The copy filmed here has been reproduced thanks to the generosity of:

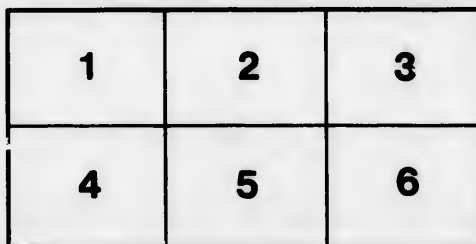

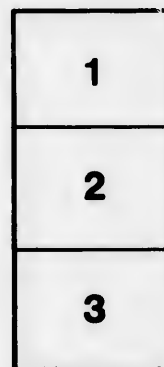

Library of the Public
Archives of Canada

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol \rightarrow (meaning "CONTINUED"), or the symbol ∇ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

La bibliothèque des Archives
publiques du Canada

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole \rightarrow signifie "A SUIVRE", le symbole ∇ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

 SUMMER, Sun enters ♋, June 22, 0h 9m morning.
 AUTUMN, Sun enters ♎, Sept. 23, 2h 12m evening.

ECLIPSES.

There will be this year two Eclipses of the Sun and one of the Moon — That of the Moon only will be visible at Quebec, 10th June; Digits 0° , 50° :—

Beginning on the 10:h June at 5h. 28m. evening. Middle, at 5h. 52m. End, 6h. 20m. Digits eclipsed, 0° . $50'$, on the Moon's northern limb.

The celebrated Halley's Comet, which appeared in 1682, and again in 1759, will return this year. According to Mr. Pontécoulant's computation it will arrive at its perihelion on the 7th November at 0h. 10m. evening. It will be nearest to the earth on the 7th of October, when its distance will be about 22 millions of miles. It is not expected to be visible longer than from the 1st until the 10th October; during which period, it will traverse the constellations of the Great Bear, Bootes and the Northern Crown. On the 5:h October it will pass near the largest star (*a* or *Dubhe*) of the Bear, and on the 11th very near the star (*a* or *Alphecca*) of the Crown. The Comet will not set but revolve all night around the north Pole, like the stars in this part of the heavens. Its meridian passage will be at about $2\frac{1}{2}$ h. (morning and evening,) on the 29th September; at 4h. on the 3d October; at $7\frac{1}{2}$ h. on the 7th; at 9h. on the 10:h October. On each of these ten days it will pass very near our zenith. Astronomers are of opinion that Halley's Comet, so brilliant in 1682, will appear very small in 1835, and perhaps not be visible but with the help of a powerful telescope.

The 7th November the planet Mercury will pass over the Sun's disk. Ingress, at about 1h. evening, egress, at 6h. 12m. or after Sun set.

ECLIPSES.

Il y aura cette année deux éclipses de soleil et une de lune. La dernière seulement sera visible à Québec : Commencement, le 10 Juin, à 5h. 28m. du soir. Milieu, à 5h. 52m. Fin, à 6h. 20m. Doights éclipsés 0° 50', sur le bord septentrional de la lune.

La célèbre Comète de Halley, qui fut vue en 1682 et en 1759 doit reparaitre cette année. D'après les calculs de M. Pontécoulant elle atteindra son périhélie le 7 Novembre à 0h. 10m. du soir. Elle sera à son périégée, ou au point de son orbite le moins éloigné de nous, le 7 Octobre. Sa distance à la terre sera alors d'environ 22 millions de milles. Il est probable qu'elle ne pourra être vue que depuis le 1er. jusqu'au 10 Octobre. Durant cet espace de temps, elle traversera la constellation de la Grande-Ourse, celle du Bouvier et la Couronne Boreale. Le 5 Octobre elle passera près de la plus belle étoile (*a* ou *Dubhe*) de la Grande-Ourse ; le 11 Octobre elle sera fort près de la plus belle étoile (*a* ou *Alphecca*) de la Couronne Boreale. Elle ne se couchera pas, mais tournera toute la nuit autour du pôle, comme les étoiles situées dans cette partie du ciel. Le 29 Septembre, elle passera au méridien vers 2½ heures. matin et soir ; le 3 Oct. vers 4h ; le 7 vers 7½h ; le 10 vers 9h. Elle se trouvera, une fois chaque jour, fort près de notre zénith. Les astronomes pensent que cette comète qui fut si brillante en 1682, paraîtra fort petite en 1835, et ne sera peut-être visible qu'à l'aide d'un très-fort télescope.

Le 7 Novembre, la petite planète Mercure passera sur le disque solaire.—Commencement, vers 1h. soir ; fin, vers 6h. 12m. c'est-à-dire, après le coucher du soleil.

Full Moon.

This Tide Table shews the time of high water on any day of the moon's age nearly, and the stream continues to run one hour and a half after high water, or, in the sea-man's phrase, it flows "Tide and Quarter Tide," and this is to be observed in every part of the River.

RULE. Having found the age of the moon at the top of each month in the Calendar, look in the left column of the table for the day from new to the full moon then in the right column the day from the full to the new moon, and in the middle column you will find the time when it is high water ashore.

Times of High Water, on the days of New & Full Moon, at different places of the River St. Lawrence.

LIGHT-HOUSES.

FLOATING LIGHT VESSEL in the Traverse.

Commander, - - - N. Marchand.

[As it has not been ascertained whether the vessel will hold in her present position, no bearings have been published.]

LIGHT HOUSE on Pointe DES MONTS.

Keeper, - - Jas. Wallace,

Will shew a light every evening from sunset to sunrise, between the first of April and the thirty-first of Decr. inclusive.

The following Notice was published by the Trinity House, relating to this Light House :—

NOTICE TO MARINERS.

That a Light House has been erected on **POINTE DES MONTS**, (or Cape Monts Pelés) on the north side of the River St. Lawrence, nearly opposite to Cap Chat, the Lantern standing one hundred feet above the water.

The Light House lays with the outermost part of **CARIBOU POINT** N. 52°. East and S. 52°. West, by the compass, and it can be seen over that point and to the Eastward of it.

Ships approaching the light from the Eastward, as they draw towards Caribou Point must bring it to bear W. by S. ; they will then be in a good fair way and if necessary they can near the land by their Lead.

After passing Caribou Point, and as they draw towards the Light House, they must come no nearer than 12 fathoms water to avoid two ledges of rocky one of which lays E.S.E. from the Light, with only 12 feet water on it ; the other lays S. W. from the Light, and E. S. E. from the Western extremity of

LIGHT-HOUSES.

Pointe des Monts, with 16 feet water on it ; but these rocks do not lay farther from the shore than half a mile at low water.

The Light House lays with the western extremity of Pointe des Monts N. 64° . East and S. 64° . West, and distant about one mile ; and when ships are to the Westward of the Point; the Light House is in one with the outermost Rocks off the Point ; and in the day time it forms a bold distinct Land Mark; and on this line of bearing ships are in the best possible fair way for the general purposes of Navigation, whether bound up or down.

For any particular purposes of Navigation, Ships may safely stand to the Northward, until the Light bears E. by N. ; they will then be drawing near the North Land ; and when it bears E. $\frac{1}{2}$ N. it is time to tack ; for when it bears East it will shut in with the High Land and cannot be seen to the *Southward of East*, and then they will be only one mile from the Land, and if they are off *Godbut* river, Pointe des Monts will bear from them E. by S. two leagues distant.

When ships are off Saint Nicolas Harbor, and the light bearing E. by N. they are in a good fair way from the North Land The S. E. spit of *Manicouagan* great Shoal, the Ship and the Light House are then all in one line of bearing.

LIGHT HOUSE on S. W. Point of ANTICOSTI.

Keeper—Lt. Harvey, b. p. Royal Navy.

A Light-House having been erected on the South West point of the Island of Anticosti, Notice is hereby given that a Grand Revolving Light, on the Argand principle, was shewn thereon for the first time, on the 25th of August 1831—and that the said

LIGHT-HOUSES.

Light will continue to be shewn every night from Sun-set to Sun rise, from the 25th day of March to the last day of December in each year.

When Ships are to the eastward of the Light-House, they may safely stand towards the Island until it bears N. N. W. by Compass—they will then be in a good fair way—and if they wish to make more free with the land they can do so by their lead. The land trends from the Light-House S. E. by S. or nearly so.

When Ships are to the Westward of the Light-House, they may safely stand towards the Island until the Light bears S. S. E. $\frac{1}{2}$ E., they will then be in a good fair way from the Land, and as before mentioned they can make more free by their lead.

Nearly East and West with the Light-House, and about three-fourths of a mile from it, is the outermost part of a *Reef of Rocks*, which joins the S. W. point. These are dry at low water and are the only dangers near the Light-House; therefore a berth of a mile from the point is a good fair way.

Sixteen leagues to the eastward of the Light-House, at Shallop Creek, and sixteen league so the westward of the Light-House, at Grand Bay, and at the Light-House itself are Depôts of provisions for the use of Mariners in distress or other ship-wrecked persons.

A Light-House has been built on Heath Point at the east end of the Island of Anticosti.
