Payment locality serviced by two carriers.
Payment locality serviced by two carriers.
Note: Only malpractice GPCI has been updated. The work and practice expense GPCIs will be updated as part of a mid-year, 2004 regulation. Malpractice GPCI scaled by 1.0021 to
retain budget neutrality.

## Medicare Program; Changes to the Hospital Outpatient Prospective Payment System and Calendar Year 2004 Payment Rates

Agency: Centers for Medicare \& Medicaid Services (CMS), HHS. ACTION: Final rule with comment period.

SUMMARY: This final rule with comment period revises the Medicare hospital outpatient prospective payment system to implement applicable statutory requirements and changes arising from our continuing experience with this system. In addition, it describes changes to the amounts and factors used to determine the payment rates for Medicare hospital outpatient services paid under the prospective payment system. These changes are applicable to services furnished on or after January 1, 2004. Finally, this rule responds to public comments received on the August 12, 2003 proposed rule for revisions to the hospital outpatient prospective payment system and payment rates ( 68 FR 47966). DATES: Effective date: This final rule is effective January 1, 2004.

Comment date: We will consider comments on the ambulatory payment classification assignments of Healthcare Common Procedure Coding System codes identified in Addendum B with new interim (NI) condition codes, if we receive them at the appropriate address, as provided below, no later than 5 p.m. on January 6, 2004.
ADDRESSES: In commenting, please refer to file code CMS-1471-FC. Because of staff and resource limitations, we cannot accept comments by facsimile (FAX) transmission or e-mail.

Mail written comments (one original and two copies) to the following address ONLY: Centers for Medicare \& Medicaid Services, Department of Health and Human Services, Attention: CMS-1471FC, P.O. Box 8018, Baltimore, MD 21244-8018.

Please allow sufficient time for mailed comments to be timely received in the event of delivery delays.
If you prefer, you may deliver (by hand or courier) your written comments (one original and two copies) to one of the following addresses: Room 445-G,

Hubert H. Humphrey Building, 200 Independence Avenue, SW.,
Washington, DC 20201, or Room C5-1403, 7500 Security Boulevard, Baltimore, MD 21244-1850.
(Because access to the interior of the HHH Building is not readily available to persons without Federal Government identification, commenters are encouraged to leave their comments in the CMS drop slots located in the main lobby of the building. A stamp-in clock is available for persons wishing to retain a proof of filing by stamping in and retaining an extra copy of the comments being filed.)

Comments mailed to the addresses indicated as appropriate for hand or courier delivery may be delayed and could be considered late.
For information on viewing public comments, see the beginning of the SUPPLEMENTARY INFORMATION section. FOR FURTHER INFORMATION CONTACT: Dana Burley, (410) 786-0378outpatient prospective payment issues; Suzanne Asplen, (410) 786-4558 or Jana Petze, (410) 786-9374-partial hospitalization and community mental health centers issues.

## SUPPLEMENTARY INFORMATION:

Inspection of Public Comments: Comments received timely will be available for public inspection as they are received, generally beginning approximately 3 weeks after publication of a document, at the headquarters of the Centers for Medicare \& Medicaid Services, 7500 Security Boulevard, Baltimore, Maryland 21244, Monday through Friday of each week from 8:30 a.m. to 4 p.m. To schedule an appointment to view public comments, call (410) 786-7195.

## Availability of Copies and Electronic

 AccessCopies: To order copies of the Federal Register containing this document, send your request to: New Orders,
Superintendent of Documents, P.O. Box 371954, Pittsburgh, PA 15250-7954. Specify the date of the issue requested and enclose a check or money order payable to the Superintendent of Documents, or enclose your Visa or Master Card number and expiration date. Credit card orders can also be placed by calling the order desk at (202) 512-1800 (or toll-free at 1-888-2936498) or by faxing to (202) 512-2250. The cost for each copy is $\$ 10$. As an alternative, you can view and photocopy the Federal Register document at most libraries designated as Federal Depository Libraries and at many other public and academic libraries throughout the country that receive the Federal Register.

This Federal Register document is also available from the Federal Register online database through GPO Access, a service of the U.S. Government Printing Office. The web site address is: http:// www.access.gpo.gov/nara/index.html.

## 1. Background

## A. Authority for the Outpatient Prospective Payment System

When the Medicare statute was originally enacted, Medicare payment for hospital outpatient services was based on hospital-specific costs. In an effort to ensure that Medicare and its beneficiaries pay appropriately for services and to encourage more efficient delivery of care, the Congress mandated replacement of the cost-based payment methodology with a prospective payment system (PPS). The Balanced Budget Act of 1997 (BBA) (Pub. L. 10533), enacted on August 5, 1997, added section $1833(t)$ to the Social Security Act (the Act) authorizing implementation of a PPS for hospital outpatient services. The Balanced Budget Refinement Act of 1999 (BBRA) (Pub. L. 106-113), enacted on November 29, 1999, made major changes that affected the hospital outpatient PPS (OPPS). The Medicare, Medicaid, and SCHIP Benefits Improvement and Protection Act of 2000 (BIPA) (Pub. L. 106-554), enacted on December 21, 2000, made further changes in the OPPS. The OPPS was first implemented for services furnished on or after August 1, 2000.

## B. Summary of Rulemaking for the

Outpatient Prospective Payment System

- On September 8, 1998, we published a proposed rule (63 FR 47552) to establish in regulations a PPS for hospital outpatient services, to eliminate the formula-driven overpayment for certain hospital outpatient services, and to extend reductions in payment for costs of hospital outpatient services.
- On April 7, 2000, we published a final rule with comment period (65 FR

18434) that addressed the provisions of the PPS for hospital outpatient services scheduled to be effective for services furnished on or after July 1, 2000. Under this system, Medicare payment for hospital outpatient services included in the PPS is made at a predetermined, specific rate. These outpatient services are classified according to a list of ambulatory payment classifications (APCs). The April 7, 2000 final rule with comment period also established requirements for provider departments and provider-based entities and prohibited Medicare payment for nonphysician services furnished to a hospital outpatient by a provider or supplier other than a hospital unless the services are furnished under arrangement. In addition, this rule extended reductions in payment for costs of hospital outpatient services as required by the BBA and amended by the BBRA. Medicare regulations governing the hospital OPPS are set forth at 42 CFR part 419. Subsequently, we announced a delay in implementation of the OPPS from July 1, 2000 to August 1, 2000.

- On August 3, 2000, we published an interim final rule with comment period ( 65 FR 47670) that modified criteria that we use to determine which medical devices are eligible for transitional pass-through payments. The rule also corrected and clarified certain provider-based provisions included in the April 7, 2000 rule.
- On November 13, 2000, we published an interim final rule with comment period ( 65 FR 67798) to provide the annual update to the amounts and factors for OPPS payment rates effective for services furnished on or after January 1, 2001. We implemented the 2001 OPPS on January 1,2001 . We also responded to public comments on those portions of the April 7,2000 final rule that implemented related provisions of the BBRA and public comments on the August 3, 2000 rule.
- On November 2, 2001, we published a final rule ( 66 FR 55857) that announced the Medicare OPPS conversion factor for calendar year (CY) 2002. It also described the Secretary s estimate of the total amount of the transitional pass-through payments for CY 2002 and the implementation of a uniform reduction in each of the passthrough payments for that year.
- On November 2, 2001, we also published an interim final rule with comment period ( 66 FR 55850) that set forth the criteria the Secretary will use to establish new categories of medical devices eligible for transitional pass-
through payments under Medicare's OPPS.
- On November 30, 2001, we published a final rule ( 66 FR 59856) that revised the Medicare OPPS to implement applicable statutory requirements, including relevant provisions of BIPA, and changes resulting from continuing experience with this system. In addition, it described the CY 2002 payment rates for Medicare hospital outpatient services paid under the PPS. This final rule also announced a uniform reduction of 68.9 percent to be applied to each of the transitional pass-through payments for certain categories of medical devices and drugs and biologicals.
- On December 31, 2001, we published a final rule ( 66 FR 67494) that delayed, until no later than April 1, 2002, the effective date of CY 2002 payment rates and the uniform reduction of transitional pass-through payments that were announced in the November 30, 2001 final rule. In addition, this final rule indefinitely delayed certain related regulatory provisions.
- On March 1, 2002, we published a final rule ( 67 FR 9556) that corrected technical errors that affected the amounts and factors used to determine the payment rates for services paid under the Medicare OPPS and corrected the uniform reduction to be applied to transitional pass-through payments for CY 2002 as published in the November 30, 2001 final rule. These corrections and the regulatory provisions that had been delayed became effective on April 1, 2002.
- On November 1, 2002, we published a final rule ( 67 FR 66718) that revised the Medicare OPPS to update the payment weights and conversion factor for services payable under the 2003 OPPS on the basis of data from claims for services furnished from April 1, 2001 through March 31, 2002. The rule also removed from pass-through status most drugs and devices that had been paid under pass-through provisions in 2002 as required by the applicable provisions of law governing the duration of pass-through payment.
- On August 12, 2003, we published a proposed rule ( 68 FR 47966) that proposed the Medicare OPPS conversion factor for CY 2004. In addition, it described proposed changes to the amounts and factors used to determine the payment rates for Medicare hospital outpatient services paid under the prospective payment system.
C. Summary of Changes in the August 12, 2003 Proposed Rule
On August 12, 2003, we published a proposed rule ( 68 FR 47966) that proposed changes to the Medicare hospital OPPS and CY 2004 payment rates including proposed changes used to determine these payment rates. The following is a summary of the major changes that we proposed and the issues we addressed in the August 12, 2003 proposed rule.

## 1. Changes Required by Statute

We proposed the following changes to implement statutory requirements:

- Add APCs, delete APCs, and modify the composition of some existing APCs.
- Recalibrate the relative payment weights of the APCs.
- Update the conversion factor and the wage index.
- Revise the APC payment amounts to reflect the APC reclassifications, the recalibration of payment weights, and the other required updates and adjustments.
- Cease transitional pass-through payments for drugs and biologicals and devices that will have been paid under the transitional pass-through methodology for at least 2 years by January 1, 2004.
- Cease transitional outpatient payments (TOPS payments) for all hospitals paid under OPPS except for cancer hospitals and children s hospitals.

## 2. Additional Changes to OPPS

We proposed the following additional changes to the OPPS:

- Adjust payment to moderate the effects of decreased median costs for non-pass-through drugs, biologicals, and radiopharmaceuticals.
- Implement a new method for paying for drug administration.
- Create new evaluation and management service codes for outpatient clinic and emergency department encounters.
- Change status indicators for Healthcare Common Procedure Coding System (HCPCS) codes.
- List midyear and proposed HCPCS codes that are paid under OPPS.
- Allocate a portion of the outlier percentage target amount to community mental health centers (CMHCs) and create a separate threshold for outlier payments for partial hospitalization services.
- Create methodology and payment rates for separately payable drugs and radiopharmaceuticals for 2004.
- Make several changes in our current payment policy with regard to payment
for Q0081, Q0083, Q0084, and Q0085 to facilitate accurate payments for drugs and drug administration.
- Change the status indicator and payment amount for P9010 by assigning it to APC 0957 (Platelet concentrate) with a payment rate of $\$ 37.30$.
- Establish new payment bands for new technology APCs.

## D. Public Comments and Responses to the August 12, 2003 Proposed Rule

We received approximately 876 timely items of correspondence containing multiple comments on the August 12, 2003 proposed rule. Summaries of the public comments and our responses to those comments are set forth below under the appropriate section heading of this final rule with comment period.
We received comments from various sources including but not limited to health care facilities, physicians, drug and device manufacturers, and beneficiaries. Hospital associations and the Medicare Payment Advisory Commission (MedPAC) generally supported our proposed approach to revising the relative weights for APCs. Pharmaceutical and medical device manufacturers and some individual hospitals that furnish particular devices or drugs were concerned with the proposed reductions in payment for medical devices and drugs. We received many thoughtful comments from a wide range of commenters with regard to methodological issues in OPPS. In addition, several comments provided external data to support their assertions. The following are the major issues addressed by the commenters:

- The proposal to use $\$ 150$ as the packaging threshold for separate payment of drugs.
- The proposal to pay for orphan drugs within the OPPS, basing payment on claims data.
- The proposal to pay for generic drugs at 43 percent of average wholesale prices (AWP) beginning with the time of the generic drug's Food and Drug Administration (FDA) approval.
- The proposed payments for blood and blood products under OPPS.
- The proposal to establish a separate outlier pool for community mental health centers(CMHCs).The proposal to apply an adjustment to increase payment to small rural hospitals' clinic and emergency room (ER) visit rates to ameliorate the effect of the sunsetting of the transitional corridor payments.
- The proposal to reinstitute drug and device coding requirements.
- Propose APC assignments and status indicators for numerous services.

In addition to comments regarding the policy proposals in the August 12, 2003 proposed rule, we received comments about the publication date of the proposed rule and the comment period.

Comment: Some commenters objected to the use of the date on which the August 12, 2003 proposed rule was made public by web posting and by public display at the Office of the Federal Register as the beginning of the comment period. They indicated that we should start the comment period only on the publication of the proposed rule in the Federal Register because that is where subscribers look for it. They objected to what they view as a 55 -day comment period if it were to start on the date of Federal Register publication (August 12, 2003). Some commenters objected to the publication of the proposed rule so late in the year. They indicated that our publication on August 9 resulted in the comment period ending so close to the publication deadline for the final rule that they believed that their comments could not be fully analyzed and used and would not be as effective as if the proposed rule were published in June or early July. They urged us to publish the proposed rule in late spring. Some commenters objected to the scheduling of the APC Panel meeting so soon after the issuance of the proposed rule because they felt that it gave them inadequate time to prepare their presentations for the Panel.

Response: The comrnent period on a proposed rule begins on the day that the proposed rule is available for public comment. We believe that putting the document on display at the Office of the Federal Register and also making it available on the CMS Web site meets the test of being publicly available and that, therefore, is the start of the comment period. The publication of the proposed rule on the internet makes it available to many more people than routinely access the Federal Register or can visit the Office of the Federal Register where the display copy is located. The public had 60 days to comment on the proposed rule. This is the standard amount of time generally allowed for comment on notices of proposed rulemaking. Therefore, we do not believe the public was at a disadvantage or limited in the amount of time available to make public comments.

Our review of the public comments is extensive, with the comments being read and considered carefully, often by many staff. We agree that it is
preferable, when possible, to issue the proposed rule as early as possible. However, the important issue is whether we have sufficient time to carefully and
thoughtfully consider all comments in development of the final rule, rather than the amount of time between the end of the comment period and the publication of the final rule.

## II. Changes to the Ambulatory Payment Classification (APC) Groups and Relative Weights

Under the OPPS, we pay for hospital outpatient services on a rate-per-service basis that varies according to the APC group to which the service is assigned. Each APC weight represents the median hospital cost of the services included in that APC relative to the median hospital cost of the services included in APC 0601, Mid-Level Clinic Visits. The APC weights are scaled to APC 0601 because a mid-level clinic visit is one of the most frequently performed services in the outpatient setting.

Section 1833(t)(9)(A) of the Act requires the Secretary to review the components of the OPPS not less often than annually and to revise the groups, relative payment weights, and other adjustments to take into account changes in medical practice, changes in technology, and the addition of new services, new cost data, and other relevant information and factors. Section 1833(t)(9)(A) of the Act requires the Secretary, beginning in 2001, to consult with an outside panel of experts to review the APC groups and the relative payment weights.
Finally, section $1833(\mathrm{t})(2)$ of the Act provides that, subject to certain exceptions, the items and services within an APC group cannot be considered comparable with respect to the use of resources if the highest median (or mean cost, if elected by the Secretary) for an item or service in the group is more than 2 times greater than the lowest median cost for an item or service within the same group (referred to as the " 2 times rule").

We use the median cost of the item or service in implementing this provision. The statute authorizes the Secretary to make exceptions to the 2 times rule "in unusual cases, such as low volume items and services."

For purposes of the proposed rule and this final rule we analyzed the APC groups within this statutory framework.

## A. Recommendations of the Advisory Panel on APC Groups

1. Establishment of the Advisory Panel on APC Groups

Section 1833(t)(9)(A) of the Social Security Act (the Act) requires that we consult with an outside panel of experts, the Panel, to review the clinical integrity of the APC groups and their
weights. The Act specifies that the Panel will act in an advisory capacity. This expert panel, which is to be composed of representatives of providers subject to the OPPS (currently employed full-time, in their respective areas of expertise), seviews and advises us about the clinical integrity of the APC groups and their weights. The Panel is not restricted to using our data and may use data collected or developed by organizations outside the Department in conducting its review.

On November 21. 2000, the Secretary signed the charter establishing an "Advisory Panel on APC Groups." The Panel is technical in nature and is governed by the provisions of the Federal Advisory Committee Act (FACA) as amended (Pub. L. 92-463).

On November 1, 2002, the Secretary renewed the charter. The new charter indicates that the Panel continues to be technical in nature, is governed by the provisions of the FACA, may convene "up to three meetings per year," and is chaired by a Federal official.

To establish the Panel, we solicited members in a notice published in the Federal Register on December 5. 2000 ( 65 FR 75943 ). We received applications from more than 115 individuals nominating either a colleague or themselves. After carefully reviewing the applications, we chose 15 highly qualified individuals to serve on the Panel.

Because of the loss of 6 Panel members in March 2003 due to the expiration of terms of office, retirement, and a career change, a Federal Register notice was published on February 28, 2003 ( 68 FR 9671), requesting nominations of Panel members. From the 40 nominations we received, 6 new members have been chosen and have been identified on the CMS web site.

We received one comment regarding our selection of Panel members.

Comment: One commenter stated that Community Mental Health Centers (CMHCs) have not been represented on the APC Panel even though the names of qualified nominees have been submitted. The commenter went on to say that the Federal Register (February 28,2003, at 68 FR 9671 through 9672) specifically states, "Qualified nominees will meet those requirements necessary to be a Panel member. Panel members must be representatives of Medicare providers (including Community Mental Health Centers) subject to the OPPS * * * [therefore,] I feel that it is imperative to have a freestanding CMHC representative on the Panel."

Response: The Federal Register notice on the APC Panel to which the commenter referred, states in section ll,

Criteria for Nominees, the following: "The Panel shall consist of up to 15 members selected by the Secretary, or designee, from among representatives of Medicare providers (including Community Mental Health Centers) subject to the OPPS." The language does not mandate that a CMHC representative will be on the Panel. In the regulation, we simply identified representatives from CMHCs-or any other organizations-as possible nominees.
This year, when we requested nominations for the APC Panel, the list of nominees was long, prestigious, and included representatives from all aspects of the health care industry: Doctors, nurses, hospital administrators, coders, etc. Therefore, our choices were difficult; however, since there are definite Federal guidelines governing our selections, and specific Panel and Agency needs to address, given the clinical range of services paid under the OPPS, we were able to identify the most qualified individuals. Since the needs of the Agency and the Panel change due to members leaving, we invite all concerned Medicare providers to continue to nominate qualified individuals when the need arises.

The Panel's biannual meetings are forums to discuss APCs and representatives from the CMCHs-and other organizations-are invited to attend Panel meetings and to make presentations to the Panel on relevant agenda items.
Comment: The commenter also stated that the APC Panel sets the payment rates for the outpatient services.

Response: While the Panel is an advisory committee mandated by law to review the APC groups, and their associated weights, and to advise the Secretary of Health and Human Services and the Administrator of the Centers for Medicare \& Medicaid Services concerning the clinical integrity of the APC groups and their weights, the APC Panel does not set payment rates for outpatient services. The advice provided by the Panel is considered by us in our development of the annual rulemaking to update the hospital OPPS. The APC Panel's activities most often address whether or not the HCPCS codes within the APCs are comparable clinically and with respect to resource use, assigning new codes to new or existing APCs, reassigning codes to different APCs, and the configuring of existing APCs into new APCs.

## 2. August 2003 Meeting

The APC Panel met on August 22, 2003 to discuss issues presented in the proposed rule of August 12. We announced the meeting in the Federal

Register on July 25 and invited the public to make presentations to the Panel on issues discussed in the proposed rule. In this section, we summarize the issues discussed by the Panel, their recommendations on those issues, and our decisions with respect to their recommendations.

## a. Blood and Blood Products

The Panel heard testimony by suppliers of blood and blood products and their representatives who expressed significant concerns about the proposed payment rates, particularly in light of new safety and testing requirements. These presenters to the Panel recommended that we exclude blood and blood products from the OPPS and pay for them at reasonable cost. After listening to the testimony, reviewing the median costs and proposed payments rate from our hospital claims data, and deliberating the issue, the Panel recommended that we continue to pay for blood and blood products within the OPPS. However, the Panel further recommended that we freeze the payment rates for blood and blood products at 2003 levels for 2004 and 2005 while we undertake further analysis of the cost data. The Panel also recommended that hospitals be educated on the proper billing for blood and blood products.

As discussed elsewhere in this final rule, we will accept the Panel's recommendation with respect to 2004. We will freeze the payment rates for blood and blood products at the 2003 payment levels. However, we are not making a decision with respect to 2005 at this time. Any proposals regarding our 2005 payment rates or policies for these items will be discussed in our proposed rule for the CY 2005 update. The Panel also recommended that the APCs for blood and blood products be on the agenda for the winter 2004 meeting in time for consideration of the 2005 payment rates. We agree to place this item on the agenda for the next APC Panel meeting.

## b. Nuclear Medicine, Brachytherapy, and Radiosurgery Services

## (1) Nuclear Medicine APCs and Radiopharmaceuticals

The Panel heard testimony on and considered the proposed restructuring of the nuclear medicine APCs discussed in the August 12, 2003 proposed rule. The Panel recommended that we move forward with the categorization system in the proposed OPPS 2004 rule absent strong, reasoned opposition from provider groups. If strong opposition was revealed in the public comments,
the Panel recommended that we maintain the classification system that is in place for 2003. The Panel also recommended that we change the HCPCS code descriptors for radiopharmaceuticals to be on a "perdose" basis-not on a "per-unit" basis.

We have accepted the Panel's recommendation that we move forward with the proposed restructuring, after considering public comments on this issue. As discussed in section II.A. 3 of this final rule, we will implement the restructuring with certain changes to the proposed reclassification based on our review of the public comments. For reasons discussed in section VI.B. 3 of this final rule, we are not accepting the Panel's recommendation to change the HCPCS code descriptors at this time.

The Panel further recommended that APCs for radiopharmaceuticals be on the agenda for the January 2004 meeting. In preparation for that meeting, the Panel recommended that our staff analyze the claims for the nuclear medicine APCs and do the following: Itemize the costs, determine what proportion of the median cost can be attributed to radiopharmaceuticals, and present the data at the Panel's January 2004 meeting. The Panel recommended that the issue of packaging the costs of radiopharmaceuticals under the 2003 threshold of $\$ 150$ be placed on the agenda for the Panel's winter 2004 meeting.

We will consider this topic for placement on the agenda for the Panel's 2004 meeting. As discussed in section VI.B. 3 of this rule, however, we are revising our threshold for packaging radiopharmaceuticals from $\$ 150$ to $\$ 50$.

## (2) Brachytherapy Services

The Panel recommended that we review whether the codes for needles and catheters were included in the payment rate proposed for APC 0313. The Panel also recommended that we consider outside data presented by commenters in establishing payment rates for APCs 312 and 651 to arrive at an appropriate payment rate. See our discussion, below, regarding APCs 312, 313, and 651 and our considerations concerning the claims used to set the relative weights for these APCs.

The Panel further recommended that we discontinue use of G codes for prostate brachytherapy and use appropriate Current Procedural Terminology (CPT) codes paid in clinical APCs when making payment for these services. The Panel recommended we pay separately for brachytherapy sources for the treatment of prostate cancer in the same manner by which we are paying separately for the
brachytherapy sources for the treatment of other types of cancer. We have accepted the Panel's recommendation. As discussed in section II.B. 4 of this final rule, we will discontinue use of the special G codes for prostate
brachytherapy and allow separate payment for the sources used in these treatments.

## (3) Radiation Therapy and Radiosurgery APC Issues

The APC Panel heard testimony concerning radiation treatment delivery codes CPT 77412 through 77416, which we proposed to assign to APC 0301 and CPT 77417, assigned to APC 0260. The presenter stated that many hospital billing departments had not updated their charge masters since the inception of OPPS to reflect the costs of newer technology, specifically with respect to the use of $x$-ray guidance during external beam radiation treatment delivery. The APC Panel recommended that we review whether the use of x -ray guidance (as opposed to CT or ultrasound guidance) for radiation therapy is being properly reported and included in the payment rates for the radiation treatment delivery codes. We agree that we should review these issues further and will do so in preparation for the 2005 update. However. we did not receive sufficient or convincing information upon which to base a change for 2004. Therefore, we encourage interested parties to submit any additional information on the use of these codes and cost of providing these services in the outpatient hospital setting in response to this final rule with comment period.

The APC Panel also heard testimony concerning the proposed payment rate for CPT 77418, assigned to APC 0412 (IMRT treatment delivery). The presenter stated that the proposed amount was too low. However, the APC Panel supported the proposal in the absence of compelling evidence that the rate derived from the claims data is wrong. We concur with the APC Panel's recommendation and will retain CPT 77418 in APC 0412. We used approximately 113,000 claims to set the weight for this procedure, which we believe is a sufficiently robust set of data.
During this section of the APC Panel's August 22 meeting, the Panel members also heard testimony concerning HCPCS codes G0251 and G0173 used to report stereotactic radiosurgery. The APC Panel supported the proposed payment rates for these codes until more data become available. The APC Panel also asked to review this issue further at its winter 2004 meeting. We discuss
stereotactic radiosurgery in further detail below. We have decided to make certain changes to the payment for these procedures. However, the APC assignment for these codes for 2004 is interim final. We solicit comments on the 2004 assignments, and we will also include this on the APC Panel's agenda for its winter 2004 meeting.

The final topic in this section of the APC Panel's August 22 meeting pertained to HCPCS codes G0242 and G0243 (multi source photon stereotactic planning). The APC Panel was requested to recommend that we combine the coding for these procedures under one code, with the payment for the new code derived by adding the payment for G0242 and G0243 together. The information presented to the APC Panel stated that the services represented by the two G codes represent one continuous procedure, that it is a surgical procedure, and the cost center mapping should be to a surgical cost center. The APC Panel will review this request at its winter 2004 meeting. The APC Panel is interested in receiving comments on this topic from professional societies representing neurosurgeons, radiation oncologists and others concerning this proposal.

## c. Payment and Coding for Drug Administration and for Certain Drugs, Biologicals, and Radiopharmaceuticals

The APC Panel heard testimony and discussed the proposals described in the August 12, 2003 proposed rule on payment for drug administration and the packaging of the costs of drugs, biologicals, and radiopharmaceuticals. The APC Panel recommended that:

- We continue to use the current "Q" codes for drug administration and not institute new " $G$ " codes to represent the administration of either packaged or separately paid drugs.
- We allow billing of Q0081 on a pervisit basis, rather than on a per-day basis as proposed.
- We delete Q0085 and allow hospitals to use both Q0083 and Q0084 when billing for chemotherapy administered by both infusion and other techniques in a given visit.
- That we consider adopting the final option among the three new methods of paying for drug administration that we proposed, as options to the current policy, in the August 12, 2003 proposed rule.
- That we look further at hospital pharmacies' costs for preparing drugs and radiopharmaceuticals and this issue be examined more closely by the Panel during its winter 2004 meeting.

The APC Panel also expressed serious concern about the dollar threshold for
the packaging of drugs and the adequacy of payment for separately paid drugs. However, in the absence of alternative proposals by us, the APC Panel did not make further recommendations on that issue. The APC Panel requested that we present alternative options during the winter 2004 meeting, including a new APC structure for drugs and radiopharmaceuticals. As for specific drug issues, after hearing testimony concerning the codes for Baclofin refill kits, the APC Panel recommended that we delete code C9010 and retain the other codes for this product used in the treatment of Parkinson's disease and spasticity.

We have carefully considered each of the APC Panel's recommendations along with comments on the subject of drug administration and payment for drugs, biologicals, and radiopharmaceuticals. For the reasons discussed more fully elsewhere in this final rule, we have decided to accept the APC Panel's recommendations that we continue using Q0081 through Q0084 in 2004: that we continue to define these codes on a per-visit, rather than per-day basis: that we delete code Q0085; and that we delete code C9010. We have decided to continue paying for the drug administration "Q" codes according to our current rules and discuss that decision further in section VI.B. 4 of this final rule. We will consider the Panel's recommendation that we investigate other approaches for paying for drugs and radiopharmaceuticals. However, for 2004, we have determined that we will pay separately under their own APCs for drugs, biologicals and
radiopharmaceuticals for which the median per day costs are in excess of $\$ 50$.

## (4) Device-Related Procedures

The APC Panel heard testimony from the device manufacturing community and others concerning payment for procedures that involve the implantation of devices. The presenters discussed concerns that affected such procedures in general, such as the absence of a proposal to limit payment reductions for such procedures between 2003 and 2004 and issues related to the hospital claims for these procedures. Presentations to the APC Panel also discussed inadequacies in the claims data or our methodology for using the claims data to set relative weights for specific device-related APCs (APCs 0046, 0107, 0108, 0222, 0225, 0385, and 0386. Presenters urged that the APC Panel advise us to use the best external data possible, including proprietary data that would be held confidential.
Presentations to the APC Panel also
addressed the multiple surgical
reduction with respect to device-related APCs.

The APC Panel recommended:

- That we use credible external data that can be made publicly available for establishing the median costs for APCs 0107 and 0386.
- That we change the status indicator for CPT 61885 so that it is not subject to the multiple procedure discounting.
- That we assign the new CPT codes for central venous access devices into appropriate APCs, either clinical APCs or new téchnology APCs.
- That the APC assignments of the new central venous access devices be reviewed by the APC Panel at its next meeting.
- That we provide the APC Panel with median cost data for all APCs in spreadsheet format for its consideration in advance of and during its next meeting.
- That we review the presenter's suggestions with respect to APC 0046 and make recommendations for any changes to this APC to the APC Panel at its next meeting.
- That we change the status indicator for CPT 93571 and 93572 from " $N$ " (packaged status) to an appropriate indicator that allows separate payment under the APC.

We considered the final set of recommendations from the APC Panel's August 2003 meeting and have accepted several of them. Specifically, we decided to use external data in setting the median cost for 2004 for APC 0107. We have not used external data for APC 0386. Each of these decisions is discussed in greater detail elsewhere in this final rule. We accepted the Panel's recommendation to change the status indicator for CPT 61885. In order to do so, we moved this code into its own APC, 0039, Implant neurostim, one array. We have assigned the new CPT codes for central venous access devices to New Technology APCs as displayed in Addendum B. The range of new CPT codes is 36555 through 36597 , and the new APC assignments include APCs 0032, 0115, 0109, 0187, and 1541.

The assignment of these codes is subject to public comment and will be placed on the APC Panel's agenda for its next meeting. During that meeting, we will also provide the APC Panel with spreadsheet data on the median costs of all APCs. With respect to APC 0046, we are sympathetic to the presenter's concerns. However, we were not provided with data that we considered sufficient to assess whether a new coding structure with increased payment rates is warranted for the treatment of bone fractures with
external fixation devices. However, we would support the specialty societies' efforts to request changes to the existing CPT coding structure. For reasons discussed elsewhere, we have not accepted the Panel's recommendation with respect to CPT codes 93571 and 93572.

Comment: An association voiced concern that the Panel meeting on August 22, 2003 came too soon after the publication of the August 12, 2003 proposed rule for its members to prepare adequately for presentation to the Panel.

Response: The agency must schedule the Panel meetings sufficiently in advance of the meeting in order to provide ample notice to the public of the meeting and to allow sufficient time for the Panel members to arrange their schedules. We attempted to balance those needs with the goal of conducting the first mid-year meeting of the Panel during the comment period so that issues discussed in the August 12, 2003 proposed rule could be topics for the Panel's consideration and interested parties' testimony before the Panel. The July 25, 2003 Federal Register notice ( 68 FR 44089) announced the second 2003 meeting of the APC Panel, which we believe provided sufficient advance notice of the meeting.

While it is true that the proposed rule was placed on display on August 6, published on August 12, and the meeting was held on August 22, 2003, many interested parties attended the meeting and presented thoughtful comments on most issues discussed in the proposed rule. Nevertheless, we will take this comment into consideration for future planning of APC Panel meetings.

Comment: Several commenters expressed concern about the length of the meeting and time allotted on the agenda to particular issues. One commenter stated that scheduling only [1] day for Panel deliberations was inadequate. A commenter was concerned that device-related issues were relegated to the last hour, that presenters were given only 2 minutes, and that there was little time for Panel discussion and consideration of the issues presented.

Response: We appreciate the commenter's interest in ensuring that adequate time be allowed for the public to present issues for the Panel's consideration and for the Panel to have sufficient time for their discussion and deliberation.

Although the device issues were scheduled for the last hour of the meeting, the Panel members received the written presentations beforehand, and had an opportunity to review them
before the meeting. Placing a limit on presentations is a prerogative of the Panel Chair and must at times be done in order to allow all interested parties to make presentations on agenda items. However, we will take all of the concerns into consideration when scheduling future meetings.
3. Recommendations of the Advisory Panel and Our Responses

## January 2003 Meeting

In this section, we consider the Panel's recommendations affecting specific APCs. The Panel based its recommendations on claims data for the period April 1, 2002 through September 30, 2002. This data set comprises a portion of the data that will be used to set 2004 payment rates. APC titles in this discussion are those that existed when the APC Panel met in January 2003. In a few cases, APC titles have been changed for this final rule, and, therefore, some APCs do not have the same title in Addendum A as they have in this section.

The Panel's agenda included APCs that our staff believed violated the 2 times rule as well as APCs for which comments were submitted. As discussed below, the Panel sometimes declined to recommend a change in an APC even though the APC appeared to violate the 2 times rule. In section II.B of the August 12, 2003 proposed rule, we discuss our proposals regarding the 2 times rule based on the April 1 through December 31, 2002 data that we used to determine the final 2004 APC relative weights. Section II.B ( 68 FR 47977) of the August 12, 2003 proposed rule also details the criteria we used when deciding to propose exceptions to the 2 times rule.
Unless otherwise specified in each of the following discussions of the APC Panel's recummendations, our proposed actions are finalized in this final rule.

## a. Debridement and Destruction

APC 0012: Level I Debridement \& Destruction

APC 0013: Level II Debridement \& Destruction

We expressed concern to the Panel that APCs 0012 and 0013 appear to violate the 2 times rule. In order to remedy these violations, we asked the Panel to consider the following changes:
(1) Move the following codes from APC 0013 to APC 0012:

| HCPCS | Description |
| :---: | :--- |
| $11001 \quad \ldots . . . . . . .$. | Debride infected skin add- <br> on. |
| 11302 | $\ldots . . . . . . .$. |
| 15786 | Shave skin lesion. |
| Abrasion, lesion, single. |  |

| HCPCS | Description |
| :---: | :--- |
| $15793 \ldots . . . . . . . .$. | Chemical peel, nonfacial. |
| $15851 . . . . . . . . .$. | Removal of sutures. |
| 16000 | Initial treatment of burn(s). |
| $16025 \ldots . . . . . . .$. | Treatment of burn(s). |

(2) Move code 11057 (Trim skin lesions, over 4) from APC 0012 to APC 0013.

The Panel agreed with our staff and recommended that we make these changes. We proposed to accept the Panel's recommendation.

However, we received comments from a group of hospitals concerning the proposed change for CPT code 15851 , removal of sutures under anesthesia (other than local), same surgeon. In their comments, the hospitals noted that the descriptor for CPT codes 15851 and 15850 (removal of sutures under anesthesia (other than local), other surgeon, were virtually identical with the exception of which surgeon performs the suture removal. The commenters did not believe that the identity of the surgeon could result in a significant difference in resource costs to the hospital. Our clinical staff agree and believe that the difference in hospital median costs derived from our claims data may be due to a misunderstanding about the coding. For 2004, we have decided that we will place both CPT codes for suture remove under anesthesia in APC 0016.

## b. Excision/Biopsy

APC 0019: Level I Excision/Biopsy APC 0020: Level II Excision/Biopsy APC 0021: Level III Excision/Biopsy We expressed concern to the Panel that APCs 0019 and 0020 appear to violate the 2 times rule. In order to remedy these violations, we asked the Panel to consider the following changes:
(1) Move the following HCPCS codes from APC 0019 to a new APC:

| HCPCS | Description |
| :---: | :---: |
| 11755 | Biopsy, nail unit. |
| 11976 .... | Removal of contraceptive cap. |
| 24200. | Removal of arm foreign body. |
| 28190 ............ | Removal of foot foreign body. |
| 56605. | Biopsy of vulva/perineum. |
| 56606 ............. | Biopsy of vulva/perineum. |
| 69100 ............ | Biopsy of external ear. |

The APC Panel recommended that we make these changes, and we proposed to do so in our August 12, 2003 proposed rule.
(2) Move the following HCPCS codes from APC 0020 to APC 0021:

| HCPCS | Description |
| :---: | :---: |
| 11404 | $\ldots \ldots . . . .$. |
| 11423 | $\ldots \ldots \ldots$. |
| 11604 | Removal of skin lesion. |
| 11623 | Removal of skin lesion. |
| Removal of skin lesion. | Removal of skin lesion. |

The Panel recommended that we not change the structure of APCs 0019, 0020, and 0021 at this time in the interest of preserving clinical homogeneity. In August, we proposed to accept the Panel's recommendation that we make no changes to the structure of these APCs for 2004. However, following our review of the median costs developed for the final rule, using a more complete set of claims for services from April through December 2002, we determined that CPT codes 11404 and 11623 should be moved to APC 0021. We plan to place these APCs on the Panel's agenda for the 2005 update.
c. Thoracentesis/Lavage Procedures and Endoscopies

APC 0071: Level I Endoscopy Upper Airway

APC 0072: Level II Endoscopy Upper Airway
APC 0073: Level III Endoscopy Upper Airway

We expressed concern to the Panel that APCs 0071 and 0072 appear to violate the 2 times rule. In order to remedy these violations, we asked the Panel to consider the changes below.
Move the following HCPCS codes as described below:

Table 1.-hCPCS Codes Final to be Redistributed From apCs 0071 AND 0072 TO APCS 0071, 0072, AND 0073

| HCPCS | Description | 2003 | 2004 |
| :--- | :--- | :--- | :--- |
| $31505 \ldots$ | APC | APC |  |
| $31575 \ldots$ | Diagnostic laryn- <br> goscopy. <br> Diagnostic laryn- <br> goscopy. | 0072 | 0071 |
| $31720 \ldots$ | Clearance of air- <br> ways. | 0072 | 0073 |

The Panel recommended that we make the above changes. We proposed to accept the Panel's recommendation, with the exception of CPT code 31720. After reviewing an additional quarter of claims data that were not available at the time the Panel convened, placement of CPT code 31720 into APC: 0072 better reflects its resource consumption. Therefore, we proposed to keep CPT code 31720 in APC 0072.

## d. Cardiac and Ambulatory Blood Pressure Monitoring

APC 0097: Cardiac and Ambulatory Blood Pressure Monitoring
We expressed concern to the Panel that APC 0097 appears to violate the 2 times rule. We asked the Panel to recommend options for resolving this violation and suggested splitting APC 0097 into two APCs. The Panel recommended that the structure of APC 0097 should not be changed at this time based on clinical homogeneity considerations. We proposed to accept the Panel's recommendation that we make no changes to APC 0097 for 2004. We received no comments disagreeing with this proposal, and we will adopt it for 2004. We also plan to place this APC on the Panel's agenda for the 2005 update.

## e. Electrocardiograms

APC 0099: Electrocardiograms APC 0340: Minor Ancillary Procedures
We expressed concern to the Panel that APC 0099 appears to violate the 2 times rule. We asked the Panel to recommend options for resolving this violation, and suggested moving CPT code 93701 (Bioimpedance, thoracic) from APC 0099 to APC 0340. The Panel believed, however, that the structure of APC 0099 should not be changed at this time based on clinical homogeneity considerations. We proposed to accept the Panel's recommendation that we make no changes to APC 0099 for 2004. We plan to place this APC on the Panel's agenda for the 2005 update.

## f. Cardiac Stress Tests

APC 0100: Cardiac Stress Tests
A presenter to the Panel, who represented a device manufacturer, requested that we move CPT code 93025 (Microvolt t-wave assessment) out of APC 0100. The presenter believes that the actual cost for this procedure is significantly higher than for other procedures in the same APC. Since this technology is often billed in conjunction with other procedures (for example, stress tests, CPT code 93017), few single-APC claims were available to evaluate the presenter's contention.

The Panel believed the data presented are insufficient to merit moving the code and recommended that CPT code 93025 remain in APC 0100 until more data are available for review. We proposed to accept the Panel's recommendation that CPT code 93025 remain in APC 0100 until more claims data become available for review. We will adopt this proposal for 2004.
g. Revision/Removal of Pacemakers or Automatic Implantable Cardioverter Defibrillators

APC 0105: Revision/Removal of Pacemakers, AICD, or Vascular

We asked the Panel to review the codes within APC 0105 for an apparent violation of the 2 times rule, stating that we believe the apparent violation is a result of incorrectly coded claims. The Panel agreed and recommended no changes to APC 0105 at this time. We proposed to accept the Panel's recommendation that we make no changes to APC 0105 until more accurate claims data become available and support the need for a change. We will adopt this proposal for 2004.

## h. Sigmoidoscopy

APC 0146: Level I Sigmoidoscopy APC 0147: Level II Sigmoidoscopy We expressed concern to the Panel that relatively simple procedures such as anoscopy and rigid sigmoidoscopy have higher median costs than more complex procedures such as flexible sigmoidoscopy. Panel members suggested the high costs may be due to the need to perform an otherwise minor office procedure in a hospital setting (for example, due to the clinical condition of the patient). Panel members also suggested that claims may be incorrectly coded because coding instructions do not clearly state how to code when the procedure performed is not as extensive as the procedure planned (for example, when a colonoscopy is planned but only a sigmoidoscopy is performed). In these cases, coding instructions are unclear as to whether the planned procedure should be reported with a modifier for reduced services or with the code for the actual procedure performed.

The Panel recommended that we make no changes to APCs 0146 and 0147 at this time. We proposed to accept the Panel's recommendation that we make no changes to APCs 0146 and 0147. We will adopt this proposal for 2004. However, we plan to place this APC on the Panel's agenda for the 2005 update.
i. Anal/Rectal Procedures

APC 0148: Level I Anal/Rectal Procedure

APC 0149: Level III Anal/Rectal Procedure

APC 0155: Level II Anal/Rectal Procedure

We expressed concern to the Panel that APCs 0148 and 0149 appear to violate the 2 times rule. We asked the Panel to recommend options for resolving these violations, and suggested rearranging some of the CPT
codes within APCs 0148, 0149, and 0155. The Panel recommended that we move CPT code 46040 (Incision of rectal abscess) from APC 0155 to APC 0149. We proposed to accept the Panel's recommendation, and we will adopt it for 2004.

## j. Insertion of Penile Prosthesis

APC 0179: Urinary Incontinence Procedures
APC 0182: Insertion of Penile

## Prosthesis

A presenter to the Panel representing manufacturers and providers requested that APC 0182 be split into two APCs, based on whether the procedure used inflatable or non-inflatable penile prostheses. The presenter stated that the complexity of the procedure, the cost of the devices, and related resources were all significantly higher with inflatable prostheses.

The Panel recommended that we eliminate APCs 0179 and 0182 and create two new APCs, 0385 and 0386, that contain the following CPT codes:

APC 0385

| HCPCS | Description |
| :---: | :---: |
| 52282 | Cystoscopy, implant stent. |
| 53440 | Correct bladder function. |
| 53444. | Insert tandem cuff. |
| 54400. | Insert semi-rigid prosthesis. |
| 54416 .. | Remv/repl penis contain prosthesis. |

APC 0386

| HCPCS | Description |
| :---: | :---: |
| 53445 | Insert uro/ves nck sphincter. |
| 53447 . | Remove/replace ur sphincter. |
| 54401. | Insert self-contained prosthesis. |
| 54405 | Insert multi-comp penis prosthesis. |
| 54410 | Remove/replace penis prosthesis. |

We proposed to accept the Panel's recommendation to eliminate APCs 0179 and 0182 and create two new APCs, 0385 and 0386, containing the above CPT code configurations.

## k. Surgical Hysteroscopy

APC 0190: Surgical Hysteroscopy
A presenter to the Panel, who represented a device manufacturer, requested that we move CPT code 58563 (Hysteroscopy, ablation) from APC 0190 to a higher paying APC. The presenter noted that endometrial cryoablation is included in a new technology APC, while a thermal ablation system is included with older, less costly
techniques. The presenter expressed concern that cryoablation may be reimbursed at a higher rate than the thermal ablation system, giving its manufacturers an unfair competitive advantage.

Panel members agreed that new, more expensive technologies that prove to be more effective merit review for a higher payment rate. Without substantial evidence of greater effectiveness, however, the Panel was reluctant to create APCs that provide an incentive to use a more expensive device. In its discussion of whether or not to recommend moving CPT code 58563 to a higher paying APC, the Panel recommended that we take into account different methods of endometrial ablation associated with hysteroscopy, adequately reflect the resources used for the various procedures, avoid creating a competitive advantage or disadvantage, and collect data needed to track costs on the type of technologies used for this procedure.

After consulting with experts in the field, we proposed to split APC 0190 (Surgical Hysteroscopy) into two APCs that are more clinically homogeneous. We proposed to change the description for APC 0190 from "Surgical Hysteroscopy" to "Level I Hysteroscopy" and keep the following HCPCS codes in APC 0190:

| HCPCS | Description |
| :---: | :---: |
| 58558 ............ | Hysteroscopy, biopsy. |
| 58559. | Hysteroscopy, lysis. |
| 58562. | Hysteroscopy, remove fb. |
| 58579 ............ | Hysteroscope procedure. |

We also proposed to move the following HCPCS codes from APC 0190 to newly created APC 0387 titled "Level II Hysteroscopy":

| HCPCS | Description |
| :---: | :---: |
| $58560 \ldots \ldots \ldots \ldots$. | Hysteroscopy, resect sep- <br> tum. |
| $58561 \ldots \ldots \ldots . .$. | Hysteroscopy, remove <br> myoma. <br> Hysteroscopy, ablation. |
| $58563 \ldots \ldots . . . .$. | Hy |

In addition, we proposed to move the following HCPCS codes as described below:

Table 2.-hCPCS Codes to be ReDISTRIBUTED TO APCS 0130, 0195, AND 0190

| HCPCS | Description | 2003 <br> APC | 2004 <br> APC |
| :---: | :---: | :---: | :---: |
| $58578 \ldots$. | Laparoscopic <br> procedure, <br> uterus. | 0190 | 0130 |

Table 2.-hCPCS Codes to be RedISTRIBUTED TO APCS 0130, 0195, AND 0190-Continued

| HCPCS | Description | 2003 <br> APC | 2004 <br> APC |
| :--- | :---: | :---: | :---: |
| $58353 \ldots$. | Endometrial ab- <br> late, thermal. <br> Hysteroscopy, di- <br> agnostic, sep. <br> procedure. | 0193 | 0195 |

We believe these final changes take into account the different technologies used to perform these procedures while maintaining the clinical comparability of these APCs as well as improving their homogeneity in terms of resource consumption.

## 1. Female Reproductive Procedures

APC 0195: Level VII Female Reproductive Proc

APC 0202: Level VIll Female Reproductive Proc

A commenter requested that we place CPT code 57288 (Repair bladder defect) in its own APC because it requires the use of a device. Our staff suggested that CPT codes 57288 and 57287 remain in APC 0202, while the remaining codes in APC 0202 be moved to APC 0195:

| HCPCS | Description |
| :---: | :---: |
| $57109 \ldots \ldots \ldots . .$. | Vaginectomy partial w/ <br> nodes. |
| 58920 | $\ldots . . . . . . . .$. | | Partial removal of ovary(s). |
| :--- |
| Removal of ovarian cyst(s). |

The Panel agreed with our staff, and we proposed to accept the Panel's recommendation to move CPT codes 57109, 58920, and 58925 from APC 0202 to APC 0195. We will adopt the Panel's recommendation for 2004.

## m. Nerve Injections

APC 0203: Level IV Nerve Injections APC 0204: Level I Nerve Injections APC 0206: Level II Nerve Injections APC 0207: Level III Nerve Injections Several commenters suggested changes in the configuration of APCs $0203,0204,0206$, and 0207 because of concerns that the current classifications result in payment rates that are too low relative to the resource costs associated with certain procedures in these APCs. Several of these APCs include procedures associated with drugs or devices for which pass-through payments are scheduled to expire in 2003.

We requested the Panel's input regarding whether or not these APCs should be restructured. The Panel stated that the current configuration of APCs $0203,0204,0206$, and 0207 is more
clinically cohesive than the previous year's configuration and that more data should be collected before making any changes. We proposed to accept the Panel's recommendation that we make no changes to the structure of these APCs until more data become available for review. We will adopt the Panel's recommendation for 2004.
n. Laminotomies and Laminectomies; Implantafion of Pain Management Device
APC 0208: Laminotomies and Laminectomies
APC 0223: Implantation of Pain Management Device
A presenter to the Panel, who represented a device manufacturer, requested that we move CPT code 62351 (Implant spinal canal catheter) from APC 0208 to APC 0223 to better capture the device cost that may be involved with the procedure. The Panel believed the data were insufficient to merit moving the code and recommended that CPT code 62351 remain in APC 0208 until more data are available for review. We proposed to accept the Panel's recommendation that CPT code 62351 remain in APC 0208 until more claims data become available for review. We will adopt the Panel's recommendation for 2004.

## o. Extended EEG Studies and Sleep Studies; Electroencephalogram

APC 0209: Extended EEG Studies and Sleep Studies, Level II

APC 0213: Extended EEG Studies and Sleep Studies, Level I

APC 0214: Electroencephalogram
We expressed concern to the Panel that APC 0213 appears to minimally violate the 2 times rule. In order to remedy this violation, we asked the Panel to consider a commenter's suggestion that we move CPT code 95955 (EEG during surgery) from APC 0214 to APC 0213. The Panel agreed with the commenter's suggestion. We proposed to accept the Panel's recommendation to move CPT code 95955 from APC 0214 to APC 0213.

## p. Nerve and Muscle Tests

APC 0215: Level I Nerve and Muscle Tests

APC 0216: Level III Nerve and Muscle Tests APC 0218:

Level II Nerve and Muscle Tests
We expressed concern to the Panel that APC 0218 appears to violate the 2 times rule. In order to remedy this violation, one commenter requested that we move CPT codes 95921 (Autonomic nerve function test) and 95922
(Autonomic nerve function test) from APC 0218 to APC 0216, while another
commenter requested that we move CPT code 95904 (Sensory nerve conduction test) from APC 0215 to APC 0218. Alternatively, our staff suggested to the Panel that the following CPT codes be moved from APC 0218 to APC 0215.

| HCPCS | Description |
| :---: | :---: |
| 95858 | $\ldots \ldots \ldots \ldots .$. |
| 95870 | $\ldots \ldots \ldots .$. |
| 95900 | Tensilon test \& myogram. |
| 95903 | Muscle test, nonparaspinal. |
| Motor nerve conduction test. | Motor nerve conduction test. |

After considering all of the above proposals, the Panel recommended that we move CPT codes 95858, 95870 , 95900 , and 95903 from APC 0218 to APC 0215. We proposed to accept the Panel's recommendation.

## q. Implantation of Drug Infusion Device

APC 0227: Implantation of Drug Infusion Device

APC 0227 contains only two CPT codes: Implantation of programmable spine infusion pumps, 62362 , and Implantation of non-programmable spine infusion pumps, 62361. A commenter requested that we split APC 0227 into two APCs to recognize the cost difference between CPT code 62361 and CPT code 62362. However, since our cost data do not show a significant cost difference between the two devices and APC 0227 does not violate the 2 times rule, the Panel recommended that CPT codes 62361 and 62362 remain in APC 0227. We proposed to accept the Panel's recommendation, which we will adopt for 2004.

## r. Ophthalmologic APCs

APC 0230: Level I Eye Tests \&
Treatments
APC 0235: Level I Posterior Segment Eye Procedures

APC 0236: Level II Posterior Segment Eye Procedures
APC 0698: Level II Eye Tests \& Treatments

We advised the Panel that APCs 0230 and 0235 violate the 2 times rule but that the current configuration of these APCs reflects the Panel's previous recommendations. A presenter to the Panel, who represented a device manufacturer, expressed concern that the pass-through device category "New Technology: Intraocular Lens" was discontinued and these devices are now packaged. The presenter asked the Panel to recommend that future new intraocular lens devices be considered for a new pass-through category.

To remedy the violations to the 2 times rule, we asked the Panel to consider moving CPT code 67820 (Revise eyelashes) from APC 0230 to APC 0698 and CPT code 67110 (Repair
detached retina) from APC 0235 to APC 0236. The Panel recommended that we make these changes. We proposed to accept the Panel's recommendation and monitor the data for APC 0235 for possible review next year. We will adopt this recommendation for 2004. The Panel also acknowledged that making recommendations concerning pass-through categories is beyond their purview.

## s. Skin Tests and Miscellaneous Red Blood Cell Tests; Transfusion Laboratory Procedures

APC 0341: Skin Tests and Miscellaneous Red Blood Cell Tests APC 0345: Level I Transfusion Laboratory Procedures We advised the Panel that APCs 0341 and 0345 minimally violate the 2 times rule and suggested moving several CPT codes within these APCs into a new APC because a commenter expressed concern over the combination of skin tests and miscellaneous red blood cell tests in APC 0341, asserting that services within this APC cannot be considered comparable with respect to resource usage.

In order to remedy these violations to the 2 times rule, we suggested moving CPT code 86901 (Blood typing, Rh (D)) from APC 0345 to a new APC along with the following CPT codes from APC 0341:

| HCPCS | Description |
| :---: | :--- |
| $86880 \ldots \ldots . . . . .$. | Coombs test, direct. <br> Coombs test, indirect, quali- |
| $86885 \ldots . . . . . . .$. | tative. |
| $86886 \ldots . . . . . . . .$. | Combs test, indirect, titer. <br> 86900 |

The Panel recommended that we make the above changes. We proposed to accept the Panel's recommendation to move HCPCS codes 86880, 86885 , 86886, and 86900 from APC 0341 to new APC 0409 and to move CPT code 86901 (Blood typing, Rh (D)) from APC 0345 to new APC 0409. We will adopt the Panel's recommendation for 2004.

## t. Otorhinolaryngologic Function Tests

 APC 0363: Level IOtorhinolaryngologic Function Tests APC 0660: Level II Otorhinolaryngologic Function Tests We expressed concern to the Panel that APC 0660 appears to violate the 2 times rule and suggested moving CPT codes 92543 (Caloric vestibular test) and 92588 (Evoked auditory test) from APC 0660 to APC 0363. The Panel recommended that we make these CPT code changes. We proposed to accept the Panel's recommendation to move CPT codes 92543 and 92588 from APC

0660 to APC 0363, and we will adopt the proposal for 2004.

## u. Tube Changes and Repositioning

APC 0121: Level I Tube changes and Repositioning
APC 0122: Level II Tube changes and Repositioning
We expressed concern to the Panel that APC 0121 appears to violate the 2 times rule. In order to remedy this violation, we suggested moving the following CPT codes from APC 0121 to APC 0122:

| HCPCS | Description |
| :---: | :--- |
| $47530 \ldots \ldots . . . . .$. | Revise/reinsert bile tube. |
| 50688 | $\ldots . . . . . .$. |
| 51710 | Change of ureter tube. |
| 62225 | $\ldots . . . . . . . .$. | | Change of bladder tube. |
| :--- |
| Replace/irrigate catheter. |

The Panel recommended that we make these CPT code changes. We proposed to accept the Panel's recommendation to move CPT codes 47530, 50688, 51710, and 62225 from APC 0121 to APC 0122. We will adopt the proposal for 2004.

## v. Myelography

APC 0274: Myelography
We advised the Panel that APC 0274 minimally violates the 2 times rule and suggested moving CPT codes 72285 (Xray c/t spine disk) and 72295 (X-ray c/ t spine disk) from APC $0274^{\circ}$ to a new APC. A presenter, from an organization representing radiologists, agreed with our proposal. The Panel recommended that we make these CPT code changes. We proposed to accept the Panel's recommendation to move CPT codes 72285 and 72295 from APC 0274 to new APC 0388. We will adopt the recommendation for 2004.

## w. Therapeutic Radiologic Procedures

APC 0296: Level I Therapeutic
Radiologic Procedures
APC 0297: Level II Therapeutic
Radiologic Procedures
We advised the Panel that APCs 0296 and 0297 appear to minimally violate the 2 times rule as a result of changes recommended by the Panel and adopted by us last year. The Panel recommended that no changes be made to APCs 0296 and 0297 in the interest of preserving the clinical homogeneity of these APCs. We proposed to accept the Panel's recommendation that we make no CPT code changes to APCs 0296 and 0297, and we are adopting the proposal for 2004.
x. Vascular Procedures; Cannula/Access Device Procedures

APC 0103: Miscellaneous Vascular Procedures

APC 0115: Cannula/Access Device Procedures

A commenter requested that we move CPT code 36860 (External cannula declotting) from APC 0103 to APC 0115, asserting that this procedure is more similar to other procedures in APC 0115 and does not fit well in its current miscellaneous APC. The Panel found that the claims data were insufficient to support moving CPT code 36860 from APC 0103 to the higher paying APC 0115 and recommended that CPT code 36860 remain in APC 0103 until more data are available for review. We proposed to accept the Panel's recommendation that CPT code 36860 remain in APC 0103 until more claims data become available for review. We will adopt this proposal for 2004.

## y. Angiography and Venography Except Extremity

APC 0279: Level II Angiography and Venography except Extremity
APC 0280: Level III Angiography and Venography except Extremity
APC 0668: Level I Angiography and Venography except Extremity

A commenter requested that we move CPT code 75978 (Repair venous blockage) from APC 0668 to APC 0280 and that we move CPT code 75774 (Artery x-ray, each vessel) from APC 0668 to APC 0279. A presenter to the Panel testified that CPT code 75978 is commonly used for dialysis patients and often requires multiple intraoperative attempts to succeed; thus, it should be paid under APC 0280. The Panel believed that APCs 0279, 0280, and 0668 were clinically homogenous and recommended that we only make changes after consulting with experts in the field. We proposed to accept the Panel's recommendation to make no changes to APCs 0279, 0280, and 0668 until we have consulted with experts in the field. We plan to place these APCs on the Panel's agenda for the 2005 update.
z. Computed Tomography (CT), Magnetic Resonance (MR), and Ultrasound Guidance Procedures Currently Packaged

APC 0332: Computerized Axial Tomography and Computerized Angiography without Contrast Material

APC 0335: Magnetic Resonance Imaging, Miscellaneous

APC 0268: Ultrasound Guidance Procedures
A presenter to the Panel expressed concern that the packaging of guidance procedures for tissue ablation does not recognize the significant difference in cost and time required to perform each procedure (for example, MRI vs. CT). This presenter believed that hospitals needed more education on the appropriate application of these codes. Another commenter requested that CPT codes 76362, 76394, and 76490 be changed from a status indicator of N to a status indicator of $S$ and be included in an appropriate clinical or new technology APC.

The Panel agreed with the above comments and stated that the packaging of these three procedures made it difficult for hospitals to track their use for the purpose of allocating funds. The Panel recommended changing the following CPT codes from a packaged status ( N status indicator) to a separately payable status ( S status indicator) within the indicated APCs:

Table 3.-hCPCS Codes To Be Designated as Separately Payable

We proposed to accept the Panel's recommendation to change HCPCS codes 76362, 76394, and 76490 from a packaged status to a separately payable status as indicated above. HCPCS 76490 has been deleted for 2004. However, we will pay for it under APC 0268 during the grace period from January through March 2004.

## aa. Magnetic Resonance Imaging and Magnetic Resonance Angiography Without Contrast

APC 0336: Magnetic Resonance Imaging and Magnetic Resonance Angiography without Contrast

A commenter requested that we change CPT code 76393 (MR guidance for needle placement) from a packaged status to a separately payable status within APC 0336. Based on clinical homogeneity considerations, the Panel agreed with the commenter and recommended that CPT code 76393 be changed from a status indicator of N to a status indicator of S and placed in APC 0335. We proposed to accept the Panel's recommendation.
bb. Plain Film Except Teeth; Plain Film Except Teeth Including Bone Density Measurement
APC 0260: Level I Plain Film Except Teeth

APC 0261: Level II Plain Film Except Teeth Incłuding Bone Density Measurement

## APC 0272: Level I Fluoroscopy

A commenter requested that we move CPT codes 76120 (Cine/video x -rays) and 76125 (Cine/video x-rays add-on) from APC 0260 to APC 0261. However, a presenter to the Panel argued that these CPT codes are fluoroscopic procedures that should not be grouped with Level I radiography procedures. The Panel recommended that we move CPT code 76120 from APC 0260 to APC 0272 and that CPT code 76125 remain in APC 0260. This change makes the APCs more clinically coherent. We proposed to accept the Panel's recommendation, and we will adopt the proposal for 2004.
cc. Chemotherapy Administration by Other Technique Except Infusion
APC 0116: Chemotherapy Administration by Other Technique Except Infusion
A presenter to the Panel requested that we split APC 0116 into three APCs according to the method of administration: (a) Subcutaneous or intramuscular administration (CPT code 96400); (b) "push" administration (CPT code 96408); and (c) central nervous system administration (CPT code 96450). The presenter also requested that existing CPT codes should replace the more nonspecific Q codes for administration of chemotherapy because the CPT codes will provide more detailed data on methods of chemotherapy administration, which could be used for future payment policy decisions. Another presenter agreed with this request and stated that CPT codes are preferable to Q codes because other payers require CPT codes.
The Panel agreed with the above suggestions to split APC 0116 into 3 APCs according to the method of
administration. The Panel recommended that we require hospitals to use the existing CPT codes (for example, 96400,96408 , and 96450 ) for administration of chemotherapy and map them to APCs 0116, 0117, and 0118, as appropriate. The Panel also recommended that payment rates be based on current Q code cost data until cost data for the CPT codes are available. These cost data will be used to determine whether to change the APC structure for chemotherapy administration
We proposed not to accept the Panel's recommendations to split APC 0116 into three APCs and to use CPT codes for administration of chemotherapy. We will consider such a split in the future but would like to first address the administration of drugs issue. Based on the comments we received on our proposed drug administration coding, we believe that making a change in APC 0116 will be too complicated and burdensome for hospitals at this time. (See a full discussion of this in section VI.B. 4 of this final rule.)

We will consider such a split for APC 0116 for CY 2005. We also believe the use of CPT codes will be burdensome to hospitals, will require extensive education, and will result in a significant amount of miscoding. The CPT codes for infusion therapy are based on the service furnished per hour. We do not believe that all hospitals routinely record the start and stop time for infusion therapy and that doing so in order to be able to bill the proper number of hours of infusion therapy could be very burdensome for them. Moreover, the historic cost data on which we base the payment for the service are reported on a per visit basis (much easier to cull from the record than the number of hours of service) and if we changed to CPT codes for these services, we will be unable to convert the charge/cost data now on a per visit basis to a per hour basis (as required by the CPT code) for budget neutrality purposes. See section VI of this final rule for further discussion on payments for drugs and drug administration.

## dd. Capturing the Costs of Drugs,

Biologicals and Radiopharmaceuticals Packaged Into APCs

APC 0290: Level I Diagnostic Nuclear Medicine Excluding Myocardial Scans

APC 0291: Level II Diagnostic Nuclear Medicine Excluding Myocardial Scans

APC 0292: Level III Diagnostic
Nuclear Medicine Excluding Myocardial Scans

APC 0294: Level II Therapeutic Nuclear Medicine

APC 0666: Myocardial Add-on Scans

At the January 2003 meeting, we told the Panel that APCs 0290 and 0291 appear to violate the 2 times rule. Several presenters to the Panel expressed concern that our cost data are inadequate because of confusion over coding due to changes in codes and coding instructions for these procedures, poor hospital reporting of radiopharmaceutical use, and the use of single (not multiple) claims in determining costs. One presenter claimed that the current cost data used for CPT code 78122 (Whole blood volume determination) underestimated real costs because of confusion about whether to code radiopharmaceuticals on a "per dose" basis or "per millicurie" basis. This presenter requested that we move CPT code 78122 from APC 0290 to the higher paying APC 0292.

Other presenters agreed with these concerns and stated they were applicable to payments for all drugs, not just radiopharmaceuticals. These commenters were also concerned about the loss of drug-specific data due to packaging because hospitals will have no incentive to code, and thereby identify, packaged drugs.

Pass-through payments for 236 drugs, biologicals, and radiopharmaceuticals expired as of 2003, were then paid either separately or packaged with the procedures with which they are associated. Drugs and radiopharmaceuticals with median costs for administration of $\$ 150$ or less were packaged. Beginning in 2003, claims data do not provide specific cost information for packaged items. We requested input from the Panel on methods for determining drug costs in the future.

Panel members were concerned that packaging the costs of
radiopharmaceuticals into procedures would result in underpayments for the service because we lack adequate data on the cost of radiopharmaceuticals. They were also concerned about creating incentives to use radiopharmaceuticals based on cost rather than clinical efficacy. The Panel recommended that we consider grouping drugs and radiopharmaceuticals into new APCs taking into account both their cost and clinical use. The Panel further recommended that, if new APCs for radionuclides are created, the descriptors should be as simple as possible and use of confusing units of measure should be limited.
Due to the packaging of radiopharmaceuticals into the APC payments for nuclear medicine procedures, we, along with commenters
have expressed concern to the Panel regarding whether the current nuclear medicine APC structure is homogeneous in terms of resource consumption. We have reviewed information about the use and cost of various radiopharmaceuticals and believe that restructuring the APCs for nuclear medicine will result in greater clinical and resource homogeneity. Therefore, we proposed to eliminate APCs 0286, 0290, 0291, 0292, 0294, and 0666 and create 20 new APCs for nuclear medicine.
Comment: We received many comments about the proposed nuclear medicine APCs. Generally, commenters supported our proposal for the new APCs but had suggestions for modifications to improve clinical and resource use homogeneity. The suggested modifications are:

- Split APC 0398 into three levels to account for differences in the number of sessions provided and type and amount of radiopharmaceutical used with these procedures.
- Split APC 0401 into two levels to account for the different number of sessions, type and amount of radiopharmaceuticals used, and whether or not ventilation imaging and perfusion imaging are part of the procedure.
- Delete codes G0273 and G0274 and use the newly created CPT codes 78804 and 79403. They recommended that we assign 78804 to a new APC 0406T, Tumor/Infection Imaging Level II and that we assign 79403 to the new APC for Radionucliide Therapy APC, created by combining proposed APCs 0407 and 0408.
- Move codes 78015, 78016, and 78018 from APC 0390 to APC 0406 because they are for metastatic tumor imaging rather than for one organ system.
- Move all of the nuclear medicine "add-on" codes into one APC to be named "Nuclear Medicine Add-On Imaging." Three of the codes, 78478, Heart wall motion add-on, 78480 Heart function add-on, and 78496, Heart function first pass add-on, are assigned to proposed APC 0399. They recommended moving the remaining add-on code, 78020, Thyroid carcinoma metastases uptake, to proposed APC 0399 with the other three add-on codes, to create an APC comprised of add-on codes with a status indicator "X."
- Move each of the codes in the series of codes, 78X99 into the appropriate APCs based on the organ system to be consistent with the proposed APC structure.
- Reassign codes 78270, 78271, and 78272 to APC 0389 because they are
non-imaging nuclear medicine procedures with resource use more similar to the procedures in APC 0389.
- Combine APCs 0390, 0391, and 0392 to create two new APCs composed of thyroid, parathyroid, and adrenal systems. They suggest that the codes should be reassigned to two levels of endocrine imaging based on the number of sessions and radiopharmaceuticals used in the procedure. The titles suggested for the new APCs are "Endocrine Level I" and "Endocrine Level II."
- Combine proposed APCs 0407 and 0408 into one APC because hospital claims data do not reflect any logical division between the two proposed APCs. Further, they request that all of the nuclear medicine therapy codes in the new APC should be paid separately since they know of no nuclear medicine therapeutic radiopharmaceutical that has costs below the proposed $\$ 150$ threshold for packaging.
- Collapse and redistribute code assignments in APCs 0404 and 0405 to create two new APCs for Level I and Level II Renal and Genitourinary Studies. They recommended assigning only one code, 78709, Kidney imaging, multiple studies, with and without pharmaceutical intervention, to the Level II APC.
Response: After careful review of the recommendations, with one exception, we concur with the commenters that their recommended modifications to the proposed APC classifications improve clinical homogeneity and payment equity. The shifts in median cost that result from the adjustments are minor in most cases and overall, the increased cost is not significant.

The one exception to our agreement with the commenters' recommendation is regarding the assignment of 78708, Kidney imaging with vascular flow and function, single study. Commenters recommended that it be assigned to APC 0404. We believe that it is more appropriately assigned to APC 0405 based on both clinical and resource use considerations.
Although we do not disagree with the commenters' suggestions, we also will not assign the new code 78804, pretreatment planning, non-Hodgkins to the APC suggested by the commenters. Instead, we will assign it to new technology APC 1508. A detailed discussion of this assignment and other issues related to Zevalin is below in section VI.B.

Thus, we will finalize the nuclear medicine APCs as shown below.

APC 0376: Cardiac Imaging Level II

| HCPCS | Description |
| :---: | :--- |
| 78473 .............. | Gated heart, multiple. <br> 78483 <br> Heart first pass, multiple. |

APC 0377: Cardiac Imaging Level III

| HCPCS | Description |
| :---: | :---: |
| $78461 \quad \ldots . \ldots \ldots \ldots$. | Heart muscle blood, mul- <br> tiple. |
| $78465 \quad \ldots \ldots \ldots . . .$. | Heart image (3D), multiple. |

APC 0378: PULMONARY IMAGING Level II

| HCPCS | Description |
| :---: | :---: |
| $78584 \ldots \ldots . . . . .$. | Lung V/Q image gas, single <br> breath. |
| 78585 | $\ldots . . . . . . . .$. |
| 78588 | L.......... | | Lung V/Q imaging gas. |
| :--- |
| 78596 |
| Lung V/Q imaging aerosol. |
| Lung differential function. |

APC 0389: NON-ImAGINg NUCLEAR Medicine

| HCPCS | Description |
| :---: | :---: |
| 78000 | Thyroid, single uptake. |
| 78001 | Thyroid, multiple uptakes. |
| 78003 | Thyroid suppress/stimuli. |
| 78190 | Platelet survival, kinetics. |
| 78191 .. | Platelet survival. |
| 78270 . | Vitamin B-12 absorption exam. |
| 78271 ............ | Vitamin B-12 absorp. exam, intrin. Fac. |
| 78272 ............ | Vitamin B-12 absorp, combined. |
| 78725 ............ | Kidney function study. |

APC 0390: Endocrine Level I

| HCPCS | Description |
| :---: | :--- |
| $78006 \ldots \ldots \ldots \ldots$. | Thyroid imaging with uptake. <br> 78010$\ldots \ldots \ldots \ldots$. |
| 78011 | $\ldots \ldots \ldots \ldots$. |
| 78099 | Thyroid imaging. | | Thyroid imaging with flow. |
| :--- |
| Endocrine nuclear proce- |
| dure. |

APC 0391: Endocrine Level II

| HCPCS | Description |
| :---: | :--- |
| $78007 \ldots \ldots \ldots \ldots$. | Thyroid image, mult <br> uptakes. |
| $78070 \ldots \ldots . . . . .$. | Parathyroid nuclear imaging. <br> 78075$\ldots . . . . . . .$. | Adrenal nuclear imaging..

APC 0393: RED CELL/PLASMA
STUDIES

| HCPCS | Description |
| :---: | :---: |
| 78110 | Plasma volume, single. |
| 78111 | Plasma volume, multiple. |
| 78120 | Red cell mass, single. |
| 78121 | Red cell mass, multiple. |
| 78122 | Blood volume. |
| 78130 | Red cell survival study. |
| 78135 | Red cell survival kinetics. |
| 78140 | Red cell sequestration. |
| 78160 | Plasma iron turnover. |
| 78162 | Radioiron absorption exam. |
| 78170 | Red cell iron utilization. |
| 78172 | Total body iren estimation. |

## APC 0394: Hepatobiliary Imaging

| HCPCS | Description |
| :---: | :---: |
| 78201 | Liver imaging. |
| 78202 . | Liver imaging with flow. |
| 78205 .. | Liver imaging (3D). |
| 78206 ............ | Liver image (3D) with flow. |
| 78215 ............ | Liver and spleen imaging. |
| 78216 | Liver \& spleen image/flow. |
| 78220. | Liver function study. |
| 78223 ............ | Hepatobiliary imaging. |

APC 0395: GASTROINTESTINAL IMAGING

| HCPCS | Description |
| :---: | :---: |
| 78230 | Salivary gland imaging. |
| 78231 | Serial salivary imaging. |
| 78232 | Salivary gland function exam. |
| 78258 | Esophageal motility study. |
| 78261 | Gastric mucosa imaging. |
| 78262 | Gastroesophageal reflux exam. |
| 78264 | Gastric emptying study. |
| 78278 ............ | Acute GI blood loss imaging. |
| 78282 | Gl protein loss exam. |
| 78290 | Meckel's divert exam. |
| 78291 | Leveen/shunt patency exam. |
| 78299 | GI nuclear procedure. |

APC 0396: BONE IMAGING

| HCPCS | Description |
| :---: | :---: |
| 78300 | Bone imaging, limited area. |
| 78305. | Bone imaging, multiple areas. |
| 78306 | Bone imaging, whole body. |
| 78315 | Bone imaging, 3 phase. |
| 78320 | Bone imaging (3D). |
| 78399 ............ | Musculoskeletal nuclear exam. |

APC 0397: VASCULAR IMAGING

| HCPCS | Description |
| :---: | :---: |
| $78445 \ldots \ldots \ldots . .$. | Venous thrombosis study. <br> 78455$\ldots . . . . . . . .$. |
|  | Venous thrombosis study. |

## APC 0399: NuClear Medicine AddON IMAGING

| HCPCS | Description |
| :---: | :---: |
| 78020 | Thyroid met uptake. |
| 78478 | Heart wall motion add-on. |
| 78480 | Heart function add-on. |
| 78496 | Heart first pass add-on. |

## apC 0400: Hematopoietic Imaging

| HCPCS | Description |
| :---: | :---: |
| 78102 | Bone marrow imaging, Itd. |
| 78103 | Bone marrow imaging, mult. |
| 78104 | Bone marrow imaging, body. |
| 78185 | Spleen imaging. |
| 78195 | Lymph system imaging. |
| 78199 | Blood/lymph nuclear exam. |

APC 0401: Pulmonary Imaging, LEVEL 1

| HCPCS | Description |
| :---: | :---: |
| 78580 | Lung perfusion imaging |
| 78586 | Aerosol lung image, single. |
| 78587 | Aerosol lung image, multiple. |
| 78591 | Vent image, 1 breath, 1 proj. |
| 78593 | Vent image, 1 proj, gas. |
| 78594 | Vent image, mult proj, gas. |
| 78599 | Respiratory Nuclear Exam. |

APC 0402: BRAIN IMAGING

| HCPCS | Description |
| :---: | :--- |
| $78600 \ldots \ldots \ldots \ldots$. | Brain imaging, Itd static. |
| 78601 | $\ldots \ldots \ldots .$. |
| 78605 | Brain imaging, Itd w/flow. |
| 78606 | $\ldots \ldots \ldots .$. |
| 78607 | Brain imaging, complete. |
| Brain imaging, compl w/flow. | Brain imaging (3D). |

APC 0402: BRAIN IMAGINGContinued

| HCPCS | Description |
| :---: | :---: |
| $78610 \ldots \ldots . . . .$. | Brain flow imaging only. <br> 78615$\ldots \ldots \ldots . .$. |
| Cerebral vascular flow <br> image. |  |
| $78699 \ldots \ldots \ldots . . .$. | Nervous system nuclear <br> exam. |

APC 0403: CSF IMAGING

| HCPCS | Description |
| :---: | :--- |
| 78630 | $\ldots \ldots \ldots \ldots .$. |
| 78635 | Cerebrospinal fluid scan. |
| 78645 | $\ldots \ldots \ldots \ldots$. |
| 78647 | CSF ventriculography. |
| 78650 | CSF shunt evaluation. |
| $78660 \ldots \ldots .$. | Cerebrospinal fluid scan. |
| CSF leakage imaging |  |

## APC 0404: Renal \& Genitourinary Studies Level I

| HCPCS | Description |
| :---: | :---: |
| 78700 | Kidney imaging, static. |
| 78701 | Kidney imaging with flow. |
| 78704 | Imaging renogram. |
| 78707 | Kidney flow/function image. |
| 78710 | Kidney imaging (3D). |
| 78715 | Renal vascular flow exam. |

APC 0405: Renal \& Genitourinary Studies Level II

| HCPCS | Description |
| :---: | :---: |
| 78708 | Kidney flow/function image. |
| 78709 | Kidney flow/function image. |
| APC 0406: TUMOR/INFECTION IMAGING |  |
| HCPCS | Description |
| 78015 | Thyroid metastases imaging. |
| 78016 ... | Thyroid metastases imaging/ studies. |
| 78018 ............ | Thyroid metastases imaging/ body. |
| -78800 | Tumor imaging, limited area. |
| 78801 | Tumor imaging, mult areas. |
| 78802 | Tumor imaging, whole body. |
| 78803 | Tumor imaging, whole body. |
| 78805 ............ | Abscess imaging, Itd area. |
| 78806 | Abscess imaging, whole body. |
| 78807 | Nuclear localization/abscess. |

## APC 0407: Radionuclide Therapy

| HCPCS | Description |  |
| :---: | :---: | :---: |
| 79000 | $\ldots \ldots \ldots \ldots .$. | Init hyperthyroid therapy. <br> Repeat hyperthyroid ther- <br> apy. |
| 79001 | $\ldots . . . . . .$. |  |

APC 0407: RADIONUCLIIDE
THERAPY-Continued

| HCPCS | Description |
| :---: | :---: |
| 79100 | $\ldots . . . . . . . .$. |
| 79200 | Hematopoetic nuclear ther- |
| apy. |  |

APC 1507: New Technology Level VII (\$500-\$600)

|  |  |
| :---: | :---: |
| $79403 \ldots \ldots . . . . .$. | Hematopoetic nuclear ther- <br> apy. |

APC 1508: TUMOR/InFECTION IMAGING Level II

| HCPCS | Description |
| :---: | :---: |
| $78804 \ldots \ldots \ldots \ldots$. | Pre-tx planning, non-Hodg- <br> kins. |

We believe that the final APC structure, which takes into account the organ(s) being examined (or treated) as well as the type and complexity of the procedure, is more homogeneous both clinically and in terms of resource consumption than the current APC structure.

## ee. Endoscopy Lower Airway

APC 0076: Endoscopy Lower Airway
A presenter to the Panel expressed concern that APC 0076 apparently violates the 2 times rule and requested that we move CPT code 31631 (bronchoscopy with tracheal stent placement) from APC 0076 and into a new APC.
The Panel suggested that a new APC comprised of the four most costly procedures in APC 0076 will result in a more homogenous grouping, and recommended that we move the following CPT codes from APC 0076 and into newly created APC 0415.

| HCPCS | Description |
| :--- | :--- |
| 31630 | Bronchoscopy dilate/fracture reduc- <br> tion. |
| 31631 | Bronchoscopy, dilate w/stent. <br> 31640 |
| 31641 | Bronchoscopy w/tumor excise. |
| Bronchoscopy, treat blockage. |  |

We proposed to accept the Panel's recommendation that we move CPT codes $31630,31631,31640$, and 31641 from APC 0076 to new APC 0415. We
received no comments disagreeing with this proposal and will adopt this recommendation for 2004.

## ff. Gastrointestinal Endoscopic Stenting Procedures

APC 0141: Upper GI Procedures
APC 0142: Small Intestine Endoscopy

APC 0143: Lower GI Endoscopy APC 0147: Level II Sigmoidoscopy

A commenter requested that we create a new APC that will be comprised of all the gastrointestinal endoscopic stent codes. The Panel agreed with the commenter's suggestion because the
resource requirements for all gastrointestinal endoscopic stents appear to be similar. The Panel recommended that we move the following CPT codes from their 2003 APCs to newly created APC 0384 for 2004:

Table 4.-HCPCS Codes to be Moved Into New APC 0384

|  | HCPCS | Description | 2003 APC | 2004 APC |
| :---: | :---: | :---: | :---: | :---: |
| 43219 |  | Esophagus endoscopy ................. | 0141 | 0384 |
| 43256 |  | Upper Gl endoscopy w/stent ......... | 0141 | 0384 |
| 44370 |  | Small bowel endoscopy w/stent .... | 0142 | 0384 |
| 44379 |  | Small bowel endoscopy w/stent .... | 0142 | 0384 |
| 44383 |  | Small bowel endoscopy ............... | 0142 | 0384 |
| 44397 |  | Colonoscopy w/stent ................... | 0143 | 0384 |
| 45387 |  | Colonoscopy w/stent ................... | 0143 | 0384 |
| 45327 |  | Proctosigmoidoscopy w/stent ........ | 0147 | 0384 |
| 45345 |  | Sigmoidoscopy w/stent ................. | 0147 | 0384 |

We proposed to accept the Panel's recommendation to move the following gastrointestinal endoscopic stent CPT codes into newly created APC 0384: 43219, 43256 (from APC 0141); 44370, 44379, 44383 (from APC 0142); 44397, 45387 (from APC 0143); 45327, 45345 (from APC 0147). We received no comments disagreeing with this proposal, and we will adopt it for 2004.
gg. Capturing the Costs of Devices That Are Packaged Into APCs
APC 0081: Non-Coronary Angioplasty or Atherectomy
APC 0083: Coronary Angioplasty and Percutaneous Valvuloplasty
APC 0104: Transcatheter Placement of Intracoronary Stents
APC 0222: Implantation of Neurological Device
APC 0223: Implantation of Pain Management Device
APC 0227: Implantation of Drug Infusion Device
APC 0229: Transcatheter Placement of Intravascular Shunts
Several commenters requested that the status indicators for the above APCs (all of which include high-cost devices) be changed from $T$ (multiple-procedure discount applies) to S (multipleprocedure discount does not apply). Two presenters to the Panel stated that hospitals do not pay less for devices when they are used in the context of a multiple-procedure claim and suggested that we apply the multiple-procedure reduction to the non-device portion of the claim only. Alternatively, these presenters recommended that we apply the discount policy only when the device cost is below a predetermined proportion of the APC cost. Another presenter to the Panel requested that APCs 0222, 0223, and 0227 be exempt
from the multiple-procedure discount policy because the cost of the devices used in these procedures makes up more than 50 percent of the APC cost.

We sought the Panel's input as to whether there are situations in which we should not apply our multiple procedure discount policy. The Panel recommended no changes to the status indicators for any of the device-related APCs discussed because they were concerned that exemptions from the discount policy could result in incentives to use more devices than necessary. However, the Panel asked that we analyze our data to determine if we may be underpaying for devices when the multiple procedure discounting policy is applied and recommended that we develop some methodology to track device costs. In section II.B of this preamble, we discuss the issue of device costs and multiple procedure reductions and our progress to date in developing "combination APCs" to address the Panel's concern.
hh. Discussion of Ways To Increase the Use of Multiple Claims To Set APC Payment Rates
A presenter to the Panel suggested that we use dates of service on multiple procedure claims to increase the number of claims we use to set payment rates. Another presenter suggested that we could further increase the number of multiple procedure claims that could be used to set payment rates by ignoring codes with status indicator K. Other suggestions were to exclude from consideration those APCs with small dollar values and to create a new code or APC specifically for the insertion and removal of devices.
The Panel recommended that our staff explore ways to increase the number of
claims used to set payment rates, including the following methodologies: sort multiple claims by date of service; exclude codes with $K$ status indicator from evaluation; exclude those APCs with nominal costs (the definition of "nominal" can be determined by modeling a variety of possible dollar amounts). In addition, the Panel recominended that we not create G codes as part of the effort to use multiple procedure claims for developing relative weights. If new codes are needed, the Panel suggested that our staff work with the American Medical Association's CPT Board to identify possible new codes.

## B. Other Changes Affecting the APCs

1. Limit on Variation of Costs of Services Classified Within an APC Group

Section $1833(t)(2)$ of the Act provides that the items and services within an APC group cannot be considered comparable with respect to the use of resources if the highest cost item or service within an APC group is more than 2 times greater than the lowest cost item or service within the same group. However, the statute authorizes the Secretary to make exceptions to this limit on the variation of costs within each APC group in unusual cases such as low volume items and services. No exception may be made in the case of a drug or biological that has been designated as an orphan drug under section 526 of the Federal Food, Drug, and Cosmetic Act.

Taking into account the proposed APC changes discussed in relation to the APC Panel recommendations in section II.A. 4 of this preamble and the use of 2002 claims data to calculate the
median cost of procedures classified to APCs, we reviewed all the APCs to determine which of them would not meet the 2 times limit. We use the following criteria when deciding whether to make exceptions to the 2 times rule for affected APCs:

- Resource homogeneity.
- Clinical homogeneity.
- Hospital concentration.
- Frequency of service (volume).
- Opportunity for upcoding and code fragmentation. For a detailed discussion of these criteria, refer to the April 7, 2000 final rule ( 65 FR 18457).

The following table contains the final list of APCs that we exempt from the 2 -times rule based on the criteria cited above. In cases in which a recommendation of the APC Panel appeared to result in or allow a viblation of the 2 times rule, we
generally accepted the Panel recommendation because Panel recommendations were based on explicit consideration of resource use, clinical homogeneity, hospital specialization, and the quality of the data used to determine payment rates.
The median cost for hospital outpatient services for these and all other APCs can be found at Web site: http://www.cms.hhs.gov.
table 5.-APCS Exempted From 2 Times Rule

|  | Final Rule APC | Description |
| :---: | :---: | :---: |
| 0006 |  | Level I Incision \& Drainage. |
| 0012 |  | Level I Debridement \& Destruction. |
| 0018 |  | Biopsy of Skin/Puncture of Lesion. |
| 0019 |  | Level I Excision/Biopsy. |
| 0020 |  | Level II Excision/Biopsy. |
| 0043 |  | Closed Treatment Fracture Finger/Toe/Trunk. |
| 0046 |  | Open/Percutaneous Treatment Fracture or Dislocation. |
| 0058 | . | Level I Strapping and Cast Application. |
| 0060 |  | Manipulation Therapy. |

| 0402 |  | Brain Imaging. |
| 0404 |  | Renal and Genitourinary Studies Level I. |

Table 5.-APCS Exempted From 2 Times Rule-Continued

| Final Rule APC | Description |
| :---: | :---: |
| 0407 | Radionuclide Therapy. |
| 0409 | Red Blood Cell Tests. |
| 0688 | Revision/Removal of Neurostimulator Pulse Generator Receiver. |
| 0692 | Electronic Analysis of Neurostimulator Pulse Generators. |
| 0698 | Level II Eye Tests \& Treatments. |
| 0699 | Level IV Eye Tests \& Treatments. |
| 1528 | New Technology-Level XXVIII (\$5000-\$5500). |

2. Procedures Moved From New Technology APCs to Clinically Appropriate APCs

In the November 30, 2001 final rule ( 66 FR 59903), we made final our proposal to change the period of time during which a service may be paid under a new technology APC. Beginning in 2002, the policy is to retain a service within a new technology APC group until we have acquired adequate data that allow us to assign the service to a clinically appropriate APC. This policy allows us to move a service from a new technology APC in less than 2 years if sufficient data are available, and it also allows us to retain a service in a new technology APC for more than 3 years if sufficient data upon which to base a decision for reassignment have not been collected.

In the context of new technology procedures, we create HCPCS codes for services only. We do not create HCPCS codes for equipment that is used in the course of providing an item or service (except in the case of "C" codes for devices that meet the criteria for transitional pass-through payments). Equipment that is used to provide an item or service is not separately coded because it is a resource required to furnish the service. Like other resources that are required to furnish a service (for example, cost of a room, cost of staff, cost of supplies), the hospital should show charges either as part of its charge for the procedure or with a revenue code.

As described below, we proposed to delete four HCPCS codes that are currently paid in new technology APCs. We believed that these four HCPCS codes do not conform to our current policy to not create HCPCS codes for equipment used to provide a service. In addition, we stated that there soon would exist, CPT codes to describe all of the services being furnished, including any equipment that is needed to perform them, so we believe it is appropriate at this time to delete the HCPCS codes. The HCPCS codes which we proposed to delete effective January 1, 2004 were:

C1088; Laser Optic Treatment System, Indigo Laseroptic Treatment System C9701; Stretta System
C9703; Bard Endoscopic Suturing System, and C9711; H.E.L.P. Apheresis System.
A full description of these HCPCS is available in the proposed rule ( 67 FR 47978).

We received no comments in response to this proposal. However, we have determined that our proposal to delete codes C9701 and C9703 was in error. Upon further review of this issue, we have determined that these codes were in fact established to represent complete procedures. Therefore, we will retain codes C9701 and C9703.

Comment: A provider of treatment planning software submitted several comments regarding this service. In their first set of comments on the 2003 OPPS final rule with comment, the commenter agreed with our decision to create a new G -code, G0288, for their product, Preview, and other similar treatment planning software and to assign this service to new technology APC 0975. G0288 was created and assigned to new technology APC 0975 for the 2003 final rule and was subject to comment after its publication. In their comments in response to the 2003 final rule with comment, they indicated that the $\$ 625$ payment rate associated with new technology APC 0975 appropriately reflected the costs of Preview to providers. However, this party recommended that we pay for G0288 under certain circumstances. These included payment only for treatment planning imaging services that are FDA approved; that is, to follow FDA's determinations concerning which imaging software programs are sufficiently comprehensive and accurate. Further, the commenter recommended that we pay for both presurgical and post-surgical imaging, claiming optimum effectiveness of the related endovascular repair procedures only occurs when imaging studies are performed both before and after surgery. Third, this party recommended that we use G0288 in the OPPS but not in other Medicare payment systems until cost
data were more complete. The commenter believed that we should encourage use of the CPT process to develop codes that describe a wide range of applications for the treatment planning imaging that may develop.

The commenter also commented on our August 12, 2003 proposed rule, in which we proposed assigning G0288 to new APC 0414, with a payment rate of $\$ 260.65$. This commenter stated that the proposed payment is inadequate and based on flawed, imputed cost data. It also asserted that the descriptors for APC 0414 and G0288 do not restrict the use of this code to services that meet the "recognized standards and specifications" for three-dimensional computer-aided measurement planning simulation ("3D-CAMPS") services and recommended that we revise the proposed payment for APC 0414 based on hospital acquisition cost data that they provided. The commenter also recommended that we create a revenue code specifically for APC 0414 to enable more rational charge determination for the service and that we revise the descriptors for APC 0414 and G0288 to ensure that the codes only are used for the 3D-CAMPS systems, and to clarify that the service may be applied pre- or post-surgically. The recommended descriptor is: "Three-dimensional computer-aided measurement simulation (3D-CAMPS) services for pre-surgical and post-surgical imaging."

Response: We proposed to move G0288 from new technology APC 0975 to APC 0414 because we believe that we had sufficient 2002 claims data for our analysis. The predecessor C-code for Preview, C9708, was reported approximately 1,300 times in 2002, with a median cost of $\$ 272.48$. However, we have reviewed the hospital cost data that the commenting party provided, and believe that there may be some claims in our data that understate the cost of the treatment planning software. We have decided to give equal weight to the median cost based on our claims data and the median cost of $\$ 625$ provided by the commenter, based on its analysis. Therefore, we are establishing the appropriate cost
amount as $\$ 448.74$. As a result, we are assigning G0288 to new technology service APC 1506, for a payment rate of $\$ 450.00$. We are continuing the assignment of G0288 to a new technology APC because this is still a relatively new procedure and we still have concerns regarding our cost data.
We agree that this can be used for treatment planning prior to surgery and for post-surgical monitoring and have revised the code descriptor to clarify this point. The descriptor for this code is revised as follows: G0288 Reconstruction, computed tomographic angiography of aorta for preoperative planning and evaluation post vascular surgery. We assume that hospitals providing this service will abide by the FDA labeling requirements for equipment used in providing this service.
3. Revision of Cost Bands and Payment Amounts for New Technology APCs

We proposed to implement a comprehensive restructuring of all the new technology APCs. First, the cost intervals in the current new technology APCs are inconsistent, ranging from $\$ 50$ to $\$ 1,500$. Secondly, as the number of procedures assigned to new technology APCs increases, we believe that narrower cost bands are required to avoid inaccurate payment for new technology services. The increased number of new technology APCs that would result from narrowing the cost bands cannot be accommodated within the current sequence of available APC numbers. Therefore, we proposed to dedicate two new series of APC numbers to the restructured new technology APCs, which would allow us to narrow the cost bands and also afford us flexibility in creating additional bands as future needs may dictate.

We proposed to establish cost bands from $\$ 0$ to $\$ 100$ in increments of $\$ 50$, from $\$ 100$ through $\$ 2,000$ in intervals of $\$ 100$, and from $\$ 2.000$ through $\$ 6,000$ in intervals of $\$ 500$. We believe that these intervals would allow us to price new technology services more appropriately and consistently. We also propose to retain two parallel sets of new technology APCs, one with status indicator " $S$ " and the other with status indicator "T." We solicited comments on the hierarchy of cost levels of the restructured new technology APCs.

The final list of restructured new technology APCs is in Addendum A.

We received a number of comments in support of this proposal to restructure the new technology APC bands. Therefore, we will finalize our proposal.
4. Creation of APCs for Combinations of Device Procedures
In the August 12, 2003 proposed rule, we discussed data development that we had undertaken to create median costs for combinations of HCPCS codes in different APCs that we believed were frequently performed on the same day. We focused our work on pairs of APCs, one of which contained a service that required an expensive device. See 68 FR 47979 for a complete description of the data development. We undertook this activity to see if creating larger classification groups of this type might increase the number of multiple procedure claims that we could use to set payment rates for these services. We also thought that the analysis might yield useful information regarding the appropriateness of the multiple procedure reduction for combinations of services that include at least one APC with an expensive device, that are commonly performed on the same date. In many cases, we found that the combination APC medians closely approximated the median that results under the current policy (that is, the sum of single medians for each APC, reducing the median for the lower cost procedure by 50 percent). In other cases, the data revealed combination APC median costs that were considerably higher or lower than under our current policy.

We concluded in the proposed rule that the results of the study provided no compelling reason to change our payment policy. We asked for comment on all aspects of the methodology, analysis, and payment options. We also asked for discussion of how we could use more multiple procedure claims were we not to create combination APCs and for an explanation of why external data should be used in lieu of our single or multiple procedure claims data to set median costs for APCs with large device costs. However, we did not propose to create combination APCs or to make payment based on the combination APC medians for 2004.

We received only a few comments on the combination APC methodology and these were in the context of why we should not apply multiple procedure reductions to specific combinations of APCs. See the discussion of multiple procedure reduction in V.D. 2 for a summary of these comments and our responses.
III. Recalibration of APC Weights for CY 2004

Section 1833(t)(9)(A) of the Act requires that the Secretary review and revise the relative payment weights for

APCs at least annually, beginning in 2001. In the April 7, 2000 final rule ( 65 FR 18482), we explained in detail how we calculated the relative payment weights that were implemented on August 1, 2000 for each APC group. Except for some reweighting due to APC changes, these relative weights continued to be in effect for CY 2001. (See the November 13, 2000 interim final rule ( 65 FR 67824 to 67827)).

To recalibrate the relative APC weights for services furnished on or after January 1, 2004 and before January 1, 2005, we used the same basic methodology that we described in the April 7, 2000 final rule. That is, we recalibrated the weights based on claims and cost report data for outpatient services. We used the most recent available data to construct the database for calculating APC group weights. For the purpose of recalibrating APC relative weights for CY 2004, the most recent available claims data are the approximately 127 million final action claims for hospital outpatient department services furnished on or after April 1, 2002 and before January 1, 2003. We eliminated 2.6 million claims for bill types other than OPPS bill types and claims for services furnished in Maryland, Guam, and the Virgin Islands. We matched the remaining claims that were paid under the OPPS to the most recent cost report filed by the individual hospitals represented in our claims data. We were left with about 75 million claims for which we could identify cost report data. The APC relative weights continue to be based on the median hospital costs for services in the APC groups.

## A. Data Issues

## 1. Period of Claims Data Used

We used claims for the period beginning April 1, 2002 through and including December 31, 2002 as the basis for the CY 2004 OPPS. The statute requires that we take into account new cost data and other relevant information and factors in reviewing and revising the weights, and we believe that this period will give us the most recent costs. We chose not to include the claims for the period beginning on January 1, 2002 through March 31, 2002 because they were used to set the payment rates for the 2003 OPPS and we believe that the most recent 9 months of claims data will result in payment rates that are most representative of the current relative costs of hospital outpatient services.

Comment: Some commenters supported our use of claims for this 9month period for setting the weights for
the 2004 OPPS. Other commenters wanted us to use external data in lieu of claims data for specified APCs because they believed that the payments that result from the median costs developed using claims data were inadequate. Other commenters objected to the use of 2002 claims data because they stated that 2002 costs would not be an appropriate proxy for the relative costs of drugs, biologicals, and radiopharmaceuticals in 2004 and they urged us to use hospital acquisition costs instead of claims data.

Response: We used 2002 claims data for services furnished from April 1, 2002 through December 31, 2002 as the basis for the relative weights used to create payment amounts for the 2004 OPPS. Our established policy is to use the most recent claims data available. For the August 12, 2003 proposed rule and this final rule, those data are for services in the last 3 quarters of 2002. These data are used to calculate median costs upon which to base our relative weights. The OPPS seeks and uses relative costs to create weights that are used to distribute a fixed amount of Medicare payment for OPPS services appropriately among hospitals. Therefore, the accuracy of the relativity is more important than whether the median costs derived from the claims data accurately reflect the costs of the services. See section III.B for our discussion of the use of external data.

## 2. Treatment of "Multiple Procedure"

 ClaimsSince the inception of the OPPS, we have received many requests asking that we ensure that the data from claims that contain charges for multiple procedures are included in the data from which we calculate the OPPS relative payment weights. Those making the requests believe that relying solely on singleprocedure claims to recalibrate APC: weights fails to take into account data for many frequently performed and complex procedures, particularly those commonly performed in combination with other procedures.

We agree that it is desirable to use the data from as many claims as possible to recalibrate the relative payment weights, including those with multiple procedures. For CY 2003, we identified a number of multiple-procedure claims that could be treated as single-procedure claims, enabling us to greatly increase the number of claims used to develop the APC payment weights. However, there remain several inherent features of multiple procedure claims that prevent us from using all of them to recalibrate the payment weights. We discussed these obstacles in detail in the August

9, 2002 proposed rule (67 FR 52092, 52108 through 52111), and the November 1, 2002 final rule ( 67 FR 66718,66743 through 66746).
To enable us to use more claims in the creation of median costs upon which our payment weights and rates are based, we proposed several changes to how we use claims data for the CY 2004 OPPS. Specifically; we proposed to expand the number of HCPCS codes that we "ignore" for the purpose of creating pseudo single claims from claims that contain other separately payable HCPCS codes. We also looked at dates of service on packaged HCPCS codes and packaged revenue centers, and proposed where possible, to attribute the charges to major, separately payable HCPCS codes based on the codes' dates of service. We also considered creating combination APCs for procedures that have a significant device component. Our complete discussion of the use of data to set the weights for CY 2004 OPPS follows in section III.B of this preamble.
Expansion of the List of Codes To Be Ignored in Creation of Single Claims

For CY 2003 OPPS, we ignored the presence of HCPCS codes 93005, 71010, and 71020 to create pseudo-single claims where there was only one remaining separately paid, major HCPCS code on the claim. Ignoring these codes enabled us to attribute the costs of packaged HCPCS codes and packaged revenue centers to the remaining separately paid, major HCPCS codes and, thereby, create a useable psuedo single claim. We did this because we believed that the charges found in the packaged HCPCS or packaged revenue centers would be appropriately associated with the only other separately payable HCPCS that remained on the claim once the ignored codes were bypassed.

For CY 2004 OPPS, we proposed to expand the list of HCPCS codes to be ignored for purposes of creating pseudosingle claims. On claims that contain other separately payable HCPCS, we proposed to bypass the HCPCS codes in the APCs identified in Table 6. As with the previously ignored HCPCS codes 93005, 71010, and 71020, we believe that there are additional codes that are highly unlikely to have charges that are found in packaged HCPCS or in packaged revenue centers. Therefore, we believe that they also can be ignored for the purpose of creating pseudo-single claims from the remaining charges on the claim. We solicited comments on the proposed methodology to create pseudo-single claims, on the list of codes that we proposed to ignore (Table
6), and whether there are other low-cost services that we could ignore using this methodology. We also requested comments on whether we should use the charges for the codes in the APCs in Table 6 to create pseudo singles for these codes from these claims.

Use of Dates of Service To Create Single Claims

For CY 2004, we used dates of service on HCPCS codes and on packaged revenue centers to attribute charges to a major payable HCPCS code where the dates of service match. We could only use this approach where there are different dates of service for the separately payable major HCPCS codes. Where there are multiple major payable HCPCS codes on a claim with the same date, we could not use this approach because there was no way to tell to which major payable HCPCS code the charges from the packaged HCPCS or packaged revenue center belonged. Moreover, where the hospital did not provide dates for all packaged revenue centers, we could not attribute charges based on the date of service.

## Use of Single Procedure Claims

Comment: Some commenters objected to the use of single procedure claims as the basis for setting weights for all APCs. The commenters are concerned that even with the changes we made to use more claims for 2004 OPPS, some of the APCs had medians based on less than 10 percent of their true claims volume. They believe that this methodology results in the use of claims only for simple, low-cost cases from small, relatively non-busy centers with low levels of technological complexity and inappropriately low costs and charges. They urged us to use external data, whether proprietary or not, in place of the claims-derived medians when the medians would otherwise be based on a small number of claims.

Some commenters urged us to ignore codes for procedures performed on the same day as procedures of interest to them and to package all revenue center charges and charges for packaged HCPCS codes into the code for which they were seeking a median. Some commenters gave us relatively elaborate strategies for creating pseduo-single claims out of multiple procedure claims for particular services or groups of services that were of interest to them. Some of these related to special packaging for chemotherapy services and nuclear medicine services. The commenters urged us to model our data for the 2005 OPPS according to the specifications they provided.

Response: We would certainly prefer to use all claims in the setting of weights for APCs, if it were possible to do so validly. However, we continue to be plagued by our inability to allocate revenue center charges when there are multiple major procedure codes for services performed on the same day. We are unable to determine how to accurately split some costs (for example, recovery room time) among the major procedures. We have received no comments that offer alternatives that would enable us to do so with confidence.

We did not accept the service-specific strategies for acquiring more single claims that were submitted in comments because none of them could be generalized to the entire claims population in such a way that we could be sure that they would not distort the relativity of all services. We set weights for hundreds of APCs in this system and we think it is important that the same rules governing creation of pseudo single claims from multiple procedure claims be applied across all services so that packaging occurs uniformly and the relativity of services is maintained. It is a practical impossibility to have different strategies for creating pseudo singles for each category of services. We did not use the line items that were ignored in the calculation of medians for the APC into which they would fall because we lacked confidence that they would accurately represent the full cost of the service. We asked for comments on this in the proposed rule. Based on the comments that indicate that the data for these line items should be used in median setting, we expect to use these line items for median setting for the 2005 proposed rule.

## APCs to be Ignored To Create More Single Claims

Comment: Commenters supported the expansion of the list of APCs that we ignored to create single procedure claims from multiple procedure claims to enable us to use more claims data in weight setting. A commenter asked that we confirm that the line items that were ignored to create pseudo-single claims (See Table 6) are used in the weight setting process. A commenter asked that we implement the combination APC approach as a way of using more claims data for multiple procedure claims. One commenter asked that we add evaluation and management codes to the list of codes ignored for purposes of creating pseudo-singles. Other commenters provided lists of additional codes that could be ignored to create more pseudo-single claims.

Commenters also supported the use of dates of service on lines with revenue code charges where they could be used to attribute charges to HCPCS codes for weight setting. Some commenters advised that we should use the date of service aggregation at the beginning of the pseudo-single claim creation to achieve the best effects. Some commenters asked that we require all hospitals to use dates of service on all lines (but not before July 1, 2004), even where only revenue codes are on the lines, so that more claims could be used in future years.
Several commenters asked that we eliminate the requirement for series bills for certain services if we require a date of service for each line because the claim will grow in size as charges for multiple dates of service that are now combined on a single line with no date of service will now have to be split into multiple lines to show the date of service. The commenters fear that the increase in the lines on the claim may result in errors on the claim and there may be cashflow problems if more clains are returned to the provider. The commenters indicated that delays in payment for series bills covering 30 days of service are significant.

Response: For the 2004 OPPS, we did make progress in using more claims by looking to the dates on revenue center charges, where they exist, to assign them to a single major procedure on the same date. We applied the date of service criteria before we ignored APCs to create single claims. Moreover, we were able to create more single procedure claims by ignoring procedures for which we thought no revenue center charges or packaged HCPCS charges would be appropriately assigned. We appreciate the information provided in comments and hope that the public will continue to furnish us with an expanded list of codes that they believe can be considered "stand alone" codes, which we could properly ignore in creating pseudo single claims from claims containing multiple major procedures. We did not add evaluation and management service codes to the list because we believe that drugs and supplies are often used during such services and that it would not be correct to assume that all of the supply and drug charges on the claim were for items and services used with the procedure that also is billed also on the same claim. We would like to further explore the issue of which claims to ignore for pseudo single creation with the APC Panel in its winter meeting and to seek the Panel's views on the specific code to be added to the list of codes to be ignored for this purpose.

While we did not apply the combination APC approach, we expect to continue to explore whether this would, upon further refinement, have value in establishing correct weights for procedures performed in combination with one another. We hope to improve both of these processes next year and to develop other methods of using multiple procedure claims.
We did not use the line items for the HCPCS codes we ignored in the calculation of medians for those HCPCS codes. We asked for public comment on the issue. In view of the public comments supporting the concept of ignoring certain codes for creation of pseudo singles and supporting the validity of using these line items in the median setting for these codes, we will propose to use them for median setting for the 2005 proposed rule.

Our requirement for series bills creates efficiencies in claims processing that enable us to provide better provider service. In view of the decision to not implement the drug administration option, which would have required coding of all drugs, and seemed to be the impetus for the comment, we do not expect to revise our series bill policy.

## B. Description of Our Calculation of Weights for CY 2004

The methodology we followed to calculate the APC relative payment weights proposed for CY 2004 is as follows:

- We excluded from the data claims for those bill and claim types that would not be paid under the OPPS (for example, bill type 72X for dialysis services for patients with end-stage renal disease (ESRD)).
- We eliminated claims from hospitals located in Maryland, Guam, and the U.S. Virgin Islands.
- Using the most recent available cost report from each hospital, we converted billed charges to costs and aggregated them to the procedure or visit level first by identifying the cost-to-charge ratio specific to each hospital's cost centers ('"cost center specific cost-to-charge ratios" or CCRs) and then by matching the CCRs to revenue centers used on the hospital's CY 2001 outpatient bills. The CCRs include operating and capital costs but exclude items paid on a reasonable cost basis.
- We eliminated from the hospital CCR data 287 hospitals that we identified as having reported charges on their cost reports that were not actual charges (for example, a uniform charge applied to all services). Of these, 206 hospitals had claims data.
- We eliminated from our data claims for critical access hospitals that are not
paid under OPPS and whose claims are therefore not suitable for use in setting weights for services paid under OPPS.
- We calculated the geometric mean of the total operating CCRs of hospitals remaining in the CCR data. We removed from the CCR data 56 hospitals whose total operating CCR deviated from the geometric mean by more than three standard deviations.
- We excluded from our data approximately 3.11 million claims submitted by the hospitals that we removed or trimmed from the hospital CCR data.
- We matched revenue centers from the remaining universe of claims to hospital CCRs.
- We separated the remaining claims that we had matched with a cost report into the following three distinct groups: (1) Single-procedure claims; (2) multiple-procedure claims; and (3) claims on which we could not identify
at least one OPPS covered service. Single-procedure claims are those that include only one HCPCS code (other than laboratory and incidentals such as packaged drugs and venipuncture) that could be grouped to an APC. Multipleprocedure claims include more than one HCPCS code that could be mapped to an APC. Dividing the claims yielded approximately 24.43 million singleprocedure claims and 16.86 million multiple-procedure claims.
We converted 9.833 million multipleprocedure claims to single-procedure claims using the following criteria: (1) If a multiple-procedure claim contained lines with a HCPCS code in the pathology series (that is, CPT 80000 series of codes), we treated each of those lines as a single claim. (2) For multipleprocedure claims with a packaged HCPCS code (status indicator " N ") on the claim, we ignored line items for preoperative procedures and for those
services in the APCs identified in Table 6. These are services with payment amounts below $\$ 50$ (under the CY 2003 OPPS) for which we believe the charge represents the totality of the charges associated with the service (that is, that there are no packaged HCPCS or packaged revenue centers attributable to the service). If only one procedure (other than HCPCS codes in Table 6) existed on the claim, we treated it as a single-procedure claim. (3) If the claim had no packaged HCPCS codes and if there were no packaged revenue centers on the claim, we treated each line with a procedure as a single-procedure claim if billed with single units. (4) If the claim had no packaged HCPCS codes but had packaged revenue centers for the procedure, we ignored the line item for codes in the APCs identified in Table 6. If only one HCPCS code remained, we treated the claim as a single-procedure claim.

Table 6.-APCS That Were Ignored To Create Pseudo Single Procedure Claims

|  | APC Description | Status indicator |
| :---: | :---: | :---: |
| 0001 | Level I Photochemotherapy | S |
| 0060 | Manipulation Therapy | S |
| 0077 | Level I Pulmonary Treatment | S |
| 0099 | Electrocardiograms | S |
| 0215 | Level I Nerve and Muscle Tests | S |
| 0215 | Level I Nerve and Muscle Tests | S |
| 0230 | Level I Eye Tests \& Treatments | S |
| 0260 | Level I Plain Film Except Teeth .......................................... | X |
| 0262 | Plain Film of Teeth | X |
| 0271 | Mammography ................................................................. | S |
| 0341 | Skin Tests and Miscellaneous Red Blood Cell Tests ............. | X |
| 0342 | Level I Pathology ............................................................. | X |
| 0343 | Level II Pathology ............................................................ | X |

| 0345 | Level I Transfusion Laboratory Procedures .......................... | X |
| 0364 | Level I Audiometry ........................................................... | X |
| 0367 | Level I Pulmonary Test | X |
| 0669 | Digital Mammography ....................................................... | S |
| 0690 | Electronic Analysis of Pacemakers and other Cardiac Devices. | S |
| 0706 | New Technology-Level I (\$0-\$50) .................................... | S |

In addition, we assessed the dates of service for HCPCS codes and packaged revenue centers on each claim that contained more than one major code. Where it was possible to attribute charges for packaged HCPCS and packaged revenue centers to HCPCS codes for major procedures by matching unique dates of service, we did this and created single claims by packaging charges into the charge for the major service on the same date. We were only able to do this if the multiple major procedures had different dates of service and if there were dates of service on all of the packaged revenue centers. Dates of service on revenue centers are not required and, therefore, only claims
from hospitals that submitted dates of service on revenue centers in CY 2002 could be used in this process for maximizing the number of singleprocedure claims to be used for weight setting.

- To calculate median costs for services within an APC, we used only single-procedure bills and those multiple-procedure bills that we converted into single claims. If a claim had a single code with a zero charge (that would have been considered a single-procedure claim), we did not use it. As we discussed in section III.A. 2 of this final rule, we did not use multipleprocedure claims that billed more than one separately payable HCPCS code
with charges for packaged items and services such as anesthesia, recovery room, or supplies that could not be reliably allocated or apportioned among the primary HCPCS codes on the claim. We have not yet developed what we regard as an acceptable method of using multiple procedure bills to recalibrate APC weights that minimizes the risk of improperly assigning charges to the wrong procedure or visit.

For APCs in Table 7, we required that there be a C code on the claim for the claim to be used. These APCs require the use of a device in the provision of the service. Moreover, in 2002, hospitals were required to bill the C code in order for the device to receive pass-through
payment for the device. Therefore, if no C code was billed on the claim, we
presumed that the claim was incorrectly coded, and we did not use it. For some
of these APCs, we further required that specific devices be on the claim.

Table 7.-APCS for Which a HCPCS for a Device Was Required To Be on a Claim Used for Weight Setting

- For each single-procedure claim, we calculated a cost for every billed line item charge by multiplying each revenue center charge by the appropriate hospital-specific CCR. We used the most recent settled or submitted cost reports. Using the most recent "submitted to settled ratio," we adjusted CCRs for the submitted cost reports but not the settled ones. If an appropriate cost center did not exist for a given hospital, we crosswalked the revenue center to a secondary cost center when possible, or used the hospital's overall CCR for outpatient department services. We excluded from this calculation all charges associated with HCPCS codes previously defined as not paid under the OPPS (for example, laboratory, ambulance, and therapy services). We included all charges associated with HCPCS codes that are designated as packaged services
(that is, HCPCS codes with the status indicator of " N ").
- To calculate per-service costs, we used the charges shown in revenue centers that contained items integral to performing services. Table 8 contains a list of the revenue centers that we packaged into major HCPCS codes when they appeared on the same claim. This is a change to the packaging of revenue centers by category of service that had been done since the inception of the OPPS in the April 7, 2000 final rule ( 65 FR 18457). In all prior years of the OPPS, we had specific subsets of revenue centers that we packaged into major HCPCS codes based on the type of service we assigned to the HCPCS code for this purpose. For example, we had a set of revenue centers that could be packaged into visit codes and a different, but overlapping, set of revenue centers that could be packaged
into surgery codes. For 2004 OPPS, we converted these categories to a single set of revenue codes (see Table 8) that would be packaged into the major HCPCS code with which it appears on a claim. We believe that this will increase the likelihood that the total charge for the major HCPCS code will capture all of the costs attributed to the services furnished. Table 8 lists packaged services by revenue center that we are proposing to use to calculate per-service costs for outpatient services furnished in CY 2004.

## TABLE 8.-PaCkaged Services by Revenue Code

| Revenue code | Description_ |

- We standardized costs for geographic wage variation by dividing the labor-related portion of the operating and capital costs for each billed item by the proposed FY 2004 hospital inpatient prospective payment system (IPPS) wage index published in the Federal Register on May 9, 2002 (67 FR 31602). We used 60 percent to represent our estimate of that portion of costs attributable, on average, to labor. We have used this estimate since the inception of the OPPS and continue to believe that it is appropriate. (See the April 7, 2000 final rule ( 65 FR 18496) for a complete description of how we derived this percentage).
- We summed the standardized laborrelated cost and the nonlabor-related cost component for each billed item to derive the total standardized cost for each procedure or medical visit.
- We removed extremely unusual costs that appeared to be errors in the data using a trimming methodology analogous to what we use in calculating the diagnosis-related group (DRG) weights for the hospital IPPS. That is, we eliminated any bills with costs outside of three standard deviations from the geometric mean.
- After trimning the procedure and visit level costs, we mapped each procedure or visit cost to its assigned APC, including, to the extent possible, the proposed APC changes.
- We calculated the median cost for each APC.
To develop the median cost for observation (APC 339, HCPCS code G0244), we selected claims containing HCPCS code G0244 (Observation care provided by a facility to a patient with CHF, chest pain, or asthma, minimum eight hours, maximum forty-eight hours) that also showed one or more of the ICD-9 (International Classification of Diseases, Ninth Edition) diagnosis codes required for payment of APC 339. We ignored other separately payable codes so that the claims with G0244 would not be excluded for having multiple major procedures on a single claim. We packaged the costs of allowable revenue centers and HCPCS codes with status indicator " N " into the cost of G0244, and trimmed as was done for the calculation of the median costs for other APCs.
- Using the median APC costs, we calculated the relative payment weights for each APC. As in prior years, we scaled all the relative payment weights to APC 0601, Mid-level clinic visit, because it is one of the most frequently performed services in the hospital outpatient setting. We assigned APC 0601 a relative payment weight of 1.00 and divided the median cost for each APC by the median cost for APC 0601 to derive the relative payment weight for each APC. Using 2002 data, the median cost for APC 0601 is $\$ 58.78$.

Section 1833(t)(9)(B) of the Act requires that APC revisions, relative payment weight revisions, and wage index and other adjustments be made in a manner that ensures that estimated aggregate payments under the OPPS for 2004 are neither greater than nor less than the estimated aggregate payments that would have been made without the changes. To comply with this requirement concerning the APC changes, we compared aggregate payments using the CY 2003 relative weights to aggregate payments using the CY 2004 proposed weights. Based on this comparison, we made an adjustment of 0.981635942 to the weights. The weights that we developed for 2004 OPPS, which incorporate the recalibration adjustments explained in this section, are listed in Addendum A and Addendum $B$.

## Impact of Allocation of Equipment and

 Capital CostsComment: Several commenters indicated that the weight setting methodology may have a disproportionately adverse effect on procedures performed in departments with higher medical equipment and capital costs such as radiology and nuclear medicine. The commenters indicated that the capital costs incurred by these departments are generally spread among all hospital departments on a square foot or other basis, rather than being specifically allocated to the departments that incur the costs involved. This would distort the cost to charge ratios for these departments, resulting in under-weighting of the APCs for the services they furnish. Commenters indicated that we recognized this in the preamble to the 2000 OPPS rule (65 FR 18485, April 7, 2002) but indicated that it did not have the data necessary to make the appropriate adjustment due to hospital reporting processes. The commenter indicated that it would be appropriate for us to re-evaluate mechanisms that could be used to ameliorate the distortion.

Response: We recognize that the allocation of capital and equipment costs to revenue centers that do not use the equipment could distort cost to charge ratios for the revenue centers that use the equipment (and presumably whose charges reflect those costs). It is not clear how cost to charge ratios could be adjusted for such allocations. However, for the 2005 OPPS, we hope to explore the effect and impact of basing relative weights on relative hospital charges, rather than costs. If weights are based on relative charges, then presumably, the charges for services with high cost equipment and capital expenses would reflect those costs relative to other services without such costs.

## Dates of Service on Revenue Code Lines

Comment: Commenters supported requiring dates of service on lines with revenue code charges but asked that the requirement not be enforced until June 2004 to enable hospitals to have sufficient time to adjust their systems to provide this information.

Response: Subsequent to the proposed rule, we learned that the X 12 N 837 standard transaction with which covered entities had to be in compliance on October 16, 2003, requires a date of service on each line item containing a charge.

## Single Revenue Code List for Packaging

Comment: One commenter supported the use of a single revenue code list for packaging costs into separately paid HCPCS codes. The commenter indicated that this change would result in more accurately attributing costs to services. Another commenter objected to our proposed changes for packaging revenue centers. This commenter is concerned that the use of a single set of revenue codes for packaging into the major procedure on a claim may inappropriately allocate charges not associated with the major service on the claim. For example, the commenter stated that revenue code 254 and revenue code 255 should continue to map to a radiological APC, and charges in these revenue centers should not be assigned to a major non-radiological procedure.
Response: We proposed to combine the multiple lists of revenue codes into one because there was significant overlap in them and our physicians believed that the risk of not picking up appropriate charges was greater than the risk of picking up charges that were not appropriate. In the case cited by the commenter, we are depending on hospital billing and our reliance on single procedure claims to preclude us
from packaging a charge for a radiological service into a HCPCS code for a non-radiological service. We have never had a complaint that we have packaged more costs than were appropriate into a HCPCS code, although we frequently are told that we neglected to pick up all related charges. For the final rule, we retained the single set of revenue codes for packaging into separately payable major HCPCS codes.

## Need for Stability in Relative Weights

Comment: Commenters stated that signifteant changes in weights for services from year to year are difficult for hospitals because not all hospitals provide all services and if the APC rates fall for the particular service mix the hospital furnishes, this can mean significant shifts in total payment for outpatient services from Medicare from year to year. Commenters indicated that we should adjust medians derived from claims data to limit the amount of change that occurs from year to year. Commenters indicated that hospitals are limiting availability of services based on declining Medicare OPPS revenues and that once a service is curtailed or eliminated, it is not likely to be reintroduced again because the hospital will cease monitoring the costs of the device and equipment needed to offer the service once it is no longer provided in the hospital and, therefore, even if it would be cost effective to reintroduce the service, it is not likely to occur. Commenters indicated that the pattern of revenue changes is a factor in hospital decisions regarding whether to acquire state-of-the-art equipment. Therefore, reductions in payments for equipment-intense services discourage hospitals from acquiring the equipment necessary to provide state-of-the-art services to Medicare beneficiaries. Commenters also indicated that the cumulative effects of the reductions from 2002 payment rates, particularly for procedures to implant medical devices, have resulted in significant payment cuts for many of these procedures and will discourage acquisition of the items necessary to provide the highest quality care.
A commenter stated that we should stabilize the APC rate when a device comes off of pass-through status. Several commenters stated that the proposed rates reverse the progress that was made in 2002 by using the manufacturer prices in the setting of medians for 2002. Commenters indicated that we should adjust the medians from claims data to ensure that no APC's median falls more than 5 percent compared to the medians used for payment in 2003. A commenter suggested that we adjust
the medians whenever there is more than a 20 percent reduction from one year to the next. Another commenter indicated that all APCs that decline more than 10 percent compared to 2003 adjusted medians should be adjusted in the same way that we proposed to adjust medians for drugs, biologicals and radiopharmaceuticals and that these adjustments also should apply to brachytherapy sources.

Another commenter asked that we let no inedian cost used in weight setting fall more than half the difference between the loss and 15 percent because this methodology offers a buffer for hospitals to minimize annual changes. Another commenter indicated that we should freeze the 2003 payment rates. particularly for brachytherapy services and should educate providers to show all of the charges for all of the ancillary services on the claim so that they will be included in the development of relative weights for future years.

Response: We are sympathetic with the concerns of hospitals that the OPPS should be sufficiently stable that hospitals would have the capacity to plan and budget for future years. We recognize that the early years of a payment system may result in shifts in payment across services. However, a prospective payment system is a system of averaging in which the payment to the hospital becomes an overall amount that the hospital has at its disposal to use in the way it finds to be most efficient and effective. The payments for individual services are the means by which the amount of money to be spent on OPPS is distributed among hospitals but the hospitals have the right to use that payment as they choose across all services they choose to furnish. The OPPS is a system that attempts to calibrate payments for a, service or procedure to best approximate the costs that an efficient provider would incur in providing the service or procedure in order to give providers incentives for efficient procurement and service delivery.

As we indicated in the proposed rule, for 2004 , some of the same services had significant declines in median costs compared to the 2003 adjusted median but not compared to the 2003 median before adjustment. We did not propose to adjust the 2004 medians for procedural APCs compared to the 2003 adjusted median. Instead, we indicated that we would consider using external data that could be made publicly available if we were convinced that the medians for 2004 would result in payment rates that were grossly aberrant in the context of the service.

After reviewing the comments, and our final claims data for 2004, we decided that we would not adjust the medians for procedural APCs but that we would adjust medians for certain APCs for which we were given external data that could be made public because we were convinced that the medians from our claims data resulted in median costs that were grossly variant. We adjusted the medians for the following APCs using external data: APC 0107 (insertion of cardioverter-defibrilator), APC 0108 (Insertion/replacement/repair of cardioverter defibrillator leads and insertion of pulse generator), APC 0222 (implantation of neurostimulator), APC 0039 (which was broken out of APC 0222) and APC 0674 (prostate cryoablation). For each of these APCs we calculated an adjusted device portion of the median by taking one part of the device cost from our data and one part of the device cost supplied by external data. We added the adjusted device median to the nondevice median from our data to acquire the adjusted median. In the case of APC 0108, we used the external device cost data that was used to set the median for the 2003 OPPS because we received no outside data for the 2004 OPPS for this APC and because the proposed median of $\$ 28,685.30$ set forth in the proposed rule was considerably higher than the final rule data median of $\$ 23,944.80$, which resulted when additional claims were used to calculate the median cost. In other cases, we found that corrections in the APC assignment or splitting an APC into two APCs resulted in more accurate median costs.

For 2004, we will adjust median costs for drugs, biologicals and radiopharmaceuticals as proposed for reasons discussed in section VI.B.3. We will freeze payments for blood and blood products at the 2003 rates for reasons discussed in section VI.B.8. We will pay single indication orphan drugs at 88 percent AWP for reasons discussed in section VI.B.6.

## Comparison of Procedural APC Medians for the 2004 OPPS to Adjusted Medians

 for 2003 OPPSUsing the data available to us at the time we developed the proposed rule, we identified APCs that showed decreases in median cost of more than 10 percent compared to the adjusted medians on which their payments were based for 2003. We discussed specific APC medians to the extent that we understood the reason for the decreases or were particularly puzzled by the change. We requested comments on the medians and provided a set of criteria for external data that could be used to
supplement the median costs derived from our claims data. The criteria we provided regarding the use of external data included a stipulation that the data must not be confidential because any data we use must be available to the public. We also provided a list of preferred (but not required) criteria that addressed our preferences for characteristics of the data. We indicated that to be of optimal use, the external data should represent a divergent group of hospitals by location and type, identify the number of devices billed to Medicare as well as rebates or reductions for bulk purchases, identify the HCPCS codes with which the devices would be used, identify the source of the data and include both charges and costs for each hospital by quarter for the last 3 quarters of 2002 (68 FR 47987). We did not propose to adjust the medians for procedural APCs in the manner that they were adjusted for the 2003 OPPS. For 2004 we did not apply a systematic adjustment to all medians that declined more than a specified percentage in comparison with the medians for 2003. Instead, as discussed previously, we adjusted the medians of 5 APCs based on external data where we thought it was necessary and we have split some APCs where we thought doing so would result in more accurate relative weights.

## Use of External Data

Comment: Some commenters opposed the use of external data on the basis that they believe that they will result in unfair imbalances in payment. They recognized that the application of cost-to-charge ratios will not result in amounts that are equal to full acquisition costs but they believe that as long as the same standard methodology is used across all services, the relative payments will be correct. They indicated that in a system of averaging, it is not necessary or even expected that each item and service will be paid at acquisition cost. They encouraged us to remain faithful to the averaging process inherent in a prospective payment system and not to rely on external data. Some commenters opposed use of external data and supported the requirement that they be publicly disclosable. Other commenters stated that we should use our claims data to set weights because they accurately reflect the relative hospital costs of providing outpatient services. However, these commenters were concerned with how different rates for some services in the 2004 proposed rule are from the rates for the same services in 2003.

Some commenters said that we should use external data that are
proprietary and maintain the confidentiality of such data. Several commenters indicated that the prices for medical devices are often covered by agreements that preclude the parties from disclosing the price of the device and that we should use the data to set prices, notwithstanding that they cannot be made available for inspection by the parties whose payments may be reduced by their use. Several commenters stated that we used external data that were proprietary for setting of 2002 weights, and for some 2003 wejights and that we should do so again because data from manufacturer price lists and invoices more accurately reflect the costs attained by applying the cost-to-charge ratios for hospital departments to the charges for the devices to get costs to package into the APC medians. These commenters stated that external data should be used more widely than data based on the criteria that were used for the 2003 OPPS for the use of external data (that is, that the device-cost portion of the APC exceeded 80 percent of the total APC cost for external data to be used). These commenters stated that external data should be used for all APCs that show significant reductions since the 2002 OPPS. In particular, they cited the APC Panel recommendation that outside data be used to set the median cost for APC 107.

Some commenters had specific comments on the criteria we provided for use of external data. One commenter stated that its members did not have and could not easily acquire the data that would ensure that the data represent a diverse group of hospitals by location and type nor could they identify specific hospitals that used their devices. The commenter also stated that its members could not provide the information on discounts and rebates against their price lists that we requested. The commenter indicated that its members did not want to provide the HCPCS codes in which their products were used but instead, wanted us to require the typical applications that they feel are most appropriate. The commenters agreed that they could provide the source of the data. The commenters stated that its members could not provide data that corresponded with the same period of time being used to set the relative weights for all APCs.

Response: In the proposed rule, we indicated that external data should cover services furnished during the last 3 quarters of 2002 ( 68 FR 47987). We appreciate that manufacturers and wholesalers would not want to disclose negotiated prices for 2003 or 2004 for competitive reasons. However, we fail to
understand how they could be harmed by publicly disclosing prices that were applicable in 2002 but have now been obsolete for a year. Moreover, since upward adjustment of any median cost results in reduction of payments for all other items and serv ices, we believe that, in a governmental payment program, the parties whose payments are reduced by the use of external data should be able to examine all elements of the payment system.

We do not believe that widespread use of external data to set median costs for selected APCs is appropriate in a system that relies on relativity to establish payment amounts. We are sympathetic with the concerns of some commenters that widespread use of external data will result in payment inequities rather than appropriate payments to hospitals based on the relative weights of the services they furnish. However, we are also concerned about circumstances in which we are convinced that the payment amounts that would result from the medians from our data will discourage hospitals to provide access to needed care. Therefore, in the case of several APCs as discussed elsewhere, we used external data to adjust the medians. In general, however, we continue to have confidence in the integrity of our claims data with respect to the procedural APCs. For the future, we prefer to seek ways to refine the methodologies that we apply to our own data, such as the use of a greater percentage of claims to set the weights for certain APCs.

Comment: Several commenters stated that we should work with them to set the methodology for the 2005 medians in view of the absence of device codes in the 2003 data and should pursue a study of the acquisition costs of devices in particular, so that there will be valid device related data for setting the 2005 OPPS.

Response: We are always interested in hearing the proposals of outside parties with regard to our methodology for setting OPPS weights. We recognize the concern that the absence of device codes for 2003 claims may lead to median costs that fail to fully incorporate the costs of the devices used in the applicable APCs and we are interested in all ideas for preventing this problem. Our proposed methodology will be presented in the proposed rule for the 2005 OPPS and will be open to public comment.

## General Comments About Payment

Comment: A commenter asked that we base the relative weights on the geometric mean that we use for
trimming the data. The commenter indicated that the use of the geometric mean is the industry standard for both trimming aberrant data, as we use it, and also for calculating relative weights when costs are not distributed symmetrically. The commenter stated that the use of the geometric mean is particularly useful in circumstances that mirror those of OPPS: the first years of a new system and with low-volume high-cost services. The commenter noted that we agreed to move forward with analyses to look at the use of a mean versus median cost for weight setting in the November 1, 2002 final rule published in the Federal Register, but believes that not much analysis is needed since the use of the geometric mean is an industry standard for setting relative weights.

Response: We appreciate the thoughtful comments on this issue and other suggestions on how we might improve our rate setting methodology. We will continue to explore these options in 2004 . Our efforts in 2003 were limited to creating unscaled weights from the means used for the 2003 OPPS and comparing them to the unscaled weights for medians for 2003 OPPS. Our preliminary comparison revealed that there would be many swings in payments. Hence, for the 2004 OPPS, we continued our use of the median cost.
In preparation for 2005 OPPS, we hope to calculate OPPS amounts using the mean costs, and also mean and median charges (to circumvent the effects of cost-to-charge ratios), and the 2004 OPPS conversion factor. This should give us a more complete view of the impact of revising our methodology in this way.

## Charge Compression and Cost Finding

Comment: A commenter indicated that the use of cost to charge ratios is consistent with the concept of averaging that underpins a prospective payment system and that the system should not seek to micro-cost individual items or services but rather should rely upon the hospital charging patterns irrespective of Medicare policy to base relativity. The commenter indicated that while some items have different markups than others, the use of a standardized methodology to establish relative weights for all services should result in appropriate relative payments. The commenter strongly objected to any additional burdens that would be imposed in order to fine tune the passthrough payment system or weights at the expense of all other APC payments. The commenter specifically objected to CMS overriding the claims data to alter
the ratio for new technology devices because the commenter believes that such adjustments will make the OPPS unduly administratively complex and create unfair imbalances in payment.

Other commenters opposed the use of cost-to-charge ratios applied to charges to acquire cost data. They indicated that in many cases, we had to use overall hospital cost-to charge ratios that had no relevance to the costs of the services being determined and therefore resulted in invalid representations of median costs. They also indicated that both the departmental and the hospital specific cost-to-charge ratios were derived in part from costs that are commingled between inpatient and outpatient services and therefore are not necessarily representative of a ratio that could be applied to outpatient services alone, as we do. Some commenters indicated that we ignore studies that demonstrate that charges are compressed, with low-cost services being marked up more than high-cost services, thus resulting in systematic underpayment of high-cost items and diminishing beneficiary access to highcost services. A commenter suggested that, for drugs, biologicals and radiopharmaceuticals, we set a minimum payment based on the Federal Supply Schedule price plus a percentage markup to ensure that payment for drugs, biologicals, and radiopharmaceuticals was sufficient to make them available to Medicare beneficiaries who need them.

Several commenters indicated that the application of hospital specific cost-tocharge ratios at the department level where available, otherwise at the hospital level will always result in incorrect costs because hospitals do not have a consistent markup for all items and services within a department. They indicated that hospitals markup lowcost items more than high-cost items and that therefore, the application of a cost-to-charge ratio, even at the department level, will never result in the hospital acquisition cost for an item. They indicated that there is no easy adjustment to correct for charge compression and they urge us to explore using external data, developing surveys or doing studies to acquire hospital cost data that can be used in place of the median costs acquired from claims data. Response: We recognize that the application of cost-to-charge ratios to charges for individual items as needed to develop median costs for APCs is imperfect. However, the only means at our disposal for determining costs from the charges on the claims was to calculate a cost-to-charge ratio using the cost report data that we believe is
applicable to the OPD (for example, excluding room and board). We acknowledge that this system for determining relative values is imperfect, but we believe that it continues to be preferable to total reliance for particular items on external data which could inappropriately inflate Medicare payments for those items to the detriment of general hospital services. As indicated above, we hope to explore use of mean costs, and mean and median charges in preparation for the 2005 OPPS to determine if such a change would result in better relative weights and less instability in OPPS payments for particular services from year to year. However for 2004, we based relative weights on median costs derived through the application of a cost-to-charge ratio to the charges for the services.

## General Concerns About Decreases

Cominent: We received many comments objecting to proposed decreases in the proposed payment rates for specific services. These commenters indicated that the service has become more expensive rather than less expensive over the year, or indicated that the payment for the service declined for 2003 and should not decline for 2004. In some cases, the comments indicated that the payment should remain at the 2003 rate so that hospitals will not consider discontinuing the service.

Response: The OPPS is a relative payment system based upon the relative median costs of services. We calculate the costs of services by applying a cost to charge ratio to the charges for the services and then packaging the costs together for major HCPCS codes. We then calculate the median of the array of costs across all claims for HCPCS codes in an APC. There are many factors that can affect whether the cost of services rises or falls from one year to the next. In general, for the 2004 OPPS, about half the APC median costs increased and about half decreased compared to the 2003 median costs. In most cases, the changes were modest and such changes from year to year are to be expected as hospitals find ways to reduce costs for some services and incur higher costs for others. Because we do not expect the mix of services furnished in hospitals to vary hugely from year to year across the universe of hospitals, we do not expect that the changes in relative costs to create enormous impacts either.

Disparity in Payments for Overhead Costs for the Same Service

Comment: A commenter indicated that OPPS provides disparate payment for the overhead costs associated with services that are furnished both in physician offices and in hospital outpatient departments. As an example, the commenter indicated that CMS attributes $\$ 25.36$ in physician practice expense to CPT code 99213 (office or outpatient mid level evaluation and management service for an established patient) but pays a hospital $\$ 54.46$ (the amount set forth in the proposed rule) for the overhead for the same service and indicated that for other services the OPPS payment is as much as 4 times the amount paid to physicians for practice expense for the same service. The commenter asked that CMS establish payment equity for the same service furnished in these respective settings.

Response: The method for calculating payment for physicians' practice expenses under the Medicare physician fee schedule is established by law, as is the method we use for the outpatient setting. The application of the different methodologies results in different payment amounts in the two settings.

Comments and responses on payment amounts for specific APCs are included in section II.B.

## Source of Data for Weight Setting

Comment: One commenter stated that we should conduct a study to establish a source for cost data other than claims data on which to base APC weights. Another commenter strongly objected to use of survey data because the commenter did not believe that it could ever fully capture all hospital costs for services and that therefore, the survey data would be used only for items and would have to be integrated with claims data for services. The commenter did not believe that the two could be integrated in a way that would properly reflect the relative costs.
Response: We believe that relative weights should generally be based on claims data because, notwithstanding the weaknesses, claims data are the most complete and accurate source of information about all services furnished by all providers paid under OPPS. We believe that it would be unreasonably expensive to acquire survey data that would be representative of the entire population of Medicare hospitals and all OPPS services furnished in them. We do not support the idea of using only selected hospitals and/or selected services because we think data from a limited survey would not be representative of the whole population
of Medicare hospitals and services and would not be accurate to reflect relative costs of all services.

## Incomplete Hospital Bills

Comment: Commenters indicated that when OPPS was inplemented, hospitals no longer had a payment incentive to ensure that all charges were shown on the claim because there was no longer a direct relationship between the amount of charges on the claim and the interim payment they would receive for services. Therefore they ceased to complete the claim as fully as when the charges were directly related to the Medicare interim payment. Several commenters indicated that in some cases, hospitals went as far as to remove items from the chargemaster so that a charge was no longer created when an item or service was used, particularly if the item or service were from a department other than the department billing the CPT code. A commenter said that in many cases, hospitals ceased to bill all charges for services if the completion of the claim with all charges would delay the submission of the claim to Medicare and therefore delay the Medicare payment to the hospital. Commenters indicated that hospitals did this particularly for services like brachytherapy in which the services were furnished from multiple departments of the hospital and the claim could be delayed significantly to accumulate all charges. Commenters indicated that the absence of all charges for services could result in poor data and instability in median costs from year to year, particularly when we use only single procedure claims.

Response: We encourage hospitals to report all charges for all services on claims for Medicare payment so that the data on which relative weights are set will fully reflect the relative costs of all services. However, where all charges are not included on the claim but the costs exist in the cost centers, the cost-tocharge ratios would increase and, to some extent, offset the effect of the absence of charges. Hence, while we would prefer that hospitals bill all charges for the services they furnish, where they do not do so, it does not necessarily mean that the costs derived from applying the hospital's cost-tocharge ratio to charges would result in improper relative weights for the services.
C. Discussion of Relative Weights for Specific Procedural APCs

## New APC for Antepartum Care

We proposed rule to split APC 0199, Obstetrical Care Service, into two APCs.

For this final rule, new APC 0700, Antepartum Care Service, was created and 59412 (external cephalic version) was assigned to it. The two remaining HCPCS code 59409 (vaginal delivery only) and 59612 (vaginal delivery only, after previous cesarean delivery) will remain in APC 0199, Obstetrical Care Service. We received no comments about this APC and will finalize our proposal.
Implantation of Neurostimulators and Implantation of Neurostimulator Leads (APCs 0222 and 225)
Comment: Commenters encouraged us to use a "dampening" approach to increase the median costs for these APCs and to use external data to set the payment weights for APCs 0222 and 0225. Commenters indicated that the proposed payment amounts do not cover the cost of the device, much less the hospital services to furnish it. Commenters indicated that our policy of calculating median weights based on single claims or pseudo single claims disadvantages these services by resulting in the use of only the simplest and lowest cost services. A commenter indicated that these services have had relative weights that were too low since the inception of OPPS and that the cumulative effect of multiple years of payment reductions will cause hospitals to cease to provide these services to Medicare beneficiaries. A commenter suggested that we split these APCs to reflect the different resources used in implanting one device versus another device in the same APC. A commenter also asked that we establish a separate APC for the NeuroCybernetic Prosthesis System.

Response: We also are concerned that the median costs for these APCs appear to be so low relative to other OPPS median costs. Both of these APCs are ones for which we require that selected C codes be on the claims that are used in calculation of the median to increase the likelihood that we are using correctly coded claims for these services. We recognize that the need to use single procedure claims and the need to further select claims that appear to be correctly coded reduce the number of claims used in median calculation. However, if we did not require that selected C codes were on the claims used, the median costs would be even lower than those calculated. Hence, using more single procedure claims would, in this case, result in even lower median costs.

For 2004, we have made changes to both of these APCs. In the case of APC 0222, we removed HCPCS code 61885 from APC 0222 and we placed it in its
own APC 0039 because the APC Panel recommended that its status indicator be changed from a " $T$ " to an " $S$ " in order to not apply the multiple procedure reduction when two devices are implanted, as is often the case. Moreover, for both APC 0222 and APC 0039, we accepted external data for the device cost and used one part external data and one part claims data for the device portion of the APC's median cost to which we added the nondevice portion of the median cost. This increased the median cost for APC 0222 from a final data median of $\$ 11,050.90$ to an adjusted median cost of $\$ 13,383.79$. This increased the median cost for APC 0039 from a final data median cost of $\$ 10,741.66$ to an adjusted median cost of $\$ 13,555.80$. We believe that this more accurately reflects the relative cost of these services to other OPPS services.

In the case of APC 0225, we split the APC into two APCs, (APC 0225) and (APC 0040). APC 0225 contains CPT codes 63655, 64553, 64573, 64580 and 64577 and for this final rule, has a median cost of $\$ 11,873.72$. APC 0040 contains CPT codes 64560, 64555, $63650,64561,64575,64581$, and 64565 and, for this final rule, has a median cost of $\$ 3,002.98$. Both APCs have a status indicator " S " (to which multiple procedure discounts do not apply).

We believe that these changes will result in more appropriate relative weights for these services in relation to other OPPS services.

## Brachytherapy Issues

## High Dose Rate Brachytherapy (APC 0313)

Comment: Commenters objected to the proposed payment amounts for this APC and indicated that the costs of the procedure could not be fully included in it. Commenters indicated that they did not believe that hospitals were billing for both the needles and the catheters. These commenters recommended that we use only claims that contain the primary procedure code, the HDR Iridium source code, and codes for catheters and needles. A commenter indicated that the direct costs for the practice expense in physician offices for the codes in this APC average $\$ 1,130.16$ and that it is inconceivable to the commenter that hospital costs could be any less. The commenter believes that the faulty data are attributable to hospital billing errors and urged us to educate hospitals regarding how to bill the service properly. A commenter asked us to issue a program instruction requiring hospitals to report both the cost of the

HDR source and the needles or catheters needed to administer the treatment by date of service to facilitate setting of a correct median cost. The commenter is concerned that the actual cost of brachytherapy needles and catheters has not been captured and is not incorporated into any of the related APCs. Commenters also indicated that the discussion of the APC in the August 12, 2003 proposed rule was confusing and did not fit the services furnished in this APC.

Response: Upon receipt of comments and after listening to the concerns of outside groups during the comment period, we explored the circumstances surrounding the development of the median cost for the APC that resulted in the weights and payments in the August 12, 2003 proposed rule. We found that, while the APC was on the list of APCs for which claims were required to contain C codes and although the criteria required that there be both a brachytherapy source (C1717) and either needles (C1715) or catheters (C1728), no claims that met all of those criteria were found among the single procedure claims for that APC. Therefore, the system defaulted to using all single procedure claims, for which there were no sources or needles/catheters on the claim. Hence, APC 0313 was erroneously included in Table 7 as an APC for which $C$ codes were required. Moreover, our discussion of the median for the APC was in error to say that there had been sources packaged into the payment for 2002 and that this accounted for the reduction in proposed payment for 2003.
For the final rule, we acquired nore single procedure claims but again, none of the single procedure claims contained both sources and needles or catheters. We then revised our criteria to require only that the claims must contain sources (C1717). This gave us 27 single procedure claims that we used to acquire a median cost of $\$ 936.52$, a significant increase over the median for all claims of $\$ 795.83$.

In the course of discussions regarding this APC, some parties suggested that we ignore other procedure codes, such as dosimetry codes, that are typically found on claims for these services because the commenters believe that no charges billed under packaged revenue codes or packaged HCPCS should be allocated to those other procedures. We plan to explore the expansion of the codes we ignore for selection of single procedure claims for the 2005 OPPS. However, we did not believe we had sufficient information or data to make such a change for the final rule for 2004. We again note that it is important for
hospitals to include charges for all services they furnish on the claim so that we can better ensure that the relative weights are based on the most accurate data possible.

## Low Dose Rate Brachytherapy (APCs 312 and 651)

Comment: We received several comments regarding payment for low dose, non-prostate brachytherapy (APCs 312 and 651). Commenters cited the proposed reduction in payment for APC 0312 and expressed concern that our methodology that excludes a number of multiple procedure bills results in our use of data from atypical encounters such as those in small centers with minimal technological complexity and inappropriate costs and charges. Commenters indicated that typically other services would be furnished on the same day and that the presence of these services on the claim would likely result in the claim not being used. Commenters indicated that the resources used for the services in these APCs are highly variable depending on the part of the body being treated and the nature of the equipment involved. They indicated that some hospitals ceased billing charges for all of the services furnished when OPPS was implemented because showing the charges on the claim would no longer result in more payment but showing all charges on the claim was costly, burdensome, and slowed billing. Commenters indicated that we should educate providers in the correct way to bill for the catheters, needles, and sources used for this service and that in the absence of acceptable median costs, we should adjust the medians to result in reasonable payments for the service. Commenters indicated that we should select only claims that contain device costs and ignore claims that do not contain such costs, setting the median cost on the subset of selected claims.

Response: We used the medians from our final data to set the relative weights on which the payments will be based for 2004. We were not convinced by comments that the data did not reflect a median cost that was appropriate relative to the costs of other OPPS services. We recognize that our methodology excludes a large number of claims because there were multiple procedures on the claim and as we indicated in the discussion of multiple procedure claims, we are continuing to work on ways to use more claims data. We will closely examine expanding the list of CPT and HCPCS codes that could be ignored to create pseudo single claims for use in calculating median costs to set relative weights. For future
years, we will consider whether to impose criteria for correctly coded claims, such as requiring that the claims contain either any $C$ code or specified C codes for brachytherapy sources and needles or catheters that are necessary to insert the sources. We were not able to do this for the 2004 OPPS. For the 2005 OPPS, we will use the claims data from 2003, for which there is no coding of brachytherapy needles or catheters, although there is coding of sources that can be used to select correctly coded claims.

As we previously indicated, for the 2004 OPPS, we will pay for prostate brachytherapy using the CPT codes and the HCPCS codes for brachytherapy sources used. We expect that the majority of the CPT codes billed will be 77778 (APC 0651) and 55859 (APC 0163) and that the HCPCS codes billed will be C1718 (brachytherapy source, iodine 125) or C1720 (brachy source, palladium 103). When we calculate the total median cost on which the payment to the hospital for the services involved in prostate brachytherapy will be based, we determine that paying under APC 0651 and APC 0163 with separate payment for the sources (APC 1718 or APC 1720) will result in more payment than would be the case under the packaged payment we proposed. For example, if we assume that 100 sources are implanted during a prostate brachytherapy procedure, we would expect the hospital to bill 77778,55859 , and 100 units of either C1718 or C1720. The sum of the applicable medians will be $\$ 6,486.54$ if using iodine sources and $\$ 7,261.54$ if using palladium sources. This is a considerable increase over the payments in 2003, which were $\$ 5,154.34$ with iodine cources and $\$ 5,998.24$ with palladium sources. We believe that this circumstance will be the predominant use of APC 0651 and that the total median for the service will result in appropriate relative weights on which to set the payments.
APC 0312 was billed just over 850 times for the 9 months of data used in the final rule. Of the five CPT codes in this APC, four have median costs for the CPT code of less than $\$ 400$ and one code, 77776, Interstitial radiation source application, simple has a median of $\$ 2,218.18$. However, that code does not meet the test of being significant, which we define as having a frequency greater than 1,000 or a frequency lower than 99 and a percentage of larger than or equal to 2 percent. Therefore, we have not moved it from the APC.

Separate Payment for All Brachytherapy Sources
Comment: Commenters indicated that we should provide separate payment for all brachytherapy sources but that the current payment structure and amounts are inadequate. Commenters indicated that we should create two new permanent separate brachytherapy source APCs for high activity iodine 125 and high activity palladium 103 sources that should be paid on a per source, per patient basis in addition to the procedure code. Commenters indicated that the proposed rates for iodine 125 and palladium 103 sources do not capture the costs of loose low dose seeds, much less the costs of high activity sources, which typically cost in excess of $\$ 150$ per source.

Response: For 2004, we will pay separately for implantable brachytherapy sources based on the median costs from our claims data. We were not convinced by comments that the relative weights that will result from these median costs are inappropriate.

## Prostate Brachytherapy

Comment: Commenters indicated that the creation of the new G codes (G0256 and G0261) for prostate brachytherapy imposes an unneeded burden on hospitals and that it conflict with the reporting of the service by other payers. Additionally, commenters stated that the use of the codes will preclude us from capturing the costs of the service in the future. The commenters encouraged us to eliminate the $G$ codes and pay using the CPT codes for the procedures and the HCPCS codes for the sources on a per source, per case basis. They indicated that this would allow us to capture the true costs of the procedures to set rates in the future and that this approach is consistent with the APC Panel recommendation to us. A commenter requested that we eliminate APC 0649 (Prostate Brachytherapy Palladium Seeds) and APC 0684 (Prostate Brachytherapy Iodine Seeds) and reinstate the previous policy that allowed hospitals to bill the prostate brachytherapy procedures with two separate APCs; one for urology CPT code 55859 and one for the radiation oncology CPT code 77778. The commenter stated that this elimination would be consistent with our decision to pay for the sources on an individual basis. The commenter believed that creation of the G codes has caused unnecessary confusion for hospitals. The procedure is now described with a single G code; however, only one revenue center can be selected, causing confusion since these APCs have both a
urology CPT code as well as a radiation oncology CPT code. The commenter requested that we eliminate these two APC groups and institute a system that would allow the two procedures to be reported in separate APC groups.
Response: We agree and have deleted the alphanumeric HCPCS codes for packaged prostate brachytherapy and will pay using CPT codes for the procedures and the HCPCS codes for the sources. We have deleted the G codes (G0256 and G0261) and APCs 0649 and 0684; and for 2004, we will pay prostate brachytherapy procedures under APCs 0163 and 0651. Brachytherapy sources used for prostate brachytherapy will be paid on a per source basis using APCs 1718 (iodine) and 1720 (palladium).

## Cryoablation of the Prostate (APC 0674)

Comment: Commenters indicated that the proposed payment was too low to pay for both the hospital services and the cost of the probes used in the procedure. They indicated that 92 percent of the procedures use 6 or more probes ( 64 percent use 6 probes and 28 percent use more than 6 probes). They indicated that a kit of 6 probes costs $\$ 5,000$ and asked that we set a payment amount no less than the minimum cost a hospital incurs to provide the service, which they stated is $\$ 6,750$. Commenters indicated that charges for this new technology were not properly reported by hospitals and that therefore the data do not properly reflect the costs of the service.

Response: We recognize that with the device being paid as a pass-through for the first time effective April 1, 2001, it is likely that there are irregularities in the claims data regarding the number of units of the device that have probably led to a median cost that is not representative of the relative cost of the procedure with the device packaged. Therefore, for 2004, we used one part of the acquisition cost of 6 probes ( $\$ 5,000$ for 6 probes which are used in 64 percent of the procedures) and one part of the device cost from our claims data to create an adjusted device cost median to which we added the nondevice cost from our claims data to acquire an adjusted median of $\$ 6,915.08$ on which we based the relative weight for the 2004 OPPS. This compares favorably to the median of $\$ 5,925.41$ on which the August 12, 2003 proposed rule was based and also compares favorably to the final rule data median of $\$ 6,283.49$ on which the payment weights would have been based had we not used external data to adjust the device portion of the median.

## Payment for Cesium-131

A new brachytherapy source, Cesium131, came to our attention during the latter part of this year, through the passthrough device application process. We reached a decision on this application after publication of the August 12, 2003 proposed rule. We determined that this source did not meet our criteria for creation of a new pass-through category for devices. However, we believe that separate payment for a substantially equivalent new brachytherapy source is warranted, since we pay separately for other sources. The indications presented to us for Cesium-131 were substantially the same as those for Palladium-103 and Iodine-125. As such, the reasons for separate payment of brachytherapy sources, for example, variation in the number of seeds or other source forms make packaging into a clinical APC an undesirable option. Therefore, we have decided to create a separate APC so that the costs of this new source may be tracked like those of other
brachytherapy sources. The payment rate for this source is $\$ 44.67$ per seed. This payment rate is close to the reported price of the Cesium-131 seed and equal to our payment rate based on claims for Palladium-103, a source that is used for similar clinical indications.

## Cardiopulmonary Resuscitation

Comment: A commenter indicated that a 28 percent drop in payment for this service is unwarranted because of the number of people and the level of training needed when this service is furnished.
Response: We were not convinced that the relative weight that would result from the use of the median cost for this APC would be inappropriate in relation to other OPPS services. Therefore, we will use the median cost from the final rule data to set the weight for this APC.

## Computer Aided Detection for Diagnostic Mammography

Comment: A commenter expressed concern about our proposal to reassign Computer-Aided Detection for Diagnostic Mammography from a New Technology APC to APC 0410. The commenter stated that the proposed reassignment is premature and would result in a reduced payment rate that would be approximately half of the payment rate for the technical component of procedures performed in other settings. The commenter recommended that we retain this procedure in New Technology APC 1501 until we have greater claims experience.

Response: The alphanumeric HCPCS code for this service (G0236) is being replaced by a CPT code for the same service for 2004 (CPT code 76082). We found over 43,000 claims for this service in the 2002 data on which we are basing the 2004 relative weights. We believe that this volume of services is sufficient to justify setting a relative weight based on cost information rather than keeping the service in a new technology APC. Moreover, the practice expense portion of payment for this service is not relevant to the setting of relative weights for OPPS services, in which the relativity is established within the context of services paid under OPPS and not with regard to the practice expense for services under the Medicare physician fee schedule.
Orthopedic Fracture Fixation Procedures

Comment: Commenters stated that APCs 0043, 0046, 0047, 0048, 0049, and 0050 are not clinically similar and they violate the 2 times rule. They asked that we separate out the more costly procedures that involve fracture fixation devices because they involve additional time, resources, and significant costs of fixation devices. They recommended that we either create two new APCs with corresponding HCPCS codes for upper (at a payment of approximately $\$ 2,000$ ) and lower fracture fixation devices (at a payment of approximately $\$ 3,000$ ) or create two code modifiers (for upper and lower fixation devices) and multiple new APCs.

Response: For the 2004 OPPS, services that require an external fixation device will continue to be paid in APCs that also provide payment for fractures that do not require external fixation devices. While we are sympathetic to the commenters' concerns, we are not able to identify CPT codes that always require use of an external fixation device or the extent to which such devices are required for other codes. Nor did the information we received from the commenters provide a convincing breakdown of the differences in costs for procedures using external fixation devices. To create new APCs or new APC relative weights to provide additional payment for external fixation devices where such APCs would also contain procedures that do not routinely require use of an external fixation device, would result in overpayment of those procedures. Moreover, since most services in these APCs do not require an external fixation device, it may be appropriate to continue to pay for them in these APCs to encourage hospitals to use them only when required.
Furthermore, we would be reluctant to
impose an additional burden on hospitals by establishing " $G$ " codes or modifiers to use in reporting procedures with or without external fixation devices. However, as we state elsewhere, we would support interested specialty societies' decisions to request the CPT to consider this coding issue.

## APC 0680 Reveal ILR

Comment: A commenter indicated that the proposed payment rate is about 95 percent of the hospital acquisition cost of the device, leaving the hospital at an immediate loss if it implants this device. The commenter indicated that it is the only manufacturer of the device and therefore the only source of acquisition cost for the device. They indicated that in 2002, the cost was $\$ 3,495$ and recommended that we reevaluate and re-price the APC to provide sufficient payment that beneficiaries will have access to the device when needed. They indicated that the predominant site of service is in the hospital outpatient department and that if payment is below hospital cost, beneficiary access will eventually be limited.

Response: The final rule data for APC 0680 reveals a median cost of $\$ 3,691.15$ for this APC, on which the relative weights for 2004 are based. We were not convinced by comments that this median cost would result in a relative weight that would be inappropriate relative to the payments for other services under OPPS.

## Fractional Flow Reserve (FFR)

Comment: A commenter indicated that fractional flow reserve (CPT codes 93571, Intravascular doppler velocity and/or pressure derived coronary flow reserve measurement * * * during coronary angiography, initial vessel and 93572, each additional vessel) should be paid separately in addition to the procedure with which they are performed, rather than being packaged into the payment for the primary procedure. The commenter indicated that FFR should be paid separately because it is an expensive service with higher device and equipment costs and takes more time and staff than if it is not used. They also indicated that we pay separately for Intravascular ultrasound (IVUS) which is also deployed via guidewires. They stated that the principal difference is that IVUS describes the anatomy of the vessels while FFR describes the blood flow through the vessels. They indicated that it is inequitable to treat them differently. Payment for IVUS but not FFR creates inappropriate financial incentives for
hospitals in determining which procedures to provide.

Response: Currently, where FFR is provided, the costs for it are packaged with the principal service to which FFR is an addition, which we expect to be coronary angiography. If we were to pay separately for this service, we would need to remove the costs for this service from the cost for services with which it was packaged (that is, coronary arteriography), which would reduce the medians on which the payments for those services are based. This would reduce the median and therefore the payment for coronary angiography. We are concerned with the circumstances under which this service would be appropriately paid under Medicare and will consider development of a national coverage decision regarding when it is medically necessary to treat illness or injury. After such a coverage decision is made, we will reconsider whether it is appropriate to pay separately for the service.

## Cataract Surgery With IOL Implantation (APC 0246)

Comment: A manufacturer of intraocular lenses was concerned that on claims for the procedures in APC 246, the median charge of claims for which no charge is reported using revenue code 276 (Intraocular lens) is one-third lower than the median charge of claims where a charge is reported using revenue code 276 . The commenter believes that when charges are not listed in revenue center 0276, they are omitted from the claim altogether, rather than being placed in a different revenue center. The commenter recommended that we adopt a policy of using only claims for APC 0246 that report charges for revenue code 276 , which would be consistent with our proposal to calculate relative weights for certain device-related APCs using only claims that included a separate and correctly coded charge for a device.

Response: For the 2004 OPPS, payment for cataract surgery with IOL insertion is based on the median cost for the procedure from the final data. A review of the 2002 claims for procedures in APC 246, which includes CPT code 66984, one of the highest volume outpatient surgical procedures paid under the OPPS, indicates that the vast majority are billed with revenue code 276. Long-standing instructions require hospitals to report the IOL charge under revenue code 276 when billing for a procedure in APC 246.

In our implementing instructions for the 2004 OPPS update, we will remind hospitals and the contractors who process OPPS claims that, in order to
receive payment for a procedure in APC 246, hospitals are required to report the associated IOL charge under revenue ${ }^{\text {- }}$ code 276. We will also consider for the 2005 OPPS update the commenter's recommendation that we use only claims with revenue code 276 to recalibrate the relative payment weight for APC 246. Our data are extremely robust for this APC (with a frequency of nearly 520,000 ), and they indicate that the preponderance of the claims used to establish the 2004 median does include revenue code 276.

## Transcatheter Placement of Intracoronary Drug-Eluting Stent Procedures (APC 0656)

Comment: One commenter supported our recognition of the new drug-eluting stent technology through the creation of two "G" codes (G0290 and G0291) and their placement in new APC 0656. However, the commenter questioned how we calculated the proposed payment rate for 2004 . The commenter stated that some patients classically considered at higher risk for percutaneous interventions, including diabetics and patients with multi-vessel disease, are being referred for drugeluting stent procedures. The commenter stated that the clinical disposition of these patients makes them more complex and more resourceintensive than the average patient. The commenter further noted that, while the reporting of a second main coronary vessel procedure would result in a second, reduced APC payment, that our payment for the single vessel should be based on an average of 1.7 stents per vessel. Finally, the commenter recommended that we add APC 0656 to the list of APCs for which a device was required to be on the claim for weight setting.

Response: For the 2004 OPPS, we will continue to base the payment for transcatheter placement of intracoronary drug eluting stents on the median for APC 0104, transcatheter placement of intracoronary stents. We increased the median for APC 0104 ( $\$ 4,765.05$ ) by $\$ 1,200$ to acquire the median we used for APC 0656. We are using the same adjustment amount used for a single stent in the inpatient prospective payment system. We received no comments that are sufficiently compelling to convince us that more than one stent per vessel typically will be used when this service is furnished in the outpatient department or that the adjustment amount of $\$ 1,200$ per stent is inappropriate. We will consider including this on the agenda for the next APC Panel meeting.

With respect to the comment that we should add APC 0656 to the list of APCs for which a device was required to be on the claim for weight setting, we believe it would be inappropriate to do so for the 2004 OPPS. This is because the drug-eluting stent was not approved by the FDA until 2003, and, therefore, it did not appear in the 2002 data. Moreover, since there are no device codes for coronary stents for use on claims in 2003, the 2003 data will not contain the device codes that would be needed to create a subset of stent device claims to use for the 2005 OPPS.
However, in view of the reinstitution of device coding for 2004, we will consider this comment in our work to develop the 2006 OPPS. Moreover, as we indicated above, we based the payment for APC 0656 on the median for APC 0104, which was calculated from claims that contained C codes for stents.

## Cardioverter Defibrillator (APC 0107)

Comment: Commenters indicated that the proposed payment for this APC was too low to pay for the device, much less the cost of the services to implant it. They indicated that the cost of the device in 2002 varied between $\$ 19,160$ and $\$ 21,410$ among major group purchasers, considerably more than the proposed payment of $\$ 15,773.28$. They asked that we use the external data to set the device portion of the hospital cost.

Response: We reviewed the data for this APC and considered the comments of the APC Panel at its August 2003 meeting on the August 12, 2003 proposed rule. We were convinced that the median for this device is too low to be appropriate relative to other median costs. We used external data that had been presented to the APC Panel to calculate a mean external acquisition cost and used one part external cost to one part median cost from our claims data to acquire an adjusted cost for the device. We then added the nondevice median from our claims data to the adjusted device acquisition cost to acquire an adjusted median that we used to set the relative weight for this APC. Effective for October 1, 2003, we established codes to be used for reporting the services assigned to APCs 107 and 108. Specifically, CPT code 33240 (Insertion of cardioverter defibrillator) is no longer recognized as a valid code for OPPS. Instead, hospitals now report either G0297 (Insertion of single chamber pacing cardioverter defibrillator pulse generator) or G0298 (Insertion of dual chamber pacing cardioverter defibrillator pulse generator). Also effective for October 1, 2003, CPT code 33249 (Insertion/
replacement/repair of cardioverter defibrillator and insertion of pulse generator) is no longer recognized as a valid code for OPPS. Instead, hospitals will report either G0299 (Insertion or repositioning of electrode lead for single chamber pacing cardioverter defibrillator and insertion of pulse generator) or G0300 (Insertion or repositioning of electrode lead for dual chamber pacing cardioverter defibrillator and insertion of pulse generator). These codes were created to capture differential costs related to single and dual chamber cardioverter defibrillators. Claims containing the CPT codes we no longer recognize for OPPS (CPT codes 33240 and 33249) are being returned to providers to be coded correctly and resubmitted.

## Insertion of Pacemaker Dual Chamber (APC 0655) and Insertion of Pacemaker Single Chamber (APC 0089)

Comment: A commenter indicated that the proposed payment rates for these APCs are only slightly more than the Jowest median hospital acquisition cost of the device leaving a hospital little or no payment for the services to implant it. They asked that we reevaluate and price these APCs at a level that pays the full cost of the device and services.
Response: We carefully reviewed the data for these APCs. We were not convinced that there was a need to adjust the median for either of these APCs. The median cost for APC 0655 is about 12 percent higher than the adjusted median on which the 2003 payment weights were based (2003 adjusted median of $\$ 7,298.52$ versus the final rule median of $\$ 8,225.23$ ). The median cost for APC 0089 is slightly higher than the adjusted median on which the 2003 weights were based (2003 adjusted median of $\$ 6,686.16$ versus the final rule median of $\$ 6.754 .63$ ). The comment was not convincing that these median costs were inappropriate in relation to the other median costs that will be used to set the relative weights. Moreover, since median costs for both APCs rose above the amounts achieved by upward adjustments for these APCs in 2003, we believe that the medians are
appropriately relative to the costs for other services that will be used to set the relative weights.

## Insertion of Pacemaker, Dual Chamber

 Generator Only (APC 0654)Comment: A commenter indicated that the proposed payment rate is about 95 percent of the hospital acquisition cost of the device, leaving the hospital at an immediate loss if it implants this
device. They asked that we re-evaluate and price these APCs at a level that pays the full cost of the device and services.
Response: The median cost for this APC is about 19 percent higher than the adjusted median on which the 2003 payment weight was based (2003 adjusted median of $\$ 5,456.63$ versus the final rule median of $\$ 6,495.61$ ). We saw no reason to further adjust the median on which the relative weights for 2004 are based. The comment was not convincing that these median costs were inappropriate in relation to the other median costs that will be used to set the relative weights. Moreover, since the median cost for the APC rose above the amounts achieved by upward adjustments for the APC in 2003, we believe that the median is appropriately relative to the costs for other services that will be used to set the relative weights.

## INTEGRA Wound Products and Other Wound Products

Comment: We received a comment concerning INTEGRA Dermal Regeneration Template and INTEGRA Bilayer Wound Matrix in which the commenter stated that there is a payment disparity between the INTEGRA products and APLIGRAF, DERMAGRAFT and TRANSCYTE, which are eligible for separate payment as biologicals. The commenter noted that hospitals that use APLIGRAF, DERMAGRAFT, and TRANSCYTE receive an extra payment in the form of a pass-through or other separately paid APC payment in addition to the APC payment for the skin repair procedures (APC 0025), while users of the aforementioned INTEGRA products receive only the regular payment associated with skin repair CPT codes. The commenter stated that this payment differentiation provides a financial incentive to hospitals to use the other skin replacement products, and places INTEGRA at a competitive disadvantage. The commenter recommended that we create a productspecific APC for INTEGRA to provide comparable payment for "this class of products." Alternatively, the commenter recommended that we establish a single APC that includes the cost of all or most skin replacement technologies. The manufacturer noted that hospitals using INTEGRA would receive only $\$ 340.41$ under our proposed rate for APC 0025 , while total payments for APC 0025 plus the product-specific codes for APLIGRAF, DERMAGRAFT, and TRANSCYTE would be between $\$ 770.86$ and $\$ 1,072.86$.

Response: TRANSCYTE was approved for transitional pass-through
payment as a biological as of July 1, 2003; DERMAGRAFT continues in passthrough status through 2004; and APLIGRAF is a former pass-through biological proposed to be paid separately as non-pass-through biological, that is, status indicator "K." Since no party has yet applied for transitional pass-through payment for INTEGRA along with relevant documentation in order to evaluate Integra as a biological for pass-through payment, we have not been able to evaluate pass-through payment status as a biological for this product. We are sympathetic to the commenter's concern, and we find merit in the recommendation to group a class of skin replacement products into the same APC. However, we do not believe that we have sufficient information at present upon which to determine the appropriate payment rate for such an APC. Furthermore, we would want to allow the public an opportunity to provide input on such a proposal. Therefore, we will consider the recommendation of a common APC for skin repair using new skin replacement technologies for 2005. We will also consider referring this issue for consideration by the APC Panel at its next meeting. Meanwhile, we invite public comment on the concept of grouping payment for skin repair procedures using new skin repair technologies such as INTEGRA, DERMAGRAFT, and APLIGRAF into a common APC.

## Stereotactic Radiosurgery

Comment: A commenter urged that we continue to consider stereotactic radiosurgery (SRS) to be a radiation procedure and that we not reopen the revenue code of surgery for SRS, stating that a radiation oncologist is a critical component to the delivery of SRS. The commenter expressed concern for unintended consequences that may result from unbundling of services associated with this procedure.

Response: We appreciate the commenter's concern for accurately capturing the costs of stereotactic radiosurgery. As a matter of policy, however, we do not generally mandate the reporting of services under specific revenue centers but leave that decision up to the hospitals.

Comment: We received several comments regarding stereotactic radiosurgery (SRS). Commenters were concerned that the current $G$ code descriptors do not appropriately recognize the differences among the various forms of SRS. Commenters explained that there are two basic methods in which SRS can be delivered
to patients, linear accelerator-based treatment (often referred to as "Linac") and multi-source photon-based treatment (often referred to as Cobalt 60). Advances in technology have further distinguished these treatment modalities. Linear accelerator-based treatment can be performed using various types of SRS systems, two of which include gantry-based systems and image-guided robotic SRS systems. Commenters stated that the existing G codes do not accurately describe the unique differences among these services and therefore do not accurately capture the costs involved in providing these services.

For example, several commenters expressed concern regarding the limitation imposed by the code descriptor for HCPCS code G0242, which restricts its use to planning for Cobalt 60 -based treatment. While some commenters stated that planning costs for linear accelerator-based treatment and Cobalt 60 -based treatment are identical, other commenters asserted that planning costs for these services differ significantly.

Commenters recommended the following options to resolve the issue:
(1) Create another G code to distinguish between linear acceleratorbased SRS and Cobalt 60-based SRS, which would be consistent with the two G codes (G0173 for linear acceleratorbased and G0243 for Cobalt 60 -based) for SRS treatment delivery; or
(2) Modify the descriptor for HCPCS code G0242 to describe treatment planning for both linear acceleratorbased and Cobalt 60-based SRS treatments. For clarification purposes, the current G codes for SRS treatment delivery services are as follows:

G codes for linear accelerator-based SRS treatment delivery:

HCPCS code G0173-Stereotactic radiosurgery, complete course of therapy in one session.

HCPCS code G0251-Linear accelerator-based stereotactic radiosurgery, delivery including collimator changes and custom plugging, fractionated treatment, all lesions, per session, maximum 5 sessions per course of treatment. G code for Cobalt 60-based SRS treatment delivery:

HCPCS code G0243-Multi-source photon stereotactic radiosurgery, delivery including collimator changes and custom plugging, complete course of treatment, all lesions. The current G code for Cobalt 60-based SRS treatment planning is as follows:

HCPCS code G0242-Multi-source photon stereotactic radiosurgery (Cobalt 60 multi-source converging beams) plan,
including dose volume histograms for target and critical structure tolerances, plan optimization performed for highly conformal distributions, plan positional accuracy and dose verification, all lesions treated, per course of treatment.
Response: We agree with commenters that the current description for HCPCS code G0242 is limited to the planning of Cobalt 60 -based SRS treatment and does not account for the planning of linear accelerator-based SRS treatment. To be consistent with the two $G$ codes we created for treatment delivery, we will create a new $G$ code (G0338) to distinguish linear accelerator-based SRS treatment planning from Cobalt 60 based SRS treatment planning. We will place G0338 in APC 1516 at a payment rate of $\$ 1,450$. The new $G$ code for linear accelerator-based SRS treatment planning will be as follows:

HCPCS code G0338-Linear-accelerator-based stereotactic radiosurgery plan, including dose volume histograms for target and critical structure tolerances, plan optimization performed for highly conformal distributions, plan positional accuracy and dose verification, all lesions treated, per course of treatment.

Comment: Several commenters expressed concern that our current code descriptors for HCPCS codes G0173 and G0251 do not distinguish between the various types of linear accelerator-based SRS treatment. Currently, image-guided robotic linear accelerator-based SRS systems are grouped with other forms of linear accelerator-based SRS systems using HCPCS codes G0173 and G0251. Commenters requested that we modify the code descriptors to distinguish image-guided robotic systems from other forms of linear accelerator-based SRS systems to account for the wide cost variation in delivering these services.
Response: We agree with commenters that the descriptors for HCPCS codes G0173 and G0251 do not distinguish image-guided robotic SRS systems from other forms of linear accelerator-based SRS systems to account for the cost variation of delivering these services. To more accurately capture the true costs of these services, we will create two new G codes (G0339 and G0340) to describe complete and fractionated image-guided robotic linear accelerator-based SRS treatment. Please see response to below comment for code descriptors.

Comment: Commenters urged that we modify the code descriptor for the delivery of image-guided robotic SRS to include both complete and fractionated courses of therapy in one code, resulting in the same payment amount for both types of therapy. Commenters explained
that the per-session costs of delivering image-guided robotic linear acceleratorbased SRS are the same, regardless of whether the patient's disease requires one treatment or multiple treatments.
Response: Our claims data do not support the assertion that the persession costs of delivering image-guided robotic linear accelerator-based SRS is equal to the costs of delivering a complete course of image-guided robotic linear accelerator-based SRS treatment. However, we acknowledge the possibility that claims data for G0173 and G0251 may include both inageguided robotic linear accelerator-based SRS treatments as well as other forms of linear accelerator-based SRS treatments and, as a result, the median cost may not accurately reflect the true costs of delivering image-guided robotic linear accelerator-based SRS therapy. As stated in our response to the above comment, we will create two new G codes (G0339 and G0340) to distinguish complete and fractionated image-guided robotic linear accelerator-based SRS treatment from other forms of complete and fractionated linear accelerator-based SRS treatment. We will place HCPCS code G0339 (complete session) in APC 1528 at a payment rate of $\$ 5250$. The APC placement of HCPCS code G0340 is discussed below.

While we recognize the costs to provide multi-session image-guided robotic SRS therapy may be greater than the current payment rate for HCPCS code G0251, we received no convincing cost data supporting commenters' claims that the costs of performing each additional session subsequent to the first session of a fractionated treatment is equivalent to the costs of performing a complete session. Rather, we believe that certain economies of scale are realized when performing each additional session subsequent to the first session of a fractionated treatment. That is, based on our understanding of the therapy, we do not believe that the same exact amount of hospital resources would be utilized for each subsequent session.

Statements provided by various interested parties indicate that the costs of providing each session of a fractionated treatment range from $\$ 2700$ to $\$ 9000$. However, we received no convincing data to substantiate these statements. We have estimated that approximately 75 percent of the costs of a complete session would be required to provide each additional session subsequent to the first session of a fractionated treatment. Therefore, we will place HCPCS code G0340 in new technology APC 1525, which covers procedures ranging from $\$ 3500$ to $\$ 4000$
in payment and which pays $\$ 3750$. This new technology APC range pays approximately seventy-five percent of the payment for HCPCS code G0339. We will modify the descriptor for HCPCS code 0340 to describe additional sessions (second through fifth sessions) subsequent to the first session of a fractionated treatment. In addition, we will expand the descriptor for a complete session (HCPCS code G0339) to include the first session of a multisession treatment. To further clarify, when providers perform multi-session image-guided robotic SRS therapy, they should bill using HCPCS code G0339 for the first session. For each additional session subsequent to the first session, providers should bill using only HCPCS code G0340 up to a maximum of five sessions.

Although we received no clinical data to substantiate the use of a single session versus multiple fractionations up to five sessions, a few commenters stated that a maximum of five sessions may be utilized to treat certain conditions; therefore, we will continue to pay for the delivery of multi-session therapy (HCPCS code G0340) up to a maximum of five sessions per course of treatment. When additional data is submitted, we may reconsider this payment decision.

As described above, we will create the following new G codes to identify image-guided robotic linear acceleratorbased SRS treatment delivery:

HCPCS code G0339-Image-guided robotic linear accelerator-based stereotactic radiosurgery, complete course of therapy in one session, or first session of fractionated treatment.

HCPCS code G0340-Image-guided robotic linear accelerator-based stereotactic radiosurgery, delivery including collimator changes and custom plugging, fractionated treatment, all lesions, per session, second through fifth sessions, maximum five sessions per course of treatment.

## SIRTeX Medical (RE: SIR-Spheres Brachytherapy Source)

Comment: The manufacturer of a brachytherapy source to treat liver cancer commented that our proposed payment of $\$ 8,870.88$ for APC 2616 was inadequate to pay for its product, which it reported costs $\$ 14,000$ per treatment dose. This commenter stated that there are only two products that would fit this APC, which is for Yttrium-90
brachytherapy source. Moreover, this party claimed that there were significant clinical differences between its product and another Yttrium-90 source, and that these differences necessitated the price differential between the two products.

The commenter requested establishment of a separate alpha-numeric HCPCS code for its product, in order to account for the cost differences between the two Yttrium-90 products and to set more equitable payment rates for the two products.

Response: We appreciate the concerns of the commenter. We would first note that payment to APC 2616 has increased to $\$ 9,615.50$ per dose compared to the 2003 payment of $\$ 6,485.37$. The information provided in the comment did not convince us that the payment rate resulting from the 2002 claims data is inadequate to pay hospitals for the Yttrium-90 products. We are uncertain whether or not there are other Yttrium90 sources in addition to the two discussed in this comment that would need to be considered in any analysis of the relative costs of the products. Therefore, until we have additional data, we believe that code C2616 and APC 2616 adequately describes and pays for Yttrium-90 brachytherapy sources.

## Low Osmolar Contrast Media

Comment: A radiology specialty society expressed disappointment because we did not address payment for low osmolar contrast media (LOCM) in the proposed rule. The commenter believes that the variability in usage and Medicare's restricted coverage of LOCM warrant payment in a separate APC in the 2004 final rule. The commenter recommends that we increase the relative weights of APCs that include codes that involve the use of LOCM agents to reflect the additional costs of these agents if we do not establish a separate APC to pay for LOCM.
Response: We issued a program memorandum on November 22, 2002 (Transmittal A-02-120, Change Request 2185) in which we removed all requirements differentiating payment between high osmolar contrast material and LOCM as well as restrictions that would limit payment for LOCM only to patients with specific diagnoses. In that program memorandum, we instructed our contractors to discontinue any edits that would prohibit payment for LOCM if specific diagnoses were not reflected on the claim, effective for services furnished on or after January 1, 2003. We further directed contractors to instruct hospitals to include charges for LOCM in the charge for the diagnostic procedure or. if LOCM is billed as a separate charge, to use revenue code 254 or 255 as appropriate. These instructions applied only to hospitals subject to the OPPS.

We disagree with the commenter's recommendation that a separate APC
should be established to bill for LOCM for several reasons. Prior to issuance of Transmittal A-02-120, covered LOCM costs would have been reflected either in an appropriate revenue code or within the hospital's charge for a diagnostic procedure or in a charge with an appropriate HCPCS code (A4644, A4645, or A4646). To the extent that hospitals submitted covered charges for LOCM in 2002, those costs are packaged into the cost of the procedure with which the LOCM was used. We expect that claims for services involving the use of LOCM furnished during CY 2003 will reflect even more fully costs associated with LOCM in light of the instructions that were issued in Transmittal A-02-120. These costs will be reflected in the 2005 update of the OPPS. Finally, without verifiable information that demonstrates the actual market-based price that a broadly based national sample of hospitals are routinely required to pay in order to procure LOCM, we have no data upon which to base a determination that a separate APC for LOCM would be appropriate.

## Prosthetic Urology

Comment: Several commenters supported the proposed restructuring of the prosthetic urology procedures into APCs 385 and 386. However, the commenters urged us to consider further refinements to increase the payment rates for these APCs. The commenters expressed concern about the use of a single departmental cost-to-charge ratio for devices and recommended for calendar year 2005 that we implement edits in our development of median costs to benchmark cost data for device procedures so that charges for expensive devices are not reduced below a designated point. The commenters also stated that hospitals charged for only one component of a prosthetic urology device for multi-component prosthetic urology devices. The commenters believe this resulted in under-reporting of charges for the entire procedure. The commenters recommended that we use external data to adjust the level of payment for multi-component devices and exclude claims with device costs less than $\$ 5,000$ from the rate-setting database. Commenters stated that hospitals in the States of California, Colorado, Florida, Illinois, North Dakota, New York, and Oklahonia have closed their prosthetic urology programs because Medicare OPPS payments are too low.

Response: APCs 385 and 386 were created by splitting APC 0182 into two APCs for higher cost and lower cost devices (penile prostheses and urinary
sphincters). The payment for these procedures in 2003 is $\$ 4,975.96$. As a result of splitting former APC 0182 into two APCs, the payment amount for 2004 is $\$ 3,663.93$ for APC 0385 and $\$ 6,342.07$ for APC 0386. This is a relatively small reduction for APC 0385 with the lower cost devices and a very significant increase for APC 0386, with the higher cost devices. Moreover, as discussed in more detail elsewhere, we decided to change the status indicator for these APCs from " $T$ " to an " $S$ " so that the multiple procedure reduction will not apply to them (or other procedures with a "T" status indicator) on the same day. These changes together result in significantly more payment for these services in 2004 than in 2003.
Therefore, we did not use external data to further adjust the median cost on which the payment was based.

## Intensity Modulation Radiation Therapy

Comment: Commenters urged that we withdraw our proposal to move intensity modulation radiation therapy (IMRT) treatment planning (CPT code 77301) from new technology APC 1510 (previously APC 0712 in 2003) to APC 0413 and IMRT treatment delivery (CPT code 77418) from new technology APC 1506 (previously APC 0710 in 2003) to APC 0412. Commenters indicated that the payments proposed for APCs 0412 and 0413 are too low to adequately compensate hospitals for the costs of the services. One commenter further explained that part of the problem behind the low median cost may be that, according to CMS PM A-02-26, hospitals are precluded from billing for all of the services involved in this treatment. The commenter indicated that hospitals should be able to bill and be paid for the simulations (CPT codes 77280-77295), dosimetry calculations (CPT code 77300). an isodose plan (CPT codes 77305-77315), special teletherapy port plan (CPT code 77321), continuing medical physics (CPT code 77336) and special medical physics (CPT code 77370). Commenters requested that CPT codes 77301 and 77418 be retained in their current new technology APCs (APCs 1510 and 1506, respectively) for another year to provide additional time for provider education about the proper coding of these services and to enable the data to mature.
Response: We agree with commenters that the payment rate for APC 0413 does not adequately cover the costs of providing IMRT treatment planning (CPT code 77301). As noted by one commenter, PM A-02-26 instructs that services identified by CPT codes 77280 through 77295, 77300, and 77305 through 77321, 77336, and 77370 are
included in the APC payment for IMRT and SR planning. The low median for CPT code 77301 appears to be a result of miscoding. Therefore, we will retain CPT code 77301 in new technology APC 1510 to allow additional time for provider education and to enable the data to mature. We believe, however, that the significant volume of single claims ( 93 percent of total claims) used to set the payment rate for IMRT treatment delivery (CPT code 77418) accurately reflects the costs hospitals are reporting for this service. Based on this robust claims data, we will move CPT 77418 from new technology APC 1506 (previously APC 0710 in 2003) to APC 0412 (IMRT Treatment Delivery).

Comment: One commenter requested that we allow the use of existing IMRT CPT codes 77301 and 77418 for compensator-based IMRT technology in the hospital outpatient setting. The commenter states that Medicare beneficiaries may be denied access to compensator-based IMRT as a result of inadequate payment for this service.

Response: We do not prohibit the use of existing IMRT CPT codes 77301 and 77418 to be billed for compensatorbased IMRT technology in the hospital outpatient setting. Rather, we believe the confusion may pertain to billing instructions for CPT codes 77301 and 77334 billed on the same day. CMS PM A-02-26 instructs that "payment for IMRT and SR planning does not include payment for services described by CPT codes 77332 through 77334. When provided, these services should be billed in addition to the IMRT and SR planning codes 77301 and G0242.' Providers billing for both CPT codes 77301 (IMRT treatment planning) and 77334 (design and construction of complex treatment devices) on the same day should append a 59 modifier to receive accurate payment.

## Proton Beam Therapy

## Comment: Several commenters

 indicated that proton beam therapy, intermediate and complex should be moved from APC 0650 to a new technology APC (as it appears in Addendum B). However, commenters stated that these two codes should not be placed in the same APC due to a significant difference in resource utilization. We received several other comments supporting our proposal to maintain simple proton beam therapy (CPT codes 77520 and 77522) in APC 0664 and intermediate and complex proton beam therapies (CPT codes 77523 and 77525, respectively) in APC 1511 (previously APC 0712 in 2003).Response: We agree with commenters that codes for simple proton beam
radiation therapy (CPT codes 77520 and 77522 ) should be placed in a different APC than codes for intermediary (CPT code 77523) and complex (CPT code 77525 ) radiation therapy. As we stated in the correction notice of February 10 , 2003 ( 68 FR 6636), we also agree with commenters that it would be inappropriate to return codes for simple proton beam therapy to a new
technology APC due to having sufficient claims data to integrate these codes into the OPPS. We continue to believe that the placement of these codes in APC 0664 is appropriate based on having used 98 percent of total claims for simple proton beam therapy to set the 2004 median for APC 0664. Therefore, CPT codes 77520 and 77522 will remain in APC 0664.
The placement of intermediate (CPT code 77523) and complex (CPT code 77525) proton beam therapies in APC 650 in the November 1, 2002 final rule ( 67 FR 66718) for the 2003 OPPS was an error that was corrected in the correction notice of February 10, 2003 (68 FR 6636). We clarified in the correction notice that these CPT codes were placed in new technology APC 0712 for CY 2003 because they lacked sufficient cost data to confidently move these codes out of a new technology APC. We continue to lack sufficient cost data to move these codes into a clinical APC; therefore, we will crosswalk CPT codes 77523 and 77525 from new technology APC 0712 to the corresponding new technology APC 1511 for CY 2004. Once sufficient data is available, we will be able to determine whether intermediate and complex proton beam therapies should be placed in the sane APC.

## FDG PET Procedures

Cominent: Several commenters commended us for our proposed rates for FDG PET procedures. They were pleased that the proposed 2004 rates for the FDG PET procedure and the radiopharmaceutical when combined are nearly identical to the rates for the combined procedure and radiopharmaceutical for 2003. Commenters stated that the retention of FDG PET procedures in a new technology APC will ailow providers an additional year to improve their reporting practices, while providing us with another year of more accurate claims data.

Response: We agree with commenters that the retention of FDG PET procedures in a new technology APC for an additional year will allow providers a reasonable amount of time to improve their reporting practices, while
providing us with another year of claims
experience. Therefore, we will retain FDG PET procedures in new technology APC 1516.

Coinment: One commenter expressed concern that HCPCS code G0296 did not appear in Addendum B of the August 12, 2003 proposed rule. The commenter urged us to place this new code in APC 1516 with other FDG PET procedures.

Response: We thank the commenter for bringing to our attention the absence of HCPCS code G0296 from addendum B of the proposed rule. We agree with the commenter's recommendation to place this code in the same APC as other FDG PET procedures. Therefore, we will place HCPCS code G0296 in new technology APC 1516.

Comment: One commenter recommended the establishment of a revenue code dedicated solely to PET procedures.

Response: Revenue codes exist for hospital accounting purposes and, in general we do not require that particular services be billed with particular revenue codes. We are not convinced that adding specific requirements for revenue coding or expanding the revenue codes to acquire more specific information will result in better data or that the end result would be cost effective in terms of its potential effect on hospital operations.
IV. Transitional Pass-Through and Related Payment Issues

## A. Background

Section $1833(\mathrm{t})(6)$ of the Act provides for temporary additional payments or "tranșitional pass-through payments" for certain medical devices, drugs, and biological agents. As originally enacted by the BBRA, this provision required the Secretary to make additional payments to hospitals for current orphan drugs, as designated under section 526 of the Federal Food, Drug, and Cosmetic Act, Pub. L. 107-186; current drugs, biological agents, and brachytherapy devices used for the treatment of cancer; and current drugs and biological products.

For those drugs, biological agents, and devices referred to as "current," the transitional pass-through payment began on the first date the hospital OPPS was implemented (before enactment of the Medicare, Medicaid, and SCHIP Benefits Improvement and Protection Act (BIPA), Pub. L. 106-554, enacted December 21, 2000).

Transitional pass-through payments are also required for certain "new" medicaldevices, drugs, and biological agents that were not being paid for as a hospital outpatient service as of December 31, 1996 and whose cost is
"not insignificant" in relation to the OPPS payment for the procedures or services associated with the new device, drug, or biological. Under the statute, transitional pass-through payments can be made for at least 2 years but not more than 3 years.

Section 1833(t)(6)(B)(i) of the Act required that we establish by April 1, 2001, initial categories to be used for purposes of determining which medical devices are eligible for transitional passthrough payments. Section $1833(\mathrm{t})(6)(\mathrm{B})(\mathrm{i})(\mathrm{II})$ of the Act explicitly authorized us to establish initial categories by program memorandum (PM). On March 22, 2001, we issued two PMs, Transmittals A-01-40 and A-0141 that established the initial categories. We posted them on our Web site at: http://www.hcfa.gov/pubforms/ transmit/A0140.pdf and http:// www.hcfa.gov/pubforms/transmit/ A0141.pdf, respectively.

Transmittal A-01-41 includes a list of the initial device categories, a crosswalk of all the item-specific codes for individual devices that were approved for transitional pass-through payments. and the initial category code by which the cross-walked individual device was to be billed beginning April 1, 2001. Items eligible for transitional passthrough payments are generally coded using a Level II HCPCS code with an alpha prefix of "C." Pass-through device categories are identified by status indicator " $H$ " and pass-through drugs and biological agents are identified by status indicator "G." Subsequently, we added a number of additional categories, retired 95 categories effective January 1, 2003, and made clarifications to some of the categories' long descriptors found in various program transmittals. A list of current device category codes can be found below, in Table 10.

Section $1833(t)(6)(B)(i i)$ of the Act also requires us to establish, through rulemaking, criteria that will be used to create additional device categories for transitional pass-through payment. The criteria for new categories were the subject of a separate interim final rule with comment period published in the Federal Register on November 2, 2001 ( 66 FR 55850) and made final in the November 1, 2002 Federal Register ( 67 FR 66781) announcing the 2003 update to the OPPS.

Transitional pass-through categories are for devices only; they do not apply to drugs or biological agents. The regulations at $\$ 419.64$ governing transitional pass-through payments for eligible drugs and biological agents are unaffected by the creation of categories.

The process to apply for transitional pass-through payment for eligible drugs and biological agents or for additional device categories can be found on respective pages on our Web site at http://www.cms.gov. If we revise the application instructions in any way, we will post the revisions on our Web site and submit the changes for approval by the Office of Management and Budget (OMB) as required under the Paperwork Reduction Act (PRA). Notification of new drug, biological, or device category application processes is generally posted on the OPPS Web site at http://www.cms.gov.

## B. Discussion of Pro Rata Reduction

Section 1833(t)(6)(E) of the Act limits the total projected amount of transitional pass-through payments for a given year to an "applicable percentage" of projected total Medicare and beneficiary payments under the hospital OPPS. For a year before 2004, the applicable percentage is 2.5 percent; for 2004 and subsequent years, we specify the applicable percentage up to 2.0 percent. We proposed to set the percentage at 2.0 percent for the 2004 OPPS.

If we estimate before the beginning of the calendar year that the total amount of pass-through payments in that year would exceed the applicable percentage, section $1833(t)(6)(E)(i i i)$ of the Act
requires a prospective uniform reduction in the amount of each of the transitional pass-through payments made in that year to ensure that the limit is not exceeded. We make an estimate of pass-through spending to determine not only whether payment exceeds the applicable percentage but also to determine the appropriate reduction to the conversion factor.
In the August 12, 2003 proposed rule, we described in the detail the methodology we used to make an estimate of pass-through spending in 2004 (68 FR 47992). In general, we specified that after using the respective methodologies described in the proposed rule, to determine projected 2004 pass-through spending for the groups of devices, drugs, and biological agents, we would calculate total projected 2004 pass-through spending as a percentage of the total projected payments (Medicare and beneficiary payments) under OPPS to determine if the pro rata reduction would be required.
Table 9 shows our current estimate of 2004 pass-through spending for known pass-through drugs, biologicals, and devices based on information available at the time this table was developed. We specified in the proposed rule that we were uncertain whether estimated passthrough spending in 2004 would exceed
\$456 million (2.0 percent of total estimated OPPS spending) because we had not yet completed the estimate of pass-through spending for a number of drugs and devices. In particular, we did not have estimates for those drugs still under agency review for additional pass-through payments beginning October 2003 or the changes in passthrough spending that could result from quarterly rather than annual updates of AWP for pass-through drugs. Finally, we would incorporate an estimate of pass-through spending for items for which pass-through payment becomes effective later in 2004 (that is, April 1, 2004; July 1, 2004; and October 1, 2004) based on estimates of items that become eligible for pass-through payment on October 1, 2003 and January 1, 2004. Specifically, we would assume a proportionate amount of spending for items that become eligible later in the year while making an adjustment to account for the fact that items made eligible later in the year will not receive pass-through payments for the entire year. We invited comments on the methodology we proposed and the estimates for utilization that appeared in Table 12 of the August 12, 2003 proposed rule. We received several comments on this proposal, which are summarized below along with our responses.

Table 9.-Estimate of Pass-Through Spending in 2004

| HCPC | APC | Drug biological | 2004 passthrough payment portion | $\begin{aligned} & 2004 \text { esti- } \\ & \text { mated utiliza- } \\ & \text { tion } \end{aligned}$ | 2004 anticipated passthrough payments |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Existing Pass-through Drugs/biologicals |  |  |  |
| J0583 | 9111 | Injectin Bivalrudin, per 1 mg | \$0.40 | \$5,278,000 | \$2,111,200 |
| C9112 | 9112 | Injection, Perflutren lipid microsphere, per 2 ml | 37.44 | 67,000 | 2,508,480 |
| C9113. | 9113 | Injection, Pantoprazole sodium, per vial | 6.34 | 20,000 | 126,800 |
| J1335 | 9116 | Injection, Ertapenum sodium, per 500 mg | 6.00 | 14,400 | 86,400 |
| J2505 | 9119 | Injection, Pegilgrastim, per 6 mg single dose vial | 708.00 | 110,344 | 78,123,329 |
| J9395 | 9120 | Injection, Fluvestrant, per 25 mg | 22.13 | 274,156 | 6,067,072 |
| C9121 | 9121 | Injection, Argatroban, per 5 mg . | 4.13 | 50,000 | 206,500 |
| C9200 | 9200 | Orcel, per 36 cm 2 | 286.80 | 1,000 | 286,800 |
| C9123 | 9123 | Transcyte, per 247 sq cm | 194.76 | 100 | 19,476 |
| C9203 | 9203 | Injection Perflexane lipid microspheres, per 10 ml vial | 36.00 | 82,400 | 2,966,400 |
| J2324 | 9114 | Injection, Nesiritide, per 0.5 mg vial | 38.30 | 60,000 | 2,298,000 |
| J3315 | 9122 | Injection, Triptorelin pamoate, per 3.75 mg | 100.70 | 307,440 | 30,959,208 |
| J3487 | 9115 | Injection, Zoledronic acid, per 1 mg | 54.93 | 539,000 | 29,607,270 |
| J3486 | 9204 | Injectionm Ziprasidone mesylate, per 10 mg | 5.25 | 234,286 | 1,230,000 |
| C9205 | 9205 | Injection, Oxaliplatin, per 5 mg | 23.86 | 280,756 | 6,698,845 |
| C9208 . | 9208 | Injection, IV, Agalsidase beta, per 1 mg | 31.27 | 194,533 | 6,083,040 |
| C9201 .. | 9201 | Dermagraft, per 37.5 square centimeters | 145.92 | 9,264 | 1,351,803 |
| C9209 | 9209 | Injection, IV, Laronidase, per 2.9 mg Pass-through Drugs/Biologicals Effective January 2004 | 162.72 | 2,612 | 425,092 |
| C9207. | 9207 | Injection, IV, Bortezomib, per 3.5 mg ........ | 262.66 | 102,680 | 26,970,000 |
| C9210. | 9210 | Injection, IV, Palonosetron HCl , per 0.25 mg ( 250 micrograms) | 77.76 | 37,500 | 2,916,000 |
| C9211 .......... | 9211 | Injection, alefacept, for intravenous use, per 7.5 mg ...... | 168.00 | 13,775 | 2,314,200 |
| C9212 ....... | 9212 | Injection, alefacept, for intramuscular use, per 7.5 mg Existing Pass-through Devices | 119.40 | 27,550 | 3,289,470 |
| C1783 | 1783 | Ocular implant, aqueous drainage assist device .. |  | 324 | 160,250 |
| C1814 | 1814 | Retinal tamponade device, silicone oil ........................ |  | 35,173 | 13,675,262 |
| C1884 | 1884 | Embolization Protective System |  | 25,000 | 38,601,544 |
| C1888 | 1888 | Catheter, ablation, non-cardiac, endovascular (implantable) ........ |  | 215 | 129,731 |

Table 9.-Estimate of Pass-Through Spending in 2004—Continued

Comment: Several commenters objected to the methods used to project pass-through drug spending, especially those techniques used to estimate future products that are first eligible for passthrough payments beginning in April 2004 or later in the year. They are concerned that pass-through expenditures in 2004 will exceed the statutory cap and cause us to impose a pro rata reduction. Several hospital associations propose that we limit the funds allocated for the pass-through pool to one percent and use the remaining 1.0 percent to fund all other APCs. They suggest that we overestimate pass-through spending, which results in the reduction of payment rates for other critical care services.

Response: Section 1833(t)(6)(E)(i) of the Act requires that the Secretary estimate the total pass-through payments to be made for the forthcoming year (which allows us to determine the amount of the conversion factor for the forthcoming year) and to the extent the estimate exceeds the statutory limit, reduce the amount of each pass-through payment. For 2004, the statutory limit is 2.0 percent of total estimated program payments. In the August 12, 2003 proposed rule, we provided our best estimate at that time of pass-through payments for the drugs and devices for which we expected to make pass-through payments in 2004 , and we explained our methodology for determining the estimate for the final rule. We provided a list of the devices and drugs we either knew would be paid under pass-through next year or which we believed may be paid as passthrough items in 2004.

We finalized our estimate of 2004 pass-through spending and, for the reasons discussed below, we have determined that no pro rata reduction will be required in 2004. As discussed below the estimate falls under the statutory limit of 2.0 percent. Therefore,
the conversion factor has been increased correspondingly from the proposed rule by 0.7 percent.
Pass-Through Devices Effective January 2004

Comment: One commenter recommended that we not impose a pro rata reduction on pass-through devices if the estimated pass-through expenditures increase appreciably. A device manufacturers' association was concerned that new drugs will take an increasing share of the pass-through pool. They suggested that the shift to more pass-through spending on drugs will increase under the easier qualifications for drug pass-through payments and encouraged us to reconsider the issue to determine how to ensure that devices maintain an "adequate" share of the pass-through pool.

Response: Section 1833(t)(6)(E)(iii) of the Act requires a prospective uniform reduction (pro rata) of the amount of each of the transitional pass-through payments made in that year, if it is expected that pass-through payments will exceed the cap set for OPPS passthrough expenditures. Therefore, if any pro rata reduction applies, we are required to apply it to pass-through devices as well as drugs and biological agents. For 2004, we do not expect the total payments for pass-through drugs and devices to exceed the statutory limit. Therefore, as discussed elsewhere, we will not impose a pro rata adjustinent on any pass-through items in 2004.

## V. Payment for Devices

## A. Pass-Through Devices

Section 1833(t)(6)(B)(iii) of the Act requires that a category of devices be eligible for transitional pass-through payments for at least 2 , but not more than 3, years. This period begins with the first date on which a transitional
pass-through payment is made for any medical device that is described by the category. We proposed that two device categories currently in effect would expire effective January 1, 2004. Our proposed payment methodology for devices that have been paid by means of pass-through categories, and for which pass-through status would expire effective January 1, 2004, is discussed in the section below.

Although the device category codes became effective April 1, 2001, most of the item-specific "C'" codes for passthrough devices that were crosswalked to the new category codes were approved for pass-through payment in CY 2000 and as of January 1, 2001. (The crosswalk for item-specific "C" codes to category codes was issued in Transmittals A-01-41 and A-01-97). We based the expiration dates for the category codes listed in Table 10, on when a category was first created, or when the item-specific devices that are described by, and included in, the initial categories were first paid as passthrough devices, before the implementation of device categories. The device category expiration dates are listed in Table 10. We proposed to base the expiration date for a device category on the earliest effective date of passthrough payment status of the devices that populate that category. There are two categories for devices that will have been eligible for pass-through payments for more than $2^{1 / 2}$ years as of December 31. 2003, and we proposed that they would not be eligible for pass-through payments effective January 1, 2004. The two categories we proposed for expiration are C1765 and C2618, as indicated in Table 10. Each category includes devices for which pass-through payment was first made under OPPS in 2000 or 2001.

A comprehensive list of all currently effective pass-through device categories is displayed in Table 10. Also displayed
are the dates the devices described by the category were populated and their respective expiration dates. For devices continuing on pass-through status after 2003, expiration dates were set forth in the August 12, proposed rule and are finalized here. Newly added code C1819
is first announced in this final rule and is given a December 31, 2005 expiration date.
The methodology used to base expiration of a device category is the same as that used to determine the 95 initial categories that expired as of

January 1, 2003. A list including those 95 categories that expired as of January 1,2003 (as well as 5 categories that continued to be paid in 2003) is found in the November 1, 2002 final rule (67 FR 66761 through 66763).
table 10.-List of Current Pass-Through Device Categories With Expiration Dates

| HCPCS codes | Category long descriptor | Date(s) populated | Expiration date |
| :---: | :---: | :---: | :---: |
| C1765 ... | Adhesion Barrier | $\begin{aligned} & \text { 10/1/00-3/31/01; } \\ & 7 / 1 / 01 . \end{aligned}$ | 12/31/03 |
| C2618 | Probe, cryoblation | 4/1/01 | 12/31/03 |
| C1888 | Catheter, ablation, non-cardiac, endovascular (implantable) | 7/1/02 | 12/31/04 |
| C1900 | Lead, left ventricular coronary venous system | 7/1/02 | 12/31/04 |
| C1783 | Ocular implant, aqueous drainage assist device | 7/1/02 | 12/31/04 |
| C1884 | Embolization protective system | 1/1/03 | 12/31/04 |
| C2614 | Probe, percutaneous lumbar discectomy | 1/1/03 | 12/31/04 |
| C2632 | Brachytherapy solution, iodine-125, per mCi | 1/1/03 .............. | 12/31/04 |
| C1814 | Retinal tamponade device, silicone oil | 4/1/03 .............. | 12/31/05 |
| C1818.. | Integrated keratoprosthesis | 7/1/03 .............. | 12/31/05 |
| C1819 ..... | Tissue localization excision device | 1/1/04 .............. | 12/31/05 |

We received several comments on this proposal, which are summarized below along with our responses.

Comment: A few parties provided comments on our criteria for eligibility for a new device category for passthrough payment as published in the November 1, 2002 Federal Register ( 67 FR 66781).
Response: We made no proposal to modify our criteria for establishment of a new category for transitional passthrough payment, so the criteria were not subject to comment in this rulemaking period. However, we will take note of these comments as considerations in our ongoing evaluation of the new device category process.
New Technology Treatment for New Devices for Brachytherapy Catheters and Needles

Comment: A commenter asked that we consider pass-through payment or new technology payment for new devices of brachytherapy catheters and needles when they are approved by FDA for new indications and treatment protocols.

Response: We have a process for applying for pass-through new technology APC status. See http:// www.cms.hhs.gov for instructions. If a provider or other party believes that an item or service meets the criteria for pass-through or new technology status, the interested party should submit an application, and we will then make a judgement based on the individual circumstances described in the application.

## B. Expiration of Transitional Pass-

 Through Payments in CY 2004In the November 1, 2002 final rule, we established a policy for payment of devices included in pass-through categories that are due to expire ( 67 FR 66763 ). We stated that we would package the costs of the devices no longer eligible for pass-through payments in 2003 into the costs of the clinical APCs with which the devices were billed in 2001. There were very few exceptions to the policy (for example, brachytherapy sources for other than prostate brachytherapy), and we proposed to make no changes. Therefore, we proposed that payment for the devices that populate C1765 and C2618, which we proposed would cease to be eligible for pass-through payment on January 1, 2004, would be made as part of the payment for the APCs with which they are billed.
The methodology that we proposed to use to package expiring pass-through device costs is consistent with the packaging methodology that we describe in section II.B.5. For the codes in APCs displayed in Table 10 of the proposed rule, we proposed to use only those claims on which the hospital included the "C" code and to discard the claims on which no "C" code is billed. We proposed to limit our analysis to the claims with "C" codes because we are not confident that the claims for the relevant APCs include the charges for the devices unless the " C " codes are specifically billed.

To calculate the total cost for a service on a per-service basis, we included all charges billed with the service in a revenue center in addition to packaged

HCPCS codes with status indicator "N." We also packaged the costs of devices that we proposed would no longer be eligible for pass-through payment in 2004 into the HCPCS codes with which the devices were billed.
We received several comments on this proposal, which are summarized below along with our responses.

Comment: A commenter supported packaging the cost of expiring passthrough codes C2618 and CC1765 into the payment for the procedure in which they are used because they believe that packaging minimizes payment incentive to use these devices over other appropriate devices. The commenter urged CMS to release the crosswalk it will use to assign pass-through device costs to specific APCs so that they can confirm the appropriateness of the assignment.

Response: There is no such crosswalk. Devices and packaged drugs (that is, those with a per day median cost of $\$ 50$ or less) are packaged into the HCPCS code on the single procedure claim (natural single or pseudo single) with which they are billed. The packaging is controlled solely by what the hospital bills on the claim. To determine what drugs and devices were packaged into an APC, one would need to undertake an extensive analysis of all single and pseudo single claims used in weight setting. The only time that judgment was used to attribute a device to an APC was not for purposes of packaging charges into APCs but rather was in the setting of median costs for 5 APCs in which external data on acquisition costs was used in a one to one proportion
with claims data to set the device cost for an APC as discussed above.

## C. Reinstitution of C Codes for Expired Device Categories

Comment: Some commenters strongly objected to reinstatement of the C codes for devices because of the burden that it would impose on hospitals without a corresponding benefit in immediate payment. They indicated that charges for devices are included in the revenue code charges for the services furnished and that using C codes will increase administrative costs significantly without any benefit to patient care or hospital revenues. They indicated that hospital staffs would not be able to differentiate between devices that should be reported and those that should not. One commenter said that widespread confusion over what device to code and what device to not code is the reason that the claims for services that require pass-through devices often do not show codes for the devices. The commenter indicates that most hospitals could not comply with this requirement by January 1, 2004 in any case because of extensive changes to chargemasters that would be needed. Moreover, given that many hospitals did not comply even when the use of the code would have resulted in separate payment is a strong indication that they would be unlikely to comply when no additional payment will result from coding devices. Commenters indicated that reintroducing C codes for devices will result in continuation of improper coding and will lead to a false sense of confidence in the data for procedures that require devices. A commenter said that if CMS decided to reintroduce C codes for devices, CMS should reinstate the same C codes that were used for device coding in 2002 because it would minimize confusion.

Other commenters said that CMS should reinstate the C codes for reporting of devices so that CMS and others can ensure that only correctly coded claims are used to set medians for APCs into which device costs are packaged. They said that coding for devices is needed so that CMS can be assured that the costs of the devices are packaged into the costs for the procedure when the medians for the procedure are set. They urged us to continue to use the presence of an appropriate device code as a criterion for claims used to set medians for devices.

Response: For 2004, we are reactivating the C codes for device categories as they existed on December 31,2002 . The use of the code is not required and will not be enforced.

However, hospitals should understand that providing complete and accurate information on the claims about the services that were furnished and the charges for those services is
fundamental to our establishment of relative weights on which the payment for their services is based.

Comment: Commenters that supported the reinstitution of C codes for devices said that CMS should continue to restrict the claims used for APCs with a device to claims that contain the charges for the devices used in the APC. In particular, a commenter said that the median for APC 0246 (Cataract removal with intraocular lens) should be based only on claims that contain charges under revenue center 0276 and that claims for APC 0246 that do not contain charges in revenue center 0276 should not be used to set the median. In the case of this APC, the commenter asked that we adopt the 2004 proposed payment at a minimum. Other commenters opposed the reinstitution of C codes for devices, which would preclude us from restricting claims used to set weights for device APCs to claims containing such codes.

Response: We restricted the claims used to set the medians for the APCs contained in Table 7 to claims for which there was a line item containing a device category code that was in use for services furnished on April 1, 2002 through and including December 31, 2002. We believed that restricting the claims used to set median costs to those that met this criterion resulted in median costs that more accurately reflected relative costs of these services. Moreover, for the APCs in Table 7 we required that the claim not only contain a device code that was valid during the period specified but we also required that the claim must have a particular device code or combination of device codes.

For APC 0313 (high dose rate brachytherapy), we attempted to require both brachytherapy sources HDR Iridium 192 (C1717) and either a catheter (C1728) or needle (C1715) but we found that no single procedure claims met those criteria. Hence, the median for APC 0313 that appeared in the 2003 OPPS final rule was the median for claims that did not meet the specified criteria and it was mistakenly included in Table 10 in the NPRM. For this final rule, we again began by applying the criteria including source and needle or catheter codes, but still no claims met the criteria. Therefore, we sought only single procedure claims that contained brachytherapy sources. We found 27 single procedure claims that
met the revised criteria and we used the median cost of $\$ 936.52$ that resulted from those claims.
D. Other Policy Issues Relating to PassThrough Device Categories

1. Reducing Transitional Pass-Through Payments To Offset Costs Packaged Into APC Groups

In the November 30, 2001 final rule. we explained the methodology we used to estimate the portion of each APC rate that could reasonably be attributed to the cost of associated devices that are eligible for pass-through payments ( 66 FR 59904). Beginning with the implementation of the 2002 OPPS update (April 1, 2002), we deduct from the pass-through payments for the identified devices an amount that offsets the portion of the APC payment amount that we determine is associated with the device, as required by section 1833(t)(6)(D)(ii) of the Act. In the November 1, 2002 final rule, we published the applicable offset amounts for 2003 ( 67 FR 66801).
For the 2002 and 2003 OPPS updates, we estimated the portion of each APC rate that could reasonably be attributed to the cost of an associated pass-through device that is eligible for pass-through payment using claims data from the period used for recalibration of the APC rates. Using these claims, we calculated a median cost for every APC without packaging the costs of associated C codes for device categories that were billed with the APC. We then calculated a median cost for every APC with the costs of associated device category C codes that were billed with the APC packaged into the median. Comparing the median APC cost minus device packaging to the median APC cost including device packaging enables us to determine the percentage of the median APC cost that is attributable to associated pass-through devices. By applying these percentages to final APC rates, we determined the applicable offset amount. We included any APC on the offset list for which the device cost was at least 1 percent of the APC's cost.

As we discussed in our November 1, 2002 final rule ( 67 FR 66801), the listed offsets are those that may potentially be used because we do not know which procedures would be billed with newly created categories.

After publication of the November 1, 2002 final rule, we received a comment indicating that in some cases it may be inappropriate to apply an offset to a new device category because the device category is not replacing any device whose costs have been packaged into the APC. We agree with this comment
and proposed to modify our policy for applying offsets. Specifically, we proposed to apply an offset to a new device category only when we can determine that an APC contains costs associated with the device. We specified in the proposed rule that we would continue our existing methodology for determining the offset amount, described above. However, we solicited comments for alternative methodologies for determining the offset amounts that potentially could be applied to the payment amounts for new device categories.

We added that we could use this methodology to establish the device offset amounts for the 2004 OPPS because we are using 2002 clains on which device codes are reported. However, for the 2005 update to OPPS, we proposed to use 2003 claims that would not include device coding. Thus, for 2005, we are considering whether or not to use the charges from lines on the claim having no HCPCS code but have charges under revenue codes 272,275 , $276,278,279,280,289$, and 624 as proxies for the device charges that would have been billed with HCPCS codes for these devices in previous years. We are also considering the reinstitution of the $C$ codes for expired device categories and requiring hospitals to use one or more newly created C codes for identification of devices and costs on claims. See section VI.B of this final rule for further discussion.

We proposed to review each new device category on a case-by-case basis to determine whether device costs associated with the new category are packaged into the existing APC structure.

We reviewed the device categories eligible for continuing pass-through payment in 2004 to determine whether the costs associated with the device categories are packaged into the existing APCs. For the categories existing as of publication of the proposed rule, we determined that there are no close or identifiable costs associated with the devices in our data related to the respective APCs that are normally billed with those devices. Therefore, for these categories we proposed to set the offset to $\$ 0$ for 2004.
If we create a new device category and determine that our data contain identifiable costs associated with the devices in any APC, we would apply an offset. We proposed, if any offsets apply, for new categories, to announce the offsets in a transmittal that announces the information regarding the new category.

We received several comments on the proposal, which are summarized below along with our responses.

Comment: Device manufacturers and associations generally supported our proposal to modify our policy in applying offsets to only those device categories where we can determine that an APC contains costs associated with the device category. One commenter also recommended that we not apply offsets to those categories that do not replace current devices found in the APC costs.

Response: We will apply an offset to a new device category only when we are able to determine that an APC contains costs associated with the new device. We will also continue our existing methodology for determining any offset amount, if we find that device costs associated with a new device category are packaged into the APCs. We will include information about any applicable offset in the transmittal we issue to announce information regarding the new category.

We also will publish the device percentages related to APCs on our web site. We believe this information is useful to the public even if we do not use the information to apply any particular offset to new device categories, because we use this information to apply the tests of "not insignificant cost" to a proposed new device category application. A transitional pass-through device category must have an average cost that is not insignificant in relation to the OPD fee schedule amount, according to section 1833(t)(6)(A)(iv)(II) of the Act.
2. Multiple Procedure Reduction for Devices

In our discussion in the proposed rule of recommendations of the Advisory Panel, we noted that the Panel asked us to analyze our data to determine if we may be underpaying for devices when the multiple procedure policy is applied ( 68 FR 47976). We made no proposal to change our policy regarding the multiple procedure reduction for device-related APCs, but we did receive a number of comments on the topic.
Comment: Commenters stated that we should change the status indicator (SI) from "T" to "S" for APCs with packaged device costs so that the multiple procedure discount will not adversely affect the payment for APCs that contain high cost devices. One commenter indicated that no APC for which the device percentage is 50 percent or more should be subjected to a multiple procedure reduction because any such reduction would reduce the Medicare payment below the hospital's cost for
the device. The commenter offered to work with us to develop a list of device percentages of APC payments that would not be subject to the multiple procedure reduction. Another commenter suggested that we create a modifier that could be used to override the multiple procedure reduction for certain codes with SI "T". Some commenters said that any code that is not subject to the multiple procedure modifier under the Medicare physician fee schedule should be subjected to a multiple procedure modifier under OPPS.

Response: We are concerned that the application of the multiple procedure reduction has been a recurring theme among commenters with regard to APCs that contain significant device costs. We continue to believe that for most cases, including many cases with devices, the payment reductions for the second and subsequent payments are appropriate. This is particularly true given that there must be two procedures with $\mathrm{SI}=\mathrm{T}$ for the reduction to occur. Hence, if a device procedure is performed with a non-device procedure, the non-device procedure will not be reduced if the device procedure has an $\mathrm{SI}=\mathrm{S}$, even if the non-device procedure is less costly because it was done at the same time as the device intense procedure. We are reluctant to change the SIs for device procedures because of the increase that will occur for non-device procedures. The shift in median costs will be picked up in the scaling of relative weights for budget neutrality and will result in some reduction for all services, shifting pavment to procedures and away from other services types (for example, E\&M. diagnostic tests).

Decisions regarding the application of the multiple procedure SIs are made independently for the Medicare physician fee schedule and the OPPS. The physician fee schedule decision is heavily dependent upon the work performed by the physician and the OPPS decision is made only with regard to the resources the hospital supplies for the service to be performed. There is no reason to believe that a decision to reduce or not reduce for multiple procedures in one system would necessarily justify that same decision in the other system.

For 2004 OPPS we have not changed the policy. However, as we did for 2003 OPPS, we have changed the SI for certain APCs for which we were convinced that the application of the multiple procedure reduction would result in inappropriate payment. For 2005, we hope to analyze the effects of a more systematic approach to determining when we should apply the
multiple procedure reduction to APCs with high device costs. We hope to develop these possible approaches and discuss them with the APC Panel at its winter meeting.
Prosthetic Urology (APCs 0385 and 0386)

Comment: Commenters said that APCs 0385 and 0386 should be changed from $S I=S$ to $S I=T$ and that the $A P C$ Panel agreed and recommended these changes in its August 22, 2003 meeting. The commenters indicated that when a penile prosthesis and a urinary sphincter are both implanted at the same time, while there is some cost efficiency (for example, OR time, recovery room time, drugs, supplies), the cost of the prostheses are such a large part of the cost of the APC that the reduction of the second APC by 50 percent results in less than cost being paid.

Response: For the 2004 OPPS, we have changed the SI for these APCs from T to S, so that when both the prosthesis and sphincter are implanted on the same date, the multiple procedure reduction will not apply to the second device. These APCs each contain a combination of penile prostheses and sphincters. Our data analysis shows that it is not a rare occurrence for both to be implanted on the same day and that each APC has a device percentage in excess of 60 percent. For these reasons, we have changed the SI for these APCs to "S" for 2004.
Electrophysiology APCS (APCs 0085, 0086 and 0087)

Comment: Commenters said that APCs 0085, 0086, and 0087 should not be subject to the multiple procedure reduction because the devices used in these procedures are not less costly when the second procedure is done on the same day. Commenters said that these procedures have become so advanced that they now are commonly done on the same day and that the multiple procedure reduction significantly reduces the payments below what they were paid when they were done on subsequent days. A commenter suggested that we should create a combination APC for APCs 0085,0086 and 0087 or for APCs 0085 and 0086 since these are often performed on the same day and the commenter believes that the multiple procedure reduction improperly reduces payment for them.

Response: We have not changed the SI for these APCs because we do not believe that such a change is warranted. Although devices are integral to these APCs, the device portion of the median
is not very significant. Each has a device percent lower than 35 percent (APC $0085=25.61$ percent, $\mathrm{APC} 0086=34.77$ percent, APC 0087 = 30 percent). Moreover, we believe that there is efficiency in performing these procedures on the same day in the outpatient setting, which is why hospital practice has changed. Therefore, we are retaining these procedures as SI=T for 2004.
Implantation or Revision of Pain Management Catheter; Implantation of Drug Infusion Device (APCs 0223 and 0227)

Comment: A commenter indicated that the same rationale that applies to implantation of neurostimulators (discussed immediately preceding) applies to APCs 0223 and 0227 and that therefore, the multiple procedure reduction should not apply.

Response: We are not convinced by the comment that it would be appropriate to change the_SI for APCs 0223 and 0227 from "T" to "S". We believe that there are economies of scale that cause these procedures to allow for appropriate payment when they are performed with other procedures.
Left Ventricular Leads (APCs 0105, 1547 and 1550)

Comment: A commenter indicated that placement of a Left ventricular lead (CPT code 33224, 33225, and 33226, APCs 0105,1547 and 1550 respectively) should not be subjected to the multiple procedure reduction.

Response: We have reviewed the codes contained in these APCs and we are not convinced that it would be appropriate to change the SI for these APCs.
VI. Payment for Drugs, Biologicals, Radiopharmaceutical Agents, Blood, and Blood Products

## A. Pass-Through Drugs and Biologicals

In the proposed rule, we expressed concern about the extent to which Medicare pays more for pass-through drugs than other payers and more than the market-based price of drugs. To address this problem of how to pay appropriately for drugs that are priced using the AWP, we are developing regulations that would revise the current payment methodology for Part B covered drugs paid under section 1842(o) of the Act. We proposed to adopt and apply the provisions of the final AWP rule to establish the AWP of pass-through drugs payable under the OPPS. If implementation of the AWP final rule necessitates mid-year changes in the 2004 OPPS payment rates for
pass-through drugs, we proposed to make those changes on a prospective payment basis through our regular OPPS Transmittal process and PRICER quarterly updates. We further proposed to issue instructions by program memorandum regarding implementation of the provisions of the AWP final rule to set payment rates for pass-through drugs under the OPPS.

We stated that if the AWP final rule is not issued in time to permit us to apply its provisions to price passthrough drugs furnished on or after January 1, 2004, we proposed to use 95 percent of the AWP listed in the most recent quarterly update of the Single Drug Pricer (SDP). If a drug with passthrough status is not included in the SDP, we proposed to forward to the SDP contractor the AWP information submitted as part of the pass-through application for calculation of an allowed payment amount.

Because the January SDP would not be available in time, we proposed to announce the January 1,2004 prices for pass-through drugs in our January 2004 OPPS implementing instructions to fiscal intermediaries and in the January 2004 OPPS PRICER rather than in the 2004 final rule, which is to be published in the Federal Register by November 1, 2003. We further proposed to update the AWP for pass-through drugs paid under the OPPS on a quarterly basis in accordance with the quarterly updates of the SDP. The updated rates for passthrough drugs and biologicals would also be issued through our quarterly OPPS program memoranda and PRICER updates.

Coinment: A national hospital association supported our proposal to use the SDP to determine the payment amount for pass-through drugs and biologicals. However, the same commenter expressed concern about not having accurate 2004 information on AWP until after the 2004 OPPS is implemented, which would make it impossible to predict pass-through spending and not give hospitals enough time to update their billing systems. The commenter also opposed our proposal to update the AWP for pass-through drugs on a quarterly basis because it would result in increased confusion and burden on hospitals to make quarterly price changes and could result in CMS having to make quarterly adjustments to the pass-through pool to recalculate the relative payment weights for all APCs.

A provider expressed reservations about the impact of the AWP rule, which could precipitate a shift in care from physicians' offices to hospitals. This commenter recommended that we determine pass-through payment
amounts using market applications by drug manufacturers and acquisition data solicited from the hospital industry through group purchasing organizations and individual hospitals and systems. The same commenter encouraged us to delay changes in pass-through payments pending an assessment of the impact of the AWP rule on physician practices.
Response: We wish to clarify how our use of the SDP to-price pass-through drugs will affect the OPPS in 2004. The payment rates for pass-through drugs and biologicals that are shown in Addendum B are based on the April 1, 2003 SDP, which was the update that was available when we recalibrated the relative payment weights for this final rule. We also used these payment rates as the basis for estimating pass-through spending in 2004, which is discussed in section IV of this preamble.

We have carefully considered the commenter's concern about the confusion that could result if we were to revise the payment amounts for passthrough drugs and biologicals by installing prices from the January 2004 update of the SDP in the OPPS PRICER for implementation beginning January 1, 2004. We agree with the commenter that, because of the timing, this proposal could create operational problems both for providers and for our claims processing systems. Therefore, we will retain the payment amounts published in this final rule as the payment amounts for pass-through drugs effective January 1, 2004.

Further, to keep quarterly changes to a minimum, we have decided not to implement at this time our proposal to update the AWP for pass-through drugs paid under the OPPS on a quarterly basis in accordance with quarterly SDP updates.

At this time, we are not implementing the AWP rule. Therefore, we are not making final the OPPS changes we proposed that would have resulted from the AWP rule.

Comment: Several commenters were concerned about the delay in processing pass-through applications and assigning c-codes for new drugs and biologicals. Commenters believed that the lack of immediate payment under OPPS for new FDA-approved drugs and biologicals may drive hospitals to discontinue providing innovative lifesaving therapies to Medicare beneficiaries until pass-through payments are established. Another commenter suggested that CMS create and regularly update a central on-line listing of all current codes for passthrough drugs, biologicals, and devices. The Web site should also list all passthrough drug and device applications
under review, and their status in the review process.

Response: We understand the concerns expressed by commenters about the impact of the time gap from FDA approval to our c-code assignment and payment for new pass-through items; however, our position on this issue remains the same as that described in the November 1, 2002 final rule ( 67 FR 66780-81).

## B. Drugs, Biologicals, and

Radiopharmaceuticals Without PassThrough Status

## 1. Background

Under the OPPS, we currently pay for radiopharmaceuticals, drugs, and biologicals including blood, and blood products, which do not have passthrough status, in one of three ways: packaged payment, separate payment (individual APCs), and reasonable cost. As we explained in the April 7, 2000 final rule ( 65 FR 18450), we generally package the cost of drugs and radiopharmaceuticals into the APC payment rate for the procedure or treatment with which the products are usually furnished. Hospitals do not receive separate payment from Medicare for packaged items and supplies, and hospitals may not bill beneficiaries separately for any such packaged items and supplies whose costs are recognized and paid for within the national OPPS payment rate for the associated procedure or service. (Transmittal A-01-133, a Program Memorandum issued to Intermediaries on November 20, 2001, explains in greater detail the rules regarding separate payment for packaged services). As we explained in the November 1, 2002 final rule ( 67 FR 66757), we do not classify diagnostic and therapeutic radiopharmaceutical agents as drugs or biologicals as described in section 1861(t) of the Act.

Comment: Several trade associations and manufacturers urged CMS to revise its policy that radiopharmaceuticals are not drugs. They emphasized that radiopharmaceuticals go through the same FDA approval process as drugs, are approved for inclusion in the United States Pharmacopoeia Drug Indication, and have historically been considered drugs under OPPS. They indicated that Congress is considering a legislative clarification that under OPPS radiopharmaceuticals will continue to be treated and paid as drugs.
Response: We appreciate the comments on this issue. We do not intend, by our designation of radiopharmaceuticals for purposes of determining which items are eligible for pass-through status, to imply that
radiopharmaceuticals are not considered drugs under the Food, Drug, and Cosmetic Act or that they are not subject to the same FDA approval process as those items that we have designated as drugs. However, we will continue to consider radiopharmaceuticals as neither a drug nor biological. Our reasons were set forth in the November 1, 2002 final rule ( 67 FR 66757). In that rule, we stated that a careful reading of the statutory language in section $1861(t)(1)$ convinces us that inclusion of an item in, for example, the USPDI, does not necessarily mean that the item is a drug or biological. Inclusion in such a reference (or approval by a hospital committee) is a necessary condition for us to call a product a drug or biological, but it is not enough. CMS must make its own determination that a product is a drug or biological for OPPS purposes under its governing statutes, and this determination is different from and does not affect FDA's determination that a product is a drug or biological under the Food, Drug, and Cosmetic Act.

While we have determined that radiopharmaceuticals are not drugs under the OPPS, we have chosen to establish separate payment for radiopharmaceuticals under the same packaging threshold policy that we apply to drugs and biologicals. We have also determined that we will apply the same adjustments to the median costs for radiopharmaceuticals that will apply to non-pass-through, separately paid drugs and biologicals.

## Payment for New Radionucliide Therapy for Certain Forms of NonHodgkins Lymphoma

Currently, payment for the radiopharmaceutical Zevalin (Ibritumomab Tiuxetan) is packaged into the payment for HCPCS codes G0273 (Pretx planning, non-Hodgkins) and G0274 (Radiopharm tx, nonHodgkins). To ensure consistency with our payment policy for other radiopharmaceuticals (that is, making separate payment for radiopharmaceuticals whose costs are greater than $\$ 150$ per episode of care), we proposed to make payment for Zevalin (ibritumomab tiuxetan) separately from payment for the procedures with which Zevalin (ibritumomab tiuxetan) is used.
We proposed to use HCPCS A9522 (Indium 111 ibritumomab tiuxetan) to report the use of In-111 Zevalin (In-111 Ibritumomab Tiuxetan) and HCPCS A9523 (Yttrium 90 ibritumomab tiuxetan) to report the use of Y90 Zevalin (Y90 Ibritumomab Tiuxetan). We proposed to place HCPCS A9522 in

APC 9118 with a payment amount of \$2,084.55 and HCPCS A9523 in APC 9117 with a payment amount of $\$ 18,066.09$. We note that payment rates for radiopharmaceuticals are not subject to wage index adjustments because no portion of the payment is attributed to labor-related costs.

Because we proposed that payment for G0273 and G0274 no longer include payment for Zevalin, we also proposed to place G0273 into newly created APC 0406 and G0274 into newly created APC 0408. These APCs include procedures that are similar clinically and in terms of resource consumption to G0274 and G0273, respectively.

Zevalin (ibritumomab tiuxetan) is a radioimmunotherapy that is used to treat patients with certain forms of nonHodgkin's lymphoma (NHL). Medicare began payment under the OPPS for Zevalin services furnished on or after October 1, 2002.

On June 27, 2003, the FDA approved the manufacture and sale of Bexxar (tositumomab and Iodine I 131 tositumomab), which is another radioimmunotherapy used to treat patients with certain forms of nonHodgkin's lymphoma. Both Zevalin and Bexxar are therapeutic regimens administered in two separate steps: The first step is diagnostic to determine radiopharmaceutical biodistribution of radiolabeled antibodies; the second step is the therapeutic administration of targeted radiolabeled antibodies.

On September 8, 2003, we issued a One Time Notification (Transmittal 1, Change Request 2914) to implement payment for Bexxar effective for services furnished on or after July 1, 2003. We instructed hospitals to bill for Bexxar using HCPCS codes G0273 (Pretx planning, non-Hodgkins), G0274 (Radiopharm tx, non-Hodgkins), and G3001 (Administration and supply of tositumomab, 450 mg ). Publication deadlines precluded our being able to address payment for Bexxar in the August 12, 2003 proposed rule.

Comment: A major hospital association, a nuclear medicine specialty organization, several providers that treat cancer patients, and two radiopharmaceutical manufacturers submitted comments regarding the changes we proposed to the coding and payment for Zevalin (ibritumomab tiuxetan) under the 2004 OPPS. The commenters agree with our proposal to separate payment for Zevalin from the payment for the procedure and to pay for Zevalin using HCPCS codes A9522 and A9523, which would not be subject to a wage index adjustment. One commenter noted that the HCPCS descriptors for A9522 and A9523 define
the unit of service as "per millicurie," but that the payment we proposed for these two codes appeared to be a total payment amount rather than a per millicurie rate. Several commenters recommended that the code descriptors for A9522 and A9523 be revised to read "per dose" rather than "per millicurie."

## Response: We appreciate the

 commenters" support of our proposal to pay for Zevalin separately from its administration. We also agree with the commenter who suggested that the payment rate proposed for A9522 and A9523 was incorrectly shown as a total payment amount rather than a per millicure rate, and we have made certain that the final payment amounts implemented in the 2004 update are consistent with the code descriptor for the service. We further agree with the recommendation of commenters that the HCPCS descriptors for Indium 111 ibritumonab tiuxetan and Yttrium 90 ibritumomab tiuxetan would be less confusing if expressed in terms of dose rather than millicuries. However, the descriptors for A9522 and A9523 were established by the HCPCS National Panel through the process described on our Web site at http://www.cms.hhs.gov/ medicare/hcpcs/, and such a descriptor change could not be applied for in time for January 1, 2004 implementation of the OPPS. Therefore, we are establishing two temporary C-codes for hospitals to use to bill under the OPPS for Indium 111 ibritumomab tiuxetan and Yttrium 90 ibritumomab tiuxetan, for services furnished beginning January 1, 2004, as follows:C1082, Supply of
radiopharmaceutical diagnostic imaging agent, indium-111 ibritumomab
tiuxetan, per dose
C1083, Supply of
radiopharmaceutical therapeutic imaging agent, Yttrium 90 ibritumomab tiuxetan, per dose

Comment: One commenter recommended that we create separate codes that parallel A9522 and A9523 to bill for Bexxar (tositumomab and I-131 tositumomab).

Response: We are establishing two temporary C-codes for hospitals to use to bill under the OPPS for I-131 tositumomab for services furnished beginning January 1, 2004, as follows:

C1080, Supply of radiopharmaceutical diagnostic imaging agent. I-131 tositumomab, per dose

C1081, Supply of
radiopharmaceutical therapeutic imaging agent, I-131 tositumomab, рег dose

## Comment: Several commenters

 recommended that we discontinue use of HCPCS codes G0273 and G0274 todescribe the administration of Zevalin and that, instead, we instruct hospitals to report new CPT code 78804,
Radiopharmaceutical localization of tumor or distribution of
radiopharmaceutical agent(s); whole body, requiring two or more days imaging, and new CPT code 79403, Radiopharmaceutical therapy, radiolabeled monoclonal antibody by intravenous infusion. One commenter expressed concern about our proposal to assign G0273 for pre-treatment planning and administration of the diagnostic dose to APC 0406, Tumor/Infection Imaging because the payment rate proposed for APC 0406 ( $\$ 258.10$ ) is inadequate to pay for the cost of the scans required to measure the distribution of the radiopharmaceutical agent. The same commenter agreed with our proposal to assign G0274 for administration of the therapeutic dose to APC 0408, with a proposed payment rate of \$217.16.

Response: We agree with the commenters' recommendations that we replace HCPCS codes G0273 and G0274 with CPT codes 78804 and 79403, respectively. We will direct our contractors to instruct hospitals to use CPT code 78804 to report administration of the diagnostic dose of ibritumomab tiuxetan and I-131 tositumomab, and to report CPT code 79403 to report administration of the therapeutic dose of ibritumomab tiuxetan and I-131 tositumomab. We also agree with the concern of commenters that the payment amount for APC 0406 in the final rule is insufficient for administration of the diagnostic radiolabeled antibodies plus the imaging required to determine radiopharmaceutical localization of tumor(s) and distribution of the radiopharmaceutical agent. Therefore, we are assigning CPT code 78804 to New Technology APC 1508, which has a payment rate of $\$ 650$. After we have had an opportunity to collect claims data that indicate hospital costs for this procedure, we will re-evaluate its APC assignment. Further, there are several additional expenses associated with these innovative radioimmunotherapies used to treat patients with certain forms of non-Hodgkin's lymphoma, which we discuss below. We are therefore assigning CPT code 70403 to New Technology APC 1507, until we have collected sufficient data to confirm the appropriate clinical APC for this service.

Comment: Several commenters expressed concern that our proposed payment for Zevalin ( $\$ 2,084.55$ for the diagnostic dose of indium and $\$ 18,066.09$ for the therapeutic dose of
yttrium) would be approximately $\$ 2,000$ less than what it costs a hospital to purchase Zevalin from a nuclear pharmacy, thereby jeopardizing beneficiary access to this therapy. One commenter submitted information from a nuclear pharmacy attesting that it has dispensed 2,068 patient-specific doses of Zevalin nationwide (1,071 Indium doses and 997 Yttrium doses) and that its current charges are $\$ 2,260$ per dose of Indium-111 Zevalin and S19,565 per dose of Yttrium-90 Zevalin. The commenter stated that this represents nearly 80 percent of all Zevalin doses dispensed between product launch in April 2002 through June 30, 2003.

Another commenter expressed concern about the adverse impact that the proposed reduction in payments for Zevalin could have on payment for Bexxar in 2004. The commenter urged us not to base payment for Bexxar on what we proposed for Zevalin but, rather, on hospital acquisition costs for Bexxar, which approximate the wholesale acquisition cust (WAC) of $\$ 2,250$ for the diagnostic dose and $\$ 19,500$ for the therapeutic dose.
Response: Although we established a code to enable hospitals to bill for and receive separate payment for Zevalin effective October 1, 2002, hospitals could only report this code through December 31, 2002. (Effective January 1, 2003, we combined payment for Zevalin with its administration, using HCPCS codes G0273 and G0274.) Our 2002 claims data are insufficient to allow us to calculate a median cost for Zevalin. Because Bexxar was approved by the FDA in June 2003, it was not billed at all in 2002. Therefore, we cannot determine payment rates for either radiopharmaceutical based on the standard methodology that we use to calculate the other APC relative payment weights and rates. In instances where we lack adequate data upon which to base a payment rate, we have relied wholly or in part on external data as the basis for rate setting. For example, in the absence of claims data, we use data submitted in applications for new technology status to enable us to assign a service to an appropriate new technology APC. Elsewhere in this final rule, we discuss how we are using external data to set 2004 payment rates for certain other services and procedures.

We received information consistent with our request for verifiable data (68 FR 47998) that indicates the payment amounts we proposed for A9522 and A9523 in the proposed rule do not reflect the price for Zevalin that is widely available to the hospital market.

Therefore, we are making final the following paymients, effective for services furnished on or after January 1, 2004:

For HCPCS code C1080 (APC 1080) the payment is $\$ 2,260$;

For HCPCS code C1081 (APC 1081) the payment is $\$ 19,565$; For HCPCS code C1082 (APC 9118) the payment is S2.260;

For HCPCS code C1083 (APC 9117) the payment is $\$ 19,565$.

Comment: One commenter expressed concern about the inadequacy of the 2003 payment rate $(\$ 2,159)$ that we established for HCPCS code G3001, Administration and supply of tositumomab, 450 mg . The commenter noted that the WAC for unlabeled tositumomab is $\$ 2,125$, and that a payment amount of $\$ 2,159$ is not sufficient to pay hospitals for both the acquisition of unlabeled tositumomab and its administration. The commenter was also concerned that packaging the unlabeled antibody tositumomab with its administration and assigning it to an APC that is subject to wage adjustment would result in large payment differences across the country. The commenter noted that the unlabeled antibody rituximab, which is used with Zevalin therapy, is a separately payable drug and therefore not subject to wage index adjustments. The commenter recommended that we either increase the payment rate for G3001 and exempt it from wage adjustment or that we create a new code for unlabeled tositumomab, assign a payment rate that reflects its acquisition cost, and pay separately for its administration using HCPCS code Q0084.
Response: After carefully reviewing the commenter's concerns, we have assigned HCPCS code G3001 to New Technology APC 1522, which has a payment rate of $\$ 2,250$. Unlabeled tositumomab is not approved as either a drug or a radiopharmaceutical, but is a supply that is required as part of the Bexxar treatment regimen. Therefore, we do not agree with the commenter's recommendation that we assign a separate new code to unlabeled tositumomab. Moreover, administration of unlabeled tositumomab is a complete service that qualifies it for assignment to a New Technology APC. We believe that the increased payment resulting from assignment of G3001 to New
Technology APC 1522 will be sufficient to enable hospitals to acquire and administer unlabeled tositumomab, notwithstanding application of a wage adjustment.

## Comment: One commenter

 recommended that we modify the payment amounts for the existing codesused to bill for Bexxar or that we establish new codes to recognize the costs of patient evaluation, education, and clearance for radiation safety purposes as well as the costs of compounding Bexxar by radiopharmacies. The same commenter suggested that. as an alternative to establishing a new code for the costs associated with the procedures required for patient safety and education when Bexxar is used, we allow hospitals to report an appropriate Evaluation and Management code for patient evaluation, education, and clearance when receiving diagnostic or therapeutic services involving radioisotopes.
Response: We disagree with the commenter's recommendation that an additional code is needed to pay for radiopharmacy compounding costs or that an allowance of $\$ 1,000$ should be added to the payment for the both diagnostic and therapeutic doses of Bexxar to offset these costs. We believe that the rates we are implementing in this final rule, as discussed above, provide sufficient payment for radiopharmacy compounding or delivery costs that hospitals may incur when using Bexxar or Zevalin. We have carefully considered the commenter's recommendation that hospitals be allowed to bill an appropriate evaluation and management code for patient evaluation, education. and clearance following procedures involving radioisotopes. We recugnize that special requirements may have to be met before releasing a patient following exposure to a high dose of radiation. We would expect the patient's physician to provide, and bill for separately with appropriate documentation. a significant portion of the preparation and education needed by a patient being treated with Zevalin or Bexxar. However, to the extent that qualified hospital staff are required to provide additional face-to-face patient education and instructions before the patient's release following radioimmunotherapy, the hospital may bill an appropriate evaluation and management code as long as the medical record documents that the services are medically necessary and that they constitute a distinct, separately identifiable evaluation and management service that is consistent with the hospital's criteria for that service.
Drugs and Biologicals for Which PassThrough Status Will Expire in 2004

Section 1833(t)(6)(C)(i) of the Act specifies that the duration of transitional pass-through payments for drugs and biologicals must be no less
than 2 years nor any longer than 3 years. to expire on December 31, 2003 meet The drugs and biologicals that are due
and biologicals for which pass-through status will expire on December 31, 2003.
table 11.-List of Drugs and Biologicals for Which Pass-Through Status Expires CY 2004

| HCPCS | APC | Long descriptor | Trade name | Pass-through expiration date |
| :---: | :---: | :---: | :---: | :---: |
| C9202 | 9202 | Injection, suspension of microspheres of human serum albumin with octafluoropropane, per 3 ml . | Optison (single source) ........... | 12-31-03 |
| J0587 | 9018 | Injection, Botulinum toxin, type B, per 100 units | Myobloc (single source) | 12-31-03 |
| J0637 | 9019 | Injection, Caspofungin acetate, 5 mg | Cancidas (single source) .........* | 12-31-03 |
| J7517 | 9015 | Mycophenolate mofetil, oral per 250 mg ....................................... | CellCept (single source) .......... | 12-31-03 |
| J9010 | 9110 | Injection, Alemtuzumab, per 10 mg | Campath (single source) ......... | 12-31-03 |
| J9017 | 9012 | Injection, Arsenic trioxide, per 1 mg ............................................. | Trisenox (single source) .......... | 12-31-03 |
| J9219 | 7051 | Implant, Leuprolide acetate, per 65 mg implant ............................. | Viadur (single source) ............. | 12-31-03 |

Comment: A commenter requested that we maintain transitional passthrough status for this biological through calendar year 2004. The commenter indicated that Dermagraft was approved as a pass-through device effective October 1, 2000 through March 31, 2001, by which time CMS had concluded that Dermagraft should be classified as a biological for payment purposes. Dermagraft later re-qualified for pass-through status as a biological effective April 1, 2002. The commenter stated that CMS should not count the time Dermagraft was on the passthrough list as a device to determine whether this product received a minimum of 2 years under pass-through status.

Response: We agree with the commenter and will retain Dermagraft in pass-through status through

## December 2004.

Comment: The manufacturer of an ultrasound contrast agent, Optison (APC 9202, C9202), expressed concern about our decision to retire their product from pass-through status on December 31 , 2003. The manufacturer indicated that two of Optison's competitors, Definity (C9112) and Imagent (C9203) will remain pass-throughs in 2004 and receive higher payments, while payment for Optison will be based on median cost calculated from hospital claims data. The commenter was concerned about differential OPPS payments to hospitals for clinically similar products and recommended that we should either allow all of these agents to remain on pass-through status until December 31, 2004, or remove them and use claims data to establish a uniform payment rate for 2004.

Response: As stated above, section 1833(t)(6)(C)(i) of the Act specifies that transitional pass-through payments for drugs and biologicals must be made for at least for 2 years but not more than 3 years. Pass-through payment for Optison was established on April 1, 2001, while Definity and Imagent received pass-
through status on April 1, 2002 and April 1, 2003, respectively. Since hospitals have been billing for and receiving pass-through payments for Optison for at least 2 years, we have the statutory authority to remove this item from pass-through status. Since passthrough payments for Definity and Imagent have not exceeded the minimum 2-year period yet, these products will retain their special status in 2004. In the absence of verifiable external data, the 2004 payment rate for Optison was calculated using hospital claims data from April through December 2002 and was eligible for dainpening.
2. Criteria for Packaging Payment for Drugs, Biologicals, and
Radiopharmaceuticals
To the maximum extent possible, our intention is to package into the APC payment the costs of any items and supplies that are furnished with an outpatient procedure. For 2004, we proposed to continue with our policy of paying separately for drugs and radiopharmaceuticals whose median cost per day exceeds \$150 and packaging the cost of drugs and radiopharmaceuticals with median cost per day of less than $\$ 150$ into the procedures with which they are billed. In the proposed rule, we set forth the methodology we used to calculate the median cost per day for drugs, biologicals, and radiopharmaceuticals (68 FR 47996-47997).

We proposed to provide an exception in 2004 to the packaging rule for drugs and radiopharmaceuticals whose payment status would change as a result of using newer data. For 2004, we proposed that:

- Currently packaged drugs and radiopharmaceuticals with median costs per day at or above $\$ 150$ would receive separate payment in 2004.
- Currently separately payable drugs and radiopharmaceuticals with median costs per day under $\$ 150$ would
continue to receive separate payment in CY 2004.
- Drugs whose pass-through status would expire on December 31, 2003, and whose median costs per day are under $\$ 150$ would receive separate payment in 2004.
- Currently packaged drugs and radiopharmaceuticals with median costs per day below $\$ 150$ would remain packaged in 2004.

We requested comments on the methodology we used to determine the median cost per day, on the threshold we proposed to use for packaging drugs and radiopharmaceuticals, and on the proposal to pay separately for drugs and radiopharmaceuticals whose payment status would change based on use of recent claims data and our proposed methodology. We also requested comments on alternatives to packaging.
We received many comments on our proposals, which are summarized below along with our responses.
Comment: We received many comments from patient advocates, individual clinicians, physician and nursing professional associations, individual hospitals, and manufacturers and their representatives that expressed significant concerns over our proposal to continue the 2003 policy under which we package the cost of most drugs, biologicals and radiopharmaceuticals that cost $\$ 150$ or less. We also received several comments from major provider groups in support of the packaging proposal and recommending a higher threshold. One such organization recommends that we study this issue further to develop a more appropriate long-term solution.

Commenters who disagreed with the proposal to package drugs, biologicals and radiopharmaceuticals costing \$150 or less believe that the proposed rates for the drug administration codes do not adequately address the costs of hospitals to administer these drugs. Several commenters conducted their own analyses of this issue in conjunction
with the proposals for drug administration discussed elsewhere in this final rule. For many of these commenters, the issues of packaging, drug payment rates and our discussion of drug administration in the proposed rule were intertwined. Some commenters that disagreed with our \$150 packaging threshold asserted that most visits involve delivery of drugs that had been designated as packaged and that overpayment for visits with no packaged drugs is small compared to the overall underpayment of both packaged and separately payable drugs. Particular concern was expressed about the packaging of cancer chemotherapy drugs. One commenter stated that the dosages may vary significantly, and where given in high doses the cost for a single drug alone may exceed the total packaged payment. Also, commenters stated that several packaged drugs are often administered during a single infusion, and where the cost of a single packaged drug may be less than $\$ 150$ the cost of multiple packaged drugs is often greater than \$150.

Several commenters indicated that the methodology and cost data we used to calculate the median cost per day for drugs and radiopharmaceuticals were based on incorrectly coded claims where the wrong number of units were reported and a very limited number of single claims were captured which failed to portray the hospitals' charges appropriately. Therefore, certain high cost items fell below the $\$ 150$ threshold.
Commenters expressed concern about patient access to effective but lower cost drugs and the disincentive we may create by paying separately for those over $\$ 150$ per day. One organization stated that cancer centers have reported that they have taken or are considering steps to restrict patient access to those drugs that we have packaged. One hospital estimated that it would lose approximately $\$ 490$ per visit for a patient receiving chemotherapy due to the $\$ 150$ packaging rule and the proposed reductions in payments for certain drugs. While some commenters expressed general concerns about packaging the costs of any drugs, biologicals or radiopharmaceuticals, other commenters recommended that we apply a $\$ 50$ threshold in lieu of the proposed $\$ 150$ threshold in determining which items to pay for separately. Some of the commenters recommending a $\$ 50$ threshold cited statutory changes under consideration by Congress that would mandate a $\$ 50$ threshold.

Response: For 2004, we have established a \$50 median cost per day threshold in determining whether drugs, biologicals and radiopharmaceuticals
will be packaged. Those items that fall below the threshold will be packaged into the costs of the service or procedure with which they are billed; those items with median costs above the threshold will be paid for separately in 2004.

We analyzed our data in determining our final drug administration coding and payment policy, as discussed elsewhere in this final rule, and reviewed the median costs of all APCs under both a $\$ 150$ and a $\$ 50$ packaging rule. We concluded that there was not a sufficient difference in the median costs under those two scenarios, resulting in inadequate payment when drugs, biologicals and radiopharmaceuticals costing between $\$ 50$ and $\$ 150$ would be used by the hospital. Therefore, we agree with the majority of commenters that, for 2004, the appropriate threshold should be $\$ 50$.
We also recognize, as several commenters did, that packaging creates incentives for hospital efficiencies and will continue to apply that concept to devices, most supplies and equipment associated with a procedural APC, and low cost drugs. However, we are convinced that under our current methodology for establishing relative weights, that packaging drugs, biologicals and radiopharmaceuticals costing in excess of the $\$ 50$ threshold per patient per day would not provide adequate payment in 2004 and could adversely affect beneficiary access to important therapies. Nevertheless, our final decision for 2004 does not mean that a change in our methodology for establishing relative weights in the future could not cause us to revisit our packaging policy in the future. Since we have lowered the packaging threshold from $\$ 150$ to $\$ 50$, we will not adopt the proposal to provide an exception to the packaging rule for drugs and radiopharmaceuticals whose payment status would change from 2003 to 2004 as a result of using newer 2002 data.

However, we note several exceptions to our policy of packaging drugs, biologicals and radiopharmaceuticals for which the median per day cost is less than the $\$ 50$ threshold. As discussed elsewhere in this final rule, we will allow separate payment under the OPPS for all blood and blood products and for single indication orphan drugs. We will also allow separate payment for hepatitis $B$ vaccine under the OPPS. While the median per day costs for several hepatitis $B$ vaccine codes fell below the $\$ 50$ threshold using the final rule data, we believe that continued separate payment for these codes is warranted given the special, separate benefit category established by

Congress. Separate payment for influenza and pneumococcal vaccines will continue to be made outside of the OPPS on a reasonable cost basis.
3. Payment for Drugs, Biologicals, and Radiopharmaceuticals That Are Not Packaged
In order to establish payment rates for separately payable drugs and radiopharmaceuticals for the 2004 OPPS, we first determined median cost for each drug and radiopharmaceutical per unit. When we compared the median cost per unit used for determining the 2003 payment rate (for example, the true or dampened median cost) for separately payable drugs and radiopharmaceuticals with their 2004 median cost per unit, we found fluctuations in costs from 2003 to 2004.
We solicited comments concerning the reasons for the fluctuations in median costs from 2003 to 2004. We stated our interest in determining whether these fluctuations reflect changes in the market prices of these drugs and radiopharmaceuticals or problems in the hospital claims data (for example, inaccurate coding, improper charges) that we use for setting payment rates.
In the proposed rule, we discussed in detail several options we considered to address the fluctuations in median costs for separately payable drugs and radiopharmaceuticals (68 FR 4799747998). The option that we proposed for 2004 was a variation of the methodology used for the 2003 OPPS. For separately payable drugs and radiopharmaceuticals whose 2004 median costs decreased by more than 15 percent from the applicable 2003 median cost, we proposed to limit the reduction in median costs to one fourth of the difference between the value derived from claims data and a 15 percent reduction (for example, for a drug whose cost decreased by 35 percent from the applicable 2003 median cost, the allowed reduction from 2003 to 2004 would be 15 percent $+(1 / 4$ times $35-15)$ percent $=20$ percent). For separately payable drugs and radiopharmaceuticals whose median costs decreased by less than 15 percent from 2003 to 2004, we proposed to establish their payment rates using the median costs derived from the 2002 claims data. We stated that, based on more complete claims data we expected to have for the final rule and on the comnents from the public, we would re-evaluate the appropriateness of adjusting median costs for drugs for which median costs would decline in 2004.

We also proposed a separate payment policy for drugs, biologicals, and radiopharmaceuticals for which generic alternatives have been approved by the Food and Drug Administration (FDA) between October 2001 and December 2002.

We solicited comment on both our proposed methodology and payment rates for separately payable drugs and radiopharmaceuticals for 2004 . We requested that commenters who disagree with the proposed rate for a drug or radiopharmaceutical submit verifiable information to support their opinions that the proposed rate is inaccurate and does not reflect the price that is widely available to the hospital market.

We received a number of comments on our payment methodology options for separately payable drugs, biologicals, and radiopharmaceuticals. Those comments are summarized below along with our responses.

Comment: We received a number of comments noting disagreement with the proposed payment rates for separately paid drugs, biologicals and radiopharmaceuticals overall. Many of these comments were included in the comments on our packaging proposal, summarized above, and expressed some of the same concerns, such as restrictions to patient access, particularly to cancer chemotherapy drugs. One hospital commenting on the proposed rates stated that, as with most hospitals, they continually attempt to leverage buying power to reduce the costs of drugs but, like most hospitals, have been unable to do so for certain drugs. Commenters asked that we critically review the data used to establish the payment rates including consideration of the charge compression issue. Commenters stated that the proposed payments would not cover the direct acquisition costs of certain items.

A number of commenters objecting to our proposed payment rates stated that the hospital data that we use to calculate those rates are flawed and that the methodology we employ to convert hospital claims data to relative weights is problematic. Commenters attributed these concerns to issues such as hospital billing practices that result in inaccurate reporting of units or charges, HCPCS coding changes, and the use of cost-tocharge ratios across all products regardless of whether an item is high or low cost.

We received numerous comments on alternatives to our proposed policies for separately payable drugs and radiopharmaceuticals. One commenter suggested that we pay the amount of the hospital's acquisition cost plus an
additional 25 percent to pay for costs of receiving, processing and storing the items. Other comments suggested that we limit the decreases for all separately paid drugs to a reduction of 10 percent in the payment rates, as we proposed for blood and blood products, instead of our proposed policy of limiting reductions in median costs for those separately paid items with median costs with reductions greater than 15 percent. Another suggestion was that we establish a payment rate floor for a product that could be raised if a manufacturer submitted information demonstrating that the rate should be higher than the floor.

Several commenters indicated that we should use only clairns that have the appropriate administration or procedure code and the HCPCS code for a particular drug or radiopharmaceutical when determining the median cost for that drug or radiopharmaceutical. One commenter recommended that we pay for drugs and biologicals at 95\% AWP to standardize payments for drugs and biologicals across different practice settings. Another commenter requested that we establish payment floors that are equal to those in the pending Congressional Medicare legislation (for example, certain sole source drugs would be paid at least 88 percent of AWP in 2004); whereas another drug manufacturer recommended that we use the Federal Supply Schedule price plus a certain percentage (for example, 12.5 percent) as an absolute minimum payment amount for drugs and radiopharmaceuticals.

In addition to the comments regarding our proposed payment rates for drugs, biologicals and radiopharmaceuticals overall, we received comments concerning the proposed rate for specific items. For a few of those items, we received external cost data that met the preferred criteria we set forth in our proposed rule (for example, nonproprietary data that demonstrates actual, market-based prices at which a broadly-based national sample of hospitals were able to procure the item). Several commenters suggested that we substitute external data on hospital acquisition cost for median costs calculated from our claims data when determining the payment rate for drugs and radiopharmaceuticals for which we have received such data. Others recommended that we use external data to benchmark payment for drugs and radiopharmaceuticals and make appropriate adjustments to the proposed 2004 payment levels. Even though most commenters supported the use of external data in place of hospital claims data, a national hospital association
expressed concern about the use of external data in OPPS. The commenter indicated that if external data is used for rate setting in 2004, then we may have to continue to collect data on acquisition cost for future years to be able to continue to adjust the weights. Instead, the commenter was supportive of using claims data to set payment rates without the use of external data and urged us to remain committed to the averaging process inherent in the prospective payment system.

Response: We have decided to adopt the general principle proposed in our August 12, 2003 proposed rule limiting the reduction in median costs to onefourth of the difference between the value derived from our claims data and a 15 percent reduction. For example, a drug whose median cost decreased by 35 percent from the median cost used to establish the separate payment rate for 2003 would be 15 percent $+(1 / 4$ times $35-15$ ) percent, or 20 percent. However, we will not apply this methodology to the medians of those drugs, biologicals and radiopharmaceuticals that are packaged in 2003 but for which we will allow separate payment in 2004. Payment for drugs, biologicals and radiopharmaceuticals that emerge from packaged status in 2004 because their median per day costs are greater than \$50 per day will be based on the unadjusted median cost derived from our April-December 2002 claims data. Since these items are packaged in 2003, we did not calculate any adjusted medians on which to base their payments on for 2003. Thus, we are unable to determine the extent to which their median costs fluctuate from 2003 to 2004.

As discussed in our proposed rule and elsewhere in this final rule, we used a more complete set of claims for the April-December 2002 claims period and the most recently submitted cost report data to calculate median costs for all currently separately paid drugs, biologicals and radiopharmaceuticals. Our analysis of the later and more complete data revealed that a number of these items continued to experience a decline of more than $15 \%$ in median cost. We again considered several options to address the fluctuations in medians, which for some items would result in wide fluctuations in payments to hospitals. One option was to do nothing to adjust for the fluctuations; another option was to apply a more modest give-back (for example, 50 percent instead of 75 percent, after allowing for the 15 percent reduction.) We also considered the comments we received on drug payments in general and for specific items.

We did not adopt the options that would allow no adjustments for items separately paid in 2003 where the costs declined because we were convinced by the many commenters on this topic that such fluctuations create problems for the hospitals. We were also convinced by the commenters that a less generous give-back, such as 50 percent, would not adequately address the very real concerns about patient access to some of these drugs, particularly for cancer chemotherapy. We believe that, for the majority of items paid separately in 2003 for which the more recent hospital data indicates a reduction in excess of

15 percent, the adjustment methodology we proposed and that we are adopting for this final rule provides an adequate buffer for the hospitals against dramatic fluctuations in payment amounts while at the same time not significantly affecting the budget neutrality scalar applied to the relative weights for all services.

We believe that either the use of our unadjusted medians or, where applicable, a median adjusted to limit reductions greater than 15 percent methodology, will not adversely impact beneficiary access. However, we were convinced by the external data meeting our preferred criteria and the related
comments that we received for several items, the payment rates resulting from our data alone could provide a disincentive for hospitals to provide these particular therapies. Therefore, we have determined that we will use this credible and relevant external data to establish a median cost for the following items listed in table 15. For these items, as with the few device-related APCs for which we are considering external data, we have calculated an adjusted median cost by blending the median cost derived from our dampening methodology with the cost data from the external sources on a one-to-one ratio.

Table 12.-List of Drugs, Biologicals, and Radiopharmaceuticals for Which Blended Data Were Used to Determine 2004 Payment Rates

|  | APC | HCPCS | Short descriptor | 2004 adjusted median cost | External acquisition cost | 2004 1:1 Blended median cost |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0909 |  | $J 1825$ | Interferon beta-1a | \$159.16 | \$231.25 | \$195.21 |
| 9022 |  | Q3025 | IM inj interferon beta-1a | 53.05 | 77.08 | 65.07 |
| 0902 |  | $J 0585$ | Botulinum toxin a ...... | 2.86 | 3.92 | 3.39 |
| 7000 |  | $J 0207$ | Amifostine | 241.95 | 369.49 | 305.72 |
| 1624 |  | Q3007 | Sodium phosphate p32 | 49.18 | 100.00 | 74.59 |
| 1625 |  | Q3008 | Indium 111-in pentetreotide | 400.41 | 550.00 | 475.21 |
| 1305 |  | C1305 | Apligraf ...................................... | 659.55 | 1.077 .57 | 868.56 |

We note that we also received external data for other items, which we did not use for rate setting. In those cases, we determined the data was not reliable because the data did not meet the preferred criteria set forth in the August 12, 2003 proposed rule.

Comment: One commenter raised a concern about our proposal to limit reductions in the median costs of non-pass-through drugs and biologicals to one-fourth of the difference between the actual decline and $15 \%$ less than the 2003 adjusted median. While expressing support for an initiative that reduces significant fluctuation in APC payment rates from one year to the next, the commenter expressed uncertainty about the size of the reduction limitation and suggested that CMS consider a less generous dampening approach since the budget-neutral dampening would negatively affect other APCs.

Response: While we believe that a general limitation on reductions in payments for certain drugs and biologicals is warranted for reasons discussed elsewhere in this final rule, we also recognize the commenter's concerns about the effect that such a policy would have on other APCs. We have decided to address the commenter's concern by placing an upper limit on adjustments to the median costs used to calculate the 2004 payment rates. We believe that it is reasonable to place such an upper limit on the dampening so that the resulting adjusted median is no greater than 95 percent of AWP or the 2004 unadjusted median. We reviewed the drugs, biologicals, and radiopharmaceuticals whose median costs decreased by more than 15 percent from 2003 to 2004. We then compared the adjusted median (after dampening) to 95 percent of AWP for each of the items. In cases where 95
percent of AV.P was higher than the adjusted median, we capped the adjusted median at a value that was the higher of 95 percent of AWP or the 2004 unadjusted median. The 95 percent of AWPs for these drugs and radiopharmaceuticals were calculated using AWP values from the Redbook that were effective as of April 1, 2003. We reviewed the drugs, biologicals, and radiopharmaceuticals whose median costs decreased by more than 15 percent from 2003 to 2004. We then compared the adjusted median (after dampening) to 95 percent of AWP for each of the items. In cases where 95 percent of AIVP was higher than the adjusted median, we capped the adjusted median at a value that was the higher of 95 percent of the AWP or the 2004 unadjusted median. The drugs, biologicals, and radiopharmaceuticals affected by this policy are listed in the table below.

Table 13.-Items Whose 2004 Adjusted Medians are Capped at the Higher of 95 Percent of AWp or Their 2004 UnadJusted Median

## 4. Payment for Drug Administration

In order to facilitate accurate payments for drugs and drug administration, we considered whether to make several changes in our current payment policy with regard to payment for Q0081, Q0083, Q0084, and Q0085.

We proposed to continue our current policy of packaging drugs and radiopharmaceuticals that cost less than $\$ 150$ per episode of care into the APC with which they are associated (for example, nuclear medicine scans, drug administration).
In the proposed rule, we presented data that showed that paying based on a median cost for the APC for each of the four current codes generally results in underpayment when packaged drugs are billed on the claim and overpayment when separately paid drugs are billed on the claim. In the proposed rule we discussed our data analysis in detail. We also discussed four alternatives to the current codes and APC payments in detail (68 FR 47999-48003). In summary, the 4 alternatives presented were:

1. Maintain the current codes and APCs with payments based on the median costs of all claims in the APC.
2. Eliminate the four current codes and create eight new codes to enable hospitals to report that they administered a packaged drug or a separately paid drug. We would pay a different APC amount for each of the eight new codes. The new code descriptors would parallel those of the current codes. This would retain the concept of using one code rather than two when both "infusion" and administration of chemotherapy by "other than infusion" occurred (as exists under the current codes). Coders would have to look up the drugs administered to know which code to bill.
3. Eliminate the four current codes and create six new codes to enable hospitals to report that they administered a packaged drug or separately paid drug and pay a different APC amount for each of the six new codes. In this option, no code equivalent to Q0085 would exist. Therefore, when administering chemotherapy by "infusion" or "other than infusion," hospitals would report two codes, one for administration by "infusion" and one for administration by "other than infusion." This would eliminate the need to use one code when both infusion and another method of administration of chemotherapy occurred. Coders would have to look up the drugs administered to know which code to bill.
4. Retain three of the current codes (Q0081, Q0083, and Q0084) but delete Q0085 (infusion and other administration of chemotherapy) and modify the OCE to use the drugs billed on the claim to assign an APC for packaged drugs or an APC for separately paid drugs. No drug administration code could be paid without a drug also being reported on the claim. We solicited comments on each of the options in the proposed rule.

For 2004 OPPS we will continue the use of Q0081, Q0083 and Q0084 to pay for drug administration, for both packaged drugs and separately paid drugs. These drug administration codes will continue to describe the administration of drugs per visit. As recommended by the APC Panel, we will cease to make payment under OPPS for Q0085 and will instead permit the services described by Q0085 to be billed using both Q0083 and Q0084. We believe that this will result in appropriate payment for drug administration because for 2004 OPPS we will pay separately for drugs for which the per day median cost is in excess of $\$ 50$ per day.

Comment: Commenters stated that appropriate payment for drug administration is very important but the options provided for making changes would be extremely burdensome and cannot be done for 2004 , if ever. They indicated that the risk of incorrect coding and the adverse consequences of incorrect coding for options 2, 3 or 4 are severe and that the payment changes do not justify the change in codes or policy. Commenters indicated that options 2-4 would increase operational costs that would eliminate any benefit from higher payments; decrease accuracy of coding for drug administration; increase improper payments due to decreased accuracy of coding; increase inaccuracies in claims data due to decreased accuracy of coding. The commenters indicated that they believe that there were many errors in the addenda (Addenda $\mathrm{L}, \mathrm{M}, \mathrm{N}, \mathrm{O}, \mathrm{P}$, and Q) in the proposed rule that would be used for option 4 and that it would be virtually impossible to create mutually exclusive lists of drugs as would be required to implement option 4.

Commenters indicated that they believed the options as presented in the NPRM would violate the HIPAA requirements that the same service be coded the same way for all payers. They urged CMS to eliminate the Q codes for drug administration and in favor of use of the CPT codes to code drugs administration. Commenters asked that CMS engage the APC Panel in a
discussion of the best way to code drug administration.

One of the commenters indicated that its analysis showed that options 2, 3 or 4 have considerable financial risk for Medicare. Specifically, the commenter indicated that its analysis revealed that option 2 would result in additional payments of $\$ 107.1$ million for 2004. A commenter asked that CMS create a task force to study the most appropriate methodology for payment for drug administration and for setting payment rates. A commenter supported option 4, which would continue the current coding and map the combination of a drug administration code and drug codes to the appropriate APC. One commenter suggested that we continue the current coding for drug administration, set payment rates at the packaged drug rate for the APC but offset the payment by the difference if no appropriate drug is billed for the same date of service. The commenter indicated that this would simplify the coding and the payment for drug administration and should result in greater accuracy of payment. A commenter supported options 2 or 3 as the most accurate for payment of drugs furnished in the emergency department.

Response: For the reasons discussed earlier in this section, for 2004, CMS will continue use of Q0081, Q0083 and Q0084. Q0085 will not be recognized as a valid OPPS code for 2004. Instead, when a hospital furnishes chemotherapy infusion and chemotherapy via another route, the hospital will bill and be paid for both Q0083 and Q0084. Coding for drug administration is discussed in greater detail below in the context of other comments.

As discussed in elsewhere in this final rule, for 2004, CMS will pay separately for all drugs, biologicals and radiopharmaceuticals that have a per day inedian cost in excess of $\$ 50$. Therefore, only drugs, biologicals and radiopharmaceuticals that have a per day median cost of $\$ 50$ or less will be packaged into the payment for the services. Therefore, the payment for drug administration codes Q0081, Q0083 and Q0084 will be based on the median costs for drug administration with only drugs having a median per day cost of $\$ 50$ or less packaged into the cost of the administration code. We believe that separate payment for drugs with a median cost in excess of $\$ 50$ will result in the drug administration codes being paid more accurately and will result in more equitable payment for both the drugs and their administration.

## Edits To Ensure Correct Billing for Drugs

Comment: A commenter asked that CMS create a series of edits in the OCE that would facilitate the collection of better data on drug costs and drug administration. Specifically, the commenter wants the OCE to edit out claims where a drug administration code is billed with no drug code on the claim; where a chemotherapy drug administration code is billed with a revenue code 25 X and no specific HCPS code; and where multiple units of a drug administration code are billed on the same line.
Response: We will consider what edits may be appropriate for inclusion in the OCE with regard to drug administration to facilitate collection of better data. However, we are concerned that edits of the type requested by the commenter may both impose greater billing burden on hospitals and create complexities that could delay claims processing.

## Discounting of Non-Chemotherapy Administration

Comment: Commenters indicated that no multiple procedure reduction should be applied to Q0081 (infusion of drugs other than chemotherapy) or its successor codes under any of the options. They indicated that payment is already too low to cover the cost of the infusion and that reducing it further when there are more costly procedures on the claim will only further under pay the service.
Response: We have retained the status indicator of "T" for Q0081. This status indicator means that the code will be reduced by 50 percent if it is the lower priced service on the same claim with another procedure with the status indicator "T". In most cases, we expect that this reduction would occur when there is a separate procedure performed on the same day as the infusion and that there will be significant efficiencies in administering an infusion. If the infusion is performed by itself or with a visit, or with a service with status code " S ", the multiple procedure reduction will not apply.
Payment for Drug Administration on a Per Day Versus a Per Visit Basis

Comment: Commenters indicated that it would be incorrect to revise the definition of the drug administration codes to be per day instead of per visit, as they are currently defined. They referred to many cases in which it is necessary for a patient to have more than one administration of nonchemotherapy drugs in a day and that hospitals should be able to bill multiple
units of the applicable code when that occurs. They noted that the APC Panel supported this view with regard to Q0081, infusion of non-chemotherapy drugs. They asked that CMS provide explicit instructions regarding billing for drug administration and ensure that fiscal intermediaries are bound to comply with the national instructions. One commenter asked that CMS create modifiers or specific HCPCS codes to reflect administration of multiple chemotherapy agents during a single session and that CMS permit payment for more than one chemotherapy administration on the same day of service, with a new modifier to reflect truly separate administrations.

Response: We acknowledge the commenters' concerns about our proposal to change the drug administration codes from a per visit basis to a per day basis and have not revised the definition of the drug administration codes from per day to per visit.

## CPT Codes for Drug Administration

Comment: Many commenters suggested that CMS should delete the HCPCS alphanumeric codes for drug administration and should use existing CPT codes. They indicated that the APC Panel supports this change and that it would be less burdensome for providers than using the HCPCS alphanumeric codes. One commenter presented a crosswalk that could be used to pay under the current drug administration APCs while permitting hospitals to bill using CPT codes. A commenter indicated that hospitals already maintain start and stop times for infusion therapies and that, therefore, the use of CPT codes for infusion would not be more burdensome than the current HCPCS codes.
Response: For the reasons discussed earlier in this section, for 2004 OPPS, administration of infusion of nonchemotherapy drugs, infusion of chemotherapy drugs and administration of chemotherapy by other than infusion, will continue to be billed and paid based on Q0081, Q0083 and Q0084. However, we take seriously the requests of the commenters and the APC Panel that we should use the CPT codes to pay for drug administration. We will seriously consider the crosswalk submitted and will discuss it with the APC Panel at its winter meeting. We also will pursue a means by which the existing data from 2003 hospital claims, which exist only for the Q codes, which are per visit, can be used to pay for services billed under the CPT infusion codes, which are on a per hour basis.

Elimination of Q0085 Chemotherapy Administration by Both Infusion and Other Technique

Comment: Several commenters supported elimination of Q0085 and the continued use of Q0083 and Q0084 in place of Q0085.

Response: As indicated above, we will no longer recognize Q0085 for payment of drug administration services for 2004. The code could not be deleted from HCPCS because the 2004 HCPCS was complete before the NPRM comment period closed. Instead, hospitals will bill and be paid for both Q0083 and Q0084 when they furnish chemotherapy by both infusion and another route.

## Charge Compression Reduction

 Through Revenue Code Requirements and Expansion of Revenue CodesComment: A commenter indicated that CMS could reduce charge compression effects by requiring hospitals to do detailed coding of drugs using the most specific categories of revenue codes. The commenter indicated that CMS would also need to create additional revenue codes to collect more specific information. The commenter indicated that collection of drug charge information at such detailed levels would both reduce charge compression and give CMS more information when determining which drugs to package to specific drug administration services.
Response: CMS will not require that specific revenue codes be used for drugs and will not ask the National Uniform Billing Committee to create additional revenue codes to collect more specific information. Revenue codes exist for hospital accounting purposes and, in general CMS does not require that particular services be billed with particular revenue codes. We are not convinced that adding specific requirements for revenue coding or expanding the revenue codes to acquire more specific information will result in better data or that the end result would be cost effective in terms of its potential effect on hospital operations. We believe that such requests to the NUBC should be generated by the provider community if it believes such changes would be in their overall best interest.

## Request for Clarification of Instructions

Comment: Commenters said that CMS needs to develop and issue clear national instructions on how drug administration in the OPD should be billed and to ensure that fiscal intermediaries all comply uniformly with the instructions. They said that in the absence of national instructions,
fiscal intermediary medical directors have developed and enforced local medical review policies that vary considerably from one another, resulting in very different interpretations of how services should be billed and of the amount of payment for the same set of circumstances. They specifically recommend that we address issues including how often drug administration codes can be billed in a day, billing for piggyback infusions, how to bill units of service. billing for pain control pump services, double infusions, and use of chemotherapy administration codes for patients with non-cancer diagnoses. The commenter also asked for clarification of the use of 90782 (IM injection) and 90784 (IVP injection) when used for sedation before surgery, Q0081 when used to keep a vein open, and Q0083 with regard to whether it should be billed each time a chemotherapy drug is administered. A commenter also asked that CMS clarify whether HCCPS codes Q0081, Q0083, Q0084 and Q0085, CPT codes 90783 , 90784 and 90788 may be billed more than once per visit. The commenter indicated that CMS previously said that CPT codes 90782-90788 may be billed separately for each injection and asked if this is a change to CMS policy in this regard.

Response: CMS will develop program instructions regarding how the drug administration codes should be used. We will attempt to address the specific questions identified in the comments in the course of developing those instructions. When the instructions are issued, they will be binding on all Medicare fiscal intermediaries under their contract with CMS. In the absence of national instructions, Medicare fiscal intermediaries have authority to develop local medical review policies governing billing, coverage and

## payment.

With regard to the issue of how often in a day Q0081, Q0083 and Q0084 may be billed, each of these codes is to be used to report all services in a single visit, regardless of the number of drugs administered during that visit. Therefore, if two chemotherapy drugs are administered by intravenous injection and 3 chemotherapy drugs are administered by infusion, the hospital would bill 1 unit of Q0083 and 1 unit of Q0084. A second unit of either code would only be billed if the patient left the OPD after completion of the first administration and then returned later for a separate encounter for administration of another chemotherapy drug. If the patient leaves the OPD and returns later in the day suffering from dehydration and requires infusion of
fluids and infusion of antiemetics, the hospital would bill Q0081 for those services. If the patient returns later in the same day for another infusion of one or more chemotherapy drugs that could not be administered at the earlier infusion for medical reasons, the hospital may bill 2 units of Q0084.

CPT codes 90782-90788 each represent an injection and as such, one unit of the code may be billed each time there is a separate injection that meets the definition of the code.

As indicated above, drugs for which the median cost per day is greater than \$50 are paid separately and are not packaged into the payment for the drug administration codes with which they are billed. See Addendum B for the 2004 OPPS payment amount for separately paid drugs, which are indicated with both payment amounts and status indicator "K."
Proposed Payment Rates for Drug Administration

Comment: Commenters indicated that the proposed payment rates for drug administration are too low to adequately compensate hospitals for the costs of packaged drugs. They indicated that there is some confusion over the resultant decrease in drug administration medians after low cost drugs (\$50-\$150) were packaged into the drug administration codes. The expectation was that the addition of the drug costs would result in increases. Moreover, they stated that the payment rates for drug administration services that include drugs that cost $\$ 50$ to $\$ 150$ per day, are so low that none of the rates are adequate to cover cases for which multiple drugs of \$100 each are administered.

A commenter who is particularly concerned with immunosuppressive drugs that are needed by beneficiaries following organ transplants, indicated that in 2000, Congress directed the Secretary of HHS to prepare a report to Congress containing recommendations regarding a cost effective way of providing coverage for immunosuppressive drugs to promote the objectives of improving health outcomes by decreasing transplant rejection rates attributable to failure to comply with immunosuppressive drug therapy and to achieve Medicare cost savings by preventing the need for secondary transplants and other care related to post transplant complications (Pub. L. 106-113). The commenter believes that packaging transplant drugs into the payment for drug administration and the proposal of such a low amount of payment defeats Congress's stated intention in this case
and will decrease beneficiary access to immunosuppressive drug therapy following transplant surgery.
Response: We believe that making separate payment for both the procedure and drugs for which there is a median per day cost in excess of $\$ 50$, will result in appropriate payment for the procedure with which the drug is billed. In the case of the HCPCS codes for administration of drugs per visit (Q0081, Q0083 and Q0084), compared to the proposed payments published in the NPRM, payments for the procedures do not decline by much when calculated without packaged drugs that have medians of $\$ 50$ to $\$ 150$. Therefore, we believe that total payments will be more appropriate for these drugs in 2004.

With respect to post-transplant immunosuppressive drugs, we would note that take-home supplies of such drugs are billed to the Durable Medical Equipment Regional Carriers and paid for separately outside of the OPPS. To the extent that such drugs fall below the $\$ 50$ median cost per day, we expect the frequency of administration in the hospital outpatient setting to be low.

## Coding for Drugs

Comment: A trade association representing drug manufacturers supported our proposal to require hospitals to report individual codes for all drugs, including those that are packaged, on the grounds that it would improve the quality of our data. Most commenters representing hospitals and hospital associations opposed the proposal. They indicated that the operational impact on hospitals would be significant, if we were to implement such a requirement. It would take a year or more to update chargemasters and train staff, and many more codes would have to be established for drugs that are administered but not identified in the current HCPCS. Hospitals and hospital groups did not support detailed reporting of routine, low cost drugs and supplies that are currently reported only using a packaged revenue code. A commenter stated that if CMS were to choose to require drug and/or device coding, CMS should give hospitals at least a year to prepare to implement the requirement and work with hospitals to identify all drugs and devices that would require codes, develop HCPCS codes with dosage descriptions that match the administered or purchased dose, assign HCPS to all administered drugs, clarify reporting of selfadministered drugs and drugs considered integral to a procedure under OPPS, and identify applicable drugs and devices in hospital
chargemasters. Commenters indicated that the use of "unclassified drugs" and "unclassified biologicals" would increase if hospitals are required to bill all drugs and that such a requirement would result in less reliable data for CMS at great cost to hospitals, with no measurable benefit. Some commenters indicated that the use of unclassified codes would create significantly more work for hospital staff and Medicare contractors. One commenter was concerned that this requirement would force hospitals to contort internal ordering and billing systems in order to match HCPCS codes to unrelated packaged dosage amounts, thereby significantly increasing the potential for error in the administration of drugs and putting patient safety at risk.
Response: Because we are not implementing any of the new drug administration coding requirements that we proposed, the need for more detailed drug coding is removed. Therefore, we are not requiring hospitals to report with a HCPCS code every drug that is administered to a patient. However, in order to receive payment for a drug for which a separate payment is provided, hospitals will have to continue to bill for the drug using revenue code 636, "Drugs requiring detail coding," and report the appropriate HCPCS code for the drug. Drugs for which separate payment is allowed are designated by status indicator " K " in Addendum B. Hospitals should continue to bill for packaged drugs, which are assigned status indicator " N ," using any of the drug revenue codes that are packaged revenue codes under the OPPS: 250, 251, 252, 254, 255, 257, 258, 259, 631, 632, or 633. Hospitals are not required to use HCPCS codes when billing for packaged drugs, unless revenue code 636 is used. Although we are not requiring hospitals to report HCPCS codes for packaged drugs, it is essential that hospitals continue to bill charges for packaged drugs by including the charge for packaged drugs in the charge for the procedure or service with which the drug is used, or as a separate drug charge (whether or not it is separately payable). Reporting charges for packaged drugs is critical because packaged drug costs are used for calculating outlier payments and are also identified when we calculate hospital costs for the procedures and services with which the drugs are used in the course of the annual OPPS updates.

Comment: Several commenters recommended that CMS establish a unique revenue code for radiopharmaceuticals that hospitals would be required to use when
reporting all radiopharmaceuticals, whether packaged or separately payable. They indicated that establishing a unique revenue code would assist CMS in tracking costs for the
radiopharmaceuticals and contribute to more accurate cost data collection.
Response: We do not establish revenue codes. Rather, the National Uniform Billing Committee (NUBC) receives and considers such requests from multiple sources, including providers and other members of the public. While we continue to examine cost-to-charge and cost compression issues, we will consider whether such an approach would assist CMS in refining our methods of establishing relative weights. We would also note that the commenters and other interested parties may also request that the NUBC consider the creation of new revenue codes.

Comment: Several commenters expressed concern about the frequent coding changes implemented for radiopharmaceuticals over the past two years. They recommended that CMS revise the HCPCS coding descriptors for products that do not currently have "per dose" or "per study" descriptors to reflect the products as they are administered to the patient. They emphasized that creating these new descriptors and corresponding payment rates will improve data collection and help to ensure equitable payment to hospitals.

Response: We recognize the concerns expressed by these commenters. However, we are striving to achieve stability in descriptor changes, and we believe that in changing descriptors to "per dose", we will lose specificity with respect to the data we will receive from hospitals. We are not convinced that there is a programmatic need to change the radiopharmaceutical code descriptors to "per dose" and that our claims data are problematic for setting payment rates for these products; however, we will continue to work with industry representatives to ensure that the current HCPCS descriptors are appropriate and review this issue in the future, if needed. Furthermore, we stress the importance of proper coding by providers so that we can get accurate data for future rate setting.
Comment: One drug manufacturer urged CMS to advise hospitals that it is appropriate for them to set charges for drugs submitted to Medicare for OPPS services so that the charges reflect actual product costs when charges are multiplied by hospital and cost-centerspecific ratios of cost-to-charges. The commenter also requested CMS to not rely on data obtained in the absence of
such advice. A comment from a national hospital organization, however, advised CMS to permit hospitals to continue to establish their charge structures and mark-up policies separate and apart from CMS's payment policies. The commenter indicated that only in this manner would prospective payments appropriately reflect general trends in charges and mark-ups across all hospitals.

Response: We do not regulate what hospitals charge for hospital services and will not advise hospitals regarding how to determine the charge for an item or service. Hospital charges have fundamental uses and the use of charges to determine relative costs for OPPS should not be the determining factor in how a hospital sets its charge for any item or service. The OPPS is a system based upon the relative costs of services and these costs are developed by applying the hospital's most recent cost to charge ratio to the charges of the hospital for the item. While we recognize that the system is imperfect, we believe that on average, it results in appropriate relative weights. However we recognize that on occasion, this is not true and therefore, as discussed elsewhere, we have used external data where we believe that the median derived from claims data does not appropriately reflect the relative cost of the item or service.

Comment: One commenter requested that we change the status indicator for HCPCS code J7599 (Immunosuppressive drug, not otherwise classified) from " $E$ " to " N " so that new immunosuppresives can be identified on claims forms as a separate line item until a unique passthrough " C " code can be assigned to the product.
Response: We agree that the status indicator for J7599 should be " N " and have made that change for CY 2004. As for other new drugs and biologicals, interested parties may submit an application for pass-through status for new immunosuppressives.

## Coding for Drugs Billed as Supplies

Comment: Commenters said that CMS significantly complicated the issue of billing for drugs when it indicated that drugs that are an integral part of the procedure should be billed as supplies (revenue code 270) rather than as pharmaceuticals (revenue code 250). Response: We did not issue instructions to require that drugs that are an integral part of a surgical procedure be billed using revenue code 270 (supplies) rather than revenue code 250 (pharmaceuticals). Rather, we instructed hospitals to report drugs that are treated as supplies because they are
an integral part of a procedure or treatment under the revenue code associated with the cost center under which the hospital accumulates the costs for the drugs. (See section XXIV.D of Transmittal A-02-129, issued on January 3, 2003.)

In general, supplies that are an integral component of a procedure or treatment are not reported with a HCPCS code. The charges for such supplies are typically reflected either in the charges on the line for the HCPCS for the procedure or on another line with a revenue code that will result in the charges being assigned to the same cost center to which the cost of those services are assigned in the cost report.

## Correct Coding Initiative Edits

## 5. Generic Drugs, and <br> Radiopharmaceuticals

In general, hospital acquisition costs for drugs, biologicals, and radiopharmaceutical agents with generic competitors are lower than the acquisition costs for sole source or multi-source drugs. In order to ensure that Medicare recognizes these lower costs in a timely manner, we proposed a new method of calculating payment amounts for drugs, biologicals, and radiopharmaceuticals that are separately paid under the OPPS and for which the Food and Drug Administration (FDA) has recently approved generic alternatives.

Because many hospitals have long term purchasing arrangements for drugs and radiopharmaceuticals, we believe that there is generally a 12 -month lag between the time that generic items are made available and when our claims data will accurately reflect the costs associated with the availability of the generic alternative. Therefore, during the interval between FDA approval of a generic item and the time when we would reasonably expect claims data to reflect the cost of generic alternatives, we proposed to adopt the following methodology to price the affected drugs, biologicals, and radiopharmaceuticals under the OPPS.

We proposed to identify items approved for generic availability by the FDA during the 6 months before the first day of the claims period we use as the basis for an annual OPPS update. Where we determine that our claims data do not reflect the costs of generic alternatives for a separately payable drug, biological, or radiopharmaceutical, we proposed to base our payment rate on 43 percent of the AWP for the drug, biological, or radiopharmaceutical.

To apply this payment methodology to the 2004 OPPS update, we reviewed FDA approvals for generic drugs, biologicals, and radiopharmaceuticals issued between October 2001 and December 2002. We found six drugs, which we proposed to be separately paid under the 2004 OPPS that had generic alternatives approved during that time. These drugs are:
Daunorubicin, Bleomycin, Pamidronate, Paclitaxel, Ifosfomide, and Idarubicin. Table 21 shows the dates when the FDA approved generic alternatives for these drugs.
We solicited comments on this proposed method of calculating payment for drugs, biologicals, and radiopharmaceuticals for which generic alternatives have recently been approved. Specifically, we were interested in comments concerning our proposed methodology for identifying these items, whether we properly identified all the items, and whether our proposed payment policy for these generic alternatives is appropriate.
We received many comments on our proposal regarding generic drugs and radiopharmaceuticals, which are summarized below along with our responses.
Comment: One commenter applauded CMS's efforts to lower payment for generic products to an amount more closely aligned with hospital acquisition cost. However, the commenter indicated that payment for generic cancer products would continue to be excessive and contribute to an environment where hospitals may offer treatments using less effective chemotherapy products. Alternatively, comments from a national hospital association and numerous manufacturers stated that the presence of generic alternatives in the market does not necessarily result in cost savings for hospitals. They indicated that established multi-year contracts may prevent providers from switching immediately to generic alternatives. As a result, providers would not realize any cost savings from buying the generic products until the conclusion of their existing contract, which in some cases may be a few years after the generics are available in the market. Commenters also indicated that it is quite common for shortages of generic equivalents to occur when they first appear in the market. Thus, there is no guarantee that sufficient quantities of generic alternatives will be available in the marketplace for all providers to purchase them. Furthermore, adoption of generic drugs by hospitals is also affected by whether the providers determine they are safe to use in
comparison to the brand name products. One commenter recommended that CMS continue to use its 2002 claims data to set the payment rated for these drugs.

Response: We appreciate these insightful comments and agree with the commenters that the time it takes for hospitals to realize cost savings (or price decreases) from purchasing generic products is longer than we initially expected because of the various reasons described by the commenters. Further research on this issue also shows that cost savings due to competition between generic and name brand drugs can vary. One reason is that in some cases regulations allow the first generic marketed to compete with a name brand drug to have a period of exclusivity during which time no other generics may come on the market. This period of exclusivity may mean that cost savings during this period of exclusivity are less than cost savings that occur once more than one generic is put on the market. For 2004, we believe that calculating payment rates for generics according to the methodology discussed above would not sufficiently take into consideration the true costs incurred by hospitals for purchasing generic products. Therefore, we believe that it is appropriate to calculate the payment rates for generics according to the same methodology used for other separately payable drugs and radiopharmaceuticals.

## 6. Orphan Drugs

In the proposed rule we stated that we no longer believe that paying for orphan drugs at reasonable cost, outside of OPPS is appropriate, and we proposed the following payment policy:

- We proposed to continue using the same criteria to identify single indication orphan drugs (67 FR 66772).
- We proposed to discontinue retrospective cost payments and to make prospective payments under the OPPS for those identified single indication orphan drugs.
- We proposed to base payments on the same methodology we use to pay for other drugs including any limitation on payment reductions (as described above).
- We proposed to make separate payment for the single indication orphan drugs and place them in APCs.
The 11 single indication orphan drugs that would be affected by our proposal are: (J0205 Injection, alglucerase, per 10 units; J0256 Injection, alpha 1proteinase inhibitor, 10 mg ; J9300 Gemtuzumab ozogamicin, 5 mg ; and J1785 Injection, imiglucerase, per unit); J2355 Injection, oprelvekin, 5 mg ; J3240 Injection, thyrotropin alpha, 0.9 mg ;

J7513 Daclizumab parenteral, 25 mg; J9015 Aldesleukin, per vial; J9160 Denileukin diftitox, 300 mcg ; J9216 Interferon, gamma 1-b, 3 million units; and Q2019 Injection, basiliximab, 20 mg.

We solicited comments on these proposals and requested that commenters submit information meeting the same criteria as comments for other drugs (as discussed above). We received numerous comments, all of which were in opposition to our proposals regarding payment for orphan drugs.

Comment: Every commenter who commented on the changes we proposed regarding payments for single indication orphan drugs opposed our proposal to discontinue payment for orphan drugs on a reasonable cost basis and to instead use the same methodology to set payment amounts for the single indication orphan drugs that we use to set rates for other drugs. Commenters stated that doing so would create serious access problems for patients who rely on an orphan drug for treatment of a rare disease because hospitals would no longer be able to afford to treat them. A number of commenters were particularly concerned by the decreased payment rate proposed for alpha-1-proteinase inhibitor. Some pointed out that the data we used to calculate payments for orphan drugs are especially flawed because of the low volume, high cost characteristics of orphan drugs, complicated by errors in the way hospitals bill for drugs generally. Recommendations from commenters included: applying the dampening rule to limit decreases to $10 \%$ of reasonable cost payments in 2003; establishing a payment floor; and, continuing to pay for orphan drugs on a reasonable cost basis.

Response: We carefully reviewed commenters' concerns about the impact our proposal would have on patient access to orphan drugs. We do not dispute that orphan drugs used solely to treat an orphan condition are generally expensive and, by definition, are rarely used. We also recognize that coding changes may have resulted in questionable billing data. However, we believe that it is important to balance these concerns with maintaining a consistent payment system for hospital outpatient department services overall, and to limit to the maximum possible extent payment for services or items outside the OPPS. We also discussed in the August 12 proposed rule our concerns about the increased number of drugs that meet our criteria for special payment status as single indication
orphan drugs and the resulting increase in the number of hospital outpatient services that would be paid outside the OPPS were we to continue to pay for these drugs on a reasonable cost basis. It was in light of these factors that we proposed to discontinue payment for single indication orphan drugs on a reasonable cost basis outside the OPPS and to use our claims data as the basis for setting payment rates for those drugs that we have identified as meeting our criteria for special payment status as single indication orphan drugs. We also proposed to pay separately for the single indication orphan drugs and to assign each of them to an APC.
Having weighed the concerns raised by commenters and our concerns about the increasing number of outpatient services that would be paid outside the OPPS were we to continue the current policy of paying for single indication orphan drugs on a reasonable cost basis, we have decided that beneficiaries, hospitals, and the Medicare program will be best served over the long term by our making payment for the single indication orphan drugs under the OPPS at 88 percent of the AWP. We arrived at 88 percent based on our analysis of claims data, and our intent that payment be sufficient to ensure that all beneficiaries have access to needed drugs. Among the 11 orphan drugs, the highest median cost in the claims data was approximately 78 percent of the AWP. After considering comments we received on the proposed rule, we were concerned that merely adopting the existing highest percentage of the AWP may not ensure that a sufficient payment amount is established in all cases prospectively. We therefore have provided for an additional margin of ten percentage points to account for possible future increases, and ensure sufficient payment. This results in the percentage of 88 percent that we have adopted in this final rule.

However, we received information consistent with our request for verifiable data ( 68 FR 47998) that indicates the payment amounts we proposed for alpha-1 proteinase inhibitor, for imiglucerase, and for alglucerase do not reflect the price at which these drugs are widely available to the hospital market. This information, combined with the concerns expressed by commenters generally that the payment amounts we proposed for the 11 drugs that meet our criteria for special payment as single indication orphan drugs are too low and may threaten beneficiary access to the drugs, have persuaded us to make final one modification to the method we proposed for setting payment rates for drugs that are paid as single indication
orpharr drugs under the OPPS. That is, rather than using claims data to calculate payment rates for single indication orphan drugs that meet our criteria for special payment under the OPPS, we are setting payment for all but two of these drugs at 88 percent of their AWP as established in the April 1, 2003 single drug pricer (SDP). As discussed above, we received information about the widely available market price for imiglucerase and alglucerase, and, based on that information, we have priced these two drugs at 94 percent of their AWP.
We believe that this policy is a reasonable compromise. It enables us to set a prospective payment amount under the OPPS for qualified single indication orphan drugs. But, by increasing payment levels for these low volume drugs, we minimize the risk of compromising beneficiary access to treatment for life-threatening, rare diseases.

Therefore, we have set payment rates for single indication orphan drugs in accordance with the following policy, effective January 1, 2004:

- We are using the same criteria that we implemented in CY 2003 to identify single indication orphan drugs used solely for an orphan condition for special payment under the OPPS;
- We are discontinuing payment on a reasonable cost basis for single indication orphan drugs furnished in the outpatient department of hospital that is subject to the OPPS;
- We are making separate payment for single indication orphan drugs and assigning them to APCs;
- We are setting payment under the 2004 OPPS for single indication orphan drugs at 88 percent of the AWP listed for these drugs in the April 1, 2003 single drug pricer unless we are presented with verifiable information that shows that our payment rate does not reflect the price that is widely available to the hospital market.

Comment: Several commenters objected to our special treatment for only 11 orphan drugs, rather than including all of the drugs that the FDA designates as having órphan status. A few commenters recommended that we set the criteria for special treatment based on claims volume instead of our current criteria. That is, CMS would set a criterion for "high volume" drugs based on a threshold of 30,000 or more claims per year. Then, any FDAdesignated orphan drug with less than the threshold volume of claims would be subject to special payment under the OPPS as an orphan drug.

Response: Using the statutory authority at section $1833(\mathrm{t})(1)(\mathrm{B})(\mathrm{i})$ of
the Act, which gives the Secretary broad authority to designate covered OPD services under the OPPS, we have established criteria which distinguish these 11 drugs from other drugs designated as orphan drugs by the FDA under the Orphan Drug Act. Our determination under this authority to provide special payment for a subset of FDA-designated orphan drugs does not affect FDA's classification of drugs under the Orphan Drug Act. Because these 11 drugs have a low volume of patient use, lack other indications, and have no other source of payment, we allow special treatment of them so beneficiaries can continue to have access to them. Because these 11 drugs are used solely to treat an orphan condition that affects a relatively low number of beneficiaries, hospitals receive payment for a low volume of cases by definition, and the cost of the drug is not spread across other uses. We are concerned that if we were to adopt the commenter's recommendation that we qualify all FDA-designated orphan drugs under a particular volume threshold for special payment under the OPPS, we could be expanding this special payment provision, which is meant to target the small number of orphan drugs that are used solely to treat rare diseases, to drugs that are used for other conditions and indications, for which hospitals would also be receiving payment. Therefore, we are not adding a volume threshold to our criteria for identifying orphan drugs that receive special payment under the OPPS in 2004.

## 7. Vaccines

Outpatient hospital departments administer large amounts of the vaccines for influenza (flu) and pneumococcal pneumonia (PPV), typically by participating in immunization programs. In recent years, the availability and cost of some vaccines (particularly the flu vaccine) have fluctuated considerably. As discussed in the November 1, 2002 final rule ( 67 FR 66718), we were advised by providers that OPPS payment was insufficient to cover the costs of the flu vaccine and that access of Medicare beneficiaries to flu vaccines might be limited. They cited the timing of updates to OPPS rates as a major concern. They said that our update methodology, which uses 2-year-old claims data to recalibrate payment rates would never be able to take into account yearly fluctuations in the cost of the flu vaccine. We agreed and decided to pay hospitals for influenza and pneumococcal pneumonia vaccines based on a reasonable cost methodology.

As a result of this change, hospitals, home health agencies (HHAs), and hospices were paid at reasonable cost for these vaccines in 2003. We are aware that access concerns continue to exist for these vaccines; therefore, we proposed to continue paying for influenza and pneumococcal pneumonia vaccines under reasonable cost methodology.

We received no comments regarding our payment proposal for vaccines, and finalize our proposal in this rule.

## 8. Blood and Blood Products

Since the OPPS was first implemented in August 2000, separate payment has been made for blood and blood products in APCs rather than packaging them into payment for the procedures with which they were administered. We proposed to continue to pay separately for blood and blood products.
The list of APCs containing blood and blood products can be found in the November 1, 2002 final rule ( 67 FR 66750). We note that the APCs for these products are intended to make payment for the costs of the products. Costs for storage and other administrative expenses are packaged into the APCs for the procedures with which the products are used.
As described in the November 1, 2002 final rule ( 67 FR 66773), we applied a special dampening option to blood and blood products that had significant reductions in payment rates from 2002 to 2003. For 2003, we limited the decrease in payment rates for blood and blood products to approximately 15 percent.

After careful comparison of the 2003 dampened medians with the 2004 medians from our claims data, we determined that establishing payment rates based on the 2004 median costs would, for many blood and blood products, result in payments that are significantly lower than hospital acquisition costs. In order to mitigate any significant payment reductions and to minimize any compromise in access of beneficiaries to these products, we proposed a 10 percent limit to decreases in payment rates for blood and blood products from 2003 to 2004

We solicited comment on this proposal, especially from hospitals. Specifically, we solicited comments that include verifiable information about the widely available acquisition cost of commonly used blood and blood products.

We received several comments on this proposal, which are summarized below along with our responses.

Comment: Several hospital groups supported the recommendation made by the APC Panel at its August 22, 2003 meeting and urged us to consider freezing 2004 payment rates for blood and blood products at the 2003 levels. A few commenters recommended that CMS use data provided by suppliers of blood and blood products to help set payment rates for 2004. Two commenters stated that major blood organizations are prepared to share the data for verification with CMS. Another commenter recommended that CMS base payments on either reasonable cost or external data.

Response: After carefully reviewing the concerns expressed by commenters and analyzing the further reductions in payment that would result from using our 2002 claims data, even with the 10 percent limit on payment decreases that we proposed, we are convinced that our payments would be considerably lower than what it costs hospitals to acquire blood and blood products. Further, we are mindful of the increasing number of tests required to ensure the safety of the nation's blood supply, which is adding to the cost of processing blood and blood products. Therefore, in order to ensure that our beneficiaries have uninterrupted access to safe blood and blood products, we agree with the recommendation of commenters and the APC Panel that we freeze payments for blood and blood products in 2004 at 2003 payment levels rather than implement our proposal to limit payment decreases to 10 percent. This will enable us to undertake further study of the issues raised by commenters and by presenters at the August APC Panel meeting, without putting beneficiary access to blood and blood products at risk. Therefore, effective for services furnished on or after January 1, 2004, the payment rates for blood and blood products will not change from their 2003 levels.

Comment: One commenter was concerned that while autologous blood and directed donor blood do not have separate CPT codes, hospitals' costs to obtain them are different. Hospitals can only report charges for the autologous blood unit if the patient receives it; otherwise, hospitals must absorb the cost of the autologous donation. The same commenter also suggested that CMS research the issue of whether providing blood to patients with special needs would increase hospital costs. The commenter stated that hospitals do not receive additional payment when conducting national searches to meet special blood needs. Another commenter was concerned that drugs and biologicals were dampened to a
lesser extent than blood and blood products. The commenter requested that CMS discontinue the differential dampening and apply the dampening rule equally.
Response: The commenter's concerns about rules governing payment for autologous blood and the costs associated with procuring blood for patients with special needs fall outside the scope of our proposed rule. These questions require further analysis and study, which we cannot undertake in time for implementation of the 2004 update of the OPPS. However, as we examine the current policies that affect payment for blood and blood products under the OPPS, we will consider both of the commenter's concerns.

As for the comment regarding adoption of a uniform dampening policy for both separately payable drugs as well as blood and blood products, this concern is no longer an issue because of our decision to freeze payment rates for blood and blood products at their 2003 levels for 2004.

Comment: Several commenters requested that CMS provide and promote guidance on correct coding and billing for blood and blood products to hospitals and other providers.

Response: We acknowledge the need for comprehensive billing and coding guidelines for hospitals and other providers. This is an area we expect to address in the near future.

## 9. Intravenous Immune Globulin

In the proposed rule, we discussed public comments suggesting that we reclassify intravenous immune globulin (IVIG) as a blood and blood product. We stated that after a review of claims data, we believe that payment for these products is appropriate using the methodology we proposed to implement for other drugs and biologicals.
Therefore, we proposed to continue to classify IVIG as a biologic. We solicited comments on this proposal.

We received several comments on this proposal, which are summarized below along with our responses.

Comment: Several trade associations, manufacturers, patient organizations and individual commenters urged CMS to classify intravenous immune globulin (IVIG) under the "blood and blood product category." They indicated that IVIG is derived from plasma fractionation similar to other products categorized as a blood and blood product by CMS; and, furthermore, IVIG falls within the FDA's definition of "blood and blood product." Some of the commenters expressed concern about the potential negative impact on patient access as a result of our proposed
payment policy. Another commenter requested that we consider all plasmaderived products and their recombinant analogs as blood products.
Response: We appreciate these comments. However, we continue to believe that IVIG and other plasmaderived therapies and their recombinant analogs are comparable to other drugs and biologicals, and they do not have the same access concerns as other blood and blood products. Our policy regarding IVIG and plasma therapies were described in the November 1, 2002 final rule ( 67 FR 66774). For 2004, IVIG will be a separately payable item, and its payment rate will be based on approximately 26,500 claims for approximately 1.5 million services. As mentioned in the August 12, 2003 proposed rule ( 68 FR 48005), analysis of the claims data indicated that hospital costs and billing practices for IVIG have been consistent over the past two years. Therefore, we believe that the 2002 claims data contain a sufficiently robust set of claims for IVIG on which to base the payment rate for this item using the methodology that will be used for other separately payable non-pass-through drugs, biologicals, and radiopharmaceuticals.

## 10. Payment for Split Unit of Blood

Since implementation of the OPPS, we have assigned status indicator " $E$ " to HCPCS code P9011, blood (split unit). Status indicator "E" designates services for which payment is not allowed under the OPPS or services that are not covered by Medicare. P9011 was created to identify situations where one unit of red blood cells or whole blood, for example, is split and half of the unit is transfused to one patient and the other half to another patient. Because use of split units is not uncommon, we proposed to change the status indicator for P9011 from " E " to " K " and assign it to a blood and blood product APC that pays approximately 50 percent of the payment for the whole unit of blood. We proposed to assign P9011 to APC 0957 (Platelet concentrate) with a payment rate of $\$ 37.30$. We invited comments on this proposed change in the status indicator and payment amount for P9011.

We received a few comments on this proposal, which are summarized below along with our responses.

Comment: Commenters pointed out that there was a typographical error in the proposed rule in which we referred to the split unit of blood as P9010 rather than P9011.
Response: We agree this was an error and have corrected it in this preamble and are making final our proposal to
assign P9011 to APC 0957 (platelet concentrate).

## 11. Other Issues

We proposed to continue our payment policy for Procrit and Aranesp for calendar year 2004. As explained in detail in the November 1, 2002 final rule ( 67 FR 66758), Aranesp and Procrit are in separate APCs, and are paid at equivalent rates with the application of a ratio to convert the dosage units of Aranesp into units of Procrit. We indicated that we might refine the conversion ratio as soon as feasible based on information not available at the time we established the current conversion ratio.
We have continued to gather information regarding an appropriate conversion ratio by reviewing recent published studies and data from alternative sources. In the proposed rule, we stated that we remain open to establishing a different conversion ratio in the final rule if we conclude that a change is warranted based on public comments and information submitted during the public comment period and/ or any other information we consider in developing the final rule. Therefore, we proposed to continue with the current policy regarding payment for Procrit and Aranesp, including the current conversion ratio. We solicited comments on this issue and we stated that we would base any changes to our current payment policy for these two drugs only on data that we could make available to the public.

We received several comments on this proposal, which are summarized below along with our responses.

Comment: We received several comments concerning payment under the OPPS for erythropoietin and an erythropoietin-like product. Specifically, the comments pertained to payment for Aranesp ${ }^{\text {TM }}$ (marketed by Amgen) and Procrit ${ }^{\mathrm{TM}}$ (marketed by Ortho Biotech) under the OPPS and the decision we made for 2003 with respect to an appropriate conversion ratio to ensure that these products, which use the same biological mechanism to produce the same results, are paid at the same rate.

Response: Erythropoietin, a protein produced by the kidney, stimulates the bone marrow to produce red blood cells. In severe kidney disease, the kidney is not able to produce normal amounts of erythropoietin and this leads to the anemia. Additionally, certain chemotherapeutic agents used in the treatment of some cancers suppress the bone marrow and cause anemia.
Treatment with exogenous erythropoietin can increase red blood
cell production in these patients and thus treat their anemia.

In the late 1980's, scientists used recombinant DNA technology to produce an erythropoietin-like protein called epoetin alfa. Epoetin alfa has exactly the same amino acid structure as the erythropoietin humans produce naturally and, when given to patients with anemia, stimulates red blood cell production.

Two commercial epoetin-alfa products are currently marketed in the United States: Epogen ${ }^{\text {TM }}$ (marketed by Amgen) and Procrit ${ }^{\text {TM }}$ (marketed by Ortho Biotech). These products are exactly the same but are marketed under two different trade names. Both Epogen ${ }^{\text {TM }}$ and Procrit ${ }^{\text {TM }}$ are approved by the FDA for marketing for the following conditions: (1) Treatment of anemia related to chronic renal failure (including patients on and not on dialysis), (2) treatment of Zidovudinerelated anemia in HIV patients, (3) treatment of anemia in cancer patients on chemotherapy, and (4) treatment of anemia related to allogenic blood transfusions in surgery patients. Both products are given either intravenously or subcutaneously up to three times a week.

Amgen developed a new erythropoietin-like product, darbepoetin alfa, which it markets as Aranesp ${ }^{T M}$. Also produced by recombinant DNA technology, darbepoetin alfa differs from epoetin alfa by the addition of two carbohydrate chains. The addition of these two carbohydrate chains affects the biologic half-life of the compound. This change, in turn, affects how often the biological can be administered, which yields a decreased dosing schedule for darbepoetin alfa by comparison to epoetin alfa. Amgen has received FDA approval to market Aranesp ${ }^{\mathrm{TM}}$ for treatment of anemia related to chronic renal failure (including patients on and not on dialysis) and for treatment of chemotherapy-related anemia in cancer patients.

Because darbepoetin alfa has two additional carbohydrate side-chains, it is not structurally identical to epoetin alfa. However, the two products use the same biological mechanism to produce the same clinical results-stimulation of the bone marrow to produce red blood cells.

These biologicals are dosed in different units. Epoetin alfa is dosed in Units per kilogram ( $\mathrm{U} / \mathrm{kg}$ ) of patient weight and darbepoetin alfa in micrograms per kilogram (mcg/kg). The difference in dosing metric is due to changes in the accepted convention at the time of each product's development.

At the time epoetin alfa was developed, biologicals (such as those developed through recombinant DNA) were typically dosed in International Units (IU or Units for short), a measure of the product's biologic activity. They were not dosed by weight (for example, micrograms) because of a concern that weight might not accurately reflect their standard biologic activity. The biologic activity of such products can now be accurately predicted by weight, however, and manufacturers have begun specifying the doses of such biologicals by weight. No standard formula exists for converting amounts of a biologic dosed in Units to amounts of a drug dosed by weight.
In the clinical management of individual patients, CMS recognizes that no precise method of converting an epoetin alfa dose to a darbepoetin alfa dose has yet been established for any of the approved clinical uses. There are general guidelines for conversion and clinicians modify the dose based on the patient's hematopoietic response after the start of treatment with the new biological. For the purpose of developing a payment policy, however, it is feasible to establish a method of converting the dose of each of these drugs to the other. This payment methodology is intended to reflect average dosing requirements for the entire Medicare target population, and is not intended to serve as a guide for dosing individual patients.

As part of the process to define and further refine a payment conversion ratio between these biologicals, CMS held a series of meetings with representatives from both Amgen and Ortho Biotech. Both companies provided substantial new data, both published and unpublished. We also reviewed the Food and Drug Administration labeling for each product (EpogenTM, ProcritTM, and AranespTM), hired an independent contractor to review the available clinical evidence, and performed an internal review of this evidence as well. CMS took into consideration both published and unpublished studies as well as abstracts, conference reports, clinical guidelines, marketing material, and other reports and materials provided by Amgen and Ortho Biotech.

As noted in the OPPS final rule for 2003, CMS was interested in having a "head-to-head" comparison of epoetin alfa to darbepoetin alfa either in patients with chronic kidney disease or in cancer patients with chemotherapy-induced anemia, and in which appropriate outcome measures were used. Because no head-to-head study has yet been completed, CMS also considered
clinical studies that either compared both products to each other or that linked the dose of a particular product with an appropriate health outcome measure. For the 2003 OPPS, we held a series of meetings with both Amgen and Ortho Biotech. We examined the written and published information provided by both companies, reviewed the FDA labeling for each product, hired an independent contractor to review available clinical evidence and performed an internal review of the evidence as well. In our review, we placed the greatest emphasis on published, high quality clinical studies and looked for the best possible estimates based on an evaluation of the dosing of each product that, on average, produced the same clinical response. Based on our own review of the evidence, our consultation with the independent contractor who also reviewed the evidence, and our discussions with each company, we established a conversion ratio for purposes of payment in 2003 of 260 International Units of epoetin alfa to one microgram of darbepoetin alfa (260:1).
Since publication of the OPPS final rule for 2003, we have continued to review and refine our analysis of the appropriate conversion ratio between these biologicals. In order to facilitate analysis of the non-peer reviewed materials submitted by Amgen and Ortho Biotech, we initiated a process in July 2003, in which each company shared with CMS, our contractor, and each other, a detailed description of the methods used in each of their unpublished clinical studies. Each company was then asked to submit to us their comments as well as the responses to questions raised by the other company's review. Finally, based on our analysis of this information, CMS submitted questions to each company to clarify their views. The final payment conversion ratio is based on our analysis of the information submitted during the process described above, as well as claims analysis, and other publicly available information.

Chemotherapy-induced anemia: The articles submitted by the manufacturers regarding treatment of chemotherapyinduced anemia (CIA) were all observational, retrospective, cohort studies. Several of these studies were conducted with a high degree of attention to minimizing avoidable bias and maximizing data integrity. Observational studies are, however, unavoidably subject to patient selection bias since study subjects are not randomly assigned to the groups being compared. It is not possible to eliminate the possibility that the choice of
erythropoetic agent was somehow systematically linked to characteristics of the patients treated. Similarities or differences in clinical response may reflect either baseline patient characteristics or the effects of the therapy being studied.

Another major limitation of observational studies is that the researcher typically has no control over the manner in which the intervention under study has been delivered. In this instance, an additional difficulty with using observational studies to assess the equivalence of dosages of epoetin alfa and darbepoetin alfa in chemotherapyinduced anemia in cancer patients is that the response to these drugs may be disease-driven, dosage-driven, or both (depending for example, among other factors, on the individual cancer patient's level of endogenous erythropoietin). A large range of dosages of both epoetin alfa and darbepoetin alfa may show similar effects in any given patient and higher than necessary dosages may not be reflected in greater elevations of hemoglobin. More generally, the populations in the reported studies may show different results due to differences in demographics, health status, types of cancer, and cancer treatments.

Beyond these methodological concerns, the question of what constitutes the best indicator of drug effect remains unsettled. Studies in the literature have used one or more of the following end-points to analyze the effects of erythropoietic drugs:

1. Hemoglobin response-an increase from baseline of $>2 \mathrm{~g} / \mathrm{dL}$ (usually in the absence of transfusion in the preceding 28 days)
2. Hematopoietic responseHemoglobin increase of $>2 \mathrm{~g} / \mathrm{dL}$ from baseline or a hemoglobin $>12 \mathrm{~g} / \mathrm{dL}$
3. Mean change in hemoglobin "the mean increase in hemoglobin from baseline (usually in the absence of transfusion in the preceding 28 days)
4. Transfusions of red blood cells "the number (percent) of patients requiring transfusion measured at various time intervals.
Studies submitted by one of the manufacturers proposed additional measures such as "early hemoglobin response" (the hemoglobin rise from baseline at 4 or 5 weeks) and the "area under the curve" defined by hemoglobin increases from baseline. The FDA has not used these measures as criteria for registration (i.c., market approval) and they do not appear to be regularly used in the peer reviewed literature of erythropoietic drugs and their use either in kidney disease or in
oncology. Therefore, their clinical significance is unclear at this time. They do, however, raise the question of how hemoglobin response patterns affect symptoms that matter most to patients. Both companies are conducting additional clinical studies to address further the potential importance of front-loaded regimens that provide high initial doses of erythropoietic drugs in order to stimulate a more rapid clinical response.

During the process of exchanging and critiquing study methods, Amgen and Ortho-Biotech each raised significant methodological concerns about the study designs used to obtain new data. In addition to the overall concern about the observational methodology and selection of the outcome chosen for purposes of comparison, the following concerns were raised:
-the use of survival curves to analyze clinical data in this context
-the possible effect of patient functional status on erythropoietic response
-the technique for calculating mean values for drug dosages (arithmetic vs geometric means)
-the strategy for deciding how to handle data from patients who received transfusions
-the significance of an early rise in hemoglobin, and/or the significance of measures of hemoglobin response over the entire 12-16 week treatment interval
Each company provided extensive and compelling discussions of these and other issues, highlighting the fact that conclusions regarding the relative potency of these products are inherently limited by the nature and quality of the clinical data that currently exist. Despite the limitations of the available studies, CMS believes that it has sufficient data to establish a reasonable conversion ratio for payment purposes. Amgen submitted several observational studies, including one community-based study and three medication use evaluations (MUE). While interim results from two of these studies have been published in peerreviewed journals, final results have not yet been subjected to full peer review. In one study (Vadhan-Raj, 2003), patients were started on darbepoetin at $3 \mathrm{mcg} / \mathrm{kg}$ every other week (QOW). The patients received up to 8 doses (16 weeks). The patients had hemoglobin ( Hgb ) responses comparable to that seen with epoetin 40,000-60,000 IU per week. The protocol allowed a dose increase and 43 percent of participants had their darbepoetin dose increased to $5 \mathrm{mcg} / \mathrm{kg} /$ QOW per the protocol.

Virtually all of the Amgen studies produced results that suggested a conversion ratio of 400:1.
Ortho Biotech submitted early unpublished results from a multicenter head-to-head trial of $40,000 \mathrm{IU}$ of epoetin weekly compared to 200 mcg of darbepoetin every other week. The primary end-point is the change in Hgb from baseline at week 5 , and initial results show significantly greater increase in Hgb for patients treated with epoetin. Ortho Biotech also submitted data from several retrospective analyses of medical charts and electronic medial records, totaling several thousand patients. None of these studies have yet been peer-reviewed or published. All of the Ortho-sponsored studies provide results suggesting that the appropriate conversion ratio is $260: 1$ or less.

In the observational studies that directly compare Aranesp and Procrit for the treatment of CIA, and report total dose per patient per episode of both epoetin and darbepoetin, the ratio of mean total doses is $341: 1$ and the ratio of median total doses is 352:1. However, selection bias may affect the validity of these studies. CMS therefore believes that the above-mentioned ratios may still overestimate, at least modestly, the potency of darbepoetin alfa relative to epoetin alfa. An analysis of Medicare claims data from 2002 and 2003 determined that the ratio of utilization of Procrit to Aranesp in Medicare patients was 330:1 (units:mcg).
As noted above, a conversion ratio between the dosages of these two products is not meant to guide what should be done for individual patients in clinical practice. In addition, by using a conversion ratio CMS is not attempting to establish a lower or upper limit on the amount of either biological a physician can prescribe to a patient. CMS expects that physicians will continue to prescribe these biologicals based on their own clinical judgment of the needs of individual patients.

Based on our own review of the evidence, our consultation with the independent contactor who also reviewed the evidence, and our discussions with Amgen and Ortho Biotech, CMS concludes that an appropriate conversion ratio for the purposes of a payment policy is 330 International Units of epoetin alfa to one microgram of darbepoetin alfa (330:1) for the purpose of treating chemotherapy-induced anemia.

Chronic Kidney Disease without dialysis: It is well established that as a patient progresses through the stages of chronic kidney disease (CKD), erythropoietin levels decline and anemia tends to develop. Furthermore,

CKD patients are a very heterogeneous population, and it is likely that they will need varying doses of erythropoietic drugs as their CKD progresses to ESRD. At the present time there are no head-to-head randomized controlled clinical trials that look at erythropoietic drug needs across the spectrum of CKD.

Amgen presented studies that examined the effect of darbepoetin on hemoglobin in this population. Two studies showed a dose conversion ratio (DCR) range between 215-330. These were observational studies similarly affected by the methodological weaknesses of this study design previously discussed for chemotherapyinduced anemia. A third study submitted by Amgen showed a DCR of 168:1 and is the only study that prospectively looked at darbepoetin and epoetin.

We estimate that no more than 10 percent of the Medicare patients who receive darbepoetin in the hospital outpatient setting receive it solely because of CKD. As a result, at this time, we believe that it could be confusing and burdensome for hospitals as well as the Medicare claims processing systems to use different HCPCS codes assigned to different APCs in order to distinguish and pay different amounts for darbepoetin used by patients with CIA from darbepoetin used by patients with CKD. Therefore, given the heterogeneity of the population, the general paucity of scientific evidence on CKD, the estimated low incidence of CKD-only indications in the OPPS population, and the potential burden on providers of requiring different codes for different indications, we are not establishing a different payment rate for darbepoetin for CKD at this time. However, CMS invites the submission of peer reviewed clinical data to further illuminate the issue. Therefore, we are going to use a 330:1 conversion ratio for CKD also and, therefore, a single APC payment rate for darbepoetin alfa, in 2004.

## VII. Wage Index Changes for CY 2004

Section 1833(t)(2)(D) of the Act requires that we determine a wage adjustment factor to adjust for geographic wage differences, in a budget neutral manner, that portion of the OPPS payment rate and copayment amount that is attributable to labor and labor-related costs.
We used the proposed Federal fiscal year (FY) 2004 hospital inpatient PPS wage index to make wage adjustments in determining the proposed payment rates set forth in the proposed rule. We also proposed to use the final FY 2004 hospital inpatient wage index to calculate the final CY 2004 payment
rates and coinsurance amounts for OPPS. Therefore, we have used the corrected final FY 2004 hospital inpatient wage index to make wage adjustments in determining the final payments rates set forth in this final rule. The corrected final FY 2004 hospital inpatient wage index published as Tables $4 \mathrm{~A}, 4 \mathrm{~B}$, and 4 C in the October 6, 2003 Federal Register (68 FR 57732 through 57758) is reprinted in this final rule as Addendum H-Wage Index for Urban Areas; Addendum I-Wage Index for Rural Areas; and Addendum JWage Index for Hospitals That Are Reclassified. We used the corrected final FY 2004 hospital inpatient wage index to calculate the payment rates and coinsurance amounts published in this final rule to implement the OPPS for CY 2004. We note however, that from time to time, there are mid-year corrections to these wage indices and that our contractors will adopt and implement the mid-year changes for OPPS in the same manner that they make mid-year changes for inpatient hospital prospective payment.
We received several comments on how we apply the wage index in setting rates.

Comment: Commenters stated that we should exempt the device portion of the median cost from wage adjustment. They indicated that the wage index reflects the variation in wages and that applying it to 60 percent of an APC payment where part of that payment is for devices, to which the wage index is not applicable, results in inappropriately low payments in rural areas and discourages the expansion of state of the art technologies to rural hospitals. A commenter indicated that we should work with the commenter to calculate and publish a list of the device percentages for each APC and that the wage index adjustment should not be applied to that portion of the APC.
Response: To apply the wage index only to the non-device portion of the APC payment will mean a significant revision to the methodology used to calculate the relative weights and the conversion factor as well as changes to the system that applies the wage index on individual claims. When we calculate median costs, we divide 60 percent of the cost by the wage index for the hospital to neutralize the cost for the effects of the wage index. In addition, when we determine the conversion factor, we calculate a wage adjustment scalar to adjust for any increase or decrease that may occur to total payments from changes in the wage index. Moreover, it cannot be assumed that not applying the wage index to the device portion of the APC payment will
result in increased payment for APCs that require devices. In localities that have high wage indices, this change could result in reductions in payments for device APCs. For example, if the wage index is 1.5 and the national APC payment is $\$ 10,000$, the wage index applied to 60 percent of the APC increases the payment to the high wage index hospital to $\$ 13,000$. If the wage index is 0.9 , the wage index applied to 60 percent of the APC decreases the payment to the hospital to $\$ 9,400$. However, if the wage index is applied only to 20 percent of the APC payment because 80 percent of the cost of the APC is for the device, the hospital in the high wage index area will now get $\$ 11,000$ (a $\$ 2,000$ loss) and the hospital in the low wage index area will now get $\$ 9,800$ (a \$400 gain).

Also, because the wage index is used to neutralize costs derived from charges and is a factor in the conversion factor, the $\$ 10,000$ payment in the example may change. To gauge the full impact of such a change, we would have to undertake significant statistical analysis. We will continue to apply the wage index to 60 percent of the APC for 2004. However, we recognize the need to reassess whether this percentage is correct in view of the packaging of high cost devices into APCs and will make every effort to do a reassessment for 2005 OPPS proposed rule. If we determine that a change to the percentage might be appropriate, we will propose it in the 2005 OPPS NPRM.

## VIII. Copayment for CY 2004

In the November 30, 2001 final rule ( 66 FR 59887), we adopted a methodology that applied five rules for calculating APC copayment amounts when payments for APC groups change because the APCs' relative weights are recalibrated or when individual services are reclassified from one APC group to another. In calculating the unadjusted copayment amounts for 2004, we encountered circumstances that the methodology in the Novenber 30, 2001 final rule either did not address or whose applicability was ambiguous. Therefore, we proposed to revise and clarify the methodology we would follow to calculate unadjusted copayment amounts, including situations in which recalibration of the relative payment weight of an existing APC results in a change in the APC payment; situations in which reclassification of HCPCS codes from an existing APC to another APC results in a change in the APC payment; and situations in which newly created APCs are comprised of HCPCS codes from existing APCs.

As we stated in the August 12, 2003 proposed rule, as a general rule, we would seek to lower the coinsurance rate for the services in an APC from the prior year. This principle is consistent with section $1833(\mathrm{t})(8)(\mathrm{C})(\mathrm{ii})$ of the Act, which accelerates the reduction in the national unadjusted coinsurance rate so that beneficiary liability will eventually equal 20 percent of the OPPS payment rate for all OPPS services and with section $1833(\mathrm{t})(3)(\mathrm{B})$, which indicates the congressional goal of achieving 20 percent coinsurance when fully phased in and gives the Secretary the authority to set rules for determining copayment amounts to new services. However, in no event is the proposed 2004 unadjusted coinsurance amount for an APC group lower than 20 percent or greater than 50 percent of the payment rate.
We proposed to determine copayment amounts in 2004 and subsequent years in accordance with the following rules.

1. When an APC group consists solely of HCPCS codes that were not paid under the OPPS the prior year because they were packaged or excluded or are new codes, the unadjusted copayment amount would be 20 percent of the APC payment rate.
2. If a new APC that did not exist during the prior year is created and consists of HCPCS codes previously assigned to other APCs, the copayment amount is calculated as the product of the APC payment rate and the lowest coinsurance percentage of the codes comprising the new APC.
3. If no codes are added to or removed from an APC and, after recalibration of its relative payment weight, the new payment rate is equal to or greater than the prior year's rate, the copayment amount remains constant (unless the resulting coinsurance percentage is less than 20 percent).
4. If no codes are added to or removed from an APC and, after recalibration of its relative payment weight, the new payment rate is less than the prior year's rate, the copayment amount is calculated as the product of the new payment rate and the prior year's coinsurance percentage.
5. If HCPCS codes are added to or deleted from an APC, and, after recalibrating its relative payment weight, holding its unadjusted copayment amount constant results in a decrease in the coinsurance percentage for the reconfigured APC, the copayment amount would not change (unless retaining the copayment amount would result in a coinsurance rate less than 20 percent).
6. If HCPCS codes are added to an APC, and, after recalibrating its relative
payment weight, holding its unadjusted copayment amount constant results in an increase in the coinsurance percentage for the reconfigured APC, the copayment amount would be calculated as the product of the payment rate of the reconfigured APC and the lowest coinsurance percentage of the codes being added to the reconfigured APC.

We stated in the proposed rule that this methodology would, in general, reduce the beneficiary coinsurance rate and copayment amount for APCs for which the payment rate changes as the result of the reconfiguration of APCs and/or the recalibration of relative payment weights. We received no comments from the public on our proposal for the calculation of beneficiary copayment amounts.
The unadjusted copayment amounts for services payable under the OPPS effective January 1, 2004 are shown in Addendum A and Addendum B.

## IX. Conversion Factor Update for CY

 2004Section 1833(t)(3)(C)(ii) of the Act requires us to update the conversion factor used to determine payment rates under the OPPS on an annual basis.
Section 1833(t)(3)(C)(iv) of the Act provides that for 2004, the update is equal to the hospital inpatient market basket percentage increase applicable to hospital discharges under section 1886(b)(3)(B)(iii) of the Act.
The forecast of the hospital market basket increase for FY 2004 published in the inpatient PPS proposed rule on May 19, 2003 was 3.5 percent. To set the proposed OPPS conversion factor for 2004, we increased the 2003 conversion factor of $\$ 52.151$ (the figure from the November 1, 2002 final rule ( 67 FR 66788 ) by 3.5 percent.
In accordance with section 1833(t)(9)(B) of the Act, we further adjusted the proposed conversion factor for 2004 to ensure that the revisions we proposed to update by means of the wage index are made on a budgetneutral basis. We calculated a budget neutrality factor of 1.003 for wage index changes by comparing total payments from our simulation model using the proposed FY 2004 hospital inpatient PPS wage index values to those payments using the current (FY 2003) wage index values. In addition, for CY 2004, allowed pass-through payments have decreased to 2 percent of total OPPS payments, down from 2.3 percent in CY 2003. The 0.3 percent was also used to adjust the conversion factor.
The proposed market basket increase factor of 3.5 percent for 2004, the required wage index budget neutrality adjustment of approximately 1.003 , and
the 0.3 percent adjustment to the passthrough estimate, resulted in a proposed conversion factor for 2004 of \$54.289.
For purposes of updating the CY 2003 conversion factor to determine a final conversion factor for CY 2004 we applied an update factor based on the final hospital inpatient market basket increase for FY 2004 of 3.4 percent, as published in the final rule for IPPS on August 1, 2003. We further adjusted the conversion factor by applying a budget neutrality factor of 1.001 for wage index changes based on final FY 2004 hospital inpatient PPS wage index values as published in a correction notice to the IPPS final rule on October 6, 2003. In addition, for CY 2004, estimated passthrough payments have decreased to 1.3 percent of total OPPS payments, down from 2.3 percent in CY 2003. The conversion factor was further adjusted by the difference in estimated passthrough payments of 1.0 percent.

The increase factor of 3.4 percent for 2004, the required wage index budget neutrality adjustment of slightly more than 1.001 and the 1.0 percent adjustment to the pass-through estimate, result in a final conversion factor for 2004 of \$54.561.

We received several comments concerning the conversion factor update for 2004, which are summarized below.

Comment: Several commenters stated that the OPPS has been underfunded since its inception. One commenter stated that the OPPS conversion factor has increased by less than the full market basket increase and urged that we work with Congress to enact an annual outpatient update for 2005 that corrects for the funding gap. Other commenters, noting the preliminary estimate of pass-through spending in our proposed rule of August 12 of 1.0 percent of total OPPS payments, strongly urged us to return the remaining 1.0 percent to the conversion factor to help fund all other APCs.

Response: As described elsewhere in this final rule, we have completed our estimate of pass-through spending for 2004. By statute, we are authorized to spend only 2.0 percent of total estimated OPPS payments on passthrough spending for 2004. According to the best information available to us at this time, we estimate the total passthrough spending to be 1.3 percent of total OPPS spending for 2004. For 2003, we estimated the total pass-through spending to be 2.3 percent of total. Thus, we have returned the additional 1.0 percent to the conversion factor.

## X. Outlier Policy and Elimination of Transitional Corridor Payments for CY 2004

## A. Outlier Policy for CY 2004

For OPPS services furnished between August 1, 2000 and April 1, 2002, we calculated outlier payments in the aggregate for all OPPS services that appear on a bill in accordance with section $1833(t)(5)(D)$ of the Act. In the November 30, 2001 final rule ( 66 FR 59856,59888 ), we specified that beginning with 2002, we would calculate outlier payments based on each individual OPPS service. We revised the aggregate method that we had used to calculate outlier payments and began to determine cutliers on a service-by-service basis.

As explained in the April 7, 2000 final rule ( 65 FR 18498), we set a target for outlier payments at 2.0 percent of total payments. For purposes of simulating payments to calculate outlier thresholds, we proposed to continue to set the target for outlier payments at 2.0 percent. For 2003, the outlier threshold is met when costs of furnishing a service or procedure exceed 2.75 times the APC payment amount, and the current outlier payment percentage is 45 percent of the amount of costs in excess of the threshold.

For the reasons discussed in detail in section XI.E of this preamble, we proposed to establish two separate outlier thresholds, one for community mental health centers (CMHCs) and one for hospitals. For CY 2004, we proposed to continue to set the target for outlier payments at 2.0 percent of total OPPS payments (a portion of that 2.0 percent, 0.36 percent, would be allocated to CMHCs for PHP services). Based on our simulations for 2004, we proposed to set the hospital threshold for 2004 at 2.75 times the APC payment amount, and the proposed 2004 payment percentage applicable to costs over the threshold at 50 percent. We proposed to set the threshold for CMHCs for 2004 at 11.75 times the APC payment amount and the 2004 outlier payment percentage applicable to costs over the threshold at 50 percent. In this final rule, we are setting the target amount for outlier payments at 2.6 times the APC payment for hospitals and 3.65 times the APC payment for CMHCs. For 2004, the hospital outlier threshold is met when costs of furnishing a service or procedure exceed 2.6 times the APC payment amount and the outlier payment percentage is 50 percent of the amount of costs in excess of the threshold. Similarly, for CMHCs the threshold is met when costs of furnishing a service or procedure exceed
3.65 times the APC payment amount and the outlier payment percentage is 50 percent of the amount of costs in excess of the threshold.

We received several comments concerning our proposal to establish two separate outlier pools, one for hospitals and another for CMHCs, and to determine eligibility for outlier payments by applying an outlier threshold of 2.75 times the APC payment for hospitals and 11.75 times the APC payment for CMHCs. The comments we received concerning that proposal are summarized in section XI E. 3 along with our responses. Comments we received pertaining to other aspects of our proposal for outlier payments are summarized below:

Comment: One hospital association contended that outpatient services that qualify for outlier payments should receive 80 percent of their costs above the threshold, rather than the proposed level of 50 percent. The association stated that an increased payment level would help to ameliorate the level of losses incurred by hospitals, such as teaching hospitals, that provide complex outpatient services and would make OPPS policy consistent with the policy under the IPPS. The association also pointed out that because we apply an outlier threshold that is a multiple of the APC payment, rather than a fixed dollar amount, hospitals that provide certain costlier services must absorb significantly more costs before even qualifying for outlier payments, making it even more important to increase the outlier payment percentage. The association recognized that increasing the payment percentage would require additional funds and recommended that we seriously consider increasing the outlier payment pool from its current level of 2.0 percent of total OPPS payments to 3.0 percent, the maximum allowed by law for 2004 and beyond.

Response: Although we acknowledge the importance of outlier payments to providers, those payments are intended to ensure that the Medicare program shares, to some extent, in the extraordinarily high costs a provider may incur in caring for specific patients in unusual circumstances. Outlier payments are not intended to be paid on a routine or regular basis for treating the majority of Medicare beneficiaries. The APC payments are developed to be reasonable and adequate payment for all but the most extraordinary cases. At this time, we do not believe that it would be appropriate to shift additional funds from APC payments in order to increase the outlier payment percentage. Increasing the outlier pool would result in reduced payments for the majority of
services providers furnish in order to make increased payments for the rare, extraordinarily high cost cases a provider may treat.

Comment: A hospital association commented that we have furnished very little data on actual outlier payments under the OPPS, so hospitals have no way of knowing whether actual payments were higher or lower than estimated outlier payments and are unable to comment on the proper outlier threshold for OPPS. The association pointed out that we have historically furnished data on actual outlier payments in the IPPS rule and recommended that we furnish data on OPPS outlier payments so that hospitals may be able to make informed comments on the proper threshold.
Response: Based on hospital and CMHC claims submitted for the period April 1, 2002 through December 31, 2002, outlier payments for that period amounted to 1.78 percent of total OPPS payments. The outlier target we were trying to achieve for that period was 1.5 percent of total OPPS payments. Outlier payments to hospitals alone amounted to 1.54 percent of total OPPS payments to hospitals, while outlier payments to CMHCs amounted to 49.8 percent of their total OPPS payments.

## B. Elimination of Transitional Corridor Payments for CY 2004

Since the inception of the OPPS, providers have been eligible to receive additional transitional payments if the payments they received under the OPPS were less than the payments they would have received for the same services under the payment system in effect before the OPPS. Under 1833(t)(7) of the Act, most hospitals that realize lower payments under the OPPS received transitional corridor payments based on a percent of the decrease in payments. However, rural hospitals having 100 or fewer beds, as well as cancer hospitals and children's hospitals described in section $1886(\mathrm{~d})(1)(B)(i i i)$ and (v) of the Act, were held harmless under this provision and paid the full amount of the decrease in payments under the OPPS.

Transitional corridor payments were intended to be temporary payments to ease providers' transition from the prior cost-based payment system to the prospective payment system. Beginning January 1, 2004, in accordance with section $1833(t)(7)$ of the Act, transitional corridor payments will no longer be paid to providers other than cancer . hospitals and children's hospitals. Cancer hospitals and children's hospitals are held harmless permanently
under the transitional corridor provisions of the statute.

Since small rural hospitals may not be able to achieve the same level of operating efficiencies as larger rural hospitals and urban hospitals, we were concerned that the possible decrease in payments to these hospitals resulting from the elimination of the transitional corridor payments could result in these hospitals having to decrease or altogether cease to provide certain outpatient services. A reduction of services could have consequences for Medicare beneficiaries and their continued access to care in rural areas. In light of these concerns, we stated in the August 12, 2003 proposed rule that one thing we could do is to provide increased APC payments for clinic and emergency room visits furnished by rural hospitals having 100 or fewer beds. Any adjustment to payments for these hospitals would be made under the authority granted to the Secretary under section 1833(t)(2)(E) of the Act, to establish in a budget neutral manner adjustments as determined to be necessary to ensure equitable payments, such as adjustments for certain classes of hospitals. In the August 12, 2003 proposed rule, we invited comments on whether we should provide an adjustment, such as the one described above, for small rural hospitals.

We received a few comments regarding the elimination of transitional corridor payments, which are summarized below along with our responses.

Comment: Two commenters stated that the loss of transitional corridor payments would dramatically affect revenues for rural hospitals; therefore, they supported increased payments to rural hospitals for clinic and emergency room visits. One hospital association recommended that we provide appropriate payment protections for small rural hospitals that provide emergency services to safeguard them from any adverse consequences stemming from the elimination of transitional corridor payments and to avoid life-threatening consequences by protecting beneficiaries' timely access to emergency services. Two additional commenters contended that our proposal would be inadequate and that to avoid curtailing services to Medicare beneficiaries relief is needed for small rural hospitals, sole community hospitals, and rural referral centers. They recommended that we continue transitional corridor payments using the authority we have to make adjustments under section 1833(t)(2)(E) of the Act. One commenter stated that our proposal failed to address other outpatient
services that will be underpaid and suggested that transitional corridor payments be continued for a year while a more broad based payment methodology is developed for small rural hospitals. Another commenter recommended a rural APC add-on adjustment for all APCs paid to rural hospitals to acknowledge that these hospitals cannot achieve the same level of operating efficiencies as larger rural and urban hospitals. Another commenter argued that termination of transitional corridor payments was detrimental to all hospitals and recommended retaining transitional corridor payments for all hospitals.

One commenter opposed shifting payments from larger hospitals in order to increase payments to small rural hospitals. The commenter stated that all hospitals, regardless of size and location, struggle with gaining operating efficiencies under the OPPS. One hospital association indicated that transitional corridor payments have been a critical source of financial support for many teaching hospitals and payments to these hospitals deserve further analyses by us, which would likely result in the conclusion that a teaching hospital adjustment is warranted. Several hospital associations expressed concern about our proposal to create differential payment rates between urban and rural hospitals for clinic and emergency room visits, and one questioned our legal authority to pay differently for the same service. One of the associations added that as a preferred alternative, it is urging the Congress to allocate additional resources to extend the transitional corridor and hold harmless provisions to all providers as well as urging the Congress to increase payments for clinic and emergency room visits for all hospitals. Another of the hospital associations stated that it does not support a budget neutral, redistributive adjustment through regulation, but is instead urging the Congress to allocate additional resources to assist rural hospitals by increasing payment rates for clinic and emergency room visits for all hospitals.

The Medicare Payment Advisory Commission (MedPAC) commented that the August 12, 2003 proposed rule failed to provide a rationale for proposing increased payments for emergency room and clinic visits as a means of supporting small rural hospitals and recognized that only limited cost report data are available to assess the performance of small rural hospitals under the OPPS. MedPAC stated that we should consider other regulatory options to ensure access to
care for rural beneficiaries, such as a low-volume adjustment and pointed out that any payment adjustment should be accompanied by an analysis of how small rural hospitals have fared under the OPPS, the impact of any payment adjustment, and the impact of other policies that affect rural hospitals such as conversion to critical access status. MedPAC also stated that legislative remedies could include extending the hold harmless policy or providing a transition from hold harmless status.

Response: Although we expressed concerns in the August 12, 2003 proposed rule that the sunsetting of transitional corridor payments might significantly impact small rural hospitals and we invited comments about whether we should provide for some type of adjustment to payments for these hospitals, we did not receive a large number of comments and the comments we did receive are mixed on the issue. Although some commenters called for an extension of hold harmless transitional corridor payments for small rural hospitals, we do not believe that is a viable option because any adjustment we would make under the authority of section $1833(\mathrm{t})$ of the Act would have to be made on a budget neutral basis and would result in decreased APC payments for all providers. Because we did not receive a strong response in favor of increased visit payments to small rural hospitals or compelling evidence that clearly supported the position that an adjustment for small rural hospitals is necessary to ensure access to hospital outpatient services in areas served by small rural hospitals, we will not adopt a payment adjustment for small rural hospitals. We will continue to seek information related to specific situations that demonstrate that access to care is a problem for Medicare beneficiaries.

## XI. Other Policy Decisions and Changes

## A. Hospital Coding for Evaluation and Management ( $E / M$ ) Services

Facilities code clinic and emergency department visits using the same [Physicians'] Current Procedural Terminology (CPT) codes as physicians. For both clinic and emergency department visits, there are currently five levels of care. Because these codes were defined to reflect only the activities of physicians, they are inadequate to describe the range and mix of services provided to patients in the clinic and emergency department settings (for example, ongoing nursing care, preparation for diagnostic tests, and patient education).

In the April 7, 2000 final rule ( 65 FR 18434), we stated that in order to ensure proper payment to hospitals, it was important that emergency and clinic visits be coded properly. To facilitate proper coding, we required each hospital to create an internal set of guidelines to determine what level of visit to report for each patient. In the August 24, 2001 proposed rule ( 66 FR 44672), we asked for public comments regarding national guidelines for hospital coding of emergency and clinic visits. Commenters recommended that we keep the current E/M coding system until facility-specific E/M codes for emergency department and clinic visits, along with national coding guidelines, were established. Commenters also recommended that we convene a panel of experts to develop codes and guidelines that are simple to understand, implement, and that are compliant with the Health Insurance Portability and Accountability Act (HIPAA) requirements.

## Outcome of January 2002 APC Panel

 MeetingDuring its January 2002 meeting, the APC Panel made several recommendations regarding coding for evaluation and management services. After careful review and consideration of written comments, oral testimony, and the APC Panel's recommendations, we proposed the following in the August 9, 2002 proposed rule (for implementation no earlier than January 2004):

1. To develop five G codes to describe emergency department services:
GXXX1—Level 1 Facility Emergency Services;

GXXX2-Level 2 Facility Emergency Services;

GXXX3—Level 3 Facility Emergency Services;

GXXX4—Level 4 Facility Emergency Services; and

GXXX5-Level 5 Facility Emergency Services.
2. To develop five G codes to describe clinic services:
GXXX6-Level 1 Facility Clinic
Services;
GXXX7-Level 2 Facility Clinic
Services;
GXXX8—Level 3 Facility Clinic
Services;
GXXX9—Level 4 Facility Clinic
Services; and
GXXX10-Level 5 Facility Clinic Services.
3. To replace CPT Visit Codes with the 10 new $G$ codes for OPPS payment purposes.
4. To establish separate documentation guidelines for emergency visits and clinic visits.

In our November 1, 2002 final rule ( 67 FR 66792), we stated that the most appropriate forum for development of new code definitions and guidelines would be an independent expert panel that would make recommendations to us. In light of the expertise of organizations such as the American Hospital Association (AHA) and the American Health Information Management Association (AHIMA), we felt that these organizations were
particularly well equipped to make recommendations to us and to provide ongoing education to providers.
On their own initiative, the AHA and the AHIMA convened an independent expert panel of individuals from various organizations to develop code descriptions and guidelines for hospital emergency department and clinic visits and to make recommendations to us.
The panel recommended the following to us.

1. We should make payment for emergency and clinic visits based on four levels of care.
2. We should create HCPCS codes to describe these levels of care as follows:

GXXX1—Level 1 Emergency Visit.
GXXX2-Level 2 Emergency Visit.
GXXX3—Level 3 Emergency Visit.
GXXX4-Critical Care provided in the emergency department.
GXXX5—Level 1 Clinic Visit.
GXXX6-Level 2 Clinic Visit.
GXXX7-Level 3 Clinic Visit.
GXXX8-Critical Care provided in the clinic.
3. We should replace all the HCPCS currently in APCs 600, 601, 602, 610, 611,612 , and 620 with GXXX1 through GXXX8.
4. Based on the above recommendations, we would crosswalk payments as follows: GXXX1 to APC 610, GXXX2 to APC 611, GXXX3 to APC 612, GXXX4 to APC 620, GXXX5 to APC600, GXXX6 to APC 601, GXXX7 to APC 602, and GXXX8 to APC 620.
These crosswalks and code descriptions are listed in Table 14 below.

Table 14.-Crosswalks of 2003 HCPCS Codes to the Proposed G Codes

| 2003 HCPCS description | 2004 G code description | $\begin{gathered} 2003 \\ \mathrm{HCPCS} \end{gathered}$ | 2004 Proposed G codes | APC | Payment amount |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Emergency department visit ............................... | Level 1 Emergency Visit .............. | $\begin{aligned} & 99281 \\ & 99282 \end{aligned}$ | GXXX1 | 0610 | \$74.70 |
| Emergency department visit | Level 2 Emergency Visit | 99283 | GXXX2 | 0611 | 130.77 |
| Emergency department visit | Level 3 Emergency Visit .............. | $\begin{aligned} & 99284 \\ & 99285 \end{aligned}$ | GXXX3 | 0612 | 226.30 |
| Critical care | Level 4 Critical Care provided in the emergency department. | $\begin{aligned} & 99291 \\ & 99292 \end{aligned}$ | GXXX4 | 0620 | 491.01 |
| Office/outpatient visit, new ................................. | Level 1 Clinic Visit ....................... | $\begin{aligned} & 99201 \\ & 99202 \end{aligned}$ | GXXX5 | 0600 | 50.62 |
| Office/outpatient visit, new ................................. | Level 2 Clinic Visit ....................... | 99203 | GXXX6 | 0601 | 53.56 |
| Office/outpatient visit, new | Level 3 Clinic Visit ....................... | $\begin{aligned} & 99204 \\ & 99205 \end{aligned}$ | GXXX7 | 0602 | 82.07 |
| Office/outpatient visit, established | Level 1 Clinic Visit | $\begin{aligned} & 99211 \\ & 99212 \end{aligned}$ | GXXX5 | 0600 | 50.62 |
| Office/outpatiertt visit, established ...................... | Level 2 Clinic Visit ....................... | 99213 | GXXX6 | 0601 | 53.56 |
| Office/outpatient visit, established ....................... | Level 3 Clinic Visit ....................... | $\begin{aligned} & 99214 \\ & 99215 \end{aligned}$ | GXXX7 | 0602 | 82.07 |
| Office consultation ............................................. | Level 1 Clinic Visit ....................... | $\begin{aligned} & 99241 \\ & 99242 \end{aligned}$ | GXXX5 | 0600 | 50.62 |
| Office consultation | Level 2 Clinic Visit | $99243$ | GXXX6 | $0601$ | 53.56 |
| Office consultation ............................................ | Level 3 Clinic Visit | $\begin{aligned} & 99244 \\ & 99245 \end{aligned}$ | GXXX7 | 0602 | 82.07 |

Table 14.-Crosswalks of 2003 hCPCS Codes to the Proposed G Codes-Continued

| 2003 HCPCS description | 2004 G code description | 2003 <br> HCPCS | 2004 Proposed <br> G codes | APC | Payment <br> amount |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Critical care ..................................................... | Level 4 Critical Care provided in <br> the clinic. | 99291 <br> 99292 | GXXX8 | 0620 | 491.01 |

The independent panel convened by the AHA and AHIMA recommended these levels in anticipation of the development of national coding guidelines for emergency and clinic visits that meet the following criteria we announced in the August 9, 2002 proposed rule ( 67 FR 52131 ):

1. Coding guidelines for emergency and clinic visits should be based on emergency department or clinic facility resource use, rather than physician resource use.
2. Coding guidelines should be clear, facilitate accurate payment, be usable for compliance purposes and audits, and comply with HIPAA.
3. Coding guidelines should only require documentation that is clinically necessary for patient care. Preferably, coding guidelines should be based on current hospital documentation requirements.
4. Coding guidelines should not create incentives for inappropriate coding (for example, up-coding).

We have received recommendations for a set of coding guidelines from the independent $\mathrm{E} / \mathrm{M}$ panel comprised of members of the AHA and AHIMA. We proposed to implement new evaluation and management codes only when we are also ready to implement guidelines for their use, after allowing ample opportunity for public comment, systems change, and provider education. We also proposed to use cost data from the current HCPCS codes in these APCs to determine the relative weights of these APCs until cost data from GXXX1 through GXXX8 are available to set relative weights. We note that this proposal requires discontinuing the use of all HCPCS codes in these APCs and would not allow us to collect cost data for the five levels of emergency and clinic visits that are currently described by CPT codes. We further note that we would no longer be able to distinguish among the costs for visits by new patients, established patients, consultation patients, or patients being seen for more specialized care (for example, pelvic screening exams and glaucoma screening exams).

We would be using claims data from current HCPCS codes and crosswalking those data to the new codes in the same APCs; therefore, there would be no
change in payment for any of these services as a result of these coding changes. Once cost data become available from the new HCPCS codes, we would use those data to set the relative weights, and, therefore, there should be no budgetary impact.
We are currently considering the set of proposed national coding guidelines for emergency and clinic visits recommended by the independent panel. We plan to make any proposed guidelines available to the public for comment on the OPPS web site as soon as they are complete. We will notify the public through our listserve when these proposed guidelines become available. To subscribe to this listserve, please go to the following Web site: http:// www.cms.hhs.gov/medlearn/listserv.asp and follow the directions to the OPPS listserve. With regard to the development of these guidelines, our primary concerns are-

1. To make appropriate payment for medically necessary care;
2. To minimize the information collection and reporting burden on facilities;
3. To minimize any incentives to provide unnecessary or low quality care;
4. To minimize the extent to which separately billable services are counted as $\mathrm{E} / \mathrm{M}$ services;
5. To develop coding guidelines that are consistent with facility resource use; and
6. To develop coding guidelines that are clear, facilitate accurate payment, are useful for compliance purposes and audits, and comply with HIPAA. Before adoption and implementation of any coding changes or coding guidelines, ample time will be provided for the public to comment on our proposal and, following announcement of any final decisions, for the education of clinicians and coders and for hospitals to make the necessary changes in their systems to accommodate the codes and guidelines. In the proposed rule, we requested comments on the amount of time hospitals believe would be adequate to implement these new codes and guidelines. We stated that we remain committed to working with appropriate organizations and stakeholders in our continuing development of a standard set of codes and national guidelines for
facility coding of emergency and clinic visits.

We received comments on our proposal, which are summarized below with our responses.

Comment: Several physician societies objected to the creation of new G codes to replace existing CPT codes for facility coding of emergency and clinic visits. These commenters stated that new G codes for these services would add an unnecessary layer of complexity and confusion to the system, and that the existing CPT codes adequately and appropriately describe the services provided in the emergency and clinic settings. One physician society supported the creation of new $G$ codes for facility coding of emergency and clinic visits, agreeing that CPT codes fail to accurately describe facility resources used to provide E/M services, but expressed concern that payers or auditors might refer to crosswalks made in establishing facility E/M code levels to determine appropriate level of coding for physician E/M services. This commenter urged CMS to clarify that the levels of visits for facility E/M services should not be used by payers or auditors to verify that physicians have billed for the appropriate level of visit.

Several commenters, including a hospital association and federation, commended CMS for proposing new G codes for facility coding of emergency and clinic visits, stating that existing CPT codes for E/M services correspond to different levels of physician effort and fail to adequately describe nonphysician resources. These commenters stated that the proposed new G codes would appropriately capture facility resources, minimize confusion relative to physician versus facility $\mathrm{E} / \mathrm{M}$ services, and adequately meet hospitals' need to comply with HIPAA regulations.
Response: We agree with those commenters who believe that CPT codes for E/M services describe different levels of physician effort, and therefore, fail to accurately describe facility resources used to provide E/M services. In the November 1, 2002 final rule ( 67 FR 66718), we explained that the development of new HCPCS codes for facility visits was necessary to address potential HIPAA compliance issues. We also agree with comments that the
proposed new G codes would appropriately capture facility resources and minimize confusion relative to physician versus facility $\mathrm{E} / \mathrm{M}$ services. Therefore, we will continue to develop coding guidelines for facility $\mathrm{E} / \mathrm{M}$ codes that are clear, facilitate accurate payment, are useful for compliance purposes and audits, and comply with HIPAA. For clarification purposes, levels of visits for facility $E / M$ services. should not be used by payers or auditors to verify that physicians have billed for the appropriate level of visit.

Comment: We received a number of comments regarding our proposal of three levels of care (plus critical care) for clinic and emergency department visits. Several commenters stated that - variation in cost per visit warrants five levels of service mapping to five separate APCs to maintain reasonable steps in payment as treatment costs increase. These commenters expressed concern that the agency will no longer have the ability to collect cost data for the five levels of emergency and clinic visits currently described by CPT codes, and that an averaging of charges over only three levels of service will result in adverse effects (that is, overpayments and underpayments) at the low and high end of visit codes. Furthermore, these commenters stated that private payers require a five tiered system and may not recognize the new $G$ codes for payment. In contrast, we received several comments supporting our proposal of three levels of care (plus critical care) for clinic and emergency department visits. These commenters stated that three levels would help reduce the coding complexity and would be a more appropriate and accurate mechanism for reporting emergency and clinic visits.

Response: We appreciate the commenters' concerns while at the same time recognizing merits in the independent expert panel's recommendation to create three levels of care (plus critical care) for clinic and emergency visits. Given the level of interest in this issue and the importance to Medicare and to hospitals of establishing the appropriate codes and payment levels for these services, we will continue to study the issue. Prior to implementation of new facility $\mathrm{E} / \mathrm{M}$ codes we will carefully consider all commenters' concerns related to variation in visit costs and recognition of a three tiered system by private payers. We will also consider placing this issue on the agenda for the 2004 APC Panel meeting.

Comment: Several physician societies expressed concern about potential discrepancies in payment for the same services furnished in clinic and
emergency departments versus physician offices. One commenter stated that the proposal lacked physician input. While acknowledging statutory requirements that dictate the structure of the payment system for nonphysician resources required to support physician services and the payment system for outpatient facility resources, commenters stated that we should avoid adopting policies that further increase the inequity in Medicare's payment systems. These commenters urged us to establish payment equity for the same services furnished in these respective settings.
Response: As stated elsewhere, the statute contains different provisions for how payments are established under the physician fee schedule and how payments are established under the OPPS. With respect to the absence of physician input on the proposal, we welcome comments from all interested parties as we continue to develop our policy.

Comment: We received numerous and detailed comments in reference to the model guidelines proposed by the independent expert panel convened by the American Hospital Association (AHA) and the American Health Information Management Association (AHIMA).

Response: We are appreciative of the detailed comments we received in reference to the model guidelines proposed by the independent expert panel convened by the AHA and AHIMA. While we will carefully consider these comments in our continued review of the independent panel's proposed guidelines, we will not be responding to such comments in this rule since CMS did not propose these coding guidelines in the August 12, 2003 proposed rule.

Comment: Several commenters supported our decision to delay implementation of new $\mathrm{E} / \mathrm{M}$ codes for clinic and emergency department visits until we have established defined and uniform coding guidelines.

Response: To minimize confusion, we continue to believe that a national set of defined coding guidelines must be established and implemented in conjunction with any new E/M codes for clinic and emergency department visits.

Comment: Several commenters encouraged CMS to make any proposed guidelines for billing hospital emergency room and clinic visits publicly available with opportunity to cominent as soon as they are complete.

Response: We plan to make any coding guidelines that we are considering available to the public for
comment on the OPPS Web site as soon as they are complete. We will notify the public through our listserve when these proposed guidelines become available. To subscribe to this listserve, please go to the following Web site: http:// www.cms.hhs.gov/medlearn/listserv.asp and follow the directions to the OPPS listserve. As stated elsewhere, we will provide ample opportunity for the public to comment on the proposal.

Comment: Several commenters requested that CMS provide adequate time for the education of clinicians and coders and for hospitals to make the necessary changes in their systems to accommodate new evaluation and management ( $\mathrm{E} / \mathrm{M}$ ) codes and guidelines. While two commenters requested a minimum notice of three months prior to implementation, the majority of commenters requested a minimum notice of between six and twelve months prior to implementation of facility evaluation and management codes and guidelines.

Response: We will continue to be considerate of the time necessary to educate clinicians and coders and for hospitals to modify their systems to accommodate new codes and guidelines. Based on comments received, we will provide a minimum notice of between six and twelve months prior to implementation of facility evaluation and management codes and guidelines. We do not expect to implement these new codes and guidelines any earlier than January 2005.

## B. Status Indicators and Issues Related to OCE Editing

The status indicators we assign to HCPCS codes and APCs under the OPPS have an important role in payment for services under the OPPS because they indicate whether a service represented by an HCPCS code is payable under the OPPS or another payment system and also whether particular OPPS policies apply to the code. We are providing our status indicator (SI) assignments for APCs in Addendum A, HCPCS codes in Addendum B, definitions of the status indicators in Addendum D1, and definitions of code condition indicators in Addendum D2.

The OPPS is based on HCPCS codes for medical and other health services. These codes are used for a wide variety of payment systems under Medicare, including, but not limited to, the Medicare fee schedule for physician services, the Medicare fee schedule for durable medical equipment and prosthetic devices, and the Medicare clinical laboratory fee schedule. For purposes of making payment under the

OPPS, we must be able to signal the claims processing system which HCPCS codes are paid under the OPPS and those codes to which particular OPPS payment policies apply. We accomplish this identification in the OPPS through a system of payment status indicators with specific meanings.
We assign one and only one status indicator to each APC and to each HCPCS code. Each HCPCS code that is assigned to an APC has the same status indicator as the APC to which it is assigned.
The software that controls Medicare payment looks to the status indicators attached to the HCPCS codes and APCs for direction in the processing of the claim. Therefore, the assignment of the status indicators has significance for the payment of services.

In the August 12, 2003 proposed rule, we listed the OPPS status indicators and described how we proposed to use them in the 2004 OPPS. We also solicited comments on the appropriateness of the status indicator that we proposed to assign to each APC in Addendum A and each HCPCS code in Addendum B. Because the assignment of a status indicator designates how a particular outpatient service will be paid, either under the OPPS or under another payment system, or why payment is not made for a code, the comments that we received regarding the status indicator assigned to a particular APC or HCPCS code are discussed elsewhere in this final rule, within the context of the payment policy or rule that affect how payment is determined for the APC or HCPCS code.

Since publication of the August 12 proposed rule, we have been preparing specifications for the January 1, 2004 outpatient code editor (OCE) and PRICER, which are pivctal in determining how hospital claims for outpatient services are processed and paid. In the course of discussions with the contractors and systems maintainers with whom we work to ensure that claims are processed appropriately and in accordance with the policies and changes that we are implementing in this final OPPS rule for 2004 , several issues related to status indicator definitions and claims processing edits and dispositions have arisen. As a result of these discussions, we have determined that claims would be processed more accurately if we established two additional payment status indicators to designate with greater specificity the appropriate disposition of certain codes for which payment is not made under the OPPS. Therefore, we are adding two status indicators, status indicator " B " and
status indicator "Y," to Addendum D1, which lists all of the status indicators established as part of the OPPS and describes what they signify. We have also revised and refined the status indicator definitions and clarified the explanation of what each status indicator means. None of these changes affect how services are paid under the OPPS. Rather, the changes are intended to clarify how the status indicators relate to existing payment policy and rules and to assist hospitals and our contractors in determining the disposition of individual HCPCS codes when they are billed to Medicare.

In 2004, we are adding a new Status Indicator " $Y$ " to designate codes for non-implantable Durable Medical Equipment (DME) to assist hospitals in identifying codes that they must bill directly to the Durable Medical Equipment Regional Carrier (DMERC) rather than to the fiscal intermediary. Codes assigned Status Indicator " Y " are listed in Addendum B.

Historically, we have used Status Indicator "E" to identify certain HCPCS codes that are recognized by Medicare but that are not payable under the OPPS when they are submitted on an outpatient hospital Part B bill type (bill type $12 x, 13 x$, or $14 x$ ). Beginning with implementation of the 2004 final rule, we are assigning Status Indicator " B " to HCPCS codes that are not payable under OPPS when submitted on an outpatient hospital Part B bill type (12x, 13x, and $14 x$ ), but that may be payable by intermediaries to other provider types when submitted on an appropriate bill type, such as bill type 75 x submitted by a CORF. In some cases, another code may be submitted by hospitals on an outpatient hospital Part B bill type (12x, $13 x$, and $14 x$ ) to receive payment for a service or code that is assigned status indicator " $B$ " in Addendum B. Because we did not include these status indicator changes in the August 12, 2003 proposed rule, we invite comments on their addition to Addendum D1, and on the revised definitions and explanations that we included in Addendum D1.

Addendum D2 shows the indicators that we use to designate codes that are new in 2004 for which comments may be submitted as well as codes that are deleted in 2004 either with or without a grace period.

## C. Observation Services

In the November 1, 2002 update to the OPPS ( 67 FR 66794), we summarized and clarified previously published guidance (Transmittal A-02-026) regarding payment requirements for HCPCS code G0244, Observation care
provided by a facility to a patient with congestive heart failure, chest pain or asthma, minimum of 8 hours, maximum 48 hours. We also implemented HCPCS codes G0263 and G0264 to identify patients directly admitted to observation. In January 2003, we published Transmittal A-02-129, which provides further instructions regarding billing for observation services. In the proposed rule, we did not propose anything new with regard to observation services, nor did we seek public comment on observation issues. We stated that we would update by Program Memorandum any changes in the list of ICD-9-CM codes required for payment of HCPCS code G0244 resulting from the October 1 annual update of ICD-9-CM. We also stated in the proposed rule that we would include any changes in the 2004 final OPPS rule and allow the public an opportunity to comment.
We have had an opportunity to review the October 1, 2003 update of the ICD-$9-\mathrm{CM}$ and we have determined that there are not changes that affect the list of diagnosis codes required for payment of HCPCS code G0244. Therefore, we are not implementing any changes in the way we pay for observation services under the 2004 OPPS.

## D. Procedures That Will Be Paid Only as Inpatient Procedures

Before implementation of the OPPS, Medicare paid reasonable costs for services provided in the outpatient department. The claims submitted were subject to inedical review by the fiscal intermediaries to determine the appropriateness of providing certain services in the outpatient setting. We did not specify in regulations those services that were appropriate to be provided only in the inpatient setting and that, therefore, should be payable only when provided in that setting.

Section 1833(t)(1)(B)(i) of the Act gives the Secretary broad authority to determine the services to be covered and paid for under the OPPS. In the April 7, 2000 final rule, we identified procedures that are typically provided only in an inpatient setting and, therefore, would not be paid by Medicare under the OPPS (65 FR 18455). These procedures comprise what is referred to as the "inpatient list." 'The inpatient list specifies those services that are only paid when provided in an inpatient setting. These are services that require inpatient care because of the nature of the procedure, the need for at least 24 hours of postoperative recovery time or monitoring before the patient can be safely discharged, or the underlying physical condition of the patient. As we
discussed in the April 7, 2000 and the November 30, 2001 final rules, we use the following criteria when reviewing procedures to determine whether or not they should be moved from the inpatient list and assigned to an APC group for payment under the OPPS:

- Most outpatient departments are equipped to provide the services to the Medicare population.
- The simplest procedure described by the code may be performed in most outpatient departments.
- The procedure is related to codes that we have already removed from the inpatient list.

In the November 1, 2002 final rule, we added the following criteria for use in reviewing procedures to determine whether they should be removed from the inpatient list and assigned to an APC group for payment under the OPPS:

- We have determined that the procedure is being performed in multiple hospitals on an outpatient basis; or
- We have determined that the procedure can be appropriately and safely performed in an ASC and is on the list of approved ambulatory surgical center (ASC) procedures or proposed by us for addition to the ASC list.

At its January 2003 meeting, the APC Panel did not make recommendations regarding procedures on the inpatient list, and in the proposed rule, we did not propose to make any of the procedures that are currently on the inpatient list in Addendum E payable under the OPPS in 2004. We solicited comments on whether any procedures in Addendum $E$ should be paid under the OPPS. We asked commenters recommending reclassification of a procedure to an APC to include evidence (preferably from peer-reviewed medical literature) that the procedure is being performed on an outpatient basis in a safe and effective manner. We also solicited comments on the appropriate APC assignment for the procedure in the event that we determine in the final rule, based on comments, that the procedure would be payable under the OPPS in 2004.

Following our review of any comments that we receive about the procedures in Addendum E, we indicated in the proposed rule that we would propose either to assign a CPT code to an APC for payment under the OPPS or, if the comments did not provide sufficient information and data to enable us to make a decision, to present the comments to the APC Panel at its 2004 meeting.

Procedures on the inpatient list can be found in Aduendum E. CPT codes that
are new in 2004 and that we believe are appropriately assigned status indicator " C " to designate that they are on the inpatient list can be found in Addendum B with condition code "NI". We invite comment on assignment of these codes to the inpatient list.

We received a few comments regarding the inpatient list, which are summarized below with our responses.

Comment: A group of providers representing 18 health care systems around the country requested that CMS clarify the intent of the inpatient list. The commenter expressed concern that some independent medical review criteria appear to equate codes with APC payments as procedures that CMS has determined must be outpatient services both because they are payable under the OPPS and because they are not included on the inpatient list. The commenter is concerned that hospitals will interpret these criteria to mean that any procedure or service not on the inpatient list must be furnished on an outpatient basis, regardless of the needs of the patient.

Response: We wish to clarify that assignment of an APC payment to a service or procedure does not mean that Medicare covers the service or procedure or that it may only be payable when furnished in an outpatient setting. In the November 1, 2002 final rule ( 67 FR 66739) as well as the April 7, 2000 and the November 30, 2001 final rules, we explain in detail our rationale for the inpatient list. Assignment of an APC payment to a service or procedure does not prohibit hospitals from providing these services on an inpatient basis when it is reasonable and necessary to admit the patient based on the patient's medical condition.

Comment: The same commenter repeated objections that have been submitted in comments to OPPS rules in prior years, that it is unfair to deny payment to hospitals for procedures on the inpatient list, but to pay physicians when they perform procedures on the inpatient list in a hospital outpatient setting. The commenter asserts that physicians are not responsive to hospital efforts to educate them regarding Medicare payment for procedures on the inpatient list performed on a patient who has not been admitted as an inpatient because the location that the physician chooses to perform a procedure has no impact on Medicare payment for the physician's professional services. Moreover, the commenter asserts that physicians disagree with assignment of procedures to the inpatient list because new technology or surgical advances allow the procedure to be appropriately
performed on an outpatient basis. The commenter urged us to release the inpatient list as part of the physician's fee schedule in order to align hospital and physician incentives.

Response: In the November 1, 2002 final rule ( 67 FR 66740) we responded to similar comments regarding hospitals' concerns about physicians being paid for procedures on the inpatient list that are performed on an outpatient basis even though payment is denied to hospitals for those procedures. As we state above, the basis for the inpatient list is rooted in section 1833( t$)(1)(\mathrm{B})(\mathrm{i})$ of the Act, which gives the Secretary broad authority to determine the services to be covered and paid for under the OPPS. The authority in this section of the Act does not extend to services that are covered and paid for under the Medicare physician fee schedule, which is a separate benefit and payment system. However, we believe that as hospitals and physicians continue to gain experience and become more knowledgeable about how Medicare pays for services under the OPPS, problems associated with the existence of the inpatient list will continue to diminish.

Moreover, we welcome at any time recommendations from hospitals and/or physicians regarding procedures currently on the inpatient list that are being safely and appropriately performed on an outpatient basis. Requests for review of a code or group of codes on the inpatient list should be sent to the Director, Division of Outpatient Care, Centers for Medicare \& Medicaid Services, Mailstop C4-05-17, 7500 Security Boulevard, Baltimore, MD 21244-1850. Such requests should include supporting information and data to demonstrate that the code meets the five criteria for payment under the OPPS that are listed above, and that are also discussed in the November 1, 2002 final rule ( 67 FR 66739). In addition, we ask that evidence be submitted, including operative reports of actual cases and peer-reviewed medical literature, to demonstrate that the procedure is being performed on an outpatient basis in a safe and appropriate manner in a variety of different types of hospitals.

Comment: The same commenter recommended that we change our policy for OPPS payment of inpatient services when the patient is transferred to another hospital. They state that the current requirement creates unnecessary administrative burden when a hospital, in order to receive payment, must admit a patient simply to stabilize them prior to transfer. The commenter
recommended that, when procedures on the inpatient list are provided to patients in order to stabilize the patient immediately prior to transfer, we ignore the payment status indicator of " C " assigned to the procedure on a claim and allow the claim to be paid under the OPPS.

Response: Procedures on the inpatient list performed on patients whose status is that of outpatient are not payable under the OPPS. However, we recognize that there are occasions when a procedure on the inpatient list may have to be performed to resuscitate or stabilize a patient with an emergent, life-threatening condition whose status is that of an outpatient. We also recognize that, once stabilized, such a patient may subsequently require transfer to another facility in order to receive appropriate care. As we explain in the November 1, 2002 final rule ( 67 FR 66798), when a physician performs a procedure on the inpatient list to resuscitate or stabilize a patient with an emergent, life-threatening condition whose status is that of an outpatient, we expect the physician to order that the patient be admitted following the procedure for the purpose of receiving inpatient hospital services and occupying an inpatient hospital bed. Or, the physician may order that the patient be admitted and then determine that the patient should be transferred to another provider. In the latter instance,
Medicare allows payment for services furnished to a patient who is transferred to another provider. However, in order for the discharging hospital to receive payment in cases where it is determined that appropriate care for the patient necessitates transfer to another provider, long-standing Medicare rules provide that the patient has to have been admitted to the discharging hospital. Further, as we discuss in the November 1, 2002 final rule, it is important that the particular circumstances necessitating performance of a procedure on the inpatient list when the patient's status is that of an outpatient be thoroughly documented in the medical record. For these reasons, we disagree with and are not implementing the commenter's recommendation that we modify the outpatient code editor (OCE) to allow payment under the OPPS for services furnished to resuscitate or stabilize an outpatient with an emergent, life-threatening condition who is transferred to another facility following a procedure on the inpatient list.

Comment: One hospital requested that we remove CPT 37182, Insertion of transvenous intrahepatic protosystemic shunts(s) (TIPS), from the inpatient list.

One health system requested that we remove CPT 20660, Application of cranial tongs, caliper, or stereotactic frame, including removal (separate procedure) and CPT 49061, Drainage of retroperitoneal abscess; percutaneous, from the inpatient list.

Response: Our medical officers reviewed these recommendations and determined that these codes do not meet the criteria for removing a procedure from the inpatient list and assignment to an APC. We would expect patients whose medical condition requires these procedures to be admitted as inpatients in order to have these procedures performed. Our data indicate that these procedures are performed
predominantly in the inpatient setting. Therefore, in the absence of evidence demonstrating that these procedures are being performed on an outpatient basis in a safe and appropriate manner in a variety of different types of hospitals and that the criteria for removing a procedure from the inpatient list are met, we are retaining these codes on the inpatient list.

Comment: A provider group requested that we change the status indicator of the following codes from " N " to " C ," because these are add-on codes for procedures already on the inpatient list: CPT 61316, Incision and subcutaneous placement of cranial bone graft; CPT 61517, Implantation of brain intracavitary chemotherapy agent; CPT 62148, Incision and retrieval of subcutaneous cranial bone graft for cranioplasty; and, CPT 62160,
Neuroendoscopy, intracranial, for placement or replacement of ventricular catheter and attachment to shunt system or external drainage.

Response: We thank the commenter for bringing these codes to our attention and we agree that the status indicator for these codes should be changed from " N " to "C."
New APC To Pay for Services Furnished on Same Date as Service With Modifier -CA:
In the 2003 update of the OPPS, we implemented a new modifier-CA, Procedure payable only in the inpatient setting when performed emergently on an outpatient who dies before admission. In section VI of Transmittal A-02-129, issued on January 3, 2003, we instructed hospitals on the use of modifier -CA when submitting a claim on bill type 13x for a procedure that is on the inpatient list and that is assigned payment SI "C."' (Transmittal A-02-129 can be found on our web site at cms.hhs.gov.) We also implemented in the November 1, 2002 final rule ( 67 FR 66799) a new payment policy to allow
payment, under certain conditions, for outpatient services on a claim that have the same date of service as the HCPCS code billed with modifier -CA. A single payment for outpatient services on the claim, other than those coded with SI " C " and modifier -CA, is currently made under APC 0977.

We reviewed this policy and determined that assigning payment for these services to APC 0977, which is a New Technology APC, is problematic because payment under New Technology APCs is a fixed amount that does not have a relative payment weight and is, therefore, not subject to recalibration based on hospital costs. We proposed to establish a new APC for which payment would be made under certain conditions for otherwise payable outpatient services furnished on the same date of service that a procedure with SI " C " is performed emergently on an outpatient who dies before admission to the hospital as an inpatient. Beginning in 2004, hospitals would be paid under APC 0375 instead of APC 0977 for services furnished on the same date of service that a procedure with SI " C " and modifier -CA is billed. We proposed at the outset to set the payment rate for APC 0375 in the amount of $\$ 1,150$, which is the payment amount for the newly structured New Technology APC that would replace APC 0977. When the APC weights are recalibrated in 2005, we would use charge data from CY 2003 claims for line items that have the same date of service as the line with modifier -CA and that show a HCPCS code with status indicator " $V$," " S ," " T ," "X," " N ," or "K" to calculate a median cost and relative payment weight for APC 375. Once we have claims data, we would be able to determine whether it is appropriate to calculate a relative payment weight based on median costs from our claims data or to continue a fixed payment rate for these special cases. In the proposed rule, we invited comments on these proposed changes.

Comment: One commenter was concerned with the methodology for calculation of APC 375, Ancillary Outpatient Services when Patient Expires. The commenter stated that items such as pass-through devices and drugs and packaged items reported without HCPCS should be included in the calculation.

Response: It is conceivable that a pass-through drug or device could be furnished to a patient during the same encounter when a procedure billed with modifier -CA is performed. If that were the case, we would expect the hospital to include these services on the claim submitted for the encounter. Although
we would not pay separately for the pass-through items, we agree with the commenter that we should consider taking these costs into account when evaluating how best to establish the payment rate for APC 375 in future updates of the OPPS. We also agree that charges reported with a revenue code but without a HCPCS code should be considered as well.

## E. Partial Hospitalization Payment Methodology

## 1. Background

As we discussed in the April 7, 2000 OPPS final rule (65 FR 18452), partial hospitalization is an intensive outpatient program of psychiatric services provided to patients in place of inpatient psychiatric care. A partial hospitalization program (PHP) may be provided by a hospital to its outpatients or by a Medicare-certified community mental health center (CMHC). Payment to providers under the OPPS for PHPs represents the provider's overhead costs associated with the program. Because a day of care is the unit that defines the structure and scheduling of partial hospitalization services, we established a per diem payment methodology for the PHP APC, effective for services furnished on or after August 1, 2000.

The analysis of hospital partial hospitalization claims resulted in a per diem payment of $\$ 202.19$, effective August 1, 2000. This amount was updated effective January 1, 2001 and April 1, 2002 to $\$ 206.82$ and $\$ 212.27$, respectively.

Effective January 1, 2003, the PHP APC amount was $\$ 240.03$, of which $\$ 48.17$ is the beneficiary's coinsurance. In the proposed rule, we described the methodology we followed in developing the 2003 PHP payment rate.

## 2. PHP APC Update for CY 2004

For CY 2004, we analyzed hospital and CMHC PHP claims for services furnished between April 1, 2002 and December 31, 2002. We intended to propose to use the same methodology for computing median costs per day for CY 2004 that was used to compute the CY 2003 PHP median cost per day. However, when we applied the methodology to the CMHC claims, the CMHC median cost per day was determined to be significantly higher than the median cost per day for hospital outpatient departments to provide the same benefit. In addition, the difference in median costs per day was significantly larger than last year.

As a result, we proposed a per diem rate for PHP services furnished during CY 2004 based solely on hospital PHP
data. The proposed PHP APC 0033 amount, after scaling, was determined to be $\$ 208.95$, of which $\$ 41.69$ is the beneficiary's coinsurance.

However, a Program Memorandum issued on January 17, 2003, directed the FIs to recalculate hospital and CMHC cost-to-charge ratios. We anticipated receipt of the updated ratios this summer, and indicated that if the updated cost-to-charge ratios resulted in a more reasonable median per diem rate, we would use the CMHC data in developing the final rate for CY 2004

We received 42 public comments in response to this proposal. A summary of the comments is provided below along with our responses.

Comment: In general, the commenters expressed concern that a reduction in the PHP rate of this magnitude would lead to the closure of many PHPs and that limited access to this crucial service would result in more costly inpatient hospital care as the ony alternative. A hospital association commented that basing the rate on only hospital data is inconsistent with other prospective payment systems and recommended that we find an alternative method to secure reliable CMHC data. CMHCs commented that their costs are higher than hospitals', with most in the \$300 to $\$ 400$ range. One commenter provided summary information on the average per day costs for seven CMHCs. Although the average per day cost for these seven providers was $\$ 390$, the costs for individual providers ranged from \$216 to $\$ 725$. Unfortunately, the commenter did not provide a breakdown of these costs. Another commenter indicated that a per day rate of $\$ 300$ to $\$ 350$ was more appropriate than our proposed amount.

Another commenter stated that our inability to process the data timely does not constitute an appropriate basis for excluding all CMHC data from the per diem calculations. The commenters suggested alternatives such as including prior years' CMHC data trended forward based on medical inflation or maintaining the CY 2003 payment rate for PHP services furnished in CY 2004. One commenter questioned why the median cost per day for hospitals was reported as $\$ 225$ but the proposed rate was reduced to $\$ 208.95$.

Response: As we stated in the August 12, 2003 proposed rule, we intended to review the PHP data using the updated cost-to-charge ratios to compute the final CY 2004 PHP APC. As expected, the updated ratios reduced the median cost per day for CMHCs. The revised medians are \$440 for CMHCs and \$206 for hospitals. Combining these files results in a median per diem PHP cost
of $\$ 303$. As with all APCs in the OPPS, the median cost for each APC is scaled to be relative to a mid-level office visit . and the conversion factor is applied. The resulting APC amount for CY 2004 is $\$ 286.82$ of which $\$ 57.36$ is the beneficiary's coinsurance.

Comment: With respect to the methodology used to establish the PHP APC amount, commenters expressed concern that data from settled cost reports fails to include costs reversed on appeal and that there are inherent problems in using claims data from a different time period like available cost-to-charge ratios on settled cost reports.

Response: We used the best available data in computing the APCs. The January 17, 2003 Program Memorandum directed FIs to update the cost-to-charge ratios on an ongoing basis whenever a more recent full year cost report is available. In this way, we hope to minimize the time lag between the cost-to-charge ratios and claims data.

Comment: One commenter provided links to certain data files that were used to establish the APC rates. Since APC 0033 and certain HCPCS codes that are only paid under OPPS when they are furnished as part of a PHP were not included in these data files, the commenter believed that the data used to establish the PHP APC amount is incomplete.

Response: These data files are provided so that interested parties can study the costs associated with the HCPCS codes that comprise each APC and other analyses. We are required to include the HCPCS codes within each APC that are similar in resource use. This is not the case with the PHP APC (0033) in which the day of care is the unit that defines the structure and scheduling of PHPs and the composition of the PHP APC consists of the cost of all services provided each day. Although we require that each PHP day include a psychotherapy service, we do not specify the specific mix of other services provided and have focused our analysis on the cost per day rather than the cost of each service furnished within the day. As a result, we will add APC 0033 to the file that displays the APC median costs, but not the PHP data that show medians by HCPCS codes. We will continue to analyze the PHP data and will reconsider this position in the future.

Comment: One commenter related that administrative costs for CMHCs continue to be a major impediment to operating PHPs for Medicare beneficiaries. Medicare does not cover transportation to and from programs and does not cover meals. Almost all programs offer transportation because in
most cases Medicare beneficiaries with serious mental illnesses would not be able to access these programs without the transportation. They also
commented about the current Medicare bad debt policy, which is beyond the scope of the August 12, 2003 proposed rule.
Response: The services that are covered as part of a PHP are specified in section 1861(ff) of the Act. Meals and transportation are specifically excluded under section $1861(\mathrm{ff})(2)(\mathrm{I})$ of the Act.
Comment: Several commenters summed the median cost figures for various combinations of HCPCS codes 90853 (group psychotherapy), 90818 (individual psychotherapy, 45-50 minutes), and 90847 (family psychotherapy, with patient present) and concluded that the per diem amount is considerably less than the combined cost of these services.
Response: We believe that the figures cited by the commenters were taken from a file that shows the median cost for single bills, for example, where group psychotherapy was the only service furnished. We do not believe that this is an appropriate comparison. These amounts are provided to enable the public to identify the median cost of services before scaling. It is important to note that these services are not PHP services, but rather single outpatient therapeutic sessions. As stated earlier, we used data from PHP programs (both hospitals and CMHCs) to determine the median cost of a day of PHP. PHP is a program of services where savings can be realized by hospitals and CMHCs over delivering individual psychotherapy services.

Comment: Several commenters compared the proposed per diem amount to the cost of the minimum services mandated by us or by the local medical review policies (LMRP) used by their FIs.

Response: We have not specified the specific daily components of a PHP. However, there is an edit in our claims processing system to identify claims that do not have at least three services, with at least one psychotherapy service (individual, group, or family therapy) for each day of PHP care. We have implemented this edit to ensure that PHPs meet the statutory requirement that they be intensive treatment programs provided in lieu of inpatient psychiatric hospital services. Claims with fewer than three services per day undergo medical review by the FIs to ensure that the patient is receiving intensive treatment. There may be legitimate reasons for a day on a claim to have fewer services, for example, where the patient leaves the program
early to receive medical care. Medical review of these claims verifies that the patient requires and is receiving a PHP level of care.

Comment: The commenters also questioned our requirement that psychotherapy services be conducted by a Master's level practitioner. One commenter questioned how a hospital could comply with the three services per day requirement when licensed clinical social worker (CSW) services are bundled into the per diem payment.
Response: We do not require that a Master's prepared practitioner furnish psychotherapy services in a PHP. However, in accordance with section 1861(ff)(2)(A) of the Act, we require that practitioners who furnish psychotherapy services are authorized to do so by their States, through licensure, certification, or other official State processes. When a service is furnished by a practitioner who is not authorized by the State to furnish psychotherapy services, the service would not be recognized as a PHP service.

With respect to billing by CSWs, the professional component of services furnished by CSWs to PHP patients is bundled into the per diem payment amount and no billing to the Part B carrier is permitted. The rationale for this policy was explained in the interim final regulation with comment period we published on February 11, 1994 (59 FR 6570).

The OPPS is intended to pay PHP providers for the resources associated with sponsoring a PHP, for example, building maintenance, utilities, and support staff, including the cost of CSWs. Thus, where a PHP provider utilizes CSWs for psychotherapy services to PHP patients, payment for the professional costs of the CSW is made through the OPPS per diem payment. However, if a PHP utilizes psychiatrists, clinical psychologists, nurse practitioners, physician assistants, or clinical nurse specialists to furnish therapeutic services to PHP patients, the physician or practitioner may bill the Part B carrier for payment under the physician fee schedule for their professional services. When this occurs, the PHP provider may bill the FI under the OPPS for the facility resources associated with the psychotherapy service.

We note that a physician or any of the practitioners specified in 42 CFR 410.43 (b) (including CSWs) may bill the Part B carrier for their professional services furnished to hospital outpatients who are not in a PHP. In this case, the hospital would bill the FI under the OPPS for the facility.
resources associated with the service furnished.

Comment: Several commenters suggested alternative methodologies for paying PHP providers, such as linking per diem and outlier payments to the units of service furnished each day or paying providers the average of all PHP costs plus 40 percent, subject to final settlement based on the provider's cost.

Response: We plan further analysis of the PHP data and may propose changes to the payment methodology for CY 2005. We note that OPPS is a prospective system and a methodology with interim payments subject to cost settlement would not be allowable under the statute.

Comment: One commenter believes the sample used to determine the rates is skewed and represents a subset of the provider community that provides PHP services.

Response: We do not agree that the sample is skewed. All facilities that submit claims for PHP services have been included in the development of the final rate.

## 3. Outlier Payments for PHPs

In a related matter, the use of historical cost-to-charge ratios applied to current charges has resulted in an excessive amount of outlier payments being made to CMHCs. As a result of more in-depth analysis of the 2001 data files that were used to compute the CY 2003 PHP per diem amount, we discovered a significant difference in the amount of outlier payments made to hospitals and CMHCs for PHP.

In the August 12, 2003 proposed rule, we stated that given the difference in PHP charges between hospitals and CMHCs, we did not believe it was appropriate to make outlier payments to CMHCs using the outlier percentage target amount and threshold established for hospitals. Therefore, we proposed to designate a portion of the estimated 2.0 percent outlier target amount specifically for CMHCs, consistent with the percentage of projected payments to CMHCs under the OPPS in CY 2004, excluding outlier payments. Since CMHCs were projected to receive 0.36 percent of total OPPS payments in CY 2004, excluding outlier payments, we proposed to designate 0.36 percent of the estimated 2.0 percent outlier target amount for CMHCs and establish a threshold to achieve that level of outlier payments. Based on our simulations of CMHC payments in 2004, we proposed to set the threshold for CY 2004 at 11.75 times the PHP APC payment amount. We proposed to apply the same outlier payment percentage that applies to hospitals. Therefore, for CY 2004, we
proposed to pay 50 percent of CMHC and hospital per diem costs over the threshold.
Comment: Several commenters representing CMHCs suggested that in developing our proposed outlier policy, we made generalizations and overreacted to a few aberrant providers. Also, these commenters believe the per diem amount is insufficient and that outlier payments would provide the additional amounts they needed to stay in business until more representative data could be obtained and analyzed.

Response: Based on our analysis of PHP claims data, nearly half of the CMHCs billing for PHP services in 2002 received outlier payments. The total dollar amount of outlier payments received by these CMHCs was nearly equal to the total amount all CMHCs received in per diem payments. Of those CMHCs that received outlier payments, 56 percent received an average of more than $\$ 200$ per day in outlier payments, 30 percent received more than $\$ 300$ per day in outlier payments, 21 percent received more than $\$ 400$ per day in outlier payments, and 11 percent received more than $\$ 500$ per day in outlier payments.

The outlier policy is intended to compensate providers for treating exceptionally resource-intensive patients. Outlier payments were never intended to be made for all patients and used as a supplement to the per diem payment amount. Our analysis showed that the CMHC average charge per day increased by 31 percent from CY 2001 to CY 2002. We do not believe this increase in charges correlates to an equivalent increase in CMHC costs. Rather, our analysis indicates that the increase in charges was made in order to qualify for outlier payments to cover CMHC operating expenses, not for patients who are exceptionally resourceintensive. We are concerned that if CMHCs continue this pattern of escalating charges, CMHCs will receive a disproportionate share of outlier payments compared to non-CMHCs that do not artificially inflate their charges, thereby limiting outlier money for truly deserving cases.

Comment: Although one commenter supported our proposed outlier policy, most commenters, including major hospital associations, did not believe it was sound policy to create separate outlier thresholds based on site of service.

Response: Applying the updated cost-to-charge ratios reduced the CMHC charges to better reflect their costs. We are concerned, however, that the impact of updated cost-to-charge ratios may be mitigated by future increases in charges.

We proposed an outlier policy in consideration of the charges on the claims, the cost report data available, and the payments made to CMHCs. Our analysis indicates that CMHCs have dramatically increased their charges between CY 2001 and CY 2002. Between CYs 2001 to 2002, CMHC average per diem charges increased by 31 percent. We believe that in most cases, these increases in charges were not related to a corresponding increase in costs, but rather were designed to enhance outlier payments. We believe the data may indicate a pattern of artificially inflated charges by CMHCs that needs to be addressed. Although we agree that establishing site of service differences is not generally the preferred approach, we continue to believe that establishing two separate outlier percentages is the most appropriate way to address the problem to account for the disparity between hospital and CMHC PHP per diem charges.

For these reasons, for CY 2004, we are establishing a separate CMHC threshold. The threshold is based on the proportion of total OPPS payments CMHCs are estimated to receive in CY 2004. As stated earlier in this section, our analysis indicated that CMHCs were projected to receive 0.36 percent of total OPPS payments in CY 2004, excluding outlier payments. Therefore, we proposed to designate 0.36 percent of the estimated 2.0 percent outlier target amount for CMHCs and establish a threshold to achieve that level of outlier payments. Based on our simulations of CMHC payments in 2004, we proposed to set the threshold for CY 2004 at 11.75 times the PHP APC payment amount. We have updated our simulations using the final CY 2004 PHP per diem rate. CMHCs are now projected to receive approximately 0.5 percent of estimated total OPPS payments in CY 2004 , excluding outlier payments. We have calculated the CMHC outlier threshold to achieve that level of payment. The resulting threshold for CY 2004 is 3.65 percent times the APC 0033 payment amount. We will apply the same outlier payment percentage that applies to hospitals. Therefore, for CY 2004, we will pay 50 percent of the difference between CMHC per diem costs and the CMHC outlier threshold amount. We intend to analyze whether a separate CMHC outlier threshold will continue to be appropriate in future updates.

## XII. General Data, Billing, and Coding Issues

We received a number of general comments about OPPS data and related issues to which we respond below. Not all coding questions are addressed,
however. We do not believe that the final rule is the appropriate venue in which to address specific inquiries about billing.

## OPPS Data

Comment: A commenter indicated that it was difficult to model the August 12,2003 proposed rule after its release and urged us to provide timely responses to questions about data, data files, and the specifics of the methodology used to generate relative weights, either by having data meetings or by clarifying the language in the final rule and median cost files. The commenter asked that we create a website to post responses to questions on data so that the information will be available for all to use. The commenter also asked that a number of data elements be added to the median cost file and the limited data set of claims that is available for public purchase.

Response: We have tried to respond to questions on data related issues on a flow basis. However, staff limitations and the need to develop the final rule greatly restrict the amount of time that our staff can devote to replying to these questions. Moreover, creation and maintenance of a web-site to post answers to questions from a few people with special interests is not a good use of our limited staff resources. We would encourage interested parties who have suggestions for improving our data file clarity to contact us with those specifics.

## Creation of a National Outpatient Coding Governing Body

Comment: A commenter indicated that we should create an outpatient coding governing body that would educate providers regarding the correct use of codes, maintain a web-site on which all guidance on coding would be maintained, and oversee the Medicare fiscal intermediary interpretation of codes to ensure national uniformity across fiscal intermediaries.,

Response: The HCPCS codes most often used for payment under OPPS are CPT codes, which are created and owned by the American Medical Association (AMA). Providers should look to the many resources available from the AMA for education regarding the correct use of CPT codes. The alphanumeric HCPCS codes are created and owned by us but they form a very limited portion of the services payable under OPPS and, as providers have frequently asked, we attempt to eliminate alphanumeric codes whenever possible and to work with the AMA to create CPT codes for use in both the physician fee schedule and the OPPS.

We attempt to provide coding guidance on alphanumeric codes, which are usually created only when there is a coverage or payment decision and when there is no CPT code that describes the service being covered or paid. However, providers must look to the AMA for education and support in the use of the CPT codes that form the bulk of OPPS.

Comment: We received one comment requesting that we publish updated addenda each quarter.

Response: The addenda that are published annually online are an official public record that cannot be changed without going through the Federal Register. We provide the Addenda in Excel format for the convenience of users since it is difficult to manipulate data in pdf format.

We also received a number of comments that were not relevant to the proposals made in the August 12, 2003 proposed rule. The commenters requested specific coding changes and requested clarification or guidance regarding certain billing requirements. Although we will provide answers to the questions raised, the final rule is not the appropriate venue for that guidance. We will consider the requests and suggestions provided, and will continue our ongoing efforts to formulate and publish billing instructions. Similarly, we will consult with our clinical experts regarding the suggestions made regarding coding of outpatient department procedures and other services.

## Revenue Code Edits

Comment: A commenter asked whether we permit fiscal intermediaries to impose CPT to revenue code edits. The commenter believes that CMS has said that providers may choose the revenue code that applies to the item or service being billed but that some fiscal intermediaries have imposed revenue code to CPT edits that prevent hospitals from billing the service under the revenue code that they believe is appropriate and that cause unnecessary and unfair payment denials.

Response: We have issued some instructions that require that specific revenue codes be billed with certain HCPCS codes, such as specific revenues codes that must be used when billing for devices that qualify for pass-through payments. Where explicit instructions have not been issued, we instructed intermediaries to advise hospitals to report charges under the revenue code that will result in the charges being assigned to the same cost center to which the cost of those services are assigned in the cost report. However, we have not explicitly prohibited
intermediaries from installing the revenue code to HCPCS code edits, so it is possible that certain edits are applied by some intermediaries and not others. The commenter did not provide examples of the edits that are causing what the commenter considers to be unnecessary and unfair payment denials.

## New CPT Venous Access Codes

Comment: A commenter indicated that CPT had revised its venous access codes and encouraged us to use external information to determine hospital acquisition costs for devices used in these procedures.

Response: We carefully reviewed the new CPT codes for insertion of venous access devices and we assigned the new CPT codes to APCs based on our clinicians' view of the relative amount of hospital resources that the services, as described by the new codes, would use. We note that the new CPT codes represent longstanding services, albeit with new code descriptions and code numbers. Since these are new CPT codes (albeit for existing services), the APC and status indicator assignments are interim and subject to comment.

## New "NI" Drug Codes

There are several new HCPCS codes for drugs, biologicals, and radiopharmaceuticals that are new for 2004. Since these codes were not subject to public comment in the August 12, 2003 proposed rule, they have been assigned to code condition "NI" and are subject to public comments following the publication of this rule. Some of these new codes for drugs and radiopharmaceuticals are replacements for codes for which we have hospital cost data. In these cases, we crosswalked the data for the expired codes to the new codes to determine their packaging status and payment rates. For codes that did not have a predecessor, we had no means to determine associated hospital costs; therefore, we assigned the codes to packaged status for 2004. We reinforce the importance of billing for packaged codes with appropriate charges so that we can collect cost data on these codes to use for future rate setting. We invite comments on the status indicators that have been assigned to these codes. Commenters who would like us to consider their cost data for these codes may submit verifiable external information according to the criteria set forth in the August 12, 2003 proposed rule.

Status Indicator Changes for Services Currently Packaged

Comment: A commenter asked us to pay separately for the following services for which payment is currently packaged into payment for other services. Commenters asked that we change the SI for CPT code 36540 , collection of blood from an implanted access device, to a payable SI because otherwise hospitals would be forced to bill an E\&M code when this is the only service provided. Commenters asked that we change the SI for 36600 , withdrawal of arterial blood, from an " $N$ " to a " $T$ " since it requires more effort and risk than a simple venipuncture (which is paid separately under the clinical laboratory fee schedule) Commenters asked that we change the SI for 90471 and 90472 , vaccine administration and each subsequent administration, from N to X since patients may present only to receive the vaccine because otherwise hospitals must bill an E\&M to receive any payment. Commenters asked that we change the SI for CPT codes 94760 , 94761, and 94762, Pulse oximetry, multiple and continuous, from " $N$ " to " X " because these may be the only services the patient receives and, in the case of CPT code 94762, the service continues for a long period of time. Commenters also asked that we change the SI for the following services from " $N$ " to " C " since they are add-ons to services that are inpatient only: 61316, 61517, 62148, and 62160.

Response: We will carefully consider the status indicator changes for the currently packaged services for which the commenter wants separate payment for 2005 OPPS. The commenters did not provide enough information or empirical evidence to convince us of the need for these changes and so we would like to have the opportunity to receive input about this from the APC Panel. We have revised the SI for the following codes from " N " to a " C " in recognition that if there are charges for these codes which are add-ons to inpatient only procedures, they are billing errors and should not be packaged into the median costs for other procedures on the claim that can be paid in the outpatient department: 61316, 61517, 62148, and 62160.

## XIII. Provisions of the Final Rule With Comment Period for 2004

## A. Changes Required By Statute

We made the following changes to implement statutory requirements:

- Added APCs, deleted APCs, and modified the composition of some existing APCs.
- Recalibrated the relative payment weights of the APCs
- Updated the conversion factor and the wage index.
- Revised the APC payment amounts to reflect the APC reclassifications, the recalibration of payment weights, and the other required updates and adjustments.
- Ceased transitional pass-through payments for drugs and biologicals and devices that will have been paid under the transitional pass-through methodology for at least 2 years by January 1, 2004.
- Ceased transitional outpatient payments (TOPS payments) for all hospitals paid under OPPS except for cancer hospitals and children's hospitals.

## B. Additional Changes

We rade the following additional changes to the OPPS:

- Adjusted payment to moderate the effects of decreased median costs for non-pass-through drugs, biologicals, and radiopharmaceuticals.
- Changed status indicators for HCPCS codes.
- Listed midyear and proposed HCPCS codes that are paid under OPPS. - Allocated a portion of the outlier percentage target amount to CMHCs and created a separate threshold for outlier payments for partial hospitalization services.
- Created methodology and payment rates for separately payable drugs and radiopharmaceuticals for 2004.
- Changed the status indicator and payment amount for P901 by assigning it to APC 0957 (Platelet concentrate) with a payment rate of $\$ 37.30$.

## C. Major Changes From the Proposed Rule

- We will apply a $\$ 50$ threshold in lieu of the proposed $\$ 150$ threshold in determining which drugs to pay for separately.
- We will set payment for all except two orphan drugs that meet our criteria for special payment under the OPPS at 88 percent of their AWP as established in the April 2003 single drug pricer (SDP). Based on widely available market prices for two orphan drugs, we will set the payment for these two orphan drugs at 94 percent of their AWP.
- We will set payment rates for 2004 for blood and blood products at 2003 payment rates.

## XIV. Collection of Information Requirements

Under the Paperwork Reduction Act of 1995, we are required to provide 60day notice in the Federal Register and
solicit public comment before a collection of information requirement is submitted to the Office of Management and Budget (OMB) for review and approval. In order to fairly evaluate whether an information collection should be approved by OMB, section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our estimate of the information collection burden.
- The quality, utility, and clarity of the information to be collected.
- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

The OPPS provisions set forth in this final rule do not impose information collection and recordkeeping requirements. Consequently, it need not be reviewed by the Office of Management and Budget under the authority of the Paperwork Reduction Act of 1995.

## XV. Response to Public Comments

Because of the large number of items of correspondence we normally receive on Federal Register documents, we are not able to acknowledge or respond to them individually. We will consider all comments we receive by the date and time specified in the DATES section of this preamble, and, if we proceed with a subsequent document, we will respond to comments in the preamble to that document.

## XVI. Regulatory Impact Analysis

## A. General

We have examined the impacts of this final rule as required by Executive Order 12866 (September 1993, Regulatory Planning and Review), the Regulatory Flexibility Act (RFA) (September 16, 1980, Pub. L. 96-354), section 1102(b) of the Social Security Act, the Unfunded Mandates Reform Act of 1995 (Pub. L. 104-4), and Executive Order 13132.

Executive Order 12866 (as amended by Executive Order 13258, which merely reassigns responsibility of duties) directs agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). A regulatory impact analysis (RIA) must be prepared for major rules
with economically significant effects ( $\$ 100$ million or more in any 1 year).

We estimate the effects of the provisions that will be implemented by this final rule will result in expenditures exceeding $\$ 100$ million in any 1 year. We estimate the total increase (from changes in the final rule as well as enrollment, utilization, and case mix changes) in expenditures under the OPPS for CY 2004 compared to CY 2003 to be approximately $\$ 0.607$ billion. Therefore, this final rule is an economically significant rule under Executive Order 12866, and a major rule under 5 U.S.C. 804(2).

The RFA requires agencies to determine whether a rule will have a significant economic impact on a substantial number of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and government agencies. Most hospitals and most other providers and suppliers are small entities, either by nonprofit status or by having revenues of $\$ 6$ million to $\$ 29$ million in any 1 year (see 65 FR 69432).

For purposes of the RFA, we have determined that approximately 37 percent of hospitals will be considered small entities according to the Small Business Administration (SBA) size standards. We do not have data available to calculate the percentages of entities in the pharmaceutical preparation manufacturing, biological products, or medical instrument industries that will be considered to be small entities according to the SBA size standards. For the pharmaceutical preparation manufacturing industry (NAICS 325412), the size standard is 750 or fewer employees and $\$ 67.6$ billion in annual sales (1997 business census). For biological products (except diagnostic) (NAICS 325414 ), with $\$ 5.7$ billion in annual sales, and medical instruments (NAICS 339112), with $\$ 18.5$ billion in annual sales, the standard is 50 or fewer employees (see the standards Web site at http:// www.sba.gov/regulations/siccodes/). Individuals and States are not included in the definition of a small entity.
In addition, section 1102(b) of the Act requires us to prepare a regulatory impact analysis if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 603 of the RFA. With the exception of hospitals located in certain New England counties, for purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a Metropolitan Statistical Area (MSA) and has fewer than 100
beds (or New England County Metropolitan Area (NECMA)). Section $601(\mathrm{~g})$ of the Social Security Amendments of 1983 (Pub. L. 98-21) designated hospitals in certain New England counties as belonging to the adjacent NECMA. Thus, for purposes of the OPPS, we classify these hospitals as urban hospitals. We believe that the changes in this final rule will affect both a substantial number of rural hospitals as well as other classes of hospitals and that the effects on some may be significant. Therefore, we conclude that this final rule will have a significant impact on a substantial number of small entities.

## Unfunded Mandates

Section 202 of the Unfunded Mandates Reform Act of 1995 (Pub. L. 104-4) also requires that agencies assess anticipated costs and benefits before issuing any rule that may result in an expenditure in any 1 year by State, local, or tribal governments, in the aggregate, or by the private sector, of $\$ 110$ million. This final rule will not mandate any requirements for State, local, or tribal governments. This final rule will not impose unfunded mandates on the private sector of more than $\$ 110$ million dollars.

## Federalism

Executive Order 13132 establishes certain requirements that an agency must meet when it publishes a final rule that imposes substantial direct costs on State and local governments, preempts State law, or otherwise has Federalism implications.

We have examined this final rule in accordance with Executive Order 13132, Federalism, and have determined that it will not have an impact on the rights, roles, and responsibilities of State, local or tribal governments. The impact analysis (see Table 15) shows that payments to governmental hospitals (including State, local, and tribal governmental hospitals) will increase by 4.9 percent under the final rule.

## B. Changes in This Final Rule

We are making several changes to the OPPS that are required by the statute. We are required under section $1833(\mathrm{t})(3)(\mathrm{C})(\mathrm{ii})$ of the Act to update annually the conversion factor used to determine the APC payment rates. We are also required under section $1833(t)(9)(A)$ of the Act to revise, not less often than annually, the wage index and other adjustments. In addition, we must review the clinical integrity of payment groups and weights at least annually. Accordingly, in this final rule, we are updating the conversion factor
and the wage index adjustment for hospital outpatient services furnished beginning January 1,2004 as we discuss in sections IX and VII, respectively, of this final rule. We are also revising the relative APC payment weights based on claims data from April 1, 2002 through December 31, 2002. Finally, we are removing two devices and eight drugs and biological agents from pass-through payment status. Alternatives to the changes we proposed and why we did not accept them are discussed throughout this final rule. In particular, see section V.B with regard to the expiration of pass-through payment for devices; see section VI.B with regard to the expiration of pass-through payment for drugs and biological agents.

Under this final rule, the change to the conversion factor as provided by statute will increase total OPPS payments by 4.5 percent in 2004. The changes to the wage index and to the APC weights (which incorporate the cessation of pass-through payments for many drugs and devices) will not increase OPPS payments because the OPPS is budget neutral. However, the wage index and APC weight changes will change the distribution of payments within the budget neutral system as shown in Table 15 and described in more detail in this section. The overall 4.5 percent increase does not take into account the expiration of transitional corridor payments or the end of the hold harmless provisions for small rural hospitals.

## A. Alternatives Considered

Alternatives to the changes we are making and the reasons that we have chosen the options we have are discussed throughout this final rule. Some of the major issues discussed in this rule and the sections in which they are discussed follow:

| Issue | Preamble section |
| :---: | :---: |
| Drug packaging threshold | VI.B. 2 |
| Drug administration | VI.B.4. |
| Adjustment of median costs .......... | II.B. |
| Outlier policy ....................... | X.A. |
| Device coding .............................. | V.C. |
| Payment adjustment for small rural hospitals. | X.B. |
| Payment for orphan drugs, generic drugs and blood. | VI.B. |
| APC changes .............................. | II. A and III.C. |

## Conclusion

It is clear that the changes in this final rule will affect both a substantial number of rural hospitals as well as other classes of hospitals, and the effects
on some may be significant. Therefore, the discussion below, in combination with the rest of this final rule, constitutes a regulatory impact analysis.

The OPPS rates for CY 2004 will have, overall, a positive effect for every category of hospital. These changes in the OPPS for 2004 will result in an overall 4.5 percent increase in Medicare payments to hospitals, exclusive of outlier and transitional pass-through payments. We also noted that both the overall 4.5 percent increase and the percent changes to individual classes of hospitals depicted in Table 15 are exclusive of any impacts to those hospitals that would result from the expiration of the transitional corridor payments or the end of the hold harmless provision for small rural hospitals. As described in the preamble, budget neutrality adjustments are made to the conversion factor and the relative weights to ensure that the revisions in the wage index, APC groups, and relative weights do not affect aggregate payments. We also note that both the overall 4.5 percent increase and the percent changes to individual classes of hospitals depicted in Table 15 are exclusive of any impacts to those hospitals that would result from the expiration of the transitional corridor payments or the end of the hold harmless provision for small rural hospitals. The impact of the wage and recalibration changes does vary somewhat by hospital group. Estimates of these impacts are displayed on Table 15.

The overall projected increase in payments for urban hospitals is slightly lower (4.3 percent) than the average increase for all hospitals ( 4.5 percent) while the increase for rural hospitals is slightly greater ( 4.9 percent) than the average increase. Again, as noted above, these numbers do not include the effect of the expiration of the transitional hold harmless payments to small rural hospitals. The introduction of a new wage index combined with changes to the APC structure will result in small distributional changes for all categories of hospitals. Rural hospitals will gain 0.2 percent from the wage index change and another 0.2 percent as a result of APC changes. Large urban hospitals will lose 0.2 percent from the APC change, whereas "other" urban hospitals show an increase of 0.1 percent from the APC changes. A discussion of the distribution of outlier payments that we project under this final rule can be found under section XV.E below. Table 16 presents the outlier distribution that we expect to see under this final rule.

## C. Limitations of Our Analysis

The distributional impacts represent the projected effects of the policy changes, as well as statutory changes effective for 2004, on various hospital groups. We estimate the effects of individual policy changes by estimating payments per service while holding all other payment policies constant. We use the best data available but do not attempt to predict behavioral responses to our policy changes. In addition, we do not inake adjustments for future changes in variables such as service volume, service mix, or number of encounters.

## D. Estimated Impacts of This Final Rule on Hospitals

The OPPS is a budget neutral payment system under which the increase to the total payments made under OPPS is limited by the increase to the conversion factor set under the methodology in the statute. The impact tables show the redistribution of hospital payments among providers as a result of a new wage index and APC structure. In some cases, under this final rule, hospitals will receive more total payment than in 2003 while in other cases they will receive less total payment than they received in 2003. The impact of this final rule will depend on a number of factors, most significant of which are the mix of services furnished by a hospital (for example, how the APCs for the hospital's most frequently furnished services will change) and the impact of the wage index changes on the hospital.

Column 4 in Table 15 represents the full impact on each hospital group of all the changes for 2004. Columns 2 and 3 in the table reflect the independent effects of the final change in the wage index and the APC reclassification and recalibration changes, respectively. We
excluded critical access hospitals (CAHs) from the analysis of the impact of the final 2004 OPPS rates that is summarized in Table 15. For that reason, the total number of hospitals included in Table $15(4,378)$ is lower than in previous years. CAHs are excluded from the OPPS.
To a very limited extent, wage index changes favor rural hospital categories. Large urban hospitals with greater than 500 beds show the largest percent decrease ( -3.0 ) attributable to wage index changes. Rural hospitals show modest increases of 0.2 percent for most bed sizes but show the largest gains for categories with fewer than 50 beds or 150 to 199 beds where the wage index change results in a 0.4 percent increase. Rural hospitals located in Puerto Rico show the largest negative impact ( -2.5 percent) due to changes in the wage index. Hospitals located in the Middle Atlantic region also experience a large negative impact -0.6 percent due to wage index changes regardless of urban or rural designation. However, this effect is somewhat lessened by the distribution of outlier payments as discussed in more detail below.
The APC reclassification and recalibration changes also favor rural hospitals with the exception of rural hospitals with 200 or more beds that show a negative effect ( -0.8 percent). Conversely, urban hospitals with greater than 199 beds show a decrease attributed to APC recalibration. Urban hospitals in excess of 500 beds show a 0.5 percent decrease as a result of APC recalibration. In general, APC changes are small and result in very few distributional changes among hospital categories.

In both urban and rural areas,
hospitals that provide a lower volume of outpatient services are projected to receive a larger increase in payments than higher volume hospitals. In rural
areas, hospitals with volumes between 5,000 and 20,999 are projected to experience increases larger than 5.0 percent. Urban hospitals that provide low-volume services show similar rates of increases ( 5.0 percent). Conversely, urban and rural hospitals providing more than 21,000 services are projected to experience a rate of increase in the 4.0 to 4.7 percent range.

Major teaching hospitals are projected to experience a smaller increase in payments ( 3.7 percent) than the aggregate for all hospitals ( 4.5 percent) due to negative impacts from both the wage index ( -0.4 percent) and APC recalibration ( -0.4 percent). Hospitals with less intensive teaching programs are projected to experience an overall increase ( 4.5 percent) that is equal to the average for all hospitals. There is little difference in impact among hospitals that serve low-income patients where increases in payments range from 4.3 to 4.7 percent higher than in 2003.

Psychiatric hospitals and long term care facilities show the largest increase in payment rates among all categories of hospital providers. Psychiatric hospitals show an increase of 18.2 percent as a result of an increase in payment rates for partial hospitalization programs and for other services such as psychotherapy. Also, payments made to psychiatric facilities represent a small portion of total spending for OPPS, approximately 60.6 million dollars for 2004. Long-term care facilities show a growth rate of 7.5 percent over payments made in 2003 . We believe this is the result of a policy change that removes payments made for therapy services from the physician fee schedule to the hospital outpatient prospective payment system. Payments made for long-term care account for a small amount of OPPS payments, approximately 14.5 million for 2004.
table 15.-Impact of Change for Cy 2004 Hospital Outpatient Prospective Payment System
[Percent change in total payments to hospital (program and beneficiary); does not include hold harmless, corridor, outlier or transitional passthrough payments]

[Percent change in total payments to hospital (program and beneficiary); does not include hold harmless, corridor, outlier or transitional passthrough payments]

|  | Number of hospitals (1) | New Wage index (2) | APC <br> changes (3) | All CY 2004 changes (4) |
| :---: | :---: | :---: | :---: | :---: |
| PSYCH | 175 | 0.8 | 12.2 | 18.2 |
| LTC | 150 | 1.6 | 1.2 | 7.5 |
| CHILDREN | 44 | 0 | 0.5 | 4.9 |

1. Some data necessary to classify hospitals by category were missing; thus, the total number of hospitals in each category may not equal the national total.
2. This column shows the impact of updating the wage index used to calculate payment by applying the FY 2004 hospital inpatient wage index after geographic reclassification by the Medicare Geographic Classification Review Board. The appropriate hospital inpatient wage index appears in a correction notice published in the FEDERAL REGISTER on October 6, 200368 FR 57732.
3. This column shows the impact of changes resulting from the reclassification of HCPCS codes among APC groups and the recalibration of APC weights based on 2002 hospital claims data.
4. This column shows changes in total payment from CY 2003 to CY 2004, excluding outlier and pass-through payments. It incorporates all of the changes reflected in columns 2 and 3 . In addition, it shows the impact of the FY 2004 payment update. The sum of the columns may be different from the percentage changes shown here due to rounding.
5. Volume is expressed in terms of the number of lines that appear on a claim.

## E. Projected Distribution of Outlier Payments

As stated elsewhere in this preamble, we have allocated 2 percent of the estimated 2004 expenditures to outlier payments. Table 16 below illustrates the percentage of outlier payments relative to the total projected payments for the categories of hospitals that we show in the impact table.

We project, based on the mix of services for the hospitals that will be paid under the OPPS in 2004, that approximately 95 percent of hospitals will receive outlier payments. For the majority of provider groups, the table shows outlier payments as a percent of total payments in the 1.5 to 3.5 percent range. Two categories, Rehabilitation and Children's hospitals are the
exception with outlier to total payment ratios of 6.7 and 11.9 percent respectively. We would point out that these hospital types represent a small number of providers with a low volume of services. The anticipated outlier payments for urban hospitals can be expected to ameliorate the impact of the wage index and APC changes on payments to urban hospitals.

Table 16.-Distribution of Outlier Payments for CY 2004 Hospital Outpatient Prospective Payment

## Table 16.-Distribution of Outlier Payments for CY 2004 Hospital Outpatient Prospective PaymentContinued

|  | Number of hospitals | Percent of total hospitals | Number of hospitals with outliers | Outlier payments as a percent of total payments (percent) |

## F. Estimated Impacts of This Final Rule on Beneficiaries

For services for which the beneficiary pays a coinsurance of 20 percent of the payment rate, the beneficiary share of payment will increase for services for which OPPS payments will rise and will decrease for services for which OPPS
payments will fall. For example, for a mid-level office visit (APC 0601), the minimum unadjusted co-payment in 2003 was $\$ 10.11$; under this final rule, the minimum unadjusted co-payment for APC 601 will be $\$ 10.71$ because the OPPS payment for the service will increase under this final rule. For some
services (those services for which a national unadjusted co-payment amount is shown in Addendum B) the beneficiary co-payment is frozen based on historic data and will not change, and will therefore present no potential impact on beneficiaries.

However, in all cases, the statute limits beneficiary liability for copayment for a service to the inpatient hospital deductible for the applicable year. This amount is $\$ 876$ for 2004. In general, the impact of this final rule on beneficiaries will vary based on the service the beneficiary receives and
whether the co-payment for the service is one that is frozen under the OPPS.
In accordance with the provisions of Executive Order 12866, this regulation was reviewed by the Office of Management and Budget.
(Catalog of Federal Domestic Assistance Program No. 93.773, Medicare-Hospital Insurance; and Program No. 93.774,

Medicare-Supplementary Medical Insurance Program)
Dated: October 27, 2003.
Thomas A. Scully,
Administrator, Centers for Medicare \& Medicaid Services.
Approved: October 29, 2003.
Tommy G. Thompson,
Secretary.

addendum D1.-Payment Status Indicators for the Hospital Outpatient Prospective Payment System

| Indicator | Item/code/service |
| :---: | :---: |
| A ............... | Services furnished to a Hospital Outpatient that are paid under a Fee Schedule/Payment System other than OPPS, e.g.: <br> - Ambulance Services $\qquad$ <br> - Clinical Diagnostic Laboratory Services $\qquad$ <br> - Non-Implantable Prosthetic and Orthotic Devices <br> - EPO for ESRD Patients $\qquad$ <br> - Physical, Occupational, and Speech Therapy <br> - Routine Dialysis Services for ESRD Patients Provided in a Certified Dialysis Unit of a Hospital. <br> - Screening Mammography |
| B .............. | Codes that are not recognized by OPPS when submitted on an Outpatient Hospital Part B bill type (12x, 13x, and 14x). |
|  | Inpatient Procedures |
| D ............... | Deleted Codes .... |
| E... | Items, Codes, and Services: $\qquad$ <br> - That are not covered by Medicare based on Statutory Exclusion. <br> - That are not covered by Medicare for reasons other than Statutory Exclusion. <br> - That are not recognized by Medicare but for which an alternate code for the same item or service may be available. <br> - For which separate payment is not provided by Medicare |
|  | Corneal Tissue Acquisition; Certain CRNA Services .................. |
| G .............. | Drug/Biological Pass-Through ................................................ |
| H .............. | Device Category Pass-Through |
| K ............... | Non Pass-Through Drugs and Biologicals; Radiopharmaceutical Agents; Certain Brachytherapy Sources. |
| L ............... | Influenza Vaccine; Pneumococcal Pneumonia Vaccine |
| N ............... | Items and Services packaged into APC Rates ......................... |
| P ............... | Partial Hospitalization ............................................................ |
| S .............. | Significant Procedure, Not Discounted when Multiple ................ |
|  | Significant Procedure, Multiple Procedure Reduction Applies ..... |
|  | Clinic or Emergency Department Visit ..................................... |
| Y ............... | Non-Implantable Durable Medical Equipment ............................ |
| X ............... | Ancillary Service .................................................................. |

Not paid under OPPS. Paid by Intermediaries under a Fee
Schedule/Payment System other than OPPS.

Not paid under OPPS.

- May be paid by Intermediaries when submitted on a different bill type, e.g., 75x (CORF), but not paid under OPPS.
- An alternate code that is recognized by OPPS when submitted on an Outpatient Hospital Part B bill type (12x, 13x, and 14x) may be available.
Not paid under OPPS. Admit patient; Bill as Inpatient.
Not paid under OPPS. Not paid under Medicare.
Not paid under OPPS.

Not paid under OPPS. Paid at reasonable cost.
Paid under OPPS; Separate APC payment includes PassThrough amount.
Paid under OPPS; Separate cost-based Pass-Through payment.
Paid under OPPS; Separate APC payment.
Not paid under OPPS. Paid at reasonable cost; Not subject to deductible or coinsurance.
Paid under OPPS. However, payment is packaged into payment for other services, including Outliers. Therefore, there is no separate APC payment.
Paid under OPPS; Per diem APC payment.
Paid under OPPS; Separate APC payment. Paid under OPPS; Separate APC payment. Paid under OPPS; Separate APC payment.
Not paid under OPPS. All institutional providers other than Home Health Agencies bill to DMERC.
Paid under OPPS; Separate APC payment.

## Addendum D2.-Code Conditions

| Code condition | Descriptor |  |
| :---: | :---: | :---: |
| DG <br> DNG $\qquad$ <br> NF $\qquad$ <br> NI $\qquad$ | Deleted code with a grace period; Payment will be made under the deleted code during the 90-day grace period. <br> Deleted code with no grace period; Payment will not be made under the deleted code after December 31, 2003. <br> New code final APC assignment; Comments were accepted on a proposed APC assignment in the Proposed Rule; APC assignment is no longer open to comment. <br> New code interim APC assignment; Comments will be accepted on the interim APC assignment for the new code. |  |

42 CFR Parts 400, 405, and 426
Medicare Program: Review of National Coverage Determinations and Local Coverage Determinations; Final Rule

## DEPARTMENT OF HEALTH AND hUMAN SERVICES

Centers for Medicare \& Medicaid Services

42 CFR Parts 400,405 , and 426
[CMS-3063-F]
RIN 0938-AK60
Medicare Program: Review of National Coverage Determinations and Local Coverage Determinations

AGENCY: Centers for Medicare \& Medicaid Services (CMS), HHS.
Action: Final rule.
SUMMARY: This final rule will create a new process to allow certain Medicare beneficiaries to challenge national coverage determinations (NCDs) and local coverage determinations (LCDs). It will implement portions of section 522 of the Medicare, Medicaid, and SCHIP Benefits Improvement and Protection Act of 2000. The right to challenge NCDs and LCDs will be distinct from the existing appeal rights that Medicare beneficiaries have for the adjudication of Medicare claims.
effective date: The provisions set forth in this final rule are effective December 8, 2003.

SUPPLEMENTARY INFORMATION:
To order copies of the Federal
Register containing this document, send your request to: New Orders,
Superintendent of Documents, P.O. Box 371954, Pittsburgh, PA 15250-7954. Specify the date of the issue requested and enclose a check or money order payable to the Superintendent of Documents, or enclose your Visa or Master Card number and expiration date. Credit card orders can also be placed by calling the order desk at (202) 512-1800 (or toll-free at 1-888-2936498) or by faxing to (202) 512-2250. The cost for each copy is $\$ 10$. As an alternative, you can view and photocopy the Federal Register document at most libraries designated as Federal Depository Libraries and at many other public and academic libraries throughout the country that receive the Federal Register.

This Federal Register document is also available from the Federal Register online database through GPO Access, a service of the U.S. Government Printing Office. The Web site address is http:// www.access.gpo.gov/nara/index.html.

Note: The former name of the Centers for Medicare \& Medicaid Services (CMS) was the Health Care Financing Administration (HCFA). The terms CMS and HCFA can be used interchangeably.
In addition, because of the many terms to which we refer by acronym in this final rule, we are listing these acronyms and their corresponding terms in alphabetical order below.

## 1. Background

## A. Background of Rulemaking

On August 22, 2002, we issued a proposed rule ( 67 FR 54534) implementing certain provisions of section 522 of the Medicare, Medicaid, and SCHIP Benefits Improvement and Protection Act of 2000 (BIPA), proposing a process for the review of local coverage determinations (LCDs) and national coverage determinations (NCDs). The notice and comment period closed on October 21, 2002. We received 31 timely comments, which were quite useful in identifying issues and concerns. We have made significant changes to this final rule to address the public comments. We believe that these changes will contribute to a fairer and more efficient process. Significant changes to the proposed rule based on public comments, which are discussed in section III, below, include:

- More broadly defining beneficiaries "in need."
- Reducing the burden for physician certification requirements.
- Allowing for participation in the BIPA section 522 adjudicatory process as an amicus curiae (friend of the court) for NCD appeals.
- Creating a mechanism to allow new evidence to be received subject to timelimited remands.
- Expanding the effect of a final decision by the Administrative law judge (ALJ) or the HHS Departmental Appeals Board (Board).
B. Overview of Existing Statutes, Regulations, and Policies
Medicare is the nation's largest health insurance program covering approximately 41 million Americans. Beneficiaries consist primarily of individuals 65 years of age or older, some disabled people under 65 years of age, and people with end-stage renal disease (permanent kidney failure treated with dialysis or a transplant).

The original Medicare program consists of two parts. Part A, known as the hospital insurance program, covers certain care provided to inpatients in hospitals, critical access hospitals, skilled nursing facilities, as well as hospice care and some home health care. Part B, the supplementary medical insurance program, covers certain physicians' services, outpatient hospital care, and other medical services that are not covered under Part A. While the original Medicare program covers many health care items and services, it does not cover all health care expenses. The Medicare statute specifically excludes from coverage certain items and services under section 1862(a) of the Social Security Act (the Act).

In addition to the original Medicare program, beneficiaries may elect to receive health care coverage under the Medicare+Choice ( $\mathrm{M}+\mathrm{C}$ ) program under Part C of the Medicare program. This program provides beneficiaries with various options, including the right to choose a Medicare managed care plan or a Medicare private fee-for-service plan. Under the $\mathrm{M}+\mathrm{C}$ program, an individual is entitled to those items and services (other than hospice care) for which benefits are available under Part A and Part B. An M+C plan may provide additional health care items and services that are not covered under the original Medicare program.
The Act gives beneficiaries specific rights to challenge particular types of decisions. We are committed to providing beneficiaries an opportunity to fully exercise these statutory rights. Moreover, we are committed to resolution of these disputes in a fair and efficient manner.

## C. Claims Appeal Process

Under the original Medicare program, a beneficiary may generally obtain health services from any institution, agency, or person qualified to participate in the Medicare program that undertakes to provide the service to the individual. Assuming that a qualified provider or supplier has furnished medical care, the health care provider or supplier, or, in some cases, a beneficiary would submit a claim for benefits under
the Medicare program. If the claim is for an item or service that falls within a Medicare benefit category, is reasonable and necessary for the individual, and is not otherwise statutorily excluded, a government contractor (either a fiscal intermediary for claims under Part A or Part B, or a carrier for claims under Part B) would pay the claim. However, if the Medicare contractor determines that the medical care is not covered under the Medicare program, the Medicare contractor would deny the claim.

This final rule does not seek to significantly alter the existing claims appeal process. Nor does this rule significantly alter our existing regulations for $\mathrm{M}+\mathrm{C}$ beneficiaries as established at § 422.560 through $\S 422.622$. However, it does create an expanded definition of aggrieved party to include a beneficiary who received a service, but whose claim for the service was denied, extending an opportunity to that beneficiary to file a complaint under $\S 426.400$ or $\S 426.500$. For further discussion of the claims appeal process please consult the proposed rule.

## D. National Coverage Determinations (NCDs)

Section 1869(f)(1) of the Act defines national coverage determination as "a determination by the Secretary with respect to whether or not a particular item or service is covered nationally under title XVIII, but does not include a determination of what code, if any, is assigned to a particular item or service covered under this title or a determination with respect to the amount of payment made for a particular item or service so covered." For the full discussion of NCDs please consult our proposed rule at 67 FR 54535 published on August 22, 2002.

## E. Local Medical Review Policy (LMRP)

As explained in the preamble to the proposed rule, Local Medical Review Policies are contractor-specific policies that identify the circumstances under which particular items or services will be (or will not be) considered covered and correctly coded. An LMRP is not controlling authority for ALJs or the Board in the claims appeals process. These guidelines simply help to ensure that similar claims are processed in a consistent manner within those jurisdictions. LMRPs may not conflict with an NCD, but may be written in the absence of, or as an adjunct to, an NCD.

An LMRP may contain any or all of the following:

- Coding provisions.
- Benefit category provisions.
- Statutory exclusion provisions.
- Provisions related to the authority under section 1862(a)(1)(A) of the Act, which prohibits payment for any expenses incurred for services that are not reasonable and necessary for the diagnosis or treatment of illness or injury, or to improve the functioning of a malformed body member.
Some LMRPs contain only a single type of provision, while other LMRPs contain all four types. The provisions described in bullets two through four above constitute coverage provisions.
For further information on LMRPs please consult our proposed rule at 67 FR 54535.

## F. Local Coverage Determinations

Section 522 of BIPA does not use the term "LMRP," but uses the term "Local Coverage Determination" (LCD). Section 522 of BIPA amends section 1869(f)(2)(B) of the Act, to define LCD as "a determination by a fiscal intermediary or a carrier under part A or part B, as applicable, respecting whether or not a particular item or service is covered on an intermediary-or carrier-wide basis under such parts, in accordance with section 1862 (a)(1)(A)."
An LMRP may contain four different types of provisions (coding, benefit category, statutory exclusion, and reasonable and necessary). Section 1869(f)(2)(B) of the Act limits an LCD as a determination only under section 1862(a)(1)(A) of the Act's "reasonable and necessary provision." For the purposes of this regulation, we will use the term "reasonable and necessary provision" to describe section 1862(a)(1)(A) of the Act. We intend to work with contractors to divide LMRPs into separate LCD and non-LCD documents; however, it is likely that LMRPs will continue to exist for the next several years. During this time, the term LCD will refer to both of the following:

- Separate, stand-alone documents entitled "LCDs" that contain only reasonable and necessary language; and
- The reasonable and necessary provisions of an LMRP.

## G. Differences Between NCDs and LMRPs/LCDs

Under our claims appeals process, ALJs may consider, but are not bound by, LMRPs or LCDs. Thus, an ALJ may rule that Medicare payment is due on a particular item or service received by a beneficiary, based on the particular circumstances represented by the case, even if the contractor's LMRP or L.CD clearly prohibits payment for the particular service (We note that a regulation which may impact ALJ consideration of LCDs in claims appeal
cases has been proposed. See 67 FR 69328,69351 .) On the other hand, contractors and ALJs are bound by NCDs. ALJs may not review an NCD.

## H. Individual Claim Determinations

In addition to policy determinations, contractors may make individual claim determinations, even in the absence of an NCD, LMRP, or LCD. In circumstances when there is no published policy on a particular topic, decisions are made based on the individual's particular factual situation. See Heckler v. Ringer, 466 U.S. 602, 617 (1984) (recognizing that the Secretary has discretion to either establish a generally applicable rule or to allow individual adjudication).
I. Impact of Section 522 of the Medicare, Medicaid, and SCHIP Benefits Improvement and Protection Act of 2000 (BIPA)

## 1. Overview of the Legislation

Section 522 of the BIPA created a new review process that enables certain beneficiaries to challenge LCDs and NCDs. These appeal rights are distinct from the existing appeal rights for the adjudication of Medicare claims. This section also creates additional avenues for beneficiaries to seek judicial review. Before BIPA, the statute did not provide an administrative avenue to challenge the facial validity of LCDs or NCDs.
2. Differences Between the Claims Appeal Process and the LCD/NCD Review Processes

The existing claims appeal rights were not significantly changed by section 522 of the BIPA. Our claims appeal regulations will continue to provide detailed administrative appeal rights for beneficiaries whose claims are denied. These claims appeal procedures permit beneficiaries to challenge the initial claims denial and include de novo review by an independent ALJ. If still dissatisfied after exhausting all administrative remedies, a beneficiary has a right to seek judicial review in a Federal district court. This claim appeal system enables beneficiaries to submit any relevant information pertaining to an individual claim. Moreover, because LCDs are not controlling authorities for ALJs, when an ALJ does not find an LCD persuasive, an individual claim appeal could result in the claim being paid without the need to challenge the underlying LCD. We have proposed rules that would modify the claims appeals process at 67 FR 69312 (November 15, 2002).

Section 522 of the BIPA created a review process that is separate and
independent from the claims appeal process. This process will be different, because the nature of the challenge and the relevant evidence is different. The procedures used in this process will be different from the claims appeals process. Review of an LCD or NCD requires examination of an entire policy, or specific provisions contained therein. and not just one claim denial. Therefore, such reviews may lead to changes that impact other beneficiaries if the policies are found to be unreasonable. A beneficiary, thus, may elect to pursue a claims denial through the claims appeal process, seek review of an LCD or NCD using the process in this final rule, or both. In no way does filing a 522 challenge, or a decision on a 522 challenge, affect beneficiary appeal rights or other issues that may arise in the claims appeal process.

Complaints under section 522 of the BIPA are subject to standing rules. Namely, under section $1869(f)(5)$ of the Act "[a]n action under this subsection seeking review of a national coverage determination or local coverage determination may be initiated only by individuals entitled to benefits under part $A$, or enrolled under part $B$, or both who are in need of the items or services that are the subject of the coverage determination." In this final rule, we are interpreting the standing provision to include individuals who have received the item or service and whose initial claim was denied based on an LCD or NCD and, thus, are in need of Medicare coverage. We will also permit the estates of certain individuals to have standing. Only individuals who have standing may bring a challenge under section 522 of the BIPA, and in this final rule, we refer to these individuals as "aggrieved parties."

As discussed in the proposed rule, the aggrieved party may not assign the right to bring a challenge under section 522 of the BIPA to anyone else. However, the aggrieved party is permitted to obtain assistance from any individual in pursuing the challenge. (We discuss the difference between assigning rights and receiving assistance in section IV of this final rule.)

The definition of an "aggrieved party" will permit an individual to bring a challenge to an LCD or NCD in advance of receiving an item or service, or after the LCD or NCD is applied to a claim causing the claim to be denied. As we discuss in greater detail in section IV.E of this preamble, a successful challenge would permit the individual to have his or her specific claim reviewed without reference to the challenged policy. Claims that are otherwise payable can be paid. In addition, a successful
challenge to an LCD or NCD may result in the following:

- The policy being retired/withdrawn in its entirety, or
- The policy being revised to effectuate the Board decision, or the ALJ decision if it is not appealed to the Board.

## 3. The Reconsideration Process

We previously established a procedure by which individuals could seek reconsideration of policies established in an LCD or NCD. The procedures for NCDs were set forth in the September 26, 2003 notice ( 68 FR 55634,55641 ). The procedures for LCDs were set forth in the Program Integrity Manual, Chapter 13, Section 11.

## 4. The Role of Other Interested

 Individuals or EntitiesThe section 522 review process is intended to be initiated only by aggrieved parties. However, consistent with several public comments, we are expanding $\$ 426.510(\mathrm{f})$ to allow for limited participation in an NCD challenge by other individuals as amicus curiae when the individuals or entities meet the standards set forth in these regulations. Please note that the reconsideration process described in section I.I. 3 of this preamble remains the appropriate process by which all other interested entities may submit new evidence pertaining to the review of current LCDs and NCDs.
5. Differences Between an LCD/NCD Review and an LCD/NCD

## Reconsideration

The main difference between an LCD/ NCD review under section 522 of the BIPA and an LCD/NCD reconsideration is the avenue an individual chooses to take to initiate a change to a coverage policy and who may initiate the review. All interested parties, including an aggrieved party, may request a reconsideration of an LCD or NCD, rather than filing a complaint to initiate the review of an LCD or NCD. Conversely, only an aggrieved party may file a complaint to initiate the review of an LCD or NCD. If the aggrieved party believes that we, or the contractor, misinterpreted evidence or excluded available evidence in making the coverage determination or has new evidence to submit, then the aggrieved party has the option to file a request for a reconsideration by the contractor or us, respectively, or to file a complaint to seek review by an adjudicator.

In the reconsideration process, all interested parties, not just aggrieved parties, have the opportunity to submit new scientific and medical evidence for
review by individuals with medical and scientific expertise. The reconsideration process permits experts to make judgments about those policies, rather than using an adjudicatory proceeding.

## II. Provisions of the Proposed Rule

For a discussion of the specific provisions of the proposed rule, please see 67 FR 54534-54563. The significant changes to the final rule, based on public comments, are reflected in section III, below.

## III. Analysis of and Response to Public Comments

We received 31 comments from the public on the proposed rule. Summaries of the major comments received and our responses to those comments are set forth below.

## Definition of an NCD

Comment: We received several comments on our interpretation of what qualifies as an NCD, and which policies are subject to review. Some public comments stated that we interpreted the statute too narrowly, and that additional policies should be subject to review; other public comments suggested that we interpreted the statute too broadly, and that benefit category determinations should not be defined as NCDs, and should not be subject to review before the Board.

Response: Our definition of an NCD is consistent with the statutory language, and we are not accepting the public comments that suggest the definition is either too broad or too narrow. We continue to believe that the statute is clear, and that the Congress has created a new definition of NCD to include benefit category determinations. The Congress's definition of an NCD is now broader than the prior statute at section 1869 (b)(3) of the Act. Moreover, it is broader than the definition of LCD that is specifically limited to determinations made in accordance with section 1862(a)(1)(A) of the Act. We presume that the Congress acted intentionally and precisely in defining an NCD, and we are following that definition in this final rule.

## Definition of LCD

Comment: One commenter suggested that an LCD should be synonymous with LMRP.
Response: Because the statutory definition of an LCD is limited to the reasonable and necessary provisions in section 1862(a)(1)(A) of the Act, we could not make the definition of an LCD synonymous with the definition of an LMRP. As discussed earlier in this preamble, an LMRP may contain coding,
benefit category, and statutory exclusion provisions that are not based on section 1862(a)(1)(A) of the Act.

Comment: Several commenters suggested that both procedure codes and diagnosis codes be included within the definition of LCD. These commenters stated that the final regulation should not preclude an aggrieved party from challenging the reasonable and necessary provisions of an LCD that contain diagnosis codes.
Response: An LCD or LMRP provision stating that a service is not reasonable and necessary for specified diagnoses (whether listed in text or listed by ICD9 diagnosis code) is considered part of the LCD.

## Definition of an Aggrieved Party

Comments: We received two
comments in support of our proposed definition of an aggrieved party as a beneficiary in need of a service and who has not yet received the service that is the subject of the coverage
determination. While these commenters felt that it is correct to allow aggrieved parties to initiate the review of an LCD or NCD, they wrote that opening up the LCD/NCD review process to beneficiaries who have already received the service would result in unnecessarily complicated adjudications. However, over half of all commenters on the rule suggested that the definition was too narrow and should be expanded. Some commenters stated that the proposed definition was far too restrictive and suggested that we remove the requirement that the service not be received at the time the complaint is filed. One commenter pointed out that the proposed definition would insulate certain LCDs and NCDs from ever being challenged because some LCDs/NCDs address services that are only used in emergency or urgent situations where the beneficiary would be incapable of filing a challenge prior to receiving the service. Some commenters suggested that beneficiaries would lose their section 522 rights if they chose not to forego urgent treatment. One commenter suggested that we revise the definition to require that the beneficiary be in need of coverage for a service. One commenter specifically requested the establishment of an emergency appeals process.

Response: In response to these comments, we have interpreted the statutory requirements more broadly and have expanded the definition of aggrieved party to require that the beneficiary be in need of coverage of a service. Therefore, the definition includes beneficiaries who have already received the service. We believe this
change obviates the need for an emergency appeals process because a beneficiary can obtain an emergency service and then seek review without forgoing his or her rights. In order to define which beneficiaries have standing as aggrieved parties, we have added a requirement in § 426.400 (b)(2) and $\S 426.500$ (b)(2) that aggrieved parties, who have received a service and have filed a claim, must file their section 522 challenge within 120 days of the date of the initial denial notice from the contractor.

Comment: One commenter stated that beneficiaries should be allowed to challenge coverage NCDs as well as noncoverage NCDs.

Response: We conclude in this final rule that a beneficiary is aggrieved by an NCD only if it denies coverage for a service which that beneficiary needs. Therefore, the ALJ/Board may accept a complaint regarding an NCD that limits coverage. Since the Congress provided for review upon the filing of a complaint by an aggrieved party, we believe that the Congress intended the process to be available only when the beneficiary is in need of coverage for an item or service that would be denied or has been denied, under an LCD or NCD.

## Allowing a Beneficiary To Assign Appeal Rights

Comment: We received a number of public comments suggesting that the aggrieved party should be able to assign LCD or NCD review rights under section 522 of the BIPA to another person or entity. Several of the comments suggested that the procedures were complex and that, by enabling a beneficiary to assign the rights to another person, it would relieve the beneficiary of the burden of participating in the process and would be more equitable, or, perhaps, more efficient. One commenter suggested that permitting providers to be aggrieved parties would have been consistent with an earlier proposal in a Senate bill. Some commenters suggested that allowing physicians or other interested parties to assist the beneficiary in requesting review would be useful to beneficiaries. Other commenters recognized that the Medicare program permitted the assignment of rights in other contexts.
On the other hand, one commenter noted that the statute requires a beneficiary in need to initiate a review. Another commenter agreed with our proposal, and believed it would be inappropriate under the statute to permit the assignment of rights to request a review of an LCD or NCD to other interested parties. That
commenter noted that the "Medicare program is fundamentally a beneficiary, or patient, program designed to assure access to clinically sound services."

Response: We are retaining our position that an aggrieved party may not assign legal rights to request a review of an LCD or NCD to a third party, but are clarifying our rules to ensure that a challenger is not precluded from obtaining assistance or representation from individuals or entities who may assist the beneficiary in pursuing the individual's appeal.

We agree with the commenter who suggested that the statute was clear in this regard. The standing provision in section 1869(f)(5) of the Act is precise. Moreover, as one commenter correctly observed, a broader standing provision, that would have enabled other interested parties to file complaints about LCDs and NCDs, existed in earlier drafts of the legislation. It appears that the Congress's narrowing of the language in the final bill was intentional and deliberate. We do not believe it would be consistent with this history to expand the scope of individuals who have a legal right to initiate and pursue a challenge to an LCD or NCD.

We do, however, agree that beneficiaries may seek assistance from knowledgeable physicians, suppliers, providers, manufacturers, and attorneys in developing the individual's request for review. The individual is free to consult with these individuals and to follow those suggestions,
recommendations, or advice. Thus, while these individuals may assist the beneficiary in navigating the adjudicatory process in an efficient manner, the beneficiary may not assign his or her legal right to request a review of an LCD or an NCD to a third party.

Comment: A commenter suggests that dually eligible Medicare and Medicaid beneficiaries have already assigned rights to third party payment to Medicaid agencies by virtue of sections 1902(a)(45) and 1912 of the Act, and §433.137 of the Medicaid regulations, and that States, therefore, should be allowed to participate in the process.

Response: We disagree with the commenter. The provisions of the Act and regulations cited concern the assignment of rights to seek medical support or payments and in providing information to assist the State in pursuing financially liable third parties. In contrast, a person initiating a challenge to an LCD or NCD is seeking to have a coverage policy held invalid and is not establishing a right to medical support or payment. Should a dually eligible beneficiary prevail in a policy challenge, a State may benefit in the
claims adjudication process if it is determined that the policy was invalid. Furthermore, although this adjudicatory process is not available to a State directly, a State may always request reconsideration of an LCD or NCD.
Dismissal of Complaint Upon Death of Beneficiary

Comments: We received comments about the proposed policy that would have dismissed complaints if the beneficiary died after initiating a section 522 challenge. Approximately one third of the commenters were opposed to this policy, and only one supported it. That commenter concluded that since the deceased would no longer be considered "in need," it would be appropriate to dismiss the claim. The majority of those who commented objected to permitting an estate to appeal a claim without permitting the estate to continue a challenge to the policy that could determine the outcome of the appeal, thereby denying meaningful relief. One commenter indicated that the policy of automatic dismissal of a complaint upon death runs contrary to Federal common law that allows for the survival of remedial, as distinguished from penal or punitive, claims. In describing the burdens created by an automatic dismissal, the commenters referred to the potential for delay, the requirement to seek meaningful redress in Federal court rather than through the administrative appeals process, wasted resources expended prior to the death of the beneficiary in LCD/NCD challenges, and the potential for devastating financial burdens on the estates of deceased beneficiaries.

Response: We have revised the final rule to permit the estate of a beneficiary, as a successor in interest, to continue a challenge in those cases where the aggrieved party received the service and filed a timely complaint prior to death. In addition, we will allow an estate to initiate a challenge within 120 days of the issuance of a denial notice.

## Acceptability of Complaints

Comments: Some commenters stated their belief that the complaint filing process in the proposed rule was overly complex. One commenter suggested that complaints should be deemed acceptable if sent to the ALJ, the local Social Security office, carrier or fiscal intermediary (FI), or the Board.

Response: We have revised the final rule to simplify and clarify the complaint filing procedures and to make them more beneficiary-friendly. We have eliminated a number of requirements that we believe are unnecessary. However, it is the duty of
the beneficiary to file the complaint correctly under these regulations. Nevertheless, we will issue instructions advising our contractors of procedures for a misdirected LCD/NCD complaint. These instructions will inform the contractor that it should forward the complaint to the proper location and notify the beneficiary.

## Physician Certification

Comment: Some commenters stated that physician documentation of medical need is a reasonable way of determining whether beneficiaries have a basis for challenging LCDs/NCDs. However, other commenters felt that the physician certification requirements imposed unnecessary new paperwork burdens on physicians. Some commenters argued that it was unrealistic to require physicians to be certain of the intricacies of Medicare policies. Others felt these requirements would prove to be a significant impediment to the process and suggested that the original physician order for the service suffice as certification that the beneficiary needed the service. Finally, a number of commenters suggested that nonphysician practitioners should be allowed to document the beneficiary's need.
Response: We have revised the certification requirements at $\$ 426.400$ (c) and $\S 426.500$ (c) in this final regulation by clarifying that the certification of need can be in the form of a written order for the service in question or other documentation in the medical record, thus significantly simplifying the certification requirements. We have also removed the requirement that the practitioner predict that payment would be denied. However, we continue to believe that the beneficiary's treating physician-not any treating practitioner-is best situated to determine "in need" status, both because he or she is the primary caregiver and also is responsible for the beneficiary's overall care.

## Joint Complaints

Comments: We proposed permitting multiple parties to file a single complaint. We received one comment in support of the joint complaint option noting that it permits more effective resource utilization in addressing complaints. One commenter recommended that the criterion for joint complaints should not require "a similar medical condition," rather that the adverse impact created by the LCD or NCD should create standing. Another commenter asserted that requiring a similar medical condition was
unnecessary and inconsistent with the Federal Rules of Civil Procedure and that requiring a challenge to the same provisions of the same policy should be sufficient.

Response: In response to the comments concerning the requirement of a "similar medical condition" for the filing of a joint complaint, we believe that this requirement is reasonable, given the specific focus of these adjudications. Moreover, the Federal Rules of Civil Procedure are not controlling on our administrative proceedings. We believe that these procedures appropriately fit the specific requirements for LCD and NCD adjudications and are consistent with the Secretary's authority ( 42 U.S.C. 405(a)). Moreover, we do not eliminate the possibility of combining actions based upon different medical conditions if a party believes, and the ALJ/Board finds, that there are other bases for consolidating complaints.

## Adjudicator Consolidation of

 ComplaintsComment: We received three comments on adjudicator authority to consolidate complaints. One commenter recommended merging the provisions for joint and consolidated complaints or, alternatively, having the provisions cross-reference one another. Another commenter objected to the consolidation of complaints without the aggrieved party having reviewed the other complaint(s) to determine whether or not the consolidation might negatively impact the individual's specific issue with the LCD or NCD. Another commenter questioned whether the consolidation might result in lengthening the process if an adjudicator combined a later complaint with an earlier one.
Response: We believe that preserving the procedures for aggrieved parties to file joint complaints and for adjudicators to consolidate complaints promotes efficiency in adjudicating challenges to LCDs and NCDs. While we recognize that the two procedures support a common goal, we note that they are separate and distinct and therefore should remain in their respective sections. With respect to the comments concerning the possibility that a party might find consolidation adverse or burdensome, we believe it is appropriate for the adjudicator to determine whether consolidation is appropriate under the specific circumstances. We will allow any aggrieved party who feels disadvantaged by consolidation to raise these issues to the ALJ/Board. We have added language to $\$ 4.26 .410(\mathrm{e})$ and $\$ 426,510(\mathrm{e})$ to .tres
clarify that the ALJ/Board may not consolidate complaints if doing so would unduly delay the ALJ/Board decision.

## Aınending a Complaint

Comment: Several commenters indicated that they were concerned that the proposed rule allowed a beneficiary to amend a complaint only once and then required the ALJ/Board to dismiss the challenge if the aggrieved party failed to submit an acceptable amended complaint.

Response: The statute requires that the section 522 challenge begin with the filing of a complaint. We believe that it would be inefficient if an aggrieved party had an unlimited number of attempts to file an acceptable complaint. A complaint is a significant document in identifying issues on appeal and leads to the production of the record. The final rule continues to allow the aggrieved party one opportunity to amend an unacceptable complaint before a time penalty is imposed.

## Withdrawal of Complaint-Six-Month Limit on Refiling

Comment: We received two comments in support of our proposal to establish a six-month limitation if an aggrieved party withdraws a complaint. One commenter was opposed, stating that if the aggrieved party has new evidence, he or she should be allowed to file another complaint regardless of the timeframe. We received two additional comments suggesting that, if the aggrieved party has new evidence, he or she should be allowed to file another complaint without a time limitation.

Response: We continue to believe that the six-month time limit is necessary to ensure the efficient use of scarce resources. If the aggrieved party withdraws a complaint, that aggrieved party must still wait six months before filing a new complaint on the same LCD/NCD. However, we have clarified that, once an acceptable complaint has been filed, if the aggrieved party identifies new evidence that was not available at the filing of the original complaint, the aggrieved party may submit that new evidence at any time without withdrawing and resubmitting the complaint.

## Aggrieved Party Submitting a Brief

Comment: We received one comment suggesting that an aggrieved party should have the opportunity to submit a brief after the aggrieved party has had the opportunity to review the record upon which the LCD or NCD was based.

Response: We agree that an aggrieved party should have an opportunity to
make his or her case. In seeking to make this process accessible to Medicare beneficiaries, who may or may not have legal representation, we did not want to mandate that parties submit legal briefs in support of their claims. However, in view of the changes we have made to the review process in this final rule, particularly for the introduction and use of new evidence, we are clarifying that, while briefs are not required in all cases, the adjudicator may request or permit the parties to submit written briefs and that the aggrieved party has the option to retain representation and to submit these written briefs. ${ }^{\text {. }}$

## Educating Beneficiaries and Providers

 About the ProcessComment: Many commenters stressed the importance of having a wellconstructed and advertised educational campaign for providers and beneficiaries. Some commenters suggested that a template for an acceptable complaint, a physician's certification, and an acceptable appeal of an ALJ's decision be available on the CMS Web site to assist beneficiaries in filing an acceptable complaint. Another commenter suggested that beneficiaries should be informed of their rights in the LCD or NCD review process and that one means of providing this might be to include it with advanced beneficiary notice (ABN) forms. Another commenter encouraged us to inform beneficiaries clearly as to their financial obligations while the complaint is pending. Several other commenters suggested that we provide model language for use by Medicare managed care organizations to use in their evidence of coverage documents.
Response: In the proposed rule ( 67 FR 54547), we explained our intent to produce a user-friendly guide that beneficiaries may use in accessing the section 522 process. We will work with the ALJs and Board to develop educational materials to inform the public of-
(1) The elements of an acceptable complaint;
(2) The standards for treating physician certifications; and
(3) The elements of an acceptable appeal of an ALJ decision. We intend to prepare this educational material (including templates) and make it publicly available, but we will not delay implementation of the final rule to wait for these materials to be developed. We will work with ALJs and the Board to make available to Medicare managed care organizations and Medicaid State agencies, relevant information on complaints and decisions. We do not
intend to revise ABNs as part of this educational program.

## Allowing Participation by Interested Entities

Comment: Several commenters believed that we should allow for more public participation of interested entities in the process, along with submission of evidence by those parties.
Response: The LCD and NCD reconsideration processes currently exist to give all interested entities the right to request and participate in reconsiderations of these policies. These processes will continue to exist to provide an avenue for all interested entities to submit evidence that they consider pertinent. In contrast, the adjudicatory process created by section 522 is initiated only by a beneficiary in need of coverage, and not by all interested individuals. We are concerned that allowing any member of the public to submit evidence would make these adjudicatory proceedings unwieldy. We are modifying this final rule at $\$ 426.513$, however, to permit participation as amicus curiae, in the NCD process. We recognize that NCD reviews may impact a large number of stakeholders apart from the aggrieved parties initiating the review. We believe that the nationwide effect of an NCD review decision requires public notice and opportunities for input in a way that LCD reviews do not. In addition, this impact may be significant, even where no change to existing policy results from the review, such as when the Board concludes that an NCD record is complete and contains adequate information to support the validity of the NCD.

Anyone who has information that can assist the Board in reviewing an NCD challenge is permitted to request participation as an amicus curiae. Given the nationwide effect of an NCD review decision, the process must strike a careful balance between providing reasonable opportunities for input by those who may ultimately be substantially affected by any decision, and creating a workable process to address the issues presented by the aggrieved party seeking review. Because of the regional nature and high number of LCDs; allowing the opportunity for amicus curiae participation in the review of LCDs would create an inefficient process. However, at any time, any party within the contractor's jurisdiction who wishes to bring forward new evidence relating to a policy may do so through the contractor's LCD reconsideration process. This process is frequently used
and is an efficient method to bring new evidence to the contractor's attention.

## Making NCD Complaints and Documentation Available and Announcing the Proceedings

Comments: A number of commenters suggested that all interested parties should have notice of an LCD/NCD complaint and have the opportunity to participate in the proceedings. One commenter recommended the use of an on-line docketing system whereby the public could learn of LCD/NCD challenges and determinations made by the ALJs and Board in these cases.

Response: The statute does not require that we develop such a nationwide online docketing system. While the concept is interesting, an online docketing system is beyond the scope of this regulation. Currently, we are exploring options for the best way to docket and track challenges.

Changes in NCDs may determine the health care services, technologies, and treatments to which beneficiaries have access. The denial of coverage for a service that is allegedly reasonable and necessary may have an adverse impact on others across the nation. Hence, it is important that the review decisions are based on a comprehensive and welldeveloped record.

In addition, the general public may have a substantial interest in the outcome of some NCD reviews. NCD review decisions will constitute a legal precedent with respect to the outcome. Board decisions will clarify the extent of available Medicare coverage.

Therefore, under the final rule, the Board will make available to the public information about all NCD complaints by means of posting on the Internet. This method will provide the broadest possible public notice, without unreasonably delaying review of the complaint already filed. Any request to participate as an amicus must then generally be filed within the timeframes set by the Board.
Although LCDs are also important, LCDs are regional in nature. Because LCD reviews generally impact only a limited geographic area, we will not require the ALJs to make public all LCD complaints.

## Notice to Managed Care Organizations (MCOs) and State Agencies

## Comment: Several commenters

 suggested that Medicare managed care organizations (MCOs) and State agencies receive timely notification when a challenge is filed at each stage of review, when an ALJ/Board decision is made, and when a revised LCD/NCD is effective. One commenter suggested thatthe regulation be revised to require the ALJ or the Board to notify MCOs when an enrollee challenges an LCD/NCD.
Response: We will work with the ALJs and the Board to make available to MCOs and State agencies, relevant information about complaints and decisions.

## Mediation

Comment: We received one comment for and one comment against using mediation in an evidence-based review process.

Response: We have added a provision authorizing the Board to stay the review proceedings for a reasonable time when all parties voluntarily engage in settlement negotiations, with or without the assistance of an impartial mediator. In general, we do not consider it appropriate to negotiate about clinical issues that affect the health or safety of Medicare beneficiaries. In some instances, however, it may be worthwhile to explore alternative and less costly means of resolving a dispute. Mediation may be useful to narrow the issues in dispute in order to make the review process more efficient. Using alternative means of resolving disputes is consistent with the Federal Administrative Dispute Resolution Act and HHS policy. Under this final rule, the ALJ or the Board could not compel mediation. Where the parties consent to mediation, the ALJ or the Board may provide an impartial mediator or assist the parties in finding an impartial mediator acceptable to them.
Automatic Dismissal When a Contractor Retires an LCD or CMS Withdraws an NCD

Comments: One commenter agreed that, if an NCD is withdrawn, the purpose for the review has been eliminated and the claims can be adjudicated without consideration of the repealed NCD, but objected to the statement that the repeal will have the same effect as a decision under §426.560(b). The commenter, however, interpreted section $\S 426.560$ (b) as permitting a contractor to continue to rely on a withdrawn NCD.

Response: Retiring an LCD or withdrawing an NCD would result in the retired/withdrawn policy no longer applying in the claims adjudication process for services rendered on or after the date that the policy is retired/ withdrawn. Moreover, the aggrieved party would be granted individual claim review. Since a claimant would receive the same relief that would have been available had the adjudicator found that the relevant LCD or NCD was not valid,
there would be no reason to continue the appeal.

Comment: One commenter recommended against automatic dismissal if a policy were retired or withdrawn. As an alternative, the commenter suggested giving the adjudicator discretion to dismiss "where the decision normally occurs" and opined that since a retired or withdrawn policy may be reconsidered or reaffirmed, the automatic dismissal provision effectively nullifies the entire policy appeal process.

Response: When we retire/withdraw an LCD/NCD we will not apply those policies for services furnished after the retirement/withdrawal date and we will reprocess the aggrieved party's affected claims without applying the retired/ withdrawn policy. If, in the future, the contractor or CMS issues a new LCD/ NCD on that subject the change would be adopted after an opportunity for public comment. Any such change would be prospective in nature, and a new LCD/NCD would be subject to challenge under this final rule.

Comment: Two commenters indicated that automatic dismissal would not permit an ALJ's or the Board's findings to be used in the appeal of claims decisions based upon the invalidated policy.
Response: Because the ALJ or the Board would not be required to make a decision in a case where the contractor/ CMS retired/withdrew the LCD/NCD, there would be no Board decision with precedential effect. However, we believe our approach conserves resources for all parties and adjudicators.

## Timeline for Beneficiary Getting the LCD/NCD Record

Comment: We received one comment on the timing of the LCD/NCD record production requirement. That commenter suggested that we should create a 45-day response timeframe to ensure that the review process proceeds without inordinate delays.
Response: We agree that the establishment of timeframes will promote the efficiency of the BIPA 522 process. However, we believe that the time required will vary with the size and scope of the record requested. Therefore, we have revised the final rule at $\S 426.410$ (d) and $\S 426.510$ (d) to state that the contractor or CMS must generally produce the record within 30 days, subject to extension for good cause shown.

## Timeline for an Aggrieved Party to Review the LCD or NCD Record

Comment: One commenter suggested that 30 days might not be enough time
for the aggrieved party to review the record, particularly for an individual pursuing a complaint with minimal outside assistance. The commenter recommended a 45-to-60-day timeframe for the aggrieved party to respond.
Response: We accept the commenter's suggestion to increase the time for review of the record. While we have maintained the 30-day timeframe, we have added an exception for good cause shown, for review and response to the relevant LCD or NCD record, if additional time is required.

## No Evidence To Support an LCD/NCD

Comment: We received several
comments stating that where no record exists to support an LCD/NCD, the beneficiary should not have to introduce new evidence.

Response: We expect it would be a rare event that no record exists. In that rare event, we agree with the commenter. We have made changes to clarify that, in the rare event that no evidence exists to support an LCD or NCD, we will either voluntarily retire/ withdraw the policy, or request the ALJ/ Board to strike down the applicable provision(s) of the policy, whichever is the more expeditious option.

## New Evidence

Comment: Approximately half of the commenters made comments on the issue of new evidence. Most of the comments stated that allowing us to have an automatic stay, coupled with the absence of specific deadlines, would unduly delay the review process. Other commenters suggested that the stay should be a matter of ALJ/Board discretion. Numerous comments specifically requested that the ALJ or Board review all evidence, including new evidence, to allow for a more efficient process.

Response: We agree that a more efficient and time-sensitive adjudicatory process is important, and we have addressed several aspects of these comments in the final rule. We have taken considerable steps to create an efficient adjudicatory process that still preserves the important role of the clinical and scientific experts in making LCDs and NCDs.

We have eliminated the proposed autormatic stay when new evidence is submitted. Instead, our final rule will require that, if new evidence has been received by the ALJ/Board that would otherwise be admissible, the ALJ/Board will review the new evidence after the period for discovery and the taking of evidence is complete, and decide if it has the potential to significantly affect the LCD/NCD provision in question. If
not, the review will continue. If the ALJ/ Board determines that the new evidence has the potential to significantly affect the validity of the LCD/NCD, the ALJ/ Board will stay the proceedings and forward the material to the contractor or to us for a brief review. The contractor/ CMS will have 10 days to provide a statement indicating whether or not: (1) A reconsideration will be initiated, or (2) the policy will be revised or retired/ withdrawn. If the Agency undertakes a reconsideration, it must be completed within a period set by the ALJ/Board that is not more than 90 days. We believe this 90 -day timeframe is reasonable due to the potentially large body of evidence that must be reviewed. Following a reconsideration, the contractor/CMS will prepare and submit the new LCD/NCD record, and the ALJ/ Board proceedings will continue on the revised LCD/NCD. If the contractor/CMS chooses not to initiate a reconsideration, the ALJ/Board proceedings will continue on the original LCD/NCD as supplemented with the new evidence. The aggrieved party will have an opportunity to submit a statement about whether the record still fails to support the validity of the LCD/NCD. The contractor/CMS will have an opportunity to respond. No further evidence will be taken at this stage, and the ALJ/Board will proceed to make a determination on the merits.

We have also made changes to the definition of "new evidence" to clarify that new evidence means evidence that was not considered by the contractor or CMS.

## When Does the Review Stop?

Comments: In the proposed rule, we specifically asked for comments on alternatives for structuring the review process. We proposed to divide the decision making process for cases at the ALJ/Board level into two stages and thereby establish the prerequisites for discovery under the statutory framework set forth at section $1869(f)(1)(\mathrm{A})(\mathrm{iii})(\mathrm{I})$ and section $1869(f)(2)(A)(i)(1)$ of the Act. Under the proposed regulation, in order to obtain discovery, a challenger was required to first file a motion with the Board or ALJ alleging that the record was incomplete or lacked adequate information to support the validity of the determination. Only if the record was incomplete or otherwise inadequate would an aggrieved party be able to pursue discovery. Even if the challenger did not file such a discovery motion, however, a beneficiary could seek a decision on whether the determination was based on reasonable findings of fact, reasonable interpretations of law,
and reasonable applications of fact to law.
We outlined another possible approach in our proposed rule at 67 FR 54542. That approach would require a party to file a statement regarding whether that party considers the record complete and adequate, and an "offer of proof" supporting factual allegations about incompleteness. The adjudicator would then decide whether the record is complete and adequate to support the decision and would prepare a written decision. If the adjudicator found that the record was complete and adequate, this decision would be a final Agency action appealable to the court.

There were two public comments on this issue. One commenter suggested that, if the adjudicator found that the record was incomplete or inadequate, the Board would be legally required to determine that the "NCD is not reasonable." This commenter believed that the Board would be precluded from allowing discovery or any other new evidence at this point, but must automatically rule against CMS. A commenter appeared to prefer the following approach: "If, upon review of the record, the aggrieved party does not have objections to the completeness or adequacy of the LCD or NCD record, then what is the basis of the aggrieved parties complaint? Presumably the coverage policy would be challenged on the basis that it is inconsistent with current clinical or scientific evidence. In such case, a motion by the aggrieved party would appear to be a necessary part of the complaint process and an appropriate step given the limited time and resources of adjudicators, CMS and contractors." The commenter "believed that the aggrieved party should challenge the completeness or adequacy of the record before an adjudicator should make a determination with respect thereto."

Response: We have re-examined our proposed procedures in light of the public comments and the unique statutory language in section 1869(f)(1)(A)(iii)(I) and section $1869(f)(2)(A)(i)(I)$ of the Act. In this final rule, we clarify at $\$ 426.400$ and $\S 426.500$, the procedural and substantive steps involved in the appeal. The revised procedures incorporate approaches from both alternatives discussed in the proposed rule. We believe that the revised procedures are fair, consistent with the statutory framework, and will enable the ALJs and Board to fairly resolve challenges to LCDs and NCDs in an expeditious manner.

The administrative review provisions in BIPA section 522 are unique. While
the reviews are, at the outset, based on the medical and scientific evidence that the contractor/CMS considered in issuing the LCD/NCD, and the statute requires that the adjudicator "shall review the record," it does permit discovery in some limited circumstances and also permits that adjudicator to consult with "appropriate scientific and clinical experts." Obviously, new evidence obtained through discovery or testimony could not have been considered by the agency when the policy predates the new evidence. Thus, the procedures are not entirely based on the record, but new evidence and testimony may influence the ALJ's/Board's decision in some cases.

It is possible that an aggrieved party would attempt to challenge an LCD/ NCD for several reasons. For instance, a challenger may believe that a policy that was correct when it was issued has become outdated and is no longer valid in light of advances in medicine. Those challengers may be most interested in presenting new medical evidence in support of changing the policy rather than challenging the original factual basis for the policy. As noted previously, we are modifying our procedures to allow a party to submit new evidence to the ALJ/Board. We have modified the procedures at $\S 426.340$ to allow the ALJ/Board to make a preliminary determination on whether the new evidence submitted would have a significant bearing on the validity of the LCD/NCD. If the evidence is found significant, it would be sent to the contractor/CMS to determine whether the contractor/CMS agrees that the evidence warrants a formal reconsideration. As mentioned earlier, the reconsideration process would be time limited but would allow the public to submit medical and scientific evidence and allow the agency to fully develop the record in light of advances in medical science. Following the timelimited reconsideration, a supplemental record would be filed and the adjudication could continue, if necessary.

This approach will provide the contractor/CMS the initial opportunity to permit medical and scientific experts to examine the new evidence and to make findings of fact concerning the new evidence. Among other things, the statute requires that the ALJ/Board "slaall defer only to the reasonable findings of fact" and it was impossible for the agency to have made findings on evidence that did not yet exist or that had not been furnished to the agency for consideration. We believe this approach is necessary to ensure that the medical
and scientific opinions of the agency experts illuminate the record, since these appeals could involve very technical medical and scientific material related to the new evidence.

While it is possible that the challenger may submit credible medical and scientific studies that warrant a formal reconsideration, it is also possible that the evidence submitted would not be either relevant or persuasive, or that a challenger may seek to challenge the policy on other grounds. Because the public comments have highlighted the different types of disputes that may be presented, we have modified our procedures in attempt to fairly, yet expeditiously, resolve any type of challenge that may be presented. Our revised approach would allow the ALJ or the Board to resolve some cases without need for a reconsideration and would also allow the review proceedings to be resolved in a more expeditious manner. To resolve any confusion, we will describe the significant procedural and substantive steps of the review.

Under the revised procedures at $\S 426.425$ and $\S 426.525$, all aggrieved parties, after reviewing the LCD or NCD record, will be able to file a statement that includes the challenger's arguments as to why the record is not complete, or not adequate to support the validity of the LCD/NCD under the reasonableness standard. This may be the most important step in the review process from the aggrieved party's perspective because this is the opportunity to present any arguments for the LCD/NCD being held invalid. (See §426.425(a), $\S 426.525(\mathrm{a})$ ). CMS or the contractor will have 30 days to submit a response to this statement. (See §426.425(b), §426.525(b)).

After evaluating the materials and the record, our revised procedures will permit the ALJ/Board to make a prompt decision in the nature of a summary judgment if the case warrants this approach. For instance, if applying the reasonableness standard, the adjudicator finds that record is complete and has adequate information to support the validity of the LCD or NCD, the ALJ or the Board may issue a decision that "the record is complete and adequate" to support the policy. (See §426.425(c)(1), and $\S 426.525(\mathrm{c})(1))$. For cases involving an NCD, the aggrieved party would have the right to challenge this final agency action in Federal court. (Section 1869(f)(1)(A)(v) of the Act). For cases involving an LCD, the aggrieved party would have the right to challenge the ALJ's decision at the Board, and potentially in Federal Court. (§426.465).

If, on the other hand, after evaluating the materials submitted by the parties and the record, the ALJ/Board determines that the record is not complete or not adequate, to support the validity of the LCD/NCD, the adjudicator will permit discovery and the taking of evidence. Following discovery and the taking of evidence as set forth in these final rules, the ALJ/ Board will issue a final decision. (See $\S 426.447, \S 426.547$ ). Those final decisions may also be appealed in appropriate circumstances.
Although we recognize that one commenter suggested that the ALJ or the Board would be legally required to hold invalid the LCD/NCD rather than allowing the agency to supplement the record, the case cited is not relevant given the unique language and history of BIPA section 522. The ALJs and the Board are not acting as a Federal court reviewing final agency action. The case relied on by the commenter concerned the scope of review under the judicial review provisions of the Administrative Procedure Act, 5 U.S.C. 706. Moreover, under prior provisions for court review of NCDs, even courts were required to permit us to supplement the record before declaring an NCD invalid. We believe our approach is consistent with the specific requirements of the statute.

## Scope and Weight of Evidence

Comment: One commenter believed that the proposed rule would have the effect of excluding highly relevant information such as physicians standards of practice and their professional opinions from the review process. Another commenter believed that we should define the hierarchy of evidence strength to assure proper weighting by the ALJ or Board when considering scientific and clinical information.

Response: We are not accepting the recommendation to include a hierarchy of evidence in order to allow flexibility in analyzing evidence. We recognize that many types of evidence have value, and will consider clinical experience, as well as other forms of medical, technical, and scientific evidence in making LCDs and NCDs. We note that the ALJ/Board may seek input from clinical and scientific experts at their discretion. There is no prohibition against the ALJ or the Board seeking the input of practicing physicians or considering standards of practice.

## Discovery

Comment: We received several comments on the nature and scope of discovery. One commenter supported the limitation upon discovery that
would allow contractors to produce existing records rather than requiring them to develop and produce new documentation.
Response: We appreciate the commenter's support of our proposals and have taken its views into account in considering the comments of those commenters who recommended revisions.
Comment: One commenter objected to our proposal not to initiate discovery between parties until after an adjudicator has made a determination about the adequacy of the record. The commenter suggested that discovery should be available any time after the complaint is filed.
Response: We note that the statute establishes the timing of discovery. Section 1869(f)(1)(A)(iii)(I) and section 1869(f)(2)(A)(i)(I) of the Act provide for discovery and the taking of evidence only in instances where an ALJ or the Buard has reviewed the record and made a determination that it is incomplete or lacks adequate information to support the validity of the LCD or NCD at issue. Therefore, we believe that an initial determination regarding the completeness and adequacy of a record must precede the initiation of discovery between parties.

Comment: Several commenters opposed our rule limiting discovery to requests for documents only. The commenters suggested that parties should be permitted to use interrogatories and other discovery means. A commenter also objected to the rules at $\S 426.435$ and $\S 426.535$ setting forth the subpoena procedures on the basis that they are inconsistent with the Federal Rules of Civil Procedure, particularly with respect to the 30 -day notice requirement. Finally, one commenter suggested that discovery should not be restricted to material relating to a specific LCD or NCD but should include other policies that might be relevant to an evaluation of whether a coverage policy is reasonable.

Response: The BIPA gives a right to discovery, but does not specify permissible forms and does not require that these administrative proceedings follow the discovery or subpoena rules set forth in the Federal Rules of Civil Procedure or the rules of any other administrative proceedings. We proposed limiting discovery to requests for documents and believe this approach is consistent with other Departmental rules permitting discovery. (See, for example, 42 CFR 1005.7). After consideration of the comments, however, we are expanding discovery under $\S 426.432$ (c) and §426.532 (c) to include the opportunity
to submit 10 written interrogatory questions. This is intended to be a limited opportunity, available when needed to promote the overall efficiency of the review proceeding, that we expect ALJs and the Board to narrowly construe to minimize the burden on the agency. We are also revising $\S 426.432$ (e) and $\S 426.532$ (e) to exclude written interrogatories from the list of unavailable discovery. We are not allowing for depositions, requests for admissions, or other types of discovery because we view them as unnecessary for this kind of administrative proceeding and because this limitation will reduce the time and expense associated with these appeals. We believe that limiting discovery in this way will ensure the timely and efficient disposition of LCD and NCD challenges.

Comment: A commenter objected to an adjudicator's issuance of a protective order without the employment of a balancing test to determine whether the moving party has a sufficient basis for requesting the order. Another commenter objected to the absence of any provision authorizing a beneficiary or the Board to compel disclosure of documents by us.
Response: Sections 426.432 (b)(2) and 426.532(b)(2) set forth criteria that adjudicators must utilize in determining whether to grant or deny protective orders. We believe that these criteria are sufficient to evaluate the merits of a request for a protective order without developing an additional balancing test. As a result, we will not be incorporating the commenter's suggestion into this final rule. Furthermore, we believe that a process for compelling disclosure of all documents by us is not necessary because these regulations already set forth and define the scope of what must be provided through discovery.

## Expert Witness

Comment: One commenter objected to the restrictions on the introduction of expert evidence, having interpreted them as permitting oral testimony by an expert witness only if written evidence were submitted.
Response: Sections 426.440 (e) and 426.540 (e) do not require that a witness provide a written report, but rather require that any expert witness providing written testimony be available for oral cross examination. Under $\S 426.440(\mathrm{~d})$ and $\S 425.540(\mathrm{~d})$, the ALJ or the Board may require or permit expert witnesses to submit a written report. Moreover, it is common practice for expert witnesses to submit written reports in order to use hearing time efficiently and to focus questioning effectively.

Withholding Evidence Deemed To Be Proprietary
In the proposed rule, we sought to limit disclosure of "proprietary data" based on the parenthetical phrase included in section 1862(a) of the Act in the paragraph that follows. The provision in this paragraph establishes several procedural requirements that the Secretary must follow in making NCDs. The provision states:

## In making a national coverage

 determination (as defined in paragraph (1)(B) of section 1869(f)\} the Secretary shall ensure that the public is afforded notice and an opportunity to comment prior to implementation by the Secretary of the determination; meetings of advisory committees established under section 1114(f) with respect to the determination are made on the record; in making the determination, the Secretary has considered the applicable information (including clinical experience and medical, technical, and scientific evidence) with respect to the subject matter of the determination; and in the determination, provide a clear statement of the basis for the determination (including responses to comments received from the public), the assumptions underlying that basis, and make available to the public the data (other than proprietary data) considered in making the determination.The reference to "proprietary data" reflects a limitation on disclosure to the public. We specifically invited public comments "on the scope of proprietary data and the extent to which this material should not be disclosed" (67 FR 54541). Comments we received on this issue follow.

Comment: We received several public comments concerning proprietary data and information disclosure. Several commenters agreed with the proposal to limit disclosure of proprietary data. One commenter suggested that the record contain only the materials referenced in the LCD. One commenter indicated that it should apply to the studies and analysis purchased or performed by a contractor. Another commenter observed that patient specific information should also be protected and disseminated only with patient permission.

Other commenters opposed the concept. One commenter asked that the regulation be revised to state that the record contains "all the information presented to the Agency and/or the Medicare contractor when the coverage determination was being established[[]" One commenter suggested that the record should be expanded to include relevant information that comes to CMS "after a policy is published." Another commenter wrote that, "a contractor or CMS can withhold from the reviewing body information it believes to be
proprietary, creating a huge loophole that allows the withholding of evidence in support of the beneficiary's claim. Because the proposed regulation provides for very limited discovery, a beneficiary will have very little opportunity to determine whether supporting documentation has been withheld." Other commenters suggested that "these proposed regulations be revised to state that the record includes any document or materials that were presented to CMS or the contractor in the development of the LCD or NCD."
Another commenter suggested that when we compile the record of the LCD or NCD, we should also produce an index of all material that was excluded, and then seek a protective order from the adjudicator to exclude that material from the record. We would be required to state for each document the specific basis for a claim of privilege or the specific provisions of Federal statute authorizing the withholding or prohibiting disclosure. A beneficiary would be given an opportunity to respond and object.

Response: In section 1862(a) of the Act, the Congress provided that the Secretary was not required to disclose "proprietary data" to the public when making available the data considered in making the determination. We believe it is likely that this exception serves to encourage manufacturers and others to submit evidence that would be useful in making LCDs/NCDs. Prior to this statute, manufacturers may have been reluctant to submit valuable business and commercial data if they believed it would be publicly disclosed as part of a record in a judicial proceeding. This provision enables the Secretary to receive and consider proprietary data and to assure that proprietary data would not be disclosed without the expressed consent of the individual or entity that submitted the documents. This may enable the contractor/CMS to make LCDs/NCDs, including determinations that may expand Medicare coverage, more rapidly and accurately.

We are aware that there is tension in the statute between the specific right given to an aggrieved party to seek discovery during the appeal process (section $1869(f)(1)(A)($ iii $)(1)$ of the Act), and the opportunity that the Secretary is given to withhold from the public "proprietary data." The public comments include cogent views from both perspectives. The Secretary has the discretion and challenge to balance these competing interests, and must resolve this issue in order to implement the expanded appeal rights that the Congress has provided.

We are resolving this tension by issuing this regulation to inform the public that we will withhold proprietary data from the public during the ALJ or the Board process. We do not expect to have proprietary data in our possession in most cases. In the rare instance that we obtain and consider proprietary data, this information will be presented to the ALJ or the Board under seal but will not be disclosed to any party or disclosed as part of the public record of the LCD/ NCD proceedings. We believe that the Congress's concern about disclosure of proprietary information to the public in section 1862(a) of the Act suggests that the Congress did not intend to mandate disclosure of that same data during the LCD/NCD appeal. The limited assurance of maintaining confidentiality during the process of preparing an LCD/NCD, but not during the administrative appeal, would discourage manufacturers from submitting crucial confidential information.
At $\S 426.110$, we are specifically defining "proprietary data" and "privileged information" as information from a source external to CMS or a contractor, or protected health information, that meets the following criteria: (1) It is ordinarily protected from disclosure pursuant to 45 CFR Part 164, under the Trade Secrets Act (18 U.S.C. 1905) or under Exemptions 4 or 5 of the Freedom of Information Act (5 U.S.C. 552) as specifically interpreted in our Departmental regulations at 45 CFR 5.65 ; and (2) the party who possesses the right to protection of the information from public release or disclosure has not provided its consent to the public release or disclosure of the information. Any information submitted by the public that is not marked as proprietary will not be considered proprietary. We may review this assertion in determining whether the information is proprietary data. Any information received that is not designated as "proprietary data" will not be considered "proprietary data." In order for proprietary data to be considered and given weight in LCD or NCD reviews, any such proprietary data submitted by a manufacturer of a drug or device should contain true and complete records of all clinical and scientific data existent and, therefore, any submission must include an affidavit that the data consists of true and correct copies of all data submitted by the manufacturer to any other Federal or State agency or department in relation to that drug or device. This is to limit the possibility that review decisions are based on partial or biased presentations of available evidence.

Consistent with this requirement, CMS will request such certifications when receiving proprietary data for its initial NCD analysis, and would anticipate a similar procedure by carriers or intermediaries in their LCD analysis.

We believe this relatively narrow exception will still provide beneficiaries adequate access to all of the evidence that is typically considered in making LCDs/NCDs. There is a great deal of helpful and useful information available in publicly disclosable documents that are relevant to the subjects that we consider. In many cases the proprietary data may just reaffirm conclusions that are consistent with publicly available sources. While we recognize that this resolution may be somewhat awkward for a party challenging an LCD/NCD, we believe this result is in the best interests of the public. This approach will support more accurate and rapid coverage determinations through greater access to more data and may lead to faster and better LCDs/NCDs that may increase access to new advances in medicine and technology.

For the comment that we provide an index of all excluded material, we are adopting this comment in part. In the rare event that we rely on proprietary and privileged data in formulating a coverage decision, these data will be given to the ALJ/Board under seal. In this rare event, these data will not be furnished to the aggrieved party; rather, we, or our contractors, will include an index that lists all of the excluded material as part of the LCD/NCD record. To implement the statutory protections for proprietary data and privileged information in section 1862(a) of the Act, we are not furnishing proprietary and privileged data as part of the public record, but the seal will be maintained on that information for use by a court in relation to an NCD review. In the event that a court seeks to obtain or requires disclosure of proprietary data or privileged information, CMS or the Department will seek to have a protective order applied to that information, to prohibit any recipients of the information from further disclosing the information or from using it for any purpose other than the challenge. The statutory protection accorded this data ensures the availability of the best relevant information whether proprietary or not, and maximizes flexibility in developing coverage determinations.

## Consulting Scientific and Clinical Experts

Comment: We received two comments requesting a clearer definition of who could be considered a scientific or
clinical expert, and requesting that those with conflicts of interest not be considered as experts. A related comment stated that the ALJs/Board may solicit testimony from any expert on issues relevant to the LCD/NCD provision(s) in question.
Response: We agree with these comments. We are clarifying that scientific and clinical experts consulted by the ALJ/Board must be independent and impartial and have significant experience and published work pertaining to the subject of the review to be considered experts.

Comment: A commenter objected to the rule allowing the Board to call its own witnesses. The commenter suggested that the rule would compromise the role of the Board by placing it in an advocacy position.

Response: While we appreciate the commenter's concern regarding the appropriate role of the Board, we are obligated to comply with statutory requirements, and section 1869(f)(1)(A)(iii)(II) of the Act specifically provides that the Board "may, as appropriate, consult with appropriate scientific and clinical experts." Therefore, we believe it proper to interpret this statutory provision to permit adjudicators to call their own witnesses when reviewing LCDs or NCDs. Moreover, similar provisions exist in many administrative procedures, especially those involving public health or safety.

## Witness and Legal Fees

Comment: One commenter referred to § 426.445 and questioned whether or not we would pay for witness fees for contractors' witnesses and legal fees incurred in connection with LCD review.

Response: The compensation of Medicare contractors and their witnesses is an internal policy matter, which need not be resolved in this final rule.

## Role of CAC/MCAC

Comment: Two commenters suggested that members of the Contractor Advisory Committee (CAC) and members of the Medicare Coverage Advisory Committee (MCAC) should have substantial input into the LCD/ NCD review process.

Response: The CAC/MCAC members already serve an important role in developing certain Medicare policies. We believe it would be inappropriate for these individuals to serve as expert witnesses in these proceedings. Therefore, we are not revising the final rule in response to this comment.

## Burden of Proof

Comment: We received several comments regarding the proper burden of proof in the adjudicatory proceedings when an LCD or NCD is challenged. One commenter believed we should make it clearer that the burden of proof was on the challenger to show that an item or service is safe and effective for the proposed indication. Two commenters believed we should stop requiring proponents to show that Medicare coverage is appropriate. These commenters suggest that the Social Security Act places the burden of proof on us if it wishes to deny Medicare coverage and suggested that the contractor/CMS should have the burden of showing why evidence supports retention of an LCD or NCD.
Response: We disagree with the commenters who suggest that the burden of proof should rest on the government. The Social Security Act contains no "presumption that services are covered." Rather, the Act expressly provides that "[n]otwithstanding any other provision of this title, no payment may be made * * * for expenses incurred for items or services * * * not reasonable and necessary * * *." (Section 1862(a)(1)(A) of the Act (42 U.S.C. $1395 \mathrm{y}(\mathrm{a})(1)(\mathrm{A})$ ). Courts have recognized that this language "which bars benefits for services 'not reasonable and necessary' for diagnosis or treatment, is not reasonably interpreted as an affirmative mandate to extend coverage to all necessary services." Goodman v. Sullivan, 891 F.2d 449, 450 (2d Cir. 1989). Moreover, section 205(a) of the Social Security Act, 42 U.S.C. 405(a), expressly incorporated in title XVIII by section 1872, 42 U.S.C. 1395ii, permits the Secretary to adopt "reasonable and proper rules and regulations to regulate and provide for the nature and extent of proofs and evidence" and the method of furnishing that evidence. In light of this authority, we are clarifying our final rule at $\S 426.330$ to more clearly place the burden of production and persuasion on the individual challenging an LCD or NCD.

## Reasonableness Standard

In the proposed rule, we adopted a reasonableness standard requiring the adjudicator to determine whether the findings of fact, interpretations of law, and applications of fact to law by CMS or the contractor were reasonable. Comments on this issue follow.

Comment: One commenter supported the approach we had taken to define reasonableness. One commenter suggested that we need a better
definition of reasonableness. Two commenters stated that the reasonableness standard is too "soft" or "lax" for a meaningful review, and instead, a substantial evidence or "de novo" standard should be used. One commenter suggested that a "totality of the circumstances test" should be used.

Response: We proposed a standard of review that was consistent with the specific language of the statute. Therefore, we believe it would not be appropriate to use any other standard. We use the "reasonableness standard" as the standard that an ALJ or the Board must apply when conducting an LCD or an NCD review. In determining whether LCDs or NCDs are valid, the adjudicator must uphold a challenged policy (or a provision or provisions of a challenged policy) if the findings of fact, interpretations of law, and applications of fact to law by the contractor or us are reasonable based on the LCD or NCD record and the record developed before the ALJ/Board. We are using the statutory language from sections $1869(f)(1)(A)(i i i)$ and $(f)(2)(A)(i)$ of the Act, which instructs adjudicators to defer only to the reasonable findings of fact, reasonable interpretations of law, and reasonable applications of fact to law by the Secretary.

The logical corollary is that the ALJs and the Board must accord deference if the contractor's or CMS's findings of fact, interpretations of law, and application of fact to law are reasonable. The concept of deference is one that is generally applied by courts to administrative decisionmaking, in recognition of the expertise of a program agency. Thus, we view the statute as setting out a reasonableness standard that recognizes the expertise of the contractors and CMS in the Medicare program-specifically, in the area bf coverage requiring the exercise of clinical or scientific judgment.

So long as the outcome is one that could be reached by a rational person, based on the evidence in the record as a whole (including logical inferences drawn from that evidence), the determination must be upheld. This is not simply based on the quantity of the evidence submitted, but also includes an evaluation of the persuasiveness of the material. If the contractor or CMS has a logical reason as to why some evidence is given more weight than other evidence, the ALJs and the Board may not overturn the determination simply because they would have accorded more weight to the evidence in support of coverage. In some situations, different judgments by different contractors may be supportable, especially if explained by differences
such as the ready availability of qualified medical professionals in one contractor's area, but not in another. Moreover, an ALJ or the Board may not determine that an LCD is unreasonable solely on the basis that another Medicare contractor has issued an LCD that permits coverage of the service at issue, under the clinical circumstances presented by the complaint.

For legal interpretations, the reasonableness standard would not be met if an interpretation is in direct conflict with the plain language of the statute or regulation being interpreted. Moreover, an interpretation in an LCD would not meet the reasonableness standard if it directly conflicts with an NCD or with a CMS Ruling. So long as an interpretation is one of the readings permitted by the plain language of the law and can be reconciled with relevant policy, however, it must be upheld, even if the ALJ or the Board might have reached a different result if interpreting the statute or regulation in the first instance.

## Authority of ALJs and the Board

Comment: Some comments supported the limited authority granted to the ALJs/Board in issuing decisions, and many comments requested that the ALJ/ Board be granted greater authority in issuing decisions. A number of comments suggested that the proposed rule restricted ALJ/Board authority so that the main outcome of a decision of unreasonableness would be contractor/ CMS reconsideration, and that a decision of unreasonableness should result in the policy being null and void. Furthermore, numerous comments suggested that authority is not granted to the ALJ or the Board in the way that the Congress intended, and that the contractor/CMS retains too much authority over the process.

Response: We have revised the final regulation to allow for greater authority for the adjudicators in several respects. In appropriate cases, the ALJ/Board may find a provision(s) of the LCD/NCD invalid and may limit that holding to a beneficiary's clinical indication (or similar condition). Furthermore, the contractor or CMS would effectuate the ALJ/Board decision within 30 days (if not sooner), by either retiring or withdrawing the policy or revising the policy that would be applied prospectively. This means that neither the contractor nor CMS will apply a policy that has been held invalid to a claim of the aggrieved party or to any other similar Medicare claim with date(s) of service beginning on or after 30 days of the adjudicatory decision. Even though we are giving, broader :nr:
effect to the ALJ/Board decision by extending the decision to others on a prospective basis, we continue to believe that the Congress intended that CMS or its contractors would have the authority to develop clinical policies. Thus, we will maintain in the final rule the prohibition against adjudicators developing new language for LCDs and NCDs.

After a policy has been held invalid, it will not be applied to the beneficiary who raised the challenge or to others who receive services after the effective date of the invalidation. CMS or the contractor may issue a new or revised LCD/NCD that does not include the invalid provision(s). The new or revised LCD/NCD would be applied prospectively. The new/revised LCD/ NCD would also be subject to challenge under this review process.

Please note that whenever we discuss claim relief or dates of service in the context of an ALJ or DAB decision holding invalid an LCD or NCD, the references should be read to include pre-service requests denied by an $\mathrm{M}+\mathrm{C}$ organization and the dates of pre-service requests. The application of this regulation in the $\mathrm{M}+\mathrm{C}$ context is discussed further below.

## Effective Dates

Comment: Several commenters stated that timeframes should be set in this process to reflect the timeframes set in the NCD process notice.

Response: We agree with the concept of timeframes, but do not reference the "NCD process notice" since that notice does not speak to this issue, and we have added language to $\$ 426.460$ and § 426.560 requiring that contractors/ CMS either-

1. Retire/withdraw the LCD/NCD in its entirety within 30 days of the ALJ/ Board decision; or
2. Issue a revised LCD/NCD removing the invalid provisions, effective for claims with dates of service after the 30th day of the ALJ/Board decision.

If the Board issues a decision finding an NCD provision invalid and the NCD is revised to reflect the Board's decision, all contractors must review and appropriately revise any related LCDs so as not to be in conflict with the revised NCD. If we choose to withdraw the entire NCD, the contractors must review and appropriately revise any LCDs so as not to rely on the withdrawn NCD as the basis for the LCD.

## Precedential Value of ALJ/Board Decisions

Comment: One commenter stated that previous ALJ/Board decisions should be controlling precedent. Another:s
commenter recommended that ALJs/ Board be bound by previous ALJ decisions on local policies in other jurisdictions.

Response: We have revised the final rule at $\S$ 426.431(a) to require ALJs to treat as precedential Board LCD and NCD decisions, and to require the Board to follow its own applicable precedents. We believe this will improve the efficiency of the review process. Because of differences in the local practice of medicine, we do not believe it would be prudent for ALJs to treat as precedential other ALJ decisions on an LCD challenge.

## Appeals of Decisions Involving Joint

 Complaints and Consolidated ReviewsComment: One commenter requested that for joint appeals, aggrieved parties should be prohibited from appealing decisions to higher levels unless all parties to the initial appeal agree to appeal.
Response: We will not require in this final rule that all parties must agree to appeal an ALJ decision as a prerequisite for the appeal to continue. Even if some individuals decide not to pursue an appeal, other parties in the case may exercise their appeal rights. Section 426.470 of the regulation allows the Board to consolidate similar appeals.
Appeal of ALJ Decision/Board Review of ALJ Decisions

Comment: One commenter suggested that we should not be allowed to appeal ALJ decisions to the Board due to conflicts of interest. Another commenter objected to having the Board overturn ALJ decisions that were favorable to the aggrieved party due to potential burdens on the beneficiary. Another commenter felt that the regulation should not require the Board to affirm or reverse the ALJ decision in its entirety and suggested that the Board should have the discretion to reverse a decision in part. We received one comment suggesting the Board should not support a policy based on a rationale that is not stated in the supporting documents that were submitted. We also received three comments requesting that the Board not be limited to fundamental rules of procedures, and that it have broader discretion in reviewing ALJ decisions.

Response: Nothing in the statutory language of section 522 suggests that the Congress intended to bar the government from appealing an adverse decision of an ALJ. We believe that such an appeal is warranted as a mechanism to ensure that ALJs are applying the statute and regulations correctly, even if we rarely employ this strategy. Because the statute provides that ALJ decisions:
may be reviewed by the Board, we have retained the language allowing either the contractor or CMS to seek Board review of ALJ decisions. Furthermore, our final rule provides flexibility in the Board's review of ALJ decisions.

We have modified the final rule at §426.476(b) to provide that the Board will review an ALJ decision on appeal to determine whether it contains any material error, including any failure to properly apply the reasonableness standard. The Board will not reverse a decision for harmless error, but may remand if a prejudicial procedural error was made. Further, if the ALJ erred in determining that the LCD record was complete and adequate to support the validity of the LCD, the Board will reverse and remand the case to the ALJ to complete discovery and the taking of evidence. We believe that this standard of review provides appropriate discretion for Board review of ALJ decisions.

## Impact on Medicare + Choice ( $M+C$ )

Comment: One commenter suggested that we should clarify an M+C organization's obligations when a complaint is under review by both the section 522 process and the M+C organization's existing appeals process.
Response: If an M+C enrollee files both an LCD/NCD review request and a request for reconsideration of an adverse organization determination for the same item or service, the $\mathrm{M}+\mathrm{C}$ organization should adjudicate the reconsideration using the coverage policies in place on the date the service or item was requested (in the case of a pre-service determination) or provided (in the case of a payment determination). If the LCD/ NCD under review is subsequently found to be unreasonable, then the aggrieved party who sought review of the LCD/NCD is entitled to have the previously adjudicated organization determinations or reconsidered determinations reopened and adjudicated without consideration of the invalid LCD/NCD provision(s). M+C organizations would be responsible for reopening and adjudicating organization determinations, and the independent review entity (IRE) would be responsible for reopening and adjudicating reconsidered determinations.

Comment: One commenter requested that we clarify the obligations of $\mathrm{M}+\mathrm{C}$ organizations when an enrollee has an appeal pending at the time the revised LCD/NCD becomes effective.

Response: The type of organization determination being reconsidered (payment or pre-service) will determine an M+C organization's obligations when
an enrollee has a reconsideration pending at the time a revised LCD/NCD becomes effective. Consistent with original Medicare, LCD/NCD changes may only be applied prospectively to requests for payment. Therefore, when an enrollee requests reconsideration of a payment determination and the reconsideration is pending at the time a revised LCD/NCD becomes effective, the $\mathrm{M}+\mathrm{C}$ organization should apply the LCD/NCD in place at the time the item or service was provided. In responding to a request for reconsideration of a preservice determination that would be affected by a revised LCD/NCD, an M+C organization should dismiss the appeal and reopen the adverse organization determination on the basis of new and material evidence. The M+C organization should then apply the revised LCD/NCD in effect and issue a revised organization determination.

We recognize the importance of ensuring timely transmission of ALJ/ Board decisions and intend to work closely with the Medicare managed care industry to make certain that an effective method of communicating LCD/NCD changes is in place.

Comment: Another M+C-related comment stated that claims that were adjudicated using the invalidated LCD/ NCD should be eligible for a new decision (so long as the appeals timeframes have not passed).

Response: As noted in the comment above, LCD/NCD changes can only be applied prospectively to requests for payment, as was the case under original Medicare. Therefore, regardless of subsequent policy changes, for purposes of reconsidering a payment
determination, the relevant LCD/NCD is the policy in effect at the time the item or service was provided.

Comment: One commenter requested that we clarify whether a decision made under individual claim review is considered an "organization determination," as defined under parts 417 and 422 , giving rise to appeal rights.
Response: When an M+C organization reopens and adjudicates an organization determination under §426.460(b)(1), the $\mathrm{M}+\mathrm{C}$ organization must issue a revised organization determination, which gives rise to appeal rights under parts 417 and 422. An enrollee could benefit from a revised LCD/NCD by filing a new request for an organization determination.

Comment: One commenter requested clarification as to whether our statutory obligation, under section 1852(a)(5) of the Act, to make fee-for-service payments for a significant cost, midyear change in benefits would apply if a significant cost threshold for an NCD is
met as a result of a decision by the Board to revise an NCD.
Response: Section 1852(a)(5) of the Act provides that if an NCD or legislative change in benefits effective in the middle of an $\mathrm{M}+\mathrm{C}$ contract year generates a significant change in the costs to a $\mathrm{M}+\mathrm{C}$ organization of providing benefits that are the subject of the NCD, and if this significant change in costs was not incorporated into the M+C payment rates at the time the NCD becomes effective, the NCD does not apply to the $\mathrm{M}+\mathrm{C}$ contracts until the first contract year after new M+C rates are published. Moreover, section 1853(c)(7) of the Act provides that, if there is a change in benefits resulting in a significant increase in costs to the $\mathrm{M}+\mathrm{C}$ organization, we will adjust appropriately the $\mathrm{M}+\mathrm{C}$ payment rates to reflect this change. The M+C organization must provide coverage of the NCD or legislative change in benefits by furnishing or arranging for the NCD service or legislative change in benefits. However, the M+C organization is not required to pay or assume risk for the costs of that service or benefit until the contract year for which payments are adjusted to take into account the cost of the NCD service or legislative change in benefits. Section 422.109 has been revised to define "significant cost" thresholds, and notes that, if the costs for new coverage or a change in benefits is significant, CMS will pay on a fee-forservice basis on behalf of the $\mathrm{M}+\mathrm{C}$ organization for the new benefit until the M+C rates are appropriately adjusted. (These provisions do not apply if the change in benefits does not meet either significant cost threshold described at $\$ 422.109$.)

## Automatic Stay Upon Appeal

Comment: Three commenters disagreed with the automatic stay of an ALJ decision when the contractor/CMS appeals a decision to the Board.

Response: We disagree. We believe it would be disruptive to beneficiaries overall to have ALJ decisions implement policies only to have these policies reversed by the Board. This would create both an inefficient and confusing process. Furthermore, a contrary ruling would require the expenditure of significant resources to implement an ALJ decision only to have to change the decision if the Board reverses.

## Dual Track Process

Comment: We received one comment for and one comment against allowing aggrieved parties the option to pursue both a reconsideration and a review under these rules.

Response: We believe that both options should be available to aggrieved parties, in order to allow for the parties to seek a decision in the most appropriate way possible, and to allow the most flexibility to these parties.

## Expedited Judicial Review

## Comment: Several commenters

 suggested that the final regulations should address section $1869(\mathrm{ff})(3)$ of the Act, which relates to circumstances where a challenger may seek expedited judicial review when there are no material issues of fact in dispute.Response: We are not adopting these comments. This section of the statute does not require regulatory action by CMS because it is related to the jurisdiction of the judicial branch of the government. The statute is selfimplementing and does not require additional rulemaking by the Secretary.

## IV. Provisions of the Final Rule

## A. Overview

We are establishing that a Medicare beneficiary who qualifies as an aggrieved party may challenge an LCD or an NCD (or specific provisions therein) by filing a complaint concerning an LCD with the office designated by CMS on the Medicare Web site, http://www.medicare.gov/ coverage/static/appeals.asp (information on the designated office will be available by calling $1-800-$ Medicare) or by filing a complaint concerning an NCD with the Board of HHS. After a complaint is filed, the adjudicator determines whether the complaint is acceptable.

In this final rule, we are adding in § 400.202 a definition of "Local coverage determination (LCD)" and revising the definition of "National coverage determination (NC.D)." The definitions are specific to Medicare and reflect the definitions for these terms found in section 522 of BIPA. With one exception described below, this final rule makes clear that a determination of the code assigned to a service, if any, or a determination with respect to the amount of payment to be made for the service is not included in the definition of an LCD or an NCD. We have clarified that diagnosis codes used in an LMRP to describe when a service is considered medically necessary are also part of the LCD. We use the term "Services" as defined in $\S 400.202$ to include both "items and services."
In §405.732, "Review of a national coverage decision (NCD)," we revise paragraph (a) regarding appeals of Part A cases, to state that an NCD is a determination by the Secretary with
respect to whether or not a particular item or service is covered nationally under title XVIII. An NCD does not include a determination of what code, if any, is assigned to a particular item or service covered under title XVIII or a determination with respect to the amount of payment made for a particular item or service. NCDs are made under section 1862(a)(1) of the Act or other applicable provisions of the Act. An NCD is binding on all Medicare carriers, fiscal intermediaries, QIOs, HMOs, CMPs, HCPPs, the Medicare Appeals Council, and ALJs.
This final rule revises $\$ 405.732$ (b) to specify that an ALJ may not disregard, set aside, or otherwise review an NCD. An ALJ may review the facts of a particular case to determine whether an NCD applies to a specific claim for benefits and, if so, whether the NCD has been applied correctly to the claim.

We are revising §405.732(c) to specify that for initial determinations and NCD challenges under section 1862(a)(1) of the Act, arising before October 1, 2002, a court's review of an NCD is limited to whether the record is incomplete or otherwise lacks adequate information to support the validity of the decision, unless the case has been remanded to the Secretary to supplement the record regarding the NCD. In such cases, the court may not invalidate an NCD except upon review of the supplemental record. For Part B appeals, we are making similar changes.

In §405.860, "Review of a national coverage decision (NCD)," we revise paragraph (a) regarding appeals of Part B cases to specify that an NCD is a determination by the Secretary with respect to whether or not a particular item or service is covered nationally under title XVIII. An NCD does not include a determination of what code, if any, is assigned to a particular item or service covered under title XVIII or a determination with respect to the amount of payment made for a particular item or service. NCDs are made under section 1862(a)(1) of the Act or other applicable provisions of the Act. An NCD is binding on all Medicare carriers, fiscal intermediaries, QIOs, HMOs, CMPs, HCPPs, Medicare Appeals Council, and ALJs.

We are revising §405.860(b) to specify that an ALJ may not disregard, set aside, or otherwise review an NCD. An ALJ may review the facts of a particular case to determine whether an NCD applies to a specific claim for benefits and, if so, whether the NCD has been applied correctly to the claim.

In §405.860(c), we specify that for initial determinations and NCD challenges under section $1862(\mathrm{a})(1)$ of
the Act, arising before October 1, 2002, a court's review of an NCD is limited to whether the record is incomplete or otherwise lacks adequate information to support the validity of the decision, unless the case has been remanded to the Secretary to supplement the record regarding the NCD. The court may not determine that an item or service is covered except upon review of the supplemental record.
We are also adding a new part 426, titled "Reviews of Local and National Coverage Determinations," to title 42 of the CFR to include the following subparts:

- Subpart A contains general provisions applicable to the entire part.
- Subpart B is reserved.
- Subpart C contains the general provisions applicable to the review of LCDs and NCDs.
- Subpart D contains the provisions specific to the review of LCDs
- Subpart E contains the provisions specific to the review of NCDs.

## B. Subpart A (General Provisions)

Subpart A of part 426 specifies the general provisions applicable to the entire part. Section 426.100, "Basis and scope," sets forth the basis (under sections $1869(f)(1)$ and (f)(2) of the Act), and the scope specifies the requirements and procedures for the review of LCDs and NCDs. In §426.110, we define the terms used in part 426 whose definitions may not otherwise be implicit.
Under section 522 of BIPA, only an "aggrieved party" may file a complaint to initiate the review of an LCD or an NCD. In this final rule, we define "aggrieved party" as a Medicare beneficiary who is entitled to benefits under Part A, enrolled under Part B, or both (including an individual enrolled in fee-for-service Medicare, in a Medicare+Choice plan, or in another Medicare managed care plan), and is in need of coverage for a service that is the subject of an applicable LCD (in the relevant jurisdiction) or an NCD as documented by the beneficiary's treating physician. We revised the final rule to include also as an aggrieved party a beneficiary who has already received the service and is in need of coverage, or the estate of a deceased beneficiary in need of coverage.

Based on comments on our proposed rule, in this final rule we allow an aggrieved party's estate to pursue an LCD/NCD challenge if the aggrieved party died after filing a proper complaint and the aggrieved party received the service for which coverage is sought. We also allow the aggrieved
party's estate to file a complaint within 120 days of receipt of the denial notice.

In §426.110 we define the following:

- "Board" to mean the Departmental Appeals Board.
- Clinical and scientific experts that are consulted by the ALJ or the Board as independent and impartial individuals, with significant experience and/or published work pertaining to the subject of the review.
- "Contractor" as a carrier (including a DMERC) or a fiscal intermediary (FI) (including an RHHI) that has jurisdiction for the LCD at issue.
- "Deemed NCD" as a determination that the Secretary makes in response to a request for an NCD by an aggrieved party under section 1869(f)(4)(B) and (C) of the Act, that no national coverage or noncoverage determination is appropriate, or the Secretary's failure to meet the deadline under section 1869(f)(4)(A)(iv) of the Act. Section 1869(f)(4)(C) of the Act deems certain decisions of the Secretary to be NCDs for purposes of administrative review. Please see our proposed rule for further discussion of deemed NCDs (67 FR 5434).
- "New evidence" is clinical or scientific evidence that was not previously considered by the contractor or by us before the LCD or NCD was issued.
- "Party" as an aggrieved party, which is an individual or estate who has the right to participate in the LCD or NCD review process, and, as
appropriate, a contractor or CMS. In the case of an LCD review, we may choose whether to be a party in the review along with or instead of the contractor. These reviews involve challenges to important CMS policies that may impact many beneficiaries. We note that we are always a party to an NCD review and contractors would not participate in an NCD review.
- "Proprietary data" and "privileged information" are information from a source external to CMS or a contractor, or protected health information that meets the following criteria: (1) It is ordinarily protected from disclosure pursuant to 45 CFR Part 164, under the Trade Secrets Act (18 U.S.C. 1905), or under Exemption 4 or 5 of the Freedom of Information Act (5 U.S.C. 552) as specifically interpreted in our Departmental regulations at 45 CFR 5.65 , and (2) the party who possesses the right to protection of the information from public release or disclosure has not provided its consent to the public release or disclosure of that information. Members of the public that send us proprietary data must mark these documents as such, and include the
legal basis for any such assertion. Any information received from the public that is not designated as "proprietary data" will not be considered "proprietary,"
- "Reasonableness standard" is the standard that an ALJ or theBoard must apply when conducting an LCD or an NCD review. In determining whether LCDs or NCDs are valid, the adjudicator must uphold a challenged policy (or a provision or provisions of a challenged policy) if the findings of fact, interpretations of law, and applications of fact to law by the contractor or CMS are reasonable based on the LCD or NCD record and the relevant record developed before the ALJ/Board.
- "Supplemental LCD/NCD record" is a record that the contractor/CMS provides to the ALJ/Board and any aggrieved party and consists of all materials received and considered during a reconsideration. Materials that are already in the record before the ALJ/ Board (for example, new evidence presented in the taking of evidence or hearing) need not be provided but may be incorporated by reference in the supplement to the LCD/NCD record. The contractor/CMS may provide statements, evidence, or other submissions to the ALJ/Board during the proceedings, as provided elsewhere in these regulations, but such submissions are not considered as supplementing the LCD/NCD record.
- "Treating physician" is the physician who is the beneficiary's primary clinician with responsibility for overseeing the beneficiary's care and either approving or providing the service at issue in the challenge.

In §426.120, we explain how deadlines are calculated. In §426.130, we explain that any documents submitted to the ALJ/Board after the initial challenge, excluding privileged or proprietary data, must also be served on all other parties simultaneously. These sections have been added to provide additional guidance in implementing the requirements of this final rule.

## C. Subpart B (Reserved)

We are reserving subpart B.

## D. Subpart C (General Provisions for the Review of LCDs and NCDs)

The general provisions common to both the review of LCDs and NCDs are established in subpart C. In §426.300(a), we state that the review of a challenged provision (or provisions) of an LCD is conducted by an ALJ only upon the receipt of an acceptable complaint as described in $\S 426.400$. We also state in $\S 426.300$ (b) that the review of a
challenged provision (or provisions) of an NCD is conducted by the Board only upon the receipt of an acceptable complaint as described in $\S 426.500$. An acceptable complaint must be filed with the applicable adjudicator by an aggrieved party. Additionally,
$\S 426.300$ (c) would allow for the review of deemed NCDs, a process that would parallel the review of NCDs.

In §426.310(a), we explain that LCD and NCD reviews are largely independent of the claims appeal processes set forth in part 405, subparts F and G; part 417, subpart Q; and part 422, subpart M. In §426.310(b), we require the aggrieved party to notify the ALJ/Board of any pending claim or appeal related to the LCD/NCD appeal.

In §426.320(a), we explain that only an aggrieved party may initiate a review to challenge an LCD or NCD (including a deemed NCD), or an existing specific provision or provisions of an LCD or an NCD by filing an acceptable complaint. In §426.320(b), we explain that neither an ALJ nor the Board will recognize as valid any attempt to assign rights under section 1869(f) of the Act.

In $\S 426.325$, we describe the policies that are, and are not, subject to this review. Under this requirement, an aggrieved party would be allowed only to challenge an LCD or NCD.
Conversely, an aggrieved party may not use this process to challenge anything that does not meet the definition of an LCD or an NCD (see § 426.325). For example, draft LCDs or NCDs, and coverage decision memos would be excluded from review as they are predecisional. LCD and NCD provisions that are no longer in effect are excluded from review. Other interpretive policies that are not LCDs or NCDs would also not be subject to review under this process. Provisions of contractor policies that are based on things other than the reasonable and necessary provision of section 1862(a)(1)(A) of the Act, such as benefit category determinations, statutory exclusion determinations, and HCPCS/Revenue Code coding determinations, would not be subject to review under this part. In addition, any M+C or other managed care plan policy, rule, or procedure is not subject to review under this process. Individual claim determinations by adjudicators are also not subject to review under this process.

In $\S 426.330$, we state that the aggrieved party filing the complaint bears the burden of proof and the burden of persuasion for the issue or issues raised in the complaint. The burden of persuasion will be judged by a preponderance of the evidence.

Section 426.340 provides procedures to be followed after discovery and the taking of evidence are complete. If an aggrieved party has submitted new evidence pertaining to an LCD or NCD which the ALJ or the Board finds admissible, the ALJ/Board must review the new evidence and decide if the new evidence has the potential to significantly affect the evaluation of the LCD/NCD provision(s) in question under the reasonableness standard. If the ALJ or the Board determines that the new evidence does not have the potential to significantly affect the ALJ's or the Board's evaluation of LCD/NCD provisions, the review shall go forward to a decision on the merits. If the ALJ or the Board decides that the new evidence has the potential to significantly affect the evaluation of the policy, the ALJ or the Board must stay the proceedings and send the new evidence to the contractor or CMS. The contractor or CMS has 10 days upon receiving the evidence from the ALJ or the Board to provide a statement indicating whether a revision/ reconsideration will be initiated. If the contractor or CMS informs the ALJ or the Board that a revision/ reconsideration has been or will be initiated, then the stay shall continue and the ALJ or the Board shall set appropriate timeframes (not more than 90 days) by which the revision/ reconsideration will be completed. If the contractor or CMS chooses not to initiate a revision/reconsideration and does not retire/withdraw the LCD/NCD, the ALJ or the Board proceedings will continue on the original LCD/NCD.

## E. Subpart D (The Review of an LCD) and Subpart $E$ (The Review of an NCD)

In subparts D and E , we set forth the procedures for the review of LCDs and NCDs, respectively. The process for LCD and NCD reviews is largely the same with the exception of the following:

- LCDs are based on section 1862(a)(1)(A) of the Act; NCDs may also be based on other statutory provisions.
- LCD reviews are conducted by an ALJ; NCD reviews are conducted by the Board.
- ALJs and contractors participate in an LCD review; there is no role for ALJs or contractors in an NCD review.
- We are not always a party to an LCD review, but are always a party to an NCD review.
- Amicus participation is not allowed when reviewing an LCD, but may be allowed when reviewing an NCD.
- Board decisions regarding NCDs will be made available on the Medicare Internet site, without beneficiaryidentifying information.

For the purpose of this preamble, we consolidate the discussion of the requirements and policy decisions when possible. Sections 426.400 and 426.500 contain the requirements for filing an acceptable complaint regarding a provision or provisions of an LCD and an NCD, respectively. In both cases, a complaint must be in writing and must be from an aggrieved party. In §426.400(a), we require that complaints regarding LCDs be submitted to the office designated by CMS on the Medicare Web site, http:// www.medicare.gov/coverage/static/ appeals.asp (information on the designated office will be available by calling 1-800-Medicare) or by filing a complaint concerning an NCD with the Board of HHS (see §426.500(a)). Should the appropriate office change in the future, this regulation shall be read to conform to that change, and the information will be made publicly available. We have simplified and clarified the complaint-filing procedures.

In $\S 426.400$ (b) and $\S 426.500$ (b), we explain the circumstances under which a complaint will be considered timely received. A complaint will not be considered timely unless it is received by the office designated by CMS/Board of HHS within-(1) 6 months of the written statement from each aggrieved party's treating physician for aggrieved parties who choose to file an LCD/NCD challenge before receiving the service; or (2) 120 days of the initial denial notice for aggrieved parties who choose to file an LCD/NCD challenge after receiving the service.
In $\S 426.400$ (c)(1) and $\S 426.500$ (c)(1), we require a valid complaint to contain beneficiary-identifying information and a written statement from the treating physician indicating that the beneficiary needs the service that is the subject of the LCD/NCD. We also require the information in \$426.400(c)(2) and (c)(3) and $\S 426.500(\mathrm{c})(2)$ and (c)(3), which is necessary to identify the LCD or NCD (or the specific provision or provisions of the LCD or NCD) that is (are) adversely affecting the aggrieved party. In addition, we require a statement from the aggrieved party that explains the rationale for the complaint.
In $\S 426.400$ (c)(4) and $\S 426.500$ (c)(4), we also allow the aggrieved party to submit copies of material clinical or scientific evidence that supports the complaint. We require that any proprietary data submitted be marked as "proprietary data" and include the legal basis for so identifying it. In addition, in $\S 426.400$ (c)(4) and $\S 426.500$ (c)(4), we require that, in order to be considered and given weight in LCD or NCD
reviews, any such proprietary data submitted by a manufacturer of a drug or device must include an affidavit that the data consists of true and correct copies of all data submitted by the manufacturer to the Food and Drug Administration in relation to that drug or device. In $\S 426.400$ (d), we state that two or more aggrieved parties may initiate the review of an LCD by filing a single written complaint with the ALJ if the conditions in $\$ 426.400$ (d)(1)(i) and (ii) are met. Similarly, in §426.500(d), we state that two or more aggrieved parties may initiate the review of an NCD by filing a single complaint with the Board if the conditions in §426.500(d)(1)(i) and (ii) are met.
Based on public comments, we have added $\S 426.403$ and $\S 426.503$ to allow the aggrieved party to submit new evidence without withdrawing the complaint.
Section 426.405 specifies the authority of the ALJ during an LCD review, including authority during a hearing, if applicable. Similarly, in $\$ 426.505$, we set forth the specific authority of the Board during an NCD review, if applicable.

Sections 426.406 and 426.506 prohibit ex parte contacts so that no party or person (except employees or consultants of the ALJ/Board's office) may communicate in any way with the ALJ/ Board on any substantive matter at issue in a case, unless on notice and opportunity for all parties to participate. This provision does not prohibit a person or party from inquiring about the status of a case or asking routine questions concerning administrative functions or procedures.

In §426.410, we establish the ALJ's role in docketing and evaluating the acceptability of LCD complaints. These procedures are very similar to the Board's role in docketing and evaluating the acceptability of NCD complaints in $\S 426.510$. Under the procedures, the adjudicatory body receives and dockets the complaint, evaluates the acceptability of the complaint, and resolves any consolidation issues. The appeal will be docketed under the name of the LCD or NCD rather than the aggrieved party or parties to protect the privacy of the party/parties.

In § 426.410 and $\$ 426.510$, we establish the criteria that a complaint must meet to be considered as an acceptable complaint by an ALJ or the Board. An aggrieved party must file the complaint; the complaint must meet all of the requirements of a valid complaint regarding an LCD in $\$ 426.400$, or regarding an NCD in $\S 426.500$, and may only challenge a policy that meets the definition of an LCD or an NCD.

If a complaint is deemed to be unacceptable after being evaluated under $\S 426.410$ (b) or $\$ 426.510$ (b), the applicable adjudicator will provide the aggrieved party (or parties) one opportunity to amend the unacceptable complaint within a timeframe set forth by the adjudicator (see §426.410(c) and $\$ 426.510$ (c)). If the aggrieved party (or parties) does not submit an acceptable amended complaint within this timeframe, the adjudicator will issue a decision dismissing the unacceptable complaint. The aggrieved party will be precluded from filing another complaint on the same issue for 6 months.
If, after having been evaluated under $\S 426.410$ (b) or $\S 426.510$ (b), a complaint is accepted, the adjudicator will send a letter to the aggrieved party (or parties) acknowledging the complaint and informing them of the docket number (see §426.410(d)). The adjudicator will also forward a copy of the complaint and the acknowledgement letter to the applicable contractor and to us, and request that we or the contractor send a copy of the LCD record to the ALJ and all parties to the LCD review. The corresponding section in $\S 426.510$ (d) will require the adjudicator to follow the same process for NCDs, with the exception that the Board will make available to the public information concerning the complaint on its Web site (see §426.510(f)) and specify a time period for affected parties to request amicus participation.

In §426.410(e) and §426.510(e), we allow for adjudicators to consolidate complaints regarding LCDs and NCDs, respectively. Under this provision, several complaints may be consolidated into one review if the complaints are appropriately similar. The review processes are not changed by a decision to consolidate complaints into one review.

In §426.510(f) and §426.513, we describe the opportunity and extent to which interested parties may participate in the NCD review process as amicus curiae.

In $\S 426.415$, we explain that we may provide information to the ALJ, and all parties to the LCD review, identifying the person who would represent the contractor or CMS in the LCD review process. We can determine whether the contractor or CMS will participate in the review. Under the corresponding section in $\S 426.515$, we provide a copy of the NCD record (as described in $\S 426.518$ ) to the Board and all parties to the NCD review within 30 days of receiving the Board's order.

In $\S 426.416$ and $\S 426.516$, we describe the role of Medicare managed care organizations and Medicaid State
agencies in the LCD and NCD review process. In §426.417 and §426.517, we describe the role of contractors and CMS in reviewing any new evidence.

Sections 426.418 and 426.518 describe, respectively, the elements of a contractor's LCD record and our NCD record, furnished to the aggrieved party. Sections 426.419 and 426.519 describe, respectively, the elements of a contractor's LCD record and our NCD record furnished to the ALJ or Board. These sections have been added in response to comments, and to facilitate the review process when privileged or proprietary data is submitted. Generally, an LCD or NCD record is composed of documents and materials that the contractor or we considered during the development of the LCD or NCD. Any MCAC transcripts would also be considered part of an NCD record. In the cases where comments are submitted, a "comment and response" summary document is sufficient for inclusion in the LCD record. In §426.418(b) and §426.518(b), we do not include privileged information or proprietary data, or any new evidence, as part of the record furnished to the aggrieved party. In $\S 426.419$ and $\S 426.519$, we state that official records presented to the Board may contain proprietary data or privileged information, if the information was considered in reaching the LCD or NCD under review. In these instances, the proprietary data and privileged information is filed under seal and is protected from inappropriate disclosure according to all applicable statutes and regulations, or common law privileges.

In §426.420(a) and (b), we allow a contractor to retire the LCD under review or revise the LCD to remove or amend the provision in question before the date the ALJ issues a decision regarding the LCD. Retiring an LCD (or provision of the LCD) means that the contractor may no longer use that LCD in the adjudication of claims on a prospective basis. We also provide the aggrieved party individual claim review under §426.460(b). Thus, in most cases, there would no longer be a need for an LCD review because relief would be provided. In §426.520(a), we may withdraw an NCD under review or revise an NCD to remove or amend the provision in question before the date the Board issues a decision regarding that NCD. Withdrawing an NCD (or provision of the NCD) means this policy is no longer a controlling authority for our contractors and certain adjudicators. Thus, there no longer would be a need for an NCD review. In §426.420(b), $\S 426.420$ (c), $\S 426.420$ (d), § 426.420 (e) and §426.520(b), §426.520(c),
§426.520(d), §426.520(e), we describe the process for LCDs and NCDs that are revised or reconsidered while under review. In cases where an LCD/NCD provision(s) has been revised, but not completely removed, the review continues because relief may not have been provided. This responds to comments received, and will ensure that aggrieved parties receive coverage relief when they prevail.

Under § 426.423 and $\$ 426.523$, we are permitting aggrieved parties who filed the complaint to withdraw complaints regarding LCDs and NCDs, respectively. We allow an aggrieved party to withdraw a complaint before the applicable adjudicator issues a decision regarding the complaint by simply sending a written notice to the ALJ, to the applicable contractor, and to us (if applicable) for LCDs, or to the Board and to us for NCDs (see $\S 426.423$ (b) and §426.523(b)). Under this process, the adjudicator issues a decision (discussed later in this section of the preamble) dismissing the complaint, and the aggrieved party may not file another complaint to the same coverage determination for 6 months.

In the case of a joint complaint, one or more aggrieved parties may withdraw from the review without affecting the status of any remaining aggrieved party or parties named in the complaint. The adjudicator would issue a decision dismissing the complaint for the aggrieved party or parties who wish to withdraw, and the review would continue until the adjudicator issued a decision on the merits, or until each aggrieved party withdrew its complaint. Similarly, if the adjudicator had decided to hold a consolidated review, an aggrieved party or parties who are part of the consolidated review may withdraw without affecting the status of the other aggrieved party or parties who are part of the consolidated review (See §426.423(c) and §426.523(c)).

Sections 426.425(a) and 426.525(a) contain the processes for LCD and NCD reviews, respectively, that take place once the record has been filed. Section 522 of the BIPA added sections $1869(f)(1)(A)($ iii ) and $1869(f)(2)(A)(i)$ of the Act, which specify that the adjudicators of NCD and LCD reviews, respectively, "* * * shall review the record and shall permit discovery and the taking of evidence to evaluate the reasonableness of the determination, if the [adjudicator] determines that the record is incomplete or lacks adequate information to support the validity of the determination." Therefore, we allow the aggrieved party who submitted the complaint to file a statement alleging that the LCD record (or the NCD record
in the case of an NCD review) is not complete, or not adequate to support the validity of the coverage determination, under the reasonableness standard. This statement will be filed after the aggrieved party has had adequate time to review the record ( 30 days after receipt of the record, with a possible extension for good cause shown). The statement will be submitted to the adjudicator, to the contractor (if an LCD review), and to us (if applicable). In §426.425(b) and §426.525(b), we explain that the contractor/CMS has 30 days to respond.
In §426.425(c) and §426.525(c), we explain that, after the time for filing has expired, the ALJ or the Board will evaluate whether the record is complete and adequate to support the validity of the policy by applying the reasonableness standard. If the adjudicator determines that the record is not complete, not adequate to support the validity of the coverage determination, or both, the adjudicator will notify all parties to the review of this decision and allow discovery (as proposed in §426.432 and §426.532 and discussed later in this section of the preamble). If the adjudicator determines that the record is complete and adequate to support the validity of the coverage determination, the adjudicator will issue a decision finding the LCD/NCD record complete and adequate to support the validity of the LCD/NCD and the review process ends. In §426.425(d) and §426.525(d), we state that the process described in (a), (b), and (c) applies whenever an LCD/NCD record is supplemented.

Under § 426.431 and $\S 426.531$, we describe the process that adjudicators will use to review the provision(s) named in a complaint based on the reasonableness standard. The actions of this process include the following:

- Confining the LCD/NCD review to the provision(s) of the LCD/NCD raised in the aggrieved party's complaint;
- Conducting a hearing, unless the matter can be decided on the written record;
- Closing the LCD/NCD review record to the taking of evidence;
- Issuing a decision as described in §426.447 and §426.547. We further state that ALJs may consider previous ALJ decisions regarding the LCD provisions with the same issues and facts and the same clinical conditions. We also provide that ALJs must treat as precedential any previous Board decision that involves the same LCD provision(s), same specific issues and facts in question, and same clinical conditions. We also provide that the Board will follow applicable Board
precedent regarding the same NCD provisions and the same clinical conditions.
In addition, the adjudicator has the option, under $\S 426.431$ (b) and 426.531(b), to consult with appropriate scientific or clinical experts, and to consider previous ALJ decisions (discussed in the section of the preamble on $\S 426.440$ and $\S 426.540$ ).
In §426.431(c) and §426.531(c), we explain that ALJs and the Board must follow all applicable laws and regulations, and NCDs, with the exception that the Board is not bound by the NCD that is before it.

Under §426.432 and §426.532, paragraph (a), if the ALJ or the Board orders discovery, the ALJ or the Board will establish a reasonable timeframe for discovery and ensure that a party to the LCD or NCD review who receives a discovery request has certain rights. In paragraph (b), we state that any party receiving a discovery request may file a motion for a protective order before the date of production of the discovery.

Under § 426.432 and $\S 426.532$, we also set forth the rules for discovery during an LCD or NCD review, respectively.

We have eliminated proposed §426.432(a)(3) and §426.532(a)(3) because we do not expect any nonparties to be required to submit evidence in these proceedings.

In § 426.432 (c) and § 426.532 (c), we list the types of discovery that are available. In §426.432(d) and §426.532(d), we explain what the term discovery includes and state that discovery does not require the creation of any document. In §426.432(e) and §426.532(e), we identify forms of discovery that are not available. We believe that this is consistent with normal practice and will avoid unnecessary delays in the coverage determination reviews.
For proprietary data or privileged information, §426.432(f) and §426.532(f), we have clarified that the ALJ/Board may not, under any circumstances, disclose this material to the public without consent from the party who possesses the right to protection of the information.
In $\S 426.432(\mathrm{~g})$ and $\S 426.532(\mathrm{~g})$, we state that the ALJ/Board will notify all parties in writing of the date when the discovery period will close.
While reviewing a provision of an LCD or NCD, the adjudicator may, if necessary, issue subpoenas. In §426.435 and $\S 426.535$, we describe the process for obtaining and responding to subpoenas during a coverage determination review. A request for a subpoena to require the attendance of an
individual at a hearing (or provide evidence at a hearing) must be filed with the adjudicator by a party to the coverage determination review at least 30 days before the date of a hearing. In addition to designating the witnesses (and their locations) and the evidence to be produced by those witnesses, the subpoena must state the facts that the party expects the witness to establish, and state whether these facts could be established by other evidence or without the use of a subpoena.

The subpoena sections also detail the role of adjudicators in granting subpoenas, the role of a party in serving a subpoena, and the role and rights of the individual receiving a subpoena (including the right to file a motion to quash a subpoena). In addition, in § 426.435(h) and §426.535(h), we also set forth the remedy afforded under section 205(e) of the Act, if a subpoena is not obeyed.

We describe the rules relating to evidence in coverage determination reviews in §426.440 and §426.540. In $\S 426.440$ (a) and $\S 426.540$ (a), we state the ALJ or the Board is not bound by the Federal Rules of Evidence, but may apply the rules, if appropriate. In §426.440(b) and §426.540(b), we provide that the ALJ or the Board must exclude evidence that is clearly irrelevant, immaterial, or unduly repetitive. Sections 426.440 (c) and §426.540(c) provide admission of, and protection for the submission of proprietary/privileged information under seal. Sections 426.440 (d) and $\S 426.540$ (d) address the authority of the ALJ/Board over the use of expert witnesses. Under $\S 426.440$ (e) and $\S 426.540$ (e), we require experts submitting reports to be available for cross-examination at an evidentiary hearing. Under $\S 426.440(f)$ and $\S 426.540$ (f), we require that, unless otherwise ordered by the adjudicator for good cause shown, all documents and other evidence be open to examination by all parties to the review, except as set forth in § 426.440 (c) and $\S 426.540$ (c).
Under $\S 426.444$ and $\S 426.544$, we describe an adjudicator's dismissal for cause of a complaint regarding an LCD or an NCD, respectively. A dismissal is effectuated by the issuance of a decision dismissing a complaint. In general, an adjudicator may dismiss a complaint if an aggrieved party fails to attend or participate in a pre-hearing conference (the pre-hearing may be conducted by telephone) or hearing without good cause shown or fails to comply with a lawful order from an adjudicator (see §426.444(a) and §426.544(a)). Under §426.444(b) and §426.544(b), we require that the adjudicator dismiss
complaints that fail to meet the requirements for acceptable complaints, including complaints regarding inapplicable policies or determinations. We also require the adjudicator to dismiss a complaint if the aggrieved party withdraws the complaint, or if the complaint seeks review of a matter beyond the adjudicator's authority.

Under §426.444(b)(6), we also require an ALJ to dismiss a complaint if the applicable contractor notifies the ALJ that the LCD is being retired or revised to remove the provision in question. Similarly, in §426.544(b)(6), the complaint must be dismissed when we notify the Board that the NCD (or provision of the NCD) is no longer in effect.

In § 426.445 and $\S 426.545$, we require that witness fees, for appearances during a hearing, be paid by the party seeking to present the witness.

Under § 426.446 and $\S 426.546$, we require that an ALJ and the Board, respectively, ensure that any hearing conducted regarding a LCD or NCD review is open to the public and electronically, mechanically, or stenographically recorded. These sections require that, except for privileged information and proprietary data, all evidence upon which the adjudicator relies for a decision be contained in the public record, and that any pertinent document or record be incorporated into the record of the LCD/ NCD hearing.

Under § 426.447 and $\S 426.547$, we set forth the procedures for the issuance and notification of ALJ and Board decisions, respectively. Within 90 days from closing the review record to the taking of evidence, the applicable adjudicator is required either to issue a decision, including a description of appeal rights, or to provide notice that the decision is pending, and an approximate date a decision will be issued. In §426.547(b), we explain that Board decisions regarding NCDs will be available on the Medicare Web site of the Department of Health and Human Services and that steps will be taken to ensure the privacy of the parties to the review.

Under §426.450, we describe the required elements of an ALJ's decision regarding an LCD. In §426.550, we describe the required elements of the Board's decision regarding an NCD. Since Board decisions will be published, identifying information about beneficiaries may be placed in an accompanying cover letter giving notice of the decision. This cover letter, however, will not be published, in order to preserve beneficiaries' privacy. As discussed earlier in this section of the
preamble, a decision may include the dismissal of a complaint or a finding that the LCD/NCD record is complete and adequate to support the validity of the LCD/NCD under the reasonableness standard. If the ALJ/Board decision neither dismisses the complaint nor finds that record complete and adequate, the decision must contain a statement pertaining to each provision listed in the complaint and state whether the provision is valid or invalid under the reasonableness standard. We also require that the decision include the information in §426.450(b) and §426.550(b), which include LCD review or NCD review identifying information, claim information (if known), the basis for the decision (including findings of fact, interpretations of laws, and application of facts to the law), a summary of the evidence reviewed during the review, and a statement about appeal rights. We provide that the materiality of any proprietary data or privileged information in the validity determination should be discussed in the decision without disclosing the substance or contents of the sealed evidence. In addition, a separate statement prepared and maintained under seal will explain the rationale for the treatment of the proprietary data or privileged information, including any necessary discussion of the data themselves. This statement will accompany the proprietary data or privileged information under seal if the decision is appealed to the next level of review.

In $\S 426.455$ and $\S 426.555$, we require that an ALJ or the Board decision be prohibited from doing any of the following:

- Ordering us or our contractors to add any language to an LCD or NCD or to pay a specific claim.
- Establishing a time limit for the creation of a new or revised LCD or NCD.
- Reviewing or evaluating an LCD or NCD other than the LCD or NCD under review.
- Including a requirement for us or our contractors that specifies payment, coding, or systems changes for an LCD or NCD, or deadlines for implementing these changes.
- Ordering or addressing how we or our contractors should implement an LCD or NCD.

As a result of comments we received on our proposed rule, we revised the requirements concerning ALJ or the Board decisions to allow such a decision to direct us or our contractors to delete language from a provision of an LCD or NCD, when the adjudicator finds provision(s) unreasonable with
respect to the aggrieved party's clinical indications, and for same or similar conditions. While we have revised the rule accordingly, we continue to believe that ALJs or the Board should be prohibited from ordering us or our contractors to add language to a LCD or NCD provision and have maintained the prohibition in this final rule. The ALJ/ Board decision requiring a contractor or CMS to strike an LCD/NCD provision may be written narrowly. In one example, an aggrieved party with condition $X$ challenges an LCD stating that a particular service is covered for conditions Y and Z and contains the following sentence: "This procedure is considered not reasonable or necessary for all other conditions." The ALJ may find that this sentence is invalid for condition X. The contractor would have several options for effectuating this decision. First, the contractor could remove the sentence altogether leaving coverage of all conditions other than $Y$ and Z to individual consideration. Second, the contractor could add condition X to the list of covered conditions. Third, the contractor could revise the LCD to state that the service is covered for conditions Y and Z , individual consideration will determine coverage for condition X, and that the service is not covered for all other conditions.

In § 426.457 and $\S 426.557$, we explain that ALJ or the Board decisions may be written narrowly to hold specific provision(s) invalid as applied to specific clinical indications and for similar conditions.

In §426.458, we describe the ALJ's review record furnished to the public, and to the Board, and specify that proprietary data or privileged information must be under seal.
In §426.460 and §426.560, we describe the effect of ALJ or the Board decisions issued under § 426.447 and $\S 426.547$. Although an ALJ or the Board will now be allowed to order us or our contractors to strike down a LCD or NCD provision, we continue to believe that the exact wording of a new coverage determination should be made by the contractor or by us. These policies affect other beneficiaries and, thus, these determinations must be made by clinicians and scientific experts who have the necessary specialized training. Thus, we and the contractor will remain the entities responsible for ensuring that the clinical and scientific policies are sound, in order to ensure the best quality of care for beneficiaries.

The effect of an ALJ or Board decision will depend on the outcome of the coverage determination review. If the
adjudicator finds that the provision(s) named in the complaint was (were) valid under the reasonableness standard, the aggrieved party or parties (in the case of an LCD review) could appeal that decision to the Board or (in the case of NCD review) may challenge the final Departmental action in Federal court.

If the adjudicator found that the provision(s) listed in the complaint was (were) invalid under the reasonableness standard and the contractor or we do not appeal this decision to the Board in a timely manner, the contractor must or we will do several things. First, there would be individual claim review for the aggrieved party or parties named in the complaint(s).

- If the aggrieved party received a (fee-for-service or managed care) service that was the subject of the challenged coverage determination, then the contractor (if applicable) or Medicare managed care organization will not use the provision(s) of the coverage determination that was (were) found invalid in the adjudication of that claim.
- If the aggrieved party has not received the service, the individual may obtain the service and file a claim, which could be reviewed by the contractor, without using the provision that has been found invalid.
Neither the first level appeal reviewer nor the hearing officer is bound by the invalid provision. Specifically, we will instruct the contractor to make a claim determination without using the LCD or NCD provision(s) that has been found invalid in each of the following situations: (1) The claim has not been adjudicated or; (2) the claim was denied. It is important to note that individual claim review can only be provided to an aggrieved party if his or her individual claim or appeal has not been paid during the individual claims adjudication process. Furthermore, the contractor/CMS will not use the invalid provision as guidance to deny claims.

Second, there would be coverage policy relief. Within 30 days of the issuance of an ALJ or the Board decision, the contractor or CMS must either retire/withdraw the LCD/NCD or revise the LCD/NCD to remove the provisions found to be invalid by the ALJ or the Board. The effective date of the retirement/withdrawal or revision must be for dates of service no later than the 30th day following issuance of the ALJ or Board decision. As discussed earlier, the retirement of a coverage determination or removal of a provision of a coverage determination means that it can no longer be used in the adjudication of claims with dates of
service after the effective date of the ALJ/Board decision.
Under § 426.462 and $\S 426.562$, "Notice of an ALJ's decision," and "Notice of the Board's decision," we require that, after the ALJ or the Board, respectively, has made a decision regarding an LCD or NCD complaint, the ALJ or the Board send a written notice of the decision to each party. The notice must state the outcome of the review and inform each party to the determination of his or her rights to seek further review if he or she is dissatisfied with the determination, and the time limit under which an appeal must be requested.
Under § 426.463 and § 426.563,
"Future New/Revised LCDs/NCDs," we state that the contractor and CMS may not reinstitute an LCD/NCD provision found to be unreasonable by an ALJ/ Board unless the contractor/CMS has a different basis (such as additional evidence). However, nothing in this regulation shall be construed to prevent contractors or CMS from developing new or revised/reconsidered LCD/NCD provisions, as long as these provisions are developed using a different basis and evidence.

In the remainder of the sections proposed in subpart D, we set forth the procedure for appealing an ALJ's decision regarding an LCD review. In $\S 426.465$ (a), we state that an aggrieved party may appeal part or all of an ALJ's decision that states that a provision of the LCD listed in the complaint is valid under the reasonableness standard or that dismisses a complaint (with certain exceptions). We also allow an aggrieved party who was part of a joint complaint or a consolidated LCD review to appeal an ALJ's decision either independently or as a group.

In $\S 426.465(\mathrm{~b})$, we state that a contractor or CMS may appeal to the Board an ALJ decision that an LCD was unreasonable. Because we allow Board consolidation of similar appeals, we believe that it is not necessary to prohibit aggrieved parties from appealing to higher levels if one or more parties to a joint complaint withdraw from that complaint.

In §426.465(c), we require that the implementation of the ALJ decision will be stayed pending review by the Board.

In §426.465(d), we establish that we do not allow an aggrieved party to appeal a dismissal in certain circumstances, namely, if the aggrieved party who filed the complaint withdraws the complaint, or because the contractor retired the LCD or revised the LCD to remove the provision in question.

Under §426.465(e), we require that an appeal would have to be submitted to the Board within 30 days of the date the ALJ's decision was issued. We believe this is a reasonable timeframe to allow a party to make a decision on whether to appeal and to prepare the necessary documents, but we permit the Board to consider a late appeal if good cause is shown by the party.

Section 426.465(f) lists the necessary components of an appeal to identify the relevant parties and issues.
In §426.565, "Board's role in making an LCD or NCD review record available," we require that upon a request from a Federal Court, the Board must provide to the Federal Court, a copy of the Board's LCD or NCD review record (as described in §426.567).

In §426.566, we state that a Board decision is subject to judicial review.

In $\S 426.468$, we explain that an aggrieved party who initiates an LCD review, but does not appeal any part or parts of an ALJ's decision to the Board in a timely manner, waives his or her right to any further review of that part or those parts.

In $\S 426.470$, we state that the Board's role in docketing and evaluating the acceptability of appeals of ALJ decisions is similar to the process that an ALJ would use in docketing and evaluating the acceptability of a complaint. The Board assigns a number to the appeal and determines if it meets all of the requirements of an acceptable appeal proposed in §426.465. Unlike the evaluation of an initial complaint, however, we require, in $\S 426.470$ (c), that the Board issue a decision dismissing an unacceptable appeal, instead of allowing an opportunity to amend an unacceptable appeal.

Upon the request from the Board to provide copies of the LCD review record under $\S 426.470$, we require that an ALJ send a copy of the LCD review record to the Board.

Once the Board has accepted an appeal to an ALJ's decision and received the ALJ's LCD review record, we describe in $\S 426.476$ the steps that the Board will take in reviewing the ALJ's decision. In addition to reviewing the ALJ's LCD review record and the ALJ's decision, the Board must allow the contractor or, if applicable, allow us, to submit a statement to the Board and the aggrieved party responding to the appeal. The final required step in the Board review of an ALJ's decision is to issue a Board decision. We require that the Board must evaluate the ALI's application of the reasonableness standard to determine if the ALJ's decision was erroneous.

We believe that the Board review of an appeal of an ALJ's decision should remain a paper review of existing materials. Accordingly, we establish, in §426.476(b), that the Board will determine whether the ALJ decision contains any material error, and prohibit the Board from considering any evidence that is not a part of the ALJ's LCD review record. We establish that the Board will remand the case for discovery and the taking of evidence if the ALJ erroneously determined that the contractor's record was complete, or if the ALJ permitted a prejudicial procedural error. In §426.476(c), we establish the Board's scope of review and that the Board is bound by applicable laws, regulations, and NCDs when reviewing appeals of ALJ decisions. These include the applicable provisions of the Act, our regulations and rulings, and NCDs.

In $\S 426.476(\mathrm{~d})$, we require the Board to dismiss an appeal of an ALJ's decision if the contractor retired the LCD or revised the LCD to remove the provision(s) in question during the appeal.

In §426.478, we allow the contractor to retire an LCD or revise the LCD to remove the provision(s) in question during the Board's review of the ALJ's decision. As stated in the previous paragraph, this would lead to the Board dismissing the appeal.

In § 426.480 , we allow a party to withdraw an appeal of an ALJ's decision. The provisions proposed in this section, for a party acting alone or as part of a joint or consolidated appeal, would be the same as the provisions for withdrawing a complaint in $\S 426.423$.

In §426.482, we require the issuance and notification of a Board decision regarding an appealed ALJ decision. These provisions are the same as the provisions we described for the issuance and notification of an ALJ decision.

In §426.484, we set forth the mandatory provisions of a Board decision regarding an appealed ALJ decision. We require the Board to either dismiss the appeal or, for each part of the ALJ's decision named in the appeal, to uphold, modify or reverse that part or all of the ALJ's decision. Because the Board is conducting a review of the ALJ's decision using the ALJ's LCD review record, and is not conducting a de novo review of the LCD itself, a Board decision upholding, modifying or reversing each part, or all of the ALJ's decision is the proper outcome. The Board's decision must include the information necessary to identify the appeal, and the rationale for the Board's decision.

In §426.486, we prohibit the Board's decision from including those provisions that we exclude from the ALJ's decision, for the reasons discussed earlier in this preamble. In §426.487,
"Board's Record on Appeal of an ALJ Decision," we state in paragraph (a) that except as provided in paragraph (b) of this section, the Board's LCD review record furnished to the public consists of any document or material that the Board compiled or considered during an LCD review.

Paragraph (b) states that the LCD review record furnished to the Court under appeal includes, under seal, material that is privileged or proprietary.

Paragraph (c) states that in any instance where proprietary data or privileged information is contained in the LCD record and the information goes to court, CMS or the Department will seek to have a protective order issued for that information, as appropriate.
In § 426.587, "Record for Appeal of a Board/NCD decision," we set forth in paragraph (a) that, except as provided in paragraph (b) of this section, the Board's NCD review record furnished to the court consists of any document or material that the Board compiled or considered during an NCD review. CMS or the Department may seek to have a protective order issued with respect to proprietary data or privileged

## information.

We describe in paragraph (b) that the NCD review record furnished the court maintain the seal on material that is privileged or proprietary. CMS or the Department may seek to have a protective order issued with respect to those documents.

In $\S 426.488$, we set forth the effect of a Board decision. Section 426.488(a) explains the relief that is provided to a successful challenger. Moreover, there may be coverage relief for the aggrieved party. We also describe the effect of the Board reversing an ALJ decision.

We permit the Board to remand cases to the ALJ in a limited number of circumstances. In §426.489(a), we explain the process the Board must follow to remand a case to the ALJ. In §426.489(b), we explain required action by an ALJ upon a Board remand. In $\S 426.490$, a decision by the Board would constitute a final Agency action and would be subject to judicial review. Neither the contractor nor we may appeal a Board decision.

## V. Collection of Information Requirements

Under the Paperwork Reduction Act of 1995, we are required to provide 30day notice in the Federal Register and
solicit public comment before a collection of information requirement is submitted to the Office of Management and Budget (OMB) for review and approval. In order to fairly evaluate whether an information collection should be approved by OMB, section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 required that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our estimate of the information collection burden.
- The quality, utility, and clarity of the information to be collected.
- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

We have solicited public comment on each of these issues for the following sections of this document that contain information collection requirements:

## Sections 426.400 and 426.500

Sections 426.400, Procedure for filing an acceptable complaint to a provision (or provisions) of an LCD, and 426.500, Procedure for filing an acceptable complaint to a provision or provisions of an NCD, state that an aggrieved party may initiate a review of an LCD or NCD, respectively, by filing a written complaint. These sections also identify the information required in the complaint to qualify as an aggrieved party as defined in $\S 426.110$, as well as the process and information needed for an aggrieved party to withdraw a complaint. The required documentation includes a copy of the written authorization to represent the beneficiary, if the beneficiary has a representative, and a copy of a written statement from the treating physician that the beneficiary needs a service that is the subject of the LCD.

Based on the lack of public comments, we continue to estimate that there will be 1,000 LCD complaints per year and that it will take the aggrieved party 4 hours to draft the complaint and gather the information to send to us. The national burden would be 4,000 hours annually. We estimate that there will be 15 to 20 NCD complaints per year. It will take 4 hours, maximum, to gather the information and to write each complaint. Thus, we estimate a total of 80 hours per year to comply with the requirement.

The estimate of 4 hours is based on previous experience in both the local and national coverage development processes, and the estimated time to submit beneficiary and policy-specific information (for example, name,
address, and policy challenged) and collect and photocopy scientific and clinical evidence. It should actually take less than that amount of time in NCD challenges, since the aggrieved party has already sent us the information and merely has to send it again.

If you comment on these information collection and recordkeeping requirements, please mail copies directly to the following:
Centers for Medicare \& Medicaid Services, Office of Strategic Operations and Regulatory Affairs, Regulations Development and Issuances Group, Attn.: Dawn Willinghan, Attn: CMS-3063-F, Room C5-14-03, 7500 Security Boulevard, Baltimore, MD 212441850.

Office of Information and Regulatory Affairs, Office of Management and Budget, Room 10235, New Executive Office Building, Washington, DC 20503, Attn: Brenda Aguilar, CMS Desk Officer.

## VI. Regulatory Impact Statement

## A. Overall Impact

We have examined the impacts of this rule as required by Executive Order 12866 (September 1993, Regulatory Planning and Review), as amended by Executive Order 13258, and the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96-354), as amended. Executive Order 12866 directs agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). A regulatory impact analysis (RIA) must be prepared for major rules with economically significant effects ( $\$ 100$ million or more annually). Based on provider, beneficiary, and Agency costs, our analysis indicates that the costs involved with the implementation of this rule will not exceed $\$ 100$ million annually. Therefore, this rule is not considered a major rule.

The RFA requires agencies to analyze options for regulatory relief of small businesses. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and government agencies. Most hospitals and most other providers and suppliers are small entities, either by nonprofit status or by having revenues of $\$ 5$ million or less annually. Individuals and States are not included in the definition of a small entity.

In addition, section 1102(b) of the Act requires us to prepare a regulatory impact analysis if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 603 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a Metropolitan Statistical Area and has fewer than 100 beds.

For these reasons, we are not preparing analyses for either the RFA or section 1102(b) of the Act because we have determined that this rule would not have a significant economic impact on a substantial number of small entities or a significant impact on the operations of a substantial number of small rural hospitals.
Section 202 of the Unfunded Mandates Reform Act of 1995 also requires that agencies assess anticipated costs and benefits before issuing any rule that may result in expenditures in any one year by State, local, or tribal governments, in the aggregate, or by the private sector, of $\$ 110$ million. We do not believe that this rule would have an effect on the governments mentioned, nor would the private sector costs associated with the rule be greater than \$110 million.

## B. Federalism

Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has Federalism implications. This final rule will not have a substantial effect on State or local governments.

## C. Anticipated Effects

## 1. Effects on Medicare Beneficiaries

In developing this rule, we considered how to make it user-friendly for the individual beneficiaries who qualify as aggrieved parties to initiate the review of an LCD or an NCD. Possible access obstacles for some aggrieved parties include limited financial resources, limited mobility, various disabilities, absence of legal representation, and difficulty in compiling and presenting scientific and clinical materials. We have sought to include means to alleviate these obstacles as much as possible through this rule, but would also expect the ALJs and the Board to use the flexibility in this rule to respond to obstacles that may confront
individual aggrieved parties in particular cases.

Some concerns may remain about how to facilitate participation, especially when evidence is taken in person, by aggrieved parties with limited mobility or resources. This final rule seeks to address this by providing for most evidence to be submitted in written form and by allowing use of a variety of electronic means for remote attendance at any oral proceeding, if one is needed. In addition, the rule provides flexibility for ALJs and the Board to tailor proceedings in each case to best reflect the needs of the parties, the appropriate scope of participation, and the nature of the issues presented.
While we require some documentation to support a complainant's assertions of being an aggrieved party (see §426.400 and § 426.500 ), we will accept that documentation as sufficient to show standing to challenge an LCD or an NCD. By limiting this documentation, we seek to simplify the process for the beneficiary, to alleviate privacy concerns about confidential medical records and other patient-specific information, and to reduce any intrusive discovery burden on beneficiaries.
Our intent is to ensure that beneficiaries fully understand these rights. When this final rule is published, we expect to produce a user-friendly guide that beneficiaries may use to assist them in accessing this process.

We have also provided for appropriate measures to be taken to address confidentiality and privilege issues relating to privileged or confidential trade secrets, commercial information, or financial information.

## 2. Effects on Providers

We do not believe that the provisions of this rule will have a significant effect on providers, since the Congress developed the BIPA 522 process for beneficiaries. Providers may be requested, however, to supply documentation that an aggrieved party is in need of a specific service, and to assist in representing an aggrieved party. In addition, we have clarified in the final rule that this document may be in the form of an order or other existing language from the beneficiary's medical record and need not be newly created material. It is also possible for a provider to be subpoenaed under $\S 426.435$ and $\S 426.535$, but § 426.445 and $\S 426.545$ will allow for compensation under this circumstance. While there may be time requirements placed on providers and expert witnesses in this respect, there will be no additional monetary expenses. As a
result, we believe that the rule will have an insignificant economic impact on health care providers or the health care industry as a whole.

## 3. Effects on the Medicare Program

The Medicare program would incur certain significant administrative costs associated with coverage determination reviews, the cost of being a party to coverage determination reviews, the cost of reevaluating policies, and the cost of changes to the claim review and appeals procedures.

## D. Alternatives Considered

We considered various alternative approaches for implementing the ALJ or the Board decisions with respect to an LCD and NCD. One alternative we considered was to allow an ALJ or the Board to specify the type of relief that would be afforded to the aggrieved party in those instances in which an ALJ or the Board issued a finding of unreasonable under the reasonableness standard. We contemplated whether it would be feasible based on the record developed in this proceeding for an ALJ or the Board to order us to make payment for a particular claim for the individual. We determined, however, that because the record in a policy challenge adjudication focuses on the challenged policy, and not on the beneficiary's particular medical circumstances or entitlement to Medicare benefits, it is not possible to allow an ALJ or the Board to order payment in those circumstances. In some cases, other statutory restrictions may apply for a particular claim that would prevent Medicare from making payment even if the LCD or NCD were found unreasonable. For instance, if care were furnished by an excluded physician in other than an emergency situation, section 1862(e)(1) of the Act would bar Medicare payment. There are other examples where rules other than an NCD may lead to the denial of a claim (such as statutory exclusion). To avoid redundant claims/appeals processes, individual review is performed through our existing claims appeals procedures, but the LCD or NCD that was found unreasonable by the ALJ or the Board will not be applied.

Further, we do not believe that it is appropriate for an ALJ or the Board to add language to coverage determinations. LCDs and NCDs are based on clinical and scientific evidence to develop policies that are both sound and effective, and continue to ensure the highest quality of covered care for Medicare recipients. For the sake of continuing to ensure that aggrieved parties receive the same quality care as
all other Medicare recipients, and for the sake of efficiently administering this process, we believe that clinicians and scientific experts are best suited to continue to develop these policies.
In accordance with the provisions of Executive Order 12866, as amended by Executive Order 13258, this regulation was reviewed by the Office of Management and Budget.

## List of Subjects

42 CFR Part 400
Grant programs-health, Health facilities, Health maintenance organizations (HMO), Medicaid, Medicare, Reporting and recordkeeping requirements.

## 42 CFR Part 405

Administrative practice and procedure, Health facilities, Health professions, Kidney diseases, Medicare, Reporting and recordkeeping requirements, Rural areas, X-rays.

## 42 CFR Part 426

Administrative practice and procedure, Medicare, Reporting and recordkeeping requirements.

- For the reasons set forth in the preamble, Centers for Medicare \& Medicaid Services amends 42 CFR chapter IV as follows:

## PART 400-INTRODUCTION; DEFINITIONS

- 1. The authority citation for part 400 continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395 hh ) and 44 U.S.C. Chapter 35.

- 2. Amend $\S 400.202$ by adding the definitions of "Departmental Appeals Board," and "Local coverage determination (LCD)," and by revising the definition of "National coverage determination (NCD)" to read as follows:

## §400.202 Definitions specific to Medicare.

Departmental Appeals Board means: (1) Except as provided in paragraphs (2) and (3) of this definition, a Board established in the office of the Secretary, whose members act in panels to provide impartial review of disputed decisions made by operating components of the Department or by ALJs.
(2) For purposes of review of ALJ decisions under part 405, subparts G and H; part 417, subpart Q; part 422, subpart M; and part 478, subpart B of this chapter, the Medicare Appeals Council designated by the Board Chair.
(3) For purposes of part 426 of this chapter, a Member of the Board and, at the discretion of the Board Chair, any
other Board staff appointed by the Board Chair to perform a review under that part.

Local coverage determination (LCD) means a decision by a fiscal intermediary or a carrier under Medicare Part A or Part B, as applicable, whether to cover a particular service on an intermediary-wide or carrier-wide basis in accordance with section 1862(a)(1)(A) of the Act. An LCD may provide that a service is not reasonable and necessary for certain diagnoses and/ or for certain diagnosis codes. An LCD does not include a determination of which procedure code, if any, is assigned to a service or a determination with respect to the amount of payment to be made for the service.

## National coverage determination

 (NCD) means a decision that CMS makes regarding whether to cover a particular service nationally under title XVIII of the Act. An NCD does not include a determination of what code, if any, is assigned to a service or a determination with respect to the amount of payment to be made for the service.
## PART 405-FEDERAL HEALTH INSURANCE FOR THE AGED AND DISABLED

- 3. The authority citation for part 405 continues to read as follows:
Authority: Secs. 1102, 1861, 1862(a), 1871, 1874, 1881, and $1888(\mathrm{k})$ of the Social Security Act (42 U.S.C. 1302, 1395x, 1395 y (a), $1395 \mathrm{hh}, 1395 \mathrm{kk}, 1395 \mathrm{rr}$ and $1395 w w(k)$ ), and sec. 353 of the Public Health Service Act (42 U.S.C. 263a).
- 4. Revise § 405.732 to read follows:
§405.732 Review of a national coverage determination (NCD).
(a) General rule. (1) An NCD is a determination by the Secretary for whether or not a particular item or service is covered nationally under title XVIII of the Act.
(2) An NCD does not include a determination of what code, if any, is assigned to a particular item or service covered under title XVIII or a determination for the amount of payment made for a particular item or service.
(3) NCDs are made under section 1862(a)(1) of the Act or other applicable provisions of the Act.
(4) An NCD is binding on all Medicare carriers, fiscal intermediaries, QIOs, HMOs, CMPs, HCPPs, the Medicare Appeals Council, and ALJs.
(b) Review by ALJ. (1) An ALJ may not disregard, set aside, or otherwise review an NCD.
(2) An ALJ may review the facts of a particular case to determine whether an NCD applies to a specific claim for benefits and, if so, whether the NCD has been applied correctly to the claim.
(c) Review by Court. For initial determinations and NCD challenges under section 1862 (a)(1) of the Act, arising before October 1, 2002, a court's review of an NCD is limited to whether the record is incomplete or otherwise lacks adequate information to support the validity of the decision, unless the case has been remanded to the Secretary to supplement the record regarding the NCD. In these cases, the court may not invalidate an NCD except upon review of the supplemental record.

## - 5. Revise § 405.860 to read as follows:

## §405.860 Review of a national coverage

 determination (NCD).(a) General rule. (1) An NCD is a determination by the Secretary for whether or not a particular item or service is covered nationally under title XVIII of the Act.
(2) An NCD does not include a determination of what code, if any, is assigned to a particular item or service covered under title XVIII or a determination for the amount of payment made for a particular item or service.
(3) NCDs are made under section 1862(a)(1) of the Act or other applicable provisions of the Act.
(4) An NCD is binding on all Medicare carriers, fiscal intermediaries, QIOs , HMOs, CMPs, HCPPs, the Medicare Appeals Council, and ALJs.
(b) Review by ALJ. (1) An ALJ may not disregard, set aside, or otherwise review an NCD.
(2) An ALJ may review the facts of a particular case to determine whether an NCD applies to a specific claim for benefits and, if so, whether the NCD is applied correctly to the claim.
(c) Review by Court. For initial determinations and NCD challenges under section 1862(a)(1) of the Act, arising before October 1, 2002, a court's review of an NCD is limited to whether the record is incomplete or otherwise lacks adequate information to support the validity of the decision, unless the case is remanded to the Secretary to supplement the record regarding the NCD. In these cases, the court may not invalidate an NCD except upon review of the supplemental record.

- 6. Add part 426 to subchapter B to read as follows:

## PART 426-REVIEWS OF LOCAL AND NATIONAL COVERAGE DETERMINATIONS

## Subpart A-General Provisions

Sec.
426.100 Basis and scope.
426.110 Definitions.
426.120 Calculation of dead lines.
426.130 Party submissions.

## Subpart B-[Reserved]

Subpart C-General Provisions for the Review of LCDs and NCDs
426.300 Review of LCDs, NCDs, and deemed NCDs.
426.310 LCD and NCD reviews and individual claim appeals.
426.320 Who may challenge an LCD or NCD.
426.325 What may be challenged.
426.330 Burden of proof.
426.340 Procedures for review of new evidence.

## Subpart D-Review of an LCD

426.400 Procedure for filing an acceptable complaint concerning a provision (or provisions) of an LCD.
426.403 Submitting new evidence once an acceptable complaint is filed.
426.405 Authority of the ALJ.
426.406 Ex parte contacts.
426.410 Docketing and evaluating the acceptability of LCD complaints.
426.415 CMS' role in the LCD review.
426.416 Role of Medicare Managed Care Organizations (MCOs) and State agencies in the LCD review.
426.417 Contractor's statement regarding new evidence.
426.418 LCD record farnished to the aggrieved party.
426.419 LCD record furnished to the ALJ.
426.420 Retiring or revising an LCD under review.
426.423 Withdrawing a complaint regarding an LCD under review.
426.425 LCD review.
426.431 ALJ's review of the LCD to apply the reasonableness standard.
426.432 Discovery.
426.435 Subpoenas.
426.440 Evidence.
426.444 Dismissals for cause.
426.445 Witness fees.
426.446 Record of hearing.
426.447 Issuance and notification of an ALJ's decision.
426.450 Mandatory provisions of an ALj's decision.
426.455 Prohibited provisions of an ALJ's decision.
426.457 Optional provisions of an ALJ's decision.
42ถิ.458 ALJ's LCD review record.
426.460 Effect of an ALJ's decision.
426.462 Notice of an ALJ's decision.
426.463 Future new or revised LCDs.
426.465 Appealing part or all of an ALJ's decision.
426.468 Decision to not appeal an ALJ's decision.
426.470 Board's role in docketing and cvaluating the acceptability of appeals of ALJ decisions.
426.476 Board review of an ALJ's decision 426.478 Retiring or revising an LCD during the Board's review of an ALy's decision.
426.480 Withdrawing an appeal of an ALJ's decision.
426.482 Issuance and notification of a Board decision.
426.484 Mandatory provisions of a Board decision.
426.486 Prohibited provisions of a Board decision.
426.487 Board's record on appeal of an ALJ's decision.
426.488 Effect of a Board decision.
426.489 Board remands.
426.490 Board decision.

## Subpart E-Review of an NCD

426.500 Procedure for filing an acceptable complaint concerning a provision (or provisions) of an NCD.
426.503 Submitting new evidence once an acceptable complaint is filed.
426.505 Authority of the Board.
426.506 Ex parte contacts.
426.510 Docketing and evaluating the acceptability of NCD complaints.
426.513 Participation as amicus curiae.
426.515 CMS' role in making the NCD record available.
426.516 Role of Medicare Managed Care Organizations (MCOs) and State agencies in the NCD review process.
426.517 CMS' statement regarding new evidence.
426.518 NCD record furnished to the aggrieved party.
426.519 NCD record furnished to the Board.
426.520 Withdrawing an NCD under review or issuing a revised or reconsidered NCD.
426.523 Withdrawing a complaint regarding an NCD under review.
426.525 NCD review.
426.531 Board's review of the NCD to apply the reasonableness standard.
426.532 Discovery.
426.535 Subpoenas.
426.540 Evidence.
426.544 Dismissals for cause.
426.545 Witness fees.
426.546 Record of hearing.
426.547 Issuance, notification, and posting of a Board's decision.
426.550 Mandatory provisions of the Board's decision.
426.555 Prohibited provisions of the Board's decision.
426.557 Optional provisions of the Board's decision.
426.560 Effect of the Board's decision.
426.562 Notice of the Board's decision.
426.563 Future new or revised or reconsidered NCDs.
426.565 Board's role in making an LCD or NCD review record available.
426.566 Board decision.
426.587 Record for appeal of a Board NCD decision.
Authority: Secs. 1102 and 1871 of the
Social Security Act (42 U.S.C. 1302 and 1395hh)

## Subpart A-General Provisions

§426.100 Basis and scope.
(a) Basis. This part implements sections 1869(f)(1) and (f)(2) of the Act, which provide for the review of LCDs, NCDs, and certain determinations that are deemed to be NCDs by statute.
(b) Scope. This subpart establishes the requirements and procedures for the review of LCDs and NCDs.

## §426.110 Definitions.

For the purposes of this part, the following definitions apply:

Aggrieved party means a Medicare beneficiary, or the estate of a Medicare beneficiary, who-
(1) Is entitled to benefits under Part A, enrolled under Part B, or both
(including an individual enrolled in fee-for-service Medicare, in a
Medicare+Choice plan, or in another Medicare managed care plan);
(2) Is in need of coverage for a service that is denied based on an applicable LCD (in the relevant jurisdiction) or an NCD, regardless of whether the service was received; and
(3) Has obtained documentation of the need by the beneficiary's treating physician.

Board means the Departmental Appeals Board.

Clinical and scientific experts mean experts that are consulted by the ALJ or Board as independent and impartial individuals, with significant experience and/or published work, pertaining to the subject of the review.

Contractor means a carrier (including a Durable Medical Equipment Regional Carrier), or a fiscal intermediary (including a Regional Home Health Intermediary) that has jurisdiction for the LCD at issue.

Deemed NCD means a determination that the Secretary makes, in response to a request for an NCD under section $1869(\mathrm{f})(4)(\mathrm{B})$ and (C) of the Act, that no national coverage or noncoverage determination is appropriate, or the Secretary's failure to meet the deadline under section $1869(f)(4)(A)$ (iv) of the Act.

New evidence means clinical or scientific evidence that was not previously considered by the contractor or CMS before the LCD or NCD was issued.

Party means an aggrieved party, which is an individual, or estate who has a right to participate in the LCD or NCD review process, and, as appropriate, a contractor or CMS. Proprietary data and Privileged information means information from a source external to CMS or a contractor, or protected health information, that meets the following criteria:
(1) It is ordinarily protected from disclosure in accordance with 45 CFR part 164, under the Trade Secrets Act (18 U.S.C. 1905) or under Exemptions 4 or 5 of the Freedom of Information Act (5 U.S.C. 552) as specified in 45 CFR 5.65.
(2) The party who possesses the right to protection of the information from public release or disclosure has not provided its consent to the public release or disclosure of the information. Any information submitted by the public that is not marked proprietary is not considered proprietary.

Reasonableness standard means the standard that an ALJ or the Board must apply when conducting an LCD or an NCD review. In determining whether LCDs or NCDs are valid, the adjudicator must uphold a challenged policy (or a provision or provisions of a challenged policy) if the findings of fact, interpretations of law, and applications of fact to law by the contractor or CMS are reasonable based on the LCD or NCD record and the relevant record developed before the ALJ or the Board.

Supplemental LCD/NCD record is a record that the contractor/CMS provides to the ALJ/Board and any aggrieved party and consists of all materials received and considered during a reconsideration. Materials that are already in the record before the ALJ/ Board (for example, new evidence presented in the taking of evidence or hearing) need not be provided but may be incorporated by reference in the supplement to the LCD/NCD record. The contractor/CMS may provide statements, evidence, or other submissions to the ALJ/Board during the proceedings, as provided elsewhere in these regulations, but these submissions are not considered as supplementing the LCD/NCD record.

Treating physician means the physician who is the beneficiary's primary clinician with responsibility for overseeing the beneficiary's care and either approving or providing the service at issue in the challenge.

## §426.120 Calculation of deadlines.

In counting days, Saturdays, Sundays, and Federal holidays are included. If a due date falls on a Saturday, Sunday, or Federal holiday, the due date is the next Federal working day.

## §426.130 Party submissions.

Any party submitting material, except for material for which a privilege is asserted, or proprietary data, to the ALJ or the Board after that party's initial challenge must serve the material on all other parties at the same time.

## Subpart B-[Reserved]

## Subpart C-General Provisions for the Review of LCDs and NCDs

$\S 426.300$ Review of LCDs, NCDs, and deemed NCDs.
(a) Upon the receipt of an acceptable LCD complaint as described in $\S 426.400$, an ALJ conducts a review of a challenged provision (or provisions) of an LCD using the reasonableness standard.
(b) Upon the receipt of an acceptable NCD complaint as described in $\S 426.500$, the Board conducts an NCD review of a challenged provision (or provisions) of an NCD using the reasonableness standard.
(c) The procedures established in this part governing the review of NCDs also apply in cases in which a deemed NCD is challenged.

## §426.310 LCD and NCD reviews and

 individual claim appeals.(a) LCD and NCD reviews are distinct from the claims appeal processes set forth in part 405, subparts G and H; part 417, subpart Q; and part 422, subpart M of this chapter.
(b) An aggrieved party must notify the ALJ or the Board, as appropriate, regarding the submission and disposition of any pending claim or appeal relating to the subject of the aggrieved party's LCD or NCD complaint. This reporting obligation continues through the entire LCD or NCD review process.

## §426.320 Who may challenge an LCD or

 NCD.(a) Only an aggrieved party may initiate a review of an LCD or NCD (including a deemed NCD), or provisions of an LCD or NCD by filing an acceptable complaint.
(b) Neither an ALJ nor the Board recognizes as valid any attempt to assign rights to request review under section 1869(f) of the Act.

## §426. 325 What may be challenged.

(a) Only LCDs or NCDs (including deemed NCDs) that are currently effective may be challenged.
(b) Some items are not reviewable under this part, including the following:
(1) Pre-decisional materials,
including-
(i) Draft LCDs;
(ii) Template LCDs or suggested LCDs; and
(iii) Draft NCDs, including national coverage decision memoranda.
(2) Retired LCDs or withdrawn NCDs.
(3) LCD or NCD provisions that are no longer in effect due to revisions or reconsiderations.
(4) Interpretive policies that are not an LCD or NCD.
(5) Contractor decisions that are not based on section 1862(a)(1)(A) of the Act.
(6) Contractor claims processing edits.
(7) Payment amounts or methodologies.
(8) Procedure coding issues, including determinations, methodologies,
definitions, or provisions.
(9) Contractor bulletin articles, educational materials, or Web site frequently asked questions.
(10) Any M+C organization or managed care plan policy, rule, or procedure.
(11) An individual claim determination.
(12) Any other policy that is not an LCD or an NCD as set forth in $\$ 400.202$ of this chapter.

## §426.330 Burden of proof.

During an LCD or NCD review, an aggrieved party bears the burden of proof and the burden of persuasion for the issue(s) raised in a complaint. The burden of persuasion is judged by a preponderance of the evidence.

## §426.340 Procedures for review of new evidence.

(a) The process for review of new evidence is initiated once the ALJ/Board completes the taking of evidence.
(b) If an aggrieved party has submitted new evidence pertaining to the LCD/ NCD provision(s) in question, and the ALJ or the Board finds that evidence admissible, the ALJ or the Board reviews the record as a whole and decide whether the new evidence has the potential to significantly affect the ALJ's or the Board's evaluation of the LCD/NCD provision(s) in question under the reasonableness standard.
(c) If the ALJ or the Board determines that the new evidence does not have the potential to significantly affect the ALJ's or the Board's evaluation of the LCD/ NCD provision(s) in question under the reasonableness standard, this evidence is included in the review record, and the review goes forward to a decision on the merits.
(d) If the ALJ or the Board determines that the new evidence has the potential to significantly affect the ALJ's or the Board's evaluation of the LCD or NCD provision(s) in question under the reasonableness standard, then the ALJ or the Board-
(1) Stays the proceedings and ensures that the contractor or CMS, whichever is appropriate, has a copy of the new evidence for its examination; and
(2) Allows the contractor/CMS 10 days, generally, to examine the new
evidence, and to decide whether the contractor or CMS initiates a reconsideration.
(e) If the contractor or CMS informs the ALJ or the Board by the end of the 10 days that a reconsideration is initiated, and then the ALJ or the Board-
(1) Continues the stay in proceedings: and
(2) Sets a reasonable timeframe, not more than 90 days, by which the contractor or CMS completes the reconsideration.
(f) The ALJ or Board lifts the stay in proceedings and continues the review on the challenged provision(s) of the original LCD or NCD, including the new evidence in the review record, if the contractor or CMS-
(1) Informs the ALJ or Board that a reconsideration is not initiated; or
(2) The 90-day reconsideration timeframe is not met.
(g) If an LCD or NCD is reconsidered and revised within the timeframe allotted by the ALJ or Board, then the revised LCD or NCD and any supplement to the LCD or NCD record is forwarded to the ALJ or the Board and all parties and the review proceeds on the LCD or NCD.

## Subpart D-Review of an LCD

§426.400 Procedure for filing an acceptable complaint concerning a provision (or provisions) of an LCD.
(a) The complaint. An aggrieved party may initiate a review of an LCD by filing a written complaint with the office designated by CMS on the Medicare Web site, http://www.medicare.gov/ coverage/static/appeals.asp.
(b) Timeliness of a complaint. An LCD complaint is not considered timely unless it is filed with the office designated by CMS within-
(1) 6 months of the issuance of a written statement from each aggrieved party's treating practitioner, in the case of aggrieved parties who choose to file an LCD challenge before receiving the service; or
(2) 120 days of the initial denial notice, in the case of aggrieved parties who choose to file an LCD challenge after receiving the service.
(c) Components of a valid complaint. A complaint must include the following:
(1) Beneficiary-identifying information:
(i) Name.
(ii) Mailing address.
(iii) State of residence, if different from mailing address.
(iv) Telephone number, if any.
(v) Health Insurance Claim number, if applicable.
(vi) E-mail address, if applicable.
(2) If the beneficiary has a
representative, the representativeidentifying information must include the following:
(i) Name.
(ii) Mailing address.
(iii) Telephone number.
(iv) E-mail address, if any.
(v) Copy of the written authorization
to represent the beneficiary.
(3) Treating physician written statement. A copy of a written statement from the treating physician that the beneficiary needs the service that is the subject of the LCD. This statement may be in the form of a written order for the service or other documentation from the beneficiary's medical record (such as progress notes or discharge summary) indicating that the beneficiary needs the service.
(4) LCD-identifying information:
(i) Name of the contractor using the LCD.
(ii) Title of LCD being challenged.
(iii) The specific provision (or provisions) of the LCD adversely affecting the aggrieved party.
(5) Aggrieved party statement. A statement from the aggrieved party explaining what service is needed and why the aggrieved party thinks that the provision(s) of the LCD is (are) not valid under the reasonableness standard.
(6) Clinical or scientific evidence. (i) Copies of clinical or scientific evidence that support the complaint and an explanation for why the aggrieved party thinks that this evidence shows that the LCD is not reasonable.
(ii) Any documents or portions of documents that include proprietary data must be marked "proprietary data," and include a legal basis for that assertion.
(iii) Proprietary data submitted by a manufacturer concerning a drug or device for which the manufacturer has submitted information to the Food and Drug Administration, must be considered and given substantive weight only when supported by an affidavit certifying that the submission contains true and correct copies of all data submitted by the manufacturer to the Food and Drug Administration in relation to that drug or device.
(d) Joint complaints--(1) Conditions for a joint complaint. Two or more aggrieved parties may initiate the review of an LCD by filing a single written complaint with the ALJ if all of the following conditions are met:
(i) Each aggrieved party named in the joint complaint has a similar medical condition or there are other bases for combining the complaints.
(ii) Each aggrieved party named in the joint complaint is filing the complaint
in regard to the same provision(s) of the same LCD.
(2) Components of a valid joint complaint. A joint complaint must contain the following information:
(i) The beneficiary-identifying information described in paragraph (c)(1) of this section for each aggrieved party named in the joint complaint.
(ii) The LCD-identifying information described in paragraph (c)(2) of this section.
(iii) The documentation described in paragraphs (c)(3) and (c)(4) of this section.
(3) Timeliness of a joint complaint. Aggrieved parties, who choose to seek review of an LCD-
(i) Before receiving the service, must file with the ALJ a joint complaint within 6 months of the written statement from each aggrieved party's treating physician.
(ii) After receiving the service, must file with the ALJ a complaint within 120 days of each aggrieved party's initial denial notice.
§426.403 Submitting new evidence once an acceptable complaint is filed.

Once an acceptable complaint is filed, the aggrieved party may submit additional new evidence without withdrawing the complaint until the ALJ closes the record.

## §426.405 Authority of the ALJ.

(a) An ALJ conducts a fair and impartial hearing, avoids unnecessary delay, maintains order, and ensures that all proceedings are recorded.
(b) An ALJ defers only to reasonable findings of fact, reasonable interpretations of law, and reasonable applications of fact to law by the Secretary.
(c) The ALJ has the authority to do any of the following:
(1) Review complaints by an aggrieved party (or aggrieved parties).
(2) Dismiss complaints that fail to comply with $\S 426.400$.
(3) Set and change the date, time, and place of a hearing upon reasonable notice to the parties.
(4) Continue or recess a hearing for a reasonable period of time.
(5) Hold conferences to identify or simplify the issues, or to consider other matters that may aid in the expeditious disposition of the proceeding.
(6) Consult with scientific and clinical experts on his or her own motion concerning clinical or scientific evidence.
(7) Set schedules for submission of exhibits and written reports of experts.
(8) Administer oaths and affirmations.
(9) Examine witnesses.
(10) Issue subpoenas requiring the attendance of witnesses at hearings as permitted by this part.
(11) Issue subpoenas requiring the production of existing documents before, and relating to, the hearing as permitted by this part.
(12) Rule on motions and other procedural matters.
(13) Stay the proceedings in accordance with $\$ 426.340$.
(14) Regulate the scope and timing of documentary discovery as permitted by this part.
(15) Regulate the course of a hearing and the conduct of representatives, parties, and witnesses.
(16) Receive, rule on, exclude, or limit evidence, as provided in §426.340.
(17) Take official notice of facts, upon motion of a party.
(18) Decide cases, upon the motion of a party, by summary judgment when there is no disputed issue of material fact.
(19) Conduct any conference, argument, or hearing in person or, upon agreement of the parties, by telephone, picture-tel, or any other means.
(20) Issue decisions.
(21) Exclude a party from an LCD review for failure to comply with an ALJ order or procedural request without good cause shown.
(22) Stay the proceedings for a reasonable time when all parties voluntarily agree to mediation or negotiation, and provide mediation services upon request.
(d) The ALJ does not have authority to do any of the following under this part:
(1) Conduct an LCD review or conduct LCD hearings on his or her own motion or on the motion of a nonaggrieved party.
(2) Issue a decision based on any new evidence without following §426.340, regarding procedures for review of new evidence.
(3) Review any decisions by contractors to develop a new or revised LCD.
(4) Conduct a review of any draft, retired, archived, template, or suggested LCDs.
(5) Conduct a review of any policy that is not an LCD, as defined in $\$ 400.202$ of this chapter.
(6) Conduct a review of any NCD according to section $1869(f)(1)(A)(i)$ of the Act.
(7) Conduct a review of the merits of an unacceptable LCD complaint as discussed in §426.410.
(8) Allow participation by individuals or entities other than-
(i) The aggrieved party and/or his/her representative;
(ii) CMS and/or the contractor; and
(iii) Experts called by the parties or the ALJ.
(9) Compel the parties to participate in a mediation process or to engage in settlement negotiations.
(10) Deny a request for withdrawal of a complaint by an aggrieved party.
(11) Compel the contractor to conduct studies, surveys, or develop new information to support an LCD record.
(12) Deny a contractor the right to reconsider, revise or retire an LCD.
(13) Find invalid applicable Federal statutes, regulations, rulings, or NCDs.
(14) Enter a decision specifying terms to be included in an LCD.

## §426.406 Exparte contacts.

No party or person (except employees of the ALJ's office) communicates in any way with the ALJ on any substantive matter at issue in a case, unless on notice and opportunity for all parties to participate. This provision does not prohibit a person or party from inquiring about the status of a case or asking routine questions concerning administrative functions or procedures.
§426.410 Docketing and evaluating the acceptability of LCD complaints.
(a) Docketing the complaint. The office designated by CMS does the following upon receiving a complaint regarding an LCD:
Dockets the complaint.
Determines whether the complaint is-
(i) The first challenge to a particular LCD; or
(ii) Related to a pending LCD review.
(3) Forwards the complaint to the ALJ that conducts the review. In cases related to pending reviews, the complaint generally is forwarded to the ALJ who is conducting the review.
(b) Evaluating the acceptability of the complaint. The ALJ assigned to the LCD review determines if the complaint is acceptable by confirming all of the following:
(1) The complaint is being submitted by an aggrieved party or, in the case of a joint complaint, that each individual named in the joint complaint is an aggrieved party. (In determining if a complaint is acceptable, the ALJ assumes that the facts alleged by the treating physician's documentation regarding the aggrieved party's (or parties') clinical condition are true.)
(2) The complaint meets the requirements for a valid complaint in $\$ 426.400$ and does not challenge one of the documents in §426.325(b).
(c) Unacceptable complaint. (1) If the ALJ determines that the complaint is unacceptable, the ALJ must provide the
aggrieved party (or parties) one opportunity to amend the unacceptable complaint.
(2) If the aggrieved party (or parties)
fail(s) to submit an acceptable amended complaint within a reasonable timeframe as determined by the ALJ, the ALJ must issue a decision dismissing the unacceptable complaint.
(3) If a complaint is determined unacceptable after one amendment, the beneficiary is precluded from filing again for 6 months after being informed that it is unacceptable.
(d) Acceptable complaint. If the ALJ determines that the complaint (or amended complaint) is acceptable, the ALJ does the following:
(1) Sends a letter to the aggrieved party (or parties) acknowledging the complaint and informing the aggrieved party (or parties) of the docket number and the deadline for the contractor to produce the LCD record.
(2) Forwards a copy of the complaint, any evidence submitted in the complaint, and the letter described in paragraph (d)(1) of this section to the applicable contractor and CMS.
(3) Requires CMS or the contractor to send a copy of the LCD record to the ALJ and all parties to the LCD review within 30 days of receiving the ALJ's letter, the copy of the complaint, and any associated evidence, subject to extension for good cause shown.
(e) Consolidation of complaints regarding an LCD-(1) Criteria for consolidation. If a review is pending regarding a particular LCD provision(s) and no decision has been issued ending the review, and a new acceptable complaint is filed, the ALJ consolidates the complaints and conducts a consolidated LCD review if all of the following criteria are met:
(i) The complaints are in regard to the same provision(s) of the same LCD or there are other bases for consolidating the complaints.
(ii) The complaints contain common questions of law, common questions of fact, or both.
(iii) Consolidating the complaints does not unduly delay the ALJ's decision.
(2) Decision to consolidate complaints. If an ALJ decides to consolidate complaints, the ALJ does the following:
(i) Provides notification that the LCD review is consolidated and informs all parties of the docket number of the consolidated review.
(ii) Makes a single record of the proceeding.
(iii) Considers the relevant evidence introduced in each LCD complaint as introduced in the consolidated review.
(3) Decision not to consolidate complaints. If an ALJ decides not to consolidate complaints, the ALJ conducts separate LCD reviews for each complaint.

## §426.415 CMS' role in the LCD review.

CMS may provide to the ALJ, and all parties to the LCD review, information identifying the person who represents the contractor or CMS, if necessary, in the LCD review process.

## §426.416 Roie of Medicare Managed Care Organizations (MCOs) and State agencies in the LCD review.

Medicare MCOs and Medicaid State agencies have no role in the LCD review process. However, once the ALJ has issued its decision, the decision is made available to all Medicare MCOs and State agencies.

## §426.417 Contractor's statement <br> regarding new evidence.

(a) The contractor may review any new evidence that is submitted, regardless of whether the ALJ has stayed the proceedings, including but not limited to-
(1) New evidence submitted with the initial complaint;
(2) New evidence submitted with an amended complaint;
(3) New evidence produced during discovery;
(4) New evidence produced when the ALJ consults with scientific and clinical experts; and
(5) New evidence presented during any hearing.
(b) The contractor may submit a statement regarding whether the new evidence is significant under $\S 426.340$, within such deadline as the ALJ may set.
§ 426.418 LCD record furnished to aggrieved party.
(a) Elements of a contractor's LCD record furnished to the aggrieved party. Except as provided in paragraph (b) of this section, the contractor's LCD record consists of any document or material that the contractor considered during the development of the LCD, including, but not limited to, the following:
(1) The LCD being challenged.
(2) Any medical evidence considered on or before the date the LCD was ${ }^{\text {. }}$ issued, including, but not limited to, the following:
(i) Scientific articles.
(ii) Technology assessments.
(iii) Clinical guidelines.
(iv) Statements from clinical experts, medical textbooks, claims data, or other indication of medical standard of practice.
(3) Comment and Response Document (a summary of comments received by
the contractor concerning the draft LCD).
(4) An index of documents considered that are excluded under paragraph (b) of this section.
(b) Elements of the LCD record not furnished to the aggrieved party. The LCD record furnished to the aggrieved party does not include the following:
(1) Proprietary data or privileged information.
(2) Any new evidence.

## §426.419 LCD record furnished to the ALJ.

The LCD record furnished to the ALJ includes the following:
(a) Documents included in §426.418(a).
(b) Privileged information and proprietary data considered that must be filed with the ALJ under seal.

## §426.420 Retiring or revising an LCD

 under review.(a) A contractor may retire an LCD or LCD provision under review before the date the ALJ issues a decision regarding that LCD. Retiring an LCD or LCD provision under review has the same effect as a decision under $\S 426.460$ (b).
(b) A contractor may revise an LCD under review to remove or amend the LCD provision listed in the complaint through the reconsideration process before the date the ALJ issues a decision regarding that LCD. Revising an LCD under review to remove the LCD provision in question has the same effect as a decision under $\S 426.460$ (b).
(c) A contractor must notify the ALJ within 48 hours of -
(1) Retiring an LCD or LCD provision that is under review; or
(2) Issuing a revised version of the LCD that is under review.
(d) If the contractor issues a revised LCD, the contractor forwards a copy of the revised LCD to the ALJ.
(e) The ALJ must take the following actions upon receiving a notice that the contráctor has retired or revised an LCD under review:
(1) If, before the ALJ issues a decision, the ALJ receives notice that the contractor has retired the LCD or revised the LCD to completely remove the provision in question, the ALJ must dismiss the complaint and inform the aggrieved party(ies) who sought the review that he or she or they receive individual claim review without the retired/withdrawn provision(s).
(2) If, before the ALJ issues a decision, the ALJ receives notice that the contractor has revised the LCD provision in question but has not removed it altogether, the ALJ must continue the review based on the
revised LCD. In this case, the contractor must send a copy of the supplemental record to the ALJ and all parties. In that circumstance, the ALJ permits the aggrieved party to respond to the revised LCD and supplemental record.
§426.423 Withdrawing a complaint regarding an LCD under review.
(a) Circumstance under which an aggrieved party may withdraw a complaint regarding an LCD. An aggrieved party who filed a complaint regarding an LCD may withdraw the complaint before the ALJ issues a decision regarding that LCD. The aggrieved party may not file another complaint concerning the same coverage determination for 6 months.
(b) Process for an aggrieved party withdrawing a complaint regarding an $L C D$. To withdraw a complaint regarding an LCD, the aggrieved party who filed the complaint must send a written withdrawal notice to the ALJ (see §426.400), CMS (if applicable), and the applicable contractor. Supplementing an acceptable complaint with new evidence does not constitute a withdrawal of a complaint, as described in § 426.403.
(c) Actions the ALJ must take upon receiving a notice announcing the intent to withdraw a complaint regarding an LCD-(1) LCD reviews involving one aggrieved party. If the ALJ receives a withdrawal notice regarding an LCD before the date the ALJ issued a decision regarding that LCD, the ALJ issues a decision dismissing the complaint under § 426.444 and informs the aggrieved party that he or she may not file another complaint to the same coverage determination for 6 months.
(2) LCD reviews involving joint complaints. If the ALJ receives a notice from an aggrieved party who is named in a joint complaint withdrawing a complaint regarding an LCD before the date the ALJ issued a decision regarding that LCD, the ALJ issues a decision, dismissing only that aggrieved party from the complaint under § 426.444 . The ALJ continues the LCD review if there is one or more aggrieved party who does not withdraw from the joint complaint.
(3) Consolidated $L C D$ reviews. If the ALJ receives a notice from an aggrieved party who is part of a consolidated LCD review withdrawing a complaint regarding an LCD before the date the ALJ issued a decision regarding that LCD, the ALJ removes that aggrieved party from the consolidated LCD review and issues a decision dismissing that aggrieved party's complaint under §426.444. The ALJ continues the LCD review if there are one or more
aggrieved parties who does not withdraw from the joint complaint.

## §426.425 LCD review.

(a) Opportunity for the aggrieved party, after his or her review of the LCD record, to state why the LCD is not valid. Upon receipt of the contractor's LCD record, the aggrieved party files a statement explaining why the contractor's LCD record is not complete, or not adequate to support the validity of the LCD under the reasonableness standard. This statement must be submitted to the ALJ and to the contractor, or CMS, as appropriate, within 30 days (or within the additional time as allowed by the ALJ for good cause shown) of the date the aggrieved party receives the contractor's LCD record.
(b) Contractor response. The contractor has 30 days after receiving the aggrieved party's statement to submit a response to the ALJ in order to defend the LCD.
(c) ALJ evaluation. (1) After the aggrieved party files a statement and the contractor responds, as described in §426.425(a) and §426.425(b), or the time for filing has expired, the ALJ applies the reasonableness standard to determine whether the LCD record is complete and adequate to support the validity of the LCD.
(2) Issuance of a decision finding the record complete and adequate to support the validity of the LCD ends the review process.
(3) If the ALJ determines that the LCD record is not complete and adequate to support the validity of the LCD, the ALJ permits discovery and the taking of evidence in accordance with $\S 426.432$ and $\S 426.440$ and evaluates the LCD in accordance with §426.431.
(d) The process described in paragraphs (a), (b), and (c) of this section applies when an LCD record has been supplemented, except that discovery and the taking of evidence are not repeated. The period for the aggrieved party to file a statement begins when the aggrieved party receives the supplement.
§426.431 ALJ's review of the LCD to apply the reasonableness standard.
(a) Required steps. To review the provision(s) listed in the aggrieved party's complaint based on the reasonableness standard, an ALJ must:
(1) Confine the LCD review to the provision(s) of the LCD raised in the aggrieved party's complaint.
(2) Conduct a hearing, unless the matter can be decided on the written record.
(3) Close the LCD review record to the taking of evidence.
(4) Treat as precedential any previous Board decision under § 426.482 that involves the same LCD provison(s), same specific issue and facts in question, and the same clinical conditions.
(5) Issue a decision as described in §426.447.
(b) Optional steps. The ALJ may do the following to apply the reasonableness standard to the provision(s) listed in the aggrieved party's complaint:
(1) Consult with appropriate scientific or clinical experts concerning evidence.
(2) Consider any previous ALJ decision made under §426.447 regarding the same provision(s) of the LCD under review and for the same clinical conditions.
(c) Authority for ALJs in LCD reviews when applying the reasonableness standard. In applying the reasonableness standard to a provision (or provisions) of an LCD, the ALJ must follow all applicable laws, regulations, rulings, and NCDs.

## §426.432 Discovery.

(a) General rule. If the ALJ orders discovery, the ALJ must establish a reasonable timeframe for discovery.
(b) Proiective order-(1) Request for a protective order. Any party receiving a discovery request may file a motion for a protective order before the date of production of the discovery.
(2) The ALJ granting of a protective order. The ALJ may grant a motion for a protective order if (s)he finds that the discovery sought-
(i) Is irrelevant or unduly repetitive;
(ii) Is unduly costly or burdensome; or
(iii) Unduly delays the proceeding.
(c) Types of discovery available. A party may obtain discovery via a request for the production of documents, and/or via the submission of up to 10 written interrogatory questions, relating to a specific LCD.
(d) Types of documents. For the purpose of this section, the term "documents" includes relevant information, reports, answers, records, accounts, papers, and other data and documentary evidence. Nothing contained in this section is interpreted to require the creation of a document.
(e) Types of discovery not available. Requests for admissions, depositions, or any other forms of discovery, other than those permitted under paragraph (c) of this section, are not authorized.
(f) Privileged information and proprietary data. The ALJ must not, under any circumstance, order the disclosure of privileged information or proprietary data filed under seal without the consent of the party who
possesses the right to protection of the information.
(g) Notification. The ALJ notifies all parties in writing when the discovery period closes.

## §426.435 Subpoenas.

(a) Purpose of a subpoena. A
subpoena requires the attendance of an individual at a hearing and may also require a party to produce evidence authorized under $\S 426.440$ at or before the hearing.
(b) Filing a motion for a subpoena. A party seeking a subpoena must file a written motion with the ALJ not less than 30 days before the date fixed for the hearing. The motion must do all of the following:
(1) Designate the witnesses.
(2) Specify any evidence to be produced.
(3) Describe the address and location with sufficient particularity to permit the witnesses to be found.
(4) State the pertinent facts that the party expects to establish by the witnesses or documents and whether other evidence may establish without the use of a subpoena.
(c) Response to a motion for a subpoena. Within 15 days after the written motion requesting issuance of a subpoena is served on all parties, any party may file an opposition to the motion or other response.
(d) Extension for good cause shown. The ALJ may modify the deadlines specified in paragraphs (b) and (c) of this section for good cause shown.
(e) Motion for a subpoena granted. If the ALJ grants a motion requesting issuance of a subpoena, the subpoena must do the following:
(1) Be issued in the name of the ALJ.
(2) Include the docket number and title of the LCD under review.
(3) Provide notice that the subpoena is issued according to sections 1872 and 205(d) and (e) of the Act.
(4) Specify the time and place at which the witness is to appear and any evidence the witness is to produce.
(f) Delivery of the subpoena. The party seeking the subpoena serves it by personal delivery to the individual named, or by certified mail return receipt requested, addressed to the individual at his or her last dwelling place or principal place of business.
(g) Motion to quash a subpoena. The individual to whom the subpoena is directed may file with the ALJ a motion to quash the subpoena within 10 days after service.
(h) Refusal to obey a subpoena. The exclusive remedy for contumacy by, or refusal to obey, a subpoena duly served upon any person is specified in section

205(e) of the Act (42 U.S.C. 405(e)) except that any reference to the
"Commissioner of Social Security" shall be considered a reference to the "Secretary."

## §426.440 Evidence.

(a) Except as provided in this part, the ALJ is not bound by the Federal Rules of Evidence. However, the ALJ may apply the Federal Rules of Evidence when appropriate, for example, to exclude unreliable evidence.
(b) The ALJ must exclude evidence that (s)he determines is clearly irrelevant, immaterial, or unduly repetitive.
(c) The ALJ may accept privileged information or proprietary data, but must maintain it under seal.
(d) The ALJ may permit the parties to introduce the testimony of expert witnesses on stientific and clinical issues, rebuttal witnesses, and other relevant evidence. The ALJ may require that the testimony of expert witnesses be submitted in the form of a written report, accompanied by the curriculum vitae of the expert preparing the report.
(e) Experts submitting reports must be available for cross-examination at an evidentiary hearing upon request of the ALJ or a party to the proceeding, or the reports will be excluded from the record.
(f) Except as set forth in paragraph (c) of this section or unless otherwise ordered by the ALJ for good cause shown, all documents and other evidence offered or taken for the record are open to examination by all parties.

## §426.444 Dismissals for cause.

(a) The ALJ may, at the request of any party, or on his or her own motion, dismiss a complaint if the aggrieved party fails to do either of the following:
(1) Attend or participate in a prehearing conference (the pre-hearing may be conducted by telephone) or hearing without good cause shown.
(2) Comply with a lawful order of the ALJ without good cause shown.
(b) The ALJ must dismiss any complaint concerning LCD provision(s) if the following conditions exist:
(1) The ALJ does not have the authority to rule on that provision under §426.405(d).
(2) The complaint is not timely. (See §426.400(b).)
(3) The complaint is not filed by an aggrieved party.
(4) The complaint is filed by an individual who fails to provide an adequate statement of need for the service from the treating physician.
(5) The complaint challenges a provision or provisions of an NCD. (See
§426.405, regarding the authority of the

## ALJ.)

(6) The contractor notifies the ALJ that the LCD provision(s) is (are) no longer in effect.
(7) The aggrieved party withdraws the complaint. (See §426.423 for requirements related to withdrawing a complaint regarding an LCD under review.)

## §426.445 Witness fees.

(a) A witness testifying at a hearing before an ALJ receives the same fees and mileage as witnesses in Federal district courts of the United States. If the witness qualifies as an expert, he or she is entitled to an expert witness fee. Witness fees are paid by the party seeking to present the witness.
(b) If an ALJ requests expert testimony, the appropriate office overseeing the ALJ is responsible for paying all applicable fees and mileage, unless the expert waives payment.

## §426.446 Record of hearing.

The ALJ must ensure that all hearings are open to the public and are electronically, mechanically or stenographically reported. Except for privileged information and proprietary data that are filed under seal, all evidence upon which the ALJ relies for decision must be admitted into the public record. All medical reports, exhibits, and any other pertinent document, either in whole or in material part, must be offered, marked for identification, and retained in the case record.

## §426.447 Issuance and notification of an

 ALJ's decision.An ALJ must issue to all parties to the LCD review, within 90 days of closing the LCD review record to the taking of evidence, one of the following:
(a) A written decision, including a description of appeal rights.
(b) A written notification stating that a decision is pending, and an approximate date of issuance for the decision.

## §426.450 Mandatory provisions of an

## ALJ's decision.

(a) Findings. An ALJ's decision must include one of the following:
(1) A determination that the provision of the LCD is valid under the reasonableness standard.
(2) A determination that the provision of the LCD is not valid under the reasonableness standard.
(3) A statement dismissing the complaint regarding the LCD and a rationale for the dismissal.
(4) A determination that the LCD record is complete and adequate to
support the validity of the LCD provisions under the reasonableness standard.
(b) Other information. An ALJ's decision must include all of the following:
(1) The date of issuance.
(2) The docket number of the LCD review.
(3) A statement as to whether the aggrieved party has filed a claim for the service(s) named in the complaint, the date(s)-of-service, and the disposition, if known.
(4) A basis for concluding that the LCD was or was not valid based on the application of the reasonableness standard to the record before the ALJ, including the contractor's:
(i) Findings of fact.
(ii) Interpretations of law.
(iii) Applications of fact to law.
(5) A summary of the evidence reviewed. If proprietary or privileged data were submitted under seal, the decision must state whether the data were material and what role they played in the determination, but without disclosing the substance or contents of the evidence under seal. A separate statement of the rationale for the ALJ's treatment of the sealed evidence must be prepared and kept under seal itself. If the ALJ decision is appealed to the Board, this statement must be provided to the Board under seal.
(6) A statement regarding appeal rights.
§426.455 Prohibited provisions of an ALJ's decision.
An ALJ's decision may not do any of the following:
(a) Order CMS or its contractors to add any language to a provision or provisions of an LCD.
(b) Order CMS or its contractors to pay a specific claim.
(c) Set a time limit for CMS or its contractors to establish a new or revised LCD.
(d) Review or evaluate an LCD other than the LCD under review.
(e) Include a requirement for CMS or its contractors that specifies payment, coding, or systems changes for an LCD, or deadlines for implementing these types of changes.
(f) Order or address how a contractor(s) must implement an LCD.

## §426.457 Optional provisions of an ALJ's decision.

When appropriate, the ALJ may limit a decision holding invalid a specific provision(s) of an LCD to specific clinical indications and for similar conditions.
§426.458 ALJ's LCD review record.
(a) Elements of the ALJ's LCD review record furnished to the public. Except as provided in paragraph (b) of this section, the ALJ's LCD review record consists of any document or material that the ALJ compiled or considered during the LCD review, including, but not limited to, the following:
(1) The LCD complaint.
(2) The LCD and LCD record.
(3) The supplemental LCD record, if applicable.
(4) Transcripts of record.
(5) Any other relevant evidence gathered under § 426.440.
(6) The ALJ's decision.
(b) Elements of the ALJ's LCD review record furnished to the Board under seal. The ALJ's review record must include, under seal, any proprietary data or privileged information maintained under seal, and such data or information must not be included in the review record furnished to the public.

## §426.460 Effect of an ALJ's decision.

(a) Valid under the reasonableness standard. If the ALJ finds that the provision or provisions of the LCD named in the complaint is (are) valid under the reasonableness standard, the aggrieved party or parties may appeal that (those) part(s) of the ALJ decision to the Board under §426.465.
(b) Not valid under the reasonableness standard. If the ALJ finds that the provision or provisions of the LCD named in the complaint is (are) invalid under the reasonableness standard, and no appeal is filed by the contractor or CMS under $\S 426.465$ (b), the contractor, the $\mathrm{M}+\mathrm{C}$ organization, or other Medicare managed care organization must provide the following-
(1) Individual claim review. (i) If neither the contractor nor CMS appeals the ALJ decision under $\S 426.425$ (b), and if the party's claim or appeal(s) was previously denied, the contractor, an $\mathrm{M}+\mathrm{C}$ organization or another Medicare managed care organization must reopen the claim of the party who challenged the LCD and adjudicate the claim without using the provision(s) of the LCD that the ALJ found invalid.
(ii) If a revised LCD is issued, the contractor, the M+C organization, and any other Medicare managed care organization within the contractor's jurisdiction uses the revised LCD in reviewing claim or appeal submissions or request for services delivered or services performed on or after the effective date of the revised LCD.
(iii) If the aggrieved party who sought the review has not yet submitted a claim, the contractor adjudicates the
claim without using the provision(s) of the LCD that the ALJ found invalid.
(iv) In either case, the claim and any subsequent claims for the service provided under the same circumstances is adjudicated without using the LCD provision(s) found invalid.
(2) Coverage determination relief. If neither the contractor nor CMS appeals the ALJ decision under $\S 426.425(\mathrm{~b})$, the contractor implements the ALJ decision within 30 days. Any change in policy applies prospectively to requests for service or claims filed with dates of service after the implementation of the ALJ decision.

## §426.462 Notice of an ALJ's decision.

After the ALJ has made a decision regarding an LCD complaint, the ALJ sends a written notice of the decision to each party. The notice must-
(a) State the outcome of the review; and
(b) Inform each party to the determination of his or her rights to seek further review if he or she is dissatisfied with the determination, and the time limit under which an appeal must be requested.

## §426.463 Future new or revised LCDs.

The contractor may not reinstate an LCD provision(s) found to be unreasonable unless the contractor has a different basis (such as additional evidence) than what the ALJ evaluated.

## §426.465 Appealing part or ali of an ALJ's decision.

(a) Circumstances under which an aggrieved party may appeal part or all of an ALJ's decision. An aggrieved party (including one or more aggrieved parties named in a joint complaint and an aggrieved party who is part of a consolidated LCD review) may appeal to the Board any part of an ALJ's decision that does the following:
(1) States that a provision of an LCD is valid under the reasonableness standard; ог
(2) Dismisses a complaint regarding an LCD (except as prohibited in paragraph (b) of this section).
(b) Circumstance under which a contractor or CMS may appeal part or all of an ALJ's decision. A contractor or CMS may appeal to the Board any part of an ALJ's decision that states that a provision (or provisions) of an LCD is (are) unreasonable.
(c) Stay of an implementation pending appeal. (1) If an ALJ's decision finds a provision or provisions of an LCD unreasonable, an appeal by a contractor or CMS stays implementation as described under § 426.460 (b) until the Board issues a final decision.
(2) The appeal request must be submitted to the Board in accordance with paragraph (e) of this section.
(d) Circumstances under which an ALJ's decision may not be appealed. An ALJ's decision dismissing a complaint is not subject to appeal in either of the following circumstances:
(1) The contractor has retired the LCD provision(s) under review.
(2) The aggrieved party who filed the complaint has withdrawn the complaint.
(e) Receipt of the appeal by the Board. Unless there is good cause shown, an appeal described in paragraphs (a) or (b) of this section must be filed with the Board within 30 days of the date the ALJ's decision was issued.
(f) Filing an appeal. (1) To file an appeal described in paragraph (a) of this section, an aggrieved party, who sought LCD review, a contractor, or CMS must send the following to the Board:
(i) The full names and addresses of the parties, including the name of the LCD.
(ii) The date of issuance of the ALJ's decision.
(iii) The docket number that appears on the ALJ's decision.
(iv) A statement identifying the part(s) of the ALJ's decision that are being appealed.
(2) If an appeal described in paragraph (a) of this section is filed with the Board later than the date described in paragraph (c) of this section, it must include a rationale stating why the Board must accept the late appeal.
(3) An appeal described in paragraph (a) of this section must include a statement explaining why the ALJ's decision should be reversed.
§426.468 Decision to not appeal an ALJ's decision.
(a) Failure to timely appeal without good cause shown waives the right to challenge any part(s) of the ALJ's decision under $\S 426.465$.
(b) Unless the Board finds good cause shown for late filing, an untimely appeal is dismissed.
(c) If a party does not timely appeal any part(s) of the ALJ's decision on an LCD review to the Board, as provided in this subpart, then the ALJ's decision is final and not subject to further review.
§426.470 Board's role in docketing and evaluating the acceptability of appeals of ALJ decisions.
(a) Docketing the appeal. The Board does the following upon receiving an appeal of part or all of an ALJ's decision:
(1) Dockets the appeal either separately or with similar appeals.
(2) Assigns a docket number.
(b) Evaluating the acceptability of the appeal. The Board determines if the appeal is acceptable by confirming that the appeal meets all of the criteria in §426.465.
(c) Unacceptable appeal. If the Board determines that an appeal is unacceptable, the Board must dismiss the appeal.
(d) Acceptable appeal. If the Board determines that an appeal is acceptable, the Board does the following:
(1) Sends a letter to the appellant to acknowledge that the appeal is acceptable, and informs them of the docket number.
(2) Forwards a copy of the appeal and the letter described in paragraph (d)(1) of this section to all parties involved in the appeal.
(3) Requires the ALJ to send a copy of the ALJ's LCD review record (maintaining any sealed documents) to the Board and a copy of the public record to all parties involved in the appeal.
(e) No participation as amicus curiae. The Board may not allow participation by amicus participants in the review of an LCD.
§426.476 Board review of an ALJ's decision.
(a) Review steps. If the Board determines that an appeal is acceptable, the Board-
(1) Permits the party that did not file the appeal an opportunity to respond to the appeal;
(2) Hears oral argument (which may be held by telephone) if the Board determines that oral argument would be helpful to the Board's review of the ALJ decision;
(3) Reviews the LCD review record and the parties' arguments; and
(4) Issues a written decision either upholding, modifying, or reversing the ALJ decision, or remanding the case to the ALJ for further proceedings.
(b) Standard of review. (1) In general. The Board determines whether the ALJ decision contains any material error, including any failure to properly apply the reasonableness standard.
(2) If the ALJ erred in determining that the contractor's record was complete and adequate to support the validity of the LCD, the Board remands the case to the ALJ for discovery and the taking of evidence.
(3) If a party alleges a prejudicial error of procedure, and the Board determines that such an error was made, the Board may remand the case to the ALJ for further proceedings consistent with the Board decision or may take other appropriate steps to correct the procedural error.
(4) Harmless error is not a basis for reversing an ALJ decision.
(c) Scope of review. In reaching its conclusions, the Board is bound by applicable laws, regulations, and NCDs.
(d) Dismissal as moot. The Board dismisses an appeal by an aggrieved party of an ALJ decision finding that an LCD was valid if the contractor notifies the Board that it has retired the LCD or revised the LCD to remove the LCD provision in question.

## §426.478 Retiring or revising an LCD during the Board's review of an ALJ's decision.

A contractor may retire or revise an LCD during the Board's review of an ALJ's decision using the same process described in $\S 426.420$. If an LCD is retired or revised to remove completely the challenged provision(s), the aggrieved party who sought the review is entitled to individual claim review provided at §426.488(b).

## §426.480 Withdrawing an appeal of an

 ALJ's decision.(a) Withdrawal of an appeal of an ALJ's decision. A party who filed an appeal of an ALJ's decision may withdraw the appeal before the Board issues a decision regarding the ALJ's decision.
(b) Process of withdrawing an appeal of an ALJ's decision. To withdraw an appeal of an ALJ's decision, the party who filed the appeal must send a written notice announcing the intent to withdraw to the Board and to any other party.
(c) Actions the Board must take upon receiving a notice announcing the intent to withdraw an appeal of an ALJ's decision-(1) Appeals involving one aggrieved party, or initiated by CMS or a contractor. If the Board receives a notice withdrawing an appeal of an ALJ's decision before the Board has issued its decision, the Board must issue a decision dismissing the appeal.
(2) Appeals involving joint complaints. If the Board receives a notice withdrawing an appeal from an aggrieved party who is named in a joint appeal before the Board issues its decision, the Board must issue a decision dismissing only that aggrieved party from the appeal. The Board must continue its review of the ALJ's decision for the remaining aggrieved party or parties.

## §426.482 Issuance and notification of a Board decision.

The Board must issue a written decision, including a description of appeal rights, to all parties to the review of the ALJ decision.
§426.484 Mandatory provisions of a Board decision.
(a) Findings. A Board decision must include at least one of the following:
(1) A statement upholding the part(s) of the ALJ decision named in the appeal.
(2) A statement reversing the part(s) of the ALJ decision named in the appeal.
(3) A statement modifying the part(s) of the ALJ decision named in the appeal.
(4) A statement dismissing the appeal of an ALJ decision and a rationale for the dismissal.
(b) Other information. A Board decision must include all of the following:
(1) The date of issuance.
(2) The docket number of the review of the ALJ decision.
(3) A summary of the ALJ's decision.
(4) A rationale for the basis of the Board's decision.
§426.486 Prohibited provisions of a Board decision.

A Board decision must not do any of the following:
(a) Order CMS or its contractors to add any language to a provision or provisions of an LCD.
(b) Order CMS or its contractors to pay a specific claim.
(c) Set a time limit to establish a new or revised LCD.
(d) Review or evaluate an LCD other than the LCD named in the ALJ's decision.
(e) Include a requirement for CMS or its contractors that specifies payment, coding, or system changes for an LCD or deadlines for implementing these changes.
(f) Order CMS or its contractors to implement an LCD in a particular manner.
§426.487 Board's record on appeal of an ALJ's decision.
(a) Elements of the Board's LCD review record furnished to the public. Except as provided in paragraph (b) of this section, the Board's LCD review record consists of any document or material that the Board compiled or considered during an LCD review, including, but not limited to, the following:
(1) The LCD complaint.
(2) The LCD and LCD record.
(3) The supplemental LCD record, if applicable.
(4) Transcripts of record.
(5) Any other relevant evidence gathered under §426.440.
(6) The ALJ's decision.
(7) The Board's decision.
(b) Elements of the Board's LCD appeal record furnished to the court
under seal. The Board's LCD review record must include, under seal, any proprietary data or privileged information snbmitted and reviewed in the LCD review process, and that data or information must not be included in the review record furnished to the public, but the information must be maintained, under seal, by the Board.
(c) Protective order. In any instance where proprietary data or privileged information is used in the LCD process and a court seeks to obtain or require disclosure of any proprietary data or privileged information contained in the LCD record, CMS or the Department will seek to have a protective order issued for that information, as appropriate.

## §426.488 Effect of a Board decision.

(a) The Board's decision upholds an ALJ decision that an LCD is valid or reverses an $A L J$ decision that an $L C D$ is invalid. If the Board's decision upholds the ALJ decision that an LCD is valid under the reasonableness standard or reverses an ALJ decision that an LCD is invalid, the contractor or CMS-is not required to take any action.
(b) The Board's decision upholds an ALJ determination that the LCD is invalid. If the Board's decision upholds an ALJ determination that the LCD is invalid, then the contractor, the $\mathrm{M}+\mathrm{C}$ organization, or other Medicare managed care organization implements the decision as described in §426.460(b).
(c) The Board's decision reverses a dismissal or an ALJ decision that the LCD is valid. If the Board reverses an ALJ decision dismissing a complaint or holding that an LCD is valid without requiring discovery or the taking of evidence, the Board remands to the ALJ and the LCD review continues. If the Board reverses an ALJ decision holding that an LCD is valid that is reached after the ALJ has completed discovery and the taking of evidence, the Board may remand the case to the ALJ for further proceedings, or the Board may find that the provision(s) of the LCD named in the complaint is (are) invalid under the reasonableness standard, and the contractor, the $\mathrm{M}+\mathrm{C}$ organization, or other Medicare managed care organization provides the relief in §426.460(b).

## §426.489 Board remands.

(a) Notice when case is remanded to the $A L J$. If the Board remands a case to the ALJ, the Board-
(1) Notifies each aggrieved party who sought the LCD review, through his or her representative or at his or her last
known address, the contractor, and CMS of the Board's remand decision; and
(2) Explains why the case is being remanded and the specific actions ordered by the Board.
(b) Action by an ALJ on remand. An ALJ takes any action that is ordered by the Board and may take any additional action that is not inconsistent with the Board's remand order.

## §426.490 Board decision.

A decision by the Board (other than a remand) constitutes a final agency action and is subject to judicial review. Neither the contractor nor CMS may appeal a Board decision.

## Subpart E—Review of an NCD

## §426.500 Procedure for fiiing an

 acceptable complaint concerning a provision (or provisions) of an NCD.(a) The complaint. An aggrieved party may initiate a review of an NCD by filing a written complaint with the Department of Health and Human Services Departmental Appeals Board.
(b) Timeliness of a complaint. An NCD complaint is not considered timely unless it is filed with the Board within-
(1) 6 months of the written statement from each aggrieved party's treating physician, in the case of aggrieved parties who choose to file an NCD challenge before receiving the service; or
(2) 120 days of the initial denial notice, in the case of aggrieved parties who choose to file an NCD challenge after receiving the service.
(c) Components of a valid complaint. A complaint must include the following:
(1) Beneficiary-identifying information:
(i) Name.
(ii) Mailing address.
(iii) State of residence, if different
from mailing address.
(iv) Telephone number, if any.
(v) Health Insurance Claim number, if applicable.
(vi) Email address, if applicable.
(2) If the beneficiary has a representative, the representative's indetifying information must include the following:
(i) Name.
(ii) Address.
(iii) Telephone number.
(iv) E-mail address (if any)
(v) Copy of the written authorization to represent the beneficiary.
(3) Treating physician written statement. A copy of a written statement from the treating physician that the beneficiary needs the service that is the
subject of the NCD. This statement may be in the form of a written order for the service or other documentation from the beneficiary's medical record (such as progress notes or discharge summary) indicating that the beneficiary needs the service.
(4) NCD-identifying information:
(i) Title of NCD being challenged.
(ii) The specific provision or provisions of the NCD adversely affecting the aggrieved party.
(5) Aggrieved party statement. A statement from the aggrieved party explaining what service is needed and why the aggrieved party thinks that the provision(s) of the NCD is (are) not valid under the reasonableness standard.
(6) Clinical or scientific evidence. (i) Copies of clinical or scientific evidence that supports the complaint and an explanation for why the aggrieved party thinks that this evidence shows that the NCD is not reasonable.
(ii) Any documents or portions of documents that include proprietary data must be marked "proprietary data," and include a legal basis for that assertion.
(iii) Proprietary data submitted by a manufacturer concerning a drug or device for which the manufacturer has submitted information to the Food and Drug Administration, must be considered and given substantive weight only when supported by an affidavit certifying that the submission contains true and correct copies of all data submitted by the manufacturer to the Food and Drug Administration in relation to that drug or device.
(d) Joint complaints-(1) Conditions for a joint complaint. Two or more aggrieved parties may initiate the review of an NCD by filing a single written complaint with the Board if all of the following conditions are met:
(i) Each aggrieved party named in the joint complaint has a similar medical condition or there are other bases for combining the complaints.
(ii) Each aggrieved party named in the joint complaint is filing the complaint in regard to the same provision(s) of the same NCD.
(2) Components of $a$ valid joint complaint. A joint complaint must contain the following information:
(i) The beneficiary-identifying information described in paragraph (c)(1) of this section for each aggrieved party named in the joint complaint.
(ii) The NCD-identifying information described in paragraph (c)(2) of this section.
(iii) The documentation described in paragraphs (c)(3) and (c)(4) of this section.
(3) Timeliness of a joint complaint. Aggrieved parties, who choose to seek review of an NCD-
(i) Before receiving the service, must file with the Board a joint complaint within 6 months of the written statement from each aggrieved party's treating physician; or
(ii) After receiving the service, must file with the Board a complaint within 120 days of each aggrieved party's initial denial notice.

## §426.503 Submitting new evidence once an acceptable complaint has been filed.

Once an acceptable complaint has been filed, the aggrieved party may submit additional new evidence without withdrawing the complaint until the Board closes the record.

## §426.505 Authority of the Board.

(a) The Board conducts a fair and impartial hearing, avoids unnecessary delay, maintains order, and ensures that all proceedings are recorded.
(b) The Board defers only to reasonable findings of fact, reasonable interpretations of law, and reasonable applications of fact to law by the Secretary.
(c) The Board has the authority to do any of the following:
(1) Review complaints by an aggrieved party (or aggrieved parties).
(2) Dismiss complaints that fail to comply with § 426.500 .
(3) Set and change the date, time, and place of a hearing upon reasonable notice to the parties.
(4) Continue or recess a hearing for a reasonable period of time.
(5) Hold conferences to identify or simplify the issues, or to consider other matters that may aid in the expeditious disposition of the proceeding.
(6) Consult with scientific and clinical experts on its own motion, concerning clinical or scientific evidence.
(7) Set schedules for submission of exhibits and written reports of experts.
(8) Administer oaths and affirmations.
(9) Examine witnesses.
(10) Issue subpoenas requiring the attendance of witnesses at hearings as permitted by this part.
(11) Issue subpoenas requiring the production of existing documents before, and relating to, the hearing as permitted by this part.
(12) Rule on motions and other procedural matters.
(13) Stay the proceeding in accordance with §426.340.
(14) Regulate the scope and timing of documentary discovery as permitted by this part.
(15) Regulate the course of a hearing and the conduct of representatives, parties, and witnesses.
(16) Receive, rule on, exclude, or limit evidence, as provided in this regulation.
(17) Take official notice of facts, upon motion of a party.
(18) Decide cases, upon the motion of a party, by summary judgment when there is no disputed issue of material fact.
(19) Conduct any conference, argument, or hearing in person or, upon agreement of the parties, by telephone, picture-tel, or any other means.
(20) Issue decisions.
(21) Exclude a party from an NCD review for failure to comply with a Board order or procedural request without good cause.
(22) Stay the proceedings for a reasonable time when all parties voluntarily agree to mediation or negotiation, and provide mediation services upon request.
(d) The Board does not have authority to do any of the following under this part:
(1) Conduct an LCD review or conduct LCD hearings, except as provided by §426.465.
(2) Conduct an NCD review or conduct NCD hearings on its own motion or on the motion of a nonaggrieved party.
(3) Issue a decision based on any new evidence without following §426.340, regarding procedures for review of new evidence.
(4) Review any decisions by CMS to develop a new or revised NCD.
(5) Conduct a review of any draft NCDs, coverage decision memoranda, or withdrawn NCDs.
(6) Conduct a review of the merits of an unacceptable NCD complaint as discussed in § 426.510.
(7) Conduct an NCD review of any policy that is not an NCD, as defined in $\$ 400.202$ of this chapter.
(8) Allow participation by individuals or entities other than-
(i) The aggrieved party and/or his or her representative;
(ii) CMS and/or the contractor;
(iii) Experts called by the parties or

## Board; or

(iv) Third parties with a clearly identifiable and substantial interest in the outcome of the dispute who have petitioned for and been granted permission by the Board to participate in the proceedings as amicus curiae.
(9) Compel the parties to participate in a mediation process or to engage in settlement negotiations.
(10) Deny a request for withdrawal of a complaint by an aggrieved party.
(11) Compel CMS to conduct studies, surveys, or develop new information to support an NCD record.
(12) Deny CMS the right to reconsider, revise, or withdraw an NCD.
(13) Subject to the timely filing requirements, deny an aggrieved party, CMS, or its contractor the right to appeal an ALJ decision.
(14) Find invalid applicable Federal statutes, regulations, or rulings.
(15) Enter a decision specifying terms to be included in an NCD.

## §426.506 Exparte contacts.

No party or person (except Board staff) communicates in any way with the Board on any substantive matter at issue in a case, unless on notice and opportunity for all parties to participate. This provision does not prohibit a person or party from inquiring about the status of a case or asking routine questions concerning administrative functions or procedures.

## §426.510 Docketing and evaluating the acceptability of NCD complaints.

(a) Docketing the complaint. The

Board does the following upon receiving a complaint regarding an NCD:
(1) Dockets the complaint.
(2) Determines whether the complaint is-
(i) The first challenge to a particular NCD; or
(ii) Related to a pending NCD review.
(3) Forwards the complaint to the Board member who conducts the review.
(b) Evaluating the acceptability of the complaint. The Board determines if the complaint is acceptable by confirming all of the following:
(1) The complaint is being submitted by an aggrieved party or, in the case of a joint complaint, that each individual named in the joint complaint is an aggrieved party. (In determining if a complaint is acceptable, the Board assumes that the facts alleged by the treating physician's documentation regarding the aggrieved party's (or parties') clinical condition are true.)
(2) The complaint meets the requirements for a valid complaint in $\S 426.500$ and is not one of the documents in §426.325(b).
(c) Unacceptable complaint. (1) If the Board determines that the complaint is unacceptable, the Board must provide the aggrieved party (or parties) one opportunity to amend the unacceptable complaint.
(2) If the aggrieved party (or parties) fail(s) to submit an acceptable amended complaint within a reasonable timeframe as determined by the Board, the Board must issue a decision dismissing the unacceptable complaint.
(3) If a complaint is determined to be unacceptable after one amendment, the beneficiary is precluded from filing again for 6 months after being informed that it is unacceptable.
(d) Acceptable complaint. If the Board determines that the complaint (or amended complaint) is acceptable, the Board does the following:
(1) Sends a letter to the aggrieved party (or parties) acknowledging the complaint and informing the aggrieved party (or parties) of the docket number and the deadline for CMS to produce the NCD record.
(2) Forwards a copy of the complaint, any evidence submitted in the complaint, and the letter described in paragraph (d)(1) of this section to CMS.
(3) Requires CMS to send a copy of the NCD record to the Board and all parties to the NCD review within 30 days of receiving the Board's letter, a copy of the complaint, and any associated evidence, subject to extension for good cause shown.
(e) Consolidation of complaints regarding an NCD-(1) Criteria for condideration. If a review is pending regarding a particular NCD provision(s) and no decision has been issued ending the review, and a new acceptable complaint is filed, the Board consolidates the complaints and conducts a consolidated NCD review if all of the following criteria are met:
(i) The complaints are in regard to the same provision(s) of the same NCD, or there are other bases for consolidating the complaints.
(ii) The complaints contain common questions of law, common questions of fact, or both.
(iii) Consolidating the complaints does not unduly delay the Board's decision.
(2) Decision to consolidate complaint. If the Board decides to consolidate complaints, the Board does the following:
(i) Provides notification that the NCD review is consolidated and informs all parties of the docket number of the consolidated review.
(ii) Makes a single record of the proceeding.
(iii) Considers the relevant evidence introduced in each NCD complaint as introduced in the consolidated review. (3) Decision not to consolidate complaints. If the Board decides not to consolidate complaints, the Board conducts separate NCD reviews for each complaint.
(f) Public notice of complaint and opportunity for interested parties to participate. (1) If an acceptable complaint is the first complaint the Board has received challenging the particular NCD or provision, then the Board posts notice on its Web site that it has received the complaint, specifying a time period for requests to participate in the review process.
(2) If an acceptable complaint challenges an NCD provision when review is pending and no decision has been issued ending the review, the Board may supplement the public notice on its Web site and extend the time for participation requests if indicated.
(3) The Board may allow participation, in the manner and by the deadlines established by the Board, when an NCD is being challenged and the Board decides that-
(i) The amicus participant has a clearly identifiable and substantial interest in the outcome of the dispute;
(ii) Participation would clarify the issues or otherwise be helpful in resolution of the dispute;
(iii) Participation does not result in substantial delay; and
(iv) The petition for participation meets the criteria in §426.513.

## §426.513 Participation as amicus curiae.

(a) Petition for participation. Any person or organization that wishes to participate as amicus curiae must timely file with the Board a petition that concisely states-
(1) The petitioner's interest in the hearing;
(2) Who will represent the petitioner; and
(3) The issues on which the petitioner intends to present argument.
(b) The nature of the proposed amicus participation. An amicus curiae is not a party to the hearing but may participate by-
(1) Submitting a written statement of position to the Board before the beginning of the hearing;
(2) Presenting a brief oral statement or other evidence at the hearing, at the point in the proceedings specified by the Board; and
(3) Submitting a brief or a written statement when the parties submit briefs.
(c) Service by amicus curiae. Serving copies of any briefs or written statements on all parties.

## §426.515 CMS' role in making the NCD record available.

CMS will provide a copy of the NCD record (as described in §426.518) to the Board and all parties to the NCD review within 30 days of the receipt of the Board's order.
§426.516 Role of Medicare Managed Care Organizations (MCOs) and State agencies in the NCD review process.
Medicare MCOs and Medicaid State agencies may participate in the NCD review process only if they meet the amicus participant criteria listed in $\S 426.510(\mathrm{f})(3)$ and $\S 426.513$.
§426.517 CMS' statement regarding new evidence.
(a) CMS may review any new
evidence that is submitted, regardless of whether the Board has stayed the proceedings, including but not limited to new evidence:
(1) Submitted with the initial complaint;
(2) Submitted with an amended complaint;
(3) Produced during discovery;
(4) Produced when the Board consults with scientific and clinical experts; and
(5) Presented during any hearing.
(b) CMS may submit a statement
regarding whether the new evidence is significant under $\$ 426.340$, by a deadline set by the Board.
§426.518 NCD. record furnished to the aggrieved party.
(a) Elements of the NCD record
furnished to the aggrieved party. Except as provided in paragraph (b) of this section, the NCD record consists of any document or material that CMS considered daring the development of the NCD, including, but not limited to, the following:
(1) The NCD being challenged.
(2) Any medical evidence considered on or before the date the NCD was issued, including, but not limited to, the following:
(i) Scientific articles.
(ii) Technology assessments.
(iii) Clinical guidelines.
(iv) Statements from clinical experts, medical textbooks, claims data, or other indication of medical standard of practice.
(v) MCAC transcripts.
(3) Public comments received during the notice and comment period.
(4) Coverage decision memoranda.
(5) An index of documents considered that are excluded under paragraph (b) of this section.
(b) Elements of the NCD record not furnished to the aggrieved party. The NCD record furnished to the aggrieved party does not include the following:
(1) Proprietary data or privileged information.
(2) Any new evidence.

## §426.519 NCD record furnished to the Board.

The NCD record furnished to the Board includes-
(a) Documents included in
§426.518(a); and
(b) Privileged information and proprietary data considered that must be filed with the Board under seal.
§426.520 Withdrawing an NCD under review or issuing a revised or reconsidered NCD.
(a) CMS may withdraw an NCD or NCD provision under review before the date the Board issues a decision regarding that NCD. Withdrawing an NCD or NCD provision under review has the same effect as a decision under §426.560(b).
(b) CMS may revise an NCD under review to remove or amend the NCD provision listed in the complaint through the reconsideration process before the date the Board issues a decision regarding that NCD. Revising an NCD under review to remove the NCD provision in question has the same effect as a decision under $\S 426.560$ (b).
(c) CMS must notify the Board within 48 hours of-
(1) Withdrawing an NCD or NCD provision that is under review; or
(2) Issuing a revised or reconsidered version of the NCD that is under review.
(d) If CMS issues a revised or reconsidered NCD, CMS forwards a copy of the revised/reconsidered NCD to the Board.
(e) The Board must take the following actions upon receiving a notice that CMS has withdrawn or revised/ reconsidered an NCD under review:
(1) If, before the Board issues a decision, the Board receives notice that CMS has withdrawn the NCD or revised the NCD to completely remove the provision in question, the Board must dismiss the complaint and inform the aggrieved party (ies) who sought the review that he or she or they will receive individual claim review without the retired/withdrawn provisions.
(2) If, before the Board issues a decision, the Board receives notice that CMS has revised the NCD provision in question but has not removed it altogether, the Board must continue the review based on the revised NCD. In this case, CMS must send a copy of the supplemental record to the Board and all parties. In that circumstance, the Board permits the aggrieved party to respond to the revised NCD and the supplemental record.

## §426.523 Withdrawing a complaint regarding an NCD under review.

(a) Circumstance under which an aggrieved party withdraws a complaint regarding an NCD. An aggrieved party who filed a complaint regarding an NCD may withdraw the complaint before the Board issues a decision regarding that NCD. The aggrieved party may not file another complaint concerning the same coverage determination for 6 months.
(b) Process for an aggrieved party withdrawing a complaint regarding an

NCD. To withdraw a complaint regarding an NCD, the aggrieved party who filed the complaint must send a written withdrawal notice to the Board (see §426.500) and CMS.
Supplementing an acceptable complaint with new evidence does not constitute a withdrawal of a complaint, as described in $\S 426.503$.
(c) Actions the Board must take upon receiving a notice announcing the intent to withdraw a complaint regarding an NCD-(1) NCD reviews involving one aggrieved party. If the Board receives a withdrawal notice regarding an NCD before the date the Board issued a decision regarding that NCD, the Board issues a decision dismissing the complaint under $\S 426.544$ and informs the aggrieved party that he or she may not file another complaint to the same coverage determination for 6 months.
(2) NCD reviews involving joint complaints. If the Board receives a notice from an aggrieved party who is named in a joint complaint withdrawing a complaint regarding an NCD before the date the Board issued a decision regarding that NCD, the Board issues a decision dismissing only that aggrieved party from the complaint under $\S 426.544$. The Board continues the NCD review if there is one or more aggrieved party who does not withdraw from the joint complaint.
(3) Consolidated NCD reviews. If the Board receives a notice from an aggrieved party who is part of a consolidated NCD review withdrawing a complaint regarding an NCD before the date the Board issued a decision regarding that NCD, the Board removes that aggrieved party from the consolidated NCD review and issues a decision dismissing that aggrieved party's complaint under §426.544. The Board continues the NCD review if there is one or more aggrieved party who does not withdraw from the joint complaint.

## §426.525 NCD review.

## (a) Opportunity for the aggrieved

 party after his or her review of the NCD record to state why the NCD is not valid. Upon receipt of the NCD record, the aggrieved party files a statement explaining why the NCD record is not complete, or not adequate to support the validity of the NCD under the reasonableness standard. This statement must be submitted to the Board and CMS, within 30 days (or within additional time as allowed by the Board for good cause shown) of the date the aggrieved party receives the NCD record.(b) CMS response. CMS has 30 days, after receiving the aggrieved party's
statement, to submit a response to the Board in order to defend the NCD.
(c) Board evaluation. (1) After the aggrieved party files a statement and CMS responds as described in §426.525(a) and §426.525(b), or the time for filing has expired, the Board applies the reasonableness standard to determine whether the NCD record is complete and adequate to support the validity of the NCD.
(2) Issuance of a decision finding the record complete and adequate to support the validity of the NCD ends the review process.
(3) If the Board determines that the NCD record is not complete and adequate to support the validity of the NCD, the Board permits discovery and the taking of evidence in accordance with $\S 426.532$ and $\S 426.540$, and evaluate the NCD in accordance with §426.531.
(d) The process described in paragraphs (a), (b), and (c) of this section applies when an NCD record has been supplemented, except that discovery and the taking of evidence is not repeated. The period for the aggrieved party to file a statement begins when the aggrieved party receives the supplement.
§426.531 Board's review of the NCD to apply the reasonableness standard.
(a) Required steps. The Board must do the following to review the provision(s) listed in the aggrieved party's complaint based on the reasonableness standard:
(1) Confine the NCD review to the provision(s) of the NCD raised in the aggrieved party's complaint.
(2) Conduct a hearing unless the matter can be decided on the written record.
(3) Close the NCD review record to the taking of evidence.
(4) Treat as precedential any previous Board decision made under $\$ 426.547$ that involves the same NCD provision(s), same specific issue and facts in question, and the same clinical conditions.
(5) Issue a decision as described in §426.547.
(b) Optional steps. The Board may consult with appropriate scientific or clinical experts concerning clinical and scientific evidence to apply the reasonableness standard to the provision(s) listed in the aggrieved party's complaint.
(c) Authority for the Board in NCD reviews when applying the reasonableness standard. In applying the reasonableness standard to a provision (or provisions) of an NCD, the Board must follow all applicable laws and regulations, as well as NCDs other than the one under review.

## §426.532 Discovery.

(a) General rule. If the Board orders discovery, the Board must establish a reasonable timeframe for discovery.
(b) Protective order-(1) Request for a protective order. Any party receiving a discovery request may file a motion for a protective order before the date of production of the discovery.
(2) The Board granting of a protective order. The Board may grant a motion for a protective order if it finds that the discovery sought-
(i) Is irrelevant or unduly repetitive;
(ii) Is unduly costly or burdensome; or
(iii) Will unduly delay the proceeding.
(c) Types of discovery available. A party may obtain discovery via a request for the production of documents, and/or via the submission of up to 10 written interrogatory questions, relating to a specific NCD.
(d) Types of documents. For the purpose of this section, the term documents includes relevant information, reports, answers, records, accounts, papers, and other data and documentary evidence. Nothing contained in this section will be interpreted to require the creation of a document.
(e) Types of discovery not available. Requests for admissions, depositions, or any other forms of discovery, other than those permitted under paragraph (c) of this section, are not authorized.
(f) Privileged information or proprietary data. The Board must not under any circumstances order the disclosure of privileged information or proprietary data filed under seal without the consent of the party who possesses the right to protection of the information.
(g) Notification. The Board notifies all parties in writing when the discovery period will be closed.

## §426.535 Subpoenas.

(a) Purpose of a subpoena. A subpoena requires the attendance of an individual at a hearing and may also require a party to produce evidence authorized under $\$ 426.540$ at or before the hearing.
(b) Filing a motion for a subpoena. A party seeking a subpoena must file a written motion with the Board not less than 30 days before the date fixed for the hearing. The motion must do all of the following:
(1) Designate the witnesses.
(2) Specify any evidence to be produced.
(3) Describe the address and location with sufficient particularity to permit the witnesses to be found.
(4) State the pertinent facts that the party expects to establish by witnesses
or documents and state whether those facts could be established by evidence other than by the use of a subpof na.
(c) Response to a motion for a subpoena. Within 15 days after the written motion requesting issuance of a subpoena is served on all parties, any party may file an opposition to the motion or other response.
(d) Extension for good cause shown. The Board may modify the deadlines specified in paragraphs (b) and (c) of this section for good cause shown.
(e) Motion for a subpoena granted. If the Board grants a motion requesting issuance of a subpoena, the subpoena must do the following:
(1) Be issued in the name of the presiding Board member.
(2) Include the docket number and title of the NCD under review.
(3) Provide notice that the subpoena is issued according to sections 1872 and 205(d) and (e) of the Act.
(4) Specify the time and place at which the witness is to appear and any evidence the witness is to produce.
(f) Delivery of the subpoena. The party seeking the subpoena serves it by personal delivery to the individual named, or by certified mail return receipt requested, addressed to the individual at his or her last dwelling place or principal place of business.
(g) Motion to quash a subpoena. The individual to whom the subpoena is directed may file with the Board a motion to quash the subpoena within 10 days after service.
(h) Refusal to obey a subpoena. The exclusive remedy for contumacy by, or refusal to obey, a subpoena duly served upon any person is specified in section 205(e) of the Act (42 U.S.C. 405(e)) except that any reference to the "Commissioner of Social Security" shall be considered a reference to the "Secretary."

## §426.540 Evidence.

(a) Except as provided in this part, the Board is not bound by the Federal Rules of Evidence. However, the Board may apply the Federal Rules of Evidence when appropriate, for example, to exclude unreliable evidence.
(b) The Board must exclude evidence that it determines is clearly irrelevant or immaterial, or unduly repetitive.
(c) The Board may accept privileged information or proprietary data, but must maintain it under seal.
(d) The Board may permit the parties to introduce the testimony of expert witnesses on scientific and clinical issues, rebuttal witnesses, and other relevant evidence. The Board may require that the testimony of expert witnesses be submitted in the form of a
written report, accompanied by the curriculum vitae of the expert preparing the report.
(e) Experts submitting reports must be available for cross-examination at an evidentiary hearing upon request of the Board or a party to the proceeding. or the report will be excluded from the record.
(f) Except as set forth in paragraph (c) of this section or unless otherwise ordered by the Board for good cause shown, all documents and other ovidence offered or taken for the record is open to examination by all parties.

## §426.544 Dismissals for cause.

(a) The Board may, at the request of any party, or on its own motion, dismiss a complaint if the aggrieved party fails to do either of the following:
(1) Attend or participate in a prehearing conference (the prehearing may be conducted by telephone) or hearing without good cause shown.
(2) Comply with a lawful order of the Board without cause shown.
(b) The Board must dismiss any complaint concerning NCD provision(s) if the following conditions exist:
(1) The Board does not have the authority to rule on that provision under § $426.505(\mathrm{~d})$.
(2) The complaint is not timely. (See § $426.500(\mathrm{~b})$ ).
(3) The complaint is not filed by an aggrieved party.
(4) The complaint is filed by an individual who fails to provide an adequate statement of need for the service from the treating physician.
(5) The complaint challenges a provision or provisions of an LCD except as provided in §426.476, regarding the Board's review of an ALJ decision. (See §426.505, regarding the authority of the Board.)
(6) CMS notifies the Board that the NCD provision(s) is (are) no longer in effect.
(7) The aggrieved party withdraws the complaint. (See §426.523, for requirements for withdrawing a complaint regarding an NCD under review.)

## §426.545 Witness fees.

(a) A witness testifying at a hearing before the Board receives the same fees and mileage as witnesses in Federal district courts of the United States. If the witness qualifies as an expert, he or she is entitled to an expert witness fee. Witness fees are paid by the party seeking to present the witness.
(b) If the Board requests expert testimony, the Board is responsible for paying all applicable fees and mileage, unless the expert waives payment.

## § 426.546 Record of hearing.

The Board must ensure that all hearings are open to the public and are electronically, mechanically, or stenographically reported. Except for privileged information and proprietary data that are filed under seal, all evidence upon which the Board relies for decision must be admitted into the public record. All medical reports, exhibits, and any other pertinent document, either in whole or in material part, must be offered, marked for identification, and retained in the case record.
§426.547 Issuance, notification, and posting of a Board's decision.

The Board must do the following:
(a) Issue to all parties to the NCD review, within 90 days of closing the NCD review record to the taking of evidence, one of the following:
(1) A written decision, including a description of appeal rights.
(2) A written notification stating that a decision is pending, and an approximate date of issuance for the decision.
(b) Make the decision available at the HHS Medicare Internet site. The posted decision does not include any information that identifies any individual, provider of service, or supplier.
§426.550 Mandatory provisions of the Board's decision.
(a) Findings. The Board's decision must include one of the following:
(1) A determination that the provision of the NCD is valid under the reasonableness standard.
(2) A determination that the provision of the NCD is not valid under the reasonableness standard.
(3) A statement dismissing the complaint regarding the NCD, and a rationale for the dismissal.
(4) A determination that the LCD or NCD record is complete and adequate to support the validity of the LCD or NCD provisions under the reasonableness standard.
(b) Other information. The Board's decision must include all of the following:
(1) The date of issuance.
(2) The docket number of the NCD review.
(3) A statement as to whether the aggrieved party has filed a claim for the service(s) named in the complaint, the date(s)-of-service, and the disposition, if known.
(4) A basis for concluding that the NCD was or was not valid based on the application of the reasonableness standard to the record before the Board, including CMS':
(i) Findings of fact.
(ii) Interpretations of law.
(iii) Applications of fact to law.
(5) A summary of the evidence reviewed. Where proprietary or privileged data were submitted under seal, the decision must state whether the data were material and what role they played in the determination, but without disclosing the substance or contents of the evidence under seal. A separate statement of the rationale for the Board's treatment of the sealed evidence must be prepared and kept under seal itself. If the Board decision is appealed to the court, this statement must be provided to the court, under seal.
(6) A statement regarding the right to judicial review.

## §426.555 Prohibited provisions of the Board's decision.

The Board's decision may not do any of the following:
(a) Order CMS to add any language to a provision or provisions of an NCD.
(b) Order CMS or its contractors to pay a specific claim.
(c) Set a time limit for CMS to establish a new or revised NCD.
(d) Review or evaluate an NCD other than the NCD under review.
(e) Include a requirement for CMS or its contractors that specifies payment, coding, or systems changes for an NCD, or deadlines for implementing these types of changes.
(f) Order or address how CMS implements an NCD.

## §426.557 Optional provisions of the

 Board's decision.When appropriate, the Board may limit a decision holding invalid a specific provision(s) of an NCD to specific clinical indications and for similar conditions.

## §426.560 Effect of the Board's decision.

(a) Valid under the reasonableness standard. If the Board finds that the provision (or provisions) of an NCD named in the complaint is (are) valid under the reasonableness standard, the aggrieved party may challenge the final agency action in Federal court.
(b) Not valid under the
reasonableness standard. If the.Board finds that the provision (or provisions) of an NCD named in the complaint is (are) invalid under the reasonableness standard, then CMS instructs its contractor, $\mathrm{M}+\mathrm{C}$ organization, or other Medicare managed care organization to provide the following-
(1) Individual claim review. (i) If the aggrieved party's claim/appeal(s) was previously denied, the contractor, an

M +C organization, or another Medicare managed care organization must reopen the claim of the party who challenged the LCD and adjudicate the claim without using the provision(s) of the NCD that the Board found invalid.
(ii) If a revised NCD is issued, contractors, $\mathrm{M}+\mathrm{C}$ organizations, and other Medicare managed care organizations must use the revised NCD in reviewing claim/appeal submissions or request for services delivered or services performed on or after the effective date of the revised NCD.
(iii) If the aggrieved party who sought review has not yet submitted a claim, the contractor must adjudicate the claim without using the provision(s) of the NCD that the Board found invalid.
(iv) In either case, the claim and any subsequent claims for the service provided under the same circumstances, must be adjudicated without using the NCD provision(s) found invalid.
(2) Coverage determination relief.

Within 30 days, CMS implements the Board decision. Any change in policy is applied prospectively to requests for service or claims filed with dates of service after the implementation of the Board decision.

## §426.562 Notice of the Board's decision.

After the Board has made a decision regarding an NCD complaint, the Board sends a written notice of the decision to each party. The notice must-
(a) State the outcome of the review; and
(b) Inform each party to the determination of his or her rights to seek further review if he or she is dissatisfied with the determination, and the time limit under which an appeal must be requested.

## §426.563 Future new or revised or reconsidered NCDs.

CMS may not reinstate an NCD provision(s) found to be unreasonable unless CMS has a different basis (such as additional evidence) than what the Board evaluated.

## §426.565 Board's role in making an LCD or NCD review record available.

Upon a request from a Federal Court. the Board must provide to the Federal Court a copy of the Board's LCD or NCD review record (as described in §426.587).

## §426.566 Board decision.

A decision by the Board constitutes a final agency action and is subject to judicial review. CMS may not appeal a Board decision.

## §426.587 Record for appeal of a Board NCD decision.

(a) Elements of the Board's NCD review record furnished to the public. Except as provided in paragraph (b) of this section, the Board's NCD review record consists of any document or material that the Board compiled or considered during an NCD review,
including, but not limited to, the following:
(1) The NCD complaint.
(2) The NCD and NCD record.
(3) The supplemental NCD record, if applicable.
(4) Transcripts of record.
(5) Any other evidence relevant gathered under § 426.540 .
(6) The Board's decision.
(b) Documents excluded from the NCD review record furnished to the court. The NCD review record furnished to the court maintains the seal on privileged information or proprietary data that is maintained under seal by the Board. In the event a court seeks to obtain or requires disclosure of any documents excluded from the NCD record as privileged information or proprietary data, CMS or the
Department seeks to have a protective order issued for those documents, as appropriate.

## LIST OF PUBLIC LAWS

This is a continuing list of public bills from the current session of Congress which have become Federal laws. It may be used in conjunction with "PLUS" (Public Laws Update Service) on 202-7416043. This list is also available online at http:// www.nara.gov/fedreg/ plawcurr.html.

The text of laws is not published in the Federal

Register but may be ordered in "slip law" (individual pamphlet) form from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402 (phone, 202-512-1808). The text will also be made available on the Internet from GPO Access at http://
www.access.gpo.gov/nara/ nara005.html. Some laws may not yet be available.
S. 3/P.L. 108-105

Partial-Birth Abortion Ban Act of 2003 (Nov. 5, 2003; 117 Stat. 1201)
Last List November 6, 2003

Public Laws Electronic Notification Service (PENS)

PENS is a free electronic mail notification service of newly enacted public laws. To subscribe, go to http://
listserv.gsa.gov/archives/ publaws-I.html

Note: This service is strictly for E-mail notification of new laws. The text of laws is not available through this service. PENS cannot respond to specific inquines sent to this address.

## Weekly Compilation of <br> Presidential Documents

Monday, January 13. 1997
Volume 33-Number 2
Page 7-40

## Presidential Documents

This unique service provides up-to-date information on Presidential policies and announcements. It contains the full text of the President's public speeches, statements, messages to Congress, news conferences, and other Presidential materials released by the White House.

The Weekly Compilation carries a Monday dateline and covers materials released during the preceding week. Each issue includes a Table of Contents, lists of acts approved by the President, nominations submitted to the Senate, a checklist of White House press releases, and a
digest of other Presidential activities and White House announcements. Indexes are published quarterly.

Published by the Office of the Federal Register, National Archives and Records Administration.

[^0]:    b North American Industry Classification System. Entities potentially affected by the subject rule for today's action also include State, local, and tribal governments.

[^1]:    ${ }^{1}$ The December 31, 2002 final rules did not act on several issues proposed in 1996. We intend to act on some or all issues from the 1996 proposal in subsequent Federal Register notices.

[^2]:    ${ }^{2}$ Petitions for reconsideration of the December 31, 2002 final rule that EPA received before July 2003 were filed by: Northeastern States (CT, ME, MD. MA, NH, NJ, NY, PA, RI, VT); South Coast Air Quality Management District (CA); and Environmental Groups (led by NRDC, Earthjustice, Clean Air Task Force, and Environmental Defense). Additional petitioners joined existing petitions: The People of California and California Air Resources Board (joined South Coast and Northeastern States petitions); Yolo-Solano Air Quality Management District (CA) (joined South Coast petition); Santa Barbara, Ventura, and Monterey Air Pollution Control Districts (CA); and Sacramento Air Quality Management District (CA) (joined South Coast petition). Petitions for reconsideration of the FIP rule were filed by: Delegated States (CA, CT, IL, MA, NT, NY, DC, South Coast Air Quality Management District (CA), and Santa Barbara Air Pollution Control District (CA)); and Environmental Groups (essentially the same groups that filed petitions to reconsider the December 31, 2002 rule).
    On July 11, 2003, we received another petition for reconsideration filed by Newmont USA Limited, dba Newmont Mining Corporation. This petition was subsequently joined by the National Cattlemen's Beef Association and the National Mining Association. We are not responding to that petition at this time, but will do so in the near future.
    ${ }^{3}$ In this notice, the term "petitioner" refers only to those entities that filed petitions for reconsideration with EPA prior to July 2003.
    ${ }^{4}$ Available through our NSR Web site at http:// www.epa.gov/nst and in Docket ID No. A-90-37, Document IV-A-7.

[^3]:    ${ }^{2}$ The Secretary of Transportation delegated the authority to carry out the provisions of this section to the Under Secretary of Transportation for Security/Administrator. 68 FR 10988, March 7, 2003.
    ${ }^{3}$ Pub. L. 107-296, November 25, 2002, 116 Stat. 2280.

[^4]:    ${ }^{4}$ The penalty for violation of 18 U.S.C. 842(i) is up to ten years imprisonment and a fine of up to \$250,000.
    ${ }^{5} 68$ FR 23844 and 68 FR 23851.

[^5]:    ${ }^{1} 68$ FR 23852 (May 5, 2003).

[^6]:    ${ }^{2}$ Pub. L. 107-56., October 25, 2001, 115 Stat. 272.

[^7]:    ${ }^{3}$ The Secretary of Transportation delegated the authority to carry out the provisions of this section to the Under Secretary of Transportation for Security/Administrator of TSA. 68 FR 10988, March 7, 2003.
    ${ }^{4}$ Pub. L. 107-296, November 25, 2002, 116 Stat. 2280.
    ${ }^{5}$ The penalty for violation of 18 U.S.C. $842(i)$ is up to ten years imprisonment and a fine of up to $\$ 250,000$.

[^8]:    ${ }^{5}$ Department of Homeland Security Appropriations Act, 2004, Public Law 108-90, 117 Stat. 1137, October 1, 2003.

[^9]:    The petitioner is the Coalition for Fair Preserved Mushroom Trade which includes the American Mushroom Institute and the following domestic companies: L.K. Bowman, Inc., Modern Mushroom Farms, Inc., Monterey Mushrooms, Inc., Mount Laurel Canning Corp., Mushroom Canning

[^10]:    Company, Southwood Farms, Sunny Dell Foods, Inc., and United Canning Corp.
    ${ }^{2}$ This request was originally filed on February 27, 2003, but was subsequently refiled on March 6 . 2003, because the package containing the original request could not be located subsequent to the original filing.

[^11]:    ${ }^{3}$ In response to the Department's questionnaire issued in the fourth administrative review, both companies claimed they had no shipments of the subject merchandise during the POR other than the transactions covered in the new shipper review.

[^12]:    ${ }^{1}$ Allegheny Ludlum, AK Steel Corporation, Butler Armco Independent Union, United Steelworkers of America, AFL-CIO/CLC, and Zanesville Armco Independent Organization are collectively "Petitioners" for this review.

[^13]:    ${ }^{1}$ The limit has not been adjusted to account for any imports exported after December 31, 2002.

[^17]:    ${ }^{1}$ The Target Indexes are the Select Emerging Markets Free Index, Morgan Stanley Capital International Europe Index, and the Morgan Stanley Capital International Pacific Index. Each Fund reserves the right to substitute a different index for the Target Index that it currently tracks. Any substitute index will measure the same general market as the current Target Index. Investors will receive notification of any such substitution.
    ${ }^{2}$ Each Fund will invest at least $90 \%$ of its assets in the component securities of its Target lndex but may invest up to $10 \%$ of its assets in convertible securities, stock and index futures, options on stock and index futures, swap agreements, cash investments, forward foreign currency investments foreign currency exchange contracts, and other instruments not inconsistent with the investment policies described in its registration statement, which VGI believes will help the Fund to track its Target Index.

[^18]:    ${ }^{3}$ Applicants expect VIPER Shares to appeal to short-term investors because they can be bought and sold continuously throughout the day at market price rather than at net asset value ("NAV"), which is calculated only once per day at the close of trading on the New York Stock Exchange ("NYSE"). Transactions in Conventional Shares will continue to be priced at NAV.
    ${ }^{4}$ A Fund may require investors to purchase a minimum number of Creation Units.
    ${ }^{5}$ Applicants state that, for Funds holding fewer than approximately one thousand portfolio securities, the Deposit Securities typically will be identical to the Fund's portfolio. For Funds holding more than that number of portfolio securities, VGI will select a subset of the Fund's portfolio using a representative sampling strategy, similar to that discussed above. American Depositary Receipts ("ADRs") will not be component securities of a Target Index and Authorized Participants will not be able, on their own initiative, to substitute the ADR of a Deposit Security in place of the actual Deposit Security. However, Applicants may include one or more ADRs in a list of Deposit Securities

[^19]:    when the security underlying the $A D R$ is difficult or costly for Authorized Participants to obtain or designating the ADR as a Deposit Security will otherwise enhance pricing and liquidity.
    ${ }^{5}$ On each business day, prior to the opening of trading on the Exchange, VGI will make available through DTC or VMC the list of the names and the required number of shares of each Deposit Security to be included in the Creation Deposit for each Fund. Each Fund reserves the right to permit or require the purchaser of a Cieation Unit to substitute cash or a different security to replace a Deposit Security under certain circumstances.

    When a Fund permits an investor to substitute cash for a Deposit Security, the investor may be assessed a higher Transaction Fee to offset the increased cost to the Fund of buying the necessary Deposit Security for its portfolio.
    ${ }^{8}$ Applicants state that persons purchasing Creation Units will be cautioned in the VIPER Prospectus that some activities on their part may, depending on the circumstances. result in their being deemed a statutory underwriter and subject them to the prospectus delivery and liability provisions of the Securities Act. For example, a broker-dealer firm and/or its client may be deemed a statutory underwriter if it purchases Creation Units from a Fund, breaks them down into the constituent VIPER Shares, and sells VIPER Shares directly to its customers, or if it chooses to couple the purchase of a supply of new VIPER Shares with an active selling effort involving solicitation of secondary market demand for VIPER Shares. The VIPER Prospectus will state that whether a person is an underwriter depends on all the facts and circumstances pertaining to that person's activities. The VIPER Prospectus also will state that brokerdealer firms should note that dealers who are not "underwriters" but are participating in a distribution (as contrasted to an ordinary secondary

[^20]:    trading transaction), and thus dealing with VIPER Shares that are part of an "unsold allotment" within the meaning of section $4(3)(C)$ of the Securities Act, would be unable to take advantage of the prospectus delivery exemption provided by section 4(3) of the Securities Act.
    ${ }^{9}$ VIPER Shares will be registered in book-entry form only. DTC or its nominee will be the registered owner of all outstanding VIPER Shares. Records reflecting the beneficial owners of VIPER Shares will be maintained by DTC or its participants.
    ${ }^{10}$ Every 15 seconds throughout the trading day, the Exchange will disseminate via the facilities of the Consolidated Tape Association the market value of a VIPER Share and, separate from the consolidated tape, a calculation of the estimated NAV of a VIPER Share. Applicants state that an investor comparing the two figures will be able to determine whether, and to what extent, VIPER Shares are selling at a premium or discount to NAV.

[^21]:    ${ }^{1}$ Investors who redeem for cash, rather than in kind, may pay a higher Transaction Fee.

[^22]:    ${ }^{12}$ Investors who own Conventional Shares through an employer-sponsored retirement plan can sell those shares and use the proceeds to buy VIPER Shares without tax consequences. It is therefore unnecessary to offer such investors the Conversion Privilege.
    ${ }^{13}$ The terms of an exchange made pursuant to the Conversion Privilege will comply with section 11(a) of the Act and rule 11a-3 under the Act. The Conversion Privilege would offer a "one way" exchange only. Therefore, a holder of a Fund's VIPER Shares who wishes to shift to the Fund's Conventional Shares would have to sell the VIPER Shares in the secondary market and use the sale proceeds (less any brokerage cominission) to purchase Conventional Shares from the Fund. The sale of VIPER Shares would be a taxable transaction.
    ${ }^{14}$ Applicants note that an exchange of Conventional Shares for VIPER Shares of the same Fund generally would not be a taxable transaction. Applicants note that because DTC's systems are unable to handle fractional shares, exchange requests will be rounded down to the nearest whole VIPER Share. If an investor wishes to exchange all of his or her Conventional Shares, however, any fractional VIPER Share that results from the exchange will be liquidated and the cash will be sent to the investor's broker for the benefit of the investor.

[^23]:    ${ }^{15}$ Investment Company Act Release No. 11645 (Feb. 25, 1981) (Opinion of the Commission and Final Order). Under the formula, each Vanguard Fund's contribution is based $50 \%$ on its average month-end net assets during the preceding quarter relative to the average month-end net assets of the other Vanguard Funds, and $50 \%$ on its sales of new shares relative to the sales of new shares of the other Vanguard Funds during the preceding 24 months. So that a new fund is not unduly burdened, the formula caps each Vanguard Fund's contribution at $125 \%$ of the average expenses of the Vanguard Funds collectively, with any amounts above the cap redistributed among the other Vanguard Funds. In addition, no fund may pay more than $0.2 \%$ of its average month-end net assets for distribution.

[^24]:    ${ }^{16}$ Rule $15 \mathrm{c} 6-1$ under the Exchange Act requires that most securities transactions be settled within three business days of the trade. Applicants acknowledge that no relief obtained from the requirements of section 22(e) will affect any obligations applicants may have under rule 15c6-1.

[^25]:    ${ }^{17}$ Applicants do not seek relief from the prospectus delivery requirement for non-secondary market transactions, including purchases of Creation Units or those involving an underwriter and transactions pursuant to the Conversion Privilege.

[^26]:    ${ }^{1} 15$ U.S.C. $78 \mathrm{~s}(\mathrm{~b})(1)$.
    ${ }^{2} 17$ CFR $240.19 \mathrm{~b}-4$.
    ${ }^{3}$ For Amendments No. 1 through 8, the Exchange filed a new Form 19b-4 each time, which replaced and superseded the original proposal and all previous amendments in their entirety.
    ${ }^{4}$ Letter from Claire P. McGrath, Senior Vice President and Deputy General Counsel, Amex, to Elizabeth King, Associate Director, Division of Market Regulation ("Division"), Commission, dated July 24, 2003 ("Amendment No. 9"). Amendment No. 9 transfers to the list of rules enforced by the Amex Enforcement Department under paragraph (g) of Amex Rule 590 the requirement set forth in proposed Amex Rule 933, Commentary .04(d) that the specialist use his best efforts to attempt to ensure that the registered options trader responsible for disseminating the best bid or offer receives an allocation of the next automatic execution.
    ${ }^{5}$ The Exchange filed a new Form 19b-4, which replaced and superseded the original proposal and all previous amendments in their entirety.
    ${ }^{6}$ Letter from Claire P. McGrath, Senior Vice President and Deputy General Counsel, Amex. to Elizabeth King, Associate Director, Division, Commission, dated September 11, 2003 ("Amendment No. $11^{1}$ "). Amendment No. 11 revises proposed changes to Amex Rule $590(\mathrm{~g})$ to clarify that a specialist who fails to properly allocate executed contracts to the price-improving registered options trader must pay restitution in amount calculated by multiplying the number of contracts that should have been allocated to the priceimproving registered options trader by the number of underlying shares represented by each contract, which would then be multiplied by half of the

[^27]:    spread between the option's bid and offer at the time the order was executed.
    ${ }^{7}$ Securities Exchange Act Release No. 48495 (September 16, 2003), 68 FR 55422.
    ${ }^{8}$ These variables include the price of the underlying stock, time remaining to expiration, interest rates for "cost to carry", the amount of interest on the money used to pay for the options position during the period prior to expiration of the option series), dividends (both declared and anticipated) and volatility.
    ${ }^{9}$ See Rule 11Ac1-1 under the Act ("Quote Rule"), 17 CFR 240.11Ac1-1, and Amex Rule 958A.
    ${ }^{10}$ The Exchange submitted the proposed rule change in response to subparagraph IV.B.h(i))(aa) of the Commission's September 11, 2000 Order ("Order"), which requires the Exchange to "adopt new, or amend existing, rules concerning its

    ${ }^{+}$The Commission notes that the Exclange is proposing to adopt listing standards relating to shareholder approval of equity compensation plans that are similar to those that the Commission recently approved for the New York Stock Excharge. Inc. ("NYSE") and the National Association of Securities Dealers, Inc. ("NASD"), through its subsidiary. The Nasdaq Stock Market, Inc. ("Nasdaq"). See Securities Exchange Act Release No. 48108 (June 30, 2003), 68 FR 39995 (July 3, 2003) (order approving File Nos. SR-NYSE-2002-46 and SR-NASD-2002-140). See also Securities Exchange Act Release No. 48627 (October 14, 2003), 68 FR 60426 (October 22, 2003) (notice of filing and order granting accelerated approval to File No. SR-NASD-2003-130, incorporating amendments to the NASD's recently approved shareholder approval rules for equity compensation plans applicable to Nasdaq quated securities). The Commission also published a correction to the notice of File No. SR-NASD-2003-130. See Securities Exchange Act Release No, 48627A (October 22. 2003), 68 FR 61532 (October 28, 2003).

[^58]:    The Commission notes that these additional amendments by Nasdaq make the NYSE and Nasdaq proposals more consistent and uniform. See also infra note (regarding the Commission's recent approval of a similar proposal by the American Stock Exchange LLC ("Amex")).

[^59]:    ${ }^{5}$ Under the Exchange's proposal, as amended, an equity compensation plan is any plan or other arrangement that provides for the delivery of equity securities (either newly issued or treasury shares) of the listed company to any officer, director, employee or consultant as compensation for services. See proposed Interpretation and Policy .06(1) to CHX Rule 19(j).
    ${ }^{6}$ Tier II governance standards are set out in CHX Rule 21.
    ${ }^{7}$ This exception exists in the current CHX rule.
    ${ }^{8}$ Sections ( 7 ) and (8) of proposed new Interpretation and Policy . 06 to CHX Rule 19(j)

[^60]:    contain definitions of the terms "tax qualified, nondiscriminatory employee benefit plan" and "parallel nonqualified plan." See proposed CHX Rule 19(j)(1)(B).
    ${ }^{9}$ This exception applies to plans or arrangements where an issuer is converting, replacing or adjusting outstanding options or other equity compensation awards to reflect a merger or acquisition or where the issuer is using shares available under certain plans acquired in acquisitions or mergers for certain post-transaction grants, as set out in proposed Interpretation and Policy .06(6) to CHX Rule 19(j). See proposed CHX Rule 19(j)(1)(C).
    ${ }^{10}$ These issuances only qualify for the exception if they are made to a person not previously an employee or director of the issuer or following a bona fide period of non-employment or non-service. If an issuer uses this exception, it must promptly disclose, in a press release, the material terms of the grant, including the recipient of the grant and the nuinber of shares included in the grant. See proposed CHX Rule 19(j)(1)(D).
    ${ }^{11}$ See proposed CHX Rule 19(i)(1)(E).

[^61]:    ${ }^{12}$ See proposed Interpretation and Policy .06(2) to CIHX Rule 19(j).
    ${ }^{13}$ For example, proposed Interpretation and Policy 06 (3) to CHX Rule 19 ( j ) confirms that where a plan contains an evergreen formula (for automatic increases in the shares available) or an automatic grant pursuant to a dollar-based formula, the plan cannot have a term in excess of ten years unless shareholder approval is obtained every ten y'ears. Other provisions confirm that issuers should strive to make plan terms easy to understand when preparing plans and presenting them for shareholder approval and that an issuer is not permitted to use repurchased shares to fund option plans or grants without prior shareholder approval. See proposed Interpretation and Policy .06(4) and (5) to CHX Rule 19(j). The Commission notes that if a plan permits a specific action without further shareholder approval, it must be clear and specific enough to provide meaningful shareholder approval of those provisions.

[^62]:    ${ }^{14} 15$ U.S.C. $78 f(b)$.
    ${ }^{15} 15$ U.S.C. $78 f(b)(5)$.
    ${ }^{16}$ See supra note 4.

[^63]:    ${ }^{17} 15$ U.S.C. $78 \mathrm{f}(\mathrm{b})$. In approving the Exchange's proposal, as amended, the Commission has considered the proposed rule's impact on efficiency, competition and capital formation. 15 U.S.C. $78 \mathrm{c}(\mathrm{f})$.
    ${ }^{18} 15$ U.S.C. 78 f(b)(5).
    ${ }^{19}$ See supra note 4 . The Commission notes that it has recently approved similar rules requiring shareholder approval of equity compensation plans for the Amex on an accelerated basis. The Amex's proposal is almost identical to, and based on, the NYSE and Nasdaq proposals. See Securities Exchange Act Release No. 48610 (October 9, 2003), 68 FR 59650 (October 16, 2003).
    ${ }^{20}$ The Commission notes that these new listing standards will apply to all companies listed on the CHX and will include both CHX's Tier I and Tier II designations.

[^64]:    ${ }^{21}$ See supra notes 4 and 19.
    ${ }^{22}$ This disclosure would, of course, be in addition to any information that is required to be disclosed in annual reports filed with the Commission. For example, Item 201(d) of Regulation S-K 117 CFR 229.201(d)] and Item 201(d) of Regulation S-B [17 CFR 228.201(d)] require issuers to present-in their annual reports on Form 10-K or Form 10-KSBseparate, tabular disclosure concerning equity compensation plans that have been approved by

[^65]:    shareholders and equity compensation plans that have not been approved by shareholders.
    ${ }^{23}$ See Section 303A(8) of the NYSE's Listed Company Manual and NASD Rules 4310(c)(17)(A) and $4320(\mathrm{e})(15)(\mathrm{A})$.

    ${ }^{2}$ Allowed expenditures for the last three quarters of 1999 are based on the FY 2000 SGR.
    ${ }^{3}$ Allowed expenditures in the first year (April 1, 1996-March 31, 1997) are equal to actual expenditures. All subsequent figures are equal to quarterly allowed expenditure figures increased by the applicable SGR. Cumulative allowed expenditures are equal to the sum of annual allowed expenditures. We provide more detailed quarterly allowed and actual expenditure data on our Web site under the Medicare Actuary's publications at the following address: http://www.cms.hhs.gov/statistics/actuary/. We expect to update the web site with the most current information later this month.

[^110]:    ${ }^{1}$ The figures for fees, enrollment and real per capita GDP from the $12 / 31 / 02$ final rule are shown here. We made a subsequent change to the law and regulations factor and the total in the February 28, 2003 Federal Register ( 68 FR 9572). We show the revised law and regulation factor and total in the above table.
