The fact that there is now most excellent black bass fishing in Lake of the Woods will be hailed with delight by anglers. Forty or fifty bass were placed in this water eight or nine years ago and the fish have thriven and multiplied amazingly. The lake has not been fished successfully in the past. Possibly the right methods were not used. However, C. J. Stovel, an expert angler of this city, took a turn at the fish two weeks ago. His catch for one day was twenty-three fish, averaging nearly two pounds each. On two other days he caught seventeen and seven bass respectively. His largest fish weighed five pounds. This is, indeed, a whopping big bass for California. Mr. Cummings caught ten bass one day. They weighed twenty-two and a half pounds. The bass in this lake will average from one and three-quarter to two pounds. Cummings was too late for good results in bass fishing as the cold weather had commenced.

The trout fishing in Fordyce lake was exceptionally good. This lake was drained four or five years ago, since then the fish have thriven and multiplied.

Mountain quail and grouse were very plentiful having bred exceedingly well this year. The country abounds in natural cover for the birds, chemise and high chaparral cover the Sierra foot hills densely, this gives the birds ample refuge adjacent to water and feeding grounds. These birds can always be counted on to frequent this section. There is only about three weeks' shooting obtainable there, and that is whilst the birds are traveling, coming through the valley on their way to a refuge at a lower altitude on the approach of cold weather. This period is generally from September 1st to the 25th according to the season, sometimes the birds leave that section as early as the 15th of September.

Mr. Cumming besides enjoying two days' snipe shooting, getting limit bags each day also had a couple of days' grouse shooting at Meadow lake, twelve miles from Webber, haggng the limit daily. He intended to get a third day's shooting but was the victim of a ludicrous adventure. His horse, a knowing mountain animal, had actually untied, with his teeth, a knotted rope, and took the road back to Webber lake. This left the sportsman the alternative of taking "shank's mare" back to the hotel, which he did early in the day, and had the pleasure of following the trail left by the runaway's dragging stake rope for eleven miles to a gate in a barbed wire fence. The gate stopped the animal on that course, but not until futile efforts had apparently been made to break through. The horse was afterwards found hiding in the brush some 200 yards away from the gate and near the fence. Cumming says that he never really enjoyed a long walk until he tried this "hike."

English snipe were not so numerous this year as in past seasons. The lakes mentioned and Sierra valley have been recently the resort for rest during the southerly flight of thousands of wild ducks. Plover, curlew and two varieties of fresh water rail were also observed to be numerous during the stay of Mr. Cumming in that section.

Live Bird Shoot at Pinole.

The Home Gun Club will hold a big live bird shoot at Pinole to-morrow. The club grounds are well adapted for pigeon shooting and the Pinole shooters are a hospitable lot of sportsmen. A number of local shooters, C. A. Haight, C. C. Naumen and others, will go over to the shoot on an early train in the morning. Birds will be trapped at \$3 per dozen. We understand the management have procured a supply of strong pigeons. The shoot will start at 9 o'clock. Pool shooting will follow the regular events. Local shooters intending to be present can take the S. P. 7 A. M., or Santa Fe 7:30 A. M. boat from the foot of Market St.

Jackson's Napa Soda is sold in every city, town and hamlet in the State.

Huntress and Wounded Buck Fight to Finish

A story comes by way of Ukiah detailing a sensational fight between a wounded buck and a Mendocino county Diana, Mrs. Tomlinson of Philo, who was severely injured a week ago in a hand-to-hoof combat with a wounded deer. Mrs. Tomlinson, who is a well known sports woman, started on a hunt, accompanied by her dog. The dog jumped up a fine four-pointed and Mrs. Tomlinson immediately dropped him. Rushing up to the fallen animal, she reached to cut his throat, as is the custom with hunters. The deer, however, was only wounded and at the first touch of the knife was upon his feet.

Then the battle for life commenced, the deer using his sharp forefeet and his horns as weapons. The dog tried to aid, but was killed by the deer. For several minutes the fight continued, Mrs. Tomlinson who is a strong woman, never releasing her hold of the antlers. The animal finally weakened from the loss of blood from his wounds and sank to the ground.

Mrs. Tomlinson, although weak from the exertion and suffering from several cuts inflicted by the horn and hoofs of the deer, managed to make her way to her home. Her husband later returned for the deer. The head will be mounted and kept as a cherished trophy of the chase. Mrs. Tomlinson's feat was the more remarkable as several men in that regio have been crippled for life in similar encounters at various times.

The enraged animal must have been badly wounded by Mrs. Tomlinson's shot, else she never could have mastered the infuriated buck by a hold on his antlers. For, if there is anything a deer can show his strength and agility by, it is his extraordinary ability to shake off any hold on his horns.

San Francisco Fly-Casting Club.

SATURDAY CONTEST, RE-ENTRY—Stow Lake, Sept. 26, 1903. Wind, west. Weather, cloudy. Judges, Messrs. Kierulff and Brotherton.

Table with columns for Events (1, 2, 3, 4) and sub-columns (a, b, c) showing scores for participants like Brotherton, T. W., Edwards, G. O., etc.

SUNDAY CONTEST, RE-ENTRY—Stow Lake, Sept. 27, 1903. Wind, west. Weather, cloudy.

Table with columns for Events (1, 2, 3, 4) and sub-columns (a, b, c) showing scores for participants like Haight, F. M., Brooks, Dr. W. E., etc.

NOTE: Event 1—Distance Casting, feet. Event 2—Accuracy, percentage. Event 3—Delloacy, (a) accuracy percentage; (b) delloacy percentage; (c) net percentage. Event 4—Lure casting, percentage.

The fractions in lure casting are 15ths.

Coming Events.

- List of upcoming events including Rod (April 1-Sept. 10), Gun (July 1-Feb. 15), Bench Shows (Oct. 6, 7, 8, 9), and Field Trials (Sept. 29).

Dog Owners!! Read This!!

We are carrying in the advertising columns of this journal an advertisement of "Sergeant's Dog Remedies," a popular line of preparations for which F. W. Braun & Co. of Los Angeles, California, have been made distributing agents on the Pacific Coast. The goods have few equals and no superiors on the market today having received the highest endorsements of the leading dog men and kennel owners of this country and Canada.

THE FARM.

Live Stock Farming.

Prof. Pamel of the Iowa Experiment Station urges that stock farming is the most profitable. He says:

"It has been demonstrated both by experience and practice that the farmer who sells beef, pork and mutton that he has produced from the corn and grass raised and fed on the farm makes more money per acre of his land and per dollar of his capital than the one who grows only wheat or corn or cotton and sells it. It is not necessary to entirely discontinue raising these crops, but if we are to produce a surplus to be sold in foreign markets it is best to expert that surplus in the most condensed and marketable form, as meat and animal products, rather than in the original crude and bulky state.

"In the long run the farmer will make the most money who devotes his fields to the growing of forage crops to feed stock, making use of all the raw products at home, thereby saving not only much of the cost of transportation, but maintaining the fertility of the soil. By doing so, corn-belt farmers will maintain their pre-eminence in agricultural lines. Experience of the past few months has shown that the men who stuck to feeding and were not tempted by high prices to sell their corn have made the most money. Anything that will enhance the productive capacity of our soils for the production for forage conditions will help the farmer.

Poultry Notes.

Don't feed too much wet food; dry food is the best for a purpose.

Wheat and oats as a mixed feed, are hard to surpass as a food for eggs.

Some poultrymen recommend oil meal as a food for hens during the moulting season.

Chickens forced in growth do not breed as well as those who take it a little more slowly.

Fowls confined to narrow limits are apt to get too fat if well fed, and they will not lay.

Coops of turkeys, ducks and chickens are recommended for melon patches, to keep off the bugs.

Pure breeds, and only one kind at a time, for everyday practical purposes is the advice of a poultryman.

Cellars are being used largely for incubator chickens. An even temperature is more easily maintained.

In raising fowls for the market those that are the best layers, the best setters, and mature early are the best.

Hot weather does not agree with little chicks. Those hatched when the weather is warm do not grow rapidly.

When hens stop laying change their feed for a few days. This will frequently cause them to resume business.

Moulting season is hard on the flock; but those which stand it the best are the best hens. Select them for next year.

It is said that women make the best poultry raisers, because they are more considerate of the wants of their flocks than men.

Fowls do not seem to tire of milk, and there is not any more danger of them getting too much than of getting too much water.

To have good poultry is no longer a "fad." It is the result of a growing conviction that it pays, and everyone wants what pays.

Speaking of insectivorous birds, none are superior to chickens, duck or turkeys. If near a melon or squash patch, very few bugs would escape.

Color of plumage is a matter of preference only. A brown Leghorn will lay just as well as a white Leghorn. The

principal thing being that she is Leghorn.

Some fail in the poultry business because they do not make a product for the market which they have. Those who cater to their market usually sell all they can produce.

Some use the plan of having their fowls roost in trees during the warm weather; if they have no trees, the perches are moved out of the chicken house for weeks at a time.

It is some trouble, but in order to preserve the health of the fowls, the droppings should be taken from the houses daily or covered with dry earth. Use lime and ashes freely.

When dressing a chicken, it will save washing the table or a meat board if a newspaper is spread down to work upon. When through throw the refuse away and burn the paper.

The poultry business is as well adapted to elderly persons as to the young. A hen will lay as well for an old woman as for a handsome young girl, or as well for a boy as for a man.

A fancier says that he would rather take care of three thousand broilers in February and March than one thousand in June, and advises that we should begin hatching in early winter and push for the first market.

Corn is fattening and slow of digestion. It makes good feed for the setting hen, as it has a tendency to keep her fat and warm. She should be well fed every time she comes off, and a good dust bath should be near.

One reason that some flocks breed up so slowly is that the chickens are hatched from immature stock. Only the eggs from the best layers should be set. Some pullets lay at four months old. They should be put in a pen by themselves, when mature, and their eggs set.

When the fat of cream is removed every 100 pounds of skim milk contains about 90 per cent of water and ten per cent of solids. The solids contain about 35 per cent of casein and 4.5 per cent of milk sugar with small proportions of fat and albumen, as the fat can not be entirely removed. The milk sugar remains in whey when it separates and the casein in curds or cheesy matter, although both contain small percentages of fat, albumen, etc. The whey will promote the formation of fat, while the curds supply the elements for growth of muscle. It is an advantage to feed the two substances together, adding bran and seasoning slightly with salt. If the skim becomes sour and ferments it should not be used at all. The proper plan is to use the skim when fresh or but slightly sour.

Small bones in a large hog is a condition that should not be desired. If the bones are very light, it is a fact that the percentage of flesh covers the deficiency. But would it not be better to have still more flesh supported by still stronger and heavier bones? A big hog should have big bones, and little hogs little bones. Our best breeders and judges insist on strong limbs and good sized bones as necessary to the vigor and symmetry of the hog.

Diversified farming does not stop at crop grown from the soil, but should include a diversity of live stock. Some good cattle, a few good capacious brood mares, some good breeding hogs, a few or more sheep, goats and owls of diverse sorts, should be found on every farm, for they do not interfere or conflict with each other. There is a place for each, and a farm is incomplete without a stock of each sort.

The Woodland Creamery distributed \$3,467 among its patrons during the month of August. This is at the rate of over one hundred thousand dollars a year for the dairymen who take their milk to that creamery.

Model Dairy Farm.

[Santa Clara Journal.]

The Board of Trade of Palo Alto has proposed a novel scheme, the success of which will be watched with interest. Profiting by the terrible scourge of typhoid fever that almost paralyzed industries there last spring, caused, as the physicians declared, by impure milk, the board now proposes to organize a co-operative dairy farm to be run on scientific principles and strict sanitary conditions. The proposition is to form a stock company composed of experienced dairymen, and under the instructions of the State Dairy Commissioner, they will establish and maintain a high class dairy farm where none but pure milk and cream can be obtained. The effort will be watched with interest by other parts of the State.

All vessels which have contained milk must be at once rinsed with pure, cold water. To pour hot water on them before this is done results in milk being scalded on, as is sometimes seen in the yellowish white substances firmly adhering to the inner surfaces of pails, tin strainers, etc., which have been thus treated. If they can not be washed at once, fill with cold water and allow them to remain thus until they can be attended to. Salt rubbed dry over tin surfaces removes the yellow coating when present but it is much better to use preventive means. Salt is also excellent as a means of cleansing the meshes of the wire gauze in the strainer if it has become stopped. The cause of this is scalding before it has become perfectly cleansed. The boiling water cooks the particles lodged in the meshes.

The Swiss cheese made in this country differs from the real Swiss in not having the gases so largely developed and hence in being a more solid cheese and containing fewer and smaller holes. It is also marketed when only three to four months old whereas the genuine Swiss cheese is kept in the curing cave for eight or nine months which allows it to develop a richer and more aromatic flavor. Here again however, the western taste for a fresh and comparatively mild flavor in cheese is met by the domestic manufacturer. None of our California manufacturers of imitation foreign cheese have a cave in which to ripen their goods after they are made.

Beef from cattle twelve to twenty-four months old if well fattened is in more demand than that from animals six to eighteen months older. One reason for it is that there is not a great deal of it on the market. It is very seldom that the market is overstocked with good, fat yearling steers or heifers, yet through a very large portion of the year they command as high a price as the 1,200 to 1,300-pound steer of similar quality. Just now the packers are not disposed to pay a fair price for any kind of beef.

FOR SALE.

THE PACING GELDING, AL SANDY 2:26 by Wayland W. dam Rapid Ann by Overland. Can pace three beats better than 2:30. Can brush very fast on the road. Also the black pacing gelding, DOC 228, one of the best roadsters in the city. Can lower his record several seconds. Both horses are excellent prospects to race. For prices and further particulars address S. WATSON, 235 Douglas street, San Francisco.

FOR SALE.

THE PACING MARE SWANHILDA. She is a handsome bay, coming seven years old, a natural pacer and with but little track work can pace a mile below 2:30 with ease. Gentle and kind and has been driven by ladies to hugg. She is a fine roadster and with proper training will make a great race mare. For pedigree and further particulars address W. L. McDONALD, Concord, Cal.

Pedigrees of This Season's "Stars."

[BY RALPH H. TOZER.]

The present season has been a notable one, in a racing way, and it is doubtful if so many American speed marvels were ever out in a single season as that of 1903. Africander, son of Imp. Star Ruby and Afric Queen, and bred at Rancho del Paso, was heralded as the champion three-year-old of the season one month ago, but had to be retired for a time, and it was feared he would not be seen again for many months, but is rounding to, and will doubtless face the barrier again before the Washington meeting comes to a close. While Africander was making a memorable record for himself through winning several of the great racing fixtures from older horses, Dick Welles came out at Washington Park and ran six furlongs in 1:11 4/5 over a circular track, establishing a world's record, then reeled off a mile in 1:38 flat with astounding ease, later, at Harlem, clipping a fifth of a second from Allan-a-Dale's world's record at a mile, putting the mark at 1:37 2/5. There is no room to doubt that Welles could have run the distance in about 1:36 4/5 had Grand Opera been able to make the bay son of King Eric and Tea's Over extend himself. As it was, he won without the use of steel or catgut, with his ears pricking, and now even the Easterners are of the opinion that Africander would have to play second violin if Richard were to be pitted against the California colt. Dick Welles' record to date for 1903, is twelve wins in thirteen starts, his only defeat being when sent over a muddy track, a sort of course the long-striding, frictionless, close-to-the-ground runner could never negotiate. As Respass' colt has won at a mile and a furlong in good company and in fast time, there is no reason to believe he cannot stay as well as sprint. His owner has refused \$40,000 for his speed machine, and declares he is not anxious to part with the three-year-old even if \$50,000 was the desideratum. And, taking the \$80,000 paid for the four-year-old Hermis into consideration, Welles is worth \$100,000.

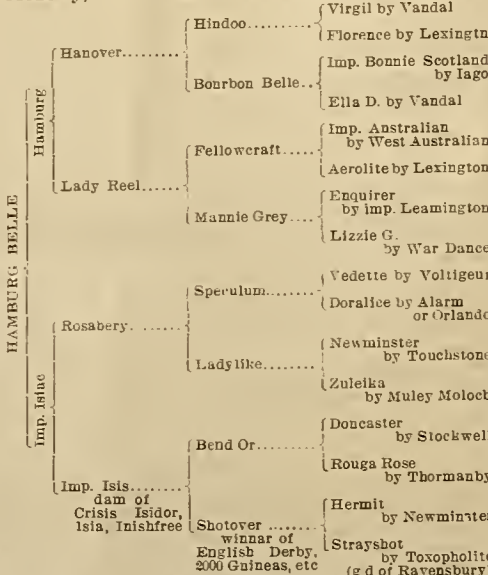

Fifth dam, Bay Flower (dam of Ivy Leaf, Gath, Glengarriff, Bayadere, etc.) by Lexington; sixth dam, Bay Leger (dam of Baywood, Beacon, Bayswater, Preakness, Niagara, Bingaman, etc.) by Imp. Yorkshire; seventh dam, imp. Maria Black by Filho da Puta, etc.

Filling the public eye just now, along with Dick Welles, are the two year olds Hamburg Belle, who beat Leonidas a scant head for the rich Futurity, and Highball, also the four year olds, Waterboy and McChesney. For some time it was claimed the latter was dodging Waterboy, but when "Big Mac," at his second and third Eastern attempts, beat The Picket Hermis, Heno and other fleet ones, and in hollow fashion, the tables turned, and the cry went up that the Haggin horse was doing the artful dodger act. Indeed it looks very much that way, and unless the owner of Rancho del Paso and Elmendorf recedes from his present position McChesney will be regarded as the champion of the year on the all aged division.

Below will be found the tabulated pedigrees of the turf stars, Hamburg Belle, Leonidas, Waterboy and McChesney, the racing marvels of the year. A peculiar feature is that all are from young mothers. The Futurity winner's dam was foaled in 1891, Leonidas' mother in 1894, Dick Welles' and Waterboy's in 1893 and McChesney's in 1892, the oldest therefore being twelve years of age, the youngest nine. Imp. Isiac, imp. Boise, Zealandia and Tea's Over never raced, while McChesney's mama, Manola Mason, lined up to the barrier just once. This will set breeders to thinking, and doubtless they will ask themselves the question, "If I desire to breed a champion had I not better use for stud purposes a mare that is in full possession of all her vitality instead of a famous race mare that has been campaigned hard for three or more seasons?"

Both Hamburg Belle and Leonidas are not only by the champion race horse Hamburg, and from his first crop of youngsters to race, but the seventh dam of both was Lady Moore Carew (by Tramp), mother of Mendicant, winner of the Oaks and St. Leger and dam of Beadsman, winner of the Derby. Hamburg, to my mind, is bred to succeed his sire, Hanover, as the champion sire of America, there being not a weak link in his pedigree chain for six generations or more, while in the first three removes one observes Hanover (champion race horse and sire), Hindoo (champion racer and high class sire), Virgil (champion sire), Vandal (grand race horse and second only to Lexington, in his day, at the stud), imp. Bonnie Scotland (who headed the list of winning sires in America),

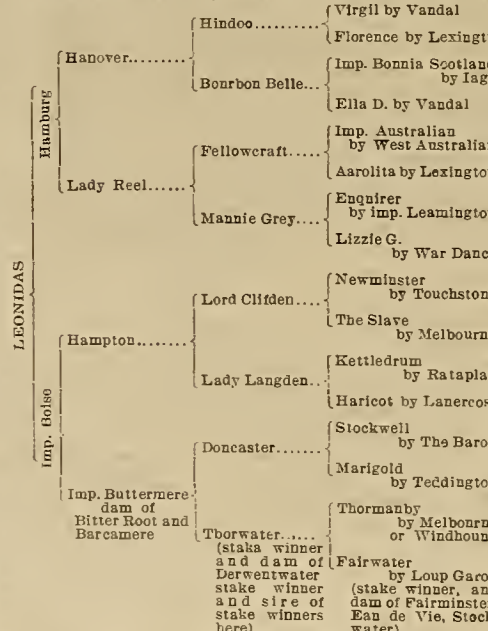

Fellowcraft (the first horse to beat 7:20 in a four-mile race), Enquirer (champion race horse and one of the leading sires), imp. Australian (who has head the list of sires in America), imp. Leamington (seven times at the head of the stallion list) and Lexington (who was first even oftener than Leamington, his rival). Then there is the blood of War Dance, sire of Modesty, first winner of the American Derby, also of

Fifth dam, Vaga (dam of Belphebe) by Stockwell; sixth dam, Mendicant (winner of Oaks and St. Leger and dam of Beadsman) by Touchstone; seventh dam, Lady Moore Carew by Tramp, etc.

L'Argentine, War Song, Ella T., Blue Grass Belle and others that have made much track and stud history in this country. Then look at the famous mares in Hamburg's pedigree—Mannie Grey (dam of Domino, Correction, etc.), Bourbon Belle, Ella D. (next to Mollie Jackson Vandal's best racing daughter), Lizzie G. (dam of Faustus and Good Night) and Aerolite (dam of Fellowcraft, Rutherford, Miser and Spendthrift and sister to the turf queen Idlewild, dam of Wildidle).

On the dam's side Hamburg Belle is equally well bred and more in the fashion desired by breeders now-a-days. Rosebery, sire of the dam, was a great stake horse by the famous sire Speculum, who headed the list in England and was a "cup horse" of world-wide renown by Vedette, the best "cup horse" of his day as well as being winner of the 2000 Guineas as a three year old. Aod Vedette was by Voltigeur, winner of the Derby and St. Leger and the only horse that ever showed heels to The Flying Dutchman. Imp. Isiac, grandam of Hamburg Belle, threw the stake horses Isidor, Isia and Inishfree, and was by the champion race horse and sire, Bend Or (sire of imp. Ormonde and imp. Golden Garter) out of Shotover, one of the very few mares that ever won the Derby at Epsom. She also won the 2000 Guineas and other rich stakes

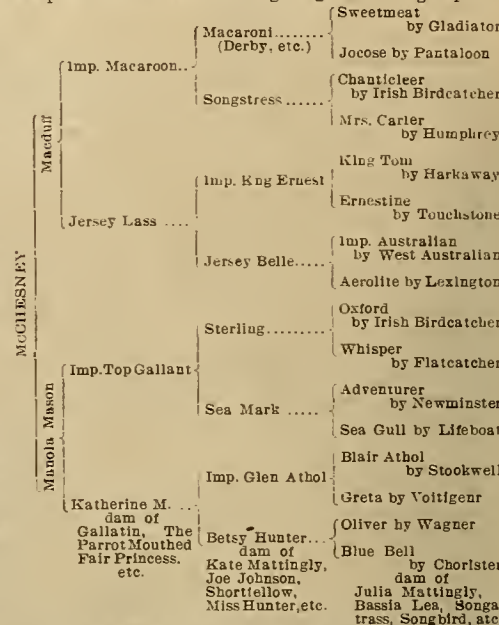

Fifth dam, The Bloomer (dam of Ely, etc.) by Melbourne; sixth dam, Lady Sarah (a winner and dam of Rylstone, etc.) by Velociped; seventh dam, Lady Moore Carew by Tramp, etc.

and was by Hermit, winner of the Derby, he by the St. Leger winner, Newminster, and he in turn by Touchstone, winner of the St. Leger and twice victorious in the Doncaster Cup. Bend Or was by the Derby and Ascot Cup winner Doncaster, he by Stockwell, winner of the St. Leger, he in turn by The Baron, winner of the St. Leger. Bend Or's dam, Royal Rose, was by Thormanby winner of the Derby, etc. It may be news to most people that A. Joseph's fast little mare, Ishtar, is a half-sister to Hamburg Belle; but she is, being by Sam Lucas-imp. Isiac.

Leonidas is bred somewhat similar to Hamburg Belle on the dam's side, but his mother, imp. Boise, now but nine years of age, was by Hampton, a great race horse, unbeatable at four and five years of age, Hampton by the St. Leger winner Lord Clifden, he by Newminster (St. Leger winner), his sire Touch-

stone St. Leger winner. Hampton's dam Lady Langden, threw Sir Bevy, winner of the Derby. She was from the famous racer Haricot whose mother was the wonderful Queen Mary, dam also of Blink Bonny (Derby and Oaks) imp. Bonnie Scotland and seven other stake horses.

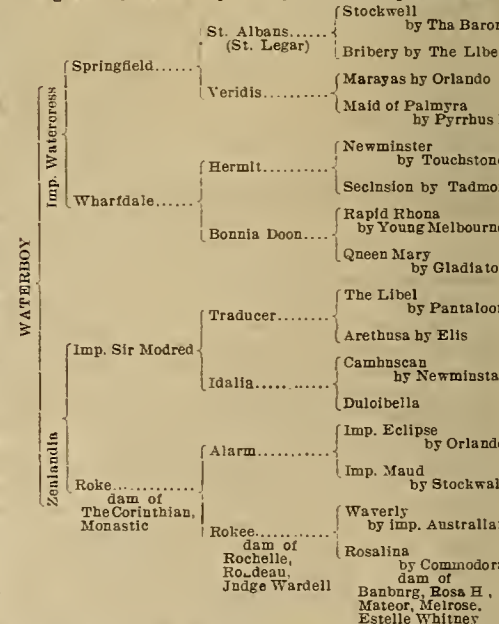

Both Dick Welles and McChesney have the King Ernest cross close up, and in addition Welles has crosses of Hanover, King Alfonso, Virgil, Lexington and Imp. Yorkshire, all at the top of the winning sires' list of America in their day. Dick Welles comes from the family that gave us Bramble, Bramblett, Beacon, Bayswater, Preakness and many other renowned racers. The second and third dams of Respass' colt threw nothing of great racing reputa-

Fifth dam, Blue Filly (Flat) (dam of Kate Hunter, Liz Morgan, Hunter's Glencoe, etc.) by imp. Hedgeford; sixth dam, Lady Thompkins by American Eclipse; seventh dam, Katy Ann by Ogia's Oscar; eighth dam, Medoc's dam by imp. Expedition, etc.

tion, but they did not have many foals, hence had little chance to distinguish themselves at the stud. The fourth dam threw Gold Cup, mother of Oro, Grady and Flush of Gold, well-known performers on this Coast.

Waterboy is a beautifully bred big horse, but while his sire is a tried-and-oot-found-wanting stallion from the great Queen Mary family and was a phenomenal

Fifth dam, Fanny Wells (dam of Jils Johnson, etc.) by imp. Sovereign; sixth dam, Reel (about the greatest of all American brood mares) by imp. Glencoe; seventh dam, imp. Gallopade by Catton, etc.

race horse himself, the second and third dams, by great sires of dams, could not be called top-notchers in the line of producing stake horses. The fourth, fifth, sixth and seventh dams of Waterboy, however, were producers of world-wide reputation from the famous "Dance family" that gave us Domino, Correction, Glidelia, Farandole, Lecompte, War Dance, Hamburg and scores of other celebrities of turf and stud.

McChesney comes from a good line, but his dam, Manola Mason, so the story goes, came within an ace of being a part of the bad broodmare consignment sold South without pedigree, with the hope that the identity of the various supposed "failures" would become lost in the mists of obscurity. She was too young to be condemned, though, and McChesney came out in the fall of his two-year-old form and "saved her bacon." Now, as the mother of "Big Mac" and First Mason, she is justly highly prized. McChesney is stoutly as well as fashionably bred, and outside of his grand dam his first nine dams could be called "gilt-edged" producers. Macduff, his sire, was a stud success, and Macduff's second dam, Jersey Belle was an own sister to Spendthrift, Miser, Rutherford and Fellowcraft.

Even at this late day occasionally a farmer asks if a silo is profitable on a farm. Of course these question askers do not read the papers, at least they do not read farm papers, or they would not ask such a question. The silo is one of the greatest inventions of the age, enabling a farmer to preserve his feed crops in a succulent and practically green state all the year round, so that it can be consumed by the cattle with the least possible amount of waste. Every farmer should keep cattle, and silage is a most excellent food for them, and cheaper than any other except pasturage. The wonder is that so many farmers voluntarily try to get along without silos.

A horse trainer says that a young horse should not be driven over the same road too often. He may go well over that road, but may make trouble over some other. Drive him over different roads, and teach him to go wherever he is guided.

One of the most important things with young pigs is to get them to growing well. This can be best accomplished by giving good care to the mother. Plenty of sloppy feed will make a large yield of milk.

"SAVE-THE-HORSE" SPAVIN CURE

TRADE MARK

OAKLAND, CAL., AUG. 21, 1903.
I had a horse with a very bad thoroughpin, I got a bottle of "Save-the-Horse" from Garrett & Taggart of Oakland; used the same according to directions, and when it was all used up the thoroughpin was still there. I thought of all the doctor had told me—that it could not be cured—and let the horse go. After this I saw the horse, and his leg was improved so much that I got him back, bought another bottle of "Save-the-Horse," and two thirds of that bottle cured him sound as ever. Since then, while working a colt for speed, it hit one knee and ruptured a blood vessel. I tried the balance of the bottle of "Save-the-Horse" on it, and it has improved so much that I think it will cure that also. Please send me another bottle. Both cases were given up as incurable by three or four of our best veterinarians. The thoroughpin was treated by three expert veterinary surgeons without any result except terrible torture to the horse. The leg was badly burned by such treatment, and I was compelled to apply lard and sweet oil to stop the burn, and to this day the horse is badly scarred.
HARRY D. BROWN, 266 Second St., Oakland, Cal.

September 7th, at the Fasig-Tipton sales at Sheepshead Bay, Long Island, N. Y. a yearling by Escher-Excellenza was being sold by Mr. William Easton, and when the animal was led into the ring he said: "This horse has been suffering from a bog spavin, of which practically no trace remains. He was treated with that remedy called "Save-the-Horse," which all of you know, and it did save the horse—that is, it cured him. Now you know lots of great horses, Morello and others, were successfully raced, and there is no reason to expect that this colt will ever take a lame step." The bidding then opened at \$250, and the colt was sold for \$800 to Mr. J. D. Smith.

"SAVE-THE-HORSE" Cures Without Scar, Blemish or Loss of Hair

"Save-the-Horse" can be applied at any time, anywhere, any place, and in all conditions and extremes of weather. Horses may be worked as usual with shin or ankle boots, as no harm can result from destruction of hair or scalding of limb.

\$5.00 PER BOTTLE.

Written guarantee with every bottle given under our seal and signature, constructed solely to satisfy and protect you fully. Need of second bottle is almost improbable, except in rarest of cases. Copy of booklet and guarantee sent upon application.

POSITIVELY AND PERMANENTLY CURES

Bone and Bog Spavin, Thoroughpin, Ringbone (except low ringbone), Curb, Splint, Capped Hock, Windpuff, Shoe Boil, Weak and Sprained Tendons and all Lameness. If you have a case different than described in our booklet or advertising we will advise you frankly as to the possibility of the remedy effecting a cure. Give explicit particulars. Give the veterinarian's diagnosis if he is competent. Inform us fully as to the age, development, location and swellings, lameness, action and previous treatment. \$5.00 a bottle at all druggists and dealers, or sent express prepaid.

PALACE HOTEL, SAN FRANCISCO, CALIFORNIA.

TOURISTS and TRAVELERS will, now, with difficulty recognize the famous COURT into which for twenty-five years carriages have driven. This space of over a quarter of an acre has recently, by the addition of very handsome furniture, rugs, chandeliers and tropical plants, been converted into a lounging room—the FINEST IN THE WORLD.

The EMPIRE PARLOR—the PALM ROOM, furnished in Cerise, with Billiard and Pool tables for the ladies—the LOUIS XV PARLOR the LADIES WRITING ROOM and numerous other modern improvements, together with the unexcelled Cuisine and the Most Convenient Location in the City—all add much to the ever increasing popularity of this most famous HOTEL.

GUARANTEED BY THE GUARANTEED

Pacific Coast Trotting Horse Breeders Association

FOR FOALS OF MARES BRED IN 1903.

TO TROT OR PACE AT TWO AND THREE YEARS OLD.

ENTRIES TO CLOSE NOVEMBER 2, 1903.

ONLY \$2 TO NOMINATE MARE.

\$3250 for Trotting Foals. \$1750 for Pacing Foals. \$800 to Nominators of Dams of Winners and \$200 for Owners of Stallions. Money Divided as Follows:

\$2000 for Three-Year-Old Trotters.
200 for Nominator of Dam of Winner of Three-Year-Old Trot.
1250 for Two-Year-Old Trotters.
200 for Nominator of Dam of Winner of Two-Year-Old Trot.
100 to Owner of Stallion, Sire of Winner of Three-Year-Old Trot when Mare was bred.

\$1000 for Three-Year-Old Pacers.
200 for the Nominator of Dam of Winner of Three-Year-Old Pace.
750 for Two-Year-Old Pacers.
200 for Nominator of Dam of Winner of Two-Year-Old Pace.
100 to Owner of Stallion, Sire of Winner of Three-Year-Old Pace when Mare was bred.

ENTRANCE AND PAYMENTS—\$2 to nominate Mare on November 2, 1903, when name, color, description of mare and stallion bred to must be given. \$5 March 1, 1904 \$5 November 1, 1904. \$10 on yearlings March 1, 1905. \$10 on two-year-olds March 1, 1906. \$10 on three-year-olds March 1, 1907.

STARTING PAYMENTS—\$25 to start in the two-year-old pace. \$25 to start in the two-year-old trot. \$25 to start in the three-year-old pace. \$50 to start in the three-year-old trot. All starting payments to be made ten days before the first day of the meeting at which the race is to take place.

Nominators Must Designate When Making Payments to Start Whether the Horse Entered is a Trotter or Pacer.
Colts that Start at Two Years Old are Not Barred from Starting Again in the Three-Year-Old Divisions.

CONDITIONS.

The races for Two-Year-Olds will be mile heats (2 in 3), and for Three-Year Olds 3 in 5. Distance for Two-Year-Olds, 150 yards; for Three-Year-Olds, 100 yards.
If a mare proves barren, or slips, or has a dead foal, or twins, or if either the mare or foal dies before March 1, 1905, her nominator may transfer his nomination or substitute another mare or foal, regardless of ownership; but there will be no return of a payment, nor will any entry be liable for more than amount paid in or contracted for. In entries the name, color and pedigree of mare must be given; also the name of the horse to which she was bred in 1903.
Entrée must be accompanied by the entrance fee.
Should the amount of entrance money received be in excess of the amount of the Stakes the excess will be added, less the cost of postage stamps, printing and advertising, to the Stakes for the

Three-Year-Old divisions in proportion to the amount offered in each division.
Nominators liable only for amounts paid in. Failure to make any payment forfeits all previous payments. Hopples will not be barred in pacing races.
Right reserved to declare off or reopen these Stakes in case the number of entries received is not satisfactory to the Board of Directors.
Money divided in each division of the stake 50, 25, 15 and 10 per cent. There will be no more moneys in each division than there are starters.
Entries open to the world; membership in the Association not required to enter, but no horse owned in the State of California will be allowed to start until the owner has become a member. Horses owned outside of the State of California are eligible to start regardless of membership.

The Care of Calves.

One of the most serious faults of the average American farmer is his lack of knowledge and determined purpose in the care of young stock. We judge of a man's understanding of any question by the way he does his work. Look over the calves at three, six or twelve months of age in nine out of ten of our American farms. Note their unthrifty, scrawny ill fed looks, and then judge what must be the real knowledge of calf raising possessed by their owners. Some will say that the owners of these calves do not do half as well as they know. In our opinion that is not the fact. The real difficulty is that they do not half know what they ought to know about these things and consequently their work is half done. They have never resolutely set themselves to study what it means to rear a calf well. When a man is thoroughly saturated with the knowledge of a thing it holds him up to better work.

In March last two men came into this neighborhood looking for grade dairy calves, says a correspondent of *Hoard's Dairyman*. They were men who knew what they wanted. They purchased seven grade Guernsey heifers, dropped last fall, of one man and paid him an average of \$24.28 for the lot. At the same time they said they could purchase calves of the same breeding and age of neighboring farmers for from \$10 to \$15 apiece.

What made this difference in price? Simply the way the calves were handled. The seven calves were handled as follows:

1. They were kept dry and clean with plenty of fresh dry bedding every day and their quarters were kept well disinfected.
2. They were fed skim milk, fresh from the separator, after the first ten days, with a little ground flaxseed and blood meal added.

When the milk was fed they were put in stanchions and the milk set before them in pails. Afterward they were given a small feed of oats, followed by alfalfa hay. But the great care was to keep them dry and clean. As soon as they were through eating their oats they were let out of their stanchions and ran together loose in the compartment. They were fed milk morning and evening. When sold they were in fine, clean, thrifty condition, but not fat. They consumed apiece in the six months they were kept about 3,500 pounds of skim milk, \$1 worth of oats, \$2 worth of alfalfa hay and flaxseed meal and 50 cents' worth of blood meal.

After paying for the oats, hay, flaxseed meal and blood meal, \$3.50, and allowing \$3 for the value of the calf when a week old—the price allowed by calf buyers—we have \$17.78 per calf as pay for 3,500 pounds of skim milk and the labor.

Twelve calves were kept in the compartment. Does it pay to make a little study of calf life?

When some babies in Seattle, Washington, died from cholera infantum the city chemist analyzed the milk taken from the dairies and was present at a trial as the chief witness for the State. He came to the court room with a hottle containing the gastric juices of a stomach. He poured half of the fluid into another hottle and added a very small amount of formaldehyde—less than is contained in half a pint of milk sold by adulterators. He then produced a hard-boiled egg and splitting it in half placed a portion in each hottle. The half placed in the hottle containing the pure gastric juices digested in a short time while that placed in the hottle containing the drop of formaldehyde remained just as it was put in and would remain so he exclaimed for a long time. He then explained that the amount of poison contained in the bottles was not so great as that in the milk analyzed, One-half pint of adulterated milk is enough to poison an adult.

CAMPBELL'S EMOLLIO IODOFORM GALL CURE

For GALL BACKS and SHOULDERS, CRUPPER SORES and SADDLE GALLS there is none superior.
The horse CAN BE WORKED AS USUAL
For BARBED WIRE CUTS, CALKS, SCRATCHES, BLOOD POISONED SORES and ABRASIONS OF THE SKIN it has no equal.
It is very adhesive and easily applied to a watery as well as a dry sore.
Its use will absolutely prevent BLOOD POISONING. In this respect there is no Gall Cure offered which can justly even claim to be a competitor.
We placed it on the market relying wholly on its merit for success, and notwithstanding the fact that comparatively little has been done in the way of advertising the sales of 1903 were 100 per cent greater than the aggregate sales of Gall Cure preceding that year. This increase was entirely due to its MERITS, and from it we feel justified in saying that it is THE GALL CURE OF THE 20TH CENTURY.
It is a quick and sure cure for those troublesome skin cracks under the fetlock which injure and often lay up race horses.

All Trainers Should Have it in Their Stables

PRICE:—3 OZ. BOX, 25c; 1 LB. BOX, \$1.00.

CONDITIONS.

The races for Two-Year-Olds will be mile heats (2 in 3), and for Three-Year-Olds 3 in 5. Distance for Two-Year-Olds, 150 yards; for Three-Year-Olds, 100 yards.

If a mare proves barren, or slips, or has a dead foal, or twins, or if either the mare or foal dies before March 1, 1905, her nominator may transfer his nomination or substitute another mare or foal, regardless of ownership; but there will be no return of a payment, nor will any entry be liable for more than amount paid in or contracted for. In entries the name, color and pedigree of mare must be given; also the name of the horse to which she was bred in 1903.

Entries must be accompanied by the entrance fee. Should the amount of entrance money received be in excess of the amount of the Stakes the excess will be added, less the cost of postage stamps, printing and advertising, to the Stakes for the

Three-Year-Old divisions in proportion to the amount offered in each division. Nominators liable only for amounts paid in. Failure to make any payment forfeits all previous payments. Hopples will not be harred in pacing races.

Right reserved to declare off or reopen these Stakes in case the number of entries received is not satisfactory to the Board of Directors. Money divided in each division of the stake 50, 25, 15 and 10 per cent. There will be no more moneys in each division than there are starters.

Entries open to the world; membership in the Association not required to enter, but no horse owned in the State of California will be allowed to start until the owner has become a member. Horses owned outside of the State of California are eligible to start regardless of membership.

E. P. HEALD, President.

F. W. KELLEY, Secretary.

SAVE-THE-HORSE TRADE MARK SPAVIN CURE

OAKLAND, CAL., AUG. 24, 1903.

I had a horse with a very bad thoroughpin. I got a bottle of "Save-the-Horse" from Garrett & Taggart of Oakland; used the same according to directions, and when it was all used up the thoroughpin was still there. I thought of all the doctor had told me—that it could not be cured—and let the horse go. After this I saw the horse, and his leg was improved so much that I got him back, bought another bottle of "Save-the-Horse," and two-thirds of that bottle cured him sound as ever. Since then, while working a colt for speed, it hit one knee and ruptured a blood vessel. I tried the balance of the bottle of "Save-the-Horse" on it, and it has improved so much that I think it will cure that also. Please send me another bottle. Both cases were given up as incurable by three or four of our best veterinarians. The thoroughpin was treated by three expert veterinary surgeons without any result except terrible torture to the horse. The leg was badly burned by such treatment, and I was compelled to apply lard and sweet oil to stop the burn, and to this day the horse is badly scarred.

HARRY D. BROWN, 266 Second St., Oakland, Cal.

September 7th, at the Fasig-Tipton sales at Sheephead Bay, Long Island, N. Y., a yearling by Esber-Excellenza was being sold by Mr. William Easton, and when the animal was led into the ring he said: "This horse has been suffering from a bog spavin, of which practically no trace remains. He was treated with that remedy called "Save-the-Horse," which all of you know, and it did save the horse—that is, it cured him. Now you know lots of great horses, Morello and others, were successfully raced, and there is no reason to expect that this colt will ever take a lame step." The bidding then opened at \$250, and the colt was sold for \$300 to Mr. J. D. Smith.

"SAVE-THE-HORSE" Cures Without Scar, Blemish or Loss of Hair

"Save-the-Horse" can be applied at any time, anywhere, in any place, and in all conditions and extremes of weather. Horses may be worked as usual with shin or ankle boots, as no harm can result from destruction of hair or scalding of limb.

\$5.00 PER BOTTLE.

Written guarantees with every bottle given under our seal and signature, constructed solely to satisfy and protect you fully. Need of second bottle is almost improbable, except in rarest of cases. Copy of booklet and guarantee sent upon application.

POSITIVELY AND PERMANENTLY CURES

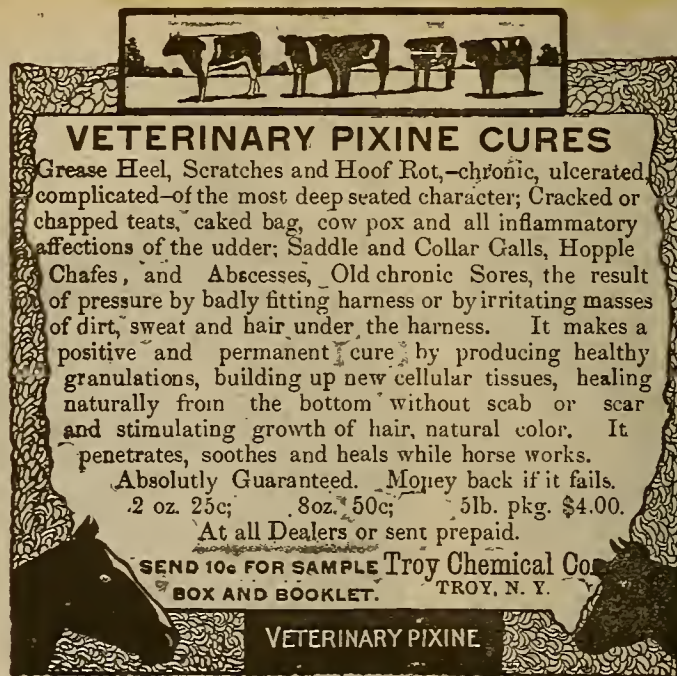

Bone and Bog Spavin, Thoroughpin, Ringbone (except low ringbone), Curb, Splint, Capped Hock, Windpuff, Shoe Boli, Weak and Sprained Tendons and all Lameness. If you have a case different than described in our booklet or advertisement we will advise you frankly as to the possibility of the remedy effecting a cure. Give explicit particulars. Give the veterinarian's diagnosis if he is competent. Inform us fully as to the age, development, location and swellings, lameness, action and previous treatment. \$5.00 a bottle at all druggists and dealers, or sent express prepaid.

TROY CHEMICAL CO., Manufacturers, TROY, N. Y.
D. E. NEWELL, Pacific Coast Agent, 519 Mission St., San Francisco

PALACE HOTEL, SAN FRANCISCO, CALIFORNIA.

TOURISTS and TRAVELERS will, now, with difficulty recognize the famous COURT into which for twenty-five years carriages have driven. This space of over a quarter of an acre has recently, by the addition of very handsome furniture, rugs, chandeliers and tropical plants, been converted into a lounging room—the **FINEST IN THE WORLD.**

The **EMPIRE PARLOR**—the **PALM ROOM**, furnished in Cerise, with Billiard and Pool tables for the ladies—the **LOUIS XV PARLOR** the **LADIES WRITING ROOM** and numerous other modern improvements, together with the unexcelled Cuisine and the Most Convenient Location in the City—all add much to the ever increasing popularity of this most famous HOTEL.

VETERINARY PIXINE CURES
Grease Heel, Scratches and Hoof Rot,—chronic, ulcerated, complicated—of the most deep seated character; Cracked or chapped teats, caked bag, cow pox and all inflammatory affections of the udder; Saddle and Collar Galls, Hopper Chafes, and Abscesses, Old chronic Sores, the result of pressure by badly fitting harness or by irritating masses of dirt, sweat and hair under the harness. It makes a positive and permanent cure by producing healthy granulations, building up new cellular tissues, healing naturally from the bottom without scab or scar and stimulating growth of hair, natural color. It penetrates, soothes and heals while horse works. Absolutely Guaranteed. Money back if it fails.
.2 oz. 25c; 8oz. 50c; 5lb. pkg. \$4.00.
At all Dealers or sent prepaid.

THE WEEKLY BREEDER AND SPORTSMAN

F. W. KELLEY, PROPRIETOR.

Turf and Sporting Authority of the Pacific Coast.

—OFFICE—

36 GEARY STREET, SAN FRANCISCO.

P. O. BOX 2300.

TELEPHONE: Black 586.

Terms—One Year \$3, Six Months \$1.75, Three Months \$1 STRICTLY IN ADVANCE.

Money should be sent by postal order, draft or by registered letter addressed to F. W. KELLEY, 36 Geary St., San Francisco, Cal.

San Francisco, Saturday, Oct. 10, 1903.

IT ONLY COSTS TWO DOLLARS to nominate a mare in the Pacific Breeders Futurity No. 4, which closes on the second day of next month, for mares bred this year. This is the fourth renewal of a most popular stake and as the entrance fee has been reduced to \$2, should be more popular and receive a larger entry list than ever before.

that these animals will be successes in the stud, as many things may prevent that; but from such mares, under favorable conditions, great successes come." Future historians and statisticians of the performances of thoroughbred horses, will realize more than anyone possible can at this time, the great value of the information within the covers of "The Whitney Stud."

Los Angeles Driving Club.

The annual meeting of the Los Angeles Driving Club was held last Monday evening. The Los Angeles Express says that it was the most successful meeting of the organization ever held and was well attended. The enthusiasm manifested in the club and its future is a promise of good times for the public and members.

Mr. Byron Erkenbrecher

This did not take long, and it soon was announced that Mr. Byron Erkenbrecher had been elected president; Dr. William Dodge, vice-president; Dr. Ralph Hagan, secretary; Mrs. F. E. Chandler, assistant secretary, and Mr. C. A. Canfield, treasurer. As a board of directors the following were selected: William Garland, H. G. Bundrum, J. A. Fairchild, J. A. Edmonds, H. N. Henderson, Thomas Hughes, Dr. W. W. Hitchcock.

Lexington Meeting Opens.

They are having bad luck at Lexington this year in addition to the gloom cast over the whole State of Kentucky by the death of Secretary Shanklin the week previous to the opening of the Kentucky Trotting Horse Breeders Association, a heavy rain storm visited that section and made the postponement of the opening for one day absolutely necessary.

Sadie Mac, E. E. Smathers' recent purchase, won the historic Kentucky Futurity for three year olds, purse \$14,000, without apparent effort in three straight

heats, going the last mile in 2:13 1/4, which is two seconds short of the record made by Ferenno three years ago. She won by several lengths in each heat and only at one time was her contention for the crown in danger, and that was in the first seven-eighths of the first mile when Ethel's Pride kept nose to nose with her.

Grace Boad, favorite for second place, won the two-year-old futurity, purse \$5000, in two straight heats, going the first heat in 2:17 1/4. Jessie Benyon won second money.

Nervola won the Tennessee, 2:08 pacing, purse \$3000, in three heats out of four, Major C. taking the third heat. Ferenno won the 2:07 trotting purse of \$1500 in two straight heats.

The 2:11 class pacing, purse \$1000, was won by John M. in two straight heats.

Bessie Brown, the ruling favorite, easily carried off first honors in 2:21 class trotting, purse \$1000.

State Fair Directors Meet.

The State Board of Agricultural met last Saturday afternoon at 1 o'clock, in executive session, and spent the largest portion of the session in considering and awarding the contract and lease for Agricultural Park. All the members of the board were present except Mr. Covey.

Three bids were made and long considered. Tom Norton \$2050, James Martin \$2100, and Hauh & Kuchler \$2305. The bid of the latter firm was accepted and the lease awarded accordingly to John Hauh and Fred Huchler.

The finances of the Agricultural Society were considered, but no final balance sheet was struck, and inhibition was placed upon the Secretary against giving out any figures at present, as the board will meet on the 24th inst. at 1 p. m., and will then be prepared to give to the public an exact statement of the financial condition of the society.

It has been ascertained, however, that the late fair paid expenses and left the society \$1000 to the good. That, with the allowance made it for the McKinley closure the previous year, and the regular appropriation, enables the society to indulge in a most hopeful outlook. All labor bills have been paid and all charges for premiums also, while the society will pay off \$10,000 of its back indebtedness—indeed, it is said that the payment has been already practically effected. The understanding is that the directorate is encouraged and pleased by its present condition, and the outlook for the future.

John Hauh, the senior of the firm of new lessees of Agricultural Park, said last night to a Union reporter, that his firm proposes to secure the services of a first-class superintendent to put the race track in A1 condition. The stables will be so fitted as to be inviting for owners of the horses to keep them on the grounds, and general repairs will be made as needed. At the spring race meets Hauh & Kuhler will hold, there will be very strong invitation for the presence of fine strings of speedy horses. There will be permitted no syndicate bookmaking, and all poolselling will be auction. Mr. Hauh also said that his firm purposes to put the grounds into good condition for other sporting events, sharp shooting, auto and cycle racing, athletic entertainments, etc., to invite events in such sports frequently.—Sacramento Union.

In hot weather there is no drink like Jackson's Napa Soda—plain or in a lemonade.

THE WHITNEY STUD is the title of a beautifully printed and splendid bound volume, for which the Hon. W. C. Whitney of New York has our thanks. The book contains tabulated pedigree and full history of each stallion and mare owned by this gentleman, easily the most prominent figure in thoroughbred breeding and racing in America. It is the most valuable contribution to thoroughbred literature that has been made in years. In a brief preface to the work Mr. Whitney says: "Count Lehndorf, in his admirable little book of 'Recollections' called attention in 1883 to the desirability of breeding only from race mares if one wished to minimize the elements of uncertainty and increase the chances of success. * * Investigations I have made corroborated the theory to my satisfaction and therefore sought to know, as to my stud, what the racing record was, not only of its individual members, but of their families. Hence this volume, intended originally for my own greater convenience. As these records grew upon my hands I saw that they contained valuable historic matter likely to be interesting and useful to others. They show, among other things, a complete record of some of the great American racing families not heretofore completed, and so I have printed them for private circulation among my friends." Three stallions and eighty-one mares are given place in this magnificent volume, and of the mares only twelve are without racing records. Sixty-four of the mares ran in 2482 races, won over twenty-five per cent of them, and were placed in thirty-six per cent of the remainder. Mr. Whitney says "It does not necessarily follow

JOTTINGS.

TRACING THE PEDIGREES of record breakers has a charm for most men who are at all interested in the blood lines of horses. There is a pleasure in sitting down and tabulating the pedigree of an animal that has accomplished some great feat on the oval track, and when a cross is found that leads to the woods, nothing is more fascinating than following up the various trails pointed out by those who are supposed to know something of the facts, even though a majority of them lead to forests where they are lost in darkness and impenetrable swamps. Since Lou Dillon made herself world famous by her mile in two minutes at Readville, her breeding has been under discussion wherever horsemen have gathered. Her dam, Lou Milton, the dam of three others with records, has been in the Great Broodmare list since Volume 6 of the Year Book was issued. That was in 1890, the year that Ethel Mack and Redwood, two of her produce by Anteco took records. In that volume Lou Milton's pedigree was given us by Milton Medium, dam Fly, not traced, and it has not been changed in the records since and may never be. In the old stud cards of Redwood, Fly was described as the Ralston mare, supposed to be a thoroughbred. She was called the Ralston mare because at one time she had been the property of the late William C. Ralston of San Francisco. This seemed to be all that anyone knew of Fly and it is not on record that any very determined effort was ever made to trace her breeding any further.

A few weeks ago the writer received a letter from Mr. Chas. E. Berry of Kelseyville in which it was stated that there were two mares in Lake county years ago, one of which was afterwards claimed to be the dam of Lou Milton, and was owned by Green Thompson, now of Santa Rosa. The first opportunity I had to visit Santa Rosa came on Saturday last, and I embraced it. Reaching the pretty City of Roses, I hunted up my friend Dr. Summerfield, the well known veterinarian of that city, who kindly helped me find Mr. Thompson. As I had suspected, he proved to be an acquaintance of my boyhood days, and after old times had been recalled, I stated my mission and Mr. Thompson told me the story of Lou Milton.

In 1880, Green Thompson was living at Pine Flat, which is in Sonoma county close to the Napa and Lake county lines. His friend John Mendenhall, of Lake county, then owned Milton Medium, son of Happy Medium, and believed him to be a great horse. Mendenhall became involved and wished to go to Oregon with Milton Medium expecting to make money with him there in races and in the stud. Before leaving Mendenhall turned seventeen colts and fillies by Milton Medium, and the mare Fly in foal to that stallion over to Mr. Thompson for \$1000, with the understanding between them that on his return he could have them back by return of the money and payment of the pasture bill on the stock. Mr. Mendenhall at that time told Mr. Thompson that he had purchased Fly from Mr. J. S. Kimball, the well known carriage manufacturer of San Francisco, to whom she had been presented by William C. Ralston. That if he never returned, to take great care of the mare and her coming foal as they would be valuable property. Mr. Thompson describes Fly as a dark chestnut mare about 15.3 hands high, one hind foot white nearly to the ankle. She had a star, and a strip that started a little below the star and extended to the nose where it broadened out. Mr. Thompson describes her as almost a counterpart of Lou Milton in conformation, was mixed gaited when jogging and could trot a 2:30 gait. The only thing Mr. Thompson can remember in regard to her breeding was that it was said she had Belmont blood in her veins, but whether it was Williamson's Belmont or Belmont 64 he does not know.

The following spring, when she was 12 years old Fly foaled a filly now known as Lou Milton, the only foal she ever had. When the filly was six weeks old, his boys were riding Fly one day and reaching home just at dinner time tied the mare to the fence and went in to dine. When dinner was over Mr. Thompson went out and found the mare dead. She had lain down and in an effort to roll over had choked to death as she was tied on a side hill. Mr. Thompson took the filly and raised her on cow's milk. He states that she was a beautiful little thing and he naturally became very much attached to her. When she was a three year old he had her well broken and she could show a great deal of speed at the trot. Mr. Thompson in those days owned a horse or two that he ran in sprint races. He was at Healdsburg the spring

that Lou Milton was a three year old. Charlie Bromfield, well known then, owned a yellow horse that he considered quite a half-mile runner, and was training him at the Healdsburg track. One morning Thompson chaffed Bromfield about his yellow horse and remarked that his trotting mare could beat him. So, in fun, he put a boy on Lou Milton and though she had never been run under saddle before, she beat the yellow horse at his own game, finishing about thirty yards in front of him and running the half mile in about 54 seconds as he remembers. Mr. Thompson then gave her to Hellman Bros. to train at the trotting gait, but she went lame and he afterwards sold her to Mr. A. McFayden, of Santa Rosa, who raised three standard performers from her and then sold her to the Santa Rosa Stock Farm, Mart Rollins, who was always a great admirer of the mare, making a long and finally successful effort to induce Pierce Bros. to buy her.

Mr. Thompson told me that Mr. McFayden tried to trace the pedigree of the Ralston mare when he owned Lou Milton, but was unsuccessful. As John Mendenhall, J. S. Kimball and W. C. Ralston are all dead it will be very hard to establish the mare's breeding with certainty. On my return from Santa Rosa I told Samuel Gamble what Mr. Thompson said about the Ralston mare and her successive owners. Mr. Gamble remembered a chestnut mare owned by Kimball of the same description as that given of the Ralston mare by Mr. Thompson, and said as an effort was once made to sell her to the late Dan Cook, he might be able to find some record of her in his old papers. He searched and found an old memorandum book in which he had written: "Kimball mare, a chestnut by Red Iron, known as Daniel's McClellan." That was all. There was nothing about the dam or any other particulars and it might have referred to the dam of Lou Milton or it might not. The stallion Red Iron is recorded in Wallace's Register as Gen. McClellan 144, and was owned by Seneca Daniels, who brought him to California. In another old book Mr. Gamble found the following memorandum: "Kimball's mare, Lady Butterfield by John Nelson, dam

Major Delmar Following the Wind Shield

by Geo. M. Patchen, Jr." It may be there are men now living in California who have some definite knowledge of the Kimball mare, and the description furnished by Mr. Thompson would easily lead to her identification if there are any who remember her and can furnish any clue to her breeding. With the facts known about the mare and her ownership it does not look like an impossible task to ascertain how the dam of Lou Milton was bred, and I hope that any who know anything of old Fly, the Kimball mare, will kindly send such facts as they know to this office that the breeding on the dam's side of the first two-minute trotter may be further traced.

The wind shield as an aid to record breakers is just now the principal topic of discussion with horsemen. Lou Dillon was not aided by one when she made her two minute mile, but Major Delmar had one of the new contrivances pulled in front of him when making his mile in two minutes and there was also one in front of Prince Alert for a little more than three-fourths of the journey when he paced to the world's record of 1:57 at Empire City track.

I say "a little more than three-fourths" because it is stated that when the runner reached the three-quarters pole he was all out, and Mart Demarest, who was driving him, had to pull to one side to keep Prince Alert from pacing over the thoroughbred. The heavy draft had been too much for the runner, and he was very tired from pulling the canvas shield. The wind shield is a piece of canvas about three feet in height. It is stretched on a frame made in the form of a half circle and rests on the shafts in front of the driver whose head just appears above it. There are two small holes in the canvas through which the reins pass. There is much diversity of opinion as to whether this shield helps to any great extent the horse that follows it, but there is no question that it lessens the atmospheric pressure on a horse that keeps close behind it, and consequently aids him in a more or less degree. It is a contrivance

that should never have been introduced on a trotting or any other track, and it is to be hoped it will be ridiculed until all wind shields are consigned to the junk pile. When Major Delmar trotted his mile in 2:00½ without the wind shield, he finished stronger than he did when he made the mile in two minutes with its aid. Help or no help, it should have no place in future trials. Records made with it will be looked upon as trials of speed that were not genuine contests.

When the telegraph reported the expulsion of the California driver, W. G. Durfee, and the mare Sweet Marie, at the Oregon State Fair last month, there was much surprise manifested in this part of California, as "Billy" had up to that time won nearly every heat in which he had started a horse on the North Pacific Circuit, and fuller reports of the race were anxiously awaited by all interested in harness racing. Without referring to the official summaries, I believe Durfee won every race at Seattle in which he was up behind any of the horses in his own string, and many were figuring on his making a clean score up north. The \$2000 Lewis & Clarke Stake was the leading feature of the entire northern circuit, and that Durfee was accused of deliberately "laying up" a heat in it with Sweet Marie caused lots of surprise here, as those who have seen the mare in her races are of the opinion that she is not one of the sort to make a long contest with, but will make her best showing in races of fewest heats. That Durfee wanted to win the big stake is pretty generally conceded, and while there may be some question as to whether or not he laid up the heat, the expulsion was doubtless made because Mr. Durfee refused to permit a driver selected by the judges to drive Sweet Marie, and took her from the track. A gentleman who was at Salem at the time this unfortunate affair occurred told me the other day that Durfee's refusal to turn his mare over to the driver selected by the judges was because said driver was not on good terms with Durfee, and the latter believed he would go out with the mare, drive her from wire to wire and probably "mark her for life," at the same time jeopardizing her chances to win first money in the race. This gentleman further stated that Durfee was willing some other driver should pilot the mare, and so told the judges, but that it was their selection or none, and consequently Mr. Durfee faced expulsion rather than to have Sweet Marie driven by one whom he considered his enemy. The *Pacific Rural Spirit*, the organ of the North Pacific Circuit, has thus far printed no comments on the affair, and whether or not Mr. Durfee has taken an appeal from the ruling of the Salem judges has not yet been stated. One of the Portland papers, in describing the finish of the second heat in the race in question, stated that Dr. Hammond won the heat "a nose in front of Briney K., and Sweet Marie at Briney's throat-latch." This was a pretty finely drawn finish for a driver to make that was laying up a heat, and as the papers all agree Durfee was driving at the finish, the "laying up" must have been earlier in the heat. The same journal states that Durfee pulled out at the half when leading to let Briney K. through, the inference being that he wanted to let the Strathway gelding get a heat so as to insure him second money over Dr. Hammond. As this heat was trotted a full second faster than the first, it is possible that Sweet Marie was doing her "level d—dest," as poor old Pete Brandow used to remark. Captain Tom Merry, one of the most observing of turf writers, writes as follows on this matter in *Pacific Sportsman News*, a new candidate for public favor published in Los Angeles:

William G. Durfee, of Los Angeles, was ruled off at Salem, Or., on the 17th because his mare, Sweet Marie, won the first heat of a race and could finish no better than second afterwards. Nobody who knows Mr. Durfee believes he would do anything crooked with that mare. She belongs to a very wealthy man and Durfee could have his horses for the rest of his life. This ruling means a loss of at least \$6000 to Durfee for the next year, unless he is reinstated meanwhile. Our own idea is that the mare, having already won several hard races, had grown stale and being pitted against a horse that has been constantly improving, found the game too hard for her. Durfee has always driven squarely here and, in our belief, drove to win up there. The horse, Dr. Hammond, which beat her, is owned by Bennett & Goodall.

It is not alone in the performances of Lou Dillon that the blood of Happy Medium has been prominent this season, says *Horse World*. Belle Kuser 2:08 has for a grandam a mare by Happy Medium; Margaret Bathgate 2:11½, the fastest four-year-old trotting filly of the year, is out of a mare by Happy Medium; Lizzie A. 2:13½, one of the great three-year-olds of the year, is out of a mare by Happy Medium, and Lord Roberts, another great three-year-old, is out of a daughter of that horse. It has been some time since Happy Medium blood was regarded as really fashionable, but it appears in the pedigrees of extremely fast performers with uniformity enough to impress breeders with its great worth when combined with other strains.

PACIFIC BREEDERS FUTURITY STAKES No. 3, \$6000 GUARANTEED, FOR FOALS OF MARES BRED IN 1902.

Third Payments of \$5 each were made October 1, 1903, on the following 186 Foals of Mares bred in 1902:

Table with columns: NOMINATOR, ENTRY, SIRE, DAM, NOMINATOR, ENTRY, SIRE, DAM. Lists names of breeders and their foals.

Washington State Fair Races.

NORTH YAKIMA, Sept. 29, 1903.

The Annual State Fair opened to-day, and all the best stables of harness horses on the circuit are in attendance. Judging by to-day's results close finishes and fast time will be in order throughout the meeting.

Table listing race results: Trotting, 2:19 class, purse \$500. The Commonwealth, by Sbadelans Onward (J. Green) 1 6 1 1.

Table listing race results: Pacing, three year olds, purse \$300. Economist, by Chas. Derby-Echo (R. A. Smith) 1 2 1.

WEDNESDAY, SEPT. 30TH.

Two harness races were decided today, first honors in which were both taken by California owned and trained horses. The first the 2:18 pace was won by the Sacramento owned "Polka Dot" and the second, the free for all pace, by that good McKinney mare Rita H., who has already secured a large proportion of this Circuit's first moneys. Results:

Table listing race results: 2:18 pace, 3 in 5, purse \$500. Polka Dot, by Mendocino (Jes. Erwin) 1 1 1.

Free for all pace, special, 2 in 3, purse \$350. Rita H., by McKinney (H. Helman) 1 1.

Table listing race results: Sam Bowers (Lance) 5 2, Francisco (Leroux) 3 4, Starkey (Thompson) 4 5.

THURSDAY, OCT. 1.

The 2:14 trot today was a mere exercise jog for Mack Mack, Briney K being content with second money, the others were hopelessly outclassed. A special had been generously offered by the management and had filled with a well classed entry list of 7. However, through the usual disagreement about the "divide" only four horses appeared on the track.

Table listing race results: 2:14 trot, 3 in 5, purse \$600. Mack Mack, by McKinney (Helman) 1 1 1.

The meeting came to an end to day with two very interesting harness races and several running races. That harness racing is the popular sport here with the attending public was evinced by the large number of people who left the stand after the decision of the two events in question.

It was expected that existing track records would be lowered in the 2:11 pace but an exceedingly high

wind retarded the accomplishment of this, still the time for the three heats, 2:12, 2:12 and 2:12, will show the consistency of the race. Sam Bowers made a gallant effort in the last heat only to succumb by half a length to Francisco, who was well teamed by his owner and trainer C. F. Leroux of Walls Walla.

Table listing race results: Pacing, 2:11 class, purse \$600. Francisco by Cnuton (C. F. Leroux) 1 1 1.

Table listing race results: Trotting, 2:23 class, purse \$500. Belle Storm by Storm (McGuire) 1 1 1.

Most of the horses left to-night for Spokane and La Grande, where the next meetings of the circuit takes place. ROBT. LEIGHTON.

Satisfactory in Every Case.

What better testimony to the virtues of Absorbine does anybody want than is contained in the following epistle from a responsible firm: 50 SHELBY ST., DETROIT, MICH., Jan. 22, 1903.

The Kenney Bicycle Co., 531 Valencia St., is doing a big business in the McMurray Carts and Sulkies. You not only save money by purchasing a McMurray but get the most durable, best made, and easiest running cart or sulky in the market.

On a hot day drink Jackson's Napa Soda lemonade and be refreshed.

Notes and News.

Los Angeles meeting opens to-day.

Don Derby is the kingpin pacer on the New York Speedway.

Ukiah meeting begins next Tuesday and continues through the week.

Geers is shaping up Onward Silver 2:08 for an attempt to beat his record at Memphis.

Sadie Mac won the Kentucky Futurity. Mr. E. E. Smathers purchased her for \$20,000 two days before the race came off.

Direct 2:05½ is now credited with 34 trotters and 28 pacers that have made records in standard time, and eight of them are in the 2:10 list.

The record for pacing mares is now 2:03½ and belongs to the Hal family, Fannie Dillard having taken that mark at the Columbus meeting.

The champion records for trotting and pacing geldings and stallions were all made against time. The record for pacing mares, however, was made by Fanny Dillard in a race. It is 2:03½.

The Readville track has offered \$25,000 for a race between Lou Dillon and Major Delmar. If the owners do not care to race for money the track is willing to hang up a gold vase that will cost that amount.

The 2:07 trot last week at Columbus, O., was a very hard fought race. Rhythmic won the first heat and lowered his record to 2:06½. It is very likely that he will not be raced next year but will make a season in the stud.

Third payment has been made on 186 colts and fillies in the Pacific Breeders Futurity \$6000 Stake No. 3 for the produce of mares bred in 1902. This is an excellent showing. The full list appears elsewhere in this paper.

The business men of Syracuse, N. Y., are talking of raising a purse of \$10,000 to be turned over to the management of the New York State Fair with the understanding that it is to be offered for competition for the fast trotters of 1904.

Frank Caton has been training and racing horses in Russia for the last ten years. In appreciation of his good work in the sulky the Moscow Driving Club presented him with a massive punch bowl with tray and eight cups of gold and silver.

The announcement of the Western Horseman's \$6200 no entry-fee futurity stake for harness speed bred foals of 1904 will appear in the BREEDER AND SPORTSMAN of October 24th, and will interest every light harness horse breeder, both large and small.

Welchman, a chestnut gelding by Diablo, has been winning races all through the New England circuit recently. He now has a record of 2:22½ and is said to be a very promising trotter. His dam is Rachel Welch by William L. and he was bred by C. L. Griffith.

Allerton 2:09 is now credited with 82 trotters and 26 pacers that have made records in standard time, a total of 108. Not a bad showing for a 17-year-old inbred Wilkes sire, whose dam was by a horse full of thoroughbred and whose third dam was by a thoroughbred.

Gambetta Wilkes 2:19½ gets another 2:10 performer in the stallion Don Cozine, who just stepped into the select circle at Empire City Park last Saturday, with a mile in 2:10. This makes the ninth of the get of the son of George Wilkes 2:22 and Jewell to take records in 2:10.

John H. Brown, of Detroit, Mich., has a seven year old green horse by Sidney Dillon, sire of Lou Dillon 2:00, that worked a mile the other day at the trot in 2:11½. He is being trained by Frank Cares and Frank says he will have a sayso about the slow trotting stakes next year.

E. Cotton Smith, the man that makes that great pain remover, Vita Oil, has come to Los Angeles and will call on all the horsemen at the big meeting which opens there to-day. Mr. Smith is pushing the sales of Vita Oil and finds it easy work, as every person that uses it once, takes the precaution to keep it on hand at all times thereafter and recommends it to his friends.

One of the most remarkable performances of the season by a green horse was when Baron Grattan, a four year old gelding by Grattan 2:13, recently paced two heats in 2:06½ and 2:07. The last half of the mile was paced in 1:01½, and the last quarter in 30 seconds. When it is taken into consideration that this fellow is a late colt, having been foaled in September, the performance is all the more remarkable.

Rev. W. J. Speers of Oakland, Cal., a minister who has a love for a horse and always drives a good one, is the owner of a weanling filly by Waldstein, dam Sadie Moor by the Grand Moor, that is the largest and prettiest thing of her age in Alameda county, and is a credit to both her sire and dam. Sadie Moor is in foal to Guy McKinney, a horse that Mr. Speers says is one of the grandest stallions he ever saw.

Mr. C. A. Harrison, of Los Angeles, was in town last week. Mr. Harrison attended the recent fair at Eureka, Humboldt county and says it was a big success. He says a new race track is to be built at Eureka before the next fair which will be up-to-date in all its appointments. He states that among the horses he saw racing at Eureka, the mare Petrina by Directum attracted his attention most, and he says she will wear watching as she is certainly a coming fast one.

Major Delmar is undoubtedly one of the greatest trotters that the turf has ever seen. No other trotter ever showed three such miles in one week as his mile in 2:01½ at Syracuse September 9th, again in 2:01½ at the same track two days later on the 11th, and his mile in 2:00½ at Readville on the 14th. These wonderful miles were all made within five days and without any wind shield. And yet great as he is we believe Lou Dillon will trot to a mark that he will be unable to equal.

Prof. K. Imai, of the Imperial University of Tokyo, Japan, has arrived in Lexington, Ky., for an indefinite stay for the purpose of studying American methods of horse breeding, principally the trotting horse. Like the other Japs who preceded him some months ago, he is an official representative of the government of the Mikado, and whatever knowledge he may acquire is to be introduced into the government breeding establishments in Japan. He has been in Europe on a similar mission.

Fred H. Chase & Co. will hold a sale of draft and driving horses at 1732 Market street Monday evening, October 12th. Mr. R. H. Nason, one of the leading breeders and farmers of Solano county is retiring on account of extreme age, being 84, and co-signs all his horses. There are forty head of draft horses, from four to seven years old, besides four driving horses, two with records of 2:17 and 2:17½ respectively. The same evening Mr. Chase will sell all the horses and rigs of the Alta Stables, San Rafael.

An exchange says: "An illustration of adding insult to injury occurred during the Providence meeting. The stables of Snow and Geers were close together. Star Hal's mascot is a game rooster. After the third heat of the race and Star Hal had won, the rooster walked over to the stall of the defeated King Direct and stepped into the doorway of that horse's stall, let a crow out of him that could be heard for a city block; and then strutting back to the stable of Star Hal, flew upon his trunk and repeated the process of calling him out."

Opie Reed tells of an attorney in Kentucky who was driving along the road one day when his horse shied and broke one of the shafts of the buggy. He was wondering what he should do when an old darky came along. The darky saw the trouble, went to the side of the road, cut a hickory switch and peeled it. With the peeling he bound the broken shaft together so that it was strong enough for the journey to be resumed. The attorney gave the negro a coin and at the same time thanked him. "I would never have thought of mending it that way," he said. "I 'spect not," replied the darky; "some men is jest naturally smarter than others."

S. H. Hoy has his favorite Kelly Briggs 2:10½ back in his old stall at Winters. Kelly Briggs is still owned by Mr. F. E. Wright of Sacramento who has placed him in Mr. Hoy's charge to condition for the races next year. Kelly came back to California with a big knee, the result of a mix-up in a race at Cleveland last summer, when Farmer Bunch had him eat. Hoy has been giving this knee the hot water treatment and has reduced it to almost its normal condition. If Kelly Briggs comes out all right Hoy will probably race him next year, and has implicit faith in the little fellow getting a mark of 2:06 or better and no man who knows Sam Hoy ever accused him of being over enthusiastic about any of his horses.

Bayswater Wilkes, sire of Kelly Briggs is reported by Mr. Hoy to be in splendid shape after a good season in the stud. Sam has a number of young horses by him that are showing well and will be out next year. It may be that he will take Bayswater Wilkes to Woodland for the season of 1904. Woodland is only about eighteen miles from his present home, and in the same county. There are a number of owners of well bred mares living in that vicinity who own colts and fillies by Bayswater Wilkes and want more of them, so they have been importuning Mr. Hoy to bring the son of Sable Wilkes to Woodland for the season of next year. Sam has not yet fully decided to make the move, but the probability is that he will do so. The family of Sable Wilkes has made an excellent showing in the East this year.

It was announced in San Diego recently that A. G. Spalding, the well-known Chicago manufacturer of sporting goods, who is now residing at Point Loma, has bought out practically the entire interest in the Belmont Breeders Association, and has also purchased from Colonel A. G. Gassen the 250 acres of land bordering on False Bay, known as the Pacific Beach race track. The final move was made September 13th, when the old board of directors resigned and in their places A. G. Spalding was elected president, Keith Spalding secretary and Charles T. Hewitt manager. The old race track, which was considered one of the best in the State, will be entirely refitted and remodeled, and after this work has been completed the public will be given an opportunity to inspect the selected lot of registered saddle stock row at the track, headed by the stallion Rex Montgomery. The name of the new association will be changed to the "American Saddle-Horse Breeding Farm," and it is Spalding's intention to establish a breeding farm which will add much to California's reputation for high-class stock.

Hanford is holding one of the old fashioned country fairs this week that is being largely attended. The exhibits include all the products of that section of the State and the daily attendance has been large. There are 526 individual displays of fine stock and fifty-two varieties of fruits, vegetables and grain, all grown in Kings county, are shown. Sixty horses have been entered in the various races on the programme. Mr. T. C. White of Fresno has officiated as presiding judge of the races. The stock is being judged by Professor Trus of the University of Nevada.

The race won by Dan T. at Columbus last Friday is the fastest four-beat race ever trotted, and lowers the previous record made by Lord Derby last season at Readville by a good margin. The Columbus race was trotted in 2:06½, 2:07½, 2:08½, 2:07½, an average of 2:07½; the former record was 2:06½, 2:07½, 2:08½, 2:09, the average being 2:08 1-16. Another fast four-beat race last week was the one won by McKinley, also at Columbus, the average time for which was but one-eighth of a second slower than those of Lord Derby's race. The main difference between Dan T.'s race and Lord Derby's is that the latter was a three-in-five, while Dan T.'s was a two-in-three.

There was another hot race at the five-eighths track at Sixteenth street station, Oakland, on Sunday last. There were four starters. Messrs. Bellingall, (senior and junior) both driving mares by Secretary, Mr. J. T. Moran with his Grand Moor mare and Mr. Hein with a Guy Wilkes horse. All were trotters except Mr. Moran's mare. The heats were best two in three, once around the track. Bellingall, Sr. took the first heat, Mr. Hein the second, and Bellingall, Jr. the third. The fourth heat was a dead heat between Bellingall, the younger and Mr. Hein. The race then went over until the following Sunday. The heats were trotted around 1:30, a 2:24 gait. The contest was solely for sport, being neither for money nor marbles.

Fanny Dillard, that lowered the world's champion record for pacing mares to 2:03½ at Columbus, O., on the 22d inst., was got by Hal Dillard 2:04½, son of Brown Hal 2:12½. Her dam, the great brood mare Ellen M., that also produced Hal B. 2:04½, was by Blue Boy, a son of Wilson's Blue Bull, and out of Punch, a daughter of Wilson's Blue Bull. The Blue Bulls were at one time considered soft, but the produce of this inbred mare, Ellen M., are game enough, and have plenty of endurance. Most of the foals that Blue Bull got during the first of his stud career were undoubtedly from an inferior class of mares. It is not surprising that many of the produce of such mares should not prove game race-winners.—*Am. Horse Breeder.*

There are three trotters and ten pacers that have beaten 2:03 and of these eleven are descendants of Hambletonian 10. The trotters are Lou Dillon 2:00, Major Delmar 2:00, and Cresceus 2:02½. The pacers are Prince Alert 1:57, Dan Patch 1:59, Star Pointer 1:59½, John R. Gentry 2:00½, Joe Patchen 2:01½, Little Boy 2:01½, Robert J. 2:01½, Anaconda 2:01½, Dan R. 2:01½ and Coney 2:02. The two that are not directly descended from Hambletonian are Star Pointer and Dan R. Prince Alert, Major Delmar, Joe Patchen, Little Boy and Robert J. are the same relative distance removed from Hambletonian, being great-grandsons, in the next remove, or great-great-grandsons, come Dan Patch, John R. Gentry, Anaconda, Coney and Cresceus. While Lou Dillon is the furthest removed from the "Hero of Chester," she being a great-great-great-granddaughter.

Cassiar, brown pacing stallion by Soudan, dam Carrie Malone, by Steinway, took a record of 2:25 over the Ferndale half-mile track at the meeting held there last month. Cassiar is a handsome big ten year old stallion that had not been used in the stud or trained until Mr. W. J. East, of Fortuna, Humboldt county, purchased him last year from Mr. Wattles of Healdsburg. Mr. East had bred Cassiar to quite a number of mares last year and this spring, and concluded to train him. The stallion showed lots of speed and his marks of 2:25 should be 2:15 or better next year if he is trained and raced. Cassiar is one of the best bred stallions in the country. His sire Soudan was by Sultan out of Lady Babcock by Hambletonian 7:25. Carrie Malone, the dam of Cassiar, is an own sister to Chas. Derby 2:20, Klatawah 2:05½, Katrinka G. 2:14½ and others, her dam being the famous Katie G. by Electioneer.

A dispatch from Lexington, Kentucky, dated October 2d, says that E. W. Shanklin, Secretary of the Kentucky Trotting Horse Breeders Association, dropped dead that evening from heart disease. The sad occurrence is particularly unfortunate as the wide-awake horseman was just on the eve of what seemed to be the crowning effort of his life—in fact, the hard work in connection with it is no doubt in a measure responsible for his untimely death. He had been working like a beaver to make the meeting of the Breeders Association, which opened Wednesday, the best in its history, and had succeeded in receiving a wonderfully large entry list, averaging twenty-four in each class. He had also broken the conservative policy of the association and exhibition miles, and had secured the champion pacer and champion trotter, both to go against their records. In addition to this he was also engaged in planning a great sale of horses during the meeting, under the auspices of Shanklin & Walker, having dissolved the partnership so well known to horsemen of Woodard & Shanklin last year. He has been secretary of the Breeders Association just two years, having been elected after Horace W. Wilson, the former secretary, went to New York. His selection at that time was proof of the management's belief in his ability, as he was chosen out of many applications from the best in that line in the country.

Close of Grand Circuit.

CINCINNATI, Oct. 2.—Prince Alert paced a mile in 2:01½ at Oakley Park this afternoon without the wind shield and over a track that was rendered a full two seconds slow because of the rain of last night. The gelding was accompanied by but one runner. Mart Demarest drove him. The racing dragged throughout the afternoon and when darkness came only two events had been finished. Summary:

Pacing, 2:17 class, purse \$1000—Daniel J. won second and third heats in 2:10½, 2:11½. Directum Miller won first heat in 2:10½. Ethel Mack, Irish Elder, C O D, Dutch Mowry, Black Pet, Money Musk and Charlie C also started.

Pacing, 2:02 class, purse \$1500—Harold H won second and third heats in 2:05, 2:06. Daniel won first heat in 2:07. Dan R and Captain Spbinx also started.

To beat 1:59 pacing—Prince Alert (Mart Demarest), lost. Time by quarters, 30½, 1:00½, 1:31½, 2:01½.

October 3.—At the meeting of the Oakley Park the last of the Grand Circuit of 1903 was brought to a successful close this afternoon. The splendid sun and high wind of the morning had dried the track out until it was at its best for Major Delmar's trial against time, which E. E. Smathers came here to witness. The best the Major could do was 2:03. Driver Alta McDonald came on the track with Major Delmar at 4 o'clock. Two thoroughbreds, ridden by Jockeys McIntyre and Kane, accompanied the gelding. The second time down McDonald nodded for the word. Major Delmar went to the quarter in 0:30½, to the

Pacing, 2:16 class, purse \$1000—Black Pet won in straight heats. Time 2:11½ and 2:08½. Angus Pointer, Fred H., Hard Case, Ravenna Wilkes, Judge Hughes and Star Onward also started.

Trotting, 2:18 class, purse \$1000—Gray Gem won in straight heats. Time 2:13 and 2:12½. Grace Keller, Bonner and Prince Caton also started.

From Old Virginia.

RICHMOND, VA., Sept. 20, 1903.

California trotting blood is popular in Virginia now and is likely to be even more so as the seasons progress. One of the handsomest and most bloodlike of trotting sires in the State is Kelly 2:27, son of Electioneer and famous thoroughbred Esther, dam of Expressive 2:12½. He is owned by James Cox, of the beautiful Belgravia Farm, near Mt. Jackson. Helen Wilmer, the chestnut filly by Kelly and the great broodmare Erena 2:19½ by Alcyone, is a rare good looking specimen and is of exquisite quality and finish. She gives promise of making a trotter, too, and is now being developed with care. One of the matrons at Belgravia is the Palo Alto bred mare Libby Whips, a hay of massive build, by Whips from Amrah, the dam of Electwood 2:29½, by Nutwood. She is in foal to Kelly.

By odds, however, just now the most popular stallions in the whole State are Colonel Sidney and Sidney Prince 2:21½ in the stud of Floyd Brothers, Bridgetown, by whom they were purchased from the estate

season in 2:08 or better. While being driven to polo in 1902 Tiverton and Tudor Chimes made a great pair and the same is likely to be said of the Gallileo Rex horse and Senator Mills when Mr. Gwathmey hooks them double some fine day and shows a mile close to 2:10. As a road horse there is not the superior of the Senator in New York City and Mr. Gwathmey values him in proportion. W. J. CARTER.

The Shortage in Draft Stock.

A short time ago mention was made in these columns of the large number of three-year-old horses that are being sold in the Chicago market to buyers who make a specialty of supplying draft feeders to Eastern professional fitters. At the time the last paragraph was printed it seemed as though a serious drain was being made on the resources of the breeding districts, but then information was not at hand in full. Now we are informed that the increase in receipts in Chicago consists almost wholly of these three-year-old horses, and that farmers are being paid prices which tempt them to part not only with the colts but with the fillies. Attention has been called time and again in this department to the fact that there is bound to be a much greater shortage of draft horses of marketable age next year than there is this year, and yet the sale of the three-year olds seems to go on unabated. It may be good policy for breeders to sell their colts for \$150 to \$200 at three years of age, but it would seem after all that it would be better business to keep them another year and get \$100 more for them in addition to the work they will do between now and 1904. If the Eastern professional fitters are buying three-year olds it is because they cannot get five-year-olds, or even four-year-olds, and that being true there must be a shortage of marketable prospects in the breeding localities. Hence there is little doubt that we are approaching the famine of good draft horses which has been so often foretold by the best posted men in the trade. To the man who has studied the matter from the days of low prices to the present it appears that horses are going higher in price by many dollars than they have ever been in this country.—Breeder's Gazette.

Don't Like the Wind Shield.

M. W. Savage, owner of Dan Patch, Directum and Roy Wilkes, objects to the manner in which Prince Alert made his record of 1:57. He says: "In the minds of people who understand the facts Dan Patch is still the champion pacer, because he will be judged by his wonderful miles under natural conditions, just as horses race every day. I certainly must protest that the freak mile of Prince Alert, made at the Empire City track, is not entitled to official recognition except as a freak mile made by a hopped pacer behind a large canvas wind shield which entirely broke the resistance of the atmosphere. If Prince Alert will come out from behind his wind shield and pace a mile in less than 1:59, I will take off my hat to him as the 'hopple champion.' If he will lay aside hopples and 'strong drink' and beat 1:59, I will hail him as champion pacer; but until he meets these conditions I do not believe he has any right to the title 'champion,' and I am sure that every fair-thinking horseman will admit that position is correct and that Dan Patch is still the champion harness horse of the world."

Robert I. 2:08 3-4 by Hamb. Wilkes
A California Horse that has Raced Well in the East This Year

half in 0:59½, to the three-quarters in 1:30½, and the mile in 2:03.

The 2:09 pace, which came over from Friday with four heats decided, went to Baron Rogers easily. Jolisco's hobbles broke and Driver McConnell fell out of the sulky. In the stretch Joe Pointer, the original favorite, made a break.

Gray Gem had the distinction of winning two races in one day. He took the deciding heat in the 2:16 trot at 1:30 o'clock, and two hours later he annexed the 2:18 trot. John H., a prohibitive favorite, won the 2:13 pace in straight heats. Charles Marvin drove Great Spirit to a straight-heat victory in the 2:23 trot, and Black Let took the 2:16 pace in the same easy fashion. Summaries:

Pacing, 2:09 class, purse \$2000, four heats Friday—Baron Rogers won third, fourth and fifth heats in 2:09½, 2:10 and 2:08½. Jolisco won first and second heats in 2:09 and 2:10. Joe Pointer, Trilby Direct, Milton, Cubanola, Jolisco, Sol Loomis, Robert I., Miss Wilamont, Royal Wilkes and Sufreet also started.

Trotting, 2:16 class, purse \$1000, one heat Friday—Gray Gem won two straight heats. Time—2:11½, 2:09½. Gracie Keller, Pat Ford, Parthia, Millard Sanders, Almerion, Austin Boy, Ben Potts and Direct View also started.

Pacing, 2:13 class, purse \$1000—John M. won in straight heats. Time—2:10, 2:09½. Dolly Carr, Czarina W., Cousin Madge, Daphne Direct, Taylor H., Illinois and Credette also started.

Trotting, 2:23 class, purse \$1000—Great Spirit won in straight heats. Time—2:10 and 2:09½. Bessie Brown, Bermuda Maid, Alberto, Ax Delight, Bessie Birchwood, Winnie Wright, Anna Dillon, Hemenway, Yankee Boy, and Grocery Maid also started.

of the late G. Valensin, their breeder. Both are by Sidney 2:19½, the former out of Maud R., dam of Sihyl 2:27½, by Hambletonian 725, and the latter from Crown Point Maid, dam of Sidney Maid, by Crown Point. This blood is better liked now, of course, seeing that Sidney Dillon, another son of Sidney, is credited with Lou Dillon 2:00. Both are sires of standard speed, but the get of Sidney Prince come early and his hook has been filled to overflowing for several seasons past and mares turned away. The Messrs. Floyd purchased last fall in New York, to be used as a stock horse after being developed, the good looking colt Rod Oliver, by Electrite, dam the great producer Lady May, by Port Leonard. Rod Oliver is a full brother to the chestnut gelding Blondie 2:13½, owned by the former Virginian, Mr. A. B. Gwathmey of New York, and one of the fastest horses in that well-known amateur reinsman's private stable. In the matter of ownership and ability as a reinsman Mr. Gwathmey stands at the head of all Virginians. He, too, is partial to blood from the "Golden State," because four of his fastest horses are by California bred sires, Senator Mills 2:12½, winner of the Clay Stake this season, being by Electrite, as is Blondie, while Tudor Chimes 2:13 is a son of Chimes, and Forney 2:19½ is by Sidney Prince, dam by Bendee, son of General Benton. Forney can trot a half in one minute and conditioned to carry his speed further I look for him to trot below 2:10 another season. The crack race performer of the Gwathmey stable, however, is Tiverton 2:11½, the bay gelding by Gallileo Rex, who has been timed on different occasions this

Horse Owners Should Use

GOMBALT'S CAUSTIC BALSAM

The Great French Veterinary Remedy.
A SAFE, SPEEDY & POSITIVE CURE.

Prepared exclusively by J. E. Gombault, ex-Veterinary Surgeon to the French Government Stud.

SUPERSEDES ALL CAUTERY OR FIRING.

Impossible to produce any scar or blemish. The safest best Blister ever used. Takes the place of all blinments for mild or severe action. Removes all Bunches or Blisters from Horses or Cattle.

As a HUMAN REMEDY for Rheumatism, Sprains, Sore Throat, etc., it is invaluable.

WE GUARANTEE that one tablespoonful of Caustic Balsam will produce more actual results than a whole bottle of any blinment or spavin cure mixture ever made.

Every bottle of Caustic Balsam sold is warranted to give satisfaction. Price \$1.50 per bottle. Sold by druggists, or sent by express, charges paid, with full directions for its use. Send for descriptive circulars, testimonials, etc. Address:

THE LAWRENCE-WILLIAMS COMPANY, Cleveland, Ohio.

ROD, GUN AND KENNEL.

Conducted by J. X. De WITT.

Pheasant Hunting in Oregon.

Auspicious is the first of October, and pheasant shooting begins on both sides of the world—that is to say, it begins in Oregon for those pure souls who prefer a clear conscience to a broken law, and would rather carry a gun openly and fear no man, pockets full or empty, than have to take the gun apart and pocket the pieces and slink into town by back lanes and alley ways for fear of the game warden and his deputies—because the first of October had not dawned. I know a man who thought to himself and bragged to a friend that the game laws could not be enforced, writes Wallis Nash in the Portland Oregonian. So he took time by the forelock and started in two weeks ahead of the law-set day. Him the game warden "laid for," and met, coming into town with the beads of six China pheasants sticking out of the skirt-pockets of his jacket. It is reported that sad day that the sportsman had to mortgage his home for \$350 to pay a \$300 fine and \$50 for the expenses of his trial. Now he believes the game laws can be enforced, and so do I. "Broken with impunity?" "Of course, often, when the deputy warden's eyes are shut and when folks tell him, and he believes, that this sort of law never has been carried out and never will be while so many love killing China pheasants out of season." But let us get on to our China pheasants. This kind of talk about enforcing laws belongs better to us poor dwellers in Portland than to the happy few who are spending the too swift hours of this bright day in the grain fields and copses of the Willamette valley.

Every one knows that this pheasant of ours is the Ring-necked, or Chinese, or Denny. The last name it ought to bear after the Consul who brought these new settlers from their Chinese home and turned loose, I think it was ten pairs of them, in Western Oregon. We used to wonder if they would not all be killed off the very first season, for surely their bright colors seemed to make them an easy mark for the hunter for the pot, who lived then as I expect he lives yet, in every third farmhouse in these broad valley lands. But law protected them, and also, it is but fair to say, a generally diffused sense that these birds were a gift to all of us, and so it would be ungentlemanly and unsportsmanlike piece of greediness and selfishness to spoil the chances of their spreading by killing off these few first visitors.

And the mildness of our climate and the hold fighting nature of the bird, did the rest of it, so they lived and thrived and multiplied. The poor native birds put up a losing fight with them from the start. The big dusky grouse that one used to hear "hooming" in the cool mornings and misty evenings in the fence corners of the grain fields and along the draws and undrained swampy bits of our great valley, what has become of him?

Twenty years ago one could, and did, go out and get ten or fifteen of these at almost any time in September or early October. And then our ruffed grouse or native pheasant. He "drums" still. But like the brown humans before the all conquering white man, these pretty birds have retired farther and deeper into the recesses of our hilly woodland, and there maintain themselves where the imported bird does not care to follow.

Two broods a year and a dozen in a brood, no wonder that they multiplied so fast! What beauties they are as one sees the bright dash of scarlet in the head and the clear white collar shine in the sunlight as he looks boldly at you over the top of the wheat stubble!

But if you stop the huggy, gun in hand, and climb the fence, thinking him an easy prey, how he fools you. Fly? Not much; he runs and skulks along the furrow, out of sight in an instant, so that it is a fast dog and one up to his tricks that can force him to take wing. No man can run him down or get him up against his will, and that has been and is the salvation of him. Without a dog, and a good one, it is all but hopeless to hunt him, unless you fancy an all-day tramp for one or two chance shots as the birds fly across the road.

In strange contrast with his English cousin, the Chinese pheasant prefers the open fields. The corn patch near the farmhouse has great charms for him, or the grassy ditch, dry of water in our long Summer and early Fall, with its thick growth of weeds and timothy. He fears not man and haunts the vegetable garden. It used to be said of him that he did more harm to grain and vegetables than he was worth, but he has outlived that slander, as his crop full of weed seeds, bugs and grasshoppers at most times of the year will prove him the friend of man. Bold and aggressive, he will join the chickens close to the barnyard, and fight with the king of the poultry for supremacy. With his sharp spurs, his courage, strong legs and active habits he is no mean foe and a hattle royal between the wild and the tame bird is a sight to see.

The best dog to use is a fast modern Pointer—not one of the heavy lumbering sort, who putters along at a slow lope or trot, and thinks more of the manner of his going than of the pace he can put on. Mr. Pheasant just laughs at him, and you will see him pop over the fence before the dog is within half a field of him. But with the light-going, up-standing dog, liver and white, or yellow and white, who rapidly

crosses hack and forth in front of his master, and having struck the bird's scent presses quickly after him and gives him no time for his tricks, the turn of the game is the other way, the pheasant has to take wing, whether he likes it or not, and the gun gets its chance. The shots are nearly always long ones at the old birds, they take the best of care of themselves, but often the brood of just grown youngsters gets scared at finding the dog among them, squat down and fly up one at a time to their certain death by a steady shot.

I ought not to forget in telling of dogs, that the Gordon Setter, black and tan, if well bred, is just as fast as the Pointer, and generally less headstrong, more obedient and is easily, to my taste, the king of bird dogs. But the red Irish Setter is not far behind the Gordon and seems to be more easily obtained in this state. Many of us remember the red Setter, which was the constant companion of the good sportsman and good friend, the late J. W. Whalley. How that dog shone at work and play. And the Setter is so handsome and gentle and well behaved that I have known many drawing room ornaments admitted and approved by the ladies of the house.

Good luck, then, to the good sportsman. He is no trespasser, but for either love or money he has the right to start his dog and himself and his friend these lovely mornings, with which Oregon is now favoring us, from one of those cozy farmhouses, em- bedded in its orchard, now heavy with red and golden fruit, which abound in almost all the eight counties of this Willamette Valley. The fields are wide, the wheat stubbles only ankle high, the birds are plentiful and a long, hard tramp is before them. But close to the farmstead is the corn patch, its leaves already rustling in the soft breeze. And here is the first chance. Pedro, or Spot, or Laura pulls short up before a hundred yards is behind and the eager look of the eye and the tense drawn muscles of the crouching frame tell the tale. Quietly the guns move up, for here the birds will have to fly, not run, in this well-fenced lot. At the farthest end, in a moment, up flies the father of the brood, too near for him, though, and the shot tells. At the shot three or four youngsters flutter up and away, but pay toll with two of their number and the rest the sportsmen see skimming away in a long flight across the wide wheat fields. A good beginning, and so near the house that the birds can be left in the cool rather than be packed along in a close pocket or dangled from a belt, to be struck and half spoiled whenever a fence is climbed.

Then comes the wheat field and the dog is soon drawing on scent, and eagerly the sportsmen follow him; but it is a weary while before the birds are seen, and often have to be followed for distant flight after distant flight before they can be made to rise within shot of the gun. But there in the distance is a low copse of rose hushes and thick undergrowth, and there the guns get another chance. And so on and on while the sun is hot on one's back and the healthy sweat pours off one's face, and city legs get the least bit weary until welcome lunch time comes. For young birds and early in the season the afternoon is often the best time, so there is no rest for the wicked and the shadows lengthen on two weary men and a very tired dog. The blue lines of the far distant mountains grow distinct as the sun draws nearer to them, the air is absolutely still and clear, the stubble seems to hang around and catch the tripping feet, and home and rest are welcome indeed.

Washington Field Trials.

The Pacific Northwest field trials were run last week at Whidby island, near Seattle. There was a good attendance of sportsmen and the meeting was a very successful one. Prof. John A. Balmer of Cle-Elum, Washington, judged both the Derby and All-Age Stakes. Prof. Balmer has judged every trials the club has had.

Uncle Jim, (Count Whitestone-Sport's May Belle) an English Setter owned by J. A. Peebles of Seattle, won first in the Derby. John H. Schumacher of Los Angeles, owns the winner of second place, the English Setter Valita (California Bell Boy-Rod's Lark). Third money was divided between two English Setters, Cincinnati Nat (Ch. Cincinnati Pride-Ruth T.) owned by E. B. Roy of Seattle, and Count Whitestone's Chief (Count Whitestone-Sport's May Belle) owned by N. A. Weeden.

The All-Age was won by The Lady (Ch. Count Gladstone IV-Peachmark) Joseph E. Terry's game English Setter bitch. This win is all the more remarkable as Lady was put down just 60 days after whelping a litter of puppies. Lady won the Pacific Coast Members' Stake this year and was first in the Derby and second in the All-Age two years ago. The Seattle dog fleet owned by William Paulsell was second in the All-Age and Kilgariff (Orion-Mary Lou) was third. Kilgariff was a sensational winner of the Derby at Bakersfield last January. He is a wide ranger and worker and it was almost decided not to run him in the Northwest All-Age for the reason that the grounds at Whidby island were rather circumscribed and it was believed he would get off into the adjacent heavy brush or timber in search of birds and would thus have his chances handicapped for a place. It seems the dog had more wisdom than he was credited with. He is also owned by Mr. Terry.

A detailed account of the trials was received too late for publication in this issue.

AT THE TRAPS.

The Home Gun Club held the initial club live bird shoot at Pinole on the 4th inst. In the main event of the day nineteen shooters lined up. The race was at twelve birds, \$5 entrance. C. C. Nauman and Clarence Sylvester were the high guns in this event. Nauman grassed all his birds in each event he entered. Leo Kincannon scored straight in a six bird match, but did not keep up his gait in the twelve bird race. C. Sylvester and "Jack" Hall each did some excellent shooting. The traps were looked after by W. R. Murdock. The birds supplied were good flyers and the shoot was voted a success by the shooters in attendance. Besides the Pinole shooters present, a number of trap shots from the city and other points took part in the shoot. It is the intention of the club to have the grounds fitted up for live bird shoots, which will be one of the features for next year. The scores made Sunday are the following:

Event No. 1, 6 pigeons, \$2.50 entrance, 3 moneys, distance handicap—

Table with names and scores for Event No. 1. Includes J. Birmingham Jr., C. Sylvester, L. Wood, J. C. F. Hall, R. K. Smith, W. B. Stevens, W. Hanson, Hall, and Dr. Hutton.

* Dead out

Event No. 2, 6 pigeons—

Table with names and scores for Event No. 2. Includes Haight, Nauman, Smith, Wood, Sylvester, Hansen, Hutton, Jefferys, Packer, and Birmingham.

Event No. 3, 6 pigeons, \$2.50 entrance, 3 moneys—

Table with names and scores for Event No. 3. Includes Wood, Smith, Huber, Masterson, Wattles, F. Knauft, H. Knauft, Kincannon, Sylvester, Nanman, Haight, Hutton, Birmingham, Pisan, McDonald, Han, and Hall.

Event No. 4, 12 pigeons, \$5 entrance, 3 moneys, distance handicap—

Table with names and scores for Event No. 4. Includes Dr. Hutton, Hall, Sylvester, Nauman, Birmingham, McDonald, Kincannon, Huber, Hansen, Packer, Jefferys, F. Knauft, H. Knauft, Woods, Haight, Pisan, Masterson, Wattles, Fish, Sylvester, Hall, Birmingham, Nauman, W. Hansen, Kincannon, Woods, Hutton, Nauman, H. Hansen.

Six bird shoot—

Table with names and scores for Six bird shoot. Includes Haight, Hutton, Birmingham, Nauman, W. Hansen, Sylvester, Hall, and Woods.

Six bird shoot—

Table with names and scores for Six bird shoot. Includes Hall, Birmingham, Haight, Nauman, Hansen, Kincannon, Woods, Hutton, Nauman, H. Hansen.

The Marysville Gun Club will hold a blue rock tournament tomorrow. Some recent Sunday practice scores by members are the following:

Results with double birds were poor, scores averaging low. At 10 single birds the following scores were made: J. Weber 10, E. Barthe 10, George Peacock 9, George Phillips 9, J. L. Hare 9, J. C. Haugh 9, W. Bedeau 9, Frank Bremer 8, Jack Colford 8, T. Giblin 8, W. Spillman 8, Frank Marshal 7, Ed Heisch 7, R. Moncur 7, H. Onstott 6, K. Gordon 6, Clark McQuaid 6.

The following scores were made by members of the Marysville Gun Club in blue rock practice last Sunday:

Table with names and scores for Marysville Gun Club practice. Includes E. Barthe, W. C. Spillman, J. Giblin, W. Spillman, J. Weber, J. S. Collins, W. Bedeau, G. Peacock, R. F. White, F. S. Marshall.

A projected live pigeon shoot at Blue Island, Chicago, was interfered with recently by John G. Shortall and three other agents of the Illinois Humane Society. The projectors of the shoot were notified that they would all be arrested if they wounded any pigeons without killing them and the event was declared off. The shoot had been arranged by members of several gun clubs and a park at Blue Island was selected as the place for holding it. It was to have begun early in the afternoon and just as the names of the first marksmen were being called the agents of the Humane Society appeared. There was a consultation of the gun club officials and it was finally decided to call the meet off. It is impossible in an event of that kind to cause the instant death of birds that have been shot and the sportsmen argued that there was not enough sport in the event to pay for the consequent trouble of being arrested.

Several of the members of the Watsonville Rod and Gun Club visited the club grounds last Sunday with a view to breaking a few records as well as blue-rocks. The latter were shattered to some extent but the former were not lowered to any perceptible degree. The first prize was won by James Johnson and in shooting off a tie with Victor Petersen, T. J. Alhright won third medal. The complete score out of a possible 20 targets was as follows: James Johnson 15, T. N. Alford 14, T. J. Alhright 13, Victor Petersen 13, Emel Malmgren 12, J. E. Willoughby 12, A. L. Bixby 10, Henry Schroder 10, James Redman 10.

GOSSIP FOR SPORTSMEN

Sportsmen will be glad to know that the trip from Klamath Hot Springs to Pelican bay, a portion of Klamath lake, in Oregon, can now be made easily and in a satisfactory manner. The region round about Klamath Hot Springs is noted for its fishing and hunting, and should the hunter or angler desire to go farther north into Oregon the route here given will take him into a fish and game country of abundance.

From Klamath Hot Springs there are seven miles of staging to the Klamath Lake Railway, and then a ten-mile ride to Pokegama, thence by stage twenty miles to Keno, on the Klamath river. From this point the trip up the river to the falls, a distance of twenty miles, is made in a launch. The journey is continued above the falls by launch, thirty miles up to and through the turgid green tulle-colored waters of Klamath lake to the ice cold crystal reaches of Pelican bay.

Mr. Floyd Judah of this city and W. I. Lembkey, United States custodian at Pribilov Island, recently left the Hot Springs, where they had been successful in bagging deer and catfishing trout and salmon, for a continuance of the outing on and about Pelican bay.

A stay of three days at Pokegama was made in the "white city," where Al Lindley, a former shining light of the diamond field, holds sway over a hotel, every department of which is under canvas among the tall pines close to the Klamath river. Mountain quail were numerous and afforded good sport one day. In Fall creek the day following sixty brook trout running from nine to eleven inches in length were taken.

Continuing the trip to Pelican bay, while the launch was speeding through this grand fishing water, large rainbow trout, five to eight pound fish, were frequently seen swimming around and underneath the boat. A number of these fish, in splendid condition, running from two to five pounds, were taken on trolling lines. From 125 to 150 feet of line and a No. 2 royal coachman or professor fly was found to be the proper tackle. Pelican bay is fed by a number of large springs, whose perennial torrents burst through the sandy bottom of the bay and make this portion of the lake an ideal resort for anglers. The water here is always at a temperature of from 42 to 44 degrees.

At Pelican bay several dozen English snipe were shot and mallard ducks were found in abundance. Klamath lake is a noted breeding ground for mallard, where the birds find a favorite food—the wocus root. Immense flocks of widgeon, teal and sprig were making their appearance at the lake two weeks ago. These birds will shortly come south and entertain California sportsmen.

Dr. Julian L. Waller has just returned from a deer hunting and fishing trip in the country along the McCloud river, twenty seven miles above Bairds. In the hunting party were the doctor, William Ellery, George Ellery, John Ellery and Mr. Blatchley of this city. The camp larder was supplied with trout by Mr. Blatchley, and the doctor furnished the venison. He killed three deer—a Pacific buck, weighing 175 pounds; a 90-pound spike buck, and a three pointer that scaled 125 pounds. George Ellery bagged two small black bears.

The regular annual meeting of the American River Fish and Game Association was held last Saturday at Newcastle.

This association was formed in the fall of 1901, among the residents and property holders on the western side of the American river, in Placer county, and it extends for about ten miles along the river and west of that stream to and in places beyond the Auburn and Folsom county road, with an average width of about three miles.

The reports showed a great increase in game within the limits of the preserve, five deer having been killed within the week preceding the day of the meeting, while quail and other small game show rapid increase.

In the matter of placing a fish ladder at the State Prison at Folsom it was decided to take up the subject vigorously, and to insist that the State Fish Commissioners give this the attention that has long since been promised. The people of Placer county living above the Folsom dam do not know why they have been so long ignored in this matter, and they do not propose to any longer submit to such imposition, and the wealthy private corporation that has so long maintained this obstruction will be asked to "come off the perch."

The fact that large quantities of dead salmon have been recently observed lining the banks of the Klamath river proves that the fish are now, for the first time in years, able to swim up the Klamath to the various spawning grounds of the river and its tributaries. Salmon have this season gone up to and through Lake Klamath into the Williamson river and up to its headwaters to spawning beds that have heretofore been inaccessible, whilst the dam at Pokegama obstructed their progress up stream. Since the dam was destroyed things have changed in favor of the fish and the fraternity of anglers.

The dead fish seen on the Klamath river were all spent fish. The salmon, unlike the steelhead, after spawning, soon dies, but a very small percentage of the males, kelts, so-called, ever reach salt water again. The female salmon invariably dies after spawning.

The officers of the Jackson, Amador county, Fish and Game Protection Association recently wrote to the Standard Electric Company for permission to stock Taheau reservoir with black bass; this species of fish being selected as the most suitable under the circumstances. Early last week an answer was received from Frank Pierce, the president, stating that the advice of the engineers of the company was against the proposition, and the project could not be entertained at present. The precise ground for declining

the proposition was not stated. Whether it was feared the fish might get into the pipe and interfere with the flow of water, or whether the tramping of anglers on the banks of the reservoir might increase the risk of breakage, is not known. The project of fishing in Taheau reservoir has gone a glimmering for the present. As a change of management has taken place in the company, it may be that the matter will be brought up again in the near future.

The salmon season in Monterey was a disappointment this year, the fish caught in the early part of the summer being all uniformly small and not desirable for packing. This being unusual, the Sacramento river people took counsel with the Fish Commission, and were informed that the fish caught this year were of a variety imported from the Kennebec river in Maine twenty-seven years ago and planted in California waters. From that time to the present these fish, which were planted here for the benefit of sportsmen, on account of their gameness and the readiness with which they take the bait, have practically been lost sight of, and their appearance in large numbers this year was a great surprise to the Fish Commission.

Later in the season (much later than usual) the large Quinnet, or Chinook salmon, which come regularly to Monterey bay, made their appearance, and of these a fair pack was made. This run of the fish also afforded anglers greater sport than was had for years past.

The Big Basin in Santa Cruz county, a tract embracing altogether about 65,000 acres of territory, is regarded by the comparatively few lucky sportsmen who are familiar with its hunting and fishing possibilities as an ideal region in every respect—for the hunter, angler, camper and all those who love nature and who study and follow the teachings of the school of out doors.

As a deer hunting resort this country cannot be excelled, on the slopes of the hogback between the Waddell and Gazos creeks, a tract some twelve miles long, level and hard as a street pavement on the top, which is above the timber line, the hunter can always find hucks among the chalk cliffs rising back from the red wood and chaparral covered terraces commencing at the creek banks.

W. W. Richards, a well-known local devotee of rod and gun, has exploited that region for bucks recently with success. Sportsmen who have camped there this season, had "meat hanging in camp all the time."

This region is good for a California lion or wildcat almost any time. Thousands of red foxes also make this country their habitat, when their favorite food, manzanita berries, is in season. Bears were plentiful years ago, but are now pretty well killed off. "Old Man" Waddell, a lumberman, after whom Waddell creek is named, was killed in Bear Valley, another good deer hunting ground, by an immense grizzly bear some years ago.

Mr. Richards, and a party of San Jose members of the Sampervirens Club, composed of Dr. Osborne, Dr. Walker, E. E. Goodrich and Mr. H. Harris, have selected a tract on the confines of the Basin, which will give the club a camping ground, comprising about 100 acres. Mr. Richards and Ben Maddock, a woodsman and hunter, who has lived in the Big Basin for years, have recently cut some trails into good hunting and fishing territory.

A road from Santa Cruz to Pescadero through the Big Basin will soon be commenced by the Santa Cruz Supervisors. When the highway is completed it will be a boon to outing parties and sportsmen.

In the Federal Court at Los Angeles Judge Ross decided a case last week which is of interest to sportsmen. The case in point was in reference to the limit bag on game. The Judge decided that the supervisors of any county can not alter the wording of the general law, which places a limit of twenty-five on the number of quail a sportsman may kill in one day; that the supervisors may close the season if they please, but must not increase or decrease the number of birds granted by State law.

Champion pugilist Jim Jeffries is quite an ardent sportsman. He returned to Los Angeles last week after having enjoyed a short hunting trip in the Colorado river "bottoms." He gave a rather graphic account of his experiences, saying:

"We did the thing right. Got a 20-foot boat of the kind they use on the Colorado at Yuma, and it carried the five men in our party nicely. Talk about your game countries, why that Colorado River is the grandest thing I ever saw. We started out killing ducks and geese for 'grub' with our guns, but the big Indian, Frank, who was my special guide, told us to take sticks to them, as it was cheaper. Without any bother, we could get all we could eat that way. And I never saw such ducks. Why they were as fat as butter, and nearly all young ones, just getting able to travel around. There is every kind of water bird there that I ever saw before, and some that I never saw anywhere else.

"I got two big wild hogs myself. Frank, the Indian guide, is a bigger fellow than I am—six feet four tall, and as strong as an ox. He had a pack of dogs, and they did good work whenever we were anywhere near the hogs.

"One of mine was a big boar that I first caught a glimpse of lying in the tules. There are tules all over that country, and they are the highest I ever saw; twenty feet long some of them. Well, I tried to get a shot at that pig, but he was too quick for me. I could see his tusks, and knew he was a boar, and a big one, so I naturally wanted to go in and get him. Frank wouldn't hear of it; said the hogs would eat me and him and the dogs and everything else. Finally I said I was going into the tules after the pig, and Frank says "all right, you hossy man," and in he came, too. I wouldn't want a better guide than that

fellow. Well, to make a long story short, I killed the pig at the first shot. They die pretty easy if you happen to hit them just right. He was a whaling big fellow, but for some reason was too thin to be much good. I didn't get to eat any pig meat to amount to anything while there.

"Along the edges of the Colorado, below the American line, where it is a fine big stream, there is a lot of the finest grass and cattle feed I ever looked at. The cattlemen use it now, but deer are very plentiful there and other game in it, too. In some places the deer have trampled regular runways through the tules. If I had had more time I would have shot some of those big blacktails. Everything we got except that pig, seemed to be in fine shape. The ducks breed there by the million, and even the young ones are fat.

"The worst complaint I have to make about the place is the mosquitoes. They are just as plentiful as everything else. And they are always hungry. The cattlemen told me they sometimes killed the cattle for them, and I believe it, for they nearly carried Dave and I off several times. Finally we got out in the river and anchored to a snag at night, then we did not suffer from them so much.

"Talk about raining. We don't know what rains are here. One afternoon about 4 o'clock while Brandt, Martinez, Frank and I were in the boat, an electrical storm broke over our heads. I was scared. We had ten pounds of dynamite in the boat, and in would have been all off if some of the lightning had hit near us. But it didn't. The rain hurt us worse than anything else. From 4 that afternoon to 6 the next morning it came down like pouring water out of a pail, I guess it was what they call a cloudburst. We had to bale out the boat. It would have sunk her if we hadn't worked lively. In half a minute I was drenched to the skin. The rain came driven by a gale of wind and it was about the nastiest storm I ever saw. They say it usually rains that way down there.

"There is as good fishing in the Colorado country as there is shooting. We got a lot of fine mullet; one jumped into the boat and hit my arm.

"Along the shore the coyotes come out and look at you as if they were not a bit afraid. I never saw such a hunter's country in my life. Some day I'll go back there again. I sure can't be beat."

Bulldogs at the Crystal Palace.

The London Bulldog Society held its twelfth annual show at the Crystal Palace on Tuesday and Wednesday, September 8th and 9th, when there was quite a representative collection of exhibits, although some of the best known winners were conspicuous by their absence. The entry was not quite so large as that obtained at last year's exhibition, but 137 dogs, representing more than double that number of entries, were bonched in the center transept. Of this total, however, seventeen were French Bulldogs, all of which had flat ears, there being no representatives of the toy Bulldog, for which classes had been arranged. Mr. W. G. Smart judged the large Bulldogs and Mr. H. C. Brooke the small, the former taking great care in selecting the winners, it being late in the afternoon of Tuesday before the final awards were made.

Commencing with the open class for dogs exceeding 45 pounds, Mrs. Marley provided the winner in Felton Prince, an active, good all round Bulldog, with the exception that he should have a wider underjaw; he was, however, somewhat closely pressed by Mrs. Waterlow's Nuthurst Doctor, who is also a good mover and a typical heavy-weight Bulldog; he is superior in skull to the third prize winner, Mr. G. R. Murrell's Lord Burley. Mrs. Marley was again to the front in the corresponding class for bitches with Felton Duchess, who, in body and head properties, cannot be improved, but she is faulty in carriage of ears; Mrs. Ford's Flora Venn, who was second, is also the right stamp, but she is scarcely so active as Mr. W. J. Pegg's Woodcote Sweetface, who was next in order. This was a difficult class to judge as there were several good bulldogs in competition, notably Mr. Atkinson Jewett's Floradora, who has a capital head, but falls somewhat in body, Dr. J. H. Skeen's Cypripedio, and Mr. G. W. Richard's Daisy Dump-llog.

In open dogs not over 45 lbs. the first and second were easily found in Mrs. W. H. Ford's Lord Milner and Mr. G. Milledge's Master Merlin—the former sturdy in build and short in the back, with well placed shoulders; the latter remarkably good in head and wrinkle for a puppy, but rather too small. This is the puppy that created such a sensation when he was first exhibited at the Bulldog Club Show at Kensington. Mr. Pegg's well-known Woodcote Cervantes was third, and Mr. J. Knewstubb's Black Mask reserve, the latter in poor condition, but a sound, useful dog. Of the remainder Mr. A. Ferguson's Swashbuckler was the best, but this dog still wants more spring of ribs. In bitches not over 40 lbs. Mrs. Ford's Lady Letty, who won, was shown too fat, a much better mover being Mrs. Crocker's Buddug; the latter, however, was not quite so short in the back, a remark which also applies to Mr. Atkinson Jewett's Kentish Pride, who was third, but has a well-finished face. Next came the limit classes, when in large-sized dogs Mr. C. H. Chandler's Jahberation was the winner, with Mrs. Marley's Felton Baron second, who is superior in head 'out does not stand nor move so well. Florodora stepped up to first in hitches, and then in medium weight dogs Mrs. Marley's Felton Regent and Mr. Pegg's Woodcote Consolation were first and second, with Lord Burley again third. Following Lady Lettie in medium weight bitches was Mr. Dack's Amber Duchess, a young bitch of considerable merit.

Nothing new came out in light weight dogs, and the pick of the bitches was Mr. P. May's Prima Donna, just a fair all-round specimen. The chief winners in

novices were Mr. Harry Layton's Royal Britain's Pride, Mr. G. R. Murrell's Miss May Matador, Mrs. Taylor's Juniper, and Mrs. Clarke's Mersham Soda, and most of the same dogs came over again in the junior classes. The championships with the chief special prizes were won respectively by Mrs. Marley's Felton Prince and Mrs. Ford's Lady Lettie, the latter exhibitor winning the breeder's challenge cup for the best dog with Lord Milner, and Mrs. Crocker that for the best bitch with Buddug, and Mrs. Marley carried off the medals for both braces and teams.

Of the French Bulldogs under 28 lbs., Mrs. Gregory had the best in Beau of Ashfield, having a slight advantage in squareness of muzzle over Lady Lewis' Harpton Crib. Neither is quite so good in body formation as Mr. Chas. Waterlow's Bohs, who was third; and in bitches Mr. O. P. Traherne's Petite Suzette just managed to score over Mrs. Waterlow's Coquette, the former being somewhat shorter in back. Beau of Ashfield won again in dogs under 24 lbs., with Mrs. Traherne's Pax a very good second, the latter squarer in muzzle than most of the breed and more cobby in build. The hitches of the same weight were a repetition. Mrs. Waterlow had the best brace, and Lady Lewis the best team.

DOINGS IN DOGDOM.

In the departure of Mr. J. H. Dorian, this week, for a permanent residence in Chicago, the ranks of the local fancy and particularly the Cocker Spaniel Club, have lost the direct support of an enthusiastic, painstaking fancier and a thorough sportsman. Mr. Dorian, since his advent among local doggy circles has been most agreeably prominent in support of doggy affairs not only in this city but on the Coast as well. Mr. Dorian has been enviahy successful as a breeder and exhibitor of St. Bernards and Cocker Spaniels and leaves here with the good wishes of a host of friends, both socially and in business circles.

Jessie Gladstone III, a well bred and thoroughly broken English Setter, was killed by a train near Chico last week. She was owned by O. H. P. Sheets, a popular member of the Soto Gun Club.

The premium list for the December show of the Pacific Collie and Old English Sheep Dog Club in this city, December 2-5, will go to press October 16th.

The officers of the club are: P. W. Morse, President; Chas. R. Harker, Vice-President; Norman J. Stewart, Secretary-Treasurer; C. R. Harker, O. J. Albee and J. C. Berrett, Bench Show Committee.

The ladies' auxiliary committee consists of Miss Della Beach, of San Jose; Miss Sargent, of Sargents; Mrs. Bradley-Dyne, of Saturna P. O., B. C.; Mrs. W. W. Peaslee, of Portland, Or., and Mrs. J. H. Dorian.

The judges for the show will be an Eastern selection. Mr. J. C. Berrett will act as Superintendent.

Entries for the Danbury Agricultural Society's twenty-second annual show this week numbered a total of 504. Under the supervision of Mr. James Mortimer the show promises to be a successful and interesting one. The fact that Wandee Kennels will have a dog or two in the show makes the exhibition more than usually interesting to local dogdom. The list of entries is as follows: Bloodhounds 10, Mastiffs 2, St. Bernards 22, Great Danes 11, Russian Wolfhounds 14, Greyhounds 3, Pointers 26, English Setters 50, Irish Setters 14, Gordon Setters 12, Clumber Spaniels 12, Field Spaniel 1, Cocker Spaniel 4, Collies (rough) 36, Collies (smooth) 12, Old English Sheepdogs 6, Poodles 7, Bulldogs 19, French Bulldogs 8, Bull Terriers 15, Airedale Terriers 11, Dalmatians 6, Chow Chows 1, Boston Terriers 19, Beagles 5, Dachshunds 11, Fox Terriers (smooth) 42, Fox Terriers (wire) 28, Irish Terriers 19, Scottish Terriers 21, Welch Terriers 9, Black-and-Tan Terrier 1, Whippet 1, Yorkshire Terrier 1, Toy Terriers 4, Pomeranians 14, Toy Spaniels 22, Miscellaneous 5. Total 504.

Mrs. Rosenberg has a stray Foxhound which came to her house recently. Whose dog is it?

Mr. Charles R. Stevenson, secretary of the National Beagle Club of America, writes us that at a recent meeting of the club Mr. Charles Quynn of Frederick, Md., and Mr. Thomas Shallock of Providence, R. I., were appointed Judges to judge at the fourteenth annual field trials of the club, which will commence on November 9, 1903, at Howardsville, Alhmarie county, Virginia.

The Pacific Collie & O. E. Sheep-Dog Club ask us to state in the columns of the BREEDER & SPORTSMAN that its premium list goes to press on the 16th of this month and that any members or friends of the club who have not already donated a special prize, but who may wish to do so, are requested to advise the Secretary, Mr. N. J. Stewart, Polhemus St., San Jose, before that date.

Cups and trophies have already been donated by friends of the club in such numbers as to assure that every breed will have at least some extra prizes to compete for.

The judges have not yet been definitely settled on, but in all probability all but one or two breeds will be taken by a prominent Eastern judge.

We hear that several Eastern and at least one English dog have been bought and are coming out to try conclusions with our Coast dogs at the December show. Sometimes these purchases are disappointing to their owners when the judging is over, but they are of the greatest benefit to Pacific Coast dogdom at large and for this reason we are always glad to hear of the arrival of noted dogs on the Coast.

The Pacific Collie and Old English Sheep Dog Club are getting up county cups for the best dog from each county. This is a new form of special prize and we think should promote a friendly and healthy rivalry between the counties. Sacramento, Los Angeles, Santa Cruz and Santa Clara counties have already donated cups and the club hopes that the fanciers of Alameda and San Francisco counties will not allow themselves to be unrepresented in the cup competition.

"The Call of the Wild" is the story of a man who was sewed up in a dog skin. So far as the book has any practical worth from a "doggy" standpoint it is absolute rot. The tale is strung out on sensational lines, the basis of which is a spoonful of fact, blown up with hushels of gas.

Opening of the Shooting Season.

Next Thursday, October 15th, will usher in the fall shooting season. Indications for good quail shooting have not been better for years past. The season has been most favorable for the valley quail and the birds have bred numerously, such is the report from almost every section of the State frequented by the bird. Ducks also have bred plentifully in the home breeding grounds. In the marshes of the bay counties, the tule districts of the Sacramento and San Joaquin, mallard and teal are much in evidence.

Sprig, teal and quite a few widgeon, all Northern visitors, have been gradually coming in for three or four weeks past. The ponds in some portions of the Suisun marshes have been "black" with ducks recently. In fact, the birds have been reported exceedingly numerous upon all of the preserves which have been baited for them.

For several weeks past sportsmen have been getting ready in gleeful anticipation of the opening days. Dogs have been conditioned, guns and hunting togs, etc., made ready for upland shooting. The sportsmen who prefer the marsh and waterways for their shooting, have had club houses, shacks and arks placed in order and stocked, boats and skiffs have been fixed up, decoys painted, and blinds erected, ponds have been cleared and baited up and everything is in readiness for the opening day of the season.

As we go to press a heavy southeast storm with attendant rain squalls is coming up, should the weather conditions be had for twenty-four or forty-eight hours it will be all off for the duck hunter on Thursday, for by that time the birds will be pretty well scattered. Quail hunting will not receive the set back that duck shooting will by a heavy storm.

Should the storm be a general one, it will expediate the arrival of the northern flight.

Striped bass fishing has been very good during the week and many large fish have been taken in the "straits" and about Angel Island and Belvedere. The best catches have been made early in the morning and late in the evening. Last Sunday there was over 300 pounds of splendid fish, displayed at the ark of the Pacific Striped Bass Club.

Black bass fishing near Hilton on the Russian river is excellent at present. John McGill and C. F. Farley sent ten fish to this city, one day this week, that averaged nearly three pounds weight each. Live minnows was the bait used.

Good trout fishing can now be had near Cisco.

Salmon grise have been caught at Powell street wharf this week.

TRADE NOTES.

We acknowledge the receipt from the E. I. Du Pont Company, Wilmington, Del., of a set of twelve handsome half tone pictures of game birds and game animals. The set is a very artistic one, the drawings of birds and animals being lifelike. There has been such a heavy demand from sportsmen for these pictures, that the appropriation of complimentary copies was speedily exhausted. Sets can now be procured by sportsmen desiring them, only by forwarding 24 cents to prepay postage—the set is an expensive one and the Du Pont Powder Company have decided that, in view of the great demand, those desiring them should pay the postage.

It was a big feather in Uncle Sam's cap when recently at Bisle, England, in an International contest the American team of marksmen won the Palma Trophy match. And the general public became greatly interested when Lieutenant Albert S. Jones, Secretary of the National Rifle Association of America, wired to President Roosevelt at Oyster Bay that American rifles, ammunition and men won against Great Britain, Canada, France, Norway, Australia and Natal and would bring back the Palma Trophy.

Seven governments sent teams of eight men each, and the result of the contest attracted attention to the fact that the American team used ammunition that was manufactured by the Union Metallic Cartridge Company of Bridgeport, Conn. The score of the American team was 1570 out of a possible 1800 at 800, 900 and 1000 yards. The next highest score made was 1555, made by the team of Great Britain.

The extraordinary score of the American team was in a great measure due to the use of the .30-40 regular factory cartridges, made by the U. M. C. Co.

Heretofore the riflemen have insisted upon loading their own shells for such contests, but after an exhaustive trial, however, it was decided to use the cartridges of the Company in question, because of their uniformity and extreme accuracy. Mr. W. M. Thomas, Chief Inspector for the U. M. C. Co., went

with the team to England and was present when the team used this ammunition, both at practice and in the match. It is of moment to note that the team took this ammunition, which is paid for, in preference to the Government ammunition which is supplied free. The particular merit of this ammunition, aside from the great accuracy of loading, is the Thomas bullet, which gets its name from the Company's Inspector mentioned.

A letter from W. H. Seaver, dated Prescott, Arizona, states: "In regard to the Eleventh Annual Tournament of the Arizona Sportsmen's Association, which was held in this city on the 18th, 19th and 20th inst., would say that Winchester 'pump' guns and Winchester 'Leader' shells carried off the honors. Of the 28 shooters who shot in this tournament, 25 shot Winchester 'Leader' shells and 14 Winchester 'pump' guns. The first, second and third high averages of the tournament were made by shooters using our 'pump' guns and 'leader' shells, Mr. W. D. Tanner, of Phoenix, being first on average with 421 out of 445 shot at, H. C. Burmister, of Prescott, and W. H. Seaver, of San Francisco, tied on second average on 406 out of 445 shot at. The high average for squad shooting for the tournament was captured by the Winchester 'pump' gun squad composed of D. D. McDonald, H. C. Burmister and M. E. Morin of Prescott, Dr. L. A. Hawkins and J. A. Knoblock of Jerome, and W. H. Seaver of San Francisco. All members of this squad shot Winchester 'pump' guns and Winchester 'Leader' shells. The three man Gwynne Trophy, 30 targets per man, was won by the Prescott team, composed of Messrs. M. E. Morin, H. C. Burmister and D. D. McDonald, all members of the Winchester 'pump' gun squad, with the splendid score of 87 out of 90. The individual championship medal, emblematic of the champion wing shot of Arizona, was tied for by W. D. Tanner, of Phoenix, and M. E. Morin, of Prescott, on scores of 48 out of 50. In the shoot-off Mr. Morin won. Both gentlemen shot Winchester 'pump' guns and Winchester 'Leader' shells. Mr. Morin also captured the Copper Queen Trophy with this same combination on a score of 25 straight. The four man team championship diamond medal, shot for on the second day of the tournament, was captured by the Prescott team, composed of H. C. Burmister, M. E. Morin, T. M. Pickett and D. D. McDonald with the score of 180 out of 200. Three of the four men in this team shot Winchester 'pump' guns and all four used the 'Leader' shells. The McVeagh handicap medal, shot for on the last day of the tournament, was won by W. D. Tanner, of Phoenix, shooting from the 22 yard mark on the score of 23 out of a possible 25. Mr. Tanner, as stated before, used our gun and shells."

Coming Events.

Rod.

April 1-Sept. 10. Oct. 16-Feb. 1—Open season for taking steelhead in tidewater.

April 1-Nov. 1—Trout season open.

July 1-Jan. 1—Open season for black bass.

Aug. 15-April 1—Open season for lobsters and crawfish.

Sept. 1-Nov. 1—Close season for crabs.

Sept. 1-May 1—Open season for shrimp.

Sept. 10-Oct. 16—Close season in tidewater for steelhead.

Nov. 15-Sept. 10—Season open for taking salmon above tide water.

Gun.

July 1-Feb. 15—Dove season open.

July 15-Nov. 1—Deer season open.

Sept. 1-Feb. 15—Open season for mountain quail, grouse and sage hen.

Sept. 27—Millwood Gun Club. Blue rocks. Mill Station.

Oct. 15-Feb. 15—Open season for quail, ducks, etc.

Bench Shows.

Oct. 6, 7, 8, 9—Danbury Agricultural Society, Danbury, Conn. John W. Bacon, Treasurer.

Oct. 20, 21, 22, 23—Frederick County Agricultural Society, Frederick, Md. J. Roger McSherry, Secretary, Frederick, Md.

Oct. 7, 8, 9, 10—Bench Show in Spokane, Wash.

Nov. 3, 4, 5, 6—Ladies Kennel Association of America. Madison Square Garden, New York. Mrs. A. G. Evans, Hon. Secretary, Westbury, L. I.

Nov. 17, 18, 19—Boston Terrier Club. Boston, Mass.

Dec. 2, 3, 4, 5—Bench Show in connection with Poultry Exhibit. San Francisco. P. K. L. rules.

Field Trials.

Oct. 9—British Columbia Field Trial Club. Inaugural trials. Stevenson, B. C. N. F. Lynne, Secretary, Vancouver, B. C.

Oct. 26—Sportsman's Field Trial Association. Clare, Mich. E. C. Smith, Secretary, Midland, Mich.

Oct. 28—Monongahela Field Trial Association. 9th annual trials. Washington C. H., O. A. C. Peterson, Secretary, Homestead, Pa.

Oct. 27—Nevada Field Trial Association. Paradise Valley near Winnemucca, Nev. Dr. C. E. Wilson, Secretary, Elko, Nev.

Nov. 2—Michigan Field Trial Association. Annual trials. Mich. C. D. Stuart, Secretary, Riverside, Mich.

A Hint on Gun Repairing.

Get your gun overhauled or repaired now! Do not wait until the last day, for you may be disappointed and not have your favorite gun to shoot with on the 15th—close at hand. See Skinner for high class gunsmithing and repairing. Everything in this line done promptly and satisfactorily. Be forehanded and have your gun in proper working order. Skinner's place is at 801 Market street, the big sporting goods emporium.

Something for Nothing.

The Polk Miller Drug Co., of Richmond, Va., are manufacturers of Sergeant's Dog Remedies, the most popular line of preparations, intended for dogs, on the market today, having received the highest endorsements of the leading dog men and kennel owners in this country and Canada. Read their advertisements appearing in the columns of our journal each issue. The firm referred to will mail you absolutely free, a copy of their celebrated book on Dogs if you will forward 3 cents to cover postage. If your dog is sick, write them, enclosing stamp, and describe the symptoms as accurately as you can. They will cheerfully furnish the best information on the subject without charge. F. W. Braun & Co., of Los Angeles, California, have recently been made distributing agents for Sergeant's Dog Remedies on the Pacific Coast.

Jackson's Napa Soda is sold in every city, town and hamlet in the State.

THE FARM.

WHERE THE HEN REIGNS.

Petaluma, California, the Greatest Chicken Raising Town in the World.

[BY HAMILTON WRIGHT.]

\$3500 a day, for eggs alone; that's what Petaluma, California, receives in cash on an average each day throughout the year. Petaluma has a population under 4000, but with its million chicken inhabitants, it is, from a hen's point of view, the metropolis of the world. No other district of even ten times the territory can approximate the chicken output of Petaluma. Poultry raising is a leading industry and if all the hens in the little city and its immediate environs were to form one huge composite hen, this gigantic fowl would weigh more than 225 tons. 850,000 of the fowls are white Leghorns (as given by the last chicken census) and almost everyone who has an acre or two of land raises chickens on an extensive scale. For the student of poultry raising on a large basis Petaluma affords a unique and profitable study.

The city supplies more than one-half the poultry and eggs used in California and it sends a great quantity of eggs and chilled fowls to the East, as well as to the Hawaii and the Philippines. As a producer of breakfast foods Petaluma is a rival of Battle Creek and this breakfast food is all the product of the great American hen. Along with its giant chicken business, Petaluma boasts of the largest incubator factory in the world and there are more incubator manufactories in Petaluma than in any single city. One sees thousands of cases in Petaluma and thousands of wire chicken crates. Signs announcing "Poultry Feed" and "Poultry Supplies" are conspicuous. Petaluma is a cash town. Its merchants pay spot cash for all farm products from a dozen eggs, or a hundred oases, to a thousand tons of hay. This is because eggs are perishable. The poultry business has been a gold cure for financial stagnation. It has fixed business on a cash basis. The hens of Petaluma consume over \$450,000 worth of prepared feed each year. Those within a radius of fourteen miles at \$3,300,000 (approximately) worth of feed. There are within this radius 7,650,000 fowls. On April 23d Petaluma Commission Merchants paid \$5,300 cash for eggs; and for the week ending March 27th they paid out \$18,450 for poultry products, not including direct shipments which would increase the amount to \$25,000 for the week. Petaluma is 36 miles from San Francisco. A great portion of its poultry trade is done with that city. Two stern-wheel steamers, the "Gold" and the "Napa City" make daily trips and 38 sailing vessels assist in carrying eggs. The "Gold" and "Napa City" carry an average throughout the year from 500 to 700 cases of eggs, each case containing from 30 to 36 dozen eggs. Besides this they are often loaded down to the water line by additional chicken crates. Sometimes the load is so heavy that it reaches from the lower deck to a level with the pilot house of the good-sized packets which carry the daily loads. It costs ten cents to ship a crate of eggs to San Francisco, the empty crate being returned free.

Petaluma has the largest chicken ranch in the world. This ranch has on its premises 13,000 laying hens besides thousands of young chicks in the brooders and brooder houses. The poultry ranches vary in size from those of 300 to 2000 hens kept within city limits or so close at hand as to form practically a part of the city to the average big

ranch of 3000 to 5000 hens with fifteen minutes' or half hour's drive from the steamboat landing. It takes an enormous quantity of feed to keep these ranches supplied. Some of the poultry men buy feed in quantities up to 2000 sacks at a single purchase. It is estimated conservatively that each hen yields an annual net income of 75 cents.

Of course in exceptional seasons the average will equal or exceed one dollar. By selling all hens over three years old, young cockerels and broilers, the poultry rancher is able to meet all current expenses and to pay the interest on his plant. It is the hens who lay the golden eggs and from the eggs in Petaluma come most of the profits. White Leghorns are raised in Petaluma because they lay white eggs, and these eggs sell better than any other varieties; they are uniform in size and please the housewife better than when the eggs are differently shaded, although perhaps larger.

Poultry raising on a large scale is an interesting industry. There is as much difference between the methods of the man who raises a few dozen or a few hundred chickens and the man who raises them by the thousands, as there is between the small dairyman and the great stock rancher. The big poultry rancher buys his feed at wholesale. It takes a ton of wheat and a ton of middlings per month to feed one thousand chickens up to the profitable laying point. The big poultry rancher buys his feed by the carload; he sells the stray feathers, the empty egg shells from the incubators and the guano.

The sale from all of these makes an appreciable reduction in the running

and this undressed, for none of the poultry ranchers in the Petaluma district ever dress their own poultry. This is all done by the shippers and commission houses. Thousands of crates of live chickens are sent to San Francisco.

On a large chicken ranch the chickens are moved to a new plot of ground every three months. The "running" ground is divided into four plots, two of the plots being grass runways and two being gravel. After the chickens have been moved from one runway it is ploughed and sown to grass, alfalfa or kale. At the end of three months this has sufficiently grown to allow the fowls plenty of green while the gravel runway having lain idle is now perfectly sanitary.

The climate of Petaluma appears to be suited to the most vigorous growth. Ordinary fowl ailments are almost unknown on a well conducted ranch. Petaluma is but 17 miles from Santa Rosa, where is located the experiment farm of Luther Burbank, the great plant breeder and hybridizer. The success with which all rarities of plants from every quarter of the globe can be grown vigorously is indicative of the vigor of fowl life.

Not all persons are equally successful. I met an old German rancher, Mr. Schroeder, who lives on the outskirts of Petaluma. Starting with a very small property, within a few years he has built up a large chicken ranch. When he had but 500 hens he was selling as many eggs as some of his neighbors who had four times his stock. He attributes his success to his feeding, which, while generous, is so graded as to produce the highest fruitfulness. "Give your

How to Fatten Chickens.

Ground oats may be an excellent article for fattening, but I am at a loss to understand why a change of feed to something else would not promote appetite and result favorably.

The great object is to have the fowls eat an abundance of something which will fatten, and as there are other things besides oats which will do this, it would seem an improvement to the plan to alternate occasionally. Certainly in case the fowls showed any symptoms of being cloyed by confinement to a steady diet.

It is hopeless to attempt to fatten chickens while they are at liberty. They must be put in a proper coop; and this, like most other poultry appurtenances, need not be expensive.

To fatten twelve fowls, a coop may be three feet long, eighteen inches high, and eighteen inches wide made entirely of bars. No part solid, neither top, sides nor bottom.

Discretion must be used, according to the size of chicken put up. They do not want room: indeed, the closer they are the better, provided they can all stand up at the same time.

Care must be taken to put up such as have been accustomed to be together, or they will fight. If one is quarrelsome it is better to remove it at once, or, like other had examples, it soon finds imitators. A diseased chicken should not be cooped.

The food should be ground oats, and may either be put in a trough or on a flat board running along the front of the coop. Never inside. Food should be

Watching a Brush on the Speedway in Golden Gate Park

expenses. The eggshells alone are worth \$1.60 a bushel. There are nine establishments in Petaluma which pack eggs and chill dressed poultry so that it may be shipped a long distance. The hen in Petaluma is too dignified and valuable a creature to devote her time in hatching chicks. All she does is to keep on laying until the end of the third year when she is sold for marketable purposes. The duties of maternity are all performed by incubators and brooders, and on some big poultry ranches near Petaluma one will find a half dozen incubators and as many brooders and brooder houses all filled with chicks. Small halls of down just from the incubator or little white, wild chirping creatures that swarm to the other side of the brooder house in affright the moment a strange voice sounds within. There are always a number of cats on every chicken ranch to keep the ranch free from rats and other vermin. One sees very few roosters in Petaluma, it being generally considered a useless expense to keep many of them the year round. Young frying males bring 30 cents wholesale; hens bring 25 cents and 30 cents at eight and ten weeks. Young fries, if well grown, bring 20 cents. These prices are the very lowest. The winter and early spring eggs have sold at 50 cents a dozen. Good spring fries have brought 75 cents for all that could be produced

chickens enough so that they won't run themselves thin, but not so much as to make them over fat" is Mr. Schroeder's motto. But then his very world is bound up in chickens. He knows the subtleties of the arrogant hen.

Everybody knows that a cow when fresh will give more milk than when the calf is older but sometimes it is desirable to know at what time a cow will make her record. From 239 records it was found that the largest flow of milk is given during the second and third week, beginning four days after calving. Tests for five years show that a cow's milk is as rich when a heifer as when matured. The milk is as rich the first month as later except during the last few weeks when the cow is drying off. There is very little difference in the season as to the quality of the milk. It is as rich while feeding on pasture as on dry feed in winter and its composition varies but little from day to day. These tests will surprise some people. It is almost universally believed that turning a cow on green pasture in the spring will increase the milk yield and that the milk is richer as the calf grows older. It must be remembered that in these tests the cows were given the maximum feed both in quantity and quality and they derived nothing more except variety when they were pastured than they did when they were kept up.

mixed with water or milk, the latter is better. It should be well soaked, forming a pulp as loose as can be, provided it does not run off the board. They must be well fed four times a day, the first time soon after daybreak as may be possible or convenient, and then at intervals of four hours. Each meal should be as much and no more than they can eat up clean.

When they have done feeding, the board should be turned over and some gravel may be spread. It causes them to feed and thrive.

After a fortnight of this treatment, you will have good fat fowls. If, however, there are only five or six to be fattened they must not have as much room as though there were twelve. Nothing is easier than to allow them the proper space, as it is only necessary to have two or three pieces of wood to pass between the bars and form a partition.

This may also serve when fowls are up to different degrees of fatness. This requires attention, or fowls will not keep fat and healthy. As soon as the fowl is sufficiently fattened, it must be killed, or sold, otherwise it will be a loss in its reaction.

If fowls are intended for market, of course they are or may be fattened all at once; but for home consumption, it is better to put them up at such intervals as will suit the time when they will be required for the table.—Dr. L. S. Tookie, Rockport, Ind.

A Dairyman's Good Income.

The following experience of a successful Wisconsin dairyman was related at the recent meeting of the Gurnsey Breeder's Association at Athens, Wis., by H. D. Griswold of West Salem, Wis:

"Choose a herd sire that has a mother and a grandmother and as many more relations as possible that were good milk and butter producers," advised Mr. Griswold. "Get the very best you can. Then get a scale and a Bahcock test and know what each cow is doing. Cull out the poor ones and keep the best always. Keep up that practice with your heifers. You cannot buy good cows; there is only one way to get them, and that is to raise them. Then come good feed and plenty of it, warm and well lighted stable and constant, careful care.

"Now, to illustrate along this line I will give you a little of my own experience. In 1889 I bought my first Gurnsey sire. I had then one Holstein cow, one Jersey and three or four Shorthorns. I find by my books that my total receipts for butter that year were \$138.86. In 1891 I got a Bahcock tester, the first one that ever came to our town. I found that year that my cows were making 365 pounds of butter each; I then had nine. I increased the number till in 1902 I had twenty-one cows. I have increased the average production per cow to 424 pounds each. I have increased my receipts from \$138.86 in 1889 to \$1,937.43 in 1902.

"I now have twenty-five cows, and in the month of May just passed we got 5,700 pounds of cream, testing twenty per cent butter fat, with no other feed than grass and a little ensilage. These twenty-five cows are all grade Gurnseys but five. I have three Jerseys and two full-blood Gurnsey heifers. All but three were raised by myself on the farm and have never been off the place. Six of the twenty-five are two-year-old heifers.

"I tell you this not to boast, but to let you know what we are doing to-day, instead of giving you some has-been tale. We have the same little fifty-acre farm that we had in 1889 but we have built onto the farm four times, have built two silos, and the farm is increasing in productiveness. But you will say it has taken a long time, over ten years. True, but you have to work at something, and dairying is no harder than any other work. The land must be kept up with some kind of stock, and what can you do better? Did you ever think that an income of \$2000 on a little farm in the country is better than twice that in the city? Then the boys are interested in good stock, as they cannot be in scrub stock. And this daily association with these dumb animals makes a man better. He has to anticipate their wants; he has to take lots of steps and do countless little things for their welfare and comfort, and these daily duties make him more thoughtful of others, and he becomes a better husband and father and citizen."

The Best Beef From Young Stock.

As the years go by we can notice a growing demand for young stock to feed and many people prefer calves for this purpose. As the use of hulls of the improved beef breeds increases it should be easier to fill the demand for prime calves. It is quite certain also that with the increase of good blood the demand for well bred calves will multiply. No feeder who ever prepared a lot of well bred top calves will ever be content to feed scrubs or older cattle again. The profitable feeding of cattle is not by any means as general as may be supposed. When a man takes our range cattle and buys the feed required to fatten them there can be no more hazardous speculation. When a man avoids overstocking and intelligently raises his own cattle as well as the alfalfa to fatten them, carefully saving the manure and returning it to the soil, the business is without risk.

The secret of profit in feeding calves is

this: The same feed that will carry an ordinary two year old steer and make it gain two pounds a day will carry three well bred calves the same length of time and each calf will gain two pounds a day or better. The natural growth of the well bred calf is the element that offsets the heavier weight bought lower in the older steer and sold higher when finished. If the older steer is bought too high it is sure always to be too high. If a well bred calf is bought high natural growth at a trifling cost modifies the price. There are scores of feeders down in the cornbelt who take calves that will average between 350 and 450 pounds in November and make them weigh 1100 pounds by the November following, while some make them weigh 1200 pounds and a few make them weigh from 1300 to 1400 pounds.

The day is coming when the great waste of beef now annually thrown away by starving and roughing cattle through the winter will be looked upon as a barbarous method of the past. Most feeding cattle will be taken from their dams at weaning time and put at once on feed, for nothing but neglect or starvation need prevent good steers of Shorthorn or Hereford blood from being made to weigh 1200 pounds at eighteen months of age. Those of this age have proved conclusively that such ripened beef not only brings the highest market price but is produced at the very lowest cost.

While some of our misguided enthusiasts are calculating upon the establishment of independent packing companies throughout the west by enlisting the sympathies of the cattle barons the scheme would look more plausible if they would begin operations at the other end of the lane. By this we mean that before the packing houses are built the science of making beef by means of the resources at hand should be pounded into every man who owns a hoof until he can understand the matter. We can not kill until we fatten and to do this stock growers must study the farm papers and acquaint themselves with the economic uses of such things as alfalfa, beet pulp, peas, harley, speltz and rye besides the various root crops and many forage plants with which the most of them are as yet unfamiliar.—*Field and Farm.*

Feeding the Colts.

Feed as near as you can a balanced ration consisting of a variety of feeds, using oats, bran, a little corn in the winter, and roots, if you have them.

I prefer clover hay, if cut early and clean, with some timothy and corn fodder, and plenty of grass in season, and always a place where they can get exercise. If fed all they can clean up and digest well they will always be ready for the market. If not sold when three years old they should be broken to drive, and put the draft colt at light farm work, and they will pay for the keeping for the next year. Then they should be fed for the market, and that means they should have about two hundred more pounds of flesh than they usually have in the average farmer's care. Then they will bring from \$25 to \$50 more per head than they would if sold while still thin. In fact, there is no better business for a stock feeder or farmer than to feed draft horses for the market, as a good, growthy young draft horse, if properly fed, will put on flesh at the rate of one hundred pounds per month for two or three months. When they are put up for feeding give them light rations on the start and gradually increase the ration until they get all they will eat and properly digest.

H. A. BRIGGS.

Where whitewash is used it should be neatly and carefully put on so as not to scale off. It should be well made so as not to rub off on your clothes. Use a spray if possible.

The cow when nervous or restive should never be struck.

Value of Manure.

Did you ever stop to think what proportion of her keeping a hen pays in fertilizer? From each pen of fifty hens I gather each week a good, big bushel of droppings—that is, fifty-two bushels per year for fifty hens, or a little over a bushel per hen. This bushel of droppings is well worth 25 cents. It would sell for that in almost any neighborhood, or if you raise your own grain it is worth more than that for your own use. Now add to this the amount of droppings in litter, which should be saved, and we have at least 5 cents more, or 30 cents per hen each year.

Allowing that it costs \$1 to keep a hen a year, our hen has paid us nearly one-third of her keep in the best fertilizer on earth. What other live stock on the farm will do this?

Now as our hen has paid us 30 cents in fertilizer and it costs us \$1 to keep her, we must get 70 cents from her before we make any money. Let us figure eggs at 20 cents per dozen, which is a fair average, and we must get three and a half dozen of eggs from each hen before we begin to realize a profit. As we are figuring on a basis of eggs, let us say that our hen is a Leghorn. The average Leghorn will lay twelve dozen eggs a year, and after deducting the three and a half dozen we have left eight and a half dozen eggs at 20 cents per dozen, or \$170 as net profit. But wait a minute. Remember our hen is a thoroughbred Leghorn (we would keep nothing but thoroughbred birds), so we may sell a dozen of her eggs at \$2 for hatching, thus increasing our profit \$1.80, making it \$3.50, or she might hatch us a brood of ten chicks worth at least \$2 and give us the same result.

I know that under ordinary circumstances it does not cost a dollar to keep a Leghorn hen a year, and I know that if one is careful in selecting his breeding stock he can build up a strain of Leghorns that will lay fourteen or fifteen dozen eggs a year instead of twelve and that by catering to a fancy trade he can average 25 or 30 cents per dozen instead of 20 cents, but I only wished to take a fair average to prove that "hiddy" is a money maker when properly cared for and given due credit for what she produces.—S. E. Smith in *Reliable Poultry Journal.*

Cattle Choke on Beets.

The Santa Maria Times says: Reports by people who are traveling between Santa Maria and Guadalupe state that on an average three or four steers die every week on the beet fields where the cattle are feeding on beet tops and such beets as were either too small or too large to be harvested. In trying to swallow the beets the cattle become choked on account of the beets sticking in their throats.

Men are employed on the ranch who are continually watching the stock, and when a steer shows signs of becoming choked the men force the beet down the animal's throat by means of a stiff rubber hose. However, as there are a great many cattle on the ranch, it is impossible to watch all, and every now and then one keels over.

Removing Alkali From Soil.

Professor W. H. Hellman, of the department of agriculture, recently announced that he has found a method by which alkali can be removed from soil. For ten months past he has been conducting experiments on the worst alkali land in Utah, and although the results of his work have not been given out officially as yet, he admits that his tests have proven successful. It is probable that, through Professor Hellman's investigation, millions of acres of land, now barren and unfruitful, may be reclaimed and become productive.—*Sunset Magazine for October.*

Sober up on Jackson's Napa Soda.

Silos up to Date.

Late experience has thrown strong light on new sides of the silo problem. Many of the early built silos have had time to show their weak points. Some styles fashionable for a time have proved poor keepers, wasteful of the ensilage and not durable. Many a cheap silo has proved a costly investment. If a saving of \$50 on a first cost causes a needless waste each year of \$20 worth of silage, the builder is paying forty per cent on his saving, a ruinous rate. Although cheap silos sometimes pay, good ones pay better.

Most new silos are built partly below ground, say three to seven feet, which is as far as drainage and convenience in feeding the contents will usually permit. A start below ground gives a support of earth, where the strain is greatest, helps to protect from frost, and brings the top of the silo within reach of a short carrier.

Air tightness and close packing appear to be the only positive essentials. A cylinder of galvanized iron no larger than a flour barrel will keep green stuff well for hens, if stored in a barn cellar or other protected places. Wet brewers' grain can be kept in the same way until wanted for feeding. Also apple pomace and similar material.

Brick silos cost half as much again as stone, wood with lining of brick or galvanized costs about as much as stone. It is more frost proof but less durable. A cheap wooden silo can be built for two-thirds the cost of stone, but is not very durable. Wooden stave silos can be had ready made from manufacturers, but they are not cheaper than home-made silos of equal quality and require more attention than the ordinary ground silos.

Cheaply made silos have been shown to be decidedly more wasteful than a silo well built and of standard pattern.

Depth is strongly insisted on; a deep silo holds more, because the contents pack more solid at the bottom. With a deep silo, the loss at the top is less in proportion than with shallow silos. There is smaller loss from slow feeding, because the closely packed silage keeps out the air.

The biggest and most successful stock raiser in England is "Squire Wettin," who is said to make about \$200,000 per year on his cattle. The "Squire" is a great lover of pure bred stock and has some of the best in the world, as is evidenced by the fact that he takes about all the prizes at the Royal shows. The "Squire" gives considerable personal attention to his herds, but would give more if it were not for another steady job he has on his hands. This occupation is that of reigning over Great Britain, for "Squire Wettin" is none other than King Edward VII. His royal highness is a splendid judge of cattle and there is nothing in his private affairs he cares more for than his live stock.

A woman operates one of the most successful stock ranches in Arizona, eleven miles from Prescott. Her father moved there from Illinois in 1896, for his health. He died two years later, leaving a mortgage of \$15,000 on the ranch. His oldest child, Annette, took up the work, and since then the herd has multiplied threefold, she has added 550 acres to the range, has paid off her mortgage, and is making money, having sold as much as \$14,000 worth of steers in two months. Her younger sister is her partner and the two girls wear men's clothes when attending to business. Thirty or forty miles a day in the saddle is not unusual with them.

Feed regularly. Never overfeed. Do not feed any heating or fattening food to the old fowls in summer. When the fowls do not appear to be hungry cut down the feed until they are inclined to eat.

Hog Cholera.

We are now at the season of the year when cholera is more or less prevalent over a large portion of the corn and hog states of the west, and every farmer should be on his guard, says *Wallace's Farmer*. He has two things to consider: First, how to prevent cholera; second, what to do when his herd becomes infected. Bear in mind that hog cholera is a germ disease and you cannot have the disease unless you have the germ introduced.

It is not always possible to prevent the introduction of the germ. It may be carried by rats, cows, dogs, but is most frequently carried from farm to farm by farmers themselves; sometimes by thru hing outfits that come from cholera infected farms and spread the disease; at other times and not infrequently by peddlers of dead hogs who come snooping around the healthy herd like buzzards after carrion to find if you have any dead hogs to sell. Set the dog on these fellows; they have no business about the farm anyhow. Another very common source of infection is by visitors, either socially or farmers whose hogs are affected and who come around to see how their neighbors' hogs fare. Keep visitors away from the hog yards in cholera times. Keep the man who has cholera on his farm outside the gate. Do not let your wife's relations come to see you if their hogs have the cholera. You cannot afford it. The farmer whose buildings are located near the center of his farm and off the main road is less liable to attacks of the disease than the farmer who lives on the main road. The farmer whose hogs have access to a stream of considerable size is more liable than those who live away from a stream and whose hogs are watered from a deep well. Bear in mind that unless the germ is in some way introduced into the herd the hogs cannot take the cholera, although they may have some disease that looks very much like it.

If your hogs do take the cholera and you find by post-mortem examination that it is a genuine case—evidenced by a high temperature of 104 to 107, by ulcers on the small intestines from the size of a pin head to the size of a nickle, or from the filling up of the lungs with cheesy matter, then you have business on hand.

We have passed through three or four sieges of it, and if cholera attacks our herd this year, which it may, we shall adopt the following policy: First, sell off all the shoats that are of saleable size, taking whatever price we can get; second, kill the little pigs. They are not worth a cent a dozen when the cholera is around. Third, turn everything else out on to the clover meadow and absolutely shut off all grain feed of every kind. Let them have all the pumpkins they want, but nothing else. Why? The hog has an incarnate appetite and will eat after it has been sick two or three days. It can not digest what it eats, and this indigested matter becomes foreign matter. Grass is cooling, laxative and satisfies hunger for the time being.

We would not sell a good brood sow because cholera has attacked the herd. The probability is that in severe cases you will lose half of them, but they will be the half most susceptible to disease, and the brood sow that has once come through the cholera is valuable for two reasons: First, because it is proof that the animal has strong resisting power; in other words, an unusually strong constitution; second, because brood sows having once passed through the cholera are immune and may be kept for several years, provided, of course, cholera does not interfere with their breeding, which it sometimes does. If so, they can be sold for pork.

We would not buy any remedies. The government remedy might be used on general principles, but it is not really a remedy for the disease. If our conscience compelled us to do something, or if the wife insisted on it, we would buy some

medicine and set it on the mantle, but would follow the course prescribed of starvation. It will set the hogs back a month, but better do that than increase the death rate by giving them feed after they are not in a condition to digest it. After the disease has done its work clean out all yards and stables, disinfect with lime and diluted sulphur and carbolic acid, and don't buy any new hogs for three months.

Defects in the Show Ring.

During the past month I have been attending county and state fairs which gave me the opportunity of meeting a large number of exhibitors from different sections. Among them were a good many plain farmers, who are striving successfully to better their condition by improvements along the line of breeding better stock as well as a large number of well known professional breeders of all kinds of live stock and a very few speculators, whose only object seems to be to buy and sell whatever and wherever they can. It also gave me an excellent opportunity to see and know what other people are doing and how they do it.

Since coming home I have been thinking of the things I saw and some of the impressions I received, and I do not know of a single idea I formed that was new to me—only a deeper, more firm conviction of the truth of the old ideas or doctrines that the best breeders of live stock in all countries have firmly held in all their work of improvement. I was particularly interested in the sheep exhibited. At one fair there were three exhibitors of delaine merinos. In the aged ram class one owner brought out a seven-year-old buck as big as an ox but with the thinnest, most open fleece of wool I ever saw on a merino.

He bought the animal when young on account of extreme size and had always used it since as a stock ram. The result was that the owner did not receive a prize ribbon in the class and not a sheep in his flock was worth \$3. They were absolutely worthless for any purpose for which sheep should be kept. How much better it would have been if this man seven years ago had bought a dense fleeced ram of good type and breeding and gone on improving his flock all these years. In one of the sheep classes I was looking to see the ages of a string of breeding ewes. In one pair I found a ewe with a parrot mouth. The owner colored up some and explained that she was an inbred ewe.

I had forgotten about it until in a class of younger ewes I found another one with the same defect and the owner told me that the old ewe was given to breeding parrot-mouthed lambs. Did it pay him to make such a mistake and where will the results cease? One exhibitor seemed to feel aggrieved because he had not received the blue ribbon. He called my attention to the fact that his ram had clean yellow hoofs with not a streak of black to be found on them and he also told me that the chop folds were of the most fashionable form, all of which I knew but that particular breeder had paid more attention to some of these minor points than to producing a strong, vigorous animal.

Lack of constitution was apparent in his entire flock. It matters nothing to me, when I put on my overcoat on a cool morning, just what was the color of the hoofs of the sheep that grew the wool nor the style of the folds on its neck. What I am after is warmth. It matters little to me, when I have a chop for breakfast, just what was the style of the head and face-covering of the sheep that produced it or whether the cow that furnished the milk and butter had a black tongue and switch or not. It is well to look carefully after the faucy points in all our pure-bred stock and be sure that the peculiar characteristics of the breed are not lacking, but I am fully convinced that some breeders are paying more attention to senseless fads than to the practical utility of their animals.—W. L. Ford.

Dairy Notes.

The hog is almost a necessary adjunct to the paying dairy farm.

Eastern countries are becoming larger and larger customers for American condensed milk.

Churning should always be carried on in a moderate temperature.

An increase of feed improves rather the quantity than the quality of the milk.

With all due respect to the gentle bull, he should never be trusted.

Have any of our readers ever tried Turkish toweling to strain milk?

Wash the butter thoroughly and there will seldom be trouble about mottled butter.

A heifer is apt to form her life's milking habits after the first calf. A little extra time spent then means money later.

Light colored butter and white milk are the natural results of summer feed. Green food gives a rich appearance to both, but cannot be obtained the year round. If the public could be educated up to this fact a great temptation to adulteration would be ended.

The small expense incurred in purchasing a dairy thermometer is in no way commensurate with the improved results from its use.

Few modern industries are successful without the utilization of by-products. The by product of the dairy is milk, which can be converted in pork or used in raising calves. Help the cow in her efforts to make you money.

The oleo manufacturers seemed to have dropped their campaign of education, in which they subsidized country papers to relate stories of dairymen who sold their butter and bought oleo, because they liked it better than the real thing. At one time we saw numerous stories of this kind in our country exchanges, but lately they have disappeared.

Within recent years many changes have taken place in buttermaking. It was formerly supposed that most any one who was neat and tidy could make good butter. Since investigations have been pursued along scientific lines we find that it requires skilled labor, says *Stockman and Farmer*. The men who are pursuing dairying at our schools now are possibly twenty-five per cent in advance both in education and skill of the students who took dairy work seven or eight years ago. As we look the country over we find the people who have become famous in the dairy world are men of unusual intelligence, who would undoubtedly have made a success in most any other line of business.—*Orchard and Farm.*

GONE LAME!!

Those words strike terror to the heart of every horseman. Don't worry. If it is Spavin, Ring Bone, Splints, Curb or any form of Lameness, Kendall's Spavin Cure will cure it quickly and permanently.

Cambridge Springs, Pa., Dec. 4, 1902.
American House Livery,
Dr. B. J. Kendall Co.,
Gentlemen—I have been using your Kendall's Spavin Cure for fifteen years and find it a success. I have one of your old "Treatise on the Horse and his Diseases," the leaves are some of them lost; if you have any new ones please send me one, and oblige.
Very truly yours,
CHAS. KELLY.

Price \$1; 6 for \$5. As a liniment for family use it has no equal. Ask your druggist for Kendall's Spavin Cure, also "A Treatise on the Horse," the book free, or address Dr. B. J. KENDALL CO., ENOSBURG FALLS, VT.

THE PACING MARE SWANHILDA. She is a handsome bay, coming seven years old, a natural pacer and with but little track work can pace a mile below 2:30 with ease. Gentle and kind and has been driven by ladies to buggy. She is a fine roadster and with proper training will make a great race mare. For pedigree and further particulars address
W. L. McDONALD, Concord, Cal.

The Weanling's Feet.

We will take, for instance, says a writer in the "Horseshoer's Journal," two colts, weanlings; they are running together on the same soil, and they are cared for much the same. We will suppose that both thrive alike, maintaining about the same increase in weight, and at about six months old they are separated, one falling into the hands of a man who will take good care of his young charge, and the other going to a careless, indifferent owner. The first, we will suppose, is looked over and it may be noticed by the owner that he has the tendency so common to all colts, of an over-grown hoof and the limb inclined inward, which, of course, carries the foot to the outward direction.

Turning to the case of the other colt, the owner is indifferent about the formation of the hoof and limb; he keeps on developing just as he is inclined, and so we may expect in the one case to find any class of bad conformation purely through the fact that he has never been watched. But it is altogether different with the case of the first colt, for the owner, the moment he realizes the tendency of the little fellow's growth, what does he do? The first thing that a careful owner will do is to reduce the hoof as much as necessity will demand, and in case conditions will allow, and if he can do so he will reduce the pressure, let it be ever so slight. Now this trouble remedied will be quite enough in itself to enable the foot to thrive in health and strength.

But to the limb. Many colts take the limb formation through the same neglect that the feet take theirs. Everybody knows that there are cases of toe in, and many more of toe out. The intelligent man knows that a little earlier care of the colt will stop this and produce a perfect shape to the limb and foot. When grazing the colt throws his weight on the front limbs, which carries the foot outward; he sustains himself by taking this position, and as it will be seen at a glance, the heels are pointing inward and the toes out. And as the limb is thus shaped the hoof takes on its growth on the outside, which adds additional weight to the interior of the limb. Continual strain of this kind finally results in the foot growing just as it is allowed, and in the limb taking the form that it most because of the constant strain thrown upon it.

The careful owner recognizing the shape which the foot or limb has taken will at once set about to remove the cause by both care of feet and giving the young muscles and joints that care which will remove the possibility of their becoming malformed. Some men wonder why there are so many of the toe-out class of horses. The above explains the reason why. Even the colt which might inherit malformation can be straightened up and he made to wear a perfect limb and foot if he is carefully watched in babyhood, for once the limbs are set in their position, which is after the colt passes about his ninth month, it is useless to try and effect any change for the better; at least it is seldom that any improvement can be made after this period of age arrives, not very much is possible before this time.

A dairyman of El Paso county put a milk-separator in his cow barn where he was milking sixty cows. A tread power run by a calf was used. Objection was at first raised by the calf but as it got no breakfast until the work was done it soon tumbled to the situation. Stanchions for the young calves were arranged at one end of the holding and a gallon milk crock was placed in front of each calf. In a few minutes after the milk had been taken from the cow it had been run through the separator and fed to the calf. The many advantages of such a plan must be apparent to every man who has grown weary under the belt trying to grind out the morning milking with one of the hand machines.

CAMPBELL'S HORSE FOOT REMEDY IS THE BEST REMEDY

EVER USED ON HORSES' FEET. IT PENETRATES and DRIES in quickly and DOES NOT GUM and FILL UP THE PORES like tar and oil compounds. It is the GREATEST REMEDY ever used to remove SORENESS and FEVER from the foot, and makes it possible to get good services out of a horse working on hard and hot pavements.

It gives natural nourishment to the foot and incites a rapid, healthy growth—ALL DRYNESS and BRITTLENESS quickly disappears.

QUARTER CRACKS and SAND CRACKS are rapidly grown out when directions given in our booklet are followed. It is a SURE CURE for CORNS, CONTRACTED FEET and NAIL WOUNDS in directions as followed.

It PREVENTS SOUND FEET FROM BECOMING UNSOUND and GROWS a TOUGH, STRONG, ELASTIC WALL and HEALTHY FROG—a FOOT WHICH WILL STAND WORK on race courses.

Many of the best owners and trainers state that for track work nothing equals it. In many cases horses have reduced their records several seconds, due to its use.

It is a CER-AIN CURE for THRUSH and SCRATCHES We Guarantee That It Will Do What We Claim and Will Refund Money If It Fails.

PRICES:—Quarts, \$1.00; Half-Gallon, \$1.75; Gallon, \$3.00; 2 1/2 Gallon, \$5.50; Five-Gallon, \$10.00.

Books giving full directions for its use and much valuable information as to shoeing are supplied free.

Don't fail to read "ad." giving information concerning Campbell's Iodiform Gall Cure in next issue of this paper. It is the best and because of its merits is rapidly displacing all others.

WINCHESTER "LEADER" SHELLS LEAD

At the Third Annual Target Tournament of the Dominion of Canada Trap Shooting and Game Protective Association, held in Toronto, August 12th to 15th, inclusive, winnings were made as follows:

- 1st Day: High average for day by Mr. Higginson of Buckingham, Quebec.
- 2d Day: Two Men Team Championship of Canada, 20 targets per man, won by Messrs. McGill and Wakefield of Toronto, with score of 37. High average for day won by E. Westbrooke of Brantford.
- 3d Day: Parker Gun won by J. Hovey of Clinton, who also won high average.
- 4th Day: Grand Canadian Handicap, 100 targets, won by Mr. Craig of Sherbrooke, with a score of 93.

"Mall Trophy," the most important trap shooting trophy in Canada, emblematic of Five Man Team Championship of Canada, won by Brantford Gun Club Team, with score of 222 out of 250.

The Montreal Rolling Mills Company Cup, emblematic of Individual Championship of Canada, won by Mr. Balm of Winulpeg, with a score of 48 out of 50 targets.

High average for the day—"Beresford Cigar" Cup—won by Mr. Hovey.

All these splendid victories were won with Winchester "Leader" Shells, and are a forcible testimony to the uniformity of these goods.

ENTRANCE FEE REDUCED TO \$2.

\$6000 Pacific Breeders Futurity No. 4. \$6000

GUARANTEED

BY THE

GUARANTEED

Pacific Coast Trotting Horse Breeders Association

FOR FOALS OF MARES BRED IN 1903.

TO TROT OR PACE AT TWO AND THREE YEARS OLD.

ENTRIES TO CLOSE NOVEMBER 2, 1903.

ONLY \$2 TO NOMINATE MARE.

\$3250 for Trotting Foals. \$1750 for Pacing Foals. \$800 to Nominators of Dams of Winners and \$200 for Owners of Stallions. Money Divided as Follows:

\$2000 for Three-Year-Old Trotters.
200 for Nominator of Dam of Winner of Three-Year-Old Trot.
1250 for Two-Year-Old Trotters.
200 for Nominator of Dam of Winner of Two-Year-Old Trot.
100 to Owner of Stallion, Sire of Winner of Three-Year-Old Trot when Mare was bred.

\$1000 for Three-Year-Old Pacers.
200 for the Nominator of Dam of Winner of Three-Year-Old Pace.
750 for Two-Year-Old Pacers.
200 for Nominator of Dam of Winner of Two-Year-Old Pace.
100 to Owner of Stallion, Sire of Winner of Three-Year-Old Pace when Mare was bred.

ENTRANCE AND PAYMENTS—\$2 to nominate Mare on November 2, 1903, when name, color, description of mare and stallion bred to must be given. \$5 March 1, 1904. \$5 November 1, 1904. \$10 on yearlings March 1, 1905. \$10 on two-year-olds March 1, 1906. \$10 on three-year-olds March 1, 1907.

STARTING PAYMENTS—\$25 to start in the two-year-old pace. \$25 to start in the two-year-old trot. \$35 to start in the three-year-old pace. \$50 to start in the three-year-old trot. All starting payments to be made ten days before the first day of the meeting at which the race is to take place.

Nominators Must Designate When Making Payments to Start Whether the Horse Entered is a Trotter or Pacer.
Colts that Start at Two Years Old are Not Barred from Starting Again in the Three-Year-Old Divisions.

CONDITIONS.

The races for Two-Year-Olds will be mile heats (2 in 3), and for Three-Year-Olds 3 in 5. Distance for Two-Year-Olds, 150 yards; for Three-Year-Olds, 100 yards.
If a mare proves barren, or slips, or has a dead foal, or twins, or if either the mare or foal dies before March 1, 1905, her nominator may transfer his nomination or substitute another mare or foal, regardless of ownership; but there will be no return of a payment, nor will any entry be liable for more than amount paid in or contracted for. In entries the name, color and pedigree of mare must be given; also the name of the horse to which she was bred in 1903.
Entries must be accompanied by the entrance fee.

Should the amount of entrance money received be in excess of the amount of the Stakes the excess will be added, less the cost of postage stamps, printing and advertising, to the Stakes for the

Three-Year-Old divisions in proportion to the amount offered in each division.

Nominators liable only for amounts paid in. Failure to make any payment forfeits all previous payments. Hopples will not be barred in pacing races.

Right reserved to declare off or reopen these Stakes in case the number of entries received is not satisfactory to the Board of Directors.

Money divided in each division of the stake 50, 25, 15 and 10 per cent. There will be no more moneys in each division than there are starters.

Entries open to the world; membership in the Association not required to enter, but no horse owned in the State of California will be allowed to start until the owner has become a member. Horses owned outside of the State of California are eligible to start regardless of membership.

San Francisco, Saturday, Oct. 17, 1903.

THE CALIFORNIA MARE, Lou Dillon, continues to surprise the public every time she tries to lower her record. At Lexington last Saturday after her rival and only other two minute trotter, Major Delmar had lowered the wagon record to 2:03½ without a wind shield and in a strong breeze, a feat that was in itself a wonderful performance, the daughter of Sidney Dillon and Lou Milton, came out within five minutes and knocked two full seconds from the doughty Major's record, making her mile in 2:01½, a wagon record that will probably not be lowered for some time unless Lou Dillon herself accomplishes the feat. The fact that both these wonderful trotters reached the half mile post in the same time—1:01, and that Major Delmar lost speed coming the remainder of the journey, while Lou Dillon increased it, shows conclusively that on Saturday last at least, she was the greater trotter, and leads one to conclude that when they meet at Memphis in the great cup race she will be returned the winner. In his mile at Lexington Major Delmar was well rated. He went the first quarter in 31 seconds, the second in 30 seconds, the third also in 30 seconds, and then tired so that it required 32½ seconds for him to come the last quarter. The California mare reached the first quarter in 31 seconds, and trotted the second in 30 seconds, both identical with the first quarters of her rival's mile. Where he trotted the third quarter in 30 seconds, she took but 29½, and then flew home in 31 seconds—the same speed as her first quarter, and a second and three-quarters faster than Major Delmar could cover the stretch in. There is good evidence in this that Lou Dillon is the gamer animal and no doubt remains that in addition to her being the first two minute trotter she is also the greatest.

MONTE CARLO won the greatest race of the year at Lexington on Wednesday and Thursday of this week and proved himself about the best trotter of his class that has been out this year. His three winning heats were in exactly the same notch—2:07½, and he defeated such horses as Dr. Strong, Hawthorne, The Roman, Walnut Hall and Dan T. There were six heats trotted on Wednesday and they averaged faster than any six heats ever trotted in a race. Darkness caused a postponement and the race went over until Thursday with Monte Carlo, Dr. Strong and Hawthorne each having two heats. Monte Carlo won the deciding heat on Thursday and the time of the seven heats averages faster than any seven heat race ever trotted. If this does not stamp Monte Carlo as one of the greatest race trotters, nothing can. In every heat he was a contending horse. He won the first and second heats in 2:07½. Hawthorne had been 4-5 in these heats and won the third in 2:06½ with Monte Carlo a close third. In the fourth heat Monte Carlo finished first, but was set back to fourth position on an alleged foul. In the fifth and sixth heats he was second and on Thursday was a much fresher horse than either Dr. Strong or Hawthorne and was never headed in the heat which he stepped in 2:07½. Monte Carlo has had a very severe campaign this year and for several weeks acted badly in his races and was considered to have become track sour and ugly. It was finally discovered that he had been suffering from gravel in the foot and after the foot was poulticed the stone was removed and his ugly temper disappeared. He is undoubtedly one of the best trotters that California has produced.

A catalogue of the final dispersal sale of the Palo Alto Stock Farm has been issued by the Fasig-Tipton Company. The stallions to be sold are Exlonser by Boodle, Monbells by Mendocino, and Nazote by Whips. A special notice in the catalogue reads as follows: "As the stallion Mendocino 2:19½ is physically not in condition to be shipped to New York—being practically crippled—he is not included in the dispersal consignment; and must therefore be sold privately at Palo Alto Farm."

Grand Circuit Winners.

The Chicago Horse Review statistics of the Grand Circuit which ended at Cincinnati, are very exhaustive and complete this year, and occupy a page of small type in that paper. The total amount of money won by the horses that raced on the circuit was \$448,705. Brighton Beach distributed the most money—\$71,400. There were eleven meetings and the average time of the 642 heats trotted and paced was 2:10.61. The greatest money winning trotter was Billy Buck 2:07½ that won \$31,000, and the leader of the winning pacers was Elastic Pointer 2:06½ with \$10,700 to his credit. Sooty Hudson leads the drivers with a total of \$61,670 won by horses driven by him and Geers is a close second with \$55,995 to his credit. Sixty-four trotters and forty-five pacers won \$1000 or over, and sixty-two drivers won \$1000 or more. The principal money winning horses and drivers are as follows:

TROTTERS.

	1st.	2d.	3d.	Money won.
Billy Buck 2:07½	9	1	1	\$31,000
Hawthorne 2:07½	2	4	2	17,250
Jay McGregor 2:08	6	4	2	13,750
Kinney Lou 2:07½	2	3	1	10,250
John Taylor 2:10¼	4	1	1	10,050
Casplan 2:07½	6	2	2	8,225
Ebel's Pride 2:13¾	3	1	1	7,500
Saddle Mac 2:11½	2	1	1	6,971
Judge Green 2:10¼	4	1	4	6,550
Masseto 2:09	4	1	1	5,800
Dan T. 2:07¼	5	3	2	5,475
Monte Carlo 2:07¼	2	2	2	4,625
Dillon Boy 2:09¼	5	3	2½	4,250
Wainscot 2:10¼	3	3	2	3,700
Prince of Orange 2:07½	3	1½	¼	3,575

PACERS.

	1st.	2d.	3d.	Money won.
Elastic Pointer 2:06½	4	1	1	\$10,700
Star Hal 2:06¼	1	1	1	8,750
Tom Keene 2:04¼	6	1	1	6,470
King Direct 2:09¼	2	1½	2½	6,000
Al Bock 2:08¼	6	1½	1½	5,800
Nervolo 2:05¼	6	1	2	5,655
Frank Yoakum 2:05½	2	1	1	5,500
Dr. Madara 2:08	3	1	1	5,300
Joe Pointer 2:05¼	4	3½	1½	5,030
Pau Michael 2:07¼	3	2	1	5,000
Miss Willamot 2:07¼	1	2	1	4,750
Dick Wilson 2:08	2	½	1½	4,200
Miss Daphne Direct 2:11½	3	1	2	3,800
Trilby Direct 2:08¼	2	3½	2½	3,675
Diablo 2:08½	2	1	2	3,350
Locanda 2:05¼	3	3	1	3,025
Winfield Stratton 2:06¼	2	3	½	3,000

MONEY WINNING DRIVERS.

Driver.	1st.	2d.	3d.	Money won.
Hudson, R. S.	32	23½	15	\$61,670
Geers, E. F.	23	18½	10¼	55,995
Snow, W. L.	12	7½	8	20,850
Curry, J. C.	12	11½	2½	20,500
Walker, B.	10½	13½	10½	19,875
Wilson, D.	6	1½	4½	15,156
Doble, B.	4	3	2	12,670
McDonal, Lou	3	6	4	11,330
Shank, B.	6	4½	4½	11,125
Hussey, J.	4	½	1½	10,900
Miller, R.	3	5	2	10,720
Cox, W.	9	7½	4½	10,432

Answers to Correspondents.

Jos. L. Purcell, Grass Valley—A. A. Moore, Register No. 23,872, is by Director 2:17, dam Admirita by Antevolo 2:19½, second dam Monte by Admiral 488, third dam Oakland Maid by Captain Webster. He has no record, but is said to have shown better than 2:30 in his work. None of his produce are in the 2:30 list. His services in the stud have been very limited.

A. G. Harley, San Francisco—The longest drawn out running race ever held in this State we believe was at the State Fair, Sacramento, in 1872. There were four starters for a purse of \$1000 offered for a race of mile heats, best three in five. Demirep won the first and second heats in 1:45½ and 1:46½. Nell Flaherty won the next two in 1:44½ and 1:47½. Phil Sheridan won the next three and the race in 1:47, 1:51½ and 1:52. Nettle Brown was fourth in four heats and distanced in the fifth. Demirep was by Scythian, Nell Flaherty by Rifleman and Phil Sheridan by Norfolk, out of the famous old mare Bonnie Belle by Williamson's Belmont that also produced Gen. Sherman, Ward Beecher and Centennial Belle, all well known race horses. Centennial Belle and Bonnie B., both daughters of Bonnie Belle, were owned by the Meek Estate and from them have descended such fast ones as Clipper 2:06, Janice 2:08½, Nolo 2:15, Dan Burns 2:15 and many more.

E. T. G., Sacramento.—Peter the Great 2:07½ is a bay stallion, foaled 1895, by Pilot Medium, son of Happy Medinm. His dam is Santos by Grand Sentinel, second dam Shadow by Octoroon, third dam by Joe Hooker 185, fourth dam by Sam Johnson. Joe Hooker 185 was a son of Mambrino Chief.

Undisputed Proof.

Mr. O. F. Wakeman, prominent horseman at Springview, Neb., writes as follows: "This is to certify that I have used Quinn's Ointment for the last two years and have cured spavin ringbones, curbs and thoroughpin from six to eighteen months standing. Am now treating a case of hogspavin and thoroughpin combined, and have nearly cured in twelve days treatment. I cannot say too much in praise of Quinn's Ointment." This is the general verdict of the leading breeders and horsemen throughout the United States. For curbs, splints, spavins, windpuffs and all bunches on horses, use Quinn's Ointment. Price \$1.00 delivered. Address W. B. Eddy & Co., Whitehall, N. Y.; if you cannot obtain from your druggist.

Facts From the Inventor.

Mr. Alfred Reeves, Secretary of the Empire City Trotting Club, writes as follows:

"As I was responsible for the wind shield that Prince Alert and Major Delmar used at the Empire City track at our fall meeting, and as that affair seems to have created a general stir in the trotting world with considerable comment, one way and another, it might not be amiss to give my reasons for its use, together with some idea as to its advantages. The wind shield is of decided advantage to a horse—probably three to four seconds when he is properly rated—but I do not see why records so made should not be officially recognized. To be sure, we make the task a little easier for the animal in which we are all interested, but why his time should be discredited simply because he was given every possible advantage is more than I can understand. Prince Alert has gone with the shield, Major Delmar has gone with the shield, and there is no reason why every other horse in the country should not be permitted to do likewise. If it is of advantage to Prince Alert, it is certainly of advantage to Dan Patch or any other horse who is struggling against Father Time. Nevertheless, I do believe that the governing body of the sport should make a rule stating just how many square inches of the wind shield should be carried by the pace-maker in front, so that wind shields shall come within a reasonable limit. Records so made should, in my opinion, be placed in a class by themselves, but by no means should they be discredited.

"Whether we should make it easier for the horse when he is struggling against that good old scythe-bearing gentleman known as Father Time, whether we should cater to the public demands for fast time, and whether we should be modern in the conduct of trotting as a great American sport, are three very important questions that occurred to me in connection with this wind shield discussion.

"It does seem to me that in an effort to beat 'Time' we should give the horse every possible advantage within reason, and I do not think it is unreasonable to give him any shelter that does not look ridiculous on the track. The size of the shields can be carried to excess, and for that reason I believe in a rule limiting the size.

"It was some six or seven years ago that I saw the wind shield used for the first time by bicycle riders in Paris. Its advantage was so apparent that it was adopted almost universally by the men who rode bicycles. When the idea arrived in this country the riders immediately started wearing heavy sweaters and built their machines so as to give the greatest amount of wind-resisting surface. It was then that the governing body ruled as to the size of pacing machines, and this rule is now in effect.

"As to its advantage in the bicycle game I might say that the fastest mile ever made by a bicycle rider alone on a track is 1:53 2-5, whereas behind a pacing machine fitted with a wind shield he has covered a mile in 1:09, traveling more than fifty miles an hour. Another incident that proves the marked advantage of wind shields was the ride of Charles Murphy behind a train on the long Island Railroad a few years ago. He traveled a mile behind a car fitted with a special hood in 0:57 3-5 seconds, and at the finish was unable to get out of the suction, and we had to lift the man and his bicycle aboard the train.

"Although I may be wrong, I think that the wind shield will result in a general breaking of records for the entire year to come, and it is record-breaking that interests the public. People who attend race meets are little concerned as to just how records are broken, just so long as a horse travels faster than he ever traveled before in his history. I am a strong advocate in encouraging the breeders of this country, but I cannot see where the general use of the wind shields will harm their interests in any way.

"To interest the public means bigger attendance at the race tracks, greater interest in the performances of horses and a greater demand for light harness horses in general, in all of which the track owners are as vitally interested as anyone else who loves the trotter.

"I first suggested the idea of a wind shield to our president, Mr. James Butler, and subsequently turned over plans for it to our superintendent, Mr. Treanor. I am now planning a wind shield of a little different nature from the one used at our fall meeting and feel sure it will prove of at least five seconds advantage to any horse that can be properly rated to go behind it.

Yours truly,
New York, Oct. 5. ALFRED REEVES."

Budd Doble had but two horses on the Grand Circuit, yet his winnings in purses amount to \$12,600 and he stands seventh in the list of winning drivers. Kinney Lou alone won \$10,250, and but three horses won more.

JOTTINGS.

IF YOUR HORSE has been trotting steadily and suddenly changes his notion and makes frequent breaks or acts sour, better examine his feet very carefully to see if a small piece of gravel has not worked its way into his foot and is giving him pain. During the Denver meeting the McKinney stallion Tom Smith, owned by Prof. E. P. Heald of this city, trotted to a record of 2:13½ and acted like a sure 2:10 horse. At the Vallejo meeting the next month he trotted a race that was not fast, but he was in the lead at the finish of every heat and looked to me as if he could trot just as fast as he wanted to, as he could show a two minute clip and never raise his nose. After he reached Petaluma he was a different horse and would go to a break nearly every time he was asked to score fast. It was the same at Sacramento and after that meeting was over, a small gravel worked out of the stallion's foot just above the hoof. This explained the refusal of Tom Smith to trot fast. It hurt him to strike the ground as hard as is necessary when 2:10 speed is wanted, and he naturally flinched from it. Tom Smith is not the only horse that has been affected that way. "Marque" of the *Horse Review* tells the following story of Monte Carlo:

When Monte Carlo began to cut capers at the score in mid-season the cry went up that he had been raced until he had grown tired of the game. It surely looked that way, for from as sweet a mannered horse as ever started he suddenly refused to score and gave every sign of headstrongness. Later he seemed to lose his speed and was denounced as a counterfeit. His case caused Monroe Salisbury many sleepless nights, but try as he would he could find no physical cause for it. Half a dozen learned "vets" were called in, but they, too, gave it up. Finally after the Charter Oak race at Hartford he pulled up lame and en route to New York he held up one foot and fairly groaned with misery. Mr. Salisbury could detect no cause, but proceeded to apply poultices. After reaching Empire City track the applications brought to light the fact that a small sharp stone had entered his left front foot beneath the frog and gradually worked up till it was taken out above the coronary band. After the stone was removed the horse gave every indication of relief and at once became cheerful and kind. If horses could only talk they could tell many a harrowing tale of man's lack of knowledge of their ills. Of course this was a matter for which no one was to blame. Monte is now taking his work nicely and Mr. Salisbury hopes to get him shaped up to race at Memphis, if not at Lexington.

The summary of the great race at Lexington last Wednesday will show how good Monte Carlo is at the present time.

There is a report in the East that Mr. Malcolm Forbes, who owns Nancy Hanks 2:05, Bingen 2:06½, Arion 2:07½, Peter the Great 2:07½ and probably the greatest collection of stallions and broodmares ever got together on one farm, has engaged Ed Geers to do his training and driving next year at a salary of \$20,000 per annum. I sincerely hope that it is true. Mr. Forbes has paid more for horses for breeding purposes than any other admirer of the harness horse, and it is known that he believes Mr. Geers to be the leading trainer in the world. Nothing will be of greater benefit to the training industry than the paying of large sums in salaries to the leading members of the training fraternity. When men of brains and aptitude know that there are breeders and owners ready to pay liberally for their services, the morale of the industry will be on a higher plane, and training ability will be given the recognition it deserves. Every owner is not so situated financially as to be able to pay such salaries as Mr. Forbes can afford, but the fact that such positions are within reach will cause more men of brains, ability and integrity to enter the profession in the hope of acquiring fame and fortune at the top.

There is a possibility that the breeding of Lou Milton, dam of the greatest trotter that ever lived, may be cleared up. There are several horsemen in California who are now at work with that end in view, and there is strong probability that evidence may yet be presented that will establish beyond any doubt, the breeding of the grand old mare that gave to the world Lou Milton, dam of the first two minute trotter. Since the publication last week in this department of the testimony of Mr. Green Thompson of Santa Rosa, at one time owner of Lou Milton, the writer has received several communications, written and verbal, in regard to the matter. The Kimball mare is remembered by many of the horsemen and those who were acquainted with Mr. J. S. Kimball, her owner. One thing that aids greatly is clearing up the matter, is that there is no desire or effort on the part of anybody, that has come under the writer's observations so far, to direct the research to any particular line of blood. All are intent on getting

evidence that is direct and conclusive and there is strong hope that it may soon be known just how the Ralston-Kimball mare was bred.

One of the most pleasing pieces of news that the Eastern horse papers contained this week was a contradiction of the story of the death of the well known trainer Ben Kenney. It is now said that the trainer of the California horse John A. McKerron 2:04½ is much improved and on the road to certain recovery. There are quite a number of California horsemen who are acquainted with Mr. Kenney, all of whom speak in the very highest terms of his abilities and good qualities. They are greatly pleased to know that the report of his death was unfounded and that he stands a fair chance to fully recover his health before the year is ended.

The Strathway gelding that Mose Hart of this city sold to Col. J. C. Kirkpatrick, and was taken east by James Thompson, has made two starts at Lexington during the meeting which ends there today. The gelding has been named John Caldwell. His first start on any track was at Lexington on Friday of last week. It was in the 2:25 trot, in which there was a big field—twelve starters. Great Spirit won the race in straight heats in 2:14, 2:14½ and 2:14½ which was good time, for the track was heavy and a biting wind prevailed. John Caldwell was 3-4 in the summary and got fourth money. His next start was on Tuesday of this week in the 2:22 class trot. There was another big field and the time was much faster—2:13½ and 2:11½. He was behind the money. While the gelding trotted a workout mile in 2:12½ at Pleasanton just before leaving for Lexington, he could hardly be expected to win in a bunch of horses that contained several that are seasoned campaigners and can trot around 2:10. John Caldwell is a good horse, however, and will be heard from next year.

If the managers of the tracks in the principal California towns can arrive at a realization of the fact that a harness meeting intelligently and carefully managed can be made to pay a profit to the managers, there will be a harness circuit next year that will be a credit to the State, and this without any State appropriation. For years past a certain element in California opposed to harness racing has tried to make it appear that the appropriations for district fairs has been used for racing purposes, and that a harness meeting held apart from a district fair could not be made to pay expenses. The BREEDER & SPORTSMAN has always held that a well conducted harness meeting will pay in a majority of California towns, and the proof of this statement has been furnished by several associations this year. Mr. Thos. Smith, lessee of the Vallejo track, who gave a three days harness meeting there in August this year tells us that he made very nearly \$700 clear on the meeting. Vallejo never was a first-class harness horse town. There are few breeders in that locality and but little road driving, owing to the hilly country in the immediate vicinity of the navy yard town. Consequently gate receipts are never large. Mr. Smith arranged a three days program of trotting and pacing events, however, with two purses of \$1000 each and five of \$300 each, besides a few small purses for local horses. With but \$400 gate receipts during the three days, Mr. Smith was, however, able to meet every bill, pay every purse promptly and have a balance of nearly \$700 left as a profit. Of course, being the lessee of the track he did not have to pay any extra rental for it during the meeting, but the figures show that a small harness meeting can be made to pay with good management. It was Mr. Smith's first venture in taking full control of a meeting, and there were several little things that caused criticism that can and will be different another time. The Hollister association also gave a meeting that paid a fair profit after all bills were settled. A very enjoyable program of racing was given and all who attended spoke in the very highest terms of the management.

The Breeders Association gave \$10,200 in purses and stakes at Petaluma this year, and the crowd was so great on the last day that every available seat in the grandstand and on the fences was occupied, and the hotel and restaurant keepers of the town were put to their utmost efforts to supply the visiting portion of the crowd with something to eat during the day. The Breeders received a bonus from the citizens but no State aid, yet they made a good profit on the meeting. What the Vallejo and Hollister and the Breeders Associations can do other associations can also do. There is no reason why a harness meeting, well conducted, will not pay at Santa Rosa, Napa, Woodland, Chico, Red Bluff, Willows, Colusa, Marysville, Stockton, Pleasanton, San Jose, Oakland, Salinas, Fresno, and a dozen more towns that could be mentioned.

The Breeders made a profit on their meeting o-

\$800, lacking \$2. And this without any skindicate or other sort of book betting. All the wagering that was done on the contests was by means of auction and mutual pools, in which the public made the odds. The meeting was four days in duration and during that time a little over \$12,000 passed through the pool boxes, from which was deducted five per cent or a little over \$600. The harness races are not accompanied by much betting in California and this is to its credit. The majority of owners of trotters and pacers in this State race their horses for the sport of the contests and for the purses, and incidentally make a few bets, but are not in the game for the sole purpose of gambling. The persons who are continually saying that the harness horse is not in favor in California are mistaken. Breeding and training are indulged in nearly as much as ever. It is the associations that are dead or sleeping. California furnished quite a number of horses for the very limited circuit this year, sent several strings to Oregon and Washington and at least a half dozen stables of horses for the Eastern circuits. There would have been two hundred more California horses trained if a good circuit had been arranged here and advertised early. It is said that things will be different next year. Let us hope so, at least.

T. W. Barstow, of San Jose, gave an exhibition of speed with his mare Alone 2:09½ by Nearest 2:22, last Saturday that has not been equalled in the United States this year or at any other time so far as I have heard. There were four watches held when the performance was made, all by reliable and experienced timers, so there is no reason to doubt the figures given out, wonderful though they may seem. Alone was hitched to a light road wagon of the hike build, but not a racing wagon, and was not paced by a runner and followed no wind shield. She was driven a quarter by Mr. Barstow in 27 4-5 seconds and came the last eighth in 13 seconds flat. If any pacer has ever shown more speed than that the fact has not been published. That last eighth was at the rate of 1:44 to the mile, speed that some thoroughbred horses cannot show at the running gait. This five year old mare will get a mark close to two minutes some day.

Word comes from Los Angeles that an effort is being made there to organize a Southern California Trotting Association, something on the lines of the P. C. T. H. B. A. with the idea of giving a meeting each year in the fall. It is proposed to advertise a number of rich stakes for trotters and pacers, and to give two \$500 purses each day, entries to which will close overnight. Manager Brooks of the new Ascot Park has made the promoters of the new organization a very liberal offer to hold their meeting at Ascot Park. The meetings will be devoted entirely to harness horses and should be very successful if intelligently managed, as the harness horses have a big following in Los Angeles and the late fall is the ideal season for racing there. The proposed meeting, if arranged, will be held each year immediately before the opening of the season of thoroughbred racing at Ascot Park.

Eugene, Oregon, Races.

A very successful fair and race meeting was held at Eugene, Oregon, beginning September 30th and ending October 3d. Lord Kitchener, a son of Zombro won two races during the meeting. The result of the harness races follow:

Special trot, purse \$100—Lord Kitchener won in straight heats, Holmbox second, Neptune third, Linmont fourth. Time—2:30, 2:36.
Pacing, 2:25 class, purse \$300—Prince Tom won in straight heats, Maplemont second, Geo. D. third. Time—2:28½, 2:30¼.
Trot or pace, purse \$125—Lord Kitchener won, Geo. D. second, Holmbox third.
Pacing, free for all, purse \$250—Prince Tom won, Maplemont second, Belle Air third.

Two Bottles Cures Spavin.

BRONSON, TEX., March 26, 1903.

Dr. E. J. Kendall Co., Enosburg Falls, Vt.
Gentlemen:—I enclose stamp for which please send me your "Treatise on the Horse and His Diseases." I have a valuable horse that had a spavin. A neighbor advised the use of your Kendall's Spavin Cure. I used two bottles, and now even a horseman could not tell which leg it is on.
Respectfully yours, C. H. KEYES.

The Kenney Bicycle Co., 531 Valencia St., is doing a big business in the McMurray Carts and Sulkeys. You not only save money by purchasing a McMurray but get the most durable, best made, and easiest running cart or sulky in the market. Investigation will convince a Missourian.

Dr. S. A. Tuttle, July 9, 1900.
Dear Sir:—Enclosed find \$2. for which please send me by express six bottles of Elixir. I am having great luck with the Elixir. It has, I think, cured a splint on a horse that has been lame for two years, one of the most obstinate cases. Also cured a colt that had a very bad sprain of the ankle. I think I can do you some good here, for I can say without reserve that you have one of the best remedies I have ever seen. Yours truly, E. D. GULICK.
Maple Avenue Driving Park, Elmira, N. Y.

On a hot day drink Jackson's Napa Soda lemonade and be refreshed.

The Hanford Fair and Race Meeting.

HANFORD, Oct. 11, 1903.

BREEDER AND SPORTSMAN:—I take great pleasure in herewith reporting to you the most successful and satisfactory fair and race meeting ever held in the San Joaquin valley, that of the Hanford Agricultural Association, which closed yesterday.

The exhibits of farm products were of the highest quality, but only what might be expected in a country where Nature has bestowed her bounty with such lavish hand. The parade of premium stock on Saturday could be compared to nothing less than a like parade at the State Fair in the happy days gone by before that fair fell under the baneful influence of syndicate bookmaking. While there were no sensational exhibitions of speed, the racing was good and there was no flagging of interest from the time the bell rang out the first race on Tuesday till the finish of the last race on Saturday evening. There was some bosting on every event in the racing, but the "shark" and "grafter" were conspicuously absent.

This association adopted a plan that should be copied by every fair association. Instead of having local judges to award premiums on stock they secured the services of Prof. True of the Nevada College of Agriculture. He is a gentleman thoroughly capable and entirely impartial, and his awards gave complete satisfaction.

What contributed as much as anything else to the success of this fair was the air of generous hospitality that pervaded it. While the city's hospitality was taxed to the utmost, no one took advantage of the visitors' necessities to try to make money. There was no increase in hotel or restaurant charges.

The attendance from the first day to the last was something wonderful. There was a larger crowd on the first day than witnessed the trotting for the Occident Stake the first day at the State Fair. On Thursday the attendance was estimated at 4000, and increased until the last day when there was hardly standing room inside the inclosure.

The judging of the races, while rigorous in some instances, was strictly in conformity with the National Association rules and did much to establish confidence in the integrity of the district association.

It is the intention of this association to enlarge their grounds, build a first-class regulation mile track and otherwise enlarge their facilities. When this is done the California Breeders Association will make a great mistake if they do not hold a meeting here.

Great credit is due to Messrs. Cousins and Howard, the active men of the association, for the manner in which they attended to all the details of the business with patience and courtesy.

Of the many noteworthy things that happened I can only mention a few. Mr. Nanny's Athby, in his races, showed that he was a sure enough descendant of old Athalie, and 2:21½ for a big fellow like him, on a half-mile track in a third heat and with little work, is surely good enough. Mr. Snyder's Jonesa Bassler, under Mr. Walton's skillful guidance, was given an exhibition mile in 2:14, and won hearty applause by the smooth, easy manner in which he lowered the track's record. Mr. Corey's handsome black mare Mabel C. showed herself to be a worthy descendant of her sire, Strathway. Mr. Jake Broliar's two-year-old filly My Way won the plaudits of the crowd by winning her race easily against aged horses. My Way is a plain country girl that has had none of the educational advantages usually enjoyed by horses of her high breeding, and about the only training she got until recently was pacing on a country road inspired by the rattling of a load of milk cans. She started in the pacing division of the Breeders stake, but was out of condition and failed for that reason to make the showing she should. She is by Stoneway, son of Strathway, dam Ethel Basler by Robt. Basler; second dam by Pasha, third dam by A. W. Richmond. Barring accidents she will pace in 2:10.

McDonald was fined \$50 for withdrawing Swanhilda, as was also Mr. Legitt for withdrawing Cuckoo.

Following are the results of the harness races held during the meeting. The track is a half-mile one and is not fast:

Pacing, 2:40 class, purse \$75—J. Broliar's My Way by Stoneway won in straight heats, Nanny's Nettie Johnson second, Walton's Lightfoot third, Dunlop's Gentle fourth. Time—2:33, 2:30.

Pacing, 2:30 class, purse \$200—Corey's Mabel C. by Strathway won in three straight heats, McDonald's Swanhilda second, Boust's Albert X. third. Time—2:33, 2:26, 2:24.

Trotting, yearlings, half-mile heats—Beach Boy won first and fourth heats and first money, Parson M. won third heat and second money, Vlvian B. won second heat and third money. Bridget R. and Lucy D. also started. Time—1:58, 1:55, 1:56, 1:54.

Pacing, 2:35 class, purse \$150—Nanny's Athby by Athadon won third, fourth and fifth heats and race; King Button won first and second heats and second

money; Lady R. and Hazel C. also started. Time—2:22, 2:20, 2:21½, 2:23, 2:23.

Pacing—Little Hal won first, third and fourth heats and race; Nettie Johnson won second heat and second money; Selda and Gentle also started. Time—2:37, 2:35, 2:34½, 2:44.

Mixed, trot or pace—Mabel C. won three straight heats, L. W. second, Newport third. Time—2:27½, 2:20½, 2:23.

Special Pace, purse \$180—Athby won three straight heats, Lady R. second, L. W. third, Graceful George fourth. Time—2:27, 2:23, 2:32.

Special against time—Jonesa Basler won. Time—2:14.

Several running races made up the balance of the program. The judges were Messrs. T. C. White, J. W. Martin and H. Robinson. The timers were J. Lemasse, M. L. Doss and E. Weisbaum.

Horse News from the Horse Centre.

[Pleasanton Times, Oct. 10.]

"Farmer" Bunch blew in the other day with the "white ghost" Louise Croner 2:22. This mare's record is no indication of her speed; she is very fast. Besides Louise he has four promising well bred youngsters.

J. R. Albertson, formerly of Fresno, has located here. He has the wonderful trotter George G. 2:12½. This fellow never saw a track until last January. He has been a mile in 2:10½, a half in 1:03 and a quarter in .28½. Mr. Albertson intends taking him East next year. Barring accident, he ought to win anywhere and in most any kind of company.

Mr. Robert Niles of Humboldt county has moved his family to Pleasanton. His object in coming here is to seek health for himself, the climate of Humboldt not agreeing with him. Mr. Niles owns the brood mare Jemsey, by The Grand Moor, dam by Rifleman which he brought down here last May to breed to Searchlight 2:03½. Taking a liking to the place and climate and being interested in good horses he decided to move his family here. The mare Jemsey is the dam of Lady Waldstein 2:15. Mr. Niles has two or three full brothers and sisters to the Lady that he will handle while he is seeking health.

C. L. Crellin's three year old colt Sunlight by Searchlight that Barney Simpson is handling has a very smooth way of going and looks like a great pacing prospect.

R. Brown stepped his green trotter by Bay Bird a mile in 2:21 and repeat in 2:20½ last Wednesday. He is coming very fast.

Searchwarrant, a three year old by Searchlight, paced a quarter in 35 seconds and an eighth in 16 seconds last week.

Ed Mills shipped two horses to Salt Lake last week from San Jose and has orders for three or four more high-class roadsters and gentlemen's driving horses.

Johny Ries four year old and Bert Logan three year old paced a mile together the other day in 2:19 and a quarter in 0:31½.

Dr. Boucher is training a very fast three year old pacer by Hector 2:25, dam by Kilarney, owned by Eugene Lindley of Dixon, Cal. This colt stepped a half a few days ago in 1:06.

Lecco 2:09½ is being jogged on the road to buggy every day. He is without a doubt the handsomest trotting stallion in California, and one of the best bred ones in America. His half sister Authoress got a record this year of 2:09½, making his dam a double producer of 2:10 trotters.

In the lot of Rey Direct colts that George Davis sold to Henry Sanders are a number of extra fine lookers and Mr. Sanders will without a doubt find some among them that will prove very fast and worth more than the entire bunch cost him.

Barney Simpson has just taken up a three year old gelding sired by Don Derby 2:04½, dam by Guide 2:16½. This colt is a stout, substantial looking fellow, and while he has been driven but a few times, takes to the pace like a duck to water. He may be the one Barney has been looking for.

Fred Chadhourne has a promising three year old trotter by L. W. Russell, dam by Lone Pine 2:18, that is quite a trotter for the amount of training he has had. His owner told Fred the other day that if he would drive him a quarter in 35 seconds he would give him a split second stop watch. He did the trick and got the watch.

Ben Chaboya has a new addition to his stable in the black stallion Guy McKinney by McKinney 2:11½, dam by Guy Wilkes 2:15½, next dam by Onward 2:25½, next dam by Mambrino Patchen. This is a magnificently bred horse and if he is as good as his breeding indicates ought to make a great trotter and sire.

"Best Blister I Ever Saw."

AGOSTA, MICH., Sept. 3, 1902.
The Lawrence-Williams Co., Cleveland, O.
I bought a bottle of your Gombault's Caustic Balsam. It is the best blister I ever saw.
W. J. PARSONS.

Harness Racing at Los Angeles.

The Los Angeles Race Meeting opened last Saturday with a big attendance, the local dailies estimating the crowd at 7000. While it cannot be considered a harness meeting, as there are five or more running races each day and never more than one and sometimes no harness race on the program, still the events for trotters and pacers have furnished good contests and proved quite interesting. The harness races called first, and the syndicate book does not lay odds against the contestants. On the opening day the Hotel Stakes, \$500 for trotters of the 2:30 class, was the event for harness horses, and gave George T. Beckers an opportunity of winning three straight heats and first money with his good four year old Zombowette by Zomhro, dam Silver Bells by Silver Bow. It will be remembered that Zombowette won third money in the Occident and second money in the Stanford stakes last year at the State Fair. In the Hotel Stakes last Saturday Lady Madison was the favorite, but was distanced in the first heat and Zombowette won the race very handily.

On Monday the harness event was declared off as it failed to fill to the satisfaction of the management which desires every harness event to be a contest if possible. On Tuesday there was a \$500 purse for pacers of the 2:25 class to open the program. There were six starters in this event, Walter Maben's horse Ira by Iris being the favorite on account of the extreme speed he had shown at Sacramento where he won a heat in 2:10. The wise ones were not good guessers however, as the Nutwood Wilkes three year old Tidal Wave won the race rather easily. He took the first heat in 2:15 flat, but was third in the second which went to Ira in 2:14. The judges called driver Mosher to the stand and gave him a little talk about the punishment that would certainly follow a ride in third place when a little effort would place him in front, and he went out and took the next two heats.

On Wednesday, six horses started in the 2:20 trot for a purse of \$1000. W. W. Mendenhall's mare Rosie Woodburn by Easter Wilkes took the race in straight heats, the fastest being the second in 2:17. Sutter the stallion by Noonday was second, and Lady Zombro, a filly in P. W. Hodges' string took third money.

The result of the harness events up to and including Wednesday's races are as follows:

Saturday, Oct. 10—Trotting, Hotel Stakes, \$500, 2:30 class.
Zombowette, b m, by Zombro (Beckers) 1 1 1
Babe (Phillips) 2 2 2
Mamie Elizabeth (Maben) 3 3 3
Fortune, Lady Gipsy and Lady Madison also started.
Time—2:22½, 2:23, 2:23.

Tuesday, Oct. 13—Pacing, 2:25 class, purse \$500.
Tidal Wave, ch c, by Nutwood Wilkes (Mosher) 1 3 1 1
Ira, b g, by Iris (Maben) 2 1 1 1
High Ball, Victor Platte, Wood B. and Otto Z. also started
Time—2:15½, 2:14, 2:15, 2:14½.

Wednesday, Oct. 14—Trotting, 2:30 class, purse \$1000.
Rosie Woodburn, b m, by Easter Wilkes (McDonald) 1 1 1
Sutter, b s, by Noonday (Donnelly) 3 2 3
Lady Zombro, b m, by Zombro (Hodges) 2 6 5
Zombowette, Jupiter B. and Babe also started.
Time—2:18, 2:17½, 2:19½.

A Good Trotter in Humboldt.

The October 2d issue of the Standard, printed at Eureka, Humboldt county, California, contained the following:

"Dr. John J. Gaynor's green buggy horse Morosco in a work-out at South Park yesterday trotted his second heat in 2:18 and the third in 2:17½, and still had several seconds 'up his sleeve.' This horse, if entered, evidently had the free-for-all at his mercy for both heats yesterday were not only faster than the fastest heat in the free-for-all, but they were the two fastest consecutive heats ever moved by a Wayland W. on South Park track. The track yesterday was several seconds slower than on free-for-all day and is generally recognized as five seconds slow in the best of condition. Morosco finished the last ¼ of his last mile at a two minute gait."

Morosco, the horse referred to above is a rangy brown horse, a live trotter, and with machine-like, frictionless gait. He wears no boots and touches nowhere. His gait is so smooth and easy that onlookers usually ask when seeing him work, "How fast would that horse move were they to ask him to try?" Horsemen who have been on the coast circuit for years pronounce him one of the best gaited and most promising trotters they have seen for sometime. He is by Wayland W. out of Lady Moor by Grand Moor. It is said there has never been a Wayland W., not excepting the old horse himself, that ever was able to turn the South Park, Eureka, track better than 2:18½. The track is so slow and heavy that it takes a big strong horse to make fast time over it. Jack W. turned it in 2:15½, which was three seconds slower than his record made elsewhere. Morosco will be sent to a trainer in the spring, and that he will be in the 2:10 list before the end of next year is considered pretty certain.

Strike!—If they don't give you Jackson's Napa Soda when you ask for it.

Notes and News.

Lou Dillon 2:01½ to wagon.

Tha fastest Russian Orloff trotting record is 2:14.

Monta Carlo 2:07½, winner of the fastest six heats ever trotted.

Directum has five new ones in the list this year and all have records below 2:15.

According to an Eastern exchange Major Delmar was gelded because of his bad temper.

What has become of the Memphis show? Is it waiting until it gets back home to break a record?

There is an average of over twenty entries to the races on the program of the Memphis meeting.

Chahalis 2:04½ is being raced in the free for all classes on the half mile tracks of New England.

T. C. Cahney of Eureka will remove his string of horses, eight in number, to Pleasanton next month.

Ban Walker stood fifth on the list of winning drivers on the Grand Circuit this year, with \$19,875 to his credit.

Kinney Lou 2:07½ has won but two races on the Grand Circuit this year, but he has over \$10,000 to his credit.

Before being shipped to Lexington, Ky., Lou Dillon 2:00, was stepped a half in 0:58½ and the last quarter in 28½ seconds.

The two minute record will be beaten at Memphis next week if the weather and Lou Dillon are both in proper condition.

The fastest mile trotted in a race this year was the 2:06½ made by Fereno in her race at Cincinnati. Fereno's grandam is the dam of McKinney 2:11.

James Golden, who drove the five year old gelding Rowellan by Adbell, out of Rowenahy Azmoor a mile in 2:09½ this season, thinks he can drive him a mile in 2:07 or better.

A rubber tired, turn under canopy top surrey in fine order is for sale cheap. Also a doctor's pneumatic tire top buggy. Apply to the Kenney Bicycle Company at 531 Valencia street.

Rohizola was just outside the money in the 2:13 trot at Lexington on Friday last. Five heats were trotted and were close to the same notch, the fastest 2:10½ and the slowest 2:11½. Norrie won the race.

W. B. McDonald, owner and driver of Gray Gam was taken from his sulky at Lexington last Monday and Scott Hudson substituted. Gray Gam then won the race and McDonald was suspended for a year.

Alone 2:09½ by Nearest 2:22, paced a quarter in 27.45 records at San Jose last Saturday, last eighth in 13 seconds. She was hitched to a light road wagon, and had no pace maker or wind shield. She is a flyer.

Trilby Direct 2:08½ and Diablito 2:08½ were sent East by Mr. Juan Gallagos of Mission San Jose who bred them. They were green pacers when they started, but have two races each to their credit and have won a total of \$7,475.

Lou Dillon worked a last half in 58½ seconds, with the last quarter in 28½ seconds at Cleveland before she was shipped to Lexington. She will heat two minutes before the season is ended if she has ordinary luck and finds weather and tracks favorable.

Entranca to the Pacific Breeders Futurity Stake No. 4 has been fixed at \$2, a reduction of \$1 from the entrance fee to former stakes. Don't miss this opportunity. The stake closes November 2d and is for the produce of mares bred this year.

It is reported that Millard Sanders has engaged ten stalls at Pleasanton and will be back about the first of December. There is much speculation as to whether he will bring Lou Dillon back with him to winter her in California. It is hoped that he will.

Although the Register and Year Book say nothing regarding the breeding of Major Delmar's third dam, it is stated upon good authority that she was by Prophet, Jr., a horse of Black Hawk breeding, and that his fourth dam was by Vermont Hambletonian.

The National Trotting Association is distributing half-tone engravings of Fred Wilton 2:09½. This is the horse that has been on a ringing tour throughout the East under the names of Ormus, Finley Ross, Frank Darby, Rock Wilkes, Brooklyn Boy, Noah R., and Elzaged.

The Directs are doing well this season. Among them is Almaden 2:22½, the fastest two year old trotting colt; Daphne Direct 2:15, the fastest three year old pacing filly; King Direct 2:09½, the fastest four year old pacing colt; and Trilby Direct 2:08½, the fastest new pacing mare.

Jim Thompson got fourth money with the Strathway gelding, John Caldwell, at Lexington last Friday. "Jeams" took considerable satisfaction out of the fact that he beat Ed Geers in the race, the latter being fifth in the summary with Tonga. There were twelve starters in the race.

An Eastern man who has every chance to know says that the reason the European market is not so good for trotters as formerly is not so much due to the high prices or the general quality of the goods, but to the number of gold bricks which have been sent across the water as the real article.

If Lou Dillon 2:00 and Major Delmar 2:00 meet in the contest for the Memphis cup next week, California money will be on the little chestnut mare. There are some enthusiastic admirers of the daughter of Sidney Dillon who think that she can choke the Major with a fifty-foot rope in a dash at any distance from a quarter of a mile up.

Kinney Lou 2:07½, by McKinnay, with \$10,250 to his credit is the leading money winning trotter from California this year, and Judge Green 2:10½ by Directum stands second with \$6,550 won. The leading money winning pacer from this State is Trilby Direct 2:08½ by Direct that won \$3,675, and Diablito 2:08½ by Diablo is second with \$3,675.

The sale of horses at Fred H. Chase & Co.'s salar-yard, last Monday evening, was very successful. The thirty-five horses consigned by R. H. Nason of Dixon brought an average of \$175 per head. They were nearly all draft horses weighing from 1400 to 1700 pounds, although four or five trotting bred horses were among them. The latter brought from \$150 to \$230.

Mr. James Butler will sell about forty of the Eastview Farm horses, the get of Direct 2:05½ and Directum Kelly 2:08½, at the Old Glory sale, at Madison Square Garden, in November. The consignment will consist of yearlings two year olds and three year olds, by the above sires, while a number of record horses that made successful campaigns during the season will also be offered.

Charles Hewitt, general manager of the American Park at Pacific Beach, near San Diego, known in the past as the Pacific Beach race track, has gone to Kentucky for the purpose of securing another carload of blooded horses for the breeding and training quarters. Men are at work making improvements at the track and grounds. A shipment of blooded Kentucky horses is expected next week.

Robert Smyth, father of Robert A. Smyth sporting editor of the Call, died in this city last Saturday after an illness, extending over several days. The deceased was 80 years of age, and has been connected with the firm of Haggin & Tevis for twenty years. He was a noted horseman, and had full charge of the horse department of the Haggin ranch in Kern county. Deceased leaves a wife, son and daughter.

Secretary Murray Howe, of the Memphis Trotting Association, has declared that he will not allow any wind shield to be used in any record breaking attempts against "Father Time," as he thinks that records made in that manner are on a par with the records made on the kite shaped tracks. When Major Delmar and Lou Dillon go against the watch they will have to make their trials in the customary way.

There is a good young trotter up at Santa Rosa that is for sale. Mart Rollins is working him at the track there for Dr. Clark, who owns Rohizola. He is a four year old and a good square trotter that has already shown a mile handily in 2:25. He is by Linwood Wilkes out of a registered mare by Silas Skinner 2:17. This is good blood and the gelding shows it. This is an excellent opportunity to get a very promising horse for a low figure.

Rush & Halle, proprietors of the Suisun Stock Farm, have engaged the services of Mannie Raams, and will have all the colts and young horses on the farm developed. Heretofore the horses raised on this farm have been sold without being developed for speed, but the proprietors have concluded it will pay to have them handled by an experienced man and Mr. Raams is a very competent and successful trainer. Messrs. Rush & Halle own a number of high class mares, some of which they purchased at the closing out sale of the Corhitt farm at San Mateo. They own the stallion Demonio 2:11½, own brother to Diablo 2:09½, also several young stallions of royal breeding.

Edward F. Parker passed away at his home in Stockton, Cal., last Sunday morning, aged 56 years. For years he had been a sufferer with pulmonary troubles, and for some time had only just existed, his health being very poor. He had been connected with the grocery firm of Hedges & Buck for years. A mother, Mrs. M. D. Parker and a brother, W. H. Parker, are left to mourn his loss. The deceased left quite an estate it is understood. He was a quiet, unassuming man, and had many friends.

The deceased was a Mason and his remains were shipped to Maine for interment, after funeral services held in Stockton last Tuesday.

Mr. Parker was a great admirer of the trotting horse and though not openly identified in the ownership of many, his money paid for many stallions and brood mares that were taken to San Joaquin county years ago, and his enterprise added much to the values of the horses bred there in recent years. Mr. Parker was a true friend and one whose word was as good as gold.

Your mare had this year should have named in the Pacific Breeders Futurity Stake No. 4, for which \$6000 is guaranteed by the Pacific Coast Horse Breeders Association. It only costs \$2 to name the mare and she need not be registered or standard. If you have bred her to a horse with the idea of getting a foal that will pace or trot, put her in the stake. It will pay if you want to sell the foal, and it will pay big if the foal is fast enough to win any portion of the stake. The stake closes November 2d. Remember the date.

The idea prevails with many horse owners who are new to the business that the entry of mares in trotting and pacing futurity stakes will not be received unless the mares are registered. This is an error. No registration is required. The mare must be identified, that is all. In all trotting and pacing futurities there are many mares and foals entered that are not and cannot be registered and big stakes are often won by unregistered colts. Owners of unregistered mares need not hesitate to enter them in stakes, as the entries will be received if other conditions are complied with.

The free for all trot which came off at Los Angeles Thursday of this week was won by Iloilo, the good looking gelding sired by W. E. Meek's stallion Welcome 2:10½. Iloilo was sold a few weeks ago to parties who placed him in Al McDonald's charge. In the race in question McDonald entered and drove Forrest W. and Hughes was up behind Iloilo. Forrest W. won the first heat. A protest was then made that McDonald owned Iloilo and that the horse was not being driven to win. The judges of the Los Angeles meeting are men who will not allow any violation of the rules if they can help it, and put up Walter Mahen to drive Iloilo. The Welcome gelding won the next three heats handily in faster time than he had been beaten the first heat. The dispatches do not state whether any fines were imposed.

A regular meeting of the Board of Review will be held at the Murray Hill Hotel, New York, at 11 o'clock a. m., on Tuesday, December 1st, 1903, in accordance with the By-Laws. The President authorizes the announcement, according to precedent, that either an adjourned or a special meeting of the Board will be held in New York, N. Y., in the early spring of 1904, to accommodate those whose convenience or necessities will be served thereby. All communications intended for the consideration of the Board at the December meeting must be forwarded to the Secretary not later than Nov. 16, and all parties who desire that their cases should be acted on at the spring meeting should immediately notify the Secretary to that effect. The Board of Review is empowered to act in place of the full Board with the same authority and jurisdiction, and at the above meeting will consider business arising in each and all of the districts.

Added money in large amounts makes the list of stakes offered for the winter meeting of the New California Jockey Club the most attractive ever advertised on this Coast. The meeting will open November 14th and the list of sixteen stakes will be found on the opposite page. It is headed by the Burns Handicap which is guaranteed to be worth \$10,000 and is the greatest race each year on the Pacific Coast. In all other stakes the added money is from \$2000 to \$3000, and the total amount of stake money is \$43,000. There will be no purse of less than \$400 at this great meeting and overnight handicaps and special races will have from \$500 to \$1000 added to the entrance money. Racing will be over the club's splendidly appointed tracks at Ingleside, Tanforan and Oakland. From reports received by Secretary Treat there will be more Eastern stables than ever at this meeting, and more hookmakers have signified their intention of cutting in than have been on the block heretofore in California. Entries to the stakes advertised will close Monday, October 26th.

EFFECTUAL

The most effectual remedy in use for the cure of ailments of horses and cattle is

GOMBAULT'S CAUSTIC BALSAM

Used as a Blister or Lotion.

This preferred remedy is prepared exclusively by J. E. Gombault, ex-Veterinary Surgeon to the French Government Stud.

As a HUMAN REMEDY for Rheumatism, Sprains, Sore Throat, etc., it is invaluable. Every bottle of Caustic Balsam sold is warranted to give satisfaction. Price \$1.50 per bottle. Sold by druggists, or sent by express, charges paid, with full directions for its use. Send for descriptive circulars, testimonials, etc. Address THE LAWRENCE-WILLIAMS COMPANY, Cleveland, Ohio.

LEXINGTON'S BIG MEETING.

Lou Dillon Reduces the World's Wagon Record to 2:01 3/4 on Saturday.

There has been great racing at the track of the Kentucky Trotting Horse Breeders Association during the annual meeting which opened on Wednesday last although a heavy rainfall prevented the program of the opening day being completed, and the track was slow during the first few days. California horses have been fewer in number at Lexington this year than for several seasons past, but what they have lacked in quantity they have fully made up in quality, and one of them the incomparable Lou Dillon has broken all previous wagon records by trotting a mile pulling four wheels in 2:01 3/4, something that was considered a few years ago to be beyond the power of any horse that either trotted or paced.

The first notable event of the meeting was the winning of the Kentucky Futurity on Thursday of last week by Sadie Mac, daughter of Peter the Great. She took this great annual event in three straight heats and won handily in 2:15, 2:15 1/2 and 2:12 1/2. On the same day the two year old division of the same stake went to another filly, Grace Bond by The Bondsman. Her time was 2:17 1/2 and 2:19 and the filly Alta Axworthy that beat Grace Bond in the Horse Review Futurity in 2:15 1/2 after the latter had won the first heat in 2:14 1/2, had to be content with third money, Jessie Benyon getting second prize.

On Friday the Transylvania was trotted. There were seven starters for the \$6000 classic. The winner

and Bert Webster landed Dolly Dillon third the first heat which was in 2:06 1/2.

The fastest six heats ever trotted occurred in the McDowell stake of \$5000 for 2:10 trotters, on Wednesday, and then darkness compelled a postponement until Thursday. The race was finally won by Monte Carlo and his three heats were all in 2:07 1/2. Monte Carlo finished in front in the fourth heat, but on complaint of Scott Hudson, driver of Hawthorne, was set back to fourth position in that heat. Hudson claimed that Ben Walker struck Hawthorne on the nose with his whip, causing her to break. The heat would have given the race to Monte Carlo then, had he not been set back, and there was considerable feeling manifested by the crowd in favor of Walker. The summary of the race shows that it was hotly contested from start to finish. Monte Carlo was the contending horse in every heat and outgamed them all. The time of the six heats on the first day averaged 2:08 7/12, and the average for the race 2:08 1/2. This race stamps Monte Carlo as the best horse of his class on the Grand Circuit, with the possible exception of Billy Buck.

The racing has been high-class every day thus far. The results up to and including the races of Thursday of this week are as follows:

THURSDAY, OCT. 8.

The Tennessee, 2:08 pace, purse \$3000 (one heat paced Wednesday)—Nervolo won first, second and fourth heats in 2:07 1/2, 2:09, 2:09 1/2. Major C. won third heat in 2:10. King Direct, Tom Keene, Sufrest, Miss Willamont, Dick Wilson and Dora Papha also started.

2:07 class, trotting, purse \$1500 (one heat trotted

Free for all pacing to wagon—Dan R. defeated Greenline in two straight heats. Time, 2:15 1/2, 2:04 1/2.

SATURDAY, OCT. 10.

2:06 pace, purse \$1500—Terrace Queen won the second, third and fourth heats in 2:08 1/2, 2:10, 2:09 1/2. Cubanola won the first heat in 2:08. Trilhy Direct, Riley B, Sphinx S, Clipper and Allerton also started.

2:24 trot, purse \$2000—Jay McGregor defeated Patchen Maid in three straight heats. Time, 2:11 1/2, 2:11 1/2, 2:11.

2:15 pace, purse \$1000—John M. won two straight heats in 2:10, 2:11. Dr. Marvin, Ravenna Wilkes, Conroy, Daphne Direct, Credette, Vyzole and Go Direct also started.

2:21 trot, purse \$1500—McKinley won two straight heats in 2:09 1/2, 2:08 1/2. Dr. Strong, Belle Kuser, Mary D, Dorothy Redmond, Jim Underwood, Dodie K. Palm Leaf and Fanfaron also started.

2:10 trot, amateur, wagon race—Queen Wilkes won two straight heats in 2:15. Wauhan and Louise Jefferson also started.

Exhibition miles to wagon, trotting—Major Delmar, b g (E. E. Smathers). Quarter, :31; half, 1:01; three-quarters, 1:31; mile, 2:03 1/2.

Lou Dillon, ch m (C. K. G. Billings). Quarter :31 half, 1:01; three-quarters, 1:30 1/2; mile, 2:01 1/2.

Pacing—Prince Alert, b g (Demarest). Quarter, :30 1/2; half, 1:00; three-quarters, 1:29 1/2; mile, 1:59 1/2.

MONDAY, OCT. 12.

Trotting, 2:14 class, purse \$1000—Marion Wilkes won the first, second and fifth heats in 2:09 1/2, 2:10, 2:10. Norrie won the third and fourth heats in 2:10, 2:10. Direct View, Millard Sanders, Austin Boy, Walter Smith, Porto Rico and Oneonta also started.

Trotting, 2:18 class, purse \$1000—Gray Gem won the first, second and fifth heats in 2:10 1/2, 2:12 1/2, 2:12 1/2. Gracie Kellar won the third and fourth heats in 2:10 1/2, 2:11 1/2. Margaret Bathgate, O. I., The Parson, Claymont, Ballast Victor Jr., Bonner and Coronadon also started.

Trotting, three year olds, purse \$1500—Diadem won the second and third heats in 2:13 1/2, 2:13 1/2. Circus Girl won the first heat in 2:14 1/2 and was distanced in the second. Nanie Holland and Hilgar also started.

Trotting, 2:15 class, Walnut Hall Farm Cup, purse \$3000—Billy Buck won the second, third and fourth heats in 2:07 1/2, 2:09, 2:11 1/2. Caspian won the first heat in 2:09 1/2. Tonso, Dillon Boy, Lady Patchen, Mazetto, George Muscovite, John Mc and Guy Fortune also started.

Trotting, 2:06 class, purse \$1500—Ferenno won the first and third heats in 2:06 1/2, 2:07 1/2. Prince of Orange won the second heat in 2:06 1/2. Rhythmic, Dolly Dillon and Charlie Herr also started.

TUESDAY, OCT. 13.

2:25 pace, purse \$1000—Directum Miller won the first, third and fourth heats in 2:10, 2:09, 2:11. Line o' Gold won the second heat in 2:07 1/2. Mary Gordon, Angus Pointer, Stein, Ethel Mc, Ben Jay, Ralph and Nathalie Brown also started.

2:29 trotting, purse \$2000—Patchen Maid won the third, fourth and fifth heats in 2:11 1/2, 2:12 1/2, 2:13 1/2. Judge Green won the first and second heats in 2:10 1/2, 2:10 1/2. Bessie Brown, Prince Caton, Texas and Alberto also started.

2:08 pace, purse \$1500—Majorie won two straight heats in 2:05 1/2, 2:06. Cascade, Foxie Curd, Jong Direct, Mustard, Milton S, Council Chimes, Jessie S, Camhria Mail, Miss Millamont, Pincham Wilkes and Cubanola also started.

2:17 pace, purse \$1000—Cotillion won the second, fifth and sixth heats in 2:10 1/2, 2:14 1/2, 2:14. Dutch Mowry won the first heat in 2:10 1/2. Irish Jack won the third heat in 2:11 1/2. Reaver won the fourth heat in 2:14 1/2. Money Musk, C. O. D., Charley C, Direct L and Alley H also started.

2:13 trotting, purse \$1000—Kirkwood Jr. won two straight heats in 2:13 1/2, 2:14. Axdelight, Great Spirit, Bessie Birchwood, Bermuda Maid, Laundry Boy, Sidnut, Tonga, Grocery Maid, John Caldwell, Belle Rose and Bessie Kenney also started.

2:20 trot to wagon (amateur drivers)—Dr. Time won two straight heats in 2:16 1/2, 2:19 1/2. Briggs, Paclarlo and Galen also started.

WEDNESDAY, OCT. 14.

2:13 class, pacing, purse \$1000—Bald Hornet won three straight heats in 2:10, 2:07 1/2, 2:07 1/2. Dr. Marvin, Doctor H., Stipulator, Midway, Westre, Vyzole and Credette also started.

The Lexington two year old trotting, purse \$2000—Grace Bond won two straight heats in 2:17 1/2, 2:14 1/2. Jessie Benyon, California Cresceus, Alice Edgar, Fatty Felix, Totara and Bequeath also started.

About 2:25, trotting, to wagon, amateur drivers—Eulalia K. won the second and third heats in 2:25, 2:25 1/2. Diana S. won the first heat in 2:28 1/2. Red Leaf, Watson and Pence also started.

THURSDAY, OCT. 15.

McDowell stakes for 2:10 trotters, purse \$5000 (six heats Wednesday)—Monte Carlo won the first, second and seventh heats each in 2:07 1/2. Dr. Strong won the fifth and sixth heats in 2:09 1/2, 2:13 1/2. Hawthorne won the third and fourth heats in 2:06 1/2, 2:08 1/2. The Roman, Walnut Hall and Dan T. also started.

Pacing, 2:20 class, Wilson Stakes, purse \$2000—Hal Cbaffin won the first, second and fourth heats in 2:07, 2:06 1/2, 2:09 1/2. Foxie Curd won the third heat in 2:10. Pan Michael, Mary Anna, Fantine and Mush also started.

Trotting, 2:16 class, purse \$1000—Gracie Keller won three straight heats in 2:12 1/2, 2:12 1/2, 2:11. Direct View, Millard Sanders, Bonner, Austin Boy, Margaret Bathgate, Coronation and Victor Jr. also started.

Pacing, 2:02 class, purse \$2000—Harold H. won two straight heats in 2:03 1/2, 2:04 1/2. Nervolo, Dan R. and Shadow Chimes also started.

MONTE CARLO 2:07 1-4, Winner of the Fastest Seven-Heat Race Ever Trotted

turned up in Cassian a son of Patron, who won in straight heats. Scott Hudson's mare Hawthorne that had been tipped to win, was fourth, and Budd Doble's horse Kinney Lou, after finishing fifth twice, was withdrawn. The same day Mr. H. K. Devereux of Cleveland, drove the chestnut gelding Dan R. in the free for all pace to wagon and made the second heat in 2:04 1/2.

Saturday last was a great day at Lexington as the wagon record was smashed twice during the afternoon. Mr. E. E. Smathers took the first fall out of it with Major Delmar 2:00. He started to beat Lou Dillon's record of 2:04 1/2 and in spite of the fact that a strong wind prevailed completed the mile in 2:03 3/4, knocking a half second from the record of the dainty California mare. She was not to be denied the championship, however, and five minutes later was brought on the track driven by her owner, Mr. C. K. G. Billings. She reached the half when given the word in 1:01, exactly the time required by the Major in his effort, but showed her superior gameness by coming the last half in sixty seconds and three quarters, a quarter of a second less time than she took for the first half. The crowd went wild when the figures were displayed. On the same day Prince Alert tried to lower the record of Dan Patch, but 1:59 1/2 was the best he could do. All these trials were without the wind shield.

On Monday Billy Buck and Caspian fought it out in the Walnut Hall cup race, and after Caspian had nosed Billy out the first heat, Geers went to the front in the next three. In the 2:06 trot Ferenno trotted a great race and won in very fast time. Prince of Orange won a heat and was second in the others in this race,

Wednesday)—Ferenno won two straight heats in 2:11 1/2, 2:13 1/2. Rhythmic, Prince of Orange, Dolly Dillon and Susie J. also started.

2:11 class, pacing, purse \$1000 (one heat paced Wednesday)—John M. won two straight heats in 2:11, 2:11 1/2. Cascade, Lizzie H., Mary Anna, Jessie S. and Bald Hornet also started.

Kentucky Futurity, three year olds, purse \$14,000—Sadie Mac won three straight heats in 2:15, 2:15 1/2, 2:12 1/2. Baron Gale, Katherine A., Lizzie A., Mary Gage, Emily Letcher, Delight, Ethel's Pride, Diadem and Sporty also started.

2:11 class, trotting, \$1000—Bessie Brown won three straight heats in 2:17, 2:15 1/2, 2:13 1/2. Baron Wedgewood, Bessie Birchwood, Lucky Jim, Claymont, Ete Delight, Ellen W. Redwood, Fine Edge, Alexander Campbell and Regal Baron also started.

The Futurity, for two year olds, \$5000—Grace Bond won two straight heats in 2:17 1/2, 2:19. Jessie Benyon, Alta Axworthy, Bequeath, The Hermit, California Cresceus and Alice Edgar also started.

FRIDAY, OCT. 9.

2:13 trotting, purse \$1000—Norrie won the first, third and fourth heats in 2:11 1/2, 2:10 1/2, 2:10 1/2. Gray Gem won the second heat in 2:10 1/2. Marion Wilkes, Topsy, Rohizola, The Questor, Walter Smith, Pug, Guy Fortune, Tonse and Porto Rico also started.

2:25 trotting, purse \$1000—Great Spirit won three straight heats in 2:14, 2:14 1/2, 2:14 1/2. Laundry Boy, Bermuda Maid, John Caldwell, Tonga, Grocery Maid, Kirkwood Jr., The Crescent, Bessie Kenney, Miss Primity, Eunice G. and George H. also started.

The Transylvania, 2:12 trotting, purse \$6000—Caspian won three straight heats in 2:11, 2:09 1/2, 2:10 1/2. Kent, Dillon Boy, Hawthorne, John Mc, George Muscovite and Kinney Lou also started.

2:19 pace, purse \$1000—Directum Miller won two won two straight heats in 2:10, 2:08 1/2. Fantine, C. O. D., Reaper, Dutch Mowry, Ethel Mac, Gaiety, Red Bird, Mary Gordon, Go Direct, Stine, Charley C., Cotillon and Money Musk also started.

ROD, GUN AND KENNEL.

Conducted by J. X. De WITT.

Magnitude of the Fur Trade.

The United States leads the world as a producer of furs. Last year nearly one-half of the entire output of marketable pelts was furnished by this country, and three-fourths of our enormous production was derived from animals that live in the water. These figures are reliable, being supplied by the United States Fish Commission, which is on the point of publishing a special bulletin on the subject, from the pen of Charles H. Stevenson.

It will be news to most people that so large a proportion of our furs is obtained from aquatic animals, but formerly it was much greater, the diminished numbers of beaver, fur seal and otter having greatly reduced the relative supply of marine and fresh water pelts. Today the most important fur-bearing creature seems to be the muskrat, which contributes over 5,000,000 of its skins annually. Muskrat pelts cost only 10 to 20 cents apiece, but they are utilized on a great scale in the imitation of more valuable furs.

From the Middle Ages up to 1600 Russia was the great source of furs for the world, but the discovery of the resources of North America changed the current of the trade, and this continent soon became the important fur territory. Much of the prominence in this regard formerly possessed by the Czar's dominions was lost by the sale of Alaska to the United States.

For the production of aquatic furs this country is especially notable, and in 1902 it yielded 80 per cent of the muskrat, 70 per cent of the mink, 35 per cent of the otter, 30 per cent of the fur seal, and 12 per cent of the beaver marketed. Canada comes next after us, but with less than half the output.

Mr. Stevenson says that, if all of the muskrat skins taken last year were sewn together so as to make one piece, the latter would equal in area all other kinds of furs put together. Another very important fur-bearing animal is the nutria, or "coypu"—a small beaver like creature found in large numbers in South America, where about 2,000,000 are killed annually.

The most valuable aquatic fur is that of the sea otter, which sells as high as \$1200 a skin, but the species has been so far reduced in numbers that not more than 600 are captured in a twelve-month. As regards the total value of the product, the beaver was formerly by far the most important contributor to the trade. Later, and up to 1890, the fur seal outranked all others; but today the mink is ahead.

New York City is the great fur centre of this country, not only for the accumulation of raw goods but for dressing, dyeing and manufacturing. Indeed, that metropolis leads the world as a consumer of furs, more money being spent on them than in any other city on the globe.

The supply comes almost entirely from hunters and trappers, and the skins "in the rough" are far from attractive in appearance. They are greasy and dirty, and the first thing required in their manipulation is a thorough cleaning. Then the skin must be made soft and pliable, and in the case of some kinds of pelts, such as the fur seal, the over hair has to be plucked out or otherwise removed, so as to reveal the beautiful under coat.

The pelts are soaked in salt water to soften them, and then are scraped with a dull knife on a piece of hard wood, to break up the texture of the skin and make it pliable. Then, if the skin is very thick it is shaved to thinness, and the under side is rubbed with fat to soften it further.

Next comes the process of "tubbing." The skins, with some sawdust, are put into half-hogsheads, in which they are trodden by workmen for a long time with their bare feet, to render them still more pliable. A machine is sometimes used for doing this part of the work, but with less satisfactory results. Finally, the pelts are put into a revolving drum, with sawdust, to remove the grease from them, and after they have been beaten out to get rid of the sawdust, the fur is combed with a steel comb, which completes the process.

A very important part of the business of preparing furs for market consists in dyeing. Fashion demands certain shades—such, for example, as a lustrous blackish brown for sealskin, which is a color unknown in nature. Beaver and otter are "silvered" by passing lightly over them a solution of sulphuric acid. A golden yellow tint is produced by the use of peroxide of hydrogen.

Dyed furs, as a rule, are of inferior durability, and soon fade, but expert chemists are doing their best to improve the processes. There are only a few successful fur dyers in the world, and the recipes for the dyes they use are kept secret.

Last year this country produced 5,000,000 muskrat skins. The fur of this little animal is dense and soft, somewhat like that of a beaver, but shorter and less fine. It is concealed by long brown overhair on the back and sides, and is generally drab blue; but in Alaska there is a kind of muskrat with fur of a light silver color, and in the Chesapeake and Delaware regions are found so-called "black muskrats," the pelts of which are highly valued.

Under the skill of the fur dresser and dyer muskrat pelts are made to imitate with wonderful accuracy

beaver, otter and fur seal, according to treatment. Black muskrat skins go mostly to Russia, where they are used for coat linings. Mr. Stevenson says that the muskrat pelts produced by the United States and Canada during the 19th century numbered about 250,000,000—enough to make a blanket covering nearly 4000 acres.

Thirty years ago mink fur was very fashionable and correspondingly high in price. Attempts were made to rear the animals in confinement, but they resulted in failure, owing chiefly to the fact that the females fought each other and frequently killed their young. Few furs surpass that of the mink in richness of coloring, quality and durability; yet, owing to the capriciousness of fashion, the pelt of the mink sells to-day at one-sixth of the price it brought in 1860.

During the 17th and 18th centuries the principal use of aquatic furs in Europe was in the making of the fashionable "heaver" hats—so called because heavier fur was the chief material employed. Some heavier fur is still utilized by hat-makers in the manufacture of very light soft hats, which sell at wholesale for \$80 to \$90 a dozen. There is still a small demand for the old-style heaver-napped hats, shaped like the silk hat, as headgear for guards on drags and coaches. The muskrat and nutria are largely used for high-grade hats.

Fish leathers are now being largely manufactured. The skins of some sharks are studded with horny protuberances which are so hard as to take a polish like stone. They are waterproof, and are used for covering jewel boxes and card cases, as well as for a great variety of ornamental articles.

The hide of the "diamond shark" is employed for covering the sword grips of German officers. A Paris manufacturer has made a reputation by tanning the skin of a species of Malabar shark into morocco, and the green leather called "shagreen," made from the skin of the angel shark of the Mediterranean, has long been a familiar article of commerce.

Good leathers can be made from the skins of cod and salmon, and the hide of the wolf fish is being largely used for cardcases and shopping bags. In Egypt fish skins from the Red sea are utilized for shoe soles, and eel skins are extensively employed in Europe for binding hooks, while in Tartary dried and oiled fish skins serve as a substitute for glass in windows.

Sturgeon skin affords a handsome ornamental leather, and the hide of the armored gar fish is much valued, being covered with horny plates which may be polished to an ivorylike finish. Along the Yukon river in Alaska the skins of the salmon and cod are utilized as clothing, the material resembling kid in appearance and softness, while almost as tough as parchment. Even the skins of frogs and toads are being employed to some extent, two or three factories in France paying much attention to tanning them for cardcases and other fancy articles.

Blue Rock Tournament at Marysville.

The Marysville Gun Club held its first blue rock tournament Sunday and it was a success in every particular. There were a large number of shooters present, Sacramento, Red Bluff, Davisville, Chico, San Francisco, Wheatland, Oroville, Gridley, Yuba City, and a number from the country precincts being represented, says the *Daily Democrat*.

While the day was not as perfect as could be desired, a swift north wind prevailing, many excellent scores were made, and the event will be remembered as one of the most successful meets ever held in this city.

The visitors were pleased by the manner in which everything was handled by the Marysville boys, and were loud in their praises of the hospitality extended and splendid way that entertainment was furnished.

It is estimated that more than one hundred shooters faced the traps during the day in the different events, and the attendance of spectators was large. All in all the tournament was successfully handled and was a credit to the club.

The following events were shot and the winners in each race were:

First event—15 blue rocks; entrance, \$1.50; first money, \$15; second money, \$10; third money, \$5. J. E. Haugh, H. Hazelhush and J. W. Gihlin each broke 14; F. P. Smith, D. Grieve, A. Johnson and J. W. Godfrey scored 13, and F. Newbert, G. A. Johnson, G. W. Gihson and T. S. Boalt 12.

Second event—20 blue rocks; entrance, \$2; first money, \$20; second money, \$12.50; third money, \$7.50; fourth money, \$2.50. F. Luther, J. W. Humble, J. J. Weber broke 19; F. P. Smith and J. W. Godfrey 18; J. E. Haugh, J. W. Gihlin and A. G. Arnold 17; W. Grieve, D. Grieve, F. S. Marshall and Frank Lipp 16.

Third event—20 blue rocks; entrance, \$2.50. Club medal to be contested for by the sportsmen of Sacramento Valley. Winner to take two thirds of next year's entrance. Side pool, \$2 entrance, 50 per cent, 30 per cent, 20 per cent to second, third and fourth high guns. T. S. Boalt of Gridley 19, and F. P. Smith, W. Grieve and H. Hazelhush 18.

Fourth event—20 blue rocks; entrance, \$2.50, first money, \$40; second money, \$25; third money, \$15; fourth money \$5. J. H. Durst of Wheatland and J. E. Haugh divided on 19 birds. G. A. Johnson, H. Hazelhush, A. G. Arnold 18, F. P. Smith, W. Bedeau,

Thad S. Boalt, E. Barthe, J. A. Bailey 17, F. Newbert, W. Grieve, E. Fissue, G. W. Gihson, J. M. Hotchkiss, A. Johnson, J. W. Gihlin, J. Hare, C. Mc-Alpine 16.

Fifth event—20 blue rocks; entrance, \$1. Championship of Northern California—Kimhall & Upson Company medal—winner to receive one-third this entrance, two-thirds of next entrance. F. Newbert, J. E. Haugh and J. W. Humble each scored 19, and it was decided that the scores in the next event should declare the winner. Humble of Bigga, won by a score of 14, Newbert making 13 and Haugh 11. Both medals went to Gridley.

Sixth event—15 blue rocks; entrance, \$6. Team shoot for six men for championship of northern California. Winning team to receive one-third of this year's entrance and two-thirds of next.

As it was nearly 5 o'clock the scores in this event decided the winners in the merchandise shoot. Gridley won the team shoot, the scores being as follows: Gridley, 77; Oroville, 71; Davisville, 61; Marysville, 59; Red Bluff, 44.

Seventh event—Merchandise shoot—15 blue rocks; entrance, \$1. Class shooting, 5 classes: J. W. Godfrey of Oroville, first prize with 15, gun case; Bailey and Humble 14. Grieve, Arnold, Luther, Newbert 13. George Johnson, Derby, Herran Berg, Smith 12. John Gihlin, J. E. Haugh, J. H. Durst, 11.

In the evening about 100 sportsmen gathered around the banquet board in the dining room of the United States Hotel and enjoyed the excellent menu that had been prepared by the Marysville boys. J. W. Stewart, president of the club, acted in the role of toast-master, and the following gentlemen responded to his call: Boone Epperson, of Red Bluff; Dr. J. H. Barr; F. P. Smith, of San Francisco; Deputy Fish Commissioner H. T. Payne, president of the State Game and Fish Protective Association, and F. Newbert of Sacramento. Each gentleman was listened to with rapt attention, especially Mr. Payne, who after telling a good story on Boone Epperson, made an interesting address on the subject of protecting game and the coming convention to be held in Paso Robles next month. He complimented the club on their successful shoot and hoped to see many of those present at Paso Robles.

The Marysville orchestra rendered selections of music during the progress of the elaborate feast, that was a fitting and thoughtful climax to a day of excellent sport. Several invited guests were present and every one declared the Marysville boys royal entertainers. Three rousing cheers, proposed by Epperson, were responded to with a will, and the banquet closed.

A list of the shooters at the Marysville Gun Club tournament last Sunday and the guns, powder and shells used is the following:

SHOOTER	PLACE	GUN	POWDER	SHELL

Kennel Registry.

SALES.

Beach Hill Kennels (San Jose) have sold the sable and white Collie bitch puppy Penelope (Spartan-Ursula) whelped June 26, 1903, to Mr. Greenwalt (San Jose) Sept. 26, 1903.

Beach Hill Kennels have sold a sable and white Collie bitch puppy (Spartan-Westridge Star) whelped July 16, 1903, to Mrs. E. S. Meuzies (Thermalito, Butte Co., Cal.) Oct. 11, 1903.

Beach Hill Kennels have sold the sable and white Collie bitch Tranwyn Briar (Spartan-Pensarn Ora) whelped April 1, 1903, to Mr. W. W. Sweeney (Los Angeles) Oct. 9, 1903.

VISITS.

W. W. Moore's Fox Terrier bitch Vina Belle (Ch. Alden Swaggar-Ch. Alden Jewel) to I. G. Morgan's Ch. Niola Daddy (Hutton Bridgeman-Beacon Tartress), October 8, 1903.

Free!! Free!! Free!!

The Polk Miller Drug Co. of Richmond, Va., whose advertisements of "Sergeant's Dog Remedies" are appearing next in the columns of this journal, desires to state that they will furnish absolutely free to our readers a revised copy of their book on "Dogs," which accurately and exhaustively treats of the more frequent diseases with which Dogs are afflicted. Enclose them 3c in stamps to cover cost of mailing the book. They have recently made F. W. Braun & Co. of Los Angeles, California, distributing agents for their popular line of "Dog Remedies," and extend an invitation to all persons having sick dogs to write them describing symptoms, etc. Enclose stamp for reply. No charge will be made for information furnished.

Jackson's Napa Soda untangles the feet.

Game Laws for 1903.

The United States Department of Agriculture have issued in Farmers' Bulletin 180, compiled by T. S. Palmer, Henry Oldys and R. W. Williams, Jr., a most comprehensive and useful publication for sportsmen particularly as well as for the general public.

The bulletin contains the Federal and State game laws up to 1903, and is a complete summary of the provisions relating to seasons, shipment, sale and licenses.

The object of the present bulletin is to present for ready reference a brief summary of the provisions of the various State laws which primarily form the basis of the Lacey act and which govern the trade in game, namely, those relating to close seasons, licenses, shipment, and sale. The large edition in which the bulletin is issued makes such condensation necessary; hence the various provisions have been tabulated, and those relating to methods of capture of game and such as are essentially local in their application omitted. These will be found in the published laws of the different States, copies of which may be obtained from secretaries of state, and in many cases from State fish and game wardens. A list of State game officials is published as Circular No. 40, Biological Survey, U. S. Department of Agriculture. Special editions of game laws may often be had on application to State officers, and synopses arranged especially for the use of sportsmen are issued by certain railroad companies, game associations, and private publishers. As a rule these abstracts do not give all the provisions relating to shipment and sale, except, possibly, for the State in which each is issued.

In order to make the bulletin more useful several new features have been introduced. A summary has been added showing the more important provisions affecting nonresident sportsmen, such as license, bag limits, and limitations on the amount of game which may be carried from the State. Two new maps have been added showing States that permit export of game for propagation and those that limit the amount of game that may be killed. The map showing the prohibitions against export of game has been modified so as to discriminate between States which prohibits shipment of all game protected by the State and those which prohibit shipment of some, but not all, and also to indicate the States which allow non-residents the privilege of carrying game with them from the State. The map showing nonresident licenses has been changed so as to show the States which prohibit nonresidents from hunting, those which issue licenses at fixed rates, and those which have conditional licenses dependent on the amount required by the State in which the applicant is a resident.

An Old Irish Sportsman Called Away.

Robert Smyth, who in his day was one of the most remarkable horsemen in Ireland, passed away in this city Saturday at the advanced age of 80 years.

Up to a month ago, Mr. Smyth was fresh and vigorous and enjoyed walking or riding. He gradually declined until the end came. He leaves a wife and daughter and a son, Robert Asheton Smyth, sporting editor of *The Call*.

Mr. Smyth was essentially an outdoor man, knowing nature as it is given few men to know her. He filled but two positions during a residence of twenty-seven years on this Coast. He was with ex-Governor Milton S. Latham at Menlo Park until the latter's death, and then entered the employ of Haggin & Tevis at Stockdale, Kern county. He retired from active work eight years ago.

Mr. Smyth was born at Inch, County Cork, Ireland, in 1823. As a schoolboy he was passionately fond of hunting and was exceptionally well mounted. He hunted without intermission until 1866, during which time the sport reached its highest development. The peasantry favored it, and there was no hint of the wire fence which in recent years has in a degree ruined English and Irish hunting.

Mr. Smyth owned and hunted for many years at Lisquinlan House, Castlemartyr, one of the fastest pack of Harriers in Ireland. They had many famous runs, one in particular, some twenty miles after a deer, being famed in song and story. Among the packs with which he hunted were:

Lord Fermoy's Foxhounds, Lord Fermoy master, Traholgan, Whitegate, Cork. Union Foxhounds, Robert Fitzgerald Uniacke master, Castletown, Keleigh. These packs are now called the Union Hunt. Mountford Longfield's Staghounds, Mountford Longfield master, Castlemartyr. Cloyne. John Webb Roche's Harriers, Rochemount, Whitegate. The Rev. William Bowles' Foxhounds, The Rev. William Bowles master, Springfield, Castlemartyr. Captain Rowland's Harriers, Captain Rowland master, Kilbay, Cloyne. Mr. Wakeham's Harriers, Spring Hill, Carigtohill. John Courtney's Harriers, Ballyedmund, Middletown. The famous Duhallow pack, Lord Doneraile master, at that period. South Union Foxhounds, Thomas Knowles master, Oatlands, Kinsale. Edmund Fitzgerald's Harriers, Clonmult, Middletown. John Smith's Harriers, Rathcourcey, Middletown. Richard Tonson Rye's Foxhounds of Rycourt.

Secretary Chas. R. Stevenson writes: "The fourteenth annual field trials of the National Beagle Club of America, will commence on November 9, 1903, at Howardsville, Albemarle county, Virginia, at the invitation of Dr. and Mrs. Henry Dickson Burns and General and Mrs. T. M. Logan, on their plantations known as 'Dungannon' and 'Algoma', where all members of the club and all those making entries will be their guests during the trials.

"It is the desire of the club that all members of club and all persons making entries who expect to attend the trials, will so notify the secretary as soon as possible, and also state the number of dogs which they expect to enter, so that ample accommodations may be arranged."

Spokane Bench Show.

The dog show at the Inter State Fair held at Spokane, Wash., last week was the initial bench show for that city and was successful to a degree, there being nearly 200 entries. Mr. D. E. Davies, of Dewdney, B. C., judged all classes. The show was held under P. K. L. rules.

The awards were as follows:

COLLIES—Open and winners' dogs—1 Thos S Griffiths' (Spokane) Imp Lenzie Prince. Puppy bitches—1 Thos S Griffiths' (Spokane) Rippowam Miss Tuffet. Novice limit and open bitches—1 Rippowam Miss Tuffet, 2 Thos S Griffiths' (Spokane) Imp Craigmore Caroline. Cup for best Collie in the show, Rippowam Miss Tuffet. Cup for best Collie dog Imp Lenzie Prince. **Collies (Tri-colors)**—Open and winners' dogs—1 and res, Thos S Griffiths' (Spokane) Imp Rippowam Archer.

BLOODHOUNDS—Open dogs—1 and cup for best, Thos S Griffiths' (Spokane) Spokane.

IRISH SETTERS—Puppy dogs—1 C E Jordan's (Spokane) Patrick Henry. Limit dogs—1 George Jay's (Victoria, B C) Mike. Open dogs—1 Mike, 2 Dr A J Garisch's (Victoria, B C) Ch Hector II, 3 J M Bunn's (Spokane) Patsy, res J P M Richards' (Spokane) Ned II. Winners, dogs—1 Mike, res Ch Hector II. Limit bitches—1 C W Wagner's (Spokane) Babe, 2 S Creech's (Victoria, B C) Nellie. Open and winners, bitches—1 Babe, 2 Nellie. The A W Doland silver cup for the best Irish Setter was won by Mike.

CHEESAPEAKE BAY DOGS—Novice—1 William Cochran's (Spokane) General, 2 George T Crane's (Spokane) Donald.

IRISH WATER SPANIELS—Puppy dogs—1 F H Mason's (Spokane) Buller. Limit and open dogs—1 John Riplinger's (Seattle) Dooley Prince. Winners, dogs—1 Buller, res Dooley Prince.

COCKER SPANIELS (Black)—Puppy dogs (not over 20 pounds)—1 Mrs Mae O'Donnell's Nig, 2 J D Chickering's Teddy. Novice dogs—1 Mrs Moore's Lake Shore Bob, 2 J F Booth's Sam II. Novice bitches—1 Theodore Kiehlhofer's Flo K. Open and winners' bitches—1 Mrs C K Goodwin's (Victoria, B C) Little Dorritt, 2 Flo K. Cocker Spaniel (other than black)—Puppy dogs—1 J V Pohlman's (Spokane) Hooley. Novice dogs—1 Mrs Harry Green's Blondy. Limit dogs—1 C W Sharpless' (Seattle) Ben Ora, 2 Mrs Harry Green's (Spokane) Blondy. Open dogs—1 Hooley, 2 J F Booth's Sam II. The Washington Cracker Company cup for the best Cocker Spaniel dog was won by Ben Ora. Puppy bitches—1 C W Sharpless' (Seattle) Freckles. Limit bitches—Freckles. Open and winners' bitches—1 Freckles, 2 C W Sharpless' (Seattle) Pattern. The Boothe-McClintock silver cup for the best Cocker Spaniel bitch was won by Little Dorritt.

FOX TERRIERS—Novice dogs—1 W F Hall's (Victoria, B. C.) Cadger of Oaks. Limit dogs—1 Cadger of Oaks. Open dogs—1 George Florence's (Victoria, B C) Wandee Revelry. Winners, dogs—1 W F Hall's Cadger of Oaks, res George Florence's Wandee Revelry. The White House Dry Goods Company silver cup was won by Cadger of Oaks. Puppy novice and open bitches—1 H O Smith's (Seattle) Queen. The Mose Oppenheimer silver cup for the best Fox Terrier bitch was won by Queen.

IRISH TERRIERS—Puppy dogs—1 Jay P Graves' Teddy Leeds, 2 J P Graves' Hilo Kid. Open dogs—1 J P Graves' Teddy Leeds, 2 J P Graves' Iro King. Winners, dogs—1 Teddy Leeds. The A. B. Jackson silver cup for the best Irish Terrier dog was won by Teddy Leeds. Puppy bitches—1 Jay P Graves' Honolulu Irene, 2 J P Graves' Irish Palola. Open bitches—1 J P Graves' Iroquois Flirt. The John M Bunn silver cup for the best Irish Terrier bitch was won by Honolulu Irene.

BOSTON TERRIERS—Open dogs—1 J H Wilmot's Gas House. Puppy, limit and open bitches—1 Mrs W C Ufford's Pattie II. The Jay P Graves' silver cup for the best Boston Terrier on exhibition was won by Pattie II.

DASCHUND—Open and winners, dogs—1 Gus Meese's Totem.

SCOTCH TERRIERS—James Dunkin silver cup won by J H Travers' Kootenai Baby.

MISCELLANEOUS—1 George Tinto's (Seattle) Lanelle (Old English Sheep Dog), 2 C W Carlson's Jack (Russian Wolfhound), 3 F Pugh's Irwin (Russian Wolfhound).

A Coast Fancier in Chicago.

Mr. J. H. Dorian writes us from Chicago, where he is now located in charge of the Chicago office of the Columbia Phonograph Company. Mr. Dorian's predecessor at Chicago has been transferred to the New York office. Mr. Dorian was, previous to managing the San Francisco branch, assistant manager of the large establishment at Chicago. In a circular noting changes in the company's service it is stated that Mr. Dorian "has demonstrated his ability in every position in which he has been tried."

KENNEL EDITOR BREEDER AND SPORTSMAN—Confirming the verbal instructions given your collector just before leaving San Francisco, when I paid him your bill of Sept. 1st covering my account to that date; kindly discontinue my advertisement in BREEDER AND SPORTSMAN if it has not already been done, and send me bill. The enclosed clipping will explain the reason for this step. I had hoped to get in to see you before leaving, but found every minute filled up, and had to even bring some work with me to complete en route. I have sold all my Cocker's except one female brought with me as a pet; have disposed of the St. Bernard Le King to Mr. William Wallace of 125 Geary St., and shall bring Ch. Grand

Master II, East, as soon as I am settled here and have a place for him. Champions Alta Rachel and Gypsy Lee II are temporarily with Mr. H. H. Stanley, connected with our San Francisco establishment. I have not yet decided whether I will keep them or not. Rachel will probably remain with Mr. Stanley. Gypsy I may possibly bring East. Both will shortly be bred to Grand Master II.

I had a very pleasant visit from Messrs. Stewart, Harker and Albee just before leaving San Francisco, and regret very much indeed that I cannot co-operate with them in their effort to make the coming San Francisco Bench Show the success I am sure it will be. I have tried to express to them, however, my very genuine interest in the enterprise, and my appreciation of the many courtesies received at their hands, and those of Coast Fanciers generally. May they all 'live long and prosper'; and may the day be not long distant when 'the lion and the lamb shall lie down together' to the growth and profit of Coast dogdom in general, and our canine friends in particular. Until that happy day, believe me, with kindest personal regards, and hearty appreciation of the many courtesies received at your hands.

Very sincerely yours, J. H. DORIAN."

The Northwest Field Trials.

The fourth annual field trials of the Pacific Northwest Field Trials Club were run on the same grounds, near Coupeville, Whidby island, Wash., that were the scene of the club's previous meetings. The meeting took two days, September 29th and 30th to dispose of three stakes.

There was a good attendance of club members and visiting sportsmen at the trials. Weather conditions for a week previous to the trials caused the quail to seek cover in the heavy brush and not until the second day of the running could the birds be found in their accustomed haunts numerous enough to satisfy the spectators and handlers and give the dogs opportunity to show their class. For a week previous a heavy downpour of rain had delayed harvest work and the fresh stubble was so wet that at first but few beaves of quail were found on the ground where they were known usually to be plentiful.

The lack of quail on ground that under ordinary circumstances was well provided with excellent quail stubble was rather disappointing. This made the running slow and uneven, for in several heats promising young dogs could not do any work on birds and the judge necessarily took a line on their field trial form as shown in style, range, speed and going.

Prof. J. A. Balmer of Cle-Elum, Wash., was again in the saddle and judged with the same discretion and capability that has distinguished his judging at each of the three previous trials of this club. When a field trial judge adopts as the standard for a field trial dog great natural ability and the "class" that is a prominent quality expected and recognized by field trial devotees and when personal prejudice and bias are eliminated then there can be no exception to the results announced by a judge who works on those lines.

At the regular annual meeting of the club, following the trials, the officers elected for the ensuing year were: J. A. Peebles of Seattle, President; L. B. Youngs, C. L. Lundy and E. B. Roy of Seattle, and T. J. A. Tiedemann of San Francisco, Vice-Presidents; John Riplinger of Seattle, Secretary-Treasurer; F. A. Pontius, J. W. Conidine, C. B. Yandell, F. R. Atkins and N. A. Weeden of Seattle, Board of Governors.

Among the visitors from distant cities present at the trials were: Mr. John A. Schumacher of Los Angeles, Mr. Thomas Plimley of Victoria, B. C., Mr. Jos. E. Terry of Sacramento, Dr. E. F. Tucker of Portland and Miss Winnifred Davies of Victoria, B. C.

The Derby was run with fourteen starters (12 English Setters and 2 Pointers) out of twenty-six nominations. The quality of the dogs in the stake this year was superior in a degree to that shown at any of the previous club trials. The purse, which amounted to nearly \$200 was awarded 50 per cent to first, 30 per cent and 20 per cent to second and third. J. A. Peebles' English Setter dog Uncle Jim (Count Whitestone-Sport's May Belle) showed high-class speed and range. John H. Schumacher's English Setter bitch Valita (Bell Boy-Rod's Lark) second, was handled by W. B. Coult's very cleverly, she showed good form and redeemed the promise of her youth and showed the style expected of a Rod's Lark puppy. E. B. Roy's English Setter dog Cincinnati Nat (Ch. Cincinnati Pride-Ruth T. Etol) divided third with N. A. Weeden's English Setter dog Count Whitestone's Chief (Count Whitestone-Sport's May Belle). Nat was the popular performer of the stake. He is a handsome white, black and tan and works with a showy pace, range and style, and was always staunch and snappy in point work.

Eight starters (7 English Setters and 1 Pointer) out of thirteen nominations made up the complement of dogs in the All-Age Stake. More birds were found in this event than in the Derby. Jos. E. Terry's English Setter bitch Lady (Ch Count Gladstone-Peachmark) winner of first, notwithstanding recent maternal duties captured first. She is a catchy worker, popular with the spectators and is a splendid goer with stylish action combined with great ranging qualities and speed. Her work on birds was a feature of the trials. She was handled by Coult's. Fleet, (Dashing Fleet-White Bawn) an English Setter dog owned by W. B. Paulsells, took second money after showing consistent quality all through. The winner of third turned up in Kilgariff (Orion-Mary Lou) Jos. E. Terry's English Setter dog winner of the Pacific Derby this year. "Kil" is a speedy wide ranger and was started somewhat reluctantly, it being believed that he would get away in the heavy cover close by the wood fringed stubble and would be accordingly

handicapped. He showed that he knew what he was about and confined his investigation to the open stubble.

The Members' Stake had five dogs in the running, (4 English Setters and 1 Pointer). J. W. Considine's Hick's Lad and Hick's Bab (Doc Hick-Woodcraft), won first and second, C. Wenig's English Setter dog Doc Montez (Roy Montez-Diana Montez) won third. The prizes were handsome silver trophies donated by the members.

The first brace put down in this stake was Hick's Bab with Doc Montez, then came Hick's Lad with Lady's Count Noble. K. C. Rip, the Pointer, ran a bye.

The club offered a \$25 purse to the handlers putting in the largest strings in the Derby. Handler Hansen took first, \$15, and Handler Couits received second prize, \$10. Couits turned the tables in the All-Age and took first prize \$15, for the largest string, whilst Hansen received the second prize, \$10. The quality and breeding of the dogs run in these trials is of a high standard as will be noted in the following list and order of running of the heats in the Derby and All-Age:

DERBY

- Hick's Lad, English Setter dog (Doc Hick-Woodcraft). J. W. Considine, Seattle, owner; Hansen, handler.
Bon Ton Belle, English Setter bitch (Lady's Count Noble-Va's Belle). Chas. Herman, Vancouver, owner; Sweetser, handler.
Roy's Lady, English Setter bitch (Roy Montez-Victoria Belle II). Miss W. Davies, Victoria, B. C., owner; Sweetser, handler.
Cincinnati Nat, English Setter dog (Ch. Cincinnati Pride-Ruth F. Etol). E. B. Roy, Seattle, owner; Hansen, handler.
Valita, English Setter bitch (Bell Boy-Rod's Lark). J. H. Schumacher, Los Angeles, owner; Couits handler.
Bangoo, Pointer dog (Glendale-Kenwood Rose). W. B. Couits, owner and handler.
Count Whitestone's Chief, English Setter dog (Count Whitestone-Sport's May Belle). N. A. Weeden, Seattle, owner; Hansen, handler.
Doc Montez, English Setter dog (Roy Montez-Diana Montez). C. Wenig, Seattle, owner; Hansen, handler.
Robert Llewella, English Setter dog (Drake Llewella-Miss Maud). T. J. A. Tiedemann, San Francisco, owner.
Glen Rose with Cincinnati Nat. Hick's Bab with Lady's Lad. Roy's Lady with Count Whitestone's Chief. Uncle Jim with Valita.

RESULT

1st, Uncle Jim; 2d, Valita; 3d, Cincinnati Nat; 4th, Whitestone's Chief.

ALL AGE

- Lola Montez, English Setter bitch (Llewella Drake-Zola Montez). J. W. Considine, Seattle, owner; Hansen, handler.
Lady, English Setter bitch (Ch. Count Gladstone IV-Peachmark). Jos. E. Terry, Sacramento, owner; Couits handler.
Miss Rip, Pointer bitch (Young Rip Rap-Jingo's Lass). W. B. Couits, owner and handler.
Busbranger, English Setter dog (Highland Fleet-Jersey Queen). F. J. Pratt, Jr., owner; Kyle, handler.
Harry B., English Setter dog (Why Not-Sue). C. E. Worden San Francisco, owner; Couits, handler.
Lady's Count Noble, English Setter dog (Lady's Count Gladstone-Lady Noble). Green and Weisman, owners; Hansen, handler.
Fleet, English Setter dog (Dashing Fleet-White Bawn). W. Paulsell's, Seattle, owner; Hansen, handler.
Kilgarif, English Setter dog (Orion-Mary Lou). Jos. E. Terry, Sacramento, owner; Couits, handler.
Harry H. with Lady Lola Montez with Kilgarif Lady with Fleet.

RESULT.

1, Lady; 2, Fleet; 3, Kilgarif.

DOINGS IN DOGDOM.

Mr. James Cole, of Kansas City, will judge all breeds at the coming dog show to be held in the Mechanics Pavilion, San Francisco, Dec. 2d to 5th. Mr. Cole, while a stranger to San Francisco, has judged at Sacramento, Seattle and Portland, and we understand gave great satisfaction.

The Oakland Poultry Association, which will manage the poultry department of the combined show, are assured of an entry of over 2000 birds. This very nearly doubles the largest poultry entry ever previously made on the Coast. One of the features of the poultry department will be a number of incubators of different makes, all hatching out chickens during the show. The artificial mothers, or brooders, as they are called, will be shown brooding the young chicks, in fact every stage of incubation and raising, from the egg to the matured winner in his cage, will be shown.

The cat department of the show will be managed by the San Francisco Cat Club of which Mrs. N. Stewart, 33 Market street, is secretary. This will be the club's first effort in giving a show, but as it has been promised the hearty support and co-operation of the Pacific Cat Club, an entry even surpassing that of last year is confidently expected. The cats will be benched in the Art Gallery, away from all the noise and danger of too close proximity to the dogs. The Art Gallery is entirely shut off from the main hall, so that exhibitors need have no fear for their pets.

Mr. B. W. Cavanaugh and Mr. H. Wachorst of Sacramento have both donated handsome silver

trophies for the best dog and bitch bred and owned in Sacramento county, and shown at the December bench show.

Mrs. Bradley-Dyne of Victoria offers a cup for the best Irish Terrier owned by a lady.

A large entry of Northern dogs has been assured, and it is expected that several of the Pointers and English Setters who have been carrying everything before them on the bench and in the field, at the Northern shows and field trials will at last come down to try conclusions with our California dogs.

As we have mentioned in the BREEDER AND SPORTSMAN, the North is very strong in the sporting classes, and unfortunately in December we can hardly hope to see California's best sporting dogs on the bench; we trust, however, that a few really good ones may be got together to give the Northern fanciers that competition which true fanciers, such as they, always desire.

Phil C. Meyer will enter a Dachsund and a Boston Terrier at the Pacific Collie and O. E. Sheep Dog Show.

Collies are in steady demand. The Glen Tana Kennels swept the board at the recent Spokane show. Beach Hill Kennels, San Jose, report several sales in the Kennel Registry.

Champion Le King is announced in stud in the classified ads. on page 15.

King Commando, Endcliffe Pleasure and two other Bulldogs will be the Ellesgy Kennels' entry for the December bench show.

"I Know Where That Bevy Is!"

Current number of American Stock-Keeper states: On account of the great demand for the service of Ch. Woodcote Wonder, Bonnybred Kennels feel obliged to raise the fee to \$50. Their desire is to have every customer satisfied and they will not resort to the mean practice of substitution, therefore to save a strain on the dog they are forced to raise the fee.

Opening of the Shooting Season.

Sportsmen who favored duck shooting for their first hunt of the season Thursday seem to have had a shade the best of it over the quail hunting contingent. The weather conditions were not by any means conducive to lively duck shooting, in most of the marshes the hunters were kept as busy fighting mosquitoes as they were engaged in shooting ducks.

By ten o'clock most of the duck shooting on the preserves was over. On the Alameda marshes many hunters pattered about all day now and then getting a shot at a "straggler." Nearly all of the sportsmen who went to the club preserves and shot on baited ponds had good shooting, many of them getting the limit bag. On the Suisun, Sonoma and Petaluma marshes the reception the ducks received caused the quackers to finally seek safety out on the hay waters. On the south east shore marshes of San Francisco bay the birds soon found that the deep water regions were ideal health resorts. The ducks bagged on the Alameda side were sprig, teal and spoonbills principally with a few widgeon and a stray canvasback here and there. On the northern marshes the birds shot were mainly sprig and teal, widgeon were fairly plentiful, but generally few high.

The recent storm drove quite a number of birds south, but still there was enough birds about the baited ponds to keep the guns busy.

Most of the quail hunters selected favorite places in Marin and Sonoma counties for their shooting. Among these sportsmen results were uneven and according to location. The knowing sportsmen were familiar with the ground hunted over and knew where to find birds. Others took general chances and got but few birds. The hot weather was against the quail hunter however, who found frequently that the birds had an exasperating method of taking to the trees and eluding both the dogs and their masters.

All in all, the opening day for local shooters, at least, was auspicious and the outlook for good fall and winter shooting is nearly all that could be desired. To-day and to morrow the main body of sportsmen will be out, at the time of going to press the weather indications were very favorable for both quail and duck shooting.

Among the many shooters who were out on Thursday may be mentioned:

The members of the Pringle Gun Club, Len D. Owens, Amby Buckley, Frank Maskey, John Bour-

dette and Colonel E. F. Preston, bagged 120 ducks on the Peyton ponds. Another party consisting of Dr. A. F. Derby, Dalton Harrison, Acille Roos, Cal C. McMahon, A. M. Shields, Louis Titus, Al Cumming, F. A. Hopke and J. J. Wirtner, members of the Field and Tule Club, had a good shoot on their preserve near Cordelia, killing 265 ducks, mostly widgeon.

Otto Feudner, Ed Feudner and C. H. McBride bagged 150 birds at the Stewart ponds, each securing the limit.

A party of Oakland sportsmen, consisting of A. A. Moore Sr., W. S. Goodfellow, Arthur Goodfellow, Wickham Havens, John C. Klein, Howard Havens, Charles Wetterbill and A. A. Moore Jr., bagged about twenty birds each on the Tomassini ponds. Herman Oelrichs, with a party of friends as his guests, had a good shoot on his preserve at Cygnus.

Among the Suisun sportsmen the following bags are reported: Herman Perkins and J. C. Murphy of the King Gun Club, 82; W. H. Bryan, Leonard Prior, George C. Gordon, J. L. Emigh, M. Dinkelspiel, C. H. Downing and A. W. Olf of the Armijo Club, 50; Lewis Pierce, Chas. B. Elliott and Harvey Dulton, 72 on the Boynton ponds; Jack Wilson, Ed Whitty, Guy Stewart and Don Reeves, 110 on the Stewart ponds; Dr. J. J. Pfister and Walter Cooper, 25; Gene Losh and Jake Anderson, 40; Dr. S. G. Bransford, J. D. Cerkel and H. B. Muzzzy, 145; Jack Morgan and Sheriff James A. Keys, 60; Tom Grennan, Tim Corcoran and Bob Waterman, 150; Fred Rush and Dr. Everts Downing, 35.

Seven members of the Spooney Gun Club secured the limit near Mt. Eden, the combined bag being 350 ducks. Those present were L. R. Larzelere, Dr. E. N. Sbord, George Morse, Dr. E. T. Mervy, Rod Guyett, Mr. Wolf and Mr. Brommer.

The members of the Pastime Club who were out were: George Carlson, John Best, Fred Bell, John Castle, Carson Lewis, Panzer, Cook and Johnson.

George Franzen and wife and some guests had a good day's sport at his ark.

H. Vollmer, John Walker and Tom Vincent also returned from Alvarado heavily laden.

George H. Newman, Fred Stanley, Ed Mouldrop and C. N. Davis secured the limit near Mount Eden.

Coming Events.

Rod.

- April 1-Sept. 10. Oct. 16-Feb. 1-Open season for taking steelhead in tidewater.
April 1-Nov. 1-Trout season open.
July 1-Jan. 1-Open season for black bass.
Aug. 15-April 1-Open season for lobsters and crawfish.
Sept. 1-Nov. 1-Close season for crabs.
Sept. 1-May 1-Open season for shrimp.
Sept. 10-Oct. 16-Close season in tide water for steelhead.
Nov. 15-Sept. 10-Season open for taking salmon above tide water.

Gun.

- July 1-Feb. 15-Dove season open.
July 15-Nov. 1-Deer season open.
Sept. 1-Feb. 15-Open season for mountain quail, grouse and sage hen.
Oct. 15-Feb. 15-Open season for quail, ducks, etc.

Bench Shows.

- Oct. 20, 21, 22, 23-Frederick County Agricultural Society, Frederick, Md. J. Roger McSherry, Secretary, Frederick, Md.
Nov. 3, 4, 5, 6-Ladies Kennel Association of America, Madison Square Garden, New York. Mrs. A. G. Evans, Hon. Secretary, Westbury, L. I.
Nov. 17, 18, 19-Boston Terrier Club, Boston, Mass.
Dec. 2, 3, 4, 5-Pacific Collie and Old English Sheep Dog Club, Bench Show in connection with Poultry Exhibit, San Francisco, P. K. L. rules

Field Trials.

- Oct. 26-Sportsman's Field Trial Association, Clare, Mich. E. O. Smith, Secretary, Midland, Mich.
Oct. 26-Monongahela Field Trial Association, 9th annual trials. Washington C. H., O. A. C. Peterson, Secretary, Homestead, Pa.
Nov. 2-Michigan Field Trial Association, Annual trials. Mich. C. D. Stuart, Secretary, Riverside, Mich.
Nov. 2-Ohio Field Trial Association, 6th annual trials. Washington, C. H., O. G. R. Haswell, Secretary, Circleville, O.
Nov. 9-Missouri Field Trial Association, Annual trials. Mo. L. S. Eddins, Secretary, Sedalia, Mo.
Nov. 9-International Field Trial Association, 15th annual trials. St. Joachim, Ont. W. B. Wells, Honorary Secretary, Chatham, Ont.
Nov. 9-Independent Field Trial Club, 5th annual trials. Hutsonville, Ills. H. S. Humphrey, Secretary, Indianapolis, Ind.
Nov. 10-Western Irish Setter Club, 2d annual trials. Dr. T. L. Fenn, Secretary, Chicago, Ill.
Nov. 10-Connecticut Field Trial Club, Hampton, Conn. F. W. Smith, Secretary, New Haven, Conn.
Nov. 16-North American Field Trial Club, 5th annual trials. Can. Alfred Wigle, Secretary, Windsor, Ont.
Nov. 16-Kentucky Field Trial Association, 4th annual trials. Ky. Sam Brown Hays, Secretary, Louisville, Ky.
Nov. 16-Illinois Field Trial Association, 5th annual trials. Robinson, Ill. W. R. Green, Secretary, Marshall, Ill.
Nov. 16-Pointer Club of America, Hoimdel, New Jersey. C. F. Lewis, Secretary, New York City.
Nov. 17-Nevada Field Trial Association, Paradise Valley near Winnemucca, Nev. Dr. O. E. Wilson, Secretary, Elko, Nev.
Nov. 23-American Championship Field Trial Association, Annual trials. Robinson, Ill. H. S. Humphrey, Secretary, Indianapolis, Ind.
Nov. 30-Virginia Field Trial Association, Chase City, Va. Chas. R. Cooke, Secretary, Richmond, Va.
Dec. 1-Indiana Field Trial Club, Annual trials. Clay City, Ind. C. F. Yung, Secretary, Clay City, Ind.
Amateur Field Trial Association of Maryland and District of Columbia, Md. Wm. R. Armstrong, Secretary, Baltimore, Md.
Dec. 5-Continental Field Trial Association, Thomasville, Ga. John White, Secretary, Hempstead, L. I., N. Y.

Duck and Quail Outfits.

Skinner, this week, had the record sale of sportsmen's outfits, ammunition and guns. A large stock of goods put in for the opening of the season was not sufficient for the unusual demand for hunting suits, rubber boots and hunters' footwear, canvas and folding wooden decoys, gun cases and a new design of leather-covered shell boxes. One make of shotguns was sold out entirely. Skinner's place is 801 Market street. You can get anything there you need for duck or quail shooting. Send for a catalogue, if you haven't the time to come, and try a mail order.

THE FARM.

Alfalfa to be the Leading Product.

The overshadowing question interesting every one seeking a permanent home in California is "What can I produce from the soil that will bring a sure and steady return for the money invested and the labor expended?" The ringing answer comes unchallenged from the alfalfa fields of the famous San Joaquin and Sacramento valley, where the actual returns are from five to ten crops a year, yielding from ten to fifteen tons per acre, and where five crops are cut and there is grazing for the herd for six months of the year. The price of the hay will have from \$8 to \$12 a ton, if sold in that form, but if fed to the herd or to dairy stock, no other crop—gold, fruit nor grain—will be more remunerative. The dairy is the adjunct of the alfalfa field. Twenty acres of alfalfa will keep thirty head of cows, and each cow will return a net proceed of from \$5 to \$8 per month for hutter alone, leaving the by-products for the consumption of other stock on the ranch. This is no idle statement, and it gathers cumulative force from the fact that it is not raising a single few months' crop, but a perpetual crop under the genial skies and prodigious supplies of water that bring unitedly the marvelous results.

It is not disparagement to compare the achievements of the past with the possibilities and actualities of the present and near future. California's fruits, mines and stores of grain have amazed and delighted the eyes of the world, and it is not visionary to expect that not only fruits and mine and grain will continue to stand preeminent, but in addition the dairy productions of the State will rival them in supremacy and challenge the world to excel them. The quality will be superior by reason of the fact that the continuous growth of the fields will be fresh and nutritious. Produced from the thousands of acres of land especially adapted to raising alfalfa; nurtured by the snow-fed mountain streams or unceasing artesian well, alfalfa presents a reality in the achievement of future conquest in the cycle of the coming kingdom of progress. The future possibilities to be realized in the domain of the dairy can hardly be hinted in this brief sketch, or even compassed by words. The lever of gold, the victories of California products, past and present, her oncoming conquest of the markets of the world and the long and glowing commercial advancement in the past are incidents that will pale before the future achievements from her great and growing dairy productions.

Dairying is becoming a very prominent industry about Modesto, because of the favorable conditions and excellent profits. Twenty acres in alfalfa will support thirty cows, and one man at a salary of \$35 per month will milk and care for the herd. The milk will bring at the creamery from \$5.50 to \$7 a month per cow, according to the grade of the cow. The skimmed milk, returned and fed to calves and hogs, will afford an income sufficient to meet expenses, leaving the returns from the creamery net profit. Modesto creamery patrons received an average of 24.1 cents a pound for butter fat furnished in 1902. The land can be purchased in small tracts from \$35 to \$50 per acre, and can be graded, checked and planted to alfalfa for from \$6 to \$10 per acre—for \$6 if the man does the work himself, \$10 under contract. Planted in the fall, alfalfa maintains a fine stand by spring, and is good for seven years without reseed, yielding five crops annually, each crop one and a half tons to the acre, and affording pasture after the curing season. With few acres in alfalfa, and a few cows, a family is assured of a living within a very brief period. There is a creamery at

Ceres and a model \$10,000 creamery at Modesto, with skimming stations here and there.

Another product providing a ready and early source of income is the sweet potato. It is produced to perfection in the sandy soil and by aid of irrigation, the crop maturing in four months. The yield is from eighty to two hundred sacks to the acre, commanding an average price of about 90 cents per sack. Land producing sweet potatoes is invariably choiceland for peaches, which are always in demand by the canneries at prices affording net profit from \$75 to \$150 per acre. Melons, beans, corn and like products also yield abundantly on this land.

Within five years land prices should double and in ten years treble. Owing the water, as it does, in perpetuity, the source exhaustless, the supply hountful, within twenty years the land and water right will inevitably command \$250 per acre.

Land planted to alfalfa in such districts sells at \$60 to \$100 per acre, and the glorious climate of California goes with the deed.—*Pacific Fruit World.*

Animals With Pedigree.

We often hear farmers and stock raisers say that they care nothing for pedigree. They forget that is by a system of registration that well bred animals have been brought up to their present high standard of excellence and that the animal is what is claimed for it. If it were not for the pedigree system farmers would often be imposed upon by unscrupulous breeders by having half bloods or grades put off on them as full bloods, writes W. J. Hayes in *Midland Farmer*. Grade animals have passed with many as full bloods, and in fact from their appearance they sometimes pass the most careful observer as genuine. High grade animals are quite as good in many respects as full bloods, but they are not good breeders. They cannot be depended upon to stamp their good qualities upon their offspring.

The full blood is prepotent over the grade animals, and to grade up a herd we must use full blood males. To be sure new blood is genuine, require a pedigree. This must of course be backed up by good individuality. It is true enough that an inferior animal cannot be made a valuable one by pedigree alone. But the good individual whose registered family history shows a line of ancestry from which these excellent qualities have been inherited can be trusted to transmit these favorable traits to his offspring. While undoubtedly too much stress is often laid on pedigree alone, it will be a fortunate day when more farmers come to a realization of the importance of the pedigree. We shall then look for a marked improvement in the quality of the animals found on the farm.

Stunted Pigs.

Sometimes these are caused by an inherited disability to make use of the food given them, but probably more often by conditions after birth. If they are watched, it will be found that the other pigs are driving them from the teats and later from the trough, says *Farmers' Review*. Having once become weakened they are less able than the other pigs to fight for their food and have to be satisfied with short rations. It is evidently a part of the plan of nature to eliminate the weakling as a breeder. However, these same pigs, if given a chance at the teats and the trough, often develop into good sized hogs and prove profitable. We would not, however, advise using such an animal as a breeder. The hint that nature has given us should be taken. We agree with her in wanting for breeders only the most vigorous.

An analysis of milk in Scotland demonstrated that morning's milk contained 3.2 per cent fat and 9.2 solids not fat. Evening's milk contained 4.5 per cent fat and 8.9 per cent solids not fat.

Dairy Notes.

[From Dairy and Creamery.]

Sour skim milk does not make good calf feed.

Individuality counts for more than numbers in a dairy herd.

Souring changes the sugar in milk to lactic acid. This decreases feeding value.

Tinware for keeping milk is preferable to stone or earthenware, and is cheaper.

Too many cows should not be kept; comfort should not be sacrificed to numbers.

Never allow animals of other species to be kept in the same room with milch cows.

A cow with a long pedigree will not fill your pocketbook unless she is a producer.

Unless a cow turns her food into butter and not flesh she has no place in the dairy.

If fed right, 190 pounds of skimmilk has a feeding value equal to half a bushel of corn.

Cows regularly and thoroughly milked are a profitable investment if the cows are good.

At an auction sale recently the great Holstein-Friesian cow, Segis Inka, sold for \$1,600.

Dogs, cats and loafers should not be allowed around the barn, especially at milking time.

The true dairy cow—one that is worth keeping—is easily affected by unfavorable conditions.

Clover hay is the best of all hays for dairy cows, some say, if cut at the right time and cured.

At least every two months scrub your mangers with water and soap, lye or washing powder.

Hot water poured into dairy milk vessels cooks the cheesy matter and makes it gum and stick.

The only certain indication of a profitable cow is to see that she gives a large yield of rich milk.

A cement floor for the cow stable is a sanitary floor. It should be more or less rough to prevent the cows from slipping.

A dairy cow that is worthy the name always shows her excellence, in form, in color, or in the size and shape of the udder.

Plenty of veins on the udder is a sign that it is not fleshy, and is one of the signs of a good milk cow. The larger and more crooked the better.

The milk flow and the appetite increase and stimulate each other. If properly managed each will reach the full capacity of the cow and may be kept there.

To keep the dairy supplied with good milk cows is one of the most difficult tasks of the dairyman. He needs to be a judge of cows as well as a good financier.

Professor Tracy of Mississippi found that from a good milker following a poor one the milk flow was increased from five cows by 244 pounds in two weeks.

Cut teats are easily healed by the use of a little carbolized vaseline. If badly cut the edges should be drawn together and fastened so that they will heal evenly.

Rinse all vessels with cold water before scalding or steaming. This is more necessary in washing woodenware, such as churns and trays than in treating tin surfaces.

The bottle test is simple. Place the same amount of milk from each cow in a fruit jar. The cream will show which is the richest. Although not an accurate test, it is comparative.

Accuracy in dealing with temperatures and cleanliness in handling milk and milk vessels will alone secure a high quality in butter or cheese. This seems so simple that many people will never try to understand why or how this is true.

There are many cows that give larger quantities of milk on some farms than on others. This is due to better varieties of grasses, more grain and more comfortable quarters. An indifferent farmer may

have good cows without being aware of the fact, because he does not give proper management.

One duty of the farmer to his children is often neglected. Teaching the boys to milk properly. Most of the boys teach themselves in a haphazard way. Not one in ten makes an expert milker.

A good dairy cow is made by intelligent breeding and feeding. She does not come by chance. It takes seven years of steady, watchful attention after birth to bring a cow to her best in the production of milk.

Tha bitter taint in cream caused from the cow eating ordinary weeds, can be removed by mixing the cream with two or more parts of water at any temperature above 70 degrees F. and running it through a separator.

Many modern methods add very much to comfort and convenience of both customer and dairyman. Quart hottles, ice boxes, rubber tires for milk wagons, etc., have revolutionized the old-fashioned milk business.

Every dairyman can easily find the yield of his cows by keeping small scales in the barn where he can weigh the milk of each cow as milked. By keeping a record you can soon locate your producers and non-producers.

Milk and butter take on impurities and odors quicker than any other product, hence the necessity of warding it off. Borax is considered an excellent disinfectant. It is pure and cleansing and kills germs which cause milk to sour.

An aggressive dairyman says: "Dairy farming is taxing business. It keeps us at home morning and evening every day, but it makes the farm, and with prices such as they have been of late, it will make us if we attend to business intelligently."

A Model Creamery.

The Pierce Land and Stock Company recently completed at their Riverside dairy on Rough and Ready Island, near Stockton, one of the finest private creameries on the Pacific coast. The building is of Spanish style of architecture, a model of neatness and sanitary perfection with porcelain tubs and tanks for holding milk and cream, cement floors and tiled walls. The building contains two cold storage rooms and every modern convenience in keeping with the splendid milking stables for the production of a high grade sanitary product.

No positive rule can be set down for feeding hens for egg production for the simple reason that all the breeds cannot be treated alike. Of course there may be a general formula given for the best results. The asiatics cannot be treated like the mediterraneans for example. They are almost opposite in nature and habit. Again the Plymouth Rocks and Wyandottes seem to come between the two so we have three distinct divisions and they should be treated in entirely different ways. Meat is necessary and is almost indispensable in the fall and winter. It takes the place of insects, grasshoppers, worms, etc., and is hence another natural food. It must however be fed judiciously. Three time a week is about right. Green cut-bone, sheep's heads, beef scraps, pluck or anything else that is meat, will supply the demand.

FOR SALE.

PERFECT PARK HORSE, 7 YEARS OLD, by Dexter Prince out of mare by Speculation; chestnut sorrel, 15 2/4 and weighs 1050. Has mark of 2:25 and can show 2:30 gait. Can pull buggy mile out in 2:30. Pure-gaited trotter and is gentle and without blemish. Good looker and pleasant to drive. Sold for want of use. Inquire at the Dexter Prince Stables, Oroville St., near Baker.

McKinney Stallion For Sale.

DAY COLT WITH BLACK POINTS, FOALING July 21, 1902. By McKinney, dam Dollie G., she by Duke by A. W. Richmond; 2d dam, Jennie C. by Sargent's Queen Sabo; 3d dam, Black Swan by Monte, by Williamson's Belmont. Colt of good size. Price \$750. Address W. W. GOLLIN, 231 North First St., San Jose, Cal.

A Mule Has Advantages.

The advantage of a mule over a horse is, he can be taught to turn shorter, thus preventing the breaking down of vegetables or other plants. He can go in rougher places, is not affected by heat as badly as the horse and requires less attention in the way of currying, rubbing, etc. His feet being smaller, he can walk closer to the growing plants. To make a good mule worth from \$50 to \$80 at weaning time, or from \$140 to \$160 as a two year old, he should be foaled from a large mare in April or May. He should run with the dam until October 1, then he weaned. At this time he should be at least 52 inches. Put him in a shed with plenty light and feed oats with clover and timothy hay. Too much corn, fevers the legs and produces scratches. The next summer he should have access to pasture, with a little corn each day until cold weather, when he should be brought back to the barn. At two or two and one-

half years old he should be 16 hands high, fat and ready for market. When feeding, care should be given to keep the system cool with green stuff, and keep out scratches. The following is a good cure: Take equal parts of blue stone, white vitrol and verdigris, grind together with equal parts of soapstone, mix with warm water until about as thin as paste, apply with a swab on the end of a stick about three times a week. Mule colts are no more troublesome than horse colts. The colts run with their mothers, but a separate pasture is required for two year old mules.—Exchange.

California Farms.

"There are 72,542 farms in California with an average size of 397.4 acres," says an article compiled for the California Promotion Committee. 1492 of these farms are under three acres in extent; 5342 are between three and ten acres; 8236 are between ten and twenty acres.

The larger farms are as follows: 13,110 are between twenty and fifty acres; there are 8067 between fifty and one hundred acres and 13,196 farms between one hundred and one hundred and seventy-five acres. There are 4635 farms ranging from one hundred and seventy-five to two hundred and sixty acres; 8370 between two hundred and five hundred acres; 5329 between five hundred and one thousand and 4753 farms more than a thousand acres in extent.

Of the 72,452 farms in California 19,048 are devoted to bay and grain, 18,537 to fruits, 15,418 to live stock, 8,686 to dairy produce, 3,045 to vegetables, 386 to sugar, 208 to flower plants, 141 to nursery products, 7072 to miscellaneous products and one to tobacco.

Bran in the Cow's Ration.

My judgment is that bran should make up at least one-half by weight of a cow's ration. I like it, not because it is particularly rich, but because of its light,

flaky character and because it be'ps lighten the ration. It is less digestible than the heavier feeds, yet seems to aid digestion.

The remainder must be made up of cottonseed and linseed or cottonseed and gluten. One of the best rations we have used contained five pounds of bran, one and one-half pounds of cottonseed and one and one-half pounds of linseed meals.—Joseph L. Hills (director Vermont Experiment Station.

Alfalfa Does It.

The Newman Index reports that the local New Era creamery paid \$7000 for butter fat for the month ending September 15. The Hygeia in the same vicinity \$3000 and the skimming station of the Encinal creamery in Alameda, also located at Newman, paid \$4000. In addition to these sources of revenue, many dairymen, most of them big ones, ship cream direct to the cities.

"SAVE-THE-HORSE" SPAVIN CURE

TRADE MARK

OAKLAND, CAL., AUG. 24, 1903.

I had a horse with a very bad thoroughpin, I got a bottle of "Save-the-Horse" from Garrett & Taggart of Oakland; used the same according to directions, and when it was all used up the thoroughpin was still there. I thought of all the doctor had told me—that it could not be cured—and let the horse go. After this I saw the horse, and his leg was improved so much that I got him back, bought another bottle of "Save-the-Horse," and two-thirds of that bottle cured him sound as ever. Since then, while working a colt for speed, it hit one knee and ruptured a blood vessel. I tried the balance of the bottle of "Save-the-Horse" on it, and it has improved so much that I think it will cure that also. Please send me another bottle. Both cases were given up as incurable by three or four of our best veterinarians. The thoroughpin was treated by three expert veterinary surgeons without any result except terrible torture to the horse. The leg was badly burned by such treatment, and I was compelled to apply lard and sweet oil to stop the burn, and to this day the horse is badly scarred.

HARRY D. BROWN, 286 Second St., Oakland, Cal.

September 7th, at the Fasig-Tipton sales at Sheepshead Bay, Long Island, N. Y., a yearling by Escher-Excellenza was being sold by Mr. William Easton, and when the animal was led into the ring he said: "This horse has been suffering from a bog spavin, of which practically no trace remains. He was treated with that remedy called "Save-the-Horse," which all of you know, and it did save the horse—that is, it cured him. Now you know lots of great horses, Morello and others, were successfully raced, and there is no reason to expect that this colt will ever take a lame step." The hidding then opened at \$250, and the colt was sold for \$800 to Mr. J. D. Smith.

"SAVE-THE-HORSE" Cures Without Scar, Blemish or Loss of Hair.

"Save-the-Horse" can be applied at any time, anywhere, any place, and in all conditions and extremes of weather. Horses may be worked as usual with shin or ankle boots, as no harm can result from destruction of hair or scalding of limb.

\$5.00 PER BOTTLE.

Written guarantee with every bottle given under our seal and signature, constructed solely to satisfy and protect you fully. Need of second bottle is almost improbable, except in rarest of cases. Copy of booklet and guarantee sent upon application.

POSITIVELY AND PERMANENTLY CURES

Bone and Bog Spavin, Thoroughpin, Ringbone (except low ringbone), Curb, Splint, Capped Hook, Windpuff, Shoe Boil, Weak and Sprained Tendons and all Lameness. If you have a case different than described in our booklet or advertising we will advise you frankly as to the possibility of the remedy effecting a cure. Give explicit particulars. Give the veterinarian's diagnosis, if he is competent. Inform us fully as to the age, development, location and swellings, lameness, action and previous treatment. \$5.00 a bottle at all druggists and dealers, or sent express prepaid.

TROY CHEMICAL CO., Manufacturers, TROY, N. Y
D. E. NEWELL, Pacific Coast Agent, 519 Mission St., San Francisco

PALACE HOTEL, SAN FRANCISCO, CALIFORNIA.

TOURISTS and TRAVELERS will, now, with difficulty recognize the famous COURT into which for twenty-five years carriages have driven. This space of over a quarter of an acre has recently, by the addition of very handsome furniture, rugs, chandeliers and tropical plants, been converted into a lounging room—the **FINEST IN THE WORLD.**

The EMPIRE PARLOR—the PALM ROOM, furnished in Cerise, with Billiard and Pool tables for the ladies—the LOUIS XV PARLOR the LADIES WRITING ROOM and numerous other modern improvements, together with the unexcelled Cuisine and the Most Convenient Location in the City—all add much to the ever increasing popularity of this most famous HOTEL.

The Bone of the Hog.

This is a part of the hog which produces much discussion, as we have three divisions on the bone question. Some breeders want the heavy bone others the light bone, and others the medium bone.

Size of bone does not seem to be the index of its strength. There is a fineness of structure in bone that is necessary to greatest strength. This quality of bone goes with highest vitality or completest development of all the parts that go to make up the animal of highest type and fullest development.

Quality of bone is of first importance, and it seems impossible to find this along with abnormal bigness. The size and quality of bone may be affected by character of feed, but this cannot wholly overcome the inherited effect of selection and hereditary.

The extremes of bigness and smallness of bone are to be avoided. Each has its objections. The bone of greatest excellence is found between the two extremes. After the breeders have been selected let it be borne in mind that quality is easily affected by feeding.

Profitable Missouri Cows.

Prof. C. H. Eckels of the Missouri College of Dairy Husbandry, writes as follows to Colman's Rural World: Very few farmers realize the income that can be had from a good cow.

Now, a few facts and figures from our experience on the state farm. Last year the cash income from the herd was \$32.50 per cow for butter sold and \$12.50 per cow for milk, skim milk and calves, making a total income from each cow of \$95.

the same sources will be over \$100 for the entire herd of twenty-eight. These results do not come from feeding expensive feeds or excessive feeding.

Sacramento canneries have put up this season so far, over four million pounds of tomatoes; this would make \$3,000 cases worth \$166,000, which is a nice little sum as a side issue.

Raising Mules in Kentucky.

The mule industry in Kentucky is an important one. For the most part, fancy work teams and cotton mules for the Southern trade are raised, very little attention being paid to the small mining mule here and few are produced.

The greatest attention is devoted to the cotton mule, which measures from fourteen to fifteen and a half hands, and markets at from \$100 to \$135.

Mule colts are bought up during the summer, delivered in October, stabled and fed during the winter months, and grazed through the following summer until the second or third year, when they are shipped to the South and sold to planters. The mule market opens in December and is practically over by the last of February. Atlanta, Memphis and St. Louis are the principal cotton mule markets now. Fancy teams bring fancy prices, some as high as \$50, but this is for exceptionally fine teams.

Some miners demand very small mules and these sell at from \$35 to \$50 each, while other miners use a better class of mules that sell from \$85 to \$100.

Many of the mule dealers rent out teams to these farmers, who are not able to buy, but agree to break them and give the best of care and feed through spring and summer for the use of teams and return them in time to fatten for the winter market. This is an accommodation to both mule dealer and farmer.

As a rule the mule has an easy time of it until his third year, and he does little except to play and eat, but after he is sold to planter or miner, his real work begins that ends only with death. The work for the mining mule is so very hard that it is said he is literally pulled to pieces in two years.—L. Jones, Maywood, Ky.

Big Dairy for Stanislaus County.

The Stanislaus Land and Abstract Company has consummated the sale of \$40 acres of land, which lies about two miles southwest of Crow's Landing, on the San Joaquin river, to two gentlemen from Santa Monica, who are largely interested near that place in the dairying business.

The gentlemen are H. Michael and John Grossman. They have been in partnership at Santa Monica for a number of years and their dairy business there has developed to enormous size. At the present time they have a herd of 250 fine dairy cows, which they milk every day. They have their own skimming station and creamery, and aside from the milk they get from their own cows, every month they buy from the farmers in that vicinity over \$1500 worth of butter fat.

These gentlemen expect to carry on the same business in Stanislaus county that they do in Santa Monica, except on a larger scale. They will remove the greater part of their dairy herd to their newly acquired farm, and will purchase new stock. A skimming station will be built immediately and for the time being the cream will be disposed of to the Newman or Crow's Landing creameries. Later, however, it is their intention to erect a creamery of their own, and then they will buy cream from the other dairymen on the West Side.

The land was purchased for \$12 per acre. It is all located in the Turlock district and can be put under water at any time. The chances are that within a few years the tract will be raising alfalfa, when a greater number of cows may be fed on the same space.

This is a transaction which means much to the county in general and the West Side in particular, as it will bring the farmers of that vicinity thousands of dollars. It is a pleasure to chronicle the advent of such enterprises to our county.—Modesto News.

Never fill the chnrrn more than one-half full; one-third is better.

CAMPBELL'S EMOLLIO IODOFORM GALL CURE

For GALL BACKS and SHOULDERS, CRUPPER SORES and SADDLE GALLS there is none superior.

The horse CAN BE WORKED AS USUAL. For BARED WIRE CUTS, GALLS, SCRATCHES, BLOOD POISONED SORES and ABRASIONS OF THE SKIN it has no equal.

It is very adhesive and easily applied to a watery as well as a dry sore.

Its use will absolutely prevent BLOOD POISONING. In this respect there is no Gall Cure offered which can justly even claim to be a competitor. We placed it on the market relying wholly on its merit for success, and notwithstanding the fact that comparatively little has been done in the way of advertising the sales of 1900 were 100 per cent greater than the aggregate sales of Gall Cure preceding that year. This increase was entirely due to its MERITS, and from it we feel justified in saying that it is THE GALL CURE OF THE 20TH CENTURY.

It is a quick and sure cure for those troublesome skin cracks under the feet which injure and often lay up race horses.

All Trainers Should Have it in Their Stables

PRICE:—3 OZ. BOX, 25c.; 1 LB. BOX, \$1.00.

WINCHESTER "LEADER" SHELLS LEAD

At the Third Annual Target Tournament of the Dominion of Canada Trap Shooting and Game Protective Association, held in Toronto, August 12th to 15th, inclusive, winnings were made as follows:

- 1st Day: High average for day by Mr. Higginson of Buckingham, Quebec.
- 2d Day: Two Men Team Championship of Canada, 20 targets per man, won by Messrs. McGill and Wakefield of Toronto, with score of 37. High average for day won by F. Westbrooke of Brantford.
- 3d Day: Parker Gun won by J. Hovey of Clinton, who also won high average
- 4th Day: Grand Canadian Handicap, 100 targets, won by Mr. Craig of Sherbrooke, with a score of 93.

"Mall Trophy," the most important trap shooting trophy in Canada, emblematic of Five Man Team Championship of Canada, won by Brantford Gun Club Team, with score of 222 out of 250.

The Montreal Rolling Mills Company Cnp, emblematic of Individual Championship of Canada, won by Mr. Bain of Winnipeg, with a score of 48 out of 50 targets. High average for the day—"Beresford Clgar" Cap—won by Mr. Hovey.

All these splendid victories were won with Winchester "Leader" Shells, and are a forcible testimony to the uniformity of these goods.

FOR FOALS OF MARES BRED IN 1903.

TO TROT OR PACE AT TWO AND THREE YEARS OLD.

ENTRIES TO CLOSE NOVEMBER 2, 1903.

ONLY \$2 TO NOMINATE MARE.

\$3250 for Trotting Foals. \$1750 for Pacing Foals. \$800 to Nominators of Dams of Winners and \$200 for Owners of Stallions. Money Divided as Follows:

\$2000 for Three-Year-Old Trotters.

200 for Nominator of Dam of Winner of Three-Year-Old Trot.

1250 for Two-Year-Old Trotters.

200 for Nominator of Dam of Winner of Two-Year-Old Trot.

100 to Owner of Stallion, Sire of Winner of Three-Year-Old Trot when Mare was bred.

\$1000 for Three-Year-Old Pacers.

200 for the Nominator of Dam of Winner of Three-Year-Old Pace.

750 for Two-Year-Old Pacers.

200 for Nominator of Dam of Winner of Two-Year-Old Pace.

100 to Owner of Stallion, Sire of Winner of Three-Year-Old Pace when Mare was bred.

ENTRANCE AND PAYMENTS—\$2 to nominate Mare on November 2, 1903, when name, color, description of mare and stallion bred to must be given. \$5 March 1, 1904. \$5 November 1, 1904. \$10 on yearlings March 1, 1905. \$10 on two-year-olds March 1, 1906. \$10 on three-year-olds March 1, 1907.

STARTING PAYMENTS—\$35 to start in the two-year-old pace. \$85 to start in the two-year-old trot. \$35 to start in the three-year-old pace. \$50 to start in the three-year-old trot. All starting payments to be made ten days before the first day of the meeting at which the race is to take place.

Nominators Must Designate When Making Payments to Start Whether the Horse Entered is a Trotter or Pacer.

Colts that Start at Two Years Old are Not Barred from Starting Again in the Three-Year-Old Divisions.

CONDITIONS.

The races for Two-Year-Olds will be mile heats (2 in 3), and for Three-Year-Olds 3 in 5. Distance for Two-Year-Olds, 150 yards; for Three-Year-Olds, 100 yards.

If a mare proves barren, or slips, or has a dead foal, or twins, or if either the mare or foal dies before March 1, 1905, her nominator may transfer his nomination or substitute another mare or foal, regardless of ownership; but there will be no return of a payment, nor will any entry be liable for more than amount paid in or contracted for. In entries the name, color and pedigree of mare must be given; also the name of the horse to which she was bred in 1903.

Entries must be accompanied by the entrance fees. Should the amount of entrance money received be in excess of the amount of the Stakes the excess will be added, less the cost of postage stamps, printing and advertising, to the Stakes for the

Three-Year-Old divisions in proportion to the amount offered in each division.

Nominators liable only for amounts paid in. Failure to make any payment forfeits all previous payments. Hopples will not be harred in pacing races.

Right reserved to declare off or reopen these Stakes in case the number of entries received is not satisfactory to the Board of Directors.

Money divided in each division of the stake 50, 25, 15 and 10 per cent. There will be no more moneys in each division than there are starters.

Entries open to the world; membership in the Association not required to enter, but no horse owned in the State of California will be allowed to start until the owner has become a member. Horses owned outside of the State of California are eligible to start regardless of membership.

E. P. HEALD, President.

F. W. KELLEY, Secretary.

New California Jockey Club

THE WEEKLY
BREEDER AND SPORTSMAN

F. W. KELLEY, PROPRIETOR.

Turf and Sporting Authority of the Pacific Coast.

—OFFICE—

36 GEARY STREET, SAN FRANCISCO.

P. O. BOX 2300.

TELEPHONE: Black 586.

TERMS—One Year \$3, Six Months \$1.75, Three Months \$1
STRICTLY IN ADVANCE.

Money should be sent by postal order, draft or by registered letter addressed to F. W. KELLEY, 36 Geary St., San Francisco, Cal. Communications must be accompanied by the writer's name and address, not necessarily for publication, but as a private guarantee of good faith.

San Francisco, Saturday, Oct. 24, 1903.

CRESCUS, the son of Robert McGregor regained the champion crown this week at Wichita, Kansas, and at this writing, (Friday morning,) still wears it. We have always believed that the mighty chestnut trotter would knock a second or so from his former mark of 2:02½ but did not expect that he would make it so emphatic. However, he has done it, and we deprecate the effort that was immediately made in certain quarters to cast a doubt upon the correctness of the time, and the length of the Wichita track. Why should not Cresceus be as capable of trotting a mile inside of two minutes as any horse that ever lived? He is comparatively young, has all his strength and vigor and is sound. At Wichita he was in the very pink of condition, the track and the weather were perfect and two thousand people saw him trot in 1:59½. The timers were reliable men and have made affidavits to the fact that the time given out was correct. All honor to King Cresceus. He is entitled to the crown. As a California journal, the BREEDER AND SPORTSMAN cannot help hoping that the Queen Lou Dillon will this afternoon still further lower the trotting record and again regain the championship for the Golden State. Her victory will not detract one iota from the greatness of Cresceus and until one of his own sex trots faster than 1:59½ he will remain the greatest trotting stallion that ever lived. The BREEDER AND SPORTSMAN'S congratulations are extended to Mr. Ketcham, who enjoys the distinction of being the only man that ever bred, trained and drove a champion two minute horse to victory.

TWO DOLLARS is not a great sum of money, but it can be invested in such a manner that it will make the produce of your mare bred this year very valuable. We hear of colts winning stakes worth large sums, but you will notice that colts cannot win these stakes unless they are entered. A colt may be fast enough as a three-year-old in 1907 to trot in 2:08, but he can't win in either division of the Pacific Breeders \$6000 Futurity that year unless he is entered in the stake. Now the date for the nomination of mares in this futurity closes November 2d—only a few days off. About the best investment you can make with two dollars next week is to send it in, together with the name and description of your mare, and the name of the stallion bred to, and thus secure a nomination in this popular stake. It will be \$2 well invested if you want to sell the mare, and the investment will increase in value if you desire to sell the colt when it arrives. According to the price paid this year for colts and fillies eligible to futurities, eligibility just about doubles their value. If you think your colt will be worth \$100 when weaned, it is pretty safe to figure on his being worth \$200 if he is eligible to this stake. The records of the salesrings will prove these assertions. Don't miss a good thing when you have an opportunity. The opportunity will have passed after November 2d. "A word to the wise," etc.

A GREAT SALE will be held by William G. Layng at the Occidental Horse Exchange on the 17th of next month. There will be some of the grandest bred young trotters and pacers ever sent to a sale in California. There are sons and daughters of Rey Direct, Hart Boswell, Diablo, Chas. Derby, Owyhee, Silver Bow, James Madison, Steinway, Guy McKinney, McKinney and Dexter Prince, and out of such mares as Stemwinder, dam of Directum 2:05½, and many others with fast records that have produced horses with fast records. Look out for further particulars next week. Mr. Layng consignments are solicited for this sale. See Mr. Layng or write to him at 246 Third street, this city.

SIXTEEN RICH STAKES with added money, close with the New California Jockey Club next Monday, October 26th. See the full list and conditions on opposite page.

BRIGHTON BEACH RACING ASSOCIATION holds one of the greatest running meetings each year that is held in the United States. Three of its principal stakes for two year olds, and the same number for three year olds, will close on Monday, November 2d, and horsemen who own colts and fillies of these ages should not forget this date. The Brighton Jr has a valuation of \$15,000, the Neptune Stakes \$7500 and the Venus Stakes \$7500. These are all for two year olds and will be run for in 1904. For the three year olds the Brighton Derby is worth \$15,000, the Iroquois Stakes \$7500, and the Brighton Oats \$7500, and are to be decided in 1905. We request owners of thoroughbreds to turn to our advertising columns and read the conditions of these rich stakes. They are among the principal events of the racing seasons of 1904 and 1905 in the eastern states.

Not Lou Milton's Dam.

The following communication has been received at the office of the BREEDER AND SPORTSMAN:

"I think I know the breeding of the grandam of Lou Dillon. It was Fly, who was either the dam or the grandam of Plunkett 2:13½. She was by Bulger, a running bred horse and her dam was, I think, a mare called Fanny by a horse called Spread Eagle. Dan Misner used to drive Plunkett and I think he can tell you who owned Fly before she passed into Kimball's hands. Yours, I. HOAG.

Our correspondent has Plunkett's breeding all right. He was bred by the late John Kean, and H. L. Neilsen of Napa. Mr. Kean was County Assessor at the time. Plunkett's sire was Strathearn, a son of Echo and the thoroughbred mare Ruth Ryan by Lodi. Fly, the dam of Plunkett, was bred as stated by Mr. Hoag. But she was never owned by Mr. J. S. Kimball. Fly, the Kimball mare, dam of Lou Milton, died in 1881, and as Plunkett was foaled in 1887, it can readily be seen that the dam of Lou Milton had been dead six years when Plunkett was foaled.

The surmise that Fly, the grandam of Dawn and Strathway might be the dam of Lou Milton that has been made by an Eastern turf writer must also be cast aside, as Mr. Mendenhall, who bred the dam of Lou Milton to Milton Medium stated that she had never produced a foal before, and as she died when Lou Milton was six weeks old, that was her only foal.

The writer has a letter from Mr. Jos. Cairn Simpson in which after thanking him for the research which led to the publication of the facts in regard to the Kimball mare as obtained from Mr. Green Thompson of Santa Rosa, Mr. Simpson adds: "One of the queerest cases in all my knowledge, and there are reasons for the belief that I am perhaps, the only one now in California who can add 'the missing link.'"

From this we are led to hope that it will not be long until this "missing link" is supplied and the dam of Lou Milton be no longer among the list of those with untraced pedigree.

Ukiah Races.

The five days' race meeting held over the excellent half-mile track at Ukiah, Merdocino county, last week attracted a large attendance and resulted in excellent sport. Tuesday and Wednesday were devoted entirely to running events and several excellent contests were seen. On Thursday the feature of the program was the Palace Hotel Stakes for two year old trotters, half-mile heats, best three in five. It took five heats to determine the winner which turned up in Wilmar, a bay gelding by Wildnut, dam Sweetwater 2:26 by Stamboul, second dam Manzanita 2:16 by Electioneer, third dam Maydower 2:30½ by St. Clair. Mr. H. B. Smith purchased Wilmar for Mr. O. E. Willams of the Palace Hotel, Ukiah, at the Palo Alto sale last January for \$175. He was jogged a month or so at the Ukiah track and then sent to John Quinn at Santa Rosa who worked him just four weeks prior to this race. His fourth heat in 1:13½, a 2:27 gait was very easily trotted and he could have circled the track in the fifth heat in 1:12 easily. As the trotter Ole 2:15 broke the Ukiah track record two days later by trotting a mile in 2:22, this performance of the two year old Wilmar looks to be especially good.

It was estimated that 2000 people were at the track on Saturday, the match race between H. B. Smith's mare May Ayers and Col. Abe Marks' Cecile M. being the drawing card. Johnny Quinn drove May Ayers and made in three straight. At the end of the race a beautiful floral collar was placed on Mr. Smith's mare amid the applause of the crowd as she and her owner are great favorites in Ukiah. The last heat was the fastest, 2:27½, not near May Ayers' limit.

The free for all trot the same day was for a purse of \$350 and was won by Ole, son of Silas Skinner. Baby Ellis was second, Gertie H. third and Dan Frasier fourth. The time of the two heats was 2:24 and 2:22.

Harness Racing at Los Angeles.

On Thursday of last week the 2:18 pace for a purse of \$500 was the harness event with which the day's program of the Los Angeles meet was opened. There is not much to be said of the race except that Ira, the Iris gelding showed up fast in the first heat and was beaten thereafter in much slower time. Ira has a world of speed, but in a heat race makes a poor showing. The race went to Higbball, son of Silkwood, and he did not have to pace faster than 2:17 to win over the field that was opposed to him.

On Saturday the 2:20 trot brought out a field of four and resulted in a good race. Zombowette by Zombro was finally returned a winner after five closely contested heats with Sutter, the stallion by Noonday owned by C. A. Arvedson of College City. Sutter and Zombowette were either first or second in every heat, the other two horses seeming to be out-classed. Zombowette took the first heat in 2:18, a new record for him. Sutter took the next two heats, but Zombowette out-trotted him and captured the fourth and fifth heats and the race.

On Monday the program was made up of six running races, and the regular harness event as a curtain raiser was omitted. On Tuesday the 2:15 class pace was down for decision. It brought to the score Higbball, Tidal Wave, Penrose, Col. Smith and Athnio. The first heat was fast, 2:12½ being hung out, but the time got slower and in the third straight heat won by Higbball 2:21½ was announced as the time, which was ridiculous for that class of horses, provided no accident happened in the heat.

On Wednesday the Catalina Stake for trotters of the 2:27 class was decided. The mare Rosie Woodburn won it handily in straight heats. The time was not fast but very good considering the track, which is cut up on the inside for the runners and is reckoned four seconds slow by the harness horse trainers.

Oct. 16—Pacing, 2:18 class, purse \$500.
Higbball, blk g by Silkwood..... (Vance) 2 1 1 1
Ira, b g by Iris..... (Maben) 1 2 2 2
Victor Platte, Penrose, Proctor and L. W. also started.
Time—2:14½, 2:17, 2:17, 2:19.

Oct. 17—Trotting, 2:20 class, purse \$500.
Zombowette, b h by Zombro..... (Maben) 1 2 2 1 1
Sutter, b s by Noonday..... (Martin) 2 1 1 2 2
Jupiter B. and Portero also started.
Time—2:18, 2:18½, 2:19, 2:20½, 2:21.

Oct. 20—Pacing, 2:15 class, purse \$1000.
Higbball, blk g by Silkwood..... (Vance) 1 1 1
Tidal Wave, ch c by Nutwood Wilkes..... (Mosher) 3 2 2
Col. Smith, Penrose and Athnio also started.
Time—2:12¾, 2:15½, 2:21¾.

Oct. 21—Trotting, 2:27 class, purse \$500.
Rosie Woodburn, b m, by Easter Wilkes..... 1 1 1
Sutter, b s, by Noonday..... 2 2 2
Babe and Lady Madison also started.
Time—2:21, 2:22, 2:20½.

Close of the Lexington Meeting.

The thirty-first annual meeting of the Kentucky Trotting Horse Breeders Association came to a close last Friday, with a day of sensational racing. In addition to the breaking of the world's pacing record to wagon by Dan Patch, there were four regular events on the card and fast time was made in every heat. The Blue Grass Stake for trotters of the 2:19 class was won by the handsome big horse Jay McGregor in straight heats with Kinney Lou second in each heat, and Judge Green took fourth money.

The Kentucky, a race for three year olds, best two in three went to Sadie Mac, and the daughter of Peter the Great equalled her record of 2:11½ in the second heat.

The bay gelding McKinley won the 2:09 trot after five heats had been trotted below 2:10, heating a field of seven good ones. The summary of the day's events were as follows:

The Blue Grass, 2:19 class, trotting, purse \$2000—Jay McGregor, b g, by Jay Hawker won three straight heats. Kinney Lou, Lady Patchie, Judge Greene and Cole Direct also started. Time—2:10½, 2:09½, 2:09½.

Kentucky, three year old class, trotting, purse \$2000—Sadie Mac, b m, by Peter the Great won both heats. Katherine A, Lizzie A and Wilna M also started. Time—2:13, 2:11½.

Trotting, 2:09 class, purse \$1500—McKinley, h g, by George St. Clair won third, fourth and fifth heats and race. Masetto won first heat and second money; Belle Kuser won second heat and third money; Maxine, Wentworth, Dillon Boy and Palm Leaf also started. Time—2:09½, 2:09, 2:07¾, 2:08½, 2:09½.

Pacing, 2:16 class, purse \$1000—Red Bird won both heats, Mary Gordon, Dutch Mowery, Beaver, Money Musk, Alley H and Effie Afton also started. Time—2:10½, 2:09½.

Dan Patch to beat world's pacing record of 2:01½ to wagon:
Time by Quarters—0:30½, 0:59½, 1:29, 1:59½.

The Kenney Bicycle Co., 531 Valencia St., is doing a big business in the McMurray Carts and Sulkies. You not only save money by purchasing a McMurray but get the most durable, best made, and easiest running cart or sulky in the market. Investigation will convince a Missourian.

JOTTINGS.

CRESCUS IS AGAIN KING. At Wichita, Kansas, last Monday he broke the two minute record held jointly by Lou Dillon and Major Delmar, trotting a mile in 1:59½ and is again the champion of all trotters. It was a wonderful mile, and adds one more to the list of wonders that have been accomplished during this year of 1903. The old stallion had been classed with the has-beens, and after making a heavy season in the stud this year was not looked to be in any condition to reduce his own former record of 2:02½, let alone trot a mile within the two minute mark. It is true that he reduced the world's half mile record to 2:08 this year and had trotted in public in 2:06½ and shown quarters in his work in 29 seconds, but few horsemen imagined he could be put into condition to carry his great speed over a mile of track no matter how favorable all the conditions of weather and footing might be. But he has done it and again proved himself the most wonderful trotter that ever lived. When he trotted two miles last year in 4:17 reducing the world's record eleven and a quarter seconds horsemen said it was the most wonderful of all his performances. Budd Doble, who was present, told me that Cresceus was running away on a trot at the end of the two miles and Ketcham could not pull him up until he reached the quarter pole. The dispatch sent out by the Associated Press, giving the account of Cresceus mile in 1:59½ is as follows:

WICHITA, Kas., Oct. 19.—Such an ovation as was given Cresceus when he trotted a mile in 1:59½ to-day and made a new world's record has been rarely witnessed. The stallion was nearly smothered to death, so eager were the spectators to pat or get near enough to touch him.

The day was simply perfect and the track in prime condition. Cresceus was paced by a running mate, Mike the Tramp, to a sulky. Cresceus had no wind break whatever. The first quarter was made in 0:30, the half in 0:59½, the three-quarters in 1:30 and the mile in 1:59½.

George H. Ketcham, who owns Cresceus, and who drove him to-day, said to-night:

"This is the best track out of doors and the conditions were perfect. When I was here week before last the track was wet, but I saw its advantages and determined to come back. The result justified my expectations. I knew before the race that the stallion would beat his record, but I did not expect a triumph so complete. I shall go to Oklahoma City and Fort Scott right away to keep engagements and that will be the last time he will appear in public."

Ketcham worked the horse out in 2:15 before the final test and then sent him flying for the record. He broke when he first scored for the word, but on the next attempt was sent off, going the first quarter in 0:30 flat. There was a cheer when he reached the half in 0:59½, and when the three-quarters was passed in 1:30 the cheer became an uproar. Just before he reached the wire Cresceus broke, and it is believed lost fully three-quarters of a second. He caught handily and flashed under the wire in 1:59½.

A doubt having emanated from Memphis that the Wichita track was short, the following dispatch was sent out from that town Wednesday:

WICHITA, Kas., Oct. 21.—President C. M. Irwin today gave out the sworn statement of Ransom H. Brown, the former County Surveyor of Sedgwick county, that he measured the Wichita track over which Cresceus trotted a mile in 1:59½ Monday afternoon and found it to be 5282 4-10 feet, or 2 1/10 feet more than a mile long. The measurement was made June 19, 1900, and the track has not been changed since that time. The affidavits of the official timers, A. C. Jordan, N. T. Eames and Fred Stearns, that 1:59½ was the correct time, also were made.

Ninety horses were stabled at Pleasanton last week, and the stalls are filling up so rapidly that room is already in demand. Monroe Salisbury's old stalls are being kept for his string that is expected home about the first of November. Millard Sanders wrote for ten stalls in his old row and will probably bring out some crackerjack Eastern horses to winter here. Manager Geo. A. Kelley is in receipt of letters from everywhere asking for stall room for from one to a dozen horses, and Pleasanton will continue to be the liveliest horse town on the coast. The track last Saturday was in excellent shape and the old story that it would not do in dry warm weather has been entirely disproved this year. Water and work in generous quantities have kept it in fine condition during the driest and warmest part of the year and it is now fit to work a horse on for his best effort. Billy Red, the bay gelding owned by Mr. J. R. Springer, was driven a mile in 2:10 flat over this track last Saturday. Two or three watches caught the mile as fast as 2:09½ and several in 2:09½, but Mr. Springer said 2:10 was about right. Billy Red should be a good horse to enter next year in the show pacing classes.

The big four year old Suomi by Zombro 2:11, out of Belle Medium, dam of Stam B. 2:11½ which Mr. Springer recently purchased from Tuttle Brothers, is just recovering from an attack of distemper which

makes his throat look a little thick but otherwise he is a grand looking colt. I understand that Dr. Boucher of Miss Logan fame has an interest in this colt and will give him a preparation for the races next year. On breeding I don't know where one would be found that can show more high class blood than this fellow. He is stabled close to Bert Logan the little son of Colbert 2:07½ and Miss Logan 2:06½. Dr. Boucher has been breeding his great pacing mare with the idea of founding a Miss Logan family and the chances are that she will produce a line of pacers that will be famous. Harry Logan her first foal is by Harry Gear, and has a mark of 2:12½ but has been rather unlucky. Bert Logan, her next foal is now a three year old and if he don't get a mark of 2:10 or better the first season he is raced there is nothing in speed and way of going by which to judge of a horse's future. Bert Logan is probably the only colt that was ever trained in California that never had a "knock." Yes; it must be admitted that there are knockers here among the horsemen, but they have all let this little fellow alone.

Ben Chahoya, who has made several sales of good young horses this year disposed of a three-year-old filly by James Madison last week to Mr. James De La Montanya of San Francisco, the same gentleman that purchased Tuna, winner of the Occident Stake. This filly is a bay, a good looker, and Chahoya tells me showed him a half in 1:03½ last May and he considered

timing of horses would be a large timer to be placed on the front of the judges' stand where it could be inspected by all. The dial need not be more than ten or twelve inches in diameter and half that size would be sufficient. An official timer should be appointed to handle this timer, to start it when the first horse had his nose on the line at the start, and stop when the leading horse had his nose on the line at the finish. This timer need not register the quarters, that being left to three regularly appointed timers as at present, who could also confirm the record of the clock. Certainly the cost of such a time piece need not exceed \$50 at the outside, and its use would do away with the suppression of time as everyone could see whether the official timer started and stopped the clock at the proper periods. It would also remove all doubt as to records made in trials of speed against time and would be beneficial in many ways. The association that first orders one of these timing clocks and puts it to practical use during its race meetings will be credited with a big step in advance in the modern management of meetings. Any watch factory should be able to manufacture one of these timers as it would simply be built on an enlarged scale of the present timing watch.

Speaking of "Blood vs. Climate" the *American Horse Breeder* says:

"Blood (inheritance) will tell," and it makes little, if any, difference whether animals possessing it are

Cresceus, King of All Trotters.

Record 1:59 3-4, made Monday, October 19, 1903, at Wichita, Kansas.

her a more promising trotter than Tuna. Her dam is Brilliantshine by Chas. Derby, second dam Lydia Bright by Triumver 2:46, third dam Annie Fish by John Bright 5:66, fourth dam Starry Clay by American Clay 34, and fifth dam Trotting Sister by Abdallah 15. Mr. Montanya paid Ben \$1375 for this filly and she is worth more money. It is a great pity that James Madison died, as his get are just beginning to be sought after.

The stallion Guy McKinney was sent to Ben Chahoya a few weeks ago by his owner J. T. Drais of Farmington. Ben's instructions are to work the big fellow along easily and not to take any chances of injuring him in any way as he is a large horse and high in flesh. He says he has not jogged him faster than a three minute gait, but is certain that the big horse is a trotter. He should be on his breeding alone, but he is a magnificent looker as well. By McKinney, dam by Guy Wilkes, second dam by Onward, third dam by Mambrino Patchen, he is related to the royal families and close at that. He is a young horse and none of his get are yet old enough to be trained, but look out for them when they start.

There is a growing demand in the East for professional timers and an exchange remarks that there seems to be no reason why they should not be employed as well as professional starters or professional judges. It has always seemed to me that one of the greatest improvements that could be made in the

bred in New England, northern New York, Kentucky or California, provided the animals fall into the hands of competent trainers who are first-class drivers.

Brother Parlin is eminently correct in his statement. The idea that the breeders in any one State can raise as good horses as those in another is not disputed by any person who has given any thought to the subject, but the fact is that they don't do it? Why? Because in some sections the conditions are such that the expense is too great. We do not claim that California can raise any better or faster horses than New York, but we do claim that we can raise them with less expense, and consequently with greater profit to the breeder. Mares run out in pasture here the year round, and foal in January or any other month without being kept up in box stalls. Our pastures have natural green grasses in them within two or three weeks after the first heavy rains of November, and our alfalfa fields are green from the first day of January until the last day of December, and we cut five crops of hay from them during that time. The climate is such that our two-year-olds are about as mature as Eastern three-year-olds, but that they are any better than the well-fed and well-housed colts of New England no reasonable Californian will claim. Our sole claim for California as a horse-breeding State is that we can raise as good horses as any State in the Union, and can do it for less money. There is a distinction and a difference in the clauses "the place to produce the best horses" and "the best place to produce horses." The latter is the one that applies to California.

Notes and News.

Welchman by Diahlo, now has a record of 2:18½.

Kremlin 2:07½ has eleven new performers this year.

Aristocrat by Athanio has reduced his pacing record this year from 2:16½ to 2:12½.

Horses are the only product of the farm on which the farmer is able to put his own price.

Black Jack 2:28½ is a new performer for Nushagak, the Walnut Grove Stock Farm's premier.

Sadie Mac 2:11½, has the Electioneer-Wilkes-Nutwood-Director combination of blood in her veins.

Three of the get of Guy Wilkes have taken new standard records this year making his list now 82.

Homeward 2:13½, sire of George G. 2:12½ was gelded some time ago by his New York owner and is used as a road horse.

Fulano 2:22½, son of El Mahdi, is the sire of the pacing mare Maud M. that reduced her record to 2:15½ this year.

McKinney cannot be displaced as the champion sire of his age of 2:15 performers. He has five new ones in that list this year.

The McGregors are doing well this year. Six of the get of Robert McGregor have taken standard records since the year opened.

Oro Wilkes contributes six new performers to the new standard list of 1903, among them the three year old filly Mary Gage 2:16½.

The Maine champion stallion Nelson 2:09 is keeping his name before the public. He is the sire of six new standard performers this year.

C. W. Marks, of Chicago, offered James Brodbine \$10,000 for the pacer Locanda 2:05½, at the recent Readville meeting, which was refused.

Two new performers, both in the 2:15 list, is the record of Steinway's get this year so far. The old horse is still alive at Oakwood Park Stock Farm.

Fruition by Ahdell, out of the dam of Major Delmar, was separately timed in a race recently in 2:13½. She has been a half in 1:05 and a quarter in 31½ seconds.

Directum 2:05½, has six new performers, the fastest being Directum Miller 2:08½, Judge Green 2:10½ and Ethel's Pride 2:13½. All but one have records below 2:20.

Barondale 2:11½, Tom James' good son of Baron Wilkes, has two new standard performers this season and his son Oakland Baron has reduced his record to 2:16½.

Strathmore has been dead for some time and was an old horse when he died, but one of his get, Abbie Strathmore, entered the 2:10 list this year with a mark of 2:07½.

Cupid 2:18, Mr. A. B. Spreckels' full brother to Sidney Dillon, has a new performer in the pacer Belle Dawson 2:16½. We believe every Cupid that has started in a race has a record.

Gambetta Wilkes has a big list of new standard performers again this year, about eighteen being listed up to date, but only five of these are in the 2:20 list, and but one in the 2:15 list.

The Chas. Derbys are coming to the front with great regularity. He has six new performers this year and three with reduced records. Three of his new ones have records below 2:15.

The mare Henrietta by Boodle, owned by Henry Hahn of Alameda, was bred to Stam B. this season and is certainly with foal. She has been nominated in the Pacific Breeders Futurity No. 4.

A well bred sixteen hand horse weighing 1200 pounds, and gentle to drive both single and double, is advertised for sale in this issue. He is fast and was sired by San Diego, the sire of Lottie 2:15.

Online, the great colt pacer that took a mark of 2:04 is contributing many fact ones to the pacing list. He has two new 2:10 performers this year. Strathline and Line o' Gold, both with marks of 2:07½.

The get of Wildnut 13472 are getting records. Besides Ellenwood 2:14½ and Wild Wind 2:12½, two others by him entered the list this year giving the son of Woodnut a total of fourteen standard performers.

The fastest two year old trotting stallion of the season to date is Silver Finch 2:21½, by San Mateo 2:13½, dam Biella, by King Wilkes 2:22½, grandam the famous Bicara, by Harold. San Mateo is not a California bred horse, as many would suppose by his name, but was bred in old Kentucky. He is by Simmons, out of Moonstone by Sultan, second dam by George Wilkes.

William G. Layng will hold a sale of trotting bred horses at the Occidental Horse Exchange November 17th. There will be a number of the get of Rey Direct 2:10 in this sale as well as the get of other high class sires.

The new track at Concord is in pretty fair shape now and the local horsemen have been speeding their trotters and pacers over it recently. They speak well of the footing and predict fast time when the Concord fair is held there next year.

The story that Prince Alert is a "dope fiend" is denied by Mart Demarest, his trainer. He says the champion pacer never had but one dose of dope in his life and that was years ago in a hard race when he was given a dose of black coffee and whiskey.

The *Horse Review* states that the green trotter by Sidney Dillon that is owned by J. H. Brown of Detroit and has shown a trial in 2:11½ recently is out of a mare by Steinway. This must be the gelding out of Athenian, sister to Babe Marion 2:17½, the next dam being Ida Wood, the dam of Owyhee 2:11.

Poor old Orrin Hickok has been sent to the Ohio State asylum for the insane. For the past year or two he has been cared for at the Lakeview Hospital, Cleveland, but his once vigorous mind is gone and it was found necessary to commit him to an asylum where he could be properly attended during his last days.

Scott Hudson has decided to discontinue handling a large stable. Next spring he will choose about six of the horses in his charge that look most promising and send the rest back to their owners. Hudson has had remarkable success in the last two years with his stables, but he finds the work greater than he can stand.

A horse that is causing lots of talk at Pleasanton is a big bay trotter by Bay Bird that looks like the real goods. William Brown, formerly of Red Bluff, is training him. This horse has been a half in 1:05½ and as he wears but a pair of shin hoots and does not scar them any, some idea of his clean gait can be gained.

Nutwood Wilkes is making a good showing this year, though but few of his get were raced. His son John A. McKerron has reduced his record to 2:04½ and he has three new ones in the list, two being three year olds, viz.: Tidal Wave with record of 2:14½ pacing, and Little Branch that has a mark of 2:22½ trotting. The other is St. Patrick 2:24½.

Those three heats in 2:07½, 2:07½, 2:07½, by McKinley, at Columbus, are within one-twelfth of a second of the world's record for three beats by a gelding, which is held jointly by Azote and Lord Derby, who trotted in 2:09½, 2:05½, 2:07, and 2:07, 2:07, 2:08, respectively, the average time being 2:07 1-3, while the average of McKinley's three heats is 2:07 5-12.

The pictures of Caspian, the winner of the Transylvania this year, look very much like those of George G. 2:12½, the best trotter seen on the Pacific Coast this season. One cannot always depend on a photograph being a true likeness but the similarity between these two trotters is remarkable. Outside of the white markings on the hind ankles of George G. they are alike as two peas in conformation.

The next regular meeting of the Board of Appeals of the American Trotting Association will be held at the Auditorium Hotel, Chicago, Tuesday, December 1, 1903, at 10 o'clock a. m., for the transaction of such business as may properly be presented to the Board for its consideration. All new applications and written evidence must be received at the office of W. H. Knight, Secretary, not later than November 16, 1903.

Tom Keene 2:04½, Swift 2:07, and Claymos 2:07½, three of the season's new 2:10 performers are from daughters of Kentucky Prince 2:47 and his son, Bayonne Prince 2:21½, sired by the dam of Belle Kuser 2:08, another new comer to the 2:10 list this year. This is certainly a remarkable showing. Sidney 2:19½ is another sire whose daughters have produced three new 2:10 performers this season, viz., Al Bock 2:08½, Berdina 2:08½ and Simmassie 2:08½.

The two pacing mares named Miss Georgie both quit the season without records. The Eastern mare by Regal Wilkes went wrong, and was withdrawn from the majority of her engagements, but recently worked a heat in 2:07½ and came back in 2:06½, so she must be pretty good just now. The California mare by McKinney, worked heats better than 2:10 before the circuit opened but was beaten repeatedly in slower time, although she was a good second nearly every heat.

Bertina and Red Light, sisters by Directum out of Bertie by Piedmont, second dam Bijou by Electioneer, third dam Alameda thoroughbred mare by Langford, have both been raced this year in the East. These mares were bred by the late John Green of Dublin, Contra Costa county, who bred Directum 2:05½ and were taken to the Blue Ribbon sale of May 1902, by Mr. C. L. Griffith of Pleasanton. Bertina now has a record of 2:17½ and Red Light one of 2:20½. They are both trotters.

Five trotters each won upwards of \$10,000 in the Grand Circuit this season: viz., Billy Buch 2:07½, \$31,000; Hawthorne 2:07½, \$17,150; Jay McGregor 2:08, \$13,750; Kinney Lon 2:07½, \$10,250; John Taylor 2:10½, \$10,050. All of the five trace directly to George Wilkes 2:22 in the paternal line, and the pedigree of every one of them shows a Vermont Black Hawk cross. The Wilkes-Morgan combination of blood lines seems to produce first class money winners.—*American Horse Breeder.*

The Stam B. three year old colt Swift B., that took a record of 2:16½ at Salem and has not been outside the money in any of his races, is trotting like a whirlwind in his work up North. It is said that he has worked a mile in 2:13½ and a half in 1:04½ recently. That other Stam B. three year old The Jester, that got third money in the Occident this year, is thought by some to be even a better colt than Swift B. The Stam B's are all right and there are several that will be heard from next year.

The *Pleasanton Times* says that Henry Sanders struck a snap when he purchased the fourteen head of Rey Direct colts from G. A. Davis for \$3000 a short time ago. Already he has discovered three of them to be worth at least as much as he paid for the bunch. One three-year old stepped a quarter in 35 seconds, a two year old a quarter in 36 seconds and another two year old trotter whose dam was Sidlette showed a quarter in 34 seconds. California certainly lost a great sire when Rey Direct went East.

In 1892 J. Malcom Forbes published the following letter: "Believing, as I do, that in the near future a mile will be trotted in two minutes, but knowing that it can be only the best judgment in breeding, educating and driving the horse that accomplishes the wonderful feat I wish now to offer as a reward for such skill the sum of \$6,000, one-half to go to the owner of the horse, and one-half to the driver subject to the following conditions: My offer holds good for the rest of the season of 1892 and for five years following if I live."

One of the handiest mares driven on the excellent roads in Alameda county is owned by Mr. R. R. Bellingall of Oakland. She is a dark rich bay and almost a model in conformation, having a beautiful intelligent head and a splendid disposition. She was sired by Secretary, a son of Director that never sired a poor looker to the writer's knowledge, and her dam is Minnie by Alexander 490, second dam Shoo Fly by Gen. McClellan 144. The mare is a fast trotter and has been the victor in many a brush on the five eighth track at Sixteenth street, Oakland.

George Ramage, who gave the only Lou Dillon her first speed lessons, and picked her out as a record breaker before any other person thought much of her, has a few youngsters up at Pleasanton that will be heard from when they get old enough to race. One is a three year old gelding by Sidney Dillon out of Oakley Russell by Happy Russell 2:21½. He is called Bert Arandale and although he has had but very little education thus far, he has a gait and a way of going that will carry him to the front. The photo-engraving of him on the front page this week shows what sort of a looker he is. His full sister, two years younger is even a greater prospect.

One of the slickest moving pacers at Pleasanton is a chestnut gelding by Dexter Prince out of Sunrise II by Gossiper Jr., that Henry Dunlap bought for \$275 at the sale of Mr. A. B. Spreckels' horses in this city a year ago this month. This gelding is a warm one and on Wednesday of this week Mr. Dunlap worked him the first half of the Pleasanton track, which is proverbially slow, in 1:04½. He thinks he can drive this four year old the last half in 1:02½. His Wednesday performance is surely something out of the ordinary as the gelding has had just four months work. Mr. Dunlap calls him Harold D. and if he isn't a 2:10 pacer next year a whole lot of people will be fooled.

John Gordon, the well known San Jose trainer is the owner of a five year old gelding by Diahlo 2:09½ that is causing much talk among the horsemen who saw Mr. Gordon working him over the San Jose track during the summer. The gelding was bred by Mr. Gordon and ran out until last January without being handled. He learned to trot, however, as soon as he was bridle wise and showed quarters below 32 seconds. He is a clean limbed good quartered fellow and in his work showed that he not only had speed, but a good head and gameness. He will be raced next year. If no accident happens him and he continues to improve, he will be ranked with the great green trotters of 1904.

A remarkable case of a pacing bred mare, the product of two great pacers, and a fast pacer herself, taking to the trotting gait at great speed occurred at the Cleveland track recently. The horse is George Garth's chestnut mare, Ella Hal, by the greatest of all pacing sires, Brown Hal 2:12½, once champion of his gait, dam Ella Brown 2:11½ by Prince Pulaski, Jr. A couple of weeks ago, Grath had Ella Hal shod to trot, and after several light workouts asked her to show her speed. A week later she trotted a mile in 2:18½. Grath could not believe that the time was correct and he and C. F. Emery timed the mare for an eighth, which she trotted in 14½ seconds a little later.

Henry Hahn of Alameda, has purchased from Palo Alto Stock Farm, famous old Sallie Benton's weanling colt by Mendocino. The youngster was foaled during the latter part of April and on a visit to the farm two weeks later Mr. Hahn saw and fell in love with him and concluded to become his owner. The sale was made this month when the colt was weaned. He is already entered in nearly seventy thousand dollars worth of stakes including the Kentucky Futurity, Horse Review, Occident, Pacific Breeders Futurity and several others. He is a royally bred colt and probably the last foal of old Sallie Benton as she is barren this year and is now twenty-three years. Sallie Benton held the record of 2:17½ for four year old trotters in 1884 and in the stud has produced Starlight 2:15½, Nordica 2:19½ as a three year old, and Serpol 2:10. Mr. Hahn's colt is bred very much like Del Mar sire of the two minute horse Major Delmar.

as he carries the blood of Electioneer and Toronto Sontag. Those who have seen him pronounce the colt one of the best looking weanlings ever seen on the Palo Alto farm.

The race won by the four year old filly Zombowette at Los Angeles, this week, when she defeated the aged horse Sutter, was one of the best contests seen on the California circuit this season. It was a five heat affair, and Sutter was favorite for every heat but the last, when he and Zombowette sold at even money. The daughter of Zombro is a chip off the old block. She won the first heat in 2:18 without a skip with Sutter close up. In the second heat she made a break and lost five or six lengths going round the first turn. She closed the gap, however, and was only beaten a nose for the heat by Sutter in 2:18. The third heat was almost a repetition of the second and after closing up a big gap Zombowette was beaten a half length in 2:19. She trotted the last quarter in 33 1/2 seconds. In the fourth and fifth heat the mare broke as usual going round the first turn, losing a half dozen lengths, but she made it up each time and out trotted Sutter in the stretch, beating him to the wire a half length each time in 2:20 and 2:21. Zombowette is Zombro's sixth 2:30 performer. As the Los Angeles track is at least four seconds slow, owing to its being cut up for the runners on the inside, this race shows Zombowette to be a four year old of great promise.

If you desire to have an entry in a Futurity to be trotted over East don't miss getting one in the Western Horseman's \$6200 stake. One need only be a paid up subscriber to that paper to make an entry, and a renewal of the subscription keeps the colt paid up on. A total of \$8 secures the paper for four years and makes the colt eligible to start in the race without any further payments. It is the most liberal stake ever devised. Read the advertisement in this issue.

Frank S. Turner, the handsome chestnut stallion by Vallota, owned by Frank Turner, Superintendent of the Santa Rosa Stock Farm, worked a mile over the farm track one day last week in 2:23, last three quarters in 1:44 and the last quarter in 34 seconds. This horse has so much good trotting blood in him that he ought to be a great sire. Vallota was by George Norval (son of Norval by Electioneer and Kitty Wilkes by George Wilkes) and his dam was Carlotta Wilkes, by Charley Wilkes a son of Red Wilkes. The dam of Carlotta Wilkes was Aspasia by Alcantara, and the grandam by Clark Chief. The dam of Frank Turner is Pballas Rival by Phallas 2:13, son of Dictator, second dam a producing mare by Onward, third dam another producing mare by Brignoli, and the fourth dam a producing mare by Pilot, Jr. 12. Few pedigrees contain so many record holding and race winning families.

H. R. Ward is handling a couple of likely geldings at Pleasanton. One is a three year old by James Madison, dam by Steinway, and is owned by Herbert Levy of this city. The other is a bay six years old by Antrim and was purchased by M. Schweitzer, of this city, from Mr. Geo. A. Kelly of Pleasanton. Both these horses are trotters and although Mr. Ward has had them but a short time, they show great improvement. Ward seldom has a lame horse in his stable and is a very careful painstaking trainer.

Dan Patch without a wind shield or anything else to help him except his own unflinching courage and splendid physical development, and the hand of Myron McHenry to guide him, smashed all records to smithereens on Thursday at Memphis, pacing to a record of 1:56 1/2, three-quarters of a second lower than the wonderful mile in 1:57 made by the gamest of campaigners, Prince Alert. All hail to the noble son of that grand old favorite Joe Patchen! He is an honor to his sire. May he live to see his sons and his grandsons starting in the two minute class and winning races in which every heat is paced below that time.

"Principles of Horse Feeding" is the title of farmers' bulletin No. 170. It was prepared by C. F. Langworthy, Ph. D., of the office of experiment stations, and discusses the general principles of feeding, with especial reference to horses.

The Board of Directors of the State Agricultural Society will meet today at Sacramento, when a full statement of the receipts and expenditures of the State Fair for 1903 will be submitted and acted upon.

Mr. J. W. Zibbell, the well known trainer has located in San Francisco and opened a training stable on the corner of Point Lobos Road and 20th Avenue. Mr. Zibbell is a perfectly reliable man in every way, and those sending horses to him can depend upon getting fair treatment. See his advertisement in this issue.

Although Budd Doble has done wonderfully well this season with his stable of two horses, The Roman and Kinney Lou, there has been a large amount of bad luck to contend with, and it has been of a character that cannot be wholly overcome. At Providence The Roman fell and strained himself to such an extent that he has not by any means recovered the full use of his muscles. This affects his gait, and during his race in the Ohio stake it was not until the third heat that Doble could get him away from the wire on a square, clean trot. In the other miles The Roman had been hopping more or less, and, of course, could not do himself justice. When he got to going square, however, there was a different story to tell, and he was an easy second to Hawthorne in 2:09 1/2. Kinney Lou has been suffering from malaria for some weeks, and while there are days when he is pretty good there are other times when he is languid. This horse goes even faster than people imagine, and he will beat again next year and show people that 2:07 will not top him by quite a margin.—The Horseman.

GREAT MEETING AT MEMPHIS.

Lou Dillon Easily Defeats Major Delmar in the Cup Race.

An immense crowd attended the opening day of the Memphis meeting on Tuesday, the prospect of seeing Lou Dillon and Major Delmar meet in the race for the Memphis Cup attracting prominent horsemen from Maine to California. Both horses were pronounced in perfect trim by their trainers, Millard Sanders and Alta McDonald, and both warmed up beautifully. Delmar stepped very fast when E. E. Smathers breezed him through the stretch. A coin was tossed to decide the scoring positions, and Billings won the pole. They scored only once for the first heat, coming down head and head at a terrific speed. Smathers was out for the heat from the start. He picked Delmar up and sent him at the dainty mare like a tiger. They laid very close together and were almost head and head as they flew into the lower turn. Scarce had they reached the eighth when Lou Dillon, despite Smathers' hard driving, began to draw away. At the quarter she was a length ahead, and the time was thirty flat. Through the glass it could be seen that the mare was going easily, while Delmar was strung out and struggling.

Lou Dillon swept on up the back stretch and was at the half in one minute flat, doing the second quarter in thirty seconds also. Delmar was losing ground at every stride, and was several lengths behind.

The three-quarters was reached in 1:32, and when he turned for home Smathers made a last futile effort, but Delmar was done and he stopped driving at the distance. Billings pulled Lou Dillon up to a slow jog, winning by four lengths in 2:04.

They tried three times before they got off for the second heat. The word was given with Delmar a neck ahead, but three strides from the wire he jumped off his feet. It was a bad break and he did not settle down until entering the turn. Meanwhile Billings took Lou Dillon away like a swallow and opened up a long gap. There was practically nothing more to the heat. The gelding trotted very fast after regaining his stride, but could never get near the two-minute mare. Although under restraint all the way she finished the mile in 2:04 1/2, winning by half a dozen lengths.

The regular racing card of the day was rather featureless. Favorites, as a rule, were defeated. The one and one-half mile dash excited quite a bit of interest. Billy Buck was a heavy favorite, but came out lame, and Dr. Strong beat him in a hard drive, after leading all the way.

Clipper by Diablo was a starter in the 2:05 pace which was won by Daniel 2:03 1/2. He must be pretty good, as he was second the second heat in 2:06 and divided second and third money with Foxy Curd.

Summary: Pacing, 2:14 class, purse \$1000. Right on Time, b. h. by Onilue-Jessie R. (Squire) 1 1, Tess, br m. (F. Jamieson) 2 4, Daniel J., h g. (Fleming) 3 2, Mary Gordon, h m. (Hudson) 5 3, Yokeley, Cod, P. J., Vyzole, Minnie, Chrissy, Arnold, Patchen, Countess, Cecil, Wealth and Divertum Miller also started. Time—2:09 1/2 and 2:07 1/2.

Trotting, 2:11 class, one mile and a half, one heat, Diamond handicaps, \$2000. Dr. Strong, gr g, by Strong Boy-Viola S. (Gabagan) 1, Billy Buck, h g. (Geers) 2, Hawthorne, m m. (Hudson) 3, Dillon Boy, h b. (Walker) 4. Time—3:17 1/2.

Trotting, free for all, amateur drivers, to wagon: Memphis gold cup, value \$5000. Lou Dillon, ch m, by Sidney Dillon-Lou Medium. (Mr. Billings) 1 1, Major Delmar, h g, by Delmar-Expectation. (Mr. Smathers) 2 2. Time—2:04, 2:04 1/2.

Pacing, 2:15 class, purse \$1000. Daniel, h m, by Alexander-Topsy E. (McDonald) 1 1, Foxy Curd, blk m. (Rea) 2 3, Clipper, h g. (Thompson) 3 2, Tom Keene, cb g. (Spear) ds. Time—2:06, 2:06.

Trotting, 2:30 class, purse \$1000. Axdelight, ch g, by Artell-Delight. (Niles) 1 1, Baraga, h g. (Clippinger) 3 2, Cathode, ch g. (Andrews) 2 3, Grocery Maid, h m. (Rea) 4 4. Time—2:11 1/2, 2:12 1/2.

Dgleonor and Eunice G. also started.

WEDNESDAY, OCT. 21.

Four races, all on the best two in three plan, made an excellent program for the second day of the Memphis meeting. The principal feature was the brilliant victory won by Ed Geers with Hal Chaffin, a four year old pacer by Brown Hal. This was in the Sunny South stake for pacers of the 2:13 class. Star Hal was the favorite and won the first heat, as Geers laid back too far and his colt was outbrushed in the stretch. In the second heat, the "Silent Man" reversed his tactics and huddled into his adversary from the word. They raced as a team to the three-quarters in 1:33, stepping the middle half in 1:01. This seemed to take the vim out of Star Hal and the Geers colt passed him at the distance, and won by two lengths in 2:05. In the third heat Geers let Star Hal

lead to the off far turn, when he came to him again, carried him to a speed break in the stretch, and won with ease in 2:05 1/2. Ben Walker drove Diabito by Diablo in this race and was a good third the last heat which was paced in 2:05 1/2.

The 2:12 trot was a handy victory for Topsy, the favorite, well driven by W. L. Snow. She entered the 2:10 list in the second heat in which all the first five horses finished in a compact bunch close together, Robizola looking like the winner until she broke inside distance.

Although Parsons showed very lame he seemed able to trot rings around the others in the 2:19 when he got straightened out. The Strathway horse John Caldwell started in this event but was outside the money.

The 2:06 amateur trot to wagon excited great interest although there were but two starters. Mr. Billings' famous brown gelding, The Monk, and Mr. Smathers' fast little mare Ida Higwood. The mare broke early in the first heat but Billings waited for her and the finish was close. The Monk winning in a drive. In the second heat the clip was much faster. They were head and head to the half in 1:03, but here the pace told on the little mare and, although she tried gamely to the end, The Monk beat her easily by three lengths in the last time of 2:07 1/2.

Trotting, 2:12 class, purse \$1000. Topsy, b m, by Almonreb-Erin Girl (Snow) 1 1, The Questor, h g. (Geers) 2 2, Hermida Maid, hr m. (McCarthy) 3 6, Robizola, h m. (Sanders) 8 3, Joymaker, Tenso, Rieline, Jim Underwood and Lady Downing also started. Time—2:11 1/4, 2:09 1/4.

Pacing, 2:13 class, Sunny South stake, \$2000 added. Hal Chaffin, hr b, by Brown Hal-Bessie McEwen. (Geers) 2 1 1, Star Hal, h b. (Snow) 1 2 4, Cousin Madge, h m. (Benedict) 4 3 2, Diabito, b g. (Walker) 3 4 3. Five Points also started.

Trotting, 2:19 class, purse \$1000. The Parson, blk g, by Lloyd-Dam by Onward. (Colby) 1 1, Allen W, h g. (McMahon) 2 2, Bessie Birchwood, ch m. (McGarr) 3 3, Kirkwood Jr, hr h. (Dillon) 5 4, Red Phil, Norberry, Great Spirit and John Caldwell also started. Time—2:12 1/4, 2:13 1/4.

Trotting to wagon, 2:08 class, amateurs to drive. The Monk, h g. (Mr. Billings) 1 1, Ida Higwood, h m. (Mr. Smathers) 2 2. Time—2:11, 2:07 1/2.

THURSDAY, OCT. 22.

Dan Patch is now king of kings among harness race horses. His title was cinched by a performance without parallel this afternoon. At 3:50 o'clock he was started to beat his record of 1:59, and went to the quarter in 0:29, to the half in 0:58, to the three-quarters in 1:27 1/2, and finished in 1:56 1/2, not only obliterating his own previous record, but eclipsing the 1:57 of Prince Alert, made behind a big wind shield last month, a record that has caused so much talk and has for a time even forced peerless Dan into an equivocal position, with his championship in doubt. But there is no room for doubt left now. The track was lightning fast and the day was absolutely perfect, and the big horse himself suited McHenry better than ever before in his life. Two pacemakers were used. Scott Hudson drove the leading one, and his work with him was marvelous. Lew Baxter drove the second runner, which was kept at the pacer's side. The word was given on the second score, Patch was going fast when the first turn was reached, and he fairly flew past the quarter pole and the half.

Pandemonium reigned as the great horse came through the stretch to the finish, a fresh volley of cheers greeting him at every step. He never faltered when McHenry went at him at the seven-eighths. From there to the wire he rushed on with a most superb carriage, and he flew under the wire in 1:56 1/2. In the race for trotters driven to wagon by amateur drivers, Mr. Harry Devereux won with the California mare Dolly Dillon and lowered her record to 2:06 1/2 in the second heat. Dolly Dillon's former record was 2:07 made in a race at Providence, Rhode Island, in 1901. She was sold at the Blue Ribbon sale last May to a Pittsburg gentleman who has won several matinee races with her this year. He engaged Bert Webster to train her, and much of her success this year is due to the splendid shape he has kept her in. In the 2:08 class trot, the great mare Ferenno won in straight heats and lowered her record to 2:05 1/2. This is the fastest mile trotted in a race this year, and puts the black daughter of Moko in line for a possible two minute record some day. The summaries:

Trotting, 2:10 class, purse \$1000. Walnut Hall, hr b, by Conductor-Maggie Yesser. (E. Benyon) 2 1 1, George Muscovite, blk h. (C. Bund) 1 2 3, Topsy, blk m. (W. Snow) 3 3 2, Palm Leaf, blk g. (W. McCarty) 4 4 4. Time—2:08 1/4, 2:08 1/2, 2:08 1/4.

Pacing, 2:08 class, purse \$2000. Nervolo, h b, by Colbert-Nelle D. (Hudson) 1 1, Star Hal, blk b. (W. Snow) 2 2, King Direct, blk b. (Geers) 3 3, Winfield Stratton, h b. (J. McConne) 4 4, Cuhanola also started. Time—2:04 1/2, 2:06 1/2.

Trotting to wagon, amateur drivers. Dolly Dillon, br m, by Sidney Dillon. (Mr. Devereaux) 1 1, Queen Wilkes, br m. (Mr. Smathers) 2 2, Frank, h g. (Mr. Jones) 3 3, Imogene, ch m. (Mr. Billings) 4 4. Time—2:10, 2:08 1/2.

Pacing, Dan Patch to beat 1:59. Dan Patch, h b, by Joe Patchen-Zelica (McHenry) won. Time by quarters—0:29, 0:58, 1:27 1/2, 1:56 1/4.

Trotting, 2:08 class, purse \$1000. Ferenno, blk m, by Moko-Hettie Case. (E. Benyon) 1 1, Hawthorne, m m. (Hudson) 2 2, Monte Carlo, h g. (B. Walker) 3 3, Wentworth, blk g. (Spear) 4 4, Marion Wilkes also started. Time—2:06 1/4, 2:05 1/4.

Pacing, half mile dash, purse \$400. Nervolo, b b, by Colbert-Nelle D. (Hudson) 1, Fanny Dillard, h m. (Snow) 2, Chestnut, ch g. (J. Bell) 3, Daniel, h m. (McDonald) 4, Dan R. also started. Time—0:59.

Prince Alert to Dan Patch.

About the neatest thing in "horse poetry" that has appeared for some time is the following taken from last week's issue of the American Horse Breeder:

My dear Dan, I have read in the last A. H. B. What your owner has said in the press about me, Because old Prince Alert at the age of eleven With a shield paced the Empire in one fifty-seven. Had I known 'twould have given you chief such a jolt, I'd have loafed on the bill, as I'm fond of his colt; And then, Dan, I remember your daddy's white face, He was good in his day, and, oh, bow he could pace With Star Pointer, or Gentry, or any old thing, When Jack Curry was up and a bet in the ring.

You're Joe Patchen's best boy, with an unbeaten slate, But you never scored up at a free-for-all gait With a few of the cracks I have met in my day, And have trimmed and been trimmed, ha ha, that is the way. There was Connor, Chehalis, Red Silk, Riley B., Harold H., Sherman Clay, Ace, Even Good, Rocky P., Anacosta, Giles Rogers, William Mc, Klatawab, Pacing Belle, Badge, Vassar, Hontas Crook, Hair-at-Law, Shadow Chimes, Bumps, and Coney, Directly, Dan R., Frank Bogash, Dariel—my, bow many there are! And they are only a few that have stepped on the dirt At a two-minute clip with your friend, Prince Alert.

In the years I've been out the old guard has retired, Or stepped off to the bushes, lame, blistered or freed, And I know it looks rough for an old stager like me To pace faster than one with a swell pedigree. But keep cool, you are young, do not put up a frown, For if you wish you can keep his old Pointer's crown; I would rather have blankets tucked into my trunk Than that old dusty boop—why, it's nothing but junk. It's a new crown I want made of canvas and tin, With a smart hoppel strap to snap under my chin, One that will be in style when I get my last drive, For Jack says he can step me in one fifty-five

In my day I've been raced from Arkansas to Maine, Been sent on by express and bumped on a freight train, But I'm bopped, Oh, yes, I know all about it, And have been for some years, I am free to admit. Like yourself Dan, I carry an old Foster's stem, And it brought me the straps, you got off without them. They are one of the traps a few count up to date, And would put on the bulls in the seal of our State.

You fell into wise bands and was trained like a jewel, I was raced for the coin, called an old gambling tool, Until Mart Demarest said "Well, I'll give him a mark," So he banded me over to Charter Oak Park. He began with slow trips in a natty blue cart, And long walks in the grove, 'till I was in such beard, That the ground did not seem good enough for my shoe, Then he brushed me a bit to see what I could do, And without the old bopples on my Foster's stem, He turned into the stretch and called on me to scoot, So I reeled off an eighth a shade under fourteen, And since then your swell marks have slipped in the green. If the courts throw mine out, I will not sbed my bide, Shuffle up a big dust or commit suicide. I've had so many jolts, one more will not hurt Theold inside gelding, or plain Prince Alert.

Is it clever to say I drink coffee and rum, That I have to be loaded before I can hum And a clip which has made the world's record look queer. And go tumbling about as though all out of gear? I'm a model old horse with no dope in my tent, No, not even a box of three feeds for a cent. Just the best hay and oats and a few nips of grass, Makes me strong as an ox and my coat shine like glass; And I'll race you, dear Dan, with McHenry's consent, For a purse, for the gate or a hip copper cent. You are fast and may win, but I will not feel hurt, As its all in the game, your new chief, Prince Alert. P. A.

Harness Races at Spokane.

Oct 7—Pacing, 2:15 class, purse \$500. Starkey, br g, by Cbehalis-Oscoela Chief..... (Martingel) 1 1 Bensurba, b g, by Tom Benton-James Madison..... (Tryon) 2 4 County Attorney, b g, by Alberton-Wilkes-Tilton's Almost..... (Hayes) 4 2 Polka Dot, b m, by Mendocino-Maud Merrill... (Thompson) 3 3 Time—2:20, 2:27 1/2.

Trotting, gentleman's road race, prize silver trophy. Almota..... (E. Hilderbrand) 1 1 Ringman..... (Cagle) 2 3 Della G..... (Swift) 3 4 Deception..... (Coyne) 4 3 Babe..... (J. Hove) 5 5 Time—2:33 1/2, 2:35.

Strike!—If they don't give you Jackson's Nap Soda when you ask for it.

Didn't Help Lou Dillon.

There is a great deal of talk about the wind shield and its effects on the speed of the champion trotters and pacers, but an experiment at Cleveland one morning recently does not indicate that it is a very great factor in record breaking. The experiment referred to was made in connection with Lou Dillon. She had been driven two miles, one in 2:10, last half in 1:02 and last quarter in 30 seconds; the other in 2:07, last half in 1:00 1/2, last quarter in 29 seconds. Then she was brought out for a really fast mile, and it was in this performance that there occurred a demonstration of the wind shield, for when Tanner came out with the runner he had attached to the cart a wind shield such as Major Delmar and Prince Alert used at Empire City Park. It had arm and leg holes and came up high enough to be nearly on a line with the driver's eyes.

It was a good morning for a demonstration of this character, for the wind was not only high—it reached the height of a gale. With the wind coming directly from the west, the shield aided her to the sixteenth pole, but the quarter was reached in only 31 seconds. Down the hack stretch with the wind at her back there was no benefit to be derived from the shield and she was never within two lengths of the leader. As the lower turn was reached the runner tired from the pressure of wind the shield caused, and it was necessary for Sanders to pull out, and she came home the rest of the mile at the side of the shield and between the two runners, Frank Gibbons having moved up at the half with a second runner that had no attachments to the cart. From the lower turn then, and just as she began facing the heavy wind, Lou Dillon had nothing in front of her, and with these unfavorable conditions she trotted the last quarter in 28 1/2 seconds, the fastest quarter ever shown by any trotter, and the last half in :58 1/2, which is also faster than any other trotter ever stepped that distance, the mile being in 2:00 1/2.

Secretary George J. Dietrich of the Cleveland Driving Park Co., who saw the performance, commented on it as follows: "The deductions to be drawn from the performance are none less than that the conditions for trying a wind shield were never so favorable; that in the first part of the mile, where it was used to advantage, she was not driven fast enough (the first quarter was in 31 seconds) to have it aid her materially; that down the hack stretch with the wind at her back she could well have gotten along without it; that she trotted to the half in 1:02 with it, and from a short distance beyond the half she trotted home without it in the face of a gale in :58 1/2."—Horse World.

La Grande, Oregon, Harness Races.

[Oct. 7th, 8th and 9th.]

Special pace, two in three. Vision, b g, by Vanquisb..... (Lindsey) 1 1 Mapiemont, b g, by Pricemont..... (Miller) 4 3 Prince Tom, blk g, by Tom V..... (Webb) 2 4 Miladi B, blk m, by Cbehalis..... (Rutberford) 3 3 Time—2:24 1/2, 2:22.

Dan Patch 1:59 1-2 to Wagon.

LEXINGTON, Ky., Oct. 16.—Dan Patch 1:59 broke the world's pacing record to wagon in an exhibition mile here today, and came within half a second of equaling his own sulky record. The previous pacing record to a wagon was 2:01 1/2, made by Little Boy on the Memphis track. Dan Patch clipped two full seconds off this record and went the mile in 1:59 1/2. The champion pacing stallion was accompanied in his round of the track by two runners, driven by Hudson and Maguire. His time by quarters was: 0:30; 0:59 1/2; 1:29; 1:59 1/2. His third quarter was made in 29 1/2 seconds. Dan Patch had been advertised to go against the world's wagon record or his own sulky record for several days, but owing to the weather conditions the exhibition was postponed. The track has been in lightning fast condition all week, and the weather conditions to-day were perfect. Four thousand people saw the record broken and cheered Driver McHenry lustily as he went under the wire. Dan Patch is owned by M. W. Savage of Minneapolis.

American Horses Win in Australia.

At the Royal Horse Show held at Melbourne during September this year, California horses made a good showing. Mr. W. B. Veirs of "The Ranch" one of the leading stock farms in Australia where trotters are bred, writes us that the farm put up a record that was never known before in the colonies. In eight classes the Ranch horses took seven first prizes, two seconds and a third and Mr. Veirs crowned this success by securing first and second prizes with his favorite dogs Meadowthorpe Donald and Moringthorpe Honesty. The following account of the exhibit at the show in the trotting classes is from the Melbourne Age:

Twelve of the thirteen trotting stallions entered put in an appearance, and a splendid lot they were. Mr. John Robertson showed his recent importation from America Owyhee, and the veteran Osterley, who amongst numberless other triumphs has won six championships. This year the only fault presented by Osterley to the expert eye was roughness in coat, but he was not awarded a place. First prize fell to Governor Tracy, shown by Mr. Alec. Robertson, of The Ranch, Glenroy. He is a fine upstanding bay horse, whose beautiful action evoked general admiration, and he was placed second to Osterley last year. Governor Tracy was nicely handled when showing his gait, and his perfect show condition reflected the greatest credit on his owner's stud groom. The Draper, a nicely shaped horse by Osterley, who took third prize last year, was placed second, and the record smasher, Almont, third. The last named, however, is a pacer, which no doubt affected his chance of achieving higher distinction, though even with equal qualifications in regard to gait it is not likely that he would have beaten Governor Tracy. Mr. John Robertson's fine imported American mare Siamhra easily repeated her success of last year in the section for mares driven in sulky or buggy, neither of her two opponents having a chance against her. First prize and championship for trotting brood mares were won by Mr. S. W. Gibson's Dorah, a fine big roomy hay mare, who in former years has gained honors in the Cleveland class. She is by the Cleveland champion imported stallion Gentleman George, and was bred by Mr. W. Aitken.

The three three-year-old colts shown were all entered by Mr. Alec. Robertson, who took first prize with Honest Robert, but if a vote had been taken at the ring side the same owner's imported colt Dixie Alto would have probably scored 3 to 1. Only three-year-old fillies were shown, and again Mr. Alec. Robertson scored first prize, with Trixy Tracy, a nice looking mare by Governor Tracy. Rose, shown by the Riverside Stud Farm, was placed second, and the other exhibit was not considered worthy of a prize. The judges had a good lot of two-year-old colts to discuss, and after long consideration Mr. Alec. Robertson repeated his previous successes, with Talis B., a handsome chestnut by Digitalis, with Mr. J. Bannister's Len Osterley second, and a brown colt, also by Osterley, and shown by Mr. M. Vallance, third. The third prize winner is a great well-honed colt, hearing striking resemblance to his famous sire. In two-year-old fillies Mr. Alec. Robertson continued his remarkable sequence of triumphs, taking first prize with Rose Tracy, a neat looking daughter of Governor Tracy, and the same exhibitor's yearling colt Mack Whips, by the imported sire Willie Whips, was unopposed, the other two entrants not entering the ring. Again Mr. Alec. Robertson scored first honors in yearling fillies with another of the get of Willie Whips—Molly Whips, a filly from the well-known imported mare Mary Daly. The proprietor of The Ranch had thus made nearly a clean sweep of the honors in trotting stock, taking seven first prizes, two seconds and a third in the eight sections in which he had competed. His stallion Governor Tracy was also awarded the championship for trotting sires.

On a hot day drink Jackson's Napa Soda lemonade and he refreshed.

Combault's Caustic Balsam

The Great French Veterinary Remedy.

A Safe, Speedy and Positive cure for ailments of HORSES and CATTLE.

As a HUMAN REMEDY for Rheumatism, Sprains, Sore Throat, etc. it is invaluable. Every bottle of Caustic Balsam sold is warranted to give satisfaction. Price \$1.50 per bottle. Sold by druggists, or sent by express, charges paid, with full directions for its use. Send for descriptive circulars, testimonials, etc. Address THE LAWRENCE-WILLIAMS COMPANY, Cleveland, Ohio.

ROD, GUN AND KENNEL.

Conducted by J. X. De WITT.

The Old Decoy Duck.

Headless, on mudbank nigh the shack, he lies,
'Mid rusty tin cans, old hoots and thrown out things,
Who, floating on tule-edged pond, oft' heard
Swing to his lure, swift vibrant wings.

About him creep the lapping waters,
And all around the sinuous marshy passes
The shattles of the waning year
Yellow Sulsun's woot of grasses.

Naught to him the lowering cloud-wrack's flight
When scurrying before the rising gale,
Returning hunters' hoats close-reefed
Speed up the channel, sail by sail.

Nor do golden sunsets that burn and fade
Do aught save dim his painted sides,
And harden coat upon coat of shiny mud
Daily venerated by the ceaseless tides.

To him all sights and sounds are one:
Not the slow drip of autumn shower,
Nor, when fierce, rocking gusts go by,
The flood of rain from storm god's bower.

No faint alarm of distant guns
That startle the slough's quacking hood,
Or thunder of the passing train
Shall rouse him from his timeless mood.

To him all souls and sights are one:
Nay, not so—What is oft' botly said
By hunter who missed his bird,
Dath rouse him from among the dead.

Different Baits for Angling.

There are many kinds of bait used in angling, but the most common and sometimes the best are the earth worms or the angle worms. These, as is well known, are to be found in good rich soil, under logs and stones, but never in sandy or clay dirt. Another way is to search for the "night walkers" with a lantern over clean cut lawns or close fed meadows. They are blinded by the light, but have the acutest sense of hearing; thus to catch them you must tread lightly, and be quick and silent in your movements.

The ash grub is found in the hollow of the oak and the ash and beech trees when rotten. Being very tender they require careful handling and are excellent bait for trout. The oak grub is a small green caterpillar that can be found in the branches of the oak during the months of June and July and August. To keep them, use a tin box with a few oak leaves within. Very good for trout. The cowdung is found wherever cattle have been—thus in fields and old pastures. It is found under the cow dung from April to October, has a small reddish head, and is very good to the eyes of a trout. Can be kept a long time in a tin box with dirt taken from where they came from.

A bait for trout, to drop in a deep dark hole, is the dock grub; that is a large white grub with a reddish head, and found in the root of the common water dock from April to July. Smaller than the angle worm is the marsh worm, that is a paler color with a broad flat tail. When scoured thoroughly, two of them may be used on a hook with a splendid result for trout. In shallow sandy parts of the rivers, brooks and tiny streams are found the caddis, and also the straw worm. The latter produces few sorts of flies. The former is a yellow grub with a reddish head, and is covered with a case of bark, bits of rushes, particles of gravel, etc., and with this shelter it enables it to creep upon the bottom by protruding its head. Nothing tickles a trout better than a nice fat caddis worm.

The maggot will be taken by any fresh water fish except the salmon and the pike. The handling is streaked from head to tail in round ringlets, alternately red and yellow, and is found in old dunghills. Considered good for eels, perch and trout. The red worm is small, and of a bright red color. Found in same places as the handling, and good for any kinds of fresh water fish. The white grub worm is found in the spring of the year underneath decayed stumps, trees, foliage, etc., and is very good bait for trout.

The minnow is fine for pickerel and black bass. The frog, used whole or in parts, is one of the best baits for pickerel, and rivals the shiner in this respect. The hind legs when skinned leaves a perfectly white meat that is good, also.

Wasps, beetles, flies, caterpillars, locusts, and many other insects are good for the fresh water fish, especially the trout. For black bass use a hellgramite, small green frog, minnow or even a piece of pork rind. The grasshopper is good for trout; also is an attractive bait for the gamy little cub. For steelhead trout either fresh or boiled shrimp is excellent. Salmon roe is also at certain seasons a tidbit that the trout takes with avidity, then nothing else will suffice. Live flies and other insects have been tried by anglers on the stream at the time when the insects were in season and the fish were feeding upon them. Results in this respect are not satisfactory, for in almost every instance there is great difficulty in keeping the hook baited. Far better, and the more sportsman-like is it to match the living fly with an imitation selected from the fly-hook.

Many are the kinds of bait among the anglers. To be sure of success it is best to take along several kinds of bait, as the fish, like the angler, in his taste is often hard to please.

The practice of scouring and preserving the worms is in vogue now some, but as the method is very simple it should be followed by all anglers, on account of the increased activity and brightness it gives to this bait. A variety of modes are recommended by different writers. The best method is to take a quantity of moss, which can be readily procured in any part of the country, wash it well and squeeze it till nearly dry, after which place it in an earthen pot with your worms. A few days will be sufficient to make them thoroughly scoured and fit for use. They can be preserved in the same manner for a number of weeks by changing and washing the moss every three or four days. Should any of them be found sickly or dead they should be immediately removed, or they will eventually destroy the others.

It is an art to bait a hook with a worm. Cotton says: "The caddis may be put onto the hook two or three together, and is sometimes (to a very great extent) joined to a worm, and sometimes to an artificial fly, to cover the point of the hook, but is always to be angled with (when by itself especially) with the finest tackle, and is the most holding bait for trout. The grub is to be baited thus: It will be necessary to wrap on a piece of stiff hair or gut, with your arming, leaving it stand out about a straw's breadth at the end of your hook. The hook is to be put in under the head and guided down the belly, without suffering it to peep out of the way (for then the ash grub, especially, will issue out water and milk till nothing but the skin shall remain, and the bend of your hook shall appear black through it) till the point of your hook comes so low that the head of your bait may rest and stick upon the hair or gut that stand out to hold it, by which means it can neither slip off itself, neither will the force of the stream nor quick pulling out upon any mistake strip it off. To bait with a branding, the point of your hook is to be put in at the very tag of his tail, and run up his body quite over all the arming, and still stripped on an inch at least upon the gut, the head, and the remaining part hanging downward."

When using a common worm enter the point of the hook a little below the head, using carefulness without bruising or breaking it, to within half an inch of the tail.

To bait with two worms, enter your hook at the head of the first worm, and bring it out at the middle, and then draw it over the arming of your hook on the line, then enter the hook at the middle of the second worm, and run it up to within a quarter of an inch of the head; draw down the first worm till it meets the second, and your bait will then travel freely on the bottom.

Another mode of baiting with a single worm, is to enter the point of your hook at the head, and bring it carefully down to within a quarter of an inch of the tail; if the worm be very large, part of it may be drawn above the arming of the hook on to the line.

As good, and perhaps better in some minds, are the artificial baits. There are many of these of numberless makes, both cheap and high-priced, and it pays to buy the best. As to the fly, each angler knows what are the best for the bass and salmon and the trout, this article pertains to baits and lures other than the fly. All rubber baits—frogs and lady-hugs and crickets and hellgramites—are good if you like them. Of spoons and spinners there are many, and only experience can tell what is the best.

Paste is a bait much in use among English anglers and to some extent in this country. To make the bread paste, take a piece of fine white bread, nearly new, soak it a few seconds in the water, and squeeze it with clean hands. Dirty hands do not do for it, for it makes the paste dull and dirty. Then knead it, and work it patiently till it becomes a perfect, smooth and compact paste. Cheese paste is also good. Use either old or new cheese, grate it, and work it into a paste with a bit of butter and saffron, and also with stale bread if the cheese be new. Use new bread if the cheese be stale.

To be a true angler is to angle the way of the good; use the sportsman's way, and the delights are more joyous. When a fish will not rise to one bait, there must be something to attract its attention. A good selector must be a true angler.

The Late P. J. Tormey.

We note with much regret the passing away of P. J. Tormey who died in Portland, Or., at 7 o'clock Friday evening, October 23. Last August he went for a month's hunting and fishing in Mendocino county, and on his return remained in the city but a short time. About October 18th he went to Albany, Or., with a party of friends for pheasant shooting. The previous Tuesday evening he arrived in Portland in apparently improved health. Wednesday noon he was stricken with paralysis. His family was immediately telegraphed and his wife and daughter Edith had just time to catch the evening train. They arrived in Portland Friday morning. Mr. Tormey never regained consciousness after the stroke. He gradually sank all day Friday and passed away at about 7 o'clock without recognizing his wife and daughter. A medical consultation was held immediately after the attack and no hope for his recovery was held from the beginning.

P. J. Tormey was born in Plattsburg, N. Y., in 1847. At an early age he entered the drug business. In 1886 he came to California, where he became one of the leading wholesale merchants in druggists' supplies and sundries in San Francisco. He was one of the proprietors of the Owl Drug Company and the Quaker Drug Company of Seattle, Wash.

He was an ardent devotee of rod and gun and was always a prominent figure in the contests and meetings of the San Francisco Fly-Casting Club of which organization he was an esteemed member. He was also the prime mover in organizing the National Association of Fly-Casting Clubs.

For the last twenty years he has been a whist enthusiast. He was one of the charter members of the San Francisco Whist Club and of the Trist Duplicate Whist Club. There has been no whist congress of the American Whist League that he has not attended since its organization until this present year, and he has always been one of its directors. In 1901 he was elected the president of the league. Since then he has been giving himself a "vacation in whist," as he said. To his personal influence is largely due the general spread of the game among women, as he persistently contended that there should be no privilege or restriction of sex in whist.

He has been a contributor to Whist. His "Whist Whys" and "Whist Don'ts" have been very popular and he is responsible for the "rotary discard," the "fourteen rule" and for several methods of "scoring." He was a personal friend of Cavendish's and Trist's, and was one of a small coterie who called themselves the "Cranks." He always wore their little emblem, of which he was very proud.

With all the time and energy he gave to whist, he still had time to be an expert "fly-caster," fisherman and hunter. During the last year he had gradually been giving up the exhausting affairs of life and has been resting and having a good time. His sudden death comes as a shock, not expected, and too recent to be realized. Mr. Tormey leaves a widow, three daughters and a son.

Changes of Color of Deer.

Men who go to the woods or mountains to shoot deer only in the deer season are apt to think that the animals are always in the dun coats in which they find them, but men who live there the year around know that deer change their color at least thrice in a year. The gradations are slight, but distinct and the completed results are widely different.

In the dead of winter almost all the deer are of an ashen gray with a tinge of dun. They have the lightest hue, and in this respect they are something like the rabbits and weasels which turn white in winter.

As the first breeze of spring appears, their coats will begin to deepen, and this deepening is rapid, almost keeping pace with the outbudding of the leaves on the trees and bushes. The reason for this is not apparent, as the gray winter coat of the deer would be less conspicuous in the summer green than the sharply rufous tint which they come to assume.

In midsummer the deer is reddish and, in some individuals, of true red. This coat lasts until well into the fall, beginning to fade in October, and by the time the men with the small bore rifles come it has turned to dun. The change is later in some individuals, and thus it happens that even in November an occasional red deer is killed.

There has come to be a belief among some hunters that the bright red deer is apt to be stronger, fatter, and more valuable than its comrades of soberer coat, but this is not true. Indeed, the red individual may have something the matter with it to prevent its changing on the schedule time.

The law of nature which gives the more pronounced colors and marks to the males of species holds good with the deer, and the bucks are redder than the does, and they never get to be of so light a hue even when there is two feet of snow on the ground. The red of the deer shows most prominently along the edges of the belly and on the legs, though sometimes the hair of the neck is of a bright sorrel.

Possibly in giving the deer a red coat in summer nature intends merely to give the eye a handsome contrast with the dark green of the leaves and this the deepening of the color does effectively, though it makes the animal more conspicuous and, therefore, more easily found by its foes. The winter coat comes as near to assimilation with the general tone of the landscape as anything may come that has a touch of brown in it. There is so little of brown that the effect is almost wholly gray, and this takes up well with the mixture of black and white caused by the tree trunks and leafless branches and the snow.

In the fall shooting season, when the ground is carpeted with dead leaves and some of the leaves still cling to the twigs, when the most marked colors of the woods are the scarlets and the light yellows, the deer's coat is admirably designed for its protection. Many a man has walked within twenty yards of one standing in the dim, shaded aisles and never seen it.

The deer is a big animal to gain advantage from protective coloration, but it does so, and its ability to hide, when it thinks that hiding would be better than running, is great. This concealing instinct is bred in it and is most marked in the cases of the fawns.

A fawn three days old, if left for a little while by its mother, will stand trembling with every sense on the alert, and if danger appears will squat on the ground like a quail, lying upon its belly with its legs under it and its nose pressed to earth. It will remain thus in form, though the intruder pass within a yard of it and is often captured because of this fidelity to the dumb instructions that have been given to it. Nearly all fawns in captivity are picked up in this way.

Treatment of Field Dogs' Feet.

In the opening days of the season various forms of injury to the dogs' feet will occur, through causes incidental to the work they are called upon to perform under circumstances which previous training has not accustomed them to. The most likely part to first cause pain or annoyance to the dog will be found in the dew claws.

There are two sorts of dew-claws upon sporting dogs—those which are attached by mere skin and membrans, and those which are connected by an ineffective bone to the leg. The former should in any case have been removed at the period of puppyhood, but if this has not been effected they are liable to soreness and bleeding through injury or being torn off by contact with the brush. In the event of serious injury, or where the dew-claw is actually torn away, the knife must be employed and the claw entirely removed, or the jagged wound made good, but where the claw is only severely scratched or torn it is best to endeavor to remedy the injury, particularly if the dog be required for work again at an early date.

The treatment commences in either case with a careful washing with tepid water and the part being then well dried followed, in the case of the removal of the claw, by washing with cold salt and water until the bleeding stops. A healing powder should then be applied. This healing powder, which should always be provided in all kennels where sporting dogs are kept, should be as follows: Sulphate of iron, myrrh, burnt alum, equal parts finely powdered. Apply the powder morning and night after removing any from previous dressings by very slight washing with tepid water. Slight and daily increasing exercise should be given and a small bandage applied if the dog persists in licking the wounded part. In the case of inflammation supervening apply a dressing of zinc liniment on a light bandage.

When a honey dew claw has to be removed on account of injury caused as stated above, it is usually the practice to remove it by the use of a pair of ordinary scissors, but if scissors be employed they should be proper surgical ones, as the effect of the former is clumsy and deleterious to the patient. The knife is always superior in effect to ordinary scissors, and should have a rounded-up point, so that the complete severance is made before the point of the knife is reached. A honey dew claw must be severed as near the claw as is compatible with its complete removal, but there should be sufficient of the skin left to cover the wound when it is healed. The subsequent treatment is as before.

The actual claws of sporting dogs are sometimes lost through accident, or from some cause, explanation of which is difficult to supply. In the former case it will be a serious accident which will tear the claw from its root in the toe, leaving it hanging, or perhaps, detaching it entirely. Where the claw is torn from its proper position it must be removed by aid of the knife. Where the dog is shedding a claw for no apparent reason, the symptoms will be a marked and increasing lameness, whilst the actual cause is probably some trifling injury to the toe, resulting from a strain or prick. The lameness will be accompanied by heat and swelling, increasing to acute inflammation and severe pain. When handling the dog to discover the affected claw, each toe should be gently handled in turn, and when the cause of the lameness is found the dog will wince and whine from the pain as the toe is pressed.

The treatment for cases where the claw is wholly or partly torn off is similar to cases where the dew-claw is removed or torn away, but where the dog is about to shed the claw itself the treatment is different. The affected claw must be repeatedly bathed in water as warm as is reasonable and at frequent intervals between the bathings of the actual claw affected, the whole foot of the dog should be placed in a hot water as the animal can stand. In a short time, usually within a week, the claw will be shed. If no great inflammation remains, which is unlikely, the foot can be hound up in lint, and he securely bandaged. A few days' rest and quietness, with low dieting, will see the foot restored to a healthy and sound condition, and the dog ready for work again. Occasionally the claw will be reproduced, but this is not very usual. In any case the dog does not appear to suffer any inconvenience for the lack of the lost claw, provided the toe has healthily healed.

A frequent source of trouble in even the most regularly worked sporting dogs will be the tendency of one or more of the claws to grow to an excessive length, and curling under the pad of the foot, cause more or less considerable pain. Spaniels in particular, and Setters also, are more prone to become sufferers from this unnatural growth of the claws than other breeds. Why this is the case is difficult to determine, but the fact remains.

The other claws will all remain healthy, and offer a natural growth, and yet one, or maybe more, apparently persist in rapid and precocious development. The only rational solution of the matter would seem to be that there is some physical weakness in the dog's foot, which causes it to relieve the pressure on one or other of the toes, with the result that the nail is not worn away as it should be under ordinary circumstances, the claw grows ahead of the others, and having once obtained headway over the others, rapidly increases in length until its presence becomes a burden and source of pain, as it is sure to curve under more or less directly, and if not attended to, penetrate the pad of the toe or the main pad of the dog's foot.

Where the feet of field dogs are not regularly scrutinized, the first signs of something of the kind being wrong will be given as a rule, not by the dog

going actually lame, but by its repeatedly and continually stopping to rest the affected foot or may be of its seeking to run upon three legs. Anyhow, it is from the gait of the dog that the first signs of an overgrown claw will be gathered. If the overgrowth be unobserved or neglected then the dog will go unmistakably lame, small arteries will extend into the overgrown claw, and neglect to remedy the malformation at an early stage render its treatment more difficult and time-costly. In kennelled dogs or others not heavily worked, fever and inflammation of the maldorned toe or the whole foot will follow.

Once observed, the only way to deal with overgrown claws is to continually pare them down with a pair of sharp wire nippers. The extremity is devoid of feeling, but the parts adjoining where the claw enters the flesh are very sensitive to pain, and in the case of overgrown claws which have been unobserved or neglected, the paring process must be done at successive operations, or injury or pain will be caused to the animal. As a rule dogs which are regularly exercised on earth or gravelly roads manage to keep down any tendency to overgrowth in their claws.

San Francisco Show Notes.

Rumor is rife that efforts are being made to bring to an end the factional fight between the opposition kennel associations, which has done so much to retard kennel interests on the Coast, and which will eventually kill bench shows on the Coast unless some agreement be come to between the opposing factions.

A united Pacific Coast is not an impossibility and can be brought about if fanciers will only give up their personal and club ambitions and desires and work for the interests of the whole Coast.

Everything looks promising for a good old-fashioned dog show in San Francisco in December. All classes of fanciers are working together to make the show a representative show of the great Pacific Coast and for once harmony reigns in the canine world.

British Columbia, Washington and Oregon have arranged to send at least ten dogs each and the club confidently expect the total to be swelled to fifty or more.

Seattle Kennel Club donates a silver cup for the best English Setter in show, and Portland Kennel Club a silver cup for best Pointer.

Richardson Bros. have offered a cup for best Fox Terrier puppy owned by a member of the Pacific Fox Terrier Club.

Mr. Stewart tells us that he brought over several very beautiful medals donated by friends in England and that they will be offered at the coming show.

Mr. P. W. Morse, of Watsonville, reports an unusual activity and enthusiasm in kennel affairs in Santa Cruz and Monterey counties, and a bumper entry is expected from those counties.

We hear that Richardson Bros. have placed an order in England for a Collie to win at San Francisco.

Mr. Thomas S. Griffith, President of Spokane Kennel Club, has offered a silver cup for best Collie in show, and will send down a kennel of his Collies, which carried everything before them at the late Spokane show.

Miss Howard, a young lady fancier of San Jose, has become enamoured of the beautiful and graceful Borzois or Russian Wolf Hound, the breed which Queen Alexandra and the Duchess of Newcastle have made so popular in Europe. Miss Howard hopes to have at least a brace at the December show.

Mr. Stewart, secretary of the coming dog show, asks us to state that if there are a sufficient number of entries by ladies to justify it, that the club will provide female attendants for the ladies' dogs.

Premium lists and entry blanks will be ready about the 2nd or 3d of November. A list of offices in British Columbia, Washington, Oregon and California, where entries may be made and all information obtained, will be found in our advertising columns next week.

A Bull Terrier Club in Order.

A Bull Terrier club just now should be a popular and strong specialty organization of local and Coast fanciers. The breed is a strong favorite, there are many good ones here and likely material for the breeder is plentiful enough to warrant the attention of our Coast fanciers.

Just why and when interest in the Pacific Bull Terrier Club waned we will not here discuss, if mistakes were made or lack of enthusiasm had a cause we are not prepared to state, suffice it to say that the errors or oversights of the past can easily be avoided by a new club, starting with renewed enthusiasm and with new members.

One thing can be said of the old club, and that is, for two years after it was organized, the Bull Terrier exhibit at our shows were the best in entries and quality that we had before or since.

A strong demand was created for the Bull Terrier, which demand has not yet abated, in fact there is a steady call for well bred dogs of the breed.

A new club formed at the present time could have the opportunity of making an initial club showing in December, and at all events would have an excellent opportunity to make a splendid showing at the S. F. K. C. show here next spring.

The American Championship Stake.

BREEDER AND SPORTSMAN:—The American Championship Field Trial Club's third annual championship stake, will be held at Robinson, Ill., beginning Monday, November 23, 1903. This stake will be run on the grounds of the Independent and Illinois clubs, following the Illinois trials on the Monday succeeding. The grounds are unsurpassed as field trial grounds in this country, and it will be an eminently fitting and proper place to decide on the champion of America.

This year the club will give, as usual, a magnificent sterling silver cup to the value of \$50, and the purse will be the entrance money. Both to go to the winner. All dogs that have been placed in a field trial anywhere are eligible to enter. However, those dogs which have been placed in trials of a club not a member of A. C. F. T. C. will enter at a total of \$35, entrance and starting fees, while dogs placed in a trial given by a club belonging to the American Championship Field Trial Club may enter at the total nominal fee of twenty-five dollars.

Thus it will be readily seen that clubs belonging to the A. C. F. T. C. will, this year, have no deficits to help make up, as no purses are guaranteed. Dues from constituent clubs are expected to buy cup and pay expenses. It will cost clubs only the annual dues of ten dollars to continue membership. For clubs that do not belong, the membership fee is but five dollars. Every field trial club in America not only owes it to itself to support this, a real champion stake for the entire field trial public, as this is, but they owe it to their patrons and handlers, who support their clubs, to belong, in order that their patrons may enter their dogs at the nominal fee.

So laudable an institution as A. C. F. T. C. is should receive the glad hand of every field trial club on this continent and to the extent of joining and sending delegates to its meetings. No one denies that a governing body for general needs is badly wanted, and once the organization is thoroughly perfected in detail, its results for the general good and advancement of field trials and clubs cannot but be patent to everyone.

I hope to hear from the secretary of every field trial club in America signifying their intention to join the association and at an early date. Clubs who have already held trials this year will let their winners in at the twenty-five dollars total fee. So help out the good work and have it appreciated by all concerned.

Much interest is being taken in the stake already, and every day I am receiving inquiries in regard to it. A goodly number of live clubs are unhesitatingly giving their support to this body, and are unanimous in their opinion as to its utmost desirability. This year it remains with the field trial patrons and clubs to make this stake the greatest champion stake ever run. Clubs who desire to join the association will have no conditions to adhere to, except that they do not run free for all stakes in the place of a legitimate All-Age Stake. Judges will be carefully selected by vote and entries will close on October 25, 1903, with ten dollars forfeit, which must accompany the entry. The starting fee, fifteen dollars, to be paid at the drawing Sunday night, November 22. For dogs placed in trials outside of the association the starting fee will be twenty-five dollars. Any dog not entered, and winning after entries close October 26 can be entered any time up to the drawing by paying the full entrance and starting fee together. Running rules and entry blanks, which are being printed, may be had upon application to the secretary, 1625 Broadway, Indianapolis, Ind. JAS. PEASE, President. H. S. HUMPHREY, Secy.-Treas.

DOINGS IN DOGDOM.

Mr. Tbos. S. Griffith, the proprietor of Glon Tana Stock Farm Collie Kennels, writes from Spokane as follows:

EDITOR BREEDER AND SPORTSMAN:—Blood will tell, and fanciers will send a long way to secure something extra good. I have shipped to Mr. Frank Belton, Waveland, Ind., a hitch puppy sired by Imp. Rippowam Archer and out of my celebrated prize winner Imp. Moreton Vesta. This pup is full brother to Lord Stanford, winner of ten prizes in the East, in the hottest kind of competition, at the early age of seven months. This "nick" seems to be a good one, as the five puppies I have left out of this same litter all look like prize winners to me. I thought so much of Rippowam Archer as a sire of prize winners, that I made Mr. M. M. Palmer, his owner, a very liberal offer for him. I have also shipped a very fine dog pup to Mr. J. C. Eden of the Great Northern Ry., Seattle, sired by the celebrated prize winner and sire of prize winners, Ohio Hope.

I have had great luck or extra good dogs at our recent bench show here. In Collies my bitch Rippowam Miss Tuffet, sire Imp. Rippowam Archer, dam Imp. Moreton Vesta (you published her photo), won 1st puppy, 1st novice, 1st open, 1st limit and cup for best Collie in the show. My Imp. Craigmore Caroline won 2d novice, 2d limit, 2d open. Imp. Lenzie Prince won 1st open, 1st winners and cup for best Collie dog. In Tri Colors my dog Imp. Rippowam Archer won 1st in open, 2d in winners class. In Bloodhounds my dog Spokane won 1st open and cup. My bitch Miss Catron won 2d. In Jersey Bulls my Bull Glen Tana won 1st for best two year old.

The Nevada field trials are off, the continuous dry weather prevailing in Humboldt county, where the trials were to be held, made the meeting an impos-

bility. There is a rumor that the Nevada club may run their initial trials at Bakersfield after the Pacific Coast trials come off.

If such a move is contemplated, the Nevada sportsmen will have the enthusiastic support of the California field trial devotees.

Mr. E. C. Plume announces a closing out sale of Plumer's Kennels prior to his departure for the East.

Violet Eaton, the three year old daughter of Mrs. Eaton, who is visiting Mrs. Frank Garlands, at her ranch, ten miles from Spokane, Wash., on the Little Spokane, was lost from 11 o'clock Sunday, October 11th, until the following morning in the woods nearby. Mrs. Garland reported the loss to T. S. Griffith, who was driving to town on Sunday from his ranch, and he immediately ordered his man to take out his two Bloodhounds, Spokane and Catron, and go in search of the missing child. The next morning Mr. Griffiths received a brief telephone message from his ranch advising that the child had been recovered. Definite information regarding the finding of the little tot is unobtainable, but there is little doubt that the recovery was brought about by the keen scented hounds, which, though young, have been perfectly broken to trail people.

GOSSIP FOR SPORTSMEN.

Despite the warm weather prevailing since the opening of the duck shooting season, most of the sportsmen have had fairly good duck shooting. Those who have hunted on the Suisun marshes have made good bags as a rule, the best shooting, of course, has been found at the baited ponds of the preserves. Sprig, teal and wildgeon generally fat and in good condition were the most numerous. Mallard and spoonbills were fairly plentiful.

What surprises a great many veteran sportsmen is the early appearance of canvasback ducks. One hunter, L. Cuneo, last week, killed seventeen "cans" on the Sonoma marsh bay shore. Last Sunday, a youth who was fishing from a boat off California city, Marin county, bagged three canvasback with a .22 rifle. These birds have also been shot on the east shore bay marshes and quite a few have been seen, and several shot on the Empire Gun Club preserve at Elkhorn slough.

Across the bay, from the Alameda marshes to Alviso, sprig, teal and spoonbills have been plentiful, wildgeon are not yet so numerous in that section. On the Alameda marshes the shooters have easily been getting the limit on rail.

On the reclaimed lands off San Mateo the duck and rail shooting has been good. Altogether the indications for the winter's shooting could hardly be better, particularly so for mallard shooting in the Yolo, Sacramento and San Joaquin basins. Los Banos promises to produce splendid duck shooting this season.

Quail hunting will be better after a rain or two. Some limit bags were shot on the Country Club preserve and in the vicinity of Point Reyes last Sunday.

Phil B. Bekeart was in Portland on October 15th. In company with A. J. Winters and another sportsman, he enjoyed a half day's shooting down the river on the preserve of the Portland Gun Club. The combined bag counted up 125 fat mallard ducks.

Striped bass fishing, during the week, in the straits, Tiburon cove and about Angel island has been very good. Many boats have been out and some large fish have been taken. The best catch of the week was made on Monday afternoon by Joe Amaral and Mr. Abrams. They were trolling with handlines, working their boat back and forth between Stewart's point and Hospital cove on the Angel island shore during the middle of the ebb. They hooked and landed thirteen bass, running in weight from ten to fourteen pounds apiece, all in splendid condition. Three other fish were struck with the spoons, but they got away. One fish was caught and landed and afterwards kicked up such a racket in the boat that he finally flopped overboard and escaped. The members of the Pacific Striped Bass Club have caught a number of fish during the week also. Old "Mike Brown" hooked and landed an eighteen pounder Thursday evening off the end of Belvedere island.

A twenty-five pound salmon came ashore the other afternoon on the gravelly beach of the north side of Kershaw's island. The fish was easily secured and was found to be a female full to bursting with roe, a considerably quantity of which the fish had exuded in the gravel depression where the capture was made. We are not in possession of enough particulars to state positively that the fish had selected this spot to spawn, but the Tiburon party who first observed and then caught the salmon, insisted that the salmon had made her nest and was spawning.

The cultus or blue cod, as it is called, is plentiful in the bay at this time of the year. This fish is a delicious table fish, it runs in size from a half pound up to twenty pounds and is caught on the deeper fishing grounds about ten or fifteen feet from the bottom, closer in shore in shallower waters the blue cod can be taken from six to fifteen feet below the surface. The same baits used for rock cod will do for blue cod. A red salmon fly or spoon is also effective. The striped bass anglers have taken some large ones recently on the trolling spoons, the largest scaled eighteen pounds, they do not put up much of a fight when hooked, but come in to the boat more like a log than a fish.

The Hollister *Free Lance* states: The quail season opened yesterday and a number of our local nimrods enjoyed the day in the hills. Judging from all reports it is high time a game warden was appointed to enforce the game laws in this county. For the past

month lawbreakers have been killing ducks and quail and an example should be made of them. The sportsman who obeys the law and refrains from hunting until the season opens has but little chance with the game hogs who persist in the slaughter out of season. Quail are not only scarce, but very shy from being shot at. A stiff fine on one or two of the offenders would soon put a stop to the practice.

On the waters of the west tule in Sutter county there are many wild geese, and a greater number of ducks than usual at this time in the year. Quail are more plentiful than usual in the foothills of Yuba county, and there are many indications of good open season for duck and quail.

Stockton hunters are said to have bagged about 3000 ducks on the opening day. On Union island, along the barbed wire fence, so numerous were the hunters, that the rigs could be seen tied up 100 yards apart the whole length of the island.

The Victor, one of the speediest and best equipped launches on the bay, is for sale. This boat, ordinarily, will easily make over nine miles an hour and under favorable conditions of wind and tide she has run thirteen miles an hour. An idea as to her speed can be had from a trip she made last year. Starting from the "twin houses" on Petaluma creek, she covered the distance to the California Yacht Club house in Oakland estuary in two hours and forty-five minutes. She has made the run from the Morgan oyster beds, off San Mateo, to the narrow guage mole in one hour and thirty-eight minutes.

She is thirty-eight feet long, strongly timbered with oak and planked with selected Port Orford cedar. The keelson is solid oak, 8x10 inches. Her bottom and timbers inside have been treated with a tar preservative so that dry rot as well as any water in the hold are two features that are avoided.

The engine will develop over 28 horse power and is in perfect running order. The boat is fully able to comfortably accommodate a party for any kind of hunting, fishing or outing trip. A patent water closet is one of the conveniences on board.

The boat is eight feet beam and a splendid seaboard. Her owner has taken her outside the heads a number of times. During two shooting seasons past she has been taken frequently up to and about Grizzly island in all sorts of weather. Shallow Suisun bay will try any kind of a craft in stormy weather and this launch was found to be a good seaboard and none too small for cruising safely in all kinds of weather. The launch is an ideal boat for a hunting club or for service up the river. She is owned by W. H. Williamson, 2121 San Jose Avenue, Alameda. The boat is sound and seaworthy, the owner's reason for selling, is that he will leave here shortly for a business trip of some length in Idaho.

Wisconsin Game Law.

The following new hunting law is in vogue in Wisconsin:

"It shall be unlawful and is hereby prohibited for any person or persons to use in the pursuit of any wild duck, goose, brant or any other aquatic fowl, upon the waters of this state, any sneak boat, or boat propelled by an oar or oars operated from the sides or stern of such boat, or any sail boat, or boat propelled by steam, naphtha, electric, or any battery, sink box or similar device, or to kill or attempt to kill, while occupying or using any such boat, box or device outside or beyond the natural covering of leaves, reeds, grass or other vegetation growing above the water, any wild goose, duck, brant, or other aquatic fowl, or to construct or to use for the purpose of hunting, outside of such natural covering or upon the ice, any fixed or artificial blind or amshush; or for any person to use more than twenty five decoys; such decoys to be personally set and watched by the owner, and to be plainly marked or stamped with the owner's name, or initials. Any person who shall violate any of the provisions of this section shall be punished by a fine of not less than \$25 nor more than \$50, or by imprisonment in the county jail not less than ten days nor more than thirty days, in the discretion of the court."

All decoys used in violation of the provisions of this section are hereby declared to be contraband, and may be seized and sold to the highest bidder under the direction of the game warden, and the net proceeds of the sale to go into the hunting license fund.

Kennel Registry.

SALES.

Beach Hill Kennels (San Jose) have sold the tri-color Collie dog pup Tranwyn Bruce (Spartan-Peusam Ora) to J. J. Daucan (Ukiah, Cal.), Oct. 19, 1903.

Beach Hill Kennels have sold two sable and white Collie bitch pups (Spartan-Westridge Star) to Jay Bros. (Nevada), Oct. 15, 1903.

Beach Hill Kennels have sold a sable and white Collie bitch pup (Spartan-Westridge Star) to J. S. Barker (Berkeley), Oct. 13, 1903.

Duck and Quail Outfits.

The demand at Skinner's keeps up for sportsmen's outfits, ammunition and guns. A large stock of goods put in for the opening of the season was not sufficient for the annual demand for hunting suits, rubber boots and hunters' footwear; canvas and folding wooden decoys, gun cases and a new design of leather-covered shell boxes. One make of shotguns was sold out entirely. Skinner's place is 801 Market street. You can get anything there you need for duck or quail shooting. Send for a catalogue, if you haven't the time to come, and try a mail order.

In hot weather there is no drink like Jackson's Napa Soda—plain or in a lemonade.

TRADE NOTES.

The following is a list of the shooters who were in attendance at the tournament of the Helvetia Rifle Club held at Sacramento Oct. 18th and 19th, 1903, and the rifles, shells and primers used:

Capt. Ruhstaller, Sacramento, Winchester Pope 32-40, U. M. C., U. M. C. 7½.

Frank M. Newbert, Sacramento, Winchester 32-40, Winchester, U. M. C. 7½.

Lieut. Huber, San Francisco, Winchester Pope 32-40, U. M. C., U. M. C. 7½.

Jacob Gruher, Sacramento, Winchester Pope 32-40, U. M. C., U. M. C. 7½.

Jno. Baumann, Sacramento, Stevens Pope 32-40, Winchester, Winchester.

H. J. Vetter, Sacramento, Winchester Pope 32-40, Winchester, Winchester.

Capt. S. W. Kay, Sacramento, Muzzle Loader, U. M. C. Cap.

T. J. Carroll, San Francisco, Winchester Pope 32-40, U. M. C., U. M. C. 7½.

H. F. Strecker, Stockton, Winchester Pope 32-40, Winchester, Winchester.

Adam Brehm, San Rafael, Winchester Pope 32-40, Winchester, Winchester.

A. W. Pope, San Francisco, Winchester Pope 32-40, U. M. C., U. M. C. 7½.

Max Kolander, San Francisco, Winchester Pope 32-40, U. M. C., U. M. C. 7½.

Capt. Fred Kuhne, San Francisco, Winchester Pope 32-40, U. M. C., U. M. C. 7½.

Wm. Ehrenpfort, San Francisco, Winchester Pope 32-40, U. M. C., U. M. C. 7½.

G. Tammeier, San Francisco, Winchester Pope 32-40, U. M. C., U. M. C. 7½.

J. Kullman, San Francisco, Winchester Pope 32-40, U. M. C., U. M. C. 7½.

Aug. Jungelart, San Francisco, Winchester Pope 32-40, U. M. C., U. M. C. 7½.

J. L. Uschig, San Francisco, Stevens Pope 32-40, U. M. C., U. M. C. 7½.

Otto Bremer, San Francisco, Winchester Pope 32-40, U. M. C. and Winchester, U. M. C. 7½.

J. L. Lubram, San Francisco, Stevens Pope 32-40, U. M. C., U. M. C. 7½.

F. W. Mason, San Francisco, Stevens Pope 38-55, U. M. C., U. M. C. 7½.

Philo Jacoby, San Francisco, Winchester Pope 32-40, U. M. C. and Winchester, U. M. C. 7½.

Frank Zeberg, Sacramento, Stevens Pope 32-40, Winchester, U. M. C. 7½.

C. F. Blake, Sacramento, Remington Pope 32-40, U. M. C., U. M. C. 7½.

A. C. Gehrist, San Francisco, Winchester Pope 32-40, Winchester, U. M. C. 7½.

F. M. Franklin, San Francisco, Winchester Pope 32-40, Winchester, U. M. C. 7½.

A. Ghunda, San Francisco, Stevens Pope 32-40, Winchester, U. M. C. 7½.

Nick Ahrens, San Francisco, Winchester Pope 32-40, U. M. C., U. M. C. 7½.

A. Rahlinger, San Francisco, Winchester Pope 32-40, Winchester, Winchester.

A. Strecker, San Francisco, Winchester Pope 32-40, Winchester, Winchester.

J. N. Phillips, Sacramento, Stevens Pope 32-40, U. M. C., U. M. C. 7½.

C. M. Henderson, San Francisco, Stevens Pope 32-40, U. M. C., U. M. C. 7½.

J. W. Goetz, San Francisco, Winchester Pope 32-40, U. M. C., U. M. C. 7½.

Chas. F. Shierbach, San Francisco, Winchester Pope 32-40, U. M. C., U. M. C. 7½.

Martin Blasse, San Francisco, Stevens Pope 32-40, U. M. C., U. M. C. 7½.

Wm. Blasse, San Francisco, Winchester Pope 32-40, U. M. C., U. M. C. 7½.

D. B. Faktor, San Francisco, Winchester Pope 32-40, U. M. C., U. M. C. and Winchester.

E. Schmid, Pres. H. Club, Sacramento, Stevens Pope 32-40, U. M. C., U. M. C. 7½.

The championship of New England at flying targets was won by Mr. E. C. Griffith, of Pascoag, R. I., at the tournament of the Worcester Sportsman's Association held at Worcester, Mass., Sept. 29th and 30th, with the splendid score of 95 out of a possible 100.

Mr. Griffith uses exclusively in all his shooting contests a Winchester "pump" gun and Winchester "Leader" shells. Mr. Griffith also won the championship of Rhode Island on Oct. 3rd, at Pawtuxet, R. I., with the same combination. At the three days' tournament at Pekin, Ill., Sept. 29th and 30th and Oct. 1st, Mr. W. R. Crosby won the professional high average for the tournament, and also captured the L. C. Smith cup and the Board of Trade diamond badge, and Mr. Russell Klein won the amateur high average at this same tournament and carried off the Parker gun. Both Mr. Crosby and Mr. Klein always use Winchester "Leader" shells in all their contests at the traps. At the Pekin tournament the only shooters that "got into the money" were those using Winchester shells.

Premium lists and entry blanks for the fourteenth annual trials of the National Beagle Club of America, to be run at Howardsville, Albermarle county, Virginia, on November 9, 1903, may be had by addressing the club secretary, Mr. Chas. R. Stevenson, 106 Market St., Camden, N. J.

Dog Owners!! Read This!!

We are carrying in the advertising columns of this journal an advertisement of "Sergeant's Big Remedies," a popular line of preparations for which F. W. Braun & Co. of Los Angeles, California, have been made distributing agents on the Pacific Coast. The goods have few equals and no superiors on the market today having received the highest endorsements of the leading dog men and kennel owners of this country and Canada.

They are manufactured by Polk Miller Drug Co. of Richmond, Va., who invite all persons having sick dogs to write (enclosing stamp) describing symptoms, and they will cheerfully furnish the best possible advice without any charge whatever. A revised copy of their book on "Dogs" sent free on receipt of 3c in stamps to cover postage.

THE FARM.

Selecting Cattle for Feeding.

[By F. E. Mumford, Acting Director, Missouri College of Agriculture.]

The uncertainties of cattle feeding can be reduced to the minimum by observing certain fundamental principles.

One of the most important factors determining the profit to be received from feeding cattle, is the judicious selection of the cattle to be fattened.

The farmer generally pays too little attention to the demands of the market. The successful manufacturer is ever alert to take advantage of the demands of his customers.

If the consumer demands a tall but the manufacturer makes haste to supply this demand. It is profitable for him to do so.

The manufacturer also takes advantage of efficient machines.

The farmer should be equally enterprising in catering to the general demand, and in using the best machines.

In no other branch of agriculture is the similarity between manufacturing and agricultural operations more striking than in the case of the cattle feeder.

He employs raw material in the shape of corn, oats, grass and hay and by the aid of the machine, which in this case is the animal feed, he produces a finished product—beef.

He should, like the manufacturer, produce an article which consumers demand and for which, therefore, they are willing to pay a good price.

There is a great discrimination on the markets between cattle fed on the same kind of food for the same length of time.

Some cattle sell for six cents per pound, while others fed on exactly the same food for the same length of time, and equally fat, sell for five cents a pound.

It is not due to the kind of food fed; it is due in many cases to the conformation of the animals fed.

The cattle which bring a high price on the market are cattle of the beef type.

They are possessed of straight back and underline; they are broad, deep and low down or blocky.

They have a relatively small head, small bones and smoothness over all which tends to hide the hips and shoulders and other prominences.

The cattle which bring the lower price on the market are generally scrubs or natives having sharp backs, thin flanks, relatively large bones and prominent hips and shoulders.

Their backs are narrow and their withers are sharp, and in general they resemble the Jersey type of cattle.

These cattle, no matter how much corn, grass or hay they may consume, can never hope to bring on the market as high a price as the beef cattle described above.

But what is the real difference between the two types?

Why should the beef type of cattle bring a higher price on the market?

In every great market of the world there are certain portions of the beef which bring a premium over the other portions.

These portions are called porterhouse steak, the sirloin and the prime of rib.

Porterhouse steak sells for as much as 35 cents a pound in the Eastern markets. Sirloin and prime of rib are also high-priced cuts.

Other portions, such as the round, the flank and rib plate, sell for prices ranging down from nine to four cents a pound.

Thus, an animal that can consume the coarse products of the farm and can produce therefrom porterhouse, sirloin or prime of rib, will always bring the highest prices on the market.

Such animals always belong to the beef breeds. These are the Shorthorn, the

Aberdeen—Angus, Hereford and Galloway. The Jersey, the scrub and the native can never produce a high proportion of these valuable cuts.

Their conformation is such that the porterhouse, sirloin and prime of rib cuts are always deficient in quantity. In selecting feeders, therefore, the farmer should pay particular attention to the form of the animals.

They should conform to the beef type of animal described in this article.

Dirt.

Experiments at the Illinois station to compare the amount of dirt falling from washed and unwashed udders during the process of milking are reported as follows: It was determined after several trials, with three different milkers on 30 cows, that it requires 4½ minutes to milk a cow.

A glazed dish 11 inches in diameter and the size of an ordinary milk pail was placed in the top of a pail and held under a cow's udder in the same position as when milking. For 4½ minutes the milker then went through motions similar to those in milking, but without drawing any milk.

The amount of dirt which fell into the dish during the operation was, of course, approximately the same as would have gone into the milk during the milking process. The dirt caught in the dish was then brushed into a small glass weighing tube, the udder washed and the process repeated.

The dirt which fell from the washed udder was carefully brushed into a weighing tube. Both tubes were then placed in a desiccator, and after drying twenty-four hours were accurately weighed on a chemical balance. Sixty trials were made at different seasons of the year.

With udders that were apparently clean it was found that an average of 3½ times as much dirt fell from the unwashed udders as from the same udders when washed. With soiled udders the average was 22, and with muddy udders the average was 94 times as much dirt from the unwashed udders and from the same udders after washing.

It's All in the Cows.

The dairyman who can make a profit on half-fed scrub cows that milk five or six months during the season of low prices ought to be the most surprised man on earth. And still the country is full of them. The money they have, if any, is not derived from what they make, but from the pleasures and comforts they deny themselves. We thought of this as we recently drove through a California dairy section and found all kinds of herds, and in nearly all cases where we saw charming homes and apparently contented, prosperous dairymen, we found a herd of heavy producing cows. On the other hand a herd of scrub cows was accompanied by hovels for dwellings, a miserable shed in place of a barn, fences composed of two or three wires, broken and patched up farm machinery, pastures gone to weeds with evidence of neglect on every hand and the family in rags and filth—a living picture of poverty. It is the difference in the herd that makes one dairyman prosperous, contented and able to enjoy life or to make life a burden.—*Dairy and Produce Review.*

Broke the World's Record.

By dressing a 1200-pound steer in three minutes and thirty-eight seconds, Jacob Baer, employed in a Denver packing plant, reduced the world's record by twenty seconds and won the Western championship. The feat was accomplished at a contest held at Broadway Park in Denver last Monday.

Jackson's Napa Soda is sold in every city, town and hamlet in the State.

Sugar Beets for Live Stock.

When beets are ready for feeding I run a puller through the field, then put the beets into wagons and haul them to the feed lot, tops and all. It may be necessary to cut them and a corn knife can be used for the purpose. After the cattle get a little used to the beets they will eat them quite readily without cutting. I have been feeding beets to cattle, hogs and horses for ten years. They seem to be very fond of them and the horses are just as anxious to get their feed of beets as of grain. I do not think that any farmer can afford to get along without a root crop of this kind.

Animals seem to do especially well and in a short time a very fine glossy appearance will be noted. I have found beets a most excellent feed for thick-winded horses and much easier breathing results. I raise about forty-five or fifty tons of beets at little expense and find them the most profitable crop on the farm. In addition to using beets during the fall I plan to have a supply for brood sows during the latter part of March and early April. They are invaluable at that time when it becomes necessary to increase the flow of milk. This feed keeps both the sows and pigs in fine condition.

We feed 3,000 to 3,500 head of cattle four to six weeks on beet tops and corn fodder. The fodder is first run through a cutter and then given to cattle with beet tops. The animals do much better than when kept on a full grain ration. We are now starting to feed beet pulp and expect good results especially as corn is so high. We are also feeding 3,000 sheep on beet pulp with satisfactory results. Stock take readily to beets without any preparation. I believe feeding whole is better than slicing for sliced beets lose more or less of the juice. In addition the animals seem to enjoy chewing the whole beet. I have always contended that sugar beets will pay better if fed to animals than if sent to the factory.—*James Scully in Field and Farm.*

Heavy Sales of Spring Lambs.

Eugene Harrington of Taaffe & Co. and representatives of the Western Meat Co and Miller & Lux were in Livermore Sunday for the purpose of buying last spring's lambs. They purchased between 5000 and 6000 lambs during the day from P. Connolly, Mrs. M. Mulqueeny, Jas. G. Kelly and John C. Kelly. The prices paid ranged from \$2.90 to \$3.00 a head. The sheep are now on pasture on the San Joaquin river bottoms near Byron and Bethany and the shipments will be made from the latter point.

This is the largest local sale since June the demand having been supplied by Oregon and Nevada stock which was in good condition and was rushed to market on account of the scarcity of feed. The recent heavy purchase indicates that the foreign supply is exhausted and that hereafter San Francisco hutchers will be compelled to rely upon California stock, which as far as this locality is concerned was never in better condition.

The winter range was never better, not having been scourged as usual by fires during the summer and consequently the sheep men are not looking forward to the winter season with their usual dread.—*Livermore Herald.*

Seven sows and twenty-one piglets weighed and turned in on two acres of alfalfa and fed a light corn and slop ration were again weighed at the end of thirty days and showed a gain in value at the current price of pork of \$18.01. This was in Nebraska.

Salting Sheep on the Farm.

The use of salt for sheep and other livestock in winter, I think, requires a good deal of attention, as stockmen have so many ways of giving it. I do not think where an animal is living entirely on dry feed it requires so much salt as when on pasture or other vegetable diet, writes R. Wooley in *Orange Judd Farmer*. Whether salt is necessary to animals if never given to them is no doubt an open question, but if once fed must be continued, and should be always where they can get it. The best kind is lump salt, as they cannot get too much at one time, and is also the cheapest. Why an animal should require salt on Sundays or some other day, as some farmers feed it, I could never see. If required at all, they should always have it near them. It an animal takes to eating an unlimited amount, it will in many cases cause scurvy, and will end in death if not attended to.

I have heard it stated that if sheep suffering from stomach worms are kept from salt for a time, then fasted for 12 to 14 hours, and then let have an unlimited amount, it will kill the worms. I very much doubt this statement, as stomach worms are very difficult to destroy when once they have got possession of a sheep. I think the regular use of salt may help to keep worms out. I have seen sheep affected with liver fluke taken onto salt marsh land, where they would get fat, say, in six to eight weeks, but if not killed they would again run down and die, showing that it is not a permanent cure, but that the entire change enables them to out stand the disease for a short time.

Of Value of Horsemen.

Do you turn your horses out for the winter? If so, we want to call your attention to a very important matter. Horses which have been used steadily at work, either on the farm or road, have quite likely had some strains whereby lameness or enlargements have been caused. Or perhaps new life is needed to be infused into their legs. Gombault's Caustic Balm applied as per directions, just as you are turning the horse out, will be of great benefit; and this is the time when it can be used very successfully. One great advantage in using this remedy is that after it is applied it needs no care or attention, but does its work well and at a time when the horse is having a rest. Of course it can be used with equal success while horses are in the stable, but many people in turning their horses out would use Caustic Balm if they were reminded of it, and this article is given as a reminder.

While California dairymen have not up to the present time adopted silos to any great extent there is satisfaction in knowing that we have the material out of which to construct them. Press reports state that the model silos for the World's Fair at St. Louis have been completed and are about to be filled and that they were made out of California redwood. We hope the silos will demonstrate to Easterners the advantages of redwood silos and to Californians the advantages of ensilages.—*Dairy and Produce Review.*

Where a man can raise alfalfa and can get the pigs, cows and hens to work in connection with the alfalfa he has got about as certain and profitable a business combination as we know of. Twenty acres under this plan are better than forty acres in wheat.

According to the experimenter at the West Virginia Experiment Station the way to get eggs with rich yellow yolks is to feed yellow corn. Wheat, oats and white corn produce light-colored yolks.

J. W. Zibbell's Training Stables

Corner Point Lobos Road and 26th Avenue, San Francisco.

HORSES TRAINED FOR TRACK OR ROAD and satisfaction guaranteed. Terms reasonable. Horses bought and sold.

The Crowning Sale.

On Tuesday, November 17, 1903, I WILL SELL AT PUBLIC AUCTION THE finest consignment of Trotters and Pacers ever offered during this eventful year, comprising in part one and daughters of Rey Direct 2:10 (out of mares like Stenwilder (dam of Directum 2:05 1/4), Babe Marion 2:17 1/4, Antera by Anteo, Lurline 2:17 1/4, Missie Medium, etc.), Hart Boswell, Diablo 2:09 1/4, Charles Derby 2:20, Owyhee 2:11, Silver Bow 2:16, James Madison 2:12, Argent 2:29, Steady 2:23 1/2, Guy McKinney, McKinney 2:11 1/4 and Dexter Prince. Consignments of well-bred Trotters and Pacers solicited. Catalogues will be issued immediately. These colts and fillies have been selected by one of the best judges of horses in California. WM. G. LAYNE, Live Stock Auctioneer, Occidental Horse Exchange, 246 Third St., San Francisco.

A Giant Creamery.

The largest creamery in the world is located in Lincoln, Nebraska. It makes seven million pounds of butter annually. This is an average of 21 tons of butter per day the churns running day and night with shifts of men. The creamery has six thousand patrons in Nebraska, and cream is brought from a distance of 450 miles. There are eighteen skimming stations. Four thousand hand separators are in use by patrons. The product mostly goes to the South. In Nebraska the mine of wealth is alfalfa. It grows to perfection in every county in the State. Either rainfall or irrigation means three or four crops of alfalfa in a season. Alfalfa hay is grain itself. It makes, green or dry, the finest of food for milk production. There are oceans of the best and purest water near the surface, and flowing wells are common. A Nebraska editor writes: "We want dairymen out here—men with dairy cows, instead of beefers; with barns and cow stables, in place of straw roofed hovels and barbed wire siding. They are going to come; also winter dairying and silos. You ought to go out to some of the frontier counties where we have commenced to buy cream. In one county, with less than fifteen hundred inhabitants, we will pay this year more than \$35,000 for butter fat. With dairying, alfalfa, corn and hogs, I know men out there, each on 320 acres of land, who will take in \$3,000 in cash apiece this year. These men in Nebraska are just beginning to wake up to the importance of a milk cow as contrasted with that kept a year to raise a \$30 calf. We are out of debt; we have money to loan in Nebraska."

Pays to Keep Cows.

That it pays to keep cows and dispose of the milk at the creamery has been pretty well demonstrated recently by Mr. H. Parnham, who resides near town on the Santa Rita road, says the *Pleasanton Times*.

Mr. Parnham delivered to the Santa Rita creamery in thirty-one days 1674 pounds of milk, which tested 3.9 butter fat. This quantity was produced from two cows, for one of which it was the first calf. He also fed two calves for two weeks of that time with milk from the same cows. His receipts from the creamery for this milk amounted to \$17.65 or nearly \$9 for each cow.

It is not possible to get at the exact cost of feeding the animals during this period, but it is safe to say that the cost was nominal, as they were allowed to run on the stubble and were fed a small quantity of hay and a couple of sugar beets morning and evening.

These kind of results should encourage farmers to keep cows for the milk they can send to the creameries for it is certainly a profitable industry.

Good Profit from Eight Cows.

We have personal knowledge of a man near Woodland who has eight cows that he milks for the creamery, says the *Mail* of that city. Last month his check for that milk was an even \$65, or eight dollars and a bit per cow. Will some one please come forward and tell of any crop that a farmer can raise that will equal milk. Besides the milk he will have the by-products of the calves and several head of hogs each year.

George Jackson intends to establish a creamery at Altamont in the near future. He has arranged for the purchase and installation of a No. 2 separator, a fifty-gallon churn and such motive power as may be decided upon later. Mr. Jackson has twenty-five cows and is about to purchase as many more. With his own and neighbors' cows he believes he will milk enough to keep the creamery in operation.

Sober up on Jackson's Napa Soda.

Feeding Lambs for Profit.

In feeding sheep on different rations at the Nebraska station alfalfa and prairie hay were used as roughness—four lots being fed on each. Seven lots had a protected yard and shed for shelter. Lot eight had only an open yard with no shed for shelter. The lambs weighed an average of fifty pounds when the experiment commenced and sold one hundred days later weighing an average of seventy-eight pounds. Four different grain rations were fed to the four lots on prairie hay and three grain rations to the four lots on alfalfa hay.

Lot one on alfalfa hay and corn gained thirty-three pounds in one hundred days and yielded a profit of \$2.05 for each lamb. Lot two on alfalfa hay and a grain ration of three-fourths corn and one-fourth oats gained thirty-two pounds in one hundred days and gave a profit of \$1.98 cents a lamb. Lot three on alfalfa hay and a grain ration of three-fourths corn and one-fourth bran made a gain of thirty pounds each and gave a profit of \$1.90 cents a lamb. Lot eight was fed in an open yard with no shelter. It received alfalfa hay and a grain ration of three-fourths corn and one-fourth bran, making a gain of thirty-four pounds a head in one hundred days and gave a profit of \$1.94 a lamb.

Lot four was fed on prairie hay and corn, making a gain of nineteen pounds a head in one hundred days and gave a profit of \$1.43 a lamb. Lot five was fed on prairie hay and a grain ration of corn with sixteen per cent linseed meal, making a gain of twenty-four pounds a head in one hundred days, and gave a profit of \$1.50 a lamb. Lot six was fed prairie hay and grain ration of three-fourths corn and one-fourth oats, making a gain of nineteen pounds a head in 100 days and

gave a profit of \$1.32 a head. Lot seven was fed prairie hay and a grain ration of three-fourths corn and one-fourth oats, making a gain of nineteen pounds in one hundred days and gave a profit of \$1.50 a lamb.

Counting all losses and all expenses against the sheep fed, they made an average profit of \$1.60 a lamb. The alfalfa hay-fed lambs consumed 1.34 pounds of hay and one pound of grain each a day, against .99 pound of hay and .89 pound of grain consumed by the prairie hay-fed lambs. The alfalfa hay-fed lambs on different grain rations made fifty-two per cent greater gains than the lambs fed prairie hay and the same grain rations. The lambs fed prairie hay and corn with sixteen per cent oil meal made twenty-six per cent greater gains than the lambs fed prairie hay and corn or prairie hay and corn with one-fourth oats or bran.

The amount of feed a bull should have will depend largely on circumstances, says C. S. Plumb of the Ohio College of Agriculture. He should be kept growing steadily until he has reached full maturity, and, while he should not be made fat, he should be fleshed up to stand a reasonable amount of service. If he is brought to a full growth by constant and satisfactory gain it will after that be much easier to maintain him in satisfactory flesh than if he is allowed to drag in growth. After reaching full maturity and good condition the amount of grain fed should be regulated according to his breeding service and condition of flesh.

FOR SALE.

Best in The World.

The time-tried remedy which has done duty in every climate, making its way by its matchless curative properties for Spavin, Ringbone, Curb, Splint and all forms of Lameness.

Kendall's Spavin Cure.

Thousands of horsemen year after year gladly attest its merits.

Dr. B. J. Kendall Co., Lisle, Ont., Dec. 13, 1902. Gentlemen:—I have used a great amount of your Kendall's Spavin Cure and am now on my twelfth bottle. I have found it satisfactory. I have cured dozens of horses, have found it the best remedy I ever got hold of. We can get it right here in town. There have dozens of people asked me about it and I said "it is the best stuff in the world for Spavin, Curb, Splint and many other things." They went and got a bottle and tried it and said it was just the best they ever got. I have been dealing in horses for twelve years and I never found anything to equal Kendall's Spavin Cure. Please send me one of your books so that I can tell the people more about it, and you will oblige.

Price \$1; six for \$5. As a liniment for family use it has no equal. Ask your druggist for Kendall's Spavin Cure, also "A Treatise on the Horse," the book free, or address DR. B. J. KENDALL CO., Enosburg Falls, Vt.

The Western Horseman's

Indiana Complimentary Stake.

\$4100 for Trotters RACE, TWO IN THREE \$6200 \$2100 for Pacers RACE, TWO IN THREE

For Foals of Mares Bred in 1903

To be Contested at the Indiana State Fair Meeting in 1907.

This Complimentary Stake is offered and fully guaranteed, in the sum named, by THE WESTERN HORSEMAN COMPANY, \$3000; THE INDIANA STATE BOARD OF AGRICULTURE, \$1000; H. B. GENTRY, Proprietor Gentry Stock Farm, Bloomington, Indiana, \$1000; N. W. BOWEN, Proprietor Spring Hill Stock Farm, Delphi, Indiana, \$1000; STERLING R. HOLT, Proprietor Maywood Stock Farm, Indianapolis, Indiana, \$1000; A. H. MERRILL, Starting Judge, Danvers, Mass., \$200. Total, \$6200.

CONDITIONS—Nominations will close November 2, 1903, and any one sending us TWO DOLLARS in payment of one year's subscription to The Western Horseman on or before this date may nominate one mare in this stake by giving her name, breeding and name of stallion to which bred in 1903, and any such subscriber may name as many additional mares as he likes by sending TWO DOLLARS for each extra mare so named along with the name and address of the party to whom he desires the paper sent. A renewal of subscription, accompanied by the usual subscription price of TWO DOLLARS on or before November 1, 1904, entitles the subscriber to name and describe the foal. This renewal of subscription keeps the nomination good to November 1, 1905, on or before which date another like renewal of subscription keeps the nomination good to November 1, 1906. Another like renewal of subscription for one year on or before November 1, 1906, makes every foal so nominated and kept good eligible to start in either division of the stake

Any such subscriber may name any other foal in case any nominated mare has no living foal November 1, 1904. A failure to renew subscription at expiration of paid-up period cancels both the subscription and nomination

NOTE—Not one cent other than the regular subscription price for the paper, \$8 at most, does it cost to nominate and start in this stake—no such liberality ever before dreamed of.

TO BE RUN IN 1904.

THE BRIGHTON JUNIOR STAKES (Guaranteed gross value, \$15,000)

FOR TWO-YEAR-OLDS NOW YEARLINGS. By subscription of \$250 each, half forfeit. If declared by March 15, 1904, \$35; by May 15, 1904, \$75. The Association to add \$2500. The second horse to receive \$3000 and the third horse \$1000 out of the stakes. Winners of a race of the value of \$5000 to carry 3 pounds extra; of two races of \$5000 or one of \$10,000, 5 pounds extra. Non-winners of a race of the value of \$2500, allowed 5 pounds; of a race of the value of \$3000, allowed 7 pounds; of a race of the value of \$1000, allowed 10 pounds; of a race of the value of \$700, allowed 15 pounds. Six Furlongs.

THE NEPTUNE STAKES (Guaranteed gross value, \$7500) FOR TWO-YEAR-OLDS

NOW YEARLINGS. By subscription of \$150 each, half forfeit. If declared by March 15, 1904, \$25; by May 15, 1904, \$50. The Association to add \$1500. The second horse to receive \$1000 and the third horse \$500 out of the stakes. Winners of a race of the value of \$5000 to carry 3 lbs extra; of two races of \$5000, or one of \$10,000, 5 lbs extra. Non-winners of a race of the value of \$2500 allowed 5 lbs; of \$1500, allowed 7 lbs; of \$1000, allowed 10 lbs; of \$700, allowed 15 lbs. Six Furlongs.

THE VENUS STAKES (Guaranteed gross value, \$7500) FOR TWO-YEAR-OLD FILLIES

NOW YEARLINGS. By subscription of \$150 each, half forfeit. If declared by March 15, 1904, \$25; by May 15, 1904, \$50. The Association to add \$1500. The second horse to receive \$1000 and the third horse \$500 out of the stakes. Winners of a race of the value of \$3500 to carry 3 lbs extra; of a race of the value of \$4000, 5 lbs extra. Non-winners of a race of the value of \$1500 allowed 5 lbs; of \$1000, allowed 8 lbs; of \$700, allowed 12 lbs. Maidens allowed 15 lbs. Five Furlongs.

TO BE RUN IN 1905.

THE BRIGHTON DERBY (Guaranteed gross value, \$15,000) FOR THREE-YEAR-OLDS

NOW YEARLINGS. By subscription of \$250 each, half forfeit. If declared by January 1, 1905, \$35; by May 15, 1905, \$75. The Association to add \$5000. The second horse to receive \$3000 and the third horse \$1000 out of the stakes. Non-winners of a race of the value of \$2000 in 1905 allowed 8 lbs; or a race of the value of \$1000 in 1905 allowed 11 lbs; or a race of the value of \$700 in 1905 allowed 14 lbs. One Mile and a Half.

THE IROQUOIS STAKES (Guaranteed gross value, \$7500) FOR THREE-YEAR-OLDS

NOW YEARLINGS. By subscription of \$150 each, half forfeit. If declared by January 1, 1905, \$25; by May 15, 1905, \$50. The Association to add \$1500. The second horse to receive \$1000 and the third horse \$500 out of the stakes. Non-winners of a race of the value of \$2000 in 1905 allowed 7 lbs; of a race of the value of \$1500 in 1905 allowed 10 lbs; of a race of the value of \$800 in 1905 allowed 15 lbs. One Mile and a Quarter.

THE BRIGHTON OAKS (Guaranteed gross value, \$7500) FOR THREE-YEAR-OLD FILLIES NOW YEARLINGS.

By subscription of \$150 each, half forfeit. If declared by January 1, 1905, \$25; by May 15, 1905, \$50. The Association to add \$1500. The second horse to receive \$1000 and the third horse \$500 out of the stakes. Winners of a race of the value of \$3500 in 1905 to carry 3 lbs extra. Non-winners of a race of the value of \$1500 allowed 5 lbs; of a race of the value of \$1000 allowed 8 lbs; of a race of the value of \$700 in 1905 allowed 12 lbs. One Mile and a Furlong. The Rules of Racing adopted by the Jockey Club and the National Steeplechase and Hunt Association govern all races run under the auspices of the BRIGHTON BEACH RACING ASSOCIATION. THE MONK AND EQUITY 2:09 3-4

The Champion Team Record. Owned by C. K. G. Billings.

ABSORBINE HELPED.

EQUITY 2:12 1/4 was sold at the Fast Sale for \$750 because he was blemished. Later he passed to Mr. A. E. Perren, who knew he could get him right by careful nursing and using the proper remedy. He did so and sold him to Mr. Billings for \$10,000. "A big price!" you say, but Equity made good when he and The Monk set the team record out of reach of any other team in the world, and it is believed they can reduce it. A recent letter from Mr. Perren reads as follows:

BUFFALO, N. Y., Sept. 16, 1903.

DR. W. F. YOUNG, Springfield, Mass.

Dear Sir.—I have used Absorbine on my horses, one of which was Equity, who, with The Monk, established a new world's wagon record to pole of 2:09 3/4, and I have so far found that it does just what you claim for it. It is as much of a necessity in my stable as hay, oats, etc. Yours truly, A. E. PERREN.

ABSORBINE sent, express paid, to your address upon receipt of \$2. Many leading trainers use Absorbine Wash. See directions in free book.

Manufactured by W. F. YOUNG, P. D. F., Springfield, Mass.

VETERINARY PIXINE CURES

Grease Heel, Scratches and Hoof Rot,—chronic, ulcerated, complicated—of the most deep seated character; Cracked or chapped teats, caked bag, cow pox and all inflammatory affections of the udder; Saddle and Collar Galls, Hople Chafes, and Abscesses, Old chronic Sores, the result of pressure by badly fitting harness or by irritating masses of dirt, sweat and hair under the harness. It makes a positive and permanent cure by producing healthy granulations, building up new cellular tissues, healing naturally from the bottom without scab or scar and stimulating growth of hair, natural color. It penetrates, soothes and heals while horse works.

Absolutely Guaranteed. Money back if it fails.

"SAVE-THE-HORSE" TRADE MARK SPAVIN CURE

NOTE ITS MIRACULOUS WORK ON BROKEN-DOWN TENDONS

MIDDLE HOPE, ORANGE CO., N. Y., Aug. 9, 1903.

TROY CHEMICAL CO., TROY, N. Y.
Gentlemen:—I received a horse from the city last June that was a very fast pacer and had been raced and used on the speedway until he did not have a leg to stand on. I was instructed to blister this horse and fire him if I thought he needed it. Well, as the horse could not stand on his feet an hour at a time, I thought it would be cruelty to the horse to blister him, and I commenced to use your remedy. Chipped hair from legs and went to work at him, and I must say "Save-the-Horse" has worked wonders with him, as his front legs are as clean as a hound's tooth to-day, and another application will clean up his hind legs. His owner came here to see him a few weeks ago, and while he knew I had not blistered him, he was at a loss to tell what I had done until I told him and showed the bottle. Yours respectfully, NAT. C. BARNES.

Gibson, Ill., July 21, 1903.

Troy Chemical Co.,

Troy, N. Y.

Gentlemen:—

Dear Sirs:— I want to say in regard to the bottle of "Save-the-Horse" I purchased of you I used it on my horse Bellado with record of 2:20-1/2 for a had ease of bone spavin of six year's standing. At times was so lame he could hardly get around. I used about a bottle and a half and he is completely cured. I have given the horse hard drives and he never favors it at all. I think the remedy is all right.

Very truly,

Geo. Mc Nabney

Ripon, Wis., July 29, 1903.

Troy Chemical Co.,

Troy, N. Y.

Gentlemen:—

My horse had ringbone on right hind leg. Used blisters for nearly one year and had him fired, but to no effect other than to leave a bad scar. In April I purchased a bottle of your "Save-the-Horse" and by the time I used half of the bottle it had completely cured the lameness and is reducing the bone.

Yours respectfully,

J. B. Dakin

"SAVE-THE-HORSE" Cures Without Scar, Blemish or Loss of Hair.

"Save-the-Horse" can be applied at any time, anywhere, any place, and in all conditions and extremes of weather. Horses may be worked as usual with shin or ankle boots, as no harm can result from destruction of hair or scalding of limb.

POSITIVELY AND PERMANENTLY CURES

Bone and Bog Spavin, Thoroughpin, Ringbone (except low ringbone), Curb, Splint, Capped Hock, Windpuff, Shoe Boil, Weak and Sprained Tendons and all Lameness.

\$5.00 PER BOTTLE.

Written guarantee with every bottle given under our seal and signature, constructed solely to satisfy and protect you fully. Need of second bottle is almost improbable, except in rarest of cases. Copy of booklet and guarantee sent upon application.

BALLISTITE

The Standard Dense Powder of the World.

STILL LEADS AT THE TRAPS OR IN THE FIELD.

Ballistite wins from the limit marks in distance handicaps, at either live birds or flying targets as it always gives the highest velocities with the closest and most even patterns at all ranges. Ballistite is absolutely unvarying in results, being water-proof, smokeless, odorless, without residue, resurfaces lower than black powder, unaffected by age or climatic changes, and never pits, rusts or corrodes the barrels. Ballistite is sold with above guarantee.

Take No One's Word. Try It for Yourself.

BALLISTITE

The Standard Dense Powder of the World.

CAMPBELL'S HORSE FOOT REMEDY IS THE BEST REMEDY

EVER USED ON HORSES' FEET.

IT PENETRATES and DRIES IN quickly and DOES NOT GUM and FILL UP THE PORES like tar and oil compounds. It is the GREATEST REMEDY ever used to remove SORENESS and FEVER from the foot, and makes it possible to get good services out of a horse working on hard and hot pavements.

It gives natural nourishment to the foot and incites a rapid, healthy growth—ALL DRYNESS AND BRITTLENESS quickly disappears.

QUARTER CRACKS and SAND CRACKS are rapidly grown out when directions given in our booklet are followed. It is a SURE CURE for CORNS, CONTRACTED FEET and NAIL WOUNDS if directions are followed.

IT PREVENTS SOUND FEET FROM BECOMING UNSOUND and GROWS a TOUGH, STRONG, ELASTIC WALL and HEALTHY FROG—a FOOT WHICH WILL STAND WORK on race courses.

Many of the best owners and trainers state that for track work nothing equals it. In many cases horses have reduced their records several seconds, due to its use.

It is a CER'AIN CURE for THRUSH and SCRATCHES

We Guarantee That It Will Do What We Claim and Will Refund Money if It Falls.

PRICES:—Quarts, \$1.00; Half-Gallon, \$1.75; Gallon, \$3.00; 2 1/2 Gallon, \$5.50; Five-Gallon, \$10.00.

Books giving full directions for its use and much valuable information as to shoeing are supplied free.

Don't fail to read "ad." giving information concerning Campbell's Iodoform Gall Cure in next issue of this paper. It is the best and because of its merits is rapidly displacing all others.

Pacific Coast Trotting Horse Breeders Association

FOR FOALS OF MARES BRED IN 1903.

TO TROT OR PACE AT TWO AND THREE YEARS OLD.

ENTRIES TO CLOSE NOVEMBER 2, 1903.

ONLY \$2 TO NOMINATE MARE.

\$3250 for Trotting Foals. \$1750 for Pacing Foals. \$800 to Nominators of Dams of Winners and \$200 for Owners of Stallions. Money Divided as Follows:

\$2000 for Three-Year-Old Trotters.

200 for Nominator of Dam of Winner of Three-Year-Old Trot.

1250 for Two-Year-Old Trotters.

200 for Nominator of Dam of Winner of Two-Year-Old Trot.

100 to Owner of Stallion, Sire of Winner of Three-Year-Old Trot when Mare was bred.

\$1000 for Three-Year-Old Pacers.

200 for the Nominator of Dam of Winner of Three-Year-Old Pace.

750 for Two-Year-Old Pacers.

200 for Nominator of Dam of Winner of Two-Year-Old Pace.

100 to Owner of Stallion, Sire of Winner of Three-Year-Old Pace when Mare was bred.

ENTRANCE AND PAYMENTS—\$2 to nominate Mare on November 2, 1903, when name, color, description of mare and stallion bred to must be given. \$5 March 1, 1904. \$5 November 1, 1904. \$10 on yearlings March 1, 1905. \$10 on two-year-olds March 1, 1906. \$10 on three-year-olds March 1, 1907.

STARTING PAYMENTS—\$25 to start in the two-year-old pace. \$35 to start in the two-year-old trot. \$35 to start in the three-year-old pace. \$50 to start in the three-year-old trot. All starting payments to be made ten days before the first day of the meeting at which the race is to take place.

Nominators Must Designate When Making Payments to Start Whether the Horse Entered is a Trotter or Pacer.

Colts that Start at Two Years Old are Not Barred from Starting Again in the Three-Year-Old Divisions.

CONDITIONS.

The races for Two-Year-Olds will be mile heats (2 in 3), and for Three-Year-Olds 3 to 5. Distance for Two-Year-Olds, 150 yards; for Three-Year-Olds, 100 yards.

If a mare proves barren, or slips, or has a dead foal, or twins, or if either the mare or foal dies before March 1, 1905, her nominator may transfer his nomination or substitute another mare or foal, regardless of ownership; but there will be no return of a payment, nor will any entry be liable for more than amount paid in or contracted for. In entries the name, color and pedigree of mare must be given; also the name of the horse to which she was bred in 1903.

Entries must be accompanied by the entrance fee. Should the amount of entrance money received be in excess of the amount of the Stakes the excess will be added, less the cost of postage stamps, printing and advertising, to the Stakes for the

Three-Year-Old divisions in proportion to the amount offered in each division.

Nominators liable only for amounts paid in. Failure to make any payment forfeits all previous payments. Hopples will not be barred in pacing races.

Right reserved to declare off or rescope these Stakes in case the number of entries received is not satisfactory to the Board of Directors.

Money divided in each division of the stake 50, 25, 15 and 10 per cent. There will be no more moneys in each division than there are starters.

Entries open to the world; membership in the Association not required to enter, but no horse owned in the State of California will be allowed to start until the owner has become a member. Horses owned outside of the State of California are eligible to start regardless of membership.

E. P. HEALD, President.

F. W. KELLEY, Secretary.

THE \$60,000

DAN PATCH 1:56 $\frac{1}{4}$

CHAMPION PACING HORSE OF THE WORLD

(Without Hopples, Wind-Break, Etc., Etc.)

EATS

3 FEEDS FOR ONE CENT EVERY DAY.

"International Stock Food" greatly aids Digestion and Assimilation so that More Nutrition is obtained from all grain eaten. It "tones up" and Permanently Strengthens the entire system and Purifies the Blood so that disease is prevented. Every \$3.50 pail of "International Stock Food" is positively guaranteed to save \$7.00 worth of grain. It will cause your Race Horse to have more speed and endurance. It will make your Carriage Horses healthy, fat and beautiful. It will give your Show Horses more life and action and make them glossy. It will make your Work Horses strong, healthy and of great endurance. It will make your Stallions and Brood Mares surer, and your colts will be better and grow and develop more rapidly. "International Stock Food" is absolutely harmless even if taken into the human system. It is prepared from Roots, Herbs, Seeds and Barks and is fed in small amounts as an addition to the regular grain allowance. It is equally profitable when fed to Horses, Cattle, Sheep, Hogs, Colts, Calves, Lambs or Pigs. It will make you a large extra profit when fed to your stock for Growing, Fattening or Working. It will increase milk 15 to 25 per cent. in Cows, Mares, Sows or Ewes, and only costs **3 FEEDS FOR ONE CENT.** A Dan Patch colt commanded \$5,000 at eight months of age. He looked like a yearling and was beautiful, strong and vigorous. The dam was fed "International Stock Food" before and after foaling, and the colt as soon as it would eat. Dan Patch became the World's Champion Harness Horse nine months after commencing to eat "International Stock Food" every day. If it is good for such horses don't you think it would pay you to test it on yours? Our "International Stock Food Farm" contains 650 acres, 12 miles from Minneapolis, and on it we own Dan Patch 1:56 $\frac{1}{4}$ Directum 2:05 $\frac{1}{2}$, Roy Wilkes 2:06 $\frac{1}{2}$, and a band of brood mares. They all eat "International Stock Food" every day. **BEWARE OF IMITATIONS AND SUBSTITUTES.** There are many worthless imitations on the market, put out by people who seem to think that the way to start a business is to steal as much as they can from some prominent firm. No chemist can separate and name all of the ingredients used in "International Stock Food," etc., and any chemist or manufacturer claiming to do so must be an Ignoramus or a Falsifier.

A BEAUTIFUL DAN PATCH PICTURE FREE

We have a very fine, large lithograph of Dan Patch with the great driver, M. E. McHenry, in sulky. This Lithograph, Printed in Six Brilliant Colors, is one of the finest and most attractive horse pictures ever published. It is 21x28 and printed on heavy paper suitable for framing.

We Will Mail You One Copy Free, postage prepaid, if you will Answer Two Questions.

1st.—Name This Paper. 2d.—State How Much Stock You Own.

Answer these questions in a letter or on a postal card and we will mail at once. Write at once before the offer is withdrawn.

Money should be sent by postal order, draft or by registered letter addressed to F. W. KELLEY, 36 Geary St., San Francisco, Cal. Communications must be accompanied by the writer's name and address, not necessarily for publication, but as a private guarantee of good faith.

San Francisco, Saturday, Oct. 31, 1903.

LAST CALL FOR THE BIG STAKE—the Pacific Breeders Futurity No. 4, \$6000, for the foals of mares bred this year. Nominations close Monday next, November 2d. The fee has been reduced to \$2, and this small sum may be the means of your prospective foal winning one or both the divisions of the stake set apart for colts of his gait. The increased value that attaches to a colt well staked is obvious to every breeder, and is recognized by every person who has given the subject any thought. The glory attached to winning a stake with a colt of ones own breeding is one of those things that only a true horseman can appreciate, but the profit derived from the transaction is something that appeals to everybody. It is a great pleasure to hear the applause from the grand stand when one's colt comes under the wire a nose in front of three or four fast competitors, but for real satisfaction the jingle of the bright gold pieces paid over by the Secretary on account of this win, is "the real, real thing." You will not feel those thrills of pleasure and satisfaction, however, unless you have a colt in the race and you cannot have one there unless the dam is nominated. Nominations close Monday next. Send the name of your mare, her description and the name of the stallion bred to, to Secretary F. W. Kelley, 36 Geary street. Accompany this with \$2, and you will be in line.

LOU DILLON 1:58½. It almost startles a person to write the figures, and induces a rubbing of eyes and pinching of flesh to make certain that the writer is not dreaming. A mile in two minutes was marvelous, and turned the astonished eyes of the world to the beautiful Santa Rosa mare, but this mile in 1:58½ leads one to ask "Where will she stop? What is her limit?" Millard Sanders, to whose abilities as a trainer is due the wonderful showing made by the world's greatest trotter, says she will go still faster, and that she has as much speed as any pacer. We are compelled to believe that Mr. Sanders says what he actually believes to be true. He has made many predictions as to what Lou Dillon could do, and in every instance she has fulfilled the prophecy he has made. Therefore, when he says she has as much speed as any pacer, we believe him, and will be gratified but not surprised when the peerless mare trots a mile next year in 1:56½ or better. All honor to the California mare, to the stock farm that produced her, the man who cares for her and the trainer who has guided her a mile in nearly two seconds better than two minutes. They have all brought fame to California. Lou Dillon is the daintiest, the fastest and the gamest trotter in all the world, and stands without a rival, in a class by herself.

SEVERAL NOMINATORS to the Pacific Breeder \$6000 Futurity have written asking why more money is given the trotters than the pacers in arranging the divisions of stakes. They cannot see why the pacers should not be entitled to as much money as the trotters. The principal reason is that the stake was originally arranged for trotters, the money for pacers being given simply for the reason that the breeder of a colt that paces "may have a show for his white alley." Then there are more trotters foaled than pacers and consequently the larger part of the stakes should go to those that have the diagonal gait. The trotting horse is more valuable than the pacer, other things being equal. As a roadster the trotter is worth about twice as much as the pacer, and he is considered the most desirable horse to breed. The Pacific Coast Trotting Horse Breeders' Association was organized in 1889, and in its constitution adopted in 1890, its principal object was stated to be "to promote the legitimate interests of the breeders by encouraging the breeding of the highest type of the trotting horse and the development of the same." Such being its main object, would it not look rather queer for the association to offer as much money in its only annual futurity event for pacers as it gives to trotters?

THE RED RIBBON SPEED SALE that William G. Layng will hold at the Occidental Horse Exchange on Tuesday evening, November 17th, is advertised in this issue of the BREEDER AND SPORTSMAN in a manner so that the breeding of each horse is fully given. The sale is attracting much attention from breeders, and will draw an immense crowd to Mr. Layng's big pavilion the night it comes off. Henry Sanders of Pleasanton consigns sixteen head by Rey Direct, Chas. Derby, Diablo, Owyhee and Hart Boswell. P. J. Williams sends a half brother to Monterey and a yearling filly by that great trotter. Thos. Smith of Vallejo, L. M. Lassell of Martinez, C. Archer of Linden, and several others consign horses by Geo. Washington, Linwood, Ahotsford Jr, Direct, Dexter Prince, Sidney, Guy McKinney, McKinney, Silver Bow, Sidmore and other good sires. These are all out of well bred mares, many of which are producers. Besides this consignment of trotters and pacers, there is a hand of seven handsome Shetland ponies, all thoroughly broken and consigned by Geo. A. Davis of Pleasanton. This is just the opportunity to secure a Christmas present for the children that will not only be appreciated by them but keep them out of doors and bring them health and vigor in the open air. Catalogues are to be issued at once. Send to Mr. Layng at 246 Third street for one.

DAN DENNISON, one of the wisest Irishmen and best trainers that ever handled a horse, died suddenly on the street in Oakland last Tuesday, from heart disease. Dan Dennison was an old resident of California, having come here from Ireland when quite a youth. He trained and drove trotters in the old days, being contemporaneous with Jim Eoff, Chas. Shear, Yank Smith, Barney Rice, and many others who have passed over the divide. In recent years he has trained and raced runners, having handled strings successfully for W. O'B. Macdonough and the late Marcus Daly. Many of the "old boys" and all who were acquainted with Dan Dennison will hear of his death with regret. He leaves a large family, several of the sons having ridden races before they became too heavy. His oldest daughter married M. J. Kelly, the trainer for Burns & Waterhouse, who died about three years ago. Eva Dennison, another daughter, is the ingenue with the Frawley company now touring Australia and New Zealand.

Pleasanton Notes.

[Pleasanton Times, Oct. 24.]

"White Hat" McCarthy is a weekly visitor at the track nowadays, looking after his Sidney Dillon gelding that Mr. Albertson is working. He may not be another Lou Dillon, but he will step some hys and ahys.

Barney Simpson has been quite sick for the last few days and unable to do much with his horses. He recently drove his three year old Welcome 2:10 a quarter in :033. This colt has had but little work and is quite a promising pacer.

Mr. Albertson, of Georgie G. 2:12½ fame, lately had sent to him one of the greatest bred youngsters in the State. He is a three year old brown colt by the great McKinney 2:11½, dam the greatest racing three year old trotter that ever scored for the word, Expressive 2:12½ by Electioneer. This colt was bred at the Palo Alto Stock Farm and is one of the best individuals as well as one of the best bred colts ever raised at that famous farm.

Johnny Ries, four year old stallion by Chas. Derby 2:20, stepped a half in 1:04½ last Thursday. This is a strong, handsome chestnut fellow that has only had ninety days work in his life. He has a perfect racing head; never made a break—don't know how to break; good gaited, sound and all right; and looks and acts like a real racing prospect. Ed Mills, his owner, thinks very highly of him, and they have to be pretty good to please Mr. Mills.

Mr. Montanya has purchased of Ed Mills the fast trotting gelding "Bane" by Chas. Derby but has left him with Mr. Mills to train. This is as pure gaited frictionless trotter as ever stepped on a race track and has better than two minute speed. He trotted a mile at the Oakwood Park Farm two years ago in 2:14. He has only had slow miles for the last thirty days with an occasional brush at the finish. The last eighth of a slow mile was stepped in 15 seconds the other day. When he is ready, miles in 2:10 will be only exercise for him.

W. Brown worked his green trotter by Bay Bird a mile last Saturday in 2:16½. This was a very creditable performance for a trotter that has had less than two months work altogether. He looks like a 2:10 prospect.

Seven head of horses belonging to Senator Clark of Montana arrived yesterday and will winter here. They have been raced through the northern circuit and came through from Portland, Ore., by express.

Listen

All yu' owners and yu' trainers in north and east and south! It may be yu' can tell a horse by logkin' in his mouth; It may be yu' can train 'em, too, and handle 'em with care, And it may be yu' can race 'em and time 'em fair and square. It may be yu' have bred a few that want't so awful slow; It may be yu' have won the hinc in some big city show; But if yu' want a sure horse farm, that's worthy of the name, Where ev'ry horse yu' raise will sell and many bring you fame, There's a State out by the ocean that's called the sunset sea, Where there's earth and grass and water, enough for you and me, Where the horses have endurance and finish strong and game— A land of roads and warm sunshine and reputable fame, Where grass grows in the summer and in the winter, too, And where we bred and raised a queen whose christian name is Lou, Besides some thousand other stars, of whom the books will tell, And where you can breed some like 'em as easy and aa well. The north and south and east are good, but if you want the best Pack up your duds and ship your stock and come out to the west. We like all worthy strangers, and so we gladly warn yu'— The best place on God's green old earth is dear old California. San Francisco, Oct. 26, 1902. B. C.

Leading Sires of 1903.

The full list of new performers of 1903 has not yet been made up, but from present figures Gamhetta Wilkes 2:19½ is far in the lead with 18 new performers to his credit. The following is a list of those stallions that have four or more new performers this year:

Gamhetta Wilkes 2:19½	18	Expedition 2:15¾	5
Direct 2:05¼	11	Prodigal 2:16	3
Kremell 2:07¾	11	Aleander 2:20¼	4
Allerton 2:09¾	10	Arworthy 2:15¼	4
Bellini 2:13¾	10	Baron Dillon 2:12	4
McKinney 2:11¼	7	Birehwood 2:15	4
Charles Derby 2:20	6	Bobby Burns 2:19¾	4
Elyria 2:25¼	6	Boreal 2:15¾	4
Nelson 2:09	6	Bourbon Patchen 2:09	4
Oro Wilkes 2:11	6	Brown Hal 2:12¼	4
Robert McGregor 2:17¼	6	Happy Heir	3
Sphinx 2:20¼	6	John G. Carlisle 2:27	3
Axtell 2:12	5	Mambrino King	4
Baron Wilkes 2:18	5	Patchen Wilkes 2:29¼	4
Bingen 2:06¼	5	Pom 2:11¼	3
Directum 2:05¼	5	Wilkes	3

Won by His Poor French.

An amusing incident is reported from Paris as having occurred at a race meeting at Auteuil. An Englishman, whose French must have been that of the English schools, went to the Paris Mutual hooth and asked for 900 francs' worth of tickets on Popillon Quatre. His pronunciation, however, was not sufficiently understood by the clerk in charge to enable him to carry out the wishes of his client. He understood that the individual wanted to back the horse whose name was number four on the list, as he could make out a resemblance between the word Quatre, meaning four, as the Englishman pronounced it, and the sound he in common with other Parisians gave it. Acting, therefore, in accordance with the idea he supposed had been conveyed to him, the clerk gave the Englishman ninety ten-franc tickets on Geanne la Folle, smiling as he did so, for Geanne, although fourth on the list, was perhaps the rankest outsider that had been entered. But with the blind luck that often causes a man to stumble on something which he would never see were his eyes not blinded at the time, it happened that the error was the cause of great good fortune to the badly pronouncing Englishman. La Folle actually won, and the Englishman discovered when looking at his tickets that he had won 61,400 francs.

A dispatch from Santa Rosa says: "The horsemen of Santa Rosa in particular and Sonoma county in general are enthusiastic over the performances of the wonderful Lou Dillon during the present season on Eastern tracks. They are also proud of the handling of the mare by Millard Sanders, also a Californian, and upon his return to his home here they intend to entertain him handsomely. A banquet and a public testimonial to him as a trainer and reinsman will probably be given him by his friends and admirers. The entire populace will join heartily in any scheme to honor the man who handled Lou Dillon, and advertised to the world the section of country from which she came. Through the efforts of Lou and Dolly Dillon on Eastern tracks this year, Santa Rosa has become more widely known in Eastern states than ever before. Sanders will probably be presented with a loving cup upon his return. He is a well known California horseman, and has been handling the stock of the Santa Rosa Stock Farm for many years." It is pleasant to see that the Santa Rosa horsemen propose to recognize merit where it is due.

The Kenney Bicycle Co., 531 Valencia St., is doing a big business in the McMurray Carts and Sulkeys. You not only save money by purchasing a McMurray but get the most durable best made, and easiest running cart or sulky in the market. Investigation will convince a Missourian.

All of Chas. Kerr's thoroughbred yearlings will be sold by public auction at the Occidental Horse Exchange, 246 Third street. Wm. G. Layng the auctioneer says they are the finest looking this well known horseman has ever bred.

Strike!—if they don't give you Jackson's Nap Soda when you ask for it.

Notes and News.

Lou Dillon 1:58½!

Her wagon record 2:00!

The daughter of Sidney Dillon is a wonder.

Major Delmar has lowered his record to 1:59½.

No one expected the two minute trotter this year, but there are three.

Harry Hurst, by Delwin, reduced his record to 2:15 in the 2:17 pace at the Boise meeting.

Can't some inventive genius devise a wind shield for use on the hot-air circuit that will open soon?

Monroe S. the chestnut pacer by Dictator Wilkes, reduced his record to 2:13½ at Boise, Idaho, October 17th.

The fastest two heats to wagon by a pacing gelding is to the credit of Coney 2:02. It was made in 1900 and the time was 2:05½ and 2:05½.

Swift B, the three year old trotter by Stam B. 2:11½ won two races at the Boise, Idaho, meeting, and in one of them he heat a field of pacers.

Joe Thayer recently drove a yearling pacer by Birchwood a half over the Lexington track in 1:03½, and says he can drive the youngster a full mile in 2:10

Osmont, the bay pacer by Altamont, that, Under-Sheriff Daly of Napa, sold last spring to Salt Lake parties, earned a record of 2:14½ at the Boise, Idaho meeting October 16th.

Mack Mack, by McKinney, remains eligible to the 2:14 class, but he has taken down the money about every time he has started this season, and can easily trot in 2:10 should he have to to win.

Mr. James A. Murphy's pacer Don Derby 2:04½, full brother to Diablo 2:09½, has so far proved himself King of the New York Speedway pacers, as he has found nothing so far that can brush with him.

E. E. Smathers will sell at auction next month, in New York, Shadow Chimes, 2:05; Alice Barnes, 2:10½; Gold Brick, 2:07½; Antezella, 2:10½, and other fast horses, to make room for his recent purchases.

The largest money winner of the season last year was the unbeaten Direct Hal, 2:04, while the largest money winner of the season this year is the trotter Billy Buck. Ed Geers trained and drove both horses.

Clipper 2:06 by Diablo, is himself again and his record of 2:06½ and 2:06½ in a race to wagon at Memphis this week is evidence that he is the real thing just now. He defeated two good ones—Tom Keene and Greenline.

The handsome black stallion, Claymont, by Altamont, out of the famous mare, Tecora, by C. M. Clay, Jr. 22, stepped a mile in 2:12 during the second heat of the 2:18 trot at Lexington. Claymont is owned by Dr. Oldham, Wichita, Kan., and is in the racing stable of J. B. Chandler.

Myron McHenry has declared his intentions of deserting the harness horse and taking up with the runners. He will gather a stable of gallopers and race them at New Orleans this winter, next season returning to the North, and take in Chicago and other places where the running game flourishes like a "green hay tree."

Hudson bought the stallion Nervolo, one of the best race nags among all the pacers, and that he has campaigned with success this year, last Friday, paying \$15,000 for him. The seller was Dr. Thornhill of Spring Valley, Minn., and the new owner of the son of Colbert is an Easterner whose name has not been made public.

Kinney Lou was the only horse in the Blue Grass purse at Lexington that could make Jay McGregor extend himself, and was second each heat. In the second mile Kinney Lou made the big stallion step to the half-mile pole in 1:03, but even this rate of speed did not seem in the least to take the tuck out of Hudson's mount.

Mr. W. J. Miller of Fresno is the owner of a yearling by Guy McKinney that will compare with any foal of like age in the country for good looks and size. The dam is by Dexter Prince and the second dam by Abhotsford. Mr. Miller has been breaking him to harness and the little fellow shows lots of natural speed. He is called Guy Prince.

The stallion Direct View, one of the best looking sons of Direct, trotted a wonderfully good race at Lexington in the 2:16 class, and unless all the signs are at fault he will beat 2:10 in 1904. In the third heat he was away absolutely last and yet finished a good second in 2:11½, being separately timed in 2:11½. When it is considered that in order to come second he was obliged to trot around the entire field, and that on the upper turn he was well to the outside of the track it will be seen that the mile was something like a 2:10 performance had the horse been at the pole all the way.

From nearly every town in California where a trotting track is located comes the report that the managers want to give a good trotting meeting next year.

Pacific Breeders Futurity No. 4, for the get of mares bred this year, will close Monday next, November 2nd. It only costs \$2 to name the mare. Get in and win some of that \$6000.

There is talk of a match race between a couple of San Francisco pacers to come off over the speedway within a week or two where the stakes will be a ton of hay and half a ton of oats.

Jack Dinue has our thanks for a number of fine photographs of horses and scenes at the Seattle track. We will find use for them in future issues of the BREEDER AND SPORTSMAN.

The sale of Rey Direct colts and fillies at the Occidental Horse Exchange, Nov. 17th, will give buyers an opportunity to get Director blood through one of the choicest lines of that great family.

That popular horseman P. J. Williams, owner of the great stallion Monterey 2:09½, will sell a number of fine looking, good sized and well bred young horses at the Occidental Horse Exchange, Nov. 17th.

"When one harness race and six running races make up a day's program, the chances are about six to one against the harness race being on the square," says a swipec who has been on the California circuit for several years past.

The \$60,000 Dan Patch that has the world's pacing record of 1:56½ is fed on International Stock Food every day. Read the advertisement in this issue and

Robert I. celebrated his return to California by winning his first start at Los Angeles since his trip East, but he had a hard time beating Ama A., the Dictatus mare.

Ama A., the mare by Dictatus that took a trotting record of 2:16½ last year, won a heat in 2:12½ at the pacing gait at Los Angeles this week. As the Los Angeles track is slow this record is better than it looks.

The \$40,000 paid for Major Delmar is the greatest price ever paid for a gelding, Rarus having brought \$36,000 and the Abbot \$25,000. F. H. Parks, who owned the gelding Major Delmar bought him two years ago for \$2000 and has won large sums with him since. He is six years old and has been racing since he was a two year old, except in his fourth year. He has won fourteen races out of twenty-one starts.

The black stallion Citizen Bird, a great grandson of McKinney, won all the honors for standard bred stallions at the Spokane Inter-State fair this year. Citizen Bird is a two year old and is by Gyr Falcon, a son of Zombro 2:11. The dam of Gyr Falcon is Lyla 2:27½, daughter of Altamont and the great broodmare Tecora, and Coquette the dam of Citizen Bird is a full sister to Lyla. Citizen Bird won first prize for the best two year old over nine competitors, and Gyr Falcon won the blue ribbon for best aged stallion. Then Citizen Bird beat his sire for best stallion of any age. He is owned by Mr. Thos. S. Griffith of Spokane.

The McDowell 2:10 trot, won by Monte Carlo, is the fastest seven-heat race ever trotted, and lowers the previous record by a full second and a half. And Monte Carlo's three heats each in 2:07½ constitute the fastest three heats ever trotted by a gelding, which record was formerly held jointly by Azote and Lord

CLIPPER 2:06. Wagon Record, 2:06 1-2.

send and get a picture of the champion pacer. It will be furnished you absolutely free of cost if you mention the Breeder & Sportsman and state how much live stock you own.

Better name that mare you bred this year in the Breeders Futurity. Send \$2 to Secretary Kelley at 36 Geary street, giving the name and breeding of your mare and the stallion she was bred to. This may lead to winning first money in the stake.

Those Forrest W.-Iloilo races at the Los Angeles meeting have a bad look from every point of view. It was pretty generally understood in this section that both geldings were the property of one person up to the time the Los Angeles meeting opened.

James Berryman will place his young stallion Silver Moon by Silver Bow Jr, dam by Almoon, in the stud at Pleasanton next spring. Silver Moon is a good sized bay stallion that has good looks and speed, and after a short season in the stud will be raced and given a record.

Sandy Smith is working a number of young Cupids and Dexter Princes at the Aptos Stock Farm and says he has some crackerjacks by both sires. Sandy says: "Look out for some of these youngsters by Lou Dillon's uncle; they trot your eye out right now and some of them ain't hridle wise yet."

It is stated by a Chicago paper that the American Trotting Association has sent its agents to Wichita, Kansas, to thoroughly investigate the performance there last week of the stallion Cresceus. It is also said that the most rigid investigation will show that the stallion trotted the mile fairly and squarely in 1:59½ and that the track will be found to be regulation length.

In trotting a mile in 1:58½ at Memphis on Saturday Lou Dillon covered 44 53-100 feet every second. It is necessary to average 44 feet every second to make a mile in two minutes. The records of Cresceus, Major Delmar, Alix and Maud S. are 1:59½, 2:00, 2:03½ and 2:08½. Lou Dillon beat Cresceus 55 69-100 feet to the mile, Major Delmar 66 83-100 feet, Alix 233 9-10 feet and Maud S. 456 3-5 feet.

Derby, who had trotted their heats in 2:09½, 2:05½, 2:07, and 2:07, 2:07, 2:08, respectively, making an average of 2:07 1-3, while those of Monte Carlo average 2:07½. The time of the seventh heat, 2:07½, is also the best on record, the best previous one being 2:10½, made by Pat L. and Nutbearer.

Mrs. William Murray will bring her horse Diablo 2:09½ back to Woodland, Yolo county, this fall, and the son of Chas. Derby will make the season of 1904 there as usual. The Diablo's have made a good showing this year. Diablo is one of the best winners of the year, and Clipper has won one of the greatest wagon races ever paced. There are three or four trotters by Diablo that will be raced next year that will be among the crackerjacks if no accident happens them.

At the matinee races held at Narragansett Park last Saturday under the auspices of the Narragansett Park Association, Prince Alert, clipped a quarter of a second from the world's record for a half mile by going the distance in 57½ seconds. His time for the second quarter was 29½ seconds. Mart Demarest, the driver of Prince Alert, telegraphed to E. E. Smathers at Memphis after the race that he would match Prince Alert against Dan Patch. Demarest stipulated that the match race shall take place at Memphis November 10th for a purse of \$20,000, best two out of three, one-mile heats. Prince Alert did not hold the record long as Dan Patch paced a half mile in 1:56½ three days later at Memphis.

Dan Patch, says an exchange, whose mark of 1:56½ pacing, is not likely to be beaten unless he beats it himself, wears seven-ounce plain shoes in front and five-ounce corked shoes behind. John A. McKerron, the great wagon horse, wears eight-ounce plain shoes in front and four-ounce swedged shoes behind. Alix is the only great trotter of the past fifteen years who wore all four shoes of like shape and weight. Joe Patchen, sire of Dan Patch, held the record up to four years ago at pacing. He wears four-ounce shoes behind and eight-ounce shoes in front. Lou Dillon, the trotting queen, wears three-ounce shoes in front and six and a half ounces behind, being the lightest weight for all four shoes, of all the great record-breakers of the present period.

Hiram Tozier has been a mile in 2:20 with the two year old colt Pierpont Morgan, by Idolita 2:09½. The Victor, another two year old by Idolita, has shown a mile in 2:27.

Col. Delmar 2:26½, brother in blood to Major Delmar, has been sent to Hiram Tozier, at Readville, who will winter him and fit him for a fast mile next year. Col. Delmar is a strong, rugged looking horse, and has extreme speed. He has shown quarters close to thirty seconds in his work. He is by Delmar, sire of Major Delmar 2:00, and out of a mare by Autograph, as likewise is Major Delmar, and his second dam is also the grandam of Major Delmar.

A peculiar bet was decided at Whitegate Park, Blackpool, England, last July. A Mr. Thomas Smallwood made a bet that he would produce two horses that would trot forty-three miles in two hours, using them alternately. The track on which this was tried, was less than a half-mile, being, in fact, 170 yards short of the half-mile, so to go the forty-three miles, it was necessary to go 106 laps and 120 yards. The two animals used were named Florrie O. and Rustic Beauty, and at the end of the first hour the mares were one lap of the track, actually 710 yards ahead of time, but in the second half they both tired, and one, Florrie O., acted badly, and they lost this advantage and more time, too, so at the end of the hour they were 620 yards, about thirty-five yards more than a third of a mile behind, losing the bet. They completed the distance in two hours, one minute and six seconds, which, although a losing performance as far as the bet went, was a truly remarkable performance. The relays were made in five miles each, so that as the clip was at an average of 2:49, it gave them about thirteen minutes between heats.

Baron Wilkes 2:18 has his eleventh member of the 2:10 list in Baron Bell 2:09. The latter's record was made against time, but this does not detract from his merit, as he has convinced the public that he is a genuine racehorse. He has raced four years on the one-third and half-mile tracks, and has never been behind the money, and in his season last year on the Grand Circuit he was eight times inside the money, and has the distinction of never having won a heat and losing the race except once, which was on account of an accident.

The suppression of time as well as the awarding of false records, is one of the most serious offenses in the calendar of the National or American Trotting Association, yet no rule is more flagrantly violated. It is common talk among horsemen, when speaking of their horses, to hear them say, "He went in 2:16, but the judges gave it 2:19½, etc." Apart from the lack of honesty of the transaction, the manifold injury which the system entails is so apparent that a curtailing of the abuse at least is greatly to be desired.—*Kentucky Stock Farm.*

The popular young stallion, Mystic Tie by Guy Wilkes 2:15½, owned by Dr. C. A. White, Danville, Ind., has two standard trotters to his credit this year. They are Nelke 2:28½ and Mystic Boy 2:29½.

Dr. C. W. Conley, of Eaton, O., has this season bred several very high-class mares to the old trotting king, Directum, 2:05½, among them Selma, by Sultan dam Eye See (dam of four), by Nutwood, and Emma Wilkes (dam of Refina, 2:08½, and Mustard, 2:08½), by George Wilkes.

The *American Horse Breeder* says the performances of Sadie Mac 2:11½ at Lexington will give the breeders of that section of the country some idea of what a really great stallion her half-brother Todd is likely to prove. Todd trotted eighths in 15 seconds, a two-minute gait, as a two year old.

Secretary W. H. Gocher has issued a call for a regular meeting of the Board of Review, to be held at the Murray Hill Hotel, New York, at 11 o'clock a. m., on Tuesday, December 1, 1903. An adjourned or a special meeting of the board will be held in New York in the early spring of 1904, to accommodate those whose convenience or necessities will be served thereby. All communications intended for the consideration of the board at the December meeting must be forwarded to the secretary not later than November 16th, and all parties who desire that their cases should be acted on at the spring meeting should immediately notify the secretary to that effect.

A dispatch from Marysville, Ky., states: "The cause for the lameness of Dr. Hord's famous trotter, Neddle Connor, was found yesterday. When at Detroit, entered in the Grand Circuit races there, he became lame, could not contest, and was shipped home. Yesterday a hypodermic needle, broken off, was found projecting from the horse's leg. Dr. Hord will offer a handsome reward for the name of the person who inserted the needle. Only recently he was offered \$7,500 for the trotter, but refused it. Neddle Connor was wintered at Memphis last winter by Geers, who expected to race him until his lameness prevented."

To prove that harness racing is not only a drawing card for the fair but one that makes its success positive, we cite the fact that the Ohio state fair at Columbus last month, cleared \$10,000, the New York state fair at Syracuse, \$30,000 and the Minnesota state fair \$71,000.

Bad habits in horses almost always have their origin in bad handling when they are young. Kind treatment will develop the best fibers in a horse, but meanness to colts hurts a horse's disposition permanently. Jerking at the bits and other ill treatment never does any good. Horses have long memories; they do not forget injuries quickly.

Trainer Lon McDonald is a master hand at picking out embryonic world beaters. After negotiations the sale of Sadie Mac (3) 2:11½, to E. E. Smathers for \$20,000, Lon bought of Jere L. Tarlton, at Lexington, last week, a yearling filly by Larabie the Great, dam Genevieve by Barney Wilkes, for the long price of \$1800. The filly has trotted a quarter in 3¼ seconds and has a large number of valuable engagements, including the Kentucky Futurity.

Says Hawley in *Kentucky Stock Farm*: Of all the older horses that appeared at Lexington only a very few, possibly only three, looked to have that bloom that betokens absolute fitness and in which no signs of having been over-done were in evidence. Lou Dillon, although she had been put to a test that was the most difficult that can be asked of a trotter, gave no evidence either in her appearance or her performance of having been over-done. Her coat shone like satin, her eyes were bright, and her whole appearance was that of perfect health and thorough condition. That such was the case speaks volumes for her trainer's ability, and that a world's record-holder after many severe miles and constant training covering a period of nearly ten months should lack all appearance of staleness should be an object lesson to other trainers whose charges appear baked and over-done. Dan Patch and Monte Carlo are the other two that impressed the observer with their bloom, the former in particular, and when it is considered that he has been shipped constantly from one track to another and has paced his miles closely averaging two minutes, the wonder is that he could have been kept in such condition as he now is.

The Black Nightingale 2:10½, is the dam of Baron-gale 2:15½, a three year old by Baronmore.

James Brodbine, of Boston, says he will start Locanda next year at Detroit and race him all the way down the big line to Memphis.

Geo. W. Leavitt, of Boston, has bought of W. W. Evans, of Lexington, Ky., a yearling colt by Larabie the Great out of Cara by John G. Carlisle, for which he paid \$2300.

The increasing popularity of ponies in Europe, as well as in America is following close on the bicycle craze. The ladies and children now pay more for ponies than wheels, and there are special pony carriage factories that make pony carts, surreys and elegant new designs of vehicles. The Shetland, with its kindly disposition, is the most popular pony, but there are many handsome, clean legged little ponies of other breeds and crosses, that are receiving recognition.

On the third day of the Lexington meeting every one of the winners of the four regular purse events was out of a record mare. Norrie, by Brown Wilkes 2:21½, out of Carilla 2:22½, by Nugget, won the 2:13 trot; Great Spirit, by Prodigal 2:16, out of Rachel 2:08½, by Baron Wilkes, won the 2:25 trot; Caspian, by Patron 2:14½, out of Cascarilla 2:25½, by Shelby Chief, won the Transylvania; and Directum Miller, by Directum 2:05½, out of May Day 2:18½, by Abdallah Mambrino, won the 2:19 pace.

Jay McGregor is the heaviest money-winning stallion of the season, with over \$15,000 to his credit.

A tough mouthed, obstinate horse is often developed by using a harsh unsuitable bit. The bit first cuts the horse's mouth and makes him ugly tempered, afterwards the cut becomes calloused and horses so treated become headstrong and mean as their masters. Colts should never be teased. Teasing a colt will develop all the viciousness there is in him.

The margin between the good draft gelding and the common or inferior horse on the market is wider than ever before. Draft mares, besides doing the best work, raise the best paying colts. When the big geldings are two years old they earn their keep and learn to work, with no expense for breaking or training. They grow into more money than any other farm stock. Young draft mares should be kept on the farm for breeding.

"Columbus" of the *Western Horseman* very aptly remarks: "Force of habit has compelled several journals devoted to light harness horse racing to publish lengthy accounts of the 1903 Futurity and Transylvania. Others futurity races have fashioned turf history; the last was a roaring farce. The Transylvanias of the past have been gruelling contests, and horses have been sacrificed in order to win, but there was absolutely nothing to the race of 1903. Far better races have been witnessed this season at pumpkin shows, where the horses fought like demons for a little old purse of \$200. A race worthy of being discussed consists of something more than a series of heats, the start and finish, the payment of certain sums of money to the winners and the odds of the bookmakers. Heavy betting is not always essential to good racing. Split heats may only prove that certain parties are out to beat the men who play the books. Windy efforts upon the part of the starting judges and spasmodic attempts at protecting the public by the judges do not always result in high-class racing. Game horses and honest drivers are the proper material from which may be fashioned a horse race that is thoroughly satisfactory and that leaves no odor of 'burned rags.'"

Demas Deming, the banker and expert horse devotee of Terre Haute, Ind., who sold the pacer John M. to E. E. Smathers for \$10,000, gave \$2000 to "Uncle Sam" Fleming, who discovered the horse and drove him his fortune-winning races this season, \$250 to one stable boy and a road horse to another stable boy.

Buyers who are looking for a high-class stallion should be able to make a selection from such stallions as Peter the Great 2:07½, Tommy Britton 2:06½, Oro Wilkes 2:11, St. Vincent 2:13½, Belsire 2:18 and Early Reaper 2:09½. These stallions all go to the auctions this fall.

George Hill recently drove the famous old time trotter Rysdyk Maid 2:24½, now thirty-one years old, a quarter over the Combination Park track in 40 seconds. Notwithstanding her advanced age the famous daughter of old Hambletonian is still as lively as a four-year-old and looks to be good for another ten years. She is the dam of Mystic Maid 2:21½ and Easter 2:12½, one of B. F. Dutton's famous pole teams.

Monte Carlo's showing in the seven heat race he won at Lexington was thus commented on the day after the race by "Columbus," the *Western Horseman's* correspondent: The sole topic of conversation at the hotels, the opera house and upon the streets Wednesday evening was the fourth heat of the McDowell stake for 2:10 trotters, which was taken from Monte Carlo and given to Hawthorne. The talk did not assume the form of a discussion, as there appeared to be but one opinion expressed, which was that Monte Carlo was entitled to the heat. The horse trotted six good and game miles, and was the only horse in the race that didn't make a break. He was a contending horse in every heat, making the pace from the start and driven to win. Hawthorne was laid up the first heats, just finishing to the good and stepping the miles in about 2:12, as Hudson stopped driving after the flag was beaten. These miles were far different from the first two miles of Monte Carlo, who trotted in 2:07½ and 2:07, the last mile being changed to 2:07½ after it had been hung out. Hudson deserved a fine for laying up.

A meeting to last thirty days is a probability for the Empire City track, New York, next season. The meeting will be held during August.

With the exception of Major Delmar 1:59½ the Smathers string will be wintered at Memphis. Alta McDonald will take the Delmar gelding to Albany, N. Y.

When the news of Cresceus' mile in 1:59½ reached Memphis Murray Howe wired George H. Ketcham an offer of \$5000 if he would drive the champion a mile better than two minutes at Memphis.

The handsome chestnut stallion Crescent Route by Cresceus, dam Bessing by Jay Bird, took a record at Lexington recently of 2:10½. The last half of this mile was much faster and indicated that this son of Cresceus could easily step a mile better than 2:10.

The Director family seems to have an inbred love for the money.

One of the races that captured horsemen by the way it was won was the Lexington, for two year old trotters, that fell to the wonderful little trotting filly Grace Bond. A detailed description would be of no interest, as the filly simply took the lead when the word was given in each heat and romped home ahead of the others, making the distance between herself and the others as much as she chose. Her second heat, in 2:14½, was within a quarter of a second of the race record for trotting fillies of her age, and it was the general impression of the critics that she could certainly have beaten 2:14 had Miller so willed. The quarters of the mile were 0:34, 1:06, 1:39, the trip down the homestretch being only a jog. A feature of the race was the distancing in the first heat of the Boston filly Totara, that had a record of 2:17, made a month before the Lexington meeting. In Geers' hands it was thought Totara would be an important factor in the race, and in much of the betting she brought more than Grace Bond. But Totara was given the worst of the start in the first heat, and was not even trotting squarely when the word was given. She finally left her feet at the head of the homestretch, being then far behind, and was beaten without ever having a chance to show her quality. The Moko blood was prominent in the race, fillies by that horse taking second and third moneys, and, curiously enough, both were out of Jay Bird mares.

Prof. K. Imai, of the Imperial University of Tokyo, Japan, has arrived in Lexington, Ky., for an indefinite stay for the purpose of studying American methods of horse breeding, principally the trotting horse. Like the other Japs who preceded him some months ago, he is an official representative of the government of the Mikado, and whatever knowledge he may acquire is to be introduced into the government breeding establishments in Japan. He has been in Europe on a similar mission.

At the recent meeting at Hudson River Driving Park, Poughkeepsie, H. N. Bain drove his handsome young stallion, Sir Robbins 2:23½ by Stamboul 2:07½, an exhibition mile to wagon in 2:23½. Sir Robbins has won many blue ribbons in the show rings and "has the speed" as well.

Palmer Clark says he was invited into the stand at a fair not a hundred miles from Chicago, and in the stand was the superintendent of speed. As each heat was trotted the timers would submit their watches to him, and about the following conversation would ensue: "Let's see, this is the 2:30 class; 2:26½, well, give it 2:29½; we want to leave him in his class." The next beat another horse won. "What did you make it, 2:32½? Well, give it 2:29½; this man wants to give his mare a standard record." This is a sample of the duties performed by a great many of the speed superintendents, and if it was not such a serious matter, it would be laughable.

Harness Racing at Los Angeles.

The harness racing part of the program at Los Angeles has not amounted to much since our last report. On Friday Highball won a rather easy race, beating Ira and two others in straight heats. There was no harness racing on Saturday or Monday, but on Tuesday of this week the free for all pace in which Robert I started drew quite a crowd and excited considerable enthusiasm although the race did not amount to much. Robert I was said to be out of condition and after winning the first heat in 2:14, lost the second in 2:12 a new record for the winner, Ama A. by Dictatus. In the third heat Ama A. broke and Robert I won the heat and the race in 2:17; Midnight and Highball were the other starters.

On Wednesday there was a trot for the 2:14 class, in which Forest W. and Iloilo started, although both are supposed to belong to the same owner. One may have been sold, however, since the State Fair. One of the Los Angeles turf writers stated that Iloilo acted in this race as if he had been filled up with water. The race had a had look and Al McDonald was fined \$50 for laying up the first heat with Forrest W. The 2:20 pace on the same day went to Ira in straight heats.

On Thursday the 2:17 trot resulted in a five heat race which was a duel between Walter Maben's mare Mamie Elizabeth and P. W. Hodges Lady Zombro. Lady Gypsy and Lady Madison were the other starters in this event, but they did not figure in the final summary. Mamie Elizabeth won but the Zombro filly fought it out with her every heat and was not disgraced though beaten. The heats were all trotted close to the same notch. Summaries:

Table with 4 columns: Name, Time, and other details for Oct. 23 - Green class, pace, purse \$500.

Table with 4 columns: Name, Time, and other details for Oct. 27 - Free for all pace, purse \$1000, two in three.

Table with 4 columns: Name, Time, and other details for Oct. 28 - Trotting, 2:14 class, purse \$500, three in five.

Table with 4 columns: Name, Time, and other details for Pacing, 2:30 class, purse \$500, three in five.

Table with 4 columns: Name, Time, and other details for Oct. 29 - Trotting, 2:17, purse \$100.

Acting Secretary Lowden Released.

[Sacramento Union, Oct. 25.]

The State Board of Agriculture yesterday decided to dispense with the services of Acting Secretary Harry Lowden after the 31st inst. It was also ordered that the election of a permanent secretary take place at the first meeting of the board in March, 1904. In the meantime L. R. Miller, now clerk of the board, is appointed in Mr. Lowden's place.

President Rush and Directors Johnson, Johnston, Wilson, Rose, Land, Paine, Fox, Whittaker and Burke were present at the meeting.

The board found that bills due and payable on account of the late fair, except a few not yet rendered, and those of not large amount aggregate \$11,896.37. Of these it ordered paid in the sum of \$4000.81 the following: Premiums in Live Stock Department—Joseph Marzen, \$340; California Pastoral and Agricultural Company, \$277; John Sparks, \$554; W. H. Howard, \$718; James W. Rea, \$400; Mrs. M. E. Gubbay, \$396; J. H. Glide, \$86; I. Christie, \$5; C. O. Stanton, \$10. Race account—El Primero Stables, \$905. Miscellaneous—Carl Eisenschmiel, engrossing, \$40; B. A. Johnson, caterer, \$250. All premiums have now been paid.

This leaves unpaid bills aggregating \$7895.56. They will be discharged as soon as the State appropriation is made available, and that will be when the board files its certified list of premiums awarded with the State Board of Examiners. This certified list the secretary is now at work upon and will have ready in a few days.

Mr. Miller says he had made no canvass for the position and that there is no issue between himself and Mr. Lowden, but that the only question was one of economy, Mr. Lowden receiving \$200 a month, while Mr. Miller at present receives but \$85.

Director Land, in making his motion, said he meant no reproach. Mr. Lowden had been a faithful and

efficient secretary, but economy demanded that there be reduction of expenses.

Director Land moved that the election for permanent secretary take place at the first meeting of the board in March, 1904, and the motion prevailed. In each case the vote stood 6 to 4: Ayes, Land, Rose, Paine, Whittaker, Burke, Fox; nays, Johnston, Johnston, Rush, Wilson.

The board ordered that the services of D. M. Cox, night watchman, be dispensed with and that the janitor, C. B. Herndon, with an increase of \$5 a month, will perform his duties. It was agreed that both telephones be taken out of the secretary's office until August 1st next.

The board adjourned until the president calls it to again convene.

Harness Races at Boise, Idaho.

Five days' racing was given at Boise, Idaho, during the Idaho Inter-Mountain Fair which opened on the 12th inst. The harness racing began on Tuesday and lasted during the week. Two harness events and two or three running races made up the program each day.

The officers of the association are C. R. Shaw, president; J. B. Stetson, secretary. Presiding judge, L. L. Ormsby, of Boise; Starter, Geo. A. Harrington, of Colorado.

The track was very heavy and slow, and the time made was excellent considering the conditions. The summaries of the harness races follow:

Table with 4 columns: Name, Time, and other details for Oct. 13 - Trotting, 2:30 class, purse \$500.

Table with 4 columns: Name, Time, and other details for Pacing, 2:30 class, purse \$500.

Table with 4 columns: Name, Time, and other details for Pacing, free for all, purse \$250.

Table with 4 columns: Name, Time, and other details for Oct. 14 - Pacing, 2:17 class, purse \$500.

Table with 4 columns: Name, Time, and other details for Trotting, 2:30 class, purse \$500.

Table with 4 columns: Name, Time, and other details for Oct. 15 - Pacing, 2:30 class, purse \$500.

Table with 4 columns: Name, Time, and other details for Mixed trot and pace for three-year-olds, purse \$300.

Table with 4 columns: Name, Time, and other details for Oct. 16 - Trotting, 2:14 class, purse \$500.

Table with 4 columns: Name, Time, and other details for Pacing, 2:25 class, purse \$500.

Table with 4 columns: Name, Time, and other details for Oct. 17 - Trotting, 2:25 class, purse \$500.

Table with 4 columns: Name, Time, and other details for Pacing, 2:11 class, purse \$500.

The best winner on the circuit this year was Ben F. 2:10 by Bradtmoor. He not only won the Pacific Slope stake, which was the largest stake for pacers in California this year, but he also won every race in which he started. He lost but one heat during the entire circuit, and we do not believe he made a break in any of his races. He is a game and tried race horse, but his owner, Mr. L. R. Palmer, of Walnut Creek, is a business man that cannot spend the time to race him and consequently desires to sell him. Ben F. is the only 2:10 horse brought out in California this year. He is sound and all right in every way and can be seen at Walnut Creek, Contra Costa county, where he has been running in a paddock since the close of the racing season.

Wm. G. Layng will sell the W. O. B. Macdonough thoroughbred yearlings at the Occidental Horse Exchange, November 30th.

"The Races at Corinth."

A Sermon to Horsemen.

Rev. Baker P. Lee, Dean of Christ Church Cathedral (Episcopal), preached a special sermon to horsemen at Lexington, Ky., on Sunday evening, Oct. 11th. The church was crowded to the doors and a large number of visiting horsemen were present. The subject of the discourse was "The Race at Corinth," the text being taken from St. Paul's First Epistle to the Corinthians, 9th Chapter and part of the 24th verse: "So Run That Ye May Obtain." We give, from memory, says the editor of the American Horse Breeder, a few of the salient points of the Dean's eloquent discourse.

The Dean said that when St. Paul addressed the words of the text to the Corinthians, he employed a language familiar to every man of Grecian birth. For many centuries the Olympic games had been one of the four great national festivals of Greece, and it was considered high honor to win a prize at these games. The flower of Grecian youth were pitted against each other in these athletic contests. None but those of unblemished reputation were allowed to compete. An aspirant for honors must have no taint of slavish blood in his veins, no blot on his reputation. When once entered the aspirant must go through a severe course of training in a gymnasium to fit himself for the contest. In order to win he must be trained to the hour, and when he entered the stadium for the contest he must be divested of all impediments in order to do his best. The victor's crown was a wreath of olive leaves or parsley. A record book was kept in which the names of the contestants were entered. It would be seen that certain rules and regulations governed these contests, and in order for an aspirant to be eligible to compete he must conform to these rules and regulations.

The same thing applied to the race course. There are certain rules and regulations governing it, and a horse in order to be eligible to compete must conform to these rules and regulations. He must be duly entered, and a record book must be kept of his performances. He must be trained to the hour, must be reliable, and so driven that he will not break in the stretch, for if he breaks, his chances of winning the prize are imperiled.

So in the church there are certain rules and regulations of divine ordination which must be observed in order to win the prize of the high calling of Christ Jesus. It would not do to say that morality, admirable as good morals are, is sufficient to save souls. There must be something more than a cold and formal code of ethics of a moral system to appeal to the spiritual nature and sympathies of man. Excellent as was the moral code devised by Seneca, it was not sufficient to save Rome from the debauchery of a Nero, neither did the moral teachings of Hume and others avert the bloody catastrophe of the French Revolution. Nothing but the example of a dying Savior was sufficient to win men back from the ways of sin to the path of righteousness.

He laid special emphasis on the statement that in order to win the prize of the high calling one must be duly entered, must be trained to the hour, must fight the good fight, he must struggle to win in the contests with his stern competitors, the lusts of the flesh, and if he goes down to defeat once not to be discouraged. If he breaks in the stretch and loses he must resolve not to repeat the mistake the next heat, but to correct the fault. Show the pluck of the thoroughbred and his determination to win out.

He desired to impress upon his hearers the thought that in this great contest, involving the prize of eternal life, a record book was kept, not in the old theological conception of the term, which represented a recording angel standing by, with book in hand, in which he duly entered every act of ours, good or bad, and between which acts a balance was finally struck, but that that record book was the tablet of our memories, whereon are indelibly, though maybe unconsciously, inscribed the thoughts and deeds of our life, and which at some period of our existence are bound to rise up before us, either to approve or condemn.

He concluded by exhorting his hearers to acknowledge Christ as the source and author of their strength, the giver of every good and perfect gift. He is the loving father who cares for and protects us, pities and forgives our weaknesses, encourages us in the stern race of life, applauds our victories, and to whom is due all the honor of our achievements.

Lou Dillon now holds numerous world's records. She is the fastest green trotter ever known, by many seconds. She holds the world's trotting record of 1:58. When she beat Major Delmar, the California mare went the fastest two heats ever made in a race. The fastest mile to a wagon is the 2:00 made by Lou Dillon. She also holds the world's 5-year-old record and the world's fastest mile to a high-wheel sulky with a mark of 2:05.

AT MEMPHIS.

Most Sensational Harness Meeting Ever Held Closed Wednesday.

The Memphis meeting ended on Wednesday of this week. During the eight days more sensational miles and half-miles were trotted and paced than were ever before seen on a race track. The first event that attracted the attention of the horse world was the contest between the two minute trotters Lou Dillon and Major Delmar to wagon for the \$5000 Memphis Cup. The California mare won easily. Two days later the mighty Dan Patch, king of all the pacers, turned the track in 1:56 1/2 lowering all records and astonishing everybody. On Saturday, however, Lou Dillon performed a marvelous feat and made the trotting world stand aghast by trotting a mile without wind shield or other artificial contrivance in 1:58 1/2, one and three-quarter seconds faster than the two minute mile she made at Readville, a feat considered impossible by many of the wisest horsemen a year ago. Her performance placed Lou Dillon in a class by herself, and she stands to-day the unequalled and peerless champion of the world. The story of her mile in 1:58 1/2 is thus told in the dispatches:

MEMPHIS, Tenn., Oct. 24.—Quarter in 30 seconds, half in 59 1/2 seconds, three-quarters in 1:28 1/2, and mile in 1:58 1/2.

These figures tell what Lou Dillon did here this evening at 5 o'clock, just as the sun was sinking in the crimson west. The track was like velvet, and Lou herself was known to be fit for a supreme effort. And fortune favored. At 4 o'clock the breeze, which had been strong in the morning, lessened, and Lou trotted her last preliminary mile at 4:30 o'clock in 2:13, and when she came out at 5 o'clock, while the wind was still blowing, it was light. The bookmakers posted odds at 6 to 5 against 1:59 1/2. Millard Sanders arrayed in a white duck suit and cap, sat behind the mare when she came out. "Doc" Tanner was behind the leading pacemaker and Scott McCoy behind another at the mare's side. They turned to score very shortly and were off almost on the instant, the mare nearly two lengths back of the runner. So they reached the quarter in 30 seconds.

The turn for the backstretch was now reached and many expected to see the champion falter because of the wind. To the surprise of everyone, Lou Dillon seemed to travel faster, and when the half-mile was reached the timer's slate clicked out 59 1/2.

A great cheer arose and many horsemen predicted that a new record was making. On the far turn McCoy was forced to whip the runner to keep clear of the trotting marvel which was pushing him closely. The three-quarters pole was passed in 1:28 1/2 and the mare had turned for home. Straight and true she came, her head high in air, her stride never faltering, her speed scarcely diminishing to the very end.

The wind now was an advantage rather than a detriment, and, with a superb burst of speed, Lou Dillon, urged on by the shouts of the drivers of the runners, dashed under the wire in 1:58 1/2.

When the time was flashed to the spectators hats were thrown into the air and cheer followed cheer. Sanders was literally lifted from his sulky by an admiring throng, while Billings was showered with congratulations. It was a noticeable fact that the watches of the three official timers agreed to the fraction, and many horsemen standing in the infield caught the time as officially announced to a fraction. The timers were Budd Doble, Fred Hartwell of Chicago and John Dickerson of New York.

After the mare had been blanketed and sent to her barn, Sanders, her driver, said:

"I am not a bit surprised at the result of Lou Dillon's effort. I expected to break the world's record, despite the adverse conditions. I desire to say that it is my candid opinion that Lou Dillon can trot as fast as any horse in the world can pace, and next year I will demonstrate this statement. With perfect conditions today I would be afraid to say how fast the mare would have trotted the mile."

On the same day two other world's records were beaten that would have at any other time been considered sensational had they not been overshadowed by Lou Dillon's marvelous performance. These were the reduction of the record for pacing mares by Dariel to 2:00 1/2, and the driving of The Monk and Equity to pole by Mr. Billings in 2:09 1/2, a reduction of the team record for trotters full three seconds.

On Tuesday of this week Dan Patch again showed his phenomenal capacity to out pace all competitors by reducing the half-mile record of 0:57 1/2, heretofore held by Prince Alert to 0:56. In less than an hour he came out hitched to a wagon and was sent against the wagon record for pacers. He reduced it to 1:57 1/2. The last quarter was paced in 29 1/2 seconds and the son of Joe Patchen showed no signs of fatigue when cooled out, but looked ready to repeat the performance.

On Wednesday, the last day of the meeting, two more records were reduced, and dainty Lou Dillon had one of them to her credit. She was driven by her owner, Mr. C. K. G. Billings, against her own champion wagon record of 2:01 1/2.

The dispatches say the performance was even more spectacular than the trial against time last Saturday, when she trotted a mile in 1:58 1/2. The trial Wednesday was made with the customary two runners to set the pace, and the forward sulky carried a wire dust

screen hung to the axles. As the horses drew near the last eighth pole, the speed of the little mare was so terrific that Mr. Billings drew her from behind the forward sulky, driven by Doc Tanner, and the finish was made in a drive, with the two runners alongside of the trotter, all three horses flashing under the wire noses apart. The start was made on the first trial and the quarter was reached in 0:29 1/2, the half in 0:59 1/2, the three-quarters in 1:29 1/2, and the mile in exactly 2:00. The mare and her owner were given an ovation.

Then Mr. Billings brought out his magnificent pair of trotters, The Monk and Equity to try for a further reduction of the team record. A runner, driven by Doc Tanner, set the pace for them. The handsome team was driven around the track at a slow jog, with the runner trailing behind, and just before the wire was reached the runner drew alongside, and under the wire the three horses went for the trial against time. At the quarter the time was caught in 0:32 1/2, the half in 1:04, three-quarters in 1:36, and the mile in 2:08.

FRIDAY, OCT. 23.

Trotting, 2:16 class, purse \$1000. Adelight, ch g, by Axtell-Delight (Niles) 1 1 Turley, b g, by Axtell-Delight (Madison) 2 3 Millard Sanders, b g, by Axtell-Delight (Merrifield) 4 2 Austin Boy, b g, by Axtell-Delight (McCarty) 3 5 Hugh Wynne and Bonner also started. Time—2:13 1/2, 2:12 1/2.

Trotting, 2:20 class, purse \$3000. Jay McGregor, b h, by Jayhawk-Notre Dame (Hudson) 1 1 Judge Green, b g, by Jayhawk-Notre Dame (Walker) 3 2 Kinney Lou, b h, by Jayhawk-Notre Dame (Doble) 2 3 Cole Direct, h k, by Jayhawk-Notre Dame (Geers) 4 4 Time—2:10 1/4, 2:09 1/4.

Pacing, 2:30 class, purse \$1000. Directum Miller, br h, by Directum-May Day (Brady) 4 1 1 Lilly Salt, b m, by Directum-May Day (Hafley) 1 5 4 Ebel Mc, b m, by Directum-May Day (McCarty) 5 2 2 Angus Pointer, b g, by Directum-May Day (McPherson) 2 3 3 Mary Gordon and Nathalia Brown also started. Time—2:11 1/4, 2:09 1/4, 2:09 1/4.

Pacing, 2:20 class, mile dash, purse \$400. Clipper, b g, by Diablo (Thompson) 1 Foxy Curd, br m, by Diablo (Raa) 2 Quote, b m, by Diablo (McDonald) 3 Time—2:07 1/4.

Wagon race, amateur drivers. Walter Smith, b g, by Buffalo Wilkes (Devereaux) 2 1 1 Charlie Mac, blk g, by Buffalo Wilkes (Jones) 1 2 2 Pug, gr g, by Buffalo Wilkes (Smathers) 3 3 3 Time—2:17 1/2, 2:16 1/4, 2:16.

Pacing, half mile dash, amateur drivers. John M., blk g, by Paris (Mr. Smathers) 2 Greenline, b g, by Paris (Mr. Billings) 1 Time—1:00 1/4.

SATURDAY OCT. 24.

Pacing, 2:11 class, purse \$1000. Cascade, b g, by King Pilot, dam by Masker (Wall) 1 1 Cousin Mudge, blk m, by King Pilot, dam by Masker (Benedict) 2 2 Tess, br m, by King Pilot, dam by Masker (Jamieson) 3 4 Daniel J., b g, by King Pilot, dam by Masker (Fleming) 6 3 Minnie, Christy, Stipulator, Tony W. and Bow Sebastian also ran. Time—2:07 1/2, 2:07 1/2.

Pacing, 2:07 class, purse \$1000. Star Hal, br h, by Brown Hal-Stella (Snow) 1 1 Winfield Stratton, b h, by Brown Hal-Stella (McGuire) 2 2 Foxy Curd, blk m, by Brown Hal-Stella (Rea) 3 3 Chestnut, ch g, by Brown Hal-Stella (Bell) 4 4 Cubanola and Trilby Direct also started. Time—2:05 1/2, 2:07 1/2.

Half-mile pace, to wagon, amateur drivers, two heats. Prime Rose, b m, by Alcander-Topsy (Mr. Roberts) 1 1 Babe Allerton, br m, by Alcander-Topsy (Mr. Jarwell) 2 2 Time—1:02 1/2, 1:03 1/2.

Pacing, 2:20 class, Emerald handicap, purse \$2000, one and one-half mile dash. Hal Chaplin, br h, by Brown Hal-Bessie McEwen (Geere) 1 1 Mary Anna, b m, by Brown Hal-Bessie McEwen (Snow) 2 2 Diablotto, b g, by Brown Hal-Bessie McEwen (Walker) 3 3 Five Points, blk h, by Brown Hal-Bessie McEwen (Hogan) 4 4 Time—2:13 1/4.

To beat 2:03 1/2, world's pacing record for mares held by Fanny Dillard. Dariel, h m, by Alcander-Topsy (McDonald) 1 1 Time by quarters—0:29 1/2, 0:59 1/2, 1:29, 2:00 1/4.

To beat 2:12 1/2 world's trotting record to pole. Equity and The Monk (Mr. Billings) 1 1 Time by quarters—0:32 1/2, 1:05 1/2, 1:38 1/2, 2:09 1/2.

To heat the world's trotting record, 1:59 1/2, held by Crescens. Lou Dillon, br m, by Sidney Dillon-Lou Medium, by Milton Medium (Millard Sanders) 1 1 Time by quarters—0:30, 0:59 1/2, 1:29 1/2, 1:59 1/2.

MONDAY, OCT. 26.

Pacing, 2:21, purse \$1000. Directum Miller, br h, by Directum-May Day (Brady) 3 1 1 Line o' Gold, ch m, by Directum-May Day (Stanley) 1 2 3 Angus Pointer, b g, by Directum-May Day (McPherson) 2 3 2 Double Z, b h, by Directum-May Day (Andrews) 4 4 4 Time—2:08 1/4, 2:09 1/4, 2:09 1/4.

Trotting, 2:15, Magnolia stake, purse \$2000. Masetto, blk g, by Constantine-Merry Clay (Dickerson) 1 1 Jay McGregor, b h, by Constantine-Merry Clay (Hudson) 2 2 The Questor, b g, by Constantine-Merry Clay (Geers) 3 3 Dillon Boy, b h, by Constantine-Merry Clay (Walker) 5 4 Tonso, rn g, also started. Time—2:08 1/4, 2:08 1/4.

Trotting, 2:25, purse \$1000. Cathode, ch g, by Snicker-Culture (Andrews) 1 1 John Caldwell, b g, by Snicker-Culture (Thompson) 2 2 Buraja, b g, by Snicker-Culture (Shaw) 3 3 Kirkwood Jr, br h, by Snicker-Culture (Geers) 5 5 Anna Gay, Great Spirit also started. Time—2:13 1/4, 2:14 1/4.

Trot to wagon, amateur drivers. Ida Highwood, b m, by Highwood-Dam by California (Mr. Smathers) 1 1 George Muscovite, b h, by Highwood-Dam by California (Mr. Gaylord) 2 2 Time—2:09 1/4, 2:10 1/4.

TUESDAY, OCT. 27.

Pacing, 2:17 class, purse \$1000. Daniel J., b g, by Winks, dam by Plymouth (Fleming) 5 2 1 1 Mary Gordon, b m, by Winks, dam by Plymouth (Hudson) 2 1 2 2 Line of Gold, ch g, by Winks, dam by Plymouth (Stanley) 1 5 6 3 Wealth, h h, by Winks, dam by Plymouth (Walker) 4 3 4 4 P. J., Lord Curzon and Speedy Girl also started. Time—2:10 1/4, 2:09 1/4, 2:09 1/4, 2:14 1/4.

Pacing, wagon race, amateur drivers. Clipper, b g, by Diablo (Devereaux) 1 1 Green Line, b g, by Diablo (Billings) 2 2 Tom Keene, ch g, by Diablo (Smathers) 3 3 Time—2:06 1/4, 2:06 1/4.

Pacing, free for all, purse \$1000. Dan R, ch g, by Tasco Jr-Colonel Hunt (Benyon) 4 1 1 Dariel, b m, by Tasco Jr-Colonel Hunt (McDonald) 1 2 5 Shadow Chimes, br g, by Tasco Jr-Colonel Hunt (Spear) 2 3 3 Fannie Dillard, b m, by Tasco Jr-Colonel Hunt (Snow) 3 4 2 Harold H also started. Time—2:04 1/4, 2:04 1/4, 2:03 1/4.

Pacing, to wagon, amateur drivers. Stipulator, blk h, by Titus (Gaylord) 1 1 Daisy Field, ch m, by Titus (Roberts) 2 2 Time—2:15, 2:14 1/4.

Trotting, 2:14 class, purse \$1000. Porto Rico, b h, by Electrite, dam by Wilkes Boy (Johnson) 1 1 Joy-Maker, h h, by Electrite, dam by Wilkes Boy (McCoy) 5 2 Eye Line, blk m, by Electrite, dam by Wilkes Boy (Sherman) 2 5 Austin Boy, b g, by Electrite, dam by Wilkes Boy (McCarty) 3 3 The Parson, blk g, by Electrite, dam by Wilkes Boy (Colby) 4 4 Lady Dowling and Bonner also started. Time—2:11 1/4, 2:11.

Pacing half-mile dash, 2:06 class, purse \$1000. John M, blk g, by Paris (Spear) 1 Trilby Direct, blk m, by Paris (Walker) 2 Primrose, b m, by Paris (McCarty) 3 Chestnut, ch g, by Paris (Bell) 4 King Direct also started. Time—0:59 1/2, 0:59 1/2.

Pacing, half-mile dash. Star Hal, br h, by Brown Hal (Snow) 1 Winfield Stratton, b h, by Brown Hal (McGuire) 2 Time—0:59 1/2, 0:59 1/2.

Pacing, to beat 0:57 1/2, world's record, half a mile. Dan Patch, b h, by Joe Patchen-Zelica (McHenry) 1 1 Time by quarters—0:28 1/2, 0:56.

Pacing, to beat 1:59 1/2, world's record to wagon. Dan Patch (McHenry) 1 1 Time by quarters—0:29 1/2, 0:58 1/2, 1:23, 1:57 1/2.

Trotting, to beat 2:00. Major Delmar (McDonald) 1 1 Time by quarters—0:30, 1:00, 1:29 1/2, 1:59 1/2.

WEDNESDAY, OCT. 28.

Trotting, 2:11 class, mile dash, purse \$400. Queen Wilkes, br m, by Lexington Wilkes (Spear) 1 1 Kylene, blk m, by Lexington Wilkes (Sherman) 2 2 Porto Rico, b h, by Lexington Wilkes (Johnson) 3 3 Palm Leaf, br g, by Lexington Wilkes (McCarty) 4 4 Topsy, br m also started. Time—2:10 1/4.

Trotting, 2:30 class, purse \$400. Anna Gray, b m, by Egotist (Thomas) 1 1 Grocery Maid, b m, by Egotist (Rea) 3 2 Declare, b m, by Egotist (Sherman) 2 4 Red Phil, b m, by Egotist (Seaper) 4 3 Maggie Murphy also started. Time—2:17 1/4, 2:17 1/4.

Trotting, 2:17 class, mile dash, purse \$400. Hugh Wynne, b g, by Allendorf-Helen Wilkes (McCoy) 1 1 Empire Wilkes (Benedict) 2 2 Time—2:13 1/4.

Pacing, 2:09 class, purse \$1000. Cascade, br h, by King Pilot-dam by Masker (Wall) 1 1 Hal Chaffin, b m, by King Pilot-dam by Masker (Geers) 2 2 Stranger O, b m, by King Pilot-dam by Masker (Seaper) 3 5 Diablotto, b g, by King Pilot-dam by Masker (Walker) 6 3 Cousin Mudge and Personelle also started. Time—2:06 1/2, 2:06 1/2.

Pacing, 2:11 class, half-mile dash, purse \$400. Mary Anna, b m, by Jack Lucky (Snow) 1 1 Angus Pointer, b g, by Jack Lucky (McPherson) 2 2 Minnie Christy, b m, by Jack Lucky (Johnson) 3 3 Daniel J., b g, by Jack Lucky (Fleming) 4 4 Time—1:01 1/2.

Trotting, 2:11 class, half-mile dash, purse \$400. Queen Wilkes, by Lexington Wilkes (Spear) 1 1 Porto Rico (Johnson) 3 3 Austin Boy (McCarty) 3 3 Bonner (Worth) 4 4 Jim Underwood also started. Time—1:02 1/2.

To beat 2:01 1/2, world's trotting to wagon record. Lou Dillon, ch m, by Sidney Dillon, by Milton Medium (Mr. Billings) 1 1 Time by quarters—0:29 1/2, 0:59 1/2, 1:29 1/2, 2:00.

To beat 2:09 1/2, world's trotting record to pole. The Monk and Equity (Mr. Billings) 1 1 Time by quarters—0:23 1/2, 1:04, 1:36, 2:08.

On a hot day drink Jackson's Napa Soda lemonade and be refreshed.

Curb, Splint, Sweny, Capped Hock, Strained Tendons, Founder, Ring Puffs, and all lameness from Spavin, Windbone and other bony tumors. Cures all skin diseases or Parasites, Thrush, Diphtheria. Removes all Bunches from Horses or Cattle. As a HUMAN REMEDY for Rheumatism, Sprains, Sore Throat, etc. L. is valuable. Every bottle of Caustic Balsam sold is warranted to give satisfaction. Price \$1.50 per bottle. Sold by druggists, or sent by express, charges paid, with full directions for its use. Send for descriptive circulars, testimonials, etc. Address: THE LAWRENCE-WILLIAMS COMPANY, Cleveland, Ohio.'

ROD, GUN AND KENNEL.

Conducted by J. X. De WITT.

Hook and Line Fishing for Pacific Salmon.

A. B. Alexander, of the steamer Alhatross, has furnished in the U. S. Commissioner of Fish and Fisheries' report published early this year, some interesting notes relative to the taking of Pacific salmon with hook and line.

Trolling for salmon in Monterey bay has increased steadily each year since its beginning, and in 1901 there were taken by this method, approximately, 190,786 pounds of salmon, or about 10,000 fish in number, most of which was placed in cold storage and shipped to various Eastern markets. About 100 boats were engaged in the fishing.

Previous to 1893 few salmon were taken in Monterey bay by any kind of apparatus. In that year trolling for them was found to be very successful and the discovery was quickly taken advantage of by anglers and commercial fishermen. It was not known that salmon could be taken with the hook in this bay in paying quantities, the reason being, doubtless, that the fish do not appear leaping at the surface, as is the custom when entering fresh water. Most of the fishing is done in the summer time, but a moderate number of fish can also be taken in Monterey bay during the winter months.

The fish appear in numbers about the first week in June, when the sardines are most numerous. The salmon are also found feeding on smelts and squid. The fish are taken in two ways, by trolling with the spoon with and without bait, and with the baited hook used at a considerable depth with a heavy sinker. Previous to the arrival of the sardines and other species on which the salmon feed the fishing is done mostly by trolling with the rod and spoon, but as soon as bait is to be had this method is abandoned for the sinker and hook. As a substitute for bait the baited spoon is sometimes used, but the baited hook is preferred by the commercial fishermen.

Sportsmen who visit the bay from San Francisco and elsewhere use split bamboo rods ranging from ten to twelve ounces. Both silk and linen lines are employed, varying in length from 150 to 200 yards. The spoons vary in size from Nos. 5 to 7. The average hook used in connection with the spoon corresponds in size to the No. 14 cod trawl hook, with a slightly longer shank. Some fishermen use the brazed treble hook, but it is not a favorite with sportsmen. All the fishing is carried on from skiffs and small rowboats.

As the numerous commercial fishermen do not often use a spoon, many more salmon are taken with baited hooks. A common bamboo pole is used by the fishermen, with a cotton line of 32 thread, from 80 to 100 feet in length. The hook is five inches long and shaped like a halibut hook, with a longer shank. In baiting the hook care is taken to have the shank entirely covered, leaving the barb and point bare. The sinker is quite heavy, being about four pounds in weight and fastened to the line twenty-five feet above the hook. When the salmon is hooked the pole is dropped and the line is hauled in hand over hand, great care being taken that the fish does not break away; frequently the fishing is done without the use of the rod. When the sinker is used the trolling is done at a depth of at least twenty feet. The usual sailing speed in trolling is four miles an hour, and the average size of the salmon taken is a little over twenty pounds, although fifty-pounders are sometimes caught. The best fishing is usually to be had during the afternoon, and twenty-five fish are considered a good day's catch for one hook.

Monterey is the most southerly point where salmon are taken, either commercially or for sport. Very few salmon are taken with the hook in San Francisco bay and the Sacramento river. In the Eel river there is good salmon trolling to be had in the fall. The fish are taken in tide water chiefly by professional fishermen, using from twenty to thirty boats, but many anglers visit these waters for the sport of fishing. It takes the angler an hour on an average to land one of the larger fish. Similar fishing is done by anglers in a number of the smaller coast rivers, such as the Russian and Navarro, the Olema, and about the head of Tomales bay. Steelhead and salmon are frequently taken in these waters with artificial flies.

The Indians of Neah bay, Washington, do considerable trolling for silver salmon, and have been known to take as many as 4000 fish in a day. The principal fishing grounds lie off the mouth of the bay and in the vicinity of Tatoosh rock off the coast and some two or three miles farther south. The catch is usually disposed of at Port Townsend. The Indians repair to the grounds early in the morning, remaining out all day and sometimes after dark if the weather permits. The spoons employed are larger than those used elsewhere on the coast. The lines are usually of 30 thread and about 150 feet long. Pieces of salmon and small herring are used for bait. In trolling the canoe is paddled, except in very light breezes, when the sail is set.

Salmon trolling has long been practiced in Puget sound, where sportsmen use the rod and reel.

At Killisnoo, Alaska, the king salmon take the spoon readily, the fish coming in to feed on the herring, which annually visit these waters in great numbers. Spoons and lines of the same pattern as those used at Neah bay are employed by the Killisnoo Indians. The same bait is used and the fish taken are for their own consumption.

When salmon will not readily take a spoon at the surface, a baited hook towed near the bottom frequently induces them to bite.

There can be no doubt that there are many other places along the west coast where salmon could be taken by trolling. They have recently been taken from vessels ten or twelve miles off the coast of Washington, the bait being towed at thirty fathoms where the soundings were forty fathoms. It now seems probable that a thorough trial by deep trolling all along the west coast will show that the salmon are "on soundings" and not far from the coast during most of the time they spend at sea.

Shipment of Game.

More than 100 sacks of game have been seized by the state officers since the opening of the season. Much of the confiscated game was taken when it arrived into this city by express because it was improperly labeled. The law in this respect is plain and if sportsmen generally were acquainted with and observed the provisions of the law relating to the shipment of game much hither could be avoided and a number of seizures would thereby be unnecessary. The law is as follows:

Sec. 627 b. Every railroad company, steamship company, express company, transportation company, transfer company, and every other person who ships, or receives for shipment, or transportation, from any one person, during any one day, more than twenty-five quail, partridge, grouse, or sage hen, snipe, curlew, or his, or more than fifty doves, or more than twenty rail, or more than fifty wild ducks, or who transports any of said birds, or any deer, in any quantity, unless such birds or deer are at all times in open view, and labeled with the name and residence of the person by whom they are shipped, is guilty of a misdemeanor.

Special Sportsmen's Train.

A number of local sportsmen whose occupations prevent them from leaving the city on the regular 3:15 p. m. train Saturdays to Point Reyes and stations along Tomales bay have arranged with the North Shore Railroad to run a special sportsmen's train to Tomales, leaving San Francisco via the 7 o'clock Sausalito ferry on the first Saturday night in November. Sportsmen who get off at any station between Camp Taylor and Tomales Saturday night will have the privilege of taking the regular northbound train Sunday forenoon to any other point south of Tomales (such as Millerton, Marshalls, Cypress Grove Villa, Hamlet or Pistoletti) without the payment of an additional fare. Returning, the special train will leave Tomales at 6 p. m. and Point Reyes at 7 p. m. Sunday. This will give hunters and anglers an opportunity of enjoying their favorite sport for a whole day and yet get home Sunday night. It is hoped by those sportsmen instrumental in securing this special train that so many will patronize it that the railroad company will make this special service a feature of its regular winter schedule. Tickets for the round trip will be only \$1.25 and may be procured at the Sausalito ferry Saturday, November 7th, or any day before that date at 626 Market street.

Fish Lines.

While cruising in the Fish Commission's launch Quinnet, Deputies Davis and Cross came upon four five-inch mesh nets set to catch striped bass. The owners had disappeared and the nets, which varied from 1800 to 2000 feet and are worth about \$1200, were confiscated. The first one was picked up off Roe island lighthouse, the second in the little cut-off, the third in Suisun bay and the fourth at Point Edith, Contra Costa county. This is the largest seizure of set nets ever made at one time here.

Steelhead and salmon fishing is excellent in Eel river at present. John Butler returned from Weymouths last week. He brought down forty nice trout, they ran about three to the pound, which he distributed among a number of friends.

John Marsden is still at Weymouths enjoying the sport. Plenty of big fish are at the mouth of the river waiting for the rains to raise the river so that they can run up stream.

The Paper Mill is so low that the salmon can not get up stream to spawn. The fish will come in from the ocean on a tide and go up as far as the county bridge where they soon die.

Striped bass fishing in Raccoon straits is so good recently as to entice many anglers to go out in the trolling boats. On Tuesday a great catch was made by Charles Miller, of the Pacific Hardware and Steel Co., and J. A. Pariser. The two fishermen left this city on a forenoon boat and were out in their boat on the Angel Island shores by about 10 o'clock. They caught seven bass, ranging from twelve to nineteen pounds in weight. The fish were in fine condition and evidently fresh run from the ocean.

Four eighteen pound bass were caught on the railroad wharf at Point Richmond on Sunday.

J. A. Pariser, during a recent trip to Catalina and San Diego, caught the record yellowtail for the season. He captured the fish off the San Pedro breakwater. Its weight was forty-two pounds.

Fly-Casting Medal Winners.

T. C. Kierulff is the principal medal winner of the San Francisco Fly-Casting Club in the contests held this season at Stow lake. Mr. Kierulff won three class medals and also the medal annually awarded the club member whose scores in the different events show the best general improvement in the art of manipulating the split bamboo rod and braided silken lines.

The medal winners in the various events are: Long distance casting—Champion class, Harry C. Golcher; first class, Col. G. C. Edwards; second class, T. C. Kierulff. Delicacy—Champion class, Col. Carlos G. Young; first class, T. C. Kierulff; second class, F. M. Haight. Accuracy—Champion class, C. R. Kenniff; first class, T. W. Brotherton; second class, T. C. Kierulff. Lure casting—C. R. Kenniff.

To compete in the long distance championship class the contestants had to average 102 feet in the first six contests of the season.

Walter D. Mansfield.

World's record, long distance casting, 134 feet.

Each member who cast over 115 feet at any contest was placed in the championship class arbitrarily.

Those in the first class averaged 90 feet and over. The contestants in the second class were those who averaged under 90 feet in the classification series of contests.

The cast-off for the championship medal took place between Golcher, who was high rod in the Sunday contests, and Brotherton, high score in the Saturday contests.

Mr. Brotherton, although losing the cast-off, has the best individual score at long distance casting this season, 137 feet. Mr. Golcher's best

score cast last year was 140 feet. Walter D. Mansfield still holds the world's championship for long distance at an open tournament. His absence on an Eastern trip this year made it impossible for him to enter the club contests in their order, consequently his average was cut down by lost scores. A contest between Golcher and Mansfield would be one worth going far to see, for these two expert anglers are practically the best long distance casters in the world.

The cast-off for first class long distance medal was between Col. Edwards, high Sunday contestant, and Dr. W. E. Brookes, who was high rod for six Saturday contests. Col. Edwards won. Tom Kierulff was high rod for second class long distance work on Saturdays, his best cast being 115 feet. There was no Sunday competitor in this class.

In the delicacy casting 84 per cent and over was the average for the championship class. First class, 81 per cent and under 84 per cent. Second class, 81 per cent and under. In this work, which is practically the work an angler does on the trout stream, Colonel Young (Sundays) and C. R. Kenniff (Saturdays) being the two high scores, came together and Young won the medal for the champion class. Kierulff was high rod for both Sundays and Saturdays for the first class medal. F. M. Haight won the second class medal easily.

In accuracy casting C. R. Kenniff (Saturdays) and J. B. Kenniff (Sundays) came together in the cast-off for the championship medal. C. R. Kenniff won. T. W. Brotherton (Sunday) and Col. Young (Sat-

C. R. Kenniff.

World's record, lure casting, 97.9-15%.

day) cast-off for the first class accuracy medal, which the Colonel lost. Kierulff was high man for the Saturday contests in the second class and won the medal, there being no Sunday contestant in the class.

In lure casting C. R. Kenniff easily won the medal on the general average of over 97 per cent. This average places him ahead of the recorded exploits of any other angler at this style of casting. Mr. Kenniff is probably the best all-round fly-caster in America today, judging from his season's scores. He still retains the honor of scoring the world's record in lure casting, 97.9-15%, made at the tournament held at Stow lake last year.

The Fly-Casters' Club will hold a banquet early next week, on which occasion the medals will be presented to the winners.

In hot weather there is no drink like Jackson's Napa Soda—plain or in a lemonade.

Inaugural Field Trials in British Columbia.

The recently organized British Columbia Field Trials Club held the initial club field trials at Steveston, B. C., Friday and Saturday, October 9th and 10th. Thomas Plimley, of Victoria, B. C., was in the saddle and his decisions in both stakes were received with general satisfaction.

Contrary to the usual cool and pleasant weather at this time of year a fall of rain nearly all day Friday and until Saturday afternoon made the conditions uncomfortable and unfavorable to quite an extent for both man and dog. Mongolian pheasants (the birds worked on) were not plentiful in either grass or stubble, the "hardhack," in which cover the birds took shelter was entirely too wet for both dogs and handlers. Under this bad weather handicap, however, each brace cast off found birds enough to allow testing of their qualities on game. The work of the dogs in each heat was closely followed from start to finish by a good attendance of enthusiastic owners and sportsmen present.

It is now believed that in the showing made in these trials that running field trials on Mongolian pheasants is entirely practical, for in a number of instances the pheasants, when pointed, lay just as satisfactory as prairie chickens or quails, the pheasants laying close until flushed by the handlers.

The Derby stake closed with ten entries, eight of which started. The All-Age Stake had fifteen nominations and ten of these dogs started.

The Derby winner Roy's Lady (Roy Montez-Victoria Belle II) is owned by Miss Winifred E. Dalves of Victoria, B. C. Roy's Lady is a black, white and tan English Setter bitch, but thirty-two pounds in weight; she worked in a stylish, snappy way and showed good speed and range. She is looked upon as as likely one for next year's All-Age. In the Pacific Northwest Derby at Whidby island, she was unplaced in a heat with the Pointer Glen Rose. Birds were not found until the end of the heat, the Pointer finally pointing a heavy. Roy's Lady, it was reported, showed better range than her opponent, but seemed not to be under the control of her handler. She is bred in the purple and will no doubt give a good account of herself in the future.

Texada (Iroquois Chief-Tony's Destiny) second, is owned by N. F. Lyne, of Vancouver, B. C. She is a good looking medium sized black, white and tan English Setter bitch, under a year old. She showed high class qualities throughout her work, being range and speedy, stylish on point and with pleasing all action.

Criterion (Ricko-Nellie B.) third, is also small sized, a lemon and white English Setter dog, he is owned by Dr. Findley. His bird work can be improved, during his first heat he showed a disposition to botter with small birds; he is a fast worker, however, and a wide ranger.

Vancouver Shot (Sport IV-Perrot's Daisy) a black and white Pointer dog—the only pointer placed—winner of fourth is owned by L. Willbrand. Shot has good natural qualities but showed weariness in the first heat and practically quit in the second.

The All-Age Stake was won by Val's Belle (Rain's Flash-Val's Lady) owned by C. Cocking. Belle is a somewhat large, good type, black, white and tan English Setter bitch. She is speedy and stylish on point work and an excellent ranger. She turned off two heats without an error. Belle won the Pacific Northwest Derby in 1901.

Val's Rose, second, owned by James Brooks, is a black, white and tan and is a litter sister of Val's Belle. Rose is good on birds and steady to shot and ring. She was unplaced in the Pacific Northwest Derby last year.

Tony's Destiny (Tony Boy-Sport's Destiny) a blue belton English Setter bitch, small in size, owned by N. F. Lyne was looked upon as the class dog of the All-Age. When her lack of experience on game and raining is overcome she will be eligible in any company. In speed, range and style she won much favorable comment.

Lady Roberts (Grouse P-Tobe's Val) another small sized and heavily marked blue belton English Setter bitch won fourth place. She is owned by H. Abbott. Lady started off well but let up in her pace at the close and seemed inclined to chase.

The summaries of both stakes follow:

STEVESTON, B. C., Oct. 9, 1903.—British Columbia Field Trial Club's initial Derby Stake for Setters and Pointers whelped on or after January 1, 1902, and owned in British Columbia. Purse, entrance money, 40 per cent, 30 per cent, 20 per cent and 10 per cent. Ten nominations, eight starters (6 English Setters, 2 Pointers.)

I Texada, black, white and tan English Setter bitch, (Iroquois Chief-Tony's Destiny) October 13, 1902. N. F. Lyne, owner and handler.

With Roy's Lady, black, white and tan English Setter, (Roy Montez-Victoria Belle II) January 24, 1902. Miss W. E. Davies, owner; C. H. Sweetser, handler.

Vancouver Frank, black and white Pointer dog, (Sport IV-Perrot's Daisy) July 25, 1902. C. G. Macdonnell, owner; C. W. Brown, handler.

With Lady Snooker, black, white and tan English Setter bitch, (Lady's Count Noble-Val's Belle) May 7, 1902. Dr. Gatewood, owner; C. H. Sweetser, handler.

Rush, English Setter dog, (Bain's Flash-Pugh's Sal) January 20, 1902. N. H. Bain, owner and handler.

With Ton Belle, lemon and white English Setter bitch, (Lady's Count Noble-Val's Belle) May 7, 1902. Charles Herman, owner; C. H. Sweetser, handler.

Criterion, lemon and white English Setter dog, (Ricko-Nellie B.) January 10, 1902. Dr. Findley, owner; C. H. Sweetser, handler.

With Vancouver Shot, black and white Pointer dog, (Sport IV-Perrot's Daisy) July 25, 1902. L. Willbrand, owner; C. H. Sweetser, handler.

II Roy's Lady with Vancouver Shot. Texada with Criterion.

RESULT First, Roy's Lady; second, Texada; third, Criterion; fourth, Vancouver Shot.

STEVESTON, B. C., Oct. 10, 1903.—British Columbia Field Trial Club's initial All-Age Stake for Pointers and Setters owned in British Columbia. Purse, entrance money, 40 per cent, 30 per cent, 20 per cent and 10 per cent. Fifteen nominations, ten starters (11 English Setters, 1 Irish setter). Two dogs, paid up, were absent.

I Val's Lady, lemon and white English Setter bitch (Dan V.-Tobe's Val). William Frost, owner and handler.

With Val's Rose, black, white and tan English Setter bitch (Reco-Val's Lady). James Brooks, owner; C. H. Sweetser, handler.

Vancouver Grouse, orange and white English Setter dog (Grouse P-Val's Lady). J. G. Rougier, owner and handler.

With Irish Jack, red Irish Setter dog (Mike-Biddy). William Hasper, owner and handler.

Tony's Destiny, blue belton English Setter bitch (Tony Boy-Sport's Destiny). N. F. Lyne, owner; C. H. Sweetser, handler.

With Lady Roberts, black, white and tan English Setter bitch (Grouse P-Tobe's Val). H. Abbott, owner; N. F. Lyne, handler.

Val's Belle, black, white and tan English Setter bitch (Bain's Flash-Val's Lady). C. Cocking, owner and handler.

With Busy Boy, orange belton English Setter dog (Dashing Fleet-Busy Bee II). H. W. Kent, owner; C. H. Sweetser, handler.

Jessie, lemon and white English Setter bitch (Victor L.-Howard's Lady). J. C. McClune, owner; C. H. Sweetser, handler.

With Assinahoine Rodfield, black, white and tan English Setter dog (Hickory Gladstone-Thier's Spec). H. S. Rolston, owner and handler.

II Val's Rose with Tony's Destiny. Val's Belle with Lady Roberts. Assinahoine Rodfield with Vancouver Grouse.

RESULT First, Val's Belle; second, Val's Rose; third, Tony's Destiny; fourth, Lady Roberts.

San Francisco Show Notes.

In our advertising columns will be found the advertisement of the coming combination show of dog, poultry, cats, pigeons and pet stock to be held in the Mechanic's Pavilion, San Francisco, in the first week of December.

Richardson Bros., who last week offered a silver cup for best Fox Terrier pup owned by a member of the Pacific Fox Terrier Club, have decided not to limit the competition for their cup and have therefore offered it for best Fox Terrier in puppy classes, competition open to everyone.

Mr. George Q. Chase, of piano fame, has recently imported from England the Bulldog Boer, which will make his debut on the Pacific Coast at the coming December show.

Mr. C. D. Nairn, of Ballston, Oregon, a prominent breeder of Collies, offers a silver trophy for the best Collie in the novice classes.

Mr. Charles R. Harker, J. C. Berret and N. J. Stewart of San Jose, have decided to pool their interests in Bulldogs and have formed the San Jose Bulldog Kennel. The kennel consists so far of "Her Majesty of Charcombe," (a bitch Mr. Stewart brought out from England with him) "Madame Chaddy," "True Blue," whom it will be remembered was a winner at the S. F. Show of 1901, and the dog "Captain Absolute." Captain was bought recently from Mr. Vinton P. Brees, Secretary of the New Jersey Kennel Club. He was bred by Mr. St. John Cooper, England's great judge and breeder. Captain is in the heavy weight class, being an extra big fellow, thoroughly sound and a wonderful stud dog. He will shortly be placed at public stud.

Mr. W. C. Bogen, of Campbell, reports that he has some extra nice looking young Bull Terriers coming on. Mr. Bogen is very enthusiastic over the formation of a Bull Terrier Club and will show a kennel of four at the December Show.

DOINGS IN DOGDOM.

Second forfeits in the Pacific Coast Field Trial Derby will close on Nov. 1st. Out of the fifty-six entries of young Pointers and Setters in this stake it is not expected that more than three or four nominations will lapse.

Secretary Albert Betz expects to announce the judge for the Bakersfield trials next week.

Reports from Bakersfield state that birds are very plentiful on the trial grounds. This district has been patrolled since last August.

J. F. Kelly's Irish Setter bitch Lady Glenwood (Barrimore-Lady Jersey) whelped eight puppies to Pilot B in August. The litter is coming on in excellent shape now, several of the pups are very promising.

The following communication from a subscriber at Keswick, Cal., is of interest to Bull Terrier fanciers:

EDITOR BREEDER AND SPORTSMAN:—I noticed the article in regard to a Bull Terrier Club in your most valuable columns of your last issue. I think and believe that such an organization would be a good thing, and will gladly join same. I am quite interested in the noble dog and would like to see their good qualities and merits more appreciated. I imported a pair from John P. Colby, of Newburyport, Mass., last July, and have the dog in stud, for which I enclose an advertisement to be placed in your columns. He is Jumping Jack by Tige out of Molly, by Racines' Sam, full brother to Old Danger. The bitch Toots is by Major that defeated the Providence dog Joe, by

Teddy, by Paddy, by Old Pilot, and out of Thistle, by Fritz, by John Galvin's Turk, and also has Slothouse blood in her. I already have eight pups sold at \$25 each, if I ever get them. If you know of anyone that wishes to breed to a good dog, please ask them to write to me, and oblige, Yours truly,

E. F. KIESSLING, Taylor, P. O.

The entries for the Ladies' Kennel Association Show number fifty-seven more than last year. Not counting the English entries which were mailed from the other side October 12th, the dogs entered number 1652. Indications are that the show will be a great success. Following are the entries by breeds:

Table listing dog breeds and their entry counts for the Ladies' Kennel Association Show. Breeds include St. Bernards, Mastiffs, Bloodhounds, Newfoundland, Great Danes, Russian Wolfhounds, Deerhounds, English Foxhounds, American Foxhounds, Pointers, English Setters, Irish Setters, Gordon Setters, Sporting Spaniels, Collies, Old English Sheepdogs, Dalmations, Poodles, Bulldogs, Bull Terriers, Airedale Terriers, Boston Terriers, French Bulldogs, Basset Hounds, Fox Terriers, Doberman Pinscher, Chow Chow, Whippets, Irish Terriers, Scottish Terriers, Welsh Terriers, Black and Tan Terriers, Sikes, Yorkshire Terriers, Toy Terriers, Maltese Terriers, Pugs, Schipperkes, Pomeranians, English Toy Spaniels, Japanese Spaniels, and Miscellaneous. Total entries: 1,652.

O. J. Albee writes us that the coming December show is creating quite a bit of interest among San Jose doggy circles. A number of Santa Clara fanciers are getting their dogs ready, the outlook for a nice entry from that section is a good one. Mr. Albee will have a few in from the Oak Grove Kennels.

He states "I think it too bad that Los Angeles had no show this year. I received several communications about dogs from parties who wished to meet me at that show. In each instance I replied that there was to be no show at Los Angeles this year."

More's the pity. A larger circuit of shows would undoubtedly be for the benefit of all concerned.

A kennel of the best Bulldogs and hitches on the Coast will soon be discontinued by the present owner. Fanciers will have an opportunity to get some good ones.

S. Christenson received this week from Atlanta, Ga., an English Setter bitch six months old. She is by Ch. Lady's Count Gladstone, a well known field trial performer and sire, out of Pride's Queen. Queen, by the way, was killed three weeks ago. She was a winner of firsts on the bench and in the field. She won first at the Georgia Field Trials over eighteen starters, and at a time when she had been out with her handler but twice.

Dr. C. E. Wilson writes from Nevada as follows:

On account of the drought which has prevailed throughout Nevada for the last six months we find it impossible to hold field trials in Paradise valley, as the birds have had to leave the trial grounds and go to the hills to obtain water.

I have during the last month visited the Carson-Sink country, and also the country around Bishop and Big Pine, in Inyo county, Cal., and find that the same conditions prevail. As these are the only sections where quail can be found in sufficient numbers to hold trials on it looks as though we will have to call the meeting off for this year.

It has been suggested by a patron in California that we ask the Pacific Coast Field Trial Club for the use of their grounds and hold the trials the third week in January.

As several of the kennels that will compete are now having a siege of distemper this perhaps would be a good plan, providing we could get the grounds, and no doubt will meet with the approval of the handlers who will be under the expense of virtually one meet, with the opportunity of running the same dogs under different judges, as will be done at Robinson, Ill., this year.

This move has the favorable opinion of a number of local sportsmen and handlers.

Mr. Thos. S. Griffith writes from Spokane: I do not think I will be able to spare the time to go down to your show in December, but would like to send my young bitch Rippowam, Miss Tuffett and others. Kindly give me a good reliable handler, or, if not too much trouble, find out how much or on what terms he would show her for me. The same day Miss Tuffett was winning here in Spokane, her three brothers out of the same litter were winning at Danbury, Conn., Oct. 6, 7, 8, 9, 1903, dog show. Rippowam's Valiant won first puppy, first novice, first limit, first open and first in winners. Also special cup for the dog possessing the best head and ears. Rippowam's Candidate was second puppy, third novice, third limit and third open. Stonywald Reliance was third in puppy.

I have a great stud dog in Archer and wonderful brood bitch in Moreton Vesta to produce four winners in one litter, and in the former the great dog Lord Stamford winner of ten firsts at seven months old. Don't you think some of your breeders in California would ship some bitches to such a sire? Bred Imp. Craigmore Conrad to Lenzie Prince and Archer to Spokane Lassie, also Sable Plum II. I trust this long note will not tire you out, but I am never tired talking about Moreton Vesta.

Petaluma is up in arms against the dog poisoner and it will not go well with him if his identity is discovered. Several dogs have been poisoned recently but the latest and most atrocious act of the poisoner is accountable for the death of the famous greyhound,

Rusty Gold. The dog, the property of D. J. Healy, after taking the poison hastened to his master. Heroic efforts were made to save its life but to no avail.

Rusty Gold was one of the most famous dogs of his time and in two years won \$3000 in stakes for his owner. Six of his puppies were sold by Mr. Healy for \$2000 and at one time Rusty Gold was sold for \$600. The animal was retired from racing some time ago and but recently Mr. Healy refused several hundred dollars for him and would not have sold him for \$1000 owing to his splendid career.

He was known in coursing circles all over the country and his owner has offered \$500 for the arrest and conviction of the person or persons responsible for his death.

John Lucas will leave for the vicinity of Bakersfield on the 1st inst. He will have about twenty-five dogs in his string, including some promising young ones he is putting the finishing touches on.

Babcock is now at Del Ray with W. W. Van Arsdale's dogs.

W. B. Coutts will make an early move for the trial grounds.

R. M. Dodge has the Stockdale Kennels dogs in good shape.

GOSSIP FOR SPORTSMEN.

Duck hunters are awaiting weather and conditions that are more favorable to the sport than have prevailed for the past week. Generally speaking, results for local hunters have been poor. On some of the preserve ponds limit bags have been easily shot, but these instances are the exceptions. Unless the hunter has been favorably located, he had a chance at but few birds.

Never in many years past has there been so many northern ducks here this early in the season. Among them are plenty of canvashack and wildgeon.

Quail hunters find that the country contiguous to the railroad stations near this city has been pretty well hunted out. In Marin county, along the line of the North Shore railroad, birds are plentiful back in the country miles away from the line of road.

Reports from San Jose and that vicinity state sportsmen have been holding high carnival during the past eight or ten days. Every day has witnessed the exodus of many hunters to the marshes and the foothills. The marshes have been especially attractive for the reason that ducks are very abundant. Sunday in the Alviso marshes there were many hunters and the bombardment was quite general, this was advantageous to the sportsmen for the reason that the ducks were kept on the move and all had an opportunity of shooting game.

The quail hunters have thus far had good success, but the sport will improve after the first heavy rains. The ground is now pretty dry and this condition, coupled with the unusually warm weather for this time of the year, makes it rather strenuous sport climbing over the hills. After the rain falls the ground will then be in good condition for both man and dog and the birds will also be found easier.

Miss Gertrude Ehlers and Miss Alma Mazza two well known young ladies of San Antonio, Sonoma county, went hunting on the 15th inst. and shot a nice bag of quail. Miss Ehlers killed eighteen and Miss Mazza eleven. The young ladies are expert hunters and have frequently hunted together.

The exodus of hunter and dog for a day's pheasant shooting on the opening of the season in British Columbia, October 15th, is mentioned by a scribe on the Victoria Daily Colonist in a style so facetious that it may be presumed he knows not the delights of a day in the hunting field. He states:

"Long before the V. & S. morning express reached Hillside avenue yesterday morning a record-breaking crowd of sportsmen had assembled on the corner armed to the teeth for a long Thanksgiving Day shoot in the woods and fields up the line. Everyone had at least one gun and one dog, and every man was clad in picturesque costume, from the suit of weatherbeaten tweeds that was saved from the klootchman (Indian squaw) when better went for salmon and blackberries in a back-door deal; the canvas jacket with capacious pockets for the reception of game, and from which a few of the sports ostentatiously pulled out and threw away a few feathers as if to intimate to the others that they had been there before; the Norfolk jacket laced with well-stuffed bandoliers; some went in every day costume with their ammunition in one pocket and lunch in the other.

Most had their guns coverless, but others had swell rhinoceros-hide cases: some home-made canvas or woolen bags, but all had the same hopeful smile.

The humorists of the party trotted out the venerable gags and wheezes sacred to such congregations about 'one bird to every barrel in the crowd would extirpate the whole pheasant family in Saanich;' about the bird's Thanksgiving, and so forth.

In due time the train came from town and to the horror of the sports every seat in every car was found to be occupied by a complacent Chinaman, who, having paid his good money to travel, smiled winsomely at the scowling white men, who muttered some pretty warm compliments about the yellow peril. The baggage car resembled a Boer commando going to the front. The whole space was crammed with sportsmen, ordinary passengers, hunting dogs, bicycles, Chinese, freight packages, milk tins, railway men to no end. At every curve somebody stepped on a Setter's toes and dismal howls arose from the injured hound, whilst the Chinese jabbered and smoked cigarettes as if on the job at price and a half. How the conductor ever wound his way through that car, punching in presence of the passengers, is one of those things no fellow can understand.

Sudden stops at wayside stations would lead to the

immediate formation of joint stock companies composed of angry sports, growling dogs, jangling bicycles and a Chinaman or two vociferating choice Cantonese cussology.

All along the line the hunters dropped off in little bunches, whistling to their dogs and disappearing in the woods, soon to sound with the crackle of musketry and the yelp of the eager hounds. ["Musketry" and "yelp of eager hounds" in pheasant shooting is rich, indeed.—Ed.]

And the day was simply perfect; a cloudless sky of Italian blue, a soft southern wind; still the hint of the night's frost in the exhilarating air, and dry-going underfoot.

Two recent press dispatches give the details of lively and sensational hunting adventures. One describes a mixup with a bunch of bobcats near Redding, last week when George Reid and Louis Brautlacht had a thrilling encounter with wildcats at the old Joy Hotchkiss place on the Chewaucan. The two men had been hunting in the woods near by. Returning late in the evening, they ran a wildcat into the open door of a barn on the Hotchkiss place. Both hunters went into the dark barn, latched the door behind them and prepared to slaughter the cat. They found themselves literally surrounded by wildcats. There were six, all told, and they put up a terrible fight. For fifteen minutes the hunters fought in the darkness. They finally got out of the barn, torn, scratched and bleeding, and four of the big cats were dead inside. The other two escaped.

The second affair is tinged with more dangerous elements and transpired in Mendocino county this week. It is not unusual for a wounded deer to revive and develop strength enough to become a dangerous adversary, or even to finally escape, when the hunter attempts to use the finishing knife. But for a hunter to experience a ride on a venison automobile, this is a new one in the variety of adventure the hunting field may produce. The story is that Edward Long, son of the late Supervisor Long and a student of the Santa Rosa Business College, is being congratulated on his escape from death in a struggle with a wounded deer.

While spending his vacation at home in Covelo he went hunting and came across two fine bucks in an opening. He fired and the nearest deer fell dead. The other also fell. The second deer appeared not to be quite dead and young Long straddled it and proceeded to cut its throat. The deer, however, had been only stunned. It jumped up with the hunter on its back, knocking the knife out of his hands by the sudden move, and plunged down the hillside. Young Long grabbed the animal's horns and hung on.

Finally in passing a redwood the hunter managed to turn the deer's head by pulling his horns and guided him into the tree at full speed. Deer and hunter went down together. Long was badly bruised and the deer's neck was broken. Young Long managed to get both of the carcasses into Covelo, and is now the hero of Mendocino county.

A report from Baker City, Or., this week states that Dr. H. E. Curry gives out the news of the discovery in the Mount Rastus mining district of a tree bearing the inscription "Lewis and Clark, 1804-1805" and of a well-constructed stone fort and the remains of a log house. The inscription on the tree was cut in the late fall or winter months, when the sap was down, because the letters now appear as raised. It is known that one of the earliest overland trails passed near the scene of the discovery reported by Dr. Curry.

The Wilson Snipe.

In all the category of American game birds there are very few to which attach more genuine sporting interest than to the erratic and mysterious little fellow known as the Wilson snipe, or perhaps more generally as the jack snipe. This bird is also known as the English snipe, a name which at one time was much more common in the West than it is to-day. In the West and South, the term jack snipe is almost universal, although most sportsmen are sufficiently well versed with the history of the bird to accord it its older and better title, the Wilson snipe. Since Wilson was the first to describe and classify this bird, and since it has so long held his name, it is difficult to conceive why the committee of the A. O. U. should see fit to still further confuse the public mind as to the nomenclature of our game birds by giving to this bird the name of Gallinago delicata—a name perhaps descriptive and correct, yet serving no good purpose as replacing the older and generally accepted title.

There are some ninety species of snipe and about fifteen "tenable genera," as Coues states it, although more are frequently applied. The same naturalist continues: "Various attempts to divide the group into special families have met with little success owing to the close intergradation of the several types." While there is no difficulty in easily distinguishing the Wilson snipe from its relatives in the matter of its name, one might feel like quoting the same naturalist to the effect that a "parallel perversity on the American Ornithological Union would result in ornithological anarchy." It is likely that the American sportsman will continue to call this bird either jack snipe or Wilson's snipe, at least those are the terms by which it can be recognized in any corner of the United States to-day, writes E. Hough in *Texas Field and Sportsman*.

There are many gunners who are fond of quail shooting; others believe that the ruffed grouse offers the finest sport in America; whereas others will hunt nothing but woodcock when opportunity offers. Still, among all these you will hardly find one shooter who, given an opportunity to pursue the jack snipe under favorable conditions, will not gladly take him-

self to the marsh to fight out his ancient grudge against this weird and wary little spirit of the wet grounds. There is something pleasing and exhilarating in the pursuit of the jack snipe, a quest nearly always attended with considerable physical exercise, always in the fresh air and nearly always under the pleasing circumstances of an open view, abounding ground and all the strange, strong facinations of the landscape of the marsh.

The jack snipe itself offers a keen sporting interest. Now and again it may be successfully pursued with the dog, and indeed even western and southern shooters are now beginning to employ the pointing dog in its pursuit to a greater extent than formerly. In the Eastern states the use of the dog has always been more general, perhaps because the bird is not so abundant there as it is in other and more favorite localities. When there is a good flight of jack snipe in on a suitable marsh, the birds customarily alight in such numbers that it is not necessary to employ a dog in order to get abundance of shooting. Where they are less numerous and harder to find the dog is very useful, and one who has a good snipe dog, with caution and nose enough to handle this thin scented and keen winged bird, will rarely care to go out without his four-footed companion. It takes no racing, headlong, shallow witted dog to be a past master at this sport. He must have a keen nose, cautious foot and level head, else he were far better left chained at home. At times when the day is warm and the birds are fat and lie close, one can have beautiful sport over a dog at jack snipe shooting. It cannot be said, however, that the employment of the Setter or Pointer is to be considered the typical form of jack snipe shooting, for rather the contrary obtains in the greater part of the jack snipe country.

Close cousin to his more portly relative, the woodcock, is this inhabitant of the wet marsh. Its boring and its stain resemble those of the woodcock and its comings and goings are fully as mysterious. The jack snipe always migrates by night, taking the moonlight for its flight. Sportsmen say that they "move on the moon," and at the appearance of the first bright nights in the migratory season they look for the flights of the birds, which can often be detected in the night when their "humming" and "booming" notes are heard high aloft in the air, here, there and everywhere above the marsh, where twenty-four hours earlier, there was not one to be discovered.

When the first flight of the spring jack snipe appears upon the northern marshes the birds are apt to be thin and very wild. If cloudy or windy weather prevails, they are still more apt to be shy and difficult of approach, rising with their wild, independent cry of scap! far ahead of the gun. Again, although the weather may be bright and fairly warm, though usually shortly before a storm, these birds may be seen tumbling and pitching in the air above the marsh. Put up your gun then and go back to the house, for you should not then expect to find much sport. The birds will get up wild and go through their aerial gymnastics, quite forsaking all thought of food.

These evolutions of the jack snipe in the air constitute some of its most interesting habits. Especially in the breeding season is it very active on wing. The male snipe will then circle about or hover high up in the air, uttering all the time its low liquid "humming" note, a sweet mysterious and very penetrating sound which is hard to locate. This is its love song and its sweet tremulous note is one familiar to all snipe hunters who care to pursue this bird in the spring time.

After the mating time, this activity of the male still continues. He will circle about, high up in the heaven, and then drop down with the rush of wing which causes his "booming" note. After pitching and rolling and circling about in sheer joy of his love, the jack snipe will again come down swift as an arrow to the ground. Having alighted, he will strut about his mate with wings drooping something after the fashion of the woodcock. Again, though this occurs usually in the fall when the birds are wild, one may see a jack snipe shoot down from some unseen place high up in the sky, its hard set wings producing a loud "drumming" or rolling note.

This sound at times will start all the snipe near by and they will all begin to pitch and drop, performing evolutions very interesting and very ominous to the observer, for under such conditions as these the birds will not lie, but are apt, when pursued, to get up and leave the country. All these peculiarities are things well known to the sportsman and go to add zest to the sport, always uncertain enough.

[TO BE CONTINUED.]

Duck and Quail Outfits.

The demand at Skinner's keeps up for sportsmen's outfits ammunition and guns. A large stock of goods put in for the opening of the season was not sufficient for the unusual demand for hunting suits, rubber boots and hunters' footwear, canvas and folding wooden decoys, gun cases and a new design of leather-covered shell boxes. One make of shotguns was sold out entirely. Skinner's place is 801 Market street. You can get anything there you need for duck or quail shooting. Send for a catalogue, if you haven't the time to come, and try a mail order.

Something for Nothing.

The Polk Miller Drug Co., of Richmond, Va., are manufacturers of Sergeant's Dog Remedies, the most popular line of preparations, intended for dogs on the market today, having received the highest endorsements of the leading dog men and kennel owners in this country and Canada. Read their advertisements appearing in the columns of our journal each issue. The firm referred to will mail you absolutely free, a copy of their celebrated book on Dogs if you will forward 3 cents to cover postage. If your dog is sick, write them enclosing stamp, and describe the symptoms as accurately as you can. They will cheerfully furnish the best information on the subject without charge. F. W. Braun & Co., of Los Angeles, California, have recently been made distributing agents for Sergeant's Dog Remedies on the Pacific Coast.

In hot weather there is no drink like Jackson's Napa Soda—plain or in a lemonade.

THE FARM.

Ringed Hogs.

I dislike very much to see a pasture rooted and plowed up by swine, but ordinary rings seem to have but a temporary influence to correct the habit, as they come out, and many hogs manage to root with rings.

My stock runs out in the field the year round, but every little while they have to be re-rung or they would root up all the grass ground on the farm. I have never resorted to cutting the cartilage of the nose as it disfigures an animal and is, it seems to me, too heroic a remedy.

The majority of manufacturers of pig rings seem to think their rings will prove effective so long as they inflict pain enough to the wearer of their jewelry. Hence, these rings are made to close with rough edges in the flesh or with a knot or lever on the ring to give the pig an extra yank or peng whenever it is so unfortunate as to touch it against a twig, a corn cob or ear of corn or the feeding floor or ground. The construction of the ring and frequent injuries inflicted by it keeps the nose sore and the pig nervous and restless, all of which is not conducive to health and thrift. If the ring has been set a little too deep and injures the periostem, an incurable sore follows that causes suffering and loss that should be avoided.

The ring thus set will be effective and lasting enough to please the manufacturer. But so long as the pig is greater than the ring the owner of the pig must look to his interests and save his pig and his pocket. Such cruel use of rings has set many breeders against them and opened the way for the disfiguring devices now advertised for mutilating the snout and disfiguring the pig.

It is only another form of torture and injury to the animal. The propensity to root abides end as soon as the wound thoroughly heals the old sow will turn sod to amaze the owner. These anti-rooters and de-enouters are effective so long as the wound is tender, but no longer, yet the disfigurement remains. Not so with the ring, unless it gets caught on a nail or root and the pig or hog in its agony tears it out through the flesh.

But the owner of the animal has enough at stake to lead him to try to save his sod and his pig, and avoid unnecessary suffering. This will require a little more care, but it will save the sod and the sow and offspring.

The writer has such a love for a handsome blue grass sod and such a high appreciation of the value of pasture for health and profit in swine husbandry that he is willing to take a little extra care to secure them. Instead of the rings and anti-rooters, scores of which he has tried, he has found the tinner's ring, made out of good number 10 or 12 wire, the most lasting and effective and the least painful. Any tinner will make or furnish them, or the herdsman can make them. To insert we first, with a saddler's leather punch, cut the hole in the snout, taking great care to not cut deep enough to injure the periosteum or bone covering, and yet deep enough to give a good hold for the ring and allow it to turn readily when in place. With two pairs of plyers we twist one end of the ring aside enough to allow it to enter the hole made for it in the snout, and then turn the ring half around, and then with plyers twist the wire so the ring closes outside of the flesh. It is better to put in two rings about an inch or less apart. They are more effective and last longer. The wound soon heals and seldom swells or festers, as do the rings offered by manufacturers and closed in the flesh. The tinner's rings, being heavier and loose in the snout, do not wear out so readily, but when they

wear out or get out they must be replaced. We know of no device more humane or so effective or lasting.

The older the hog and the older the sod the oftener will one find the sod upturned. Old blue grass sods become infested with the larvae of the May beetle and other grubs and these are such delicate and toothsome tidbits for the old sows that they will endure suffering to get them. Younger pigs are more easily restrained, but to save the sod unbroken one must attend to the rings and replace them when lost.

After a meadow or old pasture becomes infested with the white grub it is well to let the hogs root, plow the sod and still let them root until the grubs have been destroyed. It is the cheap and effective way to fit such a sod for a future crop.—*P. C. Holmes in American Swineherd.*

Fortune in Alfalfa.

Twelve or fifteen years ago the farmers of comparatively isolated Humboldt county found themselves on the verge of ruin. Their lands were fertile, the rainfall was sufficient to meet all demands of agriculture, banner crops were year after year harvested, but the expense of getting bulky crops to market made cultivation profitless. The Humboldt farmer was saved by the introduction of alfalfa. Fields that had been planted to oats, wheat and potatoes and cultivated at a loss, immediately became profitable. Soon dairying became second only to lumber of the industries of the county. Humboldt butter became famous from one end of the coast to the other. The weekly shipments were enormous. Mortgagees of years' standing were paid off. Ready money became plentiful. Humboldt county, even during the years of depression which followed the panic of 1893, was prosperous—consumers had to have butter and were willing to pay for it, and Humboldt had butter to sell.

In the San Joaquin valley much the same results have followed the planting of alfalfa and the turning of heretofore profitless grain fields into dairy farms. Kings, Tulare and Fresno counties have within five years made tremendous strides as dairy counties. Dairying brings to them ready money all the year round, the surest guarantee of continued prosperity.

In the Sacramento valley, while alfalfa is on the increase, the possibilities which it offers have scarcely been hinted at. Nowhere in the State, perhaps, are the advantages for raising alfalfa what they are here. It is well known that alfalfa does not do its best in the coast counties; and yet Humboldt has grown rich from alfalfa fields; in the San Joaquin the conditions of soil and climate are not the best for it, but lower San Joaquin farmers are raising it and prospering.

In the Sacramento valley wherever the raising of alfalfa has been attempted the returns have far exceeded those of either of the sections mentioned. Here the conditions for its growth are ideal, climate, soil and plenty of moisture uniting to that end. Three and four and even five crops a year are cut. But the possibilities of the Sacramento valley for alfalfa growing and dairying have not yet been realized as in Humboldt county or even in Kings.

This year it is an encouraging sign to see farmers turning heretofore unused fields into alfalfa pastures. It is a serious beginning of an industry which will eventually be one of the most important sources of the valley's wealth.—*Sacramento Union.*

In the dairy quality counts for more than quantity, and there is more profit in a small, well-managed one than in a large one carelessly managed.

A cow requires three times as much water when she is giving milk as when she is not.

In order to make dairying pay it is essential not only to get cows which are capable under very favorable conditions of giving high temporary returns, but the steady kind of animal which makes a profitable yield under all conditions.

The cream of two skimmings mixed will not yield up its butter as perfectly as one skimming.

For Sale---Ben F. 2:10

The unbeaten pacer of 1903. Ben F. 2:10 by Bradmoor, is offered for sale. Is sound and in the shape, and will be sold right. Apply to the undersigned. L. R. PALMER, Walnut Creek, Contra Costa Co., Cal.

KICKING,

Balking, Shying or any kind of a habit cured in a few hours by my system. Particulars free.

ATTEND THE Red Ribbon Speed Sale

TO TAKE PLACE AT THE

OCCIDENTAL HORSE EXCHANGE

246 THIRD STREET, SAN FRANCISCO,

TUESDAY EVENING, NOVEMBER 17, 1903

Commencing at 7:45 o'clock sharp.

The greatest care has been exercised in selecting the following well-bred colts and fillies, many of them are being trained at the Pleasanton track where they can be seen daily. Competent judges pronounce them the most uniform lot of handsome youngsters ever seen on that famous course. They must be sold. There is to be no reserve, and as this is perhaps the best opportunity to get the blood of the sires that made California famous it is of vital importance to farmers, horse breeders and lovers of good horses to attend this sale, and get animals they can take pride in and if necessary make money with as many are heavily engaged in stakes. Following is only a synopsis of a few to be sold:

CONSIGNED BY H. C. SANDERS, ESQ., PLEASANTON, CAL.

- | Nome and Sire. | Don's Family. |
|--|--|
| Brown filly (2) by Rey Direct 2:10..... | Birdie McClain by Adirondack, grandam by Oregon Pathfinder. |
| Directory (2) by Rey Direct 2:10..... | Mama H by California Black Hawk, grandam by Posora Hayward, etc. |
| Brown gelding (2) by Diablo 2:09 1/4..... | Missie Medium by Rampart (son of Almont 33), grandam Belle Medium (dam of Stam B 2:11 1/4), by Happy Medium, great grandam Armenta by Almont Lightning, etc. |
| Black filly (1) by Chas. Derby 2:30..... | May (dam of Bay Rum 2:25) by Anteeo 2:16 1/4; grandam by Captain Webster 1:17 1/3 |
| Rey Directon (1) by Rey Direct 2:10..... | Baba Marion 2:17 1/2 by Steinway 2:35 1/2; grandam Ida Wood (dam of Owybee 2:11) by Simmons 2:28, etc. |
| Bay filly (3) by Chas. Derby 2:30..... | Nannie Smith (sister to Phil Thompson 2:16, etc.) by Red Wilkes; grandam Gray Nellie by John Dillard, etc. |
| Reina Directum (1) by Rey Direct 2:10..... | Stemwinder 2:31 (dam of Directum 2:05 1/2, etc.) by Venture 2:27 1/4; grandam Kate by St. Lawrence. |
| Black filly (1) by Rey Direct 2:10..... | Mamie H. by California Black Hawk, grandam by Posora Hayward. |
| Rey McGregor (1) by Rey Direct 2:10..... | Lurline (sister to W. W. Flook 2:15 1/4, Algregor 2:11) by Steinway; grandam Maggie McGregor by Robt. McGregor; 1:17 1/2 (sire of Crescents 1:59 1/4). |
| Black filly (1) by Rey Direct 2:10..... | Mama H. by California Black Hawk, grandam by Posora Hayward. |
| Black filly (2) by Rey Direct 2:10..... | Anteeo by Anteeo 2:16 1/4; grandam Debonair by Sultan; great grandam Ferguson mare by Williamson's Belmont. |
| Black filly (1) by Rey Direct 2:10..... | Diana by Diablo 2:09 1/4; grandam Belle Robbins (dam of Pleasanton 2:29 1/4) by Tarrason, etc. |
| Bay colt (2) by Owybee 2:11..... | Index (dam of Alamo 2:23 1/2, Our Jack 2:13 1/4) by Sweepstakes; grandam Dolly Bull (dam of Inez 2:22 1/4) by Kentucky Bartrand. |
| Bay mare (6) by Diablo 2:09 1/4..... | Belle Robbins (dam of Pleasanton 2:29 1/4) by Tarrason; grandam Black Bessie by Blucher dam by Guy Wilkes (pedigree will be published in catalogue.) |
| Bay filly (1) by Hart Boswell..... | Direct filly by Direct 2:05 1/2; grandam by Hewlett's Echo, son of Echo. |
| Black filly (1) by Chas. Derby..... | |

CONSIGNED BY P. J. WILLIAMS, MILPITAS, CAL.

- | | |
|--|--|
| Ogden (half brother to Monterey 2:09 1/4), b c by Egyptian Prince..... | Hattie (dam of Monterey 2:09 1/4 and Montana 2:16 1/4) by Com. Belmont, grandam Barona by Woodford Mambrino etc. |
| Chestnut filly (1) by Monterey 2:09 1/4..... | Lo Lo (sister to Leap Year 2:26 and Iago 2:11) by Tempest, grandam Eulogy by Commodore Belmont, etc. |

CONSIGNED BY THOS. SMITH, VALLEJO, CAL.

- | | |

| Chestnut colt (3) by Silver Bow 2:16..... | Ventures by Arthurton; grandam Lady Ventura by Williamson's Belmont, etc. |

and many others. I will also sell

7 handsome Shetland Ponies, consigned by Geo. A. Davis, Pleasanton

Every animal is well broken and will be led by the side of a saddle horse. Particular attention is called to the breeding of these horses. Their individuality stamps them as the best looking, best limbed and best developed trotters and pacers ever led into a salesring. Catalogues will be issued at once. Horses at salesyard November 14th.

WM. G. LAYNG, Live Stock Auctioneer, 246 Third St., San Francisco

THE PENDULUM SWINGS BACK.

V. E. Fuller Reviews the Change in the Trend of Public Opinion Influencing the Jersey Market in the Past Twenty Years.

As is the case in the breeding of almost every thoroughbred stock in this country, great changes have taken place, by decades, in the breeding of Jerseys.

In the early 80's the Rieter-Alpheas Jerseys stood in very high esteem, based on their performances at the pail and churn, and especially through the yearly performance of Eurotas. Their supremacy was contested by the Island-bred cattle, mainly the Coomassies and importations made by the veteran breeder and importer, Mr. T. S. Cooper. The supporters of the imported cattle at this time based their favoritism on the perfection of type of the Island Jerseys.

The American-bred had their adherents, and there were also many friends and supporters of the Island type.

In 1883, after I had tested Mary Anne of St. Lambert, Ida of St. Lambert, and many of their half sisters, the St. Lambert strain, bred at St. Lambert, Quebec, topped the market, and though they have had many rivals at various times, they have always been in constant and good demand at profitable prices. About this time the demand for imported Jerseys slackened very materially, and it became secondary to the St. Lambert.

As was the case with the Rieter-Alpheas, so it was with the St. Lambert, at that time, namely: anything with the Rieter or St. Lambert blood was eagerly sought after; little regard being paid to individuality. Or, in other words, breeders became "pedigree crazy." This lasted until about 1885. Then demand became based on the performances of individuals and their ancestors, and this state of affairs continued in the Jersey kingdom until about four years ago. In the craze for performance, the correct type of the Jersey cow as we found it in the 70's in the New England States was wholly lost sight of. Buttar records, and these alone were demanded. So keen was the competition that doubtful tests were recorded, and being accepted for record by the American Jersey Cattle Club, were accepted. Disregard to the correct type of Jersey was strengthened by the club's maintaining an antiquated scale of points, wholly inapplicable to the correct type. Fortunately, though late in the day, a new scale of points has been adopted.

As a natural consequence of breeding for performance only, and disregarding type, there are many Jerseys of undesirable structural form scattered from the Atlantic to the Pacific.

In the past few years the pendulum has again swung around to Imported Jerseys or those American-bred who are perfect in individuality; and they alone command the top prices. Or, in other words, individuality of a high type is now demanded. It is a fortunate thing for the Jersey interests that such is the case.

All Jersey breeders are familiar with the excellent importations made by Mr. T. S. Cooper in the past four years, and sold under the hammer in the past three years. They deservedly commanded high figures. Their dispersal among the Jersey herds of the country will do much to correct the undesirable type of many of our American-bred Jerseys.

Comparatively few breeders know of the most excellent and superior lot of Jerseys imported by Mr. Frank C. Ward of East Orange, N. J. in the Fall of 1902 and sold in the Spring of 1903. Previous to Mr. Ward's sale I stated that I considered the two-year-old heifers imported by him the best lot (for an equal number) that had ever been brought to this country. Unfortunately, their high quality was not known to the majority of Jersey breeders, and they were sold at prices not at all commensurate with their real value. Many bargains were secured,

and Mr. Ward suffered a considerable financial loss by the importation. Those who were fortunate enough to secure them are loud in their praises, not only as to their high type but as to their dairy qualities.

Nothing daunted, Mr. Ward went to the Island shortly after his spring sale, and selected another herd to place on his farm in New Jersey and breed them. The City of East Orange had for some time been negotiating with Mr. Ward for the purchase of his farm to utilize the springs on it for waterworks purposes. Prior to his departure Mr. Ward had given an option on his farm at a price he thought they would not pay. While on the Island, and after the cattle had been purchased, Mr. Ward received notice of the purchase of his farm. The City of East Orange has possession thereof, and Mr. Ward has his cattle in quarantine with no farm to which to take them, though he has unsuccessfully sought one adapted to his purpose.

Under the circumstances, much to Mr. Ward's regret, he is compelled to place them on the market by public auction; and the herd will be sold by the well-known auctioneer, Peter C. Kellogg at Durland's Riding Academy, Hoboken (opposite New York City) on Nov. 12th.

The importation consists of 52 head, two bulls, three heifers or cows over three years old, and forty seven heifers either two or coming two years old. All females are fresh, or will freshen before the date of the sale. The bull that heads the herd is a son of Golden Jolly (whom £1000 cannot buy on the Island) esteemed to be the best bull on the Island, judged by his daughters in milk. Golden Jolly is a son of Golden Fern's Lad, and is out of the superb cow Brookhill Rose II. Three sons of Golden Jolly have been imported into this country, viz: Golden Jolly's Prince, Brookhill Fox and the bull at the head of the Ward herd. I will guarantee that three no more perfect or handsomer bulls got by one sire were ever imported. They are wonderfully alike, and about perfection.

The Ward bull is an extra handsome fellow, well set up in every way, with top lines perfect, a deep body set on short legs, and a handsome head and fine carriage. He is in every way an A1 show bull.

I have made two critical examinations of the Ward herd. After the last one I remarked (and it came from the bottom of my heart) that I have never seen as uniform and perfect a lot of heifers as is

to be found in this herd. 'Tis not alone that they are extra handsome; that they have very large, deep bodies and splendid constitutions for Island-bred heifers; but their perfection and size of udder is truly astonishing. The udders run away up on the bellies, are very large and well rounded, and they have good large teats, well placed. This does not apply to a few, but with possibly three exceptions it applies to every female imported. I never saw a more uniform lot of large, plump fore udders.

The same uniformity exists in the broad, level backs from withers to tail setting. What is of still greater importance to the practical dairyman is that so far as the eye can judge, they are large producers, and I am informed that such is the case.

A pen picture is given of this latest importation, because it shows the type which is now sought by Jersey breeders since the pendulum has again swung around to the imported type. It would be a very difficult matter to find fifty females who more nearly approach the perfection of the Island type now so much in demand, and who at the same time possess the size, length, depth and constitution demanded by American buyers.

All breeders interested in such animals should apply to Peter C. Kellogg, 107 John St., New York City for catalogues of the sale; as they will find therein some amateur photographs, untouched by any master hand, of some of the heifers in the sale. Their udders are depicted as Nature made them. They are not unduly inflated by allowing the milk to remain in them for twenty-four hours, nor by an artist's brush.

If any of your readers are unable to attend the sale, and desire to be bidders I will be glad to execute their commission, on the usual terms of commission, and I can be addressed in care of Peter C. Kellogg.

The country will be scoured for animals for the show ring at the coming World's Fair at St. Louis, and the breeders are going to put their "best foot foremost." These cattle of Mr. Ward's are not pampered but are kept in good healthy condition, as were the last lot he brought over and sold. The men who bought them have borne testimony to the fact of their being in fine condition and improving under care. To any man who wants a carking two year old for St. Louis, I would say that this sale is a providential opportunity to get a heifer who will take a lot of beating in the show ring.

Our Foreign Meat Trade.

South American cattle and sheep from Argentina are giving our exporters considerable competition in foreign markets. Secretary Wilson has sent Frank W. Bicknell to Argentina to investigate the matter. He reports that the Argentina republic is fast becoming a wideawake rival in the production of cattle and sheep. He estimates that there is 25,000,000 cattle in Argentina and about 100,000,000 sheep, and he is authority for the statement that improved and scientific methods of breeding and feeding stock are universal in that country.

The native of Argentina prefers to confine his efforts to raising the animals, leaving the development of trade to foreigners. Freezing companies send frozen beef and mutton to England, South Africa and other markets, earning about 40 per cent in dividends.

Last year the agricultural department of Argentina chartered a transport from the navy department and sent experimental cargoes to South Africa. These consisted of mules, steers, horses, sheep, butter, wheat, oats, alfalfa, and many other things, some of which were small consignments and all were sent on the owner's private account. The shipments met with ready sale which paved the way to the establishment of three regular shipping lines.

As British ports are now open to sheep and cattle from Argentina, we have a direct competitor in the English markets. With cheap land, cheap labor and climate favorable for the production of corn and other feeds and so congenial to stock that they need no shelter the year round, together with the fact that green feed may be easily provided every month in the year, gives the cattle and sheep raisers of Argentina an advantage that they are not slow to appropriate.

Up to the present time, apparently, little attention has been paid to the production of pork, but experiments along this line have led to the belief that the propagation of hogs on a commercial scale will be as profitable as cattle and sheep are proving at the present time. Probably Argentina is the only country on earth that is in position to put up a competitive fight with the United States in foreign markets in live stock and food products.—*Farm Stock Journal.*

Jackson's Napa Soda does not tangle the feet

Feeding Grain to Dairy Cows.

Years ago we took the stand that many of the teachers of agriculture were advocating the feeding of unnecessarily large quantities of grain to dairy cows, and that, in consequence, they were feeding them food unnecessarily expensive. Some taught that it was their practice to feed dairy cows all the grain that they would eat up clean. They would feed them grain until they saw that they were not cleaning out all the food from their mangers, says The Farmer. They were then fed just a little less, and the quantity thus determined would be the standard grain ration given to them, so far, at least, as quantity was concerned. It now turns out that such feeding is wrong and in the end injurious. Experiments conducted at the Vermont station were made in feeding 4, 8 and 12 pounds of grain respectively. The 4-pound ration gave the largest relative profit for the grain food fed. The additional cost of feeding the cow that got 8 pounds per day was \$13.85, while the increased yield of butter was only \$7.86. There was some added value, however, in the manure from the cow that was heavily fed on grain, but when the whole expenditure and returns were compared, no financial gain resulted from feeding the cow 8 pounds of grain, as compared with feeding her 4 pounds. In the instance where the cow was fed 12 pounds of grain per day, the loss was very material, as compared with the cow that was fed 4 pounds per day. Experiments conducted at some other stations point in the same direction. There is also a further loss arising from long continued heavy feeding of grain. It has a tendency to destroy the producing power of the cow, on the principle that driving a machine at high pressure tends to shorten the period during which it may be used.—Colman's Rural World.

Poultry Notes.

The average of sixty Leghorn pullets fed for various purposes was 88 eggs per hen in 240 days. Some were immature at the beginning. It was an average transaction. People who want information will find this first-class goods. We would rather figure on facts than anything else.

Profits in the poultry yard hinge not on breeds and varieties, but on birds. Breeds have certain characteristics, but it is the individual which pays or fails. The poultry-keeper will do well to take notice of each bird and its performances, and not rely on the fact of their being of this or that breed.—California Cultivator.

At the Maine State Experiment Station during four years they gave full year tests to over 1,000 hens and found among them thirty-five that yielded from 200 to 251 eggs each year. On the other hand, several hens yielded on 36 to 60 eggs each year, and three "hiddies" did not prove any eggs belonged to them. The bulletin don't say so. About 135 eggs per year appear to be the Maine State average per year per hen.

The best way to give lime to our fowls is in the form of bones either fresh and finely broken or burned and in ash. Then the lime will be digested easily and supply the needs of the fowls healthfully. As all animals that feed on vegetable food need salt to refresh the gastric fluid and restore the waste of the body, this is the best and most safely given in small quantities with the food every day. Salt in excess is a most acrid poison.—Pacific Fruit World.

In nearly all cases it is much better to grow into dairying from a small beginning than to make an entire change both in dairy stock and in appliances. In this way the experience necessary to success as well as the wants and necessities of the business become more thoroughly understood, and there is less risk of failure.

How Stock Helps Land.

An instance was related to me the other day of the value of stock raising and its incidental clever rotation in building up the productive capacity of the land. Before the perfection of the Chicago cold storage beef industry large herds of cattle were driven to the Washington market from northern Virginia farms. These farms were then models of fertility. The rotation was wheat, corn and clover, and little if any commercial fertilizer was used. The beef produced was of the finest. When Chi-

cago beef began to be shipped everywhere these farmers did not find it so profitable to raise steers and drive them to Washington. They dropped off their live stock growing and in a few years had to begin the use of commercial fertilizers. These farm lands have since steadily decreased in productive capacity until now most of them are worn out and will not produce twelve bushels of wheat to the acre.—Washington Cor. American Cultivator.

Sober up on Jackson's Napa Soda.

Lou Dillon Beats All Trotting Records

Driven by MILLARD SANDERS

she makes a mile in one minute, fifty-eight and one-half seconds at Memphis, Tenn., Oct. 24, 1903.

To the Troy Chemical Co
Troy N. Y.
Dear Sir Please send my wife
more bottles of "Save the horse"
It is doing great work.
Respectfully
Millard J. Sanders
7. Spring Park, Glenville, Ohio

Sept. 7, at the Pasig-Tipton sale at Sheepshead Bay, a yearling by Esher-Excellenza was being sold by Mr. William Easton, and when the animal was led into the ring he said: "This horse has been suffering from a bog spavin, of which practically no trace remains. He was treated with that remedy called "Save-the-Horse," which all of you know, and it did save the horse—that is, it cured him. Now, you know lots of great horses, Morello and others, were successfully raced, and there is no reason to expect that this colt will ever take a lame step." The bidding opened then at \$200, and the colt was sold for \$800 to Mr. J. D. Smith.

Private Stables Jas. Galway, Race Track, Saratoga, N. Y.
I got a bottle of "Save-the-Horse" first of Moseman & Bro. of New York, and used same on ring-bone, curing it entirely. I next used "Save-the-Horse" on two splints and cured them. Have also used it on a strained Eastern joint, which made horse very lame; it cured this also. I predict a great output of "Save-the-Horse." It has never failed to cure any case I used it on.—EDWARD FEAKS, Trainer for Jas. Galway of 312 W. 55th St., New York, owner of Meltonian.

It is the truths that ring out sound and clear and impressive—actual results like the above from men whose standing and reliability can be readily ascertained—which have made "Save-the-Horse" such a success. Their cured horses are living advertisements, absolute certainties as to the possibility of the remedy for your own case, and with every bottle is a guarantee document as binding to protect you as the best legal talent could make it.

"SAVE-THE-HORSE" Cures Without Scar, Blemish or Loss of Hair.

Applied anywhere, and in all conditions and extremes of weather. Horses may be worked as usual with shlo or ankle boots, as no harm can result from destruction of hair or scalding of limb.

POSITIVELY AND PERMANENTLY CURES BONE AND BOG SPAVIN, THOROUGH PIN, RINGBONE (except low ringbone), CURB, SPLINT, CAPPED HOCK, WINDPUFF, SHOE BOIL, WEAK AND SPRAINED TENDONS, AND ALL LAMENESS.

\$5.00 PER BOTTLE.

Written guarantee with every bottle given under our seal and signature, constructed solely to satisfy and protect you fully. Need of second bottle is almost improbable, except in rarest of cases. Copy of booklet and guarantee sent upon application.

\$5.00 a bottle at all druggists or dealers, or sent express prepaid.

Watering Cows.

Always give a cow all the fresh water she wants. The more water a cow can be induced to take into her system the more milk she will yield all other things being equal. As the period of lactation advances, the amount of decrease of water taken into the system and the amount of milk produced are almost exactly in the same proportion; that is the decrease of water taken in during one test was 19 per cent, while the milk decreased 20 per cent. In another test the decrease of water was 14 per cent, while the milk diminished 13 per cent.

This is not chance, but characteristic of cows. At the Wisconsin Experiment Station, in seven out of eight other tests the cows took more water into their system daily and gave more milk while eating silage than on corn fodder, thus showing that the rations which produced the most milk contained the most water. With silage fed there were 2.9 pounds of water for each pound of milk yielded.

Cows should not be allowed to drink very cold water, as it reduces the temperature of the body. They often take chills and it requires a good deal of vitality to recover from the ill effects. The late Hon. E. F. Bowditch, of Framingham, by experiment found that by giving twenty cows water at a temperature of 92 degrees F. the supply of milk was increased two hundred quarts per week, conclusively proving the value of warm drinks over cold in winter.

Two experiments conducted at the Maryland station showed that water at 70 degrees F. gave better results than the same at 32 degrees. The cows ate more while on warm water than on cold. Now decide which is cheaper, to warm water in winter with coal at \$3 or \$4 a ton, or with hay and grain after the animal drinks.

It is an interesting fact that a cow in full flow of milk requires from one-fourth to one-third more water than when she is not giving milk, and a cow giving a large quantity of milk requires more than one not giving so much. The cows not giving milk require from 79 to 80 pounds daily when giving milk.

Above all things a cow should never be permitted to drink stagnant or impure water. Drinking stagnant water produces feverish condition in the system which is manifested by a ropiness in the milk. Samples of milk from cows that have been drinking stagnant water, when put under the microscope will show them to be fairly swarming with life which has been taken into the system through the water.—Up-to-Date Farmer.

The Walking Gait.

The walk of a young horse is largely influenced by the driver. If you put a horse into the care of a slow, idle man, or if a young horse is driven by a slow, careless man, the animal will acquire a habit of slow motion that will be difficult to overcome. In a majority of cases a slow, trailing gait makes really harder work for the horse. A moderately quick walk, with at least all ordinary farm work, exhausts the animal less than a slow gait. Another point that should always be considered is that when a horse is allowed to get into the habit of moving slowly he becomes aged and incapacitated before his natural time; his joints and sinews become stiff and contracted, and he is less valuable, not only to his owner for use, but must be sold at a much lower price if placed upon the market. So far as conditions will permit, a young horse that is being trained for work should be worked with an older animal that has been trained to move fairly quickly, as he will not only be a more valuable animal, but prove more profitable to his owner.

Jackson's Napa Soda is sold in every city, town and hamlet in the State.

CAMPBELL'S EMOLLIO IODOFORM GALL CURE

For GALL BACKS and SHOULDERS, CRUPPER SORES and SADDLE GALLS there is none superior.

The horse CAN BE WORKED AS USUAL. For BARBED WIRE CUTS, CALKS, SCRATCHES, BLOOD POISONED SORES and ABRASIONS OF THE SKIN it has no equal.

It is very adhesive and easily applied to a watery as well as a dry sore.

Its use will absolutely prevent BLOOD POISONING. In this respect there is no Gall Cure offered which can justly even claim to be a competitor. We placed it on the market relying wholly on its merit for success, and notwithstanding the fact that comparatively little has been done in the way of advertising the sales of 1903 were 100 per cent greater than the aggregate sales of Gall Cure preceding that year. This increase was entirely due to its MERITS, and from it we feel justified in saying that it is THE GALL CURE OF THE 20TH CENTURY.

It is a quick and sure cure for those troublesome skin cracks under the feet which injure and often lay up race horses.

All Trainers Should Have it in Their Stables

PRICE:—3 OZ. BOX, 25c.; 1 LB. BOX, \$1.00.

ATTEND THE Red Ribbon Speed Sale

TO TAKE PLACE AT THE

OCCIDENTAL HORSE EXCHANGE

246 THIRD STREET, SAN FRANCISCO,
TUESDAY EVENING, NOVEMBER 17, 1903
Commencing at 7:45 o'clock sharp.

The greatest care has been exercised in selecting the following well-bred colts and fillies, many of them are being trained at the Pleasanton track where they can be seen daily. Competent judges pronounce them the most uniform lot of handsome youngsters ever seen on that famous course. They must be sold. There is to be no reserve, and as this is perhaps the last opportunity to get the blood of the sires that made California famous it is of vital importance to farmers, horse breeders and lovers of good horses to attend this sale, and get animals they can take pride in and if necessary make money with as many are heavily engaged in stakes. Following is only a synopsis of a few to be sold:

CONSIGNED BY H. C. SANDERS, ESQ., PLEASANTON, CAL.

Name and Sire.	Dam's Family.

and many others. I will also sell

7 handsome Shetland Ponies, consigned by Geo. A. Davis, Pleasanton

Every animal is well broken and will be led by the side of a saddle horse. Particular attention is called to the breeding of these horses. Their individuality stamps them as the best looking, best limbed and best developed trotters and pacers ever led to a salesring. Catalogues will be issued at once. Horses at salesyard November 14th.

WM. G. LAYNG, Live Stock Auctioneer, 246 Third St., San Francisco

PALACE HOTEL, SAN FRANCISCO, CALIFORNIA.

TOURISTS and TRAVELERS will, with difficulty recognize the famous COURT into which for twenty-five years carriages have driven. This space of over a quarter of an acre has recently, by the addition of very handsome furniture, rugs, chandeliers and tropical plants, been converted into a lounging room—the FINEST IN THE WORLD.

The EMPIRE PARLOR—the PALM ROOM, furnished in Cerise, with Billiard and Pool tables for the ladies—the LOUIS XV PARLOR the LADIES WRITING ROOM and numerous other modern improvements, together with the unexcelled Cuisine and the Most Convenient Location in the City—all add much to the ever increasing popularity of this most famous HOTEL.

Lou Dillon Beats All Trotting Records

Driven by MILLARD SANDERS she makes a mile in one minute, fifty-eight and one-half seconds at Memphis, Tenn., Oct. 24, 1903,

To the Troy Chronical Co
Troy N. Y.
Dear Sir, Please send my wife
more bottles of "Save the horse"
It is doing great work.
Respectfully
Millard F. Sanders
7 Spring Park
Menerville
Ohio

Sept. 7, at the Fasig-Tipton sale at Sheepshead Bay, a yearling by Esher-Excellenza was being sold by Mr. William Easton, and when the animal was led into the ring he said: "This horse has been suffering from a bog spavin, of which practically no trace remains. He was treated with that remedy called 'Save-the-Horse,' which all of you know, and it did save the horse—that is it cured him. Now, you know lots of great horses, Morello and others, were successfully raced, and there is no reason to expect that this colt will ever take a lame step." The bidding opened then at \$250, and the colt was sold for \$800 to Mr. J. D. Smith.

Private Stables Jas. Galway, Race Track, Saratoga, N. Y.
I got a bottle of "Save-the-Horse" first of Moseman & Bro. of New York, and used same on rigo-bone, curing it entirely. I next used "Save-the-Horse" on two splints and cured them. Have also used it on a strained Pastern Joint, which made horse very lame; it cured this also. I predict a great outcrop of "Save-the-Horse." It has never failed to cure any case I used it on.—EDWARD FEAKS, Trainer for Jas. Galway of 312 W. 56th st., New York, owner of Meltonian.

It is the truths that ring out sound and clear and impressive—actual results like the above from men whose standing and reliability can be readily ascertained—which have made "Save-the-Horse" such a success. Their cured horses are living advertisements, absolute certainties as to the possibility of the remedy for your own case, and with every bottle is a guarantee doocment as bloding to protect you as the best legal talent could make it.

"SAVE-THE-HORSE" Cures Without Scar, Blemish or Loss of Hair.

Applied anywhere, and in all conditions and extremes of weather. Horses may be worked as usual with skin or ankle boots, as no harm can result from obstruction of hair or scalding of limb.

POSITIVELY AND PERMANENTLY CURES BONE AND BOG SPAVIN, THOROUGH PIN-RING BONE (except low ringbone), CURB, SPLINT, CAPPED HOCK, WINDPUFF, SHOE BOIL, WEAK AND SPRAINED TENDONS, AND ALL LAMENESS.

\$5.00 PER BOTTLE.

Written guarantee with every bottle given under our seal and signature, constructed solely to satisfy and protect you fully. Need of second bottle is almost improbable, except in rarest of cases. Copy of booklet and guarantee sent upon application.

\$5.00 a bottle at all druggists or dealers, or sent express prepaid.

TROY CHEMICAL CO., Manufacturers, TROY, N. Y.

San Francisco, Saturday, November 7, 1903.

THE OPPORTUNITY you have been looking for will be offered at the Occidental Horse Exchange on Tuesday evening, November 17th. At that time and place the well-known live stock auctioneer, Wm. G. Layng, will offer to the highest bidders consignments of trotting bred stallions, mares, colts and fillies from various owners, that will give buyers a chance to secure at their own figures some of the best bred horses ever led into a salesring in the United States, as well as some of the best individuals and greatest prospects. There is a yearling filly by Réy Direct 2:10 out of Stemwinder, dam of the great Directum 2:05½ by Venture; a brown gelding two years old by Diablo out of Missie Medium by Rampart, grandam Belle Medium, dam of the great trotter and sire Stam B. 2:11½; a bay colt, two years old by Owyhee 2:11, dam Inex, dam of Our Jack 2:13½ and Alamo 2:29½ by Sweepstakes; a handsome bay stallion by Egyptian Prince out of Hattie, the dam of Monterey 2:09½ and Montana 2:16; the mare Trilby 2:21½, a fast trotter that can beat her mark and would make a splendid broodmare; a mare by Dexter Prince out of a mare by Ansel, next dam by Dictator—no better breeding than this; Edith 2:10 by Dexter Prince, in foal to Searchlight 2:03½; two fillies out of Edith, one by Guy McKinney, the other by McKinley, both sons of the great McKinney 2:11½; the mare Monaco 2:15 by McKinney, dam by Director, grandam by Hawthorne, great grandam the Ryan Mare that has three standard performers and two producing sons and was by Black Hawk 767. As will be seen by a new advertisement on page 11 of this issue, four two-year-old stallions by McKinney have been consigned to this sale by Mr. J. H. Gray of Santa Rosa. One is out of Carlotta Wilkes, dam of 2 by Charley Wilkes; another is out of Biscara, dam of 5, by Director, second dam Bicara, dam of 7, by Harold, and is probably the best bred McKinney ever foaled; another is out of By By, the sister to Lockheart 2:08½ by Nutwood, and the fourth is out of Russie Russell by Bay Rose 2:20½, second dam Oakley Russell by Happy Russell. These colts have been worked at the Santa Rosa track and have trotted quarters from 32½ to 38 seconds—not one but has shown speed of a high order. They are sound and all right every way, but as their owner is called East he must sell them. Remember that there will be no more McKinney stallions in California unless owners send their mares back to Indiana to breed to that horse, or go East to the sales. Mr. Layng is getting out a complete and accurate catalogue of the horses to be sold at this great sale and will mail them free upon application. Don't forget the date of this Red Ribbon sale—Tuesday, November 17th, in the evening at the Occidental Horse Exchange.

THE PACIFIC BREEDERS FUTURITY has proved the most popular stake ever inaugurated in California and the Pacific Coast Trotting Horse Breeders Association is to be congratulated on the magnificent showing made by stake No. 4 which closed on Monday last and is for the produce of mares bred this year. Over four hundred mares have been nominated by about two hundred and fifty owners and no stock farm has made over ten entries, showing that the small breeders are learning that it is a good business proposition to have their colts entered in stakes. Next year the three year olds in stake No. 1 will contest for the money, and it promises to furnish two high-class contests. In the trotting division the prediction has been already made that the record of the three year olds made in the Occident Stake will be beaten, while the field of three year old pacers that will start for the world will surely be large and high-class. Stake No. 4 has not only received a larger list of nominations than any previous stake, but the mares named are better bred and have been mated with better stallions on the average than ever before. As usual in all stakes there were several parties who neglected to enter until the day after closing, and a

number of these have already filed applications for nominations in case any of the mares that are entered should die or fail to produce a foal. The entry list to this stake is proof conclusive that the breeding of harness horses has increased on this coast and that more interest is taken in racing colts than ever before. The inauguration of this stake was an experiment entered upon at a time when there were doubts in some quarters as to its success. The results show that the Pacific Coast Trotting Horse Breeders Association has had the support of the breeders of the entire coast since the stake was inaugurated, and the endorsement is made stronger than ever this year.

FOUR HUNDRED MORE ENTRIES than were ever received before for their winter stakes is the record of the stake entry list of the New California Jockey Club. The racing season will open Saturday next, November 14th, and there are more horses ready to race and at the track than were ever in California before. The season's racing will be the greatest ever held by the popular organization of which Mr. Thos. H. Williams is the president. That gentleman spent some time in the last year in the interest of Pacific Coast racing and succeeded in inducing many of the leading Eastern racing men to come to San Francisco with their strings who have never raced on the Coast before. Presiding Judge Edward C. Hopper and Col. William Letcher, the new official handicapper will reach here Friday of next week. Starter Richard Dwyer is already here.

DIRECTUM 2:05 1-4, Whose Get Have Made a Great Showing This Year.

More high class horses and a larger number of high priced jockies will be seen in the stake events than ever before. The New California Jockey Club is assured of the most popular and prosperous season of racing in the history of California.

CALIFORNIA THOROUGHBREDS are to be sent to South Africa. It is exceedingly probable that William Easton, the well known horseman and auctioneer, will go to South Africa this fall with about two hundred young broodmares belonging to Jas. B. Haggis, of the great Rancho del Paso and Elmerdorf Studs. These will be of the best blood in this country, and will be sold to race, and to breed from, believing there is to be an important opening in that country for high class American stock. The project has been under consideration for some months, and, if carried to completion, can scarcely fail of satisfactory success. Mr. Easton is the one man likely to make it so, his acquaintance with prominent horsemen being world wide, and personality and technical knowledge not to be discounted.

Good Ones For Sale.

P. H. McEvoy of Menlo Park, is offering for sale three standard bred trotting stallions by Prince Airlie, one of the handsomest sons of Guy Wilkes. They are three of the most promising young representatives in the State of the great Wilkes family and have recently been sent to the San Jose track where with less than two weeks training, they are showing miles better than 2:30. Particulars as to their breeding, etc. can be seen by reference to Mr. McEvoy's advertisement in this issue.

ATTENTION is called to the events to close Monday, November 16th, for stakes to be decided in 1904, 1905 and 1906 on the course of the Coney Island Jockey Club at Sheepshead Bay. They comprise some of the richest stakes ever run for in America. Keep the date in mind and send to this office for entry blanks.

EVERYTHING BUT THE COW and the feed that is necessary for converting grass to butter is for sale by G. G. Wickson & Co., 34-36 Main street, San Francisco. See the illustrated advertisement in this issue of the BREEDER AND SPORTSMAN.

Harness Horses Breeding in Arizona.

Stock breeders in the vicinity of Phoenix, Arizona, are taking an interest in the breeding of trotters and promise is made that in the future a number of good campaigners will be sent down the grand circuit. The breeding of horses works in very handily with that of cattle, as the cows have to be kept up all the time. Once allowed to run down they do not come in milk again and this necessitates a lot of green feed, which leaves a lot of short feed that would go to waste ordinarily, but which comes in very handy for horses which are turned out.

All the farmers in the valley in which Phoenix is located have to depend on irrigation for farming purposes, as the climate is not only warm all the year round, but is devoid of rain as well, so that horses

can run out twelve months in the year and yet flourish amazingly. The breeders believe in this kind of climate horses can be raised equal to anything in Kentucky or California. Of the four horses sent out of the state to race all have taken records, two right around 2:15, another of 2:17 and a fraction and while the fourth has a slower record he has recently been sold for a long price, as it is expected he can step close to 2:10 another year.

J. C. Adams of Phoenix is the leading breeder just at present, and his stable, while small, is select. He has eleven brood mares which have produced standard performers, and his twenty-five head are all standard and registered. In California he purchased a number from the Pierce estate, and has a yearling colt he thinks will develop into a first-class stallion to head his farm. This youngster is out of Sister by McKinney, while the second dam is Alien, a half-sister to Lou Dillon, being out of Lou Milton. Mr. Adams also owns the dam of the wonderful California trotter, Sweet Marie. A four year old filly by Sky-pointer stepped a quarter as a two year old in 31 seconds, and will be raced next year. A recent purchase of his is the bay stallion Boydello 2:14½ by Boy Dell, a son of Electioneer and Sontag Dixie (dam of Del Mar 2:16½) by Toronto Sontag, dam Florence C. 2:30 by Durango Chief, second dam Grace P. by Prince Dictator. This horse obtained his record at Peoria, Ill., in 1897. He has some wonderfully well finished colts, although standing in that country, none of his get have yet had an opportunity to demonstrate their value on the track. Next season Mr. Adams expects to campaign a stable down the grand circuit.—*Los Angeles Express.*

JOTTINGS.

HOLLISTER, the county seat of San Benito county, has one of the best mile tracks in California. This may seem surprising to horsemen who have never visited the place, and it certainly was to me when I rode around it on Tuesday of last week in company with Mr. R. P. Lathrop, one of the energetic and leading business men of that thriving community. It was my first visit to Hollister, and I confess that I did not expect to see such a business-like, prosperous and well-kept town. Its population is about 2500 and there are more clean, well-sprinkled streets, more miles of first-class cement sidewalks, more beautiful shade trees and a better and larger water supply than can be found in any town of the same size on the Pacific Coast. Every street in the town limits is sprinkled daily during the summer months, wagons running both night and day. The residence section contains many handsome modern dwellings with clean and pretty lawns, and there seemed to be an air of thrift all over the place. The principal product of San Benito county is hay, and Hollister hay is known from California to New York. A very large proportion of the trotters and pacers campaigned on the Grand Circuit, as well as a large number of thoroughbreds that compete for the money on the big Eastern tracks, eat Hollister hay during the entire racing season. Nearly all the hay shipped out of San Benito county is handled by the Lathrop Hay Company, of which Mr. R. P. Lathrop is the manager. In the company's three big warehouses there is now stored 13,500 tons of hay, and from now until the next crop comes on ten carloads a day will be shipped from these warehouses. Thirty thousand tons of hay are shipped by this company every year.

The mile track of the San Benito County Agricultural Society, as I said before, is one of the best in the State. It is situated on a perfectly level piece of ground, and is sixty feet wide all round and is an easy track kept in order during the summer months, being made on adobe soil. It is well appointed, having about sixty good box stalls, a grand stand that will seat at least a thousand people and all the other buildings necessary to conduct a fair and race meeting.

The San Benito Agricultural Association gave no fair this year, as there was no State appropriation to pay premiums on exhibits; but they gave a race meeting and not only paid out a goodly sum in purses but made a neat profit after every bill and purse and other expense was paid.

Hollister track should be one of the very best places in the State to train trotters and pacers and it is more than likely that next spring will see a greater number of harness horses in training there than ever before, as the interest in trotters and pacers is increasing every day. Trainer Jos. Sanchez has quite a string of horses there at the present time, and shots of a few of which are on the front page of the BREEDER AND SPORTSMAN to-day. The stallion Dictatus Medium 32,499 owned by Mr. R. P. Lathrop heads the list. He is kept for stud purposes and is one of the grandest looking stallions for a stock horse that I have seen for some time. He is by Dictatus 2:17, than whom no better bred or faster horse was ever brought to California. The dam of Dictatus Medium is the mare Belle Medium, dam of Stam B. 2:11½, by Happy Medium. I doubt if any mare in California can show three better looking sons by three different sires than her son Stam B. by Stamboul, Dictatus Medium by Dictatus and Suomi by Zombro. Dictatus Medium was a very fast horse. He is a pacer and could pace in 2:10, but met with an accident which injured his hip and he shows a slight lameness when driven at top speed. He is a beautiful bay with the most magnificent mane and a flowing tail that touches the ground. No better dispositioned horse ever lived and that he is destined to be a very high-class sire is manifested by the crop of yearling and weanling colts that are owned in the vicinity of Hollister.

The yearling Little Medium, a bay by Dictatus Medium, dam Little One 2:30 by Benton Boy, is among those pictured on the front page of this issue. He is owned and was bred by Mr. A. G. Wilson of Hollister, and paced an exhibition quarter of a mile at the Hollister meeting last October in 38½ seconds. He is a great prospect and Mr. Wilson has refused several good offers for him.

Meefoe 31875, a black fellow by Sable Wilkes, is a stylish looking horse and his produce are all of good size and solid color. He is well patronized by the

breeders of San Benito county. He is the property of Mr. Lathrop.

Monhelo, a two year old son of Monbells, is a very handsome colt and was bred at the famous Palo Alto Farm. He is owned by Mr. W. Ladd, of Hollister, who purchased him at the Palo Alto sale in this city last January. His sire is the last of the Beautiful Bells family and is by Mendocino. His dam is the great broodmare Laura C. by Electioneer, second dam the thoroughbred mare Fannie Lewie by imp. Buckden. He should make a great stock horse, as he has two crosses of the great Electioneer, and his sire is a son of Beautiful Bells.

The gray mare Sister Patty is owned by Mr. Jere Driscoll of Watsonville. She has a record of 2:23, made at Hollister meeting after but two months work. She is much faster than this record shows, however, and Mr. Sanchez thinks she is a great prospect for the pacing classes next year. She is by Vasto.

In a letter to an eastern paper Mr. Joseph Cairn Simpson writes that he is certain he has discovered the identity of Lou Dillon's grandam and that it is none other than the thoroughbred mare Lady Fairfield by imported Bonnie Scotland, whose dam was Lady Lancaster by imported Monarch. Mr. Simpson states that Lady Fairfield was once owned by the late J. S. Kimball of this city and that it was said she met her death by being cast in a stall. Putting these facts with the statement of Mr. Green Thompson of Santa Rosa, (owner of Lou Milton from the time she was foaled until he sold her as a three year old to Mr. A. McFayden), that Fly the dam of Lou Milton was once owned by J. S. Kimball and that she died from being cast when tied to a fence thereby choking to death, Mr. Simpson concludes that Fly and Lady Fairfield are one and the same. It should be very easy to decide this question. Mr. Thompson has furnished a very close description of Fly. He says she was a chestnut mare with a star in her forehead, and a strip in her face, widening out until it was broadest on the nose. He also states that one of her hind feet was white to the ankle. Now as Lady Fairfield is registered in the American Stud Book her description should be among the records in the possession of The Jockey Club, at New York, the present owners of that publication. In volume 3, on page 174 of that book, Lady Fairfield is registered as a bay mare foaled in 1865 and bred by John Reber. She produced in 1875 the bay colt St. Patrick by Jack Rowett, but her name does not appear in any succeeding volume of the stud book. In volume 1 Lady Lancaster is registered on page 615, and her produce from 1861 to 1873 is given. Lady Fairfield is there again described as a bay filly by imported Bonnie Scotland. It is possible that Fly may have been a light bay, or that Lady Lancaster may have been a chestnut. We have seen two men disagree on the color of a horse when looking at it. But the markings of Fly as given by Mr. Thompson cannot be mistaken. She had a star in her forehead, a strip in her face running down to the nose where it broadened out. One of her hind feet was white. If the markings of the thoroughbreds registered when volumes 1 and 3 of the Stud Book were issued were required to be as definite as they are at the present time then the complete description of Lady Fairfield should be of record. If she had a star and snip and a hind foot white, there is ground for further research as to her being the mare that produced the grandam of Lou Dillon. If her markings are not as Mr. Thompson describes there is nothing to the surmise that Lady Fairfield and Fly are one and the same mare.

And right here I desire to express the hope that it may be proven that Lady Fairfield is really the grandam of the first two-minute trotter. It would, I think, be a matter of satisfaction to every admirer of the great mare to know that her pedigree goes straight into the royal families instead of running "into the woods." It will either add to or detract from her capabilities as a world beater, but it will show the way to breed more like her. However, there should be positive proof of any pedigree given and until there is such testimony furnished as would be accepted in a court of justice, the grandam of Lou Dillon will and should be recorded with the many great mares and horses of history whose breeding is untraced.

On the last steamer from New Zealand there came to my address from the firm of Trist & Small, of Christchurch, a set of leg guards, made to protect the limbs of a horse that wears hoppers. These leg guards are made of tough kangaroo leather, and fit the leg like a legging being made to fit closely by means of elastic, and are held in place by straps that go over the shoulders and hips. Mr. D. J. Price, owner of the New Zealand champion Ribbonwood

2:09, is the inventor of these leg guards, and it was at his request that they were sent here by the firm mentioned. They have been sent at Mr. Price's request to the well known trainer, Fred Chadbourn of Pleasanton who will give them a trial. They should be the very thing to prevent hoppers from chafing a horse and the Pleasanton trainers will have an opportunity to see how they work.

How Lou Dillon Trotted in 1:58 1/2.

The following is from the pen of Marque, the well known writer for the *Chicago Horse Review*. It describes Lou Dillon's mile in 1:58½ and is notable for the simple manner in which the facts are given without the "gush" and extravagant rhetoric that is indulged in by so many turf writers when recounting a great performance. It was written the same day the record was made and is as follows:

Lou Dillon was to have tried against her record yesterday, but the day was cold and a high wind was blowing. All afternoon it was hoped that the wind would lull, but it did not, and the crowd accepted the announcement, made near evening, that a postponement was necessary, graciously, even happily, for the love of the little mare is so great that every one felt relief when they heard that the task would not be asked of her under such adverse conditions. Millard Sanders brought her out and worked her a mile in 2:16½, with the last quarter in 0:30, and last eighth in 13½ seconds, and then took her back to her box.

To-day was another chilly day, with the wind blowing in gusts. At times it was very strong, and at others only breezy, but throughout the afternoon there was always more than a favorable for record-breaking. It was five o'clock when Millard brought her out for her try against 2:00. He had previously given her a mile in 2:12½, evenly rated, and he tells me that to-day was the third time she had been hitched to her racing sulky since she broke the record at Readville. Since then she has been driven to wagon or to a Payne long shaft sulky, except when she was driven to high-wheeled sulky at Cleveland. Hitched to any vehicle she is always the same marvelous flying machine. Nothing seems to unbalance her, or disturb the poetry of her gait. She has now been up to concert pitch since she was shipped east from California in April to the Cleveland sale where she trotted a half mile in 1:00½. Every task asked of her she has accomplished and this afternoon she placed the world's record where she alone, of present day trotters, has any chance to lower it.

To see this fawn-like little mare is at once to love her. She is so dainty, so exquisite, so feminine. In her box she is a baby to be nursed and kissed and petted; but on the track she is electricity clothed in flesh and blood—a delicately perfect instrument keyed to the uttermost pitch and limit. Once I saw her in the blacksmith shop and during the process of shoeing she looked at me in a way which was almost uncanny. It made a chill pass over me, so wonderfully expressive were her hazel eyes. Others have made the same remark about her and Tommy Waugh has told me that sometimes she looks at him as if she wanted to speak. Nature's ways are mysteriously her own; and certainly nature surpassed herself in creating this little chestnut mare Lou Dillon.

"Doc" Tanner drove the leading pacemaker and instead of a canvas strip beneath the cart, a wire screen was used—the same one that was used in her mile to wagon in 2:01½ at Lexington. This screen certainly plays no part as a wind break, as it allows free passage of the air, and its use proves Mr. Tanner's statement that its purpose is solely to prevent the dirt from striking the mare in the face. She drew the same white Faherulky which she pulled at Readville. Scott McCoy drove the side runner. Sandere gave Lou a very short score, and she was away at once. Tanner started at least two open lengths ahead with his runner, and rounding the turn, Millard kept out in second horse position and slightly outside of Tanner till after passing the quarter. The pace-maker throughout the mile was not followed as closely as by Dan Patch for several times the mare was all of 25 feet back of the runner, this being true of almost the entire third quarter, the fastest in the mile. All three drivers remained silent throughout, and Millard never touched Lou with the whip. The first quarter was in 30 seconds, the half in 59½, the three-quarters in 1:28½ (middle half in 58½). Midway of the stretch Millard pulled her out from behind the runner and almost in the center of the track, and she finished in 1:58½ amid applause that was tremendous. The local people regard the mare as their own and they simply went wild when the time was hung out, few such demonstrations having ever been seen at a race track. There was no watch that I saw that caught the mile slower than 1:58½, and many had it a quarter of a second faster. The time by eighths was :15½, :30, 44½, 59½, 1:28½, 1:43½, 1:58½. The official timers were Budd Doble and John Dickerson, and Mr. F. G. Hartwell, of Chicago, and all three watches showed exactly the same time.

Mr. Billings was a very proud and happy man after the mile, and said that it was one-half a second faster than he had expected under the circumstances. Millard said that he went exactly in the notch he had marked. He thinks she can trot in 1:57½ under perfect conditions, if permitted.

A Well-Known Man's Experience.

New York City, March 20, 1903.

W. F. Young, Springfield.
Dear Sir—I have used your Absorbine for several years and have found it the best of anything I ever used for strained tendons and muscle soreness. Yours truly,
W. J. ANDREWS.
Absorbine 82 per bottle, express prepaid.
Address W. F. Young, P. D. F., Springfield, Mass.

Notes and News.

The record is broken.

Breeders Futurity No. 4

Has no less than 400 entries.

The largest number for any previous stake was 335.

The stake is growing and becoming more popular every year.

It is said that Geers has refused all offers to train for individuals and will open a public stable at Memphis.

Prince Howard won a race up at Mount Vernon, Washington, September 9th. The fastest heat was 2:31.

Judge E. A. Colburn of Denver will soon retire from the horse breeding business and will sell all his horses at auction.

In selecting animals for breeding always satisfy yourself that all defects are results of accidental injury, not natural.

W. H. Gocher will issue a second volume of "Tales of the Turf" in the fall. It will be a larger volume than the first book.

Ed. Geers recently had added to his stable two green trotters and since then the Silent Man has stepped them miles in 2:11.

Crescent Route 2:08½ is the initial 2:10 performer for his sire Cresceus 1:59½, and is also the first one from a daughter of Jay Bird.

The Missouri stallion, Dillon Boy 2:09½ by Baron Dillon, is a member of the Salisbury stable, and report has it that Mr. Butler owns the horse.

Eddie Mitchell, who has taken care of Cresceus for the past two seasons, has decided to accept a position as trainer for Walter Winans, of England.

Briney K. by Strathway made a very successful campaign up north. He won two races, was second nine times and third once, out of eleven starts.

It is not beyond the realm of possibilities that a 2:00 class for trotters will be opened by some of the leading associations before the end of another decade.

A horse with the very best of hocks at any time may, by severe exercise, spring a curb, but it is only a temporary injury, neither permanent nor hereditary.

If your mare bred this year is named in the Breeders Futurity she is one of the four hundred. There are that many entries to the stake which closed last Monday.

John A. McKerron 2:04½ is making a fall season at the Glenville track, Cleveland. His service fee is \$150. Next spring he will be allowed twenty mares at \$200 each.

Dan Patch's record breaking mile was the best rated one ever driven. The time of three of the quarters was 29 seconds, and of the other 29½ seconds. The third quarter was the slowest one.

The veteran trainer Charles Marvin was thrown to the ground by the breaking of his sulky while driving a heat in the 2:25 trot at Memphis on the 26th inst., but fortunately was not seriously injured.

An eastern paper says that Fereno 2:05½ is the fastest direct descendant of George Wilkes 2:22. What's the matter with John A. McKerron 2:04½, by Nutwood Wilkes, he by Guy Wilkes, he by George Wilkes?

There is no doubt in the world but Directum will be one of the greatest of sires. He has nineteen in the standard list now. When he left California in October 1898, he had but one and his list of foals was not large.

James Thompson had Col. J. C. Kirkpatrick's horse Clipper 2:06 in fine shape at Lexington and Memphis, and the son of Diablo did not wear the hoppers there in his races that he was worked in during the spring.

Foxy Quiller 2:25, the pacing own brother of Cresceus 1:59½, who has been in Denver for a year or two, worked a mile at Lexington recently in 2:09½. He was once condemned for a counterfeit and now looks like a coming crack.

The sum raised by the Kentucky Beeeders Association for the widow and children of Elliot W. Shanklin, late secretary of the association, reached the tidy total of \$7224. This money will be invested by the administrator of the estate.

If there is anyone in California who still retains a doubt in his mind as to Lou Dillon being a race mare, he should communicate in regard to the matter with Mr. E. E. Smathers of New York who owns Major Delmar, and who is the only man that ever drove a horse in an actual contest with the California mare.

W. G. Durfee brought home with him the pacers Harry Hurst and Frank West, owned by Mr. A. T. Van De Vanter of Seattle and will train them at Los Angeles during the winter and coming spring. Harry Hurst is booked for a record of 2:06 or better.

Dariel's mile in 2:00½ makes her look as though she would be the first pacing mare to reach the two-minute mark. A few years ago she was used on the Harlem speedway and was thought worthless as a racing proposition. My, but what a change.

When breeding get size if you can without sacrificing quality. Quality and finish will add 50 per cent more to the value than mere size. Get both if you can, but remember that the majority of good ones, both on the track and road, are not above 15.2.

W. G. Durfee and R. A. Smith, who have been campaigning strings of horses through the Oregon and Washington circuit this summer, passed through San Francisco this week on their way home to Los Angeles. They report all their horses in good shape.

When Cresceus trotted to his record of 1:59½ at Wichita, Kansas, the judges in the stand were J. B. Chandler, G. S. Freeman and S. B. Amidon. The well known starter, A. C. Jordan, gave the word. The timers were A. C. Jordan, of Lyons, Kan.; Fred Stearns and H. T. Eames.

The Modesto horsemen intend organizing a driving club and will start a local futurity stake for Stanislaus county colts. Nothing will keep up the interest in breeding and aid in the production of good horses more than futurity stakes. They are the very life of the harness horse breeding industry.

Forrest W 2:14½ is a much improved horse this year. Al McDonald drove him the last quarter of a heat at Los Angeles in 30 seconds, timed by a dozen watches, and will probably take him to Pleasanton this week for the purpose of working the gelding a fast mile. Al thinks he can drive him in 2:10.

Caution 2:25½ by Electioneer, dam Barnes by Whipple's Hambletonian, grandam by Chieftain 721, is the leading sire of the Northwest. He is fifteen years old and made his record ten years ago, but has all his speed, as he was stepped an eighth two weeks ago on the Walla Walla track in 16 seconds, a 2:08 gait. This right out of the stall without any training.

Harry Lowden, who recently lost his position as Acting Secretary of the California State Agricultural Society, has according to the Sacramento papers, secured "a lease of the racing privileges" of the track at Agricultural Park, and announces that he expects to give racing there in the future. He intends holding a harness meeting in the spring and later will give a running meeting.

Dan Lane, a groom at the Pleasanton race track, was found dead in a bunk at that place on Monday morning of last week. An inquest held on Tuesday brought out the facts that the deceased was 61 years old, was probably born in New York, that he had no known relatives, that death was caused by acute pleuro-pneumonia. He was buried in Odd Fellows' cemetery at Pleasanton.

There is nothing in the trotting association's rules prohibiting the use of electric batteries to stimulate a horse in a race, but the Kentucky Trotting Horse Breeders Association sat down good and hard upon a driver found using one and prohibited all drivers from using the vile appliance on its track. This was the proper thing to do and showed that the Kentucky association was equal to the occasion.

The McKinney blood is as good in the show ring as it is on the track. The McKinney stallion McAlropa took the blue ribbon at the Walla Walla fair this year. His name is one of those combinations that is euphonic but cannot be made up in every instance. It was formed by using the first two letters of his sire's name, and the first two letters of the names of sires of his first three dams—Altamont, Rockwood and Pathfinder.

Lou Milton, thought to be in foal to Sidney Dillon, has been named in the Breeders Futurity \$6000 stake for the produce of mares bred in 1903. Don't get scared boys. The prospective full sister or brother to Lou Dillon 1:58½ may be another two-minute trotter, and then again one of you may have the satisfaction of heating it with a colt whose sire and dam are both unknown to fame at the present time. You can't most always sometimes tell.

Hanford is to have a mile track. The racing at the very successful fairs held at that thriving town has led the Directors to believe the excellent half-mile there should be superseded by a regulation up-to-date mile track and they propose to have one completed in time to race over at the fair of 1904. Hanford should have a date on the main circuit as the association there is fully capable of giving a meeting that will attract all the best harness horses in training in California.

Lou Dillon does not need any wind shield. On the sulky drawn by the runner that preceded her part of the way in her record breaking performances at Memphis was a wire screen in place of the small piece of canvas previously used to prevent the dirt flung from the runner's feet from striking her in the face. The only reason a runner is kept in front of Lou Dillon part of the way is to keep her back. After the half mile pole is passed the runner pulls out and finishes alongside the mare.

Mr. F. W. Kelley, proprietor of this journal and Secretary of the Pacific District Board of Appeals of the National Trotting Association, has been appointed Export Certificate Agent for this port. Hereafter parties exporting horses to foreign countries from San Francisco can secure certificates of breeding of the same on furnishing breeding and identification, and payment of the usual fees. The export certificates of the National Trotting Association are recognized by all European racing associations.

Mart Demarest has this to say about Prince Alert: "Prince Alert is no dope fiend. At Memphis, last fall, on one occasion, I gave him a few spoonfuls of whiskey and coffee, and this is the only possible cause I can assign for the dope stories being circulated. He has never had a grain or a drop of any stimulant since. It is purely a piece of fiction. Any man whose knowledge of horses enables him to tell of one's condition can see that Prince Alert is in the form of his life at this minute. He is, to my mind, one of the handsomest representatives of the harness horse family."

Budd Doble will soon return to California with his great stallion Kinney Lou 2:07½ and will allow him to serve a limited number of mares before going east again next summer. Directly after winning the Empire City \$5000 stakes at New York, Kinney Lou contracted catarrhal fever, which left the horse in bad condition and Mr. Doble does not expect him to fully recover until he is thrown out of training. A few weeks of California climate will make the son of McKinney and Mary Lou himself again however, and we expect to see him reduce his record several seconds next year on the Grand Circuits. Those who get their mares booked to the horse will be fortunate.

The probability is that Monte Carlo would not have won the McDowell stake at Lexington had not Mr. Salisbury put in a protest against starting the seventh heat after sundown. The protest was filed and by the time the judges had perused it, the sun was out of sight and a postponement was ordered. Monte Carlo had been a contestant in every heat and was very tired. Hawthorne was also very tired and should have been distanced for running as she ran a long way to beat the flag in the sixth heat. Dr. Strong was the freshest horse of the three as he had not tried for any heat that would have given him a record below 2:09½. So the postponement really gave the race to the best horse after all.

An Englishman, speaking of the great American trotter, has this to say: "The standard-bred trotting horse of America is, without exception, the kindest, gentlest, most sensible and best mannered animal of all the equine race. None but those who know him intimately—who have owned, driven and tried them under all sorts of circumstances and conditions—can begin to realize what grand animals they are and what enduring pleasure and real gratification the possession of one affords to the lover of a really good horse. I have bought a few standard mares and intend to import a first-class standard-bred stallion in the spring."

Captain C. B. Jackson, whose home is known as Jackson Hill on the national road near Hagerstown, Md, has erected a handsome monument over the grave of Black Frank, his famous trotting horse, which died twenty years ago. Black Frank was one of the most famous trotters of his day and was buried in the front yard of his owner. When Black Frank died he was wrapped in a silk flag and given a funeral, which was largely attended. The present monument is the fulfillment of a vow made by Captain Jackson at the time the horse died. An elaborate program was arranged at the unveiling ceremonies. A large crowd was present.

The pacer Don Derby 2:04½, brother to Diablo 2:09½ astonished the natives on the Harlem drive near New York week before last. He was to start in the champion class at the opening of the fall matinee season, but no other horse was present to start against him. His owner, Jas. A. Murphy, concluded that he would not disappoint the people who came to see the horse go, so he drove the son of Charles Derby a half at speed. Timers were appointed stationed at the half mile post and a flag was dropped at the start. The timers watches caught the time in 57½ seconds, and many outside watches verified it. Don Derby paced this wonderful half hitched to a wagon and did not wear a hoot of any description.

When a pacer like John M. 2:09, capable of 2:04, sells for \$10,000, it would seem to indicate that the race qualities of a pacer, as compared with a trotter, are slightly on the increase. Mr. Smathers is reported to have paid \$10,000 for John M. and \$40,000 for the two minute trotter, Major Delmar. It is safe to say that the champion trotting gelding of the world, and the only gelding that ever trotted in two minutes is enhanced in value by one hundred per cent on account of that record. We can think of four or five other trotters that can trot in 2:05 under the same conditions that Major Delmar trotted in two minutes. And \$20,000 would probably be a fair value for each. When 2:10 was regarded as supreme speed for a trotter, as it was only five years ago, the value of a 2:10 trotter was, three times as much as a 2:10 pacer, age, quality, etc., being equal. Five years ago we had only ninety trotters that from the inception of harness racing down to 1898 ever took a record of 2:10 or better, while the 2:10 pacers numbered two hundred and thirty-five. The value of a 2:10 trotter now capable of only 2:10 is probably about two and a half times as much as the value of a 2:10 pacer capable of only 2:10, everything else being equal.—*American Sportsman.*

Who can pick the next two minute trotter?

This is a record breaking year all around. The Pacific Breeders Futurity has the largest list of entries in its history.

It is not every runner that is a good pace maker when hitched to a sulky. A good teaser is worth quite a respectable sum of money and there is much demand for them. Many thoroughbred horses can not pull a sulky fast enough to keep out of Lou Dillon's way when she is at top speed.

Lou Dillon's two heats, each in 2:04 1/2, constitute the fastest two heats ever trotted in a race, the fastest two heats by a mare, the fastest mile in a race to wagon, ditto two heats to wagon and one or two more records of minor importance.

The green four year old trotting mare by Axtell, dam Lena Rivers by Gambetta Wilkes, in the stable of W. F. Freeman, turned the Lexington, Ky., track last week in 2:06 1/2, with the last half in 1:02. She is owned by J. J. McDonald of Cuthbert, Ga.

A modern compilation of engineering maxims states that a horse can drag, as compared with what he can carry on his back, in the following proportion: On the worst earthen road, three times; on a good macadamized road, nine; on plank, twenty-five; on a stone trackway, thirty-five, and on a good railway fifty times as much.

Prof. Lucas says that the most puzzling feature of American fossil horses is what caused their extinction. From the evidence produced it is known that they ranged all over North and South America, up until a period, from the standpoint of geology, was quite recent, and yet, when the Europeans arrived, they had long since disappeared, the Indians having no record or tradition of such animals.

The most profitable weight for the coach-hred gelding is from 1150 to 1250 pounds, though horses do not have to weigh so much to bring long prices. As a matter of fact, however, granting that there is nothing sensational about a horse of this kind, he will sell to better advantage if he weighs around 1200 pounds than if he weighs much more or much less. He is then of size to pull a hrougham or large phaeton.

Jim Ferry broke the track record for trotters at the Denver matinee track last Saturday week. Paced by David J. and covering the half mile distance in 1:06 1/2, he clipped a full half second over the best of the track, made by J. Fred Roberts' Trilhy P. Otto Wilkes 1:09 1/2 has held the record medal since Trilhy P. died.

Likely enough Jay McGregor 2:08 will not race next season, as his owners desire to have him make a full season in the stud in 1904. It is said that Hudson would like to have the horse in his stable next year, as he believes him capable of taking a much faster record than 2:08.

The trotting mare Kentucky Union 2:07 1/2, by Aberdeen, owned by Richard Croker, that has been at Village Farm for the last two years, has been shipped to John J. Scannell's The Ahhot Farm, near Poughkeepsie, Kentucky Union produced a fine foal by Chimes and was hred back to him again. Next season she will probably be hred to Idolita 2:09 1/2, the premier sire at The Ahhot Farm.

When training a colt to work, the first thing after it can be safely hitched is to teach it something about pulling. This is a simple matter yet thousands of colts receive their first lesson in halking soon after being first hitched. In order to teach the animal to pull its full ability it is only necessary to increase the load so gradually that neither the driver nor the colt will know when the pulling really begins, and if never overloaded afterward, it will never balk. It is important to use caution in hitching the colt for the first time to different kinds of implements and vehicles. If to one that runs somewhat heavily, as the plow or harrow, it should know something about pulling first. In working to the plow it is not best to use the jockey stick at first, for a colt will be apt to rush ahead, jerk its mouth on the hitch strap, rear up and learn bad habits in this way. If the check lines are used the colt can be controlled without jerking and after being taught to keep place a jockey stick may be used with satisfaction and without danger.

According to the Secretary of Agriculture the exact number of horses in the United States, when last enumerated, was 16,557,373 (sixteen million five hundred and fifty-seven thousand three hundred and seventy-three), the estimated value of which was \$1,030,705,959 (one billion thirty million seven hundred and five thousand nine hundred and fifty-nine). The horseless age has evidently been indefinitely postponed.

Says the Kentucky Stock Farm: "Some one has discovered that Lou Dillon was foaled standard, just because her sire and dam were registered. But what of it? That does not make her any better hred and nobody who is sane would try to make people believe that it does. As it is there are not enough standard crosses in Lou's pedigree on which to crucify a half-dozen fleas."

According to a press dispatch in the daily papers the haggage car in which Cresceus 1:59 1/2, was being transported, was derailed in the yards of the railroad at Salpurga, I. T., last Sunday. The stallion was thrown down and his legs were slightly injured, but apparently not severely, for another dispatch from Kansas, City, Mo., states that he is to go against the half-mile track record there next Saturday.

Credette, that lowered her record from 2:14 to 2:05 1/2 last week at Memphis, makes the eleventh 2:10 performer to the credit of Gambetta Wilkes 2:19 1/2, which places him on a par with Baron Wilkes 2:18 and Brown Hal 2:12 1/2, as leading sires of 2:10 speed. The four added this season are Credette 2:05 1/2, Foxie Curd 2:07, Don Cozine 2:10 and Wealth 2:10. In addition to these Cohanola reduced his record from 2:08 1/2 to 2:06 1/2 this season. Gambetta Wilkes and Online 2:04 are the only sires to put in as many as four new 2:10 performers this season.

Speaking of "specials," a horseman who has followed the circuit for years says he knows of a case where a trainer offered the managers of a fair and race meeting to start his entire stable of six horses in a special race, the association directors to put up the drivers. The offer was respectfully declined.

From Wellsville, Kan., comes this story: Sold as a yearling for \$10 and holder of two world's records before she was five years old, is the record of Little Squaw 2:04 1/2, the pacing mare from Kansas, who has been so prominent on the Grand Circuit this season. F. O. Ceideberg, the owner and driver of Little Squaw, came to this country from Sweden about ten years ago. He worked on a farm and accumulated enough money to go into business for himself. One day he started out to purchase a team of mules, and in making the purchase he secured Little Squaw, a pure find for him. The dam of Little Squaw was owned by D. D. Hostetter, of Wellsville. She had no pedigree, and at that time had shown no signs of speed. Kewanee Boy, the sire, has a record of 2:23 1/2. The green yearling was an awkward-looking filly and Hostetter did not consider her promising. In making the mule trade he offered to throw in Little Squaw for \$10. The Swede accepted the offer and led the filly away with him. This was in 1897. After a little Ceideberg began work as a brakeman on the Santa Fe and placed Little Squaw in the hands of a trainer. All his earnings were devoted to training her. She developed speed and as a two year old made a half-mile mark of 1:15 on a half-mile track. The following year she raced at Coffeyville, Fredonia, Iola, Paola and Ottawa, winning every race she entered. At Ottawa she was given a mark of 2:14 1/2. Then she was taken south and captured the world's record for three year old pacing fillies, 2:09 1/2. Driven to wagon at Memphis, Tenn., in 1901 by Frank Jones, in an amateur race, she made another world's record, 2:06 1/2. Her subsequent career is well known.

A special meeting of the Vermont Morgan Horse Breeders Association was held at Middlebury, Vt., recently. It was voted to have a good exhibit at the St. Louis Fair. Col. Joseph Battell was chosen as a committee on finance and Messrs. H. I. Cutts, of Orwell and E. H. Hoffman, of Lyndon, committee on selection of stock. About \$4000 will be offered in premiums for Morgans at the St. Louis Fair.

E. E. Smathers' purchase of the pacing crack John M. for \$10,000 makes \$85,000 the New Yorker has laid out in four light-harness horses since midsummer, the list now reading: Major Delmar, \$40,000; Sadie Mac, \$20,000; Billy Buck, \$15,000 and Kent \$5000. He has only to go \$10,000 more to round out a \$100,000 in this class of horseflesh, an enormous investment in the short period of three months. His recent purchase and the fact he has priced several other cracks now racing indicates that his operations in the turf next season will be on a most extensive scale.

It is said that Nella Jay, the winner of the Kentucky Futurity last year, has become unusually sour in temperament and her turning out when again placed under the charge of her old driver, Fred McKey, was due to the fact that she has become track sour and refuses to go around the course. Once this year she jumped over the fence on one of the Eastern tracks and nearly ended the career of James Gatecom, who then had her in charge. McKey says with a winter's runout he will bring the once-famous filly back to Futurity form, but many good judges who have witnessed the antics of the daughter of Jay Hawker says, if Nella Jay's star ever shines again, it will be in the stud and not on the track.

Announcement is made that Alfred Reeves, secretary of the Empire City track, had tendered his resignation to the Empire City Trotting Club and New York Driving Club. Mr. Reeves sailed for Florida last week, but will return within a month. He has volunteered to look after the track's affairs until the first of the year. Failure to agree on terms for next year is given as the reason for Mr. Reeves' resignation. The season at Empire track is admitted to have been the most successful in its history. The Grand Circuit meeting under the new Empire plan inaugurated at the track, furnished the fastest time in trotting history; the New York Driving Club's matinees, under its own plan, resulted in the fastest time of any amateur club in the country, while the course at Yonkers is credited with the great 1.57 mile of Prince Alert, pacing, and the 2 00 journey of Major Delmar.

The stallion Crescent Route, a son of Cresceus that at Lexington trotted against the watch in 2:10 on two occasions, was brought to Memphis by Scott Hudson, who found the horse improving so fast that he wanted to give him every chance. On Wednesday Crescent Route was started to heat 2:10 1/2, Ed Benyon doing the driving and Hudson steering the runner that made the pace. Under this sort of management Crescent Route went a great mile, stepping to the quarter in 0:32 1/2, the half in 1:05, and from that point came along even faster. He was at the three-quarters in 1:37, and marched home in 0:31 1/2, making the mile 2:08 1/2 and the last half 1:03 1/2. He finished strong and true with every foot in its proper place, and is certainly a horse that should never have been tin cupped.—The Horseman.

Answers to Correspondents.

J. B. McD., Manchester.—Sweetzer is a chestnut stallion by Secretary, dam by Grey McClellan. His record is 2:14 1/2 pacing, made at Santa Rosa in 1900. We do not know his age. He is not registered.

E. F. Keissling.—The stallion Roscoe was by Brigadier, but he is not registered and we do not know his dam's breeding. She was a mare called Flora F. that was owned by A. L. Frost of Sacramento. A colt out of a mare by Roscoe cannot be registered, neither can a filly until the Roscoe mare is the dam of two that have standard records. Your filly by Escort out of Verona is not eligible to registration. The horse Don Pedro by Black Eagle has none in the list. John Nelson 187 sired four with records from 2:23 1/2 to 2:30, and his daughters have produced eight with standard records.

Thos. Russell, Milpitas.—The breeding of the horse Newton Booth is not given in either the Year Book or the Register.

W. M. B., Fresno.—Mares are not given a number in the Register. For the full breeding of George G. 2:12 1/2 see issue of this paper, September 26th, page 4.

Walla Walla Harness Race Summaries.

[Oct. 19 to 23.]

Pacing, two year old class, purse \$250. Bessie R., by Francisco.....(E. Hogoboom) 3 1 1 Dandy Frisco, by Francisco..... 1 2 3 Lynn, by Lynnont.....(W. Hogoboom) 2 3 2 Time—2:35, 2:33 1/2, 2:30.

Half Bottle Cures Ringbone.

Palm, Ark., March 24, 1903. Dr. B. J. Kendall Co., Enosburg Falls, Vt. Gentlemen—I have a very valuable mule that was taken lame with Ringbone I used half a bottle of your Kendall's Spavin Cure and it gotten my mule all right. Accept my thanks. I have purchased a new bottle of your Spavin Cure and intend to keep it on hand all the time. Find enclosed a stamp for your "Treatise on the Horse and His Diseases" Yours truly, W. M. FORMBY.

Caustic Balsam Cures Shoe Boils.

Shelbyville, Ind., July 30, 1902. Tba Lawrence-Williams Co., Cleveland, O. I wish to know if Gonhall's Caustic Balsam will take off a curb and use horse at the same time? (Yes. L. W. Co.) I was used your Balsam several years ago for shoe boils successfully, but have never tried it for curb. ED. B. JOHNSON.

The Kenney Bicycle Co., 531 Valencia St., is doing a big business in the McMurray Carts and Sulkies. You not only save money by purchasing a McMurray hut get the most durable, best made, and easiest running cart or sulky in the market. Investigation will convince a Missourian. *

Harris Hill, N. Y., Sept. 20, 1901. Dr. S. A. Tuttle. Dear Sir:—Please send me nine bottles of your Elixir and three bottles of your White Star Liniment for horses, by National Express, Bowmansville, Erie Co., N. Y. What I got last spring cured the mare with the bunch on the ankle in two weeks. Send C. O. D., and onhige. WALLACE WOODWARD.

How Cresceus Trotted His Mile.

It is the general opinion now that the mile in 1:59½ made by Cresceus at Wichita, Kansas, was "on the square," and all the Eastern turf papers are giving him credit for same. Mr. F. E. McMullen, correspondent at Wichita of the *Chicago Horse Review*, sent an account of the great event to that journal, a portion of which is as follows:

At 3:15 Mr. Ketcham mounted the sulky, and asked that he be given the word on the second scoring. Mike the Tramp, with Eddie Mitchell in the sulky, took the pole, and Cresceus kept well out towards the outside of the track, that he might miss the sharp turn at the eighth pole. The pair scored down once easily, and next time came down for the word. Cresceus was tugging at the lines, and he seemed fairly to fly as he tore down the stretch. Near the wire he broke, however, and not until nearly under it did he catch his stride again.

Back they came, and the next trial was successful. Away they sped, as if on wings, Mike but a few inches in front of the horse who was racing for a lost crown and for a new record. At the eighth there was just a suspicion of a falter, which showed how anxious the grand, old monarch was and how fast he was going. Mr. Ketcham kept him well in hand, however, and the first quarter reached in exactly 30 seconds. Never was there a grander sight to the lover of a trotter, than Cresceus with his silken mane flying in the breeze as he sped up the back stretch. Old Mike the Tramp seemed fairly to straighten himself out in his attempts to out-foot him, and it did not require a watch to tell that the mile was likely to be a record-breaker. A quarter of a second was gained in the second quarter, the half being reached in 0:59½, but in the third it was lost, this being the slow quarter of mile. The three-quarters was reached in 1:30 flat, and then the race for the wire began.

Into the home stretch the pair whirled, and it seemed that they hardly touched the ground as they raced for the wire. The great stallion hent to his work, and seemed to understand that it was a case of now or never, for Mr. Ketcham had said that it was his last chance. All went well until the last hundred feet was reached, and the anxious watchers fairly held their breath as they realized that they were looking upon the most wonderful performance ever seen on a race track. Suddenly there was an exclamation of disappointment as the usually steady Cresceus "hobbed" and went into the air. Visione of fleeting seconds passed before the eyes of all, as they realized that the chances for a broken record were fading. But they did not know Cresceus, and they forgot the master hand that was guiding him. Two leaps, and that was all. Splendidly he caught himself, smoothly he was trotting again, and he forged ahead as if to catch the flying seconds which had got away from him while he was resting a bruised leg. Under the wire he sped going squarely as ever a horse trotted, and when the timers hung out the blackboard on which was chalked 1:59½, the crowd present could hardly contain itself.

Cheer after cheer rang out for the victory which had been won, and when Mr. Ketcham turned the matchless horse and he jogged back to the grand stand, both were given an ovation. Friends of the horse smothered him with caresses, and President Irwin, of the Southern Kansas Fair Association lifted Mr. Ketcham bodily from the sulky, after which he was borne triumphantly upon the shoulders of four or five stalwart men into the judges' stand. The judges were J. B. Chandler, G. S. Freeman and S. B. Amidon.

It was a great victory on a great day, and none was more proud or had more reason to be than George H. Ketcham. Not once this year had he intimated that Cresceus would attempt to heat the merk set by Lou Dillon and Major Delmar, and he had even cautioned his boys to say nothing with regard to it. When he was here two weeks before, he had said that if he could get Cresceus back to Wichita as good as he was then, could have the track in good shape and weather that was propitious, there would he "something doing," but that was as near as he came to making any predictions.

"I had expected the old horse to heat his record," he said, "but had not anticipated a victory so complete."

He said he hardly thought that Cresceus lost or gained by the break on the home stretch, but others, among them Starter A. C. Jordan, declared that they believed he lost at least three-quarters of a second.

Though the Wichita track is comparatively unknown, it is the one over which Joe Patchen 2:01½, paced two of his fastest heats against John R. Gentry 2:00½. Of the track, Col. H. G. Toler, who bred and reared John R. Gentry, and owned his sire, Ashland Wilkes 2:17½, and scores of other good ones, said:

"It is surfaced with black loam, resting on two

to two and one-half feet of sand, overlaid with water and quicksand, which gives it a spring, the same as the old brush tracks that were built years ago at great expense. It is the fastest track in the world, especially for horses that are becoming a little aged and sore.

"John R. Gentry and Joe Patchen paced their great race on this track in 2:02½ and 2:03½. Blue Sign paced his first mile in 2:10 on this track, and Gentry beat the world's record for three year olds on it, and made a new record of 2:14½."

Among the turf writers who rather scoffed at the idea of Cresceus trotting a mile in less than two minutes was Palmer Clark of the *Chicago Inter-Ocean*, and Mr. Ketcham wrote him the following characteristic letter in reply thereto:

KANSAS CITY, Mo., Oct. 28, 1903.

MR. PALMER L. CLARK—*My Dear Sir:* In your article in the Sunday paper in regard to the performance of Cresceus at Wichita when he reduced his record to 1:59½, I am surprised to find from one who is usually so well posted several misstatements.

"In the first place I have no means of knowing the exact length of the Wichita track, but it has been raced over for years and never was a record made over it questioned before, but I am assured by the officials and also by the engineer who remeasured it some time ago that it is slightly over a mile. All I know is that the track is there, and can be measured at any time.

"As to the timers, they are all strangers to me, and I do not know as to their ability, but they all look like honest men, and I would be inclined to take their decision as I would that of the timers I have seen through the grand circuit. I did not time the mile myself, but caught the first eighth in fourteen and one-half seconds, and then was busy till I got to the three-quarter pole, and my watch registered there 1:30. From there home I was too busy to give any further thought to the time.

I am inclined to believe the timers were correct, as the two times I caught agreed perfectly with what they announced, and I think it would be no more than common courtesy to believe the gentlemen are right until they are proven otherwise.

"The length of the track was first questioned at Memphis by Dick Benson, and he knows no more what he is talking about than the man in the moon. I have been racing my horses for twenty years, and driving them for sixteen, and I believe I am sufficiently calloused to withstand public criticism, but at the same time I like to be right, and I believe I am in this matter, and if I am you and your fellow horse writers have done wrong in questioning my honesty. If at any time I have done wrong I am willing to take censure.

"Now let me tell you about the misstatements you have made. In the first place, you take me to task for not taking the public into my confidence and telling them all what I was going to do with my horse, and further on you say, 'All honor to Dan Patch 1:56½, and his driver, Myron McHenry, who was game enough to keep quiet until the opportunity was favorable,' etc. Now, that was my case exactly. I had an object in view, and I have been trying to accomplish it for the last two years, and I see no reason why I had to go around the country telling the public what I wanted to do. I had my horse in condition last year to do it, but I never had a favorable day, and I doubted it possible, after the heavy work Cresceus did this spring, to get him in shape for a record mile, but all conditions were perfect at Wichita, and he did the trick.

"You say Cresceus has not been at his best for two years. How do you console that with the fact that last year he trotted the fastest heat of the year under very adverse weather and track conditions, and also reduced the two-mile record from 4:28½ to 4:17? If he could do this when he was not in good condition, what would he do when he was fit?

"You say that at Galesburg he was all out and dead tired in 2:08½. Were you there to see that mile, and how do you know about it? Before I drove him that mile I announced that, owing to the condition of the track being extremely hard and not to his liking, it would be impossible for him to trot a fast mile, and I made no unusual effort to do so. If my memory serves me rightly, the mile was in 2:05½, instead of as you state. He finished the mile like a running horse, and showed to me that he was coming to his old form.

"You further say that only two weeks ago, over a track at Cedar Rapids that was especially prepared for him, he could only trot 2:14½. That's another misstatement. It rained for five days previous to the twenty-four hours of that exhibition, that it was positively dangerous to drive over it at all, and no attempt was made for a fast mile. You forget, in making this statement, that the week before at Wichita, over the track deep in mud, he finished the

last quarter of his mile in 29 seconds; and let me tell you now about this quarter, and why I returned to Wichita for the record. Owing to the condition of the track that day, on account of mud, it was impossible to drive a fast mile, but on the outside of the last quarter the footing was fairly good, and I announced that I would go slowly to the three-quarters, and then see how fast he could step the last quarter. A flagman was sent to the third quarter, so as to get the proper time, and when the pace-maker, who had the pole and was leading Cresceus by at least thirty feet, came to that point, the flag was dropped and he was handicapped just that much. The time was announced as 29 seconds, but fortunately for me I timed that quarter as it should have been and it was in 28½ seconds, as I announced after the exhibition. This was proof to me that Cresceus was fit for his life, and I made a contract then to return and drive for the record, and I announced at that time that if the track was in good order Cresceus would step a mile in two minutes. I have every reason to believe that he has done so.

"The conditions that day were perfect and the Wichita track at that time was the fastest piece of work I ever saw. Cresceus has trotted all of his miles without an excuse book being necessary. If I couldn't drive a trotter to a record without having a lot of excuses to offer every time I tried, I would try some other game.

"I notice what you say about my ability as a conditioner and driver, and I believe that is about the first time that I have ever received that praise, but I have always contended that unless a man is a natural born idiot he cannot give the best part of twenty years to any one object without acquiring a certain amount of skill, and I don't believe it is possible to devote eight years to training one horse without knowing what is the best thing to do to develop the speed of that individual horse, and I also believe that I can do that job better than any writers of horse literature can tell about, and I believe that you agree with me in this statement. As for being a good press agent thanks. If I can get the better of you tough horse writers at the game, I must be a good one. You will at least bear me out in the statement that I have always furnished you with new material.

Now, kindly use your usual charity and correct any mistake that you may have made, and I hope to have the pleasure of seeing you next week to tell you about it.

"GEORGE H. KETCHAM."

Says a Los Angeles paper: Arrangements are being made by the Los Angeles Driving Club for its opening matinee of the season of 1903-04, which will be given at Agricultural Park Thanksgiving Day. It is intended to make this event excel in point of high-class racing, the number of speedy horses entered, and the character of the races, anything ever before attempted by the club. These matinees are for the harness men and have done much to create interest in this class of sport here. There is never any wagering on results, but the horses are sent on their merits and driven by their owners. No admission is charged to the grounds or grandstand, the only reservations being the boxes, which are held for the members of the club. As several of the members have purchased new horses since the closing matinee of last year, of a speedier class than has been seen heretofore at the matinees, fine sport is promised enthusiasts of harness events. The driving club is composed of business and professional men, capitalists and others who take an interest in the thoroughbred and speedy animal, and who are in the sport merely for the enjoyment there is in it for themselves and others.

Horse Owners

Look to your interests and use the safest, speediest and most positive cure for ailments of your horses, for which an external remedy can be used, viz.

GOMBAULT'S CAUSTIC BALSAM

Prepared exclusively by J. E. Gombault, Veterinary Surgeon to the French Government Stud.

SUPERSEDES ALL CAUTERY OR FIRING.

Impossible to produce any scar or blemish. The safest best Blisters ever used. Takes the place of all liniments for mild or severe action. Removes all Bunches or Blisters from Horses or Cattle.

Every bottle of Caustic Balsam sold is warranted to give satisfaction. Price \$1.50 per bottle. Sold by druggists, or sent by express, charges paid, with full directions for its use. Send for descriptive circulars, testimonials, etc. Address THE LAWRENCE-WILLIAMS COMPANY, Cleveland, Ohio

ROD, GUN AND KENNEL.

Conducted by J. X. De WITT.

The Wilson Snipe.

[Continued from last week.]

The regular or legitimate flight of the snipe is something quite familiar to the marsh shooter. The bird always starts up wind, always zig zags rapidly for a few yards before settling to its flight, and usually accompanies its start with two or three of its sharp notes of "scaipe," a note which is repeated often when the bird is wilder but which degenerates into a faint squeak when the bird is fat, well fed and contented with its sun bath. When the jack snipe is very fat it will start without making any sound at all, and one will often see this bird, with the wisdom of the ruffed grouse, wait until the shooter has passed and then undertake to slip away behind him in absolute silence. Upon the best feeding grounds of the winter range of the jack snipe in the neighborhood of the Gulf coast, these birds, feeding on abundant food and in the warm sun become very approachable and defenceless and very large bags of them are frequent. The writer once witnessed the operations for several days of a few market shooters near Galveston. It was rarely that these men would bring in less than fifty birds a day to the gun, and very often a single gun would kill one hundred jack snipe. The shooting was done nearly altogether in the warmer hours of the day, between eleven and three o'clock, and such was the abundance of the game that one might shoot almost continuously if he cared to do so. This work was at short range and on birds which rose close to the gun—quite a different matter from the same thing on the northern marshes when the birds are scattered, wild and much pursued. These southern market shooters commonly used Spaniels to retrieve their birds, and such was the labor exacted of these dogs, that they would rarely keep at their work for more than a couple of hours. No attempt was ever made to employ a pointing dog, for the birds were too abundant to render it necessary. The shooters used No. 10 and sometimes even No. 12 shot, a fact which will show well enough the difference between southern and northern shooting on the same bird, for No. 9 or No. 8 will ordinarily be found very much better in the north.

One of the difficulties of shooting jack snipe without a dog is that of finding one's birds, and it is easy for the expert to tell whether a shooter is or is not of experience at jack snipe hunting. The old timer will have no difficulty in marking down his birds, for as quickly as a bird is knocked down he lines it up with some object on the far horizon and locates more definitely in his eye the particular weed, or tussock or bit of mud near which he saw it drop. If one does not mark his bird thus exactly he will surely have difficulty in finding it, for the colors of the jack snipe's plumage blend so exactly with the vegetation near which it is found that it takes the keenest eye to detect it. A wingtipped bird which makes about is more apt to be found than one killed stone dead. Many a time the hunter will stand with the dead bird actually between his feet and yet be looking about in the endeavor to locate his game. The market shooters, punters and pushers of both the coast marshes and the great interior marshes become very expert in this marking a dead bird.

Probably the greatest regions for jack snipe shooting in the United States are the sea marshes of southern Texas and Louisiana, the similar marshes of the Currituck country of North Carolina, and some of the wilder interior marshes of the Mississippi valley. Before the draining of the Kankakee river marshes the State of Indiana furnished perhaps as fine shooting on jack snipe as could be found anywhere, but the glory of these grounds has now largely departed. Again, such marshes as the Horicon, the Butte des Morts, and others of the Wisconsin breeding grounds have offered magnificent sport at jack snipe. The writer has seen great numbers of these birds on September 1st on the Horicon marsh of Wisconsin, and there is no doubt that most of these birds were local birds, bred on the marsh. These found abundant food in the little black hogs scattered about in the great marsh, which hogs were to be reached only by boat. At one time a shooter stood in plain view in his boat at the edge of such a little bog not more than one hundred feet long, and in the course of a couple of hours killed sixty-five jack snipe. Again the writer haggled thirty of these birds one afternoon upon a dry meadow near the edge of the great marsh. At times the jack snipe, although typically a bird of the marsh, will escape from the wet country awhile, especially if it be pursued steadily, and will resort to dry knolls, open fields or even to the timber. Where much pursued they will regularly leave the marsh for a part of the day, and it is known that at times they resort to edges of the dry and grassy knolls in the mid-day hours. Sometimes they may be put up in dry corn fields, and indeed it is often upon the corn fields that the first shooting is found in the spring in the middle west, although frequently they appear at an earlier date in the black and boggy meadows cut up for feeding cattle, where there are numerous tussocks. The writer has known a nice bag of snipe to be made in the barnyard of a Wisconsin farm where the birds had discovered abundant worms on the edges of a manure pile. The shooter sat on a fence and had a husky and certainly singular hour of sport. How the birds came to resort to that uncommon neighborhood is something apparently to be accounted for in the vagaries of the jack snipe's brain—which latter, we may remember, is tilted back so that its base is forward, as is the case also with its

base is forward, as is the case also with its cousin the woodcock. Perhaps this is why either bird is so eccentric of habit.

The great breeding grounds of jack snipe are up under the Arctic circle, far beyond the investigation of most sportsmen. Thence to the south across Manitoba and others of the British provinces, the nesting grounds extend even so far to the south as Indiana or Illinois. Yet although these birds are well known to breed at the latitude of 42 degrees, it is very rarely that the nest of jack snipe has ever been discovered by a western shooter. One veteran snipe hunter who has for years followed his favorite sport of jack snipe shooting in the Kankakee marshes reports that he never found but one nest of jack snipe in all his life. The nest was located on May 25, and it is only just to this shooter to say that immediately he put up his gun for that spring at least.

It might be very much better for our sport did we all have sufficient forbearance to put up our guns at the end of the fall shooting season, and not to take them out for jack snipe in the spring. If there were no spring shooting in any part of the United States we should be astonished to see the rapidity with which the birds would return to such of their haunts as now remain open to them. Against this unanswerable argument there exists only the selfishness of the unthinking class of shooters. The common argument is that these birds appear only in the spring time, and do not stop in the fall flight, so that one must shoot them in the spring if at all. It is perhaps not worth while to answer this argument, since those to whom the answer should be directed would not realize its force under any circumstances. What with this continuous spring shooting, with the great reclamation of the great interior marshes and persistent and destructive operations of market shooters on the winter range of the jack snipe, we are confronted with the fact that this bird is decreasing in numbers and gradually passing away, in common with all our other game birds. It is a shame, for there are few, if any, birds offering keener zest for better sport than the jack snipe when seen at his best.

In hunting the jack snipe a few simple rules will be necessary. The shooter should not encumber himself with unnecessary clothing, for the walking will ordinarily be found a bit difficult and fatiguing when long continued. Rubber boots one must have usually, although in some of the sea marshes of Texas, where one walks on dry ground along the edge of the little "leads" of brackish water, it is not necessary to employ rubber boots at all. The gun should be preferably the 12 gauge, some liking the 16 gauge or even a smaller bore. As to the load, it must depend upon the conduct of the birds. If the conditions are such that they lie close, an open gun and No. 9 shot will be found the best equipment for them. When they are very wild and fast of wing, a closer gun and No. 8 shot will account for them in better fashion, although perhaps No. 9 shot is the proper size. The bird is very easily knocked down, being thin of plumage. One should, of course, always hunt down wind when walking a snipe marsh, for then, as the bird rises against the wind, it comes toward the shooter at one side or the other. Some shooters snap at the bird directly as it starts, but others reserve both barrels, or at least one harrel, for the instant when, after ceasing its zig-zagging and criss-crossing, the bird starts off upon its straighter flight. There is no such thing as a table of skill in snipe shooting, for what may be good record one day may be a very poor record the next. The writer has sometimes seen a dozen and a half or two dozen of these birds killed straight, or again been out upon a day when a score of half of one's shots would have been excellent shooting. Yet again there will be days when there can be no regularity of shooting and it is all long range scratch work which cannot be called sport at all.

The presence of the jack snipe upon a marsh can usually be detected from its "horings" or its "stain," and when these are very abundant it may be presumed that at some time of the day the bird will return to its feeding ground, although for reasons peculiar to itself, it may for a part of the day absent itself from the grounds. The jack snipe is a heavy feeder, and will make a great number of its horings in search for worms, thrusting its bill into the earth quite to the base. This instinct seems to be strong even in death. The writer once knocked down a brace of snipe which rose before him on a swampy meadow covered with black hummocks or tussocks. Going to pick up the second bird it was found that it had fallen at the side of one of these tussocks of black earth, and had thrust its bill quite up to the base in the little mound. It was lying there quite dead, with wings spread out and its bill driven firmly into the earth, whether in the instinct to pursue its feeding or in the convulsion of its death struggle could not be determined. When well habituated to a good feeding ground, and when it has gained a little avoirdupois from some days of feeding, the jack snipe does not like to leave its chosen locality. Sometimes as the hunter approaches he will see the bird rise in front of him and angle upward rapidly to considerable height. Perhaps it may circle around a bit, and then, if he remains motionless he may see it tumble rapidly down, alighting at a spot not very far from where it first took wing. This is a good sign and shows that the birds have adopted the country for at least a temporary feeding ground. Of course the experienced snipe shooter will look for the birds where the ground is warm, soft and apt to produce abundant worms. Ground from which the water

has just receded, and which is cold and "sour" will not offer such feeding and will not be patronized by this little gourmand. Having located a good hody of birds thus used to a piece of country, the fortunate shooter can enjoy some hours or perhaps some days of as pleasant sport as he is apt to find out of doors.

The jack snipe has been the Ishmaelite of our game birds. The hand of every man has been against him, even the hand of our legislators. No bird has been more sacrificed on our statute books than the Wilson snipe. Thus in the forming of the old Illinois game law the jack snipe was left unprotected, in order that the heathen element, if one may use that expression, of the Illinois legislature would consent to a little bit better protection for prairie chickens and quail. The erratic and unsettled habits of the birds have left it out of the plans of the legislative element in many states. Anything has been good enough for the jack snipe. Consequently, in not fully protecting one of our best game birds, we are now to see it gradually and even swiftly passing away from its place as one of the most interesting and desirable of our sporting possibilities.

The Wilson's Snipe. (Galinago Wilsoni; or G. delicata.)

Common names: Jack snipe, English snipe, bog snipe, marsh saipe, shad bird, shad spirit, alewife bird.

Description: Crown black, with stripes of pale yellow over eye and down middle of head. Upper parts brown black, with rufous and tawny markings. Scapulars edged with tawn, showing two lengthwise stripes on the sides when wings are closed. Quills black brown, the outer web of first primary white. Inside line of wings white, barred with black. Rump black brown tail covert tawny and black, tail black at base, running into chestnut and defined by a thin black line, with tips showing a band of white, this black line on the tail showing a narrow line just above the white tips. The three outside tail feathers buff or white, with narrow black bars. Belly white, breast brown, flecked with darker brown. Bill black with greenish cast. Legs and feet greenish slate. Weight $3\frac{1}{2}$ to $4\frac{1}{2}$ ounces. Length $10\frac{1}{2}$ to $11\frac{1}{2}$ inches. Wing spread $17\frac{1}{2}$ to $19\frac{1}{2}$ inches. Bill $2\frac{1}{2}$ to 3 inches.

Range: A bird of widely extended habitat, reaching from the upper portions of South America northward well within the Arctic circle. It breeds as far to the southward as the states of Indiana, Illinois and Wisconsin, in less numbers now than formerly; thence north into the Arctic regions. It winters in the Southern states, the Gulf country, Mexico, Central America and the upper part of South America. It is found in those parts of the United States from the Atlantic to the Pacific which afford it suitable feeding or breeding grounds. It is known along the sea marshes as well as in the alluvial marshes of the interior.

Habits: The Wilson snipe or jack snipe is properly a bird of the marsh, not the "sour ground" or the salt marsh, but fresh water marshes which contain earth worms or small insects. The method of feeding of the jack snipe resembles that of the woodcock, which bird it approaches in the mystery of some of its habits. It feeds upon worms, which it discovers in the earth by means of the sensitiveness of its long bill. At times, but not habitually, it is found on drier country. The jack snipe in its migrations starts north from the southern wintering grounds in the month of February. It appears in the temperate zones in the latitude 42 degrees north in the months of April and May, according to the advancement of the season. On its south bound flight it appears in the month of September at the same latitude. It winters in great numbers in lower Texas, portions of Louisiana and other regions adjacent to the Gulf of Mexico. It got its name "shad spirit", "shad bird" and "alewife bird" from the fact that it customarily appeared in the spring at about the time of the spring run of shad and alewives in such streams as the Hudson. The name "gutter snipe" which one or two naturalists say is given to this bird in lower Illinois, has never been noted by the writer. This bird takes the fullest advantage of its protective coloration, at times lies close enough for the successful employment of the dog, and has many peculiarities which make it a highly desirable game bird. Typically a ground bird, it none the less sometimes perches upon trees or stumps, usually in the nesting season. During courtship the Wilson's snipe exhibits great activity and excitement, and its strange aerial gyrations at that time are curious and interesting. Its twisting and erratic flight and its sharp note of "scaipe" are peculiarities well known to the sportsmen. It is very erratic of habit, much subject to climatic influences but always interesting to the gunner. Its nest is a shallow hole in the ground lined but scantily with grass. The eggs are four in number, olive or olive brown, blotched with reddish brown markings which are most numerous at the larger end of the egg.

The Late James R. Pariser.

The passing away of a good fellow and popular sportsman, "Jim" Pariser, as he was called by his intimates, took place last Monday afternoon, much to the surprise of many friends and under circumstances that were indeed most lamentable. Mr. Pariser was strong and active, and usually enjoyed robust health. On Monday noon he ate his lunch in a restaurant in this city. In the evening at 6:20, after suffering great agony he succumbed to the effects of ptomaine poisoning.

Mr. Pariser was a native of England, aged 58 years, and had resided in Alameda for nine years. He was a member of the Odd Fellows and the Royal Arcanum, the San Francisco Fly-Casting Club, Pacific Striped Bass Club, and as an angler was known all over California. For many years past he had been a prominent figure in the printing business.

Deceased is survived by a wife, Annie S. Pariser, and five children, Mrs. George H. Whitney, Mrs. George Max Webster, Alfred D., Harry M. and Russell A. Pariser.

Malignant Enzootic Anaemia of Kennel Dogs.

Next to distemper, the great black scourge of all carnivorous life, by far the greatest number of deaths among dogs come in early life as the direct or indirect result of intestinal infection by parasites of the worm order.

Unlike the disease which, by reason of our fragmentary knowledge of its etiology, we are still constrained to call distemper, a term which might perhaps with equal or greater propriety be applied to many other ailments of the dog, time and experience has in the course of the comparative study of diseases interchangeable in men and animals already brought the knowledge of both true intestinal worms, and those as trichina which only gain an entrance to the tissues by way of the digestive or respiratory tracts, both from the biological and clinical standpoints, with few exceptions, to be one of the most thoroughly worked out subjects within the horoscope of the educated and experienced practitioner of either human or veterinary medicine, since it has long been recognized as an utter impossibility to acquire anything beyond the most superficial and dangerous kind of knowledge of the lives of these parasites in men or animals without grasping the subject in both, writes Frank H. Miller, D. V. S., Veterinarian to the Westminster Kennel Club, in *Field and Fancy*. This is beyond doubt the one branch which inseparably binds human and comparative medicine, and the one par excellence where during the past two or three decades the constant commingling, as it were, of sparks from the great polishing wheels of the sister schools has resulted in the illumination of many dark and exceedingly dangerous questions relative to the physical life of the men and their fellow-creatures.

Not only have common investigations resulted in great common benefits to men and animals, but there has been going on a constant unearthing, as it were, of facts of great importance lying wholly within the special sphere of one or the other, and for the purpose of present subject, I gladly avail myself of much testimony which has thus appeared in a somewhat complimentary manner regarding *Dochmius Trigonacephalus* of the dog as the possible outside host of the *Dochmius Duodenalis* of man, the recognized cause of the disease variously known to science as *Dochmiasis*, *Ankylostomiasis*, *Egyptian Chlorosis*, *Tunnel-workers' disease*, *Uncinariosis*, etc.

If we carefully scan the literature of the past two decades relative to this disease in man we gain between the lines a comparatively clear insight into one of the most deadly diseases known to canine medicine. I refer to the all too frequent enzootic outbreaks of fatal anaemia and marasmus, such as have occurred in my practice within the past seven years, mainly among the puppies of kennels kept in and near New York City, a disease which, while recognized in foreign standard works upon comparative medicine, is so scantily treated by them as regards etiology, pathology and therapeutics, as to cause it to be wholly or at least most imperfectly understood by general practitioners, and whose relentless destruction, litter after litter, of the entire young stock of kennels, along with the commonly unnoticed parasites, has caused to be coined the term "dry distemper," a term which has no logical reason whatsoever for its existence.

To me the extremely superficial references to these wonderfully important parasites by some of the most careful and voluminous writers of comparative medicine of Europe, suffice to tell of its comparative infrequency in that country as compared with our own, and allowing ample latitude for all possible variation of symptoms due to geographical influences, I can but conclude that much which has already been written has been less the result of actual experience with the parasite than the importance of the subject would warrant.

Little time need be spent by me in entering the purely technical discussion of the biologist and helminthologist, interesting as it may be, as to the propriety with which this small intestinal inhabitant may be grouped with relation to others of the invertebrata, suffice it for the purpose in hand to recognize that this disease, which is a state of anaemia of verminous origin, is directly due to the activity of this small round worm belonging to the *Strongylus* family of Nematodes, and whose macroscopical and microscopical details make it practically impossible for it to be differentiated from those worms infesting the digestive canal of men, which were first discovered and described by Dubini of Milan in 1838, but fifteen years later by Griesinger inseparably connected with the disease of the human family known as *Egyptian Chlorosis*, and subsequently by others as the causative factor in malignant anaemia affecting mankind in many of the tropical regions throughout the world and apparently more or less incidental to various fields of occupation, as among tunnel hudding, brick-making and coal mining well outside the tropics.

While this organism in man and the dog is scarcely distinguishable in appearance, there is, it seems to me, ample proof of its being in each, a distinct biological entity, regardless of the assumption of certain investigators that they have been able to communicate it directly from one to the other by means of the embryonal egg.

My personal experience in the past seven years within this city and its outlying kennels, many of

which have lost hundreds of dogs by this infection without a single evidence of infection among the attendants, many of whom are anything but careful in their appointments, should, I think, be strong corroborative evidence of the correctness of some of the most rigid investigators who maintain that the so-called *Dochmius Duodenalis* of man while having several closely analogous representations in other animals, is essentially a parasite of the human body and transmissible only to a very few of the larger anthropoids as the gorilla. The theory that the worm has an outside host has for ample reasons been entirely abandoned.

Serious as is the condition of anaemia of men produced by *Dochmius Duodenalis*, case for case, the infection of dogs by *Dochmius Trigonacephalus* is much more certainly deadly since there are some essential differences in its manifestations, which preclude either prompt and effectual treatment or spontaneous recovery, both of which are within certain degrees possible in the human.

Similar to the specific anaemia of the human subject within the tropics, but to a much greater degree youth in the dog offers great inducements for its inception, or at least, the conditions under which the young live as to diet and sanitary surroundings appear with great frequency to decide its enzootic nature.

My personal experience with this disease in dogs (and from that alone I speak) convinces me that puppies kept in warm kennels of the usual order have practically no resistance to infection up to the fourth month of age, and dogs of one year and over enjoy great immunity at least from their rapid growth and development, and actual damages of the worm which quickly decide the fate of a weanling.

Unlike its homologue in man, which from its well-defined location in or near the duodenum has fittingly been designated as *Dochmius Duodenalis*, that of the dog, while I have seen rare examples of its presence in that part of the intestine, almost invariably parasites upon the walls of the lower small bowel, its predilection spot being that half section of the ileum lying anterior to the ileocaecal valve, nor have I up to the present time been able to detect living worms of this species in the caecum as Frohner has incidentally mentioned.

The presence of this worm in kennels cannot in the strict sense of the word be said to be the result of the condition, hygienic and dietetic, so commonly accepted by the practical dog man as most conducive to the life and development of ordinary round worms, since I have had quite as serious, perhaps more serious, loss in what would ordinarily be rated as high-class huddings, conducted by the most skillful and experienced attendants, than in the more mediocre kinds and where post-mortem examinations in great numbers have scarcely revealed a trace of common worms as the *Ascaridae*.

While there is little doubt that *Dochmius Trigonacephalus* of the dog, like its counterpart in man, is more or less ubiquitous in tropical climates, clinical and experimental facts in abundance point clearly to the ability of this parasite, not only to gain a foothold but to be able to effectually retain it, at least for some time outside the tropical zone and well north into the temperate zone, wherever puppies, especially those under two months of age, are brought into prolonged contact with the infection, while living under the conditions of heat and moisture resembling tropical conditions so often incidental to life in many of the so-called high-class kennels whose structure and yards retain traces of the secretions and excretions in imperfectly disinfected condition.

I say puppies advisedly since its ravages are far greatest in the dog from the fifth to the tenth week, the sixth week after whelping usually finding all puppies out of existence when born amid these surroundings into a kennel actually infected by this scourge.

The symptoms of this disease which I will give are drawn entirely from personal observation and notes made of animals actually suffering in this region, and quite independent of observations of foreign writers; much of which seems to me exceedingly misleading, at least in the study of cases as seen in America, I would describe in the following manner:

The disease usually manifests itself suddenly in puppies which have previously enjoyed exceedingly good health and growth, although I have seen exceptional cases where the contrary was true as regards condition. The individual is first noticed to be somewhat diffident in the manner of taking food, going to the dish and smelling it, backing away in a loathing manner to again repeat the attempt, possibly taking a very few laps of liquid, and leaving the others to lie down and coil up or stand apart with a sleepy, depressed appearance, frequently yawning.

The appetite, poor at the outset, soon ceases altogether, the coat is noticed to become "staring" and devoid of lustre and dusty in appearance, the body movements are slow and deliberate rather than markedly feeble. There is much drowsiness.

If the animal be taken up for examination in this early stage it will be remarked that the body is usually in satisfactory condition, and not infrequently very fat, with an entire absence of the flaccid abdominal enlargement so characteristic of the presence of the ordinary round worm.

The eyes will be noticed to move sluggishly and to express a peculiarly characteristic appearance of suffering mildness, and are frequently, but in nowise constantly, inclined to slight suffusion with clear lachrymal secretion, with slight puffiness underneath the eyes rather than an actual swollen state of the lids, this latter being more noticeable in the early morning.

Examination of the visible mucous membrane of the eyes, mouth and tongue, especially the latter, will invariably reveal even at the moment of the first visible symptoms the peculiar pallor of extreme anaemia.

[TO BE CONTINUED]

In hot weather there is no drink like Jackson's Napa Soda—plain or in a lemonade.

The New York Show.

All the entries for the third annual dog show of the Ladies' Kennel Association including the belated English and German entries arriving last week, swelled the total list to 1670, an increase of 65 over last year. While a number of new exhibitors and dogs will appear in the show which opened on Tuesday, November 3d in the Madison Square Garden, a few familiar exhibitors of high class dogs will be missing. Most prominent among these will be Mrs. James L. Kernochan, President of the association. Owing to the recent death of her husband, Mrs. Kernochan did not enter any of her dogs, and this will be a distinct loss to the show, for her kennels always contained prize winners.

Most of the other officers, however, of the Ladies' Kennel Association were represented. Mrs. Jules J. Vatable, the Vice-President, showed several French Bulldogs, a class which has shown up remarkably well, proving that they have by no means lost their fashionable hold. In all there was 73 entries of French Bulldogs, being one of the best filled of all the classes. Mrs. Oliver Belmont entered a fine new French Bulldog, known by the characteristic name of Dollar. Mrs. Richard Harding Davis has some probable winners in this class. Mrs. Davis has had a small exhibitor in the past two years, but she has branched out into a variety of classes this season, and, besides her old favorites, she entered in the show Irish Terriers and Russian Wolfhounds. Mrs. William Lenox has also entered several French Bulldogs.

In the Bull Terrier class, Frank and Richard Croker, Jr., were represented, as usual, with some high-class specimens. Mrs. J. E. Smith Hodden of Hempstead and a member of the Ladies' Kennel Association Council, has entered Bull Terriers, and so has Joseph M. Doll, Secretary of the Long Island Kennel Association, which will hold its first show in the Clermont Rink, Brooklyn, the week following the Madison Square Garden show. Mrs. Burke-Roche of Newport has entered two or three of her favorite Bull Terriers, while in the large Bulldog class, which has a total of 112 entries, prominent exhibitors will be Mrs. Pauline C. Gallatin, Thomas W. Lawson of Boston, and the Earlington Kennels of New York.

One of the features of the exhibit is expected to be the splendid showing of old English Sheep Dogs. While there are as yet only fourteen entries in this class, every dog is a magnificent specimen of the breed. Two of the finest ones are entered by C. B. Dillingham of New York, by name Bouncing Lass and Stylish Boy, an English pair just imported, for which the highest price has been paid, it is said, ever known for a pair of Sheep Dogs. It is stated that from \$2000 to \$2500 was paid for the pair. The dogs were first shown in this country at the Westminster Kennel Club show last February, and then went back to England. They have won a long string of blue ribbons abroad.

Another high-class importation brought over for this show is the Airedale Terrier, Bolton Woods Briar, purchased and entered by Theodore Offerman. Foxhall P. Keene has entered his well known Airedale Terriers, frequent winners in previous shows.

A grand lot of Fox Terriers were entered, several new ones having been imported especially for the exhibit. A. H. Hunnewell of Boston has several fine ones. Winthrop Rutherford is another prominent exhibitor, the Selwonn Kennels of Magnolia, Mass., have entered a splendid lot, and the Norfolk Kennels of Toronto, Canada, will be better represented than a year ago. The Misses de Coppet of Narragansett Pier will show a few choice Fox and Welsh Terriers, and the Craig Darrock Kennels will be well represented in the Welsh Terrier class.

Some of the other prominent exhibitors are W. G. Rockefeller, in Beagles; George S. Mott of Babylon, in Pointers; Mrs. Roland Keashy, in Pugs; the Swiss Mountain Kennels of Germantown, Penn., in Pomeranians and Toy Dogs; the Ashton Kennels, by which name Miss Moeran entered her prize-winning Spaniels and other Toy dog varieties; Mrs. D. W. Evans, in Field Spaniels; the Lakewood Kennels in Pomeranians Mrs. H. G. Traver, in Poodles, and Dr. Lougest in St. Bernards. The three black Pugs that have been one of the features of former shows, owned by Mrs. Howard Gould, will not be seen this season, as it is said their period of prize winning in bench shows has passed. Last year they were given but second best.

There was a stronger representation in several classes that, while strong at the last show, were not considered as satisfactorily filled, notably St. Bernards and Great Danes. With forty-eight of the former and fifty-one of the latter, representing the best American kennels of these breeds, the exhibit it is claimed should be one of the best ever seen in the Garden. The Greyhound class has also filled exceptionally well, while the Terrier classes are well up to and in some divisions beyond the mark.

Hunting and field classes are strong, the total of Pointers, Setters, Spaniels, Beagles, Foxhounds and Deerhounds footing up 426, or 25 per cent of the total entries. The Collie class, with a total of 103, is far beyond the record of 1902.

DOINGS IN DOGDOM.

Fred Mansell in his report of the English Kennel Club show states that there were many notable sales. George Raper replacing Rahy Coastguard with a better dog, Rambling Mjor, a puppy of great promise which ran through his classes.

The Norfolk entry included the wire-hair Toss Up, True Blue fit and in good enough a fettle to go against anything, two rattling good puppies and All Blue, a dog that will take a lot of beating.

Mr. and Mrs. Geo. S. Thomas returned from their trip to England on Monday morning last, (Oct. 26),

accompanied by a team of emigrants that will doubtless make history in our kennel world, says *The American Stock-keeper*. In the short time we had to interview the travellers, one could not, without records and such, get at pedigrees and names, previous winnings and so on. Besides, this information in these days of sharp competition is not always advisable to give away. In all there were twenty-three dogs. The Irish Terrier for Selwonk, is a sound dog that has done well. He is by Bolton Woods Mixer and out of a B. W. Mixer bitch, Patty by name, so this should make him a valuable sire. Then there is a Welshman, Cwyst Ritzgleder, that can give a good account of itself. Then there is a whole raft of Fox Terriers, including a dark youngster that will be kept back a bit, and the famous wire bitch Lucretia. There are four smooth dogs, one wire dog, that is a winner on the other side; at two shows he won about six firsts and several specials, just before he came over. Then there is one wire bitch and the rest of the terriers are smooth Fox Terrier bitches for the Sabine kennels, comprising some of the choicest breeding blood in the old country. Mrs. Thomas has not been idle either. In her little lot is an Old English Sheep Dog that is to score a bobtail flush when he gets into the game. Mrs. Thomas cannot keep out of Yorkshires and two came along; one is a last year's Crystal Palace championship winner. Then there are two Pomeranians—a black and a chocolate, small and natty. On the ship were two good Whippets coming over for Mrs. Scully's Bay View Kennels. This lady has also purchased a good Greyhound, which we regret to learn is very ill.

The American Championship Field Trial Club's meeting scheduled for November 23 at Robinson, Ill., has been called off.

The Monongahela trials were postponed until October 27th and were run at Robinson, Ill., instead of Washington C. H. Ohio, as originally intended. Scarcity of birds was the reason for the change.

The date for running of the John Grace challenge cup stake for Greyhounds was announced Wednesday night at the Union Coursing Park draw at Pythian Castle. The stake, which is the richest coursing event in America, will be run on December 5 and 6. It will be limited to sixty-four entries, with an entrance fee of \$25. The total amount of the purse will be about \$4000. With the close of the Waterloo meeting at Oklahoma City the crack kennels of the Middle West will come to this Coast for the winter season and some lively competition is expected.

Tuesday's coursing marked the close of the Waterloo cup, the Waterloo purse and the Waterloo plate, at Oklahoma City, Ok. T. The Waterloo cup was won by Rubber Ankles, owned and trained by James Swoeny and entered by J. H. Rosseter both of San Francisco. Yours Truly, owned by Wilson and Allen of Victor, Col., was second.

Rubber Ankles scored 22 points and Yours Truly 8 points. The Waterloo cup and first money of \$600 went to Rubber Ankles, second money, \$300, to Yours Truly and Roguish Eyes, owned by Bert McFadden, Oklahoma City and Honey Grove Girl, owned by B. O. Walcott, Honey Grove, Texas, each won \$100 as the next two dogs. Lord Brazen, the favorite, was badly beaten by Honey Grove Girl after a no-course run. The Waterloo purse was won by Northern Express, owned by Blake and Smith, Butte, Mont., beating Countess Eva, owned by Carter of Cottonwood Falls, Kas. In this course, which lasted two minutes, as the hare was caught by Northern Express, Countess Eva fell dead. In the Waterloo plate, Celtic, owned by J. Charlton and Sons, Minneapolis, beat Consort, owned by J. H. Rosseter, San Francisco.

In the Waterloo cup the four other dogs than those named that shared in the money were Lady Allen, owned by C. E. Root, New Richmond, Minn.; Sir Magic, owned by John Russell, Cable, Ill.; Cloudburst, owned by Blake and Smith, Butte, Mont. and Lord Brazen, owned by G. Lucy Crawford, St. Louis. The American Derby was run on Wednesday.

In the final course Tatie B, owned by G. H. MacDougal of Butte, Mont., beat Comstock, also a Montana dog. The next events of the meet will be given to-day and to-morrow when the All-Age stakes will be run.

Wandee Coastguard, formerly Raby Coastguard, won in all classes in which he was entered this week at New York and also took first in winners. Wandee Manilla, a new wire bitch Raper brought over, won a reserve, whether in winners or one of the regular classes, we are not yet advised, presumably the award was in winners. Wandee Seabreeze went third on limit and open. We have not heard yet whether Blizzard, True or Mayse were entered or placed. The Fox Terrier competition undoubtedly was a hot one.

Under Richard Croker Jr., Ivel Damon went third in limit and open under 45 pounds. The Bulldog entry, as published, was 112.

Wandee Kennels took the special for best kennel of wire hairs.

San Francisco Show Notes.

The premium list for the December show made its welcome appearance early this week and the demand for it has been constant and steady all week.

Entries will positively close November 23d. The following is a list of offices where entries can be made and information obtained relative to the show: San Francisco—BREEDER AND SPORTSMAN, 36 Geary street and 33 Market street; Sacramento—Matt Coffey; 2503 G. street; Portland—W. W. Peaslee, 452 Sherlock block; Seattle—George Tinto, Sunnydale, Wash., and Chas. McAllister, City Hall, Seattle; Victoria—Frank Turner, 63 4th street; San Jose—

Secretary, N. J. Stewart, Charcombe Grove, Polhemus street.

The classification list is a full one, 309 classes in all. The entry for each dog in each class is \$3.00.

Silver medals will be given to first, and bronze medals to second prize winners in all classes. Hand-some diplomas will be given to winners of first, second, third, and winners in all classes. Other regular awards will be made as follows, but in these cases no diplomas are given: Reserve, Very Highly Commended, Highly Commended and Commended.

In all breeds, entries of bitches with whelps at side will be accepted for exhibition only, for which an entry fee of \$3 for each bitch and litter will be charged.

Parties wishing to place dogs at the show for sale only, and not for competition, can do so by paying \$2 entry fee to cover cost of benching and feeding. Such entries must be made on regular entry blanks.

Special cash prizes are offered as follows: \$20 for handler showing largest string of dogs from California. \$20 for handler showing largest string of dogs from British Columbia. \$20 for handler showing the largest string of dogs from Washington. \$20 for handler showing the largest string of dogs from Oregon. Not less than ten dogs to be exhibited by any handler to be entitled to prize money.

The special prizes published comprises a good list of valuable and handsome trophies, additional specials from clubs and individuals will be announced later on, through the press and in the catalogue. In all cases, where possible, cups and medals will be distributed Saturday evening, December 5th.

In this the club is setting a good example and will undoubtedly establish a precedent in making bench show awards that will be a boon to exhibitors.

A partial list of general specials is the following: The St. Nicholas Hotel offers a silver trophy for the best dog or bitch in show of any breed. The fanciers of Santa Clara county offer the Santa Clara county cup for best dog or bitch from Santa Clara county. The fanciers of Los Angeles offer the Los Angeles county cup for the best dog or bitch from Los Angeles county. The New Russ House, Charles Newman, offers a beautiful cut-glass trophy for the best dog or bitch from San Francisco county. B. W. Cavanaugh, Esq., of Sacramento, offers a handsome silver cup for the best dog or bitch bred and owned in Sacramento county. H. Wachorst, Esq., of Sacramento, offers a silver flower vase for the best of opposite sex to the winner of the Cavanaugh cup, bred and owned in Sacramento county.

The fanciers of Santa Cruz and Monterey counties offer the Santa Cruz and Monterey county cup for the best dog or bitch from Santa Cruz or Monterey counties. Dogs competing for any of the county cups or trophies must be the property of a resident of that county, and not less than five dogs must compete for each cup.

The list of specials given for the various breeds is a liberal one and far too extensive for greater elaboration here; among the list is a number of silver cups, trophies, club and individual medals, etc.

Tommy Banks, Pacific Coast Manager for Spratts, will look after the benching, feeding and disinfecting. This is an assurance to exhibitors that their dogs will receive proper attention.

Pacific Coast Trials.

The Bakersfield trial grounds embrace over ten sections of land which have been reserved for the Pacific Coast Field Trial Club's meeting next January. This territory has been patrolled since last August. Birds are very plentiful and the cover generally to be found on the ground could not be better for field trial work. Secretary Albert Betz is in correspondence with Eastern judges and will shortly announce the club's selection for the January meeting.

Seventeen English Setters and fifteen Pointers, thirty-two dogs in all, remain in the Derby list of probable starters.

The following entries to the Pacific Coast Field Trials Club's twenty-first annual Derby paid second forfeit due on November 1, 1933:

SETTERS.

Clinton E. Worden's black, white and tan bitch Count's Cash (Count's Whitestone-Sport's Belle).

Chas. W. Coggins' white, black and tan bitch Miss Nelson (Tony Boy-Sport's Destiny.)

Same owner's black, white and tan dog Sharon Boy. Same breeding.

John W. Considine's white, black and tan bitch Sporting Duchess (Tony Boy-Sport's Destiny.)

Same owner's white and lemon dog Tony's Tony (Tony Boy-Belton Girl.)

Same owner's black and tan dog Hick's Lad (Doc Hick-Woodcraft.)

Same owner's black and tan bitch Hick's Bab. Same breeding.

John Schumacher's white, black and tan bitch Valita (California Bell Boy-Rod's Lark.)

T. J. Watson's orange and white dog Star's Rod (Starlight W.-Rod's Sylvia.)

B. J. Baum's black, white and tan dog Starlight Jr. (Starlight W.-Rod's Sylvia.)

W. W. Van Arsdale's white and tan dog Klamath (California Bell Boy-Rod's Lark.)

Same owner's white, black and tan bitch Keepsake (California Bell Boy-Peach Blossom.)

Same owner's white and orange bitch Count's Gift (Count's Mark-Verona Schoolgirl.)

J. E. Terry's black, white and tan bitch Countess Lou (Count's Mark-Mary Lou.)

H. W. Keller's orange and white bitch Somora (Llewellyn Drake-Shadow.)

Alexander Hamilton's black and white dog Lady's Lad (Clipper W.-Lady.)

S. Christensen's black, white and tan dog Count Jo (Count's Mark-Mary Lou.)

POINTERS.

W. B. Coutts black and white dog Glen Rose (Glen-dale-Kenwood Rose.)

J. W. Flynn's liver and white bitch Whisper D (Kenwood Dan-Whisper.)

John Schumacher's liver and white dog Frank W. (Don Graphic-_____.)

Clinton E. Worden's liver and white dog Sande-wood (Cuba of Kenwood-Petronella.)

Dr. A. T. Leonard's liver and white dog Wallace Bruce (Kenwood Dan-Whisper.)

Wm. Dormer's liver and white bitch Lize (Ash-bury-Vic's Queen.)

W. W. Van Arsdale's white and liver bitch Sen-orita (Dr. Daniel's-Nancy Jingo)

Same owner's white and lemon dog Mariposa. Same breeding.

Stockdale Kennels' liver and white dog Cuba's Cottonwood (Ch. Cuba of Kenwood-Petronella.)

Same owner's white and liver dog Cuba's Glenwood. Same breeding.

Same owner's liver and white bitch Cuba's Ivy-wood. Same breeding.

Same owner's liver and white dog Cuba's Gen. Jo Wheeler (Ch. Cuba of Kenwood-Florida.)

Same owner's liver and white dog Cuba's Sinew. Same breeding.

Same owner's black and white bitch Fly's Pearl (Cuba Jr.-Winnepog Fly.)

Same owner's white and black bitch Dodge's Stella II. Same breeding.

Coming Events.

Rod.

April 1-Sept. 10. Oct. 16-Feb. 1—Open season for taking steel-head in tidewater.

Nov. 1-April 1—Trout season closed.

July 1-Jan. 1—Open season for black bass.

Aug. 15-April 1—Open season for lobsters and crawfish.

Nov. 1-Sept. 1—Open season for crabs.

Sept. 1-May 1—Open season for shrimps.

Sept. 10-Oct. 16—Close season in tidewater for steelhead.

Nov. 15-Sept. 10—Season open for taking salmon above tide water.

Gun.

July 1-Feb. 15—Dove season open.

Nov. 1-July 15—Deer season closed.

Sept. 1-Feb. 15—Open season for mountain quail, grouse and sage hen.

Oct. 15-Feb. 15—Open season for quail, ducks, etc.

Bench Shows.

Nov. 3, 4, 5, 6—Ladies Kennel Association of America. Madison Square Garden, New York. Mrs. A. G. Evans, Hon. Secretary, Westbury, L. I.

Nov. 17, 18, 19—Boston Terrier Club. Boston, Mass.

Dec. 2, 3, 4, 5—Pacific Collie and Old English Sheep Dog Club. Bench Show in connection with Poultry Exhibit. San Francisco. P. K. L. rules

Field Trials.

Oct. 27—Monongahela Field Trial Association. 9th annual trials. Robinson, Ill. A. C. Peterson, Secretary, Homestead, Pa.

Nov. 2—Michigan Field Trial Association. Annual trials. Mich. C. D. Stuart, Secretary, Riverside, Mich.

Nov. 2—Ohio Field Trial Association. 6th annual trials. Wash- ington, C. H., O. G. R. Haswell, Secretary, Circleville, O.

Nov. 9—Missouri Field Trial Association. Annual trials. Mo. L. S. Eddins, Secretary, Sedalia, Mo.

Nov. 9—International Field Trial Association. 15th annual trials. St. Joachim, Ont. W. B. Wells, Honorary Secretary, Chatham, Ont.

Nov. 9—Independent Field Trial Club. 5th annual trials. Hut- sonville, Ills. H. S. Humphrey, Secretary, Indianapolis, Ind.

Nov. 10—Western Irish Setter Club. 2d annual trials. Dr. T. L. Fenn, Secretary, Chicago, Ill.

Nov. 10—Connecticut Field Trial Club, Hampton, Conn. F. W. Smith, Secretary, New Haven, Conn.

Nov. 16—North American Field Trial Club. 5th annual trials. Can. Alfred Wigle, Secretary, Windsor, Ont.

Nov. 16—Kentucky Field Trial Association. 4th annual trials. Ky. Sam Brown Hays, Secretary, Louisville, Ky.

Nov. 16—Illinois Field Trial Association. 5th annual trials. Robinson Ill. W. R. Green, Secretary, Marshall, Ill.

Nov. 16—Pointer Club of America. Holmdel, New Jersey. C. F. Lewis, Secretary, New York City.

Nov. 17—Nevada Field Trial Association. Paradise Valley near Winnemucca, Nev. Dr. C. E. Wilson, Secretary, Elko, Nev.

Nov. 23—American Championship Field Trial Association. An- nual trials. Robinson, Ill. H. S. Humphrey, Secretary, Indian- apolis, Ind. Declared off.

Nov. 30—Virginia Field Trial Association. Chase City, Va. Chas. R. Cooke, Secretary, Richmond, Va.

Dec. 1—Indiana Field Trial Club. Annual trials. Clay City, Ind. C. F. Yng, Secretary, Clay City, Ind.

—Amateur Field Trial Association of Maryland and Dis- trict of Columbia. Md. Wm. R. Armstrong, Secretary, Baltimore, Md.

Dec. 5—Continental Field Trial Association. Thomasville, Ga. John White, Secretary, Hempstead, L. I., N. Y.

1934.

Jan. 11—Georgiana Field Trial Association. 2d annual trials. Waynesboro, Ga.

Jan. 6, 13—Mississippi Field Trial and Gun Club. Inaugural trials. Holly Springs, Miss. Membership Stake, January 6; Derby and All-Age Stake, January 13. W. De Arnold, Tupelo, Miss.

Jan. 13—Pacific Coast Field Trials Club. 21st annual trial. Cal. Albert Betz, Secretary, 201 Parrott Bldg., S. F.

Duck and Quail Outfits.

The demand at Skinner's keeps up for sportsmen's outfits, ammunition and guns. A large and new stock of goods has been added to fill the demand for hunting suits, rubber boots and hunters' footwear; canvas and folding wooden decoys, gun cases and a new design of leather-covered shell boxes. Peters Factory Loaded Shells are unequaled. Skinner's place is 801 Market street. You can get anything there you need for duck or quail shooting. Send for a catalogue, if you haven't the time to come, and try a mail order.

Strike!—if they don't give you Jackson's Napa Soda when you ask for it.

THE FARM.

California's Triumphant Arch.

A triumphal arch, constructed of the minerals of California, will constitute the entrance to this State's exhibit in the Mines and Metallurgy Palace at the World's Fair.

The height of the arch will be 23 feet and its width will be 17½ feet. All visitors to the California mining exhibit will pass beneath this arch. It will be made up of building stones selected from every county in the State. The base will be of granite. The next course will be of sand stone. Then will come tufa, marble and terra cotta. The ornaments will be bears heads and the State seal. The arch will be graceful and will contain specimens of all the best building materials in the State.

The arch will be a standing invitation to the visitor to view the wonderful collection of minerals which it guards. Behind the arch will be a vast collection of cabinet specimens. A column of lepidolite 16 feet high will be one of the attractive features. This is a beautiful mineral and from it is derived mineral salts.

In the exhibit will also be a great dis-

find also that they are the ones who are most opposed to agricultural schools and experimental stations and would not listen to anything that came from them. I wish to speak as one who has never had the privilege of such a training.

In the spring of 1901 we had on our farm a herd of grade cows, and statistics here given are for the month of June of that year for milk taken to a creamery in comparison with the same month in 1902 for cream from a hand separator. For the month of June, 1901, our six cows gave an average of 172 pounds of milk per day, or 5160 pounds for the month. This milk tested 4.2, which gave us 216.72 pounds of butter, which sold at 20 cents a pound, bringing an income of \$43.34 for the month, or \$7.22 per cow. For making and selling the butter the creamery company charged 2 cents per pound and the over run.

In June, 1902, we had the same herd of cows that gave an average of about the same amount of milk, i. e., 172 pounds daily, or 5160 pounds for the month. This we separated with a separator, skimming out 17 pounds per hundred, or 877 pounds of cream for the month. We sent the cream to the same creamery where we had sent the milk the year before. This they made into butter and sold the over run, a saving of 2 cents a pound. The cream tested 30, giving us 263.1 pounds of butter, or 46.44 pounds more butter than was made from the same quantity of milk

The Pig at Weaning Time.

Where it is desirable to breed the sow when the pigs are six to eight weeks old, they should be removed as soon as they can be depended upon to partake of milk or other soft feed. If one has plenty of good, sweet skim-milk at all times, little time is lost in the growth of the litter by early weaning, while the sow does not get thin and run down as she does when the pigs are allowed to suck after they are old enough to shift for themselves.

Much is to be gained by having two fine, healthy litters a year, and this is easily possible if each litter is weaned at the proper time. I do not believe in leaving them with the sow until they wean themselves, as they depend too much upon the mother for nourishment when they should be learning to eat. Eight weeks is a sufficient time to elapse from birth to weaning.

Have a good, light pen where the sunshine can penetrate every nook and corner, if they must be confined. It is much better however, to confine the sow and let the little fellows have free range for a time, at least. Provide warm sleeping quarters with plenty of dry straw for bedding. Comfort amounts to as much as good feed for little pigs.

If they are slow in learning to eat, give them warm, sweet milk without any ground feed for the first few days, then gradually add the mill stuff until they

which means as much weight as possible in the back, loin and hind-quarters where the high-priced cuts are to be found. Having secured the right kind of an animal the next point is how to obtain the greatest gain in weight at lowest cost. When feed stuffs were low in price and labor was high a feeder acted wisely if he economized labor at the expense of feed. With corn ranging at from ninety to ninety-five cents a hundred he can no longer follow such methods. It is then a question of economizing in grain. The feeder must get more pounds of gain from alfalfa and other feed. In this respect there is great need for investigations pertaining to the advisability or non-advisability of feeding lighter grain rations. If fifteen or eighteen pounds of corn daily for each steer will give as good results as twenty-five and thirty pounds it certainly would be much more economical for the feeder to adopt such methods.

It is estimated that under favorable conditions one female of the mange parasites in ninety days will produce 1,500,000 individuals. Each female lays about twenty to twenty-four eggs which are hatched in about seven days. The young reach the stage of reproduction about the fourteenth day. As the ordinary dips which are used in the treatment of scabies do not kill the eggs of these parasites, a second dipping should be made between the time the eggs hatch and the time when the young reach the age of reproduction. These parasites in nature multiply only on the body of the animal. From the diseased animal they may be transmitted directly to the healthy ones by actual contact but are often left on posts, fences and trees or any object against which the diseased animal rubs to relieve the itching and in this way are spread. They are left on the fences of stockyards in which diseased cattle are yarded or on the walls of cars in which they have been shipped, whence they will be transmitted to healthy animals. It seems fortunate that these parasites do not survive long except on their natural host, the longest time being about four weeks under the most favorable conditions of heat and moisture. Aside from proprietary dips the standard formula for dipping cattle is flowers of sulphur twenty-one pounds, unslacked lime 16¾ pounds to 100 gallons of water.

FERENO 2:05 1 2, Fastest Race Winner of the Year.

play of borax and by-products; copper in large quantities; coal to some extent; an illustration of the oil industry, with the geological formations in which oil is found; cinnabar and quicksilver; kunzite, the new pinkish gem that takes a high polish; gold, silver, and all the mineral substances that have given California her proud standing as a mineral producing State.

Accompanying the ores will be a collection of pictures in which each mineral industry of California will be separately illustrated. California will occupy with entertaining exhibits 6000 square feet of floor space in the Palace of Mines and Metallurgy.

Do Hand Separators Pay?

I have met a number of farmers with whom I have discussed the question whether hand separators pay. I find that many who have had little experience in dairying and no experience with a separator give me an emphatic "No." I

the year before. This increase, if sold at 20 cents, the price of the year before, would give us \$9.28; but because of the saving of 2 cents per pound in making, sold for 22 cents, another saving on the 263.1 pounds of butter of \$5.26, making a total saving of \$14.54 for the month; or, in other words, those six cows made for us in the month of June, 1901, without a separator \$43.34 and in the month of June, 1902, with a separator \$57.88, or an increase of \$2.42 per cow. That is, the separator made an increase in our income of 35 per cent.

This is for the money made from the butter alone, but when we consider the difference in the feeding value of the skimmed milk when fed right from the separator, warm and sweet and milk that has stood in a sour, dirty tank, and then drawn several miles on a hot day, we must add another sum to the separator's credit.—J. F. Breen.

Jackson's Napa Soda is sold in every city, town and hamlet in the State.

become greedy for it. Shorts and ground oats are nutritious, and when mixed with unadulterated sweet milk, form an almost ideal growing ration for small pigs. Give them all the green stuff they will eat. Cut roots and vegetables, clover hay, alfalfa, and pasture of wheat rye, blue grass or anything of the kind procurable, will pay well for all the time and labor required in providing them.—C. B. Barrett.

Success in the production of beef is governed by the methods pursued at the beginning. One important feature of the business is to have the right kind of an animal—one possessing the desired form combined with plenty of quality. Bear in mind that width of back, loin and hind-quarters are indispensable in a good steer. The three factors which determine the selling price of a steer on any leading market are percentage—that is proportion of dressed weight to live weight; quality—that is a thick covering of good flesh over back and loin; and proportion

AT THE Red Ribbon Speed Sale

Standard-Bred Trotters Tuesday Ev'g, Nov. 17

I WILL SELL 4 McKinney Stallions 4 (Two-Year-Olds)

The Best Bred and Fastest in California

(OUT OF SUCH GREAT MARES AS CAROLITA WILKES (dam of 2) by Charley Wilkes; BISCARA (dam of 5) by Director 2:17 out of Bieara (dam of 7) by Harold, etc.; BY BY (sister to Lockheart 2:08½) by Nutwood 2:18½ out of Rapidan (dam of 3) by Dictator, etc.; RUSSELL RUSSELL by Bay Rose 2:30½ out of Oakley Russell by Happy Russell.

Owner, J. H. GRAY, is called East. He has worked these colts on Santa Rosa Track. They have trotted quarters from 33¼ to 38 seconds, and are as sound as the day they were foaled. Handsome as pictures and have size and color; best of disposition. This is the greatest opportunity to get sons of the immortal McKinney ever offered. Besides these remember there is a half sister to Dictum 2:05¼, half brother to Monterey 2:00¼, half brother to W. Foote 2:11, and a score of the best lookers ever offered. There are famous brood mares, perfect drivers, well-matched teams, mares with records, and, in fact, trotters and pacers to suit everybody. Remember the opportunities to get such horses at auction are diminishing every day. Catalogues ready.

WM. G. LAYNG Occidental Horse Exchange, 246 THIRD STREET.

A Notable Importation of Jerseys

Mr. Frank C. Ward has in quarantine at Abtenia, N. J., his last importation of Jersey cattle which he personally selected last summer. The original importation consisted of fifty females and two bulls but one of the females died from the effects of a rough passage on the ocean. All but four of the females rate as two-year-old heifers and are either fresh at the present time or will be by the time of their discharge from quarantine which will be on the 9th of November. The other four are cows somewhat older and will also be fresh. As announced in the advertising columns, this herd will be sold at auction under the management of Peter C. Kellogg on Thursday, November 12th, at Hoboken. It was Mr. Ward's intention to have taken this herd to his farm, but the farm was sold on an option and being deprived of a place to keep the cattle in proper condition the only alternative is to sell the importation at auction.

As a selector of Jerseys Mr. Ward no longer needs an introduction to the American public. His sale of last April gave a favorable surprise to all who saw the high quality of his cattle. In the present case he went in for great udder development, rugged constitution and individual superiority and those who attend his sale will not be disappointed in the character of the stock. While the fall is not a favorable time for high prices, the cattle are so good that if a fair attendance of enterprising American breeders can be attracted to the ring there will be little danger of their being thrown away, but of course the "it" will decide the question when it comes to the issue.

I visited quarantine on the 20th inst., and looked over the cattle. I do not think I ever saw so large a number of heifers in milk or springing on their first calves that uniformly carried udders of such remarkable size. There is not an animal in the lot that is not worthy of a special description as a superior animal, but I shall not undertake to mention more than a few of them.

Mr. Ward took a snap-shot of a silver gray heifer by Furor, of which I send you the picture. She is of extra large size and very shapely, and her enormous udder milks down to a loose wrinkled condition that never goes with a poor dairy cow. Her teats are a fair length, but not as large in diameter as I like to see; this, however, is a point in which she is likely to improve with age. Few look over the herd without remembering her, both on account of her fine individuality and her striking color. I have not sent you her picture because she was the pick of the basket by any means, as I could readily select half a dozen that would suit me quite as well. Unfortunately I cannot specify these heifers by their names for the reason that their registration is now before the Club officials and it is uncertain what they will be called. I would delay this letter until this drawback could be remedied but as the sale is to take place November 12th and California is far away I want the readers of the BREEDER AND SPORTSMAN if possible to know what a good thing is coming before them in time to enable them to avail themselves of the opportunity to be present or represented at the sale. This gray heifer is known in the stable as Lock No. 24.

Lock No. 30 a daughter of Flying Fox recently dropped twin calves and is now milking on her first lactation. She is a little more ragged in her make-up than some other daughters of this \$7,500 bull and is likely to make a large cow. Her teats are just right in size and well placed and she is doing exceedingly well at the pail.

Lock No. 56 is a stunning heifer just fresh. Her bag is a load in carry and, although nature had prepared for that condition, her rear parts are remarkably

large and substantial as compared with her forehead. While I know nothing of the richness of her milk, were she to be in the dairy tests at St. Louis next year, judging her upon form, I think it would take a wonderful three year old to beat her. She is a brownish fawn evidently of splendid constitution. She is now a little throaty but that will soon milk off; her depth of flank is remarkable. To my liking she surpasses anything that Mr. Ward had in his importation last spring.

Lock No. 39 is her stable mate and there is a good deal of resemblance between the two. I hardly rate No. 39 to be as good as the other though in some points she surpasses her and at present has somewhat longer teats. She is not as stylish back of the hips as her mate.

Lock No. 22 is an orange fawn, rangy and handsome, just beginning to spring a well shaped udder with large well placed teats. She has a deep body. Those who admire a high and wide escutcheon will pick her for a good one. She is large and rugged with long, slim tail and looks breezy about the shoulders and neck.

Lock No. 31 is a stable mate of Lock 22 but with some dark shadings in the face which the other has not. Very deep body, teats well apart but at present development, point somewhat askant. Her udder is only half sprung and this may come right by calving time. Her body now is more like that of a cow fully mature than of a springing heifer. By present indications her udder will be of remarkable

A Two-year-old Jersey Heifer of Mr. Frank C. Ward's recent importation; fresh on first calf; milking 18 quarts per day, very rich in cream.

size and she will be a large cow.

Lock No. 64 is a dark orange fawn heifer with dark face shadings and looks younger than most of the other two year olds, still retaining the calf-like expression. She has a substantial deep body, udder not yet sprung but promising well. She carries considerable flesh but has quality with it and I think will be uncommonly handsome when mature. Notwithstanding her strong make-up she is fine of bone; her udder shows plenty of leather and she has the deep body and general conformation that reminds me of old Belle Dame that was one of the stars of the Mountainside herd twenty years ago.

Lock No. 59 is a stable mate of the one last mentioned but looks older and is bigger and equally substantial. Her udder and teats promise well but she will not calve until December. This will put her at a disadvantage at the sale but if she is not a right good one she belies her appearance, having grand length distributed as it should be; plenty of depth and all indications of a worker. She is by Isonomy and a credit to that splendid young sire.

Lot No. 69 is the oldest cow in the importation (and one of only four that rate beyond two year olds) and reminds me in conformation of Mr. Darling's Lida, the dam of Eupidee and other great bulls. She is a dark fawn, low set, deep in body,

sharp at withers, good at back, hips and rump and with a very long, well rounded udder with good teats well placed. Her tail is long and of the whiplash order. She is finer in finish and quality than old Leda was and is very good at the hips which are both wide and deep yet not ragged. She is a gray with dark shadings and a black face, eyes handsome, horns fine, down and in-curving. She is older than Mr. Ward preferred, but he said she was too good to leave behind and whoever sees her will not blame him for the importation.

Lock No. 26 is springing on her first calf and I bring her in this order because I can best summarize her description by saying that she seems to have started out to be a very close imitation of the older cow just described. She is of the Leda type. Her half sprung udder shows six evenly placed teats. She is very deep in the rear flank and her general make-up from the hips back indicate that she will be a remarkable milker.

I will not occupy your space farther with the females than the ten I have mentioned. I could lead alongside of them an equal number from the unmentioned that average with them in quality and probably will bring as much at the sale. I do not wish to overstate the perfection of this importation. There are points in which I would like to see some of the heifers improved, but it is difficult to get everything just right. As long as the essential working quality is evi-

hip and is otherwise of solid color.

I have said little of pedigree for the reason that the papers necessary for accuracy of statement are at the club office in use for registration and not available at this writing. Nearly everything partakes more or less of Golden Lad and favorable out-crosses for the Sultanne blood. The catalogue will give all of that.

PETER C. KELLOGG.

Why Not More Hogs?

When an expert like Professor W. L. Carlyle, familiar with the conditions, says "The Coast States, California, Oregon and Washington, are going to raise the swine from which we in the East are going to breed our stock," it is because he knows, as he also said, that "We have the climate and other conditions which will produce the sinew, the bone and the vitality."

This being so, the wonder is not that stockmen are giving more attention to hog raising but that more general interest is not taken in this profitable line of stock industry. When there is at hand a machine which will convert feed into profitable flesh so certainly, so easily and at so small an investment as the hog, it is surely to be regretted that farmers and stockmen are so slow to take advantage of it. The reasons, however, are not difficult to find and the principal one, probably, is that undue fear is entertained of the danger of disease. "Swine fever" and "hog cholera" have been and are bogies which have deterred investments and even the many marked successes made by hog raisers have not served to remove the fears entertained by more timid folk. And yet there is comparatively small ground for these fears. Although disease exists, the observance of proper sanitary methods will prevent it; careful attention to feeding and environment will keep the herd free from infection, and these ordinary precautions it is surely to be expected that the hog raiser will be willing to take. A contented pig is as profitable an animal as one can have on a farm, but no animal is contented, nor can it thrive, unless it has plenty to eat, a clean place to sleep and a chance to exercise. It requires judgment and care to raise good hogs but there are few animals which will yield better returns for the care bestowed upon them.—*Live Stock and Dairy Journal.*

Milk set when first drawn, or at a temperature of 95 or 93 degrees, will yield all its cream as soon as, or very soon after its temperature has been reduced to 45 degrees if the reduction be quickly made. No method of milk setting will secure all of the cream, but deep cans, immersed in cold water immediately after straining the milk, will come up next to the separator in securing all of the cream.

Jackson's Napa Soda does not tangle the feet

\$100 Reward

For long years we have offered to pay this amount for any case of Lameness, Curb, Splint, Contracted Cord, Colic, Distemper, etc., which cannot be cured by

Tuttle's Elixir

Used and Endorsed by Adams Express Co.

We have never been obliged to pay the reward for obvious reasons. It's infallible in all cases of **Thrush, Cracked and Grose Heel** and all forms of **Lameness.**

Tuttle's American Condition Powders—a specific for impure blood and all diseases arising therefrom. Tones up and invigorates the entire system.

Tuttle's Family Elixir is unequalled as a remedy in the home. We send a sample free for 6c in stamps, merely to pay postage. Send at once for our 100-page book "Veterinary Experience," which we mail free.

Tuttle's Elixir Co., 437 O'Farrell St., San Francisco, Cal.

Beware of so-called Elixirs—none genuine but Tuttle's. Avoid all blisters; they offer only temporary relief, if any.

Immense Agriculture Exhibit.

The building erected at the St. Louis Exposition for its great agricultural exhibit is the largest structure on the grounds, costing \$800,000. The structure is 500 feet wide by 1,600 feet long. The first group is farm equipment, and methods for improving land. This means specimens of various systems of farming, plans and models of farm buildings, the general arrangement and equipment of the farm, and appliances and methods in use in agricultural engineering, i. e., machinery, draining, irrigation, and similar improvement schemes.

Without a fair knowledge of agricultural chemistry, the farmer of to-day is not fully equipped for the fight with the land. At St. Louis he will be able to compare notes, for he will see the results of study and practice about soil and water, charts, census of animals, a history of agriculture in its successive changes, and of the fluctuations in the prices of land, rents, labor, live stock, crops and animal products. Institutions, co-operative societies, communities and associations that deal with or take part in experiments and the advancement of farming will be shown.

The great hay or central portion of the Palace of Agriculture will be reserved for special demonstrations in the more important crops of the United States—corn, cotton, tobacco, the straw-growing cereals and sugar—which are designed to fully comprehend all that pertains to them; to faithfully epitomize these crops, including the tools and implements used in the preparation of the soil, in the harvesting and marketing, in the transforming or manufacture of these crops into marketable products and by-products. These features have never before been demonstrated at any Exposition, and they here revolutionize the art of exhibiting agricultural products.

Specially broad and comprehensive are the displays and illustrations of the products of the cow. All that is modern and pertinent in construction, equipment and management of dairies, creameries and cheese making will be amplified and shown in the most entertaining manner.

The New Orleans Cotton Exchange has taken charge of the Special Cotton Exhibit and will demonstrate cotton in all its forms and features in the center of the great Palace of Agriculture. It will be artistic, comprehensive, complete.

The tobacco exhibit will also be in the central bay of the Palace of Agriculture, and, as with cotton, will be thoroughly representative of all of the tobacco-growing states. It will occupy more than 20,000 feet of floor space and will comprehend every phase of tobacco, its growth, curing and manufacture, together with methods of cultivation and fermentation, and the machinery used in preparing it for the great marts of the world.

The same general idea applied to cotton and tobacco will be carried out as to corn, its culture, harvesting and storing; its manufacture into foods—some forty breakfast foods have corn as a basis—into

starch, into glucose; the extraction of oil from corn and its value as stock food. This feature promises to be one of the most interesting and will have the largest number of interested spectators, since every farmer in every State grows more or less corn.

There will be special exhibits of the straw-growing cereals, rice, wheat, oats, barley, rye, buckwheat, etc.

The sugar and syrup makers will have a section where cane sugar and syrup, beet sugar and maple sugar and syrup will be shown, together with processes of manufacture.

The inedible products of the fields and farms will receive marked attention. Textile plants, cotton, flax and jute will be shown both in cultivation, growth and final manufacture, including processes. Medicinal plants and those producing oils, dyes and tannin and other plants useful and noxious find place to interest and instruct.

Systematic collections of insects, of vegetable parasites, of plants and of animals; appliances for destroying injurious insects and plant diseases; silk worms and bees and their products will be fully shown.

Preparing Poison for Gophers.

Most poison formulas call for large quantities of corn or wheat so I went to the trouble to figure out the amount for one pint of corn. First take five teaspoonfuls of vinegar and have ready one-seventh of a teaspoonful of sulphate of strychnine. When the vinegar comes to a boil add the strychnine and stir with a stick till it is all thoroughly dissolved. Strychnine cannot be thoroughly dissolved in water. Now add to this compound of vinegar and strychnine one-half pint of warm water. Pour this upon a pint of corn and let soak for eighteen hours.

Then pour over it a syrup made in the following manner: Dissolve one-half pint of sugar in one pint of water and let it boil down one-third. Cool it and add a few drops of annis oil which may be obtained at any drug store. The oil emits an odor attractive to the gopher and other pests. Spread the corn out to dry in a safe place and when sufficiently dried keep in a tight jar with a screw cover or a bottle. One grain contains enough poison for a gopher.

To determine quite accurately one-seventh of a teaspoonful of strychnine fill the spoon first with meal or dirt and divide as nearly as may be into seven equal piles. Then put one of the piles into a teaspoon and put as much strychnine in another spoon. Of course if one has fine scales the proportion could be obtained by weight, but farmers frequently have nothing in this line better than a pair of spring scales more or less inaccurate. For a quart of corn or wheat twice the given amounts could be used although the common pint tin must be taken as the standard of measurement.—B. F. Powers.

The character of wool as of the hairy covering of all animals is greatly influenced and modified by climate. The sheep's fleece is its natural protection against weather and equally, as wool is a growth supplied by food, both this and the climate tend to give special character to the fleece. Cold tends to lengthen the fleece and make the fiber of it longer and coarser, but food has its very important effect as well and thus it may easily tend to modify the effects of climate. So it is that the breed characteristics of a sheep become changed gradually by climate and feeding. The result of this is that frequent change of rams is necessary to preserve the desired character of the fleece with exactitude. By strict preservation of these results on a sheep, both as to kind of fleece and form and figure of carcass, it is quite easy to produce a distinct variety of sheep in any locality which in time may become so constant in character as to be entitled to be called a breed. This is not fully realized in a few, nor in perhaps twenty or forty years.

The development of the dairy heifer depends not only upon proper feeding—using bulky, succulent, non-fattening feed—but on such protection from the elements as will render it certain that she never suffers. Early breeding is also one of the important points in the development of the dairy heifer and as the milking habit comes from milking, the heifer with her first calf must be persistently milked, regardless of whether the quantity of milk obtained pays or not. No cow with a six months' period of lactation ever pays, no matter how much or how rich the milk she gives and a long period of lactation is a matter of habit which must be established from the outset. The dairy heifer, therefore, must be milked as long as possible, stimulating the milk flow all the while. During calfblood and later the bulky part of the feed should be large in order that that portion of the milking machine may have large development. The pot-bellied animal is not pretty, but a little of it is no blemish to the dairy calf or heifer.

Sober up on Jackson's Napa Soda.

For Sale---Ben F. 2:10

The unbeatable pacer of 1903, Ben F. 2:10 by Bradmoor. Is offered for sale. Is sound and in fine shape, and will be sold right. Apply to the undersigned. L. R. PALMER, Walnut Creek, Contra Costa Co., Cal.

FOR SALE.

THE PACING MARE SWANHILDA. She is a handsome bay, coming seven years old, a natural pacer and with but little track work can pace a mile below 2:30 with ease. Gentle and kind and has been driven by ladies to buggy. She is a fine roadster and with proper training will make a great race mare. For pedigree and further particulars address W. L. McDONALD, Concord, Cal.

FOR SALE.

FOUR-YEAR-OLD BAY GELDING BY LINWOOD Wilkes 2:30; dam, the standard end registered mare Joanta Skloover by Silas Sklamer 2:17; second dam, Gipsy by Echo 4:02; third dam, Jeao by Black Hawk 7:07. This gelding is a good gaited, square trotter, and with but little work has trotted a mile in 2:25 on the Santa Rosa track. Is an excellent prospect and will be sold reasonable. Apply to DR. J. W. Percherons.

This breed was brought to a high state of excellence in the district once known as LePerche in northern France south of Normandy. Horses from this region have been largely imported into the United States where there are now bred and reared extensively, the first importation to attract wide attention being made fifty years ago into Union and Pickaway counties, Ohio, where they were commonly known as the French. Upon closer study of their origin and history they have been designated as Percherons. From time to time other importations were made and the appellation of Percheron has been firmly fixed upon these horses throughout the United States. Much disagreement has arisen in this country as to the proper name of these horses, principally from the fact that earlier importations of French horses, especially to Illinois and adjacent states, had been called Normans and these French horses have been variously known as Percherons, Percheron-Normans, Norman-Percherons, Normans and French horses, a superfluity of names exceedingly confusing and unsatisfactory. Several attempts were made to compromise on a suitable and popular abbreviation, none of which were successful until the organization of the Societe Hippique Percheronne in France in July, 1883, and the publication of a Percheron stud book in that country finally furnished an easy solution of the difficulty. The American society in the same year decided to adopt and adhere to the only name by which the breed is said to be recognized in its native country—the Percheron. The lineage of a large percentage of the most noted of the modern Percherons seems to have been satisfactorily and definitely traced to the sire Gray Arabian, Gallipoli, imported into France about 1820, and to the Arabian blood is generally attributed the more general gray color—the form, disposition and general characteristics also being very strong evidence of their being of Arabian descent, while their original size is believed to be derived from the large Black horses of Flanders. In France the original color is gray while in this country black is perhaps the favorite. According to high authority the French breeders develop the blacks not especially for quality but to suit the fancy of Americans and if the quality feature is in the smallest degree overlooked there is great likelihood of not only producing an inferior animal but at the same time an altogether too large a one.—*Denver Field and Farm.*

How to Stack Alfalfa.

William Lomas, a Texas farmer writes as follows: On our highly fertilized land, and in a wet weather country, four tons to the acre at one cutting of clover hay, oats and vetches, oats and English peas, and other very successful forage crops were difficult to make into hay, so that we had to haul part of the crop into a clean pasture field to cure, and even then it was often too sappy to keep in a large stack. We made a staddle of heavy brush, or anything that would let the air underneath the stack, and we filled four hushel sacks hard with straw or old hay. These were set at distances along the center of the stack, at the staddle, for our stacks were long, and in these cases not very wide. In building the stack we would tread round these sacks, and pull them up as we built, carrying them up to the top of the roof. Our stacks were built so that the drop from the eaves fell one foot away from the sides of the stack, at the ground, and we thatched all our stacks. On dull mornings the steam would be seen to reek out of these pipe holes just like a chimney, but the hay was safe and good. It was not unusual for careless farmers to lose stacks by spontaneous combustion by neglecting this.—*Wm. Lomas.*

A HORSE FOALD 1897: SIRE SAN DIEGO 8776, dam Belle Emmet by Mambrino Wilkes 6083; 16 bands high, weighs about 1200 lbs.; fast, gentle, drives single or double. Address H. P. H. HAGGETT, Lower Lake, Cal.

BALLISTITE

The Standard Dense Powder of the World.

STILL LEADS AT THE TRAPS OR IN THE FIELD.

Ballistite wins from the limit marks in distance handicaps, at either live birds or flying targets as it always gives the highest velocities with the closest and most even patterns at all ranges. Ballistite is absolutely unvarying in results, being waterproof, smokeless, odorless, without residue, resurges lower than black powder, unaffected by age or climatic changes, and never pits, rusts or corrodes the barrels. Ballistite is sold with above guarantee.

Take No One's Word. Try It for Yourself.

CAMPBELL'S HORSE FOOT REMEDY IS THE BEST REMEDY

EVER USED ON HORSES' FEET. IT PENETRATES and DRIES IN quickly and DOES NOT GUM and FILL UP THE PORES like tar and oil compounds. It is the GREATEST REMEDY ever used to remove SORENESS and FEVER from the foot, and makes it possible to get good services out of a horse working on hard and hot pavements.

It gives natural nourishment to the foot and incites a rapid, healthy growth—ALL DRYNESS and BRITTLENESS quickly disappears.

QUARTER CRACKS and SAND CRACKS are rapidly grown out when directions given in our booklet are followed.

It is a SURE CURE for CORNS, CONTRACTED FEET and NAIL WOUNDS if directions are followed.

It PREVENTS SOUND FEET FROM BECOMING UNSOUND and GROWS a TOUGH, STRONG, ELASTIC WALL and HEALTHY FROG—A FOOT WHICH WILL STAND WORK on race courses.

Many of the best owners and trainers state that for track work nothing equals it. In many cases horses have reduced their records several seconds, due to its use.

It is a CERU'AIN CURE for THRUSH and SCRATCHES We Guarantee That It Will Do What We Claim and Will Refund Money if It Fails.

PRICES:—Quarts, \$1.00; Half-Gallon, \$1.75; Gallon, \$3.00; 2 1/2-Gallon, \$5.50; Five-Gallon, \$10.00.

Books giving full directions for its use and much valuable information as to shoeing are supplied free. Don't fail to read "ad." giving information concerning Campbell's Iodoform Gull Cure in next issue of this paper. It is the best and because of its merits is rapidly displacing all others.

ROSIE WOODBURN 2:16 BY EASTER WILKES

ATTEND THE Red Ribbon Speed Sale

TO TAKE PLACE AT THE

OCcidental Horse Exchange

246 THIRD STREET, SAN FRANCISCO,
TUESDAY EVENING, NOVEMBER 17, 1903
Commencing at 7:45 o'clock sharp.

The greatest care has been exercised in selecting the following well-bred colts and fillies, many of them are being trained at the Pleasanton track where they can be seen daily. Competent judges pronounce them the most uniform lot of handsome youngsters ever seen on that famous course. They must be sold. There is to be no reserve, and as this is perhaps the last opportunity to get the blood of the sires that made California famous it is of vital importance to farmers, horse breeders and lovers of good horses to attend this sale, and get animals they can take pride in and if necessary make money with as many are heavily engaged in stakes. Following is only a synopsis of a few to be sold:

CONSIGNED BY H. C. SANDEBS, ESQ., PLEASANTON, CAL.

Name and Sire.	Dam's Family.
Brown filly (2) by Rey Direct 2:10.....	Birdie McClain by Adirondack, grandam by Oregon Pathfinder.

and many others. I will also sell

7 handsome Shetland Ponies, consigned by Geo. A. Davis, Pleasanton

Every animal is well broken and will be led by the side of a saddle horse. Particular attention is called to the breeding of these horses. Their individuality stamps them as the best looking, best limbed and best developed trotters and pacers ever led into a salesring. Catalogues will be issued at once. Horses at salesyard November 14th.

WM. G. LAYNG, Live Stock Auctioneer, 246 Third St., San Francisco

PALACE HOTEL, SAN FRANCISCO, CALIFORNIA.

TOURISTS and TRAVELERS will, now, with difficulty recognize the famous COURT into which for twenty-five years carriages have driven. This space of over a quarter of an acre has recently, by the addition of very handsome furniture, rugs, chandeliers and tropical plants, been converted into a lounging room—the FINEST IN THE WORLD.

The EMPIRE PARLOR—the PALM ROOM, furnished in Cerise, with Billiard and Pool tables for the ladies—the LOUIS XV PARLOR the LADIES WRITING ROOM and numerous other modern improvements, together with the unexcelled Cuisine and the Most Convenient Location in the City—all add much to the ever increasing popularity of this most famous HOTEL.

Lou Dillon Beats All Trotting Records

To The Troy Chemical Co
Troy N. Y.

Dear Sir Please send my wife
more bottles of "Save the horse"
It is doing great work.

Respectfully
Millard J. Sanders
7 Spring Park
Merrill
Ohio

Sept. 7, at the Fasig-Tipton sale at Sheepshead Bay, a yearling by Escher-Excellenza was being sold by Mr. William Easton, and when the animal was led into the ring he said: "This horse has been suffering from a bog spavin, of which practically no trace remains. He was treated with that remedy called "Save-the-Horse," which all of you know, and it did save the horse—that is it cured him. Now, you know lots of great horses, Morello and others, were successfully raced, and there is no reason to expect that this colt will ever take a lame step." The bidding opened then at \$250, and the colt was sold for \$900 to Mr. J. D. Smith.

Private Stables Jas. Galway, Race Track, Saratoga, N. Y.
I got a bottle of "Save-the-Horse" first of Moseman & Bro. of New York, and used same on ring-bone, curing it entirely. I next used "Save-the-Horse" on two splints and cured them. Have also used it on a strained Pastern Joint, which made horse very lame; it cured this also. I predict a great output of "Save-the-Horse." It has never failed to cure any case I used it on.—EDWARD PEAKS, Trainer for Jas. Galway of 312 W. 50th St., New York, owner of Meltonian.

It is the truths that ring out sound and clear and impressive—actual results like the above from men whose standing and reliability can be readily ascertained—which have made "Save-the-Horse" such a success. Their cured horses are living advertisements, absolute certainties as to the possibility of the remedy for your own case, and with every bottle is a guarantee document as binding to protect you as the best legal talent could make it.

"SAVE-THE-HORSE" Cures Without Scar, Blemish or Loss of Hair.

Applied anywhere, and in all conditions and extremes of weather. Horses may be worked as usual with shin or ankle boots, as no harm can result from destruction of hair or scalding of limb.

POSITIVELY AND PERMANENTLY CURES BONE AND BOG SPAVIN, THOROUGH PIN-RINGBONE (except low ringbone), CURB, SPLINT, CAPPED HOCK, WINDPUFF, SHOE BOIL, WEAK AND SPRAINED TENDONS, AND ALL LAMENESS.

\$5.00 PER BOTTLE.

Written guarantee with every bottle given under our seal and signature, constructed solely to satisfy and protect you fully. Need of second bottle is almost improbable, except in rarest of cases. Copy of booklet and guarantee sent upon application. \$5.00 a bottle at all druggists or dealers, or sent express prepaid.

TROY CHEMICAL CO., Manufacturers, TROY, N. Y.
D. E. NEWELL, 519 Mission St., San Francisco, Cal., Pacific Coast Agent.

QUINN'S OINTMENT FOR HORSES

stands at the head of all veterinary remedies. Such troubles as Spavins, Curbs, Windpuffs, Splints, Bunches have no terrors for a horse if the master keeps and applies Quinn's Ointment. All well known horsemen speak of it in the highest terms:

Miller & Sibley of Franklin, Pa., owners of St. Bel, brother of late Bel Boy, write, "We have used Quinn's Ointment with great success and believe it fulfills all claimed for it. We cheerfully recommend it to our friends." For Curbs, Splints, Spavins or Bunches it has no equal.

Price \$1.00 per package. Sold by all druggists, or sent by mail.

W. B. EDDY & CO., WHITEHALL, N. Y.

TRY IT.

San Francisco, Saturday, November 14, 1903.

ORRIN A HICKOK, the veteran driver, died at Cleveland, Ohio, on Tuesday of this week after a long illness. Orrin Hickok was one of the old guard, and few reinsmen were better known to the people of the whole country. In the early 70's he toured the country with Budd Doble, who was exhibiting the champion trotter Goldsmith Maid. At these exhibitions Mr. Hickok drove the mare Lucy and the two mares, piloted by those two master reinsmen, brought the people in the grand stands to their feet in many an exciting finish. They came to California in 1872, having been guaranteed \$20,000 and expenses for the exhibitions made here. In October, 1879, when General Grant reached San Francisco on his return from a trip around the world, among other entertainments provided was an attempt by the trotter St. Julien, driven by Orrin Hickok, to lower the world's record of 2:13½, held at that time by Rarus. Gen. Grant occupied a seat in the judges' stand and held a watch. The mile was made in 2:12¼ amid much enthusiasm. The old stand now occupies a conspicuous place on the beautiful lawn at Oakland track, having been placed there by order of President Williams when the California Jockey Club came into possession of the property and transformed it into a modern race course. Mr. Hickok campaigned many noted horses during his turf career, among them the great Palo Alto three year old Expressive 2:12¼ and Mr. A. B. Spreckels' great mare Hulda 2:08¾, who won two heats in the \$20,000 Columbia free for all at the Chicago World's Fair and then broke a bone in her ankle and had to be withdrawn after having the race at her mercy. Until a few years ago Orrin Hickok was considered quite well to do, but on giving up the trotters he became a follower of the running horses and lost his all trying to pick the winners. Two years ago he again took up the training of harness horses, and handled Thornway and Clipper at the Pleasanton track for Col. J. C. Kirkpatrick, taking the two pacers to Cleveland in the spring of 1902. He was taken ill soon after reaching there and lost his mind. He was well cared for at a private hospital there until a few weeks ago when he became so violently insane that it was necessary to send him to an asylum, where death soon came to his relief.

BUDD DOBLE, trainer and driver of three champion trotters, reached his California home in Alameda this week with his great trotting stallion Kinney Lou 2:07½, with which he won over ten thousand dollars in purses on the Grand Circuit this year in spite of the fact the son of McKinney was afflicted with a severe attack of catarrhal fever during the early part of the season. Kinney Lou is stabled for the present at Alameda, as Mr. Doble has not yet decided where he will keep the horse during the stud and early training season. After a short season in the stud he will be shaped up for another campaign on the big Eastern tracks. Kinney Lou is a 2:04 horse in Doble's opinion, which all horsemen know is rated at par value all over the country. The great reinsman is very enthusiastic over the champion mare Lou Dillon and says she is the trotting wonder of all ages. He was one of the timers, as all our readers know, when the California mare made the wonderful record of 1:58¾, but marvelous as that mile seems, he is confident she will lower it to 1:55 next season. She has trotted quarters in 27 seconds, and no trotter ever lived that could carry its flight of extreme speed as far as she. Mr. Doble speaks in his usual quiet and modest way of his own success this year after his long retirement, but his face brightens with a smile that is genuine and from the heart when he refers to the grand receptions given him by the public at his every appearance in the sulky at the different cities, and he says, "it was very kind, very pleasant and very gratifying."

A high class road mare with a trotting record of 2:18½ is offered for sale. See advertising columns.

CRESCUS' MILE at Wichita is now under investigation by the American and National Trotting Associations, and when their verdict is announced the truth of the matter will be known. There has not been sufficient evidence given the public as yet, however, to justify the hysterical daily press in its claim that the mile in 1:59¾ was a fake. The first charge, that the track is 180 feet short of a mile, made with so much noise and assurance, has been utterly disproved by official measurement made this week. The track, measured on the inside, is a little over two feet longer than a mile, just as the officers of the Wichita association claimed. There have been statements made by parties who were present and who claimed to have timed the mile of Cresceus that it was as slow as 2:06, but there are many others who timed the mile from the grand stand who state that their watches agreed with the time announced by the official timers. Mr. Ketcham, in a manly way, asked for an investigation of the matter as soon as he heard the record was questioned. The investigation is now going on, and when it is concluded we will know whether the son of Robert McGregor is entitled to the record of 1:59¾ or not. We hope, for the good of the trotting turf that the record was honestly made and will stand, but if it is proven to have been "faked" that every one connected with the announcement be expelled from all tracks under jurisdiction of both the National and American associations.

THE PALO ALTO HORSES, consigned to the Old Glory sale at Madison Square Garden, New York, will be shipped from the farm on Monday next in charge of Supt. Frank W. Covey, and will be the last consignment from this farm to an Eastern sale. There are a hundred or so horses left that will be disposed of at private sale and some probably at auction here in the spring when all breeding will be discontinued at the once great farm and the land turned to other uses. The stallions Monbells, Exioneer and Nazote, about thirty broodmares, and nineteen yearlings will comprise those to be shipped to New York on Monday. Monbells is the last of the foals of Beautiful Bells and is by Mendocino. Exioneer is by Boodle out of the great mare Expressive by Electioneer, and is a grand horse. Nazote is an own brother to Azote 2:04¼ and his colts show that he will be one of the best sires ever bred at Palo Alto. It is a shame and a pity that Palo Alto farm is to be no more, especially as it was the expressed desire of its lamented founder that it be continued.

Best Records of the Year.

Following is a table of the best records for 1903:

Trotters	
Two year old—Grace Bond, by The Bondsman	2:14
Three year old—Sadie Mac, by Peter the Great	2:11
Four year old stallion—Wainscot, by Aley Wilkes 2:16¾	2:10
Four year old gelding—Judge Green, by Directum 2:05½	2:10
Five year old—Lou Dillon, by Sidney Dillon	1:58
Fastest stallion—Cresceus (8), by Robert McGregor 2:17	1:59
Fastest gelding—Major Delmar (6), by Delmar 2:16	1:59
Fastest mare—Lou Dillon, by Sidney Dillon	1:58
Fastest new performer—Lou Dillon, by Sidney Dillon	1:58
Fastest mile, half-mile track—Cresceus, by Robert McGregor 2:17	2:08
Fastest to wagon—Lou Dillon, by Sidney Dillon	2:00
Fastest to high-wheel sulky—Lou Dillon, by Sidney Dillon	2:05
Fastest pole team—The Monk and Equity	2:08
Pacers	
Two year old—Fata Morgana, by Sphinx 2:20	2:19
Three year old—Miss Daphne Direct, by Direct 2:05	2:11
Four year old stallion—Hal Chaffin, by Brown Hal 2:12	2:05
Four year old gelding—Dr. Marvin, by Newtown Boy 2:10	2:11
Five year old—Pan Michael, by Boreal 2:15	2:07
Fastest stallion—Dan Patch (7), by Joe Patchen 2:01	1:56
Fastest gelding—Prince Alert (12), by Crown Prince	1:57
Fastest mare—Darial (10), by Alcander 2:20	2:00
Fastest new performer—Tom Keene, by West Egbert 2:29	2:04
Fastest mile, half-mile track—Dan Patch by Joe Patchen 2:01	2:03
Fastest to wagon—Dan Patch, by Joe Patchen 2:01	1:57
Fastest half-mile—Dan Patch, by Joe Patchen 2:01	1:56
Fastest race mile—Dan R., by Tasco, Jr. 2:19	2:01

The Kenney Bicycle Co., 531 Valencia St., is doing a big business in the McMurray Carts and Sulkeys. You not only save money by purchasing a McMurray but get the most durable, best made, and easiest running cart or sulky in the market. Investigation will convince a Missourian.

Sober up on Jackson's Napa Soda.

Spell Binders of the Turf Press.

"Volunteer" must look well to his reputation as a spreader of ink, as Stanley Waterloo, of the Chicago *Inter Ocean*, is hot on his trail. In his description of the opening day at the Chicago Horse Show Stanley Waterloo says: "A canopy of scarlet and yellow, flooded with light, hangs over the tanbark ring at the horse show. Blare of brass-throated music thrills the blood of men, women and high-bred horses alike. Around the ring runs a walk, which is crowded with sightseers, and banking this walk are the boxes of beautiful women, fair and gorgeous as the hanging gardens of Babylon the Great. Over all the immense galleries run back to the roof hank upon hank of decorous, well-dressed humanity." With a little practice there is no telling what this Waterloo fellow will do. He has "Volunteer" started "South" already, and may keep him stepping some with farther coaching. "Volunteer" did fairly well in his description of the race for the Memphis Gold Cup, working in a number of beautiful word pictures which, while far from being the real thing, are calculated to sooth the minds of those esthetic fellows located within speaking distance of the trotting horse industry. During the race for the Memphis Gold Cup "the sylph-like form of the chestnut mare seemed to float like a winged thing cleaving the air, almost without an effort." Perhaps "Volunteer" beheld the vision he wrote of; certainly no one else at Memphis did.—*Western Horseman*.

Mr. T. J. Weeks, one of the pioneer residents of the town of Santa Cruz, and who bred and owned the mare Nutwood Weeks, dam of Ethel Downs 2:10 and Henry Nutwood 2:29, by Nutwood, has a three-year-old colt from her by Altamont, that is a picture. The colt is as black as night, the only white spot on him being a small star in his forehead, not larger than a silver half-dollar. This colt is only halter broken, but he is a model of symmetry and has great style. Mr. Weeks permitted him to serve a few mares this spring, and expects to have him broken and trained next year. As his grandam was by Williamson's Belmont and produced the trotter Bismark 2:29, sire of Chancellor 2:18, Hazel H. 2:12 and the dam of Lottie Parks 2:16¾, this black colt of Mr. Weeks' is one of the best bred sons of Altamont there is on this Coast. There is a belief among horsemen that the colts resulting from the mating of old horses have an old look. No three-year-old in California ever looked more coltish than this fellow, however, although his dam was over twenty and his sire twenty-six when they were mated.

John A. McKerron, of 203 Mason street, San Francisco, whose harness is used by those who want the best all over the world, and who won the gold medal for the best light harness exhibited at the last Paris Exposition, recently received an order from Cape Colony, South Africa, for several sets of harness. In far off Russia, in India, Australasia and other points the McKerron harness is used, and not a month passes but Mr. McKerron ships an order to some foreign country. Not long since a New York banker sent Mr. McKerron an order for a set of his best harness, and when New Yorkers do that it is pretty conclusive evidence that McKerron's harness must be better than they can get at home or in Europe.

Millard Sanders will not come to California this winter, but will locate at Memphis, where he will have Lou Dillon in charge and will fit her for a further reduction of the trotting record next year. He will take outside horses to train and wants to hear from those who have good prospects that they want raced on the Grand Circuit in 1904

The fast pacing mare Line o' Gold 2:07½ by Online, who took her record at Lexington, was bred as a two-year-old to the fast pacing stallion Hal Dillard 2:04½. She now has a yearling, two year old and three year old by this sire. Her dam is by Great Heart. She will be raced again next year.

Geo. C. Petermann of Mount Eden has a filly foaled this year by Wm. Harold, dam Columbia by Clipper 2:06, that is a very fast natural pacer and can now outstep her dam in the pasture. Columbia is the only foal got by Clipper, as he was gelded after Mr. Petermann sold him.

Lou Dillon will not come to California after all, unless Mr. Billings changes his mind. It is stated that Millard Sanders is under contract with Mr. Billings and will remain in the East this winter. Nearly all the Billings horses will winter at Memphis.

Owners of thoroughbreds should not forget that entries for colt stakes of the Coney Island Jockey Club will close on Monday next, Nov. 16th. Entry blanks can be had at this office. See advertisement.

How is this for a hopped pacer? Prince Alert 1:57 has started in eighty-one races and ten exhibitions, and has paced two hundred and seventy-nine heats and has won one hundred and forty-three.

Ben Walker stands third this year among the money winning drivers. The horses driven by him won over \$25,000 on the Grand Circuit during the season just closed.

JOTTINGS.

THE GRANDEST TWO YEAR OLD I have seen in many a day is at Mr. A. B. Spreckels' farm at Aptos down on the shore of Monterey bay. He is full sixteen hands, and a beautiful chestnut, with a star in his broad intelligent forehead, and two white stockings behind that reach nearly to the hocks. This colt would be a blue ribbon winner at the New York or any other horse show; such style and conformation has he, together with such commanding presence. He has an almost ideal head, with a long lean neck that is arched to perfection. He is a rangy fellow, and no one ever saw a better set of legs under a horse. They are flat, clean and sinewy, and end in feet that cannot be found fault with. Keeping in mind that the colt was a two year old, and trying to picture him as a fully developed stallion two years hence, I did as every other person has that has looked him over—pronounced him the grandest two year old I had seen for a long time. He is by Dexter Prince out of Galata by Stamboul, second dam famous old Jenny, the dam of Hulda 2:08½, Gracie S. 2:22, Gus Spreckels 2:30, and granddam of Dione 2:07½, Venus II 2:11½, and Psyche 2:16½. The combination of Dexter Prince and Stamboul blood in this instance has produced a colt that few breeders would care to show against. He is a trotter, too, having shown a mile out over the heavy half mile track at Aptos Farm in 2:33, the last quarter in 35 seconds. It was raining when the colt was led out for inspection last Saturday and I regret that the conditions were not such that a photograph could have been taken as I am certain my camera would have confirmed all that I and others have said of this colt. Sandy Smith, who is working a half dozen youngsters at Aptos Farm, had written me that he had the handsomest two year old in California in his string, but I had made the usual allowance for a trainer's enthusiasm over the horses he likes. Seeing was believing in this instance, however, and I am willing to testify that Sandy "drew it very mild" when he described this colt to me.

It has been a year and a half since I had visited Aptos Farm, and it was a pleasure to look at the handsome two year olds in Sandy's string that were running by the sides of their dams at my last visit. There is a bay trotting filly by Cupid out of Lilly S. by Speculation, therefore an own sister to Venus II. 2:11½. She is a racy looking filly of very handsome mould, and with two months' work showed a quarter in 45 seconds. She moves much like her sister and we all know that the latter's record should have been somewhere around 2:05.

When the stall of a big growthy two year old by Dexter Prince out of Point Lace by Antevolo was opened I recalled his full sister, Crown Princess, that was sold at the Blue Ribbon sale last year for \$2200, and has this year taken a record of 2:13½. I saw Sandy step her a quarter in 16½ seconds before she went to the sale and thought then she would be a good one. This full brother is ever more promising than she was at the same age, but he is such a big growthy fellow that little work has been required of him.

A bay colt with a white face by Cupid 2:18 out of Gracie S. 2:22, dam of Dione 2:07½, is the last of that old mare's foals. Gracie died last winter. This colt is a natural pacer and one of the boys says he looks just like old Richball 2:12½ when he comes down the stretch.

Talking about pacers, Sandy is handling a three year old chestnut filly by Cupid out of a mare by McKinney that is a hummer. She has paced a mile out over the farm half mile track in 2:23 with an easy quarter in 32 seconds to wind up the trial. This filly is a good enough prospect to take over East where all the heats have to be in 2:10 or better when first money is won. She is one of those level-headed, easy going pacers that requires no hoots or straps or anything else but a quiet driver to sit in the sulky and let her go. If she don't make a 2:10 performer for Cupid the first year she gets to racing it will be on account of accident or sickness.

There is a big, rangy bay mare by Altivo 2:18½ out of Princess Louise by Dexter Prince that has all the appearance of a high class mare and that has trotted a mile in 2:37 this year, with the last quarter in 37 seconds. She is so big gaited that it is hard for her to get round the sharp turns of this track at speed and she had to do the most of her fast trotting in this trial while on the stretches. She is a grand looking mare sixteen hands high and acts like a good one.

Cronje, the five year old by Cupid out of Hulda 2:08½ has not been stepped for two months, but just before the rain set in last Saturday morning, Sandy

let him step a hundred yards or so for my edification. He appeared to be running away at the trot and a better gaited one would be hard to find. He could take a record of 2:20 or better at any time he could be given a few weeks work, and every admirer of Hulda and Cupid will hope to see him given the chance some day. Two of Hulda's foals, are dead—one by Searchlight, the other by Dexter Prince, and as Cronje can certainly take a low mark it would be very pleasing to record his performance, especially as it would make a producer of Hulda, one of the fastest and gamest mares ever seen on a race track. These comprise the string that Sandy has been working a little this summer and they are the first crop of colts he began on when he went to Aptos farm. There is not one with a pimple or a hemish and all are as sound as a hound's tooth, showing they have had the best of care and treatment.

John Williams, who was with Oakwood Park Stock Farm for a long time, has twenty-one head in the yearling barn at Aptos that are about as uniform a lot as one would wish to see. Williams has them all nicely broke and they will be kept up and jogged a little daily for a while yet, but will be turned out when the grass is good. They are by Cupid, Dexter Prince, Aptos Wilkes and other sires, and out of such mares as Dione 2:07½, Hulda 2:08½, Chloe, Miss Valensin, a sister to Czarina 2:13½ and other grandly bred mares.

It is an interesting sight to see John Williams drive a nervous yearling up and across a railroad track for the first time. Aptos Farm is situated entirely away from a public road, and railroads, but it is only a half mile drive through the hills to the town of Aptos where several trains pass every day, and where automobiles are to be often met with. A few miles distant is the Santa Cruz electric line and the yearlings and two year olds are all introduced and made acquainted with all these inventions. As I was saying it is worth while watching Williams drive a colt over a railroad track. If the little fellow balks and shies at the rails and refuses to pass over them, there is no loud yelling or whipping. A few quiet assuring words from Williams are generally sufficient, but if not a half hour's coaxing will not make the trainer lose his temper, and he always triumphs in the end and the colt gives him no trouble thereafter. It is a gift, this ability to make young colts do as one desires them and at the same time keep their confidence and regard, and John Williams has the gift to a remarkable degree.

Among the weanlings are a couple of bays that are given a paddock to themselves, owing to their distinguished ancestry. They were both sired by the champion stallion Cresceus 1:59½, one being a colt, the other a filly. The colt is a dark bay and is a masculine fellow with a head and hind quarters that resemble his illustrious sire. His dam is Czarina 2:13½ by Dexter Prince. The boys at the farm say this colt seems to know that he is one of the royal family, as when running with the other weanlings this fall he would almost always be found at the very highest point he could reach on the hill, looking down on his mates. The filly is a lighter bay and is out of that fast mare Venus II 2:11½ by Cupid 2:18 (brother to Sidney Dillon). The dam of Venus II was Lilly S. by Speculation, second dam Jenny (dam of Hulda 2:08½, etc.) by Bull Pup. These weanlings by Cresceus are, we believe, the only ones on this Coast by the champion stallion, and they are worthy representatives of their royal lineage.

While President Roosevelt made no reference to the matter in his Thanksgiving proclamation every true admirer of the American trotting horse will give thanks on that day that the year 1903 has brought the two minute trotter, and that consequently all the Christmas editions of the horse papers will fail to contain those long annual arguments pro and con as to whether the two minute mark will ever be reached. We are thankful, truly thankful for Lou Dillon 1:58½ and Major Delmar 1:59½ and when the American Trotting Register Association gets through making its investigation of the recent affair at Wichita we hope it will be in time and the result will justify us in being also truly thankful that Cresceus trotted within the two-minute circle.

C. A. Durfee reached home last week from his trip East, the first in many years and the first during which he had a chance to see any Grand Circuit racing. He was at the Readville, Providence, Hartford and one or two other meetings, and saw Lou Dillon make her two-minute mile at the former place. Mr. Durfee has many interesting things to tell of the Eastern tracks and the way racing is conducted over there. One thing that struck him forcibly was the perfect condition of the tracks, and says that at one

of the meetings, after walking up and down the stretch and thinking to himself that it was the most perfect track he had ever seen, he was surprised to hear some of the trainers complaining that it was cuppy. He therefore inspected it again, and more closely, and did find that in one or two places a horse's foot would break a quarter or half an inch. He had not noticed this, as he was accustomed to the California tracks where "cuppy" is the word applied to one when a horse throws out a hatful of dry, loose dirt at every stride. However, he found that the track referred to was not as good as others that he says looked as if they had been sand-papered from fence to fence, so smooth and perfect were they. "And they are kept so during the entire afternoon," said he, "and that is one reason the horses go so many fast heats and last so well." As soon as a heat is ended three or four teams are put to work sprinkling, harrowing and floating, so that the starters in the last heat have as good a track as those in the first. I asked Mr. Durfee if he bought a stallion while East to take McKinney's place, and he replied that he did not, as he left one at home that won the two-year-old division of the Breeders Futurity while he was gone, which was to his mind a little better young stallion than any he saw over East. He referred, of course, to Almeden 2:22½ by Direct, dam Nora McKinney. Mr. Durfee has several young McKinneys at San Jose that he intends getting up and beginning work on right away.

Bert Webster, who went East with Mr. C. L. Griffith's horses consigned to the Blue Ribbon sale at Cleveland last May, and remained there during the summer in the employ of the Pittsburg gentleman who purchased Dolly Dillon, got back to Pleasanton on Wednesday of last week, and on the Monday following went over to Oakwood Park Stock Farm where he has already begun work on a bunch of young horses that will be trained for speed. Webster had great success with Dolly Dillon this year and kept her in the very pink of condition so that her owner was able to win many matinee events with the California mare. Bert drove her several miles better than 2:08 and thinks she will race well again next year.

It is a pleasure to know that Oakwood Park Stock Farm has again begun the training of its colts, and it is to be hoped Mr. Boyd will once more have the farm represented in the stakes and purses on the California and Eastern circuits. No stock farm on the Coast has produced more high class horses for the number bred and to see the Oakwood Park colors once more at the fairs and harness meetings would be a source of pleasure and satisfaction to every Californian. The get of the farm's stallion Chas Derby are making a wonderful showing each succeeding year, and this season he heads the list of stallions that have sired new 2:20 performers, no less than nine of his get having taken new or reduced records in that time or better. There are some grand young colts now on the farm by James Madison, Stam B., and other outside stallions and out of some of the farm's great broodmares, so it will be seen that during the time Oakwood Park has been absent from the races, it has continued breeding and has aimed to produce the best. The horses sold at the California and Eastern sales by this farm have turned out remarkably well and their size, good looks and speed have attracted the attention of horsemen in all parts of the country.

Tom James of San Jose reached home this week from a business trip to his old home in Iowa. He says that times are good in that section, and the Iowa banks are full of money that they are anxious to loan at a low rate of interest. He also says that the young Barondales are showing lots of speed on the Iowa tracks. He saw a three-year-old out of a pacing mare trot a quarter in 17 seconds, and its owner stated that he had worked the colt two months. While he has lots of good things to say of Iowa, he says California in general and San Jose in particular are good enough for him, and he is glad to get back to the land of sunshine, fruit and flowers.

A dispatch from Wichita says the track there was officially measured by representatives of the American Trotting Register Association and was found to be a little more than two feet over a mile. Score one for Cresceus and Geo. Ketcham. Dick Benson was probably talking through his memory when he said the track was 180 feet less than a mile in length. It was his memory that was short instead of the track.

The *American Horse Breeder* aptly says: "Give the man a wide berth who demands money for giving what information he possesses in regard to the pedigree of a noted trotter or pacer. A man who is so contemptibly mean that he will not freely tell all he knows of such a matter is not to be believed even when giving evidence under oath on the witness stand. Fortunately they are but few such in the world."

Notes and News.

Dialhita 2:08½ is to be sold at the Old Glory sale in New York the last of this month.

Cozad 2:11½ has been consigned to the Old Glory sale by his owner, Chas. E. Clark of Fresno.

Prince Direct 2:07, better known as Freddie C., has been fired and is expected to race sound next year.

The Transylvania was won this year by Ed Geers' mule. Scott Hudson and Jim Thompson were outside the money.

Alta McDonald will remain in charge of Major Delmar 1:59½ and expects to still further reduce his record next year.

The 2:10 pacers are getting so numerous that there is no longer any doubt of a 2:10 class filling on any of the Eastern tracks.

The Western Horseman's stake for foals of mares bred this year breaks all records. There are nearly three thousand entries.

Dick Wilson believes he can produce evidence to show that Till, the dam of Prince Alert 1:57, was sired by a son of Blue Bull.

Chas. Derby 2:20, the Oakwood Park Farm's premier stallion, leads in the number of new 2:20 performers. He has nine new ones this year.

Several thoroughbred mares bred to trotting or pacing stallions have been named in the Breeders Futurity for mares bred this year.

Mr. John Hogan, a wealthy horse breeder of Washington has purchased the Dutton ranch near Santa Cruz and will fit it up for a breeding farm.

Jepsen Brothers Company, at 1145 and 1147 Market street, advertise new harness and saddles of high class finish and workmanship at the big store.

Roslyn 2:15, the son of Robert McGregor that sired this season's good pacer Bald Hornet 2:07½, was docked and turned into a high stepper four or five years ago.

Lida W. by Nutwood, dam of Nutwood Wilkes, was this year bred to Searchlight and has been nominated in the Pacific Breeders Futurity for foals of mares bred this year.

Sable Francis 2:15½ by Sable Wilkes out of Francisca, the dam of I Direct 2:12½, is one of the many fast trotters consigned to the Old Glory sale, which opens in New York November 23d.

Faris Stock Farm has named the Fenella by Fallis, bred to William Harold, in the Breeders Futurity for foals of mares bred this year. The foal will be a full sister or brother to Janice 2:08½.

Grace Bond 2:14½ is one of the smallest two year old trotter that started in the big stakes this season, but she got there just the same in two out of three races including the Kentucky Futurity.

Horsemen who were on the northern circuit this year say that Mack Mack by McKinney can trot about five or six seconds faster than he had this year when he made a record of 2:13½.

Among the California horses that will be sold at the Old Glory sale at Madison Square Garden, New York, this month is the trotter Homeward 2:13½. He is the sire of George G. 2:12½, but is now a gelding.

Get one of those Rey Directs at the Red Ribbon sale at the Occidental Horse Exchange next Tuesday evening. They will be worth more money in a few months than anyone will pay for them at the sale.

Joe Maguire, who has been very successful with Winfield Stratton and reduced his mark to 2:06½ this year, will train all of the horses belonging to Ed Gaylord of Denver that are to be raced next season.

There is owned in Montana a three year old pacing filly by Bozeman 2:17, a son of Mambrino King, dam by Kentucky Volunteer, that has paced a mile in 2:10½, last quarter in 29 seconds. She is owned by Senator C. W. Hoffman of Bozeman, Mont.

When those young Rey Directs sold East this year begin to step out in the races next season everybody will want one of that stallion's colts. The time to get one is at the Red Ribbon sale at the Occidental Horse Exchange next Tuesday evening.

Don't miss seeing Ogden the half brother to Monterey 2:09½ even if you don't bid on him at the Red Ribbon sale next Tuesday evening. He is a big fine bay stallion, sired by Egyptian Prince a son of the great Mambrino King. His dam Hattie by Commodore Belmont produced Monterey 2:09½ and Montana 2:18. Ogden can step close to 2:20 and has never been regularly trained. He ought to earn \$1500 net in the stud in any community where breeding is carried on to any extent. Ogden is 16.1 and weighs close to 1200 pounds.

Telling a prospective buyer that your pacer can step a quarter in 30 seconds does not count for much these days. A pacer that has been trained a season and can not show that much speed attracts very little attention in this two minute age.

A half brother to John A. McKerron 2:04½ is to be sold by William G. Layng next Tuesday evening. This horse is a big dashing trotter nine years old and is by California Nutwood and out of Ingar by Director. He is a fine road horse and can show better than a 2:40 clip.

California stallions are well represented in the Old Glory Sale to be held in New York, November 23d. In the catalogue are the get of Adbell, Advertiser, Alfred G., Azmoor, Belsire, Direct, McKinney, Mendocino, Sable Wilkes, Nutwood Wilkes, Oro Wilkes, and many others.

Ed Gaylord has shipped his mare Confianza 2:21½ by James Madison back to Denver, where she will be wintered. At Lexington Confianza worked a mile in 2:10½ and will be raced on the Grand Circuit next season. Confianza is a full sister to Tuna, winner of this year's Occident Stake.

The youngest sire represented in the Breeders Futurity for foals of mares bred this year is a yearling son of Nutwood Wilkes owned by Dr. C. E. Farnum of this city. This colt was bred to the mare Bessie Hock by Hock Wilkes this year and the mare has been nominated in the stake.

The pacing mare Sunshine 2:15 is not by Del Norte 2:08, as heretofore given, but by Del Short, a son of Delmarch 2:11½. Her dam is Royal Flush by Regal Wilkes 2:11½, grandam Abbie 2:26 by George Wilkes 2:22. Del Short was sired by Delmarch 2:11½, dam Embassy 2:21½ by Ambassador 2:21½.

Fillies by Chas. Derby are worth buying, especially when you can get them at your own price. Three extra good ones are to be sold at the Occidental Horse Exchange next Tuesday evening. One is out of a mare by Red Wilkes, another from a mare by Anteeo and the other from a mare by Direct.

M. E. McHenry is determined to break every pacing record with Dan Patch before the season closes. He has them all now except the half-mile track record, and he may decide to ship the great son of Joe Patchen to Birmingham, Ala., or some other fast Southern course to try to beat Prince Alert's 2:03½ on a half-mile track.

The fastest mile of the year in a regular race by a mare is 2:05½, by Ferenio; the fastest mile in a race this season by a stallion is Rhythmic's 2:06½, and the fastest mile by a gelding is 2:06½, by Prince of Orange. The singular thing about these three record holders is that they were all got by different sons of one horse, Baron Wilkes 2:18.

Charlie Whitehead, the well known horseman and trainer of Stockton, Cal., has secured a lease of the Salinas track and shipped his stable of trotters and pacers there this week. Mr. Whitehead will keep the track in shape for training and will rent stalls to others at reasonable rates. He will stand his good stallion Delphi 2:12½ by Director at Salinas track, and should have a good patronage for him as Delphi gets good-looking, well-made horses that have style and speed.

The well known trainer, James Golden, died week before last after an operation for appendicitis. Mr. Golden was always a prominent buyer at the eastern sales of California horses, and will be missed when the Palo Alto horses are sold at Madison Square Garden this month. At the time of his death he owned the trotter Rowellan 2:09½ by Adbell, having purchased him as a two year old at one of the Fasgitt-Tipton sales. Mr. Golden paid \$5000 for the black filly Reybel by Rey Direct at the Blue Ribbon sale at Cleveland last March. He was a resident of Medford, Massachusetts.

A large number of horses and horsemen will remain in Memphis to spend the winter, but Budd Dohle, with Kinney Lou, The Roman and others, ships direct to California. So will Monroe Salishury, with Monte Carlo. Alta McDonald will take Dariel and others to his home near Albany, N. Y. W. L. Snow, with Fanny Dillard, goes to Hornellsville, N. Y. Scott Hudson goes back to Kentucky, with the honor of winning more money than any other driver (about \$86,000) this season. Ed Geers will remain in Memphis. Geers will train a public stable in addition to training for J. Malcolm Forbes.

Four two year old colts by McKinney are to be sold at the Red Ribbon sale at the Occidental Horse Exchange next Tuesday evening. They are all of good size, splendid lookers and royally bred. Cruzados is a bay with two white stockings and is out of Stamboulita 2:27 by Stamboul, second dam Biscarl, dam of four by Director, third dam Biscarl, dam of six by Harold, etc. Calamanco is out of Bonnie Russell by Bay Rose, second dam Oakley by Happy Russell, third dam Oakley by Orestes. Carlokin is out of Carlotta Wilkes (dam of Valita 2:15½) by Charley Wilkes, second dam Aspasia, dam of three, by Alcantara, third dam Miss Buchanan, dam of one and grandam of four, by Clark Chief. Carabina is out of Biscarl, dam of four by Director, second dam Biscarl, dam of six by Harold, third dam Belle, dam of one and of four producing sons, including Belmont 64, by Mambrino Chief. These four two year olds by McKinney are entered in the Occident, Stanford, Pacific Breeders and Kentucky Futurities.

E. E. Smathers took Tom Keene (p) 2:04½ on the New York speedway on Tuesday, and started in to drive with J. A. Murphy, who was out with Free Advice. Tom Keene had the speed, but the soft footing caused him to leave his stride. Mr. Smathers was out next with Queen Wilkes, one of the fleetest of speedway trotters, and was beaten by Nora McKinney, driven by Biayton Ives, the first time down. In a second trial Mr. Smathers beat the McKinney mare.

Jeff Fruitt of Merced, who purchased the yearling filly Lady Paqueta by Marengo King (son of McKinney) out of Paceta by Lone Pine at the Santa Rosa Stock Farm sale in this city a few months ago, writes that she is one of the finest looking yearlings that one would wish to see. She is certainly a royally bred one, as her dam was by an own brother to Palo Alto 2:08½, second dam by Piedmont, third dam by Gen. Benton and fourth dam a thoroughbred mare by imp. Australian.

J. B. Nightingale of Cordelia has several four-year-old colts by Prince Almont that are full of promise. One in particular, Glenn, dam Jenny Wren, has trotted the last half in 1:14, with practically no training. Mr. Nightingale intends handling his colts regularly this fall, so by the time the season opens next year he may be favorably heard from. Among the horses is a three-year-old stallion by Prince Almont that would take a blue ribbon for beauty at any horse show.—*Solano Republican*.

The earnings of Cresceus 1:59½ in the stud and on the turf during the season aggregate close to \$30,000. He earned \$19,500 in the stud and his ten exhibitions in the West, including his marvelous mile in 1:59½ at Wichita, Kansas, aggregate a trifle over \$10,000. When Mr. Ketcham was offered \$100,000 for Cresceus last winter by a Canadian gentleman, some of his friends advised him to sell, but his earning capacity this season indicates that Mr. Ketcham's price, \$125,000, was very reasonable.

Lord Gilbert, now in the hands of Walter Wood, is believed by Denver horsemen to be the next Colorado horse to attract attention on the Grand Circuit. The horse has to his credit a trial mile in 2:18 and a trial to wagon on the Denver track in 2:24, and a second mile in 2:20½, the last half of the second mile having been made in 1:07½. He went a quarter last week in 30½ seconds. The sire of Lord Gilbert is Saraway, who is also the sire of Winfield Stratton 2:06½. Saraway is a brother to Charles Derby 2:20.

M. E. McHenry, driver of Dan Patch, received a telegram from H. M. Savage (Dan Patch's owner) at the Memphis meeting, stating that he would not consent to a match with Prince Alert. "It would be no honor to defeat a hopped pacer," telegraphed Savage. McHenry was disappointed in not being able to accept the deft of Demarest. McHenry wired to Mr. Savage asking that he be allowed to deposit the entire \$20,000, and winner to take all. Mr. Smathers has changed his opinion now, and while he formerly wanted the Prince Alert end of the match, he confessed that he saw but one horse in the race in event of a match, and that Dan Patch.

Frank Work, the veteran road driver and one of the few prominent members of the famous "seal skin brigade" still able to enjoy his horses, is a great believer in sun baths, and during the bright, Indian summer weather, he could be seen comfortably ensconced in a great easy chair, placed in the door of his residence facing Madison Square, enjoying the direct rays of the noonday sun. He sits there for two or three hours at a stretch, reading the newspapers or chatting about the horses with any of his friends who happen to be passing. He seldom drives now; but his love for the trotters is just as strong as ever, and he frequently visits his stables and looks over his favorites.

The Howe family is destined to corner the market on harness horse souvenirs. Murray Howe owns the greatest number of champions' shoes ever collected, which includes shoes worn during their championship trials by Lou Dillon, Major Delmar, Star Pointer, Dan Pan Patch, Prince Alert and many others. A. M. Howe has started to collect whips handled by men who drove champion pacers and trotters to their mark. He owns whips used on Dariel and Dan Patch, the respective queen and king of the wiggling fraternity, when they established their world's records. He was looking forward to adding the Lou Dillon whip to his collection, and was disappointed when he noticed that Millard Sanders drove the Billings marvel to her mark with nothing but reins in hand.

The fastest four year old trotter of the year and the most promising of all candidates for the big events for the slow classes for next season, including such rich trophies as the \$20,000 Bonner Memorial, the \$15,000 Massachusetts, the \$10,000 Roger Williams, the \$10,000 Charter Oak and \$6000 Transylvania, has not won a race or even a heat this season, writes a Lexington correspondent. Allusion is made to the crack son of Rex Americus, John Mc., which great gelding showed in the Walnut Hall Farm Cup race here on Monday last an easy capability of even now as a four year old trotting three heats better than 2:10. He was also well up in the Transylvania, beating out in the various heats such stars among the older brigade as Kinney Lou 2:07½, Hawthorne 2:08½ and George Muscovite 2:09½. In the first heat of the Walnut Hall Cup a dozen watches caught John Mc in 2:08½, and he came back by a separate timing the next heat and the third heat better than 2:10. After the race the gelding's owner, Dr. J. M. McCready, Sewickley, Pa., turned down an offer of \$10,000 for him, and it is the second time this season he has been tendered this amount for his great young horse.—*Stock Farm*.

PACIFIC BREEDERS FUTURITY NO. 4.

List of Nominations Largest in the History of the Stake.

There were 404 mares nominated in the fourth renewal of the Pacific Breeders \$6000 Futurity for foals of mares bred this year. This is a larger number than was ever nominated in a stake in California and shows that this stake is increasing in popularity each year. These 404 mares were named by 252 nominators, and were bred to 105 stallions. Last year with 331 nominations, McKinney was the leading sire represented, having 32 of the mares bred to him that year nominated in the stake. His son Zombro was second with 29, and Nutwood Wilkes came third with 15. Of the 404 mares named this year 24 were bred to Zombro who leads, with Sidney Dillon and Searchlight represented by 17 each, Richmond Chief next with 14, Nutwood Wilkes and Petigru coming next with 12 each. Bonnie Direct and Stam B. are next in line with 11 each, Diablo has 10, and Chas. Derhy, Prince Nutwood, Guy McKinney, Grecco, Nearest and Nushagak are credited with 9 each. Two stallions, Monochrome and Bayswater Wilkes, are represented by 8 mares, five, Athahlo, Alta Vela, Monterey, Washington McKinney and Seymour Wilkes by 7, two, Demonic and Athaner by 6, four, Coronado, Six Bells, Azmoor and Robert Direct by 5, while six stallions, Scott McKinney, Zolock, Falrose, William Harold, Neerut and Capt. Jones have 4 each. Those that are represented by 3 mares are Edward B., Waldstein, Iran Alto, Dictatus Medium, Montesol, Prince Ansel, Del Oro and Athamag. Two each of the mares nominated were bred to Loring, Vinmont, Athadon, Marvin Wilkes, Phal Norte, Strathway, Barondale, Sutter, Sidney Arnett, Kewanna, L. W. Russell, Gaff Topsail, Cassian, Diawood, Del Norte, Cresco Wilkes, Alta Genoa, Conifer, Direct Heir, Chief Whips, Lecco, John A., Stoneway, Bonnie McK., Robin and Jules Verne. The following are represented by one mare each: Boodle, Direcho, Pole Star, Cupid Hook, St. Patrick, Knight, Welcome, Keystone W., Limonero, Royal Derby, Tom Smith, Lynwood W., Guynut, Hambletonian Wilke, Ormanda Wilks, The Commonwealth, McKinney Jr., Billups, Mendocino, F. S. Turner, Alex Malone, Mokelumne, Stickle, Duplicate, Richard B., On Stanley, Dagon, McNear, John R. Conway, McKenna, Boxwood, Peter J., Electrical, Ouhoub, Educator, Pacheco Wilkes, Sir Van and a yearling son of Nutwood Wilkes.

Of the 404 mares nominated there are many with fast records and a number that have already produced trotters and pacers with fast pacers. Lou Milton, the dam of Lou Dillon 1:58 1/2, is nominated in the stake, as is Lida W., grandam of John A. McKerron 2:04 1/2; Bertha, dam of Don Derby 2:04 1/2, Diablo 2:09 1/2 and several others; Elsie by Gen. Benton, dam of five in the list; Fenells, dam of Janice 2:08 1/2; Edith, dam of Idolia 2:09 1/2; Algenie, dam of Kelly Briggs 2:10 1/2; Tone, dam of Agitato 2:09; Belle Medium, dam of Stam B. 2:11 1/2, and many others.

How to Lay Out a Race Track.

A HALF-MILE TRACK—For a half-mile track draw two parallel lines 600 feet long and 452 feet and 5 inches apart. Half way between the extreme ends of the parallel lines drive a stake; then loop a wire around the stake long enough to reach to either side. Then make a true curve with the wire, putting down a stake as often as a fence post is needed. When this operation is finished at both ends of the 600-foot parallel lines, the track is laid out. The inside fence will rest exactly on the line drawn and the track will measure one-half mile, three feet from the fence. The turns should be thrown up an inch, or an inch and an eighth to the foot. The stretches may be anywhere from 45 to 60 feet wide.

ONE MILE TRACK—For a mile track draw a line through an ohlong center 440 yards in length, setting a stake at each end. Then draw a line on either side of the first line, exactly parallel with and 417 feet and two inches from it, setting a stake at either end of them. You will then have an ohlong square 440 yards long and 834 feet and four inches wide. At each end of these three lines set stakes. Now fasten a cord or wire 417 feet and two inches long to the center stake of your parallelogram and describe a half circle, driving stakes as often as you wish to set a fence post. When the circle is made at both ends of your parallelogram you will have two straight sides and two half circles, which, measured three feet from the fence, will be exactly a mile. The turns should be thrown up an inch and an eighth to the foot.

Blanketing Horses.

A blanket is an essential part of the equipment of every stable. It is always necessary when a horse is standing in the stable in winter. A light sheet is about as necessary in summer during fly time. A blanket should always be thrown over the horse in cold weather, or even in the cool weather of Spring and Autumn, when standing after being driven. While the horse is working there is no danger that he will suffer from the cold. If a blanket is used the average horse will sweat and the moisture will be retained, and in this way the danger from taking cold is much greater.

A horse should always be blanketed when standing in a draft or in the stall, using a cloth or rubber blanket as the case may be. After a hard drive and the horse has become heated, do not cover him for about five minutes, letting him steam. Then put on a light blanket; allow this to remain half an hour, then remove this and put on your heavy one. This gives the animal a warm, dry covering, after you have removed the light blanket which is wet from the steam of the horse. A thorough rubbing first, if convenient, is excellent.

In blanketing your horse see that the blanket is

sufficiently large to cover the animal from neck to tail; see also that the breast flaps are sufficient to protect this sensitive part, and that the sides and flank are fully protected. If not do not buy it at any price.

The Great Records.

The fractional times of the fastest miles made during the year are as follows:

THREE FASTEST TROTTED MILES.					
Lou Dillon	3/4	3/4	3/4	Mile.	1:58 1/2
Creseus	30	59 1/2	1:28 1/2		1:59 1/2
Major Deimar	30	59 1/2	1:30		1:59 1/2
		1:00	1:29 1/2		1:59 1/2
	Time of each quarter.				
Lou Dillon	30	29 1/2	29	Fourth.	30
Creseus	30	29 1/2	30 1/2		29 1/2

Dan Patch's Record, 1:56 1-4, Can Be Beaten.

ST. PAUL, MINN., Oct. 23 — W. M. Savage, owner of Dan Patch, who broke the hookies on the Memphis track and established a new world's record, is confident that the big pacer has not even yet shown his best speed and can lower even 1:56 1/4. Mr. Savage said to-day of Dan's summer pacing:

"Dan Patch had not been urged to do his very best by Mr. McHenry in his trials against time this summer, and I knew that once he was called upon to do 1:57 he would make good. When it was definitely settled that Dan Patch would start at Memphis, I told Mr. McHenry to go the limit, and while 1:56 1/4 is good enough just at present, I am confident that the stallion will eclipse this mark if ever called upon to do so.

"How fast can he go? I don't know. He is a wonder for speed and seems to have a tremendous reserve that has even astonished me, and I have of

course studied his work more closely than any one else. All I can say is that he is an exceedingly fast horse. I am often inclined to think he can go in 1:55. I really think he can make that mark yet.

"I am not planning on any more record-breaking, but when the time comes the stallion will show all that is required. McHenry will tell you the same thing."

Mr. Savage says Dan Patch will be shipped to Minneapolis at the close of the season for the winter."

The dead sire Online (4) 2:04 has now five representatives in the 2:10 list, and the singular thing about them is that there is but a fraction of a second's difference between all five, viz.: Junius 2:07 1/2, Lino o' Gold 2:07 1/2, Onoto 2:07 1/2, Strathline 2:07 1/2 and Greenline 2:07 1/2.

Problem—Last season as a four year old Lou Dillon 1:58 1/2 worked a mile in 2:08 1/4. A few weeks ago the four year old trotting mare Angle by Axtell (3) 2:12, worked a mile in 2:06 1/4. Now how fast will Angle trot next season?—American Horse Breeder.

In hot weather there is no drink like Jackson's Napa Soda—plain or in a lemonade.

Warranted to Give Satisfaction.

Gombault's Caustic Balsam

Has Imitators But No Competitors.

A Safe, Speedy and Positive Cure for Curb, Splint, Sweeney, Capped Hock, Strained Tendons, Founder, Wind, Farcy and all lameness from Sprain, Ringbone and other bony tumors. Cures all skin diseases or Parasites, Thrush, Diphtheria. Removes all Bunches from Horses or Cattle.

As a Human Remedy for Rheumatism, Sprains, Sore Throat, etc., it is invaluable. Every bottle of Gombault's Balsam sold is warranted to give satisfaction. Price \$1.50 per bottle. Sold by druggists, or sent by express, charges paid, with full directions for its use. Send for descriptive circulars, testimonials, etc. Address

ROD, GUN AND KENNEL.

Conducted by J. X. De WITT.

Washington Tournament.

Under the auspices of the Seattle Gun Club the ninth annual trap shooting tournament of the Washington State Sportsmen's Association took place at Seattle on October 29th, 30th and 31st. The shoot took place on the local gun club's grounds near Ballard, forty-seven shooters were in attendance during the meet. Three days were devoted to blue rock shooting and one day to live birds. On the first day the weather was perfect.

In the first event E. E. Ellis and Thielman of Seattle divided first money, making scores of ten straight, known traps and angles.

The second event was at fifteen birds, unknown traps, known angles, and was won by Brown of Chehalis, with a score of fourteen.

Denham of Tacoma took the third event, known traps, unknown angles, making a score of fourteen out of a possible fifteen.

Forbes of Spokane was winner in the fourth event, making the good score of twenty birds straight, known traps, unknown angles.

In the fifth event Mack of Seattle, Hillis of Vancouver, B. C., and Hollohan of Wallace, Idaho, tied for first place, with a score of fourteen out of a possible fifteen birds, known traps, unknown angles.

The sixth event was a three man team shoot, won by the Seattle team. The race was open to Washington shooters only, the winners each received a gold medal. The Dayton team won the race last year.

The seventh event, at fifteen birds, was productive of some very fine scores. E. E. Ellis of Seattle and McBroom of Spokane tied for first money with straight scores and several of the others finished close up.

The eighth event was also at fifteen birds, reverse angles. Hillis of Vancouver and Denham of Tacoma took first money, with a score of thirteen each.

On account of the short day several of the events had to be postponed. The shoot for the *Post-Intelligencer* trophy, carrying with it the individual championship of the state, was not pulled off because of a lack of time. Only residents of Washington can compete for it. The Seattle team was composed of E. E. Ellis, Mack and Steel. They made a score of 48 birds out of a possible 60, and won first money. A team from Whatcom finished second, and the shooters from Harrington finished third. Some of the best shots in the association fell down badly in their work because of the strange surroundings and the fact that they were not used to shooting over such swift traps.

On the second day the opening race was: Event No. 9, mixed angles—First money divided between E. E. Ellis of Seattle, H. T. Denham of Tacoma and J. T. Hillis, of Vancouver.

Then followed the match for the *Post-Intelligencer* medal—Won by Fred McBroom of Spokane by a score of 43 out of a possible 50. Dr. Steele of Seattle took first money, while second was divided between E. E. Ellis of Seattle, R. B. Miller of Whatcom and P. J. Hollohan of Wallace, Idaho.

Event 11—First money was divided between P. J. Hollohan and Thielman, of Seattle, each making a score of 14 out of a possible 15 birds.

Event 12—Won by Mack of Seattle with a score of 23 out of 25.

Event 13—Won by Ruppe of Seattle with a straight score of 15.

Event 14—First money divided between E. E. Ellis and Fred McBroom with a score of 19 out of 20.

The day's shooting closed with the contest for the L. C. Smith trophy cup. The race was at 40 targets, viz: 10 at unknown angles, 10 at unknown angles, reverse, use of both barrels, 10 at known traps and angles, 10 at known traps and angles, reverse, one barrel only. Entrance \$4.00, added money \$30. E. E. Ellis of Seattle, winner last tournament received 50% of the purse. The winner of the cup proved to be Dal Cooper of Whatcom, who scored 36 out of 40 targets. First money, 50% of balance of the purse went to Forbes of Spokane, second money, 30% of balance was divided between Ellis and Miller of Whatcom.

The winners in the races on the third day were as follows:

Fifteenth event, 25 birds, reversed angles. Seven men divided first money, Mack; Seattle; Forbes and McBroom, Spokane; McDonald; Harrington; Brown, Harrington; Cooper, Whatcom, and Dixon all made the same score, 22 breaks.

Sixteenth event, 15 birds, was shot during a fog. Thirteen was the top score, made by four shooters, Shields, Harrington; E. E. Ellis, Seattle; Cooper, Whatcom, and Stevens, Pomeroy.

Seventeenth event, for the Hunter Arms Company medal, valued at \$50, 25 birds, reverse, unknown angles, both barrels—Won by E. W. Brown, Harrington with a score of 22. Second money was divided by C. D. Ellis, Harrington and J. T. Hillis, Vancouver, B. C.

Eighteenth event, 20 birds—Won by Mack, Seattle, with a score of 19.

Nineteenth event, which decided the general average contest—Won by E. E. Ellis Seattle who broke 24 birds out of a possible 25.

This race makes E. E. Ellis of Seattle the crack shot of the Northwest, he won thereby a fine gold medal, given by the Washington State Sportsmen's Association to the man making the highest average in three days' shooting. Mr. Ellis won this honor,

after one of the most exciting contests in the history of the association.

When the last event was called Saturday afternoon, Ellis and Mack of Seattle, Cooper of Whatcom, and McBroom of Spokane were all bunched for first place. Ellis won the race by making a score of 24 out of a possible 25 in this event, and this score put him two birds ahead of Mack of Seattle and Cooper of Whatcom, who tied for second place.

When the shooters took their places at the traps for the last event, Cooper led Ellis by two birds for first place, Mack of Seattle led him by one bird on the three days' shooting, and McBroom had him tied. Cooper broke hut 20 of his 25 birds, however, and McBroom and Mack could not get above 21. Ellis made a grand stand finish by putting up pretty nearly a clean score, and walked off with the highest honors of the tournament.

On account of the dark days, and a slight wind blowing directly across the traps, the elevation of the shooters above the ground, and the fog that floated in nearly every afternoon, but very few clean scores were made during the shoot. This necessitated the postponing of the live bird events until Sunday and other changes as well from the scheduled program. The ninth annual tournament, however, was pronounced by all in attendance to be the most successful meeting in the history of the association, and the credit for handling the affair goes to the Seattle Gun Club.

The averages made by the shooters during the three days follow: E. E. Ellis, of Seattle, winner of the \$25 gold medal and \$15 additional, 316; Mac, of Seattle, and Del Cooper, of Whatcom, 314; Fred McBroom, of Spokane, 313; Jack Forbes, of Spokane, 304; Peter Hollobau, of Wallace, Idaho, 299; Brown, of Harrington, 295; Steele, of Seattle, 288; Shields, of Harrington, 287; McDonald, of Harrington, 285; Mitter, of Whatcom, and Garratt, of Seattle, 284.

Of the forty-seven shooters in attendance, twenty-three men shot through all the events, and were given a standing in the general averages.

The blue rock high average moneys amounted to \$106, divided into ten prizes. The medal and \$15 went to first, \$25 to second and \$20 to third high average. The value of the three trophies offered amounted to \$160. The added money in the blue rock events footed up \$460.

On Sunday, November 1st, the live bird events came off at "The Meadows." The main event was a twenty-bird race for the *Spokesman-Review* medal emblematic of the State live bird championship. Entrance was \$10, added money \$75. Del Cooper of Whatcom, winner last year, received 50% of the purse. The winner of the medal was Mack of Seattle, who scored twenty straight. As the birds this year were an unusually good lot, all strong flyers, the score made by Mack is a very good one. W. A. Hrsdy of Seattle, H. T. Denham of Tacoma and R. C. Reed of San Francisco tied for second place with a score of eighteen. This meant a division of first money, 50%.

There were twenty-eight entries, and besides the shooters mentioned before, the following got inside the money: Third place, second money: Howe, Portland; "Dickson," San Francisco; E. E. Ellis, Seattle; Farnsworth, Tacoma; Halstead, Tacoma; Robertson, San Francisco; Miller, Whatcom, and S. McDonald, Harrington. These men tied on a score of seventeen birds.

Third money was divided between Hollohan of Wallace, Idaho; Stevens, Pomeroy; Hillis, Vancouver, B. C., and Cooper of Whatcom. They all made a score of sixteen.

The three men inside the first money divided between them \$53.75; second money paid, \$32.25, and third money, \$21.50. Each man shot from the 30 yard mark, in squads, at known traps.

After the championship race had been shot a number of pool shoots were pulled off. These contests were from unknown traps. Two miss and out races were also shot.

The shooting began shortly after 9 o'clock A. M. with a five-bird match as a preliminary, and the pop of the shotguns kept up until late in the afternoon. About 850 birds were shot out of the traps, and quite a number of them got away.

The shoot was probably the last live bird contest that will be seen in the state, as the constitution of the association has been so amended as to prohibit pigeon contests in the future.

The association held its annual meeting and election of officers at the Rainier-Grand Hotel Thursday evening, and determined upon Harrington, Wash., as the place where the next annual tournament will be held. The association passed a resolution authorizing the drafting of a new constitution and ordering several changes in the by-laws.

Following are the officers elected for the ensuing year: President, Samuel McDonald; Vice-President, A. Shields; Secretary-Treasurer, C. D. Ellis, all of Harrington; Directors—Peter Hollohan of Wallace, Idaho; George Baker of Dayton, and E. E. Ellis of Seattle.

Fish and Game Exhibit.

A characteristic feature of the building set apart for the displays of fish and game and forestry exhibits at the Universal Exposition of 1904 will be its central nave, eighty-five feet wide. Its ends will also be eighty-five feet wide, and without posts. The chief interest in this department will undoubtedly center

in its live fish and game, which will be displayed by a number of the States. The aquarium will be located in the east end of the building, and occupy a space of 185 feet long by thirty-five feet wide. It will have two lines of tanks, separated by an aisle fifteen feet wide. In the nave, beginning in front of the aquarium, and extending west to the center of the building will be a series of pools for large fish and other aquatic animals. The central pool, forty feet in diameter and five feet deep, will contain a collection of marine specimens. The pools will be very large and accommodate fish and other creatures of great size.

Another great attraction in this portion of the building will be the groups of living game birds, especially the pheasants, quail, wild turkey, and other species known to the sportsman, representing a range of country from the Atlantic to the Pacific, and from Canada to the Gulf of Mexico. The displays of hunting equipments will be interesting. A large space will be allotted for the exhibition of rifle targets. The various implements required by sportsmen—decoys, gun chisnets, tents, camping and hunting equipments, will be shown in great variety.

There will be an especially fine collection of oil paintings, photographs, and drawings, while in taxidermy, furs, game trophies, products of hunting and fishing, literature, fishing equipment, including native appliances, modern netting, boats fully rigged for fishery work, artificial flies, reels, and all other tackle the competition seems very active.

The methods of the salmon fishery will be exhibited in a very attractive manner, illustrating the fishing grounds, the methods employed, and the products obtained. The methods and apparatus of marine and fresh water fish culture will also have an important place in this section of the building.

Tuna Club Prize Winners.

The fishing season at Catalina Island has practically ended, that is so far as the sport under the recognition of the Tuna Club is concerned. The anglers who have fished in conformity with the club rules this season received various prizes last week at Avalon from the Tuna Club.

Tuna fishing proper was almost a complete failure this year, only five of these fierce fighters being caught. There was but one "hutton" tuna landed, that is, a fish weighing more than 100 pounds and entitling the one who caught it to be admitted to membership in the Tuna club. This particular fish was caught by Eugene Atwood of Stonington, Conn., and weighed 144 pounds, but in the capture he failed to land his fish without assistance, and thus failed of membership.

By reason of the fact that there were no "hutton" fish and no records broken a number of prizes set apart for these particular events were not awarded.

For the first tuna of the season, H. E. Smith of New York received a fine sgate-tipped rod. The score for largest tuna of the season, for which Montgomery Bros., jewelers, of Los Angeles, offered a special silver cup, was tied, H. E. Smith of New York city and B. F. Alden of Chicago each taking one weighing 94 pounds. They will each have their names inscribed on the cup.

For the smallest tuos, H. L. Packard of Bakersfield, Cal., was awarded a rod.

In the line of hlsck sea bass Edward Llewellyn of Los Angeles received both first and second prizes. His largest fish weighed 425 pounds, which establishes a new record. The second largest weighed 379; for each fish Mr. Llewellyn received a rod.

The prize for the smallest black sea bass, which weighed hut 34 pounds, fell to T. McD. Potter of Los Angeles, for which he received a rod.

For largest white sea bass, 52 pounds, William Potter Adams of Chicago was awarded a tackle box.

For second largest white sea bass, 51½ pounds, Ernest Fallon received a gaff.

For catching the largest yellowtail, 46 pounds, F. P. Newport of Los Angeles was awarded a rod. W. A. Holt, M. D., of Globe, Ariz., had the second largest, 44 pounds, and received a gaff.

For the largest allicore, 38 pounds, John Vao Llena of Los Angeles received a rod.

For largest rock bass, 9½ pounds, Rev. H. D. Ward of Huron, S. D., received a line dryer.

For largest whitefish L. G. Murphy of Converse, Ind., received a gaff.

Harry Doss received a fine agate-tipped, silver-mounted rod for having in commission the best-equipped launch over four horse power.

Harry Nichols received a similar rod for best equipped launch under four horse power.

Harry Elms, the boatman taking the first tuna of the season, was awarded a rod.

The present holders of cups and records are: Largest tuna—C. F. Holder, Pasadena, 1899, 183 pounds; Col. C. P. Morehouse, Pasadena, 1900, 251 pounds; F. S. Schenck, Brooklyn, N. Y., 1901, 158 pounds; F. V. Rider, Avalon, 1901, 158 pounds; John E. Stearns, Los Angeles, 1902, 197 pounds. Black sea bass—F. V. Rider, Avalon, 1898, 327 pounds; T. S. Manning, Avalon, 1899, 370 pounds; F. S. Schenck, Brooklyn, N. Y., 1900, 384 pounds; A. C. Thompson, Pomona, 1901, 384 pounds; H. T. Kendall, Pasadena, 1902, 419 pounds. Largest yellowtail—F. V. Rider, Avalon, 1898, 41 pounds; F. S. Gerrish, Jacksonville, Fla., 1899, 37 pounds; R. F. Stocking, Los Angeles, 1900, 48 pounds; T. S. Manning, 1901, 33 pounds; Dr. Trowbridge, Fresno, 1902, 47½ pounds.

All of which goes to show that there is a deal of sport to be had by salt water anglers in and about the waters of Catalina Island. The mooted question, whether the so called "leaping" tuna or the "marine racehorse" of Aransas Pass or the Florida waters (as Jack Cracknell designates the tarpon) is the gamiest and most vigorous antagonist for the fisherman is still an open one. Both fish have their champions among the brothers of the angle.

Malignant Enzootic Anaemia of Kennel Dogs.

[Continued from last week.]

There may be noticed a strange metallic odor from the breath and not infrequently the tongue is deeply coated. Examination of such cases in my hands has extremely seldom revealed the presence of marked sensitiveness over the abdomen or the condition of local oedematous swelling of the limbs and head, mentioned by foreign writers, nor have I ever discovered even in a single case the tendency to escape of blood from the nose as noted by them, as being a more or less characteristic symptom of this disease in dogs as seen in Europe; the whole condition, upon the other hand, pointing to the general absence of tendency to extravasation of blood in any superficial part of the body.

The bowels are usually extremely torpid and inactive from the first with excreta of a dark, tenacious consistency and bad odor, not altogether unlike that marked in distemper, and which, when examined microscopically, shows abundance of the ova.

The pulse, at first normal, soon becomes low in tension and the heart weak and fluttering in its action.

Temperature is seldom elevated and very frequently decidedly sub-normal. While pain is rarely evinced by palpation, the body movements, upon the whole, would indicate that animals are not entirely free from such.

As the anaemia increases the animal becomes more and more depressed, absolutely refusing to take nourishment of any kind, and lies rolled up in a state of somnolence, bordering upon and early giving place to coma.

The skin of the sufferer is almost devoid of resilience, scarcely enough tonic being present for it to resume its normal position when gathered up in folds between the fingers and liberated.

Well-marked latitude exists in the time elapsing between the initial symptoms and the death of the animal, for such is the termination of practically all those infected, especially between one and two months of age; but two to five days usually limits the suffering, although exceptional cases (especially in very young animals) linger for many days in a state of perfect coma before death comes to the relief. All animals of an infected litter usually disappear, one after another, in rapid succession, showing identical symptoms, none of which, as it may be seen, in anywise, even in the least degree (with the exception of the dark stools) resemble distemper.

The autopsy of such cases reveals a condition of body strictly identical to that found in autopsies of the human subject whose death has been caused by *Dochmius Duodenalis* (Egyptian Chlorosis), and from many notes carefully taken may be set forth as follows:

The cadaver begins to show early putrefactive change, and is marked by an odor which reminds of the peculiar metallic smell of the breath detected in the early physical examination.

The muscular coats of the abdomen and the subcutaneous tissues, while not, as a rule, markedly thickened by it, show a peculiar glistening watery infiltration with great pallor of all structures and but little blood in evidence. The opened abdomen frequently shows an abundance of mesenteric fat, and as a very general rule contains a few grammes of serous fluid of a pale straw color.

The intestines and organs, as liver and kidneys, are pale in color and as a normal condition of youth essentially very fatty in texture.

Experience in great numbers of these examinations, along with careful regard to the findings of expert pathologists in making autopsies of humans subject to the disease, has taught me also to be able to establish the presence of the *Dochmius* in the intestines of the dog before their contents are exposed by opening, by the distinct and diagnostic appearance of the small intestines as they lie in the opened abdomen.

There is to be noticed a total absence of the peritoneal gloss of the intestines normally present in the healthy animal, and upon closer observation this lack of lustre will be found due to a sort of granular, or, more graphically speaking, morocco-like surface of dull white peritoneum, which, however, cannot be said to be in the least marked by inflammation or effusion. Such sections of bowel when taken between the fingers are invariably found to be quite firmly, I might say, almost rigidly contracted upon themselves, giving the feel and appearance of stiffness.

There are seldom any other ocular evidences of disease in the abdominal organs.

Upon removing the viscera and opening the same from the stomach downwards there is noted a lack of both food and symptoms until the lower part of the small intestines is reached, when the scant intestinal contents, yellowish above and gradually growing darker in color, suddenly begin to grow more caseous and granular in consistency and attain a reddish hue, soon to deepen in degree into maroon-red, due to the presence of blood in a more or less broken down condition.

With even careful inspection of the intestinal contents there is seldom noticed evidence of animal life until the material is spread out upon a suitable background and the mucous membrane cleared off, when for the first time the exceedingly small, almost microscopic worms, measuring from three-eighths to five-eighths of an inch in length, are revealed lying closely to the membrane and always firmly attached to the same by their heads, provided the examination be made within six or eight hours of the animal's death.

I have, up to the present, failed to find traces of worms imbedded either totally or partially within the folds of the tissues, as mentioned by some European writers.

In young puppies the distribution of the parasites seems to be generalized over the surface, their num-

bers usually varying from fifty to two hundred examples, in strange contrast to which the numbers found in this disease in the adult dog appear comparatively small.

A few of the most virulent cases which I have ever studied occurred in ten months old puppies and adult dogs, whose illness almost invariably took the form of rapid profuse dysentery with pure blood stools and collapse, death occurring within a very few hours, examination in such cases showing extremely few parasites, frequently not more than ten and seldom more than fifty, these being almost invariably grouped into very circumscribed patches over the small intestines. The intestinal contents of such cases was blood pure and simple.

Close examination of these worms will show their very uniform size to be almost diagnostic, since other varieties usually vary in size very materially, no matter at what age examined; especially is this true of the ascaridae, which also require three to four months for their development.

The location in the small intestines removes the probability of their being mistaken for *Oxyuris Vermicularis* which alone infest the large bowel of the dog.

When removed upon a suitable background for examination these worms will be seen to possess certain peculiarities of outline corresponding to sex.

The female, which in the cases in puppies outnumber the male about two and one-half to one, measuring one-half to five-eighths of an inch in length, are exceedingly thin and slender in form and white or pinkish white in color, with a fine taper and pointed at each extremity, the head slightly flexed dorsally.

The male are in slightly paler and in adults, without exception, shorter than the female, and while bearing the same gross characteristics at the anterior extremity, terminate posteriorly in a visible expansion, which, to the unassisted eye may be said to be club-shaped.

Examined microscopically both sexes are noticed to be armed anteriorly with a most formidable array of head apparatus, consisting of a thimble or band-like process, which is in turn supplied with what appears to be six large hook or gall-like teeth directed centrally. The two upper processes are, however, more properly speaking, inflexions of the annular band.

The adult female when taken from the average case in puppies is invariably noticed to contain great numbers of ova, the posterior, or tail, being acutely pointed; the posterior extremity of the mole, however, terminates in a trilobate filamentous capsule or membrane of a decidedly trumpet shape, the form of which is dependent upon the constant presence of eleven chitinous rays or finger-like processes, one of which is bifurcate at its summit. Carefully prepared specimens show two thread-like spiculae projecting from this caudal appendage, one of which corresponds to the male sexual organ.

The longitudinal black line, mentioned by writers as diagnostic of this species of worm, I find very indistinct and frequently entirely absent in my cases in young animals, but very well marked indeed in those cases of older dogs which suffer. The caudal expansion of the male and disparity of size in sex, however, are the best and only necessary elements for differential diagnosis.

The microscopical examination of the contents of the female body shows along with the myriads of oval ova great numbers of red blood corpuscles in various stages of maceration and digestion, but inordinate numbers of which appear in quite normal condition.

Examinations of the intestinal contents of animals dead from this disease, especially when taken from the area of infection, also reveals the presence of great numbers of red blood cells in all stages of destruction as well as great numbers of the ova.

If a strong hand glass be used upon the mucous membrane at the various points of irritation there may frequently be observed the distinct puncture marks of the teeth of the parasites now filled with coagulated blood. There is little evidence of inflammatory change in the tissues except in the immediate vicinity of the punctures.

The mesenteric lymph nodes are usually oedematous to a slight degree in the majority of cases in young puppies, but I have noted not only much enlargement, but well-defined haemorrhages of the nodes in a few cases of extremely acute character in adult dogs dying after a few hours' illness, as is usual in such cases.

The kidneys upon close examination are usually found more or less oedematous.

The thoracic organs usually fail to show symptoms beyond those incidental to anaemic conditions, as paleness and tendency to oedema of the lungs, ante-mortem clots in the cardiac chambers and clear effusion in the pericardial sac.

There was no post-mortem evidence in the multitude of cases which I have observed such as would likely to be more or less well defined in cases of non-specific anaemia, as chronic general enlargement and nodular lymphatics, enlargement of the spleen, gastric ulcers, etc., nor have I been able to establish anything approaching the amyloid conditions of the liver and kidneys, one of the conditions said to frequently mark the occurrence of the disease in man. Its absence in the dog is no doubt due to the short duration of the illness and the rapidity with which his death is induced.

[TO BE CONTINUED]

Mr. Thomas S. Griffith, owner of the Glen Tana Colle Kennels, Spokane, writes us:

I am pleased to state that I shipped November 3d two fine Collie pups to Memphis, Tenn.; a sable bitch, dam Cairngorm Ethel sired by imported Braehead Commander, and a sable dog, dam Cairnbrogue Louise, sire imported Lenzie Prince, winner of forty seven first prizes. I bred the great prize winner imported Moreton Vesta (dam of Miss Tuffet) to imported Rippowam Archer, also a big prize winner, and can only look forward anxiously for what I believe will be excellent results.

Some Northwest Terriers.

Irish and Scotch Terriers are gradually coming to the front on the Coast and the many good qualities and sterling worth of these two breeds are becoming more appreciated. A good terrier is worth a tidy sum of money and a successful breeder aside from the pleasure and sport of breeding game and intelligent dogs should do well with them.

Few people have any idea of the sport that may be had in the woods and along our streams with a brace of snappy and gamey terriers. For this hunting the Irish and Scotch Terriers are best adapted and may be relied upon at all times to bag their quarry, be it a wild cat, raccoon or other vermin.

One of the earliest, if not the pioneer breeder of the Northwest, is we believe, Mrs. Katherine Bradley-Dyne, formerly of Sidney, Victoria, but now of Saturna Island, B. C. Mrs. Bradley-Dyne's dogs are all well and fashionably bred, two or three were winners in the "old country." Some of her dogs also won here and at Oakland, Cardiff Warman, Saanich Mixit and Saanich Dahlia, if we remember rightly.

Since moving to her new home Mrs. Bradley-Dyne has not devoted the time and attention to her kennels as she had previously, and has not, in consequence, been able to supply the constant and popular demand for puppies from her stock.

Saanich Mixit is at the head of the stud in the Saturna Island kennels. He was Mrs. Dyne's first importation and is bred on the right lines; he is by Pat O'Hara out of Nell. Pat was sired by Wm. Graham's good old dog Breda Mixer. Billy Graham will be remembered by some of our readers who met him when he judged in this city several years ago. He joined the silent majority last year some time, we believe. Mixit is now a veteran, but is still the same good old "daredevil." Luckpenny Peter is a sterling good young dog (Saanich Mixit-Saanich Dahlia) and won easily over everything at Victoria in 1901. New Bank and Sport are also two youngsters above the average.

Blantam Barney, is also a good sire, several promising youngsters in the kennels will testify to that.

The kennel brood bitches are at present but two in number. Doreen, the star, is a grandly bred one, she is by Ch. Stackhouse Sportsman out of Nimble, she is by the well known Ch. Brickbat ex Lotion. This breeding represents something that fanciers of the Irishman can "go a bit" on. Doreen is well known to the local and general fancy and she has been a consistent winner at shows here and elsewhere on the Coast. Mollie, by Breda Muddler out of Bridesmaid is the other matron of the kennels. Both of these bitches have generally whelped large litters of good puppies.

A desideratum in Irish Terriers here is correct "nobs;" long head, square under jaw, the small dark hazel eye, and small properly set V shaped ears. Good bodied dogs are in the vast majority over the correctly headed ones—and this will apply to any breed for that matter. In coats, the Coast "Micks" are usually good, better in fact than many of the Eastern blue ribbon dogs can show. For when these terriers are not in show form, there seems to be some favoring element in our climate and territory that strongly brings out on many of our Irish Terriers the desired hard and wire texture, straight and flat without any objectionable shagginess.

In Scotties, Mrs. Dyne has without doubt the best on the Coast to to-day. Old Ch. Loyne Ruffian is still on deck and has been a consistent producing sire.

This staunch old "die hard," was a winner of numerous prizes in England and was brought to America by Dr. Ewing of Webster Grove, Mo., from whom Mrs. Dyne purchased him. Ruffian is the sire of Nosegay Sweet William the first American bred Irish Terrier puppy to win a championship. He is as full of ginger as ever and always ready and willing to prove his mettle with any of his kennel mates. Two young dogs now in the kennels give great promise of maturing into crack, one especially, a brindled gray like his daddy.

Ch. Fighting Mac (Raglan Bell-Seafield Nettle) is a very typical dog, particularly so in head qualities and character. As a sire, on form and breeding, he should hold his own. Before reaching the Northwest he won as a puppy at Earl's Court show, England.

In bitches, Mrs. Dyne has two corking good ones. Scottie O'Brac (Heather Prince-Connie Lass), an imported bitch, was a winner "across the water" and won first open here in 1900. As we remember her she is a proper headed, even, good coated bitch full of character. Princess Orsa, her daughter by Mac, is a close second to her dam. Mac also won first open here in 1900.

The Scottie is an almost ideal all round dog and makes the best kind of a pal, and as the name of "die hard" signifies, he will die fighting if necessary, but withal he is not a quarrelsome dog.

Some excellent Ch. Hampton Goldie puppies are for sale by an Alameda fancier. See ad. on page 15.

E. C. Plume will be in New York during show week and proposes to take in the Westminster Kennel Club show.

An opportunity to procure some good Cocker Spaniels is offered by Plumera Kennels, prior to Mr. Plume's departure for Chloago. Some desirable bitches and young dogs are for sale. See ad. on page 15.

In hot weather there is no drink like Jackson's Napa Soda—plain or in a lemonade.

San Francisco Show Notes.

Entries close November 23d.

As a rule exhibitors defer making their entries until the last moment, thus making a great deal of extra work for the show officials. Mr. Stewart tells us that exhibitors are showing greater consideration this year, and that many entries have already been received.

Making entries as early as possible is to be commended. If any errors are made it leaves time for correspondence and correction. Errors in catalogues can usually be traced to late entries.

Mr. Julius Redelheimer of Seattle has offered a handsome silver cup for best Pacific Coast bred Fox Terrier.

Mr. J. Riplinger of Seattle is sending down the English Setters Ch. Elmore, imp. Stylish Sergeant and two extra promising youngsters. Mr. Riplinger also expects to bench the English Setter Ch. Pera, which will come direct from Philadelphia to the show.

Collies promise to give some close competition. We hear that Mr. Arthur Letts of Los Angeles has imported a Collie from England and will send him up to San Francisco.

In our show notes of last week we commended the Collie and Sheep Dog Club for arranging to have all its special and regular prizes ready for distribution on the last night of the show. We understand that the diplomas awarded will also be given out on Saturday, so that when the show closes on Saturday night every exhibitor will have received everything coming to him.

Thomas Howe of Mt. Angel, Oregon, will bring down the string of dogs from Portland. Our Oregon readers are requested to write Mr. Howe, should they desire to send down any dogs.

Among the entries for the show next month will be a bat eared French Bull bitch that has won the Empress prize at St. Petersburg and Warsaw bench shows. She is a light-weight black brindle (12 pounds) and is a good one. Nou Nou, as she is named is owned by Mrs. Cash Sloan.

A good Boston Terrier, a son of Kinsman will be benched by Dick Jose, the well known minstrel ballad singer.

A Bull Terrier bitch by Ch. Princeton Monarch out of Lady Summit and a winner at the last Chicago show was entered this week by a gentleman who resides in Fargo, North Dakota, and who will send his bitch here to the December show.

Michigan Field Trials.

The inaugural field trials of the Sportsmen's Field Trial Club were run at Clare, Mich., October 26th, 27th and 28th. There was a large and enthusiastic attendance of sportsmen from various points in the State. This club is composed largely of Michigan business men. Although but recently organized there is already more than a hundred members in the association. Each member, this being an amateur club, must handle his own entry if able to do so. The trial grounds are situated two miles from Clare and comprise 3000 acres, containing a number of large fields where the dogs can work to fair advantage, despite the fact that rather too many fences cut up the district.

The Derby had twelve dogs in the stake, most of these showed considerable range and speed, in only a few instances however did any of the young dogs evidence any experience of previous work on game. The winner Clairvoyant, a snappy little orange and white bitch sixteen months old, is very stylish and worked out her heats like an old dog. She also ran second in the All-Age.

Gath's Dorrit, winner of second, is a medium-size black, white and tan bitch, by Sport's Gath—Little Dorrit. She showed considerable quality and with better work on birds might have changed places with Clairvoyant.

Phoebe's Rod, winner of third, is a high-beaded stylish orange and white dog, litter brother to Clairvoyant, but is not so compactly built nor so snappy in his work.

Dike's Dike, winner of fourth, is a small, compactly built white, black and tan dog, by Fairland Dike—Top Mark Lady. He is stylish and a merry worker.

The All-Age Stake had eighteen starters, thirteen of which were put down in the second series—eight of the latter being carried into the third. The winner, Lou Rodfield, a speedy and rangy lemon and white bitch is credited with being faultless in her bird work and showed consistency to a degree by a sterling regularity of work in all her heats.

Clairvoyant, second, won the place by superior bird work.

Rose M., medium sized white, black and tan bitch placed third, is rather an old bitch and showed her experience on game in other than point work.

Phoebe's Rod, equal fourth (also third in the Derby) showed to better advantage than in the first stake.

Tony's Nell, equal fourth, was undoubtedly handicapped in working under a strange handler. She is a consistent and speedy performer, a good ranger and merry goer.

The awards of the judges, were well received and but little dissatisfaction was shown. The winners received silver cups in addition to the division of the moneys, which were divided at 40%, 30%, 20% and

10%. The order of running and starters were as follows:

CLARE, Mich., October 27, 1903.—Sportsmen's Field Trial Club's inaugural Derby Stake. Open to Pointers and Setters whelped on or after January 1, 1902. Nominations \$2, starting fee \$3. Twelve starters, all Setters.

Gath's Dorrit, white, black and tan Setter bitch (Sport's Gath—Little Dorrit.) Dr. E. D. McQueen, owner; T. Morris, handler.

Clairvoyant, orange and white Setter bitch, (Cowley's Rodfield's Pride—Phoebe Whitestone.) E. H. Waller, owner and handler. Dike's Rod, white, black and tan Setter dog (Duke Case—Lady Case.) E. L. Teal, owner and handler.

Ruby's Queen, black, white and tan Setter bitch (Fairland Dike—Waller's Ruby.) C. H. Van Brunt, owner and handler.

Princess Dot, white, black and tan Setter bitch (Count Dan—Elizabeth.) E. A. Foster, owner and handler.

Phoebe's Rod, orange and white Setter bitch (Cowley's Rodfield's Pride—Phoebe Whitestone.) L. N. Hilsendegen, owner and handler.

Petrel's Count's Boy, black and white Setter bitch (Petrel's Count—Tony's Nell.) A. J. Smith, owner and handler.

Dohrezycki, black, white and tan Setter dog (Fairland Dike—Lady Clare.) F. E. Doherty, owner and handler.

Pride of Alma, black, white and tan Setter dog (Gladstone's Dash—Nellie.) Opdyke & Thompson, owners; Mr. Thompson, handler.

Viccount Kitchener, white ticked Setter dog (The Sultan—Our Lou.) E. J. Walsh, owner and handler.

Dike's Dike, white, black and tan Setter dog (Fairland Dike—Top Mark Lady.) E. C. Smith, owner and handler.

Ino B., black, white and tan Setter bitch (Gladstone's Dash—Nellie.) P. T. Bonghart, owner and handler.

Dohrezycki with Phoebe's Rod.

Petrel's Count Boy with Duke's Rock.

Clairvoyant with Dike's Dike.

Ino B. with Gath's Dorrit.

RESULT

First, Clairvoyant; second, Gath's Dorrit; third, Phoebe's Rod fourth, Dike's Dike.

CLARE, MICH., October 29, 1903.—Sportsmen's Field Trial Club's inaugural All-Age Stake. For Pointers and Setters which had not previously won first place in recognized field trials. Eighteen starters (13 Setters, 5 Pointers.)

Whitey, black and white Setter dog (Fairland Dike—Florence Shelley.) George Dawson, owner and handler.

Rod's Pride III, blue helton Setter dog (Cincinnati's Pride—Ruth T. Etol.) M. W. Tanner, owner and handler.

Sam S, white and black Setter dog (Dike—Nellie.) A. Shaw, owner and handler.

Dot's Belle, liver and white Pointer bitch (Dot's Jingo—Indiana.) E. J. Deuehler, owner and handler.

Phoebe's Rod, orange and white Setter dog (Cowley's Rodfield's Pride—Phoebe Whitestone.) L. Hilsendegen, owner and handler.

Clairvoyant, orange and white Setter bitch (Cowley's Rodfield's Pride—Phoebe Whitestone.) E. H. Waller, owner and handler.

Ned Cummings, black, white and tan Setter dog (Joe Cummings—Marie Girard.) F. N. Geiger, owner and handler.

Dashaway, white and lemon Satter dog (Jerry—Brownie.) L. H. Goodwin, owner and handler.

Hal Pointer's King, black and white Pointer dog (Hal Pointer—Glory Quayia.) Dr. E. D. McQueen, owner; Tom Morris, handler.

Midland Daisy, white and orange Setter bitch (Duke Case—Lady Case.) E. C. Smith, owner and handler.

Genlyon, white Setter dog (Donald Bane—Frost.) John Davidson, owner and handler.

Don Pedro II, black, white and tan Setter dog (Rodney II—Elizabeth.) J. H. Sleeth, owner and handler.

Tony's Nell, black and white Setter bitch (Tony's Mark—Nellie F.) A. J. Smith, owner; E. H. Waller, handler.

Maud of Mt. Clemens, black and white Setter bitch (Monk of Furness Drake—Tony's Betsey.) E. F. Fines, owner and handler.

Lou Jingo, liver and white Pointer bitch (Lad of Jingo—Harry's Lady.) E. J. Deuehler, owner and handler.

Rose M, white, black and tan Setter bitch (Kel's Carter—Scraper) F. H. Shearer, owner and handler.

Lottie Case, white and black Setter bitch (Duke Case—Lady Case.) E. L. Teal, owner and handler.

Lou Rodfield, orange, white and tan Setter bitch (Rodfield—Gypsy A. Gladstone.) M. W. Tanner, owner and handler.

Ned Cummings with Don Pedro.

Rod's Pride with Clairvoyant.

Sam S with Phoebe's Rod.

Whitey with Lou Rodfield.

Lottie Case with Maud of Mt. Clemens.

Tony's Nell with Rose M.

Tony's Nell with Ned Cummings.

Clairvoyant with Rose M.

Phoebe's Rod with Maud of Mt. Clemens.

Lou Rodfield with Don Pedro.

RESULT

First, Lou Rodfield; second, Clairvoyant; third, Rose M.; equal fourth, Phoebe's Rod and Tony's Nell.

DOINGS IN DOGDOM.

Woodlawn Kennels' Bull Terrier bitch Newmarket Queen was served by Mr. A. Joseph's Bloomsbury Baron October 24th. Queen is a proved producing bitch and has whelped some good ones to Cb. Woodcote Wonder. The mating with Baron should prove to be a good "nick." Baron has sired winning puppies and is one of the best of our local Bull Terrier stud dogs.

In Boston Terrier circles there is a prospective litter due from the mating of Miss Hagar's Nifty to Mr. Woodworth's bitch Babe, November 8th and 9th.

The show last week in New York was of local interest to our fanciers for there were entered in Bull-dogs and Fox Terriers a string of Wandee Kennels' dogs that had been sent East as well as several newly purchased wire-bairs owned by the kennels, but which have not yet arrived in this city.

In Bull-dogs a strong class of 112 entries all told—Limit (under 45 pounds) 1 Rolyat, 2 Remilk Chinosol, 3 Ivel Damon, res Glendale King. Open—(under 45 pounds) 1 Rolyat, 2 Remilk Chinosol, 3 Ivel Damon, res. Ch. Rodney Rosador.

In smooth Fox Terriers—Limit dogs—1 Sabine Re-

cruit, 2 Norfolk All Blue, 3 Warren Deputy, res Warren Voucher, v h c Warren Drastic, v b c Wandee Ch. True, h c Warren Dabber. Limit bitches—1 Warren Daunt, 2 Sabine Beldia, 3 Wandee Seabreeze, res Norfolk Fortune, v b c Wandee Mayse. Open bitches—1 Warren Daunt, 2 Sabine Lavender, 3 Wandee Seabreeze, res Norfolk Fortune, v b c Wandee Mayse.

Wires—Limit—1 Wandee Coastguard, 2 Wandee Mearns, 3 Selwonk Topper, res Selwonk Nippe Open—1, 2, 3, Coastguard, Mearns, Topper, res C Hands Up. Winners—1 Wandee Coastguard, 2 Wandee Mearns.

Wire bitches were—Novice—1 Wandee Manilla Wandee Ramble. Limit—1 Selwonk Lucretia, Wandee Manilla, 3 Norfolk Toss Up. Open—1 Selwonk Lucretia, 2 Wandee Manilla, 3 Selwonk Feeless, res Norfolk Toss Up. Winners—1 Selwonk Lucretia, res Wandee Manilla.

California Game and Fish Protective Association

The fourth annual meeting of the California Game and Fish Protective Association will be held at Paso Robles to-day and to-morrow. The Paso Robles association have made extensive arrangements for the entertainment of the delegates, among which will be quail and wild pigeon shooting, followed by a grand camp entertainment and barbecue.

The program, so far as arranged, is as follows: Friday evening—Public meeting, to which all citizens are invited, opened by an address of welcome by the Mayor, the reading of a number of papers by different sportsmen. Saturday afternoon, at two o'clock, the association will hold a business meeting, which will be concluded Saturday night. Sunday—the citizens of Paso Robles will take the visitors out for a quail or wild pigeon shoot as they severally desire, all meeting at noon under the beautiful oaks to partake of a barbecue prepared by the famous Paso Robles experts in this line. After this there will be more shooting for those who wish, a drive through the oaks, a hot sulphur bath and a sumptuous dinner at the fine hotel.

Sportsmen generally and individual members are urged to be in attendance. There are many matters of vital importance to the better conservation of the game and fish of this State that should be taken in hand at once and given the most careful consideration of the association between now and the next meeting of the Legislature; and in these matters the officers of association earnestly ask the co-operation of all members of the association.

The Southern Pacific Railroad have made a round trip rate of one fare to all the delegates and their families. The California Northwestern Railway have granted a rate of one and one-third fares for the round trip from any station on their line to San Francisco, from which point the trip can be made via the S. P. line to Paso Robles. The rate, for those attending the convention, and who choose to stop at the palatial Hotel Paso Robles will be \$2.50 per day, this includes the free use of the splendid mineral and other baths connected with the hotel. E. A. Mocker is the secretary and Deputy Fish Commissioner H. T. Payne is the president of the association.

GOSSIP FOR SPORTSMEN.

The best quail shooting, for the general run of hunters, since the opening of the season was enjoyed last Sunday. The previous rain made shooting conditions most favorable. The ground afforded easy walking for the guns and the dogs were enabled to work birds in good style. Some of the best bags we noted this week were secured near Marshalls, and at Point Reyes, Marin county.

Near the former point James P. Sweeney bagged 20 birds and W. W. Richards and Fred Butler, Jr. secured 35 between them. Frank Vernon and E. G. Rodolph had two dozen, F. W. King and C. R. Rosenberg two dozen and Clarence A. Haight and Howard Vernon shot a combined limit bag at Point Reyes. Drs. Clyde and Redmond Payne shot a nice bunch of ducks, nearly all widegon, at Point Reyes.

Duck hunters have not done so well during the earlier portion of the week. Storms up north are bringing in plenty of northern birds. Fair weather tomorrow should make the duck hunting better than has prevailed for some days.

English snipe have been rather plentiful on many of the snipe patches and some excellent bags have been the result.

Anglers have been enjoying salmon fishing in the deep holes of the White House pool near Pt. Reyes. The rains have brought in quite a run of quinnat salmon. Low water prevented the fish from getting up further than the county road bridge. The rains this week should enable the fish now to get up stream and spawn. Steelhead have also made their appearance at Pt. Reyes, several nice sized fish were taken last Sunday and during the week.

Striped bass have been taken at Rodeo and Point Richmond. Geo. C. Peterman and Ed Snider caught 19 striped bass in Lake Merritt last Sunday. The fish ran from 5 to 15 pounds in weight.

Duck and Quail Outfits.

The demand at Skinner's keeps up for sportsmen's outfits, ammunition and guns. A large and new stock of goods has been added to fill the demand for hunting suits, rubber boots and hunters' footwear; canvas and folding wooden decoys, gun cases and a new design of leather-covered shell boxes. Peters Factory Loaded Shells are unequalled. Skinner's place is 801 Market street. You can get anything there you need for duck or quail shooting. Send for a catalogue, if you haven't time to come, and try a mail order.

A RELIC OF BYGONE DAYS.

Old Judge's Stand at Oakland Track from Which General Grant saw Orrin A. Hickok Break the World's Record with St. Julien.

THE FARM.

Dairy Notes.

When cream froths during churning the cause is not a mystery to the well informed dairyman. It can easily be avoided by using a thermometer and bringing the temperature of the cream up to sixty-five degrees.

Are you making butter for private customers? Find out how they like their butter salted, and try to suit them. The matter of salting has a great deal to do with the satisfaction people get from eating our butter. And satisfaction settles the question of trade.

Cover tightly the pail or jar in which you keep your cream. If it can be made air tight, so much the better. Lots of butter is absolutely spoiled by taking in the smells of the kitchen. These smells suit our nostrils first rate, but they make very poor flavoring for butter.

A dairy lunch, where cool milk, country butter and other products of the dairy will be served, will be a feature in the Wisconsin building at the World's Fair. The necessary products to maintain the lunch counter will be shipped regularly from Wisconsin to St. Louis during the fair.

A Bread, Milk and Butter Company is being formed in Chicago that will furnish these staples each morning to its customers. In fact a trust is spoken of which will absorb all the bakeries and dairies in that city, and milk dealers shipping milk into the city will also join this combine.

If your cow has a lot of warts on her bag and teats remove them at once. They are a nuisance to the milkman and some times cause the cow pain when she is milked, and therefore in no way do they increase the flow of milk. Iodine applied with a camel's hair brush or feather daily for a week or two will kill them.

An effective milk inspection law works no injury to the milk dealer or dairyman who is honest in his methods. Keep up the fight for pure milk. Not a step backwards must be taken. The law must not be weakened. Not one of its essential provisions must be wiped out or modified in the interest of greed and dishonesty.

South Africa is now buying largely of imported dairy products. During the six months ending June 1, 1901, four hundred and eighty thousand pounds of butter and cheese were imported into that country, whereas during a corresponding period in 1902 the amount was nearly doubled, and a steady increase in the yearly imports may be expected.

Owing to an attempt to corner the cheese market in the Northwest, the La Crosse Cheese and Butter Company has on hand \$900,000 worth of cheese, which is stored in warehouses in Chicago, Milwaukee and other cities, and is in financial difficulty. Traveling salesmen have been making strenuous efforts to dispose of the cheese which the company has accumulated.

Raising Calves for the Dairy.

The calves are allowed to draw first milk from cow, then taught to drink. Whole milk is given until two weeks old, about two quarts twice daily at first, increasing to three. Keep close watch that the bowels are natural. At two weeks old we begin to add one-third skim milk, writes H. B. Cater in *New England Homestead*, decreasing the whole milk of course and continue to substitute the skim milk gradually for ten days, at which time the whole milk is all withdrawn and the calf has passed the change unaffected.

There are many different ways, and perhaps as many different ideas of the best form to supply the fat taken out by the cream. Our experience, after having used flaxseed meal in the form of gruel, corn meal, linseed in gruel form and many especially prepared calf meals, is that old process linseed, given un-

cooked in the skim milk, about two ounces to each calf, morning and night, has given us better results and much less work than anything we have ever used. We feed about eight quarts skim milk per day to each calf until weaned, which is usually at three months. During this time we keep ground oats and mixed wheat feed in equal parts constantly before them, and all the good hay they will eat, or, if in summer, we use green feed instead of hay, such as rye, oats and peas, soy beans, green corn, barley, etc. When the milk is taken from them we make the grain ration about one-third linseed meal and two-thirds ground oats and mixed feed. Calves raised by this method do not, perhaps, look quite as sleek as those raised on whole milk, but they are better prepared to grow and mature into cows of good, profitable producing capacity than are these which are allowed the rich milk. I might add that we feed during the season for it all the silage they will eat.

Prizes at World's Fair.

Commenting editorially upon the fact that the prizes offered for live stock by the World's Fair at St. Louis in 1904 are \$55,000 greater than the aggregate cash offerings by fourteen of the leading national and state live stock shows of the United States the *Breeders Gazette* of Chicago, recognized as the highest authority on live stock matters, sums up the situation thus:

"All the news from St. Louis rings acceptably to the ears of exhibitors of live stock. The preliminary classification is very broad and comprehensive, advancing features of a novel and valuable character, and marking a higher standard of classification for live stock exhibitions than has yet been set. Expectation has been keyed high concerning this show and breeders are deeply gratified to learn that these high hopes have suffered no disappointments. It has been the aim of Chief Coburn to set a standard that will serve for years to come and he has succeeded admirably.

"It is idle to traverse the ground on which is rested the offer of money prizes for exhibitions of pedigreed live stock. The proposition is defensible in argument, impregnable in precedent. The query for years has not been whether money prizes should be offered, but as to the amount of money which could be wisely devoted to the encouragement of such exhibitions. There is a point short of which falls nigardliness, beyond which lies extravagance. It would tax memory, however, to cite any examples of the latter. It has not yet come about that prizes disproportionate in value to the importance of the exhibit have been given at livestock exhibitions. Pride would induce many a breeder to exhibit at St. Louis next year, even if prize money were not attractive. Pride and prize money will make it the record show of the country.

"Palpably the cash prizes at St. Louis mount to the dignity of a World's Fair. The nations of the earth are manifesting great interest in this coming exposition and it behooves American breeders of pedigree stock to present such an array of the products of herd, stud and flock as will drive home to all visitors the pre-eminence of this country in the diversity, magnitude and excellence of its production of the breeds of live stock."

The California Creamery Operators' association is preparing to make a representative exhibit of dairy products from this State at St. Louis next year. At a recent meeting of the association a resolution was adopted recommending that the exposition commission create the position as superintendent of the dairy exhibit, the duties of the incumbent being to co-operate with the California Creamery Operators' association and dairy interests of the State, to organize an exhibit and be in attendance upon the same at the fair. The association and the California Promotion committee will join forces in an attempt to capture the national butter-makers convention of 1905.

FOR SALE.

BLACK TROTTER MARE, RECORD 2:18 1/4; standard bred; sound; nearly 10 hands high; weighs about 1100 pounds. Gentle and a high-class road mare. Can be bought cheap. To see the mare and for particulars call or address

J. W. ZIBBELL,

345 Twentieth Ave., San Francisco.

Making a Cement Stable Floor.

The concrete is made by mixing eight parts of clean gravel with one part of Portland cement. Or if finely crushed stone is used—no piece larger than one inch in diameter—ten or twelve parts can be used to one part of Portland cement. The concrete should be mixed thoroughly dry, shoveling it over three or four times and sprinkling enough to thoroughly dampen when ready to use. Lay the floor in sections, three or four feet wide so that one can easily reach across to trowel it, then put up a two inch piece and stake it to make the width needed, wheel the dampened concrete in, spread evenly two inches at a time and ram solid. Continue this until within one inch of the top in the horse stable or one half inch for the cow stable or hog house.

The top coat is made with two parts of sharp clean sand and one of cement, thoroughly mixed and tempered, with liquid enough to make it flow readily. See that the corners and edges are well filled in and in the horse stable make the floor perfectly level and in the cow barn give a fall of one inch from the manger to the manure ditch, which should be five feet. To prevent slipping at the back of each stall make grooves, for two feet in the soft mortar, running crosswise four inches apart and the same across the doorway where the horses step in. When a section of the floor is laid, carefully take up the edge piece, moving it to the same distance and lay another section and so on until the floor is finished.

Keep the building closed so that no stock, not even chickens, can get in while the cement is soft. It will harden in about twelve hours so that it can be walked over. Sprinkle thoroughly with a watering pot twice a day for ten days after which it will be hard enough to allow the horses on it. As the floor is made set blocks in at the proper angle where the studding are needed to partition the stalls, then take them out after the mortar is hardened and it will leave a mortise for the foot of the studding. In addition to the durability of the cement floors there are several other advantages. They afford no harbor for rats, save all the liquid and never become saturated so as to give offensive odors as does a plank floor.

Make the floor in the cow stable five feet long from the manger back to the manure ditch, then for small cows put an extra board next to the manger to keep them back six or eight inches so as to reduce the length of the stall. The manure ditch should be two feet wide at the top and twenty inches in the bottom. This gives a slope of two inches on each side of the ditch which is eight inches deep. The door to the cow stable should be directly at the end of the ditch and then the cows will always walk in through the ditch to their stalls. Back of the manure ditch make a walk of cement two and a half feet wide and on a level with the floor on which the cows stand.—*Field and Farm.*

How Horses Are Fed.

The United States Army feeds its cavalry and artillery horses 12 pounds of oats and 14 pounds of hay per day per thousand pounds of weight, and its mules 9 pounds of oats and 14 pounds of hay. The Wyoming station feeds its driving horses 21.25 pounds of alfalfa and 3.2 pounds of straw and its carriage horses 10 pounds of oats and 12 pounds of hay per thousand pounds of horse per day. The Boston fire company feeds its horses 9.38 pounds of grain and 18 pounds of hay, and the Chicago fire company feeds 4 pounds of oats and 15 pounds of hay all per thousand pounds of weight, per day. The Richmond (Virginia) Express Company feeds its horses 4.67 pounds of corn, 5.33 pounds of oats, 8 pounds of bran, 4.16 pounds of cornmeal and 15 pounds of hay. The Jersey City Express Company feeds 2 pounds of corn, 9 pounds of oats, 1.16 pounds of

bran and 9.5 pounds of hay, and the Boston Express Company feeds 12 pounds of corn, 5.25 pounds of oats and 20 pounds of hay. The Wyoming station feeds its farm horses 13.75 pounds of alfalfa and 2.25 pounds of straw per day. The Utah station feeds its farm horses 25 pounds of alfalfa and 10 pounds of bran, or 22.8 pounds of timothy hay and 10 pounds of bran. It will be noticed that at all these Western stations alfalfa hay is a preferred feed for farm horses. At Chicago the daily ration of the draft horses of large companies is 7.5 pounds of oats and 20 pounds of hay, and in South Omaha 15 pounds of oats and 12 pounds of hay.

The success of a creamery depends more upon the butter-maker than anybody else. Many things that to a careless man seems of little importance, to the intelligent maker are of the greatest importance. This condition is quite evident to anyone who has patronized such institutions. In some creameries we find every evidence of prosperity. The manager meets the patrons with a good morning and a pleasant smile and weighs and samples the milk as it should be done. The creamery is in first-class order and there is a pleasant atmosphere everywhere. It is a pleasure to visit such a plant. Contrast this with one where we find everything in dilapidated condition with an untidy maker at the head of it, patrons dissatisfied and the complaint is made on every hand that the creamery business does not pay and the patrons think that creamery men are among the biggest rascals in existence. This often prevents the creamery business from extending as it should. Jealousy among farmers has destroyed more creameries than all other things combined. As a matter of fact there are very few dishonest men in the creamery business. If one-tenth of the dishonesty which is printed in the sensational newspapers were true, the business of the world would be seriously affected.

Advantages and Disadvantages of Pasteurizing Milk.

The chief advantages of pasteurization for butter making are:

1. It destroys the germ life of milk or cream to a large extent, especially when heated to 185 degrees, which is the temperature to be recommended. A clean seed-bed is thus prepared for the proper germs to give fine flavor to the butter.
2. It tends to eliminate stable and feed flavors from milk and cream, especially with milk in winter.
3. The ripening of the cream may be controlled by the butter maker, which is the important point in making good butter.
4. In case of bad flavored milk, it enables the butter maker to improve very much the quality of his goods.
5. By the use of pure cultures (commonly called "starters") a more uniform quality is produced from day to day throughout the year.
6. The butter possesses an improved keeping quality, hence is better suited for the export trade, as our butter does not reach the consumer for two to four weeks after being made.
7. An improved quality of butter may be produced at cream-gathering creameries by pasteurization of the cream when sweet. The pasteurization of sour cream is attended with more labor and more difficulties, and the results are not so good. It is difficult to pasteurize milk or cream which contains more than 0.1 per cent of acid. However, after natural coagulation takes place in the cream, which will be when it contains 0.4 to 0.5 per cent of acid, the work may be done fairly well but is usually attended with considerable loss.
8. There is less loss in the skim milk when the whole milk is pasteurized before separating, especially in winter. We have used nearly all the leading makes of separators for creaming hot milk. The upper bearing of the machine needs to be somewhat more loose than when running

through milk at a temperature of 100 degrees, and plenty of good oil is required to lubricate the bearing when separating pasteurized milk.

9. A better quality of skim milk may be returned to the farmers by sending it home hot. There is also less danger of spreading disease. In Denmark all skim milk and buttermilk must be heated to 180 degrees before it is returned to the farmer. This plan has materially lessened the spread of tuberculosis in that country. Hydrogen peroxide is used to test whether the dairy products have been pasteurized, and the law is rigidly enforced.

The disadvantages of pasteurization are:

1. The extra cost of labor and machinery to heat and afterward cool the milk or cream. A milk pasteurizer that will heat milk for two power separators will cost \$150 to \$200.
 2. There is difficulty in pasteurizing milk or cream which is "overripe," and this may cause trouble in hot weather, when milk or cream is not properly cared for and cooled at the farm and is delivered in poor condition.
 3. Some trouble is experienced from the froth which rises on the milk as a result of heating. No practicable remedy for this has yet been discovered.
 4. There is a tendency to lack of flavor, and sometimes there is a slightly "cooked" flavor as a result of pasteurization. The cooked flavor usually disappears in less than two weeks. Lack of flavor is objectionable in local markets.
- Two points are essential if pasteurization is practiced—proper means of heating and cooling the cream and the use of a proper culture to give the desired flavor to the cream and butter. Commercial cultures should be propagated three or four times in pasteurized skim milk before they are used in cream for ripening, in order to get the best results.—*Canadian Dairying.*

Sober up on Jackson's Napa Soda.

THE \$60,000

DAN PATCH 1:56 1/4

CHAMPION PACING HORSE of the WORLD
[Without Hopples, Wind-Break, Etc., Etc.]

EATS

3 FEEDS FOR ONE CENT EVERY DAY.

"International Stock Food" greatly aids Digestion and Assimilation so that More Nutrition is obtained from all grain eaten. It "tones up" and Permanently Strengthens the entire system and Purifies the Blood so that disease is prevented. Every \$3.50 pail of "International Stock Food" is positively guaranteed to save \$7.00 worth of grain. It will cause your Race Horse to have more speed and endurance. It will make your Carriage Horses healthy, fat and beautiful. It will give your Show Horses more life and action and make them glossy. It will make your Work Horses strong, healthy and of great endurance. It will make your Stallions and Brood Mares surer, and your colts will be better and grow and develop more rapidly. "International Stock Food" is absolutely harmless even if taken into the human system. It is prepared from Roots, Herbs, Seeds and Barks and is fed in small amounts as an addition to the regular grain allowance. It is equally profitable when fed to Horses, Cattle, Sheep, Hogs, Colts, Calves, Lambs or Pigs. It will make you a large extra profit when fed to your stock for Growing, Fattening or Working. It will increase milk 15 to 25 per cent. in Cows, Mares, Sows or Ewes, and only costs 3 FEEDS FOR ONE CENT. A Dan Patch colt commanded \$5,000 at eight months of age. He looked like a yearling and was beautiful, strong and vigorous. The dam was fed "International Stock Food" before and after foaling, and the colt as soon as it would eat. Dan Patch became the World's Champion Harness Horse nine months after commencing to eat "International Stock Food" every day. If it is good for such horses don't you think it would pay you to test it on yours? Our "International Stock Food Farm" contains 650 acres, 12 miles from Minneapolis, and on it we own Dan Patch 1:56 1/4. Directum 2:05 1/4, Roy Wilkes 2:06 1/2, and a band of brood mares. They all eat "International Stock Food" every day. **BEWARE OF IMITATIONS and SUBSTITUTES.** There are many worthless imitations on the market, put out by people who seem to think that the way to start a business is to steal as much as they can from some prominent firm. No chemist can separate and name all of the ingredients used in "International Stock Food," etc., and any chemist or manufacturer claiming to do so must be an Ignoramus or a Falsifier.

A BEAUTIFUL DAN PATCH PICTURE FREE

We have a very fine, large lithograph of Dan Patch with the great driver, M. E. McHenry, in sulky. This Lithograph, Printed in Six Brilliant Colors, is one of the finest and most attractive horse pictures ever published. It is 21x28 and printed on heavy paper suitable for framing. We Will Mail You One Copy Free, postage prepaid, if You will Answer Two Questions.

1st.—Name This Paper. 2d.—State How Much Stock You Own.

Answer these questions in a letter or on a postal card and we will mail at once. Write at once before the offer is withdrawn.

Long or Short Tails?

The matter of docking the lambs is subject, as many others are, to differences of opinion. That majority of flocks are docked might well go to intimate that popular opinion is mostly in favor of the docking, and the majority of shepherds adhere to the practice. But it is quite rational to think it a matter of fashion, much the same as that of docking horses has been, and still is. Generally, in regard to all kinds of disputed matter there is much to be said on both sides, in favor as well as to the contrary. But impartial consideration, we think, will go in favor of docking the lambs at the earliest possible opportunity, which on all accounts should be at the earliest possible age. Then the animal suffers very little pain from the operation, if it is done in the right way. This is to clip off the surplus part of the appendage within two or three inches of the root of it. Why the tail is needed by sheep is one of those questions which none can answer with any degree of satisfaction. Some tail is necessary for the protection of a very sensitive part of the anatomy, the termination of the bowel, and the still more tender part of the female anatomy. But three inches of tail is ample for the complete protection of those delicate parts of the animal. The sheep does not require a tail as a horse or cattle do for protection against flies, any further than the few inches of the undocked tail is a nuisance, and mischievous to a sheep, as it harbors filth, which attracts flies and these are often so inveterate in their attacks on the fouled parts of the sheep as to cause the worst possible infliction on the wretched animal, which becomes fly-blown and suffers the most agonizing death of being literally eaten and consumed alive by slow torture due to the myriads of maggots which infect it. It is no uncommon sight to see a miserable animal eaten to the bones of the rump by fly maggots, until at last it hides itself in some secluded place and submits to the inevitable death by the slow torture inflicted on it by the thousands of maggots. Often these parasites spread far over the hind parts of the sheep, collecting in the fouled wool, and practically the sheep is devoured alive.

So, too, the long wool about the udder is the most effective cause of infection of the lambs by the worst of parasites, such as the knotty-guts worm, and every kind of tape worm which infests the sheep; thus of course the long tail is the active means of spreading the filth over the whole of the hinder part of the sheep, and especially of the thighs and udder, and in this way actually poisoning the lambs. On the whole, we cannot avoid the logical results of all the conditions existing in this respect, and therefore we must be forced to secure the sheep, and the lambs, by this necessary means to ensure cleanliness by which so many evils may be avoided.

Usually the lambs are docked when two weeks old or even sooner, and the time just now is pertinent to consider that if any lambs have not been docked it should be done at some near convenient time when opportunities are favorable, and not left until the next crop of lambs are in hand for the same care. One person may easily dock a lamb of two or three weeks old by taking the animal under the left arm with the rump forward, and with the left hand fingers slipping back the loose skin of the tail towards the rump, and with the right hand clipping the tail with a pair of pruning shears, so as to leave not over three inches; then with the right hand fingers apply a pinch or two of finely powdered blue stone, and draw down the skin over the end. The lambs will scarcely feel the operation after a few minutes, generally they hurry to the ewe and take comfort by a drink of milk, and then go to play. In a flock of thousands, not a lamb has suffered any discomfort by the operation done in this way. The

old fashioned complicated method of searing the wound is properly obsolete, as a refinement of cruelty, only possible under the grossest ignorance and absence of all sparks of humanity.

Time For Horses to Drink.

A veterinarian gives some facts from the results of his experiments, as follows:

Herewith are given the results of experiments with three horses to show the effect upon digestion of watering them before, during and after eating. In most of the experiments the horses were fed on oats and hay; in some cases on bay alone, and in others on oats and maize with chopped straw and hay. So far as could be observed, the time of drinking did not have any effect upon the digestibility of a ration of grain and coarse feed.

It seemed probable that, when hay only was fed, there was a slight advantage in watering after feeding. The time of drinking exercised a marked effect on the amount of water excreted.

The horse drank the greatest amount of water when it was given after feeding, and the least amount when it was supplied before feeding. This was especially noticeable in the morning, when water was sometimes refused if offered before feeding.

The excretion of urine was directly proportional to the amount of water consumed. When it is desired to increase the excretion, water after feeding.

The method of watering has no effect upon the amount of qualitative composition of the feces. Body weight varied with the amount of water consumed.

Though the methods of watering tested were regarded as equally good, circumstances may make it necessary to adopt one or the other. Thus, after severe exertion water should be supplied before the feed.

It is not desirable to change unnecessarily from one method of watering to another, as some animals do not appear to be altogether indifferent to such changes.

It was found that, whenever a change was made from watering after feeding to watering before, the appetite fell off for some days, and the ration was not as readily eaten as formerly.

A similar effect was not observed when the change was from watering after feeding or from watering after to watering during meals, or when the change was in the opposite direction to the last.

It is possible that the method of watering before feeding, until the animal becomes accustomed to it, produces a certain feeling of satiety.

Driving Three Horses.

Put the reins on the outside harness and snap outside reins as usual. Snap the inside reins to bit of the inside or third horse. Tie a strap from the bits of the outside horses to the harness of the middle. The horses are not worried by the swinging of their heads and the three drive as well as two. Another method is to take common two-horse lines and put on the two outside horses, then use the two tie straps for extra cross lines, buckling them onto the lines the same as the other cross lines are buckled, pass one over the back—under the check—of the middle horse, through the harness on the same and snap into the bit ring of the opposite horse. Do the reverse with the other cross line. The horses have control of their heads and you have better control of the horses.

Dr. Blemer, State Veterinarian, in an interview sent out by the Associated Press and printed in most of the newspapers of the Coast, said a few days ago: "When the Live Stock Breeders Association was formed during the late State Fair, I was appointed a committee of one to investigate into the possibility of holding a fat stock exhibition in San Francisco next March, and I have decided that it can be successfully accomplished, and

will be a great educator to the people. I am also sure that as the association grows in strength it will be possible to hold in addition to the fat stock show, a fine stock exhibition and in connection with this, I shall propose a dairy exhibit and creamery, showing the entire process of handling milk until it becomes a finished product in the shape of butter."

A dairy farmer who does not keep pigs is not on to his job for money making with a dairy.

AT THE Red Ribbon Speed Sale

Standard-Bred Trotters Tuesday Ev'g, Nov. 17

I WILL SELL 4 McKinney Stallions 4 (Two-Year-Olds)

The Best Bred and Fastest in California

OUT OF SUCH GREAT MARES AS CARLOTTA WILKES (dam of 2) by Charley Wilkes; BISCARA (dam of 5) by Director 2:17 out of Biscara (dam of 7) by Harold, etc.; BY BY (sister to Lockheart 2:08½) by Nutwood 2:18 out of Rapidan (dam of 3) by Dictator, etc.; RUSSELL RUSSELL by Bay Rose 2:30½ out of Oakley Russell by Happy Russell.

Owner, J. H. GRAY, is called East. He has worked these colts on Santa Rosa Track. They have trotted quarters from 32½ to 33 seconds, and are as sound as the day they were foaled. Hand-some as pictures and have size and color; best of dispositions. This is the greatest opportunity to get sons of the immortal McKinney ever offered. Besides these remember there is a half sister to Director 2:05½, half brother to Monterey 2:09½, half brother to W. Foote 2:11, and a score of the best lookers ever offered. There are famous brood mares, perfect drivers, well-matched teams, mares with records, and, in fact, trotters and pacers to suit everybody.

Remember the opportunities to get such horses at auction are diminishing every day. Catalogues ready.

How to Prevent Crowing.

"The hoard of health of Flushing, L. I., has issued a proclamation that roosters which crow before 7 A. M. will be treated as nuisances, which means that they will be killed or confiscated. The suburban poultry owners are now trying to devise some plan to silence their chanticleers. It is suggested that hoods be provided for them."

This article happened to catch the eye of William Westover, a retired farmer who lives in Le Sueur, Minn., and he expressed much wonder that persons who do not wish their roosters to crow, should allow them to crow, said he:

"My roosters never crow for the reason that I don't like the noise, and don't let them crow. As soon as they are old enough to commence trying their voices, I catch them, one after the other, and, with a small instrument something like a pair of pinchers and similar to the one that is used for putting rings in the noses of swine, I put a small ring of silver wire in each one of the vibratory cords of the fowl's larynx. These rings stay right there as long as the bird lives, and stops his crowing at once and permanently. He can cluck and cackle and make all the other noises which he uses to ingratiate himself with his female friends and to call them on a run to see the tid hits which he finds and promptly eats up as soon as they come near, but he cannot crow. It is not that he lacks the vocal power, for that is not the case, but the vibration of the cords from so loud a noise seems to tickle his throat when the rings are in, for he will start all right, but stop suddenly, with a hollow gurgle, as soon as he commences, and scratch his neck first with one foot and then the other and try to hack around the yard away from something that seems to trouble him. After trying this a few times, he gets discouraged and gives it up, for he never even tries to crow after the first week. The pinchers are very easy to make. Any jeweler will make one for half a dollar, and the silver wire does not cost over half a cent to a hird, so that it has always been a wonder to me that people did not, more of them, use the plan. If these Flushing, (L. I.) people will send to me for instructions, I will be glad to describe in detail just how the whole thing is done."

Plenty of Fall Feed.

For the first time in years, says the Livermore Herald, the sheep men have an abundance of fall feed on their ranges in the hills south of town. John McGlinchey, a leading sheep-owner, informed us this week that he had never known conditions more favorable. The absence of fires during the summer and fall has left a good growth of grass on the hillsides which will sustain the sheep in good condition until the green feed has sufficient strength and the growth is large enough to protect the tender grass sprouts against frost.

The flocks are still on stubble in San Joaquin and Contra Costa counties but all will be on the home range before December 1st.

Nearly all the fall clip of wool was sold early and at good prices. There has since been considerable depression in the wool market but within the past few weeks there have been signs of renewed activity and several wool-buyers were in town last week trying to buy the wool that remains in grower's hands.

It is almost impossible to keep vessels clean if they have a rough surface. They should be smooth and always cleaned promptly after using.

If a cow is fed liberally and fattens instead of increasing in milk, she is getting too much to eat or should be sold to the butcher.

Jackson's Napa Soda is sold in every city, town and hamlet in the State.

CAMPBELL'S EMOLLIO IODOFORM GALL CURE

For GALL BACKS and SHOULDERS, CRUPPER SORES and SADDLE GALLS there is none superior.
The horse CAN BE WORKED AS USUAL.
For BARBED WIRE CUTS, CALKS, SCRATCHES, BLOOD POISONED SORES and ABRASIONS OF THE SKIN it has no equal.
It is very adhesive and easily applied to a watery as well as a dry sore.
It will absolutely prevent BLOOD POISONING. In this respect there is no Gall Cure offered which can justly even claim to be a competitor. We placed it on the market relying wholly on its merit for success, and notwithstanding the fact that comparatively little has been done in the way of advertising the sales of 1908 were 100 per cent greater than the aggregate sales of Gall Cure preceding that year. This increase was entirely due to its MERITS, and from it we feel justified in saying that it is THE GALL CURE OF THE 20TH CENTURY.
It is a quick and sure cure for those troublesome skin cracks under the fetlock which injure and often lay up race horses.

All Trainers Should Have It in Their Stables

PRICE:—3 OZ. BOX, 25c.; 1 LB. BOX, \$1.00.

San Francisco, Saturday, November 21, 1903.

THE CHRISTMAS NUMBER of the BREEDER AND SPORTSMAN will be published Saturday, December 26th, and will be the handsomest and best illustrated number ever issued by this journal. In addition to a large amount of statistical matter of great interest to breeders, prepared especially for this holiday number, there will be several articles from the pens of Eastern and California contributors that will be of vital interest to horsemen, sportsmen and stock breeders. The half-tone illustrations of noted horses and dogs, shooting and fishing scenes, etc., now being made for this edition will be numerous and artistic and printed on heavy plate paper, many of them being suitable for framing. The advertising space will be limited, therefore those who wish to be represented in it should apply for space early. The rates will not be increased, but be the same as in regular issues. A beautiful embossed cover of artistic design is now being printed, and with the 34 pages of letter press and engravings will make the handsomest souvenir number ever issued by this journal since its establishment, twenty-one years ago.

THE ORGANIZATION of a California Circuit is necessary to put harness racing in this State on a proper footing and to restore it to its former vigor and standing. For several years past harness racing in this State has been a very uncertain quantity with owners and trainers who have been figuring on campaigning their horses. One year a good circuit of meetings would be given, but the very next year, owing to the cutting off of appropriations for district fairs and other causes, the circuit would amount to almost nothing to the great disparagement of training and disappointment and loss to all interested in any manner in the breeding or racing of the light harness horse. During the racing season just closed California has made the worst showing in her history. One good meeting was given—that of the Pacific Coast Trotting Horse Breeders Association at Petaluma, where purses and stakes amounting to \$10,200 were distributed to horse owners in four days, but outside of this the harness racing was hardly worth mentioning. This is not as it should be. There are owners enough and horses enough in California to make a success of a racing circuit that will be a credit to the State and to its horse breeding interests. It is time for breeders and owners to realize that it is useless to depend upon the district fair associations to furnish a circuit of harness racing. Those organizations depend entirely upon a State appropriation for their existence and as this appropriation is now cut off, and is very liable to remain so for the next three years, it is folly to expect any circuit of fairs during that time. California horsemen should therefore cut loose from the district fairs and hold harness meetings independent of them. What is needed is a circuit of harness meetings to be given under the auspices of local driving clubs. The towns of Petaluma, Santa Rosa, Napa, Vallejo, Woodland, Stockton, Pleasanton and San Jose could easily organize a Central Circuit that would attract large entry lists if purses of sufficient size were given. A four days program would be sufficient at each place and the meetings could be made profitable. If the Breeders Association can pay out \$10,200 in purses in four days and still make a profit of \$800, other associations can do the same. If a three days meeting given at Vallejo where the gate receipts were but \$500 and the subscription from the citizens only \$300, was made to return a profit of nearly \$700, Santa Rosa, Napa, Woodland, Stockton and San Jose should be able to do as well, as Vallejo is the poorest horse town in the State. What is imperatively needed at the present time is an effort on the part of those

most interested in harness horse affairs, toward organization in every one of the towns above mentioned. If clubs can be formed in even four or five of these towns, and delegates from those clubs will get together, select dates and announce programs, the thing will be done. The Breeders Association will affiliate with them and a circuit formed that will be worthy of this, one of the leading horse breeding states of the union. The time to organize is now. Programs for the entire circuit should be out by February, so that owners and trainers will know what to expect. An effort will be made next month to hold a meeting of delegates from several of the towns above mentioned with the idea of founding the Central California Circuit. See to it that your town and track are represented.

Will Race on Thanksgiving Day.

The Fresno Driving Club on Thanksgiving Day will hold its closing meeting and the arrangements that have been made for this occasion promise harness racing that will surpass anything that has been seen in Fresno for years. The program will consist of three events open to trotters and pacers, and, to make it of greater interest, the events will be best three in five, instead of best two in three as heretofore. Already there have been some of the best horses in this neighborhood entered, and the entry list is a good one, so that the classification committee has a lot of material to work on and the events will be so arranged as to bring horses against each other that are closely matched in speed.

The indications are, too, that it will be a society event, as such meetings have been in the past. Admission will not be free and the money thus raised is to be devoted to a worthy purpose. It is to be handed over to the ladies who have raised the money for the cemetery fence fund and is to be used by them towards helping to erect a memorial arch at the cemetery. Of course this will interest the ladies and their friends, and, although the club's meetings are always well attended, it is expected that on account of the worthiness of the object for which the money is to be raised, this will be a record breaker.

As stated, this will be the last of the club's meetings under the present organization. It has been a great success and has taken the place in the social history of Fresno that its projectors anticipated for it. The meetings have attracted the best people of the city and county at different times and all have enjoyed themselves, for the quality of the sport furnished has been first class in every respect and these amateur races have been of deeper interest in many cases than professional events on which thousands of dollars have been wagered. Horse owners unite in giving much of the credit for this result to the indefatigable efforts of the secretary, A. J. Hudson, who has spared no effort to make the club meetings a success.

It is probable that the club will reorganize next spring and that thereafter instead of the prizes in the races being trophies, they will be purses.—*Fresno Republican.*

At the Salinas Track.

In a letter to the BREEDER AND SPORTSMAN, dated Salinas, Nov. 18, Charles Whitehead the new lessee of that track, says:

Mr. Ed Parker has six head of Mr. J. B. Iverson's horses, here at the track, including Dictatress 2:09, Prince Gift 2:12, Princess 2:16, and a Dexter Prince mare that is very fast. He has also two sisters to Dictatress that look like they will go as fast as she. They are all in good condition.

My horses arrived here in good shape. I brought five head from Stockton; Topsy 2:10, owned by Francis Hodgkins, Deputy 2:13, owned by Mart Smith, both of Stockton, also Delphi 2:12, The Mrs. and full a brotber to her that is quite a good trotter for a green two year old. I received since I came here, a trotting filly by Gossiper owned by Mr. A. W. Martin of San Francisco. I have four of Mr. J. Hebert's horses—Bruno 2:16 by Junio, two pacers by Hambletonian Wilkes and a green trotting filly by McKinney, all in nice condition.

The track and stables will be kept in good shape all the time. Everyone here takes an interest in the horse business. The directors of the Agricultural Society intend giving a good meeting next year."

Speed is Necessary.

Somebody has compiled a table which shows the extreme speed of the trotters and pacers in races this year at all the meetings of the Grand Circuit, and including Lexington and Memphis. From this table it appears that 141 heats were trotted in 2:10 or better and 240 heats were paced in 2:10 or better, making a total of 381 beats in actual races that a horse had to go in 2:10 or better to win.

A Horse-Breeding Country.

While in Adelaide lately, writes "Bruni" in the *Australasian*, I had an opportunity of seeing some horses from a part of the State that has always had a special attraction for me. I refer to the district to the north of the terminus of the Central Australian railway, a semi-desert region that lies about 700 miles to the north of Adelaide, where the annual rainfall is often for years not more than 6 inches, and of late years it has often been considerably less. Notwithstanding its many drawbacks, this country is occupied by pastoralists, and some excellent stock are raised on it. The environment is a peculiar one; the surface is covered with a mass of stones, set as closely as if done purposely by hand. Amid these stones are smooth spaces, somewhat lower than the surrounding land, and should even a 3 inch fall of rain occur suddenly these smooth spaces receive a good irrigation. No matter at what time of the year the rain may fall, there is a growth of vegetation differing according to the time of the year, and this will serve for the twelve months. This country is admirably adapted to breeding horses, which develop well in this sultry land. With such a scanty rainfall one would naturally expect to find the horses raised in the district undergrown weeds, but, to my surprise, I saw well shaped animals, with round barrels and such muscular loins and quarters as one seldom sees in Australia. They had splendid bones, shapely cut backs, and hoofs like flint. There was a type in them that spoke plainly of the environment, which seemed to eliminate the coarseness that would certainly have marked horses bred as one lot was, if raised in a more genial climate. One lot of horses from this district was composed of half-bred Arabs, bred by Mr. S. S. Ralli. They were from ponies of great excellence, by imported Arab sires, and I never saw anything superior to them. The horses from the district to which I have referred are much liked by Indian dealers, who give high prices for them.

Didn't Print it All.

I. Hoag writes as follows to the San Francisco BREEDER AND SPORTSMAN: "I think I know the breeding of the grandam of Lou Dillon. It was Fly, who was either the dam or the grandam of Plunkett 2:13. She was by Bulger, a running-bred horse, and her dam was, I think, a mare called Fanny, by a horse called Spread Eagle. Dan Misner used to drive Plunkett, and I think he can tell you who owned Fly before she passed into Kimball's hands."—*Ky. Stock Farm.*

Yes; and the BREEDER AND SPORTSMAN at the same time it printed Mr. Hoag's letter also printed the fact that Fly the dam of Lou Dillon died in 1881, while Fly the dam of Plunkett was alive six years later as Plunkett was foaled in 1887.

There are four McKinney weanlings at Gentry Farm, Bloomington, Ind. McKinney is looking fine, and clearly impresses one as being just what he is, one of the grandest horses of the day, while Ed Winter has developed wonderfully in form and general appearance since Mr. Gentry bought him. Among the brood mares, all in flesh, showing their good care and keep, we were especially attracted by Mary Lou 2:17, dam of Kinney Lou 2:07; Gazelle 2:11, dam of Zephyr (4) 2:11 and Zolock 2:10; Leonor, dam of Jenny Mac 2:09 and Doctor Book 2:10.—*Western Horseman.*

A dispatch from Santa Rosa says: There is disappointment among the horsemen caused by the announcement that Lou Dillon, the queen of the turf and Millard Sanders, her driver, will winter in Memphis, Tenn. It was planned that on the arrival of the duo in this city they were to be given a royal reception befitting their achievements on the Eastern tracks. Sanders was to have been banqueted, and in addition it was planned to present him with a handsome silver loving cup.

There was a smart race between Nora McKinney 2:12 and Queen Wilkes 2:10 on the New York speedway, the other day. The former won the first brush, and the second was a dead heat between the two mares. Queen Wilkes trotted a half at Memphis in 1:02, while at Empire City Nora McKinney trotted the last half of a winning beat in 1:02.

Best Remedy Out --Cured Bone Spavin.

Cartwright, Man, Oct. 19, 1903.
Dr. B. J. Kendall Co., Enosburg Falls, Vt.
Gentlemen: Please send me one of your "Treatise on the Horse and His Diseases." I can truly recommend your Kendall's Spavin Cure, for I have used quite a few bottles of it, and I find it the best remedy out. I am never without a bottle of it now. I have cured Bone Spavin with it and I find it good for any disease I have tried it on. Yours truly,
WM. B. LOWE.

Sober up on Jackson's Napa Soda.

JOTTINGS.

THE MCKINNEY COLTS, consigned by Mr. James H. Gray of Santa Rosa to William G. Layng's Red Ribbon sale last Tuesday evening, were the features of the sale and attracted lively bidding. Mr. Gray purchased these colts from the Santa Rosa Stock Farm a year ago and has made a neat profit on them.

The first one sold, Cruzados by McKinney out of Stamboulita 2:27 by Stamboul, second dam Biscari, dam of four in the list, by Director, third dam Bicari, dam of six by Harold, etc., brought an even \$1000 and went to the bid of Dr. C. C. Ricks of Eureka, Humboldt county. Dr. Ricks is associated with Dr. C. O. Falk, also of Eureka, in the ownership of this colt, and these gentlemen have a young horse that should not only prove a profitable investment, but trot to a low record and be a very successful sire. He is entered in the Occident, Stanford, Breeders and Hartford futurity stakes, and will be trained for those events. Under Mr. Gray's care he has trotted a quarter in 33 seconds, which shows that he has plenty of natural speed, and his individuality and breeding should make him a racehorse of the first class. It is the intention of Messrs. Ricks & Falk to place Cruzados in the stud next spring and permit him to serve a limited number of mares, after which he will be put in training for his stake engagements. The colt was shipped to Eureka on Wednesday.

C. L. Jones, a young farmer and breeder of Modesto, was a bidder on the above mentioned colt, and when he failed to get him became a bidder on the colt Carlok in by McKinney out of Carlotta Wilkes (dam of Volita 2:15½) by Charley Wilkes, second dam Aspasia (dam of three) by the great Alcantara, third dam the producing mare Miss Buchanan by Clark Chief 89. Mr. Jones now thinks that his luck was with him and that he really got the best colt when Carlok in was knocked down to him for \$875. Certainly this colt is a good looker. He is a bay with two white socks behind, and is a splendidly formed and high headed colt with a fine disposition and 2:20 speed right now. He has been a quarter in 35 seconds handily and is a great prospect. Mr. Jones has turned him over to the well known trainer Hi Hogohoom, who has taken him to the Woodland track and will allow him to serve a few mares early in the spring. He says he expects to win at least a part of the money in the Occident, Stanford and Bredera futurity next year with this fellow, as he considers him one of the best prospects he has ever had.

The black colt by McKinney out of Biscari by Director was the fastest trotter of the four two-year-olds, and \$1300 was bid for him at the sale; but we understand he was bid in for Mr. Gray, as was also the McKinney colt out of Russie Russell by Bay Rose that was bid up to \$350.

James Thompson reached home last week from his Eastern trip looking like a winner. He has splendid success with the three horses he took over for Col. J. C. Kirkpatrick—Clipper 2:06 Mendovena and John Caldwell. The record made by Clipper is one for which Mr. Thompson is entitled to a great deal of credit. He landed his string there late in the season and Clipper had to start in three races within ten days, and without hopples. A more steady going determined pacer was never seen however, and Mr. Devereux drove him the two fastest heats paced by a gelding this year in a race, when he won the beautiful cup for pacers driven to wagon at the Memphis meeting. These heats were in 2:06½ and 2:06½ and Mr. Devereux expressed the opinion right after the race that he could drive Clipper a mile to wagon in 2:04. Mendovena, the mare by Mendocino out of Avena by Palo Alto, was sold at a good figure, and John Caldwell, the Strathway trotter did all that was asked of him. This last named horse astonished the California trainers as he was an entirely green horse when Mr. Kirkpatrick purchased him and put him in Thompson's hands. He started against horses that could trot in 2:10 and won second money when the time was better than 2:14, finishing a close second in 2:13½. By next season this gelding will be a 2:10 trotter. Mr. Thompson returns full of enthusiasm over the way racing is conducted over East and says that if he can take a horse over there that will win the M & M., the Bonner Memorial or any of those big trotting events, he will consider that his work with harness horses has not been in vain. He will locate at Pleasanton again this winter and will soon be at work on a number of prospects.

That the breeders of the light harness horse are not a class easily discouraged by local conditions is

evident by the large number of mares already being booked to stallions in this State, and the number of horses that are being taken up to begin training on for the season of 1904. The California circuit was such a failure this year that there was danger of the breeders and trainers losing heart, but the California horsemen are not of the quitting sort and they are at it again as strong as ever. There will be more horses trained in California next year than at any time for the past five or six years, and a very large percentage of them will be taken East if they make a good showing by the first of May. The number that will remain in California, however, will be enough to fill all the programs that will be made up by the local track managers, and the chances are that the California circuit will be a good one in spite of all the drawbacks the game has met with during the past few years. The Breeders meeting will be announced early, and the State Agricultural Society will make an early announcement of some good sized purses. Meetings will in all probability be held at Pleasanton, San Jose, Salinas, Hollister, Petaluma, Santa Rosa, Vallejo, Woodland, Fresno and several Southern points, and all have promised to make announcements of the same as early as February. The few meetings held this year show that the public will patronize harness meetings, as every meeting held this year paid a profit. By the first of February there will be five hundred trotters and pacers in training in this State, and the standard bred stallions will have a larger patronage than ever.

Tea Dee Cee 2:14½, the good son of Zomhro, is working well at the Los Angeles track and increasing his speed right along. Last Tuesday Geo. Beckers drove him a mile in 2:15, the first half being in 1:07 2-5, and the last half in 1:07 3-5. Tea Dee Cee finished well and Mr. Beckers thinks he will have a mighty good horse for the 2:20 trots next year.

If anyone thinks there is not a great interest in trotting bred stock still manifest among the best people in California let him attend an auction sale of well bred ones. Every sale of standard bred horses held in this city during the last year has drawn from one to three thousand people and the bidding has been lively, while prices have been good. The American trotter has a warm place in the hearts of the people.

The Pacific Coast Trotting Horse Breeders Association proposes to increase its two high stakes, The California for 2:24 trotters and Pacific Slope for 2:20 pacers, and will probably make the first named \$2500 and the latter \$2000. Some of the directors favor making The California a \$3000 stake and this may prevail. The Breeders will announce its stakes not later than February.

A Pittsburg correspondent says that one of the handsomest horses seen on the drives in that city is Boodler, the trotter by Boodle 2:12. Boodler was raced at the matinees there this year, winning every start, and getting a wagon record of 2:17, trotting the last half on two occasions in 1:05½. He has trotted a mile in 2:12 in his work and is considered a great road horse.

Dan Patch had a let up of a week just before he broke the world's record by pacing a mile in 1:56½ at Memphis. It will be noticed by anyone who looks up the matter that the majority of horses have made the supreme effort of their careers just after a let up.

Missing Numbers Wanted.

To complete a file of the BREEDER AND SPORTSMAN we need papers of the following dates:

1896—February 20th, May 2d, May 23d, June 20th and June 27th.

1897—April 3d.

1898—February 5th and March 19th.

Anyone having any of these numbers will confer a favor by notifying us or sending them in to this office.

BREEDER AND SPORTSMAN.

Answers to Correspondents.

D. C. Lemoore—Has Chandelier by James Madison, dam Betsy Trotwood, any record? What is Don Marvin's age, and what is the fastest record of any of his get?

Answers—Chandelier has no record in standard time so far as has been reported in the Year Book.

Don Marvin was foaled in 1884. His fastest performer is the trotter Don Lowell 2:14½.

H. B. Gentry, Bloomington, Ind., has sold to W. F. Galbreath of Urbana, O., for \$1000, the bay yearling filly Lady McKinney, dam Our Lady by Nearest 2:22, brother to John A. McKerron 2:04½.

Seymour (2) 2:23 by Diawood 2:11.

On the title page of this issue of the BREEDER AND SPORTSMAN is a half tone engraving of the bay colt Seymour by Diawood 2:11 out of Nancy H. by Upstart. This colt won the pacing divisor for two year olds in the first Pacific Breeders Futurity at the Breeders meeting at Petaluma last August. The time of the two heats was 2:27½ and 2:23, and Seymour could have beaten 2:20, but it was not necessary. When it is taken into consideration that the fastest two year old pacer of the year in the entire country was the filly Fata Morgana 2:19½ by Sphinx, the record of Seymour is a particularly good showing for a California two year old that had but one race to start in.

Seymour is the first of the get of that handsome stallion Diawood to start. Diawood was himself a race horse, and took his record at the State Fair in 1899, when he won the 2:12 class pace in 2:11½ and 2:11, heating such good ones as Don 2:10, Artbur W. 2:11½, Beechwood 2:08½, I Direct 2:12½, Floraceta 2:11½, Hazel H. 2:12½, and Montecito Boy 2:16½. This was a hot field of pacers that year and Diawood had to be a good horse to beat them. Diawood is by Diable, 2:09½, whose get have made an excellent showing this year and is one of the best bred horses in America. The dam of Diawood is Abbie Woodnut, (dam also of Abdine 2:17½) by Woodnut 2:16½. The ancestors on both sides of Diawood's pedigree are producers of extreme speed. He carries the blood of Strathmore, Electioneer, Geo. Wilkes, and Nutwood, and is related to all the two minute horses both trotters and pacers. He was a great colt pacer, getting a record of 2:21½ as a two year old, 2:14½ as a three year old and 2:11 as a four year old. He is owned by Mr. C. E. King of College City, Colusa county, Cal.

Seymour is owned by Mr. Elmo Montgomery of Davisville, Yolo county, and was trained by Sam H. Hoy of Winters. Mr. Hoy also trained the filly Friskarina by Bayswater Wilkes, belonging to Mr. E. D. Dudley of Dixon. Two weeks before the meeting Seymour was turned over to Chas. Spencer to drive in the race, and Sam had to see the filly driven by himself beaten, but she was a good second. Seymour is the first of the get of Diawood to start in a race but there are several more that will be heard from soon.

Several attempts have been made by professional and amateur photographers to get a picture of Seymour, but for some reason nearly every picture taken has been a failure. The one on our front page this week, taken by a Davisville amateur, is peculiar inasmuch as it was snapped just as one of his front feet was lifted from the ground, but it is a good likeness of the colt.

Knocks the Knockers.

Sensible words were uttered by Mr. R. P. Lathrop of Hollister at the convention held in this city this week under the auspices of the California Pacing Committee. Mr. Lathrop represented the California Central Counties Improvement Club, and spoke as follows:

"It is important that every care should be taken for one district not to injure another by pulling the other district down to build up your own. This 'knocking' has done more to injure Central and Northern California than any other one thing. An investor comes into one of our coast counties. The local parties have much to say in behalf of their locality. This is legitimate and to be expected, but incidentally they make comparisons and run down Northern California districts. This is entirely wrong, uncalled for, unjust, short-sighted and is a death blow to co-operation. The man being among strangers is on the alert and naturally skeptical. He becomes suspicious and goes to Northern California to investigate for himself, only to learn that they in turn are knocking the Central Coast counties. What is the result? He becomes disgusted and quietly goes to Southern California, where they have studied the art of entertaining and interesting the investor, where they work under a system, where they co-operate and where they pull together; they are a unit.

"By co-operation let us induce desirable Eastern people to come and see for themselves. Let every district sound the praises of their own locality, and work with a will for it. But if they cannot say a good word about the other districts let them keep silent. Silence is golden, many times.

"It is not so much which-section fills up first, but to fill them all. This, gentlemen, is my idea of co-operation."

As Mr. Lathrop, in addition to the many enterprises in which he is interested, is a horse owner and breeder, we take this opportunity to quote his words that they may be read by horsemen. They can be read with profit by all.

Wilkes Stallions for Sale.

Mr. P. H. McEvoy of Menlo Park is offering several desirable young Wilkes stallions for sale as will be seen by an advertisement in another part of this issue.

Jackson's Nana Soda untangles the feet.

Notes and News.

Horse values are not declining.

The demand for good roadsters is incresing.

Over one hundred horses are in training at Pleasanton.

Dan Patch now has nearly every pacing record there is in sight.

Waldstein 2:22½ has been taken to Cloverdale, Sonoma county, where he will make the season next year.

It is the general opinion that the "skindicate" hook has seen its last days at the harness meetings in this State.

Mr. Ketcham has proposed to Mr. Billings that Lou Dillon be bred to Cresceus when the mare is retired.

The Hollister association will join the National Trotting Association next year and give a good race meeting.

Cavalry and artillery horses are again being bought in the Chicago market for account of the British Government.

Robert McGregor crossed the century line as a sire this year. Six new standard performers to his credit make his total 101.

Honors are comparatively easy between the trotters and pacers, inasmuch as three of each gait have beaten two minutes.

The owner of the Canadian pacer Gallagher 2:10½ by Royal Rysdyk is reported to have refused an offer of \$8000 for his horse.

W. G. Durfee, of Los Angeles, has purchased a yearling filly by Zomhro 2:11, dam Daisy Q. by Altamont, from J. A. Jones of Portland.

The popular and well-known trainer and driver, George Starr, has so far improved from his injuries that he has been enabled to leave the hospital.

An Eastern paper says that the Salishury gelding Mush 2:08½ has been shifted from the pace to the trot and that he is showing very fast at the diagonal gait.

Tom Smith, manager of the Vallejo track says that a good harness meeting will be given there next year, with good purses, and announcements will be made early.

Among the meetings to be given next year Pleasanton track will be prominent. It is proposed to make an early announcement of good purses for trotters and pacers.

Frank Irvington a trotter by Nutwood Wilkes won a five heat race at Fort Wayne, Indiana, October 21st, and took a record of 2:23½. His dam is Nettie G. by Anteeo.

Margaret S. 2:12½ by Director heat St. Andre 2:13½ recently in a hot crush on the Philadelphia speedway. The one-time rival of Allerton and Nancy Hanks, now seventeen, must retain her speed remarkably.

A Woodland horseman who was in the city attending the Blue Ribbon sale this week says that the association there will be in line next season with a high class race meeting the week prior to the State Fair.

Allie Nun, the famous show road mare in the stable of E. T. Stoteshury, has won fifty blue ribbons on the tan hark and has been beaten only a very few times. She was got by Allie Wilkes out of The Nun by Nutwood.

Sam N. Matthews, of Salinas, lost a very fine two year old filly last week, the cause of her death being some howel trouble. She was by Robin, (sire of Rohlzola 2:12½, Rohlet 2:12 and others) out of a mare by Secretary.

Henry Hellman is hack at Portland with the three horses he campaigned on the Northwest circuit this year. They are the trotter Mack Mack 2:13 by McKinney and the pacing mares Hallie Hinges 2:17½ and Portia Knight 2:16½.

A. C. Baxter of Lima, Ohio, paid \$3500 for the two-year-old filly Grace Direct by Direct Hal 2:04½, dam Grace Chimes by Chimes; second dam Grace Hamlin (sister of Heir-at-Law 2:05½ and Prince Regent 2:16½) by Mamhrino King.

Mr. George H. Ketcham has received quite a handsome income from Cresceus 1:59½ the past season. The horse earned upwards of \$19,000 in the stud, if report is correct, and his fees for exhibitions in the West foot up some \$10,000.

The stallion Oro Guy is offered for sale in our advertising columns. He is standard and registered, a splendid individual, has worked a mile in 2:16½ and is a well bred horse. His sire is Oro Wilkes 2:11, that is one of the most popular sires in the East, and his dam is the good mare Roseatehy Guy Wilkes, second dam the producing mare Rosedale by Sultan, third dam also a producing mare by The Moor, and fourth dam by Fireman, son of the thoroughbred race horse Langford.

The Old Glory Sale catalogue has reached us, and is a massive volume. 1047 horses are catalogued. It will take two weeks to sell them. The sale opens November 23d, and continues two weeks. The Palo Alto horses will be the first consignment offered.

Forrest W. 2:14½ worked a half mile in 1:03 at Pleasanton last Saturday and is looking fit to step a mile in 2:10 or better any time he should be turned round for the word. Al McDonald has this very handsome gelding in fine shape at the present time.

Van B. DeLashmutt, who has been living in Spokane for several years past, has returned to his Witch Hazel farm near Portland, says the *Rural Spirit*, and started a dairy farm. At one time Witch Hazel was the largest trotting horse breeding farm in Oregon, where Mr. DeLashmutt had at least seventy-five head of brood mares. It was on this farm where Caryle Carne 2:11½, Sam Bnwers 2:11, Vision 2:12½, and Nettie Ham 2:19½, were bred.

There will be some changes in the personnel of the Oregon State Board of Agriculture in another year. W. H. Wehrung, president, and J. H. Settlementier, vice-president, have both sent in their resignations to the governor and two new members will be appointed in their stead. Secretary M. D. Wisdom has announced that he will not be a candidate for that office again, which also means a new man for secretary. Personal business is given as the reason for the retirement in each case.

Silver Trophy won at Memphis by Col. J. C. Kirkpatrick's bay gelding Clipper 2:06 by Diablo.

Horses that many trainers think are "has heens" and "hack numbers," often lower their marks when placed in the hands of amateurs. It is a singular fact that The Monk 2:05½ and Equity 2:12½, the trotters that placed the trotting record for dnuhle teams at 2:08 the other day, were both discarded from the Village Farm racing stable because they were supposed to be not sound enough to make them of value as race horses. Just now both geldings are in the finest of form. Equity can doubtless trot a mile around 2:07 in single harness and Ed Geers recently asserted that if Mr. Billings would give The Monk a chance to go a mile to sulky for a record he would trot in 2:04 or better.

A correspondent of the *Topeka Mail and Breeze* says: "The writer used to think it almost impossible to get a farm horse too large. He had one which weighed 1700 pounds, and when he and his mate were put ahead of a plow they had the weight to take it through anything but solid rock. His next team weighed around 1300 each, and for all purposes he likes that size better than the great big fellows. As a rule, you will find the smaller horses, to say 1200 to 1300, are handier, have better nerve, more grit, and will do as much work as the overgrown ones. This fall I saw a big team and a small one plowing, and the medium sized, wiry horses did as much plowing, round for round, as the big ones."

Wilmar, the two year old gelding by Wildnut, dam Sweetwater by Stamboul, that was sold at the Palo Alto sale last January to Mr. O. E. Williams of Ukiah, is showing great speed at the Santa Rosa track, and is looked upon as one of the best prospects in the three year class for next year's stake races. Wilmar is not engaged in any California stake, but is entered in the Horse Review, Kentucky and Hartford futurities and in the Terre Haute Matron Stakes. He has shown enough speed now to warrant the belief that 2:12 will not stop him in his three year old form, and a nicer gaited trotter one seldom sees. He is a good looker, and has the legs and feet, handsome head, solid hay color and beautiful mane and tail that would make him an ideal horse for the speedway.

Hi Hogohoom's string which he has begun work on at Woodland should develop some high class horses, as while they are all youngsters they are a grandly bred lot and good lookers. In addition to Mr. C. L. Jones' handsome two-year-old by McKinney-Carlotta Wilkes, that was purchased at the Red Ribbon Sale in this city last Tuesday, Mr. Hogohoom has a colt by L. W. Russell out of Elsie dam of five in the list by Gen Bentnu, one by Diablo out of a mare by Waldstein, and the yearling Palo King by Marengo King, son of McKinney, dam a mare by Palo Alto 2:08½. It will be hard to find four better bred youngsters in one row of stalls at any track. Mr. Hogohoom also has the fast stallion Arthur W. 2:11½, at Woodland and will make a season with him in the stud. Arthur W. is a good looking horse with size and extreme speed and his colts are very promising, though none of them are old enough to race yet.

Alta McDonald has taken Major Delmar to Island Park, Albany, N. Y., for the winter. He believes he will drive the horse a mile next season faster than any other trotter has yet gone. His faith in the Major is unbounded, and he hopes next year to drive him in a race against Lou Dillon. Alta is one of the few men who thinks now that Delmar has any chance with the little chestnut mare.

If China Maid, the McKinney mare that Ho Yow gave to J. M. Nelson who took her East, does not pace to a very fast record next season it will be because she has been touted to death. Nearly every paper that reaches us from the East tells of a fast mile this mare has been worked and adds that she is to be "saved over" for 1904. The last hurst of speed she was credited with was a mile in 2:05½.

If report may be relied upon it seems probable that the 28-year-old trotting mare Madeleine 2:23½, by Rysdyk's Hambletonian, may produce a foal next season by Red Wilkes, a 29-year-old son of George Wilkes 2:22. Here will be an excellent opportunity to test Professor Redfield's old age theory. Madeleine is probably as lively an old lady as any trotter of her age that ever lived. Nancy Whitman, the dam of Madeleine, also produced Robert McGregor 2:17½, the sire of Cresceus 1:59½, and it was doubtless from Nancy Whitman that Robert McGregor inherited much of his speed as well as ability to perpetuate the same.

Clipper brought \$2500 at John Splan's sale at Chicago week before last and went to the bid of W. R. Wylie, who was acting for a wealthy speedway driver. Few horses will be able to head Clipper on the speedway, and he pulls a wagon as fast as he does a sulky. Col. J. C. Kirkpatrick of this city, who has owned Clipper for several years and consigned him to the Splan sale, received this week from Memphis a very handsome silver cup won by this son of Diablo at the Memphis meeting in October, when he was driven by Mr. Harry Devereux of Cleveland and defeated the two crack pacers Tom Keene and Greenline, driven respectively by those famous amateur reinsmen, E. E. Smathers and C. K. G. Billings.

The fact that Lon McDonald had to tap Sadie Mac at the finish of the second heat of the race in which she defeated Katherine A. at Lexington, caused a Kentucky turf writer to speculate upon what the daughter of Wiggins would have done to the northern bred filly had she not been handicapped by illness this season. When asked about the heat at the finish of the race, Lon McDonald, the driver of Sadie Mac, said: "Why, I could have beaten Katherine A. twenty lengths had I so desired. I had promised Mr. Smathers that I would keep Sadie in the 2:12 class if possible, and took her hack in the stretch, not thinking any of the others were dangerous, and when the daughter of Wiggins came with a rush was almost caught napping."

It has been definitely decided that Rihhnonwood will be taken to San Francisco after the conclusion of the present season, his owner being desirous of letting the champion measure strides with some of the American cracks. Before making the journey Rihhnonwood may race or give exhibitions at the Auckland Trotting Club's Autumn Meeting, the northern club being desirous of giving its patrons a chance of seeing him racing. Price shortly intends issuing a challenge to match his representative against anything in Australasia, for any amount, either best three out of five mile heats, or best two out of three distances at one, two, and three miles. Should any of the Australian cracks take up the gauntlet the Commonwealth racing men will have an interesting match to look forward to.—*New Zealand Referee*.

The following information is gleaned from Scott Hudson's books showing the operations of his stable for 1903: Races won, 43; gross amount won, \$75,767 50, of which Hawthorne won \$19,135 and Jay McGregor \$17,250. Jay McGregor started in 15 races in 13 weeks in 1903, won 9, was second 5 times and third once. He won a total of \$17,250. He was the largest winning trotting stallion of the year. Hudson's stable next year will include the following horses: Hawthorne 2:06½, Jay McGregor 2:08, Doctor Madara 2:08, Tertimin 2:24½, Twinkle 2:05½, Belle Kuser 2:08, Lady Gail Hamilton, 3, 2:11½, Ilive and Tregantle. Twinkle, Tertimin and Lady Gail Hamilton were fired this fall and are doing well. Jay McGregor and Nervolo will each make a limited season in the stud next spring, following which they will be prepared for a campaign. Rhythmic 2:06½ has been returned to his owner in Bourbon county and will not be raced again.

A faster track than the one at Memphis does not exist, and never has. The records made over it prove this. With the same amount of work it may be no faster than Readville or Columbus. No other track gets the care this one does. A. M. Howe, who has charge of it, is at it from sunrise until sunset, and a good part of the night during race meetings. Twenty mules and a dozen men are worked constantly on foats, harrows and watering carts. The soil is a red-dish loam, is 14 inches deep and requires lots of work to keep it hard. Thousands of tons of water are necessary to keep it packed properly, for rain is not a common thing down there in the summer and early fall. It is naturally fast soil, but it is the work spent on it that makes it the fastest piece of dirt in the world. The air of Tennessee is favorable for speed, too. It is clear and generally warm, with only once in a great while a strong wind. In the three years Memphis has been giving meetings there have been only four windy days and not a drop of rain has fallen

Benefit of a Let-Up.

When Dan Patch, who has once more lowered the world's pacing record, pulled a wagon in 1:59½ during the Lexington meeting the audience noticed that Scott Hudson drove the runner and the capable manner in which the Kentucky reinsman handled his part of the performance brought out a good deal of favorable comment. Also it was noted that Dan Patch finished his great mile in a style indicating that he had still a little speed in reserve. Talking about the trial some days later, McHenry, driver of Dan Patch, said that it was true his horse was not all out at the finish of the 1:59½ mile. "I was surprised," he said, "at the way my horse finished, and he certainly was a trifle better than I had figured he would be that day. You will remember that at Cincinnati Dan went against the record on a day when neither the weather nor the track conditions were favorable for a great effort. Still, I knew, even before we started for the fast mile, that the stallion was not at his best. When we came out for the warming up heats he shook his head and acted as he always does when right in trim, but by the time those miles were over he was dull, and I saw that his playfulness was a bluff, and he was really not feeling as chipper as he would like to make me believe. Dan is a horse that will always do his best, and he tried hard at Cincinnati, but between his own feeling of lassitude and the poor day and track the performance he put up was one that did not suit me. I knew right then that he had been given a little too much fast work and had trained off—in other words was a little stale.

"Then I decided to give him a complete letup, and for eight days that horse never had a harness on. He was walked and banded otherwise in the ordinary way, but there was no harness work. That brought him to the Lexington trial in a shape that did not just meet my views. I thought he would be better if there had been a chance to give him a little sharp work before going to the wagon in an effort to beat the world's record at that hitch, but there was no chance to do this and also carry out my plan of giving him a good rest, and so when I decided to go against the wagon mark I figured that it would be a great performance if he could step the mile in two minutes, or possibly a little slower, as the mark we were shooting at was 2:01½. During the Lexington mile I never spoke to Dan or rallied him in any way until the seven-eighths pole was reached. As we got to within a hundred yards or so of the wire I tapped him with the whip and was surprised at the way he stepped out from it—just like a horse that hadn't been doing his best at all. From that point to the wire the runner was really in Dan's way, and from what my horse showed me in that last hundred yards I am perfectly satisfied that if I had figured him to be as good as he was and done my driving accordingly he would have paced that mile in 1:58½.

"Of course, I was figuring that the week's absolute rest had shortened him up a little, so to speak, but that is where I was mistaken. Once before I had the same experience with a fast pacer. Years ago, when John R. Gentry was in my stable and was racing a series of exhibitions with Joe Patchen, the same thing happened. We were at Louisville with the horses, after going a lot of races, and neither one of those pacers could step a mile better than 2:08. We still had three exhibitions to give with them—at Milwaukee, Dubuque and Sioux City—and it looked as though we would not be able to make a respectable showing for the money that was to be paid. I figured on the matter a little and finally decided that so far as Gentry was concerned he was to be given a good rest during the week or so that intervened before the Milwaukee race was booked to take place. I told Jack Curry, who had Joe Patchen, what my ideas were, and sent Gentry to Milwaukee with a boy in charge, instructing the caretaker to give the horse a couple of nice walks every day, let him roll around and eat grass and enjoy himself generally, but not to put the harness on him.

"This program was carried out to the letter with the result that our pacers went a fine exhibition at Milwaukee. The rest cure had worked so well that I decided to try some more of it before the race at Dubuque, which was to occur seven days after the one at Milwaukee. Not once did Gentry feel the weight of a harness between these races, and yet at Dubuque he stepped a third heat in 2:03½, his best mile that year, and at Sioux City, only two days later, paced one of his miles in 2:04.

"As to what pacemakers can do for a trotter or pacer that is trying to go a good mile, my idea is that the most of them accomplish but little in the way of help to the horse that is making the effort. As a rule they are either too far away or too close. I know that Dan Patch doesn't owe anything to the pacemaker in some of his best miles, but that on the contrary they have been a hindrance to him. All the

talk about the driver of the runner being able to rate the trotter or pacer is bosh, and for this reason: Every man who has driven fast trials knows that, while his watch is a convenience, and in some respects a help, that, after all, what he must depend on is how his horse feels to him at the end of the lines. It is not infrequently the case that a two minute pacer, for instance, will take more out of himself going one-quarter of a mile in 0:30½ than he will when he steps the next one in 0:29½. Now the watch isn't going to tell the driver that—he can find it out only through the reins, and certainly the man who drives the runner in front of the harness horse cannot know anything about how the other horse is doing his work."—Exchange.

How the Daily Paper Does It.

The morning after Lou Dillon beat Major Delmar in the wagon race at Memphis, the *Commercial Appeal* of that city printed the following:

"Something happened in Memphis yesterday, something that never happened in this big, round world's history before. Great and unusual things continue happening in Memphis, because Memphis is a great and unusual place, and like likes like and attracts it. Hence it was that a match race was trotted in Memphis yesterday, such as was never before witnessed since the horse was invented and the last improvement on his equineship was patented. The king and queen of trotters were here. The first two horses that ever made a mile in two minutes in the whole world's history were at the Memphis Driving Park.

held it to the end. This kept Delmar running after her, which was proper. It is in the order of nature. She came in uncaptured, heart whole and fancy free, and all the more desirable. In the second heat Delmar, gallant gentleman that he is, broke in the first quarter. This was eminently proper. It destroyed his chances of winning and made him strive all the harder to overtake her. Many a man saw himself, his younger self, reflected in Delmar's performance. Lou Dillon moved with energy and swiftness, but with poise and sensuous grace. She appeared a Gibson girl in horseflesh, arrayed in the prevailing eel skin costume of the smart set, and she beat the king of trotters. Some day a poet will embalm her performance in verse. And modern philosophers will revise their sage advice. It will no longer be: "Hitch your wagon to a star," but "hitch your wagon to a Lou Dillon." Memphis salutes the queen of trotters.

Statistics of the Memphis Meeting.

The last heat raced at Memphis wound up the light harness season of 1903. The total number of races was thirty-two and the total number of heats (one mile or over) fifty-six. The fastest heat was 2:03½ and the slowest heat was 2:17½. The average time was 2:09 35-112. The total number of horses started was 172. The trotters numbered 80 and the pacers 92. The total amount of money distributed was \$32,200. Jay McGregor, Dr. Strong, Masetto and Axdelight led the trotters, while Hal Chaffin, Star Hal, Nervolo, Cascade and Directum Miller won most money among the pacers. Ed Geer and

SADIE MAC 2:11½ BY PETER THE GREAT 2:07½
Winner of the Kentucky Futurity of 1903

For the first time in their lives these horses met in a trotting contest, which means that for the first time since the wheels of time began to revolve on their axles two two-minute horses met—and in Memphis. The event is epochal. It is an unprecedented blow out, literally an outflow—e-ventus—but not in the sense in which the argot of the street uses it. It is something that blows out every other light but its own. It dwarfs all other performances. It erases all past records as if they had been stylused on palimpsest, and writes a new and more glorious one over them.

Old Memphis on the Nile in her days of glory was great, and the pyramids and the broken colossal statue of Rameses bear testimony to the fact; but her namesake on the Mississippi looks out from her pinnacle of glory on the ruins of the ancient city with commiseration and on her greatest greatness with contempt.

The occasion was a memorable one. The consciousness that people were witnessing something greater than ever happened before and something that was happening for the first time, thrilled and awed like the first sunrise seen by the first man is supposed to have done. Both animals were pictures, but different. Lou Dillon was a stanza from a classic lyric, in motion. Delmar was a canto from an epic poem—magnificent but ponderous and rugged. Lou Dillon moved as soft and soothingly as a Provencal air, fresh from the land of Oc. Delmar's was a Wagnerian etude, splendid, but not compelling. Together they rendered a Hungarian rhapsody. Lou Dillon won and won easy. She had to. It was so ordered. She belongs to the winning sex—the sex that always wins, the sex that never loses. She took the lead at the outset and

Scott Hudson led the winning drivers, with Snow, Walker, Benyon, Brady and Dickerson close behind. Nine new world's trotting records were established. Lou Dillon was responsible for five of these. Major Delmar, Fereno, and The Monk and Equity placed the rest. Five new world's pacing records were hung up. Three went to the credit of Dan Patch and one each to John M. and Darrel. Bardoe, Ed Geer's mule, set a new world's trotting record for mules at 3:46½.

The Directs Get the Money.

No less than four of the champion harness racing records of 1903 were made by the offspring of Direct, 2:05½, who has to his credit also more new performers in the 2:15 list than any other trotting sire. It is remarkable how, in spite of fierce competition and annual increase of speed, the family of Direct continues, year after year, to stay in front of the procession. Last year Direct Hal 2:04½, the largest winner of the campaign, and Prince Direct 2:07, were the sensational performers to the credit of Direct. A year or two before it was Bonnie Direct, whose 2:05½ is still the fastest record ever made by a green four year old. In 1898 the unbeaten trotter Directum Kelly 2:08½, winner of eight straight races in the Grand Circuit, and the precocious pacer Directly 2:03½, were the stars. No other trotting sire of the times is credited with so many truly sensational winners as Direct.

The Kenney Bicycle Co., 531 Valencia St., is doing a big business in the McMurray Carts and Sulkeys. You not only save money by purchasing a McMurray but get the most durable, best made, and easiest running cart or sulky in the market. Investigation will convince a Missourian.

Racing Season Opens Successfully.

The racing season for San Francisco and vicinity opened last Saturday at Emeryville with an attractive program and an attendance of approximately 3000 lovers of the sport. All indications point to a successful meeting. The stakes received 25 per cent more entries than on any former year. It is estimated that there will be about 1600 horses present to take part in the races during the season. It is expected that the Pacific Coast breeders of thoroughbreds will be greatly benefited in the near future by this meeting as a number of prominent Eastern horsemen are here at present and others will arrive later in the season, many of whom, attracted by the success of California bred horses, will be purchasers. Never have the California thoroughbreds been so successful in the East as during this year and only last Wednesday three of them won races—two at Benning and one at Latonia. Nothing is wanting in the way of equipment or appointments to make the tracks of the California Jockey Club equal to any in America, every detail having been placed in the hands of representatives thoroughly familiar with the requirements. The judges and starters are gentlemen of unquestionable ability and integrity. Under the best management and the most honest racing there are many conditions that will occasionally defeat a horse that cannot always be taken into consideration. Hence "racing luck" and many of the disappointed ones who lose a wager on form see a swindle where no swindle exists and it has suggested that it is due the public where horses show a startling reversal of form that their entries should be thrown out. This would do much to inspire the public with confidence and save the reputation of many jockeys. Not only will San Francisco and vicinity enjoy the sport this winter but Los Angeles will also have the beautiful Ascot Park opened on December 24th for a ninety days' meeting, and there is no doubt but both the San Francisco and the Los Angeles tracks will receive a large attendance.

BIG PRICE FOR TURF FAILURES.

Before the races yesterday the writer was conversing with an old Eastern trainer regarding the failures of the turf. The public seldom gives this matter much consideration. It does not realize the vast amount of money lost on the high priced horses that prove a failure on the track. The owner is the largest individual loser, but the amount he loses is a pittance compared with what it costs those who remember only that the horse in question was bought for a high figure and presume he must be a stake winner, and with this idea rush to play him whenever and wherever entered in races, believing that he should be as good as the price.

The writer recently returned from Australia. During September he attended a sale of race horses in Sidney and saw Kinglike, one of the greatest failures of recent years, sold for 35 guineas. Perhaps it is not quite right to blame Kinglike for all his failures. He was a horse from whom handicappers expected too much and the result was they never gave him a chance. As a two-year old he was a stone (14 pounds) behind Malster. When Mr. Maedonald gave 900 guineas for him everyone thought that he must know the ungainly looking black was going to make a great three-year-old. After he beat Finland in the Guineas (when receiving 5 pounds) he won the Eclipse Stakes, beating Seahorse, Paul Pry, Lancaster, Mora and others at weight for age. This looked like a brilliant performance as the time for the mile and three furlongs was 2:22 on the turf and yet it might have been a fluke.

The late William Forrester who was hacking Kinglike, thought a strong pace would suit the black and he told Gough, the rider of the Chief (not in form at that time) to make it a "cracker." Gough carried out his instructions most literally and those who could get going went after him Kinglike, always slow in getting under way was soon many lengths behind, but he got up steam at about the sod wall and won easily. Probably the others ran themselves to a standstill chasing the Chief and then came up to Kinglike making it appear a brilliant win for him. Starting at 7 to 2 for the Caulfield Cup Kinglike was not in the first twelve and he has never won a good race since the Eclipse Stakes. He was no good at the following Spring meeting and while he has had a number of rests he has never yet shown a glimpse of his Eclipse Stakes form. Mr. Maedonald gave 900 guineas for him simply on his two year old form. In the two races he won, Kinglike was not backed by his owner because before leaving St. Alban's Stock Farm for the meeting Revenue who had not been up long had shown that he was quite as good as the black.

Next year it was made evident that Kinglike would need to have been good to hold his own with Revenue half well. Kinglike got about £600 of his purchase

money hack in these two races. How much his failure in the Caulfield and Melbourne Cups and his keep since have cost can only be conjectured; but he must have cost outside backers of doubles and long shots in subsequent cups a power of money. Handicappers weighted him not as Kinglike but as the stable companion of Wakeful, Revenue and Aurous, while the public hacked him in the same way. Revenue recovered form and won a cup, why not Kinglike? And now the idol of the handicappers and the public has been sold for 35 guineas! Kinglike showed a little pace in a race the other day, and his new owner may get races out of him, more especially as handicappers will not fear him as they did when he was in the same stable that contained a number of stake winners.

B.

Jack Trout on Anaconda.

"Jack" Trout, one of the oldest New England trainers and who successfully campaigned Anaconda one season, has a green trotter he is willing to hack against any green trotter in Massachusetts for \$1000 a side, the race to come off at Readville next July. He believes that Anaconda is still one of the greatest pacers in the country. To use his own words in regard to the horse:

"I believe that the 'snake' horse can beat any pacer wearing harness if properly put into racing condition and just nail him up back of one of those pacemakers and he can pace a mile as fast as any of them.

"You remember how last spring I said, after the report was sent out that Anaconda would be faster than ever because his trainer had got him so he wouldn't take hold of the bit at all, that I thought his new education would result in failure.

"Well, my prophecy proved true, you see. Now, I'll tell you my reason for so thinking. When I took Anaconda to Dover the year I had him, I began to break him all over. In certain ways this breaking was all right, but I soon discovered that teaching him to go in a light rein was not the correct thing.

"Why, later in the season, when I got to racing him I found out that I could tell the days he was right good and those when he wasn't. Any time he didn't take hold of the bit and want to run away with me on a pace, just so sure he was not right on edge and was defeated.

"Then, too, any time in a race that he let go of the bit, right then he was a heaten horse. When right good he was on the bit from wire to wire. I understand that McHenry found the same thing true when he was driving Anaconda before I got him.

"Yes, indeed, I'd like to have him in my charge once more. I really believe what I said before, that he can beat all of the free-for-all pacers."

Give Credit to Whom Credit is Due.

During the racing season it is seldom that the public while witnessing the marvelous speed of the horses being raced on the big tracks gives much thought to the men who have made it possible for the famous to sweep down the line with money winning stables. There is a time in the life of nearly every famous trotter or pacer when its success or failure as a racing prospect is made by some man who has perhaps never driven a race on the Grand Circuit track, if indeed he has ever driven one at all. Few great trotters or pacers have been given their first speed lessons by the men who drove them to victory in after years. There are a few men known to fame as race drivers who have the faculty of taking green youngsters and developing their speed, but the average driver of note prefers to take his racing material after it has passed through the first stage of its racing preparation, or in other words, after it has had its speed developed sufficiently to guarantee that it will pay to prepare it for a campaign. There are many men absolutely unknown to fame whose time is spent in the tiresome but patient work of educating and developing youngsters for some one else to take to the races. These men have no such incentive to work as the race drivers have. They never hear the applause of thousands and they have no opportunities to win large sums of money as do the men who drive races, yet they play a most important part in the harness racing world. They are in nearly all cases genuine lovers of the horse and continue in their work solely because they are in love with it. When admiring the sensational race horse and the art of the man who drives him, it will not be out of place for the observer to give a little thought to the possibly unknown man who educated, developed and handed him over to the trainer all ready to add to his fame as a race driver.—*Horse World.*

Strikel—If they don't give you Jackson's Napa Soda when you ask for it.

The Late Orrin Hickok.

Dr. J. W. Neal of the *Western Horseman* thus writes of Orrin Hickok, whose death occurred at Cleveland last week:

"Orrin Hickok was the last of the greatest aggregation of knights of the sulky that the world has ever known, and his demise is a most pathetic one, but his place in the history of the American trotter will always be secure. He was 71 years of age, and up to the beginning of the Cleveland Grand Circuit meeting of 1902, was able to be at his work, but during that meeting he was stricken with paresis, and taken to the Lakewood Hospital. Hickok received his education as a trainer and driver in California, and on the race tracks in that State gained his first laurels in the field of fame. He sprang into prominence as far back as 1875, when with Jim Brown 2:17½, Fisherman 2:21, Sisson Girl 2:28½, Ajax 2:29 and Defiance 2:27½, he nearly cleared up the programs then trotted and paced on the Pacific Coast. He still further established himself as a skilful horseman the following year, 1876, making a very successful campaign with Alameda Maid 2:27½, Grattan 2:13, St. Helena 2:27½, Juniper 2:30, St. James 2:23½ and Nimrod 2:19½. While campaigning these horses he was slowly fitting St. Julian for his later great turf triumphs, and in 1878, 1879 and 1880 the son of Volunteer was the hero of the day.

It took Hickok three years to fit St. Julian for the track. The great horse was unruly, flighty in his hursts or speed, and only most careful handling was effective with him. Once, however, Hickok began racing with him St. Julian more than fulfilled every expectation, and introduced the noted driver to the Grand Circuit tracks. He won \$60,000 with the then champion, and though offered large prices for him from time to time he could never make up his mind to sell his pet, and the horse died his property at an advanced age. The brilliant seasons Hickok had with St. Julian gave him a great reputation, and when he appeared east of the Rockies a few years later, he had earned the respect of all the great drivers of his day with Santa Claus, 2:17½, and made a bid for Chicago's great stallion race. He could only win the second heat, however, as after Robert McGregor, the sire of the present world's champion, Cresceus, had won the first and third heats, Piedmont stepped in and won the last three heats and the race. Hickok, however, got even later in the year in the \$10,000 race at Boston, when he turned the tables on the son of Almoat, Santa Claus beating him in straight heats. Between this and 1887 the noted driver piloted many famous horses, colt trotters and pacers, as well as brilliant campaigners, such as Lucy 2:14, Sweetheart 2:22½, Eva 2:25½, Nevada 2:23, Conde 2:19½, Expressive 2:12½, and Avena 2:22½. In the latter year he came through the Grand Circuit with Arab 2:15, and made one of the greatest campaigns known in trotting history in the free-for-all classes. Hickok's last great performer was the daughter of Guy Wilkes, Hulda 2:08½, and his star set with that of the great mare, as the Columbian free-for-all was the last great race in which he drove. He made a half-dozen fortunes on the turf but was a liberal spender, and an expensive liver, and he died penniless.

The Owner of Cobwebs.

Among the many men who patronize the Harlem river speedway, there is none whose love for the trotter is stronger than that of Nathan Straus. Mr. Straus first became identified with the trotter years ago, when Majolica 2:15 electrified the whole horse world by his splendid performances on the turf. Ever since his memorable campaign in 1883, Mr. Straus has been a prominent road driver in New York. He has owned a number of horses who have helped to make turf history; among them being the chestnut gelding Cobwebs 2:12½, who was the acknowledged champion of the speedway for years. It is doubtful if any man ever derived as much pleasure with any horse as Mr. Straus has with the game and consistent son of Whips. When his familiar face showed under the Washington Bridge last Sunday, a hearty round of applause greeted the ex-champion and it plainly showed that Cobwebs was the idol of the frequenters of the speedway. As time passed a great many new horses appeared on the scene and the top-notchers of the younger generation wrested the crown from the California bred trotter. It was then that Mr. Straus looked around for a horse to fill the place of "Cobs." He finally secured Ted 2:15½, a stout made, fine gaited son of Norval 2:14½. The selection was a good one, as Ted has proven himself to be a speedway star. He has defeated the best of the speedway brigade this year, and bids fair to become a champion. Mr. Straus was one of the leading spirits in securing the speedway and the lovers of the light harness horse owe him a debt of gratitude for his splendid work in giving to New York the finest speedway in the world.—*N. Y. Spirit of the Times.*

The Cavalry Horse.

The horse should be selected for the post he is to fill not merely because he stands so many hands high and weighs so many hundred pounds. The cavalryman has enough to do to keep his eye to the front and his mind on the duties he may be called upon to perform without having to choose the ground for each footstep of his horse. Burdened with his many accoutrements he must have a springy seat or he becomes jaded and galled at the end of a day's march to such an extent as to be unfit for duty. The writer, though an infantryman in the civil war, had occasion many times to note the difference in the mounts as the cavalry troops passed by. The Kentucky troops were generally, and especially early in the war, mounted on horses secured in their own State. They had that easy motion, easy to both horse and rider, so necessary to the comfort and efficiency of both. On the contrary, when troops from the more northern States passed by mounted on the horses of a harness type, then mostly in use in that section, the difference was conspicuous. There was a rhythm of motion with the former and a jangle out of time with the latter. Certainly the men who move with greater comfort will be able to perform their arduous duties more satisfactorily. And though the Kentucky saddle horse never fails to perform well in harness, it is no disparagement to him if we admit that the Northern horse was more suited to the labors of the trains or even of the artillery service.

Gen. John B. Castleman, on this subject, says:

"Therefore it is that the stallions of the American saddle horse, judiciously crossed, produce horses of highest utility, produce the best horse for the range; produce the best cavalry horses that can be found in the world, having the greatest intelligence, the fastest walk, the easiest canter, and the clearest trot. * * * The experience of the civil war demonstrated that no cavalry horse of the armies of the world has ever equaled him in endurance and movement. I rode representatives of this breed during four years of the war, and served in a regiment and in a division whose mounts were generally similarly bred. It was with such mounts that this extraordinary regiment of men were enabled in repeated cases, with ease to the horse and ease to the rider, to make great marches in the rapid walk characteristic of this horse. * * * The history of cavalry service shows no parallel to the continuous fast movement of the cavalry under Morgan and Forrest and this service was rendered chiefly by the American saddle-bred horse; and this horse of singular beauty and smooth, fast walk and untiring energy stood the terrible strain where horses of other breeds gave way under test of great marches."

I quote also from Gen. Duke, who was with Morgan in all his raids:

"When Morgan marched from Sparta in August, 1862, to surprise a garrison at Gallatin, he accomplished the distance of fully 90 miles, including detours made to conceal his route, in about twenty-five hours. On the Ohio raid, after more than two weeks of very severe previous marching, his command, then about 2100 strong, marched without halting from Summerville, Ind., to a point 28 miles due east from Cincinnati, a distance which may fairly be estimated at 94 miles. This march was accomplished in about thirty-five hours. Many—indeed the greater number—of the Kentucky horses which had started on the raid performed this march without flinching and many of them kept on to Buffington, some even hearing their riders across the Ohio river and returning to the Confederacy. The horses which had been impressed in Indiana and Ohio failed in such an ordeal, never lasting more than a day or two, and often succumbing after a ride of eight or ten hours. * * *

Perhaps this is the horse that the Lord had in mind when he wished to impress Job with his own omniscience. The quotation from Job is appropriate at any rate:

"Hast thou given the horse strength? hast thou clothed his neck with thunder?"

"Canst thou make him afraid of a grasshopper? the glory of his nostrils is terrible."

"He paweth in the valley, and rejoiceth in his strength; he goeth on to meet the armed men."

"He mocketh at fear, and is not affrighted; neither turneth he back from the sword."

"The quiver rattleth against him, the glittering spear and the shield."

"He swalloweth the ground with fierceness and rage; neither believeth he that it is the sound of the trumpet."

"He saith among the trumpets, Ha, Ha; and he smelleth the battle afar off, the thunder of the captains and the shouting."—I. B. Nall in *Breeders Gazette*.

Lou Dillon's Debut on the Speedway.

[N. Y. Times, Nov. 9.]

Lou Dillon, queen of the light harness turf and holder of the world's trotting record, 1:58½, made her initial appearance on the road and stepped her first race on the Harlem River Speedway yesterday morning, to the delight of an immense crowd drawn by the promised debut of the famous mare. Long before 10 o'clock the spectators began to gather along the upper stretch and seek out points of vantage. When the earliest of the regular Sunday morning drivers

arrived they were surprised at the number of lookers-on who were lined two and three rows deep along either curb. Several times the cry rose "Here she comes!" but each time it was a false alarm, and when the trotting queen finally put in an appearance she was overlooked by everybody until she had reached a point close to the finish, driven by her owner, C. K. G. Billings.

A burst of applause greeted her then, and the cheers did not die away until the mare was turned up the backstretch. Following close behind her came Lou Dillon's stable mate, Greenline, 2:07½, driven by "Doc" Tanner. The crowd clamored for a brush, to which Mr. Billings promptly agreed. After stepping the queen two fast half miles by way of warming her up, she was turned to a good start with Greenline. That the mare took to the footing, which was excellent, and that she had suffered no bad effects from her journey East, became evident in her first strides, as she went away like an arrow from a bow after scoring once. Greenline had considerably the best of the start, and a perfectly clear road, as all other drivers had pulled close to the curb.

Lou Dillon followed pace until the stretch was entered, and then, closing the gap, apparently without the slightest exertion, reached Greenline's shoulder. In the last dozen strides the mare moved forward at a word from her driver and passing Greenline as though he had stopped, won by a half length with ease. A cheer rose from the crowd, to which Mr. Billings responded by raising his hat. Then Lou Dillon jogged back for a second heat. This time Greenline was given several lengths the best of the start, but it seemed to make no difference to the little champion, who overhauled and passed her rival at the first quarter post and finished half a dozen lengths in the lead, Mr. Billings driving with one hand and looking over his shoulder at the finish to see what had become of Greenline.

The two heats and the work-outs were considered enough work for one morning, and amid renewed applause of the crowd the mare was jogged back to the stable in Dyckman street. The manner in which she was driven upon a crowded road proved her disposition and the confidence Mr. Billing has in her beyond a doubt, while her speed was marveled at by everybody.

The Old Campaigner.

"These records that Lou Dillon and Dan Patch and some of the rest of the flyers have made this year will, I am afraid, have a bad effect on the horse business," observed the Amateur as he laid down the morning paper after reading the Memphis summaries forward, backward and upside down, to make sure that his eyesight had not gone crazy overnight. "Next year will be so tame that we will not take any interest in the trotters and pacers."

"Well, if you feel that way," said the Old Campaigner, "go and buy yourself a gasoline buggy and make believe you are having a good time. I'll stick to the trotters and take chances on enough things happening to keep me from getting lonesome. If you had any memory you would not have forgotten that Star Pointer beat two minutes six years ago. Did that stop anybody? Not that we ever heard of, and if it did he wasn't worth stopping. A quitter is of no earthly good in any business. But, as a matter of fact, every man who was breeding and every man who was training kept his eye on the 1:59½ of the big Tennessee pacer, and looked for the day to come when he would own one good enough to heat it. That's what happened to the business. Made it better. There was something to shoot at that was hard to hit, and it was really surprising that so many fellows got a gun and took shot after shot at the mark. An Indiana breeder succeeded in hitting it, then went on and made a better score. Another Indiana horse helped his trainer in the good work and they succeeded. Meanwhile, with the trotting record at 2:03½ nobody was discouraged. About all the people who take an interest in such matters predicted the early coming of the two-minute trotter. And she is here; likewise he. On the face of the returns we now have a trotting mare with a record of 1:58½, a trotting stallion with a record of 1:59½, and a trotting gelding with a record of 1:59½. That is nearly enough for one year. And Millard Sanders says Lou Dillon has only begun. If you awaken some fine morning next fall to learn that she has trotted a mile in 1:55 just remember that I gave you an advance hint.

"But you needn't worry about things getting dull even if the Dan Patch and Lou Dillon records are not touched next year. Alix was champion for six years; Cresceus was king for two. World's records are not lowered every year. However, the point I want to impress upon your minds is that the trotting game won't die even if the existing records are never lowered. I know of fifty men right now who are try-

ing to find a starter for next year's M. and M. There are just as many or more with designs on the Empire City, the Bonner Memorial, the Massachusetts, the Roger Williams, the Charter Oak, the Ohio and the Transylvania. The rich futurities were never before so well patronized. It don't take a two-minute trotter to win any of them. The race horse that can step miles around 2:10 has a look-in-for first money in any of the big purses. I know that 2:10 looks mighty cheap alongside 1:58½, but if I had a green trotter that had shown me 2:12 or better I believe I'd take my chances on his getting some of the money next year. If you will take a look through the summaries of this year's big meetings you will discover that 2:05½ is the fastest mile in a race by a trotter and that the trotter who did it won races in which she had to step no faster than 2:11. Plenty of good trotters get through the year, on an honest campaign, with records that give them a show for big money in 1904. We may live to see the time when two-minute trotters will start by sixes or more in races, but even then the 2:10 race horse will be harvesting a goodly share of the dollars. They had a lot of 2:02 classes for pacers this year. You may not know it, but Harold H. 2:04 won most of them without lowering his record.

"The difference between racing speed and speed for a dash against the watch has always been wide, and it gets no narrower as the years go by and the world's records get lower. The careers of the Hawthornes, Billy Buchs, McKinleys, Ferenos, Jay McGregors, Casplans and Kinney Lous ought to be enough to keep any one from getting the blues because the trotting record has gone down to 1:58½. When it gets to the lowest possible notch there will still be plenty of money for the race horse that could not go a mile in two minutes if he were hauled by an automobile and sheltered by a wind shield as big as a house. Just keep your mind centered on the fact that there has always been room on the race track for the good horse and there always will be. I may be mistaken, of course, and the doings of this sensational year may result in everybody putting up the shutters and going out of business. But I look for about everybody to stay in, who is already in and the fever may rage to such an extent that we will get a lot of recruits. In any event we are breeding just as good horses as ever were bred. If there is anything in the popular theories they ought to keep getting better. It is at worst an even break for all concerned, and if we should finally get to the point where a 2:10 class will be a slow one everything will have adjusted itself to new conditions as they come up and we will have to look into the Year Book to refresh our memories about the times when a green trotter that could heat 2:10 was sensational. Don't get the blues, my son. Worse things can happen to the horse business than the wholesale slashing of world's records that made the year 1903 famous. A panic in Wall street, for instance."—*Stock Farm*.

W. H. Davis, a pioneer of Calloway County, Mo., is dead. He was at one time the most successful exhibitor of saddle-bred horses in his State, and first showed the great stallion Rex McDonald. With this horse he won one premium of \$1000 and one of \$800, and was accounted in his day one of the best horsemen in Missouri. He was 61 years of age and resided in Fulton, Mo.

For all kinds of weather there is no drink like Jackson's Napa Soda—plain or in a lemonade.

WILL NOT SCAR OR BLEMISH.

GOMBAULT'S
CAUSTIC BALSAM

Is the safest and most effective lotion or blister for ailments of

HORSES and CATTLE

and supersedes all cautery or frings. It is prepared exclusively by J. E. Gombault, ex-Veterinary Surgeon to the French Government Stud.

As a HUMAN REMEDY for Rheumatism, Sprains, Sore Throat, etc., it is invaluable.

Every bottle of Caustic Balsam sold is warranted to give satisfaction. Price \$1.50 per bottle. Sold by druggists, or sent by express, charges paid, with full directions for its use. Send for descriptive circulars, testimonials, etc. Address

THE LAWRENCE-WILLIAMS COMPANY Cleveland, Ohio.

Some Things Worth Knowing About Fish Hooks.

At a recent meeting of the Anglers' Association of Onondaga, N. Y., George Barnes Wood of Syracuse read a paper on "Fish Hooks," and told some things about them which will be news to many fishermen. Among other things he said:

"Primeval man hooked and caught fish by the aid of numerous devices, the most important of which were gorges made of bronze or stone. The latter consisted of pieces of stone about an inch in length with a groove in the middle for a line. One of these gorges, a relic of the stone age, has been discovered in France, and is about 8,000 years old. When swallowed by the fish it turned across the fish's gullet and held it secure.

"After stone, bronze was used, and then bone. The early Indians used hone, thorns, and antlers, and later improvised hooks made from hand-forged nails.

"The saying of Amos in the Old Testament established the fact that fish hooks have been used nearly 2,700 years. He says: 'The days shall come upon you, that he will take you away with hooks, and your posterity with fish hooks.' (Amos iv., 2.)

"It has been stated that hooks of the best quality are made in this country, and that the imported hooks are inferior in temper and durability. The facts are simply reversed. There has been but one factory in the United States that ever made the attempt to compete with the imported hooks, and it gained a fine reputation for turning out hooks which were compared to pin hooks, with the exception of their having a barb.

"The reason why Americans do not manufacture as good hooks as those imported is the same as why we cannot make needles. We lack the experience in tempering, and, until recent years, have been unable to make steel to compare with that of England, Germany and France.

"There are over 200 different sorts of hooks, each having from twenty to thirty sizes, among which may be mentioned:

- | | |
|---------------------------|--------------------|
| Eyed, | Roach, |
| Flatted, | Hake, |
| Ringed, | Mackensie, |
| Tapered, | Baiting hook, |
| Turn-down eye, | Central draught, |
| Knobbed, | Indiana bass, |
| Spiral eye, | Kensie, |
| Kirby, | Blackfish, |
| Limerick, | Sheepshead, |
| Kendall, | Whiting, |
| Snack bent, | Virginia, |
| Pennell turn-down eye, | Chestertown, |
| Cholmondeley-Pennell, | O'Shaughnessy, |
| Gravitational cod, | Aberdeen, |
| Double brazed, | Sproat, |
| Double black or japanned, | Bayonet point, |
| Double braized live bait, | Spear point, |
| Lip hooks, | Hollow point, |
| Mahsen treble, | Needle point, |
| Double reversed Limerick, | Double, |
| Round bent sea hooks, | Treble, |
| Harwich sea hooks, | Quadruple, |
| Exeter, | Double safety pin, |
| Shark, | Norway, |
| Carlisle, | Yankee, |
| Cincinnati bass, | Pothook, |
| New York trout, | Weedless, |
| New York bass, | Sockdolager, |
| Perfect trout, | Automatic, |
| Perfect bass, | Round head, |
| Halibut, | Pennsylvania, |
| Mackerel, | Salmon, |
| Dog, | Crystal. |

"Yankee inventions on fish hooks have been numerous, but little attention has been given to efforts to change the shape. I have examined the United States patent office reports, and find 119 patents were granted on fish hooks from the year 1872 to 1903, an average of about four each year. The banner year was in 1899, there being fourteen patents issued. Nearly all patents have been on the principle of the 'snap-and-catch-'em' order, none of which appeals to the true angler.

"The Kirby is the oldest steel hook made in England. Its name is derived from its inventor, a Mr. Kirby of London. Samuel Allcock of Redditch, England, writes me that he remembers the appearance of the Kirby hook sixty-five years ago. This hook has a curve in the body, is commonly called a bent hook, and does not lie flat on a level surface.

"The Limerick follows next in order. It is a straight hook, and lies flat on the level. The bend is more acute and the barb a trifle longer than on the Kirby hook. It was made in Limerick, Ireland; hence its name.

"Shortly after it came out a Mr. Phillips of Dublin, Ireland, made a slight alteration of the point. Instead of a straight point he caused the point to stand out; he also made it not quite so long, hence the name, 'Dublin Limerick.' His claim was that upon striking the fish it was more sure of hooking him.

"The Kendall hook was first made in Kendall, England, whence its name. It has an almost square bottom, and is bent like the Kirby, the shank being about the same length.

"Carlisle hooks were first made at Carlisle, England. They have a round head and lie flat. Later they were manufactured at Kirby and given a head, and were termed 'Carlisle Kirby,' which shape is mostly used in this country and called Carlisle.

"Barbless hooks have been used by the Japanese for centuries. They are much used by fish breeders in order to avoid injuring the fish when taken from the water to be stripped of spawn and milt for the hatchery.

"When Seth Green was in charge of the New York

state fish hatchery at Caledonia he made the assertion that more fish could be caught and saved by barbless hooks than any other. He gave me a few to try, and taught me how to make them, which was by using the best steel needles. First, we annealed them and then bent them around a form, which was like a Carlisle, only the point was a trifle higher.

"I made over a hundred, which were distributed among my angling friends as an experiment. The results were the same. On small trout, which could be quickly landed, it worked admirably, but for bass, pike, and pickerel it was a failure, as the reports showed a loss of 6 per cent of fish hooked.

"H. Cholmondeley-Pennell of London was formerly inspector of sea fisheries of England. The eyed trout hook was perfected by him in 1885, and, strange to say, it is almost a new hook to the angling fraternity in the United States.

"It is used extensively in England, especially for flies, as they are much easier to carry and with little practice are quickly changed from one kind to another on the leader. I consider the draft better than any other kind. The Limerick style combines the three great requisites of penetration, holding power, and flotation, or the general contour of the shank.

"Double hooks originated centuries ago. They are said to have been used before the single hook. Many millions of double hooks are now utilized in this country for the manufacture of spoon baits, gangs, and inventions to represent fish.

"More than a century has passed since any attempt has been made to improve the eye. One manufacturer has lately been granted a patent on double interchangeable hooks. The shank is arranged like a safety pin. Its advantages are: It can be attached and detached in a second; it can be made in single or treble hook as well.

"The sproat hook is undoubtedly one of the best known and most universally used hooks throughout the United States. It has been termed by some the hogback, as it has that appearance when laid on its point.

"It has gained a world wide reputation on account of its admirable form, having a beautiful curve, and its penetrating power is very near correct because the pull is nearly in the direction of the point. It also has the advantage of being less liable to break than any other on account of its general construction, together with the size of the wire used.

"The wire used in hook making is the best English cast steel, which must be first quality—otherwise it will not temper properly—the gauge or size varying according to the requirements of the hook to be made.

"1. The operator takes a part of a coil of wire in his hand and places the ends in a gauge, and the correct length being arrived at, he quickly and sharply cuts them into lengths with a large pair of shears.

"2. Bearding. A number of wires thus prepared are arranged on a plain surface, with their right-hand ends against an upright. The barb, or beard, is then cut by means of a hollow ground knife, which, being pressed forward and deftly turned by the hand of the workman, opens the barb to the required angle, great care having to be exercised in this operation to avoid cutting too deep or opening too wide, or the barb breaks when used.

"3. Filing. The points are now carefully filed. Using a pair of tongs made specially to hold the wire and rapidly turning the same a point is filed on instantly, forming either what is termed a hollow, Kirby or Dublin point. All best hooks are filed this way by hand, thus giving to the point three or four knife-like cutting edges, enabling it to penetrate much more quickly than the less expensive needle-pointed hook.

"4. Bending. It is now necessary to give the hook its form and for this purpose the workman holds a mold fashioned like the pothook of our copybooks, mounted on a wooden handle. With one deft movement the beard is hooked around the shorter end, and a quick turn brings the shank straight with the shank of the mold.

"5. By the aid of an ingenious machine or hammer the end of the shank is either ringed, flatted or marked. If intended for salmon or trout flies it is filed to a delicate point, or knobbed.

"6. Process six is most important, and is that of the hardening of the hitherto soft steel hook. This is carried on in a specially constructed building, and consists in placing the hooks in a white-heat furnace, watched by an experienced workman, who withdraws them on seeing them attain a certain appearance and plunges them into a vat of oil. This converts the temper of the hitherto soft hook into a highly brittle condition. Mere description cannot do justice to this stage of hook manufacture.

"7. Tempering. The hooks are then taken from the oil, mixed with heated sand, and placed in an iron pan over a fire, sand and hooks being kept in constant motion. Ever and anon a hook is picked out and tested, and as soon as one lot is deemed sufficiently tempered it is passed to one side and another takes its place.

"Of course, the experience of the operator dictates the finish of each parcel, and the man is always selected from those of the highest capabilities. The heat required for each size and style of hook varies, and there is all the difference between a hook too hard or too soft.

"In the former case, immediately it is struck against the hard jaw of a fish it breaks, either going to the head or at the point. Nothing is more irritating to the fisherman than to find the fish pricked and gone, and the point also minus, and this not discovered pos-

sibly till he has hit, and, as he thinks, by some fault of his own, missed the rising fish.

"The best hooks are those which are tested and found of perfect temper, and they are, of course, of the best price. Those which, by some mistake or accident or unavoidable chance, are not deemed all are placed on one side and sold at a considerable reduction.

"8. Scouring. For this purpose the hooks are placed, with water, etc., in oblong barrels, which are kept in motion by steam power from one to two days, thus removing all scale and leaving the hooks ready for the ninth process of polishing.

"9. Polishing is performed in two ways. The hooks are placed in an oblong bag, with sawdust, and are rapidly shaken from end to end, until they become quite bright. The other way is to place them in barrels, moving more or less rapidly round on their bases, inclined at an angle of 85 degrees from the perpendicular. It is found that this inclination has a greater and more certain effect toward the end in view than an upright or horizontal position would have.

"10. Consists in the application of various methods of protecting the hooks from the corrosive action of water. Japanning—that is, giving the hooks several coats of a specially prepared black Japan; tinning, or coating them with tin; rust-proofing, browning, bluing, and coloring them red for worm fishing, or blue, green, yellow, etc., for fly dressing.

"One factory alone in England turns out an average of 7,000,000 fish hooks a week.

"Nearly all the best known hooks are numbered alike, starting with a hook which measures about seven-sixteenths inch from the point across to the shank and is called No. 1. From that hooks down to the smallest in common use, No. 15, although one hook is made as small as No. 20, which is three-sixteenths inch. The larger sizes start from No. 1 and run up in naughts to No. 10-0 and even 14-0, the larger sizes being used for salt water fishing.

"Cincinnati bass hooks have independent numbers, starting with No. 30, the smallest of which measures one-fourth of an inch, and going up to No. 16, which is thirteen-sixteenths of an inch. No. 24 corresponds with No. 1 in ordinary styles.

"The Kinsey is also oddly numbered, ranging from No. 24, the smallest, up to No. 6 the largest. No. 16 corresponds with No. 1 of the common hooks."

Fly-Casters' Banquet.

The San Francisco Fly-Casting Club members and guests gathered around the banquet board Tuesday night in good fellowship and congenial reunion. After the menu had been disposed of Chairman Walter D. Mansfield, with appropriate and timely remarks, introduced Judge John Hunt. The learned Jurist presented the medals and prizes to the winners in his usual happy style. The winners of club trophies were:

Long distance casting—Champion class, H. C. Golcher; first class, Colonel G. C. Edwards; second class, T. C. Kierulff.

Delicacy—Champion class, Colonel Carlos G. Young; first class, T. C. Kierulff; second class, F. M. Haight. Accuracy—Champion class, C. R. Kenniff; first class, T. W. Brotherton; second class, T. C. Kierulff. Lure casting—C. R. Kenniff.

Mr. Kierulff was also awarded the club's annual medal for the best individual general improvement.

Secretary T. W. Brotherton was the surprised recipient of an elegant watch charm—a diamond studded miniature fishing creel. This token was given by his fellow members as an appreciative recognition of the secretary's hard work and effective services for the welfare of the club.

James Watt was also presented with a suitable prize for scores he did not make at the lake during the season.

The club executive committee will arrange with John Benn of this city to have an exhibit of his famous flies at the St. Louis Exposition. Mr. Benn received a gold medal for his exhibit at the last Paris Exposition. He is credited with being one of the most expert fly tyers living today. He and his daughter have done more in this line to develop angling in our trout streams than any other fly makers.

Speeches were made during the evening by Alex T. Vogelsang, Dr. C. W. Hihbard, Dr. W. J. Lane, James Watt, F. M. Haight, T. W. Brotherton, Col. Young, H. E. Skinner and others.

Dr. Hihbard, during his remarks, incidentally referred to the contemplated legislative procedure in the interest of fish and game protection, that was considered and agreed upon at the recent meeting of the California Fish and Game Protective Association. Among the remedial action proposed was mentioned the protection of swans, English snipe, the prohibition of the sale of trout, etc., all of which proposed measures were viewed by the assembly with general accord.

At the suggestion of Dr. Lane some action will be instituted to prohibit night fishing.

The memory of the late P. J. Torney was properly honored by a silent toast which was drunk standing.

W. D. Mansfield presided as toastmaster. Among those present were: Walter D. Mansfield, Hon. John Hunt Jr., Hon. J. H. Seavell, T. W. Brotherton, Col. C. G. Young, Alex T. Vogelsang, A. Muller, W. F. Bogart, E. T. Allen, S. A. Heller, T. C. Kierulff, H. Baitu, A. M. Blade, J. H. Mahoney, H. E. Skinner, H. B. Sperry, James S. Turner, George C. Walker, Walter Genesey, James Watt, Dr. C. W. Hihbard, A. E. Mocker, F. H. Mayer, M. J. Geary, R. A. Smyth, J. X. De Witt, John Butler, Alfred H. Reising, Clark Burnham, H. G. W. Dinkelspiel, Ed Everett, A. B. Finch, F. M. Haight, Charles Huyck, W. E. Stevens, Charles H. Kewell, Dr. F. J. Lane, G. W. Lane, Mr. Dawson, F. H. Reed, E. A. Selfridge.

The next meeting of the club will be a jinks instead of a dinner. The annual meeting will take place next January.

Malignant Enzootic Anaemia of Kennel Dogs.

[Continued from last week.]

Like its corresponding disease of the human race this verminous anaemia of the dog (more properly known as *Dochmiasis*) is apparently a truly enzootic disease, since I have never been called upon to attend isolated cases of infection beyond one or two cases, which had been comparatively recently sold or otherwise detached from infected kennels. By this I would not be understood as denying the possibility of isolated animals contracting the disease in manners other than by direct co-habitation in kennels, since the entire study of the biology of the parasite would indicate the possibility under really favorable conditions of such an infection, but the conditions would necessarily be of a nature so rare as to result in a plain improbability of its occurring, a statement which appears to me quite conservative, since I have made many autopsies in the public dog pound of New York City and in private practice with the single object of ascertaining, if possible, to just what extent it might so develop and prevail in dogs other than those which would with propriety be called kennel dogs.

These special examinations I may say have invariably shown the absence of the *Dochmius Trigonacephalus* with the exception of two examples having been found in the body of a wolf autopsied in the New York Zoological Park, possibly due to the animal having at some time passed through a dog emporium, which oftentimes are notoriously infected.

From careful reading of the valuable and somewhat extensive literature relative to the prevalence of *Dochmiasis* of man, both as regards its sporadic occurrence in its home in the tropical countries and in more temperate localities, as Southwestern Europe, notably Austro-Hungary, Northern Italy, Southern France, and even as far north as Belgium, I am more than ever convinced that similarly in my own sphere of canine medicine I need not apprehend its dissemination as a general widespread epidemic among the dogs of the United States, since, like the prevalence of the so-called tunnel-workers' disease among the tunnel laborers in various European tunnels, and notably those engaged in the construction of the St. Gothard, as well as among the laborers of many coal mines and brick fields of middle Europe, the conditions of congested quarters, heat, moisture and possibly enfeshing of the body by absence of a sufficiency of free exercise in the open air and sunshine in the actual presence of positive infection will, of necessity make and keep this disease essentially a kennel dog's disease, or one where continuous aggregation of young animals takes place in the same quarters will be practically the only condition of dogs allowing of the life requirements of these worms favorable to their assuming epidemic manifestations.

I regret exceedingly that my personal experience in the medical treatment of dogs suffering from *Dochmiasis*, which has been quite extensive, has been such as would give me little pleasure to record, or such as warrants me in forming high expectations for the future.

Obstinately and extremely unsatisfactory as the diseases to combat in the human adult, where it is found necessary to give as high as one gramme of oleo-resin *Aspidium* (male shield fern) in capsule and up to a point of fifteen grammes in three hours (most astonishing, yet evidently comparatively safe dosing in man), the bare fact that it is in the dog essentially a disease of puppyhood, most commonly raging among those under ten weeks of age, gives ample reasons for pessimism regarding the existence of agents yet undiscovered, which will in an essential manner combat the disease without first destroying the host's life, and that speedily.

Being an organism created unlike the majority of belminths to live at the expense of its host by attacking his food, but in a purely leech-like manner, by taking its nourishment through abstraction of the host's blood direct, such agents as santonine, naphthaline, turpentine, etc., have practically no effect upon them, even when given in doses sufficient to produce toxic symptoms.

Tbymol, as used in man, both as solid and in alcoholic solution with varying success, is extremely uncertain in its action and not without danger even in adult dogs when given in vermicidal doses.

The administration of creoline in small doses combined with oil I have tried faithfully, and at times thought it did at least have a certain influence for good upon the cases and especially in warding off infection in animals born in infected kennels, but greater experience and more intimate knowledge of this worm in its relation to disease in animals and man convinces me of the comparative worthlessness of such treatment, the improvement in such cases having in all probability been due to the greater attention to disinfection of quarters, isolation, etc., as always went hand in hand with internal medication.

I am quite certain, however, that extract of male shield fern when administered in large doses in the stronger and older puppies did remove a certain number of parasites, and in some few cases helped to fight out a bare existence for the patient, but the painful fact still remains that in extremely young animals near the weaning age (and that is plainly the susceptible age) medication of any kind, which entirely removes the appetite, is in itself very likely to rapidly reduce them to an absolutely hopeless state of weakness, even though no disease whatever be present.

This being true, our hope in the future for the finding of some remedial agent capable of working the certain destruction of these worms in puppies appears to me slight and should be in the direction of finding preventive measures or a disarming of the foe by so constructing and managing kennels as to make the possibility slight indeed of its survival outside the animal's body. This will come from attaining a clear knowledge of its life history, which will at least impress upon the mind the important fact that this worm has no outside host, and that experimental re-

search has conclusively proven that infection of animals can only be accomplished by the ingestion of eggs which have already made a certain well-defined cycle of segmentation outside the animal body. For example, a puppy, ever so susceptible, fed quantities of these worms as such would in nowise suffer infection. The egg, to become capable of gaining lodgment and development in the host's intestine, must itself without exception undergo development after it leaves the worm's ova-duct up to a point recognized as the larval stage. A certain part of this segmentation takes place after the extrusion of the egg during its sojourn in the host's intestine, but the cycle is invariably completed in the presence of suitable heat and moisture outside the animal body altogether.

This outside segmentation period furnishes the key to our attack and suggests that we should arrange our plans as to make conditions in infected kennels (and others also) as unsuitable as possible to this prime requirement of segmentation and prevent it if possible.

The period in question varies quite perceptibly according to temperature, moisture and chemical composition of the media in which it lies, all of which naturally fix the term of life of the egg, those of *Dochmius Duodenalis* of man having been successfully retained through nearly one year when placed under especially favorable conditions.

The early period at which these worms are occasionally found in nursing puppies frequently gives rise to the strong impression among dog owners of experience that infection must be present at birth, a supposition, of course, quite incorrect since the time required for the development of the adult worm from the adequately segmented egg after it reached the digestive tract of the host is approximately established at twenty to twenty-five days, as computed from the appearance of eggs from the resultant worms in the excreta, but beyond reasonable doubt well developed, although sexually immature worms may be, and probably are, present in the canal giving rise to symptoms several days earlier. Personally, I cannot recall any autopsies revealing this worm in puppies under three weeks of age.

The prevailing idea, especially among the wealthy, that artificial heat in abundance and much washing of kennels is the secret of rearing puppies is, in this case, closely associated with the numerous epidemics which it has been my privilege to observe during the past few years in this vicinity.

Tropical conditions are thereby set up and indefinitely maintained in a temperate zone and unless great measures of cleanliness and hygiene be observed this disease will always remain a source of dread.

Many of such kennels boast of a system of daily disinfection consisting of a light sprinkling by a watering can of a solution of some of the high-smelling nostrums upon the market, whose disinfecting unit is oftentimes extremely low, and whose alkaline reaction is not beyond reasonable suspicion as being actually advantageous to the necessary segmentation of the ova of *Dochmius Trigonacephalus* outside the body.

In the light of present knowledge and my personal experience, I am firmly convinced that the greatest insurance which can be taken against this terrible disease in such kennels as must of necessity be artificially heated, lies in the construction of good solid concrete bottoms (and sides when possible) to all the living spaces and outside runs.

Wooden sheeting, while comparatively inexpensive and more or less satisfactory in the absence of disease, are impossibilities where adequate and efficient sterilization becomes imperative, and as regards the particular disease in question affords the best possible opportunity for infected material to be hidden away beyond a possibility of its destruction.

It is not more reasonable to demand that young dogs which are closely confined in kennels should have a circumscribed patch of bare polluted earth to dig in and lie upon than to maintain that confined yards of prisons and schools should be of dirt instead of concrete, in the interest of the health and physical development of the over-crowded inmates.

Two laws do not exist whereby two contaminated inclosures kept for the higher and lower animals respectively can on the one hand be conducive to disease and death and upon the other conducive to health and development, as maintained by many who claim great experience in rearing dogs.

Small earth-bottomed yards as ordinarily adopted by kennels are universally suspicious, and in the case of this and all other forms of intestinal worms are deadly in their tendencies.

Dogs, like other domesticated animals, are always more easily maintained under conditions of cleanliness and unless the outside space be large enough to partake of the nature of a "run" or paddock the first cost of concreting the yards would be more than repaid in the first two years in the safety attained from various diseases, not to mention the great advantages over the old system in preventing and combating this particular kennel-wrecking disease.

Close study of this disease in man has evolved the question as to whether symptoms observed were wholly due to local irritation and anaemia, or in part to the co-existence of a state of toxemia due to the absorption by the host of specific disease-producing products thrown off from these worms.

While strong arguments have been adduced to support this contention in human medicine it cannot up to the present be stated as conclusively proven, but the constancy of psychic disturbances invariably marked in the progress of the disease in dogs as evidenced by the drowsiness and apathetic expression and movements of the eyes, sluggish howl and comatose condition would certainly indicate the value of further study along this line in canine medicine.

My study of these worms in dogs, especially those of adult age, fully substantiate the peculiar facts noted in human medicine regarding the changes in relative numbers of the sex in prolonged or recovering cases.

In adult or aged dogs which have been autopsized

by me I have by actual count established the number approximately ten males to seven females as against two and one-half females to one male in the same disease in puppies.

That this change of ratio is due to increase of the male, as has been rather strongly contended by authorities upon Egyptian Chlorosis, I am doubtful, since the microscopical examination of females from such cases in my practice has invariably shown their bodies to contain exceedingly few ova as compared with cases in the young animal, a fact inclined to influence me toward the belief that the known resistance of the older animals consists in furnishing the parasite a media or subsistence unsuitable for the life and fruition of the female.

Upon this line of deduction I can, in a manner, account for the apparent benefits derived at times in the administration of such agents as glycerine and carbolic acid, creoline, etc., in small doses, over lengthened periods, by attributing to them the power of reducing the media to such as will slowly tend to induce sterility in the female organism.

In summing up, I would put my faith in building kennels and yards which would make the perfect sterilization of the same easily and perfectly possible and test every prospective brood bitch separately with large doses of male fern extract, observing the excreta for worms or their eggs long before they give birth to young in such a kennel and proceed in all essential manner as prudent corporations in middle Europe now proceed in the employment of men in mines, tunnels, brick yards, etc., where experience has amply taught them the necessity of keeping out infection and regulating their hygienic system, and above all other things the effort to make it practically impossible for the eggs of this parasite to undergo the segmentation necessary to contaminate and endanger the surroundings of their employees.

Ohio Field Trials Club.

Three stakes were on the card for the Ohio Field Trials Club trials at Washington Court House, Ohio. Major J. M. Taylor and Mr. George A. Haswell acted as judges. The Members' Stake had ten starters, the class was up to the average of dogs run in this event. The Derby was run with twelve dogs. Arent and Duryea's entries seemed to be the class of the stake. Itaska, a snappy, merry going young hich, was placed first. Hickory, second, distinguished himself by doing some clever point work. Algonquin, third, was in line for first place in the opinion of some of these in attendance.

Sixteen dogs started in the All-Age, which was begun on Friday, the weather conditions being better than on the preceding day.

Tony Man, first, showed his mettle in the second series, being in fact the strongest, merriest worker in the stake. Alford's John, second, was the only Pointer placed in the stake. Sport's Count Danstone and Iroquois, equal third, are both stylish, classy dogs. The order of running and summaries follow:

WASHINGTON COURT HOUSE, OHIO, November 2.—Members' Stake.

I
Ripstone's Jingo, Pointer dog (Ripstone-Jingo's Lady). C. T. Phillips, owner; Tide Huston, handler.

With
Lemons, English Setter hich (Freckle D-Baby Gladstone). Harry L. Brown, owner and handler.
J. C. Poloter dog (Young Jingo-Eve). F. R. Huntington, owner; Tide Huston, handler.

With
Cincinnati's Star, English Setter (Cincinnati's Pride-Florence Rodfield). James McManany, owner; H. L. Brown, handler.
Emma May, English Setter hich (Joe Cummos-Emma T.). C. B. Wolf, owner; Tide Huston, handler.

With
Maggie Mitchell, English Setter hich (Ortiz Lad-Emma Lelaps). E. S. Fishback, owner; H. L. Brown, handler.
Tip Fauster, lemon and white Pointer hich (Jingo's Pearl-Nellie Fauster). Dr. J. G. F. Holliston, owner; Tide Huston, handler.

With
Judge Hughes, English Setter (Joe Onward-Grace Lelaps). E. S. Fishback, owner; Tide Huston, handler.
Jingle Coin, Pointer (Jingo's Coin-Dottie Rip Rap). E. S. Fishback, owner. Run with a pick-up.

RESULT
First, Tip Fauster; second, Lemons; third, Ripstone's Jingo; fourth, J. C.

WASHINGTON C. H., O., November 4, 1903.—Ohio Field Trial Club's Derby, for Pointers and Setters whelped on and after January 1, 1902. Purse \$500; \$250 to first, \$150 to second, \$100 to third. Twelve starters (8 English Setters and 4 Pointers).

I
Queen Mah II, liver and white Pointer hich (King Cyrano-Queen Mah). C. B. Wolf, owner; Tide Huston, handler.

With
Itaska, black, white and tan English Setter hich (Prime Minister-Youma). Arent & Duryea, owners; J. M. Arent, handler.
Lakefield Pride, orange and white English Setter dog (Rodfield's Pride-Phoebe Whitestone). Lakefield Kennels, owners; John C. Gude, handler.

With
Robert Rodfield, black, white and tan English Setter dog (Rodfield-Lady Daustone). J. H. Johnson, owner; E. T. Munger, handler.
Queen Mah's Lad, liver and white Pointer dog (King Cyrano-Queen Mah). C. B. Wolf, owner; Tide Huston, handler.

With
Shawnee, black, white and tan English Setter hich (Tony Boy-Cado). Arent & Duryea, owners; J. M. Arent, handler.
Princess Mah, liver and white Pointer hich (King Cyrano-Queen Mah). Harrahan & Howard, owners; Tide Huston, handler.

With
Algonquin, black, white and tan English Setter dog (Prime Minister-Clip Wind'em). Arent & Duryea, owners; J. M. Arent, handler.
Cyrano Lady, liver and white Pointer hich (King Cyrano-Queen Mah). Tide Huston, handler.

With
Chippewa, black, white and tan English Setter dog (Tony Boy-Lady Rachel). Arent & Duryea, owners; J. M. Arent, handler.
Hickory, black, white and tan English Setter dog (Mohawk-Bonnie Lit). Arent & Duryea, owners; J. M. Arent, handler.

With
Lemons, lemon and white English Setter hich (Freckles D-Baby Gladstone). Harry L. Brown, owner and handler.

II

Shawnee with Lakeland Pride.
Itaska with Princess Mah.
Algonquin with Lemons.
Hickory with Robert Rodfield.
Shawnee with Lemons.
Algonquin with Chippewa.

RESULT

First, Itaska; second, Hickory; third, Algonquin.

WASHINGTON, C. H., November 6, 1903.—All-Age Stake, purse \$500; \$250 to first, \$150 to second and \$100 to third. Sixteen starters; (9 English Setters, 7 Pointers).

J. C. black and white Pointer dog (Young Jingo-Eve). F. R. Huntington, owner; Tide Huston, handler.

Dolly Manners, black, white and tan English Setter bitch (Tony Boy-Quida F). W. H. Beazell, owner and handler.

Alford's John, liver and white Pointer dog (Dave Kent-Cleade). Foust & Dickey, owners; J. T. Jones, handler.

Iroquois, black, white and tan English Setter dog (Tony Boy-Cado). Avent & Duryea, owners; J. M. Avent, handler.

Lakeland Rod, black, white and tan English Setter dog (Rodfield-Kate N). Lakeland Kennels, owners; John C. Gude, handler.

Duchess of Honor Bright, black, white and tan English Setter bitch (Lady's Count Gladstone-Jessie Rodfield). W. C. De Camps, owner; Harry Brown, handler.

Sport's Count Danstone, black, white and tan English Setter dog (Court Danstone-Sport's Maid). William Brett, owner; J. T. Jones, handler.

Tony Man, black, white and tan English Setter dog (Tony Boy-May Blue). Avent & Duryea, owners; J. M. Avent, handler.

Eve II, black and white Pointer bitch (Young Jingo-Eve). James Thompson, owner; Tide Huston, handler.

Peach Blossom, black, white and tan English Setter bitch (Count Gladstone IV). ———, owner; J. T. Jones, handler.

Mohawk, black, white and tan English Setter dog (Tony Boy-Conness Meteor). Avent & Duryea, owners; J. M. Avent, handler.

Blythe Belle, lemon and white Pointer bitch (Drillmaster-Indiana). W. H. Beazell, owner and handler.

Tip Fauster, liver and white Pointer bitch (Jingo's Pearl-Nellie Fauster). Dr. J. G. F. Holston, owner; Tide Huston, handler.

Red Jacket, black, white and tan English Setter dog (Tony Boy-Cado). Avent & Duryea, owners; J. M. Avent, handler.

Lord Grousemoor, black and white Pointer dog (Ripstone-Jingo's Lady). O. B. Brown, owner; J. T. Jones, handler.

Dipstone's Jingo, black and white Pointer dog (Ripstone-Jingo's Lady). C. T. Phillips, owner; Tide Huston, handler.

II

Iroquois with Sport's Count Danstone.
Alford's John with Tip Fauster.
Tony Man with Mohawk.
Dolly Manners with Peach Blossom.

RESULT

First, Tony Man; second, Alford's John; equal third, Sport's Count Danstone, Iroquois.

An Open Letter.

During the spring and summer of 1898 great dissatisfaction was shown by the clubs on the Coast owing to the change in the classification, or rules, as we called it, by the American Kennel Club. In less than a year three different classifications had been tried. The one eventually decided on by the A. K. C. was not satisfactory to any of its members on the Coast. During the San Francisco Show of that year a mass meeting of fanciers was held to protest against the classification then in force, and to request the A. K. C. to allow the Coast to return to what was then known as the "Old Rules." Other meetings were held, but without result, and at last on September 23, 1898, the delegates from the different Pacific Coast clubs met in San Francisco and the Pacific Kennel League was formed.

While it might appear from this that the P. K. L. was formed simply on a question of classification, it was due perhaps more to the refusal of the A. K. C. to listen to the advice of the Coast clubs. We felt that our proposals had not been merely rejected but that they had never been considered. During the five years in which the league has been in existence much has happened. The very classification which the A. K. C. tried to force on the Coast, the Coast has deliberately chosen as its own. Of course the conditions existing now are not the same as those of 1898. We do not say the league was wrong to refuse in 1898 what it afterwards adopted in 1901, but it is interesting to note that the Coast eventually followed the advice of the A. K. C. in the matter of a classification. A still greater change, however, is to be found in the treatment of the Coast by the A. K. C. The Pacific Advisory Board, which previous to the formation of the league, had practically no powers to do anything which any individual or club could not have done, has been re-organized. A form of local government has been given it, not by any means so complete as one could wish, but still a big step in the right direction.

No one, however prejudiced, but must realize the good work the P. K. L. has done during its short career. It has accomplished all its promoters ever expected of it. Were the league to go out of existence to-morrow there is no one connected with it who cannot look back with pleasure and gratification at the good work done by the league. It is questionable, however, if the present form of government is the best which we can devise.

We have at present three bodies all endeavoring to rule the Coast and trying to prove that its peculiar form of government is the best. In the north we have the Canadian Kennel Club, in the south the American Kennel Club, and edged in between those two powerful national associations, we have the Pacific Kennel League. Such a state of affairs cannot be but injurious to the Pacific Coast kennel interests. Canada does not recognize the A. K. C. wins and the P. K. L. does not recognize A. K. C. wins while, to make matters worse, the A. K. C. does not recognize the wins of either of the other associations.

This means that on the whole of the great Pacific Coast there is not one single show whose wins are recognized over the whole Coast. The result of this

is that at no show can one get a representative gathering of Pacific Coast dogs. Then we have the friction which must always exist where there is more than one head. We find dates clashing, and to be brief—in this fight for supremacy, the dog, whose care is the chief duty of all kennel associations, is quite forgotten.

Can nothing be done to remedy this? Is it impossible to restore harmony and unity to the Coast? The Canadian Kennel Club is too far away from the Coast to be in the running. The same argument would apply to the A. K. C. were it not that it has on the Coast an Advisory Board, to which it has delegated powers for the government of the Coast and to which it would doubtless grant such additional powers as might be found necessary for the most efficient government of the Coast. We have therefore the P. K. L. and the A. K. C. left. Either is capable of governing the Coast—the question is which is better for Pacific Coast dogdom?

We have never regarded the P. K. L. as a permanent affair, which accounts for the fact that it has no headquarters, issues no stud book, etc. If therefore the intention of the original members of the League was that it was to be merely a temporary affair to urge upon the A. K. C. the necessity of granting to the Coast a form of local government, and if the A. K. C. has granted or is willing to grant such a form of local government board, then it appears that the P. K. L. has accomplished its mission and there is no further reason for its existence.

On the other hand different conditions may have arisen and it may be heat for the Coast that the Pacific Kennel League he made a permanent body, with a stud book, offices, etc. If this is so then surely the burden of proof lies with the officers of the league.

I have no cut and dried plan to lay before the fanciers of the Coast but I would earnestly ask them to consider the matter and urge upon their respective clubs the necessity of taking some action. Let us combine and do away with this triple-headed government, which is slowly but surely killing the interest in dog shows on this Coast. Can we not have a meeting between the opposing factions and talk the matter over? Out of some such meeting much good might come; in any case no harm can result, anything is better than this policy of "masterly inactivity" which seems to have become chronic in P. K. L. affairs.

Yours obediently,
San Jose, Oct. 21, 1903. NORMAN J. STEWART.

W. S. Bell, of Pittsburg, Pa., will in all probability officiate as judge during the running of the Pacific Coast Field Trials. The selection is a good one, Mr. Bell was one of the judges at the recent Monongahela trials, he is a well known and popular Eastern field trial devotee.

Entries for the All-Age stake close on December 15th.

Entries for the Pacific Coast Collie and Old English Sheep Dog Club show in December will close Monday, November 23d at 10 P. M. Entries mailed on or before that day will be accepted.

From present indications the number of dogs benched will be a very creditable showing. Local dogs will be well represented, the outside entry will also be a good one.

Mr. E. C. Plume left this week intending to locate permanently in Chicago. A few Cocker Spaniels remaining in Plumeria Kennels' string are now in charge of Tom Blight.

The storm, this week, will in all probability spoil, for the sportsmen who shoot over the marsh ponds and sloughs, the opportunity for duck shooting tomorrow with any degree of much success. All of the ducks, save the deep water birds, canvasback, blue bills and a few other varieties, it is safe to say, are now enjoying fresh green food and "pudding" in the ponds and muck holes to their heart's content.

If the stormy weather continues to-morrow bay shore shooting in many places should be excellent for the "cans" and blue bills will take flight inland, seeking refuge in sheltered sloughs and creeks. An incoming tide in the morning ought to make the shooting good during the whole forenoon. One stormy day this week, two market hunters shot 100 canvasback on the bay shore, off the southeast end of Tubbs island.

The Spooney Gun Club members had the best bags shot near Mt. Eden or Alvarado last Sunday. Results generally were nil. J. Maynard, P. McRae and E. Shultz, got hut six ducks between them.

Dr. Clyde Payne, F. Surryhne, Con Roman, C. A. Bennett, Dr. Sylvester, Dr. Parent, Dr. Gere and W. A. Haupt all made good bags at the Empire preserve on Elkhorn slough.

M. O. Feudner, Geo Story and Bruce Bonney got 134 birds between them on the Stewart pond on Sunday.

Striped bass anglers have landed a number of good fish recently from San Antonio creek. Lake Merritt bass fishing has recently been better than usual.

Live decoys are in use to hut a limited extent by Coast duck hunters. In the East and Central West the use of live trained ducks is in vogue to quite an extent. Among our classified advertisements this week on page 15 will be found the announcement of

Duck and Quail Outfits.

The demand at Skinner's keeps up for sportsmen's outfits, ammunition and guns. A large and new stock of goods has been added to fill the demand for hunting suits, rubber boots and hunters' footwear; canvas and folding wooden decoys, gun cases and a new design of leather-covered shell boxes. Peters Factory Loaded Shells are unequalled. Skinner's place is 801 Market Street. You can get anything there you need for duck or quail shooting. Send for a catalogue, if you haven't the time to come, and try a mail order.

he Fair Oak Duck Farm, the proprietor of which, offers to sell sportsmen live mallard and teal decoy ducks that are trained, so he claims, to call on sight.

TRADE NOTES.

The following data, interesting to trap shooters, was forwarded to Mr. E. E. Drake, by Mr. Frank Howe:

At the Washington State blue rock shoot, U. M. C. shells won second, third, fourth and fifth high average, with a number of others using U. M. C. being closely bunched with the top men. The Hunter Arms Company trophy cup won with U. M. C. shells, by Mr. Del Cooper of Whatcom, Wash. The Post Intelligencer medal was won with U. M. C. shells, by Fred McBroom of Spokane, Wash. The Hunter Arms Company medal was won by Mr. F. W. Brown of Harrington, Wash., using a Remington gun. Second place and money was won by Mr. J. T. Hillis of Vancouver, B. C., using U. M. C. shells and a Remington gun. Out of fifty-two contestants, thirty-four used U. M. C. Acme, Magic and Majestic shells.

In the live bird event, The Sportsman's Review medal, live bird championship trophy for the state of Washington, was won by Mr. Jas. McLaughlin, of Seattle, Wash., on a clean score of twenty straight kills, using U. M. C. shells. Second place and first money was won by shooters using U. M. C. shells, three in number tied. Third place and second money was tied for by eight shooters, seven of this number using the U. M. C. shells, and four Remington guns. Fourth place and third money was tied for by four shooters, all using U. M. C. shells. The miss and out contest was won with U. M. C. shells. Out of seventeen contestants who shot in the money sixteen used U. M. C. shells.

At the Nez Perce County Sportsman's Association Tournament the Hunter Arms Company gold medal was won by Mr. R. L. Pennell, of Lewiston, Ida., using U. M. C. shells. The first high average was won by Mr. J. Forbes of Spokane, Wash., using U. M. C. shells. The first 103 birds Mr. Forbes shot at, he broke 101, using Magic (U. M. C.) shells. The second high average was won by Mr. Frank Stephens of Pomeroy, Wash., and Mr. T. B. Ware of Spokane, Wash.; both using U. M. C. shells. The third high average was won by Mr. P. J. Holohan of Wallace, Ida., and Mr. S. O. Tannahill of Ho, Ida.; both using U. M. C. shells. The fifth average was also won with U. M. C. shells, by Mr. L. A. Smith, Wardner, Ida. Out of thirty-eight shooters contesting in the different events, thirty-two used U. M. C. Magic, Acme and Majestic shells.

The following is a list of the shooters, who attended the recent Nez Perce County Sportsmen's Association shoot at Lewiston, together with guns, shells, powders and loads used, averages, etc:

- T. B. Ware, Spokane, Wash., Smith, Magic, Dupont 3 1/4, 1 1/2, hand load.
- A. J. Winters, Portland, Ore., Pump, Leader, Infalible 24, 1 1/2 7/8, Selby load.
- C. M. Kopp, Kendrick, Ida., Pump, Leader, Infalible 24, 1 1/2 7/8, Selby load.
- R. C. West, Moscow, Ida., Pump, Magic, Dupont 3, 1 1/2 7/8, self load.
- Wm Hunter, Kendrick, Ida. Ithaca, Leader, Dupont 3 1/4, 1 1/2 7/8, Selby load.
- J. Forbes, Spokane, Wash., Smith, Magic, Dupont 3 1/4, 1 1/2 7/8, Ware Bros. hand load.
- L. M. Knettle, Pomeroy, Wash., Parker, Magic, Dupont 3 1/4, 1 1/2 7/8, Ware Bros. load.
- Peter Holohan, Wallace, Ida., Pump, Magic, Dupont 3 1/4, 1 1/2 7/8, Ware Bros. hand load.
- P. Frazier, Lewiston, Ida., Lefevre, Magic, Dupont 3 1/4, 1 1/2 7/8, Selby load.
- C. B. Green, Moscow, Ida., Smith, Magic, Dupont 3 1/4, 1 1/2 7/8, Ware Bros. load.
- J. J. Hamley, Kendrick, Ida., Pump, Magic, Dupont 3 1/4, 1 1/2 7/8, Ware Bros. load.
- P. T. Lomax, Lewiston, Ida., Pump, Magic, Dupont 3, 1 1/2 7/8, Selby load.
- S. O. Tannahill, Ho, Ida., Pump, Magic, Dupont 3 1/4, 1 1/2 7/8, self load.
- A. J. Turner, Grangeville, Ida., Lefevre, Leader, Dupont 3 1/4, 1 1/2 7/8, Selby load.
- J. S. Jent, Lewiston, Ida., Pump, Repeater, Dupont 3 1/4, 1 1/2 7/8, Selby load.
- S. P. Callison, Kendrick, Ida., Pump, Magic, Dupont 3 1/4, 1 1/2 7/8, self load.
- Wm. Carter, Clarkston, Ida., Parker, Acme, Infalible 24, 1 1/2 7/8, Selby load.
- C. Cole, Culesac, Ida., Lefevre, Magic, Hazard 3 1/4, 1 1/2 7/8, Selby load.
- H. Cole, Lewiston, Ida., Lefevre, Magic, Hazard 3 1/4, 1 1/2 7/8, Selby load.
- F. C. Stephens, Pomeroy, Wash., Pump, Magic, Dupont 3 1/4, 1 1/2 7/8, Ware Bros. load.
- Hugh France, Wardner, Ida., Pump, Magic, Dupont 3 1/4, 1 1/2 7/8, Ware Bros. load.
- C. E. Butler, Lewiston, Ida., Lefevre, Magic, Dupont 3 1/4, 1 1/2 7/8, self load.
- J. W. Penfield, Spokane, Wash., Smith, Magic, Dupont 3 1/4, 1 1/2 7/8, Selby load.
- W. E. Brown, Harrington, Wash., Remington, Magic, Dupont 3 1/4, 1 1/2 7/8, Ware Bros. load.
- S. E. McDonald, Harrington, Wash., Smith, Magic, Dupont 3 1/4, 1 1/2 7/8, Ware Bros. load.
- L. A. Smith, Wardner, Ida., Pump, Magic, Dupont 3, 1 1/2 7/8, Selby load.
- Edwin Leland, Lewiston, Ida., Pump, Majestic, Dupont 8, 1 1/2 7/8, Selby load.
- Robert Smith, Lewiston, Ida., Lefevre, Magic, Dupont 3 1/4, 1 1/2 7/8, Butler hand load.
- F. N. Shepard, Spokane, Wash., Lefevre, Magic, Dupont 3 1/4, 1 1/2 7/8, Selby load.
- C. N. La Fond, Asotin, Wash., Greener, Majestic, Dupont 8, 1 1/2 7/8, Selby load.
- C. M. Day, Kooskia, Ida., Pump, Majestic, Dupont 3 1/4, 1 1/2 7/8, Selby load.
- R. L. Pennell, Lewiston, Ida., Parker, Magic, Dupont 3 1/4, 1 1/2 7/8, Selby load.
- W. A. Robertson, San Francisco, Cal., Smith, U. M. C. and Winchester Shells, Infalible 24, 1 1/2 7/8, Selby load.
- R. C. Reed, San Francisco, Cal., Smith, U. M. C. and Winchester Shells, all powders, Selby load.
- M. M. Godman, Dayton, Wash., Pump, Magic, Dupont 3 1/4, 1 1/2 7/8, Ware Bros. load.
- H. C. Riggs, Lewiston, Ida., New Erie, Majestic, Dupont 3 1/4, 1 1/2 7/8, Selby load.
- A. S. Tharber, Lewiston, Ida., Smith, Repeater, Dupont 3 1/4, 1 1/2 7/8, Selby load.
- Frank Howe, Portland, Ore., Remington, Magic, Acme and Majestic, Dupont, Infalible and Bullsite 3 1/4, 26, 25, 1 1/2 7/8, Selby loads, C. P. W. loads.

Averages out of 550 targets shot at: J. Forbes 400, F. C. Stephens 470, T. B. Ware 470, P. J. Holohan 478, S. O. Tannahill 478, J. S. Jent 474, A. J. Winters 474, L. A. Smith 465. Guns—Remington 2, Smith 8, Ithaca 1, Parker 3, Winchester 15, New Erie 1, Greener 1, Lefevre 7. Shells—Magic 27, Majestic 7, Leader 6, Acme 5, Repeater 4. Powders—Dupont 33, Infalible 6, Hazard 3, Bullsite 2.

THE FARM.

Consignment of Beef Cattle Shipped from Illinois to England.

Much attention was attracted to a recent shipment of 400 head of beef cattle from Clay county, Illinois. The cattle went by special train of twenty-six cars to New York, and thence by steamer to Liverpool, where soon afterward they were sent to London and served to the inhabitants of the world's metropolis. This event occasioned much surprise, and caused considerable favorable comment among stockmen on the possibilities of cattle raising in the Mississippi valley, and especially so near the great market centers.

These steers were magnificent specimens of their kind, and, in fact, every animal was fit for entry at a prize livestock show. Mammoth, sleek, docile animals, whose weight averaged more than 1,600 pounds, they were well entitled to be called prize steers, and it is little cause for wonder that they excited the admiration of the Englishmen who received them at the end of the long journey.

In the lot were many whose weight reached a ton, and the largest, a Hereford giant, tipped the beam on the scales at 2,450 pounds. Hereford, Shorthorns, and black Polled Angus predominate in the breeds selected for the special markets, and each animal must be as nearly perfect as is possible in order to be classed as fit for inspection by the buyer's representative, who scrutinizes every point that would, in any way, qualify a beef for the most exclusive market in the world. These beef cattle brought upward of \$100 each, and the shipment represented a total valuation of nearly \$45,000. When prepared for sale in the London markets the meat sold at a price seemingly so high that none but a Croesus could afford this luxury of the best grade of meat produced in America.

An average of four years is required to fit these animals for the high grade markets, and two years steady feeding will put them in condition ready for shipment. The selection of a grade of cattle known as "feeders" requires an expert whose knowledge of an animal will enable him at sight to judge whether or not it has the qualifications, which combined with two years' growth and feed will result in the making of an ideal fat steer. The enormous expense connected with the production of such live stock can only be justified by the fancy prices they bring in the markets when sold.

Good grass pasture with an abundance of water and plenty of corn are the essentials which bring about the desired results. The entire profit of the business, however, does not come from the cattle sold. Hogs and sheep in large numbers are kept on the same farms and upon the utilization, in many ways, of what might be counted as of no value, depends just where the profit and loss accounts are adjusted.

In many communities the growing of live stock has supplanted the idea of general farming, and, as a rule, in these localities prosperity is apparent. The requirements of the markets as to the grade of cattle wanted have set a new pace for the growers, and they are accordingly meeting these demands.

The live-stock industry has within the last decade enjoyed a revival, and there are but few farmers in any section of the country who cannot point to their cattle and say that department of the farm has paid well. The impetus given to cattle raising in localities outside of the great live-stock districts of the West is the result of a change of conditions which will cause the average farmer to look with encouragement upon this important in-

dustry. This change of conditions has resulted in material benefit to the agriculturalist who owns but an average-sized farm in the section where general farming is the principle avocation.

Perhaps the chief reason assigned for the shifting of the business is the occupation of the large areas of grazing lands in the West by bona fide settlers who have converted the public domain, so long held by the cattlemen, into farms and homes. These vast areas of public lands have at last been absorbed by immigration from the Eastern states, and the question of range is becoming a serious one for the cattle kings who have so long held unlimited sway and sent their product to the markets at a cost of production so low that the grower in the Eastern states was unable to meet such competition.

These changes promise an equalization of the industry, as is evidenced by the increase in the number of cattle in the distinctly agricultural districts, and such shipments of export cattle as have but recently been made from the territory contiguous to St. Louis tend to bear out the belief that the future promises much for the growers of fine cattle in the Mississippi valley.

The strides toward development in the raising of fine cattle have been marvelous. The fat-stock shows draw great crowds, and at the annual state fairs the stock departments attract as much attention from the visitors who make their pilgrimages each year as any exhibit offered to the public. These splendid bovine specimens which so pleased the eye of the critical buyers and tickled the palate of the epicures across the water were the result of the development of the industry as attained by years of patient effort by men who had ultimate faith in the future of the business.—*Inter-Ocean.*

Drinking Water for Swine.

We find little recorded on this subject, says Prof. W. A. Henry, possibly because the matter is not considered of importance by many. In a feeding trial by the writer at the Wisconsin station a group of ten pigs divided into two lots of five each, one lot getting barley meal and the other cornmeal, was fed for a period of eight weeks, with the results given below.

The five fed on barley averaged 208 pounds at beginning of test, ate 2882 pounds of grain, gained 601 pounds in weight, consumed 9056 pounds of water, and required 471 pounds of grain for 100 pounds of gain. For every 100 pounds of food eaten they drank 320 pounds of water.

The five fed on cornmeal averaged 209 pounds in weight at the beginning of the test, ate 3100 pounds of grain, gained 713 pounds in weight, drank 6620 pounds of water and used 435 pounds of food in making 100 pounds of gain. For every 100 pounds of feed eaten they drank 213 pounds of water, or 107 pounds less than those fed on barley.

The weight of water reported includes that required for soaking the meal and also that drank from a second trough.

It will be seen that the pigs fed on cornmeal consumed about two pounds of water, and the barley fed over three pounds, for each pound of meal eaten.

The pigs getting cornmeal consumed over 900 pounds of water, and the barley fed pigs 1500 pounds, for each 100 pounds of gain in live weight. Pigs fed on cornmeal appear to require less water than when on other feeds.

Dairy Interests Booming.

It is estimated that more than one thousand more cows will be dairied in this section in 1904 than during the present year, says the *Lompoc Record*. This shows the progress in this industry among us, and this is but the beginning of an industry that is destined to become next to fruit in production and profit. Ten years more and the Lompoc valley, covering about 13,000 acres, will be practically given over to winter apples and dairying.

Some Fine Cattle.

[Woodland Mail, Nov. 14th.]

Henry Eakle Jr., returned yesterday from Iowa and Missouri where he went to take in the great stock show at Kansas City and also to purchase some fine stock for his ranch in Yolo county. He left on October 15th and reports having had a very enjoyable and a very profitable trip. He brought back with him some fine stock consisting of 5 head of Durham cattle, 12 head of Shropshire sheep, and 13 head of Duroc Jersey hogs, a boar, sow and family of 11 pigs.

Mr. Eakle now has some of the finest stock in Yolo county. His new bull, a thoroughbred Cruickshank, is no doubt the finest in Yolo county. The *Breeder's Gazette* published at Chicago published the following regarding the stock that Mr. Eakle has just landed in Yolo county:

Charles C. Norton, Corning, Ia., writes: "We were recently favored with a visit from H. P. Eakle, Woodland, Cal., who is building up a choice herd of Shorthorns in that far away State. Verily his cattle should be good ones, as such land as they will tread there is selling for from \$165 to \$200 per acre. Mr. Eakle has selected from our herd the fine red bull Saturn, calved in October, 1901, by imp. Bapton Admiral, out of a pure Cruickshank cow Sovereign, of the Secret family, by imp. Salamis. He also takes the choice red Cruickshank Brampton Rose heifer Brampton Spray, by Bapton Admiral out of Brampton Lilly, by imp. Salamis, and the very sweet white heifer Blissful by imp. Scottish Beau out of Blythesome 23d. a Mar-bred Butterfly by Spicy Robin. As will be seen by the breeding of this trio is most excellent, and the quality is such as to warrant one in expecting that they will, with proper care, give trouble to competitors in the show rings, as well as make profitable animals in the herd. The heifers are bred and supposed to be in calf to Banker's Victor, which is proving a rare good getter. Mr. Eakle also takes with him several fine Duroc-Jersey pigs from the choice herd of Hon. Thomas L. Maxwell, and a dozen selected Shropshire ewes from the flock of Mr. Miller, also of Iowa."

Swine Notes.

Dusty hog pens may be filthy and unhealthy as the wet sort, where filth is in a liquid or semi-liquid state.

Cleanliness is next to good porkliness, if not to healthfulness and profitableness.

If hogs reveal the presence of worms give turpentine on an empty stomach at the rate of a tablespoonful to 200 pounds of hogs. Or give coal creosote, 1 ounce to 99 ounces, or 6 pounds 3 ounces water, in feed. One ounce of this solution is a dose.

Decayed vegetables and putrid food of any kind—even milk—should not be given to swine. And soapy dishwater should not be put in the swill barrel.

Dust in the hog yard or pen induces throat and lung trouble.

The oat crop is a big one, and ground oats are good for growing pigs, when cheap enough, for they are muscle and bone builders.

Kerosene emulsion has been found to be a very effective destroyer of hog lice. For best results dipping should be the method of use, but spraying freely and with considerable force has proven very satisfactory, if repeated once or twice.

There are many more hogs overfed than starved.

For hog lice spray a good sheep dip onto them with a sprayer that means business. Kerosene emulsion often proves a good substitute for sheep dip.

If a hog dies of any disease burn it up or bury it down. Never let its relatives or neighbor hogs eat it.

If hogs, or other animals, begin to show signs of illness, loss of appetite, etc., modify and change rations at once. Monotonous and overmuch feeding are often responsible for a box of evils that Pandora would have doted on.

Cattle Poisoned on the Plains.

The grazing interests of the great plains are considerably exercised over their heavy losses this year due to the eating of poisoned weeds by their grazing stock. Hundreds of cattle and sheep have fallen victims to these dangerous weeds, and the matter has become so serious that the Agricultural Department has inaugurated a special investigation with the hope of affording a greater degree of safety to the stock growers of the far West. One of the most widely distributed of these poisonous plants is the loco weed a small pea-like vine, six to twelve inches high, with conspicuous white or cream colored flowers. It grows from a thick, woody, persistent root. It is found mainly along dry, rocky ridges or gravel plains, but exhibits great capacity for growing in nearly every kind of soil. The only means of extermination at present known is digging up the plant by the roots. It will be the aim of Professor Chestnut, the department agent assigned to this work, to find some other means of protecting domestic animals from this and other poisonous plants which have proven so destructive in the past.

Forest Ranges Overstocked

C. H. Shinn, head forester for the northern division of the Sierra reserve, says that the rangers are now preparing their reports to be sent to Washington in regard to the pasturing of cattle on the ranges, and next year, he says, the number of cattle allowed on the government reserves will be considerably limited. On account of the poor condition of the ranges, the cattle did not do well last year, and the fact is that the ranges were considerably overstocked. Many of the cattle came out poor, and this condition is unsatisfactory to the cattlemen, and the presence of more cattle than the ranges can support is extremely injurious to the land. The limitation of the cattle will be done in such a way that the owners living along the border will have the preference, and non-resident owners will have to bear the brunt of the partial exclusion rule.

The range hogs will not be permitted to roam at will over the ranges, either, and the owners have been given notification to that effect. This order will be put into force gradually so as not to work a hardship.

Almost every railway system keeps wrecking trains ready equipped for emergencies at every division point. Forces to man the train and machinery are near at call to respond at any hour to go out and clear any wreck. The equipment of a wrecking train besides the crew, consists of bunk car, several flat cars loaded with trucks, jackscrews, heavy timbers, pulleys, rope, ties, steel rails, spikes, crow-bars, nails and carpenter's tools, besides the derrick or crane operated by steam from the engine in the cab on the derrick car.

An immense watch is to be manufactured for the St. Louis World's Fair. It will be seventy-five feet in diameter and forty feet high, with neat little staircases running all about and walks into which people may go. The balance wheel will weigh a ton, and the hair spring will be 300 feet long.

There will be no more copper pennies coined by the United States for one year. The mints in the last five years have coined more than 3,000,000,000 one-cent pieces.

Only 8197.95 pounds of butter were exported from the United States for the fiscal year ending June 30, 1903, as against 15,084 150 pounds exported the previous year.

Only five pensioners remain on the pension roll on account of the revolutionary war.

Jackson's Napa Soda does not tangle the feet.

Factors in the Management of a Pure Bred Herd.

In the journal of the Royal Agricultural Society of England, Mr. Clement Stephenson, gives some points to be observed in the management of a pure bred herd which are of the utmost importance to the breeder of pure bred stock, as upon the observance of them depends the success in the business:

The herd, I believe, is best commenced by buying a small number of in-calf cows or heifers as near to the drop as possible, and then, selecting the best stud bull obtainable. As to the females, it is not in my opinion wise to at first buy high-priced and so-called fashionable bred ones; these may with advantage be bought afterwards, when the establishment of the herd has become an accomplished fact. Good, thick-fleshed animals, upon short legs and with good polled heads, are the sorts not only to start with, but to stick to, and the bull that is bought should be the best that can be found or that the buyer can afford to pay for.

A really good bull will make a herd even from moderate cows, while an inferior bull will ruin a herd regardless of the high qualities of the cows it may contain. Those who intend to start a herd should, in my opinion, consult some one who is quite familiar with the breed; of course, the man who has a natural eye for cattle can easily pick out the good sorts, but there is more than this required, if the new herd is to be a success.

There is a family history to consider: Were the ancestors of the animals it is proposed to buy all good ones? Were they regular breeders and good milkers? Were they free from white markings on the body and legs (no one objects to a white udder), and were they sound and robust in constitution? These are important points and should all be well considered, but it is only those who have made a special study of the subject who are competent to advise. "Experience teaches" always comes in, but, alas, it generally comes too late. It is better, therefore, for the beginner to remember the law of "let the purchaser be on his guard," and consult an expert and pay for his advice. Or he may place himself unreservedly in the hands of a well known breeder, but should be prepared to pay full value for good males and when he has got them safely into their new quarters, it becomes a question of how to treat them so as to obtain the best results.

There are different systems adopted for rearing calves, but in pedigree herds at any rate, nature's plan is the best; therefore, let the calf suck its dam—that is, if she is healthy and in a condition to suckle her calf. There is nothing like its mother's milk, taken just as required, for making a good calf; it is the food provided for its sustenance, and it supplies all that is requisite to build up a healthy structure. Besides, in the act of suckling the milk is taken just in the proper quantity and suitably mixed with the salivary secretions to insure good digestion.

When the bull calves are from one to two months old, those that it has been decided to alter should be operated on. And here let me point out the supreme importance of keeping only the best bull calves for stock purposes—by best, I mean those that in the first place are good ones individually, and have in addition a good record as to ancestors, and all other qualities that are not only desirable but absolutely needed in a stock bull. The demand for small-priced—it is a mistake to call them cheap—bulls of this breed is considerable for crossing purposes, and the breeders may be tempted to keep on animals that would be worth as much or more as steers. This is a mistake, and the sooner both the pedigree-breeder and the cross breeder realize it the better it will be for all concerned. In breeding cross breeds, the sire at any rate must be pure and good. When this is the case the result of the first cross is most marked. Care must be taken to see that the calf

continue thriving and doing well; that they get a sufficiency of milk, but not too much. I have already pointed out the supreme importance of the stud bull—he makes or mars the herd—and I have also mentioned that the young bulls are generally sold when about twelve months old, and when they are quite fit to serve a limited number of cows or heifers. Those in want of a good young bull think it no trouble to travel hundreds of miles to find one. And there is one advantage in buying at this time—namely, that his sire, dam and other members of his family may be seen at his place of birth. The stud bull should have a straight top and underline; he deep and wide round the heart; have short loins; be neat at the tail head; have short legs, well set in; a good, polled head; an honest face; and withal, plenty of muscular development (flesh) and masculine character. See that he walks well and that his hocks are good ones—the latter is an important part in a bull. If to his personal qualities he adds descent from good parents and belongs to a prolific, long lived, sound family, that is the bull to buy; the probabilities are that he will be a success. To obtain him neither money nor trouble should be spared.

Observant breeders quickly realize the all-pervading powers of heredity and atavism. To breed good animals we must start with good parents, and to prevent any ill results from atavism (throwing back from a remote ancestor) we must as far as possible make sure that the ancestors of the animals we breed from were good ones. I have great faith in a good pedigree, and I would not buy any animal unless the pedigree pleased me. The pedigree is the title-deed by which we know whether or not its possessor is a good and safe investment. The so-called fashionable pedigree, or the long pedigree, is no warranty of excellency, and both may be rendered objectionable by the inclusion of some inferior animal in them. Neither is the ordinary pedigree, where simply the direct dams and sires are given, to be implicitly relied upon. To establish a good pedigree, it should be possible to trace every animal to its foundation, and in none of the collateral branches must there be a stain. At the same time individual merit must be our first consideration and the pedigree comes afterward.

To secure the best results in washing the buttermilk out of the butter it is important to add plenty of water at the start, and not attempt, as is often done, to draw off the buttermilk without first adding water. The churn should not be too full at the start, and then plenty of cold water can be added. Give the churn two or three turns and the water will come to the top. If the butter is soft, rather better results can be secured if a little salt is added to the water before turning in, and then it is allowed to stand a few minutes before draining off the buttermilk. It is not best to draw off too closely the first time. Add more water and draw off, repeating until the water runs clear.

A cheese weighing 2 tons will be on exhibit at the World's Fair at St. Louis, from New York, suggestive of the greatest cheese making State in the Union.

Nearly one million emigrants came to the United States during the fiscal year ending June 1, 1903, which in number breaks all previous records.

Popular tradition to the contrary, there is no animal to which pure water is more essential than the hog, and none that will pay a higher price for it.

Good butter cannot be made on the farm or anywhere else unless there are facilities for making good butter.

Jackson's Napa Soda is sold in every city, town and hamlet in the State.

Management of a Dairy Herd.

I regard care, feeding and developing the milking habit quite as important in making the ideal dairy cow as her breeding. In breeding and rearing dairy animals at the State Farm I have pursued a conservative course, deeming it wise to make haste slowly. Calves have been removed from dams about the second day and given her milk seven to ten days; and the same time has been taken to change from whole to skimmed milk which is continued until they are about six months old. The third week a teaspoonful of ground flaxseed is added to the milk. When the calf is first removed from the dam a midday feed of three or four pints of milk is given, and later on is restricted to two feeds a day. The milk is gradually increased until ten quarts a day are given, and the flax meal until a tablespoonful is reached. The roughage is generally composed of cut clover, or timothy and clover hay mixed, and a small allowance of ground or whole oats or bran is given twice a day immediately after the milk is taken. The aim is to feed roughage ad lib., but with us it, as well as the milk, is weighed daily, because of experimental work, so we know exactly how much food is consumed by each animal when stabled. Enough bran is given to secure vigorous growth without putting on fat. This system is followed through the growing period. We always feed grains that contain a good supply of protein and ash, to build a strong frame and a maximum development of vital organs.

Heifers drop the first calf when they are two years old, because it is the aim to begin to develop their milk-making functions with their feeding powers, and great care is exercised not to force them beyond a normal growth, so no effort is made to secure a large yield for any given time during the years of growth, but rather that a habit shall be developed. So a grain ration ranging from four to six pounds daily, according to size and work performed, will suffice the first year of lactation, and with each succeeding year a pound or two may be added to the daily ration. By this system good growth is secured, together with the steady and normal development of milk functions. The offspring, too, will be more vigorous. The small size of some breeds and animals is chiefly due to early maternity and a too rapid development in dairy work. Too much grain fed during the growing period causes an abnormal development of milk, giving an energy to milk production which should go to building a strong vigorous frame.

Systematic feeding both as to quality and time is a very important matter. By feeding a given quantity at a stated time the system will gradually adjust itself to the bulk of feed and its nutrient content, and less waste will result. If more is fed one day than another the system cannot adjust itself to the sudden change, and nutrients will pass through the digestive tract without assimilation. The proper handling of animals intended for the dairy is quite as great an art as is breeding, and to succeed one must be as expert in the one as in the other. Gentleness and kindness mean much to the little mother to be, so she should be honored with a name—that when you speak to her she may know it, become acquainted with you, and, because of your kind treatment and kind words will become attached to you, and then when motherhood is reached she will desire to give you her milk.—Prof. L. Haecker in *Farm, Stock and Home*.

The result of raising pine trees in the sand-hill districts of Nebraska, experimented in by the United States department of agriculture, has been very gratifying to Secretary Wilson, who has made recent investigation of the work. Eighty acres of pines are growing on what is considered the very worst sand-hill land in the state.

KENDALL'S SPAVIN CURE

The Pedestal of Fame.
 We are not great statesmen, inventors or conquering heroes, but we may lay modest claim to being benefactors to humanity. For a long term of years we have been making
KENDALL'S SPAVIN CURE
 and supplying it to suffering horsemen all over the country. It has been found to be the only perfectly reliable remedy for Spavin, Ringbone, Curb, Splint and all forms of Lameness. It is undoubtedly the best known and most largely used veterinary remedy in the world. Thousands of people write us such letters as this about it:
 Stands at the Head. Used 25 Years.
 Worcester, Mass., Nov. 17, 1892.
 Dr. E. J. Kendall Co.,
 Gentlemen—Will you kindly send me one of your books entitled "A Treatise on the Horse and his Diseases." My experience teaches me that Kendall's Spavin Cure is a liniment for man or beast, stands at the head. I have used and seen it used successfully all of twenty-five years.
 Very truly yours,
 G. W. McHENRY.
 For sale by all druggists. Price, \$1.50 a tin for 65¢. As a liniment for family use it has no equal. Ask your druggist for KENDALL'S SPAVIN CURE, also "A Treatise on the Horse," the book free, or address
DR. E. J. KENDALL CO., Enosburg Falls, Vt.

Standard Trotting Stallion For Sale
ORO GUY 34192

Foaled 1898. By Oro Wilkes 2:11. Dam by Gny Wilkes, 2d dam by Sultan, 3d dam by The Moor. Black in color, stands 16 bands high, weighs 1500 pounds. With little work has shown a mile in 2:16 1/4. Square-gaited trotter; guaranteed absolutely sound. Good disposition. Stylish conformation. One of the best bred representatives of the Wilkes family on the Coast. Will be sold reasonable. Apply or address **R. I. ORR, R. D., Gilroy, Cal.**

WALTER SEALY, Manager.

On Broken Down, Weak, Sprained and Ruptured Ligaments and Tendons Its Power is Unfailing.

No Man need see his Horse suffer and become incapacitated.

"SAVE-THE-HORSE" POSITIVELY AND PERMANENTLY CURES BONE AND BONE CURB, SPLINT, CAPPED HOCK, WINDPUFF, SHOE BOIL, WEAK AND SPRAINED TENDONS, AND ALL LAMENESS.

"SAVE-THE-HORSE" cures without scar, blemish or loss of hair; can be applied anywhere and in all conditions and extremes of weather. Horses may be worked as usual with skin or ankle boots, as no harm can result from destruction of hair or scalding of limb.

Cured horses are absolute certainties as to the possibility of the remedy for your own case. Such results, as shown in our booklet, by business men whose reliability can be readily ascertained, have carried "SAVE-THE-HORSE" over skepticism, prejudice and uncertainty. Send for the booklet and copy of written guarantee, which is as binding to protect you as the best legal talent could make it.

\$5.00 PER BOTTLE.

Written guarantee with every bottle. Need of second bottle improbable, except in rarest cases. If your case is different we advise frankly as to possibility of the remedy effecting a cure. Give veterinarian's diagnosis, if he is competent. Describe age, development, location of swellings, lameness, and way horse carries and holds leg.

\$5.00 a bottle at all druggists and dealers, or sent express prepaid.

Trees on which the leaves remain after hard frost sets in and stick to the branches in the spring are not healthy.

To make a horse sleek and its hair bright and glossy feed it on whole wheat or wheat bran.

Goats.

The goat industry of the United States is the subject of a pamphlet by the Department of Agriculture compiled by Geo. F. Thompson, editor of the Bureau of Animal Industry. The census of 1900 shows a total of a little less than 2,000,000 animals, largely found in the Southern States. Not all kinds of goat skins, the circular says, are in demand for leather. The pelt of the angora is, as a rule, too thin and poor for leather, the longer the hair of the goat the thinner and poorer the pelt. This applies to goats not angoras. Among the French mountaineer the raising of kids for their skins is a leading industry. As soon as the kids are old enough to eat grass and other diet, the skin begins to grow coarser and harder. The kid is therefore penned, not only to prevent its eating improper food, but to prevent scratching and bruising. The conditions in the United States, it is stated, especially as regards the item of labor, are so unlike those of mountainous France that it is not probable that a similar industry could be maintained here. We import from \$20,000,000 to \$25,000,000 worth of goat skins annually, mostly for shoes and gloves. The bulletin discusses the question as to whether it will pay farmers to raise common goats for the sale of kids, whose meat is as palatable as that of lambs, and is in fact sold in every large city as lamb's meat. If a ready market was established for kids at, say \$1.50 each, and if one nanny goat can raise three kids annually, it can hardly be doubted that the industry could be made profitable.

The bulletin points out that there are vast acreages in this country suitable for goat raising where, perhaps, no other animals would thrive. The feed that goats prefer is browse, with a small proportion of weeds and grass; therefore lands burdened with brushwood and briars are particularly desirable. The pronounced characteristic of angora goats for destroying brushwood, briars, weeds, etc., has been exploited so extensively that many people have received the impression that this was a trait peculiar to the angora breed. This is not the fact; the predilection of goats for such diet is common to all breeds. Brush-ridden land is usually rich, but to clear it by ordinary methods requires an expenditure varying from \$5 to \$40 per acre. If goats can do this work as thoroughly, why not employ them, even leaving out the question of their own profitableness? The bulletin avers that a little investigation will probably convince the farmer that the common goat is not so promising of profit as the angora. The latter produces a fleece for which there is a good demand at good prices, while the common goat contributes nothing of this kind. Its flesh is much more palatable than that of the common breed, and it is less inclined to jump or climb. On the other hand, the value of the skins probably is less, and the angora goat usually has but one kid a year, while the common goats have two and often three. At this time there is a ready sale for angoras, while it can hardly be said that there is a market for the common breed.

Farm Notes.

Good farming is impossible without good teams.

Breed the horses for strength, endurance and then style.

Most crops exhaust the soil in proportion to their value.

Any animal when fed heavily should have a variety of food.

Regular feeding is very essential to health and comfort of the teams.

Excess of food weakens a working animal and disables it from work.

Few localities are too hot or too cold, too wet or too dry for wool growing.

Do not sell hay, grain or straw, but convert them into meat, wool or milk.

Used after the Race

Takes out soreness, lameness and all aches and pains.

Try it.

CAMPBELL'S HORSE FOOT REMEDY IS THE BEST REMEDY

EVER USED ON HORSES' FEET.
IT PENETRATES and DRIES IN quickly and DOES NOT GUM and FILL UP THE PORES like tar and oil compounds. It is the GREATEST REMEDY ever used to remove SORENESS and FEVER from the foot, and makes it possible to get good services out of a horse working on hard and hot pavements.
It gives natural nourishment to the foot and incites a rapid, healthy growth—ALL DRYNESS AND BRITTLENESS quickly disappears.
QUARTER CRACKS and SAND CRACKS are rapidly grown out when directions given in our booklet are followed.
It is a SURE CURE for CORNS, CONTRACTED FEET and NAIL WOUNDS if directions are followed.
It PREVENTS SOUND FEET FROM BECOMING UNSOUND and GROWS a TOUGH, STRONG, ELASTIC WALL and HEALTHY FROG—a FOOT WHICH WILL STAND WORK on race courses.
Many of the best owners and trainers state that for track work nothing equals it. In many cases horses have reduced their records several seconds, due to its use.
It is a CURE for THRUSH and SCRATCHES.
We Guarantee That It Will Do What We Claim and Will Refund Money if It Fails.
PRICES:—Quart, \$1.00; Half-Gallon, \$1.75; Gallon, \$3.00; 2 1/2-Gallon, \$5.50; Five-Gallon, \$10.00.

Books giving full directions for its use and much valuable information as to shoeing are supplied free.
Don't fail to read "ad." giving information concerning Campbell's Iodoform Gell Cure in next issue of this paper. It is the best and because of its merits is rapidly displacing all others.

PALACE HOTEL, SAN FRANCISCO, CALIFORNIA.

TOURISTS and TRAVELERS will, now, with difficulty recognize the famous COURT into which for twenty-five years carriages have driven. This space of over a quarter of an acre has recently, by the addition of very handsome furniture, rugs, chandeliers and tropical plants, been converted into a lounging room—the FINEST IN THE WORLD.

The EMPIRE PARLOR—the PALM ROOM, furnished in Cerise, with Billiard and Pool tables for the ladies—the LOUIS XV PARLOR the LADIES WRITING ROOM and numerous other modern improvements, together with the unexcelled Cuisine and the Most Convenient Location in the City—all add much to the ever increasing popularity of this most famous HOTEL.

San Francisco, Saturday, November 28, 1903.

THE ANNOUNCEMENT made in these columns last week that the Pacific Coast Trotting Horse Breeders Association, will probably increase its stakes for 2:24 class trotters and 2:20 class pacers next year to \$2500 and \$2000 respectively, has met with the general approval of horsemen all over the Coast, and on every hand the opinion is expressed that the larger the stakes the greater will be the number of entries. The statement that the Breeders will announce its stakes not later than February, is the one that pleased the horsemen most however, and if three or four of the principal California towns will announce good trotting and pacing stakes at the same early date, there will be busy times thenceforth on every training track in the State. The fact is very evident that the only reason harness racing was at such a low ebb this year in California was simply because the associations did not give meetings enough. Wherever a harness meeting was held the racing was good and the meeting profitable. The mixed meetings were very bad, so far as the harness events were concerned, and this will be the case generally except in the smaller country towns. The district associations, failing to receive their regular appropriations from the State, refused to run the risk of holding an unprofitable fair that would bring them in debt, and they would not hold a race meeting without a fair. They were unwise in most instances and it has been clearly demonstrated that a good harness meeting of three or four days duration can be made to pay a profit to its managers in any town in California where there is a mile track. It is the old six day meeting that has put the associations in debt. Three days is all the average town of 5000 or less population can stand. Four or five days is the limit on nearly all the big tracks in the East where thousands of dollars are made each year on harness meetings, but for some reason the associations in the little California towns imagine they can bring the people to a fair or race meeting for six days. It is a mistake, however, as harness racing is still a sport. When it gets to be a business, like the running game (which heaven forbid) long drawn out meetings may be held. The short meetings can give larger purses than the long meetings, as they do not have to provide for so many classes, and the entries average more to each race. The breeding of harness horses was more extensive this year in California than for some time past, and there will be more horses trained in 1904 than at any time during the past ten years. If a circuit of a half dozen tracks can be arranged and announced by February a vast majority of these horses will be entered for its races. If not they will race up north, in the Mississippi valley, on the Grand Circuit, or be consigned to the auction sales. We are confident such a circuit will be formed.

THE FALL AUCTIONS in the East show that the harness horse is in demand and prices as good if not better than last year. While no sensational prices are reported it is because no sensational speed horses have been offered. The average, both at Chicago and Lexington has been excellent, and at the Old Glory sale, now in progress at Madison Square Garden, New York, the prices are very satisfactory for everything that can show speed. The Palo Alto horses did not bring the prices expected, but as they were almost entirely breeding stock this is not surprising as the New York buyers want their speed ready made and look to the country to furnish it. There is a very strong demand for racing prospects good enough to train for the Grand Circuit, and the supply does not equal it by considerable. It looks like prosperous times ahead for the small breeders who train their stock and put it on the market ready to race.

Strikes!—If they don't give you Jackson's Napa Soda when you ask for it.

WESTCHESTER RACING ASSOCIATION announces the eighth National Stallion Stake with \$5000 added, to be run for by then two-year olds in the spring of 1905. It also announces the eighth Matron with \$10,000 added, to be run for by then two year-olds during the autumn meeting of 1906. Both these great stakes will close Tuesday, December 15, 1903, and the full conditions will be found in our advertising columns.

GET YOUR HORSE in the stallion directory to be printed in the BREEDER AND SPORTSMAN'S Christmas edition. It will cost you but \$3 and will pay, as breeders will be looking for this directory and selecting stallions from it to mate their mares with.

Stanford Stake of 1905.

A Prominent Hawaiian Gone.

Col. W. H. Cornwell, a wealthy and prominent citizen of Hawaii died suddenly on his plantation at Warkapu, Maui, recently. Mr. Cornwell was a great lover of horse flesh. For a number of years he was president of the Hawaiian Jockey Club and one of its charter members. He imported and owned many harness and running horses, among them being "May D," "Hancock," "Nisa," "Garfield," "W. W. Wood," "Lord Brock," "Venus," "Gartalene," "Ahuimanu," and many others. His racing colors were well known as the silver gray and cardinal maltese cross. At his Sacramento River ranch in California he bred quite a number of horses. Mr. Cornwell was born in New York sixty-one years ago and went to Honolulu when a boy of fifteen with his father.

Death of Fred M. Denio.

Every horseman in California who had the pleasure of knowing Frank M. Denio of Vallejo, will be pained to hear of his sudden death near that city on Sunday morning last. Mr. Denio had gone on a hunting trip with a party of friends and while walking through the tule lands was suddenly attacked with apoplexy and died in a few minutes. Frank Denio was a blacksmith and horseshoer and one of the best mechanics in his line in the State. He has shod many fast runners and harness horses, and his services were always in demand during the meetings held at Vallejo, and every horseman who has visited that town will remember him as a genial, hard working and honorable man, whose ability in his calling was marked. In fact he had few superiors in shoeing trotters and pacers so as to correct their faults of gait. Mr. Denio's father was a mechanic before him, and was during his life for many years the Master Mechanic at the Mare Island Navy Yard. He was a warm personal friend of Abraham Lincoln, and it was one of the proudest recollections of Frank Denio's childhood days that President Lincoln had often taken him on his lap and talked to him. Mr. Denio leaves a wife and daughter to whom his death will be a severe blow as his home life was idealistic. Frank Denio had lived in Vallejo since he was about five years old and died at the age of 47.

Driving--Ancient and Modern.

As a recreation few exercises are so pleasant as driving. The modern vehicle has rendered it more comfortable than formerly, but it is doubtful if the drivers of to-day are equal to those of the olden time. Jehu is spoken of in the Book of Kings as a famous driver; for when he went forth to fight against the city of Jezreel, the watchman in the tower gave warning to the King helow in these words: "The driving is like the driving of Jehu, the son of Nimshi; for he driveth furiously." There were many famous drivers amongst the Jews in the time of their greatest glory, and many of their warlike kings were rated among the number.

In the palmy days of the Egyptians, when the valley of the Nile was a garden of groves and terraces, driving was a luxury and the custom the highest in the land. There were splendid drivers in those days, now hidden by the waves of sand that have swept for centuries over many of the finest achievements of mankind, and here and there were orchards, beautiful in arrangement, rich in ornamentation and cultivation, giving evidences of the highest artistic skill. But all of Egypt's magnificence, all of her ancient glories, all of her civilization, power, achievements, and pleasures are gone, buried and forgotten almost beneath the debris of the Nile, the drifts of the desert sands and the waste of centuries.

The Romans were reckless and skillful drivers, and one is forced to admire both as they are pictured sweeping over the plains of the East of Egypt and the Holy Land, overrunning all opposition and striking down every system, compelling all alike to bow the knee in suppliance to their awful power.

The practice and the prizes of the Coliseum, no doubt, contributed to their skill and made them daring as they stood in their chariots forcing their fiery coursers into the very vortex of war. The exhilaration of speed, added to the excitement of battle, made every charioteer a hero, and served to brace him against every danger that lay in his course.

The Greeks, the Persians, the Bahylonians, were all lovers of the art of driving; for truly it is an art. Their steeds were of the finest Arab strains, and their equipages of the most magnificent design, and trimmings.

Glory was the desire of every heat, and all their surroundings were glorious.

The Russians are reckless in driving, for in their sledges they will dash away over the snow into the blackest night, trusting to the sight and instincts of their horses rather than their own knowledge and skill. Though exceedingly reckless, they are skillful as well, and manage an untamed horse with consummate dexterity.

In this country, however, driving has been reduced to an exact science. The turf has developed experts in that line that would turn the eyes of an ancient Roman green with envy. The wonderful records made by the trotters of this age is due to expert driving just as much as it is to the improvement in the equine breed, and perhaps more.

There is a fascination about driving that is contagious. The little child, after an outing or two, begins to clamor for a ride. The bracing air, the waving trees, the rising and fading scenes that greet the eye, and the pleasant motion of the carriage, all tend to lighten the spirits and bring to the heart a feeling of happiness.

Driving clubs are being formed in many cities for exercise and friendly competition, and as a consequence there is an increasing demand for better streets and more extended avenues. The taste is an elevated one, and if its indulgence will aid the spirit of enterprise and compel the construction of streets and boulevards, it should have full sway; for anything that tends to smooth the ways of this world and make brighter and happier the general surroundings is worthy of the highest culture. So let's harness up our horses and all take a ride.—*Harness World.*

The Kenney Bicycle Co., 531 Valencia St., is doing a big business in the McMurray Carts and Sulkies. You not only save money by purchasing a McMurray but get the most durable, best made, and easiest running cart or sulky in the market. Investigation will convince a Missourian.

JOTTINGS.

"WERE WORTH MORE MONEY," was the expressed verdict of every horseman in California when he read in the dispatches on Tuesday morning of this week that the fifty-one head of horses consigned to the Old Glory sale by Palo Alto Stock Farm had brought hut \$19,995, an average price of \$395. Monbells, son of Mendocino and Beautiful Bells—think of that breeding for a moment—brought hut \$900, a sum he could earn twice over in the stud in almost any county in California before next July, and, in a good locality and in good hands, could quadruple it. Mr. Henry Orr of Reading, Pennsylvania, was his buyer. We will have to await the arrival of the mails before we know the full particulars of the sale, the dispatches giving but a very meager account of it. Helena 2:11½, dam of Wild Nutling 2:11½ and Hyita (trial 2:12), brought \$1050; Rowena 2:17, dam of that good trotter Rowellan 2:09½, sold for \$875; Expressive 2:12½, one of the greatest three-year-old trotters that ever lived, sold for \$1700, and Sunolito, a half sister to Sunol, brought \$435. These are the only individual sales of the Palo Alto horses mentioned in the dispatch, which states that others of the string sold at prices ranging down to \$200.

I would like to have seen Monbells remain in California. There is not one of the sons of that greatest of broodmares, Beautiful Bells, now in this State, and there are many of our most intelligent horsemen who believe that with proper opportunity he will be the greatest of all the sons of that famous mare. Had this sale of Palo Alto horses been held in San Francisco, I believe the stallions Monbells, Exioneer and Nazote would all have brought more money than they did in New York, and am also inclined to the opinion that the entire consignment would have brought the farm a greater net return than the New York sale has done.

For a good green trotter, a high class race horse with or without record, a first class roadster, or a colt well staked and promising, the New York market is the one that brings the most money. But for stallions and broodmares, unless the individuals offered are very prominent and right in the direct focus of the public eye, the big sales are not the places for high prices. The millionaires are not engaging in the breeding business at the present time as a rule. They want the finished product and the prospective free-for-all horses, but they prefer buying to breeding them. One millionaire paid out over \$100,000 for a half dozen horses this year that were ready to race and entered in the big stakes. He would have paid the entire sum for one that could beat Lou Dillon, but he probably would not bid one quarter of the amount for the sires and dams of both Lou Dillon, and Major Delmar, with the sire and dam of Dan Patch thrown in.

There is much encouragement for the small breeder in this state of affairs. Time was when it seemed as if nearly every man of great wealth in the country was starting a breeding farm, and the poor man with one or two entries in the colt stakes was compelled to accept odds of about one to twenty against his entry beating those of the big stock farms. It is different now. Comparatively few of the millionaire horse admirers are content to wait until they breed a stake winner. They prefer buying one even if they have to pay double the amount the horse can win. Witness the purchase of Major Delmar for \$40,000 in the hope that he could win the Memphis Cup, and the payment of \$20,000 for Sadie Mac because it was nearly a foregone conclusion that she could win the Kentucky Futurity worth \$10,000 and a lot of glory.

The small breeder, the man who has the brains and energy and business sense to breed and develop a fast trotter or pacer, and the common sense to accept a fair and profitable price for one when opportunity offers, never had a better chance to make money than right now. There is a good demand for horses that have size, style and speed, and especially for those with speed. The wealthy people want them and are ready to pay the cash on delivery of the goods. They are largely from Missouri however, inasmuch as they must be shown, and those that are buying on talk and stories, or even affidavits are few and far between.

The finished product is now demanded in every line by those who have the money. It is the same with the thoroughbred horses. Breeding farms are being dispersed every year. With a very few exceptions the men who are willing to pay the most for a running horse are men who think it would be a waste of time

to breed them. They are willing some one else shall take all the pains and trouble and honor and glory that belong to the breeder of a champion. Ownership of a world beater or a race winner is their desire, and they would rather ride in front in one of the amateur events, drawn by a horse bred by a Chinaman than to finish second with a horse bred on their own farm according to their own ideas. Consequently there is plenty of money in sight for the men who breed and develop horses that have extremespeed. The market for this sort is healthy and has an upward tendency.

The greatest living sire, Red Wilkes, 29 years of age, son of George Wilkes and Queen Dido by Mambriño Chief, sire of 3 in 2:10, 23 in 2:15, 51 in 2:20 and 167 in 2:30, as well as the dams of 150, was sold at the Old Glory for \$775. He is a horse of remarkable vigor and surprised everyone when led into the ring. While he has been a wonderful sire and is one of Geo. Wilkes' greatest sons, his years of usefulness are naturally about over and he cannot be expected to get more than one or two crops of foals before he dies or becomes impotent. If he was worth \$775 Monbells is worth \$10,000.

Kinney Lou 2:07½, the fastest entire son of McKinney is taking things easy in a big box stall at the Alameda track, with an occasional run in a paddock where the green grass has already begun to sprout. I saw him for the first time last Sunday. He is a brown horse with a star and two hind ankles white, and though in fair order still shows signs of the sickness which troubled him all summer. He is improving every day, however, and will soon be as well as ever in his life. Catarrhal fever was his ailment, and he had a pretty severe time with it, the wonder being that he managed to win over eleven thousand dollars during the season and trot so many beats helow 2:10. His skin still shows the effects of the "breaking out" that so often accompanies this disease and there are numerous little spots where the hair is off. When Kinney Lou reached Alameda after his Eastern campaign his hair was on end and he looked to be all out of form, but it lies close now and begins to take on that lustre that denotes good health and clean blood. He is just about as tall as his illustrious sire, I should judge, but is not quite so compact a horse. He has one of the grandest of heads, and the breadth between the eyes is extraordinary, and the high brain clearly manifest. He is deep through the heart and carries good shoulders and forearms, but it is his hind quarters that attract attention. The sweep of his hams, from the point of hips to hocks is splendid and the long well developed muscles show where he gets the great power to produce the speed he has. His hocks are just about as perfect as one could find on a trotting horse and the bones of his legs clean and flat with not one trace of beefiness. His unshod feet look to be in excellent condition and are nearly perfect in shape. He is a good looking horse now, and within a month or two when he has taken on a little more flesh he will be the almost perfect type of the American trotting horse and sire.

Mr. Dohle tells me he has ridden faster behind him for a quarter than any other trotter he ever drove, and that means a quarter in 29 seconds or better, and he also added that he never saw a better gaited one. He intends placing him in the stud in the early part of the coming year, permitting him to serve a limited number of mares, as he believes he will be a high class sire. The horse will be raced in 1904 however, and the year following, before he is retired permanently to the stud and Mr. Dohle thinks 2:04 or better will be opposite his name then.

If there is anything in breeding and performances Kinney Lou should be a great producer. He is not only a splendid individual and a game and tried race horse, but he is from a family of game race winning and producing families on both sides. By McKinney 2:11½, the greatest sire of his age of 2:15 race horses, out of that famous old race mare Mary Lou 2:17, by Tom Benton, second dam Brown Jenny that produced besides Mary Lou, the old five heat race winner Shylock 2:17½ and the game all day pacer Ned Winslow 2:12½. I doubt if there has ever been a brood mare that has produced three game race horses than Shylock, Mary Lou and Ned Winslow. The very mention of their names recall some of the greatest split heat events in the history of California racing. Brown Jenny was an inbred Black Hawk or Morgan and the readers of the horse journals all know that the Morgan blood shows itself every year in the veins of the big winners and record breakers on the grand circuit.

The limit of Lou Dillon's speed no one knoweth. All intelligent horsemen who have seen her move this year are agreed that she will still further reduce her marvellous record of 1:58½ for a mile, but how

much she will reduce it no one has the temerity to predict. The little California mare is a wonder. She is a bundle of the very finest bone, muscle, sinew and nerve that has yet been developed among the American trotters. She stands alone and without a parallel. Her last performance that, like all her preceding efforts, has excited the wonder of everybody, was on the New York Speedway on the 11th inst. It is described by Fred Beachy, the New York correspondent of the Chicago Horse Review in the following language:

On Wednesday, the 11th, Mr. Billings decided to drive her a quarter as fast as she could go in order to ascertain, for his own satisfaction, the extreme limit of her speed. The trial was made at 10 o'clock in the morning, as a crowd of spectators was not desired; however, quite a large number of people were present and witnessed what proved to be the most phenomenal exhibition of harness speed ever given.

Mr. Billings drove Lou to her Faber wagon, which weighs forty eight pounds nine ounces with the shafts, and was accompanied by a runner, driven by Tanner, to a cart, and a pacer, driven by trainer Fred Nohle, hitched to sulky.

After warming the mare up in a stiff brush down the road Mr. Billings and his pacemakers returned to Dykeman street and the three were off well together. In a few strides Lou Dillon was down to business and stepped over the road at lightning speed. The first quarter was trotted in :29 and the last quarter was covered in :30, or :59 for the half mile. Lou did not like the loose footing, as the soft loam broke under her flying feet. Mr. Billings decided to give her a chance over the lower stretch, which afforded a firmer footing, and the champion and her pacemakers were jogged down to the lower stretch and given the word. The Queen simply flew over the ground at a high rate of running-horse speed. Half way down she forged ahead of the runner, left the other pacemaker far behind and finished the distance strong. Those who had their watches on the trial could hardly believe their eyes. Flags were dropped so that perfect accuracy in the timing could be insured, and numerous watches were held. They showed 25½ seconds—a 1:43 gait—and those who held them were fairly dumb with amazement. Mr. Billings let her finish out the half, and she reached it, eased up, in 58½ seconds.

Mr. Billings was delighted with the performance. It was the first time Lou was ever driven to her limit for a quarter, and the result, so extraordinary, demonstrated that it will be easy for her to set her record well below 1:58½ next season if no bad luck befalls her.

She will be kept here for a week or ten days longer before being placed in winter quarters, in charge of Millard Sanders.

As this was the first time Lou Dillon had ever been driven a quarter of a mile at the very top of her speed, it is very probable that she can learn to cover the distance in less time. But just stop to think of this quarter in 25½ seconds, which is at the rate of 1:43 to the mile. Running horses had been bred for centuries before they could run a mile in 1:43. Alarm, the celebrated son of imported Eclipse was the first thoroughbred in America to run a mile better than that time. At Saratoga July 17, 1872, Alarm ran a mile in 1:42½ and was hailed the champion runner of the world. At that time the trotting record was 2:16½ and any person who had predicted that a trotter would eventually be able to speed a quarter at the rate of 1:43 to the mile, he would have been considered a false prophet if not a brainless idiot. But Lou Dillon has shown that she has that high rate of speed and it is a question in the minds of many whether any horse can pull a sulky for an eighth of a mile faster at the running gait than Lou Dillon can at the trot.

Why Memphis Track is Fast.

"Perhaps it has already entered the minds of some readers of the daily papers that the Memphis track is short," said H. K. Devereux on his return from the big trotting meeting of the year, "but such doubts can be set at rest. The Memphis track was built with extreme care, and it is 1½ feet longer than one mile, according to the measurements required by the trotting associations. Its remarkable speed is the result of no error in measurement, but on the contrary results from a series of fortunate elements. In the first place the track is as level and even as a track could be, its surface is one that encourages speed and its shape fools the horses into better going than they think for.

"The average harness horse is wise. Most of them look down the stretch and anticipate the turn. They throw the head to one side and prepare themselves for the curve, frequently doing so too early, with the result that they skip a step or get their legs tangled at the loss of speed.

"At Memphis the turns are of the compound curve variety and are longer than are generally found on mile tracks. As a natural result the straights are shorter. It follows, then, that when a horse comes down the Memphis stretch he reaches the turn before he is expecting it, and because the curve is compound he finds himself going around the turn without any preparation on his part whatever. This is the principal reason why supreme speed is reached on the Memphis track."

Jackson's Nana Soda untangles the feet.

Abuse of the Over-Draw Check.

BREEDER AND SPORTSMAN.—I would like to call attention to the evil of a too long use of the over check, better known as the Kemble Jackson check, on the hack, work and driving horses of our city. It inflicts long hours of torture by its continuous use, although it was never intended by its inventors to be used on a horse at any one time for a longer period than ten minutes. If it could be understood by owners that the beauty and comfort of horses standing in or passing through the streets, avenues or parks depend much upon their arched necks, and that the over-draw check was invented for a particular horse and to prevent that very arch, they could perhaps appreciate the folly of using such an instrument of torture on the long drives, or while allowing their horse to stand for hours in the street. In many towns there is a law against a penalty for long and high checking. It is not only a torture to the animal, but it destroys his beauty and action as well. This is especially the case with a carriage horse, and its use on such horses denotes a "jay" owner or driver.

This over-draw check was invented nearly fifty years ago by Mr. Reynolds, owner of the horse Kemble Jackson, and thus received its name. Before this device was made for this horse he would press his head down on his chest so that he was beyond control. When he was rigged with this check, however, he developed into a very speedy horse for those early days.

I was informed years ago by such well-known, old-time trainers as William Dohle Sr., Daniel Pipper, Jock Bowen and others that at no time was this horse checked high except in his speedy work and in his races. From those early days up to this hour that checking device has been in use, and often excessive use, upon our speedy trotting and road horses.

As a general rule the pacing horse requires a high check, at least it is very generally used on him, and with his head checked very high he seems to do very well. It seems to me, however, that it should not be brought into use until just before a workout heat or race, and that the horse would do better and be more comfortable were he permitted to carry his head naturally during his slow jogging and walking work. It would be much better for the pacer's back if he was not checked up for a period of over ten minutes at any one time.

The pacing horse may require a high check, but it is the only instance in horse history where high checking is of general improvement. Budd Doble has proven to his satisfaction the evils of the excessive use of the high check upon the trotting horse of this track and road. The season that the late John A. Goldsmith handled Stamboul he always maintained that the high check and guy reins used upon him annoyed and did not assist that great horse in his struggle to attain the highest rate of speed. He advanced those ideas to the late W. S. Hobart and L. J. Rose, but neither of those gentlemen would listen to his plea, as in their opinion it was not advisable to experiment with a horse at the eleventh hour in the fight for champion stallion honors.

After failing on two different occasions to equal or beat Nelson's then record of 2:10 1/2 to old fashioned sulky on an oval track, Mr. Goldsmith kept insisting to Messrs. Hobart and Rose that the rigging and old methods must be cast aside and finally they consented to allow him to have his way. Mr. Goldsmith then let up on Stamboul's speedy work for a few days, and then started working him again with a plain over check without check bit, and then worked the horse out on three different occasions on the oval track at Stockton to an old style sulky, a mile in 2:09 1/2, a half to 1:02 and a quarter in 30 seconds, thus proving to the gentlemen that he was correct on the evils of the high check and guy reins. A few days later Mr. Goldsmith met with a painful accident, and the late O. A. Hickok was substituted at the very last moment to drive Stamboul in his last opportunity that year to lower Nelson's record. The best Mr. Hickok could accomplish that day was a mile in 2:11. There is a man suitable for every horse and Mr. Goldsmith proved that he was the man for Stamboul, and he afterwards showed his appreciation of that stallion by bidding \$40,000 for him two years later with "a wet blanket record" over him. Mr. Hickok drove Stamboul with a high check and guy reins - his old-time head-annoying rig. Mr. C. Lang, formerly bookkeeper for Mr. Goldsmith and William Corhitt of Guy Wilkes fame, and still occupying the same position at Burlingame, can testify as to what sort of a horse Mr. Goldsmith had in Stamboul in 1890.

Millard Sanders with Lou Dillon 1:58 1/2, and Budd Doble with his speedy stallion Kinney Lou 2:07 1/2 have proven beyond all doubts that the overdraw or Kemble Jackson check was of no assistance to them.

To the livery, hack or carriage horse on long drives, and standing, it is a torture, as it is on every horse where it is used to excess, and if the owners and drivers would but realize this they would save the noble animal a great deal of misery.

Yours,
K. F. B. S. G. S.

Prepotent Maternal Speed Progenitors.

It will be readily admitted, I think, that altogether too much attention is paid by the breeder in the matter of the production of extreme speed to the bloods that are most prepotent in the male line. While almost any student of the breeding problem, and nearly all trotting enthusiasts are more or less so, can tell offhand the families that have been most prolific in the production of speed in the male line, but very few have any conception of the principal blood factors on the female side of the house.

As an up-to-date test, I have carefully gone through the list of horses that have made records of 2:10 or better during 1903, and, curiously enough, there are only six stallions that are the sires of the dams of two or more in this select list, as follows:

Alcantara 2:23 by George Wilkes 2:22—	
Rosie Morn, dam of Beaumont, p.....	2:06 1/2
Bertha, dam of Don Derby, p.....	2:04 1/2
Highland Maid, dam of Charley Hayt, p.....	2:06 1/2
Kentucky Prince by Clark Chief 89—	
Daughter, dam of Tom Keene, p.....	2:04 1/2
Daughter, dam of Claymos, p.....	2:07 1/2
Recollect, dam of Swift.....	2:07
Sidney (p) 2:19 1/2 by Santa Claus 2:17 1/2—	
Lassie, dam of Simmassie, p.....	2:08 1/2
Sidnida, dam of Berdina, p.....	2:08 1/2
Countess, dam of Al Bock, p.....	2:08 1/2
Alegyone 2:27 by George Wilkes 2:22—	
Kathrina, dam of Laocoe, p.....	2:05 1/2
Daughter, dam of Sylviaone, p.....	2:09 1/2
Mambrino Russell by Woodford Mambrino 2:21 1/2—	
Alice Russell, dam of Cottillion, p.....	2:06
Pearl Russell, dam of Cuhanoia, p.....	2:06 1/2
Red Wilkes by George Wilkes 2:22—	
Daughter, dam of Dr. Madara, p.....	2:08
Maggie Yieser, dam of Walnut Hall.....	2:08 1/2

Taking this select list of stallions that have shown their ability to produce extreme speed through the maternal line, it affords an excellent criterion by which to judge of the merits of the respective families, and is withal a substantially accurate gauge of what would be found should the whole list be taken into consideration, instead of those only of the past season, as showing the relative prepotence of the various families. Three, or half of the entire number, are sons of George Wilkes by Hambletonian, and another is descended from Hambletonian through Strathmore, Santa Claus and Sidney, from whence comes the champion trotter, Lou Dillon.

The remaining two are from the Mambrino Chief family, being respectively sons of Clark Chief and Woodford Mambrino, and the value of this family blood nicked with that of the Hambletonian will be admitted when it is learned that the three Wilkes stallions are the direct result of the Hambletonian-Mambrino cross.—Palmer Clark.

Tales of the Turf, Vol. II.

Volume II of Tales of the Turf is ready for delivery. It is a book of 404 pages, written by H. C. Gocher and illustrated by Frank Whitney, and contains samples of racing from the Grand Circuit tracks to the hushes and the snow path, with a dash or two of the gaijopers and quarter horses, and a few samples of horse trading. The table of contents includes, among other subjects, the following:

- The Beginning—A tale that was told by the winners.
- The General—A product of Ireland and one of the best in his line; the man you know as John E. Turner.
- Charlie Sing—The Chinaman who plunged on Del Monte at Albany in '88.
- The Old Favorite—A few lines about Guy, the trotting machine.
- The Goldsmiths—The most noted family of horsemen ever seen with the trotters.
- The Queen—In the matter of fact records of the turf she is known as Lou Dillon.
- Old Bill—The champion stroog horse and his last pull.
- Oiney O'Shea—A sporty Irish farmer who was in love with a galloping horse.
- Johnny's Colt—A well-bred one always has a chance.
- The Tout—The husy confidence man and intriguer of the turf.
- The Luke Lightwood Legacy—Two sparkling samples of quarter racing with a preliminary canter through the career of the man.
- The Confession—A few words before the last call.
- Getting Even—An exchange of equine civilities between a pair of Vermonters whose eye teeth were cut in the cradle.

Tales of the Turf, Volume II, is bound in cloth in the same style as the one which preceded it. The price is \$2.

For all kinds of weather there is no drink like Jackson's Napa Soda—plain or in a lemonade.

Ribbonwood 2:09 Will Come Here.

The New Zealand Referee of September 2d contained the following: "As previously announced, before making his projected trip to America, Ribbonwood is to be given a chance of adding distinction as a sire to his turf laurels. Though still a young horse he possesses every qualification that augurs success in a sire, while his vitality and breeding leave little to be desired. How great a race horse Ribbonwood really is only time will show, but even now he stands as the undisputed champion of Australasia, and no doubt before the close of his racing career he will have added further to his fame. Starting off as a two-year-old, he won two out of his four essays, finishing up the season with a mile record of 2:33. Unfortunately he was not engaged in the Juvenile stakes that season, or it is almost certain he would have added it to his winning record. As a three-year-old he jumped right into the first flight of performers by winning five out of his eight races, and leaving off with a two-mile record of 4min 46 3-5th sec. Amongst the events that fell to his lot were the High Class Handicap, 4min 54 4 5th sec; Addington Handicap, 4min 49sec; and New Year Handicap, 4min 46 3-5th sec, besides scoring a bloodless victory in the Three-year-old Handicap. Last season his victories were attained in the New Zealand Handicap, 4min 43sec; Free-for all, 2min 15 4-5th sec; Second New Zealand Handicap, 4min 35 4-5th sec, while in his great match with Fritz he showed undoubted superiority to the Australian champion trotter. Wildwood, the sire of Mr. Price's record holder, is one of the best bred and most successful stallions in New Zealand, while through his dam he inherits a staunch strain of thoroughbred blood, a cross to be found in many of the best American sires. How much better than his present record of 2min 9sec Ribbonwood could go is hard to say, but it speaks well of his ability to greatly improve on it when his owner is prepared to match him against any horse in the world on a New Zealand track. Ribbonwood is, I understand, to be limited to a few approved mares, and at such a moderate fee of 8gs his list should fill very quickly."

A turf writer who visited Mr. Price's farm wrote as follows of him in the same paper: "Ribbonwood had just come in from his usual afternoon jaunt about the roads, and though he has put on a lot of condition since last seen in public, he is forward enough to be ready for racing when the occasion arises. From the fact that he did so much racing as a two-year-old we have come to look on the champion as a "little un." When it is mentioned that he can lift the standard at 15.1 it will be seen there is now nothing small about him, while his development adds further to his build. We in New Zealand can ill afford to lose such a great horse, but if, as is anticipated, the son of Wildwood does eventually find his way to America, we can confidently look forward to his upholding the honors of his hirthplace."

Great Difference in Them.

Horses differ as greatly in disposition as do human beings. Some horses will enter into a race with vim and courage and ambition to be first at the wire. They do not need to be encouraged or even spoken to. They will try to beat another horse and show almost human pride in doing so. Some horses will make as great a fight in trailing a field of horses as when they are ahead. Others while in the lead are full of ambition and make a desperate effort to maintain their position, but let another horse pass them and they lose heart, become discouraged and do not seem to have within several seconds of their usual natural speed. Sometimes a driver asks more of a horse than he can perform and that moment his influence over him weakens. The asking too much is oppression, and the horse knows it by his discouragement. Impossibility is asked of the horse and all endeavor is gone. How often has this been witnessed with horses too heavily loaded. A team of horses may be ever so true, but if they are once or twice loaded beyond their capacity their discouragement will be noticed in their half hearted efforts. A team will sometimes make two or three desperate efforts to move a load, and being unable will not try again, despite all the efforts of the driver.—Exchange.

It is a well known fact that horses and colts that run out in the winter thrive, providing they are provided with comfortable shelter nights and have a feed of good hay and a fair ration of grain. They are animals provided by nature with a heavy coat and are well adapted to withstand the rigors of winter.

Wilkes Stallions for Sale.

Mr. P. H. McEvoy of Menlo Park is offering several desirable young Wilkes stallions for sale as will be seen by an advertisement in another part of this issue.

Notes and News.

Hal Pointer 2:04 is dead.

Charley Herr 2:07 is to be raced again next year.

The last world's champion driven by Ed Geers was The Abbot 2:03½.

Jewess (dam of New Richmond 2:08½), by A. W. Richmond, died recently at Nashville, Tenn.

Andy McDowell is in New York again, but will return to Austria and open a public stable there.

The remains of the late Orrin Hickok were taken to Geneva, O., for burial, a sister of the deceased living there.

E. E. Smathers has traded Shadow Chimes 2:05, to Joseph Murphy, of Troy, N. Y., for the McKinney pacer, Coney 2:02.

It is reported from Lexington that Joe Thayer recently drove a yearling pacer by Birchwood over that track a half mile in 1:03½.

Josie C. 2:25½, to wagon, sister of Ottinger 2:09½ by Nephew Jr., has been sold by J. H. Matty, of Denver, to S. W. Bullard, of Greeley, Colo.

Baron Wedgewood, about the best unmarked trotter who paraded in company this year, will go down the line in Lon McDonald's stable next season.

At the Splan sale, Chicago, ten horses brought prices ranging from \$1000 to \$3500, and twenty-two others sold for prices ranging from \$500 to \$975.

Dan Leiginger has four or five promising trotters and pacers that he is jogging on the park roads every day and getting ready to begin work on in the spring.

Horace Brown, a well-known American who has been training the trotter in Europe, is paying a visit to New York, his first appearance in America for six years.

If it is true that "money saved is money earned," Mart Demarest earned about \$20,000 by the refusal of M. W. Savage to allow the match race between Dan Patch and Prince Alert.

The largest fair in New England is the one held at Brockton, Mass., by the Brockton Agricultural Society. The receipts this year were \$70,592, the expenses \$50,689, leaving a profit of \$19,902.

The stallion Simmocot 2:13½ by Simmons, sire of Dan Q. 2:07½, Meridian 2:12½, Mississie 2:08½ and others, has been sold by Dr. H. S. Chapman of Pontiac, Mich., to H. A. Hammond, Wyoming, Ill.

The yearling trotter Algonquin, by Adbell (1), 2:23, dam the dam of The Major 2:12½, recently stepped a quarter in 37 seconds, last eighth in 17 seconds, at Lexington, Ky. He is in all the futurities.

Alcantara's list of standard performers now numbers 111 trotters and 47 pacers. He is the sire of 54 pacers in all that have made records of 2:30 or better, and 31 of his performers are in the 2:15 list.

Twenty-nine head of Village Farm horses brought \$20,210 at the Tranter-Kenney sale. This is good enough, surely. Nor is this an indication that the breeding of high-class trotters and pacers is not remunerative.

In reply to a correspondent we will state that George Wapple's record is 2:25 pacing. He is a chestnut horse, foaled 1882, by Brigadier 2:21½, son of Happy Medium. His dam was by a horse called Copperhead.

Some people still contend that a horse can draw a wagon as fast as a sulky, but the weight of evidence is with the sulky. Dan Patch's wagon record is 1:57½, sulky record 1:56½. Lou Dillon's wagon record is 2:00, sulky record 1:58½.

That horsemen have confidence in the racing qualities of the get of Direct Hal, is evident from the fact that a two-year-old filly and a two-year-old colt by him brought respectively \$3500 and \$2500 at the late Tranter-Kenney sale. The dams of both were by Chimes.

The City of Mexico is to have a winter horse show, and there is talk about arranging a Pacific Coast circuit to take in the California winter resorts. Horsemen who have visited the Mexican capital say that few cities in the United States have so many fine carriage pairs.

An interesting long distance road race was pulled off in New Hampshire the other day. John Horton of Macchester bet \$50 with Chas. S. Fifield that his horse could cover the distance between the latter's stable and Derry Depot, twelve miles, in 54 minutes or less, and after a rest of two hours return within the same time. The horse drew two men in a buggy and made the first trip in 53 minutes. The return trip, however, took 54 minutes and 55 seconds, and Fifield was declared the winner. The roads were in wretched condition from frost and rain. The horse was not at all distressed after the ordeal.

Cresceus trotted a mile in 2:12½ over the half-mile track at Kansas City, Mo., on the 10th inst. He was started to heat 2:08, but all conditions were unfavorable for fast time. The great trotter was injured in a railroad accident after his Wichita performance, and showed a little lameness at Kansas City.

Never before in the history of the trotter has there been a time when promising colts and fillies well engaged in big futurity events were so much sought after as they are now. One bred in the right lines and showing promise of being as good as the breeding, can be sold quickly at a price that gives the breeder a good profit.

It is likely that in the future members of the Los Angeles Driving Club will discard the sulky and drive their races in the bike road wagons. Assistant Secretary Mrs. F. E. Chandler was instructed this week to ascertain what the cost of these four-wheeled road wagons would be and such other data regarding them as might be obtained.

George Spear took all the Smathers horses excepting Major Delmar to New York, Mr. Smathers having changed his mind about leaving them in the South all winter. Billy Buck, the heaviest money winner of the year, has, it is said, broken down and doubts are entertained of his ever getting to the races again. His trouble is behind.

The statement is being widely published that Lou Dillon weighed 804 pounds just before trotting in 1:58½ at Memphis. This is incorrect. She weighed 804 just before she trotted her two-minute mile at Readville August 24th. Between this date and October 24th, when she trotted in 1:58½, she had put on considerable flesh, weighing 822 pounds when she reached Memphis.

Charles De Ryder, the well-known Western trainer and driver, formerly with the Patchen Wilkes Farm, at Lexington, Ky., has been engaged for the ensuing year by Monroe Salisbury, and will spend the winter at Pleasanton, Cal., leaving New York immediately after the "Old Glory" sale. Mr. De Ryder is one of the best men in his profession, and has marked a number of horses in 2:10 or better.

If everything goes well Santa Ana will have a driving club modeled along the lines of the Los Angeles Driving Club and its first race matinee will be given about Christmas Day. The club has secured grounds and will meet in a few days to organize, elect officers and have the club started in good shape. San Bernardino also is waking up and a revival of racing is being discussed by leading business men there.

Inferno, by Diablo 2:09½, dam Biscara, by Director 2:17, is one of the best Montana campaigners out this year. He is owned by C. D. Crutcher, of Fort Brenton, and at the Kallspeil meeting lowered his record to 2:21½. With three weeks' work he paced the Bozeman track in 2:18½, a half in 1:05 and a quarter in 31 seconds, pulling a ninety-pound cart. He was bred at Santa Rosa Stock Farm, the birthplace of Lou Dillon.

The famous track at Glenville, O., is pretty nearly deserted; but a few trainers will winter there, among them Guy Lee, "Billy" Moon, Vance Nuckols, H. F. Frasier and Geo. Saunders. Nuckols will winter only three head, consisting of Theron Powers, The General and Miss Brock. Saunders will care for fifteen head, among them Baron de Shay and Prince Direct, owned by M. E. Sturgis of New York. The latter two horses have been fired and will be given a long rest.

There is to be an entirely new feature this year in connection with the afternoon program of the Tournament of Roses at Pasadena, New Year's Day. Arrangements have been made for four-horse chariot races for prizes worth \$1000 or for cash. A number of entries already have been received and the novel sport is looked forward to with much interest by all who love speedy horses. Entries for the events close December 1st.

The greatest number of heats ever won by any three-year-old trotter, is 40, and were won by Zombro 2:11, a son of McKinney 2:14½. Expressive by Electioneer, dam the thoroughbred Esther, comes second. She won 34 heats and took a record of 2:12½ as a three-year-old. Directum 2:05½ won 25 heats in 2:30 or better, and took a record of 2:11½. Cresceus won 22 heats and took a record of 2:11½. Fantasy won 21 heats and took a record of 2:08½.

Caid 2:07½ has proved one of the best trotters ever taken to Austria. He has won the great annual two mile trotting event there for years in succession. His latest victory in that race was on the 6th ult., and his time was 4:36. In 1900 he trotted the two miles in 4:27-2-5, which was at that time the world's champion two-mile trotting record, and has been beaten only by Cresceus, whose two-mile record is 4:17.

A majority of the sensational trotters and pacers of 1903 were plainly and comfortably rigged, and this does not apply solely to those horses going fast miles against the watch, but includes the season's sensational class horses. Take Lou Dillon, Major Delmar, Dan Patch, Cresceus, John A. McKerron, Onward Silver, The Monk, Equity and others used for exhibition purposes, and it can be written of them that they wore very little else, aside from boots, than what one would use upon a road horse. Gaiting poles, derricks and bits of the Raymond type were not used with the extremely fast horses of the past season. Even Prince Alert, harring his hoppers, was always comfortably rigged when driven at speed. What has been stated regarding the horses used for specials will also apply to a majority of the winners of rich stake and purse races the past season.—Columbus.

Trotting blood not only enables horses to trot fast, but it also enables horses to pace a blue streak. The champion pacing records are held by trotting-bred pacers: Dan Patch 1:56½, fastest stallion; Prince Alert 1:57, fastest gelding, and Dariel 2:00½, fastest mare. The fastest yearling pacer, Belle Acion 2:20½; the fastest two-year-old pacer, Directly 2:07½; the fastest three-year-old pacer, Klatawah 2:05½, and the fastest four-year-old pacer, Online 2:04, were all sired by trotting-bred stallions.

The handsome stallion Bonnie Boy 2:25, formerly owned in Western New York but now the property of Wm. Buechley & Son, Pottsville, Pa., made a full season this year, having evidently caught the fancy of the breeders around Pottsville. To his list of 16 standard performers Bonnie Boy this year added Bonnie Patchen 2:16½ and Pearl Wilkes, a four-year-old by him, was second in 2:20. Reports indicate that he has a lot of promising youngsters to come out next season and add to his fame as a sire. He is the sire of Lecco 2:09½.

Nearly every paper that has discussed the performance of Cresceus at Wichita has assumed that all disputed records are settled by the Board of Censors of the American Trotting Association. As a matter of fact, Rule 43, Sect. 17 of the rules of the National Trotting Association provides that:—The Presidents of The National Trotting Association, The American Trotting Association and The American Register Association shall constitute a Board to determine the validity of all records disputed by The American Trotting Register Association.—Am. Horse Breeder.

Of the recent Tranter-Kenney combination sale held in Kentucky the *Stock Farm* says: "The recent sale at Lexington furnished a proof that the market for light-harness horses is not only stronger than it has been for several years, but is not affected as most other commodities by the slump in stocks. When men are willing to pay several hundred dollars for trotting-bred horses that can not trot, it is a sure sign that the fever is again attaching itself to the admirers of the trotting and pacing horse. The prices realized by every lot, with very few exceptions, were fully up to the standard, and in many instances were considerably more than the animals were worth."

A subscriber who was recently in Fresno tells us that he saw a colt while there that for individual excellence surpasses anything that he has seen for some time. The colt belongs to Horace Thorwaldson, the harness man of Fresno and is called Major McKinley. He is a rich dark bay 15.3½ hands high, and large in proportion to height and developed like an aged horse, though he was only a year old last May. He is by McKinley (son of McKinney 2:11½), first dam Bess by Sidney Arnet, second dam by Grand Moor, third dam Lady Norfolk by Norfolk. With a month's handling he can show better than a three minute gait, and does it in a way that betokens great speed when age comes to him.

There is not much doing at the Sacramento track just now, the rains having made the tracks and the roads in that vicinity pretty muddy, but a few days of sunshine will make pretty good roads for jogging the trotters and pacers over. Walter Mastin has moved Falrose and his string of horses over from Woodland. Rio Vista George is at work breaking several colts for Mrs. Callendine and has good ones among them. Mr. Mitchell has three colts, L. M. Clark has four colts, and "the big policeman" has a weanling that he is giving his spare time to. There are several Athamax weanlings in that vicinity that are attracting great attention for their size and looks, and Athamax is bound to be a producer if they are a fair sample of his get. There is one out of a Don Marvin mare and another from a mare by Holm Dell that will be hard to heat in the show ring as yearlings. They are now five months old.

On the title page of the BREEDER AND SPORTSMAN this week is a half tone engraving of the fifteen months old colt Golden Boy, by McKinney 2:11½, owned by Mr. W. R. Murphy of Los Angeles. Few colts are better developed at his age and he can show a great deal of natural speed when led to halter, while his gait is pure and frictionless. His breeding is of the gilt edge sort—in fact we do not know of a colt in California more intensely bred in pure trotting lines than he. His sire we all know as one of the greatest sires ever produced. His dam is Bonnie Red by Red Wilkes, sire of 167 in the list and still a vigorous horse at 29 years of age. The granddam of Golden Boy is by Almont 33, third dam by Abdallah 15, and fourth dam by Hambletonian 10. The blood of Hambletonian 10 is doubled up through the best sons and grandsons of that great speed progenitor and in Golden Boy Mr. Murphy has a colt that should develop into a great sire.

A curious specimen of the equine family was received at the horse market in St. Louis a few days ago, and for the two days that it remained at the yards it was the object of the most curious attention. It was none other than an eight-footed horse, a new and novel curiosity. The animal was a good shaped sorrel gelding, on the driver pattern, and was smooth, sleek and well fed, and outside of the fact that he had some abnormal growth, looked nothing out of the ordinary. But growing out of each fetlock just at the ankle joint on the inner side of the legs was a perfect little equine foot with the horn and frog equally as well developed as any horse hoof. The horse was an Oregon-bred ranger. The extra feet in no way interfered with the movements of the horse, which in action seems to be totally oblivious to the fact that he is any differently constructed from the average equine. Rather the double set of feet appeared to fill the good office of interfering hoots and made the horse trot good and wide. Several offers of \$400 were made for him but refused.

Cresceus and His Records.

(Breeders Gazette.)

A press dispatch from Wichita states that on the demand of the American Trotting Association the track at that Kansas point has been remeasured and found to be two feet over a mile in length. It is plain as plain can be that this demand for remeasurement came in connection with the record of 1:59½ made by Cresceus on the Wichita track in October. Just after the news that Cresceus had once more gained the trotting crown was flashed across the country a well known trainer announced at Memphis that the Wichita track was nearly 100 feet short of a mile, and then commenced an exhibition of hostility to the stallion, his owner and the record which has no parallel in the history of the harness turf.

It is a well established principle of law and equity that a man must be considered innocent till he is proved to be guilty, but it has been the fashion this time to cry fraud against the whole performance and Mr. Ketcham and the Wichita officials have been called on time and again to prove themselves innocent. To begin with the Memphis association made the had blunder of immediately challenging Mr. Ketcham to come to Memphis and heat 2:00. A reward of \$5000 was offered for the performance, which under the terms of offering simply meant that the owner of Lou Dillon would bet Mr. Ketcham \$5000 to nothing that Cresceus could not trot in 1:59½. Stories flew back and forth thick and fast. The merest halder-dash was given space as to the making of the record at Wichita and when some one hungling away with a knife blade and the second-hand of a common watch was found to have stood some 150 feet away from the wire and caught the mile in 2:06 or thereby his story was given a scare head and commented on as controverting the official statement of the time made. Another layman rigged out with the same sort of a timing outfit was alleged to have "told his wife" that the stallion did not heat 2:00, and this rubbish also got into print as indicative that the horse did not trot in 1:59½.

It is not to be denied that the marvelous feat of the chestnut son of Robert McGregor, came as a genuine surprise to harness turfmens generally. It was not thought that Cresceus had regained his old time speed. However, there are many points which must be taken into consideration, now that the length of the track has been proved to be according to rule. Some time before Cresceus made his record he was engaged to go an exhibition at the Wichita fair. The rain made the track too muddy for fast time and as has been previously stated racing was possible on two days only out of the six through which the fair lasted. On the Saturday, when by dint of hard work the stretch had been brought into something like condition, Cresceus was driven a mile in a little better than 2:12, with the last quarter in 29 seconds. Now it is well known that Cresceus never was much of what is termed a "brueh horse," which is to say that when he has his speed with him he can carry it through the mile. Per contra he has never shown the ability when "strung out" to trot one quarter much faster than any other in the mile, and every one knows that his owner and driver Mr. Ketcham knows him like the proverbial book. It was this fast quarter which induced Mr. Ketcham to return Cresceus to Wichita to make the trial against the watch when the track should have dried out and been reduced to record breaking shape after the prolonged deluge of the first two weeks in October.

The judges in the stand are all men of reputation. The timers fit that description also. They have made affidavits as to the correctness of the time. It is certainly probable that some men will be willing to swear that the stallion did not trot within several seconds of the time announced and in view of the general temper of turfmens as heretofore expressed it is not unlikely that some hard swearing will be done when the Board of Censors meets next month to take action on the general acceptance of records. So far as is known no one has lodged a regular protest against the acceptance of the record, but under the rules the Board of Censors is a body with initiative as well as original and appellate jurisdiction and it annually rejects records for this, that or the other reason.

It is plain, however, that in the Cresceus matter it has an entirely new phase of the record question on their hands and it will stand its members in hand to go exceedingly slow in the premises. The established principle in the government of harness racing is that the judges are and of right must be the sole judges of all the facts in connection with a race against time or otherwise, and unless fraud and collusion can be shown beyond the shadow of a doubt the record must stand, provided that the published rules relating to time records were all complied with, and so far no claim has been made that they were

not. If a claim of the sort is or has been filed the matter then becomes one for the consideration of the Board of Appeals of the American Trotting Association just like any other protested matter. Records have been changed by order of both the Board of Appeals of the American and the Board of Review of the National Trotting Association, the case of The Roman being one in point. The most conclusive proof, however, alone can be permitted to weigh against the testimony of judges and timers.

Farther there is the motive, which must always be considered. It is very questionable if the reduction of his record to 2:00 or below would at any time within the past year have increased the value of Cresceus \$100. He has been the king of trotting stallions for so long that his owner has been enabled to get for Cresceus' stud services quite as much as if he had had a faster mark than 2:02½. The feat of Cresceus' son Crescent Route at Memphis when he trotted in 2:08½ was much more of an advertisement for his sire than any thing that sire could have done or has done on the track. Not one of the men who sat in the judges' stand at Wichita could afford to be mixed up in a racing swindle and not one of them would have consented to go into any thing of the sort. Not alone that, but if a steal had been contemplated so many men would have had to be taken into knowledge of what was to be done that the whole story would have been public property long before this.

For instance, it has been stated that one damaging fact is that not one of the men requested to time the heat possessed a stop-watch, and that four such watches were borrowed by the secretary for the occasion. The inference of this is that the watches were either slow or fixed in some way to make the mile seem faster than it really was. In the name of common sense, seeing that these watches agreed as to the time of the mile as well as other watches do in other places on similar occasions, how could four such chronometers have been tampered with to make them agree as they did? There is not a watch expert on the face of the earth who can do anything of the sort, and if there is no less than six men, to wit, those four who loaned the tickers, the secretary and the jeweler, would he fully cognizant of the fraud, for the watches were obtained at the track and would of necessity have had to be borrowed beforehand, fixed and returned in order that they might again be borrowed just before the start. This is merely a sample of the many ridiculous aspersions which have been cast on the performance, the men connected with it and the horse.

Taken in its entirety the case merely resolves itself into this: The performance of Cresceus was to rule, for that has not been denied. The judges, who are the sole judges of the facts of the race, gave out the time as exhibited by quaters by the timers and in full as taken by them. The track, at the demand of the parent turf organization, has been found to be correct in length. Fraud must be clearly shown before the record can be rejected, a clear case must be made out. If the authorities believe fraud was perpetrated, it is their duty to ferret it out; and until they show beyond the shadow of a reasonable doubt that fraud was perpetrated, the record must stand as perfectly legitimate, independent of all else which went before or has come after the day on which it was made.

Board of Censors.

The Board of Censors of the American Trotting Register Association will have several questions of importance to be considered before the issuing of the next Year Book, among them the 1:59½ record of Cresceus at Wichita, the wind shield, as to whether records made behind it will stand, as well as other methods of pacemaking. The board will also be urged to bar all hopped horses from earning championship records save in a class by themselves. The board is composed of Messrs. W. C. Brown, F. S. Gordon and W. P. Ijams, all representative breeders, who will give the matter careful consideration. There are many and the number is growing who believe that hopped horses should be barred in all races, and it seems only just that horses so rigged should not be awarded honors in the championship class.

Ed Geers is working a green trotter on the Memphis track that gives promise of being a duplicate of Billy Buch 2:07½. He is a bay gelding (age not quoted), named Alexander by Star Duroc, dsm by Geo. Wilke. A dispatch from Memphis states: "One of the reasons Geers took him to train from an Ohioan named Clark is that he resembles Lord Derby in several ways and Geers never tires praising Lord Derby. He has shown a mile in 2:10, the half being negotiated in 1:03. His breeding is old fashioned and his previous career is like that of Billy Buch. "Alexander," said Geers, "has shown more speed than Billy Buch at the same time last year. Scott Hudson is said to be after the colt."

The Horse's Muscle and the Horse's Shoe.

How many men who shoe horses think of the relation which the shoe has toward the muscles of the leg, says an exchange. We will take for instance the perforans muscle, which has its origin below the knee joint and on the upper and posterior face of the tibia and fibula. This muscle or tendon, receiving as it does the smaller muscles of the lower limb, is so reinforced that it, acting as an independent agent of flexion, contracts the action of the joints with ease. On the other hand, take the extensor muscle with its office of extending the stride of the animal. This muscle, acting as a partner of the flexor, performs the entire work of the limb in so far as the movements of joints are considered. So that the entire care of the legs is entrusted to the well being of the two muscles. At the extremity of these a weight is attached. Nature has provided for this, but how much weight can the muscles carry without suffering injury? This is the question to be considered. It might also be asked, how should this weight be placed so as to equalize the tension thrown on the muscles, burdening neither one of them with more than is necessary or proper? In the running horse from two to four ounces (the latter is somewhat excessive weight) is sufficient for all needs of this most fleet-footed of horses. On the draught horse from two to three pounds is quite a common load to see placed on the extremity. Being slow of movement and heavy of weight it may be presumed that the draught horse can carry his load of shoes quite as comfortably as can the thoroughbred.

Striking a medium line and coming to the carriage horse, usually the weight of shoe on this kind is about twenty ounces in front and possibly sixteen ounces behind. Should the horse be expected to carry this weight? Not at all. The shoe was designed originally to protect the hoof from wear. It is true that the expense attending shoeing of some horses is large, but it is much more profitable to save the muscles and thus save the animal than to economize at the wrong end. The horseshoer should keep in mind that his duty is not alone to shoe the foot, but also to preserve the usefulness of the horse in so far as a scientific application of the shoe can accomplish this, and that he may do this a little consideration of what is the natural power of muscle in its weight-carrying ability would go a long ways.

Says the *Horse Breeder*: "Californians evidently have a promising representative of the Alcyone family in the stallion Zombro 2:11 by McKinney 2:11½. At the late California State Fair Zombro was awarded first prize for best standard bred stallion, four years old or over, and also received the gold medal for best standard bred stallion with five of his get. Zombro is now eleven years old. He took a race record of 2:13 the season he was three years old. His dam was by Almont Lightning, a son of Almont; and his second dam by Kentucky Clay. The latter was a half-brother of Lady Thorn 2:18 and Mambrino Patchen 58. His sire was Strader's Cassius M. Clay Jr., and his dam was the famous Rodes Mare by Gano."

The Mystic Park track, over which Goldsmith Maid secured her record of 2:14, at that time the world's trotting record, will be cut up into lots, unless some one connected with the trotters secures it before 1904.

Suber up on Jackson's Nara Soda

Horse Owners Should Use
**GOMBAULT'S
CAUSTIC BALSAM**
The Great French Veterinary Remedy.
A SAFE, SPEEDY & POSITIVE CURE.

Prepared exclusively
by J. E. Gombault, ex-
Veterinary Surgeon to
the French Government
Stud.

SUPERSEDES ALL CAUTERY OR FIRING.
Impossible to produce any scar or Membr. The safest best Blister ever used. Takes the place of all liniments for mild or severe action. Removes all Bunches or Blemishes from Horses or Cattle.
As a HUMAN REMEDY for Rheumatism, Sprains, Sore Throat, etc., it is invaluable.
WE GUARANTEE that one tablespoonful of Caustic Balsam will produce more actual results than a whole bottle of any liniment or ointment ever made.
Every bottle of Caustic Balsam sold is warranted to give satisfaction. Price \$1.50 per bottle. Sold by druggists, or sent by express, charges paid, with full directions for its use. Send for descriptive circular, testimonials, etc. Address
THE LAWRENCE-WILLIAMS COMPANY, Cleveland, Ohio.

ROD, GUN AND KENNEL.

Conducted by J. X. De WITT.

Footwear for Sportsmen.

The demand for suitable footwear for the hunter and angler, as well as for other lines of sport, has arisen, grown and now to quite an extent has been supplied. At the present time the manufacture of sportsmen's clothing is the sole output of many big factories and large shops, established and equipped at an enormous expense and furnishing work for thousands of employees. This industry is also an important and profitable branch of other large factories as well. The industry, however, is comparatively in its infancy, and is yet of a scope far from what it gives promise of being in years to come.

A perfect enjoyment of outdoor sport largely hinges upon the sportsman's activity and ability to withstand fatigue, and if the feet are not properly clad they are quick to tire under the stress of unaccustomed work. Moreover, they are very susceptible to unusual cold or dampness, and the ordinary wear of the house or street will not furnish sufficient protection in the forests, marshes or fields. The problem of clothing the other members, or the body, is less difficult. Extremes of temperature or weather changes may easily be met. But the feet have the hardest, roughest work to perform, and can neither be left bare nor clumsily bundled up without militating against their usefulness. It follows, therefore, that the perfect boot or shoe must furnish absolute protection with absolute freedom from restraint for the foot; consequently, perfect footwear will never be made, nor anything that will closely approximate perfection. The Indian moccasin and the rubber boot are widely dissimilar types, each serving a single purpose, the one giving ease and the other protection, and if we can imagine a boot or shoe in which these qualities are joined we have the very thing which sportsmen have ever longed for and never obtained.

Unless one is accustomed to wearing moccasins they are very trying to the feet, for the thinness of the sole is remembered every time the foot presses a stick or pebble. But with a little practice the wearer will learn to unconsciously pick smooth footing and this enforced caution has helped to earn for the moccasin its reputation for noiselessness. The moccasin foot avoids dry twigs and rattling stones. It also avoids the marshy spots in the trail and sbricks from contact with melting snow, for the majority of moccasins are far from waterproof. Otherwise, they are very desirable footwear in still hunting and are less worn than they deserve to be. It has been found that the white man's ingenuity could not improve upon the Indian method of dressing deerskins for moccasins, while ordinary oak-tanned leather is not suitable for their manufacture. Moccasins of Indian make would withstand a considerable amount of moisture without wetting the feet, and the hides of moose and elk, being thicker and of closer grain, were better than huckskin. Of late, two or three manufacturers are producing really good elk and moose-hide moccasins and sportsmen are rapidly learning their value.

A felt boot, of the sort worn largely by lumbermen, will be found very serviceable by the still hunter. It is warm and can be worn over any number of socks or stockings and is preferable to a moccasin on dry or frozen ground or in snow that is not melting. It will not wet through in an ordinary dew and the high top protects the ankle and calf from brushes and briars. The felt boot is much too warm for wear except in winter or late fall. Worn with an arctic or rubber overshoe, nothing is better in the sunny days that sometimes come in midwinter with their swift alternations of thaws and freezes.

The hunting boot, proper, is of tanned leather, made to lace closely over a waterproof tongue or lining at the instep and calf. In some styles the lacing is at the side, in seven or eight pairs of eyelets. The toes are usually broad and roomy, the soles thick and heavy and the heels flat. There are many makes of hunting boots on the market and the majority of them are very neat in design, well made and serviceable. Buck-tanned elkskin is to some extent used for uppers and horsehide for soles. Rubber soles have been tried, but did not give entire satisfaction. From 15 to 18 inches is the ordinary height of the leg. The common type of hunting shoe might be more accurately termed a half-boot, for it differs from the boot but very little in style, material and weight, save that the leg is only 9 or 10 inches high. These boots and shoes are comfortable and easy to wear, keep out dampness well and are all that a sensible customer can expect of footwear of this type. Their makers do not claim that they are noiseless, for inch-thick soles must needs be stiff and unyielding to a certain degree, but the average gunner is not a still-hunter nor does he require to be velvet shod.

For lighter wear there are so-called moccasins, with soft, pliable uppers and a thin, rawhide sole. Some have heels and some are without, but the former are preferable, for a perfectly smooth sole gets "slick" with a little wear and is conducive to unexpected and disagreeable falls. These moccasins are about six inches high, some of them have seamless uppers and all are supplied with soft, waterproof tongues.

Rubber is the only strictly water-proof material suited for use in the manufacture of footwear. The modern footwear is built up of rubber-coated drilling

or duck, all seams made tight with rubber cement and reinforced with rubber strips. The fashion of lining them with woolen flannel is gradually but surely falling into disfavor, for a boot that induces sweating of the feet and has a lining difficult to dry, defeats the very purpose for which it was intended. Rubber boots are made in knee, thigh and hip lengths, according to the work for which they are intended. There is very little difference in the appearance of the different makes, but in quality of the material used there is a wide latitude for choice. An inferior rubber boot is worse than worthless, for it beguiles the wearer abroad and betrays him into the clutches of rheumatism, la grippe and pneumonia. As expert judges of the quality of rubber are scarce outside the trade, the customer's safety in purchasing lies in accepting only the goods of a reputable maker. And when in the field he should remember that no rubber footwear is absolutely snag-proof and guard his steps accordingly. With good hip or thigh boots, two or three feet of water on a duck marsh does not hinder the hunter and with knee boots he is safeguarded against mud or thawing snow of moderate depth. Rubber footwear is to be eschewed in warm weather. It makes the feet tender and painful, excluding all air—fairly blistering the flesh if worn long in the hot sun. The best that can be claimed for it is that it is impervious to moisture and that is sufficient. A sportsman is not completely equipped without rubber boots for wear in cold, wet weather. Rubber hip boots of lighter weight are largely used by anglers, but the legs are commonly of mackintosh, which serves quite as well as rubber, since the sole of an angler's boot is alone subject to rough service. Then there are waders with shoes attached, used principally by fly-casters who fish from the center of a stream rather than from its shores; and there are also waders with stocking feet, with which leather or rubber shoes may be worn. In England and European countries waders are more commonly used than here.

Despite the desirability of many patterns of sportsmen's footwear as now manufactured, there is yet abundant room for improvement, particularly in the reduction of weight. A hunting boot may not seem heavy to a lumberman or a farmer, but the city sportsman who has worn light, low shoes and slippers during the summer months will likely imagine himself shod with lead during the first days of his autumnal outing. It ought to be possible to give a boot sole stiffness to the extent that it may guard the foot against thorns and pebbles without making it double-thick. Perhaps it is necessary to put three or four pounds of leather in a hunting boot, but if so, it would be better to dispense with boots altogether and in their place adopt shoes with a detachable waterproof leggin. The idea is more nearly practical than it appears at first glance. A pair of elastic-side gaiters have been known to keep the wearer's feet perfectly dry while wading knee-deep across a stream. Why would it not be possible to make light, waterproof leggings to be held around the shoe-tops with heavy rubber bands and worn or discarded as necessity dictates?

Boots or shoes intended to be worn on a hunting trip of special importance should be purchased months before and worn enough to at least partially break them to the feet. This ought to be unnecessary advice, but it isn't. We have all had our little unpleasant experiences with new shoes, but human nature is prone to forget the woes that are past and gone. A blistered heel or a pinched toe has spoiled many a long-anticipated outing and will work disaster to many more. It is well to be "forehanded," even in so small a matter as the purchase of shoe leather.

Another matter of importance in connection with footwear is warmth. How many hunters while in a boat or duck blind have experienced the extreme discomfort of cold feet. Anglers also can testify to the numbing effects ensuing from wading a stream the waters of which are fed from snow capped ranges.

Woolen stockings, of various lengths and thicknesses are worn, as are the so-called Arctic socks. Where extra large sized rubber boots are worn the feet and calves are sometimes wrapped in pieces of blanket or sacking. Ordinarily sportsmen successfully overcome the probabilities of much discomfort in this line, but at times, despite all usual precaution, the sportsman, to his great chagrin, realizes the fact that his feet are "like cakes of ice."

We can, as a preventive or for almost immediate relief against so uncomfortable a contingency, recommend the virtues of Vita oil. Just a few drops of this potent mixture rubbed over the feet before going out into a cold duck blind early on a raw morning will keep one's feet in a glow for hours. The oil is penetrating but harmless, it will not blister or cause any after bad effects, we know how efficacious it is for we have tried it and unhesitatingly recommend it for the purpose here mentioned.

Duck and Quail Outfits.

The demand at Skinner's keeps up for sportsmen's outfits, ammunition and guns. A large and new stock of goods has been added to fill the demand for hunting suits, rubber boots and hunters' footwear, canvas and folding wooden decoys, gun cases and a new design of leather-covered shell boxes. Peters' Factory Loaded Shells are unequalled. Skinner's place is 801 Market street. You can get anything there you need for duck or quail shooting. Send for a catalogue, if you haven't the time to come, and try a mail order.

On a hot day drink Jackson's Napa Soda lemonade and be refreshed.

American Woods.

For a number of years, now, the descendants of our pioneers have been blasting out the stumps of the walnut trees their sires and grandsires split into fence-rails, selling the splintered roots for more than the original acreage value of the land in which they grew. The gnarled and curly grain of a walnut shows well when planed and polished; and it is not easily split; consequently such wood is desirable for many uses, and particularly for gun-stocks, as natural bends of the right shape are the rule where the spur roots turn away from the perpendicular line of the trunk. Walnut stumps decay very slowly, the heart remaining sound for decades after the bark and sap have rotted away. In some few districts of the United States a considerable amount of black walnut timber still remains uncut, but, as a rule, in inaccessible locations. Where waterways were within reach it has long since been felled and rafted to market, and when railroads have penetrated fresh territory the black walnut timber, because the most valuable, was the most sought after. But the supply of American walnut for gun-stocks appears practically inexhaustible, and much of it is superior quality, equal to the best Italian or Circassian woods. Occasionally maple is used for this purpose, but not so frequently as in earlier years, when maple with curly and "birds-eye" grain was much sought after by our gunmakers. Muzzle-loading rifles stocked with maple may be found in nearly every shop dealing in second-hand arms, and there is little doubt that this wood was better than walnut for the long forestocks, which frequently extended the entire length of the barrel, as its grain was closer and tougher. American walnut also figures in the sporting goods trade in the shape of gun cases and cabinets, tables for indoor games, and handles for shell reloading and gun-cleaning implements.

Oars and paddles of American ash are supplied to the sportsmen of the world, and also, by an Arkansas factory on contract, to the navies of two important European countries. It is found in home and foreign markets in the shape of polo and hockey sticks, golf clubs, racket handles, base ball bats—though for the latter purpose willow is more commonly used. Where greater strength is necessary, as in gymnasium equipment, second-growth hickory is the acme of excellence, possessing almost the strength and elasticity of steel. Woods lately coming into prominence because of their extreme hardness are persimmon and dogwood, largely used for golf club heads and kindred purposes. Willow and red wood, again, are selected because of their lightness for seine and net floats. White cedar is preferred for making decoy ducks, and its superiority over all other woods for canoe building is beyond dispute. Port Orford cedar has a grain almost like boxwood or sandalwood, and is much in demand for boat and canoe building.

As a matter of fact, where the woods of foreign growth are found in the stock carried by a sporting goods store, our home-grown product could supply the purpose as well, and generally better—making an exception to cover the matter of fishing rods, and this with a decided reservation, for the merits of our woods are not so well understood as they may some day be. The forests of the United States hold neither lignum vitae nor rosewood, but the latter can be and is imitated closely enough to defy the scrutiny of anyone not an expert.

It is worthy of note that every year witnesses the establishment of factories for shaping our native woods into the many incidentals belonging to a sportsman's equipment. Gun-stocks, base ball bats, hockey sticks, golf clubs, gymnasium goods, canoes, decoys; turned, carved and bent wood articles of a thousand and one descriptions. The field of industry is a broad one and its scope will widen from year to year. The supply of material cannot be exhausted, is available anywhere and everywhere, and the demand for the finished goods is stable, at prices insuring a good round profit to the manufacturer. Our foreign trade in this line is as yet in its infancy and should be more fully developed. With our advantages—forests, skilled workmen, perfect machinery—we should be able to meet and conquer competition. New York, Ohio, Indiana and Michigan are now the banner woodworking States, but with the southward march of progress, Missouri, Tennessee and Arkansas should speedily forge to the front in this as in other branches of industry. The possibilities of Pacific Coast woods—spruce, white pine, laurel, manzanita, the different varieties of oak, particularly the black oak growing near the bay shores, and many other woods—are as yet practically undeveloped. Granted equal transportation facilities, the greater number of wood-working plants should be found where the timber supply is most abundant.

A dispatch from Reñding this week stated that salmon were so thick in the mouth of Mill creek just below the government fishery station that they could be seen right up to the surface of the water and so closely packed together that a person looking upon the mass would feel that he could cross the creek dry shod by stepping on the backs of the fish as they appear above the water. They were crowded up by the mass of fish which extended down to the bottom of the stream.

At the fishery the fish can be secured in greater quantities than they can be handled and the hatchery is running at its full capacity. Some days as many as 1,000,000 eggs are secured. People from the southern part of the county go to the hatchery for the fish, which are given away after the spawning operation. These fish are not fit for the table, but are probably fed to hogs. Many millions of young salmon will be hatched this season, as operations have been under way for some time and may continue for some time longer if the river does not rise too high.

The Blue Bottle, Green-Bottle, and House-Fly.

The blue-bottle, green-bottle, and house-fly, says Mr. Charles Walker in *Land and Water*, though, perhaps, the commonest flies there are, are but little used by the fly-fisherman. The success met with in using the imitation fly is, as a rule, very small. The reason for this want of success is, I am sure, the way in which the imitation is made by the fly-dresser. In this case, as well as in the imitations of the alder, it is not the fault of the fly-dresser, as the writers on fly-dressing direct the dresser to put the wings on in practically the same position as in every other fly—that is, in an upright position.

Anyone, however, on the most casual observation, must realize that the wings of a blue-bottle and the wings of a blue dun do not lie in quite the same position with relation to the body. We have heard much discussion lately with regard to the trout's power of discriminating between different colors, but I have never yet heard anyone cast doubt on its power of discriminating between different shapes; therefore, I think that it would certainly be better to try to imitate the shape of a fly as nearly as possible. And yet this fact with regard to the position of the wing in the natural fly does not seem to have been noticed by the observant writers on fly-tying, and I believe that this has a great deal to do with the incomparably greater success which has fallen to the share of the imitations of the Ephemerae in dry fly-fishing than to the imitations of any other family of flies, for the happy family of Ephemerae are the only flies the imitations of which have their wings in anything approaching the right position.

Late in the season the blue and green bottle frequently get on the water, though I have seen them there as early as June. The house-fly gets on the water even earlier, especially on windy days.

Of course these flies, when they get on the water, are most often seen buzzing violently at frequent intervals, with the object of raising themselves from the surface. The only way this can be imitated is by making a hackle fly. The hackle fly, however, is but a poor imitation of a fly buzzing, and it is better to make the fly with the wings in the position of rest, for the natural fly, as I have said before, only buzzes at intervals, which gets less frequent the longer the fly is on the water.

The position of the wings of these flies (blue and green bottle and house-fly) is horizontal. The wings are set at the head, and diverge from each other at their other extremities. This position is perhaps the most difficult to imitate of any. The wings, cut from quill feathers from opposite wings of a starling, should be crossed. The hook should then be taken in the left hand, and held by the end between the first and second fingers, with the head of the fly pointing towards the right. The wings are then laid flat on the body with the right hand, and held there firmly with the thumb of the left hand. The wings may then be tied in and the fly finished off.

The body should be made fat in all these flies, especially in the blue-bottle and green-bottle. I also think it is a good thing to put silver tinsel on the body. There are a lot of hairs on the body, and when the fly falls on the water a number of air bubbles adhere to these hairs, giving the body a silvery appearance, with the color showing through. This fact may be observed by anyone who cares to take the trouble to see what the natural fly which has fallen on the water looks like when seen from below the surface, as they must appear to the fish.

This may be done in two ways. The first is, perhaps, the best. Take a natural blue-bottle and put it on the water in a large glass aquarium. It can then be seen very well from below the surface by looking through one of the sides of the aquarium.

The other way is to put the fly on the surface of some water contained in a large bowl, and to place a small mirror at the bottom. (I have used a little round mirror which was sent to me as an advertisement for something). The fly can then be seen reflected in the mirror at the bottom, and the silvery appearance I have mentioned will be seen.

The hackle should be put on before the wings, and the fibres pulled down to point towards the head of the hook. Any fibres which will not go down thus may be cut off.

The following dressings are the best for these flies: Blue-bottle Body—Fine dark blue chenille or dark blue Berlin wool, teased up and spun on the tying silk; ribbed with silver tinsel.

Hackle—Two or three turns of black cock's hackle. Wings—From the quill feathers of starling's wing. Hook—(New size), No. 3. [10, 12, 14].

Green-bottle Body—Bright green peacock herle; ribbed with silver tinsel.

Wings and Hackle—Same as blue-bottle.

Hook—(New size), No. 3. [10, 12, 14].

House-fly Body—Yellow Berlin wool spun on black tying silk; the exact color is easy to see on the natural fly; ribbed with silver tinsel.

Hackle—Coche-y-bondu.

Wings—Starling quill feather.

Hook—(New size), No. 0-1. [12, 14, 16].

The heads of all these flies should be made large, with the black tying silk.

October was the record month for Spratts goods on the Coast. During the present month the demand for Spratts dog biscuit, etc., is almost two tons in excess of the output of medicines, &c last year.

Kennel Registry.

VISITS.

Mrs F. J. Walker's Irish Terrier bitch Royal Noreen (Exite of Erin-Widow Budott) to same owner's Irish Dangan (Monyglas Dook-Irish Smile), November 15, 1903.

Ethics of the Show Ring.

What I mean by the ethics of the show ring is the art of training dogs to show themselves and "handling" them to the best advantage while they are under the judicial ken. In these days of dog evolution, or breeding dogs for prizes and profits on an extensive scale, the "handling" of dogs in the show ring has developed into an art. In this way it is of paramount importance that fanciers who elect to follow the pursuit of dog showing, whether in a small way or on a large scale, whether as a hobby supplementary to their daily toil or avocation, or whether as a profession, to which dog showing has latterly developed, should post themselves up in the requirements of the show ring which are essential to success. It is not enough to possess a good dog, for it is often the case—and I speak as a judge of some experience—that a moderate dog, well tutored and "handled," will beat a better dog indifferently shown. Whatever a dog may be at home or before going into the ring, or when he comes out of it, it is what he looks like at that supreme and critical moment when the judge's eye is upon him, on which the judge decides upon the relative merits of the dogs before him. I say "relative," because all decisions are, or should be, made comparatively according to the merit of the dogs on the day, and not according to what a dog may have been or may have done in the show ring previously, or may he or do in the future. Just as a jury trying cases in the law courts is advised by the presiding judge to shut out from their minds any knowledge the jurymen may possess of the case or cases they are about to try, and are exhorted to arrive at their decisions purely upon the merits of the cases presented to them in court, so ought show judges, when they enter the arena of the show ring, to shut out from their minds any previous knowledge of the performances of particular dogs, and judge them entirely on their merit and condition at that particular moment. This duty of judges is, however, another subject, and a very wide one, which I will not pursue further, and only mention parenthetically by way of preparing my readers for a clearer comprehension of the necessity of efficiency in show ring education and practices.

A fundamental principle underlying the efficiency is, no doubt, a sound knowledge of the points of dogs, and whilst this is more or less an absolute necessity, it is not all that is needed. To know the good and bad points of dogs is, however, more than half the battle, for it is to a great extent in the concealment of the latter and the advantageous display of the former that the success or non-success of the "handler" is determined. This is where the "art" comes in.

The first essential to success in the show ring is, of course, the possession of a good dog, the next to have the dog in good health and condition, and the third to show it to the best possible advantage. The best dogs always pay the best, and they are all within the reach of novices and amateurs, who, if they cannot buy, can breed them if they go the right way about it.

It is always best not to show a dog in bad condition, even although he be entered for a show. Many a good dog has met defeat and tarnished his reputation by being exhibited in indifferent condition. In these days of keen competition, there is rarely any margin to give anything away on the score of condition and it is wiser and better to miss the honor of a possible win rather than run any risk of defeat on the score of indifferent condition.

Some people are stupid enough to imagine that, as collars and chains are made for dogs, so dogs are made for collars and chains, and that a young dog, when a collar and chain are put on him, should automatically fall into their use as if to the manner born. One might just as well expect a colt off the moors to go in a harness right off, without any previous tuition. The earlier dogs are taught their exhibition alphabet the better. Before ever they are exhibited, they should undergo a course of quiet tuition at home, amongst other dogs if possible. After having been taught the use of the collar and chain or lead, and become quite familiar with and at home in them, then a course of show ring drill should be commenced. They should be walked round and round an imaginary ring, pulled up at intervals, and drawn into such a pose as will show their points off to the best advantage. A young dog exhibitor could not do better than look over into the horse ring at one of our agricultural exhibitions in the summer, and see to what a pitch of perfection our show hackneys, cobs and ponies, and even ponderous shire horses, have been brought in show ring tuition and manners. Their measured movement, with head erect, their fine, high action, fore and aft, their steady hearing, and, finally, graceful pose when brought to a standstill, which they assume intuitively, stretching out their forelegs forward and their hind legs backward, in order to cover a lot of ground, and fore-shorten the back. All this is required in the dog show ring, where, however, a multiplicity of manipulation is necessarily occasioned by the many different breeds, some of which require totally different treatment to one another. There are, however, certain terriers which to a very great extent should be built on the lines of a perfect hackney, and should be shown in the ring similarly. I refer to Fox, Welsh, Alredale and Irish Terriers. Then, again, a Pointer, Setter and Retriever vary but little, as also does a Collie's anatomy, whilst I may compare that of a Greyhound to a thoroughbred. Wherever pace is the predominating feature in a dog, of whatever breed, his structural anatomy differs but little from that of a horse.

The long and low breeds such as Dandie Dinmonts, Scottish and Skye Terriers, Dachshunds, Basset-

hounds and Field Spaniels, are, of course, exceptions.

In all the first named terrier breeds it is an absolute necessity that they should come into the show ring in a gay, buoyant manner, full of fire and confidence, with both ends—head and tail—up, because only by such a bearing and deportment can their correct outline and anatomy be discerned, and their expression discovered. A dog that is too keen and quarrelsome in the ring spoils his chances of success almost as much as one that is too shy. Now, the ring demeanor requisite in these terriers would be fatal, for instance, in the case of a sporting spaniel, which should neither get his ears nor tail up. To prevent it, care must be taken in the ring that the dogs do not get too near each other, and a "handler" showing a dog will, of course, take special care that he keeps clear of any hitch in the class. Whilst a little excitement in the terrier ring is sometimes beneficial in getting the dogs to show themselves, in the sporting spaniel ring it should be scrupulously avoided. Spaniels need no inducement, and, after being put in position, are best left alone. Most terriers require some little artificial means of inducing them to show themselves at the supreme moment, such as a rabbit's foot or a hit of meat. The old practitioner generally arms himself with a piece of boiled liver, which all dogs like, and, when judging, I often beg a hit, with which I am invariably successful in drawing the dog's attention and getting a good look at his head and expression, as well as outline. It is also very necessary to have something of the sort in the case of Collies, in which breed ear carriage is of such vital moment. What will get the ears up will often get the tail up, and as high tail carriage in a Collie is objectionable, care should be taken to watch both ends.

There are some breeds which, after having been paraded in order to show their outline and movement, want a certain amount of special "fixing" when brought to a standstill. I refer to Greyhounds, Whippets and Bulldogs. The two former should have narrow fronts (as should all dogs that are required to gallop), and, therefore, it is essential that they should be carefully fixed with their fore-end standing true, and their hind legs stretched backward, so as to show the sweep of stifle. If they are slightly flat in loin, an arch is a requisite, it is quite legitimate to lift them up in loin a little, just as it is to spread a Bulldog's forelegs well out, since a wide front is an all important characteristic of this breed. Wrinkle in a Bulldog, Bloodhound, Pug and St. Bernard is a desideratum, and it is quite a common thing to see its presence assisted by the wearing of a wide collar in the case of the Bulldog and the Pug, and by the hand in the case of the other two breeds.

It is an old saying that anything is fair in love and war, and I think the little manipulations I have described as practised in the show ring are legitimate and fair, and so is the long lead, if not used to excess. A leather lead is noiseless, which is often a great advantage in the case of a dog of a nervous temperament, and is lighter than a chain, which must in all cases be as light as possible, consistent with the requisite strength.—*Prize Dogs.*

Michigan Field Trial Club Trials.

Splendid weather, high class dogs and a lack of birds were the opposite conditions which confronted the sportsmen at the Michigan Field Trials.

The Derby had nine dogs in the running and the All-Age ten. Daisy Baughn, a blue belton Setter bitch, won first over Clairvoyant in the Derby. The latter dog, it will be remembered, won the Derby and was second in the All-Age of the Sportsmen's Club trials last month. Daisy is a speedy and merry worker and had more chances on birds than the second dog, Phoebe's Rod and Gath's Dorrit, equal third, were also both winners at Clare last month.

The All-Age dogs were classy and good goers. Don Antonio III, winner of first is owned by E. S. Nelson of Detroit and is a black, white and tan who shows the mettle of Dash Antonio, his noted sire. King Do Do who won second place is owned by E. E. Kraal of Muskegon. Lou Rodfield and Count Holmes, equal third, are both well known field trial dogs. Lou won the Sportsmen's All-Age stake at the Clare trials. The order of running and summaries are the following:

GREENVILLE, MICH., Nov. 2-3, 1903.—Michigan Field Trial Club's sixth annual Derby. Nine starters (7 Setters, 2 Pointers). Judges, W. J. Baughn and J. G. Armstrong.

I
Daisy Baughn, blue belton Setter bitch (Petrel's Count-Fly Rod) F. L. Holmes, owner and handler.

With
The Arrow, black, white and tan Setter bitch (Sandy K-Gladstone Belle). C. D. Stuart, owner; Asher Cad, handler.
Trixie's Pearl, white, black and tan Setter bitch (Sport's Gath-Kingston's Trixie). C. D. Stuart, owner; Asher Cad, handler.

With
Clairvoyant, orange and white Setter bitch (Cowley's Rodfield's Pride-Phoebe Whitestone). E. H. Walter, owner and handler.
Rap's Billie, lemon and white Pointer dog (-----). C. S. Harrington, owner and handler.

With
Phoebe's Rod, orange and white Setter dog (Cowley's Rodfield's Pride-Phoebe Whitestone). L. Hilsendegen, owner and handler.
Petrel's Count's Queen, orange and white Setter bitch (-----). A. J. Smith, owner; A. Cad, handler.

With
Nettle M, black and white Pointer bitch (Plain Sam-Rip's Pearl). W. C. Donaldson, owner and handler.
Gath's Dorrit, black, white and tan Setter bitch (Sport's Gath-Little Dorrit). Dr. E. D. McQueen, owner; Tom Morria, handler. A bye.

II
Daisy Baughn with Clairvoyant.
Phoebe's Rod with Gath's Dorrit.
Trixie's Pearl with Nettle M.

III
Gath's Dorrit with Clairvoyant.
Daisy Baughn with Phoebe's Rod.
Trixie's Pearl with Nettle M.

RESULT

First, Daisy Banghu; second, Clairvoyant; equal third, Phoebe's Rod and Gath's Dorritt.

GREENVILLE, MICH., Nov. 3-4, 1903.—Michigan Field Trial Club's sixth annual All-Age. Ten starters, all Setters. Judges, J. G. Baughn and J. G. Armstrong.

I

Sandy K, lemon and white Setter dog (Koran K—Midnight's Gipsy). C. D. Stuart, owner; Asher Cady, handler.

With

Rod's Pride III, blue belton Setter dog (Cincinnati's Pride—Ruth T. Etol). M. W. Tanner, owner; E. Pettit, handler.

King Do Do, black, white and tan Setter dog (King Bo—Cliperego). E. E. Kraal, owner; Asher Cady, handler.

With

Belle, orange and white Setter bitch (—————). Marsh Byers, owner and handler.

Genevieve M, black, white and tan Setter bitch (King Bo—Cliperego). E. D. Magoon, owner; Asher Cady, handler.

With

Lou Rodfield, lemon and white Setter bitch (Rodfield—Gipsy A. Gladstone). M. W. Tanner, owner; E. Pettit, handler.

Count Holmes, white, black and tan Setter dog (Count Diamond—Little Dorritt). C. D. Stuart, owner; Asher Cady, handler.

With

Rex H, chestnut and white Setter dog (—————). F. L. Holmes, owner and handler.

Billy Rodfield, orange and white Setter dog (Cowley's Rodfield's Pride—————). Asher Cady, agent and handler.

Don Antonio III, black, white and tan Setter dog (Dash Antonio—Eldred's Constance). W. C. Donaldson, owner and handler.

II

Lou Rodfield with Sandy K.

King Do Do with Don Antonio III.

Count Holmes with Genevieve M.

III

Sandy K with Don Antonio III.

Lou Rodfield with King Do Do.

RESULT

First, Don Antonio III; second, King Do Do; equal third, Count Holmes and Lou Rodfield.

DOINGS IN DOGDOM.

Mr. James Cole, of Kansas City, whose portrait appears on this page will judge the dogs at the Mechanics Pavillon next week. Mr. Cole awarded the ribbons at Seattle and Sacramento in 1900 and is not unknown to a number of local fanciers.

Mr. C. R. Harley has returned to this city after a brief visit East. He attended the Ladies' Kennel Association and Brooklyn shows. Wandee Kennels' string is still East and will be exhibited at Philadelphia this week and afterwards at the Westminster show in New York.

F. J. Walker received recently from an Eastern dealer the Irish Terrier Iviwilde Dangan. This dog won third puppy, first novice and reserve winners at Wissahicon show 1902. Mrs. Walker has entered Dangan and Royal Noreen for the show next week. Noreen is an Eastern winner and won at the last Frisco show.

Glen Tana Collie Kennel will have four Collies in the show next week. Mr. Thos. S. Griffiths will not attend the show, Mrs. Griffiths however will be present.

Mr. Griffiths recently shipped a Lenzie Prince puppy to Pocatelli, Idaho. He writes us also, that he has received inquiries for his stock from New Zealand, his "ad" in the BREEDER AND SPORTSMAN having caught the eye of a fancier in the antipodes.

Two of Glen Tana Kennels' best bitches, Moreton Vesta and Craigmere Caroline are in whelp and will not, unfortunately, be seen on the hench here next week.

The following notes from Oak Grove Kennels this week will be of interest to Collie fanciers:

EDITOR BREEDER AND SPORTSMAN—I have received lately from the East the very fine young Collie bitch Brookmere Lucy. She is by Champion Wellesbourne Conqueror ex Barwell Lucy. A very handsome sable and white and a very promising young bitch, a typical specimen. And if I have good luck with her I expect she will make a record for herself on the Coast. I was so well pleased with Brookmere Lucy that I at once bought her dam, Barwell Lucy. She is by Champion Barwell Masterpiece ex Clayton Constance. Barwell Lucy is a very showy sable and white with good markings. She was imported from England and it goes without saying she is a good one. I bought Barwell Lucy in whelp to imported Brookmere Hope, considered by good authority to be the bestson of Champion Balreggie Hope. Lucy whelped Oct. 4th nine handsome puppies (6 dogs, 3 bitches).

I also sent imported Queen's Bounty (this is the dam of the celebrated Champion Ormskirk Emerald Jr., the champion of champions who has never had to take a second ribbon) East to visit Ellwynn Astrologer and from this mating I have two very promising bitches.

I am at this writing negotiating for a Champion Wellesbourne Conqueror ex Champion Wishaw Grace puppy, and trust I shall succeed in getting it.

I also bought on Saturday last a very handsome chestnut sable and white bitch by Champion Roh Roy. This bitch has been mated to Champion Ormskirk Emerald Jr., I hope to get a winner from this. I have some splendid dogs in my kennel, but it is my desire to have the very latest and best winning blood.

Your paper is anxiously looked for and the days can't go by some times fast enough for us to receive it, then there is a scamper who shall see it first. So please don't miss an issue, it means so much to us. Wishing your paper the success it so richly deserves, I remain,

Respectfully,

O. J. ALBEE.

Entries for the initial P. K. L. show in San Francisco closed with approximately the same total number as the show has usually received when the exhibition was held in Oakland. The quality of this show will be better than ever before.

Seemingly the local fanciers have not taken as much interest in this show as was expected. One cause for this has been the persistent and systematic opposition to the P. C. Collie and Old English Sheep Dog Club's show by several of the greater and lesser lights of local dogdom, who have been untiring in their efforts to "knock" the "invader." This would not have been so bad, had not the "knockers" met the other fellows with a welcoming hand and spontaneous promises of support. This feature is the one that is essentially had for Coast dogdom, for the same practices and underhand pulling down that we here refer to will lie dormant until the Spring show hotled up and ready for a mephitic spraying over any ambitious doggy sprouting that may not be acceptable to the element first referred to.

This lack of cohesion is, and has been, the inebriety of Coast dogdom and has hurt local doggy affairs, year after year, more than anything else and will have a hoomerang effect against the success of future shows here, for when there is a scarcity of game in outside fields there will be found alluring targets in the home kennels for the malodorous squirt guns of the "knockers".

MR. JAMES COLE

Local Anglers Are Scored.

A communication under the above caption appeared in a Tuesday morning daily and has since met with much adverse criticism from many anglers, not a few of whom, under the circumstances, question its integrity of purpose. At all events, the article is in keeping with the tenor of similar complaints that have been annually, for years past, published descriptive of alleged violations of the fish and game laws or diatribes against fish hogs and pot hunters. What virtue or merit these articles have originally had has been lost, it is believed, in what have been a series of covert attacks upon the Board of Fish Commissioners, and it is also presumed upon private individuals as well.

The story first mentioned has elicited the following communication:

EDITOR BREEDER AND SPORTSMAN:—In answer to an article which appeared in this morning's *Chronicle*, referring to salmon caught in the Paper Mill creek, the unfitness of these fish for human food, and signed by some one unknown to the fishing fraternity of this city (and whom, if he does exist, the undersigned would like to meet and go further into details with), I will say in answer thereto:

We will admit that the salmon are on the way to their spawning grounds. We ask, when, if ever, salmon are captured unless they are headed in that direction? Ninety-nine out of every 100 of the salmon in our fish markets and for sale every day to consumers in this city are fish taken on their way to the spawning grounds.

The salmon that were captured in the Paper Mill creek, at the "white house" pool, during the last month, have been eaten by a large number of my friends and myself. I have found the fish in fine edible condition, and this same endorsement is the report of at least twenty other anglers and their friends.

If the unknown (to us) writer of the article referred to will send his address to any of our local anglers who find the Point Reyes a regular and congenial fishing resort, I will guarantee that he will receive in return a cut from a salmon taken in the Paper Mill,

and also a piece of salmon from a local fish stall, and we challenge him to tell the difference between the two samples of salmon.

SAM A. WELLS,
and twenty other anglers.

There is no doubt that a spent fish was hooked now and then when the Paper Mill was low and the spawn laden fish could not get up stream any higher than the county road bridge. But the vast majority of the salmon were fresh run from the ocean, and were taken as they came in with the rising tides.

These Paper Mill salmon are the progeny of quinnat salmon fry planted in that stream some years ago by the Fish Commissioners, we believe, as an experiment, for the purpose of, to that extent, ascertaining the truth of a claimed habit of the salmon; that of returning to the identical stream in which it was spawned. So far as the Paper Mill salmon are concerned, this theory seems to be verified. Aside from this the question is to a great extent still open to argument.

While neither defending unsportsmanlike practices or advocating unnecessary fish destruction, we will state that, so far as the Paper Mill is concerned, its practical utility as a spawning resort for the salmon will never cut much figure owing to natural and other disadvantages which will never make the salmon supply of that stream more than one of meager expectations.

Further, the anglers who have been fishing at that resort are within their legal rights and are entirely undeserving the unjust criticism of the following clipping referred to:

"SAN FRANCISCO, Nov. 22, 1903.

Editor *Chronicle*—Sir: I wish you would call the attention of your sporting editor to the fact that the slaughter of salmon in the Paper Mill creek at Point Reyes by alleged sportsmen is, to say the least, shameful. I am surprised to read in the papers the names of local anglers, who are advocates of fish protection, among the ones who are doing the greatest slaughter. The salmon are unquestionably not fit for food, and this talk of a fish giving an angler a twenty-minutes' fight is, to say the least, very absurd. These fish lose their strength when they arrive in the Paper Mill, and I know for a positive fact that they make but one run and then collapse. The killing of those salmon on their breeding grounds by alleged anglers is on a par with pot hunters, who kill wild duck and quail on their nests. There is no difference between the two. So much for our alleged fish protectors.

Yours truly,

DANIEL McCLERNON."

Fishing in San Antonio slough for striped bass recently has been prolific of sport and many fine fish. Last Sunday Mr. A. Thompson made a big catch, a twenty pounder being the heaviest bass. On Thursday he landed 16 nice bass, the largest scaled ten and a half pounds. Mr. Chas. Miller caught six bass also on Thursday, his heaviest fish turned eleven pounds.

The bass evidently are running in the straits again. Mr. Carroll landed a big nineteen pound fish and his companion R. Dorrance, hooked a smaller one on Thanksgiving day. Messrs. Donallen and Ement caught four fish on the same day.

Duck hunting for a week past has been in the nature of a lottery. The best shoot we have heard reported was that of the Empire Gun Club members who shot on the Elkhorn slough preserve last Sunday. The combined bag counted up 340 birds, many of them teal in fine condition. Bay shore shooting for canvasback has not been under the auspices of the best weather conditions. What few birds have been secured were found to be very fat.

Quail hunters should, after the pleasant weather of the latter part of the week, have good sport with their dogs on the uplands to-morrow.

As we hinted in a previous issue, W. S. Bell, of Pittsburg, Pa., will judge at the Bakersfield field trials next January. Secretary Betz having closed final arrangements, this week, with Mr. Bell.

Ellesgy Kennels had the misfortune to lose that good Bull bitch, Ch. Endcliffe Pleasure, this week. Pleasure had been bred to Harry Lacey and died helping a litter of puppies. This is quite a loss to the Coast Bulldog fancy.

Coming Events.

Rod.

April 1-Sept. 10. Oct. 15-Feb. 1—Open season for taking steelhead in tidewater.

Nov. 1-April 1—Trout season closed.

July 1-Jan. 1—Open season for black bass.

Aug. 15-April 1—Open season for lobsters and crawfish.

Nov. 1-Sept. 1—Open season for crabs.

Sept. 1-May 1—Open season for shrimp.

Sept. 10-Oct. 15—Close season in tidewater for steelhead.

Nov. 15-Sept. 10—Season open for taking salmon above tide water.

Gun.

July 1-Feb. 15—Dove season open.

Nov. 1-July 15—Deer season closed.

Sept. 1-Feb. 15—Open season for mountain quail, grouse and sage hen.

Oct. 15-Feb. 15—Open season for quail, ducks, etc.

THE FARM.

Smoking Pork.

The big, old-fashioned smoke houses may be useful as a storing place for plunder, but they are too large to smoke meat successfully unless one is willing to devote a good deal of time and fuel to the business, writes F. M. Wood in *Ohio Farmer*. And when an old building of this kind has a few loose boards or missing ones to give the smoke a chance to escape, getting the meat smoked seems like an endless job to the women and children who often have this work to do.

Many farmers in this section of the country are constructing very small buildings for this purpose—just large enough to hold the meat after it is hung, so the pieces will not touch. They are made as tight as possible. A little smoke goes a long way in a building of this kind.

It is important that pork should be well smoked. The rich, brown color that is given by thorough smoking gives the meat an attractive look. Then it tastes, keeps and sells better. Sometimes the farmer has a surplus of smoked side meat, and buyers prefer meat that is well smoked.

We find that an old beating stove that has outlived its usefulness comes handy to smoke meat. It is worth more for this purpose than the junk man would give us.

As to fuel, there is nothing better to make a big volume of smoke than new, clean, corn cobs. When they show an inclination to blaze too much, we dip a few of them in water. The wet cobs keep down the fire and furnish a lot of smoke.

We like to smoke our meat early in the season in order to get it sacked and put away before the troublesome bugs and frisky flies make their appearance. We tie each piece tightly in paper flour sacks, and insects never bother. The paper sacks protect the meat better than the muslin sacks so often used for this purpose. We always purchase our flour in fifty and eighty-five pound bags. When emptied, we preserve them for this purpose. The fifty-pound sacks are just the right size for large hams and shoulders, while the smaller pieces fit nicely in the smaller-sized sacks.

The sacks containing meat should be hung in a dark, cool closet or room where the air will reach them on all sides; then they will keep perfectly during the hot, summer months. If meat is piled up on a shelf, or in a box, or bung so the pieces touch, it is sure to mold badly in warm, rainy weather.

There are many different and successful ways of putting away smoked meat for summer use. Some put the meat in a large box and fill in between the pieces and in all the crevices with wood ashes, bran, or oats, with a thick layer of whatever filling is used, on top. With any of these methods care must be used to put enough of the filling between the pieces so they will not touch. A hot, stuffy room is a poor place in which to keep meat. There must be good ventilation where meat is stored. A good way to keep home-cured dried beef is to pack it in dry salt. It keeps moist in this way, and does not absorb the salt. Meat that is properly cured, smoked and carefully put away, will keep until hog-killing time rolls around again. We think those who complain of meats spoiling or becoming inhabited must be careless in their methods.

The Sheep and the Wool.

The wool of a sheep begins to deteriorate after the sheep has passed its third year. The best wool is obtained from a sheep that is two or three years old.

Having been sheared, the fibres are all of the same length, which makes it better on that score than lamb's wool, says *New York Farmer*. Such wool is preferred for combing and for all pur-

poses where parallel fibers are required, such as spinning for cloth and fabrics.

Lamb's wool is not so desirable, on account of the uneven lengths and uneven firmness, but is much used for knitting yarns and for the manufacture of infants' fabrics, such as flannels, on account of the softness and less irritating to a delicate skin.

After the third year the wool begins to show the effects of age and becomes frowzy and harsh, and is liable to freaks, such as becoming cotted, and when it is scoured, it works badly. Then, if the sheep has ever been in a condition, it will show up in the fleece of the aged wether or ewe.

The wool of aged sheep is subjected to moreshrink than that of younger sheep.

Management of the Boar.

The boar should not be purchased until he is four or five months old, as he does not show his form fully before that time. His service is more sure and he can be handled with less trouble if he has been on the place a few weeks before he is needed for use.

The boar should never be allowed to run with the sows, and it is much better to keep him in a lot where he can neither see nor hear other hogs. He should be kept as quiet as possible, and his food should be nutritious but not fattening. Have his pen arranged to adjoin a pasture lot, which will afford him sufficient grazing and exercise.

At one year old moderate service will not injure him and with proper care he is at his best as a sire when from 18 months to five years old. Be quiet, but occasionally scratch him on his back, taking care to keep away from his head, no matter how kind you think he is. There should be a strong door between the pen and yard, so he can see the sow some time before he is turned to her. With one service she will have as many and as fine pigs as if the boar were with her for three or four days. Be sure to carry the sow to the boar's yard for service.

Grooming Dairy Cows.

Have regular hours for grooming your cows. Many people do not realize the importance of giving cows a thorough brushing every day. Often I have seen the flanks covered with a coat of dried excrement. Every motion the cow makes dislodges some of this filth. Every time she switches her tail during milking, every motion of her legs, and every rub and brush of her body by the milker dislodges particles of this material which is sure to fall into the milk pail. All of this filth is crowded with bacteria (germs) in excessive numbers, and these find their way into the milk during the whole of the milking. Always moisten the udders with a damp cloth previous to milking, and a good brushing each day will keep the skin clear and healthy, prevent diseases, and will repay the labor bestowed, besides making the cows more comfortable and contented. A stiff brush made of broom corn is best.

Good cows are usually so scarce in this country that they cannot be bought every day in the week. For this reason the best dairymen are growing their own calves. In this connection it may be well to remember that calves should be kept growing with plenty of nitrogenous food and compelled to eat lots of roughage so as to develop the digestive apparatus. If fed on alfalfa in this way and it puts fat on the ribs sell the delinquents to a butcher and if any calf cannot digest a fair ration of roughage give it to a neighbor. A dyspeptic calf will never make a good dairy cow. A dairy calf of the early maturing breeds if fed a good bone and muscle-making ration will be done growing in two years and if not taught to produce milk will naturally become a beef and should therefore come into profit at two years or sooner. At the Alabama experiment station the average cost of raising dairy calves to the time they came into profit—from nineteen to twenty-four months—was \$19.47. The main feed was skim milk, pasture, silage, hay, cottonseed meal and bran—very good and cheap feed for a growing calf, but we can discount this ration with alfalfa alone.

WESTCHESTER RACING ASSOCIATION

(UNDER THE AUSPICES OF THE JOCKEY CLUB).

RACE COURSE,
MORRIS PARK,
WESTCHESTER, N. Y.

OFFICE: No. 571 FIFTH AVENUE
NEW YORK, N. Y.
(THE WINDSOR ARCADE).

THE EIGHTH National Stallion Race

WITH \$5000 ADDED

To be Run for by then Two-Year-Olds during the

SPRING MEETING OF 1905.

THE EIGHTH MATRON

WITH \$10,000 ADDED

To be Run for by then Two-Year-Olds during the

AUTUMN MEETING OF 1906.

To Close and Name for both events at Midnight of Tuesday, Dec. 15, 1903

CONDITIONS.

THE NATIONAL STALLION, 1905.

The EIGHTH NATIONAL STALLION for then two years old, foals of 1903 to run at the Spring Meeting in 1905, the progeny of a stallion nominated.

Nominations of stallions to close and name by midnight of Thursday, October 1, 1903, by subscription of \$50 each, or only \$25 each, for stallions which have not sired a winner prior to December 15, 1903. Of the subscriptions for stallions the nominators of the sires of the first, second and third horses shall receive 25 per cent., 15 per cent. and 10 per cent. respectively. The remaining 50 per cent. to the winner.

STALLION ENTRIES FOR 1905.

Conditions for the Entry of Foals of 1903, to close and name by midnight, Tuesday, December 15, 1903.

Foals of 1903, the progeny of stallions duly nominated to be entered and named by midnight of Tuesday, December 15, 1903.

Colts and geldings at \$10 each fillies at \$5 each, the only forfeit if declared by December 15, 1904.

If left in after December 15, 1904, and declared by April 20, 1905, colts and geldings to pay \$30 each, fillies \$15 each.

If left in after April 20, 1905, colts and geldings to pay \$50 each, fillies \$30 each.

Starters—Colts, geldings and fillies to pay \$100 each additional.

The Westchester Racing Association to add \$5000 and the remaining 50 per cent of the stallion entrances, of which \$1500 to the second and \$300 to the third. The nominator of the winner to receive \$1000 out of the subscription and starting money. Of the subscriptions for stallions, the nominators of the sires of the first, second and third horses shall receive 25 per cent, 15 per cent and 10 per cent respectively.

Colts to carry 122 lbs., geldings and fillies 119 lbs.

The produce of stallions which have not produced a winner prior to December 15, 1903, allowed 5 lbs. if claimed at time of entry. By filing with the Westchester Racing Association, prior to December 1, 1904, an accepted transfer of the foal's entry, the original subscriber shall be released from liability as to the engagement of the horse, except for the original forfeit of \$10 or \$5.

Last five entries, Eclipse Course.

THE MATRON OF 1906.

The EIGHTH MATRON, with \$10,000 added, for mares covered in 1903, foals of 1904, to be run for by then two-year-olds at the Autumn Meeting in 1906. The event to be run in two races, one for colts and geldings, the other for fillies.

GENERAL CONDITIONS.

The EIGHTH MATRON for the produce of mares covered in 1903, to run when two years old at Autumn Meeting in 1906, with \$10,000 added.

Subscriptions for mares to close at \$20 each, or only \$10 each if the money accompany the entry.

Foals the progeny of mares so nominated to be eligible, at \$10 each, the only forfeit if declared on or before November 1st, 1905.

If left in after November 1st, 1905, to pay \$25 each.

If left in after April 1st, 1906, to pay \$50 each.

If left in after August 15th, 1906, to pay \$75 each.

Starters to pay \$150 each.

WEIGHTS, PENALTIES AND ALLOWANCES.

Colts to carry 122 lbs.; fillies and geldings, 119 lbs. Winners of \$5,000 or twice of \$2,500, to carry 3 lbs. extra; of \$10,000 or twice of \$5,000, 5 lbs. extra; of \$15,000, or twice of \$10,000, 7 lbs. extra; of \$30,000, or twice of \$15,000, 10 lbs. extra.

Non-winners of \$2,000 allowed 3 lbs.; of \$1,000, 5 lbs.; maidens, 10 lbs. Produce of horses or out of mares that had never produced a winner previous to January 1st, 1904, allowed 3 lbs.; of both 5 lbs.; which allowance must be claimed at time of entrance. Allowances cumulative.

CONDITION OF THE RACE FOR COLTS AND GELDINGS.

Colts and geldings the produce of mares nominated for the Eighth Matron to run by themselves, the money for which shall include all subscriptions of mares producing colts, all declaration fees paid for colts and geldings at \$10, \$25 and \$50 each, and of those left in after August 15, 1906, at \$75 each, with \$5000 of the added money, of which \$1000 to the second, and \$500 to the third. The nominator of the dam of the winner to receive 50 per cent of the starting money for the race, of the second, 30 per cent., of the third, 20 per cent. Eclipse Course.

CONDITIONS OF THE RACE FOR FILLIES.

Fillies the produce of mares nominated for the Eighth Matron to run by themselves, the money for which shall include all subscriptions for mares producing fillies, all declaration fees paid for fillies at \$10, \$25 and \$50 each, and of those left in after August 15, 1906, at \$75 each, with \$5000 of the added money, of which \$1000 to the second and \$500 to the third. The nominator of the dam of the winner to receive 50 per cent of the starting money for the race, of the second 30 per cent, of the third 20 per cent. Eclipse Course.

Both the National Stallion and the Matron as above are to be run under the Rules of The Jockey Club and Westchester Racing Association applicable to the conditions of each and both of them, viz.: Rule 38, Rule 54, Part IV, Rule 63, and Rule 5, Part III, Rule 72.

For further particulars and entry blanks, address

H. G. CRICKMORE, Clerk of the Course.

571 Fifth Avenue, New York, N. Y.

State Veterinarian's Report.

State Veterinarian Dr. C. H. Blemer in his annual report to the Governor, which has just been filed, says that during the past year every endeavor has been made in Kings, Kern, Tulare, Fresno, Madera and Merced to ascertain and eradicate Texas fever infection.

He believes that the investigation he has requested by the United States Inspector of the Bureau of Animal Industry, United States Department of Agriculture, will next year result in freedom from tick infection in those counties.

He submits a copy of his letter to the Chief of the Bureau of Animal Industry relative to those counties and Monterey. The latter county is excepted because investigation was conducted there last year by the Federal authorities and they are more familiar with the situation there.

The Monterey authorities have been unceasing in effort to eradicate the Texas fever, and that activity has been such that it is safe to predict entire success. Monterey, he therefore advises the Federal office, should be removed from the quarantine area.

In Kern, Tulare, Fresno, Kings, Madera and Merced efforts to eradicate the tick infection have so far succeeded, he says in the letter referred to, that in Kern, Tulare, Kings and Merced the infection has been eradicated, but some small amount remains in Fresno and Madera. In the latter it is confined to one ranch, from which the cattle have been removed and the property will be idle the remainder of this and all of next year, 1904.

Passing to the report proper, Dr. Blemer says he has repeatedly urged San Luis Obispo, Santa Barbara, Ventura, Los Angeles, Orange, San Bernardino, Riverside and San Diego to eradicate infectious diseases among live stock, but nothing has been done, save in San Bernardino, Los Angeles and San Luis Obispo.

The latter is now at work eradicating tick infection, but the west half of the county is still badly infected with Texas fever tick. Refusal to permit movement of cattle feeding in the eastern half will be maintained until there is guarantee of absolute quarantine of the western half of the county.

There was an outbreak of Texas fever by reason of shipping infected cattle from San Luis Obispo to Siskiyou. The ranch where the cattle were held is now under strict quarantine and the disease has been stopped by quarantining.

Texas fever, or tick fever, has caused great losses. Its reality is well established. It is difficult to investigate and it had seemed that its mysteries would never be fathomed, but scientific study has developed the discovery of a microscopic animal in the blood which destroys the red blood corpuscles and this is the cause of the malady.

It is also settled that the Southern cattle tick carried the micro-organism from the Southern cattle to the susceptible Northern cattle, and that when free from the tick the Southern cattle were harmless. The doctor then describes the symptoms of the fever and the two forms in which it occurs, acute and chronic.

The only known means of transmitting it in natural outbreaks is by the agency of the common cattle tick. This tick was common in many Southern California counties, but by reason of the fight waged against it since 1899 it has been eradicated (save on one or two ranches) from all the territory north of and above San Luis Obispo county, the Tehachapi mountains and San Bernardino county.

The worst tick infested districts now are the west half of San Luis Obispo, Santa Barbara, Ventura, Orange, Los Angeles, San Diego and Riverside.

The Southern ticks are easy to destroy, as they crawl but a few feet. They are carried by cattle from place to place. A barbed wire fence is often an effectual barrier to their passage. Destruction of the tick must begin with the individual

animal and extend to all cattle in the territory to be freed. The tick will usually perish if denied a host a whole year. So, infested pastures should be abandoned for not less than a year and dry grass and leaves be burned off.

Investigation of an outbreak of disease in Owens Valley showed it to be anthrax. It has long existed there, and will cause trouble from year to year. The local authorities are working for its eradication. It is caused by the invasion of the blood by a bacterium, rod-like in shape and characterized by producing resisting spores. If they get into the soil they may remain in a state of arrested development for years. It is improbable that the bacilli pass directly from one animal to another. Anthrax is not a directly infectious disease, when the transmission is so effected; it is usually by intermediate bearers, such as utensils and people.

Dr. Blemer here describes in detail the threefold mode of migration of the infective matter and gives the symptoms of the disease fully and also the post mortem appearances.

Anthrax attacks all animals, but most frequently cattle, goats, sheep, horses, guinea pigs and mice. Anthrax is distributed all over the world. On this coast it is rapidly increasing. The most infested districts are parts of Los Angeles and Orange counties and the sloughs and rivers of the San Joaquin and Sacramento Valleys. Outbreaks have occurred in Lake, Mono, Inyo, Monterey and San Luis Obispo and also near Reno, and in Oregon among horses.

Treatment for anthrax is practically useless; but some mild cases are cured by use of antiseptics internally. Cremation of the carcasses of victims is absolutely necessary. There must be temporary quarantines, change of food supply and immediate vaccination of all live stock and separation of those affected.

Dr. Blemer then treats in full of vaccination of animals and of its value, and says that in anthrax there are some failures with it. Protective inoculation is of more value in cattle than any other animal, but vaccination does not insure immunity and protects for but one year; its effectiveness depends on the vaccine.

Considerable has been accomplished in sheep inspection as provided by law passed by the last Legislature. Practically all the counties now have inspectors. He expresses the hope that the work in hand will result in eradication of the scab from the flocks of California sheep.

As to inspection of dairies and of live stock for tuberculosis and to secure sanitation of dairies, creameries and other places of milk supply, he considers the subject one of great importance to dairymen, and stock owners in general. The meat and milk of diseased animals should be condemned, whatever the opinion about the communicability of hoveine tuberculosis.

He recommends the use of the tuberculin test, but advises against the compulsory destruction of animals that react therefrom. He does believe, however, that such animals should be marked or branded and excluded under severe penalties from milking purposes.

The general use of milk, especially as a diet for invalids and infants, justifies every effort to secure it pure and wholesome. The question as to its being good milk cannot be decided on the ground that it contains the required percentage of solids, and is free from injurious chemicals; it must also be subject to the test for bacteriological contamination. Such contamination is too frequently the cause of conveying typhoid, diphtheria, scarlet fever and tuberculosis.

Milk is an excellent media for the development of bacteria. From a single germ as many as 200 may be produced in three hours, 10,000 in six hours, 10,000,000 in nine hours, and 2,000,000,000 in eighteen hours. Fortunately most bacteria do not

produce diseases, as most are associated with dirt, but they are not the only ones which may find their way into milk.

Pure milk, free from suspicion, can be produced only by obedience to the requirements of hygienic regulations, enforced under the directions of capable, conscientious sanitarians, ventilation, drainage of barns, and the sterilization of utensils, etc. So, too, the health of the animals must be considered. A sick cow can be of but small profit to the owner; yet dairymen have been known to maintain a tuberculosis herd for years, who would not tolerate a consumptive farm hand on the ranch.

Dr. Elemer regrets that stockmen are not more familiar with the means used for detection of tuberculosis in cattle. He advocates and describes its application. The temperature of the animal is first taken at intervals of two hours, sufficient to establish the normal temperature of the animal. The proper dose of tuberculin is then injected under the skin; generally late in the evening. The temperature is taken every two hours the next day. The rise of the temperature should begin about six hours after the injection, reaching its greatest height in from the sixteenth to the twentieth hour, when it declines gradually, returning to the normal at about the twenty-eighth hour.

Early in experimentation two classes of errors were made in diagnosis, which made questionable the accuracy of the test, but later investigations have shown the alleged errors may be largely obviated by not accepting any elevation of temperature less than 2 degrees Fahrenheit as a reaction; by requiring that the temperature should reach 104 degrees Fahrenheit; by carefully recording temperatures a sufficient number of times to show full reaction; by giving a sufficient dose of tuberculin, and by making a more careful search through the carcass for signs of disease after slaughter.

Best observation justifies the statement that there are no injurious effects from the use of tuberculin in healthy cattle. Authorities are quoted in support of this statement.

The conclusions are 1. That the tuberculin test is a wonderfully accurate method of determining if an animal is afflicted with tuberculosis. 2. That by the use of tuberculin animals diseased with tuberculosis may be detected and removed from the herd, thereby eradicating the disease. 3. That tuberculin has no injurious effect on healthy cattle.

He regrets deeply that many cattle owners, dairymen in particular, are strongly opposed to the tuberculin test. He would not like to see it forced upon them, but if they were properly informed they would be anxious to adopt it for self-interest.

There is no greater danger to cattle and swine industries in California than that which confronts them in the form of tuberculosis, a disease already widespread, and rapidly extending. Without the use of tuberculin it would be impossible to control it—with its use its control is not difficult, and badly affected herds may be converted into healthy ones in a few years, without very serious loss or hardship.

Farm Notes.

Cows that get hot and nervous give milk that is fatal to good butter.

Stabling or protection of some kind should be afforded every animal on the farm.

Assort and grade the flock of sheep for sale to butchers according to size, kind and quality.

The horse that is used to good strong fences all his life is never a had one to jump over them.

The development of a good walking farm horse is of more importance than of trotting capacity.

Jackson's Napa Soda does not tangle the feet

The Beef Breeds of Cattle.

The principal breeds of beef cattle are Shorthorns, Aberdeen-Angus, Galloways, and Herefords. It does not matter so much which breed a farmer raises, for they are all good and will return profit to the owner when intelligently managed, writes B. Shuman in *Live Stock Journal*. The most essential point when a man engages in the beef cattle business, is as with any other business, he should do it for life. Competition is keen, and only the men who go into a business deliberately, give their whole mind to it, and stick to it, have any reasonable chance for success.

The improvement of live stock is the work of a lifetime. Farms that have become famous for breeding live stock have usually been in the hands of one family from one generation to another. No great benefit has ever come to live stock from the work of speculators or men who go into the business for a year or two. The demand is constantly increasing for good beef cattle. The breeder should not overlook the ability of his stock to produce animals that will meet the requirements of the open market.

Beef producers in general are wanting registered bulls to head their herds, and appreciate a thoroughly good animal. They are turning their attention more and more to the requirements of the market as a basis for their feeding operations.

Quality and condition are the most essential points for a beef animal to possess, and to insure these points we must have a well bred as well as a pure bred animal to begin with. We should not depend alone on the pedigree of an animal, when we are selecting the heads for our herds, but they should be in a high state of development in the region of the loin, crops, back, thighs, twist and rump, for these are the parts from which are secured the high priced cuts of beef. I am reliably informed that two carloads of well bred Hereford heifers recently sold at the Kansas City Yards in the butcher stock class at a premium of \$1.85 over other butcher stock. Their freedom from waste made them cheaper than the common cows and heifers. Butchers cut such cattle without waste and send back for more.

The man who farms and feeds out of his own resources one prime steer and one hog per year for each ten acres of land in his farm is absolutely certain of success. And he who has found out the certainty of this steady, sure method of farming has discovered the most independent life that is available to the American agriculturist. Steadiness of purpose, intelligence in the selection of well bred beef cattle, patience in their care and feeding, and the ability to know when they are ripe, is the price of a successful feeding operation. The time is here when nine-tenths of the profitable feeding operations are conducted on a small scale. Satisfactory results have been recorded from feeding the grades of all the beef breeds. But not one instance of profit with scrubs is recorded, for their feeding is largely a speculation.

There is no higher form of art than that which deals with the intelligent manipulation of animal life—the molding of living creatures in accordance with the will and purpose of a guiding mind—and yet how many of those who assume the responsibility know of the breadth and depth of the proposition with which they will have to deal.

Dairy Notes.

Do not mix warm and cold milk, as it sours more rapidly.

Don't expect a cow on short, weedy pasture to do her best.

The best of water has germs in it which make butter deteriorate.

It is good economy to keep the cows in full milk till the fall food comes and then they have a good sendoff for producing a good lot of milk during the winter.

The Separator on the Farm.

The handling of milk constitutes one of the problems of the farm. Hence it may be profitable for me to call attention to the advantages to be gained by the use of a cream separator.

The cream separator is one of the modern inventions which increases the profits and lightens the labor on the farm. The genuine cream separator, not the tin-can kind, removes practically all the cream from the milk, writes Prof. C. H. Eckles in *New England Farmer*. By using the separator from one-fourth to one-third more butter can be made than when the cream is raised by gravity in the common crock or pan. That is to say, four cows with a separator are equal to five similar ones without one. The separator gets enough more cream to just about pay for itself in one year where ten average cows are kept.

The quality of butter made from separator cream is always better and often sells for two cents or more per pound than butter made from cream secured by the old gravity process.

The labor of caring for the milk is no small item for the farmer's wife. With the separator the labor is greatly reduced. When milking time comes the milkers milk the cows, separate the milk, feed skim milk to the calves or pigs and bring the cream to the house along with the separator bowl for washing.

The warm sweet skim milk secured from the separator is in the best possible condition for feeding calves and pigs and is of great value for this purpose. The up-to-date farmer raises his calves on skim milk and sells the cream to pay for keeping the cow.

The initial expense is practically the only one attached to a separator. On the Agricultural College farm a separator has been used to separate the milk of twenty-eight cows twice a day for four years with less than \$1 expense for repairs.

I do not care to recommend any particular kind of separator here. There are twelve or fifteen kinds that will give good satisfaction if used under proper conditions.

Make Animals Comfortable.

In feeding hay to horses I arrange the manger so as to be the most convenient height to snit the horse so it will be high enough for him to reach to the bottom, which is made of slats and about eight inches from the door, writes J. G. Kapp, in *Rural New Yorker*. The fine dust, etc., goes through and is easily cleaned out. The top of manger and feed box is so arranged that the top of the horse's head will be even with his back when he is eating.

I find this plan gives the horse the most comfort, and he seems to take his feed with more ease than any other way. In giving him the most comfort in the stable he will show himself off better when in harness. It seems unreasonable to expect a horse to hold his head high when he must twist his neck in all shapes to get his hay out of a rack or hay shoot or stand on his tiptoes to reach in over a high manger. Do you use a high table and low chairs to make your children walk with head and shoulders erect and a quick, smart walk?

I have trained quite a number of colts and have tried several methods, but the best success I have had is to train them in harness. First leave the checkrein loose, then shorten up as they become accustomed to the bit and harness. Never use an overcheck; always side rein. I hope there is no one thoughtless enough to have his horse eat hay from the ground. It is wasteful, slovenly and unclean. I never saw a high headed horse so made by making him hold his head down first.

Half a gallon shrinkage in a cow's milk is very hard to regain after two weeks of dry weather or short pasturage.

THE \$60,000

DAN PATCH 1:56 1/4

CHAMPION PACING HORSE of the WORLD
(Without Hopples, Wind-Break, Etc., Etc.)

EATS
3 FEEDS FOR ONE CENT
EVERY DAY.

"International Stock Food" greatly aids Digestion and Assimilation so that More Nutrition is obtained from all grain eaten. It "tones up" and Permanently Strengthens the entire system and Purifies the Blood so that disease is prevented. Every \$3.50 pail of "International Stock Food" is positively guaranteed to save \$7.00 worth of grain. It will cause your Race Horse to have more speed and endurance. It will make your Carriage Horses healthy, fat and beautiful. It will give your Show Horses more life and action and make them glossy. It will make your Work Horses strong, healthy and of great endurance. It will make your Stallions and Brood Mares snorer, and your colts will be better and grow and develop more rapidly. "International Stock Food" is absolutely harmless even if taken into the human system. It is prepared from Roots, Herbs, Seeds and Barks and is fed in small amounts as an addition to the regular grain allowance. It is equally profitable when fed to Horses, Cattle, Sheep, Hogs, Colts, Calves, Lambs or Pigs. It will make you a large extra profit when fed to your stock for Growing, Fattening or Working. It will increase milk 15 to 25 per cent. in Cows, Mares, Sows or Ewes, and only costs 3 FEEDS FOR ONE CENT. A Dan Patch colt commanded \$5,000 at eight months of age. He looked like a yearling and was beautiful, strong and vigorous. The dam was fed "International Stock Food" before and after foaling, and the colt as soon as it would eat. Dan Patch became the World's Champion Harness Horse nine months after commencing to eat "International Stock Food" every day. If it is good for such horses don't you think it would pay you to test it on yours? Our "International Stock Food Farm" contains 650 acres, 12 miles from Minneapolis, and on it our own Dan Patch 1:56 1/4 Directum 2:05 1/4, Roy Wilkes 2:06 1/4, and a hand of brood mares. They all eat "International Stock Food" every day. BEWARE OF IMITATIONS and SUBSTITUTES. There are many worthless imitations on the market, put out by people who seem to think that the way to start a business is to steal as much as they can from some prominent firm. No chemist can separate and name all of the ingredients used in "International Stock Food," etc., and any chemist or manufacturer claiming to do so must be an Ignoramus or a Falsifier.

A BEAUTIFUL DAN PATCH PICTURE FREE

We have a very fine, large lithograph of Dan Patch with the great driver, M. E. McHenry, in sulky. This Lithograph, Printed in Six Brilliant Colors, is one of the finest and most attractive horse pictures ever published. It is 21x28 and printed on heavy paper suitable for framing. We Will Mail You One Copy Free, postage prepaid, if You will Answer Two Questions.

1st.—Name This Paper. 2d.—State How Much Stock You Own.

Answer these questions in a letter or on a postal card and we will mail at once. Write at once before the offer is withdrawn. Address....

New Aids in Buying and Selling.

During the past five years it is estimated that nearly five hundred thousand country homes have been connected with telephone lines. This would equal about one telephone to every eight farm families in the United States. Although it must be conceded that many of the country subscribers were villagers and not farmers, still the rate of extension in the farming districts is such that probably within a few years most farmers will have telephones in their houses or, at least, in those of near neighbors.

Evidently the telephone is gradually to change the methods of business in certain directions. Not only will the local storekeeper, doctor and mechanic receive orders by telephone, but the city dealer and commission man may send out his calls in time of scarcity, giving his shippers the benefit of temporary high prices.

Further still, it may be possible for the farmers to build up a direct retail order trade with the thousands of city telephone subscribers, thus doing away, to some extent, with the work and commission of the middlemen. The rural telephone and a better system for sending large packages by mail would together prove a wonderful help and convenience both to farmers and to distant consumers.

Both these facilities, the farm telephone and the parcels post, are well on the way to happen, and they will chime in very well with rural free delivery, improved highways and new trolley railroads.

Treatment of the Young Animals.

The ringing of the young bulls should be done in December. This allows time for the nostril to heal up, so that they can be led by the ring when they are out for sale in February. From weaning time to turning out time in the following spring all the calves should be well attended to says *Pacific Farmer*. Their food must be of good quality, adapted to young, growing animals, and given at regular intervals.

They do not want coddling up in warm places, but should be kept in covered folds, which are well lighted and ventilated, and in which they have plenty of room to move about, and twice a day they should be let out into the yard to scamper and play about. They should be accustomed to being handled and kept clean with brush and comb, and should any of them be observed to be itchy and rubbing themselves, they should be washed with some dressings that are sold for the purpose. Nothing will give better results than good care of the young ones, and if this is bestowed it is astonishing how well they can afterward rough it. After being turned out at May day they need not be brought into the house again until the following spring, and then only for service. A shed in the field that they can go into, if inclined to do so, and oat straw in the winter, are all they require, but if it is thought advisable to give them cake it should be linseed cake. In my experience, cotton cake is not a suitable food for heifers that are to be bred from. Before being served, it is advisable to accustom them to be tied up by the neck in the barn. This completes their education.

A brush is better than a cloth for washing dairy utensils. A cloth smears, a brush gets off cream, butter and milk. Use hot water after having rinsed with cold water.

A cow that is a good milker should be in fair flesh at calving time. She will lose much of this fat in a few weeks, as her food goes to milk and not to fat.

Standard Trotting Stallion For Sale
ORO GUY 34192

Foaled 1898 By Oro Wilkes 2:11. Dam by Guy Wilkes, 3d dam by Sultan, 3d dam by The Moor. Black in color, stands 10 hands high, weighs 1150 pounds. With little work has shown a mile in 2:16 1/4. Square-gaited trotter; guaranteed absolutely sound. Good disposition. Stylish conformation. One of the best bred representatives of the Wilkes family on the Coast. Will be sold reasonable. Apply or address R. I. ORE, Gilroy, Cal.

COMPRESSED PURE-SALT BRICKS FOR ALL STOCK
HEALTHFUL-CONVENIENT-ECONOMICAL

Have the approval of large stock owners everywhere. Ask your dealer, or send for free booklet to BELMONT STABLE SUPPLY CO. Brooklyn, N.Y.

FOR SALE.
Three Standard-Bred Trotting Stallions

WILKES STOCK.

One Seal Brown, 16 hands, foaled May 3, 1898; first dam Fearless by Falls 4:51 (record 2:23); second dam Jean Perault by Signal 3:37.

One Golden Bay, 16.1 hands, foaled March 5, 1898; first dam Signal by Del Sur 10:08 (record 2:24); dam of Guy Line 2:39 1/4; second dam Lady Signal by Signal 3:37.

One Brown, white points, 16.1 hands, foaled April, 1899; full brother to the bay.

These colts are all sired by Prince Airlee 2:04 1/2, son of Guy Wilkes 2:07 (record 2:15 1/4), and bred by Wm. Corbitt, San Mateo, Cal. They are pure gaited and show wonderful speed for the little work they have done.

For further particulars apply to P. H. McEVoy, Menlo Park, Cal.

WALTER SEALY, Manager.

On Broken Down, Weak, Sprained and Ruptured Ligaments and Tendons Its Power is Unfailing.

No Man need see his Horse suffer and become incapacitated.

"SAVE-THE-HORSE" POSITIVELY AND PERMANENTLY CURES BONE AND BOG CURB, SPLINT, OAPPED HOCK, WINDPUFF, SHOE BOIL, WEAK AND SPRAINED TENDONS, AND ALL LAMENESS.

"SAVE-THE-HORSE" cures without scar, blemish or loss of hair; can be applied anywhere and in all conditions and extremes of weather. Horses may be worked as usual with shin or ankle boots, as no harm can result from destruction of hair or scalding of limb.

Cured horses are absolute certainties as to the possibility of the remedy for your own case. Such results, as shown in our booklet, by business men whose reliability can be readily ascertained, have carried "SAVE-THE-HORSE" over skepticism, prejudice and uncertainty. Send for the booklet and copy of written guarantee, which is as binding to protect you as the best legal talent could make it.

\$5.00 PER BOTTLE.

Written guarantee with every bottle. Need of second bottle improbable, except in rarest cases. If your case is different we advise frankly as to possibility of the remedy effecting a cure. Give veterinarian's diagnosis, if he is competent. Describe age, development, location of swellings, lameness, and way horse carries and holds leg.

\$5.00 a bottle at all druggists and dealers, or sent express prepaid.

It is good economy to keep the cows in full milk till the fall food comes and then they have a good sendoff for producing a good lot of milk during the winter.

Sober up on Jackson's Napa Soda.

Water in Buttermaking.

In a recent bulletin of the Iowa experiment station on the keeping quality of butter, the quality of the water used in the creamery, is considered as follows:

All well water, whether it be from shallow wells or deep wells, contains bacteria. Water from shallow wells is polluted with impurities to a greater degree than water from deep wells. The conditions which surround shallow wells do not guarantee a creamery pure water at different seasons of the year. Filthy surface water is all the time seeping in from the sides, especially during the wet season. In the spring of the year, or at any time during the different seasons when heavy rains are frequent, shallow, open or bored wells act as a receptacle for inflowing, nasty, surface water containing a great deal of organic matter, and where organic matter is present, germs of different species are always sure to be present.

Besides being a receptacle for such inflowing water, shallow wells serve in the capacity of traps for a number of animals, such as rats, mice, rabbits, skunks, minks of squirrels. The presence of one or more of these dead animals in an open well is sure to result in water strongly impregnated with undesirable odors and a multitude of undesirable and putrefactive organisms, which, when distributed through butter will produce no good results. If every open well was drained and searched for such dead animals, very few would be searched in vain.

The writer has seen water used which was impregnated with impurities and had odors to such an extent that it imparted directly to the butter this same undesirable odor and taste. The very fact that water from certain wells has a clean appearance and pure taste does not necessarily indicate that it is free from undesirable germs. Deeply-drilled wells are much the best for supplying creameries with water. They cannot in any possible way serve as a trap for small animals as can the open wells. Germs do not enter the soil so deep as to cause water to be infested with them, so the number of germs deep well water contains largely come from the atmosphere after exposure to it or to unclean receptacles.

Professor Pammel found shallow well water containing as high as 18,000 germs per cubic centimeter. Deep well water he rarely found to contain more than 400 germs per cubic centimeter.

Do Not Use Scrub Bulls.

The question of preventing the use of scrub bulls was gone into very thoroughly at the recent meeting of Jersey cattlemen in Rochester, N. Y. It was admitted that some registered bulls are inferior as all stock does not run alike, even in the same family strains, but this fact furnishes no excuse whatever for the present general use of unregistered, non-descript, scrub stock and it should be discouraged as far as possible.

One great difficulty is the time required to prove the prepotency of a bull. Mr. Peer thought that many splendid bulls have gone to the shambles before their get had time to prove their value.

Mr. Cogswell advanced the theory that a great milker often dwarfed her powers of reproduction, and the value of the get of a poorer dame is often derived from and comes through the bull. Some of the best Jerseys ever milked have persistently refused to reproduce very great milking qualities in their offsprings.

The question of an advance registry, establishing a standard for Jersey bulls was discussed and the suggestion was made that legislation might be devised to co-operate with and encourage it.

The stud law of New York was mentioned as a suggestion upon which to base legislation. This law protects the owner of a stallion from financial loss by providing security in the nature of a chattel mortgage lien on the mare and colt.

CAMPBELL'S EMOLLIO IODOFORM GALL CURE

For GALL BACKS and SHOULDERS, CRUPPER SORES and SADDLE GALLS there is none superior.
The horse CAN BE WORKED AS USUAL For BARBED WIRE CUTS, CALKS, SCRATCHES, BLOOD POISONED SORES and ABRASIONS OF THE SKIN it has no equal.
It is very adhesive and easily applied to a watery as well as a dry sore.
Its use will absolutely prevent BLOOD POISONING. In this respect there is no Gall Cure offered which can justly even claim to be a competitor. We placed it on the market relying wholly on its merit for success, and notwithstanding the fact that comparatively little has been done in the way of advertising the sales of 1900 were 100 per cent greater than the aggregate sales of Gall Cure preceding that year. This increase was entirely due to its MERITS, and from it we feel justified in saying that it is the GALL CURE OF THE 20TH CENTURY.
It is a quick and sure cure for those troublesome skin cracks under the neck which injure and often lay up race horses.

All Trainers Should Have it in Their Stables

Conditions for the Entry of Foals of 1903, to close and name by midnight, Tuesday, December 15, 1903.

Foals of 1903, the progeny of stallions duly nominated to be entered and named by midnight of Tuesday, December 15, 1903.

Colts and geldings at \$10 each fillies at \$5 each, the only forfeit if declared by December 15, 1904. If left in after December 15, 1904, and declared by April 20, 1905, colts and geldings to pay \$30 each, fillies \$15 each.

If left in after April 20, 1905, colts and geldings to pay \$50 each, fillies \$30 each.

Stallions—Colts, geldings and fillies to pay \$100 each additional.

The Westchester Racing Association to add \$5000 and the remaining 50 per cent of the stallion entrances, of which \$1200 to the second and \$200 to the third. The nominator of the winner to receive \$1000 out of the subscriptions and starting money.

Of the subscriptions for stallions, the nominators of the sires of the first, second and third horses shall receive 25 per cent., 15 per cent and 10 per cent respectively.

Colts to carry 122 lbs., geldings and fillies 110 lbs.

The produce of stallions which have not produced a winner prior to December 15, 1903, allowed 5 lbs. if claimed at time of entry. By filing with the Westchester Racing Association, prior to December 1, 1904, an accepted transfer of the foal's entry, the original subscriber shall be released from liability as to the engagement of the horse, except for the original forfeit of \$10 or \$5.

Last five furlongs, Eclipse Course.

Both the National Stallion and the Matron as above are to be run under the Rules of The Jockey Club and Westchester Racing Association applicable to the conditions of each and both of them, viz.: Rule 38, Rule 54, Part IV, Rule 63, and Rule 5, Part III, Rule 72.

For further particulars and entry blanks, address

LAST PAYMENT \$10 ON THREE-YEAR-OLDS JANUARY 2, 1904.

STARTING PAYMENTS—\$25 to start in the two-year-old pace. \$35 to start in the two-year-old trot. \$35 to start in the three-year-old pace. \$50 to start in the three-year-old trot. All starting payments to be made ten days before the first day of the meeting at which the race is to take place. Nominators must designate, when making payments to start, whether the horse entered is a trotter or pacer. Colts that start at two years old are not barred from starting again in the three-year-old divisions.

PACIFIC BREEDERS FUTURITY STAKES No. 2---\$6000 Guaranteed

FOR THE GET OF MARES COVERED IN 1901 (FOALS BORN IN 1902)

ENTRIES CLOSED OCTOBER 1, 1901

To Trot or Pace at 2 years old in 1904 and at 3 years old in 1905, at either or both ages.

MONEY DIVIDED AS FOLLOWS:

1904	1905
Two-Year-Old Trotters.....\$1250	Three-Year-Old Trotters.....\$2000

THE
BIG STORE

JEPSEN BROS CO. (INC.)
1145-47 MARKET ST. SAN FRANCISCO

PALACE HOTEL, SAN FRANCISCO, CALIFORNIA.

TOURISTS and TRAVELERS will, now, with difficulty recognize the famous COURT into which for twenty-five years carriages have driven. This space of over a quarter of an acre has recently, by the addition of very handsome furniture, rugs, chandeliers and tropical plants, been converted into a lounging room—the FINEST IN THE WORLD.

The EMPIRE PARLOR—the PALM ROOM, furnished in Cerise, with Billiard and Pool tables for the ladies—the LOUIS XV PARLOR the LADIES WRITING ROOM and numerous other modern improvements, together with the unexcelled Cuisine and the Most Convenient Location in the City—all add much to the ever increasing popularity of this most famous HOTEL.

CURBS, SPLINTS, SPAVINS, WINDPUFFS,
—and all enlargements, absolutely removed by—

QUINN'S OINTMENT.

It has the unqualified endorsement of our leading horsemen and veterinarians.

Mr. C. E. DINEHART, Cashier State Bank,
Slayton, Minn., says:
"One bottle cured a very bad case of blood spavin on a mare for which I have since been offered \$300. I would not be without it if it cost \$5.00 a bottle."
We have hundreds of such testimonials.

Price \$1.00 per package. Ask your Druggist for it. If he does not keep it, we will send prepaid on receipt of price.

STRICTLY IN ADVANCE.

Money should be sent by postal order, draft or by registered letter addressed to F. W. KELLEY, 36 Geary St., San Francisco, Cal. Communications must be accompanied by the writer's name and address, not necessarily for publication, but as a private guarantee of good faith.

San Francisco, Saturday, December 5, 1903.

THE CHRISTMAS EDITION of this paper which is to be published December 26th, is to be the handsomest paper ever issued from this office. The cover is a work of art and is to be embossed in color and gilt and contain four handsome medallions on which will be the heads of the champions, Lou Dillon 1:58½, Cresceus 1:59½, Major Delmar 1:59½ and Dan Patch 1:56½, engraved from photographs from life. The statistical tables of racing on the Pacific Coast and on the Grand Circuit in 1904 will be very complete and the list of new standard performers sired by California bred or owned sires will also be printed. There will be several special articles by well known writers on turf topics and much matter of vital interest to all horsemen. The Stallion Directory, which has been a prominent feature of our holiday edition for several years past, promises to be larger than ever. The illustrations in this issue will surpass anything yet attempted by this journal and will comprise photo-engravings of the leading champions of the turf, besides famous stallions and broodmares. The Rod, Gun and Kennel Department and the Farm Department will contain many new and special features and be beautifully illustrated. The advertising space in this edition is to be limited, so advertisers should send in their requests for space immediately. There is to be no extra charge for advertising in this issue—prices remain the same.

SUGGESTIONS for a Central California Circuit are in order, and the BREEDER AND SPORTSMAN will be pleased to receive the same from horsemen and others interested in a circuit of harness racing in this State in 1904. As a starter we will suggest the following: Let the circuit open early—not later than August 1st, and by July 15th if that date is found practicable. In a state where horses are put in training by the first day of the year, a late circuit is an absurdity. We would suggest that the circuit be strictly one of harness racing and that the managers of the mile tracks within a radius of two hundred miles of San Francisco meet by January 10th and effect some sort of an organization and agree upon dates. How would the following do? Opening meeting of say four days at Santa Rosa, thence to Petaluma, Napa, Vallejo, Woodland, State Fair, Stockton, Pleasanton and San Jose. This would give nine meetings of from three days to one week each, and if good purses were advertised by February 1st, the list of entries would be large. The Breeders association will have a great program for its meeting of 1904. There will be the three-year-old divisions of the Futurity Stake No. 1, and the two-year-old divisions of Stake No. 2, to decide. Besides these there will be a stake of \$2500 or \$3000 for the 2:24 class trotters and one of \$2000 for the 2:20 class pacers. It is also proposed to give some good sized purses for the fast classes, so as to induce those owning these horses to race at home. A \$1000 for 2:08 pacers ought to fill well, and \$1000 for the 2:15 class trotters would bring out a big field of horses and result in a horse race. If the smaller towns will confine their meetings to not more than four days they can afford to make the purses for all classes larger. The plan was tried this year at Vallejo and Petaluma and worked well. \$10,200 was paid out in purses and stakes by the Breeders association at Petaluma in a four days program and the profit on the meeting was \$800. Had the meeting opened Tuesday instead of Wednesday the probability is that the association would have lost \$800 instead of making that much. The reason is obvious. The gate receipts would have been no larger as the aggregate attendance would have been about the same. But an extra day of racing would

have required at least \$1500 more in purses and this would have put the balance on the wrong side of the ledger. It was the same at Vallejo. Seven hundred dollars profit was made on a three days meeting—all that town will stand. Four or five days, with the extra expense necessary for extra purses would have brought a heavy financial loss to the management. Good purses and short meetings should be the watchword of the circuit of 1904, if we are to have one. In the meantime we would like to receive suggestions from any and all concerned in having a good circuit of harness racing in California next year.

A DISPATCH from New York received this week states that Mr. Brayton Ives, the New York millionaire, has paid Monroe Salisbury \$20,000 for his great trotter Monte Carlo 2:07½ and will retire him from regular racing, using him solely as a roadster and for matinee racing. Monte Carlo is undoubtedly one of the highest class trotters in the country and should make an ideal road horse. He has size, good looks, youth, and is as near a perfect gaited one as has been seen on the tracks in years. There are many of the most prominent trainers who hold that had Monte Carlo been raced less he would have been almost unbeatable. They claim that he is a horse that will not stand hard racing every week and that if he had not been started oftener than once in two weeks he would have raced well and consistently. He is an intelligent horse, game as a pebble, and will trot the last quarter as fast as the first, but this year he refused to score and acted badly on several occasions, until the turf followers called him an "in and outer." It was claimed that a gravel in his foot made him act badly and that when it was discovered he was let up on and his foot cured up so that he started in the McDowell Stake a well horse. His showing in this race in which he won four heats, but was disqualified in one, was pretty good proof that the "gravel" theory was correct. But in his very next start he repeated his bad acting. As a road and matinee horse Monte Carlo should be able to make a great showing next year. He is a horse that always has his speed and few trotters make a better appearance when hitched to a wagon. It is pleasant to know that Mr. Salisbury has obtained such a good price for him, but it is not more than trotters of Monte Carlo's class are worth at the present time.

WE REGRET TO LEARN that Mr. Tom James of San Jose, owner of that grandly bred stallion Barondale 2:11½, will soon return to his old home in Iowa, and take his horses with him. Mr. James has business interests that demand his attention there and leaves California with regret as he has found improved health here and says the Santa Clara valley is to him the garden spot of the world. During his two years residence in San Jose he has earned the esteem and respect of all who have had the opportunity to meet or do business with him and has made a host of friends who will regret that he is not to remain a citizen of this State. Horsemen generally will feel that the taking of his horse Barondale away will be a direct loss to the breeding interests of California, and those who have bred their mares to this son of Baron Wilkes may consider themselves very fortunate. By Mr. James' return to his old home, California will lose a citizen who represents the true type of the American gentleman, and one who is a desirable acquisition to any community. May health and prosperity attend him and his wherever they may be.

MR. AND. ROBINSON of Sidney, Australia, who has been in this country since last August, during which time he spent several weeks on the Grand Circuit and in Kentucky, reached San Francisco last week with six trotting bred horses that he purchased at the Lexington sale and from private parties. While they have all been examined by Dr. Egan and have a clean bill of health, they will not be shipped to Australia for two or three weeks, as one of the mares was severely injured by alipping just before leaving Kentucky and is very lame at the present time. There are two young stallions in the lot—one by Bow Bells and the other by Birchwood. A two-year-old by Heir-at-Law 2:05½, out of Vera Capel 2:07½, is considered by Mr. Robinson to be one of the most promising youngsters in the country. She is certainly an elegantly bred one.

THE MILE TRACK at Santa Barbara is now in first-class condition, and within the past year a number of new stalls have been built, thereby offering accommodations for a good many horses. Mr. S. G. Randall, the manager of the track, proposes to give a meeting of four days, beginning on Christmas Day and closing December 29th, omitting Sunday, during which purses will be hung up for trotters, pacers and runners. The track is said to be an excellent one.

CRESCUS' RECORD WILL STAND and be recorded as 1:59½ in volume 19 of The Year Book. The Board of Appeals of the American Trotting Association which has been in session at Chicago this week adjourned last Thursday without taking any action on the matter of the record made by Cresceus at Wichita in October. This is the only statement made in a short dispatch sent out by the Associated Press, and doubtless means that there was not enough evidence of fraud to base any action upon. As the Board will not meet until next May, and the Year Book will be printed before that time, Cresceus will be credited with the mile in 1:59½ as reported by the Wichita association. It is a victory for Mr. Ketcham that every true horseman will be pleased over. The dispatch states that "the case hinges on a technicality." There seems to be no doubt in the minds of those who have investigated the matter that the mighty son of Robert McGregor trotted his mile fairly and squarely in a quarter of a second less than two minutes, and the only point against him is that some little technical point of the many requirements of the rules governing time records was not complied with. However, the Board of Appeals, considered this so trivial that they took no action on the matter, and therefore the record will stand. We congratulate Mr. Ketcham on the outcome of the case as the breeder, owner, trainer and driver of the champion trotting stallion, the first trotter to beat two minutes.

THE OCCIDENT STAKE OF 1906 is announced by the State Agricultural Society. It will close for entries on the first of January, the conditions the same as previous stakes. The total entrance is \$100, of which \$10 must be paid January 1, 1904, \$15 one year later, \$25 January 1, 1906, and \$50 thirty days before the race. It is the richest stake for three-year-olds that is given on the Pacific Coast and is growing in value every year. This year it was worth \$3920, of which \$2512 went to the winner, Tuna by James Madison. Next year the stake promises to be even larger, and this one for 1906 should be worth at least \$3000 net to the winner. The stake is for foals of this year to trot as three-year-olds in 1906. Don't forget to name your weanlings in this stake as it will be one of the richest ever given and will net its owner a small fortune. Entries close with L. R. Miller, Acting Secretary, Sacramento, Cal.

The Goliath of Geldings.

Snyder, the highest horse in the world and one of the most wonderful of strange animal freaks to be exhibited at the Louisiana Purchase Exposition in St. Louis next year, is owned in Cleveland, Ohio. The horse is a Percheron gelding, foaled in 1900, in Monroe county, and until last July owned by H. D. Snyder of Millersburg, Holmes county. He is the tallest horse in the world, standing 21 hands and weighs 2700 pounds, probably the heaviest horse in the world, although discredited reports from Belgium tell of two horses weighing 2800, owned in that country of heavy Flemish horses. Snyder is a beautiful dark chestnut in color, with not a mark on him except for a white puzzle atar in his forehead. This and two one-inch horns which are growing out of his temple are his freak features and are most remarkable. The horns cannot be accounted for, while the white star or puzzle is in the form of the forequarters of a horse or deer, showing the legs, head and horns and curve of the neck. It has been likened to a map in South America as well, but its striking resemblance to the forequarters of an animal is noted at first glance. The animal has been exhibited this fall at many county fairs and has attained considerable of a reputation as a wonderfully developed horse. At exhibitions, to make the horse's size appreciable, a man of average height stands at its head and reaches hut to his nose, while the horse's towering height is further illustrated by the fact that when his owners or hostlers clean him, it is necessary to stand on a stepladder in order to reach his back.—Breeders Gazette.

The remarkable four-year-old trotting mare Angle, that recently trotted a mile at Lexington, Ky., in 2:06½, stepping the last half in 1:02½, is, like Fereno 2:05½, (the fastest race trotting mare ever bred in Kentucky), an inbred Wilkes. Angle was sired by Axtell 2:12, dam Lena Rivers, by Gambonito 2:19½, son of Gambetta Wilkes 2:19½, second dam Ella B. by Belhrino, son of Mambrino Patchen, third dam Belle, by Young Messenger, son of Downing's Bay Messenger. The fact that the world's record for a four-year-old trotting mare is 2:06 is evidence that this daughter of Axtell is of the phenomenal order. She has never started in a race, but is perfectly mannered and has on different occasions trotted a last quarter of a fast mile in 30½ seconds. Her owner, Mr. J. J. McDonald, of Cuthbert, Ga., has been content to have her brought gradually into form and he now feels certain that in the daughter of Axtell he has a trotter that will take high rank among the great trotters when she is permitted to start with that object in view.

The Care of Stallions.

[Written for the BREEDER AND SPORTSMAN.]

The treatment that is given any good horse, or rather that ought to be given him, is about the treatment that should be given a stallion. He should have what good sweet, clean oat hay he wants to eat, and be given oats according to his work. He should have a large, well lighted and well ventilated box stall that always contains a bed of clean, dry straw, so that air arising from it is pure and fresh. He should have at least one good cleaning with a brush and cloth every day, providing he is not of an irritable disposition. He should be kept in the most perfect health and in the highest state of vigor, and to this end should have plenty of exercise. It should be given in harness or saddle and if possible he should be turned out in a clean sandy or grass paddock a few hours every day so that he can pitch and tumble around. If it can be reached clean sea sand is just the thing for him and he should be allowed to roll in it to his heart's content, as a stallion needs the sun and plenty of fresh air and the fresh earth to keep his skin and feet and whole system healthy.

If he is a thoroughbred stallion he should be exercised to the saddle; if a light harness horse, to a cart or wagon, and if a heavy harness horse he should be used as such at least for a few miles each day to show that he will do what is required of him and have the work on his mind. Thus used a horse will be more apt to transmit to his progeny the qualities which they are bred and intended for. All this exercise benefits his lung and heart action, develops his muscles and sinews and gives him strength and vigor to get strong and healthy progeny. A pampered high fed stallion, kept in the shade, will as a rule get feeble, puny and unruly colts. Light harness or saddle work, accompanied with the paddock work is indispensable to maintain unimpaired vigor.

When there is grass he should have at least twenty minutes to eat it every day. A lump of rock salt kept constantly in his box, is in my opinion the best plan of feeding this necessary. Give him all he wants and allow the horse to be the judge as to the quantity. He will not overdose himself.

There is another important matter in the treatment of a stallion. He should have during the breeding season, certain and regular hours in which to serve mares, and they should not be admitted to him at any other time. If he is rushed with patronage, he may be permitted to serve twice a day, at night and morning, but otherwise he should be limited to once a day.

Much depends, of course, upon the constitution and vigor of the horse. If they are permitted to receive mares at any time they are very liable to be fretful and excited all the day long, and many valuable stallions have been lost by this course. One mare each day is sufficient and not more than two occasionally when there is a rush. I refer, of course, to valuable stallions and presume that the owner of the mare wants to raise a good strong colt that will be a credit to both sire and dam. If one breeds to an inferior stallion it matters but little whether the scrub produce amounts to anything or not. The sooner it shows its worthlessness and that there is no profit in that kind, the better for all concerned.

The word "condition" is used by horsemen in a different sense from that applied to cattle, and by the majority of farmers and stock raisers. The horsemen use the word to indicate perfect health and strength produced by reducing all superfluous fat and bringing the flesh into clean, hard and powerful muscle, thus invigorating the entire system including the internal organs. By the condition of a stallion is meant that state of the system in which he should be kept in order for him to transmit and reproduce the greatest excellence and vitality in his progeny. Too many persons are content to breed their mare to a stallion whose figure suits them, without regard to his condition or the condition of the mares. Both should be as near perfect health and vigor as possible.

C. E. B. S. G. S.

San Francisco, Nov. 30, 1903.

Thanksgiving Matinee at Los Angeles.

The Los Angeles Driving Club held one of its successful matinees on Thanksgiving Day last week, and in spite of counter holiday attractions of football, base ball and theatres, several thousand people were out to see the speed contests between the many good horses owned by the members of this thriving organization. Five races were started, and all finished except one, the 2:16 for both trotters and pacers, which had to be called off after three heats had been decided owing to the lateness of the hour.

The first event was the 2:30 pace between Mr. Bixby's Boh H. Russell, Mr. Mosher's Admonte, Mr. Delory's El Mont, Mr. Heller's Electra and Mr. Budinger's Glen. While Mr. Mosher won the race in two

straight heats with Admonte in good time, Mr. Delory's gelding pressed him closely in hot heats and made the finishes close and exciting.

It took three heats to decide the 2:30 trot. Dr. Hagan, driving Mr. W. A. White's mare Katbleen, won the first heat by a nose from Mr. H. C. Wyatt's mare Catherine, driven by Mr. A. W. Bruner. The second heat it was impossible for the judges to separate the two mares and it was called a dead heat. Blanch Conifer, the other starter, was drawn before the third heat was started, and the third heat was a duel between Katbleen and Catherine, ending in a whipping finish with Kathleen first at the wire by a half length.

The free-for-all brought out three starters. President Byron Erkenbrecher drove his mare Rita H., fresh from her great winning campaign up north this year. Mr. C. A. Gates was up behind his hay gelding L. W. and Mr. J. A. Chanslor drove his fast gelding Ira 2:10 1/4. In hot heats the horses were sent away well bunched, and Mr. Erkenbrecher took his mare hack and trailed the others until the stretch was reached, when he gave the daughter of McKinney her head and she won handily.

Mr. C. A. Canfield's brown gelding Athalo was the winner of the 2:20 pace in straight heats, Victor Platte being awarded second place in the summary.

When three heats of the 2:16 mixed race had been decided it was found that darkness would prevent the finish of the race. Briney K. and Limonero, trotters, and Robert L., pacer, each had a heat to his credit. It was then announced that the race would be finished on Christmas Day, when the driving club will give another matinee.

The officers of the day were as follows: Judges, Messrs. H. N. Henderson, H. C. Bundrem and George Morgan; timers, Dr. W. W. Hitchcock, Dr. Millbank Johnson and Mr. J. A. Fairchild; starter, Mr. A. W. Bruner.

The officers of the driving club are: President, Mr. Byron Erkenbrecher; Vice-President, Dr. Wm. Dodge; Treasurer, Mr. C. A. Canfield; Secretary, Dr. Ralph Hagan. The other directors are Dr. W. W. Hitchcock, Dr. J. A. Edmonds and Messrs. J. A. Fairchild, Thomas Hughes, H. N. Henderson, H. A. Bundrem and Wm. Garland. Mrs. F. E. Chandler is Assistant Secretary.

The summary of the day's events are as follows:

Pacing, 2:30 class.	
Admonte, ch g.....	(M. B. Mosher) 1 1
El Mont, b g.....	(E. J. Delorey) 2 2
Electra, h m.....	(W. L. Heller) 3 3
Boh H. Russell, h b.....	(Dr. Bryson) 5 4
Glen, h m.....	(P. L. Budinger) 4 5
Time—2:30 1/4, 2:19 1/4.	
Trotting, 2:30 class.	
Katbleen, h m.....	(Dr. Ralph Hagan) 1 0 4
Catherine, h m.....	(A. W. Bruner) 2 0 2
Blanche Conifer.....	(Henry Berry) 3 3 dr
Time—2:26, 2:25, 2:26.	
Pacing, free for all.	
Rita H., hr m.....	(Byron Erkenbrecher) 1 1
L. W., h g.....	(C. A. Gates) 2 2
Ira, b g.....	(C. A. Canfield) 3 3
Time—2:12 1/4, 2:14 1/4.	
Pacing, 2:20 class.	
Athalo, hr g.....	(C. A. Canfield) 1 1
Victor Platte, h g.....	(E. J. Delorey) 2 4
San Gabriel Prince, ra g.....	(P. B. Michel) 6 2

Proctor, ch g.....	(M. B. Mosher) 4 5
Time—2:15, 2:20.	
Mixed, 2:16 class. Unfinished.	
Robert L., ch h (p).....	(R. B. Morehead) 3 2 1
Limonero, h s (tr).....	(Dr. Dodge) 2 1 3
Briney K., h g (tr).....	(W. H. Berry) 1 4 2
Scappoose, h m (p).....	(R. B. Mosher) 4 3 4
Time—2:14 1/4, 2:15 1/4, 2:19 1/4.	

Sale of Thoroughbred Yearlings.

The yearlings from Mr. W. O'B. Macdonough's Menlo Stock Farm were sold by Mr. William G. Layng at the Occidental Horse Exchange last Tuesday evening. There was a very large attendance and the bidding was quite spirited. The twelve yearlings sold brought the following prices:

- Chestnut filly by St. Carlo-Geneva VIII. by Fonso, to M. J. Daly for \$375.
- Bay filly by Bright Phoehus-Haidee by King Alfonso, to J. Foley for \$150.
- Bay colt by Sam Lucas-Hertha by Islington, to Vic Gilbert for \$350.
- Chestnut colt by Magnet-imp. Chiffie by Prism, to Caesar Young for \$350.
- Bay or brown filly by Orsini-Moonlit by imp. Greenback, to J. C. Nealon for \$775.
- Brown filly by Orsini-imp. Miss Brummel by Geo. Frederick, to Caesar Young for \$1400.
- Bay filly by Bright Phoehus-Lovelight by Racine, to Ed Lilburn for \$325.
- Bay filly by Bright Phoehus-Lux by Flambeau, to James Coffey for \$625.
- Chestnut colt by St. Carlo-Moldene by imp. Islington, to J. S. Givens for \$750.
- Bay colt by Bright Phoehus-Spinach by imp. Waterress, to J. W. Daly for \$350.
- Chestnut colt by St. Carlo-Gold Lace by imp. Ormonde, to Caesar Young for \$1800.
- Bay filly by Sam Lucas-The Peers by His Highness, to A. J. Molero for \$150.

Palo Alto Horses at Old Glory Sale.

Following is a summary of the sale of Palo Alto horses by the Fasig-Tipton Company in New York on Monday, Nov. 23d:

- Exioneer hlk h, 1897, by Boodle-Expressive; S. A. Fowler, St. Johns, N. B., \$400.
- Monbells h, 1897, by Mendocino-Beautiful Bells; W. Harry Orr, Reading, Pa., \$900.
- Lulu Wilkes blk m, 1882, George Wilkes-Lula; A. L. Thomas, Omaha, Neb., \$185.
- Rosemont b m, 1833, by Piedmont-Beautiful Bells; A. H. Kingsley, Concord, N. H., \$135.
- Lucyner br m, 1888, by Electioneer-Lucy; Dr. J. C. McCoy, Kirkwood, Del., \$175.
- Palatino blk m, 1891, by Palo Alto-Elaine; A. L. Thomas, Omaha, Neb., \$295.
- Avena cb m, 1890, by Palo Alto-Astoria; Dr. J. C. McCoy, Kirkwood, Del., \$225.
- Cressida blk m, 1892, by Palo Alto-Clarahel; James Wetberill, Galt, Ont., \$300.
- Maiden b m, 1884, by Electioneer-May Queen; S. A. Fowler, St. Johns, N. B., \$160.
- Elden blk m, 1839, by Nephew-Eleanor; James Wetberill, Galt, Ont., \$750.
- Coral b m, 1887, by Electioneer-Columbine; J. A. Murray, Jobstown, N. Y., \$175.
- Alula br m, 1896, by Altivo-Lula Wilkes; Wm. Cobb, Spring Mills, N. Y., \$200.
- Palita cb m, 1893, by Palo Alto-Elsie; A. G. Danforth & Sons, Washington, Ill., \$425.
- Helena h m, 1889, by Electioneer-Lady Ellen; R. H. Shockency, Kirkwood, Del., \$1,050.
- Novelist b m, 1889, by Norval-Elsie; W. A. Pierce, Stanstead, Quebec, \$260.
- Liska h m, 1889, by Electioneer-Lizzie; L. D. Fossett, New York, \$185.
- Sweetwater br m, 1890, by Stamhoul-Manzanita; McNamara & Wells, New York, \$225.

Wilkes Stallions for Sale.

Mr. P. H. McEvoy of Menlo Park is offering several desirable young Wilkes stallions for sale as will be seen by an advertisement in another part of this issue.

Col. J. C. Kirkpatrick has let the contract for a cottage to cost \$5000 to be erected on his lot on Rose street, Pleasanton, close to the famous training track in that town.

Jackson's Nana Soda untangles the feet.

Notes and News.

Monte Carlo, \$20,000.

Fast horses bring the money.

Mr. Salisbury is expected home next week.

It is proposed to announce the California circuit dates by January 10th.

Good money will be hung up for the harness horses in California next season.

Ed. Benyon expects to mark Fereno 2:05½, in about 2:03 next season.

The Los Angeles Driving Club will hold its next matinee on Christmas day.

Robert Bonner's motto was "when you find a horse that suits you buy him and pay the price."

Del Norte is old Altamont's leading sire, with eight in the list, five of which are in the 2:20 list.

Don't make any mistake. Breed your McKinney mares to good stallions. They will be great producers.

Stallion owners should see that they have a place in the Directory to be printed in our Christmas edition.

Twenty-nine animals, bred at Village Farm, sold at an average of about \$697 apiece at the late Tranter-Kenney sale in Kentucky.

Dreamwold, the trotting horse farm of Thomas W. Lawson of Boston, Mass., will hereafter race no horses not bred by Mr. Lawson.

Charles Townsend of Denver, Colo., will offer a purse of \$1500 for trotters eligible to the 2:20 class for the 1904 meeting in that city.

Ethelyn by Harold is now the dam of three trotters with records of 2:15 or better, as follows: Ethel's Pride 2:13½; Extasy 2:11½ and Impetuous 2:13.

In 1903 Scott Hudson gave new records below 2:10 to eleven trotters and pacers. He has won over \$200,000 in purses during his last three campaigns.

James Sutherland's bay weanling by Stam B. 2:11½, dam the dam of Bertina 2:17½ and Redlight 2:20, by Piedmont, is a grand looking youngster and has been named Sam G.

Peter Saxe & Son, the well known importers and dealers in live stock, shipped a fine big four-year-old jack to Mexico on the steamer which left San Francisco this week.

Horses with long hair on their legs when driven through water will stand wet through the whole night, will suffer from grease, cracked heels and several other diseases.

The Lexington mile track is now closed, and trainers are jogging their horses on the half-mile track and on the road. At last reports they were wearing ear muffs and three pairs of gloves.

The only pacers that have got records of 2:04 or better this season are Dan Patch 1:56½, Prince Alert 1:57, Dariel 2:00½, Dan R. 2:01½, Fanny Dillard 2:03½ and Major C. 2:04. The average time of these six performers is just one-half second slower than 2:00.

Rensselaer Wilkes 2:11½, that won the blue ribbon in the high stepping class at the recent Chicago Horse Show, was bred at Highlawn Farm, Lee, Mass., and got by Alcantara 2:25. His dam was Nena, by Nutwood 2:18½; second dam by Woodford Mambrino 2:21½.

The famous blue ribbon winner, Lord Brilliant, a fifteen-year-old 14.3½ hand gelding, brought \$3200 under the hammer in New York City on the 23d inst. This horse has won 405 blue ribbons and 91 championships at horse shows in this country. He is trotting bred, being by Johnny Mack 2:12.

The International Stock Food Company has established a factory at Toronto, Ontario, to supply the big demand for this famous food that has grown up in that country. The factory has been placed under the management of Mr. E. B. Savage, son of Mr. W. W. Savage, proprietor of the company.

Budd Doble has concluded to stand Kinney Lou 2:07½ at the San Jose track and will take the fastest trotting son of McKinney there soon after the first of the year. He will limit him to a dozen mares at \$100 each, and will close his season early as the horse will be raced on the Grand Circuit next year.

Jack Groom has the trotters Liege 2:12½ and Dollexa 2:21½ at the Alameda track and both are in fine shape. The mare especially is looking in perfect condition for this time of the year. She was bred to Monterey 2:09½ this year and is thought to be safely in foal. The offspring from this union should be a fast trotter and a good one. Dollexa and Liege are owned by Mr. C. F. White, of Cosmopolis, Washington.

If you want to sell a horse, spend a dollar and a half on an inch advertisement in the BREEDER AND SPORTSMAN'S Christmas edition. It will be the largest edition ever issued by a horse paper west of the Mississippi river, and will reach those who are in the market for horses.

The cover of the holiday edition of the BREEDER AND SPORTSMAN will be a beautifully embossed design in color and gilt and contain handsome portraits of Lou Dillon, Cresceus, Major Delmar and Dan Patch. It will be the handsomest thing ever gotten out by a journal of this character on the Pacific Coast.

It is announced that Gen. B. F. Tracy has decided to sell all his trotting stock and retire from the breeding business. Among the well known stallions that General Tracy has owned are Kentucky Wilkes 2:21½, Mambrino Dudley 2:19½ and Advertiser 2:15½. He has bred and raised a number of good ones including Bravado 2:10½.

In trotting a mile in 1:58½, Lou Dillon covered 44 53-100 feet every second. It is necessary to average 44 feet every second to make a mile in two minutes. The records of Cresceus, Major Delmar, Alix and Maud S. are 1:59½, 1:59½, 2:03½ and 2:08½. Lou Dillon beat Cresceus and Major Delmar 55 69-100 feet to the mile; Alix 233 9:10 feet, and Maud S., 456 3-5 feet.

Frank Hansen, a horseshoer who has earned a reputation by shoeing the fastest horses on the Grand Circuit, has located at Pleasanton and leased the shop at the track there. Mr. Hansen has the endorsement of such trainers as Budd Doble, Scott Hudson, Ed Geers, Monroe Salisbury and others and will have all he can do shoeing the Pleasanton horses this winter.

C. A. Durfee has gone to San Jose to begin work on a number of colts that he has there. He says that the McKinney-Elsie yearling is doing well and looks and acts like one that will do to have expectations on. He has a yearling that he has named Covey that is by Mendocino out of Rose McKinney, the dam of Almaden 2:22½, winner of the two-year-old division of the Breeders Futurity. This colt is also a good prospect.

Speaking of soundness recently, the successful trainer, Hiram Tozier, remarked that he would rather have a good hock with a curb on it than a poor hock without a curb, and added, that if buying he would gladly accept any discount that the seller would make on account of a curb, yet if he was satisfied with the speed and racing qualities of the animal he should buy just the same if he could not get the owner to discount one cent.

In feeding weanlings the hardest season to make them grow is through the cold winter. Boiled oats twice a day, with about one-third wheat bran, put in while hot and thoroughly mixed and allowed to stand about an hour before feeding, is one of the best feeds for growing young horses. You can winter a horse very nicely on bran and good hay if he is not working hard. Too much bran for regular road use will not give satisfaction. It is liable to loosen the bowels.

The blood of old Widow Machree 2:29 keeps coming to the front through her son Aberdeen. The trotting mare Union Bell, that started in ten races the past season, won first money in eight of them, got second in the other two, and reduced her record to 2:14½, is a daughter of Bellmen 2:14½, and her dam, Omette, was by Aberdeen. Ometta is a full sister of Kentucky Union 2:07½, and also a full sister of the dam of Onward Silver 2:05½.

Rose McKinney, the dam of Almaden, the colt by Direct that won the two-year-old trotting division of the Breeders Futurity this year at Petaluma, is destined to be quite a broodmare. She is out of Queen Bee, by Forest Clay 1934, second dam Lovella by Almont Lightning 1023, third dam Daisy by the great thoroughbred sire imported Yorkshire. Almaden will trot in 2:15 as a three-year-old and could have heat 2:20 this year without much trouble.

It was not until 1862 that the great son of Treiwell's Ahdallah and the Charles Kent mare gained a reputation sufficient to justify William M. Rysdyk in raising his stud fee above \$35. Robert Fillingham, afterwards known as George Wilkes 2:22, was the trotter that earned it for him. In that year Eph Simmons matched George Wilkes against the famous Ethan Allen for \$5000 a side, and won a great race over the Fashion course on Long Island, giving George Wilkes a mark of 2:24½, which was then surpassed only by George M. Patchen 2:23½.

Thomas Ronan, owner of the Pleasanton race track, was in the city this week purchasing the lumber for forty new box stalls which are to be erected at the track immediately. All the stalls at this famous track are now occupied or engaged, and all the outside accommodations for horses in training at the track are also engaged. There will be 250 horses in training at Pleasanton by the first of February, and there are about half that number there now. The track is in fine shape; in fact, the horse men all say that it is like a piece of velvet carpet. Mr. Ronan has just returned from his ranch at Dayton, Washington, and brought with him eight head of young horses by Antrim and Alexis that will be worked by Geo. A. Kelley. He also brought a span of big mules that will be used in working the track. Mr. Ronan is thinking of erecting three or four neat little cottages on the track property, southeast of the first turn, which he will rent on reasonable terms to trainers or owners who desire to reside near the track. There are many other improvements in contemplation which will make the Pleasanton track the leading training ground in the United States.

The grand pony Sir Gihhle, famous in the new as well as the old world, was found dead in his box at Sir Gilbert Greenell's stud farm in Derbyshire, England. Sir Gihhle was brought to the United States about the beginning of the last decade and in 1895 was returned to the land of his nativity by Mr. Bainbridge. He has been very successful in the stud since his return to England and has therefore to his credit stud success in Scotland, America and England. He was the sire of the pony stallion Sir Gihhle II owned by Mr. W. O'B. Macdonough and kept at the Menlo Stock Farm.

C. W. Williams claims for Allerton the position of champion speed sire of 1903 with twenty or more newcomers to the standard lists. This true, Allerton has now been the champion sire five years altogether and he is only sixteen years of age. Farther than this he was raced hard to the old high wheel sulky and at one time was entirely overshadowed by his stable companion, Axtell 2:12, though when matured there was little to compare between the two. Allerton is the fastest stallion now living, as proved by the records, which got his mark to the old steel-tired racing vehicle.

Thos. Ronan, owner of the Pleasanton track, who has just returned from Dayton, Washington, tells us that there has been considerable talk about the breeding of Vision 2:12½, the gelding by Vanquish that made his record on the Northwest circuit this year. Mr. Ronan says that Vision's dam was by Antrim and grandam by Antelope, son of Nutwood. Mr. Duncan, who owned Antelope, bred a daughter of that horse to Mr. Ronan's stallion Antrim. The filly that resulted afterwards came into the possession of Mr. DeLashmut and she was bred to Vanquish son of Hambletonian Mambrino, the result being the good gelding Vision that paced to a record of 2:12½ this year.

Tom James of San Jose, who is compelled by business interests to return to Iowa within a few weeks, offers for sale a three year old filly by Barondale 2:11½ that is without doubt the best bred filly on the Pacific Coast from the standpoint of being bred in producing lines. She is by Barondale 2:11½, a producing sire that is by the great producer Beron Wilkes. Barondale's first, second and third dams are in the great broodmare list, and his fourth dam is the thoroughbred mare Belle Wagner. The second, third, fourth and fifth dams of this three year old filly are also in the great broodmare list. There is not a filly on the Coast that has more great broodmares in her pedigree than this three year old by Barondale. Mr. James has a yearling and a weanling full brother of this filly for sale also. See his advertisement and write him about the price.

According to a dispatch sent out on Thursday by the Associated Press from New York, Will G. Durfee of Los Angeles won his case before the Board of Review of the National Trotting Association in regard to the protest made at Seattle to the effect that Sweet Marie and Briney K. were trained in the same stable. Sweet Marie won the race and thereupon the money was tied up on a protest as stated above. Mr. Durfee went to New York to present his defense to the Board. According to the dispatch of Thursday, the Board refused to sustain the protest consequently Sweet Marie's winnings will be paid over to Mr. Durfee. Sweet Marie is owned by William Garland of Los Angeles and was leased by W. G. Durfee for this year's racing. Briney K. is owned by W. H. Berry of Los Angeles and was leased by Mr. R. A. Smith of Los Angeles, who raced him on the northern circuit.

David Herspring, who trained and raced horses on the California circuit several years ago, but who has been a resident of New Jersey for several years, is back here on a holiday visit to relatives in this State. He took Arthur L. 2:15 and Toots another son of Direct, East in 1898 for Louis Schaffer of Oakland, made a season with both stallions there and afterwards sold them. Arthur L's colts are very highly thought of and Mr. Herspring believes several of his three year olds will get fast records next year when they will race for the first time. He gave Toots a mark of 2:20 this year and drove several winning races with other members of his string owned by a gentleman by the name of Brewster. In twenty-four starts, mostly on half mile tracks, Herspring was behind the money but twice this year. Dave says California looks mighty good to him, but he is under contract to train for Mr. Brewster again next season and will return to New Jersey in a few weeks.

A correspondent of the Trotter and Pacer writes as follows: Major Delmar, who holds the world's record for trotting geldings, never posed as a public stallion in service, but as a three-year-old got a race record of 2:15, and as Mr. Spler, his owner, owned also his sire, Delmar 2:16½, he decided to breed four mares to Major Delmar and then have him castrated, and among these mares was Miss McGregor, 2:11, Mr. Spler's favorite, and another was Lizzie B. by Deaulcon 2:22. This mare was owned by Charles Baldwin, now of Ticonderoga, N. Y., who was superintendent and trainer for Mr. Spler at his Suhurhan Stock Farm, and as a final consequence Lizzie B. only, foaled a live colt out of the four mares bred, which has been very appropriately christened Major Delmar, Jr., by his new owner, Dr. W. F. Jones, of Ticonderoga, N. Y. This colt is an elegant specimen of the Electioneer thoroughbred combination—well-formed, beautiful chestnut color, with small star and three white ankles, and as a two-year-old stands over 15 hands high and promises, all things considered—gait, quality, etc.—to become one of the leading trotting and show stallions of America, and should prove a sire of extreme speed.

A Good Stallion to Breed To.

The first stallion announcement in this journal for the season of 1904 appears this week. It is the advertisement of that grandly bred horse Dictatus Medium 2:24 (trial 2:12), owned by Mr. R. P. Lathrop of Hollister and the horse will make the season at the race track in that town. Dictatus Medium is one of the best formed horses in California and has 2:10 speed. He is large, with a beautiful mane and tail, and is a horse of kingly look and magnificent proportions. His sire is Dictatus 2:17, one of the best bred horses that ever came to California and one of the fastest. Dictatus is by Red Wilkes, one of the best of the sons of George Wilkes and the greatest living sire of speed. Miss Lottie, the dam of Dictatus is by Dictator, founder of the great family that produced Director 2:17, Direct 2:05½, Directum 2:05½, Directly 2:03½, Bonnie Direct 2:05½, etc.

The dam of Dictatus Medium is also the dam of that coming great young sire Stam B. 2:11½. She is by Happy Medium, the sire of Nancy Hanks and the grandsire of Lou Milton, dam of Lou Dillon, the fastest mare in the world. The second dam of Dictatus Medium is Argenta by Almont Lightning, sire of the dam of Zombro 2:11 that won more heats as a three-year-old than any colt of that age that ever trotted. With such blood as this in his veins, combined with his magnificent individuality and great speed, there is almost an absolute certainty that Dictatus Medium will be a great sire of speed.

His owner, Mr. R. P. Lathrop, is a progressive man and to induce the training of the colts sired by his horse he has offered a stake for the get of the mares bred to Dictatus Medium in 1904. They are to trot or pace as two-year-olds in 1907 over the Hollister track. The entrance fee to the stake is \$5 with \$5 additional from starters. To these stakes Mr. Lathrop adds \$100.

Every breeder should read the advertisement of Dictatus Medium in this issue of the BREEDER AND SPORTSMAN. The yearling colts by him (his first crop) are invariably good lookers with fine style, size and much natural speed. They are nearly all trotters.

Andy Likes the Ways of the Muscovite.

When he went to Russia last spring to identify the horse Oslund L., Andy McDowell expected to be gone about two months. He was so well pleased with that country and Austria that he accepted an engagement in Vienna and remained to the close of the trotting season. He landed back in New York a couple of weeks ago. After he had identified Oslund L., which was being used as a ringer on the Russian tracks, he determined to look around and see whether he would like the country well enough to buy it. He was more than pleased with everything but the language, and he says that he don't believe he would ever be able to get his tongue fixed so that it would be able to tumble out the funny words the Russians use. "Why," he said, "it takes a smart man to talk Russian; but they don't seem to mind it. I could have stood it all right till I heard the kids on the streets of Moscow and St. Petersburg talking it right handy, and that settled it. I couldn't stand for even the kids being smarter'n me at spouting that kind of talk, so I struck out for Vienna."

Jolly aside, Andy is just about infatuated with both Russia and Austria. He was offered a couple of fine positions in Russia, but he had no thought of staying any length of time until he reached Vienna, where he was offered such a profitable engagement that he concluded to remain through the season. He won all the big stakes with Wig Wag, by Wiggins, which John Splan bought at the Madison Square Garden sale last winter and sent to Austria. He thinks the plan of racing on the Austrian and Russian tracks away ahead of our system. A horse can be started in two races each week easily. He got two races out of his horses, and only jogged them slow miles on off days, which plan of training he found to work very satisfactorily. He likes it so well that he thinks of returning to Vienna and opening a public stable; although he is offered a good thing and \$10,000 a year to return to Russia, he believes he can do better with a public stable.—*Trotter and Pacer.*

Horsemen will be pleased to learn that Trainer Ben Kenney, who was so badly injured at the Providence Grand Circuit meeting, is now on the rapid road to recovery. He is still in the private hospital in Providence, but this week the surgeons in attendance removed the plaster cast from his injured leg, and they state that they are sure he will have no trouble with the leg in the future, except it will be some two inches shorter than his other one. In about three weeks Kenney will be ready to depart for his home in Lexington, Ky.

Dr. S. A. Tuttle.
Dear Sir: Please send to my address book of Veterinary Experiences. I am using your Elmox and like it to wash my horses. It is great.
GEORGE F. BRIGGS, Weymouth, Mass.

Sober up on Jackson's Napa Soda.

Driving Club Races in the Fog.

The card for the races of the Fresno Driving Club on Thanksgiving Day was first-class, but the fog settled down on the race track and became so thick that it was impossible to see anything a hundred yards away, so that the large crowd which was on hand when the first event was called soon began to break up and not more than fifty people saw the last heat of the final race. As far as the races were concerned, the people in the grand stand saw the start and witnessed the finish, and between the start and the finish a wall of fog intervened. As the favorite came out of the fog first every time, however, it really made no difference, except that the race was spoiled in each case at a spectacle.

There has not been such a large attendance at the races since the meeting of the Pacific Coast Trotting Horse Breeders Association a few months over a year ago. The rail was lined with vehicles and the grand stand was well filled. In fact, the lower tiers of seats in the grand stand were well occupied up to the announcement of the result in the final heat of the second event. Then, in addition to being foggy, it grew cold, and that was more than the occupants of that exposed position could stand.

The officers of the day were: Judges, T. C. White (presiding), George Taft and J. R. McKay. The timers were Louis Heilbron and H. Thorwalden.

There was a great deal of interest in the first event on the card because of the fact that George and Graceful George had met each other before and there had been a great deal of excitement at the time, but the event proved that Graceful George was not up to form or else was not in the same class as George, his old opponent. In fact Graceful George made no showing at all. In the first heat the betting, which was lively, made George the favorite and Newport second choice. The pools averaged, for example, George 5, Newport 4 and Graceful George 1.

George was driven by his owner, D. L. Bachant, while Z. R. Lowry drove Mr. Egan's Newport and E. C. Buchanan drove Mr. Bous's Graceful George. The start was a good one and in a few strides the trio were out of sight in the mantle of fog that covered the track. When they came out of it again, Mr. Bachant's horse was in the lead by six or seven lengths, with Newport second and Graceful George well behind. There had been no driving, though, in this heat, as was evidenced by the fact that the time was 2:27.

In the second heat Newport made George move along faster, and while the order of the finish was the same as in the first, the time was six seconds faster. The last heat resulted in the same way as the first heat. The time was 2:24. George remained the favorite throughout, selling in closing pools at 2 to 1. This was the only race of the day in which the decision was best three heats in five. The other two races were best two heats in three and like the first event they were won on straight beats.

The entries in the second race were: J. H. Kelly's Lottie Lilac, H. E. Burleigh's Bobby J., and E. T. Stockdale's Selds. Bobby J. was the favorite in the betting, selling in the pools at 10 to 6 for the field. Mr. Kelly drove his own entry, while Al McNeil held the ribbons on Mr. Burleigh's horse and Z. R. Lowry drove Mr. Stockdale's.

The first heat was won by Bobby J. in 2:22, with Selda second and Lottie Lilac third. In the second heat the order was Bobby J. first, Lottie Lilac second and Selda third and the time was 2:28. A protest was lodged by Selda's driver on the ground that McNeil's whipping his horse had scared Selda and forced her to break, but Judge White held that you cannot prevent a man from whipping his own horse and if another horse is scared thereby, it is not the fault of the first.

The last race of the day was that in which the entries were: George Knight's Baby Mine, Al McNeil's Lena B. and Z. R. Lowry's Milton Gear. Baby Mine was the favorite and sold in the pools at 6 against 5 for the field. Baby Mine won the first heat in 3:12, with Milton Gear second by two lengths and Lena B. third. The second heat was won by Baby Mine in 3:06, with Lena B. second and Milton Gear third.

All the winners were from trainer Charles Middleton's string and he felt very much pleased over it.—*Fresno Republican.*

Commends Absorbine.

Wapello, Ia., Dec. 1, 1902.
W. F. Young, Springfield, Mass.
Dear Sir: I have been using Absorbine in my stable for the past six years, and I have better results from it than anything of the kind that I ever used. My wife got thrown from a buggy and her wrist put out of place, and she tells me that Absorbine helps it more than anything she has tried. She uses it full strength.
Yours truly,
Absorbine, 25¢ per bottle, express prepaid.
Address W. F. YOUNG, P. O. F., Springfield, Mass.

Lou Dillon Crowned.

Lou Dillon, 1:58½, the world's champion trotter, was crowned Queen of the Speedway Saturday afternoon, November 21st, in the presence of a crowd of spectators that numbered thousands. The occasion was the fourth Fall matinee of the Road Drivers' Association of New York, which sought to pay its respects to the famous little mare and honor her owner, C. K. G. Billings, who is one of the charter members of the organization. An excellent program of eight races had been arranged by the Brush Committee to precede Lou Dillon's appearance, but all interested centered in the world's champion, and when she was seen coming down the lower stretch leading a parade among which were many of the best trotting and pacing horses in the city, a prolonged cheer broke from the crowd that was echoed again and again.

The only effect this enthusiastic din had upon the mare was to cause her to cock her ears and step out faster. She was hooked to a sixty-five-pound road wagon, and her owner handled her with perfect ease, driving at times with one hand. As she passed the grand stand, which was crowded to its utmost with members and their friends, there was another hurst of applause and numerous requests to step the trotter at speed. To this Millard Sanders, the "Buckeye Boy," who developed and trained the mare, objected on the ground that the footing was dangerous.

Mr. Billings finally overcame his trainer's anxiety and objections, and Lou Dillon was jogged back to High Bridge to make her first start before the public in this city. The west side of the road was cleared of all vehicles, and then with Mounted Policemen Fitzpatrick on the right of her and McKeon on the left, she was started. Gradually she lengthened her gait, until she was stepping close to a 2:05 clip, and the mounted policemen were digging the spurs into their runners and urging them on to show their top speed. It made a remarkable race as the trio entered the last quarter like a whirlwind. The crowds yelled themselves hoarse, and for a moment it looked very much as though the runners would be distanced. In the final dash, however, the two runners closed in on either side of the mare, and the three crossed the line head and head.

When the cheering had subsided Lou Dillon was driven up in front of the grand stand, when John F. Cockerill, President of the Road Drivers' Association, presented Mr. Billings with a beautiful floral horse-shoe six feet high and pinned a blue ribbon and a bunch of flowers to the champion's bridle on behalf of the organization. Mr. Billings responded briefly to President Cockerill's remarks, during which time the mare stood as quiet and gentle as a kitten in the midst of an admiring crowd that fondled and caressed her.

P. W. Hodges of Los Angeles was in San Francisco for a few days this week and reports the horses in the citrus belt as all doing well. There will be quite a large number trained for the season of 1904 with the idea of racing on the Eastern circuits. Mr. Hodges' mare Malvina by McKinney out of Alleen (dam of two in the list) by Anteo, second dam Lou Milton, dam of Lou Dillon 1:58½, has a fine filly by Petigru 2:10½ that is a very handsome and promising young trotter. His mare Atherine has a pacer by Nutwood Wilkes that is one of the slickest moving youngsters ever seen in Los Angeles.

It is said that one of the most promising green trotters in California is a little black gelding owned by Isaac Morehouse of Montana. The trotter is now at Mr. Morehouse's farm at Milpitas in this State. He is by Baron Wilkes out of Lady Wilton 2:11½ (dam of Lady Thisbe 2:11½) by Wilton, second dam Lemonade, the dam of Bessie Wilton 2:09½, Petigru 2:10½, etc., by Kentucky Prince. The late Marcus Daly made Mr. Morehouse a present of this gelding when a colt. He has worked a half in 1:06 and an eighth in 15 seconds, and last summer Billy Donathan saw him work and offered \$1500 for a half interest in him, which was refused.

Mr. S. L. Goldstein of this city who recently purchased the mare Dora Doe 2:12½ by Don Lowell is driving her on the road and is much pleased with her. She was not in the best of condition when she arrived home from her eastern trip a few weeks ago, but is picking up and will soon be back to her old form when she was considered one of the handsomest mares ever driven on the park speedway.

Cured Sudden Lameness.

Spencer, Ind., July 11, 1902.
The Lawrence-Williams Co., Cleveland, O.
Some time ago one of our best and soundest animals was taken suddenly lame and got in very bad shape. I instructed our healer to get some Gombault's Caustic Balsam and use it freely, which he did, and now the horse is apparently as sound as ever. You certainly must have a cracker-jack of a remedy.
E. CHUBB FULLER.

Ed Geers' Story of Hal Pointer.

Hal Pointer 2:04 died at Village Farm, November 13th, aged nineteen years. When it was found that he could not live morphine was kindly administered to him to prevent his suffering.

The following history of Hal Pointer is from Ed Geers' hook entitled "Ed Geers' Experience with the Trotters and Pacers."

"Hal Pointer was foaled in 1884, and was bred by Captain Henry Pointer of Spring Hill, Tenn. He was sired by Old Tom Hal and his dam was the grand old mare Sweepstakes, by Knight's Snow Heels, dam of Star Pointer, 1:59 $\frac{1}{4}$. As a two and three-year-old he was used under saddle, and in 1888 it was claimed he could show a 2:40 gait at the pace under saddle—a claim he could hardly justify. He is a bay gelding with one white ankle in front and one behind and has a small star. When matured he was a horse of grand conformation, standing about 15 $\frac{3}{4}$ hands high and weighing about 1,100 pounds in ordinary flesh. His legs were large and well shaped, and when in training his muscles stood out like those of a trained athlete. His beautiful and intelligent head plainly showed his sixty or more percent of thoroughbred blood that coursed through his veins. In June, 1888, Mr. Walter Steele, of Columbia, Tenn., purchased him and placed him in my stable to be trained. He had then been broken to harness, but it cannot be said that he was very handy at that way of going. He had been used so much under saddle that his gaits were very badly mixed. He would pace a little and single foot a great deal. I experimented some time with him trying to make him go square and finally shod him with a twelve-ounce shoe in front and added a six-ounce toe weight to each front foot, this seemed to improve him, and he would go square in front; but still he seemed to lack something, and to not be entirely balanced; finally, I put on long shoes behind, that is, shoes that projected an inch or more beyond his heels, and this balanced him and he would pace square. I worked with him about a month before I went North with my racing stable. The first mile I drove him it took him three minutes and thirteen seconds to make the circuit, but before I went away he showed me a mile in 2:30. He was then turned out and not taken up again until about September 1. During my absence he was started in a race at the Columbia Fair in September, in which he took a record of 2:29 $\frac{1}{4}$. When I returned that fall, I commenced working him again and kept taking the weight off his front feet and he kept increasing his speed. I finally got him so he did not require any extra weight, and during his races he generally wore a five-ounce shoe in front and a six-ounce shoe behind. Before I turned him out that fall he showed me a mile over my old half-mile track in 2:17, and I became satisfied that I had a first-class race horse if nothing happened. His hind legs always had rather a curby look, and when he paced this good mile that fall he developed a curb on one leg that caused me much anxiety; but I blistered it and turned him out and he never again showed any signs of weakness in it. I commenced work with him early the next spring and he improved so rapidly that I was more than ever convinced that he was one of the coming turf sensations and I purchased a half interest in him. I concluded to start him first in the 2:30 class at Cleveland that year, and, as he had never been on a mile track, I took him and my other horses there some time before the meeting, that he might get used to the track and surroundings. His front feet were always flat and of a tender and delicate formation. The track at Cleveland was very hard and in the work I gave him before the meeting commenced his front feet became sore, a condition which continued during the whole of that season. I shod him with har shoes and pads, which greatly helped to break the concussion; but still in jog work he would nod, and a stranger would think him unable to stand the hardships of a hotly-contested race; but as soon as the excitement of a race was on he seemed to forget all about his tender feet, and his pace was as even and true as any horse ever seen in a race. I won the race at Cleveland and moved down through the Grand Circuit and started him at every meeting; and after that I went to St. Louis, Terre Haute and other places and he won every race in which he was started that year, except at Rochester.

"Everything considered, Hal Pointer was the greatest racehorse I have ever driven. I always drove him with an open bridle, and as soon as he had had a little experience he seemed to know how to rate his speed just as well as I did; and also that the purse belonged to the horse that first passed under the wire rather than the one that reached the quarter or half-mile pole in advance of the field, and when in the lead he would watch the attempts of a rival to pass him with the same degree of interest as his driver, and was ever on the alert to prevent another horse from

getting dangerously close. This characteristic was well illustrated in the race at Terre Haute, in the fall of 1889, in which was the pacer B. B., who had been defeating everything he met that season, and many predicted that when these two horses met Hal Pointer would taste the bitter pangs of defeat. In one of the heats of that race I passed B. B. in the stretch and, expecting him to make a rush near the wire, was watching him and so was Pointer; and after the race was over the driver of B. B. said he 'could stand it to have me watching him, but when he saw Hal Pointer with one ear laid also watching him he saw it was no use, and that he could not steal a march on him, and so abandoned the attempt.' He retired that fall with a record of 2:09 $\frac{3}{4}$, which made him a candidate for the free-for-all class the next season. A long run hare-footed that winter cured the soreness in his feet, and he was in good condition the next spring to commence his training. I anticipated a hard campaign for him in 1890 and carefully prepared him for it. I started him first at Pittsburg that season and had no trouble in winning at that meeting; but at Cleveland, which is regarded as the great storm center of the Grand Circuit, I knew I should meet a different antagonist than I had yet encountered. Adonis was at that time the pride of California's race-goers and, with the experienced and accomplished Hickok behind him, he had been campaigning through the minor circuits without meeting defeat, and all horsemen expected that when he and Pointer met there would be a battle royal, and those who saw the race were not disappointed. There were a number of starters in the race, but, as was expected, the contest for first place was between Pointer and Adonis. In the first heat Adonis led until the last quarter was reached, when I, having succeeded in passing the other horses, moved up so that as we entered the stretch Pointer's head was upon the wheel of Adonis, both going true and fast, Pointer gaining at every stride and when within about fifty feet of the wire he was fully a neck in the lead, without any known cause he left his feet and passed under the wire on a run, thus giving the heat to Adonis; but this mishap made no difference in the outcome of the race, as he won the next three heats. We had several other contests during the Grand Circuit meetings, but Adonis did not succeed in winning one of the races. The defeat of Adonis greatly agitated the horsemen and sporting element of California, and the next year they sent, over the fast and almost unbeaten Yolo Maid to take the measure of the great son of Tom Hal. Our first meeting was at Cleveland, and the known speed and race-horse qualities of these two contestants caused excitement to run high. Yolo Maid could show a great burst of speed and was very fast in getting away, and in every case would lead Pointer to the first quarter by many yards; but I never drove Hal Pointer in any race where, if he could get his nose to the wheel of the sulky of the other horse at the head of the stretch he could not beat him to the wire, and Yolo Maid proved no exception to this rule. She would rush away at a two-minute gait for the first quarter, but Pointer saved his fast rush for the home stretch, and in his races often paced the last quarter in thirty seconds; and, like Adonis, Yolo Maid returned to California without having won a single race from Pointer, although she attempted to do so all through the Grand Circuit.

"But the Californians did not give up. I started Hal Pointer that season (1891) in July, and raced him the whole season over all kinds of tracks, some of which were very hard and his feet became a little tender, so much so, that he would not fully extend himself on a hard track; and while in this condition, Direct, who had been brought from California early in the season and given an easy campaign, was especially prepared to try and wrest the crown from Hal Pointer. We first met at Terre Haute in October where, after a very hot contest, Hal Pointer won. Our next meeting was at Nashville, where the track was hard and Direct won. We met a few days later at the then new kite-shaped track at Columbia, Tenn., and the track was so hard that I could not get Pointer to do himself justice, and he again suffered defeat; but to accomplish this feat, he compelled Direct to pace the three fastest heats that had up to that time ever been made in harness.

"The next season, when the horses were more nearly on an equality, in a number of races Hal Pointer clearly proved his superiority as a race horse, and defeated Direct every time they met. I campaigned him during 1893, 1894 and 1895. In the free-for-all pace at Philadelphia, in 1894, he was taken sick during the race with an ailment that baffled all veterinary skill to diagnose. He had never been sick before and showed no signs of illness until in the race. Both he and Yolo Maid were taken sick in the same heat with the same ailment, which gave rise to a suspicion of foul play on the part of someone. But whatever it was, he never recovered from it. I

wintered him with the rest of the Hamlin stable in California during the winter of 1894 and 1895, and started him in several races in 1895; but he still showed the effects of that sickness; and we gave up campaigning him. After his race at Cleveland, in 1890, Mr. Steele and myself sold him to Mr. Harry Hamlin, of Village Farm; but he continued in my stable until I went to Village Farm in 1892, and was after that in that stable and was driven by me as long as he continued to race through the Grand Circuit. I do not believe any horse ever lived that possessed more racing sense, gameness, and endurance than did this grand horse. I have often seen him, after a hard-fought five-heat race, being cooled out when another race would be called on, and he would commence to get restless and uneasy and show by every action that he wanted to get back to the track and take a hand in the excitement.

"Hal Pointer was a difficult horse to make score fast, and was always slow in starting away. He did not seem to be imbued with the necessity of winning the heat until the middle or latter part of the mile had been reached, and then he would bend all his mighty energies in an endeavor to first reach the wire, and very few horses were ever able to withstand his terrific rush. He never required, and would not endure, punishment. Once when I was giving him a workout he did something I did not like and I struck him with the whip twice, and, in spite of everything I could do, he ran three miles before I could stop him; I never tried it again, and in all the races I ever drove him I never did anything more than carry the whip over him, and when I wanted some extra speed I would shake it at him. I gave him a record of 2:04 $\frac{1}{4}$, which was the world's record at that time.

"It is a lamentable fact that many good horses after their days of usefulness are over, and they are no longer able to earn money for their owners, are through avarice or want of sympathy, either killed or compelled to eke out a miserable existence doing drudgery for strangers, when, by reason of their past services, they should be tenderly cared for by those whom they have faithfully served. I am glad to know that no hardships of this kind are in store for grand old Hal Pointer. I am giving him just enough light road work for exercise, driving him back and forth from Village Farm to the Jewett covered track. I generally drive him over to the hotel at East Aurora and hitch him under a shed when I go to lunch. He is very fond of carrots, and I always intend to put three in my pocket and feed him two before I go to lunch and the other when I am ready to start back. If I have the carrots for him, he seems perfectly happy and will be cheerful all the rest of the day; but if I happen to forget them, he is mad and acts as ill-natured as does a smoker when deprived of his after-dinner cigar."

Hartsgrove, Ohio, Feb. 25, 1902

Dr. S. A. Tuttle.

Dear Sir: I wrote you some time ago in regard to a young stallion that was off a little in his front legs. I procured some of the Elixir and used it as you directed, and I am happy to say that it is straightening him up all right. I was offered \$200 for him yesterday. It certainly is a wonderful medicine, and deserves the attention of all horsemen. You can count on me as a friend of your Elixir, and will do all I can to help the sale of it. Thanking you for past favors, I remain yours very respectfully,

W. A. WALTERS.

The Kenney Bicycle Co., 531 Valencia St., is doing a big business in the McMurray Carts and Sulkeys. You not only save money by purchasing a McMurray but get the most durable, best made, and easiest running cart or sulky in the market. Investigation will convince a Missourian.

EFFECTUAL

The most effectual remedy in use for the cure of ailments of horses and cattle is

GOMBAULT'S
CAUSTIC BALSAM

Used as a Blister
or Lotion.

This preferred remedy is prepared exclusively by J. E. Gombault, ex-Veterinary Surgeon to the French Government Stud.

As a HUMAN REMEDY for Rheumatism, Sprains, Sore Throat, etc., it is invaluable.

Every bottle of Caustic Balsam sold is warranted to give satisfaction. Price \$1.50 per bottle. Sold by druggists, or sent by express, charges paid, with full directions for use. Send for descriptive circulars, testimonials, etc. Address—

THE LAWRENCE-WILLIAMS COMPANY, Cleveland, Ohio.

ROD, GUN AND KENNEL.

Conducted by J. X. De WITT.

A Remarkable Rifle Record.

At San Antonio, November 6, Adolph Toesperwein, on the grounds of the Harvard Gun Club, made a score on blue rock targets of the regulation size, thrown up by hand, which will probably remain a record until such a time as Toesperwein himself chooses to beat it, as it is quite unlikely that any one else will ever succeed in doing so.

The score made was 1500 straight, the first 1000 at a distance of 30 feet, the next 100 at one yard further back, and the remaining 400 at a distance of 39 feet, the weapon used being a Winchester 22 caliber automatic rifle.

The remarkable thing about the performance is the fact that this is the first time that such a score has ever been made on flying targets, with either the rifle or shotgun, and the score probably never would have been made had it not been stated that a score of 995 out of 1000 had been accomplished under the same conditions, somewhere in the East. The making of such a score attracted but little attention in San Antonio and among Toesperwein's friends on account of the difference in size of the discs used by Toesperwein, and those used in trap-shooting, the circumference of the former (about $\frac{7}{8}$ inches, against about $\frac{1}{4}$ for the latter) illustrating more forcibly than mere diametrical measurements the enormous advantage which a shooter would have in using the larger target, but while a very few knew well that Toesperwein's former scores were made at the smaller objects, the shooting world at large knew that a target was a target, and probably supposed that the same sized article had been used by both.

Moreover the sporting journals had exploited the 995 score, and his friends wished to see it beaten. Toesperwein went so far as to send a sample of the targets discussed in his exhibitions, showing the disparity in proportions from those manufactured for trap shooting, but this was not satisfactory. Some one else had beaten Toesperwein's score of 989, by making 995, and it looked bad in print.

The dictionary made no distinction between the targets used by Toesperwein and the other man, and in fact the public at large were more or less cobwebby on the subject—all targets looked alike to them. Still Toesperwein hesitated. "Why, a man might shoot a week at dinner plates or the head of a barrel, and never miss one," he argued, and furthermore declared that if necessary he would go out and break a thousand straight, and see if that would stop the talk, but he first wanted to see some one beat his score of 989, using the smaller targets. His friends, however, still insisted. "Beat the record," they kept saying, and that is how the new record was attempted and made.

The day was an ideal one for such a test. The weather was clear and warm, with just enough wind blowing to prevent the targets from falling in a straight line. The .22 bullet makes a hole in a composition target nearly half an inch in diameter, and shows quite plainly through the black body of the target against a clear sky. Toesperwein was at his very best, and it was regretted by a member of his intimates that the shooting was not made at the targets usually used by him, as the majority of the shots would have been inside of a circle the size of a silver dollar, and probably not half a dozen of the 1,500 ever touched the yellow rim, which is far from the outer edge of the target. The accuracy of the shooting could be plainly seen by those in front of the targets, the bullet hole showing so clearly against the sky, and the shooter himself wished to demonstrate that there was considerable unnecessary surface in the targets used, by plugging them as near the center as possible. The first 1,000 were shot in an hour and ten minutes. The last 500 in much less than half that time, as darkness was fast approaching. After having completed the 1,000, Toesperwein stepped back a yard and shot 100, and then shot 400 from two yards farther, but the handicap did not in the least affect the accuracy of his aim.

He used two automatic rifles of 22-caliber, with an assistant to load the guns as they became empty. Neither of the guns were cleaned throughout the test. He used the Winchester 22 automatic greaseless bullet cartridge. This exhibition was a practical test of the reliability and accuracy of both rifle and ammunition.

There were a number of witnesses present, as Toesperwein always insists upon having plenty of people on hand when he makes his scores, incidentally, there are always plenty of people willing to be on hand whenever he makes an announcement of this kind.

Bert Spring, a local angler, made a remarkable catch of quinnat salmon in the "white house" pool, at Point Reyes, a short time ago. The aggregate weight of the four fish landed was 81 pounds. The largest weighed thirty-five pounds and the others 18.16, and 12 pounds each. All the fish were taken on a No. 5 Wilson hass spoon, with a 10-ounce rod. It took half an hour to land the 35-pounder, which is the largest fish taken at Point Reyes this season. Rube Haas of this city also caught four good sized fish on the same day, one of which took forty minutes to land. These two catches are the largest made at Point Reyes in ten years.

A Theory of Choke Boring.

Among the large number of problems still awaiting solution in connection with the behavior of shotguns are many which have been carried a certain distance by experimentalists in the past, and which might be carried further by the help of modern appliances and the more exact knowledge of underlying theories which now exist. Considering, for instance, how long choke guns have been in use, it is surprising that a satisfactory explanation of the action of the choke in condensing the patterns has yet to be found. The most plausible to our mind is one which we believe has not before been stated in print. It is that by the action of the choke a wave pressure is created in the column of gas behind the shot, which modifies the disturbing influences of the blast of gas issuing from the muzzle after the shot has gone out.

In other words, the action of the choke is very similar to that of an obstruction in the barrel. The extra resistance encountered causes a check in the forward movement of the shot, whereby the velocity is reduced by a certain number of feet. The piling up of the gases behind the over-powder wad that results from the delayed movement of the shot would necessarily cause a high local pressure immediately to the rear of the wad. This high local pressure would create a tendency for the gases causing it to rebound from the wad, so driving backward against the advancing gases that fill the remainder of the barrel. Supposing that the shot charge thus leaves the muzzle at the critical moment when the forward movement of the gases is momentarily delayed, it would stand a chance of getting well on its way up the range before the jet of gas fully re-establishes its forward movement. Deductions from experiments already published go to prove that the gases leave the muzzle at a velocity of something approaching 3000ft. per second, which would conceivably enable them to impinge against the shot, and so cause a slight scattering effect, which would be particularly marked in cases where the wadding is caught by the full strength of the outrushing gases. If, therefore, the spreading of the charge of shot may be attributed to the emerging gases blowing the charge from the straight line of fire, it is quite easy to see that the presence of a partial obstruction near the muzzle would modify the scattering effect by creating a wave of back pressure to resist the forward-traveling column of gas.

This theory seems to fit in with most of the experiences of practical gun-makers in regulating choke guns. First of all, one knows that the greater the reduction of the bore at the choke the greater is the concentration of pellets. More than this, it frequently happens that a choke which has the correct shape and adjustment may fail to produce the needful concentration of pattern, and that the effect of the choke may be entirely altered by boring out the barrel so as to bring the constriction nearer to the muzzle. Following out the theory above presented, one might assume that the alteration of the position of the choke modifies the time of the delay of the rush of gases, whereby the shot would get sufficiently away from the muzzle before the forward movement of the gases was fully re-established.

In other cases where it is found that a choke fails to produce the desired effect, it frequently happens that by increasing the abruptness of the cone of the choke the required concentration of the pellets is obtained. In true cylinder guns another very interesting illustration of the theory can be added. In carrying out experiments with true cylinder barrels, we have frequently been surprised at the remarkable variations of pattern from shot to shot experienced. Four successive shots may give an average distribution of 140 pellets on the 30in. circle; then may follow a succession of three or four shots with an average of 100 pellets; and it is almost invariably found that in every ten shots there are one or two rounds where the pattern displays the peculiarity which is commonly known as "blow all over the plate." Very low patterns, counting as little as sixty pellets in the circle, are thus obtained, and one must assume their presence to be due to the violent impact of the felt wad against the cluster of shot soon after it has left the muzzle. In proof of the fact that the tendency of choke boring is to delay the movement of the shot, an illustration may be quoted which has been proved by numerous experiments we have recently conducted. It is that careful measurements of the muzzle velocity with choke and cylinder guns show that the average records with choke boring display inferior velocity on the part of the choke gun to those encountered with the cylinder. The difference referred to may amount on the average to 30ft. per second, which might well be reckoned sufficient to influence the behavior of the gases at the rear of the shot.

Suppose that this theory of the influence of choking in gun barrels is a correct one, we have in it a very satisfactory explanation for the marked partiality of sportsmen for what are known as improved cylinder guns. In this class of gun there is an extremely small amount of choke, which seems to have a marked influence upon the shooting results obtained. In fact, with an improved cylinder one generally obtains patterns averaging very closely to 140 pellets, whereas

with the true cylinder the patterns obtained represent a mixture of records representing two extremes, say 140 on the one side and 100 on the other. Here, for instance, is an actual series of patterns which fairly well illustrates our argument: 129, 137, 131, 130, 80, 97, 68, 121, 129, 65, average 109. Another gun of similar boring was shot for comparison, and the following series of records were obtained: 145, 100, 146, 104, 99, 134, 135, 97, 65, 132, 125, 103—average 115.

The distinction between true and improved cylinders seems to be that the improved cylinder gun gives with considerable regularity the patterns which a true cylinder would give, but for the apparent presence of a disturbing factor that seems to spoil about half the readings. In fact, we regard the natural distribution of the true cylinder gun as about equal to that of the improved cylinder, if only we could get rid of the disturbing influence which one may well assume is due to the impact of the waddings against the charge. Professor Boys' experiments in the photography of shot charges at the moment of emerging from the muzzle shows the cluster of shot lying in a fairly compact body, with the wad at some point between it and the muzzle. Assuming the velocity of the powder gases to be about two and a half times that of the shot charge for the first 12in. of travel beyond the muzzle, one can easily see that the blast of gas would be quite capable of making the wad overtake the shot and disturb its flight. On those occasions when the wad is driven at a tangent from the line of flight of the shot, the charge would only be disturbed by the blow from the gases. If, on the other hand, the wad happens to strike the cluster of shot, the regular arrangements of the pellets would be likely to be badly disturbed. It may be assumed, for the sake of argument, that the virtue of the improved cylinder, and in fact, of all forms of choke, consists in the fact that the muzzle blast is so modified and delayed as to allow the shot to get sufficiently clear of the muzzle before being overtaken by the onrushing gases to get rid of some of their most injurious effects on the flight of the pellets.

Numerous experiments could be made to test the theory here evolved. One might, for instance, insert a small metal ring at the muzzle of a barrel so placed as to cause a check at the moment of final exit of the shot. By comparing the results obtained with and without such a ring in the muzzle of a true cylinder, important and novel information might be obtained. Similarly, one might drill a number of holes around the muzzle of a true cylinder gun, the idea of which would be to allow the escape of the gases before the shot had actually reached the muzzle, and thus largely modify the outrush of gases that would ordinarily exist. However ingeniously such experiments might be devised, the resulting inference would only prove the correctness of the theory by deduction, though of course the body of circumstantial evidence so established might be well-nigh overwhelming. Most authorities are agreed that the amount of scattering observed with a charge of shot is greater than would exist from the natural deviation of a conglomeration of pellets projected toward a plate. For instance, when using very small charges of powder, it is almost invariably shown that the patterns obtained are very much closer than where the velocities are standard. Conversely, when the powder charge is such as to produce a considerable excess over the normal velocity, the pattern is very much scattered, and one finds, in addition, a marked increase in the variations from shot to shot. Such experiences agree with the theory we have propounded, in so far that the weight and muzzle pressure of the gases is necessarily greater when a large charge of powder is used, whereas it is less when the powder is reduced.

If we assume, therefore, that, as the velocity decreases, the charge of shot more closely follows the natural line from the gun to the target, then one must admit that the disturbing influence that exists is due to the rush of gases from the muzzle. Sir Ralph Payne Galloway quotes in his "Letter to Young Shooters," an instance where a shooter fired at a rabbit midway between two beaters. The rabbit was bagged, and both beaters were peppered with pellets, notwithstanding the fact that a distance of some 30 yards separated them. A similar experience was met with in the course of some recent experiments at the plate. The gun was shot from a rest at a target 40 yards distant, and an onlooker was struck who stood at least 12 yards to the left of the target. Some fifteen pellets entered his leg in a small cluster, most of them penetrating well into the skin. On examining the plate it was found that a characteristic scatter shot had been registered, the pellets being widely distributed, with no particular tendency to congregate on or near the center of the plate. The fact that another person was standing actually closer to the target than the individual struck suggests that the diverged pellets had adhered to the wadding in leaving the gun, and that, after striking the main cluster of pellets, they had diverged from the straight line and had caused the accident referred to, no doubt parting from the wadding at some point near the injured onlooker. These and other experiences seem to suggest that the really bad patterns that are frequently encountered at the plate are due to the impact of the wad on the cluster of shot pellets shortly after emerging from the muzzle, and that the wadding can only impinge sharply on the shot pellets after the charge has left the muzzle by the aid of a rush of gas having a greater velocity than that of the charge proper. While the relation of these facts to actual everyday shooting may not at first sight seem of any very great importance, their indirect bearing upon existing problems may be vital, since improvements in any branch of mechanical science as a rule follow from the better understanding of the principles that underlie the more empirical work of practical men.—*London Field.*

For all kinds of weather there is no drink like Jackson's Napa Soda—plain or in a lemonade.

Calling Ducks.

The season for duck shooting is now fairly on, and it is doubtful if 50 per cent of the nimrods really understand the art of calling the wise old birds. A. G. Holmes, who is an expert in his line, writes as follows on this most interesting topic:

"Whether you shoot ducks over decoys, on the pass, jumping and wading, the call is very essential. Yet of the great numbers of men who shoot, comparatively few are able to call well or with judgment. Nor is it necessary to cultivate many different calls. Two or three are enough. For the inland water fowl, mallard, widgeon, teal, grayduck, spoonbill, woodduck, blackduck and all non-diving ducks, the mallard and teal call is sufficient. In fact the mallard call alone is usually enough for all non-diving ducks.

"For diving or deep-water ducks, the bluebill call will answer, although if one has also at command the purring call of the red head, it will greatly help in the day's sport. In shooting over ordinary waters where sport is to be had at canvasback, redhead, bluebills, broadbills, whistlers, butterballs and the others of their class, most of the ducks will respond readily to the bluebill or the broadbill call. Bluebills are great callers, and on calm days can be heard hailing every passing flock.

"Sometimes the bluebill calls the ker-r-r once, then twice and three times, and occasionally even four times. When they are feeding they often sound a contented kind of chuckle which is similar to that of the mudhen when undisturbed.

"Sound travels a long way in a still marsh. When the call is loud the mallard, blackduck and widgeon detect easily the fraud in calls; therefore, modulate your voice in a marsh. Oftentimes these wary birds after coming into a marsh in response to your call, will settle among your decoys, or they may alight outside of gun range and study the decoys to satisfy themselves of their being all right. If not disturbed they will then slowly move towards the decoy, feeding and chuckling as they swim.

"Do not call too loud or too often.

"Call to attract the bird's attention to decoys, then modulate your call. In a marsh remember that the birds can detect the imitation much more easily in a loud than in a muffled call.

"For deep water birds you may have to call louder, for the wind will not always favor you.

"When birds are coming into decoys stop calling, or else give a low chuckle that they can just hear.

"If birds start to circle away, a few low calls will often bring them back.

"If in open water, the birds often will go entirely around you to discover what the suspicious bunch of weeds contains, and at such a time lie low and do not try to keep them in sight all the while. Your moving will scare them quicker than anything else.

"Lie low and stay low, and if the birds come in do not jump up if you happen to be on shore. Rest just high enough to clear your blind when you shoot. Be assured the ducks' eyes are on the shore side, for there is where they watch first for danger, and any movement sends them scattering."

San Jose sportsmen have recently enjoyed better shooting conditions than have prevailed further north. The pleasant weather of the past week has caused the ducks to leave the fresh water marshes and resort to the open southern waters of the bay. Santa Clara valley hunters consequently found that hunting in boats for ducks was the most profitable way of indulging in the sport.

Not only did that condition of affairs exist on the local marshes, but the same thing was true all round the bay. The birds go out into the fields late at night to feed, but the early morning finds them again out in the open water of the bay where it is hard to get at them.

What is needed is another storm to ruffle the waters and drive the birds into sheltered coves and inland ponds. Then the marsh hunting will again be good. Although the conditions have not been extremely favorable the past week, many have ventured out and a large number of birds have been bagged. There was an especially large number of San Jose sportsmen among the marshes on Thanksgiving Day, and many of them were well rewarded, especially those who went after game in boats.

Quail hunting in that vicinity has been very profitable sport during last week. The birds were found in large coveys and were quite tame, and several limit bags were brought in. Quail hunting is good on both sides of the valley.

Reports from the eastern foothills were to the effect that thousands of robins are to be found in that section. They are feeding on the red berries which are so plentiful this year. The appearance of these birds in such large quantities so early in the season is believed to be a sign that there will be great numbers of them in the valley this year. The olive orchardists are becoming a little alarmed lest the birds attack the fruit before the crop has been harvested. It will be remembered that two years ago the robins destroyed nearly a third of the crop in the valley, and it is now feared that the birds will repeat their depredations.

Snipe shooting is also being indulged in by many of the sportsmen, as they find this to be more exciting than either quail or duck shooting. Dan Thornton, the well known snipe shot, bagged twenty-two of the erratic flying birds last Sunday north of the Brokaw road. Fred K. Bishop got fourteen in the same locality.

The Alviso marshes have furnished recently numerous bags of ducks and snipe.

Strikel—if they don't give you Jackson's Napa Soda when you ask for it.

Save the Birds.

During the eight months of experimental work just concluded for this year by a corps of State University agricultural experts during a campaign against the codlin moth conducted in the apple orchards of the Pajaro valley and which investigation promises to result in the extermination of the moth pest, a side investigation of immense practical interest has been carried on during the period of the spraying experiments, by Professor F. E. L. Beale, the United States Government economic ornithologist. With him has been associated J. S. Hunter, under-graduate assistant in the entomological department. The task of these two men has been to shoot and dissect some 1300 birds found in the apple orchards. A microscopic examination of the stomachs of these birds, it was believed, would reveal vital facts concerning their value or harm to the fruit industry. While only about fifteen per cent of these bird stomachs have been studied, some interesting information is already available. Hunter says that none of the birds found in the orchards are as injurious as they have been commonly supposed to be. Instead of being pests, they are benefactors, and ought to be protected much more strongly than they are, especially at nesting time. The depredations that these birds make on the fruit are small compared with the great good they do in eating the codlin moths, especially the pupae and larvae and cutworms and other harmful insects. The blackheaded grosbeak, long supposed to be an orchard enemy, has been proved to be a great foe to the codlin moth. Out of twenty-four specimens there was found in the stomach contents an average of 90 per cent of injurious insects and fourteen per cent of these were the codlin moth. Other valuable insect destroyers were the yellowhammer, woodpecker, the Arizona chipping sparrow and the linnet, the last bird feeding more particularly on the woolly aphid.

Show Dogs from Canada and the Custom House.

Through the efforts of the Westminster Kennel Club dog shows will henceforth be considered by U. S. custom officials in the same category as agricultural or racing associations. This will obviate much of the difficulties experienced by dog owners on the Canadian side in sending their dogs across the line for show purposes. The difficulty has not been in sending dogs for exhibition in Canada but the stumbling block has been on this side. An instance of this status occurring only recently in the case of several dogs that would have been sent from Victoria to the show here this week, had not the local officials explained, that contrary to past precedents, show dogs could not come in duty free, if under bond to be returned to the northern exhibitors immediately after the show.

The document which publishes the new ruling and opens the road for dogs from beyond the northern boundary line is the following:

Treasury Department, Office of the Secretary, Division of Customs, Washington, Nov. 11, 1903.

The Collector of Customs, Plattsburg, N. Y.:

Sir—The department has considered the letter of Mr. George de Forest Grant, president of the Westminster Kennel Club, dated New York the 30th ultimo, addressed to you, in the matter of the free entry of dogs brought to this country for exhibition at kennel shows.

Paragraph 474 of the tariff Act of July 24, 1897, provides for the free entry of—

"Animals brought into the United States temporarily for a period not exceeding six months, for the purpose of exhibition or competition for prizes offered by an agricultural or racing association; but a bond shall be given in accordance with regulations prescribed by the Secretary of the Treasury;" and the department has heretofore held that a kennel club was not an agricultural or racing association, and therefore dogs could not be admitted to free entry under this provision of law.

Upon reconsideration, the department is of opinion that under the generic definition of the word 'agricultural,' an association devoted to the breeding of thoroughbred dogs and the improvement of the different breeds, may fairly be considered an agricultural association, and that upon the importation of dogs for exhibition or competition for prizes offered by bench shows, same may be admitted to entry under the above provision of law.

H. A. TAYLOR, Assistant Secretary.

We agree with our New York contemporary in the assertion that the thanks of the fancy should certainly be tendered the W. K. C., who have solved this problem and pushed aside a very difficult and displeasing obstacle which the show world has had to contend against.

Entries for the Pacific Coast All-Age Stake will close on December 15th. For entry blanks and further information our readers are referred to Secretary Albert Betz, 201 Parrott Bldg., this city, who will be pleased to respond to inquiries.

The prospects for a larger entry than ever in this event are most auspicious, a number of entries have already been sent in, the nominators in this respect, taking the initiative before entry blanks for the stake had been issued.

The Philadelphia show last week had 857 entries as against 1143 for last year, a falling off of nearly 300 entries. The show is a three-point show and the prizes were \$15, \$10 and \$5 with a medal to fourth, and 294 classes were given in the premium list.

We are informed that Senator P., J. W. Flynn's great Pointer, will be entered in the Pacific Coast All-Age Stake.

Kennel Suggestions.

We now approach a topic equally as important as the last, namely, the commissariat department. The art of keeping a dog in perfect health, having once ascertained his concert pitch, consists of three things. His appetite must be consistent, his stomach and liver clean, his weight constant. All the rest will follow. It sounds simple enough, yet many fanciers of years' standing have not mastered the secret.

Quite half the answer lies in his menu. A pigeon is generally considered a toothsome morsel, and a gentleman once made a bet that he would eat one every consecutive day for a certain period, not a very long one either. He paid like a lamb. Yet how many dogs are expected to subsist entirely on Bumble's biscuits, others for months at a time receiving nothing but horseflesh? And their owners wonder why they go off their feed or develop skin disease. There are those who argue that because a dog in his wild state eats nothing but raw flesh, it must follow that it is his proper diet at all times and under all circumstances.

A true bill, most sapient logicians, so he did. But before he got hold of the flesh, unless he was extra lucky, he had to hunt all day and cover an unlimited number of miles. This gave him a most voracious appetite, coupled with a digestion which can only be likened to that of an ostrich. The conditions under which he hunted, and fed accordingly, having altered, so have his digestive organs in degree, as you will very soon find if the theory be put into practice.

One of the greatest mistakes made by the kennel manager is the effort to put dogs into show condition through extra attention to the feed bowl. The dog that is fed up for show and then allowed to fall back to hard pan is usually a sorry individual between shows. It is just as easy to keep the dogs in good fighting trim the year around so that a little extra grooming is all that will be necessary for the bench. Of course, there are exceptions in the case of bad doers, but even in this case it is poor policy to throw a lot of rich food into them for one occasion if it cannot be kept up all the year.

If there should be a dearth of vegetables from the house, they are separately added, beetroot and onion from choice, probably the two most valuable kinds, all things considered.

Variety is a great point to be studied. Man requires a certain amount of meat, but his gorge would soon rise were beef put before him every day in the week. So with a dog.

It may be urged that the stock-pot every other day is monotonous, but consider what it is, or rather what it is not in it. A moment's reflection will show that it could hardly be more varied. Indeed, it can be said with truth that where just one or two dogs are kept no finer staple food can be given than ordinary table scraps. Albeit, the quantity should be strictly regulated with regard to the quality, and the dogs do not require any extraordinary treatment whatsoever beyond a little castor oil once a week and the periodical dosing for worms.

A very excellent supplement to the night feed of puppies growing or backward animals is powdered bone meal mixed with the food. A regular course of this will give astonishing results in the way of developing size, bone and stamina.

On the question of water some people hold exceedingly curious views. Sundry say that in reality a dog requires very little water, and that the more you give him the more you may. I have known kennelmen who would, if allowed, only water their charges once or at most twice a week, not because they were satisfied that that was the best plan, but because by doing so the dogs voided less urine, and consequently gave themselves less trouble.

Yet another fancier of repute not very long ago kindly gave his experience to the world, and said he had educated his dogs to drink tea, and that having become used to it they now declined the unadulterated beverage. Well, there is nothing very exceptional about that.

Nevertheless, all this does not do away with the fact that a dog wants practically an unlimited supply, and even in the case of the tea-drinker he gets it. Having regard to the physiology of the body, either human or canine, which is three parts water, continually being used up and requiring replacement, the matter must be patent to the most obtuse, and hardly requires further argument. The body must have a good supply of fluid; man chooses to improve (?) his, and suffers accordingly.

Water must then be always at the dog's disposal, even young puppies, of good quality, and frequently changed. Bad water is worse than none, and if allowed to stand any length of time or supplied in an unclear vessel, it will take and hold impurities and bacteria faster than anything else.

The dog will certainly drink muddy water; so will even, the American soldier in the Philippines, with the result that he speedily contracts enteric fever or dysentery. Therefore it should be served in such utensils as have been recommended, and renewed three times a day at least. The best way of all is to supply running water, which can be contrived at very little cost, by fitting ordinary spouting through the kennels, fed at one end by an india-rubber hose attached to a tap, and the overflow carried off by a similar pipe to a drain trap. By this means your water is always above suspicion, it is no trouble at all, and in a week a lot of time would be saved. Moreover, it is one thing to tell your man to change water three times a day, quite another for him to obey.

Exercise is the third great factor in the healthy condition of the canine race, and neglect or irregularity in this connection will speedily make itself apparent either by loss of appetite, skin disease, or extreme

grossness, not to mention mal-formed limbs and a greatly weakened constitution, consequently increased liability to contract ailments.

People with the best intentions in the world do not rightly understand what the lack of exercise means to a dog. By nature full of activity, first of all the blood declines in quality, because the muscles being idle, do not cause sufficient exercise of the heart's action to ensure a necessary supply of oxygen. This affects the digestive organs so that they imperfectly perform their functions of absorbing nutritive constituents, and repelling waste or noxious products, hence the digestive organs are affected; failing a removal of the cause, they speedily go from bad to worse, and the whole system is put out of gear. It may best be likened to a ship without sufficient water to float it.—*American Stock-Keeper.*

The Bench Show.

The initial show of the Pacific Coast Collie and Old English Sheep Dog Club this week at the Mechanics Pavilion may be said, under the circumstances, to be a very good show. Entries fell short of the spring show in actual numbers of dogs henched, just one hundred and five dogs and the spring show benched 295 dogs, this week's exhibit has 186 dogs on Spratts henching.

Seven St. Bernards, one Mastiff and nine Great Danes comprise the number of big dogs. In several notable instances the quality is high class.

In Pointers, English Setters, Gordons, Irish Setters and Irish Water Spaniels and a solitary Field Spaniel there were twenty-six representatives of the sporting breeds shown. Among the Pointers and English Setters are a quintet of individuals that will make the liveliest kind of going at any show—Minnesota Joe, Boston, Champion Pera, Champion Elloree and Stylish Sergeant are not unknown to the admirers of field dogs. Among the younger dogs are a lot of classy puppies.

Cocker Spaniels are a nicely averaging lot, there being blacks, reds and parti-colors to the number of thirty-five and compose a lot of Cockers that include several well known Coast and local prize winners. In puppies there are several most promising young dogs.

Collies, in the aggregate, can be considered as the class of the show. Fifty-six entries comprise the Collie exhibit and among these are some good ones. Champion Hanover Moorarch, Champion Ormskirk

ones, the standard established by Champion Ivel Rustic for the breed here, is one that will take a long time, if ever, in producing the preponderance of quality that might be expected.

Bull Terriers and Fox Terriers, with the exception of a few dogs, is not up to our average in class or quality. Eighteen Bull Terriers and eleven smooth and wire haired Fox Terriers make a considerable falling off in the two breeds, compared with past benchings.

A corking good little bat eared French Bulldog and six Bostons are flanked by two Irish Terrier entries.

Prototype of the Modern Bulldog.

The latter dogs show quite a little worth, one or two individual dogs are capable of taking ribbons anywhere in this country.

Four Maltese Terriers and three Bleobeims are about the best ever shown in this city. The balance of the small ones are few and far between and as usual of mediocre quality.

In connection with this, we will say that the "feather" end of the combined show is one of rare merit, both in numbers and quality. The dogs how-

ever keeping exhibitors out. Notwithstanding, the interest shown by new beginners and veterans who made their re-appearance is an indication of a healthy rejuvenation of doggy affairs, which if the various interests are wise, will be nurtured and utilized for the general benefit of Coast dogdom, instead of being stifled at birth.

Mr. Cole's decisions have been received with general satisfaction. The surprise of the show, however, was the placing of Le King over Ch. Lester C. These two dogs have come together four times, and on each occasion Le King had taken a back seat. It has always been contended that he was the better St. Bernard of the two, but he has heretofore been shown in such poor condition that he was placed a peg under his rival. This week Le King was put down in the best condition he has been in since he reached the Coast and he prevailed over his former conqueror.

A complete report of the show, and list of awards will appear next week.

DOINGS IN DOGDOM.

A meeting of the Interstate Coursing Club was held Tuesday evening in this city to arrange the preliminaries of the John Grace Challenge Cup stake for this year. John Halton reported for the cup committee.

The event will be run at Union Coursing Park on the 12th and 13th of December. It will be limited to sixty-four entries, as has been the custom in the past. The entrance fee will be \$25 and \$1600 will be added to make up the \$3200 purse.

Of this amount the winner will receive \$500; runner up, \$300; third, \$175, fourth, \$100; the next eight, \$50 each, and the next sixteen dogs, \$25 each. There will be two consolation events and the prize money will be distributed in such a manner that of the sixty-four original entries only six will fail to win their entrance fee.

From present appearances fully one-half of the dogs nominated will be Greyhounds of note from the East. They will make their first appearance on this coast in this event.

Dr. W. J. Hasford, president of the Interstate Coursing Club, will come the field stewards and other officers on the night of the draw which will be held on the 9th inst. It has been announced that Jobo Grace, the veteran judge, will officiate in the saddle, having sufficiently recovered from his recent severe injuries.

Ch. Le Prince Jr.

Ch. Lester C.

Ch. Ormskirk Emerald Jr.

Emerald, Jr. and Ravenswood belonging to Arthur Letts of Los Angeles are the chief contenders among the older dogs. Among the matrons there is also no lack of quality. In young dogs the entries are indicative of careful and select breeding. Entries in this breed were sent in from many distant Coast cities.

But two Old English Sheep Dogs represent the comparatively unknown shaggy breed here.

ever are the attraction for the large number of visitors at the show.

All in all, the experiment, for to a certain extent such it was on this side, of a fall bench show in this city has proven a success, so far as public interest is concerned. Among the fancy, a fall show, without doubt will be supported in the future and can be regarded as a material factor in helping the spring

Coming Events.

Rod.

April 1-Sept. 10. Oct. 15-Feb. 1—Open season for taking steelhead in tidewater.

Nov. 1-April 1—Trout season closed.

July 1-Jan. 1—Open season for black bass.

Aug. 15-April 1—Open season for lobsters and crawfish.

Nov. 1-Sept. 1—Open season for crabs.

Sept. 1-May 1—Open season for shrimp.

Sept. 10-Oct. 15—Close season in tidewater for steelhead.

Nov. 15-Sept. 10—Season open for taking salmon above tide water.

Gun.

July 1-Feb. 15—Dove season open.

Nov. 1-July 15—Deer season closed.

Sept. 1-Feb. 15—Open season for mountain quail, grouse and sage hen.

Oct. 15-Feb. 15—Open season for quail, ducks, etc.

Bench Shows.

Dec. 2, 3, 4, 5—Pacific Collie and Old English Sheep Dog Club. Bench Show in connection with Poultry Exhibit. San Francisco. P. K. L. rules.

Field Trials.

Nov. 23—American Championship Field Trial Association. Annual trials. Robinson, Ill. H. S. Humphrey, Secretary, Indianapolis, Ind. Declared off.

Nov. 30—Virginia Field Trial Association. Chase City, Va. Chas. R. Cooke, Secretary, Richmond, Va.

Dec. 1—Indiana Field Trial Club. Annual trials. Clay City, Ind. C. F. Yung, Secretary, Clay City, Ind.

Mrs. Thos. Magee Jr.'s Winner

Ch. Jnanita

Sixteen Bulldog entries are an unexpected showing. The average of quality will compare most favorably with any previous benching of the breed on the Coast. Whilst several individuals are really good

show.

More local entries would have been made had the proper press announcements been made before entries were closed. Some local opposition also had its effect

Duck and Quail Outfits.

The demand at Skinner's keeps up for sportsmen's outfits, ammunition and guns. A large and new stock of goods has been added to fill the demand for hunting suits, rubber boots and hunters' footwear, canvas and folding wooden decoys, gun cases and a new design of leather-covered shell boxes. Peters Factory Loaded Shells are unequalled. Skinner's place is 801 Market street. You can get anything there you need for duck or quail shooting. Send for a catalogue, if you haven't the time to come, and try a mail order.

THE FARM.

Treatment of Wounds in Animals.

As ordinary wounds sustained by farm animals are usually treated by the owner or his hired men, it is of importance that they should understand the principles of cleanliness and antiseptics so that Nature may be aided in repairing such injuries, says A. S. Alexander, V. S., in the *Live Stock Report*. Left to herself she will do successfully in a majority of instances, but not in the most desirable manner. Scars, enlargements, hard spots, and similar evidences of the reparative process remain when Nature unaided is allowed to remedy wounds and lacerations. It is possible to avoid these blemishes if proper attention be paid to the wound by those in attendance.

We find several things commonly retarding recovery or insuring blemishes. First is the too common carelessness which fails to render immediate assistance. The wound is discovered, deemed of slight significance, and later found to be serious. Second, immediate aid when given is often unintelligent, and even detrimental. This is surely so when the wound is at once given a coating of axle grease, tar, somebody's filthy salve from an old pot, or is wrapped up in a section of old shirt or pants leg, and this improvised bandage is allowed to become foul with discharges so that it becomes the congregating ground of myriads of disease enhancing flies. Third, there exists the almost unanimous opinion that strong caustics are absolutely necessary in the treatment of wounds, which by their use are often rendered worse, caused to spread and eat deeply, or healed with unsightly scars and blemishes.

As a general law, it may be stated that unless everything applied to a wound is clean and kept clean, the wound had better be left uncovered. Air, full of oxygen, is wholesome and reparative. Certain germs, as that of lockjaw (tetanus), for example, do not thrive in the presence of oxygen. For this reason punctures of the foot, by nails or snags, not giving free access to air, are the common source of lockjaw, and such wounds, more than large, open ones, most demand the use of germicides and antiseptics—agents destructive to germs and preventive of germ growth. Smearing axle grease or other tenacious material upon wounds seals them up, includes germs already present and excludes air which might possibly destroy or render harmless existing germs or those afterwards coming in contact with the wound.

Presuming, as it was wise to do, that germs are present in every fresh wound, the first step should be to seek their destruction, the second to guard the wound against reinfection, and third to promote healing by stimulations. Thorough cleansing with some effective disinfecting

solution, such as a 1-1000 solution of corrosive sublimate (bichloride of mercury or a teaspoonful of carbolic acid, or creolin, to a cupful of warm water, or a like solution of any one of the advertised and excellent tar product disinfectants, should be done before stitches are inserted, salves applied, or a covering of antiseptic cotton and bandages put on. This cleansing should be thorough. Patient work is often necessary, as in case of wounds of the knee from falling, for in such will be found sand, dirt, gravel, hairs, bruised skin and other tissue, and any one of these allowed to remain in place must of necessity retard the healing process. Clotted blood is also to be considered a foreign body, and to be removed at once.

Cleaning Harness.

It seems like quite an undertaking to clean a harness and it can not be done in a few minutes, but if one knows just how it is not an unpleasant piece of work. The harness must first be taken to pieces, every strap unhuckled and if an amateur is doing the work he should pay particular attention to the peculiar way in which back strap and check-rein are huckled. If the harness is dry and stiff, give it a good soaking in warm water, using white castile soap and a brush to clean off the dirt. Hang it up to drain and before quite dry apply neatfoot oil with a paint brush. Let it dry until the next day. Then if the harness still seems hard apply another coat of oil. When the oil has soaked in, soap it all over with white castile soap, having the sponge or rag moistened and very soapy. After this treatment an occasional soaping will keep the harness in order for a long time. Before the harness is put together, any broken places should be mended with needle and waxed thread. An awl is necessary in places.

In cases where cows have been giving milk a long time the fat globules become smaller, the milk contains more albumin, casein and sugar than normal and the milk fat is harder. This condition causes difficult churning and especially when the cream is not properly ripened injurious bacteria may be a cause. Brush the udders and under parts of a cow with a damp sponge or cloth. Milk in clean vessels and cover the milk until it can be strained. Skim when the cream is raised and do the last mixing of cream twelve hours before churning. Let the cream become ripe, slightly acid but not sour. Keep it as cool as possible and churn at different temperatures and thus find the right temperature for the cream. The richer the cream is in fat, the lower the temperature for churning. Cream with forty per cent fat may be churned as low as fifty degrees while pure cream containing only from fifteen to twenty per cent fat needs a higher temperature of from fifty-eight to sixty-two degrees.

Sober up on Jackson's Napa Soda.

The Champion Steer.

At the National Stock Show in Chicago this week the title of grand champion steer of America was conferred on Challenger, an animal which six months ago was running untamed in Farmer Murphy's pasture near Tecumseh, Neb. Professor H. R. Smith of the Agricultural department of Nebraska University "discovered" the steer among a bunch of others and paid Murphy \$65 for the animal. The professor sent his prize to the university, where students recognized the animal's possibilities, began to feed him scientifically and gave him the name of Challenger. This week he took the title of honor among the choice animals of the Nation. He will be put up at auction, and probably will bring \$1000. It develops that the sire of the steer is a registered shorthorn bull named McGinty. Murphy's cow, the dam of the champion steer, is a nameless shorthorn with a small percentage of Holstein blood.

Salting butter in the chorn avoids streaky butter.

Hog Prices and Bacon Prices.

Twenty cents per pound for bacon sides and fat hogs selling for less than five cents per pound. Here is a market that should encourage our pork producers to go into the manufacture of bacon. Formerly it was said that bacon would be the right price if fixed at double the price of pork, the offal, etc., affording a good profit; but the consumer now pays the freight down to San Francisco and back, with three profits added, which necessarily brings the price too high.—*Willows Journal*.

A corporation to establish a goat dairy in St. Louis marks another step along the path of the faddists. Prominent local physicians are the principal stockholders. Its purpose will be to provide milk for infants that is most like mother's milk and free from tuberculosis germs. The corporation will be capitalized at \$150,000. This dairy company will not deliver milk, but goats will be rented. The customer can keep a nannie as long as desired and milk her when he pleases. The dairy company will furnish food for the goat and the customer must see that it eats nothing else.

STATE AGRICULTURAL SOCIETY OCCIDENT STAKE OF 1906

TROTting STAKE FOR FOALS OF 1903
To be Trotted at the California State Fair of 1906. Entries to Close January 1, 1904.
with L. R. MILLER, Acting Secretary, at the office in Sacramento.

ONE HUNDRED DOLLARS ENTRANCE, of which \$10 must accompany nomination; \$15 to be paid January 1, 1905, \$35 to be paid January 1, 1906, and \$50 thirty days before the race. The Occident Cup, of the value of \$400, to be added by the Society. Mile heats; three in five, to harness. First colt to receive cup and six-tenths; second colt, three-tenths; and third colt one-tenth of the stakes. Five to enter, three to start, otherwise N. T. A. Rules govern. Nominators are not held for full amount of entrance in case colt goes wrong; only forfeit payments made, which relieves you from further responsibility, and declares entry out.

NOTE—This stake is growing in value each year. In 1900 it was worth \$2230; in 1901, \$3595; in 1902, \$3295; in 1903, \$3920.
The stake for 1906 should receive a larger entry, and be very valuable. Every breeder should enter in it.
A Special Stake will be opened for foals bred originally in this stake and the Stanford Stake of 1906, that develop a pacing gait to be contested for in 1906.

Remember the date of closing is January 1, 1904.

L. R. MILLER, Acting Sec'y.

B. F. RUSH, President.

Dictatus Medium 32499

Will make the coming season at Race Track, Hollister, Cal.

Jos Sanchez in charge

\$40 FOR THE SEASON.

Payable at time of service, with usual return privilege. Every care taken to prevent accidents, but no responsibility should any occur. Prompt and careful attention in all cases. Pasturage furnished to mares, sent from a distance at \$2.50 a month.

A DICTATUS MEDIUM PURSE OF \$100.

I will give a purse of \$100, with entrance money added for a race, best two in three, open to any and all colts from the breeding season of 1904, either pacers or trotters. Must be three to start and race to come off on Hollister track, Fair week, 1907. (Exact date to be hereafter announced.) \$5 entrance money, payable June 1, 1905, \$5 thirty days before the race. Three moneys: 60 per cent to first horse; 30 per cent to second and 10 per cent to third. For further particulars, address

DESCRIPTION.

DICTATUS MEDIUM is 6 years old, weighs 1220 pounds. A beautiful turned bay horse with heavy mane and tail kind and gentle, with a perfect disposition. Good but heavy bone. He has great power and speed. Has a record of 2:24, but has worked out in 2:12. He is a horse that will go out any day and do his best. His colts are models of grace and beauty. Only one so far has been worked. This one, Al Willson's yearling LITTLE MEDIUM, paced an exhibition 1/4 mile on the Hollister Race Track in 38 1/2 seconds, a 2:33 gait. This colt has great promise.

DICTATUS MEDIUM is by Dictatus 2:17 one of the best bred and fastest horses ever brought to California. The dam of Dictatus Medium is Belle Medium (dam of Stam B 2:11 1/4), by Happy Medium, grandsire of the dam of Lou Dillon 1:58 1/2. His second dam is Argenta by Almont Lightning, sire of the dam of Zombro 2:11. There is no doubt but Dictatus Medium will prove to be a sire of speed as well as good size, style and disposition.

Kinds of Stable Bedding and How to Use Them.

Absorbents help wonderfully in keeping stables clean and wholesome. In fact, without them the stable can hardly be kept healthful. There are numerous other reasons why absorbents of different kinds should be used freely in the stable. By taking up the liquid manure the absorbent reduces the difficulty of saying and handling it; too rapid decomposition is also prevented. There is rapid waste in animal excrement, and especially the liquid excrement when not adulterated. Absorbents keep the animals clean, warm and comfortable.

Different kinds of material may be used to good advantage for this purpose. Sawdust makes an excellent stable absorbent, and when liberally used none of the liquid manure may be wasted, and it also leaves the stable quite clean when removed. Sawdust retards the decomposition of animal manures, and is one of the poorest known conductors of animal heat; hence a bed of it aids nicely in keeping the animals warm. Softer beds may be made of other material, yet it adds to the comfort of the animal. When mixed with manure it rots quickly, and then has considerable value itself as a fertilizer. Those who are situated so that they can get this material handily and at a reasonable cost, will make no mistake in using it as a stable absorbent, for its merits certainly warrant its use for this purpose.

Most farmers find it more convenient to use straw in bedding their stock. Probably more than half of the farmers throughout the country have more straw than they are able to feed out to their stock, so they have an abundance of this material to use as an absorbent. Straw does not take up the liquids so well as sawdust; however, it answers the requirement very well, especially if cut up rather fine. When used liberally it is an easy matter to keep the animals and stables clean. It also makes a warm and soft bed. And its use with animal excrement rapidly reduces it to a fit condition to be used as a fertilizer.

It is claimed that a little land plaster scattered in the stalls daily is beneficial. Plaster is not expensive, and is useful for fertilizing, and its fertilizing value is not impaired by its being used as an absorbent. Every one who has cleaned out horse stables has, no doubt, been made aware of the presence of escaping ammonia by unpleasant sensations in his nose and eyes. If a little land plaster is used in the stalls it will help to hold the escaping ammonia, and to remove the odor from the stable. And by its use we not only save the ammonia but we make the stables more healthy.—*V. M. Couch in Exchange.*

Serum for Hog Cholera.

The tests which the bureau of animal industry have been making during the past year with anti-cholera serum show conclusively that the bulk of a cholera-affected herd can be saved by the use of the serum. This is the third year that droves have been officially experimented upon in this manner, and in no instance have the losses been greater than 25 per cent, 70 per cent of the drove having been saved. Without such remedial treatment the loss usually ranges over 75 per cent and the hogs saved are but a fragment of the drove. Last year's experiments show about 80 per cent saved and the slightly smaller percentage due to this year's work is accounted for by the fact that younger animals were operated upon this season.

While the serum cure is sufficient of a specific to be almost a guarantee against great loss from cholera, the cost of the serum is considerable, and the bureau is now experimenting along the lines of getting a much cheaper article which will be efficient. The serum now used is a compound one, effective alike at one operation against cholera and swine plague.

Prefers Sheep to Fat Cattle.

I think if we take a series of ten years together it will commonly be found that there is not much difference between the market price of fat sheep and fat cattle, if we compare all classes, wethers, fat ewes, yearlings and lambs, with steers, fat cows, heifers and calves, says an Iowa sheep breeder. The fat cattle are now about \$1 per hundred less than a year ago, still choice fat steers are now considerably higher than fat wethers and yearlings, but fat cows are about the same as fat ewes.

It has been proved at our experiment stations that as a general rule it requires about the same amount and quality of feed to grow and fatten a given number of pounds of sheep or mutton, as of cattle or beef. According to this rule ten sheep at two or two and one half years old, weighing 130 pounds each, have eaten the same amount of feed as a steer or heifer of the same age and weight, 1300 pounds.

Suppose now we compare ten choice two-year-old wethers, weight 1300 pounds, with a choice two-year-old 1300-pound steer. The steer would sell in Chicago at about \$6.30, or about \$32. The wethers for about \$4.80, or about \$62, or \$20 less than the steer. But this difference of \$20 is more than compensated by the twenty fleeces which the ten wethers have produced in the two years, which should weigh ten pounds each or two hundred pounds, and would now bring at home fully twenty cents per pound, or \$40, making \$20 in favor of the wethers. The quotations on wool January 1, 1903, were just about the same as in May, 1900, when I sold it for twenty-one and one-half cents at my home my four hundred fleeces of delaine unwashed wool weighing ten to fourteen pounds each. The prices of steers fell nearly \$3 per hundred the first three months of 1903 and have not recovered.

If we compare fat ewes with fat cows the wool is the profit of the sheep over the cows, while lambs bring nearly as much by the hundred as steers.

Prevention of Mould on Butter.

Following is a copy of some suggestions made by the Montreal Produce Merchants Association as to points to be covered in a circular to be issued by Prof. J. W. Robertson, the dairy commissioner, to butter-makers and patrons with a view to the prevention of mould on butter.

The factories should be thoroughly cleaned by liberal whitewashing with lime and the use of any other germicide that experience can suggest.

As damp wood is a hotbed for breeding and disseminating spores of various kinds, care should be taken to have the wood-work of factories always thoroughly sound and dry, carefully removing all damp and decaying pieces, particularly from the floors and gutters. Drainage should be carried away from the factory beyond smelling distance by water-tight, vented and trapped drains.

Factory refrigerators should be kept as dry as possible, and nothing but sound wood allowed to remain in their structures.

Particular care should be taken that butter boxes are made only of thoroughly seasoned wood carefully and properly paraffined.

Only the best and purest parchment paper should be used for lining the boxes. This paper while awaiting use should be kept in a thoroughly dry, clean place; before used on the butter it should be carefully soaked in a solution of brine and formalin. It should never be applied in a dry state; and particularly it should never be used after being wet with pure water.

Great care should be taken in conveying butter from the factory to the railway station. It should be exposed as little as possible and for as short a time as possible.

A young calf for the first few weeks should be fed a little of its mother's milk often.

Stable Proverbs.

Use the currycomb, but use it mercifully; it's the dirt you are after, not the skin.

The stiff scrubbing brush the wife uses in house cleaning is a good and merciful horse cleaner. But do not appropriate hers.

So treat the horses that they will be glad to see you come into their stable, and not act as if they would like to climb through the roof.

Teach the colt when it is young and you will not have to break it when older.

Cleanliness of person and stable may not be godliness to the horse, but it is good-feelingness, which is probably more important from the viewpoint of the horse.

A clean skin is conducive to horse health as it is to man health.

Rely less upon drugs and more upon good care to keep the horse in good shape. Condition sanitary will heat condition powder every time as a condition maker.

If the foundation of the stable is getting out of condition you would fix it at once and prevent its recurrence. The foot is the foundation of the horse in the stable, and its condition must be kept good or there may as well be no horse there.

Variety of food is good for horses, but variety of hours for feeding it is very bad.

The good horse brings a good price, and good care with intelligent instruction goes a long way toward making the good horse.

A handful of hay twisted hard and tight is a good horse brush if wielded with might.

Blackleg Disease in Cattle.

Of all bovine diseases blackleg is undoubtedly the most virulent because as thousands of cattlemen know to their cost it is a malady for which no remedy is known to exist. Notwithstanding the deadliness of its attacks and the fact that it is yearly becoming more and more prevalent in various parts of the country, this disease is not as well understood even by stockmen as it should be. How to diagnose it, whence it arises and how to prevent it are questions of immeasurable moment to every cattle raiser. A little pamphlet recently issued by Parke, Davis & Co. of Detroit called About Blackleg admirably covers these points. We reprint a few paragraphs which serve to show the extreme malignancy of blackleg:

"Blackleg affects a few other animals besides cattle but to so small an extent that they may be left out of the account, while among cattle its ravages are so simply appalling. It strikes like lightning and almost as quickly kills. The disease blackens the parts it affects, chiefly the thighs, shoulders and neck. This blackening is internal of the muscles and blood. Externally there is a swelling or tumor at the affected spot which may extend to the whole body either before or after death. If this tumor be headed or pressed under the knuckles, it emits a crackling sound and if cut into it exhibits the blackened tissues and fluid, accompanied by a peculiar odor which cannot be described. Naturally the affected animal loses appetite and spirits and becomes stiff and lame.

"The cause of all this disturbance is a minute organism which multiplies by fission or sporulation and in twenty-four hours a comfortable little family group has become a million or more, with undiminished powers of geometrical increase. The germs enter the animal's body through scratches or wounds in the skin or along with its food or drink." Fortunately for the stock raising interests of the country, science has devised a reasonably certain preventive against this disease. By vaccination with a reliable blackleg vaccine the animal is successfully fortified against it.

Jackson's Napa Soda is sold in every city, town and hamlet in the State.

KENDALL'S SPAVIN CURE

20 YEARS SUCCESS

Here is a man who has used our Kendall's Spavin Cure for over 20 years with entire success. Your experience would be the same if you but tried it.

Fulton, Oregon, Feb. 10, 1903.
Dr. B. J. Kendall Co.,
Gentlemen:—Will you please send me your book "A Treatise on the Horse and his Diseases." I have used your Kendall's Spavin Cure for over twenty years and know of no better liniment for man or beast. Have also used one of your books until it is worn out.

Very truly yours,
F. J. NELSON.

It is an absolutely reliable remedy for Spavins, Splints, Curbs, Ringbones, etc. Removes the humor and leaves no scar. Price \$1; six for \$5. An liniment for family use it has no equal. Ask your druggist for KENDALL'S SPAVIN CURE, also "A Treatise on the Horse," the book free, or address
DR. B. J. KENDALL CO., ENOSBURG FALLS, VT.

FOR SALE. THREE-YEAR-OLD FILLY

BY BARONDALE 2:11 1/4, sire of 6 from 2:16 1/4 to 2:24 1/4. First dam, Mary E. by Wilkes Boy 2:24 1/4, sire 75, 3 in 2:10 list; 2d dam, Mamie A., great broodmare by Young Jim 2:09, sire 60, 3 in 2:10; 3d dam, Admiration, great broodmare by Administrator 2:20 1/4, son of Hambletonian 10; 4th dam, Kittie Patchen, great broodmare by Mambrino Patchen 58; 5th dam, Bettie Brown, great broodmare by Mambrino Patchen 58; 6th dam, Pickles by Bellfounder (Brown's); 7th dam, Old Pickles by Bellfounder (Brown's); 8th dam, daughter of Grey Eagle (thoroughbred). With 9 weeks' work she trotted a mile in 2:29, my first experience training a trotter. Next year, in any good trainer's hands, she will trot in 2:15 or better. I have a yearling full brother that at 14 months old paced a quarter in 39 1/2 seconds and an eighth in 18 seconds, harnessed to cart. I am confident that next year in his two-year-old form he will be able to step a mile in 2:12.

I also have a weanling full brother to the above that is a grand colt. I will sell any one or all of them before I ship East this winter. They are all absolutely sound, without spot orblemish, grand individuals and handsome lookers. If you are wanting to buy something good come and see these colts. They are surely bred in the height of fashion from royal bred families that are futurity winners.

TOM JAMES, San Jose, Cal.

Standard Trotting Stallion For Sale ORO GUY 34192

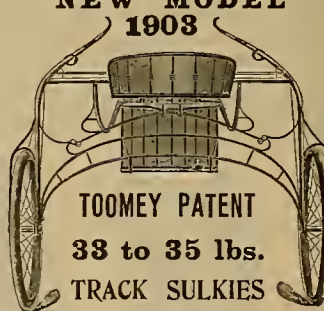

Foaled 1898 By Oro Wilkes 2:11. Dam by Guy Wilkes, 2d dam by Sultan, 3d dam by The Moor. Black in color, stands 16 hands high, weighs 1150 pounds. With little work has shown a mile in 2:16 1/4. Square-gaited trotter; guaranteed absolutely sound. Good disposition. Stylish conformation. One of the best bred representatives of the Wilkes family on the Coast. Will be sold reasonable. Apply or address R. I. ORR, Gilroy, Cal.

FOR SALE. Three Standard-Bred Trotting Stallions WILKES STOCK.

One Seal Brown, 16 hands, foaled May 2, 1898; first dam Fearless by Falls 4781 (record 2:23); second dam Jean Perault by Signal 3327.
One Golden Bay, 16.1 hands, foaled March 5, 1898; first dam Signal by Del Sur 1098 (record 2:24); dam of Guy Line 2:29 1/4; second dam Lady Signal by Signal 3327.
One Brown, white points, 16.1 hands, foaled April, 1899; full brother to the bay.
These colts are all sired by Prince Airlee 28045, son of Guy Wilkes 2807 (record 2:15 1/4), and bred by Wm. Corbit, San Mateo, Cal. They are pure gaited and show wonderful speed for the little work they have done.

The Prime Carcass and Its Development.

Professor Curtiss of Iowa, speaking on the above subject before a live stock convention said: There are different standards in relation to the kind of carcass; our tastes differ, and different markets have different standards. After all, the standard that fixes the market value is the one that should govern the producer. We cannot afford to quarrel with the taste of the purchaser; our aim is to furnish what he wants, and that for which we can obtain the greatest price. This standard has changed greatly. A few years ago the foreign market demanded large, heavy, thick, fat bullocks, weighing eighteen hundred to two thousand; but that demand has changed, and it is now usually a losing balance for the exporter to send that kind of bullock. There is now no market that demands that kind of bullock. The bullock that commands the highest price on our side is a good, compact, well finished hullock, weighing not more than fifteen hundred pounds on foot, and they do not need to be that heavy. If you have the quality, form and excellence, that bullock will sell at top price at 1200 pounds, and some of them at even 1000. When we marketed, ten years ago, our first test lot of cattle from the Iowa College, we had cattle ranging from 1500 to 1900 pounds. Some of the best cattle we submitted were rated 50 cents below the top price, simply because they did not have the weight. The judges who passed upon them said that there were no better animals in the lot than these smaller cattle, but that they lacked the weight necessary to put them in the highest priced class. That is all changed, and it is greatly to the advantage of the producer, as other things being equal, the younger the animal goes to market the less is the cost of food, and the greater the profit to the producer. The foreign market demands moderate weights, well finished, of good quality, and sufficient fat in connection with the lean meat to secure the highest degree of excellence without waste.

You cannot furnish lean meat of the required quality without a certain proportion of fat. You must have enough to insure a fine delicate flavor, and tenderness. But the wasteful carcass, on the other hand is a thing of the past; it is wasteful to the producer, because it takes more time and feed, and to the consumer, because of the excessive amount of fat. The foreign market has changed more than our own. Today the export cattle are not the heaviest or ripest cattle that come to our market. Our own market pays a higher price for the heaviest and ripest than the foreign market will pay.

There is sometimes an inherent tendency to fat in an animal. This is probably the case with the fat carcass that is here exhibited. In such an animal you often have a condition described as a fatty degeneration; That is to say, after a certain stage, a disposition to fat takes place at the expense of the lean tissue, and all fat put on after that stage is reached is at the expense of the lean meat in the carcass. These cases, however, only occur in show animals.

The great trouble with the meat that comes to the market to-day is not that it has too much fat, but not enough. The reason we do not have better meat when it comes to the table is that the animal has not been sufficiently fat. The great secret in producing a carcass of beef is to produce an animal in such a way that the fat grows with the animal, instead of producing the fat in the last three or four months, and putting it on the outside. The fat should not be deposited in patches on the outside of the carcass; it is absolutely wasted, and it is useful for nothing but tallow. You should have it occurring throughout the lean tissue. There you can sell it at a high price, and the consumer sees that he is getting an absolutely good article. That cannot be done by keeping an animal in a half-

starved condition for two years, and then finishing it up in three or four months. The only way you can be sure of prime quality is to have the animal in fairly good condition under liberal feed from birth to maturity, and thus grow the fat as the animal is developing. Then the finishing process is comparatively short, and you have what we call marbled beef. The animal that will go on the block in the best condition is not the one that has been forced beyond the point where it will give the best returns, or one that has been finished on a short forced period of feeding, but one that has grown its fat and its lean meat at the same time.

As to the degree of finish, the question has often been asked on our side: "Why is it that animals that win on foot are generally unfit to win on the block?" and the contention has been that judgment in one case or the other was wrong, many claiming that the animal winning on foot ought to win on the block. Such a state of things is somewhat inconsistent apparently, and yet it is not. There is one particular point which the animal reaches when it is in the best condition for the block. You may carry an animal somewhat beyond that point for the show on foot, without spoiling its appearance, but you do so at the expense of the carcass. Then, again, you feed the animal to develop the highest form and the highest excellence on foot, and in so doing produce a greater amount of fat in the carcass than is desirable, and carry the animal beyond the stage where the carcass will give you the best returns. If you take a steer that has been fed eighteen months or two years for the show ring, the chances are that his carcass will be too fat from the consumer's standpoint.

Methods of Handling Swine.

Any hog, to give good results, must be a good grazer, for clover and bluegrass are important factors in the production of cheap meat, and also in the promotion of the health of the hog. We undertake to have our breeding hogs run on bluegrass pasture in the winter and bluegrass and clover in the summer, writes S. H. Todd in *Orange Judd Farmer*. In connection with this we give our breeding stock slop in the morning made of middlings, corn meal and bran, about one-third each in bulk, making slop thin, so that we can fill the stomach without getting them too fleshy. At night we give them six to ten ears of corn each, keeping our eye open to see that they do not get too fat or run down in flesh.

Give them good dry quarters and a good bed of clean wheat straw or cornstalks. Never bed with oat straw. A brood sow, in stage of gestation, that has bluegrass pasture to run on in the winter time, unless the winter is too severe, will take of her own accord plenty of exercise, which is all-important to the pig before it is farrowed. If she won't take exercise herself make her take it.

The time for farrowing should be noted with great accuracy, and the sow put by herself for at least four weeks before. The sty should be about 8x10 feet and arranged with two one-sash windows, so that plenty of sunlight may fall on the sow and her family. With our large sow we have a shelf around the sty fourteen inches wide and twelve to fourteen inches from the floor. This makes a hiding place for the little pigs, and they won't be as likely to be trampled upon or overlaid by the mother. Be careful not to let the brood sow get a hollow in the center of her nest, as she is then liable to overlay her pigs.

Pigs will learn to eat at about three weeks of age. Great care should be taken to arrange a place where they can go by themselves to eat, without being disturbed by the mother. In this room keep dry corn. They seem to enjoy cracking it. Feeding middlings and corn meal, equal parts, making into a very thin slop with sour milk if you have it. If not, use dish-water. If you have neither, water will do. Have the slop warmed until the pigs are five or six weeks old, when they will take it cold.

Always remember that to feed a young pig successfully you must give him food that he relishes. If you don't he will be an eyesore to you, no matter how well bred he is.

The First Cattle Importations.

The first historical mention we have of the importation of cattle is that they were brought by the Europeans to Mexico about the year 1525, says Mrs. M. A. Sherman. The mild, equitable climate and the abundant grass-covered ranges caused them to multiply rapidly, and they soon covered not only the plains of Mexico, but those of Texas and California, with their off-spring.

The first improved cattle came to Virginia from Holland in 1625, and were of beef and milk form. The oxen were powerful animals, plowing the new lands, while the cows furnished a small amount of milk for the settler's family. The first cows used solely for milk were brought from Normandy to Quebec by the French emigrants. It is said that these yellow, dun and silver gray Normandy animals enter largely into the foundation strains of both the modern Island Jersey and the brown Swiss cattle. They were of medium size and gave a fair quality of milk, while the oxen were large enough for plowing in a hilly country, like Canada and New England.

However, the dairy cow was, as yet, of little value in the eyes of a farmer, for as late as 1825, at a Massachusetts county fair there was no class for cows or for butter and cheese; but there was the surprising entry of 100 yoke of oxen competing in feats of strength and docility. I wonder if there were some old men there to croak at that county fair as an ox show, just as we croak today that our fairs are mere race horse matinees.—

BALLISTITE
 The Standard Dense Powder of the World.
 STILL LEADS AT THE TRAPS OR IN THE FIELD.
 Ballistite wins from the limit marks in distance handicaps, at either live birds or flying targets as it always gives the highest velocities with the closest and most even patterns at all ranges. Ballistite is absolutely unvarying in results being waterproof, smokeless, odorless, without residue and ensures lower than black powder, unaffected by age or climatic changes, and never pits, rusts or rodes the barrels. Ballistite is sold with above guarantee.

CAMPBELL'S HORSE FOOT REMEDY IS THE BEST REMEDY
 EVER USED ON HORSES' FEET.
 IT PENETRATES and DRIES IN quickly and DOES NOT GUM and FILL UP THE PORES like tar and oil compounds. It is the GREATEST REMEDY ever used to remove SORENESS and FEVER from the foot, and makes it possible to get good services out of a horse working on hard and hot pavements.
 It gives natural nourishment to the foot and incites a rapid, healthy growth—ALL DRYNESS and BRITTLENESS quickly disappears.
 QUARTER CRACKS and SAND CRACKS are rapidly grown out when directions given in our booklet are followed.
 It is a SURE CURE for CORNS, CONTRACTED FEET and NAIL WOUNDS if directions are followed.
 It PREVENTS SOUND FEET FROM BECOMING UNSOUND and GROWS a TOUGH, STRONG, ELASTIC WALL and HEALTHY FROG—a FOOT WHICH WILL STAND WORK on race courses.
 Many of the best owners and trainers state that for track work nothing equals it. In many cases horses have reduced their records several seconds, due to its use.
 It is a CURE for THRUSH and SCRATCHES.
We Guarantee That It Will Do What We Claim and Will Refund Money if It Fails.
 PRICES:—Quarts, \$1.00; Half-Gallon, \$1.75; Gallon, \$3.00; 2 1/2-Gallon, \$5.50; Five-Gallon, \$10.00.
 Books giving full directions for its use and much valuable information as to shoeing are supplied free.
 Don't fail to read "ad." giving information concerning Campbell's Iodoform Gall Cure in next issue of this paper. It is the best and because of its merits is rapidly displacing all others.

Conditions for the Entry of Foals of 1903, to close and name by midnight, Tuesday, December 15, 1903.

Foals of 1903, the progeny of stallions only nominated to be entered and named by midnight of Tuesday, December 15, 1903.

Colts and geldings at \$10 each, fillies at \$5 each, the only forfeit if declared by December 15, 1904.

If left in after December 15, 1904, and declared by April 20, 1905, colts and geldings to pay \$30 each, fillies \$15 each.

If left in after April 20, 1905, colts and geldings to pay \$60 each, fillies \$30 each.

Starters—Colts, geldings and fillies to pay \$100 each additional.

The Westchester Racing Association to add \$5,000 and the remaining 50 per cent of the stallion entrances, of which \$1,200 to the second and \$600 to the third. The nominator of the winner to receive \$1,000 out of the subscriptions and starting money. Of the subscriptions for stallions, the nominators of the sires of the first, second and third horses shall receive 25 per cent., 15 per cent and 10 per cent respectively.

Colts to carry 122 lbs., geldings and fillies 119 lbs. The produce of stallions which have not produced a winner prior to December 15, 1903, allowed 5 lbs. if claimed at time of entry. By filing with the Westchester Racing Association, prior to December 1, 1904, an accepted transfer of the foal's entry, the original subscriber shall be released from liability as to the engagement of the horse, except for the original forfeit of \$10 or \$5.

Last five harlings, Eclipse Course.

Both the National Stallion and the Matron as above are to be run under the Rules of The Jockey Club and Westchester Racing Association applicable to the conditions of each and both of them, viz.: Rule 38, Rule 54, Part IV, Rule 63, and Rule 5, Part III, Rule 72.

For further particulars and entry blanks, address

H. G. CRICKMORE, Clerk of the Course.

PALACE HOTEL, SAN FRANCISCO, CALIFORNIA.

TOURISTS and TRAVELERS will, now, with difficulty recognize the famous COURT into which for twenty-five years carriages have driven. This space of over a quarter of an acre has recently, by the addition of very handsome furniture, rugs, chandeliers and tropical plants, been converted into a lounging room—the FINEST IN THE WORLD.

The EMPIRE PARLOR—the PALM ROOM, furnished in Cerise, with Billiard and Pool tables for the ladies—the LOUIS XV PARLOR the LADIES WRITING ROOM and numerous other modern improvements, together with the unexcelled Cuisine and the Most Convenient Location in the City—all add much to the ever increasing popularity of this most famous HOTEL.

TRADE MARK

QUINN'S OINTMENT

FOR HORSES

stands at the head of all veterinary remedies. Such troubles as Spavins, Curbs, Windpuffs, Splints, Bunches have no terrors for a horse if the master keeps and applies Quinn's Ointment. All well known horsemen speak of it in the highest terms:

Miller & Sibley of Franklin, Pa., owners of St. Bel, brother of late Bel Boy, write, "We have used Quinn's Ointment with great success and believe it fulfills all claimed for it. We cheerfully recommend it to our friends." For Curbs, Splints, Spavins or Bunches it has no equal.

Price \$1.00 per package. Sold by all druggists, or sent by mail.

San Francisco, Saturday, December 12, 1903.

BETTER AND LARGER HORSES will come from the ranges of Northern California and Southern Oregon four or five years from now than the San Francisco range horse market has been accustomed to, and they will meet with a ready sale at good profit. During the past few years the proprietors of the big horse ranges have been selling off their stallions and small mares, retaining the larger mares that weigh from 1200 up and buying large Percherons, Belgian, Clyde and Shire stallions to breed these mares to. Mr. Fred H. Chase, the well known dealer of this city, who recently made an extended trip through the extreme northern part of California and southern Oregon in search of express and draft horses for the San Francisco market, tells us that horses of good work size are hard to find. He bought over five hundred head, but wanted as many more, which he will have to make a second trip for. He states that six stallions weighing from 1700 to a ton were recently sold to parties in Siskiyou county at prices ranging from \$800 to \$1800. These stallions were Normans, Clydes and Shires and imported recently from the Eastern States. Mr. Chase recently sold to the well known Churchill Ranch three three-year-old draft stallions weighing from 1500 to 1800 pounds. On the Churchill ranges nothing is being kept but the large mares with draft blood in them, and they will be bred each year to full blooded stallions. Mr. Chase is of the opinion that when the results of this and future years' breeding reach this market they will outclass all range horses heretofore seen on this Coast. It is a known fact that the horses of Northern California, especially those raised in the mountains of Siskiyou and Modoc, have splendid feet and limbs, wonderfully developed muscles and great lung power. From the time they are foaled they are accustomed to climbing hills and traveling long distances, but are never underfed, as the ranges there are among the best in the world. Wild grasses that make the best of feed grow in great abundance, and although there is considerable snow in winter the grazing is always good. On many of the ranges thousands of tons of hay are cut annually and fed to the horses during the winter, so that the colts are kept growing. It is also well known that the range horses have such hard, perfect feet that they can be driven for some time without shoeing after they are sold for use in San Francisco. But few of the large ranges are left and they are fast being cut up and converted to other uses, but on those remaining there is a unanimous determination to breed up and the horse weighing 1200 pounds and upward will in a few years replace the smaller and consequently less valuable animals that have heretofore come from the range. There will be a good demand for all that can be produced.

THE OCCIDENT STAKE, California's trotting classic, has become the richest prize for three-year-olds that is given west of the Mississippi river. It was worth over \$2500 to the winner this year, and is increasing in value every succeeding year. The stake for foals of this season, to close on January 1st, will doubtless be worth \$3000 net to the winner. If you have a well bred trotting foal of 1903, be sure and name it in this stake. It will pay if you want to sell. This year's winner was bred by Oakwood Park Stock Farm and sold to Ben Chaboya, who saw she was a likely candidate for the race. Before he had developed her very far Henry Sanders wanted her to win the stake with and paid Chaboya a good price for her. Mr. Sanders won the Occident with her and then sold her for \$3000 because she was eligible in the Stanford to be trotted one week later. Mr. Montanya then won the Stanford with the filly and she is not now for sale. Had she not been entered in this stake perhaps her speed would never have been developed and she would not have been worth as much as she sold for. It pays to enter in stakes, as the expense is small and there is always a chance to win or sell.

OUR CHRISTMAS EDITION will be published two weeks from to-day. It will be the handsomest and best illustrated paper ever issued by this journal. The embossed gilt cover is pronounced by those who have seen it the handsomest thing printed for any of the California holiday journals. There will be 36 pages of beautiful illustrations and interesting reading. But a few days remain in which advertising can be received for insertion in this handsome number and as it will be more extensively circulated than any holiday edition previously printed by this journal it will be the best advertising medium horsemen and others can possibly use at this season, and they should not miss the opportunity to make their announcements therein.

BREEDERS AND OWNERS of thoroughbreds are asked to read the announcement made by the Westchester Racing Association in the columns of this journal this week. Those two great stakes the Eighth National Stallion Race and the Eighth Matron Stake are advertised to close December 15th. The Stallion Race is for foals of 1903, the progeny of stallions duly nominated, to be entered and named by midnight of Tuesday, December 15, 1903. The Westchester Association adds \$5000 to the stake, to be run for then two-year-olds during the spring meeting of 1905. The distance is the last five furlongs of the Eclipse Course. The Eighth Matron, with \$10,000 added, for mares covered in 1903, foals of 1904, to be run for by then two-year olds at the autumn meeting in 1906, the event to be run in two races, one for colts and geldings, the other for fillies, distance Eclipse Course, subscription for mares to close at \$20 each, or only \$10 each if the money accompanies the entry, to close and name for mares at midnight of Tuesday, December 15, 1903. We desire to call the attention of breeders to the fact that both of these stakes are produce fixtures and should be liberally contributed to. Entry blanks can be had at the office of the BREEDER AND SPORTSMAN. Remember the entries close next Tuesday.

HON. JESSE D. CARR, the millionaire land owner and stock breeder is reported dangerously ill at his home at Salinas. Mr. Carr is ninety years of age, and for the past few years has been almost totally blind from cataracts and his hearing was so badly affected that he could converse with great difficulty. In spite of these infirmities he has been a strong, active and vigorous business man up to within a few weeks. He recently suffered a sudden collapse and at this writing is not expected to live many days. Mr. Carr is a pioneer and has aided in making much of the history of California, and his death will be a loss to the State and especially to Monterey county.

INGLESIDE will be the scene of the New California Jockey Club's racing for the next month beginning on Monday. This beautiful track is a favorite with San Francisco race goers and there will doubtless be an increase in the already large attendance that the races have been attracting to Oakland. The present season is the most successful in the history of winter racing in California, as the attendance has been greater than ever, and the racing better and more satisfactory than ever before.

MR. M. J. KELLER, representing the Campbell Hoof Ointment Company is in California on his annual trip in the interest of this corporation. Mr. Keller takes a lively interest in all matters pertaining to the harness horse and is an occasional contributor to the horse journals of the country. He reports an increased demand for the Campbell Hoof remedy, which is deservedly popular with California horsemen.

Walla Walla County Fair Association.

At a meeting of the Walla Walla County Fair Association, recently held, the capital stock was increased from \$15,000 to \$25,000. The additional stock will be sold to make needed improvements on the fair grounds.

The secretary's report of this year's fair shows the gate receipts to have been about \$6500, which, with the other sources of income such as concessions, which brought in \$3710, donations \$748 and entry fees of \$1661, made the total receipts \$12,125.15.

The expenses, made up of purses, labor and incidentals, totaled \$7778, leaving a net profit of \$4337.

Including the mortgage against the property, the liabilities are nearly \$6000.—*Rural Spirit.*

Swift Bird by Waldstein, the dam of Swift B. 2:16½, is to be returned to Stam B. 2:11½ next year.

Two Good Ones for Sale.

In our advertising columns to-day will be found the announcement of two horses for sale that are worthy the attention of horsemen who desire high class animals to race or to use on the road or for breeding purposes. The pacing mare Reta H. by McKlincey made a reputation this year that has been equalled by few pacers. She started the season without a record, and in eight starts on the Northwest Circuit where she met all the best pacers racing there, she won eight races and earned a record of 2:11¼. Last Thanksgiving Day her owner started her in a matinee race at Los Angeles and she won easily in 2:12½ and 2:14. She is a splendid roadster, having size, style, color and perfect manners. The other horse offered is the three-year-old Electro McKinney. He is a brown stallion and one of the best bred sons of McKlincey in the state. As a two-year-old he worked a mile in 2:31½ last quarter in 35 seconds, and last spring as a three-year-old worked out in 2:21½ last quarter in 32 seconds. He is perfect gaited trotter and well enough bred to head a stock farm. His dam is by Electricity, son of Electioneer and Jay Eye See's dam.

Mr. Byron Erkenbrecher, owner of the two horses described, is the President of the Los Angeles Driving Club and a very enthusiastic horseman. He is actively engaged in the real estate business, besides being owner of large properties, and is desirous of disposing of either or both of these horses, his business interest being such that he cannot give them the time and attention necessary for their future development. Besides these he has four or five other highly bred horses, but these two are the best in his stable.

Answers to Correspondents.

BREEDER AND SPORTSMAN:—Can you give me the breeding of the old original St. Clair stallion and Billy St. Clair, a son of his? Billy St. Clair was raised by a Mr. Mathena of Sacramento. Will you kindly give me the breedings of these horses and ohlge?—S. W. L.

The breeding of the original St. Clair 16,675 is unknown. He was a pacing horse and was brought across the plains in 1849. He died in Sacramento in 1864. He sired Ben Butler 2:19¾ and Lady St. Clair 2:20. His son Doc was the sire of Occident 2:16¾. Another son, St. Clair 656, was known as Fred Low. We do not know the breeding of Billy St. Clair, and he is not registered.

EDITOR B. & S.—Please give the breeding of Billy Thornhill?

Billy Thornhill 8707 is by Beverly Wilkes 8706, he by George Wilkes out of the great broodmare Neilson by Mambrino Pilot 29. The dam of Billy Thornhill is Emily (great broodmare) by George Wilkes, grand dam Sue Stout (great broodmare) by Surplus, a son of Ashland 47. The last named horse was by Mambrino Chief 11, out of Uvilla, a running bred mare by imp. Margrave.

Opening of Ascot Track.

A dispatch from Los Angeles, dated December 9th, says: "Ascot Park track will be ready for the opening date, December 24th. The stables are finished and filled with horses, the grand stand, which is designed to be the largest and most modern west of Chicago, is fast nearing completion and the track is being used to exercise the numerous thoroughbreds now stabled on the ground. Electric transportation facilities are complete, and from now to the 24th will be devoted to cleaning up and arranging the minor details. Manager J. W. Brooks said today:

"We will positively open December 24th. Everything will be in readiness before that date and there will be racing at Ascot Park the day before Christmas, rain or shine. The stakes have filled better than I expected and there are more than 700 entries. There will be a good class of riders here, including O'Neil, De Souza, Odom, T. Burns, Troxler, Redfern, Wonderly and others. The track will be in the best possible condition and we expect to have it as fast as any in the United States for the opening day."

A few years ago the breeding business was overdone. Great farms were established by men who knew nothing practically of the horse business, and in consequence the country was overrun with trotters that couldn't trot. After these mushroom establishments went out of existence horse breeders who had made a careful study of the science of breeding and bred horses along the line of common sense were able to create an interest in the trotter. They selected stallions of the proper breeding and also with individuality and the showing made during the past few years is ample proof that the breeding and development of the light harness horse is a profitable business.

JOTTINGS.

THE OLD GLORY SALE which was concluded at New York last week, was the largest vendue of harness horses ever held in that city—more than a thousand horses being disposed of by the Fasig-Tipton Company during the ten days auction. The result of the sale of horses from Palo Alto Stock Farm, which occurred on the opening day, was printed in the columns of this journal last week. The average for the fifty-one head sold was \$333.45, a figure that was below actual value. The Mariposa Stock Farm, of Lonsdale, Connecticut, disposed of 96 head on the same day. The average was \$267.81. Among the horses sold from this celebrated farm were many that are well known in California. Adelaide McGregor 2:15½ and Adelaide Simmons 2:14½, two mares that the late Dr. Wise of Los Angeles raced through the California circuit in 1894 and 1895, were sold for \$125 and \$250 respectively. They have been owned by Mariposa Farm for several years and have been in the broodmare ranks. It was said of them when they were racing in California that one could be substituted for the other in a race without attracting suspicion from anyone, so closely did they resemble one another. They were half-sisters, the first named being by Bonnie McGregor, the other by Simmons.

The late F. C. Sayles, who owned the Mariposa Stock Farm, had quite a number of California bred horses. He at one time owned Sable Wilkes and bred his best mares to him. Among the animals owned by Mr. Sayles and disposed of at this sale were Atlanta, twenty years old and the dam of Alix 2:03½. She went for \$100, although she had a foal every year for the past three years. Dexter Princess by Dexter Prince out of Emma Nutwood brought \$210. She was bred by Dave Young of Stockton, and is a full sister to Pilot Prince and Lottery Ticket. Emma Nutwood, twenty-three years old sold for \$80. Mary Best 2:12½, foaled in 1890, brought \$300. Semi-Tropic, a daughter of Sultan, dam Lady Mackay, the dam of Oakland Baron 2:09½ and others sold for \$185. Serenata 2:25½, bred at Palo Alto, by Wild Boy and out of Sontag Mohawk, the dam of eight in the list, brought \$255. Consuela S. 2:12½, by Directum out of Daisy Nutwood, brought \$1250. She was bred by Monroe Salishury.

One of the great surprises of the sale was the low price brought by Belsire 2:18, son of Electioneer and Beautiful Bells. He was consigned by C. W. Williams, owner of Allerton 2:09½, and it was thought would bring not less than \$5000. He went to the bid of A. M. Hamilton of Wheeling, Virginia, for \$1500. Belsire is the fastest son of Beautiful Bells and is the sire of eight standard performers. Belsire sold for \$25,000 when a yearling. The fact that though given the best of opportunities he has not sired a sensational horse, had much to do with keeping breeders from bidding, but he should have brought more money. The young Allertons in Mr. Williams' consignment did not bring as high figures as he received last year. The average for his 45 head was but \$276.88 and this included Belsire and two or three that brought in the neighborhood of \$900 each.

Oro Wilkes 2:11, one of the best of this season's sires, sold for \$4050 and was purchased by J. Witherill of Galt, Ontario. In the consignment of Mr. John H. Shultz, Rect 2:16½ by Direct out of Lilly Stanley sold for \$400, and Baron Directly 2:24½, a great pacing two-year-old by Directly 2:03½ out of a mare by Baron Wilkes, brought \$2200.

James Butler's consignment brought very good figures. Diahrito 2:08½ by Diabolo went to James Harris for \$800; Mr. J. H. Rogar of New York made the high bid, \$1700, for Trilby Direct 2:08½, and Estelle, a brown mare by Richard's Elector, brought \$475.

Tommy Britton 2:06½ by Liberty Bell sold for \$7000, and was bought by William J. Andrews of New York. Mr. Andrews intends to race him next year and he will be entered all through the Grand Circuit in the 2:07 and faster classes. He is a grandly bred horse and his colts are very promising. Fanfaron, his daughter, with a record of 2:11½, was also in the sale and the high bid on her was \$1675.

The speed horses that were not counted among the has-beens all brought out lively bidding. Directum Miller 2:08½, a pacer by Directum that was on the Grand Circuit this year sold for \$3700; Prince of Orange, 2:06½, a trotter that is thought to be one of the best prospects in the fast classes for next season went to Mr. Billings' bid—\$7600; Lizzie A. 2:11½ one of the sensational three year old trotters of this year was knocked down to Chas. Tanner of Cleveland for \$2950; Wainscott 2:09½ also one of the good ones of 1903, will go to Austria, Messrs. Schleissenger of Vienna paying \$6400 for him. Cozad 2:09½ and El

Moro 2:13½, consigned to the sale by Mr. Graham E. Babcock of San Diego brought \$1100 and \$600 respectively; Homeward 2:13½ went to Chas. Williams of New York for \$900. Mr. W. A. Clark, Jr., of Butte, Montana, was represented at the sale by A. M. Carr who purchased for him the following horses: Highland, a four year old black colt by Expresso, son of Advertiser, out of Alpha by Alcantara, for \$1500. This is a trotter and a grand looking young stallion. He has a trial of 2:12 but no record. Lucie May 2:22½ winner of the pacing division for two year olds in the Kentucky Futurity of 1899, and a good prospect for a 2:10 pacer next year, \$1350. She is by Oakland Baron. Biddy a very promising green trotting mare by Re-Election, \$1000.

On the sixth day of the sale ninety-three head were sold at an average of \$214 per head. Among the California-bred horses that went under the hammer that day were Valentine 2:30 by Boodle, that was purchased by W. R. Cook of Morristown, New Jersey, for \$550; Sable Frances 2:15½ by Sable Wilkes out of Francesca, dam of I Direct, that sold for \$275, Joe Martin of New York City being the buyer; Twilight 2:28½, a mare by Eros, brought \$575. The seventh day of the sale attracted a large crowd, Peter the Great 2:07½ being the principal drawing card, and it was predicted that \$10,000 would not stop bidders on the sire of Sadie Mac. There were three bidders on him, A. L. Thomas starting the bidding with \$2000. Peter Duryea of Patchen Wilkes Stock Farm was the last bidder and the horse went to him for \$5000, a bargain if there ever was one. The young horses by Bingen 2:06½ and Arion 2:07½, disposed of on the seventh day, brought good prices, a yearling son of Bingen bringing \$1650. Several colts by Advertiser and Prodigal also sold well.

The sale closed on Wednesday with over 1000 horses disposed of. Over \$350,000 was received during the sale for the horses offered, and the average is evidence that the demand for trotters and pacers is not decreasing by any means. Broodmares and stallions did not bring large prices, but roadsters and colts with speed attracted lively bidding, and the Old Glory of 1902 was one of the Fasig-Tipton Company's many successes.

The last quarter of the Pleasanton track is to be widened about ten feet and when this work is completed it will be as good a track to give a harness race meeting on as any in the State. One thing the Pleasanton people should do is to hold a big matinee every year just before the horses in training there are shipped East. One entire day could be devoted to a program that would attract thousands of people to the pretty little town known as the horse centre of the Pacific Coast. Arrangements should be made with the railroad people to run excursions from all nearby points that would reach the town by 9:30 in the morning, in time for the excursionists to see a grand parade of all the trotters and pacers at the track, and then have a program of racing begin at 10 o'clock and continue until five P. M. with an hour for lunch. Six or seven events could be pulled off in this time. Horses that were to be shipped East to the Blue Ribbon sale could give exhibition miles and those entered for the regular races to come off during the summer could be driven fast quarters. There would be enough horses entered to fill a half dozen regular events, so that a good day's sport would be assured. A day of this sort would draw a larger crowd to Pleasanton than the thriving little town has ever held within its limits and the merchants and everybody there that had anything to sell would be kept busy. It would advertise the track more than anything that could be arranged. A May Festival at Pleasanton should be a fixed annual event.

Dan Patch Still Breaking Records.

Dan Patch has been South on a tour, and on November 30th he broke two records at Macon, Georgia, about all that were left for him to smash and he has now nearly everything of value in the pacing record line to his credit.

In spite of a cold driving wind at the Macon track he started hitched to a high wheel sulky to see how fast he could go. He performed the feat of pacing a mile to that hitch in 2:04½. A few minutes later he was started to beat the world's stallion pacing record for two miles, held by Chehalis. The record of Chehalis for that distance is 4:19½, and Dan Patch knocked two and a quarter seconds from this, putting the championship mark at 4:17. Dan is a "naughty hawn reacher," and when he reaches for anything he gets it.

Wilkes Stallions for Sale.

Mr. P. H. McEvoy of Menlo Park is offering several desirable young Wilkes stallions for sale as will be seen by an advertisement in another part of this issue.

Report of Red Ribbon Sale.

Following is a complete list of all the horses sold at the Red Ribbon Sale held at the Occidental Horse Exchange in this city Tuesday evening, Nov. 17th:

CONSIGNED BY P. FOLEY, ALAMEDA.

Lady Indigo, blk m, 1895, by Direct, to Otto Sebrader for \$75.

Lady Bird, b m, 1895, by Winwood, dam by Capt. Webster, to W. J. Simpson for \$65.

Marcelle, b m, 1897, by Fay Wilkes, dam Mountain Hare by Young Venture, to Martin Burnell for \$80.

Palatina, b m, 1896, pacer, to M. Newman for \$130.

Gorax, br g, 1894, by California Nutwood, dam Ingar by Director, to H. C. Sanderson for \$140.

Ruby L., b m, 1895, by Del Rey, dam Gyp by Billie Campbell, to Sam Hables for \$160.

Ruby's First, b f, 1900, by Alex Button, dam Ruby L., to Dr. Fitzgerald for \$165.

CONSIGNED BY HENRY SANDERS, PLEASANTON.

Birdie Rey, br f, 1901, by Rey Direct, dam by Adirondack, to Frank Christensen for \$60.

Rey Diana, blk f, 1902, by Rey Direct, dam by Diabolo, to J. F. Blessing for \$140.

Rey Direction, blk g, 1902, by Rey Direct, dam by Steinway, to R. A. Smith for \$225.

Sutherland, br g, 1901, by Diahlo, dam Missie Medium by Rampart, to Capt. Matson for \$150.

Nannie Derby, b f, 1900, by Chas. Derby, dam by Red Wilkes, to E. J. Carpenter for \$400.

Rey McGregor, b g, 1902, by Rey Direct, dam by Steinway, to W. J. Simpson for \$445.

Mamie Rey, blk f, 1902, by Rey Direct, dam by Alexander's Bay Allen, to H. C. Sanderson for \$185.

Angelina, h f, 1902, by Hart Boswell, dam by Guy Wilkes, to Frank Turner for \$100.

CONSIGNED BY VARIOUS OWNERS.

Ogden, b b, 1897, by Egyptian Prince, dam Hattie by Com. Belmont, to W. H. Anderson for \$250.

Belle Reedale, ch f, 1902, by Monterey, dam So So by Tempest, to Geo. H. Fox for \$110.

May and June, pair of gray mares, weight 3050, to Olson Bros for \$155.

Edith 2:10, b m by Sidney, dam by Hamilton Chief, to W. G. Layng for \$110.

Edith McKinley, b f, 1901, by McKinley, dam Edith 2:10 by Sidney, to A. Jacobs for \$100.

Princess Edith, b f, 1903, by Guy McKinney, dam Edith 2:10 by Sidney, to Fred Myer for \$75.

Nettie O., gr m, by Lakeland Pilot, dam by King West, to A. Jacobs for \$80.

Monica 2:15, b m, 1896, by McKinney, dam by Director, to James Thompson for \$350.

Realto, ch c, 1900, by Silver Bow, dam by Arthur-ton, to J. Dollar for \$110.

Princewood, b g, 1897, by Prince Nutwood, dam by Reliance, to S. Wakefield for \$250.

Edna Earl, h f, 1901, by Diabolo, dam by Venture, to Robt. Orr for \$190.

Floridum, hr g, 1896, by Almonition, dam Floreta by Director, to A. Jacobs for \$60.

Jimmy, br g, 1893, 16 hands, by Jim L. to C. Becker for \$175.

Coligny and Jim Budd, mare and gelding, weight 1300 and 1250 respectively, 16 2, four years old, to D. Bryson for \$230.

Sambo, br g, 16.1 hands, weight 1200, by Soudan, to J. Peters for \$125.

Nip and Tuck, pair chestnut mares, 15.2 bands, to L. A. Stone for \$125.

Murelia, blk m, 1894, 15.1 hands, to G. A. Davis for \$100.

CONSIGNMENT OF JAS. H. GRAY, SANTA ROSA.

Cruzados, b c, 1901, by McKinley, dam Stamboulita 2:27 by Stamboul, to C. C. Ricks, Eureka, for \$1000.

Carlokin, h c, 1901, by McKinley, dam Carlotta Wilkes by Charley Wilkes, to C. L. Jones, Modesto, for \$875.

As True as Ever.

"A horse is a vain thing for safety." These words were written hundreds of years ago and in a measure are as true today as when first written. We say in a measure, for they should not be taken literally so as to include all horses. Horses have proven themselves reliable and safe in emergencies in thousands of instances. An unreliable horse is a vain thing for safety. A horse that can not be depended on in an emergency is about as unsafe as any agency that can be employed. Thousands of horses there are that have been tested under circumstances of difficulty and danger and have answered the test by conduct that inspired implicit confidence and which showed that they could be relied upon. On the other hand there are thousands whose conduct is correct when no untoward circumstance confronts them, but are dangerous the moment their fears are aroused. Horses are very much like the human kind in that they are endowed with different degrees of intelligence, and to know and comprehend this is what makes the successful trainer. That horses become crazed through fear and are rendered uncontrollable is proven by every day experience. The intelligent horse will in time become reconciled to sights and sounds which at first occasioned terror, and will not heed them, while the horse with a modicum of brains will never lose his dread of objects which first aroused his fear, and will be thrown into paroxysms of terror every time he meets them.

For all kinds of weather there is no drink like Jackson's Napa Soda—plain or in a lemonade.

Notes and News.

Dan Patch 1:56½ paced no less than eleven miles below 2:01 this year.

The veteran trainer Charles Marvin will remain in Senator Bailey's employ another year.

Expressive 2:12½ by Electioneer, who was such a good three year-old trotter, will be bred to Bellini 2:13½.

Senator Bailey has bought the former race mare Kentucky Union 2:07½ by Aberdeen, and will breed her to Prodigal 2:16.

Mr. John A. Lane, of Fortuna, Cal., would like to learn the present address of Edward J. Harrington who resided at Napa in 1895.

Gambetta Wilkes 2:19½ has twenty-six new performers for this year. Eleven with reduced records, and added five new 2:10 performers.

Mombells 2:23½, the youngest son of the great brood mare Beautiful Bells, becomes the stable companion of the good sire Ashland Wilkes.

Kremlin 2:07½ by Lord Russell, has nine standard performers to his credit this season, and all their names commence with K, from Keil 2:29½ to Kamares 2:10½.

Old Tommy Foskett, a horse owned at Bangor, Me., is said to be forty-three years old. He was sired by Gideon 145, dam by Hiram Drew, and up to several years ago has done steady work.

Mr. O. A. Gott, of Alameda is driving a three year old gelding by Nutwood Wilkes that has the makings of a great roadster. He has size, substance, quality and style and is a good gaited trotter.

Elias Williams is driving a three year old colt by Billy Thornhill on the Alameda track that looks like a high class colt. He has size, good looks and everything in his favor and should make a good showing.

The Axtells are breeding on. Axworthy 2:15½, one of the early sons of Axtell 2:12, is now among the great sires of 1903. He is the sire of three two-year-olds, six three-year-olds and four four-year-olds, with records of 2:30 and better.

The New California Jockey Club will shift the scene of its racing to the beautiful Ingleside track on Monday next. The track and grounds are in perfect condition and patrons of the track who live on this side of the bay will welcome the change.

Clipper 2:06 by Diablo won the world's wagon record for a two heat race by a pacer driven by an amateur, when he beat Greenline and Tom Keene at Memphis in October last. The heats were in 2:06½ and 2:06¾ and Mr. Harry K. Devereux was his driver.

Mr. Brayton Ives, who purchased Monte Carlo 2:07½ from Monroe Salisbury to use as a speedway horse, will be a hard one to head next season as he also owns Nora McKinney 2:12½ that has been almost invincible in New York during the past year.

The Stallion Directory for 1904, which will appear in our Christmas Edition, should contain the name of your horse. It will cost but \$3 and will be worth much more than that to you. Don't delay sending in the copy for it, which must reach us not later than December 21st.

The New York Times of last Thursday confirms the report published in these columns last week wherein it was stated that W. G. Durfee won his case before the Board of Review of the National Trotting Association, in which the money won by Sweet Marie at Seattle was protested.

Geo. H. Ketcham, owner of Cresceus 1:59½, has gone to England and will bring back with him the European champion colt trotter Wig Wag, owned by Walter Winans, of Kent, England. The horse will be raced in America next season. He was bred in this country and is by Wiggins.

Every horseman on the Pacific Coast, and a very large number in the East, will read our Christmas Edition. If you have a horse for sale or want to buy one take a space of one inch (which will only cost you \$1.50) in the Sale department of this edition and you will in all probability find a customer.

Scott Hudson, who will race the pacing mare Twinkle 2:05½ next season, believes she will be able to knock two or three seconds from her present mark. She is by Mercury 2:21, and he is by Sidney out of Juno by Buccaneer. Juno's dam is Venus, the dam of Sidney Dillon, Cupid 2:18, Adonis 2:11½, etc.

Terry Driscoll, of Santa Rosa, got a bargain the other day when he purchased a six months old black filly by Daedalion out of Vesper Bells by Director, second dam by Prompter, third dam by Singleton. This filly is large, of good bone and very handsome. She is a good prospect for a trotter that will develop speed of a high order. All the Daedalion colts and fillies are very promising and are attracting much attention from horsemen.

It is reported that the New England Breeders Association is contemplating holding a two weeks' Grand Circuit meeting next year, which, if decided upon, will do away with the Breeders meeting in September and also the July meeting. Nothing definite has been given out officially, and in all probability will not till after the stockholders' meeting.

Guaymas, bay gelding, pacer, by Prodigal, dam Florentina by Jersey Wilkes, is undoubtedly the fastest stepper in Montana. He is owned by Joseph Lutey, Jr., of Butte. At Missoula last October he lowered his record to 2:16½, stepping the last quarter in 3¼ seconds, drawing a McMurray jog cart. He does not wear a strap or hoot of any kind, except the harness.

Centereye, the two year old bay filly owned by Mr. John O'Keefe of this city is being jogged by him on the Park speedway and can now show a quarter in forty seconds easy. Mr. O'Keefe will send the filly to Pleasanton January 1st, where she will be trained by Mr. H. H. Dunlap. O'Keefe expects to see her trotting a 2:10 gait by next July. She is by On Stanley 2:17½ son of Direct.

Mr. R. P. M. Greeley, of Oakland, on November 19th, sent his chestnut filly Hester Diablo, three years old by Diablo, to Henry Sanders at Pleasanton who has been working her. Mr. Sanders worked her the first fast quarter last Saturday and she stepped it off in 33 seconds. Hester Diablo is a trotter and showed great speed last spring, but met with an accident and was thrown out of training.

Don't forget that the Occident Stake for foals of 1903, to be trotted in 1906, will close for entries January 1, 1904. This stake will doubtless be worth about \$3000 to the winner, and breeders of trotting colts should see that they are represented in the stake. A consolation stake will be given for foals that are entered and turn out to be pacers. See the advertised conditions in our business columns.

If you have a stallion do not fail to put a card in the "Stallion Directory," to be published in the Christmas issue of the BREEDER AND SPORTSMAN, announcing where he will stand, the service fee and other particulars. Owners of good mares will read these advertisements with interest and if your horse is worthy of their patronage he should be represented in this Directory. See advertisement of our Christmas number on another page.

The Christmas issue of the BREEDER AND SPORTSMAN, to appear on December 26th, will contain a special department devoted to "For Sale" advertisement. If you have a horse and would rather have the money let the public know it through an advertisement in that issue. It will not cost you much and may get you a customer at your own price with no commissions to pay. For particulars see advertisement of Christmas issue on another page.

At the meeting of the Board of Review of the National Trotting Association held in New York last week, a resolution was adopted directing the President of the Board to appoint a committee to meet similar committees from the American Trotting Association and American Trotting Register Association for the purpose of recommending necessary changes, in order to keep the rules of the associations uniform. The conference will be held in New York January 5, 1904.

By a slip of the pen it was stated in last week's BREEDER AND SPORTSMAN that the mile track which Mr. S. G. Randall has recently taken the management of was located at Santa Barbara. It is the San Bernardino track that Mr. Randall has charge of and where meetings will be given in the near future. San Bernardino is an excellent place to train horses and practical horsemen say the track there is one of the safest and best in California.

Early in the year a meeting of the secretaries of the various county fairs of Montana will be called at Helena for the purpose of arranging dates so that horsemen may make a circuit at a minimum cost and without loss of time. The secretary of the State Fair is in the East and the matter of freight rates for such a circuit and the accommodations for same will be taken up with the railway officials at St. Paul, and a circuit rate will be one of the things sought.

The Montana State Fair Association has announced three colt stakes for three-year-olds. The first is for trotters, foals of 1901. First payment is \$5, due February 1st; second payment \$10, due May 1st; and third payment \$10, due September 1st. To these stakes the association will add \$200. The stake will be trotted at the fall meeting of 1904. A pacing stake with the same conditions and the same amount of added money is offered for pacers, and the three-year-old thoroughbreds also have a stake offered with \$200 added money.

H. S. Alward, acting for Mrs. Langtry, bought of George H. Ketcham, owner of Cresceus, two standard-bred trotting mares. They will be taken to England by Mr. Ketcham, who is to leave New York on the Atlantic Transport line, sailing Dec. 12. Mr. Ketcham also takes a number of fast road horses for Louis and Walter Winans of Brighton, England. The mares selected by Mr. Alward are bred in the purple, and Mrs. Langtry, who is an ardent lover of running horses and has recently developed a liking for the trotter, intends driving them herself when she returns home. They are a chestnut and a black, 7 and 5 years old, having trials, respectively, of 2:16 and 2:18½, and Ketcham believes they can step together in 2:20.

Monroe Salisbury reached Pleasanton last Tuesday with thirty head of horses, mostly the property of James Butler of the East View Stock Farm of New York. This consignment filled up all the vacant stalls at the track, but the lumber is on the ground to build fifty more and work has already begun on them.

Jo Maguire, who trained and drove Winfield Stratton 2:06½ by Saraway on the eastern circuits this year is expected to visit California this winter. Mr. Maguire is in the employ of Mr. Easterbrook, the Colorado capitalist, who will race Winfield Stratton and several more horses in the East next year.

Cresceus has trotted 14 miles in 2:05, average time, 2:03 11-14; Lou Dillon, 13, average, 2:02 12-13; Major Delmar, 12, average, 2:02 1-6; The Abbot, 6, average, 2:04½; Alix, 4, average, 2:04½; Nancy Hanks, 3, average, 2:04½; John A. McKerron, 2, average, 2:04½; Azote, 1, in 2:04½. A grand total of 55 miles trotted in 2:05, with an average of 2:03 2-5.

Horace Wilson, Secretary of the Hartford and Oakley Trotting Association, has been placed temporarily in charge of the affairs of the Kentucky Trotting Horse Breeders Association, which is equivalent, it is said, to his selection as secretary to succeed the late E. W. Shanklin. The directors will meet in January and elect a secretary, and there are some thirty-five applicants for the place.

Al McDonald has a yearling in his string at Pleasanton that is causing lots of talk among the horsemen, as he is showing so much speed at the trot as to be reckoned a phenom. He is by Rey Direct 2:10 out of a mare by Steinway, second dam by Robert McGregor. At present the youngster is only in the primary grade, but is at the head of his class all the time, and Al says will have to be promoted to the grammar grade on the first of the year, or all the other youngsters in the primary class will get discouraged.

During the season of 1902 Budd Doble's stallion Kinney Lou was bred to fifteen mares. One of the mares died during the next winter and was in foal at the time. Two of the others were old mares that had not been in foal for several years and they had no colts this year. Of the other twelve ten had foals that are now alive and they are all strong, vigorous individuals, carrying their sires color and conformation to a marked degree. As Kinney Lou's season was a very short one that year, ending early in May, the showing made is evidence that he is a very certain foal getter.

Arrangements are being made by the Los Angeles Driving Club for a Christmas Day matinee to be given at Agricultural park. Mrs. F. E. Chandler, assistant secretary of the club, says the racing will be the best ever given by the organization. She says twenty new members have joined the club lately and at least ten of these will enter their horses in the Christmas matinee. These, together with the speedy animals owned by the regulars, will furnish a list for all the racing the members can ask. Although there will be a counter-attraction in the racing line at Ascot park, it is probable both places will have good crowds.—*Los Angeles Express.*

On Monday evening, December 21st, William G. Layng, the well known live stock auctioneer, will sell at his big pavilion at the Occidental Horse Exchange, fifty-four head of thoroughbred horses being all those owned by Mr. R. E. de B. Lopez of the Merriwa Stock Farm. Mr. Lopez has without doubt the finest collection of thoroughbreds carrying Australian blood there is in America, and it is a pity that this breeding farm cannot be carried on, as Mr. Lopez could undoubtedly produce several more as good as the great but unfortunate horse Articulate. The sale will be positive and without reserve and catalogues will soon be issued. Send to Mr. Layng for one.

Diablo 2:09½ will not be brought back to Woodland for the season of 1904 as was first intended by his owner Mrs. William Murray. There is such a demand for his services at Salem, Oregon, where the horse now is that he will be kept there and begin the season of 1904 earlier than is usual in that country. Diablo is in charge of Sam Casto and is looking in perfect condition. A large number of mares have already been booked to the son of Charles Derby for next season and his book will be full at an early date. The Diablos are getting more popular every year and his list of standard performers is increasing rapidly. There are three or four green trotters by him now being worked in this State that will trot into the 2:15 list next year if no accident happens them. Diablo is not only a grand individual and a race horse, but he is one of the best bred horses in America.

Never in the history of the light harness industry has there been a more active demand for well bred foals well engaged in important futurity events as at the present time. The prospective earning capacity of a well bred trotting foal largely increases its commercial value. One fashionably bred in racing lines and heavily entered in juvenile stakes that gives promise of being as good as its speed inheritance, is now being sought at fabulous prices. When it is possible for a promising youngster to earn \$10,000 to \$30,000 in stake engagements, its price is correspondingly increased. Breeders for personal profit, as well as to multiply the chances of negotiating sales at strong prices, now make a practice of nominating the produce of all their best broodmares in all the juvenile futurities. If a trainer or breeder is looking for a well bred racing prospect, he is sure to buy the foal that is not only promising, but the one that is engaged in the largest number of stake events.

Thanksgiving Races at Phoenix, Arizona.

Largest Prices of the Old Glory Sale.

Amateur Racing Circuit.

A very successful matinee of harness racing was held at the Phoenix, Arizona track on Thanksgiving Day, and so satisfactory and enjoyable was the day's sport that it was resolved to have other matinees during the holidays in February and May 1904. The Phoenixites are going in for a good association, and propose to have meetings in the near future that will attract attention of horsemen all over the country. The attendance on Thanksgiving Day was very good and everything passed off most pleasantly.

The first race of the day was to wagon, mile heat, best two in three. It was between the bay gelding Tom owned and driven by Mr. Walter Bennett, Mayor of Phoenix, and the gray mare Surprise, owned and driven by Mr. W. W. Cook, Sheriff of Maricopa county. While the Mayor's horse won in straight beats, the Sheriff's gray mare was beaten but a half length each time. The time was 2:36 and 2:34.

There were three starters in the next event, which was to carts, best two in three. The starters were Mr. J. C. Adams' mare Leonor McKinney, Mr. G. V. Klotzboch's John Taylor and Mr. A. H. Davison's Dellnette. The race was between Leonor McKinney and Dellnette and they made two lively heats of it. Neither of these mares was up to a race, and when Mr. Davidson sent his mare along in the second heat the finish was a very close and exciting one, Leonor McKinney winning by only three or four feet. Mr. Adams has a very promising mare in this daughter of McKinney. She is out of Leonor, the dam of Dr. Book 2:10 and other good ones. Dellnette is of Electioneer stock and is a good one also. The heats were in 2:45 and 2:34.

Mr. W. A. Priestly won the third race handily with his bay mare Lady Allen. There were four other starters, viz.: R. Borton's Mandell, D. Ozburn's Sheney Mark, Harvey Lee's Kitty and Al Harmon's Prince. The time was slow, 3:10 and 2:58, but Lady Allen could have made it better had any of the others been steady enough to have made her trot to her limit.

The fourth race was the most exciting of the day. It was between the two-year-olds Idle and Tommy Lawson, owned by W. B. Cleary and W. T. Barkley respectively. In the first beat Mr. Barkley's colt was very unsteady and got frightened at the first turn and turned around, but settled down and went the rest of the mile very nicely, although Idle won as he pleased. The next two beats went to Tommy Lawson very easily and he acted well and trotted as steadily as an old campaigner. The time was very good for green two-year-olds that have had very little work. The heats were in 2:56, 2:51 and 2:45.

The Phoenix track is becoming quite a training centre. Mr. J. C. Adams, who has lately bought several fine broodmares and well bred youngsters in California, has secured a good trainer in Mr. Ed Weeks. Mr. W. C. Greene's trainer is now beginning to develop his stable of horses, of which Mr. Greene has several. Mr. W. C. Taylor, an old timer, is located at the track and is training a public stable. He has several good ones in his string. Mr. J. K. Wheat has all his stalls full and is doing well with his horses. There are several other trainers that have one or two horses they are working. Some are showing every promise of being good racing propositions.

Alex H. Davidson is doing the shoeing for a majority of the trainers. He is a graduate of the School of Scientific Horse Shoeing at Detroit.

Mr. J. C. Adams has some very choice mares on his farm near Phoenix and has recently purchased Boydello 2:14 1/2 that is by Boydell, a full brother to Delmar, the sire of Major Delmar.

Onward 2:25 1/2 is now credited with 136 trotters and 46 pacers that have made records of 2:30 or better. Red Wilkes is credited with 125 trotters and 53 pacers that have taken records of 2:30 or better. The race for honors between these noted sons of George Wilkes has been very close. Three trotters and two pacers have been added to the list of each the past season. Onward was foaled in 1875, and died from acute indigestion October 10, 1902. Red Wilkes was foaled in 1874, and is still so vigorous that some forty mares have been mated with him the past season, nearly all of which are believed to be with foal. This will give Red Wilkes the advantage of Onward at the finish, and it is probable that his 2:30 list may eventually be the largest.

Notice.

We would be pleased to receive information as to the present address of one E. W. Eaton, who was last heard from in Oregon and Washington. We also wish to warn the public not to pay said Eaton any money or extend him any credit on account of this paper.

BREEDER AND SPORTSMAN.

There were no phenomenal prices paid for horses at the Old Glory Sale, which closed at New York last week, but the average for the 1000 horses sold was over \$350. The horses that brought \$1000 or over were as follows:

- Expressive 2:12 1/2, b m, 1891, by Electioneer-Esther; W. B. Dickerman, Mamaroneck, N. Y., \$1700.
- Helena, b m, 1889, by Electioneer-Lady Ellen; R. H. Shockency, Kirkwood, Del., \$1050.
- Queen's Heiress, b f, 1901, by Handspring-Alix; A. L. Thomas, Omaha, Neb., \$1300.
- Handspring 2:18 1/2, b h, 1896, by Prodigal-Annie Wilton; A. J. Welch, Hartford, Conn., \$1600.
- Consuelo S. 2:12 1/2, b m, 1894, by Directum-Daisy Nutwood; C. L. de Ryder, New York, \$1250.
- Sally Lunn, b f, 1903, by Wiggins 2:19 1/2-Belle de Baron by Alsatian; A. M. Carr, Butte, Mont., \$1050.
- Keller 2:16 1/2, br h, 1896, by Allerton 2:09 1/2-Miss France by Red Wilkes; A. S. Deysner, Reading, Pa., \$1100.
- Belsire 2:18, br b, 1891, by Electioneer-Beautiful Bells by The Moor; A. M. Hamilton, Wheeling, W. Va., \$1500.
- Oro Wilkes 2:11, blk h, 1890, by Sable Wilkes 2:18-Ellen Mayhew 2:22 by Director 2:17; James Witberill, Gault, Ont., \$4050.
- Del Prodigal, b c, 1902, by Prodigal 2:16-Eletria by Hambrino; E. E. Smathers, New York, \$1050.
- Star Baron, br c, 1902, by Oakland Baron 2:09 1/2-Zada by Ultimous; Jacob Ruppert, Poughkeepsie, N. Y., \$1000.
- Baron Directly (2) 2:24 1/2, by Directly 2:05 1/2-Flossie Baro by Baron Wilkes 2:18; J. H. Phillips, Parkville, L. I., \$2200.
- Cole Direct 2:13 1/2, blk h, 1897, by Direct 2:05 1/2-Mis Alcantara Davis by Alcantara 2:23; Schlessenger & Co., Vienna, Austria, \$1550.
- Daphne Direct (3) 2:11 1/2, by Direct 2:05 1/2-Miss Dapbne by Alcantara 2:23; F. J. McKain, New York, \$1300.
- Johnny Harvard, ch g, 1900, by Baronmore-Medio; S. H. Knox, Buffalo, N. Y., \$1025.
- Sidnut, b g, 1898, 2:12, by Sidney-Ninette; David Lee, New York, \$1800.
- Mokoma, b f, 1902, by Moko-Annie Lewis; J. W. Johnson, Calais, Me., \$1200.
- Fanforan, b m, 1897, 2:11 1/2, by Tommy Britton-Axtellene; C. W. Marks, Chicago, \$1675.
- Tommy Britton, br h, 1893, 2:06 1/2, by Liberty Bell-Keepsake; William J. Andrews, New York, \$7000.
- Imperatus, bl c, 1900, by Prodigal-Impetuous; Senator J. W. Bailey, Gainesville, Texas, \$1000.
- Directum Miller 2:08 1/2, br h, 1898, by Directum 2:05 1/2-May Day, by Abdallah Mambrino; Mart Demarest, Hartford, Ct., \$3,700.
- Prince of Orange 2:06 1/2, br g, 1896, by Prince of India-Annie D., by Cuyler; C. K. G. Billings, Cleveland, \$7,600.
- Lizzie A. 2:13, ro f, 1900, by Alfred G. 2:19 1/2-Spanish Maiden; Charles Tanner, Cleveland, O., \$2950.
- Waincott 2:10 1/2, b h, 1899, by Alcy Wilkes-Sorceress by King Rene; Schlessenger & Co., Vienna, Austria, \$6400.
- Biddy, gr f, 1899, by Re-Election 2:27 1/2-Irish Lady by Wilkes Boy; A. M. Carr, Butte, Montana, \$1000.
- Lucie May 2:22 1/2, b m, 1897, by Oakland Baron 2:09 1/2-Katy Clay by Allandorf 2:19 1/2; A. M. Carr, Butte, Montana, \$1350.
- Don Riley 2:07, b g, 1895, by Caneland Wilkes 2:12-Lulu R. by Beecher; Andrew Phillips New York, \$1400.
- Alcy 2:13 1/2, blk g, 1894, by Alcyonium 2:24 1/2-Nelly F. by Elial G.; William J. Sheldon, Providence, R. I., \$1000.
- Jim P., br g, 1897, by Patchen Wilkes-Annie P. by King Rene; R. W. Goodhue, Rutland, Vt., \$1000.
- Precision 2:10 1/2, ch m, 1893, by Allerton 2:09 1/2-Precise by Nutwood; M. S. Ryder, New York, \$1050.
- Star Pugh 2:09 1/2, ch g, 1896, by Tom Pugh-Maggie Casey by Charles Cary; H. Stein, Philadelphia, \$1100.
- Artois 2:15 1/2, b m, 1895, by Geneva 2:11 1/2-Artica by Strathmore; Elmer Whitley, Muncie, Ind., \$1500.
- Dick Berry 2:11 1/2, b g, 1897, by Anderson Wilkes-Ida Downing by Stoner Boy; Tom Martin, Boston, Mass., \$1500.
- Cozad 2:11 1/2, b g, 1894, by Fred S. Wilkes-Telos by Almont; John H. Quinn, Worcester, Mass., \$1100.
- Centrifc 2:09, blk m, 1898, by Baron Wilkes 2:18-Belles Lettres by Bell Boy; A. C. Pennock, Cleveland, Ohio, \$1500.
- Highland Baron 2:17, h b, 1895, by Baron Wilkes 2:18-Irma by Nutwood; S. Klingensmith, Leechburg, Pa., \$1100.
- Merrill Hawker, ro c, 1899, by Jay Hawker 2:14 1/2-Minnie Merrill by Young Jim; Thomas Napier, Woodhaven, N. Y., \$1100.
- Boraima's Brother, b g, 1898, by Boreal 2:15 1/2-Simonie by Simmons; W. U. Jermyn, Scranton, Pa., \$1000.
- Peter the Great 2:07 1/2, b h, 1895, by Pilot Medium-Santos by Grand Sentinel; Peter Duryea, Lexington, Ky., \$5000.
- Governor Crane, b c, 1902, by Bingen 2:06 1/2-Nowaday by Lookaway; D. W. Maloney, White Plains, N. Y., \$1650.
- Green Silk 2:28 1/2, h m, 1898, by Prodigal 2:16-Brown Silk 2:19 1/2 by Baron Wilkes; W. D. Simpson, Lexington, Ky., \$1300.
- Purity 2:16 1/2, h m, 1896, by Junemont 2:14-Baby by Hennis Jr.; Mart Demarest, New York, \$1375.
- Hill Top Jr 2:18 1/2, h h, by Hill Top-Lady Landmark; Matt Dwyer, New York, \$1000.

If there is anyone in California who wants a high class horse—one that has no record, but has paced miles in 2:12, is 16 bands high, very handsome, sound and all right and can be driven by a lady, he should reply to the advertisement of such a horse in this issue. The horse is young and one of the handsomest and best roadsters in California.

A movement has been started to inaugurate a National amateur trotting racing circuit similar to the Grand Circuit except that amateurs only will be eligible to drive and no pools will be sold or betting allowed. The races will be competed for with cups or plate as the only prizes, as money premiums will be prohibited.

Permission must be secured from the National and American Trotting Associations for the amateur meetings, as an admission fee must be charged to pay the expenses of conducting the circuit.

The project was taken up at a meeting of the League of Amateur Reinsmen held in New York recently. President H. K. Devereux, in discussing the progress made by the organization at that meeting, said: "Our plan is to hold amateur light harness race meetings in New York, Boston and Syracuse one year and then in Pittsburg, Cleveland and Columbus the next, insuring each city in the league a chance."

At the New York meeting officers were elected as follows: President, H. K. Devereux, representing the Cleveland Driving Club; Secretary and Treasurer, T. L. Quinby of Boston; Vice-President, J. D. Callery of Pittsburg; Board of Directors—C. K. G. Billings of New York and owner of the Memphis Driving Park, and Horace White of Syracuse. Mr. Callery takes the place of Mr. Darlington of Pittsburg, who now is less active in amateur sport than he formerly was. Mr. Devereux is confident the plans will be carried out, and that the coming season will see the amateur circuit started.

A Righteous Decision.

WASHINGTON, December 9.—To nullify attempts of cattle companies and others to obtain public lands in violation of the law, the Secretary of the Interior today overruled former decisions of the department that widows or minor orphans of soldiers or sailors do not have to reside on the land on which they make homestead entry.

The decision, which affects a large number of cases, and which has an important bearing on the public land frauds, is made in the case of Mrs. Anna Bowes, who made an entry on land in the Broken Bow district in Nebraska. Mrs. Bowes claimed the right of entry as the widow of a sailor in the Civil War, under a section of the revised statutes, which allows such dependents to make homestead entries with credit for the time of the soldier's or sailor's military or naval service. It was admitted this case was made under an agreement with the Standard Cattle Company whereby Mrs. Bowes at the time of the entry leased the land to the company, with a further agreement that the company should have the option of purchase of the land. The department decides that Mrs. Bowes is required to maintain residence on the land and that her agreement with the company invalidated the entry and requires its cancellation.

Trainer Millard Sanders, who has been in New York since the close of the Memphis meeting, in charge of the trotting queen Lou Dillon, and other horses belonging to Mr. Billings, departed Tuesday with the great mare and her stable mates for Memphis, where the aggregation will be wintered. Mr. Sanders took along eight or nine head of young stock from the farm of John H. Shults, at Port Chester, which will be schooled during the winter. At Cleveland he will receive two more fast ones, and, arriving at Memphis, Frank G. Jones' fast four-year-old pacer Baron Grattan, that worked a mile during the Memphis meeting in 2:05, will be added to his stable. Mr. Sanders seems likely to have a large string to train next season, and certainly his talents deserve recognition.—*Trotter and Pacer.*

Martha Wilkes 2:08, now twenty years old, and whose record of 2:08 in 1892 was the world's race record at that time, passed through the Fasig-Tipton sale last week for \$225. Martha was shifted to the pace some years after getting her trotting record, and was raced at that gait, but did not take a record. At the same sale two of her produce, respectively four and two years old, brought \$510 and \$310. Her first foal was Dare Wilkes, by Charley Wilkes 2:21 1/2.

The sale of thoroughbred yearlings from the Antrim Stock Farm took place Tuesday night at the Occidental Horse Exchange. Moderate prices prevailed. The top price of the sale was the bay colt by Herald-My Badge, for whom A. Josephs paid \$500. He is a half-brother to Padua. "Butch" Fisher secured the chestnut colt by Yo El Rey, dam Eileena, for \$375. The bay colt by Imp. Kismet-Forest Maid went to the nod of Fredrickson for \$375. Bright Pbohus brought hut \$150.

It is rumored that Peter the Great 2:07 1/2 will be sent to England and placed at the head of a trotting breeding establishment there. Peter Duryea, who paid \$5000 for him at the Old Glory sale was offered \$8000 for the horse the same day.

On a hot day drink Jackson's Napa Soda lemonade and he refreshed.

Champion Gig Horses.

The award of the Waldorf-Astoria Cup to W. H. Moore's Forest King at the Horse Show last week set up another new type and further bewildered dealers and driving men as to what constitutes a gig horse. It is rather remarkable that of the five horses that have won this trophy since it was first offered at the Garden, no two were very much alike, and as between the winner last week and the victor in 1902 there is all the difference imaginable as to conformation, quality, action, pace, and all the points which count in awarding the prize.

Joseph E. Widener's chestnut gelding Von Harbinger, the winner in 1897, was a flash horse and a high-goer, but he was light in the middle, and his action was not true. He was 15.1½ hands high. The judges were Col. Edward Morrell, W. C. Gulliver and George R. Read.

Albert C. Bostwick won in 1898 with Lady Ursula, a bay mare, 15.2 hands high. She was a breedy looking animal, beautifully formed, harring her rather light hind parts, and in action was showy, true going and fairly fast. The judges were Prescott Lawrence, H. K. Bloodgood and Francis T. Underhill.

W. L. Elkins' Red Cloud, the winner of 1899, will be remembered as a bay stallion, 15.3½ hands high and very full made, but with extraordinary quality for a horse of his substance and size. He was a wonderfully brilliant goer, full of mettle and dash. The judges who gave him the blue ribbon as a gig horse were Prescott Lawrence, H. K. Bloodgood and Shelly T. Harrison.

Lord Brilliant, the winner of 1900, 1901 and 1902, was a full hand lower than Red Cloud and was a much lighter made horse in proportion to his height. His quality, contour, dashing style of carriage and brilliancy of action were superlative. He looked the high bred, high mettled horse all over. Prescott Lawrence, H. K. Bloodgood and Harrison K. Caner gave him the prize in 1900; Messrs. Lawrence, Bloodgood and Underhill in 1901, and Richard F. Carman, Thomas A. Maitland and Orson Moulton in 1902.

Forest King, the winner in 1903, under Messrs. Bloodgood, Carman and Underhill, is a bay gelding, 15.1½ hands high. He is one of the highest going horses ever seen at the Garden, but his forward action is somewhat labored, and he seems to lack pace. The lofty, bold, dashing, mettlesome, gamecock style of Lord Brilliant is noticeably lacking in Forest King's carriage when in action. There is just a suggestion of coarseness about his makeup, and he can hardly be called a high bred looking horse.

Although this variation in type seems to indicate inconsistent judging, it must be remembered that the officials cannot always select a typical gig horse, because there may be no such animal in the ring. The best they can do is to give the prize to the horse approaching nearest to their ideal. Among all the winners, Lord Brilliant would doubtless be considered the best gig horse, all things considered. Strong objection to his small size has been made, however. Red Cloud, a grand horse of his type, was generally regarded as being better suited to draw a brougham than a gig, owing to his heavy weight. And Forest King, the highest goer of them all, would have a better chance to win in a victoria class than in a gig class before very many judges.—*N. Y. Herald.*

Thanksgiving Day at Dreamwold.

Thomas W. Lawson gave an elaborate re-union to his employees at his magnificent farm at Scituate on Thanksgiving Day. More than 450 persons were in attendance, 200 of which were employees. The festivities took place in the 800 foot racing stable. The improvised hall was charmingly decorated with palms and evergreens. The orchestra played in an alcove shut in by small pine trees. Beautiful palms and rustic seats added to the elegance of the scene.

The guests were received in the harness room, and there left their wraps. Mr. and Mrs. Lawson, the Misses Gladys, Dorothy and Marion Lawson, and Master Douglas Lawson came and made a long stay, although the hour of departure was long past little Douglas' usual bedtime. From Dreamwold Hall, where the Lawsons reside while on their stock farm, beautiful palms added to the beauty of the decorations.

About eight the dance, with Mr. Lawson playing the part of the old country squire, opened with a waltz dedicated to "Our Employer," the "Squire" of Dreamwold. Other numbers were dedicated to George H. Pollard, manager of the stock farm; to Dreamwold itself, "Modest" George L. Paige, the chimes, once a subject of much controversy; to Borloma, the famous horse; "Glorious" Michael Kelly, who is known to every horse show goer; to the Dreamwold fire department and to the employees. Samuel Ferguson was floor manager, assisted by Christopher Dalton.

After the dancing a supper was served. Scituate

residents who attended as guests, each man being allowed to invite one person, said it was the best supper they ever tasted; and the horny-handed farmers of Scituate are connoisseurs as to turkey. The event was the time of the year in Egypt village, and the estate, brilliantly lighted, had the appearance of a stately old English manor.—*Am. Horse Breeder.*

Banquet to the Owner of Cresceus.

[American Sportsman.]

Fifty of the personal friends of Geo. H. Ketcham, citizens of Toledo, gave the breeder, owner and driver of Cresceus 1:59½ an elaborate banquet in the large banquet room of the Toledo Club, on Saturday evening. This was in honor of the first gentleman to drive a trotter in less than two minutes.

The decorations of the room were carried out in the scheme of the Ketcham colors of the trotting track—green and gold—big banks of palms forming the table background, while the table decorations were of mammoth golden chrysanthemums. At the plate of Mr. Ketcham a magnificent horseshoe of chrysanthemums in the same tint rested. The menu cards were models of the execution of clever ideas, being bound by ribbons of green and gold, while the frontispiece bore a beautiful head of Mr. Ketcham's famous horse, surrounded by a laurel wreath of green, tied also with a golden ribbon. The inside cover shows a picture of the breeder, owner and driver of the stallion. During the banquet, Richards' orchestra furnished the music. The menu was quite elaborate, including six courses. Between sherry and champagne there was a brilliant intellectual feast, in which the best talent of the Toledo bar and business men took part. The following were the formal toasts, with the responses, and there were others, that took the event deeper than the midnight hour:

Starting Judge—Mr. Clarence Brown.

Toast, "The Farmer, the Breeder, the Owner, the Driver, the Victor"—Mr. Geo. H. Ketcham.

Toast, "The Horse 1:59½" (Not Bred in Kentucky)—Dr. Owen C. Rees (Bred in Kentucky).

Toast, "Enterprising and Cosmopolitan Citizens of Toledo"—Mr. John B. Davis.

Toast, "The Ladies on the Grand Stand"—Mr. Clarence D. Whitney.

Toast, "The Gentlemen on the Track"—Mr. Harry B. Thompson.

Toast, "The Standing of the King and Queen on the Turf"—Mr. Negley D. Cochran.

News From the North.

[Portland Rural Spirit.]

The annual meeting of the North Pacific Fair Association has been called to meet in Portland, January 15-16, 1904.

Senator Helman is jogging the fast pacer Prince Tom 2:16, and will likely take him and Mack Mack 2:13 on the Grand Circuit next season.

John Sawyer is jogging Louis S. 2:24 and Alta Norte 2:16½ at Irvington this winter.

Klamath 2:07½ is the fastest trotter ever bred in Oregon, and Chehalis 2:04½ is the fastest pacer.

The great sire, Diablo, is wintering at the State Fair grounds, Salem, Or., where he will again make a season. Mr. Casto, who has him in charge, informs us that he is wintering well, and he expects to open the season early in the spring.

The race track at the State Fair grounds has been covered with manure and straw this fall, which will be plowed under in January. This will tend to give the track more life and make it faster than ever. If you don't want a record, better not come to the Oregon State Fair next year.

Senator Helman is jogging his good green trotter, Roy Benton, and will enter him in all the big trotting stakes next year. This big fellow worked miles better than 2:20 early last spring, and he was so promising the Senator held him over one season. He will certainly be a hard one to beat in the slow classes next season.

The Oregon State Fair has been so successful in the past with early closing events that most likely they will be renewed next season. We believe this association could give a \$2000 stake for 2:15 pacers, \$1000 for 2:10 pacers, \$2000 for 2:17 trotters, \$1000 for 2:12 trotters, and \$500 each for three-year-old trotters and pacers. This would be a nice lead-off for the 1904 circuit, and would encourage others to fall in line.

The Kenney Bicycle Co., 531 Valencia St., is doing a big business in the McMurray Carts and Sulkies. You not only save money by purchasing a McMurray but get the most durable, best made, and easiest running cart or sulky in the market. Investigation will convince a Missourian.

Strike!—if they don't give you Jackson's Napa Soda when you ask for it.

The New Track at Hot Springs, Arkansas.

HOT SPRINGS, ARK., Dec. 1.

If the wiseacres and croakers who are gravely asserting that the race track here will not be completed in time for the proposed winter meeting would come and see for themselves what has been accomplished they would make new resolutions for the future—not to make such radical statements at long range, far removed from the subject of their canards. For the Hot Springs racing plant not only will be completed for the coming meeting, but it is so far under way now that any local doubters have long since been silenced and become the most ardent optimists of any as to the outlook for the season.

Last week and this progress has been rapid at Lawrence, where the track is located, six miles out on the Choctaw and Gulf railroad. Open weather has speeded the large force of workmen on their object, and hundreds of visitors to the track note daily the results accomplished.

The track has been graded, fenced in and is ready for slow work. The grand stand and adjacent buildings show the foundations laid and the superstructure daily adding to its proportions, while additional stables have been completed, aggregating in all 600 stalls now ready in the stable yard. All of these stalls are roomy and commodious, 12 x 12, and well ventilated and drained. An artesian well at the end of the stable yard gives an ample supply of the pure water for which this region is justly famous.

One large boarding-house for the horsemen has already been finished, and two others are in contemplation, while kitchens are being built in the centre of the avenues that divide the stables.

Over one hundred horses are already at the track, including strings from St. Louis, Memphis and Chicago. Daley & Co. have El Rey, Five Nations, False, Dr. Hagyard, Thomas Keogh, The Four Hundred, Alice Morgan and a couple of yearlings. Five Nations, who was a good horse East for Frank Farrell, has had a year's rest and is now a grand looking four-year-old. His career here will be noted with interest, as he is speedy and can also go a route.

E. Horton has Golden Link and others, while W. O. McGuigan has the largest stable now at the track, including the promising two-year-olds Ascot and Esher Lad.

J. S. Cooper has the well-known horse Toddy, who was such a good horse for the Keenes last year. This horse has been at Hot Springs for some time undergoing a regular course of "hoiling out" in the healing hot water fresh from the bowels of the earth. He had sore shoulders and rheumatism, but does not take a lame step now and has been entered in stakes here.

If Toddy justifies his "hoiling out" it is safe to say that Goldsmith, Blue Girl, King Hanover, Orlando, Gold Heels, Wax Taper and other Eastern and Western cracks that have shown nothing this year will be sent here to the Cooper haths.

George Ogles writes to Secretary Morrison here that he will ship from Bennings next week with Wild Pirate, Arden, April Showers and others. Also that W. L. Oliver will bring All Gold and others, W. C. Daly a bunch, as well as A. Stokes, J. McCarty and others. Starter Cassidy is expected here very shortly. P.

Sober up on Jackson's Napa Soda.

Combault's
Caustic
Balsam

The Great French
Veterinary Remedy.

A Safe, Speedy and Positive cure
for ailments of
HORSES and CATTLE.

As a HUMAN REMEDY for Rheumatism, Sprains, Sore Throat, etc., it is invaluable. Every bottle of Caustic Balsam sold is warranted to give satisfaction. Price \$1.50 per bottle. Sold by druggists, or sent by express, charges paid, with full directions for its use. Send for descriptive circulars, testimonials, etc. Address
THE LAWRENCE-WILLIAMS COMPANY, Cleveland, Ohio.

ROD, GUN AND KENNEL.

Conducted by J. X. De WITT.

The Bench Show Last Week.

The bench show of the Pacific Coast Collie and Old English Sheep Dog Club last week was a success, so far as the gate was concerned and also in another particular, just as much if not more important, and that is, that a fall show in this city can be made popular. The dogs were certainly the attraction of the combined show. The "feather" exhibit was a good one, but the dogs held the crowd and made the show popular.

The result of the show last week is encouraging to the extent, that a show will be held in San Jose next April and a summer show later on at Santa Cruz.

The attendance each day was excellent and with the exception of one or two occurrences everything passed off pleasantly.

Judge Cole handled the different classes to the general satisfaction of visitors and exhibitors alike.

The aftermath of the show will no doubt tend to the general benefit of dogdom at large on the Coast and locally as well.

While the entry of dogs was not up to the expected number this cannot be considered as a showing that future fall shows will not have a larger entry. That the show last week will be a material aid to the next spring show was almost the unanimous consensus of opinion expressed by local fanciers who were present during the week.

Whether the next fall show will be under P. K. L. rules or not is now being considered. At all events, it will be a wise and winning policy if the different elements interested will work in unison:

The breeds and classes are briefly reviewed in the following notes:

St. Bernards—The main competition among the seven dogs benched was between Le King and Lester C. (entered as Dewey). The former was put down better than we have ever seen him, and won first winners and open rightly. He beats Lester C. in head, muzzle, markings, character, eye and expression. The latter showed up better in body. Pride S., first novice, could be better in head. In bitches, Princess Sheberzade would have easily disposed of a far stronger competition than she had. She was put down in fine condition and showed well. Both Cascade and Beauty were easily placed. In smooth coats General B., in for specials only, was the sole representative. We never saw him in better fettle. He was given the special for best over Le King, and won by a shade.

Great Danes—Alphonse, a greatly improved dog since the spring show, first winners and open over Rupert of Hentzau, was close. The latter seems just a trifle light in under jaw, and was a bit more rangy than the winner. Blue Beard, in for specials only, was not up to his past form and condition, but will still take a lot of beating before he goes down. Puppy bitches brought out a promising fawn, Lana, for first and winners. She is a well-stationed young one, showing all-round type and character, and should go a hit next spring. Flora, first open and reserve winners, and Tempest, first open, are both well-known dogs and were placed rightly.

Pointers—Minnesota Joe made up in quality what the showing in this breed lacked in numbers. He is a Pointer from the ground up and well sustains the reputation he made at the northern shows. A grand head, good body with deep well sprung ribs, roached hack and tucked up loins balanced on strong straight legs and compact feet make up a great dog. He is a merry shower in the ring and was full of style and action.

English Setters—A far better showing of this breed was benched than could be expected at this time of the year. Stylish Sergeant and Champion Elloree were the quality of the class. Sergeant is a rather large sized dog, but a well balanced one and looks like a strictly field dog. He has a noble head and is full of type and character. Victoria Fleet, reserve winners and first novice, shows the quality of his dam Albert's Rosalind to a degree. Champion Elloree, winners and first open, is a stylish bitch with plenty of quality and character but did not show in the ring as well as she might. Champion Pera, reserve winners and first limit, a strong bodied well ribbed one is just a trifle coarse in skull, but with a very sweet one. Fairland Pet, a Ch. Rodfield bitch, first novice, Lady's Dan, first novice dogs and the puppy classes were not hard to place.

Irish Setters—Conn (a litter brother of Toronto Mike), a handsome, upstanding one, rich colored and in fine coat won over his smaller competitor Emerald rather easily. The latter could be better in legs and feet. The puppy bitch Noreen must come along considerably to show.

Gordon Setters—Doc was the only one of the breed shown and is above the average generally benched here.

Irish Water Spaniels—A brace of two year olds, both by the sterling good old Dennis C. out of Belle Marsh, were excellent types of a breed that should have more encouragement on the Coast.

Field Spaniels—Were represented by one entry, a black and white dog, who might be a bit heavier in the legs, but a rather neat one at that.

Cocker Spaniels—Were a good averaging class throughout and comprised an entry of forty in the various classes. In blacks, Black Silk II, first winners and open, an even, sound dog, a trifle on the large size, but of good type, is nice in head where he went over Havoc, and was put down in good shape. Glenwood Havoc was the reserve dog. Portland Dude, third open and first limit (reserve winners last May) has a nice body, lots of bone and is an active, merry one, a coarse head however sets him back. Delverton Coppi second limit is a hit light boned and sports a white spot on his throat. Frisco's Boy first novice, not a bad type, barring a little too much muzzle and could be better in front, went over Midnight, rather a weedy dog. Puppies were only ordinary.

Black bitches brought out Glenwood Malsie first winners and open. (She was formerly called Sweetheart's First, and was a winner in 1902). Miss Frivolity, reserve winners and first limit, is a good even little bitch but has a wavy coat. The balance were not hard to find and place.

In reds, Victory A., first winners and limit and special for best was of good color and size, but could be just a little better in front. Delverton D'or was easily best over two ordinary puppies. Plumeria Sapbo first winners and open is also of good color and shows improvement. Little Dorrit, second open we liked better than Florodora, reserve winners and first limit, shows type, coat and plenty of bone. Little Maid though a bit small took proper position over California. Plumeria Cleo was absent.

Parti colors were somewhat better than the usual showing. Portland Kid, first winners, limit, novice and special for best was an easy winner among the dogs. He has a good front, rare hack and loins, is merry and active. He could be a little more bisel under the eyes and carries his ears a trifle high. Ben Ora second limit has a neat head but lacks the substance of the winner. Glenwood Lucky could have taken second limit over Teddy Roosevelt without creating much comment. Thornhill Tomales first was the only puppy in his class.

Paprika, first winners and limit bitches, is a handsome bitch. Portland Daisy reserve winners and first novice won easily in her class. Thornhill Lady Bountiful was not shown in the best condition.

Collies—The largest entry benched here for years and among them some good old dogs and a lot of classy youngsters. Ravenswood, a dog recently imported from England by Arthur Letts of Los Angeles, first winners, open, limit and novice and special for best is a clean headed, good coated, upstanding, nice fronted dog. He could be better in ribs. Ch. Hanover Monarch, reserve winners and second open. Glen Tana Sentine, second novice, limit and third open. These three dogs were bunched close together. Ravenswood came out on top with only a shade the best of it in head. It took quite a little while to separate him and Glen Tana in novice. The latter dog would have shown better by far had he been sent down a fortnight earlier, instead of making the sea trip and landing just prior to the show. He is a dog that will come to the front. Ch. Hatover Monarch, shown in nice condition, is a handsomely marked and great coated dog. He is full of type and character and a fine show in the ring. The positions of the three are liable to be reversed several times, so close are they together. Tyke, third novice and reserve open, has gone back, he was first winners this spring. Puppy dogs were a fair class. St. Clare George first, Old Hall Laddie second and Ormskirck Emerald Boy are big, strong dogs with lots of character and should come out well.

Brandane Marionslea was the class matron of the bitches and went through for firsts easily. A bit better in mouth and we would not have been surprised had she taken special for best over the dog. Ormskirck Gypsy, reserve winners, second open; Miss Conqueror of Charlecombe, third open, second limit and second novice; California Ivy, first puppies, second novice and reserve open were placed rightly.

Rippowan Miss Tuffet was not brought in the ring; she was ill and out of shape. Puppy bitches were also a fair class. Ivy was easily the best, but was lost later on. In specials, Glen Tana Kennels won out with Oak Grove reserve. The northern dogs were steadier in the ring than the Santa Clara quintet and were well handled. With Glen Tana and Marionslea in, the four were hard to beat. Special for best "tricolor" went to Tyche, a handsome bitch just a hit too small. In specials, we were pleased to see the Sacramento dog, Sir Henry, come out. Mr. Cole handled these classes well.

Bulldogs—Were more numerous than usual. Boer a white and fawn dog had no trouble in getting to the front. With the exception of being somewhat leggy he is a very fair one. Bully, first novice and reserve winners we thought should not have gone over Captain Absolute, second open and limit. Bully was more on the cloddy order than the Captain, but at that he showed, we think, more type and class. Woodlawn Masquerade second novice, is too high on his legs, but has a good head and hack face.

Madam Chaddy, a well known old bitch, white and fawn patches, is a classy one and showed well for first winners open and novice. Her Majesty of Charlecombe, a low set neat headed brindle, second open and limit. Salano Daisy, first limit, third novice, both gave way for reserve winners to Rancee, second novice. Rancee would not have been treated hadly had she gone down a peg. The three last mentioned are all brindles and good averaging bitches. Salano Daisy was our choice for reserve. She seemed to

have a bit better head and more quality than Rancee.

Bull Terriers—A small class showing quality in only a small degree. Englewood, first winners and first novice and limit (over 35 pounds) had only a trifle the best of it, if at all, over Bonnybred Stiletto, first open and reserve. Woodlawn Modesty aside from being slightly small sized is a pretty little bitch, with a neat head, expression and well balanced body and legs. She was entitled to winners and first open (30 pounds or under). Naughty Nan, first novice and reserve winners went through on her good head, she is too low stationed to go far in good company. Woodcote Ditto is too fine in muzzle to do better than she did, second novice and limit (over 30 pounds). Sweetheart, a classy bitch entered by the judge, was not taken in the ring but was the best one benched.

Boston Terriers—Were few and included some old familiars. Boston Jack is just too large for strong competition but took winners and first open over Lord Rusbie on a fair margin. Endcliffe Vernette first winners and open beat her kennel mate and dam Endcliffe Betty for the matron honors.

Irish Terriers—With the exception of Irish winners dogs, and Royal Noreen, winners bitches, were not a strong showing.

Fox Terriers—Were a small class and, in but two cases, a mediocre showing. Vina Belle was the best one shown and Garston Rally led the dogs. In wires the only one worthy of mention was a splendid beaded little bitch Woodlawn Dolly Varden, she could be larger and with her good front, body and coat would go nicely among the good ones.

Blenheim Spaniels—Were represented by three nice ones, Rufun, Trilby and Pansy, that were thought so well of that they were bought up by local fanciers.

Old English Sheep Dogs—But one was shown, His Majesty of Charlecombe, too good a dog to be lost on the Coast. He was taken East by the judge, and will be in the going on the Eastern circuit.

Among the small breeds were two good Maltese Terriers from Kansas City, Muggins and Pigeon. A Toy Pom, Migby Atom of Charlecombe, is the best ever shown here. The Italian Greyhound Leto, shown frequently before, is about the best yet benched and holds her form splendidly. The balance of the little fellows were not above ordinary.

A list of the regular and special prizes follows:

AWARDS.

ST. BERNARDS (rough coats)—Novice dogs—1 Mrs Lee Sickle's Pride S. Open dogs—1 W W Wallace's Le King, 2 Charles Newman's Lester C. (Dewey) Winners, dogs—1 Le King, res Lester C. Novice bitches—1 Mrs F Lueck's Cascade, 2 Jean Le Vau's Beauty. Open bitches—1 Mrs C A Smart's Princess Sheberzade. Winners, bitches—1 Princess Sheberzade, res Cascade.

BULL TERRIERS—Puppy dogs—1 Gene Sheehy's Rugby, 2 Mrs F W Kelly's The Mick. Novice dogs—1 W C Bogen's Englewood, 2 The Mick, 3 withheld. Limit dogs—1 Englewood, 2 F E Watkins' Bonnybred Stiletto. Open dogs over thirty-five pounds—1 Bonnybred Stiletto. Winners, dogs—1 Englewood, res Bonnybred Stiletto. Novice bitches—1 Jos Eastland's Naughty Nan, 2 E S Simpson's Woodcote Ditto, 3 H M Daggett's Nelfan. Limit bitches, thirty pounds and under—1 Mr Kabler's Queen. Limit bitches, over thirty pounds—1 Mrs D C Van Arsdell's Our Nancy, 2 Woodcote Ditto, 3 Dresser & Simpson's Bloomsbury Queen. Open bitches, thirty pounds or under—1 S R Ames' Woodlawn Modesty. Winners, bitches—1 Woodlawn Modesty, res Naugby Nan.

GREAT DANES—Puppy dogs—1 F Mundt's Frederick the Great. Open dogs—1 Dresser & Simpson's Alphonse, 2 Mrs L S Adams' Rupert of Hentzau. Winners, dogs—1 Alphonse, res Rupert of Hentzau. Puppy bitches—1 Dresser & Simpson's Lana. Limit bitches—1 Dresser & Simpson's Tempest. Open bitches—1 Dresser & Simpson's Flora. Winners, bitches—1 Lana, res Flora.

FOX TERRIERS (smooth coats)—Puppy bitches—1 J Bradsbaw's Woodlawn Dottie Dimple, 2 Mrs I L Moulton's Doty. Novice dogs—1 H V Hamilton's Garston Rally, 2 Mrs Montague's Bob, 3 L H Patty's Dandy Dandelion. Open bitches—1 W W Moore's Vina Belle, 2 J C Berrett's Corinne. Winners, dogs—1 Garston Rally, res Boh. Winners, bitches—1 Vina Belle, res Woodlawn Dottie Dimple.

FOX TERRIERS (wire hairs)—Puppy dogs—1 withheld, 2 Mrs I L Moulton's Humberstone Banjo. Puppy and winners, bitches—1 J Bradsbaw's Woodlawn Dolly Varden.

ENGLISH SETTERS—Puppy dogs—1 W E Moulton's Palo Alto, 2 W E Moulton's Pope, 3 W E Moulton's Mayfield. Novice dogs—1 Mrs Thos Murphy's Victoria Fleet, 2 Mrs Tbos Murphy's Lady's Dan, 3 F A Jarrissire's Chicot, res B W Lorigan's Governor. Open dogs—1 W Riplinger's Stylish Sergeant. Winners, dogs—1 Stylish Sergeant, res Victoria Fleet. Puppy bitches—1 W E Moulton's Arrow. Novice bitches—1 Mrs Tbos Murphy's Fairland Pet. Limit bitches—1 J W Riplinger's Ch Pera. Open bitch—1 J W Riplinger's Ch Elloree, 2 Mrs Thos Murphy's Fanchon, 3 C C Lee's Laura L. Winners, bitches—1 Ch Elloree, res Ch Pera.

IRISH SETTERS—Limit dogs—1 F Adams' Conn. Open dogs—1 B W Lorigan's Emerald. Winners, dogs—1 Conn, res Emerald. Puppy and winners, bitches—1 Mrs Thos Murphy's Noreen Murphy.

GORDON SETTERS—Limit and winners, dogs—1 A W Watson's Doc.

IRISH WATER SPANIELS—Open and winners, bitches—1 James E Spink's Florodora. Limit and winners, dogs—1 August Christensen's The Gossoon.

FIELD SPANIELS—Open and winners, dogs—1 J C Berrett's Van.

BOSTON TERRIERS—Novice dogs—1 Richard J Jose's Boston Jack, 2 Mrs W H Deming's Lord Rusbie. Open dogs—1 Boston Jack. Winners, dogs—1 Boston Jack, res Lord Rusbie. Novice bitches—1 Mrs W M Deming's Dixey D. Limit bitches—1 Mrs W H Deming's Endcliffe Betty. Open bitches—1 Mrs W H Deming's Endcliffe Vernette. Winners, bitches—1 Endcliffe Vernette, res Endcliffe Betty.

IRISH TERRIERS—Puppy dogs—1 Miss Mackenzie's Mr. Dooley. Limit dogs—1 Mrs W R Whittier's Irish. Open dogs—1 Irish, 2 Mrs F J Walker's Ivi-wilde Dangan. Winners, dogs—1 Irish, res Mr Dooley. Limit bitches—1 J C Barrett's Tyrone Lass, 2 John Allen's Lady Powers. Open bitches—1 Mrs F J Walker's Royal Noreen, 2 Tyrone Lass. Winners, bitches—1 Royal Noreen, res Tyrone Lass.

COCKER SPANIELS (black)—Puppy dogs—1 Percy Weekes' Black Beau, 2 Harry J Moore's Ben. Novice dogs—1 D C Brown's Frisco's Boy, 2 Black Beau, 3 A L Cresswell's Midnight. Limit dogs—1 Chas Heffernan's Portland Dude, 2 Mrs C Du Jardin's Delverton Cappel. Open dogs—1 J Hervey Jones' Black Silk II, 2 Mrs Phil C Meyers' Glenwood Havoc, 3 Portland Dade. Winners, dogs—1 Black Silk II, res Glenwood Havoc. Puppy bitches—1 D P Cresswell's Bess, 2 Delverton Kennels' Princess Yevie. Novice bitches—1 Frank Esmond's Babe. Limit bitches—1 J H Jones' Miss Frivolity, 2 Teaselown Kennels' Mill Girl. Open bitches—1 Mrs Phil C Meyers' Maisie, 2 Teaselown Kennels' Holly Downs. Winners, bitches—1 Glenwood Masie, res Miss Frivolity.

COCKER SPANIELS (solid colors other than black)—Puppy dogs—1 Delverton Kennels' Delverton D'Or, 2 W R Wright's Sport W, 3 Mrs F Esmond's Brownie. Limit dogs—1 Miss A Farno's Victory A. Winners, dogs—1 Victory A, res Delverton D'Or. Novice bitches—1 J H Jones' Little Maid, 2 A Wolfens' California. Limit bitches—1 Delverton Kennels' Florodora, 2 California. Open bitches—1 J H Jones' Plumeria Sapho, 2 Delverton Kennels' Little Dorrit. Winners, bitches—1 Plumeria Sapho, res Florodora.

COCKER SPANIELS (parti-colored)—Puppy dogs—1 Percy Ward's Thornhill Tomales. Novice dogs—1 Portland Cocker Kennels' Portland Kid, 2 Miss A Farno's Teddy Roosevelt, 3 Mrs Phil C Meyers' Glenwood Lucky. Limit dogs—1 Portland Kid, 2 Mrs C W Sharples' Ben Ora. Winners, dogs—1 Portland Kid, res Thornhill Tomales. Novice bitches—1 Portland Cocker Kennels' Portland Daisy, 2 Mrs Phil C Meyers' Glenwood Chocolate. Limit bitches—1 Delverton Kennels' Paprika. Open bitches—1 Thornhill Kennels' Thornhill Lady Bountiful. Winners, bitches—1 Paprika, res Portland Daisy. Special for best Kennel of Cockers won by J Hervey Jones.

COLLIES—Puppy dogs—1 Mrs George W Rennie's St Clare George, 2 George W Rennie's Old Hall Laddie, 3 Joe Doher's Ormskirk Emerald Boy, res Joseph Bloomberg's Pensarn Lad. Novice dogs—1 Arthur Lett's Ravenswood, 2 Thomas S Griffith's Glen Tana Sentinel, 3 Irving Townsod's Tyke, v h c S H Weston's Amigo, John Perry's Larry Bonnie, A R Sprague's Marengo, h c William J Coffey's Highland Duke. Limit dogs—1 Ravenswood, 2 Glen Tana Sentinel, 3 O J Alhee's Ormskirk Surprise, res Tyke, v h c J C Barrett's Sir Norman, c M Coffey's Sir Henry. Open dogs—1 Ravenswood, 2 Beach Hill Kennels' Ch Hanover Monarch, 3 Glen Tana Sentinel, res Tyke, v h c Ormskirk Surprise. Winners, dogs—1 Ravenswood, res Ch Hanover Monarch. Puppy bitches—1 Arthur Lett's California Ivy, 2 Dr W P Burnham's Sunset Bell, 3 Charles H Biggs' Princess Wa Wa. Novice bitches—1 Thomas S Griffith's Brandane Marionslea, 2 Charlecombe Kennels' Miss Conqueror, 3 California Ivy, res Mrs J P Norman's Tyche. Limit bitches—1 Brandane Marionslea, 2 Miss Conqueror, 3 California Ivy, res M Coffey's Nora. Open bitches—1 Brandane Marionslea, 2 O J Alhee's Ormskirk Gypsey, 3 Miss Conqueror, res California Ivy. Winners, bitches—1 Brandane Marionslea, res Ormskirk Gypsey.

OLD ENGLISH SHEEP DOGS—Open dogs—1 Charlecombe Kennels' His Majesty of Charlecombe.

BULLDOGS—Limit dogs—1 George W Chase's Boer, 2 San Jose Bulldog Kennels' Captain Absolute. Open dogs—1 Boer, 2 Captain Absolute. Novice dogs—1 Dresser & Simpson's Bully, 2 Dr L R Gamhitz's Woodlawn Masquerade. Winners, dogs—1 Boer, res Bully. Novice bitches—1 San Jose Bulldog Kennels' Madame Chaddy, 2 D Trowbridge's Rancee, 3 Fred Clarke's Salano Daisy. Limit bitches—1 Salano Daisy, 2 San Jose Bulldog Kennels' Her Majesty of Charlecombe. Open bitches—1 Madame Chaddy, 2 Rancee, 3 Salano Daisy. Winners, bitches—1 Madame Chaddy, res Rancee.

TOY POMERANIANS—Open bitches—1 Charlecombe Kennels' Mighty Atom of Charlecombe. Open dogs—1 Miss Louise Bernstein's Beauty.

TOY POODLES—Open dogs—1 Mrs Moulton's Bummer, 2 James Good's Teddy Roosevelt. Open bitches—1 James Good's Beauty.

MEXICAN (hairless)—Open dogs—1 Mrs Moulton's Cupid. Open bitches—1 Mrs Moulton's Bing Bing, 2 Mrs Moulton's Jane.

ITALIAN GREYHOUNDS—Open bitches—1 Mrs H T Payne's Leto.

CHOWS—Open dogs—1 Mrs D De Barrow's Kong. Open bitches—1 D De Barrow's Hong.

BLENHHEIM SPANIELS—Open dogs—1 James Good's Rufin. Open bitches—1 James Good's Pansy, 2 James Good's Trilhy.

JAP SPANIELS—Open dogs—1 Miss Paulsell's Inglenook Ko Ko.

MISCELLANEOUS—Pit Bull Terrier—1 Miss Florence Emery's Dixon.

SPECIALS.

St. Bernards—Best dog (smooth coat or rough coat)—1 E D Connolly's General B, res W W Wallace's Le King. Best Bitch (rough coat)—Mrs Smart's Princess Scheherazade. Best in novice classes—1 Mrs Sickles' Pride S, res Jean Le Vau's Beauty.

Great Danes—Best Great Dane in show—1 Simpson & Dresser's Blueheard, res Simpson & Dresser's Alphonse. Best Great Dane of opposite sex to winner of above trophy—Dresser & Simpson's Lana. Best pair of Great Danes—Blueheard and Alphonse.

Pointers—Best Pointer in show—H F Zeigler's Minnesota Joe.

English Setters—Best English Setter in show—1 John W Ripplinger's Ch Elloree, res John W Ripplinger's Ch Pora. Best of opposite sex—John W Rip-

linger's Stylish Sergeant. Best pair—Ch Elloree and Stylish Sergeant.

Irish Setters—Best Irish Setter in show—1 F B Adams' Conn, res B W Lorigan's Emerald.

Gordon Setters—Best Gordon Setter in show—P W Watson's Doc.

Irish Water Spaniels—Best Irish Water Spaniel in show—1 August Christensen's The Gossoon, res Jas E Spink's Florodora.

Cocker Spaniels—Best Cocker Spaniel in show—1 Miss A Farno's Victory A, res Portland Cocker Kennels' Portland Kid. Best of opposite sex—1 Delverton Kennels' Paprika, res Mrs Philip C Meyer's Glenwood Maisie. Best puppy—1 David P Cresswell's Bess, res Percy Ward's Thornhill Tomales. Best owned by a lady—Victory A. Best parti-colored—Portland Kid.

Bulldogs—Best Bulldog in show—Geo W Chase's Boer. Best Bullhitch in show—San Jose Bulldog Kennels' Madame Chaddy.

Boston Terriers—Best kennel—Mrs W H Deming. Best Boston Terrier in show—R J Jose's Boston Jack.

Bull Terriers—Best Bull Terrier in show—1 S R Ames' Woodlawn Modesty, res W C Bogen's Englewood. Best of opposite sex—Englewood.

Irish Terriers—Best Irish Terrier in show—1 Mrs W R Whittier's Irish, res Mrs F J Walker's Royal Noreen. Best owned by a lady—1 Irish, res Royal Noreen.

Fox Terriers—Best Fox Terrier in show—1 H V Hamilton's Garston Rally, res W W Moore's Vina Belle. Best of opposite sex—Vina Belle. Best wire haired Fox Terrier—John Bradshaw's Woodlawn Dolly Varden. Best pup—1 Woodlawn Dolly Varden, res Mrs Ida Moulton's Dotty.

Best Collie dog owned and bred in Sacramento county—M Coffey's Sir Henry. Best of opposite sex—M Coffey's Julia. Best tri-color pup from Sacramento county—Joseph Blumberg's Peosarn Lad.

Best kennel of Collies—1 Mrs Thos S Griffith's Glen Tana Kennels, res O J Alhee's Oak Grove Kennels. Best Collie in show—1 Arthur Lett's Ravenswood, res Mr Griffith's Brandane Marionslea. Best Collie in puppy classes—1 Arthur Lett's California Ivy, res Mrs George W Rennie's St Clare George. Best Collie or Old English Sheep Dog—1 Ravenswood, res Charlecombe Kennels' His Majesty of Charlecombe. Best Collie in novice classes—Ravenswood. Best tri color Collie—Mrs J P Norman's Tyche.

Best dog in show—Henry F Zeigler's Pointer, Minnesota Joe, res John Ripplinger's English Setter, Ch Elloree.

Best dog owned in Sacramento county—M Coffey's Scotch Collie, Sir Henry.

Best dog owned in San Francisco county—E D Connolly's St Bernard (smooth coat), Geocal B.

Best dog owned in Santa Clara county—Charlecombe Kennels' Old English Sheep Dog, His Majesty of Charlecombe.

Best dog owned in Santa Cruz or Monterey county—Irving Townsend's Scotch Collie, Tyke.

E. Courtney Ford brought the Pointer Boston from James Cole last week at the show. This dog is not only a handsome typical Pointer, that will be in the ribbons at any show, but he is also well broken for field work.

Irving C. Ackerman, E. Attridge and J. J. Roi each bought a Blenheim.

Mrs. Murphy sold Albert's Fleet and several young Setter puppies.

Judge Cole thought so well of Fairland Pet, a Ch. Rodfield bitch, that he bought and took her East.

Cocker puppies were in demand but there were none for sale.

Among the out of town visitors were Arthur Letts of Los Angeles, Mrs. T. S. Griffiths of Spokane, Wm. Halley and M. Coffey of Sacramento, John Taylor of Los Angeles, Percy Ward of Fruitvale, Mrs. N. J. Stewart, Mrs. Chas. R. Harker and Mrs. O. J. Alhee of San Jose and others.

Coming Events.

Rod.

April 1-Sept. 10. Oct. 15-Feb. 1—Open season for taking steelhead in tidewater.

Nov. 1-April 1—Trout season closed.

July 1-Jan. 1—Open season for black bass.

Aug. 15-April 1—Open season for lobsters and crawfish.

Nov. 1-Sept. 1—Open season for orabs.

Sept. 1-May 1—Open season for shrimp.

Sept. 10-Oct. 15—Close season in tidewater for steelhead.

Nov. 15-Sept. 10—Season open for taking salmon above tide water.

Gun.

July 1-Feb. 15—Dove season open.

Nov. 1-July 15—Deer season closed.

Sept. 1-Feb. 15—Open season for mountain quail, grouse and sage hen.

Oct. 15-Feb. 15—Open season for quail, ducks, etc.

Bench Shows.

Dec. 2, 3, 4, 5—Pacific Collie and Old English Sheep Dog Club. Bench Show in connection with Poultry Exhibit. San Francisco. P. K. L. rules

Field Trials.

Nov. 23—American Championship Field Trial Association. Annual trials. Robinson, Ill. H. S. Humphrey, Secretary, Indianapolis, Ind. Declared off.

Nov. 30—Virginia Field Trial Association. Chase City, Va. Chas R. Cooke, Secretary, Richmond, Va.

Dec. 1—Indiana Field Trial Club. Annual trials. Clay City, Ind. C. F. Yung, Secretary, Clay City, Ind.

Amateur Field Trial Association of Maryland and District of Columbia. Md. Wm. R. Armstrong, Secretary, Baltimore, Md.

Dec 5—Continental Field Trial Association. Thomasville, Ga. John White, Secretary, Hempstead, L. I., N. Y.

Dec. 14—Alabama Field Trial Club. Huntsville, Ala. L. G. Pettyjohn, Secretary, Birmingham, Ala.

Recoil.

It is questionable whether the sportman who is not a mathematician or an engineer in his spare time is any the wiser when he is told that such and such a cartridge will give so many foot-pounds of recoil when fired from a certain gun. He finds it difficult to appreciate as a concrete notion a 56lb. weight falling on his shoulder from a height of, say, a couple of feet. All he knows is that if he saw it coming he would get out of the way as quickly as possible. He is aware that something of the kind happens when he shoots his gun, but at the time his attention is taken up with the shot, so that he cares but little what particular decimal quantity represents the figure value of the blow he receives. If he is of an experimental turn of mind, and fires a series of shots at a whitewashed plate in order to note the patterns given by his gun, he finds to his surprise that there is an unpleasant jar at the moment of discharge more serious than anything he had previously noticed. The interval of suspense before pulling the trigger puts him on the alert, and he notices, for the first time, mayhap, that recoil has something in it that reminds one of a friendly round with the gloves.

Those scientists of the sporting press who delight in mathematical gymnastics are at all times willing to tell us all about recoil, but unfortunately more often than not it is a little difficult to follow their abstruse arguments—at any rate, to get any tangible information therefrom. Taking recoil in its simplest aspect, it is greatest with a light gun firing a heavily charged cartridge that imparts a high velocity to a large charge of shot; conversely, it is least when the gun is heavy, the shot charge small, and the velocity moderate. Since there is a limit to the amount of recoil that can be taken with comfort time after time in the course of a day's shooting, the sportsman, without being a student of applied mechanics, sets up a personal standard of recoil beyond which he does not care to go. Meantime, he knows full well that a heavy gun is fatiguing to carry, and is not handy enough to enable him to do justice to the chances of distinguishing himself that are available in the course of a day at the covert side or among the roots. Whether aware of the fact or not, he is at one with the general body of sporting opinion which favors a light gun with a low recoil.

These mutually contradictory conditions are very hard to translate into practice. To arrive at some method of computation, the recoil of various guns and cartridges has been systematically examined, with the result that our technical information is well nigh complete. Hitherto it has been customary to measure recoil by its energy—that is, by its reduction to the gravity standard of a falling weight. Now, this assumes that recoils which have the same energy value affect the shooter equally. This is to say that the shock would be alike from the blow of a 56lb. weight falling one foot as against a one-pound weight falling 56ft. Supposing the shoulder to be the huffer receiving these two blows, we feel sure that after a practical trial the person submitting himself to the test would prefer the heavy weight blow to that of the light weight striking at a high velocity. One should assume for the purpose of argument that in each case the person experimented upon reclines upon a spring mattress, so as to leave the body full liberty to give way to the impact of the blow. This very point has lately been emphasized in connection with an argument concerning guns of diverse weight. We all know that recoil is at a minimum with a heavy gun, but it has not been made clear hitherto that if a cartridge is so proportioned to a light gun as to give the same foot-pounds value of recoil as a more powerful cartridge fired from a heavier gun, the shooter will by no means experience an equality of sensation.

This stands to common sense, because the light gun will recoil with a sharper movement than the heavier one, thus making up in velocity of recoil what is lacking in weight. In practice, this means that a given value of recoil in foot-pounds which would be tolerable in a heavy gun would be unpleasant in a light gun. Yet we find that a sportsman who shoots mostly at driven game prefers a light handling gun. As he fires a large number of shots in the course of a day, he asks for the lightest possible recoil. This is generally provided for by using a reduced charge of shot and one of the new light weight powders, which give less recoil for the same result on the shot as the older 42-grain charges. The slight deficiency of shot is not noticed, as game fired at under these conditions is generally fairly close to the gun. While most of us are willing to take these things for granted, there are others who have to go into details, so as to be able to define the most favorable combinations for giving a good practical result. Thus it happens that the problem arises as to how best to measure recoil.

The accumulated experience of years goes to show that the best way of judging recoil is to hang up the gun, and measure the movement that results from the discharge. This gives us either the velocity of the recoil or by calculation its energy in foot-pounds. It is difficult to lay down how far the holding of the gun at the shoulder will affect the amount of recoil registered experimentally with a freely suspended weapon. If the weight of the body resists the recoil during the time that the movement is in process of development, that is for the first third of an inch of travel while the shot is passing along the barrel, then the body resistance must reduce recoil in just the same way that added weight in the gun tends to pull down recoil. Whatever may be the precise answer to this question, we know that the conditions are practically alike for all guns, and therefore that the combination of gun and cartridge that registers a given recoil under ex-

Jackson's Nana Soda untangles the feet.

perimental conditions will reproduce a proportionate amount of that recoil when fired from the shoulder. We can, therefore, safely assume that recoil measurements are sufficiently exact to give a reliable measure of the consequent effect on the shooter.

One must, however, avoid taking too much for granted in dealing with scientific measurements of recoil, however carefully they may be taken. A given energy of recoil cannot be pronounced excessive or the reverse without bearing in mind the weight of the gun. Again, the distress arising from recoil is far greater with a badly fitting stock than with one that takes an easy bearing on the shoulder. With a cap that hangs fire ever so little, the bad timing of the shot finds the shooter slightly unprepared for the shock. In fact, the more we look into the question of recoil the clearer is it that if it takes an expert to expound its measurements, it requires a still higher grade of intelligence to translate those measurements into actual workaday practice.—*County Gentleman.*

About Two Dogs.

It may not be uninteresting to our readers, following the win of Le King over Lester C. last week and the consequent discussion as to the relative merits of the two dogs, to give the records of both up to the present time.

Lester C., 55512, is by Alto Milo out of Queen of the Joaquin and was whelped July 1, 1898. A. E. Muenther bred him.

In 1900, under James Mortimer at San Francisco, he was given h c in novice (12 in the class), h c in limit (10 in the class) and h c in open (8 in the class). He was entered by Dr. Fred P. Clark of Stockton. He was not shown at Oakland or Sacramento under E. Davies or James Cole in 1900.

In 1901 at San Francisco, under J. J. Lyoo, in a class of eight he did not get a letter in limit where California Eboracum, Milo Jr. and Monarch Bernard went 1, 2, 3 and Sir William Wallace reserve. It may be worthy of note to mention, that Le King was in the same class and was also unrecognized. Lester C. was entered by F. Lueck of Sacramento, who subsequently sold him to his present owner.

At Los Angeles, in 1901, L. A. Klein, judge, under the name of Golden Lion Jr., he won first novice (5 entries) and was reserve winners to Le King. California Eboracum was absent and Omar Khayyam was second limit and open. But seven dogs were in the various classes.

At Oakland the same year, in December, under Chas. R. Harker, he was given first limit (alone in the class), and first winners and open over Le King his only competitor. Two other entries in novice filled the dog classes. These wins were afterwards cancelled by the A. K. C. for being improperly entered. Le King was given first winners and open.

At the S. F. K. C. show 1902, under John Davidson, winners, first limit and open went to Lester C. over Bernard II and Le King in open and Sir William Wallace and Emperor in limit. Eboracum was entered but absent. Ten dogs were in the different classes; Glenwood Booze first puppies. He was awarded the special for best in the show, best handled by a lady and for best Pacific Coast bred.

At Oakland, 1902, under Jos. Cutten of San Francisco, he won first winners and open over Grand Master II. There was but four dogs in three classes.

At Sacramento, 1902, George W. Clayton judge, Lester C. won first open alone and first winners over Don alone in limit.

Under George Raper, S. F. K. C. show 1902, Lester C. was first open over Le King second. He beat Le King, Grand Master II (first limit), Gothard and Major Bruce, first novice and puppies. He also took two specials for best St. Bernard.

Pacific Coast Collie and Old English Sheep Dog Club show, December 2-5, 1903, James Cole judge, Lester C. (entered as Dewey) was awarded reserve winners and second open—two in the class, Le King and Dewey.

Le King is by Ch. Le Prince out of Sylvia's Lola, whelped April 12, 1898. Alta Kennels, breeder.

At Milwaukee, 1899, he won first novice and limit, second open and reserve winners under John Davissou. He was beaten by Champion Autocrat.

Next year, at Chicago, he won first limit, open and winners; D. E. Waters judged. In open and limit he beat Ch. Autocrat; in limit F. J. Gould's Cbantrell Prince, E. S. Mitchell's (his owner) Sir Athaor and Baby Bowser, first puppies. There were 743 dogs entered at this show and the St. Bernard sables were over sixty.

He made his initial Coast bow at Tanforan, September, 1900, where under Harry Lacy he won first winners and first limit. He won over California Eboracum and Omar Khayyam. In this city at the 1901 show he and his rival were both lost in limit class, eight entries. In open Le King got three letters.

At Los Angeles in October, L. A. Klein, judge, he won first limit, first open and winners, beating Khayyam and Golden Lion Jr. (Lester C.), or Dewey as he has been called at various times) who was first novice. Eight dogs were in the classes, Eboracum absent.

At Oakland in December, 1901, C. R. Harker, judge, Le King was given first winners and open by the American Kennel Club over Lester C., whose win was declared void. There was but four dogs competing—Roxey Savage Taylor and Com. Soble were one, two to novice.

In this city last year John Davidson, judge, Le King went third in open, being bested by Lester C. and Bernard II. In company with Alta Rachel he won the silver cup special for best pair of St. Bernards. He was not shown at either Oakland or Los Angeles in 1902.

Last May, in this city under Mr. Raper's co-ownership,

Le King was not able to reel off but a red ribbon in open. Lester C. went over him for the blue and reserve winners was annexed by Grand Master II.

Le King, for some reason or other, had never been put in the ring in any kind of condition until last week. He would stand improvement at that.

General B. was placed over him for best of the hollies. This smoothcoat was beaten by Le King at Tanforan for best St. Bernard.

Le King has won over Lester C. three times—at Los Angeles 1901, Oakland 1901 and San Francisco 1903 (December).

Lester C. bested Le King twice—at San Francisco 1902 and 1903 (April).

Two other dogs have been mentioned in the above notes—Grand Master II and General B. There was at Oakland some little rivalry between General B. and Lester C., and General B., has several times been discussed in reference to his standing with the other three, we will take occasion later on to go over the records again and publish their show careers.

Concerning Shot Sizes and Patterns.

If it were generally admitted by sportsmen that 20-bores were better than 12-bores, they would never be less out of use. Shooting has now arrived at a point at which a man individually no longer organizes war against the game. It is done by a variety of circumstances acting on, and being in their turn reacted upon, by a number of individuals, not all of them shooters, and in order to change our present habits in respect to gun gauges, we should have to convert not only ourselves, but every one of our shooting acquaintances also and simultaneously. Shooting outfit is no longer a question only between the man and his loader. Each man at some time of the year may now be required to take 50 pounds weight of ammunition on to the field with him.

Some there are who attempt to advocate small shot for all-round the season work; but I, who am like your last week's correspondent, an out and out advocate of a light load and No. 5, protest that small shot is the worst enemy to the game preserver, and also to the cruelty to animals' society as well, or would be so to the latter if they attended to things that are practical by preference.

Why I say that there is cruelty in using small shot is on two grounds, one of which is pretty generally admitted when it is argued that two No. 7 pellets are better than one No. 5, although the latter goes in further. But to leave for an instant the question of smashing, which is all in favor of high shot, I want to attack an idea that is as general as a mald-of-all-work; it is that small shot gives the best pattern. Nothing is further from the truth. It ought to do so, perhaps, in theory, but in practice it does not. A vast lot of precious time has been expended before white-washed targets in the unprofitable task of counting pellet marks, but the choice made of sorts of shot for trial is not, as a rule, different enough in size to get any useful principle—the principle that governs these things.

It would take hundreds of thousands of discharges and counted targets to arrive at the principle of variation if the tests were made, say, with shot pellets varying no more than Nos. 6 and 7. But go to a smaller size in one direction, and to a bigger in the other, and you instantly discover the trend of differences of results. Broadly speaking, there is a much larger percentage of wildly scattered pellets when small shot is used; that is to say, for every reduction of the size of shot pellets there will be more chances of wounding. I will not say fewer chances of killing, because that so much depends upon the distance the game is away, and whether it is coming at the shooter or going away from him.

Probably the best experiments with small shot ever carried through to a definite and instructive conclusion were those undertaken at the instance of the French Government some years ago. These experiments proved beyond question that the smaller the size of the shot pellets the greater was the inaccuracy of their flight; and that many more pellets became mere stragglers than when large shot were used. The Frenchmen went to work in a totally different direction from that which had led, and misled, Englishmen for many years; and in doing that they shed new light, which has taken a long time to illuminate our own sphere of action.

To our neighbors it appeared more necessary to discover the size of the circle requisite to embrace a certain percentage of the shot pellets, at various distances, than it did to count the pellets within an already measured space. By this means they discovered the great superiority, by percentage differences, of high shot over small in the matter of pattern; and until then it was not really suspected what an enormous difference in target area there was necessary, say, for catching 75 per cent. of No. 9 as against 75 per cent. of BB shot. It is not only a loss over the longer ranges such as might be expected, but at near distances also the small pellets require a much bigger area to catch 75 per cent. of them on the target. Indeed, the differences are so great even at 33yds. range that the area of No. 9 on the target from a choke bore is bigger than the area of BB with a cylinder bore at the same distance. The figures given by the French Governmental authority for 33yds. are as follows: The diameter of the circle enclosing 75 per cent. of the load with BB shot is 2.2ft.; with No. 9 it is 3.3ft. Then at 55yds. range the difference is even more startling, being 4.6ft. for BB shot and 9.2ft. for No. 9 shot. At greater ranges the diameter practically doubles for small shot. All the above facts apply to the choke bore. With the

cylinder there are even more differences, thus: At 33yds. the respective diameters for the same 75 per cent. proportion of pellets are, for BB 3.1ft and 4.2ft. for No. 9. At 55yds., 5.9ft. for BB and 10.8 for No. 9 shot.

The application of these figures is in the direction of finding the area of the circles and the number of pellets to each square inch, and then by multiplying that number by their respective remaining energies at the distance. But probably this letter is already too long, and sportsmen, who all date wounding like poison, will understand that when you count the shot pellets in a 30in. circle at 40yds. you have not thereby necessarily learned much about the patterns of shot-gauges, and how they are effected by different sizes of pellets.—X.

GOSSIP FOR SPORTSMEN.

Steelbeads and striped bass divide the attention of the anglers and produce enough sport these pleasant December days to invite sportsmen to several favorite resorts for an enjoyable day's outing, with the possibility of bringing back to the city some nice fish.

Point Reyes is the favorite rendezvous for the steelbead fishermen, where in the "white house" pool nearby some excellent sized and conditioned fish have been booked and landed by a number of the local talent, including Sam Wells, Jas. Watts, Charley Breidenstein, J. B. Keoniff, Frank Dolliver and others. The heights of the rod will be well represented at the Point tomorrow.

The devotees of striped bass angling find enough fish in the straits to keep them busy trolling after them. Mr. Carroll has recently taken several large fish as have others of the ark contingent near Tiburon bridge. Lake Merritt is still worth a day's visit for the bass fishing to be found there.

San Antonio slough, a tributary of Petaluma creek, is the banner resort apparently for striped bass angling. Good catches have been recently made by Messrs. Hillegass, Thomson and Miller.

One of the best catches made lately was that of Al M. Cumming and F. S. Church on Wednesday and Thursday of last week. Thirty-four fish that scaled almost 300 pounds was the take. The largest bass scaled twenty-four pounds and was landed by Mr. Cumming. He had been trolling the creek and trolled in shore to run his boat into the tules. Just as he was about landed he felt a strike on his rod and the reel hummed merrily as the cuttybunk ran out. Giving the fish the butt he found that he had something big hooked up on his 10oz. split bamboo. During this brief interval the fish was hiking up stream so strongly that the light boat was pulled out from the bank and into midstream where the fish towed the outfit for nearly an eighth of a mile and before he was checked again 200 yards of line was out. Mr. Bass was gaffed after a half hour's fight. Three of the other fish caught weighed a trifle over sixty pounds. This lot were all fresh run strong and brilliantly colored fish from the ocean. The males were all full of milt; the females, and they were few in proportion, did not have the roe developed more than a third of the ripe size.

There has been quite a run of bass from the ocean lately. Many fish have been caught on the extra high tides and during the full moon period.

A field with dog and gun when the rising sun is gilding the tree tops and flashing on the boar frost under foot; when the crisp morning air brings steam from the nostrils and bites the face and bands; when expectancy pictures the quail running through the stubble in search of breakfast—the blood courses through the veins with a freedom that makes the young man more vigorous and the old man feel almost young again.

Success in any kind of hunting depends largely on acquaintance with the habits of the game you are pursuing. In quail shooting it depends partly on acquaintance with the habits of the birds and partly on knowledge of the dog. The one is variable, the other a constant factor. For the sportsman every kind of field sport has its charm, but in my estimation nothing else comes up to quail shooting.—*Ex.*

This is true if you have a congenial companion and a pair of good dogs. During the hunting season, while the woods and fields are more or less inviting to a goodly number of people, it is well to remember a number of things. You should make it your business to always crawl over a fence with the muzzle of your gun towards you. Then should anything catch on the trigger the newspaper man will have something interesting to write about the next week. If you see anything move in the brush you wait to fire right away. Of course it may be another hunter, but you can call around in the morning and explain to the widow that you thought it was a quail or a duck, or any old thing. She will probably think you are a bird. Always leave the hammer of your gun up if you have anybody with you. If it should fall your friend will probably catch the ammunition in his back before it goes far. You can then pick out the shot at leisure.

Duck and Quail Outfits.

The demand at Skinner's keeps up for sportsmen's outfits, ammunition and guns. A large and new stock of goods has been added to fill the demand for hunting suits, rubber boots and hunters' footwear; canvas and folding wooden decoys, gun cases and a new design of leather-covered shell boxes. Peters Factory Loaded Shells are unequalled. Skinner's place is 801 Market street. You can get anything there you need for duck or quail shooting. Send for a catalogue, if you haven't the time to come, and try a mail order.

For all kinds of weather there is no drink like Jackson's Napa Soda—plain or in a lemonade.

THE FARM.

Points in Cream Sampling.

A great many creams will cream on standing just as milks do. And to sample them correctly, thorough mixing by pouring several times whenever practicable, should precede sampling. When thus thoroughly mixed, either dipper or milk thief may be used. Samples, if not taken daily, at least should be frequently taken, and composited, kept from churning in transit by the use of ice and of full packages and from souring by the use of corrosive sublimate or formaline. Check samples should be left at the farm when

1.5 inches deep, with a handle, and a tin pint, or quart, measure with straight sides and a diameter slightly larger than that of the sieve, used as a container, works nicely.—*Bulletin 100 Vermont experiment station.*

More Milk is Being Used.

With the improved methods of handling and delivering milk not only in the larger cities but in the smaller, has come an increased consumption of the same. Sanitary methods have been introduced and are becoming more and more common so that people are better satisfied with the milk for ordinary consumption. It is a purer, cleaner and more healthful article. This is one phase of the dairy industry that has not been much thought of by the parties who are solely interested in the butter trade.

TOMMY BRITTON 2:06 1-2

requested; or a locked and sealed sample jar may be left with each patron, he to control his own sample until it is ready for testing. It then may be divided, one part to go to the creamery for testing, the other to be retained by him for his own testing, or that of the experiment station, but not for that of a competing creamery whose test may or may not be worth anything. A hand tester taken to the farm may be used at times to advantage for the satisfaction of a doubting Thomas.

The preparation of a sample of cream for pipetting may be materially facilitated and, likewise, be made the more perfect by adopting two minor modifications of the process:

1. Heat the sample to 105-110 degrees F. prior to pouring.

2. Use a small, fine mesh, wire sieve and pestle to detect and mix lumpy cream.

1. The heating serves to make the fat more fluid, to soften the harder clots, and in general to render the entire sample more miscible. It should be remembered, however, that the sample expands on warming and that the pipette delivery of a rich cream, i. e., one carrying more than 25 per cent. of cream, should be weighed.

2. The mixing of a warm sample, of a cold one for that matter, is vastly bettered if it be poured through a small, fine mesh, wire sieve, such as is commonly in use in the kitchen and is bought for five or ten cents at any hardware or notion store. Lumps, clots and the like are quickly revealed and may, by pestling, by finger rubbing, by further pouring, etc., be broken up and made to pass the mesh. The pestling and breaking up of the lumps is most effectively done with the sieve partly immersed in the fluid portion of the sample. This is particularly true if the sample is at all sour. A few pourings then suffice to mix the sample more perfectly than can be done with many creams by a multitude of pourings. A sieve 2.5 inches in diameter and from 1 to

In New York State within 100 miles of the metropolis the amount of butter made compared with the amount of milk shipped is a mere indication of what it was twenty-five years ago. This is so in all of the territory adjacent to large cities. Twenty years ago in the territory adjacent to Chicago creameries making butter and cheese were abundant within ten to forty miles of that city, while to day they are few and far between.

The supply of milk has increased many fold in that same territory, but a very large proportion of this is being sent to Chicago for immediate consumption. That this will have, and has had a tendency on the price of butter can not be denied, and the general average for the last five years has increased from 20.6 for 1898; to 28.8 for 1902.

This should encourage buttermakers and creamerymen not only to increase their supply by encouraging their patrons to keep a better class of cows, and care for the milk, but also to develop new territory which would not be subject to this drain of the raw product for milk consumption.—*Elgin Dairy Report*

Care of Mule Colts.

In Kentucky we begin receiving mule colts in October. They are then weaned and to keep them from drifting badly we feed green corn and cane and some grain such as corn and oats. Or else have a well fenced lot with a crop of rank clover bluegrass or other grasses. After they have quieted down they are given the run of the cornfields and wheat fields, or some pasture of good grass.

They may be turned into the cornfield before the corn is gathered, for they care little for corn when there is plenty of rank grass such as is found along the fences, in the hollows and other uncultivated portions of the grain fields. If the supply of this feed is sufficient, this pasturing may be kept up until well into

January in this section. But if allowed to come to the barn and be fed some corn or oats at night they will do much better. Sheds to which they can go when bad weather comes will result in a saving of feeds and the keeping of flesh and a good coat.

After weather conditions make it necessary to stable the colts, continue the grain ration and give for roughness, good bright fodder, clover hay with some sheep oats. The latter two feeds will alone keep them in good condition. Oats is the feed for making muscle and that is what the colt needs rather than fattening food. We are particular to keep the stable well bedded and to spend a few moments each day among them with curry comb and brush, for the double purpose of making a better coat and of getting on better terms with Jack. Nothing pleases a mule better than a good raking with a curry comb—the harder the better he seems to enjoy it. But it is necessary to be kind to them at all times. Caution the small boy against teasing the colts. It is not too early to break the mule if done in the proper manner. I like my colts to be playful and active which means that they are doing well, while the stupid, sluggish, rough-coated mule indicates had treatment which leads to a bad disposition, trouble and loss. Of great importance is a good "send-off" at weaning time.

J. D. L.—KENTUCKY.

The Poultry Industry.

Our entire export of eggs in 1902 was only 2,717,990 dozen, valued at \$528,679, which cuts a small figure in comparison with Russia's total. But our hens are very industrious, and it is only the enormous home demand that keeps our exports at such a low figure.

In 1899 there were, according to the *New York Sun*, 233,598,005 chickens in this country and they produced 1,293,818,144 dozen eggs, and the fact that we consumed ninety per cent of them shows that we are a nation of egg eaters. It is enough to think that a train of ordinary refrigerator cars containing our entire egg crop of that year would have extended from Chicago to Washington, with several miles of cars to stretch along the track toward Baltimore.

In 1901 the receipts and consumption of

we produced in the last census year was \$281,178,247. The industry was worth more than all the cattle and hogs we slaughtered. It was worth more than the wheat crop of twenty-eight States and Territories, and the value of our eggs alone was higher than that of the gold and silver product of the United States in any year since 1850, except in 1890, when the precious metals exceeded the eggs by \$9,418,125. These are surprising statements, but they are true, if the census figures from which they are taken are correct.

Poultry Notes.

The appearance of a flock has much to do with their sale—one or more.

Sick fowls should not be permitted to drink from the same vessel as the other flock.

If our aim is high, the difficulties increase in proportion to the nearness of our approach to our aim.

Hard bread is better for fowls, if it is cracked, with a hammer, than if made into a mush by soaking.

If your hens are your incubator and brooder, it is only fair that they should have every chance to do their best.

Plymouth Rocks are probably the most popular "all purpose" fowls in the country. They are good as layers, broilers and roasters.

Notwithstanding water fowls love water, they thrive better if they have an opportunity to come out on dry land and enjoy the sunshine.

Artificial eggs should be used as nest eggs. Real eggs grow stale and are liable to be broken, and teach the hen to be an egg-eater.

Chickens and eggs have ruled very high in price during the past year. Those who have had only a few hens have been able to realize a good profit.

Let us remember that when opportunity is written on one side of the door responsibility is written on the other side. This is true in regard to raising poultry as well as in living a life.

Advocates of free range are all right, but it is a little too free when it extends to scratched-up flower beds, packed berries, half eaten tomatoes, stolen nests, and are a nuisance generally.

Yokahama fowls are a variety not very well known. They are noted for the great

BERTINA 2:17 1-4 by DIRECTUM

eggs in New York city were 2,372,500 crates of 30 dozen each. Chicago has given even a larger per capita consumption, or an average of 1,581,545 crates a year. Truly the egg industry is a great business. When we consider it in connection with the broilers, spring chickens, tough and tender, and roosters we consume, the poultry interests assume prodigious proportions.

The total value of the poultry and eggs

length of their tail and back feathers. The phoenix fowls are said to be superior to the Yokahama. Their tail feathers are about a yard in length. Their general appearance is like that of the games.

Poultry can exhaust soil just as crops exhaust soil. There seems to come a time when there is nothing more in it for them. They kill the grass and eat up all the sharp gravel and sand, and catch the insects. The soil needs a rest, and the fowls need a change.

Why Milk Varies.

Professor J. A. Conover of the Kansas station writes of milk tests as follows:

"At nearly every institute attended by Professor Cottrell and myself the question was asked, 'What is the reason our milk tests 2.6 per cent one month and next, under exactly the same conditions, it tests 4 per cent or more?' There are a great many things that affect the test, so that we cannot point to any one thing as doing it. In the first place, the conditions are never 'exactly' the same; the pasture may be better one month than another, the weather may be cooler or warmer, perhaps you encourage the cow less with the milk stool, or perhaps the boy who brings them in does not get them so much excited. All these things and many more influence the per cent of butter fat."

Kindness is sure to be rewarded by an increase in both the per cent of butter fat and also in the milk yield. Whenever you abuse the cow, either by a sharp word, the milk stool or by running her, you are taking money out of your pocket by decreasing the per cent of butter fat and also the yield of milk. Whenever the cow suffers for lack of food, water or lack of proper care, there is a decrease in the amount received from her.

There are other reasons why your test may be lower one month than another. When the milk is warm it churns very easily, so that when you send your milk to the station in cans only half full they will be partially churned when they get there. There is no way of getting a fair sample of such milk, for the butter fat that is churned is lost both to the patron and to the creamery. If you have a can and a half to send fill one can full, so that you will be sure to have that much that will not be churned. Keep the milk as cool as possible, as it does not churn readily at a low temperature.

If you do not want low tests do not take the first milk yourself and let the calf have the last. The first milk often tests as low as one-half of 1 per cent, while the last will test from 10 to 12 per cent. Don't skim all your milk before you send it to the station and then expect it to test 6 per cent.

To the creamery man I would say keep all the samples of milk from churning, if possible. Good tests can never be obtained from a churned sample without the use of ether and thus is too laborious a process for you. It is claimed by some that simply heating the milk to a temperature that will melt butter fat will answer, but my work in this line convinces me that satisfactory results can never be obtained in this manner.

Animal Sense.

In a recent magazine article Mr. John Burroughs has tried to show that animals do not have sense, or, in other words, that their actions are regulated entirely by instinct and not at all by reason. For a number of years I have thought that some of our domestic animals, especially horses, cattle and dogs, reasoned a great deal, and I do not believe a man can become a good stockman without taking the reasoning faculty of animals into consideration.

This year I have an Angus cow that is a heavy milker. I keep her calf in the barn and let the cow to it morning and night. The calf can only take half what the cow gives, and the rest I have to milk in a bucket. The cow is very gentle, never offering to kick if I do not try to milk her until after the calf is through. But if I undertake to milk her before the calf has got his share she will kick and act very badly.

Another time I turned some young calves out that had been in the barn since they were dropped. They all went off with their dams except one. Its dam was not in the yard at the time, and instead of following the other cattle to the pasture it crawled through the fence and ran off to some timber. Calves at this age can-

not see very well, and it is almost impossible to drive them. I went to the pasture and brought the mother of the calf home and drove her out toward where the calf was. There was a strong wind blowing from the calf toward the cow, so that she scented her calf when fifteen or twenty rods away and before she could see it. She supposed, of course, that her calf was in the barn, but as soon as she got the scent she went readily toward it, lowing in the peculiar way that cattle do when they call their calves. As she came nearer the calf was afraid of her and ran away. The cow did not give chase, but remained where she was and called. When the calf stopped she gradually worked up to it and finally succeeded in letting it know that she was its mother. After that it was an easy matter to drive the two together to the pasture again.

I think that in the two instances given the cows showed reasoning ability. At least, by assuming that they could reason, I saved myself considerable trouble.—*F. E. Moses in Breeder's Gazette.*

Range Horses.

A correspondent in a recent issue discusses western horses in a way that may mislead some of your readers. They should not overlook the fact that he qualifies his condemnation of the western horse by the words "for breeding purposes." There are good and bad range horses just as there are good and bad farm horses. Their usefulness depends somewhat on the way they have been bred and the age at which the farmer buys them, writes a western breeder in *Stockman and Farmer*.

As to their breeding, the worst for farm or other ordinary use is the result of a thoroughbred cross on the wild mares. This horse, when taken young and broken, is unsurpassed for a saddle horse, but he him run wild till mature and he is hard to handle and often unreliable or bad tempered.

The best western horse for farm purposes has draft blood in him, and the higher grade in this respect the better. These horses are nearly all useful. A high grade draft mare from the range is just as useful as one of corresponding quality from the farm for breeding. The range breeding doesn't make any difference in her blood.

The ordinary range horse of medium size, say 900 to 1000 pounds, should be bought and broken when young. Then it is usually not hard to overcome its wildness and to make a reliable horse out of it, but a mature range horse is harder to break and seldom becomes a satisfactory horse unless it has been handled on the range. For ordinary work, knocking around or light farm work range horses are often the best to be had on account of their powers of endurance. They are useful and satisfactory, but not uniformly so, and they should be bought low enough to allow for the failings some of them are sure to have.

Texas Fever Down South.

The live stock men of all the principal ranches of Santa Barbara, San Luis Obispo and Ventura counties met in convention at Santa Barbara last Monday for the purpose of deciding on some organized plan to combat the ravages of the disease known as Texas fever among the herds in the southern part of the State. For several weeks the three counties named have been under quarantine, making it impossible to ship cattle to the outside world. In spite of the fact that many of the principal ranchers have tried hard to check the spread of the disease, Texas fever has continued gradually to extend.

The stockmen met at the Arlington Hotel and organized. Among those present was Dr. Blemer, State Veterinarian, who delivered an address on practicable methods of treatment. It was finally decided that oil dip is the most satisfactory and it was recommended to owners to have large dip ponds for the treatment of stock.

Why Dairying Maintains Fertility.

Professor Curtiss, at the recent dairy convention at Cedar Rapids, Iowa, told why dairying maintains the fertility of the farm. He said: "In selling \$1000 worth of wheat from an Iowa farm at present prices we sell with it about \$350 worth of fertility. In selling \$1000 worth of corn we sell about \$250 worth of fertility—or constituents which would cost the farmer this amount if he were obliged to buy commercial fertilizers to maintain the fertility of the farm. But we can convert \$1000 worth of corn into beef, pork or mutton and sell it in that form and not remove over \$25 worth of fertility from the farm, or we can convert \$1000 worth of feed into butter and not remove a single dollar's worth of fertility with it. Butter is almost wholly pure fat or carbon, and it adds nothing to the value or productive capacity of the soil. We probably shall be obliged to pay out much money for commercial fertilizers in Iowa, if we farm intelligently, but we have already learned that we cannot grow wheat indefinitely or constantly draw upon even a bountiful store of plant food without diminished returns. The fact that this lesson has been learned and is coming to be universally recognized is the main safeguard and the strongest feature of Iowa agriculture. We not only produce an average of a million dollars' worth of agricultural products for every day of the year, but we know enough to feed over one-fourth of a million dollars' worth of produce on the farms every day. No other state in the union approaches this amount and there are only five other states that feed even half as much. By this means Iowa not only leads in agricultural products, but conserves her resources."

Dairy Notes.

Salt not only adds to the flavor of butter, but improves its keeping qualities.

Skim milk has been chemically solidified and made into combs, buttons, etc.

A cow should be fed liberally when fresh, and not wait until she begins to drop off in milk.

Wire gauze and four thicknesses of cheese cloth has been found to make the best strainer.

City dairymen have found that milk can be handled better in glass bottles than in tin cans.

Wooden buckets and pails should not be used to handle milk. Use only tin or granite ware.

Milk handled in cans that are not full will be churned, and is not as good for anything as nicely filled bottles.

The old custom of stripping the cow with the thumb and finger is advised against, as it spoils the shape of the teats.

Quite a number of the ills to which domestic animals are subject are directly traceable to damp and unsuitable quarters.

RITA H. 2:12 1-4

Pacing Mare by McKinney 2:11 1-4

ELECTRO MCKINNEY

Brown Colt, Three-Year-Old Trotter by McKinney 2:11 1-4

RITA H. is a dark brown mare who stands nearly 16 hands high and will weigh in racing trim about 1050 lbs. This mare has had this year a very remarkable record. She started in the Northwestern Circuit in the States of Oregon and Washington, and out of eight starts won her first seven races and only lost four heats during the entire circuit, and has a pacing record of 2:14. The mare is five years old and is excellent on the road. She does not pull or lug, and a lady can drive her anywhere. Last spring she trotted a workout mile in 2:18½ and repeated in 2:16½, after only seven weeks' work. Her owner has driven her in 2:12½, and has won all the club races she has started in. This mare can step two heats below 2:10.

ELECTRO MCKINNEY is a brown colt foaled in 1900, and stands 15 hands 1 inch in height. He trotted a full mile as a two-year-old in 2:31¼, last quarter in 35 seconds, and when a three-year-old a full mile in 2:21¼, last quarter in 32 seconds. He is perfectly gaited and a grand individual in every respect. Weighs about 950 lbs. ELECTRO MCKINNEY is bred in the purple, and is one of the best sons of McKinney alive to-day. McKinney is undoubtedly the greatest sire for his age, living or dead. ELECTRO MCKINNEY was not raced this year, being only a three-year-old and not entered in any stakes it was decided to hold him over.

These horses are all right and there is not a thing the matter with them, but my business demands are such that I cannot afford to devote any time to racing them. For prices and further particulars address

BYRON ERKENBRECHER,

Experience in Grading Up.

At a late meeting of the Western Guernsey Breeders Association at Maratban, Wis., H. D. Griswold discussed "The Guernsey Grade for the General Farmer" and gave his experience in grading up as follows:

In the first place let us consider what the general farmer now has. He has usually a mixture of several breeds. He has now and then a good cow that crops out by chance, but the great majority are poor cows that pay little or no profit. When you find a herd of good cows then you find a man that has put study and thought into his business, and has some definite plan in his work. He usually has one line of stock and sticks to it.

Now we cannot all have full bloods, but a full blood sire is within the reach of most any one, and when you have him and stick to the one line you can soon have a herd equal to any as far as hutter production is concerned.

Now for the sire for the general farmer to use I know of nothing better to use than the Guernsey. He is of good size, a strong and vigorous animal, and crosses well with any of the other breeds. Now you will say that size does not count; perhaps not, so far as production is concerned, but you will find that nine men out of ten will choose a good sized cow in preference to a small cow, other things being equal. Again the Guernsey heifers almost always have good udders and teats, and are gentle and easily handled. The sire is more than half the herd because the heifers take more after the sire than the dam. The pure-bred sire is of stronger blood than any of the mixtures in the cows. Choose a sire that has a mother and grandmother and as many more relations as possible that were good milk and hutter producers. Get the very best you can.

Then get a scale and a Babcock tester and know what each cow is doing. Cull out the poor ones and keep the best always. Keep up that practice with your heifers. You cannot buy good cows; there is only one way to get them and that is to raise them. Then comes good feed and plenty of it, warm and well lighted stable, and constant, careful care. Now to illustrate along this line I will give you a little of my own experience. In 1889 I bought my first Guernsey sire. I had then one Holstein cow, one Jersey and three or four Shorthorns. I find by my hooks that my total receipts for hutter that year were \$138.86. In 1891 I got a Babcock tester, the first one that had ever come to our town. I found that year that my cows were making 265 pounds of hutter each; I then had nine. I increased the number till in 1902 I had 21 cows. I have increased the average production per cow to 424 pounds each. I have increased my receipts from \$138.86 in 1889 to \$1,937.43 in 1902. I now have 25 cows and in the month of May just passed we got 5,700 pounds of cream testing 20 per cent butter fat, with no other feed than grass and a little silage. These 25 cows are all grade Guernseys but five. I have three Jerseys and two full blood Guernsey heifers. All but three were raised by myself on the farm and have never been off the place. Six of the 25 are two-year-old heifers.

To spend half the year in growing feed for stock to eat during the other half without increasing in growth or value is not good business sense.

Change the feed of the horses quite often and under no circumstances compel them to an entire corn diet for any great length of time.

Produce sold from the farm is gone forever. That which is fed on the farm leaves a residuum to keep up the fertility of the farm.

Jackson's Napa Soda does not tangle the feet.

THE \$60,000

DAN PATCH 1:56 1/4

CHAMPION PACING HORSE of the WORLD
(Without Hopples, Wind-Break, Etc., Etc.)

EATS

3 FEEDS FOR ONE CENT

EVERY DAY.

"International Stock Food" greatly aids Digestion and Assimilation so that More Nutrition is obtained from all grain eaten. It "tones up" and Permanently Strengthens the entire system and Purifies the Blood so that disease is prevented. Every \$3.50 pail of "International Stock Food" is positively guaranteed to save \$7.00 worth of grain. It will cause your Race Horse to have more speed and endurance. It will make your Carriage Horses healthy, fat and beautiful. It will give your Show Horses more life and action and make them glossy. It will make your Work Horses strong, healthy and of great endurance. It will make your Stallions and Brood Mares surer, and your colts will be better and grow and develop more rapidly. "International Stock Food" is absolutely harmless even if taken into the human system. It is prepared from Roots, Herbs, Seeds and Barks and is fed in small amounts as an addition to the regular grain allowance. It is equally profitable when fed to Horses, Cattle, Sheep, Hogs, Colts, Calves, Lambs or Pigs. It will make you a large extra profit when fed to your stock for Growing, Fattening or Working. It will increase milk 15 to 25 per cent. in Cows, Mares, Sows or Ewes, and only costs **3 FEEDS FOR ONE CENT.** A Dan Patch colt commanded \$5,000 at eight months of age. He looked like a yearling and was beautiful, strong and vigorous. The dam was fed "International Stock Food" before and after foaling, and the colt as soon as it would eat. Dan Patch became the World's Champion Harness Horse nine months after commencing to eat "International Stock Food" every day. If it is good for such horses don't you think it would pay you to test it on yours? Our "International Stock Food Farm" contains 650 acres, 12 miles from Minneapolis, and on it we own Dan Patch 1:56 1/4, Directum 2:05 1/4, Roy Wilkes 2:06 1/4, and a hand of brood mares. They all eat "International Stock Food" every day. **BEWARE OF IMITATIONS and SUBSTITUTES.** There are many worthless imitations on the market, put out by people who seem to think that the way to start a business is to steal as much as they can from some prominent firm. No chemist can separate and name all of the ingredients used in "International Stock Food," etc., and any chemist or manufacturer claiming to do so must be an Ignoramus or a Falsifier.

A BEAUTIFUL DAN PATCH PICTURE FREE

We have a very fine, large lithograph of Dan Patch with the great driver, M. E. McHenry, in sulky. This Lithograph, Printed in Six Brilliant Colors, is one of the finest and most attractive horse pictures ever published. It is 21x28 and printed on heavy paper suitable for framing. **We Will Mail You One Copy Free, postage prepaid, if You will Answer Two Questions.**

Dictatus Medium 32499

Will make the coming season at

Race Track, Hollister, Cal.

Joe Sanchez in charge

\$40 FOR THE SEASON.

Payable at time of service, with usual return privilege. Every care taken to prevent accidents, but no responsibility should any occur. Prompt and careful attention in all cases. Pasturage furnished to mares sent from a distance at \$2.50 a month.

A DICTATUS MEDIUM PURSE OF \$100.

I will give a purse of \$100, with entrance money added for a race, best two in three, open to any and all colts from the breeding season of 1904, either pacers or trotters. Must be three to start and race to come off on Hollister track, Fair week, 1907 (Exact date to be hereafter announced.) \$5 entrance money, payable June 1, 1905. \$5 thirty days before the race. Three moneys: 60 per cent to first horse; 30 per cent to second and 10 per cent to third. For further particulars, address

R. P. LATHROP, Hollister.

DESCRIPTION.

DICTATUS MEDIUM is 6 years old, weighs 1220 pounds. A beautiful turned bay horse with heavy mane and tail, kind and gentle, with a perfect disposition. Good flat heavy bone. He has great power and speed. Has a record of 2:24, but has worked out in 2:12. He is a horse that will go out any day and do his best. His colts are models of grace and beauty. Only one so far has been worked. This one, Al Willson's yearling LITTLE MEDIUM, paced an exhibition 1/4 mile on the Hollister Race Track in 38 1/4 seconds, a 2:33 gait. This colt has great promise.

DICTATUS MEDIUM is by Dictatus 2:17, one of the best bred and fastest horses ever brought to California. The dam of Dictatus Medium is Belle Medium (dam of Stam B. 2:11 1/4), by Happy Medium, grandsire of the dam of Lou Dillon 1:58 1/4. His second dam is Argenta by Almont Lightning, sire of the dam of Zombro 2:11. There is no doubt but Dictatus Medium will prove to be a sire of speed as well as good size, style and disposition.

STATE AGRICULTURAL SOCIETY

OCCIDENT STAKE OF 1906

TROTTING STAKE FOR FOALS OF 1903

To be Trotted at the California State Fair of 1906. Entries to Close January 1, 1904. with L. R. MILLER, Acting Secretary, at the office in Sacramento.

ONE HUNDRED DOLLARS ENTRANCE, of which \$10 must accompany nomination; \$15 to be paid January 1, 1905, \$25 to be paid January 1, 1906, and \$50 thirty days before the race. The Occident Cup, of the value of \$400, to be added by the Society. Mile heats, three in five, to harness. First colt to receive cup and six-tenths; second colt, three-tenths; and third colt one-tenth of the stakes. Five to enter, three to start, otherwise N. T. A. Rules govern. Nominators are not held for full amount of entrance in case colt goes wrong; only forfeit payments made, which relieves you from further responsibility, and declares entry out.

NOTE—This stake is growing in value each year. In 1900 it was worth \$2330; in 1901, \$2595; in 1902, \$3295; in 1903, \$3820.

The stake for 1906 should receive a larger entry, and be very valuable. Every breeder should enter in it.

A Special Stake will be opened for foals entered originally in this stake, and the Stanford Stake of 1906, that develop a pacing gait to be contested for in 1906.

Remember the date of closing is January 1, 1904.

L. R. MILLER, Acting Sec'y.

B. F. RUSH, President.

SAVE THE HORSE'S SPAVIN CURE
REG. TRADE MARK
\$5.00 WITH WRITTEN GUARANTEE.

On Broken Down, Weak, Sprained and Ruptured Ligaments and Tendons Its Power is Unfailing.

No Man need see his Horse sniffer and become incapacitated.

"SAVE-THE-HORSE" POSITIVELY AND PERMANENTLY CURES BONE AND BOG SPAVIN, THOROUGHPIN, RINGBONE (except low ringbone), CURB, SPLINT, CAPPED HOCK, WINDPUFF, SHOE BOIL, WEAR AND SPRAINED TENDONS, AND ALL LAMENESS.

"SAVE-THE-HORSE" cures without scar, blemish or loss of hair; can be applied anywhere and in all conditions and extremes of weather. Horses may be worked as usual with shin or ankle boots, as no harm can result from destruction of hair or scalding of limb.

Cured horses are absolute certainties as to the possibility of the remedy for your own case. Such results, as shown in our booklet, by business men whose reliability can be readily ascertained, have carried "SAVE-THE-HORSE" over skepticism, prejudice and uncertainty. Send for the booklet and copy of written guarantee, which is as binding to protect you as the best legal talent could make it.

\$5.00 PER BOTTLE.

Written guarantee with every bottle. Need of second bottle improbable, except in rarest cases. If your case is different we advise frankly as to possibility of the remedy effecting a cure. Give veterinarian's diagnosis, if he is competent. Describe age, development, location of swellings, lameness, and way horse carries and holds leg.

\$5.00 a bottle at all druggists and dealers, or sent express prepaid.

CAMPBELL'S EMOLLIO IODOFORM GALL CURE

For GALL BACKS and SHOULDERS, CRUPPER SORES and SADDLE GALLS there is none superior.
The horse CAN BE WORKED AS USUAL.
For BARBED WIRE CUTS, CALKS, SCRATCHES, BLOOD POISONED SORES and ABRASIONS OF THE SKIN it has no equal.
It is very adhesive and easily applied to a watery as well as a dry sore.
Its use will absolutely prevent BLOOD POISONING. In this respect there is no Gall Cure offered which can justly even claim to be a competitor. We placed it on the market relying wholly on its merit for success, and notwithstanding the fact that comparatively little has been done in the way of advertising the sales of 1903 were 100 per cent greater than the aggregate sales of Gall Cures preceding that year. This increase was entirely due to its MERITS, and from it we feel justified in saying that it is THE GALL CURE OF THE 20TH CENTURY.
It is a quick and sure cure for those troublesome skin cracks under the fetlock which injure and often lay up race horses.

All Trainers Should Have It in Their Stables

WINCHESTER

REPEATING SHOT GUNS

A CHANCE FOR A DOUBLE

A QUESTION often asked about Repeating Shotguns is, "How quick can a second shot be fired with them?" Shooters that have used Repeaters answer with one accord: "Doubles" are just as easy to make with a WINCHESTER REPEATING SHOTGUN as they are with a double-barreled gun. The third shot that a Winchester Repeater gives often bags a badly crippled bird which otherwise would get away. Winchester Repeating Shotguns are made in "Take Down" styles in 12 and 16 gauge.

Speed, Breeding and Individuality FOR SALE.

RITA H. 2:11 1-4
Pacing Mare by McKinney 2:11 1-4

ELECTRO MCKINNEY

Brown Colt, Three-Year-Old Trotter by McKinney 2:11 1-4

RITA H. is a dark brown mare who stands nearly 16 hands high, and will weigh in racing trim about 1050 lbs. This mare has had this year a very remarkable record. She started in the North-western Circuit in the States of Oregon and Washington, and out of eight starts won her first seven races and only lost four heats during the entire circuit, and has a pacing record of 2:11 1/4. The mare is five years old and is excellent on the road. She does not pull or lug, and a lady can drive her anywhere. Last spring she trotted a workout mile in 2:18 1/4 and repeated in 2:16 1/4, after only seven weeks' work. Her owner has driven her in 2:12 1/4 in the Los Angeles Driving Club races, she having won all of them in which she started. This mare can step two heats below 2:10

ELECTRO MCKINNEY is a brown stallion foaled in 1900, and stands 15 hands 1 inch in height. He trotted a full mile as a two-year-old in 2:31 1/4, last quarter in 33 seconds, and when a three-year-old a full mile in 2:21 1/4, last quarter in 32 seconds. He is perfectly gaited and a grand individual in every respect. Weighs about 950 lbs. ELECTRO MCKINNEY is bred in the purple, and is one of the best sons of McKinney alive to day. McKinney is undoubtedly the greatest sire for his age living or dead. ELECTRO MCKINNEY was not raced this year, being only a three-year-old and not entered in any stakes it was decided to hold him over.

These horses are all right and there is not a thing the matter with them, but my business demands are such that I cannot afford to devote any time to racing them. For prices and further particulars address

BYRON ERKENBRECHER,

301 CURRIER BUILDING, LOS ANGELES, CAL.

Or inquire at Office of BREEDER AND SPORTSMAN.

TOURISTS and TRAVELERS will, now, with difficulty recognize the famous COURT into which for twenty-five years carriages have driven. This space of over a quarter of an acre has recently, by the addition of very handsome furniture, rugs, chandeliers and tropical plants, been converted into a lounging room—the FINEST IN THE WORLD.

The EMPIRE PARLOR—the PALM ROOM, furnished in Carise, with Billiard and Pool tables for the ladies—the LOUIS XV PARLOR the LADIES WRITING ROOM and numerous other modern improvements, together with the unexcelled Cuisine and the Most Convenient Location in the City—all add much to the ever increasing popularity of this most famous HOTEL.

San Francisco, Saturday, December 19, 1903.

THERE IS GREAT ACTIVITY throughout the State of California in training trotters and pacers. Pleasanton track has every stall full, and a dozen carpenters are at work putting up new ones, but they cannot keep ahead of the applications. Los Angeles is also a lively place and 175 horses are reported at work there. At Santa Rosa, Petaluma, Vallejo, Woodland, Sacramento, Alameda, San Jose, Salinas, Hollister, Santa Ana, San Bernardino, Ukiah, Red Bluff, Chico, Marysville, Willows, Eureka and several other points more horses are now stabled than there were last year at this time, and many applications for stalls are being made by owners and trainers who will not begin working their horses before February. It looks as if there will be just about double the number of horses trained in California during the spring of 1904 that were trained here this year. All that is needed is the announcement of a half dozen good meetings to put more life into harness racing than has been seen here for some time. We have every confidence that such announcements will be made next month. The officials of the Trotting Horse-Breeders Association say the Board of Directors will meet January 4th and announce an excellent program. If they do this there will be at least a half dozen associations that will follow suit. Harness racing for good purses will doubtless be held during 1904 at Petaluma, Santa Rosa, Napa, Vallejo, Woodland, Sacramento, Pleasanton, San Jose, Fresno, Salinas, Hollister, San Bernardino, Santa Ana and Los Angeles. This will make a big circuit, and the earning capacity of a good trotter or pacer will be considerable. The Oregon and Washington associations did so well this year that they are ready to give even better purses in 1904, and they have already called a convention for January to fix dates. Harness racing will be greatly revived on the Pacific Coast next year.

THE BIG STAKES of the Coney Island Jockey Club for the June and Autumn meetings of 1904, together with the great \$75,000 Futurity of 1906, are advertised to close Monday, January 4, 1904. The money which these stakes will distribute to the winners aggregate \$266,500, and is divided between 21 races. The stakes are for two-year-olds, three-year-olds and aged horses, and comprise all the big events of the year at the great course at Sheepshead Bay, such as the Suburban, the Commonwealth, the Advance, the Great Trial, the Double Event, the Flatbush, the Great Eastern and several others that have become classics of the running turf. Read the advertisement in this issue and send to this office for entry blanks.

EIGHTEEN YEARLINGS FROM PALO ALTO Stock Farm, and several other horses and mares from this celebrated farm are to be sold at auction by Fred H. Chase & Co. on Thursday, January 14th. This was the word received from Mr. Chase yesterday just before the forms of the BREEDER AND SPORTSMAN went to press. In our Christmas edition, out next week, will be full particulars of the sale and pedigree of the yearlings. They are a grandly bred lot and as good as ever raised on the great farm.

THE CHRISTMAS EDITION of the BREEDER AND SPORTSMAN will be issued next week. From cover to cover the forty pages will be filled with beautiful engravings and interesting articles of interest to horsemen and all interested in legitimate sports. The edition will be a large one, and the price will remain the same—10 cents per copy. Send in your orders early and have a few extra copies sent to your friends in the East.

There are 175 harness horses in training at the Los Angeles track. Quite a large proportion are matinee horses owned by members of the Los Angeles Driving Club.

THE GREATEST SALE of Australian broodmares ever held in California will take place Monday evening, December 21st at the Occidental Horse Exchange in this city. It is the closing out of all the horses imported by R. E. de B. Lopez of the Merriwa Farm, Pleasanton. Mr. Lopez has given up the place and intends to make his home in England.

New Park Speedway.

The Golden Gate Park Commissioners have had plans drawn up for a new speed track in the park which will be a three-quarter mile oval. In the infield will be a polo field, football gridiron and cinder path. The field will be in an amphitheater, around the sides of which there will be promenades and benches for spectators. It will be easily accessible by street cars, and is expected to prove a marked attraction when completed. It will start at the foot of Strawberry Hill and will include a part of the present speedway. The polo enthusiasts have volunteered to subscribe bandsomely, and it is expected the necessary funds will be readily forthcoming. The Commissioners do not expect the entire amount to be made up by subscription, but with a generous amount subscribed they would feel justified in going ahead with the much needed improvement.

Driving Club Races.

The Los Angeles Driving Club will give another matinee on Christmas Day and Mrs. Chandler, the assistant secretary, who is really the mainspring of the organization, promises that the coming holiday matinee will be about the best the club has given. She is authority for the statement that about twenty new members have recently joined the club and at least ten of these will enter horses. This number, in addition to the large list of regulars, will certainly provide enough nags to furnish all the racing the members and their friends could want.—*Los Angeles Sporting News.*

Barondale Weanling Sells for \$500.

SAN JOSE, Dec. 16, 1903.

ED. BREEDER AND SPORTSMAN, Dear Sir:—On Tuesday I sold the weanling colt Golden Baron by Barondale 2:11½, dam Mary B. by Wilkes Boy to Mr. Geo. C. Need of Galt, California, for \$500 cash. This colt is a natural horn trotter, and is one of the greatest bred ones in the land. He has eighteen great brood mares in his pedigree. The ad. in your good paper did the business. I have only two others bred just like him and I think they will soon be sold.
Yours very truly, TOM JAMES.

Answers to Correspondents.

J. G. L., Cosumnes, Cal.—Please give the pedigree of Patchen Girl, owned by J. W. Wilson of Sacramento, who raced her. She afterwards died on the Rancho del Paso. Also the pedigree of Alaska 14429.

Answer—We cannot find any record of Patchen Girl. Write to Mr. Wilson, Sacramento. Alaska 14429 is by Electioneer 125. Dam Lucy by Washington, son of Geo. M. Patchen 31, second dam Columbia Maid by Williamson's Belmont.

No stallion in California is siring handsomer foals than Bonnie Direct 2:05½. He puts a finish on all his get that gives them "class" in looks, and all seem to have speed. The brown filly by him that Jenny Mac 2:09, foaled last June at Pleasanton is now six months old, and this week Mr. C. L. Griffith, owner of Bonnie Direct became her owner. Mr. Griffith sent his check for \$300 to Dr. Book of Los Angeles and agreed to give the services of Bonnie Direct to Jenny Mac free in 1904, in payment for the filly. Jenny Mac is by McKinney 2:11½, and is the dam of Silver Coin 2:11½ and Cuate 2:18. Her dam is the famous broodmare Leonor 2:24 by Dashwood. Leonor is the dam of Doc Book 2:10, Jenny Mac 2:09, Miss Jessie 2:13½ and Judd 2:24.

The new mile trotting track in the vicinity of Chicago is not only an assured fact, but a trotting meeting will also be given. The track is located at Libertyville, twenty eight miles from the city. The association, which is composed of Chicago and Lake county horsemen and capitalists, has just absorbed the Lake County Fair association, and will sell its buildings and move the annual exhibition to their new grounds, on which new and better buildings will be erected during the coming year.

Eureka 2:15½, ch. g. by Ira, dam by Nutwood, sold for \$400 at the Old Glory Sale.

Strike!—if they don't give you Jackson's Napa Soda when you ask for it.

East View Farm Horses

Monroe Salisbury got in Tuesday, Dec. 15th, from the East with two carloads of horses, thirty in all. They were in charge of Charles De Ryder and George Edwards, assisted by a small army of grooms. Mr. Salisbury reported an uneventful trip and the horses looked to be in fine condition when unloaded. In the cars were Duke Direct, full brother of Directum Kelley; Diablito by Diablo; Fire Escape, a two year old filly by Directum Kelley; Alma Vesta, a four year old filly by Direct; an unnamed two year old filly by Direct; an unnamed three year old pacer by Directum Kelley; Consuela 2:12½, by Directum; Judge Green 2:10½, by Directum; Leonora 2:18, by Mendocino; Monroe 2:12½, by Seymour Wilkes; Fred Direct by Direct; California Cresceus, two year old by Mendocino; Direct Will, four year old, by Direct; Black Tborne, by Hawthorne; Venus, four year old, by Direct; a green mare by McKinney; a black two year old trotter by Directum Kelley; Phyllis Kelley, a full sister to Directum Kelley; a three year old pacer by Direct; a yearling filly by Direct; a three year old filly by Directum Kelley; a two year old filly by Directum Kelley; Direct View 2:14½, by Direct; Ophelia Princess, two year old, by Directum Kelley; Mush 2:08½, by Lottery Ticket; a black two year old pacer by Direct. Last but not least in the bunch is a beautiful stallion Baron Oaks by Oakland Baron, dam Alma Wilkes by Baron Wilkes, second dam Almata by Almont 33, third dam Alma Mater, one of the greatest brood mares in the world. This stallion will make the season at Pleasanton. With a couple of exceptions these horses are the property of Mr. Butler, the millionaire grocer of New York.—*Pleasanton Times.*

Cocained the Driver.

One of the funniest things that occurred during the season of harness racing just closed was during a pacing race in one of the last of the big meetings of the season. A horse in the race with speed enough to win was unsteady, owing to hitting one of his knees, and his owner who had backed him quite heavily had begun to look upon his money as lost. An observing horseman who saw the way things were going went to the owner and said, "Do you want to win this race?" "Do I?" said the owner, "do I look as though I had money to throw away?" "If you will tell your driver to take his directions from me I will see that your horse wins," went on the friend. The owner agreed and gave his driver instructions to that effect. The friend went and got a bottle filled with a mixture of cocaine and menthol and told the driver to moisten his fingers with the mixture and brush it lightly on the horse's sore knee just before starting out for the next heat of the race. The driver knew nothing about what the bottle contained, but concluded that if a little of it was good more would be better, and so when it came time to use it he poured out a quantity of it in his hand and proceeded to rub it on the horse's knee briskly with both hands. The stuff worked all right on the horse and he went on and won the deciding heat of the race, oblivious to the rapping his sore knee got, but it also worked on the driver's hands. They were, to all practical purposes, paralyzed when the heat was finished, and he was obliged to call for assistance to get him out of his sulky. To the few who knew about the affair, it was a decidedly humorous happening, and when the owner, who is one of the best known among the owners of the Grand Circuit campaigners, learned about it, he remarked that he had been racing horses for a great many years, but that this was the first time he had seen a driver cocained in order to enable his horse to win a race.—*Chicago Horseman.*

Polo Events at Burlingame.

The Burlingame Club is arranging for a series of important polo events. The first of these will be a polo carnival during Christmas week, with games almost daily during the holidays, the most important of which will be on New Year's Day, the series to culminate with a grand ball at the club house.

The carnival will be attended by all the polo players within reach, and some exciting contests are in prospect. The present plans of the country club contemplate a regular polo association to be organized early in the coming year, and another tournament is to be held in March in which no less than six teams will participate. Two of these will be from England, two from the South and two from this section and possibly Honolulu with one or two. The object of the association will be to promote liberal sports of all kinds, especially polo.

The bay gelding Dexter B. foaled 1895 by Dexter Prince out of Bell Bird, daughter of Electioneer and Beautiful Bells, was sold at the Fasig-Tipton auction in New York this month for \$460.

Death of Hon. Jesse D. Carr.

[Salinas Journal, Dec. 12.]

Friday morning at 3:25 o'clock Hon. Jesse D. Carr, the well known citizen and highly respected pioneer, passed into rest after less than a week's illness. For several days his death was expected, tired nature holding out stubbornly in the unequal contest. At the end he passed away peacefully, surrounded by his sons, John S. and Larkin W., and his daughter, Mrs. Jessie D. Seale, and his grandchildren, Louise D., Jesse and Stirling Carr.

The deceased was a native of Tennessee, where he was raised on a farm and attended school until he was 16 years of age, when he went to Cairo, Illinois, and worked in a store, returning at the age of 18 to Nashville, in his native state, where he clerked in a store for six years. He then went into business in Memphis, but through his partner's loss of mind met financial embarrassment, which he paid off in a short time, dollar for dollar. It is a matter of interest that the first brick house ever built in Memphis was constructed by Mr. Carr in 1840.

When the Mexican war broke out Mr. Carr was in business in New Orleans, when he accepted an appointment as sutler in the United States army. While in Mexico, just before the battle of Buena Vista, the commissary train bearing \$40,000 worth of Mr. Carr's goods was attacked by the Mexican General Urea. About half of the 180 persons accompanying the train were killed and all of Mr. Carr's goods captured. General Taylor is credited with saying that the capture of the train prevented his defeat at Buena Vista, as General Urea had disobeyed orders in order to capture this train, which he believed carried \$500,000 of government money to pay off the soldiers. His acquaintance with General Taylor ripened into friendship during the Mexican war, and when after its close General Taylor became president he appointed Mr. Carr deputy collector of the port in San Francisco, where he arrived August 18, 1849. The next year Mr. Carr was elected a member of the assembly of the first legislature of California, in which he took an active and prominent part, serving as chairman of the committee on commerce.

In 1853 he came to the Pajaro Valley and while living there was elected a member of the Santa Cruz county board of supervisors. He set out the first apple orchard in the Pajaro Valley, now the best known apple growing region in the State. In 1859 he came to the Salinas valley where he acquired large landed possessions and continued to live here until his death. From 1866 to 1876, he was one of the largest star-route mail contractors in the West, and was for many years engaged with the late Major Buckley in running the Coast Line Stage Co.'s stages between San Jose and Los Angeles. His star-route and mail contract business caused him to make yearly trips across the continent for a number of years, and his striking personality made him as familiar a figure in Washington as in San Francisco, and for many years no one on the Pacific Coast had more influence with his party at the national capital than had Mr. Carr. He was an uncompromising democrat and was frequently a delegate to the national conventions, and was several times a presidential elector.

Up to the hour of his death he took a great interest in fine horses and cattle, and for many years was a prize winner at the state and district fairs. He shipped from Kentucky to this State in the early '70s the standard bred trotting stallion Mambrino 1789, known as Carr's Mambrino. The stock interest of this valley and State owe much to Mr. Carr's intelligent and active interest in developing the horses and cattle industry.

From the date of the organization of the Monterey Agricultural Association, District No. 7, Mr. Carr was its president. He also served a few years ago as president of the State Agricultural Society, for several years.

In local business affairs the deceased always had a leading part. A man of strong purpose and indomitable energy, he was naturally foremost in all enterprises affecting the material interests of Salinas and of Monterey county. He helped to establish and was the first president of the Salinas Bank, one of the solid financial institutions of the State.

At the time of his death he was president of the Bank of Monterey, at Monterey, this county. He established the I. O. O. F. library in this city, contributing \$5000 therefor, and in honor of his memory the local lodge will turn out in a body to-morrow and accompany the remains to Cypress Lawn cemetery, near San Francisco, where they will be deposited in the costly family vault.

The subject of this sketch was twice married. His first wife by whom he had two sons, Larkin W. and John S., died in Tennessee, in 1840, and the death of his second wife occurred in California in 1864. By the second marriage there were two daughters, Mrs.

Jessie D. Seale, now of San Francisco, and Louise A., who died in infancy.

It may be truly said of the deceased that his life task was a huge one, but he performed it to the letter, working it out with an unswerving zeal and rare intelligence up to the very last. He was in the world's estimation a thorough going, public-spirited citizen; in his friendships he was open-hearted, plain spoken and loyal in all situations. His hand was ever open when sickness or want made its claim upon his generosity. A useful life has closed and a good man has gone to his reward.

The funeral services were held Sunday morning at the Lincoln-avenue M. E. Church South. His old pastor and friend, Rev. Dr. J. C. Simmons, preached the funeral sermon. At its close the I. O. O. F. lodge accompanied the remains to the 11:25 A. M. train. The remains were taken to Cypress Lawn Cemetery, San Francisco, for interment.

Board of Review, N. T. A.

Much business of interest to the Pacific Coast associations affiliating with the National Trotting Association, as well as the trotting horsemen of this section was transacted at the meeting of the Board of Review held at New York, December 1st to 4th.

The question of the Classification of time performances was discussed and the Board declined to pass such performances up to the American Trotting Register Association, but recommended that the question be taken up by a conference Board representing both associations and disposed of.

As the joint committee of the National and American Associations will meet February 10, 1904 to discuss necessary changes in the rules and to keep the rules uniform, the secretary was instructed to ask members and the trotting horsemen of the country to send to him such suggestions as may occur to them for the betterment of their interests. Such suggestions will be laid before the Joint Committee for consideration.

A resolution was passed that the National Trotting Association enter into the same reciprocal relations with the affiliated trotting clubs of New Zealand that now exist between it and the trotting associations of Europe.

It was ordered that all the unremoved suspensions imposed by associations whose membership has expired and not been renewed for three continuous years be cancelled in accordance with the by-laws.

The following cases of interest to our Pacific Coast readers were disposed of as stated:

4282—A. C. Froom, Portland, Oregon, Fred Brooker, 41 Morrison St., No. Yakima, Wash., C. P. Webb, Portland, Oregon, H. B. Rutherford, Walla Walla, Wash., S. S. Bailey, per I. C. Mosher, Los Angeles, Cal., Lars Peterson, Seattle, Wash., vs. W. G. Durfee, University P. O., Los Angeles, Cal., and b. m. Sweet Marie. Application for an order under Rule 15, Section 2. Case dismissed.

4290—Conway Brothers, Seattle, Washington, vs. Snohomish County Agricultural Association, Everett, Washington. Application for an order. Case dismissed.

4291—Fred Brooker, North Yakima, Washington, Lars Peterson, Seattle, Washington, S. S. Bailey, Los Angeles, Cal., A. M. Carr, Butte, Montana, A. C. Froom, 41 Morrison St., Portland, Ore., H. B. Rutherford, Walla Walla, Washington, C. P. Webb, Portland, Ore., vs. H. N. Berry, Los Angeles, Cal., W. G. Durfee, University P. O., Los Angeles, Cal., Wm. Garland, Los Angeles, Cal., and b. g. Briney K., and b. m. Sweet Marie. Application for an order under Rule 9, Section 1. Protest not sustained.

4296—Joseph Long, Eureka, Cal., ex parte. Application for an order as to the record made by the b. m. Nellie R., at Eureka, Cal., September 19, 1903.

Ordered, That the time of the b. m. Nellie R., in the third heat of free for all at Eureka, Cal., September 19, 1903, was 2:19½ instead of 2:18 as erroneously reported.

4355—Boyd Brothers, Anaconda, Montana, ex parte. Application for release of the b. m. Julia Shake from suspensions imposed by order of the Agricultural Association, District No. 40, Woodland, Cal., September 23, 1901, and the District Agricultural Association No. 6, Los Angeles, Cal., November 1, 1901. Application denied.

4361—Moody G. Liggett, Hanford, Cal., vs. Kings County Agricultural Association, Hanford, Cal. Application for removal of fine imposed. Application denied.

4379—Byron Erkenrecher, 507 Bradbury Bldg., Los Angeles, Cal., Willard H. Stimson, 507 Bradbury Bldg., Los Angeles, Cal., ex parte. Application for removal of expulsion of b. m. Sweet Marie imposed September 17, 1903, by order of Oregon State Board of Agriculture. Application denied.

Wilkes Stallions for Sale.

Mr. P. H. McEvoy of Menlo Park is offering several desirable young Wilkes stallions for sale as will be seen by an advertisement in another part of this issue.

Jake Broliar Will Have a String.

VISALIA, Dec. 14, 1903.

BREEDER AND SPORTSMAN—Mr. Geo. W. Kirkham has recently bought of Mr. R. O. Newman for a low price one of the greatest green trotting mares I ever saw. She is by Robert Basler 2:20 (sire of Jones Basler 2:11½) out of Peerless Maid (dam of De Bernardi Basler 2:16½) by Strathway, second dam Sus K., grandam of Homeward 2:13½, the sire of Georg G. 2:12½. This mare is coming five years old this spring and is just now being broken to work. She is one of the most blood-like individuals and a pug gaited trotter. Hitched to a heavy long shaft breaking cart, with two men seated in it, she can head an automobile down the road any time she is sent after it, without any seeming knowledge of any ability to run as fast or faster than she can trot.

I have arranged my affairs to work a string of trace horses, and Mr. Kirkham's new purchase will be under my charge together with three or four young Stone ways that are destined to put this stallion where he belongs on the map as an extreme speed producing sire. My two year old filly My Way 2:30 is writing nicely and if she goes to the races at all next year she will be fit, and I'll give you a quiet tip that if she meets up again with Seymour he will see more of her than he did in the stake this year.

Several trainers here have made a bid for the training of the great young stallion Robert Direct, knowing that he can't well fall short of being a star, but without solicitation on my part Mr. Newman informs me that Robert Direct will be sent to my school where he shall have finished his spring stud duties.

Quite a number of good horses will leave their parts to race on the Central California Circuit in 1904 if it is organized as intimated by the BREEDER AND SPORTSMAN, which I hope will be the case.

JAKE BROLIAR.

Under One Jurisdiction.

There will be no war between the New California Jockey Club and the Ascot track at Los Angeles, an agreement having been reached between the two organizations. President Williams and Vice-President Adam Andrew of the first named organization returned this week from a visit to Los Angeles and Mr. Williams gave out the following for publication:

"Last May the Pacific Jockey Club was formed to have jurisdiction over racing this side of the Rocky mountains. President Epes Randolph of the Los Angeles racing association has been ill and for that reason went to Arizona some time ago. Joby A. Muir, Vice-President, intended some two weeks ago to come to San Francisco to confer with members of the Pacific Jockey Club, but was suddenly also taken ill. W. E. Dunne, a director of the Los Angeles Jockey Club, telegraphed me and an appointment was made. He came up here and consulted with Mr. Andrew and myself and then, upon his invitation we visited Los Angeles. The result of our visit was the election of John A. Muir and W. E. Dunne as members of the Pacific Jockey Club. The Ascot Park, the Seattle Racing Association and the New California Jockey Club are now under the jurisdiction and racing under the rules of the Pacific Jockey Club."

Mr. Devereux is strongly of the opinion that his great stallion John A. McKerron, will do much better next year as he was both tired and lame when he trotted in 2:04½. Here is what he says: "McKerron should have been given a rest long before he was retired. At the time of the Grand Circuit meeting here in July he showed some signs of lameness, but in consequence of his engagements and the hopes that we had of reducing the splint, we kept on training him for speed. Finally when I sent him at Syracuse he was very bad off and it was simply cruelty to drive him. But President Roosevelt was there and I hated to break my promise to Senator Horace White. Consequently I drove him a mile which was nothing short of remarkable under the circumstances, as there was not a step of the way in which he was not in distress. Yet, he finished in 2:04½."

The gelding Stanley Dillon that is in Ed Geers' string and which is being talked about so much as coming 2:05 trotter is by Sidney Dillon out of Athenian by Stelnway, second dam Ida Wood, dam of Owyhee 2:11 and Babe Marion 2:17½ by Simmons, and third dam by Mambrino Patchen. Stanley Dillon has had his present name conferred on him by his present owner. He was sold at the Blue Ribbon sale last May under the name of Andre. He trotted a trial mile in 2:21 with the last quarter in 32½ seconds before leaving Pleasanton last spring.

If the difference between a mile on the straightaway and that of a circular course is but that of the running records over the two ways of going then Lou Dillon's quarters in 25½ seconds over the New York Speedway would mean a quarter in the neighborhood of 27½ seconds over a regulation course. Lou could probably trot a quarter on an oval course pretty close to that of her Speedway performance.

Notes and News.

A competent trainer and race driver desires a situation. See advertisement.

Andy McDowell returned to Austria last week with about fifty head of horses in his charge.

The best picture of Sidney ever printed will appear in the Christmas number of the BREEDER AND SPORTSMAN.

J. B. Stetson is wintering sixteen head of horses at Boise, Idaho, and will have a good string of horses next year.

W. O. Trine, of Corvallis, has purchased the Guy Wilkes stallion Guycesca, and will place him in the stud next season.

Anzella 2:06½, that won over twenty-one thousand dollars in Millard Sanders' hands in 1902, is back in his string at Memphis.

Rose Dale Stock Farm, Santa Rosa, has sold to Australian parties for \$1000 a fine large mare by Daly 15, dam by Dexter Prince.

Only four trotting stallions have earned race records either than 2:07—Cresceus 2:03½, Directum 2:05½, Ingen 2:06½ and Rhythmic 2:06½.

A thoroughly competent young man that has had much experience desires a position as manager of a small stock farm. See advertisement.

Among the horses that are in Millard Sanders' string at Memphis is the mare Anzella 2:06½ with which he won so many good purses in 1902.

It looks now as if Country Jay (2:10½) would never get to the races again, as his lameness has not been cured, and doesn't look as if it ever would be.

After a long illness, extending over a period of three years, Mr. F. M. Mosier, a well known trainer and driver, died at his home in Los Angeles last week.

It is announced that Senator J. H. Bailey has engaged the veteran trainer and race driver, Charles Farvin, to train his horses again the coming year.

McKinney is said to be in finer shape than ever this winter, and his hook for 1904 is nearly full already, as Mr. Gentry will limit him to thirty-five mares outside his own.

The trotting mare Dolly Dillon 2:06½ is located for the winter at Locust Grove Farm, near Castle Penn. One of her farm companions is Mendol, a full brother of Idolita 2:09½.

Bert Logan will be one of the horses they will all be talking about at Pleasanton next spring. He is just about the sweetest gaited youngster that paces, and quarter in 31 seconds seems like play for him now.

Geers visited Village Farm the other day and drove Belle Hamlin, 2:12½, the first 2:30 trotter the Hamlin's ever bred. The famous old mare was foaled more than a quarter of a century ago, but still has quite a run of speed.

It seems that E. E. Smathers did not purchase money 2:02, as reported, but that the party who owns her is son of McKinney 2:11½ purchased of Mr. Smathers as gelding Shadow Chimes 2:05, and will drive the two pacers double.

According to the 2:30 list published by *The American Horse Breeder*, Onward is now the sire of 182 trotters and pacers with records of 2:30 or better, while Red Wilkes has 177 in the same list. Nutwood is credited with 179.

Kentucky Union 2:07½ is now owned by Senator J. V. Bailey of Texas, and will be bred to Prodigal 16. She has produced two foals by the noted Village Farm stallion, Chimes 2:30½. A full sister of Kentucky Union produced the stallion Onward Silver 2:05½.

A postal has been received at this office from Turck, Cal., addressed to "Owner" who advertised a racing gelding for sale. The writer of the postal neglected to affix his signature to the inquiry consequently the information he desires cannot be sent to him.

If you want to preserve beautiful pictures of Sidney Dillon and Lou Milton, get the Christmas number of the BREEDER AND SPORTSMAN. Both are beautiful half tone etchings made from photographs taken especially for this journal by Chas. Weidner. They are worth framing as they are works of art.

Palmer & Harlan, of Walnut Creek, has sold the dark chestnut colt Diogenes to Homer Saxe and Budd Dohle. Diogenes is a trotter and will be three years old in the spring. He is by Diablo 2:09½ and his dam, Alice G. 2:36 by Brigadier, second dam the thoroughbred mare Hatchet by Norfolk. Hatchet carried lots of the thoroughbred blood that has helped to produce fast trotters as her dam was by Owen Dale, son of Williamson's Belmont, and her second dam, Jeanor Margrave by Margrave. There are no better red ones than Diogenes, and Mr. Dohle will work him some at the Alameda track.

Don't forget that the Occident Stake for 1906 closes January 1st. It will be a big stake and worth winning as the chances are it will exceed this year's stake in value and that was worth over \$2500 to the winner. Some men go clear through the Grand Circuit with a whole string of horses and don't win that much money.

Sadie Mac's winnings the past year amount to \$18,800. Her winnings, together with amount of money won by the Sherman stable on half-mile tracks, and which is between \$3000 and \$9000, places Lon McDonald, driver of Sadie Mac and the Sherman stable, pretty close to the top of the list of winning drivers of the season.

James Thompson, the well known trainer, wants two good green horses. He desires a trotter that can step around 2:15 and a pacer that can show 2:10. Now James didn't come from Missouri, but he is buying on that plan and would rather have the horses show the speed than to hear tell about it. But he is ready to pay the good hard cash for what he wants.

There are 160 horses now in the stalls at Pleasanton track—more than were ever quartered there before. Thos. Ronan, the proprietor of the track, says he will try to accommodate all who come there and when the 42 new stalls are completed, which will be within the next two or three weeks, they will be filled up by trainers who have already applied for them. There will be 200 horses working at Pleasanton by January 1st.

Pleasanton track is to be widened from the three-quarter pole the whole length of the stretch to the first turn. The widening will be done on the outside of the track leaving the inside measurement the same as at present which is a regulation mile. When the work is complete the width of the stretch will be 75 feet. The work will be commenced as soon as the 42 new stalls now in course of construction are completed.

Mr. A. G. F. Stice, formerly of Los Angeles, who for the past year or so has been conducting the Roee Hill Stock Farm, Brookfield, Mo., with the great Nutwood stallion, Manager 2:07½, at the head of the stud, has purchased a farm at Monmouth, Ill., and will have Manager in the stud there the coming season. This establishment will be known as the Stice Stock Farm.

Ten mares are distinguished by having produced three trotters with records in 2:15 and better. They are Lemonade 2:27½ by Kentucky Prince Jr., Chestnut Belle by Red Wilkes, Alaska 2:27½ by Alcyone 2:27, Montrose by Sultan 2:24, Medio by Cooper Medium, Nemesie 2:23 by Nutwood 2:18½, Puella 2:29 by Post Boy 2:23, Rena B. by Cyclone 2:23½, Jeanne by Kentucky Prince and Ethelwyn by Harold.

Mr. C. A. Harrison, of Los Angeles, was in this city this week on his way to Seattle. Mr. Harrison saw the advertisement of Mr. Byron Erkenbrecher's colt in the BREEDER AND SPORTSMAN and says that the person who buys Electro McKinney will have a high-class horse. Mr. Harrison timed this colt as a yearling a quarter in 35 seconds at the Los Angeles track, and says there never was a nicer gaited trotter.

Racing will begin at the new track, Ascot Park, Los Angeles, December 24th. Manager J. W. Brooke announces the following officials for the meeting: Col. A. W. Hamilton, presiding judge; Edward Cole and Ralph E. Tozer, associate judges; Dick Dwyer and Jake Holtman, starters; Ralph H. Tozer, clerk of the scales; Edward Jasper, racing secretary and handicapper; Capt. T. B. Merry and Charles F. Sanders, official timers.

G. E. Smith, of Petaluma, is working several horses at that track, but will not try to make any speed with them until after the rainy season is over. He has a very promising yearling by Meriden 2:12½ out of the dam of Teddy the Roan 2:17½ that is a pure gaited trotter and a nice looker. He belongs to Dr. Proctor of Meridian. A four year old trotter by Briar Hill is also a good one, as is a weanling filly by Alex Button, Jr. that bears the euphonious and apt name of Pearl Button. Mr. Smith's two year old stallion Loma Wilkes by Lynwood Wilkes will be bred to a few mares next year and then trained for a record.

There was a touch of high life at the track at Pleasanton Wednesday of last week when Henry Sanders matched a Diablo three year-old mare he has been handling a short time against Al Macdonald's horse Forrest W. 2:14½ for \$50. The race was quarter mile heats and Forrest W. won both. The fastest quarter was 31½ seconds. Forrest W. is a very fast horse. In the fourth heat of the Potter Stakes at Los Angeles this year he had a walk over. He went the first three quarters in slow time and then without a horse to pace him he came the last quarter in 30 seconds flat. This is the fastest quarter ever trotted over the Los Angeles track.

This is the way John Trotwood Moore of Columbia, Tenn., announces the arrival of a baby at his house: "To a number of kind friends who have written to me and wondered, who have sent me word and wondered, who have come by to see me, and wondered, 'Why I wasn't at Memphis this Fall,' I beg to state that just before the Memphis meeting there was entered at my home track for the Race of Life a little pacer, who strikes a new and different gait every day and in the variety and originality of his stunts makes the solid wind shield of early Junelook like the perforated dust shield of the wind up. Maybe I'll get over it in time, but at the present, his side attractions in the morning alone, when the soap gets in his eyes, are more spellbinding than the antics of a hopped pacer."

Judge Green 2:10½, the fastest four year old of 1903, arrived in Pleasanton with the Salisbury string last week and is a much better looking horse than when he left California last spring. He is considered by Mr. Salisbury to be the best prospect in his class there is in the country and he should be a big winner next season harring accidents. The gelding is owned by Judge W. E. Greene of Oakland, but was not named by him. Mr. Salisbury gave him the name when entering him this year. It's a good name, too.

A well known New York trainer who is a believer in speedway work as the part of a young trotter's education, especially in teaching him to score, says: There are many horses racing down the drive all the while in bunches that if you have a horse that is not up to snuff in scoring and makes frequent mistakes in scoring, and makes frequent breaks, the driver can get him to going again and take up with another bunch of horses, until finally there is so much going on that the unwilling scorer gets onto the game with all four feet, and before he knows it has learned his lesson so well that he does not forget it. This sounds like common sense and it is borne out by the fact that during the past two or three seasons several of the horses most prominent on the speedways have gone out and raced on the tracks with the best horses of their class, Swift 2:07, Queen Wilkes 2:10½ and Tiverton 2:11½, being some of those out the past season.

Don't get prejudiced against color if you are breeding for speed. The *Horse World* says: "Reports from Kentucky say that L. V. Harkness, owner of the famous Walnut Hall Farm, is trying to buy as many of the well bred daughters of Jay Bird as he can possibly get hold of. When he established Walnut Hill Farm, Mr. Harkness is said to have had a prejudice against the daughters of Jay Bird on account of the roan color which follows the family so persistently, but like many others who were prejudiced against this branch of the Wilkes family for the same reason, he was forced to change his mind by the actual merit of Jay Bird's blood as a speed producer. It seems that Moko, the head of the Walnut Hall stud, was mated with two daughters of Jay Bird and each of the resulting foals trotted faster than 2:20 as two-year-olds. This was enough to satisfy Mr. Harkness that it was time to drop his prejudice against the Jay Bird color, and he is now ready to buy all the good daughters of that horse that he can get."

In Canada, where the trotter has always had to take second place to the runner, the harness horse is rapidly growing in favor and some of the best bred trotting and pacing stallions bred in the United States have found honors over there during the last few years. A year ago, when the annual sale of trotters and pacers occurred in New York, the fastest stallion sold went to a Canadian buyer, that one being the pacing stallion Hal B. 2:04½, by Hel Dillard. During this winter's sale another Canadian breeder bought the famous trotter and sire Oro Wilkes 2:11, by Sable Wilkes, dam by Director. This handsome black horse is probably the greatest sire ever taken to Canada, although several other meritorious sires were taken there before having made a reputation in the stud. Oro Wilkes has sired a lot of good racehorses, including the great three year old filly Mary Gage, that broke a record of 2:16½ this season, and Navidad 2:11½, another good winner out this year, and he will be a valuable addition to Canada's trotting-horse breeding interests.

Among the horses brought from the East by Monroe Salisbury was the hay mare Consuela S. 2:12½ by Directum. Ten years ago Mr. Salisbury was much taken with a mare by Nutwood, dam by Bell Alta, that was owned by the late Lot Slocum. Mr. Salisbury paid Mr. Slocum \$200 for the use of the mare one year and bred her to Directum 2:05½. The foal that resulted was a filly and was sold East and reced to a record of 2:12½ under the name of Consuela S. Mr. Scales of the Mariposa Stock Farm was her owner. Last year Consuela S. raised a colt and when the Mariposa Stock Farm's horses were sold at the recent Old Glory Sale in New York, Mr. Salisbury bought her, more, he says as a matter of sentiment than anything else. Since he has sat behind her a few times since reaching Pleasanton Mr. Salisbury is wondering if there is anything that can heat her trotting very much that has no faster record. He says he don't see why she should not get some of the money next year as she looks like one that will trot three heats in 2:10 or better, and that is money earning speed for a trotter.

Joe Cuicello will go to Pleasanton the first of the year with a string of ten or twelve horses. He will take with him Mr. James Coffin's young stallion Cessian by Mendocino 2:19½ out of Cressida 2:18½ by Palo Alto 2:08½. Cessian will be in the stud during the early spring at \$50 the season. He is a grand young horse and a coming trotter. Cuicello will also take with him to Pleasanton a black gelding, two years old, by Rey Direct 2:10 out of Babe Marion 2:17½ by Steinway, second dam Ida Wood (the dam of Owybre 2:11) by Simmons. This youngster is a great prospect. He belongs to Chas. Newman, proprietor of the Russ House in this city. Mr. Cuicello has recently added to his string a mare by Arthur Holt; she is a full sister to H. D. B. and is an excellent prospect. Another prospect in Joe's string is a sister to Klatawah 2:05½ that was bred at Oakwood Park Stock Farm. She wanted to trot, but did not seem to do well at the diagonal gait as when she got up speed she would mix badly. Joe concluded she was a pacer and changed her shoes. The first time he hooked her up after the change she reeled off a quarter in 40 seconds as slick as grease and she is improving all the time. A Seymour Wilkes pacing gelding is also showing speed of a high order and will be heard from. Cuicello will have one of the best strings at Pleasanton.

The Trotter as a Show Horse.

Not less remarkable for his versatility than for his speed, says the *American Horse Breeder*, the trotting bred horse of America is fast coming to be known as the most valuable type yet evolved in the history of horse breeding. It is a mistake to suppose that his only sphere of usefulness is on the race track or the speedway. He has demonstrated repeatedly that he is as apt as his Yaokee master at turning his talent to new occupations and adapting himself to changing conditions of American life. Within the breed are individuals that excel for nearly every purpose for which fine horses are used. Our horse shows have proved and reproved that he is at least the equal of any carriage horse in the world. As a saddle horse he is winning prizes every year at Madison Square Garden and at other exhibitions. Trotting bred horses are following the hounds all over the country, and many of our polo ponies show the racial characteristics of the trotter.

The fame of the trotting bred horse as a high stepper has been won in the last few years. When the National Horse Show was established, and for several years afterward, popular belief credited the English hackney with exclusive ability to fold his knees and flex his hocks in the extravagant style required to get the ribbons at the garden. Admirers of the trotting horse at this time ridiculed the imported high stepper in unmeasured terms, little dreaming that in less than ten years they would be cultivating just this type themselves and boasting that their native trotter could ape the fashionable English hackney to perfection.

Major John A. Logan and Charles F. Bates were among the first to discover that a little more weight in shoeing, a change of bits and slight restraint in driving would almost instantly convert many fast trotters into high stepping park horses of the most brilliant poise and action. At the National Horse Show of 1894 Major Logan, then a prominent breeder of hackneys and owner of the celebrated hackney sire Bonfire, exhibited in the open harness classes a high stepper called The Devil's Deputy, that defeated Joseph E. Widener's imported hackney mare Dorothea. The discovery that Major Logan's blue ribbon winner was a well bred trotter in disguise, caused quite a stir among horsemen, and when the fact came out soon afterward that all of the high steppers shown by Mr. Bates were trotting bred horses, it was published all over the country as a remarkable disclosure, and probably did more to bring the trotting bred carriage horse into prominence than any other occurrence that could be mentioned. Mr. Bates was just then beginning his successful career as an exhibitor at the horse shows, and in the next few years he brought out a long list of noted trotting bred high steppers, including Cadet, Contribute, Coitsville, Coxey, Brown Donna, Eghert, The Whirl of the Town, Sporting Life and other well known winners.

Since 1893 trotting bred carriage horses have dominated the show rings and the sale marts. Every champion high stepper of the National Horse Show has been the offspring of a trotting sire, except in two instances, where the blood of the winners was unknown, says the *New York Herald*. The list includes Joseph E. Widener's Dash, by Messenger Wilkes; Charles F. Bates' Coxey, by Fred Forrest; Harry Hamlin's Cogent, by Mambrino King; Joseph E. Widener's Von Harbinger, by Harbinger; Charles F. Bates' The Whirl of the Town, by Kilhuck Tom; Dr. John L. Wentz's Lord Brilliant, by Johnny Mack; Thomas W. Lawson's Red Cloud, by The King, and the same owner's Flying Cloud, by Guelph.

The Waldorf-Astoria cup, next to the championship the most important prize of the horse show in the heavy-harness division, has been won each year, until the present by a trotting bred gig horse. In the market the prices paid of late years for trotting bred carriage horses have fairly rivaled the values in vogue for winners on the track. At one public sale held in New York a year ago forty-four head realized \$65,750, an average of \$1,494. The first twenty of these horses brought more than \$50,000. One of them fetched \$1,500. Excepting The Turk, a trotting bred high stepper, sold for \$7,800 in 1899, this is the highest priced carriage horse ever sold at auction. At this sale a four-in-hand team realized \$10,750, and at another sale held here last year William L. Elkins received \$10,200 for a pair of trotting bred carriage horses that had won the blue ribbon at the National Horse Show.

At private sale some of these remarkable prices have been surpassed. After Red Cloud won the championship and the Waldorf-Astoria cup, in 1899, he was sold by Mr. Elkins to Thomas W. Lawson for \$10,000. James Hobart Moore is said to have paid a like sum for the trotting bred carriage horse Burlington, winner of the heavy weight championship last year. For Lord Brilliant and Lord Golden, both well

bred trotters, Dr. John L. Wentz paid \$12,000, an unprecedented price for a carriage pair. Thomas W. Lawson's winning four-in-hand Red Cloud, Thunder Cloud, Whirling Cloud and Flying Cloud, cost the Boston fancier \$29,000. All are trotting bred horses. It is generally acknowledged that for horse show purposes as a park team their equals have never been seen.

With the rise of the trotting bred carriage horse there has been a corresponding slump in all foreign breeds. Nothing illustrates this fact more forcibly than the records of the National Horse Show in the divisions for hackney and French coaches.

When John A. Logan and Charles F. Bates uncovered the first known winners of the trotting type the hackney was in the height of fashion. There were twenty-one classes exclusively for hackney stallions and mares and colts at the exhibition of 1894, and thirty breeders made 110 entries. Year by year since that time there has been a falling off, until at the exhibition of 1902 less than forty hackneys were shown by the nine breeders who made entries. For the first time, probably, the number of competitors fell below the number of prizes offered. French coaches, of which there were seven in one class in 1894, had dwindled down to a single entry at the last Horse Show.

The common failing of the native horse is the lack of substance. Bred for speed, the trotter is often too roagy, leggy, light boned and light bodied to fill the eye for work in heavy harness. His most ardent admirers concede ungrudgingly that the hackneys, as a class, excel in compact form, though lacking the quality or fineness of fibre, as well as speed and stamina, of the trotters. Each breed is capable of producing within itself splendid park horses for heavy harness. But may it not be that the acme of perfection in the American carriage horse will be reached through a combination of the two rival types, with perhaps an admixture of the blood of the French coacher?

New Memphis Jockey Club Stakes.

We wish to call attention to the ten stakes offered by the New Memphis Jockey Club that will close January 2, 1904. Eight of these stakes will be decided at the spring meeting of 1904, and two, the Tennessee Derby and Oaks, for the spring meeting of 1905. The Tennessee Derby has been increased in value from a \$3000 added stake to \$5000, and this should make the Derby for 1905 one of the richest stakes offered for three year olds in the West, and should be worth, with any kind of support from the horsemen, at least \$10,000. The Tennessee Oaks, with \$2000 added, is already one of the richest, if not the very richest stake, offered for three year old fillies in the West. This stake should be worth about \$5000. Both of these stakes are races without a penalty or an allowance. Every horse must carry its weight, a true Derby and Oaks—a true test, and the winner of either should be valuable for breeding purposes. No owner in the West, with a good-looking foal of 1902, can afford to overlook these events. It costs nothing to enter either, and horses can be taken out the 2d of May, or the 2d of January at a very small expense.

The next declaration is due January 2, 1904. It costs \$25 to get out of the Derby, and \$20 to declare out of the Oaks.

Of the eight stakes that will close January 2d, to be decided at the coming spring meeting, the Montgomery Handicap for three year olds and upwards, distance 1 1-16 miles, has been increased in value from a \$2500 added stake to \$3000, which will make the stake worth about \$5500, and in addition to this, the club also adds a silver cup or plate, to the value of about \$500. This race will be decided the opening day of the meeting.

The Peabody Hotel Handicap, for three year olds and upwards, distance 1 1/2 miles, has been increased from \$1000 added to \$1500, making the stake worth about \$3000, and in addition the winner will receive a \$500 silver cup or plate. This handicap will run the closing day of the meeting.

The Tennessee Brewing Co. stake, a selling stake for three year olds and upwards, distance 3/4 of a mile; with \$1000 added, was worth over \$2500 last season.

There is one stake for three year olds, the Hotel Gayoso stakes, with \$1000 added, distance one mile, which is in the nature of a consolation for beaten horses in the Tennessee Derby and Oaks, and also a preparation for the Kentucky Derby, as the race is decided the latter part of the meeting, and the value of the race is made with the idea not to penalize the winner in the Kentucky Derby, as the winner of a three year old race of the value of \$1500, must take up a five-pound penalty in the Kentucky Derby.

The club also offers three stakes for two year olds one for colts and geldings, the Gaston Hotel stakes, distance four furlongs, \$1000 added, estimated value \$2200; one for fillies, the Ardelle stakes, distance four furlongs, \$1000 added, estimated value \$2200; and the Memphis stakes for two year olds, five furlongs, with \$2000 added, estimated value \$4000. This stake has been increased from a \$1500 added stake last spring to \$2000 this year; and is a valuable stake for two year olds this early in the season.

At the spring meeting of this club no purse will be less than \$400 and no handicap less than \$600 added. If enough jumping horses are at the meeting, three jumping races a week will be offered. Address all communications to the secretary, M. N. Macfarlan.

Horse in Evolution and Entertainment.

The latest encyclopedia, now in press, is the only one, says the *American Sportsman*, to give the horse his true place in creation. This is the International Encyclopedia of 1903, edited by such eminent scholars and scientists as Daniel Coit Gilman, L. L. D.; Harry Thurston Peck, Ph. D., L. H. D., and Frank Moore Colby, M. A., late professor of economics in New York University.

In this valuable work the horse is given the following appreciative introduction: "Since the domestication of the horse he has become, next to man himself, the most important factor in the business and pleasures of the world, in fact, all the practical details of every day human life." And we are glad to notice also that the origin of the horse is not traced to Arabia, as in Prof. Wallace's history, and in most of the numerous other so-called horse histories. According to this new International Encyclopedia, the use of the horse is first traced to Ancient Egypt. This was before history was born, and the knowledge that he was there in existence as one of man's utilities is evidenced by inscriptions on Egyptian monuments that modern scientists and archeologists have unearthed. Again we quote from the new encyclopedia: "Domestic breeds of horses have existed in Europe from prehistoric times. They have been improved continually by blending with Oriental horses."

And we are glad to note that the contention so long maintained in the *American Sportsman* that the prehistoric man on the American continent had a prehistoric horse for a companion is fully maintained in this encyclopedia. The early races that inhabited this Western Continent are extinct. The only early races that history deals with are the Indians; but the works of the Mound Builders are convincing evidence that a race far superior to Indians once lived and planted and warred on this continent.

What caused the Mound Builders to become extinct is no greater mystery than what caused the prehistoric horse that was contemporaneous with the Cave Man of the Old World and the prehistoric man of the New World to become extinct. It is known that the early colonists of Virginia, as early as 1640, used horses as food. If the prehistoric horse perished with the Mound Builders, may not the wild Red Man, who was the probable successor of the Mound Builders, have consumed the horse of the Mound Builder as food?

On the island of Chintoteague off the coast of Virginia there are still bands of wild horses and only recently have attempts been made to domesticate any of them. They are said to be of all colors but uniform in size and not over thirteen hands high. Whether these wild horses are the descendants of the pre-historic horse or are the descendants of the Spanish horse imported early in the sixteenth century is the question. Those who claim that they have concocted a theory that the island of Chintoteague was formerly a peninsula, and that bands of Virginia horses that have been turned loose by the early colonists were cut off from the main land when the wash of the raging Atlantic seas converted the peninsula into an island. This may seem possible to those who believe that Ham, one of the sons of Noah, escaped to Africa, where he became sunburnt and established the African race.

The new encyclopedia does not attempt to give the origin of the horse, but enough is stated to prove that he did not originate in any known country. He was undoubtedly created as man's natural companion, and is in the universal nature class. Wherever the grass grows, or wild roses bloom, or the oak tree flourishes, everywhere around the world, in the temperate zone, the horse has been found.

As to the native country of the horse, we know now that all science will ever discern. We know that the American horse was the avant courier of all pioneer civilization. For two hundred years on this continent he was our sole means of travel, the most vital force in the intermingling of the early colonists with each other in the evolution of a culminating democracy.

To-day, as the season just closed amply demonstrates, the horse, the harness horse, the horse of sport and pleasure, is one of the most potent forces of enlightened society. None of the marvelous inventions of modern times, railroads, bicycles, automobiles or any man-made machines, are capable of supplanting him in the affections of his master, or weaning the popular heart from spontaneous admiration of his marvelous speed and enduring attractiveness in the domain of the most wholesome of all our national sports and pastimes.

New Surrey, first class, with pole and shafts, canopy top, 1 1/2 inch rubber tire, turn under, elegantly trimmed. Original price \$420, can be bought at Kenney Manufacturing Company, 531 Market street, San Francisco, for \$225. New lot of McMurray carts just arrived—1904 models.

The Good Horse and His Points.

[By Dr. I. P. Roberts of Cornell University.]

One must have studied many horses critically before the good and bad points are discovered quickly, and the relative importance of each determined at its true value. Observe the well-bred horse from the front as he is led out. One can tell on the instant if he has some of the true Oriental blood in his veins. Good breeding and careful education through the centuries are seen in the face and head of the horse as easily as clean living and intelligence are observed in the face of a man. Each head has an individuality.

We receive a good impression at first sight; we fall in love with the bright, hazel, convex, alert, expressive eye, set exactly on the corner of the moderately long, broadish, clean head. The nostrils are open, thin, and yet prominent.

Wide nostrils never stretched by pain.
Mouth bloodless to the bit or rein.

Pointed ears are set symmetrically on the sides of a rising, prominent brain and are flexible as the wings of the pigeon. If the head is set lightly on the neck and at the right angle the correct pose is secured, and flexibility, intelligence and courage stand out in such a taking way that some minor defects of body-form may be ignored. A beautiful, harmonious head often sells the horse and saves him from abuse, because the owner comes to love the spirited intelligence and responsive service of an animal that is correctly built ahead of the throat-latch.

If the end of the horse is good, the other end is likely to be good and able to keep up. We shall confidently expect the front legs to reach out true and strong and straight, not pigeon toed; the front feet will not be thrown out to the sides when the animal is speeded, like those of a paddling goose. The breast looks like the narrow, projecting prow of a caravel. The floor of the chest is concave like the gentle rise of a stone arch by reason of the strong muscles of the legs.

Now stoop and glance backward between all of the legs. If the inside lines are not symmetrical or the pairs are not alike, a malformation, a blemish or unsoundness is to be discovered. Back the horse and see whether he has lost flexibility and drags his toes instead of lifting his feet promptly and setting them down squarely in taking the backward step. Stand aside and let the horse pass quietly. Note as he passes and repasses whether the neck and body-lines are symmetrical, and the movement of the limbs harmonious.

Having studied the outlines generally, we are ready to note details. The neck may be rather slim, longish, with little or no "crest" or "arch," if the horse he desired for fast work; or long and flexible if for coach work; or shorter, with higher crest, if for pleasure driving; or heavy and rather short, but with high-crest, if for draft. But for all uses the neck should be set on the top "corner" of the horse, not square on the end of the body like the pig's or be will "hog" the bit and drive like a harnessed swine. In any case the neck should embrace the shoulders broadly, not as the handle embraces the mop head.

If the neck is set on the "corner," then the shoulders will have to be set on the body obliquely. This will give elasticity to the front limbs and they and the feet will last longer than if the shoulders were less oblique. The unsoundness of the feet is frequently the result of a too straight conformation.

The withers are important. The saddle horse should have high withers. Low withers are one indication of speed. Some saddle horses require a webbing around the breast with ends attached to the saddle to prevent it from working backward. The horse with trotting form may require a crupper strap attached to the saddle to keep it from working forward. The imperfectly bred horse may have trotting hindquarters and draft-shaped forequarters. If so, the front end is unable to keep out of the way of the rear end; the result is over-reaching.

Who has ever described a horse's back without wanting to revise the description? The Scotchman has the best brief description: "When one is in the saddle there is nae room for another behind." Note the body lines. A short top and a long lower line indicate strength and speed. If the hips be placed well forward as they should be in all four-footed, domestic animals, and the neck on the corner of the body, there is no room for a loag back. "Long hind-quarters," "coupled well ahead," "a strong loin," are, in effect, synonymouse expressions. Xenophon says, "If we have a double loin, it is the easier for the rider." Most of our trotters do not have prominent loins. But press the thumb and finger along the loin and you will find those steer-like muscles placed along the back, out of sight and danger. These muscles are evident in the good horse. Horses that are "ribbed up" closely and smoothly are easier keepers, and their stride is shorter

than are those which have a more open conformation. The rump should be broad, but not steep or "goose-rumped" nor "beef-rumped," like the shorthorn. Neither should the tail be set at right angles with the body, but be placed symmetrically to match the angles of the neck and head. A fine, lofty neck means a tail to match it, and vice versa. The twist should be well cut up, but the space made available by the high cut should be filled with muscle. Here they will be most efficient and least likely to become sore by concussion or severe use.

"No legs, no horse," is an old proverb. Whoever described one leg so perfectly that it could always be identified. Then how can one describe two legs, the front and hind, when they are radically different. The front leg is subjected to the greater concussion; the hind leg to the greater strain. The hind leg must be crooked at the hock, but if crooked too much the result is the weak "sickle" leg; if too little the result is a "pounder." Then, too, the foot is likely to partake of the character of the leg.

That portion of the legs, front and rear, below the hocks and knees should be naturally short and broad when viewed sideways, not roundish; and it should be thin when viewed from the rear, not much unlike a razor blade when a cross section of both are compared. A line drawn from hock to fetlock should be nearly straight, concave rather than convex. If convex it is a "curby" leg and may develop into a true curb.

The cords just below the hock should be turned in, and the leg should not have the appearance of being too narrow from front to rear, just below the hock; nor just below the knee on the back side of the front leg a common fault in many a well bred horse. If the line from hoof to pastern be rather long and moderately oblique, elasticity is secured. In the draft horse the line may be shorter and straighter. If the quarters are not placed symmetrically on the body the toes of the hind feet will point out and the hocks will come together, or be "cow hocked."

The skin should be moderately thick, firm, and fitted on to the bones below knee and hock as tightly as a kid glove on a lady's hand. The bone over which the skin is fitted should approximate ivory in texture and strength.

Dark-colored hoofs are likely to be of better texture than light-colored ones. The shape of the foot is variable. The "cold-blooded" draft horse has a broader, flatter foot than the light driver or speed horse. The foot is often the point most likely to be deficient in draft horses, the heel being too open and the foot too flat. Occasionally "the hollow" of the foot makes a hole in the ground."

On the other hand the driving horse sometimes has a foot too hollow and narrow at the heel, in which case the foot is likely to become contracted, since the frog does not come in contact with the moist soil, loses its elasticity, becomes hard, contracts, draws the quarters in until the hoof becomes too small for the internal structure. The shoe does not pinch, but the hoof does. There is a happy medium between these two extremes.

A horse's limbs should be placed well under the body, for the same reason that the wheels of a street car are placed well under its body, to secure a swaying, easy motion, instead of a pounding, jolistic one.

Horses are of many colors, but dark browns and bright bays with dark points are preferred, since dark colors indicate fine, close-grained texture.

But some one may have depreciated the value of the horse in "breaking" him, in doing which his mouth has become hard and unresponsive, courage turned into revenge and whip-obedience substituted for obedience to the driver's slightest wish, sent through the reins by the kind hand. So the horse should be driven before one can determine whether all of the points of a good horse are present.

Hackneys Won This Year.

[New York Rider and Driver.]

It was a great week for hackneys in harness at the Horse Show in Madison Square Garden. Opponents of the breed have been contending for years that whereas the horse was very showy on the lead line, he became anchored by a wagon or cart and invariably suffered defeat when pitted against the standard-bred trotter. There is no gainsaying the marvelous brilliancy and stamina of our beloved native horse, but the numbers from which he has been selected for show purposes indicate that if we intend to keep up the supply for the show ring and the park it will be necessary to begin breeding for the purpose. For confirmation of this hypothesis we need only turn to the limited source of hackneys at the comparatively few studs which are systematically breeding and developing in this country, as against the millions of standard-bred trotters from which the native type is selected. Our frontispiece shows some of the success-

ful hackneys at the Garden, and Mr. Jordan is importing and breeding others that will even eclipse them. Other hackneys to win laurels in harness were notably Mr. W. H. Moore's Forest King, winner of the Waldorf-Astoria Cup, and representatives from the Grand View Farm at Lancaster, Pa.

It was most significant that Mr. Moore, who has been one of the highest bidders in the market for the Tichenor type of standard-bred baroess horse, should have gone to England for a hackney to defeat the very class of horses with which his stable is filled and for which he has in a sense stood sponsor. From now on a most interesting battle for supremacy will probably be waged. Both sides should strive hard for the foundation of a purely American breed of carriage horse. The hackney is undoubtedly the right patero, and whether we can produce an improvement by pure-breeding him on this side of the water, the same as we have done with the English thoroughbred, or whether it would be better to cross with standard bred trotters is a matter of experiment which must, if tried, prove intensely valuable. On the other hand, it remains to be seen whether by selection of appropriate individuals among the standard breed similar results may be obtained. It may serve the breeders of both types to know that when the English hackney Forest King won the Waldorf-Astoria Cup one of the most prominent directors of the National Horse Show Association was said to have remarked that he regarded it as a calamity, the implication being added that the association wished to foster the native horse. It may be recalled, also, in this connection, that on Saturday when the champion class was judged, Forest King was ignominiously "given the gate" and the horse he had defeated only two days before was crowned with the tri-colored rosette of supremest victory.

Now, therefore, to the fray! Will the gentlemen who have spent millions of dollars in importing and breeding the hackney with a view, of course, to establishing an American carriage horse, permit themselves to be written down as fallures, who have wasted their money, their time and their energy—in a word, that they were fools? We wonder! And, per contra, are the gentlemen so keenly interested in the native horse going to continue picking up their specimens, haphazard, at the race tracks and from among the animals that do not promise efficient speed to warrant training? We are aware of only one breeding establishment at which the standard-bred horse is to be bred methodically on strictly carriage horse lines. Among the several score gentlemen committed to the hackney may be mentioned such astute men as Messrs. E. D. Jordan, F. C. Stevens, O. H. P. Belmont, F. G. Bourne, A. J. Cassatt, Mitchell Harrison, G. Howard Davison, Frederic S. Dennis, Rudolph Ellis, Henry Fairfax, Henry L. Higginson, William Jay, Prescott Lawrence, Edward Morrell, R. W. Rives, Winthrop Rutherford, William Sanford, William D. Sloane, Rutherford Stuyvesant, H. McK. Twombly, W. Seward Webb, J. E. Widener and a great number in Canada.

Four trotters purchased at the Fasig-Tipton auction sale in New York two weeks ago by W. A. Clark, Jr. of Butte, Montana, reached Pleasanton the other day, and have been added to the Clark string which is being trained by Ted Hayes.

Sober up on Jackson's Napa Soda.

**Warranted
to give satisfaction.**

**GOMBALT'S
CAUSTIC BALSAM**

A safe, speedy and
positive cure for

Cut, Splint, Sweny, Capped Hock,
Strained Tendons, Founder, Wind Puffs,
and all lameness from Spavin, Ringbone
and other bony tumors. Cures all skin
diseases or Parasites, Thrush, Diphtheria,
Removes all Bunches from Horses or
Cattle.

As a HUMAN REMEDY for Rheu-
matism, Sprains, Sore Throat, etc., it
is invaluable.

Every bottle of Caustic Balsam sold is
warranted to give satisfaction. Price \$1.50
per bottle. Sold by druggists, or sent by ex-
press, charges paid, with full directions for its
use. Send for descriptive circulars, testimo-
nials, etc. Address

Trout Talk.

[By El Pescador.]

Trout-fishing, as defined in my "Unahridged," means excitement, enjoyment, recreation and everything pleasurable that is to be had in this world combined. Many a day have I "put in" at this fun, and (confess I must) at all times of the year. Of the thousands I have caught there were very few but were eaten by others than myself; some person was always handy who was sick or delicate enough to claim the indulgence. I have studied their habits and life; I have angled for them when the water was so cold that every time I dropped the bait it got bigger.

Did you ever examine the stomach of a trout in winter? If you do, you will find a number of very small stones about the size of grass seed, and often a quantity of them stuck together, the mass being about an inch in length, and about three-tenths of an inch in diameter. Now take this little "stick of stones" and break it in two and it will be found to be the winter quarters of a worm that in warm weather leads a life which makes a trout turn a somersault to catch. I have seen the stomach and intestines of a trout so inflamed by these little stones that they were actually bleeding.

I have caught trout with a fly where the lower part of the pool would be frozen over, and nothing open but the ripple at the head. I remember catching four in a place of this kind with a red hackle; they were from ten to twelve inches long, and as red as fire. I put them on a nice bit of green moss, with a teahery in each mouth, and sent them to a sick person who loved fishing as well as myself, and who was besides a strict party in regard to law. I took notice he could eat and enjoy them quite as much as if they had been caught in May or June.

Imagine yourself between as pretty a lot of mountains as you can find anywhere, on the bank of an old, deserted saw-mill dam, and the trout jumping as fast as possible, but you are unable to get a "rise." What's to be done? I'll tell you what I did. I caught a lot of grasshoppers, then cut a quantity of manzanita branches and tied the same to my person until I looked "just like a bush." It happened that at the moment I was ready to try my new dodge, a number of cattle (always found in summer feeding close to the mountain) started to the water to drink. I went after them and drove them back, then remained until the water cleared, and caught seventeen trout in less than a half hour, and not two of them were under twelve inches. I had tried scores of times before to get even a "rise," but invariably failed. This was about twelve o'clock on a very hot day, at a time I seldom fish. Do you account for my good luck on the score of the cattle, or my verdant decorations?

I have been fishing when the angler could get a spiece of panther or two thrown in. One evening at dusk, I was cleaning my fish at the run, and back of me was a cabin used by the lumbermen, and one of them, the nearest approach to my ideal of Leatherstocking, was cooking supper. I chanced to look up, and there, not thirty feet in front of me, was as handsome a panther as ever I saw, crawling upon the log, with his ears laid back, his delicate little mouth partly open showing the cleanest set of teeth that a man could expect to be used upon him. His eyes "were all for me." I yelled. Bang! went a rifle from the cabin, and my feline withdrew, skipped, insulted, I presume, at his reception. We set a trap, and two days after found the cat caught. "Natty Bumpo" No. 2, shot at him and broke the spring of the trap. I think it was about as exciting then as a royal tiger hunt, and if the next shot had not broken his leg, I am afraid the nan (out) there would have been bad for mine company. But it ended so that our casualties amounted only to shattered nerves. We measured the length of the cat, but not before he was dead, and he came to nine feet very close.

But to fish again. Did you ever see a "trout fight?" They can do it and wind up the "round" very quick. I saw two "fall out by the way," in a fish pond once, and one of the duellists was dead in about three minutes. The survivor took to the business—became a pro-fish "fightist" I suspect, and would allow no trout to live near him. He had to be taken out and put by himself. He could not be cured of his habit, and after spawning season, was employed with a few more to get a square meal. But enough.

Many accidents happened to P. A. Peters, a Stock ton nimrod, while he was on a recent hunting trip with Emile Fimble in Amador, Calaveras and Tuolumne counties. He fell into a mining shaft while hunting for quail and was not rescued until he had spent eighteen hours underground. After recovering from the shock he ran into some poison oak, and his face soon became so swollen that he could not see. A poultice of feathers made by an old Indian woman cured him. His next painful adventure happened a few days later, while he was on another hunting trip. This time one of his shoes was pulled off between two rocks and it fell into a deep ravine. Not being able to recover his footgear, he had to walk back to camp barefooted.

Jackson's Nana Soda untangles the feet.

The Du Pont Calendar.

The E. I. Du Pont Company have issued a most artistic calendar; one that will strike the sportsman in a very favorable light. The upper half of the calendar is illustrated with a copy of a painting of merit, "The First Day of the Open Season." A shooting party, with all the paraphernalia of guns, dogs, etc., has arrived at a country station, Guntown, in the South. A mule wagon is being loaded preparatory to the trip further inland. Two well-bred Pointers and a pair of Setters, held by a negro lad are the subject of favorable criticism from the village oracles. Two cases of loaded shells labelled "Shells Loaded with Du Pont Smokeless, E. I. Du Pont Co., Wilmington, Del.," are a suggestive feature of the hunters' outfit. The coloring and human portraiture are perfect, which every sportsman will appreciate. As an attractive wall hanger the Du Pont calendar for 1904 is very artistic. Readers mentioning the BREEDER AND SPORTSMAN can obtain a copy by addressing the E. I. Du Pont Company, Wilmington, Del., or C. A. Haight, 519 Mission St., San Francisco, Cal., and enclosing ten cents for mailing expense.

Some Experiments With Shot.

Finality in shotgun experiments is not readily attainable by reason of a large number of complicating factors that affect the results obtained. In laying down a program of experiments there is a great temptation to multiply unduly the number of shots to be fired. The effect of such a procedure is that a subsequent review of the records obtained either involves the quotation of an unwieldy mass of figures or else much of the information obtained is lost through the necessity to summarize the results, whereby many important details disappear. On the present occasion the number of rounds fired were limited to fifty, this being thought sufficient to allow of every attention being paid to details as well as to the general principles evolved.

As our usual reports on the behavior of cartridges are based on what we call our proof barrel results, we proceeded to fire a number of shots, following the everyday routine. In this way twenty-five rounds were expended, these being divided into five groups, each group consisting of five individual shots. The average behavior of each size of chilled shot was thus determined, the records obtained comprising at line and 6 in., time from fall of hammer to departure of shot from the muzzle, and mean velocity over a 20yds. range. The following were the results obtained:

PROOF BARREL RESULTS.

1½ ounce of No. 7 shot, 333 pellets.

Cartridges loaded with	Pressure in tons per square inch.		Time up barrel. Seconds.	Velocity over 20yds. in feet per second.
	At 6 in.	At 1 in.		
No. 7 shot.....3.05	1.74	1.83	.0042	1019
No. 6 shot.....3.05	1.85	1.95	.0044	1017
No. 5 shot.....2.98	1.79	1.83	.0051	1017
No. 4 shot.....2.98	1.74	1.83	.0038	1012
No. 3 shot.....2.97	1.74	1.83	.0040	1028
AV.....3.10	1.80	1.85	.0043	1019
1½oz. No. 6 shot, 304 pellets.				
1.....2.84	1.83	1.83	.0034	1002
2.....3.22	1.95	1.95	.0036	1041
3.....3.20	1.89	1.89	.0036	1022
4.....2.81	1.74	1.74	.0151	1017
5.....3.30	1.74	1.74	.0046	1024
AV.....3.05	1.85	1.85	.0041	1021
1½oz. No. 5 shot, 245 pellets.				
1.....2.67	1.74	1.74	.0051	1048
2.....3.43	1.74	1.74	.0047	1031
3.....2.92	1.83	1.83	.0046	1048
4.....2.90	1.89	1.89	.0053	1058
5.....2.98	1.74	1.74	.0042	1031
AV.....2.98	1.79	1.79	.0048	1043
1½oz. No. 4 shot, 194 pellets.				
1.....2.87	1.79	1.79	.0042	1051
2.....3.03	1.74	1.74	.0044	1051
3.....3.46	1.74	1.74	.0042	1031
4.....2.73	1.74	1.74	.0046	1053
5.....2.81	1.74	1.74	.0044	1038
AV.....2.98	1.74	1.74	.0044	1045
1½oz. No. 3 shot, 158 pellets.				
1.....2.98	1.74	1.74	.0039	1046
2.....2.75	1.74	1.74	.0051	1069
3.....2.87	1.74	1.74	.0044	1075
4.....3.35	1.74	1.74	.0049	1070
5.....2.92	1.74	1.74	.0036	1030
AV.....2.97	1.74	1.74	.0044	1058

The most striking fact of the whole table of experiments is the remarkable conformity one with another of the individual records in each series, the mean deviation from the average worked out being most insignificant. At any rate, it is fairly obvious that the average values obtained from each of the five groups of shots may be accepted as typical of the conditions that prevailed. In order, however, to have an additional check upon our readings of velocity, we fired a further twenty-five cartridges from a shoulder gun. The results obtained there with were as follows:

VELOCITIES IN FEET PER SECOND OBTAINED OVER 20 YARDS FROM SHOULDER GUN.

Size of Shot in Cartridges.	Velocity in feet per second.				
	7	6	5	4	3
1.....1052	1048	1026	1052	1050	
2.....1228	1058	1046	1053	1052	
3.....1054	1028	1050	1036	1036	
4.....1060	1050	1051	1028	1033	
5.....1050	1034	1043	1024	1048	
AV.....1040	1044	1043	1046	1056	

Attention may again be called to the extreme regularity of the velocities registered, the averages once more representing, not the mean of extremes, but the characteristic action of each five cartridges tried. So as to facilitate a general examination of the results obtained from the whole series of fifty shots, we have summarized the various averages in the following table:

SUMMARY OF RESULTS WITH CARTRIDGES CONTAINING DIFFERENT SIZES OF SHOT.

Cartridges loaded with	Pressure in tons per square inch.	Velocity over 20 yds. in feet per second.	
		From Proof Barrel	From Shoulder Gun
No. 7 shot.....3.10	1.83	1019	1048
No. 6 shot.....3.05	1.85	1017	1049
No. 5 shot.....2.98	1.79	1043	1043
No. 4 shot.....2.98	1.74	1045	1046
No. 3 shot.....2.97	1.74	1058	1056

It is commonly recognized that the larger sizes of shot must necessarily have a superior striking power to that of the smaller sizes, and one would suppose that this superiority would at least be manifest to some extent when measuring the 20yds. velocity for such extreme sizes as 7 and 4. Yet the fact remains that while with our proof barrel sizes 6 and 7 show somewhat lower velocities than sizes 3, 4 and 5, on the other hand, with the shoulder gun the entire series of velocities seem to conform to a monotonous dead level. Examining the results obtained with shot sizes 6 and 7, it will be noticed that the pressures were greater than those obtained with the larger sizes. This may be accounted for by the fact that with small sizes of shot there are a greater number of surfaces of contact with the cartridge case. These and other conditions go to increase the amount of friction set up in the expulsion of the charge from the cartridge. The resistance being greater, the gas pressure is also more considerable. The increased rate of burning during the initial movement of the shot as a rule leads to a more complete combustion of the powder charge. This is shown by the increased pressure at the 6 in. plug, the assumption being that powder which is not resolved into gas by the time the shot has reached this distance will pass out of the barrel in the form of unburnt residue.

While a limited number of experiments, like those under consideration, cannot be accepted as entirely conclusive, they may be none the less valuable as illustrating general principles. The principle here evolved is that, while small shot has a tendency to part rapidly with its velocity in passing down the range, this tendency is to some extent compensated for by the fact that the greater confinement in the cartridge leads to the production of a greater gas pressure, and therefore a greater initial velocity. With our proof barrel, which gives a pattern but little superior to that of an ordinary cylinder gun, the net result of these two opposing influences seems to be that a loss of velocity over 20yds. was registered with 6 and 7 shot, but with sizes 4 and 5 the results were about alike, whereas with No. 3 shot a slight increase was manifest. Our shoulder gun, on the other hand, contains an exceedingly well-bored choke barrel. The closeness of flight of the column of shot, whereby it travels for a greater distance, as a compact body, would thus tend to minimize the effects of the varied driving power of the different sizes of pellet. At any rate, we have to face the fact that with a range of sizes of shot varying from No. 4 to 7 inclusive, the differences of velocity experienced were absolutely immaterial. With No. 3 shot an insignificant 10ft. of extra velocity was admittedly recorded; but even so, the firing results from the shoulder gun were such as to suggest that, whatever may have been the striking velocities of the different sizes of shot used, the measurement of mean velocity over 20yds. does not sufficiently indicate their relative differences.

Attention may be called, in passing, to the incidental advantage which this range thus affords for dealing with the general behavior of cartridges, the size of shot used not appearing to affect the characteristic 20yds. velocity shown by the powder. Furthermore, it is clear that the system of loading recently advocated in these columns adapts itself very well to the obtaining of standard results from a large variety of shot sizes. While, however, the 20yds. test of velocity is shown by these experiments to be a very useful means of judging the general behavior of a cartridge, it is not in itself sufficient to accentuate the distinctions that must necessarily exist between the action of one size of shot and another. We must, of course, assume that, even though the records of mean velocity up the range with the shoulder gun were practically uniform, the actual muzzle and striking velocity in each group of shots must have been markedly different, the small sizes of shot displaying a tendency to leave the muzzle at a high velocity and strike the target at a low velocity, whereas with the larger sizes, the muzzle velocity might be somewhat less and the striking velocity somewhat more.

This line of reasoning confirms the advisability of measuring actual muzzle and actual striking velocities when distinguishing between the behavior of different sizes of shot. Admittedly the average velocity over a considerable distance, such as 40yds., would bring into greater prominence the superior ranging power of the larger sizes of pellet; but the result would not be so satisfactory as if the velocity at each end of the range adopted were accurately observed. Further experiments should display in a more marked manner than at present the characteristics of the different sizes of shot which sportsmen favor according to their fancy or the results of their observation.—London Field.

Duck and Quail Outfits.

The demand at Skinner's keeps up for sportsmen's outfit, ammunition and guns. A large and new stock of goods has been added to all the demand for hunting suits, rubber boots and hunters' footwear; canvas and folding waders, decoys, gun cases and a new design of leather-covered ball boxes. Peters Factory Loaded Shells are unequaled. Skinner's place is 801 Market-street. You can get anything there you need for duck or quail shooting. Send for a catalogue, if you haven't the time to come, and try a mail order.

This breed has attracted considerable attention among Eastern fanciers within the past few years. The breed has a limited following on the Coast and would if efforts to that end were made undoubtedly obtain a strong footing where climate and geographical conditions are most favorable.

We have seen some fairly good specimens at odd times, but never out here anything to give us a line on what was the real thing in Borzois. Upon this subject, a letter of Mr. J. B. Thomas, Jr., given below will be found interesting. Mr. Thomas is one of the wealthiest proprietors of the Valley Farms, Connecticut, and is an enthusiastic breeder of Borzois. In England he purchased one of the best specimens he could find, Czar Nicholas, which, however, did not come up to the standard dreamed of. After looking over the best kennels of England and Germany, not finding what he wanted, "the best on earth," he started for Russia in his quest. At the hunting lodge of the Grand Duke Nicholas Perechina he bought a great dog, Bistri, two years old, sired by the Russian champion Almaz, the silver medal winner at Moscow, 1903. One of but seven medals given during the past fifty years.

Bistri stands thirty-three full inches, has a great coat and a wonderful head, splendid legs and general conformation. He is almost white in color and has been placed by M. Boldareff, one of the best judges in Russia, as the eighth best dog in Russia. It is said that money cannot buy any individual of the other seven. The Grand Duke is the winner of six of the seven medals above referred to. In relating his experiences Mr. Thomas writes as follows:

"I am pleased to reply to your request for information concerning my recent researches re the Borzoi. There is a standard by which we have tried (most of us) to breed, but so widely have the standard and the dogs at our disposal differed, that to arrive at the ideal seemed an impossible task. The lack of dogs approaching this ideal has caused much ignorance and controversy, both in England and America, as to what type to breed. Much discouragement to the breed has been the main outcome of this lamentable state of affairs. Determined to clear up certain facts, concerning which I have in print never seen anything but controversy, and determined to ascertain what type should be bred, and if specimens approaching the ideal could be obtained, I sailed for England and Russia in early July.

Three weeks spent in vain effort to find something definite in type convinced me that England was little, if any, better off in Borzoi than were the States. The principal kennel is mainly notable for the size and coarse aspect of its dogs, which characteristic, coupled with the straight hind legs of many specimens, makes them anything but a running dog. Coarse heads, with prominent stops were here in evidence. Hardly following the standard, this.

The minor kennels were notable, mainly for the lack of type and weedy appearance in many of their representatives.

Early August saw me at St. Petersburg, and here I nearly gave up my search for the ideal, for on visiting the Imperial Kennels, at Gatchina, near the capital, I saw only two out of eighty grown dogs that I should have liked to possess, but what was more discouraging was the fact that no distinct type was visible. Some were well coated, others the contrary; some had fairly good heads, others absurdly poor. The reason for the lack of type in England and America were immediately patent, as more specimens have gone to these countries from the Imperial Kennels than from any one other kennel. Fortunately, in spite of further disappointments, I did not relinquish my quest until I had visited the kennel of Grand Duke Nicolai Nicolaivitch and that of Mr. and Mrs. Artem Boldareff.

Leaving Moscow late one evening, the next morning found me at Tula, a town some hundred of versts south of the ancient capital, and three hours in a "troika" across the trail of the Steppes finally brought me to Perchina, the grand ducal hunting lodge. Here a veritable surprise and reward for all my trouble awaited me, for, met by Monsieur Dmitry Waltzoff, a most amiable fancier and judge, I had the pleasure of being conducted through a kennel containing the finest collection of dogs of any one breed I have ever seen.

Marvelous, is the only adjective that will qualify here. Imagine a hundred grown dogs all stamped with the hall mark of the "ancient type," the type that we have all read about, but rarely, if ever, seen. Fine long "dry" heads of straight lines, great hne and muscle, depth of chest, thickness of loin, and general appearance of strength, with a coat of extraordinary length; in fact, the theoretical standard, we

is, why have English and American breeders not secured specimens of these dogs, and why has not more been heard of them? There are three potent reasons answering this query. Primarily, these wonderful kennels are very remote from the ordinary travelled route; secondarily, owing to the English dog quarantine laws, very few Borzoi have in recent years left Russia, and, thirdly, years ago, when exportations did take place, this type practically did not exist.

Nearly four score years ago the "ancient type" did exist, then began a mania for "improvement" which provided nothing more nor less than the general spoilation of the race, so that from that time up to the recent regeneration brought about by the Grand Duke and Mr. Boldareff, Russian kennels in general contained dogs similar to those in the Imperial Kennels of to-day. The short coated white Polish, his cousin, the English Greyhound and the long eared Crimean hound supplied the foreign blood. What the effect of this promiscuous crossing had on the ancient type is only too evident, prominent stops, poor coats, large ears, short and gaily carried tails, were the most prominent legacies of the foreign invasion, not to mention a motley and ill bred appearance in the packs. Nineteen years ago the Grand Duke Nicolai gathered the progenitors of his now wonderful kennel. Eight years ago he won his first gold medal at Moscow, the first, by the way, which had been awarded for twenty years. To briefly explain the method of regeneration, it is necessary only to state that it was brought about by a violent out cross; for example, a strain containing Russian and English blood was crossed with another strain containing Russian and Crimean blood. Some of the progeny of such crosses reverted to the ancient type and by the most careful selection of these for years in succession the above mentioned results were brought about. In the last seven years the Grand Duke has won in the single class, seven out of the eight gold medals ever offered at Moscow, and three out of the five gold medals for wolf teams (two dogs and a bitch). The other two gold medals for teams have been won by dogs of Mr. Boldareff's breeding.

I know very well that some sceptic will ask how it happens that so little has been seen or heard of these extraordinary dogs. May I ask the question, how many Borzoi authorities have ever visited Russia and what is more to the point, how many have ever visited the kennels I mention and in recent years? I have already said that ten years ago the type did not exist in large numbers; even to-day it is held practically in two kennels and from these two kennels no good dogs ever are sold, except as a special favor or mark of courtesy. To say the least, I was very much flattered in being able to secure from the kennels of the Grand Duke such a dog as the white and brindle Bistri, by Almaz, winner of the gold medal in single and team classes, out of Ptachka and with every grandsire and dam a silver medal winner. From the Boldareff Kennels I was fortunate enough to be able to purchase the great silver medal white bitch Sorva by Liouhezn, winner of the great silver medal, and the prize for wolf coursing and in a team, the gold medal. In addition to this pair I brought out as a gift from that most keen of fanciers and genial of hosts, Mr. Artem Boldareff, the bronze medal white bitch, Atamanka by Koptchick, thrice a silver medal winner and pronounced the best all-white dog in Russia. Atamanka is litter sister to the double gold medal team winner, Karatai, the best coated and perhaps most typical dog in all Russia. It is interesting to note that the grandam of these two hitches, the famous twice great silver medal winner, Libodka, said to be the first profusely coated bitch in the regeneration of the breed was imported to England a few years ago by a man who was not "in the swim." Libodka being the only one of her type on the island, was actually "thrown down" in the judging ring because she had too much coat. Poor Libodka, she died the days she arrived in America, a few weeks ago, brought here by me as an object lesson in breeding.

It is not only a great satisfaction to have secured such specimens, but it may be considered doubly so, when one can import them, knowing exactly what their breeding is and having seen a large number of their progenitors and kin. By this very lack of information regarding the characteristics of the progenitors of most Borzoi, American and English fanciers have been "up against" an almost insurmountable obstacle to good breeding. In this connection I might mention that I secured the pedigree of Ch. Imp. Markaman and the Duchess of Newcastle's Ch. Imp. Tzaritza, a fact which should interest a large percentage of English and American fanciers.

From time to time we have heard considerable controversy concerning hunting with Borzoi. From earliest times their game has been the hare, fox and wolf. To understand the method of the chase, it is necessary to know that a flat country well dotted with groves, is usually the scene of the sport.

have all been so confused over, reproduced in practical perfection.

Such dogs, I also found possessed by the Boldareffs at Woronzova in the province of Tamhoy, from Tula, a fourteen hour trip over the route taken by the Trans-Siberian express. The dogs at Perchina vary in color from white to dark tan (no black), while the Boldareff Kennel is especially notable for its white dogs and for their magnificence of coat. One's first thought

The most common method of hunting is in connection with a Guanchi (Foxhound) pack.

As a rule twenty Borzoi, i. e., ten leashes, make a hunt. The leashes being held by the hunters, mounted on Khirgez points at allotted stations, silently await the game which is driven from the woods by the Foxhounds. At sight the leashes are slipped and a wild race for life or death takes place. In the case of wolves being caught and held by the dogs, the hunter throws himself from his mount and with a clever thrust from his long Caucasian dagger puts an end to further resistance.

The finest dogs, from a show standpoint, are not spared from this work, and in every instance I found these working dogs perfectly kind even with strangers, in spite of all the foolish gibberish that has been written to the contrary.

I trust that what I have been enabled to ascertain may throw light on many a mooted question, and may be the means of advancing the breed in England and America, and anyone who may desire further information, is invited to do me the honor of looking over my collection of photos."

The Russian Wolfhound Club of America was organized as a specialty club by exhibitors and others interested in the breed at the Brooklyn bench show, November 12, 1903. An executive committee composed of Dr. J. E. De Mund, J. B. Thomas, Jr. and James Mortimer was appointed to frame a constitution and adopt a standard to be passed upon by the club at a meeting to be held in Madison Square Garden, Wednesday, February 10, 1904, during the Westminster Kennel Club show.

The purpose of the club is to place the Russian Wolfhound, both as a working dog and a "chien de luxe," first in popular esteem among the larger breeds of dogs. To this end, better classification and special prizes from this and foreign countries are being arranged for the winter shows. Applications for membership may be made to Jos. B. Thomas, Jr., Secretary, care of American Kennel Club, 55 Liberty street, New York.

At the Bakersfield ranch of Mr. Clinton E. Worden there are a few Borzois and also some crossbred dogs that are one-half Greyhound. Both the Borzois and the crossbred dogs are remarkably intelligent and deadly in hunting and running down coyotes.

California Cocker Club.

Interest and enthusiasm among the Cocker fanciers does not abate, already the Cocker club members are looking forward to a banner exhibit here in the spring.

At a meeting of the club held last week, at the St. Nicholas Hotel, the following officers were elected for the ensuing year:

James Hervey Jones, President; Irving C. Ackerman, 1st Vice-President; D. C. Brown, 2nd Vice-President; A. Wolfen, Secretary-Treasurer. The Executive Committee is composed of the gentlemen above mentioned and Mr. A. L. Cresswell.

DOINGS IN DOGDOM.

We would like to get the address of the owner of a Chesapeake Bay dog who desires to sell.

The All-Age stake for the Pacific Coast trials next month closed Tuesday with about twenty entries.

Crufts will hold a big show at Islington, February, 10-12, the same dates as the Westminster Club show in New York.

Phil B. Bekeart shipped this week a well bred young Irish Setter bitch puppy to his friend Mr. E. O. White of Honolulu.

J. Robertson's hitch Lito (Ch. Havoc-La Paloma) was mated with J. Hervey Jones' Black Silk II. (Nank-Juda) on the 14th inst.

The English Bulldog Sir Launcelot, twice a winner of championship honors, has been purchased by Mr. Bechtold of Philadelphia.

We have scarcely had time to call attention to the stud announcement of the Wandee wire Fox Terriers, that has appeared on the front page. The Wandees are owned by Mr. C. K. Harley of San Francisco, but recognising that there is little glory to be gained in showing such crack terriers in the far West, he has wisely elected to indulge in the more exciting dog battles in the East. To that end his terriers will remain in the kennels of Mr. Mayhew at Stapleton, S. I. until the spring. After the spring shows they will journey to the Pacific Coast in time for the San Francisco show. In the meanwhile they stand at stud in charge of Mr. Harley's kennel manager, Stanley Lomas, who will give all terriers sent to the Wandees, every care and attention. It is scarcely necessary to speak of the good terrier qualities of these well known winners that have made such a record in the short time they have been over. Their breeding alone warrants their use while those who depend upon the individual to make the sire, have here the right sort of stuff. Mr. Harley has returned to Frisco. After the Brooklyn show he went home with Mr. Thomas to the Selwong Kennels, and after looking these over came to the city and took a night train for the West. Mr. Harley seems to have the right idea in getting together a representative campaign kennel, and we should judge is one of the staying sort of fanciers now that he has the hang of the game.—Stock Keeper.

For all kinds of weather there is no drink like Jackson's Napa Soda—plain or in a lemonade.

The State Game Officials Are Vigilant.

A case of alleged violation of the game laws, of much interest to newspaper men, was tried here yesterday, (December 14th.) Late in October A. Jones shot a deer thirty miles east of here. Two weeks ago the Amador Ledger acknowledged the receipt of a sample in a complimentary notice. A local game club, and afterward the State Game Commission, took the matter up, saying that it was unlawful to have deer meat in one's possession in the closed season, no matter if the killing was done in the open season.

L. W. Kercheval, a State deputy, traveled from San Francisco to make the arrest of R. Webb, editor of the Ledger, and A. Jones. The trial of the editor took place in the Justice Court yesterday and the jury disagreed. It developed that the venison had been served to some cats.

The foregoing appeared in a morning daily as a dispatch from Jackson, Amador county, December 15th.

If we were to state our candid opinion of the operations of the officials of the State Fish Commission it might not be considered a complimentary one.

If the statement above is fairly within the facts the subordinate officers of the Commission are deserving of laurel wreaths and pensions for their sleuth like devotion to duty and a laudable desire to avoid anything like a grand stand play. For press dispatches in the dailies are good things for the general public to read. It begets a confidence in the worth of the State institution and shows that the deputies are doing something more strenuous than drawing salaries and breath.

It is an excellent thing to know that on the first suggestion of wrong doing, a husky deputy commissioner is ready to journey many miles, hundreds if necessary, at the risk of his health, to face the rigors of a California winter in the pursuit of his sworn duty and at the expense of the State.

The reiterated daily statements of biased and interfering sportsmen, who, to quote the Chief Deputy Commissioner, "want everything themselves" must be founded on imagination. For there can be no truth whatever in the frequent assertion that the local commission men seem to violate the game law with impunity. They never have sacks upon sacks of ducks in their possession. The statement that the fishermen drown and capture daily hundreds of wild ducks which are subsequently sold by peddlers is undoubtedly a libel upon a hardy and very law abiding foreign class who would not take anything that was nailed down.

The libel upon the poor foreigner is accentuated by the further assertion from many hoggish sportsmen that these men use small nets, so small that they will hold muddy water, and that they fish on Sundays in violation of the law. We don't believe it.

The slanderous rumors that many boxes of small sized bass, that is illegally sized, are often or daily in the local fish stalls is a reflection upon the abilities of the state sleuths that is not worthy of a second's consideration.

The moutings of some jealous individuals concerning the claimed depredations of the net fishermen in Petaluma creek, San Antonio slough and Midshipman slough are puerile and undoubtedly without credence.

That the deputies are vigilant and equal to the occasion is patent when it is believed that the up river fishermen fear the advent of the state patrol launch and anathematize the prying eyes of the officers.

The fairy tales that the fishermen are a jovial lot of practical jokers must be ephemeral. For it would be no joke to go to the trouble and bother of staking out an old, worn out rotten salmon net for the sorry satisfaction of having it discovered and seized. The fallacy of such a ragged attempt at humor is patent because the country justices are put to much extra bother and trouble and valuable space, that might be devoted to important news in the city dailies, is taken up with special dispatches in which some poor foreign fisherman is mentioned as the mulctee on a fine proposition. The busybody above referred to says the "lateeners" are so devoid of humor that they would not laugh in their sleeves if they could.

Some busybody is responsible for the suggestion that if the causes were known which prompted the resignation from the Board of Hon. Henry M. Keller, that an interesting story might be recounted.

The stories told, with hated breath, by prying sportsmen, of the awfully vulgar messages they have at times been deputized to convey to the State officers by some alleged criminally inclined fisherman who was supposed to have staked out a small meshed net can not be true. These coarse compliments would show that the commission's deputies are feared and respected. The idea of a common, ordinary law violator, when threatened with the lash of the awful Game Commission, the idea, we say, of this individual having the audacity to peremptorily order his tormentor to betake himself to a certain torrid place and supplementing this ungentlemanly request with wholesale references to the canine ancestry of the Board, individually and collectively, with all its tenements and hereditaments thereunto appertaining. Sad and pathetic, this can not be true.

The Board and its work cannot be improved upon, the sportsmen who have, possibly with the best of motives, laid complaints before that august body, have possibly had a too vivid imagination. So long as the white plume of Dustedproof Harry waves, so may the assertion be made, that the Commission and its doughty men are all right.

Trap Shooting in Colorado.

The 100-target shoot for the Denver Post trophy between J. W. Garrett of Colorado Springs and Wm. Clayton of Kansas City, Mo., which has been anticipated with keen interest by expert trap shots all over the country since the arrangement of the match last August, was pulled off at the range of the Colorado Springs Gun Club at Broadmoor December 1st. Mr. Garrett, by defeating his opponent by a score of 90 to 85; not only retains possession of the handsome \$250 silver loving cup presented by the Denver Post and won by him at the Grand Western Handicap shoot in Denver last June, but more firmly establishes his claim to being champion inanimate target shooter of the West, says a Denver exchange.

The scores made by both of the experts were good, considering the condition of the weather, a stiff wind interfering somewhat with the shooters, but both expressed themselves as disappointed in their work at the conclusion of the event. Other experts who witnessed the match, however, regard the work of the principals as above the ordinary, considering that the afternoon was chilly and that a strong wind was blowing at an angle across the range during the afternoon, making their work uncertain and rendering the flight of the targets more erratic.

"I have been defeated by a better man, and that's all there is to it," said Mr. Clayton at the conclusion of the challenge event. "I did not shoot in my usual form, but I suppose Mr. Garrett feels the same way, and that even the thing up."

When asked if he would challenge for the trophy again Mr. Clayton replied, "Yes; I don't intend to give it up for a while yet, anyway. I have not been shooting as long as Mr. Garrett, and maybe with a few more months' practice I will be able to do better. I shall probably challenge for the cup again next spring. But I am here to tell you that it is going to be a hard matter to take that prize from Colorado Springs as long as its present defender keeps his pace, and I shall not be disappointed if I fail again."

Mr. Garrett freely predicts that Mr. Clayton will hold national honors in another year or two of experience. "Mr. Clayton has been shooting at the traps but three years, and I'll tell you he is going to make us all look to our laurels before long," said Mr. Garrett after the big event was pulled off.

The shoot was under the auspices and rules and regulations of the Denver Trap Club. The handicapping committee notified the principals about two weeks before the shoot that the challenger should shoot at seventeen yards and the challenged at twenty-one yards. At the same time A. J. Lawton and A. Meredith were appointed referees and D. L. Macaffree was appointed judge. D. C. Sanderson and Fred Moore were chosen scorers by the contestants before the shoot. The officials, all of whom are prominent members of the Colorado Springs Gun Club, were on hand and the event went off without a hitch in exact accordance with the arrangements.

Prior to the shoot some of Mr. Garrett's friends feared lest the handicap of four yards in favor of Mr. Clayton would be his undoing, but it seemed to have not the slightest effect on the work of the champion. His nerves were as steady and his aim as true as they had been in the club shoots in which he participated but a few weeks before at seventeen and eighteen yards, and when the targets broke under his fire they usually flew into a thousand pieces.

A comparison of the experts is interesting. While Mr. Clayton leans forward as the target flies from the trap and shoots with deliberation, Mr. Garrett stands almost erect and picks off his bird on its upward flight in an instant after it is thrown.

Mr. Clayton proposes to practice during the winter, with a view to challenging Mr. Garrett for the Denver Post cup in the early spring. He is an enthusiastic shooter and generally conceded to be one of the most promising young shooters in the country. He now holds the state championship of Missouri at live birds, having won his title at St. Joseph last spring.

Mr. Garrett has been shooting over the traps for seven years, and is classed among the very best inanimate target shooters in the world. He not only holds the Grand Western Handicap championship, of which the Denver Post trophy is emblematic, but the championship of Colorado, and has broken a number of world's records since he began to follow the shooting game.

In the above described event Mr. Garrett used a Winchester repeating shotgun, while Mr. Clayton used a Smith hammerless, double-barreled gun. Both shot Winchester Leader shells, containing 40 grains of DuPont powder and 1 1/2 ounces of 7/8 chilled shot.

A large crowd witnessed the shoot. Noticesble among the spectators were many members of the Colorado Springs, Denver and Cripple Creek Gun Clubs. After the Clayton-Garrett match a number of well known shots participated in a social match.

Clayton-Garrett match for Denver Post trophy.

Table with 2 columns: Name and Score. Clayton at 21 yards: 1111 1101 1010 1111 1011-21, 1101 1111 1111 1111 1111-23, 1111 1110 1111 1111 1101-23, 1111 1111 1101 1101 1111-22-90. Clayton at 17 yards: 1011 1111 1011 1101 1011-21, 0111 1111 1011 0111 1011-21, 0101 1101 1111 1111 1111-22, 1111 1111 0010 1101 1111-21-85. After the main event a 50 bird match between the same men was also won by Garrett by a score of 47 to 43. The scores at 16 yards were: Garrett: 1111 0111 1111 1111 1111-32, 1111 1111 1111 1111 1111-24-47. Clayton: 1011 1111 1111 1111 10101-2, 1111 1110 1111 1110 0101-21-113

On a hot day drink Jackson's Napa Soda lemonade and be refreshed.

Turkey Shooting.

An old fashioned turkey shoot will be held at the Hunters' Inn (Jimmy-the-Lake's old place) at the head of Estudillo avenue, San Leandro. Since mine host Raveke has taken charge of this popular sportsmen's resort the Hunters' Inn has been the scene of many pleasant shooters' re-unions. Shooting for turkeys will take place tomorrow and on next Thursday. A free lunch will be served and an extra lot of fine fat turks will be at the disposal of the riflemen. For those who care to drop in en passant, we are informed, guns and ammunition will be furnished. A large attendance is expected and an enjoyable outing promised.

Permits are often given by the game commissions of States to clubs and individuals for the privileges of capturing deer which are to be kept in fenced preserves, but the owner of the permit is very likely to be in the same position as the small boy who procured some salt to put on the bird's tail—they cannot get near the prize. The owners of three private parks at Lenox, Mass., received permits from the Maine Game Commission last spring, and they offered \$100 apiece for live deer captured in Maine and expressed to the parks.

The offer was open when Dr. Hemingway, of Buffalo, arrived in the Msine woods with his camera to photograph wild deer and study their habits. Upon learning of the offer he agreed to deliver twenty-five deer alive at Lenox for \$800. The natives were astounded to see Dr. Hemingway start out every morning, for a week, at dawn with his gun, and complaints were made that he was violating the game law. He usually returned in about five hours empty handed and spent the rest of the day around the hotel smoking. At midnight he would return to the woods with a couple of guides and the party would return later with one or more live deer. How did he do it? The guides would not tell them. Reports soon reached the ears of the game warden of his mysterious and supposed illegal actions, and he was arrested. Finding it useless to show his permission, signed by the commissioners, he went before a local trial justice and revealed his secret of how to shoot deer and send them away without killing them.

"It is all very simple," said the doctor. "There are certain narcotic drugs which will put human beings to sleep if introduced into the blood by means of an injection. I argued that similar drugs would have a like effect on deer. So I made a composition bullet of flour paste, of vegetable alkaloid and soluble glue and when it was dry and hard, I shot it into the deer with my old muzzle loader.

"As soon as the deer began to feel the effects of the drug they went away and lay down in the bushes near their regular sleeping grounds. Knowing the place well, I had no trouble in leading the guides to the unconscious animals. They were secured with soft bands of hemp and put in crates before consciousness returned. Except for a slight flesh wound in the flank or side, not a deer of the lot has a scratch upon its body and I feel sure that every one will reach its destination in good health."

"May I learn the name of the drug you employed?" asked the justice.

"Certainly," replied Dr. Hemingway, "I used about a grain of sulphate of morphia in every bullet. It is enough to produce from six to eight hours of continuous slumber in any animal no larger than a deer. If I were trying to capture elephants, for example, I would multiply the dose by six or ten."

Coming Events.

- Apr. 1-Sept. 10, Oct. 16-Feb. 1-Open season for taking steelhead in tidewater.
Nov. 1-April 1-Trout season closed.
July 1-Jan. 1-Open season for black bass.
Aug. 15-April 1-Open season for lobsters and crawfish.
Nov. 1-Sept. 1-Open season for crabs.
Sept. 1-May 1-Open season for shrimp.
Sept. 10-Oct. 16-Close season in tidewater for steelhead.
Nov. 15-Sept. 10-Season open for taking salmon above tide water.

Gun.

- July 1-Feb. 15-Dove season open.
Nov. 1-July 15-Deer season closed.
Sept. 1-Feb. 15-Open season for mountain quail, grouse and sage hen.
Oct. 15-Feb. 15-Open season for quail, ducks, etc.

Bench Shows.

- Jan. 20, 23-Toledo Fanciers' Association. Toledo, O. A. W. Lea, Secretary, Toledo, O.
Jan. 27, 30-National Fanciers' and Breeders' Association. Chicago.
Feb. 7-Ohio State Poultry Association. Columbus, O. W. A. Lott, Secretary, Wooster, O.
Feb. 10, 13-Westminster Kennel Club, Madison Square Garden, New York. James Mortimer, Superintendent.
April 7, 9-Victoria Kennel Club. Victoria, B. C. T. P. McConnell, Secretary, Victoria, B. C.
April—San Jose Kennel Club. San Jose, Cal. N. J. Stewart, Secretary, San Jose, Cal.

Field Trials-

- Dec. 14-Alabama Field Trial Club. Huntsville, Ala. L. G. Pettyjohn, Secretary, Birmingham, Ala.
1904.
Jan. 6-Mississippi Field Trial and Gun Club. Inaugural trials. Holly Springs, Miss. Membership Stake, January 6; Derby and All-Age Stake, January 13. W. De Arnold, Tupo, Miss.
Jan. 11-Eastern Field Trial Club, Thomasville, Ga. S. C. Bradley, Secretary, Greensboro, N. C.
Jan. 11-Pacific Coast Field Trials Club. 21st annual trial. Bakersfield, Cal. Albert Betz, Secretary, 201 Parrott Bldg., S. F.
Jan. 12-Texas Field Trial Club. 2nd annual trials. T. A. Ferlet, Secretary, San Antonio, Tex.
Jan. 19-Georgia Field Trial Association. 2d annual trials. Waynesboro, Ga. P. M. Essig, Secretary, Atlanta, Ga.
Jan. 25-United States Field Trial Club. Grand Junction, Tenn. W. B. Stafford, Secretary, Trenton, Tenn.
Feb.—National Championship Association. Grand Junction, Tenn. W. B. Stafford, Secretary, Trenton, Tenn.

THE FARM.

Simple Dairy Rules.

Mr. L. Englemann, of the Rockford Creamery Co., North Yakima, Wash., has recently sent out the following rules to his patrons in a bulletin form:

1. Aim to have thirty-eight to forty-two per cent cream. First, rich cream will keep better, and second, the creamery does not want any skim milk. You need all the skim milk for your hogs, calves and chickens.
2. In winter time it is harder to separate milk than in summer time; consequently, be sure that your milk is warm enough and run your separator a little faster than usual.
3. Be sure that your separator is level.
4. Keep your separator clean and look especially for the skim milk tubes.
5. Use only the very best of oil and clean occasionally all gearing with petroleum.

There is a drawback connected with the separator, viz.: Farmers lose sight of the test of their herds. While we admit that some farmers will soon find out whether

4. Keep your herds in a healthy condition.
5. Feed and milk regularly.
6. Feed only wholesome feed and look carefully to the drinking water
7. Poor feed and dirty water give tainted milk and impair the health of the cow.
8. Keep your calves growing.
9. Don't feed warm milk one day and cold the next.
10. If you want a good dairy cow from your calf, get a good long body with well sprung ribs on your calf.
11. The coat of an animal is a good indication of its condition.
12. Try to have your cows "come in" in the fall and winter. Winter dairying pays the best; besides, you have more time to milk in winter than in summer.
13. Try to raise all the hay for your herd.
14. Make the most out of skim milk.
15. Dairying and hog raising are a very good combination.

If this bulletin should find the approval of our patrons and be a welcome guest in their homes, we shall issue more bulletins treating on feeding, breeding, care of milk and cream, etc.

Jackson's Napa Soda does not tangle the feet.

attached to the lining of the stomach and the conditions being favorable in from six to ten weeks develops into a worm and we cannot inspect food closely enough to prevent it.

The horse most generally has worms for some time without any external showing or being seen, and his condition does not seem affected, but later will commence to run down. The presence of worms may be determined by observing certain indications which are generally quite correct. If an owner finds that his animal has an unusual appetite and is eating and is given more feed than usual and does not show any corresponding improvement—his coat looking dull—does not show his usual spirit and seems a little off, with perhaps no apparent cause, try a worm treatment, which will be of great benefit, even if no worms are seen.

The youngster or colt stands around the barn yard dumpish, a rough coat, that seems to be growing towards the ears, constantly rubbing or biting his sides. Try a worm treatment and see what an acceptable change will come. This is a time when the youngster should be kept in a thriving condition and growing, but they will not so long as worms are present. Prompt attention will be of much benefit and will fully repay the little trouble.

until they are twelve or fifteen months old and then put them up in a close pen and fatten them exclusively on corn. While this plan is still in vogue in some sections it is rather the exception than the rule.

Having good breed and then mating the sows so that they will farrow early in the spring and again early in the fall will be starting the right way. The sow should have not only during the suckling period, but during gestation as well, the run of a small pasture so that she may be able to have exercise and in a measure a variety of food. She should be fed such material as will produce muscle and bone and keep her in such condition that a short time of good feeding on fattening rations will finish for market. With any of the standard breeds a pig can be made ready for market inside of eight months from the date of farrowing.

With pigs farrowed in the spring, the sow should be in a thrifty condition when due to farrow. For at least ten days before she is due her rations should be such as to keep her bowels open, as constipation at that time increases her fever. She should never be disturbed unless absolutely necessary. Have handy a bucket of warm thin slops, so that whenever she gets up it can be given her. Feed lightly for four or five days after farrowing and then gradually increase her feed until she is given all that she will eat up clean.

El Toro of Yerba Buena

A Winner of First Prizes from Calf to Sweepstakes

their cows are paying or not, there are others who lay the blame on the separator or to the creamery. Don't forget that you can't get a forty per cent cream out of milk testing three per cent only.

It is a wrong idea to believe that a cow testing five per cent is a good cow. The cow that gives the most butter fat within a year is the most profitable cow, no matter what her test is. Don't get the idea that a certain breed is the only and best breed. A good cow is a good cow, no matter to what breed she belongs. Select the breed you like best and which is best adapted to your circumstances, and cows that milk ten to eleven months during the year; also they may have only a fair average test.

Important points that a dairyman must keep in mind, are:

1. The hull is half the herd.
2. Raise the calves from your best cows.
3. Sell all your poor cows.

Worms in Horses.

At this time when the worm begins to develop more plentiful than at any other season of the year perhaps a few practical pointers may be of some service to the average owner, says an exchange.

Many think the normal horse always has worms, but veterinary science says not, and also that worms are not considered a serious injury, but experienced horsemen know that the worm causes a whole lot of disagreeable and unsatisfactory conditions, that prevent the thriftiness and improvement of the animal, and many irregularities—bad condition—want of usual spirit, and others, can be attributed to the presence of the worm and all can be corrected by attention and little trouble.

Worms are caused by something that the animal takes into the stomach by way of the mouth, most generally it is the deposit of some insect and becomes

With the horse the veterinary generally prescribes a physic of a pint of oil or a ball which the average owner cannot well administer and this physic only drives out a few of the developed worms. With the improved treatment of the ailments of the horse, come improved medicines, which do the work much better and more effectively with little trouble. No harm, or interference with service. It should be borne in the mind of every owner that any animal troubled with worms will not thrive, and prompt attention and little trouble will fully repay.

To Raise Hogs with Profit.

To make hog raising most profitable, at least two essentials must be observed—good breed and good management. Under present conditions keeping scrub hogs does not pay, writes N. J. Stevens in *Record Herald*. Neither does it pay to allow them to take care of themselves

One of the very best rations is mill feed made into a slop with sweet skimmed milk, or if this cannot be had use wheat bran, sweet milk and a small quantity of oil seed cake. If possible give her the run of a clover pasture. If the slop is given in a roomy trough the pigs will commence eating by the time they are three weeks old. Gradually increase the rations, using care that no more is given than is readily eaten up clean. An ear of corn each once a day after they are six weeks old may be added with benefit. When fattening for market increase the corn and lessen the amount of slop, but still give slop regularly twice a day. Feed regularly and see that they have pure water daily. Keep a supply of ashes and salt where they can help themselves. Fall pigs should come sufficiently early so as to get well accustomed to eating before cold weather sets in. Have warm, dry quarters. An earth floor if dry is best for their sleeping quarters and a tight floor for feeding. Feed new corn in winter on account of its value for maintaining animal heat. Give some clover hay and the run of a pasture and they will keep healthier than if closely confined.

National Live Stock Convention.

Secretary Charles F. Martin has sent out a call for the annual meeting of the National Live Stock Association to be held in Portland, Oregon, January 12, 13, 14 and 15, 1904.

Delegates will be admitted according to the provisions of the constitution, as follows:

Each state, territorial, county or local range association of cattle, sheep, horse or swine breeders may appoint one delegate for every 10,000 head of stock, or part thereof, represented by the members of such organization.

The governor of each state and territory may appoint three delegates-at-large.

Each feeders' and breeders' association may appoint one delegate-at-large and one for every twenty-five members or part thereof.

In counties where there is no regular live stock organization, the county commissioners may appoint one delegate from among the stockmen of said county.

Each state or territorial live stock sanitary board may appoint three delegates.

Each state board of agriculture or agricultural college may appoint one delegate.

Each live stock commission merchants' exchange may appoint one delegate-at-large and one for each twenty-five members thereof.

Each stock yards company may appoint one delegate.

Each railway and transportation company may appoint one delegate.

Each chamber of commerce may appoint one delegate for every one hundred members.

Each dairymen's association may appoint one delegate.

Each State irrigation association may appoint one delegate.

An alternate may be appointed for every delegate.

Any bona fide stockman engaged in breeding, feeding, trading or handling live stock may become a member of this association by payment of an initiation fee of \$10 and an annual one of \$10.

Delegates may be appointed from Canada and the Republic of Mexico, but in all cases, except those from state and county, the requirements regarding membership must be complied with.

All associations, governors and county commissioners are requested to send the names and postoffice addresses of their delegates to the secretary as soon as named, in order that the roll may be promptly and properly arranged.

Questions of vital importance to the live stock industry will be taken up at this meeting, such as the Forest Reserve, packer's combination against stock growers, arid lands, transportation, etc.

Reduced rates on all railroads. For full particulars, address the secretary, Chas. F. Martin, Portland, Oregon.

Roweling for Blackleg.

A correspondent writes: "The following recipe appears in a monthly journal as a reliable remedy for the prevention and cure of blackleg when administered in its incipient stage: Insert a rowel made of white flannel into the leg or affected part, thoroughly saturated with this preparation: Alcohol, four ounces; spirits of nitre, four ounces; corrosive sublimate, one-half ounce; gum camphor, one-half ounce. It is said to have been discovered by a prominent and extensive cattle raiser in Montgomery county, Kansas."

Without seeming to be funny, is it the rowel, the leg, or the affected part that is to be saturated? Have any of our readers used this remedy, and with what result? Roweling is a very ancient remedy, or, rather, preventive of blackleg. It is inserted in various forms. The dewlap is slit and sometimes a piece of "whang" is put through the slit and knotted, and at other times a tar rope, and sometimes a wild onion. The theory on which it was used is that the blood of the animal was

too rich, and hence a sore should be made in some place that would give the animal but little inconvenience, the dewlap being best, and would get rid of this surplus richness. On the same theory many farmers used to bleed their cattle just above the hoof and then chase them around the fields so as to get rid of this superfluous matter in the blood. Wonderful cures used to be reported twenty years ago, but we have heard but little of them lately. The theory held now by veterinarians is that blackleg is a germ disease, that the germ enters the system through abrasions of the skin, such as bruises, harbed wire cuts, etc.; that some farms are, so to speak, inoculated with the virus which is preserved by allowing the dead animals to decompose on the farm or to be buried, in which case it is brought up by earthworms, and through the abrasions of the skin above mentioned finds its way into the system. We have had a good deal of experience with blackleg, but have never felt quite sure about the correctness of the present theory. Blackleg is extremely prevalent in many sections of the country, especially in Kansas, Nebraska, northwestern Missouri and southeastern Iowa. Whatever may be the correct theory of the disease, the only rational way of treating it is by inoculation. The rowel treatment for blackleg may be classed with the old-fashioned treatment for hollow horn and wolf in the tail. When we were a boy and a cow got sick and her horns were cold, the custom was to bore a hole in the horn, put in pepper and salt, split the tail, and apply the same remedy. The practice of dehorning seems to have done away with the hollow horn, and the cows' tails have been right ever since. The practice of roweling, we think, may well be abandoned, and instead of that use blackleg vaccine, which is advertised in farm papers, which has been thoroughly tested both by the Government and by individuals, and is perhaps about as complete a preventive as has ever been discovered for any of the diseases of live stock.—*Wallaces' Farmer.*

Broody hens are often very troublesome to layers, and cause them to break their eggs by crowding into the nest. Take them off, confine them three days with plenty of food and water. Turn them out just at night. If they return to the nest, confine them three days more. The second treatment will usually cure them.

The average thickness of an egg shell is thirteen one-thousandths of an inch. Yet the light ordinary hen's egg will sustain a pressure varying between 400 and 700 pounds when applied evenly all over its surface. When applied to twelve eggs they give way at a pressure varying from thirty-two to thirty-six pounds.

Always select smooth and growthy animals to feed even at a greater cost, and the profits will usually be in proportion.

Sober up on Jackson's Napa Soda.

An old gander is worth all he will cost in protecting the young chicks from their enemies, in the shape of hawks, crows, dogs, cats, etc. Not only does he attack them vigorously, but he lets the whole neighborhood know that he has an objectionable visitor of some kind. If routed the owner can come to his relief.

Jackson's Napa Soda is sold in every city, town and hamlet in the State.

SITUATION WANTED

AS TRAINER AND RACE DRIVER, BY A thoroughly competent man, from the East, with experience. First-class references as to ability and character. Address T. C. HARRIS, care of West Ranch, Fernando, Cal.

KENDALL'S SPAVIN CURE

When you see the above trade mark on a label you are sure that you are getting the genuine KENDALL'S SPAVIN CURE.

That means that you are getting the only absolutely true tested and reliable remedy for Spavin, Ring Bone, Carb, Splint and all forms of lameness in horses. A single bottle may save your horse. It has worked that way in thousands of cases. Note this man's experience:

Wausau, Neb., March 13, 1902, P. O. Box 947.

Dr. B. J. Kendall Co., Enosburg Falls, Vt.
Gentlemen—You may remember I sent for your book, "A Treatise on the Horse and His Diseases," about a year ago. At that time I was using your Kendall's Spavin Cure on a *Bone Spavin* of about eighteen months standing. I used two and one-half bottles and now there is no spavin, not even a bunch. You may use my name among your testimonials if you wish.

Yours truly,
D. E. SEGER.

For sale by all druggists. Price, \$1.50 for 65¢. As a liniment for family use it has no equal. Ask your druggist for Kendall's Spavin Cure, also "A Treatise on the Horse," the book free for the asking, or address

Dr. B. J. Kendall Company, Enosburg Falls, Vermont.

Vita Oil

No racing stable should be without the greatest of all horse liniments. Cures Rheumatism, Sprains, Cuts, Bruises, Cramps, Colic, Stiffness, Soreness, Aches and Pains. A single trial will prove all we could say.

All Druggists and Harness Dealers or Vita Oil Co., 1533 Buchanan St., San Francisco, Cal.

10---Ten Stakes to Close January 2, 1904---10 For Spring Meeting, 1904, and Tennessee Derby and Oaks for 1905.

STAKES FOR 1905.

THE TENNESSEE DERBY FOR 1905—Estimated value \$10,000. SUBSCRIBED TO BY G. C. BENNETT & Co. For foals of 1902 (two-year-olds of 1904). \$5000 added. (Entrance free). For 1905. A sweepstakes for three-year-olds (foals of 1902). \$150 each, \$75 forfeit, or \$15 if declared on or before May 2, 1904; \$30 if declared on or before January 2, 1905. All declarations void unless accompanied by the money. \$500 added, of which \$100 to second, \$50 to third, and fourth to save stake. Weights—Colts, 122 lbs.; geldings, 119 lbs.; fillies, 117 lbs. One mile and one-eighth.

THE TENNESSEE OAKS FOR 1905—For fillies (foals of 1902). Estimated value \$5000. \$2000 added. (Entrance free). For 1905. A sweepstakes for fillies, three-year-olds (foals of 1902) \$100 each, \$40 forfeit, or \$10 if declared on or before May 2, 1904; \$20 if declared on or before January 2, 1905. All declarations void unless accompanied by the money. \$300 added, of which \$40 to second, \$20 to third, and fourth to save stake. Weights, 117 lbs. One mile.

STAKES FOR 1904.

THE GASTON HOTEL STAKES—Estimated value \$2200. SUBSCRIBED TO BY GASTON'S HOTEL. For colts and geldings (foals of 1902). \$1000 added. (\$10 entrance). For 1904. A sweepstakes for two-year-olds, colts and gelding. \$10 to accompany nomination, and \$50 additional to start. \$1000 added, of which \$300 to second, and \$100 to third, fourth to save starting money. Four furlongs.

THE ARDELLE STAKES—For fillies (foals of 1902). Estimated value \$2200. \$1000 added. (\$10 entrance). For 1904. A sweepstakes for two-year-old fillies. \$10 to accompany nomination, and \$50 additional to start. \$1000 added, of which \$300 to second and \$100 to third, fourth to save starting money. Four furlongs.

THE MEMPHIS STAKES—For two-year-olds (foals of 1902). Estimated value \$4000. \$2000 added. (\$10 entrance). For 1904. A sweepstakes for two-year-olds. \$10 to accompany nomination, and \$50 additional to start. \$3000 added, of which \$250 to second and \$150 to third, fourth to save starting money. 3 lbs. below the scale. PENALTY—A winner of a race of the value of \$1000 to the winner, 3 lbs. (selling excepted). ALLOWANCES—Non-winners of two races of the value of \$300 each, or one of the value of \$1000.

SPECIAL NOTICE—No entry will be received for any of these stakes except upon this condition: That all disputes, claims and objections arising out of the racing, or with respect to the interpretations of the conditions of any race, shall be decided by a majority of the Executive Committee present, or those whom they may appoint, and their decisions upon all points shall be final.

The Club also reserves the right to refuse the entries of any person, or the transfer of any entry, and without notice.

THIS RACE COURSE (MONTGOMERY PARK) is, without a doubt, one of the best in America to winter and train the thoroughbred, furnishing first-class and most comfortable quarters for both man and horse. On this track the majority of the good two-year-olds of the West each season are developed.

Entry Blanks or any information on application will be promptly furnished by the Secretary.

\$500 (selling race, purse and stake excepted) allowed 5 lbs.; maidens 10 lbs. Five furlongs.

THE HOTEL GAYOSO STAKES—Estimated value \$2000. SUBSCRIBED TO BY HOTEL GAYOSO. For foals of 1901 (three-year-olds of 1904). \$1000 added. (\$10 entrance). For 1904. A sweepstakes for three-year-olds (foals of 1901) \$10 to accompany nomination, \$50 additional to start. The Club to add \$1000, of which \$300 to second, and \$100 to third, the fourth to save starting money. A winner of a three-year-old stake race, when carrying that weight (colts 122, geldings 119, fillies 117), 3 lbs penalty; if two or more, 5 lbs. ALLOWANCES—Beaten non-winners in 1904 allowed 5 lbs; if unplaced, 8 lbs.; others never having won a two or three-year-old stake race (selling stakes excepted), allowed 7 lbs.; if such have never won a race of the value of \$400 to the winner (selling stakes and purse races excepted), allowed 12 lbs.; beaten maidens, 20 lbs. Allowances not cumulative. One mile.

SCALE OF THIS RACE.

FOR THREE-YEAR-OLDS AND UPWARD

THE MONTGOMERY HANDICAP—Estimated value \$5500. Silver cup or plate to winner. Handicap. \$3000 added. (Entrance free). For 1904. A handicap sweepstakes for three-year-olds and upward. \$50 each, half forfeit, or \$10 if declared. \$3000 added, of which \$400 to second, and \$350 to third, the fourth to save stake. In addition to the stake the winner will receive a valuable silver cup or plate, donated by the Club. Weights to be announced before 9 a. m., February 6th, and declarations to be made on or before February 20, 1904. All declarations void unless accompanied by the money. The winner of a race, after the weights are announced, of the value of \$500 to the winner, or two

times of any value (selling purse race excepted), 5 lbs penalty; such penalty not to exceed scale weight if handicapped at less; those weighted at scale or more than scale weight by the handicapper will not be subject to a penalty. The scale to be Western Jockey Club Scale. This race to be run the opening day. One mile and one-sixteenth.

THE PEABODY HOTEL HANDICAP—Estimated value \$2000. SUBSCRIBED TO BY PEABODY HOTEL. Handicap. \$1500 added and \$500 silver cup or plate. (Entrance free). For 1904. A handicap sweepstakes for three-year-olds and upward. \$50 each, half forfeit, or \$10 if declared on or before April 5th. All declarations void unless accompanied by the money. \$1500 added, of which \$250 to second, and \$150 to third, fourth to save stake. In addition COL. R. B. SNOWDEN will add a silver cup or plate, to the value of \$500, to go to the winner. Weights to be announced two days before the race. Winners of a race after the announcements of weights (selling race excepted), to carry 5 lbs. penalty. One mile and one-eighth.

THE TENNESSEE BREWING CO. STAKES—Estimated value \$2500. SUBSCRIBED TO BY TENNESSEE BREWING CO. Selling stakes. \$1000 added. (Entrance \$10). For 1904. A selling sweepstakes for three-year-olds and upward. \$10 to accompany nomination and \$50 additional to start. \$1000 added, of which \$300 to second, and \$100 to third, fourth to save starting money. The winner to be sold at auction for \$3000 if for less; 3 lbs. allowed for each \$500 to \$2000; then 1 lb. for each \$100 less to \$500. Starters and selling price to be named through the entry-box by the usual time of closing for this day's racing, and those so named are liable for starting fee. Seven furlongs.

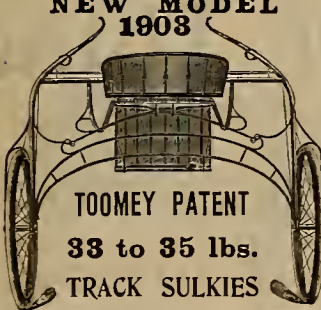

THE COTTON STEEPLECHASE STAKES—Steeplechase. Estimated value \$2500. \$1500 added. (Entrance free). For 1904. A steeplechase handicap sweepstakes for three-year-olds and upward. \$50 each, half forfeit, or \$10 if declared on or before April 24. All declarations void unless accompanied by the money. \$1500 added, of which \$250 to second and \$150 to third, the fourth to save stake. Weights to be announced two days before the race.

EXALTA—Winner of steeplechase (selling excepted), after weights are announced, 5 lbs. Four or more horses of entirely different interest to start, or the race may be declared off. Starters to be named through the entry-box at usual time of closing the day before the race, and those named are liable for starting fee. About two miles.

That all disputes, claims and objections arising out of the racing of the Executive Committee present, or those whom they may appoint, and their decisions upon all points shall be final.

Dictatus Medium 32499

Will make the coming season at
Race Track, Hollister, Cal.

Jos Sanchez in charge

\$40 FOR THE SEASON.

Payable at time of service, with usual return privilege. Every care taken to prevent accidents, but no responsibility should any occur. Prompt and careful attention in all cases. Pasturage furnished to mares sent from a distance at \$2.50 a month.

A DICTATUS MEDIUM PURSE OF \$100.

I will give a purse of \$100, with entrance money added for a race, best two in three, open to any and all colts from three to start and race to come off on Hollister track, Fair week, 1907. (Exact date to be hereafter announced.) \$5 entrance money, payable June 1, 1905, 35 thirty days before the race. Three moneys: 60 per cent to first horse; 30 per cent to second and 10 per cent to third. For further particulars, address

DESCRIPTION.

DICTATUS MEDIUM is 6 years old, weighs 1220 pounds. A beautiful turned bay horse with heavy mane and tail, kind and gentle, with a perfect disposition. Good flat heavy bone. He has great power and speed. Has a record of 2:24, but has worked out in 2:12. He is a horse that will go out any day and do his best. His colts are models of grace and beauty. Only one so far has been worked. This one, Al Wilson's yearling LITTLE MEDIUM, paced an exhibition 1/4 mile on the Hollister Race Track in 38 1/2 seconds, a 2:33 gait. This colt has great promise.

DICTATUS MEDIUM is by Dictatus 2:17, one of the best bred and fastest horses ever brought to California. The dam of Dictatus Medium is Belle Medium (dam of Stam B. 2:11 1/2), by Happy Medium, grandsire of the dam of Lon Dillon 1:58 1/2. His second dam is Argenta by Almost Lightning, sire of the dam of Zombo 2:11. There is no doubt but Dictatus Medium will prove to be a sire of speed as well as good size, style and disposition.

STATE AGRICULTURAL SOCIETY OCCIDENT STAKE OF 1906

TROTTING STAKE FOR FOALS OF 1903

To be Trotted at the California State Fair of 1906. Entries to Close January 1, 1904, with L. R. MILLER, Acting Secretary, at the office in Sacramento.

ONE HUNDRED DOLLARS ENTRANCE, of which \$10 must accompany nomination; \$15 to be paid January 1, 1905, \$25 to be paid January 1, 1906, and \$50 thirty days before the race. The Occident Cup, of the value of \$400, to be added by the Society. Mile heats, three in five, to harness. First colt to receive cup and six-tenths; second colt, three-tenths; and third colt one-tenth of the stakes. Five to enter, three to start, otherwise N. T. A. Rules govern. Nominators are not held for full amount of entrance in case colt goes wrong; only forfeit payments made, which relieves you from further responsibility, and declares entry out.

NOTE—This stake is growing in value each year. In 1900 it was worth \$2230; in 1901, \$2595; in 1902, \$3265; in 1903, \$3825.

The stake for 1906 should receive a larger entry, and be very valuable. Every breeder should enter in it.

A Special Stake will be opened for foals entered originally in this stake, and the Stanford Stake of 1906, that develop a pacing gait to be contested for in 1906.

Remember the date of closing is January 1, 1904.

L. R. MILLER, Acting Sec'y. B. F. RUSH, President.

On Broken Down, Weak, Sprained and Ruptured Ligaments and Tendons Its Power is Unfailing.

No Man need see his Horse suffer and become Incapacitated.

"SAVE-THE-HORSE" POSITIVELY AND PERMANENTLY CURES BONE AND BOG SPAIN, THOROUGHPIN, RINGBONE (except low ringbone), CURB, SPLINT, CAPPED HOCK, WINDPUFF, SHOE BOIL, WEAK AND SPRAINED TENDONS, AND ALL LAMENESS.

"SAVE-THE-HORSE" cures without scar, blemish or loss of hair; can be applied anywhere and in all conditions and extremes of weather. Horses may be worked as usual with shin or ankle boots, as no harm can result from destruction of hair or scalding of limb.

Cured horses are absolute certainties as to the possibility of the remedy for your own case. Such results, as shown in our booklet, by business men whose reliability can be readily ascertained, have carried "SAVE-THE-HORSE" over skepticism, prejudice and uncertainty. Send for the booklet and copy of written guarantee, which is as binding to protect you as the best legal talent could make it.

\$5.00 PER BOTTLE.

Written guarantee with every bottle. Need of second bottle improbable, except in rarest cases. If your case is different we advise frankly as to possibility of the remedy effecting a cure. Give veterinarian's diagnosis, if he is competent. Describe age, development, location of swellings, lameness, and way horse carries and holds leg.

\$5.00 a bottle at all druggists and dealers, or sent express prepaid.

Also sell CAPS and FUSE.

CAMPBELL'S HORSE FOOT REMEDY IS THE BEST REMEDY

EVER USED ON HORSES' FEET. IT PENETRATES and DRIES in quickly and DOES NOT GUM and FILL UP THE PORES like tar and oil compounds. It is the GREATEST REMEDY ever used to remove SORENESS and FEVER from the foot, and makes it possible to get good services out of a horse working on hard and hot pavements.

It gives natural nourishment to the foot and incites a rapid, healthy growth—ALL DRYNESS and BRITTLENESS quickly disappears.

QUARTER CRACKS and SAND CRACKS are rapidly grown out when directions given in our booklet are followed.

It is a SURE CURE for CORNS, CONTRACTED FEET and NAIL WOUNDS if directions are followed.

It PREVENTS SOUND FEET FROM BECOMING UNSOUND and GROWS a TOUGH, STRONG, ELASTIC WALL and HEALTHY FROG—a FOOT WHICH WILL STAND WORK in race courses.

Many of the best owners and trainers state that for track work nothing equals it. In many cases horses have reduced their records several seconds, due to its use.

It is a CERTAIN CURE for THRUSH and SCRATCHES We Guarantee That It Will Do What We Claim and Will Refund Money if It Fails.

PRICES:—Quarts, \$1.00; Half-Gallon, \$1.75; Gallon, \$3.00; 2 1/2 Gallon, \$5.50; Five-Gallon, \$10.00.

Books giving full directions for its use and much valuable information as to shoeing are supplied free.

Don't fail to read "ad." giving information concerning Campbell's Iodoform Gall Cura in next issue of this paper. It is the best and because of its merits is rapidly displacing all others.

WINCHESTER

REPEATING SHOT GUNS

A CHANCE FOR A DOUBLE

A QUESTION often asked about Repeating Shotguns is, "How quick can a second shot be fired with them?" Shooters that have used Repeaters answer with one accord: "Doubles" are just as easy to make with a WINCHESTER REPEATING SHOTGUN as they are with a double-barreled gun. The third shot that a Winchester Repeater gives often bags a badly crippled bird which otherwise would get away. Winchester Repeating Shotguns are made in "Take Down" styles in 12 and 16 gauge.

ALMONADA—27079—Record, 2:18 3/4

Sired by EROS, first dam, Maggie E., by Nutwood, 2153 1/4. All of his dams back to fifth dam are great producers. His breeding is second to no horse on this Coast.
None of his colts have ever been campaigned. Scout, the first of his get, now in the hands of W. S. Maben, is trotting quarters in 30 1/2 seconds in six weeks handling. Has two 2-year-olds showing quarters better than 40 seconds on the road.

TERMS: \$25 for the season, with return privileges, or three from one party (well-bred mares) at \$50, with cost of feed added.

The best of pasturage to be had at \$2 per month, or with Hay and Grain if desired.

For further particulars apply to

D. F. OGLESBY,
Carpinteria, Cal.

ATHABLO 2:24 1/4—The best entire son of DIABLO.

Sired by DIABLO 2:09 1/2, sire of 10 in 215 list. Dam ATHALIE, dam of Athanio 2:10; Ira 2:10 1/2; Athadon 2:27 at 1 year old and 4 others in 230 list. Athalie is but 16 years old and if she lives to be 20, 1 will make her the greatest brood mare in the world as a speed producer.

ATHABLO will be one of the greatest sires in California. His dam is the greatest mare Diabolo ever served. 3 of her sons are producers but Athablo will outrank them all. Has only 2 yearlings and they are the fastest colts I ever raised.

Season 1904 at my Stock Farm. Return Privilege.

FEE, \$25 SEASON. Address, **GEO. L. WARLOW, Fresno, Cal.**

ATHADON—20990—2:27 at 1 year old.

Sired by MATADON—3392—son of Onward. First dam, great brood mare Athalie, dam of 7 in 230 list, by Harkaway—11808—son of Strathmore. Second dam, Mag. by Alcalde, 103.

Sire of Sue, 2:12 1/2; Listerine, 2:13 1/2; Dakon D., 2:16 1/4, and others in 230 list.

Will make Season 1904 at \$25, with return privilege.

At my Stock Farm, Fresno, Cal.

FEE, \$25 SEASON Address, **GEO. L. WARLOW, Fresno, Cal.**

ATHAMAX—36927

SIRE, ATHADON, yearling record 2:27, and sire of Sue 2:12 1/2, Listerine 2:13 1/2 and others
DAM, LUSURINE, great brood mare, by Onward 2:25 1/2, sire of 9 in 230; 2d dam by Challenger, sire of Challenger Chief 2:15, etc.; 3d dam, by Cassius M. Clay, Jr., 22; sire of 4 in list, 16 producing sons, 35 producing daughters.

Season of 1904 at SACRAMENTO RACE TRACK.

FEE, \$25. Address **F. W. PERKINS, 1239 Q Street, Sacramento.**

BILLY THORNHILL—8707—2:24 1/2

Sired by Beverly Wilkes, 8706, by the great Geo. Wilkes, 519; dam Emily (dam of 3 in 230 list) by the great Geo. Wilkes 519; 2d dam, Sue Stout (dam of Alexis 2:18) by Ashland 47. Sire of Ned Thorne, 2:11 1/2; Lady Thornhill, 2:17; Briarhill, 2:18 1/4; Great Stakes 2:30; Minnie B., 2:29 1/2.

Will make the Season of 1904 at MILPITAS.

FEE, \$25 For particulars address **JAS. BOYD, Milpitas Cal.**

BONNIE DIRECT 2:05 1/4

By Direct, 2:05 1/4; dam, Bon Bon, 2:26, by Simmons.

Will make the Season of 1904 at PLEASANTON, CAL.

Mares not proving to be in foal can be returned free of charge or fee refunded at option of owner of mare.

C. L. GRIFFITH, Pleasanton, Cal.

CASSIAN—Bay Horse, foaled February 9, 1901.

Sire, Mendocino, 2:19 1/2, sire of Monte Carlo, 2:07 1/4, Idolita, 2:09 1/2, etc.; son of Electioneer 125. Dam, Cressida, three-year-old record 2:18 1/2, by Palo Alto, 2:08 1/2; second dam, Clarabel (dam of three in the list), by Abdallah Star, third dam by Hambletonian 10.

Cassian is a high class three-year-old in size, looks, style and speed.

Will make the Season of 1904 at PLEASANTON RACE TRACK.

Address **JAMES COFFIN, 132 Market St.,**

FEE, \$50. **San Francisco, Cal.**

No Horsebreeder can afford to be without this speed-transmitting, virile blood.

CONIFER—Sired by Lord Russell 4677

Dam, Carlota, by Nutwood 600, 2:18 1/2, sire of 170 standard performers. Sire of Anna J. (P) 2:16 1/2; trial, 2:10; Johnnie Trouble, 2:15; trial, 2:10; Chloe (P), 2:13; Bonnie Russell, 2:14 1/2; trial, four-year-old.

Conifer was bred by Hancock M. Johnston, Los Angeles, 1889. Is a rich bay, weighs 1200 lbs., perfect in conformation and disposition, is prepotent to a degree. He combines in himself more Miss Russell blood than any other horse in the world, being sired by one distinguished son and sire—Lord Russell, (sire of Kremlin, 2:07 1/2), and his dam, Carlota, by Nutwood 600. Miss Russell's greatest son, thus giving Conifer her double cross. Miss Russell, the greatest dam of trotting horses of all time, transmits her extreme speed through her sons and grandsons and their get, as instanced by Kremlin, Mount Russell and Couifer, all sires of early and great speed. Conifer's beauty, ability to reproduce his good temper and conformation as well as speed, make him peculiarly desirable as a sire of roadsters and carriage horses.

Will make Season of 1904 at PASADENA and LOS ANGELES.

Address **CHAS. E. GREEN, Manager, 231 So. Pasadena Avenue,**

FEE, \$50. **Pasadena, California.**

GEO. W. MCKINNEY—Record 2:14 1/4.

By McKinney, 2:11 1/2. Dam Lady Washington, 2:35 (dam of Geo. W. McKinney, 2:14 1/4; Elmolino, 2:20; Idle Gossip, trial 2:25; Washington McKinney, trial, 2:22 1/4; Isaac, 2-year-old, trial, 2:35). By Whipple 835, grandam Lady Mayberry (dam of Dubec, 2:16, etc.).

Will make the Season of 1904 at SANTA ANA, Orange Co., Cal.

from January 1st to July 1st. For further particulars address

FEE, \$30. **F. R. GARNSEY, Santa Ana, Cal.**

GOSSIPER, Jr.

By Gossip, 12008; record 2:13; (Sire of Gazelle, 2:11; Miss Jessie, 2:13; Ketcham, 2:16; and four others in the list, and dams of Zolock, 2:10; Zephyr, 2:11; Cuate, 2:13, etc.). Dam Virginia Vasto, by Vasto. Owners of good mares can make no mistake in patronizing this highly-bred and handsome horse.

Season of 1904 at Brown's corner, near Woodland.

SERVICE FEE, \$25. **JOHN NORTON,**
Woodland, Cal.

GUY MCKINNEY—37625

By McKinney, 2:11 1/2 (sire Coney, 2:02; to others in 210 list, all trotters but 2) and 25 in 215 list; 1st dam, Flossie by Guy Wilkes; 2d dam, Blanche Ward by Onward; 3d dam Blanche Patchen by Mambrino Patchen; 4th dam, Lady Blanche by Hoaglands Privateer; 5th dam, Jenny Lind, by Abdallah 15; 6th dam by Saltram, a pacer who sired Highland Maid, 2:27, the world's record in 1855.

Season 1904 at PLEASANTON RACE TRACK.

Address all communications to

TERMS, \$40. **BEN. CHEBOYA, Pleasanton, California.**
F. table before removal of mare.
With usual return privilege.

LIST OF STANDARD BRED STALLIONS THAT WILL MAKE THE SEASON OF 1904 IN CALIFORNIA

Speed, Breeding and Individuality FOR SALE.

RITA H. 2:11 1-4

Pacing Mare by McKinney 2:11 1-4

ELECTRO MCKINNEY

Brown Colt, Three-Year-Old Trotter by McKinney 2:11 1-4

RITA H. is a dark brown mare who stands nearly 16 hands high, and will weigh in racing trim about 1050 lbs. This mare has had this year a very remarkable record. She started in the North-western Circuit in the States of Oregon and Washington, and out of eight starts won her first seven races and only lost four cents during the entire circuit, and has a pacing record of 2:11 1/4. The mare is five years old and is excellent on the road. She does not pull or lug, and a lady can drive her anywhere. Last spring she trotted a workout mile in 2:18 1/2 and repeated in 2:16 1/2, after only seven weeks' work. Her owner has driven her in 2:12 1/4 in the Los Angeles Driving Club races, she having won all of them in which she started. This mare can step two bents below 2:10.

ELECTRO MCKINNEY is a brown stallion foaled in 1900, and stands 15 bands 1 inch in height. He trotted a full mile as a two-year-old in 2:31 1/4, last quarter in 35 seconds, and when a three-year-old a full mile in 2:21 1/4, last quarter in 32 seconds. He is perfectly gaited and a grand individual in every respect. Weighs about 950 lbs. ELECTRO MCKINNEY is bred in the purple, and is one of the best sons of McKinney alive to-day. McKinney is undoubtedly the greatest sire for his age, living or dead. ELECTRO MCKINNEY was not used this year, being only a three-year-old and not entered in any stakes it was decided to hold him over.

These horses are all right and there is not a thing the matter with them, but my business demands are such that I cannot afford to devote any time to racing them. For prices and further particulars address

BYRON ERKENBRECHER,

301 CURRIER BUILDING, LOS ANGELES, CAL.

Or Inquire at Office of BREEDER AND SPORTSMAN.

On Broken Down, Weak, Sprained and Ruptured Ligaments and Tendons Its Power is Unfailing.

No Man need see his Horse suffer and become incapacitated.

"SAVE-THE-HORSE" POSITIVELY AND PERMANENTLY CURES BONE AND BOG SPRAIN, THOROUGHPIN, RINGBONE (except low ringbone), CURB, SPLINT, CAPPED HOCK, WINDPUFF, SHOE BOIL, WEAK AND SPRAINED TENDONS, AND ALL LAMENESS.

"SAVE-THE-HORSE" cures without sear, hlembst or loss of hair; can be applied anywhere and in all conditions and extremes of weather. Horses may be worked as usual with splin or ankle boots, as no harm can result from destruction of hair or scalding of limb.

Cured horses are absolute certainties as to the possibility of the remedy for your own case. Such results, as shown in our booklet, by business men whose reliability can be readily ascertained, have carried "SAVE-THE-HORSE" over skepticism, prejudice and uncertainty. Send for the booklet and copy of written guarantee, which is as binding to protect you as the best legal talent could make it.

\$5.00 PER BOTTLE.

Written guaranteed with every bottle. Need of second bottle improbable, except in rarest cases. If your case is different we advise frankly as to possibility of the remedy effecting a cure. Give veterinarian's diagnosis, if he is competent. Describe age, development, location of swellings, lameness, and way horse carries and holds leg.

\$5.00 a bottle at all druggists and dealers, or sent express prepaid.

THE \$60,000

DAN PATCH 1:56 $\frac{1}{4}$

CHAMPION PACING HORSE of the WORLD

[Without Hopples, Wind-Break, Etc., Etc.]

EATS

3 FEEDS FOR ONE CENT EVERY DAY.

"International Stock Food" greatly aids Digestion and Assimilation so that More Nutrition is obtained from all grain eaten. It "tones up" and Permanently Strengthens the entire system and Purifies the Blood so that disease is prevented. Every \$3.50 pail of "International Stock Food" is positively guaranteed to save \$7.00 worth of grain. It will cause your Race Horse to have more speed and endurance. It will make your Carriage Horses healthy, fat and beautiful. It will give your Show Horses more life and action and make them glossy. It will make your Work Horses strong, healthy and of great endurance. It will make your Stallions and Brood Mares surer, and your colts will be better and grow and develop more rapidly. "International Stock Food" is absolutely harmless even if taken into the human system. It is prepared from Roots, Herbs, Seeds and Barks and is fed in small amounts as an addition to the regular grain allowance. It is equally profitable when fed to Horses, Cattle, Sheep, Hogs, Colts, Calves, Lambs or Pigs. It will make you a large extra profit when fed to your stock for Growing, Fattening or Working. It will increase milk 15 to 25 per cent. in Cows, Mares, Sows or Ewes, and only costs **3 FEEDS FOR ONE CENT.** A Dan Patch colt commanded \$5,000 at eight months of age. He looked like a yearling and was beautiful, strong and vigorous. The dam was fed "International Stock Food" before and after foaling, and the colt as soon as it would eat. Dan Patch became the World's Champion Harness Horse nine months after commencing to eat "International Stock Food" every day. If it is good for such horses don't you think it would pay you to test it on yours? Our "International Stock Food Farm" contains 650 acres, 12 miles from Minneapolis, and on it we own Dan Patch 1:56 $\frac{1}{4}$ Directum 2:05 $\frac{1}{4}$, Roy Wilkes 2:06 $\frac{1}{2}$, and a band of brood mares. They all eat "International Stock Food" every day. **BEWARE OF IMITATIONS and SUBSTITUTES.** There are many worthless imitations on the market, put out by people who seem to think that the way to start a business is to steal as much as they can from some prominent firm. No chemist can separate and name all of the ingredients used in "International Stock Food," etc., and any chemist or manufacturer claiming to do so must be an ignorant or a falsifier.

A BEAUTIFUL DAN PATCH PICTURE FREE

We have a very fine, large lithograph of Dan Patch with the great driver, M. E. McHenry, in sulky. This Lithograph, Printed in Six Brilliant Colors, is one of the finest and most attractive horse pictures ever published. It is 21x28 and printed on heavy paper suitable for framing.

We Will Mail You One Copy Free, postage prepaid, if you will Answer Two Questions.

1st.—Name This Paper. 2d.—State How Much Stock You Own.

Answer these questions in a letter or on a postal card and we will mail at once.

Write at once before the offer is withdrawn.

Dictatus Medium 32499

Will make the coming season at
Race Track, Hollister, Cal.

Jos Sanchez in charge

\$40 FOR THE SEASON.

Payable at time of service, with usual return privilege. Every care taken to prevent accidents, but no responsibility should any occur. Prompt and careful attention in all cases. Pasturage furnished to mares sent from a distance at \$2.50 a month.

A DICTATUS MEDIUM PURSE OF \$100.

I will give a purse of \$100, with entrance money added for a race, best two in three, open to any and all colts from the breeding season of 1904, either pacers or trotters. Must be three to start and race to come of on Hollister track, Fair week, 1907 (Exact date to be hereafter announced.) \$5 entrance money, payable June 1, 1905. \$5 thirty days before the race. Three moneys: 60 per cent to first horse; 30 per cent to second and 10 per cent to third. For further particulars, address

R. P. LATHROP, Hollister.

DESCRIPTION.

DICTATUS MEDIUM is 6 years old, weighs 1230 pounds. A beautiful turned bay horse with heavy mane and tail, kind and gentle, with a perfect disposition. Good flat heavy bone. He has great power and speed. Has a record of 2:24, but has worked out in 2:12. He is a horse that will go out any day and do his best. His colts are models of grace and beauty. Only one so far has been worked. This one, Al Willson's yearling LITTLE MEDIUM, paced an exhibition 1/4 mile on the Hollister Race Track in 38 1/2 seconds, a 2:33 gait. This colt has great promise.

DICTATUS MEDIUM is by Dictatus 2:17, one of the best bred and fastest horses ever brought to California. The dam of Dictatus Medium is Belle Medium (dam of Sam B. 2:14 1/2), by Happy Medium, grandsire of the dam of Lou Dillon 1:58 1/2. His second dam is Argenta by Almont Lightning, sire of the dam of Zombro 2:11. There is no doubt but Dictatus Medium will prove to be a sire of speed as well as good size, style and disposition.

A Sidney Stallion With Earning Capacity FOR SALE.

In pursuance of my intention to retire from the business of breeding horses, and having disposed of all my broodmares at auction, I now offer at private sale the stallion

WILLIAM HAROLD 2:13 1-4.

His sire is the great Sidney 2:19 1/4, grandsire of the champion trotter of the world, Lou Dillon 1:58 1/2, and his dam the great race and broodmare Cricket 2:10 (dam of four in the list) by Steinway, the greatest son of Strathmore.

WILLIAM HAROLD is a producer. The only two of his get to start are that wonderfully fast trotter Janice 2:08 1/2 and the pacer Dan Burns 2:15. WILLIAM HAROLD'S services in the stud were very limited up to three years ago, as he was raced. His weanlings, yearlings and two-year-olds are very promising and have size, good looks and great natural speed, besides being uniform in color, nearly all bays. He is a sure foal getter, is in the very best condition, sound and healthy, and with ordinary good business management can earn in the stud in 1904 the price asked for him.

For tabulated pedigree and full particulars, address

OF BREEDER AND SPORTSMAN.

HEALD'S SCHOOL OF Mines and Engineering

The most practical School in the West. Strikes right at the core of things. Students prepared for shop and field in the shortest possible time.

Any course or group of studies may be selected.

The Civil Engineering Course includes: Geometry, Trigonometry, Draughting, Strength of Materials, Surveying, etc.

The Mining Engineering Course includes: Assaying, Blow-Pipe Analysis, Mill Construction, Milling, Mining, Geology, Mineralogy, Economic Geology, Surveying, etc.

The Metallurgical Course includes: Chemistry, Assaying, Metallurgy, Calorifics, etc.

School open the entire year, day and night. Send for catalogue. Address,

E. P. HEALD, President

Vol. XLIII.

No. 26

San Francisco, Saturday, December 26, 1903.

CHRISTMAS CHEER that is genuine comes to harness horse breeders of America at this glorious holiday time. A season of achievements unparalleled has just closed; the two minute trotter, not only one, but three have appeared, and breeders from California to Main are resolving to breed still more and still faster ones. The trotting horse has not only kept his place as the favorite animal in the hearts of Americans, but he is so firmly enthroned that his place is permanent. He is the horse of business as well as pleasure, and he is owned and used by men, women and children in every walk of American life. In the evolution of the horse the American trotter is destined to stand as the very acme of the equine species, if he has not already reached that proud position. In the production of the long looked for two minute trotter California occupies the foremost place. In this State was bred Lou Dillon, the first to reach that mark, and her sire and dam. Here was also bred the sire of Major Delmar, the second horse to trot a mile in the time that but a few months ago was considered by many to be beyond the achievement of a trotting horse. In the list of eight trotters that have beaten 2:05 this land of sunshine has produced three, and the sires of two more. No further proofs needed to show that California is the place par excellence to breed the highest type of the horse. It is also the best place in the world to develop him. Horses can be worked every month in the year and there are more and better training tracks here than in any place of like population in the world. Nearly every county has its mile track with good box stalls and every convenience for working horses. There are good regulation mile tracks at Chico, Red Bluff, Marysville, Colusa, Willows, Woodland, Santa Rosa, Petaluma, Napa, Vallejo, Concord, Eureka, Ferndale, Alameda, Oakland, San Francisco, Tanforan, San Jose, Hollister, Salinas, Sacramento, Stockton, Fresno, Bakersfield, Hanford, San Bernardino, Los Angeles, Santa Ana, San Diego and Santa Barbara, and all are well fitted with grandstands and all the necessary buildings for holding race meetings. California is a horse country and in breeding and training trotters and pacers it stands in the very front rank. In harness racing, however, during the past few years California has not occupied a very prominent place. Years ago, when the county fair was about the only amusement afforded the people in the farming sections, the State was divided into Agricultural Districts in which fairs, aided by State appropriation, were held every year. A part of the program was horse racing, and the trotting horse people finally came to depend upon these fairs to provide a circuit of harness racing. In 1893, when all business, and especially horse breeding, was suffering from low prices and little demand, the State appropriation for fairs was discontinued and as a consequence the harness circuit was broken up. After two years the appropriations were restored, but they were again cut off in 1903 and this year there was not enough racing to be called a circuit. The Pacific Coast Trotting Horse Breeders Association gave one of the best meetings it has ever held however, using the track at Petaluma, and there were smaller meetings held at a few towns. While harness racing did not amount to much in California this year, the meetings held taught the harness horse people that it is not only possible to give profitable meetings without the adjunct of county fairs or State aid, but that the only way to make an annual circuit certain is to organize associations at the principal towns and make up one. This can be done and should be in time for the racing of 1904. The Breeders association has called a meeting of its Board of Directors for Monday, January 4th, at which time a program of stakes and purses for its 1904 meeting will be arranged and announced

and it has extended an invitation to all track managers and representatives of district associations in California to meet with the Directors and see what can be done to arrange a circuit of harness racing that will be worth while. The Breeders will give the best program and the best meeting that it has for years past and all that is needed is co-operation on the part of track managers and some of the district boards to make the season of 1904 one of the brightest in the history of California harness racing. The outlook is bright for breeders and owners of harness horses all over the country. May everyone have a Merry Christmas and a Happy New Year and may those in California get a liberal share of the good things that are to be distributed to the winners in 1904.

THE FINAL SALE of Palo Alto Farm horses will be held at Fred H. Chase & Co.'s salesyard, January 14th. This is positively the last of the horses on the great farm that will be sold by auction. There are eighteen yearlings, foals of 1903, one two year old, two four year olds and a couple of brood mares. They are by the greatest of California stallions and out of the best mares of Palo Alto farm. There are six McKinnoys, five by Nutwood Wilker, two by Mendocino, three by Monhells, one by Nazote and one by Iran Alto. The mares are by Dexter Prince, Piedmont and Electioneer. This is the very last opportunity to get colts or fillies from the once great farm. At the same time and place Chas A. Durfee will sell four head of young McKinnoys to close out a co-partnership, and Geo. Fox of Clements, Cal., will sell his grand young stallion Daedalion 2:11, son of Diahlo and the great brood mare Gracey by Buccaneer. This sale should attract the attention of every breeder in California. It furnishes an opportunity that will not be offered for many a day.

Winter Polo in California.

Burlingame seems without doubt to be getting more and more the center of winter polo. Players from England, France and the Eastern States are coming each year in larger numbers. This season Mr. C. Raoul-Duval is already here representing the French element and his brother Maurice is expected shortly. Mr. Ezra is here from London and India, while Messrs. Frank Jay Mackay, C. Garland Capt. Neil Haig and Mr. Gill are to be here next week to challenge for the Pacific Coast championship. Mr. Mackay is already known here having played on two of the Hurlingham teams, being beaten the first time and winning the championship the second. Mr. Mackay plays No. 2. Mr. Gill is the manager of the Ranelagh Club, with Hurlingham the largest polo club in England and that means anywhere. Capt. Neil Haig belongs to the Innis Killin Dragoons, one of the best polo regiments, for several years winners of the military championship. Capt. Haig and Mr. Gill play Back and No. 3.

Mr. Mackay has twenty ponies ready to play awaiting his arrival in the southern part of the State. Messrs. Driscoll and Dunphy each have a large string of very fine looking ponies, most of them thorough-

L. McCreery, C. Dunphy, J. O. Tobin and C. Raoul Duval.

R. M. Tobin, Mr. Ezra, E. W. Howard and J. Lawson.

Mr. Driscoll, W. A. McCreery, Cyril Tobin and F. Carolan.

Last year at this time it would have been difficult to get up two teams.

Mr. F. C. G. Menzies, who was missed last season and will be remembered as having played No. 2 on the Hurlingham team is expected here early next month. W. S. Hobart sails for home on January 13th and expects to be playing here in February.

Burlingame and San Mateo have now three polo fields which allows playing to go on in nearly any kind of weather. The club field and the Crossway Farm field are both full size, and the latter is one of the prettiest polo fields to be found anywhere. When visitors are seated on the porch of the charming pavilion watching a polo match on one of our fine winter days it is hard for them to realize that it is not May or June instead of January or February. The owner, Mr. Carolan, deserves the hearty thanks of the community for all he has done to help and foster sport.

The third field at Mr. W. C. Clark's place is rather too small for anything but practice games, but he is about to enlarge it. Mr. Rudolph Spreckels, though not a polo player himself, takes a great interest in the game and in the breeding of ponies, and has, or is about to make a polo field at his place in Sonoma.

Mr. R. M. Tobin is also one of the local men whose interest in the game has had much to do with its successful establishment here. To Mr. Lawrence McCreery's exertions are due, in a great measure, the cosmopolitan aspect of our winter polo. At his suggestion Mr. Chas. Wheeler, of Philadelphia, and Mr. T. C. G. Menzies, of Scotland, came out and made possible the first Hurlingham team.

The last week in March has been set aside for the Pacific Coast championship games, when the following teams are expected to compete. One from Honolulu; one from Hurlingham, England; one from Rugby, England; one from Southern California; two local teams and probably one Eastern team, making seven teams to cut in for the championship—more than twice the previous number.

In February Hotel Del Monte at Monterey is to have a week of polo tournament and pony racing and over a thousand dollars are to be given out in prizes.

Mr. John Lawson, though a Britisher, can in a certain sense be claimed as a Californian player, having learned the game out here, and his success in England last season when he played on the winning team at Rugby must be placed to the credit of our polo.

From the above statement it is easy to see that the season of 1904 promises to be most brilliant and to eclipse any previous season on the Coast.

A Sire of Extreme Speed.

The fastest piece of horseflesh that was seen on any of the California tracks this year while the circuit races were on was Alone, the mare that took a four year old race record of 2:09½ in 1902. This

year she did not race, but at the breeders meeting at Petaluma she was sent a half mile against the watch, simply for the pleasure that it would afford the large crowd present and stepped the distance in 0:59½, better than a two minute gait. Two months later over the San Jose track she stepped an eighth in 13½ seconds, and there is little doubt but a mile in two minutes is within her reach. The sire of this speed marvel is the stallion Nearest 2:22, whose likeness appears herewith. He is owned by Mr. Theo. W. Barstow of San Jose and is an own brother to that great trotter John A. McKerron 2:04½, being by Nutwood Wilkes out of the great brood mare Ingar by Director. John A. McKerron is the fastest trotter in the male line of all the great Wilkes family. Nearest is a grandly formed horse, and sires speed with size and good looks as uniformly as any stallion in America. As a race horse he was game and much faster than his record. He has as perfect a disposition as it is possible for a stallion to have, and is intelligent and full of life and vigor. A lady can drive him, yet he is as bold and fearless as a lion. Without an exception his colts show speed, and there are several youngsters by him now at San Jose that are models. He combines the blood of the two greatest race winning families—Wilkes and Director—and those who send mares to him in 1904 will make no mistake. It is from just such horses as Nearest 2:22 that will come the competitors in the two minute classes of the future.

NEAREST 2:22

breeds.

Though Mr. W. S. Hobart is abroad the local players are reinforced by Messrs. Driscoll, Dunphy and Walter McCreery, none of whom were playing here last year.

On New Year's Day a tournament for three teams for cups offered by the Burlingame Club will begin. The teams as at present arranged are:

Cresceus 1:59 3-4, Champion Trotting Stallion

To Announce Stakes for 1904.

A meeting of the board of directors of the Pacific Coast Trotting Horse Breeders Association will be held at the office of the secretary, 36 Geary Street, San Francisco, Thursday afternoon, January 7th, 1904, at 2 o'clock instead of January 4th as stated on the editorial page of this issue. The meeting is called for the purpose of arranging and announcing a series of early closing stakes for the race meeting of the association the coming season and to take measures to secure a circuit of harness meetings next year in this State. Representatives of the district associations and all others interested in race meetings in California are requested to attend this meeting of P. C. T. H. B. A. directors.

It is highly important that places contemplating giving meetings announce their intention and select dates immediately, as the assurance at this time of the year, of a number of good race meetings in California the coming season, will be an inducement to owners to train horses and race them here instead of campaigning them outside of the State. The urgency of this matter should impress itself on all parties interested and it is greatly to be desired that the different associations and race tracks be represented at this meeting.

New Standard Records.

The following horses made new or reduced their former records on the California circuit in 1903:

Table listing new records and reduced records for trotters and pacers. Includes names like George G., Deputy, Sproul, Gertie H., Black Jack, Tuna, Little Branch, Almaden, Dan Fraser, Fancy, Dollexa, Emmy Lou, Bertha R., May Ayers, Rosie Woodbury, Ole, Louise Croter, Zombowette, Lady Zomhro, Mamie Elizabeth, Tom Smith, Hoilo, Trilhy, Sister, and presa Basler.

Table listing various horses and their records, including Col. C., Seymow, Edwin S., Demonio, Ira, Mabel C., Atbby, Young Monterey, Nellie R., Sister Patty, and San Lucas Maid.

REDUCED RECORDS—PACERS.

Table listing reduced records for pacers, including Ben F., Cuckoo, Monroe S., and Dan Burns.

The following horses, many of them bred in California, made new records or reduced their records on the Oregon and Washington Circuit:

NEW PERFORMERS—TROTTERS.

Table listing new performers for trotters, including Sweet Marie, Idyllwild, Red Skin, Louis Z., St. Patrick, Dr. Hammond, Swift B., Getaway, Deputy, Beladi, and Belle Storm.

PACERS.

Table listing pacers, including Tidal Wave, Reta H., Ama A., Portia Knight, High Ball, Prince Tom, Bensusurba, Hallie Hinges, Economizer, Polka Dot, Vision, Oregon Maid, Osmont, Josie Fontaine, Glengary Patchen, and Glendella.

RECORDS REDUCED—TROTTERS.

Table listing reduced records for trotters, including Briney K., Mar Boy, Helen Norte, Coronado, Package, Master Delmar, The Commonwealth, Onward, and Mack Mack.

PACERS.

Table listing pacers, including Christobel.

Table listing horses and their records, including Ollie M., Martha B., Harry Hurst, Francisco, and Monroe S.

Occident Stake.

The second payment on the Occident Stakes has been made on the following that were sold from the Santa Rosa Stock Farm in 1903. Purchasers of these please note the fact and if they desire to continue making payments notify the secretary of State Agricultural Society, Sacramento. The third payment of 1904 is due January 1, 1904. All by McKinney out of the mares Carlotta Wilkes, Biscara, Stamboulits, Rose Russell. The following Sidney Dillons out of Lilly Stanley, Guycara, and Adioo and two by Marengo King, one out of Palo Belle, the other is out of Paceta. These five are entered in the Occident Stake of 1905, second payments on which are also due January 1, 1904.

Nutwood Wilkes 2:16 1/2, the sire of John A. McKerron 2:04 1/2, is the sire of seven 2:15 performers.

Includes the text 'Horse Owners', 'Look to your interests and use the safest, speediest and most positive cure for ailments of your horses...', 'GOMBAULT'S CAUSTIC BALSAM', 'Prepared exclusively by J. E. Gombault, Veterinary Surgeon to the French Government Stud.', an illustration of a horse, and 'SUPERSEDES ALL CAUTERY OR FIRING.' The ad also includes a detailed description of the product's benefits and contact information for The Lawrence-Williams Company, Cleveland, Ohio.

FROM DEXTER TO KINNEY LOU

Forty years ago a young man from Pennsylvania rode into fame on the back of a trotting horse called Dexter. Hiram Woodruff, the great trainer and driver and author of that fascinating book "The Trotting Horse of America," had trained and driven Dexter in many races and when the owner of the mighty son of Hambletonian engaged Doble to train and pilot the great trotter in his races, Mr. Woodruff wrote as follows in his book of the transfer:

"When Dexter left my stable Mr. Trussell selected for his future trainer and driver Budd Doble, a young man of high character, good intelligence and much experience for his years. He had been among trotters from the time that he was a little boy, his father being a trainer and driver; and Budd himself was everywhere esteemed as one of the very best riders in the country."

In the early part of the winter of 1866-67, Mr. Woodruff wrote as follows among the last leaves of his book:

"Dexter is passing the winter at Baltimore and from all that Doble tells me he is likely to come out fine in the spring. It is unnecessary to recapitulate his performances since he left my stable. I believe I have given them all; and it occurs to me that I ought to call public attention to the integrity and capacity with which Doble has trained and driven him. The owners of Dexter were fortunate in selecting this young man for the post; and the public were fortunate that some persons did not get hold of the horse and use him for plundering the people. Great as the achievements of Dexter have been, I can see no reason to believe that he has yet reached his highest development. It is a long time now since I took Mr. Foster to his box, and pointing out his very remarkable shape—the wicked head, the gamecock

Budd Doble and Dexter at Point Breeze Track in 1867.

health compelled Doble's retirement from the sulky, but California climate and sunshine during the past few years has renewed his health, and this year he again took the reins in his hands and with Kinney Lou, a green son of McKinney, raced through the Grand Circuit and gave the stallion a mark of 2:07½ in the second heat of a race. A graphic picture of the finish of this heat is given herewith, and it is re-

years younger. During this winter he has been residing with his daughter in the beautiful suburban town of Alameda, and his time is much occupied with his little grandchild, a year and a half old hoy who, as is shown in the snapshot on this page, has thus early taken to "playing horse" with "Grandpa" Doble for a driver. The writer of these lines took this snap when Mr. Doble was not aware that the camera was

Budd Doble Winning the Deciding Heat of the \$5000 Stake at Empire City Track, August 12, 1903, with Kinney Lou in 2:07 3/4

trouble, the immense depth over the heart, the flat, oblique shoulder laid back clean under the saddle, the strong back, the mighty haunches square and big as those of a cart horse, and the good wiry legs—predicted to him that there stood the future Lord of the Trotting World. That prediction has not yet been wholly fulfilled, but my faith in its accomplishment is not at all shaken. He has not beaten the 2:19½ of Flora Temple; nor has he beat the 2:25 to wagon which stands to her credit and to the credit of Geo. Wilkes; but I can see no reason to doubt that to do both these things is clearly within his capacity."

Hiram Woodruff died in the middle of March, 1867, and therefore the grass had not grown upon his grave when these predictions in regard to Dexter had been fulfilled. Budd Doble drove him in 2:19 at Boston, July 30th and two weeks later at Buffalo lowered the record to 2:17½, a mighty achievement for the time.

In 1871 Budd Doble again reduced the record, this time with that wonderful mare Goldsmith Maid and she lowered Dexter's record a quarter of a second and then by easy gradations continued the reductions until 1874 when at Mystic Park, Boston, she placed the mark at 2:14.

Rarus, St. Julien, Jay Eye See, Maud S. and Sunol then wore the crown successively until 1892, when Budd Doble again came to the front with Nancy Hanks and put the trotting record at 2:07½ at Chicago in August of that year, reducing it further to 2:05½ at Independence a few days later, and then in September at Terre Haute, placing it at 2:04. Soon after that ill

lated that when Doble dismounted after winning it, the veteran horseman, Gen. John Turner, said to him, "Budd, that's as good a job as you ever did in your life."

Budd Doble is now in his 63d year, but looks fifteen

A Willing Yearling

to be turned on him, and while the reader might think that the great reinsman, the driver of three champion trotters, was driving the little one, we can assert from actual knowledge acquired on the spot, that the he was being led, willingly and more proudly than he ever felt when seated behind Dexter, Goldsmith Maid, Nancy Hanks or Kinney Lou.

The Leading Hotel.

California's greatest hotel is the Palace of San Francisco. Every feature connected with the colossal caravansary was designed and introduced for a double purpose—surrounding guests with comforts, conveniences and entertainment, and adding to the popularity and reputation of the Palace as one of the great hotels of the world. In the center of the great building is the famous court and off of this are the equally famous grill rooms. For your convenience telephone and telegraph offices, writing and reading rooms, barber shop, billiard parlor, carriage office, news stand and typewriter offices are directly off the court. Outside—the wholesale and shopping district, theaters, clubs, banks and railroad offices are a step from the entrance. The half-tone engravings of a few of the new features of the hotel are shown on the back cover of this paper.

Wilkes Stallions for Sale.

Mr. P. H. McEvoy of Menlo Park is offering several desirable young Wilkes stallions for sale as will be seen by an advertisement in another part of this issue.

OAKWOOD PARK FARM.

Resting partly on the side of that prominent landmark of Central California, Mount Diablo, and extending down over a sweep of pretty and fertile valleys and hills which lie at the mountain's base, are the six thousand acres of land which comprise Oakwood Park, one of California's greatest breeding farms. Naturally it is one of the most beautiful spots in all California, and when it is considered that over \$800,000 has been expended in improvements one can partly realize without seeing it that Oakwood Park is the best appointed of all the stock farms of the Pacific Coast. The residence, the barns, the training stables, the tracks, the paddocks, etc., are all placed with an eye to beautify instead of mar the landscape, and the bird's eye view gained of the farm from any of the surrounding eminences is one of exceeding charm. The fields of Oakwood Park are prolific in

Steinway at 25 Years

growing fruits and grains of every variety. The pasture fields are rich with native grasses to the hill tops, while the lower lying valleys contain alfalfa that is cropped several times a year and furnishes green feed for the stock from one year's end to another.

Oakwood Park has been a successful farm, and a cradle of early and extreme speed. The broodmares selected for it have proved worthy matrons and the Great Broodmare list contains the names of many of them. Katie G. by Electioneer is the dam of H. R. Covey 2:25, Chas. Derby 2:20, Steiner 2:29½, Sunlight 2:25, Klatawah 2:05½ (champion three-year-old pacer) and Katrinka G. 2:14½. Bertha by Alcantara has produced Diablo 2:09½, Elf 2:12½, Ed Lafferty 2:16½, Jay Eff Bee 2:26½ (as a yearling), Demonio 2:11½ and Don Derby 2:04½. Calypso by Steinway is the dam of Ally Sloper 2:28, Best Way 2:29½ and Pussy Willow 2:10½. Inex by Sweepstakes is the mother of Alamo 2:29½ and Our Jack 2:13½. Flash by Egmont gave the

Bertha by Alcantara, one of Oakwood Farm's Greatest Mares

farm Javelin 2:08½, Sallie Derby 2:19½ and Flare Up 2:14. Algerdetta by Allandorf produced Sable Steinway 2:23½, Allandora 2:18 and Christobel 2:11½. Addie Ash by Indianapolis is the dam of Cibolo 2:13½ and Mia Louise 2:15½. Maggie McGregor by Robert McGregor is the dam of Algoreg 2:11, Tyana 2:16½ and W. W. Foote 2:15½. Princess by Administrator produced Neva 2:27 and Derby Princess 2:08½. Tone by Ferguson gave us Agitato 2:09, a champion of his age. None Better by Allandorf produced Much

Better 2:07½ and Little Better 2:11½. We might go on until this page appeared like the Great Broodmare table in the Year Book, for Oakwood Park's matrons are celebrated producers of extreme speed and all the record horses mentioned above were produced by them on the farm and were by the farm's stallions. Of the trotters produced at Oakwood Park that have gained fast records are Derby Princess 2:08½, Owyhee 2:11, Derby Lass 2:14, Our Jack 2:13½, Dr. Hammond 2:12½ and Katrinka G. 2:14½. The pacers are Klatawah 2:05½, W. Wood 2:07, Agitato 2:09, Cricket 2:10, Sylvanway 2:10½, Algoreg 2:11, Free Coinage 2:11½, Elf 2:12½ and Darkway 2:13½, all by Steinway, and Don Derby 2:04½, Much Better 2:07½, Diablo 2:09½, Christobel 2:11½, Demonio 2:11½, Little Better 2:11½, Willie Oshorn 2:12½, Cibolo 2:13½ and Flare Up 2:14 by Chas. Derby.

Oakwood Park's premier stallion was Steinway 2:25½, the champion three-year-old of his time. He is a son of Strathmore out of Abhess by Albion, and his full sister Soprano ranks second only to Beautiful Bells as a speed producer, she having ten in the standard list. Mating Steinway to Katie G. by Electioneer, the farm produced Chas. Derby 2:20, destined to be one of the greatest of all speed sires and already standing well to the front among horses of his age.

Heald's College.

Heald's Business College leads all educational institutions of its kind in the west in keeping up with the progress of the times in business methods and the practical arts and sciences. Every department is thoroughly up to date in all points. It keeps in touch with modern commercial methods and when a student has completed the course in this college he knows that he has acquired an education that can be made immediately profitable as he is fitted to accept a position with every confidence of his ability to fill it with satisfaction to himself and his employer. Each department of the colleges a separate and distinct professional training school and everything appertaining to instruction in that branch is based on the knowledge that those in attendance expect to step from the schoolroom fully equipped for an active career. Business men have been long familiar with the merits of this institution and there is always a large demand for its graduates who have no difficulty in finding situations. More than twenty-five teachers are in the service of this college and they take the deepest interest in the welfare of its pupils, seeking to advance them on all occasions both in and out of school. Visitors are always welcome and those interested in practical education will find much in the college worth seeing. Prof. Heald, the founder, is in active service as president and most of his time and energies are given to the institution he has made the leading commercial school in the West.

The Standard Gas Engine.

Gas and oil engines are rapidly supplanting steam engines for a great variety of purposes, especially where economy in the use of fuel is concerned. One great advantage of a gas or oil engine is that it is almost instantly capable of developing its greatest efficiency of power.

The Standard is the most perfect gas or oil engine that has been placed on the market. It is an engine that is thoroughly reliable and of great efficiency, besides being the easiest to handle and the most economical to run. Every part is made of the best material procurable and of sufficient strength to

stand any possible strain. It is compact and all parts are interchangeable and can be easily replaced. It is equipped with a governor that regulates its speed to a nicety regardless of the load.

If you are in the market for a stationary engine of any size or for any purpose you will find it profitable to write or call on the Standard Machine Works, 117 Main St., San Francisco, Cal. See advertisement in another column.

Strike!—if they don't give you Jackson's Napa Soda when you ask for it.

A Beautiful Filly.

One of the handsomest weanlings in California is the seven months old daughter of Waldstein and Sadie Moor whose photograph taken last week by Huddleston of Oakland has been reproduced and appears herewith. The name which this filly bears is Grace A. Speers, and she is owned by a minister of the Gospel, a gentleman who, to use his own language, 'loves a horse and believes it was created for something better than a gambling tool.' Not that he deprecates speed contests, as he thrills over and glories in them, but he holds that the American trotting horse will reach a fuller development and a greater glory through the amateur contest where all hettling and gambling is barred, than through the race for money, and as proof of his conviction is always ready to cite the case of Lou Dillon, the fastest trotter the world ever saw, who never started in a race for money and is owned by a gentleman who scratched her from \$35,000 worth of stakes which she might have won, and started her simply for the glory of earning the world's record. The minister to whom reference is made is Rev. W. J. Speers of Oak-

Grace A. Speers
Sadie Moor's Weanling by Waldstein

land, who owes Sadie Moor and who bred this filly. Sadie is one of the sweetest, handsomest little mares that ever pulled a buggy. She was raced before Mr. Speers bought her and took a record of 2:26 in the fourth heat over a half-mile track. She stands but 14.2 hands but is a hunch of muscle and vim. Lay the lines on her back and she will jog like a gentle dog through the streets where cars, automobiles, bicycles and all other nerve wracking devices are to be seen and will neither look to the right or the left, but keep "the even tenor of her way." She is a perfectly mannered animal. Take up the lines and call on her for speed and she will "put forth her utmost soul" and show a 2:20 clip. She could take a record of 2:15 to a certainty and should have it. Sadie Moor is by Grand Moor 2274, her dam is Carmine, the dam of Brice McNeil 2:19½, etc., by Poscora Hayward and her second dam is Jenny by Algerine, a son of Whipples Hambletonian. When Mr. Speers bought Sadie Moor for a buggy mare and took her away from Humboldt county there were letters written and articles published in the local papers showing in what esteem the little mare was held. Mr. Speers bred her to Waldstein and got the filly pictured herewith, and Sadie is now in foal to Guy McKinney.

Probably the greatest pony race horse that ever left America is Silver Dick that stands 14.2 hands, yet weighs 1106 pounds. He is owned by Walter Hohart, Esq., of this city, and has met all the crack ponies of England and France and defeated them,

though carrying from 160 to 170 pounds. After a very successful tour he was brought back to this country by his trainer, W. S. Heath of this city, to whom we are indebted for the accompanying picture of the horse.

SANTA ROSA STOCK FARM
BY WM. G. LAYNG

Had anyone prophesied last Christmas that the year 1903 would be more notable in the annals of the trotting world than any that preceded it, the prophet would be looked upon as a day dreamer and be laughed at for his predictions. Nevertheless such a forecast would have proven correct, for on the title page of this Christmas annual are photographs of the heads of three that have torn down the two minute barrier, and the greatest of these is the young mare Lou Dillon 1:58½, the most marvelous trotter that ever lived. Had Vanderbilt, Bonner, Stanford, Backman, Rose or a score more of the trotting-horse enthusiasts lived to see this feat accomplished, how eagerly would they have clasped hands with Mr. Billings and congratulated him upon owning such a marvelous mare.

Since her surprising and successful battles against Father Time were first flashed across the continent interest in her antecedents was aroused and almost every week articles have appeared in the leading newspapers of the United States in relation to her, where she was foaled, her sire, her dam, her training, and last of all, the questions: How did she come by such wonderful speed? Was it natural or acquired by training? Had her sire ever produced any others that were fast?

Lou Dillon 1:58½ was foaled on the Santa Rosa stock farm Santa Rosa, Cal. Her sire, Sidney Dillon, her dam, Lou Milton, and two half-sisters are there at present. In the accompanying illustrations one can obtain a very fair idea of what these members of this famous family are like. They were owned by the late Henry Pierce and his surviving brother, Ira Pierce, who for the past forty years made the breeding of trotting horses a study. The farm contains over 140 acres of the richest soil in the beautiful Sonoma Valley. It is situated about one mile from the Court House in what is known as the "City of Roses." The improvements include one of the finest mile race tracks in California, which is almost entirely protected from the Westerly winds which prevail throughout the summer, by a heavy growth of cypress trees. Inside of the mile track another course has just been completed. It is three-

quarters of a mile in circumference, and was made especially for winter work. Besides these tracks there are over 200 box stalls, cooling-out sheds, barns, paddocks, judges' and timers' stands, pavilions, etc.

Taking it as a desirable spot upon which such an establishment must undoubtedly flourish, the Messrs. Pierce Bros. displayed great taste in selecting and beautifying this pretty place. Sidney Dillon (sire of Lou Dillon 1:58½) has had less opportunities in the stud than any other in California, but before going into details regarding this, let us see how he is bred. The full page, half-tone illustration in this issue gives a faint idea what kind of an individual he is. In color he is a beautiful chestnut, with blaze and hind ankles white. He stands 15.3 hands high, and weighs 1150 pounds. He is so beautifully turned and well-proportioned that one can hardly believe he tips the scale to such a figure, but on a second inspection all doubts are set aside and the impression prevails that "figures do not lie." He was foaled in 1892, consequently he is only eleven years old. His disposition is perfect, a child can handle him. He has neither tricks nor vices.

Sidney Dillon was sired by Sidney 2:19¾, dam Venus, dam of Cupid 2:18 (sire of Venus II 2:11½, Psyche 2:16¼ and Lottie Parks 2:16¼), Adonis 2:11½ (holder of the record for four-year-old pacers), Juno (dam of Ida 2:30 and Mercury 2:21, latter sire of Twinkle 2:05¼, Samartina 2:10¾, Frank Creamer 2:11¾, McClary 2:14½, Mattie C 2:18, Mercury Maid 2:21¼, Norda 2:22¼ and Katie 2:23½), Venus was by Venture 2:27¼ (sire of dam of Directum 2:05¼), son of Williamson's Belmont, who has been appropriately termed "the Mambrino Patchen of the Pacific Coast."

Sidney 2:19¾ was sired by Santa Claus 2:17¼, out of Sweetness 2:21¼ (dam of Royal Guy 2:25½ and the sires Jay Wilk, Lavalard and Saccharine). One of her daughters produced Sweet Director 2:19¼ by Volunteer 55, by Hambletonian 10; second dam Lady Merritt by Edward Everett 81 (son of Hambletonian 10 and a mare by imp. Margrave, etc.).

Santa Claus 2:17¼ was sired by Strathmore 408 (son of Hambletonian 10), out of Lady Thorne, Jr. (dam of Navidad 2:22½, the sires Hinkston Boy, Santa Claus 2:17¼ and Christmas, besides the dam of Appanosee 2:26½, Boabdil 2:21½, Boltaciur 2:24½ and Roslyn 2:15), by William's Mambrino.

The second dam of Santa Claus was Kate by Highland Chief, son of Mambrino Chief II; third dam by McGowan's Halcorn, a thoroughbred son of Virginian by Sir Archy, the most renowned son of imp. Diomed.

William's Mambrino (sire of the dam of Santa Claus 2:17¼) was by Ericson, son of Mambrino Chief II. His dam was by Aratus, thoroughbred son of Director, he by Sir Archy, and his second dam was by Timoleon, another thoroughbred son of Sir Archy.

The dam of Strathmore was by North American, whose sire, the thoroughbred Sir Walter, was by Hickory, a son of imp. Whip, and out of Nettletop by imp. Diomed. Lady Patriot, the dam of Volunteer, was by Young Patriot, whose sire, Patriot, was inbred to old Ducroc, sire of American Eclipse. The dam of Edward Everett was by imp. Margrave.

The descendants of Strathmore, Santa Claus 2:17¼, Sidney 2:19¾, and Sidney Dillon, are known as the greatest money winners as well as about the most consistent trotters and pacers in the history of light harness horse racing. The blood of these sires courses through the veins of Rhythmic 2:06¾ (champion of 1902, winner of \$21,250 in one year), the champion green trotter Baron de Shay 2:08¾, Sir Albert S. 2:03¾, Free Bond 2:04¼, Lena N. 2:05¼, Dolly Dillon 2:06¾, Joe Wheeler 2:07½, Janice 2:08¼, Nerva Patchen 2:08, Klatawah 2:05½, Bumps 2:03¼, Coleridge 2:05¼, Choral 2:06, Dan Q. 2:07½, Wm. Penn 2:07¼, W. Wood 2:07, Hazel Kinney 2:09¼, Agitato 2:09, Diabolo 2:09¼, Clipper 2:06, Dan M. 2:09½, Helen D. 2:09¾, Monterey 2:09¼, Toggles 2:08½, Lena N. 2:05¼, Dr. Leek 2:09¼, Oddity 2:10¼, Sidmont 2:10½, Goldleaf 2:11¼, Adonis 2:11½, Lolita 2:12¼, Maisie Sidney 2:13¼, Wm. Harold 2:13¼, Edna R. 2:11¾, Miss Sidney 2:14, Thistle 2:13¼, Faustino 2:12¼, Venus II. 2:11¼, Alford C. 2:12¼, Dan M. 2:09½, Helen D. 2:09¾, Berdina 2:10¼, Meridian 2:12¼, Simassie 2:11¼, Twinkle 2:05¼, Much Better 2:07¼, Silver Prince 2:08½, Emma M. 2:09¾, Derby Princess 2:08½, Ithurier 2:09¼, Fred W. 2:08½, Dan Cupid 2:09¼, Ambulator 2:09½, Alves 2:09½, Fereno 2:05½, Ruby Mac 2:08½, Sophia 2:09¾, E. Powers 2:08½, Connor 2:03¼, Dr. Monica 2:09¾, Strathberry 2:04¼, Antheo 2:10, and Dolly Dillon 2:06¾, the fastest trotting mare of 1901, also Lou Dillon 1:58½, the fastest trotter in the world.

Sidney Dillon was endowed with speed. He trotted miles over the Santa Rosa track in 2:22, quarters in 33 seconds. It was late in the season and nothing in the

of the estate have received numerous letters expressive of the writers' enthusiasm over the "prospects" they have.

BROODMARES ON THE FARM.

Lou Milton is twenty-two years of age and was sired by Milton Medium 2:25½ (son of Happy Medium). The pedigree of the dam is unknown. She was a fast mare owned by the late W. C. Ralston, Lou Milton is the dam of Redwood 2:21 (a sire); Ethel Mack 2:25 and Aileen 2:26¼ (dam of Mowitza 2:20½ and Sister 2:20½), all by Anteco 2:16¼; a gelding and a filly by Bay Rose 2:20½, the latter being at Mr. Pierce's farm at Santa Barbara; Bravo, never trained, by Beau B.; Lou Dillon 1:58½, the queen of the turf; Mildred Russell, a four-year-old by L. W. Russell, and Cornelia, a two-year-old, by Beau B., 2:16½. Lou Milton is believed to be safe with foal to Sidney Dillon.

By By (dam of Marengo King 2:29½ and L. W. Russell, a sire), a beautiful bay mare, a sister to Lockheart 2:08½, sired by the great Nutwood 2:18¾ out of Rapidan (dam of Lockheart 2:08½ and three others in 2:30 list) by Dictator; second dam Madame Headley (dam of Expert Prince 2:13¼, etc.) by Edwin Forrest. By By has a filly by Sidney Dillon at foot and is in foal to this horse again.

Carlotta Wilkes, bay mare (dam of Volita 2:15¼ and Vallotta, a sire) sired by Charley Wilkes 2:23¼, son of Red Wilkes, dam Aspasia (dam of three) by Alcantara 2:23; second dam Miss Buchanan (dam of Escape 2:26¼) by Clark Chief, etc. She has a filly by Sidney Dillon at her side and is in foal to this horse again.

Stamboulita 2:27 by Stamboul 2:07½, out of Biscari (dam of four) by Director 2:17; second dam Bicara (dam of six including the great Pancoast 2:21¾) by Harold; third dam Belle (dam of Belmont, sire of Nutwood 2:18¾, etc.) by Mambrino Chief, etc. Stamboulita is safe in foal to Sidney Dillon.

By Guy, a beautiful brown mare by Guy Wilkes 2:15¾, out of By By, has a handsome colt at foot by Sidney Dillon and is in foal again.

Adioo, her sister, has a strongly-made Dillon colt at foot and is in foal again to the sire of extreme speed.

Guyara 2:18¾ is another daughter of the famous Guy Wilkes 2:15¾, but she is out of Biscari by Director 2:17, second dam Bicara. She has a chestnut colt and is in foal again to the great Sidney Dillon.

Biscara, the granddam of the above mare, is one of the greatest producing daughters of the mighty Director 2:17, being the dam of Stambold 2:18¼, Inferna 2:24¼, Stamboulita 2:27 and Guyara 2:18¾. She is out of

Santa Rosa Stock Farm—View of Tracks and Buildings, looking north

way of training him was carried on thereafter.

It is a question whether any stallion on a stock farm had as limited opportunities in the stud as Sidney Dillon. His owners did not advertise him and had three other stallions standing for service. There were only a few mares on the farm, hence the patronage of each was very limited. From the records on the books he had in 1895 four foals, 1896 two, 1897 four, 1898 two, and 1899 three—fifteen in all that are older than three years. Of the four foals of 1895, following is the showing:

Dolly Dillon 2:06¾, the greatest money winner of 1901, a mare with as much speed as Lou Dillon, had she been specially prepared for breaking the world's record. Stanley Dillon, trial 2:09, last half in 1:01½, now in Ed Geer's care. Captivity 2:28½, trial 2:14½, and Sidetta, not trained. 1896—Andreas, trial 2:17; chestnut filly, untrained. 1897—B. S. Dillon 2:16¼, trial 2:09½, half in 1 minute; Lucky Dillon, trial 2:24; Lady Dillon, now in training, and Roy Dillon, untrained. 1898—Lou Dillon 1:58½; Maud Dillon, untrained. 1899—Pansy Dillon, Annie Dillon and A. Brutus, untrained.

In 1900 Sidney Dillon had been bred to 13 mares and there are 12 foals. In 1901 the majority of the Santa Rosa mares were sent to the other farm belonging to Messrs. Pierce Bros., situated about 12 miles south of San Jose and Sidney Dillon was only bred to five mares and these all had foals. In 1902 he begot six foals and in 1903 he had seventeen. The aggregate number of living foals to his credit is only 55. Everyone that has been trained or is in training is a credit to him. When it is considered that many of the leading and more prominent stallions average about eighty foals each year and the majority of these are developed and never heard of, is it not a remarkable fact that every Sidney Dillon that has been worked has shown that it has speed of the highest order and their owners are encouraged beyond expression by the showing.

After the death of Mr. Henry Pierce the executors of his estate ordered nearly all of his horses to be sold with the exception of Sidney Dillon, three of his weanlings and some choice mares that were in foal to this sire. The purchasers of the Sidney Dillon colts and fillies are very enthusiastic over them and the executors

Bicara, another wonderful brood mare; in fact she is Harold's greatest producing daughter. Biscara has a well-formed filly at foot and is in foal to Sidney Dillon.

Russie Russell, a bay mare by Bay Rose 2:20½, out of Oakley Russell by Happy Russell, was one of the fastest trotters ever seen at the Santa Rosa race track. She is a perfect individual and has a bright bay filly by Sidney Dillon that is a picture. This broodmare is safe with foal to Sidney Dillon.

Florella Russell, a black mare by L. W. Russell, out of Flora Allen (dam of five in the list) by Mambrino Wilkes, son of George Wilkes 2:22 is another grand looking broodmare. She is in foal to Sidney Dillon.

Viola Allen is another choice mare. She is by Valletta 30840, one of the richest bred young stallions in California (being by George Norval out of Carlotta Wilkes). Viola Allen is out of Mollie Allen 2:20½, sister to that great producer Flora Allen. Viola Allen is also stunted to Sidney Dillon.

It can be seen that the mares are of high-class and everyone has been carefully selected for their qualities as matrons for this horse. That there are some of these little ones that will be well inside the 2:10 list if they get any care and development is a foregone conclusion.

A visit to this well appointed stock farm will repay anyone who is interested in light harness horses and wishes to see the grandest lot of select broodmares ever collected. While not great in numbers they make up for it in quality and with them is Sidney Dillon who will be kept at Santa Rosa Stock Farm this year.

WM. G. LAYNG.

Four Great Fillies for Sale.

As it is my intention to go East in 1904 to race my string of horses, I have decided to sell four standard bred fillies. Two by Rey Direct 2:10, a yearling and a two year old, dam by Anteco 2:16¼. Two by Cbas Derby 2:20, both yearlings, one out of mare by Direct 2:05½, the other out of mare by Alexander Clay. All well broken and show great speed for the amount of work they have had. The two year old is entered in the \$1000 Breeders Futurity for three year olds to be trotted in 1904. Can show quarter better than 40 seconds now. Can be seen at Pleasanton track. Address, H. C. Sanders, Pleasanton.

BREED TO THE WINNERS.

In selecting stallions to breed race winners from it is wise to select those that have been tried and have proven true. The stallions that won races in their day, like George Wilkes and Director are the ones that have founded race winning families and so it will continue to be. The superb horse whose photograph heads this page was one of the greatest race winners the country has produced, and he met the best of the free for all horses of his racing days. Searchlight, besides being the greatest race winning stallion that is standing for service in California, is also the fastest stallion whose services have ever been offered to California breeders. He is by Dark Night, one of the greatest sons of that wonderful sire, Alcyone 2:27, and his dam is that great broodmare, Nora Mapee, dam of four in the standard list. His second and third dams are also in the great broodmare list and carry in their veins the most fashionable speed lines. Searchlight is the fastest stallion by the records that ever stood for service in California and holds two world's championships. His record of 2:04 in a race is the race record for four-year-olds, and his mark of 2:03½ as a five-year-old has only been equalled by Audubon Boy. He is a horse of rare individuality and is pronounced one of the most perfect specimens of horseflesh ever foaled. Two minute aped he can show at any time. He paced a trial in 2:02 in public at Indianapolis, pulling the heavy cart in which he is now daily exercised at Pleasanton, and the last quarter of that mile was paced in 29½ seconds. He is a horse of great substance, great speed and great endurance and a very high order of intelligence.

Searchlight was bred up to July 1st to 80 of the best mares in California and was patronized by the most intelligent and progressive breeders in the State. It is believed that a very large per cent of the mares are in foal, in fact only two of them have thus far been reported as doubtful. All mares sent to Searchlight last season were returned in as good, and the majority of them in better, condition than when they were

SEARCHLIGHT 2:03 1-4

pina by Diablo 2:09½, dam by Allendorf 2:09½; Mollie Markham, full sister to Ottinger 2:09½; Rubato, full sister to Agitato 2:09½; Deana, full sister to Lena N. 2:05½; Bee 2:24, dam of Monroe B. 2:15½; Miss Muffit by Gossiper 2:14½, dam by Woolsey, full brother to Sunol 2:08½; Jemsey, dam of Lady Waldstein 2:15 by the Grand Moor, and others. Searchlight has only six living foals older than weanlings, and every one of them with limited training has shown from 2:20 to 2:00 speed. They are good gaited, good headed, have size, solid color and style, and, harring accidents,

Lecco 2:09½ is a trotter, was a game race horse and a fast one. He is a son of Bonnie Boy, the best producing son of Patchen Wilkes, sire of the great Joe Patchen 2:01½ that has in turn sired another champion, Dan Patch 1:56½. If a breeder wants champion race blood combined with great speed and splendid individuality he will find in Lecco a stallion to his liking. It was in 1899 that this young stallion went down the Grand Circuit, meeting the best horses of the year in his class, starting seven times and winning four first moneys, and two seconds. In the \$10,000 Massachusetts of that year, which was a seven-heat affair, he won second money, taking the fourth and fifth heats in 2:13½ and 2:10½ and being the closest kind of a second to the great Charley Herr 2:07 in the sixth and seventh. Such trotters as Bonnatella 2:10, Surpol 2:10, Fred Kohl 2:07½ and ten others of the best trotters out that year finished behind Lecco in this important event.

The breeding of Lecco is worth considering, as he is an outcross for nearly every mare in California today. His dam, Lucy Homer, is also the dam of Authoress that reduced her record this year from 2:22½ to 2:09½ in a winning race. This makes Lecco the only stallion in California whose dam has produced two 2:10 trotters. She is one of but a very few mares that has this distinction. She is by Homer, a speed producing son of Mamhrino Patchen, the great sire of broodmares and the sire of the great Mamhrino King. The second dam of Lecco is also a producer, Dinnie 2:25, and she is by the producing stallion Rochester that is a son of Aberdeen, grandsire of Anzella 2:06½. His next dam is a producing mare by Clark Chief, whose get are renowned for speed and great endurance. For four generations in the pedigree of Lecco there is not a sire or dam but is a producer of standard speed, and they are all of the stoutest families besides. Lecco is a square trotter with perfect action, he has great beauty and style and will sire fast, game and level headed trotters. Lecco never served a mare until 1903. He was bred to twelve and eleven of them are in foal. He is a coal black horse, 15.2½ hands, weighs 1040, and is called the handsomest trotting stallion in California. He has a perfect disposition and is safe for a woman or a child to drive.

For any further particulars as to either of these two great stallions a letter to Mr. Edward Mills at Pleasanton will bring a prompt response, together with card containing complete tabulated pedigree of each.

LECCO 2:09 3-4

received. Without an exception every owner was pleased with their condition and the care that had been given them. It was Mr. Mills' intention to raise the price of Searchlight's services for 1904 but he has concluded to give the breeders of California one more chance to breed to that great horse for the low price of \$75.

In the accompanying picture of a few of Searchlight's mares are, Bertha, dam of Don Derby 2:04½, Diablo 2:09½, etc.; Lida W. 2:18½, dam of Nutwood Wilkes 2:16½; Mano, dam of Mendocino 2:19½, sire of Monte Carlo 2:07½, Idolito 2:09½, etc.; Cri Cri 2:20 by Direct 2:05½, dam Cricket 2:10; Amazon by Chas. Derby 2:20, dam Ramona (dam of W. Wood 2:07); Dixie, full sister to Amazon; Spry Ruth by Boodle 2:12½, dam by Electioneer; Edith 2:10 by Dexter Prince; Alsilki by Chas. Derby 2:20, out of the dam of King Cadenza 2:15; Princess Dawn by Dawn 2:18½, dam Alto Dawn by Iran Alto 2:12½, dam Princess Dawn; Nazoma by McKinney 2:11½, dam Amazon by Chas. Derby 2:20; Geraldine 2:16½ by Mt. Vernon 2:15, dam by Gen. McClellan; Lurline, full sister to Al Gregor 2:11 and W. W. Foote (2) 2:15½; R. Sada by McKinney 2:11½, dam by Secretary; Sally Dexter, dam of Nora McKinney 2:12½, by Dexter Prince; Winnie Wilkes 2:17½ by Rey Wilkes; Proser-

will all get fast records. Searchlight is a brown horse, 16 hands and weighs 1240 pounds. He is sound as the day he was foaled, is a good dispositioned horse and no stallion can outlook him.

Some of the Noted Mares Bred to Searchlight This Year

THE MARE FROM YORKSHIRE

How She Won the St. Leger

[A friend has furnished us with the following poem, which he has written out from memory. When a young man he heard the great elocutionist Baifou, recite it, and the thrill that it gave the young listener, led him to commit it to memory and he, being also a reader of no common ability, has in turn often thrilled others with its dramatic recital. He does not know the author's name, but in the old magazine in which he found it years ago, it was stated that the poem took the prize at Oxford University in England and was written by a student of one of its colleges.—EDITOR B. & S.]

The sun is bright, the sky is clear,
Above the crowded course;
As the mighty moment draweth near,
Whose issue shows the horse.

The fairest of the land are here,
To watch the struggle of the year,
The dew of beauty and of mirth,
Lie on the living flowers of earth;
And blushing cheeks and kindling eye
Lend brightness to the sun on high:
While every corner of the North,
Has poured her hardy yeomen forth.
The dwellers by the glistening rills,
That sound among the caverned hills;
And stalwart husbandmen who hold
The plow upon the eastern wold
Are gathered thickly o'er the lea,
Or streaming from far homes to see
If Yorkshire keeps her old renown,
Or if this dreaded Derby horse
Can sweep in triumph o'er her course.

Clear peals the bell, at that known sound,
Like bees the people cluster 'round.
On either side upstarting then,
A close dark wall of breathing men,
Far down as eye can stretch, is seen,
Along yon vivid strip of green,
Where keenly watched with countless eyes,
Mid hopes and fears and prophecies,
Now fast, now slow, now here, now there,
With hearts of life and lungs of air;
Snorting and prancing, sliding by,
With arching neck and glancing eye,
In every shape of style and grace,
The horses gather for the race.

Soothed for a moment all, they stand,
Together like a sculptured band.
Each quivering eyelid flutters quick;

Each face is flushed, each heart beats thick;
And all around dim murmurs pass,
Like low winds moaning on the grass.
Again the thrilling signal sounds!
And off at once, with one long bound
Into the speed of thought they leap,
Like proud ships rushing to the deep.
A START—They're off, by heaven,
Like a single horse, though twenty-seven;
And amid the flash of silks we scan
The Yorkshire jacket in the van.

Hurrah, for the bold bay mare!
I'll pawn my soul her place is there
Unheeded till the last!
For a thousand pounds she wins on past.
Hurrah, for the matchless mare!

A hundred yards have glided by.
And they're settling to the race;
More keen becomes each straining eye,
More terrible the pace.
Unbroken o'er the gravel road,
Like maddening waves the troop has flowed;
But the speed begins to tell
And Yorkshire sees, with eyes of fear,
The Southern stealing from the rear.
Ah, mark his action well!

Behind he is, but what repose!
How steadily and clean he goes!
What latent speed his limbs disclose!
What power in every stride he shows,
They see and feel. From man to man
The shivering thrill of terror ran;
And every soul instinctive knew,
It lay between these mighty two.

The twenty-five that lie between,
Are blotted with the stirring scene;
And the wild cries that rang so loud,
Sink, by degrees, throughout the crowd,
To one deep humming, like the roar,
Of seas along the northern shore.
In distance dwindling to the eye,
Right opposite the stand they lie,
And scarcely seem to stir.
Nor are there wanting signs, which show,
Defeat is busy as they go.
Look how yon mass that rushed away,
As full of spirit as the day,
Is lengthening into single file!
Gay colors, momentarily less bright,
Fade flickering on the gazer's sight,
Till keenest eyes can scarcely trace,
The homeward ripple of the race.

Care sits upon each lip, each brow.
"Who leads?" "Who fails?" "How goes it now?"

Look to yon turn! Already there,
Gleams the pink and black of the fiery mare!
While through that, which was a gap,
Creeps on that terrible white cap,
His jockey moves on him. "Ah, see him come!"
Booms through the crowd like muffled drum.
Then, momentarily, like gusts, is heard:
"He's sixth!" "He's fifth!" "He's fourth!" "He's
THIRD!"

And on like a glancing meteor flame,
The stride of the Derby winner came.

During all this anxious time,
(Sneer as it suits you at my rhyme,
The earnestness became sublime,
For that needs must be a mighty minute,
When a crowd has but one soul within it.
Like some bright ship, with every sail
Obedient to the urging gale,
Through the reeling field he flew;
And near and yet more near he drew.
Each leap seems longer than the last.
There! There! The second horse is past,
And the keen rider of the mare,
With haggard looks of feverish care,
Hangs forward in the speechless air,
With steady stillness nursing in
The remnant of her speed, to win.

One other bound, one more—'tis done,
Right up to her the horse is run;
And head to head and stride for stride,
Newmarket's hope and Yorkshire's pride,
Like horses harnessed side by side,
They're struggling for the goal.
Ride gallant son of Eber,
For the honor of the North,
Strain every bursting sinew,
Put out thine inmost soul;
And with knee and thigh and tightened rein,
Lift in your mare by might and main!

One spirit flashes from each eye,
One impulse lifts each heart-throgh high.
One short and panting silence broods
O'er the wildly working multitudes;
While on the struggling coursers press,
So deep the eager silentness,
That underneath their feet, the turf,
Seems shaken like the ebbing surf,
That tastes the rushing gale.
The singing fall of the heavy whips,
That tear the flesh away in strips,
Strikes vividly, distinct and near
But mark the awful rush, "There! There!
He's herd! He's beat! By Heavens! The Mare!"
* * * *

With herd-like dash, she shot away,
And, by half a head, she gained the day.

GUY MCKINNEY NO. 37625.

A Wilkes Stallion Par Excellence.

There is no stallion in California that carries as much of the champion race horse blood of George Wilkes, founder of the tribe of Wilkes, as Guy McKinney, whose grand proportions are but poorly shown in the engraving on this page. His sire is McKinney, the greatest grandson of George Wilkes, his dam is by Guy Wilkes and his second dam by Onward, two of the greatest sons of the same great horse. Guy McKinney represents the very acme of breeding. Of his sire McKinney 2:11½, sire of more horses with race records of 2:15 or better than any sire of his age that ever lived, but little need be said, as he is known to every breeder in America as Alyone's greatest son, and when he was sold last year for \$25,000 and taken from California to Indiana, the breeding interests of the Pacific Coast suffered a loss. The dam of Guy McKinney is Flossie Drals, a daughter of Guy Wilkes 2:15½, the stallion that once headed the San Mateo Stock Farm of the late Wm. Corbitt, and whose get went through the Grand Circuit and led the money winners for years. The second dam is Blanch Ward, dam of the mare China Maid that has a public trial of 2:05½, by the mighty Onward 2:25. The blood of Onward is as highly prized by intelligent breeders as any that is used in the production of horses that have size, gait and the ability to win money in dashes or when the heats are long drawn. He has sired no less than ten with records of 2:10 or better, and this year a large number were added to his new list of standard performers. Onward, it should be remembered was a son of Dolly, that same great mare that produced the mighty Director 2:17, sire of Direct 2:05½, Directum 2:05½ and founder of the greatest family of race winners of modern times.

The third dam of Guy McKinney is Blanch Patchen, the daughter of Mamhrino Patchen, the greatest of broodmare sires. Mamhrino Patchen was by Mamhrino Chief, founder of another great strain of trotting blood and was out of the Rodes mare by Gano that produced Lady Thorn 2:18½ one of the fleetest and gamest of the trotters of forty years ago. Mamhrino Patchen was also the sire of Mamhrino King,

one of the great horses of this decade, and a sire of even in 2:10 and the dam of that exchampion gelding The Abbot 2:03½.

Guy McKinney's fourth dam was Lady Blanche, a great broodmare that produced Alcryon 2:15 (a sire of several 2:10 performers); Jay Wood, sire of many good race winners and was also the dam of Geo. Hooff 2:21½. Lady Blanche was by Houghton's Privateer 2:58, a producing sire, and her dam was Jenny Lind by Abdallah 1:5, reckoned by many as Hambletonian's greatest son for his opportunities. The next dam of Guy McKinney was the mare Lady Weiner by Salttram that sired Highland Maid 2:27, holder of the world's record of 2:27 as far hack as 1853.

From the above it will be seen that Guy McKinney's breeding is along the lines of great speed and race winning capabilities. In his pedigree within five generations are such sires as McKinney, Alyone, Gov. Sprague, George Wilkes (3 times), Hambletonian 10 (4 times) and Onward. The great broodmares are

Rose Sprague, Alma Mater (twice), Dolly Spanker (three times), Dolly and Lady Bunker. Such blood as this cannot help but reproduce itself and that Guy McKinney will be a successful sire is as certain as night follows day.

Guy McKinney is a magnificently proportioned black horse, standing 16 hands and weighing about 1200 pounds. He is now at Pleasanton and will make the season of 1904 there in charge of Ben Chahoya, who is now giving him slow work with the idea of giving him a record later after the stud season is over. Those who have seen this horse at work on the track are charmed with his free open gait and lofty carriage and predict a low mark for him at any time he is ready and the question is asked of him. Guy McKinney is owned by Mr. T. J. Drals of Farmington, Cal., who bred him and also bred his dam. The stallion will be seven years old next spring. His colts are not yet old enough to train, but they all show natural speed and are models of conformation and with perfect dispositions like their sire.

GUY MCKINNEY

PROBLEMS IN SPEED BREEDING

BY J. W. NEAL, M. D.

EDITOR THE BREEDER AND SPORTSMAN:

While highly appreciating the compliment you pay me in asking me to contribute something to the holiday number of your excellent journal, I fear that any efforts of mine to interest or instruct your readers will not prove a great success. However, I am a "poor hand" at "backing up," always preferring a flat failure to no effort at all. In selecting a subject I have chosen one which all speed breeders have been "up against," and hence if I should make a signal failure, I feel that I shall have plenty of "company along the way."

The incentives for success in harness-speed breeding are indeed many, and hence the labor of thought and action along the lines of this accomplishment should not be regarded as irksome, even though it really is. There are natural mathematicians, and natural logicians; but in the main, mathematical and logical problems are solved only after the exercise of acquired knowledge, and incidentally acquired knowledge during the effort. Successful harness speed breeding is, likewise, the result of mental evolution and the application of previously acquired knowledge, either first or second-hand, and while an occasional "accident" may happen in harness speed breeding, i. e., a successful race horse or a record breaker resulting when least expected, it is nevertheless true that results follow causes, and that success comes from making the right cross, whether or not the breeder knows at the time that he is actually doing so. That there is more to the speed breeding problem than the simple act of mating a trotting bred mare with a trotting stallion, or mating even a low record mare with a low record stallion, every one who has had any experience, or given the matter any thought and observation well knows. All that glitters is not gold, and while the axiom, "For speed breed to speed" is a good one on general principles, it is not an unwavering law, for all breeders know that many breeding animals in the trotting horse line which have had no manifest speed themselves, have transmitted speed, even very extreme speed, and that others possessing very marked manifest speed have failed to transmit speed, even under such as have been considered most favorable conditions and opportunities.

In so short an article as this must of necessity be, I cannot go very deep into the intricate problem of speed breeding, even were I competent to do so; but my own experience and observation teach me that while blood lines and manifested speed are, beyond question, essential fundamentals, in harness speed breeding, the real secret of success, after we have these things as a basis upon which to build, is individual selection and mating. In horse breeding "like produces like" with very many and very marked variations. In fact, the law of like producing like in a biblical sense means only that a certain species will re-produce this species, the building up of certain traits, qualities and characteristics in certain species being the results of certain lines of inbreeding and individual selection, the fundamental principle in line breeding and specific characteristic production and

perfection being the condensation of a certain strain of blood. I take it for granted that practically all harness speed breeders of the present day recognize the reasonableness of relying on so-called trotting blood in the production of harness speed, and this leads up to the point of individual selection and mating of trotting bred sires and dams. When harness bred speed breeding shall have been carried on for centuries, as has running horse breeding, there will still be failures often when animals of the choicest breeding are mated, just as now happens often in running horse breeding, unless the strictest attention is given to making proper individual selection. Horse, like humans, have temperamental characteristics, and with horses as with humans, males and females of the same temperament do not cross well in reproduction. In harness speed breeding then, trotting blood comes first, and individual mating second as elements of success,—and I am not sure but that this should be reversed. In mating stallions and mares of strong breeding, the innate and temperamental forces of the one are either augmented or neutralized by the innate and temperamental forces of the other, and the resultant offspring is consequently often greater than either or equal to neither. Nearly all stallions and mares are either positive or negative in temperament and disposition—aggressive or passive—and, in nature, mating "two of a kind," absolutely of a kind, means nothing as a product. One had as well try to get an electric current from the joining together of the negative poles of two batteries as to expect a race horse from the mating of a stallion and mare, each possessing the same positive, aggressive temperamental characteristics, or the reverse, i. e., both negative, for life itself—vital force, is electricity. Very largely stallions and mares are like either pole of an electric battery—are either positive or negative—and it is a well known law in physics that either two positives or two negatives produce a negative—nothing. In undertaking to breed harness speed the first essential, of course, is to select stallions and mares of approved harness speed producing blood lines. The next essential element of success is a close analytical study of mental qualities and characteristics. If a mare is bred right, is "snappy," nervous, "high strung," and has a tendency to be "flighty," she is a "good prospect" as a speed producer, provided she be mated with a well-bred, rather phlegmatic, courageous, level-headed, non-excitable "deaconish," "clock-headed," stallion, who displays his real metal only when vigorously "shaken up." Sluggish, indifferently disposed mares, however well-bred, will produce speed only when bred to stallions of the dense texture, "high-keyed," dashing, alert, "breedy acting" sort—the "hot-blooded" kind. A study of individual characteristics along these lines will compensate any speed breeder, and what is here said is said more for the purpose of stimulating thought along these lines than with a view of imparting "valuable information."

"Many men are of many minds," on the subject of harness speed breeding, as well as on subjects of religion, politics, and planting corn, and hence opinions probably will always differ, more or less, as to the best combinations of blood as a harness speed producing element. Figures are wonderfully reliable things, even though it may not be absolutely true that they "never lie." Figures, trotting horse statistics, very plainly say that in the main every additional cross of Hambletonian blood in a trotting pedigree increases the chances for trotting speed, and it clearly is more than a mere acci-

dent that Dan Patch, 1:56 $\frac{1}{4}$; Lou Dillon, 1:58 $\frac{1}{2}$; Major Del Mar, 1:59 $\frac{1}{4}$, and Cresceus, 1:59 $\frac{3}{4}$, all trace to Hambletonian 10 on both sides—most of them several times. Yet Hambletonian would not have proven the prince of all speed progenitors had he not come in contact with the other pole of the battery himself. He was a horse of very positive, yet phlegmatic temperamental qualities, and in American Star and Clay mares he encountered the opposite pole—somewhat figuratively speaking—and the greatest trotters and speed progenitors of that day and generation resulted. From this day down to the present time, stallions of distinctly marked character, sedate, mentally strong, not over excitable, "clock-headed," rather phlegmatic temperamental make-up, have proven the most uniform and successful speed sires. George Wilkes, Electioneer, Onward, Red Wilkes, McKinney, Sidney, Brown Wilkes, Direct, Nutwood, etc., all have, or had, this same temperamental make-up largely, while with scarcely an exception, great speed producing brood mares have, what we call in the human family, nervous temperaments, are quick, nery, snappy, alert, and "off like a flash." A number of stallions of the highly nervous temperament,—of which class Dr. Herr, son of Mambrino Patchen, was ideal,—have proven good sires, but only when they have been mated with the even tempered, sluggish kind of mares. Joe Davis, 2:17 $\frac{3}{4}$, was not Dr. Herr's fastest performer, but he was by all odds his greatest racehorse. His dam, Molly, by Mambrino Pilot, Jr., was a good sized, sluggish bay mare which one could hardly drive out of his way in the pasture, and one which a circus parade and a drove of elephants could not excite in the least. She carried some good harness speed blood, and afforded Dr. Herr exactly the right temperamental out-cross. Personally I do not know the temperamental characteristics of Sidney Dillon, sire of Lou Dillon, nor of Lou Milton's dam; but I am sure that if some California horseman, say Joseph Cairn Simpson, or Mr. Sam Gamble, will make a study of the temperamental qualities of the two, they will be found opposite in this respect, and my prediction is that Lou Milton is the "high-keyed" one of the pair, a nervous, high strung mare. Milton Medium should, on individual blood line ancestry, be a "sluggish" kind of a horse, and Lou Milton, on her paternal ancestry, might be the same; but her dam, Fly, was undoubtedly of the nervous high-tempered kind, and most likely imparted this same temperament to her daughter. But blood lines are not always a safe guide as to temperament. Cactus, by Cuyler 100, dam Rising Sun, by Gages Logan 127, carries a strong suspicion of sluggish, phlegmatic temperament in her breeding; but she was the extreme opposite, keyed to the highest notch, and nervous, flashy and spiteful to the highest degree. I was puzzled to find a stallion of good breeding and sufficient sedateness to which to breed her, but finally selected the "deaconish," clock-headed, Argot Wilkes, 2:14 $\frac{1}{4}$, and the result was The Bishop, 2:06, a wonderfully good racehorse. I had stallions of my own, but none which I thought would prove the correct temperamental cross, though they were elegantly bred. Breeders cannot always afford to breed their own mares to their own stallions. For best results there should be a co-aptation of both blood lines, conformation, and temperamental make-up, the latter, in my opinion, being one of the greatest essentials.

Indianapolis, Ind., Dec. 15, 1903.

An Unbeaten Three Year Old.

The greatest money winner of the harness horses that raced in California in 1903 was the fast little three-year-old filly Tuna 2:16 $\frac{1}{2}$ by James Madison, dam Ituna by Steinway, second dam Nettie Ward by Echo, third dam Mills mare by Goldfinder, a son of Boston, and fourth dam a mare by Langford a son of Williamson's Belmont. Tuna is an own sister to Confianza that took a three-year-old record of 2:21 $\frac{1}{2}$ in 1902 and that has trotted a trial in 2:10 this year. Tuna is owned by Mr. De La Montanya of this city, and was bred at the Oakwood Park Stock Farm where so many famous fast ones have first seen the light of day. Tuna's record is three starts and three winning races as follows:

Her maiden appearance was in the \$600 stake for three-year-olds given at the Breeders meeting at Petaluma last August. There were four other starters—Little Branch by Nutwood Wilkes, Duplicate by McKinney, D E. Knight by Lynmont, and Owynex by Owyhee. The first heat went to Little Branch in 2:22 $\frac{1}{2}$ and then Tuna took the next three in straight order, in 2:24 $\frac{1}{2}$, 2:26 $\frac{1}{2}$ and 2:24 $\frac{1}{2}$. This was on Thursday. The following Monday she started in the Occident Stake at the State Fair at Sacramento and met such good colts as Swift B. and The Jester, both sons of Stam B., besides several other good three-year-olds. Tuna took the first heat in 2:18 $\frac{1}{2}$ but in the second heat made a break just as the word was given and Swift B. won in 2:22. Tuna then won the third and fourth heats in 2:23 $\frac{1}{2}$ and 2:18, the time of the last heat the fastest of the race and showing her to be a dead game trotter. First money in this race was \$2512.

One week later at the same meeting she started in the Stanford Stake, which she won in straight heats in 2:16 $\frac{1}{2}$, 2:21 $\frac{1}{2}$ and 2:20 $\frac{1}{2}$. Swift B. pressed her hard in this race and drove her to a break in the second heat, but she came on and beat him out amid great applause from the large crowd present.

This ended her campaign for this year. Tuna was brofed and handled by Ben Chahoya, but Henry

Mr. James De La Montanya with Tuna 2:16 1-2

Sanders trained and drove her in all her races. Her record of 2:16 $\frac{1}{2}$ is the record for the Stanford Stake and a second below the time of Aristo and Eula Mac, who divide the speed honors of the Occident Stake with records of 2:17 $\frac{1}{2}$.

Mr. Montanya has turned Tuna out on the Brentwood Farm for two or three months, but she will be taken up in February and enter Henry Sanders' string at Pleasanton, where she will be carefully pre-

pared for the Grand Circuit, and will cross the mountains to meet the horses in her class during the campaign of 1904. That she will give a good account of herself is certain, as she is one of the nicest gaited, best dispositioned and most intelligent trotters ever bred in California. She will get a record within the charmed 2:10 circle as certain as no accident happens her. Tuna's winnings in the three races in which she started aggregated \$4125, quite a neat sum to be won by one little filly in three starts.

SIDNEY AND COUNT VALENSIN

The Man Who Developed Him

BY PETER J. SH ELDS

I think a Christmas edition of your paper would be wholly incomplete without some record of the merits of the great California sire Sidney, 2:19 $\frac{1}{4}$, and I think, too, that a reference to the distinguished man who developed him and gave him his reputation would be timely as it is so well deserved. Count Valensin was a remarkable man, one of the many brilliant men who were attracted to California because of the romance of her early history, because of the field she presented for the moulding of genius into opportunity. And he did much to add to the development and the fame of California, and his early death was a loss to his state, an irreparable loss to the industry of breeding fast and finished horses. His habit was not deliberative, his judgments were intuitive. He had a genius for breeding and was a born horseman. His selection of Sidney was no accident, as is frequently the case with the lucky owners of great producing sires. He selected him because of his bloodlines; he liked the Santa Claus and Volunteer blood in his veins. He liked the thoroughbred base of his pedigree, hot blood far enough removed to be tempered, close enough up to impart fire. He liked his form and gait, his character and disposition. Best of all, with an eye which could see farther than those who lacked his genius, he liked him for that great something which he saw in him which told him he would found a family. When Sidney was four years old and his first colts were just beginning to drop, I asked him what he saw in him which made him so confident of his success. With his alert movement and quick but soft speech he said: "What do you see in the face of a great man which indicates his power, what in the face of a good woman which proves her quality? You cannot tell nor can I; but you see it and know it, and so do I of Sidney." Valensin did not live long, but long enough to prove his faith. Had he lived longer to promote Sidney's fortunes, his supremacy to day would be established, but unaided, he will impress upon his breed a large measure of his greatness. For Sidney is a great horse. I have seen scores of his colts broken and trained; I have seen stable after stable of his sons and daughters collected and just ready to go out upon record-breaking campaigns, when the loss of a trainer, want of money, the sickness of the owner and ultimately his death, dispersed them. I feel like claiming all excellence for Sidney, as I know of great numbers of his foals which would have been in the 2:10 list or champions, had not unfortunate circumstances prevented. Lou Dillon is not the only superlatively great one in his family, nor am I prepared to say that she is the greatest. Mr. Millard Sanders, who trained many of his colts, will tell you of the numbers of his two-year-olds which could have beaten 2:10, of the

number of his yearlings which could have beaten 2:20, and that his get could all trot into the 2:30 list. He sired speed with unequalled uniformity. His family was accused of a lack of stamina, a charge which is always made against horses of great natural speed. The Sidneys had speed without training and consequently were generally started without adequate physical preparation and showed it in their races as would any of the so-called "gamer" families which would not have gone so fast. When they were trained for strength and wind as others were for speed, they carried their greater flight as well as the best. If given a chance Sidney, through his sons and daughters, will found a great family. No man worthy of the name of breeder will neglect their extensive use. Much false education is being disseminated about the superiority over all other families of the Wilkes and the Electioneer tribes. It is annually claimed that more of them each year take records than of any other family, and that consequently they having proved their fitness should survive. It is not my purpose here to institute comparison between the several standard families; they are all good, each has its special merit and it will be from the combination of all of their excellencies that the great horse of the future is to come. Very many more Wilkes and Electioneer horses are annually bred and trained than of other leading families, and in proportion to numbers no more of them show either greater race quality or greater prepotency than such families. The craze for Wilkes and Electioneer blood to the exclusion of other which has been demonstrated to be good should be checked; it is faddish and will hamper breeding progress. Think of such horses as Sidney, Director, Pilot Medium, Nutwood, Kremlin, Mambriño King and Stamboul, and the splendid accomplishments of their families, and then ask yourself if we shall neglect them. There is room in the breeding industry for all of these, together with the Wilkes and Electioneers, and we should all do all in our power to discourage a mere fashion which would even tend to exclude the general use of them all alike. It was fortunate that Sidney's peerless granddaughter should have called him anew to the favorable attention of the breeding world. If given proper opportunity he will found a great family. His sons will make great sires, his daughters the greatest of mothers. California should always praise him; he has brought her many laurels. And in his sure and increasing greatness the memory of the man who selected and developed him will be perpetuated. Valensin, brilliant, polished, loyal and brave, may the snows of winter lie lightly upon your lonesome grave in Cleveland, and within your abode beyond the shadow may you find a Christmas greeting in the affection and gratitude of California horsemen.

New Surrey, first class, with pole and shafts, canopy top, 1 $\frac{1}{2}$ inch rubber tire, turn, under, elegantly trimmed. Original price \$420, can be bought at Kenney Manufacturing Company, 531 Market street, San Francisco, for \$225. New lot of McMurray carts just arrived—1904 models.

J. W. Zibbell's Training Stable.

J. W. Zibbell, who came to California from the East last winter, is temporarily located at 345 20th avenue near Point Lohos avenue, San Francisco. Mr. Zibbell has opened a public training stable and expects in connection with his business of training horses for the track and road, to buy and sell horses of all kinds. Among the horses he now has in training and will prepare for the racing season in 1904 are Lottie Smart 2:07 $\frac{1}{2}$, Tom Smith 2:13 $\frac{1}{2}$, Lady Rowena 2:18, Nance O'Neil 2:23, Allesandro who won in Denver as a two-year-old and captured the track record at that place, McKinney Jr., a green trotter, a fast three-year-old pacer, a very promising four-year old and two very likely yearling trotters.

It will be remembered that Mr. Zibbell was very successful with his string through the Colorado circuit last June and did very well after returning to the Coast with the above mentioned horses. Besides which he had Swift B., who won in Denver and was second in the Occident and Stanford Stakes at the State Fair. He also won the two-year-old trotting division of the Pacific Breeders Futurity Stakes, \$6000, with the colt Almaden, giving him a mark of 2:22 $\frac{1}{2}$.

Mr. Zibbell is an acquisition to the list of first class trainers on this Coast and no doubt will build up a big business. He has excellent facilities not only for training horses, giving them preliminary work on the speed way, etc., but is located so that he should do a good business in buying and selling track horses and high class roadsters. He is not only an excellent judge of horse flesh but bears the reputation of being a reliable man with whom to have dealings. As there will be a great many two and three year-olds prepared for the two divisions of the Breeders Futurity Stakes and the other colt stakes to take place at the State Fair and other places, he will make a specialty of training youngsters for these events. He has had great success with young horses and is exceptionally careful and efficient in handling colts.

As a veteran trainer and driver of ability he is well known to horsemen in all parts of the western country having for many years campaigned a number of good horses through Iowa, Dakota, Wisconsin, Illinois, Nebraska and Colorado.

W. R. Zibbell, who is a son of J. W. Zibbell, also did very well this fall through the Oregon, Washington and Idaho circuits, with Mr. J. A. Richardson's horses, giving the green four-year-old Getaway a mark of 2:24, Monroe S. 2:13 $\frac{1}{2}$, the three-year-old trotter Swift B. 2:16 $\frac{1}{2}$. The young man is well liked and it looks as though he was going to be as successful in his chosen profession as is his father, having already proved himself to be a mechanic in the sulky in a number of hotly contested races.

Mr. Zibbell, Sr., is handling a number of horses for Prof. E. P. Heald, President of the P. C. T. H. B. A. and Mr. Heald speaks very highly of his ability as a trainer, as well as do all others whose horses have been in Mr. Zibbell's hands.

Sober up on Jackson's Napa Soda.

CALIFORNIA THOROUGHBREDS

AND THEIR BREEDERS

BY RAIPH B. TOZER

In 1850, or fifty-three years ago, when California was admitted to statehood, it is extremely doubtful if there were in the whole state forty thoroughbreds all told. Achilles Grigsby, the pioneer of Napa county, had a few mares at that time; James Moore, of Yolo, owned a few, and later Lola Montez, by Grey Eagle, and perhaps there were a few in Sacramento and Santa Clara counties, but forty would well cover the list. About this time the Williamson Brothers brought out Belmont, American Boy, Jr., Maria Downing and Liz Givens, then came Bulwer (son of Grey Eagle), Tom Moore (by American Eclipse) and Lady Davis (by Red Bill), and by the close of the '50's California could perhaps boast of eighty of the "children of the winds." Now, with her 1200 brood mares and close to 700 stallions seeing active service, the Golden State ranks second in the production of thoroughbreds of all the States of the Union, Kentucky alone eclipsing her record in this respect.

It will be my endeavor in this article to give the readers of THE BREEDER AND SPORTSMAN a good idea of the extent at this time of the thoroughbred breeding industry in this State, beginning at the north and working down to the southernmost confines of California. Of course, there are many thoroughbred mares not registered in the American Stud Book, but I will give my opinion as to those unregistered as I go along, so that a fair estimate of the number now in the Golden State can be gathered.

In Siskiyou county there are a number of mares not strictly thoroughbred by sons of Kirby Smith, by sons of Gladiator (by Belmont), and by sons of Jim Glenn and Conner, but I doubt if there are any real thoroughbreds at present in that county.

Pescador, son of Gano and Armeta Howard, was sent up to Modoc county a few years ago to be mated with a lot of "range" mares of no known breeding, but it is extremely doubtful if there are any thoroughbreds in that wild section.

In Loloeta, Humboldt county, at last accounts, A. S. and T. Knight had Black Maria by Major Whiteside—Mollie Stockton—Eola, by Prince of Norfolk—Black Maria, and Linda Connors, by Imp. Kyrle Daly—Lizzie Idle, Samson (by Norfolk), Broad Church and Canny Scott (by Leinster) and the good mares Nellie G. (by Samson) and Mamie Scott, by Canny Scott, came from this county. Doubtless there are other thoroughbreds in the county by Samson, for he was stationed there for many years.

In Mendocino county, near Hopland, is the stock farm of Burns & Waterhouse, a very well-equipped establishment, fitted up less than two years ago. There they keep the stallions Altamax, Col. Wheeler, Mt. McGregor II, Take Notice, Eddie Jones, Figaro (?), and First Tenor, while their mares are Berna, Cosette, Deceptus, Decoy Duck, Duckling, Dulcie Larondil, Early Rose, Free Love, Gratitude II, Happy Maiden, Hoolon, Humidity, Juanita by Galore, Krana, Lake Co., Madrona, Miss Ban, Mistletoe, Napamax, imp. Paloma, Palomacita, Picnic, Recreation, Rustrice, Sea Bass, Shasta Water, Sonomis, Sweet Faverdale, Sweet Rose, Talluda and The Teal and perhaps a few young mares that have just been sent to the stud. They have bred many good winners during the few years they have operated near Sacramento, and good judges believe Mendocino county will soon become famous for breeding good horses, the land being of a rolling description, the air pure and the water unexcelled. In this county George White has ten or a dozen mares and a Bramble stallion he secured of Sam Hildreth a few years ago. There were a few old mares by Hubbard in that county near Ukiah, at last accounts, and the stallion House-warmer got some fast ones (among the number Fox) in the old Bay District days.

In Lake county there are a few mares by imp. Friar Tuck, St. Saviour and imp. Greenback, relics of the once famous Guenoc stud of Frederick Gebhard and Mrs. Lily Langtry, that once flourished in the county near Middletown, and which was among the leading stock farms of the State in the early '60's.

Near Chico, Butte county, A. C. Lusk had half a dozen well-bred mares a few years ago, and at Red Bluff, D. S. Cone has Panilla by Panique-Ilia; Fiddle-de-Dee, by El Rio Rey-Lady Dare, and Snow Blossom, by John Happy-Snowdrop. They were bred to Mulberry and Moreno, latter a son of Morello.

In Colusa county, near Williams, J. S. Gibson has the good horse Bloomsbury and the splendid producers imp. Czarina, Sister to Ruth Ryan, February and Josie G., besides the mares Narra G. and Targette in training. There are probably a few old thoroughbred mares on the ranch of the late Senator John Boggs and a young gentleman named Eakles purchased I Declare, Sallie Sensible and others at sales here a year or so ago and sent them up to Colusa county.

There are a few Norfolk, Joe Hooker and Snuff Box mares in Sierra county—perhaps a dozen, but they are not registered in the Stud Book, hence I have to guess at them.

Sonoma county used to be quite a breeding center, and many good race horses have come from there, but the dispersal of the late J. B. Chase's stud over a year ago has taken a large number of horses out of that county. He had Dare, imp. Trentola, imp. Clieведен and other stallions on his place and bred Hidalgo, DeLracey, Gilead, Solon, Monterey, Lurline, Top Gallant, Modwena, Marigold, Centella, Glen Ellen and many other good winners. A few of the old mares are probably on the ranch, but not many. Ironclad used to stand in that county, also Wheatly, and years before that Hubbard and imp. Lawyer. T. G. Jones, who used to manage the Chase place, had Trade Lots (by

imp. Trade Wind-Sister to Lottery) and Usurla (by Duke of Montrose-Sozodont) in Sonoma county at last accounts.

Napa county has long been a great county for breeding race horses, Achilles Grigsby and Nathan Coombs pioneering the way and breeding many a turf celebrity there in the long ago. At present A. B. Spreckels is the chief breeder of the county, his place being called Napa Stock Farm. It is situated just on the outskirts of the city of Napa. There he has a completely equipped place and the splendid English stallions Solitaire and Marius, both of which were fine race horses, the Australian horse, Crichton, two of whose get won good races at Emeryville the other day; the record-breaking Libertine and imp. The Judge (by imp. Loyalist, sire of Lissak, etc.). The Spreckels mares that appear in the stud book are Abbie F., Agnes B., Alma Dale, Annie Buckingham, Annie Race, Antorcha, imp. Atossa, Bellguard, Bohemian Lass, Border Lassie, Break O'Day, Bridal Veil, imp. Candid, Carnation, Cattle Kate, Chartreuse, Elminetta, Fatima II., Florence B., Floriana, Folly, Frisca, Georgia, Glee, Glitter, Grace S., Griselda, Hazel M., Headflower, Lady Cleveland, Lista Hock, Lucille II., Magdalenas, Makawa, Marcell, Maria F., Maya II., Melanita, Meta II., Miss Douglass II., Nellie Bell, Nitouche, Phoebe F., Picante, Piquante, Pique, imp. Repose, Sacharis, Sevens, Straight Tip, Sweet Peggy, Therese, Tragic, Umatilla, Victory, Vielleicht, Victory and imp. Yarranabee. Mr. Spreckels has had fair success at breeding, and now that he has weeded out his mares and stallions and is using only the tried-and-not-found-wanting ones, Napa Stock Farm will doubtless be heard from often as the first home of high-class race horses. A fellow multi-millionaire, Henry T. Oxnard, has purchased a big breeding farm not far from the Spreckels place, and the following mares will probably soon be sent out from Kentucky at an early date: Almera, Almora and Almy (sisters, by Springbok-Alme), Balance II., Belle of Butte (sister to Ballarat), Bracelet (dam of Bangle and Limewater), Dolly Varden, Ganges, imp. Marcianesi, Miss Laudeman and imp. Ridicule among others, this being just about two-thirds of the number of mares at present owned by the sugar king. E. F. ("Daggie") Smith owns several mares and has them in Napa county, among the number being Goldina (Sunrise), Larena C., Resignation and Hermanita. The first named has a foal by George F. Smith, the record-breaker.

There are but few thoroughbreds in Yuba county, but the stallion Texarkana and the mare Flora S., by John Happy-Nannie Hubbard, were at last accounts quartered near Marysville, and owned by E. P. McDaniel of that place.

G. Pacheco owned a few thoroughbred mares in Marin county, and the McShafter place may have a few, but there are not many in that county.

The Wilson Bros., Petaluma, own Rose of Magenta dam of Byron Rose, also Azarine, by Azra, and there are a few other mares in this neighborhood belonging to Harry Stover, who owns Kenilworth, Edinborough, Hloyaho and other stallions.

Yolo county has quite a number of thoroughbreds and breeding has long been carried on there. I. P. Diggs and his father are old breeders, and bred Diggs, Sutton, Olinthus and other good ones from Lilly Wright, by California. I. P. Diggs now owns Sunrise, by Salvator-Alice. The stallions Red Iron, Malcolm, Mosier, Nephew, Shannon and David Terry have been in Yolo county for the past few years, and have improved the stock there mightily. Jim Douglas used to stand in the county, at the Dinsdale place, and there was bred Red Cloud and other good race horses. Ward Adams had at last accounts a dozen or more mares, but only a few are strictly thoroughbred, hence I presume that is the reason Lulu IV. is the only one given in volume 8 of the Stud Book. Mrs. Dinsdale had two or three Jim Douglas mares at last accounts. C. H. Turner had Black Streak (by Three Cheers-Arondale) and R. M. Brown had Arondale, by Marmaduke, and J. E. King owned a couple of mares.

Now we come to Sacramento county, the Yorkshire of the West. In this county are quartered about half the thoroughbred mares and stallions of the entire State, there being a record of 420 mares owned by J. B. Haggin alone at Rancho del Paso, besides some thirty odd stallions. Rancho del Paso is 44,800 acres in extent, the largest establishment used for the breeding of thoroughbred horses in all the world. As the owner of this finely equipped place has paid as high as \$21,000 for a horse and has some of the best stock in the world, it can easily be seen that the 450 thoroughbreds he owns on this place represent considerably over a million of dollars. The Haggin stallions are imp. Sir Modred, imp. Darebin, imp. Artillery, imp. Star Ruby, imp. Basselaw, imp. Mariner, imp. Watercress, imp. Golden Garter, imp. Golden Dawn, imp. Goldfinch, imp. St. Gatien, imp. Prestanpans, imp. July, Milesio, Nomad, Rousseau, Roche, Fresno, Spunwell, Maximo, Del Paso, Ben-Ali, Tyrant, Indio, Uncle Jess, Montana, Fitz James, Brierhill, Dorian and Torso.

The mares that were alive on the place at last accounts were as follows: Abilone, Abva, Alva Daly, Abvara, imp. Abundance, Accurate, Actpal, Aella, Africa Queen, Agnes Flash, Ailee, Albertina, Alexia, Alfaretta, Allannah, Allanette, Almanac, Alma Tadema, Altitude, Amourette, Amours, Andreth, Annie Lewis, Arnette, Aura II., Aurelia, Avaunt, Ave Marie, imp. Baby, Bagatelle, Balaklava, Dandida, Barbic, Barbary, Maid Bavaria, Bear Flag, Beatify, Bedotte, imp. Beeswing, Bella B., Bellane, Bena, Beryl, Bethulia, Bianca, Blithesome, Blue Dress, Boheme, Bohemienne, Bombazette, Braw Lass, Brazilla, Breeza, Briar Sweet, imp. Brierbush, Brier Rose, Britannia, Bndnoora, Cachuca, Calve, Cantia, Carina, Carissima, Carness, Carolita, Carrie, Celia III., Cerulea, imp. Chanty, Chemica, Chetah, Chic, Chimera, Circlet, Clarissa, Clay Stockton, Cloister, Columbine, Connemara, Cottage Girl, Court Dance, Cresset, Cuisine, Cuyama, Daffodil, Dalnshire Lass, imp. Dane-gild, Daniella, Dansante, D. A. R., Dare Dollar, Dareka, Darina, Darine, Dearie, Delicia, Delight, Demure, Dixienne, Ducille, Duchess of Kendal, Duchess of Towers,

Easter, imp. Eccentricity, Echola, Effervescent, Electricity, Emigre, Emotion, Empress of Norfolk, Epigram, Ernestine, Erratum, imp. Evangeline, Extract, imp. Fairystone, Falsalara, Fascination, Faux Pas, Fidalma, Felicity, Feulhak, Finalis, Firefly, Firezeta, Flarane, Flavina, Fleurette, Flora Ben, Flora Dora, Flors Hurst, Flora Mac., Fritter, imp. Fusee, Garnet, Gazalia, Gianetta, Gladeys, Gladiola II., Glencara, Glenolia, Glenrose, Glenhorn, imp. Glimmer Glass, Golden Days, Goldseal, Gold Wing, Gondole, imp. Gorgo, Gracine, Graziosa, Guenn, Hana, Harmony II., imp. Hattesse, Hearsa, Heartless, Heart of Midlothian, Heloise, Helva, Hiatus, Hidalgo, Hymancy, Herondelle, Hyleden, Inquisitive II., Irian, Iris, Isleta, Ismailia, imp. Italian Beauty, Jewelry, Joiza, Josie K., Jude, Julisse, Kate Daly, Kathleen, Katie Fletcher, Kaweah, Kissing Ring, Kruda, La Belle Juive, La Cachuca, Ladybug, Lady Cardigan, Lady Lister, La Favorita, La Flecha, La Fleur, Lamhayeyca La Paz, La Penitente, La Primera, La Scala, Lass O'Brac, La Toquera, Leucosia, Liane, Lillie Hemstead, Limekiln, Linda Vista, Listen to the Band, Lizetta, Loleta, Longalette, Loo, Lovelock, Lovelove, Lovely, Loyalrita, Lucania, Lucy Light, Lulu, Lumina, Luxury, Lydelia, Maestra, Magnolia, Mamie B., Margerique, Marian, Marigold, Marionette, Marquise Marsala, Martenette, Martine, Mary Adelia, Maxima, Mazine, Meg Merrilies, Memento, Memory II., imp. Merrimac, Millie, Minnet by Norfolk, Minuet by Ray on d'O'r, Misfortune, Miss Belinda, Miss Buckman, Miss Clay, imp. Miss Fria, Miss Hooker, Miss Maggie M., Miss Maxim, Miss Motley, Miss Pickwick, Miss Prim, Miss Rowett, Miza, Moderacia, Modreda, Mollie B. B., Mollie Walton, Modo, Moonflower, Mottle, Motto, Music, imp. Music, Mythic, Nadavis, Naiad, Nana, Napa, Narcola, Nayada, Nehusta, Nell Preston, Nereid, Nina M., Nowaday, Nonage, No Name II., imp. Non-plus, Optic, Ortawin, Pandora, Pansy, Parable, Pas Seul, Patagonia, Pearl V., Peeress, Pensa, Pepper Grass, Petal II., Phillista, Pink Cottage, Pin Money, Pitonisa, Popsy, Pompadour, Preciosa, Priestess, Prim II., Princess Prodigal, Quadrant, Queen Bess, imp. Queen Fisher, Queen's Taste, Quera, Reclaire, Recollection, Red Rose, imp. Red Spinner, Redworth Rose, Repressa, Resurga, Rope, Rhoda G., Rosalind, Rosalva, Roseling, Rosemary, Rose of Arizona, Rosette, Royal Falcon, Ruraria, Sabilla, Sabrina, Sadness, St. Lucie II., Sallie Lucas, Salutaris, Salverine, Salvora, Samoa, Santa Rita, Santuzza, School Girl, Secretive, Sekanet, Sentiment, Sextant, Shannon Rose, Shasta, Sibyl, Silence, Silenta, Silver Wave, Sister Beatrice, Sister Warwick, Slipper Dance, Snowdrop, Solana, Somona, Sozodont, Springlike, Starlet, Starlight, Strathflower, Stray Shot, Suscol, Suspicion, Sweet, Sweet Violet, Syrienne, Tangerine, Teacher, Teatro, Temescal, Tessa II., The Dome, The Gossip, The Maygar, The Mute, Torrid, The Proof, Tortosa, Tourmaline, Trade Dollar, Trellis, Trifolia, Trolley, Tryene, Tulare, Tumult, Turmoil, Typhoon, Tyrannical, Tyranny, Unit, Vandala, Vanish, Ventre, Ventura, Verity, Vernette, Vice Versa, Victoria Cross, Vineyard, Vita, Whisban, Widow Cliquot, Winema, Witchery, Woodford Filly, Yolande, Ysabel, Yum Yum, Zealandia, Zodiac and Zuleika.

Also at Rancho del Paso, Sacramento county, were the select lot of mares owned by Superintendent John Mackey, as follows: Alameda, Andrewetta, Angeliene (dam of Saintly, etc.), Calla Lily, Calora, Carrie Covey, Cervic, Chryseo, Confidante, Elizabeth R., Eye Lash, Fiesta, Gloom, Helen Scratch, Hemera, Hinda Dwyer, Hot Spring (dam of Geyser and Vesuvian), Hula, Loma, Middle Dwyer, Peril, Princess Noretta (dam of Shot Gun), Punstress, Ricardo (dam of Tiger), Royal Aquarium, Scarlet Rose, Seco, Solitude, Sulphide and Torsina.

E. Wilson has on the farm Chemuck, Clara Wilson and Tremblor; the estate of S. G. Reed imp. Brierfoot and Scotch Fir; W. S. Leake, Sister Mary, by Woodlands; Mrs. B. C. Holly, La Reina, by Hidalgo-Helen Scratch, and E. S. Culver, Sophie and Vestina.

W. L. Pritchard owns several mares and has them in Sacramento county after a many years' residence on "the Grant," as Rancho del Paso is known. Among the number are Berth Dunbar, Filena, Gipsey, Lizzie Dunbar and Moldene, though I rather think the latter has been sold. Claudius was used as a stallion a good deal, also Torso and imp. July. W. M. Murry has in the same county Cierce, Claire, imp. Elise, Julia O., Mamie H., Miss Pickwick, Ray Heath, Rochemont, Tillie S., and Wilda, and used the stallions King William, Thornhill, Friar Tuck and Yankee Doodle. Murry used to own Three Cheers. Thomas Fox, postmaster at Sacramento, owns City Girl, Claudie T., Flosey, Guidon, Builtless and Marcia A., and has used imp. Trentola, imp. True Briton, Torso, Figaro, Tim Toolin and imp. Artillery as stallions. Mrs. T. H. Boyle keeps Clara Charm, Clara L., Helen Addis, Lizzie B. III., Loie Fuller, Ravelette, Rosie P., and Waterfall, also the stallion Jack Richelieu. J. A. Coleman has in that county Conchita, by Friar Tuck-Pink; J. H. McGee, Ida Saurer by Joe Hooker-Addie O'Neil; L. H. Todhunter, Lucy Melbourne by Ben Ali-Miss Laura. Ab Stemler owns Detrix, Royal Purple, Ray of Gold, and Wedding Gift; G. K. Rider, Duesa; Andrew Wachman of Elk Grove, Etta W. and her daughter, Rose Clark; Willis Gardner, Sacramento, Lady-Jackson by Jackson-Lady Foster; A. M. McCollum, Castnelli by imp. Martenhurst-Crisalba; David Ahern, of the same place, Kitty A. (dam of Colonel Van, etc.), by Three Cheers-Mayetta (dam of Maresa, etc.); A. T. Ross is the owner of Four Flush, Keepsake, Lilly R., Nic Nac and Queen of Scots; Caesar Young has Ella Smith, Bonibel, Physalis and several others; James Tuohy owns Florence C., and J. F. Cavanaugh, Farie N.: Frank Farrar, Tiny; P. Siebenthaler, Seaside; John Humphreys, Carilia and Chartreuse II.; E. Purser, Scarf Pin and Tenspins.

There are probably twenty mares at Brentwood Farm, Antioch, belonging to different owners, among the number Casekeeper, by St. Saviour; W. L. Stanfield's Queen Nubia and Rose Maid; M. Storn's Perceptriss; W. B. Sink, Jr.'s Lonton R.; J. Reary's Lilly Pantland; C. H. Kobicke's Darechota; Jos. Fetz, Jr.'s Grandezia, Hazel

D. and several others; S. C. Hildreth's Rio Hondo and W. Fischer's Seraphin.

At Concord, Contra Costa county, is W. J. Holpin's place. He owns the stallion El Rayo and the mares Bonnie Brook, Francisca II., Fusil (sister to Horton, Lucinda and Nivea, all these being purchased from the estate of B. C. Holly). At Danville, Contra Costa county, J. F. Boyd has the Joe Daniels mares Josie D. and Miss Douglass, while J. O. Reis had a few mares in the county. The late Colonel H. I. Thornton had his Rancho Resaca in Contra Costa county and bred many good horses there, including Gindo, Oporto and Moringa.

Ed. Lanigan has the magnificent Rayon d'Or stallion, Rubicon, at Brentwood, besides three fine mares, while other stallions at this establishment are Hamilton II (by Iroquois), and Jos. Fetz, Jr.'s Salvado by Salvator-imp. Oran (dam of Bend Or).

In Alameda county, J. C. Simpson owns Jo-Viva (dam of Ora Viva); R. D. Ledgett, Josie D. (by imp. Fossington) and Kitty L. (by Major Ban); J. C. Sweet, Mozelle (by Monday); A. S. Knight, Elmhurst, Oriola, by Joe Hooker-Puss; Wm. Napier, Pleasanton, Cheerful II., by Three Cheers-Queen Emma.

W. H. Christie, Emeryville, Cal., Model II by Sir Modred-Gipsy. George Van Gordon, Pleasanton, Playful by Jim Brown.

R. E. deB. Lopez, of Merriwa Farm, Pleasanton, Alameda county, Cal., owns imp. Merriwa and the mares imp. Clitquot by Grandmaster-Wildfire; Hagar by Apache-Narcola; Harriet C. by imp. Clieveden-Harriet; imp. Ivy by Castor-Veneration; imp. Jess by First Water-imp. Camella; Kinla by imp. Merriwa-imp. Luna; imp. Lady by First Water-Ladyship; Lady Muriel (imp.) by First Water-Ladyship; imp. Luna by Sweet William; Minnie B. by Prince of Norfolk-Lizzie Idle; Queen Maker by Kingmaker-Vitalia; Reising by imp. Clieveden-imp. Clitquot; Secrecy (imp.) by First Water-Secret, and Yepomera by Anacanda-Santa Rosalia. L. Morley, Oakland, owns Wachita by imp. Merriwa-Panchita, and W. E. Greene, Oakland, Flambeauette by Flambeau. The Lopez stud was dispersed December 21st, the stock being sold by auction at the Occidental Horse Exchange, this city.

San Francisco men own several mares. Dr. C. E. Farnum, at last accounts, had the fine stallion Ducat, Eda, Miss Mateo and several mares by Almont, imp. Greenback and other good sires quartered on his place in Butte county. Coaler and Irvine own Corriente, by imp. Friar Tuck-Josie D. Mike Fox, formerly of Rancho del Paso, had Fannie Louise and Reseda II, near Ingleside track at last accounts, while E. D. McSweeney of this city owns Acquito, Alasco, Commotion, Crap Game (a good producer), Dutch Dancer, Idalia, Lillie D (dam of Sleeping Child), and Revolution. He did have these mares on the S. G. Reed farm at Pasadena, bred them to Santiago, Rey El Santa Anita and Nomad. The mares of the late Charles L. Fair which were at Knight's Landing, on the Sacramento river, were sold off last December. They were Callatine, Centella, Ella Smith, Ethelinda, Glen Ellen, I Declare, imp. Janet N., Lucrezia Borgia, Miss Truth, Odd or Even, Pow Wow, Phoebe, Phyalis, Princess, Ray of Gold, Rose of Ormonde, St. Kristine, Sally Sensible, imp. Shimoga, Ursula and Virginia. W. S. Hobart, the young millionaire, also sold off a lot of mares that had been on the Lane place at Palisade, Nev., and they were purchased by different owners through the State. R. Hughes did own Ethelinda, Modwena, Jennie Reid and other good mares. H. Glover purchased Virginia (by Joe Hooker-Bonita) at the Fair sale. P. W. Selby, the wealthy smelterman, owns Santa Petra by imp. San Pedro-Aerolite, and Venita by Tyrant-Idalia.

San Mateo county did have a number of fine stock farms, notably those of the late Senator Leland Stanford, Palo Alto, Prince Poniatowski and W. S. Hobart, but all have been broken up, and but few of the mares remain. The Stud Book shows that W. O'B. Macdonough is still breeding on a good scale on his Menlo Stock Farm, back of Menlo Park, that Mrs. Stanford has imp. Amalia, Aurelia II, Muster and a few of the very old Palo Alto stud; that J. J. Moore, the big shipping man, has in San Mateo county five or six mares and the great Tarcoola, winner of the Melbourne cup, etc., while Frank M. Burke has on his farm, Wandering Nun by Argyle-imp. Janet N. Most of the Burlingame Farm mares of Prince Poniatowski were disposed of to the late Charles Fair, the stallion Magnet sent to Australia, and San Lucas was sold, I believe. He had Afrique, Bessie Hooker, Carinthia, imp. Chiffie, Geneva, Hermanita, Hertha, I Declare, Jocunda, Lillian Russell, Lowry O'Connor, Mammie Scot, Phyalis, Ray of Gold, Sallie Sensible, imp. Shimoga, Spanish Queen, Tenebre, Tiger Lily and Viola by Himyar. The Prince still owns a few, it is understood, but just where they are or what he has kept, I could not say.

W. O'B. Macdonough has had wonderful success breeding in San Mateo county, and deserves it all, because he bought the best stallions and mares that money could purchase, and made a study of the breeding problem as few men have studied it. I believe he has had a greater measure of success than any breeder in America, in my opinion. Ormonde, "the horse of the century," must have cost the plucky young Californian \$170,000 landed safely at Menlo Farm, and while the \$150,000 paid for the horse to Senor Bocau of Buenos Ayres has never been realized through the sale of the unbeaten racer's progeny, there is a chance for Mr. Macdonough to "get out" if the horse lives a few years and gets a few of the caliber of Ormonde's Right, Honiton, Beau Ormonde and Rosormonde and sires like Orme, Goldfinch and Orsini. St. Carlo, another of the Menlo stallions, has proven the best son of St. Blaise at the stud, and never a year has passed since the first crop came out that there has not been three or four good St. Carlos. Now he has Ossary and Orsini for good measure in the stallion line, and the stud book shows the following splendidly bred mares, most of them producers of note: Aerolite, Be Happy, Bessie W., imp. China Rose, Flurry, Geneva VIII, Glenlivet, Golden Locks, Haidee, imp. Kissing Crust, Lady Marion, Moon-

light, Moonlit, Orellana, Partisana, imp. Santa Bella, Santa Cruz, Sapientia, Sloe, Tenebre and Windflower.

J. Naglee Burk of San Jose bred many fine performers in Santa Clara county, but retired from the business over a year ago, selling the stallions Crescendo, Drum Major and Brioso and twenty-odd mares, most of them producers of note. The late H. C. Judson had perhaps twenty-five mares at one time at Santa Clara, also the stallions Wildide and Monday Final, but the mares have been scattered through the State. Wildide died, and the place is well-nigh forgotten as the first home of a host of turf celebrities. P. J. Donohue had about twenty-five mares at Santa Clara six or seven years ago, many of them by the good old Wildide, and he used the very fair sire Duke of Norfolk as a stallion. There was a dispersal sale, and this place is but a memory as a stock farm.

The Elmwood Stock Farm, near Milpitas, founded by the late William Boots, is kept up as of yore, however, though the successful sire, imp. Brutus, died over a year ago, and Tiger was destroyed. Satsuma sired several youngsters, and now Mr. C. T. Boots has imp. St. Symphonion to take Brutus' place. He is by Muncaster (son of Doncaster and Windmere by Macaroni) from St. Editha (dam of St. Gatien, etc.) by Kingly Vale, was a good winner himself and sired St. Servan and other good race horses in England. Then he has Vinctor (by imp. Brutus-Mollie H) and other good Brutus horses that he could use at the stud. His mares are as follows: Brown Maria by imp. Hercules-Lizzie Marshall, Catharine the First by imp. Brutus-Bonnie Jean, Catharine the Great by imp. Brutus-Bonnie Jean, Centella by Joe Hooker-Katy Pease, Claudia by Inauguration-The Swayback, Dido II by St. Saviour-Diana, Forma by Inauguration-Beauty, Formella by imp. Brutus-Forma, Formula IV by Inauguration-Beauty, Gypsette by Inauguration-Gipsy, Initiation by Inauguration-Brown Maria, Installatrix by imp. Brutus-Installation, Leda by Nathan Coombs-Gipsy, Ledalia by Argyle-Leda, Ledette by Nathan Coombs-Gipsy, Lucia de Lammermoor by imp. Brutus-Ledette, Lucrezia Borgia by Brutus-Ledette, Miropo by Joe Hooker-Constellation, Miss Trust by Keyser-Annie Florence, Miss Gift by Wildide-Kate Gift, Mollie H by Wildide-Mamie Hall, Nabette by Nathan Coombs-Beauty, Nebula by imp. Brutus-Constellation, Nerva by Bob Wooding-Lizzie Marshall, Oneko Maid by Oneko-Maid of Balgowan, Phoebe by Grinstead-Phoebe Anderson, Roma II by imp. Brutus-Beauty, Rose of Ormonde by imp. Ormonde-Bud, St. Pristine by St. Carlo-imp. Kissing Crust, The Swayback by Nathan Coombs-Lizzie Marshall, and Ursula by Duke of Montrose-Sozodont. Mr. Boots once refused \$100,000 for Brutus and five of his colts, and has had marked success in breeding race horses with winning ways.

Other thoroughbreds in Santa Clara county are to be found at Emmet, they being the property of S. T. Kennedy. They are Edna K. (by Thad Stevens-Miami), Fanny Fisher (by Servitor-Sue Abbott) and Sophie (by Bazar-Sophie Jennison). These mares were mated with Tiger, San Benito, Brutus, Duke of Norfolk and other horses.

San Joaquin county used to be quite a breeding ground. There the late Hon. L. U. Shippee had a big stud, with Fellowcharm, Take Notice, Lodowic and other stallions and many famous mares, among the number Picnic (dam of Recreation, etc.), Songstress (dam of Kinley Mack and Mary Black), Early Rose (dam of Eddie Jones) and Alameda (dam of Oakland, etc.). R. E. Dolan of Stockton owned at last accounts Mayetta (dam of Maresa, etc.) by Joe Daniels-Amanda L., and G. W. Trahern had several daughters and granddaughters of Blue Bonnet and the stallion Rear Guard, sire of G. W. Trahern. Joe Daniels stood in this county for many years, and many of his sons and daughters are in this neighborhood. Arthur Harrison owned the stallion Kylo (by Cyrus) and half a dozen mares, and bred The Miller and other fast ones in San Joaquin county.

In Calaveras county there are perhaps six or eight thoroughbred mares, for Jack Brady (son of Wildide), Rackety Jack (by Ramaden), imp. Piccolo and other good horses once stood in this section, and doubtless left some descendants.

In Stanislaus county the late Col. Caleb Dorsey had a big stock farm and the stallions Cyclone, imp. Partisan, Young Partisan, etc., besides perhaps fifteen or sixteen mares, several brought from Kentucky. He bred many good race horses from them, horses that not only were successful here, but in the Middle West. Joshua was perhaps the best by any of the Dorsey stallions. Little Alp, a good sprinter himself and a wonderful sire of speedy ones, was kept near Modesto for many years, and a lot of his stock is in the county, though it is not thoroughbred. Revolver, winner of over thirty races, was bred near Modesto. J. T. Davis, who bred Peixotto and Corriente, has a stock farm near Modesto, on which he had Adios by imp. Kelpie-Tyree, Black Willows by Monday-Carrie Miller, Chicquita by imp. Partisan-Brury Mare, Cutneck by Joe Daniels-Carrie Miller, Josie D. by Joe Daniels-Black Willows, The Smith filly by imp. Kelpie-Cutneck, and Tyree by Tyree's Veto-Minnie Smith. At various times these mares were bred to Young Partisan, Dutch, Kylo, Rear Guard, Morello and imp. Brutus. The Williams brothers had a few mares at Newman, among the number Sea Breeze and Miss Cromwell.

In San Benito county, near Tres Pinos, is the stock farm of Gaston M. Ashe. There he has the stallions Ruinart, Homer, Jackson and Oscar, and until lately had imp. Tarcoola, the great winner of the Melbourne cup, Williamstown cup, etc. The mares are Altamah by Alta-Mah; Altivo by Gano-Clara D; Athalie (sister to Potente) by Racine-Pow Wow; Bernie by Alta; Black Peggy by St. Carlo-Cousin Peggy; imp. Ceres by Peregrine-imp. Rosetta; Emelia S. by Take Notice-Whisban; Grey Peggy by imp. Suwarrow-Fanny D; Idalene by Ed Corrigan-Idalene Cotton; Idalene Cotton by Jim Brown-Lizzie P; Ivo by Ed Corrigan-Thetis; Keera by Nomad-Snowflake; Miss Hooker by Joe Hooker-Napa Queen; Noma by Nomad-Idaho; Pet by

Norfolk-Maggie Dale; Queen Alta by Alta-Cousin Peggy; Queen Peggy by Dr. Garnett-Queen Alta; Santa Flora by St. Carlo-Bud of Glennore; Sinfalto by St. Carlo-Sinfire; Sinfire by Kyrle Daly-Cousin Peggy; Stephanotis by Shannon-Lizzie Whips; Thetis by Ten Broeck-2ca; Turbulent by Ben Ali-Termagant; Whirlwind and by El Rio Rey-Blizzard; Wrinkles by Flambeau-Phoebe Anderson; Yerba Buena by Suwarrow-Pet. On the same place at the Ruinart Stock Farm mares, formerly in Marin county, as follows: False Queen by Falsetto-Queen Victoria; Franchise by Hindoo-Countess Gisela; Gladwin by imp. Brutus-Gladys by Flood; Gladys by Flood-Regin; Inflammatrix by Brutus-Ariola; May, R by Midlothian-Orinda and Miss Buckley by Brutus-Forma.

In Monterey county there are a few breeders of thoroughbreds. Young Kingston (sire of Cap. Al) stood near Salinas for years, and Daisy D and Sam Mount were in the county. At Soledad Charles Rutherford has Rhinebeck, a mare by Young Kingston-Vallera, and at Monterey, I believe, E. J. Molera of San Francisco, owner of Rey Alfonso, keeps his mares near Salinas. They are Bud by Glennore; Mercedes by imp. Young Prince; imp. Mirandola by imp. Jolly Friar; Namora by imp. Sir Modred, and Nebita by imp. Cyrus, while Charles White of Monterey had the good stallion imp. Piccolo; Experiment by Cyrus-Mozelle; Lady Torso by Torso-May Dunbar; Lerana by Argyle-imp. Lælia; Marcella by Grinstead-imp. Mutiny and Minetta by Duke of Montrose-Kitty Clover.

There is no considerable breeding of thoroughbreds in Merced county, a gentleman named Potter, owning perhaps half a dozen mares, and there may be a few of the Little Alps and Atlas scattered through the county, though years ago Porter Ashe had Alta and a number of good mares at Merced.

Fresno county has several stock farms, including those of M. F. Tarpey, Thomas Bros. and Lee A. Blasingame. Mr. Tarpey, who lives in Alameda, had Cicero on his Fresno place, called El Nida stud, the last I knew, and his mares were Alert by Jim Brown-Not Idle; Ahaja by imp. Islington-Not Idle; Bruja by Ed Corrigan-Not Idle; Chevy Chase by imp. Cheviot-Jennie Belshaw; Hileen by Wildide-Bonanza by Lodi; Josie G by Gano-Belinda and Querida by imp. Islington-Jennie Belshaw. The Owen Bros. owned Gold Cup, Lady Intruder and Serpolette, among others, and had the stallion Capt. Al and Royal Flush. Lee Blasingame has the good horse Wernberg and the mares Fallen Princess by Falsetto-Princess Glenn; Flush Ban by Major Ban-Miss Flush; Leap Year by Norfolk-imp. Lady Jane; Lou S by John A-Louisa D; New by Major Ban-Scat; Miss Goslin by Gosling-Leap Year; Princess by imp. Cheviot-imp. Music and a young Wildide and Cyrus mare that were good winners on the turf. Other Fresno county breeders are F. D. Wells of Perkins, with the mare Tyrena by Tyrant-Fabiola, and John Arnett of Conejo with Cantenac by Three Theers-Eufaula; Queen Daniels by Joe Daniels-Queen Emma; Ruth by Joe Daniels-Queen Emma; Salt Grass Mag by imp. Mariner-Ruth, and he did own Queen Emma and bred Mainstay and other good ones. Oscar Duke of Conejo, Cal., brought a lot of mares down from Oregon and bred to Montana, a horse once owned by B. C. Holly. The mares are Birdie Butler by Dr. Lindsey, Jr.-Molly Small; Contrary Mary by Bank Roll-Moll Small; Molly Small by imp. Thunderstorm-Mattie; Rosannah Rowan by Mariner-Contrary Mary, and Tiny Lindsey by Dr. Lindsey-Mollie Small.

In Tulare county, near Hanford, there must be several Islington mares and a few by imp. Mariner and Joe Daniels. Islington stood near Hanford for several years, and after the brother to Isinglass had made a great name for himself he was returned to England by the late Col. Hugh McCalmont, his owner.

Charles Kerr has a fine stock farm near Bakersfield, Kern county, which he calls after his old home, Antrim. There he has bred many fine turf performers and has Herald, imp. Kismet, Cromwell and other stallions, and it was the home of the good sire Apache, imp. Reggie, imp. Calvados, imp. Piccolo, Lew Weir and Rio Bravo. The Antrim mares are Aleyone, Amanda, Appoline, Audacity, Belle Platte, Blondinette, Bonita R. Brook, Carrie D, Cinderella, Dorothy IV, Eileena, Forest Maid, Idaho, Jennie Deane, Jennie K, Jennie Nevine, Josie W, Juanita, Katrinka, Leonora, Lina, Madam Wheatley, Maid of Stockdale, Maintop, Marie V, My Badge, Nomades, Ona, Play Toy, Resella, Rill, Rillito, Rosa Bella, Sallie Mac, Santa Rosa, Snowflake 2nd, Sunnymile, Tyrona, Victoria, Virginia Dare, Virjean and Whynot.

Many good horses come from Ventura county, and she used to send out some more than useful horses, such as John Treat, Odette and Dottie Dimple, but the last few years have not been productive ones, and the horses of John G. Hill and other breeders down that way are heard of no more. Wildide, Shiloh and Sid used to be in this section of the country.

T. W. Moore had a dozen or more mares and the stallion Surinam a few years ago near Santa Barbara, but I believe his stock has been scattered throughout the State. However, E. J. and A. W. Boeseke of Santa Barbara afterward owned Surinam, also Rinfax and Caspar, and the mare Ban Lassie by King Ban, among others, and bred some very fair winners. At Capistrano, Cal., M. A. Forster uses the stallion Dan M. Murphy and the mares Zingarella by Ed Corrigan-Minuet; Gertrude P by imp. Pletely-Lornita and Indita by Balboa-Lornita, while John A. Colc recently purchased twenty-two brood mares of E. J. Baldwin and will go into breeding on a large scale.

At Exeter, Cal., George W. Kirkman owns a few mares, among them Myrtle II, a recent winner, by Torso-Lady Leinster, and at Camulos, Cal., N. F. Del Valle has bred some useful racers by Iock Hocking, Jr. (one being Ignacio), out of Pichona. He also has Elza by Kyrle Daly-Eliza by Norfolk.

Los Angeles county is second only to Sacramento county as a breeding section, and E. J. Baldwin's Santa Anita, in the San Gabriel Valley, is one of the best noted stock farms in all the world. It was the

of the sons of Grinstead that first drew attention to California as a great State in which to breed thoroughbreds that could win stakes, and as long as Grinstead lived the Santa Anita stud was at the top of the winners' tree. Emperor of Norfolk is now the premier stallion there, and besides there are Amigo, Santiago, Honduras and Vinctor. The Baldwin mares are as follows: Alano, Altenango, Arapahoe, Ardiente, Argentina, Aritta, Atalanta II, Belinda, Blazeaway, Blossom, Britannia II, Celoso, Chloe A. Clara D, Clara Rose, Clara S, Cleopatra, Clodomira, Colonias, Cordola, Cuban Queen, Dollie L, El Kestro, Esperanza, Espirito Santo, Fame, Florentina, Florilla, Formosa, Gloritta, Hermosa, Hook Blonde, Indianola, Josie Anderson, La Cienea, La Colorado, Lady Diamond, La Maroma, La Palada, La Plata, La Toluca, La Vienta, Leola, Lime Leaf, Lizzie B. Los Angeles, Los Cerillos, Magdalena, Malate, Maricopa, Mariquita, Martina II, Messotint, Miss Ford, Muchacha, Ogarita, Orange Leaf, Orsada, Palo Blanco, Paola, Queen Lilly, Rose Bud, St. Cecilia, Santa Anita Bellé, Santa Monica, Santa Salida, Seven Up, Teodolina, Tiffany and Violetta.

Another Southern California breeder is Atwood Sproul of Norwalk, Cal. He used the English stallion Conveh and has the mares Brunora by Hyder Ali-Leona by Prolific; Clara Moore by J W Norton-Terulia; Cynthia by Milner-Ida Wood and Reina de Luna by Emperor of Norfolk-Cynthia.

Mrs. John Wolfskill of Los Angeles had a number of mares a few years ago, and the Australian stallion Plenty, and in all probability owns them still, and Otto Zahn of the same place had Centenella by Hock Hocking-Monica, and bred her to Sid.

The late S. G. Reed had at one time upward of twenty mares and the English stallions Martenhurst and Duncombe on his farm near Pasadena, but on his death the horses were taken to Rancho del Paso, and probably the Pasadena place has no equine tenants at this time. John Gries used to breed thoroughbreds in Los Angeles county on quite a scale once also. There are a few mares by Hock Hocking, Wildile and Cano scattered through Los Angeles and San Diego counties, of which there is no record in the American Stud Book, but I believe that in this article I have shown fairly well the breeding operations of the Golden State as it stands to-day.

Electioneer and Wilkes.

The accompanying engraving is from a recent picture of the stallion Frank S. Turner 2:28, son of Valotta. Valotta was by George Norval (son of Norval by Electioneer and Kitty Wilkes by George Wilkes), and his dam was Carlotta Wilkes by Charley Wilkes, a son of Red Wilkes. The dam of Carlotta Wilkes was Aspasia by Alcantara, and the grandam by Clark

Frank S. Turner 2:28

Chief. The dam of Frank Turner is Phallas Rival by Phallas 2:13 1/2, son of Dictator, second dam a producing mare by Onward, third dam another producing mare by Brignoli, and the fourth dam a producing mare by Pilot Jr. 12. Few pedigrees contain so many record holding and race winning families. Frank S. Turner has worked miles in 2:20 and quarters in 3/4 seconds. He is owned by Superintendent Turner of the Santa Rosa Stock Farm.

Where the Best Horses are Sold.

The Occidental Horse Exchange is as well known to Eastern horsemen, as well to those on the Pacific Coast, as the Madison Square Garden in New York City. While not so large as the latter, nevertheless, it answers the purpose for which it was constructed, and that is the holding of auction sales of horses night or day. Fourteen large arc lights are on the premises. A large tan bark ring around three-quarters of which are 2000 seats placed for the accommodation of visitors. In the rear of the building are large yards in which over 40 boxes are constructed, and in the adjoining brick building are stalls for over 100 horses. The location is unsurpassed, it is only a few blocks from the Palace and Grand Hotels, on Third street, the principal thoroughfare south of Market street. It is very convenient to trains and boats, and special attention is paid to the receiving and shipping of live stock. When it is remembered that all of the leading stock farms transact all their buying and selling through this exchange and where every attention is paid to keeping and showing stock to the very best advantage, winter and summer, it is a matter of pride with Mr. Wm. G. Layng, the auctioneer, to refer to every person with whom he has transacted business, and this includes scores of owners of thoroughbred racehorses as well as owners of standard bred trotters, either large or small breeders.

A New Stock Farm.

Adjoining the pretty little town of Sebastapol, in Sonoma County, Mr. George W. Kingsbury, the well known and popular proprietor of the Lick House in San Francisco, has established a stock farm that is as yet but young, but is designed to be one of the most perfectly arranged of the smaller places devoted to the breeding of light harness horses. There is a picturesque half-mile track, in the infield of which is a thrifty vineyard. There are barns, box stalls, paddocks, etc., and the residence and other buildings are handsome and neatly kept. The pasture land is hilly and particularly well adapted to the raising of strong, thrifty horses with good feet and well

Della K. (2) by Silver Bow

developed muscles and lungs. Among the horses owned at Kingsbury Heights as this farm is bapilly named, are Lynall 2:16; Cbas. H., a five year old, and D. E. Knight, a three year old, both by Lynmont; Della K., a very handsome two year old filly, by Silver Bow, dam Elma by El Benton, that can show a forty gait now and is entered in all the stakes in California for three year olds. There are also colts and fillies by McKinney, Diablo and other well known sires and a few choice broodmares. Kingsbury Heights was purchased by Mr. Kingsbury for a country home where he could find relaxation from business and incidentally breed a few trotters and develop them.

Have Produced Three in 2:15 List.

- Ten broodmares have produced three with records of 2:15 or better. They are as follows:
- Alaska 2:27 1/2 by Alcyone, dam Wenonah by Hambletonian 559—
 - Lady Geraldine.....2:11 1/2
 - Willask.....2:11 1/2
 - Alkalone.....2:14 1/2
- Chestnut Belle by Red Wilkes, dam Mary by Gov. Sprague—
 - Nobel.....2:10 1/2
 - Dartmore.....2:11 1/2
 - Chestnut King.....2:12
- Elhelwyn 2:23 by Harold, dam Kathleen by Pilot Jr.—
 - Extasy.....2:11 1/2
 - Impetuous.....2:13
 - Ethel's Pride.....2:13 1/2
- Jeanne by Kentucky Prince, dam Suisun 2:18 1/2 by Electioneer—
 - Miss Della Fox.....2:10 1/2
 - Bernalda.....2:10 1/2
 - Cretonnes.....2:13 1/2
- Lemonade by Kentucky Prince Jr., dam Susie Melbourne by Melbourne Jr.—
 - Bessie Wilton.....2:09 1/2
 - Petigru.....2:10 1/2
 - Lady Wilton.....2:11 1/2
- Medio by Cooper Medium, dam Topsey by Mambrino King—
 - Peter Stirling.....2:11 1/2
 - Black Robert.....2:13 1/2
 - Marble.....2:14
- Montrose by Sultan, dam San Mateo Maid by Hambletonian 725—
 - Muta Wilkes.....2:11
 - Mary Best.....2:12 1/2
 - Fred S. Moody.....2:14
- Nemesis 2:28 by Nutwood, dam Four Lines by Blackwood—
 - Nemoline.....2:11 1/2
 - The Astronomer.....2:13 1/2
 - Asmera.....2:13 1/2
- Puella 2:29 by Postboy, dam Ella by Cripple—
 - Annine.....2:11 1/2
 - Corinne.....2:13 1/2
 - Winifred M.....2:14 1/2
- Rena B. by Cyclone 2:23 1/2, dam Loraine by Strathmore—
 - Dentline.....2:13 1/2
 - Bessie Owens.....2:13 1/2
 - Rena Wise.....2:15

Horses Wanted.

James Thompson of Pleasanton has an order to buy two horses. Good prices will be given for a trotter that can show around 2:15 and a pacer that can show 2:10. They must be sound, and good lookers. Anyone owning such a horse and desiring to sell should write Mr. Thompson giving full particulars. Address James Thompson, Pleasanton.

Fastest Records of the Year.

TROTTERS.

- Two year old—Grace Bond, b f, by The Bondswoman—Grace Boyd by Ashland Wilkes 2:17 1/2
 Roy Miller 2:14 1/2
- Three year old—Sadie Mac, b f, by Peter the Great, 4, 2:07 1/2—Fanella 2:13 by Arion, 4, 2:07 1/2
 Alonzo McDonald 2:11 1/2
- Four year old—
 - Judge Green, b g, by Directum, 4, 2:05 1/2, dam by Anteco, Jr. 2:25 1/2, Ben Walker 2:10 1/2
 - Wainscot, b c, by Alec Wilkes 2:16 1/2—Sorceress by King Rene 2:30 1/2, Fred Hyde 2:10 1/2
- Five year old—Lou Dillon, ch m, by Sidney Dillon—Lou Milton by Milton Medium 2:25 1/2
 Millard F. Sanders *1 58 1/2
- Fastest mare—Lou Dillon, ch, 5, by Sidney Dillon—Lou Milton by Milton Medium 2:25 1/2
 Millard F. Sanders *1.58 1/2
- Fastest gelding—Msjor Delmar, b, 6, by Delmar 2:16 1/2—Expectation by Autograph 2:16 1/2
 Alta P. McDonald *1:59 1/2
- Fastest stallion—Cresceus, ch, 9, by Robert McGregor 2:17 1/2—Mabel by Mambrino Howard
 G. H. Ketcham *1:59 1/2
- Fastest new performer—Lou Dillon, ch, m, 5, by Sidney Dillon—Lou Milton by Milton Medium 2:25 1/2
 Millard F. Sanders *1 58 1/2
- Fastest mile, half mile track—Cresceus, ch, h, 8, by Robert McGregor 2:17 1/2—Mabel by Mambrino Howard
 Geo H. Ketcham *2:08

PACERS.

- Two year old—Fata Morgana, hr f, by Sphinx 2:20 1/2—Vee See, p, 3, 2:25, by Fairy Gift 2:30. *2:19 1/2
 - Three year old—Miss Daphne Direct, hl f, by Direct, p, 2:05 1/2—Miss Daphne by Alcantara 2:23
 Ben Walker 2:11 1/2
 - Four year old—King Direct, bl c, by Direct, p, 2:05 1/2—Welcome Bunker by Mambrino King
 E. F. Geers 2:09 1/2
 - Five year old—Hal Chaffin, br h, by Brown Hal, p, 2:12 1/2—Bessie McEwen, by McEwen 2:18 1/2
 E. F. Geers 2:05 1/2
 - Fastest mare—Darial, h, 10, by Alcantara 2:20 1/2—Topsy by Holabird's Ethan Allan
 Alta P. McDonald *2:00 1/2
 - Fastest gelding—Prince Alert, b, 10, by Crown Prince—Till
 J. C. Curry *1:57
 - Fastest stallion—Dan Patch, br, 7, by Joe Patchen, p, 2:01 1/2—Zelica by Wilkesberry 2:30
 M. E. McHenry *1:56 1/2
 - Fastest New Performer—Tom Keene, cb g, by West Egbert 2:29 1/2, dam by Kentucky Prince
 Geo. W. Sanders 2:04 1/2
 - Fastest mile, half mile track—Dan Patch, br, b, 7, by Joe Patchen, p, 2:01 1/2—Zelica by Wilkesberry 2:30
 M. E. McHenry 2:03 1/2
- * Time records. † With wind shield.

Yukon 2:14 1-4.

This handsome young stallion is a son of Bay Bird, he by Jay Bird. The dam of Yukon is by Algona, sire of Flying Jib and his grandam is a full sister to Beautiful Bells. Yukon is one of the best bred

stallions in California. He proved himself a good race horse in 1902 when he won three straight races on the California circuit. He is owned by Mr. C. W. Welby of San Francisco and will make the season of 1904 at the Yukon stables as per advertisement in this issue.

Red Wilkes is a most remarkable horse. He is a big, rugged, bay horse, fully 16 hands high, with bone and substance enough for a draft horse. He was bred by Crit Davis, Harrodsburg, Ky., and foaled in 1874, by George Wilkes 2:22, dam Queen Dido by Mambrino Chief 11, second dam by Red Jacket, third dam the Robert Patterson mare, said to be thoroughbred. Red Wilkes inherited his size and substance from his dam Queen Dido. She was a bay mare with black points, fully 16 hands high, foaled 1862. Red Jacket, sire of the second dam of Red Wilkes, was only 15 hands high, and was an inbred Morgan. His sire Comet was by Sherman Morgan, son of Justin Morgan. The dam of Comet was from a daughter of Old Justin Morgan, and the dam of Red Jacket was by a son of Sherman Morgan. Red Wilkes will soon be thirty years old.

A young man in Edison's work shops has discovered that a pneumatic tube around the axle of a wheel instead of around the tire will obviate jar, and avoid wear, tear and punctures.

LOU DILLON AND HER OWNER, MR. C. K. G. BILLINGS.

CALIFORNIA MONEY WINNING TROTTERS OF 1903.

1. Budd Doble with Klancy Lou, 2:07 $\frac{1}{4}$, winner of \$11,450.

2. Monte Carlo, 2:07 $\frac{1}{4}$, winner of \$7,550.

3. Judge Green, 2:10 $\frac{1}{4}$, winner of \$7,650.

Three Representative Trotters.

Racing on the Grand Circuit from Detroit to Memphis was productive of more sensational trotting this year than has ever been seen during any one season by those who go "down the line." There were 79 trotters that won more than \$1000 on that circuit, headed by the gelding Billy Bucb 2:07½ whose winnings amounted to the handsome little fortune of \$33,400. There were eleven trotters of these 79 that won over \$6000 each, and of these the three California horses pictured on the opposite page were among the first nine. Budd Doble's horse Kinney Lou 2:07½ was the largest winner of the California horses that went East in 1903. He won \$11,450. Kinney Lou started eleven times, was twice first, five times second, and three times third. After his first two or three starts he contracted catarrhal fever and was a sick horse during the rest of the year, but trotted some wonderfully fast miles nevertheless and now that he has fully recovered his health will be raced again next year, and Mr. Doble is confident he can reduce his record materially. Kinney Lou was sired by McKinney 2:11½ and his dam is Mary Lou 2:17 by Tom Benton, second dam Brown Jenny by David Hill Jr., and third dam by Black Hawk 767. The grandam of Kinney Lou has produced three with records better than 2:18, one pacer and two trotters. Kinney Lou returned to California absolutely sound and after a limited season in the stud at San Jose will again go East to meet the horses in his class on the Grand Circuit.

Monte Carlo 2:07½ will not come back to California as Monroe Salisbury sold him for \$20,000 to Mr. Brayton Ives of New York during the early part of this month. Monte Carlo won \$7575 in purses during the year. He was one of the sensational horses of 1902, and was only beaten a short head by Major Delmar at Memphis in 2:05½. He closed the season with a record of 2:09½, which he reduced two seconds this season. He started thirteen times, winning four races, was twice second, three times third and twice fourth. Monte Carlo was bred by Mr. L. B. Daniels of Chico. He is by Mendocino 2:19½, dam Jane by Tilton Almont, grandam Katie Fisher by Norwood, son of Speedwell Hambletonian. Monte Carlo will not be raced on the Grand Circuit next year as his new owner intends using him as a speedway and matinee horse.

Dividing honors with Wainscot as the fastest four-year-old trotter of 1903, is the bay gelding Judge Green 2:10½ that was campaigned in the string of James Butler of the East View Farm, New York. This gelding is one of the grandest trotters that ever represented California on the Grand Circuit. He was bred by Hon. W. E. Greene, Judge of the Superior Court of Alameda county, California, who sold a half interest in him when a yearling to Mr. J. W. Dingee, the well known capitalist of Oakland. He is by the great champion of his day, Directum 2:05½, his dam is by Anteeo Jr. (son of Anteeo and Lady Signal), second dam Belle by Geo. M. Patchen Jr. 31, third dam Lady Primus by Primus 255, fourth dam Fanny McCourtie, a mare brought to this State from Michigan and said to be by Harry Clay 45. As a two-year-old he was given two months easy work. The first time he was jogged a mile out he turned the track in 2:59, and at the end of the two months' work showed a mile in 2:31. Nothing was done with him during the winter of that year and the next March, when a three-year-

old, he was turned out and ran in a pasture with a number of horses until January, 1903, when he was leased to Mr. Salisbury, acting for Mr. Butler, for two years. Mr. Salisbury named him Judge Green, after his breeder, when entering him in the events for 1903 and speaking of the gelding the other day said: "I consider Judge Green the champion four-year-old of America, as he met and defeated all of the colts in his class at Brighton Beach and did it very easily. All things considered I think him the equal of his great sire, and if I had trained him in his three-year-old form I do not believe he could have been defeated this year." He won \$7800 during the season of 1903, starting thirteen times. He won four races, was three times second, four times third, twice fourth and never outside the money. He will be raced again on the Eastern track in 1904 with the East View Farm horses, and Mr. Salisbury says: "I would like to see the five-year-old that has any license to beat this fellow in any kind of a race."

A High Class Stallion.

The late Senator Stanford was of the opinion that the Piedmont-Electioneer cross would produce extreme speed and the horses bred that way at Palo Alto have demonstrated the truth of his theory. Out

the pacer Quick, that took a record of 2:19½ this year and is possessed of speed enough to lower this mark to 2:10. Four others of his get were worked a little this year. Mr. Arms of the Arms Car Company owns them. Two are bay geldings 15.3 hands and can trot in 2:20 now. The other two are fillies and both have shown quarters in 35 seconds. They are in the stable of Mr. J. H. Williams, who will stand Limonero at Agricultural Park, Los Angeles, this year. Limonero is by Piedmont 2:17½, and his dam is Lulaneer, also the dam of Bion 2:19½ by Electioneer, second dam the great mare Lula 2:15 by Norman 25. Limonero made his record at Lexington, Kentucky in 1894. It was in the \$5000 purse for three-year-olds that brought together that year such trotting youngsters as Expressive, Baron Dillon, Axinito, B. B. P. and others. Six heats were required to determine the winner. Expressive took the first heat in 2:15½, B. B. P. captured the next two in 2:14½ and 2:14½ with Limonero close up each time. The next three beats went to Limonero in 2:15½, 2:16½ and 2:21½. It was one of the most hotly contested three-year-old races ever trotted, and stamped the winner as a great colt. Limonero will make the season at Agricultural Park, Los Angeles in 1904 at \$25 the season, and \$35 to insure a colt. He is a stallion that has breeding, size, style, conformation and soundness and is worthy of

LIMONERO 2:15 3-4

of Electioneer mares Piedmont got Limonero 2:15½, one of the handsomest and fastest stallions ever bred at the famed farm of the tall pine, and from Piedmont mares, Electioneer sired that great stallion Mendocino 2:19½ (sire of Monte Carlo 2:07½) and race horses like Alta Vela 2:11½. Limonero, whose likeness is presented herewith, is a bay stallion foaled in 1891, and as he was raced in his colthood, trotting to a record of 2:15½ as a three-year-old, his stud duties have been very limited. But one of his get has ever faced a starter,

patronage by those who wish to breed the highest type of the American trotter.

A farmer consigned a horse to a sale where George Bain was selling. The horse was led in the sale ring and George asked the man if the horse was city broke. "No, but he is country broke." A purchaser asked George what was meant when a horse was country broke. George replied, "He is guaranteed not to shy at the sun or the Rocky Mountains."

RITA H. (p) 2:11 1-4

By McKinney 2:11 1-4, dam Smut (also dam of Brilliantine (p.) 2:17 1:4) by Prompter. Owned by Byron Erkenrecher, Los Angeles.

ELECTRO MCKINNEY

By McKinney 2:11 1-4, dam El Mae by Electricity 5344, son of Electioneer. Owned by Byron Erkenrecher, Los Angeles.

ROD, GUN AND KENNEL.

Conducted by J. X. De WITT.

Pacific Coast All-Age.

Twenty-one entries paid second forfeit last week in the Pacific Coast All-Age Stake. Of these nominations, thirteen are English Setters and eight are Pointers. The class of the All-Age nominations will be appreciated by sportsmen, for with the exception of but a very few, all the rest of them have been placed, several dogs not once but often. The recent performances of Mr. W. W. Van Arsdale's Peach Blossom and the wins of Mr. J. W. Flynn's Senator P. last year have placed Coast dogs in the ranks of the Eastern champions. A recounting here of the records of the dogs below listed would take more space than is available at this time.

Reports from the field trial grounds at Bakersfield are favorable. Indications are that birds will be plentiful, the trial grounds having been patrolled since last August, poachers being religiously excluded. Cover conditions are also encouraging. The recent rains have been beneficial in more ways than one. A complete list of the All-Age entries follows:

SETTERS.

J. W. Considine's (Seattle) black, white and tan bitch Count's Clip (Ch. Lady's Count Gladstone-Jessie Rodfield), whelped September 26, 1901. Bred by Dr. J. A. Bown, Chariton, Ia.

Same owner's black, white and tan bitch Count's Peg. Same breeding.

Same owner's black, white and tan bitch Policy Girl (Dave Earl-Top's Queen).

Clinton E. Worden's (San Francisco) orange and

Jos. E. Terry's Kilgariff, Winner of Coast Derby, 1903.

white dog Jay M. (Col. R.-Spot's Girl), whelped March 29, 1901. Bred by Geo. E. Gray, Appleton, Minn.

Same owner's black, white and tan dog Harry H. (Why Not-Sue), whelped February 17, 1901. Bred by P. Lorillard, New York.

W. W. Van Arsdale's (San Francisco) white, black, tan and ticked dog McCloud Boy (Tony Boy-Sadie Hopkins), whelped December 25, 1900. Bred by Hugh Hopkins, Minturn, Cal.

Same owner's white, black, tan and ticked dog Oakley's Pride (Oakley Hill-Gipsev Queen), whelped June —, 1900. Bred by Chas. W. Tway, Irwin, Ohio.

Same owner's white, black, tan and ticked dog Detroit Joe (Joe's Count-Queen of Diamonds), whelped March 10, 1901. Bred by Louis Hilsendegen, Detroit, Mich.

Same owner's white, black, tan and ticked dog California Bell Boy (Tony Boy-Lena Belle), whelped July —, 1900. Bred by P. Lorillard.

J. E. Terry's (Sacramento) lemon and white bitch Lady (Ch. Count Gladstone-Peach Mark), whelped March 2, 1899. Bred by W. W. Van Arsdale.

Same owner's black, white and tan dog Kilgariff (Orion-Mary Lou), whelped —, 1901. Bred by owner.

Dr. C. E. Wilson's (Elko, Nev.) black, white and tan dog Clipper W. (Marie's Sport-Isabella Maid), whelped April 1, 1899. Bred by H. B. Ledbetter, Farmington, Mo.

A. H. Nelson's (Tacoma) black, white and tan bitch Sport's Destiny (Marie's Sport-Mark's Fleet), whelped July 16, 1899. Bred by H. B. Ledbetter, Farmington, Mo.

POINTERS.

J. W. Flynn's (San Francisco) lemon and white dog Senator P. (Cap E.-Queen P.), whelped June 6, 1897. Bred by E. F. Pinder.

Same owner's lemon and white bitch Nellie Bang (Ch. Senator P.-Lady Belle), whelped July 10, 1901. Bred by owner.

Clinton E. Worden's liver and white bitch Pearl's Jingle (Young Jingo-Pearl's Dot II), whelped August 9, 1899. Bred by Geo. E. Gray, Appleton, Minn.

Stockdale Kennels' (Bakersfield) liver and white dog Cuba, Jr. (Ch. Cuba of Kenwood-Florida), whelped March 13, 1900. Bred by owner.

Same owner's black and white bitch Margaretta (Cuba's Zep-Jingo's Bagpipe), whelped Nov. 1, 1901. Bred by owner.

Same owner's black and white bitch Midget, same breeding as last.

Same owner's liver and white bitch Petronella (Young Jim-Florida), whelped July 29, 1899. Owner, breeder.

Same owner's black and tan dog Cuba's Zep (Ch. Cuba of Kenwood-Jacquina), whelped January 5, 1899. Bred by owner.

GOSSIP FOR SPORTSMEN.

A good story of a well trained dog comes from Point Reyes. One afternoon recently a party of sportsmen after a day's quail shooting, were congregated about the big stove in the symposium at the Point Reyes hotel prior to taking the train for the city. Among the hunters was "Bill" Richards and with him his handsome English Setter dog Squire Dan. The usual run of sportsmen's gossip and hadinage was in full blast, when at an opportune lull in the conversation, there was heard the sharp report made by a cork popped from a bottle of Jackson's Napa Soda water by the gent behind the bar. This in itself was not of a special interest to the hunters—but one of the party was on the alert and that was Dan, for he immediately dropped to shot and looked up inquiringly at his master. His action was immediately noticed by his master and others and Dan was the center of an increased circle of admirers.

Devotees of striped bass angling, doubtless will be pleased to learn that a flag station has been established at the trestle over the head of San Antonio slough, about three miles from Burdell's station. The new station is also about ten minutes' walk from Schultz slough, another excellent fishing water. Trains going in either direction will stop on signal. Tickets for the new anglers' resort were placed on sale Friday last. This arrangement will enable any number of individual fishermen to reach the two sloughs that heretofore have been controlled by several gun clubs which have prohibited anglers from obtaining access to the navigable waters of the sloughs over their preserves. One reason for this prohibition, however, it is stated, was the indifference to the clubmen's rights and property interests displayed by numerous bank fishermen, whose actions tended to raise the ire of those upon whose lands they were at first allowed to fish by sufferance.

Another item of interest to the rod and reel men is a successful shipment of fifty striped bass recently to Newport beach, Orange county. The fish, ranging in size from one-quarter up to three pounds in weight, were caught by net near San Pablo by Deputy Fish Commissioners Manuel L. Cross and Jack Davis. They were placed in large tin cans and shipped at once on the cars. The deputies stayed with the fish throughout the trip. The cans were kept packed in ice and the salt water was frequently aerated. The fish were subsequently liberated in the Santa Ana river, hundreds of miles south of the point of capture and shipment was accomplished without the loss of a single fish. Before releasing the bass the water in the cans was gradually brought to the temperature of that of the new habitat, 61 degrees. The locality selected for the fish, the Santa Ana river and its sloughs, is almost identical with many favorite resorts of the bass in San Pablo bay. The net fishermen at Newport beach have at odd times caught a striped bass or two. fish. it is presumed, which made their way south from Monterey bay. The Supervisors of Orange county will place a close season of at least three years on striped bass. By that time it is confidently expected that striped bass will be plentiful in the southern coast waters.

Mr. Will J. Golcher, who has passed through a severe attack of illness, we announce, with pleasure, has now completely recovered his health and will shortly be able to meet his many friends at his place of business again.

For nearly two weeks past the duck hunters have had shooting innings that are very liable to be ended by the recent rain, for now it is believed by experienced sportsmen that the ducks will take flight to the South for good. Canvashack and mallard ducks have been plentiful, fat and in splendid condition, available both to the hunter who went forth after his birds or the citizen who prefers to get his ducks in the market, club or restaurant. Mallard ducks have been seen in the local markets that weighed

over five pounds dressed. Most of these birds are sent up from the Kern and Tulare irrigation districts, where ducks of many varieties have been more plentiful recently than for years past. Teal ducks have to a great extent left the marshes and ponds and are now to be found in the overflowed tule regions. These dainty little ducks have a fashion of getting into the open water behind the big stretches of tule, where they are safe from the gunner's molestation.

Canvashack shooting for the main body of hunters who find Sunday their most available shooting day, was almost general last Sunday. All over the Suisun, Sonoma and Petaluma marshes, the east side marshes down to Alviso and as far south as Elkhorn slough the royal canvashack was plentiful. These birds are recent migrants from the storm-vexed northern feeding grounds.

Deer Hunting Party in Mendocino County.

Progressiveness in Sporting Goods.

One of the largest establishments on the Pacific Coast devoted to every requirement in the line of goods used by sportsmen and anglers, the devotees of outdoor sports or indoor recreation is that of the H. E. Skinner Company located at the southwest corner of Market and Fourth streets in this city.

The business was first established by Mr. E. T. Allen some twenty-five years ago. When Mr. Allen retired from active business about three years since, the present organization was formed with Mr. Henry E. Skinner at its head. Mr. Skinner had for years been Mr. Allen's right hand man.

Shortly after the new firm took charge of the business, a new location was selected and the present quarters at 801 Market street were fitted up on a scale commensurate with the firm's increasing volume of business.

Mr. Skinner originally attached himself to this particular business with the intention of making it his permanent vocation, and has consequently devoted many years to an intelligent study of the manifold details of handling successfully the merchandise requisite to fill in the complete invoices the firm is now stocked with.

One reason why patronage will increase is not so much founded on personal liking of the dealer, as upon the application of a study and desire to give sportsmen goods that they want and what they need—something up-to-date and always adapted to their particular wants and worth the money, this has been the keynote of the company's success.

Tiburon Landing—A Resort of the Striped Bass Anglers.

A MOOSE HUNT

BY RUSTIC.

When last I journeyed cityward from my country home I took my white English Setter dog Star with me. Everyone likes Star—because the dog Star likes every man, woman and child in the world. I have been fearful some exquisite, when my dog put his paws on his clothes, would kick or strike my beautiful white friend and get me into trouble. But no, Star just pokes his nose into some one's lap or rubs up alongside of somebody to attract attention. When the selected person feels the cold nose or the suggestive push, he or she may look surprised but never angry when is seen the fearless clear eyes and the clean cut figure and bright, shining white coat; then a gentle pat on the intelligent silky head and the dog has made another friend.

It was thus on an Oakland boat one evening recently; my fourfooted friend sidled up to a spare, keen-eyed, alert-appearing individual, who was looking the incoming passengers over from where he sat.

"Oh! Oh! you are a dog, are you?" he said, looking down at the intruder who had thrust his nose and head into his lap. "Want to be friends, do you? Well, you needn't try hard, I'm a friend to a dog—I own three."

Then I, Rustic, had my say—"You have three dogs! Any of them hunting dogs?"

"Well, yes, not your kind," replied the stranger. "Not Pointers or Setters, but just Alaska dogs."

"So you are an Alaska miner?"

"Yes I am. I have wintered there," was the response, "and I never knew what a dog was worth until I found and used him in the North."

"Your dogs up there, what were they?"

"Newfoundlands and Shepherds," replied my new made friend.

"Why," I replied, "I thought that you used Huskies, the native dog."

"So we do, so we do," he assented, "when we can't get any others. Why, my dear sir, Esquimaux dogs are veritable devils. I know of one case where a driver was devoured by them; they do not need a 'Call of the Wild'—they are wild. But when you want brains among men, get a white man—when you want brains among dogs, get a white man's dog. My Newfoundland dog Prince led my string of dogs. When I said 'Mush' that's Esquimaux for 'on;' how he straightened out the pack, how he kept the trails and made the turns! Why, he was a horn leader of dogs."

"Hold up Alaska," I said, "what about your hunting dog?"

"Why he is the one," he continued, "Prince is the dog. Once, towards evening, I was riding on my sled behind my team of dogs, when Prince suddenly swerved, hesitated, then stopped and brought the other dogs to a standstill. Then he commenced to wag his tail, straining in his harness and looking towards a point in the snow off to one side of the beaten trail. I looked intently over the snow but could discern not a thing, was just about to yell 'Mush,' when I saw eight ptarmigan; game birds almost as white as the snow. It took but a moment to draw out my 'pump gun' from its case in the sled and in a few seconds more four birds dropped. It was not ten minutes after I had picked up the plump, fat birds that I made a camp. Hailing my companions I called out, 'Meat, boys; fresh meat!' For you know, canned goods and salt meat are food that we got very tired of."

"Hardly enough to go round," one of my fellow prospectors remarked. "How did you find them?"

"Old Prince," I said, pointing to the Newfoundland.

"Pick those birds one of you fellows, Prince and I will go and get some more."

"I unharnessed him, and then, no longer a horse but a dog, he and I went hunting."

"I gradually made towards some timber, as I neared the woods, I saw the dog's tail commence to wag. The closer Prince got to the birds the livelier his tail swished from side to side. Presently the dog broke into a run, the birds flushed and away they whirled."

When my narrator got to this stage of his reminiscence I thought my English Setter Star showed an expression of abject disgust. Pointed stanchly and steady to shot, is what he most surely would have done.

"Well, you got no more birds then, Mr. Poole?" I asked.

"Yes, we did, Mr. Rustic; I chided Prince and moved on to the trees. Again the monitor tail wagged a warning. The more the tail wagged the more I chided and restrained Prince. Presently I saw the ptarmigan huddled together on the limb of a tree. I fired and killed four more. I then went back to camp and the eight birds were stewed with crackers and evaporated potatoes."

"No wonder," I jocularly remarked, "your dog Prince was a good sled dog—when he went hunting he had a way—on behind."

"Any way you took Prince he was a game dog," Mr. Poole replied earnestly.

"Did you see or kill any big game," I asked, "while you were up in Alaska?"

"Yes," replied Mr. Poole, "but we are at the mole now; I'll tell you a big story of big game when we are on board the train."

We had to go into the smoking car to find a seat because we had a dog for company—a well behaved companion who did not drink, smoke nor chew. But corporations have no souls, it has been said; so we

seated ourselves amidst the smoke to talk of the big game in Alaska.

"You must know," my friend began, "that the Caribou and the moose are the big game of the North. The Caribou are twin brothers to the reindeer. I saw some of the reindeer which Mr. Jackson brought over from Lapland. To the eye there is no difference between the two varieties, except one is tame and the other is wild."

"Now, for the hunt I am about to tell you of," said Mr. Poole, reflectively. "We were camped on a tributary of the Yukon, at a spot many miles to the north of Dawson, four of us in the party. We had been living on canned goods and bacon until we were all hungry for fresh meat; so the boys proposed a hunt for moose or Caribou. This was agreed to and each picked out the locality he desired to hunt over. I struck out through the snow for a creek on which I knew some prospectors were located. I calculated, whether I killed any game or not, I would at any rate find out what the other prospectors had found, as we were all of us in the bleak inhospitable north in quest of gold. The magic yellow metal which buys health and happiness; shuts the doors of prisons to rogues; makes lawyers rich; opens up the saloons of the polite, or the minds of the wise—all responsive to the directing potent touch of the magician's yellow wand."

"So I trudged on through the snow, keeping my eyes open and musing on my situation in the land of the midnight sun. When I reached the divide between the creeks, I stepped back behind a hush for a brief rest. Why I stopped where I did, underneath a snow covered hush, I know not; unless it was habit to tread softly, to hide often and to listen many times when out hunting."

"I looked out from my shelter before leaving it. Yes, there was something coming over the ridge; about to pass me some fifty paces away. It is a Caribou! it is too small for a moose, so I waited until the creature was opposite; then aimed my 30-30 at a vital spot back of its front leg, fired and down it went. It took but a moment to throw the empty shell out and put a loaded one into my gun. Ready to move I looked out again before stirring and there! yes, there! behind the calf I had shot came the mother moose; her big mule head poking along over the snow, through which she plodded. I waited until she came upon the dead calf and threw up her head and snorted, then I sent a ball between her ribs, and away she lumbered over the snow, but not before I had sent another ball after her."

"I am afraid I have lost you, Moosey dear, and we need meat and many camps about us."

"Reloading my little 30-30. I looked out again from my snow covered screen, to my astonished vision there appeared a form looming up on the trail that caused me to exclaim, under my breath, 'What is that monster?' For there was a big bull moose following the mother and son I had shot. Just before Mr. Bull could see the calf—perhaps his son, bang went my gun again. The great beast made a lunge forward, crunched through the snow following the cow moose and disappeared."

"I stood all in a tremble," said my narrator, Mr. Poole, with suppressed excitement. "What had I done? Killed or wounded three moose, enough meat for months. I alone with my little 30-30."

"After I had reloaded," he continued, "I waited a few moments for another moose, which never came. I went to where the calf lay dead, it was fat and must have weighed 300 pounds. I hid the dead moose and hurried on tracking easily the cow and bull. First I came to the cow dead, shot almost through the heart; the second shot had entered at the flank, gone through the body and out at the opposite shoulder. Hurrah! for the 30-30. One hundred and fifty feet beyond the cow, lay the bull, likewise dead."

"I threw down my gun and shouted. I picked it up, shot it off again and again. Not even an echo came from that vast stillness—a solitude so great that it oppresses the human heart. I trembled and broke into a profuse perspiration when I fully realized that I had killed two mighty moose and one big calf, single handed and alone. No answering shot came to me, no halloo in answer to my signals. 'What shall I do?' was the question which presented itself to me strongly. 'It will not do to leave my game; night is too near and camp too far. When the shades of night come on all the timber wolves will be afoot—nor hoof nor hide of moose will be here in the morning. I must stay with the quarry.' So I took my hatchet from my belt, cut branches from dead trees, built two fires, one between the calf and mother and one between the cow and bull moose. I then laid in a store of dry wood alongside the fires and kept solitary vigil, trudging hungry and cold, to and fro between the two fires, keeping at bay the howling wolves, whose teeth snapped and pairs of green, hungry eyes glistened in the fire light. The night wore on to the coming day. The first I knew that help was nigh was when I felt a warm, moist nose against my hand as I was standing on guard near the dead calf. I looked down to find my dog Prince, whining to be recognized. 'Good dog,' I said, 'so you found your master when his men friends had deserted him.'

"Hello! hello! hello!" came voices in quick succession; 'what have you here?'

"A Caribou," said one. "No, a young moose," said another. "Meat, by Jove!" said the third.

"Yes, meat," I answered, "but no credit to you. Why did you not hunt me up last night?"

"Why, we expected you in camp; we knew you were not lost. We had no idea you had shot anything."

"There! look, there is another! she'll weigh 800 pounds," exclaimed another in surprised tones, as we walked along the path I had tramped deep in the snow between the carcasses.

"Gee whiz! here's the papa of all the Imoose tribe! look at those horns! he wore an armchair upon his head," excitedly shouted my companion. "Hurrah, for Poole," chorused the boys, as they hoisted me aloft on their shoulders. I offered to give my friends

the moose, but they would not hear of it. They claimed I shot the game, stayed by it and kept the wolves away, all for the common benefit, after being left alone and unaided. They refused to take an ounce of meat as a gift but insisted on buying and paying for what they wanted."

"So right there," said Mr. Poole, "hundreds of miles from anywhere I sold the three moose for \$750. But I did not sell the dog which found me. My partner has him and two others awaiting my return in the spring to our claim, from which we hope to get rich."

So ended the story. Mr. Poole patted Star on the head and said, "Good-bye, Rustic." The night had come. The train stopped and the journey ended at my station.

An Old Established Firm.

Nearly forty years ago Clabrough Brothers opened a gun, ammunition and sporting goods store in this city. They originally started the business in Montgomery Block, near Washington and Montgomery streets. The reputation of the firm gradually spread and their customers annually increased. The business is still conducted by the Clabrough, Golcher Company at 538 Market street. The Clabrough gun has been, and is now, a favorite with all sportsmen who desire a high class gun for field, marsh and trap shooting.

A full and complete stock of everything desired by devotees of any sport or recreation can be found at the big store, 538 Market street.

Among the Pointers and Setters shown on page 32 are some notable field trial performers. Going back for only two years we find—

Peach Blossom (Ch. Count Gladstone IV.—Peachmark) equal third, Pacific Coast All-Age 1902; first, Pacific Coast All-Age 1903; equal fourth, Illinois All-Age 1903, and winner of the Illinois Championship Stake 1903.

Dr. Daniels (Plain Sam—Dolly Dee II.) first, Pacific Coast All-Age 1902; second, Pacific Coast All-Age 1903, and fourth Independent Field Trial Club 1903.

Cuba Jr. (Cuba of Kenwood—Florida) first, Pacific Coast 1902; third Pacific Coast All-Age 1903.

Harry H. (Why Not—Sue C.) second, Pacific Northwest Derby 1902.

Lady (Ch. Count Gladstone IV.—Peachmark) third, Pacific Northwest All-Age 1902; first, Pacific Coast Members' Stake 1903.

Northern Huntress (Ch. Joe Cummings—Mecca II.), equal third, Pacific Coast All-Age 1902; third, Pacific Coast Members' Stake 1903.

Victoria Belle is owned in Victoria, B. C., and has a good record of bench winnings and has also proved

Oak Grove Kennels' Ch. Ormskirk Emerald Jr.

a dam of winners.

Minnesota Joe (Ch. Alberta Joe—Ch. Susie Rush) is one of the best looking Pointers on the Coast to-day. Minnesota Jr., his handsome son, took second in the recent Independent Derby.

Vina Belle (Ch. Aldon Swagger—Ch. Golden Jewell) has been among the winners every time she has been benched.

Ch. Hanover Monarch (Ch. Ellwyn Astrologer—Ch. Old Hall Noon) has a string of hench show honors to his credit that were won in England, back in East and recently in this city, where he made his first appearance at a Coast show.

Le King (Ch. Le Prince—Sylvia's Lola) had his career given in detail in our issue of December 12th.

Rippowam Miss Tuffet (Imp. Rippowam Archer—Imp. Moreton Vesta) is a promising young bitch that has won a number of prizes at northern shows.

Ch. Ormskirk Emerald Jr. (Ch. Ormskirk Emerald—Imp. Queen's Bounty) has been practically an unbeaten dog since his puppy win of first several years ago. In the open competition he has generally taken the blue.

Du Pont Calendars.

A communication from the E. I. Du Pont Company, Wilmington, Del., announces regretfully that the entire issue of Du Pont calendars for 1904 has been exhausted. There has been such an enormous demand for them that further applications must be refused, no matter how much money is enclosed for a calendar.

Duck and Quail Outfits.

The demand at Skinner's keeps up for sportsmen's outfits, ammunition and guns. A large and new stock of goods has been added to fill the demand for hunting suits, rubber boots and hunters' footwear; canvas and folding wooden decoys, gun cases and a new design of leather-covered shell boxes. Peters Factory Loaded Shells are requested. Skinner's place is 801 Market Street. You can get anything there you need for duck or quail shooting. Send for a catalogue, if you haven't the time to come and try a mail order.

BEAR HUNTING WITH HOUNDS

IN BRITISH COLUMBIA.

BY A. BRYAN WILLIAMS.

October was waning when, one bracing morning, just at dawn, I sallied forth from my house. After a brief and complacent survey of the daybreak landscape—the murky, mist wreathed river; the serrated ridges of tree tops silhouetted against the faintly illumined sky-line, and the more or less lofty and extended landmarks o'ershadowing familiar tramping ground. I felt assured that a good day for a hunt was awakening. So, crossing over to my kennel, I opened the doors and let out the eager hounds; the pack well knowing that something to their liking was on the tapis.

It was an off day for me, that is, I had not generally announced, as was customary with me, that I intended to hunt with my dogs. In consequence I was alone, my usual hunting companions and visitors were for the nonce absent. I had, however, the evening previous, told M., a neighbor and comrade of the chase, to be on the lookout for me, as it was possible I might be astray early upon the following morning, and if I did, I would go by his house and cross the river, from the island on which I was located, to the mainland in his canoe.

A walk of a mile, brought me to M.'s house where I found him ready, and without delay we started for the river side, a little more than a half-mile away. Road there was none, nothing but a cow trail through heavy scrub brush, the trail leading through, at intervals, small open prairie-like patches.

The path, such as it was, proved very muddy. We both kept our eyes open for signs of game, not that we particularly expected to find anything there, but still caution was in order, for we were aware that now and again an odd deer or wildcat harbored in the scrub and patches, and if we came across either, a kill was a foregone conclusion.

We did not find any kind of sign, however, and I kept the hounds close in to heel. Soon after climbing over a huge cottonwood log that laid across our route, M. called my attention to the absence of Philosopher, one of my best hounds. Thinking the old dog was just behind we halted a few minutes, then I hallooed for him, but without avail.

"There must be something about," I remarked; "I am sure I saw him on that big log we just crossed over. But we ought to have seen some tracks."

"Most probably he struck an old 'coon track on the log," replied my companion.

I was about to agree with him and drawing my horn to call in the hound, I noticed Judge, another of my best hunters, sniffing the air in a suspicious manner.

"It is more than a 'coon," I said to M., "look at Judge, there must be a huck about somewhere and close too."

"No," answered M., "I was all through here yesterday grouse hunting and saw nothing but 'coon tracks. We are only wasting time fooling around here, blow your horn and call Phil in, and let us get over to the mountain."

I was only half convinced, and slowly raising the horn when "Ough-ah-ough!" resounded Philosopher's deep note, from apparently a spot some three hundred yards away to our left.

"By jove!" cried M., "that does not sound like a 'coon. It is possible a deer may have come in here this morning."

Then hearing the grand old hound speak again, with a "Hark to him, laddies! Hunt him up!" I sent the rest of the pack flying to their melodious throated leader.

Anxiously we waited, for the quarry, whatever it might be, was not yet on foot, and to make for the deer runways would only be wasting time, if it should, after all, turn out to be some other sort of game than a huck.

For ten minutes, about, we stood eagerly awaiting results, hearing an occasional note from Philosopher and some "hahhling" by several of the youngest hounds. They were not yet trained to pick up scent, still they were too excited to abstain from talking.

"Hark! Judge is whimpering," I cried, "now we shall soon know all about it."

Then Philosopher spoke again and we heard Baby Tootles' plaintive voice shrilly proclaiming that she, too, could "own" the drag. Judge's music fell resonant upon our waiting ears next, then followed the unmistakable chorus in unison when fresh scent is struck and the whole pack is away in full cry.

For some minutes the chase went straight away from us, and M., believing it was a deer, started for the canoe. Just then a deep, angry bay from Judge, far different from his ordinary cry, told me that the quarry was not a deer after all, but better game by far.

"Hold on," I yelled to M., "it's a bear they are after. Listen to Judge!"

Philosopher, too, changed his note. It seemed as if the bear, for my surmise was correct, had slackened his pace, maybe intending to fight off his four-footed enemies at the start. If so, the varmint changed his tactics when he discovered that the pursuing pack were not ordinary curs, but hounds that knew their business and had the courage to close in mortal combat.

Away the distant chase sped again, the deep bay of

the veterans changed into the regular cry, we knew then that we had to put our best foot foremost, if we did not want dogs and hear to get away from us altogether.

After them we went, tearing frantically through the scrub, over logs, into ponds and mire—we had neither time nor desire to pick our way—our clothes were torn and our faces and hands scratched by the wild rosehushes. For a half hour we worked along together and managed to keep the pack in hearing, though they had made but few turns and had hardly checked during the whole time. But the going was too heavy for M., whom I left, lying half way over a log and gasping for breath.

Another quarter of a mile and then my bolt was also shot and the hounds passed out of hearing. I rested a few minutes to recover my wind and then made back for the river in the expectation that Bruin would cross and strike for the mountains. In that event, I could locate the dogs on the other side.

Finally reaching the river I did not hear the hounds as I had expected. There was no means of crossing the stream, save by swimming about 100 yards, this was not advisable unless the bear was at bay close by. I turned and slowly followed the river bank intending to get M.'s canoe.

I was almost half way when I heard the hounds faintly; they were a long way off. They were still on the island and after listening intently a few minutes I made out that they were running hard in the direction and locality where they first found and if they kept on as they were going the chase should pass by or near M., where I had left him.

I attempted to get through the thick brush but the effort was hopeless, so I decided to follow the river bank until I reached the trail, from that point I could turn up the trail and then cut in ahead. Off I started on the run. Nearer and nearer the chase approached and louder and louder was the crying of the hounds, until I despaired of getting there on time. The going along the bank, luckily, was good and a welcome "check" gave me opportunity to get to the middle of the trail before the chase got on the line again.

through the line and got a small start.

This maneuver gave M. a chance, for all of the dogs dashed to my side in avoiding the bear's rush. He fired a snap shot, but was too careful about the dogs, leading too far ahead he missed. Before M. could shoot again, the hounds closed in and ere Mr. Bear was half way across the clearing, Judge nipped him so badly that he half turned to strike. Philosopher then dashed in on the other side and drew blood.

Again the bear made a dash for liberty, but it was futile, for at the further end of the prairie he found a fatal obstacle in an enormous log which blocked his path into cover again. For spent as he was, he could not jump and to get into the hush refuge again he had either to go over the big fallen tree or to scramble up the steep banks which were at each end of it.

Both of us were now close up, eagerly awaiting the chance for a safe shot, for in the mix-up we did not want to hit a hound. Knowing now the bear was ours we took no risks but stood by and watched the scrimmage.

Time and again Bruin tried to scale the log or leg up the banks; but each time one, two, or three of the demon hounds seized hold of him and pulled him back. Repeated failure of these attempts to loose his enemies made the shaggy, black gladiator mad with an impotent rage and apparently abandoning all hope or desire for escape he turned on the dogs. First at one yelping pest, then at another loud-mouthed tormenter he dashed, striking out with his claws as skillfully as a hozer and gnashing his foam flecked teeth the while. The dogs dodged many a fatal blow and while he was devoting his deadly attention to one in front the rest of them were making it exceedingly warm and unpleasant in his rear and back to the log he would retreat.

Judge and Philosopher, were as usual, the chief aggressors. Tiger did his share of the work, Baby Tootles had her mouth full of hair, even the youngest of the pack were taking a part in the combat, if only by making a good row of it.

At last Bruin got too tired to do much more than defend himself. Judge, seeing a favorable opportu-

The Shaggy, Black Gladiator

I had just got my breathing apparatus in working order once more when M. emerged, panting, from the bush. He had not waited to see if he could get a shot as they went by, but had started back as soon as he heard the outfit returning.

Just then the hounds picked up the scent again and were coming straight for us, making the woods ring with their cry, evidently pushing their game hard. Suddenly they turned to one side and we raced down the trail to keep in front of them. Then, as they swung back again, back we also went. Up and down the trail we ran half a dozen times; the bear was making a number of turns for the purpose of throwing the dogs off. We kept our rifles ready in the expectancy of getting a shot at any moment. When the pack was within about 200 yards of the trail the music was changed from the cadence of the running chorus into an angry ensemble that told us that Bruin had turned to bay, dropping the gauntlet for the opening rounds of a fight to the finish.

Into the hush I dashed, but before coming onto the scene of the holdup, once more bear and dogs were on the move, but they went slowly. I could tell from the baying of the dogs that they had the bear surrounded and that he would not go much further.

They were all within twenty yards of me by this time, but in such a dense growth of rosebushes that, although I could plainly see the bushes swaying about in the commotion, I was unable to see hide or hair of Brer B'ar. I felt that it was too difficult to try for a shot there without running great chances of killing or wounding a hound.

A few yards further back from where I stood was a small open space, some 200 yards long and about fifty yards wide. Believing, to a certainty, that the "rough house" in the rosebushes would work over to and across this prairie I made for it. M. hurst through the brush on the opposite side just as I reached clear going. Then Bruin ambled out from cover, taking a course between the two of us—the entrance of the three principal actors upon the (last) stage for the final act in this tragedy of the wildwood being almost simultaneous. The hounds were all around the varmint, keeping him busy and making it hazardous for us to risk a shot. Upon seeing us, he halted, taking the hounds by surprise he broke

nity, dashed in and took a hind-leg hold which he stayed with. The bear was having all he could attend to in keeping off the dogs in front. Philosopher, possibly not wishing to be outdone by his kennelmate, became reckless and made a mad attempt for an ear hold, he failed to land and was picked up and held under one arm; he gave one howl of mingled pain and rage and then squirmed around and took firm hold with his teeth in the bear's throat.

"Shoot! shoot!" screamed M., "he will kill Philosopher."

We both tried, but couldn't do so without hitting either Judge, who still hung on to the hind leg, or Philosopher, who was literally eating into his enemy's throat and did not appear to be getting much hurt in return.

Brer B'ar had to use his disengaged arm to fight the other dogs and consequently could not hurt either if the two hounds hanging on to him. Tiger was oxt in order for a good hold and then, for the first time the old bear howled loudly. Evidently believing that his time had come, he ceased to fight the main bunch, and to make sure of one of his foes, he grappled Philosopher in both arms and sought to tear him with his jaws. Just then my opportunity came and with the rifle's muzzle almost touching the bear's back I pulled the trigger. Down with a thud he went, all in a heap. The dogs just swarmed over him and stretched him out; he was not dead, he was too tough to give up so easily and struggled gamely to his feet. This, however, was the last effort, for he was dragged down again and after a few final struggles gave up, fighting to the last.

Philosopher had never let go his hold on the bear's throat and it was some time after the kill before I could persuade him to do so and let me examine his wounds, which while painful were none of them at all dangerous.

The quarry weighed, I should judge, 350 pounds or over and was in fairly fat condition. The pet was so badly mauled that we did not care to take it.

It was still early in the day, for the final scrimmage did not last so extraordinarily long, but as so many of the dogs were wounded and required attention we decided not to hunt any more that day and turned our steps in the direction of M.'s house.

Riverside Ranch.

Near the city of Stockton, California, on the Rough and Ready Island which is formed by the San Joaquin river and sloughs that are tributary to it, the Pierce Land and Stock Company, whose office is at 14 Turk street, San Francisco, has established a most perfectly appointed dairy farm. The Riverside herd of Holsteins contains the largest number of officially tested advanced registry cows of any herd in the world. Among the cows are De Natsy Baker, that holds the

is from 12 to 15 inches. A cool breeze comes in from the sea coast on the west which tempers the warmest days, both summer and winter are inviting. San Benito county excels in three things—hay, poultry and fine horses. Hollister hay is of a superior quality owing to climatic conditions, absence of fogs, extreme heat or cold, and the peculiar adaptability of the soil to produce a sweet, sun-cured hay, that is free from foul weeds and undergrowth; a hay that makes a strong, rich feed and that gives the best results and entire satisfaction.

good water, sunshine, not too cold, and free from fogs—all these conditions exist and that industry is growing very rapidly. San Benito county is noted for its fine horses, both draft horses and fine blooded horses, but more particularly for fine draft horses, the sale of which is a great source of revenue to the community. We give herewith a resume of shipments from San Benito county for twelve months past, which is very flattering and shows a very healthy, prosperous condition of things, and also shows that San Benito county, although small, is a very productive

A Load of Hay.

[Will Lampton.]

Geo.
I seen a load of hay
To-day
On the street.
Not haled hay,
But the other way;
The real smell-sweet
Kind, piled high
On a wagon passing by.
Come from—no matter where;
It brought the good, clean air
Of the fields and the days
When Pap and the hands
Cut the medder lands
And I hauled haycocks with a mule,
After school.
Jee-mimy Kate,
Wasn't that great?
And then after a bit
Pap hauled loads of it
To town;
Great big loads piled high.
My,
But they looked big to me;
And I can see
'Em yit,
Every bit
As plain as if it was yestiddy,
And didn't he bring
Us children everything
When he come back at night,
All right?
Say,
When I seen that load of hay
Today,
I jst wondered if somewhere
Outside of this town
There wasn't a lot of children
Looking down
The road watching for their Pap
To come back.
And say,
That hay
Got into my eyes some way.
The smell of it, I guess, or—
Dinged if I know what.
I'm shore
It never got
Into my eyes before.
Say,
Did you ever feel that way

Riverside Ranch—Front View of Milking Barn

world's two year old thirty-day officially tested record of 70 pounds and 10 ounces of butter; Jnlia De Kol, holder of the world's two and a half year old thirty-day official record of 93 pounds of butter; Manor De Kol Belle 2d, holder of the world's three year old thirty-day official record of 83 pounds and 10 ounces of butter; Romeo Aaggie Acme, whose seven year old record for seven days is 26 pounds and 11 ounces of butter. It is from such cows as these that the Riverside herd is being built up and is now the leading herd of America. It does not pay any more to keep poor cows, and the dairy man who wants to be up to date and to make the greatest profitable profit from his cows should select the best to be had. It is not a case of how cheap but how good. Visitors at the Riverside Ranch are welcome at any time. Read the wonderful record of the Riverside Herd on the inside of the last cover page in this issue.

A Small but Fertile County.

San Benito county is one of the smaller counties of the State, but what it lacks in area it makes up in fertility and productivity. Hollister, the county seat, has a population of 2500; is a prosperous up-to-date town, 95 miles south of San Francisco on the line of the Southern Pacific R. R., with three trains daily to and from San Francisco. Hollister is 25 miles east of Monterey and is 234 ft. above sea level, the average mean temperature based on public records is 58.9; the climate is as near perfect as can be found in California, which excels in climatic conditions. The average rainfall

The plant of the Lathrop Hay Co., Hollister, the shipping yard of which is shown herewith, is the largest plant in the United States covers 14 acres, with three large warehouses with a combined storage capacity of 13,500 tons. The shipping yard is equipped with hay derricks used for loading the hay, as it comes in in the summer time, right into the cars. This does not include the hay

county and a good field for the home-seeker or capitalist: Hay 31572 tons, fruit 4004 tons, butter 96 tons, cheese 380 tons, wine 400 tons, quicksilver 160 tons, hogs 460 tons, harley 5000 tons, flour 8298 tons, poultry 5502 dozen, eggs 870525 dozen, horses 800 head, cattle 3200 head, 27 car loads green fruit shipped from San Juan valley.

In addition to other things that may be

Riverside Ranch—Interior View of Milking Barn

stored; the annual yield of hay in the county amounts to from 32,000 to 35,000 tons. The Lathrop Hay Co. handle an average of 2000 tons a month the year around, and ship hay to many Eastern cities—for instance, New York City, Chicago, St. Louis, Cleveland, Lexington, Kentucky and other points.

This county also excels in the raising of poultry and eggs. To be successful in this industry you must have cheap feed,

said, San Benito county has the richest and the largest producing quicksilver mines in the world to-day—the New Idria mines.

We are learning that with improved breeds a better and quicker profit is possible while by maintaining better sanitary conditions and feeding a variety of material the risks of disease are materially lessened.

Next to a load of hay?
No?
Oh;
You was born in the city?
What a pity!

Matre sows usually are not only more prolific, but have more vigorous pigs, so that when a sow has proved herself a good breeder and mother it is best to keep her as long as she farrows profitable litters.

Horses will be at yard January 11th for inspection. Send for Catalogues.

FRED H. CHASE & CO., 1732 Market St., S. F.

At the same time and at the same place there will also be sold the stallion Daedalion 2:11 by Diablo 2:19 1/4, dam Grace, dam of two in 2:15, three in 2:30 by Buccaneer. Daedalion is one of the most promising young sires in California, and is able to race and reduce his record. Consigned by Geo. H. Fox, Clements, Cal.

To close a copartnership, Mr. C. A. Durfee sends the following four by McKinney 2:11 1/4: Johnny McKenzie, two year old gelding, dam Babe by Ferdinand 1815, son of Stratmore, second dam Firewood by Fayette Wilkes, son of Geo. Wilkes, third dam by Blackwood 74 and fourth dam by Washington Denmark. This colt is a great prospect and is entered and paid on in all the leading three year old stakes in California. Twilight and Daisy B., full sisters five and four years old by McKinney 2:11 1/4, two year old gelding, dam of two in 2:15 1/4. These should be the greatest broodmares ever out of Stenwinder, dam of the great Directum 2:05 1/4. These should be the greatest broodmares ever bred in California. Bessie D., a filly by McKinney out of a mare by a son of Venture. She is bred much like the other two and a great prospect.

FRED H. CHASE & CO., 1732 Market St.

FOR SALE MATCHED TEAM.

Handsome bay horses, 16 hands; one 8 and the other 9 years old. A high-class carriage team, well mated, stylish, good gaited. To see the team and for particulars address or apply to

B. L. FISHER,
1352 Park St., ALAMEDA, CAL.

FOR SALE.

THE BEST UNMARKED PACER IN CALIFORNIA. Handsome 2 1/2 a picture; can be driven by a woman, and is sound, kind and gentle. He is a bay gelding, coming six years old, with small star and near front foot and ankle and both hind ankles white. Stands 16 hands high and weighs about 1100 pounds. Is the best bargain in California for the price asked. Has worked miles in 2:12 and 2:13. For price and other particulars address OWYER, care BREEDER AND SPORTSMAN, 36 Geary Street, San Francisco.

Dillon Stock For Sale

DAISY DILLON, brown filly, foaled May Stock Farm, sired by Sidney Dillon, sire of Lou Dillon, 1:59 1/2. First dam Paeta 2:26 by Lou Pine 2:28 1/2 (son of Electioneer); second dam Ceta by Piedmont 2:17 1/4; third dam Cecil by Gen. Benton 2:34 1/2; fourth dam Cuba by Imp. Aust. Mar. etc. DAISY DILLON is a beautiful filly and a grand prospect for some one. Fine disposition, well developed, and shows she is bred to win. I will sell her dam FACETA also. She is the Acme of Palo Breeding. Both dam and filly must be seen to be appreciated. I am offering them for sale as I will not have the time to devote to them that they should have. Paeta was stinted to Sidney Dillon again May 20th. Address, T. H. S., care of BREEDER AND SPORTSMAN, 36 Geary St., San Francisco, Cal.

PACER FOR SALE.

ALFRED D. 2:12 1/4, BAY GELDING, 16 HANDS, A by Longworth, dam by Judge Saulty-bur, with little training heat Welcome Me in 1902 in 2:12 1/4, 2:13 1/2, 2:14, over a track five seconds slow. Kind disposition and sound as a bell. A coming two minute pacer sure. Address

MARSH THOMPSON,
P. O. Box 331, Ventura, Cal.

McKINNEY FILLY FOR SALE

W. L. DE CLOW CEDAR RAPIDS JACK FARM IMPORTER OF Percheron, Belgian and Oldenburg Coach Stallions Spanish and Majorca Jacks.

My three importations of Percheron, Belgians and German Coachers and Catalan Spanish Jacks are at my farm at Cedar Rapids, Iowa. I have among these horses the largest and finest Belgians that have ever been imported to America. Of Percherons, I have the best qualities that could be secured in France, being nearly all ton horses. There is no disputing the fact that my 2400 lb Belgians are the best in America. My German Coachers are all 1500 lb. Coachers with the best of quality, bone and substance. All are high acting and toppers of the highest order. You will lose money if you buy elsewhere without seeing my stock. Stock is all fresh, no horses sold and taken back to be sold again to unsuspecting customers. You run no risk in buying from me. For this season I have the best line of Jacks ever put on sale in America. I have two year olds 16 1/2 hands high and built from the ground up. I have three, four and five year olds of the same quality, size and substance and an making prices lower than ever before. My motto is, "Quality for a living price." It is my object to make my place "the farmers supply of the Middle West" and sell direct to farmers. If you want a company in your neighborhood, organize it yourself and come to my farm and buy a better horse for \$150 than other importers are trying to sell to you for twice the money. At the Live Stock Show in Chicago a well known horse breeder from Ohio said to me, "You have more quality and better horses than any other importer on the grounds. I am surprised at finding so many 'brilliant' colts among your Percherons." Another man from Iowa said "I have never seen German Coachers with the size, bone quality and action of such a high standard of excellence as yours. There is nothing on the grounds that equal your Coachers." An other old time horse breeder from Peoria, Ill., said, "I have not seen so much quality in Percherons since 1888 as you have in your bunch. I always like the brilliants and think at the present time they are worth double of any other strain of the Percherons." and emphasized his statement by taking a 2100 lb. three year old home with him. Each of my horses has four corners with a foundation under each corner, perfect types of the old time Normans. Twenty-one gold and silver medal winners. When buying, buy a medal winner. Come and see for yourself

All declarations void unless accompanied by the money. \$2000 added, of which \$400 to second, \$200 to third, and fourth to save stake. Weights, 117 lbs. One mile.

STAKES FOR 1904.

THE GASTON HOTEL STAKES—Estimated value \$2200. SUBSCRIBED TO BY GASTON'S HOTEL. For colts and geldings (foals of 1902). \$1000 added. (\$10 entrance). For 1904. A sweepstakes for two-year-olds, colts and gelding. \$10 to accompany nomination, and \$50 additional to start. \$1000 added, of which \$200 to second, and \$100 to third, fourth to save starting money. Four furlongs.

THE ARDELLE STAKES—For fillies (foals of 1902). Estimated value \$2200. \$1000 added. (\$10 entrance). For 1904. A sweepstakes for two-year-old fillies. \$10 to accompany nomination, and \$50 additional to start. \$1000 added, of which \$200 to second \$100 to third, fourth to save starting money. Four furlongs.

THE MEMPHIS STAKES—For two-year-olds (foals of 1902). Estimated value \$4000. \$2000 added. (\$10 entrance). For 1904. A sweepstakes for two-year-olds. \$10 to accompany nomination, and \$50 additional to start. \$2000 added, of which \$250 to second and \$150 to third, fourth to save starting money. 3 lbs. below the scale. PENALTY—A winner of a race of the value of \$1000 to the winner, 3 lbs. (selling excepted). ALLOWANCES—Non-winners of two races of the value of \$300 each, or one of the value of \$500 (selling race excepted), 5 lbs. penalty; such penalty not to exceed scale weight if handicapped at less; those weights at scale or more than scale weight by the handicapper will not be subject to a penalty. The scale to be Western Jockey Club Scale. This race to be run the opening day. One mile and one-sixteenth.

SPECIAL NOTICE—No entry will be received for any of these stakes except upon this condition: That all disputes, claims and objections arising out of the racing, or with respect to the interpretations of the conditions of any race, shall be decided by a majority of the Executive Committee present, or those whom they may appoint, and their decisions upon all points shall be final.

The Club also reserves the right to refuse the entries of any person, or the transfer of any entry, and without notice. THIS RACE COURSE (MONTGOMERY PARK) is, without a doubt, one of the best in America to winter and train the thoroughbred, furnishing first-class and most comfortable quarters for both man and horse. On this track the majority of the good two-year-olds of the West each season are developed. Entry Blanks or any information on application will be promptly furnished by the Secretary.

NEW MEMPHIS JOCKEY CLUB. Office, No. 2 Cotton Exchange Building, Memphis, Tenn.
S. R. MONTGOMERY, President. M. N. MACFARLAN, Secretary.

\$500 (selling race, purse and stake excepted) allowed 5 lbs.; maidens 10 lbs. Five furlongs.

THE HOTEL GAYOSO STAKES—Estimated value \$2000. SUBSCRIBED TO BY HOTEL GAYOSO. For foals of 1901 (three-year-olds of 1904). \$1000 added. (\$10 entrance). For 1904. A sweepstakes for three-year-olds (foals of 1901). \$10 to accompany nomination, \$50 additional to start. The Club to add \$1000, of which \$200 to second, and \$100 to third, the fourth to save starting money. A winner of a three-year-old stake race, when carrying their weight (colts 122, geldings 119, fillies 117), 3 lbs. penalty; of two or more, 5 lbs. ALLOWANCES—Beaten non-winners in 1904 allowed 5 lbs.; if unplaced, 8 lbs. others never having won a two or three-year-old stake race (selling stakes excepted), allowed 7 lbs.; if such have never won a race of the value of \$400 to the winner (selling stakes and purse races excepted), allowed 12 lbs.; beaten maidens, 20 lbs. Allowances not cumulative. One mile.

SCALE OF THIS RACE.

	Colts	Geldg.	Fillies
Those entitled to no allowance.....	122	119	117
Winner with weight up of one 3-year-old stake.....	125	122	120

Non-winners of a race of the value of \$400.....	110	107	105
Beaten maidens.....	102	99	97

FOR THREE-YEAR-OLDS AND UPWARD

THE MONTGOMERY HANDICAP—Estimated value \$5500. Silver cup or plate to winner. Handicap, \$3000 added. (Entrance free). For 1904. A handicap sweepstakes for three-year-olds and upward. \$50 each, half forfeit, or \$10 if declared. \$3000 added, of which \$400 to second, and \$250 to third, the fourth to save stake. In addition to the stake the winner will receive a valuable silver cup or plate, donated by the Club. Weights to be announced before 9 a. m., February 6th, and declarations to be made on or before February 20, 1904. All declarations void unless accompanied by the money. The winner of a race, after the weights are announced, of the value of \$500 to the winner, or two

of weights (selling race excepted), to carry 5 lbs. penalty. One mile and one-eighth.

THE PEABODY HOTEL HANDICAP—Estimated value \$3000. SUBSCRIBED TO BY PEABODY HOTEL. Handicap. \$1500 added and \$500 silver cup or plate. (Entrance free). For 1904. A handicap sweepstakes for three-year-olds and upward. \$50 each, half forfeit, or \$10 if declared on or before April 2d. All declarations void unless accompanied by the money. \$1500 added, of which \$250 to second, and \$150 to third, fourth to save stake. In addition COL. R. B. SNOWDEN will add a silver cup or plate, to the value of \$500, to go to the winner. Weights to be announced two days before the race. Winners of a race after the announcements of weights (selling race excepted), to carry 5 lbs. penalty. One mile and one-eighth.

THE TENNESSEE BREWING CO STAKES—Estimated value \$2500. SUBSCRIBED TO BY TENNESSEE BREWING CO. Selling stakes. \$1000 added. (Entrance \$10). For 1904. A selling sweepstakes for three-year-olds and upward. \$10 to accompany nomination and \$50 additional to start. \$1000 added, of which \$200 to second, and \$100 to third, fourth to save starting money. The winner to be sold at auction for \$500 if for less; 3 lbs. allowed for each \$500 to \$200; then 1 lb. for each \$100 less to \$50. Starters and selling price to be named through the entry-box by the usual time of closing for this day's racing, and those so named are liable for starting fee. Seven furlongs.

THE COTTON STEEPLECHASE STAKES—Steeplechase. Estimated value \$2500 \$1500 added (Entrance free) For 1904. A steeplechase handicap sweepstakes for three-year-olds and upward. \$50 each, half forfeit, or \$10 if declared on or before April 2d. All declarations void unless accompanied by the money. \$1500 added, of which \$250 to second and \$150 to third, the fourth to save stake. Weights to be announced two days before the race. PENALTY—Winner of steeplechase (selling excepted), after weights are announced, 5 lbs. Four or more horses of entirely different interest to start, or the race may be declared off. Starters to be named through the entry-box at usual time of closing the day before the race, and those named are liable for starting fee about two miles.

STATE AGRICULTURAL SOCIETY OCCIDENT STAKE OF 1906

TROTTING STAKE FOR FOALS OF 1903

To be Trotted at the California State Fair of 1906. Entries to Close January 1, 1904, with L. R. MILLER, Acting Secretary, at the office in Sacramento.

ONE HUNDRED DOLLARS ENTRANCE, of which \$10 must accompany nomination; \$15 to be paid January 1, 1905, \$25 to be paid January 1, 1906, and \$50 thirty days before the race. The Occident Cup, of the value of \$400, to be added by the Society. Mile heats, three in five, to harness. First colt to receive cup and six-tenths; second colt, three-tenths; and third colt one-tenth of the stakes. Five to enter, three to start, otherwise N. T. A. Rules govern. Nominators are not held for full amount of entrance in case colt goes wrong; only forfeit payments made, which relieves you from further responsibility, and declares entry out.

NOTE—This stake is growing in value each year. In 1900 it was worth \$2230; in 1901, \$2595; in 1902, \$3285; in 1903, \$3920.
 The stake for 1906 should receive a larger entry, and be very valuable. Every breeder should enter in it.

A Special Stake will be opened for foals entered originally in this stake, and the Stanford Stake of 1906, that develop a pacing gait to be contested for in 1906.

Remember the date of closing is January 1, 1904.

L. R. MILLER, Acting Sec'y. B. F. RUSH, President.

CAMPBELL'S EMOLLIO IODOFORM GALL CURE

For GALL BACKS and SHOULDERS, CRUPPER SORES and SADDLE GALLS there is none superior.
 The horse CAN BE WORKED AS USUAL.
 For BARBED WIRE CUTS, GALLS, SCRATCHES, BLOOD POISONED SORES and ABRASIONS OF THE SKIN it has no equal.
 It is very adhesive and easily applied to a wettery as well as a dry sore.
 Its use will absolutely prevent BLOOD POISONING. In this respect there is no Gall Cure offered which can justly even claim to be a competitor. We placed it on the market relying wholly on its merit for success, and notwithstanding the fact that comparatively little has been done in the way of advertising the sales of 1900 were 100 per cent greater than the aggregate sales of Gall Cures preceding that year. This increase was entirely due to its MERITS, and from it we feel justified in saying that it is THE GALL CURE OF THE 20TH CENTURY.
 It is a quick and sure cure for those troublesome skin cracks under the fetlock which injure and often lay up race horses.

All Trainers Should Have It in Their Stables

WINCHESTER

REPEATING SHOT GUNS

A CHANCE FOR A DOUBLE

A QUESTION often asked about Repeating Shotguns is, "How quick can a second shot be fired with them?" Shooters that have used Repeaters answer with one accord: "Doubles" are just as easy to make with a WINCHESTER REPEATING SHOTGUN as they are with a double barreled gun. The third shot that a Winchester Repeater gives often hags a badly crippled bird which otherwise would get away. Winchester Repeating Shotguns are made in "Take Down" styles in 12 and 16 gauge.
