An Historical
RELATION
OF THE
Kingdom of **CHILE.**

BY
ALONSO DE OVALLE,
OF
The Company of **JESUS,**

A Native of *St. Jago of Chile*, and Procurator
at *Rome* for that Place.

Printed at *Rome* by FRANCISCO CAVALLO, 1649.
with Licence of his Superiors.

Translated out of *Spanish* into *English.*

Translator's PREFACE.

WHEN the translation of the history of *Chile* was first undertaken, it was more out of consideration of making that part of the world, so remote from ours, better known, as to the geographical part, the natural history, and the first settlements of the *Spaniards*, than to enter into a distinct narrative of the events of that invasion, which contain little instruction, being between a people of great arts and abilities on one side, and another of great natural courage, and no culture of the mind or body, on the other. The case was so extravagantly unequal between them, when the odds of guns, armour, horses, and discipline, are weighed against nakedness, anarchy, panick terrors, and simplicity, that it seems a kind of prodigy that the love of liberty and a stock of natural unpolished bravery, should hold a contest with armed avarice, spirited by superstitious zeal, for almost a whole century.

The natural history of *Chile* is so admirably performed, that it may be a model for most relations of that kind; for there are exact descriptions of all the beasts, birds, fishes, plants, minerals, coasts, rivers, bays, and inhabitants of the country, that can be wished for. There is, besides, an excellent account of the climate, the seasons, the winds, the manner of living both of the *Indians* and the *Spaniards*. The description of the great *Cordillera*, or chain of mountains, which runs for almost a thousand leagues in a parallel line with the *South Sea*, and divides *Chile* from the *ultra* mountain provinces, is so accurate, that nothing of that kind can be more so: the narrative of the manner of travelling through those vast plains of *Cuyo* and *Tucuman*, as far as *Buenos Ayres*, and the river of *Plata*; the topographical description of the streights of *Magellan*, with all its bays, ports, and its whole navigation, are of great instruction, as well as very entertaining.

In all this the jesuit, who was the author of this history, must be confessed to have deserved the character of a candid inquisitive philosopher; and in what he has performed besides, about the settlements of the *Spaniards*, he is very particular, especially in his description of the city of *St. Jago de Chile*; where any one may see the progress of priest-craft in that new world, by the vast riches of the convents, monasteries, and nunneries: but above all the instructive chapters of this treatise, there is one about the methods of driving a trade between *Europe* and *Chile* to and from the *Philippines* and

The Translator's PREFACE

and *East Indies*, which contains secrets of commerce and navigation, which I wonder how they were published, and 'tis possible may, ere it be long, be practised by the *Spaniards* and other nations, if the navigation of the *Mexican gulph* becomes so troublesome, as it is like to be made by the naval powers of *Europe*, who seem to have chose those seas for the scene of all their maritime power to exert itself in.

There is a digression about the first discovery of the islands and continent of *America* by *Columbus*, and a progressive narration of all the other discoveries, as they were made, and by whom, which is very curious ; but as it is borrowed from other writers, the author can challenge no other merit than that of a judicious compiler.

All that needs to be added to this preface, is, to let the world know that the translation was first encouraged by the *Royal Society*, of which the translator has the honour to be a member ; and that it was two summers work, that it might be the less subject to errors ; and to prevent them, that worthy encourager of all natural knowledge, as well as of his own profession, in which he excels, *Dr. Hans Sloane*, has contributed very obligingly some of his care and attention, as well as to the edition by *Mr. Awnsham* and *John Churchill*, who are publishing a most curious collection of tracts of this nature, collected by him with great expence, and admirable choice, of which this tract will be one.

T H E

THE
Author's PREFACE.

BEing come from the kingdom of Chile into Europe, I observed that there was so little known of the parts I came from, that in many places the very name of Chile had not been heard of.

This made me think my self obliged to satisfy, in some measure, the desire of many curious persons, who pressed me to communicate to the world a thing so worthy of its knowledge. But I found myself in great difficulty how to comply with their pressing instances, being destitute of all the materials requisite for such a work, and at such a distance from the place that could furnish them, that I despaired of giving a just satisfaction: however, in obedience to those whose commands I cannot but respect, I resolved to write this account, more to comply with my duty, and give some information of those remote regions, than to pretend to a perfect and exact history, which this relation, in all its parts, (I confess,) comes very short of. The reader then being thus prepared, will, I hope, have a regard to the little help I could have in this work, at such a distance as Rome and Chile are from one another; and by his prudence and goodness, excuse any thing that may seem less finished in this work; particularly since there is hopes of a general history of Chile, which cannot be long before it is finished.

It has not yet appeared in the world.

In the mean time, the first and second books of this relation will shew the natural state of the kingdom of Chile, both as to its climate and product; The third, will describe the qualities of its first inhabitants; The fourth and fifth, will describe the first entrance of the Spaniards into it, and the conquest of it by them; The sixth, will contain the various events of the war, caused by the noble resistance made by the Araucano's; The seventh, will shew the first means of peace attempted by father Lewis de Valdivia, of the company of Jesus, in order to facilitate the preaching of the holy gospel, and the glorious death of his holy companions; The last book, which is also the largest of all, will contain the first means of planting the christian faith, and its propagation among the Indians, which was particularly compassed, and is still carried on by the missions and ministry of our company; all which endeavours of theirs I explain and distinguish under six heads, shewing the necessity of the spiritual help that those new christians lie under, both as to preaching, and informing them in matters of the christian faith.

I must give here five advertisements: The first, That in what I have seen my self, I have not departed from the truth in any thing I have writ: as to what I relate by hearsay, or by authority from other wri-

The Author's PREFACE.

ters, I report it with the same candor as I heard and read it, without adding or diminishing any thing of the truth; and though all those I cite in this work are worthy to be believed, yet the least to be suspected of partiality, are such foreign writers who extol and commend this kingdom of Chile with such repeated encomiums. My second advertisement is, That considering the Kingdom of Chile was the last part of South America that was discovered, and the nearest to the Antartick Pole, I could not treat of its discovery with good grounds, without touching a little upon the neighbouring kingdoms of Peru and Mexico, which were as a passage to it; and if I have enlarged now and then on the praises and description of those parts, it was, because I thought it might not be disagreeable to the reader; in which, if I am mistaken, he has only to skip some chapters of the fourth book, and go directly to those which treat of the first entrance of Don Diego de Almagro into Chile; Thirdly, I must take notice, that though I do sometimes, in speaking of the land of Chile, report some particularities which seem trifles, and not so proper for history, I do not relate them as singular and proper to that country alone, but rather to shew the uniformity both of nature and customs, as to life and religion, in all those parts; and some things are mentioned to encourage those new countries to drive on the advancement of religion, politeness, learning, and good morals.

Fourthly, I must take notice, That since I do not here make a general history of Chile, I have not had occasion to mention all the illustrious men, and noble commanders and soldiers, who have flourished in those parts from the beginning of the conquest: I only, therefore, take notice of such as I find named in the authors whom I cite; and they too not making it their business to write a distinct history of Chile, but only to relate some particular event, and so mention only some part of the government of some governors, or their wars, cannot be exact in the account of all those who have in different times and occasions acted in those wars; and by this salvo I cover the honour of all our gallant commanders and soldiers of Chile, whose actions I omit, though they are worthy to be graven in marble, or Bronze, only for this reason. And though I own, that I am not ignorant of many who have flourished in my time, and before it, yet I have not so distinct an information as would be necessary to give them their due commendations, and set their actions in that light which their valour deserves; therefore the general history of Chile will perform that part. Perhaps, even before that, this work of mine may excite some body to employ their talent in making a particular book of their eulogiums and praises, which cannot fail of being well received in the world, since so many noble and illustrious families of Europe will be concerned in it.

Lastly, I advertise, That though the principal motive of my writing this relation, was to publish the spiritual ministry of our company in the conversion of souls in this kingdom of Chile, yet I could not but treat

The Author's PREFACE.

first of the land and inhabitants, as being the object and subject of their endeavours; and I have been forced to be more diffuse in it, than I would have been about a place already known to the world by any history or relations made of it. For this reason, I have employ'd six books in the description of the land, and the valorous fierce disposition of its inhabitants, that the force and efficacy of the divine grace might shine out the more in the beginnings of the conversions of that untractable nation, mentioned in my two last books, which are almost as comprehensive as my six first, which were divided into so many, only to answer the diversity of matter which they contain.

Thus I have informed my reader of this work, in which he will find variety of entertainment. Some things will answer the curiosity of those who delight in knowing natural causes; others will be moved and incited to valiant actions by the examples of those performed here. Those likewise, who love historical relations, will be pleased, since here is an epitome of the discovery of the best part of the Indies, according to the order of times, and persons concerned in the conquests and discoveries of so many kingdoms; and, lastly, the pious disposition of devout minds will be elevated to praise God for the signal favours, which the queen of heaven has bestowed on the kingdom of Chile in particular; and adore the Lord of all things, for having in little more than one century made his name known, and his worship introduced among so many heathen nations, even to bring the untamed and powerful Araucano's upon their knees to him, after so many years stubborn resisting the entrance of the Gospel. I cannot desire my Reader to express any acknowledgements for this work of mine, because I do not judge it deserves so great a reward; but I hope he may, with indulgence, excuse its faults, and make me some allowance for the little helps I have had in writing. I have endeavoured to please all; but, particularly, to shew how the kingdom of Christ may be advanced in that new world, if the apostolical zeal of the evangelical workmen will employ itself in this great harvest of so extended a gentiilism and new christianity.

To the READER.

THE first six books being the only ones that contain the historical and natural accounts, they alone are translated; and some chapters even out of them omitted, for their tedious superstitious narratives.

labar and Coromandel, and of the Island of Ceylon, with all the adjacent
Countries. By Philip Baldaeus. Translated from the High Dutch. 501

BOOK I.

Of the Nature and Properties of the Kingdom of CHILE.

CHAP. I.

Of the Situation, Climate, and Division of the Kingdom of CHILE.

Situation. **T**HE kingdom of *Chile*, which is the uttermost bounds of *South America*, and has the kingdom of *Peru* to the north, begins at the 25th degree of south latitude, towards the *Antartick Pole*, and is extended in length five hundred leagues, as far as the streights of *Magellan*, and its opposite land, called *La Tierra del Fuego*, which reaches to the 59th degree. The breadth of *Chile* is various; for it may be said to extend itself one hundred and fifty leagues east and west, because though that which is properly call'd *Chile*, is not in many places above twenty or thirty leagues broad, which is generally its extent from the sea to the famous *Cordillera Nevada*, or chain of mountains cover'd with snow, (of which we shall speak in its proper place,) yet in the division of the bounds of the several governments of *America*, the king added to *Chile* those vast plains of *Cuyo*, which runs in length as far as *Chile* does, and are above twice as broad.

The opposite part of the world to this kingdom, is the meridian that passes between the island *Taprobana* of the Antients, which is *Zeilon*, and cape *Comorin*, beginning at twenty six degrees north of the equinoctial line. The inhabitants are properly antipodes to those of *Chile*; and those who inhabit the countries that reach from thirty seven degrees to forty four of the most westerly parts of *New Guinea*, would be also diametrically antipodes to the inhabitants of *Castille*; but 'tis yet uncertain, whether that part of the world is land or water; but this is certain, that it falls out in the division of *Castille*, and is opposite to it, and is west from *Chile* one thousand seven hundred leagues.

Climate. This kingdom is comprehended in the third, fourth, and fifth climate: In that part of it which is in the third climate, the longest day is thirteen hours; and in the fifth climate, the day at longest is about fourteen hours, and something more, quite

contrary to *Europe*, as being opposite to it, but not diametrically; for the longest day in *Chile* is *St. Lucias*, and the shortest *St. Barnaby's*; the sun is always there towards the north, and the shadows to the south.

This is the situation of the kingdom of *Chile*, which borders upon the north with the province of *Aracama*, and the rich mines of silver of *Potosi*, where the kingdom of *Peru* begins; and on the south it has the great sea to the pole, and the islands discover'd in it. *Abraham Ortelius* was of opinion, that there was on this south side of the kingdom of *Chile*, a land which was contiguous with *New Guinea*; and this opinion lasted till we were undeceiv'd by those, who having pass'd by the streight of *St. Vincent*, otherwise call'd the streight of *Le Maire*, went round that south land call'd the *Tierra del Fuego*, and return'd to the north sea by the streights of *Magellan*; proving evidently the said land to be an island entirely separated from any other land; as I shall shew further in its proper place.

Chile has on the east *Tucuman* and *Buenos Ayres*, and to the north east *Paraguay* and *Brazil*; to the west it has the *South-Sea*, which, according to the opinion of *Antonio de Herrera*, is all that is comprehended between *Chile* and *China*, and begins at the *Golden Chersonesus*, or the island of *Sumatra*; and that sea is in breadth, east and west, two thousand seven hundred leagues.

According to what has been said, we *Division.* may divide this kingdom into three parts: The first and principal is that which is comprehended between the *Cordillera Nevada* and the *South-Sea*, which is properly call'd *Chile*. The second contains the islands which are sow'd up and down upon its coast as far as the streights of *Magellan*. The third contains the province of *Cuyo*, which is on the other side of the snowy mountains, call'd the *Cordillera Nevada*, and run in length all along as far as the streights, and

OVALLE in breadth extends to the confines of *Tucuman*.
1646.

To begin then with that part which is most properly call'd *Chile*: I confess I had rather the description of it had fallen to the lot of some stranger who had seen it; for then the danger of passing for too partial for one's own country (to which are expos'd all those who write of it) would have been more easily avoided, and such a one might with less apprehension enlarge upon the excellent properties which God has been pleas'd to endow it with. The common opinion of all those who have come from *Europe* to it, is, that its soil and its climate exceed all others they have seen; though, perhaps, in that they only make a return for the kind welcome they all meet with in those parts. As for my part, all I can say, is, that though it be like *Europe* in every thing, except in the opposition of the seasons, which are transpos'd, it being spring and summer in the one, when it is autumn and winter in the other, yet it has some properties which do really singularize it, and deserve the praises given it by travellers; for, first, neither the heat nor the cold are so excessive as in *Europe*, particularly as far as the 45th degree of latitude, for from thence to the pole the rigorous and excessive cold begins.

The situation accidental of the land of *Chile*, must be the cause of this temperature of the air; for being cover'd on the east by the high mountains of the *Cordillera*, which are all so prodigiously elevated, it receives the fresh and cooling breezes from the sea; and the tides which penetrate as far as the foot of the mountains, joining with the coolness of the snow, with which they are cover'd, refresh the Air so, that about four a-clock in the afternoon the heat is no ways troublesome. Nay, if one is in the shade, one may say, that in no hour of the day the sun is insupportable, especially from thirty six degrees or thereabouts, neither day nor night the heat can be complain'd of; which is the cause, that at the town of the *Conception*, which is in that situation, the covering for beds is the same winter and summer, neither of those seasons being any ways troublesome.

Another good quality of this country is, to be free from lightening; for though sometimes thunder is heard, 'tis at a great distance up in the mountain. Neither does there fall any hail in the spring or summer; or are those storms of thunder and lightening seen here, which in other parts make the bells be rung out, and the clouds to be exorcized; neither are there so many cloudy days in winter as in other parts; but most commonly after the rain has lasted two or three days, the heavens clear up, and look

as if the sky had been wash'd, without the least cloud, in a very short time after the rain; for as soon as ever the north wind, which brings the cloudy weather, ceases, the south succeeds, and in a few hours drives away the rain; or if it be in the night-time, the dew falls, and the sun rises brighter than ever.

This country is yet to be valued upon another propriety of it, which is, that it is free from poisonous creatures, such as vipers and snakes, scorpions or toads; so that one may venture to sit under a tree, or lie down and rowl on the ground, without fear of being bit by them. Neither are there tygers, panthers, or any other mischievous animals; except some lions of a small kind, which sometimes do harm to the flocks of sheep or goats, but never to men, whom they fly from; and this is not only in the cultivated land, where men are frequent, but in the woods and solitude, and in the thickest groves, of which there are some so close with trees, that one can hardly break through them afoot. I heard a friar of ours, who was an excellent Builder, say, that having gone for three months together in woods, where there was no sign of any one's having pass'd before, to find out trees proper for the timber of the church of *St. Jago*, he had never met with the least poisonous creature, that could either cause a nauseous idea, or a dangerous effect.

There is another most wonderful singularity of this same country, which is, that not only it does not breed, but will not suffer any *punaizes* or bugs to live in it; which is the more to be admir'd, that on the other side the mountains they swarm. I never saw one in it alive, for sometimes there are some in the goods and furniture of people who come from the province of *Cuyo*; but as soon as they feel the air of *Chile* they die. The experience that was made of this, by one that was either curious or malicious enough, was wonderful; for coming from *Cuyo* to *Chile*, he brought some of those creatures with him, well put up in a Box, and such food provided for them as to keep them alive; but no sooner were they come to the valley of *Aconcagua*, which is the first valley coming down from the mountains, but they all died, not so much as one remaining alive.

I do not say any thing here of the mines of gold, nor of those excellent waters which, running from them, are cordial and healthy; nor of the abundance of provisions for life, nor of the physical plants, nor of many other rare qualities in which this country exceeds others, as well to avoid confusion, as because those things will be better shew'd when we come to treat of each of them in particular in their proper place.

The climate and soil of Chile very like those of Europe.

In all other things the land of Chile is so like Europe, both in climate and soil, that there is very small or no difference; and it is very remarkable, that in such variety of discoveries made in America, none is so conformable in every thing with the European constitution, as this tract of Chile; for in most of the places between the tropicks, as Brasil, Cartagena, Panama, Portobello, and those coasts in that situation, the heats are violent, and continual all the year; and in some other places, such as Potosi, and the mountains of Peru, the cold is as excessive; in some they have a winter without rain, and have their rain in summer, when their heat is highest; others there are, where they have neither wine, oil, nor wheat of their own product; and though in some they may have these productions, yet the other fruits of Europe do not take with them; but Chile has, just as Europe, its four seasons, of spring, summer, autumn, and winter; it does not rain in summer, but in winter; and all the product of Europe agrees with their soil.

Several lands in the same latitude with Chile, yet which differing in climate from that and Europe.

One thing is much to be admir'd, and that is, that the land of Cuyo, that of Tucuman, and Buenos Ayres, being all in the same latitude with Chile, are nevertheless so different in climate from it and from Europe; for though in those parts it freezes exceedingly, so as to freeze water within doors, and that their cattle, if left abroad, die with cold, yet there does not fall a drop of rain all the winter, and the sun shines out so bright and clear, that not a cloud is to be seen: But in the spring they have such abundance of rain, that it would drown the whole country, if the showers lasted as long as in Europe or in Chile; for when the rain lasts but an hour and a half, the streets are full of streams in the towns, and the carts are up to their

axe-trees, though they are very high in those parts, and all the country is as it were a sea: There fall likewise at that time thunder-stones, and hail as big as a hen's egg, nay, as geese eggs, and sometimes as big as ostriches; as I myself have seen.

OVALLE. 1646.

All these storms and varieties of weather form themselves in the high mountains, that are a kind of wall to the kingdom of Chile; and they never come so far down as to invade its territories, but stop at them like a barricado; for in Chile the weather is always steady and constant, without sudden changes, all the spring, summer, and autumn; in winter, indeed, there are degrees of heat and cold, as there is a difference in the length and shortness of the days, according to the degrees of the latitude, and course of the sun, which causes the same variation as in Europe, though in opposite months.

From hence it follows, as authors do observe, and experience teaches, that there must be, and is, a great resemblance between the animals and other productions of Chile and those of Europe. As a proof of this, I have seen several gentlemen that came to Chile from other parts of America, either as commanders, or for other employments, which are in the king's disposal, incredibly overjoy'd at this conformity with Europe; for they think themselves, as it were, in their native country, the air and the provisions of both so like in their qualities: The meats are more nourishing than in hotter climates; and when those who have been either born or bred in those hot countries come to Chile, they are forced to abstain, and keep a watch upon their appetites, till their stomachs are used by little and little to the strength of the food of that country, and can digest it.

A great resemblance between the animals and other productions of Chile, and those of Europe.

C H A P. II.

Of the four Seasons of the Year, and particularly of the Winter and Spring: With a Description of some Flowers and Medicinal Plants.

The four seasons.

THE four seasons of the year; which are in Europe the spring, the summer, the autumn, and the winter, are with the same duration of time enjoyed in Chile, though not exactly under the same names, at the same time; for the spring begins about the middle of the European August, and lasts to the middle of November; then begins the summer, which holds to the middle of February; which is followed by the autumn, which lasts to the middle of May; and then the winter enters, and makes all the trees bare of their leaves, and the earth cover'd with white frosts, (which nevertheless dissolve about two hours

Winter.

after sun-rise, except in some cloudy days, that the icicles last from one day to another;) the winter ends again about the middle of August. 'Tis very seldom that the snow falls in the valleys or low grounds, though so great a quantity is upon the mountains, that it fills up sometimes all the hollow places to the height of several pikes, and there remains, as it were, in wells and reservoirs, to provide, as it does in due time, so many springs and rivers with water, so fertilizing the valleys and plains, that they produce infinite crops of all sorts in the autumn, and enrich the kingdom. But notwithstanding that it seldom

OVALLE. seldom snows in the valleys and plains, yet it is so cold in them, that few parts of *Europe* are colder; which proceeds not only from the degree of elevation this land is in, but also from its neighbourhood to those vast mountains called the *Cordillera*, who send out such sharp and piercing winds, that sometimes they are insupportable; therefore the sea coast is much more temperate and warm; but in return, much more exposed to vehement tempests of winds, than the inland parts, where these storms are in some measure spent before they reach them, and so cannot whip them and torment them as they do the sea coasts.

Thorn-bushes in abundance, affording plenty of fuel.

For some protection against these sharp cold winds, God Almighty has placed several great clusters of thorn-bushes, which thrive so well, that it is the ordinary fuel of all the countries about the town of *St. Jago*, and the valleys near it. It is a plant not unlike an oak, though more durable; the heart of the wood is red, and incorruptible; of it they make coals for the furnace, and other shop uses. In other parts the true oak serves for the same purpose; as in the territory of the city of *Conception*, where there are very large woods of them, which are so thick, that though they have already served for the uses of the natives so many years, yet when they are enter'd, they can hardly be passed in the middle; and this within half a league of the city; for further up in the country there are forests, where no man ever set his foot.

Ever-greens.

Though these oaks, as also the fruit-trees, lose their leaves in winter, yet there are wild trees which do not, though all covered with ice and snow; and the cold is so far from injuring them, that when the sun melts the frost, they look brighter and more beautiful. As soon as the first rains come, the fields begin to be clothed in green, and the earth is covered in twenty or thirty days with grass; amongst which nature produces a sort of yellow flower in such abundance, that the plains and valleys look like carpets of green and yellow.

Spring.

These first rains seem to prepare the earth for its ornamental dress of flowers with the spring, which begins about the middle of *August*; and they last till *December*, that the heats come in, and that with such variety and abundance of so many kinds, that the fields look as if they had been painted, producing a most delightful object. I remember once, as I was travelling, I saw so great a diversity of these flowers, some scarlet, others blue, yellow, red, straw-colour, purple, &c. that I was mov'd to tell them, and I told

Description of some flowers,

in a short time two and forty sorts, so admirable was their variety; and yet I do not reckon among these the cultivated ones in gardens, nor those that were brought from *Europe*, such as carnations, roses, stock-gillyflowers, orange, lillies, poppies, lupins, &c. I only speak of those that grow wild, which are so odoriferous and sweet-scented, that 'tis out of them that they distil a water call'd *aqua d'angeles*, or, angel's-water. The smell of these flowers is perceived sweetest at the rising and setting of the sun; which mingled with the scent emitted by the herbs, which are very aromatick, produce a most admirable perfume, and for that reason they put the sprouts and tops of them among the flowers which make the angel-water.

It is scarce possible to express the force with which the earth puts forth these plants, which is so great, that in many places 'tis hard to distinguish the cultivated from the uncultivated lands. One would think at first that all had been plowed and sowed alike; and with the continuance of the rains, the grass runs up so strong, and grows so intricate, that a horse can hardly break through it, it coming in most places to the saddle-girts.

Mustard-seed, turnips, mint, fennel, *Plants, &c.* trefoil, and other plants, which I see are sowed and cultivated in *Europe*, for the just esteem that is made of them, do all grow wild in *Chile*, without serving to the use of life at all, otherwise than by the cattle's feeding on them, which they may do for several leagues together. The mustard plant thrives so mightily, that it is as big as one's arm, and so high and thick, that it looks like a tree. I have travelled many leagues through mustard groves, which were taller than horse and man; and the birds build their nests in them, as the gospel mentions in these words, *ita ut volucres caeli veniant & habitent in ramis ejus*; *Mat. xiii. 31.* so that the birds of the air come and lodge in the branches thereof.

There are many plants of great virtue in physick, and known only to the *Indians*, call'd *Machis*, who are a race of men that are their doctors. These plants they conceal carefully, and particularly from the *Spaniards*, to whom if they communicate the knowledge of one or two, it is a great mark of their friendship; but the knowledge of the rest they reserve, and it passes from father to son. These *Machis*, or doctors, are not only esteem'd by the *Indians*, but by the *Spaniards* themselves, who have recourse to them in the greatest extremities, when the disease presses most. They find wonderful effects from the application of these simples, which they use in a lesser dose with the *Spaniards* than with the *Indians*,

Character of the Machis, or Indian doctors.

dians, who are of a more robust nature, and stronger constitution.

• Two remarkable cures performed by the Machis. •

I saw one of our order much troubled with the falling-sickness and swooning fits, so as he was forced to have always some body in his company, or else he might have fallen down stairs, or otherwise killed himself: he had used all the remedies that the learning of physicians and the charity of religious men could suggest, but without any effect at all; nay, he was worse and worse every day. Our fathers learned at last, that about twelve leagues off from that place there lived an *Indian Machi*: they sent for him; and being come, and having heard the relation of his distemper, he gave him as much of a certain herb in wine as the bigness of a nail; and it had so great an effect, that it took away the distemper, as if he had taken it away with his hand, the person being never troubled with it more, all the time I knew him.

I have seen many other cures performed by these *Machis*, particularly in cases of poison; for in that sort of distemper they are very eminent. I shall mention but one instance, of a gentleman who had been pining away for several years, and often at death's door: once, being in extrem danger, he heard of a famous *Machi* who lived a great way off, but was a she-doctor, (for there are women amongst them eminent in the art:) he procured, by presents, to have her sent for; and having promised her a considerable reward, besides what he gave her in hand, which he was well able to perform, being very rich and powerful, she began to apply her remedies, which were herbs; and one day, when she saw his body prepared to part with the poison, she caused a great silver volder to be set in the middle of the room, and there, in the presence of many people, the gentleman having first been very sick in his stomach, he cast up the poison which had been given him many years before, wrapp'd up in hair, which came up with it; and he was perfectly well after this, as he himself related to me.

Though, as I have said, the *Indians* are so close in keeping secret the herbs they use, yet many of them, persuaded by reason, and induced by friendship, do communicate something; and time and experience has discover'd so many more, that if I should mention them all, I should be forc'd to make a book on purpose of them; therefore I shall only mention three that I have more present in my memory, the effects of which are prodigious.

Description of some medicinal herbs.

The first shall be the famous plant call'd *Quinchamali*, which rises not a foot above the ground, and its branches spread like a nossegay, and end in little flowers at the

points, which, both in colour and shape, are not unlike the saffron call'd *Romi*. They pull up the herb, and boil it entire with its root, leaves, and flowers, in fair water, which is given to the Patient to drink hot: amongst other effects it produces, one is to dissolve all coagulated blood in the body, and that very quickly; so that an *Indian* feeling himself wounded, takes it immediately, to hinder the blood that could not come out at the wound from congealing inwardly, and so prevents all imposthuration, and the corruption of the rest.

OVALLE: 1646.

There happened in our college of *St. Jago* an accident, which gave proof of this admirable herb; which was, That an *Indian* belonging to us being gone to the great place to see the bull-feast, a bull, to his great misfortune, catch'd him up, and toss'd him in the air, and left him almost dead on the ground; he was brought to our house, and the physician, being called, said he was a dead man, and nothing could save him: but, however, he told the father that has care of the sick, that it would cost but little to give him the *Quinchamali*, wrap him up warm, and leave him alone some hours. It was done accordingly; and after some time, the father resorting to the place where they had laid him, to see if he was dead, he was found not only alive, but out of danger, and the sheet all full of blood, which the herb had caus'd him to void through the pores of his body, so as he remain'd perfectly well in a little time.

The second herb is that which we *Spaniards* call *Albaaquilla*, and the *Indians*, *Culen*, because its leaves are like the leaves of sweet basil: it grows in bushes so high, that they seem to be trees; the leaves are very fragrant, and sweet like honey: being bruised, it is applied to the wound outwardly, and some drops of its juice are to be poured also into the wound; after which most admirable effects of its efficacy are seen.

I was told by captain *Sebastian Garcia Carrero*, the founder of our novitiat-house of *Bucalemo*, that as he was travelling with a dog in his company, which he loved extremely, some wild monkeys that live in the mountains fell upon him, and so worried him among them by biting him, some on one side and some on the other, that they left him full of wounds, and particularly with one large one in his throat: his master came up at last, and found him without sign of life: he was much troubled for the loss of his dog, and lighted to see what he could do for him. This *Albaaquilla* is an herb that grows every where in the fields; and the gentleman, at a venture, gathering three or four handfuls of it, bruized them between

1646. **O**VALLE. two stones, and poured the juice into the dog's wounds, and into the great one of his throat he thrust a handful of it, and so left him without hopes of life: but it fell out wonderfully, that after a few leagues travelling on, turning back to look at something, he saw his dog following at a distance, who was so well cured that he lived many years after.

The third herb, that I can remember, is like a knot of fine hair, and which is not commonly met with: this is an admirable herb in fevers and pleurifies; it is boiled in water, and drank; it purifies and cleanses the blood, expelling that which is bad, and so the sick body remains perfectly

cured; as I myself have had the experience of it.

There are several other plants, some of which cure the pains of the liver; others dissolve the stone in the bladder, and break it to pieces; some are excellent for the sciatica and other infirmities; all which, if I were to relate in particular, I should make a new *dioscorides*, or herbal, which is not my intention. We will therefore leave the flowers and herbs of the spring, the harmony of the singing of birds, which so rejoices the mornings, and the serene and quiet days of this season, to draw near the summer, which will afford us matter of discourse.

C H A P. III.

Of the Summer and Autumn, and their Product.

Summer.

THE Summer begins in the middle of November, and lasts to the middle of February, so that the greatest heats are at Christmas; and we are forc'd to have recourse to our faith, to consider the Child God trembling with cold in the manger; for when we rise to sing *matins*, particularly in *Cuyo* and *Tucuman*, where the heats are excessive, we are ready to melt with heat. In *Chile* the heats are not so excessive, because the country is more temperate; but still the weather is not so cold as it was in *Bethlem*. About this time the fruits begin to ripen, which are in great variety; and there are but few of those of *Europe* that are wanting; for as soon as any of them are brought, either in stone, seed, or plant, they take, and 'tis wonderful to see how they thrive. I remember about thirty years ago there were no cherries; there coming by chance a little tree from *Spain*, from which all the curious began to multiply them in their gardens, (it being both a rarity, and a valuable fruit;) in a small time they were so increased, that they were banish'd from the gardens to the fields, because they produced so many young plants from their roots, that they took up all the ground about them.

Description of fruits.

Of the fruits of *Peru*, *Mexico*, and all the continent of *America*, not one will grow in *Chile*; and the reason is, the opposition of the climate of *Chile*; nay, though they bring either plant, seed, or setting, they never thrive; for those countries are within the tropicks, and *Chile* is out of them: for which reason also the fruits of *Europe* take so well in *Chile*, such as pears, abricots, figs, peaches, quinces, &c. which bear infinitely; and if there is not care taken to lessen their number when little, it is impossible for the boughs to bear

the weight of the fruit, so that they are fain to prop them up with forks when they grow near ripe.

The fruit that exceeds all the rest for bearing, is the apple of all kinds, of which there are prodigious orchards; and of these, though they lessen the number, yet the others increase so much in weight, that the trees are brought down to the ground; so that there are many windfalls, filling all the ground about them, and the very rivers on which they stand, and stopping the course of the water.

All the crops of oats, wheat, maiz, and ^{Grain.} all other garden product, begin to be cut in *December*, and so on to *March*; and they seldom produce less than twenty or thirty for one, nay, some a hundred for one, and the maiz four hundred for one; and 'tis very seldom that there is any scarcity of grain, but it is very cheap most commonly.

As for the fruit of the gardens, it is never or rarely sold, but any body may, without hinderance, step into a garden or orchard, and eat what they will; only the strawberries, which they call *Frutilla*, are sold; for though I have seen them grow wild for miles together, yet, being cultivated, they are sold very dear: they are very different from those I have seen here in *Rome*, as well in the taste, as in the smell; and as for their size, they grow to be as big as pears, most commonly red, but in the territory of the *Conception* there are of them white and yellow.

About this time also the herbs that fatten the cattle grow ripe; and then they begin to kill them with great profit, it being the chiefest riches of the country, by reason of the tallow and hides which are sent for *Peru*. They kill thousands of cows, sheep, goats; and the flesh, being so cheap that it is not worth saving, they throw it away into the
sea

sea or rivers, that it may not infect the air; only they salt the tongues and loins of the cows, which they send for Peru as presents to their friends; and they who are able, and understand it, send likewise some dried salt-fish for the king's forces, or keep it to feed their own slaves or servants.

Autumn. Autumn begins about the middle of February; so lent proves the most delicious time of the year; for besides lobsters, oysters, crabs, and other sorts of shell-fish and sea-fish of all kinds, they fish in the ponds and rivers for trouts, *Vagres*, *Pejerreges*, and other very choice river-fish of several kinds; and at the same time there is a great plenty of pulse, and garden-product, as gourds, all sorts of fruit, particularly quinces, which are as big as one's head, and another kind called *Lucumas*, of which they make so many dishes, that the mortification of fasting is hardly perceived.

Time of gathering olives and grapes. Noble and generous wines. In the end of Autumn they begin to gather the olives and the grapes; and this lasts the months of May and June. The wines are most noble and generous, and fam'd by the authors who write of this country: there is such plenty of them, that the

plenty is a grievance, there being no vent OVALLE. 1646. for such quantities: it kills the *Indians*, because when they drink, 'tis without measure, till they fall down; and it being very strong, it burns up their inward parts: the best kind is the *Muscatel*. I have seen some that look like water; but their operation is very different in the stomach, which they warm like brandy.

There are white wines also very much *White* valued; as those of the grapes called *Uha* *wines.* *Torrontes*, and *Albilla*: the red and deep-colour'd are made of the ordinary red grape, and the grape called *Mollar*. The bunches of grapes are so large, that they cause admiration; particularly I remember one, which, because of its monstrous bigness, was by its owner (a gentleman) offer'd to our lady's shrine: it was so big as to fill a basket, and to feed the whole convent of friers for that meal, and they are pretty numerous. The branches of the vines are by consequence very big, and the trunk or body of them is in some places as thick as a man's body, and no man can compass with extended arms the heads of them, when they are in full bloom.

C H A P. IV.

Of the natural Riches of the Kingdom of Chile; which are its Mines of Gold, and other Metals; as also of the industrious Management of its other Product.

Two sorts of riches.

THE riches of *Chile* are of two sorts: first, those which nature has bestowed on it, without the help of human industry; and, secondly, those which have been produced and invented by the inhabitants, to improve and enjoy its fertility. To the first kind belong its mines of gold, silver, copper, tin, quick-silver, and lead, with which heaven has enriched it. Of the copper of *Chile* are made all the great guns for *Peru* and the neighbouring kingdoms, in the garrisons of which there are always stores, particularly on the coasts: all the bells of the churches, and utensils for families, are of this metal; so that since the working of these mines, no copper has come from *Spain*; for the *Indies* are sufficiently supplied by them with all they can want.

Little lead, and less quick-silver.

There is little lead work'd, because there is little use of it; quick-silver less, because the mines are but newly discovered; and as they were going to work them, the obstacle to those of *Guancablica* in *Peru* was removed, and so there was no need of working those of *Chile*. Those of silver likewise lie unwrought, because the golden mines are of less charge, and so every body has turned their industry to-

wards them: they are so many, and so rich, that from the confines of *Peru* to the extreamest parts of this kingdom, as far as the streights of *Magellan*, there is no part of the country but they discover them; which made father *Gregory* of *Leon*, in his map of *Chile*, say, That this country ought rather to have been called a plate of gold, than to go about to reckon up its golden mines, which are innumerable.

All the authors who have writ of this country, do mightily enlarge upon its riches; and the same is done by all those who have navigated the streights of *Magellan*: *Antonio de Herrera*, in his general history of the *Indies*, says, That in all the *West-Indies*, no gold is so fine as that of *Valdivia* in *Chile*, except the famous mine of *Carabaya*; and that when those mines were first work'd, (which was before those *Indians* who are now at peace with us were at war,) an *Indian* among them did use to get from them every day 20 or 30 *peso's* of gold, which comes to near 500 reals of plate, and was a wonderful gain.

And the already-cited *John* and *Theodore Great de Brye* say, That when the *Nodales* passed plenty of the streights of *St. Vincent*, otherwise *Gold*, called

1646. *OVALLE*. called freights of *Le Maire*, there came some *Indians* from the country called *La Tierra del Fuego*, who exchanged with the *Spaniards* a piece of gold of a foot and a half long, and as broad, for scissars, knives, needles, and other things of little value; for they do not value it as we do. Other authors say, that most of the gold that was laid up in the *Incas* treasure, was brought to him from *Chile*, though having never subjected the *Araucanos*, he could not have that quantity which this rich country would else have afforded.

But what need I weary myself in citations of people abroad, when those who live in the country of *Chile*, and see it every day, are the best testimony of the great riches that the *Spaniards* have drawn from these mines; which was so great, that I have heard the old men say, That in their feasts and entertainments they us'd to put gold-dust in their salt-sellers, instead of salt; and that when they swept the house, the servants would often find grains of gold in the sweepings, which they would wash out, for the *Indians* being the persons that brought it to their lords, they would often let some fall.

Gold more plenty than silver. I have said before, that it was much more easy to get gold than silver out of the mines, because this last costs much pains; first, to dig it from the hard rock, then to beat it in the mills to powder, which mills are chargeable, as is also the quick-silver, necessary to be us'd to make the silver unite, and all the rest of the operations requisite to refine it; but the advantage of getting gold has no other trouble in it, than to carry the earth in which it is found to the water, and there wash it in mills on purpose, with a stream which carries off the earth, and the gold, as being heaviest, goes to the bottom.

'Tis true, that sometimes they follow the gold vein through rocks and hard places, where it grows thinner and thinner, till at last the profit that arises is very small; yet they persist to follow it, in hopes it will grow larger, and end at last in that which they call *Bolsa*, which is, when coming to a softer and easier part of the rock, the vein enlarges so, that one of these hits is enough to enrich a family for all their lives. There is now less gold found than formerly, by reason of the war the *Spaniards* have had with the nation of *Araucanos*; but still some is found, particularly in *Cochimbo*, where, in the winter, when it rains much, is the great harvest of gold; for by the rain the mountains are wash'd away, and the gold is easier to come at. There is likewise some gold in the territory of the *Conception*; in which I was told, by a captain who enter'd into our

society, That there was, not above half a league from the town, a pond, or standing-water, which is not deeper than half the height of a man; and that when the *Indians* have nothing to spend, they send their wives to this pond; and they going in, feel out with their toes the grains of gold; and as soon as they have found them, they stoop and take them up. They do this till they have got to the value of two or three *peso's* of gold; and then they seek no longer, but go home, and do not return for any more as long as that lasts; for they are not a covetous people, but are content to enjoy, without laying up.

A peso is about the value of eight shillings.

I brought with me to *Italy*, one of these grains thus found, of a pretty reasonable bigness; and sending it at *Seville* to be touch'd, without either putting it in the fire, or using other proofs, it was allowed to be of twenty three carats, which is a very remarkable thing. Now the peace is made, and the warlike *Indians* quiet, the *Spaniards* may return to search for the gold of *Valdivia*, and other mines thereabouts, which will extremely increase the riches of the country.

As for the product made by the industry of the inhabitants, it consists particularly in the breed of their cattle of all kinds, as I have observ'd above; sending the tallow, hides, and dried flesh, for *Lima*; where having first retain'd the necessary proportion for themselves, which is about twenty thousand quintals of tallow every year for that city, and hides accordingly, they distribute the rest all over *Peru*: the hides, particularly, are carried up to *Potosi*, and all that inland tract of mines, where most of their cloathing comes from *Chile*; they are also carried to *Panama*, *Cartagena*, and the rest of that continent; some of this trade extends itself likewise to *Tucuman* and *Buenos Aires*, and from thence to *Brazil*.

Breeding of cattle the chief product of Chile.

The second product is the cordage and tackling, with which all the ships of the *South-Seas* are furnish'd from *Chile*; as also the match for fire-arms, with which all the king's garrisons along the coast are provided from those parts; for the hemp which makes the first material of all these provisions, grows no where in the *West-Indies* but in *Chile*: there is also packthread exported, and other smaller cordage.

Cordage, tackling for ships, and match for fire-arms.

The third product is mules, which are sent to *Potosi*, through the desert of *Araucama*.

Mules.

The fourth product is the cocoa-nuts, which are the fruit of the palm-trees; and do not, indeed, proceed from industry, but grow wild in the mountains, without any cultivation, so thick, that I have seen several

Cocoa-nuts.

Almonds. several leagues of this tree. Almonds likewise, and the product of gardens, which do not grow in *Peru*, are carried thither with great profit, so as to be able to set up a young beginner. When I came to *Lima*, I observed that the annifeed which had been bought at *Chile* for two pieces of eight, was sold there for twenty; and the cummin-feed, bought at twenty, was sold for fourscore; which makes merchants very willing to trade to those parts, as hoping to grow rich in a small Time; and this increases the riches of *Chile*, by drawing every day thither men with good stocks. The gains made this way are so considerable, that a man who has about forty thousand crowns to employ in land, flocks, and slaves, to take care of them, may every year have a revenue of ten or twelve thousand crowns, which is a gain of *twenty five per cent.* very lawful, and without any trouble to one's conscience, or subjection to the dangers of the seas: for those who will run the hazards of that element gain much more; for the merchants, by many commodities, get a hundred, and two hundred, nay, three hundred *per cent.* in a navigation of about three weeks, which is the time usually employed from *Chile* to *Lima*, without any fear of pirates, all those seas being entirely the king of *Spain's*, and so free from those robbers. Besides, 'tis very seldom that any storms are felt in that voyage, or, at least, not any that endanger the loss of the ships. The greatest danger proceeds from the covetousness of the owners and merchants, who trusting to the peaceableness of those seas, and that they sail all the way from *Chile* to *Lima* before the wind, they load up to the mid-mast. 'Tis not exaggeration; because I have seen them go out of the port with provisions for the voyage, and other necessaries, as high as the ropes that hold the masts; and though the king's officers are present to hinder the ships from being overloaded, yet generally they are so deep in the water, that they are but just above it; and with all these, there are many goods left behind in the magazines of the port; for the land is so productive of every thing,

Great encouragement to merchants.

that the only misfortune of it, is to want a vent for its product, which is enough to supply another *Lima*, or another *Potosi*, if there were one. OVALLE.
1646.

'Tis upon this foundation, that 'tis affirmed generally, that no country in all *America* has a more solid establishment than *Chile*; for in proportion to the increase of inhabitants in *Peru*, *Chile* must increase too in riches, since it is able to supply any great consumption, and yet have enough of its own in all the kinds of corn, wine, flesh, oil, salt, fruits, pulse, wool, flax, hides, tallow, chamois, leather, ropes, wood, and timber, medicinal remedies, pitch, fish of all kinds, metals of all sorts, and amber. There wants silk; and 'tis to be wished that it may never get thither, but for ornament to the altars; for it is already the beggering of the country, by reason of the great expence in rich cloaths; particularly by the women, who are not outdone in this, even by the bravest ladies of *Madrid*, or other parts; but yet the land is so proper for silk-worms, that if any one carries the seed of them there, I am persuaded it will take with great abundance, the mulberry-trees being there already as full grown, and in as great beauty as in *Spain*.

The wax likewise comes from *Europe*, though there are bees who make both honey and wax. Pepper, and other *east-india* spices, come from abroad, though there is a kind of spice which supplies the want of them very well; and the authors above cited say, That in the streights of *Magellan*, there is good cinnamon; and that on those coasts there grow trees of a most fragrant smell in their bark, and which have a taste like pepper, but of a more quick favour, as it shall be made out when we treat of that streight.

In the whole kingdom, the herbage and the fishing are in common; as also the hunting; and the woods for fuel and timber; and the same is practised as to the salt mines. There is no imposition on trade through all the kingdom, every one being free to transport what goods he pleases, either within or without the kingdom. *Herbage, fishing, hunting, woods for fuel, and salt mines, all in common.*

CHAP. V.

Of the Famous Cordillera of Chile.

Description of the Cordillera.

THE *Cordillera*, or high mountains of *Chile*, are a prodigy of nature, and without parallel in the world: 'Tis a chain of high mountains, which run from north to south from the province of *Quito*, and the new kingdom of *Granada*, to *Chile*,

above a thousand *Castilian* leagues, according to *Antonio de Herrera*, in his third tome, *Decade 5.* to which adding the length of the kingdom of *Chile* to the streights of *Magellan*, it will make in all little less than 1500 leagues. The remotest part of *Chile*

OVALLE. is not above twenty or thirty leagues from the sea. These mountains are forty leagues broad; with many precipices, and intermediate valleys, which are habitable till one comes to the tropicks; but not beyond them, because of the perpetual snows with which they are always covered.

Antonio de Herrera, already cited, puts two chains of mountains; one much lower, covered with woods and handsome groves, because the air is more temperate near it; the other much higher, which by reason of the intense cold, has not so much as a bush on it, the mountains being so bare, that there is neither plant nor grass on them: but he says, that on both these sorts of mountains there are several animals, which because of the singularity of their kinds, I shall here describe some of them.

Description
of several
animals.

Hogs.

One of the most remarkable, is a species of hogs, that have their navel in their back, upon the back-bone: they go in herds, and each herd has its leader, who is known from them all; because when they march, none dares go before him, all the rest follow in great order. No hunter dares fall on these herds till he has killed this captain, or leader; for as long as they see him, they will keep together, and shew so much courage in their own defence, that they appear invincible; but as soon as they see him killed, they are broke, and run for it, giving up the day, till they chuse another captain.

Their way of eating is also admirable: they divide themselves into two bodies; one half of them goes to certain trees which are in a country called *Los Quixos*, in the Province of *Quito*, and are like the cinnamon-trees: these they shake to bring down the flowers, which the other half feeds on; and when they have eat enough, they go and relieve the other half of the flock, and make the flowers fall for them; and so return the service to their companions, that they have received from them.

Monkeys.

There are many sorts of monkeys, who differ mightily in their shapes, colour, and bigness, and other Properties: some are merry; some melancholy and sad; these whistle, the others chatter; some are nimble, others lazy; some cowards, others stout and courageous; but yet when one threatens them, they get away as fast as they can. Their food is fruit and birds-eggs, and any game they can catch in the mountains: they are very much afraid of water; and if they happen to wet or dirty themselves, they grow dejected and sad. There are also great variety of parrots.

Goats.

The wild goats are numerous: they are called *Vicunnas*, and have so fine hair, that it seems as soft as silk to the touch: this is used to make the fine hats so much valued

in *Europe*. There are likewise a sort of sheep of that country, they call *Quanacos*, which are like camels, but a good deal less, of whose wool they make waistcoats, which are woven in *Peru*, and are more valued than if they were of silk, for their softness, and the fineness of their colours.

The same author says, moreover, That ^{Two famous} through this chain of mountains there went ^{highways.} two highways, in which the *Ingas* shewed their great power; one of them goes by the mountain all paved for nine hundred leagues, from *Posto* to *Cbile*: it was five and twenty foot broad, and at every four leagues were noble buildings; and to this day there are the places called *Tambos*, which answer our inns, where every thing necessary is to be found by travellers; and that which was most admirable, at each half-league there were couriers and posts, who were designed for the conveniency of passengers, that they might send their letters and advices where they were requisite. The other way, which was also of twenty-five foot broad, went by the plain at the foot of the mountains, with the same proportion and beauty of inns and palaces at every four leagues, which were enclosed with high walls; as also streams and rivolets running through this way, brought thither by art, for the refreshment and recreation of travellers.

This is what *Antonio de Herrera*, and other authors, who treat of the *Indies*, do tell us about this famous *Cordillera*: now I shall relate what I myself have seen, and do know about it.

And first, I must suppose, that though these two highways run separate and distinct through all *Peru* and *Quito*, yet they must grow nearer each other as they rise higher in the mountain; for when they come to *Cbile*, they are no longer two, but one. This is clearly found, by experience, in those who cross the *Cordillera*, to go from *Cbile* to *Cuyo*, as I have done several times, that I have passed this mountain, and never could see this division, but always continual and perpetual mountains, which serve for walls and fortifications on each side to one which rises in the middle infinitely higher than the rest, and is that which most properly is called the *Cordillera*. I am also persuaded, that the two ways above mentioned came but to the boundaries of *Cbile*, and ended in those of *Peru*. I have, indeed, in passing the *Cordillera*, met with great old walls of stone on the top of it, which they call the *Ingas*; which, they say, were encampments, (though not his, for he never came to *Cbile*;) but of his generals and armies sent to conquer the country; and 'tis not impossible but the said two ways might be continued on to these buildings; but it was not practicable, that it could be with that

perfection, as in that part of the mountain contained within the tropicks; where because the hills are more tractable, such ways might be made as they describe; but not in the mountains of *Chile*, which are one upon another so thick, that it is with great difficulty that a single mule can go in the paths of it: and the *Cordillera* grows rougher and rougher; the more it draws nearer the pole, so that it appears to be above the compass of human power to open a way through it, so curious and finely contrived as it is represented. It was not necessary that the *Inga* should use so much art and industry, to make admirable that which is already so much so, as this mountain is in its whole course through the kingdom of *Chile*, as it shall be shewed when we discourse in particular of its several parts and properties. For, first, supposing what we have said of its running fifteen hundred leagues in length, and forty in diameter, its wonderful height makes it astonishing: the ascent is so prodigious, that we employ three or four days in arriving to the top of it, and as many more in the descent, that is, speaking properly, and only of the mountain, for otherwise it may be affirmed, that one begins to mount even from the sea-side, because all the way, which is about forty leagues, is nothing but an extended shelving coast; for which reason the rivers run with such force, that their streams are like mill-streams, especially near their heads.

Sudden
change of
air.

When we come to ascend the highest point of the mountain, we feel an air so piercing and subtle, that 'tis with much difficulty we can breath, which obliges us to fetch our breath quick and strong, and to open our mouths wider than ordinary, applying to them likewise our handkerchiefs to condense our breath, and break the extrem coldness of the air, and so make it more proportionable to the temperament, which the heart requires, not to be suffocated: This I have experienced every time that I have passed this mighty mountain.

Don *Antonio de Herrera* says, That those who pass it in *Peru*, suffer great reachings and vomitings; because no one thing produces so great an alteration at once, as a sudden change of air; and that of the mountain being so unproportioned to common respiration, produces in those who pass over it those admirable and painful effects. He says moreover, that those who have endeavoured to dive into the causes of them, do find, That as that mountain is one of the highest in the world, the air of it is so extrem subtle and fine, that it discomposes the temperament of the animal, as has been said. 'Tis true, that in that part of the *Cordillera* in *Peru*, which they call *Pariacaca*, there may be a concurrence of other causes

and disposition of the climate, to which OVALLE. may be attributed some of these effects; for 1646. if they were to be attributed only to the height of the mountain, we that pass it in *Chile* ought to find those inconveniencies as much, or more, because the mountain is highest without comparison; and yet I never endured those reachings or vomitings, nor have seen any of those motions in others, but only the difficulty of breathing, which I have mentioned.

Others experience other effects, which Exhalations and other meteors. I have often heard them relate; for the exhalations, and other meteors, (which from the earth seem so high in the air, that sometimes we take them for stars,) are there under the feet of the mules, frightening them, and buzzing about their Ears. We go through the mountains treading, as it were, upon clouds; sometimes we see the earth without any opposition to our sight, and when we look up, we cannot see the heavens for clouds; but when we are ascended to the highest of the mountain, we can no longer see the earth for the clouds below, but the heavens are clear and bright, and the sun bright and shining out, without any impediment to hinder us from seeing its light and beauty.

The *Iris*, or *Rainbow*, which upon the Rainbow. earth we see crossing the heavens, we see it from this height extended under our feet; whereas those on the lower parts see it over their heads: nor is it a less wonder, that while we travel over those hills which are dry and free from wet, we may see, as I have done often, the clouds discharge themselves, and overflow the earth with great force; and at the same time that I was contemplating, at a distance, tempests and storms falling in the valleys and deep places, as I lifted up my eyes to heaven, I could not but admire the serenity over my head, there being not so much as a cloud to be seen, to trouble or discompose that beautiful prospect.

The second thing which makes this Snow. mountain admirable, is the prodigious snow which falls upon it in winter, which is so great, that though these mountains are so high and broad, there is no part of them uncovered with snow, being in many places several pikes deep. I am not informed how it is in the highest part of all, which is most properly called the *Cordillera*, because this being so very high, that it is thought to surpass the middle region of the air, its point alone may perhaps be uncovered; at least, when I passed it, which has been sometimes in the beginning of winter, I have not seen a crum of snow; when a little below, both at the coming up and going down, it was so thick, as our mules sunk in without being able to go forward.

But

OVALLE. But that which I have observed, is, That after a glut of rain, which has lasted two or three days, and the mountain appears clear, (for all the time it rains 'tis covered with clouds,) it seems white from top to bottom, and is a most beautiful sight; for the air is so serene in those parts, that when a storm is over, the heavens are so bright, even in the midst of winter, that there is

1646.
The Cordillera white from top to bottom after a glut of rain.

not a cloud to be seen in them for many days; then the sun shining upon that prodigious quantity of snow, and those coasts and white shelvings all covered with extended woods, produces a prospect which, even we that are born there, and see it every year, cannot forbear admiring, and draws from us praises to the great creator for the wonderful beauty of his works.

CHAP. VI.

Of the Vulcanos, and the Mines of Gold and Silver of the Cordillera.

Vulcanos: **T**HERE are in this *Cordillera*, or chain of mountains, sixteen *Vulcanos* which at several times have broke out, and caused effects no less admirable than terrible and astonishing to all the country: amongst the rest, that which happened in the year 1640. is worthy to be remembered. It broke out in the enemy's country, in the territory of the *Cacique Aliante*, burning with so much force, that the mountain cleaving in two, sent forth pieces of rock all on fire, with so horrible a noise, that it was heard many leagues off, just like the going off of cannon. In all that territory the women miscarried for fear, as shall be related more particularly in its proper place, in the account I shall give of the subjection of all that country to our catholick king, being moved thereunto by this and other prodigies.

The first of these *Vulcanos* is called the *Vulcano of Copiapo*, and is in about twenty six degrees altitude of the pole, about the confines of *Chile* and *Peru*; in thirty degrees is that of *Coquimbo*; in thirty one and a half that of *La Ligua*; in thirty five that of *Peteroa*; in thirty six and a half that of *Chilau*; in thirty seven and a quarter that of *Antoco*: this is followed by that of *Notuco* in thirty eight and a half; that of *Villarica* is in thirty nine and three quarters; near this is another, whose name I know not, in forty and a quarter; and in forty one is that of *Ojorno*; and near that, in less than a quarter of a degree, that of *Guanabuca*; and in a little more than forty two degrees that of *Quebucabi*: and last of all are two more; one without a name, in forty four; and that of *St. Clement*, which is in forty-five and a half.

These are the known *Vulcanos of Chile*: we have no knowledge of others, which may be as far as the *Tierra del Fuego*, because till this time our discoveries have not gone so far; but there is no doubt but there are some, as they are to be found before one comes to *Chile*, in the kingdoms of *Peru* and *Quito*. *Diego Ordonnes de Salvos*, in the third book and eighteenth chapter of

his *Voyage through the whole World*, mentions, among the rest, one that is near the fall of the river, in the valley of *Cola*; and says, it is on a mountain in the form of a sugar-loaf, like that of *La Plata* in *Potosi*; and that in winter it throws out so much smoak and ashes, that it burns up all the grass within two leagues round about it.

He likewise mentions another in the entrance of the province of *Los Quixos*, near the town of *Maspa*; and speaks of another, which broke out near *Quito*, in a mountain called the *Pinta*: and he affirms, that the ashes fly two leagues and a half from the mountain; and he has seen them lie on the houses above four foot deep in the nearest places to the mountain.

Lastly, he tells of that of *Ariquipa*, which buried the vineyards, and had almost overwhelm'd the city. To this day there are seen the effects of that desolation, which ruined many families, by destroying their houses and possessions. At the same time he observes, that the earthquakes which before were frequent, ceased from that time; and this perhaps may be the reason why the earthquakes in *Chile* have always been considerably less than those of *Peru*, because *Chile* has more breathing holes for the vapours to exhale by.

There is no room for doubting of the immense riches which these mountains enclose in their bowels; for 'tis a certain argument, and proof of it, to see only the mineral riches of *Chile*, which are, as it were, indexes of what may be contained in those rocks, as the rivers which fertilize the country are a proof of the unexhausted fountains contained in the rocks and precipices.

I think there may be two causes assigned, why these riches do not manifest themselves, nor appear more: the first is, that general reason, and inviolable maxim among the *Indians*, to conceal and not discover them to any other nation. This they observe so punctually, that it is among them a capital crime, punishable with death, to break silence in this matter, which they make sacred and indispenfible; and if any one

The concealing of treasure from all foreign nations, is a maxim of state among the Indians.

one among them, either out of interest, negligence, or any other motive of conveniency, discovers any thing of this kind, his death is infallible, and no power on earth can save him.

A remarkable relation of a journey undertaken in search of some rich mines.

I remember on this subject, that some gentlemen having, by presents, insinuations, and flatteries, come to the knowledge of some treasure by the means of an *Indian*, and prevailed with him at last to guide them to some very rich mines in a remote mountain, he begg'd earnestly of them to be secret, or otherwise he was a dead man, let them take never so much care of him. They promised him accordingly, and so they set out, and he brought them through horrid rocks and precipices, where it look'd as if never man had set his foot, nor scarce any living animal. Every day they met with certain marks, which the *Indian* had told them of beforehand: First, after so many days they discovered a red mountain; and then at certain distance from that a black one on the left-hand; then a valley, which began from a monstrous high mountain or rock; then at so many leagues a mountain of chalk. All which signs the guide went shewing them, verifying thereby the relation he had given them beforehand, and comforting them up to endure the hardship, by the hopes of fulfilling at last their expectation, and seeing their labour rewarded.

Their provisions failed them, and they were forced to come back to provide more, to pursue their enterprize. The *Indian* was always in fear of being discovered, knowing that he run in that no less a hazard than that of his life. They returned then to a town; and to secure their *Indian* from his fright of being discovered, they locked him up in a room very safe; but the night before they were to set out again, without ever being able to discover how it was done, (for there was no signs by the door of any body's going in that way,) as they went to call the *Indian* in the morning, they found him strangled; by which means, being deprived of their intent, and having lost the hopes of satisfying their desire, they returned to their own homes, though with a resolution to try again, being encouraged by so much as they had already discovered.

The other reason to be assign'd for not seeking after these mines, is the great plenty of every thing necessary for life; so that hunger, which is the prompter of covetous desires, being wanting, there are few that care to run a hazard, and lose their conveniencies at home, to go through impracticable defarts upon search after hidden treasure; particularly finding already so much in the valleys bottoms, rivers,

and fountains; nay, even these mines in the low countries are not wrought, because the profit of other products is easier. 'Tis probable that people will increase; for every day there is a new addition; and there then being more consumers, the product of the land will be dearer; and provisions not being so cheap as now, men will be more ingenious and industrious to seek for sustenance under ground, by the mines and treasures hid there by providence.

These few years last past have given beginning to a discovery of some *gokku* mines, and silver ones, on each side of the *Cordillera*: for as I passed over it once, I remember that the sight discovers a black mountain at a distance, whose top shines as if it were covered with silver; and it is a common tradition that it contains it, and great treasures besides, in its bowels; but they are at present useless, for the reasons alledged; and because one half of the year the mountain is covered with snow, and so not only uninhabitable, but impenetrable.

They write me word, that on the side of the province of *Cuyo*, they have begun to discover other very rich mines, which being below the roughest part of the mountain, may be wrought all the year round, and with great conveniency of the miners, and other necessary workmen, because carts may come to the very situation of the mine, which is of consideration for the price of the metal. They speak of it with great expectation, by reason of the good proofs they have already had in the assaying of it in small quantities.

Discovery of several very rich mines.

Besides the mines of gold, and silver, and brass, and lead, which are work'd in *Coquimbo*, and those of quick-silver, which have been discovered within these few years in *Lamache*, which is a valley in *Chile*, I do not know of any others of any other sort in this *Cordillera*. I am verily persuaded there are some of chrystal; for, considering the nature of the place, I cannot think there is one any where more proper. Being in the valley of *Rancagua*, I heard one of our nation tell an *Indian*, that upwards in the mountain he had found a great deal of chrystal: he hearing this, out of curiosity went up to see what it was; and I heard him tell, that after having gone over several rocks, he saw on the top of a precipice a great opening, and that drawing near to it, he saw a profound cave, and in the bottom of it a great plank or table of chrystal, which appeared to him of the finest sort; but wanting help and instruments to get it out, he returned with only this information, and some little pieces of a chrystal stone which he found on the top.

OVALLE.
1646.

C H A P. VII.

Of the Fountains, Rivers, and Brooks of the Cordillera.

Vast number of fountains, springs, brooks, and rivers.

THAT which contributes not a little to the admiration we have for this great chain of mountains, is the vast number of fountains, springs, brooks, and rivers, which we meet with ever and anon, when we go over it: they are so numerous, that 'tis a thing rather to be seen than related, though the travellers reap but little benefit by the curious observation of them; for by them the ways are the most broken and troublesome that 'tis possible to imagine: they last about eight days journey. One must suppose too, that the summer is pretty well enter'd; for in winter they are absolutely impassable, and in the spring not without evident danger of one's life; because one travels all the way on a path so narrow, that there is but just room for a mule's feet. On one side are prodigious precipices, which have at the bottom a furious and profound river; and on the other hand huge rocks, and some part of them standing out so, that if the mule's loading, (as it often happens, and I have seen it,) touches part of them, it throws down the mule headlong, and sends her rowling down till she comes to the river at the bottom, which carries her away to the sea without stopping, except it happen upon some turning of the river to get it on shoar; where, though the lading may be saved, yet not the mule's life, because it is impossible almost to get her up again.

Many places scarcely passable.

In many places one is forced to lide; and even a man on foot is not very safe, because some of the coasts are so streight and slippery, that it frights one to walk on them. The ascents and descents of the hills are so steep, that when from below one looks at those who are above, they look like figures; and for my part I thought it a temerity, if not an impossibility, to venture to get up to them.

Rapid rivers.

The brooks and rivers which cross the ways every step are so violent, that there is no head so strong, but it turns to look on their current; which is so swift, that if it comes up to the mule's saddle, there is no passing without evident danger of one's life; for these streams coming from on high, have the strength of a mill-stream, carrying along with them loose stones, which overturn a loaded mule as it were a chicken; so that 'tis necessary sometimes to stay two or three days till the sun does not shine; for then these brooks are lower, because there is less snow melted: and for this reason 'tis always best to pass early in the

morning, they having had all the night to run lower.

It was necessary for an allay of the dangers and irksomeness of these ways, that God should temper the rigour of the sufferings, by the variety and diversion which so many waters give in their rise and course: some are to be seen breaking out from almost an imperceptible height, and meeting with no intermediate object, the whole mass of water, which is usually very great, dissolves itself by the way into so many drops, which make a lovely prospect, like so much pearl falling; and being mingled by the force of the air, which drives them across one upon the other, it seems a chain hanging from its first issue to the earth; where, taking another shape, it becomes a running brook, and unites with the current of the chief river which runs in the middle.

The great variety of waters very diverting.

I saw others, which, before they got to the earth, divided into two branches, forming like a thick shower in the midst of the way, or atoms in the sun-beams; but 'tis impossible to paint all the variety of objects produced by these several motions and compositions of streams and fountains. I cannot leave them without mentioning one called the *Eyes of Water*, which is very remarkable; 'tis in the last *mesa* but one, at the foot of the mountain. I called it *mesa*, because providence has, for the relief of travellers, disposed, at some leagues distance, little valleys and agreeable plains, which ease the travellers in this most tedious and long ascent.

Los ojos de agua, or springs.

This valley is environed with a wall of most prodigious high rocks; it may be a mile or thereabouts in its diameter, and is all the year round full of greens, odoriferous plants and flowers, which make it a picture of paradise: in the midst of it springs up this fountain, or fountains, because the springs of water are many that rise from the ground all about, leaping with great force into the air, which in a little space all unite, and make two great bodies, each of them full of water, as clear as chrystal. These two heads begin a kind of combat a little below, and mingling in their course with one another, as if some ingenious artist had ordered it, make a great many turnings and windings, sometimes far from one another, and sometimes united through the whole valley, till at the end of it, joining together, they fall into one canal, which empties itself into the principal river, composed by many of these rivulets.

One

*The waters
extream*

One property of all these chrystal streams, is extream coolness, which they never lose, no, not when the sun shines out most in the heat of the day; it is such, that no body can drink half a cup full of it without resting, or taking breath; and though all these springs have this quality, yet none in so intense a degree as this fountain of *Los ojos de aqua*; of which, though the weather be never so hot, 'tis not possible to drink above two or three sups; and one can hardly endure to hold the water in one's hand above a minute.

Behind one of those high mountains which is to the east of this fountain, there is a great lake or pond, so deep and clear, that it appears as if it were of azure; and there is a tradition, that the last of the *Ingas*, kings of *Peru*, caused vast quantities of treasure to be thrown into it, when he saw that he could not redeem himself, nor save his life by them; though it seems hard to believe they should go so far to do a thing they might have executed much nearer home. The waters of this lake have no issue, being environed on all sides with very high rocks, and therefore 'tis thought that it comes under ground to those fountains called the *Ojos de aqua*, and empties itself by them.

*Rio de
Mendoza.*

I cannot pass over in silence another fountain which is at the foot of the *Cordillera*, on the other side towards *Cuyo*. There is a river called the *Rio de Mendoza*, which comes down from the east, not inferior to that of *Aconagua* in *Chile*, which runs to the west into the south sea. Into these two rivers are emptied most of the little streams of the mountain; that of *Mendoza* meeting in its way with a chalky mountain, bores it quite through, and leaves a bridge broad enough for three or four carts to pass a-breast. Under this bridge is a great table of rock, over which run five different streams of water, proceeding from so many fountains; which water is extream hot, and very good for many distempers. The stones over which it runs are of a green, like emerald. The vault of this bridge surpasses in beauty all that human art can produce; for there hang down from it several icicles, in shapes of flowers, and pendants of a stone like salt; for the humidity which penetrates from above, makes it congeal like points of diamonds, and

other figures, which adorn this vault; OVALIA
1646. through which there falls perpetually a quantity of great drops, as big as pale some, and others as big as yolks of eggs; which falling upon the stone table I have mentioned, are turned into stones of several shapes and colours, of no small value.

There is another bridge on the other side, call'd the *Inga's* bridge, either because he caus'd it to be built; or because (as is more probable) his generals were the first discoverers of it, and pass'd over it; for it is not possible that any human art could make so bold an attempt as has been brought to pass by the author of nature in this place. This bridge is form'd by a most prodigious high rock, which is cloven in two, as if it had been sawed down, only cover'd on top: it is hollow to the very river, which is large and rapid, and yet the noise of it is no more heard on the top, than if it were a little brook; which is a strong argument of the great distance there is between the top and the bottom of the mountain; for the opening not being above eight foot over, it being easy to leap from one side to the other, it would be thought, that a great river being so streightened as to go through it, should make a very great noise in passing such a streight place with so much force; and if the noise does not reach the ear, 'tis because of the great distance. I myself have gone to the side of this bridge, and look'd down, (though with great horror, for it strikes a shivering into one, to contemplate such a depth, than which I have not seen a more terrible one;) I not only did not hear any noise, but that great river appear'd a little brook, hardly to be discern'd.

These are the entertainments for the eye in passing this part of the *Cordillera*: as for the many others which may be met with in so vast an extent, who can relate them? I believe there are those who know much more than what I have here describ'd, which is only what I have seen; but from so little 'tis easy to infer more; for if only the rise of two rivers have afforded such matter of admiration, what may not be produced in the birth and course of so many others, as we shall describe in the following chapter?

CHAP. VIII.

Of the vast Number of Rivers which take their Rise in this Mountain, and empty themselves into the Sea.

THE great author of nature has founded the best part of the beauty and fecundity of the fields of *Chile* in this

J

range of mountains call'd the *Cordillera*, in which, as in a bank that can never break, he has deposited its treasure and riches, by assuring

OVALLE 1646. assuring the annual tribute of so many brooks and ample rivers which are to fertilize the earth; for neither can the country maintain its fertility without such moisture, nor such a moisture maintain itself all the year without such quantities of snow, as are laid up in the deep hollows of it in the winter, to feed in the summer the many rivers that are derived from it.

Who can demonstrate the number of them at their rise? But one may guess at the prodigious quantity of snow which supplies them; for though it cannot be seen all in a mass, because its reservoirs are impenetrable, yet its effects do manifest it; for besides the feeding of innumerable rivers which run to the east, and empty themselves into the north sea, and supplying prodigious lakes in the province of *Cuyo*, those which run to the west, and enter the south-sea, (not reckoning what may be by the straits of *Magellan*, and the *Tierra del Fuego*.) are above fifty, which may be well multiplied by four a-piece more which they receive, and so make two hundred; which arrive at the sea so full and deep, that some of them have water enough for the navigation of the galleons and ships of great burden; which is the more to be admir'd, because their course is so short, the most extended of them not passing thirty leagues in length.

The first river of this kingdom, beginning from the confines of *Peru* about the 25th degree of latitude, is the river called the *Salt River*, which comes from the *Cordillera*, running through a deep valley: its waters are so salt, that they cannot be drank; and when sometimes horses, deceived by its pure clear colours, happen to drink of them, they are turned into salt by the heat of the sun, so that the bodies seem of pearl, they beginning to petrify by the rail.

The next to this is the river of *Copiapo*, in 26 degrees; it runs twenty leagues from east to west, and makes a bay at its entrance into the sea, which serves for a harbour for ships. In 28 degrees the river of *Guafo* does the same, and forms a port.

After this comes the river of *Coquimbo* in 30 degrees, whose port is a noble bay adorn'd on the shore with fresh and beautiful myrtles, and other trees, which continue within land as far as the town, and make a noble and pleasant grove, which out-does all the contrivances of art. There are fish'd in this coast tunny-fish, *albucores*, and many sorts of excellent fish, as also oysters, and great variety of shell-fish.

The next to the river of *Coquimbo* are those of *Tongoy* and *Limari* about 30 degrees and a half east: and then in 31 degrees the river of *Cbuapa* empties itself into the sea. Upon that coast there is found

a sort of delicate shell-fish, which they call *jacas*.

Between the one and thirtieth degree, and the two and thirtieth, the rivers *Longotoma* and *La Liga* enter the sea; and about thirty three degrees that of *Aconcagua*, which is the great river which comes down, as we have said, by the way of the *Cordillera*. This is a very deep river; and though it runs through the large valleys of *Curimon*, *Aconcagua*, *Quilota*, and *Concon*, which being cultivated with all kinds of products, particularly wheat, flax, hemp, &c. and by consequence well water'd, yet this river arrives at the sea as full and deep as if they had not drained it by the way to fertilize their fields.

About thirty three and a half, follows the famous river *Maypo*, which I cannot tell whether it be more famous for its good qualities, or for the danger and difficulty of passing it, many having been drowned in it, and every day miscarrying by it. It is of so rapid a current, and sometimes swells so high, that no bridge can resist its fury, but it is carried away by it; for which reason, at this day it has no other but one of many cables join'd together, and lying a-cross from one side to the other. Its waters are ordinarily thick; and it enters the sea with so much force, that it makes its way in it distinct for a good while; its waters are perfectly known from those of the sea by a circle they make: they are besides very cold, and yet it quenches thirst but ill, for it is brackish, which makes the flesh of the sheep which feed near it, to be excellent in taste. There are fish'd here also most excellent fish, particularly trouts, esteem'd all over the country.

There falls into this river, among others, that of *St. Fago*, otherwise called the river of *Mapocho* which is divided into several streams, to water the district of that city; and it does it sometimes more than we could wish, when it overflows. Not far from the city, it hides itself under ground, leaving a bridge of two or three leagues over it, while it maintains a silent course underneath; at the end of this space it comes out in bubbles among a grove of cherry trees, with its waters as clear and purified as chrystal; so that though it seems to hide itself, and die, it is only to spring up again more beautiful and stately, being of a stronger current, before it is again spread and diffused to fertilize the fields. At this place of its second birth, there stands an ancient and illustrious convent of *St. Francis*, which, because it is within sight of a vast forest of trees, is called *St. Francis of the Mountain*, in which there have been, from time

time to time, most holy men of the first founders in that province, and who employ themselves in the worship of God, and help of their neighbours, with great zeal and reputation of their order.

Poangué.

The river of *Poangué*, which falls likewise into *Maypo*, runs also many leagues under ground: this cannot rise with more advantages than at its first fountain; for its waters are, at the very source, so clear, delicate, and sweet, that they cannot be mended; it has not its original like all the rest from snow water, but from minerals of gold, through whose veins it makes its way, as if it had an aqueduct of that precious metal: its course is border'd on each side with most beautiful trees, which contribute to make its waters wholesome: they are indeed of themselves a remedy; for they help digestion so visibly, that if any one has exceeded and eat more than his stomach can well embrace, one draught of this water will relieve him, so that he shall be hungry again in a little time. Neither is it usefess under ground; for while it is there, it communicates it self to the whole valley by subterranean conduits: the effect of which is visible; for though in the summer it does not rain a drop, and the valley has no other watering, yet it brings as seasonable a crop, and as relishing fruit, as any other that has the help of rain and other irrigations; neither have I seen any where larger or more delicious melons, nor more abounding and well grown maiz, than in this valley.

De Colina and Lampa, make the famous lake of Cudaguel.

There are two other rivers which fall into *Maypo*, which are call'd *De Colina* and *Lampa*; which uniting together about ten or twelve leagues from their first rise, make the famous lake of *Cudaguel* so profound and deep, that great ships might swim in it: this lake is about two leagues long, all bordered with delicate willow trees, and other greens, which keep their freshness and greenness all the year round; and, that nothing may be wanting to its agreeableness, it is full of excellent trouts and *vagres*, which sometimes are so plentiful, that they are easily caught; and this uses to be one of the greatest diversions of the citizens of the city of *St. Jago*. There are other lakes, as those of *Aculco*, which empty themselves into this river of *Maypo*, on the contrary side to that of the clear river: there are also bred in it, smelts of above a foot long; the very name in *Spanish* declaring their excellency, it signifying a royal fish: some years there are such plenty of them, that the whole city may keep *Lent* with them alone, without buying any other fish from the sea; which, though it is very good, yet it never attains to the delicacy of the

river fish, which is so sweet and healthy, that it is used to be given to the sick and convalescent. OVALLE. 1646.

After *Maypo*, is the river of *Rapel*, not at all inferior to the other; it enters the sea about the 34th degree, and is many minutes; about four or five leagues before the two famous rivers of *Cachapoal* and *Tinguiritica* join together, and are no less in debt to mankind for the many people they have swallowed, than that of *Maypo*. Among others which increase their rapid current, are the rivers *Mallua* and *Chambaronigo*: on the banks of this the order of the *Redemption* has a convent, for the instruction and edification of all that country. The *Jesuites* have also a novitiate, who have for neighbours a monastery of *St. Dominick*. The lands thereabouts are extream fertile, have excellent pastures for the fattening of cattle, and are much valued all over the country. In thirty four degrees and three quarters is the river *Delora*, which receives those of *Teno*, *Peterroa*, and *Metaquito*, whose stream is so rapid, that many perish in it. These rivers water most rich lands, and a delicious country for the breeding and feeding of all sorts of cattle; and indeed there is not a foot of ground unemployed in them. Rapel, Cachapoal, and Tinguiritica. Mallua and Chambaronigo. Delora, Teno, Peterroa, and Metaquito.

The great *Maule* appears at thirty five degrees; and it makes the limits of the archbishoprick and jurisdiction of the city of *St. Jago*: all that was inclosed between this and *Rapel*, *Cachapoal*, and *Tinguiritica*, was called by the natural *Indians* *Promocaes*, that is, a place of dancing and delight, to express the pleasantness of that country. They were not out in this character at all: I remember once, that travelling in this country, when I came to a farm of any *Spaniard*, he would entertain me with nothing but the praises of it, and that with so many particulars, that I could not imagine it could be out-done by any in the world; but when I came to another farm, the master of it would relate to me such admirable properties of his, that the first seemed but ordinary to me. Thus I found every one so in love with the spot he lived on, that I could not but admire the whole, and have a great idea of the excellency and temperament of this land, as well as of its provisions. Partridge are abounding, and all manner of game; and as for fish, there are such quantities of smelts and trouts, that they take them when they will, being as sure almost to catch them, as if they had them in ponds at home. I have heard them often say, that when they were sat down to table, if any one longed for a fresh trout, they had no more to do, than to send and catch

catch of, which they would have ready dressed before they rise from the table. The river *Maule* receives the clear river, and that of *Cauquenes*; and though it be as deep again as either of them, yet it is less dangerous for passengers, and fewer people are drowned in it; because near the sea, by the yard for building of ships, it spreads itself, and makes a large passage, where the king has a ferry for the conveniency of passengers. The *Austín* friars have also a convent here, and take care of the *Spaniards*; and their black and *Indian* servants, who people all the banks of this river, and are numerous, living in separate farms all along the country: these they call *Estancias*.

Now we enter the jurisdiction of the city of the *Conception*, where the governor resides; and there is a garrison of the militia. The bishoprick of the city of *Imperial* begins also at this river, which has for next and immediate neighbour the peaceable and noble river of *Itata*, three times as large, and as deep as the *Maule*, and enters the sea at about thirty six degrees: its course is among rocks, and so is less useful to the land, because it cannot water it: They pass it upon rafts, and there are also fords in some places. About the middle of its course, the furious torrent called *Nuble* joins it: this washes the walls of the city of *St. Bartholomew of Cbillan*, an ancient garrison of the *Spaniards*, and a singular proof of their bravery and fidelity.

Immediately next to this river is the spacious and agreeable bay of the *Conception*, into which the slow and silent river of *Andalien* empties itself at thirty six degrees and three quarters. There is another small river which passes through the middle of the city, having first precipitated itself from a high rock, and affording matter to the industry of the inhabitants, for all sorts of water-works among pleasant groves of laurels, and myrtles, and other odoriferous plants which adorn its banks; and as it falls from so high, it invites the industrious planters to contrive mills for the sustenance of the city; of which there are already a great many.

Two leagues further from this bay, in the thirty seventh degree, the so-much celebrated *Biobio* enters the sea. It is the most powerful river of all *Chile*: it has at its entrance two or three miles in breadth, more or less, according as it swells or shrinks, which is a great deal, considering its short course: but that is not the chief thing which makes it famous, and deserve so much praise; it is its wholesome waters; for (besides the particular excellency they may acquire, by passing through veins of gold, which nevertheless many other rivers of this

country have too,) it has a singular advantage, by a small river which falls into it; which river, taking its rise and course among *Sarzaparilla* roots, communicates to the other its virtue and good qualities, and makes it a cure for many infirmities. There is a tradition, That at the source of this river there were most rich mines, work'd before ever the *Spaniards* came into these parts. Upon this information, Don *Alonso de Sottomayor*, president of the country, sent a band of soldiers to view them, as they did; though as they came back, they were laid wait for by the *Indians*, our enemies, and had a smart engagement with them, and had much ado to escape with their lives. This *Indian* people do always as much as they can to hide from the *Europeans* the treasures and riches of their country, as it has been said already.

This river is the bounds which divides the *Spaniards* and our *Indian* friends from the *Indian* enemies: in winter the river overflows so, that all the fords are unpassable; and so the soldiers may take some repose till the spring, at which time they are to begin their inroads again. The enemy on his side has no garrison, nor place of strength; for they trust to their mountains, to which they can retire at any time: but the *Spaniards* have many garrisons all along the river, with which they bridge and keep in awe the potent rage of their proud enemy, who alone has given them more trouble than all the rest of *America*.

Their chief forts, besides the cities of the *Conception* and *Cbillan*, are those of *Arauco* and *St. Philip*, in which there are generally about sixteen hundred natural *Spaniards*, besides the *Indian* allies, who are numerous. The first of these is upon the sea-side, and the other nearer the *Cordillera*. There are others between on each side of the river, and some pretty far into the enemies country. I can name nine of these forts; which are, that of *St. Angol*, of the *Nativity*, of *St. Ann*, of *St. Rosendo*, of *Good Hope*, of *Talmacabuida*, of *St. Peter*, of *Colcuta*, and that of *Levo*. These are all provided with great guns, and a sufficient number of soldiers; and at such proportionable distances from each other, that they can soon receive notice of what is necessary to be known from the first to the last by the cannon-shot, according as it may have been concerted beforehand.

The company of *Jesus* has here two residencies, one in *Arauco*, and the other in the fort of *Good Hope*; from whence they also make their attempts, not against the bodies, but to save the souls of their enemies, engaging with hell itself, and obtaining over it daily and glorious victories, as it shall

shall be told in its proper place; for now we must follow the description already begun of the rivers of *Chile*.

Colcura,
Arauco,
Lavapie,
and Levo.

Ralemo, or
Coypo.

Imperial.

Ladies
River.

After *Biobio* follow four others much inferior to it: they are the rivers of *Colcura*, *Arauco*, *Lavapie*, and *Levo*, which empties itself near the thirty eighth degree; and a little further, that of *Ralemo*, which, a little from its source, is called *Coypo*, in near thirty nine degrees. The pleasant and peaceful river of the *Imperial* enters the sea, having first incorporated with its stream, the river called the *Ladies River*, because of the delicacy of its waters and quiet current. More above, nearer its source, it receives

the two rivers of *Curarava* and *Eyow*, ^{ONALLE.} which, before they meet to enter the river ^{1646.} *Imperial*, form the much-celebrated lake of *Puren*, a most unconquerable fortress of the *Indians*, who are more secure in it than the *Spaniards* in any of theirs. ^{Curarava and Eyow form the lake of Puren.}

About half a degree beyond the river *Cauren*, which is the same as the *Imperial*, the river *Tolten* pays its tribute to the sea, ^{Tolten.} and is deep enough for great ships. About eight leagues further the river *Queule* does ^{Queule.} the same; which, though small, yet receives barks in it, and is about nine leagues upon a north and south line from the famous river of *Valdivia*.

CHAP. IX.

Of the famous Port and River of Valdivia.

THE river and port of *Valdivia*, never enough commended by foreign writers, and no less admired by those who have seen it, had its name from *Pedro de Valdivia*, first governor and conqueror of *Chile*. It is, as it were, in the centre of the whole kingdom, at almost forty degrees latitude, south-west from *Seville* in *Spain*; upon a plain map one thousand nine hundred and seventy leagues, measured by the heavens. The sun is five hours, and a third part of an hour, in going from the meridian of *Sevilla*, to the meridian of *Valdivia*; so that when it is noon at *Seville*, 'tis in *Valdivia* six a-clock and forty minutes in the morning. Its longest day is of fourteen hours, or thereabouts.

Description
of the river
of Valdivia.

This river has its opening to the north; and because of the depth of its waters, great ships can go up to the very city, which is two or three leagues from the sea; when they are there, they can lie so near the shoar, as with a plank to go in and out, and take in and unlade their cargo, without the help of boats. There is just over-against the city, a fine island, called the *Island of Constantine*, with two little ones, one before, and the other behind the island. The river is navigable on both sides the island; but because the south branch has more depth, the great ships come in that way, and the lesser by the north branch.

There are two high points of land, like rocks, which mark the entrance of this river; the biggest is to the north, and is called *Bonifacio's Hill*; the south is lesser, and is called *Gonzalo's Hill*. When one is entered some way up the river, there is another streighter passage, which is the key of the port, or rather ports, because there are many harbours within. This entrance has also two hills, which come so near each other, that I have heard a captain, who was sent to sound the river, relate, That in

the middle he was within musket-shot of either hill; the south one is called *Morro de los Mançanos*, and the opposite *Morro de Niera*: so that, according to this account, there might be an iron chain laid from the one to the other, with which, and two forts raised on each side, the entrance would be made impenetrable.

As soon as this streight is passed, there ^{The port:} is on the south side a noble port; for though all the river may be called so, for the quietness of its water, yet this is more advantageously situated, by being covered with the mountains of the land: 'tis called the port of the *Corral*: it forms a bay capable of receiving great fleets. When you have passed this port, there appears the first island; between which and the land on the south-side, there are many shoals and sands; wherefore the ships take the north-side, and go between this island and the great one; and then follow their course up to the city, by the channel of the great island. The lesser vessels may keep the other side of the island.

Besides all these good qualities, this port has other advantages from the land, by the fertility of the country, which produces corn, and fruits of all kinds, except grapes, which do not ripen here so well as in other parts of *Chile*, from which wine is brought to these parts: but it has great plenty of beef and mutton, fowls and venison. It has also wood for the building of shipping; and that which is above all, it has the richest mines of the finest gold in *Chile*; and in all *America* there is none comes up to it, but the gold of *Carabaya*.

This is the account of *Antonio de Herrera*. He adds, That there was an *Indian*, who had every day a revenue of twenty five or thirty *Pesos* of gold; which being observed by the governor *Valdivia*, he sent the *Adelantado Hyeronimo de Alderate* to *Spain*, to inform his catholic majesty of the

the

DVALE. the great riches of the kingdom of *Chile*, that his majesty might make the more esteem of it, and to invite foreigners to come and people the country, and help him to conquer it, he sent some *Spaniards* by land, whose stirrups, breast-plates, and all that use to be of iron about a horse, were of fine gold; and that, not satisfied with this, he had resolved to go in person, to inform his majesty, and obtain from him the confirmation of his government: to which end he employed twenty thousand *Indians* to bring him gold, designing to embark and sail through the streights of *Magellan*, if death had not prevented him.

1552. This city was founded by the governor *Valdivia* in the year 1552. upon a high rising, but plain side of a hill, and above the rest of the country.

Recloma,
a famous
Indian lady.
The famous *Indian* lady *Recloma* was very instrumental in helping towards its conquest and foundation. The story was thus: The *Spanish* forces were come to this river, conquering the country all the way before them; but here the *Indians* not being willing to let foreigners settle in their country, took up arms, and making the river serve for their defence, hindred the progress of *Valdivia*, and gave him great trouble. But he being a man of great courage, was not daunted by this resistance, but endeavoured to pass the river to engage the enemy.

Upon this occasion, this brave *Indian* lady, either inspired by heaven, or touched by compassion of so much blood as must be shed on both sides, in the rencounter, offered the governor, that she alone would gain him the victory, without any other force, than that of her eloquence and courageous mind. *Stay here, says she, and go no further; for I will put all this province into thy hands, and will make thee this day, lord of all that thy eyes can discover. Stay for my return here, and do not suffer any of thy soldiers to pass on a step further.* The governor promised to do so; and, upon his word and promise of good treatment to the *Indians* who should submit to his god and his king, she threw herself into the water, and, in the presence of them all, swam the river. When she was landed, she desired audience of the general of the *Indians*: to whom she delivered her message with so much force of eloquence, that they submitting to her reasons, promised to accept of what terms should be given them. With this the famous *Recloma* returned to the *Spaniards*, singing victory, laying at their feet the richest prize they could wish; and such a one, as after much time, expence, and bloodshed in the conquest of it, they would have thought themselves well paid to be masters of such a country, whose golden mines they presently began to work: by which

means the city increased so fast, that if the devil had not troubled the peace, and caused the rebellion of the *Indians*, which ruined it, it had been one of the first and best cities of the *Indies*.

The *Hollanders*, our enemies, are well informed of the nature of the country, and the excellency of the port, and do all they can to get possession of it; but our favour, who by his grace has hitherto preserved those countries free from heresy and its corruption, will not permit, that this *Hydra* of hell shall infect that air with its venomous breath, nor breed a contagion in the purity of its faith, which is propagated so sincere and true in the hearts of those new christians.

This has been proved by the success of a fleet of theirs in the year 1643. when these rebellious pirates passed the streights of *Magellan*, with a design to settle at *Valdivia*; for though in effect they did people the place, having first passed by the islands of *Chiloe*, where our company has so many glorious missions; in which they threw down the altars and the crosses, and committed other enormities proper to their impiety and obstinacy, yet at last they came off no laughers, but had reason to lament rather. The same befel another of their generals, called *Antonio Sivaastro*, many of his fleet being taken prisoners, and thirty of them hung up by the feet, as is related by their own authors, *John* and *Theodore de Brye*.

But in this second occasion, they paid yet more severely for their attempt; for in the very same island, where they had committed all these disorders, God took the life of the general, punishing his unhappy soul with the due chastisement of such an undertaking. They lost the ship which carried their provisions, their ammunition, thirty pieces of artillery, all the brick and lime, and other materials for building three forts, which they had orders to raise in the river of *Valdivia*, and on the island of *Constantine* in that river; and having afterwards got to *Valdivia*, and begun to people, their new general, whose name was *Elvis Aramans*, was forced to shut up all his people in the island of *Constantine*, because they run from him continually, and forsook him; besides the prisoners made in the islands of *Chiloe*, and others destroyed by us, and the warlike *Indians*.

In short, God having espoused this cause as his own, they were tormented with hunger; and before the *Spaniards*, who were on their way, could come up to them, their own diseases and losses obliged them to weigh anchor, and be gone. This was their wisest course; for if they had staid till the fleet from *Peru* had come up to them, and the land forces from *Chile* had attacked them,

them, they had not gone off so well; for the marquis of *Mansera* being so good a soldier himself, and so zealous for god and his king, immediately, upon the first news of their arrival, had set out ten sail, which he provided with powder and ammunition, and dispatched them to give advice along the coast; then he prepared a navy, which was to be of 16 galloons and ships, and 4000 *Spaniards*, resolving to go in person, or at least to send his son.

The governor of *Chile*, the marquis of *Baydes*, with his accustomed vigilancy and readiness in things, where the service of god and the king are concerned, and as a captain of that valour and experience, which he shewed in *Flanders*, was ready to enter by land, after having provided all the ports of the kingdom with the army kept on foot by his majesty; so that if the *Hollander* had had yet more force than he had, being so hard pressed both by sea and land, he must either have relinquished the port, or perished there for ever.

It has been seen in this occasion, that one man is as good as many in the defence of the cause of god and their country, against any invader whatsoever, every one despising all dangers on such an account; but particularly colonel *de Villa Nueva Soberal* signalized himself at this time; for being general of the kingdom, and governor of the country of *Arauco*, he ventured himself in a small bark in the midst of winter, to sollicite at *Lima* the necessary succours, and assist the vice-roy for a more quick dispatch of all things.

He took with him father *Domingo Lazaro*, of the company of *Jesus*, that he might inform him as an eye-witness of all that had passed, he being at that time employed in *Chiloe*, in the apostolical missions when the *Hollanders* landed: he, ne-

vertheless, with undaunted courage, embarked in the midst of the winter, in a tempestuous sea, as it is at that time; and without apprehension of all those dangers, and of being made a prisoner by the *Hollanders*, who lay in his way, and could scarce be avoided, he arrived at the city of the *Conception*, where he gave an account of all that had happened; by which means the country was immediately prepared, and in arms for their defence.

There is another action which ought not to be concealed, as well because it shews the great prudence of the marquis *de Baydes*, as the courage of 20 *Spanish* soldiers. It being uncertain whether the enemy were still at *Valdivia*, or whether he had abandoned it, they offered to go in a boat up the river, as they did by the governor's command; and without being terrified by the manifest danger they exposed themselves to, they went as high as the town; and having discovered the ill condition of the enemy, and his design of leaving the place, they returned with that advice. This moved the general not to attack them, as was at first resolved; but it did not hinder his intention of peopling the place, (as I believe was done last summer;) for I have advice from *Panama*, that there is a garrison of 600 *Spaniards* left there; to which our *indian* friends being joined, (and the coast *Indians* also,) that post will be henceforward inexpugnable, and by it the south-sea will be secured; for it being already so dangerous to sail through the streights, and so easy for us who are at home to defend this post of *Valdivia*, and having all the land our friends, we receive succours both from the *Spaniards* and *Indians*, who are so friendly, that their caciques sent to offer their assistance of their own accord against the *Hollanders*; I say it will be very hard henceforward for any one to give us any disturbance.

C H A P. X.

A Continuation of the Description of the Rivers of Chile, and particularly of those which run to the East; and of the Difference between the one and the other Side of the Great Cordillera.

Chalbin. THE river next to that of *Valdivia* is that which is called *Chalbin*; it is deep, and capable of great vessels. From this river, to a place called the *Punta de Galera*, 'tis about two leagues; and from this to *Rio Bueno* seven; into which fall five rivers more, and one which is beyond the bounds of *Valdivia*.

Rio Chico. After this is the *Rio Chico*, which comes from a lake at the foot of the *Cordillera*; in which lake are baths to cure leprosy and other infirmities. Next to this is the *Rio de*

la Ballena, which is close to the cape of that name, so call'd because of a whale of prodigious bigness, which died upon that coast. After this, you come to the *Archipelago* of islands, into which falls the river call'd *De los Rabudos*, because of an *Indian* nation of that name, so call'd, because 'tis said they are born with tails, as father *Gregory* of *Leon* describes them in his map. More on to the south is the river *De los Coronados*, named so by the company of a ship which put in there on the day of the forty martyrs so called.

G

After

OVALLE.
1646.

OVALLE. After these there are many rivers all along the coast; the first is called *De la Esperanza*, or of hope, because of the wishes, that one day the light of the gospel may reach to those parts by means of the ministers of it. The second is called *Rio sin fondo*, or the river without a bottom, because of the great depth of it. The third is called the *Gallegos*, from a Spaniard of that name who fall'd along those coasts, and like another *Icarus*, gave his name to one of them, by being drown'd in the sea hard by it, at a cape which has the same name. Then follow the rivers *De los Martyres*, and *De los Apostoles*; and immediately after them two others: the first has no name, the second is called *De los Gigantes*, or of the Gyants, because here they were begun to be seen, and they reach all along the *Streights*. The famous river call'd *De la Campana*, enters at a place named *El Ancon sin salida*: this name was given to the river, because its two arms seem to form the shape of a bell. There are two rivers more before you come to the *Streights*, to wit, that of *De los Pajaros*, or of birds, by reason of the vast quantity of them that were upon it, in that part which comes towards the *Streights*; and the other, of *St. Victorian*, called so from the opening, to which the same saint gives its name. As for the other rivers which run among the islands, and those which empty themselves into the *Streights*, they are many, and shall be described in their proper places.

Hitherto we have described the rivers of most renown of this long extended kingdom, which run from east to west, and empty themselves into the *South-Sea*: those which run from the opposite part of the *Cordillera*, towards the north-sea, are not so well known, because those parts are less inhabited, at least, by such as can give us a good account of them. The most remarkable of them are those of *St. John* and of *Mendoga*, which are very large rivers, and empty themselves into the famous lake of *Guanacache*.

The governor *Hieronimo Lewis de Cabrera*, a gentleman of great valour and merit, met with several great rivers in his passage over those vast plains call'd the *Pampas*, where, as at sea, people are fain to travel by the compass, not to lose themselves: he was in quest of a nation call'd the *Cessates*, of whom we shall treat hereafter in its proper place. They were forc'd to pass many great rivers, and without doubt there are many more as far as the *Pole*.

Nevertheless I am persuaded, that these rivers do not equal those which run opposite, and enter the sea on the coast of *Chile*; and this may be clearly gathered from the

difference which may be observ'd in passing the *Cordillera*, between each side of the mountain, which is so great, that they seem two different worlds, the east and west parts; and one would think heaven had put these mountains to divide them as a wall, and keep off from the west, all the storms and ill weather of the east, where are the provinces of *Cuyo* and *Tucuman*, not to disturb the serenity and tranquillity of *Chile* and the western parts. Any one that travels to the top of the high chain of mountains, may experience this clearly; for there he discovers both horizons, and when he looks to the east, all is cover'd with gross vapours, which seem to hinder the light, and shadow all the country; and at the same time looking west, the heaven is so christalline and bright, that it causes pleasure and joy to look on it. The east side is full of a cloudy, thick air, which engenders storms and hail, with horrible thunders and lightnings, which fright all the inhabitants: on the other side, in the west, there is not a cloud to be seen, but clear and bright, as if in the heavens themselves there were such a partition as the *Cordillera* to divide the climates, as that upon earth does produce a difference in the trees, plants, and animals on each side.

A curious observer contemplating once, from this height, this so remarkable difference, said, That nature, in the fabric of this part of the world, seem'd to have turn'd her back upon the eastern provinces, and look'd with her face only upon *Chile*, giving blessings with both hands to this last, and leaving the other, as it were, disinherited, and grieving at the pre-eminencies of its elder brother. In going down to the eastward there are fewer fountains and rivers, and those muddy, the face of the land melancholy, without so much as one green tree to recreate the sight, nor any pleasant verdure; and when at last there is some, as in the valley of *Uspallata*, the heats begin to be so intolerable, that all things seem afflicting and unkind. On the other side, when we go to the west, 'tis quite contrary; for as soon as we begin to descend, we meet with lovely springs; the trees are green, the groves frequent and pleasant, and the little valleys, which are like so many resting places in that great stair-case, where passengers take breath, and are refresh'd with the verdure and flowers of them; the air still grows purer and purer; and the more they come down, the more they leave behind them all the inclemencies of the climate of the other side, enjoying the advantages of the temperate *Chile*; for from the very foot of the mountains one feels the mildness of the sea air and one

The rivers of St. John and Mendoga.

one is rejoic'd with the harmony of the birds, and other delightful objects, so as to forget the trouble and danger of the way one has pass'd.

There is the same difference in the very land at the foot of the mountains; for on the east side there are few fountains; the land is barren, and little cultivated; neither are there flocks of any kind either fed or bred, so that the fields look like a useless barren ground, except it be that the thinness of the people has not as yet given way to try the fertility of the earth; for the plains below these are extremely fertile, where they are cultivated; but at present there is nothing but thorns and barren dryness in those parts.

'Tis not so to the west, where fountains break out continually, which in the winter are temperate, and in the summer as cold as ice, and that so much the more as the weather grows hotter and hotter. These springs do so fertilize the fields at the foot of the mountains, that they keep the earth fresh and green all the year, though it be but a patch; for most of the ground is woody, and there is such variety of wild trees, that one would think they were arbors and groves planted by the hand of man: many of these are loaded with fruits of the country, of which the *Indians* make

excellent drinks, and some of them are very good to eat. The valleys are full of odoriferous beautiful flowers, brought forth by nature, without any human industry: there are also among them most extraordinary physical plants of a beautiful aspect. The little hills and plains afford excellent pasture for all sorts of cattle and flocks; there are also admirable valleys for planting of olives and almond-trees, and all sorts of fruit-trees. At the lower part, about a league in the plain, there are vineyards, of which are made excellent wines, particularly muscadels, which are in great esteem.

There are likewise in this descent of the mountain, admirable pastures, where great flocks are bred, and do increase wonderfully; their flesh is extreme savory, and the milk of the goats is so fat, that by only boiling and stirring it gently over the fire, I have seen it grow as thick as if flower had been put into it; and yet in other parts this milk is of its nature very thin. This may be said particularly of the young she-goats; and the milk thus boil'd has a sweetness and delicacy which passes ordinary milk, even with the things that are put in to mend it; all which are arguments of the great substance and nourishment of that land.

C H A P. XI.

*Of the Effects produced by the great Snow of the Cordillera.*Great
snows.

WITH the first rains of the winter, which are about the middle of *May*, the *Cordillera* begins to be cover'd with snow, and to put on, as it were, a white armour, to hinder its being pass'd, not only by men, but even by animals and birds, which are so driven out of it by the rigour of that season, that there is not one remaining in it.

Insolent
cold.

Even the *Silguerillos* and *Sorfales*, birds which of their own nature are so hot, that in the very beginning of the summer they take to the mountain, as soon as they perceive that the winter draws near, come in flocks down to avoid its rigour in the mountains; and then it is that the taking of them is easy, and that as soon as the cold pinches, the ground being almost cover'd with them, it proves the season of most pleasure for the youth of the country, who going out, take so many of them, either with glue or nets, that they carry loads of them home, reserving those of the finest colours to put in cages, for their harmony is very sweet. The *Cordillera* is shut up five or six months in the year; so that till *October* or *November*, it cannot be pass'd

without manifest danger of one's life; and in the midst of winter not at all, because all the paths and ways are cover'd with snow, to the height of many yards; and if any one should be rash enough to attempt it, he would after a little going, sink in every where, so that he would not be able to go a step forward nor backward, as has happened to several, who either for some very pressing concern and interest, or flying from a death which threaten'd them for their crimes, have found it in these deserts more certainly than perhaps they would have done in the prisons where they fear'd it.

These are buried, not in sepulchres whitened on the outside, nor under cold marble, but in the very bosom of frost and snow, which preserves them without being imbalm'd, and yet keeps them as incorruptible and dry, for so they have been found after many years; for such is the cold of those mountains, that it dries up all the moisture that can cause corruption in dead bodies, and so preserves them.

This so insuperable difficulty of passing the *Cordillera*, is less at the entrance, than the end of the winter, because the drifts of snow

1646. **OVALLE.** snow are not then so violent as to shut up the ways entirely; so in those seasons some do venture to pass, though never but with great danger, and upon urgent occasions: if sometimes they are so lucky as to get off well, because they meet with a clear sky, yet at other times it costs them dear; and always 'tis with infinite labour that they get thorough.

I have seen others who escaped with their lives by god's mercy, because the storm catch'd them before they were too far engaged in the mountain, and so they could yet make a retreat to the low countries; others have been forc'd to open their mules bellies that they ride on, and hide themselves in them; and by that warmth, and other defence of cloaths, they make a shift to get over the storm of snow, if it does not last long; after which they gain the plains on foot, if they are not too far engaged, and so avoid the danger, but not the long-sufferings which follow generally after such adventures.

In short, every body has some story to tell of the mountain, and complain of it; for some lose their toes, others their fingers; some their sight; some are benumm'd and lam'd, and so remain all their life with great infirmities. And I do not wonder at all at this, because though one should pass without a storm, yet the cold is so terrible, that it cannot but injure nature extremely in that season, since even in the midst of summer, when we pass this mountain, and in the lower part of it sweat with heat, as soon as we come to pass the top, we are forced to put on double cloathing, and prepare the stomach with good warm things, to withstand the sharpness of the cold, and the subtileness of the air, which penetrates the body through and through, if it be not well cover'd.

Among the several times that I have pass'd this mountain, one was in the beginning of *April*, when autumn in those parts is at an end, and the winter begins to threaten, and I must own that the cold was so intense, that it seem'd a different species of cold from all those I ever felt either in *India* or *Europe*; though even then it had not begun to snow, the cold was so fierce that it made one's hands cleave; nay, it had an effect upon the very rocks, for I remember the sun was reflected by them as by a looking-glass. When we come to treat of the first discovery of this kingdom, I shall re-

late what was endur'd by the *Adelantado Don Diego de Almagro* with his army, and by those who afterwards followed him, and passed this mountain, in which they were so ill handled, that some were struck blind, others lame; some lost their fingers without feeling it, because the excessive cold took away all sense; some were frozen to death, and with them some horses, whom six months after some other *Spaniards* found so fresh and well preserv'd, that they eat of them; and to secure themselves from cold, made a defence of those dead bodies; nay, some got into them. About six years after, others going that way, found a negro, who at that time was frozen to death, leaning against the side of a rock, with a lead horse, and the reins in his hand, though consumed with time. They who have a mind to know more particulars, let them read *Don Antonio de Herrera, Decade 5. Book 10. and Chap. 5.* and also *Garcilasso de la Vega*, in his first tome.

'Tis necessary to understand, that it is of this cold of the mountain that authors speak, when they say, That the cold of *Chile* is so severe, that the rivers are frozen up, and men frozen to death in the fields: for this is only true of those uninhabitable mountains, where I believe at that season the rivers do not run, but are turned into chrystal; and if any springs do escape, they are very few, and that in the valleys most secur'd and shelter'd; that appears by the rivers which run in the plain country, which are almost dried up, in comparison of the quantity of water that they carry with them in the summer.

And thus the truth of what historians relate may be saved from contradiction; for they not knowing the country, make no distinction between the mountain and the plains, in which there never was seen any such effect of cold in any part of them; for the sea air, which is thick and moist, tempers the sharpness of the blasts from the *Cordillera*; and for this reason it is, that the colds of the *Pampas* of *Cuyo* and *Tucuman* are so insupportable; as also those of *Buenos Aires*, which being at such a distance from both seas, and not enjoying the warmth of its vapours, the air in summer is intolerably scorching, and in ~~Winter~~ so cold, and for want of rain so dry, that 'tis common for animals to be found dead in the fields, as well as the men too sometimes.

C H A P. XII.

Of the Fountains which rise in other Parts of Chile, besides the Cordillera.

Fountains
of Chile.

BESIDES the rivers and springs of the *Cordillera*, there are others which rise in the plains and valleys, which have

admirable properties. I shall mention some, for 'tis impossible to rehearse them all; nor can I remember but a few. First, that which

which rises at the foot of the high *volcano* of *Villa Rica*, so famous in that kingdom for its terrible effects, for which God Almighty makes himself to be feared and respected by mankind; rises, I say, at the foot of this mount with such force, that it springs out of the earth in two sources, each as big as a man, and sufficient to form alone a good stream, and runs into a lake which is made by its waters.

Rio Chico.

In another lake, out of which comes the river call'd *Rio Chico*, there rises also a fountain of hot water, most efficacious for the cure of leprosy, and all contagious infirmities. There is another springs up in the *Maguay*, yet most admirable; for there are two sources just by one another, the one of hot, the other of cold water; the hot one is so hot, that no one can endure his hand in it; the cold one is let in to temper the bath which is made for the sick. The baths of *Rancagua* are also very famous, and like these; which, for being near *St. Jago*, and in the greatest intercourse of the kingdom, are very useful, and much frequented. There are others in other parts; but not remembering them distinctly, I can say little of them. Among

Fountain of Ramon.

the fountains, that of *Ramon* is very famous, as well for the goodness, as abundance of its waters; which is such, that they alone are sufficient to water many fields: it is about two leagues eastward of *St. Jago*, and in that district. There are many others, among which that of *Caren* is worth taking notice of: it springs in a beautiful meadow, of about five or six leagues in length, affording a delicious prospect; its water is very sweet, and enters into the meadow; the earth of which is so porous, that whoever treads hard upon it, feels it shake under him: it is all the year green; and the grass is a kind of small trefoil, called by the inhabitants *Caren*, and is pleasant to eat. Neither ought I to pass over in silence another fountain between these two, very plentifully furnished with delicate sweet water, which is always so much the cooler, as the weather is hotter; it is call'd the fountain of *Mayten*, by reason of a tree of that name, which grows at the foot of a great square table of live rock, where people use to go and eat their collations, the tree sheltering them all the while from the heat; for 'tis a tree whose leaves are green all the year, something like a myrtle, but much larger, and without dispute of a more beautiful green: by its foot runs this fountain, whose source is a little higher in a valley, from whence it comes murmuring upon pebble stones, and among pleasant groves full of beautiful herbs and flowers.

Mayten.

which rises at the foot of the high *volcano* of *Villa Rica*, so famous in that kingdom for its terrible effects, for which God Almighty makes himself to be feared and respected by mankind; rises, I say, at the foot of this mount with such force, that it springs out of the earth in two sources, each as big as a man, and sufficient to form alone a good stream, and runs into a lake which is made by its waters.

The trees, though wild, yet bear very OVALLE. 1646. savoury fruits of that soil; and in them are great variety of birds, who, with their harmony and sweet notes, make the entertainment more delightful for those that frequent the place. 'Tis not the least part of their enjoyment, to discover at the end of these woods a prospect for many leagues over plains, which being of so great extent, many of them lie uncultivated; so that among the vineyards and plowed lands, the wild uncultivated part is so beautiful, particularly in the spring, that one would think art had help'd nature. There are in one place great spots of yellow flowers, which cover the earth, so that for a great space nothing else is to be seen; then you have white, blue, fillemot spots of the same proportion; the green meadows mingle in this with the waters of the river *Mapocho*, which is seen from this distance sometimes entire in its bed, then divided into several arms, and at last drained into the fields of the neighbouring grounds, to fertilize them. The prospect is terminated with several farms, which are called *Chacra's*, with their churches; and in the midst of all, the city of *St. Jago*, the capital of *Chile*, which being not above two leagues off, and the heavens so serene, the towers of it are easily distinguished, and the bells heard sometimes. A delightful prospect.

This district is full of a great many more springs, all within the compass of a mile of each other; and their waters are excellent and healthy.

That which is to the north of the city of *Conchalli*. *St. Jago*, called *Conchalli*, is likewise highly commended; it springs in a little valley, called the *Salto*, or *Leap*, because of the fall of the river *Mapocho*. This river comes running in a plain to a certain place; where being divided (for it is the work of industry) into two branches, the greatest of which runs in its natural channel, the lesser is derived to water this valley; which towards the west is even; but towards the east the land is so high, through which the river runs, that it is two or three mile from the bottom of the valley to the high grounds, from whence the river falls. It is precipitated with great noise, making lovely and various cascades by the rencounter of the rocks and other obstacles, which by their streight passages retard its course, till at last it comes entire to the valley, and is divided into cuts and channels for the watering it; which is not ungrateful, to make a more than ordinary return to those who cultivate it, not only in corn, most excellent wine, and most savoury fruits of all kinds, but also it ripens them above a month before any other place thereabouts; and it is very remarkable,

OVALLE 1646. remarkable, that in this valley, which is only half a league from the city of *St. Jago*, the figs use to be ripe, when in the gardens of the city, and all its neighbourhood, they scarce begin to change colour: therefore, as well for this as the game it affords, of partridges on the hills, and wild fowl in the waters and ponds of it, it is the greatest entertainment all those parts afford.

I shall not dilate upon more of these fountains, which are so frequent; for if I were to mention them all, I should never have done; for since those alone of the *Conception*, *Arauco*, and the country of the limits upon the warlike *Indians*, would require a large treatise, besides those of the district of *St. Jago*, what would it be then in the territories of the ancient cities, which are yet farther in the country? for it abounding extremely in rivers, it is to be presumed that it must be so in fountains and springs; all which proceeds from the abundance of moisture of the *Cordillera*.

Of these springs, the most agreeable for their good waters are the farthest off from the *Cordillera*, because they are more purified by a long motion, and refin'd by the good qualities of the earth they run through, particularly the mineral impregnations are singular: I cannot but mention one, which is in the novitiate of the company of the *Jesuits* of *Bucalemo*, whose waters are not to be match'd, at least I never met with the like; for without drinking them, one may discover by the touch their nobleness, their softness being like that of new butter; and they do make the hands that are wash'd in them in a few days smooth, and thereby prove their vast difference from other waters.

This fountain springs in a little valley, very pleasant, under some hills, about a league from the sea; and it bubbles up between a white sand, in which there is gold, as if it had a fire under it to make it boil. It is wonderful to observe, that if they throw any bough or flowers upon it, it seems to take it ill, and never is at rest till it has swallow'd it up, leaping up against it several times, till it has made it its own, and hid it from our sight; and this it will do for a whole evening, if they continue throwing flowers or branches of trees into it, without any body's being able to tell what becomes of them all.

The effects that this water causes in the stomach are admirable: it helps to digest the meat with more easiness; it destroys crudities, dissolves phlegms and gross humours, and evidently prolongs life, especially to old men. This was most particularly made clear in the person of that famous captain *Sebastian Garcia Caretto Cbumazero*, the founder of that novitiate, who lived there many years, and came to be ninety years old in good health, and so vigorous, that he did to the last go on horseback through the woods and mountains, as if he had been a young man. I heard him say many times, that this fountain was his life; for as soon as he found himself any ways out of order, he sent immediately for the water of it, and drinking it fresh from the spring, he used to go to bed upon it; where falling asleep, he would after some time awake well disposed: this I have often been witness of. The old *Indians* thereabouts experimented the same, and did attribute their good state of health to this spring, without using any other physick or remedies.

C H A P. XIII.

Of the Lakes of Chile, and the Salt that is gather'd from them.

Lakes.

AFTER having treated of the fountains and rivers, it seems natural to treat of the lakes and standing waters form'd out of them, and by some inundations of the sea in winter, when it fills them, and leaves them provided for all the summer. Those made by rivers come first in rank; and I wish my memory would serve to place them here, with their several qualities. Omitting then to repeat what we have said of those of *Aculco* and *Pudaguel*, which being near *St. Jago*, make the greatest diversion of its inhabitants, we will begin with the lake of *Tagataguas*, about fourteen leagues from that city, and which once was more in esteem; for the trouts catch'd there are of a larger size, and the game for wild fowl so much more diverting, that there is no comparison be-

Lake of Tagataguas.

tween these waters and others. I do not describe here particularly the variety of wild fowl, because I intend to do it when I treat of the variety of birds of this country. The lakes of *Villa Rica* are of great renown, though I confess I know little of their properties.

The lake of *Puren* has been famous, having been an impregnable fortress for the warlike *Indians* our enemies, by reason of the disposition and qualities of its situation; for from thence they have for many years maintain'd a war with whole armies of *Spaniards*, without being subdued: their advantage lay in this, That upon any rout given them by us, they had here a most certain and safe retreat, which when once they had recovered, they were out of all danger; for none could hurt them either by sword or fire.

The

Sea lakes.

The sea lakes are also many, and of great profit to their owners; for the fisheries in them are much more certain than in the sea: for which reason they furnish the best part of the lenten fare, though the sea affords a great deal too. Among the rest the lake of *Rapel* brings a great revenue: it runs in length above two leagues within the land. In the winter time the sea is joined to it; for by its storms it forces an entrance, but it leaves it full of all sorts of fish; which, with those that are bred there, furnish it for the whole year, and enable it to supply all the neighbouring country; and that not only with fish, but with salt too in abundance: for, about *January*, the communication ceasing between it and the sea, when the sun is at its hottest in that climate, the water is congealed so, that it has a crust of a foot, or more, thick of a most excellent white salt. This, indeed, does not happen every year; for it requires an extrem heat to do it, the lake being deep, and the climate there more enclining to cold: but they provide themselves in one, for many others; and the salt-pits made by hand seldom fail; for they not being of great extent, the water that is let into them turns to salt with less heat, the matter to be congealed being less in itself. And since we are mentioning salt, I cannot omit to relate what I myself have seen in the valley of *Lampa*, which is about three leagues from *St. Jago*; and it is this, There grows an herb, not unlike to *Sweet Basil*, only its green is upon an ash-colour, and not so gay; it rises about a foot above ground: this plant, in the summer, is covered over with small grains of salt, like pearl, which is congealed upon its leaves, either from the dew of heaven, or by some vapour raised by the sun from

Lake of Rapel.

Salt found on an herb growing in the valley of Lampa.

that earth; or else the nature of the herb itself is such, as to sweat out this humidity, which being afterwards congealed by the heat of the sun, is turned into salt. Let the cause be what it will, the effect is seen no where but in this valley, and upon that species of herb; which is therefore much valued by the *Indians*, the salt of it being more favourable, and of a finer flavour than any other.

OVALLE. 1646.

I cannot tell whether *Jobannes de Laet* means this in his description of the new world; for having mentioned the kingdom of *Chile*, to which he gives the preference for its excellent properties, he says, That in that kingdom, in some of its valleys, there falls, at certain times of the year, a dew so thick upon the leaves of the plants, that it is like sugar, and serves, being kept some time, for the same use as manna. *Antonio de Herrera* reports the same thing, in his general history of the *West Indies*; and, amongst other commendations he gives this noble kingdom, he relates the same thing of this strange and admirable dew. I say upon this, that I know not whether they allude to what I have reported of the valley of *Lampa* by my own sight, and have no knowledge of that other thing they mention; though one would think, such authors should distinguish things so different in their effects and favour, as salt and sugar. 'Tis possible, God may have done both, having been so wonderfully liberal to that country, where the singularities are so many and wonderful; and it would therefore be no wonder some of them should not be known, especially, considering that we, who are there employed for the conversion of souls, have not the time to search after curiosities, and secrets of nature.

C H A P. XIV.

Wherein is treated of the Sea of the Kingdom of Chile, and of the Etymology of its Name.

Sea of Chile.

THE fountains, springs, rivers, and brooks, carry us along with them naturally to the sea, where their course ends, and where there is room for my pen to exercise itself, if the brevity of this narration did not confine my flight: I must therefore be content to say something of this element, that the nature of it may not be unknown as to this new world.

Etymology of the name of Chile.

Beginning therefore with the etymology of its name: 'Tis well known that all commonly call it the *South Sea*, because it is towards the *antarctic* pole, from whence generally the south wind blows, in opposition to the *tramontana*, or north, which

reigns in the ocean as far as the *arctic* pole. But leaving these disputes to the schools, or rather to that abyss of divine wisdom, *qui profert ventos de thesauris suis*, 'tis a known truth, that the effects which the wind of the *arctic* pole causes in its jurisdiction towards the opposite part, the same is caused by the south wind in its motions from the *antarctic* towards these parts.

In *Chile* we look upon the south wind as a favorable wind, as in *Europe* the north is in the same esteem. The north with us covers the heavens with clouds, causes tempests and storms at sea, and makes all the land dark and sad: the south, on the contrary,

The south wind most favourable at Chile.

OVALLE. 1646. contrary, clears the sky, serenes the air, and makes the sea as calm as milk : on the contrary, this same south wind, in the north sea, is stormy, and covers the heavens with clouds, and raises those tempests, which do so endanger ships ; whereas the north, called there *tramontana*, clears all again, and makes the fine days.

From hence proceeds, that in *America* the south wind reigns in summer, when the sea is calm, and the north in winter, when it is tempestuous : the north does most certainly, bring with it the rains, particularly from thirty six degrees to the pole, and that so suddenly, that sometimes, in the moment the wind comes to the north, the rain falls, and most commonly 'tis within half an hour after its change ; and when in those parts in winter the sun is clear, and the weather fair, 'tis when the south wind overpowers the north ; for the south in those parts is cold and dry, and so drives away the clouds, so as it happens sometimes that the heavens are dark ; and as soon as the clouds are discharged, if the south appears a little the stronger, 'tis an infallible sign of calm weather, which generally follows in a trice ; for this wind drives all the clouds so before it, that when it blows, it does not leave one in the sky.

The contrary of this is seen in *Europe*, where the south winds bring humidity, and the north drives it away : the south relaxes the body, and affects the head ; but the north strengthens the body, purifies the air, and dries up superfluous humours. In short, these two winds cause quite different effects in *Europe* and in *America*, that we may call the *Europeans* sons of the north, and those of *South America* children of the south.

From this there follows another very notable and well-known difference, which is, That as to go from *Europe* to the *Indies*, the north is the proper wind, and carries us before it, and by consequence is contrary to our return ; so in the *South Sea*, sailing from the pole towards these parts, the south is the favourable wind, and contrary to our return : from whence it proceeds, that the voyage from *Spain* to *Cartagena* being by the *North Sea*, and made in thirty, forty, and fifty days, the return to *Spain* uses to last fourscore, and a hundred, and more days. On the contrary, in the *South Sea*, where the voyage from *Chile* to *Lima* is but of about a fortnight, and as much more to *Panama*, or thereabouts, the return only to *Lima* is of two months, and from thence to *Chile* forty days. The *South Sea* is also called the *Pacifick Sea*, to distinguish it from the *North Sea*, whose storms and tempests are so frequent ; whereas in the *South Sea* they are rare : but, in my opi-

nion the difference is for another reason, which I shall alledge here.

The most frequent navigations of the *South Sea* are from *Peru* to *Panama*, and from thence to *New Spain* and the *Philippinas* ; and those from *Peru* to *Chile* are less used : by which it appears, that the best part of the *South Sea* navigations are between the tropicks ; and so the sun has so much force, as to keep the winds from being furious, and making such lasting storms as those which are raised without the tropicks, and in parts nearer the pole ; for this reason the sailors in these warm climates, where there never is any winter, called this sea the *Pacifick Sea*, from the good effects they experiment in it. The contrary of this is in the *North Sea*, where most of the navigations are out of the tropicks ; where the sun having less force, the winter predominates, and raises mighty storms. Now the *Europeans*, who first navigated the *South Sea*, being such as were used to those dangers, to which the navigators of the northern parts are most commonly exposed, when they found so quiet a sea as that under the line, and in those which particularly are the seat of commerce with *New Spain*, *Panama*, and *Peru*, they gave it the name of *Pacifick*, without examining any further the cause of the difference of the effects, which they experienced in both seas : but if they had try'd that very *South Sea* beyond the tropick of *Capricorn*, they would not so easily have named it *Pacifick*.

I know that this discourse will be approved by those who have had experience of the hardships which are suffered by the navigators, from the twenty sixth degree of latitude on the coast of *Chile*, to fifty three degrees ; for there, as soon as the winter begins, the sea cannot be navigated without manifest danger, the storms being no ways inferior to the greatest in the *North Sea* ; and though at that season it is not so dangerous for ships to sail from *Chile* to *Lima*, because they every day get into a less latitude, and so enjoy a quieter sea, yet from *Peru* to *Chile* it is extream dangerous, not only because they come into a greater latitude, and go out further to sea, to avoid the south winds opposition, but also because the vapours of the sea, and cold mists of the earth do raise such fogs and dark clouds, that they cover the land so, that when they make their port, they are in great danger of splitting upon the rocks.

This, I say, is only of those coasts of *Chile* which are in the least latitudes ; for from the city of the *Conception*, towards the pole, even in summer, they are dangerous ; and the ships which are bound for the islands of *Chiloe* have not above two or three months in the year to go in and out

Remarks on the navigation of the South Sea.

Called also the Pacifick Sea.

conveniently, or they neither go in nor out till the year following: this is understood as far as forty four or forty five degrees, in which this archipelago of islands is placed, for from thence to the streights of *Magellan*, those may relate the dangers who have experienced them, and passed those streights: all that I know of it, is, that they all have matter enough to discourse of at their return.

So that we may say, that the name of *Pacifick* does not absolutely belong to the *South Sea*, according to its whole extent, but only as to those parts of greatest intercourse, which, because they are within the tropicks, are the freest from storms; and yet it cannot be deny'd, but that the *South Sea* has an advantage over the *North Sea*, even within the tropicks, which is, that it is free from those great sands which are so common in the *North Sea*, about *Carthage-na*, *La Havana*, and other islands, nay, even in the canal of *Bahama*; which indeed are so many, that let a storm be but moderate, they make it still greater, and more dangerous, by shortening the sea-room, and force the sailors to be always heaving the lead, or else to split upon the rocks, which may be clearly seen and distinguished from the ship's side.

I find likewise, that the *South Sea* may be called *Pacifick* for another reason, which is, because of the extream quiet it enjoys in its navigation, without disturbance from any of its enemies, who are so frequent on all the shores of the *North Sea*; for there be-

ing no other entrance into the *South Sea*, but by the streights of *Magellan* and *St. Vincent*, which are at such distance, and defended by nature itself, the enemies of our quiet do not care to engage in so usefess and dangerous a design, with so manifest a destruction; and so little advantage, as hath happened already to some hereticks who have attempted it; for having no settlement, nor landing place in all that vast sea, they have been forced to sail to the *Philippinas*: therefore the ships of the *South Sea* are free from any fear of enemies, and go and come without any apprehension of danger on that side. *Antonio de Herrera*, in the fifth *Decade* of his *General History*, folio 319. relates the motive that *Magellan* had to call this the *Pacifick Sea*, and that is, Because there is not in all that element a more specious career for the winds and tides, and because there reigns between the tropicks so steddly and strong a levant, that in many days the seamen need not hand their sails, nor the steersman his helm, sailing through those vast seas as if it were in a canal or river. And the same author adds, That this motion of this wind proceeds from the course of the first *Mobile*, which is proved by its perpetual invariability, and the increase of its vehemence, as it draws nearer the *Equinox*. Some dispute, whether it ought to be called a wind, or an impulse which the air receives from superior orbs, communicated to them by the first sphere. So far this author.

OVALLE.
1646.

CHAP. XV.

Of the Sea Coasts of Chile, and its Ports and Havens.

IT would be too great an excursion beyond my purpose, to mention all the ports and creeks along the coast of *Chile*; for they are very numerous. *George Spilberg*, admiral of a fleet of six sail, whose names were, the *New Sun*, the *New Moon*, the *Hunter*, the *Pole-Star*, *Eolus*, and *Lucifer*, says, he observed twenty five ports in the streights of *Magellan* alone, before he entered the *South Sea*: he commends them mightily, but particularly he is much pleased with the twenty fifth; for he staid in it some time, and gave it his own name: he calls it a noble port, by reason of its safeness for shipping, as also for the pleasantness of the fields, which, he says, were all covered with fruit; which I suppose were strawberries, according to the description he makes of them. He found there likewise abundance of excellent oysters, at the mouth of a river, which beautify'd that port extremely, it falling into it from high

Spilberg's observation of twenty five ports in the streights of Magellan.

mountains. But this retreat did not serve them long; for having seen some very fine coloured birds, they pursued them on shore, and hunted them; which they had no sooner begun to do, but they were assaulted by a troop of *Indians*, with clubs in their hands, and some of them were killed, and the rest forced to retire to their ships, and set sail in haste; which is a great mark of the valour with which those people engaged them; for though they had fire-arms, they could not withstand the charge.

Spilberg assaulted by the Indians.

The most famous port in all the coast, besides that of *Valdivia*, which we have described already, is that of *Coquimbo*, mentioned in our seventh chapter; and it deserves all sorts of commendation, as well for its lovely bay, where ships ride as safe as can be, as also for the pleasantness of the country about it; which is one of the most delicious of all *Chile*. The products of the country are particularly gold and copper,

Port of Coquimbo.

OVALLE. copper, which is carried from thence to Peru; for the making of artillery, casting of bells, and other household furniture.

1646.
Copiapo,
Guasco,
and Pacu-
do.

The ports also of Copiapo and Guasco are esteemed, and more deservedly that of Pacudo, which is a private hidden bay, where the ships of Peru come to load with the hides and tallow of Chhuapa; as also with tar and tackling for ships, which is made in that valley, and is whiter and better than any in Chile, by reason of the excellent waters they make use of in its making.

Quintero. The next good port to these, is, that of Quintero, where the general of the six ships above named landed; and it being a place uninhabited, met with no opposition, but refreshed his men with a large fishing which they made. They do so commend the place, that they cannot sufficiently (they say) extol the pleasantness of the land, the sweetness of the water, the security for ships, and, in short, all sorts of conveniences for human life; and after these many encomiums, the historian concludes thus, *portus hic nulli secundus*, this port yields to none; and yet this port of Quintero is none of the famous ones of Chile; by which it may be inferred, that he was but little acquainted with the rest. He could not land in them; for he found them all guarded by the militia, who expected him; and though coming to Val Paraiso, he had begun to land some men, yet, upon advice that the horse of St. Jago were at hand to hinder the descent, he took them on board again; and failing at midnight, cast anchor at Quintero, where they watered, and cut wood, the admiral himself landing with many soldiers to protect his men: there they drew up a trench, with a kind of half-moon, to secure their retreat against the Spaniards, who began to appear upon the hills; but they did not stay for them, but embarking again, followed their course towards Peru, not landing any where else; but yet they commend the land extremely.

Coucon, or
Quillora,
and Val
Paraiso.

After these follows the port of Coucon, or Quillora, which serves to embark the product of those valleys; and hard by that, the port of Val Paraiso, where are landed all the goods brought for the city of St. Jago: from whence they are distributed all over its territory, and as far as Cuyo, and Tucuman: This port is every day more and more inhabited; and there is building a convent of austin friars, which will be of great relief to the souls of the inhabitants, and of all those who go and come, who are not a few; for this is the port of the greatest commerce with Peru: 'tis distant from St. Jago twenty four leagues, all plain and good way, fit for carriage; and so all the commodities of both kingdoms are conveyed and exchanged by it.

Near the port of Val Paraiso is that of St. Antonio, which is also very safe and good, and is at the mouth of the river Maypo. There is a mistake in authors about this; for they place the port of Val Paraiso at the mouth of a river, which they make in their maps to come from St. Jago; which is a very great error, because, at Val Paraiso there is no river of any note, but only springs and fountains, which rise out of the rocks close by the sea, which are most excellent waters. There are also others of a coarser nature, with which the ships fill their provision, because they having more body, they resist better at sea against corruption.

There are several other ports between that and the Conception, in the bays and mouths of rivers; but not much used, because they are not necessary; all those valleys from Maule to Quillota sending their commodities to Val Paraiso. I believe in time other ports will be employed, because the products of that kingdom multiply apace, and so people will be willing to seek out the nearest ports for embarking their goods. All the product from Maule upwards, is carried to the harbour of the Conception, which is the best bay in all those coasts; and it being a very large one, providence placed at its entrance the island of Quiriquina; under which, as under a mole, Island of ships are secured in foul weather. At the Quiriquina largest entrance of this bay is the port of ^{na.} La Herradura, or Horse-Shoe, it being in La Herradura, St. Vincent, and Carne- that form; and opposite to that is that of St. Vincent; and a little farther, that of Carnero, called so for the refreshment it afforded to one of the ships of the bishop of Palencia, who, by order of Charles V. passed the streights of Magellan with six sail, and having lost their Patache, were forced to the Moluccas.

Next to these are the ports of Tirva and Quedal, La Baia Chica, that of Puralla, the port of St. Cebrian, that of Santa Clara, that of St. Domingo, St. Esteran, Los Reyes, that of Baixas, that of the Innocents, and many others less considerable, as far as the streights of Magellan.

Besides these ports which we have marked upon the terra firma, there are several others, well known in the islands of Juan Fernandes, La Mocha, Santa Maria, in the islands of Chiloe, Alse; where the most frequented are that of Carelmapo, and that called the English Port, because formerly an English ship landed there, and the men and ship, with all its artillery, were made prize. There are also several other ports in the archipelago of Chiloe, which I forbear mentioning, because I have not a perfect account of them.

CHAP. XVI:

Of the Fertility of the whole Coast of Chile:

THE abundance and fertility of this kingdom is not only perceived in its valleys and fields, but likewise in its whole coast, even on the rocks, where the sea beats. It will be hard to make this appear by particulars, because though in other parts of the world the rocks produce shell-fish; yet I do not know that it is in such quantity, nor so large any where as in *Chile*, nor of so many different species. First, I will speak of that which is most common and intelligible: There grows along the coast every where an herb not unlike to endive; they call it *Lucbe*, which they pull from the rocks: it is gathered in the spring, when 'tis most grown; and being dried in the sun, 'tis made into loaves, which are look'd upon as a great delicacy far from the sea, particularly in *Peru*, *Cuyo*, and *Tucuman*; for it serves for many sauces. It grows upon the tops of rocks, such as are above the water. At the foot of the rocks are found certain roots, which bring forth a trunk as thick as one's wrist, called *Uttecueste*: this they cut, and laying it before the fire, they pare it like a lettuce, or cardoon, or chistle, but it has a much different taste. From these trunks shoot out certain long cods, of three or four yards long, and some of about six or eight fingers in breadth: these they call *Coebauyo*; and there are two sorts of them, which, though they resemble one another, yet the *Indians* make a great difference between them, reserving the good, which they cut and dry, and make provision of them for Lent; the others they leave to the sea, which heaps them up upon the shoar, where they lie in heaps very usefess. So much for the herbs. Now let us speak of the sea shell-fish. The best of this kind are oysters, both great and small, so much talked of by the *Hollanders* with great commendations: they found them in the streights of *Magellan*; but the greatest plenty of them is on the coast of *Coquimbo*, where they are very large and delicious; the lesser sort they call *Tacas*, very much valued too, and taken all along that coast. But those of greatest renown are the oysters of *Chuapa*; in the great ones are bred pearls, as the *Dutch* say, and, according to *John* and *Theodore de Brye*, they bought some of the *Indians* in the streights very finely wrought.

The herb
Lucbe.

The root
Uttecueste.

Oysters.

Choros.

That which they call *Choros* is also a fine sort of shell-fish, and in its shell, as *Antonio de Herrera* says, there are pearl very white. That sort which I have seen is

not so big; but since they are to be found every where, there may be of all sorts of them; for they are caught in abundance, both little, middle size, and large ones, some as broad as my hand. The choicest of them are those which have the fish of a yellow colour, though the black ones are good too.

There is another shell-fish, called *Mane-Manegues*, which is in two round shells, such as serve for models in architecture; the fish within is but coarse meat, but of good sustenance. In one kind of these, which is the little sort, in opening the shell, which in the inside is like mother of pearl, when one takes out the meat, one may see the impression on the shell, of a purple colour, which represents the image of the most holy virgin, with her mantle, and her child in her arms, which causes great devotion and comfort; and, though they all have this impression, yet some have it so perfect, that it is wonderful.

A fish they call *Locos* may also be ranked among the shell-fish: they call them also *Afs's-Hoof*, because they are of that shape: They are very savoury, but hard and indigest; for which reason they are to be eaten sparingly, though in the dressing of them they macerate them between two stones, to soften them. I should never have done, to go through all the kinds of shell-fish; as likewise of snails, which are also good to eat, and are produced on the rocks. There are some cast up by the sea, in such quantity, that ship loads may be had of them, of such variety of figures and colours, that I doubt not but the curious in *Europe* would value them, and our artists would make curiosities of them; but they, for want of such artificers, are good for nothing in the *Indies*, but to make lime of, by burning them in a furnace; yet they are in such vast quantities, that the shore is covered with them, and they make a fine shew.

The shell-fish called *Picos de Papagayos*, *Picos de Papagayos* are another kind much esteemed: they are so called, because for their shape and bigness, they are just like parrots heads; and as these birds build their nests on shoar, in some hollow rocks and caves, so this fish breeds in a kind of stone-work, hollow, like little cells, where it grows till it comes to be of the bigness of those heads. They dress them in those very nests, which serve for pots, and when they are enough, take them out. They are excellent meat.

Those

OVALLE.
1646.
Kericos.

Those which they call *Kericos*, though common in other parts, yet I never saw them so large as in those parts; and being taken in the increase of the moon, they have very large tongues, fat, and of about two fingers breadth.

Crabs,
Apavico-
ras, and
Praunes.
Lobsters.

The *Crabs*, *Apavico-ras*, and *Praunes*, are likewise very good, and of several sorts and sizes. The *Lobsters*, and those of that kind, are likewise much esteemed; they breed under the rocks, and are fished for, as all the rest, not with nets, but only by the *Indians* going into the sea up to their middle, and knocking them from the rocks with sticks in their hands. So much for this kind of eatables. There are others which live a little more in the sea, which are of a beautiful form; some they call sea-stars; some the sun; others the moon; because they are of the form of those planets, as they are commonly painted. These may be eaten too; but they have one very singular propriety, which is, to cure the vice of drunkenness, being reduc'd to powder, and given in wine to drink; and this is of

so certain an effect, that those, who before they took it had no greater delight than drinking of wine, did afterwards so abhor it, that they would not touch it, though they were hir'd: This is a healthy remedy, as well as sure; and therefore us'd by the *Negroes* to avoid taking another; which, though as certain, is very dangerous; which is, drinking the sweat of a horse mingled with wine. They say, this puts those who take it, in danger of losing some of their senses; though I knew one, who being exceedingly given to drunkenness, his wife gave him this remedy without his knowledge, and it did him no other hurt than to make him hate wine, so that he could not bear the smell of it; but, as I said, the *Negroes* use the powder of the star-fish; and though I have observed, that with some it is not so efficacious, but they long for wine again after a while, yet it is but to repeat the remedy as soon as that ill inclination prevails again: and this is commonly so practis'd upon the *Negroes*, who are much given to that vice.

C H A P. XVII.

Of the various Kinds of Fish which are fished on the Coast of Chile.

The whale. LET the whale appear first, since by its bigness it is a kind of king of the sea; and if where the king is, the court is, we may give that title to the sea of *Chile*, where there is such store of whales, that I know not any place where they abound more; and they are accompanied by such a court of little fishes of all kinds, that those who have navigated those seas, cannot but mention it with admiration. Among the rest, *William Seerten*, who came with a fleet through the streights, says, That they met with so many whales near certain islands, that they were forced to sail with great care and attention to avoid them, they being so many, that they were almost always in the ships way, and endangered the loss of them, being so big, that they look'd like rocks: they are all along the coast of *Copiapo* and *Guasco*, and are of no small profit, by the ambergreece they cast on shoar. The journals of those who have pass'd the streights do mention much of this amber floating on the sea, and therefore no doubt but a great deal of it is on shoar; but it is lost, for the *Indians* having no value for it, know it not; and 'tis but within these twelve years that the *Araucana's* minded it; by seeing some *Spanish* soldiers look for it, they did so too, and found a great deal, and very good, on the coast. Of the grey sort, which is the best, they found great pieces of an ash colour, with a nobler and more delicate smell; the ordi-

nary sorts are yellow and black, and it has a quicker, though not so sweet a smell as the grey. I have heard the people of those parts say commonly, that the difference is very accidental, and that it depends only upon being more or less prepar'd by the sun-beams: and experience seems to confirm this thought; for I have observ'd that the black does in time grow white, by being expos'd to the sun in a box; but if it be laid open, so as both sun and rain come upon it, the experiment will be more manifest; and as for the harshness of the smell, it may be remedied by infusions in rose water, exposing it first to the dews for nine days, and then to the fire, by which means it grows perfect.

Though 'tis known that amber is a thing which the whales cast from them, there is diversity of opinion about the manner, because some think that this noble product is form'd at the bottom of the sea, or upon some rocks; and that the whales eat it for food, and not being able to endure it in their stomachs, because it is naturally extreme hot, they get to the shore to cast it up: others say, it is the whales excrements. 'Tis not my business to decide this dispute. The other great advantage which the whales are of to the country, is the oil they afford after they are dead; and it is a great deal that one whale will yield: it serves for various uses of life. We do not know that these fishes die of a violent death,

death, because their vast bulk defends them both from men, and all other animals, that may be their enemies; but yet being subject to pay the common debt of nature, when they find themselves near death, they draw near the land, and are often cast on shore by the sea, which will not bear any corruption in its waters; and 'tis strange to see how they are thrown up in great numbers on those coasts. The oil is made by the heat of the sun, and when the weather has consum'd the flesh, the ribs and other bones remain white; and the *Indians* make use of them for seats: much more conveniency and curiosity might be afforded by them to other workmen.

Tunny-fish, and Albacoras.

There are another sort of fish which are found most on the coast of *Coquimbo*, which are not so big as whales, but yet are very large, and a good fish to eat, which are the tunny-fish, and the *Albacoras*, which the *Indians* kill with great dexterity: they go into the sea a good way upon floats of seal-skins, well sowed together, and blown up like a bladder; they carry with them a kind of trident with sharp tongues; this is fastened to a long, slender, but strong rope; the *Indian* guides his float near the fish he chooses, and then darts it with his trident; the tunny, as soon as wounded, goes out to sea like lightening; the *Indian* gives him rope enough, and follows him the way that he runs, till the fish has spent itself by loss of blood; and then the *Indian* draws in his rope, and the fish with it, either dead or dying, and lays it on his float, and he returns to port with his prey rejoicing.

Flying-fish.

There are many other sorts of fishes; one of the most extraordinary is the flying-fish, which fly with wings, and follow a ship like birds. The lion-fish is also admirable: they are found in great quantities about the *Streights* of *Magellan*, near a port, call'd *Port Desire*: they are very good to eat, but very hard to take; for though they wound them with shot in many places, yet if they do not hit them in the head, or the stomach, they do not yield: they are as big as a colt, and have a lion's head, with a perfect mane; which the females of them have not, neither are they above half as big as the males, and have a thinner skin. Those who have sail'd through the *Streights*, talk much of these

Lion-fish.

sea-lions, and do also mention many other sorts of fishes which they took there, some of sixteen foot long, very savoury and good to eat. *Antonio de Herrera* says, That there are fishes taken in the island of *Santa Maria*, out of whose eyes they take a sort of coarse pearl, which have a gloss like the true ones, and are worn by the women; and if, as they are soft, they were a little hard, they would be better than pearls.

OVALLE. 1646.

The sea wolves, or seals, which are found on all the coasts, are innumerable. I have seen whole rocks cover'd with them, and they lay even one upon another, so as some of them rolled down into the sea again, there not being room for so many: they are as big as calves, and make a noise like them.

Sea-wolves, or seals.

Antonio de Herrera, in the voyage of *Magellan* says, That in the river of the *Cross*, in the *Streights*, they took one so large, that without his head, skin, and fat, he weigh'd nineteen *Castilian Arrobas*. The *Indians* take them for their skins, which are very hard and strong, and some eat their flesh. As to the plenty of the ordinary fish of those seas, the authors already cited speak very advantageously of their kinds, particularly *William Scowten*, who coming with his fleet to the island of *Juan Fernandez*, in thirty three degrees, and forty eight minutes, the quantity of fish they met with was so great, that in a very little time they catch'd a great quantity of *Robalos*, which is the best and most wholesome fish of all those parts. They did not take them with nets, because they had not time to land, but with hooks at sea, by the ship's side, and that as fast as they could throw in and pull up.

An Arroba is twenty five pound.

What I myself have seen, is in the great lake of *Rapel*, all the sides of it cover'd with *Pejereges*, by the vast quantity of them which came upon the coast, as the droves of pilchards by the bay of *Conception*, and in *Chiloe*, so that they take them with blankets. I have seen the same droves of tunny-fish, which come leaping over one another's backs, as if there were not room for them; and, indeed, that climate being so favourable to multiplication in all animals on shoar, as shall be shewed in its proper place, it cannot well be otherwise as to the fishes.

C H A P. XVIII.

Of the Birds of Chile.

THE birds and fishes seem to be brothers of the same venter, the author of nature having created them both out of the element of water; and therefore, to

dispatch all the creatures of this country, having treated of the first, it seems that the chain of an orderly narration obliges us to say something of the others. To speak generally,

OVALLE. generally, it may be truly said of the air of that hemisphere, that it has a great advantage over the earth, though so fertile, so rich, and so delicious, as we have represented it; for though it is true, that it now produces the animals and fruits of *Europe*, with such an increase as is wonderful, yet it cannot be denied, that before the *Spaniards* carried thither the seeds and animals which are now so multiplied, (for they had them not in any sort, though perhaps others which supplied the want of them,) the air, without being at all enrich'd by the accession of foreigners, has maintain'd always such an abundance of the volatile kind, that it needed no supplies from *Europe*, but rather has many to make up any one defect.

The eagle. To begin with the king of them all, the eagle: there are there abundance of them; those which are call'd royal or imperial have been seen there only twice; first, when the *Spaniards* first enter'd that kingdom; and the second time, in the year 1640. when the *Araucanos* submitted their untam'd necks to their God and the king, they interpreting this as one of the signs of God Almighty's will to incline them to take that resolution which they then took. As for the ordinary eagles, who do not differ much from the others, they have always been and are still in the country very common. There are likewise bred *Falcons*, so large and strong, that for their beauty they have been carried from thence, though so far, as a present to the king of *Spain*; and they are commonly carried to *Peru*, particularly that kind which are call'd *primas*, or first, though those call'd second are very large too. There are besides, all other birds of rapine and prey; and of the singing-birds, there are linnets, bulfinches, nightingales, blackbirds, and many others, who form some a bass, and some a tenor, with all the other parts of a harmony, beyond belief, particularly in summer, under the shades of trees.

Birds of prey.
Singing-birds.
Birds of game.
Tame fowl.
Swallows.
Owls and bats.
The birds for game are, herons, partridges, wild pigeons, thrushes, turtles, parrots, wild ducks of a thousand sorts, some of one colour, and some of another, and all very good. The domestick tame fowls are hens, ducks, geese, turkeys; and that nothing may be wanting, swallows in summer, which go away in winter, as they do in *Europe*, to warmer climates; screech-owls, and other night-birds; as also bats.

These are the birds of the *European* kind, which are found in those parts, as well as I can remember; and there is hardly a bird here in *Europe*, that I observe in the fields, that I have not observ'd the like somewhere in *Chile*, with very little difference.

Who now can describe the variety of native birds of that climate? who are in

such variety and abundance, that people are fain to guard their vineyards from them as soon as the grapes begin to ripen; and yet 'tis impossible to hinder them from doing a great deal of mischief, they being so nimble, and having so secure a retreat, though all sorts of inventions, such as guns, cross-bows, slings, scare-crows, are put in use; so that if any are negligent, they may be sure to find their vintage made to their hand. And this mischief is not only for their vineyards, but likewise for all seeds, which is fain to be watched after 'tis sowed, 'till it sprouts; and as soon as the wheat and maiz begin to ripen, the guards must be renewed; for there comes whole armies of birds to attack them, and do them as much mischief as if they were *Xerxes's* armies.

In particular, the parrots are so voracious *Parrots.* and greedy, and have a bill that cuts like a razor; they come in flocks of such an extent, that when they rise they cover the air, and fill it with such a confusion of cries, that I cannot find any thing to compare it to. This kind of birds is bred all over *Chile*, in the mountains, and in the *Cordillera*; and 'tis wonderful to see how exactly they come to an hour, as if they were call'd by a bell, or had some notice where and when the fruits are ripe, and in season for them to enjoy them: they come down from the mountains in the evening; and the noise they make in flying, though they fly high, is such, that one would think them close by: they have a shrill clear voice, and they fly all screaming at once, so that their noise is very loud: they are all green and yellow, and have a blue circle about their neck, and very good to eat, particularly the young-ones.

Those years which are to prove rainy, as the natives observe, as soon as the weather grows cool, before the winter begins, one may see every evening, for many days, great quantities of crows come down from the *Cordillera* into the plains: they come about an hour before sun-set in squadrons, forming a triangle or pyramid, the point of which is led by one single one, before whom none dare go: the figure they make is most regular, with great correspondency to each other, as if they were fixed in the air, and immoveable, so equal and well-concerted is their flight.

There is likewise a bird which we call *Taltales*, or *Galinafos*: it is like a duck, but has bigger wings: they are either black or brown, and very voracious of carrion. In the time of slaughtering, which is every year in *Chile* of most beasts, there is a great deal of flesh lost; then these birds come, as if one had sounded a charge to them, and fall upon the carrion with so much greediness, that having eaten their fill,

fill, they cannot rise again, and are easily knock'd on the head with sticks: the bones of their legs are valued to make scizers, and their quills, which are as thick as ones finger, serve for harpsicals, and other curiosities. Out of this slaughtering-time they die with hunger; but among all the ways they have of maintaining themselves, their way of hunting young goats and lambs is admirable: they sit upon high trees, and from thence spy the flocks of sheep and goats, watching till any of the young-ones stray from the guard of its dam, as they often do, either staying behind to feed, or climbing some rock: this the *Taltale* quickly seeing; and that the young-one is far

from the defence either of the shepherd or old-one, it leaps upon it, and the first thing it does, is to peck out its eyes, and eat its brains; which it does so quick, that though it cry, and the shepherd or mother come to its relief, 'tis too late. Very like to these are another sort of bird, both as to bigness, colour, and shape, and its disposition to prey; they call them *Peuques*, only they are something less, and of a nicer diet, being pleased with nothing but hens or chickens, which they take very dexterously: they are so bold and nimble, as to get into a hen-roost, and carry away their prey, even in presence of the owners, without being stopped or prevented.

OVALLE.
1646.

Peuques.

C H A P. XIX.

The same Matter is pursued, and the Flying of Hawks treated of.

AMONGST the great number of birds which are bred in lakes and ponds, and on the sea-side, which are of great variety, none are more remarkable than the birds called *Flamencos*: they are white and scarlet, bigger than turkeys, but so long legg'd that they walk through a lake with great gravity, the water not touching their feathers by a foot or two: the *Indians* delight in making works of their white and scarlet feathers, for their dances and their feasts.

Flamencos.

There is another bird, called the *Child-bird*, because it looks like a swaddled child with its arms at liberty: I have not seen them any where but at sea; perhaps they are the same, called *Pinguins*, of which frequent mention is made by those who pass the *Streights of Magellan*: They are generally painted in the maps; and they say, there are abundance of them in those parts, and that they are good meat.

The Child-Bird.

There are other birds which furnish the tufts of feathers, called *Hérons-feathers*, which though so narrow, yet are so valued, that formerly every feather was worth two *rials*: those which grow under their wings are larger and better, though those on their heads, which they wear as aigrettes, are very fine. There are but few of this kind of birds; for they do not increase so much as others. There are more of that kind, call'd *Garçolas*, which serve for soldiers feathers, and other ornament. There are many others of great variety of colours, of which the *Indians* use to make their ornaments, called *Mallengues*, which are made for the head like a garland of most fine colours of wooll, and in that they stick a plume of feathers, for their dances, and days of rejoicing.

Hérons-feathers.

Garçolas.

Voycas.

are very famous among them, in whose notes, at certain times and places, they find great mysteries, prognosticating by them, either their own, or their children, or their friends death, or sickness, or other misfortune; and they remain with great apprehension and fear. The *Spaniards* call these birds *Pebicolorados*, that is, marked on the breast; because there is no scarlet deeper, nor brighter, than the red on their breast: the other feathers of their wings and body are brown. There are other very little ones, called *Pinguedas*, whose body is not much bigger than an almond: these live upon flowers; and that they may come at the honey of them, nature has given them a bill, which, when 'tis shut, is like a needle to sew with; and for this reason they feed flying, like bees, from flower to flower, without lighting but very seldom on a branch of it, and that very slightly. These birds are of the greatest beauty imaginable; for if they were made of polished gold, they could not shine brighter: they have a green mingled with this gold colour. The males are distinguished from the females, in that they have on the head a lively orange colour, which is like fire. Those on the other side of the *Cordillera* are yet more beautiful, because their tail is also of the colour of their head; and though they have so little a body, their tail is a foot long, and two inches broad.

Pinguedas.

There is likewise a very odd bird, to which the *Spaniards* have given the name of *Wood-Pecker*; because though they are but little, they have so strong and sharp a bill, that they form their nests with it in the trees, forming a hollow place fit for them as exactly, as if they had an instrument to do it. Of these I have seen but few; but there are great numbers of a kind of birds, called

Wood-Pecker.

OVALLE 1646. called *Condores*, which are as white as ermin, and of their skins they make muffs, it being of a very soft touch, and extream warm; but the bellies of the buzzards are much more so, being admirable to make stomachers to cover the pit of the stomach, and help digestion.

I have not seen such variety of birds on the other side of the *Cordillera*; and the cause, I believe, is the dryness of the land, and the want of that shelter of woods and groves which are on *Chile* side; but in those plains, called the *Pampas*, there are *Fran-*

Francolins. *colins* to be found, which are a sort of wild hens, and as big; but much better meat, and of a higher relish. There are likewise

Ostriches. *Ostriches*, who are a mighty bird, and very numerous there. They often find their nests, and in them such a quantity of eggs, as one nest will feed a great company; one of them alone being beaten and fry'd, makes a pancake big enough to dine several people: their feathers are employ'd for umbrells to keep off the sun, and other good uses.

Variety of diversions in hunting, hawking, &c.

'Tis a pleasant sight to see the taking of the *Francolins*: the *Indian*, with a string made at one end into a running knot or noose, at the other having a little piece of sharp cane fastened to it, goes out to find them, which when he has done, he draws gently near, so as not to fright his game; when he is at a due distance, he begins to go round the bird, making with the cane several circles over his head. The *Francolin* is of its own nature a very fearful bird, and simple, and dares not rise, because he thinks he is encompassed round, but goes into the middle of the circle; where the *Indian* lessening still his rounds, follows it, so that at last it squats down upon the ground, and lets the *Indian* put the noose over its head; which when he has done, touching it on the wing with the sharp end of the cane, the bird flies up, and draws the noose close, and so is catch'd like the fishes by an angling-rod.

'Tis not so easy to catch the *Ostriches*; for though they do not fly, yet they have such large wings, that though a greyhound be very swift, if the bird has law of him, he will hardly overtake him; but if by chance he comes up with him by surprize, or otherwise, 'tis wonderful to see the art the *Ostrich* uses to avoid his teeth; for when the dog is just going to seize, the *Ostrich* lets down one of his wings, and fixes it to the ground, covering with it its whole body: the greyhound thinking he has him sure, takes hold with open mouth; but he fills it only with feathers, and is cheated; for immediately the *Ostrich*, before the dog can clear his mouth, sets a running, and gets a good length before him; and often

escapes, if the greyhound does not make extraordinary haste to overtake it.

This is a very diverting sport; but that which is used in *Chile* with *Faulcons* is much more so: not to fly partridges, for that is a known sport every where; but with another sort of bird, which the *Indians* call *Quulteu*, from the sound of its note when it sings, which sounds so. These are as big as hens, and have very large wings, and upon their wings they have, in the joining place, provided by nature for their defence, certain sharp points. The *Spaniards* call these birds *Friers*, either because they always go two and two, or three and three, or because the colour and order of their feathers is so, that one would really think they have a hood and a frock.

For this sport 'tis not enough to have one *Faulcon*, but there must be two, and those very well taught, and dexterous to assist one another. There uses to be very good company to see the engagement, as we may call it; for it is worth seeing. Coming then to the place that these birds haunt, which is generally some meadow or watery ground, (for that they never forsake, their last defence being in the water, as soon as they are sprung,) one at a time, the sportsman flies one *Faulcon* at them, who, as if he minded not his game, endeavours to get as high as he can, and get the wind of his prey, who, at the same time, does the same thing, and contends for place with his enemy; so that they both get almost out of sight; but at last the *Faulcon* having the better wing prevails. When he has got advantage enough over him, he comes down upon him like lightning; but the *Quulteu* defends himself, either by avoiding the blow, or by opposing the armed points of his wings; upon which often the unwary hawk is wounded in the breast. When the sportsman sees the engagement last too long, fearing his hawk may tire, or be balked before the victory declares for him, looses his other *Faulcon* to help the first, who being fresh, soon joins his companion, and both together fall upon the *Quulteu*, but not at the same time, lest they should hinder one another: one gives him a blow, and then the other another; and so, though he make a good defence, he is forced to yield, which he does, by making a way for the water, where he has his last retreat to defend his life: here he expects his enemies upon his back, with the points of his armed wings turned towards them: the *Faulcon* despising the danger, comes down with all his force, and seizing her with one foot, tears her to pieces; but 'tis not without receiving sometimes dangerous wounds. The victory does not always cost so dear; for that is according to the strength of the contenders.

tenders. I omit the shooting of wild-fowl in the fens and waters, which is nevertheless very entertaining, as are likewise the *Indians* ways with nets, nooses, arrows, night-lights; nay, the manner of catching the *Faulcons* themselves is as diverting: 'tis done

with fine nets, in which they involve them, that they may not hurt their wings. O'VALL
1646. E.

This is sufficient about the birds; and since we are in the region of the air, so near heaven, let us say something of it before we come down to the earth again.

C H A P. XX.

Of the Heaven, and Stars, which are proper to the Kingdom and Region of Chile.

THIS the common opinion of all those that have seen and dwelled in *Chile*, that its soil and heaven, if they have their equal, have not their superior in the world; and though some say the stars of the *artick* pole are larger than those of the *antartick*, yet as to their brightness and beauty, and the light they give, and as to their numbers, with the clearness of the heavens where they are, there is none but must own the advantage on the side of the *antartick*. We may give, as a natural reason of this, the temper of the climate, both as to air and earth; for though there are in it so many rivers, as we have observed, yet they being rapid, and swift in their course, do not cause overmuch humidity by their stay, but afford only what is necessary for its fertility; and, of the two extremes, the country is rather dry than moist, particularly as far as thirty four or thirty five degrees, as is manifestly made out by two experiments: first, by the facility with which all wounds are cured, which use to be much longer in wet countries; and, secondly, 'tis proved from the habitations and houses, where the best apartments are reputed to be on the first floor, they being looked upon in *summer* for coolest, and in *winter* for warmest; and, though they are watered every day in the year, and the floors most commonly but of earth, not at all upon vaults, yet they are never unhealthy; and there is no need of board-flooring or mats, let the winter be never so sharp. This is a convincing argument, that the country inclines to dryness rather than to humidity; from whence it follows, that the sun raises fewer vapours; and therefore the air being clearer, the brightness of the stars is more conspicuous; and for this reason the sun sets and rises so glorious, casting out resplendent beams of light, which is not so on the other side of the *Cordillera*; for there I have seen the sun pretty high, and its whole body visible, and yet no ways dazzling, the vapours of the earth taking away the radiant beauty of its beams.

The experience of this is yet more admirable to those who sail from *Peru* for *Chile*; for though they keep out a great way from

land, yet they know presently by the horizon when they come to the height of *Chile*; for they begin to see it all disengaged from clouds and serene, gilded and glorious, and its beauty increasing upon them every day, as they gain more height towards the pole. On the contrary, when they sail for the line from *Chile*, the nearer they grow to the tropick, that light and splendor grows duller and duller; so that in my voyage for *Panama*, I saw all the horizon muddy, sad, and clouded, which continued till I got to the *Havana*; where being in eighteen degrees north latitude, the horizon cleared up and grew every day better and better, till we got to *Spain*.

So much for the clearness and beauty of the heavens and stars, which may be confirmed by all those who have seen the place; but 'tis not so of the bigness of the stars. The astrologers pretend, That the contemplation of them, and their measure, belongs entirely to their art, as understanding best the disposition of the celestial sphere; but, in my judgment, they who can best speak of this matter, are those who have seen both poles, as is well observed by *John* and *Theodore de Brye*, in the eighth and ninth part of their twelve curious books, where they relate variety of histories, observations, and voyages, which have been in the *North* and *South America*, as far as the *Streights* of *Magellan*. They report then the opinions of learned men, who, in sailing on the *South Sea*, observed what I shall here produce, translated faithfully from their elegant *Latin* into our vulgar tongue, in these words:

The learned of our nation, who have sailed on the South Sea, do relate to us many things of that sky, and its stars, as well of their number, as beauty and bigness; and my opinion is, that the stars we see here, are no ways preferable to the meridional ones; but rather do affirm, without dispute, that those stars which are near the antartick pole are more in number, and brighter and bigger. John and
Theodore
de Brye.

He adds, besides, speaking of the stars of the constellation of the *Cruzero*, that their splendors and beauty is extraordinary,

OVALLE. and that the *Via Lactea*, or *Milky-Way*, is much brighter in these parts. This is all from those authors.

The fourteen constellations of the Hemisphere of Chile.

Peter Theodore, a most skilful pilot and astronomer, relates in particular the stars of that hemisphere, and the fourteen figures or constellations they make. The first is the *Cameleon*, which contains ten stars; the second is the *Indian Aspick*, made up of four stars; the third is the *Flying-Fish*, which is made up of seven; the fourth, called the *Fish Dorado*, is composed of five; the fifth is called the *Hydra*, and is of fifteen; the bird *Toncan*, which is the sixth, has eight stars; and the *Phoenix*, which is the seventh, has fourteen; the *Crane* has thirteen, which is the

eight; in *Noah's Dove*, which is the ninth, there appear eleven; the *Indian Sagittary*, which is the tenth, has twelve; the *Peacock*, which is the eleventh is composed of sixteen; the *Bird of Paradise*, otherwise called *Maauodiata*, has twelve; the thirteenth is the *Triangle*, and contains five; and the last is the *Cruzero*, in which are four, which make a cross, with a little one close by it, which makes the foot of the cross. And though this *Cruzero* is the guide of those who sail in the *South Sea*, as the *Cynosura* is to those who navigate the *North Sea*, yet it is not immediately at the pole, but thirty degrees from it; but there being no stars of that bigness near

it, it is made use of for that effect, but not for the needle; for that in either sea, whether south or north latitude, always turns to the north; though when one is in the *South Sea*, the whole globe of the earth, or the best part of it, is between them and the north, according to the circle that the *Cruzero* makes. The fix'd point of the pole seems to be between two, as it were, great clouds, though they are not such, but clusters of stars, not well distinguishable, such as compose the *Via Lactea*; and they are always fixed, without stirring; and when

the heavens are clear, they are brighter, and better seen. There are other stars nearer these clouds than the *Cruzero*; but not being so big, there is little notice taken of them, but only of the *Cruzero* stars, which are indeed very beautiful, and shine with great liveliness. I suppose that those who have not seen them in their own place and situation, would be glad to see a draught of them; which therefore I have placed in the foregoing page, representing them as they are seen there.

OVALLE.
1646.

C H A P. XXI.

Of the Animals, as well proper, as new Comers to the Kingdom of Chile; and also of the Bezoar-Stones.

TILL the *Spaniards* came to these *American* parts, there never had been seen in them either cows, horses, sheep, hogs, house-cats, nor rabbits tame or wild: nor dogs, except those called cur-dogs; but no hounds, greyhounds, nor other dogs for game, either by land or water; no mastiffs, nor little dogs, which we call lap-dogs; no goats, nor asses: but as soon as the *Spaniards* were settled in *Chile*, and found the land so proper for the breed of cattle and flocks, they have increas'd them to a degree of superfluity; so that there is not only enough for the support of human life, but also for those animals who are carnivorous; for, as we have seen above, in the slaughtering time, much flesh lies waste in the fields, so that 'tis necessary to burn it, and throw it into lakes and rivers, to hinder its corrupting the air. That which in other parts is call'd a calamity and desolation of the country, which is a murrain among cattle, in *Chile* is thought a necessary purge of the too great abundance of it. This may seem a paradox; but yet is founded upon experience, because the cattle increasing as it does, and the land being so good, that it fattens them to a wonderful degree, (there being often taken out of one cow a hundred and fifty pounds weight of tallow, each pound of sixteen ounces,) there is enough to do to get a vent for it. The same may be said of the hides; for though *Peru*, where the best part of the consumption is made, is so great, yet such is the product of *Chile*, that it wants another *Peru* to consume it; for this reason 'tis a gain to lose the increase of the cattle, for then the profit is more, with less trouble and cost of servants. In the beginning of the settlement in *Chile*, Don Antonio de Herrera says, That horses were commonly sold for a thousand pieces of eight a horse; and Gareilasso says, That at first a horse did

not use to be sold in *Peru* at all, except upon the death of the owner, or upon his returning to *Spain*; and in that case they were sold for four, five, or six thousand pieces of eight a horse. He says, he himself knew a soldier who had an excellent horse, and that a negro going one day by with him in his hand, a gentleman, who saw them, sent to offer the soldier ten thousand pieces of eight for the horse and negro, which he refused with contempt: but since that time horses have multiplied so, that there being not people enough to feed and tend them, they are fallen extremely. The cows too have increased so as to cover the fields; and 'tis a wonderful thing to see in those great plains of *Tucuman* and *Buenos Aires* vast herds of them feeding, without any other master than the first that will take them, if he can. I have seen in *Chile*, in the territory of *St. Jago*, horses already dress'd for war, sold for two crowns a-piece, to supply the army, and yet for shape, courage, and good qualities, they yield to no *Neapolitan* horse I ever saw; no, nor to the *Andaluzes*, from whom they are descended; for they have had no reason to degenerate in so good a land. The cows too, which were at first out of all price, I have seen sold for a crown a-piece, and the calves for half a crown: the sheep, such as I have seen bought in flocks for *Cuyo* and *Tucuman*, have been sold for three pence, or three half-pence a-piece.

Theodore and John de Brye, do mention some author, who says, That rats were likewise strangers to *Chile*, and were carried thither by an *Antwerp* ship that passed the *Streights* of *Magellan*: they must not mean the ordinary house-rats and mice, but those great ones which have a large tail, and are about a foot long: they are called *Pe-Pericotes*, *ricotes*, and are very mischievous. This a large sort of rats. This ship, without doubt, took port in some of

OVALLE. of those of *Chile*, where it left these animals, so prejudicial and hard to destroy; for they resist the cats, and 'tis a stout one that can kill them. But it is a wonderful thing to observe, that though in sea-towns the magazines, shops, and warehouses, are full of them, yet they never go further into the land, which they might easily do, by so much carriage as the commerce of those parts requires. I believe the air of the *Cordillera* does not agree with them, and so may have killed those which have been carried by chance with goods; for I do not remember I ever saw one in *St. Jago*, nor in any town far from the sea-side.

Sheep. Among the animals that are proper to *Chile*, the first may be reckoned those which are called the sheep of that country: they are of the shape of camels, not so big, nor vast, and without the bunch that camels have: they are white, black, brown, and some are ash-coloured. The authors above cited say, That anciently they served to plow the land in some parts, before there were oxen in it; nay, in the relation of *George Spilberg* and his fleet, 'tis said, the *Dutch* passing by the island of *Mocha*, saw the *Indians* use them in that work.

They are made use of at this time in some parts, for carriage of wine, wheat, maize, and other provisions; and I remember to have seen them about thirty years ago serve to carry water at *St. Jago* from the river to the houses, for the use of the family; but now they are not at all employed there in this kind of labour, there being such quantities of mules and asses for all that service. These sheep have their upper lip slit, with which they do, as it were, spit at those who vex them; and the children, who use to do it, when they see them ready to spit, run away; for they know, and 'tis a common truth, that wherever their spitting falls, it causes a scab; and having a very long neck, about three foot long, they use these defensive arms the better. Their wool is extremely valued; for of it are woven cloaks, or mantles, so fine, that they look like camlet: they govern them by a kind of bridle, which they put through holes in their ears, and so by pulling the reins, turn them which way they will: they kneel down to be loaded, and when the loading is well fitted and fastened, they rise and carry it very gravely.

Pegues, a small sort of wild rabbits. There are likewise natural to that country a sort of little rabbits, called by the *Indians* *Pegues*, which they eat with much pleasure: they are wild. The taking of them is very good sport: they carry water in great tubs to their holes; and though they are very deep, and have secret issues and correspondencies with each other under ground, to avoid being pursued by the

hunters or their dogs, yet the water overcomes them; and while they fly from it, the *Indians* watch for them at their other holes, and with their dogs take them as they come out to avoid the water.

There are another sort of little rabbits, Small tame rabbits, called Cuyes. which are like these, but they are tame, and the *Indians* call them *Cuyes*, which are also very good meat: they are of pretty colours, and spotted: they are very common every where.

The squirrels are not so; and I do not Squirrels; know they are to be found any where in *Chile*, but in the valley of *Guasco*: they are grey, or ash-colour, and their skins are mightily valued for furs, for their warmth and fineness of the touch.

The animals called *Guanacos*, *Chamois*, Wild goats, or *wild goats*, are very like these country sheep, as well in their shape as motions; but they are of a different colour; for they are red, of a clear colour: they never can be tam'd, but go in flocks, feeding in the fields; and 'tis as much as a very swift horse can do to overtake them running; and if they have the least start of them, they seem to play with them; for by an easy gallop, they make the horse strain; in which they are much help'd by their long legs, for by them they gain more ground at every reach: yet 'tis very easy to catch the young-ones, or those who are not us'd to be hunted; because being so tall, and their bones, because of their youth, not well knit, they are easily tir'd; so that by following a flock of them on horseback with dogs, (and they go three or four hundred in a flock,) the young-ones are forc'd to lag behind, and some are kill'd by the dogs, some are knock'd on the head with a stick by the hunter. I have seen them bring thus three or four dead at a time. And this is not only a pleasant, but a useful sport; for the flesh of these young-ones is like kid's flesh, and is eaten fresh; but that of the old-ones is not so, but dried and smoak'd: 'tis the best of that kind in the world.

These creatures breed, in a bag they have The bezoar stone. under the belly, the bezoar-stones, which are so valued against poison and malignant fevers, good to rejoice the heart; and other admirable effects. The matter out of which they are made, are herbs of great virtue, which these animals eat to cure themselves of any thing they ail, and preserve themselves from the poison of any venomous creature, as serpents, or poisonous plants, and other accidents.

These stones are found in the oldest *guanacos*; and the reason is, that their natural heat not being altogether so strong as the heat of the young-ones, they cannot convert into their substance all the humour of the herb they take to remedy their indisposition; and

and so nature has provided, that what remains may be deposited in that bag, and be made a stone to cure in men the same infirmities: according to this notion one may observe, that the stone is compos'd of several coats, some thicker, and some thinner, according to the quantity of matter that is gathered together at each time, just as a wax candle is made by several coats given at several times to form its bigness.

'Tis likewise a thing well experienced, that in those countries, where there are most vipers, and other poisonous animals, these stones are most plentiful; and the cause is manifest, because these animals, and the deer-kind, do beat so much ground for their livelihood, they are more expos'd to venomous creatures, which, when trod upon, wound them sorely, and they run naturally to their remedy in these herbs; and as they do this more frequently in those parts where they receive most damage, by consequence there are more of these stones engender'd.

From hence it happens, that in those parts of *Cuyo*, there is a greater quantity of these bezoar-stones to be had, than in that which we call properly *Chile*; for there are many vipers and poisonous creatures, of which *Chile* is very free, as we have said; and yet there are taken some stones here, but the greatest part come from *Cuyo*; to which likewise it is of some consideration, that there are bred more guanacos and stags than in *Chile*; for that country being not so populous, and having such vast plains, these animals have room enough for food and for increase; but it is not so towards the sea-side of *Chile*, for that being very populous, and full of cattle and flocks, there is no room for the wild ones, except upon the edges of the *Cordillera*, from whence they come down into the plains sometimes.

The bigness of these stones is in proportion to the animal that breeds them; the most certain rule is, that if they are little,

there are many in the bag, and fewer if large; and sometimes, when very large, there is but one. I carried with me to *Italy* one that weighed thirty two ounces; and yet that was not it which made it the most valuable, but its virtues and shape, for it was a perfect oval, as if it had been turn'd by a turner: the *Indian* who found it had seventy pieces of eight for it; because when a great stone is found, it is not sold by weight, but according to the estimation of the owner, and the bigger the dearer.

The virtue of these bezoar-stones is very well known and experienced; and people of quality take them, not only in the time of their sickness, but also in health, to preserve it: the way of using them is to put them whole into the vessel that holds either the wine or water, or into the glass out of which one drinks, and the longer they stay in, the more virtue they communicate. And if a person be not much indisposed, there is no need of using them any other way; but if any one should be attack'd by any distemper of consequence, and be sick at heart, or be affected with melancholy fits, it would have more virtue to grate a little of the stone to powder, and drink it: whatsoever way 'tis taken, it comforts the heart, purifies the blood; and the using of it is look'd upon as a preservative against all infirmities.

There are also bred in the *Pampas*, or the plains of *Cuyo*, many hares; and one sort, call'd *Chirichinchos*, whose flesh tastes like that of sucking pigs. But the greatest increasers are the *Guanacos*, and the deer. It has been said already, that in *Chile* there are but few, for the reasons alledged; but there are great quantity of wild cows and wild mares, which came at first from some which went astray, by the negligence of the owners; and being once in those mountains, they have increased so wonderfully, that they are become a game, and many go to kill them, or take them for profit.

C H A P. XXII.

Of the Trees growing in Chile.

AMongst other obligations which the land of *America* has to *Spain*, one is the having enrich'd it with so many noble plants, trees, and seeds, which it wanted; for before the *Spaniards* conquer'd it, there were not in all *America* either vines, fig-trees, olive-trees, apple-trees, melicotoons, peaches, auberges, quinces, pears, pomegranates, cherries, apricots, plumbs, oranges, lemons, citrons, nor almonds. As for seeds, there was neither wheat, barley, nor oats, aniseed, coriander-seed, cumin,

VOL. III.

nor oreganum, linseed, flax, pease, beans, nor cabbage, lettice, radishes, cardoons, chicory, or indive, *berenguenas*, gourrels, melons, cucumbers, parsley, garlick, or onion. But instead of these trees, fruits, and plants, the author of nature had provided them with others of great use and good relish, such as maize all over *America*: *Frisoles*, *Las Papas el Madi*, *Los Capallos*, and some others, are proper only to *Peru*, and the land within the tropicks; the *Camotes*, *Guayabas*, *Mammeyes*, *Plantanos*,

M

tanos,

UVALLE. *tanos, Zipitapotes, Anones, Nisperos, Aquacates, Pinnas, Guanabanas, Papayas, Pitabayas,* and many others, which, though highly commended, do not generally come up to the relish of the *European* fruits. And the bread and wine has been a singular addition to them, such as the *Indians* value more than all their product, and particularly the wine, which is their chief delight; as for bread they value it, but not so much.

Though *America* is oblig'd to *Europe* for all this addition, yet *Chile* much more, as having the greatest advantage by it, and with more plenty than any other part of that new world; for though all that we have nam'd of *European* plants are to be found somewhere, yet not all everywhere; for in some there grows corn, and not wine; in others both those, and not oil; in others neither corn, wine, nor oil, but other fruit-trees. The same thing may be said of the animals to eat; some have beef, others mutton, others pork, which on the continent is a delicacy, and is given to the sick; so that running over all *America*, we may find that this communication of new creatures has reach'd some parts for one thing, and some for another. But as for the kingdom of *Chile*, it may be said to have been totally oblig'd and enrich'd; for all the trees, seeds, plants, and all the animals, &c. of *Europe*, are to be found there, and that almost in every part of it, for 'tis rare to see any thing take in one place, and not in another; but if it does they may easily have it from their neighbours, if it be not so good, or not at all with them.

In the third chapter of this book, we have already mentioned how all these *European* fruits and seeds take in *Chile*, but we can never enough dilate upon that subject: It will hardly be believed by most people, particularly by those who never having been out of their own country, are so in love with it, as not to imagine there can be any equal to it, much less exceed it; and we relating things so distant, of which we cannot bring ocular witnesses, we are the more liable to contradiction; but since we are writing a history, we must speak the truth as we know it, and it really is.

Trees. Some trees do not exceed in bigness those of *Europe* of the same kind, as cherry-trees, quince-trees, almond, peach, and pomegranate-trees, olive, orange, lemon, and citron-trees, melicotoons, which last in *Tucuman* are nevertheless very large, and to that degree, that three or four men sometimes cannot embrace the body of one of those trees. I have seen some apple-trees as big as elm-trees; the pear-trees are yet bigger, and much more the mulberry-trees,

and walnut-trees, though as to their fruit, it is not so large as that of *Europe*, the nuts having the shell as thick again, and by consequence less meat. This is as to the garden-trees brought from *Europe*.

As for the trees natural to that country, they are of two sorts, the one is fruit-trees, the other not: of the first, I find only three kinds of species of those, which are likewise in *Europe*, which are the *avellanos*, or hazel-nut, the pine-tree, and the *algarabos*, or cod-tree. Of those which are not properly fruit-trees, there are the *laurel*, the oak, the willow, the cypress, which are in great abundance, and very large; out of these they have boards very fit for boxes and trunks, which are no ways pieced, but of one plank; the doors and coverings of the churches are also of this cypress-wood.

These trees grow most commonly in the *Cypress-precipices* of the *Cordillera*, which being very deep, the cypresses are extremely large and tall, for they shoot up till their tops can be warm'd by the sun-beams; so that they are as straight as a wax-candle, and of so fine a smell and perfume, that though it be so plentiful, it bears a good price, and a greater in *Peru*, to which 'tis carried, as well as the cedar, which does not sell so well, because there are more of them.

These cedar-trees are without comparison bigger, and have larger heads than the cypress-trees, and of one of them are made several planks; but more of this when we come to speak of the islands of *Chiloe*; for there they are larger than in any other part. The colour of the wood is red when it is first work'd, but in time, and by degrees, it loses that lively colour, and comes to be of a kind of walnut-tree colour; the planks are of the fashion of cedar planks, not so subject to the worm, but more easy to work.

The oak also yields very large planks, *The Oak*. for they thrive exceedingly, and grow very thick; some of them are white, and the wood of them is corruptible; others are red, and incorruptible.

The planks from the *paragua-tree* are the most in use, but less valuable. The *paragua-tree* is a handsome branching tree, keeping its leaves green all the year: they are like elms.

The most common wood of all, and that of which there is most plenty, which serves for the covering of houses and roofs, is the cinnamon-wood. These are very large trees, of a beautiful aspect; they keep their leaves all the year, and are like that which in *Italy* they call the laurel royal. The *guayac-tree* is bred in the mountain or *Cordillera*, and from thence has its hardness and heaviness, which is such, that it is like iron; and

and the balls made of it to play at billiards, are almost as hard as the ivory ones; the tree is no large tree, and the heart of the wood is a yellow mix'd with green; the decoction of it is good for many infirmities.

sandal-tree.

The sandal-tree is very odoriferous; there are great quantities of them in the islands which are nam'd from *Juan Fernandes*; 'tis a preservative against the plague, and is us'd by the confessors, and others, who are bound to approach infected people. There are other trees and shrubs of admirable virtue for several infirmities, of which the *Indians* have a particular knowledge, and perform admirable cures with them.

Palm-tree. The fruit-trees bred in the mountains are many, and of great variety: let us first treat of that which indeed carries the palm, not only because of its name, but that its height, beauty, and abundance, and that of its most excellent fruit, challenges the first place among all the rest.

They grow generally upon the mountains, and in precipices, so thick together, that seeing them at a distance, one would think they were a clump set by hand; they are very thick and high, all the body of the tree is naked till the top or first sprout; its nature is to lose all its old branches as the new ones come out, by which means the body of the tree rising free, and disencumber'd from such boughs as use in other trees to grow out of the sides of them, is totally employed in feeding the top, and the fruit which grows within it being, as it were, a pyramid round it, to preserve it by the admirable texture of its leaves and branches which encompass it.

These palm-trees have a wonderful property, and most certain, which is, that none of them give their fruit, except they are in sight of each other; and if it happens that one comes up alone, without a companion, though it thrive to a great largeness, yet it never bears, except another be planted by it, and this they call the female; and as soon as the female is planted, though never so little a one, yet the great ones bear, and the second in its time, when it is big enough: I have seen the experience of this; and 'tis a thing well known to all. The fruit of these trees is called *Cocos*, and is like filberds, though bigger by half, and the meat within the shell is not solid, but hollow, and is, round the edge, about the thickness of a crown-piece, and in the rest of the hollow is a kind of milk, or water, of an excellent relish; and so is the flesh of it, which is white, and serves to preserve the liquor like a viol, which stays in it till it be imbibed by the *Coco*, which happens in some months; and then they are not so good to eat as when they are fresh; but then they are good to preserve, as al-

monds are, and other kernels of that nature. OVALLE.
1646.

Antonio de Herrera, and other authors, say, that these *Cocos* are good against poison; and nature seems to set a value upon it, by the many covers in which it is involved; first, the kernel is cover'd with a shell harder than that of the almond, then it has another cover of a green colour, and sometimes yellow, which is woven so close about it, and so strongly, that when it is green, 'tis easier to break it than to peel it off. The fruit grows close to a stalk, which sometimes will have above a thousand on it; and this is environ'd by a great shell, which grows bigger and bigger with that bunch it contains, till at last the fruit makes it burst and open into two parts, which are like two boats, each of above half a yard long, and two spans diameter in the broadest place, and the bunch within all of a fine yellow, very beautiful to look on. It hangs on the branches till it be ripe, and then falls to the ground, where it is gather'd, and great provision is made of it for *Peru*; for besides their being made a sweetmeat, the children rid the merchants of them for play-things, it being one of their greatest entertainments.

The palm-trees which bear dates, do not seem to be natural to this country, but brought from abroad; for I never saw them, as others, wild in the fields, but only in gardens.

There are other fruit-trees wild, which come in the fields, and are call'd *Pengue*; they *The Pengue.* have a red fruit, something bigger and more oval than the filberds; these the *Indians* eat boil'd with other ingredients. There are also trees call'd *Magues*, which are very *The Mague.* beautiful and cooling; the leaves are admirable against a burn; the fruit is black like a myrtle-berry; 'tis very well relish'd, having a *dulcepiquante* very agreeable; it blackens the mouth and hands when it is eaten, and for that reason the more civiliz'd people do not use it so much. There are also fruits of which the *Indians* make their fermented liquors, whose names and properties I cannot call to mind; only I know there is great variety of them; and I can remember one call'd *Quehu*: the fruit is very sweet and small, between red and yellow; of this they make a drink extraordinary sweet. They make another drink of that which they call *Iuigan*, and the *Spaniards* *Molle*; it is of the shape and colour like pepper; the tree on which they grow is but little, but a great bearer: this drink is very agreeable, and coveted even by the greatest ladies. The most common drink of the *Indians* is made of maiz, which is the ordinary bread and sustenance of the *Indians*.

OVALLE.

1646.

The Mur-
tilla.Ant. de
Herrera.

Let us end with the tree called *murtilla*; though, if we believe the authors who treat of it, it deserves to be ranked in the first place. Antonio de Herrera speaks so well of this tree in the ninth *Decade* of his history of the *Indies*, Book IX. and Folio 247. that I will relate only what he says, and that in his own words, which are as follow: [*There is a kind of fruit of trees that grow on the mountains, which grow from thirty seven degrees upwards, and in those countries 'tis a common food; the natives call it Uni, and the Castilians Murtilla. It is red, and like a small grape, something bigger than a swollen pea; its shape and colour is like the pomegranate grains, its smell and taste agreeable, and not unlike a grape. It has little grains, like a fig, which are almost imperceptible to the tongue; its temperature is hot and dry: of this they make a wine, which exceeds all other liquors, even that of the east-india coco, or palm-tree: neither cyder, mead, nor beer, nor all the other drinks described by Andres de Laquuna, are to be preferred to it. This wine is clear, fine, warm, and very agreeable to the taste, as well as profitable to the stomach. It consumes all vapours in the head, its heat warming the ears without going any further: it comforts and cherishes the stomach, increases appetite, and never takes it away. It never offends the head, or makes it heavy, or burthens the stomach; and it bears as much water again as wine will do. Those who have tasted it, commend its colour and flavour, as much as that of grapes. Its colour is golden, and mighty bright; and it is as sweet and good as the wine of Ciudad Real. There is little of it made, and so it lasts but eight months; for which reason 'tis not known how many years it would keep. It takes up as much labour and care as wine, in the making: if it be left to itself, and without fire, 'tis forty days be-*

*fore it ferments. It casts down a lee, and works out the frothy part at the top of the vessel; and for that reason care is taken to scum it as it boils, and then 'tis drawn off into another vessel. When 'tis turned to vinegar, its vinegar has a better taste and colour than wine vinegar; for it retains the colour of the fruit, which is very odoriferous and sweet.] Thus far this author: from whence it may be inferred, that this land had good wine of its own; and it had also very good oil made of a seed called *Madi*; it is extremely well relished; but now 'tis not much in use, because that of olives is so common.*

It is not possible to describe particularly, one by one, all the various sorts of trees that are bred in the woods and mountains of *Chile*; and it would take up a very large treatise, which is not my purpose; yet when we come to treat of the *Streights of Magellan*, we will speak of the cinnamon-tree, which is to be found there, and of the barks of some other trees of that soil, which have the same taste as the *east-india* pepper. All that I can say at present, is, that there are few of these trees that lose their leaves in winter, particularly those which grow wild in the woods, which are generally aromatick, and of a very fragrant smell; and of them, all the finest of this kind are bred in the territory of the *Conception*. I would not have believed it, if I had not seen it; for in travelling I met with lovely groves, which bordered the highways, and cast out so rich a smell from their leaves, that the flowers of *jasmin* did not appear sweeter. There are also abundance of *myrtles* and *laurels*, which grow in great groves naturally; and yet among them there are trees whose leaves exceed them infinitely in the perfume of their smell; infomuch that passing one's hand over them, one would think one had amber gloves on.

BOOK II.

Treating of the second and third Part of the Kingdom of CHILE.

CHAP. I.

Of the Islands of the Kingdom of Chile:

HAVING, for the better description of the kingdom of *Chile*, divided it into three parts, we have treated of the first and principal one, which is that which is properly called *Chile*, in which many things are said which are common to all the three parts; therefore in these two which remain, we shall take notice of that only which shall be peculiar to them, to avoid repetition.

Islands.

We come now to the second part, which are the islands which are spread all along the coast of the *South Sea*, as far as the *Streights of Magellan*; I say, they are many in number, and some of them very large ones; as that of *Sancta Maria*, *La Mocha*, *Juan Fernandes*, and, above all, that of *Chiloe*, in which is founded the city of *Castro*. Some make these islands fifty, some seventy leagues in length, and about six or seven leagues in breadth. In the same sea, or archipelago, there are many more, some of ten leagues, and others less; and in all, reckoning those that are within the *Streights of Magellan*, there are above two hundred discovered.

Del Soboral, De Muxillonnes, De los Paxaros, and many others.

Just over-against *Coquimbo* there are three, which are called *Del Soboral*, *De Muxillonnes*, and *De los Paxaros*, in thirty degrees latitude; two more in thirty three and forty degrees: there eight small ones just over-against *Val Paraiso*, which are called the islands of *Juan Fernandes*; who dying, left them to the *Jesuites*. Then follows the island *Quiriquina*, which is in the bay of the *Conception*. Just over-against *Arauco* is the island of *Sancta Maria*, in the thirty seventh degree; and in thirty eighth that of *La Mocha*. Hard by *Valdivia*, about forty three degrees, comes the archipelago of *Chiloe*, which is composed of forty islands; and hard by it is the province of *Calbuco*, in which there are twelve more. Those of *Los Cbonos* are as many, in forty five degrees; and in fifty degrees are the eighty

islands discovered by *Pedro Sarmiento*, as shall be related hereafter. OVALLE. 1646.

The islands of *Chiloe* are reputed barren; but their soil is not really so, only the excessive rains choak the seed, and do not let the corn thrive; so that they are without wheat, wine, or oil, or any other plants which need much sun. The nature of the climate of this archipelago is such, that it rains almost all the year, so that only maiz, or other such grains can ripen, that do not want so much sun. The nourishment or diet of the natives, is mostly of a root called *Papas*, well known over all the *West Indies*, of a good nourishment; and they grow there bigger than in any other place. They have besides some maiz, some fish, and particularly shell-fish, which is excellent in those seas. They have few sheep, but very good poultry, as well as hogs, and some beef; with which, and what besides is brought to them from *St. Jago*, and the *Conception*, the *Spaniards*, both of the garrison and city of *Castro*, make a good shift. This city is the capital of the chief island; in which, and in the rest, there is great quantity of honey and wax made. And *Herrera* and other historians say, there are mines of gold upon the shore; and they remark it as an extraordinary thing, and hardly heard of in any other place.

Isles of Chiloe.

The manufactures of these islands are the cloathing for the *Indians*, who have a kind of vest which they call *Macun*, and it is without sleeves, because their arms are naked; and over this they put a garment called *Cboni*, which serves for a cloak, and is like that which painters give to the apostles in their pictures. They have another commodity from their woods, particularly of the plank they make of a tree, which is a cedar, and of which they have vast woods, and in them trees of a prodigious size; for frier *Gregory of Leon*, of the order of *St. Francis*, in his map of *Chile*, which he dedicates to the president *Don Lewis Fernandes*

Manufacture of the islands.

OVALLE. *de Cordoua, Senior del Carpio*, says, that
 1646. some of these trees are so big that they
 cannot be hardly encompassed by a rope of
 six yards long; and out of the wood of the
 boughs there has been made six hundred
 planks, of twenty five foot long, and two
 foot broad; and that which is considerable,
 is, that this plank is not sawed, but cut
 with axes; in which there is much more
 loss. This author deserves belief, as well
 from the experience of forty two years that
 he lived in *Chile*, as from having been de-
 finitor of his order. And what I have heard
 from the mouth of a colonel, who was both
 born and bred in that country, will serve
 to confirm this; which is, That if two
 men on horseback are on each side of the
 tree, when it lies along, they cannot see one
 another; for the body of the trunk hin-
 ders them. These planks are carried to
Chile and *Peru*; and in exchange they bring
 back provisions to live on. The islands of
Chono are yet poorer than these; because,
 that being nearer the pole, their summer is
 shorter, and their rains more copious, in-
 so-much that they drown the earth, and hin-
 der it from producing.

Isles of
Chono.

We have little knowledge of any other
 islands besides these of *Chiloe*; because the
 continent being so large, and yet not
 thoroughly peopled, there has been little oc-
 casion of inhabiting any more than some
 few of the islands; by which means there
 is but small discovery made of their quali-
 ties; though 'tis reasonable to think they re-
 semble the land over-against which they lie.

Isles of Juan
Fernandes.

As for the islands of *Juan Fernandes*, I
 will relate what I find writ about them in
Theodore and *John de Brye*, in their relation
 of the voyage of *John Scutten*: they say
 then, that these two islands are very high
 land; the least of the two, which is the
 westermost, appeared to them barren, as
 being covered with wood, and very moun-
 tainous; though not landing on it, they
 could make no judgment of the inside of
 the island. The bigger island, which is the
 eastermost, is likewise mountainous, but
 has great variety of trees, and much grass,
 with which are fed great herds of swine and
 goats, bred from some few which were put
 on shore by *John Fernandes*, who began to
 cultivate these islands as his own; but he
 dying, and the *Spaniards* finding greater
 advantages upon the continent, they for-
 sook those islands, which were out of all
 trade, leaving their stocks of cattle behind
 them, which now are infinitely multiplied.

Fine Island.

They say besides, that coming to this,
 which they call the *Fine Island*, they found a
 port very safe for their ships, having twenty
 or thirty fathom depth, the shore all sandy
 and even, with a delicate valley full of trees
 of all sorts, and wild boars, and other ani-

mals feeding in it; but they could not dis-
 tinguish them, by reason of the distance
 they were at. They extol particularly a
 most beautiful fountain, which coming
 down from high rocks, rows into the sea
 by different canals, which form a pleasant
 prospect, and its water is very sweet and
 agreeable. They saw also great store of
 seals, and other fish, which they caught in
 great plenty. In short, they were so in
 love with this island, for the good qualities
 they discovered even at its entrance, that
 they were very unwilling to leave it, though
 pressed in point of time.

I do not doubt, but this is a very plea-
 sant situation; for in its temperature, and
 other properties, it must be very like *Val
 Paraiso* and *St. Jago*, because 'tis almost in
 the same degree west; and without doubt
 these islands will be peopled in time, when
 the continent grows populous, as it does
 every day; for then people will be seeking
 new habitations; but at present they only
 go thither sometimes to fish, to send it to
Peru, where they have it not so plentifully.

The same authors, giving an account of
 the other *Dutch* Squadron under *George Spil-
 berg*, say, That they came to the island of
Mocha, and found the north side of it plain
 and low, but the south full of rocks: they
 landed; and the good reception they found
 from the *Indians*, is an argument of the fer-
 tility of the place. Those *Indians* are a
 noble sort of people, and very good na-
 tured. When they had refreshed themselves
 much at their ease, they made provision of
 great store of sheep, who are very large,
 and in great plenty there, as likewise of
 hens, eggs, fruit, and other provisions.
 They treated the *Indians* on board, and
 shewed them their great guns, and their
 men in order for fighting: they presented
 them also with *European* commodities, such
 as hats, cloaths, axes, and things which
 they valued. After this, they set them
 again on shore; and the *Indians* made signs
 to them to go back to their ships, as they did.

But they were very differently received in
 the island of *Sancta Maria*, where the vice-
 admiral landed with some of his men, and
 were invited by the *Indians* to eat; but from
 the ships they saw a great army coming
 down upon them, as they were going to sit
 down to table: whereupon they made signs
 to them to retreat to the port; which they
 did, and had just time to embark. But they
 likewise carried off about five hundred sheep,
 and other refreshments, having found the
 island very fertile and well provided, as well
 as very temperate, being about thirteen lea-
 gues south-west from the city of the *Concep-
 tion*, about thirty seven degrees, and not above
 three leagues from *Arauco*; which makes
 some think, that formerly this island was
 fastened

fastened to the main land, and that the sea had in length of time made the division which now forms the bay of *Arauco*.

There is little to be said that is particular of all the other islands to the *Streights of Magellan*, since it has not pleased God to let them be peopled by *Spaniards*, and so give an entrance to the gospel; by which means the product and nature of them might be known, and many souls saved which inhabit them.

All that we know now of them, is, That in the voyage of *Pedro de Sarmiento* to *Spain*, being sent by the viceroy to chastise

Francis Drake, for his boldness for infesting those coasts; in his way, on this side the *Streights of Magellan*, he discovered a great archipelago of islands, which they told to the number of eighty, which he named by several names, and took possession of them in the name of his king. He also discovered more islands in fifty one degrees, to which he did the same. 'Tis known likewise, that in the *Streights* themselves there are many islands, some of which we shall mention when we treat of the *Streights of Magellan*.

OVALLE:
1646.

C H A P. II:

Of the Land called *Tierra del Fuego*.

THE land called *Tierra del Fuego*, (so famous in the relations and maps we have of the *Streights of Magellan*;) has deceived many by its name, people believing that it had been given it for some *Volcanos*, or burning mountains, or other subterraneous fires; but it is not so, for this name had no other occasion, than that the first navigators through the *Streights* discovered upon it many fires and great smoaks, made, as they supposed, by the numerous inhabitants of it; and so they called it the *Land of Fire*. There arose likewise another mistake from its great extent; for it was judged to be a great continent, of which in time the world was undeceived, as we shall see hereafter.

Situation of
Tierra del Fuego.

This land, called *Tierra del Fuego*, is that which forms the south side of the *Streights of Magellan*, extending itself the whole length of the *Streights*, east and west, above one hundred and thirty leagues. Formerly, before the *Streights of St. Vincent*, otherwise call'd the *Streights of Le Maire*, were discover'd, this land was thought to be joined to some other great continent of the *Terra Australis*, which was supposed to join to *New Guinea*, or the islands of *Solomon*; and *Ortelius*, in his *Geography*, is of this opinion; but upon the discovery of the other *Streights of St. Vincent*, that doubt has been clear'd, several having gone through them to the *South Sea*; and among the rest, two caravels, set out by the king's command, in the year 1618. on purpose to view these *Streights*, which it was said had been discover'd by *James Le Maire*, which caravels were commanded by *Don Juan de More*.

1618.

These two vessels set out from *Lisbon* in the month of *October*, 1618. and being come to the east entrance of the *Streights of Magellan*, they pass'd by it, and run along all that coast, without finding any entrance, till they came to that of *Le Maire*, which they went through in less than one day's

time; after which they turn'd to the south, and afterwards to the west: they went round all the *Tierra del Fuego*, and sailing north, came to the west entrance of the *Streights of Magellan*, into which they enter'd, and sail'd through them to the *North Sea*. Having thus made a circle clear round the *Tierra del Fuego*, they proved it demonstratively to be an island separate from all other land. The same was done by Sir *Richard Hawkins*, an *English* gentleman, who having pass'd the *Streight of Le Maire*, sail'd for five and forty days to the south, without finding any land contiguous to the *Tierra del Fuego*, but many islands, as is related by *Antonio de Herrera*, Chap. 27. of the description of the *West-Indies*. The same has been confirm'd by several, who being driven by storms from their intended course, have been forc'd to run towards the south pole; amongst the rest by *Francis Drake*, who having pass'd the *Streights of Magellan*, the sixth of *September*, 1572. and being got on the seventh, a degree from the *Streights*, was carried by a storm two hundred leagues to the south; and coming to an anchor in some of those islands, he there found that the sun being eight degrees from the tropick of *Capricorn*, the days were so long, that there was not above two hours night; from whence he inferr'd, that when the sun came to the tropick, there must be a perpetual day of twenty four hours. The same was experimented about two year ago by the fleet of general *Henry Brum*; which having pass'd the *Streights* in *April*, were by the force of ill weather carried into seventy two degrees, and cast anchor at the island of *St. Bernard*, to which they gave the name of *Barnevelt*; and it being about the entrance of winter, the days were not above three hours long, so that they expected they would still shorten till *June*, when the sun being furthest off from that hemisphere, would leave them in a total night; for this reason,

1646. OVALLE. reason, and because of the hardness of the weather; which increas'd every day, they durst not winter in that island, as they had a mind, but after a fortnight's stay in it, weigh'd anchor, and sail'd for *Cbile*. In which voyage they made but little advance, having always the wind a-head, insomuch that they were a whole month doubling one cape, and lost in the endeavour their *Tender*, in which was the best part of their provision.

So much for the islands belonging to the coast of *Cbile*; but having also mention'd the islands of *Solomon* and *New Guinea*, to which antiently it was thought that the land of *Tierra del Fuego* was join'd, it will be well to say something of them.

The author who writes the best of them, is *Antonio de Herrera*, and from him is taken what *John* and *Theodore de Brye* say of them; which is thus:

Islands of New Guinea. The islands of *New Guinea* run from something more than one degree south of the pole *antartick*, three hundred leagues east to the fifth or sixth degree; according to which reckoning, they fall about the west of *Paita*. The islands of *Solomon* fall to the west of *Peru*, about eight hundred leagues from its coast, and extend themselves between the seventh and twelfth degree: they are distant from *Lima* about fifteen hundred leagues: they are many, of a good size: there are eighteen principal ones, which are some three hundred, some two hundred, some one hundred, some fifty leagues, and less in compass. Between them and *Peru*, inclining to the land of *Cbile*, there is another call'd the island of *St. Paul*, about the latitude of fifteen degrees, and about seven hundred leagues from the *terra firma*.

The fleet of *William Scowten* having run

along the coast of *Cbile* in the year 1615. 1615. or 1616. from the *Streights of Magellan*, took their course to the west, when they were about the latitude of eighteen degrees, to try to find out some new island, and found one in fifteen degrees; which, according to their computation, was distant from the coasts of *Peru* about nine hundred leagues. After this they discover'd two more, which they call'd the *Cocoa* islands, by reason of ^{The Cocoa} the great plenty of that fruit that was ^{islands.} there, that the inhabitants did use to drink the sweet liquor that was bred within the *Cocoas*, but when it was at an end, they made a shift with salt water; to which, being accustom'd from their youth, it did not hurt them. They say more, that the inhabitants go naked, though not quite; and that their way of being civil and saluting, is to give themselves blows upon their temples, which is the same as with us the pulling off the hat or cap. At first they laugh'd at the fire-arms, till they saw one fall much wounded, which undeceiv'd them, and convinced them that it was not only noise which proceeded from those arms. These islands are distant from *Peru*, 1510 *German* leagues, which are longer than the *Spanish* leagues, though not so long as the *Indian* ones. There were found also other islands in the latitude of twenty nine degrees, which perhaps were those which at first they call'd the islands of *Solomon*. Others say, that there are others more to the west, opposite to *Cbile*. Whosoever is curious enough to know the particulars of all those islands, their temperature, inhabitants, their good and ill qualities, may find them in the above-cited authors, who treat of them more at large; for my intention, 'tis enough to say what I have reported.

CHAP. III.

Of the two Streights of Magellan and St. Vincent.

THE *Streight of Magellan* receiv'd its name from that man, who eternized his own, by being the first who discover'd and pass'd it. This was that famous *Portuguese* captain, *Hernando de Magellanes*, whose intrepid soul going almost beyond the true limits of all ordinary valour, seems to have border'd upon temerity and rashness, by engaging himself to discover a passage altogether unknown, and so narrow, that it was very dangerous for ships, being besides in the fifty fourth degree, which makes it very cold. This bold captain began to enter the *Streight* by the *North Sea* the twenty seventh of *November*, in the year 1520. and in twenty days, which was a happy passage, he enter'd the *South Sea*;

from thence he sail'd to the *Philippine* islands, where he was kill'd in one of those islands called *Matan*, to which he went from another called *Zebu*, to fight against the king of the first, because he refused to subject himself to one of those kings who had turn'd christian; engaging him with more courage than conduct, and so he perish'd by the great number of his adversaries. His death was very much lamented, and he much miss'd in the discoveries of that new world; for, without doubt, if he had lived longer, he would have made great discoveries in the *terra firma* and islands.

To give a more certain account of this *Streight of Magellan*, I will make use of the memoirs of those who have pass'd it, and left

left relations of it, who, as eye-witnesses, were less subject to mistake. And first I will give those sworn relations given in ~~Sabilla~~ by those who set sail from the *Corrunna*, by the emperor *Charles* the fifth's order, in six ships under the command of *Fray Garcia Jofre de Loaysa*, a knight of *Malta*, and born at *Ciudad Real*.

They say in their report, That the said *Streight* is a hundred leagues in length, from the cape of the *Eleven Thousand Virgins*, which is at the entrance of the *North Sea*, to the Cape of *Desire*, which is at the entrance of the *South Sea*; and they say more, that they found in the *Streight* three great bays, of about seven leagues wide from land to land, but the entrances of them are not much more than half a league over; the first is about a league deep; the second about two leagues; the third, they say, is encompass'd with mountains of such a height, that they seem to be in competition with the stars, and the sun does not enter within them in the whole year; which was the cause of their enduring there an extream cold; for it snows almost continually, and the snow never melting by the sun-beams, it looked with a kind of blueish colour. They say, moreover, that the nights were twenty hours long; they met with good water, and trees of several sorts, among which many cinnamon-trees; and that the leaves and boughs of the trees, though they appear'd green, yet burnt in the fire as if they were dry; that they found many good fishing-places, and saw many whales, (some mermaids,) many of the tunny-fish, sharks, cods, great store of pilchards and anchovies, very great oysters, and other shell-fish. That there were also very good harbours, with fifteen fathom water; and in the *Streights* itself above five hundred fathom, and no where any sands or shoals. They observ'd several pleasant rivers and streams, and saw that the tides of both seas came each of them above fifty leagues up the *Streight*, and meet about the middle of it with a prodigious noise and formidable shock. Though a *Portuguese* captain, who had pass'd this *Streight*, told me, That these tides were only some high floods, which last a month, or thereabouts, as the winds blow; which makes the sea sometimes rise to a great height, and at other times fall as much, leaving the shoar dry for a great way; and the ebbing is sometimes so fast, that ships are left dry, as this captain's ship was, so that he was forc'd to dig his way out to get into deeper water. They found several other entrances in this *Streight*; but for want of provision they could not stay to search them: they lost one ship off the *Virgins Cape*; and they had scarce enter'd the *Streights*,

VOL. III.

when a storm blew them back to the river OVALLE. of *St. Ildefonso*, and to the port of *Sancta Croce*, where they found serpents of various colours, and stones that were good for stanching of blood; all this may be seen in *Antonio de Herrera*, in the second tome, *Decade* 3. and the ninth book, *Fol.* 335. and it does not disagree with the other relation of *Magellan's* voyage, though this makes the straightest part yet less, allowing it not above a musquet-shot over, and from one entrance to another it reckons a hundred leagues, the land on both sides being very rich and beautiful.

This is, in short, the relation given in to the king. There are some other authors, who neither make the *Streight* so long, nor do they make the narrowest part so straight; for some allow but fourscore and ten leagues, or less, to its length; but yet 'tis probable, that the first give the most credible account, because they examin'd it with such care and punctuality, in order to inform his majesty. All agree in one thing, which is, in the good qualities of the sea, land, and islands of the *Streight*, as well as of the shoar on both sides, and of the good parts that are in it, and of some particularly so secure, that the ships rid in them without being fastened, being as safe as if they had been in a box.

Among the rest the *Hollanders* celebrate much the twenty fifth port, call'd the *Famous*; and it is so much so, that *George Spilberg*, their general, gave it that name, for the excellent reception they found there: they saw the whole earth about cover'd with various fruits of various colours, and of excellent taste. To delight them the more, there was a fine brook of excellent water that fell from a high rock, and water'd all the valley entering into the port; and besides these five and twenty ports or harbours, there were many others in the remaining part of the *Streight*, which might be a third of it, all which were very remarkable.

There is a harbour call'd *De la Pimienta*, Harbour or the *Pepper Harbour*, for the sake of some trees they found in it, whose barks had a most aromatick smell, and a taste of pepper, something more burning and quick than that of the *East-Indies*. When the *Nodales* pass'd this way, they gather'd a great deal of this bark; and authors say, that when they brought it to *Seville*, it was so valued there, that it was sold for sixteen ryals, or two crowns a pound.

The same authors report, that they found cinnamon-trees, which bore good cinnamon; and in the second narrow passage some others, that bear a sort of black fruit, of most excellent taste and favour. In other places they saw most beautiful woods

O

and

1646. **OVALLE**. and groves, pleasant plains, agreeable valleys, and intervals of great beauty, with high mountains; some cover'd with snow, from whence there descended lovely streams, others all cloathed with greens of various sorts; and in them they descried many animals going to and fro, such as deer, ostriches, and others, as also great variety of most beautiful birds of all colours; and among the rest they kill'd one so large, that measuring one of its wings, they found it above a yard long; and they were so tame that they flew to the ships, and suffer'd themselves to be handled: they found also another sort of large birds, which they call'd sea-geese, every one of which, after they had been plum'd and pull'd, weigh'd eight pounds of *Castile*; and they were so numerous, that the ground was cover'd with them, so that they kill'd what quantities they pleas'd. They saw another sort of bird, much of the shape of a pidgeon, all white, only with red bills, and red feet; all which were a great entertainment to them as they sail'd along. They commend also the harbour, which they call *Most Beautiful*, where the city of *St. Philip* was founded; there they saw the traces of several animals, which us'd to come to drink in those chrystal fountains. After the third streight place, there is to be seen a most excellent harbour, call'd the *Shell-Harbour*, by reason of the vast quantities of oysters and other shell-fish that they found there, which sufficed to feed the whole fleet several days, carrying away with them a good provision likewise for their voyage, all owning that they were better than those of *Europe*.

Iles of St. Lawrence and St. Stephen. Pinguin Islands.

Holy King's Island.

Iles of Sevaldo.

There are found in the great canal of the streight several islands, which are as estimable as the *terra firma*; they are generally in the widest part, where the sea is seven or eight leagues over; the chief are those of *St. Lawrence* and *St. Stephen*, otherwise called the island of *Barnevelt*. Before they came to these, they found other islands, which they call'd the *Pinguin Islands*, for the great quantity of that sort of birds that are bred there. There is another, call'd the *Holy King's Island*, which is in a river, which enters into the streights, and they saw in it many seals. Others of these islands are nam'd *Sevaldo*, from the name of him that discover'd them, near which there were store of the pinguin birds, and abundance of whales. After having pass'd the second streight, there are still more

islands, the first is call'd of the *Angels*, and *Iles of* is full of the birds we have mention'd. The *Angels*. second is nam'd the island of the *Patagoons*, *Ile of Pa-* or gyants, because they saw there some *agoons,* and several others. Near the shell-port there are other eight islands; and a little before the entrance into the south-sea, there are several other islands, which must be very little, for the streights are there very narrow. Some may desire to know, whether, besides this entrance of the streight of *Magellan*, there are any other, by which ships may sail from the north-sea to the south. Touching which, the relation of *George Spilberg* says, that there is one by the cape, which they call'd *Prouvaert*. Some *English* likewise, who have sail'd that way, are of the same opinion; for which they cite father *Acosta*, of our society, in his *Oriental History*, translated by *John-Hugh Lincolt*, Chap. 10. in the end; as may be seen in the already-cited *John* and *Theodore de Brye*, who add, that many other authors do agree in this opinion; and that those of *Spilberg's* fleet, before they came to the streight, saw this opening on the north-side, but they did not dare to go into it, because they had express orders to pass the streight of *Magellan*; and besides, that which added to this resolution, was the observation they made of the great force with which the waves met each other at this opening, in so much that the sea seem'd to boil.

This is all that I have met with in authors about this opinion, which even *John* and *Theodore de Brye* look upon as false; because neither the *Spaniards* nor *Dutch* ever saw this second canal; but rather that the whole land of *Fuego* is one great continued island, which they prove by the relation of the navigation made by the *Nodales*, who were sent to search for the *Streight of St. Vincent*, and who went round the *Tierra del Fuego*, without finding any such opening, or any other than that of *Magellan* and *St. Vincent*; and yet I am of another opinion, and hold the first for certain; and this does not contradict the opinion of *Spilberg*, who does not say, that the opening he saw was on the south, but on the north side, towards the land of *Chile*; and so, though the land of *Fuego* be an island, it does not follow that there may not be an entrance on the north side. But let us leave that to time to make out, and say something of the *Streight of St. Vincent*, which is the second passage from the *North* to the *South Sea*.

C H A P. IV.

~~The same~~ Matter is continued, and the Usefulness of the Commerce between Chile and the Philippine Islands is made out.

1619. **I**N the year 1619. the king sent, in the month of *October*, the two caravels which I mentioned above, to search the *Streight of St. Vincent*, because about that time it was reported in *Spain*, that *James Le Maire* had discovered it. These two ships failed to the bay of *St. Gregory*, which is near the east entrance of the *Streight of Magellan*; from whence they sailed along all that coast, where they saw and conversed with a sort of giants, who were at least the head higher than any of the *Europeans*; and they exchanged for scizars and other baubles gold, which it seems is the product of that country: after which they sailed south-west round the *Tierra del Fuego*, till they came to the mouth of this new *Streight*, which they called the *Streight of St. Vincent*; and before they entered it, they sailed along the shore of this new discovered land, keeping it always on the right hand, their course east-north-east, as it tends.

They failed about thirty leagues; and not having discovered all that way, nor as far as they could see, any opening or inlet, they returned to the opening of the *Streight of St. Vincent*; and entering into it, went through it in less than one day, it not being above seven leagues in length; and being entered afterwards into the *South Sea*, they followed the same land to the east, and south-west thirty leagues more; and seeing it was one continued coast, closed up with mountains of great height, they durst not go any further, beginning to want provisions; and so thinking that this land might reach as far as the *Cape of Good-Hope*, they left it, and failed to the west entrance of the *Streight of Magellan*; which they entered, and went through to the *North Sea*, returning that way to *Spain*, to give an account of what they had discovered, having made a very fortunate voyage, and not lost one man, nor had any sickness, all that climate being very like that of *Europe*, and particularly to the cold part of it. This made the king give order for the setting out of eight sail more, to carry this way to the *Philippine* islands all the relief necessary of soldiers, artillery, and tackling for ships, resolving henceforward that they should always go this way, as being shorter, easier, and of less charge and danger. This was the opinion of *Michael de Cardeel*, and the other pilots chosen for this expedition, who obliged themselves to sail to the *Philippines* (bating extraordinary accidents)

in eight or nine months; for having once passed the *Streights*, if they had the wind and currents favourable, they hoped to get to the *Philippines* in two months; because from *Chile* to those islands, there is no reason, as in other navigations, to wait for certain seasons and times of the year; for all that voyage being to be made within the tropicks, there is no danger of winter; but one may fail it at any time of the year.

The *Dutch* authors already cited, treating of this subject, add these words: [“ In truth this is a great conveniency to mankind, to be able to go from *Europe* to these islands in so short a time, with all the health and safety of the sailors; it being otherwise in going by the *Cape of Good Hope*, where the diversity of winds is to be observed, some of them being so contrary, as to hinder absolutely the voyage; so that it lasts sometimes fifteen or sixteen months. Besides, this course is so subject to diseases, that often they bury half their men in the sea, as happened to *Girard Reinst*, who was sixteen months getting to *Bantam*, which is not above half way to the *Philippines*, and yet lost a quarter of his men: *Adrian Wreuter* was nineteen months getting to *Bantam*, and lost out of the ship, called the *Flessingue*, one hundred and sixty three out of two hundred: the same happened to the other three ships of that squadron.”] Thus far these *dutch* authors; who add, That the ship *Concordia*, going the other way, arrived at the *Moluccas* without losing a man. And if they say true, and make out that it is better to sail this way to their *Batavia*, how much better is it for the *Spaniards*, who drive a trade with *Peru* and *Chile*, the distance being much less, and having for friends all the ports of *Chile*, if they won't go so high as *Peru*, which the *Dutch* have not? Neither would it be a small advantage to exchange in those ports the merchandizes of *Europe* with their product, which is so wanting in the *Philippine* Islands, and all those parts of the east. Every one may find their account in this trade; the *Spaniards*, without running the danger of sickness in those unhealthy climates of *Cartagena*, *Panama*, and *Puerto Bello*, might find as much vent for the *European* commodities; *Chile* and *Peru* would have all goods from *Spain* much cheaper than they have them now by the *terra firma*; the charges then would be

OVALLE 1646. be three times less; and, at the same time, they would help off the product of those parts; as from *Peru* they might load corn, wine, and oil; and if they did not care to go so far, they might have the same things from *Chile*, and cheaper, besides copper, hides, almonds, and other commodities proper to *Europe*: so that 'tis clear this would be a very advantageous intercourse for the *Philippines*, who want all these commodities so much.

Neither would the trade of *New Spain* receive any damage at all from this; for those countries could not have them from *Peru* and *Chile* so easily as from *Europe*; and so *Spain* would send less, only so much as is carried to the *Philippines* from *New Spain*, which cannot be much; for the charge of carrying those *European* commodities from *Vera Cruz*, to be embarked again for the *Philippines*, is very considerable, it being at least one hundred and sixty leagues by land from the *Vera Cruz* to *Acapulco*, which is the port where they are to be embarked; after which they have a navigation of three months; and then there being not always conveniences of shipping in *Acapulco*, those commodities are kept so long that they are spoiled; and 'tis seen by experience how little of this trade turns to account: but it would be otherwise if these commodities were carried from *Chile*, since in two or three months, always in a temperate climate, they might sail with a constant south wind, which blows all the summer infallibly, and so bring the product of *Chile* in a good condition to the *Philippines*. This commerce, though it would accommodate all parties, yet, it must be confessed, it would be most beneficial to *Chile*, which would thereby have more vent for its product, and acquire more people to cultivate its natural fertility.

There has been two obstacles to this project, which have hinder'd its taking: the first is, the difficulty of passing the *Streight* of *Magellan*, because it being so much elevated towards the pole, it cannot be passed but in certain months of the year, which if those who attempt it do not hit, they are in danger of perishing, as in effect it has happened to some squadrons of ships, as I shall relate in the next chapter; though others have passed it very luckily in its proper season, the *Streight* itself having, as we have seen, many good harbours and shelters for ships.

The second obstacle is the same that keeps the port of *Buenos Aires* from being frequented, (for else all the treasure of *Peru*

might be sent that way;) and it is, That the course of trade is settled the other way, notwithstanding the great charge the crown is at to have two fleets, the one in the *South*, the other in the *North Sea*, only to secure this passage; and that with the loss of so many *Spaniards* lives, that in the hospital of *Panama* only, there was buried, as they told me when I went that way, in the year 1630. above fourteen thousand persons; 1630. and what must we guess then in the ports of *Cartagena* and *Puerto Bello*, which have been the sepulchre of so many *Europeans*.

Notwithstanding all these mischiefs, this way is continued to maintain those cities already founded in those parts; though it is most certain, that the same end of carrying the silver to *Spain* might be attained by one only fleet with less danger of the sea. By that course the galleons would sail always in deep water, and not run the hazards they do between *Cartagena* and the *Havana*, between which places they are fain to sound all the way, and keep the lead going, to avoid the many shoals that are in those seas, and in the canal of *Babama* afterwards: besides that, the dangers of sickness would be avoided; for the *Spaniards* find by experience, that at *Buenos Aires* they are healthy, that being in the temperate climate corresponding to that of *Europe*.

And for the same reason the navigation between *Chile* and the *Philippines* is not put in use; because the course of things being once settled one way, 'tis very hard to change them, though to a better. I shall not pursue this matter any further, because it seems to touch the state and government, which is not my design: perhaps time will bring all things to pass; and that those of *Chile* themselves will venture to find out this vent for their product. All consists in trying; for the advantages on both sides would be so manifest, that the sweet of them would soon make the way easy, and that trade would wonderfully enrich *Chile* and *Peru*, since they might bring back to those kingdoms all the commodities of *China* and *Japan*; and that without carrying any gold or silver, which might be preserved all for *Europe*. Thus the greatest part of this new world being enriched by its own product, the king's revenue will be the greater, as well as the returns in gold and silver the greater; and all things thus well accommodated, the service of god, and the divine cult and worship would be better carried on.

CHAP. V.

Of the Fleets; some of which have been lost, and some have happily passed the Streight of Magellan.

Four of the bishop of Placentia's ships lost in the Streight of Magellan,

AMONG the fleets which have been lost in the *Streight of Magellan*, the first was that of four ships set out by the bishop of *Placentia* for the *Molucca* islands; which having got to the *Streight* with good weather, and being enter'd into it about twenty leagues, there rise from the west a storm, which blowing directly a-head, forced three of the ships ashoar, they not having room to turn or run before it; but all the men were saved. The fourth had better fortune; for going before the storm, she got out of the *Streight*; and when the foul weather was over, came into the *Streight* again, where the other ships were lost, and found the men; who had saved themselves on shoar; who presently made signs and cries to be taken on board; but they with hearts full of grief answered them, *What would you have? We cannot relieve you, for the provisions we have on board are not sufficient for us, and so we may fear to perish all of us together.* They could not say to them the other words of the gospel, *Go rather to those who sell*, because they were in a desert country, where they had no remedy, but to send sighs to heaven, accompanied with inconsolable tears and cries, capable of moving the stones themselves. Thus they left them, pursuing their voyage, much afflicted to be forced to forsake them, and not be able to do any thing for them; but these are accidents and hard cases belonging to the sea-faring men.

'Tis not known to this day what has become of these men; only there is a tradition, that a great way within land, on the continent of *Chile*, near the *Streight*, there

The Cessares, supposed to be Spaniards originally.

is a nation call'd *Cessares*, who were endeavour'd to be discover'd by Don *Hieronimo Luis de Cabrera*, governor of *Tucuman*, about eight and twenty years ago, with a good army rais'd at his own charge; but his diligence was in vain, as we have mark'd already, and told the cause of his misarrying. 'Tis thought, and 'tis very probable, these *Cessares* may be descended from those *Spaniards* who were saved in this shipwreck; because it was possible, that seeing themselves without any other recourse, they might go on into the *terra firma*, where contracting alliance with some *Indian* nation, they may have multiplied, and the name of them may have reached the neighbouring nations, and so on to others. This is certain, that this tradition is much kept up, that there is in those parts an *European* nation called *Cessares*. Some say, that

VOL. III.

there has been heard the sound of bells, and they have founded cities where they live; but, in fine, there is no certainty of all this. A gentleman born in *Chiloe*, and who has been a colonel in those parts; gave me in writing a relation of several traditions and informations of great numbers of people that inhabit the land within, and who have much gold. There has been made several attempts to discover them, though all have miscarried for want of provisions, or by other accidents, which in time may be remedied when it pleases God. And at this very time I have receiv'd letters, which acquaint me, That father *Hieronimo de Montemayor*, apostolical missionary of that archipelago of *Chiloe*, had enter'd into the *terra firma* in company of captain *Navarro*, a man very famous in those parts; and that they discover'd a nation, which 'tis thought are these *Cessares*, because they are a nation of white complexion, and fresh cherry cheeks, and who in their shape and disposition of body, seem to be men of mettle; and that they had brought some of them along with them, to endeavour to inform themselves of that which they so much desire. This is all the father writ at that time, because the ship could not stay, and there is but one ship every year bound for those parts; so he was forced to refer himself to the next conveniency, to inform me more particularly of the original and descent of this nation; so that this is all that at present we can say of this nation of the *Cessares*, which 'tis possible may come from these shipwreck'd men; or else they may descend from some *Dutch*, who may have been shipwreck'd in the same place, or thereabouts; and their complexion seems to fortify this conjecture; besides, that they speak a language which nobody then present could understand; or there may be both *Spaniards* and *Flemings*. 'Tis thought we shall not be long without knowing the truth, and so I continue my narration. The second fleet which miscarried in the *Streight*, was that which was set out about two and twenty years ago, under general *Ayala*, a gentleman of high birth and valour; who going from *Spain* to *Chile*, dealt with his majesty for a relief of men, which he was to carry through the *Streight of Magellan*, without landing any where else; but just as they were entering it, they were all cast away, so as to this day there has not been any account of them, except of the vice-admiral's ship, under the command

A Spanish fleet lost in the Streight.

OVALLE. mand of *Francisco de Mandujava*; for having lost sight of the admiral in the storm, she was carried afore the wind to the port of *Buenos Aires*, where he landed the men, and marched them over land to *Cbile*. I heard some of the men talk of this matter; and they used to blame the general very much, for having gone about to enter the *Streight* when the time of the year was so far advanc'd, particularly having been advifed in *Brazil*, where he touched to winter there, which he refused to do, for fear his people should desert him, and so he and they all perished.

These accidents seem to have made this passage less practicable; but yet we know that many have passed this *Streight* with little danger, and some with great felicity. Eight fleets are mentioned by *John* and *Theodore de Brye*, as well *Spaniards* as foreigners, who have passed this *Streight*; and though some have had bad weather, yet there is no doubt but time and good observations may make it more feasible; particularly there being so many good harbours and bays in this *Streight*, where ships may shelter themselves, and let the storms blow over.

C H A P. VI.

Of the Province of Cuyo.

Cuyo, the third province of Chile.

AFTER having treated of the two first parts of the kingdom of *Cbile*, we must say something now of the third, which contains those large provinces of *Cuyo*, which are on the other side of the *Cordillera*, towards the east. We have already described their situation and extent, let us treat now of the nature of them. And to begin with their ill qualities; 'Tis a wonderful thing to consider that there being nothing between them and *Cbile*, but the high mountains of the *Cordillera*, yet they are so different in their qualities. We have already mention'd some; but we may say, that as to their temperature, they are in every thing entirely opposite; for first the heats are excessive and intolerable in summer; and for that, as well as for the vast quantity of bugs, or punaises, which are there, some very small, and others as big as bees, one can hardly sleep a-nights in the houses, and therefore the people all sleep in their gardens and court-yards. There are almost perpetual thunders and lightnings, and many poisonous reptiles and insects, though not so many as in *Tucuman* and *Paraguay*. There are likewise a species of *Mofquitos*, or gnats, no bigger than the points of needles, and as sharp in their sting, though themselves are almost imperceptible; they get into the hair of one's beard, and one cannot be rid of them any other way, than by killing them.

These are the evil qualities of the land of *Cuyo*; let us now mention the good ones. The land is so fertile, that in many things it exceeds even the richest soil of *Cbile*; the crops are better, the fruits larger, and of better taste, by reason of the great heat, which ripens them more: there is good store of corn, wine, flesh, all sorts of fruits, roots, and herbs of *Europe*; as also great quantities of olive-yards and almond-grounds; so that the only essential difference between it and *Cbile*, is the many venomous animals, and the thunders and rains in summer;

though to make some amends, if *Cbile* exceeds in summer, *Cuyo* has the advantage in winter; for though the cold is sharp, yet it is not with such clouds, nor such snow and rains, as in *Cbile*; but rather the weather is serene, and the sun beautiful and clear, without any dark weather, which makes it very temperate.

There is no sea-fish in this province, it being very far from any sea; but it has ponds, which are called the ponds of *Guanacache*, where they catch great quantities of trouts, as they call them, which are very big, like the *Savalos* of *Seville*, but much better without comparison; for they have no small bones, and are of a higher relish, and a very healthy food.

Besides the fruits of *Europe*, this country has several very good of its own. The first is called *Cbanales*, which are like filberts or small nuts; only the difference is, that that which is to be eaten is not within, but on the outside of the shell: the other is the *Algaroba*, of which they make bread so sweet, that it nauseates those who are not used to it. All *Tucuman*, as far as *Buenos Aires* and *Paraguay*, are provided from hence with figs, pomegranates, dried peaches, and dried grapes, apples, oil, and excellent wine, of which they have abundance, which they carry over those vast plains, called the *Pampas*, (where for many leagues together there is not a tree, nor a stone to be found,) in large carts, such as they use here in *Rome*; and they are a caravan of them together, to defend themselves from certain *Indians*, who are enemies, and often attack them by the way.

Some years ago they began to discover here rich mines of silver, the fame of which drew people from *Potosi* when I left *Cbile*, because they were reputed to be richer, and of more profit than those of *Potosi*, all provisions being more abounding and cheaper too. These mines were also said to be in a plain country, where carts might come easily. They write me word likewise, That

Remarks on Cuyo.

there has since been discover'd gold mines of a prodigious richness. 'Tis true indeed, that in this matter of mines, there is a great difference between assaying of them in little parcels, or in great ones; for often the oar that promises much, yields but little, when the assay comes to be made in great. This is a common observation in mines; and if these of *Cuyo* do not prove extraordinary rich, there will hardly come any people from abroad to them, particularly from *Chile*, where they have already so many and good ones, of such a known profit; and yet they do not work them, the people being more profitably employed in husbandry, which turns to greater account.

I will give here an extract of a letter which I received in *Rome* this year from father *Juan del Poço* of our company, a person of great piety, and worthy of credit, who is at present in the college of *Mendoza*, the chief of all those of the province of *Cuyo*, and it is thus: [“The greatest news here, is about the mines which are begun to be discovered, which if it holds as they relate, it will be the greatest thing in the world: they are of gold, which is seen among the silver oar: there are come very understanding miners from *Potosi*, who cannot give over commending them. There come people from *St. Jago*, to work them, and captain *Lorenço Soares* is named for *Alcalde Mayor* of these mines.”] There are others who write the same thing; and there is no doubt to be made, but that if they can have people, that country will be one of the richest of all the *Indies*; for its great fertility wants nothing but people to cultivate and consume its product. This will make the three cities of that province, which are that of *Mendoza*, that of *St. Juan*, and that of *St. Luis* of *Loiola*, increase mightily, which since their first foundation have been at a stand, by reason of the neighbourhood of *Chile*, which has kept them down; many of the first inhabitants of *Cuyo* having left it to go to *Chile*, as being more temperate, and more abounding with the conveniences of life; for the same reason that we see in other parts most people flock to the capitals of a kingdom, as is evident in *Naples* and other great cities. But if the *Spanish* inhabitants increase as they have done hitherto, there will be enough for all these parts; and already some of *St. Jago* have settled, and married at *St. Juan* and *Mendoza*; neither can it be otherwise, for the people of *Chile* are beginning to be so streighten'd, that they cannot have all the conveniences of being at large, and so are forced to seek them abroad.

And 'tis most certain, that the conveniences of this province are very great; and their not appearing so, is owing only to their neighbourhood to *Chile*, in comparison of

which these countries appear a place of banishment, and is look'd upon as the most rigorous that can be given any one in *Chile*; because, to say truth, the difference is very great, considering the proprieties of each place; but if we consider *Cuyo*, without comparing it, it is not only a good place, but surpasses many others, where nevertheless the inhabitants think themselves very happy, though wanting the abundance of *Cuyo*, where the flesh is very substantial and savoury, and great abundance of game, as also of pork, turkeys, ducks, hens, and other tame fowl.

The wines are very generous, and of so much strength, that though they be carried three or four hundred leagues over those plains, and the intolerable heats of the *Pampas*, and that by oxen, yet they come good to *Buenos Aires* and other places, and are preserved with the same facility, as long as one pleases, without spoiling; and they are in such quantity, that all the provinces round are supplied with them, nay, as far as *Paraguay*, which is three or four hundred leagues more. The bread is excellent, so is the oil, and all sorts of pulse and gardening; the fish better than the sea-fish; the flax and hemp as good as that of *Chile*; the materials for tanning very good; and, in short, it has all necessaries for life, with as much advantage as any other country.

This being thus, and even more than I relate, what is there wanting to this land, or what are its blots? *punaises, thunder, lightning, hail*. And what other country has not some of these? Shall we say, because God has exempted *Chile* by a singular providence from these things, that therefore *Cuyo* is an ill country? No; for then we must condemn most countries where these afflicting circumstances are found. And though it must be own'd, that in the summer the heats are great, yet they do not exceed those of *Tucuman*, *Buenos Aires*, and *Paraguay*; and they are inferior to those of *Brazil*, and those of *Carajas*, *Cartagena*, *Puerto Bello*, and *Panama*, as I myself have experienced in some of those places. And these parts of *Cuyo* have some amends made them from the neighbourhood of the snow; for the city of *Mendoza* is not above a league from the *Cordillera*, which is full of it; and likewise the good qualities of the air do something moderate the heat; for it is so healthy, that it never hurts any body by being in it, which makes them sleep in their gardens abroad, without any apprehension, except it be of some sudden shower which does often happen in summer; for on a sudden, though the heavens be clear and bright, it grows cloudy, and falls a raining with great fury; but this may be easily remedied; and likewise the thunders and thunderbolts might be avoided, which are the

OVALLE:
1646.

OVALLE. the things which fright those of *Chile* most, they being so little used to them; and therefore at the very name of *Cuyo*, they think the heavens are falling upon their heads, or that the punaises, and other nauseous vermin are never to leave them; so that no greater mortification can be proposed to an inhabitant of *Chile*, than to go to live in *Cuyo*. And besides all this, the vast snows which fall on the mountains, shut up the passes, and hinder all communication or intercourse; so that in five or six months

one cannot receive a letter, though those two provinces are not above thirty or forty leagues asunder, that is, the breadth of that chain of mountains called the *Cordillera*. This therefore is that which discredits *Cuyo*; and if it had been further off from *Chile*, it would have had a better name; but it is with that, as with two loaves, which though both good, yet if one be whiter and better, no body will touch the other, the best being always most pleasing.

C H A P. VII.

Of the Confines of the Province of Cuyo, and particularly of its Easterly Bounds, the Pampas, and of the River of Plata.

Situation of Cuyo.

THE confines of this province of *Cuyo* to the west, are *Chile*; and to the east, the *Pampas*, or vast plains of the *Rio de la Plata*, and part of *Tucuman*; which reaching as far as those of *Rioca*, and the mountains of *St. Michael*, with all the rest as far as *Salta* and *Jujuy*, make the north side of it; and to the south, it has the *Streights of Magellan*. All that lies within these bounds are open plains, reaching so far, that there is not so much as any stop to the eye; but it is like a sea, and the sun seems to rise and set out of the earth; and at its rising, it is sometime that it gives but little light; as also it loses some of its beams before it be quite out of sight when it sets. The way of travelling in those plains is with very high carts, which they cover over neatly with hoops, over which are cow-hides, with doors to go in and out; and these are drawn by oxen: there are also windows to give a free passage to the air, and on the bottom one makes one's bed with so much conveniency, that often travellers sleep out the whole journey, and feel not any of the inconveniencies which attend it. Generally they set out about two hours before sun-set, and travel all night, till it be an hour or two after sun-rising; so that a traveller just wakes when he comes to the baiting-place. This must be owned to be a great conveniency; because one may also walk on foot sometimes, in the cool, before one lies down, and so one comes merrily and easily to one's journey's end.

Manner of travelling.

Hunting.

There is also another entertainment which helps to pass the time pleasantly, and that is hunting: and for this end some carry horses empty, and dogs on purpose; and there is game enough both of hare and venison: for there are herds of *Guanacos*, of two or three hundred. The dog follows them; and the young-ones, not able to follow, are left behind, which the hunter knocks on the head with a club he carries,

without lighting from his horse, and returns to the carts loaden with venison, which serve for provision as well as entertainment. At other times they follow the partridges, francolins, or the bird called *Quiriquincho*. But to all this there are abatements and mixtures of trouble: the first is, the mighty heat in summer; for which reason, lest the oxen should be stifled with it, they travel in the night; and when they come to halt, or bait in the day time, 'tis in places where there is not so much as a tree, under whose shade one may rest; nor is there any other shade than that of the cart, and some coverlet upon it; for to go into it, is like going into an oven. But this is not all the way, there being some pleasant running streams and rivers bordered with green willow-trees, which very much mitigate the fury of the heat. The greatest inconvenience that I perceived in that journey, was the want of water; which is so great, that we were forced to provide ourselves, when we arrived at any of these rivers, for many days journey; for there is no other, except sometimes some plashe remaining of rain-water; and that is all green, and can serve only for the oxen: and yet this is rare too; for these are often dried up to mud, and then one is forced to double the day's journey, and march as far again; so that the cattle is almost dead with thirst. I have seen sometimes, on these occasions, the oxen take a run as if they were mad or possessed; for they know by instinct, a league or two before they come at it, the places where it is, as if they smelled it; so there is no stopping those that are loose; and even those who are at the yoke, make what haste they can; and when they get to the water, they raise the mud so by their haste, that they drink as much mud as water.

When this happens, while there is any of the water left that was taken at the river, and

and carried in carts, the misfortune is the less; but when that water is already spent, the people suffer extremely: for though most commonly some one man is sent before to take up some water of the clearest, before the oxen trouble it, yet they make such haste, that that prevention most commonly miscarries; and then we are fain to stop our noses, and shut our eyes to drink, and divert even our imagination, if we can. And to all this there is no remedy, but from heaven, as it happened to me once, that it pleased god to send us a shower in our greatest extremity, which filled several wells, and there was enough for us and our cattle, as also to carry away; for which we thanked the divine majesty, acknowledging his great mercy to us in so pressing circumstances.

This suffering would not be so great, if there were any towns and villages in the way; for there are little lakes by which they might settle, which though some years they yield no water, yet it is to be come at by a little digging, and that not very deep; and if there were people in those deserts, wells might be made, or the rain-water gathered in cisterns, as it is practised in several other places. But these plains are so vast, that they can hardly be peopled, being extended for several hundred leagues; and besides, there being no trade settled of any importance in those parts, there cannot be inns nor places of shelter settled; and so at present, whoever travels that way, must carry every thing; for when once one is set out, there is no addition to be made; and

therefore all is to be provided, more or less, according to one's ability; and that must be at least a fortnight's allowance, and some times twenty or thirty days, till one comes to some inhabited place. This is the manner of travelling in the plains of *Cuyo*, and *Tucuman*, and the *Rio Plata*, where in many leagues one does not see a hill, nor a stone, nor a tree, but continual plains; and if, to dress your victuals, you have not the foresight to carry some wood, all the remedy is to gather the cow-dung, which serves the turn very ill. In some places of this province of *Cuyo*, there are woods near the rivers, from whence may be had materials for building; and hard by the *Cordillera* there is a sort of tree that breeds incense. I brought some of it to *Rome*, and the druggists told me, that it was finer than the ordinary, consumed in churches. There grows there also the herb called *Xarilla*, which is very hot, and a good medicine, as we have said already. There are many others, of which I cannot give so particular an account, as not having made any stay in those parts; neither am I in a place where I can advantage myself of those relations, that others might give me; and which may serve for larger histories than mine, I pretending only to brevity. Therefore let this suffice for an account of the situation, soil, heavens, proprieties, trees, plants, fruits, metals, flocks, fountains, rivers, sea-fishes, and birds, in all the three parts or divisions of the kingdom of *Chile*. Let us now say a word of its inhabitants, the old *Indians*, who have possessed it all formerly.

BOOK III.

Of the Inhabitants of the Kingdom of
CHILE.

CHAPTER I.

*Of the first that peopled America, and their Antiquity.*OVALLE.
1646.

THE knowledge of the first inhabitants of the kingdom of *Chile*, depends necessarily upon that of the first inhabitants of *America*, which is not easy to be made out. If we should take the opinion of the *indian Guancas*, near the valley of *Xavia*, they would certainly affirm, that which is a constant tradition among the natives of *Peru*, and before they had any knowledge of our faith, and is, That many years before there were *Ingas*, who were the kings of those parts, the country being very populous, there was a great deluge: (thus far 'tis well.) But then they add, That in the hollow rocks of the highest mountains, there remained some alive, who returned and peopled the earth afresh; and the same tradition is received by the *Indians* of *Quito* in *Collao*. If this were so, the *Indians* of *Chile* might lay claim to the new peopling of *America*; for if any, their mountains were most capable of resisting the deluge, they being the highest that are yet discovered. There are other *indian* mountaineers, who are less mistaken; for they affirm, That none could be saved in the mountains, because they were all covered with water; but that six were saved in a float they made. If they had said eight, they would have hit upon the number which the apostle St. *Peter* says escaped with *Noah* in the ark which he built.

Antonio de Herrera, in the *Third Tome* of the *General History* of the *Indias*, excuses these errors of the *Indians*, saying, 'Tis probable there was some particular deluge in those parts, to which they might allude, because all the nations of that world are agreed in this tradition. The true and natural excuse is, that these poor wretches have not had the good fortune to see the chapter of *Exodus*, where they would have been undeceived; for there 'tis said, That out of the ark of *Noah* there was not left any living thing upon the earth, and that the water was fifteen cubits over the tops of the high-

est mountains. The other *Indians*, who talk of the six men saved on the float, may have had some tradition from their forefathers, who were nearer the time of *Noah*, about the ark; and as they are a people who have no books, because they cannot read, whatsoever they might learn from their ancestors, and retain in their memories, might by degrees be lost, or diminished; and so the descendants came to have the tale of the float and the six persons, not examining how it could possibly be, that upon so slight a contrivance, which can hardly last three or four days in the water, those people should maintain themselves for so long as the deluge lasted. As for the manner and time, how and when the descendants of *Noah* passed to people this new world, or how their generations have been extended so far, 'tis a most difficult thing to make out; for the *Indians* being without written records, as other nations have, there is no diving by their memories into their antiquities, which even when they are committed to writing, use to produce variety of opinions about the origin and beginning of things. Besides, there was in *Europe*, even among the most learned, so great an ignorance of all that regarded *America*, that it was judged scarce inhabitable, if it was at all; and so they could give us no light of a thing they had no notion of, or which they thought impossible; but after the discovery of this new world, people began to reason, and every one made his guesses or reasonings as well as he could. Some have said, with reference to what is hinted by *Plato*, in his *Timæus*, (as is related by our father *Acosta*, in his first book of the *New World*, in the twenty-second chapter,) that people passed from *Europe* and *Africa*, to certain islands; and so from one to another, till they came to the *terra firma* of *America*.

The same author advances something more probable, in his nineteenth chapter; where

where he says, That supposing we all came from the first man *Adam*, and that the propagation of the species of mankind, after the deluge, was made by those only who were saved out of the ark of *Noah*, 'tis not improbable, that the first inhabitants of *America* came to those parts, not with design, or by their own industry, because of the little use of navigation that was in those days, and particularly through so great a sea; but that they were cast by some storm on those coasts, as it happened since in its first discovery, as we shall see hereafter in its proper place. He brings, to prove this, the example of several ships, which, contrary to their course, have been driven to very remote shores. This is every day's experience, and will not surprize those who know any thing of the strength of the winds and currents in those seas; and that which the same father *Acosta* alledges of himself, That he had such a passage, that in fourteen days he came within sight of the first islands of the gulph of *Mexico*, going from *Spain*.

This, though probable, has yet a strong objection against it, which is about the wild beasts, such as tygers, lions, wolves, and others of that nature, which could not be carried in ships, because they were of no use to mankind, but rather mischievous: and though some may answer with *St. Austin*, in his sixteenth book *De Civitate Dei*, Chap. 7. when he solves the difficulty how these animals came into islands, and says, That they might either swim thither, or be carried by hunters, or that they might be created a-new by God Almighty, as they were in the beginning of the world; which is the best solution, if it were as probable as it is easy to say. But, first, there is against it the opinions of philosophers, who will not allow any great animals to be propagated any other way than by generation. And, besides, if God, as without doubt he might, had created them a-new, what necessity was there for him to command *Noah* to take so many pairs of all living creatures, all male and female? which care seems superfluous, if God resolved to make a second creation of all those species after the deluge. 'Tis more probable, these creatures might arrive at the islands swimming, and the birds flying, particularly to the nearest islands; but this does not prove, that they could arrive to those remote parts of *America*, there being such a vast ocean, that 'tis not possible that either beasts or birds should have so much strength as to swim or fly over it; for this reason he concludes in the end of the one and twentieth chapter, that the men, as well as animals, passed either by land or water to *America*, near some part where it joins to the other parts

of the world, either by the *Tierra de Bacalaos*, or the *Streight of Magellan*, that is not separated but by ordinary little separations of water and sea, which might be easily pass'd in small vessels, such as were in use in those ancient times.

This is the author's opinion; which, as to the *Tierra de Bacalaos*, carries with it only the probability of an ingenious conjecture; because as yet that part of the world has not been discovered; but if in time it proves like the conjecture about the *Streights of Magellan*, 'tis all without any grounds; for, as we have already related, 'tis now made plain, that *America* on that side is entirely divided from the other parts of the world by a vast sea. 'Tis true, that to the east 'tis not known yet how far that land runs, which is over-against the *Tierra del Fuego*, and is on the east side of the *Streight of St. Vincent*, otherwise called the *Streight of Le Maire*; for some think that it may run as far as the *Cape of Good Hope*, and so be so near that part of *Africa*, that men might pass in small vessels from the one to the other. 'Tis likewise uncertain, that the continent of *America* ever was nearer than it now is to any other continent, or that the sea has since broke away part of either, to make the separation wider, as we have observed it did in the island of *Santa Maria*, which is supposed to have formerly been all of one continued piece with the firm land of *Arauco*; but these are all conjectures, and he alone knows the truth who created these men, and other animals of *America*, and by whose providence they passed to those parts, for the great ends of his hidden secrets; to whom, with all veneration for his councils, we must submit the enquiry, why he has been pleased that that part of the world should remain undiscovered for so many ages, without any communication with those parts where his divine light has appeared sooner. These are considerations for the good to make use of with thanks, for having been admitted to it; and confusion of the wicked, who at noon day are as much in the dark, as if it had never dawned.

Peter Bereius, in his geography, as *John Bereius* and *Theodore de Brie* do relate, collects the antiquity of those nations of *America*, from their most ancient kings and lords, and from the ruins of ancient edifices, and other memorable things; for this argues the largeness of time, in which all this was done. Amongst other things, he mentions the report of one of their gardens belonging to some king, (which must be of *Peru*, who were always the richest,) in which all the herbs, and plants, and shrubs, with their trunks, leaves, and flowers of the natural proportion, were of massy gold; and in the

Aug. de Civitate Dei.

1646.

OVALLE.
1646.
the houses of recreation, there were all sorts of animals made of precious stones, and some of feathers of various colours. They say besides, that the *Ingas*, who were the emperors of *Peru*, were the richest princes in the world; and that they had so much gold, that not only the plate they eat in were of that metal, but all their household stuff and furniture were of the same, to their tables, benches, cupboards, nay, to the statues themselves; a great deal of which fell to the *Spaniards* share when they conquered those parts; but the best part was hid and concealed by the *Indians*, which to this day they keep undiscovered, being in that way of secret intractable and extrem close. Neither is it any wonder that those princes should use so much gold, since they were masters of more of that metal than any others; being so beloved by their subjects, that whatever they had that was precious, they presented it to them; and they were so inclined to hoard it, that whoever succeeded in the monarchy, made it a point of state not to touch, but rather to increase the treasure of his father; of which a great proof was the vast sum which *Atabalpa* offered for his ransom, and paid to the *Spaniards* for it, as we shall see hereafter.

Amongst other precious pieces of gold work, authors make particular mention, and admire with reason, that chain which the king *Guaynacapa*, the eleventh king of *Peru*, caused to be made at the birth of his son *Guascar*, who was to inherit his crown; for each link of it was as big as the wrist of a man, (as is reported by *Gareilasso de la Vega*, who had it from an uncle of his, an *Inga* also, who told him, when he asked the bigness, as big as this, (shewing his wrist,) and as long as twice the length of the great place of *Cusco*, which in all might

be above seven hundred foot long. And the contador, *Augustin de Varate*, in his first book, *Chap. 14.* treating of the incredible riches of that *Inga*, says these words: [Guaynacapa, at the birth of his son, caused a great cable of gold to be made (as is attested by several *Indians* yet alive) of so much weight, that two hundred *Indians* could but just lift it up from the ground; for memory of which they gave the name of *Guascar* *Inga* to the new born prince; for *Gualca* signifies a cable; and the surname of *Inga* was added, as that of *Augustus* to the Roman emperors.] Thus far this author: but this name, or word *Gualca*, not being so decent in its signification for a prince, they added the *r* to it, and nevertheless eterniz'd the memory of that rich chain.

The chiefest motive the king had to order this chain to be made, was, that the dances which were to be made at his birth, might be more solemn, and worthy of his royal person; because the manner of dancing of the *Indians*, is to take one another by the hands, and make a circle; and so moving two steps forward, and one backward, draw closer and closer to the king, to make their obeisances; and the king caused this chain to be made, for them to take hold of, instead of taking hold of one another.

A great proof likewise of this antiquity of the empire of *Peru*, is those two highways mentioned by *Herrera*; for being of that vast length, and work'd with all those conveniencies for travellers, they could not be made but by length of time, and with a long continued labour. This is what I find of the antiquity of the first inhabitants of *America*, in which we may comprehend the *Indians* of *Chile*.

CH A P. II.

Of the great Courage and Boldness of the Indians of Chile.

THE *Indians* of *Chile* are famed by all who have writ of them, for the boldest and most valiant warriors of all the vast extent of the new world: it were to be wished by us, that this had not been confirmed by woful experience, for then the kingdom of *Chile* would have been one of the most flourishing kingdoms of the *Indies*, without the continual wars which it has maintained for about an hundred years, without ever ceasing, or laying down its arms. This is the more considerable, if we reflect, that the *Spaniards* having subjected, in so little a time, those vast empires of *Mexico* and *Peru*, have nevertheless not been able, in so great a time, to conquer the *Indians* of *Chile*, sons of the great *Cordillera*, from

whose rocks they seem to borrow their untameable strength and fierceness. Except we should say with fryer *Gregory* of *Leon*, That this bravery comes from the fertility of the earth, which, as he says, and is true, does not need any thing from abroad. To which he adds, the birth of these people, who all their life tread upon so much gold, and drink the water which runs over these rich minerals, by which they participate of its good and generous qualities, as it is observed of those who live at *Potosi*, near that vast mountain of silver, who are so stout and haughty, as has appeared in the many revolutions that have happened there. Let this be as it will all authors agree, that they are the top nation of *America*, though

though hitherto no one has treated purposely of this matter. There are now two histories in the press, which will make out, by particulars, all that has been said of this nation. Don *Alonzo de Ereilla* says enough, in his famous poem, call'd the *Araucana*; but because it is in verse, it seems to lessen something the real truth; and yet abstracting from the hyperboles and enlargings of poetry, all the historical part is very conformable to truth, he being a gentleman of great quality, and an eye-witness of what he affirms; for what he writ, was not by hearsay, but upon the very spot where the things happened; so that he might have had as many contradictors as he had witnesses, who were present as well as he at what pass'd.

He dedicated his book to the most catholic king, his lord and master; and presenting it to him with his own hand, when he came from *Chile* to *Spain*, 'tis to be presum'd he would not have dared to fail in the exactness of truth, for fear of receiving a chastisement, instead of a reward, which he obtain'd for it. Let any read his prologue, in which, in a very good stile, and in prose, he gives a noble account of the valour of the *Indians*, and concludes his preface with these words: [*I have said all this, as a proof and clear demonstration of the valour of these nations, worthy of all the encomiums I can give them in my verses; and besides, there are now in Spain several persons who were present at many of the actions which I here describe, and refer to them the defence of my work on that side.*] Thus far this author, worthy of immortal praise for his incomparable book, which, though published above fifty years ago, and printed in *Spain* and *Flanders*, is yet continually reprinted; which shews the value the curious and the learned have for it. The *Araucanos* are indeed the chief subject of it; and yet what is said of them may be extended to all the *Indians* of *Chile*, as we shall see in its proper place, when we shall treat of the wars they had with the *Spaniards*.

But before ever the *Spaniards* set their feet on their ground, they had given sufficient proof of their bravery, which was invincible, to the *Ingas*, emperors of *Peru*, since with all their power they could never conquer them, though they endeavour'd it, as being extremely inclin'd to enlarge their dominions; and they desir'd it the more, for the fame of *Chile*, to which they sent a powerful army, and which made some progress at first, subjecting some nations to extraordinary tributes. But as they pursued their point, and came to the valley of *Maule*, they met with the *Promocoes*, to whose succour the *Chilenos*, who inhabited more within the country, were come, and

forc'd the army of the *Ingas* to retire in haste. *Garcilasso de la Vega* relating this more particularly, says,

That the *Inga yn Pangué*, the tenth king of *Peru*, came to the confines of his own kingdom, to a place call'd *Atacama*, to be nearer at hand to attend the conquest of *Chile*; and from thence first sent his scouts through the fourscore leagues of uncultivated country, which was between his kingdom and *Chile*, with orders to dispatch a man, every two leagues, with an account of what they discover'd; which they did, one messenger following another, and leaving in the way certain marks, whereby they that came last might guide themselves. He first sent ten thousand men, under the command of general *Sinclairuca*, and two other colonels of his own kindred, not being willing to commit to any others care so great an enterprize. They came within sight of the valley of *Copiapó*, which is the first inhabited valley of *Chile*; with the inhabitants of which, the *Peruvians* began to skirmish, because they had not admitted the embassy which they sent them as from the *Inga*, to own him for their lord; and withal, having given notice of the resistance they found to the *Inga*, he sent them ten thousand men more, with a new summons, assuring them, That his design was not to take their country from them, but only that they should own him as son of the sun, and lord of all that was warm'd and enlighten'd by him. Those of *Copiapó* seeing this new relief to their enemies, and knowing that it would not be the last, because the *Inga yn Pangué* was preparing another succour, and being convinced that this acknowledgment would cost them less than the blood that must be spilt in a long resistance, they agreed to own the *Inga* as he desir'd.

This was the first entrance of the *Peruvians* as far as *Maule*, which is one of the rivers of *Chile*, as has been said already. By this time, the army of the *Peruvians* was fifty thousand men; and desiring to prosecute their conquest, they sent their ordinary embassy to the nation of the *Promocoes*, who having already been inform'd of their invading their neighbours, were in arms to defend their country. The ambassadors of the *Inga* deliver'd their accustomed message, protesting, that their lord desir'd nothing more, than to be acknowledg'd as son of the sun, and honour'd accordingly by their submission. The *Promocoes*, who were resolv'd to defend their liberties, made answer, *That the conquerors should be the lords and masters*; and so uniting all their forces, came on the fourth day, and presented battle to the *Peruvians*. The *Inga's* generals, surpriz'd at such a cou-

OVALLE.
1646.

Gar. de la
Vega.

OVALLE. 1646. religious resolution, sent them new summons, desiring their friendship and peace, calling the sun and moon to witness, that they came not to spoil them of their lands or goods, but only to oblige them to own the sun for their God, and the *Inga* for his son and their lord. To which they receiv'd answer, That they came not to spend time in talking, or vain discourses, but to fight manfully till they should conquer or die; adding, that they might prepare themselves for battle the next day, as it happen'd; and the *Promocacs* overcame that powerful army of the *Inga's*, so that they had no mind to try their fortune any more, but made their retreat, leaving the *Promocacs* in peace, and full possession of their lands, which they had so bravely defended. *Antonio de Herrera*, in his third tome, and fifth decade, treating of the reason why those of *Chile* refus'd to submit to those monarchs the *Ingas*, says, That it was because of the great reverence with which they made their subjects treat them, as if they were Gods, and approach them as if they were of another species; which the *Chilensians* could not bear, their mind being too lofty and generous to submit to such a tyranny, which they constantly oppos'd; insomuch, that though the *Ingas* had conquer'd the best part of that continent, yet the *Chilensians* never did yield to their power. Perhaps the nearest provinces to *Peru*, such as those of *Guasco*, *Coquimbo*, and *Copiapo*, did in some measure acknowledge their power, since they paid a tribute in gold; and for that reason, these provinces alone in all the kingdom of *Chile*, do speak the common language of *Peru*, which is a very strong proof of what I here say.

For the same reason that they resist'd the *Ingas*, they did not care to have any king of their own nation, the love of their liberty prevailing against all the reasons of state, which might move them to have one monarch; neither did they fall into any popular form of government, or commonwealth; for their warlike temper did not afford patience enough for the slegmatick debates, necessary for the union of so ma-

ny minds. Thus every family chose one among them to govern them. From this arose the *Caciques*, who are the sovereigns among them, and by degrees had that power hereditary, and their children after them enjoy it, with all its rights.

But though every one governs independently his own district or jurisdiction, yet when the occasion offers, that the safety of all is concern'd, there is an assembly of the *Caciques*, and some of the elders of the people, who are men of experience, and are summon'd after their way by particular messengers. In these councils they resolve what they think most convenient; which, if it be a case of war, either defensive or offensive, they chuse the general, not one of the most noble of the *Caciques*, or the most powerful, but he who has the fame of most valiant, and has best behav'd himself on the like occasion against their enemies; and when he is justly chosen, all the other *Caciques* obey him punctually. 'Tis after this manner that they have preserv'd themselves so many years against all the strength that has been brought against them. To make these assemblies, they chose out some very pleasant place, field, or meadow; and thither they bring great store of provision, and strong drink, call'd *Chicha*, which is instead of wine. Being all assembled, and well warm'd with this liquor, and excited in their martial temper, there rises up some one of the most antient, to whose lot it falls, to propose the business of that meeting; who with great eloquence (for in that they are very famous) opens the matter, and brings all the reasons and motives of persuasion that he can. All are oblig'd to yield to the majority of opinion; and when the result is made, 'tis publish'd with the sound of drums and trumpets, and a mighty noise; but yet allowing every one the term of three days to reflect and consider on what has been resolv'd; after which, if they find no inconveniency, the execution is infallible, and they think of the means of bringing the business about by the most proper methods.

C H A P. III.

The same Subject is pursued, and the Nobility of the Indians of Chile examin'd.

Antonio de Herrera, in the place already cited in the last chapter, says, That there are some of the *Indians* reputed above the rest as gentlemen; and then he adds these words, [Of this sort have been, and are still the *Indians* of Chile.] In which he says well; for if valour and the glory of arms makes gentlemen, as may be seen in

Andreas Tiraquello, in his book *de Nobilitate & jure Primogenitorum*; and if many noble families do to this day derive themselves from some great captain or famous soldier, the *Chilean Indians* having so often signalized their valour in fights, they may very justly be distinguish'd from all the other *Indians*, and reputed more noble.

In

In short, they are the untam'd *Cantabri* of *America*, who, like those of *Europe*, defended themselves, when all the rest of it was enslaved; and repulsed the conquering monarchs of *Peru* to the extrem confines of their provinces.

And there is one circumstance more particular than under the *Cantabrians*, because they had the advantage of their mountains, and the barrenness of their country, not so inviting to a conqueror; but in *Chile* it was otherwise: the richness of its mines, and its soil full of delicious valleys, and a clear and rich territory, having been always well known, the only valour and bravery of its inhabitants was then the defence of the country: these were the fortresses and walls of it; for without a bit of fortification of any fort, or so much as one fire-arm, they oblig'd their powerful enemy to a shameful retreat. Indeed, this is a thing worthy of great admiration; yet not so much to those who know how these *Indians* value themselves upon being good soldiers, using themselves to arms, even from their childhood; of which it will not be amiss to speak a little.

The education of the youth of Chile.

When a child is strong enough, they make it run up the rocky side of a hill, giving him that does it best, some prize or reward: this makes them very nimble and light; and I have seen them, in their feasts and entertainments, run two and two for wagers with wonderful swiftness; and those who shew little disposition to this exercise, are applied to follow day-labour, but the others they reserve for war, not suffering them to take to any other employments, but mind their arms and their horses, that they may be perfect in all their exercises. To these they assign their post upon occasion, according as each has behav'd himself in those which he has been in before; and they have in this no consideration of gentility, intercession of others, or other motives, but that alone of a good performance, and the many proofs given by them of their courage and conduct in war.

Their arms in war.

The arms they use, are pikes, halberts, lances, hatchets, maces of arms, bars, darts, arrows, and clubs; as also strong nooses to throw upon a horseman, and slings. Their horse fight with lance and buckler, which they have learn'd from the *Spaniards*, and from them they have had their horses; for before their time, they had neither horse nor iron, but they have a hard wood, which grows yet harder by being turn'd in the fire, and is almost as useful as steel. They have hard and strong corselets, back and breast, and thighs, arms, bracelets, gauntlets, helmets, morions; all these of a hardened leather, so prepared when raw, that it becomes by drying as im-

Their armour.

penetrable as any steel; and they are something better, because more manageable, and do embarrass the body less, as being lighter; and so the man is more at his ease, and better dispos'd in fight. Among them the pikeman may not be an archer; neither can any that uses the mace of arms, use other arms; so every one bestirs himself with the arms he is us'd to.

OVALLE.
1646.

In forming their battalions, every file is of above an hundred men, and between every pikeman an archer, who are defended by the pikemen, who close their shoulders together; and if their first battalion is broken, the second relieves them with so much readiness, that there seems not that any have fail'd; and so by the third and fourth following each other, like waves of the sea, without any interruption; and no man forsakes his rank, but by death. They always endeavour to have some bog or lake not far off for a retreat; for there they are more in safety than in the strongest castle. Their volunteers go before the battalion, trailing their pikes with so much state, and are themselves so haughty, that, like *Goliath*, they challenge their enemy to meet them body to body; and they do the same to the *Spaniards*, giving themselves great airs of pride. They march to the sound of their drums and trumpets, having their arms garnish'd with all variety of beautiful colours, and themselves adorn'd with great plumes of rich feathers, so that they appear very handsome and fightly.

Their warlike ornaments.

When they make any forts for their defence, it is of great trees interwoven with each other, and leaving in the middle a place of arms; and formerly within this fort they us'd to make another of thick planks. Behind this, they make a great ditch, cover'd over with plants and flowers, but underneath them sharp stakes to lame the enemy's horses; some they make deeper, that the horses may remain there stak'd thorough.

Their forts.

Many of them are subject to great superstitions and auguries, observing the omens, both before and at the time of their undertaking; but many of them laugh at those observations, saying, there are no better omens than good blows, and stout laying about them, without fear of either steel, fire, or any sort of death; and it is certainly so, that their first encounter is terrible, and as if they fear'd no one thing in the world. When they are drawn up, and ready to engage, there is silence made, and the general raising his voice, begins an harangue, so full of spirit, fill'd with such warm incitations, and such a lively action, that the cowardliest among them become like lions and tygers against their enemies. He lays before them the glory of victory, and

OVALLE. and the shame of being overcome, and made
1646. captives and slaves to their adversaries.

Their military exhortations. "Take notice, says he, that there is now no medium between those two extremes: are not you the sons and grandchildren of those brave men, who have fought so many battles, and ventur'd all to defend that country and liberty, for which we now fight? Shall we own that they exceed us in bravery, or that the enemies we encounter are superior to those whom they overcame? Had they less motives than we have? or do we hope for less glory? We must all die; and in the equality of that common fate, the only difference is dying nobly for our dear country, and the liberty of our wives and children; therefore rouse up that courage which you have inherited from your ancestors, who never could endure the thoughts of that infamous yoke of slavery upon their necks. Courage then brave men, as brave as any the sun sees; courage, for in that lies victory."

With these, and other such words, and calling to mind some of their victories, they grow so warm, that raising a cry of war, they drive away all fear, and express great desire of engaging their enemies; which they do with so much fury and resolution, that a battalion that stands their first shock is a very firm one. But we will treat further of this when we shall speak of the battles they have had with the *Spaniards*, whose valour has set theirs in its lustre, obliging them to give such proofs as are worthy to be recorded in history. Let us pursue now the account of their natural qualities, independently from the resistance which they have made to his catholic majesty's arms.

Their natural temper. The warlike spirit of this nation proceeds from their natural temper, which is choleric and impatient, proud, arrogant, and fierce, very cruel in their revenge, cutting their enemies (when in their power) inhumanly to pieces, and wallowing in their blood. We shall relate a case hereafter, in which something of this will be seen. They are strong and robust of body, well proportion'd, large shoulders, high chests, well set in their members, nimble, active, vigorous, and nervous, courageous and undertaking, enduring hunger, thirst, heat, cold; despising all conveniencies of life, even their own small ones, having little value for their very lives, when 'tis necessary to hazard them, either for glory or liberty; constant in their resolutions, and persisting in a thing once begun with incredible steadiness.

Good horsemen. They are excellent horsemen, and upon a single saddle-cloth, or without one, they are as firm as others in war-saddles: they'll ride down the side of a hill, or a precipice, as if they were goats, with their bodies as

stretight and as firm on horseback, as if they were nail'd to the horse: they have no trouble with the baggage they want, for they carry but little with them; not but that when they march they have their little pack of flower of maiz, a little salt, some *Pimientos*, or *Guinea Pepper*, and dried flesh; and this is enough to maintain them a good while. They need no other kitchen utensils than a gourd or *calabash*, with which, when they come to a river or spring, they open their flower-bag, and wet a little with the water; and that serves them for drink; and for meat, when they put more of it with a little salt and pepper, this they call *Rubul*; and sometimes they eat their meal dry; with slices of dried flesh.

The great numbers of people which that country has maintain'd, may be collected from the people that the *Spaniards* found there at their first coming, which was about 200000, more or less, according to the greatness of the districts or territories, and their habitations, which never were in form of a city or town; for the *Indians* cannot endure any formal constraint, but love to live free in the fields; and every *Cacique*, or lord, govern'd his own vassals, who placed themselves according to their conveniencies, some in one valley, and some in another; some at the foot of mountains, others on the side of rivers; some by the sea-side, or on the top of mountains; but all under no other form of government, than the will of their lord, the *Cacique*, to whom they yielded a ready and prompt obedience with joy. Their houses are generally of wood, without any stories, not very large, nor all of a piece, but each room fram'd by itself, so that when they have a mind to remove and chuse another situation, they carry away the house by pieces, or rooms, which ten or twenty men can easily carry. When they take it up, they clear the ground about it, and then at one cry, lifting all together, they get it up, and carry it cheerfully away, every one taking hold by its pillars; and when they are weary they rest awhile, and so on again. Their doors are of the same material, and they have neither hinges, locks nor keys, nor any thing under a lock or key, their security consisting in each other's fidelity, which they observe sacredly towards one another.

Their furniture is very mean, they being a people that despise all conveniencies and superfluities; infomuch, that that which is their natural way of living, would be high penance with any *European* nations: For first, as to their beds, they have neither quilts, nor sheets, nor pillows, much less do they need curtains, pavilions, or alcoves. The hard ground is their couch, upon which they lay some poor skins;

skins; and for boulder, they lay a stone, or a piece of wood, and double their cloaks to lay on it; and that is their highest contrivance of ease: they have one or two very coarse coverlets, which they weave of a sort of thread as thick as one's little finger. People that use so little about their persons, may easily be presumed to have no hangings, nor other ornament to their walls; they have no utensil of gold or silver, though they have so much in their country; their plate is four or five dishes, and some spoons of wood, or a shell from the sea side; a calabash or gourd to drink in; a leaf of a tree, or of maiz, for a saltcellar. This is all the apparatus of their table, which is the ground, or at best a little bench, without any cloth or napkins, but only a little broom, upon which they wipe their hands.

Their food and diet.

Their meats are the most simple, and easily drest, without any incitements to gluttony, as in other nations; but yet they are tasteful enough, and such as many of our Europeans like very well. They eat little flesh; and before the Spaniards came among them, they had neither sheep, goats, nor cows, no, nor hens: they use these only at their great feasts. Their ordinary diet is of maiz, variety of fruits and herbs, and most commonly gourds, or a sort of beans, which we call frizoles. They did eat fish; and the game they hunted, particularly a sort of small rabbits, which they call *Degus*; and since the coming in of the Spaniards, they eat beef and mutton, of which there is great abundance.

Instead of wheat bread, which they had not before the Spaniards brought it, they eat maiz boiled in water, just as rice in the

Maiz.

East Indias. This maiz is, and always has been the general nourishment of the Indians of America; and is not only their meat, but their drink, which they make of the same maiz, toasted and steeped in water, and then boiled, and set by; and that is their *Chicha*, or wine, which they make also of the fruit of other trees.

OVALLE.
1646.

Their way of making flower is very different from ours: they first toast their maiz in great platters of earth; these they set upon the fire full of sand, which when it is very hot, they take off; and putting the grains of maiz to it, stir them about very fast with a kind of broom: it is soon toasted. When done, they take it out, and put in more, till they have done enough to make flower. This they grind between two stones thus; They have a stone fixed in the ground, of about the shape and bigness of a sheet of paper, and so hollowed, as another stone of an oval figure may play upon it: this the indian woman takes with both hands, and being upon her knees, makes it play upon the other, putting, from time to time, with her left hand, the maiz between the two stones, so as to supply what falls away, and that the mill do not stand still. The flower falls forward into a sort of box, as it does in our mills, and almost as fast, comparing the strength of a woman to that of a stream of water. She can do enough at once for the maintenance of her family; and make a provision too for a journey or a voyage of her husband or son to the wars. This is the proper business of the women; and it would be a shame for a man to employ himself in it, or in any other household business.

Their bread.

The women make it.

C H A P. IV.

Of the same Subject.

WHEN the Indians are sick, they change little of their ordinary way of living, and they never have a better bed. Their way of letting blood is safer than ours; for it is not with a lancet, which may either fail to draw blood, or go too deep, and lame the arm, if the surgeon be not very skilful; but with a sharp flint, fixed at the end of a little piece of wood, so fast, that there is just enough left out to cut the vein, and no more: this they apply to the vein after they have made a bandage, as we do, and striking a little stroke upon it, the blood never fails to come, in greater abundance than our bleedings are. This is all they need a surgeon or barber for, they themselves having no beards to shave, and the little hair they have, every one pulls out; and they take it for an affront to look hairy.

Indian phlebotomy.

They have pinchers, which they make of cockle-shells, and always have them about them, using them from time to time in conversation; they thinking it as honourable to be without that, which other people nourish, comb, and take care of; which is a good conviction of the variety of opinions of mankind, about what is, and is not honourable. As for their hair, they let it grow just below their ears, and no lower, and so need no barber to cut it, but do every one help the other to keep the ends of it even.

Their manner of cloathing themselves, (though of various, and very beautiful corners of cloathing,) is very plain and simple: they have no lining to any of their cloaths, neither do they wear one under

OVALLE 1646. der another: their drawers come down to their knees, open and loose, and it is upon their naked body; for they use no shirts: they have a sort of waistcoat, which they call *Macun*, and it is made of about a yard and a half of some woollen stuff, which they leave open, so as to put it over their heads, and then they gird it with a girdle: they have also a kind of cloak or mantle, which they call *Chomi*, which they put on when they go abroad: they have their arms and legs naked, and on their feet they have a sort of shoe, which they call *Ojota*, and is like the rope shoes the *Spaniards* wear: they wear nothing on their heads, but a kind of circle of wooll, of various colours, with its fringes hanging down like a cap; which they stir or pull off in shew of respect, as we do our hats.

*Their fine-
r.* In their feasts, balls, and rejoicings, though they do not change the form of their cloaths, yet they have a richer sort, of finer wooll, and richer colours: they put about their necks some chains of shells, which they gather by the sea-side; these they call *Nancas*: others put snail-shells, strung upon a string, about their necks; and those of the streights of *Magellan* have pearls very well wrought, and of great artifice, as is affirmed by the authors already cited; and on their heads they put a kind of garland, not of flowers, but of wooll, dy'd of several beautiful colours, to which they hang fine little birds, which they esteem, and on each side they have a plume of high feathers, either white, red, or blue, and about half a yard high.

*Their dan-
cing.* Their way of dancing is with little jumps, and a step or two, not rising much from ground, and without any capers, such as the *Spaniards* use: they dance all together in a ring, round a may-pole or standard, which one of them holds in the middle as an ensign; and near it are all the bottles of their wine, of which they take now and then a sup while they dance, drinking to one another; for it is a custom among them never to drink alone any thing that is given them: he that begins takes a sup, and then he that he drinks to pledges him, and gives the cup to another, and so to a fourth, till it be empty; and yet one has not more than the other; for what this man does for that, that man does for this; and so at last they come to be so equally shared, that at the end of the entertainment, they are all alike drunk, and laid down; for they drink as long as they can stand. But this is not easily brought to pass; for besides what they drink in the day-time, they will often pass all night at it, without leaving off, singing and dancing to their drums and flutes. The women, as more bashful, do not enter into these dances, except some

one or two, when the wine has got into their heads, and then too they do not enter into the ring with the men, but dance by themselves. Few of them get drunk, so as to lose their judgment; so they are upon their guard more, to mind that the men do not quarrel, and hurt one another in their drink. Their flutes, which they play upon in these dances, are made of the bones of the *Spaniards*, and other enemies, whom they have overcome in war. This they do by way of triumph and glory for their victory: they make them likewise of bones of other animals; but the *Indians of war* dance only to these of their enemies.

Their way of singing is, all together raising their voices upon the same note, without any difference of parts or measure; and at the end of every song they play on their flutes, and a sort of trumpets, just as we do on our guitars in the *Passacalles*. This they repeat so often, and so loud, that one may hear them at a great distance; for in these feasts, they are very numerous. Those who are not engaged in dancing, sit together in several companies, talking together upon past occurrences, and still warming themselves with their wine; and then they begin to recollect the injuries they have received from one another, and so refreshing the memory of old contests and enmities not revenged; and this makes them break out into new animosities, and sometimes kill one another upon little provocation.

The women as well as the men have their arms naked, but no other part about them; for though they go barefoot, yet their cloaths, which are very long, cover them from head to foot, though in some places they wear them shorter: this is a plain sort of mantle, close to their bodies, without any linnen underneath; this they let fall to their feet, and having fastened it on their shoulders, gather it in plaits and swath themselves from their waste to the breasts with some fine coloured-woollen scarf, of about four fingers broad, and so long, that it takes so many turns about their waste, as to keep their bodies as streight as any: this is all their dress within doors.

The *indian* women of the better sort, that live in towns among the *Spaniards*, have learned the use of smocks and waistcoats under their mantles, but of no other thing; and one cannot affront an *indian* woman more, than to offer to put her on head-cloaths, or necklaces, or sleeves, or gloves, or any of those ornaments which the *Spanish* women use; and much more if they oblige them to put any paint upon their faces; nothing of this kind could ever prevail upon them, though born and bred among the *Spanish* women; and to talk to them

and paint.

them of it, even to those among them who love to be fine, would be like giving them a cut over the face, so great a horror they have for any thing that is so very contrary to their antient customs. They wear nothing on their heads but their hair plaited behind their shoulders, and divided hand-somely upon their forehead over their eye-brows, and have locks which cover part of their cheeks; so their face is handsomely and simply adorned, without any artifice. When they go abroad, they put upon their shoulders another half mantle, square, and fastened before with a bodkin, or crochet, which answers the two others on the shoulders; and thus they go abroad with their eyes fixed upon the ground; for they are naturally very modest honest women.

Few artificers; all soldiers.

This manner of cloathing themselves, with so much simplicity and plainness, as well in the women as the men, with so little pride and vanity in their houses, does not much encourage artificers; who have little to do; and by that means there are the more men of war, which is the thing in which these men place their honour and felicity, as other nations do in the sumptuousness of palaces and furniture, or in other riches and eminencies, either of arts or learning: of all which these *Indians* never had any notion; and yet they learn them easily, when they are taught them, and to a great perfection. They can neither read nor write among themselves; but as to their way of remembering and keeping account, they have their *Quipoes*, which is a sort of strings of different bigness, in which they make knots of several colours, by which they remember, and can give an account of the things committed to their charge. With these they will give an account of a great flock, and tell which have died of sickness or other accidents, and which have been spent in the family, and for the shepherds; and they will tell every particular that happened in such and such occasions, and of what they did and said. When they go to confess, these *Quipoes* serve them to remember their sins, and tell them with distinction and clearness: they have besides excellent memories of their own, and do remember things of very antient date, just as if they had happened but a little while before; and when they begin to talk them over, (which happens generally when they drink, and begin to be warmed with wine,) 'tis wonderful how they will repeat things past, with all their circumstances, and particularly affronts and injuries that have been done them, or their ancestors, refreshing the memory of things that seemed to be quite forgotten. For proof of the care they take to keep the memory of remarkable passages, I must relate

Their way of keeping account.

here what I learned from father *Diego Torres Ovalle*. *Bollo*, a very extraordinary man, both for holiness of life, and skill in government. 1646.

This great man returning from *Rome* (whither he had been sent as procurator of the province of *Peru*) to found the province of *Quito*, he saw in a place where four ways met an *Indian*, who, to the found of a drum, was singing a great many things all alone in his own tongue: the father called one in his company, who understood it, and ask'd him what that *Indian* meant by that action; who told the father, that that *Indian* was, as it were, the register of that country, who, to keep up the memory of what had passed in it from the deluge to that time, was bound every holiday to repeat it by the found of a drum, and singing, as he was then doing. He was moreover obliged to instruct others in the same way, that there might be a succession of men to do the same thing after he was gone; and that which he at this time is singing is, That in such a year there had been there a white man called *Thomas*, who did great wonders, preaching a new law, which in time was lost and forgotten, &c. And thus we may see the manner by which the *Indians* supply the want of books and writings.

A singular way of registering events.

An addition of the interpreter, or a bye of the jesuit.

The women of *Chile* are so bold and manly in their courage, that when it is necessary, and that there is want of men, they take arms, and behave themselves as if they were men. They play likewise at a very active game called *La Chueca*, wherein the men shew their greatest agility and nimbleness, each side striving to get a ball from the other, and carry it to the mark with crooked bandy sticks. They are about forty or fifty on a side, who place themselves in different posts, so as to be useful one to another, and drive away the ball from the other party; and when it happens that two of different sides are at it together, 'tis a pleasure to see them run, the one to forward it with another stroke, and the other to get before him and hinder him from striking it, that he may drive it back to his own side. This is a sport much to be seen, and generally it has many spectators to see the end of the play, which often lasts a whole evening, and sometimes is forced to be put off to another day, such contention there is to win these prizes they play for.

The strength and boldness of the women comes from the little tenderness they are bred with, for they avoid neither heat nor cold; and in the coldest winters, when birds are killed with cold, they wash their heads in cold water, and never dry their hair, but let it remain wet, and dry itself in the air; and as for their children, they wash them in the rivers, when they are yet very young; and when they are brought to bed,

The hard education of the women.

1646. OVALLE. in a very little time they are about the house, as if it were not they, but some other woman that had lain in.

The Indian mens hardi-ness against wet and cold. If the women behave themselves thus, what may we expect from the men? 'Tis a wonderful thing how little they fear weather, though, in the midst of winter; and to see an *Indian*, with that simple habit we have described, his head bare, without hat, or any other covering. I have seen them in this condition endure mighty showers, which wet them all over, and came out at their breeches, and yet laugh and not value that, which to others would have been insupportable.

I remember, upon this occasion, what was said by a *Spanish* gentleman, of a merry humour, to one newly come from *Europe*, who, with great charity, was pitying these poor *Indians* for their sufferings in winter, which in that country is very severe. The gentleman asked the good father what he had to keep his face from the cold? To which he answered, *Nothing*, because every body's face was used to the weather. To which

the gentleman replied, *These Indians are all face*; for from their infancy they have no defence against the cold. Who is it that pities a trout, or other fish, for being in the water, because they are bred in that element? The same may be said of these *Indians*, who are like fishes, and are bred to all that hardship; and so we need not wonder at it. By these means they are so hardened, that a wound which ~~the bravest~~ ^{for the} *Spaniard* would take his bed for, does give ^{wounds bet-ter than the} *Spaniards* them so little trouble, that I have seen them go about without minding it. I have known them have a broken head ~~by accident at~~ ^{by accident at} play, and all they do is to wash it in cold water, never leaving their employment or business; and with this, and the application of their own herbs, which, indeed, are of great virtue, they are soon well; but the excellency of their own constitution helps not a little to their cure in wounds, as well as all other distempers, out of which they get well with a great deal less time and care than the *Spaniards*.

C H A P. V.

Of other Qualities proper to the Natives of Chile.

The people of Chile very patient.

A good story.

'Tis the custom in Spain to dance at processions.

The complexion of the Chile-nians.

FROM this strong constitution, comes the admirable patience of their minds, and the little sense they shew of that which amongst us *Europeans* would be a great mortification. That which happened between an *Indian* and father *Lewis* of *Valdivia* is admirable upon this subject. The *Indian* came to confess to the father; who, to make him enter into a penance for his sins, ordered him to wear a *Cilice*, or hair-cloth upon his skin: it was a very hard one, and such as would have punished one of us severely. The *Indian* put it on, and about a year after, there was a procession of the holy sacrament, at which he danced, and seeing his confessor in the church, he left his dancing, and came to him, saying, *Look here how I have preserved what thou gavest me a year ago*, and shewed it him upon his naked skin. The father was astonished to see, that what he gave him to mortify him, was turned to an ornament; and asking him how long he had worn it, was answered by him, *I have never left it off one minute since thou gavest it me*; and so returned to his dancing, shewing his companions the present the father had made him, as pleased with it, as if it had been a gold or silver brocade; and so far he was from taking it for mortification, or feeling its roughness, that he wore it for a favour given him by his father-confessor.

These *Indians* of *Chile* are the fairest complexioned, and whitest of all *America*; and those of the coldest countries are the whitest,

as we see in *Europe*; but the very antipodes of *Flanders* never come to be so white as the *Flemmings*; and among all the *Chilenians*, I do not remember a red-hair'd one; for ^{No red} they all, both men and women, have black ^{hair.} hair, and that very rough, and hard, and thick; insomuch that the mestitos, or mungrel breed of a *Spanish* man and *Indian* woman, are known and distinguished by that from the children of a *Spanish* man and *Spanish* woman; and this will last to the second and third generation before it softens. There is little difference in any thing else, either of shape, feature, or disposition; nor in the manner of speaking, or sound of the voice: and as for the language, not only the mestitos, but the *Indians* bred among the *Spaniards*, are as ready at the phrase and turn ^{They speak} of the *Spanish* tongue, as any *Spaniard*. ^{I Spanish perfectly.} I have made experience of this often in confessing them; for the confessional is so turned, as the father-confessor cannot see the woman that enters to confess. It happen'd to me often to have an *Indian* woman come in after a *Spanish* woman, and I could not find any difference, till she herself, finding I used her with that distinction and civility due to *Spanish* ladies, would humbly tell me she was but an *Indian*.

The constitution of these people is the ^{They bear} cause that time does not make so strong an ^{their years} impression on them, as on us; and they bear ^{very well.} their years mighty well, turning grey very late, at threecore, or thereabouts; and till then they look like young men. When they

they are over white, or have any baldness, you may guess them at about a hundred : *Live long.* they all live long, and particularly the women ; and when by age they lose their judgment, they seldom falter in their memory, which lasts them to their dying day, even to remember all the particulars of their young days from their infancy. Their *Good teeth.* teeth and eyes are so good, that they seldom lose either ; and, in short, all the infirmities of old men, which are the forerunners of death, come to them later than to other nations. But yet, if they happen to go out of their own country, they lose all their vigour, as we experience daily in our prisoners of war ; who being sold to *Peru*, as soon as they feel the heat of the tropick, they fall sick, and most of them die ; and this is no more than what happens to the *Spaniards*, when they come from their own climate to *Porto Bello*, or *Panama* ; nay, the *Spaniards* born in *Chile*, venture their lives that go to those countries that are between the tropicks.

Cannot endure to leave their own country.

From this experience the *Indians* have of the hot countries, comes the great reluctance they shew to go out of their own, and the resentment they express against those who carry or send them abroad ; and 'tis not to be imagin'd the strange and rash contrivances they have to make their escapes from *Lima* ; for though they have above five hundred leagues to go to their own home from *Peru*, yet they undertake it, and most commonly compass it, through a vast number of dangers and inconveniences. For first, they are forced to go all along by the sea-side, by which one may guess how much they go about, since they fetch the compass of all the bays and nooks, and double all the capes.

The next inconvenience which they meet with, is want of food ; for they dare not enter any town, or inhabited place ; so they are reduc'd to feed on cockles and other shell-fish on the sea-side, which is no very good nourishment. The third difficulty is the passing of so many, and such swift rivers.

The fourth inconvenience is the want of water to drink ; for 'tis not possible, that in so great a journey, they should not sometimes miss of fresh water to quench their thirst. All these difficulties, and many others, which are obvious to travellers, are overcome by these *Indians* by length of time and patience ; and they get at last to their own country, and are out of slavery, not by the means of gold or silver, but by the bravery of their minds.

The boldness of some other *Indians* was yet more remarkable : these were carried in a ship to be sold as slaves at *Lima*, by a *Portuguese* gentleman of the *Habit of Christ*,

who was going about things belonging to war, at the time that I went the same voyage : this navigation is made commonly in sight of the coast, more or less, according as the winds serve ; but still they keep a good way out at sea, for fear of the rocks. These *Indians* resolv'd among themselves to throw themselves into the sea, to avoid this slavery ; and one day, when they found the ship in a proportionable distance to the shoar, so as they durst venture to trust to their swimming, they got loose very dexterously from their fetters, and slid, without being perceiv'd, down by the ship's side into the sea ; and when they miss'd them they were out of sight, and so it was in vain to follow them. Among these prisoners there was an old man, who either because he was not trusted by the others, or because they had not the opportunity of acquainting him with the design, he not being shut up with them, but having the liberty of the ship as an old man, remain'd behind after they were gone. This *Indian* began to think of the thing, and to weigh with himself how his companions had undertaken and perform'd an extraordinary action ; he reflected how they had arrived at their own land, and among their friends, who perhaps were enquiring about him, and that every body despis'd him as a coward, and a man of little spirit, since he had not been able to overcome the adverse fortune which the others had conquer'd, but had submitted to it : he represent'd to himself the welcomes and joys which their friends express'd, and the feasts and entertainments made for their return, and the embraces and caresses which they receiv'd from their relations. All this, I say, made such an impression in his mind, and rais'd such an emulation, that he could not bear the reproaches he made himself, particularly seeing himself without a remedy. At last, after much thought and pensiveness, he came to a resolution, which was, to do something which should be bolder than what his companions had perform'd, and that in the manner of doing it ; for he resolv'd to do it by day, in the sight of all the *Spaniards* ; and for a beginning, he design'd to kill his master, not in the night, and without witnesses, as he might easily have done, but upon the deck, in the sight of all those in the ship, to get himself a greater name of bravery. To this end, he took one day, a great knife in his hand, and fell upon the captain ; and having wounded him in several places, with as much precipitation as he could, leap'd overboard with so much suddenness, that he slipp'd away from those who endeavour'd to seize him. 'Tis to be imagin'd, they were all wonderfully surpris'd at the resoluteness

OVALLE. 1646.

An odd story.

A desperate old Indian.

OVALLE of the action: they immediately brought the ship too, and put out the boat in all the haste that could be to follow the *Indian*, who swimming like a fish, was already almost out of sight; but they overtook him, and bid him yield himself a prisoner, since he could not escape; and finding him still endeavour to get away, they struck at him with their lances, but he dexterously avoided all their strokes with great presence of mind, diving and appearing again where they least expected him. Upon this they fir'd upon him, and wounded him in several places; but neither then did he yield, nor would ever had a thought of it, but the loss of blood taking away his strength, had made him unable to get away, so they brought him almost expiring to the ship, having more valued death with the reputation of a brave man, than life with the infamy of a coward, and the loss of reputation among his own people. This fact does not only shew the bravery of the nation, but likewise their great aversion to go out of their own country, and how heavy a yoke they think subjection to be; and we shall see hereafter how much they have done to defend their beloved liberty.

Now let us speak of some other customs these *Indians* have. They solemnize their marriages their own way, and in a very contrary manner to that of the *Europeans*; for as to the portion, the woman does not provide it, but the man; and neither of them enjoy it, but it passes to the propriety and use of the father of the young woman; so that the husband has a charge upon him of maintaining his wife without any help; nay, rather with less ability, for he parts with some of his substance to purchase her; so that in this country 'tis no charge at all to have many daughters, but rather a part of their estate and substance.

Daughters are no burthen, but rather riches to a father.

They take many wives; and the greatest obstacle they have to be converted to our religion, is this vice of *Poligamy*, which they embrace with great sensuality, though 'tis chargeable, because at the same time 'tis a figure of power and riches. The first wife has some preeminence over the others, and has the ordering of them, yet they all look upon themselves as lawful wives, and their children as legitimate; yet the son of the first inherits the estate and the honour of *Cacique*, and has a power over his other brothers.

How they manage poligamy.

Natural obedience to their Cacique.

The subjects obey their lord with great punctuality, love, and respect; and for this reason they have no prisons nor strong places to hold them in; for their natural love and respect they bear their *Cacique*, is a law inviolable in their hearts, and a reward of their obedience, which they shew in all regards that may please him.

When a *Cacique* has a mind to make war, he need not make provision of money for pay, without which, amongst us, men will not fight, even for their king: he need only give out his orders, and they all come with arms and horses, bearing their own charges during the enterprize; and this is the reason that they can assemble so powerful an army in so little time, they all looking upon the common cause as their own; and as they make the good of their country the motive of their arms, every one thinks himself sufficiently rewarded if they can defend that from their enemies. The sound of the drum and trumpet is only to shew them the necessity of their meeting in arms; at which they immediately leave wife and children, and all that is dear to them, with the hazard of never seeing them more, as it often happens.

In the distribution of the booty and slaves taken in war, there is no other method, than that every one has what he can get, so that the bravest and most diligent are the best provided, without any obligation of giving any part of it to their captains or general; for in this they are all equal, and valour alone makes the distinction, which they shew in an eminent degree, being very desirous to recover some of our arms, such as guns, swords, lances; for they have no iron of their own. When they return from war, and find what men they have lost, 'tis incredible what lamentations, cries, and tears, proceed from the widows and children of those who are dead; and though this be a common sentiment of humanity, practised amongst all nations who value society and proximity of blood, which are the foundation of friendship, yet the *Indian* women seem to surpass all others; for they do not cry in secret, but set up their notes, so that when any one hears them at a distance, it provokes more to laughter than moves to compassion. When a man dies at home, the manner of their expressing their sorrow is more remarkable; for the women all get about the dead body, and the eldest beginning, the others follow all in the same tone; and thus they continue a great while, so that they never give over as long as they can hold out; and this custom they preserve, even after they are baptiz'd, and live among christians; but not that which they had of opening the dead bodies, to know of what disease they died, and to put meat, and drink, and cloaths in their graves with them, as also jewels and things of value; neither do they cover their graves with pyramids of stones, nor use other ceremonies practised by the gentiles of those parts.

Their wars voluntary, without pay

Very brave.

Want iron.

The women's manner of mourning.

C H A P. VI.

Of the Chilenian Indians, who inhabit the Islands of Chile:

WE divided the kingdom of *Chile* into three parts, and the *Islands* made ~~one~~: these are very well peopled: those who live in the fertile *Islands*, which are capable of producing corn, and feeding flocks, pass their lives as the *Indians* of *terra firma* do, eating flesh and several fruits, the product of their *Islands*. Those who inhabit the barren or less fertile *Islands*, eat fish of the sea, and shell-fish, as also *Potatoes*; and some, who cannot have any wooll, cloath themselves with the barks of trees. Some go stark-naked, though their climate is mighty cold, and by custom do not feel the hardness of the weather *overmuch*.

Their
cloathing.Very singu-
lar.

Others have a strange way of cloathing themselves, which is to gather a certain earth with roots about it, to give it a consistency; and others cloath themselves with feathers, as brother *Gregory* of *Leon* reports in his map. They are all tall men, and in some places there are giants, as the *Dutch* relate, who say, they found skulls that would contain within them some of their heads; for they us'd to put them on like helmets: they found also dead mens bones of ten and eleven foot long, whose bodies by consequence must have been thirty foot high, which is a prodigious thing. Those whom they saw alive, were generally taller by the head and shoulders than the *Dutch*. This appears by the relation of general *Schewten*; and from that of *George Spilberg* we learn, that when they were in the *Streights* of *Magellan*, they came to an *Island*, which they call'd the *Island* of *Patagoons*, or giants, because of some they saw there, and on the *Tierra del Fuego*. Among the rest, they saw one who was upon a rock, to see the ships go by, and they say of him, that he was *immanis admodum, & horrendæ longitudinis*.

Giants.

Likewise we know, from the fleet commanded by *Don Fray Garcia, Josre de Loaísa*, a knight of *St. John's* order, that at the cape of the *Eleven thousand Virgins* they found the footsteps of men of a large stature, and met two *canoos* of savages, whom, because of their strength and stature, they call'd giants: they came near the ships, and seem'd to threaten them; but those of the ship endeavouring to follow them, they could not come up with them, for they rowed so swiftly, they seem'd to fly. 'Tis

Good row-
ers.Canoos of
whalebone.

probable these canoos were made of the ribs of whales, which are there in abundance; and they found one before with the sides and steerage of whalebone.

In another voyage, made by *Thomas*

Candish, an *English* gentleman, they found in a port, (in a very inaccessible place,) a company of *Indians*, very lusty men, who notwithstanding the prodigious cold of that country, lived in the woods like satyrs, and shewed so much strength, that they would throw stones of three or four pound weight a great way. We read likewise in the relation of the voyage of *Magellan*, that as he winter'd in the bay and river of *St. John*, there came to the ship six *Indians* so tall, that the lowest of them was taller than the tallest *Spaniard* aboard; that having made a great kettle of the sweepings of the bisket for them, enough for twenty men, those six eat it up entirely, without leaving a crum of it. *Magellan* gave them a sort of coats of red wooll, with which they were much pleas'd, never having seen any before; their ordinary wear being deer skins. They learn'd from them, that in the summer they us'd to come down to the sea-side to live, but in the winter they withdrew more into the heart of the country. We know likewise by these same authors, that the number of the *Indians* that inhabit those coasts, is considerable, particularly in the port called the port of *Sbell fish*; where as soon as they landed great numbers of *Indians*, with their wives and children, came to them, and exchanged with them great quantities of pearl, ready wrought in points, like diamonds, very artfully, for scissars, knives, and other baubles; as also for *Spanish* wine, which pleas'd them extremely; but they came no more, for they were frighted with seeing the *Spaniards* shoot some game.

The fleet of *George Spilberg* found also great numbers of inhabitants in the land, on the other side of the *Streight*; and when the captains, call'd the *Nodales*, were by the king's order to view the *Streight* of *St. Vincent*, they found, upon a point of land of that *Streight*, great store of people. The same is said by the *Saballas*, and others, who went from *Peru* to search the *Tierra del Fuego*; and all those who have pass'd the *Streights*, have constantly seen men and inhabitants on the shoars in several places; and at one place some of *Spilberg's* men landing to pursue some birds of a very fine colour, which they saw on shoar, had scarce begun to shoot them, but they were environed with *Indians*, who attacked them so furiously with clubs, that happy was he that could make his escape to the ship; and many of them were knocked on the head.

OVALLE. 1646. The *Nodales* likewise saw in the bay of *St. Gregory* great numbers of inhabitants, with whom the seamen drove a trade, by exchanging some *Spanish* trifles for gold. By all which 'tis apparent how well peopled all that coast and the *Islands* are; yet we do not know what sort of people inhabit the fourscore *Islands* discovered by *Pedro Sarmiento*, for no body landed out of that fleet; but we know that the *Islanders* of *Mocha*, are a peaceable civil nation, several ships having touch'd there, and at *Santa Maria*. As for the nation call'd the *Chonos*, they are a poor people, but good natur'd, as has been seen by the *Chilenians*, in whom the *Spaniards* have found great docility, and a good understanding.

The Islands and Straights are well-peopled by savages.

Naked people in a very cold country.

In the *Islands* discovered by *Francis Drake*, in about five and fifty degrees, of which we have already made mention, they met with canoos of men and women stark naked, which is the more remarkable, because of the excessive cold of those parts, where there is a continual night, without any appearance of day, when the sun coming to the tropick of *Cancer*, makes our summer; and on the contrary, when he draws near the tropick of *Capricorn*, there is continual day, without any shadow of night.

And now lately, in the year forty three, the *Dutch* having sent a fleet under the command of *Anthony Brun*, which pass'd the *Straights* with a design to settle at *Valdivia*, as they endeavour'd; they sail'd afterwar's into seventy degrees, where they discover'd an *Island*, which they call'd *Barnevelt*, in which they saw the footsteps of men of large stature, and observ'd great smoaks: this place was so cold, that the *Dutch* could not endure the rigour of the weather, which was nothing but frost and snow, it being then *June* or *July*, which is the depth of their winter; and a perpetual night, without seeing the sun one hour in a day. 'Tis a wonder how those *Islanders* pass their time in so much cold and darkness, without any thing to cover their nakedness; for wanting commerce with *Chile*, or other parts in *Europe*, they have neither sheep, nor goats,

nor any thing that produces wooll fit to make them garments. It must be own'd, ^{Man kind} that men are quite other creatures than the ^{naturally} nice imagination of some effeminate nations ^{hardly} takes them to be; and human nature by custom accommodates itself to the place where 'tis bred, so that very often men will not leave that place for any other more full of conveniency. 'Tis for this ~~that~~ their *Indians* shew such an aversion to leave their country where they were born and bred: and though it be a miserable one, and those they go to more delicious, yet there is no sweetness in any one like that of their own country.

There is a report likewise, that in the ^{reports of} *Straights* of *Magellan* there are pigmies, ^{Pigmies,} but I know not upon what it is founded; for all the authors that relate the voyages made into those parts, speak always of giants, or men of a gigantick form, who exceed us in strength and stature; and 'tis said in one of these relations, That the ship's men, in a certain place, beginning to fight with these *Indians*, they pull'd up great trees by the roots, to use them as a retrenchment, as we may see in a picture in *Theodore* and *Jean de Brie*; but I cannot imagine how this report of pigmies was invented; and it seems to me a jest or irony, or, perhaps, among these giants there are some dwarfs.

That which was seen by the vice-admiral of *George Spilberg's* fleet, was a body of about two foot and a half high, which was buried with another of an ordinary stature in a grave of very little depth, and cover'd after the *Indian* way, with a pyramid of stones, in an *Island* call'd the *Great Island*, about the second mouth of the *Straights*; and from hence, perhaps, or from having seen some of that littleness alive, this report of *Pigmies* took its rise.

This is all the account I can give of the inhabitants of the *Straights*, and *Islands* about it. Time will, perhaps, enable us to be more particular, when by commerce we are better acquainted with them; and then without doubt there will not be wanting authors to write about them.

C H A P. VII.

Of the *Indians* of *Cuyo*, who are on the other Side of the *Cordillera*, to the East of *Chile*.

THE *Indians* of the province of *Cuyo*, though in many things they are like the inhabitants of *Chile*, yet in many others they are not so. For first, they are not so white, but more copper-coloured, which may be attributed to the great heat they endure in summer. Secondly, they are not so cleanly, nor do not build such neat houses

The Indians of Cuyo are copper-colour'd.

to live in; but their habitations are wretched; nay, some, who live in the marshes, make themselves holes in the sand, into which they go like wild beasts. Thirdly, they are not so laborious to cultivate their land, and so have not such variety of product as those of *Chile*. Fourthly, they are not so brave, nor warlike as the *Indians* of

of *Chile*: their language is likewise different, and so different, that I do not know one word of the one, that is in the other; but yet the language of *Chile* being so universal, that it is the same all over the kingdom, to the foot of the *Cordillera*; those of *Cuyo* learn'd it too, and that very perfectly; but I never observ'd that a *Chile Indian* spoke the language of *Cuyo*, which shews the advantage that the language of *Chile* has over the other.

Basket-work that will hold water.

In return of these advantages which the *Chilenians* have, those at *Cuyo* have some over them. And the first is in the stature, which is taller, but not so strong and well-set as the *Chilenians*, but rather raw-bon'd, without flesh. I do not remember I ever saw a fat *Cuyian* among so many as I have seen. They are likewise better workmen in some things which require patience and length of time, such as basket-work of several figures, all of straw; and yet so close work'd, that they will hold water; for which reason they make their drinking vessels of them; and as they cannot break by a fall upon the ground, they are very lasting, and the curiosities of this kind, which they make, very much valued for their work and colours.

Likewise they prepare several firs of animals, which they hunt; and they are very soft and warm for winter: they hunt and catch ostriches likewise, and make many works of their feathers, with which they adorn themselves on their festivals, mingled with the feathers of other birds. They likewise hunt the wild goats and deer, and are the masters of all the *Bezoar-Stones*, which they sell to the *Spaniards* so dear, that any one who should buy them to get by them, would make but a small profit in *Europe*.

The Cuyians more hairy than the Chilenians.

These *Cuyians* are also more hairy, and have more beard than the *Chilenians*, though they pull their hair as the others do, but with more trouble; and they never look so smooth as those of *Chile*. They are all well-shap'd, and nimble, and have a good air: they have also good understandings. The women are tall and slender, and I do not know that I ever saw taller: they paint their faces green, which is so well settled in their skin, that there is no getting it out: most commonly they paint only their nostrils, some their whole faces, and the men their beards and lips. Their habit is decent in both sexes: the women let their hair grow as long as they can, but the men only below their ears. In all other things are like the *Chilenians*.

The women paint their faces green.

They are very nimble, and good travellers, without tiring. I have seen them run up the steepest and straightest hills of the great *Cordillera*, like so many goats; and this the women will do as well as the men;

the little children too. The women will run with their children in a cradle fastened to their backs by a strap that comes over their forehead; and with all this weight they follow their husbands with so much ease and agility, that 'tis wonderful.

OVALLE. 1646.

For a proof of the admirable disposition of these people, in walking and running, a corrigidor and captain-general of that province told me a story about their hunting their venison, which is very singular: He told me, That as soon as they find their game out, they draw near them, and follow them upon a half trot, keeping them still in sight, without leaving them so much as to eat; and in a day or two they begin to tire them so as they can come up with them, and kill them, and return home loaded with them, where they feast upon them, with their families, till they have made an end: for these *Indians* are such gluttons naturally, that a few of them will eat up a calf, or a young heifer in a meeting: but they are as good at fasting, when they have nothing to eat; for they will pass several days with a little maize and some roots, which grow wild: they are also very dexterous archers, and often kill with their arrows the game they see.

A proof of their agility.

I shall not omit a particular favour bestowed on these *Indians* by God Almighty, which is a singular instinct of tracing and following any lost thing. Of which I shall give two examples which happened in the city of *St. Jago*.

They pretend to an instinct of finding lost things.

Our college had a cart belonging to it, which stood at the gate of a garden, to which our *Seminarists* did use to go to refresh themselves: it was stole one night, and being miss'd in the morning by one of our lay-brothers, he immediately went to find out a *Guarpe*, (for that is the name they give those finding *Indians*;) he presently fell upon the scent or piste, and followed it, taking with him the lay-brother, till he came to a river, where it fail'd him: but he lost not the hopes of finding it; he crossed the river, and recross'd it again, once and twice, by so many different fords, (the man that stole it, as he since confess'd, had cross'd so many times to break the piste to the follower.) After this he went four leagues outright, and there he found it, when the man that had it, believ'd himself most safe from being discover'd.

Another time, a certain person having lost a parcel of oranges, he employed a *Guarpe*, who having led him through many streets and turnings, brought him at last to a house; where finding the door shut, he bid him knock, and go in, for there, said he, are thy oranges: he did so, and found them. There are every day experiments of this kind made by them to admiration:

OVALLE. they are likewise stout workers, very strong, and lasting in labour.

1646.

Next to these *Indians* of *Cuyo*, are the *Indians Pampas*, call'd so because they inhabit those vast plains, which are extended for about four hundred leagues to the east, and reach to the north sea. Those of the point of *Los Venados* are the nearest the kingdom of *Chile*, and are much of the same kind. These *Pampas* have no houses, in which they differ from all mankind; for the first thing men generally do, is to cover themselves from the inclemency of the air: and this is the thing which these *Pampas* do the least care for; perhaps, they are of opinion, that 'tis an injury to the author of mankind, to look for more shelter than he afforded men at first, which is the earth, with the heavens for vault or cover; and that to defend themselves from rain, it was enough to make any little cover, which might easily be taken away, and set up in another place.

Build no houses.

Love independency.

This they observe; and look upon it as a sort of prison or captivity, to be tied to one place: for this reason they will neither have house, nor gardens, nor plantations, or possessions, which are like chains to hinder their removal to other places; for they judge that the greatest of all earthly felicities is to have the absolute, entire, and independent use of their own free will; to live to day in one place, to morrow in another. Sometimes, say they, I have a mind to enjoy the freshness of a river side; and being weary of that, I pass to another. Otherwhile I have a mind to live in woods and solitudes; and when I am weary of their shades, I go to the open air of plains and meadows. In one place I hunt, in another I fish: here I enjoy the fruits of one territory; and when they fail, I seek out another, where they are beginning to ripen. In short, I go where I will, without leaving behind me any thing I regret or desire, which uses to be the torment of those who are fixed. I fear no ill news, for I forsake nothing I can lose; and with the company of my wife and children, which I always have, I want for nothing.

This is the account that these people give of themselves; and thus they pass a life without cares; here to day, to morrow in another place; making in an instant, with four little posts, a hut cover'd with boughs, or some hide of a beast. Their incomes are their bow and arrows, with which they provide them with flesh, with which they drink water; only sometimes they make their drink, call'd *Chicha*, of fruits of the trees, as they do in *Chile*. Their cloaths are some leaves for decency, and a skin, which is like a cloak, to cover them in other parts. They make holes in their lips, and put some

glass or brass pendants in them, and sometimes silver ones. The men let their hair grow to their shoulders, and the women as long as it will. There seems to be one thing wanting to this nation, which all other *Indian* nations have, which is the bread they make of maize, or wheat, and some of rice: but yet they do not want a supply of this kind; for because they have not these grains, they make bread of the coes of a tree, which we in *Spain* call *Algaroba*; and because that does not last long, they have invented a strange sort of bread made of locusts, (nay, I have heard of *Mosquitos*;) but the locusts use to be in such vast quantities in those great plains call'd the *Pampas*, that as I travell'd over them, I often saw the sun intercepted, and the air darkened with flights of them.

The *Indians* observe where they lye to rest; and those plains being here and there full of thickets, they rest in them, and chuse the highest for shelter. This the *Indians* know; and approaching softly in the night, they set fire to the thicket, which, with the high winds that reign in those plains, is soon reduc'd to ashes, and the locusts with them. Of these they make great heaps; and as they are ready roasted, they have nothing more to do, but to grind them to powder; of the flower of which they make a sort of bread, which maintains them. To the same end they use an herb call'd *Cibil*, which either by pact with the devil, or by natural virtue, affords them a sustenance for several days, only by keeping it in their mouths, where it makes a white foam, which appears upon their lips: it is a very disagreeable sight, and made me very sick to see it.

The herb Cibil; its virtues.

Though these people are not so warlike as the *Chile Indians*, yet they are courageous, and have shewed it upon several occasions. They are very dexterous at their bows and arrows, with which they make incredible shots. But besides these, they have a very extraordinary sort of weapon of a new kind, which is made up of two bowls; the one bigger, and is a stone perfectly well rounded, about the bigness of an ordinary orange; the other is of a bladder or hard leather, which they fill with some matter of less weight than the stone: these two balls are tied strongly to each end of a strong whipcord, which they twist of a bull's pizzle: the *Indian* standing on a high ground, takes the lesser ball in his hand, and lets the other fly, holding it like a sling over his head to take aim, and hit his adversary with the heavy ball, which they direct to the head, or legs of their enemy; and thus they entangle him so, as to bring him to the ground, and then the *Indian* leaps from the height where he was, and without giving him time to disembarass himself,

A strange sort of weapon.

himself, they kill him; and this instrument is so powerful in their hands, that it not only brings a man to the ground, but a horse or a wild bull, which are very frequent in those parts, since the coming of the *Spaniards* among them.

At this time they have no wars with any; for though they do not own a subjection, yet they carry themselves to the *Spaniards* very friendly; and the reason is, because they see their towns so populous and strong, that it would be in vain for them to stir, or make any attempt against them: they have the liberty of going in and out as they please; and when they have taken a kindness for a *Spaniard*, there will come a troop

of them in harvest time to help him to get it in, and when it is over, they return to their own way of living: but there are others who come in troops to the highway, and if the *Spaniards* are not well armed, attack them in their waggons; for which reason they seldom set out but a great many together, and well provided for an encounter; but most commonly they are well pleas'd with some little present, which they ask very boldly, as if they were masters of all the goods in the waggons: they generally are content with a little biscuit or wine; but if the travellers are too niggardly, they are in danger all the way, and must owe their safety to their fire-arms.

OVALLE.
1646.

BOOK IV.

Of the first Entrance of the *Spaniards* into the Kingdom of CHILE.

CHAP. I.

The Introduction to this Book.

HAVING hitherto treated of those three parts, into which at first we divided the kingdom of *Chile*; of its soil and climate; of its temperature and properties; of its inhabitants, and their antiquity, nobility, and customs; the order of this history requires we should now treat of the entrance of the *Spaniards* into their country; since by that it has been changed much for the better in many things: and although what we have already mentioned about the *flocks, fruit, bread, wine, oil, &c.* of which they had no idea before the *Spaniards* came among them; yet this is nothing in comparison with the advantages they receive by the light of the gospel, which by the means of the same *Spaniards*, was, and is communicated to them. Upon this consideration, we may well excuse some military excesses of covetousness in some of the first discoverers and their soldiers, who as such, and men who are bred in disorder and confusion, and used to imbrue their hands in blood where they find resistance, had less regard to the strict rules of justice towards the *Indians*. But this was against all the orders of their catholic majesties, who from

the beginning recommended most strictly the preservation of the privileges of those poor people, charging all their governors, captains, conquerors, and royal ministers, that they should always have before their eyes, in the conquest of this new world, not so much the dilatation of their royal power and monarchy, as the propagation of the gospel, and the kind usage of the *Indians*, their conversion being the principal motive of the undertaking, as we shall see in its proper place.

But how is it possible, morally speaking, that human actions, though never so well design'd upon high motives, should not have a mixture of the inconveniencies which passion, not overcome by reason, produces? And so 'tis no wonder, that in the beginning of those discoveries some disorders should happen, though they never were so exorbitant as some authors make them; and particularly in *Chile* they were much less, because the inhabitants of those parts made the *Spaniards* feel their valour at their very first entrance, where they found their progress opposed with greater vigour than they imagined.

But

OVALLE. But since this kingdom is one of the considerable parts of *America*, it will be necessary first to say something of the discovery of the new world; for this being the remotest part of it towards the south, it was necessary to pass all the rest before it could be discovered; and therefore, though I have not a design to make any relation but of the kingdom of *Cbile*, I shall nevertheless

1646.

touch upon the other discoveries, and follow the steps of the conquerors in order, as the histories of them do relate; so the subject of this book will be better understood, by opening the manner of the finding them, and the order of time in which this progress was made; and so place each kingdom according to its antiquity.

CHAP. II.

Of America in general, and what Light may be found of it among the Antient Philosophers.

AMERICA, called otherwise the *New World*, because of its late discovery, is now as well known as it was formerly hid for so many passed ages, not only to the vulgar, but to those piercing wits among the pagans, *Aristotle*, *Parmenides*, *Pliny*; and among the christian philosophers, to *St. Austin*, *Lactantius*, and others, who judged all that climate to be inhabitable that lay between the tropicks, founding their opinion upon a point of their philosophy, which was, That the preservation of the animal demanded by its temper the just proportion of the first four qualities, which they supposed could not be found under the torrid zone; for so they called it, because of the force of the sun upon it, it being all the year almost perpendicular to it; and having observed its effects on this side the tropicks, how it dries the earth in summer, consumes the fountains, thinking that if it did not withdraw to the other tropick, it would have entirely fired the earth, though refreshed by the nights, 'tis no wonder, if they were persuaded that where its beams were continual, there could be no habitation for man.

But experience, which is the touch-stone of all philosophical discourses, has discovered that not only there is a plain passage, though troublesome, from one pole to the other, but also that those regions contained under the *Zodiack* have been, and are inhabited by innumerable nations; and that there are even under the *equinoctial* line, some places, as that of *Quito*, so temperate and healthful, that they are manifestly preferable to several in the temperate Zone. This new world has, by common consent, been called *America* unjustly enough, as *Herrera* complains in the first book of his fifth *Decade*, by the crafty usurpation of this discovery appropriated to *Americo Vesputio*, instead of *Columbus*, who by this means is deprived of his true glory.

Quito temperate, though under the line.

It is not easy to make out what knowledge the antients have had of this new world: *Marinco Siculo* pretends, in his *Spanish Chronicles*, that the *Romans* had known it, and made some conquests in it; and his

foundation is, That in one of the gold mines of *America*, there was found a medal, or antient coin, with the figure of *Augustus Cæsar*; which, he says, was sent to the pope by *Joannes Ruso*, archbishop of *Cozensa*: but this is refuted, as ridiculous, by *Pedro Bercio* in his *Geography*; and 'tis not very probable, that that coin alone, and no other, should have been found in all this length of time, since the mines are working in the *West Indies*. But, besides, if the *Romans* had been once in possession of those parts, it would not have been easy to have lost all commerce with them, considering the great riches that communication produces; for the nations would have called in one another, as we see they have done since the discovery made by their catholic majesties, and their possessing of those parts, to which there goes every year so much people from *Europe*.

As to the *Roman* coin, 'tis probable, that some who passed from *Europe* with the first conquerors of the *Indies*, and out of a humour of spreading novelties, (which though little worth, are generally applauded by the vulgar,) feign'd he had found it in the mines; or it might fall from him, and be found by another, who carried it as a rarity to the bishop, who is said to have sent it to the pope. I am not ignorant that there are many arguments and conjectures, and those not contemptible, of some knowledge that the antients had of this so principal a part of our globe, which are related by *Abraham Ortelius Gorosio*, father *Acosta* of our company, in his first book of the *History of the Indies*, Chap. 11, 12, & 13. *Thomas Bosius*, Book XX. Chap. 3. *Malvenda*, frier *Gregory Garcia*, in the first book of the *Origin of the Indians*, taking their hints from *Plato*, *Seneca*, *Lucian*, *Arrian*, *Clemens*, *Romanus*, *Origen*, *St. Jerom*, and others, who seem to have had some knowledge of this new world. There may be seen in father *Pineda*, of our society, in the fourth book about *Solomon's Court*, Chap. 16. the words of *Abraham Ortelius*, which make very much to this purpose.

C H A P. III.

What Light may be had from Scripture about this New Region.

THERE is another question which seems to be better founded, than the first; and that is, What light may be had from scripture about these remote regions? because there are many authors, who from these words of the second of *Chronicles*, Chap. iv. *The servants of Hiram brought, with the servants of Solomon, gold from Ophir*, infer, that the scripture here speaks of the *West Indies*, and interpret *Ophir* to be *Peru*, or all *America*; and as the most famous *Christopher Columbus* was the first who discovered it, so he seems to have been the first that used that expression; for they say, that when he was in the island of *Hispaniola*, he often said, that at last he was come to the desired land of *Ophir*, as is related by *Peter Martyr*, in his first book of the *Decade of the Ocean*. But he who first set out this opinion in form, was *Francis Vatable*, who upon the third book of *Kings*, in the ninth chapter, and so on, makes *Ophir* to be the island of *Hispaniola*, and the continents of *Peru* and *Mexico*. He was seconded in his opinion by *Postel Goropio*, *Arias Montano*, *Antonio Possentino*, *Rodrigo Yepes*, *Bosius*, *Manuel de Sa*, and other authors, reported by *Pineda*, in his treaty *de rebus Solomonis*; which makes father *Martin del Rio*, of the company of *Jesus*, say, that this opinion is not without good grounds; but he who defends it most vigourously, is father *Gregory Garcia*, of the order of *St. Dominick*, in his book *De Indorum Occidentalium Origine*, where he strives mightily to clear this opinion from all objections and opposition.

The things said by these authors are not of small weight, though those who would make an inference from the word *Peru's* having a nearness to *Pharvim*, which is used by the septuagint in 2 *Chron.* iii. where speaking of the gold with which *Solomon* adorned his temple, they say, that it was of gold of *Pharvim*, which in the vulgate is translated *Aurum Probatissimum*, or most pure gold, have against them a powerful adversary, to wit, *Gareilasso de la Vega*, who affirms, that the name *Peru* is not the name of the land, but that the *Spaniards*, endeavouring to inform themselves of the country, took an *Indian*, whose name was *Beru*; and that asking him what country they were in, and he imagining they asked him his name, he answered *Beru*; and the *Spaniards* thought he had said *Peru*, and that that was the name of the country, which ever after was called so. That which, in my opinion, confirms most the belief of *Ophir*, is, that which *Solomon* says of him-

self in the book of *Wisdom*, That he *knew the disposition of the earth*; with which it seems that ignorance was incompatible; and that he could not but be informed of that great and principal part of the world; so that we may conclude he knew how to send his fleets thither, and bring home the riches of those parts: and this may be more probable, if we consider the great desire he had of gathering together all the precious things from several parts of the earth, and the purest gold, for the ornament of the temple and house of God; for the gold of *Valdivia* and *Carabay* being the purest in the world, and the precious woods of odours that are in those kingdoms, and *Paraguay* and *Brazil* the finest, it appears hard he should not use all diligence to have them, they making so much to his end, which was to gather treasure and precious things.

That he could do it, there seems no reason to doubt, since we know he had a great and powerful fleet; and if this fleet spent always three years from the time of its setting out in the *Red Sea*, to the time of its return, as the interpreters of the scripture all say, in what could they spend so much time, but in going to the utmost bounds of the east and west? and, 'tis possible, went round the world, as the ship *Victory* did since, in the same time; in which, the great Captain *Magellan* discovered and passed the *Streights* of his name; and since we know, that the fleets of the catholic kings do, in our days, penetrate to the utmost parts of the east and west in less than a year's time, why could not the same be done by those of so powerful and so wise a king as *Solomon*, who may be supposed to have understood himself, and instructed his captains and pilots in the art of navigation? Neither is it improbable, but he might know the use of the loadstone, and the sea compass, as some authors do affirm he did. This is yet more confirmed by what we have observed already about the knowledge and conjectures which the ancients had of this new world, of which he likewise could not be ignorant, but rather have a more particular insight into them, being himself so perfect in the sciences of cosmography and geography, as well as hydrography; all which he had by infusion from God Almighty, that he might see into the errors of those who believed there were no antipodes, nor that the torrid zone could be inhabited, denying the roundness of the earth, and other such mistakes.

Ophir said to be Hispaniola.

Reasons for Solomon's knowing the land of America.

The course
of Solo-
mon's
fleets.

Lastly, we know, that his fleets came to *Syria, Phœnicia, Africa, and Europa*; and to come to those coasts, 'tis certain, that if they set out at the *Red Sea*, it was necessary for them to sail southward to double the cape of *Good Hope*, and then north, and pass the equinoctial line a second time, as the *Portuguese* do now in their voyages from *India to Portugal*. This being supposed, and that *Solomon* had the knowledge of *America*, 'tis probable he was not unacquainted with the communication of the *North and South Seas* by the *Streights of Magellan and St. Vincent*; for *Solomon* being so powerful, both by sea and land; and so well instructed in all things, 'tis probable he caused those shores to be searched, to find the communication of both seas, as it was since done by men much inferior to him in every thing, which were *Magellan, and Jacob le Maire*; or, it might be discovered by some ships driven by storms into those parts, as some say it befel the first discoverers of *America*.

This once supposed, those who understand any thing of navigation, and the art of the sea, cannot but know how much more easily a fleet, being placed at the cape of *Good Hope* in thirty six, may sail south to the fifty fourth degree, where the *Streights of Magellan* lie, than to sail to the north above seventy two degrees, which it must do from the cape to *Europe*: from whence may be inferred what I say, that if it was true that his fleet came to *Africa and Europe*, and entered the *mediterranean sea*, it was much easier to go to *Chile and Peru*; for from the *Streights* it might run before the wind all along that coast; and having taken in the gold, precious woods, silver, and other commodities, it might return by the same *Streights*, as *Pedro Sarmiento*, and others, have done to the *North Sea*, and so to the cape of *Good Hope* and the *Red Sea*: or, the fleet being in the *South Sea*, might sail west to the *Philippine islands*; and from thence coasting along those parts we call the *East Indies*, it might take in all the eastern commodities; and so having gone round the world, return loaden with all the riches of east and west, with pearls, diamonds, rubies, and other fine stones, as also musk, amber, ivory, and other valuable eastern commodities; and from the west, with gold, silver, odoriferous woods, pearls, emeralds, fine dyes, rich and fine woolls, amber, and other riches, which were wanting to make up the opulency of *Solomon*.

Neither ought this to be thought impracticable, since 'tis made out already in these books, how easy the navigation would be from *Chile* to the *Philippine islands* in two or three months: the conveniencies of which

navigation have been set out in the fourth chapter of the second book; and we do know how the ship *Victory* did return that way, and so have many others since: by all which the possibility of *Solomon's* navigation is made out, and that within the compass of the three years, in which they used to return to their port in the *Red Sea*; and if it did not do this, it can hardly be imagined, how it could employ such a space of time.

For these, and many more reasons of this nature, our most learned *Pineda* retracts the contrary opinion, which he had published in his commentaries upon *Job*; because, when he writ them, he had not so well examined, the grounds of the last opinion, nor weighed all the authority and strength of conjectures that attend it; and, indeed, so far every prudent man would go, as not to despise and contemn an opinion of which he believed the contrary, if it were maintained with probability, and by persons worthy to be hearkened to. Though, Reasons against Solomon's having discovered America. to say truth, if I must speak what I think, that one reason which I gave above against the *Romans* having had knowledge of those parts, [which is, That it appears incredible, that having once made the discovery, and enjoy'd those mines, not only the communication with them, but the very memory of them should be lost,] seems, in my opinion, to be as strong an argument against *Solomon's* fleet; for if that did once overcome all the difficulties of that navigation, what cause could interrupt that commerce in such a manner, as that the total remembrance of it should be abolished? 'Tis true, that as to the *Jews*, they were a people who did not care to live in foreign parts, nor settle among other nations, nor inhabit the sea coasts; for God Almighty was unwilling, that by the communication with the gentiles, they should contract any of their customs; and therefore we do not know, that of all the race of their kings, any more than three went about any such thing, which were *Solomon*, who compassed it, and *Josaphat* and *Ochobias*, whose undertakings had no success. By which it may be infer'd, that when *Solomon* died, and the temple was finished; this navigation was neglected, till at last it was quite forgot; besides, that it appears from the *Chronicles*, and other places of scripture, that in those times silver and gold were but little valued, the covetousness of mankind not being arrived to the height it is at now a days: they did not think it worth leaving their houses, to endure labour in the search of them, and run all those hazards which the voyagers to those parts do undergo. This therefore might take off the edge and desire which we see in the *Europeans*,

peans, of continuing those voyages; neither would they desire to settle in those parts; or if they did, the memory of them might be lost. See *Padre Pineda*, particularly in the fifth section of the sixteenth chapter, where he answers the arguments of the negative opinion; to which he gives very handsome solutions; and in particular, to those who say, that *Solomon's* fleet could bring nothing but gold and silver, as if this were nothing, or like ballast; and that this were not motive enough for him to send his fleets, for a thing of which it appears he made such use, both for the temple and

his own palaces; so that it does not seem possible he could have it all from the east, but must have recourse to the west, where there was such a mass of it, as is made out by what we have said of the mines of *Chile*, and those of the *Inga*, with those trees, fruits, and plants of massy gold, and statues of the same metal in his gardens; besides what they call *Guafcas*, where to this day they keep concealed a vast store of those riches gathered together for the liberty of the *Inga*, when the *Spaniards* had him prisoner; all which may be seen in what has been said already in several chapters.

OVALLE.

C H A P. IV.

Of the Discovery of America: And by what means it was performed.

AMONG the hidden and wonderful secrets of nature, we may reckon the singular virtue of the loadstone, which has produced such wonderful effects, as they seem more the object of our eyes than of our faith, as men; for who, if they did not see it, could believe the experiments made every day, which surpass all imagination? See the curious and elaborate treatise of father *Albanasius Kirker*, of our company, *de arte magnetica*; for there the most aspiring mind after curiosities will find all he can wish about this matter, as well what is ancient, as what is modern, the whole treated with so much erudition and clearness, that the study of it is not less delightful than profitable. The same subject is also treated of excellently by father *Nicholas Cabeo*, of our company, in his book of *magnetical philosophy*.

Among all the virtues of this rare stone, I think that its quality of taking up iron is not so admirable as that which it has had of drawing gold and silver to *Europe* from *India*; the mass of which has been so great, that some curious persons having made a calculation in this matter, which they understood very well, and reckoning the millions brought by the galleons and flotas, from the discovery of the *Indies* to their time; and having also computed the distance between *Europe* and those parts, have found that there might have been made, from the one to the other, of bars of silver, a bridge of a yard and a half wide; so that if all that metal could be found now a-days in any one place, it would make a mountain like that of *Potosi*, from which the greatest quantity has been fetched; and for that reason it appears hollow, and bored through in so many places. We may therefore say of the loadstone, that gold has given it a virtue like that of faith, to transport mountains, not only from one place to another, but from one world to

The mass of silver brought from America.

another, through those immense seas which separate them.

Who the first man was that applied this virtue to facilitate navigation, it is hard to prove by authors; for though we know that this stone was known to the *Jews*, and to the *Egyptians*, yet who first made use of the sea-needle and compass, is very hard to find out. Some say it came from *China* to *Europe*: others, that it was found by the inhabitants of the cape of *Good-Hope*; and that *Vasca de Gama*, met with some of their vessels, when he made the discovery of the cape, who used this instrument: others give the glory of it to the *Spaniards* and *Portuguese*: others to a man of the kingdom of *Naples*, called *John Goyas*, of the city of *Amalfi*, who was rather the man that perfected this invention, being himself an experienced seaman. But let every one have his opinion, it is not my business to decide; I only say, that to this admirable virtue of the loadstone we owe the discovery of *America*: for though some authors say, that *Solomon's* fleet sailed by the observation of the stars, the winds, the flight of birds, and other signs, with which they supplied the want of this useful invention, not then known according to the common opinion, (though the contrary is not altogether improbable,) yet it must be owned that the use of this sea-needle has been the thing that has facilitated the navigation, so as the first discoverers, trusting to this, durst venture into vast seas, and pass the gulph which leads to that remote and unknown world, so as to land in it; which was a performance worthy of immortal memory to the man who undertook and executed it.

The inventor of the needle at sea.

This man was the most famous captain *Don Christopher Columbus*, a *Genoese*, whom the *Spaniards* in their language call *Colon*, who, though he were not, as he was, nobly descended, might have given by himself nobility and fame to his descendants, and

to

1646. **OVALLE.** to his noble and illustrious country; for if this commonwealth had had only this son, it might draw fame enough from him alone, since his generous and bold mind was capable of overcoming all the difficulties which he met with in the project and execution of this enterprize, the more to be esteemed by the great advantages procured by it to both worlds: to this, by that vast increase of riches, of which a great deal is consecrated upon the altars in churches, besides what is employed in the furniture of princes and great men: and to the other world, the benefit of the light of the gospel, by which it is so much more polished and meliorated in all senses.

Neither does that which *Gareilasso de la Vega*, and others, do relate, any ways affect the glory of this great man, when they say, that he undertook this design upon the knowledge communicated to him by a man whom he entertained, and who died in his house as his guest; for we must own that his chief praise does not come from what he knew of this new world before he undertook to find and conquer it, but from his generous mind and constancy in pursuing his enterprize; and this is all his own, which puts justly the laurels upon his head, and makes his memory immortal in spite of time and envy, though one would think no body should have any for the common benefactor of two worlds. That which these authors relate about this history, is, That a pilot, an inhabitant and native of the town of *Guelva*, in the county of *Niebla*, in *Andalusia*, called *Alonso Sanches de Hualva*, or as others say, *Buxula*, used to trade with a small vessel to the *Canaries*; and that one time, in his return to *Spain*, he met with a mighty strong *Levant*, which was so powerful, that in twenty days he found himself in one of the islands of the *West-Indies*, one of those which we call the *Islands of Barlovento*, or the *Windward Islands*, and 'tis judged it was *Hispaniola*; from whence, fearing to perish for want of provision, he returned to the *Island of Madera*, having endured so much, that almost all his company died, and himself came in such a condition, that though *Columbus*, who loved sea-faring men, and for that reason had chosen that *island* to live in, received him, into his house, and took great care of him,

The story of the pilot who died in the house of Columbus.

yet he died; but before he died, being willing to make some return for the kindness received, he called *Columbus* to him, and left him, as an inheritance, the journal he had made, with the rhumbs of wind both going and coming, and all others his observations in the voyage, and about the place where he landed.

This is thus related by *Gareilasso de la Vega*, and father *Joseph d'Acosta*, who says, he does not know the name of this pilot who left this legacy to *Columbus*: and this he attributes to the particular providence of God, who would not have the honour of this discovery be owing to any human industry, but immediately and entirely to the divine majesty, to whose disposition we ought to attribute, so much as appears contingent and casual in this ship's miscarriage, from its course and all the other accidents attending that storm, till the pilot was brought to die in the house of him whom God had chosen for a second cause and chief instrument of this enterprize; who being of himself a great philosopher and cosmographer, compared these notions which he had from his dying guest, with his own speculations which he had long had upon the same subject; and this made him resolve to undertake what he afterwards accomplished. In order to this he began to consider of those who were likeliest to assist him; and first of all, he offered it to his own country, who took it for a dream; after this, to the kings of *Portugal*, *France*, and *England*; and at last he addressed this rich offer to their tholick majesties, for whom it was designed, from the beginning, by him who had resolved, in his providence, to amplify their monarchy by the addition of so many rich and powerful kingdoms, as they have acquired in this new world.

Columbus offers his discovery to Genoa, France, Portugal, and England, who all refuse it.

Ferdinand and *Isabella*, who are worthy of immortal glory, having examin'd the grounds *Columbus* went upon, and the honour might be done to the cross of christ, and to the preaching of his gospel, if this enterprize should take effect, having seriously considered of it for eight years together, they commanded all necessary provisions to be made, without sparing any charge, or minding the contingency of a design so new, so difficult, and so much without example.

C H A P. V.

Don Christopher Columbus sails from Spain in search of the New World.

IN the year of the birth of our favour 1492. upon the third of *August*, about half an hour before sun-rise, (the happiest day that ever shined upon our *antipodes*, as

being the beginning of their greatest felicities,) *Don Christopher Columbus*, the most famous *Genoese* that ever was, sailed from *Spain*, with the title which he had received from

Columbus
had but
ninety in
two ships.

from *Ferdinand* and *Isabella*, of admiral of the seas of all those countries he should discover and conquer; so leaving behind him the famous *berculean Streights*, as disdain-
ing their *Non-plus-ultra*, and laughing at their pillars, he launch'd into the vast ocean, and begun his navigation with no less confidence than admiration of those who saw him leave the shore and steer a course never before attempted, by new rhumbs of winds. Having touch'd at the island of *Gran Canaria*, he again sailed from thence the first of *September*, with ninety in company and provisions for a year. After some days of navigation he began to find himself near the tropick of cancer, and under the *torrid zone*; whereupon his men who had been bred in the temperate climates of *Europe*, being impatient of heats, which they never before had experienced, and wearied with seeing nothing but a vast ocean without land, began to enter into distrust of discovering any. At first they murmured only between their teeth; but at last, speaking out boldly, they came to their captain *Columbus*, and endeavoured by all means to dissuade him from pursuing his discovery, as vain and without hopes of success; and that it would be much better to return back to *Spain*; but he with a generous mind being deaf to all their persuasions, pursued his voyage with constancy. His men perceiving still how he went further from *Spain*, and that they had almost worn out their eyes with looking out from the topmost-head of the ship, without finding any appearance of land, renewed their instances and reasons; and that the more earnestly, by how much they perceived every day the consumption of their water and provisions; calling now *that temerity, which before they said might be constancy*: for they alledged that the time was increased, their provisions lessened, the winds scarce, and calms to be feared; no land in view, its distance not to be known nor guessed at; that the danger was certain, and no avoiding to perish, if they staid any longer; therefore, said they, let us secure our lives, except we intend to be a fable and laughing-stock to all mankind, and looked upon as our own murderers.

To say truth, it cannot be denied but this was an urgent danger, and greater perhaps than can be imagined by those who never were in the like trials; for when no less than life is at stake, all dangers appear great, and particularly at sea: besides, these allegations were of themselves of great consideration, and capable of shaking the greatest constancy and valour; yet the courage of the great *Columbus* was such, and so singular his prudence, that sometimes dissimbling, and sometimes taking no notice of

what he heard, but talking to this man ^{OVALLE!} and the other in private, and then comforting them all up in general, and giving them some account of his well-grounded speculations, he so fed them with hopes and expectations, (he himself shewing no distrust of success,) that he brought at last his project to a happy issue. They were following their voyage thus, through all the inconveniencies of heat, ready to stifle them, when on a sudden a voice was heard crying *Land, Land*: they all flew to the prow and sides of the ship, and fixed their eyes on the horizon like so many *Argus's*, to find out the land which seemed to appear like a cloud upon the sea. The desire of getting to it made some doubt, if it were land or clouds; but others were more confident: some assure it to be low land; others think they see rocks, and a large extended shore; and all was but guesses, occasioned by the great distance they were at sea from any land; for in truth it was not land but clouds. And this was an invention of *Columbus*, their admiral, who seeing them almost ready to mutiny, made use of this artifice to prevent the ill effects of their despair, causing this voice to be heard to give them a short joy, and amuse them.

This succeeded well for that time: he steered his course towards this pretended land till night; and when they were asleep he set his prow to the west, in search of the true land: but in the morning when it was day, seeing those clouds, which they took for land, vanished as it often happens in long navigations, they began to afflict themselves a-new, and remonstrate to the admiral boldly to his face which I do not wonder at; for besides the danger of perishing with hunger, they found themselves in a climate so scorching and fiery, that in the third voyage that the admiral made, they being becalmed eight days, about the same place, were afraid the sun would have set fire to their ships; for all his casks flew under decks, the hoops smoaking as if they had been set on fire, and the wheat was all in a ferment; and the salt flesh was, as it were, boiled again, and stunk so, that, to avoid infection, they were forced to throw it overboard.

The admiral was thus pursuing his voyage, in which patience was his most necessary habit, to endure the terrible persecution of his own people; when on the 11th day of *October*, of the same year, it pleased God to crown all his invincible sufferings, and the confidence he had in him, first, by ^{Signs of} manifest signs of land, which in such occasions do generally put a stop to all complaints and afflictions, and are the beginning of joy and content, which is followed with forgetting all past sufferings. The

1646. OVALLE. first thing they saw was a bough of a tree new cut, with its fruit on it, which though a kind of thorn, was a branch of olive to the inhabitants of this new ark; another had seen green fish, and some pieces of wood floating; all which were clear marks of land not far off, as to the navigators from *India* are the quantity of sea-weeds which meet them about ten leagues from the coast of *Spain*. The joys which sailors and passengers shew generally at the signs of land, the capers they cut, and embraces they make each other, with their congratulations to the pilot, their thanks to heaven, nay, the tears they shed, and devout prayers they make to God and the virgin *Mary*, in acknowledgment of their protection; all these are not so much matter for my pen, as for sight and sense. All this happened to the admiral's company, which not only forgot their sufferings, and the hatred they bore to the author of them, but they run and threw themselves at his feet, as admiring and congratulating his constancy, and begging his pardon for so many hard thoughts, and as hard words, they had entertained, and let fly against him: he received them all with embraces and marks of benignity, assuring them that by the end of that day they should be within sight of land, and having said this, he went upon the highest part of the ship's stern, as being desirous to be the first, that should give them the good news of discovering land.

There was a rent of ten thousand *Mara-vedies* a year for the first discoverer, which made them all look out with great attention; some on one side, and some on the other side of the ship, fixing their eyes where they thought it was most probable to find land; but it was about two hours before midnight, when admiral *Columbus* discover'd a light, and calling to two officers, shewed it them; and presently he perceiv'd that the light chang'd place, for it was a light carried from one house to another, as was known afterwards when they landed: they sail'd on towards that light, and about two hours after midnight they discover'd land, which was at the same time made by the other ships in company, whereupon there were many claims for the *Albricias*; but at last they agreed that the *Albricias* belong'd to the admiral, because he first discover'd the light: this was confirmed by *Ferdinand* and *Isabella*, king and queen of *Spain*, and settled upon the shambles of *Seville*, as the best fund for the admiral.

Herrera, the *chronologist*, makes his reflections upon this light, and moralizes upon it, that it signified the spiritual light, which those nations wanted, and which was now brought to them from *Europe* by these discoverers; as a proof likewise of the piety

of the catholic kings, who having made war upon the *Moors* for three hundred and twenty years, had hardly finish'd it; but they put their shoulders to this new conquest, to spread by their means the glory of the gospel, and make the voice of it to be heard to the utmost limits of the earth, making out by this manifest proof, how firm supports they were to the faith, since they were constantly employed in propagating of it. Thus far *Herrera*: to which I may add, that the light *Columbus* saw in the middle of the night, was the tacit working of reason, which being buried in profound errors, did yet throw out some sparks from under those ashes, and cry to heaven for the enlivening spirit to deliver it, and by the means of Christ revive it, so as to enlighten that gentillism, so long overwhelm'd in darkness, and for so many ages past buried, as it were, in the shadow of death.

Thus it was; and as soon as day broke they landed: the admiral carried with him the royal standard spread, the other captains having in theirs the banners of this conquest, which were prepared, and had in them a green cross crown'd, and round about the names of *Fernando* and *Isabella*, to signify the hopes that those princes had entertain'd to make subject, and lay at the feet of the crucified Jesus, the crowns and scepters of those powerful monarchs of that new world; they themselves having first submitted their own, that there might be no crown, command, nor lordship, but that of the exaltation of the cross.

To this end, as soon as the admiral landed, kneeling down with all his company, he kissed it once, and twice; and lifting up his eyes to heaven, all in tears, he ador'd our Lord God of all things, who had brought him thither, thanking him for his favour, and doing homage to him in the name of those people, who were to be brought to his knowledge; in sign of all which, and the possession he then took, he call'd that island *Saint Salvador*: he rais'd also a most beautiful cross, which was a declaring war to hell, to make it renounce the possession of that land, which for so many ages it had tyranniz'd over.

The admiral being rose up, they all approach'd, and not only embrac'd him, but carried him upon their shoulders in triumph, as having perform'd the greatest work that ever man attempted, or brought to pass. Immediately after this, the admiral, in presence of a notary, took possession of that land in the name of their catholic majesties, and caus'd himself to be own'd as viceroy, and as such they began to own him, and obey him in all things.

This

This island, which we shall call *Saint Salvador*, was about fifteen leagues in length, very woody, and having good water, with a lake of fresh water in the middle of it, and well inhabited by the *Indians*, who

call'd it in their tongue *Guanaani*; and it is one of those which since have been call'd the *Lucaicks*. It is nine hundred and fifty leagues from the *Canaries*. OVALLE:
1646.

C H A P. VI.

WHEN the *Indians* saw such great bulks in the sea, with great sails, and the whole unlike their canoos, and they were drawn near the shore, they remain'd astonish'd and beside themselves, because tho' by their motion they guess'd them to be living things, yet for their bigness they took them for some strange sea-monsters, never seen before on those coasts. The ships came to an anchor close by the shore, and the admiration of the *Indians* increas'd still so much the more, seeing white men come out of them with beards and cloaths; yet they did not run away, but drew near without fear, the rather when they saw that the *Spaniards* began to present them with bells, needles, and other things of *Europe*, which pleas'd them extremely, as being new to them: in return they gave the *Spaniards* Gold, Provisions, and other things of their country: they came some in their canoos, and some swimming to the ships, where it was wonderful to see how they valued every thing, even to the bits of glazed dishes, or broken earthen ware, that lay about the ships, which they gather'd up as jewels which they had never seen. And to say truth, most things borrow their value from their rarity; and for this reason they had as little value for gold and pearls, which were things very common among them, they exchanging whole strings of pearls, and some of them as big as pease and small nuts, for needles and bells, as happened in the *Islands* of the *Margarita*; so great is the difference in the estimation of things common, or rare ones. The admiral having here got an account of some other *Islands*, went out to discover them; and the second he found he nam'd *Santa Maria de la Conception*, dedicating it to the queen of heaven: the third he call'd *Fernandina*, of the king *Don Fernando*: the fourth he nam'd *Isabella*, in consideration of his mistress queen *Isabella*. Of all these he took possession in the name of their majesties, by setting up their royal standard before a publick notary, with the same solemnity and ceremonies observ'd in the taking possession of the first *Island*.

Cuba discovered.

On a *Saturday*, the 29th of *October*, they discover'd the famous *Island* of *Cuba*, where the *Havana* is: there the *Indians*, frighted to see the *Spaniards*, whom they thought descended from heaven, went to them kissing their hands and feet. The admiral's last discovery was of the *Island* call'd *Hif-*

paniola, where he met with a great deal of gold, and some birds and fishes, like those of *Castile*. Here the cacique *Guacanagari* received him with much humanity; and in his land he made the first *Colony*, or settlement of *Spaniards*, which he nam'd the city of the *Nativity*.

The *Spaniards* generally were receiv'd in these and other the *Barlovento Islands*, and on the coasts of *terra firma*, with much love and kindness, very few of the *Indians* offering to resist them. On the contrary, they all were pleas'd with their coming upon their lands, furnishing them with all that the country afforded, and presenting them with gold, pearls, parrots; contenting themselves with a return of a very small value. Of the *European* things, those they seem'd most to mind, were needles; and at first they could not imagine what they were good for; but being told they were to sew, they answered they had nothing to sew; but yet they kept them, because they had never seen any thing of iron or steel. They were much surprized at the use of swords, and particularly when they had experienced their sharpness; for at first they us'd to take hold of them by the edge with great simplicity.

The simplest city of the Indians.

The admiral, as viceroy of those new kingdoms, began to govern, as he discover'd them; and that he might regulate them the better, by consulting their majesties in his doubts and difficulties, he made two voyages backwards and forwards to *Spain*, still making in his returns discovery of some new *Islands*, and amplifying the monarchy, as historians do relate at large, to whom I refer myself, not to engage in matters which are far from my subject; but I cannot but make some reflection upon what happen'd to this great man. Who would not have thought, considering the happiness with which he had executed all that he design'd, in the most difficult subject in the world, that he was eternizing his felicity, and putting fortune under his feet? But that no one may strive to do it, but that all may know how constant is her volubility, and how perpetual the motion of her wheel, and that there is no human power, nor star, can fix it, I will relate here briefly what befel him.

Let him who governs be undeceiv'd once for all, and know, That to sit upon a throne, and take possession of power, is to be a mark

OVALLE mark for the censure of the good and bad to aim at; 'tis just putting himself into the hands of anatomists, to be taken in pieces, and examin'd to the very bones; and very often envy oppresses innocence by feigned accusations: this is not the place to examine that of the admiral; I only know that there were so many complaints, and such appearances of misdemeanors alledg'd at court against him; as, that he did not advance the conversion of the *Indians*, but make them work to get gold, desiring more to make them slaves than christians; and taking no care to maintain them, and such other imputations, as mov'd their catholic majesties to send the commander *De Bobadilla* to examine the truth of what was alledg'd, and to do justice in requisite cases; writing at the same time a kind letter to the admiral, that he should let the commander execute their orders.

But he exceeding his commission, and the intention of their majesties, took all the informations against the admiral and his brothers, and without hearing them, made himself be own'd for judge and governor, giving rewards, and publishing, that he came to relieve the oppressed, and to pay their salaries, and put all things in good order. This drew over to him all those who had any grudge to the admiral, and most of the common sort sided with him; so he entered into the houses of the admiral and his brothers, seized their goods and their papers; all which he might safely do, without any resistance, for the admiral was away: he sent to seize him and his brothers, putting irons upon their feet, and so shipping them into a vessel, call'd a *Caravel*, he sent them away for *Spain*, to give an account of themselves.

When they came to put irons upon the admiral, there was none so bold as to do it, out of the respect that all had for him; and if he had not had in his family a rogue of a cook, who was villain enough to do it, they had not found any one to execute so barbarous a command. When *Columbus* saw himself put in chains by his own servant, 'tis said, that shaking his head, he pronounced these words, full of resentment for his usage; [*Thus the world rewards those*

who serve it; this is the recompence that men give to those who trust in them. Have the utmost endeavours of my services ended in this? Have all my dangers and sufferings deserv'd no more? Let me be buried with these irons to shew that God alone knows how to reward and bestow favours, of which he does never repent; for the world pays in words and promises, and at last deceives and lies.]

Having said this, the ship set sail; and as soon as he came to *Spain*, their majesties, when they were inform'd of the prison of the admiral, were much concern'd; for by no means, had that been their intention. They sent for him to come before them; but his tears and sighs were such, that in a great while he could not speak; at last he said, assuring their majesties of his great zeal for their royal service, which had always been his guide, that if he had fail'd in any thing, it was not out of malice, nor on purpose, but because he knew no better.

Their majesties comforted him, and particularly the queen, who favour'd him most; and after some time, in which the truth of the matter was made out, they order'd, That all that the commander *Bobadilla* had confiscated of the estate of the admiral and his brothers, should be restor'd to them; as also, that the capitulation with them should be observ'd, as to their privileges and exemptions. After this, the admiral return'd a fourth time to the *Indies*, in an honourable way; and employing himself in new discoveries, he arriv'd upon the coast of the *terra firma* of *America*, the second of *November*, 1502. and coasting along by *Cubija*, arriv'd at the port; which, because it appear'd so good a one, and the country so beautiful, well cultivated, and full of houses, that it look'd like a garden, he call'd *Puerto Bello*, or the *Fine Port*, having discover'd other islands in the way, and endur'd very bad storms. At last returning back by some of those places which he had discover'd, taking, as it were, his leave of them, and returning to *Spain*, to order there a better settlement of affairs, he died at *Valladolid*, where the court was, making a very christian end, and giving great signs of his predestination.

Columbus in irons.

Columbus dies at Valladolid.

CH A P. VII.

After the Death of Columbus, the Castilians pursue the Discovery and Conquest of the new World.

AMONG those who accompanied the admiral in his first discovery, there was one *Vincent Yanes Pinzon*, who being a rich man, set out four vessels at his own charge. He, at his return to *Spain*, set sail from the same port of *Balos* upon new

discoveries: he first came to the island of *St. Jago*, which is one of the *Cape Verd* islands: he set sail from thence the thirteenth of *January*, in the year 1500. and was the first who pass'd the *equinoctial* line, by the north sea, and discover'd *Cape St. Augustin*,

Augustin, which he call'd the *Cape of Consolation*, taking possession of it for the crown of *Castile*; from thence he found the river *Maragnon*, which is thirty leagues over, and some say more at its entrance, the fresh water running forty leagues into the sea; then coasting towards *Paria*, he found another river very large, though not so broad as *Maragnon*: they took up fresh water out of it, twenty leagues at sea. He discover'd in all a coast of six hundred leagues to *Paria*, and lost two ships in a terrible storm that he endur'd. We have seen also in the last chapter, that *Columbus* had discover'd the island of *Cuba*, though he could never sail round it, being hinder'd by the storms and ill weather; so he died without knowing whether it was an island, or no, for he judged it to be rather a point of some continent; but it is a very large island, with many fair ports, and mountains full of precious odoriferous woods of cedar, ebony, and many others; and there are in it several cities of *Spaniards*, and among the rest the strong fortrefs of the *Havana*, which is a *Scala* or rendezvous for the galleons and *flotas*, loaded with silver from the *West Indies*: this is one of the best fortifications the king of *Spain* has in all his dominions. But, in my opinion, that which makes this island most valuable, is, the good nature and docility of those who are born in it; which was a product of that soil before ever the *Spaniards* trod it, as they shewed to *Columbus*, and those who came after him, receiving them with all kindness and humanity.

The Havana.

To further what the admiral *Columbus* had begun, God raised an instrument in the person of *Vasco Nunnes de Balboa*, one of the first discoverers of this new world; a man of a good understanding, as he shewed upon the occasion which I shall now relate. He was, with others, upon the discovery with general *Enciso*, the governor: they came to a place call'd *Uraba*, and as they enter'd the port, by negligence of the steersman, the governor's ship struck upon a sand, and was lost, nothing being saved out of her but the lives of the men, who got into the boats, but naked, and in danger of perishing for want of provision. *Vasco de Nunnes* said, That he remember'd there was not far off a river, the banks of which were inhabited by much people: he guided them thither; and the thing being found to be as he had said, he gain'd great reputation among them all. They came thither, and found the *Indians* in arms against the *Castilians*, whose name was already become odious to those nations: they made a vow to our lady, to dedicate to her the first settlement and church to the honour of her image, under the title of *Sancta Maria la Antigua*, or the

VOL. III.

ancient *St. Mary*, which to this day is venerated in *Seville*; and to send her many rich gifts of gold and silver, which one of them, as a pilgrim, should carry in the name of the rest. Being encourag'd by this vow, they fell upon the *Indians*, and obtain'd the victory.

OVALLE. 1646.

Presently they made a settlement, and built a town, dedicated to the virgin, calling it *Sancta Maria el Antigua* of *Dairen*, because that was the name of that river. After this, to accomplish their vow, they sent the promis'd presents to the devout image of the virgin.

The good opinion of *Vasco de Nunnes* increasing thus daily, and having cunningly order'd it so, that *Enciso* resign'd his government, they chose *Vasco Nunnes* in his room: at first, with an associate; but he found means in time to be alone, as it was necessary he should, in point of command, being to overcome such difficulties as were to be met with at every turn: and, indeed, he knew how to make himself be both fear'd and belov'd, having a very good spirit of government. In the new discoveries he undertook, he came first to the lands of the *Cacique Ponea*, and not finding him at home, he destroy'd them: he pass'd on to the lands of the *Cacique Careta*, who not caring to enter into war, receiv'd him peacefully, and treated him as a friend. This *Cacique Careta* had a kinsman, who was a lord, that liv'd further in the country, and his name was *Suran*; who perswaded another neighbouring prince, call'd *Comagre*, to make a friendship with the *Castilians*: this prince had a very fine palace, which astonish'd them; and particularly when they saw, in a kind of chapel or oratory, some dead bodies lying cover'd with rich mantles, and many jewels of gold and pearls; and being ask'd whose bodies those were, they answer'd, of their predecessors; and that to preserve them from corruption, they had dried them with fire. The king caref'd the *Castilians*, and gave them great presents: he had seven sons, and one of them, more liberal, gave the *Spaniards* a present of near four thousand *Pesos* of fine gold, and some pieces of rare workmanship: they weigh'd it, and taking the king's fifths, they began to divide the remainder. In the division, two soldiers fell out about their share: the *Cacique's* son, who had made the present, hearing the noise, could not bear it, but coming to them struck the balance where the gold was weighing, and threw it all upon the ground, saying, "Is it possible you should value so much a thing that so little deserves your esteem? and that you should leave the repose of your houses, and pass so many seas, expos'd to such dangers, to trouble those

who

OVALLE. "who live quiet in their own country?"
1646.

"Have some shame, christians, and do not value these things: but if you are resolved to search gold, I'll shew you a country where you may satisfy yourselves." And pointing with his finger to the south, he told them they should see there another sea, when they had pass'd over certain high mountains, where they should see other people who could go with sails and oars as they did; and that passing that sea, they should meet with vast quantities of gold, whereof the natives made all their utensils; and that he would be their guide, and conduct them with his father's vassals; but that it would be requisite they should be more in number, because there were powerful kings, who could hinder their passage: giving them by this the first notice of *Peru* and its riches.

The first notice of the South Sea, and its riches.

This was the first knowledge and light which the *Spaniards* got of the *South Sea*, and of the gold and riches of its coasts, which gave them all great joy; so that they were impatient to see the hour of breaking thorough all obstacles, to see that sea never before heard of, and enjoy the riches of it. *Vasco Nunnes* immediately disposed all things, and went out of *Dairen*, in the beginning of *September*, in the year 1513. and going along the sea-side, to the habitation of the friendly *Cacique Careta*, he went towards the mountains by the lands of the *Cacique Ponea*; who, though at first he endeavour'd to oppose their passage, yet being advis'd by the *Indians* of *Careta*, who accompanied the *Castilians*, he presented them with gold and provisions, and gave them guides; they, in return, giving him looking-glasses, needles, knives, and other baubles, which they valued very much. Then they began to mount the mountain through the country of a *Cacique*, call'd *Quareca*, who appear'd in arms, and attack'd the *Spaniards*: he had a long robe of cotton, but all his men were naked. They began to skirmish, and threaten by their actions, to hinder the passage; but no sooner did they hear the noise, and feel the effects of the muskets, and find some to fall, but they turn'd their backs, flying like a herd of deer, frighted to see the fire, and hear the sound of the vollies, which appear'd thunder to them, and thought the *Spaniards* had thunderbolts at their command; so they left the passage free for them. The *Indians* of *Careta* had said, that from their country to the top of the highest mountain, there was the time of six suns; for by that they meant so many days journey; but the ways were so bad, that they employed five and twenty days to get to the top. A little before they were at the highest, *Vasco Nunnes de Balboa* caus'd a halt to be made, desiring to have the glory of having himself been the first man that

ever saw the *South Sea*. And so it was: he *Vasco Nunnes* goes alone, discovers that vast ocean, and the large bays of the *South Sea*, call'd *Pacifick*; and upon his knees, with tears in his eyes, lifts up his eyes to heaven, giving thanks to the great creator of all things, for having brought him from such remote parts to contemplate that which none of his ancestors had ever seen: he made a sign after this to his companions to come up, and so they all run in haste, pushing one another on; and when they were on the top, where there is a full prospect of the sea, 'tis not to be imagin'd the content they all receiv'd in admiring that vast and smooth liquid chrystal, which not being animated, did not on its side give leaps of joy, nor go out of its bed to the tops of the mountains to welcome those who came to deliver it from the tyranny the devil exercis'd over it, by infesting it with storms and tempests, and infecting the air with the breath of idolatry, which was breath'd in all those parts, both east, west, north, and south. Oh! if all the creatures of that world could have come one by one to see the good that was coming to them by means of the gospel, which dawned in those mountains; or, if the predestinated of that new world could have viewed from their cottages, and poor habitations, or rather from the deep night of their errors and sins, the sun that was beginning to enlighten them from that high mountain, and the virtue and efficacy of grace, which then began to appear to reconcile them with God, and the blood of Christ, which like a great river was falling through those precipices, till it should bath the utmost parts of the earth, and give life to those, who, being fallen and cover'd with the dark shadow, did not only not hope for life, but not so much as know it; how would the children have leap'd out of their cradles, who, to go into paradise, expected nothing but baptism, as has happened to great numbers, who just expired when they were made an end of baptizing? and the old men, who wanted only the knowledge of the gospel to shut their eyes, and being reconciled to God, fly into his glory, how they would open them, and lying upon the ground, fly, at least, with their spirit if they could not with their body, to receive the preachers of the gospel, who brought peace and a general pardon for their sins? All the other predestinated, every one according to his state, who have by this means been saved, (which are infinite,) how they would melt and cry with joy, to hear this news, which is as welcome to them, as that of the coming of Christ to the holy fathers in *limbo*, who were expecting it with such languishing desires.

C H A P. VIII.

Balco Nunnes de Balboa *pursues the Discovery of the South Sea, and dies.*

OVALLE
1646.

Basco Nunnes de Balboa, having performed his devotion, and thanked our Lord, with all his companions, for so great a favour done them, as to bring them to that place, and for the favour he was about to shew to that new world, by the means of the preachers of the gospel, to whom he thus opened a way to publish it; he then bethought himself of his second obligation, which was to his king; in conformity to which, he took possession, in his majesty's name, for the crowns of *Castile* and *Leon*, of the place where he was, and of the sea which he discover'd from thence; cutting for this purpose many trees, and making great crosses, which he set up, and writ upon them the names of their majesties.

After this they began to go down from the mountain, marching always prepar'd for any encounter that they might have with the *Caciques* in their way; so, though the *Cacique Chiapas* oppos'd them with his people, who were stout and many, yet by setting the dogs at them, and beginning to fire their muskets, they were soon routed. This made the *Cacique* offer terms of peace, and receive and make much of the *Castilians*, presenting them with gold; and he prov'd so good a friend, that he pacified many other *Caciques*, who were in arms, to hinder the passage, who likewise made their presents of gold.

From the town of *Chiapas*, Basco Nunnes sent out, to discover the coasts of the *South Sea*, the captains *Francisco Pizarro*, *Juan de Escara*, and *Alonso Martin*, each to a different place: this last found two canoes dry on the shoar, and the sea below them above half a league: he wonder'd to see them so far from the sea; and as he was considering it, he perceiv'd the sea coming very fast in, and did not stay long before it set the canoes on float: he enter'd into one of them, and took witness that he was the first *European* that had ever been upon that sea. The tides on that coast ebb and flow every six hours, so as great ships will be left on shoar, the water retiring so fast, that it gives great admiration when it returns, to see so great a space cover'd so fast, that it appears an inundation.

The tides
very rapid.

Basco Nunnes having advice of this, came down also to the coast; and going into the sea up to the mid-leg, with a naked sword in his hand, said, That he took possession of it, and all the coasts and bays of it, for the crowns of *Castile* and *Leon*; and that he was ready with that sword, as often as it should be necessary, to make good that claim, against all that should oppose him. The *Indians* were in great amaze at

this new ceremony; and they were more surpriz'd, when they saw him, against their advice, and that of the *Cacique's* nature to cross the gulph of *Pearls*, to discover the riches of it in that commodity; though it had like to have cost him dear, for he was near perishing in crossing that arm of the sea. Now let us see (in order to undeceive those who shall read this,) how little this courage and boldness avail'd this generous conqueror of the new world, and the great things his invincible mind had brought to pass. All his military prudence and cunning, by which he made himself be respected by unknown nations, avail'd him little; for this so fortunate a great captain had a tragical end: he lost his life in *Dairen* at his return, finding there the governor *Pedrarias*, who came to succeed him. The king in sending this man had recommended to him the person of *Basco Nunnes de Balboa*, and order'd him to make use of his council, as of one who had honour'd him by his bold undertakings, and to whom for a reward he order'd the governments of *Panamá* and *Coiba*, and the admiralship of the *South Sea*, which he had discover'd, and on which he had already built four ships, and got together three hundred men to go upon the discovery of *Peru*. But the said *Pedrarias* commanded him on shoar, and there seizing him, caus'd him to be beheaded publicly as a traytor. The crier went before him, crying, as is customary, that he was a traytor; which, when *Vasco Nunnes* heard, he said it was a lie, and that no man had serv'd the king with more zeal, nor more fidelity than he, nor more desir'd to extend his monarchy; but all his complaints were like voices in the desert, which were of no force against envy and emulation, which had prevail'd in his enemies, and which can never fail against those who govern. His death was much resent'd, and appear'd very unjust in *Spain*, because, indeed, the king lost one of his bravest captains, and one who would have discovered *Peru* with more facility, and without all those tumults, which since happened; for his prudence, valour, and zeal, were above the ordinary size.

The barbarity of the Spaniards one to another.

Vasco Nunnes beheaded.

It cannot be denied, but that the sentence may be justified according to the depositions of witnesses; but yet it was a great argument of his innocency, that which he himself said to the governor *Pedrarias*, which was, That if he had in his heart to make himself master, and independent, as they accus'd him, he would not have obeyed his call as he did, and leave his ship without any difficulty; for he had then three

1646. **OVALLE.** three hundred men all at his devotion, and four vessels, with which he might have been safe, and gone upon new discoveries, if his conscience had accused him. They add here, That an astrologer had told him, That that year he should see something extraordinary in the heavens, he should be in guard

against some great misfortune that threatened him; and that if he escap'd from it, he should be the most powerful and happy man in the whole *Indias*. And that accordingly he did see this sign, but laughed at it, as thinking himself in so high a state

CHAP. IX.

The Discovery of the South Sea; its Ports and Islands is continued.

IT is a common passion in those who govern, either to oppose the designs of their predecessors, or at least not to execute them by their means, nor by their creatures, that their assistance may not lessen the glory, which they pretend by making themselves the authors of the enterprizes. As we have already said, *Pedrarias* succeeded *Vasco Nunnes de Balboa* in the government, just as he had made the discovery of the *South Sea*; and though the king had recommended the person of *Nunnes* to him, yet he could not be brought to grant him leave to follow his discovery, though the bishop of *Dairen* advised it very earnestly; but he had resolved to give this good morsel to a creature of his, called captain *Gaspar Morales*; to whom he added, as companion, captain *Francisco Pizarro*, because of the experience he had, having been already employed in the discovery.

They set out from *Dairen*, and got to the *South Sea*, and embarking there in canoes, they came to the *Isle of Pearls*, which the *Indians* called *Tarargui*. These by this time began to endeavour to hinder the *Spaniards* from settling in their lands; but they were not able to do it, their forces being so much inferior to those of the *Castilians*, who, passing from one island to another, came at last to the largest, where was the king of almost all those nations, who took arms against the *Spaniards*, having a brave number of men, and well chosen; but they not being used to fire-arms, they soon yielded and came to composition: to which they were brought also by the fear of a famous dog, that was in the christian camp, who used to fall upon them like a lion; and they having never seen an animal of that sort, did flee him as a devil, because of the mischief he did amongst them; for they being naked, he could fasten any where without danger. The *Cbiapeses*, our friends, presently interposed; and telling the king what dangerous enemies the *Spaniards* were, and of what importance their friendship was, they being invincible, he at last prevailed upon to grant them peace. They came to his palace, which was very sumptuous, and, as they judged, better than any they had seen yet. The king received them

A famous dog frights the poor Indians.

with marks of friendship; and, as a token of it, caused a basket of rushes full of pearls, which weigh'd five marks, to be given them; amongst which, there was one which had but few fellows in the world, (for it weighed six and twenty carats, and was as big as a small walnut,) and another as big as a muscat-pear, perfect and oriental, and of a fine colour, weighing ten half scruples. The first came from hand to hand, till it was in the empress's, who valued it as it deserved, as is told by *Antonio de Herrera* and others. They presented the king, in return, with the usual presents of pins and needles, bells, knives, and other baubles of *Europe*, which the *Indians* valued much. The *Spaniards* not being able to forbear laughing, to see the value they put upon them, the king said to them, *What do you laugh at?* And having heard what it was, he said, *We might more justly laugh at you, for valuing things so much which are of no use in life, and for which you pass so many seas. As for these knives and hatchets you give us, they are very useful instruments to men.* This was not the only return the king had for his pearls; for he had the precious pearl of faith by their means: for growing very fond of them, and being by them instructed, he and all his family received the christian religion, which was the principal end to which the *Castilians* directed all their enterprizes. They made a solemn christening; and the king, to treat his spiritual fathers, who had engendered him in the gospel, carried them to see the pearl-fishing, which was in this manner: The *Indians* dived to the bottom, having about their necks a bag full of stones, that they may sink the faster; and it served them for a ballast to keep them steady while they gathered the oysters, that the water might not buoy them up. The greatest oysters are about ten fathom deep; for when they do not go to feed, they keep as low as they can, and stick so fast to the rocks, and to one another, that it is very hard to loosen them; nay, it happens sometimes, that while they spend too much time in doing it, their breath fails them, and they are drowned: but, generally speaking, they are not in danger, because, as they gather the oysters, they

Pearls of a prodigious bigness.

A wife re- partee of an indian king.

The pearl-fishing.

they put them in their bag, and lighten it of the stones, and before their breath fails they come up again with their fish. They open the oysters, and take out the pearls, which use to be many if they are small, and few if they are large. They say that among those they presented the *Castilians* at this

time, were several of the bigness of large Ovale. 1640
pease and hazle-nuts; with which they returned very well pleased to have made a discovery of so rich a treasure, as well as of the rich one they had given in exchange to the king and his people, by making them christians.

C H A P. X.

Of the Discovery of the River of Plata, and the Coasts of Chile, by the Streights of Magellan.

WE have hitherto gone by the north sea to the *terra firma*, and the discovery of the *South Sea*, with intent to follow the discoveries of this new world to its utmost bounds, which is the kingdom of *Chile*, to which all this narrative is directed. We shall follow this order by the same steps that the first conquerors went; but while they are disposing all things for this great enterprize, it will not be amiss to leave the *South Sea*, and follow those who endeavoured to discover the coasts of *Chile* by the *North Sea*. The first we shall follow is captain *Juan Dias de Solis*, who sailing from *Spain* the eighth of *October*, 1515. run along the coasts of *Brazil*, till he discovered the famous river of *Plata*, which was so nam'd, not from any silver that is found near it, or on its banks, but from some plates of that metal which the *Indians* gave the *Spaniards*; which silver they had brought from the country about *Potosi*, with which they had communication by the means of the *Tucuman Indians*, who are the nearest on that side to *Peru*. *Solis* entered that mighty river, which, if I am not mistaken, is threescore or seventy leagues over at its first entrance, and is known at sea by its fresh water, at first, till being further in, they can see the mountains and lands that bound it. This river is one of the most famous in the world, of sweet and excellent water, being observed to clear the voice and lungs, and is good against all rheums and defluctions; and all the nations of the *Paraguays*, who drink this water, have admirable voices, so tunable, that when they sing they appear organs; and therefore they are all inclined to musick; and those who come from abroad mend their voices by living there. I knew one who was born in *Chile*, and had naturally a good voice, which he mended extremely by living in *Paraguay*; but when he left that country, and came to *Tucuman*, he lost his improvement, as he himself told me. This river has another property, which is, that it petrifies the branches of trees which fall into it. The governor *Hernan Darias*, born in *Paraguay*, a gentleman of a singular ta-

The Rio de la Plata discovered 1515.

The virtue of the water of the Rio de la Plata.

lent for government, had in his house a whole tree all of stone, which had been taken out of this river. Likewise there are formed naturally of the sand of this river. certain vessels of various figures, which have the property of cooling water. There are also certain *cocos de terra*, which contain stones in them, which at a certain time are, as it were, ripe, and burst, discovering amethysts within them; they burst open with a great noise.

There are also bred upon its banks most beautiful birds of several kinds; and in its streams great variety of fishes, very dainty, and in great quantity. The river is navigable every where in canoes, but not with the same canoes, because of the prodigious fall that is in the midst of it, the whole river precipitating itself into a deep gulph, from whence it runs many leagues, till it empties itself into the sea. The noise that this fall makes, the foam that it raises, the whirlpools it causes, by the rencounter of its waters, is not to be imagin'd. The land on both sides this river is very fertile: on the west side, which is the *Tucuman* side, corresponding to *Buenos Ayres*, there are several cities, as *St. Fago de Estero Cordoua*, *St. Michael la Rioga*, and *Esteco Juzuy* and *Salta*, which border upon *Peru*: these cities are not very populous, because they are in the midst of the land, and far from commerce with both seas; but they do increase very much, particularly *Cordoua*, which, amongst other properties, has that of producing rare wits in the university governed by the Jesuits, who may match their professors and scholars with those of any other part, as I myself have experienced. There are likewise in this district many houses and families of men of quality and antient nobility. Higher up the river to the west, are also the cities of the *Assumption*, *Santa Fee de las Corrientes del Guayta*, and others. The city of the *Assumption* is the chief, and was peopled by gentlemen that came first to the *Indies*, and is since much increased in people, but not in riches; because it being so far within the land, cannot have sufficient vent for its commodities,

Its fall.

An university, and rare wits at the west-indian Cordoua.

OVALLE. which are chiefly *Sugar*, and preserved fruits; among the rest they are famous for a dried sweat-meat, called *Ladrillos*, which are slices of cetron, done up in *Sugar*, in the form of a tile: but the best sweet-meat they have they will give in great abundance for an apple, or any *European* fruit. In all this tract of land there are three governments, which are also bishopricks, to wit, *Paraguay*, *Rio de la Plata*, and *Tucuman*.

Higher yet on the east side are many heathen nations, who have others that answer them on the west; and among these are distributed those famous missions which our fathers of the society of *Jesus* have founded.

A religious digression of the author's. I am sorry I am insensibly engaged in this matter; and I must own I have mentioned that which I cannot well explain. This is not a place for panegyrics, nor does the thread of my history admit of such large digressions; yet I cannot but stop a little, and give some consideration to that we may call miracles of grace, which are perform'd in those deserts, of which I myself have been an eye-witness, having lived some time in that holy province, to which I owe all that I am. But who can explain what those apostolical men deserve in the sight of God, who seem to have nothing of man but what is necessary to make their life more admirable, which they lead like angels in human bodies?

Who would not wonder to see in those mountains and solitudes men ill fed, worse lodged, naked, painful, and in anguish for the souls of others, when they might save their own with less trouble, enjoying the good morsels and merry days, which, without sin, and sometimes meritoriously, they might have in their own country among their friends, and in the best of *Europe*? Who can but admire to see so many youths banish themselves, and renouncing all preferment, resolve to pass all their lives like hermits, for the love of God, and zeal of the salvation of souls? Is this a work of nature? and can human force arrive to this of itself? Let us go out from this consideration, lest it be like a load-stone to draw us in further; and yet let me fly as far as I will, I cannot hinder my heart from being with them, and desiring to end my days in this employment. They who desire to see the fruit of these missions of our company, the numbers of the gentiles which they have brought from solitudes to live in cities, the great progress of the faith, and the numbers of martyrs they have consecrated to God, let him read the book made of all this by that apostolical man *Antonio Ruiz de Montoya*; and then he will be extremely edified, and admire the work, as well as the author. And so I return to the thread of my history.

Juan de Solis being landed here, found little resistance from the *Indians*, who are not so cruel nor warlike as in other parts; so he took possession of all that tract, in the name of their majesties, for the crowns of *Castile* and *Leon*, as was always the custom of the first discoverers. And he for himself took possession of those seven parts of earth which death allows to those he seizes, let them be never so ambitious, though while they are alive a whole world will not suffice them. He lies buried there; and an end was put to his discoveries.

Much about the same time, there were at his catholic majesty's court the two famous captains *Ferdinand Magellan* and *Ruy Falero*, offering their persons, valour, and industry, for to find out, either towards the south or west, an end to *America*, or some canal or streight by which both seas might communicate with each other; and so the navigation from *Europe* might be made in the same ships, in which they might go round all its coasts. They were treating upon this subject; and the *Portugal* ambassador made it his business to oppose *Magellan*, because being fallen out with his king about this discovery, he desired he might not make it for the crown of *Castile*; but at last the king having heard at *Saragoça*, in presence of his council, the reasons and grounds that *Magellan* and *Falero* went upon, he accepted their service, and honoured them with the habits of *St. Jago*; and having settled the capitulation with them, his majesty commanded the squadron to be made ready, and named the captains and officers of it; and having heard that there was a dispute risen between *Magellan* and *Falero*, about who should carry the royal standard or flag, and the like, he ordered *Falero*, as not yet well recovered of a distemper he lay under, to stay at home, and mind his health; and, in the mean time, that another squadron should be got ready, in which *Falero* should follow.

The first squadron being ready, his majesty commanded the assistant of *Seville*, that he should deliver the royal standard to *Magellan* in the great church of *Santa Maria*, of victory of *Triana*, taking at the same time from him an oath of fidelity, or homage, according to the custom of *Castile*, that he should perform the voyage with all fidelity, as a good and loyal vassal of his majesty. The captains took likewise an oath to obey *Magellan* in all things. He, after many vows, having recommended himself and his voyage to our lord, went on board the ship called the *Trinity*, and the treasurer-general in the *Victory*, (so famous for being the first that went round the world.) The other ships were the *Conception*, *St. Jago*, and *St. Antony*

They

Magellan sets sail for his discovery very

They set sail the tenth of *August*, in the year 1519. They took the isle of *Tenerif*, then made the coast of *Guinea*, and arrived at *Rio Genneiro*; from whence they sailed on *St. Stephen's* day, and having had a great storm, they entered into the river of *Plata*: here they stay'd eight days; and then following their voyage, they had another terrible tempest, which carried away their fore-castle, and forced them to cut away their poop. They made vows to our lady of *Guadalupe* and *Monferrat*, and to *St. Jago of Galicia*. It pleased God to hear them, and they took shelter in the river of *St. Julian*, but not all; for one of their ships was lost: the men got on shore, but endured so much by land to port *St. Julian* by hunger, that they seemed skeletons when they came to their companions.

Magellan's men mutiny.

While they were wintering in this river, either idleness, or the great sufferings they had undergone, and those which they feared, made them mutiny against *Ferdinand Magellan*. There were some of his ships that revolted; but he with great boldness, and no less art, made himself master of them, punishing some of the guilty, and pardoning others; and for *Juan de Carthagena* and his companion in rebellion, he set them ashore when he set sail, leaving them a good provision of bread and wine. It was never known whether this were sufficient to sustain them, till they should meet with some of those giants which had been with the ships, and had been treated by *Magellan*, who perhaps received them.

Sets some mutineers on shore, and there leaves them.

Passes the stright of his name in twenty days.

Magellan seeing the winter over, as he thought, set sail the seventh of *November*, which is when the summer begins in those parts; and having by land observed what he could of the *Streight*, they passed with great good fortune in twenty days, and then steering north, they coasted along *Chile*, which they left something at large, as having no knowledge of that land, *Peru* being not yet discovered. After this, they came to the *Philippine Islands*, in one of which this most courageous captain, and famous *Portuguese*, *Magellan*, died by the hands of the natives, or to say better, by his own rashness and overboldness.

Magellan killed.

1534.

Some years after, which was that of 1534. *Simon of Alcazova*, a *Portuguese* gentleman of the habit of *St. Jago*, and gentleman of the chamber of the king, a great cosmographer, and one very expert in navigation, having been employ'd many years for the crown of *Castile*, made an agreement with the king to discover and people two hundred leagues from the place where *Almagro's* government should end, which was in *Chile*. He sailed from *St. Lucar* on the 21st of *September*, 1534. with five good ships, and two hundred and fifty men; and without

seeing land from the *Gomera* to the *Streight* of *Magellan*, only having touched at cape *Abre Ojos*, and the *Rio de Gallegos*, about twenty five leagues from the *Streights* mouth, he entered them on the 17th of *January*, 1535. having endured so much thirst, that the cats and dogs were come to drink wine, and the people were ready to perish. They found a great cross erected by *Magellan*, and the wreck of the ship which he lost there. There appeared about twenty *Indians*, who gave signs of much joy to see the *Spaniards*. They followed their course, keeping still the right hand, as the safest; but yet they had so furious a storm, that it carried away half their sails: it blew so, that they thought the ships would have been carried away through the air. They took shelter into a port; and because the season was so far advanced, they persuaded their general *Alcazova* to go out of the *Streights*, which he did, and return to the port of *Lions*, or of *Wolves*, which was a very good one.

OVALLE. 1646.

While they were wintering in those parts, they resolved to enter further into the country, and make discovery of those riches which the *Indians* told them were there; so having celebrated mass, they blessed the banners, and the captains took a new oath of fidelity and obedience; and with this they set out about 225 men, having fifty *arcabuses*, seventy *cross-bows*, four charges of powder and ball, which every one carried with his bread, which was about twenty six pound weight. Thus they marched about fourteen leagues; and there *Alcazova*, being a heavy man, could go no further, which was his ruin: he named a lieutenant, against whom the men mutined; for having gone ninety leagues, and their provision failing, they resolved to go back, as they did, though they had met with a river full of fish; and that their guides told them that a little further they should come to a great town, where there was a great deal of gold; for the inhabitants wore plates of it in their ears, and upon their arms: but nothing could move them; and as one mischief seldom comes alone, they resolved to make themselves masters of the ships at their return, and to kill all that should oppose them; and so they executed it. But God Almighty punished them immediately; for as they were going out of port, they lost their admiral; and then having but one ship, durst not venture for *Spain*, but put in at *Hispaniola*, where doctor *Saravia*, of the audience of *St. Domingo*, chastiz'd the most guilty. And thus the discovery of *Chile*, for that time, and that way, was disappointed; for God reserved that honour for another.

OVALLE.
1646.

C H A P. XI.

Of the Discovery of other Parts of America before that of Chile.

WHILE the ships are making ready to go to the discovery of *Peru*, it will not be amiss to touch upon the discovery of some other parts of *America* by-the-by, that at least the order of time, with which the discoveries proceeded each other, may be understood; and what we are to say afterwards about *Chile* will be made plain-er, that being our chief design.

It has been said already, in its proper place, how the admiral *Columbus* discover'd the *terra firma*, or continent of *America*, in his fourth voyage from *Spain* to the *Indies*, and found the port of *Puerto Bello* the second of *November*, 1502. We have also said how *Vasco Nunnes de Balboa* having founded *Sancta Maria la Antigua* of *Dairen*, discover'd the *South Sea*, and took possession of it in the month of *September* or *October*, in the year 1513. as also that in the year 1515. *Juan Dias de Solis* discover'd the river of *Plata* the first of all discoverers.

Now we will add what is known about the discovery of other lands; amongst the which, one of the first was that of *Yucatan*, which was undertaken by captain *Francisco Hernandez de Cordoua*, in the year 1517. and the *Adelantado* of it is at this day *Don Christoval Soares de Solis*, a gentleman of an antient and noble family in *Salamanca*. This same year other *Castilians* discover'd the land of *Campeche*, where, in a chapel of the *Indians*, full of their idols, they found painted crosses, of which they were not less astonish'd than rejoiced, seeing light in darkness, and the trophies of *Christ* by the side of *Belial*; which, at last, by the *Spaniards* arrival in those parts, were better known to those barbarous people. In the year 1518. the licentiado *Espinosa*, who was nam'd deputy to the governor *Pedrias*, founded the city of *Panama*, which is the canal by which all the treasure of *Peru* pass'es to *Spain* in the galleons. This city has not increased so much as many others of the *Indies*, because being situated near the equinoctial line, its temperature does not agree with those born in *Europe*; but yet there are many constitutions that do very well there, because of the great riches that are easily acquir'd there; and those who seek them, think no air bad. There are a great many people of quality; for there is a bishoprick, a royal *Audiencia*, or court of judicature; a tribunal of royal officers, and a chapter of canons, seculars and regulars. But that which in my judgment is most

Panama
founded in
the year
1518.

commendable in it, is the piety, mercy, and liberality of its inhabitants. I have this year receiv'd advice, that by the negligence of a female slave, the greatest part of the city was burnt; for the houses being of wood, if one take fire, 'tis hard to stop the flames: there was lost in this a great mass of riches, a great part of the loss falling on the cathedral; and a little after there being a gathering made, though this misfortune had concern'd almost everybody, who for that reason were less in a condition to contribute by way of alms, which some of them wanted, yet they gave above twenty thousand pieces of eight, and went on contributing. This was an extraordinary mark of their charity; but the ordinary ones, in which they constantly shew their generosity, are to strangers and passengers who pass from *Spain* to the *Indies*, who most of them are at a loss till they meet with some patron, or friend, or countryman, to assist them; and they would often be reduced to great extremity, if this were not, as it is, a common inn for all those people; for in the college of our company alone, though it is not yet founded, but lives upon alms, I saw, when I was there, a cloth laid at the porters chambers, where every day they provided for, and fed about fifty or sixty passengers, with bread and flesh in abundance. The same is done by other convents; and the seculars, I saw, gave them money and other necessaries. This, as to the city of *Panama*, founded in the year 1518. in which year the religious friers of *St. Dominick* and *St. Francis* pass'd from the island of *Hispaniola*, and began to found convents in *terra firma*, and the *Pearl* coast; from whence these two holy orders pursued their mission through all the land, enlightening it with their doctrine and holy examples; by which they have made such a progress among the *Indians*, that the present flourishing of the faith is owing to them, to the great saving of the *Indian* souls. The year 1519. *Ferdinand Magellan* made the discovery of the coast of *Chile*; and the same year *Hernando Cortes* went from the point of *St. Antonne la Havana* to *Corocha*, which is the first point of *Yucatan* east, to begin the conquest of the great empire of *Mexico*; of which, and the noble actions of that great man, 'tis better to be silent than to touch upon them, only by-the-by, as we should be forc'd to do; this being not a place to explain the state and grandeur of that mighty monarch *Montesuma*, who was

1519.

sove-

sovereignly obeyed in so many and such great provinces. Who can express in few words all this, and the felicity that accompanied Cortes in all his undertakings, which were such as they appear'd possible only after they were done, seeming otherwise so high and difficult, as to be inaccessible to the extreme boldness? Indeed, it cannot be denied, but that he was assisted by heaven, whose instrument he was in planting the christian faith among those gentiles, and shewing such reverence to the preachers of it, as might serve the *Indians* for an example; a quality which will always give reputation to princes, both before God and men.

Buenos Aires founded in 1528.

In the year 1528. the king sent a colony to the *Rio de la Plata*, having agreed with the merchants of *Seville* for that purpose. The city they founded was that of *Buenos Aires*, which is on the side of that river, in that part of it where it grows narrow from its large entrance at sea; and the river there is not above nine leagues over.

Carthagena founded in 1532.

In the year 1532. *Cedro de Heredia* of *Madrid* sail'd from *Spain*, and founded the city of *Carthagena*, which is the first *Scala* which the *Spanish* galleons make coming from *Spain* for the *Indies*, to fetch silver. It was so call'd, because its port was like that of *Carthagena* in *Spain*; for the old name of the *Indians* was *Calamari*. He had at first an engagement with the *Indians*; and though they shewed themselves very brave, yet he beat them, and founded the city, which is at present one of the best of the *Indies*, being wall'd with stone, and so strong, that we may name it as an impregnable fortress.

The situation of Carthagena.

It is situated in an island, divided from the continent by a small arm of the sea, which ebbs and flows, and comes to the bog of *Canapote*: there is a bridge or causeway there, that goes to the *terra firma*. The port is very safe, and good ships go into it by two mouths or entrances, a greater and a less; the great is sandy; and the year that I was there, they told me it was almost shut up by the sand which a river casts up against it; and now they write me word, that it is quite fill'd up, so that there is no going in, but by the lesser entrance, which makes it so much the stronger, and it is defended by a good castle; besides which, the city is well garnished with artillery, so as not to fear an invasion. The plot of the city is very beautiful, all the streets being handsomely dispos'd, the houses of free-stone, high and noble; so are the churches and convents, particularly that of the *Jesuits*, which makes a beautiful prospect to the sea. Here is a custom-house for the king, and a house call'd of the *Rigimiento*, with other publick buildings: it is very populous, and of a great trade, by reason of

Well built.

the coming of the galleons; and from them they have wine and oil; corn they have in their own territory: there resides a bishop, and there is a tribunal of the holy inquisition. The governor hath both the civil and military command: it increases every day in riches, being so situated, that it shares all the riches of *Peru*, *Mexico*, and *Spain*.

OVALLE, 1646.

In the year 1540. captain *Francisco de Orellana* discover'd the great river of the *Amazones*, which is call'd also *Orellana*, and by a common mistake *Maragnon*; and went from it to *Spain*, where, upon the relation he gave of its greatness, the emperor *Charles V.* order'd him three ships, with people, and all things necessary to make a settlement. But this had no effect, because having lost half his men at the *Canaries* and *Cape Vert*, he was too weak when he got thither; yet he attempted to go up the river in two large boats, to which his fleet was reduc'd; but finding his wants of every thing, he came out again, and went by the coast of *Caracos* to the *Margarita*, where he and his people are said to have died. About twenty years after, the viceroy of *Peru* sent a good fleet under *Pedro de Orsua*; but this miscarried also, because he was killed treacherously by *Lopes de Aguirre*, who rebell'd with the fleet; but having mis'd the entrance of the river, he landed on the continent, near the island of *Trinidad*, where he was executed by order from court. Some years after this the serjeant general, *Vincente de los Reyes Villalobos*, *Alonso de Miranda*, and the general *Josepb de Villa Mayor Maldonado*, undertook the same design, but with the same fortune, death taking them away; so that they gave over at that time all attempts on *Peru* and *Quito* side. But still the fame of this river continuing, *Benito Maciel*, general of *Paria*, and since that governor of *Maragnon*, and *Francisco Coello de Caravallo*, governor likewise of *Maragnon* and *Paria*, attempted its discovery up the river; and though they were back'd by the king's royal commands, yet there were many cross accidents as to hinder the execution of their enterprize.

The fathers of our company of *Jesus at-tempted* likewise this discovery, by the motive of saving so many souls; but beginning with a nation call'd the *Cofanes*, their progress was stopp'd by the cruel death given to father *Raphael Fernandes*, who was preaching the faith to them. Thirty years after, which was 1537. some friers of the order of *St. Francis*, mov'd by the zeal of amplifying the glory of the gospel, and by order of their superiors, went from *Quito*, in company of captain *Juan de Palacios*, and some soldiers: they began to sail down this river, and came to the *Encabellados*, or

In the year 1507.

1646. **OVALLE** people with long hair; but not finding the harvest ready, they return'd to *Quito*, except only two of their lay-brethren, which were *Domingo de Brieua*, and frier *Andres de Toledo*, who with six foldiers more sail'd down as far as the city of *Paria*, a settlement of the *Portuguese*, about forty leagues from the sea. They pass'd by the city of *St. Luis de Maragnon*, where the governor *Jacomo Reymondo de Moronna*, by the information he had from these friers, caus'd seven and forty canoes to be got ready, and embark'd upon them seventy *Spaniards*, with 1200 *Indians*, some of war, and some to help to row, under the command of captain *Pedro Texeira*, who having spent a whole year in his voyage, came at last to the city of *Quito*, having discover'd and navigated the whole river of the *Amazones*, from its entrance into the sea to its source or rise.

The river of Ovellana navigated from the sea to Quito.

The viceroy of *Peru*, who at that time was the count *de Chinchon*, being inform'd of this voyage of captain *Pedro Texeira*, resolv'd to send two persons back with him for the crown of *Castile*, who might give a perfect relation of the discovery.

At this time the city of *Quito* was govern'd by Don *Juan Vasques de Acunna*, as corregidor for his majesty over both *Spaniards* and *Indians*, and who at present is corregidor of *Potosi*, who very zealously offer'd his person for one, and his fortune to raise people at his own charges, and provide them with all necessaries; but the royal *Audientia*, considering how much he would be wanted in his office, where his prudence, experience, and zeal, had shew'd themselves, refus'd to let him go, and chose a brother of his, that they might not totally deprive his illustrious family of that glory. This brother was a father of our company of *Jesus*, and nam'd father *Christoval*.

Christoval de Acunna, who was rector of the college of *Cuenca*, and gave him for companion, father *Andres de Arrieda* of the same company, who was professor of divinity in the same college.

They set out from *Quito*, in the year *1539*. and having navigated the whole river, which, according to their account, is thirteen hundred and fifty six leagues long, (though *Orellana* makes it eighteen hundred leagues,) observ'd exactly the rise of this great river, its situation, its course, latitude, and depth, the islands it makes, the arms into which it is divided, the rivers it receives, the riches, quantities, temperature, and climate of its shores, the customs and manners of that multitude of people that inhabit it, and particularly of those famous *Amazones*. All which may be seen in a treatise made of it by father *Christoval de Acunna*, printed in *Madrid*; and it is a relation that deserves credit, he being an eye-witness, and having examin'd various nations as he went.

These informations were well receiv'd in *Madrid*; but the revolutions which succeeded in those kingdoms, hinder'd all further progress, and prevented those holy designs for the conversion of that great part of *America*. There are infinite numbers of *Indians* that inhabit the islands, and other parts of this river. 'Tis said they have one settlement, that is, a town above a league in length. And now omitting many other conquests, made much about the same time in the islands and coasts of the *North Sea*, and that which was made in the *South Sea* by *Xil Gonçales de Avila*, in the land of *Nicaragua*, in the year 1522. Let us attend (for it is high time) to the discovery of *Peru*, of which we shall treat more at large, because it has a connexion to that of *Chile*.

C H A P. XII.

The Discovery of Peru is given to Don Francisco Pizarro, and Don Diego d'Almagro, and Hernando Loque; and how much they endur'd in it.

THE captains Don *Francisco Pizarro*, and Don *Diego Almagro*, in company with the scholastick of the cathedral church of *Dairen*, call'd *Hernando de Loque*, came to the governor *Pedrarrias*, and desir'd of him, as friends, the favour of being employed in the discovery and conquests of those coasts which run south from *Panama*, where lies the powerful kingdom of *Peru*, of which at that time there was little light; and for this they propos'd their reasons, among which, that which was of least value, they relied most

The first discovery of Peru attempted.

upon, and that was their experience they had attain'd under their general *Vasco Nunes de Balboa*. They met with little difficulty with the governor; for so long as they did not desire any assistance of the king's treasure, but ventur'd their own and their lives, they easily obtain'd leave to undertake what they would. They presently bought one of the ships which *Balboa* had built for that design; and having got together threescore men, and four horses, (for at that time horses were a great rarity,) *Hernando de Loque* said

mass;

mas; and when he came to consecration, he divided the *Hostia*, or sacrament of the body of Christ, into three parts, of which he took one, and gave the other two to his two companions, offering themselves to God, with intention to propagate among those people his glorious name, and plant the christian faith amongst them by the predication of the gospel. Those who were present shed tears out of devotion, and at the same time pitied these undertakers, looking upon their enterprize as a mad one.

About the middle of *November 1524*. Don *Francisco Pizarro* having left Don *Diego Almagro* behind him, to get more people together, sail'd from *Panama* to the isle of *Pearls*, to the port of *Pinnas*, (the last discovered by *Balboa*, and after him by *Pasqual de Andagoya*.) and went up the river of the *Cacique Biru*, or *Biruquete*, to the country of *Cbocama*, where he stopped to wait for his companion *Almagro*. The hardships that the *Castilians* endured of hunger and other inconveniencies are not easily to be told: twenty died starved, and the rest were sick, having no other sustenance than the bitter palmetos; yet captain *Pizarro*, without shewing the least weakness, took care of them all with great affection, which made them all love him. At that time Don *Diego de Almagro*, his companion in the undertaking, came to him: he was received like an angel, for the relief he brought: he had lost one of his eyes by the shot of an arrow, in a rencounter he had with the *Indians*. They both together pursued their conquest; but provision failing them once more, and their soldiers being almost naked, and so persecuted with mosquitos, which are infinite there, that they could not live, they began to talk of returning to *Panama*, to which *Pizarro* himself was well enough inclined; but *Almagro* exhorted them rather to die than lose patience, offering to return to *Panama* for new succour, while he should leave his companion in the island of *Gallo*.

The effect that this had, was, That he found the government altered in *Panama*, and *Pedrarias* succeeded by *Pedro de los Rios*, who hearing of the miserable condition of those *Castilians*, would not suffer *Almagro* to return to them, being desirous they should give over the enterprize as impracticable. He sent for this end a gentleman of *Cordoua*, call'd *Juan Tafur*, a man of excellent parts, equal to his noble descent, with a commission to bring those people back, that they might not all perish. He came, and signified his order to *Pizarro*, at which he was out of all patience, seeing it would be the ruin of his project. *Tafur* seeing

this, took a prudent *medium*, which was, That he should draw a line between him and *Pizarro*, who should be at the head of his men: and *Tafur* told them, That all those who resolved to return to *Panama*, should pass the line, and come on his side. Having said this, they began to pass the line, all to thirteen and a *Mulatto*, who said they would die with *Pizarro*: and so *Tafur* returned with all the rest to *Panama*.

Captain *Francis Pizarro* remained with his thirteen companions in an island, which, for the greater proof of his courage and constancy, happened to be the *Gorgona*, which is a picture of hell for the closeness of its woods, the asperity of its mountains, the infinity of its mosquitos: the sun is scarce ever seen in it for the continual rains that fall.

When *Tafur* came to *Panama*, and his two friends *Almagro* and *Loque* found that *Pizarro* stay'd behind with so few companions, 'tis not credible how much affliction they shewed: they sollicited the president, that at least another vessel might be sent to bring them away, in case they found them alive; and after many difficulties, at last a ship was ordered after them, but upon condition to be back at *Panama* in six months: A ship the ship sail'd, and came to the place where *Pizarro* and his companions were left. Who can express the joy and surprize of those poor abandon'd wretches, when they descried at a distance the sails of the ship? At first they could not believe their own eyes; for the desire and longing for a thing makes it appear less probable to come to pass: but at last it arriv'd; and *Pizarro* seeing himself master of a good vessel, could not forbear attempting some discovery.

They sail'd as far as the country of *Tumbese*, which is very rich; though the *Tumbese* *Indians* said, That their riches were nothing in comparison of what they might see further. The lord of that country having heard of the arrival of the *Castilians*, he sent presently to visit them at their ship with twelve baskets of provisions, and among the rest a sheep of that country, which was presented to them by the virgins of the temple, as to men who seemed descended from heaven, and sent by God for some great thing. The ambassadors came; and wondering to see the ship with white men who had beards, they asked them who they were, whence they came, and what they pretended. They answer'd them, That they were *Castilians*, vassals of a powerful monarch, who, though so great, had yet a greater over him, whom he owned, with all other kings, and who is in heaven, and is call'd *Jesus Christ*, in whose name they came to undeceive them of their errors in worshipping gods of stone and wood, there being but one God, creator of all things, whom

OVALLE 1646. whom we all ought to worship. They explained to them, That there was a heaven and hell, the immortality of the soul, and the other mysteries of our faith.

The *Indians* stood staring and gaping, hearing this doctrine, which had never been heard of before in their country; for they believ'd, that there was no other king in the world but their king *Guayanacapa*, nor other gods but their idols. Among all the things they admir'd, there were two chiefly: the one was a negro; for they never had seen one, and did believe that his colour was some strong dye; for which reason they bestowed much pains in washing his face to get it off; but when they saw that he was rather blacker, and that he shewed at the same time white teeth, for he could not hold laughing to see their simplicity, they fell a laughing too, and could not but admire such a sort of men. The other thing was the crowing of a cock, which the captain sent them with a hen of

They wonder at the crowing of a cock.

Castille: every time he crowed, they ask'd what he said; for they thought his voice articulate, like the human voice; which is an argument that they had not that kind of fowl: and *Garcilasso de la Vega* is of that opinion, answering the objection of the *Indian* name they give a hen, that is, *Atagualpa*, which, he says, was a name given by the *Indians* after the coming of the *Spaniards*. The *Spaniards* having refresh'd themselves well on shore, began to desire of *Pizarro* to return to *Panama*, and gather a greater force, that which he then had being very disproportioned to his undertaking: he yielded to their persuasions, having, for this time, made discovery only as far as a place called *Santa*, which is very near the equinoctial line; and having had a more certain account of *Cusco*, its riches, and the mighty *empire* it was head of. So taking with him some *Indians*, and some patterns of the gold, as a testimony of the discovery, he return'd to *Panama*.

C H A P. XIII.

Captain Francisco Pizarro returns to Panama, goes from thence to Spain, and pursues his Conquest.

PISARRO being come to *Panama*, went with his two companions to the governor *Don Pedro de los Rios*, to represent to him their reasons for continuing their discovery, upon the account of the riches of the country, as well as the planting the faith in the capital of so great a monarchy, and so in all its dominions: but the governor would not agree to it; and so they resolv'd that *Pizarro* should go to *Spain*, to propose it to the king himself. He undertook the voyage; and to give more credit to what he should say, he took along with him several things proper to the country he had discovered, as pieces of gold and silver, some of those sheep we have mentioned, and some of the *Indians* themselves clothed after the manner of their country. The king was much pleas'd with them; and *Pizarro*, in his first audience, began to propose the intent of his discovery, the great hardships he had endured, he and his companions going naked, and almost starved, expos'd to the mosquitos and poison'd arrows of the *Indians*; and all this, having spent three years in this sort of life, for the increase of the gospel and his majesty's royal dominions. His majesty heard him with much attention and goodness, shewing great compassion for his sufferings, and ordering a gratification for himself, and his two companions, as also the thirteen who would not forsake him: he receiv'd all his memorials, and order'd them to be dispatch-

ed to his mind, having first made an agreement with him proportionably to his great merits. They did not believe in *Spain* (and that is an old disease every where) all that *Pizarro* said of the riches of *Peru*, and of the palaces and houses of stone which he had seen, till he shewed them the pieces of gold and silver which he had brought with him; and then the fame of that land began to spread its self, and with it the covetousness of sharing those treasures, every one blaming the governor of *Panama* for not having given the necessary assistance to the discovery.

Pizarro being dispatched with the title of *Adelantado* of the first two hundred leagues he should conquer, having also a new coat of arms, and other privileges granted to him; and taking with him four stout brothers that he had, he embark'd for the *Indies* with one hundred and twenty five *Castilians* more. He left *Sanlucar* in *January* 1530. and arriv'd at *Puerto Bello*, where he was received with great joy by his companions and friends, who were all pleas'd with the favours the king had bestow'd upon them by his means: only *Don Diego de Almagro* was not so well pleas'd that *Pizarro* had made a better bargain for himself than for him, his partner in all the undertaking; he made his complaint to him, and resolv'd to part company, and discover and conquer by himself: but being assured that as soon as the first two hundred leagues should be conquer'd

The riches of Peru not believed in Spain.

1530.

quired, he would use his interest to have him made *Adelantado* of two hundred more before any of his brothers; and so suffering himself to be persuaded, they agreed anew, and fell to preparing every thing for their enterprize. He remain'd at *Panama*; and the *Adelantado*, with his brothers, went from thence with a good crew of men, being to be followed by *Almagro*, as before. To make short about the things performed by this great conqueror, the great riches he got, and among the rest an emerald as big as an egg, which was presented to him, we will suppose him at the island of *Pura* in war with the *Tombezinos*; and there he came to a clearer information of the riches of *Cusco*, and the state in which that monarchy was at present: and because he had receiv'd a special command, and was himself inclin'd to propagate our sacred religion, as the best means of furthering his own design, the first thing he did, in landing upon the continent of *Peru*, was to build a church to God, to give a beginning to the spiritual conquest of souls. His first settlement was at *Pura*, where was built the first church that was ever erected in those kingdoms. While he was employ'd in this, he sent out to discover more lands, to know more of the state of the country. There he learnt the division that was between the two brothers *Guascar* and *Atagualpa*, which was occasion'd by the death of their father *Guaynacapa*, who was a most powerful monarch, and among other sons had these two, which were now in war, and some of his subjects follow'd the one, and some the other. *Guascar* was the lawful heir, but not so brave and warlike as *Atagualpa*, who, though a bastard, yet because he had follow'd his father in his wars from a child, drew to himself a great part of the kingdom, with which he made war upon his brother, with hopes to prevail.

The *Adelantado Don Francisco Pizarro* resolv'd to have an interview with *Atagualpa*, who was the nearest to the place where he was. So putting his trust in God, he set out with his small army, more to be valued for its bravery than its number, which nevertheless was feared and respected in its march. He came near the place where *Atagualpa* had his camp, which was near fifty thousand men, and sent him his ambassadors on horseback, which was a new thing in that country, to give him advice of his arrival, and the reason of it, which was, To persuade his majesty, and his vassals, to give obedience to the true king of glory, from whom is derived all the power and command that princes have on earth. *Atagualpa* receiv'd the ambassadors in a stately tent, shewing in all his behaviour a sovereign majesty; and though his courtiers

were in great admiration of the horses, which they had never seen; yet he kept his countenance, and conceal'd the effects such a novelty might have over him. He look'd upon them with some pleasure, and not as on a strange thing he had never seen; for the horses beginning to corvet, some of his *Indians* run away, whom he presently caused to be put to death, for having shewed cowardice in his royal presence. He answered the ambassadors courteously, shewing the pleasure he should have to see and hear their general; and set a day for it, telling them, That they should not be disturbed, nor afraid to find him and his people in arms, for it was his custom to use them to

The day came; and *Atagualpa* marching in order with his army to the place where the *Spaniards* were drawn up, he discover'd to his captains the mind he had to make an end with those strangers, who had been so bold as to enter into his country, and come so near him without having any respect to his royal power: but he order'd them not to kill them, but to take them alive, because he would use them as his slaves; and as for the dogs and horses, he resolv'd to offer them in sacrifice to his gods. The *Castilians*, who were not totally ignorant of this false appearance of peace and friendship, though they were so few that the *Indians* were four hundred to one, yet they did not lose courage; but with confidence in God expected the encounter, taking their posts, and preparing every thing for it, though secretly, that they might not be thought the *Aggressors*. Therefore he drawing near, the *Adelantado* stay'd for him with only fifteen men, the rest being retir'd and hid, and sent him an embassy by a frier, who carried the gospel, and told him, That in those books were contained the faith, by which he and his people might be saved, and they brought it him from God Almighty.

The king heard the frier, and took the mass-book out of his hands, looking earnestly upon it: but not knowing how to read it, and taking it all for a jest and a fiction, he threw the book up into the air, making a sign at the same time to his people to fall on; which they did: and then the *Adelantado* lifting up a hankerchief, which was the signal to our men, they play'd upon them with their muskets on one hand, and the dogs and horsemen attacked them on the other, so that the victory soon appear'd for the *Castilians*; God Almighty having resolv'd to destroy that monarchy of the *Ingas*, and to remove that obstacle to the propagating of the faith, and to put that land into hands that should increase it, as their catholick majesties have done. They took the king *Atagualpa* prisoner; but treat-

While this happen'd, which was on a *friday*, a day dedicated to the cross, in the month of *May*, in the year 1533. the army which *Atagualpa* had sent against his brother *Guascar*, near *Cusco*, overcame him and took him prisoner, and were bringing him to *Atagualpa*, without knowing any thing of what had happened between him and the *Castilians*; but on the way *Guascar* learned that his enemy was a prisoner too; and *Atagualpa* was at the same time informed of the victory he had obtained; he hearing it, shook his head, and cried, *O fortune! what is this, that I am this day a conqueror, and conquered?* *Guascar* moderated his grief with the news of his enemy's misfortune, thinking that the *Castilians* would revenge him on the tyrant, who pretended to take from him his lawful inheritance.

Guascar taken prisoner also.

Atagualpa, though a prisoner, began to make reflections in this manner: If I cause my brother to be put to death, how do I know how the *Castilians* will take it? and whether they will not put me to death for this, and remain lords of the land. If I let him come on, and he speaks with them, the justice of his cause will speak for him, and I must perish; for I cannot expect mercy from any. What remedy? He found it cunningly, as he thought: he feigned a great sadness, with a design that the *Pisarras*, who visited him every day, should ask him what was the matter. They did accordingly; and seeing him so afflicted, desired to know the cause of that extraordinary grief. He answer'd deceitfully, That having received the news that his generals had put to death his brother *Guascar*, it gave him an exceeding grief, of which he was not to be comforted; because though they were enemies, yet he was his brother; and he could not but be much concerned at his death. All this was feigned, to see how the *Spaniards* would take it; and finding they did not seem offended at the thing, he sent orders immediately to his generals, who were coming on with his brother, that they should put him to death presently by the way; which they did, by drowning of him in a river, which amongst them is an infamous death. His cries to heaven to revenge his unjust death were useless at that time.

Guascar put to death by the order of Atagualpa.

But let no man give it to another to save his own life; for there is not a shorter, nor a more certain way for him to lose it: let him not strive by politick maxims, which an unjust and ambitious passion suggests; for though that may be an appearance of stability, yet divine justice breaks thorough it all like cobwebs, and at length leaves no

crime without its chastisement. *Atagualpa* proved himself a great example of this truth, all his artifices serving only to afford his enemies a pretext to take away his life. He had promised to fill the room where they kept him prisoner, which was a very large one, with gold and silver, beside ten thousand bars of gold, and some heaps of jewels, as an earnest, for his ransom. And though this was accepted; and that he performed it according to his promise, yet he did not obtain what he pretended; for instead of his liberty they pronounced to him a sentence of death, which he justly deserved for having put his brother to it, and tyranniz'd over that which was none of his own; and because of the advice the *Spaniards* had every day of the army that was gathering together, which if it were true, and *Atagualpa*, at liberty at the head of them, there would have been good reason to fear from his subtilty, great and irremediable inconveniences; which they thought they could no ways avoid so well as by taking his life, though with some hopes of his exchanging it for a better and eternal one, if it be true, that before he died he was instructed, and received baptism, as some say he did.

A prodigious ransom.

The Spaniards take the ransom, and perfidiously put Atagualpa to death.

About this time, which was in the year 1533. *Don Diego d'Almagro* being made marshal, came from *Panama* to *Tombez* with a good body of men and arms; and from thence he went on to help his good friend, the *Adelantado Pisarro* in his conquests, not letting his men do any injury to his *Indians* as he went. There were a hundred thousand pieces of eight given them upon their arrival; for though they were not at the battel, yet their presence confirmed the victory, and helped to keep *Atagualpa* prisoner. The remainder of the treasure, which was above a million, was divided among *Pisarro's* men; and they being few, were all made rich, and in a condition to make discoveries of their own. The *Adelantado* sent his brother *Hernando Pisarro* to *Castile*, with the news of this happy progress of their discoveries, and of the propagating the christian faith in the conversion of the *Indians*; and he also carried with him the claim of *Don Diego d'Almagro* to two hundred leagues of land beyond his brother's, of which he was likewise to be *Adelantado*. All this he negotiated very much to the content of all; and in the year 1534. there was granted, in *Toledo*, to *Don Diego d'Almagro* the government of that which they called the new kingdom of *Toledo*, which began at a place called *Las Chincbas*, where the territory of *Pisarro* ended, and extended itself to the *Streights of Magellan*.

C H A P. XIV.

OVALLE.
1646.

The News of the Government of Don Diego de Almagro is brought to him ; and he goes upon the Discovery of that of Chile.

DON Francisco Pizarro had given commission to Don Diego d'Almagro, to take possession of *Cusco*, when the news came of the government of two hundred leagues given him by his majesty, to begin from the *Chinchas*. This caused great disturbance ; for it was believed that *Cusco* would fall into this division ; and the friends of Don Francisco Pizarro, judging this of great prejudice to Pizarro, that the marshal, even by his commission, should find himself in possession of *Cusco*, they advised him immediately to revoke the powers he had given, which he did ; and this was the first cause of the disturbance in *Peru*, which made afterwards so great a noise, and for which they both lost their lives. But I being to write the history of *Chile*, and not of *Peru*, shall leave the reader to those historians who treat of it at large. This news being known in *Truxillo*, one Diego de Agüero set out to carry it to Almagro, who was upon his march to take possession of *Cusco*. He overtook him at the bridge of *Acambay* ; and he having received it with great moderation, shewed himself above the greatness of his fortune, and gave him as an albricias, or present for his good news, seven thousand *Castilians*, which are near twenty thousand ducats ; and by this news he was moved to change his design of conquering a people called the *Chiriguænaes*, and treated of that of *Chile* ; for he supposed it would fall into the government he was to have, and (as *Herrera* says) moved by the informations he had of the great riches of *Chile*.

To prepare himself for this enterprize, which was like to be very chargeable, he caused a great deal of silver to be melted in *Cusco*, to draw out the king's fifths. Amongst other things, there was a man's burden of gold rings to be melted down ; and one *Juan de Lepe* being by, and taking a fancy for one of them, begged it of marshal Almagro, who shewed himself so much a gentleman, and so liberal, that he said presently, that he should not only take that ring, but that he should open both his hands, and take as many as could lie in them ; and hearing he was married, he ordered him besides four hundred crowns as a present for his wife. He shewed another piece of liberality to one *Bartholomew Peres*, for having presented him with a shield, which was, to order him likewise four hundred pieces of eight, and a silver pot weigh-

ing forty marks of silver, and had for handles two lions of gold, which weighed three hundred and forty pieces of eight ; and to one *Montenegro*, who presented him with the first Spanish cat that ever came to the *Indies*, he ordered six hundred pieces of eight. There are a great many stories more of his liberality and charity too, he being very generous and noble minded. Having disposed all for his enterprize of *Chile*, he caused proclamation to be made, That all those who had not some particular employment to stay them at *Cusco*, should make themselves ready to go along with him. They were all overjoy'd at this, he being extremely beloved for his liberality and courtesy ; and that they might furnish themselves with arms and horses, he caused one hundred and eighty load of silver to be brought out of his house, (in those days a load of silver was as much as a man could carry,) and twenty more of gold : this he distributed among them all. Those who were willing, gave him bonds to pay him out of what they should conquer in the land they were to discover ; for this was the way of these conquerors in gaining to his majesty this new world, having no other pay but what they could purchase.

The *Inga Mango*, who was brother to *Guascar* and *Atagualpa*, had succeeded them in the government, as the son of *Guayanacapa*, who had also many others. This *Inga* had taken a great kindness for marshal Almagro ; so he gave him, as a companion in his enterprize, a brother of his, called the *Inga Paullo Topo*, and the high priest *Villacumu* ; the Spaniards call him *Villaoma*, or *Vileboma*, that they might by their authority not only keep all his vassals from falling upon them in the way, but rather should receive him, and make him presents. The marshal desired these two persons to go before, in company with three *Castilians*, and make a settlement or habitation at the end of two hundred leagues. The other people, and *Juan de SAVEDRA*, went by another way ; and when they had gone one hundred and thirty leagues from *Cusco*, they founded the town of *Paria*. Here the marshal overtook them ; and he was likewise assured of the title of *Adelantado* granted him by his majesty, with the government of the new kingdom of *Toledo*, which was to begin from the borders of *new Castile* ; for so they called Pizarro's government. His friends advis'd him to return immediately,

A cat no indian animal.

The vast riches of the first conquerors in India.

Almagro and Pizarro fall out.

diately, wherever this express overtook him, because there was one come to the city of *Los Reyes*, with a commission from the king to regulate limits of both governments to each of the *Adelantados*: but *Almagro* was so possess'd with the ambition of conquering so great and rich a kingdom as that of *Chile*, that he did not value the land he had discovered, in comparison of what he was to discover, out of which he design'd to reward his friends, and the many gentlemen that accompanied him; so he pursued his journey; where it will not be amiss to leave him engaged with the snows, and ill passages of the *Cordillera*, while we give a visit to the great city of *Lima*, called otherwise *de los Reyes*, because it being the head of those kingdoms, we cannot well pass it by.

This city was founded by the *Adelantado Don Francisco Pizarro* in the year 1555. in a very pleasant plain, about two leagues from the sea, upon a fine quiet river; which being derived by drains and cuts all over the plain, fertilize it so copiously, that it is all covered with several sorts of products, as vineyards, sugar-works, flax, garden products, and other delightful plants: and if there be any thing they want from abroad, 'tis brought them so punctually, that all their markets are supplied with all manner of delicacies that can be wished for.

A delicious place.

For this and many other delights of this city, it happens to most people who live there, that they cannot endure to think of leaving it for any other place; so that it seems an enchanted place, where the entrance is easy, and the getting out difficult. I myself heard the *Spanish* merchants, who, the year I was there, had sold their goods themselves at *Lima*, whereas they used to sell them at *Puerto Bello*, so enamoured of it, though they stay'd but a little while there, that during our whole navigation, they could talk of nothing else; and to say truth, it deserves their praises; for though it cannot be denied, that some cities I have seen in *Europe* do out-do it in some things, yet few come near it, take it altogether: and, first, for riches, it is the fountain from whence all the rest of the world drinks; its bravery in cloaths, and magnificency of the court, out-does all others: 'tis extraordinary populous; for a father of our company, who had the care of catechising the negroes, told me, they were at least sixty thousand, and more, that came to confession. They have sumptuous buildings, though outwardly they make no shew, having no tiles; for it never rains all the year round: all the furniture, as pictures, beds, &c. are mighty rich. There are great numbers of coaches, and abundance of gentry; all the inhabitants very rich, merchants of great stocks, tradesmen and han-

Its magnificence.

It never rains at Lima.

dicraftsmen of all professions. But that which is to me most considerable, is, what belongs to the worship of God, and cult of religion; for the cathedral church, and all the parish churches are very sumptuous, and provided of admirable learned men, which come out of that university; of which those of the country are not the least to be valued, having furnished so many preachers and other subjects for all other dignities, even to the highest government. What shall I say of the orders of friars and nuns? I scarce know one order that has not two or three convents in the city, beautiful cloisters, great buildings, and yet greater churches; some after the old fashion; all with burnished gold from top to bottom, as are those of *St. Augustin*, and *St. Dominick*: others after the modern way, with curious well-wrought ceilings; as is that of the *Jesuits*, and of our lady of *Mercedes*, which are of a very fine architecture. There are eight nunneries, some of which have above two hundred nuns in them. There are besides many oratories, confraternities, hospitals, and congregations. In our convent alone of the *Jesuits*, I remember there were eight foundations of several kinds, and for people of as many different ranks and estates in the world. The great congregation has few in the world equal to it: the chappel of it is very large, and of a very rich material, covered with silk and gold, and rare pictures, with other rich ornaments belonging to it. There is here great frequentation of the sacraments by monthly communions: the body of Christ is exposed, and the church so adorned with musick and sweet smells, that it is a paradise upon earth. And amongst other pieces of devotion performed by this congregation, there is a great entertainment or treat given once a year at an hospital, which is so magnificent, that it is worth seeing: the same is done in proportion by the other congregations.

This city is the seat of a viceroy, who indeed is a king in greatness and authority, disposing of a vast number of places, commands, and posts of honour and profit. There is likewise a rich archbishoprick of great authority; three courts, or royal audiencias; a merchant court, which decides all matters of trade; a famous university, in which are professors very learned in their professions; three colleges or schools for youth, under the care of the fathers of our company of *Jesus*, in which are about one hundred and thirty professors or masters: there are every day new foundations for orphans, widows, and to retire women from lewdness: there is the famous hospital of *St. Andrew* for the *Spaniards*, and *St. Anne* for the *Indians*; all which would require a relation by themselves.

This

The best cities in Peru next to Lima.

This is what I could not avoid saying about this great capital of *Peru*; and if it continues increasing as it has done for this first age, it will not have its fellow in the world. The same may be said of *Cusco*, *Arequita*, *Chuquizaga*, and the great town of *Potosi*, which increase so, that he who is absent a few years, does not know them when he sees them again; and the reason is,

that the veins and mines of gold and silver, ^{OVALLE 1646.} which like a loadstone, have drawn so many people thither, are so far from lessening, that new ones are discover'd every day, and those richer than the old ones; for which reason there comes yearly more people, and among them much gentry, as well as tradesmen of all arts and professions, who most of them settle and increase there.

C H A P. XV.

The Adelantado Almagro enters into Chile, having suffered extremely by the Way.

1535. WE left the *Adelantado Don Diego de Almagro* in a place call'd *Paria*, from whence he was to pursue his journey to *Chile*, as he did in the beginning of the year 1535. He himself going before, order'd *Juan de Sacedra* to follow with twelve horse by the royal highway thorough the province of *Las Chichas*, the chief place of which was *Topisa*, where he found the *Inga Paulo*, and the priest *Villacumu*, who presented him with ninety thousand pesos of very fine gold, it being the tribute they us'd to send the *Inga* from *Chile*, and which they were now sending, without being inform'd of the tragical accidents that had befallen the family; and there he sent back a great many *Caciques* of the countries he left behind him, and who had waited upon him thither.

The three *Spaniards*, whom he had sent with the *Inga Paulo*, and two more who joined themselves to them, being desirous of making new discoveries, and acquiring honour, and withal making their court to the marshal, went before, till they came to a place call'd *Jujuy*, which is a place or country where the people are very warlike, and eat human flesh, and who kept the *Ingas* always in great awe. This boldness cost three of the *Spaniards* their lives, though they sold them dear. The *Adelantado* being resolv'd to revenge their deaths, sent captain *Salsedo*, with sixty horse and foot, to chastise those *Indians*; but they, being alarm'd, had call'd together their friends, and made a fort to defend themselves in, and many pits with sharp stakes in them, that the horses might fall into them; with which, and many sacrifices and invocations made to their gods, they had resolv'd to expect their enemies. Captain *Salsedo* found them thus fortified, and being himself inferior in strength, sent to the *Adelantado* for relief, who sent it him under the command of *Don Francisco de Chares*; but the *Indians* then avoided engaging, and resolv'd to abandon their fort; though, not to lose all their pains, they resolv'd first to at-

tack *Don Francisco de Chares*, where they kill'd a great many, and particularly of the *Indians Yanaconas*, and carrying off the spoils, they made a safe retreat: the *Spaniards* return'd back to their chief body. Since we mention'd the *Yanacunas*, it will not be amiss to explain the signification of that word, for the better understanding of what follows.

The *Yanacunas* were, among the *Indians*, ^{What the Yanacunas were.} a people subject to perpetual slavery; and to be known, were bound to wear a sort of habit different from the rest. These seeing the bravery of the *Spaniards*, and how much they made themselves be fear'd and respected, began to rise against their masters, and adhered to the *Spaniards*, hoping thereby to shake off the yoke of slavery; and became cruel enemies to the other *Indians*. That which this word *Yanacuna* now signifies in *Chile*, is, those *Indians* who do not belong to any particular lord; for as to freedom, there is no difference, the king having made them all free alike.

From *Jujuy* the *Adelantado* march'd with the vanguard, pursuing his journey, leaving the rear to the care and command of *Nogarral de Ulloa*. He came to a place call'd *Cbaquana*, where he found the *Indians* in arms; for though at first they were frighted with the swiftness of the horses, yet at last they grew so little afraid of them, that they took a solemn oath by the great sun, either ^{The resolution of the Indians of Chile.} to die or kill them all. The *Adelantado* attack'd them, and was in great danger, for they kill'd his horse under him in the engagement; but he continuing still to fight them, they resolv'd at last to retire: then he pursued his journey, with his whole army, which was of two hundred horse, and something above three hundred foot; with a great many *Indians*, as well *Yanacunas*, as others, who assisted the *Inga Paulo*. The army being thus numerous, they began to want provisions; and which was worse, they were without hopes of finding any, there being no place thereabouts that could afford it, the country being a desert, which

OVALLE 1646. which lasted seven days, all barren ground, and full of salt nitre; and for their comfort, as they descended a hill or precipice, after which they hop'd for some relief, they met with the snows of the *Cordillera*, which was a sight able to freeze the boldest undertaker, considering the dangers and sufferings they were threatened with. *Herrera*, when he comes to this passage, says, speaking of the bravery of the *Spaniards*, and their patience in suffering a great deal, which I shall not relate, that I may not be thought to praise my own countrymen with affectation; but I cannot omit some part of it: He says then, That to overcome such difficulties, none could have attempted it, but such as were us'd to endure hunger and thirst, and to enter into a country without guides, through forests, and over great torrents, fighting at the same time with their enemies and the elements, and shewing invincible minds; marching both day and night, enduring cold and heat, loaded with their arms and provision; being all of them ready to put a hand to all things, even the most noble among them being the first, when a bridge or any thing was to be made, to turn pioneers and carpenters, and cut down trees, by which they were fit for the greatest enterprizes.

The hardships the Spaniards endured;

The *Adelantado* seeing the new, and, in all appearance, the insuperable difficulty that attended this journey, did not lose courage, but made a bold exhortation to his men, telling them, That these were accidents that us'd to befall soldiers, without which no great honour could be gain'd, nor any of those riches which they fought after; that they should put their trust in God, who would not fail to assist them, since the planting of his faith depended upon their preservation. They all answer'd cheerfully, that they were ready to follow him to death; and because example is the best rhetoric, he first began to enter into the *Cordillera*, or snowy mountains, with a detachment of horse going before, that if he found any provisions, he might send a share to the army, which began to faint for want of it. But the more he advanc'd, he met with nothing but vast deserts, with a wind so cold, that it struck them through; and the passage grew straiter and strait-

Particular by in passing the Cordillera.

er, till at last, it pleas'd God, that from a high hill, they discover'd the valley of *Copiapo*, where the kingdom of *Chile* begins, where they were receiv'd very kindly by the *Indians*, out of the respect they bore to the *Inga Paulo*, and afforded them provisions enough to send some to the army which follow'd. 'Tis not possible to imagine how much they were press'd both by cold and hunger, both *Spaniards* and *Indians*; here one would fall into the snow, and be buried before he was dead; another would lean against a rock, and remain frozen, just as if he had been alive. If any did but stop to take breath, immediately a blast of cold air left him fix'd and immovable, as if he had been of iron; and a *Negro*, who had a led horse in his hand, did but turn his head, and stop to see who call'd him, as some body did, and both he and the horse remain'd like two statues; so that there was no remedy but to keep moving, for it was a certain death to stop a little; but it could not be, but people so weary and so weak, must stand still sometimes; and therefore they lost a great many men, strowed up and down the mountain.

A remarkable instance of excessive cold.

Garcilasso says, there died ten thousand *Indians* and *Negroes*; of the fifteen thousand which went with the *Inga Paulo*, only five thousand escap'd; for being all natives of *Peru*, and not having ever felt such cold, for which they were totally unprovided with cloaths, they died apace; the *Spaniards* being better provided, endur'd less; and yet *Garcilasso* says, they lost above a hundred and fifty men, and thirty horses, which was a great loss; others lost their fingers and toes, without feeling it. Their greatest sufferings were in the night-time; for they had no wood to make fire, and the *Indians* eat the very dead bodies out of hunger. The *Spaniards* with all their hearts would have eat the dead horses, but they could not stop to flea them. At last the provisions, sent them by the *Adelantado*, met them; so they pass'd the rest of the way pretty well. When they came to the valley, the *Indians* made much of them, where we will leave them, to see how others, that came after the *Adelantado*, pass the mountain.

C H A P. XVI.

Others pass the Cordillera. What happened to the Adelantado in Copiapo. His Return from Chile. His Misfortune and Death.

IDO not find clearly the time of the year in which this army pass'd the *Cordillera*: 'tis certain it could not be in the midst of summer, nor in the heart of winter, because

not one of them would have escap'd, since the first high wind would have overwhelm'd them in the snow; therefore they pass'd it, either in the beginning, or the end of the winter.

winter; and most probably it was at the entrance of the winter; for if it had been at the going out of the winter, those who followed would not have run so great a hazard.

The first of these was one *Rodrigo Orgonnes*, who was left by the *Adelantado* in *Cusco*, to raise men and follow him, as he did. He lost his nails, and would have lost his fingers, if he had not taken his hand off the pole that held his tent up: others lost their eyes, their ears, and many their lives; particularly all those who were in one tent, which a storm rising carried up, and in the morning they were found all dead in the snow: they lost also six and twenty horses.

The next who passed after *Rodrigo Orgonnes*, was one *Juan de Arrada*, who brought the *Adelantado* the king's dispatches, and his commission for his government, whom we left in *Copiapo*; and it will not be amiss to see what befel him there, before he receiv'd his commission, and saw his friends. The first thing he did in this valley, was a work of charity and justice, in favour of the true lord of that land, who was not in possession of the government, because he was left a minor, under the guardianship of his uncle, who not only did not think of putting him in possession, but contriv'd to take his life, which he would have effected, if he could have got him into his hands; but the subjects, more loyal than he, had hid him out of the way. The *Adelantado* being inform'd of the truth of this matter, and being entreated by the wrong'd prince, restor'd him to the possession of his government, putting the tyrant to death.

Before this happened, at their first arrival at *Copiapo*, the *Inga Paulo* took care to look out for some gold in that little province; and in one day having got together the value of above two hundred thousand ducats, he presented the *Adelantado* with it, in the name of his brother, the *Inga Mango*; which gave the *Spaniards* great cause of admiration, seeing that in one village, and in so little time, so much gold had been found, gathering from this, how prodigious rich the country must be; and therefore *Almagro* was content to think all his pains well taken, that he had been at to come into it.

The *Inga Paulo* finding his present so well received, being desirous to make his court, got from the neighbouring parts three hundred thousand ducats of gold more, which he presented to the *Adelantado*; which gave him such joy, to see that so rich a country was fallen to his lot, that he caus'd all his people to be assembled, and pulling out all the bonds and obligations made to him in *Cusco*, for the gold and silver which he had there lent them, he cancell'd them all,

one by one, declaring to his debtors, That he freely forgave them their debts, and was sorry they were not greater: and not only so, but opening his bags of gold, he began to use great liberalities; which so pleased them, that they forgot the dangers they had gone thorough, every one promising himself vast riches from such a conquest. *Francisco Lopes de Gomara*, who writes this history, says, That it was a liberality becoming a great prince, rather than a private soldier: but he adds, as a consideration of the little stability of human affairs, and the prosperity of this world, that when he died, he had no body to give a pall to cover his coffin.

But let us not afflict the reader so soon with the memory of that lamentable tragedy; let us rather follow this great captain in his good fortune. As he went further into the country, he was respected and treated as if he had been the *Inga* himself, in all the places he came to; but when he came to a nation called the *Promocoes*, which was the limits, beyond which the kings of *Peru* could never extend their empire, he found the same resistance as they had done. The *Adelantado* perceiving this, demanded succour from the *Inga Paulo*, who gave it him, by calling in the *Inga's* garrisons of the neighbouring frontier; and so the war began.

Here the *Spaniards* met with their match, and began to experience that the conquest of this part of *America* would not be compass'd by their bare appearing with their horses, dogs, and guns; or that a kingdom might be got by taking a king prisoner, and separating his army to their purposes, and so remain absolute masters of the field; for here they met with a nation, who though they admir'd their horses, and were surpriz'd to see them, yet the greatness of their courage overcame that surprize; so they met and engaged them with great valour, and many were kill'd on both sides. The *Spanish* blood, which used to be so little spilt, was here shed in abundance; and from that time to this, the slaughter of them has not ceased, so as to make either side safe.

However, the valour of the *Spaniards*, and the advantage they had over them by horses and guns, was such, as they might well depend upon, which made them conceive the conquest of *Chile* to be a work of about two years at most; as 'tis probable it would have been, if the divisions between *Almagro* and *Pizarro*, and his brothers, had not cut the thread of that enterprize, as it did that of their own lives; for they perished by one another's hands, upon points of contest about jurisdiction.

OVALLE. About this time the *Adelantado* being engaged with the *Indians* in a bloody war, *Rodrigo Orgonnes* arriv'd with his *Spaniards*, and so did *Juan de Arrado*, with the king's royal patents, and a commission for the government of a hundred leagues of the country; which was just as if a deluge of water had been poured upon the fire already lighted of the war with the *Promocaes*, *Cauquenes*, and *Pencos*, who were the nations that had withstood this invasion. As for the *Indians* they pretended to no more than to defend their country, and their liberty, from foreign invaders; and the *Spaniards* found themselves call'd away by more earnest motives of interest, and so turned another way. Not but that there were different opinions about what was to be done; some thought that it was better to settle where they were, the heavens and earth being both the best that they had yet discovered, and its riches such as they were witnesses of; others were of opinion to be content with what they had discovered, without exposing themselves to new dangers, and the accidents of war. But those who brought the king's commission, insisted extremely, that the *Adelantado* should go to enjoy the effect of the king's favour to him; and above all, that which mov'd *Almagro* most, was the jealousy of seeing the *Pisarro*s masters of *Peru*: to which might be added, that if he did not take possession of *Cusco*, by virtue of the king's patent, he might be in danger of remaining, at last, without any title to any thing he had. In this confusion of motives, the *Adelantado* stuck to the worst, as it happened, since he lost his life: he had it seems arriv'd to the top of fortune's wheel; and 'tis the same thing with her to stand still, and to begin to go down; which he did, till he tumbled

quite to the ground, and had his head separated from his shoulders.

The world seldom performs its promises; otherwise who could have told this great and generous man, that he should fall by those hands, to which he had lent his? The *Pisarro*s would not have been at that height, if the frankness and friendship of *Almagro* had not assisted them from the beginning with his fortune and good counsel; but nothing of all this was sufficient to save him from death by their procurement. The differences between them grew to that height, that they engaged in a battle against each other; in which the *Pisarro*s were conquerors, and *Hernando Pisarro*, the chief of them, order'd *Almagro* to be beheaded, Almagro is beheaded by order of the Pisarro being no ways touch'd with their antient friendship, nor the submissions and tears of *Almagro* himself, though a venerable old man, begging his compassion with a body full of honourable wounds; but as if he had been a statue of marble or brass, he shewed no signs of compassion. 'Tis granted that *Almagro* did ill, to leave the conquest of *Chile*, so well begun, and where he might have settled himself and his friends to such advantage, to go back to *Cusco*, to govern there by force, in case the *Pisarro*s should oppose him; but they also were much to be blam'd, in not coming to some agreement with their antient friend and companion; but they are inexcusable in shewing so much cruelty, as to put him to death: accordingly all their own prosperity seem'd to end with his, and to turn to a lamentable tragedy, in which they died by one another's hands, as may be seen more at large in the already-cited authors. For me, it is my business to pursue the conquest and settlement of *Chile*, which is my theme.

BOOK V.

Of the Conquest and Foundation of the Kingdom of CHILE.

CHAP. I.

The Governor Pedro Valdivia enters Chile : He conquers and settles that Kingdom, and is the first that enters as far as Mapocho.

THE more I draw near to the relating the settlement made in *Chile* by its first founders and captains, who reduced that kingdom to the obedience of their catholic majesties, and to the knowledge of God, the more I miss those papers and records, which being so far off, I cannot have the help of in describing the particulars of the events which were very memorable at the first entrance of the *Spaniards*. I must therefore make use of such passages as I shall find up and down in the general histories of the *Indies*; and this will refresh in me the memory of what I have seen or learn'd by others; and yet I must own the knowledge and information the reader will have from hence, will be but scanty and short, such as I should have hardly attempted to publish without this apology; and desiring my readers to accept of this collection for the present, till the compleat history of *Chile* does come out, I having left men most eminent in their profession employ'd in it when I left those parts.

1537. The *Adelantado Almagro* being returned in the year 1537. to *Cusco*, colonel *Pedro Valdivia* desir'd from the *Adelantado Francisco Pizarro* leave to pursue the conquest of *Chile*, since he had power and commission from the king to grant it. He promised not to return till he should have compleated the subjection of it, and reduced it to the obedience of the crown and God Almighty. The *Adelantado*, who had it in his thoughts, because of the fame of its great riches, to follow the conquest of *Chile*, considering this gentleman to be one of the bravest captains that had come to the *Indies*, having born arms in *Italy* and *Peru*, and given a very good account of all that he had undertaken, chose him for this en-

Valdivia undertakes the further conquest of Chile, in the year 1539.

terprize in the year 1539. giving him a year's time to prepare all things, that he might set out, as he did in the year 1540. I do not say any thing of the particulars of his journey, nor of the people he carried with him, because I am not where I can have a distinct information; only that in which all agree, is, That he got together a good body of men, both *Spaniards* and *Indians*; for these last relating what riches the *Ingas* used to draw from people who owned his empire in those parts, animated every body to this enterprize; and *Valdivia* seconding with address these impressions, made a good army, with which he set out from *Peru*.

They had almost perish'd with cold, hunger, and other inconveniencies; yet at last they arriv'd, and advanc'd at first with little difficulty; but as they went, engaging further in the country, still they found more opposition: they first came to the valley of *Copiapo*, which signifies the Seed of *Torquoises*; for there is a rock of so great a quantity, that they are grown less valuable upon it, as *Herrera* says: it is a blue stone, which makes a very good shew. And since now we enter this kingdom with more advantage, and upon a steady foot of settlement, it will not be amiss to describe the valleys and places where the cities were first founded, and the other settlements, that we may not be oblig'd to look back with an useless repetition.

The valley of *Copiapo* is the first of the inhabited valleys of *Chile*, though the best part of the people are *Indians*, with a few *Spaniards*, out of which one is the *Corregidor*, who is named by the governor of *Chile*. The land is of it self very fruitful, and is made more so by a pleasant river, which runs about twenty leagues in it before

OVALLE. 1646. 1549.

Atorquoise rock in the valley of Copiapo.

Description of the valley of Copiapo.

OVALLE 1646. fore it empties its self into the sea in a bay which makes its harbour. Here grow all forts of the natural fruits and grains of the country, and of *Europe*; the maiz yields above three hundred for one, and the ears of it are almost half a yard long, as *Herrera* and other authors relate. Though I am not inform'd as to the particular of *Valdivia's* reception here by the *Indians*, yet I suppose it was without much contradiction; because these people were already accustomed to the foreign yoke of the *Ingas*, and had already seen and received the *Spaniards* out of respect to the *Inga Paulo*, who accompanied *Almagro*, who gave them their lawful *Cacique*, or prince, as we have seen. They had the same facility in the valleys of *Guasco*, which is about five and

twenty or thirty leagues from *Copiapo*, and that of *Coquimbo* *Limari*, and as far as *Quillota*. Here the *Indians* took arms, and oppos'd the *Castilians* vigorously; engaging them almost daily, as people that came to conquer and subdue their country. The governor *Valdivia* penetrated as far as the valley of *Mapocho*, though with the loss of many of his men. He found this valley extremely well peopled, because of its breadth, fertility, and pleasantness, being thoroughly water'd by the river of that name, which, after having run some leagues, sinks under ground, does not lose itself entirely, but appears more nobly, and comes out with a more powerful stream two or three leagues further, being much bettered in its waters, which from muddy are turn'd clear as chrystal.

C H A P. II.

The Foundation of the City of St. Jago in Mapocho. The Description of its Situation.

TOwards the east, the great *Cordillera*, or snowy mountain, is a wall to this valley of *Mapocho*, and is in winter all over white, but, in summer by spots here and there: to the west it has the ragged rocks of *Pouangue*, *Caren*, and *Lampa*, whose foot we may say is shod with gold (for that which is found in its mines is so fine, that a great deal was got out of them.) Neither is this valley uncovered on the sides; for to the north and south it is environed by other mountains, which, though they do not approach the *Cordillera* in height, yet are high enough to make a circle about this valley, which in several of its rocks produces gold: it is, in its diameter from the *Cordillera* to the hills of *Pouangue* and *Caren*, five or six good leagues, and from north to south, which is from the river *Colima* to that of *Maypo*, seven or eight leagues more; so that its circumference is between 26 and 28 leagues or more, if we go down as far as *Francisco del monte*, which is a place of most pleasant shady woods, where all the timber is cut for the building of the houses.

In this valley, two leagues from the great *Cordillera*, by the side of the river *Mapocho*, God has planted a mountain of a beautiful aspect and proportion, which is like a watch-tower, upon which the whole plain is discovered at once with the variety of its culture in arable and meadow; and in other places woods of a sort of oak upon the hills, which afford all the fuel necessary for the uses of life. At the foot of this mountain, which may be two miles about, the *Castilians* found many habitations of the *Indians*, to the number of eighty thousand, as authors report; which *Pedro de Valdivia* ob-

erving, and guessing from thence, that it was the best part of the whole valley, he resolved to found here the city of *St. Jago*, which he began the 24th of *February* in the year 1641. It stands in 34 degrees of altitude, and longitude 77. distant from the *Meridian* of *Toledo* 1980 leagues. The form and ground-plot of this city yields to few others, and is superior to most of the old cities of *Europe*; for it is regular, like a chess-board, and in that shape, and that which we call the squares for the men, of black and white, are in the city called *Isles*, with this difference, that some of them are triangular, some oval, some round; but the square ones are all of the same make and bigness, and are perfectly square: from whence it follows, that whereforever a man stands at any corner he sees four streets, according to the four parts of the heavens. These squares at first were but of four large houses, which were distributed to the first founders; but now, by time and succession of inheritance, they have been divided into lesser, and are every day more and more divided; so that in every square there are many houses.

Towards the north, the city is watered by a pleasant river, till it swells sometimes in winter, when it rains eight, nay twelve and fourteen days together without ceasing; for then it overflows, and does great mischief in the city, carrying away whole houses, of which the ruins may be yet seen in some places; for this reason they have rais'd a strong wall on that side; against which the river losing its strength, is thrown on the other side, and the city thereby freed from this inundation.

From

The valley of Mapocho described.

Inhabited by 80000 Indians.

Description of the situation of the city of St. Jago, capital of Chile. 1641.

The conveniencies of the city.

From this river is drawn an aqueduct on the east-side, which being subdivided into as many streams as there are squares, enters into every one of them, and runs thorough all the transversal streets by a conduit, or canal; and bridges are every where, as necessity requires, for the passage of carts: so that all the houses have a stream of water, which cleanses and carries with it all the filth of the city: and from this disposition of water, 'tis easy to water or overflow all the streets in the heat of summer, without the trouble of carts or other conveniencies, and that without any charge. All these rivulets empty themselves to the west, and are let into the grounds without the city, to water the gardens and vineyards that are there: which being done, 'tis let into other fields, sowed with all sorts of grain, and then returns to the great river. The inhabitants do not drink of this water, though pretty good; but it serves to water horses and other animals; therefore they fetch water from the river for their own drinking, or draw it from wells, which yield very good, and very cool: those who are yet nicer send to the springs and fountains, of which there are many in the neighbourhood, which yield most excellent sweet water. The streets of this city are all of the same bigness and proportion, broad enough for three coaches to go abreast easily: they are paved on each side

near the houses, and the middle is unpav'd for the passage of carts. There is one street that is of an extraordinary breadth, and in it fifteen or sixteen coaches may go abreast; this is to the south, and runs east and west the whole length of the city: this is call'd *La Cannada*; and though at first it did not extend beyond the city, yet now it does, and has many buildings and gardens; and there is the church of *St. Lazarus*: but there are several squares built further which enclose in again, and so it is in a good situation.

OVALLE. 1646. A noble street.

This *Cannada* is the best situation of the whole place, where there is always an air stirring, so as the inhabitants in the greatest heats of summer can sit at their doors, and enjoy the cool; to which may be added the agreeable prospect it affords, as well because of the bustle of carts and coaches, as of a grove of willows which is watered by a little rivulet from one end of the street to the other: it is besides adorned with a famous convent of *St. Francis*, the church of which is all of a white free-stone, all square stone finely cut, and a steeple of the same at one end of it, so high, that it is seen a great way off by those who came from other parts. It is divided into three parts, and has its galleries; the uppermost is a pyramid: from it one may discover on all sides lovely prospects, which delight the eye extremely, and recreate the mind.

C H A P. III.

Of the other Edifices and Churches of the City of St. Jago.

The city of St. Jago further described.

THIS city has (beside this street, called the *Cannada*, which might afford many places, such as are in great cities) another very large one, named of *St. Saturnino*; it has likewise the place of *Santa Anna*, where has been lately built a church dedicated to that glorious saint. There is also a place called *La Placera de la Compania de Jesus*, where the front of their church makes a figure, and is a retreat or tabernacle upon the day of the procession of *Corpus Christi*. Most of the other religious houses have their places before the great porticos or entrance of their churches: but above all, is the place called the principal place, where all the business of law and commerce is driven. The two sides of the place that are east and south have buildings after the old way, though they have made very good new balconies to them, and large windows, to see the bull-feasts and other publick diversions which are made there. The north-side is all upon arches of brick;

underneath which are the scriveners and publick notaries, as also the secretariships of the royal *Audiencia*, and the town-house: and overhead are the royal lodgings, with balconies to the place, with the great halls for the meeting of the town-house officers; and in the middle are the audience-rooms of the royal chancery, with their galleries to the place: and, lastly, the royal apartments, where the royal officers are lodged; and the rooms necessary for the treasury and chamber of accounts, and lodgings for the officers.

Town-houses

The side that lies to the west has in it, first, the cathedral church, which is of three isles, besides its chapels, which it has on each side: it is all of a fine white stone; the chief isle, or that of the middle, being upon arches and pillars of an airy and gallant architecture. The remainder of this side to the corner is taken up with the episcopal palace, which has a very fine garden, and noble apartments both high and low, with

1646. *W* OVALLE. with a gallery supported by pillars, which answer the place; which, if it were equally built on the east and south sides, would be one of the most beautiful and agreeable places that can be; for it is perfectly square, and very large, with a due regard to the whole plot of the city. I doubt not but in time the two old-fashion'd sides will be pulled down, and others built on pillars and arches proportionably to the other sides.

The greatest part of the buildings, (except the publick ones, which are of a rough stone, but very hard, which the mountain of *Santa Lucia* affords, and is within the city, and some great gates and windows which are of mouldings of stone or brick,) that is to say, the ordinary buildings, are of earth and straw well beaten together, which is so strong, that I have seen great openings made in a wall, to make great gates after the modern way, and yet the wall, though a very high one, not feel it, though the house was none of the newest, but almost as ancient as the city; for the sun bakes and hardens the earth and straw so well together, that I have seen a piece of those walls fall from a high place, and not break in pieces, though so big that a man could not carry it. At present the houses that are built are of a better form, higher, and lighter than at first, because the first conquerors were more intent upon getting gold, and spending it in sumptuous treats, and high living, with splendor and liberality, than in building palaces, as they might have done, by reason they had many hands, and the stone hard by.

In matter of buildings, this city, as most others of the *Indies*, may brag, that it imitated *Solomon*, who began with building the temple and house of God before he built his own palace. So the *Spaniards* have done all over the *Indies*, in this new world, inheriting this custom from their ancestors of *Old Spain*; for I remember, that travelling in *Castella*, I made this observation, that let the place or village be never so small, yet it has a good church; and even where the houses were poor, and like dove-coats, the churches were of free-stone, with a steeple of the same; which gave me matter of edification, considering the piety of the faithful on this occasion.

Just so the *Spaniards* of the *Indies* began first to erect churches, with so much application, that they do not seem buildings made within these hundred years; but rather such as one would think they had inherited from their ancestors, or had been built by the gentiles; and yet there is not a church in all the *Indies*, which they have not raised from its foundation. We have already spoke of the cathedral of *St. Jago*;

and much more might have been said of its strength and beauty, and the ornament of its altars and sacristy. There are besides several other fine churches. That of *St. Domingo*, Description of the church of St. Domingo. though not of stone, is built upon arches of brick, with a great many fine chapels on each side, particularly that of *Nuestra Señora del Rosario*, which is all painted and gilt, and is frequented with much devotion. The covering of this church is of wood, and finely wrought, as well as the choir, which is also painted and gilded, with handsome knots and festoons. The sacristy is full of ornaments of brocade of gold and silver, and embroidered silks of the same; a great deal of plate for the altar, and mouldings of the altar-piece all gilded. But this is nothing to the cloyster, which by this time is made an end of, and is of a fine architecture, two stories high; and the lower, where the procession goes, is adorned with exquisite paintings in the four corners, where are four altars all gilded, and light as a bright flame: the apartment at the entrance is also finely set off with pictures of saints of the order, of excellent hands.

The convent of *St. Francis* may be called a town for its largeness: it has two cloysters for the processions; the first is upon arches of brick; and the second, which is the largest, very finely painted, with the story of the life of the saint compared with passages of our saviour Jesus Christ's life; and over, are all the saints of the order; and at each corner four great pictures, with four altars, which serve for the processions and ceremonies of holidays.

The church is of free-stone, and all its altars gilded on the inside; but above all, the seats of the choir are a piece of rare workmanship: it is all of cypress, by which means there is always an admirable smell. The first row of seats reaches, with its crowning or ornaments, to the very roof, all of excellent architecture, with its mouldings, bases, cornishes, and other proportions.

The church of our lady of the *Mercede*, is also built upon brick arches. The great chapel is admirable for the thickness of its wall, and the beauty of ceiling, which is all of cypress wood, in the form of a *duomo*, or *cupola*. The great cloyster is begun upon so fine a model, that to finish it so, will require the care and application of those who have the government of that convent. The situation of this convent is the finest and noblest of any, except that of *St. Francis*: it has the advantage of receiving the river first, whereby water is so plentiful in the convent, that they have been able to make two mills to grind corn enough for the convent, and to give away.

The convent of *St. Augustin* is but newly begun; but its church, all of free-stone, will out-do all the others for beauty: it is of three isles, and in the midst of all the hurry and business of the town.

'Tis not many years that the sacred order of the blessed *Juan de Dios* has been settled in this kingdom; and in a little time those fathers have done a great deal; for having taken upon them the care of the royal hospitals, they have reformed them, assisting the sick with all neatness, care, and diligence, and have added several large buildings. They are much helped in this by the devotion the people have for their founder, to whom they address their prayers and vows in their wants and necessities, and not in vain; for they feel great relief by his intercession.

The college of the company of *Jesus* has not been able to build the inside of the house, because from their first foundation the fathers have attended only the finishing of the church; which is now compassed, and is without dispute the finest next to the ca-

thedral. It is all of a white stone, the front of an excellent architecture, and over the cornish a figure in *relievo* of a *Jesus*. The great chapel has its cupola and lantern all adorn'd with festoons and knots of two sorts of wood, white and red, which makes a beautiful shew.

The covering or roof is all of cypress, inlaid with all sorts of flower-work, and divided into five parts; the middlemost is a composition of all sorts of figures, which seem a labyrinth to those who see it from the ground, and with a noble cornish that runs round, gives a delightful prospect.

The architecture of the altar, and the tabernacle for keeping the holy sacrament, are valued at a prodigious sum. The altar rises to the top of the church; and because, according to art, it ought to have reached from wall to wall, which it does not, the empty places are filled up with two reliquaries on each side, which join to the altar: this being all gilded, seems, when one first comes in, to be one plate of gold.

of the je-
suits
church.

C H A P. IV.

Of the Civil Government, both ecclesiastical and secular, of the City of St. Jago; and of the Nature and Properties of its Inhabitants.

Govern-
ment of
St. Jago.

GOVERNMENT is the soul of the body-politick; and therefore, at the same time that the city of *St. Jago* was founded, the corporation was settled to administer justice, without which no government can stand. The corporation consists of two ordinary alcaldes, an alferes royal, an alguazil mayor, a general depositarius, six councillors or aldermen, chosen every year, half out of the gentlemen called encomenderos, and half out of the inhabitants of the place, who have bought that privilege for themselves and their descendants. Of the two alcaldes, he that is of the encomenderos has the precedence and first vote, and the inhabitant the other: they divide the year between them by six months. There is a president to the assembly, who is always corregedor, and lieutenant to the captain-general; and it is a place of great honour: and though it be of more charge than profit, by reason of the expence belonging to it unavoidable, yet it never fails of pretenders, because of its authority, and the respect paid to the office. They are chosen yearly, with the two alcaldes, two others of the holy fraternity, or hermandad, whose jurisdiction is without the bounds of the city, as is practised in other parts. About thirty years ago there was founded a royal chancery in this city, which consists of a president, four

The court
of the royal
audiencia.

VOL. III.

oydores, or counsellors, and two fiscals; one who is the ordinary, and another, who has been added within these four years, and has the same honours, who has the protection of the *Indians*, and the matters belonging to the holy cruzada. After these is the alguazil mayor de corte, who has also the magistrate's habit, and a chair of state: then are the officers called the chancellor, secretaries, referendaries, and others, as in such courts. There is no appeal from the sentence of review given in this court, but to the royal council of the *Indies*; and then there is a certain sum, below which there is no appeal neither. It cannot be denied but the majesty of this tribunal has very much adorned the city; though there want not those who lament the hindrance it has given to its riches and increase, which would have been more considerable, if the inhabitants had continued in their first simplicity, cloathing themselves with the manufactures of the country, and avoiding all those pompous liveries which are now in use; for those who before might walk in the publick place in a plain dress of the country, and be honoured and respected, must now appear in silk, or *Spanish* cloth, which yet is dearer than silk, for a yard of it costs sometimes twenty pieces of eight. Any gentleman of estate cannot now appear decently in publick, without many servants

F f

in

OVALLE. in rich liveries; and within a few years they have brought up a vanity of rich parasols, or umbrellas, which at first were only used by the people of the greatest quality; and now no body is without them, but those who cannot compass them; and though it is a thing of great gravity, and very useful to preserve health, yet it increases those forced expences used in great cities: for this, and some other reasons, some were of opinion, that it would have been better for the city and kingdom, that they had continued to govern themselves without this court of a *royal audiencia*, as they did formerly: but, to say truth, they are in the wrong; for, first, there are many cities in the *Indies*, where, without a court of this nature, I have seen vanity thrive in liveries and superfluous expences as much as any where. Secondly, because, abstracting from passion and interest, which commonly do mislead men in the administration of justice, it cannot be denied but that the sovereign authority of this tribunal is of great weight to maintain the quiet of the kingdom, by keeping an even hand in the administration of justice, and not suffering that the tyranny some affect, either by reason of their preferments or riches, should stifle right reason, or oppress innocence, which has not learn'd to court and flatter.

The audiencia of great advantage to the city.

Thus a *royal audiencia* is a bridle to vice, a reward to virtue, a protection to the poor, and a maintenance of right and reason; and this was the intention of our catholic monarch: for this reason did he erect this court, which is the more necessary, because it is at that distance from the royal presence, and so hard that the cries of the poor should reach his ears; for if sometimes they do arrive to his court, 'tis so faintly, that they can scarce be heard: for this reason, those who have the chusing and sending the king's officers into such remote parts, ought to be the more careful to provide men of christian principles, and well intentioned, as indeed they have been, and are still in that kingdom; and it is no more than is necessary, for a good example to those new christians the *Indians*.

This *royal audiencia* is the cause likewise, that much gentry comes from *Europe* to the *Indies*, and so help to people them, and to continue the good intercourse between *Spain* and that country, which is good for both. It cannot likewise be denied, (though that be but as an accessory,) that the presence and assistance of this royal tribunal at all publick feasts and exercises, is of great countenance to them, and particularly to the literary acts and commencements, whereby learning is encouraged; and those who employ themselves in that honourable study

have a reward before their eyes, hoping to attain to be advocates, referendaries, fiscals, and counsellors: for in the *West Indies* those places are all very honourable, and particularly in *Chile*, where the salaries are larger than in other parts, and yet provisions are cheaper; so that 'tis easy to lay up a good part of one's revenue. Besides these tribunals, there are others, as that of the chamber of accounts, or treasury, for the management and administration of the king's revenue: these officers do likewise visit the ships that come in and out at the port of *Valpariso*: their offices are very honourable, and of great profit, and they are in the king's gift, as those of the *royal audiencia* are.

The affairs of justice, and things belonging to good government, are under the *audiencia*; but those of war and preferments belong to the governor, of whom we shall speak in a proper place.

The bishop is absolute lord of all the church government; and though the bishoprick of *St. Jago* is none of the richest of the *Indies*, because all the product of the earth is so cheap, and by consequence the tithes do not rise high, yet this very abundance is part of the riches of the bishoprick; for by this means the bishop's family and expences are the easier supplied, and he may keep more attendance, and yet lay up a good part of his revenue; whereas other bishopricks, though richer, have enough to do to keep up the decency of their dignity. There is a numerous clergy, who make a great cortege to the bishop upon certain publick days; and when he is received the first time, and takes possession, the ceremony is very great; for part of the *royal audiencia*, the chapters, all the militia, horse and foot, with the people, go out to meet him; so that 'tis a day of great pomp.

The chapter of the cathedral is a venerable body of men, in which the king alone provides the vacancies by virtue of his royal patronage, and the concession of the popes; so that there is not, as in *Spain*, the bishop or the pope's month; but in the *Indies* all dignities of cathedrals, even to the very parish priests, are all at the king's nomination, but with some differences; for the dignities are bestowed in *Spain* itself by the advice of the council of the *Indies*; but the cures or livings of parish priests, the king does bestow them by his governor or president, who exposes a publick edict, that all opposers for the vacancy of such a benefice may come and oppose the examination; and of these, the bishop presents three to the governor-general, to chuse in the king's name.

The holy tribunal of the inquisition, which is in *Lima*, serves for all the whole south

The bishop supreme in all ecclesiastical affairs.

Chapter chosen by the king.

South America; so that in *Chile* there is only a commissary, with his officers and familiars, who accompany him in all publick acts, and form a tribunal with great authority. There is likewise an officer of the *Cruzada*, called a commissary, which is likewise a post of great authority; and the day that the bull is published, all the orders of the religious are bound to be at the procession.

Character
of the na-
tives.

Let us conclude this chapter by saying something of the natives who are born and bred in this city: They are generally ingenious, and of good parts; and those whose inclination is to learning, succeed very well; but they naturally are more inclined to war, very few of them taking to other employments, either of trade or business; and they who, from their infancy, or by a strong inclination, do not take to learning, seldom succeed, and easily leave it, if put upon it, to follow the sound of a drum or a trumpet, and never are quiet till they get to be enrolled as soldiers being much better pleased with the liberty of a

foldier's life, than with the discipline of the schools. OVALLE.
1646.

They are much addicted to horsemanship: and I have often seen, that to strengthen a child that can hardly go, the best way is to set him on horseback: this makes them prove dexterous horsemen, and bold. And 'tis a common opinion, and a known experience, that for horse, one of the country is better than four from abroad: this has been sufficiently proved in the course of so long a war as that which has busied that kingdom.

They are naturally liberal, good natured, and friendly, particularly if they are treated honourably, with due regard: they are pretty stubborn and wilful; to be led only by fair means, and then they are docile and tractable; but if force is used, they do worse and worse. This we the fathers of the society do often experience in our colleges: so we are obliged to lead them by sweetness and emulation, rather than by rigour and harshness.

C H A P. V.

Of the Riches, Militia, Studies, and Increase of the City of St. Jago.

THIS city, to which the king has given the title of most noble and loyal, is the capital city of *Chile*, and one of the best in the *Indies*, next to those two royal ones of *Lima* and *Mexico*, who do exceed it in sumptuous edifices, in people and trade, because they are more antient and nearer *Spain*, and of a greater passage for the people that come from *Europe*, and free from the tumults of war; which is a canker that eats deepest into great cities and kingdoms; and 'tis no small proof of their force, to be able to maintain so long a war.

Foundation
of the city.

This city was founded one hundred and four years ago; and it has all that while sustained the heavy load of a long and stubborn war, which the native *Indians* have made upon the *Spaniards* without any intermission; in which its inhabitants have either always been in arms, or sending many horses and provision to the camp; a calamity, which, far from letting it grow to what it is, ought to have kept it down from the beginning: nor is it of a small consideration, for the growth of other cities in the *Indies* to reflect, that they being in the way, and, as it were, upon the passage of other places, many newcomers have settled there, who perhaps at first were bound for other countries, or at least were indifferent where they stay'd, and took up with them. 'Tis otherwise with the city of *St. Jago*, because the kingdom of *Chile* being so remote, and the last of all the *Spanish* dominions, it is the *non-plus-ultra* of the

world; so that no body goes thither by chance, but on purpose, and upon some design or particular interest; for which reason the number of strangers is little.

But the city is so good and convenient to pass away life with ease, that notwithstanding these disadvantages, it is so increased, that it astonishes all who see it, few cities of the *Indies* outdoing it in finery, particularly as to the women, (it were to be wished it were not to that excess;) for all things coming from *Europe* are there prodigious dear; and this causes many families to run behind hand. Who should see the place of *St. Jago*, and that of *Madrid*, could see no difference as to this point, nay, as to the women, the finery exceeds that of *Madrid*; for the *Spanish* women, scornning to go to service, are all ladies, and love to appear as such, as much as they can; and the emulation between them about fine cloaths, jewels, and other ornaments, for themselves and their servants, is such, that let their husbands be never so rich they want all they have, particularly if they are of the nobility, to satisfy the pride of the women.

As to the militia of the city, the first part of it is the company of inhabitants, encomenderos, and reformed captains, who have no other commander but the governor himself, or his deputy; after that, there are two or three troops of horse, and three or four companies of foot, all *Spaniards*. These often muster on holidays, and are exercised in the use of their arms; and sometimes there

1646. OVALLE. there are general musters before the oydores and royal officers, where their arms are examin'd; who also note them down, to know what strength they can raise upon occasion, punishing such as do not keep their arms and horses fit for service. By this diligence they are very ready at their arms, and the exercising of them proves an entertainment for them and the whole city; for very often, in the publick processions, one or two of these companies use to come out, and make a salvo for them; and in the holy week there always attend a troop of horse, and a company of foot, who guard the street, where the processions of the whippers go to keep the peace, because of the *Indians*, who use to take that time to make some risings, the *Spaniards* being wholly taken up with their devotions.

The days in which this militia makes the best shew, are, when the bishops come to be receiv'd, because they make a lane from the entrance of the city to the great place of it; where they form their battalion; and the concourse of the people uses to be so great, that though the place is very large, there is scarce room for them.

The vast increase of the city.

And since we are upon that subject, we cannot omit to observe that which is worthy of admiration, and that is, to see how it is increas'd in the number of *Spaniards* within these forty years. 'Tis probable, the same has happened to the other cities of the *Indies*; but this has had a continual drain, by supplying soldiers for the war with the *Indians*, where many perish, and few return. I remember that I have heard say, that one of our fathers, newly come from *Europe*, and coming to our college, where he saw but few people in the street, cried out,

Apparent rari nantes in gurgite vasto.

By which he meant to signify, the disproportion of the inhabitants to the bigness of the city; but now that very street is so full of people, that all hours of the day, and some of the night, it is extremely frequented; for there have been built many houses for handicraftsmen and shopkeepers on both sides of it, because trade is considerably increas'd.

I can myself affirm, that I observ'd as great an alteration in a much less time, as well in people as in building; for having been absent but eight years, I confess, that at my return, I scarce knew the place again; for I found several ground spots where there was not a house built upon, with very good buildings; and those which I had left built were alter'd to the better, with more and higher apartments; and the courts which were very large, were considerably streigh-

tened by other buildings; and yet the plot of the city was larger too; so that being at first built at the foot of the mountain we have spoken of, to the west of it, I found it extended as much to the east, and the same proportionably to the south and north, and it increases daily towards the river, and the *Cannada*.

There was, when I left the place, about a dozen shops of good retailers, and at my return there were above fifty; and the same proportionably as to the shops of shoe-makers, taylor, carpenters, smiths, goldsmiths, and other handicraftsmen, whom I found also more curious and exact in their professions; and emulation has produced very good pieces of workmanship in gold and silver, and carvings in wood, gildings, paintings, which have adorn'd the churches, with those which have been brought from *Europe*, and the particular houses; so that in some houses alone, there are more things of that kind now, than there were in all the city formerly. Some complain, that there are not now such rich and powerful men as there were at first; and that is true: but it does not follow, that the generality is the worse for that, but rather otherwise; for the lands and houses which belong now to ten families, were antiently in one; it being certain, that several of the heirs of that man have attain'd to as great riches as he himself had; or at least 'tis apparent, that the stock of all those who have shar'd the inheritance, far exceeds what was left them; so that supposing, that some were formerly richer, yet the riches are more in the land; which is also clear to any that shall consider the houses, possessions, and other improvements made since that time; for now there is scarce room for the people, whereas before there was not half people for the room that was for them; which is also visible in the country round about, where farms that could hardly find purchasers, and were little worth, are now so risen in their value, that the smallest cost great sums; and this rage of purchasing is such, that most of the causes in the *royal audiencia* are about titles; for the antients, who took possession of the land, thought, that if they had a little footing in a valley, it was all theirs; but those who have come since, have purchased by virtue of new titles, and taken new possession; which makes so many law-suits.

There is not a form'd regular university in this city, because that of *Lima* serv'd for all the neighbouring kingdoms and provinces to take the degrees; but when in time the going to *Lima* was found so chargeable, and the journey, which is of three or four hundred leagues, so troublesome, there were bulls obtain'd of the pope, for the

The pope's bulls obtain'd for the dominicans and jesuits to confer degrees. the orders of *St. Dominick* and the *jesuits*, to have the privilege of conferring the degrees of batchelor, licentiate of arts, as also doctors in divinity, in the kingdoms of *Chile*, *Granada*, *Ruito*, *Chuquizaga*, *Tucuman*, and *Paraguay*.

The effect has shewed how necessary this favour, and how important this privilege has been; for this incitement to honour has caus'd a general application to learning; for the priests and curates are already great proficient in study, and so more capable of taking upon them the cure of souls; and those who betake themselves to a religious life, are better qualified to serve their orders, and be an honour to them, as many of them are; and it does not a little contribute to the value of them, to see the great solemnity us'd at the reception of the several graduates. And in this, as well as the rest, I think our city of *St. Jago* is not inferior to any: for, first, all the acts are held with great concourse of all the learned, and very often the bishop honours them with his presence, and so do the president of the *audiencia*, and the chief of the town-government, to whom are dedicated

the subjects of the extempory readings, according to the constitution of the university, which are given out with great fidelity, dividing the subject into three parts, for the graduate to dispute upon in presence of a great concourse of people; and the severity is indispensable in this and all other examinations, for the different degrees which are given by the bishop, by virtue of an approbation first given him by the father rector and the professors, as the bull directs; according to which there is no obligation of giving any treat; but yet that the doctors may assist with more pleasure and diligence, there has been introduced a custom of giving some moderate ones, besides gloves, which were allowed instead of it; but some out of ostentation, give both treat and gloves. Besides this, there has been introduc'd a custom of inviting the horse of the city to honour the procession, which makes the solemnity the more conspicuous; and they very willingly accept of the invitation, for they are very ready to mount on horseback to honour any, much more those who distinguish themselves by the exercises of virtue and learning.

OVALLE.
1646.

CH A P. VI.

Of the Worship of God, and the Church Ceremonies in the City of St. Jago.

Religious worship very stately and expensive.

IF we were to make a judgment of this city by the worship of God that is perform'd in it, and the appearance of the clergy, we should judge it to be much bigger than it is; for the state and expence with which the holidays are kept, in the charge of musick, perfumes, wax, and other ornaments, are very great: let us give some particular instances, and begin with the cathedral. I cannot but commend the piety of those eminent persons, the bishop, president, and counsellors of the *royal audiencia*, who taking each of them a day during the *octave* of the holy sacrament, are at the whole expence of that day, and that is very considerable; for all the wax and perfumes are very dear, as coming from *Europe*; and the holy emulation that is between them, increases the splendor of the day; so that during that *octave*, the church is so perfum'd, that its fragrancy is smelt some distance from it. The procession of the first and eighth day are upon the account of the chapter, as the hanging of the streets, and erecting of altars for repositories, are at the charge of the inhabitants where the procession passes: this procession is attended by all the convents, and all the companies of trades, with their banners and flags, so that it reaches a great way. After this of the cathedral come every day

VOL. III.

new ones of all the convents, so that they last a month, every one endeavouring to have theirs the best; by which means there are great variety of ornamental inventions and machines. The *Indians* of the neighbourhood, that live in the *Chagras*, that is, little cottages, within some miles of the city, attend likewise with their banners; and they chuse for this purpose a leader who makes the expence, and treats those of his company: their numbers are so great, and the noise they make so loud, with their flutes, and their hollowing and singing, that they are placed in the front, or else there would be no hearing the church musick, nor any means of understanding one another about the government of the procession. The other feasts and holidays in the year are proportionably solemniz'd with the same decency by all the orders of friers, who all of them have some devout persons who help to bear the charge. But the nuns exceed all the rest in ornaments; and these nunneries are so populous, that in that of *St. Austin* alone there are above five hundred persons, whereof three hundred are veiled nuns, the rest are lay-sisters; and because the nunnery being full, there can be no more receiv'd, but with great difficulty, the other nunnery of *Sancta Clara* receives so many every day, that in a little time it

G g

will

1646. OVALLE will equal the other in number, as it does already in the pomp and ornament of its church-service; that which these angels of heaven, (for so we may justly call those who with so much piety and anxiety do serve God continually, and are as a wall of defence to the city,) that which they do most shine in, can hardly be express'd as to the neatness, curiosity, and richness of their altars, and the church-ornaments. What shall I say of the smells, artificial flowers, fruits, chocolates, pastillos, and perfuming pots, which I have seen sometimes of so great a size, that they struck me with admiration, considering the matter they are made of, which is of a refin'd sugar, as white as snow, sometimes in form of a castle, sometimes of a candlestick, or a pyramid most exquisitely wrought.

They are not content with this; for I have sometimes seen the whole grate of the choir, and the joiners work, and beams of the church, all cover'd with preserv'd citron, in form of suns or angels of *mezzo rilievo*, and a thousand other inventions, which I should never have done, if I should report them all. I must only say, that the

generosity of those ladies is such, that though this costs very much, yet I have often seen them at the end of a mass distribute all these things to those who happen to be in the church, without keeping it for themselves: they do not only do this within the church, but the altars which are set up in their cloysters, and streets near them; for the processions are adorn'd, after the same manner, with fruits and flowers of the same materials, so well imitated, that they appear new-gather'd.

The monasteries of men are not so well fill'd as those of the nuns, though some have a hundred, others sixty or seventy friers. The secular clergy is also very numerous, very virtuous, and learned. Since I came away, there has been founded another nunnery of about thirty nuns, who will need no portion, being provided for by a gentleman who left all his estate to that foundation; it was captain *Alonso del Campo Lantadilla*, alguazil mayor of that city, which will be of great service to help the providing for poor maids, who, perhaps, else would not find it easy any other way.

CHAPTER VII.

In which is treated of the Processions of the Holy Week in the City of St. Jago.

LET us conclude this matter of religion and pious exercises with saying something of the most remarkable practice of it in the holy week, by the stateliness of the processions at that time; which is such, that all strangers confess, that if they had not seen it, they should hardly have believ'd it. These processions begin on the *tuesday* in the holy week, to which the company of the *Morenos*, which is founded in our college, give a beginning, (of which we shall speak more when we treat of its employments, as also of the brotherhood or confrary of *Indians*, on the morning of *Easter-day*.) The procession that follows next, is that which comes out of the convent of *St. Austin*, in which is founded the confrary of the *Mulattos*: they go all cover'd with black frocks, and have many passages of the passion sung very devoutly, with the best musick of the place, and many lighted torches. The *Wednesday* the famous procession of the confrary of the *Nazarenos* sets out, which is all of natural *Spaniards*, of several arts and professions, and is founded in the royal convent of *Nuestra Señora de la Mercede*; and it is one of the richest and most adorn'd processions. This procession is divided into three troops: the first of which carries *La Veronica* to the cathedral, where it stays to

The stateliness of the processions.

meet the second, in which comes the *Redeemer* with his cross, so heavy, that he is forced to kneel often.

When this second, which is the largest, comes to the great place, that which stays at the cathedral goes to meet them; and at a certain distance, in sight of a vast multitude of people, the *Veronica* comes, and kneeling down to the image of Christ, which is a very large one, seemingly wipes his face, and then shews the people the representation of it remaining in the handkerchief; and then as they begin to march, there appears the third procession, in which comes *St. John*, shewing the *Virgin Mary* that dolorous spectacle: so that by all these there is form'd a mighty procession, with many lighted torches, and all the brothers are cloath'd in their red frocks, marching with great silence and devotion. There is another representation of great piety, which is perform'd in the convent of *St. Francis*, and in this convent; which is the parting of Christ and his mother, which uses to cause great passion and many tears, because of the naturalness with which it is acted.

On the *Thursday* there are very curious sepulchres erected, and many alms given to the poor; and though in the foregoing processions, and on the *Fridays* in *Lent*, there are to be seen some people whipping themselves,

with

with divers sorts of penances, which every one performs according to his own devotion, yet the processions, which by excellency are called the bloody processions, are performed this night. One of them sets out from the chapel of the true cross, which is in the convent and chapel of *Nuestra Señora de la Mercede*, and is only of the inhabitants and gentlemen, who go all covered over with black frocks; and he who carries the cross is obliged (besides the collation which he provides for the preacher and the musick, and which uses to be very magnificent) to provide also men to attend the procession, and relieve the whippers, who often draw so much blood that they faint away; and others take care to cut off of the disciplines some of the spurs of them, for they use to have so many on, that they almost kill themselves, nay, I have seen some of so indiscreet a zeal, that they used certain buttons with points so sharp, that if they were let alone, 'tis a dispute whether they would not die before the end of the procession. Before this go also two others, both of them bloody processions; one of the *Indians*, and it is that has most whippers; the other comes from *St. Domingo*, and is of the *Morenos*: they both have musick; and the communities of all the convents go to meet them when they come near their churches with torches in their hands. They spend a great deal of time in their procession, and are accompanied by an infinite number of people.

On the holy *friday* there are two processions more that go out of *St. Domingo* and *St. Francisco*, both of natural *Spaniards*. That of *Sancto Domingo* is called the procession of pity, and has been begun but lately; but it has made such progress, that it equals the most ancient: they carry all the marks of the passion by so many dress'd up like angels very richly, and each of them is attended by two brothers of the procession with lights, and their coats of yellow. The other procession, which comes from *St. Francisco*, is the antientest, and has always been the best: it is mightily commended for the great silence and devotion with which it is performed; for there is not a word spoke in it from its going out to its returning. Before it goes there is performed the descent of the cross before a great concourse of people. This has always been an action of great piety, and very moving. The ensigns, or marks of the passion, go out in order; and when they come, there is another representation very tenderly made in the *Cannada*: there is a great cross set up; and when the image

of the virgin comes up to it, it lifts up its <sup>QVALLE-
1646.</sup> eyes, as one who misses the sovereign good that hung on it, and drawing out a white handkerchief applies it to the eyes, as crying, and then opening the arms, embraces the cross, and kneeling kisses the foot of it once or twice: all this it does so dexterously, and becomingly, that one would swear it were a living creature: and this action being accompanied with the musick of the day proportioned to the grief of the mystery, 'tis incredible what effects it has upon the people, who crowd one upon another to see it.

On the *Saturday*, and on *Easter-day* in the morning, there are other processions. The first comes out of *St. Domingo*, and is of the gentlemen and citizens, who in this are cloathed in white, of most rich cloth of silver or silk, finely garnished with jewels and chains of gold. The ceremony of the resurrection is celebrated by night in the cloyster; and for that end there is such an illumination, that it seems day. The procession goes out very noble and gay, and in it are many lights, musick, and dances, the streets being all adorned with triumphal arches, and hung with tapestries; and while this procession is in the cathedral, celebrating the mass, and communicating the host to the brothers, there comes another to the great place to meet it, another from the college of the jesuits, which is a confrary of *Indians*, the most ancient of the city, consisting of a company of *Indians* of both sexes, who, with torches in their hands, accompany the child *Jesus* dress'd up after the *indian* fashion, (which causes great concern and devotion:) they have also many colours, ensigns, and other ornaments, very rich and gay. At the same time two other processions of *Indians* likewise set out from the convents of *St. Francis*, and *Nuestra Señora de la Mercede*, and another of *Morenos* from *St. Domingo*, all with a great apparatus of drums, trumpets, colours, hautboys, dances, which make that morning appear very gay and merry; and that it may be so to our saviour resuscitated, they all communicate, and give a happy *Easter* to the divine majesty and all heaven, to which the earth can never pay a greater tribute than by the conversion of sinners, particularly of these new christians, whose ancestors adored but the other day their idols; and now they acknowledge, and kneel before the true God, and sit with him at his table, as grandees of his court; they, who not long before were slaves of the devil.

OVALLE.

1646.

C H A P. VIII.

Of some other Holidays of the City of St. Jago.

ONE of the things in which the greatness of a city shews itself most, is, in its feast, holidays, and publick entertainments: we will touch a little on those of *St. Jago*; and, besides the secular ones of bull-feasts, running at the ring, *Juego de Cannas*, tournaments, illuminations, and other diversions in which this city shines, it is wonderful how well there are celebrated the publick rejoicings for the birth or marriage of their prince, in universal canonizations of saints, and in all other solemnities, but particularly those ordered by his majesty, as that was about thirty years ago, when his majesty, out of his great piety, ordered, in honour of the queen of angels, that the mystery of her holy immaculate conception should be celebrated in all his kingdoms, as well by the seculars, as by the churchmen; and the first indeed need no incitement in this matter, every one being ready to shew their acknowledgements to this sovereign queen of heaven, who has favoured more particularly the kingdom of *Chile* with her protection from the beginning.

Let us now say what the city of *St. Jago* did upon this occasion, that the affection with which the inhabitants correspond to what they owe to this illustrious queen of heaven may be manifested, and some proof given of what they can do on such occasions; and letting alone what was done by all the convents and monasteries, I come to other particulars, to which three poetical contests gave rise: these were published solemnly on horseback through the town, with the company of the town magistrates, and all the gentry, without exception. The first of these troops were defrayed by the cathedral, the second by the celebrated monastery of the conception, the third by the congregation of students founded in our college; and in all these there were prizes propos'd of great value for the poets; and those who obtained them, had them given to them with great solemnity; and there were several representations, with other diversions, according to the custom of that country.

And since we are speaking of what happened in those holy feasts, let us not forget as remarkable a passage as any: the day, which it fell to the lot of our college to celebrate its feast, the father provincial, who was to preach before mass, felt himself so mov'd with love and devotion to the sovereign virgin, that in a fit of extraordinary

zeal he invited the people to come after dinner to the procession of our church, and to sing before the image of our lady that ballad which was in those days so famous, and begins:

*All the world in general
Says so, chosen queen of heaven,
That you are conceiv'd even
Without sin original.*

The auditory was much edified with the piety of the good father, but smiled at his proposal as impracticable; yet they all came at the hour, most out of curiosity to see the event of this novelty: they all took olive-branches in their hands, and began the procession while our fathers sung the stanzas. It was wonderful that the same spirit which moved the father to such an extraordinary invitation, moved also all the people to sing before the image of our lady, which they carried thus to the cathedral; out of which the clergy coming to meet, and singing the church-hymns, the noise of the others singing was so great, that the canons were forced to give over, and accompany the people in their stanzas, singing altogether like so many children. They looked one another in the face, admiring at what they were doing, being scarce able to believe; and if I my self had not seen it, knowing, as I do, the natural gravity of that people, I should not have believed it neither; but the inward force of devotion can do any thing, when the lord of hearts makes use of it to exalt the immaculate pureness of his mother.

The rejoicings and entertainments upon this occasion lasted many days; one of them fell to the lot of the congregation of natural *Spaniards* founded in our college, who made a very ingenious and costly masquerade, representing all the nations of the world, with their kings and princes all cloth'd after their own fashion, with their attendants, and last of all the pope, to whom each nation came, with its king, to desire his holiness to favour this mystery. The liveries were very costly; and there was a triumphal chariot, a great machine, in which was represented the church: but that which was most chargeable was the wax, which is very dear there; and this entertainment was given by night.

The other days were divided among the *Negroes* and *Indians* of all arts and professions, who having a pious emulation to each other, made many rare inventions; but the merchants carried the bell in a tournament

ment, which they perform'd in the great place, each adventurer coming either out of a sea, or a wood, or an enchanted castle, with his paper or challenge, acting their parts very well: they broke their lances, and receiv'd their prizes, which were things of great value. The gentlemen of the city crown'd the feast with their usual diversions of bull-feasts, running at the ring *Fuego de Cannas*, &c. There are generally about twenty or thirty horsemen to attack the bulls, and throw the *rejous* or lances at them, besides him who strikes the bull dead. The illuminations of torches, with which they use to run about all night, are also of great diversion; and upon this occasion they did it with rich liveries, and other chargeable expences, for the greater solemnity of the time.

The ordinary and annual rejoicings which are observ'd on *Midsummer*, on *St. John's-day*, *St. James's*, and the *Nativity of our Lady*, are also worth seeing, particularly on the day of *St. Jago*, who is the patron of the city; for then the royal ensign of the conquest, with the king's arms, and is accompanied by all the gentry, who are oblig'd to appear on that occasion, which they do very gloriously.

Marriages and christenings celebrated with great pomp and expence.

There happen likewise some marriages or christenings of the people of best fashion, in which they make as good a shew as their estates will let them, and often above their abilities. In the bull-feasts, those who undertake them use to treat the *royal audiencia*, and other bodies corporate; but in marriages they are profuse, for the presents to the bride have been brought in fashion to be very rich, such as slaves, carpets, scrutores fill'd with gold and jewels, and other curiosities of great value. There is not less spent in treats and banquets, particularly of late years, that they have taken to counterfeiting natural fruits, and other things, which serve for the sideboard; so that after a man has given a treat of all sorts of birds and fishes, his entertainment is not gallant enough, if he does not add a desert of preserv'd citrons in all figures of love-knots, &c. and the other fruits imitated after nature: these they mingle on the cloth, with the figures of ewers, saltcellars, jars, salvers, dishes, spoons, forks, knives, all made of citron, cover'd with leaves of gold and silver; and the first thing the guests do, when they sit down, is to plunder the table of these, for there are real

ones of gold and silver for the banquet. OVALLE.

All this costs extremely, because the sugar comes from *Peru*, and the manufacture of all these curiosities is very dear; many are the guests; and besides the wedding-dinner, the fathers give another the next day as sumptuous. This is what no body of fashion can help doing. I have heard formerly, that at first there were gentlemen, who, upon any of these publick rejoicings, would do it all at their own charges, giving them all liveries of velvet, at the running of the ring for example; and yet then velvet was twice as dear as it is now. But at present that is left off, though they make expences equivalent in collations, bonfires, and other contrivances of great shew; for upon these occasions they all think themselves rich enough, which is a great ruin to families, every one straining out of vanity to equal another, though the difference in riches be very great.

1646.

And now let us leave *St. Jago*, which has detain'd us more than ordinary, to satisfy the curiosity of those who are desirous to know the increase and progress of the cities and colonies of that new world, and how the christian customs and government have begun to flourish in it; and by this essay a judgment may be made of those settlements. I pass on to the particulars of the conquest of that kingdom, that I may afterwards give an account of the progress of the christian faith, and the great hopes there is of its greater propagation. And because some curious persons do desire to know some particulars of the colonies and settlements of that new world; and that it may be agreeable to the reader to know the form given by the first founders to their cities, I have thought convenient to give here the ground-plot of the city of *St. Jago*, with all its streets, houses, and publick place, with the names of the churches and convents, and the streets that answer them, they being the principal buildings of a christian commonwealth; by which it may be known how other towns and cities in those parts are contriv'd, for they most of them follow this plot or model. And because some judgment may be made of the buildings, I have likewise given the city in perspective, as it looks to those who come from the *Peru* side, and enter by the great street call'd the *Cannada*; though the cupola of the jesuits, and the tower of the convent of *St. Francis*, with other high buildings, are discern'd many leagues off.

OVALLE.

1646.

C H A P. IX.

The Governor Pedro de Valdivia pursues his Conquest. The Gold Mines are begun to be wrought. He sends Proofs of their Richness to Peru; from whence the General Juan Baptiste Pastene brings him the first Succours.

THE governor *Pedro de Valdivia* having founded the city of *St. Jago*, began to think of fortifying himself in that post, to defend himself against the fury of the *Indians*, with whom he was every day engag'd; and many men were lost on both sides, so that his men began to be uneasy, and talk of going back to *Peru*, as *Almagro* had done: for though they saw the richness of the country, yet it appear'd to them dearly bought, since they could not get any of it without running great hazards by the many engagements that they had with the enemy; so that they gave their lives for gone. The governor *Pedro de Valdivia* was not ignorant of the difficulty of his enterprize; but yet encourag'd by the hopes of success at last, he resolv'd rather to die than give it over; and being an experienced soldier, bred in the wars of *Europe*, he resolv'd to raise a fort for the defence of his men, being convinc'd of the bravery of the enemy he had to do with; and though he was inform'd of a general rising, which the *Indians* design'd, he sent seventy men to make an incursion towards the river of *Cachapoal*. The *Indians* taking the opportunity of the absence of these men, attack'd the fort, and had gain'd it if the *Spaniards* had not shewed incredible valour in the defence of it till the other men return'd; and by their assistance they repulsed the *Indians*, and remain'd conquerors.

The governor made good use of this advantage, both with the *Indians* and his own men; so that having quieted them, he began to work upon the mines of *Quillota*, which were of great fame: they prov'd so rich, and yielded such a quantity of gold, that he thought it advisable to make a fort there for the security of his men; but finding want of hands, by the losses he had had, he resolv'd to send to *Peru* for relief. This he put in execution, giving at the same time an account of the richness and fruitfulness of the country, to incite people; and because ocular testimony persuades more than what we only hear of, he trusted six men, whom he sent along with thirty others, to have a great deal of gold with them, causing besides the stirrups of their horses, and all that is employed of iron work about the bridles and saddles, to be made of massy gold, making the stirrups very great and large on purpose. But all this design was disappointed; for these men, who were

A demonstrative proof of the riches of Chile intended.

The design miscarries.

thus gilded like suns, were, when they came to the valley of *Copiapo*, fallen upon by the *Indians*, and all perish'd but two, who were *Pedro de Miranda*, and *Monroy*, officers, who got away by the help of their horses; but being pursued by the *Indians* through mountainous ways, and their horses tiring, they were taken by an *Indian* captain, call'd *Cateo*, who had a company of archers: they tied their hands behind them, and carried them to their cacique, who design'd to put them to death.

This cacique was married to the heirs of all this valley, (for their inheritances follow the women, for greater security of the right line,) and when these two were expecting nothing but the blow of death, it pleas'd God to inspire the cacica, or cacique's lady, with compassion; and so she went herself, and with her own hands untied theirs, commanding their wounds to be dress'd, and treating them with some of their drinks, which she herself presented to them, having drunk first herself, according to their custom, and bid them take courage, for they should not die. They seeing themselves brought, as it were, from death to life, threw themselves at her feet, and dedicated themselves to her as voluntary slaves, since by her favour they enjoyed a life which they gave for lost.

A wonderful preservation.

The captain, who had taken them, seeing his princefs and sovereign shew them so much favour, came to them, and bid them be confident of their lives, for that their lady having commanded they should not be killed, there was not any one bold enough to look awry upon them: they were kept six months in this captivity; and though it was so gentle, by the kind usage they met with, yet the natural desire of liberty, and the hopes of returning to their friends, still worked with them.

Let no man think himself secure that has his enemy within his own doors, nor let him trust his prisoner, though yielded up to his discretion; for let him be us'd as well as can be, yet there is no happiness like being his own man, and enjoying his liberty. This thought continually took up the minds of these two captains, so they laid a plot how to make their escape. They had observ'd in the cacique a curiosity for horses, which were a creature so new in those *Indian* countries; they persuaded him to learn to ride, and manage a horse.

He

An ungrateful return.

He liked the proposal, and began to exercise himself in this genteel amusement, carrying with him nevertheless always his guard of archers, with an *Indian* before with a lance upon his shoulder, and another behind, with a naked sword in his hand, more out of grandeur than distrust; for he had no suspicion of their plot, which was, to take an opportunity when he rid out to fall upon him, and kill him, as they did; for captain *Monroy*, with an extraordinary intrepidity, without reflecting on the guard that attended him, attacked the *Cacique*, and captain *Miranda* the rest, with so much suddenness, that they made themselves masters of the lance and sword; and bestirring themselves courageously, they wounded and dismounted the *Cacique*; so that he died of his wounds in some months. Having gained their horses, they saved themselves upon them; and not being pursued in that disorder, they overcame all the difficulties of those solitudes, and arrived at *Peru* safe; where at that time they found the government in the hands of the *Licenciado Vaca de Castro*.

These two captains were gentlemen of great families; and to this day the *Mirandas* in *Chile* are of the flower of the nobility of that kingdom. As for the *Monroys*, they are so known in *Castile*, particularly about *Salamanca*, that it is needless to say more of them. They were very well received by his excellency, for the good news they brought of that discovery and conquest, of the pleasantness of the country, and richness of its mines; and upon this relation, as *Antonio de Herrera*, and other authors say, it was resolved to further this conquest, which seemed to be of such high importance, and to chuse out some fit person, and accompany him with soldiers, arms, ammunition, and cloathing for the soldiers, who were almost naked.

Pastene sent with the first

He chose for this employment captain *John Baptiste Pastene*, a gentleman of the most antient and illustrious house of *Pastenes* in *Genoa*; which family is at present extinct in that republick, and remains only in its records, where many of that name are in the books of the nobility, and among the greatest dignities of the state. This gentleman engaged in the conquest of the

new world by the same desire of glory which *Ovalle* moved others, and to mend his fortune. He happening then to be in *Peru*, the viceroy took hold of the occasion to employ him for the king's service; which this gentleman accepted, and performed, going for *Chile*, where he arrived with the succours which that kingdom stood in so great need of.

OVALLE. 1646.

This relief was received with great joy, as being in the beginning of the enterprize, and extremely wanted, the soldiers being much fatigued and weakened with the continual assaults of their enemies, without any other defence than their fort of *St. Jago*, where they had enough to do to shelter themselves from their valour and fierce attacks; but the arrival of these succours gave them new courage, and resolution to prosecute their enterprize. To undertake it with more regularity, and prevent what accidents might happen from the sea, the governor sent *Pastene* with the title of lieutenant-general in his own ship, to discover the coast as far as the *Streights of Magellan*, as he did; and it appears by the letters of their catholic majesties, *Philip II.* and his son *Philip III.* how agreeable this piece of service was to them. About this time the mines of *Quillota* being working with great profit, and *Don Gonçales de los Rios* being captain-governor of the work, the *Indians* brought him a full pot of great grains of gold, for a shew of a great deal which they said they had found in a certain place. There they had laid an ambuscade of several of their best men, to fall upon such as blinded with covetousness should go to seek this treasure. This happened accordingly, for they all run presently to the place; for there is no alarm never so warm, that rouzes better than this desire of growing rich at once did them: but they were much mistaken; for instead of gold, they met with the iron of their enemies lances, who killed them all but their captain and a *Negro*, who escaped by the swiftness of their horses: so the *Indians* remained victorious, and by the way of triumph, set fire to a frigate which the *Spaniards* had almost finished to keep up their correspondence with *Peru*.

The Spaniards drawn into an ambuscade thro' covetousness.

C H A P. X.

The City of the Serena is peopled. John Baptiste Pastene goes for more Succours to Peru, from whence he returns to Chile; and with Valdivia and other captains, goes to help the Royal Army against Pizarro.

Valdivia pursues his conquest.

HERRERA says, that with this relief which *Valdivia* received, he pursued his conquest on the people called the *Promocoes*; and that he was met by several

Indians in the valley *Quillocma*, whom he overcame courageously, though with the loss of some horses; and at that time horses were a thousand crowns a-piece. Having discovered

OVALLE. discovered large provinces, and being satisfied of the great number of inhabitants in them, he returned to *St. Jago*. 'Tis suppos'd the governor did all this in haste, since he return'd without making any fort or settlement: so it is probable he went this time only to discover, in order to form a force proportionable of an army: therefore the general *John Baptiste Pastene* being returned from discovering of the sea-coasts, he sent him back to *Peru* to endeavour to bring more succours, as he had done the first, and so form an army capable of enlarging his conquests upon such powerful enemies, as he found the natives of *Chile* to be. Judging therefore that it was not yet time to leave any thing behind him unfortified, he founded in the valley of *Coquimbo* the city generally call'd by that name, but by him call'd *La Serena*, to serve for a resting-place or scala for the people who came from *Peru* to *Chile*; for being in great want of such supplies, he did endeavour to facilitate by all means their passage, and draw as many people as possible to preserve his conquest; for acting otherwise would only be to have so much the more to lose; as indeed it happened, and shall be related in its due place.

The city of *La Serena* was the second that was founded in *Chile* in the year 1544. in a very pleasant and fruitful valley, watered by a very fine river, not of the biggest, but of clear and admirable water, with which the fields are all so plentifully refresh'd, that their product is so various, that the inhabitants want almost nothing from abroad that is necessary for human life; for they have corn, wine, flesh, all sorts of other grain, and pulse-fruits, even more than in *St. Jago*; for besides all those of *Europe*, and those of *Chile*, they have two sorts very extraordinary: The first is a sort of cucumbers, which are very sweet, and do not need paring, for the outside is a very thin skin, smooth, of a delicate colour between white and yellow, all streaked with a very fine purple; the other fruit is that which they call *Lucumas*, and is a fruit, as I remember, I have seen in *Peru*: it is a very wholesome well-tasted fruit, the stone is smooth, and of a purple colour. The oil of this place is absolutely the best in the whole kingdom, as clear and bright as one's eyes, and of a rare smell and taste: they make great quantities, so that they send a great deal abroad. They have great flocks of cattle, though not so many as about *St. Jago*, because it rains less, and so the pasturages are leaner.

But that which is most particular, and of greatest value in this country, is the great abundance of rich metals, as gold, copper, and lead; so that though they

have given over gathering of gold in all the other parts of *Chile*, because other products are of greater advantage, yet in this place they go on gathering it more or less, according as the winter is more or less rainy; for when it rains much, the mountains are dissolv'd, and the earth open'd, and so the gold is easier found. And the copper too that is melted down there, serves for all the kingdom, and *Peru* besides. The climate of this city is absolutely the most temperate of all the kingdom; because the winter, which in other parts is very sharp, particularly nearer the *pole*, is here so gentle, that it is hardly perceiv'd, it being within five or six degrees of the *tropick*, and being in the 29th degree of latitude, enjoys a moderate climate, the longest day being of fourteen hours, and is upon the 11th of *December*, as the shortest is on the 11th of *June*, and the night is of fourteen hours.

But the accidental situation of the city helps much towards the mildness of the climate: it is within two leagues of the sea, having a plain before it all covered with myrtles: it stands on a rising ground, having a prospect to the sea, which makes a beautiful bay, abounding in fish of all sorts; by which it is an excellent place to pass the lent in, fish being very cheap: but the good cheer is also as well out of *Lent*; for besides the mutton, which is excellent, and very nourishing, there is plenty of tame fowl, partridge, turkeys, and all sorts of wild fowl. This city begun to be inhabited by many noble families, the founders being men of the best quality that came to *Chile*; and their descendants have remain'd, and do maintain the lustre of their ancestors. The governor-general appoints the place of *Corregedor*, or mayor of the city; and it is one of the most profitable places that are, because of the mines which are wrought in its territory: but notwithstanding all these good qualities which we have mention'd, this city does not increase so fast as that of *St. Jago*; for this last may be compared to the clove-tree, which sucks to itself all the substance of the earth round about it, a thing which is proper enough to capital cities every where.

About this time the general *John Baptiste Pastene* arriv'd at *Peru* for a second supply of men, which *Pedro de Valdivia* desired of the viceroy, to carry on his conquest; but he found the whole country in confusion, caused by the stubborn disobedience of *Gonçalo Pizarro*, so that the government wanted relief itself, instead of being in a condition to relieve others. This was so true, that *Pastene* was forced to return to *Chile*, to bring a force from thence to join with the royal army. This resolution 'tis probable came to the knowledge of the tyrant

The city of *La Serena*, or *Coquimbo* founded in the year 1544.

Abounds in rich metals.

The advantageous situation of it.

disappointed of a second supply at *Peru*, returns to *Chile*.

Pizarro revolts.

rant *Pizarro*; for he found means to seize his ship and his person by cunning. *Pastene*, though much press'd by *Pizarro* both by promises and threats to join with him, as very well knowing how much he might assist him as his friend, or injure him as his enemy, yet persever'd in his loyalty to the king, and found means to make his escape out of the hands of the tyrant, and to recover his ship too; which having new fitted with necessaries, he returned to *Chile*, to bring from thence some of the best officers to encourage the royal army, which was preparing to engage *Pizarro*, who on his side had such a force, that he had put to death the viceroy *Blasco Nunnes Vela*. In *Chile* they were waiting for his return, and the succours he should bring with him; but when they saw him without any, they were much troubled; for they found themselves oblig'd at least to suspend all their projects upon *Chile*, to go and relieve those upon whom their own preservation depended.

Valdivia marches to Peru to assist the king's forces.

The governor *Pedro de Valdivia*, as soon as he heard what pass'd in *Peru*, resolv'd to go thither in person with some of his best officers and soldiers to join and help the king's forces. He left in *Chile* for his lieutenant captain *Francisco de Villagra*, a gentleman of great courage and good parts, that he might govern and preserve what we had already in that kingdom, it being impossible to do more, or make any further progress, till the times should alter, and he provide more forces. He got together what gold he could, and went aboard with his captains and soldiers in the same ship, un-

der the conduct of the same general *Pastene*. His arrival at *Peru* gave great courage to the king's forces, by reason of the gold and men which he brought, the valour and experience of which was so great, that in the battle they perform'd extraordinary things, being the chief cause of the victory obtain'd over *Pizarro* in the valley of *Quiraguana*. He himself was taken, and chastis'd with his guilty assistants as his folly deserved, and his disloyalty to his prince. The president of *Peru*, *Gasca*, always advis'd with the governor *Valdivia* in all his most important affairs, whom he made of his council, with six more, for the secretest affairs and of most importance, making great esteem of his prudence and experience, as well as of the valour of his companions.

OVALLE. 1646.

This victory being obtain'd, the governor return'd to *Chile*, with a good succour of men and arms, and the same officers and soldiers who accompanied him to *Peru*, with which, and other succours which came afterwards, he was in a condition to pursue his enterprize vigorously, as we shall see hereafter. But all was little enough against the resistance of the *Indians*, who not only kept them from advancing, but for six years together, that their stubborn opposition lasted, they reduc'd the *Spaniards* to great extremities of nakedness and hunger; so that they were forc'd to eat herbs and roots, and rats and mice, and such things; and if the heart and courage of the governor *Valdivia* had not been invincible, it would have been impossible to have made the conquest.

He is victorious, and returns to Chile with a supply.

CHAP. XI:

What happened in Chile during the Absence of the Governor Valdivia, and after his Return; and of the new Succours he receiv'd.

P*edro Sanchez de Hoz* was a soldier, to whom the king was pleas'd to grant a patent for the discovery and conquest of certain lands, to begin from the jurisdiction of the marquis *Francis Pizarro*; and he pretending that part of the kingdom of *Chile* was in his grant, oppos'd the governor *Valdivia*, to whom *Pizarro* by a royal commission had given the conquest and government of *Chile*; but the marquis persuaded him to desist, and go along with *Valdivia* to *Chile*, recommending his person to the governor, to use him with regard, and give him a share in the best part of his conquest. *Valdivia* did so, bestowing on him the richest lands of the *Indians*; but the ambition of commanding is always very contentious, and subject to complain till it gets the upper hand. This appear'd in *Pedro Sanchez de Hoz*, in the absence of the governor from *Chile*; for being vex'd that he was not left with the authority of lieutenant in his room,

he plotted to take away the life of him who had it, which was *Francisco de Villagra*, who having notice of his designs, seiz'd upon *Pedro Sanchez de Hoz*, and cut off his head, by which he assur'd his own; and *Valdivia* approv'd of the thing as well done, when he was inform'd of it; because he was a friend to justice, and because a competitor is never sorry to have his competitor remov'd.

About this time, the *Indians* of *Copiapo*, who had begun to imbrue their hands in the blood of the *Spaniards*, in pursuance of the revenge of their prince's death, whom the captains *Miranda* and *Monroy* had killed, as we have related in the ninth chapter, lay in wait, and surpriz'd *Juan Bon* with forty soldiers more of some companies which were coming from *Peru*, and marching through their country; these they put all to death. After their example the *Coquimbese* attack'd the soldiers and inhabitants of the city of *La Serena*, whom they kill'd without sparing

The Copiapo Indians revenge the death of their captain.

OVALLE. ring one, and set fire to the city, which they ruin'd utterly, not leaving one stone upon another.

1646.

Are over-
come by
captain
Francis
de Aguirre.

All this being understood by the governor at his return from *Peru*, he sent captain *Francis de Aguirre* with a good force, to follow them to their retiring-place, where in several rencounters, in the valley of *Copiapo*, he overcame the *Indians*: all which was as much owing to his great valour as conduct, without which the force he had would have prov'd insufficient, (as *Herrera* observes.) He did the same in the valley of *Coquimbo*, and rebuilt the city of *La Serena*, in the place and situation where it now stands. For which reason he was look'd upon as the true founder of it; and his descendants, who are of the best nobility of the kingdom, have preserv'd that prerogative, and are the chiefest in that government, or rather the masters of it; for they are so numerous and so powerful, that they yield to none in reputation, and are accordingly respected by all.

Let us now treat of that which 'tis not reasonable to forget; which is, of those captains, who in those early times entered *Chile* with succours of men to help to conquer it, since it is just their memory should live for ever in those who enjoy the fruits of their labours, and are now masters of what they gain'd with their blood and sweat, and the loss of many lives, and danger of their own, which they expos'd in so many battles and encounters they had with the enemy. I am only sorry, that I cannot speak of them all, and describe in particular their good qualities and great merits, because I am in a place where I want memoirs and informations for such a work; but I will say what I can of their noble actions, as I find them recorded in other histories; though to say truth, that which they say about *Chile* is so little, that it is almost next to nothing. I am not surpriz'd at it, for it is a place much out of the way, and its conquerors were busier with their swords than with their pens; for their enemies press'd them continually with so much vigour, that they had but little of that leisure which histories and relations require.

A recital
of those
captains
who were
instrumental
in the
conquest of
Chile.

We shall begin with the governor *Pedro de Valdivia*, who was the first that entered the kingdom with a force, as has been related; then that which general *Pastene* brought afterwards with arms and cloaths. The succours brought by captain *Monroy* prov'd of great importance; as *Herrera* says, it was of threescore men, which in those days was as much as six hundred now: these he had hir'd in *Peru*, being much assisted by the viceroy, who, upon the relations of *Monroy* and *Miranda*, was resolv'd to encourage the enterprize.

I am not certain, whether it was before this, or after, that arriv'd the succours¹ opportunely brought by captain *Cbristoval de Escobar Villaroel*; for I do not find it mention'd in any of the historians, which I have read here; but in *Chile* the memory of it is very fresh, and will never be forgot; not only for his coming in a time when they extremely wanted supplies, but also for that circumstance of this noble captain's having brought these succours upon his own charges, (and I think they were seventy men,) and made his way by land to *Chile*, either by the wilderness of *Aracama*, or by the *Cordillera*, either of which must cost a great sum of money, for it is above five hundred leagues.

This action alone was sufficient to shew the nobleness of this gentleman, if that of his family had not been so well known as it is in *Spain*; but he continued to give proofs of his zeal for the king's service, by serving in person, and employing also his son captain *Alonso de Escobar Villaroel*, whom he had brought with him from *Spain*, that they might both give an example to their posterity, as they have; not yielding to any, but have produc'd many noble persons, both in arms and other civil employments of the government.

When I reflect upon those I have known of the descendants of this famous head and conqueror, I find, that between sons, grandsons, and great grandsons, they come up to eighty seven; and if they had not been so many, there was enough to honour this family in the seven or eight sons of the general *Luis de las Cucuas*, grandsons of this gentleman, with whom he presented himself to the royal army, all arm'd cap-a-pee, in which they serv'd many years at their own charges; for in those days the inhabitants that were gentlemen, had no other reward but their loyalty, and the glory of serving their prince. *Antonio de Herrera* makes mention of another supply, of one hundred and eighty men, conducted by captain *Francisco Villagra*, who was afterwards governor of *Chile*, and to whom that kingdom owes a great deal of its being, for the hazards he ran, and the noble actions he perform'd in its conquest, as we shall see hereafter, and may be read in the general history, to which I appeal. The nobility of his family was always notorious, and the gentlemen of his name have shewed themselves worthy of it, in the great services they have and do perform every day for the king, worthy of all sorts of acknowledgment and reward.

After this, in the time of the viceroy *Don Antonio Hurtado de Mendoza*, his excellency, as *Herrera* says, sent captain *Don Martin de Avendano* by land, with good suc-

cours

cours of men, and three hundred and fifty mares and horses, which were of as much importance for the war as so many men. The descendants of this gentleman are still carrying on the lustre of his family, so known in *Salamanca* and other parts. I was acquainted with two brothers of that name, who alone might preserve and increase the reputation of their family; the one was colonel *Don Antonio de Avendano*, who was colonel of the regiment of *Arauco*, who signaliz'd himself at the head of that regiment in many rencounters with the enemy, and particularly in one, where our camp was defeated, and where to preserve the reputation he had gain'd in so many noble actions and eminent dangers, he chose to die, being wounded in a great many places, and almost cut in pieces by the furious enemy. The other was *Don Francisco de Avendano*, likewise colonel, and who came to *Spain*; where his majesty, in consideration of his own and his ancestors merit, honour'd him with the habit of *St. Jago*, and the government of *Tucuman*, where he died.

I do not mention those companies out of which, as they pass'd by *Copiapo*, forty were killed, with their leader *Juan Bon*; because *Herrera*, who speaks of this, does not say who was the captain of them. Perhaps there were also other commanders, who in those six years time entered into *Chile* with men; and I should be glad to be where I might have particular information of them, to do them at least that small honour of

putting their names in print, and giving some glory to actions which, perhaps, deserv'd to be grav'd in brass. OVALLE.
1646.

I do not likewise set down here, that famous supply of men brought by the second governor of *Chile*, *Don Garcia Hurtado de Mendoza*, marquis of *Cannete*, for this shall be spoke of in its proper place, after the death of the governor *Pedro de Valdivia*; and thus we shall conclude those who entered by the way of *Peru*. For though, since that time, there have been several supplies, and are every day still more, yet they have not been remarkable enough, as not having come at first, but after the settlements were made; and besides, it would carry me too far to report them all. But I shall add here those which have come from *Spain* by the way of *Buenos Ayres*, as well because they were the most numerous, some having been of five hundred or a thousand men, as having come in dangerous times, when the kingdom was ready to be lost, the enemy having, as it were, besieg'd it; and so 'tis just to preserve the memory of such famous benefactors, who have been, as it were, fathers of their country. This we shall perform at the end of this book, in a treatise by itself, where we will likewise put the pictures of all the governors of *Chile*, as well as may be, considering how long they have been dead, that their descendants may preserve the memory of men who seem to deserve eternity by their heroical actions.

C H A P. XII.

The Governor Pedro de Valdivia pursues his Conquest, and peoples the City call'd the Conception, where he had like to have been destroyed in a Battle.

Valdivia pursues his conquest.

THE governor *Pedro de Valdivia* seeing himself with a good force, and the greatness of his mind persuading him that he had wherewithal to put an end to his enterprize, *Herrera* says he sent to the other side of the *Cordillera*, from *St. Jago*, captain *Francisco Aguirre* with a good number of men, with which he pass'd those terrible mountains, and founded among the *Diaguaitas* and *Juries*.

Herrera says no more; nor do I know any thing of those individual places and cities which he founded. The governor *Valdivia* on his side set out of *St. Jago* with a powerful army, and passing the furious rivers of *Maypo*, *Cachapoal*, *Tinguiritica*, *Peteroa*, *Teno*, and *Mataquito*, he conquer'd the *Promocoes*, a warlike people, who had resist'd *Almagro*, and before that had repuls'd an army of fifty thousand men, which the *Inga* sent against them when he endea-

our'd to conquer *Chile*; but the good fortune and great valour of *Valdivia* and his men overcame that which seem'd invincible, though I am persuaded that it was not without blood: but I refer myself to the general history of *Chile*, which has describ'd the particular encounters and battles on both sides.

The army pass'd the deep river of *Maule*, and the wide *Itata*, and coming to that of *Audalien*, quarter'd by the sea-side; and for the conveniency of situation, he founded there the city of the *Conception* in the year 1550. But the natives astonish'd and enrag'd at this boldness of strangers to enter thus into the heart of their country, as if it were their own, call'd a general assembly, and with a numerous and brave army presented them battle so furiously, that our people began to wish they had not engag'd themselves so far. Much blood was shed

on

OVALLE. on both sides; and our army was in great danger of being destroyed, till it pleas'd God, (who guides all things to his ends,) who was to reap the fruit of his victory over those gentiles, whom he had predestinated by the means of the gospel, which was to be preach'd to them in case the *Spaniards* were victorious, to make them so at last, and that very gloriously, the famous *Aynabillo*, chief head of the *Pencones*, remaining prisoner, after having behav'd himself with great bravery in the fight.

The situation of it.

The situation of the city of the *Concepcion* is on a plain where the sea makes a most beautiful bay, in form of a half-moon; and nature has provided a mole, by putting there a large *island*, behind which ships ride safe from the north wind. By land, towards the east, it is encompassed with some high hills, the sides of which are all planted with vines and other fruit-trees; so that which way soever one looks, the prospect terminates in beautiful plantations of trees, or rather a green semicircle, which rejoices the sight, and fortifies the city. From the north, there comes into it a small river, which comes down from the mountains, which we have already describ'd in the chapter of the rivers of *Cbile*. On the south side, another larger deeper river runs by it, and is call'd *Audalien*. Neither of these rivers do the kindness to the city which *Mapocho* does to *St. Jago*, that is, to come into the houses; but the want of this is supplied by excellent fountains of chrifalline and delicate water, which rise very near the city, and are brought into it very plentifully, and which was carried to the publick place by the general *Don Diego Gonçales Montero*, he being corrigedor of this city, and governing it with the same prudence and generosity, that he since govern'd that of *St. Jago*, in the same quality of corrigedor and lieutenant general.

Its latitude.

This city is in the latitude of thirty three degrees and five and forty minutes to the antartick pole; and for this reason, and because of the high land it stands upon, the air is so temperate, that the heats never are troublesome, nay, in the heat of summer 'tis necessary to have as many bed-cloaths as in winter, which is not at all severe, because it never snows there, though it rains extreamly. For the security of the city, there was erected a good fort for our people to retire to when press'd by the *Indians*, which often happened, and made them stand to their arms almost continually; for they, impatient of any yoke, were incessantly taken up with the thoughts and endeavours of driving them out of the country; and notwithstanding all the care that was taken, the city was lost at last, for the enemy over-powered us: but yet in length

of time it was built again, as we shall see; though still remaining a frontier to the enemy, it has not had such increase as *St. Jago*. But it gains ground, and has many rich inhabitants, who have enter'd upon a great vent of salt, flesh, and hides, which is one of the richest commodities of *Cbile*; and they have, besides, magazines of ~~flower~~, with which they furnish the army: the wines too of those parts, are generally better than those of *St. Jago*, though they are lower ceps or vines; nay, the grapes ripen as they lie along on the ground, as it is in many parts in *Europe*: they have not that abundance of almonds, oil, oranges and lemons, pulse, and dried fruit, as in other parts of *Cbile*, their summer being shorter, and the sun having less force.

The *Spanish* children born here are of a Character very sweet nature, and docile; of good wits, and take to learning very well. The men are loyal, faithful keepers of their word, friendly, and such as for their friends will venture any thing to defend them in their honour or fortunes, even with the hazard of their own, and their lives too: they are very well dispos'd to virtue, having good inclinations; and those among them, who have taken to arms, have extremely signaliz'd themselves. They are bred in great simplicity, as being far from the corruption of the court, which generally improves the malice, and raises the libertinism of young people. The bishoprick of this city is a poor one, not being worth above two or three thousand pieces of eight a year, because, though the land is rich of itself, and that in which there are most mines, yet the *Decimes* or tenths are very small, because of those continual wars which this city has maintain'd from its beginning; for we may say, it has been nurs'd with blood, and grown up in arms, not having laid them down in ninety five years, which is no small evidence of the good qualities of its inhabitants, and what it may be henceforward, when this dead weight is taken off. Another cause of the small revenue of this bishoprick, is the loss of seven cities, some of them the richest of the kingdom, which all belong'd to its diocese.

In the year 1567. there was settled a high court of chancery, which remain'd till the year 1574. and afterwards it was remov'd to *St. Jago*, where it now is: and though its jurisdiction reaches as far as this city, there is little for it to do; because the governors are generally present, to be nearer the garrisons, and countenance and assist the war, of which there is a continual necessity. The garrison is very numerous, and of choice soldiers, where every day they mount the guard, as it is practis'd in places of war. The general provides all the officers,

1567.
even

even to the colonels; but his majesty names the treasurer and muster-master-general, who is the second person after the governor: this is a post of great esteem, and no small value in this kingdom; and there

go through his hands three hundred thousand ducats of the king's money, which every year is to be distributed among the officers and soldiers, who are enroll'd in his books.

OVALLE.
1646.

Here are three chapters, which follow, all of miracles, wrought by an image of our lady, which are omitted.

C H A P. XIII.

The Governor Pedro de Valdivia prosecutes his Conquest, and founds the Cities of Imperial, Valdivia, and Villa Rica, and raises three Forts in Arauco.

1550. THE governor Valdivia having spent the year 1550. in peopling the city of the Conception, and defending himself in his fort against the continual attacks of the enemy, and having at the same time inform'd himself more exactly of the country, and its fertility, by the means of captain Hyeronimo de Alderete, who had gone through it, and observ'd the number of its inhabitants, resolv'd to go out of the Conception, and pursue his conquest. In order to this, after having well provided his fort, and left a garrison in it, he set out in the beginning of the year 1551.

1551. He took his way with his army by the plains of Angol, crossing first the great river Biobio, and coming to that of Cauten, which for its gentleness is call'd the Ladies River, when join'd with another very pleasant one near the sea: here he found great settlements of Indians, and founded the city of Imperial. This is one of the most agreeable situations of the whole kingdom, being about three or four leagues from the sea, and thirty nine leagues from the Conception, and a hundred and nine from the city of St. Jago, in thirty nine degrees of south latitude. All the territory of this city is very fruitful, bearing corn, and all sorts of pulse and fruits, though the black grapes do not ripen so kindly as the white ones and the muscadines: the country is not all plains and valleys, nor all hills, but rather a composition of the whole; the hills are gentle and tractable, with good pasture and shelter for cattle; the ground does not want much watering, it having frequent and large dews that fertilize it. The city was situated upon a pretty stiff hill, and the confluence of two navigable rivers; but the port is not good, for the flats there are within three fathom and a half of depth. Here the governor met with fourscore thousand Indians settled, nay, some authors say, they were many more; and all agree that they were a quiet and good-natur'd people, not at all so warlike as the Araucanos.

The foundation of the city of Imperial, and its situation.

as we shall see hereafter that it was, it would by this time have been a great city; for it was already very well peopled, and must have increas'd, if the gold mines which are in its neighbourhood had been wrought.

This city, which was the fourth of this kingdom, being thus founded, the governor divided the territory, and gave the lordships to his conquerors, according to the royal privilege he had so to do, that he might engage the Spaniards to enter more heartily into his enterprize. He took for himself the lordships of Arauco and Tucapel, as far as Puren, except some manors that he gave to others, to content all. Having left a force, which seem'd sufficient in the city of Imperial, he marched as far as Valdivia. Being come to that famous river, and desiring to pass it, to conquer the land and people on the other side, the brave Indian lady, call'd Recloma, hinder'd him, offering to pass the river alone swimming, and to reduce the Indians to his obedience, as she did, and as we have already related in the ninth chapter of the first book; and there likewise is a full description of the situation of the city, and all its other qualities, which it was proper to make in that place, and so is not necessary to repeat here.

The governor having founded the city of Valdivia, erected a fort, and settled all things as he had done at the Imperial. While he stay'd there to pursue his settlement, he sent captain Hyeronimo de Alderete to discover the country as far as the Cordillera Nevada; and he having sent to the governor relations of his discoveries, as he went founded a town, which he call'd, by the excellency, Villa Rica, the appearances of the riches of that country being greater than any yet had been discover'd.

The city of Valdivia founded, and a fort erected.

The foundation and situation of Villa Rica.

Though the situation he chose seem'd at first to be the best, yet in time it was resolv'd to change it, and place it upon a great lake, at the bottom of the Cordillera, and about sixteen leagues from the Imperial, and forty from the Conception. It has not such a plenty of corn and wine as the others, but it has enough, and many other good qualities, which I omit, because it being since destroyed with other cities, already mention'd,

OVALLE. tion'd, I am likewise forced to be silent of their particular properties, and refer my self to the general history of *Chile*, which will embrace all those particulars.

These were the cities planted and peopled by the governor *Valdivia*; and though I have not, as to these last, made mention of the blood spilt in gaining them, 'tis not to be imagined but that they cost dear enough, since the contest was with such warlike nations, that it seem'd a great rashness (and would have been so without a particular protection of heaven) to undertake such enterprizes. There are not wanting those who blame the governor *Valdivia*, judging that he did not measure well his strength, but grasped more than he could hold, as he found by a sad experience at his own peril in a little time.

The authors who speak of these attempts are full of the commendation of the valour, patience, and sufferings of the *Castilians*; but all this would not have done, nor have subjected those people, nor twice that force could have prevail'd against them, if because they saw them on horseback, and killing people at a distance, they had not believed them to be *Epunamones*, by which name they called the gods they ador'd; so they imagined them to be immortal, and that they came from above with a power to send out thunderbolts like God: for having never seen either small arms, or great artillery, they thought the noise was thunder; and to this day that sort of arms is call'd *Talca*, which in their language signifies thunder; and out of the same imagination they call'd the *Spaniards Viracochas*, which is as much as to say, scum of the sea, or a people come by sea, giving to understand, that those men, if they were men, were sent from God to subject them. This made them ready at first to shew all respects to the *Spaniards*, and kept them from rebelling, and resisting so vigorously as they did afterwards, though they always made some opposition, particularly the *Araucanos*, who have ever been the eagles among the *Indians*. *Valdivia* having well observ'd this, was content at present with what he had conquered, and returning to *Arauco* by *Puren* and *Tucapel*, he caused three strong houses to be erected in the distance of eight leagues from one another, and in such places as might have an easy communication together. Having thus settled matters, he return'd to the *Conception*, and so to *St. Jago*; from whence he dispatched captain *Hieronimo de Aldarete* to *Castille*, to give the king information of the riches that were discover'd in that country, and its other good qualities; as also a relation of the settlements made there, in order to obtain a supply of people, which was

granted. The cities newly founded were in great danger of being lost; for indeed they were more than our forces could protect, and the *Indians* shewed great impatience, and fretted to see foreigners settle cities in their country, and erect forts and strong places for their security.

The governor being inform'd of this disposition of the *Indians*, set out from *St. Jago* with a supply of men which he had received from *Peru*, under the conduct of *Don Martin de Avendano*, and relieved all the garrisons: which having done, and presuming they were safe, without reflecting on the danger that threatened him, he applied all his intention to give a beginning to the working of the gold mines for a design he had.

This was to go to *Spain*, and carry with him all the gold he could get together, to shew the king the vast riches of the country, and to obtain from his majesty those titles of honour which were generally bestowed upon the conquerors and discoverers of those *Indian* kingdoms, and so bring back a good force to subdue them. For this end he did two things; the first, to send to the *Streights of Magellan*, in the year 1552. *Francisco de Ulloa*, that with two ships, which were equipp'd on purpose, he might discover all the *Streight*, and give an account of it, that so he might know how to undertake the voyage to *Spain* that way: the other thing he did, was to set people to work to find out new gold mines, which they easily did, there being so many in these parts; among which, the most famous were the mines of *Quilacoya*, four leagues from the city of the *Conception*; and others in *Angol*, to work which he employed twenty thousand *Indians*. 'Tis easy to imagine how much gold such numbers of men might get from those mines, which had never been touch'd till then: it was very great, and enough to enrich both governor and soldiers, which it did: and with the acquisition of so much treasure, they began likewise to despise their enemies; who, while they were busy in searching the bowels of the earth for gold, were employed in thinking how they should recover their lost liberty, and free themselves from the yoke of subjection, which they had never felt before.

The city of the *Conception* went on prospering, because of the great quantity of gold brought into it every day; by which means the minds of the inhabitants were elevated in proportion, and the soldiers grew wanton and insolent. The governor being tainted with the same disease of too much prosperity, neglected to take notice of these disorders; for the desire of riches increasing by riches, which they saw every day

day fill their coffers, they were less attentive to that which ought most to have drawn their attention, which was their own and the kingdom's preservation, and so made way for that blow of fortune that laid them all along.

The Araucanos resolve to revolt.

The *Araucanos* were as uneasy, and continually plotting how to compass their designs, and at last resolved to rise unanimously against the *Spaniards*, and take their revenge of them. To try how it would be taken they began to talk big, and carry themselves haughtily, more like masters of

the land than like servants; they quarrell'd with one and the other, and losing all respect drove the thing so far as to kill some *Spaniards* in these contests; and then perceiving that these things were dissembled, and that their boldness had its desired effect, they grew every day more insolent: and at last being thoroughly satisfy'd that the *Spaniards* were neither gods, nor immortal, nor of any other species than they, but subject to all human infirmities, they began to fear them no longer, but resolved to fall upon them.

OVALLE.
1646.

CHAP. XIV.

The City of Angol is peopled, and the Indians rise against the Spaniards.

The city of Angol founded.

UPON occasion of the mines that were begun to be wrought in the district of *Angol*, the governor *Pedro de Valdivia* settled a city of that name there, which was also call'd the city of the confines. Some attribute this foundation to the marquis of *Cannete*, *Don Garcia Hurtado de Mendoza*, who governed after the death of *Pedro de Valdivia*: perhaps the reason of this is, that the situation of this city at first was three leagues from the place where it now stands; so it might be that *Valdivia* first settled it, and the marquis removed it to the place it is now in, and that was ground enough to make him the founder.

Its situation and description.

The present situation is in a plain, very large and disengaged, eight leagues from the *Cordillera*, and twenty from the *Concepcion*; some say sixteen, which perhaps is caus'd by the difference of its two situations. Their longest day and night are of fourteen hours and half. The land is very fertile; fruits ripen very well: there is good wine, and good store of raisins dried in the sun, figs, and other dried fruits; a vast quantity of tall cypresses, which yield a very sweet-scented wood, of which, *Herrera* says, there is made a gum-lac. The great river *Biobio* runs by it, and serves it for a wall and ditch on the south side; and on the north side another pleasant rivulet comes running from hills of a moderate height, and turns many mills for the use of the city. Those whom I have known that have been born in this city, have prov'd very gentle in their dispositions, of good wits, and noble inclinations, very friendly and real, and extremely loyal to the king, as indeed all the *Chilenians* are, looking on that as the highest *punto* of their gentility.

Character of the natives.

Now let us return to the *Araucanos*, who were busy in calling together their assemblies there, to treat how to cast off the yoke of servitude, and make themselves masters of that which was truly theirs. So it was, that the *Caciques* being possess'd with

an opinion that their forces were not inferior to the *Spaniards*, began to call them together: and they needed no incitements of pay or money; for the love of their liberty, and possessions, and posterity, was a sufficient spur to them, thinking every day a year that kept them from engaging with their enemies, and conquering them.

The *Caciques* that met were these: first, *Tucapel*, a great butcher of christians, with three thousand soldiers; *Angol*, who was very brave, with four thousand; *Cayocupil*, with three thousand men, whom he brought from the *Cordillera*, as hardy as the rocks, they came from, and made to endure any labour; *Millarpue*, an old man, of great wisdom, brought five thousand; *Paicavi* with three thousand; *Lemoleno* with six thousand; *Mareguano*, *Gualemo*, and *Leutropie*, each with three thousand; the robust *Elicuera*, held for one of the strongest men, with six thousand, and they ancient; and chief of all, *Colocolo*, with as many more. *Ongolmo* offer'd four thousand; and *Puren* six thousand; *Lincoyce*, who was of the stature of a giant, offered to bring more than any; *Peteguelen*, lord of the valley of *Arauco*, from whence the whole took their name, came with six thousand; and the famous *Caupolican*, and his two neighbours *Toome* and *Audalican*, and many others, kept themselves ready to come in with their subjects.

The caciques of Arauco revolt, and raise a numerous army.

They met, according to their custom, to eat and drink at the appointed *rendezvous*, for that never is omitted in these assemblies; and having been unanimous in the first and chief point, which was to rise, there was some difference about the choice of a general, every one desiring to have that command, as it generally happens in such elections: every one alledg'd their particular merits; the one his valour, another his experience, another his good fortune, and none seemed to want a pretence for obtaining their desire. They grew warm in this ambitious contest, and would have come to blows, if the old

OVALLE 1646. old and wise *Colocolo*, by his prudence and authority, had not quieted them, and reduc'd them to consent to choose *Caupolican*, not only as the bravest soldier, but the ablest chief. This done, they all swore obedience to him, and promis'd to obey his orders, for the better carrying on of their common design.

The *Spaniards* had, as we have already mentioned, three castles for their security, and one of them was near the post where this assembly was kept; and the *Indians*, proud and impatient, had a mind to attack it immediately; but *Caupolican*, their general, forbid it, in order to do it with more dexterity and safety. He commanded *Palta*, who perform'd the place of serjeant-general, to chuse him out fourscore soldiers of the bravest, and such as were least known to the *Spaniards*, and the *Indians* their friends: these he put under the conduct of two very brave men, *Cayaguano* and *Alcatipay*, and order'd them to enter the castle with their arms by this stratagem. The *Araucanos*, though in peace, were not permitted to enter the castle, except such as serv'd the *Spaniards*; and these enter'd often with their loads of grass, wood, and other necessaries for the garrison. *Caupolican* order'd these fourscore men to feign themselves to be servants of the *Spaniards*, and having hid their arms in the grass they carried, to answer nothing, but pretend they did not hear if they were ask'd any questions: they acted their parts to the life, some counterfeiting lameness, others weariness, so that they were all let in without suspicion: then they took their arms out of the grass, and fell unanimously upon the *Spaniards*, who were much astonish'd at so unforeseen a boldness: however, they gave the alarm,

An Indian stratagem.

and all coming out of their quarters, resisted them, so as to kill some of the *Indians*; the others, either out of fear of the *Spaniards*, or on purpose to draw them out of the castle in their pursuit, retir'd, on purpose to gain time till their general *Caupolican* could come up with his army; which he did with a very numerous one, and forced the *Spaniards* to retire to their fort. He besieg'd them in it, and after having kill'd many of them, those who remain'd alive were glad to leave the post, and get away, judging it better to retire to *Puren*, lest they should lose all; whereas being join'd with the garrison of *Puren*, they might better resist the enemy, though he was very powerful, and much elevated.

The news of this invasion soon reach'd the *Conception*, and the governor *Pedro de Valdivia*, who was then there, began presently to consider how to remedy so great a mischief. Some blame him as tardy in doing of it; for to secure the treasure of the mines, where (as *Herrera* says) he had fifty thousand vassals at work to get gold for him. Before he went to succour those in *Puren*, he went out of his way, and stay'd the erecting of a fort at the mines, which took him so much time, that he came later than was requisite to their relief. But, indeed, if any thing was ill done by him, it was the making too much haste; for without staying for the relief and succours he might have receiv'd from the other cities, he set out with a force not strong enough to encounter that of *Caupolican*: his courage deceiv'd him; for being elevated with his successes, and trusting to his fortune, he run into the precipice, as we shall shew in the following chapter.

Valdivia marches against the Araucanos.

C H A P. XV.

The Governor Pedro de Valdivia, and all his People, are kill'd by the Indians.

The famous Action of Lautaro is related, that being the chief Cause of this Event.

THE time of this great captain's death was now come; all things therefore seem'd to concur to that end. The present remedy that was to be applied to this mischief, to stop its progress, and the delay of those succours he expected from the other garrisons, were all combining causes; his heart misgave him at his setting out from *Tucapel*. He had sent out parties to bring him an account of the state of the enemy, but none came back: this gave him some apprehension, but being engag'd, it was necessary to go on. He had sent out scouts, as I said, and had scarce gone two leagues on his way after them, but he saw the heads of two of them hanging upon a tree: this increas'd his fear, and he consulted with

those with him, whether it would not be rash to proceed. The young men were of opinion, that it would be a lessening of their reputation to turn their backs to danger, though there came to them an *Indian* of their friends, and desir'd them not to proceed, because *Caupolican* was at *Tucapel* with twenty thousand *Indians*, and that the hazard they ran was manifest; but he followed on his way, and came within sight of the enemy: they soon engag'd, and the battle was cruel on both sides, so that for a great while no advantage could be perceiv'd, because the brave actions on both sides kept victory in suspense.

He engages them.

After a good while of this contention, the *Spaniards* began to prevail, and to cry

Viva

Viva España, or *Live Spain*; with which recovering new vigour; the *Indians* seem'd to give way, when (as *Arzilla*, in his *Araucana*, says) the famous *Lautaro*, an *Indian*, who had been bred page to the governor *Valdivia*, having more regard to the love of his native country and his liberty, than for the education he had receiv'd, and the fidelity he owed his master, went over to the *Indians*, and spoke to them in this manner: "What is this, brave *Araucanos*? do you turn your backs when your liberty is concern'd, your country, your children, your posterity? Either recover your liberty, or lose your lives; for 'tis a less misfortune to die, than to live slaves. Do you intend to stain the glory of your ancestors, acquir'd for so many ages past, in one hour? Remember you are descended from those who gain'd that renown by resisting their enemies, and not flying from them; and such as fear'd not to lose both lives and fortunes to preserve their fame: drive away all fear, generous soldiers, and either live free, or die." With these words he so inflam'd the minds of his friends, that despising death, they return'd with fury to invade those whom before they flew from. *Lautaro*, to encourage them the more, led them on, shaking his lance against the governor, his master; who, surpriz'd at his action, cried, *Traitor what dost thou do?* To which he answer'd only with a thrust or two, animating his people to do the same. This renewed the fight, and they all resolv'd, by the example and exhortations of *Lautaro*, to conquer, or die; which they perform'd with so much fury, that the concern of both sides was now at the highest, and the contention only who should venture farthest into danger. Many *Spaniards* and *Indians* fell on both sides, and *Lautaro* still encourag'd his countrymen without any relenting. *Valdivia* did the same by the *Spaniards*, and shewed himself every where, in the greatest danger, without the least apprehension, though he saw many of the bravest of his men fall by the sword. One would have thought the *Indians* had but just begun to engage, to see how like lions they fell on, and begun to find victory incline to their side, till at last there fell so many *Spaniards*, that *Valdivia* was almost left alone. In this extremity he went aside with his chaplain to confess his sins, that being the principal thing he had now to do. The *Indians* gave him but little time to make his peace with heaven; for a great troop of them fell upon him with darts and lances, killing the chaplain, and taking him prisoner, they brought him

The treachery of *Lautaro*.

His language to the *Araucanos*.

Valdivia taken prisoner.

alive to their general, for the last triumph of their victory. OVALLE. 1646.

This hitherto unconquer'd captain appear'd in the presence of the great *Caupolican*, his hands tied behind him as captive, his face all bloody, though venerable. He ask'd his life as a favour; he who a little before had it in his power to grant it his enemies. He turn'd his eyes towards his *Lautaro*, and with their language seem'd to desire him to intercede for him who had been his lord and master, and by whose means he was in this extremity. He promis'd *Caupolican*, if he might have his life, to withdraw all his forces, and leave the country free from their incumbrance. He made oath of this several times, and persuaded with so much eloquence his hearers, that *Caupolican*, who was as generous as brave, began to relent, and incline to compassion. But the greatest part said it was madness to trust to any words or promises of a captive, who is forced to humble himself; but that when he should be free, he would do that which should be most for his advantage. However, the dispute between them increas'd, and no doubt but *Lautaro* would have inclin'd to mercy; for if he fought against his master, it was not out of any hatred to his person, but out of the great kindness he had to his country, which, with the desire of liberty, prevail'd over the gratitude he owed for the good usage he had receiv'd at his hands; but nothing of this was able to appease the vulgar, though *Caupolican* inclin'd to clemency; so they forc'd him to pronounce his death, and to execute it immediately in hot blood, though they differ'd in the manner of it; for some say that they poured melted gold into his mouth, bidding him once for all content his thirst after that metal which he had so insatiably coveted: others say, that one of those *Caciques*, bearing impatiently that it should bear a question whether he should live or die, gave him a blow on the head with a club; which *Caupolican* resent'd highly, as a want of respect to him. That which I find most probable is, that according to the custom of the *Indians*, they made flutes and trumpets of the bones of his legs and thighs, and kept his head as a testimony of so remarkable a victory, and to animate their youth to undertake the like actions, as they might see by this their fathers had done. Thus I have heard it related. He is slain by the Indians. They make flutes and trumpets of his bones.

Of all the *Spanish* army, 'tis said there escaped only two *Indian* friends, who taking advantage of the obscurity of the night, hid themselves in a thicket, from whence creeping out as well as they could, they

L 1 came

1646. **OVALLE** came to the *Conception*, and brought the news of this fatal event. The city was immediately full of confusion and complaints, the women crying and bewailing the loss

of their husbands and sons, others that of their fathers and relations, and all together the common calamity of their city, in which they were all equally concern'd.

C H A P. XVI.

What happened after the Death of the Governor Pedro de Valdivia.

THE enemy having obtain'd so remarkable a victory, their general *Caupolican* commanded the retreat to be founded, and call'd a council, to consider whether, or no, it would be best to follow their blow warmly. Many were of opinion it would be most expedient to fall upon the cities immediately, before they could prepare for them; yet *Caupolican*, after having heard them all, resolv'd to do otherwise. 'Tis better, said he, to expect our enemies in our own homes, than to go to seek them at theirs, where all men fight with more valour; let them come to seek us in our mountains and bogs, where we are sure of a safe retreat: let us give our enemies a free access to us, who have our situation to befriend us; and in the mean time our horses and soldiers may refresh themselves: and if they out of fear (which I believe they will not) do forbear to seek us out, we may attack them when we will. Having spoke thus, he took *Lautaro* by the hand, and having publickly commended him, by attributing to him the victory and the liberty of his country, he, by consent of all, made him his lieutenant-general, and gave him leave to chuse out the men he would have to serve under him, to go and pitch upon a fit post to expect the *Spaniards* in. *Lautaro* was no very tall man, but well set, and strong, industrious, cautious, of good counsel, gentle, and well proportion'd, very brave, as we have seen, and shall see hereafter.

Caupolican makes Lautaro his lieutenant-general. His character.

To celebrate this victory, the *Indians* solemniz'd publick games of wrestling, running, leaping, and other proofs of their strength and dexterity: they made also great feasting with dancings, and for several days did nothing but rejoice and be merry; but still without forgetting to be upon their guard, as men that expected their enemies, whom they presum'd desirous of revenge.

Villagran marches to revenge Valdivia's death.

Francisco de Villagran was lieutenant-general to *Valdivia* when he was kill'd; who remaining chief in command, assembled all he could to go and take vengeance of the enemy for this defeat. Setting out, he came as far as *Arauco*; and being come to a high mountain in the way, he found *Lautaro* on the top of it, with ten thousand men, without having sent out any to disturb the *Spaniards* march; for he had left all the passes easy, to oblige them to come to that

place: it was not far from the sea, which wash'd the foot of the mountain on one side; the coming up on the other side was easy; all the rest was precipice; but the top was a plain fit to draw up in, and very proper for his design.

The *Spanish* general being in presence, the armies began to draw up on both sides; and not to make the *Indians* too presumptuous, he order'd three troops of horse to begin the charge, in hopes to draw the *Indians* from their post, but in vain; for though they made three attacks, yet *Lautaro* would not stir, but receiv'd them with showers of arrows, stones, and darts, which made them retire faster than they came on. Our people, who could not break this battalion, with the evident danger of falling into precipices, did what they could, but with little effect, only tiring their horses; for the enemy kept his post, not a man of them stirring out of his rank; only *Lautaro* would permit some of the bravest to go out, and defy the *Spaniards* body to body. There came forth, among the rest, a brave youth, call'd *Curio man*, who taking a long career, would throw his lance with that dexterity, that he wounded many of the *Spaniards*: he did this seven times, and at the eighth, *Villagran*, being vex'd at his importunate boldness, commanded a famous foldier, call'd *Diego Lano*, to chastise the *Indian's* insolence, which he did; and it was all this high courage and strength could perform. The *Spaniards* seeing themselves tir'd, and that all the movement of their horse signified little, and that the *Indians* were taking the passes behind them, began to use their small shot, which at first made a great slaughter among the *Indians*. *Lautaro*, to remedy this inconvenience, commanded *Leucaton*, one of his captains, to attack the *Spaniards* on the flank, and not to stop till he came up close with their musqueteers, that by this means mingling with them, they might avoid their small shot, which in that case could not be of any use to the *Spaniards*, without wounding their own men too. This he observ'd, and they ever since have practis'd the same with good success; and without this boldness, in which they always lose some men, they would be much inferior to the *Spaniards*, they having no fire-arms to use in the like manner: they shew

shew in this their invincible courage, and undisturb'd bravery, by which they make to themselves a defence of their own enemies; for being once mingled with them, they cannot offend them, without destroying at the same time their own people.

The fight on both sides was bravely maintain'd, *Lautaro* relieving and encouraging his men, as *Villagran* did his, both of them doing the parts both of general and soldier, and exposing themselves to the greatest danger. He that signaliz'd his valour most on our side, was the famous captain *Pedro Olmos de Aquillera*, killing with his own hand four of the chiefs of the *Indians*. Our army was encourag'd with his valour, which he inherited from that noble family so spread in *Andaluzia*: he was seconded by the *Bernales Pantoias*, *Alvarados*, and many others, who perform'd wonders in this battle, which was long contested, very bloody, and in suspense to the last. The enemy was much superior in strength to our forces, and therefore the victory began to incline to their side; for though *Villagran* the general, and some others, would rather have chose to die there with honour, than turn their backs, yet the greatest part judging that there was no honour lost in a vigorous retreat, and that it would be rashness to persist in so desperate a case, they began to retire, fighting and defending themselves; but the enemy, elevated with this success, followed close, and having knock'd *Villagran* off his horse, they had made an end

of him, if he had not valiantly defended himself till thirteen of his men came to his relief. OVALLE:
1646.

These famous commanders did not obtain less glory in this retreat, than if they had gain'd a victory; for the enemy following them for six leagues together, being a hundred to one, and having seiz'd upon most of the passes, and the numbers still increasing, yet the *Spaniards* made a noble defence, and kill'd many of them. Those who escap'd from this engagement, came with the sad news of the ill success to the city of the *Conception*, which set all the inhabitants in an uproar, mingled with lamentations and cries, every one being in some measure concern'd in this calamity; for between *Spaniards* and friendly *Indians*, there died in this engagement two thousand five hundred. One would have thought the day of judgment had been come, to see the confusion that was in the city upon this news; one laments the death of his father, another of her husband; some cry for their sons, some for their brothers; the women wring their hands, pull off their hair, fill the air with lamentable cries; the children cling to their parents, asking for their lost fathers, which is more grievous to them than daggers. In the midst of these horrors, night came on, in which no one could shut their eyes, for the memory of their misfortunes keep the soul attentive, without any consolation. *The Spaniards beaten a second time.*

C H A P. XVII.

Lautaro sacks the City of the Conception, and Caupolican besieges the City of the Imperial, which is defended by the Queen of Heaven.

Misfortunes seldom come alone; and so it happened to this afflicted city, which, instead of receiving comfort from the approaching day, no sooner did it appear, when the noise of drums and trumpets gave a warm alarm of the enemies being at hand. Here the confusion increas'd; for now the concern was not for the loss of others, but for every one's own safety, the danger threatening them so immediately: there was nothing but disorder, no counsel nor resolution being to be found in the wisest: they could not defend themselves, because they were so over-powered in numbers by the enemy; and the retreat, though necessary, was difficult, because of the approach of the *Indians*. In this hard conflict, at last the resolution that prevail'd, was to abandon the city, without pretending to save any thing but their lives. They

leave the city then, and all the gold they had got together in such quantities. They go out in long files, the mothers helping their little children along: the way that they undertook, was to the city of *St. Fago*, a long one, in which many rivers were to be cross'd, and hard passes to be gone thorough: this labour was accompanied with the perpetual fright of the enemies pursuing them. Who can relate the hardships of hunger and other sufferings, through so long a tract of mountains, desarts, and uninhabited countries? How the women, the children, the old men, could bear this fatigue, we must leave to imagination to represent the true idea of these misfortunes! Let us therefore return to the *Indians*. The *Spaniards* had hardly made an end of abandoning the city, when the *Indians* enter'd into it; and not being able *They fly from the Conception.*

Lautaro enters and sacks the city.

1646. OVALLE. to execute their rage upon the inhabitants, they did it upon the houses, to which they set fire, and consum'd them to the very foundation, killing even the very animals which the *Spaniards* left behind them. Thus was lost the city most abounding in gold, and situated in the most populous part of the *Indian* country; for 'tis said there were not less than a hundred thousand *Indians*, with their families, who were all employed in gathering gold for the *Spaniards*, whom they enriched to that degree, that *Pedro de Valdivia*, if he had liv'd, would have had fifty thousand Crowns of gold a-year, and others twenty and thirty thousand.

This burning of the city being over, news was brought, that *Caupolican* had called a great assembly in *Arauco*, which made *Lautaro* return with his people to be at it. When the two generals of the *Araucanos* met, they greeted one another for the victories obtained over the *Spaniards*; and in sign of triumph, one hundred and thirty caciques, all dressed themselves in the *spanish* dress with the cloaths they took from the *Spaniards* killed in the battle. The general had *Valdivia's* cloaths, which were, as 'tis reported of green velvet, laced with gold lace, a back and breast of well tempered steel, and a helmet with a great emerald for crest. All having feated themselves in order by the general's command, he proposed to them the design of conquering back all that was gained from them by the *Spaniards*, who now were so dejected with their loss. They all agreed to his desire, every one delivering his opinion with great pride and arrogance. 'Tis said, that the old and prudent *Colocolo*, hearing them deliver their opinions with so much insolence and presumption, that it looked as if all the world was too weak to resist their valour, humbled them a little, by putting them in mind, That if they had obtained two victories, the *Spaniards* had gained many more over them, and had made them serve as slaves; therefore that they ought to behave themselves with moderation and temper, that they might expect success from their arms; and added, that it was his opinion, that they should divide their forces into three parts, and at the same time assault the city of the *Imperial*.

Pucbecalco, a famous conjuring *Cacique*,

following the same thought of humbling the intolerable haughtiness of the assembly, told them, That they might give over their presumption; for he was to acquaint them, that having consulted his oracles, they had answered him, *That though at present they were so victorious, yet at last they were to live under the Spanish yoke in perpetual slavery.* The *Cacique Tucapel* could not bear to hear this; and rising from his place, with his mace of arms gave him such a blow as took away his life. The general was highly offended at this insolence, and being resolved to chastize the author of it, the whole assembly was disturbed; and though they all endeavoured to lay hold on the murderer, yet he defended himself so well with his mace of arms, that it was not easy to seize him: but *Lautaro*, who had great power with the general, made up the whole business; and the result of the council being to besiege the city of the *Imperial*, they immediately put it in execution.

Their army took its posts three leagues *Caupolican* from the *Imperial*; which city, though it ^{designs to} had a good garrison of brave men, was not ^{besiege the} nevertheless prepared nor provided for ^{Imperial,} a ^{but is mi-} siege with ammunition and victuals, because ^{prevented.} *raculously* the enemies would have taken it, if any had been sent to it; but the queen of heaven delivered them from this great danger. The enemies drawing near the city, there arose on a sudden a mighty storm of hail and rain, with black clouds; and their *Epunamon* appeared to them in form of a terrible dragon, casting out fire at his mouth, and his tail curled up, bidding them make haste, for the city was theirs, being unprovided; and that they should enter it, and put to the sword all the christians; and so disappeared. But as they were pursuing their design, animated by this oracle, on a sudden the heavens cleared up, and a very beautiful woman appeared upon a bright cloud, and shewing them a charming, but majestic and severe countenance, took from them the pride and haughtiness inspired into them by their first vision, commanding them to return to their own homes, for god was resolved to favour the christians; and they obey'd immediately. To which the author who reports this story adds, That the whole camp saw the apparition, which was on the 23d of *April*, and that all agree in this.

C H A P. XVIII.

The City of the Conception is rebuilt ; and Lautaro having taken it a second Time, marches to take the City of St. Jago, where he dies.

The Conception rebuilt.

THE Spaniards being in safety, began to think of returning to the *Conception*, and rebuilding of it. To this end they raised men at *St. Jago*, and with great difficulty compassed their intention, making a good fortress within the city for their better security. The *Indians* of the neighbourhood, though they were in their hearts as averse as any others to be commanded by strangers, and to let them build cities in their territories, disssembled nevertheless at present, but in due time gave advice to *Arauco*, desiring help to drive out these newcomers, or make an end of them at once.

Lautaro takes it a second time.

Lautaro came to them presently with a good army ; and some companies of *Spaniards*, which went out to encounter him, were forced to retire to the fort they made, in which they defended themselves as long as they were able to withstand the force of *Lautaro* ; but at last being overpowered, they were forced to retire a second time to the city of *St. Jago*. Many *Spaniards* were lost, and *Lautaro* followed the pursuit, in which many brave actions were performed on both sides : among the rest, a famous *Indian* captain, called *Rengo*, following three *Spanish* captains, who were retiring, called them cowards, and said a hundred insolent things to them, which moved one of them to attack him at the passage of a river ; but he secured himself by choosing a strong post ; so the *Spaniards* went on to *St. Jago*, and *Lautaro* retreated to *Arauco*, where great rejoicings were made for this new victory.

Lautaro marches to besiege St. Jago.

The *Indians* renewed their meetings ; and being much elevated with their success, they came to a resolution of not troubling themselves with the lesser cities, which they reckoned as their own ; but to attack the capital of *St. Jago*. *Lautaro* offered to undertake this enterprize ; and choosing the most warlike among them, he marched with a powerful army. He passed the rivers *Biabio*, *Itata*, *Maule*, and *Mataquito* ; near this last he raised a fort to secure his retreat, if need were, he being engaged far from his own territories.

When the news of this resolution came to *St. Jago*, many looked upon it as a fable, not being capable of imagining, that the *Indians* had boldness enough to march so far to attack them ; but those who were

come back from the city of the *Conception* undeceived them, as knowing by experience *Lautaro's* courage ; they therefore fortified the place, and provided it : they also sent out parties to engage the enemies, if the occasion offered ; but *Lautaro* forced them to return in haste to carry the news, and yet some remained behind too.

The Spaniards march to meet him.

Francisco de Villagran, the lieutenant-general was sick at this time ; and so sent his cousin *Pedro de Villagran*, with all the force he could make, to meet *Lautaro* ; they lodged within half an hour from the fort which the *Indians* had raised upon the *Rio Claro* ; the next day they entered the fort without any resistance ; for *Lautaro* had cunningly ordered his men to seem to fly, that he might catch the *Spaniards* in the fort ; and so, when he saw his time, he gave the signal, and his men fell on the *Spaniards* like lions, who had enough to do to make their retreat, and escape from their hands. The *Indians* followed them for a league, doing them much mischief, though they defended themselves with great valour. *Lautaro* feigned a second time to fly ; and our people being reinforced, engaged him afresh. They attacked his fort, and gave three assaults to it ; where they were received with showers of arrows, darts, and stones, and at last forced to retire to a valley ; whence they design'd to return, and try their fortune again : but *Lautaro* saved them the trouble ; for resolving to make an end of them all at once, and in order to it feigning that he wanted provisions, he sent to our camp to demand some. His project was to let in a river upon the *Spaniard's* camp, which he could do conveniently, because it was already in dams and canals ; and so having made a marsh of the ground where they lodged, so as they should not be able to stir, seize all the passes behind them. But *Villagran* having discovered this stratagem, raised his camp, and retired to *St. Jago*, to the great disappointment of the enemy.

Yet this did not make *Lautaro* give over his design ; for considering that he could not attack *St. Jago*, which was well provided with men and ammunition, except he had a greater strength, he raised a fort in a valley to cover himself, while his succours should arrive, and enable him to attack *St. Jago*. Those of the city were making,

OVALLE with great care, preparations for their defence; and had sent for succours to all the other cities. Their general *Villagran* had sent out upon this design; and making as if he was going to *Arauco*, had on a sudden marched to the *Imperial*, from whence he brought many good men away with him; and while *Lautaro* was raising his fort, *Villagran*, guided by an *Indian*, came swiftly and silently upon *Lautaro*, and attacked his fort. In the first assault that was given, *Lautaro* himself fell, wounded by an arrow, which struck him in the heart: thus ended that valiant captain of the *Araucanos*. His soldiers were not at all discouraged with

Lautaro
killed by an
arrow.

this misfortune of their general; but rather enraged with such a loss, and a desire to revenge his death, they fell like lions upon the *Spaniards*, taking no quarter at their hands. There were on both sides great actions performed; but the resolution of the *Indians* was the noblest in the world, preferring their glory to their lives, which they husbanded so little, that though they were broke, and but few left in a fighting condition, yet they ran upon the *Spaniards* lances, and with their hands pulled them into their bodies, to come close to their enemy, and revenge their death with his, or at least die in the attempt.

C H A P. XIX.

Don Garcia Hurtado de Mendoza comes to the Government of Chile; what happened at his Arrival, and in the Engagement he had with the Araucanos.

AFTER the death of *Pedro de Valdivia*, there was application made from *Chile* to the viceroy of *Peru*, who is to provide a governor till the king can send one, that is, both president and governor independent of *Peru*. The viceroy at this time was *Don Antonio Hurtado de Mendoza*, marquis of *Canete*, who governed with great zeal, and a prudent severity, making exemplary punishments where they were necessary, by which he secured the country. He had then with him his son *Don Garcia Hurtado de Mendoza*, who afterwards succeeded him in his viceroyship, with as much applause and esteem of the world. The ambassadors from *Chile* desired him of his excellency the father for their governor, which he granted. King *Philip* the second had appointed the *Adelantado Hyeronimo de Alderete*, to succeed the governor *Pedro de Valdivia*, whose death was known at court; but the news came likewise that *Alderete* was dead in the island of *Taboga* near *Panama*. The viceroy's son having raised a good body of horse, sent some of them by land with the horses, and he embarked with the rest; and after a hard storm, in which they had like to have been all lost, he arrived in the bay of the city of the *Conception*, and landed upon the island of *Quiriquina*, to inform himself from thence of the state of the country. The people of the island, who were fierce and warlike, took arms when they saw the ships draw near the harbour, and pretended to hinder the *Spaniards* from landing; but having no fire-arms, as soon as the cannon of the ships began to fire, they gave way. As soon as the governor landed he published the design of his coming, that the *Indians* might know it; which was, to

Don Garcia, the new
governor of
Chile, lands
at *Quiri-*
quina.

save their souls by the predication of the gospel, and reconcile them to god by the means of baptism; and to confer that sacrament, he had with him religious men of the famous orders of *St. Francis* and the *Mercede*: that if they would submit to that, he would treat with them in the name of the emperor *Charles V*. This declaration reached the ears of the *Araucanos*; and there assembled at *Arauco* sixteen caciques, and many other captains, to treat about what was best for them to do in this case; and though many youthful and arrogant speeches were made, according to their usual haughtiness, which made them despise all good counsel and peace, yet the old and prudent *Colocolo* restrained their pride with prudent reasons, and persuaded them to treat with the *Spaniards*, since they were by them invited to do it. *It cannot hurt us*, said he, *to hear them: we shall have our forces as strong still to maintain our right, if they demand unjust things.* This opinion was followed by the most prudent among them; and they sent for their ambassador the *Cacique Milalan*, a man of great rhetoric and eloquence among them, giving him order to treat with the *Spaniards*, and observe well their strength; and that he should shew inclinations to peace, to draw them to land on the continent, and forsake the island, hoping that the desire of gold would tempt them to go further into the country. *Milalan* came to the governor's tent; and making a small but civil bow, saluted him, and the other *Spaniards* that were with him; then with chearful countenance he delivered his message. He said, *That his countrymen admitted the terms of peace that were proposed, and should observe those of friendship; not out*

The *Indians*
send an am-
bassador to
treat with
him.

of

of any terror or apprehension caused in them by the arrival of these new forces; for no power was great enough to terrify them, having sufficiently experienced their strength in the success they had hitherto had; but that which mov'd them was the compassion they had for so many innocent people, so many women and children, who, upon occasion of this war, remain'd widows and orphans: that upon fair terms they would own the king of Spain, upon condition that he did not concern himself any ways with their liberty or rights; that if they had any thought of acting by violence, and making them slaves, they would sooner eat their own children, and kill themselves, than suffer it.

The governor answered him with all assurance of a good treatment as they expected; and having made him some presents, dispatch'd him back to give an account of his embassy: but this was not sufficient security for either side; so they remain'd upon their guard. The Indians observing the caution of the Spaniards, to give them more security, feign'd to dismiss their forces, but secretly gave them orders to stand upon their guard, and not lay down their arms, but be ready upon any occasion that might happen: yet the Spaniards for all this did not think fit to land upon the continent, but stay'd two months upon the island where they first landed, till the winter was entirely over. About the spring, they set on shore about one hundred and thirty men of the bravest among them, to raise a fort, as they did, upon the top of a hill which overlooks the city of *Penco*, (otherwise call'd the city of the *Conception*.) Under the protection of this fortress, the rest of the Spaniards went out of the island, hoping, that in a little time, their horses, which were coming by land, would arrive, having some news of them: in the mean time, they cut wood and fascines to fortify their camp, the governor and the commanders shewing an example to the rest in the labour of retrenching themselves, and cutting of wood, as if they had never done any thing else all their life-time. They brought it to perfection in a little time, and planted upon it eight field-pieces, with all other necessary provisions for their defence.

He lands on the continent, and raises a fort.

The Indians attack it.

The *Araucanos*, who were watching all their motions, no sooner saw them busy in their fort, but, without expecting any further proof of their intentions, which they took to be for war, call'd immediately an assembly, and with all their strength came like lions, with a resolution to demolish the new fort. They took up their post at *Talcaguano*, about two miles from the Spaniards fort, and about break of day they gave an

alarm, and having first challeng'd out many Spaniards to single combat, they at last fell on in a body, with no more fear of the cannon-bullets than if they had been of cotton or wooll, knowing, that though they receiv'd at first some damage, it could last no longer than till the battalions were engag'd. With this resolution they fell on like lions, and some of them got over the fortifications; amongst whom was *Tucapel*, who did wonderful actions. Neither were the Spaniards unprepar'd for them, doing extraordinary things, which it were too long to describe in particular, though the actions were such as very well deserve it.

OVALLE. 1646.

The Spaniards who were in the island and aboard the ships, hearing of the danger of their companions, came to their assistance, and by the help of God, who aided them, join'd their friends; and then thus united they began to prevail over the *Araucanos*; who, finding themselves inferior, and having lost many of their bravest men, began to retreat all but *Tucapel*, who having stay'd last, and being sorely wounded, yet made his escape from the Spaniards, whom he left full of admiration of his valour and resolution.

And are beaten off.

About this time the horses which came from *St. Jago* arriv'd, and with them a troop of good horsemen from the *Imperial*. The enemies muster'd all their forces, and the Spaniards went to seek them out in the valley of *Arauco*, where they had another very bloody engagement: the *Araucanos* fled, or rather retir'd; and the Spaniards having taken one prisoner call'd *Gualbarino*, they, in order to terrify the rest, cut off both his hands; but the *Araucanos* were so far from being terrified by it, that this enraged them the more; for *Gualbarino* himself being return'd to his countrymen, went up and down, begging them to revenge the injury done to him, which they all looked upon as their own. *Caupolican* their general sent to challenge the governor *Don Garcia* with all his strength, telling him, that he would stay for him in his camp, which he moved near the Spanish camp, which was at *Millarapue*. He came over night; and the next day presented him battle; which was as well disputed as the rest, both sides fighting with extreme valour. The Indians pressed the Spaniards so hard, that victory had declared for them, had not a Spanish battalion, in which alone remain'd all the Spaniards hopes, charg'd so desperately among the Indians, that they were forced to retire, and leave the field to the Spaniards; but their retreat was with great honour and reputation. 'Tis related, that in this engagement some of the neighbouring

The new governor reinforced.

He gives Caupolican battle, and beats him.

1646. *OVALLE*. *bouring Indians* were made prisoners; and that though they were put to a most exquisite torture; to force them to reveal something that the *Spaniards* wanted to know, yet they remain'd constant and true to their country, as if they had been insensible of pain. The *Spaniards* had here a considerable advantage; for, besides many dead enemies whom they left upon the spot, they took twelve prisoners of the chief among the *Indians*, whom they hang'd upon so many trees for an example to the rest; and among them that same *Gualbarino*; who not only shewed in dying an intrepid mind, but encouraged the others: and amongst the rest, a *Cacique*, who began to fear and beg his life; to whom *Gualbarino* spoke before all with so much haughtiness, taxing his base cowardice as if he had been the conqueror, and not the conquered, which struck the *Spaniards* with such admiration; that they were beside themselves.

He raises another fort.

From this place our camp marched to the valley where *Valdivia* was lost. Here the *Spaniards* raised a good fort; from whence they made their excursions upon the enemy, endeavouring to advance their conquests, but not without danger of being

often cut off; particularly the hazard they ran at a narrow pass, caus'd by the mountains on the way to *Puren*, where they were attack'd by the *Indians*, and very hard set by them, whom they might have destroy'd if they had not fallen to plunder the baggage: for a company of *Spaniards* observing this miscarriage, seiz'd on a spot on the top of an hill, from whence with their small shot they so gall'd the *Indians* below, that they fled in confusion to avoid such a tempest, leaving the *Spaniards* masters of the field, but much weakened: having been sorely handled in this rencounter, they retir'd to their camp, where they were receiv'd with great demonstration of joy. After this, leaving a good garrison in the fort, well provided for two months, the governor went to visit the other cities, to strengthen them, and provide them with necessaries against all attacks, which they had reason to fear; for *Caupolican*, enraged that in three months he had lost three victories, had call'd a general assembly; where it was resolv'd never to give over, but either die or conquer, that they might drive out the *Spaniards*, and restore their country to its liberty.

And again beats the Indians.

CHAP. XX.

More Events of War: The Death and Conversion of Caupolican.

CAUPLICAN followed his designs; but fortune seem'd to be weary of assisting him; for in most rencounters he came off either worsted, or entirely defeated, and the victory snatch'd out of his hands when he thought himself sure of it: this made his people begin to grow weary of his command; and the vulgar began to censure his conduct as too remiss, and that the desire of preserving his power, and being general, made him neglect opportunities of putting an end to the war.

Caupolican being inform'd of these suspicions of his own people, call'd a new assembly, in which he propos'd methods of carrying on the war, so as they might obtain an entire liberty. This was unanimously agreed to, with a firm resolution of not giving it over till they either conquer'd or died. This resolution coming to the knowledge of the governor *Don Garcia Hurtado de Mendoza*, who was gone, as we have seen, to the city of the *Imperial*, to fortify it, he dispatch'd to the fort advice of what pass'd, and sent them a competent relief.

Amongst other designs pitch'd upon by *Caupolican*, the first was to surprize the *Spaniards* in their fortrefs by a stratagem

before they were aware of him, and so master the place. The other captains of repute, *Rengo*, *Orompello*, and *Tucapel*, who were used to lead always the vanguard, did not approve of his project; and so let him go by himself with his own forces, they scorning, as they said, to obtain a victory by fraud or surprize. *Caupolican* set out then by himself; and being come within three leagues of the *spanish* fortrefs, he sent out his spies to observe their disposition, and how they might be easiest circumvented. He chose out for this purpose one of his best captains, whose name was *Pran*, a cunning sagacious man, and prudent, with a great deal of ready wit. This captain disguis'd himself; and putting on the habit of an ordinary *Indian*, he went alone, and without arms, as a private person, to the fortrefs of the *Spaniards*. He entered the fort without suspicion, or being known by the other friendly *Indians*, with whom he soon grew acquainted; and walking up and down, he observed our camp and forces, and took particular notice of the time of day that our men us'd to be least upon their guard, which was generally at noon, when they went to sleep, to repair their strength

strength, which was wasted by their night-watches.

Pran, an Indian spy, forms a design against the Spaniards.

There was in the *Spanish* fort, a young *Indian*, (not like *Lautaro*, in whom the love of his country prevail'd over his duty to his master,) but of another temper; his name was *Andres*, servant to a *Spanish* gentleman, and very much inclin'd to all the *Spanish* nation. *Pran* had made a great friendship with this young man; and one day, as they were going together in the fields to seek out some provision, as they us'd to do, talking from one thing to another, *Pran* discover'd himself entirely to his friend *Andres*; persuading him to help on the design he came about, since upon its success the liberty of the whole nation depended. *Andres*, who was not less sagacious and prudent than *Pran*, promis'd him all he could desire; but dissembled all the while. This being settled, they agreed, that each of them should return home to his camp, and that the next day *Andres* should come to a certain post they agreed on, and there *Pran* should meet him, and carry him to *Caupolican's* quarters, where he might settle all matters with him. *Pran* went back to the *Indians* camp, overjoyed that he had succeeded so well, as he thought: he gave a particular account of all the business to *Caupolican*, while *Andres* did the same to captain *Reynoso*, who commanded in the *Spanish* fort. If God Almighty had not by this way deliver'd the *Spaniards* out of this eminent danger, they must have perish'd; for naturally *Andres* ought to have been of the side of his own countrymen.

But it turns to the ruin of the Indians.

According to what had been agreed between them, *Andres* came the next day to the assignation, where he met his friend *Pran*; and they went together to *Caupolican*, who receiv'd him with all demonstrations of joy and confidence, shewing him his camp, and all his army; the result was, that he should assault the *Spaniards* the next day about noon. *Andres* went back to the *Spaniards*, to inform them of all that pass'd, and by that captain *Reynoso* knew how to dispose every thing to receive the attack. *Caupolican* came at the time appointed with all his *Indians*, the greatest part of which were suffer'd to enter, the *Spaniards* making as if they were asleep; but on a sudden, upon a sign given, they rose up like lions, and making a furious discharge on those enter'd, the horse fallied to engage those who had remain'd without, of whom they made a great slaughter. The surprize of the *Indians* was so great, that few of them could make their escape; but *Caupolican*, with ten more, sav'd himself by by-paths, though he was hotly pursued; the *Indians* that were

VOL. III.

overtaken, still denying they knew any thing of him, and neither threats nor gifts could oblige them to reveal what they might know more.

OVALLE. 1646.

But it being very hard there should not be one traytor among many loyal men, the *Spaniards* lite at last upon one of his soldiers, who was discontented that he had not been advanc'd according to his pretensions, who betrayed to them where he was: this man guided them by a secret path to a place where they could not be discover'd, and from thence shewed them a very thick wood, about nine miles from *Ongolmo*, where in a thicket by a river side, over a precipice, this brave man had hid himself till he could get a new army, and rally his men.

Caupolican can be trayed by one of his own men.

The *Spaniards* came upon him on a sudden, and surpriz'd him with the few that were with him; and though he did all that was in his power to defend himself, yet they master'd him. His wife seeing him a prisoner, and his hands tied behind him, call'd him coward, and us'd all the opprobrious language to him that was possible.

He is taken by the Spaniards.

Caupolican was deservedly among the *Indians* the most valued of their generals; and accordingly, in an assembly of sixteen *Caciques*, all sovereign lords, who met to raise an army against the *Spaniards*, he had the chief command given him. This was the man who, with fourscore bold fellows, surpriz'd the castle of *Arauco*, and overcame the *Spaniards* in a bloody encounter without the city walls: this was he who durst expect the general *Valdivia* in open field, and routed him and his whole army, so as there was not one *Spaniard* left alive: this was he who destroyed *Puren*, and sack'd *Penco*, not leaving one stone upon another in it, the *Spaniards* having been all frighted away by the terror of his name: this, in fine, was the man who manag'd all the war with such success, by his military skill and valour, that his authority was every where respected. This great man was now, by the means of a traitor, deliver'd up to his most cruel enemies. In this calamity he shewed no baseness; for though he begged his life, it was in a grave way, promising in return to cause all the country to submit to the king of *Spain*, and to give way to introduce the christian religion.

His character.

“ Consider, said he, to captain *Reynoso*,
 “ that what I promise, I am able to perform, by the great veneration that all my people have for me; and if thou dost not accept of this proffer, thou wilt do nothing; since for one head taken away, there will rise up a hundred *Caupolicans* to revenge my death, that the true one

His speech.

N n

“ will

OVALLE. " will not be miss'd. I desire not to be
 1646. " fet at liberty, but to remain thy priso-
 " ner till I perform my promise."

All these reasons were of no use to *Cau-*
polican, for he was publickly sentenced to
 be empaled alive, and shot to death with
 arrows, for a terror to the rest of the *In-*
dians; though as time has since shewed,
 this had no other effect, than to light the
 fire of war more and more, and make the

He is sen-
 tenced,

wound almost incurable. He heard this
 hard sentence without any alteration in his
 countenance; but he desir'd with great con-
 cern to be baptiz'd. The priests are sent *Baptiz'd,*
 for, and after a short instruction he receives
 the holy ablution, and the character of a
 christian. After this the sentence was exe-
 cuted upon him, which he endur'd with *And exe-*
 great constancy. *cuted.*

The Conclusion:

THOUGH father *Ovalle* has conti-
 nued in the remainder of his treatise
 to give an account of the various events of
 the war with the *Araucanos*, in which nar-
 rative he runs through the commands and
 actions of all the governors of *Chile*, to the
 peace made with that nation; yet it being
 by him more a piece of courtship to his
 nation, and to those families, than an in-
 formation instructive to a foreign reader, it
 has been thought proper to take the death

of that great general *Caupolican* for the first
 natural period of that war. In the course
 of the remaining narrative, there are so ma-
 ny superstitious notions inculcated, so ma-
 ny improbable miracles given for the founda-
 tion of great enterprizes, and such a
 monkish spirit runs through the work, that
 here in *England* it would rather prejudice
 than recommend the impression, and is
 therefore omitted.

Sir William Monson's

Naval T R A C T S.

In Six BOOKS.

CONTAINING,

- I. *A Yearly Account of the English and Spanish Fleets during the War in Queen Elizabeth's Time ; with Remarks on the Actions on both Sides.*
 - II. *Actions of the English under King James I. and Discourses upon that Subject.*
 - III. *The Office of the Lord High Admiral of England, and of all the Ministers and Officers under him ; with other Particulars to that Purpose.*
 - IV. *Discoveries and Enterprizes of the Spaniards and Portuguese ; and several other remarkable Passages and Observations.*
 - V. *Divers Projects and Stratagems tender'd for the Good of the Kingdom.*
 - VI. *Treats of Fishing to be set up on the Coast of England, Scotland, and Ireland, with the Benefit that will accrue by it to all his Majesty's three Kingdoms ; with many other Things concerning Fish, Fishing, and Matters of that Nature.*
-

The Whole from the Original Manuscript.

T H E

P R E F A C E.

HAVING had the perusal of these naval traëts of Sir William Monson, as well to compare two copies together, and supply the defects of the one out of the other, as to correct what might be found in them amiss, either through the negligence of transcribers, or the author's want of time to revise his work, yet without presuming to alter Sir William's sense or design in the least, but only to make the whole fit for the press, I thought it necessary to give the reader some little information concerning the work before he enters upon it, but with that brevity which I have always affected, when any thing has appear'd abroad under my own name, and which I am much more inclin'd to, being to speak of what must give praise or dispraise to another, and not to me, who am no way concern'd in it.

Some nice persons will, perhaps, at the first reading of this work, find fault with the language, and wonder that Sir William, who was a gentleman by birth, and so great a man as an admiral, should answer their expectation so little in that particular. I cannot, I must confess, vindicate the language; but it was not my province to alter it: and as for the author, it must be consider'd, that though born a gentleman, he spent most of his time at sea, a very unfit school for a man to improve his language. For the same reason we may suppose he was not much a scholar, but of excellent natural parts, and a great master of the art he profess'd, as will sufficiently appear by this work, and is enough to recommend it. Besides, we must not expect that the days of queen Elizabeth could form a man to the language of our time; and though Sir William liv'd till the civil war in the reign of king Charles I. it is to be observ'd, that he was then in his declining age, when for the most part men rather mind what they say, than how they say it.

The work therefore, though perhaps not so pleasing in stile as some might desire, is correct, and clear from abundance of oversights, which, as I said before, had either crept in through the fault of transcribers, or for want of the author's due revising it. Nor was it proper to alter the stile, but to allow the author to deliver himself in his own way; for should discerning persons find Sir William Monson speak the language of this time precisely, having never before appear'd in print, they might be rather apt to believe these traëts supposititious, than his own lawful offspring.

There is another thing, which perhaps will seem unpardonable, and not without just cause, if judges be rigorous; and is, that there are some mistakes, or to speak plainly, falsehoods to be found in these traëts. What I can say to this, is, that they are most, if not all, in things then not better known; as for instance, the affairs of the East and West-Indies; concerning which, many extravagant stories were formerly told, which time and experience have disprov'd. Besides, we must not be too rash in supposing every thing false, which does not seem probable to us; for there might be many accidents or occurrences in those days, which might be really true and undoubted, though to us they seem preposterous and strange. And it is farther to be observ'd, that these errors are not in things, whereon the credit of the subject-matter depends, but only in such as fall in by-the-by, and wherein Sir William was either impos'd upon by authors then in credit, or by living persons, whose reputation might be untainted.

I will not pretend to give a character of the author, or more of his work, which every reader has as much right to judge of as myself, and perhaps is better able. What little I have said, as to those two points above, is not to apologize for the work, or to prepossess the reader, but only to prevent his being too hasty in condemning, because some men are naturally so precipitate, that they are apt to take a prejudice to a book upon the first dislike; which they may afterwards, upon second thoughts, and more mature deliberation, find both useful and delightful. Nor is there any need to give an account what the work is, as I thought once to have done, because it would be a needless repetition of the contents, in which every man may at one view see the heads of all these traëts; besides that every book has a short argument, yet sufficient to shew what it treats of.

Sir

Sir WILLIAM MONSON

T O

His ELDEST SON.

Dear Son,

THE custom of dedicating books is antient; and they have been usually dedicated either to great persons, for protection or reward; or to acquaintance, out of friendship and affection; or to children, out of natural love, and for their instruction. And to this end it is I commend the reading of the following discourse to you, that so beholding the eighteen years war by sea, which for want of years you could not then remember, and comparing them with the eighteen years of peace, in which you have lived, you may consider three things: First, That after so many pains and perils, God has lent life to your father to further your education. Secondly, What proportion his recompence and rewards have had to his services. Lastly, What just cause you have to abandon the thoughts of such dangerous and uncertain courses; and that you may follow the ensuing precepts, which I recommend to your frequent perusal.

In the first place, I will put you in mind of the small fortune I shall leave, that you may rate your expences accordingly; and yet as little as it is, 'tis great to me, in respect I attained to it by my own endeavours and dangers; and therefore no body can challenge interest in it but myself, though your carriage may claim the best title to it.

Beware you presume not so much upon it, as to grow disobedient to your parents; for what you can pretend to, is but the privilege of two years of age above your younger brother; and in such cases fathers are like judges, that can and will distinguish of offences and deserts according to truth, and will reward and punish as they shall see cause.

And because you shall know it is no rare or new thing for a man to dispose of his own, I will lay before you a precedent of your own house, that so often as you think of it, you may remember it with fear, and prevent it with care.

Your grandfather's great grandfather was a knight by title, and *John* by name, which name we desire to retain to our eldest sons: God blessed him with many earthly benefits, as wealth, children, and reputation: his eldest son was called *John*, after his father, and his second *William*, like to yourself and brother; but upon what displeasure I know

not, (though we must judge the son gave the occasion,) his father left him the least part of his fortune, yet sufficient to equal the best gentleman of his shire, and particularly the ancient house call'd after his name. His other son *William* he invested with what your uncle now enjoys. Both the sons whilst they lived carried the port and estimation of their father's children, though afterwards it fell out that the son of *John*, and nephew to *William*, became disobedient, negligent, and prodigal, and spent all his patrimony; so that in conclusion he and his son extinguished their house, and there now remains no memory of them. As for the second line and race, of whom your uncle and I descended, we live as you see, though our estates be not great, and of the two mine much the least; which notwithstanding is the greater to me, in respect I achieved it with the peril and danger of my life; and you will make my satisfaction in the enjoyment of it the greater, if it be attended with that comfort I hope to receive from you.

The next thing I will handle shall be arms. Know that wars by land or sea are always accompanied with infinite dangers and disasters, and seldom rewarded according to merit: for one soldier that lives to enjoy that preferment which becomes his right by antiquity of service, ten thousand fall by the sword and other casualties: and if you compare that of a soldier with any other calling or profession, you will find much difference both in the reward and danger.

Though arms have been esteemed in all ages, and the more as there was greater occasion to use them, yet you shall find they have been always subject to jealousies and envy; jealousies from the state, if the general or other officer grow great and popular; subject to envy from inferiors, who through their perverse and ill dispositions, malign other mens merits.

The advancement of soldiers is commonly made by counsellors at home, whose eyes cannot witness the services perform'd abroad; but a man is advanced as he is befriended, which makes the soldier's preferment as uncertain as his life is casual.

Compare the condition and advancement of soldiers of our time but with the mean and mercenary lawyer, and you shall find so great a difference, that I had rather you should

should become apprentice to the one, than make profession of the other.

A captain that will seek to get the love of his soldiers, as his greatest praise and felicity, of all other vices must detest and abandon covetousness. He must live by spending, as the miser does by sparing; inasmuch as few of them can obtain by war, wherewith to maintain themselves in peace; and where wealth is wanting preferment fails.

Soldiers that live in peaceable islands, as in *England*, are undervalued, because we see not those dangers which make them necessary, as others do where wars are practised. And the good success in our wars has been such as makes us attribute our victories, not so much to valour as to chance.

I confess the base and ill behaviour of some soldiers has made them and their profession the less esteemed; for the name of a captain, which was ever wont to be honourable, is now become a word of reproach and disdain.

Soldiers may have reputation, but little credit; reputation enough to defend their honours, but little trust in commerce of the world: and not without cause; for their security is the worse, by how much the danger of death is the greater.

Learning is as much to be preferred before war, as the trade of a merchant before that of the factor. By learning you are made sensible of the difference betwixt men and other creatures, and will be able to judge between the good and the bad, and how to walk accordingly. By learning you attain to the knowledge of heavenly mysteries, and you may frame your life accordingly, as God shall give you grace. By learning you are made capable of preferment, if it concur with virtue and discretion; and the rather, because you are a gentleman by birth, and well ally'd; which I observe, next to money in this golden age, is the second step to preferment.

For one that is preferred by arms, there are twenty by learning; and indeed the soldier is but a servant to the learned; for after his many fought battles, and as many dangers of his life, he must yield account of his actions, and be judged, corrected, and advanced, as it shall please the other.

You may wonder to hear me extol learning so high above my own profession, considering the poor fortune I shall leave was achieved by arms: it is enough therefore to persuade you what I say is not conjectural, but approved: for if I did not find this difference, the natural affection of a father to a son would make me discover it to you, that you may follow that which is most probable and profitable.

Good son, love soldiers for your coun-

try's sake, who are the defenders of it; for my sake, who have made profession of it; but shun the practice of it as you will do brawls, quarrels, and suits, which bring with them perplexities and dangers.

There are many things to be shunned, as being perillous both to body and soul; as quarrels, and the occasions of them, which happen through the enormities and abuses of our age. Esteem valour as a special virtue; but shun quarrelling as a most detestable vice. Of two evils it were better to keep company with a coward than a quarreller; the one is commonly sociable and friendly; the other dangerous in his acquaintance, and offensive to standers-by. He is never free from peril, that is conversant with a quarrelsome person, either for offence given to himself, or to others, wherein he may be engaged.

A true valiant man will have enough to do to defend his own reputation, without engaging for others; nor are all valiant that will fight; therefore discretion makes a difference betwixt valour and desperation. Nothing can happen more unfortunate to a gentleman than to have a quarrel, and yet nothing so ordinary as to give offence: it draws with it many mischiefs both to body and soul: being slain he is in danger of damnation; and no less if he kill the other, without great repentance. He shall perpetually live in danger of revenge from the friends of the party killed, and fall into the mercy of the prince and law where he lives; but if for fear and baseness he he avoid and shun a quarrel, he is more odious living than he would be unhappy in dying.

Drinking is the foundation of other vices; it is the cause of quarrels, and then murders follow. It occasions swearing, whoredom, and many other vices depend upon it.

When you behold a drunkard, imagine you see a beast in the shape of a man. It is a humour that for the time pleases the party drunk, and so bereaves him of sense, that he thinks all he does delights the beholders; but the next day he buys his shame with repentance, and perhaps gives that offence in his drunkenness, that makes him hazard both life and reputation in a quarrel. No man will brag or boast so much of the word reputation as a drunkard, when indeed there is nothing more to a man's imputation than to be drunk.

A drunkard is in the condition of an excommunicated person, whose testimony betwixt party and party is of no validity. Avoid, good son, the company of a drunkard, and occasions of drinking, then shall you live free without fear, and enjoy your own without hazard.

Whoredom is an incident to drunkenness; though, on the contrary, all whoremasters are not drunkards. It is a sin not washed away without the vengeance of God to the third and fourth generation.

Besides the offence to God, it gives a disreputation to the party and his offspring: it occasions a breach betwixt man and wife; encourages the wife very often to follow the ill example of her husband, and then ensues dislike, divorce, disinheriting of children, suits in law, and consuming of estates.

The next and worst sin I would have you shun is swearing. I do not advise you like a puritan, that ties a man more to the observing of sundays, and from taking the name of God in vain, than to all the rest of the commandments; but I wish you to avoid it for the greatness of the sin itself; for the plague of God hangs over the house of the blasphemer. Swearing is odious to the hearers: it gives little credit to the words of him that uses it: it affords no pleasure as other sins do, nor yields any profit to the party: custom begets it, and custom must make one leave it.

For your exercises, let them be of two kinds; the one of mind, the other of body: that of the mind must consist of prayer, meditation, and your book. Let your prayers be twice a day, howsoever you dispose of yourself the rest of the time: prayers work a great effect in a contrite and penitent heart.

By this I do not seek to persuade you from such exercises and delights of body as are lawful and allowable in a gentleman; for such increase health and agility of body, make a man sociable in company, and draw good acquaintance: many times they bring a man into favour with a prince, and prove an occasion of preferment in his marriage: they are often a safeguard to a man's life, as is vaulting suddenly upon a horse to escape an enemy.

I will especially commend to you such pleasures as bring delight and content without charge; for others are fitter for greater men than one of your fortune to follow.

Hawking and hunting, if they be moderately used, are, like tobacco in some cases, wholesome for the body; but in the common use both laborious and loathsome: they alike bring one inconveniency, (as commonly vices do,) that they are not so easily left as entertained.

Tobacco is hot and hurtful to young bodies and stomachs, and augments the heat of the liver, which naturally you are subject to. It is offensive to company; especially the breath of him that takes it: it dries the brain, and many become fools with the continual use of it.

Let your apparel be handsome and decent, not curious nor costly. A wife man is more esteemed in his plain cloath, than gay cloathing. It is more commendable to be able to buy a rich suit than to wear one.

A wiseman esteems more of a man's virtues and valour than of his apparel; but seeing this age is fantastical and changeable, you must fashion yourself to it, but in so mean and moderate a manner, as to be rather praised for frugality, than derided for prodigality.

He that delights in curious cloaths is an imitator of a player, who measures his apparel by the part he acts. And as players appear upon the stage to be seen of the spectators, so do the gallants expose their bravery in open assemblies.

Whilst I live, and you do not marry, I shall temper this expence; but when I die, remember what I say: seek advancement rather by your carriage than gait; the reputation you gain by that will be lasting, when this will appear but like a flower fading.

Frame your course of life to the country and not to the court; and yet make not yourself such a stranger to great persons, as in assemblies they should ask others who you are. I confess the greatest and suddenest rising is by the court; yet the court is like a hopeful and forward spring that is taken with a sharp and cold frost, which nips and blasts a whole orchard, except two or three trees; for after that proportion commonly courtiers are prefer'd: and he that will thrive at court must make his dependency upon some great person, in whose ship he must imbarck all his hopes; and how unfortunate such great persons are oftentimes themselves, and how unthankful to their followers, we want not precedents.

He that settles his service upon one of them, shall fall into the disfavour of another; for a court is like an army, ever in war, striving by stratagems to circumvent and kick up one another's heels. You are not ignorant of the aptness of this comparison by what you know of me, whose case will serve you for a prospective-glass, wherein to behold your danger afar off, the better to prevent it: yet reverence lords, because they are noble, and one more than another, as he is more notable in virtue.

Be choice of your company; for as a man makes election of them he is censured. Man lives by reputation, and that failing he becomes a monster. Let your company consist of your own rank, rather better than worse; for hold it for a maxim, *The better gentleman, the more gentle in his behaviour.*

Beware they be not accused of crimes; for that may touch you in credit; and if you lose your reputation in the bud of your youth

youth, you shall scarce recover it in the whole course of your life: let them be civil in carriage; for commonly such men are sensible above all: let them be learned; for learning is a fountain, from whence springs another life: let them be temperate in diet and expence, so shall you learn to live in health, and increase in wealth.

Beware they be not cholerick in disposition, or arrogant in opinion: for if so, you will become a slave to their humours, and base by suffering. A cholerick man, of all others, is the worst companion; for he cannot temper his rage; but on any slight occasion, of a friend becomes an enemy. Value true friendship next to marriage, which nothing but death can dissolve; for the fickleness of friendship is often the ruin of one's fortune.

Beware of gaming, for it causes great vexation of mind: if you lose, it begets in you that humour, that out of hope of regaining your losses, you will endanger the loss of all. Do not presume too much of your skill in play, or making wagers, as if you were excellent above others, or have fortune at command; for she is like a whore, variable and inconstant; and when she disfavors you, it is with more loss at once than she recompences at twice.

Love your brother and sisters for their own sakes, as you are bound by nature, but especially for mine, whose they are. Remember you are all indifferent to me, but that God chose you from the rest to be a strength and stay to them: think you cannot honour your father more being dead, than in shewing affection to them he dearly loved; and nothing will more approve you to be mine, than love and kindness amongst yourselves. You owe somewhat more to me than that I am your father, in that I seek your advancement above theirs; of which obligation I will acquit you, conditionally you perform what you ought to them: for because man cannot himself live ever, he desires to live in his posterity; and if I had an hundred sons, my greatest hope must depend upon you, as you are my eldest; and seeing my care is of you above the rest, do not make my memory so unhappy, as to give the world occasion to say, I left an unnatural son. The only request I make, is, be kind and loving to them, who, I know, by their disposition, will give you no cause of offence. A discourtesy from you will be as sharp to them as a razor from another.

Be courteous and friendly to all; for men are esteem'd according to their carriage. There is an old proverb, *The courtesy of the mouth is of great value, and costs little.* A proud man is envy'd of his equals, hated by his inferiors, and scorn'd by his super-

riors; so that betwixt envy, hate, and scorn, he is friendless.

Many times a man is condemned to death out of presumption, especially when it concurs with an opinion of his former ill carriage: how much therefore does it concern a man in the times of his prosperity to lay up a stock of love and reputation?

There cannot be a greater honour than to gain a man's enemy by a courtesy: it far exceeds the kindness that is done to another, and doubly obliges him that receives it. Love is a thing desir'd by a king from his subjects, by a general from his soldiers, and by a master from his servants; he that has it is rich by it; it maintains peace in time of peace, and is a safe bulwark in time of war.

Do not buy this love with the ruin of your estate, as many do with prodigal expences, and then are requited with pity and derision. Let your expence be agreeable to the wearing of your cloaths, better or worse, according to company; or the journeying your horse; the less way you go to day, you may travel the farther to-morrow; but if you go every day a long and wearisome journey, your horse will fail, and you be forc'd to go a-foot. And so will it be in your expences: if you do not moderate them according to days and companies, your horse and you may travel faintly together.

If you are prodigal in any thing, let it be in hospitality, as most agreeable to the will of God; you shall feed the hungry, relieve the poor, and get the love of the rich. What you spend among your neighbours is not lost, but procures their love, and helps when you have need, and thereby you shall find friendship in the country as available as favour at court.

If you are called to any place of magistracy, do justice with pity, revenge not your self of your enemy under colour of authority; for that shews baseness, and will procure you hatred. In money matters favour your country, if it be not against the present profit of the king; for many times his name is used for the gain of other men.

Study the laws, not to make a mercenary practice of them, but only for your own use, the good of your neighbours, and the government of your country. Hold the laws in reverence next to the king: for that kingdom is well govern'd where the king is ruled by the laws, not the laws by the king.

Be not presumptuous in your command; yet seek to be obey'd as you desire to obey; for as you are above others, others are above you. Give your mind to accommodate controversies among your neighbours, and you shall gain their love, which will more avail you than the hate of the lawyers can hurt you.

Punish idleness and other vices, as well for that they are such as for example's sake. Gain love by doing justice, and hate doing wrong, though it were to your immediate profit.

If you marry after my death, choose a wife, as near as you can, suitable to your calling, years, and condition: for such marriages are made in heaven, though celebrated on earth.

If your estate were great, your choice might be the freer: but where the preferment of your sisters must depend upon your wife's portion, let not your fancy over-rule your necessity. It is an old saying, *He that marries for love, has evil days and good nights*: consider if you marry for affection, how long you will be raising portions for your sisters, and the misery you shall live in all the days of your life; for the greatest fortune that a man can expect is in his marriage. A wife man is known by his actions; but where passion and affection sway, that man is deprived of sense and understanding.

It is not the poverty or meanness of her that is married, that makes her the better wife; for commonly such women grow elevated, and are no more mindful of what they have been, than a mariner is of his escape from a danger at sea when it is past. You must set your wife a good example by your own carriage; for a wise and discreet husband usually makes an obedient and dutiful wife. Beware of jealousy; for it causes great vexation of mind, and scorn and laughter from your enemies.

Many times it is occasion'd by the behaviour of the husband towards other women: in that case do like the physician, take away the cause of the infirmity, if not you are worthy to feel the smart of it. Jealousy is grounded upon conceit and imagination, proceeds from a weak, idle, and distempered brain; and the unworthy carriage of him that is jealous many times makes a woman do what otherwise she would not.

If God be pleased to give you children, love them with that discretion that they discern it not, least they too much presume upon it. Encourage them in things that are good, and correct them if they offend. The love of God to man cannot be better expressed, than by that of a father to his children. Comforts or crosses they prove to their parents; and herein education is a great help to nature.

Let your children make you to disrelish and abandon all other delights and pleasures of the world, in respect of the comfort and joy you receive by them: make account

then that summer is past, and the melancholy winter approaches; for a careful and provident father cannot take delight in the world, and provide for his children.

For a conclusion I will recommend two principal virtues to you; the one is secrecy, the other patience. Secrecy is necessary, requir'd in all, especially publick persons; for many times they are trusted with things, the revealing whereof may cost them their lives, and hinder the designs of their masters. It is a folly to trust any man with a secret that can give no assistance in the business he is trusted with. Counsellors of state, and generals of armies, of all others ought to be most secret; for their designs being once discovered, their enterprizes fail. *Silence* was so much esteemed among the *Persians*, that she was ador'd for a goddess. The *Romans* kept their expeditions so secret, as that alone was a principal cause of their victories: but of all others trust not women with a secret; for the weakness of their sex makes them unsecret. Be patient, after the example of *Job*, and you shall become a true servant of God. Patience deserves to be painted with a sword in her hand; for she conquers and subdues all difficulties. If you will take advantage of your enemy, make him choleric, and by patience you shall overcome him.

Marcus Aurelius being both emperor and philosopher, confessed he attained not the empire by philosophy, but by patience. What man in the world was so patient as our saviour himself? By following whose example his ministers have converted more by their words, than all the persecuting emperors could deter by rigour or cruelty of laws. The impatient man contests with God himself, who gives and takes away at his good will and pleasure.

Let me (good son) be your pattern of patience; for you can witness with me, that the disgraces I have unjustly suffered, (my estate being through my misfortunes ruined, my health by imprisonments decay'd, and my services undervalued and un-recompenced,) have not bred the least distaste or discontent in me, or alter'd my resolution from my infancy, that is, I was never so base as to insinuate into any man's favour, who was favoured by the times; I was never so ambitious as to seek or crave employment, or to undertake any that was not put upon me. My great and only comfort is, that I served my princes both faithfully and fortunately; but seeing my services have been no better accepted, I can as well content my self in being a spectator, as if I were an actor in the world.

T H E
Epistle Dedicatory of the First Book,

T O S U C H

Gentlemen as are the Author's intimate Friends,
that shall read these small Treatises.

IT is proper to all discourses not to comprehend more in one book than the subject whereof they are to treat, because variety of matter may breed confusion and forgetfulness in the reader; and though the ensuing work treats of several nations, several matters and accidents, and of several times and ages, yet all tends to sea-actions, and men of that profession, as namely, the first discovery of countries, the settling of commerce and trade betwixt remote nations, the success of many warlike expeditions by sea, and several admonitions, and other particulars therein mention'd.

I have divided them into six books: in the first and second I place the acts and enterprizes of *Englishmen*, in respect of the deserved honour the world attributes to them for their marine affair; secondly, in duty being bound to prefer my own country before all others, wherein I cannot be tax'd with partiality or flattery; and, thirdly, because the actions and journeys of the *English* will give light to ensuing ages, by comparing them with times past for advantage of time to come, if there be occasion.

In the third book I set down the office of the lord high-admiral of *England*, and all other inferior offices belonging to him, and his majesty's ships, from the highest commander to the meanest sailor.

In the fourth book I touch upon divers discoveries and conquests of the *Spanish* and *Portuguese* nation; but I will forbear to say any thing of them in particular, till I come to the place where I am to treat more at large of their acts and enterprizes.

In the fifth I treat of projects, which I dedicate to the projectors of this time, not to honour, but to display them and the infamous courses they take against the commonwealth.

In the sixth I discover the benefit of fishing upon his majesty's coasts of *England*, *Scotland*, and *Ireland*, and with what ease it may be undertaken by his majesty's subjects.

Many things contain'd in these six books are no other than collections of other authors; and my labour is more therein, than theirs who gather variety of flowers out of several gardens to compose one fightly garland.

It is not my intention that many shall read them; and such as do shall be only my dearest friends, because they will put a favourable construction upon any oversights I shall make, and will conceal and hide what weakness they discover in me.

All my aim is my own pleasure, and my friends satisfaction, if this yields them any; if not, my good will ought to be never the less valued, considering my intention in offering it. What is wanting in perfection, shall be supplied by my affection and service ever devoted to you. And so, farewell.

B O O K

B O O K I.

A Yearly Account of the *English* and *Spanish* Fleets, set out from the Year 1585. when the War with *Spain* first began, till the Year 1602. when King *James* made his happy Entrance into this Kingdom, shewing the Designs, Oversights, and Errors, on both *English* and *Spanish* Sides, with the Names of the Queen's Ships and Commanders in every Expedition.

Sir Francis Drake's Voyage to the West Indies, Anno Dom. 1585.

1585.

Ships.

The *Elizabeth Bonaventure*.
The *Aid*.

Commanders.

Sir *Francis Drake*.
Captain *Forbisber*.
Captain *Carlee*, lieutenant-general
by land.

UPON knowledge of the imbar-go laid by the king of *Spain* in the year 1585. upon the *English* ships, men, and goods found in his country, her majesty having no means to help or relieve her subjects by friendly treaty, authoriz'd such as sustain'd loss, by the said order, to repair themselves upon the subjects of the king of *Spain*; and to that end gave them letters of reprisal, to take and arrest all ships and merchandizes they should find at sea, or elsewhere, belonging to the subjects of the said king.

Her majesty at the same time, to revenge the wrongs offer'd her, and to resist the king of *Spain's* preparations made against her, equipp'd a fleet of twenty five sail of ships, and employ'd them under the command of Sir *Francis Drake*, as the fittest man, by reason of his experience and success in fundry actions.

It is not my intent to set down all the particulars of the voyages treated of, but the services done, and the mistakes and oversights committed, as a warning to those that shall read them, and to prevent the like errors hereafter.

This voyage of Sir *Francis Drake* being the first undertaking on either side, (for it ensued immediately after the arrest of our

ships and goods in *Spain*.) I will deliver my opinion of it before I proceed any farther.

One impediment to the voyage was, that to which the ill success of divers others that after follow'd is to be imputed, *viz.* the want of victuals and other necessaries fit for so great an expedition; for had not the fleet by chance met with a ship of *Biscay* in her return from *Newfoundland*, laden with fish, which reliev'd their necessities, they had been reduc'd to great extremity.

The service perform'd in this action, was the taking and sacking *Sancto Domingo* in *Hispaniola*, *Cartagena* on the continent, and *Santa Justina* in *Florida*, three towns of great importance in the *West Indies*. This fleet was the greatest of any nation but the *Spaniards*, that had been ever seen in those seas since the first discovery of them; and if it had been as well consider'd of before their going from home, as it was happily perform'd by the valour of the undertakers, it had more annoy'd the king of *Spain*, than all other actions that ensued during the time of the war.

But it seems our long peace made us incapable of advice in war; for had we kept and defended those places when in our possession, and provided to have been reliev'd and succour'd out of *England*, we had diverted

1585. verted the war from this part of *Europe*; for at that time there was no comparison betwixt the strength of *Spain* and *England* by sea, by means whereof we might have better defended them, and with more ease inroach'd upon the rest of the *Indies*, than the king of *Spain* could have aided or succour'd them.

But now we see and find by experience that those places which were then weak and

unfortified, are since so fortified, that it is to no purpose to us to annoy the king of *Spain* in his *West Indies*.

And though this voyage prov'd both fortunate and victorious, yet considering it was rather an awakening than a weakening of him, it had been far better to have wholly declin'd, than to have undertaken it upon such slender grounds, and with so inconsiderable forces.

1587. *Sir Francis Drake's second Voyage to the Road of Cadiz, and towards the Tercera Islands, Anno 1587.*

Ships.

The *Elizabeth Bonaventure*.
The *Lyon*.
The *Rainbow*.
The *Dreadnought*.

Commanders.

Sir *Francis Drake* general.
Sir *William Borroughs* vice-admiral.
Captain *Bellingam*.
Captain *Thomas Fenner*.

HER majesty having receiv'd several advertisements, that while the king of *Spain* was silent, not seeking revenge for the injuries the ships of reprisal did him daily upon his coasts, he was preparing an invincible navy to invade her at home. She thereupon sought to frustrate his designs, by intercepting his provisions before they should come to *Lisbon*, which was their place of rendezvous; and sent away Sir *Francis Drake* with a fleet of thirty sail, great and small, four whereof were her own ships.

The chief adventure in this voyage (besides those four ships of her majesty's) was made by the merchants of *London*, who sought their private gain more than the advancement of the service; neither were they deceiv'd of their expectation.

Sir *Francis Drake* being inform'd by two ships of *Middleborough*, that came from *Cadiz*, that a fleet with provisions and ammunition riding there, was ready to take the first opportunity of a wind to go to *Lisbon*, and join with other forces of the king of *Spain*, he directed his course for *Cadiz* road, where he found the advertisement he receiv'd from the ships of *Middleborough* in every point true; and upon his arrival attempted the ships with great courage, and perform'd the service he went for, by destroying all such ships he found in harbour, as well of the *Spaniards* as other nations that were hir'd by them; and by these means he utterly defeated their mighty preparations, which were intended against *England* that year 1587.

The second service perform'd by him, was the assaulting the castle of cape *St. Vincent*,

upon the utmost promontory of *Portugal*, and three other strong holds; all which he took, some by force, and some by composition. Thence he went to the mouth of the river of *Lisbon*, where he anchor'd near *Cascais*, which the marquis of *St. Cruz* beholding, durst not with his galleys approach so near as once to charge him.

Sir *Francis Drake* perceiving, that though he had done important service for the state by this fortunate attempt of his, yet the same was not very acceptable to the merchants, who adventur'd only in hope of profit, and prefer'd their private gain before the security of the kingdom, or any other respect; therefore from *Cascais* he stood to the *Tercera* islands, to expect the coming home of a *carrack*, which he had intelligence winter'd at *Mosambique*, and consequently she was to be home in that month. And though his victuals grew scarce, and his company importun'd his return home, yet with fair speeches he persuaded, and so much prevail'd with them, that they were willing to expect the issue some few days at the islands; and by this time drawing near the island of *St. Michael*, it was his good fortune to meet and take the *carrack* he look'd for; which added more honour to his former service, and gave great content to the merchants, to have a profitable return of their adventure, which was the thing they principally desir'd. This voyage proceeded prosperously, and without exception; for there was both honour and wealth gain'd, and the enemy greatly endamag'd.

The first Action undertaken by the Spaniards in 1588. the Duke of Medina Sidonia General, encounter'd by our Fleet, the Lord Admiral being at Sea himself in Person.

1588. **N**otwithstanding the great spoil and hurt Sir *Francis Drake* did the year past in *Cadiz* road, by intercepting some part of the provisions intended for this great navy, the king of *Spain* us'd his utmost endeavours to revenge himself this year, left in taking longer time his designs might be prevented as before, and arrested all ships, men, and necessaries wanting for his fleet, and compell'd them by force to serve in this action.

He appointed for general the duke of *Medina Sidonia*, a man employed rather for his birth than experience; for so many dukes, marquisses, and earls, voluntarily going, would have repin'd to have been commanded by a man of less quality than themselves: they departed from *Lisbon* the 19th day of *May*, 1588. with the greatest pride and glory, and least doubt of victory, that ever any nation did; but God being angry with their insolence, dispos'd of them contrary to their expectation.

The directions from the king of *Spain* to

his general were to repair, as wind and weather would giveleave, to the road of *Callice* in *Piccardy*, there to abide the coming of the prince of *Parma* and his army; and upon their meeting, to have open'd a letter directed to them both, with further instructions.

He was especially commanded to sail along the coasts of *Brittany* and *Normandy*, to avoid being discover'd by us here; and if he met with the *English* fleet, not to offer to fight, but only seek to defend themselves. But when he came athwart the north cape, he was taken with a contrary wind and foul weather, and forc'd into the harbour of the *Groyne*, where part of his fleet lay attending his coming. As he was ready to depart from thence, they had intelligence, by an *English* fisherman whom they took, of our fleets late being at sea, and putting back again, not expecting their coming that year, infomuch that most part of the men belonging to our ships were discharg'd.

1588. This intelligence made the duke alter his resolution, and to break the directions given him by the king: yet this was not done without some difficulty, for the council was divided in their opinions; some held it best to observe the king's command, others not to lose the opportunity offer'd to surprize our fleet unawares, and burn and destroy them.

Diego Flores de Valdes, who had the command of the *Andalusian* squadron, and on whom the duke most relied, because of his experience and judgment, was the main man that persuaded the attempt of our ships in harbour, and with that resolution they directed their course for *England*.

The first land they fell in with, was the *Lizard*, the southermost part of *Cornwall*, which they took to be the *Ram's-Head* athwart *Plimouth*; and the night being at hand they tacked off to sea, making account in the morning to attempt our ships in *Plimouth*.

But whilst they were thus deceiv'd in the land, they were in the mean time discover'd by captain *Flemming*, a pirate, who had been at sea pilfering; and upon view of them, knowing them to be the *Spanish* fleet, repair'd with all speed to *Plimouth*, and gave notice to our fleet, then riding at anchor: whereupon my lord admiral hastened with all possible expedition to get out the ships; and before the *Spaniards* could draw near *Plimouth*, they were welcom'd at sea by my lord and his navy, who continued fight with them, till he brought them to an anchor at *Calais*. The particulars of the fight, and the success thereof, being things so well known, I purposely omit.

While this armada was preparing, her majesty had from time to time perfect intelligence of the *Spaniards* designs; and because she knew his intent was to invade her at sea with a mighty fleet from his own coast, she furnish'd out her royal navy, under the conduct of the lord high admiral of *England*, and sent him to *Plimouth*, as the likeliest place to attend their coming, as you have heard.

Then knowing that it was not the fleet alone that could endanger her safety, for that they were too weak for any enterprize on land, without the assistance of the prince of *Parma*, and his army in *Flanders*, therefore she appointed thirty sail of *Holland* ships to lie at an anchor before the town of *Dunkirk*, where the prince was to embark in flat-bottom'd boats, made purposely for the expedition of *England*.

Thus had the prince by the queen's providence been prevented, if he had attempted to put out of harbour with his boats; but in truth, neither his vessels nor his army were in readiness, which caus'd the king

ever after to be jealous of him, and, as 'tis suppos'd, to hasten his end.

Her majesty, notwithstanding this her vigilant care to foresee and prevent all danger that might happen at sea, would not hold herself too secure of her enemy, and therefore prepar'd a royal army to welcome him upon his landing; but it was not the will of God that he should set foot on *English* ground, the queen becoming victorious over him at sea, with little hazard or bloodshed of her subjects.

Having shewed the design of the *Spaniards*, and the course taken by her majesty to prevent them, I will now collect the errors committed as well by the one as by the other, as I have promis'd in the beginning of my discourse.

As nothing could appear more rational and likely to take effect, after the duke had got intelligence of the state of our navy, than his design to surprize them unawares in harbour, he well knowing, that if he had taken away our strength by sea, he might have landed both when and where he listed, which is a great advantage to an invader; yet admitting it had taken that effect he design'd, I see not how he was to be commended in breaking the instructions given him by the king; what blame then did he deserve, when so ill an event follow'd by his rashness and disobedience?

It was not the want of experience in the duke, or his laying the fault upon *Valdes* that excus'd him at his return; but he had smarted bitterly for it, had it not been for his wife, who obtain'd the king's favour for him.

Before the arrival of the ships that escaped in this voyage, it was known in *Spain*, that *Diego Flores del Valdes* was he who persuaded the duke to break the king's instructions; whereupon the king gave commandment in all his ports, where the said *Diego Flores del Valdes* might arrive, to apprehend him; which was accordingly executed, and he carried to the castle of *Santander*, where he was not permitted to plead his excuse, but remain'd there, without being ever seen or heard of after, by report of his page, with whom I spoke afterwards, we being both prisoners together in the castle of *Lisbon*.

If the king's directions had been punctually follow'd, then had his fleet kept the coast of *France*, and arriv'd in the road of *Calais*, before they had been discover'd by us, which might have endanger'd her majesty and the realm, our ships being so far off as *Plimouth*, where then they lay; and though the prince of *Parma* had not been presently ready, yet he had gain'd time sufficient, by the absence of our fleet, to make himself ready.

And

1588. And whereas the prince was kept in by the thirty sail of *Hollanders*, so many of the duke's fleet might have been able to have put the *Hollanders* from the road of *Dunkirk*, and possess it themselves; and so have secured the army and fleet's meeting together; and then how easy had it been after their joining, to have transported themselves for *England*? And what would have ensued upon their landing here, may be well imagined.

But it was the will of him that directs all men and their actions, that the fleets should meet, and the enemy be beaten, as they were, put from their anchorage in *Calais-Road*, the prince of *Parma* beleaguere'd at sea, and their navy driven about *Scotland* and *Ireland* with great hazard and loss; which shews how god did marvellously defend us against their dangerous designs.

And here was opportunity offered us to have followed the victory upon them; for after they were beaten from the road at *Calais*, and all their hopes and designs frustrated, if we had once more offered them fight, the general, it was thought, by persuasion of his confessor, was determined to yield; whose example, 'tis very likely, would have made the rest to have done the like. But this opportunity was lost, not through the negligence or backwardness of

the lord admiral, but merely through the want of providence in those that had the charge of furnishing and providing for the fleet; for at that time of so great advantage, when they came to examine their provisions, they found a general scarcity of powder and shot, for want whereof they were forced to return home: besides that, the dreadful storms which destroy'd the *Spanish* fleet, made it impossible to pursue the remains of them. Another opportunity was lost, not much inferior to the other, by not sending part of our fleet to the west of *Ireland*, where the *Spaniards* of necessity were to pass, after so many dangers and disasters as they had endured.

If we had been so happy as to have followed this course, as it was both thought and discoursed of, we had been absolutely victorious over this great and formidable navy; for they were brought to that necessity, that they would willingly have yielded, as divers of them confessed that were shipwrecked in *Ireland*.

By this we may see how weak and feeble the designs of men are, in respect of the creator of man, and how indifferently he dealt betwixt the two nations, sometimes giving one, sometimes the other, the advantage; and yet so that he only ordered the battle.

1589. THE last overthrow of 1588. given to the invincible *Armada*, or navy, as they termed it, did so encourage every man to the war, that happy was he who could put himself into the service against the *Spaniards*, as it appeared by the voluntiers that went in this voyage; which the queen, (considering the great loss the king of *Spain* received the year past, whereby it was to be imagined how weakly he was provided at home,) was willing to countenance, though she undertook it not wholly herself, which was the main cause of its ill success and overthrow.

For whosoever he be of a subject, that thinks to undertake so great an enterprise without a prince's purse, shall be deceived; and therefore these two generals, in my opinion, never overshot themselves more, than in undertaking so great a charge with so little means; for where victuals and arms

are wanting, what hope is there of prevailing?

The project of this voyage was to restore a distressed king to his kingdom, usurped as he pretended; and though the preparations for this expedition were not so great as was expedient, yet in the opinion of all men, if they had directed their course whither they intended it, without landing at the *Groyne*, they had performed the service they went for, restored *Don Antonio* to the crown of *Portugal*, dismembered it from *Spain*, and united it in league with *England*, which would have answer'd the present charge, and have settled a continual trade for us to the *West Indies*, and the rest of the dominions of *Portugal*; for so we might easily have conditioned.

But the landing at the *Groyne* was an unnecessary lingering and hinderance of the other great and main design, a consuming

1589. of victuals, a weakening of the army by the immoderate drinking of the soldiers, which brought a lamentable sickness amongst them, a warning to the Spaniards to strengthen Portugal, and (what is more than all this) a discouragement to proceed further, being repulsed in the first attempt.

But notwithstanding the ill success at the Groyne, they departed from thence towards Portugal, and arrived at Peniche, a maritime town twelve leagues from Lisbon, where with small resistance they took the castle, after the captain understood Don Antonio was in the army.

Thence general Norris marched with his land forces to Lisbon, and Sir Francis Drake with his fleet failed to Cascais, promising from thence to pass with his ships up the river to Lisbon, to meet with Sir John Norris, which yet he did not perform, and therefore was much blamed by the general consent of all men, the overthrow of the action being imputed to him.

It will not excuse Sir Francis Drake, for making such a promise to Sir John Norris; though on the other hand, I would have accused him of great want of discretion, if he had put the fleet to so great an adventure to so little purpose: for his being in the harbour of Lisbon, signified nothing to the taking of the castle, which was two miles from thence; and had the castle been taken, the town would have been taken of course.

Besides, the ships could not furnish the army with more men or victuals: wherefore I understand not in what respect his going up was necessary; and yet the fleet must have run many hazards to so little purpose.

For betwixt Cascais and Lisbon there are three castles, St. Julian, St. Francis, and Bellem. The first of the three I hold one of the most impregnable forts to seaward in Europe; and the fleet was to pass within calliver-shot of this fort, though, I confess, the passing it was not the greatest danger; for with a reasonable gale of wind, any fort is to be passed with small hazard.

But at this time there was a general want of victuals; and being once entered the harbour, their coming out again was uncertain, the place being subject to contrary winds. In the mean while the better part of the victuals would have been consumed, and they would have remained there in so desperate a condition, that they would have been forced to have fired one half of the fleet, to bring home the rest; for as it was, when the army embarked for England, many died for hunger in their way home, and more would have done, if the wind had taken them short; or if by the death of some of them, the rest who surviv'd had not been the better reliev'd.

Besides all these casualties and dangers, 1589. the *Adelantado* was then in Lisbon with the galleys of Spain; and how easily he might have annoy'd our fleet by towing fire-ships amongst us, we may suppose by the hurt we did the Spaniards the year before in Cadiz-Road; and greater we might have done had we been assisted with galleys.

It was a wonder to observe every man's opinion of this voyage, as well those that were actors in it, as others that staid at home; some imputing the overthrow of it to the landing at the Groyne; others to the Portuguese failing us of those helps and assistances promised by Don Antonio; and others, to Sir Francis Drake's not coming up the river with his fleet.

Though any of these three reasons may seem probable enough, and the landing at the Groyne the chiefest of the three, yet, if we weigh truly the defect, and where it was, it will appear that the action was overthrown before their setting out from home, they being too weakly provided of all things necessary for so great an expedition.

For when this voyage was first treated of, the number of ships was nothing equal to the proportion of men: wherefore they were forced to detain divers *Easterlings* they met with in our channel, and compelled them to serve in this expedition for the transportation of our soldiers; and though these ships were an ease to our men, who would have been otherwise much pestered for want of room, yet their victuals were nothing augmented; but they were put aboard the ships, like banished men, to seek their fortunes at sea, it being confessed, that divers of the ships had not four days victuals when they departed from *Plimouth*.

Another impediment to the good success of this voyage, was the want of field-pieces; and this was the main cause why we failed of taking Lisbon: For the enemies strength consisting chiefly in the castle, and we having only an army to countenance us, but no means for battery, we were the loss of the victory ourselves; for it was apparent, by intelligence we received, that if we had presented them with battery, they were resolved to parley, and by consequence to yield; and this too was made use of by the Portuguese, as a main reason why they joined not with us.

And there is as much to be said in behalf of the Portuguese, as an evidence of their good-will and favour to us, that though they shewed themselves not forward upon this occasion to aid us, yet they opposed us not as enemies: whereas if they had pursued us in our retreat from Lisbon to Cascais, our men being weak, sickly, and wanting powder, and shot, and other arms, they had in all probability put us to a great loss and

1588. and disgrace. And if ever *England* have the like occasion to aid a competitor in *Portugal*, we shall questionless find that our fair demeanor and carriage in this expedition towards the people of that country, have gained us much reputation among them, and would be of singular advantage to us; for the general strictly forbid the rifling of

their houses in the country, and the suburbs of *Lisbon*, which he possessed, and commanded just payment to be made by the soldiers for every thing they took, without compulsion or rigorous usage: and this has made those that stood but indifferently affected before, now ready upon the like occasion to assist us.

1588.

A Voyage undertaken by the Earl of Cumberland, with one Ship Royal of her Majesty's, and six of his own, and other Adventurers, Anno Dom. 1589.

Ships.

The Victory, the queen's ship,
The Margaret,
And five others.

Commanders.

The Earl of Cumberland,
Capt. *Christopher Lister*,
Capt. *Monson*, afterwards Sir *William Monson* vice-admiral.

1589. AS the fleets of Sir *John Norris* and Sir *Francis Drake* returned from the voyage of *Portugal*, the Earl of *Cumberland* proceeded upon his towards that coast; and meeting with divers of that fleet, relieved them with victuals, who otherwise had perished.

This voyage was undertaken at his and his friend's charge, excepting the *Victory*, a ship royal of the queen's, which she adventured.

This voyage is writ at large by the famous mathematician Mr. *Wright*, who was an actor in it himself; what is here set down is but a brief collection out of his account.

The service performed at sea was the taking of three *French* ships of the league in our channel, and his encountering upon the coast of *Spain* with thirteen hulks, who made some resistance. Out of these he took to the value of 7000 *l.* in spices belonging to *Portugal*.

From thence he cross'd over to the *Tercera* islands, about three hundred leagues from the rock of *Lisbon*; and coming to *St. Michael's*, the first and greatest of the islands, with his boats, he fetched out from under the castle, which fired upon him, two ships that arrived there the night before from *Spain*.

In his course from thence to the island of *Flores*, the westernmost of the *Terceras*, he took a *Spanish* ship laden with sugars and sweatmeats that came from the island of *Madera*.

At *Flores* he received intelligence, by an *English* man of war, of divers *Spanish* ships which were in the road of *Fayal*; whereupon he suddenly made from that island, where captain *Lister* and captain *Monson* gave a desperate attempt in their boats upon the said ships; and after a long fight possessed themselves of one of them of three hundred tuns burden, carrying six pieces of ordnance, and sixty men. This ship, with one other, came from the *Indies*; two of the rest out

of *Guinea*, and another was laden with wood, which that island affords in great plenty. The captains returning after the carrying off that great ship, took the rest, being seven in all. This done, we all put to sea again, and making the island *Graciosa*, made several attempts there for two days to land, in order to get some provision, but were still repulsed with great loss; yet at last the island came to composition, and sent such refreshments as it afforded. In the mean while we discovered and took a *French* ship of two hundred tuns, homeward bound from *Canada*.

Afterwards, sailing to the eastward of the road of *Terceras*, in the evening we beheld eighteen tall ships of the *Indies* entering into the said road, one whereof we after took in her course to the coast of *Spain*: she was laden with hides, silver, and cochineal; but coming for *England*, she was cast away upon *Mount's Bay* in *Cornwall*, being valued at 100000 *l.*

Two other prizes of sugar we took in our said course to the coast of *Spain*, esteemed each ship at 7000 *l.* and one from under the castle of *St. Mary's* to the same value.

There was no road about those islands that could defend their ships from our attempts; yet in the last assault we gave, which was upon a ship of sugars, we found ill success, being sharply resisted, and two parts of our men slain and hurt; which loss was occasioned by captain *Lister*, who would not be persuaded from landing in the view of their forts.

The service performed by land, was the taking of the island of *Fayal* some months after the surprizing of those ships formerly mentioned. The castle yielded us forty-five pieces of ordnance, great and small: we sacked and spoiled the town, and after ransomed it, and so departed.

These summer services, and ships of sugar, proved not so sweet and pleasant, as the winter was afterwards sharp and painful; for

1589.

1589. in our return for *England*, we found the calamity of famine, the hazard of shipwreck, and the death of our men so great, that the like befel not any other fleet during the time of the war. All which disasters must be imputed to captain *Lister's* rashness, upon whom my lord of *Cumberland* chiefly rely'd, wanting experience himself.

He was the man that advis'd the sending the ships of wine for *England*, otherwise we had not known the want of drink: he was as earnest in persuading our landing in the face of the fortifications of *St. Mary's*, against all reason and sense. As he was

1589. rash, so was he valiant; but paid dearly for his unadvised counsel: for he was the first man hurt, and that cruelly, in the attempt of *St. Mary's*, and afterwards drowned in the rich ship cast away at *Mount's Bay*.

After our quitting *St. Mary's*, as you have heard, we repair'd to the island of *St. George*, as you may read in the sixth book, where there happened a strange accident to me, and indeed, I may say, the strangest escape that ever befel me in my life. I refer you to that book, thinking it fitter to be inserted there than in this.

1590. FROM the year 1585 until this present year 1590. there was the greatest possibility imaginable of enriching our nation by actions at sea, had they been well followed: the king of *Spain* was grown so weak in shipping by the overthrow he had in 1588. that he could no longer secure the trade of his subjects.

Her majesty now finding how necessary it was for her to maintain a fleet upon the *Spanish* coast, as well to hinder the preparations he might make against her to repair the disgrace he receiv'd in 1588. as also to intercept his fleets from the *Indies*, by which he grew great and mighty, she sent this year 1590 ten ships of her own in two squadrons; the one to be commanded by *Sir John Hawkins*, the other by *Sir Martin Forbusher*, two gentlemen of tried experience.

The king of *Spain* hearing of this preparation of hers, sent forth twenty sail of ships under the command of *Don Alonso de Bassan*, brother to the late famous marquis of *St. Cruz*, who had not long before subdued the *Tercera* islands, and overthrown the navy of *France*. *Don Alonso* was charged to convoy home the fleet from the *Indies*, and the carracks expected home about that time.

But after *Don Alonso* had put off to sea, the king of *Spain* becoming better advised,

1590. than to adventure twenty of his ships to ten of ours, sent for *Don Alonso* back, and so frustrated the expectation of our fleet.

He likewise made a dispatch to the *Indies*, commanding the fleets to winter there, rather than to run the hazard of coming home that summer. But this proved so great an hindrance and loss to the merchants of *Spain*, to be so long without return of their goods, that many broke in *Seville*, and other places; besides, it was so great a weakening to their ships, to winter in the *Indies*, that many years hardly sufficed to repair the damage they received.

Our fleet being thus prevented, spent seven months in vain upon the coasts of *Spain*, and the islands; but in that space could not possess themselves of one ship of the *Spaniards*; and the carracks, upon which part of their hopes depended, came home without sight of the islands, and arriv'd safe at *Lisbon*.

This voyage was a bare action at sea, though they attempted landing at *Fayal*, which the earl of *Cumberland* the year before had taken and quitted; but the castle being refortified, they prevail'd not in their enterprize: and thenceforwards the king of *Spain* endeavoured to strengthen his coasts, and to increase in shipping, as may appear by the next ensuing year.

Two Fleets at Sea ; the English under the Lord Thomas Howard, and the Spanish commanded by Don Alonso Bassan, Anno 1591.

| Ships. | Commanders. |

| <i>The Crane,</i> | Captain Duffield. |

1591. **H**ER majesty being inform'd of the Indian fleet's wintering in the *Havana*, and that necessity would compel them home this year 1591. she sent a fleet to the islands under the command of the lord *Thomas Howard*.

The king of *Spain* perceiving her drift, and being sensible how much the safety of that fleet concerned him, caus'd them to set out thence so late in the year, that it endangered the shipwreck of them all; choosing rather to hazard the perishing of ships, men, and goods, than their falling into our hands.

He had two designs in bringing home this fleet so late; one was, he thought the lord *Thomas* would have consum'd his victuals, and have been forc'd home: the other, that he might in the mean time furnish out the great fleet he was preparing, little inferior to that of 1588. In the first he found himself deceived; for my lord was supply'd both with ships and victuals out of *England*: and in the second he was as much disappointed; for the earl of *Cumberland*, who then lay upon the coast of *Spain*, had intelligence of the *Spaniards* putting out to sea, and gave notice thereof to the lord *Thomas* the very night before they arrived at *Flores*, where my lord lay.

The day after this intelligence, the *Spanish* fleet was discovered by my lord *Thomas*, whom he knew by their number and greatness to be the ships of which he had warning; and by that means escaped the danger that Sir *Richard Greenville*, his vice-admiral, rashly ran into. Upon view of the *Spaniards*, which were fifty five sail, the lord *Thomas* warily, and like a discreet general, weigh'd anchor, and made signs to the rest of his fleet to do the like, with a purpose to get the wind of them; but Sir *Richard Greenville* being a stubborn man, and imagining this fleet to come from the *Indies*, and not to be the *Armada* of which they were informed, would by no means be persuaded by his master or company to cut his cable to follow his admiral, nay so headstrong and rash he was, that he offered

violence to those that advis'd him so to do. 1591.

But the old saying, *That a wilful man is the cause of his own woe*, could not be more truly verified than in him: for when the *Armada* approached, and he beheld the greatness of the ships, he began to see and repent of his folly, and when it was too late, would have freed himself of them, but in vain: for he was left a prey to the enemy, every ship striving to be the first should board him.

This wilful rashness of Sir *Richard* made the *Spaniards* triumph as much as if they had obtain'd a signal victory, it being the first ship that ever they took of her majesty's, and commended to them by some *English* fugitives to be the very best she had: but their joy continued not long; for they enjoy'd her but five days before she was cast away, with many *Spaniards* in her, upon the *Tercera* islands.

Commonly one misfortune is accompanied with another: for the *Indian* fleet, which my lord had waited for the whole summer, the day after this mishap, fell into the company of this *Spanish Armada*, who, if they had stay'd but one day longer, or the *Indian* fleet had come home but one day sooner, we had possess'd both them and many millions of treasure, which the sea afterwards devour'd: for from the time they met with the *Armada*, and before they could recover home, nigh an hundred of them suffered shipwreck, besides the *Ascension* of *Seville*, and the double fly-boat, that were sunk by the side of the *Revenge*.

All which was occasioned by their wintering in the *Indies*, and their late difemboguing from thence: for the worm, which that country is subject to, weakens and consumes their ships.

Notwithstanding this cross and perverse fortune, which happened by means of Sir *Richard Greenville*, the lord *Thomas* would not be dismay'd or discouraged; but kept the sea as long as he had victuals; and by such ships as himself and the rest of the fleet took, defray'd the better part of the charge of the whole action.

The Earl of Cumberland to the Coast of Spain, 1591.

| Ships. | Commanders. |
|--|--|
| The <i>Garland</i> , of her majesty's. | The earl of <i>Cumberland</i> . Captain under him, |
| Seven other ships of his, and his friends. | Captain <i>Monson</i> , afterwards Sir <i>William Monson</i> . |

1591. THE earl of *Cumberland* keeping the coast of *Spain*, as you have heard, while the lord *Thomas* remain'd at the islands, and both to one end, viz. to annoy and damnify the *Spaniards*, though in two several fleets, the earl found fortune in a sort as much to frown upon him, as it had done upon the lord *Thomas Howard*.

He departed *England* in *May*, and in his course to the *Spanish* coast, met with several *Dutch* ships, which came from *Lisbon*, wherein he found a great quantity of spices belonging to the *Portuguese*. So greatly were we abus'd by that nation of *Holland*, who, though they were the first that engag'd us in the war with *Spain*, yet still maintain'd their own trade into those parts, and supplied the *Spaniards* with ammunition, victuals, shipping, and intelligence against us.

Upon my lord's arrival on the coast of *Spain*, it was his hap to take three ships at several times, one with wine, which he unladed into his own; and two with sugars, which he enjoy'd not long; no more did he the spices, which he took out of the *Hollanders*.

For one of the ships of sugar, by means of a leak that sprung upon her, was forced to be cast off, and the men, with much difficulty, recover'd the shore, and sav'd their lives.

The other being sent for *England*, and tossed with contrary winds, was for want of victuals forc'd into the *Groyne*, where they render'd themselves to the enemies mercy.

The spices were determin'd to be sent for *England*, and a ship appointed for that purpose, with other ships to guard her to the

islands of the *Burlings*; in which ship captain *Monson* was sent with orders to see her safe dispatch for *England*.

But the other ships, not observing the directions given them, and the night falling calm, early in the morning, this forsaken ship was set upon by six gallies, the rest of the ships not being able to come up by reason of the calm; and after a long and bloody fight, the captain and principal men being slain, both ship and spices were taken; but whether it was the respect they had to the queen's ship, which was admiral of that fleet, or honour to my lord that commanded it, or hope, by good usage of our men, to receive the like again, I know not; but true it is, that the ordinary men were treated with more courtesy than they had been from the beginning of the war; I mean, that of such men as were taken, only captain *Monson* was detain'd as hostage for performance of covenants agreed upon for release of the rest, in which imprisonment he remain'd almost two years.

My lord of *Cumberland* considering the disasters that thus befel him, and knowing the *Spanish* fleet's readiness to put out of harbour; but especially finding his ship but ill of fail, it being the first voyage she ever went to sea, he durst not abide the coast of *Spain*, but thought it more discretion to return for *England*, having (as you have heard) sent a pinnace to my lord *Thomas*, with the intelligence afore said, which prov'd a service of great moment to the queen and state, in preventing the danger that might have otherwise ensued, if that notice had not been sent.

A Voyage undertaken by Sir Walter Raleigh; but he returning, left the Charge of it to Sir Martin Forbusher, Anno 1592.

| Ships. | Commanders by sea. | Commander by land. |

| The <i>Garland</i> . | Sir <i>Walter Raleigh</i> . | Sir <i>John Boroughs</i> . |
| The <i>Forefight</i> , with divers merchant ships. | Captain <i>Cross</i> , and others. Sir <i>Walter</i> went not, but Sir <i>Martin Forbusher</i> . | |

1592. SIR *Walter Raleigh*, who had tasted abundantly of the queen's favour, and found it now began to decline, put himself

upon a voyage at sea, and drew to him divers friends of great quality, and others, thinking to have attempted some place in the

1592. the *West Indies*; and with this resolution he put out of harbour; but spending two or three days in foul weather, her majesty was pleased to order his return, and to commit the charge of the ships to Sir *Martin Forbusher*, who was sent down for that purpose; but with an express command, not to follow the design of the *West Indies*.

This sudden alteration being known to the rest of the captains, for the present made some confusion, as commonly it happens in all voluntary actions. Their general leaving them, they thought themselves free in point of reputation, and at liberty to take what course they pleas'd; few of them therefore submitted themselves to the command of Sir *Martin Forbusher*, but chose rather each to take his particular fortune and adventure at sea.

Sir *Martin*, with his own ship the *Garland*, and two others, repair'd to the coast of *Spain*, where he took a *Biscainer*, laden with iron; and a *Portuguese*, with sugar: he remain'd there not without some danger, his ship being ill of fail, and the enemy having a fleet at sea to guard the coast.

Sir *John Boroughs*, captain *Cross*, and another, stood to the islands, where they met with as many ships of my lord of *Cumberland's*, with whom they comforted. After some time spent thereabouts, they had sight of a carrack, which they chas'd; but she recover'd the island of *Flores* before they could approach her; but the carrack, seeing the island could not defend her from the strength and force of the *English*, chose rather, after the men were got on shore, to fire herself, than we the enemy should reap benefit by her.

The purser of her was taken, and by threats compelled to tell of four more of their company behind, that had orders to fall in with that island; and gave us such particular advertisement, that one of them was afterwards taken.

In the mean time don *Alonso de Bassan* 1592. was at *Lisbon*, setting out twenty three galleons, which the year before he had when he took the *Revenge*: he was directed with those ships to go immediately to *Flores*, to expect the coming of the carracks, who had order to fall with that island, there to put on shore divers ordnance for strengthening the town and castle. Sir *William Monson*, being then released out of prison, sail'd in a *Hamborough* ship with this fleet.

Don *Alonso* breaking his instructions, unadvisedly repair'd first to *St. Michael's*, and there deliver'd his ordnance before he arriv'd at *Flores*; and in the mean time one of the carracks was burnt, and another taken, as you have heard.

This he held to be such a disreputation to him, and especially for that it happen'd through his own error and default, that he was much perplex'd, and pursued the *English* an hundred leagues; but in vain, they being so far a-head.

The king of *Spain* being advertis'd of his two carracks mishap, and the error of don *Alonso*, though he had much favour'd him before, on account of divers actions he had been in with his brother the marquis of *St. Cruz*, and for what he had lately perform'd, by taking the *Revenge*; yet the king was so offended not to have his instructions obey'd and observ'd, that he did not only take from don *Alonso* his command, but he lived and died in disgrace; which, in my opinion, he worthily deserv'd.

The queen's adventure in this voyage was only two ships; one of which, and the least of them too, was at the taking of the carrack; which title, joined with her regal authority, she made such use of, that the rest of the adventurers were fain to submit themselves to her pleasure; with whom she dealt but indifferently.

The Earl of Cumberland to the Coast of Spain, Anno Dom. 1593.

Ships.

Commanders.

The Lyon,

The earl of *Cumberland*. Captain under him, captain *Monson*.

The Bonaventure, and seven other ships.

Sir *Edward Yorke* vice-admiral.

1593. THE earl of *Cumberland* finding that many of his voyages had miscarried through the negligence or unfaithfulness of those who were intrusted to lay in necessary provisions; and yet, being encourag'd by the good success he had the last year, obtain'd two of her majesty's ships, and victualled them himself, together with seven others that accompanied them; and arriving upon the coast of *Spain*, he took two

French ships of the *League*, which did more than treble the expence of his voyage. My lord being sever'd one day from his fleet, it was his hap to meet with twelve hulks, at the same place where captain *Monson* was taken the same day two years before: he requir'd that respect from them that was due to her majesty's ship, which they peremptorily refus'd, presuming upon the strength of their twelve ships against one

1593. only; but they found themselves deceiv'd; for after two hours fight, he brought them to his mercy, and made them acknowledge their error; and not only so, but they willingly discover'd, and deliver'd up to him a great quantity of powder and ammunition, which they carried for the king of *Spain's* service. Here I must not let pass, as I promis'd in the beginning of my discourse, to lay down all errors and miscarriages committed; and this that follows is one, for which my lord and his master deserve blame. My lord, upon taking the hulks aforesaid, stood to sea with part of them, leaving the rest with captain *Monson* to be examin'd and rummag'd. His lordship towards the evening mis'd those ships under his custody; and it seems he had forgot that his long boat and fifty of his men were left with captain *Monson*, under the guard of one small ship for their defence: these hulks being thus dismiss'd, and coming towards Sir *William Monson* and their consorts, Sir *William* mistrusted, as indeed it fell out, that they would take advantage of my lord's keeping his loose, to board and surprize them, as they had done, if Sir *William* had not prevented it by leaping into his boat on one side, as they boarded him on the other. In which leap he receiv'd a hurt in his leg, which to this time, being the year 1640. he has found a prejudice to his whole body.

My lord of *Cumberland* having spent some time thereabouts, and understanding that *Fernantelles de Menezes*, a *Portuguese*, and the king's general of a fleet of twenty

four sail, was gone to the islands, he pursued them, thinking to meet the carracks before they should join together. At his coming to *Flores*, he met and took one of the fleet, with the death of the captain, who yet liv'd so long as to inform him both where the fleet was, and of their strength. The day after he met the fleet; but being far too weak for them, was forced to leave them, and spent his time thereabouts, till he understood the carracks were pass'd by, without seeing either fleet or island.

About this time the earl being taken so ill, that his recovery was despair'd of, unless he could return to the *English* shore, or get a cow to supply him with milk, captain *Monson* ventur'd ashore on the island of *Corvo*, where, what with threats, and what with promise of reward, he got a cow, which he carried aboard, and in all likelihood was the means of saving the earl's life.

However, captain *Monson* valuing the earl's safety above all the profit of the voyage, hasted towards home, and lost company of the rest of the ships by so strange an accident, that it will scarce be believ'd, though it is a most undoubted truth; for the whole fleet being one day becalm'd, the said calm lasted for several days, and in it the ships were so parted, that they lost sight of one another, and never saw one another more, till they met in *England*, about four or five weeks after: those ships so parted from the earl, took a prize laden with sugar, which was a good addition to what was taken before.

Sir Martin Forbusher with a Fleet to Brest in Britany, Anno 1594.

Sir Martin Forbusher.
Captain Fenner.
Captain Clifford.
Captain Savil.

1594. ABOUT three years before, and in 1591. the queen sent Sir *John Norris* with 3000 soldiers, to join with the *French* king's party in those parts of *Britany* about *Brest*. The king of *Spain*, who upheld the faction of the league, sent don *John de Aguila* with the like forces, to join with the duke de *Merceur*, who was of that side. The *Spaniards* arriving first, had fortified themselves very strongly near the town of *Brest*, expecting new succours from *Spain* by sea; which the *French* king fearing, craved assistance from the queen; which her majesty was the more willing to grant, because the

Spaniards had gotten the haven of *Brest* to entertain their shipping in, and were like to prove there very dangerous neighbours: wherefore she sent Sir *Martin Forbusher* thither in this year 1594. with four of her ships; and upon his arrival there, Sir *John Norris* with his forces, and Sir *Martin* with his seamen, assail'd the fort; and though it was as bravely defended as men could do, yet in the end it was taken with the loss of divers captains, Sir *Martin Forbusher* being himself fore wounded, of which hurt he died at *Plimouth* after his return.

A Fleet to the Indies, Sir Francis Drake and Sir John Hawkins Generals, wherein they ventured deeply, and died in the Voyage, Anno 1594.

1594. THESE two generals presuming much upon their own experience and knowledge, used many persuasions to the queen to undertake a voyage to the *West Indies*, giving much assurance to perform great services, and promising to engage themselves very deeply therein with the adventure of both substance and life. And as all actions of this nature promise fair till they come to be performed, so did this the more in the opinion of all men, in respect of the two generals experience.

There were many impediments and lets to this voyage, before they could clear themselves of the coast, which put them to greater charge than they expected. The chiefest cause of their lingering, was a mistrust our state had of an invasion, and the danger to spare so many good ships and men out of *England* as they carried with them.

The *Spaniards* with their usual subtilty, let slip no opportunity to put us into a fear, thereby to disappoint the expedition, and sent four gallies to *Bluet* in *Britany*, from thence to fall into some part of our coast; that so we might apprehend a greater force was to follow. These gallies landed at *Pensants* in *Cornwall*; where, finding the town abandoned, they sacked and burnt it: but this design of theirs took little effect; for the voyage proceeded nevertheless.

The intent of the voyage was to land at *Nombre de Dios*, and from thence to march to *Panama*, to possess the treasure that comes from *Peru*; and if they saw reason for it, to inhabit and keep it. A few days before their going from *Plimouth*, they received letters from her majesty, communicating the intelligence she had out of *Spain*, that the *Indian* fleet was arrived; and that one of them, with loss of her mast, was put back to the island of *Porto Rico*. She therefore commanded them, seeing there was so good an opportunity offered, as the readiness of this her fleet, and the weakness of *Porto Rico*, to possess themselves of that treasure; and the rather, for that it was not much out of their way to *Nombre de Dios*. Neither years nor experience that can foresee

and prevent all mishaps; which is a manifest proof, that God is the guider and disposer of mens actions: for nothing could seem more probable to be effected than this latter design, especially considering the ability and wisdom of the two generals; and yet was unhappily prevented, and failed in the execution: for there being five frigats sent out of *Spain* to fetch this treasure from *Porto Rico*, in their way it was their fortune to take a pinnace of the *English* fleet, by whom they understood the secrets of the voyage; and to prevent the attempt of *Porto Rico*, they hastened thither with all speed, (whilst our generals lingered at *Guadalupe* to set up their boats,) and at their arrival, so strengthened the town with the soldiers brought in the frigats, that when our fleet came thither, not expecting resistance, they found themselves frustrated of their hopes, and were forced to retire with dishonour, and loss of many gentlemen there slain; which indeed they themselves were the occasion of, in managing their design with no more secrecy. This repulse was so grievously resented by *Sir John Hawkins*, who was then sickly, that it is thought to have hastened his death; and being great and unexpected, did not a little discourage *Sir Francis Drake's* great mind, who yet proceeded upon his first resolved design for *Nombre de Dios*, though with no better success: for the enemy having knowledge of their coming, fortified the passage to *Panama*, and forced them to return with shame and loss. *Sir Francis Drake*, who was wont to rule fortune, now finding his error, and the difference between the present strength of the *Indies*, and what it was when he first knew it, grew melancholy upon this disappointment, and suddenly, and I hope naturally, died at *Porto Bello*, not far from the place where he got his first reputation. The two generals dying, and all other hopes being taken away by their deaths, *Sir Thomas Baskerville* succeeded them in their command, and began now to think upon his return for *England*; but coming near *Cuba*, he met and fought with a fleet of *Spain*, though not long, by reason of the sickness and weakness of his

vantage

1595. men. This fleet was sent to take the advantage of ours in its return, thinking, as indeed it happen'd, that they should find them both weak and in want; but the swiftnes of our ships, in which we had the advantage of the *Spaniards*, preserved us. You may observe, that from the year the *Revenge* was taken, until this present year 1595. there was no summer but the king of *Spain* furnished a fleet for the guarding of his coasts, and securing of his trade; and though there was little fear of any fleet from *England* to impeach him besides this in the *Indies*, yet because he would shew his greatness, and satisfy *Portugal* of the care

he had in preserving their carracks, he sent 1595. the count of *Feria*, a young nobleman of *Portugal*, who desired to gain experience, with twenty ships to the islands; but the carracks did, as they used to do in many other years, miss both islands and fleets, and arrive safe at *Lisbon*. The other fleets of the king of *Spain* in the *Indies*, consisted of twenty four ships, their general *Don Bernardino de Villa Nova*, an approved coward, as it appeared when he came to encounter the *English* fleet; but his defects were supplied by the valour of his vice-admiral, who behaved himself much to his honour: his name was *John de Garay*.

The Earl of Essex, and the Lord Admiral of England, Generals equally both by Sea and Land, Anno 1596.

 Sir *George Carew*,
 Sir *Alexander Clifford*.
 Sir *Robert Cross*,
 Sir *George Gifford*,
 Captain *King*.

1596.

THE first of *June*, 1596. we departed from *Plimouth*; and our departure was the more speedy, by reason of the great pains, care, and industry of the sixteen captains, who, in their own persons, laboured the night before to get out some of their ships riding at *Cartwater*, which otherwise had not been easily effected. The third we set sail from *Cansom Bay*, the wind, which, when we weighed was at west and by south, instantly cast up to the north-east, and so continued till it brought us up as high as the *North Cape of Spain*; and this fortunate beginning put us in great hopes of a lucky success to ensue.

We being now come upon our enemy's coast, it behoved the generals to be vigilant in keeping them from intelligence of us, who therefore appointed the *Litnes*, the *Truelove*, and the *Lion's Whelp*, (the three best sailors of our fleet,) to run a-head, suspecting the *Spaniards* had some carvels of advice out, which they did usually send to discover at sea, upon any rumour of a less fleet than this made ready in *England*.

No ship or carvel escaped us; which I

hold a second happiness to our voyage: for 1596. you shall understand hereafter the inconvenience that might have happened upon our discovery.

The 10th of *June* the said three ships took three fly-boats that came from *Cadiz* fourteen days before, by whom we understood the state of the town, and that they had no suspicion of us; which we looked on as a third omen of our good fortune to come.

The 12th of *June* the *Swan*, a ship of *London*, being commanded, as the other three, to keep a good way off the fleet, to prevent discovery, she met with a fly-boat which made resistance, and escaped her. This fly-boat came from the *Streights*, bound home; who discovering our fleet, and and thinking to gain reputation and reward from the *Spaniards*, shaped her course for *Lisbon*; but she was luckily prevented by the *John and Francis*, another ship of *London*, commanded by Sir *Marmaduke Darrel*, who took her within a league of the shore; and this we may account a fourth happiness to our voyage. The first (as hath been

1596. been said) was for the wind to take us so suddenly, and to continue so long: for our soldiers being shipp'd, and in harbour, would have consumed their victuals, and have been so pestered, that it would have endangered a sickness amongst them. The second was the taking all ships that were seen, which kept the enemy from intelligence. The third was the intercepting of the fly-boats from *Cadiz*, whither we were bound, who assured us our coming was not suspected, which made us more careful to hail from the coast than otherwise we should have been: they told us, likewise, of the daily expectation of the galleons to come from *St. Lucar* to *Cadiz*, and of the merchant-men that lay there, and were ready bound for the *Indies*. These intelligences were of great moment, and made the generals presently to contrive their business both by sea and land, which otherwise would have taken up a longer time after their coming thither; and whether all men would have consented to attempt their ships in harbour, if they had not known the most part of them to consist of merchants, I hold very doubtful. The fourth, and most fortunate of all, was the taking of the fly-boat by the *John and Francis*, which the *Swan* let go: for if she had reached *Lisbon*, she had been able to make report of the number and greatness of our ships, and might have endangered the loss of the whole design, she seeing the course we bore, and that we had pass'd *Lisbon*, which was the place the enemy most suspected, and made there his greatest preparation for defence: but had the enemy been freed of that doubt, he had then no place to fear but *Andaluzia*, and *Cadiz* above the rest; which, upon the least warning, might have been strengthened, and we put to great hazard: he might also have secur'd his ships by towing them out with galleys, and, howsoever the wind had been, might have sent them into the *Streights*, where it had been in vain to have pursued them, or over the bar of *St. Lucar*, where there had been no attempting of them.

And, indeed, of the good and ill of intelligence we had had sufficient experience formerly; of the good in 1588. for how suddenly had we been taken, and surprized when we least suspected, had it not been for captain *Flemming*? of the ill, in the year before this, by the *Spaniards* taking a bark of Sir *Francis Drake's* fleet, which was the occasion of the overthrow of himself and the whole action?

The 20th of *June* we came to *Cadiz*, earlier in the morning than the masters made reckoning of. Before our coming thither, it was determined in council that we should land at *St. Sebastian's*, the western-

most part of the land, and thither came all the ships to an anchor, every man preparing to land as he was formerly directed; but the wind being so great, and the sea so grown, and four galleys lying to intercept our boats, there was no attempting to land there without the hazard of all.

This day was spent in vain, in returning messengers from one general to another; and in the end, they were forced to resolve upon a course which Sir *William Monson*, captain under my lord of *Essex*, advis'd him to the same morning, he discover'd the town, which was to surprize the ships, and to be possessors of the harbour before they attempted landing.

This being now resolved on, there arose a great question, Who should have the honour of the first going in? My lord of *Essex* stood for himself; but my lord admiral oppos'd it, knowing if he miscarried, it would hazard the overthrow of the action; besides, he was streightly charged by her majesty, that the earl should not expose himself to danger, but upon great necessity.

When my lord of *Essex* could not prevail, the whole council withstanding him, he sent Sir *William Monson* that night on board my lord admiral, to resolve what ships should be appointed the next day to undertake the service. Sir *Walter Raleigh* had the van given him, which my lord *Thomas Howard* hearing, challeng'd in right of his place of vice-admiral, and it was granted him; but Sir *Walter* having order over-night to ply in, came first to an anchor, but in that distance from the *Spaniards* as he could not annoy them, and he himself return'd on board the lord general *Essex*, to excuse his coming to anchor so far off, for want of water to go higher; which was thought strange, that the *Spaniards* which drew much more water, and had no more advantage than he of tide, could pass where his could not; but Sir *Francis Vere*, in the *Rainbow*, who was appointed to second him, passing by Sir *Walter Raleigh's* ship, Sir *Walter* the second time weighed, and went higher. The lord general *Essex*, who promis'd to keep in the midst of the fleet, was told by Sir *William Monson*, that the greatest service would depend upon three or four ships; and Sir *William* put him in mind of his honour; for that many eyes beheld him.

This made him forgetful of his promise, and to use all means he could to be foremost in the fight. My lord *Howard*, who could not go up in his own ship the *Mere-honour*, betook himself to the *Nonpareille*, and in respect the *Rainbow*, the *Repulse*, and *Warspight*, had taken up the best part of the channel by their first coming to an anchor,

1596. to his grief, he could not get higher: here did every ship strive to be the headmost; but such was the narrowness of the channel, as neither the lord admiral, nor any other ship of the queen's, could pass on. Order was given that no ship should shoot but the queen's; making account, that the honour would be the greater, if the victory were obtain'd with so few. This fight continu'd from ten till four in the afternoon: the *Spaniards* then set sail, thinking either to run higher up the river, or else to bring their other broad-sides to us, because of the heat of their ordnance. But howsoever it was, in their floating they came a-ground, and the men began to forsake the ships: whereupon it was ordered, that all the hoys and vessels that drew least water should go to them. Sir *William Monson* was sent in the *Repulse-boat* with like directions. We possess'd our selves of the great galleons, the *Matthew* and *Andrew*; but the *Philip* and *Thomas* fir'd themselves, and were burnt down before they could be quenched.

I must not omit to describe the manner of the *Spanish* ships and galleys riding in harbour at our first coming to *Cadiz*. The four galleons singled themselves from out the fleet as guards of their merchants. The galleys were placed to flank us with their prows before entry; but when they saw our approach, the next morning the merchants ran up the river, and the men of war to the point of the river, and brought themselves into a good order of fight, mooring their ships a-head and a-stern, to have their broad-sides upon us. The galleys then betook themselves to the guard of the town, which we put them from before we attempted the ships.

But because I have promis'd in the beginning of my discourse to particularize some errors and miscarriages, my capacity would permit me to judge of, before I proceed further on this voyage I will declare a main oversight in the *Spaniards*.

After the galleons had (as you have heard) brought themselves to the mouth of the bay of *Cadiz*, and found themselves unable to withstand us, if, instead of running to *Point Royal*, they had put themselves under the defence of the town, they had been defended by their fort *Philip*, which had added a strength to theirs; or being overcome, as afterwards they were, they might with more security have run themselves a-ground near the town, which would have secured their men in spite of us, and not as they did where there was no fort, nor any force of men to support them. Besides, the men that had then escaped into the town, might have defended it with their numbers, that, though we had taken the place, it must

have been upon harder conditions than we did. But to proceed:

The victory being obtain'd at sea, the lord general *Essex* landed his men in a sandy bay, which the castle of *Puntall* commanded; but they seeing the success of their ships, and mistrusting their own strength, neither offered to offend his landing, nor to defend the castle, but quitted it, and so we became possessors of it.

After my lord's peaceable landing, he consider'd what was to be done; and there being no place from whence the enemy could annoy us, but the bridge which crosses over from the main land to the island, by our making good of which bridge there would be no way left for the galleys to escape us, he sent three regiments under the command of Sir *Comiers Clifford*, Sir *Christopher Blunt*, and Sir *Thomas Garret*, to the bridge; who, at their first coming, were encountered by the enemy, but yet possessed themselves of it, with the loss of some men; but whether it was for want of victuals, or for what other reasons, our men quitted it, I know not, and the galleys breaking down divers arches, pass'd it, and by that means escaped.

My lord dispatch'd a messenger to my lord admiral, intreating him to give order to attempt the merchants that rode in *Port Royal*; for that it was dangerous to give them a night's respite, lest they should convey away their wealth, or take example by the *Philip* and *Thomas* to burn themselves. This message was delivered by Sir *Anthony Ashley* and Sir *William Monson*, as my lord admiral was in his boat, ready with his troops of seamen to land, who, fearing the lord general *Essex* should be put to distress with his small companies, which were but three regiments, hastened by all means to second him, and gave order to certain ships the next day to pursue them.

Since I have undertaken to shew the oversights committed in any of our *English* voyages, such as were committed here shall, without fear or flattery, appear to the judicious reader.

Though the earl of *Essex's* carriage and forwardness merited much, yet if it had been with more deliberation, and less haste, it would have succeeded better: and if he were now living, he would confess Sir *William Monson* advis'd him rather to seek to be master of the ships than of the town; for it was that would afford both wealth and honour: for the riches in ships could not be concealed, or convey'd away, as in towns they might. And the ships themselves being brought for *England*, would be always before mens eyes there, and put them in mind of the greatness of the exploit; as for the

1596. the town, perhaps it might be soon won, but probably not long enjoy'd, and so quickly forgotten: and to speak indifferently, by the earl's sudden landing, without the lord admiral's privity, and his giving advice by a message to attempt the ships, which should have been resolv'd upon mature deliberation, no doubt the lord admiral found his honour a little eclips'd, which perhaps hasten'd his landing for his reputation sake, when as he thought it more advisable to have possess'd himself of their fleet.

Before the lord admiral could draw near the town, the earl of *Essex* had entered it; and though the houses were built in such manner, that every house serv'd for a platform, yet they were forc'd to quit them, and retire to the castle.

My lord at last, in despite of the enemy, gain'd the market-place, where he found the greatest resistance from the houses thereabouts, and where that worthy gentleman Sir *John Wingfield* was unluckily slain. The lord general *Essex* caus'd it to be proclaim'd by beat of drum through the town, that all that would yield, should repair to the town-house, where they should have promise of mercy, and those that would not to expect no favour. The castle desir'd respite to consider till the morning following, and then by one general consent, they surrender'd themselves to the two lord generals mercy. The chief prisoners, men and women, were brought into the castle, where they remain'd a little space, and were sent away with honourable usage. The noble treating of the prisoners has gain'd everlasting honour to our nation, and the generals in particular.

It cannot be supposed the lord generals had leisure to be idle the day following, having so great business to consider of, as the securing the town, and enjoying the merchant ships: wherefore, for the speedier dispatch, they treated with the best men of the city about the ransom to be given for their town and liberties. One hundred and twenty thousand ducats was the sum concluded on; and for security thereof, many of them became hostages. There was likewise an overture for the ransom of their ships and goods, which the duke of *Medina* hearing of, rather than we should reap any profit by them, he caus'd them to be fired.

We found by experience, that the destroying of this fleet, (which did amount to the value of six or seven millions,) was the general impoverishing of the whole country; for when the pledges were sent to *Seville*, to take up money for their redemption, they were answer'd, That all the town was not able to raise such a sum, their loss

was so great by the destruction of their fleet. And to speak the truth, the king of *Spain* never receiv'd so great an overthrow, and so great an indignity at our hands as this; for our attempt was at his own home, in his port that he thought as safe as his chamber, where we took and destroy'd his ships of war, burnt and consum'd the wealth of his merchants, sack'd his city, ransom'd his subjects, and enter'd his country without impeachment.

To write all accidents of this voyage, were too tedious, and would weary the reader; but he that would desire to know the behaviour of the *Spaniards*, as well as of us, may confer with divers *Englishmen* that were redeem'd out of the galleys in exchange for others, and brought into *England*.

After we had enjoy'd the town of *Cadiz* a fortnight, and our men were grown rich by the spoil of it, the generals imbarcked their army, with an intent to perform greater services before their return; but such was the covetousness of the better sort, who were enrich'd there, and the fear of hunger in others, who complain'd for want of victuals, that they could not willingly be drawn to any farther action, to gain more reputation. The only thing that was afterwards attempted was *Faro*, a town of *Algarve* in *Portugal*, a place of no resistance or wealth, only famous for the library of *Oforius*, who was bishop of that place; which library was brought into *England* by us, and many of the books bestowed upon the new-erected library of *Oxford*.

Some prisoners were taken; but of small account: who told us, that the greatest strength of the country was in *Lagos*, the chief town of *Algarve*, twelve miles distant from thence, because most part of the gentlemen thereabouts were gone thither, to make it good, expecting our coming: this news was acceptable to my lord of *Essex*, who preferr'd honour before wealth: and having had his will, and the spoil of the town of *Faro*, and country thereabouts, he shipp'd his army, and took council of the lord admiral how to proceed. My lord admiral diverted his course for *Lagos*, alledging the place was strong, of no wealth, always held in the nature of a fisher-town belonging to the *Portuguese*, who in their hearts were our friends; that the winning of it, after so eminent a place as *Cadiz*, could add no honour; though it should be carried, yet it would be the loss of his best troops and gentlemen, who would rather die than receive the indignity of a repulse. My lord of *Essex*, much against his will, was forc'd to yield to these reasons, and desist from that enterprize.

About this time there was a general complaint for want of victuals, which proceeded rather

1596. rather out of a desire that some had to be at home, than out of any necessity; for Sir William Monson and Mr. Darrel were appointed to examine the condition of every ship, and found seven weeks victuals, (drink excepted,) which might have been supplied from the shore in water; and this put the generals in great hope to perform something more than they had done. The only service now to be thought on, was to lie in wait for the carracks, which in all probability could not escape us, though there were many doubts to the contrary, but easily answer'd by men of experience: but in truth some mens desires homeward were so great, that no reason could prevail with, or persuade them.

Coming into the height of the rock, the generals took council once again; and then the earl of Essex and the lord Thomas Howard offer'd, with great earnestness, to stay out the time our victuals lasted, and desir'd to have but twelve ships furnish'd out of the rest to stay with them: but this would not be granted, though the squadron of the *Hollanders* offer'd voluntarily to stay. Sir Walter Raleigh alledg'd the scarcity of victuals, and the infection of his men. My lord general Essex offer'd, in the greatness of his mind, and the desire he had to stay, to supply his want of men and victuals, and to exchange ships: but all proposalls were in vain; for the riches of *Cadix* kept them that had got much, from attempting more, as if it had been pure want, and not honour, would have enforc'd them to greater enterprizes.

This being the last hopes of the voyage, and being generally withstood, it was concluded to steer away for the *North Cape*,

and afterwards to view and search the harbours of the *Groyne* and *Ferrol*; and if any of the king of *Spain's* ships chanced to be there, to give an attempt upon them.

The lord admiral sent a carvel of our fleet into these two harbours, and apparell'd the men in *Spanish* cloaths, to avoid suspicion: this carvel return'd the next day with a true relation, that there were no ships in the harbours: and now passing all places where there was any hope of doing good, our return for *England* was resolv'd upon; and on the 8th of *August* the lord admiral arriv'd at *Plimouth* with the greatest part of the army: and the lord general Essex, who staid to accompany the *St. Andrew*, which was under his charge, and reputed of his squadron, two days after us, being the 10th of *August*, where he found the army in that perfect health, as the like has not been seen, for so many to go out of *England* to such great enterprizes, and to return home again so well.

He himself rid up to the court, to advise with her majesty about the winning of *Calais*, which the *Spaniards* took the *Easter* before. Here was a good opportunity to have regain'd the ancient patrimony of *England*; but the *French* king thought he might with more ease regain it from the *Spaniard* who was his enemy, than recover it again from us who were his friends.

My lord admiral with the fleet went to the *Downs*, where he landed, and left the charge of the navy to Sir Robert Dudley and Sir William Monson. In going from thence to *Chatham*, they endur'd more foul weather and contrary winds, than in the whole voyage besides.

1597. HER majesty having knowledge of the king of *Spain's* drawing down his fleet and army to the *Groyne* and *Ferrol*,

with an intent to enter into some action against her; and that notwithstanding the loss of thirty six sail of his ships that were cast

1597. cast away upon the *North Cape*, in their coming thither, he prepar'd with all possible means to revenge the disgrace we did him the year last past at *Cadiz*. Her majesty likewise prepar'd to defend herself, and fitted out the most part of her ships for the sea; but at length, perceiving his drift was more to affright than offend her, though he gave it out otherwise, because she should provide to resist him at home, rather than to annoy him abroad, she was unwilling the great charges she had been at should be bestowed in vain; and therefore turn'd her preparations another way, than that for which she first intended them.

The project of this voyage was to assault the king of *Spain's* shipping in the harbour of *Ferrol*, which the queen chiefly desir'd to do for her own security at home, and afterwards to go and take the *Tercera* islands, and there to expect the coming home of the *Indian* fleet: but neither of these two designs took that effect which was expected; for in our setting forth, the same day we put to sea we were taken with a most violent storm and contrary winds; and the general was separated from the fleet, and one ship from another; so that the one half of the fleet was compelled to return home; and the rest that kept the sea, having reach'd the coast of *Spain*, were commanded home, by order of the lord general.

Thus, after their return, they were to advise upon a new voyage, finding by their ships and victuals they were unable to perform the former: whereupon it was thought convenient all the army should be discharged for saving of victuals, except a thousand of the prime soldiers of the low countries, which were put into her majesty's ships, that they might be the better prepar'd, if they should chance to encounter the *Spanish* fleet. Thus the second time they departed *England*, though not without some danger of the ships, by reason of the winter's near approach.

The first land in *Spain* we fell in withal was the *North Cape*, the place whither our directions led us, if we happen'd to lose company. Being there descried from the shore, and not above twelve leagues from the *Groyne*, where the *Spanish Armada* lay, we were in good hopes to have enticed them out of the harbour to fight us; but spending some time thereabouts, and finding no such disposition in them, it was thought fit no longer to linger about that coast, lest we should lose our opportunity upon the *Indian* fleet; therefore every captain receiv'd his directions to stand his course into thirty six degrees, there to spread ourselves north and south, it being a heighth that commonly the *Spaniards* sail in from the *Indies*.

VOL. III.

At this time the lord general complain'd of a leak in his ship; and two days after, towards midnight, he brought himself upon the lee to stop it. Sir *Walter Raleigh*, and some other ships, being a-head of the fleet, and it growing dark, they could not discern the lord general's working, but stood their course as before directed; and through this unadvised working of my lord, they lost him, which was a great disheartening to his fleet.

The day following, Sir *Walter Raleigh* was inform'd, by a pinnace he met, that the great *Armada*, which we supposed to be in the *Groyne* and *Ferrol*, was gone to the islands for the guard of the *Indian* fleet: this pinnace, with this intelligence it gave us, Sir *Walter Raleigh* immediately sent to look out the general. My lord had no sooner receiv'd this advice, but at the very instant he directed his course to the islands, and dispatch'd some small vessels to Sir *Walter Raleigh*, to inform him of the sudden alteration of his course, upon the news receiv'd from him, commanding him with all expedition to repair to *Flores*, where he would not fail to be at our arrival. At the islands we found this intelligence utterly false; for neither the *Spanish* ships were there, nor were expected there. We met likewise with divers *Englishmen* that came out of the *Indies*; but they could give us no assurance of the coming home of the fleet; neither could we receive any advertisement from the shore, which made us half in despair of them.

By that time we had watered our ships, and refresh'd ourselves at *Flores*, Sir *Walter Raleigh* arriv'd there; who was will'd by the lord general, after he was furnish'd of such wants as that poor island afforded, to repair to the island of *Fayal*, which my lord intended to take. Here grew great questions and heart-burnings against Sir *Walter Raleigh*; for he coming to *Fayal*, and missing the lord general, and yet knowing my lord's resolution to take the island, he held it more advisable to land with those forces he had, than to expect the coming of my lord; for in that space the island might be better provided: whereupon he landed, and took it before my lord's approach. This act was held such an indignity to my lord, and urg'd with that vehemence by those that hated Sir *Walter*, that if my lord, though naturally kind and flexible, had not fear'd how it would have been taken in *England*, I think Sir *Walter* had smarted for it.

From this island we went to *Graciosa*, which did willingly relieve our wants as far as it could; yet with humble intreaty to forbear landing with our army, especially because they understood there was a squad-

1597. 1597.
 ~~~~~  
 dron of *Hollanders* amongst us, who did not use to forbear cruelty wherever they came: and here it was that we met the *Indian* fleet, which in manner following miraculously, escap'd us.

The lord general having sent some men of good account into the island, to see there should be no injury offer'd to the *Portuguese*; because he had pass'd his word to the contrary, those men advertis'd him of four sail of ships descried from the shore, and one of them, greater than the rest, seem'd to be a carrack. My lord receiv'd this news with great joy, and divided his fleet into three squadrons, to be commanded by himself, the lord *Thomas Howard*, and Sir *Walter Raleigh*. The next ship to my lord, of the queen's, was the *Rainbow*, wherein Sir *William Monson* went, who receiv'd direction from my lord to steer away south that night; and if he should meet with any fleet, to follow them, carrying lights, or shooting off his ordnances, or making any other sign that he could; and if he met with no ships, to direct his course the next day to the island of *St. Michael*; but promising that night to send twelve ships after him. Sir *William* befought my lord, by the pinnace that brought him this direction, that above all things he should have a care to dispatch a squadron to the road of *Angra* in the *Terceras*; for it was certain, if they were *Spaniards*, thither they would resort.

Whilst my lord was thus contriving his business, and ordering his squadron, a small bark of his fleet happen'd to come to him, who assur'd him, that those ships discover'd from the land were of his own fleet, and that they came in immediately from them: this made my lord countermand his former direction; only Sir *William Monson*, who was the next ship to him, and receiv'd the first command, could not be recalled back. Within three hours of his departure from my lord, which might be about twelve of the clock, he fell in company of a fleet of twenty five sail; which at the first he could not assure himself to be *Spaniards*, because the day before, that number of ships was missing from our fleet. Here he was in a dilemma, and great perplexity with himself; for in making signs, as he was directed, if the ships prov'd *English*, it were ridiculous, and he would be expos'd to scorn; and to respite it till morning were as dangerous, if they were the *Indian* fleet; for then my lord might be out of view, or of the hearing of his ordnance; therefore he resolv'd ratherto put his person, than his ship in peril. He commanded his master to keep the weather-gage of the fleet, whatsoever should become of him; and it blowing little wind, he betook himself to his

boat, and row'd up with this fleet, demanding whence they were. They answer'd, of *Seville* in *Spain*; and ask'd of whence he was. He told them, of *England*; and that the ship in sight was a galleon of the queen's of *England*, single and alone, alledging the honour they would get by winning her; his drift being to draw and entice them into the wake of our fleet, where they would be so entangled, as they could not escape. They return'd him some shot, and ill language; but would not alter their course to the *Terceras*, whither they were bound, and where they arriv'd, to our misfortune. Sir *William Monson* return'd aboard his ship, making signs and lights, and report with his ordnance, but all in vain; for my lord altering his course, as you have heard, stood that night to *St. Michael's*, and pass'd by the north side of *Tercera*, a farther way than if he had gone by the way of *Angra*, where he had met the *Indian* fleet.

When day appear'd, and Sir *William Monson* was in hopes to find the twelve ships promis'd to be sent to him, he might discern the *Spanish* fleet two miles and a little more a-head of him, and a-stern him a galleon, and a pinnace betwixt them; which putting forth her flags, he knew to be the earl of *Southampton* in the *Garland*. The pinnace was a frigate of the *Spanish* fleet; who took the *Garland* and the *Rainbow* to be galleons of theirs; but seeing the flag of the *Garland*, she found her error, and sprang a-loof, thinking to escape; but the earl pursued her with the loss of some time, when he should have followed the fleet, and therefore was desir'd to desist from that chase by Sir *William Monson*, who sent his boat to him. By a shot from my lord this frigate was sunk; and while his men were rifling her, Sir *Francis Vere* and Sir *William Brook* came up in their two ships, who the *Spaniards* would have made us believe were two galleons of theirs; and so much did my lord signify to Sir *William Monson*, wishing him to stay their coming up; for that there would be greater hope of those two ships, which there was no doubt but we were able to master, than of the fleet, for which we were too weak.

When Sir *William* knew the two ships to be the queen's, which he had before suspected, he began to pursue the *Spanish* fleet afresh; but by reason they were so far a-head of him, and had so little way to sail, they recover'd the road of *Tercera*; but he and the rest of the ships pursued them, and himself led the way into the harbour, where he found sharp resistance from the castle; but yet so batter'd the ships, that he might see the masts of some shot by the board, and the men quit the ships; so that there wanted nothing but a gale of wind to enable him

1597. him to cut the cables of the hawfers, and to bring them off; wherefore he sent to the other three great ships of ours, to desire them to attempt the cutting their cables; but Sir Francis Vere rather wish'd his coming off, that they might take a resolution what to do: this must be rather imputed to want of experience than backwardness in him; for Sir William sent him word, that if he quitted the harbour, the ships would tow near the castle; and as the night drew on, the wind would freshen, and come more off the land; which indeed prov'd so, and we above a league from the road in the morning.

We may say, and that truly, there was never that possibility to have undone the state of *Spain* as now; for every royal of plate we had taken in this fleet, had been two to them, by our converting it by war upon them.

None of the captains could be blamed in this business; all is to be attributed to the want of experience in my lord, and his flexible nature to be over-ruled; for the first hour he anchored at *Flores*, and call'd a council, Sir William Monson advised him, upon the reasons following; After his watering to run west, spreading his fleet north and south, so far as the eastern wind that then blew would carry them; alledging, that if the *Indian* fleet came home that year, by computation of the last light moon, from which time their disemboguing in the *Indies* must be reckoned, they could not be above two hundred leagues short of that island; and whensoever the wind should chop up westerly, he bearing a slack sail, they would in a few days overtake him.

This advice my lord seem'd to embrace; but was diverted by divers gentlemen, who, coming principally for land-service, found themselves tir'd by the tediousness of the sea. Certain it is, if my lord had followed his advice, within less than forty hours he had made the queen owner of that fleet; for by the pilot's card, which was taken in the frigate, the *Spanish* fleet was but fifty leagues in traverse with that eastern wind, when my lord was at *Flores*; which made my lord wish, the first time Sir William Monson repair'd to him, after the escape of the fleet, that he had lost his hand, so he had been ruled by him.

Being met aboard Sir Francis Vere, we consulted what to do, and resolv'd to acquaint my lord with what had happen'd, desiring his presence with us, to see if there were any possibility to attempt the shipping; or surprize the island, and so to possess the treasure.

My lord receiv'd this advertisement just as he was ready with his troops to have landed in *St. Michael's*; but this message diverted his landing, and made him presently cast

1597. about for the islands of the *Tercera*, where we lay all this while expecting his coming. In his course from *St. Michael's* it was his hap to take three ships that departed the *Havana* the day after the fleet; which three ships did almost then countervail the expence of the whole voyage.

At my lord's meeting with us at *Tercera*, there was a consultation how the enemy's ships might be fetched off, or destroyed, as they lay; but all men, with one consent, agreed the impossibility of it. The attempting the island was propounded; but withstood for these reasons, The difficulty in landing; the strength of the island, which was increased by fourteen or fifteen hundred soldiers in the ships; and our want of victuals, to abide by the siege. Seeing then we were frustrate of our hopes at the *Tercera*, we resolv'd upon landing in *St. Michael's*; and arriv'd the day following at *Punta Delgada*, the chief city. Here my lord imbarc'd his small army in boats, with offer to land; and having thereby drawn the enemy's greatest force thither to resist him, suddenly he rowed to *Villa Franca*, three or four leagues distant from thence; which, not being defended by the enemy, he took. The ships had order to abide in the road of *Delgada*; for that my lord made account to march thither by land; but being ashore at *Villa Franca*, he was inform'd that the march was impossible, by reason of the high and craggy mountains which diverted his purpose.

Victuals now grew short with us; and my lord general began discreetly to foresee the danger in abiding towards winter upon these coasts, which could not afford him an harbour, only open roads that were subject to southerly winds; and upon every such wind, he must put to sea for his safety. He consider'd, that if this should happen when his troops were ashore, and he not able to reach the land in a fortnight, or more, which is a thing ordinary, what a desperate case he should put himself into, especially in so great a want of victuals; and so concluding, that he had seen the end of all his hopes by the escape of the fleet, he embarked himself and army, though with some difficulty, the seas were now grown so high.

By this time the one half of the fleet that rid in *Punta Delgada* made away for *Villa Franca*; and those that remain'd behind, being thought by a ship of *Brazil* to be the *Spanish* fleet, she came in amongst them, and so was betray'd. After her there follow'd a carrack, who had been serv'd in the like manner, but for the hasty and indiscreet weighing of a *Hollander*, which made her run ashore under the castle. When the wind less'n'd, Sir William Monson weighed with the *Rainbow*, thinking to give an attempt upon

1597. on her, notwithstanding the castle; which she perceiving, as he drew near unto her, she set herself on fire, and burned down to the very keel. She was a ship of fourteen hundred tuns burden, that the year before was not able to double the cape of *Good-Hope* in her voyage to the *East Indies*, but put into *Brazil*, where she was laden with sugars, and afterwards thus destroyed. The *Spaniards*, who presumed more upon their advantages than valour, and thought themselves in too weak a condition to follow us to the islands, and put their fortunes upon a day's service, subtilly devised how to intercept us as we came home, when we had least thought or suspicion of them and their fleet, which was all this while in the *Groyne* and *Ferrol*, not daring to put forwards while they knew ours to be upon the coast. Their general, the *Adelantado* came for *England*, with a resolution to land at *Falmouth*, and fortify it; and afterwards with their ships to keep the sea, and expect our coming home scattered; and having thus cut off our sea-forces, and possessing the harbour of *Falmouth*, they thought with a second supply of thirty seven *Levantine* ships, which the marquis *Arumbullo* commanded, to have returned and gained a good footing in *England*.

We may say, and that truly, that God fought for us: for the *Adelantado* being within a few leagues of the island of *Silly*, he commanded all his captains on board him to receive his directions; but whilst they were in consultation, a violent storm took them at east, inasmuch that the captains could hardly recover their ships, but in no case were able to save their boats: the storm continued so furious, that happy was he who could recover home, seeing their design thus overthrown by the loss of their boats, whereby the means of landing was taken away. Some who were willing to stay, and receive the farther commands of the general, kept the seas so long upon our coast, that in the end they were taken; others put themselves into our harbours for refuge and succour; and it is certainly known, that in this voyage the *Spaniards* lost eighteen ships, the *St. Luke* and the *St. Bartholomew* being two, and in the rank of his best galleons.

We must ascribe this loss of theirs to God only; for certainly the enemies designs were dangerous, and not diverted by our force, but by his will, who from time to time would not suffer the *Spaniards* in any one of their attempts to set footing in *England*, as we did in all quarters of *Spain*, *Portugal*, the *Islands*, and both *Indies*.

In this voyage to the islands, I have set down my lord's design upon the *Spanish* fleet lying at *Ferrol*; wherein his lordship required a captain he most relied on to have his opinion in writing. First, Whether he

should attempt the ships in harbour, or no? Secondly, whether before or after his being at the *Tercera*? And, Lastly, the manner how to assail them? The captain's answer follows, which you may read and judge of.

To the Right Honourable the Earl of ESSEX.

1597. **I**N answer to your lordship's demand, *Whether to give an attempt upon the ships in Ferrol, before the landing your men, and the castles gain'd*, this I say, That before I can give my resolution, I must describe the state of the harbour, and the situation of the forts, with the strength of the ships; for out of these must proceed my reasons.

" I conceive at the entrance of the harbour there are two castles, the one on the southside, the other on the north, both commanding any ship that shall enter: they are seated low by the water, the cliffs on both sides very high, and the harbour to be chained.

" My opinion is, if your lordship do land your men in the bay before you take the forts, as there is no other place of landing, you must consider it is an open road, the coast subject to northerly winds, which beat so hard on the shore, that you cannot land your soldiers and their furniture with conveniency and safety, especially being sure to find resistance at your landing.

" But your lordship may answer, That he who attempts great things, must run all hazards: and as it is wisdom to forecast all doubts and dangers, so were it too great security not to hazard loss upon hope of victory: and whereas the danger of landing by reason of the sea's breaking on the shore is alledged, you may think we are not always sure of a northerly wind, nor of so great a sea; and therefore you must put your attempt in adventure.

" But for your lordship's satisfaction in this point, you must know that you cannot seize that coast, but with such a wind as makes such a sea as renders it difficult for you to land. Or suppose, that being upon the coast as you were the last year, when you came from *Cadiz*, and that the wind should now do, as then it did, chop up from the southwest to the north-west, your lordship would be imbay'd, and forced to seek the harbour of the *Groyne* or *Ferrol*, and make good those places, which then you might have done: but now you must consider your army is not so great as it was then, and their fortifications and shipping are much stronger than they were. My opinion is, therefore, That there is little possibility of attempting

1597.

“ tempting the shipping without gaining the forts ; neither do I see any possibility to possess them with your small army.

“ But your lordship may alledge, That though the ports were impregnable, yet they may be pass'd with a large wind ; for every shot that comes from them hits not, or if it does it kills not, but though it should, it sinks not.

“ I allow it is no great difficulty to pass any fort with a ship under sail, being a moveable thing, where no certain aim can be had ; yet I think no place more dangerous than *Ferrol*, because of the highness of the hills, and the narrowness of the entrance that makes a continual calm, or the little wind so uncertain, that every puff brings sundry shift of wind. Many of the king of *Spain*'s ships have been there lost : and therefore the advantage of a ship in passing a castle is the force and largeness of a wind ; as to the contrary, these forts will be able to annoy a ship upon the former reasons.

“ But allow that your lordship's fleet should enter safely ; for the greatest difficulty is not to pass in, but to perform the service when they are within : your fleet being entered, they will be in the state of a prisoner, that cannot get out of a house without leave of his keeper ; for the wind that is good and large for them to enter, is as much against their coming out ; and therefore it behoves every commander, as well to think of bringing himself off with discretion, as of falling on with resolution.

“ Hitherto I have shewed the uncertainty of your lordship's landing, the doubtfulness of your attempt, and the danger in not having the castles ; but I will now suppose the forts to be ours, and the whole shipping passed them without any loss ; yet will the enemy have as great an advantage as they can wish ; for the number of men and shipping, and the greatness of their vessels, are known to exceed ours ; and where there is an equality in shipping on both sides, the victory is not to be obtained on neither side, whilst there is ammunition and men on the other side, unless it be by a general boarding, or stratagem of firing ; in which the *Spaniards* shall have advantage of us, they being in their own harbour, where they may be supplied, and we can have no relief but what we bring with us.

“ If your lordship shall hold it convenient, as in discretion I think you will not, to send in her majesty's ships upon this service, then you must consider the rest of your fleet to be far inferior to the enemies strength ; and so you will send them

VOL. III.

“ apparently to their own destruction, slaughter, and ruin. 1597.

“ As I am against the attempt of *Ferrol* before you return from the islands, so I am also against your lordship's presenting yourself upon that coast ; for in thinking to entice forth the fleet, besides that you shall discover your own strength, you shall give them occasion to arm their country ; and besides, it will be in their choice, whether to fight with you, or no ; for they will be able to discover and judge of your forces ; and such is their discipline, that though they had your lordship upon advantage, yet they dare not attempt you without a special order from the king ; which your lordship found by experience in the count *de Fuentes*'s answer to your lordship's challenge at the walls of *Lisbon*. And to conclude, since your lordship intends to go from *Ferrol* to *Tercera*, it were much better, in my opinion, first to attempt that island, whilst your army is strong and in health. It is a place of much more importance, and more likelihood of prevailing than in your enterprize upon the shipping : that island being possessed, will draw contributions from the rest to maintain it : your lordship will cut off the supplies the *Spaniards* and *Portuguese* receive from both the *Indies*, *Guinea*, and *Brazil* : your lordship will provide a place of refuge for our fleet hereafter ; from whence they may with ease keep the seas, and endanger all the trades aforesaid : your lordship will unite that island to the crown of *England* ; and if there be an agreement of peace betwixt the two nations, you will gain advantageous conditions to the state of *England* upon a treaty : your lordship will be in a possibility of drawing the *Armada* of *Ferrol* to pursue you thither, that island importing them so much to defend ; and then your lordship will have your desire to fight them upon equal terms at sea. If you attempt *Ferrol* at first, and should happen to be repulsed, your lordship will confess, it will be so great a dishonour and loss, that you will not be able to resolve upon any other service ; and then will your expedition for the *Terceras* be utterly void : whereas if you would please to make your attempt upon the *Terceras* first, it will not take away your hope of *Ferrol* afterwards ; for in your return from thence, you will find the shipping either in the same state you left them in harbour ; or if you meet them at sea, you will encounter them upon advantage. Thus have I answered your lordship's demand as you required.”

1599. I Cannot write of any thing done in this year of 1599. for there was never greater expectation of war, with less performance. Whether it was a mistrust the one nation had of the other, or a policy held on both sides, to make peace with sword-in-hand, a treaty being entertained by consent of each prince, I am not to examine; but sure I am, the preparation was on both sides very great, as if the one expected an invasion from the other; and yet it was generally conceived, not to be intended by either; but that ours had only relation to my lord of *Essex*, who was then in *Ireland*, and had a design to try his friends in *England*, and to be revenged of his enemies, as he pretended, and as it proved afterwards by his fall. Howsoever it was, the charge was not so great as necessary; for it was commonly known, that the *Adelentado* had drawn both his ships and galleys to the *Groyn*; which was not usually done, but for some action intended upon *England* or *Ireland*, though he converted them afterwards to another use; for the galleys were sent into the *Low Countries*, and passed the narrow seas, whilst our ships lay there; and with the fleet the *Adelentado* pursued the *Hollanders* to the islands, whether he suspected they were gone. This fleet of *Hollanders*, which consisted of seventy three sail, were the first ships that ever display'd their colours in warlike sort against the *Spaniards*, in any action of their own; for how cruel soever the war seemed to be in *Holland*, they maintained a peaceable trade in *Spain*, and abused us. This first action of the *Hollanders* at sea proved

not very successful; for after the spoil of a town in the *Canaries*, and some hurt done at the island of *St. Tome*, they kept the sea for seven or eight months; in which time their general and most of their men sickened and died, and the rest return'd with loss and shame. Another benefit which we received by this preparation, was, That our men were now taught suddenly to arm, ever man knowing his command, and how to be commanded, which before they were ignorant of; and who knows not, that sudden and false alarms in an army are sometimes necessary? To say truth, the expedition which was then used in drawing together so great an army by land, and rigging so great and royal a navy to sea, in so little a space of time, was so admirable in other countries, that they received a terror by it; and many that came from beyond sea, said, *The queen was never more dreaded abroad for any thing she ever did.*

*Frenchmen* that came aboard our ships did wonder (as at a thing incredible) that her majesty had rigged, victualled, and furnished her royal ships to sea in twelve days time: and *Spain*, as an enemy, had reason to fear and grieve to see this sudden preparation; but more, when they understood how the hearts of her majesty's subjects joined with their hands, being all ready to spend their dearest blood for her, and her service. *Holland* might likewise see, that if they became insolent, we could be as soon provided as they; nor did they expect to find such celerity in any nation but themselves.

1599. It is probable too, that the king of *Spain*, and the archduke, were hereby drawn to entertain thoughts of peace: for as soon as our fleet was at sea, a gentleman was sent from *Brussels* with some overtures, though for that time they succeeded not. However, whether it was that the intended invasion from *Spain* was diverted, or that her majesty was fully satisfy'd of my lord of *Essex*, I know not; but so it was, that she commanded the sudden return of her ships from sea, after they had lain three weeks or a month in the *Downs*.

*Sir Richard Lewson.*  
*Captain Troughton.*  
*Captain Sommers.*

1600. THE last year, as you have heard, put all men in expectation of war, which yet came to nothing. This summer gave us great hope of peace; but with the like effect; for by consent of the queen, the king of *Spain*, and the archduke, their commissioners met at *Bologne in Picardy*, to treat of peace, a place chosen indifferently, the *French* king being in league and friendship with them all. Whether this treaty were intended but in shew only, or that they were out of hopes to come to any conclusion, or what else was the true and real cause of its breaking off so suddenly, I know not; but the pretence was slender: for there grew a difference about precedency betwixt the crowns of *Spain* and *England*; and so the hopes of peace were frustrated, though had it been really intended, matters might easily have been accommodated.

The queen suspected the event hereof before their meeting; and the rather, because the *Spaniards* entertained her with the like treaty in 1588. when at the same instant their navy appeared upon her coast to invade her: therefore, lest she should be guilty of too great security, in relying upon the success of this doubtful treaty, she furnished the three ships before named, under pretence to guard the western coast, which at that time was infested by the *Dunkirkers*.

And because there should be the less notice taken, part of the victuals was provided at *Plimouth*, and *Sir Richard Lewson*, who was then admiral of the narrow seas, was appointed general, for the more secret carrying on of the business; so as it could not be conjectured, either by their victualing or by their captain, being admiral of the narrow seas, that it was a service from

home. As they were in a readiness at *Plimouth*, expecting orders, the queen being fully satisfy'd that the treaty of *Bologne* would break off without effect, she commanded *Sir Richard Lewson* to hasten to the islands, there to expect the carracks and *Mexico* fleet. The *Spaniards*, on the other side, being as circumspect to prevent a mischief, as we were subtle to contrive it; and believing (as we did) that the treaty of peace would prove a vain hopeless shew of what was never meant, furnished eighteen tall ships to the islands, as they had usually done since the year 1591. The general of this fleet was *Don Diego de Borachero*.

Our ships coming to the islands, they and the *Spaniards* had intelligence of one another, but not the sight; for that *Sir Richard Lewson* hailed sixty leagues westward, not only to avoid them, but in hopes to meet with the carracks and *Mexico* fleet, before they could join them. But the carracks being formerly warned by the taking of one of them, and burning of another, in 1591. had ever since that year endeavoured to shun the sight of that island; so that our fleet being now prevented, as they had often before been, (nothing being more uncertain than actions at sea, where ships are to meet one another casually,) they returned home, having consumed time and victuals to no purpose, and seen not so much as one sail, from the time they quitted the coast of *England*, till their return, two ships of *Holland* excepted, that came from the *East Indies*, (for then began their trade thither,) which ships *Sir Richard Lewson* relieved, finding them in great distress and want.

1601. IN the year 1600. and part of the year 1601. there was a kind of cessation from arms, though not by agreement; for this year gave a hope of peace, which failing, the former course of annoying each other was revived; we in relieving the *Low Countries*, the *Spaniards* in assisting the rebels in *Ireland*. This was the summer that the archduke besieged *Ostend*, which was bravely defended, but principally by the supplies out of *England*. And towards winter, when the *Spaniards* thought we least look'd for war, *Don Diego de Borachero*, with forty eight sail of ships, and four thousand soldiers, was sent to invade *Ireland*.

In his way thither he lost the company of his vice admiral *Siriago*, who returned to the *Groyn*; which when the king heard, he was much distast'd with *Siriago*, and commanded him, upon his allegiance, to hasten with all speed for *Ireland*, as he was formerly directed. *Don Diego's* landing was known in *England* when it was too late to prevent it; yet, lest he should be supply'd with further forces, Sir *Richard Lewson* valiantly entered the harbour, drew near their fortifications, and fought the enemy for the space of one whole day, his ship being an hundred times shot through, and yet but eight men slain. God so blessed him, that he prevailed in his enterprise, destroyed their whole shipping, and made *Siriago* fly by land into another harbour, where he obscurely embarked himself in a *French* vessel for *Spain*. All this while the main army, which landed with their general *Don Juan de Avila*, was at *Kingsale*, expecting the aid of *Tyroen*, who

promised every day to be with them. Our 1601. army, commanded by the lord *Monjoy*, lord deputy of *Ireland*, besieg'd the town, so that he prevented their meeting, and many skirmishes pass'd betwixt them.

The siege continued with great miseries to both the armies, and not without cause, considering the season of the year, and the condition of the country, that afforded little relief to either. Some few days before *Christmas*, *Tyroen* appeared with his forces, which was some little heartening to the enemy, in hopes to be freed of their imprisonment; for so may I call it, they were so strictly beleagu'd. The day of agreement betwixt the *Spaniards* and *Tyroen* was *Christmas-Eve*, on which day there happened an earthquake in *England*; and as many times such signs prove *aut bonum, aut malum omen*, this proved fortunate to us, the victory being obtained with so little loss as is almost incredible.

This was the day of trial, whether *Ireland* should continue a parcel of our crown, or no; for if the enemy had prevail'd in the battle, and a treaty had not afterwards obtained more than force, it was to be feared *Ireland* would hardly have been ever recovered. The *Spaniards* in *Ireland* seeing the success of *Tyroen*, and the impossibility for him to reinforce his army, being hopeless of supplies out of *Spain*, and their poverty daily increasing, they made offers of a parley; which was granted, and a peace ensued; the conditions whereof are extant in print. They were furnished with ships, and secured of their passage into *Spain*, where arriving in *English* vessels, the ships returned back for *England*.

*Sir Richard Lewson and Sir William Monson to the Coast of Spain, Anno 1602.*

1602. THE last attempt of the Spaniards in Ireland awaken'd the queen, who, it seems, for two or three years together, entertained the hopes of peace, and therefore was sparing in setting forth her fleets; but now perceiving the enemy had found the way into Ireland, and that it behoved her to be more vigilant than ever, she resolv'd, as the safest course, to infest the Spanish coasts with a continual fleet, and this year furnished the ships aforesaid, having promise from the states of Holland to join to them twelve sail of theirs; and because this important service required great speed, she had not time enough to man them; or supply them with provisions altogether so well as they were usually wont to be, but was content with what could be got in so short a warning, so desirous was she to see her ships at sea.

Sir Richard Lewson set sail with five of them the 19th of March, and left Sir William Monson behind with the other four, to attend the coming of the Hollanders; though within two or three days after Sir William received command from the queen to hasten with all speed to Sir Richard Lewson; for that she was advertis'd, that the silver ships were arrived at the Terceras. Sir William Monson hereupon neglected no time, nor stay'd either to see himself better mann'd, or his ships better furnished, but put to sea the 26th of March.

This intelligence of the queen's was true; for the plate-fleet had been at the Terceras, and departing thence, in their course for Spain, Sir Richard Lewson, with his few ships, met them; but to little purpose, wanting the rest of his fleet, and the help of the twelve Hollanders. We may very well account this not the least error or negligence that has been committed in our voyages; for if the Hollanders had kept touch, according to promise, and the queen's ships had been fitted out with care, we had made her majesty mistress of more treasure than any of her progenitors ever enjoy'd.

1602. Sir Richard Lewson's design against the Indian fleet, notwithstanding his great valour, being thus frustrated, and by the Hollanders slackness crossed, he plyed towards the rock, to meet Sir William Monson, as the place resolved on between them; but Sir William having spent fourteen days thereabouts, and hearing no tidings of him, went round to the southward Cape, where he was likewise frustrated of a most promising hope; for meeting with certain Frenchmen and Scots, at the same instant he descried three ships of ours, sent by Sir Richard to look him. These French and Scotch ships came from St. Lucar, and gave an account of five galleons, ready the next tide to set sail for the Indies: they likewise told him of two others that departed three days before, wherein went Don Pedro de Valdes to be governor of the Havana, who had been prisoner in England in 1588.

These two latter ships were met one night by the Warspight, whereof captain Sommers was commander; but whether it was by the darkness of the night, or by what other casualty, (for the sea is subject to many,) I know not; but they escaped.

This news of the five galleons, and the three ships of the queen's so happily meeting together, made Sir William direct his course into the latitude the Spaniards were most likely to sail in; and coming to it, he had sight of five ships, which, in respect of their number and course, he made reckoning to be the five galleons; and thought that day should fully determine and try the difference between the strength and puissance of the English and Spanish ships, their number and greatness being equal. But his joy was soon abated; for coming up with them, he found them to be English ships from the Streights, and bound home. Yet this did not lessen the hope he had conceived that the Spaniards might be met withal; and the next day he gave chase to one ship alone, that came out of the Indies, which he took, though he

1602. had been better without her; for she brought him so far to leeward, that at night the galleons passed to windward, not above eight or ten leagues off us, by report of an *English* pinnace that met them, who came into our company the day following. These misfortunes lighting first upon Sir *Richard*, and after upon Sir *William*, might have been sufficient reasons to discourage them: but they knowing the accidents of the sea, and that fortune could as well laugh as weep, having good ships under foot, their men sound and in health, and plenty of victuals, they did not doubt but that some of the wealth which the *Indies* sent forth into *Spain* would fall to their shares.

Upon *Tuesday* the first of *June*, to begin our new fortune with a new month, Sir *Richard Lewson* and Sir *William Monfon*, who some nights before, had met accidentally in the sea, were close on board the rock, where they took two ships of the *east* country, bound for *Lisbon*; and while they were rummaging these ships, they descried a carvel from cape *Espichel* bearing with them, which, by signs she made, they perceived had a desire to speak with them. Sir *Richard* immediately chafed her, and left Sir *William* with the two *Easterlings* to abide about the rock till his return. The carvel being fetch'd up, gave account, that a carrack and eleven galleys were in *Cerimbra* road, and that she was sent by two ships of ours, the *Nonpareille* and the *Dreadnought*, which lay thereabouts, to look out the admiral. With what joy this news was apprehended may be easily imagined: Sir *Richard* made signs to Sir *William* to stand with him, and left he should not be discern'd, he caused the carvel to ply up with him, wishing him to repair to him; but before they could approach the cape it was midnight, and nothing chanced all that time but the exchanging of some shot that pass'd betwixt the admiral and the galleys.

Upon *wednesday*, the second of *June*, every man look'd early in the morning what ships of her majesty's were in sight, which were five in number; the *Warspight*, wherein Sir *Richard* was; for the *Repulse* he had sent for *England* some days before, by reason of a leak; the *Garland*, the *Nonpareille*, the *Dreadnought*, and the *Adventure*, besides the two *Easterlings* taken the day before. All the captains resorted on board the admiral to council, which took up most part of the day. At first there was an opposition by some, who alledged the danger and impossibility of taking the carrack, being defended by the castle and eleven galleys: but Sir *William Monfon* prevailed so far, as that all consented to go upon her the next day, and concluded upon this

course following, That he and Sir *Richard* should anchor as near the carrack as they could, the rest to ply up and down, and not anchor. Sir *William* was glad of this occasion, to be revenged of the galleys, hoping to requite the slavery they put him to when he was prisoner in them, and singled himself from the fleet a league, that the galleys might see it was in defiance of them; and so the marquis of *St. Cruz* and *Frederrick Spinola*, the one general of the *Portuguese*, the other of the *Spanish* galleys, apprehended it, and came forth with an intent to fight him; but being within shot, were diverted by one *John Bedford*, an *Englishman*, who undertook to know the force of the ship, and Sir *William* that commanded her.

Before I go farther, I will a little digress, and acquaint you with the situation of the town, and the manner of placing the galleys against us. The town of *Cerimbra* lies in the bottom of a road, which is a good succour for ships with a northerly wind. It is built with free-stone, and near the sea is erected a strong and spacious fort, well replenished with ordnance: above the town, upon the top of a hill, is seated an ancient strong friery, whose situation makes it impregnable, and able to command the town, castle, and road: close to the shore lay the carrack, like a bulwark to the west side of the castle, so as it defended both that and the east part of the town. The eleven galleys had flank'd and fortified themselves with the small neck of a rock on the west side of the road, with their prows right forward, to play upon us, every one carrying a cannon in her beak, besides other pieces in their prows; and they were no way to be damaged by us, till our ships came so nigh the town, that all these forces might play upon us in one instant.

The galleys being placed to this great advantage, they made account (as a captain of one of them we took confess'd,) to have sunk our ships of themselves, without any farther help. We saw the tents pitched, and great troops of soldiers drawn together, which was no less than the whole country in arms against us: the boats passed betwixt the shore and the carrack all the day long, which we supposed was to unlade her; but we found afterwards it was rather to strengthen her with men and ammunition. Here appear'd many difficulties and dangers, and little hope of taking, but rather of sinking or burning her, as most men conjectur'd. The danger from the galleys was great, they being flank'd with the point of a rock at our entrance, as you have heard, it being likewise calm, and they shooting low: another danger was, that of the

1602. the wind; for if it had come from the sea, the road being open, and the bay deep, our attempt must have been in vain. And notwithstanding these, and many more apparently seen, and that there was no man but imagin'd that most of the carrack's lading was ashore, and that they would hale her a-ground under the castle, where no ship of ours should be able to come at her; all which objections, with many more, were alledg'd, yet they little prevail'd. Procrastination was perilous, and therefore with all expedition they thought convenient to charge the town, the fort, the galleys, and carrack, all at one instant: and they had determin'd, if the carrack had been a-ground, or so nigh the shore, that the queen's ships could not reach her, that the two Easterlings, the day before taken, should board and burn her.

Thursday the third day, early in the morning, every man commending himself to God's tuition and protection, expected when to begin, according to the agreement the day before. A gale of wind happening about ten of the clock, the admiral weigh'd, shot off a warning-piece, and put forth his flag in the main-top. The vice-admiral did the like in his fore-top, according to the custom of the sea. Every captain encourag'd his men; which so emboldened them, that though they were weak and feeble before, they now revived and bestirred themselves, as if a new spirit had been infused into them. The admiral was the first that gave the charge; after him follow'd the rest of the ships, shewing great valour, and gaining great honour. The last of all was the vice-admiral, who entering into the fight, still strove to get up as near the shore as he could, where he came to an anchor, continually fighting with the town, the fort, the galleys, and carrack, all together; for he brought them betwixt him, that he might play both his broad-sides upon them. The galleys still kept their prows towards him. The slaves offer'd to forsake them, and swim to us; and every thing was in confusion amongst them: and thus they fought till five of the clock in the afternoon.

The vice-admiral was anchor'd in such a place, that the galleys rowed from one side to another, seeking to shun him, which Sir *Richard Lewison* observing, came on board him, and openly, in the view and hearing of his whole company, embraced him, and told him, *He had won his heart for ever.*

The rest of the ships, as they were directed, plied up, except the admiral; who by the negligence of his master, or some other impediment, when he should have anchor'd, fell so far to leeward, that the

wind and tide carried him out of the road, so that it was the next day before his ship could be fetch'd in again; whereat the admiral was much enrag'd, and put himself into the *Dreadnought*, and brought her to an anchor, close to the vice-admiral, about two of the clock in the afternoon. There was no opportunity let pass; for where the admiral saw defect in any other ship, he presently caused it to be supplied; and the Easterlings, who were appointed to board the carrack, beginning to faint, and fail of observing the directions given them, the vice-admiral perceiving it, went on board them himself, vowing, that if they seem'd backward in putting in execution the design of firing the carrack, they should look for as little mercy from the *English*, as they could expect from the enemy. Whilst the vice-admiral was thus ordering things, Sir *Richard Lewison* came to him, and would in no case suffer him to board the carrack himself, but carried him into the *Dreadnought*, where they consulted how to preserve the carrack, and enjoy her.

The result of this consultation was, to offer her parley, which they presently put in practice, and commanded all the ships to leave shooting till the return of the messenger. The man employed was one captain *Sewell*, who had escaped, and swam to us, having been four years prisoner in the galleys, as did many *Turks* and christians. The design of this parley was to persuade them to yield, promising honourable conditions; and he was to intimate, as from himself, that the galleys, whose strength they presum'd upon, were beaten, some burnt, the rest fled; that we had the possession of the road, the castle not being able to abide our ordnance, much less the carrack; and if they refused this offer of mercy, they were to expect all the cruelty and rigour that a conqueror could impose upon his enemy. After some conference to this effect, the captain of the carrack told him, he would send some gentlemen of quality, with commission to treat, and desir'd that some of like quality from us might repair to him to the same purpose.

These gentlemen came aboard the *Dreadnought*, where the admiral and vice-admiral were, attending the return and success of captain *Sewell*. After the delivery of their message, they would needs hasten on board the carrack again; for that, as it seem'd, there was an uproar and a division in her, some being of opinion to entertain a parley, others to save themselves, and set her on fire; which Sir *William Monson* hearing, without further delay, or conference with Sir *Richard* what was to be done, he leaped suddenly into his boat, and rowed to the carrack. When he drew near to her, he

1602. he was known by divers gentlemen on board her, as having once been a prisoner among them: they seem'd to be very glad of this meeting, and they embrac'd in remembrance of their old acquaintance: the captain was Don *Diego Lobo*, a gallant young gentleman, of a noble house: he came down upon the bend of the ship, and commanded his men to stand aside; Sir *William* did the like to his company in the boat. The captain demanded of him if he had the *Portuguese* language. He told him he had enough to treat of that business; acquainted him of the place he commanded in the fleet, intimated the affection and respect he bore to the *Portuguese* nation, and that the treaty which was offer'd was his motion, and wished him to make his proposals, which were as follows. The first demand he made was, *That they should be safely put ashore with their arms.* The second, *That it should be done the same night.* The third, *That they should enjoy their ship and ordnance, as appertaining to the king, but we the wealth.* The fourth, *That the flag and ancient should not be taken down, but worn while the carrack was unloading.* His speech being ended, Sir *William* told him, *That his demands gave suspicion, that under pretence of parley, they meant treachery, or that their hopes were greater than there was cause; and but that he knew it was the use of some men to demand great things, when less would serve them, he would not lose his advantage to entertain a parley.* He desired that what they intended might be quickly concluded, for night growing on might advantage them; and for his resolution he should understand it in few words, *viz.* To his first demand, *He was willing to yield, that they should be put ashore with their arms.* To the second, *That he was content they should be set ashore that night, except eight or ten of the principal gentlemen, whom he would detain three days.* To the third, *He held it idle and frivolous to imagine he would consent to separate ship and goods, and look'd upon it as a jest.* To the fourth, *He would not consent, being resolv'd never to permit a Spanish flag to be worn in the presence of the queen's ships, unless it were disgracefully, over the poop.* There was long expostulation upon these points; and Sir *William Monson* seeing the obstinacy of the captain, offer'd in a great rage to leap into his boat, resolving to break the treaty; which the rest of the gentlemen perceiving, and that he had propounded nothing but what might very well stand with their reputation, they intreated him once more to ascend into the carrack, and they would enter into new capitulations: the effect whereof, as it was agreed upon, were these that follow:

*That a messenger should be sent to the*

1602. *admiral, to have his confirmation of the points concluded on; and that in the mean time the flag and ancient should be taken down; and if the admiral should not consent to the agreement, they to have leisure to put out their flag and ancient before the fight should begin. That the company should be presently set on shore; but the captain, with eight others of the principal gentlemen, three days after. That the ship, with her goods, should be surrendered, without any practice or treason. That they should use their endeavours, that the castle should forbear shooting whilst we rid in the road; and this was the effect of the conditions agreed upon.* This carrack winter'd in *Mosambique*, in her return from the *Indies*, a place of great infection, as appear'd by the mortality among them; for of six hundred and odd men, twenty liv'd not to return home. After a great deal of calamity and mortality, she arriv'd at this port of *Cerimbra*, as you have heard, the viceroy of *Portugal* having sent eleven galleys to her rescue, and four hundred *Mocas du Camera*, which is a title of gentlemen that serve the king upon any honourable occasion, when they are commanded. That she was brought to this pass, and forced to yield on these conditions, Sir *Robert Cecil* was wont to impute to the gentlemen's acquaintance with Sir *William Monson*. Though three days were limited for setting the captain on shore, yet it was held discretion not to detain them longer than till the carrack was brought off safely to our ships; and therefore Sir *William Monson* having carried the captain, and the rest of the gentlemen aboard him, where they supped, had variety of musick, and spent the night in great jollitry. The morning following he accompanied them ashore himself, whether the *Conde de Vidigueira* had drawn down all the force of the whole country, amounting to the number of twenty thousand men.

I must not omit to describe the behaviour of the galleys in the fight, that every man may have that honour that is due to him. Those of *Portugal*, being of the squadron of the marquis of *St. Cruz*, betook themselves, with their general, to flight in the middle of the fight; but *Frederick Spinola*, who was to convey his galleys out of *Spain* into the low countries, follow'd not the example of the marquis, but made good the road; which the other seeing, with shame return'd, but to both their costs; for before they departed, they found the climate so hot, that they were forced to fly, their galleys being so miserably beaten, and their slaves so pitifully slain, that there wanted nothing but boats to possess them all, as well as the two we took and burnt; which

1602. which is a thing has been seldom seen or heard of, for ships to take and destroy galleys. The number of men slain in the town, the castle, the carrack, and galleys, is unknown, though they could not chuse but be many. The wealth of the carrack could then as ill be estimated, though after found to be great. The value of the two galleys burnt, with their loading of powder, is hard to judge, though it's known to have been a service of great importance. For our loss, it was not much, only one man kill'd in the fly-boat, five slain, and as many hurt in the *Garland*, and one hurt in the *Adventure*. Sir *William Monson* had the left wing of his doublet shot off, but receiv'd no other hurt.

The day following, with a favourable wind, we stood our course for *England*, which brought us into forty seven degrees; and there we met a pinnace, sent with a packet from the lords, signifying the readiness of a second fleet to supply us, and the setting out of the *Hollanders* which were so long look'd for; which fleet of *Holland* was in view of the pinnace the same night, but pass'd by us unseen. This unlook'd-for accident made the admiral and vice-admiral consider what to do, and concluded they could not both appear at home, and leave a fleet of so great importance upon the enemies coast without a guide or head; and therefore they held it fit the vice-admiral should put himself into the *Nonpareille*, as the ablest ship of the fleet, and make his return once more to the coast of *Spain*. But he having taken his leave, and standing his course for the coast, a most violent storm, with a contrary wind, took him, which continued ten days, and discovered the weakness of his ship, who had like to have foundered in the deep. The carpenters and company seeing the apparent danger, if he bore not up before the wind, presented him with

1602. a petition, beseeching him to have regard to their lives; for by keeping the seas, they should all perish. Thus was he forc'd by mere extremity to bear for *England*; and coming for *Plimouth*, he found the carrack safely arriv'd, and the fleet he went back to take charge of, not to have quitted the coast of *England*.

Though it be somewhat impertinent to this voyage, to treat of more than the success thereof, yet I will a little digress, and relate the misfortune of that worthy young gentleman *Don Diego Lobo*, captain of the carrack; and because his worth will more appear by his answer to Sir *William Monson's* offer to him when he was his prisoner. Thus it was; Sir *William Monson* told him, he doubted, that by the loss of the carrack, he had lost his best means; for that he supposed, what he had gain'd in the *Indies* was laden in her, and therefore offered, That what he would challenge upon his reputation to be his own, he should have freedom to carry along with him. The gentleman acknowledg'd the favour to be extraordinary; but replied, That what he had, he gain'd by his sword; and that his sword, he doubted not, would repair his fortunes again, utterly refusing to accept any courtesy in that kind. But, poor gentleman, ill fortune thus left him not; for the viceroy, *Don Christoval de Mora*, holding it for a great indignity to have the carrack taken out of the port that was defended by a castle, and guarded with eleven galleys, and especially in his hearing of the ordnance to *Lisbon*, and in the view of thousands of people who beheld it; some of them feeling it too, by the loss of their goods that were in her, others grieving for the death of their friends that were slain; but every man finding himself touch'd in reputation.

*The Names of the Carrack and eleven Galleys.*

The *St. Valentine*, a carrack of one thousand seven hundred tons.

The *Christopher*, the admiral of *Portugal*, wherein the marquis *de Sancta Cruz* went.

The *St. Lewis*, wherein *Frederick Spinola* went general of the galleys of *Spain*.

The *Fortaleza*, vice-admiral to the marquis.

The *Trinidad*, vice-admiral to *Frederick Spinola*, burnt.

The *Leva*, in which Sir *William Monson* was prisoner, 1591.

The *Occasion*, burnt, and the captain taken prisoner.

The *St. John Baptist*.

The *Lazar*.

The *Padilla*.

The *Philip*.

The *St. John*.

And the viceroy not knowing how to clear himself so well as by laying it upon the gentlemen he put on board her, the same night they return'd to their lodging, he caus'd most of them, with their captain,

to be apprehended, imputing the loss of the carrack to their cowardice and fear, if not treason and connivance with the enemy. After some time of imprisonment, by mediation of friends, all the gentlemen were

1602. leased but the captain; who received secret advice, that the viceroy intended his death; and that he should seek by escape to prevent it. Don *Diego* being thus perplexed, practised with his sister; who finding means for his escape out of a window, he fled into *Italy*, where he lived in exile from 1602. when this happened, till 1615. His government of *Malaca* in the *Indies*, for which he had a patent in reversion, was confiscate, and he left hopeless ever to return into his native country, much less to be restored to his command; an ill welcome after so long and painful a navigation. Having thus spent thirteen years in exile, at the last he advised with friends, whose counsel he followed, to repair into *England*, there to enquire after some commanders that had been at the taking of the carrack, by whose certificate he might be cleared of cowardice or treason in the loss of her, which would be a good motive to restore him to his government again. In the year 1515. he arrived in *London*, and after some enquiry found out Sir *William Monson*, to whom he complained of his hard mishap, craving the assistance of him and some others, whom Sir *William* knew to be at the taking of the carrack, and desired him to testify the manner of surprizing her, which he alledged,

was no more than one gentleman was bound to afford another in such a case. 1602.

Sir *William* wondered to see him, and especially upon such an occasion: for the present he entertain'd him with all courtesy; and the longer his stay was in *England*, the courtesies were the greater which Sir *William* did him, who procured him a true and effectual certificate from himself, Sir *Francis Howard*, Captain *Barlow*, and some others who were witnesses of that service; and to give it the more reputation, he caused it to be inrolled in the office of the admiralty. The gentleman being well satisfy'd with his entertainment, and having what he desired, returned to *Flanders*, where he presented his certificate to the archduke and the *Infanta*, by whose means he got assurance, not only of the king's favour, but of restitution likewise to his government. The poor gentleman having been thus toss'd by the waves of calamity from one country to another, and never finding rest, death, that masters all men, now cut him off short in the midst of his hopes, as he was preparing his journey for *Spain*; and this was the end of an unfortunate gallant young gentleman, whose deserts might justly have challenged a better reward, if God had pleased to afford it him.

1602. THE fleet of Sir *Richard Lewison* being happily returned, with the fortune of a carrack, as you have heard, and the queen having now no ships upon the *Spanish* coast, to impeach the enemies preparations, she feared the fleet which was ready at the *Groyne*, would give a second assault upon *Ireland*; whereupon Sir *William Monson*, who by this time was arrived at *Plimouth*, was sent for in great haste by her majesty, to advise about, and take on him the charge of the fleet then at *Plimouth*. After a long conference with Sir *William Monson*, in the presence of her majesty, her lord admiral, treasurer, and secretary, it was resolved, That Sir *William* should repair to *Plimouth*, and with all speed get forth those ships, and others that were there making ready. His

directions were to present himself before the harbour of the *Groyne*, being the place where the *Spaniards* made their rendezvous; and if he found any likelihood of a design upon *Ireland*, not to quit that coast till he saw the issue; but if he found *Ireland* secure, and the enemies preparations to be intended only for defence of their own coasts, then his instructions led him thence, to the place where the *Holland* fleet had order to attend and expect him: and afterwards the whole carriage of the action was referred to his discretion; but with this caution, that above all respects of other profit or advantage, he attended the affair of *Ireland*. The wind this part of the summer hung contrary, and it was six weeks before he could clear the coast, during which time he

1602. lost his greatest hopes, by the return of the carracks of the *Indian* fleet, which happen'd a full month before his arrival. He set sail from *Plimouth* the last of *August*, with a scant wind, which continued with foul weather till he recovered the *Groyne*, chusing rather to keep the sea, than hazard the overthrow of the voyage by his return.

He stay'd at the *Groyne* till he understood that the fleet, which was suspected to be prepared for *Ireland* was gone to *Lisbon*, to join with *Don Diego de Borachero*, who all that summer durst not budge forth for fear of our fleet that made good the coast thereabouts. Sir *William* in his way to the *Rock*, commanded his carvel to repair to the islands of *Bayona*, as the likeliest place to procure intelligence of the state of those parts. As the carvel drew near the islands, she discerned the *Spanish* fleet, consisting of twenty four sail, whose design was, as she understood by a boat she took, to look out the *English* fleet, whose coming they daily expected upon the coast; and meeting Sir *William* with this news, he held it a good service to be thus warned of them. Here he took two goodly ships of *France*, bound for *Lisbon*, which harbour he put them from, and took pledges, that they should directly return into *France*, without touching in any harbour of *Spain*; for that he understood the *Spanish* fleet was ill provided of men, and many other things, which these ships could supply. Sir *William* and the *Dreadnought* were carried with a chase into the road of *Cerimbra*, where the carrack was taken not long before; and after some fight with the castle, who defended the vessel chased, they came to a friendly treaty, and presents passed between them.

That night, while the admiral rid in the road, a carvel coming in, not mistrusting him, was taken, but dismissed in a friendly manner; by whom he understood the affairs of *Lisbon*, but could get no notice of the *Holland* fleet, which was appointed to attend at the *Rock*, whither once more he repaired.

Coming thither the 26th of *September*, a light was spied in the night, which the admiral chased, thinking it had been the fleet of *St. Tome*, or *Brazil*, bound for *Lisbon*, where they were expected; but drawing so near them, that he might hail them, he found them, by the hugeness of their vessels, and the number, which answered the relation the carvel made, to be the *Armada* of *Spain*: whereupon he sought means how to clear himself, being engaged amongst them, and made a *Spaniard* that served him call to them, but they could not hear him; the *Adventure* only and the *Whelp* were left with him, the rest losing company four nights before in a storm. The enemy perceiving

our lights, and thinking it to be some fleet of *Flemmings*, stood in amongst us; but the *Adventure* being discovered to be an enemy, the alarum was soon taken, and they shot at her, and slew and hurt some of her men. As soon as the day appeared, the *Spaniards* beheld the three *English* ships a-head of them, which they chased; and three of them, which were better sailors than the rest, fetch'd upon us, and drew near the *Whelp*, who was of small force to resist them.

But the admiral resolving, though it was to his own evident peril, not to see a pinnacle of her majesty's so lost, if he could rescue her with the loss of his life, though it was much against the persuasions of his master and company, he struck his two sails for the *Whelp*, and commanded her to stand her course, while he staid for the three *Spanish* ships, with hope to make them have little list to pursue us. The admiral of the *Spaniards* perceiving how little he cared for his three ships, in that he lingered for their coming up, took in with the shore, and shot off a piece for his three ships to follow him. It may appear by this, as by several other expeditions of ours, how much the swift sailing of ships does avail, being the principal advantage in sea-service; and indeed the main thing we could presume upon in our war against the *Spaniards*. Sir *William* having thus escaped the enemy, in his traverse at sea there happened, as there does upon all coasts where there is plenty of trade, divers occasions of chases; and one day Sir *William* following one ship, and the *Adventure* another, they lost company for the whole voyage.

Sir *William* was advertized by a ship he took, being a *Freuchman*, who came from *St. Lucar*, that the *St. Domingo* fleet was looked for daily; which intelligence made him bear up for the *South Cape*, as well in hopes to meet with them, as to have news of his fleet.

He was no sooner come to the cape, but he was informed by some *English* men of war, that the *St. Domingo* fleet was passed by two days before; here he met with ships of several nations; some he rescued from pirates, and to others that were in league with her majesty, he gave his safe-conduct for their free passage on the sea. He kept that coast till the 21st of *October*, on which morning he gave chase to a galleon of the king of *Spain*, who recovered the castle of *Cape-St. Vincent* before he could fetch her up; though he knew the strength of the castle, yet he attempted, and had carried her, had it not been for the fear and cowardice of him at the helm, who bore up when he was ready to board her. The fight was not long, but sharp and dangerous;

1602. rous; for there never past shot between them, till they were within a ship's length one of another. The castle play'd her part, and tore the *Swiftsure*, so that a team of oxen might have crept through her under the half-deck, and one shot killed seven men. Between the castle and the galleon they slew in the admiral ten men, and hurt many more, in the view of *Siriago* and his squadron to the westward, and of divers *English* men of war to the eastward, who durst not put themselves upon the rescue of *Sir William*, for fear of the castle. *Sir William* being now left alone, and seeing what head-land soever he came to, he was to encounter a *Spanish* squadron, stood his course that night to sea, thinking to try if the islands of *Tercera* would afford him any better fortune; but coming within forty or fifty leagues of the islands, he was taken short with the wind, yet still bearing up what he could for the rock; but at length finding his victuals grew short, his mast perished, and the dangers he was exposed to, by keeping that coast, he directed his course for *England*, and came to *Plimouth* the 24th of *November*, where he found the *Mary Rose* and *Dreadnought*, most part of their men being dead or sick.

The *Adventure* arrived within an hour after him, who in her way homewards fell

amongst the *Brazil* fleet, and encountering 1602. with them, lost divers men, but took none. The *Paragon* was at home long before, with a prize of sugar and spices, which counter-vailed the charge of the voyage. The *Quit-tance* in her return, met two ships of *Dunkirk*; and in fight with them, her captain was slain; but she acquitted herself very well, without further harm. This fleet, as you have heard, was to keep the enemy busied at home, that he might be diverted from the thoughts of *Ireland*; what hazard it endured by the enemy, the fury of the sea, and foul weather, does appear: and no marvel; for it was the latest fleet in winter that ever kept upon the *Spanish* coast; as it was likewise the last fleet her majesty employ'd; for in *March* after she died, and by her death all war ceased. As *Sir William Monson* was general of this last fleet, so he was a soldier, and a youth, at the beginning of the wars; and was at the taking of the first *Spanish* prize that ever saw the *English* coast, which yet was purchased with the loss of twenty five of our men, besides fifty hurt. This prize was afterwards a man of war, and served against the *Spaniards*, and was in those days reckoned the best ship of war we had: she was called the *Commander*, and belonged to *Sir George Carew*, then governor of the *Isle of Wight*.

Captain *Polwheele.*

1603. **S**IR *William Monson* returning with his fleet in *November*, there was a resolution to furnish another against *February*, which should be recruited with fresh ships, men, and victuals, in *June*. *Sir Richard Lewson* was to command the first fleet, and *Sir William Monson* the latter; for the queen found it a course both secure and profitable, to keep a continual force upon the *Spanish* coast, from *February* to *November*, that being the time of the greatest peril to her majesty; and she was the rather encouraged thereto, by the safety she found the last summer, and the wealth and riches she had from time to time taken from the enemy. The

complaint of the ill furnishing out of her 1603. ships in other voyages, made it more carefully to be looked to now, and there was better choice of victuals and men than usually had been; but in the mean time, it pleased God to visit her majesty with sickness, which caused a lingering, though no absolute dissolving of the fleet; but when her danger was perceived to increase, the ships were hastened out to sea, it being a point of good policy, to keep our seas guarded from any foreign attempt, till his majesty should be peaceably settled in *England*.

1603. This fleet departed from *Queensborough* the 22d of *March*, and arriv'd in the *Dowens* the 25th of the same, being the day after her majesty's death. The news whereof, and commandment to proclaim king *James* the sixth of *Scotland* our lawful king, and the rightful inheritor to the crown, arriv'd both together; which put us into two contrary passions, the one of grief, the other of joy; grief for the loss of the queen, joy for accepting of the king in that peaceable manner; which was a happiness beyond all expectation, either at home or abroad.

As the design of this fleet was to guard and defend our own coasts from any incursion that might be made out of *France* or the low countries; so the commanders were vigilant to appear on those coasts once in two days, to dishearten them, in case they had any such thought: but the truth is, it was beyond their abilities, whatever was in their hearts, to impugn his majesty: and because the archduke would make the can-

didness of his intention apparent to the world, he call'd in his letters of reprisal against the *English*, and published an edict for a free and unmolested traffick into *Flanders*; so that now our merchants might again trade peaceably into those parts, from which they had been debarr'd the space of eighteen years. The king finding that *France* neither impeach'd his right, nor gave any jealousy by the raising of an army; and that the archduke made a demonstration of his desire of peace, his majesty did the like, acknowledging the league he had with those princes, with whom the late queen had wars; for wars betwixt countries are not hereditary, but commonly end with the death of their kings; wherefore he commanded his ships to give over their southern employment, and to repair to *Chatham*, giving manifest testimonies, how desirous he was that his subjects should recover that wealth and freedom by peace, which they had formerly lost by war.

*The Voyage of the Earl of Cumberland to the Island of Puerto Rico, and the Reasons why it is inserted at the End of this first Book.*

I SHALL exceed my first design, by adding this voyage to *Puerto Rico* to the rest of her majesty's actions, or those where her ships were employed at the charge of others; yet because this was the greatest undertaking by subjects, without the help or assistance of the queen, both in number of ships and land forces, being furnish'd as well for land as sea service, as also because so great a person as the earl of *Cumberland* took upon him the command of it, having by several voyages before attain'd to a perfect knowledge in sea-affairs; for these reasons I have inserted this action to *Puerto Rico* among the rest of the queen's, aforesaid.

The earl being naturally addicted to the sea from his youth, as may appear by his undertakings, the first shew whereof was in a voyage he undertook at his great charge and expence in 1586. intending his ships should pass to the *South Sea* by the *Streights of Magellan*; but unadvisedly they fail'd. After this he made fundry adventures in his own person, as in the former discourse is declar'd; and he often obtain'd the favour of her majesty, to assist him with some of her ships; which she was the more willing to grant, to encourage him in his enterprises, and to cherish the forward spirit of so great a person.

But at last my lord began discreetly to consider the obligation he had to the queen, for the loan of her ships from time to time, and withal weigh'd what fear and danger he brought himself into, if unluckily any

of those ships should miscarry; for he valued the reputation of the least of them at the rate of his life.

Upon these considerations, no persuasions being of force to divert him from his resolution of attempting some great action on the sea, where he had spent much time and money, and thinking thereby as well to enrich himself, as to shew his forwardness to do his prince and country service, he resolv'd to build a ship from the stocks, that should equal the middle rank of her majesty: an act so noble and so rare, it being a thing never undertaken before by a subject, that it deserv'd immortal fame.

This ship, which he nam'd the *Malice-Scourge*, (for by that name it seems he tasted the envy of some that repin'd at his honourable achievement,) was eight hundred tuns burthen, proportioned in all degrees to equal any of her majesty's ships of that rank, and no way inferior to them in sailing, or other property or condition of ships.

When built, she had several employments to sea, whilst my lord was owner of her, and prov'd as all other ships and men usually do, sometimes fortunate, and sometimes otherwise; for there is nothing that a man can account firm or stable in this world, especially where the sea hath the most predominant power.

And for her last farewell to sea, my lord perform'd this voyage to *Puerto Rico* in her; where he had trial of her goodness and wholesomeness in the sea, by the violent

1603. forms he endur'd, better than most part of his fleet.

It was not the ceasing of warlike actions by the king's coming to his crown, who brought peace with him, that made this ship cease from doing the part for which she was built: but another, while she was employed by the merchants of the *East Indies*, who bought her for that trade, and whither she resorted, and made two happy returns: but in her third, what by foul play and treachery, she became a prey to the *Hollanders*, where she ended her days in fire, being worthy of a far better funeral.

My lord being aboard this ship, (the *Malice-Scourge*;) and having divers others of burthen and strength under his command, he set sail from *Plimouth* the 6th of *March*, 1597. Besides his general design to take, to destroy, or any way else to impoverish and impeach the king of *Spain*, or his subjects, he grounded his voyage upon two hopes, the first more probable than the second, in my opinion, who undertake, as I have said before, to observe the errors committed in such voyages.

From *Plimouth* he directed his course to the mouth of the river *Tagus*, upon which river the city of *Lisbon* is seated, that sends forth yearly a number of ships to the *East Indies*, called carracks, and that in the month of *April*. There was no question to be made of the certainty of their departure, because if they stay beyond that month, they meet with much bad weather, and cannot weather the capes south of the line in their voyage to the *Indies*, but particularly that of *Good Hope*.

My lord's principal end in this voyage was to intercept those carracks, which for burthen exceed all other ships in *Europe*, and go full freighted with commodities for the *East Indies*, besides the abundance of money transported in them, which would have enrich'd my lord abundantly, and the rest of the adventurers.

Against the time they should depart out of harbour, my lord appear'd with his fleet before it, which did so much dishearten and dismay the *Portuguese*, that rather than they would put themselves in hazard of him and his fleet, they chose to give over their voyage, and lose the excessive charge they had been put unto in furnishing their ships, by means whereof their carracks lay at home, without employment the whole year after.

Besides the profit my lord propos'd to himself by this project thus frustrated, it tended to a matter of greater consequence to the state of *England*, if it had prov'd successful; for you must understand that in the *East Indies* they are prohibited planting of vines, and want many other things for their

suffenance, with which they are supplied yearly out of *Portugal*, that the *Indies* may not subsist without *Portugal*. Then let us consider what hindrance and losses both *Portugal* and the *Indies* receiv'd, by hindering their ships from going to the *Indies* that year.

And if one year prov'd so prejudicial to them, what would three or four years have done, if they had been so serv'd and prevented? It would have reduc'd them to great want, and forc'd them to accept of a friendly traffick with us; or in time we might have divided the *Indies* from *Portugal*, especially if we had carried a younger son of *Don Anthony*, whom no doubt they might have been forc'd to accept as king.

The error committed in the prosecution of this voyage, must be imputed to my lord himself, in not forecasting how to prevent the hazard and fears that might be impediments to his design; therefore he worthily deserv'd blame, to present himself and fleet in the eye of *Lisbon*, to be there discover'd, knowing that the secret carriage thereof gave life and hope to the action. By a familiar example of a man that being safely seated in a house, and in danger of an arrest, knows that catchpoles lie to attack him, and yet notwithstanding would venture abroad, and not seek to avoid them; so far'd it with the carracks at that time, who rather chose to keep themselves in harbour, than venture upon an unavoidable danger.

If my lord had done well and providently, his fleet should have been furnished without rumour, noise, or notice, in several harbours in *England*; the men that went in them not to know or imagine the design of their voyage, or that they should meet to compose a main fleet, till they were come to the height the carracks were to sail in; and after that each captain to have open'd their directions, with a special caution not to appear within sight of the shore, for fear of discovery. This way, and no other there was, to lull the *Portuguese* into security, or to avoid mistrust, till they had fallen into their hands.

My lord's other hope, if this should fail, was to give an attempt with his land forces, either upon some island or town that would yield him wealth and riches, being the chief end of his undertaking; and after many propositions made at council, his resolution was to make an attempt upon the island of *Puerto Rico*, in which island there is a town of convenient bigness and strength, which my lord not long after took and possessed, with little loss of men on either side, because they came to composition.

Herein lies my part to except against this design of my lord's, as I promis'd in my former

1603. former relations; for whereas all mens actions have a reasonable shew of likelihood of good to redound to them in their intended enterprizes, yet cannot I conceive how a land attempt upon towns could yield my lord any profit, or the merchants that adventur'd with him; for my lord by experience well knew, having been himself at the taking of some towns, that they afforded little wealth to the taker, because riches of value will be either buried, or secretly conveyed away. And for merchandizes of great bulk, which that poor island yielded, it was only some few hides, black sugar, and ginger, which would not amount to any great matter, to countervail the charge of so costly a journey.

Commonly that island sends out two or three ships of a reasonable burthen to transport the yearly commodities it yieldeth, for though it have the name of being in the *Indies*, yet it is a place remote, and unfrequented with traffick, either from the *Indies*, or any other place: or though the island should be surprized at such a season of the year as their commodities were ripe, and ready for transportation, yet the value is not to be esteem'd, where so many people that adventur'd with my lord were to look for a dividend according to their adventure.

And yet I will not deny, but by accident this island was made worthy an attempt upon it, by example of Sir *Francis Drake* and Sir *John Hawkins*, who, as you have heard, sail'd thither on their own account, Anno 1595. and their defeat made it the more admir'd, and purchas'd my lord's greater honour, in that he carried it with a smaller number of men, and less loss than *Drake* was repulsed.

But because time and opportunity alter the circumstances of things, therefore, to satisfy these common and vulgar people, who judge according to event, and not to reason, you shall understand the difference, and the cause that made the difference betwixt Sir *Francis Drake* in the year 1595. and the earl of *Cumberland* in 1598.

Sir *Francis Drake* was commanded thither

1603. by directions from the queen; not that she expected profit or benefit from the island, which she well knew, of itself, was unworthy any enterprize; but what she did was upon intelligence she receiv'd of a galleon of plate; which, with the loss of her mast, was forced into that island, as I gave an account, when I treated before of that voyage of 1595.

In the mean time five frigates were preparing in *Spain* to bring home that treasure, and in them to the number of eight or nine hundred soldiers, who, in their course to *Puerto Rico* surpriz'd a pinnace of Sir *Francis Drake's* fleet, that gave intelligence of his design, as well against that place as *Nombre de Dios*, whither he was bound; by which accident his designs were prevented, and the enemy had leisure to fortify, strengthen, and man the town with the soldiers brought in by the frigats, which made Sir *Francis Drake* suddenly and dishonourably retire, with the loss of divers gentlemen and others of good quality. This misfortune was supposed to hasten the death of Sir *John Hawkins*, who then died, after he had seen himself thus repulsed.

My lord might as well have consider'd, that no use could be made of the situation of that island, as of other islands of less value and riches there might be; as for instance, the *Tercera*, which, though the soil yields not that plenty and profit *Puerto Rico* does, yet by our inhabiting it, the *Spaniards* and *Portuguese* would find great annoyance in their returns from their *Indies*, *Brasil*, and *Guinea*; in which seas our ships would continually lie, and endeavour cutting them off: as on the contrary, *Puerto Rico* is seated so lonesome, that they have scarce the sight of a ship in the whole year, except those few of their own I have formerly spoke of.

And thus much for my exception against my lord's voyage to *Puerto Rico*. Now will I collect some brief proceedings in that voyage, taken out of the printed copy publish'd by Dr. *Laseild*, chaplain to my lord in that expedition.

## Commanders.

1603.

The earl of Cumberland.  
 Sir John Bartley.  
 Captain Flicke.  
 Captain Clifford.  
 Captain Coach.  
 Captain Slingsby.  
 Captain Langton.  
 Captain Palmer.  
 Captain Foliambe.  
 Captain Fleming.  
 Captain Cabetburst.  
 Captain Jolliffe.  
 Captain Careless.  
 Captain Goodwyn.  
 Captain Bromley.  
 Captain Dixon.  
 Captain Lea.  
 Captain Harper.

My lord, with the ships aforesaid, being furnished with all things necessary for such a fleet, set sail from *Plimouth* the 6th of *March*, 1597. and directed his course for cape *Finister*, the northermost cape of *Spain*.

But before he could reach that coast, he found a defect in his main mast, which was almost perished, and he forced to favour it with a slack sail, until he arrived at the island of the *Burlings*, over against *Peniche* in *Portugal*, where he anchor'd, and commanded his fleet to keep a good distance off at sea, to avoid being discovered from the shore, knowing that the hopes of his voyage consisted in secrecy.

He was not many days fitting his mast, having carpenters and materials enough for disasters: but notwithstanding his directions to his ships to stand off to sea, it could not keep the enemy from knowledge of them at *Lisbon*, where the carracks lay ready to depart; and thus the expectation of my lord's voyage was frustrated; for the carracks being fallen down as low as the bay, ready to sail, they were instantly commanded to give over their voyage, and return to *Lisbon*.

My lord finding it bootless to expect any good of the carracks, upon which the grounds of his voyage depended, directed his course to the *Canaries*, rather to refresh his men ashore, who were raw soldiers, and wearied at sea, than out of expectation of gain, or any way to annoy the enemy: he landed without resistance at the poor island of *Lansarotte*, and the rather, because he was made believe a marquis liv'd there, who, being taken prisoner, would yield ten thousand pounds ransom; but the projector knew as little of the truth thereof, as he did of the place when he came to land.

This miserable island afforded nothing

but earth to walk on, and some little store of wine, not worth the speaking of; and yet, as small a quantity as it was, it put his company into a mutinous disorder of drunkenness, that to pacify them, my lord was forc'd to use threats and the rigour of his commission, and to admonish them how to carry themselves ever after, upon danger and peril of their lives.

The 21st of *April* he set sail from thence, and being off at sea, he call'd a council; in which he propos'd to his captains, Whether, in their opinions, it was better to direct his course for *Fernan-Buco* in *Brazil*, or *Dominica* in the *West Indies*, and there to take a new consultation. After long discussing this point, every man having the liberty to use his best argument, it was at last resolv'd for *Dominica*, whither he hasten'd, and landed there on the 23d of *May*. Having water'd, (for the island afforded nothing else,) he stood for the island of *Virgines*, a place unpeopled, where he landed, and muster'd his soldiers, and found the greatest part of them both rude and raw.

At this island he was not far from *Puerto Rico*, whither his former resolution led him: my lord himself went in his boat to view a convenient landing-place, and found a sandy bay fit for his purpose; whereupon he instantly put his men ashore on the 6th of *June*, where he found no resistance; and because there needs no long account of the assault he gave to the outworks, before his approach to the town, I shall say no more, to avoid prolixity, but that in two days he took both town, fort, and what else were impediments to his enterprize.

Having brought the enemy to his mercy, he carry'd himself both nobly and with pity: and whereas in such tumults disorders cannot be avoided, yet if they appeared, or were made known to him, he punished.

1603. nished the actors with great severity, and in fight of the *Spaniards*, who beheld the justice of his carriage.

We have one instance of it in a valiant foldier, who otherwise had deserved well, and whom, for having committed violence upon the wife of a *Spaniard*, my lord, without hearkening to mediation or mercy, hanged in the publick market-place. A sailor had been so serv'd for defacing the church, but by the impportunity of other sailors (for at that time there was occasion to please them above soldiers) my lord forbore his execution after he was brought to the gibbet. As the fleet lay in harbour, upon *St. Peter's-Day* there was a ship came bearing in amongst them from *Angola* in *Africk*, laden with blacks, a commodity that country does chiefly deal in, and was there secured: another had been so served, but that seeing so many ships in the harbour, she suspected they could not be *Spaniards*, and so escaped. There was another which came from *Trinidad*; but of so small value, that she is not worth mentioning.

After all things were thus quieted and settled in the town, there was a consultation whether it should be kept or quitted; but in the end one reason prevailed against all objections, which was a sudden sickness among the soldiers, which in a few days swept away four hundred of them.

There was nothing more to do now but to embark ordnance, and goods as the town afforded, which consisted of hides, ginger, and coarse sugar, things of small value to countervail so great an expence as that of this voyage: in fine, he returned into *England*. It is needless to set down accidents at sea; but he arriv'd safely in the month of *October* following.

And thus much concerning the voyages, successes, designs, and commanders, from the year 1585 to 1603, that the wars ceased; wherein it plainly appears how conquering and victorious our nation has been in their latter actions at sea: and to add the more to their honour, you must observe the exploits they have performed by land in the land-voyages, in taking and spoiling of towns, ports, fortresses, and other places of moment, which for a time they have enjoyed and possess'd in the several dominions of the kings of *Spain*, as namely, in the *Indies*, *Brazil*, *Spain*, *Portugal*, the islands; and farther than all these, in the *South Sea*, which at that time no nations failed to but the *Spaniards* themselves, till the voyage of Sir *Francis Drake* and Mr. *Cavendish*.

The Taking of these Places following is to be justify'd by the Lawfulness of a War begun 1585. betwixt England and Spain.

Sir *Francis Drake* at his first voyage, which was in the year 1585. took these places following in the *West Indies*.

Playa, } in Cape Verde.  
St. Jago, }  
St. Domingo in Hispaniola.  
Cartagena in Terra Firma.  
St. Antonio in Florida.  
St. Hellena and the fort of St. John in Florida likewise.  
Rio de la Hacha.  
Tapia.  
Rancheria.

Sir *Francis Drake* in the *West Indies*, 1595.

Sancta Maria.  
Nombre de Dios.  
Porto Bello.

Captain *Preston* in the *West Indies*, 1595.

Puerto Sancto.  
Cboco.  
Cbapa.  
St. John de Lima.  
Cumená.

Captain *Parker* in the *West Indies*, 1601.

St. Vincent in Cabo Verde.  
Porto Bello once more.  
The fort of St. Jago.  
Triana.  
Campeachy.

The earl of *Cumberland*, 1597.

The island of *Lanzarote*, one of the *Cannaries*.  
The isle and town of *Puerto Rico*.

Captain *Newport* in the *West Indies*, 1591.

Taguana, } in Hispaniola.  
Oieda, }  
Truxillo.

Sir *John Burroughs* took a town in the island of *Trinidad* in the *West Indies*, and Sir *Walter Raleigh* another after.

Mr. *Cavendish's* first voyage about the world, 1586.

A fort and ordnance in the *Streights* of *Magellan*.

1603.

*Sancta Maria.*  
*Marmaroma.*  
*Arica.*  
*Pisco.*  
*Paraca.*  
*Cberisca.*  
*Paito.*  
 The isle of *Puna.*  
*Acapulco* in *New Spain.*  
 The port of *Nanidad.*  
 The port of *St. Jago.*  
 The bay of *Compostella.*  
 The isle of *St. Andrea.*  
 The bay of *Mascallan.*

All in the *South Sea.*

Mr. *Cavendish's* second voyage to *Brazil,*  
 1591.

*Sanctos.*

*St. Vincent.*

*Fernando Buco* taken and quitted, and the carracks and goods brought from thence by captain *Lancaster* and others.

Captain *Langton* in the *West Indies,* 1593. burnt and ranomed several farms and plantations in *Margarita, Hispaniola,* and *Jamaica.*

*Drake* to the bay of *Cadiz,* 1587 and 1589. took two or three forts upon cape *St. Vincent* and cape *Sagre.*

He and Sir *John Norris* took, in the voyage to *Portugal, Peniche,* and several villages: in Sir *John Norris's* march to *Lisbon* he took the suburbs of *Lisbon,* and *Drake* took *Cascais.*

1589. The earl of *Cumberland* took the island of *Fayal,* and made *Graciosa,* the island of *Flores,* and *Cuervo,* give him relief.

1596. The earl of *Essex* and the lord admiral took the city of *Cadiz,* the bridge of *Swafe,* and the town of *Faro* in *Portugal,* (a bishop's seat.)

1597. The earl of *Essex* took the island and town of *Fayal,* and *Villa Franca* in the island of *St. Michael.*

I omit divers other places taken by private ships of war.

*The names of such private persons as went to the West-Indies upon their own account, with such prizes as they took; by which may appear how little hurt we have done or can do to the Spaniards in the West Indies, in comparision of other places we have annoy'd them in, as I have more largely proved in my second book.*

1587. Sir *George Cary* set out three ships; two of which took nothing, and the third took a prize, and brought her into *Bristol,* worth 2000*l.*

1589. Captain *Michelson,* in the *Dog,* 1603. took three ships, but of no value, none of which he brought for *England.*

1593. A small ship of Sir *George Cary's* took nothing; but had like to be taken her self.

In the same year captain *Newport* return'd with the like success.

1594. These ships following were set forth:

Captain *Lane* with three ships of Mr. *Wats's.*

Captain *Roberts* in a ship of *Bristol.*

Captain *Benjamin Wood* with four ships of my lord *Thomas.*

Captain *Kevill* of *Lime-House;* and captain *King* of — : in all thirteen, which return'd not the charge of their voyage.

1594. Sir *Robert Dudley,* having two ships and two pinnaces, did not counter-vail his charges.

1596. Sir *Anthony Shirley* and captain *Parker* took some towns; but no profit to them.

1596. My lord of *Cumberland,* as I have said, took *Puerto Rico* without profit.

1593. Two ships and a pinnace of my lord of *Cumberland* did some spoil to the *Spaniards,* but little good to themselves.

1601. Captain *Parker* did some spoil upon towns, but they were like the rest in profit.

*David Middleton* brought home a prize of one hundred and forty tuns of *Campesby* wood, but of little value.

1595. Sir *Walter Raleigh* to *Guiana,* no profit at all; and the year before Sir *John Burroughs* with the like success.

There were divers pinnaces that went several years to discover *Guiana,* and the river of *Amazons,* but never any of them returned with profit.

1601. Captain *Cleive,* with a ship and a pinnace, took a prize of hides, which he restored at his return, the peace being concluded between the two kingdoms in the time of his absence.

These private voyages being compared with the rest of the queen's that went before, a man may plainly perceive that they produced greater loss, spoil, and damage, to the *Spaniards,* than profit or advantage to the *English;* for computing the expence of our publick actions and private adventures with the gain that arose out of them, we shall find they were much more chargeable than gainful to us; though I confess, in that case we are not to value the expence and loss in our disbursements; for it was repaid with the honour we gain'd, which will immortalize our nation.

1603.

*The Advantages of keeping a Fleet on the Coast of Spain in Time of War.*

1603.

I Omit in this first book to insert a treatise I was required by Sir *Robert Cecil*, then principal secretary of state, to write, concerning the abuses and corruptions at sea, which then began to creep in, not only in ships, men, and victuals, but in the designs; with a remedy how to amend and redress them. But because it is more proper for my third book, where I treat of projects, a reformation of the abuses of the navy, as also how to make an offensive and defensive war upon our neighbouring countries that oppose us on the seas, I refer you to that book, and have gathered by this that follows, That whilst the *Spaniards* were employed at home by our yearly fleets, they never had opportunity nor leisure either to make an attempt upon us, or to divert the wars from themselves; by which means we were secured from any attempt of theirs, as will appear by what follows.

The *Spaniards* stood so much in awe of her majesty's ships, that when a few of them appeared on the coast, they commonly diverted their enterprizes; as namely, in the year 1587. when Sir *Francis Drake* with twenty five ships prevented an expedition that summer out of *Cadiz-Road* for *England*, which the next year after they attempted, in 1588. because not molested as the year before.

Our action in *Portugal* following so quick upon the overthrow in 1588. made the king of *Spain* so far unable to offend, that if the undertaking had been prosecuted with judgment, he had been in ill circumstances to defend it, or his other kingdoms.

From that year to the year 1591. he grew great by sea, because he was not busied by us as before; which appeared by the fleet that took the *Revenge*; which *Armada* of his, it is very likely, had been employ'd against *England*, had it not been diverted that year by my lord *Thomas Howard*.

And for four years together after this the king employ'd his ships to the islands, to guard his merchants from the *Indies*, which made him have no leisure to think of *England*.

The voyage to *Cadiz* in 1596. did not

only frustrate his intended action against *England*, but we destroy'd many of his ships and provisions that should have been employ'd in that service.

He designed the second revenge upon *England*, but was prevented by my lord of *Essex* to the islands; which action of his, if it had been well carried, and that my lord would have believed good advice, it had utterly ruined the king of *Spain*.

The next year that gave cause of fear to the queen was 1599. the king of *Spain* having a whole year, by our sufferance, to make his provisions, and brought his ships and army down to the *Groyn*; which put the queen to a more chargeable defensive war, than the value our offensive fleet would have been maintained with upon his coast.

This great expedition was diverted by the fleet of *Holland*, which the *Adelantado* pursued to the islands.

The following years, 1600 and 1601. there was hope of peace, and nothing was attempted on either side till the latter end of 1601. that he invaded *Ireland*; but with ill success, as you have heard.

The last summer, 1602. he was braved by her majesty's ships in the mouth of his harbour, with the loss of a carrack, and rendered unable to prosecute his designs against *Ireland*; for no sooner was Sir *Richard Lewson* returned, but Sir *William Monson* was sent back again upon that coast, as you have heard, who kept the king's forces so employ'd, that he betook himself only to the guard of his shores.

It is not the meanest mischief we shall do the king of *Spain*, if we war thus upon him, to force him to keep his shores still armed and guarded, to the infinite vexation, charge, and discontent of his subjects; for no time or place can secure them so long as they see or know us to be upon the coast.

The sequel of all these actions being duly considered, we may be confident, that whilst we busy the *Spaniards* at home, they dare not think of invading *England* or *Ireland*; for by their absence their fleet from the *Indies* may be endangered, and in their attempts they have as little hope of prevailing.

1603.

1603.

*The Names of such Ships as her Majesty left at her Death.*

| Names of Ships.         | Tunnage. | Men in Harbour | Men at Sea, whereof | Mariners. | Gunners. | Sailors. |
|-------------------------|----------|----------------|---------------------|-----------|----------|----------|
| <i>Elizabeth Jonas.</i> | 900      | 30             | 500                 | 340       | 40       | 120      |
| <i>Triumph.</i>         | 1000     | 30             | 500                 | 340       | 40       | 120      |
| <i>White Bear.</i>      | 900      | 30             | 500                 | 340       | 40       | 120      |
| <i>Victory.</i>         | 800      | 17             | 400                 | 268       | 32       | 100      |
| <i>Mere-bonour.</i>     | 800      | 30             | 400                 | 268       | 32       | 100      |
| <i>Ark Royal.</i>       | 800      | 17             | 400                 | 268       | 32       | 100      |
| <i>Saint Matthew</i>    | 1000     | 30             | 500                 | 340       | 40       | 120      |
| <i>Saint Andrew</i>     | 900      | 17             | 400                 | 268       | 32       | 100      |
| <i>Due Repulse,</i>     | 700      | 16             | 350                 | 230       | 30       | 90       |
| <i>Garland,</i>         | 700      | 16             | 300                 | 190       | 30       | 80       |
| <i>Warspight,</i>       | 600      | 12             | 300                 | 190       | 30       | 80       |
| <i>Mary Rose.</i>       | 600      | 12             | 250                 | 150       | 30       | 70       |
| <i>The Hope.</i>        | 600      | 12             | 250                 | 150       | 30       | 70       |
| <i>Bonaventure.</i>     | 600      | 12             | 250                 | 150       | 30       | 70       |
| <i>The Lion.</i>        | 500      | 12             | 250                 | 150       | 30       | 70       |
| <i>Nonperelle.</i>      | 500      | 12             | 250                 | 150       | 30       | 70       |
| <i>Defiance.</i>        | 500      | 12             | 250                 | 150       | 30       | 70       |
| <i>Rainbow.</i>         | 500      | 12             | 250                 | 150       | 30       | 70       |
| <i>Dreadnought.</i>     | 400      | 10             | 200                 | 130       | 20       | 50       |
| <i>Antelope.</i>        | 350      | 10             | 160                 | 114       | 16       | 30       |
| <i>Swiftsure.</i>       | 400      | 10             | 200                 | 130       | 20       | 50       |
| <i>Swallow.</i>         | 330      | 10             | 160                 | 114       | 16       | 30       |
| <i>Foresight,</i>       | 300      | 10             | 160                 | 114       | 16       | 30       |

| <i>Quittance.</i>       | 200      | 7              | 100                 | 76        | 12       | 20       |
| <i>Answer.</i>          | 200      | 7              | 100                 | 76        | 12       | 20       |
| <i>Advantage.</i>       | 200      | 7              | 100                 | 70        | 12       | 20       |
| <i>Tyger.</i>           | 200      | 7              | 100                 | 70        | 12       | 20       |
| <i>Tremountain.</i>     |          | 6              | 70                  | 52        | 8        | 10       |
| <i>The Scout.</i>       | 120      | 6              | 66                  | 48        | 8        | 10       |
| <i>The Catis.</i>       | 100      | 5              | 60                  | 42        | 8        | 10       |
| <i>The Charles.</i>     | 70       | 5              | 45                  | 32        | 6        | 7        |
| <i>The Moon.</i>        | 60       | 5              | 40                  | 30        | 5        | 5        |
| <i>The Advice.</i>      | 50       | 5              | 40                  | 30        | 5        | 5        |
| <i>The Spy.</i>         | 50       | 5              | 40                  | 30        | 5        | 5        |
| <i>Merlyn.</i>          | 45       | 5              | 35                  | 26        | 5        | 4        |
| <i>The Sun.</i>         | 40       | 5              | 30                  | 24        | 4        | 2        |
| <i>Synnet.</i>          | 20       | 2              |                     |           |          |          |
| <i>George Hoy.</i>      | 100      | 10             |                     |           |          |          |
| <i>Pennyrose Hoy.</i>   | 80       | 8              |                     |           |          |          |

Her majesty left these ships aforesaid at her death in good condition; and whilst she lived they gained her and her realms honour, by the exploits and victories they and her subjects obtained; and she left in every one of those ships, officers serving in their several places whilst they lay in harbour.

But as abuses by continuance of time are crept in for want of care and overlooking, like chimneys that gather soot by continual

fires, that may endanger the house if it be not prevented by sweeping; so fared it with our navy at the latter end of the queen's reign; which Sir Robert Cecil, the principal secretary, carefully foresaw, and caused me to write the ensuing discourse how the then abuses might be taken away, and a course settled for a reformation, that the like might not hereafter happen; which I directed to him as follows:

1603.

To the Right Honourable Sir Robert Cecil,  
Principal Secretary to her Majesty.

“ I Have by your honour's command,  
“ and my own experience and observa-  
“ tion, briefly collected the abuse of our  
“ seamen, and the corruptions that are to-  
“ lerated; and shew the injuries offered in  
“ furnishing, victualling, and manning her  
“ majesty's ships; and lastly, how such  
“ wrongs may be reformed; all which I  
“ humbly represent to your honour.”

*Concerning the Abuses of our Seamen.*

NOTHING breeds disorders in our sailors, but liberty and over-much clemency: the one they have in their ordinary ships of reprisal, where no discipline is used, nor authority obey'd; the other in escaping punishment when they justly deserved it, which hath brought her majesty's service to be no more accounted of, than the actions of private men. It is strange what misery such men will chuse to endure in small ships of reprisal, though they be hopeless of gain, rather than serve her majesty, where their pay is certain, their diet plentiful, and their labour not so great. Nothing breeds this but the liberty they find in the one, and punishment they fear in the other.

The ships these men covet to go in, are neither of service nor strength to the state, or annoyance to the enemy: their owners are men of as base condition as themselves, making no more reckoning what outrages their ships commit at sea, than the men themselves that commit them. They grow so bold upon the lenity used toward them, that they as confidently detain men after they are pressed, as if there were no law to prohibit it. Nor are they satisfy'd with a competent number of men in their ships; but commonly carry twice as many as their ships and victuals require; and the first carvel or fisherman they take, they put their spare men into, who many times sink in the sea, famish for want of victuals, or are forced ashore into *Spain*, where they must either be compelled to serve against their country, or die in misery. And thus have more seamen been consumed, than in all other actions or enterprizes against *Spain*. And no man dares reprove it, because the lord admiral is interested in all such prizes as these unprofitable ships take.

It is time to foresee and prevent these inconveniencies; for it is apparent this neglect of the queen's service lost her majesty the *Indian* fleet Sir *Richard Lewson* met withal, being forced to leave Sir *William Monson* with half the ships at *Plimouth* for want of sailors to man them, when at the same

VOL. III.

1603.

time more men were suffered to go in private ships of war, than would have manned her majesty's navy.

And yet this is not all the mischief that ensues upon it; for these men being thus suffered to go, her majesty's ships are supplied with fishermen at the season of their voyage to *Newfoundland*; so that not only the poor sailors, but the countries about them that are supported by that trade, are half undone. The men themselves are so unserviceable, and of so little spirit, that I look upon it as a principal cause of sickness in her majesty's ships. These abuses are well known to the *Spaniards*, which made *Siriago*, general of their sea, covet nothing more than to board one of her majesty's ships, knowing how ill they are manned in comparison of privateers.

Besides many private voyages have prov'd prejudicial to her majesty's designs; for very often those men that go in such ships are taken prisoners, and give notice of our intentions, whereby the enemy is provided, and we prevented. As for example, the two voyages of Sir *Francis Drake* and Mr. *Cavendish* about the world, which though honourable to themselves, yet it had been much better for the queen that they had not been undertaken, but with greater forces; for we have now discovered to the *Spaniards* our finding the way through the *Streights of Magellan*, which they thought to conceal from us: we have passed by the coast of *Chile* and *Peru* up to *Panama*, cross'd over to the *Philippine* and *Molucco* islands, and the *East Indies*. Thus have we warn'd, without annoying them, to strengthen themselves in those parts; so that such places as had no defence, are now made able both to defend and offend, as appeared by the taking of Mr. *Hawkins* in the *South Sea*, 1594.

And since that time, it is apparent by three several voyages made by the *Hollanders*, the one in 1597. with five ships; the second in 1614. with as many; but, lastly, and especially in the fleet called by the name of the *Nassaw Fleet*, in 1623. all which fleets passed the *Streights of Magellan*, attempted landing in divers parts of *Peru* and *New Spain* with a force of three thousand soldiers, and were repulsed in those places which Mr. *Cavendish* had taken and enjoy'd, Anno 1587. but with thirty shot.

*How to redress these Disorders.*

IF it be true, as it is held to be, an easier thing to cure than discover a disease, then may there be hopes of amendment of these enormities and abuses: but the first thing that must be obtained, is, the consent and countenance of the lord admiral; for I have shewed, that these abuses are crept

C c c

in

1603. in by his permission, or at least his officers.

The second is, not to admit of all men to become owners and captains, that are able to buy or victual a ship; but to examine their condition, their estate, and qualities, and to cause them to give security not to connive at the abuses here mentioned.

Thirdly, to restrain all private actions whilst her majesty's are on foot; but if they will adventure, to let it be done in the company of her ships, where they shall have a share proportionable to their adventure; and I believe it will prove more beneficial than now they find it: or if they refuse it, it shall be lawful for them to adventure alone four months in the year, (when it is not fit to keep the king's ships at sea;) but to injoin them to return at a day limited: and the care to see this executed may be committed to the vice-admiral of every county, who is to take care they carry no more men than the ships require, nor less provision than is requisite, lest they run into the misfortunes above mentioned.

This will be the way to redress all abuses, to make men obedient to discipline and command, to avoid sickness in her majesty's ships, to employ none but such as are serviceable, not to molest the poor labouring fishermen, to give the merchants satisfaction, and to preserve the life and liberty of sailors.

*Now follow the Abuses in her Majesty's Ships.*

**T**HERE are so many, and several abuses in her majesty's ships, that the reforming of one is to little purpose, unless there be a reformation in the whole. And I will first begin with victuals upon which the lives of men depend: in this there is such great abuse in every voyage, that there is no man but has cause to complain.

The gunners, into whose charge is committed the strength of the ship, are preferred to their places rather for money than merit: and to descend to the ships themselves, there are so many impediments in them in our southern voyages, that we cannot say any thing is strong or serviceable about them. And though their wants be made known before their going from home, the officers of the navy, either out of frugality, or following precedents of former ages, not considering there was no such employment for the queen's ships heretofore, have not that care which is expedient. And, lastly, the men that serve in them are so ill treated, that they alledge it for the cause of their backwardness to serve the queen.

*The Manner how to reform these Abuses.*

1603.

**T**HE way to redress every abuse, is, to execute severe justice upon the chief men in office: as, first, the victualler, if he fail either in goodness or quantity of her majesty's allowance, let his life answer it; for no subject's estate is able to countervail the damage her majesty may sustain by such defect. And to take away all excuses of his part, and to provide there may be no failing of the service, it were convenient to have a surplus of victuals transported in other ships, to be exchanged, if upon view the other prove to be ill-conditioned.

Secondly, For the gunners: their frauds in powder and shot, and other things under their charge, are intolerable; and they have been the more embolden'd by the baseness of some captains, who have consented to their theft.

For reformation hereof, it were good to have a deputy appointed in every ship from the officers of the ordnance, to take charge of powder, shot, musket, &c. and to deliver them to such men as shall be accountable for them at the end of the voyage; for it is no reason so great a charge should be committed to the gunners, who make no conscience to steal, and may steal without controulment when it is in their possession.

Another thing, a captain must have orders to forbid, and look precisely it be obey'd, which is the lavishness of shooting for pleasure at the meeting of ships, passing by castles, and feasting aboard; for indeed there is more powder wastefully spent in this sort, than against an enemy.

For the third, which is the disability of ships to the southward, it is occasioned by the great weight of ordnance, which makes them labourfome, and causes their weakness; and considering how few gunners are allowed to every ship, it were better to leave some of these pieces at home, than to pester the ships with them. I must say, and with truth, that all her majesty's ships are far undermanned; for when people come to be divided into three parts, the one third to tackle the ship, the other to ply their small shot, and the third to manage their ordnance, all the three services fail for want of men to execute them.

Neither do I see that more men can be contained in the queen's ships to the southward, for want of stowage for victuals, and room to lodge in. No ship that returns from the southward should go to sea again under half a year's respite; in which time she will be well air'd, and her ballast must be chang'd.

There

1603. There should be a general workman appointed in harbour, carefully to overlook the ships that shall be employed: this man should go the voyage, and have the like charge at sea. Nothing that is necessary for ships, but must be carried in a great abundance by a deputy from the officers of the navy, as I have formerly said in the like case of the officers of the ordnance. All precedents of former times of furnishing the queen's ships to be abolish'd; and whosoever takes upon him this office as deputy, to be bound to give an account of the surplusses remaining, that what is not spent may be restor'd; which will nothing increase the charge in carrying them to sea; and yet the ships shall be so provided, as no casualty that can happen at sea will bring them into distress. Besides, they shall supply the want of such prizes as they take, who by reason of their long voyages have consum'd their sails, ropes, and tackling, as in the like case we found by the carrack, which we could not have brought for *England*, if we had not supplied her want out of the queen's ships.

And lastly, for the men that sail in the ships, without whom they are of no use; their usage has been so ill at the end of their voyages, that it is no marvel they shew their unwillingness to serve the queen; for if they arrive sick from any voyage, such is the charity of the people ashore, that they shall sooner die, than find pity, unless they bring money with them.

And seeing her majesty must and does pay those that serve, it were better for them, and much more profit and honour to the queen, to discharge them upon their first landing, than to continue them longer unpaid; for whether they are sick, or lie idle in harbour, their pay runs on till the ships and they are discharg'd, to the great consumption of victuals and wages, which falls upon the queen.

Wherefore it is necessary, that an undertreasurer be appointed in every fleet, who should carry money for all necessary disbursements. I have borrow'd some part of these reformations, and annex'd them to my fifth book, which I presented to the king's view, shewing the abuses of this time, both in ships, victuals, men, &c.

*When all these Things are reform'd and well order'd, and ships ready furnish'd to Sea, the next important Thing in a General, is to provide how to get Intelligence of his Enemy, and to keep the enemy from having Intelligence of him; which in our late Wars with Spain we compass'd by the following means.*

**W**HAT I have said touching an offensive and defensive war with *Spain*, needs no other repetition than what is con-

tain'd in the fifth book; for as I have often said in the precedent discourses, the life of all action by sea is to get intelligence of an enemy, and to keep the enemy from intelligence; for in so doing, a man is arm'd to encounter an enemy naked and unprovided, as I have instanc'd in many examples before; for whosoever is successful by chance and good luck, rather than by providence and foresight, cannot challenge the honour as his own, but must allow fortune a share with him; for success is the mistress of fools, and true management proceeds from judgment.

And to the end in our succeeding actions and wars with *Spain*, if ever there should happen a new breach, we may not be ignorant how to proceed against that nation by our former precedents, I have annexed these following precepts as a light and guide how to get intelligence at our arrival upon that coast, by which we shall be able the better to direct ourselves in the whole voyage; for it is an easier thing to follow a lesson well taught us, than to compass it by our own practice or study.

The first means we used to get intelligence of the affairs of *Spain* upon our arrival, was to hail into the height of the *Burlings*, a small desert island, whither every night the carvels of *Peniche*, opposite to it, resorted to take fish, which serv'd the whole country. About the time the carvels were to draw near the island, in the night time, we used to leave some ships boats, well mann'd, near the shore, where there could be no suspicion of them, and at the dawning of the day, the shallops suddenly boarded and seized some of the said carvels, of which we made good use in two kinds: the first was the intelligence we receiv'd of the state and affairs of *Lisbon*, and the whole coast; as also what preparations were made, either to defend or offend. The second was in respect of the carvels excellent sailings, for there were few ships but they could fetch up, and then keep sight of them both night and day, till our approach to them. Thirdly, by the unusual sails carvels carry, by means whereof we deceived the *Spaniards*, and made them believe they were their own. At last, when the voyage was at an end, the poor men were restored again to their vessels, and some reward bestowed on them.

*The Means how we obtain'd Intelligence of the south Parts of Spain, by a Method of my own.*

**I**N the voyage of *Sir Richard Lewson* and *Sir William Monfon* to the coast of *Spain*, you will find an intelligence I receiv'd from certain *Scotch* and *French* ships, of five galleons riding at *St. Lucar*, watching

1603. ing an opportunity of wind and spring tides to pass the bar of *St. Lucar*, being ready bound for the *West Indies*; and because I would be particularly resolv'd of all the circumstances thereof, I employed captain *William Love* to the ports of *Sally* and *Mamora* in *Barbary*, with the following instructions.

*Imprimis*, That you first repair to *Sally*; and if you cannot be fully inform'd of such things as you desire to know, to depart thence to *Mamora*, seven leagues eastward of *Sally*.

*Item*, You are to have especial care to manage your business with secrecy, as well from the *English* that go with you in the bark, as from the *Spaniards* and *Moors* resident in the country. And because you shall have the better pretence of coming into their forts, I will deliver you certain commodities to trade with, that are vendible in that country.

*Item*, You are to inquire and seek for the chiefest *Englishman* in either of the two places, and to deliver him a letter with a superscription, *To my faithful countryman*. And finding no such man there, if you break your mind to any other stranger, let it be to a *Hollander*, that either lieth there as agent or merchant, to whom you shall have another letter, *To my dear friend and neighbour*.

*Item*, If you find neither *English* nor *Hollander*, you having the language, may insinuate yourself into the acquaintance of some *Portuguese* or *Spaniard*, of whom you may learn by circumlocutions, so that he may find you have an intention to be inform'd of any thing in particular; and if you find his intelligence to concur with that I received from the *French* and *Scotch*, you may the more boldly give credit to him.

*Item*, The things you are principally to enquire after, are these following: the number and quality of all ships at *Cadiz* or *St. Lucar*. Secondly, whether the galleons you are employed to hearken after be gone to the *Indies*, or no; or whether they came over the bar the last spring tide; or if they be not gone, to demand the cause of their stay, or when they will depart. To enquire whether there be any ships appointed to convoy them to the *Canaries*, and how many, and their names, because I have a catalogue of all the king of *Spain's* ships, and may judge of their strength accordingly. To learn whether they alter their ordinary course of sailing, for fear of her majesty's ships being upon their coast. Speak nothing of their wealth, lest it should give some cause of mistrust. I will not write thus particularly, either to the *Englishman* or the *Hollander*; but they having my letter to credit what you shall say, and shewing my hand

to these instructions, it will be sufficient to give them satisfaction. 1603.

*Item*, That you suffer not any of the bark's company to go ashore, nor, as near as you can, any of the *Moors* to come aboard; but if any of the *English* should happen to go ashore, to give them great charge not to discover the place or height I lie in, or that any of the queen's ships are at sea, pretending it was four months since you left *England*, unless the cleanness of your ship may give suspicion, and then you may tell them you trim'd her at *Mogotbor*, an island in *Barbary*.

*Item*, That finding yourselves fully inform'd as to these things you desire, or what else you think convenient to know, then speedily to repair to me in the same height you left me; and missing me there, to direct your course to *Puerto Santo*, near the island *Madera*, where I intend to refit my ships after the fight, if I chance to meet with the galleons aforesaid.

Given on board the *Garland*, the  
17th of April, 1602.

#### *The Means to get Intelligence at the Tercera Islands.*

THE instructions following I have formerly used to be informed of affairs in those parts, and employed captain *Whiskens* in a small carvel to the effect following.

*Imprimis*, You are to keep company with the *Primrose* of *London*, which is bound for *Gratiosa*, till you come short of that island, and then to ply into the road of *Villa Franca* and *St. Michael*; where you shall use your endeavour to speak with the ships there riding, that trade under the *Scotch* colours, but are properly *English*; and to avoid suspicion and danger that may after arise to the said *Englishmen*, you shall speak with them in the night.

*Item*, The things you shall desire to know are these, *viz.* Of the state of the *West-India* fleet; and whether they still continue at the *Tercera* islands, not venturing to go from thence without a convoy from *Spain*; to learn the time of their departure from thence, and what port they mean to repair to; learn whether they keep their treasure aboard, or if it be landed, and how far their ships ride from the shore; whether they have any intelligence of *Sir Richard Lewson* and my being at sea; what you can learn of the carracks coming home, or any thing else in general touching these points.

*Item*, When you are thus satisfied of all your demands, that from thence you go to the island of *Tercera*, and view the road of *Angra*, to see in what state the ships there ride, and the possibility to surprize them at an anchor.

*Item*,

Item, That this being done, you repair to *Gratiosa*, where you shall find the *Primrose* aforesaid, who against your coming will be able to inform you of all particulars contain'd in the second article.

Item, If you find the fleet of treasure to be gone for *Spain*, then to make no stay about the islands, but return to the coast of *Spain*, where you shall find the admiral or me ten or twelve leagues west from the rock,

Item, If you be informed that the fleet of the *Indies* hover about the island, expecting a convoy from *Spain*, that you endeavour to speak with some *English* man of war, and there to deliver them this letter, the contents whereof you are already acquainted with, which will direct both you and the man of war with whom you shall meet; and so wishing you prosperous success, I rest.

From aboard the *Garland* at *Plymouth*, March 27. 1602.

*A Copy of the said Letter sent by Captain Whiskens.*

“ AFTER my hearty commendations; Whereas the queen's most excellent majesty is advertis'd of the late arrival of the plate fleet in the road of *Angra*, at the island of *Tercera*, in their course from the *West Indies* towards *Spain*; and forasmuch as her majesty hath sent divers of her ships to sea, whereof Sir *Richard Lewson* is admiral, and myself vice-admiral, to hinder and impeach the said silver fleet's passage through the seas, as a service of the highest importance, to lessen the greatness of so dangerous and mighty an enemy as the king of *Spain*; so it is, that my admiral, Sir *Richard Lewson*, is put to sea some few days before me, and before her majesty was advertis'd of the said fleet's arrival at the *Tercera*; wherefore I have employed this bearer, captain *Whiskens*, with such instructions for the accomplishment of the service, as is thought most convenient for the effecting it; which instructions I have given him order to acquaint you with upon your meeting, and the delivery of this letter, which contains a request, and as much as lieth in my power, to command all you *English* captains and masters, with whom he shall meet in the sea, to be helping, aiding, and assisting to him in so great and weighty a service, as well in counsel and advice, as in willingness to execute the directions given in my said letter, viz. If you shall understand the plate fleet intends not to venture home without ships to guard it,

VOL. III.

“ that you presently thereupon use the best means to give notice to Sir *Richard*, or me, when you shall know by captain *Whiskens* where to find us; or else that you keep about the road of *Angra*, and send captain *Whiskens* himself to look us; which soever of you comes, must observe these directions following.

“ Upon the *Spanish* fleet's putting to sea; both of you to pursue them atern, till you bring them to the height they mean to hail in; and that done, then one of you to lose company of them in the night, and to ply with all possible speed to the place aforesaid, to meet Sir *Richard* or me. And that the other bark do still attend the fleet, that if they should alter their height, she may in like manner leave them in the night, and follow the directions aforesaid, as the other bark is directed; but with this caution, that you keep a strict account of the shifting of the winds, from the time you left them, until your meeting with us; for knowing their height, and observing the winds shifting, there will be little doubt of our meeting. The service you will do to the queen and state by this, and the good that will redound to yourself, needs no repetition; and therefore not doubting of your willingness and care herein, I bid you farewell.”

From on board the *Garland* at *Plymouth*, March 26. 1602.

I have known our state use this policy in time of war, when they desir'd to be inform'd of the state of the king of *Spain's* ships, the places of their abiding, furnishing, and building: they have sent a spy, disguised like a pilgrim, to travel through all the ports of *Biscay* and *Galicia*, in his way to *Saint Jago de Compostella*, pretending his going to be in devotion; by which means he has seen and discover'd all those things he had in charge, and return'd with a true relation how things then stood.

The *Spaniards* in all their actions against *England* by sea, could never set foot on shore, but in the year 1595. when with four galleys they pass'd from *Bluet* in *Britany*, which they had taken from the *French* king, into *Pensance* in *Cornwall*. These four galleys took, spoiled, and rifled that poor town of *Pensance*, made no long stay there, but speedily return'd again for *Britany*.

The plotter of this stratagem was one captain *Burleigh*, an *Englishman*, who was afterwards well requited for his treachery; for to be even with him for so foul a fact, Sir *Robert Cecil*, the principal secretary, writ a letter to him residing in *Lisbon*, pretending that he was employed as a spy, and gave

D d d

him

him thanks for some particular service he named he had done, when indeed there was no such cause, for the man was ever too honest to that side.

Sir *Robert Cecill* so ordered it, that this letter fell into the hands of some ministers of the king of *Spain*; whereupon *Burleigh* was apprehended, close imprisoned, and cruelly tortured, when he deserved no such severe usage. I speak this, because I would have the world judge how justly he deserved it, and how prettily the *Spaniards* were imposed upon by it.

*Some Observations of my own.*

**W**HETHER we shall impute it to the work of God, who disposes of all things, or to the queen's good fortune; which attended throughout the greatest part of her reign, or to the wise conduct of those she reposed trust in, or to the care and skill of the captains, masters, and mariners that took charge of her ships, I know not which to judge of them; but it is very certain, we must acknowledge it for a great and admirable work of God, that in her majesty's eighteen years war with *Spain* by sea, her fleets, which were continually employed on the *Spanish* coast, in the *Indies*, and other places, continually abiding and enduring the fury of all winds and weather, never out of motion, and working in troublesome water, never for the space of three, four, five, or six months so much as putting into harbour, or anchoring, or having any other refreshment from shore, but still toiling on the waves of mountainous seas that never break, in comparison of ours that seem but little hills to them, the difference in times and tides much altering the case, for upon our coasts and narrow seas, where our greatest wars have been, no disaster to our ships but might be easily remedied and amended, for commonly we were never further from home than we might repair to some of our ports in twenty four hours.

The marvel I speak of, is, that notwithstanding the apparent dangers and casualties of the sea aforesaid, yet not one of her majesty's ships ever miscarried, but only the *Revenge*, which I said, in her voyage in 1591. was taken by the *Spaniards* by the unadvised negligence and wilful obstinacy of the captain, Sir *Richard Greenville*.

And we may partly judge by that ship the *Revenge's* precedent misfortunes, that she was design'd, from the hour she was built, to receive some fatal blow; for to her, above all other her majesty's ships, there happen'd these unfortunate accidents. In 1582. in her return out of *Ireland*, where she was admiral, she struck upon a sand, and escaped by miracle. Anno 1586. at

*Portsmouth*, being bound upon a southern expedition, coming out of the harbour she run aground, and against the expectation of all men was sav'd, but was not able to proceed upon her voyage. The third disaster was in 1589. as she was safely moor'd in *Chatham*, where all the queen's ships lay, and as safe one would think as the queen's chamber; and yet, by the extremity of a storm, she was unluckily put ashore, and there over-set, a danger never thought on before, or much less happen'd: and to make this misfortune the more strange and remarkable, the same night being *twelfthnight*, it was my chance to be at *Cork* in *Ireland*, and passed down from thence in a boat to *Cross-Haven*, in the greatest calm I have seen.

If we compare these fortunes of the queen's with those of her father's, who next to her had the greatest employment for his ships at sea, you will find great difference betwixt them, although we cannot properly call them voyages of king *Henry* the eighth's time; for his ships were never so far from home, but they might return again with a good wind in twenty four hours sail; as the others never expected to see the *English* shore, under four, five, or six months, and many times more.

*The Disasters of some of King Henry VIII's Ships, and the Lord Admiral.*

**U**PON the coast of *Britany*, in a fight betwixt the *English* and the *French*, the *Regent*, otherwise call'd the *Sovereign of England*, encounter'd with a carrack of *Brest*, and being grappled together, were both burnt; and the captain, Sir *Thomas Nevet*, and seven hundred men in her; and the captain of the carrack was Sir *Pierce Morgan*, with nine hundred men that perish'd with him.

The *Mary Rose*, next to the *Regent* in bigness and goodness, after this was cast away betwixt *Portsmouth* and the *Isle of Wight*, the very same day king *Henry* boarded her, and dined in her. Part of the ribs of this ship I have seen with my own eyes: there perish'd in her four hundred persons.

The next disaster that befel the king at sea, was the lord admiral himself, lord *Edward Howard*, who offering to land in his boat at *Bertaume-Bay*, near *Brest* in *Britany*, was there slain and drowned together.

When the lady *Mary*, sister to king *Henry*, was transported into *France* with fourteen ships of his majesty's, to marry *Lewis XII.* king of *France*, three of his ships were cast away; and the admiral, wherein the lady went, being the best and the greatest of the rest, called the *Lubeck*, was one of them that perish'd; but by good hap, and industry and pains of men, the lady escap'd,

escaped, but four hundred and odd persons were drowned.

Within two days after the casting away of the *Mary Rose* afore said, a pinnace of the king's, called the *Hedge-hog*, riding before *Westminster* bridge, by a misfortune of shooting off a gun a barrel of powder took fire, and blew her up.

*As I have set down in this first book the state of the war with Spain by sea from 1585. when it began, till 1602, when it ended; for the conclusion of the affairs of that time, I will annex the advice and resolution of our state, and the council of war, for making a defensive war against Spain, when we feared an invasion in 1588.*

If the following discourse seem more tedious to the reader than is fitting, let it not be imputed a fault in me; for I neither add nor diminish one word from the original copy resolved on by the council of war, whose names here follow:

The lord *Gray*,  
 Sir *Francis Knowles*, treasurer of the household,  
 Sir *Thomas Laken*,  
 Sir *Walter Raleigh*,  
 Sir *Richard Greenville*,  
 Sir *John Norris*,  
 Sir *Richard Bingham*,  
 Sir *Roger Williams*,  
*Ralph Lane* Esq;  
 The 27th of November, 1587.

PROPOSITIONS.

Such means as are considered to be fittest to put the forces of the realm in order to withstand an invasion, and the places most to be suspected that the *Spaniards* intend to land in.

*Milford*,  
*Heylford*,  
*Falmouth*,  
*Plimouth*,  
*Torbay*,  
*Portland*,  
*Portsmouth*,  
*The Isle of Wight*,

These are aptest for the army of *Spain* to land in.

*Nesse* in *Suffex*,  
 The *Downs*,  
*Margate* in *Kent*,  
 The river of *Thames*,  
*Harwich*,  
*Yarmouth*,  
*Hull*, and *Scotland*.

These are aptest for the army of *Flanders*.

How many of these places may be put in defence to hinder their landing.

*Milford* for *Wales*,  
*Plimouth* for the west.  
*Portland* for the middle of the west parts.  
*The Isle of Wight*,  
*Portsmouth*, and the  
 River of *Thames*.

MILFORD.

Although we do suppose the barrenness of the country to be such as it is not likely to be invaded, yet touching *Milford-Haven*, in respect of the goodness of the same, we think it convenient, that there should be trained the number of two thousand foot and five hundred horse, to be levied, and had in readiness: and for the increase of horsemen, if any lack be, then the gentlemen with their serving-men may be commanded to supply the default of the number afore said.

PLIMOUTH.

The reason why *Plimouth* is thought to be the most likely place, is, for that it is unlikely that the king of *Spain* will engage his fleet too far within the channel, before he has mastered some good harbour; and *Plimouth* is the nearest to *Spain*, easy to be won, speedily to be by them fortify'd, and conveniently situated to send succour to, either out of *Spain* or *France*.

PORTLAND.

The reason why *Portland* is also an apt place to land in, is, for that there is a great harbour for all his ships to ride in, and good landing for men; the isle being won, is a strong place of retreat, the country adjoining champion, where, with great conveniency, he may march with his whole army.

The reason why the *Downs*, *Margate*, and the river of *Thames*, are thought fit landing-places, is in respect of the commodity of landing, and nearness to the prince of *Parma*, in whose forces the king of *Spain* reposed special trust.

Now in these places following, order may be taken to hinder their landing, whether by fortification or assembly of the people, or both.

For *Plimouth*, both by fortification and assembly of people.

In *Devon* and *Cornwal* there are of train'd men in the counties and stannaries five

five thousand men, which are to be assembled for the defence of *Plimouth*, standing equal to both counties; of which we are of opinion, in place of muster-days, which is very chargeable, and, in effect, to no purpose, That two thousand of those should be assembled together at *Plimouth*, under such a general as shall be ordain'd to govern that western army, to the intent that they may know their leaders, be acquainted, be thoroughly instructed to all purposes, that on sudden occasions there may be no amaze, nor any confusion: this shall be done, the one half at the charge of her majesty, the other at the charge of the country, if the country's charge does not surmount the ordinary trainings.

*For Portland, by assembling of men and fortifying.*

In *Dorset* and *Wiltshire* there are of trained men two thousand seven hundred, which are to be assembled for the defence of that place; and that two thousand of the said number should be assembled and exercised, as before is said, at *Plimouth*, or in some place of *Wiltshire*, appointed for the *Isle of Wight* to take *Somersetshire*, in which there are two thousand foot.

*At Sandwich, and the Downs, by the assembling of men.*

In *Kent* and *Suffex* there are of trained men four thousand five hundred, which are to be assembled in those places for defence thereof; and two thousand of the same number to be assembled at *Sandwich*, to be governed and exercised, as before is said, for *Plimouth*.

So likewise for *Norfolk* and *Suffolk*, like order to be observed.

Our farther meaning is, That these garrisons shall remain but for twenty days, to be thoroughly trained and acquainted with encamping; and then every such two thousand men in garrison being so acquainted with this discipline, shall give example to a great army of raw men, whereby there shall be no manner of confusion on all sudden emergencies.

Farther, we are of opinion, That to these two thousand men there shall be twenty captains appointed, which twenty captains having each of them an hundred trained men, shall receive under their charge, when the army shall assemble, an hundred more; so as in effect there shall be four thousand men in order, and under martial discipline: the choice of which captains we think, for the one half, to be left to the choice of the general of the army, and the other to be of the principal

gentlemen of the country, under whom there may be soldiers appointed for their lieutenants.

The like order is to be observ'd in every of the other places of garrison.

*What order must be taken to fight with the enemy, if by force be be landed.*

For the manner how to fight with the enemy, it must be left to the discretion of the general; only we give this advice, That at his landing he may be impeached, if conveniently it may be done; and if he march forward, that the country be driven so as no victuals remain, but such as they shall carry on their backs, which will be small; that he be kept waking with continual alarms; but in no case that any battle be adventured, till such time as divers lieutenants be assembled to make a gross army, as we have before specified, except upon a special advantage.

Farther, it is thought necessary, that in these two provinces, and in all others, where many lieutenants be, there should one be appointed to be chief to lead the army, (for among many lieutenants there may be some straining of courtesy,) left by such delay and confusion great inconveniences do grow to the country, and advantages to the enemy; and therefore any lieutenant coming out of any country with his force, his authority only to extend to govern his company as colonel of that regiment, and so to be commanded by the lieutenant-general: as for example, in *Devon* and *Cornwal* there are ten lieutenants, whereby it may be known who shall command in either, as need shall require.

*What proportion of men must be prepar'd to serve to that end.*

Wheresoever the enemy shall land, as if at *Plimouth*, for example, then by the computation of six thousand men armed, and furnished in *Devon* and *Cornwal*, we conceive that the assistance of *Wiltshire*, *Dorset*, and *Somerset*, adjoining to the six thousand of the west, will make a sufficient army, being strengthened by the gentlemen and serving-men, and other of the country that shall be adjoined, though not so thoroughly arm'd as the west: and if it happen, either by design or contrary weather, that the enemy pass over *Plimouth*, and land at *Portland*, then the arm'd men and trained soldiers of the west shall repair to them. And farther, if the invasion be in *Kent*, or any other where to the west of the river of *Thames*, then those middle shires directed to assist the west, may turn to the east along the coast.

If

If the army of *Flanders* land in the river of *Thames*, then the same order is to be taken with the shires adjoining, as is afore-said, namely, *Suffolk, Norfolk, Essex*, and the city of *London*.

And because there is a special regard to be had of her majesty's person, we think it most necessary that an army should be provided to that end, to be composed of such counties as are appointed and reserved for that purpose, and to join with the forces of the city of *London*, and such other as may be armed out of her majesty's store.

Farthermore, generally for the increase of foot lacking armour, we think it fit that there be of the able men unarmed, whereof choice may be made of the trained men armed one fourth part more; of the which fourth part of unarmed men, eighty may be pikes, and twenty billmen; for the providing of which pikes and bills, there must be speedy provision made, being weapons that the realm does furnish.

Also for the increase of armed pikemen in this time of scarcity of armour, we do think it good, that all the armed billmen may be converted to be made armed pikemen; and that all able billmen unarmed should be levied, and chosen in their places; because the ranks of billmen in order of battle are always environed and encompassed about with pikemen; for the billmen serve especially for execution, if the enemy in battle shall be overthrown: but here is to be noted, that there must be reserved a few armed billmen and halbardiers to guard the ranks, wherein the ensigns and drums, &c. are placed in the order of battle.

Also, since upon any sudden invasion it would be too late to provide these things, which shall be necessary for defence, it is thought necessary that before-hand a store of ordnance and ammunition be provided, as also powder, spades, and all other furniture whatsoever; and to be left in these fore-named places, in which these garrisons shall remain.

It is also to be provided, that all those general assemblies be held for training, as well the horsemen as footmen; and to that end, that at *Plimouth, Portland, Sandwich*, and any other places that shall be fit to have the like training, the horsemen of the next adjoining counties be brought together; as, namely, at *Plimouth* those of *Devon, Cornwall*; and *Somerset*; at *Portland* those of *Dorset* and *Wiltshire*, *Hampshire* and *Berkshire*; at *Sandwich* those of *Kent, Sussex, Surrey*, &c. But because it may fall out, that in those places appointed for training of the infantry, there may want forage, or place fit for horsemen, it may be left to the discretion of the lieutenants to chuse the

fittest for the cavalry, as near the foot as conveniently they may.

#### SCOTLAND.

Farther, as touching *Scotland*, where landing we cannot resist, we think it meet that a stronger proportion be considered of for that part, namely, six thousand foot, and two thousand horse, whereof to be a thousand lances, arms of far more defence, and may be furnished as good and cheap as the jack, and to be taken out of the tower.

If therefore the army of *Flanders* should happen to land in *Scotland*, whereby their forces and strength shall be so great, as the army afore-said shall not be able to encounter them, then we think fit that a good part of the army prepared to guard her majesty's person shall march to support the army of the *North* against that enemy, and join with the trained men of that country, and the army of the west be brought to supply that charge.

It is also most carefully to be considered, that the king of *Spain* is not hopeless of some party of papists and malecontents.

All which, if these small regiments before spoken of, be not in readiness, it will be too late both to assemble for resistance of any foreign enemy, and to withstand them at home both on one day: for every man shall stand in fear of firing of his own house, and destruction of his family; therefore if any stir should happen, such severe proceedings or execution towards such offenders, would be used by martial law.

And to conclude, when it shall be bruted in *Spain*, that there are at *Plimouth* and other places such a number of armed soldiers under ensigns and leaders, the number will be reported to be double or treble; so as the king of *Spain*, upon good probability, may conceive that these soldiers, and such as are in other places upon the coast in like readiness, are determined to land in *Portugal* or the *Indies*, the same opinion being fortify'd by the preparations of so many ships as are given in charge to be made ready in those parts by Sir *Francis Drake*.

We think it also very necessary, that throughout all the countries of the realm, this proportion, as well amongst the arm'd and trained, as the unarm'd pikes and bills, may be observed, that is to say, that of every hundred there be eighty pikes and twenty bills.

We think it necessary also, that some order and provision be taken by their lordships, that her majesty's ships being at *Rocheſter* be not entrapped.

*Thus far is the Direction and Resolution of the Honourable Commissioners aforesaid, concluded on November 27. 1587.*

*Now follows an Exception to some Points of the Resolution aforesaid.*

**I**F I had been of that age and experience as now I am, and worthy to have been called upon for my opinion, by so many noble and able personages, to the propositions aforesaid, I should have dissented in some things from them, under correction be it spoken, as shall appear by these ensuing reasons.

Our safety upon an invasion depends on three defences; the one, on the good success of our ships at sea; the second, on our repulsing an enemy in offering to land; and the third, on our forces within the kingdom, if they chance to land: all which are at large handled in the precedent discourse, by the prime and most experienced foldiers of our time.

#### MILFORD HAVEN.

The first direction of propositions by them is *Milford Haven*, as a place of danger, and wish it may be guarded with two thousand foot, and five hundred horse, with some supplies of gentlemen and their servants, which they think sufficient, in respect of the barrenness of the country of *Wales*.

*The ANSWER to Milford Haven.*

I conceive, as *Milford Haven* has the advantage of all havens in *England*, or almost in *Europe*, for the largeness and goodness of the port, so there are multitude of landing places; for it is said of *Milford Haven*, that a thousand ships may ride in it, and not one see another; whereby an enemy may stand to his advantage when he list, without resistance; and in that case, where two thousand five hundred foldiers are designed to withstand the enemy's landing, there is no possibility for them to do service, unless the shore should be as well fortify'd; which would be a thing impossible.

I would therefore advise, if it were not too great a presumption in me, not to hazard any part of the two thousand five hundred men in seeking to defend their landing; but to draw them to a head, and seek to take advantage of them after their landing; as, namely, in cutting off the rear and stragglers in their marches, wearying them with often alarms, to prevent the foraging of the country of victuals; and in the mean time to draw and convey their cattle of all kinds into the mountains, that

an enemy can neither possess, nor know where to find them; and for other kind of victuals, as corn, &c. that cannot be conveniently transported, to set them on fire, that the enemy may meet with hunger and famine, instead of food.

And if the invaders intend to march from *Milford Haven* to the inward part of the land, (for that is the end of all conquerors,) it will easily appear what imminent dangers they will run themselves into.

Their victuals in that part of *Wales* will not sustain them; and it will be the less, being before destroy'd. Secondly, their march will be wearisome and tedious, where they must pass mighty mountains, and find themselves destitute of all succour; in which passages the two thousand foot and five hundred horse aforesaid, knowing the country so perfectly well, as the others do not, they may take great advantage of them. Thirdly, the further they march they will be the greater distance from their ships, and consequently from succour and assistance: and in the mean time, whilst they are upon their troublesome and dangerous march, the queen will have time enough to draw her forces from the furthest part of *England*.

#### PLIMOUTH.

The next that is alledged is *Plimouth*, as the likeliest place, in respect it is the nearest port to *Spain*, to give succour; and that they will not in reason adventure their fleet further into the channel before they are masters of some good harbour.

#### ANSWER.

I approve these reasons, as a chief ground for an enemy to settle upon; for whosoever invades by sea, above all things must seek to obtain a port for his fleet; only I disapprove the election of *Plimouth* before *Falmouth*; for *Falmouth* lies more convenient for *Spain*, fourteen or fifteen leagues nearer to it, a better harbour and outlet, and at that time of less defence than *Plimouth*; and being possessed by the *Spaniards*, it will be made stronger by the situation. Moreover *Falmouth* is in *Cornwall*, a small shire, and narrow betwixt sea and sea, and has no country neighbour to it westward to give us assistance, as *Devonshire* hath *Cornwall* to the west, and *Somersetshire* to the east; but the one and the other I hold as fit to be fortify'd, as any two harbours of *England*.

#### PORTLAND.

*Portland* is alledged to be an apt place for the *Spaniards* to arrive in; for that it is a great harbour for all their ships to ride in,

in, and a good landing for their men; that the island being won, it is a strong place for retreat, the country adjoining to it champion, where with great conveniency they may march with their whole army.

In *Dorset* and *Wiltshire* there are of train'd men two thousand five hundred, which are to be assembled for defence of that place; and the honourable commissioners do advise that two thousand of the same number should be assembled and exercised, as before is said of *Plimouth*; and that some place be appointed in *Wiltshire* for the succour of the *Isle of Wight*, and to take the help of *Somersetshire*, which are two thousand foot.

#### A N S W E R.

The honourable commissioners are misinformed in the state of *Portland*; for is it neither an island, nor has, as they conceive, a harbour for ships to lie in safely from all weather. It hath only an open bay, where with an easterly wind ships ride in danger. And if the fleet of *Spain* should arrive there, I should sooner look to have them wrecked upon the shore than to return safe again to sea.

*Portland* is a road some leagues over from shore to shore, and within it lieth a small bar, and dry haven, called *Weymouth*, of no defence against an enemy's landing, nor fit for great ships, as is all that shore, except only a small port of no importance upon the road.

This place is in the state of *Milford Haven*, that hath an infinite number of places to land in, and no possibility to impeach an enemy's landing: and this will serve as well for an answer to the *Isle of Wight*, and other places of that sort, where there are several landings.

The road of *Portland* gives us an advantage over the *Spaniards*, if they should anchor there, by reason of the breadth of the road, which is such, that no fortifications from the shore can impeach our attempts upon them. For suppose we should not be able to cope with them in ships, yet keeping ourselves to windward of them, during the time of the whole flood, we shall be able to put in execution stratagems, in firing them with vessels we may drive among them; or, if we fail one flood we shall be able to attempt them as often as we list, and the flood shall run without danger to ourselves; for during the flood they cannot come to us; and with the first of the ebb, we shall be able to ply out, without endangering ourselves any manner of way.

I confess it is necessary that the men be mustered and trained in every shire, to make them able soldiers; but, in my opinion, it is not safe to design so many men to so ma-

ny several places, without there be works and trenches made to defend them, and to enable them to repulse an enemy's landing; for if those men should be defeated, the loss of their arms would equal the loss of so many men, and dishearten others that have not been acquainted and accustomed to the accidents and chances of war.

Something I have said to this part of keeping an enemy from landing in my fifth book, where I treat of stratagems, by example of the *Downs*, and other places, where the shore-side is full of small stones and shingles cast up by sea.

#### How to fight.

The next that follows is the order to be taken to fight the enemy if he be landed, which must be left to the discretion of a general: what ensues more, by the advice of the honourable commissioners, I refer to their former directions which you have read; and for brevity sake will deliver my opinion for the world to consider.

#### A N S W E R.

There must be great consideration, not only how to fight, but a place must be chosen within the land to make their rendezvous, for all their forces to meet together with most conveniency; for the enemy being landed, we must lay aside all other propositions or stratagems, more than to think how to force them in a main battle, as we shall hear they direct their course, either by dividing their army, or marching in a whole body.

And for the effecting hereof, we must resolve to gather and draw so many men into a body, as will make two main battles, the one to attend the south and west coast, the other to be ready to attend the prince of *Parmã* and his army in the east.

If our ships fail of intercepting the *Spaniards* landing, they will become masters of all our ports; and there is no coast where they shall arrive in *England*; but will yield them store of landing places without resistance, as before I have expressed; and therefore our chief defence must consist in our land army, if we must not employ so many men as is design'd to withstand their landing as aforesaid.

For the place of rendezvous for our western army, I hold *Salisbury* the most convenient seat: it lieth half way betwixt *London* and *Plimouth*, which will make the easier march for them both; not forty miles from *Portland*, and that southern coast; not above eighteen from *Southampton*, nor thirty to the *Isle of Wight* and *Portsmouth*; so that we shall in a manner be upon the enemy

enemy before they can be provided or prepared for their march.

All the foldiers that are design'd to oppose their landing in *Cornwall, Devon, Somerset, Dorset, and Hampshire*, being join'd with the rest that shall be drawn out of the inland shires, will make an army able to encounter more men than three such fleets can either contain or bring.

When it comes to this extremity, the countries must have care to drive away their cattle, and live things of all sorts, and to convey their corn and other victuals in carts, and one cart to take it of another, that the first may return back for another load; and if they have not time enough, then to burn the rest, and carts also, that the enemy may be disappointed of carriages as well as victuals; and for forage for their horses, they coming by sea, their number cannot be great.

The place to drive their cattle to be near the army, which will surely guard them. This being done, the general is to advise whether to march and meet the enemy before their further entrance into the land, or to suffer him to march into the inward country, to have the greater advantage of them, being far from their ships, and by consequence from all relief and help that they can afford them: but I am utterly against the adventuring of our people by handfuls before they come to a main battle.

The place of our rendezvous for our eastern army was well and advisedly chosen in 1588. when her majesty repaired to her army: first, in respect of the small distance from *London*, from whence they were to receive supplies; secondly, by the provision made of building a bridge of boats to pass over the river to the succour of *Kent*, or *Kent* of them; and, thirdly, for appointing their rendezvous on the *Essex* shore, rather than in *Kent*: for if an enemy land in *Kent*, he is kept by the river of *Thames* from coming to *London*, unless it be by the bridge of *London*, or of *Kingston*, which may be prevented by breaking them down: whereas if an enemy land on *Essex* side, he may march directly to *London* without let, impeachment, or other impediment, but by the encounter of an army, that may be drawn out of *Essex, Kent, Hertfordshire, Buckinghamshire, Bedfordshire, Huntington, Northampton, Lincoln, Norfolk, Suffolk, Middlesex, and London*. And for *Berkshire, Bedfordshire, Gloucestershire, Worcestershire*, and the shires thereabout, they lie indifferently to give assistance as well to the western as eastern armies.

The honourable commissioners did conceive, that this great preparation of ours would so much terrify the *Spaniards*, that it would divert them from their intended

invasion upon *England*; but I believe it proceeded rather out of a hope, or an imagination, than out of any ground or reason; for so great an expedition as this of the *Spaniards*, is not to be scared away like birds with wisps from a cherry-tree: but if you do it as a policy to amaze them, I fear they are not so unprovided of intelligence from *England*, but to know that the preparation of ships, the quantity of victuals, and the raising of soldiers, does intend no great matter from home.

Besides, if we should fright them with a voyage to the *Indies*, there are many things required in such a voyage that cannot be suddenly provided, as, namely, the sheathing our ships, provisions of all kinds, iron hoops for casks, and many other things needless to express.

But suppose we should actually undertake such a voyage from home, I know not how we can give a greater advantage to the *Spaniards*, they having so great an army and navy in readiness to assault us wheresoever we arrive; and in such a place where they shall be continually supplied from home; whereas we shall find nothing but what we carry with us.

#### PROPOSITION.

Whereas the council of war do advise, that in the army that shall be raised there be an increase made of pikes and bills, as weapons that the country affords, and shews the necessity of their being put into such mens hands as have not been taught other arms.

I will be bold, without derogating from those noble persons, to deliver my conceit to this point, and to commend to them a weapon, that though it be known to us, yet has never been used in war, or against publick enemies; and yet in my opinion it may be made useful in the field, where there is neither castle, fort, nor town of strength.

The weapon is a pike-staff, such as keepers and warreners use for the guard of the game; and that every wood affords us without cost.

This staff to have an extraordinary long pike, and three small ones to be scrued in at the sides of the staff, and so light, that a man may easily command him; every man in a town to be enjoined to have one. And to give the more credit and reputation to this weapon, and to encourage men to the use of it, as an exercise of value, credit, and pleasure, as football, hurling, and wrestling, have been anciently used, when there was more society and friendliness among men than now-a-days, I would advise, that all people thus armed with staves, may every holiday

holiday have a place and time appointed for meeting and conversation, to use these commendable exercises and sports, and amongst them to have men of skill appointed to instruct them, as masters of defence, do their scholars, till they be made perfect.

At this meeting they may also use wrestling, and other laudable sports, which would put life and agility of body into them: it will make them courageous to encounter an enemy, and skilful to take an advantage upon him: they need take no care but to wield their staves with such advantage as shall be taught them; as a musketer, with whom they are to encounter, has his musket, his rest, shot, powder, and match, to look to, ~~one~~ whereof failing, he may cast away his piece for any other service he can do.

Let the musketer in this case be sure to kill him he levels at, or else the pike will be within him before he can load again, and have the advantage of his weapon upon him; and the pikeman being taught to wrestle, will suddenly kick up the other's heels; and if he carry ever a dagger or knife in his pocket, he will be the death of his opposite, if his staff fails him.

The bill in this case is improper, under correction to the commissioners, whose use is, if an army be routed, to fall upon them pell-mell with blows only: a bill is short, and not so nimble in a man's hand as a staff: it will be commanded by the horse,

and a great trouble to him that carries it after the pursuit of an enemy. A staff has no impediment, but may easily overtake a musketer that is laden with his piece and furniture, that he shall be either forced to yield, or cast away his arms, to escape by flight. It will also be an advantage to a man if he be put to leap a ford or ditch, and many other uses may be made of it.

This meeting for recreation will make good conversation and love amongst men; it will make them abandon alehouses, and think on nothing but on holidays to spend their time in sports, which for many years they have been debar'd of. And for the better governing it, and to avoid any hurt that may arise by it, it is wish'd, that at the time of practice the pikes be taken out of their screws; and at every such meeting the constable and his deputy be appointed to govern them, and punish abuses.

Thus shall all men in the kingdom be made to serve their prince and country without murmuring, exception, or offence offered by one or other: they are drawn to no expence or charge by it, or time lost or spent in vain, to hinder their other affairs or labours; the holiday yields them free liberty for their delights and sports, which have been of later times worse spent.

And thus much of a gentle private opinion, to be compar'd with that of the honourable commissioners.

### *The Queen's Death, and the Advantages of the Peace that ensued above the War in her Time.*

HAVING run over as briefly as I could such accidents as the eighteen years war did produce betwixt *Spain* and us, now happen'd, as you have heard, the queen's death, which, as was to be expected, produced alterations in *Europe*, though not much in *England*; for commonly every state changes with time, and sometimes to its advantage; for subjects fondness of princes is uncertain, and they are often friends to day, and enemies to morrow.

When God call'd her majesty to his mercy, it had been long look'd for, and desir'd by her foes, and fear'd by her friends; some laugh'd, some lamented; *Spain* and its adherents rejoiced, having tasted the bitterness of eighteen years of war with her; *Holland* fear'd, and suspected their good days began to wain, because his majesty needed not to support factions abroad to defend his just and lawful title.

These two nations that were opposite one to another, had their particular ends; but the people that heartily and inwardly mourn'd, were the *English*, to see themselves deprived of a sovereign so good and gra-

rious, so virtuous and victorious, whose reign had continued so long, as few had before in *England*, which made them the more uneasy.

But this trouble was soon turn'd into joy: for when his majesty appear'd, they recover'd a new life and spirit, and receiv'd him with that alacrity, that they had soon forgot their grief, and fixed their hearts as faithful to serve the king, as they had willingly obeyed the queen.

But before I end with the queen's death, I will shew you and the world, by comparison, the difference betwixt peace and war in the queen's time, if she had been so happy as to enjoy it; for though her actions were of great reputation to her and her subjects, through the success she had against so mighty and potent an enemy as the king of *Spain*, yet I must confess, the actions of our two succeeding kings (king *James* and king *Charles*) settled a firm and quiet league and peace in this kingdom, that has produced greater happiness and benefit, if we will lay aside passion and partiality.

Peace has eased us of needless taxes, which in war princes are forced to lay upon their subjects: peace takes away all fear of enemies, so that every man may live quietly under his olive-tree. Our peace has trebled our number of ships to that of former times; mariners are abundantly increased, and wealth plentifully augmented; so that we are better enabled and provided to resist the fury of war, either by land or sea, if there should be occasion.

And if eighteen years of peace have produced so great an alteration and change to this kingdom, in comparison of the eighteen years of war past, how happy had we been, if the eighteen years aforesaid had been converted into the same number of peace. All blessings had been poured upon this land, which by war was hinder'd; for who sees not that eighteen years of trade doubly increased those riches that time consumed. These errors of ours will serve for a warning to us in future times; for it is an old saying, *That example is of greater force than precept*; and, *That custom teacheth nations, reason men, and nature beasts*.

*Spain* is more punish'd by the king's peace, than by the queen's war; for by our peace, *England* is enlarg'd by several plantations in *America*, all neighbours to *Spain* in their habitations of the *West Indies*, in case they become insolent, or offer injuries; which plantations in eighteen years are brought to afford plenty of food, without the help of *England*; which is no small benefit to us, considering the increase of *Scotch* and *French* that are ready to devour us: and besides this abundance of victuals, the soil of that country will produce whatever we shall plant or graft there; so that *England* need spare nothing out of it, that will bring a want to it; for their chiefest want is of tools, materials, and other instruments.

The air is delightful, and the climate wholesome, and lies most convenient for other nations to take off their commodities: then judge, if queen *Elizabeth* had not been diverted by war, what honour, what wealth, and all other blessings, had she left as a legacy to her subjects, which was afterwards increased by our two kings aforesaid.

And besides these seven western plantations, begun and continued by subjects, without expence to the kings, and not molested by the terror of the enemies, I will sail to the *East Indies* three times further distant than the other from *England*, and where the equinoctial line must be twice cut; there we found a trade to the island of *Socotora*, at the mouth of the *Red Sea*, and the nearest part of that continent to us; and keeping the shore of that *African* coast, we landed at the island of *Ormus*, and other places

within the gulph of *Persia*, where we assisted the king of *Persia* to take that island from the king of *Portugal*.

But I confess, this was not so commendable as many other noble acts of ours; for here we defiled our hands with stealth; and what is worse, we did it to aid and benefit a mahometan. But mark what the end of that voyage prov'd to the *English*, which brought God's anger and revenge upon them; for the *Persians* treacherously broke their word with our men, and upon a slight occasion seized all the goods they had taken. And besides, an *English* ship lighting upon greater wealth than the rest, was there cast away and perish'd; not to speak of many other disasters that befel them.

We stopp'd not here, but in the same easterly course repair'd to *Surat*, in the kingdom of *Gambaya*, under the government of the great mogul, to try what trade and riches that king and country would yield us. The long distance betwixt the sea-coast and the court of the mogul, did not obstruct our visiting him, but thither we sent at times several ambassadors, who found civil entertainment, which has afforded us a peaceable trade, with divers immunities.

But before we leagued, or had correspondence with this king, we had settled and continued, and to this day do enjoy a greater trade, and further from home than *Surat*, as namely, at *Java*, *Sumatra*, *Jacatras*, the *Molucca* islands, and others. We have seen and tried what *China* and the island of *Japan* afford, though we are not much encouraged to persevere in those trades; for they do not answer the great expectation we had conceived of them. I dare boldly aver, if the custom-books of that trade to the *Indies* were viewed, it has yielded the crown of *England* many an hundred thousand pounds, all which we must attribute to our peace; for though in the queen's days, and in the year 1591. captain *Raymond* gave a warlike attempt, if he and his ships had not miscarried in his going to the *East Indies*, yet that voyage produced nothing but misery, as you will understand hereafter.

But I know the well-wishers to war, and favourers of the queen's time, will except against me, and all I can alledge in commendation of peace, as placing it before war. But in answer to them, I say, I was as great an actor in those days of war, as any other that shall question what I say, and have as good reason to judge of the difference of times as they, if partiality and faction does not transport them.

And because I insist so much upon peace, and go about to prove the good it produced above the queen's war, I expect to be hit in the teeth with his majesty's late war  
with

with *Spain* in 1625. and with *France* in 1628. But before I come to that time, I must tell them, That king *James*, who reigned twice as long as his son, reckoning to the year 1635. could not be said to have been molested, or his countries infested by enemies. And the accident that fell out in the days of king *Charles*, might rather be term'd an act of unkindness with the king of *Spain*, than of malice, and therefore deserved not the name of war, for it was begun and ended before either side could think to frame themselves to hostility; and who knows not that some evil and passionate counsellors drew our king to a sudden and sharp revenge upon *France*; which was as quickly ended, as words could give satisfaction.

But I would ask these captious persons, whether either of these two unkindnesses or occasions were so violent, or of so long continuance, as to hinder his majesty's designs to enrich his kingdoms, or whether the plantations failed by any misfortunes we found by war.

Another objection will be made against what I say of our plantations, which is, That they were known to us long before; and that *English* ships visited the *East Indies* in the queen's time; and perhaps they will press me with the first discovery of *Sebastian Cabot*, Anno 1496. from fifty eight to thirty six degrees of latitude; which I thus answer:

No relation of *Cabot's* ever mentioned his possession, or setting his foot ashore to inhabit any of the lands betwixt the degrees aforesaid; and therefore we can challenge no right of inheritance, wanting proof of possession, which is the law acknowledged for right of discovery: and by this argument, the *Spaniards* may as well inroach on us upon as colourable title, because they were the first that failed into *America*.

The second objection is, the proof of our inhabiting *Norrambega*, a part of the main continent of *America*, and betwixt the degrees aforesaid, in 1584. and so we say captain *Raymond*, before spoken of, was in the *East Indies* in 1591.

I confess here was a possession in 1584. and a patent granted *Sir Walter Raleigh*, who placed there a colony; but so ill seconded, that all the planters were there consumed, and no memory left of them, though our late planters endeavoured to find what became of them; whereby we may say our possession was lost, as in the case of inheritance, that for want of heirs a man forfeits his estate.

And to answer the objection of the *East Indies*, there is no mention of possession by *Drake*, who was there the first of any *Englishman*, when he sailed round the world, and before the reign of king *James*. And moreover, in the forty third year of the queen, and the year before she died, she granted a patent to certain merchants for fifteen years trade to the *East Indies*, which was prolonged in the ninth year of king *James* to continue for ever; but the queen lived not to see the return of that first voyage which captain *Lancaster* went. And moreover, his employment was as well to take by violence, as to trade by sufferance; and unworthy the name of an honest design: for the hands of merchants should not be stained or polluted with theft; for in such case all people would have liberty to do the like upon them.

But indeed, the most memorable thing we can challenge by that trade, is, That we have lately agreed with the *Portuguese*, who were the first discoverers, and to this day enjoy the benefit of it; have settled their government and language; built rich and curious cities, churches, and monasteries; and all things else that belongs to a civil nation, in as large and ample a manner, as in their own country of *Portugal*: and more than this, they have the command of many civilized countries adjacent to them. They have ships sufficient to uphold the trade betwixt *Portugal* and the *Indies*; and yet they are willing to make us sharers in their commerce, and to incorporate us as freely as themselves, with promise to employ and freight our ships for our better satisfaction.

But give me leave freely to deliver my opinion concerning this voluntary offer made by the *Portuguese*, who hitherto could be brought upon no account to grant us trade. We must conclude they are drawn to it rather through necessity than love, or other respects; for they find the intrusion and good success of the *Hollanders* to be such, as in time may hazard the ruin and subversion in the *Indies*, without the help of *England*, who is best able to right them; therefore let us consider the time and the occasion of this overture, and embrace it as friendship grounded upon interest; for though leagues betwixt states be to support one another, yet every one has his particular advantage. I will say no more to this point, but advise you to safety and security, and to beware you be not deluded with golden pills, wherein is hidden most deadly poison.

*A Farewel to the Gentlemen to whom I dedicated this Book.*

Gentlemen,

“ I MAKE you the *Alpha* and *Omega* of my discourse; for at the beginning of this book, I commended it to your view; and now, at the end, I take my leave with a loving farewell, adding this admonition by way of caution, That you beware of adventuring yourselves and estates upon sea expeditions; you may perceive, by my observations, what peril they bring, without profit; and what pains, without preferment; for there are few whose employment has gain'd them advantage or honour; as to the contrary, many are brought to want and misery by them.

“ Our private actions of reprisal have been as fatal to the adventurers, as *Sejanus's* horse to the riders, or the gold of *Toulouse* to *Scipio's* soldiers; for to this day there remains a proverb in *France*, *That he who is unfortunate, has some of the gold of Toulouse in his house*: and so fares it with our undertakers of reprisals; for wealth so gain'd, brings a curse with it; and not only wastes itself, but consumes goods well gotten, if mixed with it.

“ Take notice of these few persons following, instead of a multitude I could recite, that have been brought into the estate of *Sejanus's* riders, or the destroyers of *Toulouse*; and it will appear, God was displeas'd with their actions, and punish'd their designs.

“ I will begin with the earl of *Cumberland*, whose voluntary undertakings were well punish'd in his first two voyages, bereaving him of two hopeful sons, whom this kingdom could not match; and in the prosecution of such actions, he so impaired his estate, that his heirs, and their posterity, have just cause to bewail his proceedings.

“ The three eminent men of that time by sea, were *Drake*, *Hawkins*, and *Forbushier*, none of which left any legitimate issue to enjoy their adventurous labours: and if two of them were now alive, they knew not where to find the estates they left behind them.

“ The miserable gentlemen that undertook such enterprizes for gain, to recover their spent and consumed estates, were *Candish*, *Cbidley*, *Manby*, *Cock*, with many others I could name, whose funerals were all made in the bottomless sea, and their lands consumed and turned into the element of water.

“ And if we descend to the towns, which for that time flourished with the goods so gotten, and examine the conditions of them and their inhabitants, we shall find not only the people, but the places impoverished after the same manner they were enrich'd, (that is to say,) by rapine, spoil, and piracy: and I may further say, that there are not three men in this kingdom who can boast they have succeeded their fathers in any quantity of goods so gotten.

“ What I warn you of, is not so much out of persuasion, as precedents and example, which is a compass to fail by; but if your wilfulness will not admit of advice, and hereafter you feel the smart of it, remember that counsel is always full of perturbation to such as embrace their own wills.

“ And remember the saying of a grave and wise counsellor, *That as youth is warned to prevent the worst, so age bids us provide for the best*; for it is a sickness of most men to be guided by opinion, and not by judgment: but wise men do otherwise; for if they run into an error, they seek quickly to amend it.”

*The End of the FIRST BOOK.*

# Sir . W I L L I A M M O N S O N

T O

## His S E C O N D S O N .

Good S O N,

**B**Y computation of years, it is now nine since I address'd my self to you in writing; which number of nine changes one's complexion, and many times one's conditions: nine times seven, or seven times nine, make fixty three, which is the climacterical, or dangerous year.

This ninth year has bred greater alterations in you, than either in complexion or condition: her malice and perils towards others have begotten a contrary effect in you, and in so high a measure, by your marriage, that the climacterical year has lost its reputation with the observers of it; for in despite of it fortune has given you a lady of birth, parts, and means, far above your merit or thought; and since fortune has been so liberal, do not give her cause of scandal, or to find ingratitude in your face, by your carriage to your lady; for an unthankful man incites God to punish, and people to abhor him.

No man can treat with an ungrateful person, without suspicion of him; and next to the name of an evil christian, the word *Ingratitude* is the worst: God, for all his blessings on man, requires nothing at his hands but thankfulness.

Next the respect to your lady, let your carriage to all others be with that moderation and affability, that they may perceive you are no more elevated with good fortune, than you will be dejected with bad; but stand like a tree well rooted, which no wind can stir or move.

The reputation you may seek to get in this world, depends not so much upon prudence as goodness; for a man ought to get credit and esteem of all, and to be suspicious of his own advice and carriage: time will inform you, that the greatest gift nature can bestow on a young man, is comeliness of body, discretion in his carriage, and eloquence of tongue; and yet all this is nothing, if it be not attended with a good reputation. The true property of a gentleman, which I would have you to observe, is to be temperate in speech, liberal and frank in giving, moderate in diet, honest in life, and courteous in carriage: for it is not titles or riches that makes men esteemed, but the favour they do, and the gifts they bestow.

The mischiefs that breed contrary effects to these, as hate, spleen, and contempt, are

VOL. III.

covetousness, pride, and disdain: the cure to false this, is not to presume too much upon your self, without the counsel of others; for many times people (and especially young men) attribute more to themselves, than others can discern in them. *Solomon* says, *That wise men take counsel; and he that does things with advice, governs prudently; and he that does otherwise perisheth, and faileth in his own designs.*

This counsel is not to be expected from one of twenty or thirty years of age, but from hoary hairs. *Licurgus* ordered that old men should be more respected, because their advice was more to be regarded.

The greatest combat in this world, is to conquer one's self, and to tame his heart, as *Plato* says: but the way for young men to be virtuous in this battle, is to take advice, to hear, and with humility submit to reason; for naturally youth is inclin'd to have an opinion of themselves; and to abandon the counsel of others, which commonly ingenders pride, vain-glory, and ambition: then followeth reproach, contempt, and scorn, which makes their paths as dangerous to walk in, as the slipperiest of ice or glass to tread on.

Be careful in the choice of your friends; and esteem them more for virtue than honour: the one is but a title of power; the other of desert. Know there's no end of friendship which is founded upon love, and requited with the same. To such a friend one ought to be scarce in words, but prodigal in works; for the true perfection of friendship is to supply a man's wants, and advise him in his errors. But *Seneca* saith, That such are rare; and a man ought to seek but one of them, and to have never an enemy: for as it is dangerous to have enemies, so it is troublesome to have many friends: if he be poor, you must give; if rich, you must observe; if favoured, you must adore; if disfavoured, you must support; if cross and perverse, you must flatter; if choleric, you must forbear; if proud, he is not long to be endured.

Above all other vices, beware of that of pride; for young men are subject to it: it is called vanity in women, and ambition in old age. Youth are prone to be proud of their persons and external parts: women are as vain therein; and what they want by nature, they help by art. Young men affect ostentation, and to be praised; women vain-glory,

glory, and to be adored. A man endures no competitors, nor woman equal.

Many women by reason of their lightness, and young men for want of knowledge, are inconsiderate: they apprehend, and execute, all with one breath, which many times brings them to repentance: and yet do I rather approve the vanity of women, which are governed by the inconstant motion of the moon, than mens pride, that can give no reason for their being so, if they seriously consider how indifferently God distributes his gifts to all creatures; so that no man can persuade himself but that thousands equal him.

If he is proud of the favour of a prince, he may as well be proud of his fortunes; for comparing his merits with others, he will find many competitors exceed him: if of his progenitors, or other parts of his ancestors, kings reward mens proper virtues, not what they can challenge to descend from others: if of learning, his waste hours permit him not to attain to that perfection ordinary scholars do by continual study: if he affect popular applause, it is like an echo, to be heard, but no man knows where: and let him not be deceived, for no proud man is either valued or beloved, as himself can witness; for the nature of pride, is to abhor it in another: if he be frank and liberal, for pride without bounty is like a spot in a fair face that defiles it, his esteem will be according to his expence; but that ceasing, men turn their hearts against their pride.

Ambition is more sufferable and allowable in an old man, than pride in a young one: for there are two distinctions in ambition; the one is allowable and commendable, when a man hath an opportunity to compass his allow'd desires by his lawful endeavours.

Most divines hold free-will in man to do well; and where ambition tends to well-doing, pride has no power or part in him. The pride of *Tarquin* was so detestable, that it overthrew the title of kings in the *Roman* commonwealth. *Cæsar* settled the highest degree of monarchy by the name of emperor: his ambition was carried with that temper, that he attained his end by love; whereas *Tarquin* lost himself by pride, and was worthily loathed.

No man that desires to be singular, but has some part of ambition, and yet free from any part of pride. If the common soldier did not aspire by ambition to the degree of a captain, his valour against the enemy would little appear: if a courtier had not a thought of advancement, he might better employ his time, than in the service of a prince. A thankful man ambitiously strives to requite the courtesy of another: then it is not the word ambition that makes

it unlawful, but the manner of compassing it, and the means of employing it.

The second degree of ambition is accompanied with pride, envy, and hate; and obtained by corruption, flattery, and unlawfully, as appears in some *English* kings, who have not spared the destruction of their own blood to attain their devilish ambitious ends.

Ambition is like the unfatiable sea, that receives all other brooks and rivers, and yet is never filled. It may be compared to the monster *Hydra*, which though she loseth her head, yet it increaseth again; for the nature of ambition is never to have an end; and as man compasseth his desire in one thing, he is not long satisfied with it, but covets another, still working his own misery and woe. But he should remember the words of *Plutarch*, *That none climbs so high, but he has God above him, and his actions are beheld by man.* Ambition is a thing conceived in the heart, and consented to in the mind.

The last and basest property of ambition, is to compass their end by corruption: this age, and this our nation is best able to testify it; for no man's virtue can advance him, nor no man's vice hinder his ambition, if he have money and means to buy his preferment; as, on the contrary, amongst the *Romans*, no man was advanced to honour but such as refused it; and none with us, but those that buy it: nor no man was preferred but by his worth; but none with us but for their wealth. I confess that as it is reputation to have it, so it is infamy to purchase it; for a good man careth not for titles, and his good name cannot be taken from him; he may be ill used, but not dishonoured.

The next thing I commend to you is patience and temperance, as a singular virtue in itself, and the cause of much happiness to man. It breeds content to the mind, ease to the body, and quietness to the soul. It abandons ambition, and makes one submit to reason. *Plutarch* advises *Trajan* to patience in troubles, to be gentle in business, and to bear with ill tongues, and suffer calumnies; which time cures, when reason cannot; and it is as great wisdom to do no evil office, when a man may do good; for if he may have his ends by fair means, not to obtain them by foul; for the true property of a wise man is to think of times past, to order things present, and to be careful of the future. *Cicero* says, that prudence and patience is the art of life, as physick is of health; it neither deceives, nor is deceived. As for worldly fortunes, they are uncertain and mutable; for no man can account himself happy till his death.

One thing I heartily and earnestly recommend to you at your idle hours; (I know my

my request is no sooner propounded than granted;) which is the continuance and delight in your book; but with this caution, *That it breeds not a vain and arrogant conceit, which may cause contests and quarrels in arguing.* Matters of story depend on the author's authority that writes, and their judgments that read: many times writers differ; and readers are apt and prone to rely on him who suits best with their particular opinion. This over-waining conceit lives in the house of will, where reason has no power, and it is the original breeding of all heresy. And if men would read with patience, with judgment consider, with humility to submit, and with reason to receive satisfaction; neither would sects so much abound, nor scholars so greatly disagree among themselves.

All men are affectionate or partial in their opinions and sports; some delight in hunting; some in hawking, and other exercises; and as there are many faces that do not agree in one feature, so there are as few that agree in all points and delights. But esteem no less of him that sports not with your humour, than of a christian that jumps not with you in points of religion.

If reason guideth actions, learning should have the preheminance above all other satisfactions; for he that is a lover of his book, shall learn of wisemen courage to imitate, prudence to counsel, grief to lament, mirth to laugh at, fools to jest with; yea, he shall find the good he desires, and may eschew what evil he pleases.

*Barilius* the emperor advised his son not

to be weary of reading of books, because he would find that without sorrow, which others do with great trouble; he would see the mutability of human life; the raising of some, and the falling of others; the punishment of the evil, and the reward of the good; that he might fly the one, and embrace the other.

Good son, for an end of all, be confident before you enterprize a thing; be constant in pursuing it, and patient to effect it; for nothing is compassed with that facility but finds opposition, nor nothing spoils a good cause sooner than haste and choler. It is like an evil weed put into a favory broth, or poison into a potion.

Three things there are I would advise you to remember; the commandments of God, benefits received, and the uncertainty of your life: in the one, you will perform your duty to your creator; in the other, shew thankfulness to the world; and in the last, abandon many vices and vanities this age produces.

For your duty to me, let it be as God hath commanded: not that I expect more than by nature is due; and for less, let *Noah* be your example, who being despised by his son *Cham*, and being pity'd by his two other sons, God sent his curse upon the seed of *Cham*, and blessed his other children. Remember that the clear and unspotted life of the living son, begets fame and glory to the dead father. And carry in mind these precepts of mine, and you need not esteem the affronts of malicious tongues; for they may throw stones, but do no other hurt.

T O S U C H

Gentlemen and Commanders as were Actors in the Wars with *Spain* in the Days of Queen *Elizabeth*.

*Noble Gentlemen,*

**I**N my former book I have presented to the view of the world, the accidents and occurrences of the late war with *Spain*, in which you may worthily challenge an interest by having hazarded your persons in such desperate expeditions; and wherein your rewards did not equal your deserts: for time and ingratitude are the destroyers of all noble and memorable acts, and have caused you to be forgot.

The *Romans* had never been nobly esteemed, nor their victories gloriously achieved, had they not respected the actors as the authors of their conquests. They valued men not for their birth, but for their worth, accounting virtue the cause of preferment, and honour but the effect. They accounted them not gentlemen that got riches, but those that attained to reputation in war; saying, He was unworthy the praise of his ancestors, that did not imitate them in virtue and valour.

In six hundred and forty years the *Romans* were victorious, they never gave office to men that sued for it, but to such as out of mature discretion they chose, whom they knew to be fit to execute it. Soldiers may plead their honours to be more ancient; for it is written in the province of *Caria*, in the *Lesser Asia*, they gave spurs to the valiantest men at arms, by which they were privileged and dignify'd. Feathers were likewise invented to distinguish soldiers from others; and punishment inflicted on those that wore them, and could give no account of some exploit in chivalry.

Inscriptions on tombs and monuments were allowed only to those that gave testimony of their valour in warlike feats.

A young man, whose valour was suspected, and son to a famous captain, besought king *Antiochus* to give him the reward his father had given him by king *Demetrius* : *Antiochus* answered, I reward not the virtue of fathers, but the deserts of the son.

*Lycurgus*, among his many laws, for the encouragement of men to imitate the virtue of their ancestors, ordained, That at the solemn and publick feasts there should be three choirs of singers, according to their ages : the first were old men, who sung their own praise of times past : the second young men in their prime, who sung, *We are young and able, and he that will not believe us may try us* : the last were boys, who sung, *We shall be better than those that went before us*.

If these three degrees were now to sing, the old men with hoarse voices might rather exclaim against the iniquity of the times ; the young men with untunable notes, might renounce following the example and steps of those that went before them ; the boys might complain, that all hope of preferment and reward is taken from them.

Virtue was ever esteemed, and arms rewarded before all other professions ; and as a man is bound to serve a prince, so has he leave to sue to him. The powerful king *Abasuerus* was wont to say, There was no man that did service to his prince or country, but they were bound to reward him ; and because his deeds might be answerable to his words, they write of him, That one night in his bed being not disposed to sleep, he caused the annals of his country to be read to him ; and finding that one *Mordecai* had done great service to himself and country, he asked, what reward the said *Mordecai* had received ; and finding he was neglected, he advanced and preferred him above the rest of his subjects, saying, *That prince was unworthy, who did not reward according to the service he had done*.

*Numa Pompilius* commanded those to be revered that overcame in battle. *Solon* ordained a reward for such men as deserved well of their country.

But now you see, and with grief must confess, we make more account of the word honour, than of deserving it. In ancient times none had titles of dignity but those that fought to avoid it ; and few with us, but such as will buy it : we value honour by riches, not by desert, as it was first instituted.

But what shall we say of inconstant time, which alters and changes all things ? For the *Romans* flourishing estate, which continued longer and more prosperous than any other nation, was at last overthrown by luxury and delights they brought out of *Asia* : for after *Paulus Æmilius* overcame them, he brought such effeminacy into *Rome*, that other nations took advantage of it, and became conquerors over them by whom they had before been conquered ; and those that had been honoured for their valour, now became infamous to succeeding ages for their cowardice.

*Mario Antonio* observes another bane to commonwealths ; as, namely, private and particular favourites : For, says he, *the importunity of favourites makes the prince give to him from whom he should take, and take from him to whom he should give ; they dishonour the worthy, and honour others of less merit ; they despise the experienced, and rely upon the weak and ignorant ; they prefer not men to offices for their persons, but persons to offices ; they give justice to the unjust, and refuse justice to the just ; and value justice by their own profit*.

When they are brought to preferment thus unworthily, they make their authority greater than their place : they supply that with malice which they want in discretion ; they praise their own ill, no less than if it were goodness in another : but in the end they lose themselves, by adventuring into a sea they know not : they make infamous the prince they misgovern, and commonly their end is death and destruction ; for their beginning was pride and ambition, and their end envy and malice.

Though it be a scandal to a commonwealth, where princes make more of favourites than of well deservers, it behoves you not to approve or repine at it ; but to hope that act of his will not stand as a precedent.

Evil kings rely more upon custom than goodness, and desire rather to be obey'd than counselled ; the devil under colour of advice deceives them : but such princes are like covetous persons, That live poor, to die rich. They please their humours whilst they live, and leave infamy behind them when they die.

*Seneca* says, *That Cato deserved more glory for banishing the vices of Rome, than Scipio did for conquering of Carthage*. By which you may see it is not your profession, I mean arms, that reforms commonwealths, but wisdom in grave and sage senators ; for *Democritus* the philosopher truly says, *That two things govern the world, reward and punishment*. My last and best advice is, That you refer your selves and causes to time ; for that must cure, when reasons cannot.

## BOOK II.

### Containing some Actions of the *English* after King *James's* Accession to the Crown; and several Discourses upon that Subject.

*The Peace with Spain after the Queen's Death, and some Accidents that happened.*

**A**S commonly ill news flies apace, so the queen's death was soon divulged in all parts of *Europe*, every prince striving to be the first to congratulate his majesty's happy accession to the crown.

And though *Spain* be generally observed, and by its friends much condemned for its long and tedious dispatches, yet this action being so rare, and importing them so much, the news was no sooner brought them, but an ambassador was immediately nominated to perform such rites and ceremonies as princes afford one another in such cases.

What succeeded in their treaty, or what labouring by other states to keep these two great kingdoms in division, concerns me not to enquire; only I will prosecute such accidents as fell out at sea in the twelve years I served as admiral in the narrow seas.

Though his majesty might say, (as few princes ever did,) *That he could not esteem any state in Europe his enemy*; and that his christian-like motto, *Beati pacifici*, declared how far his heart was from war, or to support the divisions of christians; yet he was willing to follow the example of his predecessors in keeping some ships in the narrow seas, to defend his right and jurisdictions there, which the *Hollanders* thought to invade, as will appear by the following discourse.

This treatise was writ by Sir *William Monson*, who served as admiral of those seas twelve years, and dedicated it to the two late lord chancellors at his deliverance out of the *Tower*.

The narration shall speak for itself; and the reader may judge, if he be not too much transported in affection to the nation of *Holland*, to what their insolencies then tended, or may tend hereafter.

But before that discourse shall take place, I will entertain you with two or three acci-

dents worth your knowledge, and which may challenge a place among the rest.

The peace between *England* and *Spain* being concluded, and published in the year 1604. the war between *Holland* and *Spain* still continued as hot and fierce as before. The admiral of the narrow seas was now to think to walk indifferently, and without partiality betwixt the two nations, like a careful shepherd, to keep his neighbours flocks from intruding upon one another.

The next thing that gave occasion of debate was in the year 1605. when the king of *Spain* sent eight ships with a thousand soldiers through the narrow seas for *Flanders*. He would not exceed the number of eight vessels, because the articles of peace did warrant the entertainment of so many in his majesty's harbour.

But, as I have shewed, the bane of actions has been in the discovery of them; so this of the *Spaniards* being understood by the *Hollanders*, they provided to intercept them at sea; where they met, and there passed a cruel and bloody fight betwixt them: many of the *Spaniards* were slain, and some taken; but the greatest part recovered *Dover*, where they were defended with shot from the castle and platform.

Being now arrived in his majesty's dominions, they counted themselves under his protection, and waited an opportunity to pass over secretly and by stealth into *Flanders*; or by his majesty's mediation, who laboured with the states of *Holland* to that effect.

But the *Hollanders* having the *Spaniards* at a bay, and knowing they durst not venture to put out, being beleaguere'd by their ships, for the space of seven or eight months, his majesty sollicitated their passage, and Sir *Nevil Charoon* was sent over to that purpose, but could not prevail; for the *Hollanders* stood more upon point of honour than

any hurt they could receive from the thousand *Spaniards*.

Upon this answer, my lord of *Salisbury* sent for Sir *William Monson*, and imparted to him the state of the whole business, demanding of him, if it were possible to put over the *Spaniards* without using his majesty's authority or force, or hazarding to be intercepted by the *Hollanders*. Sir *William* told him it was a service of great importance, and the greater, because the honour of two kings was engaged in it; but if it pleased his majesty to have it done, and that his lordship would undertake his directions should be followed, he doubted not but to effect it, as his lordship had proposed.

Hereupon my lord of *Salisbury* imparted it to the king, and his majesty to the *Spanish* ambassador; for then was Don *Pedro de Sunisa* come to succeed the *Conde de Villa Mediana*. The king desiring the two ambassadors to deliberate and consider of it, shewing a willingness in him to farther it, the ambassadors took respite to give their resolutions, till they had acquainted and received an answer from the king their master; for those being his subjects whom it concerned, they could not dispose of them without his knowledge or approbation.

And thus it continued for the space of eight or nine weeks, when the ambassador Don *Pedro's* messenger return'd from *Spain*; and then he repaired to my lord of *Salisbury*, and acquainted him, that his master's friendly proposition was approved of, and thankfully accepted by the king his master.

Upon this my lord of *Salisbury* sent for Sir *William Monson* once again, requiring him to perform with care what he had formerly promised; for it was a service of extraordinary consequence.

The secrecy and policy that was used to contrive this stratagem, with the several passages that happened, is too tedious to set down; only I will say, that in spite of the fleet of *Holland*, that usually rid in the mouth of *Dover* peer, in the road of *Graveling* and *Dunkirk*, to impeach the *Spaniards* passage, yet they arrived safe in *Dunkirk* the same night design'd for them by Sir *William Monson* to be expected, without the help of his majesty's ships, or other assistance by his authority; which the *Hollanders* look'd upon as so great an affront, and to be thus prevented and derided, that it made them suspect, though they had no just ground to accuse him, that Sir *William Monson* was the director and

contriver of this stratagem; and therefore now they began to settle their hate upon him, and to urge and labour his removal out of the narrow seas, as in the following account will appear. This act of Sir *William's*, which he did by direction of the state, ever after procur'd him much hate and envy, not only from the *Hollanders*, but from their friends and factions in *England*.

The next service Sir *William* was employed in, concerned the towns of *Rye* and *Hastings*, which found themselves impoverished, and almost ruined, by the *French* incroaching upon their fishing on the *English* coast, contrary to the articles and agreement betwixt the two kings.

These towns, upon just cause, complain'd of it, and Sir *William* was sent down to redress it; which he carefully performed, though it cost the lives of some *Frenchmen*: for two years he was fain to use force, and brought the *French* to that submission, that the *English* enjoyed their usual privileges.

Many other accidents happen'd in the narrow seas, that need no remembrance; and yet I will conclude with the escape of the lady *Arabella*, twenty four hours before Sir *William Monson* had order to pursue her; which he did with that celerity, that she was taken within four miles of *Calais*, shipped in a *French* bark of that town, whither she was bound.

The manner is so commonly known, that no more needs be said, but that it was done; though the accident was so strange and unlook'd for, that few could be persuaded but that her escape was plotted, with an intent to take her again: and it was the rather believed, because Sir *William* was not rewarded according to the importance of that service. But it may be answered and imputed to his misfortune; for since the death of queen *Elizabeth*, who was both gracious and bountiful to him, he never tasted or received either recompence or preferment, more than his ordinary entertainment, according to the services he was employed in; for he began the wars with ten shillings per month pay; then with two shillings and sixpence per day; after with five shillings, with ten shillings, with fifteen shillings, with twenty shillings, and sixteen pages allowed him for his retinue; after with thirty shillings per day; and lastly, with forty shillings per day. He had served as a soldier, a private captain, a rear-admiral, a vice-admiral, a captain, under the general; and lastly, an absolute general.

*To the Right Honourable the Lord Elsmore, Lord Chancellor of England, and Sir Francis Bacon, Attorney and Counsellor, Sir William Monfon, after his Imprisonment in the Tower, Anno Domini 1616. concerning the Insolencies of the Dutch, and a Justification of Sir William Monfon.*

**I**DID greatly, and in a manner half promise myself, after I was examin'd by your honours, if ever God gave me liberty, to present you with some collections of the *Hollanders* insolencies on the narrow seas, from the time his majesty made peace with *Spain*, till the truce betwixt *Holland* and *Spain*; in which interim there arose many doubts and questions, which purchased me no small hate from that state of *Holland*.

The first of *July*, 1604. the then lord *Cecill* signified to me his majesty's pleasure, that I should take charge of his highness's ships serving on the narrow seas; and will'd me to make such provision for transporting the constable of *Castile*, who was then expected to conclude a peace, as should stand with the honour and reputation of his majesty.

After humble thanks to his majesty, and no less to his lordship, for doing me so high a favour, without either suit or seeking of mine, I was bold to tell him, That by my employment I was to enter into a labyrinth; for though the navigation was but short and easy, yet it was both difficult and dangerous; for I was to sail betwixt *Scilla* and *Caribdis*; the one I might call *Holland*, the other *Spain*; and seeking to avoid the displeasure of the one, I might as well fall into enmity of the other.

As for *Holland*, I consider'd, by the permission of our state heretofore, they might challenge a prerogative, where nothing was granted by us but of courtesy, their insolency was such; and therefore to curb them suddenly, that had their rein so long given them, could not be done without great envy, if not danger; for that their forces at sea did much exceed his majesty's, who had but one ship and pinnace to guard his coast.

On the other side, I weigh'd with myself, if I should give distaste to the *Spaniards* or archduke, I should incur the displeasure of two princes, who had their ambassadors resident near the king; and whose power, in respect of their masters, was able to crush me, if I should either willingly or ignorantly commit the least error. What his lordship's answer was to this, I omit, lest I should be charged with vain-glory, (a vice I ever detested.)

I departed from my lord with this resolution in myself, above all things to stand upon his majesty's honour and right, to carry myself like a neuter, to do justice in-

differently; and if there happen'd any question of ambiguity, to acquaint my lord admiral, and the lord *Cecill*, from whom I would be directed in all doubtful and difficult cases.

The first of *August* I received a warrant for my repair to *Graveling*, where the constable remain'd, expecting my coming. My care was to perform so much as my lord *Cecill* gave me in charge; and to add the more grace to this service, considering the greatness of the person that was to come, and the honourable occasion of his coming, I was accompanied with fifty knights and gentlemen of good account and quality. If my expence in that journey were valued, with the rest of my disbursements for the transportation of princes and ambassadors, for which as yet I have received no satisfaction, it is not the rewards or presents of ambassadors that would countervail the expence of their diet.

The day after my arrival at *Graveling*, I was desir'd by the constable to go to *Dunkirk*, to see his barks with provisions secur'd from the *Hollanders*, who did usually ride with a squadron of ships before the town of *Dunkirk*, to beleaguer it.

At my coming thither, I went on board the admiral of *Holland*, who had been my old and familiar acquaintance, by reason of many actions and services we had been in together: I told him, That after twenty years spent in the wars, I was now become a watchman, with a bill in my hand, to see peace kept, and no disorders committed in the narrow seas. And whereas many misdemeanors and outrages had been offered by ships that serv'd under him against his majesty's subjects since the death of the queen, I intreated him, that from thence forward things might be carried with more discretion and mildness; otherwise it would exasperate his majesty, and alienate the *English* hearts from them, whose love they had sufficiently made proof of. The admiral told me, That if the *English* did offer to trade into the archduke's ports of *Flanders*, his commission was to impeach them: I advis'd him, if it were so, to do it in a friendlier manner than had been; which he promised, but meant nothing less.

For the *Hollanders* continued rather more than less cruel, in taking and burning our *English* ships, and sometimes murdering our men; when at the same instant, and in view

view of our *English* barks taken, they would permit and suffer their own countrymen to have free access to the harbours of *Flanders*, without impeachment. I made many and sundry complaints of it to the lord *Cecill*, who, it seems out of policy, was willing to connive at it. I endeavour'd by all gentle and courteous means I could, to draw the admiral to a more loving proceeding, the particulars whereof I hold it not fit to relate; and yet one I will not omit.

A bark of *Yarmouth* was met and surpriz'd by a *Hollander*, in the road of *Calais*, under pretence that she was to go for *Dunkirk*. It was my hap to meet and rescue the said bark, and found fifteen *Hollanders*, mariners in her, whom I might have justly executed as pirates; but because I would oblige the admiral, after two or three days imprisonment, I dismissed them, with a letter to their admiral, expressing my mild proceedings, desiring him to follow my example to his majesty's subjects: but all in vain; for he desisted not from his former courses.

Their stubborn carriage at my first entrance into my place, in not striking their top-sails, and other rights I requir'd as due to his majesty's prerogative, I forbear to express, though your lordship may well think it could not be redress'd without much hazard and hatred to me.

The 4th of *October*, 1604. there arrived in the *Downs* a ship of war of *Dunkirk*; where she found three or four merchants ships of *Holland*, bound for *France*. I sent for the captain of *Dunkirk*, and forbid him offering violence to those of *Holland*, they being under my protection in his majesty's road. The captain obey'd me, and the merchants proceeded in their voyage.

Within three days after there arriv'd three ships of war of *Holland*, whom I forbid meddling with the *Dunkirker*, as I had done to the *Dunkirker* before. I advertised my lord admiral of this accident, and desired his lordship's directions for my proceeding in a case that was like to begin a precedent. I was bound to add my opinion, which was, to refer it to the captain of the *Dunkirker*, whether he would retire into the harbour of *Dover* or *Sandwich*, or abide in the *Downs* to take his fortune, if I should be commanded thence upon any service with his majesty's ship; for I fear'd if I quitted the road, they would little respect his majesty's authority; for I found they rather obeyed for fear and force, than out of duty of the place. My lord admiral liked well of my proposal, and committed the management of it to me; and to conclude, the *Dunkirker* retired to *Sandwich*. I consider'd that many questions were like to arise betwixt the *Hollanders*

and the others by example of this one, if his majesty did not declare himself how far he would protect ships on either side that should repair to his harbours for succour.

Therefore I dealt with my lord of *Cramborn*, that his majesty would express by proclamation such difficulties as were likely to arise, that all states might take notice thereof. Whereupon there was a proclamation, prohibiting all nations from offering violence one to another, within the compass of a line drawn from headland to headland, as it is to be seen by the same proclamation and map extant.

And in the same proclamation was signified his majesty's pleasure, That what ship, merchant, or other of the *Spaniards* or *Hollanders*, should first arrive in his majesty's harbour, the said ship first arriving, should have two tides to depart, before she should be pursued by the other.

This proclamation directed me from committing any error: now my charge was to see it executed accordingly.

I desir'd the lords, that besides the proclamation, which I held a sufficient authority for myself; yet because I was to deal with a people that would do no right, nor take no wrong, I desir'd it might be ratified by a warrant from their lordships: which they granted; and I have it yet to shew.

The 10th of *May*, 1605. I came to the *Downs*; where I found six *Holland* ships of war newly arriv'd, to impeach the *Dunkirkers* going out; whereupon I sent for the *Holland* captains, and acquainted them with my commission, requiring them to obey the tenure of his majesty's proclamation; which I caused to be translated into *Dutch* for them to peruse.

After many expostulations and disputes, they were contented to abide two tides after the *Dunkirkers*, so that I would signify under my hand to the states, that I compelled them to it by virtue of his majesty's proclamation; and so for that time they departed.

The next morning the *Hollanders* weigh'd, and went to an anchor in the mouth of the harbour of *Sandwich*, one excepted, which lay close to the *Dunkirkers*. The carriage of the *Hollanders* seem'd strange to me, considering their promise the day before; whereupon I immediately set sail, and anchored betwixt the admiral and the vice-admiral, that both my broad-sides might command them, expecting what they would do.

The tide drawing on for the *Dunkirker* to come out, she found that if she offer'd to move, the *Hollander* that lay by her was ready to board her; which the rest seeing, went to have done the like.

The

The captain of the *Dunkirker* sent me word of it; for that he had understood the intention of the *Hollanders*, and therefore refused to go out: whereupon I sent for the *Holland* captains, and charged them with breach of their words, and their contempt to his majesty's authority. They would no longer dissemble, but told me plainly, that they had better considered of it, and concluded they could not appear before their masters the states with safety, if they consented to the escape of the *Dunkirker*.

Upon their answer I was enraged, and told them, That hitherto I had treated with them in a friendly and courteous manner, and, in any reasonable man's conceit, had given them good satisfaction with my letter to the states: but seeing they dealt so indirectly, I put them on board their ships again, and willed them to stand upon their selves, and vowed, if one shot was made at the *Dunkirker*, I would sink them, or they me. When they thus saw I would believe no longer in words, they permitted the *Dunkirker* quietly to escape, and remain'd themselves two tides, according to the proclamation.

If your lordships had seen the dispositions and carriage of the people of *Sandwich*, you would have thought it strange, that subjects durst oppose themselves so openly against the state; thousands of people beholding me from the shore, look'd when the sword should make an end of the difference, and publickly wished the success to the *Hollanders*, cursing both me and his majesty's ship.

But it was no marvel; for most of the inhabitants are either born, bred, or descended from *Holland*, their religion truly *Dutch*, as two of the grave ministers of *Sandwich* have complain'd to me, protesting they think that town, and the country thereabouts, swarms as much with sects as *Amsterdam*.

Your lordships must give me leave a little to digress, and express the state of *Sandwich*, and the use *Holland* may make of it, if ever they become enemies to *England*; therefore it behoves us to prevent all dangerous advantages, which is the more in them, because they neglect no occasion wherein they may benefit themselves with the loss of others.

The first and principallest advantage all enemies have that invade a country by sea, is the safe harbour or road for the arriving of shipping; and though *Sandwich* be but a barred haven, and that ships cannot enter but upon a flood, and at no time any great vessels of burthen, yet is our *Downs* within two miles from thence, where thousands of ships may ride as safely as in any harbour of *Europe*; and if ever the *Hollanders*

be disposed to give an attempt, now that *Flushing* is in their possession, it is but one night's sailing from thence to *Sandwich*.

The town is more naturally seated for strength than any I know in this kingdom, and a place of little defence as it is used. An enemy having the command of an harbour, as I have shewed, approaching a town of no defence, which may be made impregnable, being sure of the hearts of the men within it, and to be reliev'd within twelve hours by sea, I refer the consideration thereof to your lordships, and return where I left off.

The 20th of *April*, 1605. I landed the earl of *Hertford* and Sir *Thomas Edmonds*, in their embassy to the archduke: the one of them passed with me in the *Vanguard*, the other in the *Lyon's-Whelp*, a pinnace of his majesty. The pinnace falling a league astern, was saluted by two *Holland* ships of war, in which salutation they put a disgrace upon her, by the trumpeter's blurring with his trumpet, which is held a scorn at sea.

Sir *Thomas Edmonds* being much moved at this usage, caused a piece of ordnance to be shot off for my stay; at whose coming up he acquainted me with the wrong offered. I immediately commanded the *Holland* captains on board me, which if they refused, I threaten'd to compel them; but they seeing themselves over-matter'd, made no question to obey me.

I besought my lord of *Hertford*, with the rest of the gentlemen of his train, to be witnesses of my proceedings with the captains; and told my lord, if I carried myself otherwise than became me, he should have power to over-rule me.

Before I entered into capitulation, I requir'd their answer to one question, (which was,) whether they had command from their masters, the states, to impeach his majesty's ambassadors passage, or no? if they had, I requir'd to see their commission, the copy whereof I would take and send to his majesty, and let them depart without violence.

They answer'd, they had no such directions, neither was their intention so to do. Then I told them, that seeing the affront was offered as proceeding from themselves, and not from the states, I would right myself upon them, and after acquaint their state upon what reason I did it. But upon their vows and protestations to clear themselves, imputing it to the lewdness of their trumpeter, and submitting themselves to my censure, at the intreaty of my lord of *Hertford*, I dismissed them, they promising to punish the offenders severely. One of these captains was he who since that time committed a foul murder upon his majesty's

subjects in *Ireland*, that were under protection.

The next thing that comes to my mind, is a repetition of that I delivered to your lordships in the *Tower*, concerning the admiral of *Holland's* refusing to take in his flag: I deliver'd it not with those circumstances that were convenient for your lordship's understanding; and because I know your weightier occasions may very well make you forget what was said, I will presume to reiterate the same again.

In my return from *Calais* the first of *July*, 1605. with the emperor's ambassador, as I approach'd near *Dover* road, I perceived an increase of six ships to those I left there three days before, one of them being the admiral: their coming in shew was to beleaguer the *Spaniards*, who were then at *Dover*, as you have heard.

As I drew near them, the admiral struck his flag thrice, and advanced it again: his coming from the other coast at such a time, caused me to make another construction than he pretended; and indeed it so fell out; for I conceived his arrival at that time was no other end, than to shew the ambassador, who he knew, would spread it abroad throughout all *Europe*, as also the *Spaniards*, that they might have the less esteem of his majesty's prerogative in the narrow seas, that by their wearing their flag, they might be imputed kings of the sea, as well as his majesty. I hastened the ambassador ashore, and dispatched a gentleman to the admiral to intreat his company the next day to dinner, which he willingly promised.

The gentleman told him, I required him to take in his flag; as a duty due to his majesty's ships. He answer'd, that he had struck it thrice, which he thought to be a sufficient acknowledgment; and it was no more than former admirals of the narrow seas had required at his hands.

The gentleman replied, That he expected such an answer from him; and therefore he was prepared what to say to that point. He told him the times were altered; for when no more but striking the flag was required, *England* and *Holland* were both of them in hostility with *Spain*, which caused her late majesty to tolerate divers things in them; as for instance, the admiral's wearing his flag in the expedition to *Cadiz* and the islands, where the lord admiral of *England*, and lord of *Essex*, went as generals; and that courtesy they could not challenge by right, but by permission; and the wars being now ceased, his majesty did require by me his minister, such rights and duties as have formerly belong'd to his progenitors.

The admiral refused to obey my command, saying, he expected more favour

from me than from other admirals, in respect of our long and loving acquaintance. But he was answer'd, that all obligation of private friendship must be laid aside, when the honour of one's king and country is at stake. The gentleman advised him in a friendly manner to yield to my demand; if not, he had commission to tell him, That I meant to weigh anchor, and come near him, and that the force of our ships should determine the question; for rather than I would suffer his flag to be worn in view of so many nations as were to behold it, I resolved to bury myself in the sea.

The admiral, it seems, upon better advice, took in his flag, and stood immediately off to sea, firing a gun for the rest of the fleet to follow him. And thus I lost my guest the next day at dinner, as he had promised.

This passage betwixt the admiral and me was observed from the shore, people beholding us to see the event. Upon my landing, I met with *Siriago*, the general of the *Spaniards*, who in the time of queen *Elizabeth* was employ'd under *Mendoza*, the ambassador of *Spain*. He told me, That if the *Hollanders* had worn their flag, times had been strangely altered in *England*, since his old master king *Philip II.* was shot at by the lord admiral of *England*, for wearing his flag in the narrow seas, when he came to marry queen *Mary*.

I told him that he was mistaken; for neither the *Hollanders*, nor any other nation, durst contend with his majesty in his prerogative of the narrow seas; and the accident that then fell out, was by a boy's error, who thought he had been commanded to take in the flag, and to put it out again, when he was order'd to take it in for altogether; which when the admiral understood, he caused it to be taken in, and desir'd I would not impute it to him as an affront offer'd. Thus I excused their insolency, lest it should be divulged his majesty's prerogative had been questioned by the *Hollanders*. Had I yielded to a bare striking their flag, as other admirals had done, his majesty had not reconciled his right again without bloodshed.

Within few years after, an earl, who then came in company of the emperor's ambassador, passed the seas with me again, when I transported prince *Vaudemont*; to whom he recounted at large this passage of mine and the *Hollanders*, and ascribed great honour to his majesty, in maintaining his right and privileges on the seas, which he said the *Hollanders* went about to infringe.

The first of *September*, 1605. I received a warrant for transporting the *Spanish* ambassador Don *John de Taxes*, and all his train for *Flanders*, excepting the lord *Arundell*, who

who was to pass with him into the service of the archduke.

Though the lord *Arundell* was prohibited to go over in the company of the ambassador, because the *Hollanders* pretended the world would take notice his majesty maintained their enemies against them, which would much prejudice the reputation of their state, yet notwithstanding the ambassador was promised, that within ten days after his arrival, the lord *Arundell* should have a free and safe passage; which did as much satisfy the ambassador, as if he had gone with him.

Lest the lord *Arundell* should attempt to go, notwithstanding his prohibition, which I much feared, because he absented himself that he might not receive this command, I forbid all ships and barks, as they would answer it at their peril, to receive him aboard them; which he hearing, corrupted a captain of the king's, and in a disguise convey'd himself over in his ship: he did it more to gain reputation with the *Spaniards*, than out of any doubt he had not to pass; for he knew, though he desired not to take notice of it, that his going was secured within few days after.

When I saw him upon my arrival at *Gravelin*, and understood his practice with one of my captains, I spoke of it with some bitterness, and expostulated the matter with the ambassador, supposing he had known of his indirect proceeding: but the ambassador with many protestations disavowed it, and blamed my lord's indiscretion as much as myself, saying, he was as much wrong'd as the state; for he confessed by his humble suit he had obtained his safe passage within a few days after, which he accepted as a great favour from his majesty; and my lord behaving himself so unadvisedly, he feared might breed a jealousy against him.

My lord *Arundell* knowing I had spoken somewhat liberally of him, devised how to requite me, and took an opportunity upon the following occasion.

The same night, a little before supper, news was brought the ambassador, that the barks which carried his provisions were stay'd by the *Hollanders* as they were entering *Dunkirk*, and, as it was to be feared, they would not dismiss them.

My lord *Arundell* took advantage of this, and privately persuaded the ambassador I had betray'd them to the *Hollanders*. He could not carry his complaint so secretly, but I came to the knowledge of it: I might perceive a strangeness in the ambassador, as though he retained a kind of jealousy; and therefore the supper ended, and my leave taken of him for that night, I besought the governor of *Gravelin*, that the port might

be opened, and I provided of horses; for that I had occasion to go with some speed to *Dunkirk*; both which he courteously granted, and I immediately pass'd thither, where I arrived at the opening of the gates in the morning.

I found, as it was reported, the barks detained by the *Hollanders*, but upon what occasion, and how I caused their release, your honours shall understand hereafter: but I must return once more to *Sandwich*.

Whilst the ambassador stay'd at *Sandwich* to see his horses and baggage shipp'd, there arrived fourteen or fifteen ships of war from *Holland* in the *Downs*; a number not usually seen thereabout but upon a greater occasion than I could imagine; though I mistrusted they would have obstructed the ambassador's passage, and sent for the principal captains, of whom I required if they had commission to impeach his landing: they answered *No*; and seem'd to make a frivolous excuse for their coming.

Then I required them to stay in the *Downs* after I was gone, or to depart before me; for avoiding both rumour and suspicion. They made choice of the latter, and stood over for *Gravelin Road*, where I found them upon my arrival, and discovered that the cause of their coming to the *Downs* was to have an eye on the lord *Arundell's* passage.

During the time of the ambassador's stay at *Sandwich*, those of the town thought to have put an affront upon him; which, if I had not prevented, had more disgusted than all the favours he received in *England* had contented him.

His horses being shipped, and the bark ready to depart the harbour, an informer went aboard one of them, and made seizure of a fardel of bays, to the value of ten or twelve pounds, which belonged to one of the ambassador's servants; which he took for such a disgrace, knowing it, as he said, to be a practice of the offspring of the *Hollanders* within the town, that he resolved not to depart thence till he was righted by his majesty's own order.

I laboured to give the ambassador satisfaction, and as earnestly persuaded the informer to restore the fardel; but could prevail with neither; for the value was not so much looked upon, as the injury offered.

At last, by threatening the informer to complain to the lords, and persuading him how ill his majesty would take such a wrong done to an ambassador, he restored the fardel, but writ to the farmers of the custom, that I countenanced and carried over uncus-tomed goods under the colour of the ambassador's provisions.

When they of *Sandwich* saw they could not detain the fardel, they secretly practised with

with the *Dutch* fleet then at the *Downs*, that upon the arrival of the barks at *Dunkirk*, they should intercept the fardel, and gave intelligence in what bark, and what part of the bark it lay.

The *Hollanders* accordingly detained the vessel as they were directed, and took out the fardel; and upon this occasion was the stay made of the ambassadors goods, as I have shewed before.

At my arrival at *Dunkirk* from *Gravelin*, upon the news of the arrest of the ships, as your lordships have heard, I wrote to the admiral of the *Hollanders*, that he had exceeded his commission in intercepting the ambassador's provisions, having order from their state for a free passage; and that the injury was no less to his majesty; and therefore I required the discharge of the ships, and his answer to the contempt.

He answered in writing, that it was true, his directions from his masters the states did import so much, which he did willingly obey; but in his commission he was authorized to intercept any merchandize that should be transported under colour of the ambassador's furniture; and that in one of the barks he had found a fardel of bays, which he might justify the taking of, and so dismiss'd the bark.

I returned answer, that if he went to the strict letter of his commission, I confessed he might do it; but I told him the value was so small, and it having been questioned at *Sandwich*, that I would think myself beholding to him, if he would either restore it, or keep it in his custody fourteen days. To my latter request he consented; whereupon I gave assurance to the ambassador, who was then much enraged that a letter should be procured out of *England* that should compel the delivery of the fardel.

Within four or five days after I arrived in *England*, I acquainted the lord treasurer *Dorset* with the affront offered the ambassador at *Sandwich*, and the complaint made to the farmers of the custom against me. I informed my lord admiral and my lord of *Cranborne* with the lord *Arundell's* passage, and the contempt of the captain, whom I displaced and detained prisoner, as also of the fardel seized on by the *Hollander*.

My lord treasurer sent for the informer by a pursuivant, and committed him ten weeks prisoner in the *Gatehouse*, refusing to release him, till I became suitor for him. The captain was handled in the same manner, being long imprisoned, and the fardel restored to the governor of *Dunkirk* by a letter from Sir *Howell Caroone*.

I am the more tedious herein, to shew the genius of the men of *Sandwich*, who made more account of venting their spleen and revenge, than of his majesty's reputation

and honour; and did their best endeavour to make a breach betwixt the *Hollanders* and me. At that time they had thirty ships for two in the narrow seas.

I observed at all times that I was to transport a *Spanish* ambassador, the *Hollanders* labour'd to shew some point of insolency; as I remember at the return of the marquis of *St. Germain's*, I met a *Dutch* fleet in the midst of the channel, convoy'd by a man of war, who would not take in his flag, till I was forced to use violence. I could entertain your lordships with a volume of these discourses; but what I have said is sufficient to shew the arrogant and unmannerly carriage of the *Hollanders*, who ambitiously desire to in-croach upon his majesty's jurisdiction. Had I connived at them, I had purchased less hate of them, and their well-wishers. And not long before my commitment there fell out an accident, which, perhaps, might hasten my imprisonment. Sir *Howell Caroone*, their agent, coming over in a man of war, was shot at by a pinnace of the king's, for not striking his topsail to her, which I understood he took in ill part, and cast it upon me.

If I had transgressed, or given the least advantage to have excepted against me in the twelve years I served on the narrow seas, it is very likely his majesty or the state should have known it; but seeing I was never questioned for any action, publick or private, I did no more than became a subject and a servant to his majesty, to defend the honour and reputation of him and his kingdoms, though it had been with the loss of my life.

And since I have made my apology for twelve years, I will add eighteen more to it, and begin with the wars of *Spain*, where I was an actor in the first ship, and general of the last fleet queen *Elizabeth* ever employ'd.

If it shall appear by records in the admiral's court, or by petition in the council chamber, that ever I was questioned for any unlawful act, or so much as my name used for a witness, I will willingly receive my due punishment; or let it be proved in all my employments by sea, which has been more than any *English* gentleman, that either directly or indirectly I deceived either of my two sovereigns, and I will desire the reward of a traitor.

I well remember the first time I was examined by the chief justice *Cooke*, and secretary *Winwood*, at *Hatton-House*, I besought them, That they would be pleased to enquire into my behaviour, and the course of my life from my infancy, and I hoped it would prove loyal, honest, and spotless.

Now I humbly desire, as a second suit, that either they, or any other, would examine the service I have done to the state in the time of the late queen, when there was greatest occasions for men to shew their abilities and deserts; as also what imprisonment I have endured in *Spain*; what famine, hurts, and other casualties I suffer'd; what wealth has been brought into *England* by my means; with what hazard and fortunate success I have obtained both wealth and victory; as in particular, and which is freshest in memory, the last carrack, valued at almost two hundred thousand pounds, and disposed of by his majesty at his accession to the crown.

When all these things shall be consider'd, and my rewards valued, the integrity of my heart will appear, and how much I prefer'd the service to my prince and country above my private or particular interest.

I must confess my folly and misfortune: the one made me too forward in complaining, and wishing a reformation of his majesty's navy, which has purchas'd me much envy: the other procur'd me as much hate in taking the lady *Arabella*: and then perhaps the cause of my imprisonment will more plainly appear.

Some have obtain'd their desires in ruining my estate, made me infamous to the world, taken from me my employment, seized by way of forfeiture upon my land, denying to account with me, which they have long practis'd; and, above all, cast such an aspersion upon my children, as all hope of preferment is taken from them: but my comfort is in the saying of *David*, *That my defence is in God, who saveth the upright in heart.*

Thus have I briefly run over some particulars that happened in my employment; wherein I have shew'd in what condition I found the narrow seas, how with envy and hate I reduced it, and in what form and condition I left it.

*A Voyage by Sir William Monson during the Time he served as Admiral in the Narrow Seas about England, Scotland, and Ireland. Anno Dom. 1614.*

**H**IS majesty being earnestly importuned by his *Scottish* subjects to have the assistance of some of his ships to redress the spoils committed by the pirates on their coast, out of care to them, and honour to himself, he dispatched *Sir William Monson* and *Sir Francis Howard* in great haste upon that service, commanding such victuals and other things as they stood in need of to be sent after them.

They departed from *Margate-Road* the 14th of *May*, and arrived at *Leith* in *Scotland* on the 23d of the same; thence he

And as I have given an account of twelve years employment on the narrow seas, I can as well derive myself from the year 1585. when the war with *Spain* began; for then made I the seas my profession, being led to it by the wildness of my youth. And because the two barks in which I then served, had the fortune to take the first *Spanish* prize that ever saw the *English* shore, and the rareness of the fight in taking her considered, I thought it not unworthy of repetition.

In the month of *September* 1585. and about eight a-clock in the evening, being upon the coast of *Spain* with two small ships aforesaid, we met and boarded a *Spanish* vessel of three hundred tuns burden, well manned and armed; all our men with one consent and courage entered her, and we left fighting aboard her all night, the seas being so grown that our barks were forced to ungrapple and fall off.

The *Spaniards* betook themselves to their close fights, and gave two attempts by trains of powder, to blow up their decks on which we were; but we happily prevented it by fire-pikes. Thus continued the fight till seven in the morning, when the *Spaniards* found they had so many men killed and disabled, that they were forced to yield.

When we came to take a view of our people, we found few left alive but could shew a wound or shot through their cloaths in that fight: we were a woeful spectacle, as well as the *Spaniards*; and I dare say, that in the whole time of the war, there was not so rare a manner of fight, or so great a slaughter of men on both sides.

I confess it exceeds the bounds of good manners to trouble your honours with this impertinent discourse; but I do it, that it may appear I had no thought but to employ my pains and travel to serve my prince and country; and so I humbly take my leave.

immediately went to *Edinburgh*, and presented himself to the lords of that realm, acquainting them with the cause of his coming, and the charge he had from his majesty to defend that coast from pirates; and therefore desired to be informed by their lordships concerning their strength, their number, and place of abode. He desired to be furnished with able pilots; for his majesty's ships were of greater burden and value than usually had been employ'd on those coasts; and besides, that the navigation to the northward of that place was

not frequented by our nation, and therefore unknown to us.

It pleased their lordships to recommend the care thereof to the *Trinity-House* of *Leith*, expressly commanding them to appoint the ablest pilots that could be chosen amongst them. This command of theirs was accordingly obey'd, and their pilots repaired aboard the next morning. Sir *William* immediately set sail, leaving instructions for his victuals to follow him to the islands of *Orkney*; which the lords of *Scotland* took into their provident care, and performed it accordingly.

The first of *June* Sir *William* arrived at *Sinclare-Castle*, the house of the earl of *Catbness*, the utmost promontory of *Great Britain*. Here he found neither the number nor the danger of pirates so terrible as report made them; from twenty they were vanished to two, and both of them men of base condition; the one of them not long before my boatswain's mate in the narrow seas; the other of as mean quality and rank, and first made a seaman by Sir *William*: neither can this man be properly called a pirate; for being amongst them, and misliking their damnable courses, he, with three others, left their society, and in an *English* bark they had taken, stole from them, and put himself into the hands of the earl of *Catbness*; where I found both him and the bark, which I brought away with me.

The day before I came to *Catbness*, I was disappointed of meeting the boatswain's mate, the pyrate, *Clarke* by name, who had been ashore with the earl, and friendly entertained, because his house and tenants lay open to his spoil.

That day there arrived a *Scottish* bark from the *Frith*, which gave an account of Sir *William's* coming to *Leith*, with an intent to pursue such pirates as he could hear of. This news made *Clarke* quit that coast, and fly into the island, where he refreshed himself amongst the fishermen.

But Sir *William* being now out of hope of him, and out of doubt of any others thereabout, stay'd not at *Catbness*, but the same night passed to the island of *Orkney*, where he found more civil, kind, and friendly usage, than could be expected from such kind of creatures in shew. Here he left Sir *Francis Howard* for guard of the coast, and prosecuted his intentions against *Clarke*, not sparing any place to seek him in, where there was a possibility to find him. After some time spent at sea, he put into the island of *Shuiland*, and from thence to those of *Hybrides*, where he design'd Sir *Francis Howard* should meet him.

The brutishness and uncivility of those people of the *Hybrides* exceeds the savages

of *America*; and it may be well said of them, that education is a second nature; for there cannot be greater difference betwixt day and night, than betwixt the conversation of those of *Orkney*, and those of the *Hybrides*.

Being out of hopes of meeting with *Clarke*, Sir *William* directed his course for *Broad-Haven* in *Ireland*, a harbour frequented by pirates, in respect of the security thereof, and the remoteness, few knowing it, and the relief such people find by a gentleman there dwelling, who spared not his own daughters to bid them welcome.

The danger Sir *William* ran into was great; and worse to think, that two ships of his majesty's of that consequence should be hazarded on so slender an occasion, as the pursuit of so few petty pirates.

Betwixt those islands and *Ireland* he met with so great a storm and ground-seas, that it were fit only for a poet to describe. Of four vessels he had in company, one was swallowed up in the seas; the other three were separated, and saw one another no more till they met in *England*.

When the seas had spent their fury, the storm began to abate, and the 28th he arrived at *Broad-Haven*, a place unknown to any one in his ship but the pirate he had taken from the earl of *Catbness*, as you have heard, of whom he made use to execute this stratagem.

Being now come to the well-head of all pirates, and desirous to be fully informed of the condition of those people of *Broad-Haven*, as soon as he came to an anchor he made choice of such persons of his company as formerly had been pirates, to give the less suspicion of his purpose.

These men he sent in his boat to the gentleman of that place, and took upon him to be a pirate, and the name of captain *Manwaring*. The man he trusted in this service, extolled the wealth he had on board him; his royal disposition and liberality to those that shew'd him courtesy. This hope of wealth and reward set their hearts on fire.

He used the commendations and names of sundry pirates, their acquaintance; and feigned messages to the women from their sweethearts, who he made believe had sent them tokens, which he had on board for them.

The silly women conceived so great a joy at it, that it took away all suspicion of deceit.

The gentleman of that place, like a wily fox, absented himself, and left his wife and hackney daughters to entertain the new welcome guests, till he beheld the coast clear; and when he saw his time, he returned

turned; and to make his credit and reputation seem the greater with captain *Manwaring*, expressed the favours he had done to sundry pirates, though it was to his eminent peril, which he did not esteem, if he might do captain *Manwaring* any service; so much he was devoted to his person, when he heard the report of his wealth; and to endear him the more, he promised to send two gentlemen of trust the next morning on board him, to give him the better assurance of his fidelity; and in the mean time, because he should not be unfurnished of victuals, he directed him to send his men ashore armed, and in a warlike manner, that it might appear their cattle were taken by violence, which he would appoint in a place with their ears slit, to be distinguished from other beasts.

The messenger being fully satisfied, and having executed his stratagem, return'd aboard that night. At the dawning of the day the play began, for that was the hour appointed for the wolf to seek his prey; and captain *Chester*, with fifty armed men, in a disorderly manner, like pirates, went on shore, and acted so much as was agreed on; and the cattle being kill'd, he was, in a secret manner, invited to the house of the gentleman; but at his intreaty was to make it appear publickly, that he came not by invitation, but of his own accord.

Here he was welcomed, and friendly entertained by the daughters, whose desire was to hear of their sweet-hearts, and to receive their tokens; but all in general coveted to see captain *Manwaring*, who they confidently believed would enrich them all. The gentleman, Mr. *Cormat* by name, was punctual in all his undertaking, and the two ambassadors he promised came aboard, and delivered a friendly (though in a rude manner, like their country) message of their love, and assurance of their service to captain *Manwaring*.

Their message ended, Sir *William* wished them to observe and consider, whether they thought that ship and company to be pirates; for they could well judge of pirates, because of their familiarity and acquaintance with them.

It was a folly to dissemble any longer; for though they would, yet they could not betray Sir *William's* design; and therefore in as rough and rude a manner as they delivered their message, he told them how they had transgressed, and the next thing they were to expect was death, and commanded them to be put in irons, in dark and several places, being careful to permit neither boat nor man to go ashore until his own landing.

The time approached Sir *William* promised to visit them; and for his greater honour they had drawn down four or five

hundred people to attend on the shore side, which he perceiving, and seeming to be jealous of their number, pretended to be shy of going ashore, for fear of treachery: but if oaths, vows, or any kind of protestations would serve him, he had them; and when they saw him thus convinced of their sincerity, and that he put himself upon them, three of their principal men run up to the arm-pits in water, striving who should have the credit to carry him ashore.

One of these three was an *Englishman*, a late tradesman in *London*, and attended the arrival of pirates. The second had been a schoolmaster, and a man attended like another *Apollo* amongst those rude people. The third a merchant of *Galloway*, but his chiefest trade was to buy and sell with pirates.

These three gallants, like gentlemen-ushers, conducted Sir *William* to Mr. *Cormat's* house, and the meaner sort followed with acclamations of joy. At his landing, happy was he to whom he would lend his ear. Falling into discourse, one told him they knew his friends, and though his name had not discovered it, yet his face did shew him to be a *Manwaring*. In short, they made him believe he might command them and their country, and that no man was ever so welcome as captain *Manwaring*.

Entering into the house of Mr. *Cormat*, his three hackney daughters rose to entertain him, and conducted him to the hall newly strewn with rushes, as the richest decking their abilities, or the meanness of the place could afford. In the corner was a harper, who played merrily, to make his welcome the greater.

After some discourse, and several questions asked by the three daughters concerning their acquaintance and friends; but above all, being desirous to handle the tokens promised, and laughing and jeering at their two messengers aboard, who they did not suspect were detained prisoners, but drinking and frolicking in the ship, as the use was upon the arrival of pirates. After these passages the women offered to dance; one chose Sir *William*, which he excused, but gave free liberty for the rest of his company. The *Englishman* was so pleasant and merry, that he seemed to have new life infused into him: he told Sir *William*, the heavens did foresee he was born to serve him, and to relieve him: he shewed him a pass procured upon false pretences from the sheriff of that county, authorizing him to travel from place to place to make inquisition of his goods, which he falsely pretended he was robbed of at sea: he laughed at the cheat he had put upon the sheriff in getting his pass, and urged the advantage that might be made of it, in sending to and fro in the country without suspicion.

He proffered Sir *William* the service of ten mariners of his acquaintance, that lay lurking thereabouts, expecting the coming in of men of war, which seafaring men he had power to command.

His antick behaviour was enough to put the melancholiest man in good humour; sometimes he played the part of a commanding sheriff; then he acted his own, with many witty passages how he deceived the sheriff. Sir *William* embraced his offer of ten mariners, with a promise of reward, and caused him to write effectually for them, as may appear by this that follows:

*Honest brother Dick, and the rest, we are all made men, for valiant captain Manwaring, and all his gallant crew are arrived in this place. Make haste, for he flourisheth in wealth, and is most kind to all men. Farewel; and once again make haste.*

This letter being writ, and the pafs inclosed in it, Sir *William* took it into his own hand, offering to hire a messenger to carry it; but night drawing on, which required his return on board, and having drawn from the country all the secret he desired, he caused the harp to cease playing, and commanded silence, because he was to speak.

He told them, That hitherto they had played their part, and he had no part in the comedy; but though his was last, and might be termed the epilogue, yet it would prove more tragical than theirs. He put them out of doubt that he was no pirate, but a scourge to such, and was sent from his majesty to discover, suppress, and punish them and their abettors, whom his majesty did not think worthy the name of subjects: he told them that he had received sufficient information of the protection given to pirates in that harbour, and by *Cormat*; and that he could find no better expedient to confirm what had been told him, than by taking upon him the habit of a pirate, and one of their associates; and that they had made themselves guilty in the law, without farther accusations: and now there remain'd nothing but to proceed to their execution, by virtue of his commission; and to that purpose, he had brought a gallows ready framed, which he caused to be set up, meaning to begin the mournful dance with the two men they thought had been merry, dancing aboard the ship.

He told the *Englishman* he should be the next, because his offence did surpass the rest, being an *Englishman*, who should be a pattern of good life to those people we have sought to reduce to civility, since we first possessed that country; and seeing man naturally is rather apt to follow evil example than good, he should be hanged for example.

He told the schoolmaster he was a fit tutor for the children of the devil, and that he had apt scholars to follow his damnable instructions; and that as the members are governed by the head, the way to make his members found, was to shorten him by the head, and therefore willed him to admonish his scholars from the top of the gallows, which should be a pulpit prepared for him. He asked the merchant, whether he imagined there could be thieves, if there were no receivers? And as the contriver and plotter of evil is worse than he that executes it, so is the abettor and a receiver to be condemned before the thief. He told him that pirates could no more live by their occupation, were it not for buyers, than a poor labourer work without wages; that the offence in a merchant was more heinous than in another man, because his trade must be maintained and upheld by peace: his time he told him was not long, and wished him to make his account with God, that he might be found a good merchant and factor to him, though he had been a malefactor to the law.

Here was seen the mutability of the world; their mirth was turned into mourning, and their dancing into lamenting, each bewailing and repenting, as is the custom of offenders. The night calling Sir *William* away, he appointed their guard to a boat, and left the carpenter ashore to finish the gallows; which was done by morning, and the prisoners ready to receive their doom; but being sued to by the whole country, with a promise never to connive again at pirates, after four and twenty hours fright in irons he pardoned them.

The *Englishman* was banished, not only from that coast, but from the sea side, throughout *Ireland*; and a copy of his pafs sent to the sheriff, with advice to be more cautious for the future in granting his safe conduct. Here the master died; and all that country could not afford a pilot; so little use those people make of God's blessings in those parts; for were they industrious, as in other countries, both land and sea would afford them as great plenty of trade and commodities as any part in *Europe*.

The next morning as Sir *William* was at anchor in *Broad-Haven*, he espied a ship bearing into that harbour; which seeing him sprung her luff, and came to an anchor under the weather-shore: by her working he judged her to be a pirate; and though it blew much wind, he put himself into his boat, having the opportunity of a great fog, thinking to steal upon her at unawares; but finding the fog, like other weather at sea, unconstant, when he came within falcon shot of her, it clear'd up; which she perceiving, cut cable, and stood off to sea, where he pursued

fued her with great danger of drowning in his boat.

Six days she kept the sea in foul weather, and the seventh arrived at the island of *Enefcey*, seven leagues to the southward of *Broad-Haven*, where she was out of fear of any attempt to be made upon her, by reason of the wind.

In the dark of the night, when there was least danger of discovery, the pirate found means to have a letter secretly conveyed to *Cormat*, their agent and trustiest friend; but *Cormat* being lately burnt, did dread the fire; and no sooner received the letter, but he brought it to Sir *William*, which was to this effect:

Dear friend,

**I** WAS bearing into *Broad-Haven* to give you corn for ballast, but that I was frighted by the king's ship, I supposed to be there. I pray you, send me word what ship it is; for we stand in great fear. I pray you, provide me two kine; for we are in great want of victuals: whensoever you shall make a fire on shore, I will send my boat to you.

This letter pleased Sir *William*, hoping to make good use of it, as he did. The first thing was to conjure *Cormat* to keep secrecy, charging him, upon pain of life, to follow his directions. He writ an answer, which he caused *Cormat* to sign as from himself: the purport of it was,

“That he rejoiced to hear of his health,  
“and desir'd to see him: he bid him be  
“confident this ship could not endanger  
“him; for she was not the king's, as he  
“imagin'd, but one of *London* that came  
“from the *Indies* with her men sick, and  
“many dead. He promised him two  
“oxen and a calf; to observe his directions  
“by making a fire; and gave him hope to  
“see him within two nights.”

A man could not be too cautious among the people of the country, who in their hearts were piratically given; and therefore he cloathed three or four of his company in *Irish* habits, to accompany the messenger, commanding them to lie in ambush not far off, as well to take a view of the bearer, as to defend him from any violence of the pirates, fearing they might surprize him, if they mistrusted any deceit.

The pirates kept as good a watch to observe the fire, as the country doth a beacon upon suspicion of an enemy, and espying it, were not long a rowing to shore, and as

little a while on shore; for it was the letter only at that time they coveted; and having it, they hastened aboard to read it.

The letter gave them great content, because they found themselves free from danger of the ship they took to be the king's; as also because they were promised relief in their extremity, by the two oxen to be sent them.

This day they were frolick and merry, to make amends for the six before spent in foul weather at sea. In the mean time Sir *William* contrived a stratagem the pirates neither dreaded nor dreamed of: for understanding that at the end of the river where they lay, and not above seven miles from him, there was a nook of land two miles in breadth, that parted it from another river, which opened it self into the sea over against *Enefcey*, where the pirates lay: Sir *William* kept his design secret from the *Irish*, who he knew would not much further his design against pirates, and on a sudden took so many of those *Irish*, with the help of his own company, as drew his boat and another over land; and having recover'd the next river, with no little astonishment to the *Irish*, they were to row thirty miles to the place design'd for the fire to be made.

Having pulled hard to be at the place by midnight, as soon as the boat arrived they kindled a fire; and by the time they conjectured the pirates boat might be ashore, who, they made account, would weaken the ship of so many men as she should carry, they row'd off with speed, and came within sight of, and surpriz'd her before they could be suspected, which did so much amaze the pirates, that they had not power to resist, but yielded like so many wolves caught in their own snares.

Being thus circumvented and apprehended, they were brought to *Broad-Haven*, where Sir *William* executed the chief of them, shewing mercy to the rest so far as he durst; for he was commanded in his instructions to execute justice with some vigour. Examining the behaviour of all the pirates, of many he picked out the worst, who had tasted twice before of his majesty's gracious pardon. This severe justice gave a terror to the people of that country, and no less satisfaction to the owner of the ship, whom they kept prisoner aboard them, and who might see his majesty spared not his own subjects if they offended.

The pirates ever after became strangers to that harbour of *Broad-Haven*, and in a little time wholly abandon'd *Ireland*; which was attributed to the execution of that

man; for before that time they were in those parts rather connived at than punished.

From hence Sir *William* went groping along the coast, the country, as was said, not being able to afford him a pilot. On the 12th of *July* he came to the *Vintry*, a place that had twice reliev'd him before.

Coming from sea in great extremity, on the 28th to *Bear Haven*, the 1st of *August* to *Plimouth*, the 8th to the *Isle of Wight*, and the 10th to the *Downs*, after fetching a circuit round his majesty's three kingdoms of *England*, *Scotland*, and *Ireland*.

And here he bid farewell to the sea, this being the last voyage Sir *William* made in

king *James's* time, and the last year but one he served on the narrow seas, which wanted not much of twelve years; in which I will boldly and truly say, there was never service neglected, omitted, or unperformed, that he was commanded upon; which I look upon as strange, and not to be paralleled by any that enjoyed his employment before; and if the time be considered, six years of them twelve bred many doubts and differences, how an *English* admiral should carry himself betwixt the *Hollanders* and *Spaniards*, the wars continuing between them, yet such was his hap and care, that he committed no error for the one or the other, justly to except against him.

*The Names of such Ships of the Queen's, King James's, and King Charles's, as I served in, besides divers others not mentioned.*

A Consultation before the Lords of the Council in 1617, to which I was called, and a Proposition made, How the Pirates of Algiers might be suppress'd, and the Town attempted. My Advice to it was as follows:

1. First, because an expedition against the pirates could not be the employment of one fleet for the space of six months only, but that it is rather like to prove a work of years, it is necessary that all the maritime towns of *Europe* do contribute towards the expence and charge: for considering the profit will be universal, if the pirates be destroy'd, there is no reason but the charge should be as general.

2. Because every nation is not provided with swift ships and strength alike for such an action, which are the two principal things, it is fit the fleets that must second one another, consist of *English, Spaniards,*

and *Hollanders*, as most able to perform the service, in respect of their strength and swift sailing, as aforesaid; and all other towns and countries bordering upon the seas, that cannot furnish able ships, to pay their quota in money.

3. This being agreed upon, it must be likewise resolv'd, That as the charge is general, so the gains may be equally shared and divided, which must arise from the sale of such *Turks* and *Moors* as shall be taken for slaves, and of such goods as shall be recovered out of the pirates hands, where no proprietor can challenge it.

4. The ships employ'd to be rated after the proportion of men and tonnage: As for example; so many ships of his majesty's as will carry three thousand tons burthen, and twelve hundred men, *Spain* and *Holland* sending ships proportionably, will be a force sufficient to encounter the whole number of the the *Turkish* pirates.

5. It is not convenient to employ any ships under two hundred and fifty tons, nor above three hundred, the king's ships excepted; because a lesser ship losing company, will be a prey to an enemy; and if bigger than three hundred, it will fill up the quantity of tonnage and number of men, and be able to do little more service than the lesser ship; for the more number of ships there are of three hundred tons, they will be the abler to pursue the pirates, if they be forced to scatter; for every ship must undertake a pirate; and if there be more pirates than ships of ours, the overplus in number to ours will escape for want of ships to follow them.

6. The generals to execute martial law, and to determine their authority before they meet, to avoid questions and differences that otherwise may happen.

7. To have safe-conducts to all christian ports, and authority to be supply'd with necessaries they shall want; as also provision for the sick and hurt men; and such ships or prizes as they shall take from the pirates, to be left in safe custody in the said ports.

8. To carry money or commodities to revictual, and all manner of provisions to trim and careen their ships, with one master-carpenter to have the overlooking and ordering the state of the shipping. It is better to carry commodities than money for their occasions, because of the loss between our money and theirs; and besides, it will be a gain to exchange commodities.

9. To have a treasurer to look to the payment of money, and a stock for the disbursement of all necessaries for the voyage.

10. To be extraordinary well provided with muskets and ammunition, and especially with chain-shot for the ordnance; because, where there are many people, as commonly in pirates, chain-shot will make a great slaughter amongst them, and such confusion withal, where there are so few failors to tackle their ships, that they will be taken upon the stays, or lie upon the sea at our mercy.

11. To make the ships musket-proof, which will be done with little charge, and no burden to the ships, and to have all the spare decks and other things of weight taken down, and only put up; which will be a great ease to the ships sailing.

12. Forasmuch as the chiefeft care in a sea-action consists in keeping the designs secret, this voyage requires special secrecy; for there being several *Englishmen*, who have been too busy in trading with pirates, and furnishing them with powder and other necessaries, it is to be fear'd those same *Englishmen* will endeavour to give the pirates intelligence, lest their being taken, their wicked practices should be discovered: for prevention whereof, it is necessary that our ships be provided under another pretence than pirates, and the captains themselves not to know of it till they are at sea.

13. That the *French* king do prohibit his subjects, and especially those of *Marseilles* and *Toulon*, to trade with pirates, who now make it a common and daily course, and from whom they will have notice of our preparations, if they be not prevented.

14. The place of rendezvous to be at the islands of *Bayon*, the hithermost part of *Spain*, as most convenient for all squadrons to meet without suspicion. *England* and *Holland* may pretend several enterprizes, without knowledge of one another till their meeting. The squadron of *Spain* coming thither from *St. Lucar*, *Cadiz*, or *Lisbon*, will make the pirates of *Algiers* and *Tunis* think the preparations cannot be against them, the *Spanish* squadron being furnished in the nighest part of *Spain* to them, and carry'd to the furthest from them.

15. The time of the year to be in *August* or *September*; for in those months the pirates usually put to sea, because of the vintage, and other great trades: commonly in those months the fleets from the *Indies* return into *Spain*; as also in those months the *Spanish* gallies retire into harbour, so that they need not fear them.

16. Our fleet not to appear within the streights until they hear of the pirates being at sea; for having intelligence of it, they dare not put out.

17. One great advantage we shall have, is, That if they are at sea, we shall still know where they are, by ships we shall meet that have seen them: and observing the winds, can conjecture where we shall have them: or, if we shall hear that they are scattered, we will do the like, and have signs to know one another.

18. Another advantage we shall have, is, That no harbour can entertain or defend them from their going out till they return home; for all christian shores are their enemies; and they will have none but *Tunis* and *Algiers* within the streights, and *Sally* and *Santa Cruz* without the streights, which are wide and open roads, and apt to be surpris'd or burnt.

19. If

19. If we happen to miss them at sea, they cannot escape at their return, if we spread two squadrons ten or twelve leagues from *Algiers*; for they can have no intelligence of us from the shore, because we cannot be descry'd from thence.

20. That no mariner or sailor be ransom'd or set at liberty after they are taken; for taking away their sailors, they cannot set a ship to sea; and we know their numbers cannot be great, because it is not above twelve years since the *English* taught them the use of navigation.

21. Such renegadoes as shall be taken, or such christians as have willingly serv'd the *Turks*, to be executed immediately, for the terror of others; for if christians sailors can be kept from them, their piracy will cease, which otherwise will prove a great detriment to the christian commonwealth.

22. That such an *English* general be appointed, and the ships with that care fitted, that may give reputation to the action; for considering the reputation we have had in sea affairs, it behoves us, upon such an occasion as this, because we shall join with other nations, to carry it with honour.

23. That such a general be appointed as shall have more care to perform the service, than to his own ease, pleasure, or ostentation: That he keep the sea, and avoid seeking harbour, unless necessity compels him, and then not to let it be to the leeward of *Algiers*; for so pirates may go in and out at their pleasure: and moreover, That he enter no harbour but such as have good outlets, lest the service be neglected, and he not able to get out.

24. And lastly, as the ships shall grow foul, and be forced into harbour to trim, that he do it with this consideration, That he keep a squadron out at sea, whilst the others are fitting in harbour; and upon the return of the clean squadron to sea, whilst the other squadron is in trimming, to put himself into one of those ships; for it is not the part of a general upon any occasion to leave his fleet, tho' for a time he may leave his ship.

*The Danger and Uncertainty in surprizing Algiers, or taking it by Siege, or otherwise.*

Whoever knows *Algiers*, cannot be ignorant of the strength of it: the inhabitants consist principally of desperate rogues and renegadoes, that live by rapine, theft, and spoil, having renounced God and all virtue, and become reprobates to all the christian world. This town is, and has been, of so great annoyance to the christians lying over-against it, that they have been oftentimes forced to attempt it by surprize; but still have fail'd of their

VOL. III.

designs, either by intelligence the town has had, or by their carefulness to defend it; for no man but must think that a town which depends on its own strength, being in continual danger of stratagems, and sudden surprizes from the bordering enemies, both *Moors* and *Turks*, who have the conveniency of galleys to transport and land an army at pleasure, will be extraordinary watchful and circumspect to fortify it self, and withstand all dangers that can befall it.

And if those christian countries that lie open to the places aforesaid, could never prevail in theirundry attempts, being nigh them, and having conveniency to embark and transport an army without suspicion or rumour, and to be succoured by the islands of *Majorca* and *Minorca*, if necessity requir'd, but especially having intelligence with some of the town for the delivery of it, as about fourteen years since it happened, by the practice of a renegado, called *Spinola*, which failed; what hope have we then to prevail, who cannot so secretly furnish an army and fleet, but that all the world must ring of it in gazettes and other intelligences? Or if it be once known in *Marseilles*, it cannot be conceal'd many hours from *Algiers*, there being a settled trade and correspondence between those two cities.

But allowing our designs to be kept secret till the very time we arrive upon that coast, yet the warning will be sufficient for a garrison town of less force, and fewer men than *Algiers*, to prevent a surprize.

In such a case as this the time and wind is principally to be regarded; for a large wind that is good to carry a fleet into a landing place in an open bay, will be dangerous if it overblow upon a lee shore; and it will make so great a sea, that it will be impossible for men with their furnitures and arms to land without apparent danger; and what resistance a few men are able to make, I refer to consideration.

On the other side, if we ply into the bay with a scant wind, and it gives us a good entrance to land, by reason of the smoothness of the sea, yet the defendants shall have these advntages; They will descry us from the shore a long time before we can draw near, and consequently have time sufficient to withstand our landing. With their galleys they may cut off our boats with our men, if ships ride not within command of the shore; besides many other casualties the sea and weather afford. Besides, our boats can land but the third part of our men at once; by which means we shall attempt to land but with the third part of our army; and if we do it near the town, they will still have warning enough; or if it be

M m m

fa :

far off, the march will be inconvenient, and they warned by fires.

But if we fail of surprizing *Algiers*, and attempt it by siege, we have neither necessaries to land our ordnance, nor to draw it to a place fit to raise a battery, wanting engines, cattle, and other conveniencies for that purpose. It must be considered how to relieve our siege, and defend our besiegers against the sallies of the town, which have ten men to one of ours. We must likewise forecast, if we fail of the attempt, to bring off our men with safety, as a point of great providence in a commander.

Whosoever shall enterprize *Algiers*, his greatest strength by sea must be in galleys, which can run near the shore, and command the landing-place with their ordnance: or if an enemy draw down his forces there to withstand him, he may soon bring about his galleys, quit that place, and land where he shall see no danger: ships cannot do so when they are at anchor, but must have wind and tide for their purpose.

But all I can say is nothing to what follows; for you must understand the *Algerines* are a sort of outlaws, or miscreants, that live in enmity with all the world, acknowledging the great *Turk* in some measure for their sovereign, but no farther than they please themselves. Now that part of *Barbary* where *Algiers* is seated, is a spacious and fruitful country, and abounds in numbers of people; and though the king of it be a Mahometan, as well as the *Algerines*, yet they live in perpetual hatred and war; but so, that if either of them is attacked by Christians, they will presently join as partners in mischief; and we shall no sooner land, but be welcomed by three-score or four-score thousand of those ungodly people.

Having shewed the impossibility of taking *Algiers*, either by surprize or siege; now shall follow the little use we can make of it, either to annoy the king of *Spain*, or any other potentate; as also the small profit we shall make of it; no, not so much as to defray the tenth part of the garrison, or any hope to go farther with a conquest.

If it be conceived to lie conveniently to annoy the king of *Spain*, or any other enemy, it will prove otherwise, considering the distance from *England* to be relieved, and the many casualties we shall undergo at sea, having neither the Christian nor *Turkish* shore to friend, and yet we must sail in the *Mediterranean*, where we cannot pass unseen or unmet, because of its narrowness.

The harbour of *Algiers*, which must entertain us, is of so small a compass, that it will not receive above twenty ships; which number, and no more, we must allow both

to annoy and defend ourselves from all enemies, either Christians or *Turks*.

The place affords neither victuals, powder, masts, sails, ropes, or other necessaries that belong to ships; and if there be but a want of the least of them, *England* alone must supply them. Then consider the charge and danger that is like to follow to this little purpose; for the expence is certain, and less than five thousand men cannot be allowed for garrison, and the twenty sail of ships aforesaid. The profit and advantage that can be made of it, must be by theft and rapine at sea, which the *Turks* cannot afford us, they having little or no trade in shipping. The princes of *Italy* are in the same condition; and therefore our only hope must depend on the spoils of *Spain*, which we cannot expect in the *Streights*, they having no trade of importance upon those coasts; and what we shall take without the *Streights*, we shall sooner do it from *England* than *Algiers*; and prizes so taken will be sooner and safer brought for *England*, than carried to *Algiers*, where they must pass so many dangers, as I have said before.

When this following action against the *Turkish* pirates was in agitation, it was solicited by the late lord admiral of *England*, the earl of *Nottingham*, who not long after resign'd his office to the duke of *Buckingham*, who being young, and infected with the disease of youth, to hearken to base flattery, gave ear to those that thought to make use of his favour with the king, and advised him to promote this voyage, promising it should redound to his everlasting honour at the first entrance into his place: but the event of it shall appear to be caused by the ill management of it; for no doubt but the intention was to be commended, and the management was to be blamed.

Besides this, there were two other ill undertakings, and as ill managed, which fell out in the following years, 1625, and 1628. whereof I design to give an account one after another; the one was to *Cadiz*, the other to the isle of *Ré*: wherein our rashness appear'd greater than our discretion, in bidding defiance to the two mighty and potent princes of *Europe*, *Spain* and *France*, both at one time, without help or assistance from abroad, and under the uncertainty of money, the then parliament opposing his majesty's demands.

To the *Spaniards* we only shewed our teeth, with a desire to bite: *France* provided for us, and plucked out our teeth before we could bite, as is to be seen by the unfortunate and unadvised expedition to the isle of *Ré*, which left such a mark of dishonour upon our nation, as former times could never be taxed with.

The

*The ill managed Enterprize upon Algiers in the Reign of King James, and the Errors committed in it.*

**B**EING to treat of the two unfortunate undertakings in the reign of king *Charles*, occasioned by ill advice and counsel, I must observe our dishonour at sea began the way to future misfortunes in the enterprize against the pirates of *Algiers*, in the reign of king *James*; though I must say it was really undertaken by his majesty with a noble, gracious, and religious intention; but through ill management it prov'd no better than those that ensued.

His majesty considering the daily complaints, not only of his own subjects, but of all other christian people in *Europe*, many thousands of whom groaned under barbarous slavery, and were most cruelly treated by the *Turkish* pirates, ranging abroad without any opposition, was moved to compassionate their calamities, and out of a true christian tenderness resolved to endeavour to redress this publick grievance, as appear'd by the chargeable fleet he set out to suppress the insolencies of those miscreants, who were the ruin and bane of the christian commonwealth by sea.

This fleet, by contract, was to receive some assistance from the king of *Spain*, when it once appear'd on his coast. But such was the misgovernment of those ships, and the negligence and vain-glorious humours of some to feast and banquet in harbour, when their duty was to clear and scour the seas, (for indeed they carried themselves more like amorous courtiers, than resolute soldiers,) that they lost the opportunity which offered itself, of destroying those hellish pirates; as may be collected out of a pamphlet published at their return, to which I refer you, but with this observation, That besides their going and coming, they spent not twenty days at sea whilst they continued in the *Streights*, but retired into harbour, where the pirates might find them, but not they the pirates.

This ill-carried action was a sufficient subject of scorn for all nations to laugh at, considering the reputation this realm had gained in their former expeditions by sea. And yet the chief actors in that voyage, like men naturally given to excuse their errors, gave out to justify themselves, and it was afterwards believ'd by all men, That the want of authority, and their limited commission, was the cause of their ill success.

This report was so universally credited, that I have often wondered with myself, that the state did not except against it for their own honours and reputation, if it had

not been really so; for commonly, in such cases, if a state do err in their directions, they will cast it upon those that had the execution, rather than that the imputation should light upon them; and, indeed, this was the reason that carried me into the general error of believing as others did, until I reflected upon the following reasons.

The first was, That a fleet of his majesty's could not depart *England* without a commission under the great seal. Secondly, I know that all generals of fleets have special directions and instructions to guide them: I know the managing of such great affairs by land or sea is committed to one man alone. Thirdly, I considered that there were but two ends of this imployment, (*viz.*) either peace or war; if peace, I marvel that so great a fleet should make an overture of peace, when a pinnace and a letter from the king was as authentick as the greatest person, or the greatest fleet his majesty could send to treat. Fourthly, I saw, that notwithstanding this friendly overture of peace, ships used hostility, took and destroyed some prizes, made an attempt to destroy their ships with fire in harbour, which failed; and whilst our fleet remain'd upon that coast, they carried themselves as enemies.

And seeing, as I have said before, that either peace or war must be the ground of their imployment, that they attempted both, and prevailed in neither, I know not how they can lay the blame on their want of commission, but rather on their unprovident, negligent, and unconstant behaviour. But too true it is, that since that time, our poor *English*, and especially the people of the west country, who trade that way daily, fall into the hands of those pirates. It is too lamentable to hear the complaints; and too intolerable to suffer the misery that has befallen them; and all occasioned, as they suppose, by the miscarriage of this unlucky voyage of 1620.

This making up three unfortunate voyages, as you shall soon hear, as many more were performed with no better success, two of them under the command of the lord *Willoughby*, and the third under the lord of *Denbigh*. These three had no advantage of one another; for there was nothing done worth remembering; and therefore I can say no more, than to join with others, who desire, that the subject may have satisfaction what the defects, ignorance, and errors of this voyage were, that upon examination all may appear, and every man receive his reward as he justly deserves.

His majesty and state could not have been more honoured, nor all in general better pleased; for people are persuaded that the realm never enjoyed braver and more war-like

like ships than now, commanders of greater antiquity and valour, seamen of greater experience and skill, more abundance and choice of ammunition and arms, greater quantity of victuals, and all things else to furnish such an action; as I shall have occasion to make out hereafter.

Then would have appeared the weakness of a great person in authority, when being spoken to by one of greater blood than himself, who friendly told him, he did not see a man of experience employed in the fleet to *Cadiz*, which made him doubt

of the good success thereof; he answered, not like one that thinks example of more weight than conceit, but rudely, rashly, and disrespectfully, That they were all fools who commanded in the queen's time, in comparison of those now employed. But it might have been more truly told him, That men in authority, who govern more by will and chance, than by reason and advice, are dangerous in a state; for nothing is so great a weakness, as for a man to think he knows much, when in effect he knows nothing at all.

*A Resolution of War with Spain; and what followed upon the second Expedition to Cadiz in 1625. and in the Reign of King Charles I.*

**K**ING James dying on the 25th of March, 1625. left his kingdom doubtful, whether peace or war should be embraced, having just occasion of unkindness offered, which was likely to turn to hostility. For the noble prince his son, then our blessed king, was disgusted at the dilatory courses *Spain* used to defer the marriage then in treaty with his sister; and his highness's journey into *Spain*, gave him not the satisfaction he expected; wherefore, being sensible of the injury done him, he could do no less in return to it, but let *Spain* see its error in the ill usage given him; and accordingly in the year 1625. sent a fleet to sea to revenge himself upon them. But the winter season approaching, (an ill time taken for such an enterprize, besides some other miscarriages, which may be imputed to the want of experience in the commanders, as is to be seen in the answer to a book published by the general at his return,) it had no better success than the author hereof foretold before their going from hence.

*The Author's Opinion of that Expedition, which he writ to a noble Friend of his before the Fleet sailed; as also what he conceived of the first News brought of the taking of the Fort of Cadiz, with Hopes to possess the Town, and keep it.*

Noble S I R,

**I**HAVE addressed to you my opinion of this secret and concealed fleet, whose design and unknown orders, give cause of admiration, and consequently of censure; every man judging as his fancy leads him, but all concluding of victory to us, and ruin to *Spain*, whither it is conceived to be intended by the rendezvous of ships and men in the western parts; some threatening *Portugal*, some the islands, others the bay of *Cadiz*, and city of *Seville*; others the

state of *Genoa*, and islands adjacent; some the *West Indies*, and the fleet from thence expected.

I will begin with *Portugal*, as the country nearest us, and upon which most mens opinions are settled, having experience of the force of that kingdom by an attempt formerly made in the year 1589.

You must conceive that *Portugal* fronts upon the heart of *Spain*; and that *Spain* hath sundry entrances into it, as namely by the south and west sea upon the east *Castile*, upon the north *Galicia*, and towards the south *Andaluzia*. *Portugal* is far inferior to those countries in strength; and a means not only to keep the people in obedience, but to give present aid and assistance against foreign invasions. I confess, if our actions in 1589. had been well carried, we had spoiled and ruined the city of *Lisbon*, where they had been surpris'd before we had been suspected. But we could expect no other advantage besides taking and destroying the city; for though the merchandize in it was of an estimable value, yet neither could we transport them to our ships, nor our ships repair to receive them, the passage being stopped by the castle of *St. Julian* and *Belem*.

Our hope was as little to settle *Don Antony* for king, the *Portuguese* being a multitude of poor-spirited people, without arms or hearts, that further than in their tongues and wishes, would not afford a finger to fight.

And besides, the barrenness of the country is such, that it affords not corn enough, nor other provisions, were it not for the help of the sea. And I dare boldly aver, the kingdom had better fail of their trade to the *East-Indies*, than of their fishing for pilchers upon their coast: and let this be the first consideration, How an army can subsist in that country; and the rather, by the proof we had of it in 1689.

More-

Moreover, by possessing *Lisbon* and the northern part of *Portugal*, we were nothing nearer enjoying the south part, which yields greatest plenty of food, cities, and nobility; for from *Lisbon* we were to begin, as it were, a new conquest, and to pass three leagues to the *Alenjeto* side, over-against *Lisbon*, where the *Spanish* galleys, which were then there, would have been our destruction in landing.

*The State of Portugal in the Year 1625. compared with the Year 1589.*

**I**N our enterprize of 1589. we had no cause to complain of fortune; for she gave us a happy entrance into the kingdom by the surprize of *Peniche-Castle*, that afforded us a landing; and after a peaceable march to *Lisbon*, where we found the city unarmed and unprovided, the castle excepted; but yet our success proved miserable and unhappy.

We can scarce hope for the like fortune now, their forts being better armed, and their forces better order'd by the late warning they have had.

I perceive, the river of *Tagus* excepted, there are but two places which advantage us in landing, which if we fail of, our enterprizes are frustrated. The one is *Peniche*, the other *Cascais*. The ports to the northward of *Peniche* are in the bottom of the bay of *Portugal*, a place all ships will shun and avoid, and too far distant from *Lisbon* to march. Those to the southward of *Cascais* are on the other side of *Lisbon*, and the river *Tagus*, which I have shewed the impossibility to pass over; and had not the duke of *Alva* provided to pass his army in galleys upon his taking of *Portugal*, he might at that time have possessed the south parts of *Portugal*, and have left the north part to the *Portuguese* themselves.

*Peniche* has a small harbour only capable of barks and fishermen; the other two are open roads, and not secure from a southerly or westerly wind. Our landing must be in one of these two open bays, where ships lie subject to southerly winds, which will hazard the destruction of them, if they come with violence.

The nature of the shore is disadvantageous to the invader in landing, and advantageous to the enemy in resisting.

Our means to land must be in our own boats, that cannot contain the number of our soldiers at thrice ferrying, and thereby we shall not bring the third part of our men to fight at the time of our greatest need.

A fleet coming to an anchor that distance from the shore, that ships cannot command their landing with their ordnance, the gal-

leys will cut off our boats, and utterly defeat us, as they had done at *St. Sebastian's-Point*, in our journey to *Cadiz*, if we had attempted it as it was directed.

We neither having castle nor harbour, our field-pieces cannot be landed, which must be the strength to force the castle; the want whereof was our loss of *Lisbon* in 1589. All these reasons have I given in the instance of our landing at *Algiers*.

My second observation is the state of *Portugal* since the year 1589. when we attempted it. The *Portuguese* nation in their nature are better reconciled to the *Spaniard* than they have been, and not without reason grounded upon necessity; for they have no hope ever to recover their loss in the *East Indies* or *Brazil*, or to enjoy what they possess, but by the help and force of *Spain*.

Secondly, The nobility, gentry, and others in *Portugal*, that were most discontented with the managing of things in those days, are consumed and dead; and their descendants, who never knew other times, have framed themselves up to it, and obtain favour of the king in their employments; nor does the king himself make any difference betwixt them and his other subjects.

Thirdly, The *Portuguese* are more exasperated against the *English* than they have been, by the spoils done them at sea, and the ill usage of them in the *East Indies*.

Fourthly, Many *Portuguese* in those days were transported by their love to Don *Antony*: others believed in his title; but the most disliked to be under the *Spanish* government. Since which Don *Antony* is dead, his issue gives little hope for them to rely on; but especially the children of the now pretended prince; and the father himself, since this was written, is repaired to the archduke; which takes away all comfort from the discontented *Portuguese*.

Fifthly, It is worth observation, that in our voyage to *Portugal* in 1589. our army consisted of fourteen thousand brave soldiers, four thousand choice seamen, our design being to settle that king, who had been formerly crowned in that kingdom; and yet such was the condition of the people of that country, that there was neither duke, marquis, earl, viscount, baron, knight, or gentleman, repaired to him, or shew'd himself of his party, except only a mean knight in calling, named *Duarte Pais*, with whom I was after fellow-prisoner in *Lisbon*, his commitment being for that offence, (*viz.*) for flying to Don *Antonio*: he would often complain to me of his folly, and commend the king's mercy.

*The Islands.*

FROM *Portugal* I will shape my course for the islands, as well the *Canaries* as *Terceras*, though I will say little of the *Canaries*, it being an action fitter for ten ships and a thousand soldiers to attempt, than so glorious an army as is now intended. I may say less for the island of *Azores*, the impregnable isle of *Tercera* excepted, which giveth reputation to the rest.

All these islands, as well the one as the other, cannot boast of one harbour to entertain ships, but open bays, subject to all dangers, and outerly winds, which many vessels of great value have felt, that have there perished.

The island of *Tercera*, by nature and situation, exceeds all other islands in the *Streights*, being encompassed about with mighty high cliffs, a few bays excepted, which are fortified by art, to prevent an enemy's landing.

As well that island as the rest are shore deep, and no possibility of anchoring, but close on board the land; the ground rocky, that if it fret the cable, the waves of the sea will force a ship on shore; or being near the land, and a gale of wind coming off from sea, that a ship cannot claw it off, but must of necessity be wrecked; both which my lord of *Cumberland* had proof of in the *Victory*, a ship royal of the queen's, which being at an anchor at *Flores*, and the weather calm, his cable was cut with the rocks; and had it not been for the help of his boat and mine that towed him off, he had been forced to shore.

After that, being at an anchor at *Fayall*, which island he took, one day, many of the principal men on shore being at dinner with him, suddenly the wind chopp'd up southerly, which forced him from his anchor, and with great and apparent peril he doubled the point of the land, or else he had perished.

No man that knows those seas will advance an enterprize upon the islands now towards winter; for in *August* begin their storms, and commonly last nine months with great violence; for which cause they are held the most unconstant seas in the world; and I say nothing that I will not aver by proof and precedent.

*Don Pedro de Valdes*, who was taken prisoner in the action of 1588 for *England*, was commanded with certain ships and six hundred soldiers, to repair to the islands, before *Tercera* had yielded to the king of *Spain*, there to guard and defend all the ships coming from either of the *Indies*, *Guinea*, and *Brasil*: his commission gave

him no absolute authority to land; but yet finding an opportunity to put his soldiers ashore, with a determination to fortify a landing place, which seem'd to lie open for his advantage, immediately thereupon the wind shifted, and forced him to sea, leaving his men to the mercy of the islanders. As the wind rose, the surges did the like on shore, that his boats durst not put in with the land, nor he approach so nigh it with his ships, as to give succour to his men with his ordnance, by means whereof they were pitifully massacred, not one of them returning.

In my lord of *Essex's* voyage to those islands, he landed and took *Villa Franca*, a town in the island of *St. Michael*, which afforded him not so much as his trouble was to land. But when he came to embark his men again, the wind began to blow; which if it had done but three hours sooner, it would have forced his ships to sea, and left his troops ashore, both he and they being slenderly provided of victuals, and uncertain of the ships return, the weather being so unconstant and outrageous at that time of the year. My self was witness of this, as well as of that of my lord of *Cumberland's* in 1589.

The marquis of *Sancta Cruz* had failed of taking *Tercera*, if he had not had more help by his galleys in landing his men, than by his ships and boats. But to speak the truth, *June* and *July* proved extraordinary fair, to his great advantage.

The twelve galleys he carried from *Spain*, were the first vessels of that kind ever seen so far in the ocean; the prows of those galleys dismounted a piece of ordnance on shore, that secured their landing, and were ready upon that accident with celerity to land their men, which was the first step to their victory that followed.

The town of *Angra*, which is the head and principal of all the rest, by help of the point of *Brasil*, is made the most impregnable situation in the world; then what hope have we, if we were ashore, to surprise it, or by siege to take it, the seas being, as I said before, so unconstant, our ships keeping so far off that should yield a supply? especially the *Spaniards* having the road of *Angra*, they may always relieve the town in despite of us, or any force we can make by sea.

*The Coast of Spain.*

LEAVING the islands, I will repair once more to the main land of *Spain*, and arrive at the bay of *Cadiz*, a place fatal to the *Spaniards*, and fortunate to us, by two attempts made upon it, the one in 1587. by Sir

Sir *Francis Drake*, the other in 1596. by the two lords generals, the earl of *Essex* and the lord admiral.

These two expeditions alone, did twenty times more prejudice, and impoverish'd the *Spaniards* more than all other attempts of ours in our wars: *Drake* had the spoil, sack- ing, and burning of thirteen thousand ton of shipping, most of them laden with provision for an intended fleet against *England*; which being this year by Sir *Francis Drake's* good fortune diverted, was the following year, 1588. attempted.

In the second, the lords had the destroy- ing of fifty five great ships, the galleons of war excepted; all the rest were richly laden, and ready in two days to sail to the *Indies*.

I love not to tax dead men, though, in truth I must say, there was great negligence, that those ships were not as well possessed and enjoy'd by us, as destroy'd by the enemy.

But I must tell this pretended fleet of ours, that though no place gives us better advantage to annoy the king of *Spain*, than the bay of *Cadiz*, because of the breadth thereof, which cannot be fortified to impeach our entrance; yet shall we now vainly undertake an attempt upon it, the ships of the *Indies* being long before they can arrive departed; for commonly they let not *Midsummer-Day* pass before they set sail.

I must a little digress, and shew how much our two great lords were abused in their attempt upon *Cadiz* in 1596.

They were made believe the taking of it was feasible, the honour great, the wealth inestimable, and the damage of the enemy beyond all the rest; never dreaming of that which gave glory to the enterprize, which was the shipping we there found; for had it not been for our destroying the fleet, though otherwise no profit to us, the lords had returned with the bare taking of *Cadiz*, which had given them no reputation, but rather have brought their judgment into question for so mean a design.

As for the feasibility of taking it, if we had landed at *St. Sebastian's*, where our projectors of the voyage directed, not a man had returned; for besides the strong fortifications made against us, four galleys were appointed to have cut off our boats and men, as we should have landed, our ships lying without command of them or their shore.

The wealth found in *Cadiz* was so small, considering it was carry'd away the day before in the galleys, (the two galleons we brought from thence excepted,) the queen saw not one penny towards her charge;

I dare be bold to aver, the meanest of twenty ships there burnt, was of more value than the whole town, and by us neglected, as I have said before; for upon my reputation I avow, that I advised my lord of *Essex*, the same morning he arrived at *Cadiz*, to seek rather to possess himself of the ships than town, alledging that it was the ships afforded both wealth and honour; for that riches in ships could not be concealed, as in towns it might; and that ships being brought for *England*, they were always in the eyes of the people to behold them, and put them in remembrance of the exploit in gaining them; as perhaps the town soon won, would not be long enjoy'd, and quickly forgotten. All this I have declared where I treated of the voyage to *Cadiz*, 1596. in the former book.

#### Andalusia and Seville.

IF an invasion upon the continent of *Spain* be intended, and especially upon *Andalusia* and *Seville*, as the country of all *Spain*, that flows with milk and honey, in respect of the soil and trade, there ought to be consideration of the place of landing; the distance and wearisomeness of the march in an unsufferable parching sun, which our unexperienced soldiers can never endure: besides, the provisions of victuals, of carriages, and all other necessaries, must be thought of, which we are wholly unprovided of.

I will not much insist upon the attempt, because I think it is much less reasonable than any of the rest; first, in seeking to invade a country where we have neither friend nor faction, but shall find their hands and hearts all join to repulse us; a country populous, and the more for their mighty and continual trade, fronting upon their enemies in *Barbary*, which makes them ready to receive every alarm, and put themselves under arms. If we believe history, and not above a hundred years before *Spain* was grown great by their *Indies*, the moors of *Granada* had often more men by five degrees to invade *Andalusia*, out of their bordering territories, than we carry, and could not prevail; then what hope can we expect, *Spain* being since that time so mightily increased in greatness and wealth?

It seems we make less account of the strength of *Spain*, than of any other country of *Europe*; for I am persuaded no kingdom having warning of the approach of an enemy, is so unprovided, that they will suffer twelve or fourteen thousand men to march quietly forty or fifty leagues into their country.

*The Streights.*

From hence I will sail into the *Streights* towards the port of *Genoa*, which it is suppos'd the *French*, we, and the rest of the league, will possess our selves of, and give a further entrance into *Italy*.

If this be intended, as indeed it is not probable, the invader ought to have two principal considerations, without which a fleet and army goes in perpetual peril: The one is to be defended by a safe port to entertain their ships; the other, that it be not far from home, but with care to be continually supply'd and reliev'd; for where soldiers are transported far by sea, ships cannot contain victuals to maintain them; and to hope for succour in the country invaded, were too desperate a thought.

The service I conceive the ships could perform, our soldiers being landed, is to beleaguer *Genoa* by sea, riding with our ships in the face of the town. This, as all things else, I refer to consideration, my drift being no more than to relate the true state of things, for men of better capacity than my own to judge of.

Whereas I advis'd, as a main thing of providence, not to attempt the invasion of a country, without gaining a port for the safety of shipping; therefore I must say our design upon *Genoa* is not without great hazard and danger, being hopeless of a harbour nearer than *Marseilles* in *France*, one hundred leagues distant from thence.

In anchoring before *Genoa* to beleaguer it, we shall lie open to the sea and a southerly wind, which makes the hazard no less than the two attempts upon *Algiers*, opposite to it, the one by *Hugo de Moncada*, the other by *Charles V.* both which were overthrown by storms at sea; and there is no difference betwixt the two actions, but that the southerly winds are death upon the christian shore, as the northerly upon the coast of *Barbary*; and the greatest conflict our fleet is to endure, is against the rage of the sea.

I do not conceive we shall either hurt or damnify the city of *Genoa* by this adventure of ours; for in anchoring near the shore, the lanthorn of *Genoa* will beat us from the road; if further off, we cannot hinder the galleys going in and out, but they will be able to relieve the town in spite of us; besides, other stratagems may be us'd by galleys to fire us: I confess, if *Corfica* or *Sardinia* could be surpriz'd, they would yield us relief and refreshment, with good harbours for our safety.

We have found by our unlucky and unadvised voyage to *Algiers*, how unable our

bodies are to endure that coast, by the sickness we found, though we had the help of the main land of *Spain*, and the bordering islands, to give us relief, which now we shall fail of: the excessive heat ashore, the change of the air, and the alteration of food, will cause a most lamentable mortality and sickness.

And if the king of *Spain*, in the mean time, upon the return of his fleet from *Brazil*, shall arm to sea, and take advantage of our weakness and want, and in such narrow seas as the *Streights*, which are like a pond, where fleets meeting cannot be avoided; or if with that navy, or any other, the *Spaniard* shall send to attempt *Ireland* in the absence of our ships, I hold it dangerous, and worthy to be had in consideration.

*The West Indies.*

I Will not leave my voyage till I have visited the *West Indies*, that I may relate my opinion of those parts, as well as of the rest that went before: Many are ignorantly carried away with the name of *India*, and the spoil we shall there commit; thinking it will afford wealth and riches to the king and kingdom to maintain a war, and preferment and gain to the undertakers, not valuing nor fearing the king of *Spain's* force in those parts to resist us.

But for the better satisfaction of the ignorant, who are thus vainly carried away with the conceit of our actions, I will shew the true state of the *Indies*, and the *Spaniards* inhabiting; thereby comparing times past, when we had wars, with the time present, when we covet wars.

I confess that in the year 1585, when the war began, and Sir *Francis Drake* possessed himself of *Santo Domingo*, *Caribagena*, and *St. Jago*, her majesty had a notable opportunity, by keeping those places to annoy the *Spaniards*, and encroach upon their *Indian* territories.

First, In respect her majesty in those days was rich, and her subjects no less able than willing to contribute to what she proposed, they were so much devoted to her in their hearts.

Secondly, In point of reputation, as well as profit, it behoved them to maintain those places after they were taken, as a motive to encourage them to go on with a victory thus begun.

Thirdly, Her majesty in those days might have drawn such conditions as she pleased from the states of *Holland*, who were then at her mercy; for presently ensued the earl of *Leicester's* going over to protect them; so that she might have bound them to her with their own enterprizes upon the *Spaniards*; whereas from that time till the

the year 1602, when the queen died, we see, that notwithstanding we were drawn into the war by them, yet they traded peaceably into the king of *Spain's* dominions, and never offer'd to annoy the *Spaniards* by any acts of hostility at sea, but supply'd them with ships and intelligence against us.

*Fourthly*, If we had kept footing in the *Indies*, it would have shaken the fidelity of the *Portuguese* in the *East Indies*, *Guinea*, and *Brasil*, which countries were lately become obedient and subject to *Spain*; but withal, so discontented in each placé, that it had been an easy thing to have made a combustion in these several countries, whilst the *Spaniards* had been taken up in the *Indies* and *Holland*.

*Fifthly*, The king of *Spain* in those days was altogether unfurnish'd with ships and mariners; for till we awak'd him, by the daily spoils we committed upon his subjects and coasts, he never fought to increase his forces by sea.

*Sixthly*, He thought himself so secure in his *Indies*, no enemy having ever appear'd in those seas before, and thought them so far from any hostile enterprize, that he little fear'd what would be there offered.

But leaving our opportunities and advantages as negligences or ignorances of times past, let us enter into the state and condition of our attempts as they are now to be undertaken and followed.

Whosoever makes an enterprize on a town in *America*, with an intention not to keep it, will do no more than a malicious person, that seeks the destruction of his neighbour, in setting his house a fire, without any other prospect in so doing, but mischief and revenge.

I confess we shall damnify the inhabitants of the town so sacked and spoiled, as the owner of a house burnt will be damnify'd; but it is no more loss or prejudice to the king of *Spain*, or to the bordering countries, than to the neighbour of the man that shall have his house burnt; for every one bears his own particular loss. And whereas the master of the house and people in it, are often so suddenly surpriz'd, that they have not time or leisure to save any part of their goods, after the fire is kindled, it is otherwise in a town that is to be surprized by sea; for the inhabitants will destroy ships, before they approach the shore, and either provide to withstand them that land, or to leave and quit the town, and bury or carry away their wealth; for notwithstanding the several towns taken by us in time of war, as well in the *Indies* as other places, I dare be bold to say the wealth found in them did not counter-vail the twentieth part of the charge of the voyage; as I have shewed in the first book.

VOL. III.

The state of the towns in the *West Indies* near the sea, is as follows: If they be of strength, they arm and fortify themselves so, that they do not fear a sudden assault of an enemy; and for a long siege, they well know the invaders cannot be provided, because it is so far from home, where victuals and all things else will quickly waste and be consumed.

Or suppose, upon their first landing they possessed themselves of some cattle, which is all the victuals they can expect in those parts, you must understand that no flesh in the *Indies* will take salt, or continue man's meat above three or four hours, so that our present relief will be little; and in the mean time we shall spend our store on board, and become miserable for want of sustenance.

Such towns as are weakly provided for defence in those parts, they never trust with wealth of value, but are ready to quit them, and carry or bury their goods; so that if the town be taken, their loss will only be of a few slight houses, which are soon re-edify'd again.

If we think to inhabit and dwell in such towns as shall be surprized, we ought to consider the following mischiefs and inconveniencies.

1. The first is the distance from *England*, and to compute the time they may be supply'd and succoured from thence.

2. The casualty of the sea, and the danger of sickness, which northern bodies are subject to in hot countries.

3. The number of *Spaniards* in those places, their strength, and in what time they may be drawn together.

4. The keeping us from victuals, and driving their cattle up the country, where it will be in vain for us to pursue them.

5. The building of sconces, and keeping us in towns like prisoners, that we shall not be able to make any sallies upon them; or to pass into the country to annoy them.

6. The small distance from *Spain* to give them succours, and the certainty of the winds from thence to the *Indies*, which many times makes the journey shorter and easier than from *Dover* to *Plimouth*.

7. The country, the streights, and the byways, all known to the *Spaniards*, and not to us, will much advantage them.

8. But perhaps all men will not be satisfied with truth or reason; for some are of such a nature as to rely more upon opinion and fortune, than upon proof. But for the better satisfaction of such, I will collect and repeat the success of our enterprizes upon towns in time of war, as well in the *Indies* as other places, and make them judges of their future hopes, by looking back upon times past.

And I will begin with *Santo Domingo*, *Caribagena*, and *St. Augustin*, surprized by Sir Francis Drake before they could be warned or armed, and yet (the ordnance excepted) the wealth of them did not counter-vail the fortieth part of the charge of the fleet.

*Puerto Rico*, taken by my lord of *Cumberland*, proved so poor, that the adventurers had good cause to repent their designs upon towns; for it afforded them little in comparison of their expence.

There was a town surprized in the island *Trinidad* by Sir John Burrowes; and another in the *Margarita* by Sir Walter Raleigh. *Comenagota* was taken by captain Preston; and *Vera Cruz* by captain Parker; all which did not afford so much wealth as would reimburse the adventurers.

*Porto Bello* and *Nombre de Dios* were taken by Sir Francis Drake that voyage when he died. Instead of riches, they afforded him a most miserable and infectious sickness; but for wealth they yielded none: the same town of *Porto Bello* was after taken by captain Parker, with as little profit to him as the other; the same captain also took *Campechy* in *New Spain*, which afforded him no more wealth than the rest.

There were divers towns taken at *Cape Verde* in several voyages, and in the *West Indies*, *Rio de la Hacha*, *Capeia*, *Santa Maria*, *Puerto Santo*, *St. John Bellona*, *Tapuecco*, *Vera*, and several houses and farms burnt or ransomed.

Sir Walter Raleigh, in his unfortunate attempt upon *St. Tome* and *Guiana*, which was his own ruin, and his son's death; and yielded only stinking tobacco, a commodity that could not be convey'd away, because of the bulk; and his voyage proved much less than smoke.

And if we fail further, and through the streights of *Magellan*, and pass into *Peru*, thinking there to find silver and gold, as the well-head, from whence it springs, let us ask Mr. Candich, if he were now living, what wealth *Marmaramo*, *Areca*, *Santa Maria*, *Pisca*, *Perruca*, *Cherepa*, *Paita*, the island of *Pona*, *Acaralca*, the port of *Navidad*, the port of *St. Jago*, and the island of *St. Andrea*, and other places yielded him, which he burnt, because they would not be ransom'd, though he required not much more than victuals for their redemption: which proves my former discourse, that the Spaniards little esteem'd their houses, and may easily convey away their wealth upon the approach of an enemy.

And if we come nearer home: I pray you, what did the sack of *Cadiz* afford the queen? or the *Canary Islands*? or *St. Tome* the *Hollanders*? or the island of *Fayal* my lord of *Cumberland*? and after the earl of *Essex*? for it was twice taken: or *Villa*

*Franca*, or *Faro* by him taken? or two or three forts taken upon cape *St. Vincent*? or cape *Sacre* by Drake? or *Peniche*, and other towns in Sir John Norris his march to *Lisbon*, and the suburbs thereof? And in the same voyage Drake with his few forces took *Cascais*: I omit *Lancarote*, and many other places, seiz'd upon by private ships: and we may conclude that our actions proved the ruin of some, without any great advantage to our selves. And this shall suffice for our attempts upon towns in the queen's time.

But indeed, if ever *England* will annoy the states of *Spain*, and make them feel the smart of a war with us, it must be by obstructing their trade by sea; for all other spoils are nothing in comparison of it, as I have before shew'd: for wealth in ships can neither be conceal'd nor imbezell'd, as we have had proof by three several carracks by us taken, the wealth of each of which was equal to the value of all the towns, putting them together: and how to effect it, you will find in my first book; to which I refer you.

Thus much I writ to an honourable friend of mine, as I formerly said, before the setting out of the unhappy fleet to *Cadiz*, in 1625; which friend of mine is ready to justify and produce, if need require. The copy of this I have here inserted word by word.

*Upon the News of the arrival of our Ships at Cadiz, with the taking a Fort, and afterwards the Town, intending to keep it, I added this as follows:*

THE fort I conceive to be *Puntal*, the place where we landed when we formerly took *Cadiz*, above three miles distant from it by land.

I should be glad to hear they had taken the bridge of *Swazo*, which passes between the main land and the island where *Cadiz* stands; for by that bridge succour must come to relieve the island and town, or obstruct any such relief, if an enemy get possession of it; and therefore we having no news of the surprize of that bridge, I doubt the truth of the taking the town.

We know *Cadiz* is strongly fortify'd since we enjoy'd it, and the rather out of a fear they conceive of the *Turkish* pirates; who, since they have learnt the art of navigation, which before they were ignorant in, have of late made many attempts upon the continent of *Spain*, to the great hurt and spoil of the inhabitants.

And if the Spaniards have not carefully fortify'd *Cadiz*, which lies near and more open to the *Turks* than all other towns in *Spain*, they deserve all the mischief that can befall them.

If we fail of surprizing *Cadiz*, and be forced to besiege it, these dangers following may ensue :

1. The force of *Andalusia*, and all the bordering countries, which yield more good men and horses than all the other parts of *Spain*, will come down upon us.

2. Secondly, the *Spaniards* keeping the bridge of *Swazo*, will bring multitudes of people to besiege us; and with their horse cut off all succours sent from our ships, which must only afford us relief; for the island yields nothing of itself.

3. If we so begirt the town by land, that we permit no entrance into it that way, yet we cannot do the like by water; for with their galleys they will daily relieve it in despite of us, port *St. Mary* in the continent lying opposite to it, which makes me hopeless of taking it by siege, if we fail of a surprize.

4. One other reason I have to mistrust it is not taken, which is, That the news of taking the town and fort would have come all together; for if all were not done at one instant, I much fear the success, for the reasons aforesaid, and by the example of us in 1596.

*The second rumour was, of keeping Cadiz when taken.*

THE question of keeping *Cadiz* in 1596. was long debated by the two lords generals, and the most experienced soldiers of that time, whom I think all men will allow this age doth not equal. The manner how to supply it out of *Barbary* and *England* was thought of, and Sir *Edward Hobby* was to undertake an embassy to the king of *Morocco* to that purpose.

But to use the words of the author who writ that voyage, as it is set down in the chronicle, he says, There was a great dispute about the keeping of *Cadiz*, and the opinion of all old soldiers and seamen asked; but because it appeared not how it might at all times be relieved with men, ammunition, and victuals, and other causes best known to the generals, it took not effect.

It was then discussed and disputed by men of experience, as I have said, and concluded upon mature deliberation, That it was not possible to keep the town. I would gladly know what reason men have to induce them to it more now than at that time, but especially when I see never a man called upon for advice, whose opinion was thought worthy to be taken at that time.

If it was then held impossible to relieve it, I now compare and collect the reasons

of times past we had to hold it, with the time present, if we had it.

1. Our army was then stronger, in that most of our men were old soldiers, and better experienced than those that are in this action.

2. They were healthful in body, and victorious in taking the town and bridge with little loss, which is a great encouragement to people that undertake an enterprise.

3. The bridge of *Swazo* was taken, and possessed by us; so that we might keep the town from relief by land, as we had done with our fleet by sea.

4. We knew the king of *Spain* was unfurnished with shipping to hinder our designs, we having burnt and taken nine and fifty vessels of his and his subjects in that harbour.

5. The kingdom of *Barbary* was then in peace amongst themselves, and would have rejoiced at the occasion to have aided us against *Spain*; and since there have mortal wars continued betwixt the succeeding kings of that kingdom, to the wasting the most part of their people and food the earth affords.

6. In those days the king of *Barbary* had three maritime fronting towns upon *Cadiz*, as namely, *Alarache*, *Salley*, and *Momor*; since which time two of them are possessed by the *Spaniards*, and only *Salley* remains to that king, forty or fifty miles further from *Cadiz* than the other two, and has a harbour only for small vessels, with a dangerous bar at the entrance of it.

I must now say, as I said to the earl of *Essex*, when himself, Sir *Francis Vere*, and I, stood upon the castle of *Cadiz*, and saw the galleys in their flight to *Rota*, after their escape through the bridge of *Swazo*. I told him he had lost his opportunity of keeping *Cadiz*, shewing how much the galleys would have availed him, if he had kept the town, and the annoyance he would find by their escape; for with these galleys he might have transported all necessaries from *Barbary*, whereas they would now be able to cut off such single and small ships, as should be sent thither for relief.

In the year 1596. and many years before, the *French* king and we were in war with *Spain*, and aided one another; and if the king of *France* had seen us have footing in *Spain*, it would have been a motive to have diverted him from his peace with *Spain*, which in less than two years after he concluded. Our design was to keep *Cadiz*, to exchange for *Calais* in *Picardy*, not long before taken by the *Spaniards*; and no doubt but the king of *Spain* would willingly have consented to it; as thinking it better policy that *England* should enjoy *Calais* than *France*; for they well knew they could

could no longer hold it, than the wars continued between them and *France*, and that peace would cause the restitution of it.

They likewise knew, that if *England* possessed it, there would be a perpetual jealousy and dislike between *France* and *England*, which would prove their security.

Besides, a treaty being set on foot, though but to exchange those two towns, yet it might be an introduction to a peace betwixt *England* and *Spain*; which if it had taken good effect, her majesty had not needed to have reliev'd *Ireland* with so great hazard and charge, as afterwards she did, by reason of the aid *Tyrone* had from *Spain*, when he was ready to sink, and almost forc'd to yield to her majesty's mercy; which enterprise from *Spain* brought the queen into such a strait before her death, that she was compell'd to pardon him, though much against her will.

And this shall suffice by way of comparison betwixt our holding *Cadiz* in times past with the present, and the advantages that might have ensued by keeping it.

I doubt not, but as the keeping of *Cadiz* was thought of before the departure of our fleet, (if it should be taken,) so the reasons for keeping it were no less discuss'd; for it is a maxim, That no place in another country far from home, is worth keeping, that will not defray the charges of maintaining it, unless it be for security, or to give a farther entrance into a country.

In my discourse, where I treat of our attempt upon *Genoa*, I advis'd, as the principal thing in an invader, to possess himself of a harbour for the safety of his shipping; wherein I mean not only from the weather, but for securing themselves from an enemy.

I will therefore distinguish betwixt an harbour that is to be fortify'd on both sides by him that possesses it, and an open bay, such as *Cadiz*, that is ten or twelve miles in breadth; so that whosoever is master, and strongest in shipping, has the command of it, and the ships within it.

If we intend to keep *Cadiz*, we must be sure in our supplies to master the *Spaniards* in ships, by reason of the breadth of the bay, which cannot be fortify'd.

The relief we give *Cadiz* must either be from *Barbary* or *England*; and the distance from *England* is four hundred leagues at the least; a long navigation, subject to storms, the uncertainty of winds, loss of company, the danger of the enemy, being separated, and many other casualties the sea is subject to: as on the contrary, the *Spanish* fleet that shall oppose us, is furnished nearer home, and runs no such hazard.

We are to expect no other help or succour after our departure out of *England*, till our return, but what we carry with us; and on the contrary, the *Spaniards* will be supply'd from their own shore, and that with speed.

Suppose, as we ride in the bay of *Cadiz*, the *Spaniards* attempt us with a fleet, and that by accident or force they drive part of us ashore; then are we out of hope to recover either ship or man: whereas, if the *Spaniards* run ashore, their danger will not be great, it being their own country where it happens, which will afford them present succour.

I have shewed, where I treated of galleys, how easy a thing it is to endanger us, by towing fireships amongst us; because those vessels have a great advantage over us, and will either burn or force us ashore; as our fireships did among theirs in eighty eight, when we had done them more hurt, had we been assisted by galleys.

If the *Spaniards* assault us with a fleet in the road of *Cadiz*, it will be with a large wind, and a leeward tide, to keep themselves to windward of us, and consequently in their power to board us, and we not to board them.

Whereas our advantage over the *Spaniard* is in our excellent sailing in open sea, where we may take and leave at our pleasure; the only advantage in sea service: here our sailing will not avail us, we lying in the channel of a bay, where there is no space to fail in.

If you will enter into the true state and strength betwixt the king of *Spain's* ships and ours, laying aside the advantage of swift sailing, and according to the old phrase, They are bound to fight, *Fight Dog fight Bear*, till one side be overcome; which cannot be better decided than at the anchor in a harbour. Let us judge the difference of ships: the *Spaniards* are bigger in burthen, and by consequence have the advantage to board; more spacious within board, and therefore contain more men; more decks, and therefore carry more ordnance: then consider that the greatness of vessels, the number of men and ordnance, makes the strength of ships. I refer it to consideration, and will conclude,

That if we do not relieve *Cadiz* from time to time with a stronger fleet than *Spain* can make, we shall undergo great hazards, dangers, and disgraces; which ought to have been well consider'd and argu'd before undertaking the last enterprise upon it. And this shall suffice for our attempt upon *Andalusia*, or the city of *Cadiz*; and so I will proceed to the answer of the pamphlet.

*The Voyage ended, there was published a Book of the Proceedings of that Expedition; which Book was not long after answer'd, as appears by what follows:*

*Author.* THE 8th of October, 1625, they departed from *Plimouth*, and the 9th fell in with my lord of *Essex*, the vice-admiral, who had put into *Falmouth*.

*Answer.* That month and day had been fitter (if the action had been carried with reason and discretion) to have fought *England* after a voyage, winter approaching, than to have put themselves and ships to the fortune of a merciless sea, that yields nothing but boisterous and cruel storms, uncomfortable and long nights, toil and travel, to the endless labour of the poor mariners; and what was no less than the rest, I fear, an unexperienced general, by his phrase in saying, He fell in with my lord of *Essex* the 9th day; when the proper word of falling in was with the land, and not with ships: he should rather have said, We met my lord, or, We and my lord met together: and the reason is, the land is a steadfast thing, and a ship is ever moving, not certain to be fallen in withal, but accidentally to be met with.

*Author.* The 11th he called a council, and settled the instructions for a sea-fight; as appear'd in the 7th and 10th articles, viz. If the enemy's approach be in such sort, as the admiral of the *Dutch* and his squadron, or my vice-admiral of our fleet and his squadron, may have opportunity to begin the fight, it shall be lawful for them so to do till I come, using the form, method, and care, as aforesaid.

*Answer.* This instruction in my opinion was unadvis'd, and should have been conditionally, (as thus;) If the enemy had offered to fly, then not to lose any opportunity, but to assail him; but if they meant to abide it, presuming upon their force, it was great folly to hazard part of the fleet to all the enemy's, but rather to have staid for the admiral and the rest of the ships, to observe the working of the enemy, and then to have directed every squadron accordingly how to have ordered themselves; for it were a madness in a single combat of six to six, or more, for two of them to charge their opposites before the approach of the rest.

*Author.* If any ships of the enemy do break out and fly, the admiral of any squadron that shall happen to be next, and in the most convenient place for that purpose, shall send out a competent number of the fittest ships of his squadron, to chase, assault, and take such ship or ships so break-

ing out; but no ship shall undertake such a chase without the command of the admiral, or at least an admiral of the squadron.

*Answer.* The general's want of experience shall appear in this article; for if no ship shall undertake the chase without order of the admiral, or admiral of the squadron, what if a ship that is chas'd be near some of your fleet, and a good distance from your self, shall your ship or ships lose the opportunity of chasing, and repair to you for orders? by that time the ship chas'd will be out of sight, or so far off, that it will be a folly to follow her.

For your instruction another time, these are the directions you ought to have given in such a case; If there shall happen a chase, the next ship to her to follow her; and if there be more than one chas'd, the rest of our ships next to her to single themselves as they shall think themselves able to overcome them; and if you be brought to leeward by that chase, then to ply into your height again. This article contains as much as the admiral or vice-admiral of a squadron can give, after the loss of so much time as by a ship's coming to him for his directions: and time in such case is the principal thing.

In your article there was no provision how far such a ship should be chased, when to leave the chase, or whither to repair after the chase; but confusedly, and to the loss of the advantage aforesaid.

*Author.* The 12th day the wind north-north-west, the seas grown so high, that the long-boats were lost, and many other damages sustained.

*Answer.* At that time of the year you are sure to find that weather, and to look for such disasters; and therefore it is a folly to undertake a sea journey towards winter, as I have said. If in that storm the wind had been southerly, you would have returned into the harbours of *England*, where would have been found such defects in ships, that you had seen the end of your voyage; and amongst wise men it is a great question, whether your going or staying would have proved more honourable to the kingdom.

*Author.* The 18th a council was called, and Sir *William St. Leger* writ a letter, that he suspected the plague in his ship; but it proved not so: and here the general gave special order for the ships to come near together, and hail their admiral every morning, reproving their former negligence, and gave them their instructions, which should have been done before, but was hindered by storm.

*Answer.* Sir *William St. Leger* did ill to suspect the plague in his ship upon such uncertainties, which was enough to put the

rest of the fleet in fear, and a means to make them quit one another, and separate the fleet.

If the ships were negligent in keeping near together, they deserved blame, but no punishment, as not having received their instructions: the blame was worthy to light upon the general, when in winter, and the weather so uncertain, he delay'd giving his orders, which should have been done in harbour, and sealed up, until occasion of foul weather at sea, or loss of one another.

I will let pass many trivial things not worth answering or excepting against; as namely, the defects of ships, the losing company and meeting again; the winds, victuals, sickness, and other things of that nature.

*Author.* The 20th he called a council, to debate how he should put into *St. Lucar*, according to an intention of the council held at *Plimouth*; when his majesty was present; where the matter being very doubtful, it was referred to be decided upon the spot when we should be arrived; but upon better enquiry of the inconveniencies and disadvantage for going into the harbour, and landing our army, it was quite laid aside.

Then follows a long circumstance, of the impossibility of going into *St. Lucar*.

*Answer.* I dare undertake, never enterprize at sea was set out with such doubtful directions, as to take their resolutions when they should come to the place. The port of *St. Lucar*, and the danger of the bar, being as well known to the masters before their going from home, as after they came thither: and if they did not inform his majesty with it at the council held at *Plimouth*, they deserved to be hanged there; for no man that had heard of the bar of *St. Lucar*, but knew the danger expressed in the pamphlet.

*Author.* The general demanded both of the captains and masters, why they did not speak of these difficulties before his majesty: they answered, *It was now the depth of winter, and stormy.*

*Answer.* If the masters knew no more than the captains, I think they knew little; for I am informed few of the captains had any experience and skill in sea affairs: and the masters answer was as ridiculous to the general's demand, why they acquainted not his majesty with the difficulty at *Plimouth*; for, say they, *It was the depth of winter, and stormy.*

What was this in answer to the impossibility of going to *St. Lucar*? could the summer remove the bar, and give them a safe entrance? could the summer season give them more knowledge of pilotship than they had before their coming thither?

or did they not know that winter was approaching, when they were called to the council at *Plimouth*, for it could not be above twenty days more winter, than it was when they were at *Plimouth*? *I could say no more to them*, says the author, *being I was no great seaman.* And in the 16th Leaf, he says, he made no account but the ships were ours; for speaking of seamen, (he says,) they knew more than he did how to set upon them.

Would any man thus confess his ignorance in a command he undertook? or would any man ever take upon him the charge of a general by sea, that had never past further than betwixt *England* and *Holland*? It were good to know, whether he sought the employment, or, whether it was put upon him against his will: if he was led unto it by ambition, let him answer his error, and that with severity: if it was procured by others, they ought to have the same chastisement he deserved. Betwixt the one and the other, it is pity the kingdom should bear the dishonour, which in truth cannot be justly taxed; for *England* affords as good ships as ever it has done; men of as great experience and valour, if they had been employed; and no reason therefore, but that every horse should bear his own burthen; and that the defect be not laid upon ships and men, but upon those that should be found culpable.

*Author.* In the same council it was determined, that the whole fleet should bear into the bay of *Cadiz*, and anchor before port *St. Mary*: it was appointed how every ship should anchor, (*viz.*) that the general and *Dutch* admiral should anchor together, and give directions to the vice-admiral and rear-admiral.

*Answer.* It was a most ridiculous resolution, to anchor and land at port *St. Mary*; first, in respect of the danger of the road, if the wind came southerly or westerly; secondly, their galleys would have cut off our boats and men, if we had attempted to land; thirdly, such *Spanish* ships as were in the road of *Cadiz*, would have had leisure to have saved themselves, and convey away their wealth; fourthly, the town of *Cadiz* had space to prepare for its defence, and the country would quickly have given relief to it, as well as the place where they pretended to land.

My next observation is the place they chose to anchor in, that he might give directions; and yet before he excus'd himself as unexperienced, and by consequence unfit to direct. He that shall read this little pamphlet to *Cadiz*, shall find more directions, more councils, more letters writ, and more absurdities committed, than in any action a man shall read of.

*Author.*

*Author.* The general gave orders for every ship to break down their cabbins, to be ready to fight.

*Answer.* This every ship would have done without directions: still directions to little purpose, and nothing came of it.

*Author.* I writ to my lord of *Essex*, to make all the haste he could; and that I would command his squadron to follow him, (which I did;) but I must confess they went the most untowardly way I ever saw men; for they did not hoist up their sails as they were commanded.

*Answer.* This was not a time to write, and I marvel your leisure would admit of it; for what you were to act was now or never; and if you had not directed before you came to the port what ships should go in, and what ships should second one another, you were very unfit for the command you had; for this did the two lord generals, in their expeditions to *Cadiz*: they consulted and resolved what ships should attempt the enemy the next morning; and when it came to be executed, never greyhounds strove to overcome, or outstretch one another in a course, as those ships did to draw near to the *Spaniards*; and if you had had but one man that had known the affairs of that voyage, you needed not but to have walked in the path they had trodden out before you.

You urge, you could not learn by all the seamen in your ship, who were those that were so backward: And in the 13th Leaf you say, *Because I would lose no time, I went from ship to ship, crying out, Advance for shame; but I found them not very hasty to do it.*

Shall a general say men were backward to fight, when he had authority to compel them? or that he was not obey'd, having martial law to execute upon them? No, no; but they knew who they had in hand, when they refused to tell what ships were backward to fight; for a general that had known the sea, would have known every ship of his fleet, being so nigh them.

But indeed, if all your directions had been converted into this one direction following, you had saved your self from writing, sending, or your labour in going to give the command, (that is to say,) if before your coming to *Cadiz* you had appointed, if you would not have been the leader your self, as my lord of *Essex* was in his voyage to *Cadiz*, I say, if you had commanded an admiral, and all the ships of his squadron to follow him, and they had not obey'd you, then you knew who was backward, and whom to have punished; but your direction and execution was all of a sudden, without form or deliberation;

then what could you expect but confusion?

*Author.* When all the fleet came to an anchor, and I saw the *Spanish* ships fly before me, I immediately called a general council to lose no time; and the opinion of seamen was, to clear the two forts for securing the fleet. Then I demanded, what kind of forts they were. They told me, that twenty of the colliers, and some of the *Dutch*, would beat them to dust by the morning. Whereupon I commanded, the ships warned should go up to the fort, and that they should receive directions from my lord of *Essex*, who had orders from me.

*Answer.* If my lord of *Essex* had orders from you, what need was there to call a council, and lose time? or why should you give order to my lord of *Essex* beforehand, and not to the ships that should second him till the very instant: still writing, directing, but no acting.

But for the advice in clearing the forts: surely the advisors were not well advised therein; and in this case you should have enquired what my lord of *Essex* did upon the same occasion, when he attempted the shipping: and it would have appeared to you, that he followed the *Spanish* galleons, fighting with them six or seven hours, and overcame them before he landed or took the fort. He made *Puntal* no impediment to his design; he would not lose his opportunity for fear of a fort, nor refer his enterprise to a farther council, but acted what was resolved on before.

*Author.* I commanded that upon sight of my billet, they should be ready to assault the fort of *Puntal* in the morning, and to pursue the ships: I advis'd with the most experienced captains and masters to conduct the ships to *Port Royal*, which was difficult, for want of water; and at three of the clock in the morning, I arose, and received the communion aboard the *Ark Royal*: after which I commanded the master to carry up the ship to *Puntal*; but he excused it, for want of water.

*Answer.* Here is still direction, writing, and communion, when there should be fighting; and because he speaks of the communion, it is not improper to set down what queen *Elizabeth* said upon the like success in 1590. Sir *John Hawkins* being sent general of a fleet to sea, spent seven months without taking one *Spanish* ship. At his return he writ a long apology to the queen; and for his conclusion, told her, That *Paul planteth, Apollo watereth, and God giveth the increase. God's death, (said the queen, upon reading his letter,) this fool went out a soldier, and is come home a divine.*

But

But now in answer to the excuse, in not carrying up the ship for want of water; it serv'd not my lord of *Effex* for a reason in his voyage in 1596; for he found water, though his master and others made the like allegation: he would not trust mariners in that case, but appointed a sufficient captain at the helm, and the captain of his ship to stand aloft, as he saw other ships go afore him, having his lead on both sides continually heaving.

But had the general been experienced, he might have answered the excuse of want of water, as Sir *Walter Raleigh* was answered in the same place, and upon the same occasion. Sir *Walter Raleigh* being ordered over-night to lead the van, and Sir *Francis Vere* to second him, Sir *Walter* came to an anchor at such a distance from the galleons, that he could not reach them with his ordnance: he returned aboard my lord of *Effex*, excusing it for want of water; a gentleman well known standing by, said, *It was strange that the Spaniards, who drew much more water, and had no more advantage of the tide than he, could pass where his ships could not follow.* I protest Sir *Walter* was much abashed at this speech, and thereupon went aboard his ship, causing his master to weigh again and go higher, where he perform'd the part of a noble and valiant gentleman.

This answer from the general had stopp'd the mouths of the masters exceptions; and they would have found this channel as deep for their ships, as the *Spaniards* did, going up before them, and the same channel my lord of *Effex* did when he was there.

I will leave taking *Puntal* by the land forces, with which he fills two or three leaves, directing and ordering things, my intention being only to prosecute the enterprizes by sea.

*Autor.* The 24th I went by six a clock in the morning to my lord of *Denbigh*, and spake thus to him: *You are no old seaman, and therefore I would desire you make all the haste, and get all the seamen together to council; and I desire you to think upon the best way how to burn and destroy the enemies ships.* He went upon it without delay, which he did very earnestly and punctually.

*Answer.* Though the general wanted experience himself, yet he made choice of one of sufficiency, who performed it carefully and punctually; (but what did he perform?) for hitherto nothing was performed, and yet there was commendations of a lord for his punctual performance, that did nothing punctually at *Puntal*, or the ships in *Cadiz*.

If any men deserve honour for this voyage, it is those that dissuaded it at

that time of the year; for indeed they had saved a great deal of dishonour this kingdom now undergoes; they had enriched this kingdom with much money, thus unadvisedly spent; they had preserved many a brave man's life, that might have lived to have done their country service; and lastly, the *Spaniards* had not been heartned and imboldened as now they are.

But for all the general, council, and directions, or the careful and punctual carriage of the other lord, the ships escaped without firing or sinking. The general's design, it seems, was not to take *Cadiz*, as he confess'd in the 16th Leaf; for the king before he went was acquainted, that it was extraordinarily fortify'd; and so he found when he came to view it.

I hold up my hands and eyes to heaven, when I consider the poor design and weak carriage of this last voyage to *Cadiz*; for now it appears it was intended for *St. Lucar*, though the impossibility of it was known before their going from home. He likewise confessed the strength of *Cadiz* to be impregnable; and yet notwithstanding they were both enterprized. They could not have a design upon ships, because they knew not of any being there, or those that were, to be so few, as they were not worthy of such an expedition: Then what man can excuse it? or the absurd carriage of it?

Most men, I confess, had an ill opinion of the voyage before their going, a worse after their return, but worst of all upon publishing the pamphlet; for it has stopp'd the mouths of all those that could force arguments to excuse it: some out of charity and good nature forbore to think the worse of it; some out of judgment did no more condemn it than an action that failed by fortune in the execution; some that would seem wiser than others, said, there was a greater mystery in it than the ordinary people conceived; some said, they had intelligence with *Cadiz*, or other places of importance, but took no success. But this book has discovered all; for they find the project was as ridiculous as the execution of it.

*Autor.* The 25th there was a motion to march four or five miles to recover some boats, to serve instead of their long-boats they had lost at sea; and so they marched forward and back again, brought away their boats, spoiled the fisherman's nets, masts, and other provisions they there found.

*Answer.* Here was marching forward and backward, which we may properly call a fet dance. These boats, I confess, saved your honour; for something you did upon them, though

though you did nothing upon the ships; and for your attempt upon the fishermens nets, you made the enemy have a feeling of it, they being tied to observe fasting days from fish, which now they must want.

*Author.* The 26th the colonels met at *Puntal*: and here it was resolved, that nothing could be done upon the ships, because of the wind and tide, and for that the *Spaniards* had sunk themselves, and the channel was so narrow, which was the reason my lord of *Essex* in his journey, 1596. could send no ships to do the enemy harm.

*Answer.* I confess, that if my lord of *Essex* had followed your example, to be talking three or four days of what he performed almost in as many hours, he had done the enemy no more harm than you; but what he did, and by the good advice he did it, I have shewed before; and if you call it no harm to the enemy, to have the best ships *Spain* ever enjoyed burnt and taken, to the number of nine and fifty sail, with a mass of wealth in them; and this to be done in despite of your fort, which takes up three leaves of paper in your book of difficulties; I say, if this be no harm, and your taking of fishermens boats and nets be a spoil and harm, I confess yours was the honourable action, and that of my lord of *Essex* of small consequence in respect of yours.

*Author.* The council of war did consider, that going to the bridge of *Swazo* was no great design, but to meet with the enemy, and spoil the country; and that when my lord of *Essex* took *Cadiz*, *Sir Coniers Clifford* was taxed by *Sir Francis Vere* for mistaking his directions, which were to go no farther than within shot of the town, where he might be seconded and relieved; but *Clifford* went to the bridge; so in regard there was no such necessity, he returned back again.

*Answer.* Here was a strange consultation, a strange consideration, and as strange a council of war, to conclude the taking of the bridge to be nothing more than to meet the enemy, and spoil the country.

I must tell you, That in that journey of my lord of *Essex*, which you say did the *Spaniards* no harm, there was a consultation, and a resolution before their landing, to possess the bridge, as a prime service to be executed: whereupon, at my lord's landing, he divided his army; three regiments he sent to the bridge, the rest he led himself to the town. Both these directions had good success; the bridge was possessed, and the town surpris'd; and yourself abused by him that told you *Sir Coniers Clifford* had no order to go the bridge, or that *Sir Francis Vere* was angry with him for so doing.

VOL. III.

I confess it was not *Sir Francis Vere* alone, but my lord of *Essex*, and all in general were angry for quitting the bridge, as they had reason; for the main business of the service depended on it: but it seems they wanted reason in comparison of you and your council of war; for by that bridge all succours was to pass from the main land to the relief of *Cadiz*; by that bridge we were to attempt other parts of the country, as we intended; by that bridge the galleys were to pass and escape us, which otherwise they could not have done: and if this be no great design, let you and your council consider it.

But that you may the better understand it, I will lay before you a comparison that may be made to concur with it. Suppose an enemy should land in *Surrey*, with a design to take *Wimbleton*, and that there were a bridge to pass the *Thames* at his barony of *Putney*: do not you think that a council of war would advise to take that bridge, to hinder the succours that might be sent from *Middlesex*, or the counties thereunto adjacent, to the aid of *Wimbleton*? If this advice would not have been followed, the council of war were fit for you, and not for my lord of *Essex*.

*Author.* And I have been so long in the wars, (leaf 19.) that I dare undertake they who think *Cadiz* was to be taken, cannot tell how to come at it with cannon, if there were none but women in it.

*Answer.* When you speak truth, I will concur with you; for I believe there was little reason to attempt it: but, indeed, your want of experience in sea-affairs, your frequent councils, which lost time and opportunity; your multitude of directions to no purpose, and the carefulness of your captains to disobey your command, was your blemish and shame; but more especially your want of expert men to advise what had been practis'd in fleets; for every man that can manage a small bark, is not capable to direct a fleet: you should not have relied upon sailors put into the habit of gentlemen, and made knights before they knew what belonged to gentility, nor were ever expert but in poor petty barks. This was the bane of you and your reputation.

*Author.* The one and twentieth I imbarcked again, thinking to have landed at port *St. Mary*, if the wind should not serve the fleet to go out of the bay of *Cadiz*; but as ill luck would have it, the wind came good even as we were in council; and if we had not taken that wind in the instant, perhaps we had not come out in a long time.

*Answer.* That which was good for your coming out, had not been ill for your landing at port *St. Mary*, though I confess it had been a rash attempt, as I said before.

Q 99

*Author.*

*Author.* Monday the last, the wind came westerly, and we could not come out of the bay.

*Answer.* And yet you said before the contrary: no wind, no counsel, no directions, would answer your expectation after your loss through your delays, negligence, and carelessness of the opportunity upon the ships.

*Author.* The third day, by general consent, we were to stay, and expect the fleet from the *Indies*, till the 20th of *November*; but it pleased God such sickness came, that we had not men enough to handle our sails.

*Answer.* You must know it was strange to hear of a fleet from the *Indies* at that time of the year: but suppose it had been so, and you had taken them, what would you have done with them, not having sailors enough to bring home your own ships, as yourself confess'd?

*Author.* The sixth day (and twenty fourth leaf) we took a man of war of *Algiers*, who had taken two prizes; one of them *John Isack*, a *Scotchman*, that dwelt at *Dover*, laden with wood and iron from *Biscay* for *St. Lucar*, by the king of *Spain's* subjects; which shews the great want that king has of timber and ships to carry it.

*Answer.* This was as wise an observation, as if a *Dunkirker* had taken a *Frenchman* freighted with coals by an *Englisman* from *Newcastle* to *London*, and should say, the king has great want of coals and shipping to carry them: I should have made another construction, That it shewed the *Spanish* ships were employed upon better voyages, than upon such base commodities.

*Author.* On the tenth Sir *Michael Geere*, who had been five days wilfully wanting, came again to the fleet: his master told him of it, and he beat him with a cudgel: his master had bore better command than ever he did; and in the twenty fifth leaf he says, he sent aboard the *Dreadnought* for ten tuns of beer that was left in her for the use of the *Anne Royal*; but the company mutinied, and would not deliver it; neither would the captain nor master confess who were the mutineers.

*Answer.* Would ever general set down the contempt and abuses, and not shew the punishment inflicted upon them? It is no marvel you were no better obeyed in weightier things, that could digest these petty disgraces; surely *Geere* might have come home a knight, though the strangest that ever was made; but he should not have come home a captain, nor made capable ever to bear office in any employment.

Honour was wont to be conferred on men of desert; for services done by them

before they received it; but this knight and others were made knights so unworthily, that it bred not only an admiration, but a contempt to that order.

As backward as you were in the affairs of *Cadiz*, you were as much too forward and liberal in giving and taking honour: to delay it before your going, had been to some purpose; for a noble mind would not have received it, till the world had taken notice he had deserved it.

As there was great difference in the management of sea affairs, betwixt the queen's time and these, so there was in the bestowing of honour; for though my lord admiral was the son of a baron, and the grandson of a duke, though he had the office of lord high-admiral of *England*, and many other dignities and preferments, though he had gained so great a victory in 1588. by repulsing an enemy that might have endangered the kingdom, though he spoiled, beat, sunk ships, and destroyed cities of the enemies in their own countries, yet had he obtained and performed all these exploits, before he could be admitted to the degree of an earl.

*Author.* In the twenty seventh leaf. The defects of the ships were such, that he called a council for going into the islands of *Bayona*; and here he sets down the losing of company, breaking masts, splitting sails, and shifting of winds, &c.

*Answer.* These things were impertinent for a general to relate: such observations are only proper to mariners; and he might as well have set down the seething of the kettle, the companies dining, or the setting of the watch.

*Author.* Now was I arrived at *Kinsale* in *Ireland*. On the nineteenth of *January* came in a *Dutchman* from *Lisbon*, who reported he saw letters from *Cadiz*, that the plate fleet came home within three days after my coming away, and that an hundred carvels were sent to stop them, but none of them could meet the said fleet, for they came upon the coast of *Barbary*; inasmuch, that if any of these accidents following had happened, we had been masters of the plate fleet.

The first was, if the council had consented with me to keep *Punta* fourteen days. The second, if the wind had not changed as it did. The third, if the plate fleet had but kept the same course they have for this forty years; for they had no manner of news of us: But man proposes, and God disposes. And moreover, the *Dutchman* said, that on the last of *July* there were not four barrels of powder in *Lisbon*.

*Answer.* Could the plate fleet arrive in *Cadiz*, and not be vulgarly spoke of in *Lisbon*, but by some few letters, the arrival of that

that fleet being of such consequence, that not only *Lisbon*, but all *Spain* would ring of it? And unless you had better assurance of their arrival than by this poor *Dutchman*, that was in your custody prisoner, you were ill-advised to print it; because every merchant upon the *Exchange* was able to contradict you; wherefore you should have first considered it, as thus:

Was it likely that a hundred carvels should be sent to meet the fleet? a number of carvels never employed, nor to be found in all *Spain*. Could they be so improvident as to hazard so many vessels, the taking of one of which would discover the height the fleet came home in? or could the fleet be met and stopped at sea, that was both foul, weak, heavily laden, wanted victuals, and must be compelled out of necessity to seek a harbour? or could a hundred carvels spread themselves at sea, and your fleet not see any part of them? or could the fleet come home in four days after your being at *Cadiz*? and computing the time, you could not be above twenty leagues west from thence, and to have no news of them? or could the *Spaniards* be so mad at that time of the year, to venture to keep the coast of *Barbary*, being subject to northerly winds, and to fall in upon *Cadiz* road, just at your quitting it? To wise men these things seem improbable.

And moreover, for the satisfaction of the reader, you should have set down your reasons, why you advised the keeping of *Puntal* fourteen days: all the reasons you had would not have given satisfaction to a reasonable man; for it is to be imagined, you must have one of these reasons in it; as namely, That you had correspondence with *Cadiz* for the surrendering it; or that you expected a revolt in the country; or that you hoped for supplies in fourteen days; or that you knew of the *Indies* fleets repair thither in that time. One of these I conceive to be the end of your persuasions.

Then on the other side, I think with myself the mischief that might have ensued upon it in the space of them fourteen days; your victuals would have been much wasted, for it seems then you began to want; your people being sick, as they were, it is probable they would rather grow worse than recover health. In that fourteen days the *Spaniards* would have had leisure to prepare fresh ships and men to encounter your feeble and weak army. Your supposed hundred carvels might have met in those fourteen days with the imagined plate fleet, and have conducted them to *Lisbon*, whilst you were propping up of *Puntal*. You had proof what the lingering of fourteen days might have brought you and the fleet to, by the misery you found in your return.

It was no less ridiculous, that you should believe the *Dutchman's* report, that at the last of *July* there should be but four barrels of powder in *Lisbon*; for whosoever knows *Lisbon* and the castle, knows the great quantity of powder there is still kept in it.

*Author.* I put to sea three times against the seamen's opinion: they desired to see the winds settled before we should set out; but I did not hearken to them.

*Answer.* It will appear by this rashness of yours, how unfit you are to take charge of such a fleet. In the sixteenth leaf you confess your ignorance in sea affairs, and refer yourself to men of experience, in an attempt of much less consequence than this, that concerns the safety of his majesty's ships, to venture them to no end but a desire you had to be at home. This was a rash hazard of your own, against the approbation of mariners, who could only judge what was convenient in such a case.

I confess, nothing in your discourse doth make it appear to be writ by a soldier at land or sea, but a plain and absurd stile, the improper terms used by sea and in ships, and the often repetition of some words, which is not proper in oratory. From soldiers, neither eloquent words nor forms is requir'd; their actions must give matter for scholars to amplify upon; and though this may excuse the writing of the pamphlet, yet it can no more clear you of blame in your carriage of the action, than the projector of it; it being hard to judge whether of you two deserved the most shame, the one in advising, or the other in executing.

But if this journey had been undertaken by men of experience, understanding, and reason, it had more annoyed the state of *Spain*, than any enterprize of ours heretofore, either in the queen's, or king *Charles's* reign, as it shall appear by what follows.

*How to have ruined Spain by the Fleet of 1625.*

**S**PLEEN, passion, and envy to some they love not, and the want of knowledge in themselves, are the bane and destroyers of all warlike actions, either by sea or land, which could not be better verified than in this last unfortunate fleet to *Cadiz* I have spoken of; for I must say, that in many ages (or rather in no age) we shall have the like opportunity again to annoy the state of *Spain*, as was then offered us, if the enterprize had been well projected and directed, as it was rashly begun and prosecuted, as may appear by what follows.

If our land forces had been discharged at the beginning of summer, when they were first raised, and the fleet employed upon a  
sea

sea action only; for take it for a maxim, That sea and land enterprizes together, are the bane of one another, as experience has made it appear.

At this time that the expedition was undertaken, we well knew the *Spanish* fleet had dispossest the *Hollanders* of the town of *Baye* in *Brazil*, a little before taken by them; we likewise knew they were to return to *Spain* with a million of pounds in wealth; which after proved true.

And yet this was not all, and the worst that *Spain* was to receive from us: this happen'd when they had no suspicion of us as enemies, nor any shew of hostility made, to give them warning or distrust.

If therefore we had employ'd our fleet then in readines to the *Tercera* islands,

where we assuredly knew the *Spaniards* would touch in their return, as indeed they did, all scatter'd and ill provided, we had without all doubt or question intercepted them, and possess'd so much wealth of theirs, as would have maintain'd a royal war against them, till his majesty had been reveng'd of the affronts offered him, as was conceived at his being in *Spain*.

Besides this wealth, we had cut off his fleet, which consisted of fifty or sixty of his best galleons, which in an age could not be restored, whereby he would have been unable to undertake any action against us. This was discover'd to some, before the fleet's going out; but either neglected or not believed.

### *The Errors committed in the Expedition to the Isle of Ree.*

IN my examination of the voyages in the reign of queen *Elizabeth*, I make often reflection, without fear or flattery, upon the errors then committed, as well by us, as by the *Spaniards* our enemies; which kind of proceeding, I follow in these two last expeditions, the one to *Cadiz* in 1625. which I have treated of; the other to *St. Martins* in 1627. which I am to treat of, as well in number and goodness of ships, as in proportion and quantity of men.

Though I was no actor myself in the two last expeditions, there being no relation that can give a more true account of them than those publish'd by the authority of state, I have, upon view of these pamphlets, collected such errors as the actions themselves have given just cause to except against.

Let it not be imputed to me that I do it out of a carping or detracting humour, or a malignant disposition, or an evil or contesting nature, or out of a vain or phantastical curiosity, or pride, or arrogance, to make small errors seem greater than they are; for I have no other end than what I have often expressed, *viz.* by discovering the faults and oversights past, to make them serve as a warning for time to come.

I would not be so bold and presumptuous as to examine the grounds of this last design upon the island of *St. Martin's*, or the carriage of it upon their arriving and landing; for I never doubted, but that a matter of such great consequence, as the breach of peace between princes, and wherein his majesty's honour was to be engaged, and the reputation of the chief commander considered, was not only discuss'd and argued by the grave and wise senators of the state, but advice taken of the most experienced captains both by land and sea. this kingdom could afford; which being so, the success must be referred to him who is the giver of all victories: for I am like the *Carthagi-*

*nian*, who did not esteem the loss of the general that lost a battle, but of such as fought against reason; for success is the measure of fools; whereas conduct proceeds from judgment.

This expedition to the island of *St. Martin's* was begun from *Portsmouth* on the 17th of *June* 1627. a place design'd for the rendezvous; and to that end the ships of provisions that attended the resort of the army to *Plimouth*, were drawn together at *Portsmouth*, though with ill success: First, in respect one of those ships miscarried, and others were in danger to have done the like. Secondly, I must make the rendezvous at *Portsmouth* the ground of my argument, to except against the carriage of the action, and the chief cause of the mischief that ensued.

You must understand that *Stokes Bay*, where our ships rode, is forty leagues from *Plimouth*, by the way of *St. Helen's Point*; and the course of the channel is east north-east, and west south-west: *Ushant*, which is the head-land of *France*, and by which you must pass either from *Plimouth* or *Portsmouth*, if you will sail to *St. Martin's*, is twenty six leagues from *Plimouth* south-westerly; so that there was forty leagues run to fetch those ships which could have brought themselves; and a ship lost, which had not so happen'd but by their going to fetch them.

Now should they have held a grave consultation, if they had done well, how to proceed afterwards, which should have consisted of three propositions: The one, whether to keep the sea with that easterly wind, or no; which in little space would bring them to leeward of all. The second, whether to land in *Conquet Road*, or some part of *France*. The third and last, was, whether to return to *Plimouth* or *Falmouth*, there to attend a better opportunity of wind. But, to

be short, unadvisedly they took the worst of the three, and kept the sea till they were to leeward of all *French* shores; in which space they had pursuit of certain *Dunkirkers*, whom indiscreetly they chased a whole day, when in two hours they might have discerned whether they could fetch them up, or no.

If they had anchored in *France*, or any part of that coast, notice would have been taken of it by the *French*; and it would have given a sudden alarm, and been a cause to arm all places they might suspect we would attempt.

If they had repair'd to *Plimouth* or *Falmouth*, it would have put a doubtfulness in the *French*, whether our design had been against them, or no; and they would have made the less preparations to resist us. *Spain* would also have taken the alarm, being in as great a doubt and danger of us as *France*; but drawing the ships from *Plimouth* to *Portsmouth*, *Spain* could not conceive that it was intended against them; and *France* was in as great assurance that it was design'd upon them.

Thus you see from *Portsmouth* they were to attend the uncertainty of two winds, and give warning to *France* to provide for themselves; whereas from either of the two ports of *Plimouth* or *Falmouth*, one wind would have carried them directly to *St. Martin's*, which might have been run in two or three days, without fear of scattering, or other disaster. These inconveniencies should not have been only foreseen, but prevented, if experience and discretion had guided the action.

Now follows the mischief that ensued upon keeping the sea. The first is, That they were brought so far to leeward, that if they would, yet they could not recover either *Plimouth* or *Falmouth*. Secondly, they were subject to foul weather, which they afterwards found. Thirdly, their men

not being accustom'd to the sea, and pestered in ships, brought a great inconveniency amongst them. But the greatest was the foul weather which parted them, and was the chief cause of the misfortune that followed: for above sixty of the ships being scattered, came to the island of *St. Martin's* the 10th of *July*, and the rest the day following.

The sixty ships first arriving put the *French* out of doubt, but that was the place we intended, and gave them opportunity to do as much as the time would permit.

And here you may observe the true overthrow of the expedition to the isle of *Ree*; whereas if our fleet had come together from *Plimouth* or *Falmouth*, and landed together, they had suddenly surpriz'd the island, and possessed all the victuals in it, which in that short time we gave them, they carried into the castle, being before but ill provided either of victuals, or any thing else.

Thus have I run over such errors as I have briefly collected out of the ill-carry'd action to the island of *St. Martin's*, wishing that generals may not only see, but foresee, that they may with judgment determine what they shall put in execution, before they attempt it with force and courage; for great actions ought to be resolv'd on by leisure, and perform'd with speed: they should not say and stay, but say and do: they must consider, that the first enterprize in war gets the best reputation; and a thing well begun, is half ended.

*As I have set down the Names of the Ships the Queen left at her Death in my first Book, now shall follow the Names of those that were built by King James and King Charles; and the present Rates for Seamen's Wages, according to the Ranks of Ships and Officers, increased Anno Dom. 1626.*

| <i>Ships built by King James.</i> |                 |             | <i>Ships built by King Charles.</i> |                 |             |

If I were worthy to advife his majesty, he should follow the precedent of the earl of *Lincoln*, late lord high-admiral of *England*, who two years before he died, and in the year 1582. caused a general muster to be taken of all ships, their burthen and mariners, belonging to the ports of *England*, as here follows.

And withal, I wish there were a computation made from the year 1582. till the end of queen *Elizabeth's* reign in 1602. all which being compared with the increase of ships and mariners since that time, and their greatness in burthen, it will seem wonderful to all his majesty's subjects, who shall understand it, that since the first year of

king *James's* reign, till this, which is the 13th of king *Charles*, the navy of *England* is so much increased and augmented; and thereby they may conjecture what wealth hath been imported and transported since that time, to the infinite enriching of all people in general, which will make them repine the less at paying ship money; for they must truly confess, how much the kingdom is, since the year 1582. strengthened and fortified by sea, and the commonwealth enriched by trade; for though the merchant only runs the hazard of ships and goods that go to sea, yet the whole kingdom receives benefit and profit by it, from the handicraftsman to the labourer.

*A Muster of Ships and Mariners throughout England, taken two Years before the Death of the Earl of Lincoln, Lord Admiral.*

*Somersetshire.*

**T**HIRTY seven ships, whereof ten above eighty tons.  
 Mariners, masters, and fishermen at home, 462  
 Abroad, 40  
 In all 502

|                        | Mariners | 17  |                      |                                                           |     |

They were, upon forty days warning, to furnish these ships for fifteen days, upon their own charge, after setting sail; and to do it every year, if they were demanded; the rest of the time the king to pay them.

The privilege of the cinque ports was first granted by St. *Edward the Confessor*, and *William the Conqueror*, and continued by the succeeding kings.

*Of the Sovereignty of the Seas of England, and of the Right belonging to Admirals in the same, as is to be seen in the Records in the Tower.*

**T**O you lords auditors, deputed by the kings of *England* and of *France*, to redress the wrongs done to the people of their kingdoms, and of their territories subject to their dominions by sea and by land, in the time of peace, and in truce, the procurators of the prelates, nobles, and admirals of *England*, and of the commonalties of cities and towns, and of merchants, mariners, merchant strangers, and of all others of the said kingdom of *England*, and the territories subject to the dominion of the said king of *England*, and other places, as of the coast of *Genoa*, *Catalonia*, *Spain*, *Almany*, *Zealand*, *Holland*, *Denmark*, and *Norway*, and of divers other places of the empire, doth shew ;

That whereas the kings of *England*, by reason of the said kingdom, from times whereof there is no memory to the contrary, that it had been in peaceable possession of the sovereign dominions of the sea of *England*, and of the isles in the same, in making and establishing laws and restraints of arms, and of ships otherwise furnished, as ships of merchandize to be, and in taking surety, and affording safe-guard in all cases, where need shall be, and in ordering all other things necessary for maintaining of peace, right, and equity, between all manner of people, as well of other dominions as of their own, passing through the said seas, and the sovereign guard thereof; and in doing justice to high and low, according to the said laws, statutes, ordinances, and restraints, and in all other things may appertain to the exercise of sovereign dominion, in the places aforesaid. And *A. de B.* admiral of the said sea, deputed by the king of *England*, and all other admirals ordained by the said king of *England*, had been in peaceable possession of the said sovereign guard, with the cognizance of justice, and all other appurtenances, except in case of appeal, and of complaint made of them to their sovereigns the kings of *England*, in default of justice, and for evil judgment; and especially for making of stay, doing of justice, and taking surety of the peace of all ships aforesaid, otherwise furnished, and set forth otherwise than appertains to a merchant's ship; and in all other points, where a man may have reasonable cause to suspect them of robbery, or any other misdemeanor. And whereas the ships of the said kingdom of *England*, in the absence of the said admirals, have been in peaceable pos-

session of taking cognizance, and judging of all actions done in the said sea, between all manner of people, according to the said laws, statutes, restraints, and customs: And whereas in the first article of alliance lately made between the said kings, in their treaties upon the last peace of *Paris*, are comprized the words following in a schedule annexed to these presents.

“ First, It is treated and agreed, betwixt  
 “ us and the messengers and procurators  
 “ aforesaid, in the names of the said  
 “ kings, That the said kings should from  
 “ this time forward be, one to the other,  
 “ good, true, and loyal friends, in aiding  
 “ and assisting against all men, save the  
 “ church of *Rome*, in such manner, That  
 “ if any one or more, whatsoever they be,  
 “ would disinheret, hinder, or molest the  
 “ said kings, in the franchises, liberties,  
 “ privileges, rights, duties, or customs of  
 “ them, and of their kingdoms, they shall  
 “ be good and loyal friends, in aiding a-  
 “ gainst all men that may live or die, to  
 “ defend, keep, or maintain the franchises,  
 “ liberties, privileges, rights, duties, and  
 “ customs aforesaid, (except the king of  
 “ *England*, monsieur *John* duke of *Bra-*  
 “ *bant*, and his heirs descending of him,  
 “ and of the daughter of the king of *Eng-*  
 “ *land*, and except to our aforesaid lord  
 “ the king of *France*, the excellent prince  
 “ *John* earl of *Hainault*;) and that the one  
 “ should not be of council, or aiding,  
 “ where the other may lose life, member,  
 “ estate, or temporal honour.”

Monsieur *Reynault Grimbault*, who stiles himself admiral of the sea aforesaid, deputed by his lord the king of *France* in his war against the *Flemmings*, contrary to the said alliance, and the intention of him that made it, wrongfully assumed the office of admiralty in the said sea of *England*, by the commission of the said king of *France*, and used the same one year and more, taking the people and the merchants of the kingdom of *England*, and of other places, passing through the said sea, with their goods; and delivered the people so taken to the prisons of his said lord the king of *France*, and caused their goods and merchandize, by his judgment and award, to be brought to the receivers deputed by the said king of *France* in the ports of his said kingdom, as to him forfeited and accruing; and the taking and determining of the said people with their said goods and merchandize, as also his said judgment and award, hath justify'd before you lords auditors in writing, by virtue and authority of his said commission of the admiralty aforesaid, by him usurped, and during a restraint so generally made by the king of

of *England*, by reason of his power, and according to the form of the third article of the alliance aforesaid, which contains the words underwritten, requiring that he might be acquitted and absolved of the same, to the great damage and prejudice of the said king of *England*, the prelates, nobles, and others above named.

Wherefore the said procurators, in the names of the said lords, do pray you lords auditors aforesaid, That you cause due and speedy delivery of their said people, of their goods and merchandize so taken and detained, to be made to the admiral of the said king of *England*, and to whom the cognizance of the same of right appertains, as is before expres'd; for that without the disturbance of you, or any other, he may take cognizance thereof, and do that which appertains to his office aforesaid.

And that the said Monsieur *Reynault Grimbault* be condemned, and constrained to make due satisfaction to all the parties damnify'd, so far forth as he shall be able; and in his default, his said lord the king of *France*, by whom he was deputed to the said office; and that after due satisfaction made to the parties damnify'd, the said Monsieur *Grimbault* be so duly punished, for the violation of the said alliance, that his punishment may be an example to others in time to come.

Thus much for *England's* authentick proofs of her sovereignty on the seas in these latter times.

*A more ancient Proof of the Sovereignty of the Seas.*

**B**UT *England* may plead a more ancient sovereignty o'er the seas; and not only the narrow seas that divide *France* and her, but also all other seas that encompass her, as well east and west, as north and south.

*Julius Agricola* was the first that sail'd about *England* and *Scotland*, and subdued the islands of *Orkney*, when *England* was called *Britain*.

King *Edgar* made his summers progress, as appears upon record, by sailing about the whole island of *Albion*, and was guarded with a navy of four thousand sail, which he divided into four squadrons, and appointed one thousand ships to every squadron.

King *Arthur* subdued *Ireland*, *Izeland*, *Norway*, *Gotbland*, and many other kingdoms; which he could not have done, if he had not been master of all the then known world by sea, and in shipping.

And if we speak of our *English* conquests since *William* of *Normandy*, we shall find

that *Richard* I. in his expedition to *Jerusalem*, in 1090. had with him two hundred and fifty four tall ships, and sixty galleys.

Prince *Edward*, son to *Henry* III. in his voyage to *Asia* in 1270. had a gallant navy of ships, which God blessed above other princes that joined with him in that expedition; for he lost never a ship by tempest, when the others had one hundred and twenty sail cast away.

*Edward* III. had a fleet at one time of one thousand one hundred vessels; and because it shall the better appear, I have set down the particular numbers of them and their men, with the names of their ports from whence they were furnished, immediately before these two discourses of the sovereignty of the narrow seas.

And as for the time of queen *Elizabeth*, I have set down her offensive and defensive fleets in the said first book: and comparing the strength at sea in the days of king *James* and king *Charles*, we may very well say and conclude, that they are treble to those in the queen's time, both for the number, greatness, and goodness of ships.

The rustical people that go about to impugn the prerogative due to *England* by sea, are the *Hollanders*, not only by calumnations and malicious practises, but by scandalous pamphlets, which they divulge to prove the liberty of the sea.

But the nature of those base people ought to be considered, who turn all things topsy-turvy, and make it their business to alter and change the course of the world, and the laws antiently settled in it: They withstand the rightful power of kings, established by God himself, and cast it upon beer-brewers and basket-makers, whom they obey as kings: they make the chiefest offenders judges, and the justest judges delinquents; and therefore it is no marvel, if they use his majesty malepertly at sea, that treat their natural prince rebelliously on land: but mark the end of such actions, wherein they offend God more than man; and commonly such injuries never escape without cruel revenge in the end.

*Presidents, known to the Author, of Princes, as well Turks as Christians, standing up for Prerogatives in their Seas and Ports.*

**T**HE prerogative of princes, within their own dominions, is without limit, and ever received and practised by consent of all kings and monarchs; for which reason, princes are bound to maintain one another's rights in that point.

And to put the case in the accident lately happened in the *Downs*, through the insolvency

insolency of the *Hollanders* surprizing certain ships of *Dunkirk*, I confess, though the injury and loss be great to the king of *Spain's* subjects, whose ships were taken, yet the indignity is much more to his majesty than to the others, because they were forced away from under his protection and safeguard.

All ports and harbours of princes are called their chambers, and as dutifully to be observed and revered by strangers resorting to them, as the others are; and therefore the *Hollanders* might as well have seized on the person of a *Dunkirker* within his majesty's chamber and presence, as have offered this inexcusable contempt within any of his majesty's ports.

And because examples and precedents are the rules, in such cases, to make good princes rights, and uphold their honours, I will collect some accidents that happened in the reign of queen *Elizabeth*, of famous memory, and *Henry III.* then king of *France*; I will prosecute the like cases in the time of king *James*; and lastly, of the king of *Barbary*, a *Mabometan*, who yet stands as much upon the prerogative of his ports, as though he had power to maintain them by shipping.

In the year 1588. when the *Spanish* fleet was put from its anchor by our fireships in the road of *Calais*, the admiral of the four galleasses, *Don Hugo de Moncado* was forced ashore, and there wreck'd: whereupon my lord admiral commanded her to be attempted with some ship-boats manned out of his fleet; and making an attempt upon her, the governor of *Calais*, *monsieur Gurdon*, thought it such an indignity to his master, that he shot at the *English*, and defended the galleass, which otherwise had been in our power to have burnt.

That same year, and in the same action of 1588. one of the galleons of *Spain* put into *Newhaven* in *Normandy*; which queen *Elizabeth* understanding, sent some of her ships to surprize her in the harbour; and as her ships were bearing into the said port, they were forbidden to meddle with her, with shot from the castle; which we obey'd, though it is well known, that in those days the *French* king did much more favour the queen and her proceedings, than the king of *Spain*: but it is true, that princes are always more jealous of their honours, than private persons.

King *James*, after his accession to the crown, finding that many occasions of controversy were like to arise betwixt the *Dunkirkers* and *Hollanders*, who were then at war, and the king a friend to both, he directed by his proclamation, how far he would protect either of them that should

first arrive under his protection, commanding such ships as should arrive first in any of his ports, that they should have liberty of two tides to depart before they should be pursued by the enemy: and because he would have the extents of his chamber declared, for all nations to take notice of its limits expressed therein, he caused it to be drawn by a line from headland to headland, by the advice of the *Trinity House*, who could best determine it. This act of his was duly observed during the time of the wars betwixt *Spain* and *Holland*; though at the beginning the *Hollanders* found themselves much grieved at this decree of the king's, when they could not have their wills upon several ships of *Dunkirk* that arrived in the *Downs*; for *Sir William Monson* was very careful and watchful to observe and obey his majesty's commands, without regard or respect to either of them.

And whereas a ship of *Dunkirk* arriving at *Portsmouth*, through some defect the captain sold her, reserving her tackling, ordnance, and rigging, which he shipped in an *English* barque for *Dunkirk*, but by contrary winds the barque put into the *Downs* at a time when none of his majesty's ships were there riding, an *Holland* ship, having intelligence of it, against the honour of the king he seized upon her, and carry'd her into *Holland*: but this affront being made known to his majesty by *monsieur Habuck*, then ambassador for the archduke, his majesty caused restitution of ship and goods to be made; and the states seemed offended with the captain that did it.

Lastly, For as much as concerns the king of *Morocco*, all such *Englishmen* as trade into *Barbary* can testify, That if any ship, abiding in any of his ports, be assailed by any strange nation, (as I will make comparison betwixt an *Englishman* and a *Spaniard*;) If an *Englishman* shall offer to surprize a *Spaniard* in any of his said ports, the best revenge he can take, and as I have known him offer to do, in a case of my own, *Anno 1587.* he will instantly seize upon the persons and goods of all those *English* that are resident and trading in his country, and confiscate both lives and merchandize; so much regard he has to the reputation and state of monarchy.

And besides these precedents of prerogatives of princes aforesaid, the civil law which is universal, and decides all controversies at sea, has adjudged this case *amicus soli*, (*viz.*) If a ship taken by an enemy, be brought into the port of a friend to both, the prize not having been at home with him that took her before arrival in a friend's

friend's country, she is as free as if she had not been taken. And if this be a resolution in the law; how much more is a prince injured by the case aforefaid, and

therefore punishable, I refer to consideration; for harbours and ports of princes are sacred things; and not to be disturbed or questioned.

*A Discourse directed to the Subjects, exhorting them to pay Ship-Money, and contribute with their Fortunes and Persons to punish the Insolencies of the Dutch.*

CUSTOM becomes law, which can plead no ancients right, especially where that custom is maintained by force and power; for it is an old saying, That custom has taught nations, reason men, and nature beasts. Tyrants will not admit of custom, nor submit to the justice of their cause, but to their own proper power and will: but, God be thanked, this kingdom never admitted of tyrants titles, but of their true inheritors, descending from their ancestors; and if this descent were at any time impugned by usurpers, the violence lasted not long, but right took place, like the true religion, which pestiferous heresies could never darken or suppress.

And as antiquity, descent, and justice, have crowned the kings of this land with lawful authority, from our first *William* to this very day; so have the seas given as authentick privileges and prerogatives to the kings thereof, by consent of foreign nations, as the former record doth declare; and ever since we have held an undoubted succession, which makes our title the more strong and potent. For, first, we plead consent and allowance of other countries. Secondly, the long use and execution of it. Thirdly, a continual possession without contradiction or opposition. And, lastly, our force, that in all ages has been able to maintain it, in the spite of any that should gainsay it.

And as we have received this prerogative from our forefathers, from whom all other goodness descended, as both tradition and records do witness; who should doubt of the truth thereof? or who may not as well question the clemency of *Julius Cæsar*? the magnificency of *Alexander*? or the goodness of *Trajan*? If actions and accidents of times past be not allowed, all things that are gone before are like a dream, which when we awake we remember not, nor know any thing of it. *Cicero* saith, That if a man knew no more than when he is born, he should be always a child; for history and monuments make heroicall deeds to live again, which otherwise would be buried in everlasting forgetfulness.

But can there be a more approved testimonial, than that we live and enjoy the an-

cient right left to the crown of this kingdom, as many ancient families have done their lands and possessions to their heirs and successors, who since, through the lewdness of the times, have prodigally consumed them, and made themselves the scorn of the world: therefore let the greater mischief be shunned by example of the less, that we may avoid the disgrace, imputation, and shame, the *Hollanders* endeavour to put upon us, by questioning and denying the sovereignty of the sea, as is apparent by their late insolent carriage to his majesty's ships serving in the narrow seas; an injury without satisfaction, unless we be publickly righted by open proclamation, not only in the excuse of the fact, but in acknowledging his majesty's undoubted right; which, if they deny to do, they must be made to know, That the way to wipe out old offences, is not to offer new ones.

But if ambiguous words, or feigned promises, will give us satisfaction, no doubt they will think it a little lip-labour for their tongues to pronounce it; but in that point they are like spies, that will dissemble one thing and say another; it will be all one to us to be deaf, as to hearken to what they say, unless we compel them *per force*; for the nature of them is to be proud when successful, and to become disloyal, and base withal; as on the contrary, when cast down they will yield and sink under calamity, which is the right property of cowards.

Here is an occasion offered for all true *Englishmen*, to have a feeling of a publick and national wrong; for a reproach to a discreet man, is more than the lance of an enemy. What affront can be greater, or what can make a man valianter, than a dishonour done to one's prince and country, especially by a people that was wont to know no more than how to catch, pickle, and feed upon fish, till now they are made drunk with our *English* beer? and so rude and unruly, that they strike at us their next and best neighbours and friends?

But since our *English* beer has that operation on their brains, let us keep it from them; and let them find the effect of our laws against drunkards, which is the

whipping-post, as not worthy of a better revenge; for a prince that punishes publick offences, and forgives private injurits to himself, has true honour.

Towards this defence of our reputation, it is requisite some be aiding with money, and others with their persons. They that have not the one, must supply the defect with the other: let the rich assist in liberal payment; and leave the rest to the valour of soldiers, who will think of nothing but revenges suitable to the wrong: and nothing claims revenge more than a contempt of our prince.

This done, the next thing to be recommended is celerity, as the principal advantage in war; and therefore let us disdain, and not dally with the *Hollanders*; for it gives a coward courage: our houses are not made of glass, that we need fear their throwing stones; we shall find them like a lion, not so fierce as he is painted, nor themselves so terrible as they are imagined. Let us strike, and not threaten; for that is womanish; and it is an old saying, *That a threaten'd man eats bread.*

Yet let not what we do, be done in fury; for fury admits no reason: let our actions be governed with discretion and temper; for rashness causes repentance; and he that seeks not to avoid danger, and with valour to encounter it, tempts God more than he trusts in him. The greatest glory of a commander, is to obtain a victory with the least loss; for stratagems of war are the products of wisdom; and secrecy is requisite to conceal all designs from the enemy, who is better overcome by policy, than dint of valour.

The property of a soldier is to be courageous in fight, and free from fear; for the true valiant man loves life, and fears not death: he is spurred on by revenge when injuries require it, and knowing that death cannot be avoided, is the less afraid of it. We see daily what little value life is of, since every soldier will venture it for six-pence. The badge a soldier should bear, ought to be writ in his forehead, *For my God, my Prince, and Country, I adventure my Life.* Then seeing death is of so little value, and the honour of one's prince of such high esteem; let us not shew ourselves so indifferent; as to regard whether we die or live: let us seek to imitate the *Lacedemonians*, among whom a matron being told they only had the rule of their husbands, answered, *It was no wonder, because they only brought forth valiant children.* I need say no more to this point, since you are *Englishmen*, and therefore brave: you see your prince and country injur'd and affronted; which your ancestors were never wont to put up, without bitter revenge. The peo-

ple that do this wrong, are so inferior to you, that they are unworthy the title of gentlemen, or the name of a nation; their original being drawn out of the sea, as by the etymology of *Zealand* it appears, that is to say, sea and land: their lives, their religion, their education, and breeding, differs as much from the society of civil people of other nations, as they differ from one another in diversity of sects and schisms. They live more by false fame and fortune, than by any truth spoken of them; their fame is gain'd by the intestine war they maintain against their prince and country, and by the people of the several nations that serve them, who spread abroad their own glory and praise, because they are the actors of their wars. Few judge rightly of the cause of their renown; for if we take it truly as it is in itself, it is the situation of their country, their rivers, the sea filled with the multitude of their ships, and the jealousy other nations have of the greatness of *Spain*, that are the true grounds on which they erect their monuments of fame.

As for their fortune, I do not marvel at it; for fortune often favours the unjust; and God, who is the disposer of fortune, as all things else, can change their good into bad; and many times he suffereth a wicked man to climb, that he may give him the greater fall when he is at his highest: therefore let nothing dismay your heroic spirits, but go on with your undertakings.

Now will I apply my self to men of means and estates, who must bear the burthen, as the soldiers do the brunt of the war. There are two motives that lead you to revenge: the one is honour to our nation; the other a general and particular security to yourselves and country. The affront done you is often repeated, with the qualities of the people that did it, which are such as can claim no honour to themselves by the rules of christianity; which makes the affront greater than from a king or prince, who can distinguish concerning giving or taking affronts. A disgrace to few, is born by a few; but when it is done to a country, all men of that country ought to have a feeling of it, by the law and rule of *Solon*; and whereas a private man's reputation is as dear to him as his eyes, so ought (in a higher degree of comparison) the honour of our prince and country to be, as the noble acts and deeds of the *Romans* have taught by sundry examples.

Let not the meanness, and the baseness, and the situation of the *Hollanders* make us despise their force and abilities, to endanger us; for we want not precedents, that all the flourishing and civil commonwealths of the world, have been subdued and conquered by as mean and rude people as they are. *Bren-*

was enticed to the conquest of *Italy* by the sweet and delicious wines that country afforded, which neither he nor his soldiers had ever tasted. The air, the soil, and plenty, drew the *Goths*, the *Hunns*, and the *Vandals*, from out of the habitations of snow and ice, to people the delightful southern parts, where the sun spreads forth his beams and heat. All goodness that is comprehended in these southern countries abounds in *England*, and is much desired by the *Hollanders*, who well know the state of it and us.

You are not ignorant what will ensue by their labouring to exceed us in shipping; for if they prevail, you shall find our laws and government obnoxious to them: your fair buildings without, and ornaments within, will give better accommodation to *Haunse* than a mean cabin in a fisherboat, which is their ordinary abode. There is nothing so unjust or cruel, which they will not find a text of scripture to execute upon you, they are so perfect in the interpretation of it. Our danger is the greater by our neighbour having, as it were, but a pond betwixt us; but especially through the ignorance of our vulgar people, infatuated with their republican government; with their ridiculous and phantastical religion, and with their imagined integrity and sincerity; but principally out of faction and discontent against the time we live in, not having sense to consider the benefit they receive, nor ever ceasing to slander the actions of others. But let them beware; for it is better for the mouse and frog to agree, than for the kite to be umpire. It will be better for you to contribute now whilst you have something, than to be bereaved of all you have. He that hath nothing adventures nothing, and is as ready to make havock of you as an enemy.

The question will be, whether fear or covetousness shall prevail? Fear makes you prevent the worst; but covetousness keeps you from preventing it, when money is required. Fear is not so grievous to a miserable man that only hears of it, but does not see it, because he presumeth his wealth will defend him. But let him beware; for where law serves not, weapons have power over him and his wealth; and then he will have cause to say, That poverty was bad, but riches much worse; when it brings him into that thralldom which he will be forced to confess was not caused by poverty, but by too much plenty, and want of discretion and grace to employ it.

You are like a covetous man, who, out of avarice, will not be at the charge of mending his chimney, to avoid the hazard of burning his house; or the stopping of an inundation of water, with the cost of

casting up of a bank. But here you will meet with worse than fire or water, that is, with a merciless unavoidable war, where all comfort shall be taken away, but only that you shall see your enemies in as ill case as yourselves. Do like the matrons of *Rome*, in case of necessity, who wanting a cup of gold to present to *Apollo*, contributed towards it with their jewels and bracelets; for which they received the reward of virtue, honour, and fame. And to conclude, these changes will make you confess and find, That man is the pattern of frailty, the spoil of time, the game of fortune, the image of inconstancy, and the trial of envy: therefore trust not the world, for it pays not what it seems to promise.

*The Author's Reasons why the King did not sooner resent the Wrongs offered him by the Dutch; and for his setting out the Fleet in 1635.*

THE king, out of his great providence and wisdom, weighing the state of things, as they then stood abroad, thought not good by force and strength to right himself upon the *Hollanders* for their insolencies committed in the narrow seas, though all the world knew he had a power by the force of his navy to revenge himself on them; but his majesty graciously rather imputed the *Hollanders* carriage to the rude, rustical, and unmannerly behaviour of some of their captains, who were never taught morality, civility, humanity, or honesty: wherefore his majesty held it fitter in this case, that their masters the states should know their errors by a sharp reprehension, declared by his majesty's resident there abiding, than by any way at present to chastize them. He also saw that his neighbour princes were distracted, and strove underhand to join in league one with another, for the best advantage of their state, wherein he was to behold and expect the success and event of things then in hand, and to be no more assured of one's friendship than of another's, till this year 1635. his majesty had trial of the *Hollanders* inconstancy and unthankful proceedings; for contrary to the rules of common honesty, they neglected his majesty's repeated offers of peace, to make an end of those long and intestine wars, both themselves and their predecessors had long suffer'd under: but, I say, they little regarding or esteeming his favours in that kind, rather cast themselves upon *France*, that offered to support and maintain their ancient and unlawful divisions.

After much working, and ambassadors often passing between them and *France*, at last they concluded on an offensive and defensive

defensive league, by which *France* was to declare war against *Spain*. The consequences of such a league being dangerous, and an unlimited ambition never with safety to be trusted, his majesty had just cause to be suspicious of these innovations: he had reason to weigh these things, and to consider why *Holland* and *France* should so strictly combine and league together, both of them being neighbours to him; and why it should be now hastened more than in former times, when *France* and *England* gave an indifferent and a sufficient relief to *Holland* by consent.

The king also seeing the ambitious enterprizes of *France*, assisted and animated by *Holland*, to disturb the christian and peaceable commonwealth of *Europe*, and unjustly to seize upon his neighbouring territories, without cause given, yea, not sparing by treachery and force to enjoy the countries of his weakest and nearest friend, the ancient state of *Lorraine*, which lay in his way, to hinder his unlawful designs; these were sufficient motives and reasons, for the king's majesty to behold his own case with an eye of prevention. But especially find-

ing a combination betwixt *France* and *Holland*, to divide and devour the provinces of *Flanders* betwixt them, and to possess the maritime towns, as *Dunkirk*, and others, opposite to *England*, this made his majesty to think how to quench the fire that might flame into his own house: and having intelligence that they were both of them to join in one fleet, a thing not usually done by the *French*; and they making no publick declaration of the design of their ships, as commonly princes use to do in such cases, his majesty could make no less construction, than that they intended to deprive him of his ancient and allow'd prerogative of the narrow seas, which behoved him as much to defend as his kingdom; for he that covets the one, will do as much by the other, if it were in his power to effect it: wherefore his majesty armed these ships following to sea, to inquire reason at their hands; not intending to injure any nation, but to keep himself and subjects from being injur'd, and to curb the insolency and pride of any people that should go about to infringe his royal prerogative.

*A Navy set out by his Majesty in the Year 1635.*

**Ships.**

*The Mere-honour*, a ship royal,  
*The James*,  
*The Swiftsure*,  
*The George*,  
*The St. Andrew*,  
*The Henrietta Maria*,  
*The Vanguard*,  
*The Rainbow*,  
*The Lyon*,  
*The Reformation*,  
*The Leopard*,  
*The Mary Rose*,  
*The Adventure*,  
*The Swallow*,  
*The Antelope*,  
*The Lyon's Second Whelp*,  
*The Lyon's Third Whelp*,  
*The Lyon's Eighth Whelp*,  
*The Lyon's Tenth Whelp*,

**Merchant ships.**

*The Sampson*,  
*The Royal Exchange*,  
*The Freeman*,  
*The Pleiades*,  
*The William and Thomas*,  
*The Minikin Catch*,

**Commanders.**

*Robert earl of Lindsey*, admiral.  
*Sir William Monson*, vice-admiral.  
*Sir John Penington*, rear-admiral.  
*Captain James Mountague*.  
*Captain Walter Stenart*.  
*Captain Thomas Porter*.  
*Sir Francis Siddenbam*.  
*Captain Thomas Povey*.  
*Captain John Menns*.  
*The lord Pawlett*.  
*Captain Lewis Kirke*.  
*Captain George Cartwright*.  
*Captain Parramore*.  
*Captain Henry Stradling*.  
*Captain Richard Fogge*.  
*Captain Anthony Penruddock*.  
*Captain Peter Lindsey*.  
*Captain Thomas Price*.  
*Captain William Smith*.

**Commanders.**

*Captain Thomas Kirke*.  
*Captain John Hyde*.  
*Captain Richard Feilding*.  
*Captain David Purrey*.  
*Captain John Fletcher*.  
*John Barton* master.

**T**HIS glorious and victorious fleet departed from *Tilbury Hope* the 26th of *May*, with direction and resolution to

give no occasion of hostility, or to make any nation enemy to his majesty; only to defend his and his kingdoms honour, that

that had been lately and lavishly taxed by the vain boasting of a fleet of *French* and *Hollanders*, which joined off *Portland* the last of *May*: their bragging pretence was to question his majesty's prerogative on the narrow seas; and they stuck not to proclaim wherefore they came: but it is to be observed, that the greatest threateners are the least fighters; and so fared it with them; for they no sooner heard of our readiness to find them, but they plucked in their horns, and quitted our coast, never more repairing upon it; which gave great satisfaction to the shires we passed, that before were struck with a terror. And because we would be the better informed where the fleet was, and what it did, we sent a bark upon the coast of *Britany*, whither we knew they were retired, and by it understood their designs, the weak condition of their ships, heart, and abilities, any more to look upon the *English* coast.

From the time of the return of this bark, till the first of *October*, we made good our seas and shores, gave laws to our neighbour nations, and restored the ancient sovereignty of the narrow seas to our gracious king, as was ever due to his majesty's progenitors.

Whilst this fleet was preparing, and money raising to furnish it, there were many idle, factious, and scandalous reports invented, and spread abroad by disaffected people. Their speeches tended to the dishonour of the king, and no less to the reproach of his ministers of state, saying, That the fitting out of such a fleet, was but a colour to draw money from the multitude, to be otherwise employed than was pretended: but when they saw the end in arming such a royal navy, and the necessity of it, to give terror to the world, after so many imputations cast upon our nation, by our former unfortunate actions at sea, it bred a great alteration in the disposition of people, as well at home as abroad.

It appeared at home by the readiness and willingness of those that before seemed to oppose it, and were most averse unto it; who now being satisfied as to the mistrust they had, shewed themselves more ready and willing to contribute to it than others, being satisfied it so nearly concerned the honour of their king and country.

We may say it had the like success abroad; where, at the beginning of our preparations, the gazetteers stuck not to divulge in all languages many false invented reports, which no doubt they received out of *England*, as namely, the discontent of the subjects, and their general denial to contribute towards it with moneys; besides many other invented calumniations, which now they find themselves abused and de-

ceived in; for whosoever will speak with travellers lately come from beyond sea, or confer with merchants and others that have weekly intelligence and correspondence by letters from all parts of *Europe*, will find what the world conceives of this fleet, and the fear all nations apprehend of it, not knowing which of them it may bring into danger. They now acknowledge what wise men in *England* knew before, That the king and his kingdom could not be more honoured, than by this noble expedition: the terror of it has made them that did not love us, at least to fear us. It has stopped the mouths of detractors, who now impute our former ill-governed actions, to the true and infallible causes, when witless partiality, want of experience, and the vain ambition of men in authority, more than reason, had the disposing of them.

The *Hollanders* by this time I doubt not find, that this royal fleet of ours is able to make the seas quake under us where we pass, and themselves to tremble when they call to mind the intolerable affronts they have put upon us, fearing they may require revenge; for there is no nation naturally so base, so soon elevated with good fortune, and dejected when they see themselves overmaster'd: they are rash and mad in their fury and drink; but want valour or courage to justify their actions, when they are sober, and call'd to an account for them.

But if the threatening shew will not abate their insufferable insolencies, then let us consider the state of their country, their harbour, their depths, or what advantage else we can take of them by stratagems, or otherwise, if they offend us. I will begin with the north part of *Holland*, and take *Zealand* and the ports of *Flanders* in my way, till I arrive at *Calais* in *Picardy*, in the dominions of *France*.

I will not speak of the port of *Embden*, because it cannot be accounted *Holland*; for properly it belongs to the earl of that name, called the count of *Embden*; but this town imitating the precedent of rebellious *Holland*, whose doctrine is to cast off the yoke of monarchy, and to live under the rule and government they have begun and taught, the subjects of the said earl have deprived him not only of his estate, but of his life also.

But God, who is the revenger of all evil actions, and commonly inflicts the same punishment on the actors they offend in, has made an example of that city and country since they practised their foul treachery against their prince, insomuch as they are now become most slavish to the *Hollanders*, who tyrannize over them with an irresistible garrison; and thus they are oppressed, without any hope of redemption.

There is no comparison for goodness between this harbour of *Emdden* in the east of *Frizeland*, and all others from *Brest* in *Britany*, till you come to it. Next to it, to the southward, is the *Texel* in *Holland*; it lies north-east and south-west, forty seven leagues from the *Foreland* in *Kent*, and from *Yarmouth* in *Norfolk* thirty two leagues; not to speak of the channel of the *Fly*, nor another channel betwixt the *Spanish* channel and the *Land-Deep*, which are for small shipping. I will describe the two main channels, that is to say, the *Spanish Gut*, and the *Land-Deep* aforesaid; they are both of one sort and goodness, though not for all winds; they flow at a spring-tide twenty four foot, and fall sixteen at an ebb; they lead at a road under the island of *Texel*, which defends them from the sea: this island is poorly inhabited, and of small strength, as it is used; but he that has it, has the command of all the towns in that part of *Holland*, *Gelderland*, and *Frizeland*, who can neither pass in or out without the permission of the island; and this is my first observation of the advantage we can take of *Holland*.

The next port of importance to *Texel*, is the *Nafs* in *West Holland*, twenty four leagues south-west and by south from thence, and to the *Foreland* west and by south twenty four leagues. The *Nafs* has three channels, two better, and the third like the *Texel*; all three meeting at the *Bril*, which commands all ships of *Skedam*, *Roterdam*, *Delpb-Haven*, *Dort*, and all other creeks thereabouts. My second observation for our advantage, is to get possession of the *Bril*, as formerly we had. Two leagues from the *Maese*, south-west, lies the *Goree*, the same course and distance from the *Foreland* in *England* that the other is. This harbour exceeds all the rest before named, having eighteen foot at low water, with a large and broad channel; but not frequented by great ships but out of necessity, when they have not water sufficient to go into the *Maese*, till

they have unladen part of their goods at *Goree*.

The cause why this harbour is no more in request, is, by reason that *Roterdam* and the other towns before named are far distant from thence; and such merchandize as is brought in great ships to the *Goree*, must be transported in smaller vessels through a creek called the *Spy*, which is a great delay, trouble, and expence to the merchant.

Six leagues west from thence lies the island of *Waterland* in *Zealand*, where *Flushing* is seated. There are three channels likewise better than the rest, except the *Goree*. The inconveniency of these channels, is, that they are long and narrow, and yet I have known at several times most part of the king's ships turn in at the *Weelings*. This is so well known to the *English*, that there needs no other repetition of it.

The next good harbour to *Flushing*, laying aside *Sluce*, which is not worth naming, is *Ostend*, twelve leagues west-south-west from thence; and eight leagues farther is *Dunkirk*.

The king of *Spain* makes great use of these two towns for annoying the *Hollanders* by sea; but a league and a half from *Dunkirk*, there is lately another harbour erected, called *Mardike*, that will entertain a whole fleet of the greatest ships that sails on the seas, and lies more to the hurt and damage of *England*, than all the rest of the harbours aforesaid; and therefore if ever wars should happen betwixt us and *Spain*, it would behove us to get possession of it, for we have had a late trial of the mischief it hath done us by our late short war with *Spain*.

I confess it will be a hard thing for us to effect it, because of the extraordinary fortifications to seaward; and to think to keep in their ships by sinking vessels in the mouth of the channel, is a folly; for the quicksands are such upon that coast, that as often as a ship shall be sunk, she will be suddenly swallowed up in the sand; so that this stratagem will not serve.

#### *An Introduction to the Earl of Northumberland's Voyage in the Year 1636.*

HIS majesty finding that the last year's fleet of 1635, produced both fame and safety to himself and realm, as is apparent by the voyage of that year, he resolved to persevere in his former resolutions, that it should not be looked upon by other nations, as a sudden unpremeditated determination, or a vain needless ostentation, to shew what he could do, if put to it by an enemy: therefore he prepared this year 1636. a fleet nothing inferior to the others, to make good what he had declared before, viz. To maintain the sovereignty of the

seas due to the crown of *England* in all ages, and left him by his progenitors; as also to defend the peaceable commerce and traffick that had evermore belonged and continued to his jurisdiction, but had lately been disturbed by the *Dutch*, committing hostilities upon the *Dunkirkers* under his majesty's protection.

But as this fleet could not be furnished and prepared without great expence, it was thought convenient to carry it equally betwixt the king and his subjects, in regard the expedition was for their good, safety, and

and reputation, as well as for the honour of the king; for as the office of a king is to be careful of all his provinces, countries, and subjects, to be partial to none, but a father to all with indifferency; so the part of subjects is to pay a dutiful obedience when they shall be called upon, for the reasons aforesaid; whereupon his majesty directed his letters to every shire, to levy such a proportion of money as would suffice for the furnishing of the intended navy.

But as general demands and contributions of money are commonly distasteful to the multitude, who are divided in opinions, every one pretending a seeming reason and excuse; so did it make as great a difference in mens minds and humours, some complaining of their want and poverty, some excepting against it as a needless and unnecessary charge, disapproving the design; and others excepting against the unexperienced commanders, who they said were fit to make a good design miscarry.

But if the detractors will but weigh, and with indifferency consider their supposed objections, it will appear rather a refractory disposition, that desires to possess others with the like perverseness, than any just cause they have to complain against it.

If these demands seem too heavy a burden for all the subjects in general to undergo, let them look back, and with indifferency compare the times of queen *Elizabeth* with these, and they will find what daily demands of money were then made at their hands, and how willingly they were granted, for the maintenance of a war against so mighty a prince as the king of *Spain* upon his own coast, for the relief of *Holland*, and to assist the king of *France*, besides the domestick, dangerous, rebellious war in *Ireland*; which expences they will perceive, were, beyond comparison, greater than the present, as appears by what follows.

In 1588, the city of *London* being required to furnish five thousand soldiers, and fifteen ships of war, of their own accord they granted ten thousand soldiers and thirty ships; and by their example other towns within the realms furnished in ships and pinnaces thirty, besides what the nobility and country sent in horse and foot.

In the expedition to *Portugal*, in 1589, her majesty furnished only six ships of her own; whereof two were of the smallest rank, and adventured in that expedition 6000*l.* the whole number of vessels being an hundred and forty six, with fourteen thousand soldiers, and four thousand sailors.

That same year *London* sent a thousand soldiers to the aid of the king of *France*, and several shires sent the like aid upon the same occasion into *France*, under my lord *Willoughby*.

The city of *London* in the year 1594, furnished six ships, two pinnaces, and four hundred and fifty soldiers, for three months, and the following year 1595, *London* furnished a thousand soldiers with all sorts of provision, and sent them to *Dover*, to the relief of *Calais*, when it was taken by the cardinal. Many other forces were sent out of the country upon that service.

The following year 1596, was the expedition to *Cadiz*, and the year after the island voyage; to which two exploits, not only *London*, but all *England* contributed very largely.

In *January* 1598, a great tax was laid upon *London* for *Holland*; and our soldiers there were sent into *Ireland*. The like was done in *February* following. The same year *London* furnished sixteen ships and six thousand men, besides a great number of horse and foot that were sent out of the country, at the time that my lord of *Essex* was in *Ireland*; and in the year of 1600, *London* sent five hundred men into *Ireland*, and furnished them; besides great numbers sent out of the country.

That same year the city of *London* built and furnished five galleys to sea, and was at a great charge for the earl of *Essex*'s entry into *London*.

One thousand soldiers were sent into *Holland*, and every one allowed then three pound ten shillings *per* man, besides those that were sent out of the country. Moreover, there were four hundred soldiers sent in *October* out of *London*; and in *May* following there was a great press in *London* for *Ostend*; and in the last year of queen *Elizabeth*, *London* sent and furnished two thousand soldiers into *Ireland*, and two ships and a pinnace, which stood them in 6000*l.*

If these benevolencies were granted so willingly, and without repining or gain-saying of the subjects, as well appears, let us consider of times, and judge withal of the estate of men in those days, compared with the present. First, in the mens forwardness to serve their prince and country; which their hearts and minds are now alienated from. Secondly, it is to be considered how much more able men are now to contribute, than at that time they were, by their increase of wealth and riches, which they have gained by king *James*'s bringing peace with him into this realm, as shall appear by these particulars following, that shall be by the way of queries.

*Quere*, Of the state of *London* in the days of queen *Elizabeth*, compared with these present, as namely, the buildings, with the number of inhabitants in them, and by consequence the riches increased.

*Quere,* Of our trade and commerce betwixt the time I speak of, and now in being, as namely the traffick with *Spain*, and all the dominions thereunto belonging, which we were then debarred of by reason of our wars with *Spain*; the profit whereof may be in value to the subject ten times as much as the king's custom comes to, as may be apparently made out by the custom books.

*Quere,* Of our trade to the *East Indies*, and the gain thereof, begun and followed since king *James* came to his crown; as also a late trade we have found into *Guinea* for gold.

*Quere,* The state of *Greenland*, and the whale-fishing there, that hath been discovered and prosecuted with little charge and great profit to the merchant, since king *James* possessed this kingdom.

*Quere,* Of the several plantations and colonies since that time, with the employment of people which otherwise would have been a burden, and a consuming of victuals to this commonwealth.

*Quere,* Of the abundance of shipping that hath been employ'd in that navigation, as also of the increase of ships since the days of queen *Elizabeth*, which is no hard thing to know; for when she died, there were not above four merchants ships in *England* of four hundred tons each.

And reckoning but the increase of ships since then, it would cause admiration, and be a reason for men to contribute to ship-money, when they shall consider the wealth increased by the trade of those ships that are never idle, but continually sailing from place to place.

*Quere,* Of the peaceable state of *Ireland*, and the long continuance of war before king *James* came to the crown; as also of the excessive charge *England* was continually at to maintain that kingdom, that now is not only able to uphold itself, but to afford great profit to his majesty.

But whereas our refractory men alledge for their excuse, in denying his majesty's demands of money, and comparing the times together, say, they were forced to it in the queen's time, out of necessity, being drawn to it by a dangerous war with *Spain*, not weighing with themselves that his majesty's actions have been to anticipate and prevent a war, as is to be seen in my next narrative; and no man can be so ignorant, but he must confess, it is less hazard to prevent a war before it is begun, than with valour and courage to resist after it is begun.

Wherefore are our castles seated on the sea-coast, but to prevent the invasion of an enemy, or other insolencies offer'd by stran-

gers? or why are people train'd in several shires, but to be in readiness to prevent foreign and domestick attempts? Whereas if castles were to be built, and soldiers trained after the time the enemy shall appear upon the coast, in what estate were *England* to make a defence? And this employment his majesty now has by sea, may be paralleled with the other two comparisons: and I will therefore conclude, that the wit of man doth not consist so much in seeing, as in foreseeing and preventing peril and danger that may fall upon him.

But whereas poverty is made the excuse for people's not giving what his majesty requires, the true cause shall appear, that hath bred your want, as you shall confess; and that it is in your powers to redress it; as, namely, Your pride, and other needless and unnecessary expences that depend on it. The second is your gormandizing and excessive feasting, lately crept in amongst you, not formerly used. The third is the hateful and loathsome custom of drinking, which begets all disorders, and is the increaser of all vices. The fourth is a vain and ambitious desire of titles, which after they are purchased with money, draws on a greater expence upon their estates, to maintain that port so dearly bought. The fifth is the sumptuous buildings, and ornaments of houses; all men striving for ostentation to out-do their neighbours, with whom they are in faction and emulation. The sixth is the miserable covetousness of some, and the lavish prodigality of others. The seventh is the want of care to have things sold according to their just value, in equity of law; but that every man rates his own commodity according to the necessity of the buyer. The eighth is the extortion taken by griping usurers, from people that are necessitated. But, above all, the number of base lawyers that cause suits, not with a charitable intent, to end, but knavishly to multiply them; and with that expence to the client, as no question can rise, of what value soever, but a bill, answer, and order, will be of more charge, both to the plaintiff and defendant, than what is demanded of most of you towards the furnishing his majesty's royal navy. These are the true causes of want in commonwealths, which proceeds from your own superfluities, vanities, and your revengeful humours.

Most of these abuses were foreseen by *Licurgus*, the great law-maker, who made decrees against them: he also forbid pompous burials, and banished the use of silver and gold, as things most prejudicial to commonwealths; which law of his continued five hundred years, and no man found himself

self agrieved for want of money; for it made love, increased goodness, and banished vices.

But that which you term want, proceeds not from poverty, but from plenty; for he that hath much desires more, covetousness being never satisfy'd. The true use of riches is in him that hath most and desires least; and the best riches is to abstain from covetousness.

In old times he was esteemed rich that was of a fair, upright, and good behaviour. He that shall except against the honourable design of this fleet, may be accounted an arrogant and ignorant person, and a contemner of the king's propositions, excusing it under colour of want, and with little reason. Those that repine at princes actions out of stubbornness, or refractoriness, are within a degree of impugning the sovereignty; and in such a case they want nothing but power to carry on their conceived treason. They do not consider that princes are born not to obey any but their own laws; and the subjects are born to submit to the wills of princes, where reason shall be required at their hands, for the good of the commonwealth; and that nothing deserves such severe chastisement from kings, as such contempt as opposes them or their authority. *Marcus Pelio* says, That commonwealth is everlasting, where the king seeks obedience, and people labour to get his love by their carriage.

Latter times have taught us a most woful and lamentable precedent, in the like case, to parallel with this: *Lewis II.* king of *Hungary*, being threatened with the power of *Soliman*, the great and magnificent *Turk*, required aid of his subjects to withstand so puissant an enemy, that was like an inundation of water to overflow him, them, and their country; but most of his subjects, whom you too nearly imitate in obstinacy, refused to contribute to his demands, standing upon the privileges of the law so long, till it was too late to give succour; and in conclusion, the king and his army were destroy'd, and his people and country became slaves to the *Turkish* government, under which they now live.

Herein appeared the ingratitude of the vulgar sort to their king; and how easily they might have met with this danger, before it lite so heavily upon them: they regarded not the benefit they had received, or might receive at their prince's hands, if they had been willing to have yielded to his desires; for that subject that will not yield to obedience, may as well renounce the name of king and his authority, and by consequence resist laws, justice, and peace; and then follows a continual war, without hope

VOL. III.

of reconciliation, and the commonwealth is destroy'd.

I observe, that nothing breeds this wilfulness in subjects so much as jealousy, that thinks princes have other ends than they pretend, not considering that kings affairs must be kept secret; for their designs being discovered, are disappointed and ruined.

The *Romans* success was imputed to nothing so much as secrecy in their expeditions. They were wont to say, That when they discovered their secrets, they gave away their liberty, accounting secrecy as the guardian of their affairs; and it is an old saying, *That a secret is hard for one to keep, enough for two, and too much for three.* Of all things, a subject should not desire to know the secrets of princes; for *Philip* of *Macedon* bid a philosopher to demand any thing at his hands, and it should be granted. The philosopher humbly besought him, as his greatest suit, *That he would not discover to him his secrets*: and yet you would be wiser than philosophers, to murmur at kings actions, when you should with obedience seek to gain their love; for no king can be so unnatural to himself, or such an enemy to his people, as not to govern to the profit of both, because he receives equal gain or loss with his subjects.

Nothing deceives men more than a false conceit of themselves, which makes them run into unavoidable dangers; but let such men learn, that wisdom is life, and ignorance is death; the one understands what it does, as the other is dead for want of understanding. Much danger ensues for want of reason, and much good is left undone by too much folly.

If this refractory counsel you embrace, proceed from others, and not from yourselves, despise it; for it has another design than they think fit to let you know, which may ensnare you, like a bee that is often hung in his own honey. Therefore be not enticed with fair words, doubtful hopes, or seeming probabilities; but remember that a man has power over himself and tongue, before he speak or promise; but after his words are out of his mouth, they have power of him: and you will find that perverse and desperate counsel is full of perturbation, where men are embracers of evil advice; and therefore think an hour before you answer to their propositions, and a day before you yield to uncertain things that may bring danger.

You must likewise think and consider of the condition of them that counsel you, the occasion of their counsel, and the probability of what they counsel; for if it be out of private ends, out of anger, out of dif-

Xxx

content,

content, out of revenge, or to the prejudice of kings designs, conclude such to be evil counsellors, and shun them as you will a serpent; that never stings so deadly as when she hisses not.

If you suspect their counsel proceeds from ambition, beware of it; for ambition teaches one to become disloyal, and he desires to draw others to consent to him in his ill purposes: if you be young, to whom this seditious counsel shall be given, follow the advice of *Solomon*, who says, *That folly is tied in the hearts of young men, and cannot be untied but by good instruction*; for indeed young men want experience: they are incredulous of good advice, wanting years to judge; and as poor in their judgment, being apt to delight in the musick of their own praise.

Let the warning of our late parliament admonish you; for there cannot be a more perfect precedent than by things lately done, and in your own remembrance; then you shall see the fruit of self-conceited subjects, that oppose the king in his demands, and the reward they have reaped by it; you have beheld the imprisonment of some, and the disgrace of others, which still lies as a heavy burden upon their shoulders, and cannot be discharged without submission, and acknowledging their errors, which some have done; and yet for all their obstinacy they have produced no good to the commonwealth; for the wiser sort censure them as giddy, rash, and inconsiderate, to offend so highly with their tongues, or to meddle with affairs above their reach, or what they could pretend to as members of parliament; for parliaments are called by authority of the king, who has power to dissolve them as he pleases, which puts an end to all they can say: wherefore a man should be silent, unless silence hurt him, or his speech be profitable to others.

Your part in a parliament is to give way, and obey such laws as shall be made by consent of the house; which laws have no authority till the king confirm them; neither can you challenge any privilege after the confirmation, till it be warranted by commission from the king, either in office or employment; for it is the king that rewards or punishes at his discretion; and by proof you have found, and ever will find, that after your rangling and jangling, nothing will get more favour than obedient diligence; for kings are not drawn by violence, but by humility and meekness. The scripture tells us, *That the way to get love of our princes, is by suffering, and not forcing*; for so they may taste of his goodness and mercy. It is a great virtue and wisdom in man, not rashly to enterprize a thing above his reach, or to be led by persuasion of fair words, soft speeches, or for-

ward threats, that deceive none but fools: and if you rely upon the infligation of others, that are of your fraternity and familiarity in parliament, who have nothing but words for their best witness, it is insolent madness; for what can they do but shew passion, like silly women, whose tongues are their best weapons.

All you can do for the present, is, to challenge the privilege of the parliament, of which you are members; but when that is over, you are brought to account for the indiscretion of your tongue, which is the best or worst member in a man's body; but not to be so much used as the ear or mind, which in reason should rule the tongue.

Another observation I collect, that wise men impute to your inconsiderate folly, That your words have produced no profit to the commonwealth, but great prejudice to all; for thereby you have incensed the king, and given him occasion to stretch out his prerogative to the uttermost; as also to awaken laws that have been many years sleeping, to his advantage, and inconvenience to the subject; for laws are established to bridle the haughtiness of mens minds, and the stubbornness of their conditions; and therefore it is dangerous to vex and anger princes upon such occasions.

The best thing subjects can do, is to live peaceably; for by concord small things increase to the good of all; whereas by discord all is lessened, and in the end nothing comes but repentance.

The third exception against those two fleets, generally spread abroad, is, the insufficiency of the captains and commanders wanting experience, as they suppose; which I suppose rather to be divulged without truth or proof, than on any good ground they have for it, and to be a mere scandal, proceeding from discontent and ill nature; and after that rate any man may be slander'd, if calumny pass for truth.

But if there were any such cause of exception to their sufficiency, there were none so like to know or find it as the king himself, or his lords, that have trial of their abilities; and therefore it is a great malepertness to insist upon this.

The ground they have to confirm their belief may be our long peace, which has given no occasion of war, and no means to gain experience; and the death of so many commanders, who lived and were employed in the queen's expeditions, a time when they failed with victory.

The common sort of people, who are led by shew and ignorance, esteem no man valiant but such as can shew scars and hurts, as tokens of their courage, like lewd bullies, or quarrelsome roisters, who never regard the justice of the quarrel, honour,

wife conduct, or value. victory obtained without blood, or the discreet management of a warlike action: and if a man go about to convince them of their errors, he had as good speak to the deaf; for he shall neither be heard or believed.

The last year's fleet was set out on account of the *French* and *Hollanders* vying with his majesty as to prerogative and power, which in a short time would have blazed out into open war, had it not been prevented by a speedy fleet, which some of our refractory men repine at; not considering that it was better and less chargeable to meet danger before it fell upon them, than to expect the coming of it; for the first enterprize in war gains the best reputation, especially when our enemy sees he is neither feared nor dallied with, which will make him think how to escape danger, rather than to go forward with force and courage; and we must account that victory most honourable that is obtain'd with least loss and effusion of blood.

The *Saxon* king *Edgar* left a brave reputation to all posterity, and to this day we look upon it as an act of renown and fame, that he failed about *England*, *Scotland* and *Ireland*, with thousands of ships, not once, but often; and yet no history makes mention of any conflicts or encounters he met with, but only did it for the safety and reputation of his kingdoms, and to daunt his enemies, if they had appeared: which case may be paralleled with his majesty in these our days, who is lord of the same seas, enjoys the same right king *Edgar* did, and has a greater strength and force than he to maintain it.

If it were not for the honour and sovereignty of the seas due to the king, who knows not but that it is more safety and ease to pass out of the kingdom in a small vessel, than in a royal ship of the king's; for every harbour is able to entertain a bark of little draught; but it is not for his majesty's reputation to accommodate a prince or ambassador in such a vessel, who comes courteously to visit him, which every man may hire, and lies open to all dangers of enemies and pirates.

We have many precedents of emperors, kings, and queens, passing our seas, that have been honoured and accompanied with the fleets of *England* for their security, and to shew the king's magnificency on the seas, and yet no hostile act appeared: I would ask the detractors in this case, Whether in reason or reputation the king should not have shewed his greatness for the guard of the seas, and the subjects should not contribute to that extraordinary expence, since they are interested in the dignity of it? for all succeeding ages, when they shall

read of it, will look upon it as an honourable and noble action; and though the king and subjects be all dead, their honour will never be forgotten.

In 1588. when the *Spaniards* threatened a conquest of *England*, if they had happened to have been diverted, as it was once thought they would, can you believe it had been, safe or prudent for us, upon a bare supposition, to have stopp'd and stay'd our fleet from going to sea? or to have called it back when at sea? or do you imagine the subjects at that time would have thought it discretion to have saved their moneys laid out in fitting our navy, and have made excuses of want, or dislike of the designs, or the lack of experienced commanders, who I will undertake were fewer, and knew less than they now do?

In the year 1599. the queen, with admiration to all her neighbours that beheld it, rigged, victualed, and set to sea, the most part of her ships, in fewer days than any of her progenitors had ever done, expecting an invasion from *Spain*; the rather believed, because the *Spanish* preparation was at the *Groene*, the next harbour to her; which fleet of the *Spaniards* was the same year diverted by the pursuit of a fleet of *Holland*, that had lately surprized the island of *Cannaria*: and though the queen was made secure by this accident, and that her fleet returned from the *Downs* without seeing the enemy, yet did not a man in the realm repine at the expence demanded towards the furnishing of it. By this you may see the difference of times, and the difference of mens conditions, and how providence and foresight in war are as much to be approved and esteemed, as the active part when men shew their valour in fight.

If you were as willing to know, as you are apt to judge the difference of times, you would find, that the great and fortunate victories in the days of queen *Elizabeth* were not atcheived so much by force and fighting, as by fortune and providence, and the fear the *Spaniards* conceived of us; for unless it were in the year 1587. when Sir *Francis Drake* made an attempt upon *Cadiz* road, and quelled the enemy that was preparing for an invasion of *England*; in 1588. when we were put upon our own defence; in 1596. when my lord of *Essex* and my lord admiral took *Cadiz*, and defeated fifty nine ships of great value and burden; and in 1601. when Sir *Richard Lewson* and Sir *William Monson* took a carrack, destroyed and seized upon certain galleys defended by the castle; the rest of the fleet employ'd by the queen had never cause nor opportunity to shew their valour or force in a naval battle; though I confess there were many other famous and fortunate voyages with

with wealth and reputation to our nation, as namely, and in my first book I have treated, *Drake* to the *West Indies* in 1585. *Portugal* expedition in 1589. the earl of *Cumberland* the same year to the *Tercera*, where he met with many encounters by land, and prevailed, and what ships fell into his hands was without resistance: many other voyages were worthily performed by him; the lord *Thomas Howard* in 1591. the taking of a carrack by private ships in 1592. being a ship of great value; *Drake* and *Hawkins* to the *Indies* in 1595. where they both died; Sir *Martin Forbusher* to *Brest* in 1594. the earl of *Essex* to the islands in 1597.

And to make a short repetition of the *Hollanders* actions, so unworthily boasted and bragged of, it cannot be found that they ever made a fight with six ships to six, since their wars with *Spain*, which is nigh seventy years; though it is not to be doubted, but that they have many able and sufficient captains amongst them, bred from their youth in sea affairs, that would have shewed themselves sufficient commanders, if there had been occasion; and in the same manner would those of ours, you call unable captains, have done the like; for they are of the condition of the *Hollanders* I speak of; they know as much in ships, and how to govern or fight, as the longest-experienced captain that has had the fortune to exchange most bullets, with the loss of their blood.

I wonder that this can be an exception to our captains; but that such envious persons will seek all pretences to slander them; for how can you think that without practice of war men can become experienced captains? And their purses will tell them they have not so much furthered their employment since the death of queen *Elizabeth*; which shews not only an evil disposition, but a dangerous consequence that may lite upon this kingdom, by refusing their reasonable and convenient payments; for they mean thereby that we shall not only live in ignorance, but to take away all occasions to breed soldiers and commanders; for war is not to be

followed for pleasure, if men see not the means to maintain it, or hopes of preferment.

Let them consider that in natural bodies, the longer one lives in health, sickness is the more dangerous when it comes; and so it is in war falling upon a fruitful country, that has long enjoy'd tranquillity: and therefore though no likelihood of war appear, yet do you like a skilful physician, who prevents a disease before it seizes his patient, rather than struggle with it when it has taken possession of him, and his remedies come too late; for dangers by wise men may be sooner avoided, than overcome by force and courage, so they be prevented in time.

Let these people I have spoke of pretend what they list, or frame notions to please their fancies, yet I am persuaded all ancient *English* men of honour, blood, and name, will contribute to the preservation of the narrow seas, from the violence of oppressors, who seek unjustly and outrageously to commit disorders, which cannot be resisted but by numbers of ships to equal their forces; and if people out of perverseness deny to contribute to a design so just, noble, and of such reputation, when the matrons of *Rome* voluntarily offered their jewels and bracelets, which obtained great privileges, what shame will it be in you to deny it upon such slender and ill-grounded reasons?

Let us compare our seas with our flourishing cities in *England*, that are orderly and carefully governed: think you it were well done of people to repine at the charge of their watches, as a needless expence in our peaceable commonwealth, where our laws give authority to punish offenders? we may well believe that murders, thefts and disorders, will follow, if such watches should be taken away and abolished. And the like, or greater, would ensue, if the same providence and care were not had in the government of our seas. Now will I proceed to the management of the expedition in 1636. where the earl of *Northumberland* commanded in chief.

*The Voyage it self.*

**Ships.**

*The Triumph,*  
*The St. Andrew,*  
*The James,*  
*The Victory,*  
*The Repulse,*  
*The Nonsuch,* &c.

**Commanders.**

The Earl of *Northumberland* admiral.  
Sir *John Penington* vice-admiral.  
Sir *Henry Marom* rear-admiral.  
Captain *Walter Steuart.*  
Captain *Lewis Kirke.*  
Captain *Pory.*

**U**NDER correction, I must crave leave and liberty to examine the errors and oversights committed in this voyage, if

any shall appear, as I did in the beginning of my first book, and have continued till my last; wherein I took upon me, a  
free

freedom to except against the ill-carried actions of that time, and shew the way how they might be amended, and better ordered; for small faults at the beginning may be easily prevented by admonition, if it be well followed.

What I did was not out of fear or flattery; and, as I have said before, I walk'd so uprightly, that if the commanders deserved well, I gave them their due; if ill, no man can say I spared them; nay, I was so bold, that if there were any error or fault committed by the state in their directions, with modesty I reprov'd it, and shew'd my reasons for so doing, to give the better light to succeeding enterprizes; for experience is the mother of knowledge, and to be valued above authority or opinion.

This royal fleet being all furnished and ready for the sea, but not without some defect in the ships, as appear'd by the disasters that befel many of them, his majesty made choice of the earl of *Northumberland*, a gallant and hopeful young gentleman, to command as general; though there could be no exception to the lord of *Lindsey*, the former commander, his carriage giving no distaste to the king, that ever I could hear of, as appeared by his majesty's own words, declaring, that the reason of electing him, was because he desired to breed up his nobility, to give them encouragement to take a liking to the sea, by former precedents, as men principally to be chosen for great employments; and that he meant to make it a yearly custom to keep a fleet to guard and defend the seas.

The ship appointed for vice-admiral, was the *Anne Royal*, equal in greatness and goodness with any of his majesty's ships, and one that had made trial of her sundry fortunes; the first in the year 1588. where she was honoured as admiral, and carried the arms of *England*, as due to the lord admiral; and this was the first time of her appearing at sea.

The next action of hers was in the enterprize upon *Cadix* in 1596. where my lord admiral commanded in her, with no less victorious and honourable success than the first. She was chosen as much for her goodness, as for my lord's affection to the ship; for in truth she was worthy of all honour.

But as fortune is of that perverse and uncertain temper, that she never sheweth herself constant, but mutable; and what she gives is not to continue long, but only lent; she has that power of herself, that no body can hold her against her will; so this paragon of ships was attended with the worst fate that ever befel ship belonging to the crown of *England*, and far unworthy her former exploits; for in her way from *Chatham* to *Tilbury Hope*, (a thing not to

VOL. III.

be believed, if the lamentable truth did not put it out of doubt,) whether through the negligence of the officers of the navy, or their indiscretion, or of the master, or the unskilfulness of the pilot, (for in such cases every one will lay it upon another, to excuse himself,) she run aground, and was lost; an accident so rare, that it made many ignorant and superstitious people divine and fear, that some ill fortune would attend the voyage.

It was the more wondered at, because in the eighteen years war under queen *Elizabeth*, no such disaster befel any of her ships, who had gone through more dangers and hazards in the open and spacious ocean, where their business was, than ever happen'd since; but I thank God, (excepting the loss of her, which with the charge of another ship will be recovered, and that of a *Whelp* that miscarried by the insufficiency of the pilot,) the rest of the ships returned safe, though not without some peril, which is naturally incident to sea affairs, and the rather in this, because some men imputed it to carelessness, others to the insufficiency of officers, and some to destiny.

My lord arriving in the *Downs*, expected his vice-admiral, the *Anne Royal*, who you have heard unluckily miscarried; however, he set sail with the rest of his fleet, for the west country, and the *St. Andrew* was appointed by the king to supply the want of the *Anne Royal*.

As there was occasion, my lord employ'd sundry of his ships in several services; and the *Victory*, one of the principallest, was sent into *Spain*, and returned an ambassador from that king into *England*, he being forbidden the passage through *France*, because of the wars betwixt the two kingdoms; and not then adventuring to send him by sea, unless it were under the guard of one of his majesty's ships.

*The Errors committed in this Voyage.*

NOW to proceed to the exceptions of this voyage, with which I will end this second book, and collect such errors, mistakes, and oversights, as seem worthy of reprehension, hoping it will give no more offence, or be imputed to presumption in me, any more than those I have excepted against in my first book, and part of this second; with whom I have been free, not out of design to discourage, but as a friend to warn them; for, according to the old saying, he that is warn'd is half-arm'd, and prevention is as much to be commended as valour in execution. It is held far greater wisdom to foresee, than to see; the one being natural to all eyes to behold,

Y y

the

the other proceeding from judgment, care, and discretion.

*Callicratides*, general of the *Lacedemonians*, might have saved himself and his army, had he hearkened to advice, in forbearing to charge the *Athenians*; but by his improvidence he was overcome. *Quintus Fabius*, the *Roman*, through his foresight and carefulness, did the contrary, and retired for his advantage. Here appear'd the wisdom of *Fabius*, and the headstrong wilfulness of *Callicratides*, the one lost life and honour, the other purchased the name of *Maximus*, given him by his country.

Nothing can be a better instructor to a general, than admonition by precedent, for which cause I bring these examples, to give light to succeeding times and succeeding commanders. The first exception against this expedition, I observed, was, as I have said, the loss of the *Anne Royal*, which was neither blemish nor blame to my lord general; for she followed the directions of others, before she came under the command of him. The officers of his majesty's navy are the men only worthy to bear the rebuké of it, who, for want of experience in sea affairs, are led principally by precedents of former times, too lamentable to behold, that their government must depend upon the example of times; and yet, if they had but walked the paths of them that went before them, they should not have introduced this innovation, to direct our fleets to *Tilbury Hope*, there to press men out of colliers, and other merchant ships; when two small pinaces might have done the same service, and as they were press'd, have put them presently on shore, where they were to travel but three or four miles by land to *Chatbam*, there to be entertained and entered into pay.

And whereas in going from *Chatbam* to *Tilbury Hope* we passed by the *Nesse*, which we must also do in going directly to sea, with the same wind that carries us out we may be sooner at sea from the *Nesse* than at the *Hope*, whither we must go. Thus you see, people that governed by precedent, fail'd in not following precedents; and this unhappy mishap that fell upon the *Anne Royal*, came by a precedent of their own, which otherwise had not happen'd: this new precedent, I will undertake, was never with advice or consent of any captain; for they were put to an extraordinary expence by it, being a means to draw their friends and acquaintance aboard, whom they entertain with costly banquets; which proves a greater charge to them than the whole voyage; and till of late his majesty did strictly prohibit it, more powder was wasted by their vain ostentation in shooting, than they spent otherwise.

My lord of *Northumberland* being now at sea, and having ranged and scoured the shores of *France*, where it is most likely

that fleet would have appeared, if there had been any to have opposed him, he returned to the sound of *Plimouth*, to be further inform'd of the state of things thereabouts; and finding no ships, nor shew of opposition to his design, he left the shore, having received intelligence of certain *Turkish* pirates that lay hovering thereabouts, and had committed some spoils upon his majesty's subjects.

My lord lost no time to hasten the pursuit of those pirates, as he could be inform'd of them at sea; for in truth both his care and celerity were to be commended, though his haste had little availed to have subdued the pirates, if he had met them; for by reason of their swift sailing, they have the advantage of all other ships they meet in the spacious and open sea: this may seem strange to them that know it not, that ships can be built to such advantage in sailing, all of them being built with one kind of iron and timber; but what follows will demonstrate it to any that doubt of it.

You must understand, that all the *Turkish* pirate ships are vessels of christians, taken from them by violence, which when the *Turks* are possessed of, they use all art and industry to make better sailors than all other ships; and to this purpose they first cut down their half decks, and all other weighty things over head, which makes them wind tite and burdensome: they take out most part of their knees and binding works, to make them nimble and swift, like a man that is tite trussed, and has his doublet buttoned, that by loosening it he is able to run the faster. They never regard the strength of their ships more than for one voyage; for they want not continual prizes, which they take of christians, and thus use. Every fortnight or three weeks they grave their ships, and make them clean, to go the better: they carry no weight over head, or in hold, but victuals; by means whereof, and all these things considered, no ship is able to equal them in going.

The only hope I confess my lord had, if they had met them, which in truth was very uncertain, was in over-bearing them with sail, and the others would have been forced to take in their sails. The second, if there happen'd a calm, and the pirates scatter'd, that they could not help one another, with the number of his long-boats he might board and master them with the multitude of his small shot. The third was to surprize them in harbour, where they could not get out and escape. The fourth, that with less and nimble ships they might have the hap to board some of them, and so keep them employed, to hinder their way till greater ships could come to relieve them. But all these are uncertain.

My

My lord being now at sea with his fleet, and looking out diligently for pirates, he met with an *Irish* ship, lately come from *France*; and being asked for news of that coast, he did assure him, That the *French* fleet, which made so great a noise, was fitted, and gone to the eastward of the channel, and that 'twas generally supposed they meant to beleague *Dunkirk* by sea: this intelligence made my lord immediately bear up, and take that wind to follow them; but arriving at the *Downs* within few days after, he found himself imposed upon, and abused by this false information; for neither was there any such fleet arrived, nor any likelihood of their coming. At this time the wind continued so long westerly and southerly, that my lord was not able to recover the western parts again, by which means the pirates committed great insolencies and spoils upon the coasts.

The error and oversight of the carriage of this business, was in giving over much credit to the report of the *Irishman*, it being the ground my lord was to proceed upon afterwards; and had he waited but a few hours before he stood to eastward, he might have been informed of the truth thereof, by ships that continually passed the channel; or whether the *Irishman* might not have been corrupted by the *French* to give false intelligence, to divert my lord's purposes, could not speedily be determined by only asking questions: for the like happen'd heretofore in our war with *Spain*; the *Spaniards* subtilly causing a carvel of advice to be taken with counterfeit letters, directed to the general of the *West Indian* fleet, requiring him to come home in thirty five degrees; which we finding by the letters, hastened into that height to expect them; but the true and former directions to the general was, to hail in thirty six degrees and twenty leagues to the northward of it, whereby he avoided us so many leagues.

It should have been likewise considered, and men of greater experience than my lord should have made it known to him, that there was no great occasion to pursue the *French* with that unadvised haste; for their anchoring before *Dunkirk*, to beleague it at sea, is no more to the taking of the town, than if they had kept their ships in the ports of *France*; for the coast gives no liberty to land, being a plain flat, and sandy shore. Besides, they run a great hazard, both to ships and men, being there at an anchor; for if a northerly or north-west wind take them with a storm, they cannot avoid both shipwreck and death of men. Besides, why should the king of *France* put an army in peril to invade *Flanders* by sea, when his territories lie within nine miles of *Dunkirk* by land? And to

prove the danger the ships were to undergo, had they brought themselves to an anchor on that coast, I will shew, as it were in a glass, an accident that happen'd on the like case, wherein their folly would have appear'd.

When our wars of 1525. began with *Spain*, some men, out of singularity to get fame, which proved but their shame, with certain ships of war, undertook to surprize the enemies vessels lying at *Mardike*, a new harbour near *Dunkirk*; and though this overture was much opposed by experienced seamen, who alledged unanswerable reasons against the enterprize, yet wilfulness had that predominate power over wit and reason, that the contriver of this stratagem attempted his idle project, and commanded the ships to anchor where they were directed; but before they had lain there long, they were surprized with a storm at north-west, so that they could not claw off the shore; and in short, three of the ships, with all the men wilfully perished, the enemy on land beholding it; which made a doleful cry and complaint in the port of *Dover* and *Sandwich*; for there appear'd flocks of widows bewailing their miseries, through the mad and silly undertaking of ignorant directors.

If the *French* had thought that the beleaguering of *Dunkirk* with ships would have cut off relief and succour from sea, their weakness and want of knowledge in sea affairs had appeared, not in words, but by example, precedent and proof of the hundred *Spaniards* at *Dover* before spoken of, who notwithstanding there were forty or fifty ships of war of *Holland* placed to intercept them, some in the road of *Dover*, others in the road of *Graveling* and *Dunkirk*, yet by my advice and counsel aforesaid, arrived safe in the port of *Dunkirk*, the hour and tide assign'd by me for the town to bid them welcome.

And because this shall be a light to after-times, (if there be the like occasion,) this knowledge they shall receive from me, that with a leeward wind, and a leeward tide, ships may pass into the ports of *Flanders*, in despite of any force that shall forbid them.

My lord lying at the *Downs*, waiting a north-east wind to carry him to the place where the south-west wind first took him, in the mean time his majesty resolved upon an employment for his lordship of greater importance than this was, viz. to send him to the northward amongst the fishermen that fish'd there, to make good his majesty's proclamation not long before divulged, to prohibit and forbid any such fishing upon his coast of *England* and *Scotland*, by all foreign nations that would not acknowledge his majesty's prerogative on those seas.

My

My lord was as ready to perform that service, as his commission gave him authority to do it, and with speed repaired to the places of fishing aforesaid, where he met many buffes of *Holland*, which he took, and caused them to deliver, by the way of tribute, (acknowledging his majesty's regality,) a certain sum of money from each of them; but some other fishing vessels escaped by flight, fearing they should have been worse used than the rest of their fellows were; but neither do I hear that the states of *Holland* do approve this act, as allow'd, or allowable by them; such is the pride and ingratitude of popular states.

But if I may speak without offence to this point, or that my opinion had been demanded what to have done herein, I should have advised, that my lord should have repaired to *Brafound* in *Sbutland*, an island belonging to his majesty by his kingdom of *Scot-*

*land*, there to have arrived the two or three and twentieth of *June*, a time limited by the *Hollanders* to make their abode in that port; and in the day following, the four and twentieth, they have liberty by their own laws to put out of harbour to cast their nets, and to prosecute their fishing.

Thus had his majesty brought the *Hollanders* to his mercy, possessed their strength, their wealth, and indeed their whole provinces, which he might have released and restored afterwards, if he had pleased, upon acknowledging a sovereignty, and obliging them to pay a yearly acknowledgment. This would have shewed a commanding power over them, and yet directed by goodness and mercy. And thus much of the voyage in 1636.

I will now address myself to advise such great persons as shall take upon them the command of generals by sea.

#### *Advice to Great Persons and unexperienced Generals at Sea.*

Commonly great persons of authority, place, and blood, are elected and chosen chief commanders in great expeditions and actions at sea, to give the greater honour and reputation to such enterprizes as they shall be employ'd in: and therefore, as a servant to such great persons, I will advise, by way of caution, some things, before they accept of so weighty and important a charge, who cannot challenge it out of experience, or other deserts, more than their prince's favour and their own greatness: and many times perillous dangers and uncertain casualties depend upon such uncertain employments.

Many examples, both antient and modern, shew, That the best-deserving generals have bitterly tasted the displeasure of their employments; for no man's carriage can be so clear without blot or blemish, or his success prove so uncontrollable, but there may be found some cause of exception by evil and malignant spirits they shall leave behind them, and who, perhaps, will be made judges to censure their actions; so dangerous a thing it is to come under the hands of ire and wrath: for that we call ire, the *Grecians* term'd a desire of revenge, which is sometimes increased upon provocation, and sometimes proceeds only from ill nature. It has that evil and canker'd disposition, that it believes not a friend; it speaks with malice, and will not admit of reason; commonly the greater the desert, the greater malice attends it from such perverse defamers; and the worst is, there is no defence against such envy; for we are all the sons of envy; we are born, live, and die with envy: she spreads herself and poison against those that fortune raiseth highest,

and sets her thoughts to dispraise desert. There is an old proverb amongst good men, *That good will defend them from wicked persons, and the tumult of the common people.*

The second cause that makes men covet employment, is to shine above others in authority, as a means to obtain their haughty ends, which may be truly termed ambition; for ambition is of that nature, that it sees not what is before her eyes, nor considers the state and uncertainty of man's life; for if he be of low degree, he stands upon brass; if high, he treads upon glass; he climbs by steps and degrees, but falls suddenly when he least looks for it.

There are three things that make a man's way dangerous to walk in, ice, glory, and ambition. There is no affection so great as ambition, though naturally it is insatiable: like a hungry dog, that will leave his first prey, and fall upon another; so is ambition, not respecting what one hath got, but still seeking more. Nothing doth more nourish this humour of ambition than base flattery; and a man had better fall amongst thieves, than flatterers.

Your best natures are observed to be aptest to embrace flattering counsels, like worms that easily creep into soft and sweet wood; but the difficulty is, how to know such flatterers from others; for wolves resemble dogs, and flatterers look like friends. The cunning of a flatterer is how to entice good natures with hopes; for there is nothing more sweet to man than hope, nor any thing more displeasing than to be debarr'd his hope. Therefore time will be the discoverer of such deceitful sycophants; for when a man shall suspect such a one, let him

him not connive with his untruths or delays; but tie him to a limited and prefixed time, to perform what he gives hope of; for nothing but delays gives him advantage to deceive: thus shall the flatterer be taken in his own snare, when he shall fail of performing what he promised; and the party flattered shall own, that nothing is so vain as to be deluded with idle hopes of glory. It is like a soldier that is led by an ill captain into error, and yet with a seeming pleasure.

The third thing an unexperienced commander is to fear, is the doubtfulness and deceitfulness of fortune, in whose ship he must embark himself, to try the unconstancy of the sea; for the power of fortune is so universal, that she rules kingdoms, and overcomes armies; she destroys princes, and raises tyrants; and indeed she is so obstinate and perverse, that no art can prevail against her, or detain her by force. The evil she gives we see not; she pinches, and we feel it not; what she says we hear not, and when we think we have her, she is farthest from us. Her property is to bereave us of sense, that no sight or example shall help us; as we see by many men that lose their money at play, and yet cannot forbear it; and though some marry and repent, yet they will not be warned by it; and though people be daily drowned, yet it will not terrify others from adventuring to sea, still hoping for better hap: like desperate gamblers that put their fortune upon a chance at dice; whereas, if they would duly consider, the best hap at play, is, not to play at all; for though fortune give the luck to win one day, she revokes it the next with double loss. Beware of her therefore; for she never truly favours, but flatters; she never promises what she intends to perform; she never raises one so high, but she plucks him down as low again; she shews herself not so fickle or wavering in any thing as in accidents of war, where success is uncertain. *Hercules* who escaped so many dangers by land and sea, at last died by the hands of his friends: *Alexander* ended not his days in the war, but was supposed to be basely poison'd: *Julius Cæsar*, who won fifty two battles, was killed sitting in the peaceable senate-house.

The way to revenge one's self of fortune, and to avoid the evil in her, is rather to submit to reason, than to rely on her. The *Carthaginians* would never judge of fortune, effect, or success, but according to wisdom,

judgment, and discretion; they would not be raised by good fortune, or dejected by bad; but like a tree well rooted, that no wind or weather could move. For my part I think the wisdom of man is to be temperate, mild, and patient, and to take in good part what fortune sends.

You may see by what is gone before, the property of malice and fortune; so that a great commander is not to encounter with an enemy alone to shew his valour against; but the other two will have an interest in him, which wisdom cannot prevent: but the safest way in a general, is to observe the admonitions following for the best securing of himself and action. The first, is maturely to examine his own ability, and whether he covets the employment himself, or not, or that it was imposed on him by the king. If desired by himself, it is the more dangerous, and what errors he commits are the less excusable; and he put to rely on the favour of the prince: let it be the one or the other, his surest way will be humbly to crave his majesty that such a vice-admiral may be appointed, as is approved for his sufficiency and integrity; but not to give him that authority and command, as to derogate from his honour. And for the better conveniency and performance of the service, it is necessary that the vice-admiral be aboard the general, and still ready and at hand to advise; and for him to appoint an able man in his own ship, till they come to battle. This did *Philip* king of *Spain* to his natural brother *Don John* of *Austria*, in the famous battle of *Lepanto*: *Don John* being young, valiant, and forward, it was thought convenient to temper him with a grave adviser, which was *Don Lewis Reguezines*, commander major of *Spain*. In the action in 1588. for *England*, the same king employ'd the duke of *Medina Sidonia* for general, but gave authority to *Don Diego Flores de Valdes*, a man of great experience, to advise and counsel him, which proved a happiness to the duke; for the enterprize failing by the council of *Valdes*, as is to be seen in my first book, the blame lighted on *Valdes*, which he worthily deserved; and the less fault was found with the duke for it. I would not say thus much, if I were not a friend and servant to nobility, and desired their spirits might be nourish'd in such brave employments; and will be ready with my best endeavours to do them all the honour that lies in my poor power.

*How a King should elect a General by Land or Sea, a Counsellor of State, and a Governor over his People and Provinces.*

HAVING declared in my third book the office of a general by sea, and in this second, admonished such generals as take upon them so weighty and important a charge, without experience first gained, to be cautious and wary before they accept of such a command; now shall follow the care a king ought to have in the choice of a general, either by land or sea. And because generals are commonly guided by instructions from a king, resolved on by his council of state; to which consultation generals are seldom called, till the charge of the expedition be committed to their management, I will now give my private opinion what kind of man a king should make election of for a counsellor of state, to be assisting to him with his advice; of a general, who has the rule and government of his forces and actions; and of a governor, whom he sends into several countries and provinces to rule over his subjects; for the prosperity of his kingdoms depends upon their sufficiency, viz. a counsellor to advise, a general to execute, and a governor to rule.

I will begin with the counsellor of state, as the first considerable thing a prince ought to think of. A king's election must be according to the profession the party is bred in, as artificers tools are chosen to do their office and labour; for a king is abused, and his judgment question'd, that shall be made believe all men are capable of all places and employments, when indeed some of them are of no more use than an ax to an auger, or a knife to a fiddle; and it is as unseemly a thing to prefer such a counsellor, as to present armour to a woman, books to a clown, or nets to a scholar. Kings therefore must have a care to whom they commit the affairs of the realm, either domestick or foreign, civil or ecclesiastical, and not refer all to one man; for they are distinct things, that require several counsellors, and not to be executed by him that thinks a king's favour adds knowledge to his conceived understanding.

Kings and princes ought to have two especial cares in the government; the one, how to rule in peace; the other, how to carry their affairs in war; both which must depend upon the choice of counsellors, who must be provident what they advise, and assured that what they say is honest, necessary, profitable, and possible. They must not quickly determine, lest they repent at leisure: they must advise slowly, but exe-

cute speedily: they must not rely on the name and false word of fortune; for to great persons she is deceitful, to good men unstable, and to all unsure.

A good counsellor ought to have these properties, to be good and just; for such have weight in their words; to be virtuous and speak truth, as well in absence as in presence: they must be plain in business, and reprehend with love; they must praise the good, and admonish the bad; they ought not to speak much; and when they do, to let it be to purpose; for what they have in their mouths must be the picture of their hearts.

If their opinion be asked in point of war, they must be cautious what to answer; for the security, honour, and good hap of their master, depends on it, and the man's reputation of wisdom will appear by it; which, when it shall be known to his enemy, will breed terror; for when king *David* had war with *Abfalon*, he pray'd, *That God would blind the understanding of his principal counsellor Achitophell, whom he more feared than the force of Abfalon's host.*

A counsellor cannot give a better answer to his master's demand in point of war, than *Augustus Cæsar* did in the like case, who said, *That a war ought to be commanded by gods, justified by philosophers, maintained by princes, and executed by wise captains, and courageous soldiers.* And moreover he advised, *That neither battle nor war be undertaken, unless there evidently appear more hope of gain than fear of danger.* He compares it to him that angles with a golden hook, which if it be snatched away, the fish that is taken cannot countervail the loss.

*Cæsar* would not so much rely upon himself, as upon the opinion of *Virgil*, how a commonwealth should be best governed; who answered, *If wise men hold the helm, and good men be seated in place over the bad; if the best men have due honour; and the rest be not injuriously dealt with; if judges and men in authority will not be led by malice, friendship, anger, or love:* For nothing ruins commonwealths but hypocritical and covetous counsellors, that support their deceitful credit, and make a prince believe he cannot err.

But a wise king will soon know such a counsellor, by observing his words, which will discover his intentions, and lay open his conditions; and a just king will reward him that shall thus falsely seduce and corrupt,

rupt, as in reason he should be rewarded that poisons a publick fountain or spring, whereof all people drink ; for both king and subject have part of this pernicious counsel.

A king therefore ought to be careful of three things; the first of himself, the second of his subjects, and the third of his counsellors, officers and servants ; for *Cæsar* in his time complained of the miseries of princes, saying, *They are subject to perfidiousness, to imaginations, to detestable treason, deceitful conspiracies, and destructive poisons ; some deceive, and others flatter and betray them ;* so that they are made the subject of all discourse.

For the honour of the sex, I will mention *Zenobia*, a queen of *Asia*, and will make her the mistress of counsel, for counsellors to imitate. They write of her, that she was constant in her enterprizes, faithful in her words, liberal and just, severe in punishment, discreet in speech, grave in determining, and secret in her doings.

The indifferent man to make a counsellor to a prince, is neither to be too old, nor too young ; for youth shews lightness ; and if a prince take absolute power to himself, it shews a bold rashness, and will be subject to be seduced by flattering servants, that will make his will their authority ; but with this caution, That it be done with honour, duty, and reverence to their masters, and security to themselves ; for it is not the name of a counsellor that gives reputation, but the due execution of his place ; he must be an equal distributor of justice to all people alike in the commonwealth, lest, in comparison of land, by labouring to make one part too fertile, he leave the other part barren.

A counsellor ought to be wise, and cautious withal, what advice he gives : For there are two principal things that make a prince beloved ; the one, is defending his people against oppression ; the other, to have peace and alliance with those countries and princes that afford them trade and commerce, which war seldom produces ; and yet I confess, that war well made, produces a more perfect and firm peace ; and the best time to make such a war is in peace, that moneys may be best raised. And though all war of it self is unjust, yet a good cause may make it lawful, but not when it is out of humour, out of spleen, or out of private respects ; and yet let it come when it will, they cannot propose any war to a prince, but it is better to accept of mean conditions of peace than endure the fortune of it ; for *Aristotle* says, *Fortune shews herself most favourable where there is least hope.*

The *Athenians* hearing the council was dishonest which *Athistones* gave *Themosto-*

*cles*, though profitable, with one voice cried, *If it be not just, it cannot be commodious nor commendable :* whereupon *Themistocles* commanded, it should be no more talked of. Let this be a caveat to counsellors, that they either hold their peace, or speak things that are probable and honourable to kings and kingdoms, and take it for a maxim, *That peace is the nursery for happiness.*

The solidest advice a counsellor can give his master, is, to win the affections of his subjects ; for then he will have their hands, their hearts, and purses, which is the marrow and sinews of war ; and yet, as I have said, all things considered, it is better to avoid war ; for the nature of it is to bring one into bondage, and peace makes him free ; the one is a tyrant's will, the other a prince's decree : but if the necessity of a war cannot be avoided, the first thing a prince must provide is plenty of money ; it will encourage soldiers, terrify enemies, and imbolden alliances, when they shall see no likelihood of want thereof to go forward with their enterprizes. The next consideration, is to have a grave consultation for the prosecution of the war, not at once, but often ; but let them beware they rely not upon passionate advisers ; for choler is an enemy to counsel, and never to be allowed of but in extremity, when desperation is the last and best remedy and help ; for great actions ought to be resolved on at leisure, and executed with speed ; and it is better to escape with judgment, than to go forward with courage ; and to use victory wisely, than to get it happily. The victory *Hannibal* obtained was attributed to the direction and advice of his council ; and many who are brave in the field, want maturity to direct themselves or others ; which shews all men are born, as well in war as other faculties, to support one another.

When princes are provided of counsel, money, and all other things for the war, let not them nor their generals presume upon their multitudes, strength, or power of men ; for God orders battle, and bestows the victory when he pleases to stretch forth his arm, which is of greater force than all princes, powers, and armies : but commonly he does not use to do it but in defence of equity ; for generally the chance of war is like a cast at dice, either good or bad, and may be spoiled by oversight, or mended by play.

Now shall follow the sufficiency, and next the election a prince should make of a counsellor ; for many men fly with the wings of others, and seem outwardly to be what inwardly they are not ; and if he hearken to the praise of others reports, they

they are uncertain, because delivered out of hate or affection; for good words deceive both the wise and the foolish.

It behoves a king therefore to enquire after such a man's birth, education, and reputation; though I confess his birth is the least exception; for all ages prefer virtue before blood: *Caius Marius*, a great captain, was born of base parentage; the emperor *Valentinian* was the son of a ropemaker, and divers others little better.

The philosophers did not account the lives of men by their degrees and callings, but by the good they did, and the virtuous name they held. Silence is a great light to discover the discretion of a counsellor; for haughtiness, anger, and wrath, are the properties of a fool; the empty vessel makes the greatest sound; and the least wits are the greatest talkers: but the greatest folly is to rely too much on a man's own sense, and to be proud when he is praised. Learning is a great help to wisdom; it makes young men sober; it is a consolation to old men; it enriches the poor, and adorns the rich: it is evil to disdain learning, but worse to impugn it; and the want of it is the worst of all; for indeed there is as great a difference between the learned and the unlearned, as betwixt the living and the dead, or a physician and his patient; though learning can no more help a dull wit, than labour make a barren ground fertile.

There is a surer method (for a king) to chuse a counsellor, than by his birth, education, or hearsay; for a man may have all, or most of these parts, and yet want judgment, or be of a pestilent temper, that shall destroy the rest; for there are some who can give good advice, and not follow it; like a harp, that's pleasanter to others, than to him that plays on it; or a bay-tree, that is ever green, but without fruit. Therefore judge not of gold by the colour, no more than of a man at first sight, till you prove him: but the surest rule for a king to try the sufficiency of a counsellor, is to examine him in private and suddenly, and to propose to him things of the greatest importance and wisdom, for the government of a commonwealth; then to command him immediately to write his opinion to all the particulars proposed, in his own presence, not suffering him to return, or have conference with any others; which will be a surprize upon him, and the king will see and discover his abilities, and whether he be a worthy minister for his service, or no, or commended for kindred, friendship, bribes, faction, or other false pretences, and esteem him accordingly that commends him. And thus much for the king's knowledge, how to elect a counsellor of state.

#### *How to elect a Governor.*

THE next that follows shall be the choice of a governor a king sends to rule over his countries and provinces. Let *Plato* be the adviser in this point, who says, *A governor must be loved of many, and feared of all; he must endeavour to do good actions, and deceive none with words; he must be constant and pitiful; for the clemency of a governor makes a man ashamed to commit offences. Seneca says, That clemency is a great ornament in a governor; and that mercy, which is not accompany'd with justice, is a fault reprehensible; and that justice without mercy is not justice, but cruelty.*

When *Augustus Cæsar* sent his governors into several countries to rule, he was wont to tell them, *I trust you with my honour, and commit my justice to you, that you envy not the innocent, nor be a butcher to offenders, but that with one hand you be a help to the good, and encourage the evil to amend: my meaning is, to send you to be a tutor to the fatherless, a support to widows, a physician to the sick, a staff to the blind, and a father to all.*

*Alexander* found the country of the *Sidonians* in much disorder, and the people desired a just and upright governor to rule them; which being granted, the chief of the nobility expected preferment, and to be advanced in the government; but *Alexander* deceived all their hopes, and appointed one *Abdolonymus*, whose virtues he was informed of, and who was a poor labouring man, though of regal descent.

A governor in all his actions must be secret, pleasant, and liberal; he must fear nothing, but be ever feared; he must imitate *Alexander* and *Adrian* in justice. A man complaining to *Alexander* against another, he stopped his ears, saying, *He must keep them for the party accused.* *Adrian* the emperor, upon an information made to him, the accuser brought his complaint in writing; the emperor told him, *It was but paper and ink, and perhaps forged; therefore wished him to bring witnesses.* A philosopher advised princes not to send children, fools, malicious or covetous persons, or that are revengeful, to govern.

He that is appointed governor of a country, is little less than tutor of a prince's person, or instructor in his breeding; he is the pilot of his ship, the standard of his army, the keeper of his people, the guide of his way, the treasurer of all he has; because all is put into his hands to govern. *Agessilaus* exhorts his deputies rather to study justice, and to govern well, than to give way to the insatiable desire of riches; for a king loses much love by others

others corrupt dealing; and as injustice provokes despair, so revenge is the executioner of injustice. An ambitious governor, who covets and affects greatness over the people he rules, is like a rat, that would make himself lord over mice; but such high minded men must know, That there is nothing so great as to tread false greatness under foot.

Above all others, never chuse a melancholy man counsellor to a prince, governor of a country, or general of an army; for commonly they are basely minded, vain, enemies to noble thoughts, malicious, superstitious, and phantastical; as on the contrary, a sanguine complexion is witty, has a good memory and judgment, can discourse well, is loving, affable, loyal, liberal, and of great courage; and yet all these parts and properties are nothing without secrecy, which is the guardian of great affairs: secrecy was wont in antient time to be pictured as a goddess, with her hand stopping her mouth. I confess it is a difficult thing to keep counsel, and dangerous to reveal the secrets of a king. It is an old saying, *That a secret is hard for one to keep, enough for two, and too much for three.* Plato says, *Whosoever reveals his secrets, gives away his liberty; and a fool being secret, is held wise; an open man is like a clear glass, which can bide nothing that is put into it.* Counsel without secrecy is like an abortive, brought forth without life, that was imprisoned in the womb of secret thoughts. Secrecy is the key of the cabinet where counsel is enclosed; and the reward of secrecy is, That it is without danger. And thus much for the election of a governor; and to proceed to my third point, which is the choice of a general for war:

*How to make Choice of a General.*

It is necessary that a general have these properties following; knowledge, valour, authority, fortune, and a ready wit; for the fairest tilter is not the best soldier, nor a favourite at court more fit to make a general, than a sheep to have the leading of lions.

The first man that brought war into discipline was *Besorus*, king of *Egypt*, who made not war to conquer countries, but to spread abroad fame and renown. The person of a general is as much to be feared by his soldiers as his enemies; for too much clemency and familiarity towards his soldiers, breeds a neglect and contempt.

The *Romans* were ever strict and severe in their commanders; they never entertain'd soldiers they could not maintain and govern; for a great army has more weight than force: they are ill to rule, and worse to trust: neither would they entertain an army of strangers, saying, *They took a wolf*

*by the ear*; for as it was dangerous to detain them, so it was worse to let them go. They chose young and generous men for soldiers, that were virtuously inclined; they gave them an oath, not to fly from battle, or leave their stations, unless it were to take up a dart, and throw at an enemy, or to save a friend. *Alexander* rather chose expert soldiers than multitudes; for brave soldiers make glorious captains, that will exchange their life for honour: they know their bodies are subject to death, but their deeds remain to the world's end: and the greatest honour a soldier can obtain, is, That a king will confess that he has gained by his merit, what he granted him out of liberality.

The qualities of a soldier must be these, To have a good heart and brave spirit; he must not be idle or ill employ'd; he must not give nor take wrong; he must serve God, and despise the devil; he must observe the wife, and love the good; he must let the enemy see his face, and not his back; and give God the glory of all his actions.

Valour is not all that is required in a soldier: it must be mixed with discretion and conduct; for rashness is hot in the hand, and slow in the end, that will adventure without fear or hope of prevailing; for success is but a tutor of fools, as conduct proceeds from judgment. There are many things in the war which give better counsel to men, than men to things; and therefore a general ought to be no more limited than a pilot at sea, that has the conduct of a ship.

The greatest honour and esteem a captain can purchase, is to overthrow his enemy by stratagems, rather than by hazarding; by counselling, rather than by combat; and that captain who has performed any exploit by policy, enjoys more in the fame of it, than in the salary or reward given him.

Let generals, captains, and soldiers beware their war be not against their king or prince; for that is unjust, though there were provocation: for no provocation can give lawful power to begin such a war, and purchase the name of rebels; whose circumstances are such, they are followed with threats, and kept up with intreaties: they feed upon promises, and attempt with fear; they are very suspicious, and live upon hope; they are not content with little, nor pleased with reward; because they leave not the king to follow the best cause, but out of hope of benefit by robbing and spoiling: and indeed a rebel knows not what he desires, nor has a feeling what he doth; for their fury is such, as not to admit of counsel, which makes their minds full of perturbation, because they are embracers of their own will.

An heroic captain will oblige his enemy by good deeds, rather than by fear; for so did *Leo Africanus* to those of *Carthage* he took prisoners, for humility and clemency are of noble extraction: a country conquer'd is better preserv'd by love, than force or cruelty; for a soldier ought as well to relieve the oppress'd, as to overcome his enemy. It is written of *Cæsar*, That he never left man unrewarded, nor offence unpardoned; whereby he grew popular: He sold the council of *Rome*, That nothing was so glorious, nor pleasant in this world, as to pardon an injury done; and indeed no man is victorious and conqueror, but he that uses victory with clemency. The emperor *Titus* pardoned one that would have slain him, which got him much love and esteem amongst the *Romans*. *Adrian* treated with those men that had been his enemies before he was emperor; which got him no less love and respect. *Soliman* the great *Turk*, called the *Magnificent*, reprov'd *John Sepastus*, the new-raised king of *Hungary*, because he would not pardon the archbishop of *Gran*, saying, There could not be a greater felicity than to pardon our enemies; and though they should prove unthankful, yet it were better to be requited with ingratitude, than fail of the glory of shewing mercy. This act made his actions more favoured in *Hungary*.

*Augustus Cæsar* proclaimed twenty five thousand crowns reward to him that should apprehend *Corocota*, a great robber. *Corocota* hearing of it, went secretly and submitted himself to *Cæsar*; which so much moved him, that he pardoned and received him into his favour. When *Scipio* took *Carthage*, he found a beautiful woman betrothed to a gentleman called *Indibilis*; and she being in *Scipio's* hands, he sent her to her parents: in recompence whereof they returned a great quantity of money; which *Scipio* refused to accept of, but commanded it to be given to the young woman in dower. This courtesy so far prevailed upon those people, that they submitted themselves to *Rome*. The same temper *Pompey* used to many fair ladies he took in his war against *Mithridates*, which wrought the same effect. *Selim* the great *Turk*, who was so cruel that he slew his father and brother, took many beautiful ladies, whom he used honourably, and sent to their parents; which availed him much in his victories. *Josephus* writes, That the covetousness of *Marcus Crassus*, who robbed the temple of *Jerusalem*, was the cause of his punishment; he dying miserably in his army, and in the hands of his enemies. *Julius*, uncle to *Julian* the apostate, robbed the church of *Antioch*, and was visibly punished; his intrails rotting out,

and worms creeping out of them, and his excrements coming out at his mouth. *Alexander*, to his praise, would not suffer hurt to be done to the temples, nor any thing within them, when he sacked *Tyre* and *Thebes*.

Honour is the next degree to clemency and mercy in a soldier, and nothing accounted more dishonourable in him, than breach of his promise and word given; it makes not only himself odious, but it leaves an everlasting stain of perfidiousness upon his nation and posterity. I could tax some of our christian kings with this abominable vice, if I thought example would restore them to better grace, and wipe away their old offences; for no body can seek praise by his counterfeit virtue: for fame cannot profit, but shame may hurt him in the end.

A soldier must not be stained with vice; his care must be how to think well, and how to do well; for death is a continual watchman over him. A true soldier is of so heroic a spirit, that he had rather perish in his desires, than live in base thoughts. He should not be moved with adversity, nor elevated with prosperity; for *Plato* says, That a noble and brave minded man, hath more trouble to tame his heart, than to attempt great matters; and will think it more pain to stoop to a straw, than to reach to a bough; he will scorn to desire honour, and not to deserve it with virtue and valour, and will think it an unworthy act to have his thoughts upon base things. A philosopher says, He dies not, who leaves a good fame; nor he lives not, who hath not a good esteem: they did not value men by their birth or age, but for their noble deeds they did. The triumphs that were so famous at *Rome*, were not esteemed unless the party had done some act of honour or renown.

I will now distinguish betwixt such worthy soldiers as I have spoken of, and the contrary, who make others virtues their vices. The heathens had such regard to their oaths, that they made it death for a man to forswear himself. *Hannibal* gave leave to ten prisoners he took, to go to *Rome*, with promise to return; two of them failed, which they found afterwards to be an act of so great indignity, that they killed themselves. *Parmenio* advised *Alexander* to overcome his enemies by deceit and treason; *Alexander* answered: If I were *Parmenio* I might do it; but being *Alexander*, he would not offer it. The physician of king *Pyrrhus*, made overtures to *Fabricius* to poison his master, if he would reward him: but *Fabricius* was so far from consenting to so foul an act, that he discovered it to *Pyrrhus*, and writ to him, That it was not the custom of the *Romans* to overcome their

enc-

enemies by treason. *Justinian* the emperor being at war with the *Persians*, hired the *Hunnes* to serve him; but they falsly put themselves into the pay of the *Persians*. *Justinian* inform'd the king of *Persia* of it; who justly commanded the *Hunnes* to be strangled for breaking their words, to the shameful example of a christian king. *Uladislaus*, king of *Hungary*, being at war with *Amurat* the great *Turk*, he swore the articles of peace made betwixt them, but falsly and perfidiously broke it. Hereupon the battle follow'd, and *Amurat* took out of his bosom the articles sworn to by *Uladislaus*, and lifting his hands and eyes to heaven, said, These are the conditions sworn to by the christians, which falsly they have broken; but if thou be'st God, as the christians do esteem thee, revenge this falseness they have done me. He had scarcely spoken these words, but *Uladislaus* was slain, the *Hungarians* routed, and *Amurat* got the victory. Here *Uladislaus* perfidiously broke his faith; and though he had lived, yet he had lost all by losing it.

But to redeem this treachery by a christian emperor, of more fame and worth than the latter times have sent forth, I mean *Charles V.* he being in the wars of *Tunis* in *Barbary*, the baker of *Barbarosa* his enemy, the titular king of *Algiers*, repair'd to him, with offer to poison his master with a loaf of bread of his own baking; which the emperor worthily rejected, and told him it was an act of a *Turk*, and not of a christian, and gave him leave to depart like a villain as he came.

God is so angry with unjust actions, that many times he punisheth the intentions of those that desire to commit unnatural cruelties. To instance in *Charles* king of *Sicily*, who after his subjects had rebelled, and massacred the *French* at the *Sicilian* vespers, besieged the city of *Messina*, and put it to such streights, that the people begg'd mercy; but with great anger and passion he refused it; upon which they grew so desperate, that they made choice rather to die than submit, and courageously sallied forth upon the king's army, overcame him, and became free. This rashness made the king afterwards subject to the government of don *Pedro* king of *Arragon*.

In the like manner *Lewis* earl of *Flanders* was used at the city of *Ghent*; for being before it with thirty thousand men, and it being put to a great extremity and pinch, the people of *Ghent* craved mercy, as *Messina* had done; which the earl refused, unless they submitted themselves to his mercy with ropes about their necks; but they finding his obstinacy and wilfulness so great, six thousand of the citizens sallied out of the town, overcame the earl, and made

him fly in disguise to a little cottage near *Bruges*; and upon this defeat, many other places revolted from him.

Had these princes had any grace, or sense of their religion they outwardly profess'd, they would have known what a father of the church had taught them, That to pardon many for the merits of one, was christianity; but to punish many for the fault of one, was tyranny. Out of conscience one should be more fearful to injure a poor man, than a rich; for a rich man revenges himself, as those of *Ghent* and *Messina* did by force; the others with tears.

Let cruel and perverse natures think what they please of themselves and actions, they will find the pleasures they do to a friend; it will make him more friendly; and a courtesy done to an enemy will be a means to make him become a friend; but the ground thereof must proceed from God; for *Cicero* says, That take away the piety towards God, and you'll take away all fidelity and conjunction of human society.

To conclude this point I treat of, I think that prince most happy who has the three sorts of people aforesaid to serve him, viz. wise and grave senators to counsel, just and upright magistrates to govern, and valiant, young, and discreet soldiers to execute: The one supports the other in convenient time, like fruit which comes not altogether, or ends altogether; some learning, others obeying; or like antient and sage fathers, that leave their tender sons to succeed them in their professions and virtues.

And now I will end with the employment of the king's ships, from the year 1635. till this year 1640. wherein you have seen the cause of their employment; for then his majesty began to have a feeling of the insolencies committed on the narrow seas; which he redressed by those fleets aforesaid, and since has so quelled his neighbours, that they dare not but do reason to his majesty's subjects; as appears by these particular benefits following it has produced.

The first, is an acknowledgment of his majesty's sovereignty of the seas, which of late years seemed to be questioned. The second, is the peaceable trade we now enjoy into the ports of *Flanders*, which the *Hollanders* were wont to forbid, though they were warranted by the articles of peace in 1604. which trade of *Flanders* hath turned to great profit to his majesty in customs, and ten times as much to his subjects, by the commerce of that province; for I must confess with grief, that our nation was much injured till now of late, by those base people of *Holland*; for they stuck not to interrupt our trade, seizing of our *English* barks, at the very

instant they permitted ships of their own to enter the ports without impeachment; and though I have made often and sundry complaints thereof, yet no remedy could be obtained; and as I conceive, it was con-

niv'd at out of policy, which these fleets aforesaid have now order'd for the liberty of the subject, and reputation of the king and country.

The next that followeth is,

*How to make War upon Scotland, if they follow their rebellious Courses.*

**T**HOUGH this discourse of *Scotland* is fitter for the fifth book, which contains projects and stratagems of war, yet because it is an active time, and concerns the sea, which is the chief drift of my narrative, I have annexed it to those actions that are gone before, and will proceed to make war against *Scotland*, with most conveniency, and least expence and charge.

The proportion of his majesty's ships to be employed, I would not wish to be above three, for these reasons: the world should not think it a service of that importance, as to require a greater force; and to these three ships to have an addition of ten or twelve colliers, of two or three hundred tons burden, that trade to *Newcastle*.

It is not fit for above three ships of his majesty's to be so far from the narrow seas, *France* and *Holland* fronting upon us, which want no ships, nor readiness to arm to sea, whatsoever they should intend against us; but we shall prevent any such design of theirs, when our ships shall appear at sea upon our own coast.

In the colliers ships aforesaid, to transport a regiment of fourteen or fifteen hundred soldiers; and to ease the charge, to allow every ship but thirty seafaring men, which will not amount to the third part of charge of victuals and men, and yet do the same service as so many of the king's ships would perform.

Besides the colliers aforesaid, I would wish that as many fisher barks may be pressed, to arm them with small guns, and every man to have his musket and pike, and to be furnished with all other provisions, as salt, and hooks to fish, that when they are not otherwise employ'd, they may continue their fishing, and supply the army, both by sea and land: we shall find these vessels of great importance, as well to send from port to port upon any occasion, as to transport our men from one shore to another.

*How to carry the Action at Sea with least Expence to his Majesty.*

**I**MPRIMIS, To take away the ancient abuse of pursers, commonly known, whereby neither king nor subject shall be wronged: this I will make apparent, when there is occasion to treat of it by the council of war.

At our first arrival, that we have care to possess and fortify very strongly some town near the sea, on the north side, and the same on the south and *Lowdon* side, and to put into them a sufficient garrison out of the fifteen hundred men aforesaid, and the rest of the soldiers to keep as a running camp to forage the country; for by help of the fishing vessels aforesaid, they may be speedily transported from the north side to the south, or from the south to the north, and havock and spoil the country as they list; and the two towns possessed and fortified, will serve them for a retreat; and the country of *Scotland* thereabouts will be forced to maintain four thousand men continually for its defence; two thousand on the one side, and two thousand on the other; for the *Firth* so divides them, that one cannot succour another under an hundred miles march, by the bridge of *Sterling*.

Besides, these towns being fortified and made strong, will serve such *Scots* for places of rendezvous, as shall fly from the covenanters, and submit themselves to his majesty's obedience; which no doubt many will do, if the former proclamation be published, which his majesty set forth when he was in *Scotland*; for all tenants to leave their landlords upon the condition expressed in that proclamation; only I would have this added to it, That whatsoever shall thus fly, bring with them their arms to the places of rendezvous, where they shall receive ready money for such arms as they shall bring, to the uttermost value: and this will be a ready way and means to disarm great part of the rebels.

The next care must be to supply the army with corn; for the boats will be of great help to succour them with fish, the corn to be baked into biscuit, either in *Holy Island*, or at *Berwick*, and thence sent to the army; which for want of ovens, mills, and perhaps of wood to bake it, cannot be so well furnished with bread.

*Item*, Whereas every four men are mess'd with equal proportion of victuals in the king's service at sea, we have often used in the queen's time, in our southern expeditions, to make our victuals go the further, to bring five men to the allowance of four

four, and so we have got a week in every month.

*Item,* The same course we may now take, and with more content to the company; for in those days, and those voyages of the queen's, we could never be supplied with victuals, no, not so much as water, till our return; as here we shall have plenty of fish and water.

*Item,* That one of the best colliers ships be appointed for the officers of the ordnance, to carry such provisions as properly belong to that office, which will nothing hinder the transportation of such soldiers as she carries.

*Item,* To carry in her ten or twelve culverins and demy culverins, to fortify the island of *Eskiffe*, which is the guard and defence of the harbour of *Leith*.

*Item,* Besides plenty of all kind of ammunition, that they carry a thousand arms to supply the king's party, if there be occa-

sion; as also good store of seasoned deal boards, spikes, all manner of iron tools for carpenters and smiths; provision for pioneers; and every pioneer to have a pike-staff to lie by him, whilst he is at work, that he may take himself to it, if he be assailed by an enemy; to carry good store of fowlers, as of great importance many ways; to carry twenty pitched pots of iron, with all kind of ingredients, to be used in a stragem to set on fire their coal-pits; to be careful that the mould for their bullets do fit the bore of their musket.

*Item,* Besides the spoil the *English* soldiers shall make in the country, that they be careful to destroy their corn, as the next way utterly to ruin them; for besides that they will take away their bread, they will utterly destroy their straw, which is the food of their cattle and horses; for hay they have none.

#### *How to provide for the West Part of Scotland.*

**T**HERE must be as great a provision made for the west part of *Scotland*; as for the east, I have spoken of: and how to do it with the least charge, and most conveniency, I will here set down.

*Imprimis,* To furnish three ships of an hundred tons each; and to be provided and fitted in *Barnstable* in *Devonshire*, with forty mariners in each ship; we shall save thereby five hundred miles sailing, by furnishing them at *Barnstable*, or that part of *Devonshire*, or *Cornwall*, and not at *London*; besides the shift of three several winds, as from *Barnstable*, a southerly, westerly, or an easterly wind will carry us directly to *Ireland*, or opposite to *Ireland*; so that there will be much time gotten, and great expence saved.

*Item,* There must be the same provision made of fisher-boats, corn, salt, arms, and all other necessaries, as is set down for the east part of *Scotland*.

*Item,* To command, upon pain of death, that there be no manner of trade betwixt *Ireland* and *Scotland*, or betwixt the *Isle of Man*, or any other place whatsoever and *Scotland*.

*Item,* That the three ships and boats aforesaid do seize upon all barks and vessels whatsoever, great and small, on that western side of *Scotland*, and carry them into the ports of *Ireland*, there to put them safe ashore, taking out of them their sails, masts, ropes, rudders, that they may not steal, or be stolen away; and if his majesty have occasion to transport an army from *Ireland* to *Scotland*, these ships and boats will be able to do it, which otherwise on a sudden all *Ireland* cannot furnish.

*Item,* That a discreet gentleman be cho-

sen to command this action to the west part of *Scotland*, and so to order things, that there be one ship in a port of *Ireland*, and another in a harbour of *Scotland*, to send and receive intelligence of the state of the two kingdoms, and what help and assistance is required from one to another.

*Item,* That a scout royal be built in the island of *Arran*; and such a place to be chosen where the water and channel is deepest for ships to ride and float: this fort will be able to defend such ships of ours, as we shall employ on that coast, if it happen that *France*, or any other nation, shall give the *Scots* assistance by sea.

*Item,* To make the castle of *Dunbarton* impregnable, which may be easily done; and there to keep a magazine for all provisions of war. *Dunbarton* is so seated, that it keeps all the northern parts of *Scotland* in awe; and that *Friith* of *Arran*, where it lies, goes as far to the eastward as *Glasgow*, and westward to the cape or mull of *Cantire*; so that betwixt *Glasgow* and *Cantire* there will be no passage over the water, having no provision of boats.

And from *Glasgow* to *Sterling* is but ten or twelve miles, from whence the river runs into the east *Friith*, and so into the sea; in which space likewise there is no passage for want of boats and bridges; insomuch, that we shall have but ten or twelve miles to fortify, *viz.* from *Glasgow* to *Sterling*, which if we do, we secure the south part of *Scotland* to *England* from any incursions the northern parts or highlanders can make against either of us; and so we shall pale them in their own bounds and country, where it is not fit for civil men to live.

This being done, if his majesty please, he may join that southern part of *Scotland* with *England*, and make it but one entire kingdom, allowing the inhabitants the same privilege the *English* enjoy: and this is no more than has been in former times; for some while *Northumberland* and *Cumberland* belong'd to *Scotland*, and sometime to *England*.

If his majesty shall please to do it, and make himself absolute master of *Scotland*, let him raze the castles and fortifications of *Edinburgh*; for we may see by example of all ages, that the castle of *Edinburgh* is the place (in all combustions) that either king, rebels, or foreign enemies covet to take; for whosoever possesses it, is not so quickly or easily beaten out of it; for, indeed, the castle is the defence of the whole country, being supply'd with victuals.

And instead of *Edinburgh*, which is the supreme city, and now made the head of justice, whither all men resort, as the only spring that waters the rest of the land within the kingdom, I would wish his majesty did fortify, strengthen, and make impregnable the town of *Leith*, and there to settle the seat of justice, with all other privileges *Edinburgh* enjoys, referring it to the choice of the inhabitants of *Edinburgh*, whether they will make their dwelling where they do, or remove to *Leith*, where they shall enjoy the same liberties they did at *Edinburgh*.

His majesty may do it out of these respects; *Leith* is a maritime town, and will save a great labour and charge in carrying and conveying their merchandize to *Edinburgh*, which no man but will find a conveniency in.

*Leith* is a sea town whither ships resort, and mariners make their dwellings; and the *Trinity-House* there settled; and lies more convenient for transportation and importation, it being the port-town of *Edinburgh*, and in time of war may cut off all provisions betwixt the sea and *Edinburgh*, and bring *Edinburgh* to the mercy of it.

From *Leith* to *Murro-Frith*, and from *Murro-Frith* to the islands of *Orkney*, there is never a harbour in that part of *Scotland* that will entertain any ship of great burden; insomuch, that if his majesty fortify the town of *Leith*, and the islands of *Inskiffe*, it will secure the whole kingdom of *Scotland*; for by sea no enemy can attempt it, and by land we shall be provided to defend it. By famine an enemy can have no

hope to force them to yield, because we shall supply them by sea; if the people within the town prove mutinous and rebellious, with our ordnance out of ships, we shall be able to beat their houses about their ears, and make them submit their lives and goods to our disposal. As I advise the castle of *Edinburgh* to be absolutely razed, so would I in like manner wish, that all the castles in *Scotland* were so served, except *Leith* and *Inskiffe*, as aforesaid, *Dunbarton*, the new erected castle in the island of *Arran*; and, if there be need, to continue fortified the two towns, the one of *Lowden* side, and the other on *Fife* side. These places excepted, it were good there were a law enacted, That it should not be lawful for any one piece of ordnance to remain in *Scotland*, under any pretence whatsoever; then shall the fortifications aforesaid be without danger, either by siege, or otherwise; and of strength sufficient to defend themselves against all enemies, domestick or foreign, especially when the sea lies open to us to be relieved with fish or food; and in our power to forbid others to take benefit of the sea.

For the northern part of *Scotland*, (which I have paled out from the rest of the country, as unworthy to be reckon'd with these southern parts, both in respect of the soil, as also for the brutishness of the people,) I wish considering their qualifications, that they may be only taught so much civility and breeding, as to acknowledge his majesty the true sovereign king over them, without imposing any kind of tax on them; for the country cannot afford it. And because their natures and dispositions are turbulent, and never free from quarrels and tumults among themselves, I would wish that they should be encouraged in that factious way with one another, that their thoughts may be employ'd otherwise than in plotting and contriving mischief against the southern and civil part of *Scotland*; this would in time either reduce them to civility, or by divisions quite extirpate them.

This western part of *Scotland*, I have treated of, is the most dangerous place of all the kingdom to receive relief out of *France* by shipping; and the more dangerous, because from many parts of *France*, as namely *Brest*, *Rochel*, and all that coast thereabouts, one wind will carry them out of their harbours, without ever striking fail, till they arrive in that part of *Scotland*.

*An Admonition to Gentlemen to beware how they engage in Sea Voyages, or give Ear to Projectors that put them upon such Actions.*

**M**AN for hope of gain is apt to be led into many inconveniencies, when he has an opinion of the wisdom or honesty of him that persuades; and this no where appears plainer than in sea adventures, into which such impostors and cheats have drawn gentlemen, to the ruin of themselves and posterity.

I know some who have persuaded gentlemen, that the *Indies* afforded nothing but gold, and that for fetching, and that they filled their own purses with gold; and those gentlemen ran headlong to destruction, without giving ear to advice, or believing any friend that advised them to the contrary.

But that such gentlemen may see their mistake, I will touch upon the state of the *West India* trade, by which they may perceive what they are to expect by robbing at sea; for I have already made out what they are to get by pillaging ashore; and I wish this may come to the hands of those who are in danger of being drawn in by such unhappy projectors.

He that will undertake a voyage, either with fleet, or private ships, must consider, that in the *West Indies* he is out of all hopes of carracks, ships from *Guinea*, or *Brasil*, and all other trade, and must expect only such as are bound thither, or trade from place to place.

They must also consider, their ships will soon grow foul, and not be able to fetch up those that have been lately careen'd. Fires made ashore will give warning of an enemy being on the coast, and so prevent him. And, lastly, the wind and current sets with that violence and constancy, that it is impossible to keep to windward of any port, if we keep the sea, or to recover a heighth, if we are put to leeward of it.

Therefore the error of our planters in *Virginia* and *Bermudas* shall appear, who were drawn principally into those enterprises, in hopes to annoy the *Spaniards* trade in the *West Indies*, not knowing that the current sets with such force from cape

*Florida* to the northward, that it is impossible to bear it up.

They were so ignorant as not to know, that if they go from those places to the *West Indies*, they must first fetch the *Canaries* for a wind, which is a thousand leagues from them, and but five hundred from *England*; so that they are five hundred leagues nearer the *West Indies* going out of *England*, than out of *Virginia*.

Nor do they consider, that the water does not rise so much in *Virginia*, as to grave their ships; or the small conveniency that place yields to careen them; or the sudden gusts that come from the land, and will endanger them in their careening.

But suppose *Virginia* to be nearer, and no impediment for our ships to sail from thence to the *Indies*, I would ask, what possibility there is, rather to meet a fleet in the open seas there, where I have shewn the force of wind and current will put them to leeward, than on the coast of *Spain*, whither they are bound, and must repair, and where there are capes and head-lands, which they must make before they put into the shore or ports?

Reason will make any one confess, it is more likely to find a man one looks for at the door he must certainly go in at, than on a wild heath, where he has many ways to go by; and so it is with ships, it being better to wait for them at a cape or head-land, which they must make, than in the spacious and open sea. And thus much for this point.

But seeing I have run over the casualties or uncertainties, or rather the impossibilities to annoy the *Spaniards* in the *Indies*, I will shew the inconstancy of sea affairs, by precedents of the *English* fleets that were employ'd against *Spain* in time of war, wherein the wealth taken in the voyages will appear; and by it let us judge, what profit we are to expect by such actions, which are governed by unconstant winds and fortune.

*The Number of Voyages set out by her Majesty during the War, and the Profit they turned to.*

1585. **S**IR Francis Drake to the Indies, some few pieces of ordnance.
1587. Sir Francis Drake to Cadiz Road, after which he took a carrack that had winter'd at *Moçambique*.
1588. A defensive, but a victorious action.
1589. The expedition to *Portugal*, no profit at all.
1589. My lord of *Cumberland*, some gain to himself, but nothing to her majesty.
1590. Sir *Martin Furbusher*, and Sir *John Hawkins*, no profit at all.
1591. The lord *Thomas Howard*, almost a saving voyage.
1591. The earl of *Cumberland*, no profit at all.
1592. Sir *Walter Raleigh's* fleet, a carrack taken; many adventurers.
1593. The earl of *Cumberland*, some gain to himself, none to the queen.
1594. A defensive fleet in *Britany*, no profit. Sir *Martin Forbusber* slain.
1595. Sir *Francis Drake* and Sir *John Hawkins* to the Indies, where they both died; only some ordnance.
1596. *Cadiz* expedition, two galleons with their ordnance; the galleons sold for 300 *l*.
1597. The island voyage, almost saving.
1599. The *Downs* action, a defensive fleet.
1600. Sir *Richard Lewson*, no profit at all.
1601. Sir *Richard Lewson*, but with a defensive fleet in *Ireland*.
1602. Sir *Richard Lewson* and Sir *William Monson* took a carrack, a ship of great value.
1602. Sir *William Monson*, no profit at all.
1603. A defensive fleet, when the queen died.

*The End of the Second Book.*

THE  
E P I S T L E

T O A L L

Captains of Ships, Masters, Pilots, Mariners, and  
Common Sailors.

**I**N all reason the dedicating of this third book is more proper and due to you, than any of the others to whom they are commended: forasmuch as what is contained in them, you and your profession are the principallest actors and authors of, as the wheel from whence the rest receives their motion.

For what would it avail that all boughs of trees were oaks, or every stalk of hemp a fathom of cable, or every creature a perfect artist, to frame and build a ship? what were all these more than to the eye, were it not for you, your art and skill, to conduct and guide her? She were like a sumptuous costly palace nobly furnished, and no body to inhabit in it; or like a house in *Athens*, *Laertius* writes of, in which all that were born proved fools; and another, in the field of *Mars* near *Rome*, whose owners ever died suddenly; both which were commanded, the one by the senators of *Athens*, the other by the emperor *Mark Anthony*, not only to be pulled down, but the timber to be burnt.

How should we know that *France*, *Italy*, and *Spain*, produced wine out of the grape, or *England* other commodities not heard of by them? how should we know the *Indies*, and wealth therein, or the means to receive it from thence, were it not for your skill and labour? how should we know that all nations differ from us in language, or one from another, but by your navigations? all islands, how little soever, would be in the error of the *Chineses*, who thought there was no other world nor people but their own, till the *Portuguese*, by their travels and mathematical art and learning, made it apparent to them. All these secrets must be attributed to your art, adventures, and painful discoveries.

What subjects can make their king and country more happy than you, by the offensive and defensive services you may do them at sea? what wealth is brought in or carried out of the kingdom, but must pass through your hands? what honour has *England* of late years gained, and all by your adventures and valour, which has made you excellent above all other nations? Who knows not that your parts and profession deserve favour of the state? who knows not that the whole kingdom has use for you? and that there is a necessity to nourish you?

But whether it be the sea that works contrary effects to the land, or whether it be a liberty you feel ashore, after you have been penned up in ships, like birds in a cage, or untamed horses, when they are let lose; certain it is, neither birds nor horses can shew more extravagant lewdness, more disorder of life, and less fear of God, than your carriage discovers when you come ashore, and cast off the command your superior officers had over you: for though in desperate perils at sea, you promise to your selves amendment of life, and perhaps vow never to try that kind of fortune more, as women in labour do, never to have to do with their husbands; yet when they are past, they are soon forgot of both, and you return to your old accustomed vomit, without sense of promise, or danger escaped, but rather improve in your wicked courses.

He that could as easily reduce the common sailor to civility and good behaviour ashore, as to be under the government of a discreet commander at sea, were more than man; for the nature of sailors is to stand in more awe of a mean officer at sea, whom they love and fear, than of a great person on land, whom they neither fear nor love; and therefore the way to reduce them to goodness must proceed from the commanders that govern them: their words must be as well mixed with honey as gall; they

must tell truth, and not please with flattery ; for a man cannot be both a friend and a flatterer.

This advising office is only fit for men that have been bred and trained up in the school of looseness and liberty, and recalled by years and grace to civility : they must teach them to embrace the good, and eschew the evil, and must use the terror of God's justice, and the reward of repentance : they must shew the hate God bears to wickedness, to lying tongues, to hands that shed innocent blood, and a heart that devises mischief : and on the contrary, the love God has for virtue and goodness, advising them not only to be good, but to take away the occasion of being evil. This will be the hope to make them leave sinning, when they shall be ashamed and afraid to commit sin ; for *Seneca* says, *That the clemency of a governor makes many ashamed to offer offence.*

But now let me apply my self to you, the men of command and authority over these untaught and untamed creatures, to whom this charge is committed. Beware that your counsel be good, and that you follow it your selves ; if not, you are like a harp, that sounds pleasantly to others, and enjoys no part it self ; or to *Crispianus*, a servant of *Trajan* the emperor, whose words were sweet and effectual to persuade, but he never acted any thing but what was worthy of reprehension and punishment. Remember that example is of greater force than persuasion with many men ; and when these men shall see your life concur with your admonitions, it will be the strongest force and motive for their conversion : for indeed he is not worthy to live, that takes not care to live well ; and *Cicero* says, *He dies not, who leaves a good fame ; and he lives not, that hath an ill reputation.*

BOOK

## B O O K III.

Containing the Office of the Lord High Admiral of *England*, and all Ministers and Inferior Officers under him, and what belongs to each Man's Office; with many other Particulars to that Purpose.

*The Office of the Admiralty of England.*

**T**HE master of the office is the lord high admiral of *England*, who holds his court of justice for trials of all sea causes for life and goods, being assisted by the doctor of the civil law under him, intitled, the judge of the admiralty, a marshal, and other inferior ministers of justice, proceeding in all affairs according to the civil law. The advocates, proctors, civilians, in all great causes and trials of pirates, especially the lieutenant of the admiralty of *England*, and the four principal officers of the navy, were wont to sit on the bench as assistants to the judges; which officers of the navy used to commit such offenders as imbezzeled the king's goods, or had otherwise misbehaved themselves, to the prison belonging to the court, to receive their trial there, unless in the mean time they were released by the lord admiral.

Every lord admiral substitutes his deputy or vice-admiral in every maritime shire

in *England*, except in such places where the lords of manors challenge a right formerly granted by the kings of *England*, as will appear by their grants.

These vice-admirals are carefully to look that all things be performed that are ordained by the lord admiral, and yearly to keep a court in their several countries, where every man's complaint may be publicly heard.

Another branch of this office consists merely in the government of his majesty's navy, which since the beginning of queen *Elizabeth's* time has been of great consequence, and has divers feed-officers paid out of the receipt of his majesty's exchequer, being patentees under the great seal of *England* for performance of the same, (besides many other inferior officers, who hold their places by the lord admiral's warrant only,) who are the present subject of this discourse. They are as follows.

|                                                                                                                                                                                                                          | l.  | s. | d. |

It now remains to give an account, by way of collection out of former proceedings and customs of this office, what may be the general and particular duties of these officers in the execution of their places for his majesty's service.

And, first, for the lord high admiral himself, who is great master and comptroller of the office, I neither can, nor will presume to intermeddle therewith, being sufficiently known by the extent of his letters patents, and former precedents.

The lieutenant of the admiralty is a place not extended to any late precedents, to manifest itself, and therefore omitted.

The four principal officers of the navy, and of late times the commissioners that executed their places, are the conduit pipes to whom the lord admiral properly directs all his commands for his majesty's service, and from whom it descends to all other inferior officers and ministers under them, whatsoever.

First, their general duties are, as I conceive, to attend the lord admiral, as men for their experience and reputation fit to advise his lordship in all causes and consultations for the advancement, furtherance, and managing such undertakings as they are commanded by his majesty and the state, as well for service of his highness's ships at sea, as for the building and maintaining them at home; and likewise to advise his lordship, from time to time, of all occurrences tending to the ordering and managing of his majesty's service, whatsoever, for the navy.

Secondly, They are to observe weekly meetings, or oftener, if the service require it, at *London*, as well to attend the execution and direction of such warrants as shall come from the lord admiral, as also for the ordering of all business furthering his majesty's

service; and to give satisfaction to the subject for all materials delivered, or workmanship performed by them for his majesty's use.

Thirdly, They are jointly to agree with each merchant, from whom any great provision or bargain of cordage, hemp, timber, planks, masts, great anchors, and all sorts of materials, which are bought for the price, at that present, ordinary sold betwixt man and man; and thereupon to make them bills or contracts for the same, according to the course of the office, which is the debt from the king, being first vouch'd from the inferior ministers, in the proper places for the quantity and quality.

Fourthly, they are to use the uttermost to procure moneys for the maintaining all his majesty's ships, pinnaces, and other vessels, and boats useful, in compleat equipage, building, and furniture; and as any of their number happens to decay or perish, to supply them with new, and repair their wants.

Fifthly, They are to proportion a convenient magazine of timber, season'd planks, great masts, and all sorts of outlandish commodities, as pitch, tar, rosin, hemp, anchors, sails, canvas, and cordage for twice moorings, and once setting forth to sea all his majesty's ships, and to see the same supply'd at all times; to furnish his majesty's stores, and whatsoever is wanting, to acquaint my lord admiral, and never to cease labouring to the state for money, till those main provisions be furnished; which cannot be had in the kingdom at all times, nor sufficient quantity made ready, when the materials are not had, in many months.

Sixthly, They are, as time and business can permit, to be present themselves, or when more important business hinders them, their clerks, at all payments of all sorts of workmen and labourers, to the end they may be witnesses to the real payments made; and that his majesty be not abused by the employment of more numbers than is necessary for works on shore, nor for longer time than the service requires; nor that boys and young prentices be paid so much *per diem* as able workmen. Likewise at sea, and in harbour, to see that no more men be paid than have truly serv'd; and in case they either find clerks of the check, or purfers faulty in their places, in keeping their books ill, to punish them as their offences deserve.

Seventhly, They are to be careful that no workmen or labourers be received or entered into his majesty's pay, for any works to be done by the day, till there be materials first in store, whereupon to employ them; nor to use more than is necessary, nor to continue them longer than the stuff lasts

to set them on work ; wherein if the master shipwright, or any other master workman, be found faulty by conniving, to suspend such from his place, as an unworthy member, till my lord admiral be acquainted with the offence.

Eighthly, They ought to be very careful in the choice of inferiour ministers, as any happen to die off, recommending to the lord admiral able experienced men, according to the places ; the want whereof has bred much detriment to his majesty's service both by sea and land.

Ninthly, They are to obey my lord admiral's warrant, as well for direction of his majesty's service in all things concerning this office, as also for extraordinary payments according to usual precedents ; as by virtue of his lordship's warrant, to direct theirs to the subordinate ministers under them, for the execution of so much as concerns their particular places respectively.

Tenthly, They are to oversee all inferiour officers and ministers ; and as often as they can, by themselves, or their authoriz'd substitutes, to muster all men that are employ'd by sea or land, and paid damages out of this office, and to check all defaults they find, by mustering for his majesty's best advantage.

Eleventhly, They ought to foresee that seasonable payment be made to all men employ'd in his majesty's service, and not to keep them nor ships longer in pay than the service requires ; and to this end, they should use all frugal courses to save his majesty's purse.

Twelfthly, They should make quarterly payments to the ordinary, and half-yearly to the ships on the narrow seas, as has been accustom'd ; for want of which, his majesty's charge is much increased, and the subject discourag'd.

Thirteenthly, They ought to take a yearly account of the victuals of the navy, comparing the pay-books in the treasurer's office with the warrant for victuals ; and according to the muster of the men serving, to allow of the issues, with such accidental wastes, as by ancient precedent hath been usual, and no more.

Fourteenthly, They ought to sign estimates for money, as well for the ordinary service, as extraordinary, to the end the lord treasurer may see the charge his majesty is at, and continuing the same, that the payments may be seasonably provided.

Fifteenthly, They ought to take account of all store-keepers once every year, at the least, to the end his majesty may see what provision he has in store, and what has been expended that present year.

Sixteenthly, They ought to appoint a

surveyor at the season of the year, to mark out and fell timber for his majesty's service, for supply of store ; and to cause the same to be converted into moulded and meet timber, and cut into several sorts of planks most useful for his majesty ; and to see that the summer be not let slip for land and sea carriage of the same into his majesty's stores.

Seventeenthly, They ought upon my lord admiral's warrant, requiring the preparations of any ships or fleets for the sea, immediately to make warrant from themselves to the victuallers, to make a due proportion of sea victuals, according to the service and number of men ; and in the mean time for harbour and victuals for so many sailors as shall be employ'd to rig the ships, to be delivered by petty warrant to any one officer, or to the clerk of the check, as will appear upon muster to be present in the work : likewise to the master attendants, the master shipwrights, clerk of the check and survey, to take notice of the service in hand, and to require a present certificate from them of all wants to perfect the hulls, rigging, tackling, and furniture of those ships appointed to be made ready for the seas ; and thereupon to take immediate order likewise for the providing of all materials wanting, and appoint workmen and sailors to go in hand with them with all expedition.

Eighteenthly, That one of the three officers (not the treasurer, in regard of his continual attendance for moneys at *London*) do, in their turns, quarterly reside at *Chatham*, for the expedition and oversight of the works there, and for providing of necessaries, and directing of all the inferior officers ; and the rather to prevent the imbezelling of the king's goods ; as it was in the time of the late commissioner's government, who had always one of themselves, or an able assistant dwelling at *Chatham*, to order the business there, no doubt, for his majesty's great advantage ; the neglecting whereof is no small damage to his majesty.

### *Particular Duties.*

#### *The Treasurer.*

HE is to make estimates of the charge of all his majesty's navy, both ordinary and extraordinary, and to present them seasonably, being sign'd by the lord admiral and the other principal officers, to the lord treasurer of *England*, who allowing the same, does of course give order to the clerk of the signet, to draw a bill for the king's signature, warranting the payment of so much money as the estimate amounts

to out of the receipt of his majesty's exchequer, which he is to issue to those several heads for which it has been demanded; and in case the ships happen to continue longer in employment than was mention'd in the first, then to make their estimates for their surplusses, as long as the service endures, and sollicite for privy-seals and orders for money till it be received, to satisfy the subject for materials to be bought before-hand, to furnish the ships and wages to the company at their return. He is to make a like estimate of building of new ships, or repairing the old; likewise for the repair of his majesty's dry docks and store-houses; and for a magazine of stores, when occasion requires.

He is to take due care to get money seasonably to pay all workmen, called to any extraordinary works in his majesty's yards, or for reparations aboard the ships, and to clear them as soon as the works are ended; likewise for payment of ships companies returning from sea, that his majesty's charge of victuals and wages be not longer continued than the necessity of the service requires.

He is to take care to pay the ordinary of the navy every quarter, and the ships serving on the coasts every six months, (*viz.*) *March* and *September*.

He is to give convenient notice to the officers, who are vouchers of his account, of all pays to be made, to the end they may call for books of the clerks of the check, and purfers, for their clerks to take notice of every general and particular pay to workmen and seamen, taking the officers hands to the books of the total of the abstract, or number of men paid.

He ought within six months next after the month of *December*, every year, to make up his former accounts; which being fairly ingrossed in a larger book, he is to procure the other officers hands to every page thereof, cancelling the particular bills or books first paid by each, then to deliver the same with a press certificate from the auditor of the receipts of the exchequer, to the auditor of the prest, and after sollicite them to examine it, and procure a declaration under the lord treasurer and chancellor of the exchequer, one of the barons and auditors hands, within six months more, to the end it may appear how he stands charg'd on his accounts to the king for the money he has received.

He is to keep his office constantly at *Deptford* or *London*, that the subjects may certainly know where to find him, to receive their moneys for provisions delivered to his majesty's use, or for wages due, upon lawful demands.

#### *Contra Rotulator.*

He is to keep counter-books with the treasurer of all manner of payments; and likewise a ledger-book written *verbatim*, as the book delivered to the auditors for every year's account, to the end he may upon all occasions witness as well the payments made by the treasurer, and the state of his account with the king, as also to satisfy the other officers at large of such precedents and payments as past by his and their vouchers in the execution of his majesty's service.

He is likewise to keep like counter-books with the surveyor of marine victuals, and more especially than any of the other officers, examine and keep a note of the remainder of victuals return'd by purfers at the end of their voyages, and to charge it on account for the king on the victualler.

#### SURVEYOR: *The first Part of his Duty.*

He ought to survey the quantity and quality of all manner of provisions deliver'd for the use of his majesty's ships or navy, to the end he may as well satisfy himself as his fellow-officers at their meeting, what prizes are fitting to allow for that which is good; as also to see that no bad and unserviceable ware be thrust on the king for the merchants advantage.

He is once a year to take survey of all the hulls of all his majesty's ships, pinnaces, and boats, remaining in harbour at *Chatham*, *Deptford*, *Woolwich*, *Portsmouth*; and at the return of any ship from sea, to view and examine what defects happen'd in the hull or masts, and to note them down particularly under the title of every ship; wherein the king's master shipwright, and his assistants, with the master carpenter, and the master attendants, ought to assist and testify, under his and their hands, in what condition every ship was, expressing their wants at the time the survey was taken.

He ought likewise every year to survey the defects of reparations of all his majesty's storehouses and wharfs, calling to assist him such master workmen as are experienced, to view the same; and then to add in the next estimate a due valuation of materials and workmanship that must be us'd and employ'd to repair the same.

He ought likewise, after the launching of every ship new built or repaired in any of his majesty's dry docks, to take an exact survey of the quantity and quality of all sorts of timber, planks, boards, trumels, masts, nails, and other iron works employ'd  
about

about the said ships, remaining in store; to the end it may appear upon account since the last general survey, before the ship came into the dock, how much of each sort of provision has been expended on her.

*The second Part of his Duty.*

He ought also once a year to take a general survey of all the new cordage, sails, canvas, boats, masts, and all other sorts of materials, whatsoever, under the charge of the several store-keepers in every of his majesty's yards and ships that lie long in harbour; and thereupon to examine what has been supplied since the former survey, and ballance the receipts and issues in an exact form of account; to take the store-keepers hands severally to the surveyors books, charging themselves with what remains.

He, or the clerk of the survey allowed under him, ought, at the return of every ship from sea, with the assistance of such master attendants as are present at the place, or may be had, to take an exact survey of all the rigging, ground-tackle, and furniture belonging to her, noting under every particular dimension their present quality, to the end he may shortly after account with the boatwain and carpenter of that ship for their expences in that voyage, and be ready against their next going out to furnish her wants; that so reasonable demands may be made to supply her in compleat equipage for further service.

He is likewise to take the yearly survey of all mooring anchors, other straggling anchors lying spare at the river side, or in any of his majesty's yards not formerly charged: he ought, in case it fortune that any of the king's ships should put into *Plymouth* or *Bristol*, or any other unusual harbour, by reason of leakiness, or any other apparent defect, to go himself, or send a sufficient deputy, to take an exact survey of the state of her hull, masts, and yards, with all her furniture and tackling; and after present an estimate of the charge in repairing, and supplying of their wants with all convenient speed, and procure the lord admiral's warrant to proceed, to make her able to come about to *Chatham*, unless she were fitted for further service, if cause required.

*The Clerk of the Navy.*

He ought to register his acts, agreed and performed at their publick meeting, and to note the days of every meeting, and what officers were then present.

He ought to keep notes or remembrances of all business that is material for the furtherance of his majesty's service, and to

call on them first to be debated and ordered, before any new propositions be received, or any private person's business handled at their meeting.

He ought to keep records *verbatim* of all the warrants sent from the lord admiral directed to the four principal officers, and to keep them safely in a chest lock'd up for all their safeties, if any occasion should after happen.

He ought to take particular notice of all warrants or deputations, thought fit to be made for purveyors, press-masters, and such like ministers, and to present them in a readiness to be signed by them all at the next meeting.

He was formerly employed in taking up all outlandish provisions, as pitch, tar, rosin, oil, and other small stores provided for present dispatches; likewise of nails, baskets, compasses, lead-lines, and leads, running-glasses, &c.

In all these several duties of each officer, in case any of the rest desire to be put, or to have copies of any records, or matter that more properly belongs to the other places, they are to have it without denial; and being equally interested in the king's service, every of them ought to perform each other's places in the upper officers absence, in case the service required it.

*The Officers Assistants.*

The next in place to the principal officers, are the three assistants, who in extraordinary employments in time of war, were, upon the lord admiral's command, to give their advice in the consultations about the affairs of the navy; and in the absence of the officers, to execute their business in places remote: but in the last thirty years, it seems, there has not been much use of them; I suppose rather in respect of the officers jealousies to have competitors, than for want of employment fit to further the king's service.

*The Keeper of the great Stores.*

He has, by his letters patents, the keeping of all the stores belonging to his majesty's navy; but in respect his salary was not sufficient to maintain deputies in all places where the king has cause to use them, necessity of times has begotten several store-keepers in all his majesty's yards where the king's works are managed; and at *Woolwich* and at *Portsmouth* they have grants for their places under the great seal, and fee paid out of the *Exchequer*.

He at his first coming receives his charge upon survey, and puts his hand to the surveyor's book, acknowledging to be charged with all the provisions therein contain'd.

He

He ought not to receive any thing into his charge but by warrant, nor deliver any out; and properly, in regard of his account, the surveyor of the navy should be one to direct his warrant to him for all business.

*Surveyor of Victuals.*

This officer, who, it seems, was at first instituted to survey the quantity and quality of all victuals, to the end neither his majesty may be deceived in goodness, nor the subject of his due, is now become victualler himself; whereupon there are many abuses crept into the office, fit to be reformed.

*The King's Merchant.*

No doubt this office at the first institution, was of notable good consequence for his majesty's profit, when he was employed only for his understanding, to inform the officers of the rates of all outlandish provisions, as hemp, cordage, tar, pitch, oil, masts, deal boards, &c.

But since it has been converted from advising for the king, to merchandizing for himself, which of late has been quite out of use; but in case it were reduced to the first quality, without question, his service would be very beneficial, for providing of those main materials at the best hand, when the season may afford it at the cheapest rate.

*The Grand Pilot.*

This man is chosen for his long experience as a pilot on a coast, especially to carry the king's great ships through the king's channel, from *Chatham* to the narrow seas; as also for his knowledge to pass through the channel called the *Black Deep*s.

*Three Master Shipwrights.*

These men ought, in their turns, to have the new building and repairing of all the king's ships; and when it happens, by order of the state, any ships are built by contract with strangers, yet some of them ought always to attend the oversight of all timber, planks, and other materials, put in them, that they be of fit scantlings and sizings, well seasoned, and of strength and quality sufficient, according to the burden agreed on, and so finished in all points workman-like.

*Four Master Attendants.*

These men attend at *Chatham*, quarterly, one after another, as well to direct and over-

see the boatswain and ship-keepers in harbour to perform their ordinary service of the ships, as also to carry in and out of the river such ships as happen to be ready for sea, and to see them rigged and fitted compleatly: also one of them is allowed six pence *per diem* for his particular attendance at the grounding of the king's great ships.

*Clerks of the Check.*

These men are of great trust, and much business committed to their charge, *viz.* the entering all seamen into pay aboard the ships in harbour, and the shipwrights and other workmen in day work: the first he must muster once a month, and the other twice a day: his ticket serves in the absence of an officer to the victualler, for the victualling of the ordinary ship-keepers, and other seamen employed in rigging of the ships bound to sea: he keeps likewise a book of the receipts of all provisions received into the stores, and prepares quarter books for the four officers, for ordinary and extraordinary men's wages.

*Clerk of the Survey at Chatham.*

He is to certify the want of every ship prepared for the sea, and to send the certificate, under the master attendants and his own hand, to the surveyor of the navy at *London*, to the end he may take present order to supply all the provisions wanting, to be sent with all speed to *Chatham*; which being come down, he is, by ticket under his hand, to direct the storekeeper to deliver to every boatswain and carpenter their due proportion of all kinds, as well to furnish the ships in compleat equipage in harbour before they go out, as for sea-store for the voyage: he is to make indenture betwixt the surveyor, or boatswain, and carpenters, confirming all manner of ground tackle and furniture belonging to the ship, and for sea-stores to the carpenters, and to take their hands severally to the one, and to put his hand to the other part, which they are to carry with them to sea, to shew their carpenters what stores are in the ships.

At the return of any ship from sea, he is, with one of the master attendants and master shipwright, for things in their elements, to survey the remnant of all stores return'd, and to note down all particular qualities, to be half worn, or fourth part worn, or decayed, according as the master shall judge them to be useful for the king's service; and thereupon he is to make up the account of waste in the voyage, and to dispose the remainder to be returned into the king's

store, or left in the ship, as shall best accommodate the king's service.

*Clerk of the Rope-Yard*

Receives into his charge all the hemp, tar, and other necessaries for the making of new cordage, and delivers the same to the master workman, being first dressed and heckled, to be spun into yarn for ropes: he also keeps check, by calling all the workmen twice a-day to their labour, and keeping them to their strict hours.

*Master Workmen over the Rope-Makers.*

There are two of these at *Chatham*, and another at *Woolwich*, to direct the labourers and spinners of yarn; and afterwards in laying in several sorts and sizes of cordage, and in stowing the most part at *Woolwich*, and tarring it only at *Chatham*.

*The Boatswain, Gunner, and Purser, are Officers aboard the Ships.*

*The Boatswain*

Has the chief charge in looking to the safe riding of the ship at her mooring in the river, and to under-run them as often as need requires.

He has the keeping of all the ship's stores, rigging, and furniture, charging himself on account to the surveyor of the navy, by acknowledgment under his hand to a book mentioning all the particulars, whereof he has a copy delivered him: he is also to come himself, and bring the ship's company with him to the dock, or to such other places as the flag is hung out, to shew where the works of that day are to be perform'd.

*The Gunner.*

The gunner has the charge of the ordnance, their carriages, with such stores as appertain to them, accounting for all to the office of the ordnance. No other service is required here but his attendance on board, and being found faulty that way, is checked of his victuals for that time.

*The Purser.*

He is to give his continual attendance, and to see that the company's victuals in harbour be brought them aboard weekly in their proportion, and well conditioned.

*Gunners of Sconces.*

They have several houses, and some pieces

of ordnance and ammunition under their charge, and are required to give their daily attendance in them.

*Boatswain of the Yard.*

He commands the labourers to their several works, and sees the provisions taken of hoys, or return'd from the ships, and carried safely, and orderly laid in the store-houses within the yard.

*Porters of the Gates.*

They attend to open and shut the gates morning and evening, and to wait at the doors all the day, to keep in the workmen, and to prevent carrying away or imbezbling any of the king's provisions; and one of them attends every morning as soon as the watch is broke up, till the workmen come in.

*House-Keeper.*

He takes charge to look to the king's house at *Chatham-Hill*, and the officers lodgings there, and the king's stuff, against their coming to pays, or other meetings for the king's service: he keeps the orchard and garden belonging to the house in good order likewise.

*Surgeon.*

He attends daily to cure such hurt men as happen among the ordinary ship-keepers.

*Messengers of the Navy.*

He attends the officers at their meetings, and provides horses and victuals for the pay-masters, at such time as they go to make payments: he is also, at the officers directions, to fetch any delinquent before them, and to keep him under custody till they give order for his release.

*What kind of Men are to be chosen four principal Officers of the Navy.*

**I** Conceive that the treasurer of the navy were fit to be either a merchant or a mariner, that is or has been an owner of ships, and can judge by his own experience both of the goodness and use of all the materials belonging to the building and tackling of ships, and may, upon special accidents of service, cut off his majesty's charge, take up a good sum of money for his majesty's ease, and to content the subjects, that otherwise will be grumbling for their wages when the service is ended.

The

The surveyor's place being too much for any one man to perform, to be separated into two distinct offices: the one a shipwright, who, for his experience in building new ships, for the king or merchants, the precedent part of his life, may be absolutely enabled to make choice of materials of timber, planks, and all other incident provisions in season; and can both command and direct workmen of all sorts to be employ'd in the building and repairing of all his majesty's ships and vessels; which cannot be so perfectly performed by any other man that has not had use of the mechanic part of that art, and is a full employment for any one to act, besides the publick meeting for general dispatch necessary for the navy.

The other a mariner bred, that has had the charge as master, and greater place, as captain, if such can be had, of ships of bulk and strength, knowing all the furniture and tacklings of a ship, and can well judge and rate the materials of all kinds, and so be able to make choice, and recommend to the lord admiral such persons as he finds fit to execute the boatwain's place; and can, of his own experience, judge of all wastes expended at sea, and take the accounts of the ships returned from sea, besides other general and particular duties mentioned under the title of the surveyor's place.

The comptroller and clerks places to be reduced into one, who should be an experienced clerk, long bred in the office, and understanding thoroughly passages of all demands, accompts, and allowances, usual and of right appertaining to all particular places throughout the office of the victualler and treasurer of the navy; which a stranger, though never so good an accomptant or clerk, cannot in many years attain to, if he has not been brought up in the execution thereof.

Provided always, That besides their experience and abilities to perform the active part of his majesty's service, these men be of good substance and esteem in their estates; otherwise the inferior officers will scorn to be commanded or directed by them; besides the obligation his majesty will find from men of means to perform his highness's service faithfully, rather than from needy mean qualittied persons.

Now it remains, that every one of these officers, from the highest to the lowest, under the lord admiral, should be limited and ordered by particular instructions to perform the duties of their places; for want of which, some have incroached beyond their right for private profit, and the most have been negligent in performing what they ought and of necessity should be done for the furtherance of his majesty's service, which has suffered much on this account.

*Places granted by Warrant from the Lord High Admiral.*

**T**HE three assistants to the master

Shipwrights.  
Anchor-Smith.  
Master Caulker.  
House-Carpenter.  
Two Chirurgions for the ordinary or extraordinary.

*At Chatham.*

Store-keepers.  
Rope-makers.  
Clerk of the rope-house.  
House-keeper at *Chatham-Hill*.  
Painter for the navy.  
Gunners of *Wareham Sconce, Bays Sconce*.  
Boatwain of the yard.  
Two porters of the yard.  
Pump-maker and top-maker.

*At Woolwich.*

Rope-maker.  
Clerk of the yard.

*At Deptford.*

Boatwain of the yard.  
Porter of the gates.  
Messenger of the navy.

All places of boatswains, gunners, purfers, cooks, carpenters, belonging to his majesty's ships and pinnaces.

All captains and masters in his majesty's ships and other vessels, and in all other ships in his majesty's pay.

*A brief Collection out of a Discourse of a principal Seaman touching the Shipping of England, and Officers of the King's Ships.*

THE native shipping of this kingdom has been esteemed (through the almighty providence) as walls of brass, to secure it from foreign invasions or incursions, as long as we remain masters of the seas.

Besides the great riches and honour the crown and subjects of this kingdom have gained in peace, by transporting our native commodities into the remotest parts where any known trade by sea has been, bringing home the chiefest wealth and commodities thereof, and beating our proudest enemies, even at their own doors. It may therefore easily appear, how necessary it is, as well for our honour and welfare, as for our security and safety, to maintain the shipping of the kingdom.

In the year 1588 there was not above one hundred and twenty sail of men of war to encounter that invincible *Armada of Spain*, and not above five of them all, except the queen's great ships, were two hundred tons burthen, and did not exceed those rates in all queen *Elizabeth's* time; so that our seamen were, by their experience and courage, rather the cause of our victories, than the ships.

Then in the beginning of king *James* his reign, who brought peace with *Spain* and all our neighbouring countries, our merchants, in regard the *Hollanders* and *Easterlings* had greater ships than our nation without ordnance, being able to transport commodities to and fro at far cheaper rates than the *English*, freighted strangers, and neglected our own shipping; inso-much, that our owners suffered their ships to decay, not regarding to repair them; so that in thirteen years of king *James*, there were not ten ships of two hundred tons left belonging to the river of *Tbames*, fit for the defence of the kingdom; whereupon, the *Trinity-House* men complained to the king of the state and decay of shipping, entreating his majesty to revive divers antient statutes against transportation of *English* goods on foreign bottoms; producing for example likewise, That the *Venetian* state finding the decay of their shipping, prohibited their merchants to transport or import any merchandize but in shipping of their own country, or to freight any strangers ships in foreign parts, if any *Venetian* ship were in that port wanting freight.

But the merchants opposing the mariners, prevailed against them, so that no redress was then had; and not long after it happened, in the fourteenth year of king *James*, That two great *Holland* ships of

two or three hundred tons apiece, came to *London* from the *Levant*, laden with currants and cotton-wooll upon the account of *Holland* merchants residing here, which our merchants apprehending it might endanger their trade, immediately became petitioners to his majesty and the lords of his council for redress, and so prevailed with the state, that a proclamation was publish'd, That no *Englishman* should carry out, or bring into this kingdom, any manner of goods but in *English* ships.

Hereupon the mariners and owners of ships of this kingdom began to build shipping again; and finding profit by them, and because the turks and pirates of *Algiers* and *Tunis* were many and strong by sea, able to overcome all small ships, they built ships of greater burden, viz. three, four, or five hundred tons each, and furnished them with ordnance and ammunition proportionable to their burdens, and plenty of men for their safety in sailing outward and homeward; inso-much, that within seven years after, the state finding so many great ships built, thought fit to save his majesty the five shillings upon every ton, which *Henry VIII.* and his successors to that time, had allowed their subjects, for building of ships of one hundred tons and upwards, and took it quite away; which, notwithstanding, did not discourage the owners to build, finding the benefit of trading in ships of strength.

And in the fifth year of king *Charles*, besides the ships trading to *Newcastle*, and on the *Eastland* trade, being two hundred at least, at two hundred ton each, the most part whereof were afterwards fitted with ordnance for men of war, there were found belonging to the port of *London* one hundred sail of merchant ships, furnished with ordnance; a number, in the opinion of most seamen, fit to parallel the forces of any state or prince in *Christendom*.

The number and strength of the subjects ships, built and maintained without any charge to the state, on the profit of trade in time of peace, or the advantage of reprisal in time of war, preserves the strength of shipping and seamen in *England*, and not only the power of his majesty's navy royal, though it be conceived to be of more force than any other king's in the christian world.

On the contrary, if there be no benefit of trade to support it, of necessity it must decay as fast, being always decreasing, where ships bring in no gain.

The

The experienced valiant sea-foldier and mariner, who knows how to manage a ship, and maintain a sea-fight judicially, for defence of himself and offence of his enemy, is only fit to be a captain, or commander at sea; for without good experience, a man otherwise courageous may soon destroy himself and his company.

The sea language is not soon learned, much less understood, being only proper to him that has served his apprenticeship: besides that, a boisterous sea and stormy weather, will make a man not bred on it so sick, that it bereaves him of legs, stomach, and courage, so much as to fight with his meat. And in such weather, when he hears the seamen cry, starboard, or port, or to bide alooff, or flat a sheet, or haul home a cluling, he thinks he hears a barbarous speech, which he conceives not the meaning of. Suppose the best and ablest bred seaman should buckle on armour, and mount a courageous great horse, and so undertake the leading of a troop of horse, he would (no doubt) be accounted very indiscreet, and men would judge he could perform but very weak service; neither could his soldiers hope of good security, being under an ignorant captain, that knows not scarce how to rein his horse, much less to take advantage for execution, or retreat: and yet it is apparent to be far more easy to attain experience for land service than on the sea.

The bred seaman is for the most part hardy and undaunted, ready to adventure any desperate action, be it good or bad; as prodigal of his blood, whatever his commander order him, if he loves or fears him.

The seaman's desire is to be commanded by those that understand their labour, laws and customs, thereby expecting reward or punishment, according to their deserts.

The seamen are stubborn or perverse, when they receive their command from the ignorant in the discipline of the sea, who cannot speak to them in their own language.

That commander who is bred a seaman, and of approved government, by his skill in choice of his company, will save twenty in the hundred, and perform better service than he can possibly do that understands not perfectly how to direct the officers under him.

The best ships of war in the known world have been commanded by captains bred seamen; and merchants put their whole confidence in the fidelity and ability of seamen to carry their ships and goods through the hazard of pirates, men of war, and the danger of rocks and sands, be they of never so much value; which they would never do under the

VOL. III.

charge of a gentleman, or an unexperienced foldier, for his valour only.

The *United Provinces*, whose safety and wealth depends chiefly upon their sea affairs, and who for some years past have had great employment, and enlarged their dominions much in remote places, use only their expert seamen to go captains and chief commanders in all their ships of war and trade.

Great care must be had to chuse a commander or captain of discretion and good government, who is to be preferred for his skill and experience; for where the seamen are left without orderly discipline, there can be nothing expected but confusion and shame.

The seamen are much discouraged of late times, by preferring of young, needy, and unexperienced gentlemen captains over them in their own ships; as also by placing lieutenants above the masters in the king's ships, which have never been used till of late years.

The seaman is willing to give or receive punishment deservingly, according to the laws of the sea, and not otherwise, according to the fury or passion of a boisterous, blasphemous, swearing commander.

Punishment is fittest to be executed in cold blood, the next day after the offence is committed and discovered.

A captain should chuse able and honest men for his company, as near as he can; but especially his master and master's mates should be of good government, whereby he is like to have a prosperous and good voyage.

#### *Punishments at Sea.*

A captain may punish according to the offence committed, (*viz.*) putting one in the billbows during pleasure; keep them fasting; duck them at the yard-arm, or haul them from yard-arm to yard-arm under the ships keel; or make them fast to the capstan, and whip them there; or at the capstan or main-mast hang weights about their necks till their heart and back be ready to break; or to gagg or scrape their tongues for blasphemy or swearing. This will tame the most rude and savage people in the world.

#### *Discouragement to Seamen.*

When they have unexperienced needy commanders; bad and unwholesome victuals, and complaining of it, can have no redress; cutting their beef too small; putting of five or more to four mens allowance; want of beer; long staying for their wages.

The

*The Election of a General or Admiral by sea, and what is requisite in such a Commander for the Government of the Fleet under his charge.*

NO fleet can be well-governed without a head; no flock of sheep without a shepherd; no army by sea or land without a general, or supreme commander, who must be authorized, either by immediate commission from a prince, or his substitutes that holds his place by patent from him; as, namely, for matters of the sea, from the lord high admiral of *England*.

There have been often disputes, whether the title of admiral or general were more proper to a sea commander; and though I dare not presume to conclude of either, yet I think it is as unproper to call an admiral general by sea, as to call a general admiral by land; though I confess their authorities are alike in command of mens persons, yet is the jurisdiction of the admiral by sea greater than the other, in that he ruleth and guideth a fleet of ships, which are of more importance to the king and state, than the lives of men are that serve in them.

The authority of a general being granted, the next consideration is in his election, that he be a man of experience, valour, conduct, temper, constancy, and discretion; that by his clemency and good carriage he gain love; and by his justice, fear, as well from his soldiers as enemies, after the example of *Julius Cæsar*, who, to his great praise, is said, never to have forgot the service done him, or every remembered injury offer'd him.

Such a general is to make election of his captains, to be of the same temper; and out of them to make choice of three or four to be of his select council, upon whose judgment he may presume and rely, not trusting altogether to his wit and will; for wilfulness and want of experience in generals are the utter overthrow and bane of actions, as may be collected out of sundry of those which I have treated of in my first and second books.

The next caution I give a general, is, That neither ambition, covetousness, vain-glory, nor honour, make him seek employment, till the prince command him; but especially, that he be no projector of voyages, where princes are not the only undertakers. Let *Sir John Norris* and *Drake* be an example in their voyage to *Portugal*, and *Drake* and *Hawkins* to the *Indies*; for he that desires to undertake an action which does not absolutely depend on the prince, must examine the state of himself and friends, who engage themselves with him;

and if he is to have the whole disposal of the action, to forecast that there be no want of things necessary.

But above all, he must take care that his project be grounded upon such assurance, that he fail not in the performance of it; though this is impossible: it is only in the power of man to promise, but in the hands of God to dispose; for if any of his designs fail, it will prove the overthrow of his action, the loss of his reputation, and shew the weakness of his judgment; whereas on the contrary, he that is called to a place of command by his sovereign, shall perform the service with a good conscience, be furnished with all his wants for the action, and follow the directions prescribed him; so that whether the event be good or bad, he shall keep his credit, and be thought worthy of employment; for the principallest thing of a general, is to follow the directions of his prince; and of an inferior officer, to perform the command of his general; which *Sir Richard Greenville* neglected, to his own destruction.

Amongst the *Spaniards*, private men undertake no publick actions, but the king is the whole adventurer and disposer of them himself; and generals are appointed as they are esteemed; who if they disobey the king's directions, answer it with life or disgrace; as to instance in *Don Diego Flores de Valdez* in 1588. *Don Alonso de Bassan*; *Don John de Puerto Carrero*, and *Diego Soto*, the one commander of the galleys, the other of the ships, in our voyage to *Cadiz*, in 1596. *Don John* was banished into *Barbary*; the other committed to prison, where he died: this makes them not desire employment, as amongst us, and more careful to perform the service for their own safety when they are employed.

A general is to examine the state of his ships, men, and victuals, before he put out of harbour; and finding any impediments, he is to punish the offence where it deserves, and to see himself provided of all wants before his departure; for when at sea, it will be too late to be relieved; and herein *Sir Francis Drake*, though an old captain, shewed himself but a young general, in his voyage to the *Indies* in 1585. and to *Portugal* in 1589.

The next care of a general, is to give instructions to his captains in as brief and plain a manner as he can, that no ambiguities may arise, as, namely, the place of meeting, if they lose company. Secondly, how to govern their men. And, thirdly, how to work upon any occasion that shall happen at sea, as by shewing of lights in the night, by shooting of ordnance day and night, or striking their topsails by day; for the better understanding whereof, I have set

set down some particulars touching that point, joined to their directions. After a general is provided of all those things I have related, the next thing is to expect the opportunity of a wind and fair weather, and not to put out of harbour but with a settled large wind; and being at sea, he must be as provident to slack sail for his fleet, as he shall see occasion; for it is a great weakness in a general, upon a contrary wind to bear a press sail, seeing the rest of the ships must strive to do the like, though it be to the hazard of their masts and sails; for if they miscarry in either, they must of necessity be forced home; whereas in bearing a slack sail, they will not lose two leagues in four days, which will be recover'd in less than two hours with a large wind. And herein we may blame the unadvisedness of my lord of *Essex*, in keeping the sea in his voyage to the islands in 1597. with a contrary wind, foul weather, and a press sail, till his fleet were scatter'd; when in three hours he might have harbour'd in *Falmouth*, and avoided the rigour of the storm.

A general must have a care to assign a place of rendezvous where his fleet shall meet, and especially to provide, as the necessariest thing in his expedition, to have intelligence of his enemy, and to keep them from intelligence of him, by example of 1588. and 1595.

A general that is only appointed for sea service, not for land, ought to be careful not to carry gentlemen, more than some few for the reputation of himself and action; for whatsoever gentlemen promise or pretend to the contrary before their going out, when they have been long at sea, and are tired with the tediousness thereof, and find the want of victuals, they are apt to be the first to cry home, whose examples will make others do the like; as I have shewed in the voyage to *Cadiz*, and the year following to the islands.

A general that is to enterprize a service of importance, ought, before he propose it to his council, to require the opinion of his best and trustiest captains in writing, who shall have sufficient leisure to debate all circumstances before they give their judgments; for a man that is suddenly and rawly taken, cannot give that resolution, as upon mature deliberation: it is like a consultation, which ever proves the best; and a general, out of their writing, will be able both to judge and determine what to do.

And this did my lord of *Essex* in his voyage to the islands, requiring a captain he relied on, to give his judgment in writing. First, whether he should attempt the king of *Spain's* ships in *Ferrol*, or no. Secondly, whether before or after his being at the

*Terceras*. And lastly, the manner how to assail them. The captain's answer you will find in the second book, with that voyage.

*The Directions of a General to his Ships, if they lose company.*

**I**F you happen to lose the fleet, you shall seek to get yourself into the height of and there lie off and on leagues for days; and if you meet not the fleet, nor with directions, you shall ply to the height of and keep some leagues to seaward; and if you hear nothing in days, you shall get yourself into the height of and lie off and on till you meet the fleet, or directions.

*Instructions from a General to his Vice-Admiral, Rear-Admiral, and Captains, to be observed by them at Sea.*

**M**ORE than the reputation of a vice-admiral, is to be second man in command; and that in absence or death of the admiral, he has the absolute charge; yet in presence of the admiral, he is to follow the instructions given by him, or resolved on by council, in which council he is the second person, and is to have all rights done to him next the admiral.

As he is vice-admiral, so is he admiral of a squadron; and as he wears the flag in the foretop, being vice-admiral, so he is to wear what coloured flag he please in the main top, as admiral of his squadron.

He is to have a vice-admiral and rear-admiral of his squadron, though the use of a rear-admiral is but a late invention, and is allowed but the ordinary pay of a captain, but the vice-admiral of the fleet has half the pay of the vice-admiral: these two are to wear the same flags; the vice-admiral does the one in the foretop, the other in the mizen, and every ship of the squadron besides, is to wear a streamer of the same colour in the forehead or mizen-yard, to be distinguished from other squadrons.

The instruction for his squadron is to hale them once in twenty four hours; and how to gather them together out of the fleet, when he pleases to call them, and many other observations, are to be expressed in the general articles from the admiral; and because every ship in the fleet receives the same instructions, it is fit that the captain under the vice-admiral, and the master of the ship, be perfect, and have, as it were, by heart, all the articles before mentioned, that as soon as they see a sign made by the admiral, they may prepare to work accordingly.

It is requisite that the captain under the admiral, or vice-admiral, be a man of great experience in sea affairs; for he is always ready at hand to advise, when council cannot repair on board; and yet this place is of so little esteem among us, that there is no allowance for it, though amongst the *Spaniards* it is a place of great reputation, and has the title of *Capitan de la Capitana*.

*Such Instructions as were given in the Voyage in 1635. by the Right Honourable Robert Earl of Lindsey.*

1. **F**IRST, and above all things, you are to take care, that all the officers and company of ships do offer their best devotion unto God twice a-day, according to the usual practices and liturgy of the church of *England*.

2. In your own particular, you are to have special care, that you perform your duty faithfully, and with diligence; and if any seaman, or other in your ship, shall raise faction, tumult, or conspiracy, or commit manslaughter or murder, or shall quarrel or fight, or draw blood, or weapon to that end, or commit theft, or other heinous capital offence, you shall cause precise information to be brought to me thereof, that I may inflict condign punishment upon each offender, according to the condition of his crime.

3. If any under your command in that ship shall be a common swearer, blasphemer, railer, drunkard, pilferer, or sleep at his watch, or make a noise, and not betake himself to his place of rest after the watch is set, or shall not keep his cabin cleanly, or be discontented with his proportion of victuals, or shall spoil or waste them, or any other necessary provision for the ship, or shall commit any insolency or disorder, fitting by you to be corrected, you are to punish them according to the order and custom of the sea.

4. You shall take a perfect account of the officers in your ships, to whom it belongs, of the receipts of the expences, and remains of victuals, ammunition, and allowance of provision and stores aboard your ship, and so weekly to continue the same, not suffering any spoil or waste to be made thereof, but to preserve them all the best you can, both in quantity and quality; and you shall not suffer any works to be done in the ships that shall not be needful and necessary for the same.

5. To prevent the needless expence of powder and shot, you are to take weekly account of the master gunner of the expence of the powder and shot, and all manner of ammunition, provisions, and stores contained in his indentures, not permitting

any part thereof to be wasted or embezzeled; nor any piece of ordnance to be shot without particular order or directions from yourself, and that upon very necessary occasions, and according to his majesty's proclamations, unless it be for salutes, keeping the true number and kinds of the shot, that their accounts may be thereby examined, which are not to be allowed in the office of the ordnance without approbation under your hand.

6. You are to keep a competent number of men allowed to your ship compleat, and to have a full proportion of healthy and able-bodied mariners and seamen, and but the allowed number of your retinue, that your ship be not filled with idlers; and to take care to get such as are able and healthful bodies, and not boys, or infirm persons, to perform his majesty's service.

7. You shall not suffer any boat to go ashore without special leave; and then but upon necessary occasions, as to fetch water, or the like.

8. You shall perform to me all due respects and obedience, not taking the wind of me at any time, if you be not forced to it, but keep company with me as much as you may, speaking with me both morning and evening, to know my pleasure, and so often as you see my flag of council in my mizen shrouds, you shall come on board me; and when I shall weigh anchor at the report of a warning-piece, you shall do the like, and anchor when I anchor, ranking yourselves under the colour of your squadron, the vice-admiral taking his place within me, and the rear-admiral without.

9. In the night I will carry two lights, which you are to observe and follow, bearing the same course I do, without straggling, unless storms or tempests divide us, and then with expedition to return to the place of rendezvous, which I shall direct; but if you happen to spring a leak, spend a mast, or be otherwise distressed by fire, you are to give notice by shooting off two pieces of ordnance, that other ships may hasten to your help to avoid danger.

10. If you discover any ships at sea, you are to give notice thereof by shooting off a piece, and letting fall your main top-sail so many times as there be ships; and if they appear to be *Turkish* pirates, or sea-rovers, you shall shoot two or three pieces, to warn the whole fleet to put in order either to fight or pursue.

11. It must be your principal care to preserve his majesty's honour, coasts, jurisdictions, territories, and subjects, within the extent of this your employment, as much as in you lies, that no nation or people whatsoever intrude thereon, or injure any of them; and if you shall chance to meet in  
the

the narrow seas any fleet or ships belonging to any prince, king, or state, you are to expect that the admiral or chief of them, in acknowledgment of his majesty's sovereignty there, perform their duty and homage in passing by; and if they refuse to do it, you are to enforce them thereunto; and in any wise you are not to suffer any dishonour to be done to his majesty, or derogation to his sovereign power in those seas; and if any of his majesty's subjects shall so much forget their duties, as not to strike their topsail in passing his majesty's ships, you are to enforce them thereunto, and to punish the commanders of such a ship yourself, or to give me advertisement of it, that I may take a course with them.

12. You are not to suffer any man of war to fight with each other, or man of war with merchant, in the presence of his majesty's ships in the narrow seas; but you are to do the best in those seas to keep peace, for the better and free maintenance of trade and commerce through the same; for that all men trading or sailing within those his majesty's seas do justly take themselves to be *in pace Domini Regis*, and therefore his majesty in honour and justice is to protect them from injury and violence.

13. If you chance to meet with any strangers ships riding at anchor in any of his majesty's bays or harbours with counterfeit colours, which is a practice of late much used to entrap such foreigners as trade on his majesty's coasts, you are to apprehend and bring them unto me, or send them safe into some of his majesty's ports, to answer such their presumption and offence according to law.

14. If you happen to take any ship and goods from any pirate, sea-rover, or other offender, you must be careful that they be kept in safety, and that no part thereof be spoiled, wasted, or imbezzled, spiking down the hatches and holds, and bring them to me, that I may send them to his majesty's ports and harbours for his majesty's use.

15. If you meet with any men of war, merchants, or other vessel, or ship belonging to any prince or state, either at sea, or in any road, or other place where you shall happen to come, you are to send to see whether there be any *English, Scotch, or Irish*, or any other of his majesty's subjects; and if any seamen, gunners, pilots, or mariners, shall be found aboard any of them, you are not only to cause such of his majesty's subjects to be taken out and brought to me, to answer their contempt to his majesty's proclamation in that kind, but also to admonish the captain, and principal commanders and officers in such foreign ships and vessels, that they receive or entertain aboard

any of their ships no more his majesty's subjects aforesaid, that his majesty have no cause to resent it at their hands; but you are to have special care, that no man be permitted to go aboard any ship or vessel of any of his majesty's friends or allies, to search for any of his majesty's subjects, as aforesaid, for whose fair and honest carriage you will not answer: and you are not in any case to suffer any violence, wrong, or interruption to be given by any of your company to any of his majesty's friends or allies, behaving themselves fairly and respectfully.

16. You shall do your best endeavour to hinder, that none of his majesty's subjects whatsoever at sea, or inhabitants on the coast, do buy, sell, or barter, with pirates; or sea-rovers, and taking notice of such as do or have done, see you give me notice of it, with their names, places of abode, together with a particular of their offences, and such examinations and proofs as you have against them, that I may acquaint the state therewith.

17. If any man of war, or other in any of his majesty's roads, harbours, or coasts, shall offer any violence in taking out any vessels, goods, or merchandize unduly, or commit any other insolencies, you shall do your best to recover the same again from them, and reform the abuse, either by due admonition, or, if that will not serve, by bringing the offenders to answer by justice, preserving by all means the honour of his majesty from such insolencies as much as in you lies, having always due regard to the amity betwixt his majesty, his friends and allies.

18. If we happen to descry any fleet at sea, which we may probably know or conjecture designs to oppose, encounter, or affront us, I will first strive to get the wind, (if I be to leeward,) and so shall the whole fleet in due order do the like, and when we come to join battle, no ship shall presume to assault the admiral, vice-admiral, or rear-admiral, but only myself, my vice-admiral, or rear-admiral, if we be able to reach them; and the other ships are to match themselves accordingly as they can, and to secure one another, as cause shall require, not wasting their powder at small vessels or victuallers, nor firing till they come side to side.

19. You must be careful that no bed of straw, or combustible matter, be aboard in time of fight, nor shall permit any powder to be carried up and down in open barrels or budge barrels; but to command the gunners to load cartrages, which may be kept covered; and for prevention of fireworks, you are to cause the vessels of urine to be in readiness in your ship, and shall enjoin your ship-carpenter to observe carefully

fully in the fight, if any shot chance to fall near the bulging-place of the ship, and ever to be ready to stop them with salt hides, sheet-lead, plugs, or whatsoever may be fit.

20. Before fight you are to see all things put in order; then to encourage the company, and not to suffer them to board the ship or vessel that shall oppose them till the smoke of their ordnance be cleared up, nor till the men above hatches be slain, or beaten off.

21. When we set sail, the vice-admiral with his squadron shall sail a-head the admiral, a convenient distance; and the rear-admiral astern, observing the like distance. Every ship is to rank himself under the colours of his own squadron, allowing one another fair room, for fear of falling foul, if it should happen to be rough weather.

22. In the night I will bear two lights in my poop, the vice and rear-admiral falling something astern of me, but keeping their distance, shall each of them bear one light in the poop, for the rest of the squadron to follow; both vice and rear-admiral shall speak with me twice aday, morning and evening, if wind and weather will permit, and having received such directions as I shall give them, they are to fall in their places again.

23. If I cast about in the night, I will shoot a piece of ordnance, and shew two lights one above the other, which you are to answer, that I may know you see me.

24. If I am forced to bear round, you shall see three lights on the poop of my ship, and you shall shew the like.

25. If your ship should happen to run aground upon any danger, (which God forbid,) you shall shoot four pieces of ordnance, one a little after the other; if in the night, you shall burn a fire-pike.

26. If by day or night you find yourself near any rock, sands, or shoals that may be dangerous, you shall shoot off three pieces, and cast about; but if in the night, you shall hang out two lights at your fore-topmast head.

27. If I shorten sail in the night, by reason of the foul weather, I will shew three lights on my poop, one above the other; if I try or hull, besides those I will shew two in my shrouds; and you shall do the like, that I may know you understand me.

28. If in foul weather we lose company, and after come in fight of one another; if in topsail gale, you shall strike and hoise your fore-topsail twice; but if it be not topsail gale, you shall brail up your foresail, and let it fall twice; and if you are an-

swered by the like sign, it shall betoken they are of our fleet; and if in the night you come up and hail one another, the word shall be *Charles*, and the answer *Mary*, whereby you shall know the other.

29. If in the night it be foul weather, and over-blow, every ship shall carry a light in his poop, that we may the better keep clear one of another; and in thick foggy weather, either by day or night, you are to make a noise with drum, trumpet, or ringing your bell, and sometimes shooting off a musket, whereby you may keep clear one of another; and if in such weather I cast about by day, I will shoot off a piece of ordnance; and in the night I will shoot a piece, and use the sign before mentioned.

30. You shall keep one continually in your topmast head to look abroad; and if you discover any fleet or ships, which you conceive I see not, you shall put you ancient in your top, and bear with them, till you perceive I see them; and let no man presume to wear a flag, though absent from the fleet, but those to whom it properly belongs.

31. Our principal place of rendezvous is in the *Downs*, whilst our employment is to the eastward of the isle of *Wight*; if to the westward, *Falmouth*; whither you are upon all occasions to repair, if you should be absent from me, except you hear otherwise where I am, and then to come to me there, to receive such farther instructions as I shall have occasion to deliver to you from time to time, for the advancement of the service we have in hand; or where you may conceive wind and weather may force us for more safety, either *Wight*, *Plimouth*, or any other port.

32. You are to be careful to keep your company in good order, peace, and unity one with another, and to see that they have their allowance of victuals in good order.

33. When you see the *British* flag spread upon the mizen-shrouds, then the council of war is to come aboard me; if the red ancient, then both captains and masters.

34. And when there shall be any occasion to dispose of you upon any service apart, I shall then give you such farther directions as the service requires. And so God keep you, and send us a prosperous voyage.

*From on board his Majesty's Ship Royal, the Mere-honour, riding in the Downs, the 30th of May, 1635.*

Signed,

LINDSEY.

*The distinct Practice, or special Duties of Officers belonging to the King's Ships at Sea.*

*The Captain's Office.*

THE captains in queen *Elizabeth's* time were gentlemen of worth and means, maintaining their diet at their own charge.

A captain has power, upon just cause of misdemeanor, or imbezzelling the king's goods, to displace any inferior officer, (except the master,) who has the absolute charge of conducting the ship in and out, according to the direction given by the captain, to the place whither he should sail the same. And in case the master commit any offence meriting blame, during the voyage, the captain may require stay of his wages, till the matter be heard before the principal officers of the navy, or the lord admiral himself, if the offence be criminal.

The captain may require a copy of the sea book from the purser, and muster the company at his pleasure: likewise the boatwain, gunner, and purser, ought to shew the captain what sea stores they have received into their charge for the voyage; and he may require a copy of the indenture, or bills of charge; in like sort a note of the several kinds of victuals from the purser at the end of the voyage, to certify what has been in any sort extraordinarily expended in his majesty's service, or wasted, or lost by unavoidable accidents; without which the king's officers should not give any extraordinary allowance upon their accounts respectively, provided that nothing be allowed upon such certificate, but what has been formerly lost, and truly issued for his majesty's service only. The captain must be very cautious not to remove any of the aforesaid officers that have the king's goods under their charge, unless upon urgent necessity, for matters criminal, or neglect of the service; and then to take good testimony what stores are remaining at the time of their discharge, and to commit the same to such hands as may be able to account for the same to the officers at the end of the voyage.

After the ship is at sea, the purser ought not to enter or discharge any of the company, but by the captain's special order.

1. The office of a captain is to be distinguished into two kinds, (*viz.*) a captain that is lawfully chosen by a general, serving under the patent of a prince, from which general the captain receives his commission for his employment, and instructions for him to follow during the time of the voyage; and at the end thereof to be paid

the entertainment of a captain, as aforesaid.

2. The captain ought to have experience and ability, by his art and skill, to controul his master, if he do amiss, or else his master may willingly commit such an error as will cast a disgrace upon his captain.

These latter times have advanced captains, who only take upon them that name, holding it a maxim, that they need not experience, but refer themselves to the direction of a master. I must say, That the generals who place such captains are very careless of their master's service, and forgetful of their own rising from the degree of a soldier to a general, and the mischiefs that ensue upon it; nay, I will say, That such a general is improvident of his master's profits; for if a master should direct a captain, and have the managing of the charge committed to him, why should a prince allow ten shillings a day to a captain, when a master can execute the place of both captain and master for his bare allowance?

A captain of experience being thus settled in his command, he shall see that every officer be chosen in such places, that they may be able to execute the charge committed to them, and not to advance any unworthy person for affection. This captain, under a general, has lawful authority to punish offences committed within his ship; or if his company grow mutinous or stubborn, he may have recourse to the general, who will inflict more severe punishment, as death, if they deserve it, which no private captain can do.

If a captain shall misdemean himself against his company, the like censure he shall receive from his general, whose supreme authority begets moderation and agreement amongst them, which the ships of reprisal have no means to accommodate but by violence.

What instructions the captain shall receive from his general, needs no other repetition than I have already declared in the instructions set down in this same book, to which I refer you; but with this caution, That you be careful to observe what is there contain'd.

A captain is to make choice of his lieutenant, and it is as necessary that he be a man of experience, as himself; and though no such officer be allow'd in his majesty's ships but of late; and that the master repines to have a lieutenant above him, yet do I hold it fit to have a lieutenant, and he to have entertainment from the king, as well as his allow'd shares in a private ship of war, for these reasons;

A lieutenant is an employment for a gentleman well bred, who knows how to enter-

entertain ambassadors, gentlemen, and strangers, when they come aboard, either in presence or absence of a captain.

A lieutenant is to be sent on a message, either aboard ships or ashore, upon any occasion of service, though it be to great persons, an unfit employment for a master; besides the master is not to depart out of the ship, or leave his place, but in case of necessity.

A lieutenant knows how to use gentlemen and soldiers with more courtesy and friendly behaviour, and will give better satisfaction than any other mariner or master can do, who have not been bred to it, but in the rude manner of a mariner.

A lieutenant in a fight is to command the fore-castle, or the soldiers before the mast, as the captain does abaft the mast, and to see that every man does the service he is commanded.

But the lieutenant must have a care that he carry not himself proudly or presumptuously, nor that his captain give him power or authority to intermeddle in the master's office; for where there is a heart-burning between the lieutenant and the master, it will make it burst out into open discontent, and then will follow mischiefs and factions among the company.

*The Second Degree of a Captain, viz. in Ships of Reprisal.*

**T**HIS captain I shall treat of is much inferior to the authority of the other I have spoken of: First, his title is not authorized by the immediate power of a prince, but by a subordinate; for a king of *England* in time of war substitutes his lord high admiral of *England* to grant out letters of reprisal to his subjects, to take and arrest by all means, either by sea or land, the vessels of his enemy; and this commission is taken out of the court of admiralty, having relation to the lord high admiral and his office.

In this quality any man may make himself a captain, if he put in the security aforesaid; but what abuses ensue thereof, I refer you to see in the first book.

This captain, after a ship is furnished, is to make choice of his master, officers, and company; and though he be stiled the captain, yet do they not use to obey him so strictly as him that has power from a general, as I have said before; for they receive no pay whereby to oblige them, but every one goes upon his own adventure; and therefore they will tie the captain to the same conditions in his diet, or his part of any goods taken, as themselves. His authority is little better than the captain in a pirate; for the interest and division of

goods are alike, only that this captain has commission to take from an enemy, and a pirate takes without commission, and makes all the world his enemies.

The authority of reprisals, and the law to warrant and limit them, has been ancient, and ever since *England* enjoy'd *Aquitain*, if it were truly known; for the laws to this day are called the laws of *Alleroone* near *Rockbell*, anciently possessed by the *English*.

And because I speak of the peculiar laws there established, I am bound to give you an account of an ancient record extant in the tower of *London*, wherein is to be seen, that at a general meeting of all nations of *Europe*, that had relation to the sea, with one voice and consent they gave *England* the preheminance and power over all the seas, as well those that part *England* and *France*, as also the northern seas that encompass *Scotland* and *Ireland*; by which it is apparent, the kings of *England* did not challenge the privilege of masters of the sea by force, but by lawful right, granted by the consent of all the maritime towns in *Europe*.

The law of these actions of reprisal is to divide the goods taken from any enemy into three parts, the ship has one part, the victualler the other, the company the third, and the lord admiral to have the tenths of all.

That which is called pillage is the loofe goods and apparel of the company on the upper deck, so that it exceeds not a certain proportion, and is equally to be divided to the whole company at the main-mast.

If a ship fight, the captain that takes her, by ancient right, should have the other captain's chest, and what he has in it; and every officer to have the like of other officers. The captain is to have likewise the best piece of ordnance in the ship, the gunner the second, and the master the best cable, and all the other officers after that rate, sails, muskets, &c.

The thirds due to the company is thus divided, and those that make the shares are, the master, or in his absence the right-hand mate, the gunner, the boatswain, and the four quarter-masters, (not the captain.) But the captain has this privilege, to take away half a share, or a whole share; to give from one to another whom he pleases.

|                                  | <i>Shares.</i> |
|----------------------------------|----------------|
| In the division, the captain has | 10             |
| The master                       | 7 or 8         |
| The lieutenant                   | 7 or 8         |
| The mates                        | 5              |
| The chirurgeon                   | 5              |
| The gunner                       | 5              |
| The boatswain                    | 5              |
| The                              | The            |

|                           | <i>Shares.</i> |
|---------------------------|----------------|
| The carpenter             | 5              |
| The trumpeter             | 5              |
| The four quarter-masters  | 4              |
| The cooper                | 4              |
| The chirurgion's mate     | 4              |
| The gunner's mate         | 4              |
| The carpenter's mate      | 4              |
| The corporal              | 3              |
| The quarter-master's mate | 3              |
| The trumpeter's mate      | 3              |
| The steward               | 3              |
| The cook                  | 3              |
| The cockswain             | 3              |
| The swabber               | 3              |

The youngers are according to their deserts, some three, some two, and some less; the boys one single share.

A ship of war is to keep a man or boy continually in the head of the topmast, to descry what fails they can see; and upon the descrying of any that shall prove prize, he is to have given him a reward, at the discretion of the captain.

If any prize they take shall fight, and make resistance, upon the boarding her, the ten first men that shall enter her shall have every one of them a reward, at the discretion of the captain.

Though these actions of reprisals yield no profit to a king, but only in his customs, as all other merchandizes that come into his kingdoms, yet it is a matter of great consequence, not only to him, but to his whole commonwealth, as appears by these reasons: the number of sailors and seamen are increased treble by it, to what they are in the navigations of peaceable voyages; and they are made more courageous, and more like to serve their prince and country, when there is occasion to use them, than any other of his majesty's subjects, although their successes do not prove prosperous at sea, but that they return without spoil or gain; for I confess, of twenty such ships as go out with letters of reprisal, not two, for the most part, make a saving voyage; like a lottery, where one lighting upon a good prize, encourages others to venture in it, till they make themselves penniless, and derided for their pains.

But howsoever it fall with these adventurous people, the kingdom feels no detriment or scarcity by it; for all the time they spend at sea, they consume no more victuals than they would have done on shore: every man in the ship bears his own adventure; so that neither king or country is bound to pay them at their return: or though they fail of getting in one voyage, yet upon the end of it they are ready, and never want occasion to be suddenly employ'd again in another.

VOL. III.

And lastly, The king receives benefit by these voluntary actions, by annoyance done the enemy, who is impoverished and put into great discontent by it; besides, that many times his provisions in furnishing his fleets are cut off in their way to the place of their rendezvous, whereby his preparations fail, to the great security and profit of the prince their enemy. What this end of the stealth produces, you will hear afterwards.

*The Office of a Master of a Ship of the King's.*

A master is to be chosen by the *Trinity-House*, who can judge of every man's sufficiency, as well in the point of his art as his command, which is as much to be regarded as the other in a ship of the king's: upon commendations from them to the four principal officers of the navy, he is to receive warrant for taking charge of his majesty's ship. I utterly dislike that a captain should make choice of a master himself; I speak it for the security of a captain; for if any thing but well should befall the ship in her voyage, it will be imputed to the captain's election of his master, and he only shall receive the blame and imputation by it.

His place and charge is to undertake to conduct the ship safe from port to port, and to direct at sea to and fro as the captain shall require him, by virtue of his instructions from the lord admiral in the king's service; he is also to give chase, manage a fight, or retreat by the captain's directions.

He has power to command the mariners and all the company, to perform the ordinary labours in the ship, and to keep due watch in their turns at the helm; and may by himself, or the boatswain and his mates, correct and punish, according to the custom of the sea, such as refuse his command for the service of the ship, wherein I conceive no man is exempted respectively.

He must be likewise acquainted what furniture, ground-tackle, and sea-stores, belong to the ship, and to justify the needful expences of sea-stores in the boatswain or carpenter's charge during the voyage, to the end there may be warrant for supply while the ship is under his charge.

There are six things necessary and requisite in a master or mariner that takes charge, (*viz.*) the card, the compass, the tides, the time, the wind, and the ship's way.

A master must be obedient to his captain, and so carry himself, that he be obey'd

H h h h

by

by his company; for a master that has not authority in his command, is slighted by all his men, and the inferior officers, and then the service goes to wreck.

A master ought to pass through all the offices and degrees in a ship, before he attain to his place of master; that thereby he may both direct and controul the other officers, if they commit errors or mistakes.

A master ought not to be arrogant, wilful or head-strong; not to presume too much on his own skill, without the advice of his mates, who are to be chosen as his seconds and helpers, to conduct the ship when he takes his rest; also to separate themselves into several parts of the ship at her tacking about, and tackling of the ship, giving ear to the master's command, and to see it performed; and also to oversee carefully such business as concerns the safety of the ship, (*viz.*) the anchor cleared, the splicing and bending of cables, that the shrowds be taut, &c. The boatswain employ'd to do these things, may not neglect to perform them strictly, whereby any danger may come to the ship.

The office of a master is to guide a ship into what coast, heighth, or harbour the captain shall direct him, who is commander of all; and in a fight is to conn the ship, and to see the handling of the sails, by appointment of the captain.

A master must observe the sun and star, to find out the variation of the compass, to know the tides, to prick his card, and many other things; which for the better instruction of him that shall hereafter attain to that place, I have set down briefly for them to learn and follow; as namely, the working of the sun, with the north and south declination; a rule to know the age of the moon, and so consequently to cast the tides; how many leagues answer to a degree; the prime, the golden number, who was the finder out of the loadstone, and the winds called *Monsons*.

*How to work the Sun with a North Declination.*

The height is 87 Degrees, 54 Minutes.

*Leagues to answer a Degree.*

|                         |                   |
|-------------------------|-------------------|
| North                   | 20                |
| North and by east       | 20 $\frac{1}{3}$  |
| North-north-east        | 21 $\frac{1}{3}$  |
| North-east and by north | 24                |
| North-east              | 28 $\frac{1}{3}$  |
| North-east and by east  | 36                |
| East-north-east         | 52 $\frac{1}{2}$  |
| East and by north       | 102 $\frac{1}{3}$ |

It is to be noted, that the north-east winds, which continually blow betwixt the *Canaries* and *West Indies*, blow so from the sixth or seventh degree on this side the line, to the thirtieth and thirty second degrees; and, moreover, of late it has differ'd; for sometimes the wind blows southwardly in those heighth, though I confess it is strange.

*Flavio*, of *Amalphy*, in the kingdom of *Naples*, was the first finder of the loadstone, in the year 1300.

In *October* the north-east, and east-north-east winds blow on the coast of *Brazil*, and from *March* to *October* they blow at south-east; and these are called the general winds.

The *Monsons*, that is to say, the fixed winds in the *East Indies*, have their beginning from *Mosambique* to *Goa* in the month of *September*; and the second *Monson*, from thence begins the fifteenth of *December*. The third *Monson* begins the fifteenth of *August*. The prime, or golden number, is the time of nineteen years, in which time the moon makes all her changes or conjunctions with the sun; and when these nineteen

teen years are expired, then she begins again. As for example, the year 1579 she changed the 22d of *March*, and every year alters eleven days in her change, till the year 1593. and then she changeth the said 22d of *March* again.

Every moon contains twenty nine days, twelve hours, forty four minutes, from change to change; the whole contents of the hours of the moon, seven hundred and eight hours, and forty four minutes.

There is in every year twelve changes of the moon; and the year contains three hundred and sixty five days, five hours, fifty five minutes, thirteen seconds.

In the year of twelve lunar months there are but three hundred and fifty four days, so that there are eleven more in the solar year, than in the twelve lunar months.

From *January* to *June* you shall see the moon within twenty four hours after the change, because she has a north declination of the sun.

From *July* to *December* you shall not see the moon three days after the change, because her declination is to the southward of the sun; but you may see her in twenty four hours before her change.

The golden number was so called, because it was sent out of *Egypt* in letters of gold to the *Romans*, or the city of *Rome*.

The reason of calling it the prime, was, because it was the first order the moon's course was known by.

An *English* mile contains a thousand paces, and every pace five foot, and every foot twelve inches.

The lengthening and shortening of the days, is according to the swiftness and slowness of the sun's declination. In the latitude of *London*, the shortest day is the eleventh or twelfth of *December*; the longest summer's day is sixteen hours and a half, the shortest seven and a half, from the rising to the setting of the sun.

The 12th of *December* the sun rises a quarter of an hour after eight, and sets a quarter before four.

The 29th of *December* the day is a quarter of an hour longer, and rises at eight, and sets at four.

The 17th of *January* the day is an hour longer; the 29th the sun rises at half an hour after seven, and sets at half an hour after four.

The 12th of *February* the day is ten hours long; the sun rises at seven, and sets at five.

The 20th of *February* the day is eleven hours long; the sun rises at half an hour after six, and sets at half an hour after five.

The 12th of *March* the day is twelve hours long all the world over: the 24th of *March* the sun rises a quarter of an hour before six, and sets a quarter after six.

The 7th of *April* the day is fourteen hours

long, and the sun rises at five, and sets at seven.

The 23d of *April* the day is fifteen hours long; the sun rises before five half an hour, and sets at half an hour after seven.

The 15th of *May* the day is sixteen hours long; the sun rises at four, and sets at eight.

The 11th or 12th of *June* the sun has its greatest height to the northward; the day is sixteen hours and a half, and the sun rises a quarter before four, and sets a quarter after eight.

The 10th of *July* the day is fifteen hours.

The 16th of *August* the day is fourteen hours.

The last of *August* the day is thirteen hours.

The 12th of *September* equal.

The 27th of *September* the day is eleven hours.

The 11th of *October* ten hours long.

The 26th of *October* nine hours long.

The 15th of *November* eight hours long.

The 11th of *December* at shortest.

#### *The Office of a Pilot and Coaster.*

He is to carry the ship over certain sands, or into such ports and harbours as the master is not acquainted with, at what time the master himself ought not to controul him, but to follow the course and directions of the pilot; though the managing and tacking of the ship belongs to the master.

I give the name both of pilot and coaster to one man; for the first is comprehended in the latter. A bare pilot serves only for the port he is hired for; but the coaster serves not only for such a place, but for the whole coast, as I will make the comparison of *England*.

This man's charge is more than in the command of ship and company, and is of greater weight and moment than the office of a master; for by reason of our daily experience in long voyages, the conduction of a ship is of little difficulty; for it has not been heard that any ship ever went out of *England*, and return'd home again, without finding the country or place she went for; and yet we have very many lamentable precedents, that coming home from such voyages, for want of knowledge of the coast, the ships have perished.

The principal thing in a pilot or coaster of our coast, is to know where he is; by his first soundings his depth will give him light; and as he draws nearer the coast, either of *England* or *Britany*, his depth will lessen, and by his lead he will take up sands, by which he shall gather which of the two coasts he is upon, as also if he be shot into *St. George's Channel*. The meanest mariner that trades to *Rockell*, *Bourdeaux*, *Biscay*, *Portugal*, and *Spain*, knows more in this kind, than the great masters and others that

go to the *East Indies* and long voyages, because they make four or five voyages in and out of our channel to the others one, by which they gain daily experience of our soundings, coasts, marks on land, and the entrance of our harbours, which the others cannot do.

The skill of a coaster is to know the land as soon as he shall descry it; and after he has made it, then to harbour himself; for all ports are alike to a good coaster. He must be likewise perfect in casting the tides, to take his opportunity of coming into a harbour, according to the draught of his ship, and the depth of the water.

In 1588. when the duke of *Medina* came for *England*, had he been furnished with a pilot that knew the *Lizard*, when he made it for the *Ramhead*, he had the next morning given an attempt upon our ships at *Plimouth*, when he was not suspected or looked for.

Mr. *Cavendish*, at his return from about the world, where he made himself and the nation famous by that voyage, has often told me, That the first night he entered into our channel, not daring to put in with the land, he endured more trouble and danger of shipwreck, than in all his two years and odd months of navigation in the remote and unknown places where he had been.

In the year 1589. we being come in the *Victory*, one of the queen's ships, with the earl of *Cumberland*, (as may appear in the first book,) near *Scilly*, by our reckonings, were taken with a most violent storm at east, that put us upon the coast of *Ireland*, where, for want of a man that knew that coast and harbours, we were forced to keep the sea till we were put from shore; so that before we could recover it again, we endured such great misery and want of drink, that the like has not been known, as you will find in Mr. *Hacklett's* book, treating of the *English* voyages. I could insert many other examples of this nature, but this shall suffice.

#### *The Office of a Boatwain*

Is to have the charge of all the cordage, tackling, sails, fids, and marling spikes, needles, twine, sailcloth, and rigging the ship: his mates have the command of the long-boat, putting out the anchor, and fetching it home, wafting, towing, and mooring, and to give an account of his store indented with a surveyor for the same: he is to make choice of his mates to assist him, his place being more laborious than one man can perform, in following and directing the common sailors in their works. If he die in the voyage, his chief mate is to succeed him.

As the master is to be abaft the mast, so the boatwain, and all the common sailors under his command, are to be afore the mast:

he messes the company four and four to a mess, or more if there be want of victuals, and is to see they be duly serv'd, and good hours kept. At eight of the clock at night the watch is to be set, and half the company watches, and the other half sleeps till twelve of the clock that they are relieved, unless foul weather force them all to help together.

As the master commands the tacking of the ship, the hoisting or striking the yard, the taking in or putting out the sails, upon the blowing of the master's whistle, the boatswain takes it with his, and sets the sailors with courage to do their work, every one of them knowing by the whistle what they are to do.

The boatswain is to see the shrouds and all other ropes set taut, the dipline and plummet in readiness against their coming into the soundings, and tallowed; this is only in deep water, before they make land. He is to see the cables bent to the anchors. In a fight he must see the yards slung to, partners and waste cloths, the flag and pendants put forth, and call up every man to his labour and office. The boatswain serves for a provost-marshal, to commit all offenders. And to conclude, his and his mate's work is never at an end; for it is impossible to repeat all the duties incumbent on them.

#### *The Office of a Gunner.*

A gunner at sea ought to be skilful, careful, and courageous; for the strength of the ship is put into his hands.

A principal thing in a gunner at sea, is to be a good helmsman, and to call to him at helm to loof, or bear up, to have his better level, and to observe the heaving and setting of the sea, to take his aim at the enemy.

A gunner is to be provided, besides his ordnance, with powder and shot of all kinds, fire-pikes, cartridges, case-shot, cross-bar-shot, langrel-shot, chain-shot, arm'd arrows of wild fire, and grenadoes of divers kinds.

He is to furnish himself with a horn, a priming-iron, lint-stocks, gunners quadrant, and a dark lanthorn; to make choice of his mates, his quarter gunners, yeoman of the powder-room, and his company in the gun-room, who are privileged from the labour before the mast, unless by his sufferance.

A gunner must know the names of his pieces, their bores or height, their weight, the weight of the shot, the weight of the powder, the goodness of powder, and how far every piece will carry, both at random and point-blank, which is fittest for a ship, and which for field or battery; but because every gunner does not know these secrets,

I will set down so much as is fit for them to know.

*A Cannon Royal.*

The bore of a cannon royal is eight inches and an half.

The weight eight thousand pound.

The weight of the shot sixty six pound.

The weight of the powder thirty pound.

The breadth of the ladle thirteen inches.

The length of the ladle twenty four inches.

She will shoot point-blank eight hundred paces.

She will shoot at random one thousand nine hundred and thirty paces.

*A Cannon.*

The bore of a cannon eight inches.

The weight six thousand pound.

The weight of the shot sixty pound.

The weight of the powder twenty seven pound.

The breadth of the ladle twelve inches.

The length of the ladle twenty four inches.

She will shoot point-blank seven hundred and seventy paces.

She will shoot at random two thousand paces.

*A Cannon Serpentine.*

The bore seven inches.

The weight five thousand five hundred pound.

The weight of the shot fifty three pound and an half.

The weight of the powder twenty five pound.

The breadth of the ladle ten inches.

The length of the ladle twenty three inches.

Shoot point-blank two hundred paces.

Shoot at random two thousand paces.

*A Bastard Cannon.*

The bore seven inches.

The weight four thousand five hundred pound.

The weight of the shot forty one pound.

The weight of the powder twenty pound.

The breadth of the ladle ten inches.

The length of the ladle twenty three inches and three quarters.

Shoot point-blank one hundred and eighty paces.

Shoot at random one thousand eight hundred paces.

*A Demi Cannon.*

The bore six inches and three quarters.

The weight four thousand pound.

The weight of the shot thirty pound, and an half.

VOL. III.

The weight of the powder eighteen pound.  
The breadth of the ladle nine inches and an half.

The length of the ladle twenty three inches and an half.

Shoot point-blank one hundred and seventy paces.

Shoot at random one thousand seven hundred paces.

*A Cannon Petro.*

The bore six inches.

The weight three thousand pound.

The weight of the shot twenty four pound and an half.

The weight of the powder fourteen pound.

The breadth of the ladle nine inches.

The length of the ladle twenty three inches.

Shoot point-blank one hundred and sixty paces.

Shoot at random one thousand six hundred paces.

*A Culverin.*

The bore five inches and an half.

The weight four thousand five hundred pound.

The weight of the shot seventeen pound and an half.

The weight of the powder twelve pound.

The breadth of the ladle eight inches and an half.

The length of the ladle twenty two inches.

Shoot point-blank two hundred paces.

Shoot at random two thousand five hundred paces.

*A Basilisk.*

The bore five inches.

The weight four hundred pound.

The weight of the shot fifteen pound.

The weight of the powder ten pound.

The breadth of the ladle seven inches and an half.

The length of the ladle twenty two inches.

Shoot point-blank two hundred and thirty paces.

Shoot at random three thousand paces.

*A Demi Culverin.*

The bore four inches.

The weight three thousand four hundred pound.

The weight of the shot nine pound and an half.

The weight of the powder eight pound.

The breadth of the ladle six inches and an half.

The length of the ladle twenty two inches.

Shoot point-blank two hundred paces.

Shoot at random two thousand five hundred paces.

*A Bastard Culverin.*

The bore four inches.  
 The weight three thousand pound.  
 The weight of the shot five pound.  
 The weight of the powder five pound and three quarters.  
 The breadth of the ladle five inches and an half.  
 The length of the ladle eighteen inches.  
 Shoot point-blank one hundred and seventy paces.  
 Shoot at random one thousand seven hundred paces.

*A Sacar.*

The bore three inches and an half.  
 The weight one thousand four hundred pound.  
 The weight of the shot five pound and an half.  
 The weight of the powder five pound and an half.  
 The breadth of the ladle five inches and three quarters.  
 The length of the ladle eighteen inches.  
 Shoot point-blank one hundred and seventy paces.  
 Shoot at random one thousand seven hundred paces.

*A Minion.*

The bore three inches and an half.  
 The weight a thousand pound.  
 The weight of the shot four pound.  
 The weight of the powder four pound.  
 The breadth of the ladle four inches and three quarters.  
 The length of the ladle fifteen inches.  
 Shoot point-blank one hundred and fifty paces.  
 Shoot at random one thousand five hundred paces.

*A Faulcon.*

The bore two inches and an half.  
 The weight six hundred and sixty pound.  
 The weight of the shot two pound.  
 The weight of the powder three pound and an half.  
 The breadth of the ladle four inches and an half.  
 The length of the ladle fifteen inches.  
 Shoot point-blank one hundred and fifty paces.  
 Shoot at random one thousand five hundred paces.

*A Falconet.*

The bore two inches.  
 The weight five hundred pound.  
 The weight of the shot one pound and an half.

The weight of the powder three pound.  
 The breadth of the ladle four inches and an half.  
 The length of the ladle fifteen inches.  
 Shoot point-blank one hundred and fifty paces.  
 Shoot at random one thousand five hundred paces.

*A Serpentine.*

The bore one inch and an half.  
 The weight four hundred pound.  
 The weight of the shot three quarters of a pound.  
 The weight of the powder a pound and an half.  
 The breadth of the ladle three inches and an half.  
 The length of the ladle eleven inches.  
 Shoot point-blank one hundred and forty paces.  
 Shoot at random one thousand four hundred paces.

*A Rabanet.*

The bore one inch.  
 The weight three hundred pound.  
 The weight of the shot half a pound.  
 The weight of the powder a third part of a pound.  
 The breadth of the ladle an inch and a third part.  
 The length of the ladle six inches.  
 Shoot point-blank one hundred and twenty paces.  
 Shoot at random a thousand paces.

Notwithstanding these proportions of powder given to every piece aforesaid, yet there must be respect had to the goodness or badness of powder, as, namely, serpentine powder, which is weak, and will not keep at sea; the great and gross powder is for ordnance; fine corn'd powder is in goodness according to the salt-petre: and for the shot, it must be a quarter of an inch less than the bore of the piece.

No ship commonly carries greater pieces than a demi-cannon; and the rest of her pieces ought not to be above seven or eight foot long, unless it be in the chafe or stern: they are easier in charging, easeful to the ship, besides better in traversing and mounting. The longer the pieces are, the greater is their retention of fire, and the danger of the piece the greater.

It is true, the longer piece will burn the powder better, and carry the shot farther, as the shorter piece will spue her powder; the longer is better for the land, the other for the sea; for he that shooteth far off at a ship, had as good not shoot at all.

It is a folly to try a piece, either great or small, with a double charge; for a piece is proportioned to her mettle, equal with the charge of her powder; and though a piece should endure a double charge, yet she is the weaker by the proof, and made the crazier by it.

Taper-bored, is when a piece is wider in the mouth than towards the breech, which is dangerous, if the bullets go not home, to burst her.

Honey-combed, is when she is ill cast, or overmuch worn, she will be ragged within, which is dangerous for a cross-bar shot to catch hold by, or any rag of her wading being afire, and sticking there, may fire the next charge you put in her.

Fire-works are divers, and of many compositions, as arrows trimmed with wild-fire, pikes of wild-fire to stick burning into a ship's side to fire her. There are also divers sorts of grenades, some to break and fly in abundance of pieces every way, as will your brass-balls, and earthen pots, which, when they are covered with quarter bullets stuck in pitch, and the pots filled with good powder, in a crowd of people will make an incredible slaughter. Some will burn under water, and never extinguish till the stuff be consumed; some will burn and fume out a most stinking poisonous smoke; some being only of oil anointed on any thing made of dry wood, will take fire by the heat of the sun, when it shines hot.

It is not impertinent to make repetition of a great abuse, and the greatest of all others that could befall this happy kingdom, which God has placed in such a place of the world, that all the enemies of mankind cannot annoy it from abroad, if the kingdom be well governed, the people encouraged, and the arms and strength kept from being carried abroad.

But such has been the oversight of some magistrates in times past, that they have connived at the transportation of our *English* ordnance, which exceeds all other in *Europe* for goodness: and now no country from the hithermost parts to the uttermost bounds of the world, but is able to give testimony of it in their forts and castles, which are furnished with them, to the unspeakable hazard and danger to ourselves; besides that, it breeds a double charge and expence to his majesty, as shall appear by this that follows. A *French* ship of five hundred tons, carries forty pieces of *English* ordnance, for which the king has 500 *l.* for licence of transportation. To command this ship, the king of *England* must keep yearly another bigger and stronger than she, which will cost 3000 *l. per Annum* at the least, and the charge to main-

tain her in harbour will stand him in 400 *l.* a year; so that for the profit of 500 *l.* this great charge must be maintained, which by keeping our ordnance will be avoided.

The ordnance of *England* have been sold for 12 *l.* a ton; in *Amsterdam* for 40 *l.* in *France* for 60 *l.* and in *Spain* for 80 *l.* all in one year; for it is to be noted, that the *English* ordnance is of another nature than the ordnance made in *Biscay*, which break and shiver into many pieces, to the destruction of men on board the ship.

#### *The Carpenter's Office.*

I will enlarge upon this office of more than on the rest, because he is the man that gives life to the ship; for all the works that iron or timber is used in, pass through his hands and skill.

He looks to the hull of the ship, that there be no damage by leaks within board or without, but that all be tight and stanch; likewise to the strength of the masts and yards, and repairing of the boats, cabins, or partitions of plank, deal, sheet-lead, nails for work, &c.

#### *What concerns the building of a Ship.*

The keel, the stern, and stern-post, is the ground on which a ship is built.

The ground and timber is the floor of the ship, and are called the ring-heads.

Your keelson is laid over your floor timbers, which is a long timber like the keel, and lies within as the keel lies without; from it all the upper works are raised.

The ribs of a ship are like the ribs of a man; the sleepers run fore and aft on each side of the ship.

The sparkets are the spaces betwixt the timbers along the ship's sides in all parts.

The garboard is the first plank next the keel on the out side.

The garboard streak is the first seam next the keel.

The run of a ship is that which comes narrower by degrees from the floor-timbers along to the stern-post, called the ship's way aftward; for according to her run, she will steer well or ill, according to the swiftness or slowness of the water coming to the rudder.

The fore-end of a plank under water is called the butts-end; the planks that are fasten'd to the stern, are called the woodings.

The tuck is the gathering of the works upon the ship's quarter under water; if it lie low, it makes her have a fat quarter and

and hinders the quick passage of the water to the rudder.

The transome is a timber that lies athwart the stern, and lays out the breadth of the ship at the buttock, which is her breadth from her tuck upwards.

The rake of a ship is so much of her hull as hangs over both the ends of her keel, it gives the ship good way, and makes her keep a good wind; the rake forward is near half the length of the keel.

The ships bildge is the breadth of the floor when she is ashore; the billage-water is that which cannot come to the pump.

The main-beam is next the main-mast, where is the ships greatest breadth.

Riders are builders from the keel to strengthen all, and the orlops do not lie upon them.

The beams of the orlops are to be bound with knees, which are the best that grow crooked naturally.

Clinch-bolts are clinched with a rivetting-hammer for drawing out.

A flush-deck is that which lies upon a right line from stern to stern, fore and aft.

The gun-wall is the uppermost wall that goes about the uppermost streight or stem of the uppermost deck, about the ship's waste.

The ship's quarter is from the mizen-mast.

Carling-knees are timbers that come athwart the ship from the sides to the hatch-way betwixt the two masts, and bear up the deck on both sides, and on their ends lieth the comings of the hatches.

Comings are timbers that bear up the hatches higher than the deck, and keep the water from falling in at the hatches; and they make loop-holes in them for close-fights; and they are an ease to men where the decks are low.

The knights belong to the halyards.

The revels are to belay the sheets, and tacks upon them.

The spindle is the main body of the capstain.

The whelps are short pieces of wood made fast to it, to keep the cable from coming too high in turning about.

The geer-capstain is a help to the great capstain in hoisting and weighing.

The voyal is fasten'd together at both ends, with an eye or two, and a wall-knot seiz'd together.

A manger is a plank before or abaft the main-mast. The bits are two pieces of great timber, and the cross-piece goes through them; they are placed abaft the

manger in the ship loof, to belay the cable at the anchor the lower parts are fasten'd to the rider.

The call is a short piece of timber over the haufe, to which is fasten'd a great hook of iron to trise up the anchor from the haufe to the forecastle.

The bulkhead is against the gun room, the cabin, the bread-room, the quarter-deck, or other such division.

The david is a short piece of timber, by which they hale up the anchor's flook to the ship's bow.

The couperidge-head are placed murderers; they make close the forecastle and half-deck.

Lockets are the holes the pintle of the murderers goes into.

The lower counter is betwixt the lower part of the galley and the transome; the upper part is from the galley upward.

Cat-holes are over the ports in the gun-room, right with the capstain to heave the ship astern by a cable or haufe, called astern.

A ship of four hundred tons, requires a plank of four inches; of three hundred tons three inches; small ships two inches, but no less.

For clamp, middle-bands, and steepers, they are of six inches plank for building them; the rest upwards three inches.

If a ship be of four hundred tons, lay the beams of the orlop ten foot deep in hold, and all the beams to be bound with two knees at each end.

The orlop to be laid with square three-inch plank, and all the planks to be travelled by the beams.

'Tis very necessary to have a square rudder carried in a ship, as is used by the ships in the *South Sea*.

*A Rule to know the Burden of a Ship.*

| <i>Length of the Keel.</i> | <i>Breadth in Beam.</i> | <i>Depth in Hold.</i> |
|----------------------------|-------------------------|-----------------------|
| 120                        | 40                      | 20                    |
|                            | 20                      |                       |
|                            | —                       |                       |
|                            | 00                      |                       |
|                            | 80                      |                       |
|                            | —                       |                       |
|                            | 800                     |                       |
|                            | 120                     |                       |
|                            | —                       |                       |
|                            | 000                     |                       |
|                            | 1600                    |                       |
|                            | 800                     |                       |
|                            | —                       |                       |

The burden 960 Tons.

| Length of the Keel. | Breadth in Beam. | Depth in Hold. |
|---------------------|------------------|----------------|

The Burthen 145 Tons.

*The Mastng of a Ship.*

After the proportion you may estimate the mastng of ships: suppose a ship of three hundred tons be twenty-nine foot by the beam; if her mast be twenty four inches diameter, the length of it must be twenty four yards; for every inch in thickness is allowed a yard in length.

And the fore-mast being twenty two inches in thickness, must be twenty two yards in length.

The boltsprit, both in length and thickness, must be equal to the fore-mast.

The mizen seventeen yards in length, and seventeen inches diameter: but in a made mast, which is greater, this rate will not serve.

The mizen-mast is half the length of the main-mast, which to twenty four will be twelve.

As you take the proportion of the masts from the beam, so you must the length of the yards by the keel.

A ship that is seventy nine foot by the keel, her main-yard must be twenty one yards in length, and in thickness but seventeen inches.

The fore-yard nineteen yards long, and fifteen inches in diameter.

The spritfail-yard sixteen yards long, and nine inches thick.

The mizen-yard as long as the mast.

The top-yards bear half the proportion to the main and fore-yard, and the top-gallants half to them.

All these observations are not exactly to be followed, but much after this proportion; for there are many other rules to this point to be observed.

*The several Ways of Sheathing Ships in Spain and Portugal.*

In Spain and Portugal they sheath ships with lead; not durable, heavy and subject to many casualties.

Another sheathing, is with double planks

within and without, like a furring; weighty, endures but a while, because the worm works through the one and the other.

Some have done it with fine canvas; of small continuance, and not regarded.

To burn the upper plank, till it come to be like a very coal in every place, and after to pitch it, is not amiss.

In *Cbina* they say, they have a *Bitumen*, or varnish, like an artificial pitch, with which they trim the outside of the ships: it is said to be durable against worm, water, or sun.

Some have used a certain pitch mingled with glafs, and other ingredients beaten to powder; but of no great use.

The best is with thin boards, half inch thick, the thinner the better, and elm better than oak, for it does not split, it endures better under water, and yields better to the ship's side. The manner is thus; Before the sheathing-board be nailed on, upon the inner side of it they smear it over with tar, half a finger thick, and upon the tar another half finger thick with hair, such as the white limers use, and so nail it on, the nails not above a span distant one from another.

Some impute the killing of the worm to the tar, others to the hair, that involves and choaks it; this is the best, and of least cost.

The worm begins with a hole no bigger than a needle's-head, and by degrees becomes as great as a man's finger; the thicker the plank is, the greater it grows: they are the most near fresh waters and rivers.

Creatures bred and nourished in the sea, coming into fresh waters die; and they die presently that are bred in fresh rivers, and come into the salt.

The pitch of the *Canaries* melts not with the sun; therefore good for the upper works in ships.

Near a town called *Buco*, in *Persia*, there issues out of the ground a great quantity of oil, which oil they fetch from the furthest part of all *Persia*; it serves them in their houses for lamps.

Not far from that place, tar issues out of the ground, which will serve for ships; proof whereof was made by the ships the *Englishmen* built in the *Caspian* sea. At cape *Brea*, not far from the isle of *Trinidad*, in the *West Indies*, there is a pitch of the nature of that of the *Canaries*.

*The Purser.*

In the nature of a cape merchant in a ship of merchandize, that keeps an account of all things brought into the ship, he ought to be an able clerk; he has the

charge of the victuals sent aboard by the victualler for the company serving in the ship, for such time as by his warrant he is requir'd, according to the proportion allowed by his majesty, and to see the same delivered daily by the cook and steward to all men at their meals; and at the end of the voyage to deliver back such cask and basket-bags as are not spent in the voyage. He is likewise to enter the names of all the men in a sea-book, (as we term it,) which he should originally receive from the clerk of the check of the place where the ship was rigg'd and made ready, mentioning the places where they were press'd, and the day of their entry, with such denominations of offices as properly belong to them: and likewise, if during the voyage any of the men happen to die, run away, or for good cause be discharged by the captain's order, to enter likewise the particular day of the month against each of their names in a margent of the books: he should also distinguish in the front of the book, at the beginning, when the ship entered into sea victuals; for that in all the king's ships the captain and officers do then commence into sea wages.

He is, upon any lawful discharge, to make a pass to the party, relating the time of his service, the place where he was press'd, his office, if he have any, and the place where he went from the ship, and to vouch the same under his own hand; whereunto he is to procure the captain's also, and to deliver it to the party, to carry with him to the treasurer of the navy's office at Deptford, to receive his pay accordingly.

*The Allowance of Victuals in the King's Ships at Sea.*

Every man and boy is allowed a pound of bread a day.

Every man and boy is allowed a gallon of beer a day, (that is to say,) a quart in the morning, a quart at dinner, a quart in the afternoon, and a quart at supper.

Every man and boy is allowed a day, on flesh days, one pound of beef, or else one pound of pork with pease, that is, on *Sunday, Monday, Tuesday, and Thursday.*

On fish days every mess, which is four men, are allowed a side of salt fish, either haberdine, ling, or cod, seven ounces of butter, and fourteen ounces of cheese, *Friday* excepted; on which day they have but half allowance.

The purser is allowed by every man six pence a month to provide necessaries, as wooden dishes, cans, candles, lanthorns, and candlesticks, for the hold.

*Trumpeter.*

For the more reputation of this man's service in a ship of the king's, and under an admiral, it is fit he should have a silver trumpet, and himself and his noise to have banners of silk of the admiral's colours: his place is to keep the poop, to attend the general's going ashore and coming aboard, and all other strangers or boats, and to sound as an entertainment to them; as also when they hail a ship, or when they charge, board, or enter her: they set the watch at eight of the clock at night, and discharge it in the morning, and have a can of beer allowed for the same. This is not only incident to an admiral, but to all captains that carry a noise of trumpets with them.

*A Surgeon.*

He has his mate: they are both exempted from all duty, but to attend the sick, and cure the wounded: there must be trial of his sufficiency, by certificate from able men of his profession: his chest must be well furnished both for physick and surgery, which should be viewed before his going to sea by men of skill. The surgeon is to be placed in the hold, where he should be in no danger of shot; for there cannot be a greater disheartening of the company than in his miscarrying, whereby they will be deprived of all help for hurt and wounded men.

*The Corporal*

Is to see the foldiers and failors keep their arms neat and clean, and to teach and exercise them every calm day, sometimes with powder, and sometimes with false fires; in a fight to have an eye over the rest of the shot, that they do their parts, and not to start from the place they are assigned.

So long as the fight shall last, they are to put some budge-barrels of powder in the galley, or some close cabin, whither people may resort to have their bandeliers filled, and their bullets and match supply'd; with a special care, that no matches with fire come near the said galley or cabin.

*The Cockswain and his Mate.*

The cockswain is, as it were, captain of the boat: he is to steer the skiff, and to be sent ashore on all occasions, or aboard all ships at sea he shall meet, and to be directed by the captain: he is to make choice  
of

of a gang, to be able and handsome men, well clothed, and all in one livery. It is necessary he be a good pilot for the harbours or shores he goes into, and to know the course of the tides: he ought to be a man of discretion and good shape, to countenance the employment he shall be sent on; and if he had language, it were much the better.

*The Quarter-Masters*

Are four, and every one has his mate; they have the charge of the hold for stowage, romaging and trimming the ship in hold: they have their squadron in the watch, and see that every one do his office both by day and night: they have a care to look to the steerage and the traverse-board.

*The Cooper and his Mates*

Are to look to the cask, hoops, and twigs, to stave and repair the buckets, barrels, cans, steep tubs, rundlets, hogheads, pipes, &c. for wine, beverage, cyder, water, and other liquor; and as often as they shall fill fresh water, the cooper is to give his attendance for the fitting the cask.

*The Swabber and Lyar.*

The swabber is to keep the cabins, and all the rooms of the ship clean within board, and the lyar to do the like without board. The lyar holds his place but for a week; and he that is first taken with a lye upon a Monday morning, is proclaimed at the main-mast with a general cry, *A lyar, a lyar, a lyar*; and for that week he is under the swabber, and meddles not with making clean the ship within board, but without.

*The Steward and his Mate.*

His office is to be the purser's deputy, chosen by him, and keeps always in the hold, to deliver the victuals to the cook, who is trusted to retail the victuals in meet proportions, and is only accountable to the purser, though he has some allowance from the victualler, for well husbanding and keeping the provisions from waste or putrefaction: he must not suffer banqueting or disorder in his room, but keep it clean and sweet; and, as occasion shall serve, cause the quarter-masters to romage, for the better coming to his victuals.

*The Cook*

Is to dress and deliver out the victuals, and is assisted by a mate or two; the meat being sod, either of fish or flesh, he delivers it out to them appointed to mess the company, and after to put out the fire, and suffer none to be kindled, or people to resort into the cook-room, but in case of necessity; as namely, when the cockswain's gang comes wet aboard, or sick men have occasion to use the fire for their comfort.

All these officers aforesaid have many people under them in their rooms, not able upon any occasion to tackle the ship, or do any other work, more than that they are bred to: therefore, according to my directions in the first book, it is fit and necessary that such people be put to the use and practice of the musket, or to the labour in hawling, and doing other helps to the gunner about his ordnance in the time of fight, otherwise the ship will be weaken'd, when there is use of men, by so many people, who otherwise would do good service if they were taught what to do.

Having declared the use of every man's office and place in his majesty's ships, and how conveniently all men are provided for that service in them, without confusion or trouble one to another, I will now shew how *England* exceeds *Spain* in this kind, and to that purpose will set down the managing and marshalling of the king of *Spain's* galleons, and shew the confusion and ill order aboard them, in comparison of the kings of *England*.

*The ill Management of the Spanish Ships.*

THE *Spaniards* have more officers in their ships than we: they have a captain in their ship, a captain for their gunners, and as many captains as there are companies of soldiers; and above all, they have a commander in the nature of a colonel above the rest.

This breeds a great confusion, and is many times the cause of mutinies among them; they brawl and fight commonly aboard their ships, as if they were ashore.

Notwithstanding the necessity they have of sailors, there is no nation less respectful of them than the *Spaniards*, which is the principal cause of their want of them; and till *Spain* alters this course, let them never think to be well served at sea.

The meanest soldier will not stick to tyrannize over the poor sailors, like a master over his spaniel, and shall be countenanced in it by his land commander.

Their ships are kept foul and beastly, like hog-sties and sheep-coats, in compari-

son of ours; and no marvel, for there is no course taken to correct that abuse, by appointing men purposely for that office, as we do in our ships.

Their allowance of diet is small; and yet not so small as ill-order'd; every man has his proportion of victuals in the morning to serve him the whole day, and every man is his own cook; and he that is not able to dress his meat, may fast. The soldiers will as ordinarily play away their allowance of victuals as money; and others, out of covetousness, will sell their victuals for money to maintain play: this makes them grow weak and lean, like dogs, and unable to perform the service they are commanded upon.

Our discipline is far different, and indeed quite contrary, as I have shewed before.

We have only one captain of the ship, sailors, soldiers, and gunners; and this captain had not so much as a lieutenant by the allowance of the queen, till of late; so that matters of command, direction, and correction, depend upon his discretion.

He sees that every officer humbles himself to his command, and that every ordinary man be as obedient to their inferior officers: he takes account of the expence of victuals, powder, and shot: he punishes every offence, and especially mutinies and quarrels, with great severity: he sees no injury shall be offered the sailors by the soldiers, but carries himself indifferently betwixt both. If he affect one more than the other, it is the sailor, because of the necessity of them: he overlooks the ship once or twice a-day, that she be kept sweet and clean, for avoiding sickness, which comes principally by slothfulness and disorders: he will not exceed the proportion of his men by allowance of his victuals, and will see every man be provided of his diet at a due and seasonable time; and for the better ordering of victuals, there are divers officers appointed in sundry rooms, as stewards to give it out, meaner persons to serve it, men to look to the shifting of it in water, and cooks to the dressing of it; so that no man but upon courtesy is admitted to have access into the cook's room, except the officers of the room. There are some appointed to make clean the ship within board, who are called swabbers, and without board by the name of liars, as I have shewed before. No man is suffer'd, either to sell or play away his victuals, but to take it orderly and in due season, which keeps them in health and heart.

The greatest inconveniency in his majesty's ships is the placing the cook-room in the midships, and so low in hold, that many inconveniencies and dangers arise by it; if it take fire, it is not so easily quenched

as if it were aloft, and in the fore-castle. Secondly, it will make the ship camber-keel. Thirdly, the continual fire that is kept in that part of the ship, casts such a heat amongst men and victuals, that it begets sickness, and disperses such an offensive smoke in the ship, that it putrefies victuals, and makes it both unwholsome and un-toothsome to be eaten.

*The Difference between the King of Spain's Ships in former Times and these Days, and the true Distinction of the Strength of Ships.*

I HAVE heard divers sufficient men, as merchants and others that lived in *Spain*, before the wars with queen *Elizabeth*, very much cry down the king of *Spain's* ships in comparison of ours; as in particular, that they were huge and mighty in burden, weak and ill-fashioned in building, lame and slow in sailing, fitter for merchandize than war; and I remember, that old seamen, as Sir *John Hawkins*, and others, have maintained, that one of her majesty's ships was able to beat four of them.

I confess we may the rather believe it, because the event has shewed it; for if we examine the particular loss on both sides, her majesty's ships have devoured divers of the king of *Spain's*; whereas there was but only one of hers taken, and that merely by the indiscretion of the captain Sir *Richard Greenville*; for which one there have been burnt, sunk, and taken, twice as many as the queen has in number; insomuch, that if the queen's loss had equalled the king of *Spain's*, she could hardly have maintained the navy in that flourishing state it is in.

But if we should attribute these misfortunes to ships, which are made all of one sort of wood and iron, and after one manner of building, it were great folly; but give *Cæsar* his due, and allow the ships their due; for a ship is but an engine of force, used for offence or defence; and when you speak of the strength of ships, you must speak of the sufficiency of men within her; and therefore, in comparing the *Spanish* ships with ours, I enter into the comparison of men; for if it were in my choice, I rather desire a reasonable ship of the king of *Spain's* manned with *Englishmen*, than a very good ship of her majesty's manned with *Spaniards*; so much account I make betwixt the one and the other.

But if you will agree of the true strength of ships, and the difference betwixt the queen's and the king of *Spain's*, as heretofore I have said, the king's are of greater burden, which is a great advantage in boarding; spacious within, and will contain more  
men

men than ours; have more decks, and therefore carry more ordnance.

But you will say, all this is nothing without swift sailing, which advantage we have of them. It is true, it is the only advantage on our side; which advantage may be compared betwixt a greyhound and a bear, betwixt a galley and a good ship in a calm, or betwixt a swallow and an eagle; that though they be of little force to hurt bear, ship, or eagle, yet are they of agility and nimbleness to run and fly from them.

But if we will enter into the true strength of shipping, without advantage of men or sailing, but that you must fight according to the old saying, *Fight dog, fight bear*, that is, till one be overcome, which cannot be better decided than at anchor in harbour. I say, no man can deny but that the king of *Spain's* ships are stronger than ours, by the reasons before alledged, That they are bigger, and contain more men and ordnance, the number more, of greater burden, and therefore of greater strength; as I have already shewed in the voyage to *Cadiz*, in 1625. But according to my first argument, considering the irresolution and insufficiency of the men, I would rather chuse to be one of the ten of the queen's to encounter with twenty of them, than one of the twenty to encounter with ten of her majesty's.

Notwithstanding these reasons, I do not disallow the opinion of such men as defend the difference betwixt the *English* and *Spanish* ships; for to speak the truth, till the king of *Spain* had war with us, he never knew what war by sea meant, unless it were in galleys against the *Turks* in the *Streights*, or in the islands of *Terceras* against the *French*; which fleet belonged to him by his new-gotten kingdom of *Portugal*.

The choice of ships he had of his own in his expedition of 1588. belonged to *Portugal*; most of the rest consisted of several nations, as *Levantine*, *Biscainer*, *Fleming*, and merchants of his own country. Whosoever since have seen the difference of their building, would scarcely know the others to be ships, in respect of them that are now.

The first time the king shewed himself strong at sea, was in the year 1591. when the *Revenge* was taken; since which time I will make out there have been built at the king's charge sixty nine ships, as shall appear in the ensuing and fourth book, and most of them of a thousand tons in burden, and upwards; as to instance in the two galleons we brought from *Cadiz*, which sufficiently satisfy us.

God has endued *England* with a singular blessing above the southern countries, both with shipping and mariners; and to speak the truth, *England* lies more convenient for

VOL. III.

the breeding of seamen than *Spain*; for what makes skilful and expert mariners but dangerous and painful navigations, where the weather and seas are boisterous and rough, the coasts perilous, and the tide forceable; all which our country is subject to: then on the contrary, what makes idle, loitering, and unskilful seamen, but such navigations, where the seas are calm, and the weather fair, the coasts not perilous, nor the tides strong; all which commodity *Spain* has; for betwixt them and their *Indies*, *Guinea*, and *Brasil*, to which place their chiefest trade is, the seas are calm, and the winds certain outward and homeward, seldom foul weather, or not long, the coast less dangerous than any other, and a small or no tide at all to annoy them.

Where there is so great an ease in navigation, it breeds idle and unable mariners. What makes so great a difference betwixt the *Biscainer* and natural *Spaniard* for sea, but the difference of the voyage? The one I have shewed is easy and full of pleasure, the other painful and troublesome.

The *Biscainers* greatest trade is in fishing on the coast of *America*, where, with great labour and pains, they kill the whale, and take their fish: this breeds perfect and skilful mariners, and makes them not only exceed all other *Spaniards*, but get a reputation and employment in the king's ships.

There is no officer, from the degree of a captain to the meanest officer, but commonly is a *Biscainer*; and the *Biscainers* have divers privileges, not granted to any other subject of *Spain*, to encourage them to persevere in their sea courses; and to give them their due, no nation is able to compare with them: few (for many there are not) that in knowledge, hardness, and valour, are able to equal them; and were it not for the *Biscay* sailors, I know not how the great armada's of *Spain* would be maintained.

*The Allowance of Victuals in the King of Spain's Ships and Gallies.*

EVERY soldier in a ship or galley has a pound and half of bread allowed him every day.

Of fresh beef three quarters of a pound, of salt beef half a pound and an ounce.

A quart of wine a day, and a pottle of water.

The slaves every day half an ounce of oil, two ounces of rice, beans, or garnanfes; one of these three.

They have six meals of flesh in a year, two at *Christmas*, two at *Shrovetide*, and two at *Easter*.

The master, boatswain, corporal, goaler, purser, oar-maker, and caulker, have double the soldiers allowance a day.

LIII

The

The barber, two gunners, and boat-swain's mates, have but one allowance and half a day.

Those that have two allowances a day, have twenty shillings a month.

Those that have but one and half, have fifteen shillings a month.

A single allowance but ten shillings.

A pilot has four allowances, and fifty shillings a month.

A captain is allowed five ducats a month, and two allowances.

There are allowed in every galley two slaves to row in the boat to shore, who have one allowance a day betwixt them both.

The king of *Spain* pays yearly six thousand ducats for the maintaining of a galley, and before one be launched, she stands him in seven thousand ducats; I mean only her bare hull.

All his galleys are built in *Barcelona* of pine-tree.

There is in a main-fail of a galley, fifteen hundred yards of cotton; in a fore-fail, three or four hundred yards.

*The Number of Ships, their Names and Burden, that have been built in Spain at the King's Charge, since the Year 1590. to this present Year of 1600. How many of them are lost, and where; gather'd by me in the Queen's Service.*

**I**N the year 1591. *Twelve Apostles*, six built in *Bilboa*; their names as follows; their burdens betwixt thirteen and fourteen hundred tons.

*St. Philip*, burnt by us at *Cadiz* in 1596.

*St. John*, burnt at *Havana*; she was the vice-admiral that fought with *Sir Francis Drake's* fleet in 1595.

*St. Tadeus*, lost in 1599. when the *Adelantado* pursued the *Hollanders*.

*St. Barnaby*, lost going into *Lisbon*.

*St. Matthew*, taken by us at *Cadiz* in 1596.

*St. Bartholomew*, lost in *Biscay* in 1597. when the *Adelantado* returned from *Falmouth*.

The other six at *St. Ander*.

*St. Paul*, always admiral, laid up for weakness at the *Horcado's*.

*St. Stephen*, vice-admiral, the like in *Lisbon*.

*St. Simon*, made a carrack, and since broke up.

*St. James the Elder*, lost coming to the *Groyne* with the *Adelantado* in 1597.

*St. Andrew*, taken by us at *Cadiz* in 1596.

*St. Thomas*, burnt by us at *Cadiz* in 1596.

In the same year two small ships of two hundred tons.

*St. Ursula*.

*La Castidad*.

The same year two ships built in *Portugal*, of eight hundred tons, by command of *Don Alonso de Bassan*.

One of them lost upon cape *Finister*, when the *Adelantado* went to the *Groyne* in 1597.

In the year 1592. seven ships of five hundred tons, built in the *Rantaria*: these ships use to fetch the king's treasure from the *Indies*. I met with them at the *Terceira's* in the island voyage in 1597.

*Nuestra Senora de Aranca*.

*Nuestra Senora de Monferrate*, lost on the coast of *Spain*.

*Nuestra Senora de Guardalupe*, lost in the *Indies*.

*Nuestra Senora de Valverde*.

*Nuestra Senora de Alistes*.

*Nuestra Senora del Rosario*, lost on the cape *St. Mary's*, and with her

*Nuestra Senora de la Merced*; (plate most of it saved.)

Built in the *Canary Islands* the same year four frigates of four hundred tons each: they fetch'd the plate from the *Indies*.

*St. Barbara*, burnt by us at *Cadiz* in 1596.

*St. Mary Magdalen*, burnt herself at *Puerto Rico*, when *Sir Francis Drake* was there.

*St. Helena*, was burnt by us at *Cadiz* in 1596.

*St. Clare*.

In the year 1595. built in the *Rantaria*, seven ships of thirteen hundred tons each.

*St. John Evangelist*.

*St. Matthias*, broke up at *Lisbon*.

*St. Mark*.

*St. Lucas*, lost coming out of *Ferrol*, when the *Adelantado* came for *England* in 1597.

*St. Augustine*.

*St. Gregory*.

*Flor de la Mar*.

The same year, and in the same place, three small ships of sixty tons.

*La Justicia*, lost at sea.

*La Esperança*, taken on our coast by an *English* man of war.

*La Verdad*.

The same year built in *Lisbon* three ships, by *Lambert* an *Englishman*, of four hundred tons.

*El Espiritu Sancto*, lost in 1597. coming to the *Groyne* with the *Adelantado*.

*La Fee*.

*La Caridad*.

In the year 1596. built at *Fuenteravia*, two ships of three hundred tons, which were sent into the *South Sea*.

*Nuestra Senora de Loreto*.

*Nuestra Senora de la Pena*.

In the year 1597. built in the port of *Portugal*, two ships of fifteen hundred tons, that were made carracks.

*St. Antonio*.

*St. Vincent*.

In the same year 1597. six ships in the *Rantaria*, of eight hundred tons each ship.

*St. Feronimo*,

*St. Feronimo*, lost in 1599. pursuing the  
*Hollanders* with the *Adelantado*.

*St. Domingo*, lost the same time.

*St. Francisco*.

*St. Ambrosio*.

*St. Christopher*.

*St. Joseph*.

The same year, and in the same town,  
two ships built of two hundred tons.

*Santa Margarita*.

*Santa Martha*.

In the same year, 1597. built in *Leſo*,  
two galleons of three hundred tons.

*Santa Margarita*, sold to merchants.

*Santa Joanna*.

In *St. Ander*, the same year, built two  
ships of three hundred tons.

*La Paciencia*.

*La Templança*.

In the year 1599. built thirteen ships of  
thirteen hundred tons.

*St. Andrew*.

*St. Philip*.

*St. John*, cast away at *St. Lucar*.

*St. Thomas*.

*St. Barnaby*.

*St. Salvador*.

*St. Nicholas*, cast away at *St. Lucar*.

Six ships built in *Bilboa*.

*St. Matthew*.

*St. Simon*.

*St. James the Greater*.

*St. James the Less*.

*St. Bartholomew*.

*St. Lucas*.

*St. Diego de Guardalupe*, of a thousand  
tons, built by a merchant in *Biscay*,  
but bought by the king.

The number of them all is sixty nine,  
whereof burnt, taken, and lost, sixteen; but  
besides these sixteen, the king has lost divers  
more, some of his own, some hired, and  
others pressed to serve. It is thought the  
dominions of *Spain* lost in time of war, six  
hundred vessels, one with another.

Now I am upon the *Spanish* acts and acci-  
dents at sea, I will add such instructions as  
generals of fleets use to deliver to the cap-  
tains under them; and how their captains  
of land soldiers, and captains of ships are  
to carry themselves one to another, that  
every man's command may be known and  
distinguished, and particularly in their ex-  
pedition for *England* in 1597. where the  
*Adelantado* was general, intending to have  
landed at *Falmouth*.

*Don Martin de Padilla Adelantado, Mayor*  
*of Castile, Earl of Buendia, Captain-Gen-*  
*eral of the Gallies of Spain, and of the Na-*  
*vay Royal of the Ocean Sea, and of the Ca-*  
*tholick King's Army, Anno Domini, 1597.*

**I** *Mprimis*, all servitors, as well by sea as  
land, of what state or condition soever,

shall be always ready to keep and observe  
these orders that are delivered them, to live  
a christian and virtuous life, under the pe-  
nalties contain'd in these articles.

2. You shall be ready, as well land as  
sea captains, with your officers and com-  
panies, to ship yourselves without any de-  
lay, when you shall hear the admiral fire,  
to call your companies aboard; you shall  
muster your people, and make ready your  
ships to set sail, and so to follow the ad-  
miral, as well sea captains as land captains  
that shall be in any such ship; and shall  
fail to do the same, shall be punished with  
all rigour; and all mariners, officers, or  
soldiers that shall tarry behind the fleets, I  
from this time condemn to lose all such  
wages as shall be due to them, and to serve  
the king at an oar in the gallies four years;  
and the officers to be broke and deprived  
of office for ever.

3. As soon as ever you are out of har-  
bour, as well sea as land captains of every  
ship, shall muster their sea and land men,  
and shall make a list as well of their men  
as their arms; and they shall give order,  
that they who have no arms may be pro-  
vided; the harquebusiers, and musketeers  
that have no shot, you shall cause them to  
cast it presently; you shall provide them  
match ready; you shall carefully see your  
soldiers powder dry in the flasks, and those  
ready, as it were, to present fight; this  
readiness must you be in at all hours: their  
touch-powder also, their muskets, and har-  
quebusiers must be very clean; and that  
they neither want vice-pins nor scourers;  
that they keep their cocks and pans very  
clean, and in good order; and if in the  
muster you make, you want any of those  
soldiers you had ashore, then let me have  
notice thereof, that they be sought out and  
punished.

4. The captains of land men shall exer-  
cise their musketeers and harquebusiers by  
their companies, at first with powder in  
their pans, and afterwards to shoot at a  
mark set up against the foremast; your ser-  
jeants and corporals must be very careful to  
see them exercise, and to keep their weapons  
very clean.

5. Every land captain shall be very care-  
ful, and make his soldiers know how to  
serve in shipping, and so to quarter them  
that they may know their places where they  
are to stand to fight; so that at the time of  
need they may not go thwarting one another  
in the ship, nor trouble one another. The  
captain of the sea shall likewise make his  
great ordnance ready, and the ammunition  
must be in lockers fast by the pieces: there  
must be always in readiness spikes, lant-  
horns, cartrages, armours, corselets, to have  
them clean, and every man his own.

6. The

6. The gunners shall divide themselves into companies, and every man shall know his charge, what ordnance he is to look to, and to acquaint the captain withal, and he to appoint such help as shall be necessary; the captain shall be very careful to visit his ordnance, and if there be any fault, he may see it remedied; and the gunner that hath not his piece in readiness, to be punished giving me the general notice thereof.

7. Every pilot and captain of a ship, shall have a special care to speak every day with their admiral, and to take the word, and so coming in good order, one ship to give another room, without molesting one another, and if they cannot take the word for some extraordinary occasion, then follow this order:

|                    |                                 |           |                      |
|--------------------|---------------------------------|-----------|----------------------|
| The word<br>of the | {<br>{<br>{<br>{<br>{<br>{<br>{ | Sunday    | <i>St. Mary.</i>     |
|                    |                                 | Monday    | <i>St. James.</i>    |
|                    |                                 | Tuesday   | <i>St. Barbara.</i>  |
|                    |                                 | Wednesday | <i>St. Eugenius.</i> |
|                    |                                 | Thursday  | <i>St. Raphael.</i>  |
|                    |                                 | Friday    | <i>St. Benedict.</i> |
|                    |                                 | Saturday  | <i>St. Martin.</i>   |

8. No ship by day or night shall go ahead the admiral, without he have express order to do it.

9. No ship shall go to windward, nor stop in the wind, without he be forced to it, or have order so to do.

10. If any ship fall foul of another, whereby any of them be damnified, there shall be enquiry made, which of the pilots was in fault, and he shall pay any hurt so done; besides that, he shall be put in prison for his fault, during my pleasure.

11. If we chance to sail with a scant wind, and by night, and the admiral designs to tack about, she shall fire a gun, and shew her lanthorn upon her poop, that thereby you may know it; and then shall every ship put out a light, that the admiral may perceive you know his meaning.

12. If the admiral, by force of wind and weather, or else to repair or amend something amiss, shall be driven to strike a hull, then she shall fire a gun, and set fire upon her beak-head; as soon as ever you shall see this sign, every man shall strike a hull, and put out his light, that the admiral may tell them, and so be satisfy'd that they know his meaning; and that they are a hull as well as she; and when this is done let the pilot take head that they give the ship scope enough, and keep good watch, that you do not fall aboard one another, and so spoil yourselves.

13. When the admiral sets sail by night, she will fire a gun, and set a light on the middle of her main shrouds, and so every man shall set sail and follow.

14. If the admiral come to anchor in any

bay, or upon any coast, she shall set a light upon the head of her fore-mast; and when the rest of the ships see this sign, they must come and let fall their anchor, as near the admiral as they may see they be not foul of her ground tackle.

15. All captains and officers shall diligently search what wants they have in their ships, and then to be sutors that they may be provided in time, that when need is, they be not at a loss. It is no reason that he who is provident beforehand, and does not only provide for his wants, but preserve what he has by his industry and diligence, should have any thing taken from him, and given to slothful captains, who do not perform their duties as they are bound.

16. All shipping that shall shoot off any ordnance, shall within two days, come to me, the said general, with a note under the captain of the soldiers hand, drawn by the purser, and also the captain of the ship, for what cause it was shot off, and what piece it was, that if it be found that the cause be just, he may have allowance; if he exceed the time of two days, his note shall not be received, except it be known he was not able to come to the admiral.

17. If any ship break a mast or a yard by night, she shall fire a gun, and put a light on the beak-head, and another upon the poop, that I, and the rest of the ships, may know that she is in distress; and all ships shall make haste to succour her.

18. When the admiral comes to anchor in harbour or bay, let the pilots take good heed to give a good scope, that one may not hurt another; and he that comes latest to an anchor, not to come foul of any ship anchor'd; for if he do, the pilot is to pay the loss and hurt that is done.

19. All the ships shall be careful to keep a man at the top-mast head; and he that spies a sail shall fire a gun that way the sail bears, and strike his top-sail; and so many sails as he spies, so many times to strike his top-sail; and other ships to bend themselves towards him.

20. If you discover any vessel in the night, and are not able to come to the admiral, then to shew so many lights as you spy sails, and to place them fore and aft; and he that spies the first light of the enemy, shall have a jewel given him by me for his pains.

21. When the admiral putteth her ancient in the main-shrouds, then all the fleet is to come to speak with him; but if she fire a gun withal, then the captains and pilots are to come on board.

22. In bearing in with the shore, the ship that first spies the land, shall fire a gun, and put an ancient in the head of her fore-topmast; and if it be in the night, to shoot off

off a piece, and to come to speak with the admiral.

23. If in the night there happen a storm, the admiral to put out two lights besides his ordinary lights, and every ship to shew one light upon the poop, to avoid any hurt.

24. If ships be divided in foul weather from the fleet, and have none of the three flags to follow, they shall obey the biggest of their company till they meet with the admiral, vice-admiral, or rear-admiral.

25. Before you go from the *Groine*, you shall have the order of the cross, which you shall keep whilst you are at sea.

26. When the admiral shall vail his main-top-sail, and pike it a little, then shall every ship put himself into order of battle.

27. When the admiral and his fleet arrive in an harbour, or upon a coast, no man or boat must go ashore without my leave.

28. If any captain of a ship be out of his ship, though it be with licence, yet he shall appoint no lieutenant without my order.

29. If we meet the enemy, you are to make yourselves ready to fight, and to place the soldiers in their places; if in the night, to keep their matches from being discover'd.

30. If we meet with the enemy, and the admiral and his squadron resolve to board, other ships must do the like; but if the pilot be of another opinion, yet notwithstanding they are to do it; and another sufficient man to be put in the place of the pilot; and if there be a fault in doing thus, the general to answer it.

31. If any of our ships fetch up an enemy, and fight her, the ship that shall next come to board her on the other side, shall share in the pillage, the jewels, and money, not exceeding an hundred ducats; the arms of them taken, and apparel to be theirs, so it be not stuff uncut: and whosoever shall light upon jewels and stuff, to make it known in three days; if not, to lose his pay, and be punished; and what he has taken to be divided, according to the king's instructions.

32. A ship that takes a prize, no other ship shall have to do with her, but follow the rest, if there be more; but if he chance to go on board her, and take any thing out of her, he shall pay the captain four times the value of it.

33. If any such ship yield, not to board her, but to send on board to fetch away the prisoners; and such pillage as is in her to be divided, according to the last article; and he that puts himself aboard without leave, shall lose his pay, and be punished; and if he will do it *per* force, it shall be lawful for the company to kill him; and in like case, if a man shall go into a boat without leave, to be killed.

34. The first, second, or third man that enters a ship, shall have a jewel given

him, according to the discretion of the general.

35. Whosoever enters an enemy's ship without arms, fighting, shall lose all that he gets in her, and his own cloaths beside.

36. If an admiral give chase, and suddenly tack about, or lie by the lee, it is a sign he sees many ships, and every ship must then draw near his admiral in order of fight.

37. The captains of soldiers and ships must command store of tubs of water to stand upon the deck, and blankets and coverlets in them, to be ready to quench any fire that shall happen.

38. Before you come to battle to have your yards slung.

39. If you lose company in foul weather, and descry one another, the greater number to go to the lefs; if by night, the greater number to shew two lights, the one ahead, the other abaft, putting them in and out two or three times, as when they come to anchor in the night.

40. You must have a care of your powder and carriages, and set down the number of every carriage, according to his piece.

41. That every carpenter and caulker be ready with his lead and other things for stopping of leaks.

42. That you make no fire till the sun rise, and then to dress the meat for the company; the soldiers to watch in the day time in the quarters, till an hour before sun-set, and then to put out the fire, and light it no more till the next day.

43. The soldier that has the watching of the fire, shall not suffer any to be carried out of the hearth; and he that does it, to be severely punished.

44. To keep an ordinary light in the bit-take, and a lanthorn under the spare deck, for the soldiers to watch; and he that takes away either, to be condemn'd to the galleys for two years, to serve for a soldier without pay.

45. The captain of the soldiers is to lodge with the captain of the ship; the pilot, master, ensign, and serjeant together, in the second cabin; and the rest of the officers accordingly; and to have an eye over the soldiers for brawling.

46. That no soldier, mariner, nor officer, pass from one company to another, or from one ship to another without my licence.

47. If we discover any vessels, and the admiral make a signal of giving battle, the officers that have the keeping of all kind of stores, shall have warrant from the captain for the delivery of them.

48. For that many hulks and strangers in them are deceitful; therefore, if you find any such suspicion, you shall fire three flashes of powder, and the ships next you seeing it, to repair to you with all speed, to give you succour.

49. And though in my instructions I have given you sufficient order for your navigation, which must not be violated, yet the thing of greatest importance, is, That the captains by sea and land be prudent, vigilant, and careful, as I understand all are in this service.

50. I have ordered that all the squadrons shall carry their flags severally of one colour, that they may be known, and gotten together the sooner; and because sometimes order cannot be given by word of mouth, you are to fix your eyes upon your admiral, and when he sets upon his poop the colours of any of his squadrons, the admiral of that squadron is to behold which way the sign is made by the same colours, that so he may follow any fleet so discovered.

51. If any of the strange ships shall have a leak, let it be searched by the two captains by sea and land; and if they find it to be done on purpose, let him be hanged, and his ship forfeited.

52. That no captain or pilot do set any other course than the admiral directs; and if they do, no excuse shall serve their turn.

53. That no captain, or other, ship any woman, except she be married, and proof thereof brought from the general's priest, upon forfeiture of his office, and serving the king two years without pay.

54. If any servitor stand in need, let him go to his captain; and if he cannot help him, then to the admiral, where he shall have help.

55. If any ship be in distress, then to shoot off a piece, and those next to her to hasten to her; and if they fail, to be severely punished.

56. If we meet with an enemy, great or small, let none of the fleet follow him, but follow the admiral of his squadron, and do as he does, or shall direct, except pinnaces and small ships, which shall be at the disposal of the admiral.

*N. B. Some of these Instructions are frivolous, some of them needless, but most of them tedious, and may be comprehended in fewer words, and to greater purpose: but for my part, I will rather desire to know what they do, than seek to follow and imitate their directions in sea affairs.*

*How to fight at Sea one Ship with another; or in Fleets; or Ships against Gallies; or Gallies against Ships: and the Manner how every Country preserves Men from Danger in a Fight.*

**B**Efore ships and fleets encounter, or enter upon action, these things following are necessary to be done; To divide the

company into three parts; the one appointed to tack the ship, the second to ply the small-shot, and the third to attend the ordnance; but not so precisely, but that one may be assisting to the other in the three several places.

The ship is to be brought into its short and fighting sails, (*viz.*) her foresail, her main and fore-top-sail; for the other sails are troublesome to handle, and makes the ship heel so, that her ordnance cannot be used, beside the danger of firing her sails with arrows and other wild-fire from the enemy.

The master is to appoint a valiant and sufficient man at helm; and to receive his directions from his captain how to order the fight, and where to board; which must be done with most advantage, and according to the placing the enemies ordnance; and therefore it is requisite to have a captain of experience.

Every officer is to do his part; the boat-swain to sling their yards, to put forth the flag, ancient, and streamers, to arm the tops and waste-cloths; to spread the netting, to provide tubs, and to command the company to make urine in them, for the gunners to use in their sponges to cool their ordnance in the fight, and all other things that belongs to his charge.

The gunner is to appoint his officers to their quarters, to have care to their files, budge-barrels, and cartrages; to have his shot in a locker near every piece, and the yeoman of the powder to keep his room, and to be watchful of it, and to have his eye upon any leak that shall happen in hold.

The carpenters are to be vigilant, and to have their oakham, lead, nails, and what else belongs to the stopping of leaks in readiness. He must have a man always ready to sling overboard, if there chance a leak. Or if there be cause to take in the lower tier of ordnance, by the sudden growing and working of the sea, he must have all things ready to caulk the ports.

#### *The Building of Ships.*

There are two manner of built ships: the one with a flush-deck, fore and aft, sunk and low by water; the other lofty and high charged, with a half-deck, fore-castle, and copperidge-heads.

This ship with a flush-deck I hold good to fight in, if she be a fast ship by the wind, and keep her self from boarding: she is roomsome for her men, and yare to run to and again in; but she is not a ship to board, unless it be a merchant, or another ship that is inferior to her in strength and number of people.

For if it happen that she be boarded, and put to her defence, she lieth open to her enemy; for gaining her upper deck you win her, having neither fore-castle, nor other close-fight to retire unto; and in that case the defensive part of the ship is the strength of the fore-castle.

When her deck shall be gained, and her people beaten down into the second deck, the only help is to use stratagems by fire, in making trains of divers fashions to blow up the upper deck, and men upon it; and this did the *Biscainer* I have formerly spoken of in my first book, in the voyage I first went to sea, and the first fight I did ever see, in 1585.

This ship had a flush-deck, fore and aft, which in boarding we won upon her, and her men retiring into her other deck, spent the most part of her powder in making trains to blow us up; which by fortune we prevented, and our fire-pikes took fire before it could be brought to perfection; and thus after twelve hours fight in the night, we being upon a flush-deck, and commanding their scuttles aloft, that they could not come up to us, and they commanding the scuttles below, that we could not go to them, they grew so weary for want of powder, and the death of their people, that they yielded, as I have before described, after twelve hours sail on board her.

As I have said, such a ship that has neither fore-castle, copperidge-head, nor any other manner of defence, but with her men only; that hath no fowlers, which are pieces of greatest importance, after a ship is boarded and entered, or lieth board and board; for the ordnance stands her in little stead, and are as apt to endanger themselves, as their enemy; for in giving fire it may take hold of pitch, tar, oak-ham or powder, and burn them both for company: but a murderer or fowler being shot out of their own ship, laden with dice-shot, will scour the deck of the enemy, and not suffer the head of a man to appear.

The advantage of a ship with a flush-deck, that boards another to windward, is this, She may with her lee ordnance shoot the other under water, and her self in no hazard; the ship that is boarded to leeward of her, is at the other's mercy, and becomes weak in comparison of the other to windward.

Whoever enters and takes possession of the upper deck of such a ship, shall be able to cut down her masts, shrowds, and all things over head; that though he take her not, yet she shall be left a wreck in the sea, and perish.

I will make a comparison of the *James Regis* of his majesty's, (of whom I will say,)

that for her mold and condition, she is a paragon of ships, and not to be equalled; but in her built with a flush-deck, and her close-galley abaft, she is to be excepted against in a defensive part; but how it may be amended, and she be made serviceable, as well for defence as offence, I will refer to my own direction, with his majesty's approbation; though something I will say of her close-galley, that is made only for a shew, and to accommodate captains, when I shall have occasion to treat of galleys.

The only strength of the *James* at this present is in her broad-side, where she hath two brave platforms of ordnance to over-dare any ship to board her; nor no enemy in discretion will do it, if he can find a weaker part in the ship to attempt: but suppose she be boarded in her prow, or abaft at the poop, and be entred by more men than the hands of her company can resist, she neither having fore-castle ahead, nor close-fight abaft, all must rest upon the strength and valour of a few men; which if they be overcome, both ship and they must fall into the hands of an enemy, in the manner I have shewed.

The best manner of a fight in a ship of a flush-deck, or any other, indeed, being to windward of his enemy, is to bring himself within pistol-shot of her, and to ply her and her ports with small-shot at that distance; to lade his ordnance, some with musket-bullets, others with cross-bar, and langrel-shot, or billets, to be the destruction of men; but to avoid boarding or being boarded: this I hold the best manner of fight betwixt ship and ship; it will make short work, and the quarrel will be soon decided; as fighting further off is like a *Smithfield* fray, in times past with sword and buckler, which is nothing but the wasting and consuming of powder to no purpose.

A high-built ship is the better for these reasons, majesty and terror to the enemy, more commodious for the harbouring of men; she will be able to carry more artillery, of greater strength within board, and make the better defence; she will overtop a lower and snug ship; her men cannot be so well discerned, for that the waste-cloths will take away the view and sight of them.

And lastly, to speak of a ship with three decks, (thus it is,) She is very inconvenient, dangerous, and unserviceable; the number and weight of the ordnance wrings her sides, and weakens her: it is seldom seen that you have a calm so many hours together as to keep out her lower tier, and when they are out, and forced to hail them in again, it is with great labour, travail and trouble to the gunners, when they should be fighting; she casts so great a smoak within board, that people must use their

their arms like blind men, not knowing how to go about their work, nor have a sight of the ship with whom they encounter.

*How to preserve Men in Fight.*

Several nations have several ways to preserve their men in fight at sea: the *French* use to stow half their soldiers in hold, and to draw them out, causing the others to retire as there shall be occasion or necessity. This I hold dangerous, troublesome, and inconvenient, when all men are otherwise busy in their several places, to pass to and again with their matches lighted, which may unhappily fall on something to take fire.

The *Spaniards* imitate their former discipline at land; as namely, a van-guard, a rear-guard, and a main-battle; the fore-castle they count their head-front for van-guard, that abaft the mast the rear-guard, and the waste their main-battle, wherein they place their principal force.

This in my opinion will breed great disorders, especially if the ship should fight with all her sails standing; for the labour of the mariners in tacking and handing their sails will confound them, that they know not what to do; but if they fight with their small sails, it will prove the better; but howsoever here is no provision for safeguard of men, who lie open to their enemy.

The *Dunkirkers* use in fight to place their small-shot flat on their bellies upon their decks, that the shot, great or small, coming from an enemy, shall have only their head for their aim: this is to be allowed of in small ships, that carry not many men nor ordnance; but inconvenient in greater vessels, where men are ever in action, running and stirring up and down in the ship.

There is a device made with a plank of elm, because it does not shiver like oak; this plank is musket-proof, and removed with trunks from one part of the ship to the other, which is a good safeguard for small shot: but in my opinion I prefer the quailing of cables on the deck, and keeping part of the men within them, (as the *French* do theirs in hold,) above all the rest; for the soldiers are in and out speedily, upon all sudden occasions, to succour any part of the ship, or to enter an enemy, without trouble to the sailors in handing their sails, or the gunners in plying their ordnance.

The *Hollanders* of late years have got a reputation at sea; though for their warlike affairs they have little deserved it, as I have shewed in the first book; for they never made fight of six ships to six, as is there to be seen; but now of late, and since the truce ended with *Spain*, and that the *Dun-*

*kirkers* are grown strong and powerful by sea, they have often encounter'd ship to ship, or two to two, but never with fleet, and more to the commendations of the *Dunkirkers* than themselves.

Whereas I have shewed every country's manner of fight at sea, and their care to preserve their men from danger, and to annoy the enemy with advantage, instead of cables, planks, and other devices, to preserve their men, the *Hollanders* wanting natural valour of themselves, use to line their company in the head, by giving them gunpowder to drink, and other kind of liquor to make them soonest drunk; which, besides that it is a barbarous and unchristian-like act, when they are in danger of death to make them ready for the devil, it often proves more perilous than prosperous to them, by firing their own ships, or making a confuseness in the fight, their wits being taken from them; whereas if they had been sober, they might have fought in good order.

*The Direction of a Fight in a Naval Battle.*

The most famous naval battles these late years have afforded, were those of *Lepanto* against the *Turks* in 1577. of the *Spaniards* against the *French* at the *Tercera* islands in 1580. and betwixt the armada of *Spain* and the *English* in 1588.

In these encounters, wherein the *Spaniards* had the chiefeft part, as I have said before, they imitated the discipline of war by land, in drawing their ships into a form of fight, which, in my opinion, is not so convenient; though I confess in a sea battle, that shall consist of galleys, in a calm, it is better to observe that order than in ships; for men may as well follow direction by their hands in rowing, as an army by words of the tongue speaking, or their legs moving.

But ships which must be carried by wind and sails, and the sea affording no firm or steadfast footing, cannot be commanded to take their ranks like soldiers in a battle by land.

The weather at sea is never certain, the winds variable, ships unequal in sailing; and when they strictly seek to keep their order, commonly they fall foul one of another; and in such cases they are more careful to observe their directions, than to offend the enemy, whereby they will be brought into disorder amongst themselves.

Suppose a fleet to be placed in the form of a half-moon, or other proportion, to fight, if an enemy charge them home in any of the corners of the half-moon, they will be forced to bear up room into their main battle; and then will ensue dangers and

and disorders of boarding one another; in-  
somuch that it will not be possible for a  
general to give new directions, but every  
ship must fight at its will, not by com-  
mand.

For the avoiding of such confusion, the  
instructions of a general ought not to con-  
sist of many words; for the greatest advan-  
tage in a sea fight is to get the wind of one  
another; for he that has the wind is out of  
danger of being boarded, and has the ad-  
vantage where to board, and how to at-  
tempt the enemy: and thus did the mar-  
quis of *Santa Cruz* labour to do three days,  
before he could get the wind of *Monfieur  
l'Estrous* at the *Tercera* islands, whom he  
afterwards overcame, and had a great victo-  
ry over him.

The wind being thus gotten, a general  
need give no other directions than to every  
admiral of a squadron to draw together  
their squadrons, and every one to under-  
take his opposite squadron, or where he  
shall do it for his greatest advantage; but  
to be sure to take a good distance of one  
another, and to relieve that squadron that  
shall be overcharged or distressed.

Let them give warning to their ships not  
to venture so far as to bring themselves to  
leeward of the enemy; for so shall they ei-  
ther dishonour themselves, to see such a ship  
taken in their view, or in seeking to re-  
lieve her they shall bring themselves to lee-  
ward, and lose the advantage they had for-  
merly gotten; for it will be in the power  
of the enemy to board them, and they not  
to avoid it; which was the only thing co-  
veted by the *Spaniards* in our time of war,  
by reason of the advantage of their ships,  
as I have before expressed.

The strict ordering of battles by ships  
was before the invention of the bowling;  
for then there was no failing but before  
the wind, nor no fighting but by boarding;  
whereas now a ship will fail within six  
points of thirty two, and by the advantage  
of wind may rout any fleet that is placed in  
that form of battle.

*A Fight with Galleys to Galleys, and Galleys  
to single Ships.*

There is no precedent of these latter  
times that galleys have been in use in our  
seas, till the latter end of the queen's reign,  
when two squadrons of galleys were brought  
out of *Spain* into *Flanders*, the one in the  
year 1599. the other in the year 1602. the  
latter commanded by *Frederick Spinola*,  
brother to the late marquis *Spinola*, who af-  
ter was slain in the same galleys.

All the designs of the *Spaniards*, under-  
taken against *England* by sea in the days of  
queen *Elizabeth*, proved unlucky and fruit-

less, the reason thereof to wise men is not  
to be marvelled at; for their actions have  
been grounded on so little judgment, that  
it was no great art to divine their evil suc-  
cesses before they were undertaken.

Let this act of bringing down the gal-  
leys aforesaid be paralleled with their great  
expedition in 1588. and it will appear they  
both failed in one kind, (that is to say)  
for want of an able and secure port to en-  
tertain them upon their arrival in *Flanders*;  
for though the galleys had the harbours of  
*Graveling*, *Dunkirk*, and *Sluice*, at that  
time, yet such is the nature of these ports,  
that no vessel of their draught can go in or  
out of them but from half-tide to half-  
tide; for they are bare harbours, and all  
the rest of the tide they are dry; so as if  
a galley observe not her just time of en-  
trance, she is exposed to the mercy of the  
sea, the danger of the shore, or to fall in-  
to the hands of an enemy; and therefore  
whosoever thinks to make use of galleys,  
and not to be secured of a port at all times  
and tides, will shew himself weak in sea  
affairs, as the *Spaniards* have done in this,  
and in their expedition of 1588. as I have  
before declared.

The proper use of galleys is against gal-  
leys in the *Mediterranean* sea, that is sub-  
ject to calms, and where both turks and  
christians strive to exceed one another in  
that kind of vessels, he accounting himself  
master of those seas that has the greatest  
number, and best ordered galleys.

And such was the goodness of God to-  
wards the christian commonwealth, that in  
the battle of *Lepanto* in 1577. he gave a  
most happy and victorious overthrow to  
the cruel and misbelieving turks, who since  
that time have not been able to hold up  
their hands or heads against the christian  
forces within the *Mediterranean* sea.

Next to the valour and well marshalling  
order of the christians navy of galleys, the  
next attribute is to be given to the galleas-  
ses of *Venice*, which, though they were but  
six in number, yet such is the advantage of  
those vessels against galleys, that they did  
the christian galleys treble the service of  
their number.

You must know that a Galleass is built  
like the *Vanguard* or *Rainbow* of his ma-  
jesty's, low and snug by the water, and car-  
ries the force of a ship in men and ordnance;  
but the thing that gives her advantage in  
fight, is her oars; not that there can be ex-  
pected any swiftness in rowing, but with  
her oars she is of that agility, that she is  
able to wind about as she sees occasion to  
damnify her enemy; whereas a ship lies  
like a log of wood, not able in a calm to  
help herself, or to have the help of a rud-  
der to guide her.

If galleys be forced to fly from other galleys, and not of speed to overgo them, they fall into the mercy of those that chace them; for it is to be considered, that the strength of a galley is in her prow, where she carries her ordnance, as I have before declared; for unless it be some few choice ones of *Malta* and *Florence*, no other christian galley carries artillery to fire astern; so that of necessity those galleys chased must either yield, be burnt, or sunk.

In a desperate case, where galleys in battle are in danger to fall into the hands of an enemy, the present remedy is to proclaim liberty to all the slaves, and to put arms in their hands to fight for their defence, and to deliver them out of chains, and make them freemen: this was the safety of Don *John of Austria*, in the great and famous battle of *Lepanto*.

The chief annoyance that can be done a galley in fight, is to seek the destruction of the slaves and oars; for without them galleys are of no use; and therefore whosoever fights with galleys, must seek with cross-bars and langrel-shot, to hurt and spoil their men and oars.

And in this case a ship that carries her ordnance low, and her hull high-built, has a great advantage of a galley, for her ordnance will lie level with her oars; and if she have the fortune to take away a row of them on either side, she falls into the mercy of the ship; or if she be desperately forced to board the same ship, she will not be able to enter her, in respect of her height and high-carving.

As I have promised before, I will take occasion to speak something of his majesty's royal ship the *James Regis*, and her disadvantage to make a defensive fight, as she is now built.

Ships of much less burden than the *James* have four pieces of ordnance placed to shoot astern, as namely, two in the gun-room, and the other two in the upper gun-room, which is commonly used for a store-room, lodgings, and other employments for a general or captain's use, and his followers; which is done without prejudice to the two pieces.

Above these two gun-rooms aforesaid, was placed the captain's cabin, with the open galleries astern and on the sides, that fowlers and lesser pieces might be thrust out for defence, and small-shot placed to defend that part of a ship.

In these two gun-rooms aforesaid, where the four pieces are usually placed, the *James* carries only two, and that is in the lower gun-room; for the upper gun-room is converted into the captain's cabin, and a rafter and two sided galleries are made close, that cannot afford so much convenience as

for a man to look out of them, but through some narrow windows; insomuch, that if a general or captain have occasion to give or receive directions, he must do it upon the poop or the deck of the ship, to the great inconvenience, and loss of time and opportunity, what sudden occasion soever should offer.

Moreover, if a ship by mishap shall take fire, out of her open galleries water may be suddenly drawn, and prove both the safety of ship and men; whereas being close, as now they are, there will be no remedy to quench them. It may be compared to a round pigeon-house, into which people fly from an enemy for refuge; and what defence can such a house make, that is compassed about with foes? No more than to yield to fire and water.

Now compare the *James*, by the true description I have made of her, but with one or two galleys in a calm, having no ship near to assist her, considering she carries but two pieces in her gun-room, with what ease and little danger a galley may run up in her stern, and with her prow and small-shot put her from her two pieces; for every galley carries four pieces ahead, besides her cannon in the cruzea, which piece lies more to the advantage than the other two, in that they are placed low by the water, and the galleys standing still, they may shoot as steady out of her as out of a platform.

Indeed this cannon in the cruzea is of greater danger and annoyance than all the rest; for it lies at an even stay, and not to be moved nor traversed one way or other; and the use to be made of it is for the master to bring the mast of the ship and the mast of the galley both in one, and then to call to the gunner to give fire; by which means it is impossible to miss the ship, and hazard sinking of her.

And as the *James* lies open to galleys, as I have shewed, so does she in like manner to such ships as shall board her, either afore in her prow, or abaft in her stern; where she has no defence, either of her fore-castle or close-fights. There are many other necessary uses to be made of an open gallery, which at this time I forbear to speak of, and will return once more to treat of the nature of galleys.

If it were in my choice, I would rather have two ships of two hundred tons each to encounter six galleys, than one ship of a thousand tons to fight two galleys, for these reasons;

My two ships of two hundred tons, I will bring athwart the hawse of one another, that wheresoever the galleys shall charge me, I will have a broadside to play upon them; whereas in one ship alone, I have

have only my stern for my defence, where two galleys with their small-shot will soon beat the gunners from their ports, with little danger to themselves; for no great number of small-shot can play upon them out of the narrowness of the poop; by which means they will burn, sink, or destroy any such ship, with long fire-pikes made on purpose.

And for security of myself and men, I will displace three or four banks on a side in my galleys, and in that space make a bulwark with gowns, beds, sails, and other things, that no shot from the ship shall do me hurt.

And if in fight I shall happen to be shot under water, it will be an easy thing to stop any such leak, by making the slaves heel all on one side of the galley; so that if it were as low as the keel, I will come speedily to it, and stop it.

*How to employ such People and their Stocks in Gallies, as are sent to Houses of Correction; and the Use that may be made of Gallies in England.*

**W**HOEVER have the charge of these houses, seek only their own gain, not the use for which they were instituted. People are punished or pardoned as they are able to gratify their keepers: their labours or liberties are according to their abilities; for as I have said, the rich buys his ease, the poor is threaten'd with cruelty, which has caus'd that desperateness in men towards their keepers, that to be revenged they have slain them; and yet I see no decrease of vagabonds by the course taken in the houses of correction.

*The Benefit of employing these People and their Stocks in Gallies in England.*

**T**HE time of mens imprisonment in galleys is to be limited, some for life, some for years, more or less, according to their offence, but none under seven years; by this means there will be a riddance of lewd people for life or years.

At the end of which time they ought to procure services, or be bound to work in their occupations, which they shall be taught in their galleys; but if they shall refuse it, and continue still loitering, then to send them into *Virginia*, or other colonies planted by us.

If they shall escape out of their galleys before the expiration of their time, to have a proclamation, That no man, upon certain penalties, should harbour or give them entertainment; and that they may be known from others, they must be shaved both head and face, and marked in the cheek with

an hot iron, for men to take notice of them to be the king's labourers; for so they should be term'd, and not slaves; and if any such be found, that cannot give a good account of his discharge out of the galleys, to be apprehended and sent back again; which would be a means that none of them ever after will offer to escape.

This course being carefully observed, the vagabonds will be soon lessen'd; for the terror of galleys will make men avoid sloth and pilfering, and apply themselves to labour and pains; it will keep servants and apprentices in awe; it will take away the occasion of pirates and piracies; it will save much blood that is lamentably spilt by execution of thieves and offenders, and more of this kingdom than any other; it will take away the occasion of women-vagabonds, when such rogues and thieves shall be restrained; for such men are enticers and drawers of women to lewdness. If all these mischiefs may be prevented, and the kingdom strengthen'd, without further expence than now it is, no man but must commend this project, and give his furtherance to it.

*Provisions to maintain the King's Labourers, and the Labour they shall be put to, Winter and Summer.*

**T**HEIR diet shall be certain, not according to the miserable rate they are allowed in houses of correction, where it is proportioned according to their earning by their labour; for in the galleys each man shall be allowed two shillings and six pence a week for his diet, to be husbanded by men appointed by the labourers themselves for their best advantage.

Every galley shall be allowed a surgeon, a physician, and an apothecary-general for them all: their apparel to be two suits a year, the one for summer, the other for winter, with a gown of frize: their labour to be at the oar in summer; and when they are not so employ'd, they may lawfully use any means for their maintenance, as in knitting, sowing, or any other such kind of work; for no summer labour, more than rowing, shall be required at their hands; and by the way I will tell you for a jest, That when I was prisoner in the galleys of *Spain* in 1591. all our *Englishmen* that were thither committed, amongst other occupations, framed themselves to the trade only of making dice, as an occasion to set the *Spaniards* together by the ears.

In winter they must be had ashore, and kept safe in some strong castle, where lodgings and beds, with necessary stocks and tools must be provided to set them to work, as namely, forges for smiths, leather for shoe-

shoemakers, hemp to make ropes, mills to grind corn, or any other thing that can be thought of for their benefit: and for such as have been bred to husbandry, they may be hired to farmers for their winter's work, binding the farmers to return them at the season of the year to the galleys; which they may securely do, for it will not be in their powers to escape, by the course which is formerly taken.

*The Use of Gallies in time of War.*

I have formerly in the second book said something concerning the use of galleys, which you will find there; and in this book the manner of fight with galleys. But having occasion to treat more largely of that subject, I will reiterate something that I said before concerning galleys.

1. Gallies are of no use to encounter a fleet at sea, in respect of their strength, but against single ships in calms, that cannot come to rescue one another.

2. The use of galleys is to tow a fleet out of harbour which is kept in by wind and tide, which is a thing of consequence either in peace or war.

3. The use of galleys is the conveniency to land an army, both suddenly and safely; and to take advantage in landing, both when or where they list: by example of the marquis of *Santa Cruz*, who arriving at the *Tercera* islands, attempted landing at *Angra*, the chief town of that island, and whether the inhabitants drew their forces to withstand him; but when he saw and imagin'd the other part of the island lay open for his entrance, he altered his purpose, and suddenly winded his galleys about, and landed at *Leplala*, five leagues from thence, without resistance.

4. The use of galleys is to annoy an enemy in his landing, by cutting off his boats and men, as they shall offer to land: and the like would have happened to us at *Cadiz*, if we had landed where we attempted it the day before, and where our projectors of that voyage had designed us, if we had not been prevented by foul weather; for there we found four galleys placed, to lie betwixt the shore and us, to cut off our boats, and thereby to have overthrown our action.

5. The use of galleys is against a fleet at anchor, who may tow fireships amongst them, and either burn, or put them from their anchorage; and it may happen in a place near shoals or sands, or upon a lee shore, and so destroy a whole navy.

6. The use of galleys is to prevent the like stratagem; for if such ships be set on fire, with galleys they may be rowed unto, and cast hooks on board them, and

so tow them clear of their fleet, where they may burn without endangering the ships they attempt.

7. The use of galleys is in succouring an island that is invaded by an enemy; as for example, The *Isle of Wight*, with galleys, may be suddenly supply'd both with men and ammunition from the main land, in spite of what ships or force shall lie to hinder or intercept them.

8. They ought to be kept for reputation; for as his majesty is king of all kingdoms for goodness and greatness of his navy, so it should be said there is no kind of vessels that other princes can shew, but what his majesty has the like in use; and it will be the more strange, in that no country nor harbour in *Europe*, to the northward of *Lisbon*, can shew the like.

If at any time a war happen betwixt his majesty and the king of *Spain*, or betwixt him and the *Hollanders*, having the port of *Flushing* and *Sluice* for the receipt of our galleys, we may much annoy the harbours of *Flanders*, and their trade; or having the ports of *Ostend* and *Dunkirk* to enter, we may as much, or rather more, impeach *Holland*, but especially the province of *Zealand*, and the island of *Wakerland*; for besides the hurt we shall do them at sea, we may watch and take the height of a spring-tide in a calm, and be able to cut their banks to give the sea entrance into their country, and hazard their destruction.

But speaking of galleys and *Lisbon* in the eighth article, I will say something that had been more proper to have been inserted in the first book, where the taking of the Carrack is treated of; because one of my scopes, in that book, is to shew the errors committed in the warlike sea-actions betwixt *England* and *Spain*.

In the describing the manner of that fight, you shall find, that the eleven galleys were placed under the neck of a rock, as we should enter into the road; and that at my coming to an anchor, I routed and forced them to fly under the castle of *Zezimbra*, where they drew themselves into a body, as they had done before; but yet they found my ordnance of the same nature as when they were under the rock, for when I hit one of them, my shot passed through most part of the rest, with so great hurt to them, that, in conclusion, disgracefully they quitted the road, and escaped to sea, two excepted, which we took and burnt.

But if these galleys had, when they quitted the neck of the rock, as I have said, retired, whither they did, under the protection both of the castle and carrack, and instead of linking themselves, as it were, together, had divided themselves one hundred paces from one another, and play'd

play'd upon us with their prows, each of which carried five guns, they had been a narrow mark for us to hit; and what hurt we could then do them, was only to her we lite upon; whereas in the course they took, hitting upon one, we pass'd through them all.

And moreover, where they retired, they brought themselves into shoal-water; so that our ships could not come at them; and if they had not quitted the road, they would have cut off all treaty betwixt our boats and the carrack, and given relief to the carrack from the shore, that it had been impossible for us to have taken her. The *Spaniards* may allow of this oversight, as one of the greatest they committed during the war.

*Other Uses Gallies might be put to.*

Galleys may attend his majesty's navy at all times when they go to sea, from *Chatham* till they bring them clear of the sands; and if it happen any of the ships should unluckily come aground, by the force of galleys she may be instantly haul'd off again, without hurt to the ship; and in this case a galley might have been the preservation of his majesty's ship the *Prince Royal*, at the time the queen of *Bobemia* went over, who struck upon a sand at the *Nes*, and put her into great peril, if it had not been for present help of boats of other ships of the kings that rid there.

Galleys may pass the seas in a calm, when ships and barks cannot, and boats dare not for fear of enemies; and so prevent the surprize of packets or intelligencies, as lately we found, to the prejudice of merchants affairs, and dishonour to the king.

The galleys may at all times, both winter and summer, carry provisions for his majesty's ships from *London* to *Chatham*, and ease the charge of transportation; as also in summer they may do the like to his majesty's ships at *Portsmouth*; for barks often go in danger, and more especially if we have wars with *France*, *Holland*, or *Dunkirk*.

*The fittest Place in England for Gallies.*

Because I have formerly named the *Isle of Wight* by way of comparison, I will say of that island, that it is not only the best and fittest place in *England*, but in *Europe*, to entertain galleys, considering the two harbours within it, the one *Newport*, and the other *New-Town*; besides three others in the main land opposite to it, viz. *Portsmouth*, *Hamble*, and *Hampton*, where galleys may ride and float without coming aground, which no other harbour can do betwixt the river of *Thames* and *Portsmouth*.

For suppose the galleys coming betwixt the *Thames* and the *Isle of Wight*, are taken

with a storm at fouth, or being chased by an enemy, and forced to seek an harbour for succour; if they bring not the tide with them they perish, either upon a lee shore, or upon the pursuit of an enemy: and as I have shew'd, there is no place to compare to those aforesaid for the receipt of galleys; so there is no place so commodious for the labourers to reside in the winter time as those; adding to them the castle of *Portchester*, two or three miles from *Portsmouth* by water, being a place secure for the labourers to abide in; room sufficient to entertain five or six hundred of them, with their manufactures, instruments, and tools, that may be set up to get their livings withal.

*A Proportion of Soldiers and Sailors for five Gallies, and the Charge to maintain them.*

You cannot allow less than fifteen soldiers and an hundred labourers for each galley, every labourer to have allow'd him 2 s. 6 d. per week, for his diet, two suits of cloaths, and a gown; one physician-general, and every galley its surgeon, with ten sailors to hand the sails; the soldiers not to have any allowance of pay but in victuals; for they should be such soldiers as have entertainment for hurt and lame soldiers in the shires.

*How this Money may be raised.*

A certificate from all the shires in *England*, what the contribution of the houses of correction do amount unto by the year, and to have it thus employ'd in galleys; and what shall want thereof to maintain them, to be saved out of vain and superfluous gormandizing, which is too much used in many set feasts, and more to the shame than commendation of our nation, especially in the halls and companies of *London*; the half of which may very well be spared and employ'd to this necessary use; for people may meet in a friendly conversation to maintain their customs, and to determine their affairs, with half the expence they are now at.

Thus will no man be put to any charge, nor any feel the loss of it; for there is no body invited to these feasts, of so mean a rank and condition, as to value the gift of five or six meals, more or less, in a year.

Another means to raise money towards this good work, is, out of hospitals, now become a marvellous abuse; and that especially erected by *Sutton* in the *Charter-House*; for no man is now admitted into it, but such as can buy it for money; and having money, there is no exception to his quality, whether young or old.

Neither is this hospital alone, but all others in the kingdom, which I refer to the

examination and reformation of those that shall be appointed to overlook them.

I verily believe, if the founders gifts of those hospitals were now to be bestowed, and galleys, upon the reasons aforesaid, to be erected, they would, or such hereafter will, convert the charitable benevolencies to the use of galleys, rather than to hospitals, since they live to see the abuses of such houses.

For what they shall give to maintain galleys, it would prove a strength to the kingdom, a means to save the lives of many men that otherwise should die by the gallows; a remedy against enormities, thefts, and idleness of people; a cause to make safe and peaceable travelling by land and sea, and a course to relieve more poor people, five to one, than the hospitals do.

There are many other ways, too tedious to set down, how to uphold this work, that shall no way prejudice either king or commonwealth; which I refer to after-times to consider of, when it is on foot by certain commissioners that must be appointed for that purpose.

*The Ceremony of wearing the Flag, and the Use that is, and may be made of it.*

I Have formerly shewed, when I treated of the office of the vice-admiral, how every admiral, and admiral of a squadron, was to carry their flags, and each ship under them in their squadron: now it remains for me to speak more particularly of the flag, and the use and custom of it at sea; for it is the standard, under which all the fleet marches, as soldiers do under their ensign by land.

*England*, as I have declared, truly challenges the prerogative of wearing the flag, as the sole commander of our seas, and so has held it, without contradiction, time out of mind.

The privileges are these, That if a fleet of any country shall pass upon his majesty's seas, and meet the admiral's ship serving on those seas, they are to acknowledge a sovereignty to his majesty by coming under the lee of the admiral, by striking their topsails, and taking in their flag; and this hath never been question'd, out of stubbornness, resisting the king's authority; but rather out of want of knowledge and ignorance, as appeared in the case of king *Philip II.* when he met the lord admiral of *England*, when he came to marry queen *Mary*.

But though this privilege be granted to his majesty, and his deputy upon the seas, yet every ship of the king's, that serves under an admiral, cannot require it, if he be out of sight of the admiral; but the other stranger, be he admiral or no, is to strike

his topsail and hoist it again, to any one ship of the king's that shall meet him.

Or if any such ship or fleet belonging to any other prince, shall arrive in any port of his majesty's, or pass by any fort or castle of his, in their entrance, and before they come to an anchor, they must take in their flag three times, and advance it again, unless the admiral's ship be in the same harbour, and then they are not to display it, but to keep in so long as they shall remain in the presence of the admiral. But if any other ship of his majesty's be there but the admiral, they are not bound to keep in their flag, but only to strike it thrice, as aforesaid.

This case bred a great question in 1613. when the earl of *Gundamar* came ambassador into *England*, being accompanied by two galleons of the queen of *Spain's*, who arrived at *Portsmouth*, and as he passed by *Stokes-Bay*, there rid a ship of the king's, that was neither admiral of the narrow seas, nor had employment under his commission.

This ship required the two *Spaniards* to take in their flag, as a duty due to his majesty's prerogative on the seas, which they refused to do, only they struck their topsails, till they were compelled to it.

This act was complained of to my lord admiral by the ambassador, who found himself and his master injured by it. It pleased my lord admiral to confer with me about it; and out of his long and ancient experience concluded, That they were not bound to strike their topsail, as they were required, unless the king's ship had been admiral of the narrow seas: and this I set down from the long experienced admiral the earl of *Nottingham*.

But I am not lavish in speaking of it, whensoever I hear an argument upon this subject of the narrow seas disputed; because in these latter times, both the *French* and *Hollanders* seek to usurp on his majesty's right; I will therefore wish, that his majesty's ships would take more authority upon them than is due, because I would have their insolence curbed.

If any merchant's ship shall neglect to do their duty, as aforesaid, either to ship or pinnace of his majesty's, that ship or pinnace is to fire at her, and to bring her to acknowledgment of her error by force; which being done, the ship thus offending is to pay double the value of powder and shot spent against her by the king's ship.

If any ship of the king's shall pass by any fort or castle on the shore, out of ancient and foolish custom, they have used the same reverence that merchants and strangers use to do, save only striking their flag, which

is a thing improper, and indeed most ridiculous for one of the king's ships to strike to his castle, both of them being his own; and it is as much as for a man to put off his hat to himself.

And besides, it may happen at such a time, tide, and place, as the striking a top-sail may endanger a ship upon a rock, shelve, or sand; and therefore necessary to take away this ceremony, that has neither ground nor reason in it.

All admirals in the king's service, were wont to carry antiently the *St. George's* flag in the head of the topmast; but since king *James's* coming to possess this crown, he has added to it the cross of *St. Andrew*, as due to *Scotland*, which though it be more honour to both the kingdoms to be thus linked and united together, yet in the view of the spectators, it makes not so fair a shew as the cross of *St. George* only, if it would please his majesty to consider it.

Besides those crosses of *England* and *Scotland*, carry'd as aforesaid, the cross of the arms of *England* is peculiar to the lord high admiral of *England*, who is, and no other, bound to bear it when he goes to sea, which flag, in truth, carries a princely shew when it is display'd.

As the lord admiral of *England* has the only privilege to wear the standard of *England* in the main-top, so has he likewise power to permit and suffer another man to wear the bare *English* flag in the main-top in his presence; which case I am able to instance; and, besides this that followeth, there are few precedents, as I conceive.

In the year 1596. and the *Easter* before the taking of *Cadiz* in *Spain*, *Calais* in *Picardy* was beleaguered and taken by the archduke *Albert*, and his *Spanish* forces, which made the queen weigh how much it concerned her, not to permit the neighbourhood of the *Spaniard*, her then enemies, so near her: hereupon with all celerity she rais'd land forces, to give succour to *Calais*, and appointed the earl of *Essex* commander of them. No nobleman or gentleman of spirit, but voluntarily put himself into the action, as, namely, the earl of *Southampton*, the lord *Borowe*, the lord *Monjoy*, the lord *Riche*, the lord *Compton*, the lord *Burke* of *Ireland*, *Don Christopher*, son to the pretended king of *Portugal*, with divers others, who were on board me in the *Rainbow*, at supper, and our fore-sail cut to stand over, even as news was brought of the taking of *Calais*.

The lord admiral, who was never backward to do his prince and country service, hasten'd down to *Dover* to secure the seas, and embarked himself in the *Vanguard*, as my lord of *Essex* had done in the *Rainbow*

with me. Whereupon I took in my flag, and acknowledged my duty to my lord admiral, notwithstanding the greatness of the persons on board me; which my lord admiral perceiving, commanded me, though my lord of *Essex* should oppose it, to wear the flag with him equal in the top, as long as we were in company together, which I did, though at first it was resisted by my lord of *Essex*.

And though the journey to *Cadiz* succeeded immediately after this, and my lord of *Essex* had the privilege to wear the *English* flag in the main-top, in company of my lord admiral, who went likewise in that expedition, yet the time and case must be considered; for they had both equal authority by land and sea, under the great seal of *England*, which made their command alike.

In the year 1588. when the *Spaniards* appeared on the *English* coast with their fleet, a galleon of theirs being distressed, arrived in the port of *Havre de Grace* in *Normandy*, which being known in *England*, three ships of the queen's, and one pinnace were sent to surprize her in harbour, as I have shewed before, myself being in that fleet.

Mr. *Knevet*, a gentleman of the queen's privy-chamber, was sent to sea at that time, with certain merchants ships, to strengthen my lord admiral's fleet, fearing the *Spaniards* would return again from the northward, whither they were gone. This fleet of merchants, and Mr. *Knevet*, was to join with four ships of the queen's, of which he was appointed admiral, though it was a merchant ship in which he served.

And that power may the king of *England* grant to any subject of his, notwithstanding his former patent to my lord admiral of *England*; and yet I am of opinion, that within the compass of the narrow seas, if any such admiral shall be appointed by the king, and meet the admiral's ships serving on the narrow seas, who is deputy to the great lord admiral, that such ship there serving, the other is to take in his flag in his presence, who doth wear it as substitute to the lord admiral, within the jurisdiction of the narrow seas, he having a former grant, and supreme authority before the other's employment.

How far the narrow seas extend, is much controverted betwixt the *French* and us, they challenging, rather by words than right or precedent, half the seas betwixt *England* and *France*, as some of *Flanders* do by the same reason; but I could never hear that ever they contested with us about it. *England's* claim to the narrow seas needs no other repetition than I have formerly related.

lated, (*viz.*) a consent of all nations, an everlasting possession, and an invincible power to maintain it.

Though to speak truly, in my opinion, if from headland to headland be measured in *France* with a line, what seas, or rather bays, shall fall within that line, or within them capes, do properly belong to *France*, and may be termed the *King's Chamber*, if so be we had no title to *France* ourselves; but if you will see what share of the sea may belong to them by this measure, it would not be worth contesting for, as may appear by the following:

Beginning at *Calais* cliffs, with a direct line from sea-head to sea-head to the *Hogue*, and from the *Hogue* to *Ushant*; but this last we will not acknowledge, though there were right in the other; for in that bound lie the islands of *Jersey*, an antient patrimony of *England*, and possessed by us near four hundred years; and what title soever *France* can invent to themselves for that circuit of the sea, the same we may plead by *Jersey*, that fronts upon the continents of *France* and it.

A general that shall be invited to banquet on board another ship, or otherwise come on board any other ship, how small soever she be, that ship shall carry the flag of the admiral, and be so reputed, so long as he shall remain on board her; and the flag born in his own ship to be taken in till his return; for it is the man, and not the ship that has the authority of an admiral from a prince.

The shewing or taking in the flag in the admiral's ship, being well considered and resolved of beforehand, is able to direct a fleet in many cases, as fully as though he had given his instructions by writing.

The flag carried under the poop of a ship shews a disgrace, and never used but when it is won or taken from an enemy.

Many times ships wearing contrary flags, and especially the colour of an enemy, it hath wrought many effects to the advantage of him that carries it, or may do again, as occasion offers.

When an admiral is in harbour or road with the rest of his fleet, at the taking in of the flag in the evening, and shooting off a piece of ordnance, he sets his watch, which his fleet must take notice of, and accordingly set their watch. The like is to be done at the discharge of the watch in the morning; as also when he shall weigh anchor, and set sail.

The flag in the top half furl'd up, and so worn, some are of opinion, is as great an acknowledgment, as though it was absolutely taken in; but neither that ceremony, or the taking in the flag, and advancing it thrice, gave me satisfaction when I served

on the narrow seas; but I compelled the *Hollanders* to take in their flag absolutely; which was the beginning of their malice towards me.

Many times an admiral will take in his own flag, and suffer a smaller ship to wear it as admiral, to deceive his enemy, till he hath brought him into his clutches.

In some cases an admiral will suffer many ships to wear their flag as admirals, and seeming to be of divers nations by their colours, because they shall not be suspected to be a fleet of war, till he has an opportunity to charge them, and then to take upon him his right shape.

*Laws enacted for the Punishment of Offenders at Sea, in the Days of King Richard I. in his Expedition to the Holy Land.*

IT shall now appear, that the war by sea is no new practised thing by this nation, as I have shewed in the days of *Edward III.* when there were armed out of *England* a thousand warlike vessels, a number far exceeding us in this age; and yet not equal to us, if we consider what art, experience, and skill hath taught us in sea-affairs since then, that the invention of artillery, shot, and powder has been in use; for by all likelihood and reason, the condition of ships then and now, is much differing; and besides, since the days of *Edward III.* new worlds have been discovered, able to equal more than the rest known before, which discoveries have caused greater traffick, and by consequence the increase of more ships than in those antient times: and for the furtherance and ease of navigation, to perform their voyages with greater celerity, the secret of the bowling hath been found out. I am therefore of opinion, if the goodness of their ships had equalled their numbers, some future sign or other would have appeared for our satisfaction.

Which makes me believe, that most of their ships were made of osiers, or other kind of light substance, and covered with hides for defence and safeguard of the sea: but we may say, That a ship so built, now in this age, cannot be made to brook the waves of the sea, the winds and weather being so outrageous; therefore in all likelihood the difference of times has made the difference of weather; for the weather is like the world, and people dwelling in it, that as they grow old, they have the less vigour and strength, and consequently will be worse and weaker by the continuance of it, and will by little and little decline, as no doubt it has done since the days of *Edward III.* For there is no old man now living, but will confess, the temper and calmness of the weather in the time of his youth did far

far exceed this of our elder years; and the like will his son do after him, when he come to the state of an old man; and still follow one another as long as the world continues.

Mariners have an observation, That the three years before, and three years after the prime, which happens every nineteenth year, the weather proves more boisterous and stormy than the rest of the time, and every nineteen years worse than the other: then what would a ship do, if she were built after the manner of vessels four hundred years ago, and sent out into the main sea?

But leaving this argument to men of better capacity and learning than myself, I will prove the antiquity of sea actions, undertaken by our nation, and the kings thereof, long before the enterprize of *Edward III.* formerly spoken of: and I will begin with *Julius Agricola* under the *Romans* government, that first sailed about *England* and *Scotland*, and the first that discovered the islands of *Orkney*, which he subdued.

The second was the great action of king *Edgar the Saxon*, and king of this land, who with eight hundred sail of ships, sailed round *England* and *Scotland*, not once, but often.

And the third I am to take notice of, is *Richard I.* and his glorious expedition to the holy land, against the heathen *Saracens*, in which expedition he established the following laws; which in some points have continued to this day, but not with that rigour and severity, as in times past.

*Laws established by King Richard I.*

- I. Whosoever shall kill any man a ship-board, shall be bound to the back of the party killed, and thrown into the sea with him.
- II. If one should be killed on land, the party should be bound in like manner, and bury'd alive with him killed.
- III. Whosoever shall draw any knife or weapon, with an intent to draw blood, or by other means shall draw blood, shall lose his hand.
- IV. Whosoever shall strike one, without drawing blood, with his hand or otherwise, shall be ducked three times at the yard-arm.
- V. Whosoever reviles or curses another, for so often as he has reviled, shall pay so many ounces of silver.
- VI. Whosoever steals shall have his head shorn, and boiled pitch poured on it, and feathers strew'd upon the same, whereby he may be known; and at the first landing-place where he shall come, there to be tow'd ashore.

VOL. III.

Admirals at sea have the same authority as generals have by land, and of as great antiquity: some are of opinion, that admirals were instituted in *Greece* by *Constantine the Great*; though modern times say, they were erected first in *France*, others in *Spain*, and in the year 1246. in the reign of *Don Ferdinand III.* But let other countries pretend what they list for themselves, our records and commissions do prove a more ancient right than those of latter times.

*Upon what Occasion Ships should salute Castles, or one another at Sea with their Ordnance; and how the Abuse thereof may be taken away.*

I AM sorry I have the occasion to complain of the lavish and wasteful expence of powder, in saluting ships under a friendly pretence of meeting at sea, more practised of late by our nation, than by any other, though no people or country have more cause to prohibit it than we, when we remember our opportunity lost against the invincible *Armada* of *Spain*, as they termed themselves, in 1588. and only through the want of powder, as is well known. And yet I must say in the praise of those of the queen's time, that the want of powder proceeded not out of a wasteful and idle consuming of it, before there were cause to use it; for neither then, nor in all the reign of queen *Elizabeth*, there was spent in a lavish kind the tenth part of that which is now adays: I may impute it to many causes, as namely, our wars then that made our commanders more provident; but principally I must commend the moderate drinking of that time, which I could wish a reformation of now amongst us; and that we may return to our old fashion, how odious soever it be to this new-fashioned time.

What I shall say, is not to make a comparison of times, or to tax our late abuses in that kind: I only advise, and ground my opinion upon reason, how things of this nature may be carried, which I refer to consideration; and desire, that if it be approved, every captain may be tied to observe it as a law established, and a penalty to the breakers of it: and the first thing I will handle, shall be the salutations of castles to ships, and the compliments of ships to castles.

A castle and the governor of it, is in the nature of a gentleman that will entertain his friend at his house, and give him a hearty welcome; and because a castle cannot perform it in words, he makes his ordnance speak it for him, with such a number of pieces as he thinks fit; after which propor-

P p p p

tion,

tion, an admiral is to answer by way of thanks, but to exceed the number of the castle's salutation, because an admiral's ship commonly carries three times more pieces than a castle has. This is to be referred to the will of the commander on either side.

If an admiral be accompanied by his vice-admiral, rear-admiral, and the rest of his fleet, there needs no other salutation from the castle; for the lord admiral's welcome includes all the rest of his friends and fleet; but notwithstanding, a vice-admiral must salute a castle with two pieces less than the admiral, and the rear-admiral with two less than he; and this is as much to honour the admiral as the castle; but it must be consider'd, that these three only that carry the flags of command, and rule over the squadrons, and no other ship, is to shoot, unless it is by directions of the admiral; for their shooting will be taken as too great a familiarity with him.

When an admiral shall depart from under the command of a castle, in sign of his loving acceptance for his entertainment, both he and his two other flags are to give the same salutation that the castle gave him at his entrance, and with the same number of ordnance and form, as aforesaid.

If a fleet pass within sight of a castle, and not within command of his ordnance to reach him, the castle is not bound to salute, only to afford a welcome, and a visit by a gentleman of quality.

If a governor fail to perform any compliment that is meet, he must amend it upon the admiral's landing, making his ordnance roar aloud his welcome; but the ship is not to answer, because it is done to the person of the admiral, who is bound to requite the same upon the governor's visiting him on board his ship, and at his departure from thence.

The saluting of ships by one another at sea, is both ancient and decent, though in this latter time much abused; for whereas three, five, or seven pieces have been the ordinary use for a ship to salute an admiral, and never to exceed that proportion, and an admiral not to answer with above one or three, now they strive to exceed that number, thinking that many pieces add honour to the salutation: but the owners of merchant ships would be gladder it might be done with less cost, and more courtesy in another kind. But though the admiral cannot restrain this compliment in the ship that salutes, yet he may command his gunner not to return above one or three pieces, according to the old manner.

And for such ships as are of his own fleet, he may prohibit the saluting of one another, but upon the occasions following, (*viz.*) in bringing good and fortunate news against an

enemy after an escape of a desperate danger, and then not to exceed three or five, and to be answered at the discretion of the admiral.

The excessive banqueting on board is a great consuming of powder; for as men's brains are heated with wine, so they heat their ordnance with ostentation, and professed kindness at that instant, and many times not without danger: and therefore, to take away the cause, a captain should have directions from under the hand of a general to forbid shooting, which would be a good excuse, and give his guests satisfaction, unless it be done in the manner following, as I have devised.

The vain drinking of healths is another means to waste powder, which a general must likewise forbid, except it be the health of a free prince, or men of that rank and condition; and then not to exceed one piece when the health shall be begun: the king's the queen's, or their issues, is exempted from this strictness.

Upon some occasion an admiral may command his whole fleet to fire their guns, as namely, when a foreign prince, governors of countries, ambassadors of great potentates, and men of great blood and quality, shall be either transported, or make a visit on board the admiral to behold the stateliness of his fleet, it were necessary they were as well resolved of their force, as the report they would make of their welcome; and in that case every ship of the fleet is to shoot their whole number of pieces distinctly and orderly, (as thus:) An admiral and his squadron first to begin, the vice-admiral to follow his example, and so the rear-admiral to do the like; but with this caution, That no small ship or pinnace do mingle themselves with great ships, but to second one another according to their ranks and greatness.

To come now to my proposition how things should be carried, it is thus; That upon drinking of healths, or leaves taken on board ships, instead of the excessive charge of burning powder out of great ordnance, it may be done with muskets; for a man's welcome consists not so much in the difference betwixt a cannon and a lesser piece, but in the loving heart of him that invites: both the one and the other are consumed in the twinkling of an eye; and the report of a falconet, when there is no greater piece, is all one to the hearer, as if it were a cannon or falcon.

Therefore to accommodate this difference, and to bring it to a certain custom in the king's ships hereafter, I wish, that instead of the chargeable wasting of powder that is now in use, by shooting of great ordnance, to have a number of musketeers placed

placed, and décently armed and apparell'd, soldier-like, upon the upper deck, that when there shall be occasion to drink healths, or to take their leaves at departure, they fire their muskets at a mark, made like the shape of a man put into a barrel off at sea, within point-blank, where the soldiers shall take their aim duly: this will be an act of more pleasure and delight to the beholders than the other, where nothing is expected but the falling of a bullet, having no object to shoot at; the eye, the ear, and sense, are all in action, and employed together, and many other benefits arise by it; for the foldier will by this practice be made a perfect shotsmán against he shall encounter his enemy; and with so small a cost and charge, that a cartrage of a cannon will entertain persons of good rank, and give them as great satisfaction with them few muskets, as the number of cannons will do; for the ear is only pleased with the report a cannon makes, which lasts no longer than a flash of powder: no gunner is made more perfect in his art, for he shoots at random in the air, without level.

*The corrupt Abuses used in his Majesty's Service by Sea, and the means how to reform them.*

THE difference of times has made so great a difference in our sea actions, betwixt the days of queen *Elizabeth* and those of this time, that I, who have been an actor in both, have cause not only to marvel, but to lament, to see abuses thus corruptly crept in: the particulars of some I will handle, and withal give instructions how to amend the errors committed in our services at sea, which will now much concern us, because our bordering neighbours, the *French* and *Hollanders*, daily increase in shipping, as we daily see by proof.

I will begin with the prime officer, who is the light and guide of the rest, *viz.* the lord high admiral of *England*, who is the main tree, and all other inferior officers are but branches that spread out of him; and where inferior offices are executed by many commissioners, and those not of greatest experience, and every one has his vote, sometimes they are carried by persuasion of friends, or wrought upon by servants, but commonly corruption has the upper hand, by money to prefer men without merit; for I am informed, that no place is freely disposed of without the gross feeing of some, not otherwise approving their sufficiencies.

The most inferior officer of the ordinary in harbour is the cook, whose experience, whose long continuance in his majesty's

service, or testimony of his sufficiency under the hands of the ablest officers, cannot advance him to the place of a cook, if prayers of angels do not prevail above the prayers of men.

And though the meaneness of this place is not to be rated with the rest of better degree, yet it will serve for an instance, to shew how things are carry'd with bribery and corruption, to the prejudice of the king's service; for it is an old saying, *He that buys dear, must sell dear, or save himself by deceit.*

But this is not all, nor yet the worst, that may ensue upon this bought place; for I find no man excepted from purchasing, but every one must stretch up for the price demanded for it, which makes the poor buyer confess, it is the dearest bargain a man can lay his money out on.

Here is a brave opportunity offered for an enemy, or any other ill-disposed person, to buy this place, who may be the destruction of the ship, and all other ships that ride near her, by setting the cook-room on fire, and excusing it as an unlucky accident or mischance; for to the cook is only committed the fire in the cook-room.

And because I make this cook's office the leading card to the rest, I heartily wish and pray, for the good of his majesty's service, that the cook-seller and the cook-buyer, yet though he were a cook by name, may be all hanged together, for example, fear, and terror of others.

The next abuse to this, is, the officers of his majesty's navy, who of late years have been gentlemen unexperienced; and the clerks, formerly belonging to the officers, that are well practised how to pretend profit for the king, and themselves to reap the benefit of it. These clerks guide the unexperienced gentlemen, who are often ignorant of their frauds, as will appear, if his majesty please to grant his commission to examine abuses, and to settle a form of government in sea-affairs.

The first abuse and corruption that enter'd into this office, was in the time of the late earl of *Nottingham*, lord high admiral of *England*, by placing a follower of his own, who, by the power he had with the good old lord, became the sole manager and director of things by sea, and made his own will my lord's peremptory command, and so the officers of that time have confessed to me; and since that party's quitting his office, it were good to know how other officers are come into their places, and the value they gave for them; for I know there has been paid, and it is commonly rated at 1500 *l.* for such an office; when, if you deal fairly, it scarce affords the interest of 1500 *l.*

Leaving

Leaving these abuses, which will prove without end, if examined by the commissioners aforesaid, I will now apply my self to redress these encroaching dangers and corrupt dealings, and bring it to the state of *Hawkins's* and *Burroughs's* times, who were perfect and honest men in their places, the one treasurer, the other comptroller.

This was  
write before  
my lord  
Northum-  
berland was  
lord admi-  
ral.

The way to settle things, is to appoint an admiral, young, heroical, and of a great blood: his experience in sea affairs is not so much to be required at first, as his sincerity, honour, and wisdom; for his daily practice in his office, with conference of able and experienced men, will quickly instruct him.

The next reformation will consist in the election of the four officers of his majesty's navy formerly treated of. Whosoever shall execute those places, and not have past the degrees of inferior officers, as boat-swain, gunner, carpenter, &c. but are led most by the precedent or direction of the covetous and deceitful clerks aforesaid, his majesty shall never be well served, but his name used for a colour to their deceits, as appears by an instance I was an eye-witness to.

At my lord of *Lindsey's* return from the west country to the *Downs*, there to re-victual for two months, it was no sooner known to the officers of the navy, but twelve of their servants posted thither to take a muster of our men, when a muster-master is allowed for that service.

I desire to know what the king gained by that needless employment, and what every one of those clerks was allowed for his pleasure in riding and wastefully banquetting in that journey? This strictness is without cause; for it is impossible for a captain deceitfully to carry a dead pay, unless a purser connive at it, which is unlikely he would hazard his estate and reputation for twenty shillings; and therefore let the officers of the navy pretend what they list, I know they do his majesty a disservice in it; for by this occasion, and the badness of victuals, it makes seamen backward to serve the king.

It is supposed the officers have some deceit in it for their own benefit, in taking a time of advantage by men's absence, that they know had fed upon stinking victuals at sea, and would be glad of some refreshing ashore. These, and other like ill usages of officers, makes seamen disobey his majesty's proclamation, and fly to the service of other princes and states, or become pirates, with hearts of revenge for the injuries done them.

And to end this voyage, I will say something to parallel this muster. At my return from *Portsmouth*, in the company of

captain *Mason*, who had been treasurer of the late great warlike action of his majesty's, it was our hap to meet with thirteen clerks and officers of the navy, some of them stuffed in hired coaches with four horses, the rest well mounted on horse-back, all of them to pay but two ships of the king's, the *James* and the *Reformation*, which, I think, will not amount to much more than one thousand pounds. I desire there may be a quere of their charge to his majesty by this journey of theirs, and it shall appear what devices they have to enrich themselves and followers; when captain *Mason* at that time told me, That in paying his majesty's great armies, though part of them were as far as *Cornwall*, yet he never charged his majesty in all those services with more than himself, his clerk, and one other ordinary servant.

As this was the end of that voyage, so I will not let pass what happened in the beginning of it, in the *James* I served in. At the taking in of victuals at *Tilbury-Hope*, there appeared a certain proportion of beef and pork, able, with its scent, to have poisoned the whole company; but by the carefulness of the quarter-masters it was found unserviceable; yet after it was refused by the said officers of the ship; and lay upon the hatches unstowed, some of the officers of the navy repaired aboard, and by their authority and great anger, forced it to be taken in for good victuals; which proved as I have said before.

My observation to this point, is, That though the officers of the navy have nothing to do with the victualling part, yet it is likely there is a combination betwixt the one and the other, like to a mayor of a corporation, a baker, who for that year will favour the brewer, that shall the next year do the like to his trade when he becomes mayor.

Here will I cease to make any further discovery of the abuses, but refer it all to examination, and myself will turn physician, and study how to cure the malignant diseases of corruption that have crept in and infected his majesty's whole navy, and his employments at sea, as well in the officers that assume absolute authority above the rest, and who, I think, will be found most faulty, as in the victualler, and purser, that has relation to the victualler. My third observation, is the state of the king's ships, their built, and what is to be amended in them. My fourth is, the foremast men, gunners, and all the company in general, without whom ships cannot sail. And my last shall consist of the masters and captains, which I will make the voyage of 1635. the ground of my exceptions to them.

As

As I have spoken of my lord admiral, by his authority to be the chief reformer aforesaid, so in the second degree of reformation, I wish that such officers of the navy were chosen as are perfect in their occupation and breeding, and have passed all offices and degrees in ships, and namely, out of the fraternity of the *Trinity-House*; for they are men that know well the practice of the sea, being brought up in it from their infancies: they served their apprenticeships in ships, which no gentleman or clerk has done; by their painful labour they have attain'd to good estates; they are of that sufficient ability, as they have the election of the masters that serve in the king's ships; their ambition will not extend higher than to his majesty's countenance, and to be honoured with the title of his servants; in their employments they will not strive to exceed in ostentation, or in numbers of needless servants and followers; their diet will be answerable to their accustom'd breedings; they will not covet state in their lodgings, nor solemn places in their consultations; they will commend no man to office whose sufficiency they will not undertake for; no provision or store can be brought in, but they will be able to judge of the goodness of it; no boatswain, gunner, or other officer, can exceed in their demands, but they can controul them; or in their return from their voyages bring in wasteful expence, but they will be able to check them, though it be to a yard of cable, rope, or a pound of powder. This is the way, and no other way, to prevent stealth, cozenage, and all deceits, which the clerks cannot devise to do. Thus would the name of corruption and abuses be converted into merit and desert. If these men shall offend in the execution of their offices, they are not people that can carry their deceits out by friends, as not being bred that way; or if they shall be found culpable or faulty, their estates are not so mean, but will be able to make restitution for the damages they do.

But to take away all occasion of deceit in the inferior officers of the ships, when they are at sea, these officers of the navy may appoint in every ship an able man, who, besides his labour, may have authority to overlook the expence of the gunner, carpenter, boatswain, and the rest, and to approve it under his hand with theirs, and with the testimony of the captain and master.

And because these men may have the better respect above the common sort, and profit withal to make them the more careful to perform the trust that is committed to them, they may be entered for drum and fife, which will add six shillings a month to their ordinary entertainment; for

the two places are to be well spared, as unnecessary in sea service.

The next officer or office I will handle <sup>This was writ before the victualler came in-  
see his place.</sup> shall be the victualler, whose negligence or covetousness; for one of the two it must be imputed unto, has brought the king's service to a great contempt, as all men know, with grief and pity. This officer ought to have a bitter and severe censure if he fail of the goodness and quantity of victuals of his majesty's allowance, and I wish no less than death to be inflicted on him; for no subject's estate is able to countervail the damage his majesty may sustain in such defects, in his weighty expeditions. The combinations, the abuses, and the practice of this office, I refer to future examination.

The victuals at sea consists of beer, bread, flesh, fish, butter, cheefe, &c. and to be bought of several persons, according to their professions and trades. I will therefore put them all in one number, and set down a course how to reform them all together, *viz.* to bind every one in a particular bond, returnable into the exchequer, that the victuals they furnish shall be sufficient, well-conditioned, able to abide good the length of the voyage, consisting of so many months; and if there be found defect or fault of performance thereof, the bond to be immediately forfeited, unless by a day appointed they put on board his majesty's ships the quantity of such victuals as shall be defective; by this means the king shall be well served, and the people well satisfy'd.

Moreover the victualler must be enjoined to put on board every ship the whole proportion of victuals to the quantity of men serving in her; for in this there has been great deceit: for whereas his majesty allows a large and sufficient rate for every man's diet, the victualler and the purser had wont to contract betwixt themselves, that the purser shall have the victualling of a certain proportion of men, and to allow the victualler three half-pence or two-pence *per diem*, out of that the king allows, and justly pays.

The gain of the purser at sea far exceeds all other officers, as will appear when their buying their places shall be examined. Both the buyer and seller of this office knows that the gain of it must arise by deceiving the king and company: which, besides that it breeds a great inconveniency, for the purser's unreasonable griping the failors of their victuals, and plucking it, as it were, out of their bellies, it makes them become weak, sick, and feeble, and then follows an infection, and inability to do their labour, or else uproars, mutinies, and disorders ensue among the company, that a captain must interpose himself, his reputation,

and credit, to appease them; and all for the corruption of the buyer and feller of that office; besides it gives a great discontent to people, and discourages them to do service in the whole voyage.

For reformation hereof, this place is not corruptly to be bought with money, but free election to be made of an honest and careful man, that will have no end but his majesty's profit, and his own credit; he must neither contract with the victualler, nor take advantage of poor mens being ashore, for him to save their allowance of diet to enrich himself, but such surplus of victuals as remains at the end of the voyage, to see it forth-coming, or to be accountable for it to the king's officers.

And if it be found, after the voyage, that this purser has performed the trust committed to his charge, then to reward him according to his service as the lord admiral and the officers of the navy shall think fit. This considered, will prove more beneficial and more safe to the purser, than to buy his office at a dear rate, which he must execute with danger; for his gain must rise by cozenage, which being discovered, a heavy punishment will be inflicted on him.

This false benefit thus gotten by the officers conniving with one another, by this reformation will turn to the king's profit: but I desire it may be carried with more moderation and pity to poor men; for the company have always been the sufferers, the pursers making their advantage of the mens being ashore, by taking to themselves their allowance of victuals in their absence.

The second abuse that is offered the company is in another kind, (as namely, in their pay,) wherein his majesty is no less abused than the poor men; for if at any time they fall sick, and be put ashore, such is the charity of people where they land, that they sooner perish than find pity, unless they bring money with them.

And seeing that his majesty does and must pay all those that serve him, it will be better for them, and more profit to the king, to discharge them at their first arrival, than to continue them longer unpaid; for whilst they lie sick ashore, and not discharged, their victuals and pay amounts to thirty and odd shillings a month, which may be saved, if they are at first discharged.

In the voyage of 1635. some of my men fell sick in the *James*, whom I caused to be put ashore, to avoid further infection, and commanded the purser to make provision for their lodgings, and other necessaries, to be abated in their pay. If these men had been discharged when they were landed, the king had saved so much as I have expressed before, and the poor men had

been furnished with money to have defray'd their expence, which they took upon trust.

I confess this abuse is ancient, which I complained of to queen *Elizabeth*, who redressed it, by sending an under-treasurer and moneys with me to sea in the last voyage she lived, and wherein I went admiral; but her present death following, caused it to be neglected; but fit again to be revived, for the good both of king and subject. When the purser of the *James* demanded his money thus disbursed, the officers of the navy with great anger asked him, who made him the queen's treasurer? Which is a direct proof they have a further end in it than the king's good; for I am told they have two shillings in the pound for the payment of such moneys as the poor sailors go upon the score.

I will proceed, and speak somewhat of the king's ships, their manner of built, and their defects, which, in my opinion, ought to be amended. I will make the *James* my precedent, which is a beautiful ship to the eye, and of mighty force to offend; I found nothing amiss in her hull, but in her masts, yards, and bolt-sprit, which were too short, which made her sails too narrow, and her fail the worse. But these are faults that may be easily amended.

But in some cases of building ships, or rather, I may say, of making experiment, they have left no help or hope of amendment; though I am informed there was a warning given of the insufficiency of the workman before he undertook her.

In my speaking of the difference in the built of ships, betwixt a flush-deck and high-carved, I have said sufficiently before; only I advise, that in ships with flush-decks, a slight fore-castle may be built, and the uppermost part of the ship be armed with junks of cables, for the safeguard of men against small-shot; as also to make barricadoes, and other material defences, to place several fowlers afore and abaft, to be the death of so many men as shall enter. There are many other devised things to be practised, which I refer to my fifth book, wherein I treat of stratagems.

Now I will speak of foremast-men, and the abuse used in pressing them, by example of this last voyage in 1635. The greatest part of these men consist of watermen, never before at sea, and others of the same sort altogether unserviceable; and herein are the officers of the navy to blame, who to pleasure friends, or for other ends of their own, appoint taylors, porters, and others of that rank, unworthy of the hatches to lie on; and yet every one of these men stands his majesty in 1*l.* 11*s.* a month, when they will think much to pay an able seaman that shall be absent at a muster: so

great

great a power has partiality with these men, that they prefer the unworthy before the well-deserving, and are willing to pay 1 l. 11 s. a month to taylors, rather than 14 s. to a sailer.

The sea towns in *England* are not far behind these abuses in election of such men as I have found in this voyage; for that in the northern parts, betwixt *Yarmouth* and *Newcastle*, never a man appeared in the *James* that ever had been at sea; insomuch that if I had not procured a warrant for one of my master's mates to look out for good men, never ship had been worse provided.

For reformation whereof, I would advise at the next general parts, that the charge be committed to the masters, or their mates, that go in the voyage. They are to repair to the towns and corporations on the coasts, authorizing them, with the officers of the said towns, to call all seafaring men there dwelling before them, and the masters to examine their sufficiencies, and according to their abilities to parts them, and enjoin them to appear before the clerk of the check at *Chatbam*.

There is another great mismanagement is his majesty's ships, which is fit to be amended, in order hereafter to redress it; by allowance of the king, the worst of those loiterers I have spoken of, have as good entertainment as the ablest sailer, that is no officer, and neither captain nor other commander can reform it, because custom has so settled it; for a reformation whereof, I do advise, that by consent of captain, master, and gunner, every such man's pay be proportion'd according to their sufficiencies, *viz.* to take it from one, and add it to another; but no way to charge the king more than with his ordinary proportion.

If this course were really taken, seamen would be as willing to serve the king, as they are now refractory to his service; it would be a great cause to make them to obey and love their commanders, and encourage them to exceed one another in their labours, in hope to have their pay mended. These people are to be governed by a captain, master, and other inferior officers, which I have formerly treated of; and I will now describe the fitness of a captain to be chosen to serve in the king's ships.

The little employment in sea affairs makes many pretenders to the place of captain, when there is talk of expedition; and very often there are factions and quarrels among such pretenders. But to take away all competition that may arise amongst them, and that his majesty may distinguish of their works, it were good, when such captains shall be nominated and elected, to require them to present authentick testimonies of their service and fights they have

been in at sea, which will approve their sufficiencies; for a captain is chosen for his warlike part, as the master is for the conduction of his ship.

A captain of the king's ship must be of reputation and government, bountiful, and not prodigal in his expence: he must moderate his expence according to his pay, and the time it is likely to continue; that he may be the better able to maintain his port after the service is ended, both for the honour of the king whom he serves, and for his own reputation; for his after-preferment must lie upon his former behaviour and demeanour. He must abandon the beastliness of drinking, and conniving at drunkards, which are the general disorders at sea, though in reason no man should more detest it; for they may know that drinking is not the way to preferment; for no man was ever raised for his vice, but it is made an objection to hinder his fortune.

As a captain ought to be frugal in his own expence, so ought he to be no less for the king's profit; as, first, in victuals: there must be no conniving betwixt him and his purser, nor betwixt the purser and any other officer; and what victuals soever shall come into the ship that it be not imbezelled, or secretly convey'd out of her; he must see an equal carriage betwixt purser and company, without advantage to either; for by this reformation the king is only to receive benefit. He must also have an eye over the gunner, as well to see the taking in of his store, as the re-delivery of it. He may have a servant to keep a private account of the expence of every shot at sea, to disprove any unlawful account the gunner shall unjustly charge himself withal.

I will end this discourse with the masters, who are the conductors of his majesty's ships, from their going out till their return home. There ought to be a general election of these men principally of such as have been practised, and served in the king's ships; for an experienced commander is more to be required in that case, than a skilful mariner.

The masters that were employ'd in this last voyage of 1635. are all able men in the art of navigation, which they profess, and of sufficiency to take upon them the conduction of a merchant ship to any place or port wheresoever they shall trade; but for the service in the narrow seas, where they have not been accustomed, or for managing the king's ships, in which they have not been used, for want of experience, they are much to seek, as will appear by what follows.

I confess, that since I served in the narrow seas, I find so great a difference betwixt the masters of that time and this, that I may compare it to an ancient art, that in  
long

long continuance of time has been forgotten, and lost for want of practice and use.

The masters in those days were either ignorantly adventurous, or in this time providently cautious, which I may rather term over-timorous; for we then little valued those adventures, which now we properly call dangers; though I am assured the perils be alike, and not to be accounted hazard.

But I impute the true cause of security in the masters, to that they have no other ambition, but to carry out and bring home the ship under their charge, and to receive their salary for it. I confess they are the more excusable, because their breeding has not been to sail amongst sands, or in seas so narrow, that which way soever they turn themselves, they behold land on all sides of them, which are subject to the change and shift of several winds in every port; for that wind which is secure upon one shore, is death upon another; and tides that sometimes are advantageous to them, at other times may prove dangerous.

This reformation cannot be in the masters themselves to amend, for it requires long experience and labour to make them perfect in our seas, where the service depends; and where they are strangers in the navigation, this defect must be supply'd with expert and skilful pilots, that make the narrow seas their daily trade and practice.

The king's ships being thus provided, they have little cause to fear danger of wind or storms, but only fogs, that take away the sight of the land from them, which come not often, nor continue long upon our coast; and in that case of dark and misty weather, never ships of the kings of *England* were better fitted with ground-tackle, or whole shots of cables, that they may ride in the midst of the channel: but whensoever the fog shall vanish, and the land appear, though it were in any part of the seas, betwixt the north-foreland in *Kent* and the *Dudman* in *Cornwal*, they will be able in few hours to harbour themselves, howsoever the wind proves that may endanger them; and therefore, in my opinion, that which is called care in some, may be rather term'd fear in them.

These masters that I term raw in the king's ships, not being used to the government of them, it is fit they be put into the right way by the boatswain, who is best able to instruct them; though in these latter times, that ignorance has prevail'd against knowledge, the boatswains, by a strict decree of the officers of the navy, are prohibited from taking charge of the king's ships, as masters; but the inconveniency of this law of theirs, I desire to argue with our late reformers.

Another oversight and error in these matters I find, That they cannot distinguish betwixt the discipline of the king's service, and their accustomed sailing and working in merchant ships; for though in their instructions in this voyage they were commanded to keep a good distance off one another, at their coming to an anchor, such have been the master's carelessness to observe this order, that they have pressed to be at an anchor as soon, or as near the admiral as they could, neither giving place or room to the vice-admiral, or other ships of greater charge or burthen than themselves: let this be a caution to succeeding times upon the like occasion, That wheresoever a fleet shall anchor, either at sea, harbour, or road, they suffer the three flags first to anchor, who must be careful to take a good birth from one another, (which done,) every ship, as they are divided in squadrons, is to anchor a convenient distance from the admiral of its squadron, and to take place according to the draught of the ships and the depth of the water they anchor in.

A master must moreover observe, after his coming to an anchor, to examine the defects of his ships, and to take order for the present amendment of them.

Thirdly, he must have his boats ready to fetch water, wood, and ballast, that the want of them be no cause of his stay in harbour, if he be suddenly commanded to sea; or if his abode be longer than he looked for, then to send his men by turns, to walk in the fields on shore, some one day and some another, to take the air, and exercise themselves for their healths; this will give great satisfaction, and be a refreshing to them and the ships, when people shall be absent, and the ship made clean and sweet.

Fourthly, a master is, at his first arrival in a port or rode, to let fall a single cable and anchor, unless the weather force him to moor with two, which if he do; yet as he shall see an appearance of fair weather, then to weigh one of his two, that he may be ready to set sail, if he be commanded; for a man of war is like a post, that has horse continually saddled for the king's service.

Many of these abuses I confess began to creep in, like rust into iron, at the latter end of queen *Elizabeth's* reign, by the un-ability of some officers of the navy, that then had the charge of them who did, as some now-a-days do, presume to order, and dispose of all things of the sea, though they were never twenty leagues from the coast; as great presumption as for a bred seaman to take upon him the office of a judge in temporal or spiritual affairs.

Of

*Of the Harbours of England, Scotland, Ireland, and Wales; the Nature of them; their Depths; and how they bear from one another.*

THE island of *Scilly* is from the *Land's-End* of *Cornwall* eight leagues, E. N. E. This harbour of *Scilly* has, twenty fathom, and there are three goings-out of it.

The next good harbour is *Hellford*, little frequented: it has six or seven fathom water.

From the *Lizard* to *Falmouth*, N. and by E. four leagues: *Falmouth* is in an excellent harbour, and hath twelve, thirteen, or fourteen fathom.

From *Falmouth* to *Dudman-Point*, E. and by N. four leagues.

From *Dudman* to *Foy*, N. E. four leagues.

From *Foy* to *Ramhead* six leagues, E. N. E.

*Plymouth* lies from hence, N. N. E. four leagues, and has four or five fathom.

From the *Ramhead* to the *Start* eight leagues, E. S. E. From the *Start* to *Dartmouth* three leagues, N. E. and has ten or twelve fathom.

From *Dartmouth* to *Torbay* four leagues, N. E. a good road, at eight fathom, for a south-west wind.

From *Torbay* to *Portland* thirteen leagues, E. and by N. and within that bay lies *Exmouth* and *Lime*. *Portland* is a good road for a south and a south-west wind, at seven or eight fathom.

Within *Exmouth* lieth *Weymouth*, a barred haven; and going from thence to the *Needles* in the *Isle of Wight* lies the harbour of *Pool*, where you shall have five fathom at half flood.

From *Portland* to the *Needles* eleven leagues, E. and by N. From thence to *St. Helen's* seven leagues.

Within the harbour lies the haven of *Limington* and *Southampton*, and within that *Water-Hamble*; and to the E. *Portsmouth*, an excellent harbour; and in the *Isle of Wight*, *Newport* and *New-Town*.

From *St. Helen's* to *Bechie* sixteen leagues, E. N. E. Betwixt them lies *Chichester*, *Arundel*, *Shoreham*, and *New-Haven*, all bad harbours.

From *Bechie* to the *Shingle*, E. N. E. eight leagues. Betwixt them lies *Rye*, a dry harbour.

From the *Shingle* to *Dover* nine leagues, N. E.

From *Dover* to the *Downs*, and so to the *North-Foreland*, seven leagues; there lies betwixt them *Sandwich*, a barred haven.

From the *North-Foreland* to *Orford-Nefs*, leaving the island of *Sheppey*, and the course to *London* on the larboard-side.

*Harwich* is the best harbour upon all that coast; and, indeed, the best betwixt it and the *Friith* in *Scotland*.

From *Orford-Nefs* the Coast lies, N. W. twenty nine leagues from *Flamborough-Head*. There lies betwixt them *Sole*, *Lestock*, *Yarmouth*, *Cromer*, *Blackney*, *Burnam*; from thence to *Boston*, south-east, and to *Lynn* west, you pass many dangerous sands in going into these two places.

From *Boston* to *Hull* and *Burlington*, you must go N. and N. and by E.

From *Flamborough-Head* to *Scarborough* six leagues N. W. from hence to *Whitby* five leagues.

From thence to *Hartley-Pool* seven leagues, W. N. W. from *Hartley-Pool* to *Tinmouth*, N. N. E. nine leagues, and so up to *Newcastle*.

From *Tinmouth* to *Cockit Island*, N. N. W. seven leagues. And thus much for the northern coast.

Now I will return into the other Parts of England and Wales.

From the island of *Ramsay*, or the north-part of *Wales*, lie the *Bishop* and the *Clerks*, rocks of great danger; two leagues from thence lies the island of *Grasbome*.

From thence to *Milford-Haven* three leagues, and the going in is, N. E. one of the best harbours in the world; it hath a rock in the middle of it at the entrance.

From *Milford* to *St. Gore's-Point* two leagues, and from thence to the *Nefs*, E. seventeen leagues; there lies betwixt them the island of *Coarday*, *Timbey*, and the point called *Wormshead*.

From the *Nefs* to *Steeptorme*, E. S. E. seven leagues; from thence to *Bristol* N. and by E. twelve leagues. There is betwixt the *Nefs* and *Bristol* the islands of *Barrey* and *Scilly*, *Cardiff*, *Newport*, and *Chepstow*; all barred havens.

Now to the English Shore.

From the *Holmes* to *Lundy*, W. S. W. twenty leagues: there is betwixt them *Helford-Comb*, a narrow going in, but three or four fathom within.

From thence to *Biddeford*, S. S. W. seven leagues: it has two divisions; the one goes into *Barnstaple*, the other into *Biddeford*; barred havens.

R r r r

From

From thence to *Lundy*, N. N. W. five leagues. Here you may anchor on both the sides of the island, at fourteen or fifteen fathom.

From *Lundy* to the cape of *Cornwall* twenty eight leagues S. W. and from thence to the *Land's-End*, five leagues S. there lies betwixt *Lundy* and the *Land's-End*, *Padstow*, *St. Ives*, and some other creeks, all barred havens,

*The Coast of Scotland, and of the Islands.*

The island of *Shetland* is the place where the *Hollanders* begin their great fishing, in the harbour called *Brassound*, which is an excellent harbour, where all their buffes meet, and begin their fishing the 23d of *June*. At the north point of the island, there is a good harbour, called *Blansound*, which you may sail through, from one side of the harbour to the other.

There is another good harbour, called the *Magnus Haven*, and an island where ships may go, and ride about it; and behind it a harbour called *Hamborough-Haven*.

West from *Scotland*, and north from *Ireland*, there lie many islands, antiently called the *Hybrides*; in most of these islands there are excellent harbours.

The *Lewes* is the best of the islands; which the *English* have now planted, for conveniency of fishing: it is in length twenty nine leagues S. S. W. and N. N. E.

The islands of *Orkney* are thirty one in number.

The island of *Wayes* lies N. N. E. from *Catness* in *Scotland*, and but five leagues from it; you may sail through these islands in many places by *Catness*, and S. from *Sanda*, and come out again.

From *Catness* upon the main land, and the promontory of *Scotland* to *Buckerness*, twenty one leagues S. E. betwixt them, are many good harbours, *Dermecke*, *Ross*, and *Lewerness*.

From *Buckerness* to *Aberdeen*, thirteen leagues S. S. W. from thence to *Mont-Rosse*, S. W. and by S. four leagues; to *Dundee* S. and after S. S. W.

From *Dundee* to the isle of *May*, S. W. six leagues. From *May* to the *Bass*, and up to *Leath*, nine leagues.

From the *Bass* to the *Tape-Head*, W. six leagues; from the *Tape-Head* to *Berwick*, S. S. E. five leagues.

*The Harbours in Ireland.*

The *Black Rock*, and *Cape Dursley*, S. and by W. fifty three leagues; and between them the haven of *Galloway*.

From *Galloway* to the island of *Arran*,

fix leagues; from thence to *Limerick*, S. nine leagues.

From *Galloway* to *Blasques*, S. S. W. sixteen leagues; from *Blasques* to *Dunseys*, S. E. twenty one leagues.

From *Cape Cleer* to the *Old Head of Kingsale*, E. and by N. twelve leagues.

From the *Old Head* to *Cork*, N. E. and by E. a great league.

From *Cork* to the east point of *Waterford*, E. N. E. twenty leagues; the whole southern coast lies E. N. E. and W. S. W. and betwixt *Cork* and *Waterford* lies *Yockbill*, E. N. E. from *Cork*, six leagues.

Five leagues from *Yockbill*, E. lies *Dongarvan*, lying in N. N. W.

From *Yockbill* to *Waterford*, E. N. E. twelve leagues; the haven of *Waterford* lies in N. and by W.

From *Waterford* to *Washford*, the island of *Saltres* lying in the way, you may go betwixt it and the main land east from *Waterford*; from *Saltres* to *Washford* five leagues.

From *Washford* to *Wexford*, N. and by W. five leagues.

From *Wexford* to *Dublin*, N. and W. five leagues.

Five leagues from *Dublin* lies the harbour of *Drogheda*.

From *Drogheda* to *Dundalk* seven leagues.

*An Observation I gather of the State of the Harbours aforesaid, and the Advantage an Enemy may take of them to annoy us.*

Of so many harbours that *England* affords, and towns seated upon them, as aforesaid, there are but these following of any importance to entertain ships of burden, (*viz.*) on the south coast, *Plimouth*; *Falmouth*, *Hambrose*; lying within the island of *St. Nicholas*, *Dartmouth*, *Portsmouth*, and those within the *Isle of Wight*; to the northward, *Harwich*, *Lynn*, and *Humber*: the two last are frequented most by ships of their own, full of danger and sands, little known to any others but to themselves; I will therefore say little of them.

Over-against the harbours on the south coast of *England*, *France* is seated, and, namely, *Normandy* and *Picardy*, which, we may thank God, does not afford so good a harbour upon all that coast, as the worst of those I have named; otherwise our forefathers had tasted the danger of them many ages before ours; and we in this time should find it a dangerous thing to have neighbourhood with good harbours, now *France* labours to be great in shipping.

The harbours of greatest consequence, and for us most to fear, are *Brest* and *Bluet*, forty and odd leagues asunder, and both of

of them to the eastward of *Ushant*, the head land of *Britany*, which must be doubled before they can come into our *Channel*; and that easterly wind which brings them about *Ushant*, will be against the recovery of any harbour in *England*; or if they think by their fleet to intercept our trades, or to have any other designs upon us, they will be brought betwixt *Scilly* and *Caribdis*; for betwixt their coast and ours, it is not above twenty three or twenty six leagues in most places; so that if they be taken with a storm at north-west, they are cast upon their own shore, where they shall find neither harbour nor road to receive them, but that the merciless sea will devour them: and the like effect they will find with a southerly wind upon our coast, unless they were relieved with our open roads, which their own coasts yield not. In my fifth book of projects and stratagems, I have spoken more largely to this point: and to conclude, though *France* should be able to keep fleets in our *Channel* in the summer season, when they shall find the weather fair, and the night short; on the contrary, in winter with a southerly wind, storms, and long nights, they will find themselves destitute of harbours on both sides to relieve their ships, when they are in the *Channel*.

And as for *Milford-Haven* in *Wales*, whose harbour for goodness exceeds all other harbours in *Europe*, if an enemy should enjoy it, it would little avail him; for all conquerors will covet to draw into the heart of the country they enter, and where the greatest cities are seated, and most people resorts to them. Let us compare it with *London*, two hundred miles from it, and let us enter into the condition of *Wales*, and the poverty of it; where the huge mountains will hinder the passage, and the transportation of their carriages; consider likewise the time *England* will gain, to gather all its forces together to withstand them, and the distance an enemy shall march from their ships if they be forced to retire, and shall be destitute of all other supplies or helps: this will be advantage sufficient for us. Neither can an enemy steal so suddenly upon us, but that our fleet will be ready speedily to bid them welcome. These reasons considered, *Milford-Haven* will be made as secure as any port of *England*.

#### *The State of Ireland.*

There are many choice and good harbours in *Ireland*, as commonly there are in most countries where there is least trade. The more and the better they are, the greater the danger to *England*; because an In-

vasion in *Ireland* does as much concern us, as if it were attempted in *England*. Where there are so many ports as in *Ireland*, they cannot so easily be fortified and made strong, as if they were fewer; whereby the defence of that kingdom must depend upon the faithful hearts of subjects, who heretofore have been apt in all ages to shew the contrary, as appears by their many rebellions.

The southern coast of *Ireland* is in the nature of *England*, a southerly wind being dangerous to both; and the greater to *Ireland*, because the coast is more subject to mists and fogs, so that no art or skill can preserve a ship, if she be forced to bear in upon a lee shore she has not made.

I have declared in my fifth book the danger of an invasion in *Ireland*, and the best remedy to avoid it by a fleet at sea; to which I refer you: but the safest and securest course I can think on to defend that kingdom, is to draw the people by justice and good usage to love and obedience; for then shall their hearts and hands be joined, and made to concur together, for defence of their king and country. Both they and we see, that of late years by peace they are taught how to grow rich, which before they were not: they find by his majesty's conniving with them in religion, it has mollify'd their hearts, that they are not so hardened as formerly they have been, as appears by their voluntary disbursements when his majesty requires it of them.

I am of a contrary opinion to an ancient position held in former times by our statemen of *England*, That the safest way to govern the people of *Ireland*, was by keeping them under, poor, needy, and ignorant, like men barbarously bred: whereas on the contrary, we see by proof of late times, that by our good and friendly usage they are made more tractable to reason, and understand the difference betwixt civil conversation and their former education. They are grown to that familiarity with us, and our dispositions, that if religion did not hinder it, they would make no more difference to marry with us, than amongst themselves, and hold it for an honour to derive themselves from *English* blood.

We must confess it for a truth, that they made our king and both our countries more famous of late years than in former times, by the esteem they have gained in our renowned actions of war, where they have served; for those people that were wont to be called by the name of *Kernes*, have obtained the prime places of honourable employment: which I impute to three causes; the first, is, To their late civil breeding and conversation, in comparison of times past; secondly, That they are not prohibited serving

ferving any prince or state, whereby all ancient jealousies are taken away; thirdly, They have that liberty and freedom, that they apply themselves to all gentleman-like exercises, both of learning and languages, by which they insinuate into the acquaintance of other nations and people, from whom they learn their customs of civil and mannerly behaviour, acknowledging that preferment comes by virtue, and not by vice. By this alteration, his majesty shall regain sober subjects, that have been seduced by evil magistrates.

#### Of Scotland.

*Scotland* in divers parts thereof, but especially in the islands of *Orkney* and *Hybrides*, has many large and good harbours, and more ships of their own to uphold trade than *Ireland*, has, much to the shame of *Ireland*, which has a more fruitful country, and lies by many degrees more convenient for trade, than *Scotland* does, to the rich countries of *France*, *Spain*, the *States*, and all southern parts, which afford the greatest plenty of wealth; for from *Ireland* they may be sooner in those places aforesaid, than from some part of *Scotland* to *Ireland*, where they are to begin their voyage.

We and other nations find that *Ireland* many times proves a safety to ships, men, and goods, as it is seated and placed; for ships that are to pass into our channel from the southward to *England*, *France*, *Flanders*, *Holland*, or any part of the east country, if such vessels be taken with an easterly wind before they recover *Scilly* or *Falmouth*, or fail of victuals, or otherwise distressed, *Ireland* lies open to entertain them, which no other shore can do with that wind, and much less *Scotland*, which is so far to the northward, and out of all manner of trade.

It is pity *Scotland* is not placed where *Ireland* is, considering the difference of the industry of their people; for though the country of *Scotland* yields no commodities worthy of transportation, whereby to make them rich, or can take off any merchandize that is brought them, by reason of

the barrenness of their soil, and the coldness of their climate, that produces nothing of value to exchange for it, yet they live not idly and lazily, as the *Irish* do, but maintain a number of ships to carry out and bring back such commodities as the country affords, or the people stand in need of.

Another happiness to us, is, that *Scotland* can make no use of their harbours to benefit an enemy to our annoyance; for *Scotland* has two impregnable defences, which are no less beneficial to *England*, viz. hunger and cold, that it can no way aid an enemy to invade *England* from thence, either with victuals, or other provisions.

I have often marvelled with myself, that in our forefathers days, who lived in the time of hostility betwixt us and *Scotland*, they had not so much foreseeing providence, as being masters of the sea, to endeavour to cut off all the ships, barks, and boats, that belonged to their kingdom, which had been easily effected, or without resistance; for then they had left *Scotland* to itself, without help from abroad, and forced them to make use of their own commodities amongst themselves; by which means they should never have tasted the deliciousness of wines, or other delightful things of several kinds which other countries produce: Thus would *England* have had a greater power over them than by force of arms, and would sooner have brought them to uniformity and obedience to us, than by any course of cruelty: the seamen would have soon forgotten their employment, and betaken themselves to their trades for food. And one thing I must say in their commendation, that their people are naturally apt to the sea; they would soon attain to the excellency of pilots, which grows by their dangerous and difficult navigations; which makes them more vigilant than otherwise they would be; and in the places where they generally traffick, they are held worthy of the charge they take upon them; they are no less esteemed than trusted, for their honest contracts they make with their merchants; and it is a means they are sooner freighted than others that carry greater reputation and wealth.

#### *A Proposition to the Parliament on all the foregoing Contents of this Book.*

I Need not make a particular repetition of what is contained in this third book, because it is open to your eyes to behold, view, and read; it tends to the state of his majesty's navy, and the abuse that is crept in by unexperienced carelessness, if not corrupt officers, and such as regard their own profit more than the king's service: withal, I set down a means of reformation, which I presented to his majesty, part whereof was writ-

ten at the request of Sir Robert Cecil, not long before the queen died; the rest I refer to my fifth book.

I will apply myself to you, the lords and gentlemen of parliament, for these reasons; The first, Because it concerns you more than others, who are the mouths and men chiefly trusted by the multitude of the commonwealth, that makes election of you, above others, to speak their cause. Secondly,

In

In matter of security to the state; for you have the same interest with them, as being embarked all in one ship; so that, if one drowns, the rest must be shipwrecked. And, lastly, because you are the people elected and chosen from the rest, for your grave and judicious understandings, that can distinguish and determine according to reason, what shall be proposed for the good of the commonwealth; which makes me say the less, but refer all to your wise considerations.

The great, and indeed the greatest matter of importance to the state, is his majesty's navy, properly called the walls and bulwarks of *England*; for our ships flourishing bring safety to the kingdom, and terror to others; yourselves may challenge an interest in this royal navy, as jewels annexed to the crown, that cannot be separated from it; for though the king have the disposing of them, and the only employing them, yet they are like his houses and lands that are enailed upon the crown, and the king can use them but for life.

The kingdom of *Portugal* falling to *Philip II.* king of *Spain*, who came in rather by the sword, than consent of the subjects, yet they drew him to large conditions for their freedom: and amongst the rest, because that kingdom stood upon reputation of shipping, they enjoined him to annex twelve galleons by way of entail on the crown of *Portugal* for so many brave ships he there found, as appeared by the goodly vessel called the *St. Matthew*, which I knew, and saw broke up with age, after she had been admiral of the fleet with the marquis of *Santa Cruz*, who overthrew Monsieur *La Strauze* at the islands of *Tercera* in 1580. and after she had been admiral for *England* in 1588. with the duke of *Medina Sidonia*; and, lastly, in that service and fleet, that took Sir *Richard Greenville* and the *Revenge* in 1591.

And seeing we have precedents of other times, and of other countries, to parallel with us; for the preserving the honour of *England* by our navy, but especially because it concerns us more than the firm land, we being an island that can neither defend ourselves, nor offend others, without the help of shipping, I do humbly crave your favourable ears to incline to my propositions following.

That besides the ordinary and yearly expence his majesty contributes to the ships in harbour, you will please to add a certain annual proportion, and to confirm it by act of parliament, to be employed as the parliament shall direct, or as the ensuing project shall seem acceptable.

I know that whatsoever I shall propose by way of imposition, the word is obnoxious,  
VOL. III.

and you will answer me with a general negative, by example of the grants of customs, that in continuance of time are grown hereditary; but let the importance of this weighty business concerning the king's navy move you according to reason, and to devise the easiest way, and with the least charge, how his majesty's ships may be immediately sent to sea upon an unexpected occasion.

The sum that shall come from you by a voluntary gift, not to exceed 20000 *l. per Annum*, the moneys to be rated and raised at the discretion of justices, knights, and gentlemen of the shire, a treasurer and other officers to be nominated by the parliament; and if any innovation shall be attempted to alter this form of government, the payment to cease.

That certain commissioners be appointed for two years space to view and provide, that all materials and provisions be kept safe in magazines, and no other than themselves to dispose of them; and every second *Michaelmas* term to meet and settle all things in good order, that at the next sitting of the parliament it may be presented to the two houses.

This will prove more easeful to the country, and less burthensome to the people, by ten degrees, than has been of late years taken, (*viz.*) To call upon them for great sums, and to be suddenly rated and raised by the assessment of one private man, that shall for that present year be chose sheriff; and such a one, if complaints be true, as carries a hand of too great partiality.

By the good husbanding and management of this 20000 *l. per Annum*, there will always be ready in cash so much money as will, with little help from the king, be able to put his ships to sea, without otherwise being beholding to his subjects; for it is to be supposed that kings will not have yearly occasion to employ their ships, by means whereof, the stock of 20000 *l.* will increase.

Out of this 20000 *l.* there may be provision made to allow thirty able and expert captains, each of them forty marks, or forty pound *per Annum*, the time they are out of employment, enjoining them to give their attendance, when they shall be called upon. Every man shall know the ship he is to command, and no man will be so impudent, as to seek to put him from it when employment is spoken of.

They shall hold their places, their pensions, and employments, according to their civil carriage and behaviour; for by their example, others that expect future preferment must imitate them in their rule of life.

Of all disorders, they must abandon drinking, quarrelling, and the occasion that riseth out of such vices; for if they consider it, drunkenness is but a short madness; and therefore unfit a madman should govern others, that cannot govern himself. This will be the way to gain a brave reputation in their youth, and an encouragement for gentlemen to employ their sons upon such services, on hope of preferment; and it may be a means for the king to take the example of the king of *Portugal*, who instituted, That gentlemen, according to their degrees and births, should have employment at sea, and pensions of the king for life, which they call *Fuero*. Every gentleman takes his place according to his pension and quality; and it is not amiss, seeing I am upon this subject, to set down, That the occasion of the discontent of *Ferdinand Magellaens*, or *Magellan*, the discoverer of that streight, which took name of him, was upon this cause; for which he left his king's service, and became a creature to *Ferdinand* king of *Spain*, who employ'd him.

*Magellan* was a gentleman well deserving,

### *The Beginning of our Resort to the East-Indies.*

**T**HOUGH the queen was so wholly taken up with her warlike actions by sea with *Spain*, which continued the space of eighteen years, that neither she nor her merchants had leisure nor opportunity to settle new trades in far and remote countries, as the *East Indies*, and other places, which king *James* of famous memory did, when he enjoy'd both crown and peace, as shall appear when I treat of his and king *Charles*'s actions by sea; yet because those ages and king's reigns shall be honoured as they truly deserve, I will speak of the famous enterprizes undertaken in the queen's time to the *East Indies*; the first by Sir *Francis Drake* in 1578. the second by Mr. *Cavendish* in 1586. the third by Captain *Raymond*, in 1591. and the fourth by our merchants of *London* in 1603. to whom the queen granted her letters patents for the space of fifteen years, which was after continued and enlarged by king *James* in the year 1609. to remain for ever. Whereupon the *East India* merchants built in the same year the goodliest and the greatest ship that ever was fram'd in this kingdom, though she proved not so fortunate to them as ships of less burthen that I have spoke of in my second book.

The increase of great ships in *England* may be derived from this beginning; and to make it the more wonderful, it is strange, if we consider the few ships, and the small

and on account of the institution aforesaid, he sued to the king of *Portugal* for a pension of three ducats *per* month for himself, and half as much for his son, who was a towardsly young gentleman. The king willingly granted him two and an half, but absolutely refused his son; which he took for so great an indignity, that he left the king's service, and fled into *Spain*, where he was employ'd by the king and cardinal *Ximenes*, in that noble voyage about the world, which was performed by his ship, though he was slain himself. This enterprize of his was prejudicial to the kingdom of *Portugal*, and he got the name of a fugitive and traitor by it.

To make out this degree of gentlemen, and their employment, I have spoken of, I was acquainted with it when Sir *Richard Lewson*, and I took the carrack in *Zezebra Road*; for when I went aboard her, to treat about her yielding, I found four hundred gentlemen of this fraternity with arms to defend her, all apparelled like courtiers for their reputation they held by their employment and place.

burthen of them in the memory of man, to what they are now; for till of late, which perhaps few will believe, the greatest part of our ships of burthen was either bought or built out of the east country, who likewise enjoy'd the greatest trade of our merchants in their own vessels.

And to bid adieu to that trade and those ships, the *Jesus of Lubeck*, a vessel of great burthen and strength in those days, was the last ship bought by the queen, which in the year 1564. was cast away in the port of *St. John de Ulra* in *New Spain*, under the command of Sir *John Hawkins*; and from that time to this, if we consider the increase of ships which *England* trades withal, but especially of later times in the reign of king *James* and king *Charles*, we have great cause to give God humble thanks for his blessing poured upon us, for our strength of ships, and wealth of subjects, both much increased by our navigation.

I cannot say our first voyages to the *East Indies* were by the way of traffick, as our latter years have produced: Captain *Raymond* was accompanied with the *Penelope*, a ship of his own, with the *Merchant Royal*, and *Edward Bonadventure*, three prime ships at that time both in greatness and goodness: their employment was to obstruct the trade of the *Portuguese*, and to seize their goods by way of letters of reprisal.

These

These three 'unfortunate ships arrived at the cape of *Good Hope*, where they resolved to send home the *Merchant Royal* with the sick men, and to proceed on their pretended voyage designed in *England*; but captain *Raymond* himself was unhappily swallow'd up in the sea fifty leagues from the cape: the *Edward Bonadventure* performed her voyage, but failed, as the rest did, in the hope of profit; for neither the men nor the adventurers were a penny the better for that voyage; and unluckily at her return, after she had passed many miseries and dangers, at last she arrived in the *West Indies*, whither she went for relief, being mightily distressed. And arriving at the island of *Mona*, her company resolved to cut her cables to drive ashore, choosing rather to do such an unworthy act, than to venture into *England* with her, their case was so desperate.

Most part of her men were saved by a *French* pirate that hovered about that island, one of whom, *Henry May* by name, was embarked in the said *French* ship, and in her return homeward was wrecked on the island of *Bermuda*, who gave us the first publick knowledge of that island; for before it was supposed to be enchanted, and possessed by spirits, though I knew the contrary; for above twenty years before this happen'd, I was acquainted with a *French* captain, called *Ruffel*, who was also shipwreck'd upon the same island, and escaped by means of a boat, he and his company made out of the materials of the said ship, in which with great hazard they arrived upon the coast of *Newfoundland*, where they were relieved by fishermen of their own country.

*The Competition betwixt France and Spain by Sea, and Conclusion of the Third Book.*

A *Frenchman* meeting a *Spaniard* or *Portuguese* beyond the line, or in either of the two *Indies*, they hold it a thing justifiable by law to seize upon either, especially if they make the first shot at the *Frenchman*, pretending that he gave the first offence; and that thereupon they offered him violence, and that themselves are but defendants.

The *Spaniards* and *Portuguese* answer to this, That the *French* being no discoverers of countries beyond the line, or in the *Indies*, they can challenge no more right to the countries and seas, than pirates of other nations can do; neither have they any colour to haunt those shores and seas, but with a purpose to rob and spoil, seeing they and all nations besides, know the king of *Spain* prohibits any traffick in those parts, but to his own *Spanish* subjects.

They further say, There is no ship but will in her own defence, being chased by another, and ready to be assailed and boarded, shoot first; for it is an old rule in a quarrel, *That he has the advantage who gives the first blow*: And therefore this lawful resistance of a poor merchant ship, that goes not out of his way to seek others, but avoid meeting of all, cannot be reckoned a breach of peace, and consequently a forfeit of ship and goods; this is against the law of nature, for a worm, if she be trod on, will turn.

And besides, whereas merchant ships go commonly armed to defend themselves against enemies, by this law, and contrary to all sense and reason, their safety must consist in going unarmed, that they may be unable to make defence, lest they be quar-

relled with, and thereby made a prey to all ships they shall meet at sea.

The assailant, whom you may properly call a pirate, has sometimes other pretences, as namely, the want of victuals, or their ship being leaky, or ready to founder, to exchange ships with them.

The *Spaniard* desires, that these deceitful excuses, and false pretences may with uprightnes be considered: to the first, they say, That a merchant ship that carries ten men, cannot afford two days victuals to a man of war that carries an hundred men; for ten days victuals after that proportion is but half a days victuals to a ship of war.

To the second, it is to be considered that if one ship be exchanged for another at sea, it must be the stronger that compels the weaker to it; and as a thief that robs by land makes the offence much more horrible by committing murder, so does the ship in this case; for if an hundred men be not able to keep the ship above water with their pump or baling, what shall ten men do in that ship, but sink or perish with patience? Here is both theft and murder committed upon poor innocent people, that offer no man molestation, nor go out of their course to seek acquaintance: but if this stands for a law, a pirate will make no conscience to bore a leak in his own ship to serve for an excuse.

Therefore I conclude, it is not the first shot that can be adjudged a breach of peace betwixt two ships that accidentally meet at sea, or that it shall make the assailant's cause the better; for in truth, the offence is given by the ship that chases, and has no cause to do it, but only to give an occasion

of quarrel, that thereby he may rob and spoil him: he it is, I say, that deserves punishment as a pirate, and not the poor defendant, that does no more than nature and reason oblige him to.

I would ask a *Frenchman*, whether, if a *Spaniard* should meet him upon the coast of *Canada*, where the *French* have a plantation, and there chase him, and that the *Frenchman* for his safety should fire at him he would think it reason that the *Spaniard* should take and enjoy him as lawful prize? No, I am rather of opinion, that the *Frenchman* will believe as I do, that the *Spaniard* is worthy to be hanged for a pirate.

And yet the comparison is not alike, for the *French* cannot account *Canada* their own, as the *Spaniards* may do the *Indies*; because *Canada* was first discovered by the *English* in the days of *Henry VII.* as all the world acknowledges, and none but the first discoverers can pretend title to any land newly discovered.

This is the title by which the king of *Spain* holds his *Indies*, both *East* and *West*; and this is the title by which the king of *England* holds that part of *America* from fifty eight to thirty eight degrees, and has held it since the discovery of it by *Sebastian Cabot*, and not above two years after *Columbus* found the *West Indies*; and by this right likewise the king holds the islands of *Greenland* ever since the year 1607. when discovered by his subjects: And moreover I say, that such kings as are discoverers of new or unknown lands, are bound in equity and reason to defend one another's titles in this point, and not to connive or give assistance to any other prince or country to break this law and custom, for other nations to encroach upon them; for they had as good disclaim their own rights, and suffer all other dominions to usurp over them: it is the case of our fishing, which *Holland* impugns.

When king *James* granted his patents for the planting *America*, he would always admonish the patentees to be sure to keep to the northward, lest they should plant in such places, as the *Spaniards* might challenge to be within the compass of their discoveries; for he ever intimated, that he would defend them no farther than the articles of peace did warrant him; and if they did otherwise, they were to stand upon their own legs. This I have been often told by the secretary of state, who is acquainted therewith.

This limitation princes put upon their own subjects in giving them patents, which subjects duly observe. Queen *Isabel* of *Castile* would not suffer her husband's subjects of *Arragon* to go to the *West Indies* many

years after the discovery of them, because she and her *Castilians* had the honour and fortune to find them.

The *Portuguese* to this day enjoy their antient and accustomed trade to the *East Indies*, *Guinea*, and *Brazil*; and the *Spaniards* are not suffered to go there, because the *Portuguese* were the first discoverers of them.

Our king out of some considerations prohibits the trades of the *East Indies*, *Russia*, *Greenland*, and *Turky*, but only to some particular subjects, to whom he grants his patent.

The *Hollanders*, who are refractory to all good laws and institutions established by kings, however observe this rule among themselves, That they will not suffer any of their people to trade to the *East Indies*, but those whom they incorporate, and call *The East India Company*. And though *William Cornelius Scowden* has discovered another passage into the *South Sea*, than through the *Streights of Magellan*, a voyage of fame to the undertakers and nation, yet at his arrival in the *East Indies*, where he thought to have found succour and relief from his countrymen, most ungratefully and cruelly they seiz'd him, his ship, and all he had, and used him as rigorously and unnaturally, as if he had been a professed enemy or pirate.

The *French* above all other nations have always impugned the right of the first discoverers, but not without the great punishment and just judgment of God upon them, as appears by many of their actions, as namely, in *Canada*, which was taken and spoiled by us in 1628. as also in *Florida* and *Brazil*, that was destroy'd and ruined by the *Spaniards*; and it is worthy of note, that they never lived in any of these colonies, but civil dissensions, famine, and murders, fell upon them; a just reward for the injustice they did.

The king of *Spain* is so cautious not to give offence in this case, that when *Greenland* was discovered by the *English*, some of his *Biscay* subjects repaired thither to kill the whale for oil, being more expert therein than any other nation: but the king of *Spain* considering what wrong was done to the king of *England* by it, and that it might concern him in the like case to have his *Indies* incroached upon, he prohibited his subjects going to *Greenland* to molest or hinder the *English* in their fishing, and afterwards gave assistance to the *English*, and instructed them in the manner of their whale-killing.

Subjects that desire to plant in countries they have not discovered, and therefore can claim no title to them, run many desperate and unavoidable perils; First, because the

articles

articles of peace do not warrant them, for by that law of peace we are only to enjoy our ancient and accustomed trades; Secondly, they go upon their own adventure, for the king will not break league with *Spain* for their particular cause; Thirdly, they live in perpetual danger from their neighbours near adjoining, whom they may term enemies; but principally I would have them consider, what an excessive charge they undergo before they can bring their country to perfection, which affords nothing but wood, water, and grass: to instance in an island of ten or twelve miles in length, and half so much in breadth, which some *Englishmen* have with a wonderful charge of late years planted, and I fear with little hope of profit to return to them: but I make account no man can be so ignorant as not to know, that such undertakers do it for other ends, or have other hopes of gain, than to reap it out of the earth of ten or twelve miles.

But it is rather suspected, they do it to nourish and uphold piracies, that by the spoils thereof they may be the better able to maintain that island, or to give a distaste to *Spain*, with whom they desire his majesty should have war, not considering what the end of war is, and how difficult it is to make a peace after such a war is once begun by two great princes.

But now to return to my former proposition or argument, of the competition betwixt *France* and *Spain*, of the *French* surprising the *Spaniards* and *Portuguese* beyond the line, I will conclude of nothing, only deliver my opinion, what *France* had to say in its own defence.

Sir *Francis Drake* returning from his famous and fortunate voyage round the world in 1580. the queen found, that by the passage through the streights of *Magellan*, which *Drake* had gone, there might be conveniency, if ever there happened hostility betwixt her and the king of *Spain*, to annoy him in the south sea, from whence all his treasure and wealth was brought, and after dispersed through the world. In the year 1582. she employ'd two good ships as any in the kingdom, except her own and committee, the conduction thereof to captain *Fenton* and *Ward*, to prosecute the same voyage that *Drake* had happily perform'd and taught them.

But as nothing is more uncertain than the chances and successes at sea, being governed by unconstant winds and waves, so did this voyage of Mr. *Fenton's* prove most unlucky, for they failed in all their designs, as you may find in Mr. *Hacklet's* book; to which I refer you.

The king of *Spain* having intelligence of the design of queen *Elizabeth*, and the pre-

parations of the ships aforesaid to perform her intentions in the south sea, and knowing it could not be brought to pass but through the streight of *Magellan*, he directed his letters to *Lima* in *Peru*, commanding one *Pedro Sarmiento*, a choice and perfect navigator, to pass from *Lima* to the streights of *Magellan*, that way by the south sea, which was never before purposely attempted, for by reason of the forcible westerly winds that blow upon that coast, which makes it a continual lee shore, it is not to be enterprised without great peril to the undertakers.

*Pedro Sarmiento* with two small ships proceeded upon that voyage as he was directed by the king, one of them returned again to *Lima*, the other, in which *Sarmiento* was, recovered the streights, and so passed into *Spain*, giving the king an account of the narrowness of the streight, in order to fortify it, and to endeavour to stop any ships that should attempt to pass that way; but all was false, and the king egregiously abused by his report; for there was no place within that streight less than three miles in breadth. He likewise gave a favourable report of the pleasantness and richness of the soil, to encourage men there to inhabit; but in the end it proved the most unhappy and unfortunate expedition that ever the *Spaniards* undertook.

The king being pleased with this intelligence, hoping thereby he might intercept all ships passing that way, and secure his coast of *Peru*, *Chile*, and other places, which afforded him all his treasure, he sent twenty three great galleons and three thousand five hundred old soldiers under the command of Don *Diego Flores de Valdes*, a principal commander by sea; he also sent the said *Pedro Sarmiento*, with commission to erect fortifications within the Streights, and to take upon him the title of governor. But as I have spoken somewhat of the mishap of our *English* ships, so I must say the *Spanish* fleet succeeded ten times worse; for of the twenty three galleons and the three thousand five hundred soldiers aforesaid, few ships or men returned, which was a great loss to *Spain* at that time; for in two or three years after ensued the wars betwixt them and us.

Those soldiers designed for the Streights being crossed with contrary winds, and other vexations, at last arrived there with their governour *Sarmiento*, and there seated and fortified themselves in two places; but cunningly and secretly *Sarmiento* seemed to go from one place to visit another, and foreseeing the calamity his men and he were like to fall into, (for neither the land, nor soil, or the narrowness of the streight, was answerable to his relation,) and being altogether hopeless of relief or succour from *Spain*, he

quitted the place, and treacherously ran away in his bark, pretending, after his arrival in *Spain*, that he was per force put from his cable and anchor he rid by, and could not return again for wind and weather.

In this base manner he left his poor countrymen in 1584. and in two years after, in 1586. Mr. *Carvendish* passing the *Streights* in his voyage round the world, found but three of those poor creatures living, and the place so infected with the carcaffes of those dead, that it was not to be endured. He found only six pieces of ordnance, which he brought away with him.

But as God is just, and a rewarder of all men, both in their good and evil actions, he accordingly chastised *Pedro Sarmiento* for his ill usage of his countrymen; for from *Brasil*, where he first landed in his way into *Spain*, he was met and taken by an *English* man of war, (for at that time there was hostility betwixt the two nations of *England* and *Spain*.) and brought prisoner into *England*, where I became acquainted with him.

But now to return to *Diego Flores de Valdes*, who ranging the coast of *Brasil* as his course led him, had intelligence of a colony of *French*, planted on a river called *Paria*, joining upon the sea with *Brasil*; whereupon he steered for that port, where he met and seized five *French* ships, three whereof he burnt, and two he carried with him: the men fled and dispersed themselves amongst the *Indians*, where to this day are found many savages that resemble *Frenchmen* in feature of face, and may be easily distinguished from others of their countrymen.

I know not whether others may be of my opinion, or no; but in all likelihood the barbarous usage of the *French* colony might be the occasion of the difference betwixt the *French* and *Spaniards* for the war beyond the line; and as the cause began by blood, so it is like never to end but by blood; for nothing is like to compose this difference, so long as those two monarchies continue in this greatness.

*The End of the Third Book.*

TO

T O T H E  
R E A D E R.

**I**N my first dedication, I recommend the reading thereof to my dearest and most intimate friends; in the second, to the captains and commanders serving in the late wars against *Spain*; in the third, to all sorts of seamen, from the highest to the lowest; and in this I prohibit none but the perverse puritans, whose stomachs are so faint and feeble, that any praise that can be attributed to a *Spaniard* or *Papist*, will make them sea-sick, and cast their gorge.

I will therefore make a *Turk* judge in this case betwixt the *Spaniards* and them, because every christian will incline to favour one sect more than another. Could God ever give a greater blessing to man, than to enable him to win and gain the souls of them that had been led away in infidelity and blindness? Could he ever shew a greater worldly happiness to a kingdom, than to send them, as it were, out of a cloud a new world, that affords all blessings and riches? Could he ever give more honour and reputation, than conquest over these people and their land? Could he ever shew more love to his servants, than to discover those countries at the time the *Moors* and *Turks* infected and infested the countries of *Spain* and *Hungary*? Could he in any thing more shew his wonders, than by such miracles as are related and recorded, for the means of the conversion of those people. This shall suffice for the will of God and force of his power; but as God chose the *Spanish* nation, for some secret judgment of his own, above all other people, to spread forth his holy name, so do I observe three things in them worthy of reprehension; the one is, their ingratitude; the second, their cruelty; and the third, the base condition of the people that were the authors of their prosperity.

Their ingratitude appeared towards *Columbus*, a man of more desert to the christian world than any other ever God created; for all the good before mentioned was wrought by God's permission, and his pains and patience.

This man, after his desperate and fortunate attempt, was maliciously and innocently brought prisoner in irons, to answer the calumination of his soldiers, which was not all, nor the worst; for this was an offence only to his body, the other to his honour and reputation.

For the *Spaniards* to eclipse his glory and merit, for discovery of the new world, on no other account but his being a stranger, born in *Italy*, invented and devised many fictions and idle imaginations, to lessen his praise. One while they say he was led to the discovery by a *Spaniard* that lay in his house upon his return from the *Indies*, and taught him the way thither.

But they could never agree upon the *Spaniard's* name, what province he was of, where he arrived, or what befel of him; so it is evident all were false aspersions, invented to lessen his honour, and advance the supposed *Spaniard's* praise; and God justly sent the divisions afterwards in *Peru* amongst themselves, as a punishment for their ingratitude to *Columbus*; for an unthankful man incited God to punish, and man to abhor him.

The second was their cruelty to their poor conquered *Indians*, occasion'd principally by avarice, whilst the revolt in *Peru* had almost hazarded their whole enterprize.

But their tyranny being made known in *Spain*, the emperor, like a merciful and pious prince, prohibited all rigorous courses against the silly savages, which so enraged the conquering *Spaniards*, that doubtless, had they border'd upon any civil country that could have given them assistance, they would as well have spoken any other language as *Spanish*.

My third observation was, the quality and condition of the commanders in the conquest of *Peru*, the principal whereof was such as no man would own as his son, nor they challenge for father; their education like their birth, neither being taught to write or read; and yet daily practice brought *Francisco Pizarro* to a civil familiar behaviour, and *Diego de Almagro* to a vain-glorious and high carriage.

What these two wanted in birth and breeding, was supplied in valour and industry; for to speak truly, considering what they attained to by their excessive travel and labour, the condition of the people they were to govern, and the multitude of enemies they subdued, no history, ancient or modern, can yield more honour to conquerors than they deserved

ferred; and I am of opinion, the cruel usage of the *Indians* proceeded from the debauchery and lewdness of their soldiers and followers; for their enterprize in those days was not undertaken but by desperate persons of estate and life, that thought nothing well gained that was not unlawfully gotten.

I may the rather confirm my opinion, because *Ferdinand Cortes*, who was a gentleman by birth, and so famous for valour, government, and wisdom, that he was paralleled with *Marius* and *Scipio* in the *Roman* state, carried his affairs with that honour, discretion, and mercy, that he left, and there still remains the title of a marquis to his house, when neither of the other two had ever lawful child to descend from them to uphold their names or memory.

The exploits of the *Portuguese* were no less memorable and victorious than the *Spaniards*; but seeing they are now both one nation, and live but under one king; and that the ensuing discourses will speak their praises, I will say little more than in pity to them, and attributing their many crosses to the just cause.

The *Portuguese* nation had been famous ever since the victorious battle of *Ourique*, obtained by *Don Alphonso*, the first king of that country, in the year 1139. Since then they have held competition with *Spain*, especially of late, that God made them famous in their eastern conquest, and so increased their wealth, that the cruel and miserable *Jews*, who set their whole felicity in worldly riches, crept in among them, and mingled with, and infected their blood with that cowardliness and covetousness, that it may be justly judged, they truly deserved God's ire and wrath cast upon them, viz. betwixt 1578. and 1580. God sent them for their punishment and scourge four kings, and five governors, that might be accounted kings, that spent and spoiled the wealth of their country, *Don Sebastian* by his rashness, *Henry* by his want of resolution, *Anthony* by tyranny, *Philip* by arms, and the governors for their private advantage.

Since those years the calamity that has befallen them is lamentable, by spoils and rapines committed on them by sea in the late wars with *England*; and since by the loss of their trade in the *Indies*, which was the first cause of their renown, and the first enriching of their state.

They must impute their misfortunes to God's permission, for their joining and coniving with God's professed enemies the *Jews*, for their own particular ends and gain.

It is written of *Peru*, That the constellation under which it is placed, caused so many divisions and slaughters as were there committed, not only in the time of the *Spaniards*, but many years before.

The like may be said of the *Molucco* islands, which, upon their first discovery, bred such a division betwixt the *Spaniards* and *Portuguese*, that though the two kingdoms were in peace at home, yet there happen'd continual encounters betwixt their subjects in those parts when they met there; but the *Portuguese* had always the best.

Not many years since, the like befel the *English* and the *Hollanders* upon the like cause, and about the same unfortunate islands, where they had many bickerings, notwithstanding the two states continued friends.

To conclude, I will concur with *Charles V.* the emperor, who was wont to say, *It had been well those Countries had never been discovered, or at least not so much frequented*: for we have enriched the infidels with the wealth of *Europe* and *America*, and decreased the trades of all the civil and known world, as we of *England* have proof, by our unprofitable traffick thither.

And now to the discovery of the several countries.

## B O O K IV.

## Discoveries and Enterprizes of the Spaniards and Portuguese, and several other remarkable Passages and Observations.

*The Discovery of several Countries and Islands.*

**B**EFORE I treat of the discovery of either of the two *Indies*, I will take the *Canary* and *Tercera* islands in my way, because they were known many years before the others; and in the next place, for that there is a necessity for ships to see those islands in their navigations, the one in going, the other in returning from the *Indies*.

The *Canary* islands, which are seven in number, were conquered by the *Spaniards* in the year 1393. in the time of king *Henry III.* of *Spain*.

The *Tercera* islands, being as many in number, were said to be discovered by the *Netherlanders*, but by whom by name, or by whom they were employ'd, or the year of our lord, is not set down.

*Guinea* was discover'd in the year 1471. in the days of *Don Alonso*, the fifth king of *Portugal*.

The cape of *Good-Hope*, and an hundred and fifty leagues to the eastward of it, as far as the haven of *Infanta*, was discovered by *Bartholomew Dias*, in the days of king *John II.* of *Portugal*, in 1459.

*Calicut*, and the other places in the *East Indies*, were discovered by *Vasco de Gama*, in 1497. and in the reign of *Don Emanuel*, king of *Portugal*.

The country of *Brazil* was discovered in 1500. by *Pedro Alvares Cabral*, upon the second voyage that was gone to the *East Indies*, in the time of *Don Emanuel* aforesaid.

The river of *Plate* was discovered by *Americus Vespatus*, in 1500. as he was going to find out a passage to the *Molucca's*, and employ'd by the same king *Emanuel*; but it is rather thought that *Dies de Solis*, and not *Americus*, was the first discoverer of it.

The *West Indies*, and especially the islands of *Lucayo's*, were discovered by *Christopher Columbus* in 1492.

The country of *Bacallao's*, alias *Newfoundland*, was discovered by *Sebastian Cabot*, a *Venetian*, by the directions of *Henry VII.* king of *England*, two years after the discovery of the *West Indies*.

The country of *Florida* was discovered on *Easter-Day*, 1513. by *Ponce de Leon*, who went to find the island of *Bainco*, being told by the *Indians* there was a well there, that by drinking of the water it would make old men young.

The country of *Panuco* was discovered by *Francis de Garay* in 1513.

The country of *Yucatan* was discovered by *Francisco Hernandez de Cordoua* in 1517.

*Nombre de Dios*, the islands of *Jamaica*, the *Hondura's*, and many other places, were discovered by *Columbus*.

*Darien* was discover'd by *Hojeda* and *Nicuesa*, where they endured many calamities, hunger, and mutinies, and hurts.

The river of *Amazons*, and the river of *Orellana*, and all that coast, was discover'd by the *Pinjones* in 1500.

The *South Sea*, which was the happiest discovery of all others to the *Spaniards*, for that it led them to *Peru*, which yields them all their treasure, was found by *Vasco Nunez de Balboa* in 1513. a man in disgrace at that time with *Charles* the emperor.

The country of *Chile* was discovered by *Diego de Almagro*; and whether *Lima* was in the circuit of *Chile* or *Peru*, was the difference betwixt *Pizarro* and *Almagro*, which cost both their lives, and bred their ruins.

The country of *Maldivia* near *Chile* and *Peru*, was discover'd and conquered by *Peter Maldivia*.

The cape of *California* was discover'd by *Pedro Alvarez* in his voyage from port *Navidad* to the *Molucca's*.

*Gonsalves* was sent to discover a passage out of the *South Sea* into our ocean, at the time when the question was betwixt the kings of *Spain* and *Portugal* about the trade of the *Molucca's*.

The country of *Cinaloa* and *Quivira* was discovered by *Francisco Vasques Coronado*; as also the country of *Granada*.

The *Philippine* islands were discover'd by *Michael Lopez* in 1564. he was employ'd by *D. Lewes de Vellasco* viceroy of *New-Spain*.

The islands of *Solomon* in the *South Sea* were discover'd from *Lima* in *Peru* by *Alvar de Mendolia* in 1568. and *Pedro de Sarmiento*, his lieutenant, whom I knew.

The *Streights of Magellan* were disco-

vered by *Ferdinand Magellaens*, a *Portuguese*, in 1520. employ'd by *Charles V.* then king of *Spain*.

The island of *Madera*, short of the *Canaries*, was discovered by *Machan* an *Englismen* in 1344.

*Russia*, or *Muscovy*, was discovered in the year 1553. in the reign of *Edward VI.* king of *England*. *Sir Hugh Willoughby* was sent upon the discovery; but he and his company perished in the harbour of *Urfena* in *Lapland*. *Richard Chaundler* being captain of another ship proceeded upon that discovery. *Cbery* island in *Greenland* was discovered by *Marmaduke of Hull*.

*Julius Agricola* was the first that failed about *England* and *Scotland*, and was the first that discovered the islands of *Orkney*; which he subdued.

### The Portuguese Discoveries on the Coast of Guinea, Castle de la Mina, and in the East Indies.

**G**UINEA was discovered, as you have heard, in the year 1471. and in the reign of *Don Alonso I.* who pretended title to *Spain* by his wife *Joan*, called the *Excellent*. King *John II.* of *Portugal*, and the thirteenth in descent, imagined that the spices that came into *Europe* might be brought by sea, and hearing there were christians in those parts of the world, both these things encouraged him to undertake the discovery.

*Bartholomew Dias*, an officer in the storehouse in *Lisbon*, was sent from *Castle de la Mina* to discover the length of the land of *Africk*, and found out the cape of *Good Hope*; from thence he sailed to the eastward one hundred and fifty leagues, to a port which he named *La Infanta*, and gave names to all places where he passed.

The king would not only rely upon his relation, but sent a *Franciscan* frier to find out the *Indies* by land; but the frier, for want of language, returned from *Jerusalem*: after that he sent two of his servants that were skilful in the *Arabick* language, the one called *Peter de Covillao*, the other *Alphonso de Paiva*: they departed from *Cintra* the 7th of *May*, 1487. and coming to the *Red Sea*, they parted company; *Paiva* went to *Prester John's* country, where he died: *Covillao* travelled to *Calicut*, and other places of the *Indies*, where he informed himself fully and substantially of the whole country. In his return home he met with two jews that were sent from the king of *Portugal* to meet him, and to wish him to inform himself of the state of *Prester John*.

One of the two jews he sent back with a relation of the state of the *Indies*, the other he carried with him to *Ormus*, from whence

he likewise sent him to the king, to give an account of his voyage, and himself went to *Prester John*, where the king, whose name was *Alexander*, us'd him courteously; but he dying, the other that succeeded him detain'd him prisoner; so that he never lived to return to *Portugal*, or to send more information to the king his master.

The king having information sufficient by letters the jew brought him, he immediately cut down timber, and built two new ships for that discovery in 1495. and the 25th of *October*.

King *John*, in the mean time, died, and *Don Emanuel* succeeded, who added great fame to the kingdom of *Portugal*: he furnished the two ships aforesaid, the one of an hundred and twenty tons, and called her the *Angel Gabriel*, the other of one hundred tons, and nam'd her the *Raphael*, with one carvel he bought, and one other to carry victuals.

He appointed for general a servant of his call'd *Vasco de Gama*, well experienced in sea affairs: *Paul de Gama*, his brother, went captain of one ship, and *Nicholas Coello* of another, both of them being the king's servants. *Bartholomew Dias* was to accompany them to *Mina* in *Guinea*.

The 8th of *July*, 1497. he embark'd at *Belem* with an hundred and forty eight men: the pilot was *Pedro de Alanquer*, who had been pilot with *Bartholomew Dias* in his former voyage; and if they lost company, the place of meeting was in the island of *Cabo Verde*. They passed by the *Canaries*, and off the river of *Oro* they lost company for eight days in a storm; but met again at the island of *St. Augustin*, where they refreshed themselves for seven days.

The

The 3d of *August* *Vasco de Gama* went from thence, and left *Bartholomew Dias* behind; the 4th of *November* he spy'd land, and called it *St. Hellena*, supposing it had been thirty leagues from the cape of *Good Hope*: the people in this place would have betray'd him.

The 20th, being *Wednesday*, he doubled the cape: on *Sunday* he came to *St. Blase*, being a watering-place, sixty leagues from the cape. Here he stay'd ten days, and departed the eighth of *December*; and in going to the river of *Infanta*, he endured a great storm. Here he found gentle and civil *Negroes*; one of his company could speak the language of the *Negroes*; he named it *Terra da boa gente*, and the river *Cobro*.

The 15th of *January* he sailed along the coast, and met with *Negroes* of great civility in their boats, who gave him light of the *East Indies*, and he called this river *Bons Sinais*: here he staid thirty two days, to trim his ships, and erected a mark, which he called *St. Raphael*: the place was infectious, and his men began to be sick.

The first of *March* he came in sight of *Mosambique*, where they were taken to be *Moors*, and at first well used, but finding them to be christians, they would have betray'd them. Here they had news that *Calicut* was nine hundred leagues from thence, and took in a pilot that had been there; which comforted them much.

The first of *April* they came to certain islands which they called *Acoutada's*, because finding the pilot in a lye, here they whipped him, and he confessed he brought them thither to have cast them away, as also that he would have enticed them to *Quiloa*, making them believe that christians dwelled there. In this course the *St. Raphael* struck upon a shoal, and was miraculously preserved, and this shelve they call'd *St. Raphael*.

The 7th of *May* they came to *Mombasca*, where the people knowing them to be christians, and what had passed with them in *Mosambique*, they practised to betray them.

They came to *Melinde*, eighteen miles from *Mombasca*, a city built like the houses of *Portugal*, the king a *Moor*, but courteous, and glad of the *Portuguese* coming thither; he furnished them with pilots to *Calicut*; and here he met with four ships of christians of the *Indies*, who were wonderful glad to see them: those christians gave them warning not to trust the *Moors* of *Melinde*. The king entred into friendship with the king of *Portugal*.

The 22d they departed from *Melinde*, and crossed over the gulph, being seven hundred leagues, which they sailed in thirty two days, and never saw land.

The 24th of *May* they discovered land near *Calicut*, and there they found a *Moor* of *Tunis* in *Barbary*, who knew the *Portuguese* nation, and asked them in the devil's name, how they came thither? the *Moors* of *Calicut* contrived all treasonable practices they could against the *Portuguese*, and so prevailed with the king, that was ensued betwixt them, and so continued a long time after.

They returned from *Calicut*, where they escaped great danger of treason, and in their way fell with divers islands, where the people were willing they should erect a cross with the arms of *Portugal*: this place he called *Porto de Santa Maria*. He came to the island of *Anchedivi*, where he trimmed the ship, and watered: here was a spy sent to discover his forces; which spy counterfeited to be a christian, and born in *Italy*; but he was suspected to be as he was, and they racked him three times, and then he confessed his villany. The general carried this spy into *Portugal*, where he became a good christian, and gave great light of the affairs of the *East Indies*; which stood the *Portuguese* in great stead.

Before they arrived at *Melinde* they endured great misery; and if God had not instantly miraculously succoured them, the general's brother and *Nicholas Coello* were resolved to have returned to *Calicut*, and put themselves to the mercy of the king; but at last they spied land, which proved the city of *Magadoxa*, fairly built, and inhabited with *Moors*, one hundred and seventeen leagues from *Melinde*.

The first of *February* they came to *Melinde*; where they were well entertained, and the king accepted of a pillar, to be set up in sign of friendship with the king of *Portugal*, and sent an ambassador thither.

The 17th of *February* they departed, and the 20th following they burnt the *St. Raphael* for want of men, and took the general's brother out of her.

The 20th they came to the island of *Zanguebar*, where the king used them courteously, and from thence to *Mosambique*.

The 3d of *March* to the islands of *St. Blase*; the 20th they doubled the cape of *Good Hope*, and then sailed to the islands of *Cabo Verde*, where the general's brother fell sick, and hired a caravel to carry him to *Portugal*, because his own ship was weak and leaky.

Before his arrival at *Cabo Verde*, *Nicholas Coello* willingly lost his company, that he might carry the first news to the king of his discovery of the *Indies*, and came to *Cascais* on the 10th of *July*, 1499.

The general came to the *Tercera's*, where his brother died; and in *September* to *Beline*, where the king did him great honour, and made him earl of *Vidigueira*: he gave him the royal arms of *Portugal* for his outcheon, at the foot whereof were two doves, alluding to his name *Gama*.

In his second voyage he went general of thirteen ships and two caravels: he was most fortunate in that voyage, and discovered many lands and people, that afterwards proved both wealthy and profitable to the *Portuguese* by their trade.

Betwixt his first voyage and this second there were two others; the general of the one was *Pedro Alvares Cabral*, who departed from *Lisbon* the 7th of *March*, 1500. In his way to the *Indies* he discovered the country of *Brazil* in ten degrees, and sailing to the southward in seventeen degrees and a half, he came to an harbour which he called *Porto Seguro*.

*Cabral*, upon this discovery, sent a pinnace to the king to inform him of it, which at this day is more profitable to *Portugal*

than the trade of the *East Indies*.

*Cabral*, the 29th of *May*, setting out from the coast of *Brazil*, was taken with the most violent storm that ever was read of; the day seem'd to be as black as night, the sea to burn like fire: four of his ships were swallowed up in the sea, and *Bartolomeu Dias*, the discoverer of the *Cape of good Hope*, in one of them.

The unlucky entertainment in *Brazil* made after amends to the *Portuguese*; for at this day their sugars, and the wood of *Brazil*, yields them more profit than the precious stones, spices, or other merchandizes of the *East Indies*.

The first inhabiting of *Brazil* was with small charge and adventure, the people that went were desperate, and of the worst kind, rather to be banished for offenders, than any hope of profit that should accrue unto them but the country proved so plentiful and rich, that although they have received great detriments by the *Hollanders* in *Baya* and *Fernanbuco*, yet it will quickly be redeem'd again by peace.

#### *Some other Particulars concerning the East Indies.*

1. BEFORE I treat of any particulars of the *East Indies*, give me leave to put you in mind of some observations of mine, which will not be unworthy your perusal, seeing they are to be attributed only to God, who is the searcher of all hearts, and the discoverer of hidden secrets.

2. It is strange and surprizing, That out of so many flourishing nations as God hath created and civiliz'd, he should elect and chuse the kingdom of *Portugal* to perform this great work of his, a country in those days of less esteem and reputation, of less renown and fame, and of less ability and valour, than any other christian monarchy we can call to mind, and to assign them such a time to effect it, when they enjoy'd a happy peace with their neighbours, and had no enemy to oppose or hinder their designs.

3. The first discovery, as you have heard, was to *Guinea* in 1471. where nothing appeared to the *Portuguese* but barbarous blacks, a strange and unseen sight to them, and not to be believ'd at their return, if process of time had not made it familiar to them by after-trafficke to confirm their report.

4. This discovery gave the light and way to all others that ensued upon it, as shall appear, like an art begun, that others take from one to another; but we must confess, the *Portuguese*, to their honour, were the first breakers of the ice, to give passage to all other strange countries; and

as *Guinea* yielded a complexion to their people that differed from us, as much as black from white; so did *America*, which was not long after made known to us, produce a sort of people differing from the *Europeans* in whiteness, and the *Africans* in blackness, but a mean betwixt both, and a colour like an olive; which to as many as have seen it, seems strange, considering that *Guinea* and *America* lie east and west, all in one parallel, so that in reason there should be no such difference.

5. This change in complexion, and the plentiful increase of gold in those climates, is attributed both to one cause, which is the heat and operation of the sun; and, in my opinion, not unproperly, as may be gathered out of the ensuing reasons.

6. The sun rising to the eastward, betwixt the two tropicks, runs its course westward over *Asia* and *Africa* till it come to the *Ocean Sea*, in which circuit its extreme heat ingenders the rich metal of gold, and changes the complexions of creatures to a black hue, which the heat reflects from the earth.

7. Coming to the ocean aforesaid, it passes the distance of 8 or 900 leagues over the air of the sea, and is cooled by it, as it was formerly heated by the land, that by the time it draws near the continent of *America*, it has lost great part of its vigour and force, and not able to produce that effect, as in *Africa*; and therefore is not able, as it were, to mellow the earth, and make

make it become gold, as after it does, when it has run its course the breadth of *America*, where its heat again ripens that matter and substance of gold: for we see, by experience, that the greatest quantity of gold is sent out of *Peru* into *Spain*, it being the westernmost part of *America*; when to the eastwardmost part thereof, as *Guiana*, and other places nearest us, never afford gold; and this for the reasons aforesaid, as I conceive.

8. But to return to the discovery of the *East Indies*: I will recite some particular blessings and benefits that God hath pour'd upon the world in general, upon *Europe* in particular, and upon the *Portugal* nation especially: for as they were the first discoverers, to their immortal honour, so all attempts by other nations, in other countries, must be attributed to them as a people that trod out the first path for others to walk in, as I will shew by reason hereafter in this book, when I come to treat of it.

9. This eastern discovery has resolv'd one doubt that no ecclesiastical or modern history could do before, which was the life and martyrdom of that holy apostle *St. Thomas*, as the monuments there make it manifest, and as a remnant of some christians in those desolate places, gave an infallible testimony.

10. And whereas in continuance of time many errors were crept in amongst those silly christians inclining to the *Greek* church, yet by the pains, travel, and danger of life, the *Portuguese* have brought them to the light of the truth, and have since increased the flock so abundantly, that the name and true worship of Christ is propagated in the uttermost parts of the world, yea, as far as *China* and *Japan*.

11. By the eastern discovery the length of *Africk* is butt'd out as far to the southward as the *Cape of Good Hope*, and from thence to the eastward as far as the *Cape of Guarda Fu*; in which course we have found the *Red Sea* to fall into the eastern ocean, which before was not known to us in *Europe*.

12. By the eastern discovery, and our access to *China*, we have found out that guns, powder, and printing, were in use with them many hundreds of years before they were known to us western people: we may likewise add many other curious works, which to this day we cannot equal or imitate them in.

13. By this discovery we have disprov'd that opinion of the philosophers, and other learned writers, who maintained the impossibility of inhabiting under the *Torrid Zone*, for the excessive heat, which our daily voyages beyond the line have made familiar with us.

Vol. III.

14. By this discovery we have authentically proved, by fact, antipodes, a thing before held ridiculous by many, (*viz.*) That one people's feet are opposite to another's, which, till *Magellan* sailed round the world, could not be made plain.

15. By this discovery we found the two poles equal in their nature, and that the same effect the north star produces unto us on this side the line, the south does the like on the other side, but with this difference, That when it is summer with them, it is winter with us; and when it is summer with us, it is winter with them.

16. By this discovery we have found the strangeness of winds, to blow contrary to our climate, and should not have believed it, if experience had not shewed it: as, namely, the certain constancy of a wind to blow from the *Canaries* to the *West Indies*, betwixt the north and the east, and never to change; and then again, from the coast of *Brazil*, towards the *East Indies*, as far as *China*, we find a limited wind, certain in some places for three months, and in others for six; the day of their entrance and change being known to all people: and these are called the *Monsons*; but from whence the name is derived, whether before the christians access to those parts, I cannot find.

17. By this discovery we have found out strange and unheard of fishes; amongst the rest, and of most wonder, is the *Remora*, whose nature is to stop the way of a ship, and to bring her astern, though the wind be strong and large to carry her forward.

18. This fish has been heretofore writ of, and look'd upon as a poetical fiction, till a voyage in a carrack to the *East Indies*, put all men to silence; for the beak head of that ship was clasp'd about with a *Remora*, to the fear and wonder of the mariners; for they found themselves by the height to be an hundred leagues astern of their ordinary course; and at last finding the cause with labour and pains, they got this monster unglued; and at last the carrack arrived at the port of *Goa*, where, for the memorableness and strangeness of it, this ship, the captain, the day it happen'd, and her arrival, are publickly pictur'd, and to be seen to this day.

19. By this discovery we are come to the knowledge of many islands and rocks not known before, and some of them not above a quarter of a mile in compass, as namely, *La Peana de St. Pedro*, in four degrees to the northward of the line, all white, and like a sugar-loaf; the island of *St. Helena*; two miles in compass, healthfully seated, that yields plenty of water, fish, goats, and fruits, as well to us in our navigations from the *East Indies*, as to the *Portuguese* in times past. The island of *Ascension*, wholly

Xxxx

barren,

barren, not affording so much as water: but the strangeness of these rocks and islands, is, That they are plac'd in the midst of the ocean, the nearest of them not being within one thousand three hundred miles of any main continent.

20. We are come to know the goodness and operation of the bezoar-stone, and of the beast it self that yields it. The cocoa of *Maldivia*, and the strange growth of it upon trees five or six fathom deep in the sea; the virtue whereof far exceeds the bezoar-stone.

21. By this discovery we have learnt many means for health by drugs, and choice things of nature, for man's body, the place of their growth, and the strangeness of them. We know the *Abada*, or rhinoceros, a beast that has a horn in its forehead, and is thought to be the unicorn: but it is not so, though it had the same virtue; for unicorn there is none.

22. By this discovery we are now served with our spices, drugs, precious stones, and all other *India* commodities, immediately from thence by the shipping of *Europe*, which was wont to be received by the way of *Turky*, at unreasonable prices, and at the will of the *Turk*.

23. By this discovery the *Portuguese* have brought in and settled the *Portuguese* language, which is now grown familiar and frequent in those parts of the world; they have built many famous cities and towns, erected bishopricks, churches, and monasteries; they have established temporal and spiritual laws, and the same form of government they enjoy and live under in their own country.

24. By this discovery they have found many strange kings, who govern their people with much civility, their towns and cities anciently built, their palaces of great majesty and pomp, and all things else answerable to their excellent policy, rule, and government.

*The Names of the Towns the Portuguese have in the East Indies, with their Form of Government.*

*Ternate.*  
*Tydore.*

*Band.*  
*Boyna.*

*Goa* is the metropolitan city of all the *East Indies*, lies in the kingdom of *Decan*, and is an island twenty or thirty miles in compass, both pleasant and fruitful: the viceroy resides in this town, as does the metropolitan bishop of the whole *Indies*.

The carracks arrive from *Portugal* in this port of *Goa*, unless they be forced about the island of *St. Lawrence*, which if they be, they can fetch no harbour nearer than *Cochin*, which is the place the carracks use to take in their lading in their return to *Portugal*.

The winter in *Goa* begins the 15th of *May* with very much rain, and so continues till the 15th of *August*; and during that space no ship can pass over the bar of *Goa*, because the continual showers of rain drive all the sands together near a mountain called *Oghana*, whence they spread themselves over the shoals of the bar, and into the port of *Goa*, whence they can find no way out, but continue there till the 10th of *August*, when the rain ceases, and the sea drives the sands away again.

*How a new Viceroy is declared, in case the old one dies; and of the several Titles given to Persons serving in the East Indies.*

If a viceroy dies in the *East Indies*, there are always five *Via's*, as they call them, which are letters under the king's seal, figured 1, 2, 3, 4, 5, which they open according to their figures, beginning with number 1, and so on, in case those named in the first be dead, till they lite of one whom the king has appointed viceroy. These letters are kept by the jesuits, and opened at mass, in the presence of all the nobility and others, with great solemnity and state.

*Fidalgo da casa del Roy nosso senhor*; This is a gentleman of the king's house, and the chief title.

*Mofos Fidalgos*. An honourable title, and are commonly gentlemens sons, or advanced by the king's favour.

*Cavalleiros Fidalgos*: This is a title of a knight, and much abus'd by base people that are made so.

*Mofos de Camara*: These are the king's servants, some of his chamber, some of his accounts, and some for other service; and this is the first degree of credit; and as they deserve, so they are advanced to better.

*Escudeiros Fidalgos*: These are esquires.

*Homes Hourados*: This is the meanest rank amongst them; every man that serves the king in the *Indies*, is paid according to those titles; and when they return with their certificates into *Portugal*, under the hand of the viceroy and *Matricola-General*, the king prefers them according to their titles and places.

*The several Countries from whence East India Commodities are brought.*

Cloves from the *Molucca* islands; mace and nutmegs from *Banda*, *Java*, and *Malaca*; pepper from *Malabar*; cinamon from *Ceylon*; pearls taken at a place called *Babarem* in the *Persian Gulph*, in *June*, *July*, *August*, and *September*; sandel from *Cochin* and *Malaca*; all *China* commodities from thence, as quicksilver, white sucket, camphir, lignum aloes, *China* roots, fine silk and latten; galls from *Cambaya*, *Bengala*, and *Siria*; ginger from *Cambaya*, and many other parts; wax and long pepper from *Bengala*; musk from *Tartary*, by the way of *China*; coco de *Maldivia* from the shores of *Maldivia*; indico from *Zindi* and *Cambaya*; long pepper from *Bengala* and *Malaca*; opium from *Pegu* and *Cambaya*; aloes soccatrina from the island of *Soccatora*, where *St. Thomas* was shipwrecked; manna and wormseed from *Persia*; rhubarb from *Persia* and *China*; callicoe from *Calicut*.

*Some Particulars of the Carracks Navigation to the East Indies.*

Every man that goes, puts in security to perform the voyage; and if he goes not, pays dearly for it.

The master and pilot have for their pay, outward and homeward, seventy five pounds each; but the room allowed them to carry commodities, they commonly let out for five thousand ducats; no officer that goes, but buys his place of the provisor.

The boatswain has for his wages one hundred twenty five ducats, and three thousand ducats freight; the quarter-master has for his wages seventeen shillings and six pence per month, and two thousand six hundred ducats freight; and every other officer according to his rate and proportion. The factors and the purfers have no pay, only their cabins allowed, which will stow twenty pipes of wine apiece, and a cabin aloft to lie in.

There is no difference in their allowance of victuals, every man has thirty two pound of flesh a month, onions, garlick, dried fish eaten at the beginning of the voyage. Sugar, raisons, honey, prunes, rice, and such things are kept for the sick men.

Every man makes his own provision to dress his meat, as wood, pans, pots, &c.

There are officers for the king that give the same allowance to the soldiers; for the soldiers and sailors are served apart.

In their return the king pays no soldiers; and such soldiers as come home are passengers, and have no allowance, either of meat or wages.

The sailors in their return have no allowance of meat, only bread and water, till they come to the *Cape of good Hope*, and then they make provision themselves; they are only allowed the stowage of their chest below, which if they sell, they may have eighty ducats for it.

No soldier that comes home, as aforesaid, can depart the *Indies* without a pass from the viceroy; and they must serve there five years before they can have it.

In sailing to the *Indies*, sometimes they keep too much to the coast of *Brasil*, and are forced home again, because they cannot double the shores of *Abrolhos*.

The ship that goes from *Mosambique* to *Goa*, no man can adventure in, but the captain of *Mosambique*, and such persons as are married in the town; for none but married men are suffered to live there, because of peopling the place, which is very unwholesome, and infectious.

The government of *Mosambique* is worth to the captain for his three years, three hundred thousand ducats; but after his three years, he is bound to serve at the command of the viceroy three years more, unless he have a special patent from the king to the contrary.

*The brave Exploits of the Portuguese at Adem, and other Places.*

The great success of the *Portuguese* purchased them both fame and envy, as well from christian princes as turks; and *Soliman the Magnificent*, in the year 1537. attempted, by his bassa *Soliman*, in *Egypt*, a voyage against the *Portuguese* at *Adem*, upon the mouth of the *Red Sea*.

He furnished himself with eighty brave ships, twenty five foists, four galleasses, twenty galleys, and seven other vessels; all which he carried from *Cairo* to *Suze* in pieces, being eighty miles by land.

With these forces he resolutely besieged *Adem*, which was defended by greater valour by the *Portuguese* and their governour *Francisco de Almada*.

The *Turks* were forced to retire with great shame; carrying some few *Portuguese* they had taken prisoners to *Constantinople*, and committing most barbarous cruelty upon them.

*Don Alonso de Albuquerque*, with thirty ships won *Calicut*; with twenty one he took *Goa*; with twenty three *Malaca*; with twenty

ty six he entred the *Red Sea*; with twenty two he recovered *Ormuz*. *Lopes* made a voyage into the *Red Sea* with thirty seven galleys. *Lopes de Sequiera* with twenty four ships laid siege to *Guida*.

*Henry de Meneses* wasted *Paitan* with fifty ships: *Lopes Vas* left in the arsenal one hundred thirty six ships of war, very well furnished: *Nuno d'Acuna* undertook the expedition to *Diu* with thirty six ships.

*The famous Exploit of Ferdinand Magellaens, who first sailed round the World.*

THE honourable exploits and enterprises of the *Portuguese* nation ceased not, but still one or other of them was in action, and would not be satisfy'd till they had brought to light the western parts of the world, as by their endeavour and labours they had done the eastern; for it seems they had an opinion of the world's roundness, and that by a ship sailing westward, and another eastward, they might meet together by consent, if the western sea could be discovered.

The man that first undertook to resolve this doubt, was *Ferdinand Magellaens*, a *Portuguese* by nation, and a gentleman by birth, who having lived seven years in the *East Indies*, and pondering with himself, that the world was round, thought there might be another way to the *Molucco* islands, besides the common known course by the cape of *Good Hope*; and was the more emboldened to it by a kinsman of his own, *Juan Serrano*, who dwelt in the *Molucco's*.

Upon his return to *Portugal*, what the occasion was, is unknown; but he and another gentleman, called *Rui Falero*, left the service of their king in 1516. and offered it to cardinal *Ximenes*, then archbishop of *Toledo*, and governor of *Spain*, upon the death of king *Ferdinando*.

*Don Emanuel* king of *Portugal* hearing of the flight of these two servants of his, sent to expostulate their departure, accusing them as fugitives; and his subjects, and unfit for any prince to entertain; and fought to divert their proposition of a new discovery, but could not prevail with the cardinal.

*Rui Falero* was so highly concerned for leaving the king's service, and the dishonour that would redound to him by it, that for very grief he run mad, and dy'd. But *Magellaens* being honoured with the order of knighthood of *St. James*, proceeded upon his voyage, and set sail the 20th of *September* from *St. Lucar*; and in the year 1519. he arrived at *Tenriff*, one of the *Canary Islands*, on the 26th of the same year.

Then coming into twenty two degrees, on the coast of *Brasil*, he found a harbour, and called it the river of *Serrano*, after the name of his pilot; from thence he went to port *St. Julian*, where he wintered, and there his death was conspired by some captains, and others of his company, who

were executed for it in the said port of *St. Julian*.

*Mr. Douty*, that conspired the death of *Sir Francis Drake*, (as *Sir Francis* seem'd to pretend,) was there executed; and in this island they found a part of the *Magellaens* gallows, on which his men were hanged; from hence *Magellaens* came to the river of *Santa Cruz*, where one of his ships was lost, but the men saved. Sailing thirty leagues further, he came to a cape, which he called by the name of *Ursula*, because it was upon *St. Ursula's* day he there entered the *Streights*, and one of his ships forsook him, and returned home, whereof *Stephen Gomes* was pilot.

He found the *Streights* an hundred and thirty leagues in length, and two in breadth, the shore deep, and land full of snow, though it lay but in fifty two degrees; the point from whence he discovered the *South Sea*, he called *Cape Descado*, and placed a cross on it, as a token for his ship, which he did not think was returned; now did he conjecture the *Molucco's* were not far from him, but herein he was deceived.

From the *Streights* he sailed three months, and never saw land, and was put to wonderful extremity for want of victuals, and many of his men died with hunger. The first island he fell in withal, he found uninhabited; and being two hundred leagues one from another, he called them *Unfortunate Islands*; then came he to other islands, which he called *Ladrones*, because they were all thieves, and like gypsies.

The 18th of *March* 1721. he landed upon an island called *Zamal*, thirty leagues from the *Ladrones*, uninhabited; yet he staid there to refresh his men upon it; and after arrived at an island called *Zaloan*, where he found civil usage; and so many islands there together, that they called the sea *Archipelago de Lazaro*.

He passed by the islands *Cenalo*, *Huynan*, and many others, till he came to the island of *Botman*, where he was civilly entertain'd, and at *Catagan*.

He went, by the help of pilots from one island to another, till he came to *Cebu*, which is the best island of the rest. The 7th of *April* he sent to visit the king of *Cebu*, who used him courteously; and here he met with some *Moors*, who told the king of their countrymen

countrymen the *Portuguese* being at *Malaca*, and in the *Indies*: the king of *Cebu*, with his queen, and all the whole island was baptiz'd, the king called *Charles* after the emperor, his son *Ferdinand*, after his brother; and here they destroy'd all their idols.

Not far from *Cebu* there is another island call'd *Matan*, where the king refused to pay tribute to *Magellan* in the emperor's behalf; whereupon he made war with him, and was unfortunately slain, with eight of his company; which in my opinion was great folly in *Magellan* to adventure his life against a people and island that never christian was likely to come to more.

After his death, his company chose *John Serano* and *Barbofa*, *Portuguese*, for their commanders. *Serano* was after betray'd by his interpreter, and himself and thirty of his men slain; and as many taken prisoners. Upon this disaster the king of *Cebu* renounced his religion, beat down the churches and crosses, and returned to his ancient idolatry. Eight of the thirty that were taken prisoners were sold into *China*; and within few days after *Magellan's* death, they had news of the *Molucco* islands. Going from *Matan* they found an island called *Bobolli*, where they burnt one of their three ships, to furnish the other two.

They came to the island called *Ponayoton*, the people being most black; from thence they went to *Chippit*, to *Cagayan*, and to *Pulon*; to the island of *Barneo*, where the king entertain'd them with great magnificence.

They arrived at the island of *Ciumbabon*, where they staid forty days to trim their ships, to take in water, wood, and other necessaries: some of the men by this time were altogether without cloaths; and there they found leaves, which, when they fell from the trees, would move and stir as though they were alive; and being cut, blood would come out of them.

In sailing to *Tugimnor* and *Solo*, they pass'd the sea of *Weeds*, and in those islands found great pearls; and then they went to the island of *Baytan* and *Callagan*, where they took a canoe, that informed them of the *Molucco* islands; and passing by many other islands, on the 8th of *November*, 1581. they arrived at the *Molucco's*, and the island of *Tydore*, where they were honourably entertain'd by the king. He told them, he had seen in the heavens certain signs, that such ships, and such men as they were, should come to that island; and for the more friendship with the emperor, he would have his island called no more *Tydore*, but *Castile*: this king was a *Moor* by religion.

The king of the island of *Gilolo* was a pagan, but came to them with great friend-

ship: both these kings accompanied them to the island of *Marc*, and when they parted, it was with tears. From thence they came to the islands of *Cbacovan*, *Lagoma*, *Sicbo*, *Grocke*, *Caiphe*, *Cbulacco*, *Lumittola*, *Terenton*, *Ambiton*, *Budia*, and many others, till they came to *Gallion* and *Moula*, where they staid fifteen days to mend their ship.

They arrived from *Moula* to *Tymor* on the 15th of *January*, 1522. and here the men mutinied. In this island they found great store of white sanders; and in it the *French* pox is very rife and common; and coming to *Tuida*, they had plenty of cinnamon; from hence they directed their course to the cape of *Good-Hope*, shunning the sight of the island of *Sumatra*, or any other land.

After many days sailing with contrary winds, at last they came to the cape of *Good Hope*, and finding their want and extremity so great, many of them moved to return to *Mosambique*, and to submit themselves to the mercy of the *Portuguese*; but most voices withstood it, though half the men were dead.

After a long navigation they came to the islands of *Cabo Verde*, and set their boat on shore, where fourteen of them were betray'd by the *Portuguese* of that island; and *John Sebastian Cano*, then captain, who had outliv'd all the other commanders, perceiving the falshood of the *Portuguese*, he hoisted sail, and directed his course to *St. Lucar* in *Andalusia*, where he arrived on the 6th of *September*, 1522. with only eighteen *Spaniards* of all those he carried with him, having been upon the voyage three years wanting fourteen days, and celebrated monday for sunday, (that is to say,) one day's difference in computation.

The other ship turned back, by reason of her weakness, towards *New Spain*; and being crossed five months with contrary winds, was forced back again to the *Molucco* islands, where she met a fleet of five ships of the king of *Portugal's*, commanded by one *Brito*, who took both ship and goods, and sent the men prisoners to *Malaca*: this afterwards bred great contention between the two kings of *Spain* and *Portugal*.

*An Addition of the Authors concerning this Voyage of Magellan.*

This voyage of *Magellan* decided a long and difficult controversy amongst the learned, as well divines as others; some being of opinion that the world was round, others not; and amongst the rest, that famous father of the church, *St. Augustin*, held that the world was not round, as is apparent by his works.

But *Magellan's* ship having failed about it, as by his voyage is manifest, has quashed the erroneous opinions of those that denied the roundness of it.

In my opinion, if the world had been certainly known to be round, as no doubt but it was imagin'd by *Columbus*, it might be a great motive, and indeed an unanswerable reason to animate and encourage him to the discovery of a new land, after the open sea of the cape of *Good Hope* was known, and the *East Indies* found out by the *Portuguese*.

For he could not be so ignorant, but understand, that by running a westerly course from the *Canary Islands*, if he were not interrupted by a land, the sea would conduct him to a place discovered by the *Portuguese* in the *East Indies*; and then, if the worst befel him that could, yet he should be able to shake hands with the *Portuguese*, his neighbours, in the most remote regions of the world.

*A Difference betwixt the Spaniards and the Portuguese about the East Indies.*

The *Streights* being newly discovered, which took the name of *Magellan*, and gave an entrance in the *South Sea*, and by consequence unto the *Molucco* islands, added fuel to the fire before kindled between *Charles I.* emperor and king of *Spain*, and *Don John II.* of *Portugal*, about the right of those islands, to whom they should belong; upon the division of the new world.

This bred a long question between the two princes, till it was accommodated, as shall appear in my discourse of the northern passage.

As all good successes encourage men to follow the steps of the treaders-out of the way, even so did this discovery the more animate them, because it brought with it both honour and profit, not only by the places discovered, but by the known wealth they yielded; and out of hope that other enterprizes might prove as famous and commodious, the *Spaniards* neglected no occasion to second his late discovery; and therefore in the year 1525. this tract and passage was attempted by *Garcia de Louisa*, a knight of *Malta*, with seven ships, and four hundred and fifty men.

He departed from the *Groyn* with unfortunate success, himself pass'd the *Streights*, but died in the voyage; some of his ships were lost, others put into *New Spain*; his own ship arriv'd at the island of *Tydore* in the *Molucco's*, another came to the island of *Bachiam*, where the king thereof entered his ship under

colour of friendship, slew the captain, his brother, and took all the men prisoners: another was lost in *Candiga*; and, to conclude, they all fell into the hands of their enemies, either *Portuguese* or islanders.

*Vargas* bishop of *Placentia*, sent seven ships out of *Bilboa* to the *Molucco's*; only one of them pass'd the *Streight*, and arrived at *Arequipa*, a port in the *South Sea*, and went no further: this ship was the first that discovered the lying of the coast of *Peru*.

Notwithstanding the many disgraces and losses the *Spaniards* received by this new found *Streight*, yet it did nothing dishearten them; but they tried by all ways and means how they might have access to the *Molucco* islands, by another way than by the cape of *Good Hope*; and *Ferdinand Cortes*, the conqueror of *New Spain*, by order of the emperor, sent two ships with four hundred men, in the year 1528. the general *Alvaro Serou*, to seek the *Molucco's* from *New Spain*; which succeeded no better than the rest had done; neither was the *Streights* left off, but often attempted by these that follow.

The second enterprize after *Magellan*, was by two ships of *Genoa*, which arrived at the mouth of it, and one of them with a storm was cast away at the river of *Plate*, the captain called *Pancoleon*; the other in 1526. returned home.

*Sebastian Cabot*, a *Venetian*, would have pass'd the *Streights*, but could not; he returned to the river of *Plate*, being then employ'd by *Don Emanuel*, king of *Portugal*.

*Americus Vesputius* was sent likewise by *Don Emanuel* to find the *Streights*; but neither could find the *Streight*, nor yet the river of *Plate*.

*Simon de Alcasara* went with divers ships and four hundred and forty *Spaniards*; but before they came to the *Streights*, they mutiny'd, and ten or twelve being slain, returned.

From this year, till the year 1577. the attempt of the *Streights* lay dead, not any one seeking to enterprize it, till *Sir Francis Drake* had it in agitation, and performed it with as great a resolution, to the general honour of our nation.

It was after this, and in the 1586. begun and performed by *Mr. Cavendish*. The time of his departure from *England*, his days of sailing, the space he was abroad, and the time of his return, shall appear in a brief repetition I have made by way of journal, with some addition of *Sir Francis Drake* himself, which is the next that follows.

*An Introduction to Sir Francis Drake's Voyage about the World.*

I Have laboured in all my relations to walk uprightly, and with integrity, neither swaying to the one hand, or bending to the other; I have endeavoured to carry my intentions so equally, as not to deserve blame for too much commending; nor reproof, for detracting more than truth leads me; and as I have begun so indifferently, so will I continue as sincerely, and say somewhat of this noble gentleman Sir *Francis Drake*, who is to enter into the next rank of my discourse.

There is no man so perfect, but is fit to be amended; nor none so evil, but he has something in him to be praised: and comparing the imperfections of Sir *Francis Drake* with his perfections, the world, and not I, shall truly judge of his merits.

His detractors lay to his charge the baseness of his birth and education, his ostentation, and vain-glorious boasting; his high, haughty, and insolent carriage; and except against his sufficiency for a general, though they allow him to be an able captain.

His friends and favourers answer in his behalf, That the meanness of his birth was an argument of his worth; for what he attained to, was by no other means than merit. They say, that every man is son to his works; and what one has by his ancestors, can scarcely be called his own; that virtue is the cause of preferment, and honour but the effect; that a man is more to be esteemed for being virtuous, than being called worshipful; the one is a title of honour, the other desert.

*Marius* being upbraided by *Sylla* in the like manner, for the baseness of his birth, and haughtiness of carriage, answered, That he was not of so great a family as *Sylla*, yet *Sylla* could not deny but that he was the better man; for in *Sylla's* house were painted the acts of his forefathers; but in his were hung up the banners that he himself had won from his enemy.

In vindication of Sir *Francis Drake's* ostentation and vain-glory, they say it was not inherent to him alone, but to most men of his profession and rank. It is true, he would speak much and arrogantly, but eloquently, which bred a wonder in many, that his education could yield him those helps of nature. Indeed he had four properties to further his gift of speaking, (*viz.*) His boldness of speech, his understanding in what he spoke, his inclination to speak, and his use in speaking; and though vain-glory is a vice not to be excused, yet he obtain'd that fame by his actions, that facility in speaking, and that wisdom by his experience,

that I can say no more, but that we are all the children of *Adam*.

His friends further say, That his haughtiness and high carriage is somewhat excusable, when it appears not but in his command; for a general ought to be stern towards his soldiers, courageous in his person, valiant in fight, generous in giving, patient in suffering, and merciful in pardoning: and if Sir *Francis Drake* was to be praised for most of these virtues, let him not be blam'd or condemn'd for one only vice. Many times where a man seeks obedience, it is imputed to his pride and high carriage; but if people's hate grew upon envy, (as it is likely,) it appeared greater than if it had been grounded upon injury.

The exceptions against him by those that condemn him as an ill general, are, his neglect of furnishing his fleet to the *Indies* in 1585. his not keeping *Santo Domingo* and *Cartagena*, when he was possessed of them in that voyage; his weak preparation for such an expedition as that of *Portugal*; his promise to go up to *Lisbon* that voyage, and non-performance; the taking of the pinnace in his way to the *Indies*, which discovered his directions in 1595. All these I formerly handled; and refer the reader to the place where they are treated of; though something I will say of him, as he was a private captain, and especially of his renown'd voyage about the world, being the first attempt of that nature that ever was performed by any nation, except the *Spaniards* themselves: and it was the more honour to him in that the *Streights of Magellan* were counted so terrible in those days, that the very thoughts of attempting it were dreadful; secondly, in that it had been but once passed, and but by one ship that ever return'd into *Europe*, and that above sixty nine years before his enterprize. His praise was, That he could carry a voluntary action so discreetly, so patiently, and so resolutely, in so tedious and unknown a navigation, the condition of seamen being apt to repine and murmur. But, lastly, and principally, that after so many miseries and extremities he endured, and almost two years spent in unpractised seas, when reason would have bid him sought home for his rest, he left his known course, and ventured upon an unknown sea in forty eight degrees; which sea or passage we know had been often attempted by our seas, but never discovered.

This attempt alone must silence all his detractors; for it shew'd an extraordinary resolution in his person, a special desire

fire to enrich and benefit his country, and a singular patience to endure the disasters and mishaps that befel them.

And yet he must not go so clear without stain or blemish: for you must know, that though he deserved well in the direction and carriage of his journey, yet the ground of his enterprize was unjust, wicked, and unlawful, his design being to steal, and thereby to disturb the peace of princes, to rob the poor traveller, to shed the blood of the innocent, and to make wives widows, and children fatherless.

No man had more experience of the inconstancy of fortune than he; for the nature of fortune is to bite when she flatters, and to strike when she is angry.

What his birth and other deserts were, needs no reiteration. Fortune did much for him; but at his death she was angry with him: first, in that there was a doubt whether it was natural; secondly, and the best his friends can say, that it was caused by grief, for failing of his expectation in that voyage; thirdly, after his meritorious services, his heir was prosecuted and perplexed for debts and accounts to the crown; and lastly, died, like *Pisarro* and *Almagro*, without a child to succeed him, and perpetuate his memory.

*Sir Francis Drake's Voyage round the World.*

**S**IR Francis Drake departed from *Plymouth* with five ships and a pinnace on the 13th of *December*, 1577. The 25th he fell in with the coast of *Barbary*; the 29th of *December* with the isle of *Mayo* and cape *Ferd*; the 13th of *March* he passed the equinoctial line; the fifth of *April* he fell in with *Brazil*, and in thirty degrees, and so to the river of *Plate*; where he lost the company of two of his ships; but meeting them again, took out their provisions and cast them off.

The 29th of *May* they came to *St. Julian's* port, where the people were extraordinary tall of stature, and *Magellan* termed them giants. This was the place where *Mr. Douty* was executed the 7th of *July*, 1578. and in the same island where *Magellan* executed his mutiniers, as I have shew'd before.

*A Short Account of Mr. Cavendish's Voyage round the World in the Year 1586.*

**T**HIS voyage into the *South Sea* was often attempted by sundry *Englishmen* after *Sir Francis Drake* had led the way, but never any of them had the fortune or happiness to perform it, but only *Mr. Ca-*

The 20th of *August* he fell in with the *Streight of Magellan*; the 25th of *September* he passed them; the 25th of *November* he came to *Machob*, a port in *Peru*, in thirty degrees, where he had appointed a meeting, if the ships had lost company; but captain *Winter* was returned home after he had passed the *Streights*. The 25th of *December* he came to *St. Jacob*; the 29th to *Cippo*, where the *Spaniards* armed three hundred men against them.

In *February* he arrived in *Chile*; the 15th at *Lima*; the 16th of *March* at *Acaculco*, where he felt a terrible earthquake in his ship. From the 16th of *April*, till the 5th of *June*, he sailed without seeing land, and arrived in forty eight degrees, thinking to find a passage into our seas, which land he named *Albion*: the people were courteous, and took his men for gods; they live in great extremity of cold and want. Here they trimmed their ship, and departed the 25th of *July*, 1579. standing his course for the *Molucco's*.

The 29th of *September* he fell in with certain islands, where he met with the worst-condition'd people of all his voyage; the 19th of *October* he came to *Mendiana*, where he water'd; then to the islands *Tagolada* and *Saron* the 1st of *November*; the 4th he had sight of the *Molucco's*; and coming to *Ternate*, was kindly and civilly used by the king; the 10th of *December* to *Celebes*; and here his ship struck upon a rock, but was most miraculously preserved: he came near to *Beratin*, where he was refreshed, but found the people cruel. The 16th of *March* he came to *Java Major*, thinking to go from thence to *Malaca*, but necessity forced him to direct his course homeward. The 25th of *March* 1580. he departed from *Java*; the 15th of *June* he passed the cape of *Good-Hope*, having fifty seven men, and but three butts of water; the 12th of *July* he came under the line; the 16th he fell in with the coast of *Guinea*, and there watered; the 22d of *August* into the height of the *Canaries*; the 11th of *September* into the height of *Tercera*; the 24th in sight of *Scilly*; the 25th to *Plimouth*, where he was well welcomed, and his ship afterwards carried to *Depiford*; where she lies to this day for a monument, and himself knighted in her, as he worthily deserved.

*vendish*, whose voyages I briefly treat of next.

*Mr. Cavendish*, having spent his best means at court, thought to recover himself again by a voyage into the *South Sea*; for then

then the wars with *Spain* began, and it was lawful to make any spoil upon the *Spaniards*. According to his hope, he enriched himself with a greater fortune than was left him at first, if discretion had taught him how to manage it.

He built two ships from the stocks for this voyage, and departed from *Plimouth* on the 21st of *July*, 1586. The 5th of *August* he fell into the *Canaries*; the 27th of *September* he departed from *Sera Leona* in *Guinea*; the 25th of *October* he fell in with the coast of *Brazil*; the 6th of *January* he put into the *Streights* of *Magellan*, where he found but twenty two *Spaniards* alive of three hundred which *Diego Flores de Valdes* left there, in his unfortunate voyage he undertook to intercept the *English* in their passage that way.

The 27th of *February* they were out of the *Streights*; the 14th of *March* came to the island of *St. Maria* and *Chile*; after to *Marmorano*, and the town of *Irica*; the 4th of *May*, 1587. he came to *Pista*, from thence to *Cberipa*, to *Paita*, and to the island of *Puna*.

The 12th of *July* he passed the equinocial; the 28th he came to *Acapulco*, which he burnt; the 13th of *August* to the port of *Navidad*, and then to *St. Jago*; the 3d of *September* to the bay of *Compostella*; the 12th to the island of *St. Andrew*; the 26th to the bay of *Massedan*, and so to the port of *Aquacara*, near the cape of *California*, where he lay till the 4th of *November*, and took his great and rich prize that came from the *Philippine* islands.

In forty four days he went to the islands of *Ladrones*, being nigh two thousand leagues from thence; the island he fell in withal was called *Guana*: the 14th of *January* to the *Philippines*, he fell in with *Tandaya*, then to *Manila*, and so to the *Molucco's*, he passed by the islands of *Mindanab*, *Sibolla*, and *Borneo*; the 28th to *Java Major*; the 29th of *May* he fell in with the cape of *Good Hope*; the 7th of *June* with the island of *St. Hellena*; the

4th of *July* 1588. he passed the line, being the 4th time he had passed it.

The 24th of *August* he saw *Flores* and *Corvo*; the 3d of *September* he met a *Flemish* hulk, that told him the good success of our navy against the *Spaniards* in 1588. the 5th he met with captain *Clarke* of *Southampton*, who had taken a *Brazil* man, and entering into our channel, he was in a more violent storm and imminent danger than in his whole voyage, as he told me himself; the 9th he came with great joy to *Plimouth*, and was received with much applause for his honourable enterprize, as he well deserved.

As there were divers *Englishmen* that attempted this voyage to the *South Sea*, and only two performed it, as you have heard; so there were two others that passed the *Streights*, but not with the like success, (*viz.*) *Sir Richard Hawkins* in 1593. who found the *Spaniards* better provided than when *Drake* and *Cavendish* were there; the *Spaniards* having intelligence of his coming, after a long and cruel fight, took and carried him and his ship to *Lima*, where he remained prisoner till 1597. and was then brought for *Spain* in that fleet I met and fought at the *Tercera* islands.

The other that passed the *Streights* was *Mr. John Davies*, the discoverer to the north-west, who being captain of the *Desire* with *Mr. Cavendish* in his second voyage, and the same ship he had performed his voyage about the world in, repassed the *Streights* when *Mr. Cavendish* could not; but by contrary winds and foul weather, was forced to return back again.

Captain *Davies* was after slain in his second voyage to the *East Indies*. These two voyages of *Drake* and *Cavendish* proved so happy, that they encouraged not only *Englishmen*, but *Hollanders* to enterprize it, hoping to annoy the *Spaniards*, those *Streights* giving a passage to *Peru*, which afforded the greatest wealth in the world.

*Of such Englishmen as attempted the Passage of the Streights, and failed.*

IN the year 1582. and two years after *Drake's* return, her majesty sent two ships, and two pinnaces, under the command of *Mr. Edward Fenton*, to try his fortune in the *South Sea*; which the king of *Spain* hearing, he employ'd *Diego Flores de Valdes*, (who was after general of the *Castile* Squadron for *England* in 1588.) to way-lay *Fenton*, as he passed the *Streights* of *Magellan*; which *Mr. Fenton* being informed of, when he arrived at *Brazil*, and

in the same port where two of *Flores's* ships had stay'd, and with whom he had a small encounter; and perceiving it was in vain to proceed any farther, he returned home without seeing the *Streights*.

This voyage of *Flores*, from the beginning to the latter end, proved most miserable and unfortunate; for besides the loss of the greatest part of his fleet and men in going and coming, he built a fort within the *Streights*, and placed in it for governor

*Pedro Sarmiento*, with five hundred *Spaniards*, who perished, as I have before expressed.

1586. The earl of *Cumberland*, on the 26th of *June*, sent two ships and two pinnaces to pass the *Streights*, in the year after the war broke out betwixt *England* and *Spain*. These ships arrived in forty four degrees upon the coast of *Brasil*, to the southward of the line, intending to prosecute their design for the *South Sea*; but being in want of all things necessary for such a voyage, they proceeded no farther.

1589. Mr. *Cbidley*, being encouraged by the good success of Mr. *Cavendish*, who the 9th of *September* before, arrived from his prosperous voyage, sold the better part of his estate to furnish him in this expedition for the *South-Sea*; but his success proved

most lamentable, himself and most of his men dying without seeing the *Streights*, or returning a penny profit towards his expence.

Mr. *Cavendish* having spent what he got in his former voyage, attempted a second; but with the like success as Mr. *Cbidley*, both as to death, and failing of the sight of the *Streights*, except in his ship the *Desire*, which I have spoken of. 1591.

Mr. *Benjamin Wood*, a mariner by profession, but more understanding than ordinary mariners, undertook this voyage with one ship and a pinnace belonging to Sir *Robert Dudley*; but there was never any news of ship or man, being supposed to be cast away upon the shoals of *Abrolhos*, which lie in seventeen degrees to the southward upon the coast of *Brasil*. 1596.

### *Of such Holland Ships as have passed the Streights; but to little Purpose or Profit.*

1597. FIVE ships went from *Holland*, and passed the *Streights of Magellan*, only one of them returned by the cape of *Good Hope*. In those ships there went several *Englishmen*, and particularly one called Mr. *Adams of Lymehouse*. This man afterwards arrived at the island of *Japan*, where he was much esteemed by the people of that country, and found means from thence to give advertisement into *England* of his being there, and the state of that country, with desire that our merchants would undertake the trade of *Japan*: he was so industrious and careful to benefit his country, that if he had lived, he intended to have attempted a passage from thence to *England*, by the north-east, which has been often enterpriz'd from hence, but still failed. But I do not approve of his opinion herein; for that in winter the *Monsons* always blow southerly, a season of continual night; and in summer northerly, full in their teeth, as they should pass.

1614. Five other ships of *Holland* passed the *Streights*, only their pinnace was cast away before she entered the *Streights*, which ships and captains I well knew.

1623. The *Nassau* fleet departed from *Holland* with the greatest pride and assurance of profit that men could do. They were termed the *Nassau* fleet, because the prince of *Orange* was the greatest adventurer in them.

They were furnished with an extraordinary expence, and choice men, both of soldiers and sailors; but passing the *Streights*, and coming into the *South Sea*, they found the world much altered in those parts since *Drake's* and *Cavendish's* being there; for wheresoever they offered to land, they were repulsed with loss and shame; so that in conclusion they could not perform so much with fourteen or fifteen choice and brave ships, and two or three thousand men, as Mr. *Cavendish* had done with one ship alone of an hundred and twenty ton and thirty men, he having landed in several places.

*Cornelius Van Scowton* discovered a new passage into the *South Sea*, three degrees to the southward of the *Streights of Magellan*; in which voyage he arrived at many islands, in his course to the *East Indies*, that were never discovered or known before, where he found people of several complexions; but none of those places where he arrived gave any great hope or promise of profit, if the navigation thither had been easy. 1615.

This shall suffice touching matters of the *East Indies*, and the *Streights of Magellan*, until I have occasion hereafter to mention them. And another while I will direct my course unto *America* and the *West Indies*, which was discovered within few years after the *East*.

### *The Discovery of America by Columbus.*

A M E R I C A was so called after *Americus Vesputius*, a *Florentine*; but in my opinion, there was least reason to do him that honour of all those that took upon them to discover in his time. I could

never hear of any thing he did of fame, no, not so much as the finding the river of *Plate*, when he went upon the discovery of it.

No man deserved to have that country called after his name, but *Columbus*, the first discoverer of it, who was unworthily and unthankfully dealt withal by the *Spaniards* in *Hispaniola*, where he was governor; for they sent him prisoner into *Spain* in chains. But king *Ferdinand* and *Isabel* his wife are to be excused from any hand in this unworthy act; for they hearing of his usage, caused him to be released; and before this happened, they did him the greatest honour that ever was done to subjects; for they made him sit in their presence.

The *Spaniards* cannot be excused for their ingratitude to *Columbus* on another account; for they write, though few give credit to their relation, that a pilot in a carvel that was forced with an easterly wind upon the coast of *America*, and returned but with three men alive, died in *Columbus's* house, from whom he had the light of his discovery.

But no author either names the pilot's, or the carvel's name, or where he arrived, or to what province in *Spain* she belong'd; but confusedly, one saith, she was a *Portuguese*, another a *Spaniard*, another a *Biscainer*, another that she belonged to the island of *Madera*, another to *Tercera*; and they differ as much in the place where she arrived. This was foully done of the *Spaniards*, to detract from *Columbus*, for no other reason but that he was a stranger.

*Christopher Colon*, or *Columbus*, as we call him, was born in *Genoa* in *Italy*, his original a mariner; afterwards he betook himself to make sea-cards, and had this voyage in his thoughts a long time, but was much troubled how to undertake it for want of means; for he saw the king of *Portugal* busy in his conquest of *Africk*, and in his enterprize in the *East Indies*; the king of *Spain* was as much taken up in his wars of *Granada*: whereupon he sent his brother *Bartholomew Colon* to *Henry VII.* king of *England*, who was both rich, and free from war; but the king gave little credit to him: and indeed the three kings did rather deride him, than accept of his offers, looking upon him as a cheat, and as an importor.

*Columbus* being at *Lisbon*, embarked for *Palos de Moguer* in *Spain*, where he spake with one *Alonso Pinson*, a skilful pilot, and a *Franciscan* frier called *Perez Machina*, a learned cosmographer. The frier desired him to recommend his design to the duke of *Medina Sidonia*, and the duke of *Medina Celi*, who had ships at that time in *St. Mary* port; but they rejected him as the kings had done, and looked upon his proposal no better than a dream. Then the frier advised him to go to the king and queen, who were at the siege of *Granada*,

and writ to another frier in his behalf called *Ferdinand de Talavera*, the queen's confessor: he came to the court in 1480. and delivered his petition to the king and queen; but being a poor man, a stranger, and evil apparelled, was scorn'd, only *Alphonso de Avila*, contador-mayor, gave him his diet. This contador one day carried him to *Pedro Gonzales de Mendosa*, archbishop of *Toledo*, who brought him to the king and queen, and promis'd to furnish him for his voyage, when the war of *Granada* was at an end, which happened not long after; and because the king wanted money, an officer of his, called *Lewis de St. Angel*, lent him sixteen thousand ducats.

The discovery of the *Indies*, and beating the *Moors* out of *Spain*, after they had been there seven hundred and seventy years, fell out both in one year.

*Columbus* was furnished with three carvels and an hundred and twenty men at *Palos de Moguer*. *Martin Pinson* was pilot of one, *Francis Pinson* of another, and *Detus Pinson* of the third, all three brothers, and departed the third of *August*, 1492. They came to the island of *Gomera*, one of the *Canaries*, where they refreshed; from thence he sailed thirty four days west without seeing land, insomuch that his company murmured, and contrived his death; but he satisfy'd them with good words and promises; at last he spy'd a thick cloud, which prov'd land, on the 11th of *October*, whereat they all rejoiced, thanked God, and kiss'd *Columbus's* hands.

The first land they fell in with was called *Guinaya*, one of the islands of *Lucayos*: from thence he went to *Hispaniola*, then called *Haitu*, where the admiral's ship was lost, but all the men and furniture saved.

The *Indians* fled from them, all but one woman, whom they took and cloathed, and us'd courteously, and let her go again; which did so much imbolden the *Indians*, that they resorted to the *Spaniards*, and help'd them to unlade their ship that was lost, and do them other services; and with the good will of the king they built a castle of wood, and left thirty eight *Spaniards* in it under a captain; and this was the first footing the *Spaniards* had in the *Indies*. *Columbus* took ten parrots, some turkeys, and other things the land afforded, and returned to *Palos* in *Spain* in fifty days.

The king and queen were at *Barcelona* when *Columbus* arrived, whither he went with his *Indians* and other rarities the third of *April*, a year after he departed from thence.

At his coming to the king the *Indians* were baptiz'd, the king, queen, and prince being

being present, who were their godfathers and godmother: they caused *Columbus* to sit by them, which was never done to any subject. They confirmed the privilege of the tenths, and gave him the title of admiral of the *Indies*, and to his brother *Bartholomew* that of *Adelantado*.

The queen favour'd this discovery more than the king, and would not for a while let any *Arragonians* go to the *Indies* without licence. The king rewarded many of *Columbus's* company; but the mariner, who first discovered the land, not being recompenced to his content, fled into *Barbary*, where he turned *Turk*.

The *Indians* confes'd to *Columbus*, that there were many prophecies amongst them, That they should be subdued with white men with beards, with apparel on their backs, with bright swords that should cleave a man in sunder, and should girt their swords to their sides.

*Columbus* in his second voyage had seven-

teen ships and one thousand two hundred men, mares, sheep, cows, and corn to sow. The first land he fell in with was the island of *Descada*; and coming to *Hispaniola* he found his thirty eight *Spaniards* slain, through their own fault, for injuring the *Indians*. He built a town, and in honour of the queen called it *Isabella*. And now began the *Spaniards* and *Columbus* to disagree, as I have shew'd before.

What afterwards befel the *Spaniards* in their discoveries and conquests of the *Indies*, has been sufficiently handled by several authors.

I will only treat of the famous exploits of *Francis Pizarro* and *Ferdinando Cortes*; the one, conqueror of the rich countries and mines of *Peru*, the other of the famous countries of *New Spain* and *Mexico*. Their births, originals, and adventures, are such, and so strange, that former times cannot shew the like, and, perhaps, in future ages they will scarce be believ'd.

*Of the first Discovery of the South Sea by Vasco Nunnez de Balboa, which was the first Step to the Discovery and Conquest of Peru.*

**V**asco Nunnez de Balboa, an industrious man, but in disgrace with his king, undertook the discovery of the *South Sea* with but a few *Spaniards*, and performed it with prodigious labour, sufferings, and danger from the *Indians*, with whom he often fought, but still came off victorious. On the 25th of *September*, 1513. from the top of a high mountain he spy'd the sea to the southward of him, which so much rejoiced him and his men, that it amaz'd the *Indian* king.

An *Indian* king on the south side treated him with much courtesy, carrying him in his canoes to the island of pearls; and on this side *Vasco* built the town of *St. Michael*, the first the *Spaniards* had there.

*Vasco* having discovered the sea and coast, settling friendship wheresoever he came, and gathering much wealth, returned to *Darien*, whence he first set out, and was received with much joy and triumph; thence he sent away a messenger to give the king of *Spain* an account of his success, who pardoned his past offences, and made him *Adelantado* of the *South Sea*.

*Vasco Nunnez de Balboa* continuing at *Darien*, *Pedrarias d'Avila* arrived there, being sent from *Spain* to take upon him that government, and receiv'd by *Vasco* with extraordinary honour; but had *Vasco's* messenger arriv'd in time, *Vasco* had been appointed governor. *Pedrarias* carried one thousand five hundred men, but he and they behaved themselves so cruelly in all parts, that they brought much destruction upon the *Spaniards*.

*Vasco* and he fell out, but were reconciled by the bishop; and *Vasco* married his daughter. *Vasco* being upon the *South Sea*, the place of his command, *Pedrarias* sent for and got false witnessess to accuse him, that he should say, He would not obey him, but would be upon his guard with his three hundred men he had with him, if any body offered to wrong him. Upon this false suggestion *Pedrarias* put him to death; at which the king of *Spain* was much offended, and *Pedrarias* gained the ill-will of all men; for *Vasco* was generally beloved and respected; and the sentence given against him was unjust, being procur'd by false witnessess, and out of a private grudge.

*The Actions of Francis Pizarro, Conqueror of Peru.*

**B**EFORE I speak of *Francisco Pizarro*, his deeds, and exploits, I will set down his birth and education, that his actions

may seem the more strange and admirable: he was bastard to captain *Pizarro*, serving in *Navarre*, and was left an infant at the

the church-door, where no body would own or take compassion of him ; till at last his father for shame took him home, and brought him to do all kind of drudgery ; and one day sending him to keep his hogs in the field, he gave them a sort of poison, which killed several of them. The boy not daring to return home, run away, and went to *Seville*, and from thence shipped himself for the *Indies*, and by degrees came to be ensign, and afterwards captain.

*Pizarro* and *Diego de Almagro*, being at *Panama*, were desirous, like other undertakers, to try their fortunes in discoveries. *Almagro* being rich, drew to him one *Ferdinand Luque*, a schoolmaster and priest of that town, who was likewise wealthy ; and all three undertook a discovery, with a vow, one to another, equally to divide the profit that should accrue. It was determined amongst them, that *Pizarro* should undertake the conquest ; *Almagro* go and come with all necessaries to relieve them ; and *Luque* to make provision for supplies. This happen'd in the year 1525.

The first voyage that *Pizarro* made, was with one ship, and one hundred and fourteen men : he sailed one hundred leagues ; and went ashore several times, where he found sharp encounters, lost some of his men, and was himself hurt in several places ; which forced him to return to *Chincama*, not far from *Panama*, repenting of his enterprize.

*Almagro*, who staid behind *Pizarro*, to supply him, as you have heard, went after him with seventy men, and came to the river of *St. John* ; and finding no sign of *Pizarro's* being there, returned ; but at his going back he landed at some places where he found *Pizarro* had been, and where he was hurt.

*Almagro* slew and hurt several men, and returned to *Panama*, thinking *Pizarro* had done the like ; but understanding that he was at *Chincama*, he went to him, and by consent furnished two ships, and carried two hundred *Spaniards* and some *Indians*. They arrived at a marshy and waterish place, where the people live in trees : they are warlike, and killed many *Spaniards*, and called them the *Scum of the Sea*, having no fathers ; and said they would have none in their country that had beards, or that would break their customs.

*Pizarro* and *Almagro* had a great desire to conquer that country, because of the shew of gold and stones ; but could not do it with that small force, because many of them were dead. *Almagro* returned to *Panama* for fourscore men more ; but before his coming back, *Pizarro* endured great want of victuals.

Upon *Almagro's* return, they found their forces so small, the country so barren and

unhealthful, that they left it, and went to *Chatama*, where they found plenty of all things, and thought to make themselves so rich, that they needed not to proceed further : but they were deceived ; for the *Indians* were their enemies ; and so many, that they durst not fight them. *Almagro* was to go back for more men to *Panama*, and *Pizarro* to stay in the island of *Guara*.

The *Spaniards* were so weak and tired, and so discontented, that they desired to retire with *Almagro*, and to leave their hopes of gold ; but *Pizarro* would not suffer them, either to go or write, lest they should have discredited the country ; and so *Almagro* would have got no soldiers : but notwithstanding this prohibition, the soldiers writ, and hid their letters in bottoms of thread, by which means their miseries came to be known, and complained of to the governor, who commanded, that no man should stay with *Pizarro* against his will.

At *Almagro's* coming to *Panama*, one *Pedro de la Rios* was arrived for governor, who proclaimed, That no man should stay with *Pizarro* against his liking ; and sent a messenger to *Pizarro* to let him know so much. Whereupon most of his men left him ; and those that *Almagro* took up, run away from him ; so that *Pizarro* had but twelve men left with him, whereof one was a *Grecian*. He went to an island called *Gorgena*, where he lived upon snakes, herbs, and crab-fishes, till *Almagro's* return from *Panama* ; and then he went over to the main land, and put the *Greek* ashore, who brought him news of the riches of that country, and the plenty of victuals, with the state of their king *Atabaliba* ; which was great joy to them all ; for the south sea was the fountain and happiness of all their discoveries.

*Pizarro* hereupon return'd to *Panama*, and from thence into *Spain*, to carry the emperor news of this rich country, which he desired the government of. He left two *Spaniards* behind him to learn the language, customs, and riches of the country ; but they were afterwards slain by the *Indians*.

*Pizarro* was above three years upon this discovery of *Peru*, and endured as much hunger, and other miseries, as man could do.

*Pizarro's* return to *Panama*, thence into *Spain*, and thence back again to *Peru*.

At *Pizarro's* arrival at *Panama*, he imparted the hope of his discovery to *Almagro* and *Luque* his associates, who were grown poor by their undertakings ; but yet furnished him with one thousand pieces of gold for his journey into *Spain*, most part of which they borrowed.

At his arrival in *Spain*, the emperor gave him the title of *Adelantado* of *Peru* : and to

encourage men to go with him, *Pizarro* promised more riches than he knew of, though not so great as after it proved. He carried with him three of his brethren, *Ferdinand*, *John*, and *Gonsalo*; *Ferdinand* only legitimate, the others bastards. They arrived in *Panama* in great pomp and pride. But *Almagro* was offended with *Francis Pizarro*, because he had taken upon himself all the honour in *Spain*, and excluded him who was at all the expence, and part of the labour and pains. *Pizarro* excused himself; which gave but little satisfaction.

The expence of the *Pizarro's* was so great, and their means so small, that they could not proceed upon their enterprize, without the help of *Almagro*; whom *Francis Pizarro* laboured to win again. In conclusion, by mediation of friends, *Almagro* furnished him with seven hundred pieces, and such arms and victuals as he had; so that *Pizarro* proceeded with two ships, and as many men as he could carry. He came to a place called *Coaque*, where he found much wealth, but endured much misery. From hence he sent to king *Atabaliba* for friendship; who answered, If he would return the wealth gotten, and clear the country, he would be his friend; or else not. A frier was sent to persuade him, but all in vain; so that they came to a battle. Many of the *Indians* were slain, and their king taken prisoner; and not a *Spaniard* killed or hurt, but only *Francis Pizarro* in the head, as he was snatching at the king to take him.

Before this, *Pizarro* took the island of *Puna*, and gained great wealth, which he gave to his soldiers that came to him lately. Here his people fell sick of the pox, a natural disease of those parts; and here he delivered seventy prisoners that had been taken by the islanders, and sent them free to *Tumbes*, whence they were. Notwithstanding this courtesy, they incensed the people against the *Spaniards*, and slew three that were sent in civil manner to treat with them; which so enraged *Pizarro*, that he took their town, and brought them to obedience.

These things happen'd before the taking of *Atabaliba* prisoner; who now being in their hands, offered for his ransom, as much silver and gold as would fill a great and spacious room wherein he was; which he truly performed; but the time was so long before it could be brought two hundred miles, that *Ferdinand Pizarro* adventured to go for it; and in that journey he learnt much of the secrets of the country.

*Francis Pizarro* divided the treasure thus gotten, and gave to every man his due; never soldiers in the world were so rich. He dealt justly with *Almagro*, and gave him what was his due: all things grew exceeding dear, a shirt at ten pounds, a quart of

wine at five pounds, and one thousand two hundred and fifty pounds a horse. *Pizarro* sent his brother *Ferdinand* to the emperor with his fifths, and a relation of what had happened: many common soldiers went, who carried, some twenty, some thirty, some forty thousand ducats in plate.

There was an *Indian* called *Philip*, a *Christian*, and interpreter to the *Spaniards*, who fell in love with one of *Atabaliba's* wives; and thinking to marry her after his death accused him of plotting the destruction of the *Spaniards*, for which he was condemned and executed; but whether justly, or no, is a question. Before his death he desired to be baptized; but whether from his heart, or no, that is uncertain.

*Pizarro* hearing the fame of *Cusco*, marched thither, and took it, where he found as much wealth as he had by the ransom of *Atabaliba*; and it is thought there was as much hid that never came to light.

*Almagro* had commission from the emperor to be marshal of *Peru*, and governor of one hundred leagues of land further than *Pizarro*. Whereupon he took upon him to govern *Cusco*; and this was the first beginning of the strife betwixt them two, but for the present accommodated; and *Almagro* went to discover the country of *Cbile* in 1535. where he endured much hunger, cold, and other disasters.

*Ferdinand Pizarro* returned out of *Spain*, and came to *Lyma*, after *Almagro's* departure to *Cbile*; and brought a patent to his brother, wherein he was made a marquis, and to *Almagro* the government of *New Toledo*.

He required all the silver and gold that was received for the ransom of *Atabaliba* for the emperor; the other being a king: but the soldiers answered, they had paid their fifths, which was their due. This caused a sudden mutiny: but *Pizarro* appeased it, though with the ill will of his soldiers. *Mango*, whom *Pizarro* had made king, rebelled against him, and had almost taken *Cusco*. In the conflict he slew divers *Spaniards*.

*Almagro* hearing the emperor had made him governor, as aforesaid, returned out of *Cbile*, and took *Cusco* by force, alledging it was in his government. He imprisoned *Ferdinand Pizarro*: *Mango* the *Indian* king besieged it; and now began broils betwixt *Almagro* and *Pizarro*; and now did *Francisco Pizarro* receive many losses by the *Indians* that rebelled against him. *Pizarro* sent forces to regain *Cusco* from *Almagro*; but by mediation of friends they were to meet and consult before they fought, but to little purpose; for that treaty broke up, and they fought a most cruel battle, in which *Almagro* was taken, and put into the same prison he had put the brother of *Pizarro*,

zarro, who there condemned and executed him. If the *Indians* had taken advantage of this division, they had defeated the whole power of the *Spaniards*.

*Almagro* was of mean birth, and never known who was his father: he could not read; but was valiant, frank, merciful, and vain-glorious. *Francis Pizarro*, upon this accident sent his brother *Ferdinand* into *Spain* with the emperor's fifth, and to excuse the death of *Almagro*. He came to *Valladolid* in great state, and with much wealth; but within a while after was committed to prison.

*Francis Pizarro* went on with his victories, and endured great hardships; yet he prevailed, got great wealth, and made peace with the *Indian* kings. *Gonzalo Pizarro* was a principal man in all these undertakings.

#### Francis Pizarro's Death.

*Francis Pizarro* returning from the *City of the Kings*, endeavoured to be reconciled to *Diego de Almagro*, son to him that was put to death; but he would accept of no conditions of friendship; neither would *John de Rada* advise him to it, who was left in charge of him at his father's death, with command to seek revenge of the *Pizarro's*; and though *Francis Pizarro* was still informed of the practice against him, yet he little esteemed of it; but notwithstanding his security, on the 24th of *June*, 1541. *John de Rada* and ten others entered upon him whilst he was at dinner, and slew him. He was a man neither liberal, nor covetous, nor would he proclaim what he gave; he was a good husband for the king, and a great gamester, not regarding with whom he play'd; he would never wear rich apparel, and yet sometimes would put on a garment that *Ferdinando Cortes* sent him; he took a pride to wear white shoes, and a white hat, in imitation of *Gonzalo* the great captain; he used his soldiers well, and got their loves; he was gross, valiant, and honourable, and negligent of his health or life.

Upon his death, his and *Almagro's* faction had many bickerings; and at last those of *Almagro's* party seditiously proclaimed, there was no other governor in *Peru* but *Diego de Almagro*. He appointed *John de Rada* his general; they committed many insolencies, murders, and cruelties; they divided all the goods of the *Pizarro's* and their friends, and placed whom they listed in command, meaning to make *Diego de Almagro* their king.

The emperor hearing of those tumults in *Peru*, sent one *Vaca de Castro*, a doctor, with authority to punish them; and he coming thither, those who stood for the emperor repaired to him: whereupon *Almagro* prepared all his forces to meet him, where

they fought a cruel battle, in which *Almagro* was overthrown; though more men were slain on the other side; few captains escaped, and those that were hurt, died, by reason of the great frost and snow that was in the country.

*Vaca de Castro* executed thirty of the principal offenders, and banished divers others. *Almagro* fled to *Cusco*, thinking to find relief; but his lieutenant he left there, hearing the success of the battle, apprehended him, and *Vaca de Castro* at his coming thither cut off his head.

This *Diego de Almagro* was a bastard, whom his father had by an *Indian* woman in *Panama*; but he was braver than the mestizo's used to be; he was the first that ever took up arms against the king in the *Indies*: his followers were so loving and constant to him, that though they had often offers of pardon, they would not leave him.

*Vaca de Castro* settled things in good order, gave the *Indians* content, who now begun again to cultivate their grounds, which before they could not do for the wars; and about this time many mines were discovered.

The emperor being informed of the revolts in *Peru*, and the ill usage of the *Indians*, he displaced his commissioners there, and chose others, giving them an oath to deal justly, and to order things uprightly. He made forty laws, and signed them at *Barcelona* the 20th of *November*, 1542. But these laws were ill taken in *Peru*.

He sent *Blasco Nunez Vela* with the title of viceroy, with the laws aforesaid; wherein the emperor gave great freedom to the *Indians*; which discontented the *Spaniards*; though no doubt the emperor did it out of a good conscience.

These things bred so great a heart-burning in the *Spaniards*, that with one consent all the towns of *Peru* revolted, and made *Gonzalo Pizarro* their general. The viceroy armed as much on the other side; and at first sent the bishop to persuade *Pizarro*; but he would admit no treaty. The viceroy was hated of all men, and especially for murdering the king's factor, that was taken prisoner in the *City of the Kings*.

Now began great garboils, what with the imprisoning of the viceroy, and the coming of *Gonzalo*; but before this happen'd, the viceroy had imprisoned *Vaca de Castro*, and the five commissioners that came with him out of *Spain*, for the better appeasing of things, and sent *Castro* prisoner into *Spain*.

*Pizarro* came to the *City of the Kings*, and caused the emperor's commissioners to admit him for governor. Those that had the charge to carry the viceroy prisoner into *Spain*, set him at liberty: which proved an unlucky service; for if he had been carry'd

carry'd into *Spain*, *Pizarro* would have agreed with the commissioners. *Pizarro* strengthened himself as well by land as by sea, and sent *Ferdinand Bachicao* with fifty men, who was esteemed a coward, but did much mischief: he increased his two brigantines to twenty eight ships, and came to *Panama*, where he did what he pleased, like a tyrant. His death was practis'd in *Panama*; which he hearing, prevented, with the death of those that intended it, and returned to *Peru* with four hundred men, to the defence of *Pizarro*, who followed his victory, and put his enemies to many streights. They committed great cruelties one against another when they were taken on either side.

*Pizarro* hearing of the great spoils that *Bachicao* made at sea, by consent of his council displaced him, and put in *Pedro de Hinojosa* in his room.

*Pizarro* sent *Hinojosa* to scour the seas, lest they should make head against him,

and to give satisfaction for the spoils that *Bachicao* had made; but they of *Panama* were jealous of him, till at last they agreed he should enter the town with forty men, and afterwards return to *Peru* to *Pizarro*.

The viceroy *Blasco Nunnez* and *Pizarro* came to a battle, in which the viceroy was taken prisoner; and being known to one that had served him, he cut off his head, and the next day buried him, *Pizarro* mourning in black for him.

After this *Pizarro* governed with great justice and uprightness, till he was drawn into tyranny by *Francis Carvajal* and others, who would make him king, saying, They might do it, because the country was gain'd by them, as well as *Pelaius* king of *Spain*, when the *Moors* entred it. They would have conditioned to have *Ferdinando Pizarro*, who was prisoner in *Spain*, set at liberty; others proposed to bring in the turk amongst them.

#### *Gasca sent out of Spain to quell the Rebellion in Peru.*

THE emperor hearing of the tumult in *Peru*, occasioned by the commissioners proceeding against the viceroy, and the infolencies of *Pizarro*, being then troubled with his wars of *Germany*, chose out a milder man than *Blasco Nunnez* to govern in *Peru*, which was *Pedro de la Gasca*, a priest; a man whose wisdom was tried in other affairs. He went with little shew of pride: the commissioners he chose to be such as he could trust, and he had the title of president. The emperor writ to *Pizarro*, and dated his letter from *Venlo* in *Germany* in *February* 1646.

*Gasca* arrived at *Nombre de Dios*, and carried himself mildly, saying, He came not to make war, but, according to his profession, to make peace, and revoked the rigour of the laws that caused the war. From *Panama* he sent the emperor's letters; and writ himself to *Pizarro*, telling him, He was come to pardon all offences, to draw him to obedience, to give satisfaction to his people, and, if he refused this grace, to make war.

*Pizarro* was enraged at the receipt of these letters, and would not suffer the gentleman that brought them to sit down; which the gentleman took for a great affront. *Pizarro* called for his friends, to consult what answer to give the president's letter. *Carvajal*, the chief incendiary, was absent; and therefore it was hoped he would accept of grace; yet every man delivering his opinion, some advised to take and raze *Panama* and *Nombre de Dios*, that the emperor might have no place to relieve

his men and shipping; and they having all the ships in the south sea, might without fear enjoy *Peru* to themselves, and then doubted not but to make *New Spain* revolt too, or, at least, they would rob all the towns on the sea coast, and live by spoil and rapine; which indeed they might have done, having the general of the sea true to them.

*Pizarro* cunningly answered *Gasca*'s letter, by consent of thirty of his men, under their hands; That they understood of his coming by *Hinojosa*, general of the sea, and the fair shew of good he pretended; but it was too late, after so many murders, occasioned by the viceroys; persuading him to return to inform the emperor, That they would receive no governor but *Pizarro*, and offered to send some man of quality into *Spain* to make their case known to the emperor. *Carvajal* diverted *Pizarro* from all good intentions, and would not suffer him to make any acknowledgment to *Spain*: They sent these letters to *Gasca*, and offered to give him a great quantity of money to depart home; and if he refused it, they writ to their admiral *Hinojosa* to apprehend him. These letters being brought to *Panama*, put *Gasca* in fear that he should be killed; for they absolutely refused to receive him in *Peru*.

*Gasca* dealt so cunningly with *Hinojosa*, that he brought him to submit himself and fleet, and became a true servant to the emperor. This was the overthrow of *Pizarro*; and *Hinojosa* was continued general, and none of his captains displaced. *Gasca* now prepared again for war, and furnish'd himself

self for his journey to *Peru*; and before his arrival sent a pardon to all the common sort. In his expedition he carried himself courteously, lovingly, and friendly.

*Gasca's* carriage, and the submission of the ships, made a great change amongst the rebels; for happy was he that could appear for the emperor. *Pizarro* was much grieved to hear of these alterations; but, like a courageous captain, sent to all his friends to come to him with their forces; but most part of them forsook him, and the town of *Lima*, *Cusco*, and the rest, took part with the emperor.

When *John de Casta* came to *Pizarro* to *Arequipa*, they consulted what to do, having four hundred and fifty men in the whole country against them: he resolv'd to go to *Chile*, where never *Spaniard* had been; but he was followed by one *Centeno* with a loyal party for the emperor; between whom was fought a cruel battle, *Pizarro* gaining the victory: he lost two hundred and twenty men, and *Centeno* many more. *Centeno* fled; but the others having so great a loss did not follow him. *Pizarro*, upon the victory, divided his forces into several parts. *Cepeda*, a principal man of account on his side, persuaded him to make conditions with *Gasca*, which he would not do, but was angry at the motion, and grew suspicious of him.

*Gasca* came into *Peru* with two thousand men, where he heard of the overthrow *Pizarro* had given *Centeno*; and his men being sickly, and finding the corn green, and not to be eaten, they were much discouraged; but *Centeno* coming with the remainder of his forces, put them into heart; whereupon he went in the pursuit of *Pizarro*, but had great trouble in passing the river *Apurima*. *Pizarro* being advertis'd of it, departed from *Cusco* with a thousand soldiers. *Donna Maria Calderon* speaking against the tyranny of *Pizarro*, *Fran. Calderon* entered her chamber one morning, and strangled her in her bed. Now came their armies in view of one another, every one taking advantage of the place: *Gasca* delay'd giving battle, in hopes that most of *Pizarro's* men would leave him; but they did not; and he being forced by snow, cold, and hunger, engaged in the heat of the action. *Cepeda*, who (as I said before) advis'd *Pizarro* to accept of conditions, fled to *Gasca*, which much dishearten'd *Pizarro's* side. This example, and others that did the like, made most of them yield.

*Pizarro* seeing it, chose rather to submit than fly, and yielded himself to *Villa Vicentia*, serjeant-major, who carried him to *Gasca*. Never such a battle was fought, in which the heads and chief commanders were doctors and scholars.

VOL. III.

*Gasca* sent forces to cut off those that escap'd in their way to *Cusco*, and to secure the town. The day following, being the ninth of *April*, 1548. *Gasca* committed the cause of *Pizarro* and other offenders to judges, who condemn'd him and thirteen more to death, wherof *Francis Carvajal* was one, and indeed the chief promoter of all the mischief in those parts. He was eighty four years of age, and had been an ensign in the battle of *Ravenna*: he was soldier to the great captain *Gonçalo Fernandez*, and the most noted soldier in the *Indies*, yet never counted valiant nor skilful. It was a by-word, *As cruel as Carvajal*, because he had been the executioner of four hundred *Spaniards* *Pizarro* caused to be put to death after *Blasco Nunnez* came into *Peru*, carrying blacks with him continually for that purpose. *Pizarro* was never overthrown but in this battle, though he had fought many.

*Gasca's* soldiers looked for a better reward than was given them; though, indeed; they were well dealt with, yet they mutiny'd upon it, but were soon quieted.

*Gasca* took a course for the ease of the *Indians*, and to reduce them to the christian religion, as also for the peaceable government of the kingdom.

When *Gasca* arriv'd at *Nombre de Dios* out of *Spain*, he brought not an hundred men with him, nor money, but procured credit, and, at his going away, paid all debts, and carried with him to the emperor almost two millions, but for himself not a penny, being the first man in authority that ever did the like; for covetousness was the bane of all the *Spanish* affairs.

No man that had commanded in *Peru* had escaped death or imprisonment but this *Gasca*: *Francis Pizarro* and his brothers beheaded *Almagro*; *Almagro's* son murdered *Francis Pizarro*; *Blasco* apprehended *Vaca de Castro*; *Gonçalo Pizarro* slew *Blasco Nunnez*; and *Gasca* did as much to *Gonçalo Pizarro*. There were slain one hundred and fifty eight captains and men in authority, which is to be imputed to the genius and riches of the country: for the like divisions happen'd before the *Spaniards* came thither, which made a long war amongst them.

When *Gasca* had settled all things in good order, he prepared for his return into *Spain*, and came to *Panama*, leaving much wealth there, which he could not carry; but it happened that two sons of *Rodrigo Contreras*, governor of *Nicaragua*, with two hundred soldiers entered the town, and took the treasure, and as much more as they could get. One of the two brothers got himself with his wealth into two or three ships, the other follow'd *Gasca*,

ca, thinking to rob and kill him. They murdered many, and slew a bishop, because he sent to their father into *Spain* on account of their villanies: they drew to them all factious and discontented people that favoured the party of *Pizarro*.

*Gasca* hearing of those disorders, returned with speed, fought with, and overcame them; one of the brothers was drowned in passing a river: he dispatched ships after the other, and took him and all his wealth. This proved a fortunate success to *Gasca*, and got him great honour.

He embarked at *Nombre de Dios* for *Spain* in 1550. with much wealth for others, and reputation to himself: his going, coming, and staying, was little more than four years.

### *The Exploits of Don Ferdinand Cortes Marquis del Valle.*

**F**ERDINAND CORTES was the son of a gentleman, but of small fortunes; and seeing his father could not maintain him in the port of his birth, he desired to put himself into the world; and, with his father's blessing, and little help otherwise, he made shift to get into the wars of *Italy*, where he stay'd not above a year, through want and sickness; and being forced by necessity to return for *Spain*, was forced to beg till he got to *Seville*, knowing his father's circumstances could not relieve him at home.

Not long after his arrival at *Seville*, there happened a fleet to depart from thence to the *Indies*, in which he procured a passage; and being taught to write and read, put himself into the service of a scrivener, and by degrees, through his own industry, advanced himself to perform those actions you shall read in the following discourse.

After running through several employments in *Hispaniola* and *Cuba*, he became familiar and intimate with the governor of that island *Diego Velasquez*. This governor, upon the report of the wealth of *Jucatan*, had sent his nephew *John de Gryolva*, to discover along that coast; who returning with a promising account of the riches, not only of that coast he was sent to, but of that afterwards called *New Spain*, *Velasquez* fitted out a fleet at his own expence to conquer that country, and gave the command of it to *Cortes*, whom, upon second thoughts, he design'd to have removed; which *Cortes* having intelligence of, he hastened away with his fleet upon his discovery.

Being arrived at *Vera Cruz*, and receiving there information of the vast wealth of the king of *Mexico*, he set forward towards him on the 16th of *August*, 1520.

The emperor made him bishop of *Placentia*, and sent for him to *Ausburg* in *Germany*, where he then lay, because he would be informed by word of mouth of all proceedings, and the state and condition of the people of the *Indies*.

This shall suffice for so much as concerns the beginning, progress, and conclusion of the *Spanish* conquest of *Peru*, which were full of difficulties, hazards and cruel murders among themselves. For what concerns particular men, towns, and countries, I refer you to divers authors, as well in *Spanish* as *English*; and will now proceed to the conquest of *Mexico*, by that renown'd and fortunate gentleman *Don Ferdinand Cortes*.

with five hundred foot, fifteen horse, and one thousand three hundred *Indians* to carry the baggage.

After four days march he came to a goodly country, called *Chinchebas*; but before he came thither he had passed high hills, full of snow and ice, though it was in *August*.

Next he came to *Tlascalla*, a people who were enemies to the *Mexicans*. *Cortes* overthrew them in three conflicts: the town had twenty thousand houses, very fair, and handsome markets and fairs: *Cortes* took it by night, and returned to his camp, where he found his men in mutiny; but appeased them, out of hope they should spread abroad the gospel of Christ.

From thence he went to *Chalotecan*, a country no less fruitful; where he was entertained with their kind of musick, but they were set on by the king of *Mexico* to betray him, which was discovered by an *Indian* woman; and *Cortes* suddenly set upon them, and overcame them. The king of *Mexico* sent to excuse himself of this treason, and to lay it upon the people of the country: he sent to invite *Cortes* to *Mexico*, and as he passed the country he was well entertained, especially in *Tlatelulco* and *Xalisco*, the one friend, the other enemy to the *Mexicans*.

When *Cortes* came within half a mile of *Montezuma*, the king sent a thousand courtiers, all in one garb, to meet him, who saluted him one after another, first touching the ground with their fingers, and kissing it; then came *Montezuma* with two hundred better apparelled, two and two together, without shoes, though they use shoes at other times; he leaned upon two of his nobility, to shew that he was upheld by his nobles.

*Cortes* was told, he must not touch the king, for that it was the custom of the country; he presented the king with a chain of bugles, and some diamonds in it; which the king took in good part, and gave him in requital another of gold wrought in snails, crabs, and such toys. He lodged *Cortes* in his palace with great solemnity, and made liberal provision for his army. The king erected a curious throne of state, where he directed his speech to the *Spaniards*, as follows:

*Noble soldiers, and merciful captains to them that yield, you are welcome into this country of ours; I would have you know, that our forefathers have told us, and our chronicles declare it, That we are not antiently of this land wherein we live, but brought thither by a king, who left us here, because we refused to return with him in company: Our forefathers marry'd, had issue, built houses, which we enjoy; and we have ever been of opinion, that they will come to us again, and make us subjects to them, as they have formerly been to our ancestors. And therefore considering from whence you come, and that you are sent from a great king, we yield to you all obedience and service, and make account you are entred into your own houses.*

*I am not ignorant of what hath happen'd to you by the way, and that the Cempoalans have spoken ill of me; they are my enemies, and I pray you believe them not: I know they tell you my houses and walls are gold, and that I make my self a god: but I pray you behold my houses that are made of wood, lime, and stone, and my self a fleshy man like others. Indeed I have plate from my ancestors, and what I have shall be yours. I must now depart; but will so provide, that neither you nor yours shall want.*

*Cortes* answer'd, *That what he said was true; and that the king of Spain was the king they looked for; and that he was sent thither purposely to let them know so much.* After they had passed six days in great jollity, *Cortes* had news that some of his men were murdered by the king's appointment; for which he was glad, thinking to take that occasion to subdue and conquer him and his country.

*Cortes* sent for the malefactors, and put them to death: they accused *Montezuma*, whom likewise he imprisoned, but within a while after he set him at liberty: he confessed his fault, and promised his allegiance ever after.

The king chose rather to dwell in the palace with *Cortes*, than at pleasure abroad. To give him satisfaction, he sent to discover mines for him, and procured a great quantity of wealth to present him; he

wished and advised his nobles to obey *Cortes*, and labour'd how he might subdue *Cacomacsin*, his vassal, who wholly refused to submit to *Cortes*. This act of his was affirmed by publick notaries in writing by the consent of all the nobility, and interchangeably given to one another.

*Valasques*, the governor of *Cuba*, envying *Cortes*, sent *Narvaes* with eighteen sail of ships, to command *Cortes* to go out and quit *Mexico*; whereat *Cortes* was amazed, and in a dilemma; for if he made head against *Narvaes*, the *Indians* would presently have revolted, and if he did not, *Narvaes* would in time possess himself of the country: wherefore he resolved with one hundred and seventy men to go against *Narvaes*, leaving a garrison in *Tenustitlan*, which he commended to the care of the king. *Narvaes* had eight hundred *Spaniards*, and nineteen great pieces; nevertheless *Cortes* set upon, took him, and the rest yielded themselves.

In this interim, the citizens of *Tenustitlan* revolted against the king and *Spaniards*, and assaulted the castle, alledging, their dislike to the *Spaniards*, was for breaking down their idol.

*Cortes* hastened thither with seventy horse, and five hundred *Spaniards*, which gave heart to them in the castle; the *Indians* were desperate, and desired rather to die than live: they put *Cortes* to a retreat, which emboldened them much.

*Cortes* afterwards used many engines, and other inventions; and though he slew multitudes of *Indians*, yet they valued it not: *Montezuma* looking out of a window, thinking to dissuade the people from their violent courses against the *Spaniards*, was struck with a stone, of which wound he died within three days. He was a man of a good nature, wise, and prudent. The *Spaniards* gave the *Mexicans* his body to bury, and offered the *Indians* conditions of peace; which they wholly refused, vowing to thrust the *Spaniards* out of their country, though it were with the loss of 1000 men to one. Yet within a day they deceitfully made a proposition of peace, which *Cortes* accepted of; and to give them the more content, he set a priest of theirs at liberty, thinking it would have wrought more heartily; but the day following, when *Cortes* had the least suspicion of them, and sat quietly at dinner, they attempted one of his houses: whereupon he suddenly rose from table, and with his horse charged the *Indians*, where he lost divers men, and was himself fore wounded, and scarce able to retire. It was now come to that pass with the *Spaniards*, that they must either perish, or quit the city; and that night they resolv'd

to fly with *Montezuma's* children, and treasure; but the *Indians* having notice of it, pursued them, recovered the prisoners, slew one hundred and fifty *Spaniards*, forty one horses, and two thousand *Indians* that took their part. Now did *Cortes* endure great misery and famine, and had but one dead horse to feed on in five days, till he came to *Tlascalla*.

The *Tlascallans* entertained him courteously, where he stay'd ten days; he built many fortresses for his own safety and theirs, and sent for aid into *Hispaniola*: In the mean time he gained the love of many *Indians*, who took part against the *Mexicans*.

*Cortes* built thirteen boats; and on the other side, the new king of *Mexico* prepar'd for war, and made certain pikes to annoy the horse, which they feared more than the men. *Cortes* cut a passage into the salt lake, for his boats to have a passage to the siege of *Tenustitlan*: these ships intercepted all provision, and annoy'd the *Indians* infinitely. *Cortes* assailed the town in four places, having in his army one hundred and twenty thousand men; some came for fear, some for liberty, some for friendship, some out of gain: this siege lasted ten weeks, and wasted ten thousand people with famine, and other misfortunes. *Cortes* by chance took the new king, as he was stealing away secretly by the lake: he subdu'd *Tenustitlan*, and fourteen towns by the lake side; as also all the *Mexicans* realms, and provinces to the crown of *Spain*, giving great spoil to the soldiers, and reserving the fifths to the king.

*Cortes* deserved more honour than all the rest of the *Spaniards*, for his conquest in the *Indies*; he subdued *New Spain*, and gave it that name, because it was like *Spain*; he may very well be compared to *Marius* and *Scipio* in the *Roman* state: his house remains great to this day, and has the title

of marquis *del Valle*, which he left to his posterity.

*Cortes* being afterwards captain-general, and *Mendoza* viceroy of *Nova Espania*, there happened many private grudges between them, but yet they joined together for the finding out of the passage from those seas to ours, which we properly call the north-west passage; as also in the conquest of *Sibola* and *Quivira*, where they were persuaded by certain friers, That the people worshipped the cross, and had other tokens of christianity: but all proved false, and few *Spaniards* returned home, their misery was so great, and the country so cold and barren, the people cruel, and five hundred leagues from *Mexico*.

*Cortes*, after his taking *Mexico*, sent to discover the northern parts, and his people arrived in a country where *Ticoantipe Cician Pipe* was king, who received them lovingly, and sent an ambassador to *Cortes*, thinking he was come out of the clouds, and that their vessels were great whales: they wondered at their horses, and accepted a friendly peace, offering *Cortes* fifty thousand men to assist in conquering *Tutepec*, who was his enemy for using the christians well.

Notwithstanding that *Ferdinand Cortes* had deserved as much honour as could be laid upon him; to the disgrace and shame of that time and age, he was called from his command, and at his arrival in *Spain* was unworthily dealt withal.

He afterward went the unfortunate journey with *Charles* the first to *Algiers*, not having so much command as to be admitted a councillor of war. In that expedition he lost two emeralds in the field, which could never be found again, valued at one hundred thousand crowns. He died the same year, and much about the same time that *Henry VIII.* king of *England*, died.

*The Names of the first Governors of the Island Hispaniola, where the Spaniards made their first Habitation, and from whence they discovered other Parts of the West Indies; with an Account of all those Discoveries.*

**C**hris<sup>t</sup>opher Columbus was governor eight years; during which time he and his brother *Bartholomew* conquered and peopled the greatest part of it, and made it beneficial to the king.

*Francis de Bovadilla* succeeded *Columbus*, and sent him prisoner into *Spain*; he governed three years, and well.

*Nicholas de Ovando* was next, and went thither with thirty ships, into which *Bovadilla* put all the wealth he had got for himself and the king, which was the greatest the *Indies* had afforded till then; but all

these ships with their wealth, except six, were cast away in a storm. *Ovando* was a religious man, and governed seven years with much wisdom. When he went thence, he was so poor, that he was forced to borrow money for his expences, though his revenue was two thousand pounds a year. He would not suffer any scandalous person to live among them: he conquered some provinces not subdued before, pacify'd others, and was made chief commendary of *Alcantara* when he return'd home.

*James Columbus* governed six or seven years, but was removed, and in disgrace with the king, with whom he had several years suits for his father's right to the *Indies*.

*F. Luis of Figueroa*, prior of the monastery of *Mayorano*, was sent by cardinal *Ximenes*, who governed after the death of king *Ferdinand* and his queen. He took from the courtiers all their *Indians*, because they being in *Spain*, their servants used the *Indians* very ill. He put them to school to be instructed, but many of them died of the small pox. In his time the planting of sugars in that island was much improved.

After him went *Marcello de Villalobos* but with the title of president, which still continues.

The first bishop of *St. Domingo* was *D. F. Garcia de Podilla*, a *Franciscan*. Many miracles were wrought in the first conversion of the *Indians*. The first archbishop of *St. Domingo* was *Alonso de Fuca Mayor*.

In the island the *Spaniards* found no sort of four-footed beasts, except three sorts of coney; but they have now all sorts of cattle, and of one cow there came eight hundred in twenty six years. Many of the dogs the *Spaniards* carry'd turned wild; and did more harm than wolves; and the cats they carried out of *Spain* would not caterwaul there.

*The Islands of the Lucayo's.*

These islands are four hundred in number, lying to the northward of *Hispaniola*, and the first discovered by *Columbus*. The people are fairer than in *Cuba*, and *Indians* used to come from other places to live with those women. They had no flesh; and when the *Spaniards* carry'd them to *Hispaniola*, and gave them flesh to eat, they died. They thought, that when they died they were carried into the northern regions, and from thence to paradise in the south.

Seven inhabitants of *Hispaniola*, amongst whom was *Lucas Vasquez de Ayllon*, a scholar, and auditor of the island, fitted out two carvels at *Puerto de Plata*, in the year 1522. to fetch *Indians* from the islands *Lucayo's* to work in their mines; but they found no men there; and therefore resolved to go northward for some, because they would not lose their labour. They came into thirty two degrees, where is now cape *St. Helen*, and the river *Jordan*. The *Indians* took their ships for great fishes, and entertained the *Spaniards* well, who brought away two of those *Indians*; one whereof was cast away in one of the carvels, the other starved himself to death.

*Lucas Vasquez*, by the report of an *Indian*, supposed the country to be rich, and

therefore went into *Spain* to beg leave of the emperor to conquer it. Leave was granted; and he being made a knight of the order of *St. Jago*, returned to *St. Domingo*, where he fitted out some ships in the year 1524. but his admiral ship was lost in the river *Jordan*, with many men; and this was his end.

*St. John de Puerto Rico, or Borriquen.*

The people of this island were braver than those of *Hispaniola*. *Columbus* discovered it in his second voyage, and *John Ponce de Leon* went to inhabit it in 1509. The king and queen received him courteously, and became christians. At first they thought the *Spaniards* were immortal; wherefore, to try it by consent, they drowned one *Salcedo*, whom they much feared; and seeing he died when they threw him into the water, they took heart, revolted, and killed five hundred *Spaniards*. They much dreaded a dog called *Bezerillo*; his master received pay of the emperor for him, and the dog did great service. He would distinguish betwixt the *Indians* that were friends and foes; at last he was killed with a poisoned arrow. The first bishop of this island was *Alonso Manso*, Anno 1511.

*Florida.*

The admiral *Columbus* taking *John Ponce* from his government at *Borriquen*, and he being left without command, and rich, fitted out two carvels, and not finding the island *Boynca*, where the *Indians* told the *Spaniards*, there was a well that made old men young, he discovered the coast of *Florida* on *Easter-Day*, Anno 1515. He fitted out three ships at *Seville*, came to *Guadalupe*, where putting men ashore for wood and water, and to wash their cloths, the people of that island slew them. Thence he went to *Florida*, where the *Indians* standing on their guard, wounded him, and many more; and he died of his hurt at *Cuba*, after losing much of his wealth. He sailed with *Columbus* in the year 1493. and was a good officer, and did good service.

*Ferdinand de Soto*, who had been in the wars of *Peru*, and was grown rich by the ransom of *Atabaliba*, desired the conquest of *Florida*, whither he went, and spent five years in the attempt; but he and all his men died without doing any thing.

After the death of this *Soto* many sued for the conquest of *Florida*; and in 1548. *Julian Samana* begged it: but the emperor thinking it no good course to convert the *Indians* by force, sent several friers to convert them; but the *Indians* killed four of them at their first landing.

*Panuco.*

Fifty leagues from *Florida* is the river of *Panuco*. The first discoverer of it was *Francis de Garay*, who only sailed along the coast; but he that undertook the conquest was *Pamphilo de Narvaes*, with the title of *Adelantado*. He sailed from *St. Lucar* with five ships, six hundred men, one hundred horses, and all other provisions, in the year 1527. and suffered much by the way through the ignorance of his pilots: yet he proceeded with three hundred men; but his fault was, that he did not inhabit where he landed. Of the three hundred *Spaniards* that went ashore with him, only four lived, who wander'd six years up and down naked, and wrought many miracles; as healing of diseases, and raising a dead man to life. This *Narvaes* was he that went to oppose *Cortes* in *New Spain*. A *Morisco* foretold it to him, That his fleet should have an ill end; and few of it escaped.

*Francis de Garay* fitted out three carvels at *Jamaica* in the year 1528. intending to attempt *Florida*, which they thought to be an island; for they were more willing to inhabit islands than the continent. Attempting to land, all his men were either kill'd or hurt; but he got to *Panuco*, and returned to *Jamaica*, where he refitted his ships, and recruited his forces, but had worse success than before. He vied with *Cortes*, hoping to gain as much honour as he had done, because the country promised well. He therefore provided eleven ships, with seven hundred men, one hundred and fifty horses, and all necessaries, and sailed to *Panuco*, where he lost all, but himself, who escaped to die afterwards at *Mexico*. *Nunno de Guzman* who was also governor of *Panuco*; he carried but two or three ships, and eighty men, and yet revenged the slaughters the *Indians* had made.

*Jamaica.*

*Columbus* discovered *Jamaica* in his second voyage. His son *James* conquered it, when he was governor of *Hispaniola*. *Francis de Garay* was the richest governor it ever had, but for his loss in the expedition to *Panuco*. This island breeds the best hogs in the *Indies*: the chief town is called *Seville*. The first abbot it had was *Peter Martyr of Angleria*, who writ the decades of the *Indies*.

The discovery of *New Spain* is before, with the actions of *Cortes*.

*Cuba*

Was discovered by *Columbus*, and call'd *Fernandina*, from king *Ferdinand*: *Nicholas*

*de Ovando* began the conquest of it, when he was governor of *Hispaniola*: the chief town and port in it is the *Havana*. The first bishop was *Hernando de Mesa*, a *Dominican*. Many miracles were wrought in this island, by which means it was the sooner subdued.

*Yucatan.*

*Francis Hernandez de Cordova* discover'd it Anno 1517. having one hundred and ten men with him. Here landing to take water he was opposed, and had twenty men killed, fifty wounded, as he was himself in thirty three places, and two taken, whom the *Indians* sacrificed. He returned to *Cuba* troubled for his loss; but glad that he had found such a fruitful country.

*Francis de Montejo* went next to conquer it, with five hundred *Spaniards*, in ships of his own, and built a town called *Santa Maria de Vitoria*. Here he endured much hunger, and other miseries; but outlived them; and continued twenty years, marrying an *Indian* woman, and following the customs of the *Indians*. He refused to go with *Cortes* upon his conquest.

His companion *Aguila* peopled *Campeche*, *Merida*, *Villa Doca*, *Salamanca*, and *Seville*, where he lived quietly and peaceably with the *Indians*, who in this place worshipped the crosses, and had temples and altars; which made the *Spaniards* conceit, that some of the *Goths* fled thither when the *Moors* subdued *Spain*.

*Hondura's.*

*Columbus* discovered all this coast, thinking to find a passage into the *South Sea*. *Francis de las Casas* founded *Trunillo* in the year 1525. by order of *Cortes*. Here the *Spaniards* imprison'd and killed one another.

The people are ill natured; but very obedient to their masters. The first bishop's name was *Pedraca*: the first governor was *James Lopez de Salzedo*, killed by his own people. Next to him was *Vasco de Herrera*, who was killed in the same manner, as were other governors.

*Nombre de Dios.*

The country about it was called *Veragua*, discovered by *Columbus*, Anno 1502. *James de Nicuesa*, who went with *Columbus* in his second voyage, obtained the government of it, and fitted out in *Spain* nine vessels, with seven hundred and eighty men, in 1588. He coasted along to *Carthagena*, where he found the company of *Alonso de Hojeda*, his great friend, in distress, the *Indians* having killed seventy of his men; which they

they revenged, entering their houses by night, and killing and taking them all prisoners.

After this, *Nicuesa* passed from *Hojeda* with two carvels, appointing the rest to follow him. *Lopez de Olano*, who had the command of a vessel, missed of him, and went to seek him in the river of *Chagre*: there they went ashore and sunk their vessels, intending to make it their residence, and chose *Olano* for their general, till the coming of *Nicuesa*. Three of *Nicuesa's* men came to them in a boat, telling them where he was, and that he had lost his two carvels, and endured great hunger for three months.

*Olano* hereupon sent one of his boats to fetch him out of that misery; but when he came to them, he basely imprisoned *Olano*, accusing him of usurping command, and destroying the ships.

He would not stay here, though they were within three months of reaping their corn; for fear *Olano* should have the honour of the undertaking.

Out of the other bark they made a carvel, and went to *Porto Bello*, so called by *Columbus*, because of its goodness. Here the *Indians* slew twenty of his men. He left half his company, and went away to *Cape Marmol*, where he built a fort, calling it *Nombre de Dios*. Of seven hundred and eighty men he had not above one hundred left alive. Here grew great contention between *Vasco Nunnez de Balboa* and *Francis Enciso* about the command; which was the cause they landed not, but returned.

*Nicuesa*, seeing they were gone, went to *Hispaniola* to complain, but was drowned by the way; but first he went ashore by the way, and writ on barks of trees, which were afterwards found, *This way passed the unfortunate James de Nicuesa*. He was the first that discovered *Darien*; where he was reduced to such extremity, that his men were forced to eat dogs, toads, and one another. After this *Philip Godofre* desired the government of *Beragua*, but with no better success, by reason of famine: this was in the year 1536.

The admiral *Lewis Columbus* sent *Christopher Penna* to people there, who suffered much by famine. By agreement betwixt the king and *Columbus*, he was created duke of *Veraguas* and marquis of *Jamaica*, Anno 1546.

#### *Darien.*

*Hojeda*, *Nicuesa*, and *Bastida*, as you have heard, were the discoverers of this country; and after many calamities, mutinies, famine, and other misfortunes, *Hojeda* died a frier at *St. Domingo*, and left *Francis Pizarro* his lieutenant.

In 1502. *Bastida* fitted two vessels at *Cadiz*. He had been with *Columbus* in all his voyages; but lost his ships at *St. Domingo* by the worm that eat them. He was imprisoned by *Bovadilla*, for trading with the *Indians* without leave; but the king gave him two hundred ducats a year in lieu of *Darien*. When those *Indians* fought with the *Spaniards*, they would put gold at the end of their arrows, thinking they would stoop for it, and they might kill them.

*Pizarro* seeing the fifty days expired, wherein *Hojeda* had promised to return, (who, as was said above, was become a frier,) being in great want of victuals left that country, and put to sea with two carvels; one of them was cast away in a storm, and the other had her rudder struck off by a fish; which made them all conclude themselves lost; but by good luck they got to *Caribagena* almost starved.

In his way he left *Enciso*, whom *Hojeda* had left to follow with victuals. *Pizarro* told him, how *Hojeda* was turned frier; but *Enciso* thought it was an invention of his own, and that *Pizarro* had fled from him; but being satisfy'd, he caused him to return, though *Pizarro* offered him two thousand ounces of gold, not to go back, the country was so unfortunate.

They landed at *Comagre* to take in water; and though the *Indians* were man-eaters, yet they used them kindly, when they understood that neither *Hojeda* nor *Nicuesa* were there. Going into *Uraba* their ships struck, and their mares, hogs, and all they had, was lost.

This disaster made *Enciso* desperate, thinking they must all perish; and they all swore to one another, rather to die by the hands of men than by hunger. They landed with one hundred men, and were beaten. Thence they went to a country close by, and built a village, calling it *Guardia*: at first the *Indians* were quiet; but afterwards became their enemies, whom they overcame, and possessed much wealth of theirs.

Now began great factions between *Enciso* and *Vasco Nunnez de Balboa*: *Nunnez* refused to obey him, or pay the king his fifths; and thus they continued a year.

*Henry Colmenores* went with two carvels from *St. Domingo*, to relieve *Hojeda's* men. And after many dangers he arrived at *Carefa*, and put fifty five men ashore, whom the *Indians* slew, excepting seven, that hid themselves in a tree; but they were taken and eaten. *Colmenores* fearing the *Indians* would attempt his carvels, removed to the gulph of *Uraba*, and firing his guns, was answered with fires by the *Spaniards* ashore. There was great joy for their meeting; and all of them made up one

one hundred and fifty men ; a sufficient number against the *Indians*.

The factions continued ; and to appease them *Colmenores* advised, That *Enciso* should govern, he having the king's patent for it. *Nunnez* refused, and would not allow of it ; but afterwards took *Enciso*, and confiscated all he had. *Enciso* got into *Spain* to complain of him, and obtain'd a severe judgment against him ; which came to nothing, because afterwards *Nunnez* was the cause of finding the *South Sea*, and all the wealth obtain'd by it. *Nunnez* had done many other good services, and conquer'd *Castilla del Oro*.

*Nunnez* having the absolute power, endeavoured to govern well, and had two hundred and fifty *Spaniards* ; and in the town of *Nuestra Señora el Entigua del Darien*, with one hundred and thirty of them he went out to find victuals for the rest : an *Indian* king refusing him relief, he took two of his wives and children, and carried them away. In the plundering the town he recovered three *Spaniards* that had been taken of *Nicuesa's* company, who told him how well that king had used them ; whereupon he released his two wives and children, and took their oaths to aid him against *Ponca* their enemy, and to relieve them with victuals.

*Nunnez* sent his friend *Maldivia* to *Santo Domingo* for more men, because the country promised gold, and with him a process against *Enciso*. He sacked a town two leagues up the country, where he had gold, but could not take *Ponca* ; and fearing to be so far in the country without more help, he returned to *Comagre*, and made peace with him. *Comagre* had a fair-built house plenty of victuals, and lived in a civil manner. He had seven wives and seven children, his eldest son gave him seventy slaves to serve the *Spaniards*, and much gold. As they were weighing the gold, two *Spaniards* fell out, which the king observing, he struck down the scales, saying, " If I had known, *Christians*, you would have fallen out for my gold, I would not have given you any ; for I love peace, and I wonder that you who are friends should fall out for so vile a thing. If your country be so civiliz'd as you report, it had been better you had kept in it, than to come so far to quarrel. We live here and content ourselves with indifferent things, and you call us barbarous ; but we will not kill one another for gold ; but I will shew you a country where there is gold enough."

The *Spaniards* were astonished to hear the young man talk so rationally ; and caused the three *Spaniards* that were taken, to ask how far that country he promised was off, and how called. He told them

seven days journey, and that the name of it was *Termenana* ; but advised them to carry more men, because the way was mountainous, and the people men-eaters.

*Nunnez* hearing him talk of another sea, embrac'd him with great joy, and besought him to become a *Christian* ; which he did, and was baptiz'd by the name of *Charles*. He was a great friend to *Christians*, and promised to go with them to the other sea, provided they would carry a thousand *Spaniards*, for fewer would not conquer *Termenana* ; if they mistrusted him, he offered to go bound ; and if he told a lye, they should hang him ; and this was the beginning of the discovery of the *South Sea*.

*Nunnez* return'd with great joy to *Darien*, and divided his wealth. The king's part came to fifteen thousand pesos, which was cast away going to *Spain*. *Nunnez* endure'd great misery, the corn they sow'd being spoiled with rain. Men were sent out with great danger for food, who returned with gold ; but all full of sores made by the biting of gnats.

*Colmenores* went another way with seventy men ; they met together, and went among the people that live upon trees. The *Spaniards* desired a peace with them, which they refused, relying on the height of their trees ; but when the *Spaniards* offered to cut them down, which they imagined they could not do, till they saw it, they then offered them peace and victuals. Gold they did not use, but promised to fetch some, yet came not again being gone to persuade other kings to join with them against the *Spaniards*. They gather'd five thousand men in boats, which was discovered by a woman *Nunnez* had with him. He prevented their treason, and slew most of them ; and they never after attempted any treachery against the *Spaniards* in those parts.

*Colmenores* was sent to the emperor with this news ; but his wife they kept as a pledge. *Colmenores* had been a soldier under the great captain.

*John Sebedo*, a franciscan, was the first bishop of *Antigoa*, in *Darien*, and the first priest that ever was in that new world. *Nunnez* was a gentleman by birth, industrious in war, and belov'd by his soldiers. This country is unwholsome, subject to much rain, and many were there killed by thunderbolts.

*Zenu,*

Is a river, a town, and port, ten leagues from the sea, which has a good trade for fish. The *Indians* there work their plate curiously. *Bascada* discovered it Anno 1512. but *Hojeda* and *Enciso* did most good there.

*Enciso*

*Enciso* being ready to give battle there, told the *Indians* they were *Spaniards*, and peaceable men, who came thither from afar, in great danger, and desired victuals. The others answered, There was little sign they were such men; and desired them to be gone, for they would admit of no stranger among them. The *Spaniards* persuaded them to own the true God; and told them that country was given them by the pope, who had the command of souls; and that they came to take possession of it. They answer'd laughing, That they approved of the service of one God, but would not dispute of religion; that the pope was very free of what was not his own, but had nothing to do with them; and that either the king of *Spain* was very poor, to desire their country, or very bold to threaten them; and that if he came thither himself, they would set his head upon a pole. To conclude, they engag'd, and the *Spaniards* overthrew them with the loss of two men.

*Carthagena.*

*Juan de la Costa*, who was pilot with *Bastida* in 1504. set out four carvels, offering to subdue the *Indians* of this place. He came to *Carthagena*, where he found captain *Lewis Guerra*; they joined together, and took seven hundred men, and returned without doing any great matter.

*Peter de Herrera* went governor with an hundred men, forty horses, and three carvels in 1532. He peopled it; but a mutiny happening among the *Spaniards*, he and his brother were brought prisoners into *Spain*.

The people here are taller than in any other part of the *West Indies*. They are now christians, and have a bishop.

*Santa Maria.*

*Bastida* discovered and governed this land in 1524. but it cost him his life; for his soldiers mutiny'd against him, because he would not give them the spoil of gold, saying, he valued the *Indians* more than them. His death was procured by his friend *Peter Fuentes*, who thought by his death to rule all.

*Don Pedro de Lugo* succeeded him; and after him his son, both of them exceeding covetous. Here *Pedrarías d'Avila* landed, when he went governor to *Darien*, and had a great engagement with the *Indians*, who were much daunted at the cannon firing from the ships; for they thought it had been thunder and lightning.

*New Granada*

Is eighteen leagues from *Santa Maria*, and was discovered by *Gonsalo Ximenes*: he

found out the mines of *Emeralds*, by means of the king of *Bigoufa*, who used the *Spaniards* civilly. This king had forty wives; his subjects were obedient to him, and would not suffer him to spit on the ground. They kept a *Lent* two months in the year; during which time they were not to know woman, nor eat salt. In 1547. the emperor sent a governor to *New Granada*.

*Venezuela.*

The first governor here was *Ambrose Alfinger*, a *German*, in behalf of some merchants the emperor mortgag'd it to. In 1528. he was kill'd, and his men reduced to such misery, that they eat three *Indians*. *George Spira*, another *German*, succeeded him.

Queen *Isabel* would not consent that any but her own subjects should go to the *Indies*; but after her death, the king gave leave to the *Arragonians*. The emperor opened this gap to strangers, by this contract with the *Germans*, yet now none can go but *Spaniards*.

*Venezuela* is now a bishoprick; it is so called, because seated like *Venice*: the women are more familiar than in any other part of the *Indies*; but their religion and attire is no better.

*Cumana and Cubagua.*

*Cumana* is a river that takes the name of the province. Here was a great fishery for people, and certain friers built a monastery in the year 1516. *John Garcia* being their vicar. Three of them went to convert the people up the country, but were slain; yet afterwards the others brought the people to civility, and their children to learn. Thus it continued two years; at the end whereof they revolted and slew one hundred *Spaniards*, entered the town, destroy'd the monastery, and killed all the friers.

*James Columbus* being governor of *Santo Domingo*, sent three hundred *Spaniards* to revenge this wrong, under the command of *Gonsalo de Ocampo*. At his first coming he pretended to the *Indians* that he came out of *Spain*, which emboldened them to come aboard him. When he had as many as he thought fit, he seized them, made them confess all their villany, and compelled them to build the town of *Toledo*, which is within half a league of the sea.

When the aforesaid monastery flourished, *Bartholomew de las Casas*, a priest that had lived in *Santo Domingo*, begged the government of this country, promising the emperor more wealth; and that the *Indians* should be better used than before. By means of count *Nassau*, and other *Flemings*, he obtain'd

obtain'd it. He was furnished at the king's expence, and carried three hundred labourers, with every one a cross on his breast, like a knight. At his coming he found *Ocampo* there, and the country in another condition than he had expected. He required *Ocampo* to obey him, which he refused till he had orders from *Columbus*, who employ'd him, and would not allow him to come into his town of *Toledo*, but oblig'd him to build a great barn of clay without for his labourers. Both went to *Santo Domingo* to complain; by which means *Toledo*, was unpeopled; which the *Indians* taking the advantage of, they entered upon the clay-house, and left not a *Spaniard* alive. The priest hearing hereof, became a frier, and never sent the *Flemings* the pearls he had promised them.

The loss of the pearl-fishery was a great damage to the king; but *Columbus* sent *John Castellon*, with a number of *Spaniards*, who made amends for the follies of the other two, recover'd the country, built a castle at the mouth of the river, and set up the pearl-fishery at *Cubagua*, where *New Cadiz* was built. This island was but two miles about, and barren in those days, but yielded to the value of two millions in pearls. There is a sweet and medicinal spring in it. At some times of the year the sea is red, which they impute to the breeding of oysters, and purging of women. They say here are mermaids. This island of *Cubagua* was discover'd by *Columbus*, which was the cause of his disgrace, being accused for concealing pearls he took there.

*Vincent Pinfon*, and *Adrian* his nephew, growing rich in their voyage with *Columbus*, fitted out four carvels, and had leave to discover those countries where *Columbus* had not been. They came to cape *St. Augustin*, where they found people as big as *Germans*, and had experience of their valour; for they slew eight *Spaniards*, yet he brought away thirty *Indians*, and much brasil; but lost two carvels, men and all, having spent ten months upon the voyage.

#### *Orellano and Amazons.*

This is counted the famous river in the world, rises in *Peru*, has many islands in it, and flows an hundred leagues into the country. The man that gave an account of it was *Francis de Orellano*, lieutenant to *Gonçalo Pizarro*.

*Orellano* being in *Peru*, was sent by his captain to seek victuals, and being in a boat, was carried with such swiftness by the current, that he could not return to *Pizarro*. He carried with him much wealth, and came out into the north sea down that river. From thence he sailed into *Spain*, where he sued for employment,

and undertook that voyage to the river of *Orellano*. He staid in *Spain* till all his wealth was spent, and then married, and drew his wife's friends to venture with him. He gathered five hundred men, but unfortunately died at his going to sea, and that enterprize was never after attempted. He reported he met with *Amazon* women; but it was not believed.

It is supposed that *Marannon* and *Orellano* have both the same source in *Peru*; and that the latter is fifteen leagues over, where it falls into the sea.

*James de Ordas*, who had been a captain with *Cortes* at the conquest of *Mexico*, was sent thither with the title of *Adelantado*, carrying six hundred *Spaniards*, and thirty five horses; but the enterprize fail'd by his death.

*Ferome Ortillano* was sent afterwards with an hundred and thirty men, in the year 1534. who arrived not there, but staid and peopled at *St. Michael*, *Venevente*, and other places.

#### *The River of Plate.*

From cape *St. Augustin*, to the river of *Plate*, is seven hundred leagues. Some attribute the honour of discovering it to *Americus Vespucius*; but it was *John de Solis*, in 1512. who returned into *Spain* with his ships laden with *Brasil* wood, and obtained the government of the river of *Plate*; but landing with some men, he and they were all slain in 1515. yet his ships returned safe. In the year 1526. *Sebastian Cabot*, in his voyage to find the *Molucco* islands, of which he fail'd, arrived at the river of *Plate* with four ships, at the emperor's charge. In *Brasil* he found some *Frenchmen* trading. The *Indians* killed two of his men, but would not eat them, saying they were soldiers. *Cabot* returned into *Spain* with little credit, though he was not to blame, because his men were in fault.

*Don Pedro de Mendosa* went to the river of *Plate* in 1535. with twelve ships, and two thousand men, a greater number than ever had been carried to the *Indies* at one time; in the way thither he sickened, and in his return died.

*Alvar Nunnez Cabeza de Voca* was sent *Adelantado* to the river of *Plate* in 1541. with four hundred men, and forty six horses. He could not agree with the *Spaniards* *Don Pedro* left there; nor yet with the *Indians*, so that they sent him prisoner into *Spain*.

*John de Sanabria* was bound to carry three hundred men, at his own cost, to the river of *Plate*; but he died at *Seville*, and his son went.

*F. Bernard de Armenta*, and four others, went to the river of *Plate*, and by the way fell upon an island, where they found three  
of

of *Cabot's* company, who had learned the language, and by their means they converted the savages wonderfully.

Four years before this an *Indian*, called *Orignay*, had proclaimed in those parts, that shortly there would come christians and preachers among them; advising those people to receive them, for they were holy, and would make them leave their beastliness. He made songs to that effect, which they sung; and this proved a great help to their conversion; for they entertain'd the friers as if they had been gods.

*For the better Understanding of the Circuit of America, I will here set down a Rutter of the Distance from Haven to Haven, and Cape to Cape; and will begin with the northern Regions.*

*The Length and Breadth of Europe, Asia, and Africk, the other three known Parts of the World.*

**E**UROPE takes its western beginning from the furthest part of *Ireland*, running to the river *Tanais* towards the east, accounted two thousand one hundred sixty six miles, both places lying in fifty two degrees of latitude; and from north to south, that is, from the *Morea*, lying in thirty five degrees northward, to seventy two degrees of latitude, is reckoned two thousand two hundred and twenty miles, and had in it of late years, till some of them were united into one, twenty eight christian kingdoms.

*Asia*, from the east to the west, that is

*The Two Worlds undiscovered, besides the Four known.*

**T**HE four known parts and divisions of the world have been often spoke of in these discourses; and, besides these four, there are two others, generally conceived not as yet discovered.

The one under the pole, and not fit to be attempted, though we certainly know a land to be there; but my hope is, as in my discourse of the north-west passage will appear, that under the north pole we shall find a sea, and no land, through which we shall pass to *China*, and those parts of the world.

If not, though that part of the earth should afford us another world, as big and spacious as all the rest besides, yet could we expect no more advantage from it, than *Greenland* affords us, which never any man inhabited to bid us welcome, nor commodity on shore to entice us thither to repair; and, therefore, though another world should appear in that climate, it can neither benefit us, nor the *Christian* commonwealth, more than a country of ice and snow.

The second imagined new world is to the southward of the *Streights of Magellan*,

to say, from the river *Tanais*, directly eastward, four thousand two hundred and eighty four miles; and from north to south four thousand five hundred and sixty miles.

*Africk*, from east to west, (*viz.*) from *Gambra* to *Guardufu* in ten degrees of north latitude, is four thousand one hundred fifty five miles; and from north to south two thousand seven hundred and sixty miles, (*viz.*) to the equinoctial line, ten degrees, six hundred leagues; from thence to the cape of *Good Hope*, two thousand one hundred and sixty miles.

commonly called *Tierre del Fuego*, which is supposed to be a continent, and to run east and west the compass of the world about.

That there is a land, beside the probabilities, there are proofs; the one by Mr. *Richard Hawkins*, in his voyage into the south sea; for falling short of the *Streights of Magellan*, he espy'd a country; but his intention being of another sort than discovery, he would not approach the shore, but stood his direct course to the *Streights*, which he passed in 1594.

The next proof of a land, though not of a main land, supposed by Sir *Francis Drake* to be to the southward of the *Streights*, was found out by *Cornelius Van Stowden*, of whom I have spoken in my second book, that in the year 1616. discovered a passage into the south sea, three degrees to the southward of the *Streights*, where he found diversity of lands and islands till he arrived at the *Molucco's*, as I have said in the second book.

But be it firm land, or islands, it is all one to us, that seek by the knowledge of  
it

it to make gain by it. It is a vain thing for us to think, that a country seated in so cold a climate, and not inhabited, should bring forth the fruits of the earth, or that it can be planted to afford us any commodity, no, not the value of fetching, though it should cost us nothing.

For compare it with *Newfoundland*, and the continent of that coast, long since discovered and known to us, and consider what use or profit we have made, or can make of a plantation there, and we shall find it not worth our labour; for though it be not so cold as farther to the northward, yet 'tis in that extremity of coldness, that in many hundred years it cannot be tempered for our bodies to live in.

This may seem an ambiguous speech, that the earth of an intolerable cold constitution may be tempered for men to live in, and to make use and benefit of.

But what I shall say in this point is prov'd both by reason and experience, That the coldness of *America* in fifty one degrees, which doth parallel us in *England*, is by many degrees colder than with us in *England*, and the difference thereof caused by art and pains: for where there is a plantation of towns and houses; commerce of people, whose breath sends forth a heat; divisions of lands, as by walls, ditches, hedges, the grounds trenched and dried with continual fires; it yields a perpetual heat, and is a shelter against all kind of cold, in comparison of a country that has none of these benefits or helps.

We our selves have examples of it; betwixt a natural moorish and wet dwelling, and such a place that by industry and art is brought to a better perfection. We see the difference of houses that are continually dwelt in, and fires kept burning; and others that lie uninhabited, waste, and no care taken of them.

Besides these reasons, to discourage us from planting in these degrees of *America* equal to *England*, the *French* have convinced us by their example; who, by their long travel and charge, have sought to produce some benefit out of those countries; but all their labours have proved vain; for, they find, the cold destroys all their good intentions, and the only gain they now make is in their trades for furs.

Then, if by reason and proof, *America* in fifty one degrees can yield us no profit, being but two thousand miles from *England*, where we have a conveniency to transport our men and provision once a year, at an easy rate, in ships that fish in *Newfoundland*, by whom we may be reliev'd; what can we expect from a country in the same latitude southward, that is as cold, the people barbarous and savage, and having no con-

veniency to transport our men, otherwise than in ships we purposely hire, to sail nigh seven thousand miles from *England*, the equinoctial line to be twice passed, in going and coming, which must distemper mens bodies by the sudden entering out of the cold into the heat; and this is the only cause to be imputed to the death of our men in our long navigations.

More then for our own satisfaction, that a land is there placed, we can expect no good from thence; for where there wants heat, there wants riches, by proof of the pure metals, and the quantity and diversity of them, growing betwixt the two tropicks, above all other parts of the world.

And for our other kind of commodities that are produced out of the earth, the temperate zone affords them in most abundance, but not caused by the heat of the sun alone, but by the managing and manuring of the land, by the labour and industry of the people, and by the commerce, trade, and civility, betwixt man and man, country and country; for, no doubt, in times past, when the people of *England* were barbarous, they lived in the same estate, and the country was of the same condition that other places are, of the same height at this instant.

Therefore I conclude, that though all the countries contained in the hot and temperate zones yield no profit, unless they be manur'd and us'd accordingly, yet, I say, no part of the world out of those zones, where the cold has so predominate a power over men, beasts, and fruits of the earth, is of any value or goodness to intice men to inhabit or people it; for neither by art or industry such a climate can be made capable for man to live in, or fruitful to make any use of.

But notwithstanding these reasons collected out of experience, there are some men, who, to appear singular, and others for argument sake, go about to prove there are other countries not yet discovered, as pleasant and as plentiful as those that are known by daily traffick.

It has been my chance often to meet with some of these self-conceited witty men, and for want of learning to defend my opinion, I have fled to the protection of reason, with humility to submit to judgment, and to acknowledge my errors, after I am confuted by proof: but before the discovery of any such countries should be set on foot, I have advised, That the first thing they should attempt, should be to find out another sun; for the power and operation of this sun is known to us by the light it sends abroad to all parts of the world at several seasons of the year, as the countries are

feated from the *equinoctial* line, which is termed, *The girdle of the world*.

This *Sun* is known to rise in the east, and set in the west, making its course every twenty four hours about the world; its declination to the northward and southward, is well known to us not to exceed the two *tropicks*, which are in twenty three degrees and an half from the *equinoctial*: we likewise know, that it is the guide of the lengthening and shortening of the days, occasioned by its motion. We also know all such lands in *America*, *Africa*, and *Asia*, as lie between the two *tropicks*; and, trading

into these countries, know what the heat of the *Sun* in that space produces.

Then seeing we are perfectly acquainted with the virtue and quality of our *Sun*, and the power and heat it sends forth to the countries adjoining to it; and that the riches of all places grow by the heat they are seated in; I desire to be satisfied what richer countries can be hoped for besides those already known to us, unless there be another *Sun* to work the operation this *Sun* does. And thus much concerning my private opinion of the two worlds undiscovered.

### *Other Seas besides the Ocean, great Part of them lately discovered.*

I HAVE sailed into all the quarters and corners of the earth through the wide unknown ocean, and left no country unspoken of, to which the main sea has given passage. But besides the great spacious and known seas, besides the commerce, trade, and intercourse of all nations, I have at large related there are other seas, which, in comparison of the ocean, may be termed rather *Lakes* or *Streights*, which I will a little handle.

The first shall be the *Caspian Sea*, which is invironed and compassed about with land, and seated in a main continent; where there is no issue or passage into any other sea; but like a pool or pond it has a settled being.

The second is the *Red Sea*; which, after one thousand two hundred miles running, falls into the *Indian Sea*; and but that this sea is named a sea in the scripture, which is the authentick proof of all other authors, it should no more deserve the name of a sea, than the *Persian Gulph*, which falls into the *Indian Sea*, and is equal in breadth and length to the *Red Sea*, and yet is called a gulph.

The third is the *Mediterranean Sea*, which divides *Europe* from *Africk*; and something I will say of this sea, when it comes to the place to be treated of: but first concerning the *Caspian* and *Red Sea*.

The *Caspian Sea* is at least two hundred leagues in length, and one hundred and fifty in breadth; many rivers running into it, and especially the river *Volga* out of *Russia*; which river divides itself into seventeen branches before it falls into the *Caspian Sea*.

There are few ships, and but small trade on this sea, for want of mariners and seaport towns; and because of the poverty of the people, and abundance of ice.

Our *English* merchants finding a trade into *Persia* out of *Russia* by the *Caspian Sea*, built a ship after the manner of *England*; the tar used about her issued out of the earth

thereabouts; she was of twenty seven or thirty tons burthen, and sailed with *English* mariners. This was the first and the best-built ship that ever sailed, or display'd christian colours in those seas; she drew not above five foot water; for the sea is both shallow, and subject to shoals. This trade was left off, by reason of the danger of thieves and robbers, and the barbarity of the people.

About this sea *Ottoman*, the first of that name and house that bare rule amongst the *Turks*, had his original, and came from thence in the year 1300.

In some places of this sea the water is fresh; and in some other places as salt as in the ocean.

It neither ebbs nor flows, except some times with the rage of the wind.

There are several sorts of fish, which are not in our seas; but great monsters and fishes there are none. And thus much for the *Caspian Sea*.

The *Red Sea* is not red, as many conceive; but takes the name from the red bushes that grow along the shore side. Others are of opinion, that the name is derived from the red sands in that sea, especially towards the shore, which cause the water to look red.

This sea has three channels; that in the middle is the deepest, and betwixt twenty five and thirty fathom; the other two are full of rocks and shoals, which makes it navigable only in the day time, and that with danger.

The shore affords neither grass, herbs, nor weeds, nor the sea any quantity of fish.

Some are of opinion, that the gold of *Opbir* was brought out of the *East Indies* through this sea.

No man can sail in this sea, but *Turks*, or such as have licence from them; for which they pay very dear.

*Prefter John* has only one harbour in the *Red Sea*, called *Arquico*; the *Portuguese* and

and *Prester John* have often attempted to damnify the *Turks* in the *Red Sea*; but they proceeded so faintly, that they still failed in their enterprizes.

*Mecca* is the place so famous for the sepulchre of *Mahomet*, and for the number of people yearly resorting to it, seated upon the *Red Sea*, and forty days journey from *Cairo* in *Egypt*. *Sida* is a great port in this sea; whither forty or fifty ships yearly resort, laden with spices, and other rich commodities out of *Cambdaja*, and other parts of the *East Indies*. And now to the *Mediterranean Sea*.

Out of the *Mediterranean* two other seas are increased; the *Adriatick*, which runs up to the city of *Venice*, and divides *Italy* from *Greece*; and the *Euxine*, that parts *Europe* from *Asia*, possessed only by the great *Turk*.

The *Euxine Sea*, and no other part of the *Turks* dominions, except the island of *Cyprus*, affords him any harbour to build galleys in, or ships, or materials to build them withal. What ships, galleys, or other vessels soever he at any time sends into the *Red Sea*, are carry'd from thence to *Alexandria*, and transported to *Cairo*, and so to *Susa*, which is above two hundred miles by land; a trouble and charge not to be estimated, if we consider his fleet of eighty great ships, twenty five foists, four galleasses, twenty galleys, and seven other vessels, all brought out of the *Euxine Sea* to *Susa*, in the manner aforesaid, when he attempted and failed in his enterprize to *Aden* in 1573.

The commerce and trade into the *Mediterranean Sea*, has been more ancient and famous, than all other seas in the world, although it is neither long nor broad; for at the entrance into it, it is not above two leagues over, which was forced by means and labours of people, as it is received by tradition; and I the rather believe it, because to this day the entrance into this sea is called *The Pillars of Hercules*, who is said to be the author of the work; and were it not for this small entrance, considering that the sea has a stoppage upon the land of *Syria*, it were rather to be termed a lake than a sea.

Among many observations on the *Mediterranean*, this is not the least to be considered, That though the ocean continually runs through this small streight of two leagues, carrying such abundance of water, that in reason it were enough to overflow and drown that part of the earth on which it beats, having no passage out; yet in no part of the land where these waters pass, does exceed its ordinary and usual bounds and limits. There have been many opinions and disputes about the reason hereof;

but for my prrt, I hold with him who judges that sea has a passage under the earth.

My next observation is, That God has placed in that sea, the most, and the most plentiful islands of the earth; which islands have heretofore sent forth men of fame, to enrich the world with wit and learning, and in this time spread their commodities into all the countries of *Europe*, and receive theirs in exchange.

And though I may attribute to every island some particular honour, but that it is not proper to my discourse, that treats only of the sea, yet will I say for the excellency of the island of *Cyprus*, which the *Turks* have enjoy'd ever since the year 1571. that it affords, without the help of any other country, materials to build and furnish a ship, as namely, masts, ropes, sails, and such like, that she need not be beholding to her neighbours.

My third observation is, That in that sea there have been fought more naval battles by the *Romans*, *Turks* and *Christians*, than in all the other seas of the world besides: the wars of the pirates was in that sea, whom *Pompey* the great overcame, to his everlasting honour and praise: the *Romans* kept in continual employment in that sea two thousand sail of ships, fifteen hundred galleys, eighty great galleons, with their prows and poops richly gilt, and had always double provision for the navy.

My fourth observation is God's blessing to the christians and christian shores, opposite to *Barbary*, possessed by *Turks* and *Moors*; for that in all that coast of theirs God hath not given them one harbour to entertain a fleet; which has made them heretofore ignorant in navigation, and sea-affairs; whereas, if the shore had afforded them ports, and their land timber, and all other materials to build shipping, considering their numbers, valours, and the division of christians, I am of opinion, before now, they had been masters of the better part of *Europe*. And I may the better conjecture it, by the hurts and spoils the pirates of *Algiers* and *Tunis* have of late years committed upon the christians, since they have had the use of christian ships; for themselves have none.

And only these two places afford safety for their vessels; *Algiers* by a mole or cove, made by art in the sea: *Tunis* by an open road, called the *Goletta*; and this shall suffice for the *Mediterranean*.

Besides these seas aforesaid, there are many lakes; some known, others imagined, or received by tradition, as namely, that of *Africk*, called *Zembre*, out of which flow the rivers *Nilus*, *Niger*, *Como*, *Quama*, *Maginca*, and divers others.

The river *Nilus* flows forty days in a year, and decreases as many, (that is to say,) from the 27th of *July* to the 6th of *October*. The river *Niger* doth the like; and much about that time.

The river *Cambra* and *Seneca*, which divides the colour and complexion of the people, falls out of *Niger*. On one side of the river *Cambra* the people are of a dead ash-colour, lean, and of small stature; on the other, black negroes, tall and well proportioned.

In the lake of *Zembre*, as also in the river of *Layar*, there are water-horses, and water-oxen, which at night come ashore and graze; the horses are sometimes taken and made tame; they run swift; but a man must be careful how he rides over a deep river on one of them, for they will suddenly dive under water.

*Sinus Persicus* is in the gulph of *Persia*; and has in the mouth of it, in the *Indian* sea, the island of *Ormus*, famous for the great trade to it from the *Indies*, and all the countries in that part of the world.

There are divers towns of the *Arabs* on the gulph of *Persia*, and great traffick by water; notwithstanding it is both shallow, great customs are paid, and it is subject to *Arabian* thieves.

The town they first imbarck at in passing down to *Ormus*, is *Bierr*; the vessels that

fail in that sea, are of forty or fifty tons in burthen, and have no iron in them, but only in their anchors.

*Babylon* stands upon the river *Tigris*, which falls into the river of *Euphrates*; it is a great through-fair, and stands in *Persia*; from *Babylon* they go to *Balsora*, which is a town of great traffick; in former time it was under the *Arabs*, but now under the *Turks*: from *Balsora* they go to *Ormus*, which is six hundred miles distant, and all in the *Persian* gulph.

Besides the sea and lands lately discovered, of which I have formerly treated, producing nothing but my own reasons to strengthen my opinion, there are other seas and unknown passages, supposed to make a passage or communication from one to another; as namely, the north-west and north-east passages to bring us to other seas, which our nation, above others, has been industrious to search out, to its yearly expence, hazard, and charge, without effecting any thing as yet. These that follow are reasons, or rather arguments *pro & contra*, to prove or disprove a passage; which I refer, as I do all the rest of my discourses, to the consideration of men of more judgment than my self; it was written upon the return of *Hudson's* ship, after he was treacherously murdered by his company.

### *A Discourse concerning the North-west Passage.*

THERE are three things to be considered in this pretended voyage, upon the discovery of the north-west passage this present year 1610.

1. The first is the probability of a passage.
2. Whether it is like to tend to the southward or northward.
3. What commodities are like to arise to us alone, above any other nation, by it.

That there is a passage, is confidently believed; though there be several opinions, whether it runs into the *South Sea*, or into the *North-west*, which experience must determine. Some there are who pretend to have passed it themselves; but their words carry so little shew of reason along with them, that they deserve no credit.

*Gemma Frigius* says, There went three brethren from *Europe* through this passage, whence it took the name of *Fretum Trium Fratrum*.

In my opinion, if *Gemma Frigius* intended we should believe his report, he should have set down the names of the three brethren, their country, the shipping, out of what port, or by whom they were em-

ployed; the season of the year they set forth, the time of their return; the course they failed; what hope or despair in making benefit of their discovery; the conditions of the people they met with; the commodities of every country where they had commerce; the altitude of every place; what dangers are to be shuned, or some particular accident that fell out in the voyage; for these are designs of mens voyages and discoveries: and not mentioning any of them, why may we not conceive it to be a fiction, as well as divers other names, that are given to places in maps within the lands of *Africk*, *Asia* and *America*, which never any man was known to be at, to give an account of.

We must either conclude that passage not worth following, which was discovered, and left off after the first voyage; or that those princes, or others, to whom they made relation of it, gave little credit to their report.

For, no doubt, if there had been any such thing, it was undertaken for the same end we now attempt it, (that is,) for the discovery of new lands, where we may have com-

commerce and traffick : they could not be ignorant of the nature of commodities, and it is like they would have brought home an example of some, that would have given encouragement to have persevered, and not desisted from the enterprize, it being discovered ; neither is it likely, that three brethren, who presumed to undertake such a voyage for their honour or glory, would let die so noble and so memorable an action, as the north-west passage.

The second reason to prove a passage, is alledged by *Cornelius Nepos*, That there were certain *Indians* cast upon the coast of *Germany*, which were presented by the king of *Smith* to *Quintus Marcellus Celer*, the proconsul of *France*.

The third, that in the year 1160. whilst *Frederick Barbarasso* reigned emperor, there came certain *Indians* cast upon the coast of *Germany*.

The fourth, that *Othen*, in the story of the *Gotbs*, affirms, That in the time of the *German* emperors, there were certain *Indians* cast upon the coast of *Germany*.

These four proofs are verify'd by three authors : but considering that we read in the days of *Quintus Marcellus*, the *Romans* were so desirous to enlarge their empire, that they left no means unattempted, nor no country heard of unconquered ; and that they would not examine these men, of the custom of the country, the distance from whence they came, the wealth and power of their king, the way of their coming, and, at least, to devise how to send an ambassador to be informed of the state of their nation, and to settle an intercourse of traffick. I must confess, if these things were not put in practice by the *Romans*, they were less careful of their government and greatness than any history can lay to their charge.

These reasons, with one more, I must likewise alledge to the two christian emperors, That they should be so careless in their duty towards God, that having knowledge of heathen people, they would not use their best endeavours to draw and bring them to the yoke of Christ ; by which means they might have been civilized ; and having learn'd the language and true worship of God, this would have proved a good introduction to have wrought their own ends and desires upon them.

These, I say, may breed some scruple in me, to doubt that they were people of the *West Indies* ; though in those days, they might give them the names of *Indians*, because the savages, and the people of *America*, nor *America* itself, was not then discovered, nor of many years after. I will not deny, but that such men might arrive upon the coast of *Germany* ; but I should have

been better confirmed, if the burden and manner of building their ship, had been expressed, with the number of men, their time of absence from home, the behaviour and civility of the people, what sea or streight they passed, what commodities they brought with them, and desired to carry from thence ; for the author said they came to trade.

But the greatest argument we are grounded upon that they came out of the *Indies*, is, because in the discourse they gave them the name of *Indians* ; but I do verily believe, if there were any such people, that they were savages of *America*, over-against *Germany*, who were put from the shore with a westerly wind ; as the *Spaniards* relate of a *Biscainer*, that was forced with an easterly wind from the *Canaries* to the coast of *America*, from whom *Columbus* had his light for the discovery of the *Indies* : both these reports I believe alike.

The fifth proof of a passage is grounded upon a report of *Cortereal*, a *Portuguese*, who, by his own report, passed it, and gave it the name of *Cortereal*. But where this *Portuguese* was born, or took shipping, or by whom he was employed, or upon what occasion, what became of the rest of the men, the name of the ship, captain, and master, or the journals of the voyages, is not expressed ; which makes me doubt of the credit of this story ; for there is no man so void of sense, that does not observe the month and day of his departure from home, and all accidents in the journey ; or though the *Portuguese* should be careless thereof, yet of ten mariners, eight of them would observe it.

But leaving this to the *Portuguese* forgetfulness, let us examine who should employ him ; and upon what occasion. If we speak according to reason, no prince so likely as the kings of *England*, *Scotland*, or *Denmark* ; whose countries lie more convenient for the passage.

Neither is it likely that any other than a prince would set them out, because it would concern a prince more than any private man ; but allow that more than one or ten should employ them ; think you the secret of the voyage could be concealed, or that they would leave prosecuting it when discovered : no, no ; for in those days *England*, *Scotland*, and *Denmark*, would have thought it a great happiness to their state to have found it out.

And to prove what I say, that *England* was ignorant of any such discovery, we have no record of any such voyage undertaken out of *England* ; nor proof of the *Portuguese* offer to any king of *England*, as we have of *Columbus*, who tendered his service

to Henry VII. for the discovery of the *West Indies*, before he made offer of it to *Spain*.

How this *Portuguese* could cause such a silence in the rest of the company, as not to make report of it, is very doubtful, seeing man naturally is apt to extol himself; and such a service as that passage, would cause the men not only to boast of it, but also to make offer where it was most likely to be accepted; which, as I have said, I could never hear was done to *England*.

It is an old saying, That two may keep counsel, if the third be away; but that the *Portuguese* could pass in a ship that had but two or three men to sail her, or that they could be made so silent as not to report, I refer my self to any judicious man.

The voyage was neither by the king his master's appointment, nor by any minister under him, or by the consent of the one or the other, you may conjecture; because the discovery of that passage, was likely to hazard his greatness in the *East Indies*; and therefore, if any such should be attempted, it is likely he should rather forbid than further it.

And seeing it was never seconded by *England*, *Scotland*, or *Denmark*, and the king of *Portugal* had less reason than the rest to discover it, I believe the *Portuguese* was like a great many vagabonds in *England*, who beg under the name of soldiers, that never were in war.

The sixth proof of a passage, and particularly out of the *South Sea*, is related by one *Salvatierra*, a gentleman of *Spain*, that spoke it from the mouth of one *Andrew Sernita*, a frier, in the year 1560. which frier confessed to the said *Salvatierra*, that he had passed from the *South Sea* into *Germany* through the north-west passage.

This report seems to be a hear-say of a second person; and whether the frier spoke it to *Salvatierra*, or no, that must rest upon the honesty of *Salvatierra*; and whether the frier spoke truth, in saying it, rests as much upon the honesty of the frier; so that there are two mens credits at stake, and neither of them both, to be examined; but let us examine the likelihood of it.

The king of *Spain* in those days had as little reason to discover such a passage into the *South Sea* as the king of *Portugal*; because it would be as great a damage to him as to the king of *Portugal*; the trade of *Peru* being as much exposed as that of the *East Indies*.

But suppose there was no hurt or damage to the king of *Spain* by that passage, yet the finding of it would be more inconvenient; for it is nearer from *Lima* to *Panama*, and from thence to *Nombrededios* by land, and so into *Spain*, which is the or-

dinary way of trade, than from *Lima* to *Spain* by a north-west passage.

And therefore seeing the discovery of that passage would neither profit nor shorten the *Spaniards* voyage, but might in time prejudice, yea hazard the whole *Indies*, I see no reason the *Spaniards* had to attempt this discovery, but rather to divert it; and therefore the frier's testimony to be doubted.

By his own report, this passage was not long discovered before the year 1560. Sir *Martin Forbusher*'s last attempt to the north-west was undertaken in 1576. so that there could not be twenty years difference betwixt their two undertakings.

If the frier's relation had been true, it is not likely it would have been concealed; and seeing Sir *Martin*'s action was undertaken by the queen, who had better means to understand the state of it than any private man, no question but the queen would have procured a certain relation for Sir *Martin*'s better instruction.

Or if the frier's arrival had been upon the coast of *Germany*; as neither the time, place, company, nor ship, is spoken of, nor any *German* writer makes mention of, which it is likely they would have done, if it had been true, or if not, so memorable a thing as the north-west passage would not have been forgotten in twenty years.

Besides, the *Germans* had been as likely as any nation in the world to have attempted it, if there had been cause, considering how industrious and ingenious they are by nature; and seeing that neither report made it famous, nor that it was ever seconded by any other person, I think the frier passed it in a dream, or upon the horse *Pegasus*.

The seventh reason to prove a passage, was by *Stephen Gomes*'s offer to *Charles V.* in 1527. who would have sent to discover it, but that his employment was so great otherwise, that he could not attend it; and the king of *Portugal* fearing that the emperor would persevere in the enterprize, gave him three hundred thousand ducats to desist; as saith *Francisco de Ulloa*.

How probable this is, let us a little examine. First, I think that neither *Gomes*, nor any other man, durst make such an offer to the emperor; for he might as well have presented him with poison in his cup, as to discover a passage that might prove so hurtful to the state of *Spain*; and I think few kings would have suffered *Gomes* to have lived, if they believed his relation, lest, upon refusal, he might have tendered it to some other prince or country that might lie more conveniently for it.

Secondly, *Gomes* could not have been such a fool, but to think, as it stood with the state of the emperor, to have the passage found; yet as the emperor was king of *Spain*, it was the most hurtful and dangerous thing that could happen to his kingdoms; and of the two titles and dignities, the emperor was to respect his inheritance of *Spain*, being successive, as the other was but elective.

To prove that it has been passed, is not set down by *Gomes*; and reasons that it may be passed are as well known to thousands as to *Gomes*; which makes me judge of *Gomes* to be an undertaking fellow, as we have many in our age that will put themselves into action, and promise good success to keep themselves employ'd.

And I do the rather believe this of *Gomes*, because I read in the voyage of *Magellan* about the world, that this *Gomes* was pilot of one of his ships, wherein *Alvaro Mesquita*, *Magellan's* nephew, went captain; and coming into the *Streights* of *Magellan*, *Gomes* mutiny'd, and compelled this captain to return home.

Besides, I find it recorded of the said *Gomes*, That he undertook the discovery of the north-west passage in 1525. and after ten months spent without effecting it, he brought home certain *Indians*, and arriving at the *Groynes*, was called to from the shore as he enter'd that harbour, to know what he came home laden withal; who answer'd, with *Eslavo's*, meaning with *Indians*, which the others conceived to be *Clavo's*, viz. cloves, upon the first apprehension thereof; and in hope to get a reward of the king, the party posted up to the court with tidings, that *Gomes* had been at the islands of *Molucco's*, and was return'd home, laden with cloves; but when this news was contradicted, the fellow lost his charge and travel, and they were both derided.

But to return where I left off, though there had been no likelihood to impeach the emperor in his *Indies* by this passage, yet considering it was like to prejudice the king of *Portugal* in the *East Indies*, the emperor had reason, without receiving any such sum of money, to hinder it; for as much as the more nations traded that way, the sooner they might discover those places that were discover'd afterwards, as namely, the *Phillipines*, and other islands, and in time might prove his most dangerous neighbours.

But especially the emperor was married to the daughter of *Don Emanuel* king of *Portugal*, who had the reversion of all his kingdoms, if his heirs males failed, as it did, and became hereditary to *Spain*.

And therefore it was most ridiculous we should conceive the emperor ever threaten-

ed the king of *Portugal* with that discovery, or received money of him to that purpose, as is expressed. But I observe it is the nature of all men to flatter themselves with hope of a thing they would have, and will wrest reasons and stories to strengthen their belief, by example of this which they misreport; and therefore I will set down the truth of this story out of authentick authors.

There was a long question and debate between the emperor and the king of *Portugal*, to whom the *Molucco's* should belong. And it is true the emperor labour'd to find another way to the *Molucco's*, than by the cape of *Good Hope*.

*Magellan* was a *Portuguese* by birth, who had lived seven years in the *Indies*: he left the service of his king, and offered it to the emperor, giving hope to find a new way to the *Molucco's*, though it proved the loss of his own life.

The controversy to whom the *Molucco's* should belong, continued between the two crowns of *Spain* and *Portugal*, and the *Spaniards* made sundry attempts, by way of the *Streights*, but evermore with unfortunate success. At last *Don John III.* of *Portugal*, and brother-in-law to the emperor, willingly lent him three hundred and fifty thousand ducats when he went into *Italy* to be crown'd emperor, upon condition the king of *Portugal* should no way be molested in his possession of the *Molucco* islands till that money was repaid; which being never done, the *Spaniards* never since pretended to those islands. But there was no mention made of a north-west passage.

Although there are a great many more probabilities that the *Streights* have not been at any time passed, than otherwise, yet it is no reason absolutely to disprove a passage, whatsoever any man shall ground upon philosophical arguments, or by any globe or card that is extant; for except a globe-maker can as well prove by experience that there is such a sea as he sets down, and by the testimony of some men that went it, he may as well suppose what he makes sea to be as dry land as the deserts of *Arabia*: and therefore leaving this trial, I will proceed further.

I have perused all the voyages to the north-west made by *Sir Martin Forbisher*, and *Mr. John Davies*, with whom I have often conferred touching this passage; and I have found by them a likelihood of it, but no more assurance than from those that never went so far as they did. Therefore whatsoever is hitherto done, is but imaginary.

I must confess that the last year's attempt of *Hudson's* has given us knowledge of four hundred leagues further than ever was known

known before ; and out of his discovery we are to conjecture more or less possibility of it.

And because I make this voyage the foundation of all others that shall succeed, I will set down, as much as I can remember, what I received from the mouth of the master that came home from *Hudson*, touching the particulars of his voyage, and whether it will avail us, or no, being discovered.

The entrance was in sixty three degrees, and they ran in that height two hundred leagues, and finding the *Streight*, which was forty leagues over to run south, they followed that southerly course, making account it would bring them into the *South Sea*; and here they ran two hundred leagues more, till they found the water too shallow and unpassable.

They wintered in an island in fifty two degrees; where in the whole winter they saw but one man who came to them but twice: the second time of his coming he brought with him three deer-skins, which he would not exchange for a hatchet; for he priz'd them at more value: but when he saw that he could not have it under the whole three, he was content to let them go, and promised by signs to come the next morning; but came not.

The savage was cloathed in skins, and his arrows forked with iron. They found the place much subject to north-west winds, and far exceeding any part of *England* in coldness.

As they tended south, going about the headland, they passed near the shore, and betwixt certain rocks, small islands, and main lands.

They found the flood to come from the north-west, which is one of their arguments that it came from the main sea. The next voyage must be to discover from whence this current comes, and to see if in running west or north-west, they can find a streight to run south, or an open sea to the northward.

Victuals they found none from the shore, but white partridges; the water they had was snow water, which fell abundantly into their ships every night: wine, aquavita, and other liquid things, did freeze in an exceeding manner, though it was but in fifty two degrees.

I conceive two especial benefits by *Hudson's* discovery; the one, That we have passed two hundred leagues more west than was ever discovered; that hereafter we may be bold to sail two hundred leagues directly, without losing any time to search one shore or other, which would have taken up a whole summer, if they had not intended to winter.

The second is, That whereas there was hope of a passage to fall into the *South Sea*, not many leagues after the entrance into the *Streights*, this discovery has put us out of doubt of it; so that I make account there is another summer gained.

I will suppose we are two hundred leagues in the *Streights*, and, as they say, we encounter with a north-west flood: but before we direct our course west and north-west, let us judge of this flood, and where they met it: if in the midst of the channel, we may the better believe it came out of the main sea; but if amongst islands, broken land, or rocks, we have no reason to ground our hopes of a voyage upon it.

For by experience upon the coast of *Britany*, or where there are many islands or rocks, the tides alter according to the rocks and islands; and I know *Hudson's* company confess they met them amongst rocks and islands; and therefore no hold to be taken of a north-west flood.

But according to the hope we conceive of this flood, we direct our north-west course, being entered the *Streights*, and in sixty two degrees. You must note, that in running north-west, every twenty eight leagues you raise a degree; and the further you run any point to the northward, the greater hazard you shall endure by ice and cold, the worst wintering, if you be put to it, and the further from your voyage, because the course lies southerly.

But one hope may be, That the northern part of *America*, which is made land in the maps, will prove sea. Allowing it to be true, and the *Streights* to run but two hundred leagues farther, either northward or westward, then let us compare the time we have to pass the *Streight*, and reckon our departure from *England*, and we shall find the climate very unseasonable, either to winter, or to make a factory, if we pass it not in one summer.

From *England* to the *Streights-Mouth*, seven hundred leagues; to the place discovered two hundred; to the sea imagin'd two hundred north-west, where I will suppose there is an open sea, though the contrary is known. Now have I run one thousand one hundred leagues, and in sixty two degrees.

And if we will know the distance from thence to the *Molucco's*, or where we have now a trade, this rule will lead us, (*viz.*) to measure with the meridian line from the entrance of the *Streight*, lying in sixty two degrees, due south, to the height of twenty three and a half, which is the latitude of cape *California*; then measure the distance from this meridian to the cape of *California*, and from thence to the cape *Mendacina*, which is the furthest known part of *America*, and after to the *Molucco's*, and

and you shall find nothing gained by this discovery; for that of necessity the land of *America* must be doubled, before we direct our course to any of the places aforesaid.

But suppose, upon the opening of the sea to the northward, the land proves, as is describ'd in most globes and maps, (*viz.*) all land, and no sea, then are you to run due west in sixty two degrees, as aforesaid; or as the land shall lie, so many leagues, as you shall measure by the former rule, (*viz.*) from the said meridian line to the cape *Mehdacina*, which, considering the distance and distemperature, the course alone would not be run in a whole summer.

Or if, being in sixty two degrees, we find a passage to run south-west, and to fall into the *South Sea*, about the height of cape *California*, it is great odds, that freight will not always run deep, by example of the *Red Sea* and *Persian Gulph*; both which want no breadth, though very shallow; and if this should prove deep and broad, yea, though the narrowest place be but one league over, we may have the honour to discover it; but any other nation shall reap as great benefit by it as ourselves, if we cannot make it good and fortify it on both sides.

Let us reckon how many leagues we shall run before we come to the *Molucco's* by the course into the *South Sea*: Allow we be in sixty two degrees, and nine hundred leagues from *England*; and that our entrance into the *South Sea* be in twenty three degrees south-west; then have we raised thirty nine degrees, which in a south-west course amounts to nine hundred and seventy five leagues; and from that height to *Java* the distance is certainly known, by the navigation of Mr. *Cavendish*, the pilot of whose ship, and many other principal men, are yet living; and have annexed the distance of places, the days of sailing, and their abode in every harbour where they arrived, to the *Discourse of the Voyage about the World*; as thus:

From cape *California*, in twenty three degrees and a half, to the islands of *Ladrones*, they note one thousand five hundred and fifty leagues; from the *Ladrones* to the *Phillipines* three hundred and twenty; from the *Phillipines* to *Java Major* five hundred and twenty five: so that by this computation, which cannot be disproved, it amounts to four thousand five hundred and seventy two leagues betwixt *England* and *Java*, by a passage into the *South Sea*; and reckoning from *Java* to *England* the common way, by observation of the said pilot, it is but four thousand five hundred leagues, (*viz.*) from *Java* to the cape of *Good Hope* one thousand eight hundred leagues; from

thence to *Flores* one thousand two hundred; from *Flores* to *England* four hundred and fifty; so that we find by demonstration, that it is further by four hundred and forty five leagues, by a passage into the *South Sea*, than by the known way of the cape of *Good Hope*, which is daily frequented.

But it may be said, by the north-west passage we shall have the trade of *Japan* and *China*; which will more avail us than the trade of the *Molucco's*, and the *East-Indies*, because they are many leagues nearer. If the passage be found, I confess there is something gained in the distance, but nothing in the navigation, allowing that this passage falls into the *South Sea*; as if it does not, little good is like to ensue of it, because of the hazard of cold, of ice, and of unknown seas, which experience must teach us.

But to disprove the opinion of such as are erroneously carry'd away with the conceit that the *Streights* are like to fall into the *South Sea*; about the cape of *California*, this that follows shall give an infallible satisfaction, by proof that has been made upon that coast to the westernmost part of all *America*, both from *Mexico* within the land, and from *Acapulco*, and the port of *Navidad* by sea.

*Ferdinand Cortes*, who was captain general of this new-conquered country of *New Spain*, and *Anthony Mendosa*, at that time viceroy of it, the one hating the other mortally, as is the custom where two such commanders have such equal authority; yet they both preferred the service of their master before their own spleen and revenge, and jointly undertook a discovery of *Quivira*, and the westernmost parts of *America*, being made believe it abounded in riches, and had a trade from *China*, and other parts of *Asia*. They employ'd in this journey one *Francis Vasques de Caranaca*, who arrived there by land with a number of *Spaniards*, both horse and foot; in which journey they endured greater famine and other extremities, than all the rest of the *Spaniards* undertakings in the continent of *America*.

Some of those *Spaniards*, though not many, returned by land to *Mexico*; from whence they departed, and reported the calamities and extremities they suffered. By this I collect, and by my collection will frame my unanswerable argument, to give the world satisfaction, that from *Mexico* to the westernmost part of *America*, in which space, if there be a passage, it must fall into the *South Sea*, in all their journey they found neither sea, freight, or other impediment, to hinder or stop their journey by land, but that they went and arrived at *Sibola* and *Quivira*; from whence they return'd, which they could not have done if there had been

a stoppage by water, either fresh or salt; neither did they carry any provision of boats, or other means to transport men or horse.

But for better satisfaction to this point, I will lay open a later proof, known to divers *Englishmen* yet living, that were with Mr. *Cavendish* in his glorious voyage about the world in 1586. After he had passed the *Streights of Magellan*, and the coasts of *Chile*, *Peru*, *New Spain*, he came to *California*, where he took his rich prize of seven hundred tons of *China* silks, coming from the *Philippine* islands, bound for the port of *Navidad* in *New Spain*: this ship had in her one hundred and ninety passengers; and after he had laden his own ships with her merchandize, he burnt both ship and goods, not being able to carry her with him; and for the men he put ashore at cape *California*; from whence they travelled by land as far as to the port of *Navidad*, whither they were bound by sea.

In their way they passed many *Indian* countries, not commonly known to the *Spaniards* before; in all which travel they found no interruption by freight, river, or other let of water, fresh or salt: and for the proof of their safe arrival at the port of *Navidad* aforesaid, besides the relation I have seen of it, it happened that many years after, a pilot of the said prize taken by Mr. *Cavendish*, and a *Greek* by nation, returning into his country, after twenty years spent abroad, happened into the company of one Mr. *Lock* an *Englishman*, in *Italy*, with whom he grew acquainted, and related to him all the particulars of his voyage, as well what happened by sea as by land, after Mr. *Cavendish's* putting them ashore. But leaving this argument, I will proceed farther.

Allow that we be in twenty three degrees, and in the *South Sea*, and direct our course to the islands of *Japan*, we are to run one thousand six hundred leagues a westerly course (*viz.*) to cape *Mendacina* seven hundred leagues, and from thence to *Japan* nine hundred, by the reckoning of *Francis Gall*, who was a perfect pilot, and had often sailed it; so that by this course we shall run three thousand four hundred and seventy five leagues from *England* to *Japan*.

To prove that nothing is gain'd by this navigation, I will allow we are at *Japan*, and resolve upon our return for *England* the same way we went: we must so cast our voyage, as to be sure of a sufficient time for our passage through the *Streights* in summer, otherwise we must resolve to be frozen or starved by the way; and what a hazard we shall run, if winds cross us, our masts break, our ships spring a leak, the sails split, men fall by sickness, I say, if any of these accidents happen, we are left destitute of all help or

hope, and the greatest calamity or misery that ever befel men will light upon us; for there is no death comparable to hunger and cold: and to shew how unlikely it is for us to return in one, or scarcely in two summers, let us examine the winds and seasons.

The *Spaniards* that come from the *Philippines* to *New Spain*, stand over to the main land of *America*, and coast the shore, finding the winds all easterly at sea, inso-much that they are returning eight months, which they are going in ten weeks; and this is the rather approved by Mr. *Cavendish's* sailing from cape *California* to the *Philippines*, who never found the wind from betwixt the east and north-east, from the 19th of *November* to the 15th of *January*, in which time he sailed two thousand three hundred leagues.

So that although we shall arrive with a fair wind at *Japan*, yet, considering we shall find it against us in our return, we shall sooner by one third part, and with less hazard and danger, come home by the cape of *Good Hope*, than through the *South Sea*.

Let me now appeal to the opinion of any mariner, whether it were not better for a man to sail six thousand leagues in a certain and known navigation, where the winds nor seasons never fail, than three thousand in an uncertain sea, as we shall find to the northward, where the winds are variable, and the climate unnatural, except it be in the *South Sea*, which I have shewn the inconvenience of.

The delay of voyages is commonly when the factor is not ready to lay his goods aboard; for there may be time lost in seeking such commodities as his merchant writes for, for a convenient time and season to ship it; some want or disability in the ship or company, arrest or stay by the prince where they are, or many other casualties not thought upon; but when a ship departs from any harbour so far off as the *East Indies*, and seeks to recover the place whither she is bound, it cannot be any great hindrance to the merchant to lose a month's time in coming home, but the rather profitable, as I will demonstrate by one of those voyages.

For if by the north-west there be so quick a passage, and so short a way to go and come as is desired, I say, the trade in few years will be overlaid; for as it is now by the cape of *Good Hope*, since we and the *Hollanders* have had traffick in the *East-Indies*, pepper is bought from 2*d.* to 4*d.* there, and when it increases in price where it should lessen, and falls where it should increase, what think you in time this voyage will come to, if followed, either the one way or the other?

Let us likewise consider what needless commodities they bring from thence. I see not but this country may live as well without spices, as our forefathers have done; neither are they to be had in truck of our home commodities, as cloth, lead, and tin; but if the merchant make gain by this trade, the chiefest stock he employs must be in silver, which has, and will, in time, make such a dearth of money in *England*, as all men in general will rue it: and as I have said before, we shall have the less money, and the great quantity of those needless commodities, if the navigation should prove short and easy.

If a man will speak truly and indifferently of the trade of the *East Indies*, it is not so fit for any king or prince, as the king of *Spain*, who has other *Indies* to supply the silver that goes out of his country; then what hope have we to persevere in that voyage, who have no mines or means by traffick to bring money into this kingdom? For this take for an infallible argument, That country which receives more commodities than it vends, the overplus must of necessity be of money: and by reason of our wasteful expence, in such needless and superfluous things, as silks, lawns, spices, wine, tobacco, sugar, and a hundred such vanities; we must confess there comes in much more of these commodities, than goes out of the realm in truck for them: and then let us consider the benefit of this trade, and how long it is like to continue good, for the benefit and profit of this kingdom.

The mischief that is befallen us, by exhausting our silver was foreseen long since by *Charles V.* emperor; who, beholding the greedy gain of the *Portuguese*, in their trade to the *Indies*, was wont to say, "They were enemies to christendom, by carrying their treasure from *Europe* to enrich the heathens."

But now to proceed to what I conceive of *Hudson's* last voyage: I find we are hopeless of any good by the *South Streights* where he winter'd, because of the shallowness of the water in fifty two degrees; or if it had run as far as to have brought him into an open sea, yet it was a great error in *Hudson*, to bid his company welcome into the *South Sea*, upon that *Streight*, tending to the southward; for if you please to measure it by a meridian line, you will find it would have brought him scarcely as far as the islands of *Lucaias*, which is short of the *West Indies*, and the land *Columbus* first discover'd.

I verily believe the savage *Hudson* met withal, had been acquainted with trade; first, by adventuring so near the ships and men, the sight whereof would have daunted him, if he had not seen the like before. Secondly, that whereas at his first coming, he

brought with him three deer-skins, which he would not truck for a hatchet, esteeming them of better value; this shews he knew the price of the hatchet, and knew as well how to rate his hides: and thirdly, by the iron of his dart, which manifestly shewed, he used to trade with christians.

But if it be true, which is told me, that some did imagine the iron came from *Japan*, and that those of *Japan* traded with them people; the conceit is strange to me, that any man should believe that *Japan* lying so far thence as it is, should have trade with a people and country that affords nothing, no, not so much as victuals.

If the *Japonese* came to discover, they saw themselves out of hope to pass that way, by example of our men; so that it is like, that if they had been there once, they would not have come twice; and therefore little sign of a trade: or if they came to discover, it is likely they hop'd to find a sea, as well as land; and then I see not, but they might as well come to us, as we desire to go to them.

But whosoever will understand reason, need not go so far as *Japan* for it; for it is most apparent, considering the height, the distance from the ocean sea, from hence, and from *Canada*, where the *French* yearly trade, it is like this fellow had trade with the *French*; and I am of opinion that *Canada* is but one hundred and fifty miles from this place; and I further believe, That the relation the *French* give of a sea they have seen west in those countries, is no other than this *Streight*, or what else you will call it, that *Hudson* discovered.

Having shewed the small probability of a passage, and confuted such mens reasons as have pretended to have passed it, having alledged some arguments, that we should have gained little time, though it were discovered either north or south; and thirdly, what profit shall we reap by it, though it were found? especially considering we shall have no more privilege than any other nation, except it prove narrow, for us to strengthen and fortify?

Now lastly will I set down a project, how to undertake a discovery with small charge; and either find it, or be out of hope of it, in little more than two years.

Besides the charge and endeavour that is to be used in this voyage of discovery, I will persuade, though it be with some cost to the adventurers, That either a pilot be procured from *Spain*, that hath sailed from the *Philippines* to *New Spain*, who I think is better able to give a light of this voyage, than by experience we shall attain to in many years:

Or if there be a difficulty to get such a pilot, yet that he may be conferred with, by

by some of good understanding in cosmography; for, no doubt, sailing along the shore, as they do in that navigation, he can be able to say, whether it be likely that any great river or streight can give hope of a passage that falls into the *South Sea*; or, at least, he is able to tell the distance from *China* to the main land of *America*; and whether the current sets from the north, or no, as *Francis Gall* describes; and he is able to tell the breadth of the main land of *America*, from *cape Mendacina* to *New Spain*, if you doubt of *Francis Gall's* report; and this will I wish to be done, before undertaking another voyage; for certainly it will give great hope or despair to our discovery.

I know it is conceived by the *Spaniards* in those parts of the world, that there is a sea to the northward that divides *Asia* from *Africa*; but if it be true, (as I think no less,) the entrance of it must be farther northward than yet we have discovered; and I am of opinion, we must bring the most northern part of all *America* southerly, before we run west; or as the land shall bear; and then finding no ice on the starboard side, we may be bold to say, we have entered into an open sea; for it stands against sense or reason, that any *Streights* should run deep or narrow, as it must do, if we profit by it, whether it run west, north, or south, so many leagues as the breadth of *America*, if *America* be truly described; as that we shall know by the conference with the pilot of the *Phillippines*.

But now to proceed upon the north-west discovery; The men that go that voyage, must be such as trade into *Iceland*; for they are best able to endure the cold, and most acquainted with the northern climates.

Three vessels are enough to undertake it; the one of two hundred tons, the other of fifty tons apiece. The ship is to carry such provisions for wintering, as shall be thought necessary, with a surplus of victuals to be put into the barks at the departure of the ship from them.

This ship may, if they see a convenient place, make her voyage upon the coast with fishing; if not, she may put round for *Newfoundland*, and buy her lading of fish, which being carry'd into the *Streights*, will make a profitable return, towards the charge of the discovery.

The two barks must be strong and short, because of their aptness to stay and tack, if they come into a narrow *Streight*, shoal water, or amongst ice.

The captains must be skilful mariners, and good cosmographers, men of good reputation, and of great resolution, for their credits to perform such a voyage; and

for their carriage, not to be daunted at any disaster.

Their commission must give them liberty to punish with death, if mutinies or disorders arise; but above all, nothing must be wanting that can be thought of for a two years voyage in a northern climate.

The masters must take an oath, to use their best endeavours to advance the voyage, and to keep secret the journal: the plats and cards, and all other writings that concern their navigation, must be taken from them at their coming home, and sealed up to present to his majesty.

There are many other cares to be committed to the captains and masters; as their mutual agreement; their husbanding of victuals; their drawing the proportion of every cape; the depth and distance from place to place; the observation of winds, times, and seasons; the variation of the compass, and care in keeping company; and to appoint a place of meeting, if they lose one another, hailing each one both morning and evening; what to do in fogs; to take possession of such countries as they come to for the king, and leaving some signs of their being there for whosoever shall come after. Many other things are to be thought on before their going from home, too tedious to set down.

If the two barks shall arrive in a place where a river or streight does open two ways, they are to part company, and each of them to proceed upon their discovery, as they shall agree upon, (with this direction,) That upon either of their returns, they appoint a certain place on shore, where to leave their letters wrapped up in a box of lead; and in those letters to make relation of their success, from their departure from one another.

There must be great providence to preserve their men in health, and from danger of their enemy; not to believe the allurements of savages, but when they stand upon their own guard; and if they be forced to use violence, to have a special care that the first piece they shoot, be sure to kill or hurt; for so shall the savages be more terrify'd, when they find the pieces kill as well as make a noise.

But leaving the discovery of the north-west passage to the care, wisdom, and discretion of the undertakers; I will deliver my conceit of a voyage, which hitherto no man hath written of, much less attempted; and that is, due north under the pole. One reason that induces me to it, is the nearness to *China*, *Japan*, and the *East Indies*, if there be a passage; for by computation, it cannot be above fifteen hundred leagues from *England* to *Quinsay*.

My

My other reason is grounded upon an error of the philosophers; who conceived it was uninhabitable under the line, which experience has taught us to the contrary: the like opinion they held of the pole; and we know they have no more reason for the one than for the other. And seeing the adventure cannot be great or dangerous for the undertakers, I would wish men to be as forward and willing to venture therein, as they are now in this to the north-west; for the proof is alike for any thing that is done as yet.

My third motive is grounded upon that which makes the impediment of the north-west passage; which is ice; and that I least fear or doubt of, for the reasons following.

The abundance of ice which floats in the sea, and hinders the north-west passage, is not the ice of the sea; for the great salt sea cannot freeze; but it is the ice frozen in fresh rivers and sounds, which, at the breaking up of the year, is driven out of the same harbours into the sea; which shews there is more land upon the coast of *Labrado*, than towards the north pole; for

ships have sailed one hundred leagues to the northward of the north cape of *Norway*, and sixty seven degrees, and have found no ice; whereas, if there had been land in that course, or to the northward of it, they would have found the ice, by the reasons aforesaid.

And whereas cold may be alledged for an impediment upon this discovery, we find by proof, and not without reason, that it is hotter to the northward in summer, than nearer the sun, because of the reflection of it, that gives a light and a heat for one half of the year: it is to be compared to a continual easy and gentle fire, which will cast a greater heat, and of a longer continuance, than a violent flame that is soon quenched.

And because all discoveries before spoken of, and that hereafter are to be attempted, have been, and must be, by the pains, labour, and industry of mariners, I think it not amiss to set down what I was desired by Mr. *Wright*, the great mathematician, to write to encourage and further a certain stipend for the maintenance of navigation, for seamens better instruction.

### *The Conveniency of a Lecture of Navigation.*

**I** HELD it not amiss to insert so much as I was desired to write, concerning the necessity of having a publick lecture read, for the instructing of mariners and seafaring men of this kingdom; which is as followeth.

If I should go about to prove, how much more fit it is for *England* to maintain navigation than any other country that lies upon the continent, I should do no more than many worthier persons have hitherto undertaken, or that men in common reason should conceive; for *England* is an island, and therefore bound to maintain shipping for defence of itself, offence to other nations, and enriching the commonwealth with trade: for neither can any man enter into peaceable or warlike sort, or we our selves pass forth of the kingdom, without the help of shipping.

And yet are ships alone no more available, without men to conduct them, than weapons without hands to fight. Seeing therefore that ships and seafaring men are inseparable, the one of no use without the other, we must have as great care to bring up men, and make them skilful in that art of navigation, as to maintain shipping for the good of the commonwealth.

But, with pity I speak it, we have not respected the instructing our mariners; and no marvel that we have sustained so great a

loss by shipwreck; for no more than our seamen get by bare experience, they never endeavour themselves to knowledge: and I judge the reason is, because they have no means to attain it; otherwise I think they would be as willing to know their errors, as it were fit they should be taught.

The help they received in these later times, was by mens writings, which I hold not so profitable as what they shall hear delivered by mouth; for the ordinary mariners are oftentimes ignorant of what they shall read, as not understanding either word or sense; and when they shall have it demonstrated to them, and the hard words and meaning made plain, they will both conceive what they hear, and be able to put in practice when they understand it.

Another discommodity they shall find by writing, is, That the secrets of the art will be published to the world, and other nations are likely to make as great use and benefit of it, as we ourselves: and therefore, as we ought to strive to exceed other men in navigation, in respect I have shewed it imports our country so much, so ought we to keep it secret, according to the example of *Spain*, which seeks to conceal divers rivers, and other places in the *Indies*, from us, which they know by discovery might breed them inconveniencies, and benefit us.

It is a question, Whether a man shall attain to better knowledge by experience or learning? and many times you have controversies arise, betwixt a scholar and mariner upon that point.

The scholar accounts the other no better than a brute beast, that has no learning but bare experience to maintain the art he professes: the mariner accounts the scholar only verbal; and that he is more able to speak, than act.

I confess this is great arrogancy in both, to stand so obstinately upon themselves, when they ought in reason one to assist the other; but especially the mariner is to receive comfort from the scholar; for he that has but bare experience, receives what he has by tradition, for learning is the original ground of all arts; but he that has experience joined with learning, it makes that man excellent in the art he professeth. What made *Abraham Kendall* and *Mr. John Davies* so famous for navigation, but their learning, which was confirmed by experience?

If we had but a lecture of navigation read, which seamen might resort to, they would soon reform their spiteful humours, and confess how needful it is, that learning should be added to experience. And this lecture, no doubt, in a little time will make men as famous as either *Kendall* or *Davies*, to the honour and benefit of the commonwealth.

Men of learning were able to give great light for the finding out the longitude, and for the discovery of new lands or passages, which experience must beat out, when they have their grounds from learned men.

Every man in travel or journeying desires to find the nearest and easiest way, for his rest and gain of time, to come to his journey's end: and so ought the mariner much the more; for the sea is tedious, and more difficult than the land. The land is firm and stedfast; the sea wavering and moveable: the land is known and determined by marks, signs, and limits; the sea is vast, and no marks to know it: the land has hills, mountains, and rocks; the sea has storms, tempests, great difficulties and dangers, and therefore the more need of help to avoid the fearful perils, and unlooked-for accidents man is sure to meet withal in the wide and spacious sea.

I am of opinion, there is no error the mariner finds at sea, either in card, star, instrument, or compass, but upon his information may be reduced by the skilful mathematician, and made perfect, if not suddenly, time may work it, by following such instructions as shall be prescribed by them.

It is strange to see our errors, that we prefer idle and frivolous studies that bring no profit, as namely, there are lectures of logick, rhetorick, and musick, allowed, and the readers of them have a competent maintenance for the same; none of which studies can be in election to bring the twentieth part of benefit to the commonwealth that this is like to do, if it be well used.

But I speak not, that I would have this lecture only erected, and the rest suppressed; for learning must be nourished in all commonwealths, being the ground from whence government is derived; and for my own part, I will rather wish a larger contribution for the maintenance of the rest, than a diminishing of what they have.

I am partly of opinion of our *Mathematicians*, that hold there is no certainty in the art of navigation in our ordinary masters that take charge; for if there were, they would not so much vary one from another, as usually they do: for proof whereof, let there be four or five masters or pilots in one ship that goes or comes from *England* to the *Tercera's*, if they be any time in traves at sea, you shall have some of them thirty leagues before the ship, and others as many leagues behind the ship.

Imagine by this what danger every ship is in that goes from *England*, and comes home again, which, to men of understanding, is a wonder that more ships do not miscarry, considering the danger of our coast: It is not art, but fear and care, that preserves them; for if they should presume upon their art to bear in with any land, the rocks would devour ten times more ships than they do: but the masters having so provident a care, and so great a mistrust in their own art, that though they observe the sun and stars never so exactly, they will not presume to bear in with the land which they have not made, except the coast be clear, and the wind large to claw it off again.

But if this art can be made perfect, and the errors corrected and reduced to a certainty by the painful study of the learned, it will prove a happy thing to all seamen, and by consequence to the whole commonwealth.

The only means of help that is to be expected or hoped for reformation of these ancient absurdities, which the mariner by all his wit and skill cannot correct, must be by a publick lecture allowed to be read, and competent means collected and gather'd for the same: for if the hearers of a lecture of the liberal sciences receive profit by hearing it read, you must confess they will receive much greater profit from this, being well taught.

For

For besides the common good we shall receive by this lecture, it will concern gentlemen to study it, who seeing the pleasure, and the necessity of it, will make them forward in actions by sea, which will be a great strength and stay to the kingdom; for it is requisite that gentlemen should have an insight into sea affairs; seeing they are commonly employ'd in his majesty's ships in time of service.

It is well known to other nations as to us, that *England* of late years has undertaken greater enterprizes, and achiev'd greater

victories by sea, than ever any of our forefathers have done. And that these famous memoirs of ours may remain to posterity, it is fit that gentlemen who live in this age, but especially such as have been actors in expeditions themselves, should contribute towards the maintenance of a lecture of navigation; which act of theirs will remain for a monument to those that are the founders of it: so shall they deserve well of succeeding ages, and their noble deeds will ever live fresh in memory of those that shall come after them.

*A Comparison betwixt our ancient and known Trades, and those now in being, since the late Discovery of New Worlds; with something relating to the Hollanders and Fishing, Particulars being referred to the Sixth Book.*

I WOULD have our hopeful fishing, now intended, compared and parallel'd with such actions of ours, as of late years have been achiev'd with everlasting honour and renown to our nation, as shall appear by that which follows, as well in the discovery of unknown countries, as in new plantations, and other fought trades, not heretofore known nor dream'd of by our forefathers; and yet the ambition of that mungrel and unmannerly nation of *Holland* seeks to lessen our praises: they cannot really challenge any thing of themselves, but that we gave them light of; as shall appear in the sixth book following.

I confess that such *English* as have been the actors, authors, and abettors of our brave enterprizes, have oblig'd the whole commonwealth to them; first, by the adventure of their lives, to seek out the secrets of commerce. Secondly, by the expence of their estates, till they brought it to perfection. And, lastly, by their labour, pains, and endeavour, to advance our navigation to that it was in former times; and yet if all these be examined and compared to our fishing, it will come short to the happiness our kingdom will reap by it.

If we enter into the original of our *English* trafficks, and the continuance of them, till the discovery of new countries, that gave us a greater scope to search out the bowels of the earth, you would think it strange our nation could flourish in so high a measure as it did, in comparison of the present times: for I find, that in sailing to the southward, we exceed not the bounds of the grand *Canaries*, which voyage in former times was held a greater wonder and stranger than now about the world: neither was the art of navigation so common, or so perfectly known, till of late years, that by our travels we have attained to it; for I re-

member my self the ignorance of a prime master, who, going to the *Canaries*, returned home without seeing any of the seven islands, for want of skill to direct him.

And to prove what I have said, That our traffick to the *Canaries* stretches no further to the south, this following shall clear the doubt, (*viz.*) That upon all treaties with *Spain*, since the discovery of the *Indies*, we were not prohibited by name the trade of the *Indies*; only we are tied to our antient and accustomed trafficks with *Spain*, which we cannot drive further to the southward than the grand *Canaries*, nor of right by that article of peace can require it.

Our ancient and usual trades, before the new discovery, was to all the dominions and islands of the kings of *Spain*, of *France*, of *Portugal*, the *Seventeen Provinces*, the several parts of *Germany*, *Denmark*, *Norway*, *Sweden*, the *Baltick Sea* and *Island*: these were the limits and bounds of our *English* commerce, before the latter end of *Henry VII.* when we came acquainted with *America*, *Africk* and *Asia*.

It is marvellous if we consider what *England* is now, to that it was in former ages; what wealth is returned into this kingdom, in respect of times past; what increase is made of his majesty's rents and revenues, in comparison of his progenitors; what an increase there is of ships in number and goodness; what dread and fear all other nations apprehend of our greatness by sea; and what rumours are spread abroad in all the quarters of the world to make us famous. It is admirable if we call these things to mind.

And to come to the particulars of augmentation of our trades, of our plantations, and of our discoveries, because every man shall have his due therein, I will begin

gin with *Newfoundland*, lying upon the main continent of *America*, which the king of *Spain* challenges as first discoverer; but as we acknowledge the king of *Spain* the first light of the west and south-west parts of *America*, so we and all the world must confess, that we were the first that took possession for the crown of *England* of the north part thereof, and not above two years difference betwixt the one and the other.

And as the *Spaniards* have from that day and year held their possession in the west, so have we done the like in the north; and though there is no respect, in comparison of the wealth, betwixt the countries, yet *England* may boast, that the discovery, from the year aforesaid, to this very day, hath afforded the subjects annually one hundred and twenty thousand pounds, and increased the number of many a good ship and mariners, as our western parts can witness by their fishing in *Newfoundland*.

Neither can *Spain* challenge a more natural right than we to its discovery; for in that case we are both alike: if we deal truly with others, and not deprive them of their right, it is *Italy* that must assume the discovery to itself, as well in the one part of *America*, as in the other.

*Genoa*, and *Cbristopher Columbus* by name, must carry away the praise of it from *Spain*; for *Spain* had not that voyage in agitation, or thought of it till *Columbus*, not only proposed, but accomplished it. The like may be said by *Sebastian Cabot*, a *Venetian*, who by his earnest intercession to *Henry VII.* drew him to the discovery of *Newfoundland*, and called it by the name of *Bacallao*, an *Indian* name for fish, for the abundance of fish he found upon that coast.

And speaking of plantations, I will begin with *Newfoundland* itself, which lay uninhabited, and the country unthought on to produce profit, till my lord *Baltamore*, and some merchants of *Bristol* undertook it. It may be they were the rather drawn to it by the plenty of fish, not once doubting of the soil, because they had no proof of the winters habitation; and they might think that a fresh and green shew of a hopeful summer to the eye, such as *England* yields, would send forth the like winter, and the like effect in winter; but by trial it failed, and proved a chargeable adventure, and the decay of my lord's estate. He returned for *England*, where once more he resolved to try his fortunes in a new plantation in *Florida*; but in the mean time, and in the year 1632. he died.

Let not this colony of *Newfoundland* eclipse my lord's judgment, or the adventurers with him. The chiefest exceptions against it, is the coldness of the climate;

and the like might have been said of *England*, upon the first plantation of it; for they lie both in one parallel. *Newfoundland* affords in view plenty of wood, grass, water, and other hopes of commodities, till time and experience gave light to the contrary; and at the first, therefore, not to be disproved, till a winter had made known the condition of the soil.

They had another help to their plantation, in that they were in no danger of savage enemies, which all *English* colonies are subject to, and have tasted the mischief of; but, above the rest, if the land had proved suitable to their hopes, and worthy of inhabiting, they might have planted and supplied it, at less than half the charge and expence of other colonies where the *English* are seated; for that there resort yearly one hundred and fifty ships to the fishing in *Newfoundland*, which ships go not half freighted, and not above fifteen or sixteen days sailing with a reasonable wind, that would be glad at a small rate to carry any provisions for the advancement of the plantation.

And seeing I have begun with *America*, I will take it in my way, not having relation to the years of the first plantation, but the neighbourhood to one another, and to the places where they are seated: and the next, according to the latitude, is *New England*, whose sea affords excellent and choice fish; whither divers ships of *England* yearly resort, to take and disperse it into several countries in *Europe*: the land, by mens endeavours, will be made to produce fundry commodities, as a book that is published can witness; but for want of time, for yet it is but a child, and lately born and inhabited, little can be said of it, more than a mistrust of the good success thereof, through the numerous and irreligious people that possess it, being refractory to the church-government of *England*. From thence running south, we arrive at *Virginia*, a place evil chosen for seat, soil, air, or any thing else to give encouragement for a plantation; yet seeing it was begun, and that the undertakers would not seem unconstant, to change their first resolutions, they have since 1602. continued a footing in it, with costly adventure, though hitherto it produced little more than tobacco. But this nothing lessens the worthiness of the undertakers, whose end is the general good of the commonwealth.

Not far from thence, to the southward of it, in the year 1585. a colony was sent to settle in *Norambega*, by the procurement of *Sir Walter Rawleigh*, a man much favoured and graced by the queen in those days; and the man chosen for the conduction of his ships thither, was *Sir Richard Green-*

*Greenville*, who upon his arrival was to leave the government to Mr. *Ralph Lane*; and though the situation, the climate, and the natural soil, and the proof of the commodities the country yields, was able to give encouragement for the prosecution of it, yet for want of means, and willing minds, which is the bane of all undertakings, it failed, and produced nothing but tobacco, which has brought a greater mischief to this kingdom than the profit would have countervailed, though it had proved successful.

Later than all these, and, indeed, which is now in the infancy, is a plantation in *Florida*, and near to an ancient colony of the *French*, who through ill government were in the end forced to quit it. He that can judge of things must confess, That of all other plantations, this gives the greatest hope and comfort, by proof that hath been made of it, and the temper, and the height it lieth in, if it be carefully followed, and sufficiently supplied. One danger must be eschewed, which other nations have found the smart of; which is the untamedness of the wild *Indians*, who are cruel to themselves, and worse to strangers, as both the *French* and *Spaniards* have tasted. God send them fortune that live there, to their desires, so they make not *England* still unfortunate with tobacco.

East-north-east from *Florida* lies the island of *Bermudas*, inhabited and peopled by our nation; whose extent can yield no greater profit than the circuit of the ground can promise, being but thirty miles in compass; by means whereof the planters are forced to till and manure their grounds in that excessive manner, that in a little time it will not be able to sustain their people, but force them to find another habitation; which will move the less pity, because they seek only to plant for tobacco, a thing so noisome and loathsome to this kingdom.

This island at the beginning was discovered by the *Portuguese* nation, and inhabited by them, till they found little profit accrued from it, and then they abandoned it, and left behind them such food, especially hogs, as they could not carry with them; and thus it lay waste for many years, with a general opinion to be inhabited with spirits, which made all men shun the sight of it at their return out of the *Indies*: though this error was easily falved; for I knew, above fifty years since, one captain *Russel*, a *Frenchman*, shipwrecked upon that island; and with great industry of his people, for few of his men were lost, they patched up a boat out of the materials of the perished ship, that carry'd them to *Newfoundland*, where they found relief and passage into their own country.

VOL. III.

I knew likewise in the year 1592. another *French* ship wrecked upon the same island, in which an *Englishman*, one *Henry May*, was passenger, he having belonged to one of the ships captain *Ryman* had, when he was drowned returning from the *Indies*. This *May*, and some few men of this *French* ship were preserved, and made shift, as the others did, to get to *Newfoundland*.

This plantation of *Bermudas* was not purposely undertaken by us, but accidentally fallen upon by the like shipwreck in Sir *Thomas Gates* and Sir *George Summers's* passage to *Virginia*, whither they were bound; and being delighted with the pleasures of that island, which was so well stored with hogs, they seated their colony remaining in it; since then they found a reasonable quantity of amber-grease floating out of the sea; and not without reason; for the coast of *Florida*, opposite to it, abounds in amber-grease.

The next, and more to the westward from thence, are the islands of *Barbadoes* and *St. Christopher's*; and whereas the *Canary Islands* were formerly called the *Fortunate Islands*, so would we have these islands called the contrary, (*viz.*) the *Unfortunate Islands*, in that they produce nothing but stinking tobacco; which, if we judge wisely, discovers the mischief it does: but it has such a bewitching power over the takers, that all the ill which comes of it, they interpret as good to their bodies, and have no more power to leave it, than drunkards when they are muzzled in it.

The next, and upon the next continent is *Guiana*, and the river of *Amazons*, where there have been many colonies settled by our nation in that spacious country; yet I could never hear of any commodities that rose by it, or not so much in value, as two miles of ground in *England* would afford; and yet I must rightly say of that evil tobacco, this plantation sends the best, if the strength of tobacco be so accounted. The benefit of this plantation is, That the savages are more civil and tractable than in other parts of *America*; and that the climate and soil gives hope of good to come of it: but where the *Dutch* have had footing, and quitted it, takes away my belief of it.

Further to the southward of this coast the *English* never sat down with a resolution to plant; and yet there are many ships that have made sundry voyages, some to trade, others with letters of reprisal, as well upon the coast of *Brazil*, as through the *Streights* of *Magellan*, who have after coasted to *Chile*, *Peru*, *Panama*, *New Spain*, and cape *California*, and took their leave of *America*, and the westernmost

cape *Mendofina*, the farthest land discover'd.

*Our Trade to Africk and Asia.*

The next addition of our new trade, is upon the continent of *Africk*, as far south as the cape of *Good Hope*, and then eastward to the cape of *Guardafusa*, which is the sea circuit of *Africk*; from thence we will pass over to *Asia*, till we arrive at the *Molucco Islands*, and the continent of *Cbina*, to all which places we are now no strangers, by our late and large navigation.

The first country and the highest to us, where we fettled a new trade, not frequented by our forefathers, was *Barbary*, under the king thereof, called *Mulley Abaleck*, in 1577. who gave the *English* large and fair conditions, as appears by the privileges extant; and from that year to this very day we have enjoy'd the same; and so prevail'd with succeeding kings, that we have beaten the *Portuguese* out of that trade, who at first laboured to do the like to us.

In our time of wars with *Spain*, our ships of reprisal have received great comfort and relief of the two ports or roads in *Barbary*, which, upon necessity of victuals, water, and other wants, they have supply'd us withal, and taken from us such goods, by way of traffick, as we have made sale of; but with that craft, subtilty, and danger of betraying us, that he who knows them well, would no further trust them, then necessity would compel him. The *Barbarians* had so much honour and civil honesty, that if a *Spaniard* and *Englishman* were in their ports together, they would forbid the meddling with one another, being enemies; so great a regard they had to the king's royalty: as otherwise, if they were never so little way off at sea, and one of them taken by the other, if he that took, would bring her taken into the port again, they would hold her prize to him, and give money for her.

I remember the like case in my self, *Anno* 1587. that coming into the road of *Sallee*, I found a ship of *Catalonia*, a subject to the king of *Spain*, there trading; and the *English* merchants on shore fearing I would make an attempt upon her, besought me not to offer violence in harbour upon her, assuring me, if I did, the king would take occasion to confiscate all the *English* goods in his country, and to imprison, and, perhaps, put to death the merchants: whereupon I forbore to attempt her.

The western parts of *Barbary* have two open roads, *Safin* and *Santa Cruz*; out of which the ships that ride there put to sea, when they find, by the bellow of it, the

wind likely to endanger them with a westerly gale.

Our *English* ships riding there have often been forced to put to sea, for their safety; and many times before their return they have met and taken several *Spanish* prizes; which have been more beneficial to them, than their merchantable voyage has proved.

And to conclude with the trade of *Barbary*, I must say, That though the *English* in time of war have often brought the subjects of the king of *Spain* prisoners into the ports, and though the *Moors* did more value buying the men than merchandize, yet how leud soever the *Englishmen* were, or what necessity soever they were driven to, it was never known they made sale of one christian.

The next bordering country to *Barbary*, is *Guinea*; unhealthy, through extremity of heat, and infection of the air, for which there are many reasons alledged, and antidotes invented to avoid the contagion thereof: but all in vain; for the putrifaction of the air is occasioned by the huge and monstrous beasts that country abounds in, which when they die, by reason of the excessive heat, cast such an intolerable stench, that infects and putrifies both air and earth, to the destruction of mankind.

The discovery of *Guinea*, and the sovereignty thereof, was given to Don *Alonso V.* king of *Portugal*, in 1471. which he enjoyed peaceably, and without interruption or challenge by any nation, till the year 1481. The voyage was intended by certain *English*, and the negroes themselves as willing to accept of their neighbourhood, with offer to give them a proportion of land, there to live and inhabit; but this design was frustrated, and proceeded not, at the instance and request of the king of *Portugal*, Don *John II.* to *Edward IV.* king of *England*. And since that time, to this very day, a footing in *Guinea* was never attempted or desired; which must be conceived to be out of the unwholesomeness of the climate and the air.

But though we were not resident in *Guinea*, by any place in the country we possessed, yet have we continued a yearly traffick to sundry parts of that coast on this side the equinoctial, ever since the year 1553, till this present 1632. and many corporations and patents granted by queen *Elizabeth* to her subjects of *Exeter*, and other the western parts.

Another benefit we have made of that country, is the relief it has given us in our longer voyages, as to *Brazil* and the *South Sea*; for all ships of ours, that have passed the *Streights of Megellan*, found succour and

refreshing at the port of *Sierra Leona*, where, at this day, we have a certain trade.

From the port of *Senega* in *Guinea*, we have made several attempts to discover *Tombakato* and *Gago*, two places within the inward parts of *Africa*, which afford the greatest quantity, and the purest and the best gold in the world; and from whence the king of *Morocco* or *Barbary* is furnished with all his gold, by his caravans he sends thither in great peril; for many times they are swallow'd up in an ocean of sands.

From this part of *Guinea*, or rather from the cape of *Lopez Gonzalez*, till you come to the cape of *Good Hope*, no christians have traded with the negroes, but the *Portuguese* themselves; in which course is seated *Angola* and *Congo*, which is inhabited by banished men sent out of *Portugal* for offences there committed; a place of that infection, as that it is fit only for men of that condition; and from those places they furnished the *West Indies* and *Brazil* with numbers of negro slaves, who work in their mines and sugar-works.

As *Sierra Leona* has been a relief to our nation in our long navigation, as I have declared, so is the bay of *Saldania*, within three leagues of the cape of *Good Hope*, a succour to our ships of the *East Indies*; for thither they resort in their going and coming from thence, though it yields no benefit but victuals and water, for which they truck with the most wild, ravenous, and irreligious negroes in the world.

From the cape of *Good Hope* there are two passages or navigations to the *East Indies*; the one by the way the *Portuguese* sail, keeping the *Africk* shore, on the left-hand or larboard-side; which course we likewise take with our ships that trade to *Cambaya*, a country subject to the great mogul; and in going there they sometimes touch at the island of *Socotora*, upon the mouth of the *Red Sea*, and where *St. Thomas* was shipwrecked. This island yields our merchants the best *Alloes Secatrina* in the world; and not far from thence it affords them as good commodities as the fleet of *Mecca* could send out; which I forbear to speak of.

And of late, by that track, we have found the trade of *Ormuz*; which island we gave the *Persians* assistance to take from the *Portuguese*; though I do not commend that act, in joining with turks against christians.

*Surat* and *Cambaya*, in that coast, affords us good and commodious traffick, though the *Portuguese* seek to impeach us: but besides the going and coming home of our ships, as also of other parts of the *Indies* where they remain, they are freighted, or else freight themselves, from port to

port, to their exceeding great profit and gain.

The other navigation from the cape of *Good Hope*, is to the southward of the island of *Madagascar* or *St. Lawrence*, but not frequented by the *Portuguese*, but upon great necessity, when they are forced to it in great penury, not being able to recover *Goa*, or other part of the *Indies*, as in my former book I have related: but to us that resort to *Bantam* and the *Molucco's*, or other parts of the *Indies* thereabouts, it is far the nearer, and much the safer; for we sail in a more open sea than the *Portuguese* do to *Goa*, where they meet with many rocks and shelves.

When our ships arrive at the settled ports, there trade is certain, and their return so usual, that there needs no repetition thereof: but our people not being contented till they had discovered such countries and places, as fame made report of, from hence they made an attempt upon the discovery of *China*, *Japan*, and the farthest remote places of the world, being led to it by the rumour of the magnificency and wealth of them.

But it proved like many other reports, rather shadows than substance; for though the people of *China* deserve more praise than others, for excellency of arts, and ingenious inventions, yet it is far short of the wealth that is said to be in it to our western parts of *Europe*.

This discovery hath resolv'd us of the state of those parts, which we so long desired to know, since we heard the fame of them, which made queen *Elizabeth* often send her letters to such princes as dwelt thereabouts, and desired how to convey them; and have answer of them. So desirous she was to understand the conditions of those parts, and employ'd some of her own subjects by the way of the gulph of *Persia*, thinking to find the conveniency from out the *East Indies*; but still failed by the sinister practices of the *Italians*, who incensed the *Portuguese* that they came for spies, and caused them to be apprehended and imprisoned, where they endured great affliction before they returned into their native country.

What I have said is sufficient to prove that our new and latter discovered trades have far exceeded our ancient and long accustomed commerces, before the year 1586. not only in value of wealth, but in distance, whither they resorted for them. And it is made apparent, that no part of *Africk*, *America*, or *Asia*, that any nation has traded to, but we have done the like: and that whereas in some places they have sought to impeach and restrain our trades, yet we have forced them to it, and brought them

them to our own conditions. And this shall suffice for the southern and western parts of the world.

*Our Trade to other Parts nearer to us.*
