THE FIRST HALF OF THE NINETEENTH CENTURY. INCREASE OF NATIONAL WELL-BEING.

THE vast extension of our commerce and manufactures in the course of the last fifty years, to which we called attention last week, has resulted in an enormous increase of the NATIONAL WEALTH since the beginning of the century. The precise amount of this increase we have no very accurate means of ascertaining; but a few comparative figures which we have been enabled to collect will serve to show that it must have been something immense, and out of all proportion to the mere increase of the popu-lation.

The assessments to the income tax will indicate, after every allowance is made for the temporary depreciation of the currency during the first part of the period, the value of the *real property* in Great Britain

enormous augmentation in the national wealth during the last

" half-century, yet national wealth is a very different thing from "national well-being; and if these added riches have been accu-"mulated in few hands, they may have little, if at all, promoted "the real comfort and enjoyment of the people.

No. 387.

" 'Ill fares the land, to hastening ills a prey, "Where wealth accumulates and men decay.""

We will not stop to discuss the soundness of this objection, nor to remind the objectors that wealth gives employment, and em-ployment brings remuneration, and remuneration purchases the ployment brings remuneration, and remuneration purchases the comforts and supports of life; for we have ample means of show-ing by indisputable facts that wealth has been *diffused* as well as increased during the period under review; that so far from "the rich having become richer and the poor poorer," as is so often and so inconsiderately asserted, the middle classes have advanced faster than the great, and the command over the comforts and luxuries of life, even among peasants and artisans, is far greater now than at any former period. We have several indications that the accumulation of property

We have several indications that the accumulation of property which has taken place since 1800 has been shared by all classes. and has by no means been greatest among the landed or monied aristocracy. In the first place let us look at the Savings Banks, which are entirely the growth of this century, the first having been established about 1806, and which are confined to the savings of the peasant and artisan class, of domestic servants, and of the humbler portion of the middle class. We do not mean to say that they ware a savingt no savingt heard here 1800. that there were no savings, no private hoards before 1800; but no one can suppose that among the classes of whom we speak, they were to be reckoned by millions, nor that they could even approach in amount to the sum now invested in various friendly set ocieties, and which, having no correct return of it, we do not take into our account. The deposits in Savings Banks must, therefore, be considered as so much capital accumulated since 1800 by the humbler classes of the community. These amounted in 1846 to no less a sum than 31,743,250*l*. But this is not all; the amount deposited in proportion to the population shows a steady increase. Thus, in-

		8	d

1848	****************	20	11		-		manut.	

In Scotland the increase was from 7d per head in 1836 to 7s 5d in 1848.

In 1848. From a very interesting paper read by Mr Porter before the last meeting of the British Association, it appears that while the larger class of fundholders are greatly diminishing, the smaller holders rapidly increase. Thus while those receiving dividends of only 5*l* have *increased* between 1831 and 1848 upwards of 9 per cent., those receiving from 5*l* to 10*l* have remained stationary, and all other classes receiving from 50*l* up to 2,000*l* have diminished from 2 to 20 per cent. A somewhat similar tendency towards an increase of the num-ber of moderate and a comparative diminution in the number of

ber of moderate and a comparative diminution in the number of colossal incomes is brought to light by a comparison of the in-come tax returns of 1812 with those of 1848. Thus—

Incomes		1812		1848	Increase per cent.
Between 150/ a	and 5001	30,732		91,101	····· 196
- 5001 4	and 1,000/	5,334		13.287	148
- 1,0001 1	and 2,000/	2,110		5,234	****** 148
- 2,000/ 8	ind 5,000/	1,180		2,586	119
- 5,000/ 1	and upwards	409	******	1,181	

An examination of the properties annually subjected to the pro-bate duty confirm the conclusion drawn from the above figures. It shows that while the amount assessed on estates under 1,500/ had increased in the sixteen years from 1833 to 1848 at the rate of 15 per cent., that assessed on those above 30,000l had in-creased scarcely more than one per cent., and moreover that the average amount of these colossal properties showed a steady diminution. "Dividing" (says Mr Porter) "these sixteen years "into equal periods of four years each, and ascertaining the average "duty paid on estates of 30,000l and upwards in each division, it "appears that from-

Let us now collect together a few facts showing the INCREASE IN THE CONSUMPTION OF THOSE ARTICLES OF NECESSITY OF LUXURY which are used indiscriminately AMONG ALL CLASSES. We have no means of comparing the amount of butchers' meat consumed now with that consumed at the beginning of the century, but the price we know has fallen from 5s 8d to 3s 4d a stone, and M'Culloch considers the quantity per head eaten in London to have doubled since 1750. The consumption of wheat in the kingdom was stated by Lord Hawkesbury in 1796 to be 6,000,000 qrs; it was estimated by the most careful authorities in 1846 at 15,200,000 qrs. According to Chalmers, the growth of all kinds of grain in Great Britain was in 1800, 30,000,000 qrs; according to M'Cul-loch, it is now in the kingdom 60,000,000 qrs. The increase in the growth of potatoes has also been enormous, but we have no means of ascertaining it. The amount of wheat and wheat flour According to Chalmers, the growth of all kinds of grain in imported and retained for home consumption in the five years previous to 1800 was 2,317,480 qrs; in the five years ending 1850 it was 15,463,530 qrs. The supply of farinaceous food has, thereit was 15,463,530 qrs. The supply of farinaceous food has, there-fore, clearly increased in a much greater ratio than the population; and the quality of that food has also greatly improved. During the latter part of the 18th century rye and barley bread were very extensively used in many parts of England; the for-mer being, according to Mr Charles Smith, the habitual food of one-seventh of the population:—it is now unknown, except in Durham, while the use of wheaten bread is almost universal among the poorest classes.

In the use of coffee, tea, and sugar also, a marked advance has The consumption of coffee has risen from 1 1-10th oz taken place. per head in 1891 to 13 lb in 1849, or a twenty-six fold increase ; that of tea from 19 oz to 23 oz per head; while that of sugar, which was $22\frac{1}{2}$ lb in 1801, and had fallen as low as 15 lb in 1821, which was 225 to in 1801, and had taken as low as 15 in 1821, owing to the high price, has now again risen since the reduction of the duty to 24 lb per head. The bushels of malt used in 1801 were 19,000,000; in 1849, 38,000,000. But this is not all. Let us compare the prices of a few articles

at the beginning and at the close of the half century. We have already seen that butchers' meat has fallen from 5s 8d to 3s 4d a stone. The quartern loaf which in 1801 was selling at 1s 10¹/₂d stone. The quartern loaf which in 1801 was selling at 18 $10\frac{1}{2}d$ is now at 6d, and even in the scarce year of 1847 did not go beyond 12d, and was at that price only for a very short time. Coffee has fallen from 200s to 117s per cwt; tea from 5s to 3s 4d per lb; sugar from 80s to 41s per cwt; while a piece of calico, 28 yds long, and of 72 reed quality, has, even since 1814, fallen from 28s to 6s 6d, and was sold in 1848 as low as 5s.

The amount of TAXATION REDUCED OR REPEALED during the century has been very great. Since the peace of 1815, and leaving out that year, we find that we have up to 1846—

Reduced taxes which produced Imposed	53,046,0°0 13,496,000	yearly
Relief to the country	39,550,090	
1010 1 0 1 0 1 0 1 0 1 0 1 0 1 0 1 0 1		

Since 1846 several further reductions have taken place. Last year alone the repeal of the excise on bricks, and the reconstruction of the Stamp duties afforded relief to the extent of at least 1,000,000%.

A great proportion of these reductions have taken place since the year 1830. In the Excise department alone, the following articles have been exempted :-

In 1831, Beer, candles, hides, skins, vellum, printed cottons, stained paper, starch, and others.

- 1843, Vinegar.

- 1845, Auction - 1850, Bricks. Auctions, glass.

The only Excise duties now chargeable being-

Malt and hops, Spirits, Paper, Soap.

The truth is, that the relief to the population generally, and of the working classes especially, which has been given since the year 1800 by the remission of taxation, has been something quite unpre-cedented. At that period there were heavy duties on all articles of consumption and on all the raw materials of our manufacturing induction and on all the raw materials of our manufacturing industry; now, all duties have been greatly reduced, many altogether abolished, and, if we except the excise on soap, it may be said that no tax now remains on a single one of the strict neces-saries of life. If a poor man is content to live, as wise and great men have often thought it well to live, in health and comfort, but with strict frugality; if he is willing to forego the use of those luxuries which should only be purchased out of his superfluity, he may escape taxation almost entirely. The whole tendency of our fiscal changes for the last twenty years has been to relieve the working classes from all financial burdens. At the commencement of the century salt, though an absolute essential both of health and food, was taxed as high as 15s a bushel. The importation of butchers' meat was prohibited altogether; it now comes in free of duty. Corn was prohibited till it reached a high price,

and then paid a fluctuating duty; it now comes in at a nominal rate of 1s a qr. The duty on coffee was 1s 6d a lb; it is now 4d and 6d. The duty on colonial sugar was 24s; it is now 11s. The duty on foreign sugar was prohibitory; it is now 15s 6d per cwt. The duty on tea alone remains unreduced. To this enumeration of our increased command over the comforts and essentials of life must be added one more item, not the least important in its in-fluence. In 1800 the poor man paid from sixpence to a shilling for each letter he received : it now costs him only one penny.

In no one point is the half-century we have just closed more distinguished from its predecessors than in the share of PUBLIC ATTENTION AND SYMPATHY WHICH THE CONDITION OF THE POORER CLASSES HAS OBTAINED. Formerly the lower orders were regarded, even by the kindly disposed, simply as hewers of wood and drawers of water, to be well and justly treated, indeed, by their immediate superiors whenever they came into contact with them, but still as a class naturally and permanently in a low condition, and whose lot in life was a matter which could have little philosophic or philanthropic concern for those above them. The idea of studying them, of raising them, of investigating into the operation of the causes which affected them for good or evil, had scarcely taken rise. There was kindness, there was charity, there was sympathy towards the poor as individuals, but not any interest in their condition as a class. We are far from considering the multiplication of charitable institutions as a matter for unmixed congratulation, or as a source of unalloyed good to the indigent and industrious of the community; but it at least shows the increase of sympathy towards them on the part of the rich. Now, the extent to which these charities have multiplied in re-cent years almost passes calculation. Their name is Legion. In the metropolis alone the charitable institutions reach 491 in number, and have an annual income of 1,765,000l. Of these 109 were established in the last, and no less than 294 in the present century.

But a far stronger proof of the general interest now taken in the condition of the working classes, is to be found in the various commissions that have of late years been issued to inquire into the state of the people in various occupations. Wherever there was a rumour of an abuse, a tyranny, or an injustice, a representa-tion was made in Parliament, and an investigation immediately took place. We have had a Factory Commission, a Children's Employment Commission, a Commission to inquire into the Condi-tion of those employed in Mines and Manufactures, and a Commission to inquire into the Employment of Women and Children in Agriculture. We have had Inspectors of Mines and Inspectors of Factories appointed to watch over the interests of those employed, and to keep the public informed upon the subject. Now, though we do not approve of much of the rash and clumsy legislation which followed the reports of these various commissions, and though we have from time to time raised our voice against it, yet not only did the mere issuing of them testify to the earnest concern felt by the higher classes in the condition and comforts of their less fortunate fellow-citizens, but the information thus spread through the community we regard as an unmingled good. It is in the last degree desirable that everything should be laid open, and that every man should feel that he lives and acts under the guardianship and inspection of the public eye. We have that confidence in the talent, zeal, and good feeling of our country-men, that we rejoice at the mere publication and exposure of abuses and anomalies, satisfied that by the process of discussion a remedy will be found if a remedy exists, and that when found it will be promptly and courageously applied. Abuses are, for the most part, perpetrated only because they can be kept secret, and are permitted only because they are unkown; that the world knows of them is generally sufficient to insure their cessation. We have more confidence in the influence of public opinion than in that the following the influence of public opinion than in that of legislation; it operates more safely and more effectively, and often penetrates where legislation would not be tolerated, or could scarcely reach.

In the vast improvement which has taken place in the management and internal ARRANGEMENT OF OUR PRISONS AND OUR WORKHOUSES there is much matter for congratulation. Cleanliness, health, and decency are studied and secured to a degree of which our fathers had no conception. But under this head there is much to be set down on the opposite side of the account; and we must debit the 19th century with all the consequences that may result from having made the pauper physically, and some-times educationally, better off than the laborious and struggling peasant, and having surrounded the criminal with a collection of comforts which the virtuous withstander of temptation scarcely pictures even in his dreams. In spite, however, of our errors in these particulars, it is gratifying to find that the expenditure on pauperism has not increased pari passu with our population. In 1801, with a population of nine millions, it was 4,017,000*l*; in 1848, with a population of nearly seventeen millions, it was 6,180,000*l*; showing a fall from 9s to 7s 3d a head.

On the novel and extraordinary attention which is now being paid to SANITARY MATTERS, we can look with far more unmingled satisfaction. It is a new and most encouraging feature of the times, and leads us to anticipate for the coming half-century an improvement in the dwellings of the poor, in the health of our great towns, in the extirpation of epidemic disorders, and in the average duration of life, greater even than we have witnessed in

[Jan. 25,

the last fifiy years. Even in these respects, however, our progress since 1800 has been far from cortemptible. The population is less crowded than it was, and roomier dwellings are constantly in pro-cess of erection. The average number of individuals to a house which was 5.67 in 1801, had fallen to 5.44 in 1841; and the census which is to be taken this year, will, we have no doubt, show a still further diminution.

The increased VALUE OF LIFE will form a fitting *finale* to our brief sketch of the national advance in material well-being since the beginning of the century. Some doubt rests upon the *positive* (though scarcely on the *comparative*) figures, in consequence of the new and improved system of registration introduced in 1838; but there is ample proof to satisfy us of a vast, though not a uniform, advance. According to the old registers the mortality was in :-

000	and to the ord reflectory	644 V	ALL VA VERALLY TTELS
1780	one in	40	of the population
1800		48	
1810		49	-
			-
1930		51	

After this period, the mortality appeared to increase. These registers were, however, notoriously imperfect, and being now superseded by a better system, afford no ground of comparison with the present returns. Mr Finlaison, our first authority, con-structed a table in which he endeavoured to allow for the inac-curacies. We give it here. He makes the mortality in the— Five ver

pectation of life in a male aged 20, was in-

We are, however, very far from meaning to say that our sani-We are, however, very far from meaning to say that our sani-tary arrangements are at present matters for complacency, or that improvement in this department is more than in its infancy. Many removeable causes of premature death yet remain, but the four or five years which the last half-century has added to the average duration of life, are a hopeful earnest of what may yet be done to prolong it, now that the subject has awakened public interest, and that administrative exertions are conducted under the guidance of scientific skill the guidance of scientific skill.

CALIFORNIAN GOLD.

UNITED STATES MINT. - FRENCH COMMISSION. THE influx of gold into the United States, according to the last accounts, continues at an increasing rate. The average of late accounts, continues at an increasing rate. The average of late has been fully 500,000*l* in each fortnight, or at the rate of 1,000,000*l* a month. By these accounts silver had risen to a pre-mium of from 2 to 3 per cent. It is necessary, however, to bear in mind that the American markets were then being acted upon by the advises from Europe of the each part of December where by the advices from Europe of the early part of December, when the demand for silver was so great. We have by this mail re-ceived a statement of the work of the United States Mint at Philadelphia, for the year 1850. It is as follows :-

UNITED STATES MINT, PHILADELPHIA.

Coinage for the Year 1850.		
Gold Coinage-	do's	C
1,170,261 Donble Eagles	23,405,220	0
291,451 Eagles	2,914,510	0
64,491 Half Eagles	322,455	0
252,923 Quarter Eagles	632,307	50
481,953 Gold Dollars	481,953	0
2,261,079 pieces	27,756,445	50
7,509 Dollars	7.500	0
227,000 Half Dollars	113,503	0
190,800 Quarter Dollars	47,700	0
1,931,500 Dimes	193,150	0
955,000 Half Dimes	47,750	0
5,572,879 Pieces	28,166,045	50
4,022,614 Cents	40,226	44
39,812 Half Cents	199	
Deposits for the Year 1850.		0
1850-Total gold deposits	33,150,0	00
Of which from California	33,150,0	000
1850-Total silver deposits	428.0	000

California has thus furnished to the Philadelphia Mint in 1850, California has thus furnished to the Finiadelphia Mint in 1890, 31,500,000 dollars of gold, or 6,562,500l; and, by the above ac-count, it appears that while only 7,500 dollar pieces have been coined of silver, no less than 481,953 dollar pieces have been coined in gold. It thus appears that, as we anticipated, gold must be rapidly taking the place of silver in the circulation of the United States. But the transactions of the Mint for the entire year give but an imperfect idea of the rate at which gold has been deposited during the last two or three months. In a former article we gave the proportions for the different periods of the year. The following is an account of the operations of the single month of December :-

Coisage for December, 1850.

189.821 Double Eagles 45,000 Quarter Eagles 78,098 Gold Dollars	dols 3,796,420 112,500 78.018	0 0 0
\$12,919 Silver Coinage-	3,987,018	0
66.8 0 Quarter Dollars	16,700	0
115, 00 Dimes	11,500	
293,0 0 Half Dimes	11,5 0	0
784,719 pieces Copper—	4,029,718	0
794,817 Cents	7,948	47
1,579,566 pieces	4, 37,665	47

The deposits of gold at the Mint in December are given as 4,500,000 dollars, or 937,500l.

The Paris Moniteur announces that the Commission appointed to inquire into the question of the double standard of gold and silver, and the causes of the recent disturbance of the relative prices of the two metals, have reported that the effects recently apparent in Europe have been rather the result of temporary and accidental circumstances than of the larger production of gold in Russia and California, which, they are of opinion, have not yet been sufficiently long in existence, nor as yet sufficiently productive in quantity, to have effected the disturbance of relative values recently experienced. They, therefore, recommend no alteration in the double standard of value at present, but only suggest that it will be well to watch the progress of production in Russia and California. The Commission have arrived at a very prudent and cancible. sensible decision.

THE PRESIDENT AND THE ASSEMBLY.

WE recorded last week the triumph of the President ; this week we have to mention the return blow of the Legislative Assembly. Some of all parties—led on by M. Theirs for the Orleanists, M. Berryer for the Henriquinists, and General Cavaignac for the Mo-Berryer for the Henriquinists, and General Cavaignac for the Mo-derate Republicans—united to form a large majority against the President and his Ministry. On Saturday the Assembly voted, by 415 to 286, that the Ministers had not the confidence of the Assembly. The Ministry immediately resigned, and for another week France has been, by the instrumentality of the Assembly, without an official and responsible Executive Government. The vote was nominally against the Ministers, but actually against the President — All the charges were directed against him

The vote was nominally against the Ministers, but actually against the President. All the charges were directed against him for wishing and attempting to restore the Empire. M. Thiers concluded his speech thus :—" There are now two powers in the " State, the Executive and the Legislative; if the Assembly now " yields there will only be one power—then the form of Govera-" ment will have been changed, the Empire will exist." In the name of the Assembly, and by the assistance of Republicans, was M. Thiers victorious over the President and the Empire. Some of the most respectable of his own party voted against him. The Duke de Broglie toek this course, indignant, it is said, at General Changarnier being set aside and omitted altogether from consi-deration, that a blow might be aimed at the President. M. Odillon Barrot and others would not vote at all, ashamed of the factious Barrot and others would not vote at all, ashamed of the factious Barrot and others would not vote at all, ashamed of the factious attack. Nothing of the least importance was proved against the President. He had treated the soldiers—some of them had been encouraged to cry *Vive l'Empereur*—General Neumayer had been dismissed for discountenancing the cry; and so the Ministry was broken up, the Government disorganised, and the country exposed to peril, because the nephew of the Emperor desired, as was said, to restore the Empire. That was known from the first day of his relitied agait the first Louis Napoleon has conducted him. to peril, because the hepnew of the Emperor desired, as was safe, to restore the Empire. That was known from the first day of his political existence. In fact, Louis Napoleon has conducted him-self with far greater moderation and prudence than the world expected; and his desire to make himself Emperor was a mere pretext, on which the disappointed Notables of the Assembly united to take vengeance on the man who had distanced them all in the race for power.

in the race for power. There is now open war between the Legislative Assembly and the President. The people look calmly on. The funds have im-proved—commerce, though this is not a favourable season, is flourishing—the number of depositors in the Savings Banks is increasing. France is quiet, though the political factions—the yet remaining fragments of all the Governments that have existed gives 1961, are burgling together in anywe contention. We are since 1801—are hustling together in angry contention. We are made to see distinctly, if the generally quiet demeanour of the people and their occasional revolutions before failed to make us amplifying the theory of the test of test of the test of sensible of it, that the Government and the nation are not identisensible of it, that the Government and the nation are not identi-cal. Though each member of the Assembly represents a portion of the public, and the whole of them represent the whole nation, what part of the people the majority of the Assembly can carry with them we are not aware. On that must depend the ultimate success of their contest with the President, who, in his single person, represents the nation, and is the incorporation of that Executive Power which the people are accustomed to revere. To us the policy of the Notables seems likely to be as fruitless as it

is factions, and rather dictated by blind resentment than by cautions wisdom.

An Executive Government the French must have. A deliberative Assembly with power to thwart it is a novelty for them, without the sanction of either utility or time. In the hands of the President is all that remains of the power of the Empire and the Monarchy. All the appointments belong to him. The departments have never coalesced, nor have the people ever united but under the Executive. From the manner in which power has been centralised, the people have always directed their eyes towards the Executive, and have taken from it, in whatever hands it might be, the rules for their conduct. Even, therefore, if the Legislative Assembly were not a novelty; if the chief opponents of the President were not the mere officials of the wrecked and abandoned Monarchy; if they were not all politicians who have been tried and failed, they could not hope, we think, to succeed against the Executive Government. An insurrection might, but they are not the men to provoke an insurrection, to be leaders or to find followers. Their present proceedings have no definite aim nor end, and can only strengthen the power of the Executive, and degrade, if not destroy, the character of the Assembly. The Republicans who rallied with M. Thiers and M. Berryer,

The Republicans who rallied with M. Thiers and M. Berryer, the Orleanists and the Henriquinists under their banner, in opposition to a President suspected of aspiring to be an Emperor, are consistent enough. They have obtained from both a declaration favourable to the Republic—they have gained strength by their adversaries coming to their help. As each of the monarchial parties hates and fears an Empire more than a Republic, their union with the Republicans seems to ensure the continuance at least of the forms of the Republic, and guarantees it against the return of either branch of the Bourbons. By their united blows against the Empire they have demolished all hopes of the restoration of a Monarchy.

Monarchy. That political institutions, to be healthy and durable, must be in accordance with the manners of a people, is a notorious fact. Putting conquest out of view, where the force of government is derived from a source extraneous to the people, political institutions have no power of themselves, and though each of the exiled royal families has partisans, neither has sufficient to make a restoration probable. A much shorter period elapsed between the beginning of our civil war and the final expulsion of the House of Stuart than has elapsed since the beginning of the French Revolution and the last expulsion of the House of Bourbon, and the change in all the institutions and property in France was much more complete than the change in England; and yet the restoration here ended, as it has now probably ended there, in necessarily getting rid of the old royal family, with its faith and its prejudices. The fifty-eight years elapsed between 1790 and 1848 were filled with about ten years of civil contests and confusion, fifteen years of Bonaparte's dominion and wars, fifteen years of the Restoration, and nearly eighteen years of the ascendancy of the Orleans dynasty. Of the forty-six years elapsed between the beginning of our civil wars in 1642 and the expulsion of James in 1688, seven were filled with confusion, for eleven Cromwell's power predominated, twenty-five Charles II. reigned, three James II. was on the throne, and the changes in that period were sufficient, though not near so great as those in France, to render the government of the House of Stuart uncompatible with the condition of the people. In the fifty-eight years that elapsed between 1890 and 1848 society everywhere made a much more rapid adyance and underwent greater changes than in the forty-six years that elapsed between 1642 and 1683.

Monarchs, it is said, forget nothing and learn nothing. The statesmen attached to their systems, we are afraid, are not much better. Their theories and claims, derived from the past, are rather embittered and strengthened by resentment than adapted to the time; and they try, obstinately and vindictively, to revive the buried past. In that they must fail, and we, therefore, cannot see any reasonable hopes of a successful restoration to justify the followers of the Boarbons in uniting with the Republicans to render the government of Louis Napoleon difficult, or an impossibility.

They are likely, however, to cause much mischief. The French must have an Executive Government, and as a really powerful representative Assembly is a novelty in France, the conduct of these patriots and lovers of order—men who have insisted on the Executive humbling itself to them, and who have urged it into a course of hostility to a large body of the people—cannot be otherwise than disastrous to themselves and the Assembly. They have given strength to the Republic, and have humiliated and weakened the great instrument by which it can at present peaceably act. If there be not more troubles, more serious changes, more terrible contests, more revolutions in France, the merit will not belor. J.M. Thiers, M. Berryer, and their followers They are doing what they can to introduce anarchy. Fortunately for France and the world, the people, whether from wisdom or from instinct, are desirous of repose and peace. They will not be roused into insurrection either by Socialist conspirators or parliamentary agitators. Some means must and will be found to carry on the Executive Government with the Assembly, if that body be wise and tractable; if not, without it. The Executive Government in the condition of France is the assembly if that body be

sembly, the offspring of a revolution, deriving its power from a Constitution that was violated at its own instance almost as soon as passed, is little better than an imported appendage to the Government to which the nation is accustomed; and the men who have committed it to a contest with the Executive will probably hasten its decay.

PROSPERITY .- FRANCE AND GLASGOW.

On several occasions it has been our most gratifying duty to point out, as the consequence of the freedom given to industry, that pauperism and crime have diminished, that marriages have increased, and that the people have become more prosperous and more moral. Last week we had to state that the French were all tranquilly pursuing their avocations though the Government was in commotion. In the Tuileries, in the Legislative Chamber, and in the Elysee, there has been quite a convulsion. Judging only from the journals, France seemed on the eve of another revolution; nevertheless, the people were immovably tranquil. What can have become of the Red Republicans? we asked ourselves; those ferocious men who were ready twenty months ago to embrue their hands in blood, and were only kept in check by the strong hand of the military? Where have those mercurial people buried themselves who were then to make all Europe into one red social republic? The powers which were described as keeping them in order, were all quarrelling amongst themselves, offering premiums to disorder amongst the people, who were not bribed by the occasion, nor by the example of others, to quit their ordinary pursuits and resume their political agitation. What has effected the change? The people find their ordinary pursuits the most profitable. "The internal commerce " of the country is flourishing, and the foreign trade is not in a " bad condition." This is the clue to the whole; the people are prosperous, and they no longer care much about politics, and care little or nothing about Socialism and Red Republicanism. General Changarnier boasts of his success in preserving order and extending commerce : we believe that two successive good harvests have been much more effective in securing 'peace in France than the President's prudence or the General's sword.

Every week almost we have to report "the arrivals of flour from France continue." Wheat, flour, and bread, are all from 28 to 40 per cent. cheaper in Paris than in London. In Paris, therefore, and in France there is great comparative abundance. In 1849, as we mentioned on November 23, the average price of wheat in France was 15f 37c per hectolitre. It was then 9s per qr, or 21.78 per cent. lower than the average price of the preceding sixteen years, including the three cheap years of 1834, 1835, and 1836. The low price in 1849, bespeaking great comparative abundance, is the parent of the flourishing internal and external trade of 1850. The comparative abundance and cheapness continue to this time. The best wheat at the latter end of the year was 23f 30e the hectolitre, or 36s 9d per qr—about 28 per cent. lower in Paris than in London. Instead of armed steamers knocking down our towns, the French are sending us sacks of Normandy or Paris-made flour, and pelting us with bread, not bullets. In 1847, the average price of wheat was 67s per qr: there was continual disturbance in the land, followed in 1848 by the revolution; in 1850, the price for the first six months was 33s per qr, and though political goads have not failed, order and peace have been preserved. The connection between tranquillity and abundance is as sured to us by freedom of trade—France being an extraordinary example of a nation from which we expected nothing sending us a great deal—we are afraid that she herself, being still the victim of a restrictive policy, may not be secured against future dearth and revolution.

Particular towns encourage us as much to cleave fast to what we have gained and to gain more freedom, as the contrast between France in 1847-8 and France in 1849-50, and as the contrast between France and England. We have received, in the course of the week, an Abstract of the Glasgow Mortality Table for 1850, prepared by the enlightened Chamberlain of that city, Doctor Strang, and it confirms the doctrine that freedom gives prosperity, and prosperity, tranquillity. How can a people be expected to be quiet who are half-starved; but that may be expected, and may even be commanded, when the people have ample supplies of food. In Glasgow, where the workmen do not eat much meat till they have got an ample allowance of *parritch*, the consumption of cattle, during the last three years, was as follows :—

		161,527	
Oxen Calves Sheep Lambs Pigs	**************************************	1849 22,882 4,204 82,681 49,817 18 1,925	1850 26,200 4,558 96,104 54,400 29 3,934

instinct, are desirous of repose and peace. They will not be roused into insurrection either by Socialist conspirators or parliamentary agitators. Some means must and will be found to carry on the Executive Government with the Assembly, if that body be wise and tractable; if not, without it. The Executive Government in the condition of France is the essential thing; the As-

prosperity of Glasgow; and though the people there have not wanted political goads—for they have a Sheriff somewhat renowned for exaggerated statistics, and a pompous hostility to freedom yet has Glasgow, long notorious as one of the least orderly cities of the empire, from enjoying prosperity been without any im-portant strikes or rows in 1850. The vitriol throwers have dis-appeared from her factories, as the Red Republicans have vanished from the streets of Paris.

We must, however, quote from Dr Strang one or two other specimens of its prosperity. Pauperism, far from having been increased by Free-trade, has been decreased. The number of persons receiving in and out-door relief on the 31st Dec. was, in-

1848	*************		
1850		***************************************	11,731
	Decrease		1.406

The result is, that there are 1,406 fewer paupers in 1850 than in 1848, though the population was supposed to have increased from 355,000 to 380,000. The number of casual poor relieved, to which Dr Strang particularly calls attention, was, in-

times. Th	e expense of maintaining the poor was, in-	-

1848 1850 87,638 Decrease

17.628 The result of the diminished number of paupers and cheaper provision was to reduce the expense of maintaining the poor between 1848 and 1850, 16 per cent. The decrease of pauperism was accompanied by a decreased mortality, as follows. The table, for the sake of the price of food, we copy from the Scotsman :-

		Avera	ge	of R	ale	10	Mo	rtali
	W	heat	per	qr.	in	Gla	isge	W.
Year		8	d	-			-	
1847		69	- 12		1	in	18	2

1849	************************	- 44	2	***************************************	. 1	in	26.	.78
1850		40	0	*******************************	. 1	in	36	34

It is melancholy, Dr Strang observes, to notice the large pro-portion of children who die under five years of age; in 1848, 34·11 per cent.; 1849, 42 per cent.; and in 1850, 50·03 per cent. of the whole number of deaths. But, notwithstanding this, "the "bill of mortality for 1850 is the most favourable that has been "issued since 1845, when the mortality was 1 in 39 of the esti-"mated population." Far more melancholy even than the mortality of children at present—though that is an extremely melancholy fact—is the terrible mortality that accompanied the high prices of 1847-8, caused as they were by the long continu-ance of perverse and selfish legislation, which virtually forbad other people to grow food for the inhabitants of Glasgow. The ignorance or negligence of individuals time will cure, if the legis-lator do not interpose, without much national injury, and probably to the improvement of moral feelings; but we only become con-vinced of his errors by national calamities, and only get rid of It is melancholy, Dr Strang observes, to notice the large provinced of his errors by national calamities, and only get rid of them by almost infinite trouble, after going through much suffering. The marriages and baptisms in Glasgow were as follows

	One man wert and	and Craceo	Boll mere teo source	ere a a
Year		Marriages		Baptisme
1848	***********************************	3,010		6,076
1849		3,564		6,097

Showing an increase of marriages over those of 1849 of 214, and over those of 1848 of 768; and as there is no better criterion of the progress of the people than their marriages, we may conclude prospects in Glasgow in 1850 were 25 per cent. better that the than in 1848.

One more fact and we have done. The burials at the public expense were, in-

4,042 3.577 2,381

That is a testimony not merely to the improved pecuniary con-dition, but to the improved moral condition and moral feelings of

the people ; and similar facts to those we have quoted of Glasgow, we are happy to state, are now met with in every great town of the empire.

From the Glasgow Mercantile Advertiser we will quote an account of the receipt of Customs in the ports of the Clyde, which illustrates Dr Strang's statement :-

We are enabled to report an actual increase in the Customs receipts at Glasgow and Greenock, last year, as compared with 1849, notwithstanding the material reductions of daties in various articles. The following are the results :--

Customs	receipts	at	Glasgow in	1849	£ 640,568 645,669
	Increase	at	Glasgow	*****************	5,101
Customs	receipts	-	Greenock	in 1849 1859	371,922 383,457
	Increase	1.11	Greenack		11 8.05

amount to not less than 68,000%.

It seems desirable that we should not conclude without guarding ourselves against the charge, which may perhaps be made, of taking low and grovelling views of national policy and national welfare. There are large classes who get all they want without knowing exactly how it is supplied, except that they have ample means to buy, and who, never having been under the necessity of struggling for food, regard all that concerns its production and distribution as mean and unworthy. There are others, form distribution as mean and unworthy. There are others—fierce politicians—who seem to have no objection to occasional hunger and distress as foster parents of discontent, and who exclaim with some bitterness against the plenty that, making men contented as they say with slavery, puts an end to the chance of the demagogue. We no more than they look on plenty of subsistence as the be-all and end-all of man's existence; but aspirations after greatness, and even after goodness, must be subservient to obtain-ing plenty of food. That is the basis of all, and on that and that alone can elegance in art and literature, freedom in men's mutual relations, and great scientific progress, be securely built. All that All that we insist on is, that no policy is praiseworthy which diminishes by one grain the supply of provisions; and every other policy is of inconceivably little importance, however dignified may be its names and its office-bearers, compared to that which secures, if any policy can secure, at all times plenty of food. France and Glasgow on different scales are the proofs.

IMPROVING CONDITION OF IRELAND.

At length there seems a great probability that the improvement At length there seems a great probability that the improvement of Ireland has set in with a steady flood. At the "princely" in-augural banquet of the new Lord Mayor of Dublin, Mr Alderman Guinness, on Tuesday, which the Earl of Clarendon described as equalling in magnificence anything he had ever seen, his Excel-lency justly praised the good spirit that now animates the Cor-poration of Dublin, and expressed a hope that its example will have a beneficial effect on other corporations. The election of the present Lord Mayor was distinguished by peace, concord, and harmony, and if these become the prevailing feelines amongst the harmony, and if these become the prevailing feelings amongst the Irish, their country will be speedily redeemed. In Ireland, like Greece, "all save the spirit of man is divine." Dissensions have ever been the chief source of the weakness and misery of the Irish. If they have learned to know this, and are now and henceforth to pursue their interests steadily, calmly, and harmoniously, Ireland, in proportion to the depth of her depression, will rise faster and

in proportion to the depth of her depression, will rise faster and higher than any country of Europe. The noble Viceroy, whose cares for her welfare have been so paternal, and whose exertions on her behalf so manly and states-man-like, spoke thus of the present prosperity of Dublin:--"Speaking, gentlemen, in the presence of many so much better "informed than myself upon the subject, I should regret to in-"dulge in any expectations which they might think too sanguine; "but still I hope it is not an exaggeration to say, with reference "to the times that we lately passed, that the commercial and in-" but still I hope it is not an exaggeration to say, with reference "to the times that we lately passed, that the commercial and in-"dustrial prospects of Dublin are improving, that many of our "artisans are better employed, that the necessaries of life are "more within the reach of the poorer classes, and that business, "although perhaps not so extensive as formerly, yet is now con-"ducted on a system far more cautious and secure. Generally "too, throughout the country, I trust that the tide has turned, "and that the termination of the disasters which for five years "have fallen so heavily upon Ireland has been hailed by increased "energy and exertion on the part of all classes of the commu-"nity." Unless that could have been said of the condition of trade and of the people, we should have regarded more with sortrade and of the people, we should have regarded more with or-row than satisfaction the magnificent banquet; but as an inadgar-ation of a brighter future, it is worthy of the united corporation and of the capital of Ireland.

and of the capital of Ireland. We gather from other sources corroborative evidence of re-turning prosperity. The Morning Chronicle says:---"A letter "from Killeshandra, Cavan, states that at the commencement "last year there were 50 farms to let within a few miles of that "town, but that at present there is not one unoccupied. The new "tenants are described as the sons of experienced and respectable "formers prospering sufficient capital to work the land effect " farmers, possessing sufficient capital to work the land effec-

"tively, with the fairest prospect of rendering their enterprise "remunerative." Farmers from England and Scotland are inquiring after farms, with a prospect of obtaining them at rents which will admit of their obtaining a reasonable profit from improving the cultivation. The Northern Whig says:---" Many "parties consulted Count Strzelecki as to the propriety of emi-"grating to Australia; and his reply was, that, for an active, in-"dustrious, enterprising man, Ireland was a much more remu-"nerative field—he recommended all to go to Ireland. In one "instance, a London tradesman--not an agriculturist—possessing some capital, availed himself of his counsel, came over to "Ireland, took a farm, and, but a short time ago, wrote to the "Count, thanking him for his advice, and announcing the success "of his enterprise. An English butcher, who received from him "like advice, at a railway station, and who thereupon emigrated "to the wild county of Donegal itself, has sent the Count a "similar communication. What better proof could be given of "these two English tradesmen suddenly converted into thriving "Irish farmers?" We have more facts of the same character to produce; but these will suffice to show that the "princely banquet" at Dublin was not a mockery of a nation's woes, but a herald and a memorial of improved national feelings and a rapidly increasing national prosperity.

PRIVILEGE AND LAW.

THE privilege of Parliament and the jurisdiction of the Courts of Law have come into collision in France, as they have often done in England, and we shall look with the deepest interest on the mode in which our neighbours conduct the mighty and subtle controversy. Their conduct in this matter will go far to decide their skill to manage, and their fitness to possess, constitutional freedom. The facts of the case are briefly these :--By the provisions of the Constitution a member of the Assembly. It appears, however, that exemption from attachment on civil process or pursuit for debt, is not among the privileges specified in the Constitution as belonging to members of the Legislature ; in consequence, it has been said, of the enactment of imprisonment for debt being of later date than the Constitution, and containing no exempting clauses. Be this as it may, however, one of the deputies, M. Mauguin, whose affairs have been long in a dilapidated condition, was lately lodged in prison at the suit of one of his creditors, who held a dishonoured bill of exchange. The transaction appears to have been conducted with scrupulous regard to the forms of law. The application for the warrant of arrest was made to the proper tribunal ; the President of the tribunal, after fortifying his own opinion by the judgment of the diminster of Justice, granted the warrant, which was executed by the arppointed officers. The Legislative Chamber, on hearing of the transaction, expressed the greatest indignation, voted the arrest of one of their members to be a breach of privilege, and sent M. Baze, their *huissier*, to the prison to demand his immediate release, and, if met with a refusal, to summon the military and deliver dup the prisoner. It is no trifting matter in France to oppose the will of so powerful a body as the Assembly ; still there are some individuals who feel the necessity of vindicating the supremacy of law, and who have sufficient constitutional instinct to perceive that an actof arbitrary authority, even when

notice of an action against the Governor of the goal for the illegal liberation of his debtor. It remains to be seen what course the Assembly will now pursue. The subject is curious, interest.ag, and perplexing, and we trust that the struggle will be managed on both sides with the temper and caution due to the mighty principles involved in its decision. All violence and all haste should be sedulously avoided. Few more vital questions could have been raised. On the one side the supremacy of law, so long as it is law—a supremacy with which neither the Supreme Executive nor the Supreme Legislative bodies should be permitted to interfere—lies at the very foundation of order and civil freedom. The duty of the Judicial tribunals is to decide what the law is; that of the Legislative Assembly to decide what the law shall be in future; that of the Executive to see to the prompt, impartial, and inexorable administration of that law. The functions are radically and unmistakeably distinct; and in a constitutional country each branch will be naturally and most justly jealous of any interference or encroachment. If the Legislative body is entitled to imprison or to liberate arbitrarily, it will be difficult to argue that the Executive power may not claim the same privilege. If either party exercise such a claim, personal freedom, *i.e. liability to known*, enacted, and recorded law, and to nothing else, is impaired and in danger. If the Assembly may, of its own mere will, liberate a

debtor, it may liberate a felon, a murderer, or a traitor. If it may imprison of its own mere will, it is impossible to argue that it is not equally competent to hang or guillotine; and to claim these rights would be to invest it at once with all the frightful, irresponsible, and uncontrollable power which made the Convention in the Reign of Terror about the most awful tyranny under which humanity has ever groaned.

On the other hand, no one conversant with English history or enamoured of constitutional liberty, will be disposed to undervalue the privileges of Parliament, the uncontrolled freedom of action and speech of its members, their exemption from all legal or executive interference wherever their parliamentary functions are directly or indirectly concerned, and the importance of maintaining their power of punishing, promptly and vigorously, all contempt of their authority or interference with their proceedings. They are the Representatives of the People—the depositaries of the popular authority—the guardians of popular liberty, which may, no doubt, at times be invaded and threatened under cover of the forms of law.

We rejoice to perceive that our French neighbours seem fully aware of the importance of the controversy in which they are involved; and their journals are filled with references to the history of similar struggles in England. On looking back we have been surprised to perceive, how very numerous, even during the last 150 years, have been these cases of collision between the privileges claimed by Parliament and the jurisdiction of the Courts of Law. In the period immediately following the great Revolution, they might almost be reckoned by scores. Three may be especially noted as very instructive in their details, and bearing a very close analogy to the case now at issue in France,—the case of the Aylesbury returning office in the reign of Anne, that of Alexander Murray in 1751, and that of Stockdale in 1839. Our space will not allow us at present to relate these cases in detail, or even to do more than refer to them, and point them out to the attention of the French Jurists. We shall probably do better service by a few general remarks which a study of these constitutional contests in our past history has suggested to us. In almost every case in the last century and a half, in which our House of Commons has placed itself in collision with the Courts of Law, it has been clearly in the wrong; and in the great majority of instances it has been worsted in the conflict, or has been saved from defeat only by a prorogation. The Ludges

In almost every case in the last century and a half, in which our House of Commons has placed itself in collision with the Courts of Law, it has been clearly in the wrong; and in the great majority of instances it has been worsted in the conflict, or has been saved from defeat only by a prorogation. The Judges have always maintained a very dignified attitude; and, while fully admitting the right of the House to protect its own officers in the execution of its orders, when those orders were pleaded before them, they have generally succeeded in checkmating their antagonists by a simple adherence to the established forms and usages of law.

Every case of collision with the legal tribunals has seriously injured the popularity of the House. They have always, most unfortunately, contrived to exhibit themselves in the character of oppressors, leaving to the Courts of Law the function of protectors of freedom. This has arisen from two causes :—*First*— The power of arbitrary punishment, whether by imprisonment or fine, is of itself revolting to the instinct of Englishmen, who submit far more willingly to the most unjust sentence *after* trial, than to the most deserved punishment if inflicted without trial. *Secondly*—The Judges being by law independent, irremoveable, and sacred, the action of Parliament, in all cases of collision, has necessarily been upon the inferior functionaries of the law; and its vengeance has been wreaked upon officers who, being merely the executors of decrees issued by their legal superiors, whom they could not disobey, were wholly innocent in the matter. When, therefore, the public saw a powerful body punishing sheriffs and sheriffs' officers simply for doing their duty—a duty for *not* doing which they would have incurred punishment from another tribunal—an instinctive sense of justice cried shame upon the House of Commons, and its hold upon the respect and affections of the people became injuriously weakened. Thus, in the case of Stockdale versus Hansard (the printer of the House of Commons), the House had clearly all moral right and justice on its side, and Stockdale seems to have acted from a pure love of mischief and desire of gain. But when Stockdale, in the regular course of law, obtained a verdict in the Court of Queen's Bench, and the House imprisoned the unfortunate sheriffs for carrying that verdict into effect—as they were most reluctantly compelled to do the public sympathy went with the victims of arbitrary power, and was manifested in a manner which must have shown the House the fatal error they had committed by placing themselves in a position where the truest sentiments of justice were inevitab

It is probably from a sense of the difficulty and discredit inseparable from these collisions with the law of the land, from the spread of a more gentle and reasonable temper through all classes, from the prevalence of a clearer and sounder sense of justice, as well as from a perception of the needlessness of such assumption of arbitrary power, that there has been a gradual, and, as it were, insensible tendency in later times to recede somewhat from the extreme pretensions which Parliament once put forth, and which some, at least, of our judges were disposed to admit. "The con-" sequences of these pretensions (says Mr Hallam) will appear still " more serious, when we advert to the unlimited power of punish.

" ment which they draw with them. The Commons, indeed, do not pretend to imprison beyond the session; but the Lords have imposed fines and definite imprisonment, and attempts to resist these have been unsuccessful. If the matter is to rest upon 46 "these have been unsuccessful. If the matter is to rest upon "precedent, or upon what overrides precedent itself, the absolute "failure of jurisdiction in the ordinary courts, there seems nothing "(decency and discretion excepted) to prevent them from repeating "the sentences of James I.'s reign, whipping, branding, and hard "labour for life. Nay, they might order the Usher of the Black "Rod to take a man from their bar and hang him up in the lobby. "This would not be done; and if done, would not be endured...... "The temper of Government itself in modern times has generally " been mild, and this is probably the best ground of confidence "been mild, and this is probably the best ground of confidence "in the discretion of Parliament; but popular, that is, numerous "bodies are alway prone to excess, both from the reciprocal in-"influences of their passions, and from the consciousness of irre-"sponsibility;" and it is such bodies that need, above all others, to be protected from the injurious and criminal consequences of their own haste, by what Burke calls "a noble obedience, a proud "submission" to supreme tribunals, whose deliberate and cold decisions no pressions of the moment indicance or preach decisions no passions of the moment influence or reach.

These collisions between the legislative bodies and the constituted tribunals are the more to be regretted because they are, in five cases out of six, wholly unnecessary, and with a timely exercise of prudence and temper, might have been avoided. They are easily avoidable in England; still more easily in France. The tribunals only decide what the law *is*, and administer it as it actually exists; the Legislature has at any moment the power of deciding what the law *beau* have been avoided by the law the law *is*. actually exists; the Legislature has at any moment the power of deciding what the law shall be. A declaratory act, passed by the two Houses in England, or by the single Chamber in France, would at once define what the privileges of Parliament are, and prevent any doubt upon the subject, and any interference with those privileges by the Courts of Law—on whom the new declara-tory act would be just as binding as, in default of it, the old laws and customs of the realms have been. In the case of Stockdale, such a declaratory act, affirming the right of the Parliamentary printer to publish any papers which either House might direct, without thereby incurring the liability to suit at law, was found necessary to a termination of the dispute: it made that legal which before had been illegal: and, if resorted to in the first instance. before had been illegal; and, if resorted to in the first instance, would have saved much oppression, much unpopularity, and much oss of valuable time. In the same manner one single after-noon's work in the French Chamber might frame a declaratory act affirming the non-liability of all their members to arrest for debt, and containing a clause to put an end to all proceedings arising out of Mauguin's affair; and the Assembly would thus extricate itself at once from an unseemly and perplexing situation. The Assembly has now an admirable opportunity for setting to the nation an effective example of the virtue which they most need, and in which they are most deficient,—obedience to law as law—to constituted authority because it is constituted. We earnestly trust that they will not allow the occasion to slip away unimproved. Thus, and thus only, can they convert to their lasting credit and advantage an event which, under any other solution, cannot fail to be singularly damaging both to their popularity and their honour.

At present it is impossible not to feel that they have joined issue with the legal tribunals on the worst ground they could have chosen. They have done a very bad thing, in a very bad way. The supreme authority in the State—the source of law—the foun-The supreme authority in the State—the source of law—the foun-tain of justice—interfering to save a man from paying his just debts, or from the penalty of not paying them—is at best a disre-putable spectacle, and a dangerous example. But the great as-sembly of senators—the collective wisdom of the nation—passion-ately demanding from a subordinate turnkey the surrender of his prisoner, and terrifying the wretched man into compliance by a threat of breaking open the prison doors in case of his refusal— is a still sadder and more bewildering exposure. C'etait plus qu' une crime; c'etait une faute. An act of such needless, hasty, and unseemly violence, perpetrated by the Central Power, will go far to stimulate and justify acts of resistance to legal authority on the part of more insignificant criminals; and among those of the middle classes in France, who are still simple enough to con-sider that debts ought, in common justice and honesty, to be paid, and their payment, if needful, to be enforced, this vio-lent liberation of a debtor will not raise the character of the Legislative Assembly. It is said, but we are unwilling to believe it without clearer

It is said, but we are unwilling to believe it without clearer evidence than we possess, that the arrest of M. Mauguin for debt was a manœuvre of the President and his Ministers, or at least was sanctioned and intended to be turned to account by them; that there are so many members of the hostile party in the Chamber is a similar participant that the simultaneous errest of all the in a similar predicament, that the simultaneous arrest of all the defaulting debtors would give the Ministerial supporters a clear majority on some vital questions which they meditate bringing forward. If they have resorted to such a contrivance, we can only characterise it as a low and unworthy stratagem; but on the other hand, if the allegation be true, "what a picture does it give us of an Assembly, in which insolvents are numerous enough to decide the most important questions, and abound chiefly in the ranks of opposition; and to whom exemption from the liability to pay their debts is one of the most cherished privileges. A

salary of 25 francs a day, and safety from the pursuit of credi-tors, are two privileges sufficient to poison and discredit any po-pular Assembly. We must notice, in conclusion, one marked contrast between our English conflicts of Law and Privilege, and that which is now transacting across the channel. With us the Ministers have always taken the side of Parliamentary supremacy : in France they upheld the authority of the legal tribunals, and were de-feated. feated.

We rejoice to see that, since we wrote the above, the French Chamber have been preparing a *projet-de-loi* to extricate them-selves from the false and awkward position in which their colli-sion with the tribunals place them. It is deeply to be regretted that this step was not taken in the first instance.

that this step was not taken in the first instance. The committee charged to examine the various propositions relative to im-prisonment for debt as applied to the representatives has flushed its labours. It proposes to present a bill on the subject, of which the following are the principal points: --Whenever an occasion arises which, from judgment given, could lead to the arrest of a representative for debt, an application is to be made to the President of the Assembly, who will do all he can to settle the matter between the contending parties. Should he fail within a given time, an application can be made to the Assembly for authorisation. If the authorisation is granted, should the representative so arrested not have paid within three mombs the debt for which he is imprisoned, he is to be declared no longer a member of the Assembly. The committee also proposes to declare him ineligible as long as the obligation subsists. member of the Assembly. The co as long as the obligation subsists.

THE EASTERN COUNTIES RAILWAY.

A LETTER in the Times from Mr Haviland, the gentleman for whom the special train was provided that caused the death of Lodwick at Ponder's-end, and that led to the incarceration of Ronald Baxter on a charge of manslaughter, induces us to revert to the management of the Eastern Counties Railway. Mr Haviland says,—"I was detained at the Shoreditch station an "hour and a half before the train was prepared. Why was not "the telegraph employed during that time?" That question we repeat. Why was it not ascertained by telegraph that the line was clear, and why were not the men at every station informed that a special train was to come? The very essence of railway safety is regularity and punctuality. The management, to be Haviland says,-"I was detained at the Shoreditch station an that a special train was to come? The very essence of railway safety is regularity and punctuality. The management, to be successful, must partake of the clock-work precision of the power-ful machinery set in motion. Special trains are exceptions, and should never be permitted unless for some urgent cause, and then not till every precaution has been taken to secure the safety of passengers by the train and of all persons about the line. This was not done.

was not done. Mr Haviland says that the carriage in which he sat was so much damaged that his escape seemed almost miraculous. It is highly probable, too, that the sad accident at Ponder's-end, by delaying the special train, prevented the worse accident of run-ning into the Hertford goods train which preceded the special train by a short time. Both passengers and station-keepers were exposed to great risk by starting the special train without due exposed to great risk by starting the special train without due preparation by the telegraph: an injury to a carriage, great alarm to a driver and a passenger, and the death of Lodwick, were all caused by improperly sending forward the special train. That was the source of the mischief, and at the trial of Ronald Baxter, if not before, it must be clearly and distinctly ascertained which of the officials is responsible for having despatched the train, and what are the instructions given by the Directors for the performance of this exceptional and dangerous part of the duty of their officers. Till that be known, the public may suspect that life is continually and somewhat carelessly endangered, as in this instance it has been destroyed, by gross mismanagement. Mr Haviland also tells us "that late on Monday evening I re-

"ceived a summons to attend the inquest the next morning, "which summons, at great personal inconvenience, I obeyed. "But on my arrival at Ponder's-end I was met by Mr Richard-"But on my arrival at Ponder's-end I was met by Mr Richard-"son, the superintendent, who informed me that the jury had "determined not to hear my evidence; for what reason I was "not told." Mr Richardson's interposition, preventing Mr Havi-land from appearing before the jury, looks very suspicious. His presence at the inquest was so displeasing to the jury that they requested he might withdraw, and he did withdraw. To the driver committed for manslaughter Mr Haviland's evidence would have been most important. "It appeared to me," he writes, "that Baxter was driving steadily at the time of the accident. "It was evident that he intended to do so, from his having stated "in my hearing to the station-master at Shoreditch that he would "in my hearing to the station-master at Shoreditch that he would be careful on passing the stations. To this the station-master replied, that he need be under no apprehension, as he would immediately telegraph to all the stations on the line to 'keep

" immediately telegraph to all the stations on the line to 'keep "clear.' I wish also to state that after the accident the driver, "Baxter, called my attention to the fact that the red signal-light "was concealed from view by the steam of the Norwich goods "train that was standing at the Ponder's-end station." If Mr Haviland's testimony had not been intercepted, it seems to us highly improbable that Ronald Baxter would have been charged with manslaughter, and to him apparently, and to the public at large, a great injustice has been done, by not examining Mr Haviland. The matter concerns the administration of justice,

"tively, with the fairest prospect of rendering their enterprise "remunerative." Farmers from England and Scotland are inquiring after farms, with a prospect of obtaining them at rents which will admit of their obtaining a reasonable profit from improving the cultivation. The Northern Whig says:---" Many "parties consulted Count Strzelecki as to the propriety of emidustrious, enterprising man, Ireland was a much more remunerative field-he recommended all to go to Ireland. In one instance, a London tradesman--not an agriculturist--possessing some capital, availed himself of his counsel, came over to Ireland, took a farm, and, but a short time ago, wrote to the Count, thanking him for his advice, and announcing the success of his enterprise. An English butcher, who received from him like advice, at a railway station, and who thereupon emigrated to the wild county of Donegal itself, has sent the Count a similar communication. What better proof could be given of these two English tradesmen suddenly converted into thriving "Irish farmers?" We have more facts of the same character to produce; but these will suffice to show that the "princely banquet" at Dublin was not a mockery of a nation's woes, but a herald and a memorial of improved national feelings and a rapidly increasing national prosperity.

PRIVILEGE AND LAW.

THE privilege of Parliament and the jurisdiction of the Courts of Law have come into collision in France, as they have often done in England, and we shall look with the deepest interest on the mode in which our neighbours conduct the mighty and subtle controversy. Their conduct in this matter will go far to decide their skill to manage, and their fitness to possess, constitutional freedom. The facts of the case are briefly these :-By the pro-visions of the Constitution a member of the Assembly is exempt from all imprisonment or prosecution on criminal process, with-out leave first asked and obtained from the Assembly. It ap-pears, however, that exemption from attachment on civil process or pursuit for debt, is not among the privileges specified in the Constitution as belonging to members of the Legislature ; in consequence, it has been said, of the enactment of imprisonment for debt being of later date than the Constitution, and containing no exempting clauses. Be this as it may, however, one of the de-puties, M. Mauguin, whose affairs have been long in a dilapidated condition, was lately lodged in prison at the suit of one of his creditors, who held a dishonoured bill of exchange. The transaction appears to have been conducted with scrupulous regard to the forms of law. The application for the warrant of arrest was made to the proper tribunal; the President of the warrant of artest was made to the proper tribunal; the President of the tribunal, after fortifying his own opinion by the judgment of the Minister of Justice, granted the warrant, which was executed by the ap-pointed officers. The Legislative Chamber, on hearing of the transaction, expressed the greatest indignation, voted the arrest of one of their members to be a breach of privilege, and sent M. Baze, their *huissier*, to the prison to demand his immediate release, and, if met with a refusal, to summon the military and deliver him by force. This was done; the head gaoler was absent, and the turnkey, when threatened with violence, and in the absence of his principal, felt he had no course but to submit, and delivered up the prisoner. It is no trifling matter in France to oppose the will of so powerful a body as the Assembly; still there are some individuals who feel the necessity of vindicating the supremacy of individuals who feel the necessity of vindicating the supremacy of law, and who have sufficient constitutional instinct to perceive that an act of arbitrary authority, even when committed by the Assembly which makes the law, is still something very different from law. They are resolved, therefore, to bring the whole ques-tion to a regular legal and constitutional decision; and in futherance of this object, the creditor of M. Mauguin has given notice of an action against the Governor of the goal for the illegal liberation of his debtor. liberation of his debtor. It remains to be seen what course the Assembly will now pursue.

The subject is curious, interesting, and perplexing, and we trust that the struggle will be managed on both sides with the temper and caution due to the mighty principles involved in its decision. All violence and all haste should be sedulously avoided. Few more vital questions could have been raised. On the one side the supremacy of law, so long as it is law—a supremacy with which neither the Supreme Executive nor the Supreme Legislative bodies should be permitted to interfere—lies at the very foundation of order and civil freedom. The duty of the Judicial tribunals is to decide what the law *is*; that of the Legislative Assembly to decide what the law *shall be* in future; that of the Executive to see to the prompt, impartial, and inexorable administration of that law. The functions are radically and unmistakeably distinct; and in a constitutional country each branch will be naturally and most justly jealous of any interference or encroachment. If the Legislative body is entitled to imprison or to liberate arbitrarily, it will be difficult to argue that the Executive power may not claim the same privilege. If either party exercise such a claim, personal freedom, *i.e. liability to known*, *enacted, and recorded law, and to nothing else*, is impaired and in danger. If the Assembly may, of its own mere will, liberate a

debtor, it may liberate a felon, a murderer, or a traitor. If it may imprison of its own mere will, it is impossible to argue that it is not equally competent to hang or guillotine; and to claim these rights would be to invest it at once with all the frightful, irresponsible, and uncontrollable power which made the Convention in the Reign of Terror about the most awful tyranny under which humanity has ever groaned.

On the other hand, no one conversant with English history or enamoured of constitutional liberty, will be disposed to undervalue the privileges of Parliament, the uncontrolled freedom of action and speech of its members, their exemption from all legal or executive interference wherever their parliamentary functions are directly or indirectly concerned, and the importance of maintaining their power of punishing, promptly and vigorously, all contempt of their authority or interference with their proceedings. They are the Representatives of the People—the depositaries of the popular authority—the guardians of popular liberty, which may, no doubt, at times be invaded and threatened under cover of the forms of law.

We rejoice to perceive that our French neighbours seem fully aware of the importance of the controversy in which they are involved; and their journals are filled with references to the history of similar struggles in England. On looking back we have been surprised to perceive, how very numerous, even during the last 150 years, have been these cases of collision between the privileges claimed by Parliament and the jurisdiction of the Courts of Law. In the period immediately following the great Revolution, they might almost be reckoned by scores. Three may be especially noted as very instructive in their details, and bearing a very close analogy to the case now at issue in France,—the case of the Aylesbury returning office in the reign of Anne, that of Alexander Murray in 1751, and that of Stockdale in 1839. Our space will not allow us at present to relate these cases in detail, or even to do more than refer to them, and point them out to the attention of the French Jurists. We shall probably do better service by a few general remarks which a study of these constitutional contests in our past history has suggested to us.

In almost every case in the last century and a half, in which our House of Commons has placed itself in collision with the Courts of Law, it has been clearly in the wrong; and in the great majority of instances it has been worsted in the conflict, or has been saved from defeat only by a prorogation. The Judges have always maintained a very dignified attitude; and, while fully admitting the right of the House to protect its own officers in the execution of its orders, when those orders were pleaded before them, they have generally succeeded in checkmating their antagonists by a simple adherence to the established forms and usages of law.

Every case of collision with the legal tribunals has seriously injured the popularity of the House. They have always, most unfortunately, contrived to exhibit themselves in the character of oppressors, leaving to the Courts of Law the function of protectors of freedom. This has arisen from two causes :—*First*— The power of arbitrary punishment, whether by imprisonment or fine, is of itself revolting to the instinct of Englishmen, who submit far more willingly to the most unjust sentence *after* trial, than to the most deserved punishment if inflicted *without* trial. *Secondly*—The Judges being by law independent, irremoveable, and sacred, the action of Parliament, in all cases of collision, has necessarily been upon the inferior functionaries of the law; and its vengeance has been wreaked upon officers who, being merely the executors of decrees issued by their legal superiors, whom they could not disobey, were wholly innocent in the matter. When, therefore, the public saw a powerful body punishing sheriffs and sheriffs' officers simply for doing their duty—a duty for *not* doing which they would have incurred punishment from another tribunal—an instinctive sense of justice cried shame upon the House of Commons, and its hold upon the respect and affections of the people became injuriously weakened. Thus, in the case of Stockdale *versus* Hansard (the printer of the House of Commons), the House had clearly all moral right and justice on its side, and Stockdale seems to have acted from a pure love of mischief and desire of gain. But when Stockdale, in the regular course of law, obtained a verdict in the Court of Queen's Bench, and the House imprisoned the unfortunate sheriffs for carrying that verdict into effect—as they were most reluctantly compelled to do the public sympathy went with the victims of arbitrary power, and was manifested in a manner which must have shown the House the fatal error they had committed by placing themselves in a position where the truest sentiments of justice were inevi

inevitably enlisted against them. It is probably from a sense of the difficulty and discredit inseparable from these collisions with the law of the land, from the spread of a more gentle and reasonable temper through all classes, from the prevalence of a clearer and sounder sense of justice, as well as from a perception of the needlessness of such assumption of arbitrary power, that there has been a gradual, and, as it were, insensible tendency in later times to recede somewhat from the extreme pretensions which Parliament once put forth, and which some, at least, of our judges were disposed to admit. "The con-" sequences of these pretensions (says Mr Hallam) will appear still " more serious, when we advert to the unlimited power of punish-

" ment which they draw with them. The Commons, indeed, do " not pretend to imprison beyond the session ; but the Lords have " imposed fines and definite imprisonment, and attempts to resist "these have been unsuccessful. If the matter is to rest upon "precedent, or upon what overrides precedent itself, the absolute failure of jurisdiction in the ordinary courts, there seems nothing "(decency and discretion excepted) to prevent them from repeating "the sentences of James I.'s reign, whipping, branding, and hard "labour for life. Nay, they might order the Usher of the Black "Rod to take a man from their bar and hang him up in the lobby. "This would not be done; and if done, would not be endured...... "The temper of Government itself in modern times has generally "The temper of Government itself in modern times has generally "been mild, and this is probably the best ground of confidence "in the discretion of Parliament; but popular, that is, numerous "bodies are alway prone to excess, both from the reciprocal in-"influences of their passions, and from the consciousness of irre-sponsibility;" and it is such bodies that need, above all others, to be protected from the injurious and criminal consequences of their own haste, by what Burke calls "a noble obedience, a proud "submission" to supreme tribunals, whose deliberate and cold decisions no passions of the moment influence or reach. These collisions between the legislative bodies and the consti-

These collisions between the legislative bodies and the consti-tuted tribunals are the more to be regretted because they are, in five cases out of six, wholly unnecessary, and with a timely exercise of prudence and temper, might have been avoided. They are easily avoidable in England; still more easily in France. The tribunals only decide what the law *is*, and administer it as it actually exists; the Legislature has at any moment the power of deciding what the law shall be. deciding what the law shall be. A declaratory act, passed by the two Houses in England, or by the single Chamber in France, would at once define what the privileges of Parliament are, and prevent any doubt upon the subject, and any interference with prevent any doubt upon the subject, and any interference with those privileges by the Courts of Law—on whom the new declara-tory act would be just as binding as, in default of it, the old laws and customs of the realms have been. In the case of Stockdale, such a declaratory act, affirming the right of the Parliamentary printer to publish any papers which either House might direct, without thereby incurring the liability to suit at law, was found necessary to a termination of the dispute: it made that legal which before hed been illegal, and if resorted to in the first increase necessary to a termination of the dispute: it made that legal which before had been illegal; and, if resorted to in the first instance, would have saved much oppression, much unpopularity, and much oss of valuable time. In the same manner one single after-noon's work in the French Chamber might frame a declaratory act affirming the non-liability of all their members to arrest for debt, and containing a clause to put an end to all proceedings arising out of Mauguin's affair; and the Assembly would thus extringet itself at once from an unscendly and perplaying situation extricate itself at once from an unseemly and perplexing situation. The Assembly has now an admirable opportunity for setting to the nation an effective example of the virtue which they most need, and in which they are most deficient,—obedience to law as law—to constituted authority because it is constituted. We earnestly trust that they will not allow the occasion to slip away unimproved. Thus, and thus only, can they convert to their lasting credit and advantage an event which, under any other solution, cannot fail to be singularly damaging both to their popularity and their honour. popularity and their honour.

At present it is impossible not to feel that they have joined issue with the legal tribunals on the worst ground they could have chosen. They have done a very bad thing, in a very bad way. The supreme authority in the State—the source of law—the fountain of justice-interfering to save a man from paying his just debts, or from the penalty of not paying them—is at best a disre-putable spectacle, and a dangerous example. But the great as-sembly of senators—the collective wisdom of the nation—passionately demanding from a subordinate turnkey the surrender of his prisoner, and terrifying the wretched man into compliance by a threat of breaking open the prison doors in case of his refusal is a still sadder and more bewildering exposure. C'etait plus qu' une crime; c'etait une faute. An act of such needless, hasty, and unseemly violence, perpetrated by the Central Power, will go far to stimulate and justify acts of resistance to legal authority on the part of more insignificant criminals; and among those of the middle classes in France, who are still simple enough to con-sider that debts ought, in common justice and honesty, to be paid, and their payment, if needful, to be enforced, this vio-lent liberation of a debtor will not raise the character of the Legislative Assembly. is a still sadder and more bewildering exposure. C'etait plus qu'

lent interation of a debtor will not raise the character of the Legislative Assembly. It is said, but we are unwilling to believe it without clearer evidence than we possess, that the arrest of M. Mauguin for debt was a manœuvre of the President and his Ministers, or at least was sanctioned and intended to be turned to account by them; that there are so many members of the hostile party in the Chamber in a similar predicament, that the simultaneous arrest of all the defaulting debtors would give the Ministerial supporters a clear maiority on some vital questions which they meditate bringing majority on some vital questions which they meditate bringing forward. If they have resorted to such a contrivance, we can only characterise it as a low and unworthy stratagem; but on the other hand, if the allegation be true, "what a picture does it give us of an Assembly, in which insolvents are numerous enough to decide the most important questions, and abound chiefly in the ranks of opposition; and to whom exemption from the liability to pay their debts is one of the most cherished privileges. A

salary of 25 francs a day, and safety from the pursuit of credi-tors, are two privileges sufficient to poison and discredit any popular Assembly.

We must notice, in conclusion, one marked contrast between our English conflicts of Law and Privilege, and that which is now transacting across the channel. With us the Ministers have always taken the side of Parliamentary supremacy : in France they upheld the authority of the legal tribunals, and were defeated.

We rejoice to see that, since we wrote the above, the French Chamber have been preparing a projet-de-loi to extricate themselves from the false and awkward position in which their colli-sion with the tribunals place them. It is deeply to be regretted that this step was not taken in the first instance.

that this step was not taken in the first instance. The committee charged to examine the various propositions relative to im-prisonment for debt as applied to the representatives has finished its labours. It proposes to present a bill on the subject, of which the following are the principal points :- Whenever an occasion arises which, from judgment given, could lead to the arrest of a representative for debt, an application is to be made to the President of the Assembly, who will do all he can to settle the matter between the contending parties. Should he fail within a given time, an application can be made to the Assembly for authorisation. If the authorisation is granted, should the representative so arcested not have paid within three months the debt for which he is imprisoned, he is to be declared no longer a member of the Assembly. The committee also proposes to declare him ineligible as long as the obligation subsists.

THE EASTERN COUNTIES RAILWAY.

A LETTER in the Times from Mr Haviland, the gentleman for whom the special train was provided that caused the death of Lodwick at Ponder's-end, and that led to the incarceration of Ronald Baxter on a charge of manslaughter, induces us to revert to the management of the Eastern Counties Railway. Mr -" I was detained at the Shoreditch station an Haviland says, " hour and a half before the train was prepared. Why was not " the telegraph employed during that time?" That question we repeat. Why was it not ascertained by telegraph that the line was clear, and why were not the men at every station informed that a special train was to come? The very essence of railway safety is regularity and punctuality. The management, to be successful, must partake of the clock-work precision of the powerful machinery set in motion. Special trains are exceptions, and should never be permitted unless for some urgent cause, and then not till every precaution has been taken to secure the safety of passengers by the train and of all persons about the line. This was not done.

Mr Haviland says that the carriage in which he sat was so Mr Haviland says that the carriage in which he sat was so much damaged that his escape seemed almost miraculous. It is highly probable, too, that the sad accident at Ponder's-end, by delaying the special train, prevented the worse accident of run-ning into the Hertford goods train which preceded the special train by a short time. Both passengers and station-keepers were exposed to great risk by starting the special train without due preparation by the telegraph : an injury to a carriage, great alarm to a driver and a passenger, and the death of Lodwick, were all caused by improperly sending forward the special train That was the source of the mischief, and at the trial of Ronald Baxter, if not before, it must be clearly and distinctly ascertained which if not before, it must be clearly and distinctly ascertained which of the officials is responsible for having despatched the train, and what are the instructions given by the Directors for the perform-ance of this exceptional and dangerous part of the duty of their Till that be known, the public may suspect that life is officers. continually and somewhat carelessly endangered, as in this in-stance it has been destroyed, by gross mismanagement. Mr Haviland also tells us "that late on Monday evening I re-

"ceived a summons to attend the inquest the next morning, "which summons, at great personal inconvenience, I obeyed. "But on my arrival at Ponder's-end I was met by Mr Richard-"But on my arrival at Ponder's-end I was met by Mr Richard-"son, the superintendent, who informed me that the jury had "determined not to hear my evidence; for what reason I was "not told." Mr Richardson's interposition, preventing Mr Havi-land from appearing before the jury, looks very suspicious. His presence at the inquest was so displeasing to the jury that they requested he might withdraw, and he did withdraw. To the driver committed for manslaughter Mr Haviland's evidence would have been most important. "It appeared to me," he writes, "that Baxter was driving steadily at the time of the accident. "It was evident that he intended to do so, from his having stated "in my hearing to the station-master at Shoreditch that he would " in my hearing to the station-master at Shoreditch that he would "be careful on passing the stations. To this the station-master "replied, that he need be under no apprehension, as he would "immediately telegraph to all the stations on the line to 'keep " immediately telegraph to all the stations on the line to 'keep "clear.' I wish also to state that after the accident the driver, "Baxter, called my attention to the fact that the red signal-light "was concealed from view by the steam of the Norwich goods "train that was standing at the Ponder's-end station." If Mr Haviland's testimony had not been intercepted, it seems to us highly improbable that Ronald Baxter would have been charged with manslaughter, and to him apparently, and to the multicat large a great injustice has been done, by not examining

public at large, a great injustice has been done, by not examining Mr Haviland. The matter concerns the administration of justice,

as well as the safety of the travelling public, and we must take care that a powerful company does not impede or thwart the former in order to conceal their disregard of the latter.

COTTON CULTIVATION IN INDIA.

THE following very interesting remarks upon this subject are ex-tracted from the speech of Mr Turner, the Chairman of the Man-chester Commercial Association, made at its annual meeting held this week. Quoting from the reports of Mr David Lees, an Indian correspondent, he says,

correspondent, he says,— "On the east coast of Southern India there is a great extent of land mow lying almost waste, very suitable for the culture of the New Orleans cotton plant. There is a vast tract of sandy soil, nearly on a level with the sea.—a soil and locality the best adapted to the nature and habits of a plant, which is a per-petual producer, and which, consequently, requires a perpetual supply of moisture. The whole of the Trichindore talook (or revenue district) is sandy, and, with the exception of a few isolated red sandhills, is quite fast. To the south, this flat and sandy track extends nearly to Vissiavethee, or to within 20 miles of Cape Comorin; and to the north it extends much further. Yet there are a few useful plants that love such a soil: of these the cotton plant is the chief, and the more I see, the more I am convinced it will flourish in the saline sandy soil of Trichindore." The next point to be considered will be—Is the Government rent or land-tax so great a burden as to interfere with the successful and profitable cultivation of cottor? On this question I will read paragraph No. 3:— " The government rent, or circar rent, as it is called, for land around Trichin-dore, is 10 annas 7 piec the chain—a chain containing 3 7-11 acres. And

" The government rent, or circar rent, as it is called, for land around Triebin-dore, is 10 annas 7 piec the chain—a chain containing \overline{a} 7-11 acres. And if such land is rented from a native, who has inclosed it to cultivate, he asks, for cotton cultivation, one toolam of cotton in every five toolams, and he pays the circar rent. On the islets at the mouth of the river, north of Triebindore, the land, though not cultivated, belongs to natives; and there the circar rent is 1 rupee 9 annas 6 pice the chain; and the owners ask for rent one-half the Go-vernment rent. (If, then, the rupee be called 2s, and the anna, which is 1-16th of a rupee, $1\frac{1}{2}d$; and the pice, which is 1-12th of an anna, 1-8th of a penny, the Government rent at Triebindore will be rather less than $4\frac{1}{2}d$ per acre; and the Government rent and owner's rent, taken together, on the islets at the month of the river will be about 1s $\frac{3}{2}d$ per acre.)"

the Government rent and owner's rent, taken together, on the islets at the month of the river will be about 1s 3³/₄ d per acre.)" So that I think we may feel satisfied that the land tax will not be a very oppres-sive burden in this part of India on the efforts of the cultivators. Another very important thing, which has always been considered a great impediment to the cultivation of cotton in India, is the want of roads. Now in this country, for-tunately, there is no very serious imped ment of this kind; and I think I can prove to you my third proposition—Will the cost of carriage to the port of shipment be any impediment to the profitable export of such cotton ?

"The cost of carriage in this district is very moderate. A bandy will carry 1,000 lbs of cotton 20 miles for a rupee, (This is at the rate of about 21d per ton per mile.)

that I think we are coming very nearly to the railway charges for convey

After detailing the rate of wages, and the cost of exportation, Mr Turner estimates that the total cost of New Orleans cotton from Trichindore, cleaned and laid down in Liverpool, will be thus 4d per pound.

Agriculture.

HOUSE-FEEDING OF CATTLE. MANAGEMENT OF MANURE.

MANAGEMENT OF MANUEE. To a certain extent, house-feeding forms a part of the system of every well-managed farm. Thus in Norfolk, bullocks are stall-fed; in Scotland they are fed in courts and hammells; and in Lincoln-shire store beasts are kept in the yards on straw and oilcake during winter, preparatory to being grazed on the pastures in the summer. Mr Warnes' system of box-teeding and summer grazing- that is, keeping his cattle-boxes full throughout the year, and so feeding off two sets of beasts instead of one every year—is only an extension of the plan all good farmers deem indispensable. So, again, we have the stall-feeding and soiling dairy cows all the year round, as adopted by Mr Huxtable and others. Of this plan, Mr Kennedy's farm at Myremill, near Maybole, and Mr Telfer's at Cunning Park, in Ayr-shire, are conspicuous examples; and some particulars of those establishments, taken from an account in the *Aberdeen Heraid*, cannot fail to be useful, for, as the writer truly says, the turning off "600 or establishments, taken from an account in the Aberdeen Herald, cannot fail to be useful, for, as the writer truly says, the turning off "600 or 700 fat cattle annually from 500 or 600 Scotch acres, and keeping 30 or 40 dairy cows on between 50 and 60 acres, are startling facts." Irrigation with liquid manure is the corner stone of the system on both farms. After describing the forage-house and the machinery and contrivances for preparing the food at Myremill, the bullock-house is thus described :--

and contrivances for preparing the food at myremill, the bullock-house is thus described :--The two new byres run at right angles from the side of the forage-house. Their width is just equal to its length. In each of the byres, fifty-two cattle are placed in two rows, with a centre passage-six feet wide-and a passage at each side before their heads-4 $\frac{1}{2}$ feet in width. There are three doors from the forage-house to each byre, corresponding to the passages, and one at the other end from the centre passage, opening to the manure heap. The passages and the stalls where the cattle stand are paved with tiles laid with mortar upon sand, the same as the floor of the forage-house. It forms quite a smooth walk for running the feeding waggons upon. Under each of the bullocks, the tiles are laid in a slightly concave form, and the lowest of these in the centre is perforated with holes, through which the liquid of the animal is drained to the pipe underneath, which communicates with the tank. Tunnels, three feet equare, for the admission of air, are constructed under each of the four walks in front of the cattle. There are gratings outside to admit currents of air at both ends, with boards to regulate the admission of the air. There are also air gratings over the tunnels opposite each stall of cattle. The impure air escapes by ventilation in the roof. There is a substantial stone trough be-fore each animal, with an opening from the one to the other, about six inches from the bottom. By connecting the troughs at the upper end of the torughs are filled to that depth without more trouble. The plentiful supply of water in the pipes admits, likewise, of the drains which carry off the liquid manure to the tanks, being flushed three or four times a-week, or more frequently, if it be

thought necessary, so that there is no danger of their choking. On entering thought necessary, so that there is no danger of their choking. On entering these byres, one feels agreeably surprised alike by their extent, and their clean, tidy appearance. They are each 94 feet in length, by 33 feet in width, and 11 feet in height. They are lathed and plastered over, and the camsiled roofs with rows of ventilating exy-light windows at each side, give them quite an airy appearance. The two byres are stalled for the accommodation of 104 cattle, and as filled at present, from the clean and quiet state of the animals, have all the amerance of the comfort and capid improvement. The largest stalls are served the appearance of comfort and rapid improvement. The largest stalls are seven feet and ten inches, by seven and a half feet, and they are gradually made less, so as to be suitable for different sizes of cattle. The largest stalls are sever

The beasts are thus fed :-

The beasts are thus fed :--The cooking-house for the cattle is floored with tiles as already described. On one side of it are arranged four large boilers, in which linseed is cooked by con-densed steam from the engine. About half an hour suffices for this. As soon as it is prepared, it is thrown in a hot state over cut hay, chaff, bean-meal and bruised oats, or whatever is used for mixing at the time. The whole is allowed to lie on the floor, according to the plan of Mr Warnes, until the dry chaff ce hay absorbe the mucilaginous matter of the linseed. The ordinary feeding at present used is, for each fattening animal, about 50 lbs of cut turnipe at five, A.M. At eleven o'clock, 15 to 16 lbs of the cooked food, followed by a little dry hay. At five, P.M., another 50 lbs of cut turnip and hay or straw, after which the cattle are littered up for the night.

And the following is the elaborate arrangement for distributing, by means of tubing, the liquid and much of the solid manure over the land --

The entire drainage of the steading is carried, in the first instance, to a The entire drainage of the steading is carried, in the first instatioe, to a small cess-pool, where any sediment it contains settles to the bottom, and the liquid flows into a tank at hand. This tank is 48 feet long, 14 wide, and 15 deep. The second tank is of the same length and width, and 11 feet deep. The tanks are formed by digging out the earth, building the sides without puddling, as the stiff subsoil does not require it, and arching over the top. The two are capable of containing upwards of 100,000 gallons. The liquid manure is pumped by the engine from the first to the second tank, where it is diluted with water, accord-te to its interpret to a state of the waterhow and is made ready for being ing to its strength and the state of the weather, and is made ready for being discharged upon the fields. It is obvious that a steady supply of water is re-quired for this and the various other purposes about the steading. Such has m obtained by bringing it in pipes from a higher level, at a distance less than a mile

Cast-iron pipes have already been laid down for conveying the liquid from the Cast-iron pipes have already been laid down for conveying the liquid from the tanks to 350 Scotch acres of land. There are stop-cocks in the centres of the fields, generally for each ten acres of land. To these, when a particular field is to be manured, guita percha pipes are attached in lengths of about 30 feet, and a hose at the end for discharging the liquid over the field. The operation is begun at the centre by describing a circle round the cock, which circle is gra-dually widened by adding to the guita percha till the whole field is taken in. Before guita percha came into use, a few years ago, such a plan could not have been adopted. It is the only substance known which combines the escential requisites of strength and flexibility. When we saw the process in full play, on Friday, the jet from the hose was discharged to a distance of 120 feet, and the steam-engine, which is of twelve horse power, was working a powerful thrashing requisites of strength and flexibility. When we saw the process in full play, on Friday, the jet from the hose was discharged to a distance of 120 feet, and the steam-engine, which is of twelve horse power, was working a powerful thrashing machine at the same time. It fell like a heavy shower over the ground, saturat-ing it in an evenly manner. A man to direct the jet, so ns attain an equal distribution of the manure, and a boy to assist in moving the pipes, are all that are required on the field. In this manner the steam-engine and force-pump will manure ten acres of land in a day, throwing on from eight to ten tons per acre. There is no danger of the pipes suffering from too high pressure, though an obstruction should occur to prevent the efflux of the liquid. A strong cast-iron apparatus, of a globular form, connected with the pipes, and air-tight out-side, is placed near the engine. When the pipes are full and the engine still at work, the liquid is forced towards the globe, and when the pressure comes up to a certain degree of force, the compressed air acts on the safety-valve of the engine, and the liquid, no longer impelled, runs back along a conduit into the tank. When the engine, the pumps, and the pipes are thus in complete order, it is evidently of great importance to make them do as much work as possible. An attempt is to be made at Myremill to dissolve a large proportion of the solid manure, and force it through the pipes, and thus effect a great saving of mannal and horse labour. The bullocks, which are so well provided with a clean dry bed, will receive as little litter as possible, and the manure which is thus made, almost free from straw, will be conveyed to a large tank, and dissolved with water, or, at least, brought to such a degree of thinness as, it is expected, will admit of its being pumped out. A large additional tank is laid of for this pur-pose, alongside of another new one for liquid. The two will be capacious enough to hold 200,000 gallons.

During the summer the grass is cut and carried to the stock, and each beast has daily four pounds of oilcake. The cost of the pipes is from 30s to 40s per Scotch acre, and the entire expenditure is said to be "not much more than would suffice to thorough drain the land." This we may take at about 61 or 71 per Scotch acre (of five roods), and, in addition to draining, must be deemed a rather formidable out-lay, and one that few landlords will at present incur. Neither is it yet quite clear that manure applied in a liquid state is very advan-tageous and economical. It requires to be largely diluted with water, and except by means of pipes laid down throughout the farm, any very extensive use of it is well nigh impracticable. But if it be proved that the liquid manuring system is the best, then some such con-trivances as Mr Kennedy's and Mr Huxtable's must be adopted. A necessary part of it must consist of large feeding-houses, requiring much expense for ventilation, with drains, tanks, and so forth ; and it may be well to consider, before embarking in such expenditure, whether equal or superior advantages may not be attained by a During the summer the grass is cut and carried to the stock, and it may be well to consider, before embarking in such expenditure, whether equil or superior advantages may not be attained by a different plan at less cost. Now, the box-feeding system dispenses with drains and tanks; and certain it is that many proprietors who have put up large houses for stall-feeding, are being convinced, after experimental trials, that boxes are better than stalls. That is the case with Earl Grey, whose cattle-feeding house at Howick we some time since described, which has since been converted into boxes; and at Woburn Abbey, the box-feeding is extended after trial of both plans. On all farms, open sheds divided into boxes may be erected at comparatively small cost—and we are satis-fied that a shed open on one side is, on the whole, preferable for cattle to a close house—and with this great advantage over stalls, that boxes are as useful for breeding and rearing cattle as for feeding them. In order to render the practice of soiling and house-feeding as general as it ought to be, we must seek how to provide the requi-site accommodation upon reasonable terms. This will seldom be ac-complished where liquid manure is conceived to be an essential to high farming With these few words of suggestion, we give the account of the Canning Park farm :--

high farming With these few words of suggestion, we give the account of the Cunning Park farm :--It is entirely a dairy and green crop farm -- no grain whatever being grown upon it. The early situation, and the light high-conditioned soil, render it suitable for the growth of potatoes for the early market; and a crop of mangold wurtzel is grown after these are removed. The remainder of the green cropping land is planted with an earlier crop of mangold. With good management, in an early situation, this description of crop not only gives fully a larger amount of food than turnips, but it is also more suitable for dairy cows, as it does not impart a taste to the milk or butter; and it admits of a portion of the leaves being carried off in autumn for feeding. The part of the farm is 55 imperial acrees, and it maintains a dairy of 36 heavy Ayrshire cows. Mr Telfer's maxim is, not to take too much in hand, and to do everything thoroughly well. . . . The byre is a wide, capacious building. The cows stand in two rows, with their heads to the centre, and there is a roomy passage down the middle, between the rows, for feeding them. Behlud the kerb stone, the droppings fall on a perfortated metal plate, and a drain below carries the liquid to the tank. This drain can be scoured with water whenever it is thought advisable to do so, as there is an unfailing aupply of water pumped from the river Doon. The passages before and behind the cattle are neatly paved, and the walls a few feet up are covered with slates, so that they can be washed down and the atmosphere of the building kept in a state of great purity. The cows lie upon cooadibre mats, and these, along with a very little litter, suffice to keep them clean and comfortable. . . The steam-engine is called upon to assist in the work of the dairy. It drives the churn, and the escape steam, by a pipe, boils at any time, in the course of five minutes, the water in a large trough for cleansing the dairy tares of of or the cattle is cooked in large cylinders by steam from t cutters, and working the force-pamp, which impels the liquid manure through cast-iron pipes, and distributes it on the field by means of gutta percha hose, as at Myremill. The solid manure of the farm is all prepared and kept under Cover. Mr Teifer has made various attempts to dissolve portions of if, that it might afterwards be sent by steam power through the pipes; but hitherto he has not been very successful.

CLAYLAND FARMING.

In the following account of the system and state of the clayland farmers of Durham, extracted from the Times report, we have an exam-ple of the deterioration, which we believe to have taken place, during the last fifty years, upon a wide extent of our claysoils, induced mainly by relying on grain as the source of profit. The remedy, however, lies not in reverting to permanent grass for such soils, but in the adoption of some plan of house-rearing and feeding cattle, suitable to the locality, and the good culture of the arable clayland :— The number of culturation practiced by the clayland farmers of Durham

adoption of some plan of house-rearing and feeding cattle, suitable to the locality, and the good culture of the arable clayland :---The usual system of cultivation practised by the clayland farmers of Durham is a "three-course," viz.:-(1) fallow, (2) wheat, (3) one-half oats and one-half clover. Nearly the whole of the fallow is managed as a bare fallow, there being very little green erop cultivated. Occasionally this rotation is prolonged by pasturing the clover a second year. The stock kept is quite inconsiderable. Three cows and six young cattle to 100 acres may be about an average stock for the clay farms. As this stock is badly wintered (2) acres of inferior turnips per 100 acres being the average extent of the turnip crop), the home supply of manure can be neither rich nor plentiful. To meet rent and the expenses of cultivation, the farmer's sole dependence is on his wheat crop, a little also being received from that portion of the hay crop which he sells off the farm. As a general rule no manure, except lime, is purchased. That is laid upon the bare fallow, stimulated by lime, is sown with wheat, which is followed by oats or hay. Each return of this rotation further reduces the soluble properties of the soil, as these are not restored by the small quantity of inferior manure applied in nearly the same proportion in which they are abstracted. The same farm, which 30 years ago averaged from 20 to 24 bushels of wheat, and 30 to 36 bushels of oats per acre, is now, under this process, reduced to 14 bushels of wheat and 18 to 20 bushels of oats. One farmer assured us that his oats did not last year average more than 10 bushels an acre. Diminishing produce and lower prices are producing their natural effect. The rents vary from 11s to 16s an acre; it the and rates 38 6d an acre more. The evil here is not high rents, but defective produce. If the farmer paid no rent he could not continue this system with present prices, and have a profit.

SPIRIT OF THE TRADE CIRCULARS.

From Messrs Carlisle, Capel, and Co.'s Circular.) London, Jan. 22, 1851. Though foreign to the purposes of this Circular, and embracing a subject, the discussion of which is too extensive for its limits, we are led to these remarks from the vast importance of the subject in its bearing on the destinies of our market, tea forming the only article in which any material extension of demand for China produce can be looked for in this country. A very large expansion of our general trade with China would undoubtedly result from the opening of an extended market for the products of that country. The question of a revision of the tea duty thus again forces itself ou the attention, and although we have impost, the subject cannot be too often brought forward, and its injurious work-ing familiarised to public notice. For it is mainly if not alone to this cause that the present stationary, and even retrograde state of the China trade is owing. Nor can any favourable change take place till this check on the con-suming powers of the country is removed or relieved. All past experience has owing. Nor can any favourable chauge take place till this check on the con-suming powers of the country is removed or relieved. All past experience has shown the sympathy which exists between the value of ten and its rate of con-sumption, and the last few years have more than ever demonstrated the trath of this. For several years after the opening of the trade, during which prices fell to a very low point, a large increase of consumption took place. The high prices caused by the China war, afterwards created a rapid decrease. And again, from 1842 to 1846, under a gradual and heavy decline of prices, we had an annual increase of upwards of 2,000,000 lbs. The panic of 1847 kept the consumption stationary for that year, but the depression which then brought down the common sorts of tea below the actual cost in China, increased the deliveries in the following year to the large amount of 2,500,000 lbs. Under a deliveries in the following year to the large amount of 2,500,000 lbs. Under a gradual advance in 1849 the increase only reached 1,300,000 lbs, and the further advance in the past year has reduced the excess to only 900,000 lbs. It would thus appear that under the present system it is impossible to look for any further extension of consumption, as no material reduction of retail prices can

take place. The question of an early and extensive reduction of duty therefore

take place. The question of an early and extensive reduction of duty therefore becomes one of the deepest interest, as affecting the progress of the China trade, and the well-being of the labouring population of this country, by whom the bulk of this enormous tax is borne. Amongst the various features which our market has presented during the past year, the opening of the Navigation Laws is not the least interesting. Its first effects were shown in the employment of British ships in China, in com-veying tea to America; since which the American ship Oriental has brought us the first supply of the new season's teas, in a voyage, the speed of which, we believe, is altogether unprecedented at such an unfavourable season; and the ersuit of the sales amply compensated the high rate of freight which she obtained. Two other fast-sailing American vessels also followed shortly after, and the priority of arrival has given great advantage to the importers. The great influx of American shipping from California has since enabled our merchants to avail themselves of a large amount of tonnage at an unusually low figure, at a time when the high rate of exchange in China renders this relief peculiarly opportune. priority of arrival has given great advantage to belowed shortly after, and the priority of arrival has given great advantage to the importers. The great influx of American shipping from California has since enabled our merchants to avail themselves of a large amount of tonnage at an unusually low figure, at a time when the high rate of exchange in China renders this relief peculiarly opportune. Thus as the removal of this antiquated restriction on the commercial intercourse of nations, led to the mutual and reciprocal employment of the shipping of various countries, to the great advantage and promotion of commerce in general ; its effects have also been developed to some extent by importations of tea from the Continent of Europe and from America. The great advance in our market for low teas brought us considerable supplies of low greens from Holland and and Germany, which had been lying for a long time unsaleable in those coun-tries; besides which, we have had supplies of Java teas from the former, pur-chased at the Datch Company's auction at Rotterdam last October. The imports from America have been principally of fine greens consigued to this market, owing to the depression existing there for teas of this class. Were it not for the want of reciprocity in the commercial policy of the Government of the United States, a considerable trade might be done between the two countries; but the imposition of a discriminating duty of 20 per cent. against tea from England, operates as a prohibition against shipments from this side, and is a great check to business either way. An instance of the verations operation of this arrangement occurred early last year, when a considerable shipment of green tea was made to Liverpool on the faith of the prices then quoted. On the arrival of the tea the market had fallen, and it was found to be only saleable at 10 per cent, under what might be obtained for it in America. Under a duty of 20 per cent, it could, of course, not be returned, and the parties were thus sui jected to an un

	(From Messrs Edward Higyin and Co.'s Circular.)	
	Liverpool, Jan. 17, 1850.	
-	chiming and tannage of the next year from and to Linguist services	

The shipping and tonnage of the past year from and to Liverpool, compare as follows with four previous half-years .--

January to June.	July to December.	Total for the year.
Ships Tonnage	Ships Tonnage	Ships Tonnage
1848 1",419 1,748,984	10,091 1,8 5,989	20,510 3,584,973
1849 10,642 1,802,159	10,241 1,841,218	20,813 3,644,377
1850 10,253 1,697,726	10,543 1,913,976	20,946 3.6!1,698
The dues on ships were 75,85	981 for the last half of the	year, compared with
\$1,618l from January to June.	. The Customs revenue for	or the port amounts to
3,366,284l, against 3,472,202l	in 1849, or a decrease of	105,918/ on the year.
However, as there is a total de	crease through Great Brita	in of 80,918/, which is
easily accounted for by the red		

easily accounted for by the reduction of 350,000*l* in sugar duties, it shows that, without this latter, uearly the same revenue has been raised. The yearly statement of the East India and China Association, regarding the entries and clearances from and to countries East of the Cape, presents several interesting features. Liverpool contributes 49 ships of 28,327 tons, to an aggregate increase inwards to Great Britain of 58 ships, of 36,314 tons; and of the outward clearances, which show a total excess of 40,439 tons, 25 ships of 18,713 tons are the proportion contributed by this port. The quantity of tomage to Calcutta, from Great Britain, shows an excess of 12,700 tons, and to Bombay 14,248 tons; but as this took place in the middle of the year, causing the low rates of freight lately current in India, we anticipate advices of higher quotations ruling there. China will, probably, be uninfluenced by the New South Wales ships, as barely sufficient tonnage has gone for their own wants.

Foreign Correspondence.

From our Paris Correspondent.

From our Paris Correspondent. Paris, Jan. 23, 1850. The debates, which were begun at the date of my last letter, have ended in the total defeat of the Cabinet, in the Assembly. M. Berryer delivered a bril-liant speech, which was rather a manifesto in favour of the Count de Chambord than an attemµt to obtain the majority in favour of the order of the day pro-posed by M. de Remusat. His speech was considered as unskilful, and advan-tageous to the ministerial cause. But, on Friday last, M. Thiers began in his turn to attack the Cabinet and the President, and he was more successful. He spoke with his usual dexterity, recalling to the Assembly all the different cir-cumstances in which the Government had endeavoured to encourage the de-sires of the Imperialists, and to throw discredit upon the Assembly. He finished his speech with this threatening sentence, "that if the Assembly. He finished his speech with this threaten the Government, the empire was already accom-plished."

plished. Vainly did M. Lamartine come to the rescue of the Cabinet, and M. Baroche Vainly did M. Lamartine come to the rescue of the Cabinet, and M. Baroche defended himself with all his might. He could not save himself and his col-leagues from a total ruin. The Conservatives, foreaseing that the Left would not vote with them if they did not abandon M. Changarnier, rallied themselves to an amendment presented by M. St Beuve, stating that the Assembly, having no confidence in the Cabinet, passed to the order of the day. General Cavaignac declared in the name of the Left that they would willingly declare that they had no confidence in the Cabinet, but they would not blame Gen. Changarnier's dismissal, which they highly approved. It was evident on the other side, that the Right could not disapprove the other acts of the Cabinet, as the Electoral Law, in which they had participated. The vote of the Right against the Ministers was the result of a coalition. M. Sainte Beuve's amendment was adopted by 415 votes to 286. It is singular to see among the 415 members of the majority, the names of M. Thiers and M. Changarnier, with those of the ultra-Socialists, as Colfavia, De Flotte, Miot, Arago.

De Flotte, Miot, Arago. The first thought of Louis Napoleon after such a vote was to resist the As-sembly and preserve his Cabinet, as he said that the coalition did not show ex-actly where he might chose his ministers. It was decided on Saturday evening

that he would address a new message to the Assembly, announcing that he would wait a more explicit vote to take other ministers. But several of the Ministers, and chiefly M Drouyn de Lhuys refused to accept such an awkward situation, and insisted on giving their resignation, and on Monday morning the Moniteur declared that the collective resignation of the Ministers had been accepted.

90

accepted. Many report-have been already circulated as to the names of the new Mi-nisters, but the Cabinet is not yet formed, and it is very probable that it will not be composed before several days. Louis Napoleon desires to take his new Ministers exclusively from the 356 members who have voted against M. Sainte Ministers exclusively from the 356 members who have voted against M. Sainte Beuve's amendment, and he would chose them from the Left, if he could ob-tain a majority with such a Cabinet. The principal per-ons who have been summoned to the Elysee since the resignation of the Ministers are M.W. Lamartine, Daru, Billault, Mathieu de la

resignation of the Ministers are M.M. Lamartine, Diru, Billault, Mathieu de la Redorte, Leon Faucher, Passy. O tillon Barrot. But he made propositions only to M. Lamartine, who declined them, under the plea that he would not obtain a majority either with the Left or with the Right. He engaged the President to apply to M. Odillon Barrot. Louis Napoleon called M. Odillon Barrot to the Elysee, but he made no offer to him, and he seems unwilling to put him at the head of the Cabinet, as he cannot forgive him for having abstained from voting on Saturday last. on Saturday last.

It was announced yesterday night that the ministerial crisis was over, and M. Leon Faucher was to compose the new Cabinet; but it is not confirmed this morning. M. Leon Faucher could not complete a new Government, all those to whom he applied having refused to enter the Cabinet. M. Leon Faucher has many enemies in the Assembly; he would not obtain the support of the Right, as he is disliked by the Legitimists, and the Left would certainly vote against him.

The Cu-tom-house has just sublished their tables of imports and exports for 1859, compared with 1849, 1848, and 1847. The produce of those years for importations amounted to, viz. :-f.

HALF PAST FOUR .- The following is the new ministerial list, which was circu-HALF PAST FOUR.—The following is the new ministerial list, which was circu-lating on 'Change; but I think that it is not yet definitively settled :-M. Leon Faucher, Interior; General D'Arbouville, War Department; Passy, Fi-nance; Admiral Leblanc, Navy; M. Vaisse, Trade and Agriculture; M. Buffet, or M. Fortoul, Public Instruction; M. Chasseloup Laubat, Pablic Works; M. Flavigoy, or M. Lahitte, Foreign Affairs; M. Lacaze, Justice. Our securities were not quite so firm as on the preceding days. The business was very scan'y. The 3 per Cents, wried from 57f 10c to 56f 95c; the 5 per Cents, from 95f 80c to 95f 15c; the Bank Sha es, from 2,280f to 2,220f; the Northern Shares, from 470f to 467f 50c; Strasburg, from 353f 75c to 352f 50c; Nantes, from 247f 50c to 246f 25c; Bordeaux, from 397f 50c to 395f; the Cen-tral Line, from 387f 50c to 390f 1 Boulogne, from 218f 75c to 225f.

Correspondence.

COFFEE AND CHICORY. To the Editor of the Economist.

-In your paper of the 18th there are some remarks on coffee, and an extract from a memorial praying that the duties on that article be taken off, which appear to require some attention. It is said in the extract referred to, "that the mixture of chicory with coffee is a dishonest practice, by which the planter is seriously injured, the revenue defrauded, and the public grossly imposed upon.

posed upon." Now, the minimum price of roasted coffee to the retailer. viz., 13d to 14d per pound, is about the same as the aver ge price of the mixture sold as coffee; and as the article is not generally said or supposed to be coffee only, there can be no dishonesty on the part of the seller. The colonial planter may be injured, but the Yorskhire chicory grower is benefited, and the country is the gainer by the cost of importing coffee, minus the cost of growing chicory. As there is no duty on Eaglish chicory, the revenue laces by its substitution for coffee. But

how is it defrauded? If the memorialists choose to drink London-made cham-psgne, instead of Chateau-Margeaux, are they guilty of a fraud on the revenue? And, on the same principle, the consumer who buys pure coffee and chicory sepa-rately, to mix himself, is open to the same grievous charges. The memorialists seem to think that we drink coffee solely to keep the estates in cultivation and to seem to think that we drink coffee solely to keep the estates in cultivation and to support the revenue. All import duties are bad, however unobtrusive. So, to assume that we are to use articles that pay duty, in preference to those which do not, for the sake of the revenue (or of the coffee planters in this case), is taking a position at once novel and amusing. Compare the tax on coffee and tea with that on light. If from the pressure of the duty we avoid using the former, the commonwealth is the gainer by our abstinence; but if we do with-out the latter, not only do we save nothing, but we injure the greatest prop of health and industry, and consequently destroy the very root of wealth. ' If this paper does not require more space than you c in devote to so small a matter, its insertion will oblige your obedient servant. Bridgewater, Jan. 20th, 1851. "LET THERE BE LIGHT."

matter, its insertion will oblige your obedient servant. Bridgewater, Jan. 20th, 1851. "LET THERE BE LIGHT." [No plea will excuse the sale of chicory for coffee, any more than the sale of any other article by another name. If people prefer chicory to coffee, at least let them buy it as such, and pay for it as such. Let things be called by their proper names, and at least let people know what they do drink. It is not ne-cessary that we should enter into any comparative consideration of the merits of the tax on light and tea or coffee. All that we insist upon is, that if people ask and pay for coffee, they should receive coffee. As a source of taxation, we have no doubt that tea and coffee, if sufficiently moderate, are amongst the very best of an indirect character than can be imposed.—ED. ECON.]

News of the Weteek.

COURT AND ARISTOCRACY.

HER MAJESTY and the Royal Family continue at Windsor. The Duke and Duchess de Nemours and the Duke and Duchess d'Aumale, his Excellency the Baron and the Baroness de Brunnow, the Earl and Countess of Minto and Lady C. Elliot, the Marquis and Marchioness of Worcester, Lord and Lady Ashurton, and the Right Hon. Fox Maule, have been visiting at the Castle in the course of the week.

METROPOLIS.

OPENING OF PARLIAMENT.—It is expected that Her Msjesty will open Parliament in person. The address in reply to the speech from the throne will, it is said, be moved by the Marquis of Kildare, and seconded by Mr Peto, M.P. for Norwich. REPEAL OF THE WINDOW-TAX.-Sundry demonstrations in favour

repeat of the window-tax have been held during the week. On Monday a public meeting of inhabitants of the parish of St Marylebone was held in the court of the workhouse, New road. On the hustings were Lord D. Stuart, M.P., Sir De Lacy Evans, M.P., Mr C. Lushington, M.P., Mr Williams, M.P., Mr Mow-att, M.P., &c. The following resolutions were passed :- "That, the window-tax being wrong in principle, unuatural in character, partial, oppressive, and unfair in its operation, and most reguganat to the feelings of the community, and alike de-structive of the morals and the hastle to fit he newline the days itself on structive of the morals and the health of the people, this meeting pledges itself to use every means to obtain the immediate, total, and unconditional repeal of this odious tax, and not to accept any commutation or modification thereof in any man-ner whatsoever."—" That, as it is a principle of the English constitution that no supplies be voted by Parilament until grievances are redressed, this meeting, considering the window tax to be an intolerable grievance, respectfully request that in case the window tax is not repealed the members for this borough do that in case the window-tax is not repeated the meters for this borough do use their end-avours to stop the supplies."—" That, in the event of a commu-tation, or modification of the window-tax, the meeting request the committee to continue their sittings, and determine what ulterior proceedings might be neces-sary to obtain the removal of the tax."—On Thursday three large and influen-tial meetings were held. The inhabitants of the Liberty of the Rolls, of St Leonard's, Shoreditch, and of St Luke's, Chelsca, met in vestries, when strongly worded resolutions were passed. The Evaluation of the Liberty of the Liberty of the Rolls, of St

THE EXHIBITION OF 1851 .- Mr Paxton has addressed a letter to Lord John Russell in which, after some introductory remarks, he says :--" I have the fore to propose, that, for the first fortnight of the exhibition, admission shall Russell in which, after some introductory remarks, he says :---" I have there-fore to propose, that, for the first fortinght of the exhibition, admission shall be, in every case, by payment; and, further, that one day in the week (and for many reasons I should select Wednesday) shall, for the whole term of the ex-hibition, be reserved for the higher classes of all nations who may prefer to pay for the exclusive privilege of admission, rather than encounter the inconve-nience of a crowd. With these exceptions, that the entrance shall be entirely free. The sum taken during the first fortnight and on the one day of each week would, no doubt, be very considerable; nevertheless, a large deficit would remain onerous upon the Royal Commissioners. This deficit I am emboldened to solicit your Lordship to meet by a Parliamentary grant. And this solicitation I make the more readily from the belief, that from the very fact of the Exhibi-tion, a large addition will accrue to the revenue of the country--an addition, it is calculated upon trustworthy authority, of upwards of 2,006,000l. HEALTH OF LONDON DURING THE WEEK.-The number of deaths registered last week in London amounts to 1,037; while in the ten corresponding weeks of the years 1,814-50, it varied from 960 in 1843, to 1,401 in 1843, and the average was 1,119. This average if it be augmented in the ratio of previous increase of population (1.55 per cent. per annum) up to the present time, becomes 1,253, compared with which the present return exhibits a great decrease; but it will be borne in mind that violent epidemics, which multiplied the deaths of the period from which the average is drawn, have also left a less population to yield a smaller contribution of mortality. The births of 815 boys and 734 girls, in all 1,599 children, were registered in the week. The average of six corresponding weeks in 1845-50 was 1,395. At the Royal Observatory, Green-wich, the mean reading of the barometer was 29.550. The mean reading of the thermometer was 45 deg, which is 8 de

PROVINCES.

REPRESENTATION OF GLAMORGANSHIRE.—A rumour is abroad to the effect that Mr Henry Thomas, who for many years has been vice-chairman of the quarter sessions of the county of Glamorgan, will be put forward in the Liberal interest as a candidate for Glamorganshire, on the vacancy occasioned by Earl Danraven accepting the Chiltern Hundreds. REPRESENTATION OF NOTTINGHAMSHIRE.—It is understood that the nomi-pation will take piece on one of the three data between a county of the store of the three data between a store of the store data between a store of the three data between a store of the three data between a store of the store data between a store between a store of the store data between a store of the store data between a store of the store data between a store

nation will take place on one of the three days between the 9th and 13th proximo; and in the meantime the exertions of all parties are, if possible, greater than ever. The anticipated vacancy in North Notts is likely to take

1851.7

THE ECONOMIST.

place at an earlier period than was expected. Mr Houldsworth has only re-tained the seat for some time past until his successor shou'd be agreed upon; but increasing infirmities render him daily more impatient to get rid of responsible duties.

sible duties. SHIP-BUILDING AT HYLTON.—During last year 32 vessels, classing from seven to twelve years, and of 9,415 tons burden, have been haunched at Hylton. The number is equal to 1849, but the tonnage exceeds that year by 1,530 tons. There are at present on the stocks at Hylton 23 ships, six or eight of which are nearly ready for launching, and the whole of which will probably be off the blocks within six months. The different artisans connected with shipbuilding are fully employed, and the yards all occupied, some builders having three ships in course of construction; so that this important branch of trade is in a were brick state — Darhum (hownide. very brisk state .- Darham Chronicle.

SCOTLAND.

REPRESENTATION OF FALKIRK.—Mr George Loch has addressed the electors of the Falkirk district of burghs, as a political and commercial reformer. On the subject of Free-trade, Mr Loch says, that "though there are still some excla-mations from particular interests who think their difficulties proceed from recent Include from particular interests who think their dimedities proceed from recent legislation, his belief is, that they too will gain by what has been done, not less than others, while theirs will be the peculiar advantage of exchanging an artificial position for one resting on its own independent foundations." Mr James Baird, of Garteherrie, has also published an address, announcing himself as a candidate for the vacancy, but without pledging himself to support any particular party. His sentiments are known to be Conservative.

IRELAND.

THE LLAND. THE CIVIC BANQUET.—The Lord Mayor gave his inaugural banquet on Tuesday evening in the Mansion House. The dinner was laid in the King's reson, a temporary wooden building, erected on the occasion of George IV.'s visit to Ireland, nearly 30 years ago, and capable of accommodating with com-fort and elbow-room from 400 to 500 guests; and since that memorable event no civic entertainment has at all approached in the profusion and splendour of its arrangements the one given by Alderman Guinness. His Excellency, the Lord-Lieutenant, and all the leading officials, nobility, and gentry, at present in Dublin, were among the guests at the banquet. THE NEW PARLIAMENTARY FRANCHISE.—The revision for the borough of Newry has been completed, and the numbers placed on the pol amount to 514, about half the number of those composing the constituency at the first regis-tration under the Reform Act, and even less than the number of those who voted at the last election. With respect to religious denominations, the votes stand thus:—Protestants, 294; Roman Catholics, 220. DECLINE OF PAUPERISM IN THE WEST.—Another, and by no means insig-inficant, symptom of the slow but steady improvement that has set in, even in the worst circumstanced parts of the West of Ireland, is elucidated by the official returns of the number of paupers chargeable to the Ballina Union on the st of January, 1850, and on the corresponding day in the present year. At the former period the gross total of 22 electoral divisions amounted to 2,399, while at the latter this formidable mass of pauperism had declined very nearly one-half—the number on the books being but 1,214. DEATH OF THE MARQUIS OF HASTINGS.—This young nobleman died in Dublin on the afternoou of Friday last, at the age of 19. Death was the re-sult of a slow fever, which originated in an accident that occurred to his lord-ship a few weeks since in Liverpool, when he was almost drowned.

FOREIGN AND COLONIAL.

SCHLESWIG-HOLSTEIN. According to Hamburgh correspondence of the 20th inst, the cities of Rendsburg, Altona, Lubeck, and Hamburgh are to be occupied by Federal troops.

troops. It is stated that Fredericksort will have a Danish garrison. The Austrians carry everything with a very high hand. No intercourse takes place between them and the Prussians, and the crestfallen appearance of the latter contrasts very forcibly with their somewhat arrogant manner of corner days. former days.

SPAIN. Accounts from Madrid are to the 16th inst. The Queen has composed her ministry as follows :--M. Bravo Murillo, Minister of Finance and President of the Council; M. Beltran de Lis, Minister for Foreign Affairs; Count Mirasol, Minister-at-War; M. Ventura Gonzalez Romero, Minister of Grace and Justice; M. Jose M. Bustilles, Minister of Marine; M. Fernin Arteta, Minister of the Interior; and M. Fernando Negrete, of Commerce. M. Bravo Murillo has explained to the Cortes the programme of the new cabinet, which may be summed up as follows:--The ministry will be tole-rant and impartial, and prove itself a strict observer of the laws. Probity, justice, and economy will preside as much as possible at all its acts. The ministry will not withdraw the budget, but confine itself during the dis-cussion to modify and reduce certain expenditures. M. Bravo Murillo pro-mised, moreover, to present shortly a project of law on the settlement of the debt. He, however, said nothing of his plan. The two Chambers silently listened to the expose, without manifesting either approbation or disappro-bation. AUSTRIA.

AUSTRIA.

The latest Vienna letters are to the 19th. It is stated that the Chevalier Schmerling, the Minister of Justice, has re-signed, and that his resignation has been accepted. Rumours are likewise afloat of the secession of M. Bach from the Homeoffic

The mercantile advices from Vienna of the 15th inst mention that a crisis had taken place in the administration of the National Bank, owing to a de-mand by the government that they should surrender a claim of 908,000 fl which had accrued to the bank for interest on the State paper-money held by them. The directors, to avoid the responsibility of yielding to this, resigned their appointments, but on the question being submitted to the shareholders they were re elected, with authority to acquiesce in what had been required. Upon the matter being thus settled, the bank shares, which had previously declined, regained in some degree their former position. The discussion at the meeting was an agitated one, and some of the directors wished for further restriction on the press, so as to prevent any remarks on the affairs of the establishment. The following statement, which was ex-

hibited, shows a a fresh siderable addition to the	increase in its inconvertible government debt :	issues, and also a con

PRUSSIA. On the 16th inst. the Minister of Commerce at Berlin had an interview with the President of the Cabinet, on the subject of the affairs of the Zollve-rein. The Kolner Zeitung, which contains this news, states that it is now quite certain that Baron Manteuffel is resolved not to yield to Austria on this point.

draughts. "The first draught we devote to the past, to the time when the Princes and people of Prussia, loyally and faithfully united, performed so many deeds of

people of Prussia, loyally and faithfully united, performed so many decus or greatness.
"The second draught we drink to the present time, and especially to the 'People in arms,' whose rising has again shown that the corruption of 1848 has spared the marrow of the nation. This draught is for you too, gentlemen, whom I have decorated with orders as a reward for your loyalty.
"The third draught is for the future. Few of us will live to the end of the next 50 years, but I am sure we all wish that those years may be blessed for this dynasty and this gallant people.
"Now then, gentlemen, to the past, the present, and the future!" The Berlin Commission for the London Exhibition has engaged to supply a Berlin publisher with a list of the German exhibitors and the articles sent, in order that a German catalogue may be prepared; it will contain the prices of the articles and goods attached to each entry.

SAXONY.

SAXONY. The Constitutionell has the following paragraph in reference to the ar-rangement of the votes of the States in the revised Bund;—" In the new enger-Rath, or smaller council, after subtracting the votes of Austria and Prussis, three voices will remain, which will be distributed as follows:—One to the two Hesses and Baden; the second will be divided between Nassau, Oldenburg, the two Mecklenburgs, Brunswick, and the Hanse Towna; the third among the other small States, including Holstein, Luxemburg, and Limburg. Prussia and Austria have two votes each, and each of the other kingdoms one, making nine curic with 11 votes. In the plenum Austria and Prussia will have 10 votes each, and the whole number will be increased from 69 to 80."

from 69 to 80." Luxemburg and Holstein, that is, the Netherlands and Denmark, have protested against the new federal constitution. They—important places— have by this constitution only a fraction of a vote at the Diet, whilst Wurtem-burg, an insignificant place compared with these, has an entire vote. From Baden and the "free cities," a similar protest is expected; and all the small States are likely to follow these examples. The same journal states that the Executive will have at its command 135,000 men, to which Austria will contribute 30,000, Prussia 30,000, Ba-varia 15,000, and the other kingdoms each 10,000 men. In the Hessian question it is said Prussia has proposed that it shall be submitted to a court of arbitration of the Bund, as soon as one can be formed, but that the Elector will not accept the proposition.

AMERICA.

AMERICA. Advices from New York are to the 8th inst. We are promised weekly arrivals through the winter, the proprietors of the United States steam-vessels having determined on an alternate fortnightly departure. Public affairs proceed with an equable current. The correspondence between Mr. Webster and the Austrian charge has been received with almost universal satisfaction by the American people, and is expected to have its influence on the diplomacy of the Old World.— "We have been much interested," says a *Daily News* correspondent, "by the Earl of Carlisle's lecture on the United States. He was highly estremed by those with whom he was intimate. His remarks are generally very fair, but we think them rather superficial." Some indignation has been excited by the closing of the American Protes-tant chapel in Rome; as the Catholic clergy enjoy perfect equality in the States, and are always preaching up toleration. The statistics of immigration to New York for the year 1850 show a de-crease of 8,567 passengers as compared with 1849. The whole arrival for 1850 was 212,796. Of this number 28,125 were English, and 116,552 Irish; in all, 144,677 British subjects. The report of the declaration of war between St. Salvador and Honduras is confirmed. Mr. Chatfield had intimated that the British government would interfere.

is confirmed. Mr. Chatheld had intimated that the British government would interfere. The intelligence from Yucatan is serious. A battle is reported to have taken place with the Indians in which the whites were defeated with a loss of 300 men.

Kelly, Rector, Captain Farquhar, R.N., only surviving son of the late Admiral Sir Arthur Farquhar, K.C.B., to Filen, eldest canghter of the late Samuel Philip Rickman On the 15th inst., at Shirley church, by the Rev. Charles smith, the Rev. Samuel Sheidou, of King's Norton, Leicestershire, to Augusta Isabelia, third daughter of Charles Vicars Hunter, Esq., of Clayfield Lodge, Southampton, and Kilburne Hall, Derby-hire.

DEATHS.

DEATHS. On Sunday, the 19th inst., at Fermay, universally beloved and lamented by his relatives and friends, Lord Robert Conoliy Taylour, Captain in Her Majesty's 49th Regiment. On Friday, the 17th inst., at Morrison's Hotel, Dublin, the Marquis of Hastings, Ensign s2nd Light Infantry, in the 19th year of his age. On Wedmaday, the 23nd inst., at Kiddington, Oxon, of disease of the heart, Robert, eldest son of General the Hon. Robert Mead, in his 42nd year.

COMMERCIAL AND MISCELLANEOUS NEWS.

92

COMMERCIAL AND MISCELLANEOUS NEWS. At a meeting of the proprietary of St Katharine Docks, just held, a dividend of 1% per cent. for the half-year was declared, free of income tax. From the statement of accounts presented, it appears that the total earnings of the com-pany during the past year were 238,115/ 7s 9d; and the total expenditure, 198,543/ 9s 7d; leaving a balance of 39,571/ 18s 2d applicable to the dividend. A notice has been posted in the Stock Exchange that from the 1st of February the building will be closed punctually at 4 o'clock. A Government notice was issued on Saturday of a guaranteed loan of 70,000/ to be raised for the colony of British Guiana, under the act of 1848, authorising such loans on behalf of the West India colonies and the Mauritius to an extent not exceeding 500,000/. The debentures are to be for 500/ each, bearing in-terest at 4 per cent. from the 1st inst., and redeemable in 20 years from July, 1850, and they are to be paid for at the Bank of England on the 7th of February. Thursday was the day on which the tenders were made. The offer of the Rock Life Company at 105/, and the one at 106/, which was by a private individual, were accepted. A deputation from the merchants, bankers, traders, and others, of the city of London has waited upon the Lord Mayor, upon the subject of establishing a Tri-bunal of Commerce. The deputation consisted of the following gentlemen : - Mr J. M. Frazer, 34 Mark lane; Mr Francis Lyne, 12 Mark lane; Mr George Draper, 4 Great Winchester street; Mr Brook. 35 Fenchurch street; Mr James Coxehead, 32 Royal Exchange; Mr Daniel M'Farlane, 52 Graceclurch steet; Mr W. Aston, Crown court; Mr T. Francis, Angel court; Mr H. H. Lycester, Berk-ehire; who presented to his lordship a memorial in favour of the project, signed by upwards of a thousand persons. We understand thes a leading house in London. connected with the South

who presented to his lordship a memorial in favour of the project, signed by upwards of a thousand persons. We understand that a leading house in London, connected with the South American trade, received an order by the New York steamer yesterday to effect a running insurance for 300,000/, to cover quicksilver to be exported from Mr Forbes's mine (the New Almaden) in California, along the Pacific coast. The shipment of this supply will probably take place during the ensuing twelve months, and, as it will be absorbed in South America, and will give an extra-ordinary impulse to the production of silver, it affords a further commentary on the folly of those nations who are now attempting by legislation to regulate their future position with regard to the precious metals.—*Times*. The new company for steam to India, which has been some time in contem-plation, has issued its prospectus. The proposed capital is 1,200,000/, and the title adopted is the Eastern Steam Navigation Company. Plymouth is to be the port of departure, and the lines to be established are—one to India (Ceylon, Madras, and Calcutta), China, and Australia, on the 5th of every month; another from Calcutta to China, calling at Singapore, to enable Indian passen-

Madras, and Calcutta), China, and Australia, on the 5th of every month; another from Calcutta to China, calling at Singapore, to enable Indian passen-gers to proceed to Australia; and another, "if desirable," between Aden and Mauritius. The navigation to China is to comprise a regular communication between Shanghai and Hong Kong, touching, when not interfering with the mails, at intermediate ports, and the average rate of speed of the boats of the company is to be $10\frac{1}{2}$ knots an hour. We learn that at a meeting of the Chamber of Commerce held on Tuesday last, it was agreed to send memorials to the Treasury in favour of the repeal of the duty on soap, and of a large reduction in the duty on tea.—North British Modi.

Mail.

Mail. An influential meeting of the iron trade was held on Monday in Glasgow, to consider what means might be deemed desirable to remove a strong prejudice found to exist in England against the use of Scottish iron. An effective com-mittee was appointed for that purpose. The dividend declared at the meeting of the Union Bank of Australia just held, was at the rate of 6 per cent. per annum on the entire paid-up capital, together with a bonus of 10s per share on the 32,000 paid-up shares, and a like proportion of bonus on the 21 10s paid-up on the 8,000 shares of the third series. The report and account laid before the shareholders were regarded as satisfactory, and were unanimously adopted after a few explanations.

We have much pleasure in announcing that the Order of the Garter has been conferred upon the Marquis of Normauby, in consideration of his important services as Ambassador in Paris, and in several other high offices of State.—

Lord Wharncliffe has withdrawn from a contest with Lord Redesdale for the chairmanship of committees in the House of Lords. Lord Redesdale's election is now certain.

On the afternoon of Monday last, Field Marshal Grosvenor, who was one of the six field marshals of England, and colonel of the 65th regiment, died at his residence at Richmond, Surrey, at a very advanced age. The Marquess of Northampton died on Friday at Castle Abbey. The recent death of his son-in-law, Viscount Alford, had given him a great shock.

Literature.

THE THEORY OF HUMAN PROGRESSION, AND NATURAL PROBA-BILITY OF A REIGN OF JUSTICE. Johnstone and Hunter, Paternoster row and Edinburgh.

This thick volume forms only a part of a contemplated larger work, entitled the "Science of Politics," and it commences very properly by a preliminary explanation of the nature of that science. Both the by a preliminary explanation of the nature of that science. Both the whole subject, and that part of it which the author now treats of, are at all times of as much importance as any subjects that ever engage thought and reflection. But just now—when great political changes are demanded all over Europe, and great revolutions are undertaken to bring about trifling reforms—when the whole civilised world is agitated by questions concerning the political means of ameliorating society—no subject is more worthy of attention. The busy acting men of the world, including the writers for the daily press—now the chief instructors of the public—are so pressingly occu-pied with the practical and immediate toils of the day, and are re-quired so continually to act or to advise on its numerous and minute details and cares, mingled with all its passions, that they have no time to examine principles, and hardly time to refer to those they may, in the quiet seclusion of early study, have learned and adopted. They are obliged to act or to write on the impulse of the moment, whether prepared or not by sufficient knowledge to justify them in giving an opinion or taking a part. For the whole society which they influence or guide, it is advantageous, or even necessary, therefore, that other persons should examine the principles on which politicians act and public writers daily dogmatise. If they have entered on a wrong path,

society will be conducted to acts of violence or revolution to correct their errors

Of the existence of a science of astronomy, the observed changes in the relations of the heavenly bodies serving as rules for the art of navigation, or of the existence of a science of the chemical affinities of different bodies, the foundation for many improvements in the of different bodies, the foundation for many improvements in the arts, there is no doubt; but the existence of a science of politics, or of rules drawn from the development of society on which to found and improve the art of government, is not so certain. It most assuredly cannot be inferred, either from the vulgar demand for constitutions in different countries, or what may be called the rule of thumb or slight-of-hand practices of the different rulers of society, whether president or organ constitutional representatives or deepotic priori in different countries, or what may be called the rule of thumb or slight-of-hand practices of the different rulers of society, whether presidents or czars, constitutional representatives or despotic priest-and-prophet kings; for that would be to infer the existence of a science from rules founded in ignorance, and from conduct often dictated by very reprehensible passions. The mere practices of politicians no more justify the inference that there is a science of a science of judicial astrology. Their art, in fact, though at present wholly discarded, and now derided as unfounded, had as early and almost as long an existence as the art of the politician; but all modern investigations have led to the conclusion that the astrolo-ger's art had no warrant in the order of Nature. It was founded on presumption or imagination, not on science or knowledge, perma-nent and common to all men. To hint at the bare possibility of there being no science of politics, while journalists are continually and prodigiously active in giving effect to the demands of journalism, on the supposition that they are the essence of public opinion, is enough to generate universal alarm. A ship at sea, of which the pilot re-members only the point of departure, with no land in sight, not knowing whither he is bound, without compass or chart or knowledge of the heavenly bodies, of the configuration of the coasts around the coasts of the averaging and each of the coasts around the of the heavenly bodies, of the configuration of the coasts around the ocean, of the prevailing winds and set of the currents, while he has an obedient crew, whom he continually harasses by directing the ship's course first one way then another, now spreading all the sails ship's course first one way then another, now spreading all the sails and then taking them in, trimming them, and fidgetting with them perpetually, because he is entirely ignorant of what he ought to do, is an apt representation of society under the pilotage of statesmen and journalism, if there be no science, and, consequently, no art of politics founded in nature. The subordinate science of wealth, miscalled political economy, forcibly impresses the negative conclusion on those who have most studied its principles and have traced them to their natural results. It teaches that statesmen invariably do harm—harass the more and dolut the variant by open practice of their art or by the crew and delay the voyage—by every practice of their art, or by any and every interference with the natural laws which unerringly determine, in the most minute detail, the production and distributi of wealth. To enable us to judge of the empirical art of the political cian, we must first establish, if possible, the existence of political science, and demonstrate its principles. In the comparatively short essay on the subject prefixed to this work, and in the remarks on it

essay on the subject prefixed to this work, and in the remarks on it scattered throughout, we cannot compliment the author that he has performed this great task. Politics, he says, "is the science of EQUITY, and treats of the re-lations of MEN in equity." But what is equity? It is another name for justice, for right, for honesty. The science of politics, then, is the science of justice, the science of right or morality. It is the science of the moral relations of adividuals, and is only a fine name for the vast compendium of rules branching into all the relations of life, of which some of the principal are—"thou shalt not murder," "thou shalt not steal," "thou shalt not bear false witness against thy neighbour." There may be a science of these moral relations, but that it has yet to be learned, is certain; because men are not yet agreed, or have not yet ascertained, what is murder; for some of them think it proper to take away life on the gallows and in the battle-field, and they differ much in their opinion as to what constitutes the agreed, or have not yet ascertained, what is murder; for some of them think it proper to take away life on the gallows and in the battle-field, and they differ much in their opinion as to what constitutes the property they are not to steal. The Southern planter calls it rob-bery that his negro finds refuge and protection in a Northern state, and both the existence and the abolition of our corn laws have been called robbery by different parties. Admitting the possibility of forming a science of all the rules that should govern the relations of individuals in equity, though those relations are in a progress of development not periodical; and admitting that some statesmen. have, on some occasions, undertaken to guide their conduct by one or two of those rules, it is an abuse of language to call such a science the science of politics. It is the science of society, the science of morality, the science of the relations of man to his Creator, by which, as the rule, the politician refuses to guide his actions. Morality teaches the means of happiness; and implies that rules are naturally prescribed for every part of the conduct of individuals. The relations of equity are the relations of rights and duties, all of which flow from the constitution of man and the universe, or are prescribed by the PowEn that adapts the earth and man to one another. Both etymologically and practically "justice" means that which is ordered, and if all that is necessary for man to do be ordered by his Creator, the orders of legislators and politicians are superfluous. The art of politics proceeds on the supposition that naturally there are no relations in equity, that rights are not pre-scribed nor duties enforced; and that unless the legislator or the

naturally there are no relations in equity, that rights are not pre-scribed nor duties enforced; and that unless the legislator or the scribed nor duties enforced; and that unless the legislator or the politician determines the former and enforces the latter, deciding what is property and what is not, there would be no civilisation and even no society. His art is founded on expediency, or what he sup-poses will be for the good of society. It sprung from imagination ; and, as now practised, is an inheritance from other politicians which experience is continually demonstrating to be worthless, and society is continually correcting at great expense. As men become acquainted with thescience of society, they in general learn to despise the art of the politician. Nature is uniform and harmonious ; contradictory sciences are absurdities. The expedient art of the politician is hostile to the sci-ence of equity ; it denies the natural relations established for individuals in society, and of his art there can be no science other than a history

of what he has done. The author is a disciple of Kant and Cousin, of what he has done. The author is a disciple of Kant and Cousin, but his use of the formal logic of those ingenious men cannot enable him to establish that which does not exist. In fact, he admits, when he says "the whole realm of political science is as yet little better than a superstition," that there is now no political science, and we cannot find any grounds in his work for believing that poli-tical science can be formed hereafter. "Truth (he says) has almost as little to do with legislation as it had with alchemy and astrology;" and if we can only reason from what has already happened to what will happen, there is no ground for believing that truth and legisla-tion will be united hereafter. The bulk of his book, too, is hostile to the pretensions of politicians, showing in many instances the vast mischief they have done by violating the moral laws; and he fails to prove that any principles different from the common rules of morality can be laid down for the guidance of politicians or of nations. an be laid down for the guidance of politicians or of nations.

can be laid down for the guidance of politicians or of nations. In many passages of the work he supplies incidental proofs that there is no science of politics. For example, he says-"`Luw ought to emanate from ethics, and the very first and most important question to determine is what is crime and what is not crime." "Crime ought to be prevented." "No action that is not a crime ought to be prevented." "No action that is not a crime ought to be prevented." "No action that is not a crime ought is the orbit of the earth." "Political improvement takes place exactly as men discover and definitely determine the true nature of crime." Thus all law, according to the author, should emanate from ethics; should be limited to prevent crimes; and should not prevent any action that is not a crime, which sweeps away nineteen-twentieths of all that should be limited to prevent crimes; and should not prevent any action that is not a crime, which sweeps away nineteen-twentieths of all that men call politics. Again, he says—"Science exists in the mind and in the mind alone;" and all the science of politics rests on crime, and the true nature of crime is not known. A science founded on ignorance is a contradiction. We agree with him that the question—What is crime?—since the legislator is only to prevent crime, and not to prevent any action which is not crime—is the key-stone of all politics. We looked, therefore, for a definition of crime from him, and we in fact find one. It is "a breach of equity." But equity, or what one man ought or ought not to do to another, is yet, in most cases, a mere matter of opinion. The legislator, on his views of ex-pediency, takes away life, and habitually takes away property. Our knowledge of equity, whether it be that of Chancery or that of the world at large, will not enable us to determine, with the same precision as we determine what is a square, what is crime. There is nothing in it precise and definite, like four right angles, to determine its character. Equity in Leadenhall street, as a relation between the In it precise and definite, like four right angles, to determine its character. Equity in Leadenhall street, as a relation between the East India Directors, is totally different from equity in Bengal or Scind, as a relation between the Directors and the Nawaubs of the former or the Ameers of the latter. A science founded on such vary-ing relations is an impracticability, though in the consequences of the different acts of the gentlemen in Leadenhall street to one ano-ther, and to their dependent subjects in India, we discover a science-the science of society — covertuing the variant ded science the se eience of society--correcting or overturning the pretended science of politics. The author tells us in another place-

-" Social knowledge-that is I he author tells us in another place—" Social knowledge—that is social science—is absolutely requisite before we can labour intelli-gently to improve man's social condition. These are the conditions under which man tenants the globe. Every department of Nature and of man's phenomenology has its laws, and if those laws are infringed, evil is the immediate, invariable, and necessary result." It is true, the author also says—but in the two passages there is, we think, an evident contradiction—" Men must act, and as there is no necessary necessary there is even evident contradiction—" Men must act, and as there is no necessary power determining them to act in a particular direction, there is ever before them a right course and a wrong course." "Men must there-fore legislate." But if every department of Nature have its own laws, and those laws cannot be infringed without suffering evil, and if men continually strive to avoid evil and seek good, how can it be said that there is no necessary power determining them to act in a particular direction? The book shows that the progress of society is the result of natural laws determining knowledge, and deter-mining men to act in a particular direction, and, as a whole, contradicts this particular passage. On his own showing, therefore, every act of man has already its own laws, by infringing which evil or punishment follows. follows.

follows. But evil to whom ? To the innocent, or the guilty ? To the acting agent, and perhaps to others linked with him, but to him certainly. Unless the evil be connected with the act, how can it be either a punishment or a warning. Why, in the course of Nature, should Jack suffer for what Tom has done? What a strange arrange-ment it would appear if the act were done by one agent, and the evil suffered only by another; so strange, that we have no hesitation in concluding—though the conclusion can be justified by many colla-teral facts and arguments—that the acting agent or agents must in all cases be exclusively considered, and that the evil suffered by them, and them only. is at once the exact measure of their crime and its all cases be exclusively considered, and that the evil suffered by them, and them only, is at once the exact measure of their crime and its perfect punishment. A more precise definition of crime, therefore, or of actions forbidden by our Creator, "than a breach of equity," is an action which causes or inflicts evil on the acting agent. If it bring not evil to him—if it bring only good, he has no motive to avoid it, but every motive to perform it; and how can that be prohibited to perform which man is incited, and all the consequences of which are to him beneficial? But if every crime be naturally punished, if there be no crimes but such actions as bring evil to the agents, there is no want of any human law to prohibit or punish them, agents, there is no want of any human law to prohibit or punish them, and no basis for a science which rests on the supposition that crimes are not all adequately punished by Nature. On such arguments and such facts, the author's own statements lead to the conclusion that there is no science of that art which politicians practise. Having said so much in refutation of the assumption that there is a science of politics, which is the foundation of many other theories and many injudicious practices, we must speak of the larger part of the work, which treats in much detail of human progression. There is nothing in man, except the "desire to better his condi-

tion," which can, a priori, suggest the conclusion that society is pro-gressive; or perhaps the fact which, duly considered, is very curious, that man condemns some of his own passions, or a part of his own nature, as unworthy. That seems a means of gradually removing or extirpating the passions he condemns, and so becoming an improved being. Though we cannot foretell the consequences, Nature im-plants in man seeds of improvement. He is slowly undergoing a transformation, and has, in his desire to better his condition—speaking entirely of his present existence—and his dialike of certain passions. transformation, and has, in his desire to better his condition—speaking entirely of his present existence—and his dislike of certain passions, as low and vile, the germs of continual moral growth. But whatever sentiments we way feel, the knowledge of what they lead to is ac-quired by experience. The progress of society is taught by history, and is not a deduction of science. There was a time not very re-mote when no one man nor nation was acquainted with all the chief parts of the globe. Parts familiarly known to us, the ancients were ig-norantof. Supposing that America and the islands of the Pacific ocean were peopled and, of course, known to their inhabitant in the time of were peopled and, of course, known to their inhabitants in the time of Augustus, no Roman was acquainted with the existence of that continent and these islands. The former was not discovered by the inhabitants of Europe till the fifteenth century, nor the latter till the eighteenth.

of Europe till the fifteenth century, nor the latter till the eighteenth. It is perfectly clear that our knowledge of the globe and all other knowledge has gradually extended and increased. It is equally clear that population has increased. All history goes back to a few people in every country, or almost to one country; and, in spite of a few in-stances of population having decayed, mankind have gradually in-creased on the whole, and spread over every quarter of the globe. All ethnological researches tend to show that what may be called the outlying portions of mankind—the inhabitants of the islands of the Pacific and other places—have been derived from some of the few great families, and have wandered from some central points in Asia and perhaps in Africa. That a change in the character of man has accompanied the increase in his knowledge and numbers is also certain. He has become more skilful, more powerful in relation to matter, commands a more equable and plentiful subsistence, is more The has become more skilled, more powerful in relation to matter, commands a more equable and plentiful subsistence, is more gregarious or social, more friendly with his species, communication between them is greater, their mutual services are greater, and social trading man is very different from the wild and almost solitary savage which appears to have been everywhere the first known condition of the human race.

It is a fact, therefore, that man and society are progressive, and it is of as much importance as anything can be that the theory of progression should be ascertained. It is a part of knowledge almost infinitely necesshould be ascertained. It is a part of knowledge almost infutery neces-sary to our future welfare, compared to the knowledge of the Greek and Latin languages, and of the minute history of the Greeks and Romans, which so much pains is taken to impress on all our youth. Unless we know pretty well the causes which brought society to its present condition, the means we shall take to promote its future improve-ment will be very likely to retard it. Such knowledge is equally ment will be very likely to retard it. Such knowledge is equally necessary to the statesman and the philanthropist, the mere citizen and the philosopher, the most humble mechanic and the highest aristocrat. It is a fit subject for patient research and investiga-tion, and the author deserves much approbation for undertaking the task

His idea, which seems the fundamental one of the whole sub-His idea, which seems the fundamental one of the whole sub-ject, that knowledge, the sum of all the sciences, has been evolved according to some necessary, though not human, scheme, we look on as largely comprehensive, philosophical, and eminently correct. There may be some difference of opinion as to the chronological order in which the author has placed the evolutions, but none, we think, as to the principle enunciated in the following passage :—

think, as to the principle enunciated in the following passage :-The mathematical sciences were first evolved, then the more simple of the physical sciences; and that the progress of discovery since the time of Newton, down to the present day, has been, as nearly as we could possibly expect, on the very same principle of complexity that forms the ground of classification. And it would not be difficult, we think, to prove not only that it has been so, but that it could not possibly have been otherwise. Without geometry, stations and dynamics, are impossible; without statics and dynamics, hydrostatics and hydrodynamics are impossible; and without hydrostatics and hydrodynamics, that portion of physiology which treats of the phenomena of vegetable and animal circulation is also impossible. Here the one science must precede the other in chronological discovery, because it is requisite to render that other science discoverable. The one is the means whereby we attain to the other, just as in a single science one problem must be solved before we can, by any possibility, attain to the solution of another problem. And the law of this de-pendence of one science on another is, that the traths of the antecedent science. It is impossible, therefore, that the sciences should be discovered in any other than a certain order ; that is, man must sequire knowledge on a scheme which has laws as fixed and definite as the very laws of the sciences, that its not neces-sary that the whole (all that can be known) of an antecedent science is commenced. When geometry has made a certain progress, statics may be commenced ; and thus the earlier portion of statics may be evolved coincidently with the more advanced protion of geometry. Again, when inorganic chemistry has made a certain progress, organic chemistry may be commenced; and its more elemen-tary truchs will be undergoing a process of evolution coincidently with the more advanced truths of inorganic chemistry. Thus, although the sciences are necessarily The mathematical sciences were first evolved, then the more simple of the

Thus, although the sciences are necessarly antecedent and consequent to each other, they interweave or overlap each other in their chronological evolution; just as father and son may be alive at the same time, yet the father is necessarily older than the son. And in the evolution of the sciences, we may have several generations on foot at a given period. When geometry was a science, astro-nomy was a superstition; and when mechanics and astronomy were sciences, chemistry was a superstition; and when chemistry had assumed the form of science, political economy was a superstition; and now that political economy begins to assume somewhat of scientific ordination, politics is little better than a superstition. a superstition.

It is perfectly clear, as all linear measures refer to the earth, that some knowledge of its surface must have preceded a knowledge of the heavens, though both may at once have been visible; or g-ography must to a certain extent have preceded astronomy, though astronomy afterwards promoted a knowledge of geography. In a similar manner a progress in any one science or the arts promotes a knowledge of, and progress in, another; and so united are the whole, that it is impossible one should be carried forward without others sharing in the progress, and contributing in their turn to carry forward the one that first helped them into existence. But this fact of the evolution of knowledge, or of the several sciences, does not thoroughly and satisfactorily explain the progess of man and society. It has been supposed and said, that the increase of knowledge and the extension of science are the consequences of legislation; that they result from the action of government, which is the parent of civilisation ; and thus the progress in past time, to be of use in future, must be traced to its cause.

to its cause. Modern events refute the supposition that civilisation is due to the action of government. The discovery of America was due to no action of any government. The idea of another route to the East Indies arose in Columbus; he had great difficulty to obtain regal assistance; when it was given it was from no anticipation of the discovery of America, which was the result of his idea. Every subsequent event connected with that discovery—the knowledge of the true form and dimension of the globe consequent thereon—the growth there of communities having European language and European skill —the wonderful commerce that has arisen between the two continents —and the not less wonderful influence, socially and politically, of the growth of the United States over Europe, are none of them due either to the direct or indirect action of government. Our author is very happy in explaining how combination of knowledge an i reason has brought about certain great changes in the laws and political constitutions of society, and how the sentiments of the inhabitants of Europe have gradually changed and compelled an alteration in political systems; but we do not think he is equally happy in tracing the evolution of the sciences, and these consequent changes to their cause.

to their cause. Kant has led him into error. There is no doubt but a change has taken place in the mind of man-knowledge has been substituted for ignorance; the problem, therefore, to be solved is, knowledge of what and how obtained? The author does not explicitly tell us of what, but as all science refers objectively to the external world, the increase of knowledge must be of that world. He ascribes the increase to the exercise of the reason, and depreciates, after Cousin and Kant, Locke's theory of sensation. It is, however, clear that the knowledge of the external world is obtained exclusively by the impressions on our senses; by them we test every assertion and correct every error. On what grounds did the Free-traders urge the abolition of the corn laws? The physical injury those laws did to society. What do we mean by science but a knowledge of objects external to curselves? To what do we appeal to correct the reasoning of philosophers? The evidence of sense. Sensation, superior to reason, corrects its aberrations; it corrects, too, its own first imperfect and incomplete impressions; and we never finally accept the deductions of science unless they be confirmed by the experience of the senses.

rations; it corrects, too, its own first imperfect and incomplete impressions; and we never finally accept the deductions of science unless they be confirmed by the experience of the senses. The material world, too, is the only link of communication between minds. Reason is a faculty of each individual, and never can be known to any other. So is it with the impressions on the senses of each; they are never known to any other; but they have for two or more persons, and for all men, a common object, or common cause, and that cause—the source of all language—the origin of every idea—is the external world. The impressions made on our senses by that world, are the sources of all progress in correct knowledge. An increase of mankind, including the increase both in time and space—or succ-ssive generations as well as of the number of families living at the same time—gives rise to more observations, more correct knowledge ensues, there is a greater development of science, and consequently more civilisation. The great physical change since history began is the increase of knowledge; and the increase of knowledge has modelled the character of man and of society.

From the progress society has made, we are now able to infer that the law of civilisation is a part of man's nature. It is dependent on the increase of the species and the increase of knowledge. In that there is no mystery, but much to delight and satisfy our aspirations. The minds of individuals and of nations, and of the whole human race, are gradually modelled on the external world; and the more we know of it, the more firmly we are convinced, whether we examine its minute details or its awful magnitudes, that it is worthy of all admiration. Daily and hourly are we governed by its influence. More and more are our minds moulded by its perfections, and more and more do we participate in its regularity, share its power, and delight in its magnificence. We are different from and better than our predecessors, from knowing more of nature. The author's conclusion, more correct than most of his reasoning, is, " that civilisation has been the slow and gradual acquisition of natural trath, and the reduction of that truth to practical operation." " All human science," he implies, "ends in morals." It enlightens the judgment and reforms the heart. Civilisation has a certain and a physical cause. It is another name for the development of the mind, by observation, in time and space. Whither the progress tends, and in what it will end, is not given us to know, because we now know not the discoveries which are hereafter to be made, any more than our predecessors knew of the discovered, and be reduced to practice,"—"when justice shall be the regulative principle of the earth." " A millenium is a condition of society in which man shall evolve the maxim of good by acting correctly. And man can act correctly only when he has acquired correct knowledge." That is just and well said; and it is pleasant to reflect that the rueful consequences of errors and mistakes are continually guiding and goading men to correct knowledge.

We have to regret, from discussing at so much length the great principles involved in our author's book, that we are precluded from quoting many of the striking passages it contains of the effects of various laws. He is a vigorous thinker and master of an impressive style. He is not afraid, like many persons, to carry out his principles to their just conclusion. More condensation may be desiderated; a clearer method might be adopted; but, his book being one of a class which is now much wanted, will be the parent of many improvements in our political reasoning.

THE FORTY-FIVE. By LORD MAHON. To which are added, Letters of Prince Charles Stuart. From the Stuart Papers, copied by Lord Mahon from the original MSS. at Windsor. John Murray, Albemarle street.

THE interesting story of Prince Charles, though often told, is still new in the pages of Lord Mahon. He has gathered more authentic particulars of "The Forty-Five" than any other historian, and he has made a skilful use of his materials. His narrative is plain and neat, yet full. Forming of itself a complete episode in his History of Europe, it promises in this form to be an extremely popular book. It is not merely as a book of adventures, however, that "The Forty-Five" is valuable, but also as describing a most important event in the political history of England, and as a chapter in the philosophy of human nature. Mr Murray and Lord Mahon could scarcely devise a book that will be more acceptable to the public.

WHAT IS WHAT IN 1851: A Guide to London for the Year of the Great Industrial Exhibition. By ONE WHO NOT ONLY KNOWS WHAT'S WHAT, BUT WHO'S WHO, AND WHERE'S WHERE. Whittaker and Co., Ave Maria lane.

This little work is what it pretends to be, a lucid and comprehensive epitome of all the leading places of importance and attraction throughout the metropolis. It supplies both natives and travellers with much useful and even necessary information in a cheap form, and will be a great help to the millions of persons who will honour the Exhibition with their presence.

THE DRAMATIC WORKS OF GOETHE: comprising Faust, Iphigenia in Tauris, Torquato Tasso, Egmont, translated by ANNA SWAN-WICK, and Goets von Berlichingen, translated by Sir WALTER SCOTT. Carefully revised. Henry G. Bohn, York street, Covent garden.

garden. We have no intention of saying a word of the works here presented to the public in our own tongue. Their reputation is established, and unless we were to write a critical dissertation on their respective merits, it would be impertinent to say a word either to censure or praise productions that the literary world has long recognised as master-pieces. We must content ourselves with speaking of the translations. That of Goetz von Berlichingen, by Sir Walter Scott, though spirited, was extremely faulty. The translatress and the publisher, without materialising or vulgarising the spirit, have corrected many palpable errors, and supplied many omissions. The translation now has a much greater resemblance to the original. Miss Swanwick's metrical translation of Faust, though there are twenty other versions in print, will familerise the English reader with the metre and the thoughts of the original, and enable him better to understand it. Her metrical translations of Iphigeaia and Tasso, are at once faithful and spirited. The prose translation of Egmont, the original being in prose, deserves thesame praise. Goethe's master-pieces are all rendered into nervous, but plain and rather homely English. As far as translations can serve to make an author known, these may effect that. Miss Swanwick's work will be an excellent and cheap introduction to the study of the German language and literature.

To Readers and Correspondents.

Communications must be authenticated by the name of the writer.

A. B.—We have received this letter, which we regret our space compels to omit. We perfectly understand the aim of the writer, but we do not agree that it would be either just or politic, by any act of legislation, to interfere with the natural effect of an increased supply of gold. Our correspondent must bear in mind, that, however abundant gold may become, an ounce will always be worth 3/ 17s 16½d, so long as the sovereign continues of the same weight as at present; that is, so long as an ounce coins into 3/ 17s 10½d. And as long as Bank notes are convertible at pleasure, no power to issue more, or restriction to issue less, will affect the price of gold.

F. P. came too late to receive attention this week. Mr Rowley and F. B.-Received.

FRIDAY NIGHT. The preceding accounts, compared with those of last week, exhibit.—

An increase of Circulation of	£23,347
A decrease of Public Deposits of	608,088
A decrease of Other Deposits of	458,073
A decrease of Securities of	891,595
A decrease of Bullion of	115,402
An increase of Rest of	30,816
A decrease of Reserve of	184,832

The Money Market is very easy, though perhaps so only temporarily. It is difficult to place money on call at $2\frac{1}{2}$ per cent., and bills at even long dates are discounted at 3. To have a continual high rate of interest, the profit on production must continue high. But it is an established principle that there is a continual tendency in profit to fall, which is only checked at intervals by new inventions and new discoveries, which diminish the cost of production. The abolition of restrictive laws and reduction of taxation have for a short time similar effects. Several circumstances have combined within the last three years—such as the abolition of the Corn Laws, the discovery of California, the remission of some taxes—to check the downward tendency of profits; and as the influence of such circumstances ceases if no similar ones occur, profit will fall, and interest will fall too. It is possible that we have now arrived at a time—which several circumstances, such as the comparative dulness of trade, seems to indicate when the rate of profit is at least not rising, if it be not falling. If that be the case, we may look for cheaper money; but, notwithstanding the temporary plenty, an opinion prevails that money will be dearer.

dearer. The rates of Exchange, which were improved, came from abroad to-day without any further improvement. From Amsterdam, Hamburg, and Paris they came very flat, or even a shade lower than last post.

post. The Public Funds have been rather buoyant through the week, notwithstanding the "crisis" in Paris, which seems to be regarded as of little importance to national welfare. Our Stock Market closed firm to day. The following is our usual list of the opening and closing prices of Consols on each day of the week, and the closing prices last Friday and to day of the other principal stocks :-

The loan contracted on Thursday for the use of British Guianawhen the tender of the Rock Assurance Company of 1051 for every 10014 per cent. stock, was accepted, and 5,0001 awarded to a private gentleman, who for that sum offered 1051-is considered a very fair bargain.

The change in the hours of opening and closing the Royal Exchange, making the time of assembling half an hour earlier, which is to take effect from the 1st proximo, gives general satisfaction. By the last arrivals from the United States we have received intel-

By the last arrivals from the United States we have received intelligence from Sin Francisco to Dec. 1. The Georgia steam-ship had arrived at New York with about 500,000 dols in gold dust on consignment and in the hands of passengers. The steam-ship Crescent City had also arrived with 1,500,000 dols consigned, besiles the amount in possession of passengers. It is estimated that 2,500,000 dols were brought in both ships. They reported 5,000,000 dols at Panama, waiting to be forwarded. The influx of gold seems to be increasing. It is said, also, that gold abounds in the Mormon country. Eleven persons have arrived at St Louis, from Salt Lake City, with 80,000 dols. The number of passengers, however, who return from California is

80,000 dols. The number of passengers, however, who return from California is very great. The Georgia sailed from Chagres with 924 passengers, and transferred 410 passengers in Havana to the Pacific, for New Orleans. The Crescent City had 400 passengers; so that the people seem running away from California almost as fast as they ran thither. The cholera has frightened more. The New York Herald says :--" The commercial accounts are quite brilliant. It is estimated that about four millions of dollars in gold may be expected here, as that amount has arrived at Panama. Such an addition to the large amounts already received, for several months pa-t, shows that the mines are still largely productive; and the preparations for the winter operations, as we are instructed by the journals, promise further large returns in the spring."

THE ECONOMIST.

COMPARATIVE EXCHANGES.

COMPARATIVE EXCHANGES. The price of gold at Paris is quoted at 2 per mille discount on the new tariff rate, which, at the English mint price of 3/ 17s 10¹/₂d per ounce for standard gold, gives an exchange of 25¹/₂; and the exchange at Paris on London at short being 24¹/₂5 it follows that gold is 0.68 per cent dearer in Paris than in London.

By advices from Hamburg the price of gold is 422 per mark, which, at the English mint price of 3/17s 10gd per ounce for standard gold, gives an exchange of 13-38; it follows that gold is 0-12 per cent dearer in London than in Hamburg Hamburg.

Hamburg. The course of exchange at New York on London for bills at 60 days' sight is 1103 per cent; and the par of exchange between England and America being 109 23-40 per cent, it follows that the exchange is nominally 1.17 per cent in favour of England; and, after making allowance for difference of in-terest and charges of transport, the present rate leaves a profit on the importation of gold from the United States.

COMMERCIAL EPITOME. FRIDAT NIGHT

The Corn Market, which rallied a little on Wednesday, was again dull to-day. Wheat was only purchased for immediate use, but there is a disposition to hold from expecting better prices. The arrivals during the week were moderate, nevertheless business was not brisk.

not brisk. The Colonial Produce Market has been dull through the week, but to day an improved demand for sugar arose, and full prices were obtained. Coffee, which was again lower in the early part of the week, also improved to-day. Fine native Ceylon, which has been down to 47s, sold to-day for 48s 6d. The improvement was due to the accounts from Amsterdam, where the Marchant Company Handown to 47s, sold to day for 48s 6d. The improvement was due to the accounts from Amsterdam, where the Merchant Company—Han-dels Mastschappy—have announced for auction, this spring, 270,000 bales of coffee against 303,223 in 1850, 399,003 in 1849, and 497,577 in 1848. The quantity now to be sold is 80,000 bales less than the average of the preceding five years, while the demand has ex-tended. In reference also to the almost total cessation of sales since October, the quantity to be brought forward which is all that is in in-October, the quantity to be brought forward, which is all that is in stock, is considered very moderate, and an improved market here is in consequence expected.

We have been favoured by the following extract from a letter of Messrs O'Hara, Jacob and Co., dated Guayama, 28th Dec., 1850 :-

Sugar making has already commenced, and the first shipments will probably be made during the latter part of January, should no change of consequence take place in the British or American markets. Prices will, we think, open at about 3 to 4 dollars per 100 lbs according to quality, equal to 15s 2d to 20s per cwt. free on board; and molasses 10 or 11 cents per gallon, say 7s to 7s 6d per cwt. fo.b.

Messrs. O'Hara, Cook and Co., at Ponce, comunicate under same date :-

Several estates have already commenced grinding, but this will not become general until in about two or three weeks. We think prices will open moderate, say 3³/₄ dols to 4 dols for prime sorts. We do not anticipate high prices for coffee in the beginning of the season. No transactions have as yet taken place, but two parties who were in the market offering 9¹/₂ dols, have their orders with-

drawn, on account of warlike news from Germany. Exchanges.—6 per cent. on Macaquina &c. 475 dols to 480 dols per 1001 on London. Col. doubloons 17 dols Macqa.

Cotton has found no demand here this week, the demand and sales at Liverpool having been dull. For China silk the demand continues good, but that for Bengal has

declined. With reference to the proposed Tribunal of Commerce, we have received the following letter :--

To the Editor of the Economist.

12 Mark lane, Jan. 24, 1851.

SIR,-As the originator of the movement in this city relative to Tribunals of Sig.-As the originator of the inventee in this dry relative to instants of a Commerce, may I ask the favour of your allowing this communication to ap-pear, as I have to give an account of my stewardship to upwards of a thousand highly respectable and powerful mercantile firms, who have attached their sig-natures to a memorial asking that a public meeting may be called to take into consideration the importance of the necessity of our having Iribunals of Com-

consideration the importance of the necessity of our naving Fribmans of Com-merce in this country. Some of my friends, with myself, waited upon the Lord Mayor respecting this important matter; and to-day I have had the honour of receiving the an-nexed reply, showing his lordship's readiness to comply with the wishes of his follow-citizens. fellow-citizer

fellow-citizens. It is with much satisfaction that I can assure the public the subject is most popular throughout the commercial world, not only in London, but, as far as I can judge, by direct communication, with every large town in this empire. Many noblemen and other gentlemen of great influence and consideration have likewise come forward and offered their services to the commercial world on this occasion.

A public meeting will be arranged as soon as possible, and will be duly ad-vised.—I have the honour to be, Sir, your most obedient servant, FRANCIS LINE.

1

The Lord Mayor has signified his readiness to preside over a public meeting whenever one shall be called. Lord Overstone, whose name carries great weight, has expressed his hearty good-will to the pro-ject; Lord Wharncliffe has consented to act as President of the Com-mittee; Sir James Duke, M.P., Mr Hume, M.P., Mr Montague Gore, M.P., give the project their cordial support. Preparations for holding the public meeting are in a forward state, and there is every prospect of the project being brought to a satisfactory conclusion. A Commercial Tribunal established in the metropolis would lead to the establishment of such a tribunal in every large town. Liver-pool, Manchester, Glasgow, and Belfast have lent their aid to the movement, in hopes of profiting by it, as they know that success in the metropolis would ensure success in every other town. The Quebea Gazette gives the following account of the trade of The Lord Mayor has signified his readiness to preside over a public The Quebes Gazette gives the following account of the trade of

that port :--Comparative statement of the number of vessels and their tounage, which arrived at the port of Quebec, from sea, and the number of passengers that come out in

them,

The above includes the vessels bound to alontreat. Of the vessels that arrived in Quebec this year, 96 were foreign, viz. : 43 Norwegian, 24 American (U. S.), 19 Prussian, 3 Russian, 2 Portuguese, 1 Hano-verian, 1 Swedi-b, and 1 Dutch. TIMBER TRADE.-1,054 vessels cleared at the port of Quebec, during the TIMBER TRADE.-1,054 vessels cleared at the port of Quebec, during the

season just closed, and were almost exclusively employed in the export of tim-ber; they were nearly all of large tonnage. From a statement in the New York Commercial List, it appears that

From a statement in the New Fork Commercial List, it appears that there were built in 1850, or are now building, in and around New York, 93 vessels, whose aggregate tonnage is 80,042; and that of this amount 51,526 tons has been launched, and 28,516 tons remains to be launched. Of these vessels there are 14 steam ships and 16 steam boats.

Compared with the three years immediately preceding the following is the result. Total for the year ending-On the Aggregate

From this it will be seen that ship-building has thriven during the year just closed in an unprecedented degree. The progress of American ship-building, particularly in the construction of steam vessels, since the California gold dis-coveries, has been great, and a new impetus has been imparted to another department of marine architecture by the repeal of the British Navigation laws. Th

Jan. 25.

[†] Such countries as are not mentioned in our table; viz., Russia, Sweden, &c. Contrary to previous expectation the aggregate supply of sugar to Europe in 1850 was less than in the year before. The yield of abundant crops in Cuba and Java was more than balanced by short crops in the British as well as French colonies, and by the materially increased requirements of the United States. The value of sugar, consequently, experienced a marked improvement in the second half of last year; experienced a marked improvement in the second half of last year; the rise being, however, far more considerable in the British markets than in those of the European Continent, many parcels of suitable quality were imported from Havre and Hamburg, and realised a fair profit. The export of foreign sugar from Great Britain of course became insignificant towards the end of last year, whilst the demand for home consumption went on increasing. The prices of most descriptions of foreign sugar are still at the present moment higher in the British markets than in the continental ones. The total consumption of sugar in those parts of Europe which draw their supplies from the above-named six principal entrepots.—

The total consumption of sugar in those parts of Europe which draw their supplies from the above-named six principal entrepots,— ns appears from the foregoing annual review,—has, in 1850, ex-ceeded that of the year before; but it would appear that this increase is almost limit d to Great Britain, whilst on the Continent, where the production of beet root sugar has again been largely extended, the consumption of cane sugar has remained stationary. In this country the increase in the deliveries of sugar for consumption dur-ing the first eleven months of last year, compared with the corre-sponding period of 1849, amounts to 300 000 cut of both raw and responding period of 1849, amounts to 300,000 cwt of both raw and re-fined, and to 110,000 cwt of molasses.

fined, and to 110,000 cwt of molasses. The accounts regarding the crops which have to supply Europe in the present year are very favourable from Cuba, where a most abundant out-turn is now beyond a doubt; from Porto Rico, Java, as well as the French colonies, the supplies are likewise expected to be larger than those of last year. From the Brazils, the reports mention only an average crop, whilst the British possessions in the East In-dies will furnish but moderate quantities; in Jamaica, it is feared, the cholera will greatly interfere with the securing of the crop. That of Louisiana is again stated to be a' short one, and it must consequently be expected that the United States will once more re-quire a large supply of sugar from Havana. The value of sugar at the end of 1850 was higher than at the cor-responding period of the three preceding years; the difference is but trifling when compared with 1849, it is more considerable on a comparison with 1847 and 1848, yet the advance is not so great as to lead us to expect that it will affect the consumption, provided in other respects the state of the country should continue as prosperous as last year.

1851.7

Notwithstanding the very inconsiderable deliveries from the seaports during the last month of 1850, the total stocks of coffee at the end of last year appear somewhat lighter than at the close of 1849, and considerably smaller than in the two previous years; in the entrepots of this country alone they exhibit a surplus against 1849, whilst in the continental ports there is a deficiency of more than 15 per cent.

In consequence of the reduced crops in the Brazils and in Java, the total supplies of last year were more than 500,000 cwt less than in 1849; the stocks, however, do not show a corresponding deficiency, because the decrease in the deliveries from the various entrepots has been greater still. It has been said that the actual consumption of coffee had not diminished last year. It is however beyond a doubt that such was the case in this country, for, it is shown by the Board of Trade Tables that the quantities, cleared for home consumption during the first eleven months of last year, are nearly 3,000,000 lb, or about 8 per cent. less than in the corresponding period of 1849, and there are no reasons, why the same causes which led to that diminu-tion in Great Britain (viz. high prices and the use of substitutes), should not have had the same effect in other countries. Supposing that the decrease has there been at the same ratio as in England, the deficiency of 1850 in the total European consumption, compared In consequence of the reduced crops in the Brazils and in Java, that the decrease has there been at the same rate as in Eugland, the deficiency of 1850 in the total European consumption, compared with 1849, would however only be about 8 per cent., or upon 2.942,000 cwt, about 230,000 cwt—whereas we observe that according to the above review the deliveries have diminished 640,000 cwt. It is nevertheless admitted on all hands that the stocks of coffee in the interior of all consuming countries are now much smaller than they were set the ord of 1840. were at the end of 1849.

The value of coffee is as yet considerably higher than at the corre-

The value of coffee is as yet considerably higher than at the corre-sponding period of former years, with the exception of 1849; but it must be observed that in 1847 and 1848 very abundant crops have had the effect of depressing the value in many instances below the actual cost of production. There remains now no doubt that the crops in the Brazils as well as Java, which will furnish the supply of this year, are abandant, and much larger than many accounts had hitherto led to expect. In Venezuela and St Domingo, however, the prospects are not favour-able. North America will probably incort as much this year as its able. North America will probably import as much this year as its full capacity of consuming requires; in 1848 the supply to that coun-try from the Brazils alone amounted to 800,000 bags; notwithstanding this the importation of coffee in Europe, in the next few months, is likely to be on a very liberal scale.

INDIGO.

A considerable revival in the demand became apparent in the beginning of last week, when nearly 400 serons Guatemala, offered in public sale, went off with considerable briskness, at an advance of 2d to 3d per lb on previous rates. Since then the inquiry has con-tinued, both for home consumption and export, and atter the arrival of the last overland mail, with advices from Calcutta to the 7th De-cember, more important purchases of Bengal, &c. indigo have been made on speculation. They amount in the course of the present week to about 600 chests, amougst which are the following well-known Bengal marks: E G D 245 chests, H F and Co. 170 chests. The actual prices paid for them are not publicly known, but it is confidently stated that they are fully equal to October rates, and in several instances even somewhat higher. The next quarterly sales are declared for the 11th Echemory

The next quarterly sales are declared for the 11th February, Prompt 10th May. 12,600 chests are already announced, of which, however, 600 chests have been withdrawn again; the remaining 12,000 chests consist of about 2,500 chests Madras and Kurpah, 600 chests Manilla, and nearly 9,000 chests Bengal, &c. A few thousand chests more will probably be added, and there is no doubt that the selection will be quite satisfactory. Considering the great inactivity in our indigo market during the last three months, in consequence of which stocks are greatly re-duced in all consuming countries, a very fair demand is likely to arise at those sales.

Calcutta, Saturday, 7th December, 1850. The express via Bombay arrived here on the 2nd instant with the first news of the London October sale, the "Haddington" steamer, with the bulk of the mail, came to her moorings yesterday morning, but letters could not be delivered before 2 P.M., an hour only before the commencement of a public sale of 320 chests : this day every one is writing letters, and it seems to us pretty evident that until Monday and Tuesday, for which respectively two other public sales of indigo are advertised, the effect of this late intelligence from the English and continent if markets on the immediate prospects of our own eranot be fairly estimated, the probable rates of the exchanges being the first point to ascertain. the first point to ascertain.

The following is, as far as we have been able to ascertain or calculate, the list of the indigo sold to this day :-

Total762278Freight (Packet Rate) to Liverpool—Cotton, square bales, id to 5-32d per 18.
Exchange, 1102 to 1104.After the departure of the Africa, Wednesday last, the market was inactive,
buyers refueing to operate to any considerable extent at current rates; but the
Niagara's favourable advices, received Saturday, gave a fresh impetus to our
market, which since then has been active, and an advance of a 4c per 1b has
been realised; the quotations are adjusted accordingly. The total foreign
export this year—a decrease this season of 32,373 bales. The total foreign
export this year—a decrease to France, 4,934 bales increase to North of
Earope, and 7,302 bales increase to other foreign ports. The shipments from
Sonthern to Northern ports are 37,653 bales. The sales for the past three days
are 8,100 bales, and for the previous three 1,900—we quote :—

The Cotton Market has been very dull throughout the week. The trade have again reduced their stock, and though the buyer certainly has had some slight concession, it is difficult to make any alteration in our quotations. Orleans of a good middling class are positively scarce. Brazil and Egyptian are without alteration. East India are also steady at last week's prices. The sales this day are 4,000 bales, almost exclusively to the trade. Speculation this week, 590 American, 260 Egyptian, and 400 Surat. Export, 160 American, and 70 Surat Surat.

In yarn a fair demand continues for the Mediterranean also for India, other qualities remain neglected, but prices continue remarkably firm, showing clearly that there can be but very little accumulation of stock. The transactions of the week in cloth have been in a great degree confined

to our home trade houses and printers, and a fair amount in qualities suitable

for the Levant markets. Yesterday and to-day there is a better feeling on 'change, and we think a elight concession in prices would lead to considerable business.

BRADFORD, Jan. 23.—There is very little change in either the demand or the quantity of wool coming to market. The country dealers are all firm at prices beyond what can be realised here. Noils and brokes are firm, from the small quantity making. There is no marked alteration in the transactions in yarn, and but little is doing, except for absolute consump-tion, both for this market and Lancashire. There is a deal of inquiry for piece goods suitable for spring, and the chief thing in favour is mixed goods, which are produced in great variety, and made from as many kinds of ma-terial. Ocleans and Cobourgs are taken in limited quantity, and prices without change. without change.

without change. LEEDS, Jan. 21.—The markets, both to day and on Saturday last, have not been very brisk, but still a fair business has been done. The manufacturers are mostly well employed, and it is the general opinion that we shall have a good spring trade. HUDDERSFIELD, Jan. 21.—Our market continues much the same as last week, the manufacturers are chiefly employed in working to order. A fair trade has been doing during the week in the American houses. In the wool market there has not been so much doing as previously. MACCLESFIELD, Jan. 21.—We have no new feature in the trade worthy of note, manufacturers still continuing production for the spring season, although com-plaints are general as to the want of demand for goods, at prices commensurate with the raw and thrown material. The throwing mills continue to be well em-ployed, and up to the present there is no talk of le-sening production, probably going on in anticipation of a demand for throwns shortly. The dyers are by no means so busy as usual at this season. Raw silks as reported in our last, without alteration. without alteration.

without alteration. ROCHDALE, Jan. 20.—We have had a slack market to-day, and very little business has been done. In wool there is little change. Though the demand is rather limited, former prices have been fully given. HALIFAX, Jan. 18.—The trade in our piece hall has not varied much for the last week or two, but there is rather more doing to order, especially in fancy goods, and stocks are getting low. The yarn trade is scarcely so active as it was, and there is no change in the quotations. The wool market is steady, though not near hourant end prices provide unplicated. not very buoyant, and prices remain unaltered.

CORN.

AMERICAN CORN AND FLOUR MARKETS.

AMERICAN CORN AND FLOUR MARKETS. New York, Jan. 8.—FLOUR AND MEAL.—The demand for four from all quarters is very moderate, and as speculative holders have shown a disposi-tion to realise, prices of most grades below fancy have receded slightly, the worket closing without activity. Canada is dull, and we have but to note a sale of 1,000 bbls for the West Indies, supposed at 4 dols 8740 in bond. The sales of domestic were—Saturday 3,200 bbls, Monday 2,600, and yesterday 4,500. We quote superfine No 2, 4 dols 43§c and 4 dols 6240; common State, 4 dols 91§c and 4 dols 8740; straight ditto, 4 dols 874c; favourite ditto, 4 dols 93§c; mixed Wisconsin, 4 dols 874c; inixed Indiana, Ohio, and Michigan, 4 dols 874c; straight Michigan and Indiana, 4 dols 874c; dols 4 dols 93§c. Corn meal is firm, and closes rather higher; the sales are 800 bbls Jersey at 3 dols to 3 dols 64c; and 100 brandywine, 3 dols 20c, puncheons of the latter are held at 15 dols 25c and 15 dols 50c, cash, aftant.—Wheat is offered sparingly, and as there is but little demand, the market is quiet; 1,000 bushels prime white Canada sold at 1 dol 12c in secarce, but as distillers are well supplied, it is dull ; 1,000 bushels afoat and from store. RAIN.—Wheat is offered Long Island, 1 dols 4c for milling. By s scarce, but as distillers are well supplied, it is dull ; 1,000 bushels afoat sold at 75c. Corn is in very small supply, the stook of old being nearly exhausted, and new coming forward sparingly— prices, in consequence, tend upward, and the market closes firmly ; for old and new ditto (mixed), and 78c in the slip for new white ditto; old such and we ditto (mixed), and 78c in the slip for new white ditto; old such. 111

STATE OF THE CORN TRADE FOR THE WEEK.

STATE OF THE CORN TRADE FOR THE WEEK. MARE LANE, FAIDAY MORNING. The supply of English wheat at Mark lane last Monday was a very short one, but still came forward in poor condition; the samples which were at all dry met a good demand at the full prices of the previous week, other sorts were taken slowly without any quotable variation in their value. The imports of foreign wheat were only to a moderate extent, and consisted of 353 qrs from Antwerp; 900 qrs from Barletts, 750 qrs from Hamburg, 1,300 qrs from Binid, 710 qrs from Dankirk, 283 qrs from Hamburg, 1,300 qrs from Kaifa, 1,900 qrs from Marseilles, 440 qrs from Meuport, 595 qrs from Odessa, 500 qrs from Rotterdam, and 220 qrs from Yenice, making a total of 8,331 qrs. The trade was steady for all good samples, and former rates were well established; the forced sales of Polish Odessa on board vessels arrived off the coast for orders, which were made early in the previous week, have brought forward numerous buyers, and good qualities have ralied and brought from is 6d to 25 per qr more money, the lowest point having been 32s 6d per qr, and now 34s 6d is the price offering, and in some instances for cargoes re-ported in good condition refused, whilst some of the Greek merchan's stood ou for still higher rates, and the trade in this department closed with a healthy aspect, pointing upwards. The arrivals of flour consisted of 2,243 saoks coastwise, 5,284 sacks by the Eastern Counties Railway, 4,124 sacks and 1,092 barrels foreign. For prime sorts, a fair demand was experienced with-out any change in its value. Fine malting barley was quite scarce and fully as dear, with no further decline submitted to on any description ; the im-ports of foreign were only 1,534 qrs. English cats were on limited supply, only 158 qrs; fair from Sotland, being 3,672 qrs from two northern ports alone; with a large quantity, say 13,805 qrs from Ireland, but only 3,761 qrs from foreign ports, principally French: good corn brought as much money from the

on sto qrs. The arrivals at Leeds were good of wheat, the millers took it off readily at previous prices for all good qualities; average 41s 4d on 1,338 qrs. Ipswich market was shortly supplied with wheat by the growers; demand was good at the extreme rates of the past week: average 39s 4d on 1905 growers.

1,205 grs. The deliveries at Lynn were small of wheat, merchants and millers took it

in value.

The London averages announced this day were .--

FOREIGN AND COLONIAL PRODUCE MARKETS. TRANSACTIONS OF THE WEEK.

(For Report of This Day's Markets see " Postscript.")

(For Report of This Day's Markets see "Postscript.") MINCINO LANE, FRIDAY MORNING. SUGAR.—The market has been flat during the greater part of this week, and in some instances the lower qualities have again given way. Only 700 casks British West India sold to yesterday (Thursday) at previous rates, or about 6d under the highest ruling a fortnight back. 170 casks Barbadoes were nearly all disposed of at the former value : fine, 43s 6d to 44s ; middling to good, 41s to 43s. Good grocery sugars are rather dearer. The deliveries for home use do not improve. The stock continues to show a serious decrease. Murrilius.—There were not any public sales of this description on Tuesday, and a limited business has since been done by private contract. The stock con-tinues moderate, and shows a decrease of 2,668 tons as compared with that of 1850 at same time.

1850 at same time.

1850 at same time. Bengal.-6,106 bags offered in the early part of the week, about two-thirds found buyers; white Benares went 6d cheaper for the low to middling qualities; Khaur showed a decline of 1s; fine white Benares withdrawn at high rates; middling good soft greyish yellow, 28s 6d to 44s 6d; low and dingy, 42s to 42s 6d; middling good soft greyish yellow, 28s 6d to 41s; good grainy yellow, 43s to 43s 6d; khaur, 29s to 29s 6d per owt. Madras.-The lower kinds continue depressed, and there is rather a large stock. 3,597 bags offered on Tuesday were nearly all withdrawn above the value: damp browns from 31s to 32s 6d for low to fair; some few lots soft to middling grocery yellow sold at 32s 6d to 37s 6d per owt.

middling grocery yellow sold at 323 6d to 37s 6d per owt. The stock on the 18th inst. was 95,289 bags or 5,956 tons, against 4,262 tons at same period last

Foreign .. -Few sales have been effected by private treaty this week either for

year.
Foreign.—Few sales have been effected by private treaty this week either for home use or export. Only 800 chests Havana were reported to yesterday, at 40s 9d per cwt. To-day 1,500 bage Paraiba sold at 35s 6d to 36s 6d, and 500 chests Bahia at 38s per cwt.
Refined.—Although prices have further given way 6d to 1s, there has not been a very active demand from the home trade. Yesterday brown goods were sold at 49s to 49s 6d; middling to fine titlers, 50s to 53s; wet lumps, 47s to 48s. Pieces and bastards, which are dull, have been sold at rather lower rates. Treacle continues quiet. In the bonded market English crushed has sold at 6d decline: fine 29s to 29s 6d; No. 2, 28s 6d; and a moderate business done, Loaves are firm as last quoted, viz., 10 lb 33s to 33s 6d. There is no change in Dutch crushed. Foreign goods for consumption have been dull.
MoLASES.—Some fine Antigua has been sold at 17s. 200 casks Bengal treacle sold by auction at 13s 6d per cwt.
COFFEE.—Some sales having been pressed this week, prices are again lower, and the market continues flat with a downward tendency. The transactions in native Ceylon, to yesterday, were very limited: 49s paid in the early part of the week for good ordinary; but, subsequently, 474, establishing a decline of 3s on last Friday's quotation. Some parcels of plantation offered yesterday sold at 1s to 8s under the previous value: fine ordinary to low middling, 53s 6d to 56s 6d; middling, 57s to 55s; and about half of 394 casks 156 bags found buyers: some business also reported by privat treaty at a corresponding decline, 1147 half-bales were about three-fourths withdrawn, the remainder selling chiefy at 1s to 1s 6d below the rates of last week : from 60s 6d to 63s for fine ordinary to middling clean corresponding decline or to middling clean captel weel with a corresponding decline or the side week about three-fourths withdrawn, the remainder selling chiefy at 1s to 1s 6d below the rates of last week : from 60s 6d to 63s for

Cline. The stock continues large. Inclus missines withdrawn, the remainder selling chiefly at 1s to 1s 6d below the rates of last week : from 60s 6d to 63s for fine ordinary to middling clean garbled yellow; long berry taken in at 70s. Common kinds of East India are almost unsaleable even at a further reduction. Foreign remains flat. A cargo of St Domingo has been sold, the price said to be about 44s per owt. 450 bags Bahia were withdrawn. COCOA.—There have not been any public sales of West India this week, and a limited business done by private contract. The stock is much reduced. Foreign continues dull. 100 bags Bahia were bought in at 30s for good red. TEA.—The market has been very dull since last Friday, five more vessels having arrived, and their cargoes will shortly be on sale. Common congous have been sold at a further decline of \$d, some holders showing a disposition to realise; yesterday there was some inquiry at 11dd, and business has been domy a file of sole and the incentificult of sale at 2d to 3d under the opening prices. The recent arrivals of scented orange pekces are nearly cleared off at 1id to 2d lower rates. In fine green teas the transactions are limited. Canton gunpowders and young hysons have met with a steady inquiry, at about last week's prices. week's prices.

-There has not been much business done in East India during the RICE RICE.—There has not been much business done in Fast fully during the week, and few parcels offering, so that holders have obtained previous rates. The stock continues large, being 21,018 tons on 19th inst., against 22,734 tons at same date last year. Cleaned has been steady at late prices; London dressed Carolina 1st, 26s; 2nd quality, 20s per cwt. PEPPER.—The small orders executed in common kinds of black have been at full rates; 332 bags white, of old import, sold rather cheaper, from 6d to 6jd

PEPPER.—The small orders executed in common kinds of order with order a common kinds of orders of the full rates; 332 bags while, of old import, sold rather cheaper, from 6d to 6 d por lb for middling.
PIMENTO.—Some few sales have been made by private treaty at stiffer rates, in consequence of the limited supply offering, and \$jd to 5 id is the nearest value of middling quality. The stock continues large.
OTHER SPICES.—88 cases brown nutmegs found ready buyers at rather higher rates, particularly for good and fine, which brought 3s 3d to 3s 9d; low small to fair, 2s 3d to 3s 2d. 28 cases made sold at full prices; ordinary to good middling, 2s 1d to 2s 5d per lb. Advanced rates have been paid for cassia lignea.
98 cases Calicut ginger were withdrawn, at 64s to 100s per cwt. The cinnamon sales will contain about 2,300 bales.
SALTPETRE.—The transactions in East India have been limited, as the market continues flat. 450 bags Bengal, of indirect import, sold at easier rates, from 27s to 28s for 8½ to 5½ per cent. refraction. The stock on 18th inst. was 2,738 tons, against 3,678 tons at same time in 1850.
COCHINEAL.—The market is firmer: 84 bags, about three-fourths sold at stiffer rates than last quoted : Honduras silvers, 3s 5d to 3s 9d; Teneriffe silvers, 3s 7d per lb. Some of the latter taken in. The deliveries are large.
LAC DYE.—The large public sales of 967 chests have passed off faily, common marks being chiefly taken in : good to fine partly sold at full rates : fine C A V, 1s 8d to 1s 8jd; fine B Mirzapore and genuine D T, 1s 10½ to 1s 11d;

other marks, ordinary to middling and good, 10d to 1s 4id ; low and native, 6d to 10d per il

OTHER DETSALTERY GOODS.-250 sales Bengal safflower only partly sold at easier rates: from 3/2s 6d to 7, for low to good; the lower qualities were withdrawn. Gambier is held firmly at 14s 6d. Cutch quiet. Bengal turmeric, of fair quality, has sold at 16s to 16s 6d per cwt.

DRUGS. - Since the large public sules terminated last week the markets have been very quiet, and no business is reported. Some Japan camphor in tubs sold last Friday at 73s to 74s, or 10s under the late nominal price.

Drewoods .- Some parcels of Madras red Saunders have been sold at a 42 5s per ton.

METALS.-There has not been any change of importance in the prices of rails and Wel-h bar iron this week, and a steady demand for the latter. Soutch pig may be quoted dull at 434 to 454, according to numbers. Spelter has been sold to some extent at 16/24 6d, and now hold-rs generally demand 16/55 per ton on the spot. East India tin is higher, 863 6d having been paid for Bancs, and the market very firm; an advance is expected in British.

OILS -The demand for fish has been limited this week, and in some instances prices show a decline. Cod has been dull at SSI to 33/108; other kinds as quoted. The linseed market remains dull, and 33s 9d was the nearest value on the spot yesterday, with sellers at that price. Rape has been quiet, and foreign refined may be quoted at 38s per cwt. Palm is still rather scarce. Cocoa nut Cod has been dull at SSI to 38/ 10s; other kinds as dull.

LINSEED.—The market is flat, and Black Sea may be quoted at 47s 6d to 48s per qr; very little doing afloat. Cakes meet with a steady demand at the present low prices, fine English made bringing 7l to 7l 5s per ton.

TURPENTINE .- Rough is quiet. Spirits are flat at 32s 6d per cwt for British TALLOW .- This market has conlinued inactive throughout the week, but TALLOW.--This market has conlined inactive throughout the week, out former prices steadily maintained. Yesterday, fine Petersburgh Y.C., on the spot, was quoted at 27a 3d to 37a 6d, and 3d more to arrive in February and March. There is still a good supply of town. The stock of foreign tallow in warehouse here continues heavy, lut arrivals have fallen off during the past fortnight.

POSTSCRIPT. FRIDAT EVENING.

There was rather a better feeling in the market to-day. About 400 SUGAR. - There was rather a better feeling in the market to-day. About 400 casks West India sold privately at full prices, and the week's transactions reach 1,100 casks. Mauritus-2,948 bags sold steadily at full rates, from 38s to 39s 6d for low to mid yellow; good, 40s 6d to 42s. Bengal-The sales went off well, and nearly all sold at the rates previously quoted, for all kinds. Madras-2,098 bags consisting of good and fine grocery, sold at extreme rates ; white, 45s 6d to 47s; good to fine strong yellow, 41s 6d to 44s 6d. Foreign-Several parcels sold by private contract to-day.

COFFER.—The market was firmer, and more inquiry. About 1,500 bags na-tive Cevion changed hands at 47s 6d to 48s 6d, or 6d to 1s above the rates of yesterday. Some plantation went rather dearer; 80 casks Jamaica partly sold at full prices; fine ordinary to middling, 53s to 60s per cwt.

PEPPER.-1.200 bags sold at full prices; Malabar, Sid to Sid; half heavy, Sid to Sid; Penang kind, Sid; 120 bags fair white taken in at 6id per lb.

SALTPETRE .- 600 bags Bengal refracting 103 per cent. were taken in at at 27s 6 per cwt.

NITRATE SODA .- 100 tons were taken in at 14s 6d to 15s per cwt.

HEMP .- Late in the afternoon 750 bales Manilla sold by auction, and went from 34l to 36l 10s, with very fine, 48l per ton.

DYEWOODS .- 150 tons Nicaragua withdrawn at 15/.

TALLOW,-The sales passed off steadily at full prices.

ADDITIONAL NOTICES.

REFINED SUGAR .- The home market for refined sugar continues neglected, prices are 6d to 1s less for the lower and middling qualities. The bonded for loaves unaltered, but 6d reduction has been accepted for crushed. A small parcel was sold at 28s 6d. In Dutch and Belgium nothing doing of any importance. cel was sold at 28s 6d. In Datch and Belgium nothing uoing of any importance. The Belgian Government have reduced their bounty on the exportation of

The Deigna de per cwt. Day FRUIT.—There is a little more inquiry for currants of inferior to middling quality. Other descriptions of dry fruit remain as last quoted.

GREEN FRUITS — Oranges are lower. Three cargoes from St. Michael and a parcel per steamer from Lisbon, sold by Keeling and Hunt at public sale, went at a reduction of 2s to 3s per package. Lemons have improved in price, the stock being less than has been the case for some seasons past. The stock of @beanuts is diminishing, and any of a sound character are in request; other kinds of nuts without alteration.

Skeps unaltered in the quotations. A few samples of clover seed have been shown at market, the supply of which is at present inconsiderable.

ENGLISH WOOL -The demand continues unabated, and prices rather on the advance.

FOREIGN AND COLONIAL WOOL - No change has taken place in prices FOREIGN AND COLONIAL WOOL -- NO Change has taken place in prices during the week, everything remains firm, consumption going on steadily, and most of the manufacturers working to order. The public sales of colonial wool will commence on Thursday, 13th Feb.; the quantity will not be large. COTTON.--No transactions reported this week.

FLAX .- More demand from France both here and in Scotland, and the price improved.

HEMP. - Prices remain the same, but more business done.

TIMBER.-Bu-iness very active-building works not being in suspense from severe weather as usual in January.

LEATHER AND HIDES -A fair demand has existed during the past week for leather. at fully former prices, with a tendency upwards. There was not any public sale of foreign raw goods, and by private contract the sales have been limited. On Thursday 86,025 East India were offered, (including tanned and buffalo) and 75,600 were sold. The demand was brisk at full prices.

Imports from	Jan. 1 to	Jan. 23, 1851	152,855	hides

METALS.—Metals fully participate in the general inactivity which at present is pervading most branches of commerce, owing in a great measure to the still unsettled state of affairs in France. Copper remains as when we last wrote. There has been some slight activity in foreign tin, for which higher prices are asked, and in some cases have been paid. English remains firm. Spelter con-tinues very flat, there being no demand either for export or home consumption. Lead remains steady, and holders are very firm. Iron also is very dull of sale, both for bars and pigs, at our quotations, though makers do not feel disposed to give way in price. The demand for tinplates continues large.

ENSUING SALES IN LONDON.

ENSUING SALES IN LONDON. MOSDAY, Jan. 25.—2100 bales Ceylon cinnamon. TUEBDAY, Jan. 26.—159 hhds Barbadoes, 13+do. Demerars, 700 bags Bengal sugar ; 2,500 bags Bengal saltpetre ; 170 sero-a Guatemala indigo. WEDNERDAY, Jan. 20.—1000 bags Bergal sugar ; 40 bags Bengal ginger ; 80 cases do. do.; 400 bags Madras rice, 150 tons Sapan wood. THURBDAY, Jan. 30.—621 bales Madras cotton. THURBDAY, Feb. 11.—12,630 cheats East India indigo : 200 serons Gautemala indigo. THUREDAY, Feb. 13.—3,600 bales Surat cotton ; 32 do. Madras do.

PROVISIONS

PROVISIONS. The bacon trade still very dull, and no disposition to make sales forward. More inquiry for lard and pork. Butter also looking well, and should cold weather continue an advance will surely take place. Fine Friesland 6s per cut over last week's price.

NEWGATE AND LEADENHALL MARKETS. MONDAY Jan. 20.—Since Monday last the arrivals of country-killed meat up to these markets have amounted to 3,350 carcases, chiefly from our western and midland districts. With meat slaughtered in the metropolis we are tolerably well, but not to say heavily supplied; whilst the general demand is very inactive, at about stationary prices. From Hamburg 18 packages of beef have come to hand. FRIDAY, Jan. 25.—These markets ruled heavy, on the following terms :—

AL	ner	ate	me	by the carcase.					
	d		d		8	d	8	d	
Inferior beef	0	102	2	Mutton, inferior	2	610	50		
Ditto Middling 2					2	10	3	6

SMITHFIELD CATTLE MARKET.

MONDAT Jan. 20.—Owing, in some measure, to the prevailing mildness of the weather, and chiefly to the abundance of supply on the Continent, the imports of foreign stock into London last week were large for the time of year, they having amounted to 2,433 head. During the corresponding period in 1850, we received 440; in 1849, 1,406; aud in 1848, 965 head. The weeks imports consisted of—beasts, 399; sheep, 1778; caives, 227 pigs, 24. By sev, from Ireland, 9 cows and 70 pigs have reached us. With foreign stock our market to-day was very moderately supplied, in a most inferior condition.

reached us. With foreign stock our market to-day was very moderately supplied, in a most inferior condition. From our own grazing districts the arrivals of beasts fresh up this moraing wave seasonably large, and of excellent quality. Although the weather was more favour-able for slanghtering, and the attendance of buyers tolerably good, the beef trade was in a very inactive state, at last week's prices. The extreme quotation for the best Scots was 3s 8d per 8lbs., and a total clearance was not effected. The bullock supply from the Northern districts comprised 1,210 shorthorns; from Norfolk, Suffolk, Essex, Cambridgeshire, and other parts of England. 2,000 Herefords, runts, Devons, Scotts, &c.; and from 'cotland 500 horned and polled Scots, 380 being per railway, the remainder by steamboat. For the time of year, the number of sheep was but moderate; yet the general quality of that stock was prime. The best old Downs commanded a steady sale at, in some instances, an advance in the currencies of 2d per 8lbs; yet the general top value of that breed was 84 d par 8bs. We were very scantily supplied with calves, in which only a limited business was doing, at late currencies. Prime small plg: moved off steadily at fall prices. In other qualities of pork next to noting was doing. BUFFULES.

POTATO MARKETS.

WATERSIDS, Jan. 24.—There was a good supply at this market to-day, with an average demand, at the following prices:—York Regents, from 95s to 100s; Scotch ditto, 70s to 8°s; Cambridge ditto, 65s to 70s; Kent and Essex ditto, 70s to 80s: ditto Middlinge, 50s to 60s; ditto, Chats, 25s to 30s; ditto Shaws, 65s to 70s; Kentish Red-Kidneys, 70s to 75s; Cambridge Kidneys, 60s to 70s per ton.

BOROUGH HOP MARKETS.

BOROUGH HOP MARKETS. MoNDAT, Jan. 20.—Somewhat more business is doing in the hop market, and prices for fine samples have undergone a slight improvement. Sussex pockets 63e to 75s; Weald of Kent 70s to 84s; Mid. and East Kent 80s to 150s per cwt. FRIDAT, Jan. 25.—There is rather more business doing in our market, and, in some instances, prices have an upward tendency, notwithstanding that the supply on offer is large. Factors' prices, viz, ready money—East Kent pockets, per cwt., 31 is to 64 15s; ditto bage, 31 4s to 51 5s; Mid Kent pockets 21 5s to 51 15s; ditto bags, 21 to 44 10s; Weald of Kent pockets, 31 4s to 41; ditto bags, 21 to 34 10s; Sussex, 21 16s to 34 14s.

THE ECONOMIST'

HAY MARKETS.— THURSDAY. SMETHFIELD.—Fine Upland Meadow and Rye Gras Hay, 73s to 75s; inferior ditto. 43s to 58; superior Clover, 50s to 82s; inferior datto 60s to 70s; Straw 20s to 27s per load of 35 trusses. WHITECHAPEL.—The supply at this market to-dry was moderate, trade dull, and no fluctuation in prices:—Best Meadow Hay, from 7 is to 30s; inferior ditto, 55s to 65s; Clover, 60s to 80s; Straw, 22s to 23s.

LIVERPOOL MARKETS.

wool.

FRIDAY NIGHT.

(From our own Correspondent.) A steady business is doing and the market is very firm. About 2,000 bales fine (chiefly colonial) wools, are announced for public sale, February 6th and 7th.

CORN.

(From our own Correspondent.) A more steady feeling has prevailed in the grain market during the past few days, and some particular qualities of wheat and flour have occasionally realised rather better prices, but no general advance has been established. This morning the wheat trade was without animation, but a fair quantity was disposed of, for consumption, at the full prices of Tuesday. Flour was in moderate re-quest at previous rates. Oats and oatmeal were duil, but without change in value. Indian corn was in improved demand, and 6d per qr higher.

METALS. (From our own Correspondent.)

There is no change to note in the prices of manufactured iron of any kind, for which at present the demand is only very moderate. For Scotch pig iron during the past week there has been a very dull market, and prices may again be slightly reduced. Mixed Nos. of good brands may be quoted at 43s to 43s 6d per ton, cash, f.o.b., at Glasgow. Other metals quiet with little doing.

FOREIGN MARKETS.

AMSTERDAM, Jan. 20.

COFFEE - Little doing; prices somewhat declining. SUGAR (Raw).-About 1,000 hhds Surinam were taken in public sale at 224f to 274f. INDIGO .- Prices fully maintained. The accounts from Java are rather

INDIGO.—Prices fully maintained. The accounts from Java are rather more favourable with regard to the prospects of the last crop. Corrow continues dull; prices are almost nominal. SPICES, RICE, &c.—No change in the former of these articles. About 3,500 bags table rice were taken from first hand at 9§?. New C phalonia currants, in damaged condition, offered in public sale, were taken at 11§t to 14§f. HEME.—Pretenburg clean at 63§f; half-clean 54f; Riga outshot 63f. SEEDS.—Rape—Prices remained the same. Liuseed experienced some demand for home use. Clover in better demand for England. Mustard, brown—A parcel prime fetched 16§f for export. Nothing was done in other seeds. brown seeds.

secda. CORN.—Wheat with little doing, business was almost confined to some sales for home use at former prices. Rye—Business was on a rather ex-tended scale, and sales were made at somewhat higher prices for home use and on speculative account. Barley the same. Outs and buckwheat little doing.

PETERSBURG, JAN. 11.

CORN. - Without transactions, but 23 ro. still offered for good wheat. DEALS.-Business to some extent has been done, and the next prices will probably be higher.

probably be higher. FLAX.—Nothing done for want of sellers. HEMP—Quiet; occasional needy sellers at the lower ca-h prices. The estimates of supply are more generally reduced—say to 1,800,000 poods—pro-bably owing to the continued want of sledge roads. LINSEED has attracted more attention the last few days; 5.500 chets of the better descriptions on the spot, taken at 31 ro. c.sh; and 6,000 chets Rjef, on contract, at 24 ja 24 ro., 10 ro. down. TALLOW—dull. 113 ro. with an advance, and 106 ro. cash, have been accepted for August delivery; the business being mostly among the Russians, or with parties who immediately sell with an advance against their cash purchases. This morning 500 casks reported at 105, 105 j, cash.

EPITOME OF RAILWAY NEWS.

LONDON AND SOUTH-WESTERN.—We are informed that it is the intention of the directors of this company at the ordinary meeting to be held next month to recommend a dividend for the half-year ending the 31st of December last, at the rate of 4 per cent. per aonum on the capital stock of the company.

at the rate of a per cent. per annum on the capital stock of the company. LONDON AND BRIGHTON.—The report of the Brighton directors, presented at the meeting just held, shows an increase of traffic, a smaller increase of expenditure, and an increase of net receipts available for dividend. The periodical tickets appear to afford an increasing source of income, the amounts (for the year) being 1848 10,427*l*, 1849 14,217*l*, and 1850 17,057*l*. This accounts for a trifling decrease on the second-class fares. The parcels income does not advance, a circumstance deserving of inquiry, as something must be wrong either in the charge or mode of delivery. A branch yielding 14,0001 yearly is worth careful examination. A large increase appears under the head of goods traffic, but how made up we are unaware. Further information should be given us to the sources of this traffic, which are lumped together in the sum of 59,900*l* the sum of 89,9002

WEEKLY TRAFFIC -- An analysis of the railway traffic returns for last week shows, as compared with the corresponding week of last year, an increase of 32,677l in the aggregate amount received, an increase in the milesge of 739 32,671 in the aggregate amount received, an increase in the mile ge of 735 miles, and an increase of 11.5s in the amount received per mile per week. The receipts on 6,221 miles were 221,515l, or at the rate of 35l 10s per mile per week; whilst for the corresponding week last year they were 158,538l on 5,482 miles, or at the rate of 34l 55 per mile per week. The gross sum received for the two weeks' traffic of the present year is 453,108l against 386,572l in the corresponding period of 1850.

RAILWAY SHARE MARKET.

LONDON.

MONDAY, Jan. 20.—The railway market was affected to-day by the state of business in the other departments, and prices were quoted at a decline.

TUESDAY, Jan. 21 .- The railway share market was better towards the close of business, prices then generally showing a firmer position, and in some cases a tendency to advance.

WEDNESDAY, Jan. 22.-The railway market, influenced by Consols, was better this afternoon, and prices at the close of business were generally quoted at an advance.

THURSDAY, Jan. 23 .- There was a further tendency to improvement in the railway market to-day, and prices were well supported up to the close of business.

FRIDAT, Jan. 24.—The railway share market presents again a very bouyant appearance, and there have been improved rates paid for several of the lines.

MISCELLANEOUS.

THE BRAZILIAN COFFEE TRADE.—Forty-two years ago, the annual crop of coffee in Brazil did not exceed 30,000 bags; and even in 1820 it only reached 100,000 bags. About that time the high price of coffee in England, superadded to the diminished production in Cuba, stimulated the Brazilian planters to extend its cultivation, and in 1830 they sent to market 400,000 bags, or 64,000,000 lb; and in 1847 the enormous quantity of nearly 300,000,000 lb.— New York Journal of Commerce.

New ALIMENTARY SUBSTANCES.—The French Consul at the Republic of Ecuador has brought thence two alimentary new plants of great importance. The tuber of one, called *Hocas*, has the form of an oblong potato, the interior of the substance, however, has a red and yellow colour, and the taste is that of a chestnut. The other is called *Millico*, and its form and taste is very nearly that of the potato. Both grow wild and in great abundance near Quito, even in the most meagre soil. Experiments on their propagation are now being made at the Jardin des Plantes, Paris.—*The Builder*.

made at the Jardin des Plantes, Paris.— The Builder. COMPOSITION OF THE FRENCH NATIONAL ASSEMBLY.— The National Assembly of France contains, according to a statement in the Moniteur, 43 actual or quondam Ministers of Government, 22 members of the Institute, 6 vice-admirals and rear-admirals, 34 generals, 32 ex-peers of France, 110 former members of the Chamber of Deputies. Of the 900 members of the Constituent Assembly only 330 wers re-elected, and form part of the Legislative Assembly. The united ages of the members of the Legislative Assembly amount to 35,613 years, giving an average of 47 years to each member. The oldest member was born in 1769 and the youngest in 1823.

None are genuine without MECHI's name.

52 FLEET STREET.

52 FLEET STREET. A NEW DISCOVERY IN TEETH.— A Mr HOWARD, Surgeon Dentist, 52 Fleet Steet, has introduced an ENTIRELY NEW DESCRIPTION of ARTIFICIAL TEETH, fixed without springs, wires, or ligatures. They so perfectly resemble the natural teeth, as not to be distinguished from the originals by the closest observer; they will never change colour or decay, and will be found superior to any teeth ever be-fore used. This method does not require the extraction of roots, or any painful operation, and will support and preserve teeth that are loose, and is guaranteed to restore articulation and mastication; and that Mr Howard's improvement may be within reach of the most economical, he has fixed his charges at the lowest scale possible. Decayed teeth rendered sound and useful in mastication.—52 Fleet street.—At home from 10 till 5.

APPETITE AND DIGESTION IMPROVED.

LEAAND PERRINS WORCESTERSHIRE SAUCE imparts the most L. A. A. D. J. L. E. K. K. I. A. S. WORCESTERSHIRE SAUCE imparts the most exquisite relish to steaks, chops, and all roast meat gra-vies, fish, game, soup, curries, and salad, and by its tonic and invigorating properties enables the stomach to per-fectly digest the food. The daily use of this aromatic and delicions sauce is the best safeguard to health. Sold by the proprietors, LEA and PERRINS, 6 Vere street, Oxford street, London, and 68 Broad street, Wor-cester; also by Messrs Barclay and Sons, Messrs Crosse and Blackwell, and other olimen and merchants, Loadon; and generally by the principal dealers in sauce. N.B.—To guard against initiations, see that the names of "LEA and PERRINS," are upon the label and patent cap of the bottle.

of the bottle.

HUBBUCK'S PATENT WHITE

Combines Elegance, Durability, Health, and Economy,

Combines Eleganee, Durability, Health, and Economy, THE WHITEST OF ALL PAINTS, retains its whiteness for years, being unaffected by bilge-water, noxicus vapour from cargo, or from red heat on the funnels of steam vessels. Neither exposure to damp or to salt water, nor change of climate, act upon it. Under these and other circumstances, when every other paint hitherto known and tried has failed, the "White Zhue Paint" has preserved the fastness of its colour. In ad-dition to its preservative properties, when applied to out-side wood work, it is invaluable for from ships, and from work exposed to salt water. By virtue of its galvanie action it enters the pores of the iron, and forms a species of analgam of the two metals, which is a strong preser-vative.

vative. By its use, paralysis and painter's colle are entirely avoided. Apartments may be immediately used without injury to the health of children or the most delicate

The "Patent White Zinc Paint" becomes cheaper than the inferior paints hitherto used, from its spreading over a much larger surface. Two cwt of this paint covers as much space as is usually taken up by three ewt of white lead.

The hage chain and the product of the plant by the oversation of the plant of the p

THE STUDENT'S SELF-INSTRUCT. THE STUDENT'S SELF-INSTRUCT-ING FRENCH GRAMMAR, consisting of Speech are Exemplified in Conversational Phrases, Fables, Anecdotes, and Bons Mots, with Literal Translations, are also introduced. By D. M. AIRD. Professor of French, Author of "Sketches in France," &c. &c.

Act &c. OPINIONS OF THE PRESS. "Mr. Aird's object in publishing this grammar is to simplify to the English the study of the French language. He has not failed in his endeavour. He has begun at the beginning, and, instead of taking so much of the elementary truths as are already known, he commences with the pronunciation of the alphabet, and leads the student gently over the such ceeding stages. The grammar seems altogether well adapted for young beginners in the study of this polite language, and particularly for those who, from necessity or choice, are their own instructors." - Leeds Times. "We have never seen an elementary work of this nature better worth its name. Without affecting novelty, the author attains simplicity and regularity of the attas.

Present the second s

Also, by the same Author, price 1s. 6d., HOW TO SPEAK AND WRITE FRENCH CORRECTLY, comprising Six Progressive Lessons, in which the Difficuities of the French Lan-guage are elucidated by explicit Rules, and exemplified by useful Phrases. "He who wishes to speak and write French cor-rectly ought to present in seful work. The various idioms and difficulties are elucidated by explicit rales, exemplified by useful phrases. - Bell's Life.

SASSAFRAS CHOCOLATE. —Dr DE LA MOTTE'S nutritive, health-restor-ing AROMATIC CHOCOLATE, prepared from the nuts of the Sassafras tree. This chocolate contains the pecu-liar virtues of the Sassafras root, which has been long hall in great estimation for its purifying and alterative properties. The aromatic quality (which is very grateful to the stomach (most invalids require for breakfast and evening repast to promote digestion, and to a deficiency of this property in the customary breakfast and supper may in a great measure be attributed the frequency of cases of indigestion generally termed bilious. It has been found highly beneficial in correcting the state of the digestive organs, &c., from whence arise many dis-eases, such as cruptions of the skin, gout, rheumatism, and scrofula. In cases of debility of the stomach, and a aluggish state of the liver and intestines, occasioning flatulencies, costiveness, &c., and in spasmodic asthma, it is much reicommended. Sold in pound packets, price a, by the patentee. 4s, by the patentee.
