NAGASAKI MILITARY GOVERNMENT TEAM WAY/s1
Nagasaki, Kyushu, Japan
Public Health Section

APO 929
17 January 1949

SUBJECT: Sasebo Field Trip

TO : Commanding Officer, Nagasaki Mil Govt Team, APO 929

1. A field trip was made by me in the Sasebo area between 3 Jan and 9 Jan 1949.

2. The following is a list of my activities there:

a. The Sasebo Municipal Hospital was visited and inspected. Many improvements have been accomplished - namely:

(1) Environmental sanitation has improved greatly.

(2) The kitchen and food stores are being maintained in good order.

(3) Cooking to supplement the diet is no longer done at the bedside but is done in central kitchens.

(4) Families are kept separate from patients except at visiting hours.

(5) Toilet sanitation has improved since the removal of families and since the assignment of the responsibility for their cleanliness to specific individuals.

(6) Nursing service is now well organized. Nurses are on duty and are available at all hours of the day.

(7) Charts are being kept in Japanese as well as German so that the nurses may better understand the illnesses of their patients. I scrubbed in on a case of appendicitis to demonstrate the techniques of asepsis as well as surgery. Both techniques were both

poor, but improvement, I was assured, would evolve. The case was misdiagnosed, an effort was made to demonstrate how the error was made.

b. The Kyosai Hospital was inspected and evidence was found there of small effort by Ken officials to effect improvements. Many points of the "Over All Hospital Improvement" have been sadly neglected.

(1) Altho families are separated from patients to some extent, toilet and kitchen sanitation is poor.

(2) Organization of staff and workers is poor, and this was discussed at great length.

(3) Diagnosis of the few cases seen was poor, and study along these lines was encouraged.

c. The Central Hospital was inspected and a lengthy discussion was held with the director. This is a new hospital with out-patient clinic, 15 bed capacity, and small operating room. It is inefficiently managed and was in unsanitary condition. The usual recommendations were made.

d. The city Slaughter House has greatly improved in sanitation and methods of handling meat. Waste materials of slaughtering, however, have not been adequately removed from drainage ditch.

e. The records and methods of examining the Japanese employees was looked into. There has been a great improvement in this system.

f. Surveillance was held over the return of 4,300 bodies of Japanese war dead from the Philippines. Transport and handling conditions were deemed adequate to prevent the introduction of communicable disease into Japan. Cremation and disposal of bodies was not supervised due to the lack of time.

WILLIAM A. YANCEY
Captain MC

Number of technicians employed: Laboratory 0 X-ray 2 Others 0
Number of unskilled employees: 14
Is the hospital approved for training interns and nurses by the national government no
Is the hospital affiliated with a medical college or a nursing school no
Is the hospital licensed by any agencies no What ones —
Does the prefectural or national government regularly inspect the hospital yes, Ken inspects 1/4 yr
What is the average number of beds occupied per month 45
What is the average number of outpatients treated per month 2,000
Is the hospital open to all doctors or may only staff members treat patients hospitalized there not open to other Drs.
Is there any preferential treatment shown to certain classes of patients no
Are adequate bathing facilities provided for the patients none at all
Are patients separated by age, sex, and disease yes, all
Does the hospital supply food to the patients No, patient supplies
Is there a central kitchen yes Is it used yes
Are patients cooking in their rooms no If so, why —
Are families living with patients yes Why as attendants
Are families allowed on the contagious wards yes
Are there beds and beddings supplied Patients bring their own
Are laundry facilities adequate no laundry
What is the adequacy of diet? Calories per patient per day —
Gms protein per patient per day ? Patient supplies own food
How often do patients get fish and how much ?? Dr. doesn't know
How often do they get vegetables and how much —
Are meat, eggs, or milk ever supplied —
Are there provisions for special diets —
Is there a dietician or nutritionist on the staff no

Medical care:
Are adequate records and charts kept on the patients —
Does the medical practice appear adequate yes, everything neat + orderly
Are adequate X-ray facilities available: yes Fluoroscope yes
Regular machine yes 35 MM no Deep therapy machine yes
Are adequate laboratory facilities available
Diagnostic no Lab.
Pathologic —
Bacteriologic —
Are operating rooms and operating room technique satisfactory yes
Instruments clean + neatly arranged How many operations per week about 10

Sanitation:
Are buildings and rooms generally clean yes, but load in rooms
Is insect and rodent control practiced adequately D.D.T. Hard to get
Do they have DDT Some, not much How do they get it from Ken
What is the source of the water supply City system Chlorinated —
filtered by city other treatment —

Latrines: Type under ground Clean yes Covered some Screened no
Are infectious wastes and excreta disposed of in a sanitary manner yes, disinfected with Lysol, carried away
What happens to sewage carried away by farmers.
What happens to garbage collected 2 times a week & burned
Is the kitchen and preparation of food sanitary fair, shelves dusty
Are isolation facilities adequate not too good, all in same bldg.
Is isolation technique satisfactory no isolation case, so tech. unknown
Medical Supply:
Drugs narcotics well kept, locking, also Poison locked up-
X-ray film plentyful
Equipment in fair shape, some instruments need cleaning
Is the coal supply sufficient yes
Are any classes, conferences, clinics conducted for educational purposes no
Are there any research projects under way no
Does the Welfare department provide any social service no
Are there any special arrangements for reporting communicable disease yes, Kan ch of H.C. For reporting births and deaths yes, to town office
Does hospital have a narcotic license yes, Jan. 1948
Are narcotics properly stored locked up separately
Are records properly kept well kept, neat & correct
What is the total cost of operation of the hospital per year $ 200,000 yen
How is this operating cost met Patient Fee, also some by Physician ass.
What is cost per patient per day ¥150 (in & out Patient
Is present budget sufficient to meet need at present yes.
Remarks: General sanitation very good; everything neat and orderly, the same surgery instruments need cleaning and oiling.
Recommendations: 1. Recommend fire extinguishers & sand buckets

What is the adequacy of diet? Calories per patient per day
Gms protein per patient per day
How often do patients get fish and how much (Patients supply
How often do they get vegetables and how much own food
Are meat, eggs, or milk ever supplied
Are there provisions for special diets
Is there a dietician or nutritionist on the staff no.

Medical care:
Are adequate records and charts kept on the patients yes
Does the medical practice appear adequate fair
Are adequate X-ray facilities available yes Fluoroscope yes
Regular machine 1 35 MM no Deep therapy machine no
Are adequate laboratory facilities available no.
Diagnostic
Pathologic
Bacteriologic
Are operating rooms and operating room technique satisfactory not quite How many operations per week 15

Sanitation:
Are buildings and rooms generally clean no
Is insect and rodent control practiced adequately no
Do they have DDT no How do they get it
What is the source of the water supply well Chlorinated no
filtered yes other treatment

Latrines: Type septic tank Clean no flies Covered yes Screened partly
Are infectious wastes and excreta disposed of in a sanitary manner yes
What happens to sewage Fertilizer
What happens to garbage Incinerated
Is the kitchen and preparation of food sanitary
Are isolation facilities adequate
Is isolation technique satisfactory
Medical Supply:
Drugs : Adequate
X-ray film "
Equipment
Is the coal supply sufficient yes
Are any classes, conferences, clinics conducted for educational purposes no
Are there any research projects under way no
Does the Welfare department provide any social service no
Are there any special arrangements for reporting communicable disease
For reporting births and deaths Town office
Does hospital have a narcotic license yes
Are narcotics properly stored yes
Are records properly kept yes
What is the total cost of operation of the hospital per year $500,000 yrs
How is this operating cost met Patient fees
What is cost per patient per day 100 yrs
Is present budget sufficient to meet need yes
Remarks:

Recommendations:

1. Latrines. Scrub urinals
2. Kitchen Provide adequate Watchman for patients & attendants
3. Clean Clean up all receptacles & in basements
4. Dental Organization Chart
5. District visited (no visiting hour patients)
6. (Cor) Clean & use of what please publish and especially Autopsy Operation room & wards
7. Old and unused things up in the passage etc to be store away

Date 19 July, 1948 Inspector S/Sgt Baughn

This Hospital is in bad shape. Cleanliness was very bad, Sanitation was definitely lacking. There are no water taps in the building. Water is gotten from a covered well. The principal fault was utter lack of cleanliness and sanitation.

The hospital head Dr. Tsubashi is simply attempting to carry to big of a load. He has at present thirty-two(32) bed patients, one hundred-eighty daily out patients and he has no laboratory technician, so must double in that capacity. The Dr. during our interview gave the impression of being tired out.

Recommendation were made in regard to bettering the sanitary and general cleanliness situation.

Date 19 July, 1948 Inspector S/Sgt. Baughn

In the absence of Dr. Fukumoto, Dr. Maumi gave us his assistance. Dr. Maumi was very cooperative and volunteered all information readily, also took us on a very through inspection of grounds and buildings.

This hospital appears in good shape, well managed, orderly and good organization seemed very apparent.

Their greatest handicaps lie in lack of Diesel feul to operate generaters for electricity and to operate their pump system which can supply running water to the entire hospital through taps. At present they are dependent on the city power system which permitts only a few hours daily for X ray, operating lamps etc. This water is tested frequently and purification means used.

It is apparent this Hospital is functionning approximatly as efficiently as the means at hand permitt.

Is the hospital licensed by any agencies Yes What and Welfare Ministry
Does the prefectural or national government regularly inspect the hospital Yes (last inspection by Welfare Ministry on 5/4/48)
What is the average number of beds occupied per month 25 daily ave.
What is the average number of outpatients treated per month 81 daily
Is the hospital open to all doctors or may only staff members treat patients hospitalized there Staff drs. only
Is there any preferential treatment shown to certain classes of patients No
Are adequate bathing facilities provided for the patients yes
Are patients separated by age, sex, and disease yes
Does the hospital supply food to the patients yes
Is there a central kitchen Yes Is it used yes
Are patients cooking in their rooms no If so, why
Are families living with patients no Why
Are families allowed on the contagious wards In special cases with drs permission
Are there beds and beddings supplied yes if patients do desire
Are laundry facilities adequate Yes
What is the adequacy of diet? Calories per patient per day 2000-2600
Gms protein per patient per day 65 (70-80)
How often do patients get fish and how much Every day
How often do they get vegetables and how much Every day
Are meat, eggs, or milk ever supplied yes
Are there provisions for special diets No.
Is there a dietician or nutritionist on the staff No

Medical care:
Are adequate records and charts kept on the patients yes
Does the medical practice appear adequate yes
Are adequate X-ray facilities available: yes Fluoroscope yes
Regular machine Yes Portable 35 MM no Deep therapy machine no
Are adequate laboratory facilities available
Diagnostic yes
Pathologic Yes (inadequate facilities)
Bacteriologic Yes
Are operating rooms and operating room technique satisfactory yes
How many operations per week

Sanitation:
Are buildings and rooms generally clean Fair
Is insect and rodent control practiced adequately no
Do they have DDT Yes How do they get it Welfare Ministry
What is the source of the water supply Reservoir Chlorinated yes no
filtered yes other treatment

Latrines: Type "Pottle" Clean Fair Covered yes Screened yes
Are infectious wastes and excreta disposed of in a sanitary manner Yes
What happens to sewage Carried away by trenches
What happens to garbage Incinerated or Buried
Is the kitchen and preparation of food sanitary Yes
Are isolation facilities adequate yes
Is isolation technique satisfactory yes
Medical Supply:
Drugs Adequate
X-ray film
Equipment
Is the coal supply sufficient Yes
Are any classes, conferences, clinics conducted for educational purposes no
Are there any research projects under way no
Does the Welfare department provide an social service yes
Are there any special arrangements for reporting communicable disease
For reporting births and deaths yes. Town
Does hospital have a narcotic license yes
Are narcotics properly stored yes
Are records properly kept yes
What is the total cost of operation of the hospital per year $700,000 yr.
How is this operating cost met Wartime Mining
What is cost per patient per day $ 150 yr.
Is present budget sufficient to meet need yes
Remarks:

Recommendations:

1. Sanitary Pottles and other receptacles require potash
2. D & D. Control, Use Traps - addition of poison.
3. Kitchen - Entrance should also be screened

The hospital is under consideration by the Welfare Ministry for "closing down at the end of the present financial year. The institution and operation of the hospital would make a good T.B. hospital.
