Now I will once more come nearer home, and put my self into the trade of the *Streights*, being more pleasant, gainful, and less dangerous or laborious, than the rest I have treated of. My first voyage shall be into the *Mediterranean Sea*, unworthy of the name of a sea, by reason of its straightness, in comparison of the great and spacious ocean.

This sea being anciently known to us, but not frequented, for these reasons: former times did not afford shipping sufficient to follow it. Secondly, such goods and merchandize as these countries yielded, were received from hand to hand, and we served by vessels of their own. Thirdly, we could not pass without great peril and danger of the turks, who surpris'd and imprisoned us; whereupon the *Venetians* engross'd the whole trade upon those seas, and furnished us with the rich merchandize of *Turky*, *Persia*, and *India*, at what rate they pleas'd themselves: and yet this was not all; for they labour'd to make us strangers to the *Great Turk*, the *Egyptians*, and bordering countries, and brought them to that ignorance of our nation, that they thought *England* to be a town in the kingdom of *London*.

The *Venetians* sent yearly their *Argosers* to *Southampton*; which town enjoy'd a charter from the kings of this land, which was wrested out of their hands by the earl of *Leicester*, to the utter decay of that town: and the *Argosers* since then have become strangers in *England*; the last whereof took her leave with an unfortunate end, which my eyes were witness to, in the month of *October*, 1587.

This goodly ship of one thousand one hundred tons, being richly laden with the accustomed commodities they use to serve the kingdom with; and being come as high in the channel as the *Isle of Wight*, which land the *English* pilot visibly made: this pilot, called *Foster*, for his excellent skill, was not long before redeemed out of the *Turkish* captivity by the *Venetians*, to serve in this voyage.

Upon this good land-fall, the pilot put the passengers in hope, many of them being of great account and esteem, the next morning to harbour them; for night growing on, he would not hazard to put in with the shore that evening; but the gentlemen being impatient of delays, and the land appearing to them, they thought themselves free from all danger, which is the common

ignorance of many that know not the seas. But to be short, they compell'd the pilot by force to put in at the *Needles*, the westernmost part of the *Isle of Wight*. When the poor man, neither with persuasions nor tears, could prevail, he did his best to enter the channel of the *Needles*; but such was the greatness of the waves, and the unweildiness of the ship, not answering her helm, that she struck upon the *Shingles*, where she, her goods, and company, except seven poor creatures, perished.

The sea betwixt the island and the main land was enriched by her loss, with several sorts of merchandize. What was saved was not worth speaking of. I had the fortune to light on two butts of muskadine floating on the sea; for then was I riding at *Cowes*, in the first ship I ever went captain of. I found these two butts of muskadine a great help to us in our voyage, when we were reduced to extremity for want of victuals.

About this time our merchants of *London* began to take into consideration these great and inestimable riches brought into the land by the *Venetians* and *French*, who absolutely enjoy'd the trade of *Turky*; and the great part of that wealth, which came out of *Persia* and *India*, was retail'd from them to us. They devis'd how such commodities might come to our hands by a more direct way, than to be served as we were at second-hand; and therefore resolv'd to make an overture by favour of the queen, and her letters to the great turk, for an immediate traffick from *England* to *Turkey*, and his dominions, and so home again, with ships of her subjects, without being beholding to others.

These letters were sent by her majesty, and received with great humanity and courtesy by the grand seignior, as appears by his letters yet extant. He could not give more respect and honour to her majesty, than by shewing a willingness to embrace her gracious propositions of trade: and in conclusion, articles were agreed on, and a grant of great privileges and immunities by her majesty's subjects, which have since continued, and been peaceably enjoyed.

We may reckon from this time the decay of the *Venetian* state in matters of trade; for *Argosers*, which were wont to visit us, are now unknown to us, and we possess the wealth they were wont to reap. The commodities of *Persia* and the *East Indies* are brought by our selves, in our own vessels, directly out of *Turky*; where we have obtained as great a freedom as we can desire: such places as the *Venetians* were wont to take freight in their ships, to transport from port to port, we now absolutely enjoy that privilege; for all strangers are more desirous

firous to put their goods into *English* bottoms than theirs.

Whereas we were wont to be served with great part of our spices from them, and they, by the way of the red sea, out of the *Indies*; now the passage is better known to us than to the *Turks* themselves, by the cape of *Good Hope*; and instead of receiving *India* commodities from them, we supply as well them as the *Turks* with the same out of *England*. And lastly, the terror of the *Turks* galleys, to impeach our trades in the *Streights*, is now taken away, by the privileges obtained from the grand seignior; and we may hold our ships in as great security as themselves: and moreover we may boldly say, we have sustained less loss by the pirates of *Algiers* than they have done; which pirates of late years have been the scourge of the christian trade.

In our time *Venice* flourished in ships and galleys, above all other ports or parts of the *Streights*, though there were a competition betwixt them and the state of *Genoa*: and it is not unworthy of note, that the first use that was made of ordnance and small-shot, after the invention of it in *Europe*, was in a naval battle between the *Venetians* and the *Genoese*.

This shall suffice for our southern, western, and eastern trades, or within the *Streights*, as high as *Constantinople*, *Egypt*, or other places, under the jurisdiction of the grand seignior. I will now return to the north, and run through its frozen climes, as I have already done through the south, and its parching heat.

*Sebastian Cabott*, a man before spoken of, having a sharp, acute, and solid brain, apply'd himself to the imitation of *Columbus*; who by his late and happy discoveries had enriched the world with wealth, and himself with reputation.

*Cabott* being carry'd that way of honour, out of a christian respect, to reduce the world to a perfect knowledge of God; or out of a hope of riches, it being the natural disease of mankind; or out of ambition, to make himself equal in fame with *Columbus*; or out of a desire to perform what he had long thought of, which was to sail round the globe of the world; which of these was his design, I cannot say, but charitably will conceive the best.

Whatever it was, I find an extraordinary and hearty desire in him to enrich the *English* nation, by adventuring his life in sundry attempts, to discover what he had long before conceived upon reasonable grounds, and effect what he had so wisely projected, as appeared by setting afoot the northern discoveries. There wanted no thankfulness in those days, either in king or country, to do him honour; and for requital of his

VOL. III.

travels, both in body and mind, he was chosen governor of the merchant-adventurers, for the discovery of new regions, dominions, islands, and other places unknown in the reign of king *Edward VI.* and a pension assigned him.

He gave the only information and instruction to the new-begun voyage and discovery of Sir *Hugh Willoughby* in 1553. which, though it proved unhappy to Sir *Hugh* himself, his ship and company perishing with cold in the port of *Arfina* in *Lapland*, yet his third ship recovered the harbour of *St. Nicholas* in *Russia*, where he settled a rich and commodious trade, prosecuted to this day by the merchants incorporated, and called *The Russia Company*.

The *English* not thus ceasing, but as men travelling, who arrive at a port or city where they had never been, would be inquisitive to know and learn the state of the country and its neighbourhood, without resting till they had satisfied their curiosity; so our *English* merchants finding the *Caspian Sea* famous by report, yet unknown to us, and its bounds one way upon *Muscovia*, they devis'd, though the journey was long, troublesome, and dangerous, to arrive at that sea, by the approbation and consent of the king of *Russia*; and from thence to make trial, whither the said sea would conduct them.

This was no sooner conjectured than effected; and our merchants furnished themselves out of *England* with carpenters, mariners, and other necessaries, to build a ship for such a voyage. This ship was twenty seven tons burden, and the first that ever wore the *English* colours upon those seas; from *Russia* they arrived in *Persia*, not once, but often, as appears by Mr. *Jenkinson's* relation. Thus was *Persia*, and all the countries adjacent discovered by us; first, to the northward, as far as *Russia*; after to the *Caspian Sea*; neither of them both being known to our forefathers.

The *English* did not thus rest; but as they were led to those unknown seas by a kind of fate, so they supposed the same fate did not end thereabouts, but had a passage farther to the eastward; which, perhaps, being discovered, might lead to *Japan* and *China*; and thereupon, for the shortening of the discovery, they sent a small ship at the spring, that wintered at *Comoro*, eighty leagues from *St. Nicholas*, which set sail from thence to find out the conjectured passage: this bark used its endeavour, so that no blame could be laid upon the master or the company; she passed to the eastward of the *Waggats*, where she was interrupted by extremity of ice and snow, and forced to return from whence she departed.

5 K

This

This did nothing dismay the hopeful enterprize of the merchants, but once more they made an attempt with two pinnaces directly from *England*; the masters whereof (*Pett* and *Jackman*) with the same instructions of the other bark, wherein *Stephen Burrows* was, to find out the end of the eastern sea; but being likewise encountered with the extremity of weather, the one returned, the other perished, though both of them did their parts very sufficiently.

Being now hopeless by their often repulses they found in the north-east passages, yet they would not let die what they had in agitation, for finding the *South Sea*, as the *summum bonum* of all other voyages; for from the south-west part of *America*, which bounds upon that sea, is sent forth the greatest quantity and mass of gold and silver the earth affords: whereupon they left this attempt to the eastward, and made trial of that to the westward; for they imagined that all great and large seas have a correspondence with one another, if it could be found.

The first man that made the enterprize, as well upon the country of *Baccalaos*, which he found and named so, as also in his offer to look out a passage that way, was *Sebastian Cabott*, aforementioned; but failing of the passage, he hit upon the land; but by reason of the vehement cold at that time of the year upon that coast, he stood to the southward, and from thence into *England*, taking possession of the country for the crown of *England* along the coast he went.

This voyage and many more to those parts, was set out by the city of *Bristol*, which to this day continues its fishing at *Newfoundland*: but for the discovery of the north-west passage, the man that most laboured and waded in it, was *Sir Martin Forbisher* in three attempts: the first in 1576. the second in 1577. the third in 1578. After this, and in the year 1585, and 1586. *Mr. John Davis* undertook the discovery, but failed, as many others have since done; which is no wonder; for he that will read a discourse of the north-west passage in this book, shall be satisfy'd, it is a vain and hopeless thing; and so has captain *Fox*, that was employ'd upon it in 1631. at his return, confessed to me, for such reasons as I shew'd him before his going.

Now to come to my own observations: I am of opinion, that next to the discovery of *America*, and the wealth thereof, which it sends into *Spain*, the *Spaniards* have greatest cause to give God thanks, that the attempts of the north-west have failed; for thereby they enjoy the absolute benefit of the *South Sea*, and the incomparable wealth therein, without molestation, fear, or disturbance of any other nation; whereas if

the passage had been known, no christian prince but would have strove to have had a part with them; and now it is in vain by any great attempt to prejudice the *Spaniards*, but by the *Streights of Magellan*, which is the only known way thither. It is as vain for any enemy to possess and inhabit some of the towns there planted, in respect of the distance and danger to be seconded and supplied out of *Europe*; And, lastly, any succour out of the *East Indies* will frustrate any expectation of good, the winds blowing continually contrary to arrive from thence. I refer the reader to what I have said before of other discoveries that failed, and particularly to that, than which nothing can be said more to the honour of the discoverer *Sir Francis Drake*, in whose voyage about the world, may be seen what he did and attempted; and, therefore, I shall not repeat it here. But to proceed:

Comparing what I have said of our former discoveries, our labourious plantations, and our new-found trades, with our present intended fishing, which of them will yield greatest wealth, strength, and ease, I have made appear in my sixth book; and therefore I present you that now live and are in being with it, to judge which is good and best; for though it is true what is done, deserves the name of good and immortal praise; so that which is now in hope to be done does far surpass the former, and is to be achieved with less difficulty, less peril, and less loss, than the others that have made our nation so worthily famous.

When the contents of the sixth book shall be maturely considered, the laborious industry of the *Hollanders* will plainly appear; how they have raised themselves, and their new-erected commonwealth to an equality with princes. Now shall it rest a little to distinguish of their good deeds and bad; for fortune and fame gotten by craft, are commonly of no continuance, but lost with shame.

What is due to them in praise of their virtues, I will not rob them of; for I hold it a sin to belye the wicked. They are frugal in expence, the benefit whereof themselves and country find: they are industrious, as their actions abroad and at home demonstrate; they are just in contracts, making a conscience in the little religion they have to defraud a man: they labour to find out the secrets of lands uninhabited, and countries undiscovered; they are inventors of arts, which to their praise they enrich the world with: they are willing without excuse to contribute to any good for their state, not standing so much upon privileges or petitions of right, as to neglect any occasion of advantage to benefit the commonwealth: they are laborious and painful of  
body,

body, not admitting a beggar in their provinces; and willing to relieve and comfort one another in strange countries; they are enemies to the expence of law, and the griping of lawyers, and end most of their controversies by arbitration of friends; their expence in drinking is saved and mitigated by their misery in eating; for out of their excessive covetousness, they almost starve their bellies, and by their unmeasurable frugality they scarce cloath their bodies; for it is supposed, that their people, in one of their best cities, spend not in apparel the value of a prince's coat in a year.

But all these virtues are drowned with a covetous ingratitude, which has friendship with no body, but for interest; and no marvel, for popular states are no longer thankful than they receive benefits. There is nothing of shorter life among them, than the memory of pleasures and favours past; they are so careless to give satisfaction for the evils they do, that if we demand it at their hands, it is as much as to speak of valour to a faint heart, or charity to a merciless man, or a courtesy to a churlish disposition; it will prove but telling a tale to him that is asleep. The definition of philosophers in matters of friendship is as follows: *A friend is long sought for, scarce to be found, and hard to keep: a friend is always ready to comfort in adversity, to help in necessity, to bear with one's infirmity, and to reprove one's error gently.*

But the *Hollanders* are otherwise in their friendship: they are like an ill bird that lays an ill egg, an ill tree that bringeth forth ill fruit, or a young cub that grows crafty like his dam; they do patricise, and follow the steps of their predecessors, that make riches their heaven: and whereas it is held no hurt to know evil, but to do it, those people are very perfect artists in their trades, as well in doing, as in knowing evil.

But to speak the truth, their natural evil has been nourished and made worse by us;

for if we had not connived at them and their actions, to our prejudice, they had wanted power to have executed their ingratitude; therefore in reason it had behoved us to consider what we gave, before we gave; to whom we gave, or how we gave; for states ought to be governed by wisdom, and not by popular affection or passion: wise men should not measure things by outward appearance, but by discretion and reason; or else they behold their actions in a false glass.

But let us now at last seek to avoid that evil we have done, in making the *Hollanders* too great for us to tolerate, lest we feel the effect of repentance. It is not the meanest point of wisdom to doubt and mistrust the worst; for doubts beget understanding, and thereby prevention.

As in natural bodies, the longer one lives in health, sickness is the more dangerous when it comes; so it is with us and the *Hollanders*, the longer we have lived in a mutual and unseparable peace; now that they have over-wrought us with cunning, and made us feeble by the strength they had sucked from us, it will behove us to recover our antient vigour and valour, and be no longer deluded with false pretences, as safety to us and the commonwealth: let us seek to follow the old rule, in seeking to quench the fire in our neighbour's house, though it be our enemy, lest it should flame into our own; for it is an easier thing to meet a danger aboard, than to repulse it at home.

In this book I have said little to prove what I have promised in our intended fishing, but refer the reader to my sixth and last book, dedicated to his majesty. And seeing I have made a relation of all discoveries and plantations of christian people; I will end that subject with a plantation of the *French*, for discoverers they cannot be termed, which is the next that follows:

#### *Certain Plantations of the French Nation.*

**T**HOUGH we cannot call the *French* discoverers of countries, because they never sought to find out any new worlds or passages that were not found to their hands; yet since the first discovery of other worlds, they have been always ready to infect them with piracy, and such voyages: for their going to *Peru* has been no other than to spoil and rob other nations.

And yet I must give them their due in what they have deserved; for though they cannot be called *Discoverers*, as I have said, yet they may worthily be counted in the number of planters, as well in the north

part of *America*, as in the south beyond the line, and upon the continent of *Brazil*.

To the northward they have inhabited the river of *Canada*, where they have found a rich commodious trade of furs, till the *English* supplanted them in the late wars betwixt us and *France*. The next place they had footing in, they themselves called it *New France*. The third habitation they made was in *Florida*. And the fourth, as I have said, was to the southward of the line, and upon the continent of *Brazil*; all which I will particularly handle.

But before I treat of them, I will lay a blemish and tax upon their nation; for some of their authors stick not to assume to themselves the names of discoverers of such places wherein they were but planters; herein they do manifest injury to the *English*, *Spaniards*, and *Portuguese*; for all nations do justly attribute to them the finding of those countries, as I have formerly declared and proved; the one by *Sebastian Cabott*, the other by *Pedro Alvares Cabral* in his voyage to the *East-Indies* in 1500. being the second that was gone after the first discovery. And now I will proceed to their plantations, and success in them.

The first undertaken voyage to *Canada*, (for I will begin with the north part of *America*;) was enterprized by *John Verasana* a *Florentine*, in 1524. employed by *Francis I.* king of *France*, which *Verasana* is said to discover from the fiftieth to the twenty eighth degree of the north latitude: but it is to be disproved in fact; for all the extent of land betwixt those degrees was long before discovered by *Sebastian Cabott*, in the right of *England*, as I have often repeated.

The next that undertook this colony was *James Carter* of *St. Malloes*, in 1534. with three ships, wherein that winter twenty five of his men perished with cold: but, however, the king prosecuted the voyage both in the year 1540. and 1542. and the *French* have ever since had a yearly traffick upon that coast for furs, as also in fishing, insomuch as it is written, that one *Sevales* made forty two voyages in person into those parts.

The next habitation the *French* undertook was in the year 1603. into the country named (though improperly) *New France*, which truly and properly belongs to *England*, as I have said before; for if the first discoverers be not allowed owners of the land they discover, by a law amongst christians, we, and all others, have as much right to the *Indies* as the *Spaniards* and *Portuguese* themselves.

In the year 1603. *Henry IV.* king of *France*, the 8th of *November*, granted a patent to *Monfieur Le Mante*, for a plantation of those northern parts of *America*: this voyage was begun the 5th of *March* the same year by *Samuel Champlayne* of *Borage*, who inhabited it unjustly, and gave it the name of *New France*.

This *Champlayne* was a painful, industrious, and a laborious undertaker: he passed many dangers, wonderful travels, adventures, and treacheries often practis'd against him, as well by his own people, as the uncivil savages; and to second this enterprize, *Monfieur Mante*, the patentee, went thither himself in person in 1604. with the like

success, as all planters in those northern parts have found, (*viz.*) variable hopes and fortunes, to little purpose, as appears by divers voyages made to the succour and relief of that plantation.

The *English* in *Virginia* hearing that the *French* were become incroaching neighbours to them, and in a country that did properly, and of right, anciently belong to the crown of *England*, as several patents made it appear, which the queen granted to *Sir Humphry Gilbert* and *Sir Walter Raleigh*, knights; and those *English* fearing, that intime this intrusion of the *French* might beget a custom, and that prescription and possession might make a cavil in the *French* to insist upon a right; therefore the governor and council in *Virginia*, in the year 1624. advised and undertook to find out what the country produced, as also to be better informed concerning the *French* plantation, which they were only told of by certain *Indians*.

After some time spent in coasting along that shore, at last they arrived at the port and fort where the *French* had made their habitation, and finding in the same harbour a ship of *France* belonging to the planters, the *English*, suddenly, and at unawares, surpriz'd her, without the loss of a man on either side, except one *French* jesuit, who was slain even as he was ready to give fire to a piece of ordnance against the *English*.

The *French* in the port being dismay'd by the loss and disaster of their bark, the *English* landed with great celerity; whereupon the *French* desired a parley, and time to consider of their surrender; but this request would not be granted; and therefore they secretly convey'd themselves presently out of the fort, and in a hidden manner escaped, and left it to the possession of the *English*, to whom it properly belonged.

The *French* governor of that colony being expelled, and wandering up and down without a house to put his head in, sent to treat with the *English* commander, offering to become a subject to the king of *England*, and to hold his possession of him and his crown, pretending to discover many secrets of mines, and other riches, not known to any but himself.

But the *English* commander's end being only to hold their right in that country, and having no authority to connive or permit any nations living there, but his majesty's born subjects, he refused all propositions of accommodation, and return'd to *Virginia*, from whence he went, and carried with him another jesuit, companion to him slain, and sent him into *England*, where he received good entertainment: the rest of the *French* travelled to *Newfoundland*, where

where they found passage for their country.

Now let me speak like a christian, and with a heart of pity, to see so great and good a work, as the conversion of souls from infidelity and paganism, should be diverted and destroy'd by a vain word of ambition; for hitherto the country is not brought to that perfection, as to produce any thing that may make it worthy of fame, or a ground for an ambitious man to work upon: for if the quarrel betwixt those two countries be consider'd, it is like two dogs that should snarl and fight for the picture of a deer, or any other beast; for there is little more substance as yet to be expected in this wide, vast, and desolate country that can afford land sufficient to both the nations, if content would please them.

I will therefore wish and pray with my heart, that all princes would put to their helping hands in the planting and establishing the christian religion in all remote and barbarous countries, and that with one consent they would settle a national law within themselves, and to have it generally received by agreement, to prohibit violence to any plantations where colonies are seated for the propagation of the christian faith: as also, that they would add and consent to the like privileges to all poor labouring fishermen fishing upon the seas, that no disturbance may be offered them; their pains and danger well deserve it for themselves, and no less in respect of the general good, every man reaps good by.

The *French* had a colony in *Florida* more ancient, and countenanced by *Castillon*, the admiral of *France*, Anno 1562: a great upholder of the *Hugonot* sect. He sent for governor monsieur *Lanncar*, and *John Rigall*, who arrived in *Florida* in thirty degrees, and there erected a pillar with the *French* arms. At first they were friendly entertained by the savages; but soon after, according to the nature of the *French*, who cannot long agree in love together, there happened quarrels amongst them; for the commanders shewed such cruelty and insolency, that one of the captains was slain; and, rather than a great part of them would endure what they did, they put themselves in great adventure into a small pinnacle to go to their country; but endured that necessity of victuals, that they were driven to eat one of their company, and had furnished if they had not been reliev'd by an *English* bark at sea.

This colony was not reliev'd according to promise, because of the civil war in *France*; but that ceasing, *Lanncar* was sent once more, in 1564. but there ensued such murders, such mutinies, such killing, running away, and betraying one another,

as it is wonderful to read; and amongst the rest there was one *Francis Jean*, who, by great accident, got into the *Havana*, and made known to the *Spaniards* the *French* plantations and weakness; whereupon the *Spaniards* sent some to supplant and weaken them, who used execution upon most of them, and possessed their fort. Such as survived were put to most lamentable famine, and, indeed, had perished if Sir *John Hawkins*, at his return out of the *Indies*, had not been brought thither by a *Frenchman*, who left them a bark and some relief.

In the fourth voyage of the *French* to *Florida*, they requited the *Spaniards* as they had done to them before, and hang'd and destroy'd to the number of four hundred. After this slaughter they returned to *Rochele*, expecting great reward from the king for that service; but the *Spanish* ambassador prevailed so far, that the commander durst not appear, but hid himself.

*Peter Malindes* the *Spanish* general, when he exercised his cruelty upon the *French* writ over their heads, *I do not this as to Frenchmen, but to Lutherans and Hereticks*; the *French* commanders served the *Spaniards* the like sauce, and writ over their heads, *Not as to Spaniards, but to traitors, robbers, and murderers*. The *French* after this quitted the country and fort of *Florida*, and never since have had any footing in it.

Lastly, for the *French* planting in *Brasil*, it has been with the like success as in the northern parts of *America*. The first that undertook it was *Levius*; and the cause for which he undertook it was to plant and settle the new-reform'd religion, as they term'd it: he had an approbation of it by *John Calvin* their sect-master, who much encouraged the action: but it fell out that in time, one sect increasing out of another, as commonly heresies do, instead of amity, they lived in a contention, and never ceas'd wrangling and jangling upon the interpretation of the gospel, till it was decided by the pistol: for murders, mutinies, and all other mischiefs ensued upon it; so that in the end, *Levius* confessed it to be a work of God, as the author of peace, and the hater of divisions; whereupon he abandoned that sect, and reconciled himself to the church of *Rome*, in which religion he lived and died, as himself expressed in writing.

*Thevetis*, and after him *Stadius*, were two of the next that followed this plantation; and to make an end of the tragical habitation, *Diego Flores de Valdes*, in his return from the *Streights* of *Magellan*, as you have heard, in the year 1582. coasted the *Brasilian* shore, till at last he came to an harbour called *Paraiaba*; where he found five *French* ships, three whereof he burnt, and the rest he took, and inhabited.

inhabited the fort with his *Spaniards*: the *Frenchmen* ran into the mountains, where they lived in company with the savages..

But for a conclusion of these plantations, as well by us as the *French*, and to avoid prolixity, I will briefly describe the nature of the rude, wild, and savage people of *America*; who are not to be inticed with sweetness and good usage, nor to be master'd by force and cruelty. Generally their religion is alike, though they adore several creatures for God; and every nation has a sundry opinion and practice in their ceremonies; but their supreme God of all is the devil, the enemy of mankind.

The soil and temper of many plantations exceeds us in temperature, and planted, manured, and husbanded at the charge of a prince's purse, no doubt but they may be brought to perfection; for the bane of all colonies is private mens undertakings, that are impatient of delays; for if it yield not an expectation of private gain, they are willing rather to lose their first adventure, than to shoot a second arrow to find the former shot: and moreover, factions arise amongst people that are not governed by a prince's direct authority; envy reigns amongst them, to see some advanced above themselves, and are ready to cast aspersions upon their rulers, and to tax them with deceit and fraud, whether they deserve it, or not.

*Advice how to plant the Island of St. Lawrence, the greatest Island in the World, and reckoned a Port of Africk.*

HAVING handled at large the discoveries and plantations the christian nations have laboured in, and by their industrious pains have brought to good perfection, I will now at last say something of the likeliness of a country, that in all probability may produce good; I will only collect some reasons, and refer the rest to the examination and consideration of those that are well inclined to the honourable undertaking and proceeding of new plantations.

There are two particular things to be required in a colony: the one I have already spoke of, which is, That it be the act of a prince and his purse to bear the charge; but if that be wanting, and the action be put upon private mens expence, there are three things to be considered upon such an enterprize; the one, is the length and distance from home; the second, how to supply it with least charge and most conveniency; and the third, for hiring of vessels for transportation of men and materials, the condition of which ships must be according to the place they inhabit, and the enemies they are to fear.

I observe in all the *English* and *French* plantations, the hopes are alike; sometimes they feed themselves with the hope of a passage into the *South Sea*; other times with the riches of mines; and the commodities they produce, and make large relations to persuade people to persevere in it.

But the conclusion is mutinies, murders, seditious desperate adventures, want of victuals, and other calamities, more strange than ancient histories can acquaint us with.

If the charge bestowed upon such vain hopes were valued with the gain they have reaped, it were not worth a purse to put it in; and for ours in *England* it would be consumed in smoke: for our staple commodity which it sends out, is stinking barbarous tobacco; for from the barbarous savages it is derived; a brave original for civil men to learn and imitate.

The *French* herein far exceed us; for by their industry, and laborious endeavours, they have attained to a rich and profitable traffick of costly furs, which makes our shame the greater, when we consider how easily they have effected it, and how profitably they persevered in it, whilst we are sucking of smoke, that brings with it many inconveniencies, as time has made it too plain to us.

This being done, the next consideration is the climate, the nature of the soil, and what profit it will yield at present; as also what hope of future; the nature of the people, and whether they may be made capable of reason, and be reduced from their barbarous incivility.

Of all the places I can think of, for conveniency and profit within the bounds of *America*, *Africk*, or *Asia*, out of my experience and study, is the island of *St. Lawrence*, antiently called *Madagascar*, five hundred leagues from the cape of *Good Hope*, the greatest island in the world, and the place of all others I principally commend; for our planting will be in fourteen degrees of south latitude, where our *English* are now no strangers; for commonly they refresh themselves, and find succour in their voyages to the *East Indies*.

There is nothing that I observe to further a plantation but this will yield: First, the winds are certain, at the time of the year, to carry us directly thither, without striking sail: and though it be farther distant from *England*, than *Virginia*, or that part of

of *America*, yet I hold it will be often sooner gone to than *Virginia*, where the winds and weather are both uncertain in going and coming. Secondly, whereas the charge is great to hire ships purposely to transport men and provisions to *America*, where the numbers are many, they are subject to sickness, and other disasters of the sea; I do make account that it may be so ordered and contrived, that every ship trading to the *East Indies* may be hired conveniently to carry twenty planters, without annoying or pestering the ships, being spacious, and of great burden; and this will prove less charge to the undertakers, than to hire them purposely for *Virginia*.

And if we examine the nature and condition of the country, and the people that inhabit it, with the experience we have of our *Englishmen* that resort thither, we shall find the climate singular for health, and the ground fruitful to produce wealth, as the great and extraordinary oxen the place affords, can witness. This alone exceeds all the hope *America* can at present yield us: for our increase of cattle upon that continent must be raised by such beasts as we carry'd out of *England*, which must be done with great charge, trouble, and long time before they be brought to perfection.

The cattle we shall there find, will bring us a certain commodity of hides; and as we shall seek to increase them, so will our gain and profit increase the more.

What other benefit we shall make by this plantation, time and our own endeavours will make it appear: for the two barks which I wished to be kept there for intelligence from other places, I would wish that the one should discover the south part of the island, and the other on the north side; and to make their rendezvous at the same place from whence they departed; so shall we discover the very heart of the whole island; and no doubt but we shall discover variety of gainful things, unthought of by us as yet. I have known of my own experience, and by examination of divers *Portuguese*, with whom I have spoken, that the *Moors* who live and inhabit the main continent of *Africk*, over against it, have a singular trade with the people of *St. Lawrence* for elephants teeth, ambergrease, &c. all which we should enjoy with ease, when we are settled, and perfectly known to them.

Besides the plenty of beef it will yield us for food, there is other delicate meat to be found, as muttens, but with hairy skins, hens, and other sorts of fowls; oranges and lemons, and other kind of rare fruits there naturally growing; which *America* will not yield us, unless we plant them; which will prove a work of many years, and in the

end fail of the excellency of the others in respect of the climate. The sea and the rivers will afford plenty of fish of all kinds, and for the present we shall not want a sufficient quantity of maiz and cassado for bread, till we sow our *English* corn of all sorts.

And for the people in that part of the island, it is known to all that have been there, that they have behaved themselves lovingly and respectfully to one another, and no less to strangers. By their civil behaviour and labour they draw their cattle to a tameness, as with us; which shews they are naturally civil, which is not usual amongst such people: and to prove it the more, as well in that as in their other courses, they are *Mahometans* in profession of religion; and though it be as false as falsehood may be to truth, yet by that religion they are taught more civiler conversation and humane behaviour, than the *Indians* or infidels are instructed in, who acknowledge several creatures for gods; some the sun, some the moon, and some several beasts and creatures of the earth: but I make account with our familiarity, love, and good usage, we shall entice their children, with consent of parents, to bring them for *England*, where they shall have good education and breeding, answerable to our own; and this will be the method to work our good in our plantations of that country; and the only means to propagate christian religion in remote parts.

Having a plantation or settled dwelling in the island of *St. Lawrence*, we shall make our navigation to the *East Indies* much more pleasant, short, and profitable, by using and settling a magazine of commodities betwixt us and the *Indies*. First, by their receiving our commodities, and returning those we receive from thence, by the same ships we employ; for part of one fleet, may be sent from *St. Lawrence* to the *Indies*, and return the commodities those countries afford to *St. Lawrence*, which our ships shall there receive, and bring them directly for *England*; so that all our ships shall be continually going and coming, and every twelve months have a return from thence; which now is more than double the time.

I desire that this project to *St. Lawrence* may be compared with those our nation has undertaken to *America*, and the reasons duly considered, without partiality; and being so satisfied, that they would follow them with a general consent, and so settle their plantations; that there may be a neighbourhood from one to another; for being, as they are, thus divided, they can give no help or succour, but must stand upon their own strength, what attempt soever shall

shall be made upon them by an enemy; besides many other reasons one may produce, that would much avail them: for what succour can *Newfoundland*, which is the furthest part north, give the island of *Providence*, the furthest part south, or any other places betwixt them that we inhabit, as namely, *New England*, *Virginia*, cape *Florida*, the *Barbadoes*, *St. Christopher's*, *Tartuga*, and the island of *Providence*, if you examine the distance from one to another,

and how the currents and winds set upon these coasts.

As the island of *Providence* is the last I name, so it is the greatest in fame by the persons that countenance it, and by the purses that maintain it; and because you shall know the difference betwixt that island and *St. Lawrence*, I will here make a description of the island, and refer it to your own judgment.

*The Nature of the Island Catalena, or of Providence, as called by us.*

AMONGST many ridiculous and vain plantations we have had footing in several places of *America*, as appears in this book, there is one small island, whose name we have changed from *Catalena* to the island of *Providence*; because some pretend to foresee it may damnify the *Spanish* nation, if they shall hereafter give us occasion of war.

This island of *Providence* is seated upon the coast of *Terra firma*, one hundred leagues north from *Carthage*, eighty leagues north and by west from *Nombre de Dios*, and from the headland of *Gracias a Dios*, thirty five leagues. This island for the greatness of it, may be termed rather a rock than an island, not exceeding ten or eleven miles in length, and five in breadth; a small proportion of land to promise either victuals for sustenance, or commodities worthy of labour to countervail the tenth part of charge that has been bestowed on it.

For it is like a barren and uncultivated ground, that of itself can send forth nothing, if pains and labour do not make it capable to afford nourishment; even so this least and worst of islands can promise no more than the ill ground I compare it unto; but our undertakers think by the situation of it, that it will advantage us much against *Spain*, the impregnableness of it by nature considered, which we have helped by art.

The island has these particular benefits in it: A port containing eighteen foot in depth, with good ground to ride in; it is environed with huge and high rocks and cliffs, and made impregnable against landing the harbour on westernmost side of the island, which makes it a safe riding, by reason of the perpetual easterly wind that blows off the shore. There's only one place to land in; for that excepted, it is encompassed about with such rocks, that a boat cannot come near the shore. If a ship put but one mile to leeward of the harbour, she cannot recover it again by reason of the current; unless she put for *Hispaniola*, and disemboque betwixt it and *Cuba*, at least three or four hundred leagues, back-

wards and forwards; neither can they directly go from thence to *Cuba*, by reason of the shoals and flats in their nearest course. Therefore a ship must stand over for the mainland thirty five leagues from *Providence*, and pass through a channel, not half a mile in breadth, and yet four leagues in length.

The wind and current sets to the westward from *Providence*, till within twelve or fourteen leagues of the shore; and then the current sets to the southward, though the wind keeps its continual course from the east; and were it not for the change of the current, it were impossible for to fetch *Nombre de Dios*, *Porto Bello*, or *Carthage*. Our *English* ships have a great advantage of the *Spaniards*, by reason of their fastness by a wind, which the others cannot beat it up, because of their leewardness.

Every fourteen weeks, the climate wherein the island is seated, produces an harvest of corn, pease, potatoes, and other roots and herbs: the potatoes make a delicate kind of drink, both pleasant and wholesome. The sea affords such great abundance of fish, that two boats and ten fishermen will be able to feed one thousand persons every day.

There are two other islands not above sixteen leagues from *Providence*, the one call'd *St. Andrew*, the other the *Mosquito*, not inhabited. These two islands afford great quantity of tortoises, which will be a great relief to the island of *Providence*: they are not to be dwelt upon, because they cannot be made defensible; and *St. Andrew's* is full of rocks and shoals, and dangerous to come near, by any that do not perfectly know it; neither has it an harbour, though in the westernmost part of it one may anchor in safety. And thus much for the description of the island, as namely, the height, the seat, the distance, the temperature, and distance from other places. Though there is cause for me to write more particularly of this island, yet will I not here insert it, but speak more amply of it in my fifth book; to which I refer you.

## T h i s   A G E .

**I**F I could think of a more proper word than *Project*, to entitle this ensuing book, I would do it ; for the name of projects, and the inventors of them, are grown so hateful and contemptible, that all honest men abhor and detest them.

There are no burthens, which the sharpness of lewd brains can invent to vex the commonwealth with, but they stile by the name of projects, when indeed the name *Promoter* were more proper, as people fitter to be loathed than cherished in a well-govern'd kingdom. Such men are a curse to the country that breeds them, to their friends and parents that nourished them, and to God himself that created them ; for there is no man, directly or indirectly, but finds himself hindered or injured by them ; their courses incite God to punish, and men to abhor them. A father of the church saith, *It is a greater sin to project, and lay unlawful things on the poor, than a merit to relieve them.* A favourite to *Alexander the Great*, whom we may rather term a projector, advised him, after his great expence in war, and wealth decay'd, to lay taxes upon his subjects : but *Alexander* answered, *That gardiner did ill who ploughed up the herbs and roots of his garden : for the king is like a gardiner ; roots, trees, and herbs, like the kingdom.* A flatterer told *Antiochus*, *That all things a king did were lawful.* *Yea*, he said, *to barbarous kings ; but not to him that respects justice.*

*St. Lewis*, king of *France*, was angry with one that advised him to lay new taxes upon his subjects, saying, *That God punished such examples in kings.* This king well deserved the name he bore, who had more respect to his subjects than to his profit.

A king of *Persia* being desired by his favourite, to grant him an unjust suit, he told him, *No : but that he would give him the value of the thing he requested, because it would not make him poor ;* but said, *I will not do what you desire, because it is unjust.* Projectors should have as little employment under this king, as they have reputation amongst honest men.

Though *Augustus Cæsar* did not by name dislike the condition of these people that vex the commonwealth ; yet in his precepts given to the governors of his provinces, he intimated a detestation of them, when he told them, *I do not send you to rule, that you should envy the innocent, or be a hangman to offenders ; but that with one hand you should be an helper to the good, and encourage the evil to amend ; that you be a tutor to the fatherless, a pleader for widows, a staff to the blind, and a father to all.*

I have heard of a judge in our time, who by his audacity, and forced authority and impudence, was able to pervert and wrest laws to his appetite and liking : this wicked judge had got a popular applause and esteem amongst the ignorant multitude, and by his friends was commended to king *James* of *Great Britain*, for a good minister to his state. The king answered, *Yea, if I would become a tyrant.* Intimating, that the judge who misconstrues laws, were a fit servant for such, and not for upright kings. *Solon* was such an enemy to the projectors, that he established a law, *That whosoever proposed any thing to the prejudice of the commonwealth should die.* He also decreed, *That it should be lawful to revenge an injury that should be offered to one another, that every man might have a feeling of the party injured.*

*To the Projectors of this Age.*

The difference betwixt the projectors of our age, and the projects I tender in the ensuing discourse, is this, They pretend evil under the colour of good ; they set a fair countenance on a foul face ; they smile on those whose throats they would cut ; they do, like *Scipio*, and all other rebels, pretend reformation, and taking away the abuse of the common-wealth, when themselves are abusers of it.

In my projects I have no other end but the common good of the kingdom ; I neither expect or desire gain ; I set up no new devised taxes or tolls ; I invent no impositions, nor raise contributions ; I force no man to undertake or compel people to adventure ; but I persuade like a philosopher, who advised four things to be considered, before the taking of any important thing in hand ; *To examine the beginning, to consider the middle, to approve the end, and to consult with the wise.*

If any of my propositions prove profitable to the state, and acceptable to the subject, I have obtained my wish : if not, I desire they may die, without any more appearing in the world.

**B O O K**

## BOOK V.

# Containing divers Projects and Stratagems, tender'd for the Good of the Kingdom, &c.

*The first Project shall be for the Safety of his Majesty's Navy; and the Conveniency and Inconveniency in keeping it at Chatham or Portsmouth.*

**A**S there is no man that builds a house, but at the first groundwork of his building will be sure to make his foundation firm and staple, (for on the strength thereof all the rest of the building must depend,) even so it is with kings and princes; for that king who means to live in safety, and to avoid dangers at home, or from abroad, must first seek to make his state firm and sure, as well in defence upon an invasion, as before he enterprize any action of offence upon his enemy, or else his building is upon glass and ice, and will suddenly fall for want of a settled foundation.

Therefore, like a careful builder that will provide to encounter a danger, in my ensuing projects I will first lay down a means and remedy how to secure this kingdom against the attempts of our neighbours, if in time they become our enemies, before there shall be cause of hostility, or before we make any enterprize upon them in a warlike manner. And the first thing I will handle, as the greatest importance to the kingdom, is the safety of his majesty's navy, and the conveniency or inconveniency in keeping them at *Chatham* or *Portsmouth*, as I have said before.

### *The Conveniency of Chatham.*

1. *Chatham* is so safe and secure a port for the ships to ride in, that his majesty's navy may better ride with a hawser at *Chatham*, than with a cable at *Portsmouth*.

2. The reason of the long continuance of the navy at *Chatham*, is the conveniency of docks, and all other places, for the conveniency of ships; and considering that the officers of the navy are there seated with their whole families, it would breed a great

innovation and change to bring them to *Portsmouth*.

3. The nearness from *Chatham* to *London*, from whence they may be supplied with all things they shall stand in need of, for that *London* is the storehouse of all *England*: it is necessary therefore that the navy should be kept at *Chatham*, rather than at *Portsmouth*.

4. *Woolwich*, *Blackwall*, *Deptford*, *Limehouse*, and *Ratcliffe*, yield more docks for the building and repairing of ships, than all other places of *England*.

5. All *England* cannot furnish sailors like to *London*, and the *Newcastle* trade, which once in three weeks repairs to the port of *London*.

6. No part of *England* can victual a navy so conveniently, speedily, and at so small a charge as *London*; all the corn for bread, beer, butter, and cheese, &c. is brought by water from the adjacent countries thereabouts. And for beef, pork, and bacon, *London* is placed in the center, far more conveniently than *Portsmouth*, which has never a river to bring commodities from other shires; nor the country of *Hampshire* so fruitful as to furnish it.

7. Our trade to the *Eastland* returns their commodities to *London*, which furnishes us with all materials belonging to shipping, as, namely, cables, cordage, pitch, tar, rosin, masts, yards, &c. which cannot be done at *Portsmouth*, the place yielding nothing that creates a trade.

8. The water at *Chatham* flows sufficiently every spring tide to grave the greatest ships; and it is a doubt whether it can be made to heighten so much in *Portsmouth*, as to do the like.

9. No wind or weather can endanger the coming home of an anchor in *Chatham*, and the

the river affords sufficient space for every ship to ride, without annoying one another: as to the contrary, a storm, with a wind from the north-east to the south-south-east, will stretch the cables of the ships in *Portsmouth*; and if any of their anchors come home, they cannot avoid boarding one another, to their exceeding great damage and danger, the channel being so narrow.

10. A navy lying in the harbour of *Portsmouth*, the safety of them depends upon the town of *Portsmouth*; and if *Portsmouth* should be surprized, or taken at any time, the whole navy falls into the enemy's hands.

11. Not a cable, anchor, mast, yard, barrel of powder, or any other thing that belongs to the furnishing a fleet, but must be brought from *London* or *Chatham* to *Portsmouth*, with an exceeding great charge, and no less delay and danger, considering the uncertainty of winds, the peril to be intercepted by enemies, and the hazard of shipwreck.

12. The excessive charge in sending down carpenters, cawkers, and other several workmen belonging to ships, with impresses of mariners, will amount to an extraordinary great expence. All which will be eased by being at *Chatham*.

*The Exceptions to the Navy lying at Chatham.*

1. The several winds to carry them to *Portsmouth*.
2. The hazard of the shoals and sands in going thither.
3. The distance from *Chatham* thither, if the *French* should attempt any thing upon us.
4. And some there are that advise part of the ships to be kept at *Portsmouth*, and the other part at *Chatham*.

Whosoever shall alledge these reasons, must distinguish of the service in hand, whether it be offensive or defensive, or against *Spain*, *France*, *Holland*, or any part of the east country.

If *Holland* or the *Eastland* become our enemies, then doth *Chatham* lie most with advantage to annoy them, if they attempt any part of our north coast, or *Norfolk*, *Suffolk*, *Essex*, and *Kent*, which are places of most peril, considering their nearness to the city of *London*.

If we have wars with *France*, there is little advantage gotten betwixt *Chatham* and *Portsmouth*; for being at the *Downs* at *Dover*, we shall be over-against *France*, and nearer to the *Isle of Wight* than *Brest* is, or any part of *Brittany*, where I suppose the fleet of *France* will be made ready; and for the two navies, *English* and *French* meeting

at sea, no place or time can be assign'd them, ships being in continual action, and sailing one day on one coast, and another day on another.

And whereas the several winds are objected as an impediment to our navy at *Chatham*, you must know that an easterly wind keeps in a fleet at *Chatham*; and so it doth the *French*, if they be in any part of *Brittany*: and our ships also, if they should be at *Portsmouth*, though they should be in the *Channel*, yet with that easterly wind, they cannot go to the eastward; so that you see an easterly wind brings an equal inconveniency, as well to the one, as to the other.

And whereas from *Chatham* we must have two winds to bring us into the *Channel*, or to *Portsmouth*, the one southerly or westerly to carry us to the *Downs*, the other northerly or easterly to bring us to *Portsmouth* in three tides; with fair weather, from the *Downs*, we shall be able to fetch *Portsmouth* howsoever the wind is; in which traverse we shall be as likely to meet a fleet of *France*, as in any other part of the *Channel*.

To answer the objection of sands and shoals to endanger us in our coming about from *Chatham*, we see that by the care and skill of pilots, no memory or record can tell of a ship of his majesty's so lost, as out of *Portsmouth* it is fresh in old mens mouths, and the ribs of the ship I have often seen, called the *Great Henry*, a ship-royal of king *Henry VIII.* there perished.

I likewise remember in the days of queen *Elizabeth*, and in the year 1586. that the *Revenge*, (after taken by the *Spaniards*,) was as near destruction, coming out of the harbour of *Portsmouth*.

And to satisfy the advisers that wish part of the navy to be kept at *Chatham*, and the other at *Portsmouth*, this I say, That an army on land, or a navy at sea, which shall be divided, is easier to be cut off before they meet, than if they were met together in a main battle, especially in so narrow a sea as ours, where fleets cannot pass without encountering one another.

Moreover, if the *French* should anchor with a number of ships sufficient to encounter with either of our two fleets divided, either at *St. Hellen's-Point* in the *Isle of Wight*, or the *Downs*, or *Gorend*, it were impossible for our fleet to pass unseen or unmet withal; by which means they may cut them off before they meet.

But, as I have said, the country must be considered with whom we have war; for if we have war with *Spain*, neither *Portsmouth* nor *Chatham* is so convenient as *Plimouth*; for in the winter, which is the time that ships must keep harbour, they shall have space sufficient to make provision against the spring

spring, and ease a great charge in carrying the ships from *Plimouth* to *Chatbam*, and after from *Chatbam* to *Plimouth*; which we cannot allow less than two months, if not more: and moreover, from *Plimouth* we shall put to sea with our ships nimble and clean, sooner, and better manned and victualled, than either from *Portsmouth* or *Chatbam*.

Therefore I conclude, in comparison betwixt *Chatbam* and *Portsmouth*, *Chatbam* is the best and safest place; and wish that our whole navy may be kept at *Chatbam*, and not make any continual residence but there only, considering the former reasons. Never hurt befel any of them that made their being there, either by weather or attempt of enemy; and yet I must confess, they are not altogether so safe and secure from the assault of a fleet that shall be brought from the eastward with an easterly wind; and therefore it behoves us to be cautious and wary of it, as follows:

In the stratagems contained in my third book, I advised a general to provide to withstand an enterprize to be made upon ships in harbour, where they are usually moored with two cables, to which directions I refer you; but with leave, somewhat I will say of the state of our navy at *Chatbam*, and the danger that may befel us from *Holland*, if they become enemies to us, as also shew the way of prevention.

*Holland*, by reason of their abundance of shipping, the number of soldiers quartered in all the parts of their country, and their daily and speedy use in gathering their forces together for present service, as they often do, will give us the less suspicion if they should intend any sudden stratagem upon us; and the first thing that they will attend, is the opportunity of a settled easterly wind, to bring their ships, without striking sail, as high as *Gravesend*, and there suddenly put eight or ten thousand men on the *Kentish* shore, to march to *Upnor Castle*, four or five miles from thence; where they shall find no resistance, the castle being both weak and weakly provided; and having it, they have an entrance to the river, where the ships ride.

The ships having done so much as belongs to them, in landing their men, they will, no doubt, repair presently to *Upnor*, which is the place they will principally shoot at; and the castle being taken before their coming, their passage is made for them to surprize our navy, which they will find unprovided of men, more than the ordinary ship-keepers; their ordnance commonly ashore, and without powder or

shot; for unless there be employment of ships to sea, the ammunition is always kept in the *Tower of London*, and too late at that time to be supplied from thence, if this devilish design should prevail; I protest the very thought of it makes me tremble, and wish it may be prevented.

And for prevention, it will behove us to seek how by art and skill to raise works and fortifications, both by land and water, for the guard and strength of *Upnor Castle*; and to order and appoint that a certain number of trained soldiers, thereabouts dwelling, upon every allarm repair thither with their arms, which will prevent any sudden surprize; and in the mean time we shall have leisure to draw a greater army together, than they will be able to withstand.

And so much as concerns the defence of the river, by booming, and making sconces upon it, I have said sufficiently in my former stratagems; but seeing this is a matter of so great import as the safety of our navy, and by consequence the security of our kingdom, I advise, and wish that the ordnance, or greatest part of them, be continually kept aboard the ships, both mounted and fitted with all kind of ammunition belonging to them: that as in the case of *Upnor Castle*, the trained soldiers of the country, have order to repair on board the navy with their arms: that the ships themselves be warpp'd and towed as low as the innermost boom, and there to moor themselves a head and a stern to welcome an enemy with their whole broad-sides. And if all these fail, (as God forbid,) then the ships to sink themselves at an anchor, to avoid falling into the hands of an enemy; which ships are easily after to be weigh'd without hurt or detriment.

Having left a remedy, as you have heard, for the securing our navy, my next project shall be to hinder *French* attempts upon us, they being a nation of most danger, by reason of their nearness and greatness, and especially if they be assisted with the help of *Holland* with shipping, as no doubt, but in matter of state *France* will labour to gain *Holland* from us, and to settle it with a firm league and friendship with them, to redeem their loss of *Scotland*, who for many hundred years made their dependency upon that kingdom; and if *Scotland* prove honest to *England*, they may fear by our conjunction, of foes we are become friends, and that *Scotchmen* may as well turn their swords upon their breasts, as they have done heretofore upon ours.

*A Project to prevent the French landing in England, if they become our Enemies.*

WE in *England* look upon *France* to be a strong and potent country; the people in it to be both warlike and valourous: but it lying upon a main continent, and ours an island, divided with a sea, we think we may easily offend them, and not be offended by them.

This opinion is generally received; and, indeed, not to be confuted, but by such as understand the sea better than the ordinary sort of men: but for the explaining it, if ever there happen a war betwixt *France* and us, I will truly set down the danger that may redound to us by *France*, and the means how to prevent it, as I have already done, or will do, if a war happen betwixt *Spain*, or *Holland*, and us.

The general position is, That *France* is no way to compare with us for number and strength of shipping; and by consequence, we are to fear no danger from thence, upon any attempt they shall make.

In answer hereof, it is true, if the meeting and encountering a fleet at sea were certain, the strongest are likely to prevail against the other. But I have formerly shewed, that there are three principal things to be required in a sea-action: the first is providence, to learn the design of an enemy, to prevent him: the second is secrecy, to keep the enemy from intelligence: and the third, is how to work for advantage of wind and weather.

If the *French* intend to invade us, we may easily conjecture, by their preparation by land and sea, and the drawing down their army to their port-towns; but where they mean to attempt us, if they keep their design secret, it will be hard to discover; and the chief reason we are to conceive, is according to the place where they keep their rendezvous, the observation of winds to bring them from thence to seize our coast, and the weakness of our harbours, where we may conceive they think to land.

If there were no more difficulty than the vulgar and common conceit, it were probable not to be in the power of *France* to hurt us; but speaking like a seaman, for that sea actions must be governed by the winds, thus much I must let you know, That a southerly wind, which brings them for our coast, keeps our ships in harbour that we cannot budge; so that they shall neither fear our force by sea, nor our ships be able to impeach them, unless by chance and accident they arrive in the same harbour our ships retire to; so you see it is neither the number or strength of fleets, that

can withstand them, if they observe the advantage of a southerly wind.

This is a peril that every man conceives not; for if *France* can of themselves afford a quantity of vessels, to transport an army, or by hiring ships abroad, or compelling strangers to serve that come into their ports to trade; it is not much material whether they be of strength, or no; for with a southerly wind they shall not fear any force to meet them at sea.

There was never fore, but God provides a salve; and this fearful hazard must be cured by prevention: (as thus,) Our fleet must divide into three squadrons; and being at sea, and forced to seek the shore, every squadron be appointed a particular harbour to repair to; by which means every port on the south coast shall be defended and guarded by our ships; which will be a force sufficient to withstand the strength of *France* by sea, if they be not assisted by *Holland*.

The ports being thus guarded, they are prevented of landing; for an invador is not so mad, as not to provide a harbour for his security; and no road or bay with an outwardly wind, is able, without great danger, to give him conveniency of riding or landing, the sea and siege will be so great.

But it may be objected, That though this serve for the southern coast, yet the north part of *England*, *Scotland* and *Wales* lies open to their landing. The answer to this is, That if our three squadrons be divided, the one to make good the *Downs*, another the west country, no fleet can pass betwixt *Dover* and *Calais*, but they of the *Downs* shall have a view of them; and the same wind the others have, will serve them to follow, and to prevent their landing: the western squadron will do the like upon any attempt that shall be made upon *Milford Haven*, *Wales*, or any of that part of *England*.

But our surest course will be with some ships to beleaguer their harbours of rendezvous in *France* a good distance from the shore, for fear of embaying: we must consider that such winds as serve to bring them for *England*, make a secure road upon that coast to ride in; and such winds as are dangerous to keep that shore, make it impossible for the *French* to put out of harbour; as I will shew more particularly, when I treat of the way to prevent the *French* and *Hollanders* meeting.

Thus you may perceive, that an invasion out of *France* into *England* or *Scotland*, is to be prevented. But his majesty has another

other kingdom of more danger, the conditions of the people, and the openness of the harbours considered; and that is *Ireland*, which I will a little handle.

*Ireland*, as it is an island, is in the case of *England*, though more dangerous, in respect the people are more rebellious, and divided from *England*, that cannot be with celerity relieved, if an enemy do land: besides, the *Irish* nation and their natures do not so well simbolize with the *French*, as with the *Spaniards*; or if they did, the *French* have less advantage to invade that kingdom than the others; for so much as the same wind that carries a fleet out of *France* into *Ireland*, the same wind serves us to follow them out of *England*.

But seeing I am upon this subject, I will let you know the difference betwixt the danger of a *French* invasion and a *Spanish* into *Ireland*. You must consider that a south-west wind that brings a fleet from *Spain* into *Ireland*, is not only against us to go into *Ireland*, but keeps our ships in harbour, that we cannot put to sea: by which occasion the *Spaniards* may land in despite of us.

Moreover, if with that wind they land to the northward of *Ireland*, though it be no further than to the river of *Shannon*, we must have not only a north-east wind to carry us to *Misen-Head*, or cape *Clear*, but when we are at either of the two places, we must have a contrary wind to carry us in pursuit of them that land to the northwards, which is a southerly wind; and how this is like to happen, and what dan-

ger may befall us in the mean space, is a main point of consideration: and therefore it fell out very luckily to us, that in the *Spaniards* last expedition to *Ireland*, they landed at *Kinsale*, to which place one wind carry'd us directly out of *England*, to give a relief to our army, and to prevent a second supply from *Spain*.

If they had landed further to the northward of *Misen-Head*, we should have had, as I have said, two contrary winds; besides, they would have come to them, where they should have found succour and relief, far from our army by land, where our march had almost been impossible, considering the season of the year, and the weak help that the country would have yielded us.

My advice therefore is, When an enemy is feared in *Ireland*, that there be a care to keep our fleet at sea off of *Misen-Head*, as a place to take advantage of all winds; and that the beacons be well watched on shore, with directions to the watcher, that they give notice to our fleet at sea, to distinguish the enemies landing to the northward or to the eastward of that place; for our ships lying open of the cape of *Misen-Head*, they will be able instantly to follow them, whether they shall go to the northward or eastward.

But this caution I give, that no occasion but necessity compel the fleet to seek a harbour: for I have shewed before the inconvenience of it; and the difficulty to get them in again; that in the mean time an enemy may work his mischief.

*How to prevent the French and the Hollanders meeting to rescue one another, if they become Enemies to England.*

Considering how things stand, or may hereafter stand betwixt *France* and *Holland*, to the prejudice of *England*, (for that every state changes with time and advantage to themselves and commonwealth,) it will not be amiss, for prevention of evil that may happen to this kingdom, to follow the practice of a skilful physician, in the cure of his patient, to give him cordials to avoid the disease, rather than afterwards, when it has seized upon him, to go about with physick to recover him; and according to this example, it will be better for us before-hand to withstand the peril, than seek to shun it when it is too late.

The dangers are of two kinds: the one by an increase of ships in *France*, that may in time prove prejudicial to the state; for it is perillous to have neighbourhood with danger: the other is, the assistance they may find in foreign parts by sea, and above all other nations, the *Hollanders*, who are nearest able to equal us in shipping.

The fear of an invasion out of *France*, our ancestors never much dreaded; for our ships were still the walls and bulwarks of our defence, and ever made that nation recoil with dishonour and loss, as our histories do at large declare; and rather than the *French* ambitious thoughts should now aspire to greatness of shipping, it were far better, happier, and safer for us, to proclaim an everlasting war against them, than by a suffering peace, they should attain to a strength by sea; for princes in matters of most importance ought to govern by rules of state, and to be directed by precedents of times.

We will not oppose the *French* greatness amongst themselves at home, when it shall have no relation to us abroad: But if *France* will not be contented with what they have been, but labour to be greater than we think fit they should be, wisdom bids us provide for the best; which we cannot better do, than to abate the pride and power

power in the beginning; for it is an old saying, That peace and power are incompatible, and live not long together; and the strongest pillar of peace, is to take away the occasion that may breed a war.

But in case, according to my proposition, that *France*, out of matters of state, shall seek to give assistance to *Holland*, and we to impeach it at sea, this that follows shall direct those that have the command of so great and weighty a charge as the government of our seas.

Our fleet, consisting of a number of ships, must be divided into three squadrons, and appoint three several places for their rendezvous, (*viz.*) the *Downs*, the isle of *Wight*, and *Guernsey*, all of them opposite to the harbours in *France*, betwixt *Calais* in *Picardy*, and *Ushant* in *Britany*.

Our squadrons are to work according to winds; for that wind which is dangerous for us to keep the *French* coast, is impossible for their ships to put out of harbour, as I have formerly shewed; and therefore we need not put our selves to hazard, but upon a just occasion, when the wind shall serve them.

Although some of their ports are better than others, yet there is none of them in the distance aforesaid, but are bad harbours, and dry from half tide to half tide, that a ship cannot get either in or out, but by favour of a whole tide.

And it is moreover to be considered, that there is no wind that will carry a ship out of those harbours of *France* into *Holland* or *Zealand*, but a southerly or westerly wind; for though they may put out to sea with an easterly wind, yet being at sea, they cannot recover the places aforesaid, and therefore had better keep the harbours, and avoid the danger of meeting us at sea: and besides, that such winds as aforesaid will carry them out of harbour into *Holland*, we shall be as ready to take the advantage of them from our own coast, as themselves can be from theirs; considering what time they must have to embark their men and provisions, and observe their tides for going forth of their ports. The *Downs* lie conveniently to guard *Calais*, *Bullen*, *St. Vallery*, and *Havre-de-Grace*; the isle of *Wight* will have an eye over *Diepe*, *Sherbrook*, and all the creeks to the *Hagg*; the islands of *Guernsey* and *Jersey* will do the like to *St. Maloes*, which is a port of greatest importance on that coast.

But the places of greatest weight, are *Brest*, *Blavet*, and some other harbours for the entertainment of their best and greatest ships, which lie east and south-east from *Ushant*, and not within the channel opposite to *England*.

But those *French* ships that shall there remain, must have two contrary winds to bring them into our channel; the one to get about *Ushant*; and that being done, the other is to sail into *Holland*, in which course they must pass our three squadrons aforesaid, and will find it impossible to escape us.

*Havre-de-Grace*, which is the second good harbour next to *St. Maloes*, lying betwixt *Calais* and *Ushant*, is in the same state of *Brest* and *Blavet*, which must have two contrary winds to carry them to *Holland*; though they be nearer to *Holland* by many leagues, yet they shall run the same hazard and peril of *Brest*, as I have declared.

Thus you see how easy a thing it is to prevent the *French* and *Hollanders* meeting, if a discreet and understanding commander have the rule of things, and knows what belongs to it.

For the better information of those that shall be employed, I will set down the state and condition of every harbour in *France*.

#### *The State of the Harbours in France.*

**T**HERE is a bank in the middle betwixt *Dover* and *Calais*, south from *Dover*, and west and by south from *Calais*, that has but four fathom at low water, and four leagues long.

The *Old-Man* is a good road for north-east, east or south-east wind, six or seven fathom deep.

*St. John's* road, nigh to it, is a good road for the same wind, and is fifteen or sixteen fathom deep.

*Bullen* is a barred harbour, and dry at low water.

The river of *Somme*, where *St. Vallery* stands, if it were not for a bank that lies at the entrance thereof, were a good harbour.

From the *Old-Man* to *Diepe*, south-south-west, betwixt them lies the river of *Hen*; the town of *Treport* is upon it at low water dry.

*Diepe* at full sea three fathom: there are three bouys to direct you at half flood: small ships may go in at low water dry.

*Feckban*, four leagues, west-south-west, a good harbour, two fathom at low water.

*Havre-de-Grace*, at high water, three fathom; and at low water one. There is no failing from hence up the river of *Seine* to *Roan*, without a pilot.

*Caen* is six leagues south-west from *Sand-Head*, a barred harbour, and full of sands going in.

Four leagues eastward lies the island of *St. Mark*, and to be sailed about, but foul ground.

The

The bay of *Hogs* is a good road for north-north-east winds, and, indeed, for all winds.

*Cberbourg* is a small dry creek.

From thence is *Faux-Moberil*, a dry haven.

A league from hence is *Cape de Hague*: west, three leagues from this cape, lieth *Aldernay*, west-and-by-north, almost three leagues long, east and west: the east is good to sail near the shoar, but the west is bad, and the south side worse.

From *Aldernay* to *Guernsey*, west-south-west, eight leagues; the east end of *Guernsey* is flat, the west stoope. Beware of the island of *Aron*; it is full of rocks: betwixt the castle and the land it is a good road at six or seven fathom, and without the castle at twelve or thirteen fathom: it ebbs or flows here at six or seven fathom up and down. There is good anchoring round about the island.

From *Guernsey* to *St. Malo's* seven leagues south-south-east, and to *Sacke*, east-and-by-north, one league: you may anchor about it at twenty six or twenty seven fathom.

From *Guernsey* to *Jersey*, south-east, eight leagues: There is good anchoring at *Guernsey* round about it; and yet there lie rocks to the west side: on the north side there is a good road for a north-west wind. *Cateline Bay*, on the east side, is a very good road. You may go between *Jersey* and the rocks, called *Pater-Noster*, eleven fathom, and anchor at *Trinity Bay*.

From the west end of *Jersey* to *St. Malo's*, south-and-by-east, eight or nine leagues. In the way there are rocks called the *Monks*.

The course from the *Hagg* to *St. Malo's* by *Grand Ville*, *Mount St. Michael*, and *Caucall*, is full of rocks and sands.

The island near *St. Malo's*, called *Zezembre*, a ship may go round about it safely.

The tides hereabouts rise and fall seven fathom. There is no entrance but for small ships into *St. Malo's*.

About five leagues west from thence lieth

a great sandy bay, where one may ride six or seven fathom at all winds.

You may ride about the islands of *Brisack*; and a league and a half from hence are the islands of *Pickle*, islands which you may sail about; as also the seven islands, at four fathom, as likewise *Greveland*.

The haven of *St. John's de Dieu*, three leagues from *Morlaix*, is a barred harbour; from whence you may go to *Morlaix* through the rocks, and anchor in five fathom water.

All havens thereabouts are barred, but *Rosco*, which is deep water, and has many good ships belonging to it. It is the *Bas* that makes *Rosco* so good a harbour.

*Brest* is the best harbour in all *France*, and *Blavet* the next: *Odogerne* is a good harbour; the bank before it is five or six fathom deep on both sides; there is three fathom within at low water.

*West Penmark* is a good harbour, three fathom at low water. *Bindett* is a dangerous harbour for rocks.

There is good anchoring about the island of *Mutton* and *Groye*.

*Blavet* is an excellent harbour, four fathom at low water.

*Morbeau* is a good harbour, but forceable tides, eight or nine fathom; within the east side is a bold shore.

Behind the west point of *Croisick* there is a good road, at five, six, or seven fathom, and safe as in a harbour.

The river of *Nancy* is a good harbour, seven or eight fathom water; but you must have a pilot.

The island *Heyes* has no good road; but the best is a south-west, or west-south-west wind.

*St. Martin's* twelve leagues, east-south-east from *Heyes*.

From *St. Martin's* to *St. John de Luz*, is fifty four leagues, and never a harbour in the way, but *Bourdeaux*, worthy to be accounted, being all of them barred harbours.

### *A Project how to war upon Holland, if they give Occasion.*

**I**F the *Hollanders* shall neglect our favours and friendships, or become obstinate, perverse, and insolent, and so proud withal as to disdain us, I have not that mistrust of the force of *England*, but that it will prove the revenge, and punish their unthankfulness, as well by what I have said in the precedent project, as by this that follows; for as in natural bodies, the longer they live in health, sickness is the more dangerous when it assails them, so it will prove in an unsuccessful war of the *Hollanders*, who have so long failed with a prof-

perous and fortunate gale, when at last they taste of the perverseness of fortune.

What can they value themselves upon, (to speak truly,) but *England* deserves the honour of it? We were the first that gave them life; and it is such a life, if they would consider it, that if we feed them not, they faint and famish. Let them remember an old observation of state, *That he who entertains an army of strangers, takes a wolf by the ear*; for as it is dangerous to detain them, so it is more perillous to let them go. And if his majesty at any time call home his

subjects from their service, that have been the wolves to their enemies, they will soon become silly sheep for others to prey upon; for things easily and unlawfully gotten, are soonest lost and consumed, if they be not supported.

If *England* at any time excepts against their ill usage, and calls them to account for injuries, they will find that we are the stronger, and able to give them laws, and they the weaker to accept of the less evil; for where can they trade but they shall find interruption by us, laying aside their passage through our seas? that without our leave and harbours, they cannot subsist in their navigations? But now to my purpose, to what I have in hand.

I will imitate the marquis of *Santa Cruz*, a man eminent in *Spain* for his experience, employment, and good success in sea actions, who upon the breach of peace with *England* in 1585. presented to the king his master a relation how his territories should be defended, and the *English* annoy'd.

And as an imitator of the marquis, I advise, seeing we know not how soon matters of unkindness may burst out betwixt *Holland* and us, that in the mean time we inform ourselves of the true state of their provinces by sea; and that there be a choice made of two sufficient seamen to be sent in a secret manner into the *Low Countries*, to take a view of their shipping, as namely, the number of vessels, their ordnance, and quality of them; to enquire of their ships abroad; and the conditions of them at large; of their number of mariners, and to distinguish betwixt the fishermen and sailors; to enquire of the decay of their trades, if their men and ships be employ'd in warfare; to observe how a war with *England* will relish with the multitude, and where and how they think most to annoy us; for these things are necessary to be known from an enemy.

The next must be to supply and guard our forts and castles on the sea coast; for it is a main and important thing to keep the *Hollanders* from the succour of our harbours; and if they be forced to keep the sea in foul weather, with contrary winds and long nights, the length and narrowness of our channels, the cliffs of *England* and *France* will be enriched with their wrecks.

Such towns seated opposite to *Holland* and *Zealand*, ought to be extraordinarily guarded and fortified, but especially *Sandwich*, *Harwich*, and *Yarmouth*, in respect of their harbours and roads to entertain fleets, their natural situation for strength, and the number of people there resident that are descended from *Holland*.

But how all these places should be guarded and defended by shipping that are so far

distant and remote from one another, there rests the difficulty.

In this case we must work according to the winds; for all sea actions are guided by it. And suppose the *Hollanders* with an easterly wind direct their course for *Harwich*, *Yarmouth*, or other northern parts of *England* or *Scotland*; and that our ships with that wind lie in the *Downs*, which is our ordinary rendezvous, this northerly or north-east wind is full in our teeth to pursue them.

Or by keeping the sea with our ships, our meeting is as uncertain, the sea being wide and spacious; and if we be taken with a hard gale of wind, and put to leeward, whilst we seek to fetch it up again, they shall have time and leisure to land where they list, as I can instance in this case many precedents.

And therefore, instead of the *Downs*, I conclude *Yarmouth* to be the only road for the rendezvous and seat of our shipping; for there we shall be ready upon all occasions to set sail, what wind soever shall bring an enemy from *Holland*, though it were into the river of *Thames*, or the northern parts, having the least warning, which we cannot fail of with fire-beacons, or pinnaces to be kept at sea. And as the advantage of an invader is to work with the advantage of the wind, so must the defendant seek as well to prevent them by the same advantage of wind.

The next thing I would wish to be put in execution, which rather should be the first, as of most importance, as I have already declared, is, the guard of his majesty's ships in harbour at *Chatham*; for the prosperity and welfare of *England* consists in their safety: and if *Holland* should prove an enemy, now that *Flushing* is in their possession, and within fourteen or fifteen hours sail from *Chatham*, gives them a brave opportunity.

I think good to give this caution, That an attempt upon the navy is more perillous for an enemy to the eastward of us, as *Holland*, *Denmark*, *Sweden*, and *Germany*, than from the southward, as *France*, *Spain*, or the *Streights*; for ships from the eastward are able to come directly with one wind from the countries aforesaid, as those from the southward must have two contrary winds, the one at south-west, to bring them to the *Downs*, and after, an easterly wind, to carry them to *Chatham*, which perhaps will not happen in an age.

And it is not unworthy consideration, how fatal those easterly countries have been to this kingdom; first by the *Saxons*, and after by the *Danish* conquest.

My next advice is, that we strive by all means possible to possess ourselves of the  
TOWN

town of *Flushing*, being of more importance to our state than any town of *Europe*, as I will declare in my next project: first, we shall be strengthened with as many ships as belong to *Middleburgh* and *Flushing*: secondly, it will draw all the rest of *Zealand* into our subjection, the principal harbour being *Flushing*: thirdly, it will be a bridle to *Holland*; for they can no more maintain their navigations to the southward, than a subject to live under a king, and disobey his laws; for we having *Flushing*, and guarding the *Downs* in *Kent*, all succours and safety for their ships upon that coast is taken from them.

Now to proceed to the *Hollanders* encountering us at sea; for that it must come to, not once but often, if wars ever happen betwixt us.

They will in reason labour to put their fortune upon the first battle at sea, because their state cannot maintain a long and lingering war with us: secondly, their ships and mariners, by which they live to support their state, their revenues being contributions raised out of trade, necessarily must fail, when their ships and men are converted to any other use than merchandize; but especially when the same ships and men must be maintained out of this kind of revenue, that was wont to bring in gain.

Thirdly, the victory first gotten redoubles the courage of the victor; it astonishes and disheartens the vanquished; it shakes the fidelity of subjects, many whereof are too much inclin'd to the *Holland* faction; it gets the reputation, and gains friends and alliances abroad, who commonly sway with good success: and therefore, I wish we never present them, at the first encounter, with less force than to determine the quarrel.

The benefit the *Hollanders* shall make upon our coast, is, the use of our roads, though we debar them our harbours; which roads are open, spacious, undefensible, and will succour them in all winds and weathers, as namely, the *Isle of Wight*, *Portland*, *Torbay*, &c.

And to prevent them herein, must be to divide our fleet into three squadrons, as I have often said before; and being so divided, no ship can escape us; for though they shall pass one squadron in the night unseen, or in a fog, they cannot avoid falling into the lap of one of the other two: And we shall make our *East-India* voyage no farther than our own channel; for their ships must pass it going and coming.

I will not omit to put in execution a stratagem when our fleet shall be thus divided, viz. to place along the sea-shores fires like beacons from the cape of *Cornwall*, to to the *North-Foreland* in *Kent*, with a care

they be well watched and guarded; that when a fleet shall be descry'd at sea, or ships arrive in the road aforesaid, the beacons next adjoining to be fired, and like a running post, one fire to take it of another, that in a little space an easterly squadron shall have notice what happeneth to the westward, and the west to the east; so that howsoever the wind is, one of the squadrons shall come round upon the other, and upon the ships in the roads aforesaid.

But perhaps some will say, That if so few ships as those of *Dunkirk* did so great a spoil to us in time of war, what can we expect but distraction from the *Hollanders*, that have an hundred vessels to one of the others in those days.

To which I answer, That though the *Dunkirkers* took many ships in the queen's time, yet they never lessened ours nor the *Hollander's* numbers; for by reason their harbours were not to be entered at all hours and tides, but only at a half-flood, they used to take out the masters and merchants as pledges to perform such conditions as they agreed upon for releasing the ship and goods. And at that time they stood in that danger of our ships, and the *Hollanders* who guarded the coasts, that they durst not keep their prizes longer than they had made this contract aforesaid.

But with us it will be otherwise; for all such ships as we take, we shall be able to enjoy without danger or fear, our coasts and harbours being nigh us, our ports capable at all times and tides to receive us. And I dare boldly affirm, that if his majesty will give free liberty to his subjects to take and spoil as many *Hollanders* as they can in their trades at sea, in a little space they will be able of themselves, without his majesty's help or assistance, to take or destroy the better part of their vessels within their provinces.

For let us compare them with the pirates of *Algiers* and *Tunis*, who till of late years, that they were instructed by *Christians*, were ignorant in what belonged to ships or mariners: and if we considered in what little space they increased to the number they are now of, being all of them ships of *Christians*, and not one of their own, it is to be marvelled, and our case to be compared with it.

For if we fit, furnish, and man such ships as we shall take from the *Hollanders*, and employ them against the *Hollanders* themselves, the natural inclination of our men at sea considered, the small expence in rigging, victualling, and furnishing them; the little distance they shall sail both outward and homeward, and the continual supplies from land they shall receive, for one ship the pirates

of *Algiers* have taken, as aforesaid, we shall become owners of forty, and make one of them the destruction of another, without farther help, either at home or abroad.

For securing our *Newcastle* trade, it must be to fortify our ships with ordnance, to go in fleets, and to sail near the shore, that if they be chased, or in danger of taking, to run on land. The countries upon the sea-coast must be commanded to keep a good watch in the day-time, and to be ready to rescue any ships that shall be so distressed.

And because I have named the ships of *Newcastle*, I will say something of them, and compare them with the ships of *Holland*, which some of my countrymen so much magnify, and hold so terrible, that they are frighted with the name of them, and desire to fright others.

What I shall say may perhaps be wondered at, and my judgment by some taxed; but, if well considered, it will not seem so great an error, as upon the first apprehension.

I will compute two hundred sail of ships, betwixt two and three hundred tuns in burden, belonging to the trade of *Newcastle*, vessels for their strength in building, for their spaciousness within board, for the decks to place their ordnance, and all other conveniency to make men of war, I dare say *Holland* has not the like.

If these ships be fortified with *English* ordnance, which *Holland* affords not, but with grief I may say, is supplied from us; and if one hundred of our trained soldiers be put on board every one of them, which we may do of our own nation, and which *Holland* cannot do, unless they dissolve their land-army, and put themselves into the mercy of the enemy, I will be bold to say, that these ships alone will be able to encounter the whole force of the *Netherlands*, and, as I have computed but two hundred ships, by a project contained in this book, we shall double the number of two hundred, and, by consequence, be as strong again.

Though this trade seems to be but of small account, in respect of the grossness of the commodity, that it is amongst ourselves, and in the kingdom, and that the ships return from *London* unladen, yet we may account it of most importance and consequence to the state of *England*, considering the multitude of mariners it breeds,

and the readiness of them for his majesty's service, when he has sudden occasion to use them; for every three weeks these ships never fail to make their repair into the river of *Tkames*, if they be not hindered by wind; as all other trades but this is out of the kingdom, and upon their voyages in summer, that if his majesty have need to furnish but two of his ships to sea, there will not be found mariners sufficient to man them, if it be not for the *Newcastle* trade. Leaving this, I will once more return to our annoying the *Hollanders*.

And if we go further from home to seek out the *Hollanders*, yea, as far as the *East Indies*, a place that has puffed them up with pride, and has bred a heart of disdain against us, more for the number of their ships that resort thither, and the length of their navigation, than for any profit they find there. The next voyage we undertake shall be to seek them in their return from thence, in a desolate and uninhabited island, called *Mauricius*, after the name of the last prince of *Orange*, lying in the course betwixt those places of the *Indies* they trade to, and the cape of *Good Hope*. This island affords them great comfort and refreshing, which makes their navigation much the easier and commodious; and as the meeting of ships is more certain in a harbour than at sea, so is ours the more sure to find and take them there.

If it happen that the *Hollanders* sail falling in with that island, which must proceed more out of negligence than will; for they are to expect a great succour in their way home by that island, then they to repair to *Saldanna* bay, near the cape of *Good Hope*; or missing that, then to the island of *Santa Hellena*, well known to us, and long frequented by the *Portuguese*; for no other places can succour their unsufferable wants.

And though we should fail to meet them in any of these places aforesaid, nevertheless they cannot account themselves safe at home, when they remember the long distance they have to sail, and the dangers they are to pass through our channel, if we become their enemies, unless they avoid us, by going into the north part of *Scotland*, which in my fishing project I have handled.

There are many other ways to offend the *Hollanders*, which I forbear to speak of, referring them to my breast, till there be occasion; and I will prosecute my design upon the island of *Wakerland*.

*A Project how to get Possession of the Island of Wakerland, if the King of England will compound with the Natives.*

**I**N my former project I wish'd, as a matter of greatest importance to our state, to seek and get the possession of the island of *Wakerland*, wherein *Flushing* is seated; the reasons whereof I have in some kind declared; and now shall follow the manner how to compass it with consent and liking of the inhabitants, if they will accept and hearken to reason, before we attempt them with violence or force: for it is a maxim, *He that is master of the sea, shall be able both to take and defend Flushing, or most islands.*

The first thing we must put in execution, we must have a book printed and divulged in the name of some person, pretending to be born there; and advising the inhabitants of the island to hearken to his reasons, being moved to write out of a natural affection he bears his country.

His first reason is for them to consider the end for which they have so long fought, (*viz.*) their religion, their liberty, their security, and their commodity, and have not as yet attained them, nor like to do, so long as the king of *Spain* is made able to subsist in that war.

The second consideration, is how to compass these four ends by a more gentle, and easy course than by war, which may be effected if they will judiciously weigh the ensuing reasons.

The book must make it appear, what discourtesies and oppressions *Holland* imposes continually on them; which indeed is unsufferable; but that both their security depends upon their mutual agreement, because of the third that is enemy to them both.

To wish them to consider, That though their payments in the island of *Wakerland* do equal *Holland* in their proportion, and that their men of war of *Zealand* are esteemed and known to be more warlike, and to have done braver exploits than the *Hollanders* by sea, yet notwithstanding what service is done, either by land or sea, is all attributed to *Holland*; for *Zealand* and *Wakerland* is not once mentioned; and therefore to advise them to divide themselves from *Holland*, that their worths and virtues may appear to the world.

The way to attain to happiness must be by the countenance and assistance of some powerful neighbour prince to rely upon; and *England*, above the rest, would be able to obtain that for them, in a peaceable manner, which with the loss of their blood, they could not enjoy in seventy or eighty

years of war: and if the ensuing conditions may be yielded to, by the king of *England*, they may boldly sheath up their swords, and never have cause hereafter to draw them again.

*The Conditions on which the Inhabitants are to contract with the King of England.*

The beginning of all mens actions must tend to the service of God, every one according to his private conscience; and no other king in these parts of the world, but the king of *England*, does maintain the religion by them professed; and for the better proof thereof, his majesty's father, of famous memory, shewed himself a principal pillar, and the absolute cause to settle the true religion in their provinces; as it appeared by the council of *Dort*, against the innovation of the *Armenians*; which sect *Wakerland* was never known to favour or embrace: nor will his majesty assume the nomination of their elders, or preachers, or meddle with their church-discipline, but refer it to themselves.

Whereas they are over-charged with contributions and excises, in the government they now live under, they may condition with his majesty, to ease them the moiety of what they now pay, and the other moiety be reserved for defence against an enemy; or in fortifications or maintenance of garrisons; all which soldiers to be *English*, as people that are no strangers; to them in acquaintance or conditions, as they have made proof when they lived together, without any kind of discourtesies.

Forasmuch as many times they appeal to the general states, residing in the *Hague*, or upon occasion they are often called thither, to their great expence and discontent they shall be eased of that trouble and charge, and determine all questions, and settle their affairs, amongst themselves, by authority from his majesty, without having relation to any other provinces: this will prove a greater freedom and liberty than they could all this while compass by the sword, or can otherwise do by any way they can think of.

His majesty by this grant, and other immunities he may give, without innovation or infringing their ancient laws and customs, will make them freer than ever they have been; and his protection will be so strong a defence to them, that no prince or nation dare offer to injure them, either at home or abroad.

It is apparent what benefit they shall reap by these privileges: First, in easing them of the moiety of their exises; but most especially, if his majesty will be drawn to grant them the privilege of his subjects in their customs within his own dominions, and to have a freedom of their ships to take freights within his majesty's ports, which the laws of the land prohibit to any but his own subjects; this will be much greater to their advantage and profit, than ever they shall attain to by living under the government they now do.

Perhaps his majesty may be drawn to consent to the remove of the *English* staple from *Delph* to *Middleborough*, where it had long continued heretofore, to the commodity of the whole island, as themselves best know.

In yielding their obedience to his majesty, is no new precedent amongst themselves; for in the year 1424, after *Holland*, *Frizeland* and *Zealand*, with the island of *Wakerland*, had continued in the line of *Tbieri* of *Aquitain*, the space of six hundred years, *Jacoline*, widow and heirs of these provinces, resigned them to *Philip I.* duke of *Burgundy*; by which resignation these

three states became joined to *Flanders*, and the rest of the provinces, and still continues in the line of *Philip*.

If these people may enjoy their religion quietly, their liberties freely, their security peaceably, their commerce, trade, and wealth plentifully, and have the honour to be subject to so mighty a king; no man can justly pity them, if by refusing it they fall into the hands of enemies.

And if their pride and obstinacy refuse this solid advice of a friend, as the state of *England* now stands, that by our permission the *Hollanders* are grown to so great a strength by sea, it behoves us to seek a remedy for our safeties; which cannot be better done, than by possessing the island of *Wakerland*, which does more concern us than any plot of ground elsewhere.

And if we be put by force to enjoy it, there is no more to be said than I have often repeated; That so long as we are stronger by sea, that we keep our ports guarded and armed, and prohibit their entrance into them, not only all *Wakerland*, but *Holland* and *Zealand*, will be at our devotion as aforesaid, as may appear by the project that went before.

*Of the Harbours of Holland, Zealand, and Flanders, in order, if we have Wars, to take Advantage of them.*

THE *Texel* has three channels, whereof the *Spaniard's*, or the king's, is the best: when you are within, there is a good road under the island of *Texel*; and from thence you go up to *Amsterdam*, and all places within the *Zurick Sea*.

To the northward of the *Texel* lies the *Vlie*, a good channel, but narrow; for ships that come out of the *Zurick Sea*, there are two channels going out of the *Vlie*.

From the *Texel* to the *Maese*, S. S. W. twenty four leagues, the *Maese* goes into the *Brill*, and has three channels, whereof one is better than the rest, and has sixteen foot at a full sea: within the *Brill* the channel carries them to *Skedam*, *Rotterdam*, *Delph Haven*, and other places thereabouts. The old *Maese* carries them up to *Dort*.

From the *Maese*, or the *Brill*, up to *Goree*, two leagues S. W. The *Goree* hath eighteen foot at low water; and so you may go up at *Helvoet-Sluice*, where you may ride with the greatest ship of *Holland*.

From *Goree* to the island of *Wakerland*, six leagues S. W. The island of *Scowden*

is betwixt them; and *Bruers-Haven* is in that island.

*Flushing* is the best harbour in all *Zealand*, and lies in the island of *Wakerland*; the channel has four fathom, at the water going in.

From *Flushing* to *Graveling*, twenty four leagues W. S. W. these harbours following lie betwixt them, and all upon the coast of *Flanders*, (*viz.*) *Ostend*, twelve leagues; from thence to *Newport*, three leagues; from thence to *Dunkirk* five leagues; from thence to *Graveling*, four leagues. *Mardike* lies betwixt the two last, and is the best harbour upon all that coast, as it is now made.

From the *Texel* to the *Foreland* in *England*, S. W. forty seven leagues.

From the *Texel* to *Yarmouth*, W. thirty two leagues; from the *Maese* to *Harwich*, W. a little southerly, twenty nine leagues; from the *Maese*, or *Goree*, S. W. and by W. thirty six leagues; from *Flushing* to the *Foreland*, W. twenty four leagues.

*A Project how to make War upon Spain, written in the Queen's Time, and presented to Sir Robert Cecil, by her Majesty's Appointment.*

THE continual annoyance our small ships of war have for many years offered the Spaniards upon their own coasts, makes them of late more provident than before they were, by drawing home their ships in fleets, that were wont to come straggling; as may appear by the *West Indies* trade, whose ships strove to be first at home, to take the better market; but now they use to repair to the *Havana*, where they attend the coming of the plate fleet; into which ships they put their silver, gold, and things of value; and are wasted themselves by the same fleet; by which means few of the *India* ships, have been of late years taken into *England*.

The *Portuguese* trade is more general than the Spaniards; as namely into the *East Indies*, *Brazil*, *St. Thome*, *Castle de la Mina*, and other parts of *Guinea*; from the two latter they use to send their gold brigantines to *St. Thome*, and transport it into *Portugal* with the fleet, which returns in *September*, both into *Brazil* and hither; they freight the boats of *Holland*, and the east country that are of good force, which defend themselves, and their lesser ships in their company from the *English*.

These fleets of later years have avoided touching at the *Tercera* islands, which were wont to afford them relief and succour, because they were continually haunted by the *English*; and such armada's as were wont to be sent to those islands, now keep off the headlands on their own coast, as the surest means to defend them; for whosoever seeks a coast, will first fall with a headland or cape.

#### *How to employ our Fleets against Spain.*

The last summer's good fortune that *Holland* and we both had, in taking each of us a carrack, may encourage us both to employ our sea forces against *Spain*, being a means to work us both security, and for *Holland* to prosecute their wars with more advantage: and if by one consent we agree together, we must resolve upon the employment of two several fleets; the number, the time, and manner how to employ them, with the hopes of what we are to make by hem, are as follows:

The carracks outward: the plate fleet homeward.

The *Firm Land* and *New Spain* fleets outward.

The carracks and *New Spain* fleet homeward.

The carracks departure from *Lisbon* is certain; for if they exceed the 15th of *April*, they are commonly forced back, not being able to double *Abrobo*s shoals on the coast of *Brazil* in the eighteenth degree.

And, as I have said before, that the meeting of a ship or fleet is more certain upon a headland, nigh a port whither they are bound, than in an open sea, where they may escape by night, by fog, by being to leeward, or many other casualties; therefore, besides the gross fleet that should make good the coast of *Spain*, it were fit the enemy were busied in both his *Indies*; and how to offend him in his *East Indies*, I have set down in this book; to which I refer you. Our second and most material hope, is upon the plate fleet, whose coming home is uncertain; though for the space of four or five years past, they have observed the months of *March* and *April*: the ports whither they resort are *St. Lucar* or *Cadiz*; the likeliest place of meeting them is cape *St. Mary's*, the headland they commonly make before they put into *St. Lucar*.

The greatest doubt of meeting this fleet, is the intelligence they may receive out of *Spain*; considering the small distance betwixt them and the *Indies*, and the certainty of the winds, whereby they may give warning to their fleet to winter there, if they see cause; and therefore the subtlest and securest course to prevent them, is to send two or three pinnaces, excellent choice sailors, to lie before the *Havana*, to attend the coming out of their fleet, and after to pursue them astern, till they bring them into the height they mean to hail in; which done, one of the three pinnaces may repair with all speed to our fleet, where they shall have directions to find them, and give relation in what state, and in what height they left them: the other two pinnaces are not to leave company of the fleet, unless the fleet alter its height; which, if they do, one of the two pinnaces is to follow the same directions the other did, with this caution, That if they find themselves in danger of being taken, they throw their instructions over-board.

The third and last hope of our fleet is the ships of *Terra Firma*, or the *Firm Land*, which go for the next year's plate, and are commonly to depart from *Spain*, at the coming home of the other fleet: the place to meet them is eighteen or twenty leagues from *Cape Canteen* in *Barbary*. We may know by the wind, within a point or two, how they will steer, as also the time of their departure

departure from *St. Lucar* by the moon; for they must observe the spring-tides to come over the bar: we may likewise provide to have intelligence by the way of *Mamora* or *Salley*, two towns in *Barbary*, opposite to that part of *Spain*.

If we should prove so unhappy as to miss this fleet, if her majesty will purpose this squadron to the *Indies*, they will not fail meeting with them at the northermost part of *Dominica*, where they use to water; or being departed from thence, their course is certain to cape *de Vela*; and after to *Nombre de Dios*, where commonly they take in their treasure, and where they may be easily surprized.

I will suppose our second fleet to be at sea, upon return of our first, who have these several hopes likewise: the carracks and *New Spain* fleet homeward; and the *New Spain* fleet outward. If her majesty will resolve to keep a continual fleet, as is proposed, few of these ships can possibly escape us, either going or coming, seeing we know the course they sail, the season of the year they must needs pass, and the harbours whither they are bound.

The *New Spain* fleet outward, is to depart from the same part, through the same seas, and in the same course, the *Terra Firma* or *Firm Land* fleet doth; only they differ in the time of the year; for they exceed not their midsummer-day to set sail from *Spain*, because of their safe getting to the port of *St. John de Ulva*, before the entrance of the northerly winds, which are perillous upon that coast.

Their watering-place is *Guadalupe*, where a small strength were able suddenly to surprize them; their men and ships being out of order and farme, by their rummaging them, and doing other works about them when they come to water; and their force consisting but of two galleons of war, the one admiral, the other vice-admiral.

#### *The Security to our State.*

These undertakings being followed according to the designs set down, and taking that good success that is hoped for, are one great means to breed security to our state; the enemy being impoverished, and we enriched.

Our only security must be to cut off *Spain's* forces by sea, seeing their means of invasion and strength of defence depends upon their shipping: how this service may be affected, and the benefit that will arise by it, is here briefly handled.

First, and principally, we must keep employed two main fleets upon the coast of *Spain* eight months in the year, that is,

from *March* to *November*; every fleet to consist of forty five ships, to be divided into three squadrons; one to lie off the rock to intercept all traders of *Lisbon*; the second at the *South Cape*, to stop all intercourse to *St. Lucar* and *Cadiz*, and to and from the *Indies*; the third to the islands, lest they should there stop, and put their goods ashore, having intelligence of our being upon the coast of *Spain*.

Our fleet being thus divided, no army at sea can be prepared, or at least gathered to a head, but we shall intercept them; we shall not only debar the *Spaniards* and *Portuguese* their own trade, but all nations to them; they will not be able to feed without our permission; nor no nation can be brought to greater extremity than they will be.

Perhaps the number of these ships will exceed the proportion her majesty is willing to employ; but if *Holland* will be drawn from the trade of *Spain*, and join with us, the number may be easily raised by them, and our maritime towns in *England*, so that her majesty needs employ but six ships of her own in each fleet, to serve for admiral and vice-admiral of every squadron.

It is not the meanest mischief we shall do the king of *Spain*, if we war thus upon him to force him to keep his shores still armed and guarded, to the infinite vexation, charge and discontent of his subjects; for no time or place can secure them, so long as they see or know us to be upon the coast.

The terror is so great they conceive of her majesty's ships, that few of them presenting themselves in view, do commonly divert their actions, as may appear by these brief observations following.

In the year 1587. Sir *Francis Drake* with twenty five ships prevented an expedition for *England* that summer, which they attempted the next year, 1588. because they were not molested, as in the year before.

Our action to *Portugal* following so suddenly upon the overthrow of 1588. made the king of *Spain* so far unable to offend, that if it had been prosecuted with judgment, he had been in ill circumstances to have defended it, or his other kingdoms.

From that time till 1599. he grew great by sea, because he was not buied by us, as before, as it appeared by the fleet that took the *Revenge*; which navy it is very likely had been employ'd against *England*, if it had not been diverted by my lord *Thomas Howard* in 1592.

And for four years together he employ'd his ships to the islands, for the guard of his merchants, which made him have no leisure to think of *England*. The expedition to *Cadiz* in 1596. did not only frustrate

strate the intended action against *England*, but destroy'd many of his ships and provisions that should have been employ'd in that service.

In 1597. he meant a second revenge upon *England*, but was prevented by the expedition of my lord of *Essex* to the islands; which action, if it had been well carried, and that my lord would have believed good advice, it had ruined the king of *Spain*.

The next year, that gave cause of fear to the queen, was 1599. the king of *Spain* having a whole year, by our sufferance, to make his provisions, and brought his ships and armies down to the *Groyne*; which put the queen to a more chargeable defensive war, than the value of an offensive fleet would have been maintained upon his coast.

This great expedition was diverted by the fleet of *Holland*, which the *Adelantado* pursued to the islands.

The year that followed was 1600. which gave hope of peace; for nothing was attempted on either side till the year 1601. that he invaded *Ireland*, but with ill success, as you have heard.

The last summer, 1602. he was braved by her majesty's ships in the mouth of his harbours, with the loss of a carrack, so that he was not able to prosecute his affairs against *Ireland*; for no sooner was Sir *Richard Lewson* returned, but I was sent again upon that coast, as you have heard, who kept the king's forces so employ'd, that he betook himself only to the guard of his shores.

The sequel of all these actions being duly considered, we may be confident, that whilst we busy the *Spaniards* at home, they dare not think of invading *England* or *Ireland*; for by their absence, the fleet of their *Indies* may be indangered; and in their attempts they have as little hope of prevailing.

Thus have I ventured to deliver to your honour, so much as you desired at my hand; and so much as I think is convenient for our present actions.

How to work for intelligence out of *Spain*, I have shewed in my first book; but will proceed to the state of the harbours in *Spain*, for us to take advantage of.

#### Of the Harbours in Biscay.

From cape *Machibaca* to cape *de Pennas*, lies the coast of *Biscay*.

From cape *Machibaca* to *Bilboa* thirteen leagues, S. S. W. *Barmea* is in the way; a barred haven.

*Placentia*, W. from it; a barr'd haven. *Bilbod*, a good harbour; but in it there is a fand, called *la Barse*.

VOL. III.

*Castro*, five leagues from *Bilboa*; no safe-guard for ships but with a S. W. wind.

From *Castro* to *Lavedo*, six leagues, W. a good harbour for great ships.

From *Bilboa* to *St. Antonio*, W. and by N. nine or ten leagues.

From *St. Antonio* to cape *Kesgo*, W. three leagues.

From cape *Kesgo* to *St. Andre*, five leagues, W. and by S. a good harbour.

Betwixt *St. Andre* and cape *Pennas*, thirty seven or thirty eight leagues, W. and these havens betwixt them:

The haven of *St. Martin*, W. five leagues from *St. Andre*; a barred harbour.

*St. Vincent*, five leagues, a barred haven, from *St. Martin*.

To *Cbares* three leagues, in a barred harbour.

*Roi Sella* — five or six leagues; a barred harbour.

From thence to *Villa Vicioga* two leagues; a barred harbour.

From thence to *Sanfon*, seven leagues; betwixt it and a little island, there is a good road.

In the west side of *Sanfon* is likewise a good road.

*Orion*, where fishermen lay their nets.

*Torres*, a good road for a S. W. wind.

The cape *Pennas*, three leagues.

From cape *Machibaca* to cape *Pennas*, sixty eight leagues.

But coming from *St. John de Luce* in *France*, *Fuenterabia*, four leagues; from thence a good road for a N. W. wind.

*Passage* is the next, a good harbour, at seven fathom.

*St. Sebastian*, three leagues W. from it; a good harbour, five, six, or seven fathom before the town.

From hence to cape *Machibaca* thirteen leagues.

It is good anchoring in all the bays upon the coast of *Biscay* twenty fathom.

#### The Coast of Galicia.

From cape *Pennas* three leagues S. S. W. to *Aviles* a good harbour, and a good road without, seven or eight fathom within the harbour.

From *Aviles* to *Ribadeo*, three leagues, S. W. and by W. a good harbour, three fathom water.

N. W. from *Ribadeo* eight leagues, cape *Brilo*; and within *Vivera*, a good harbour, one may go about the island of *St. Cyprian*.

From *Vivera* to *Ortegal* nine leagues, W. N. W.

*St. Mark's*, in the way, a good road, at seven or eight fathom without; safe for a S. W. and a W. wind all the coast along.

A good road under *Ortegall* for a N. W. wind, and a S. W. wind.

To cape *Prior*, S. W. eleven leagues; betwixt them is the haven of *Sequera*, a good harbour, ten fathom within.

Three leagues from cape *Prior* lieth *Ferrol*, an excellent harbour at twelve fathom.

S. and S. and by W. to the *Groyne*, three leagues, a good harbour.

It is foul about the island of *Cizarke*.

*Queres* is a good harbour for great ships.

From *Cizarke*, to *Mongie* S. W. and by W. thirteen leagues.

*Cocobayno* hath eight or nine fathom.

*Rio Roxo*, full of rocks; but being in a good harbour.

*Ponte Vedra*, eight or nine fathom; in some places forty fathom deep.

You may anchor under the island of *Bayonne*, ten, eleven, or twelve fathom.

*Vigo*, a good harbour, ten or twelve fathom before the town.

*Bayonne*, five fathom; but a blind rock before the town.

#### Portugal.

*Viana*, a barred haven, a narrow channel, but a good road without.

*Villa de Conde*, a barred harbour.

*Metelena*, two fathom full sea.

*Porto*, two channels; the south is the best, but alters sometimes before the town, ten or twelve fathom.

*Aveiro*, two fathom; but within four or five fathom.

*Peniche*, a barred haven: the islands *Berlengas* off at sea, a good road, at ten fathom.

*Lisbon* has two great channels going in, before you come to *Belem* castle.

*Cezimbre* is a good road, fifteen or sixteen fathom.

*Setural* has three fathom and a half at half-flood.

Cape *St. Vincent*, a good road for a northerly wind.

#### A Project how to increase two hundred Sail of Ships.

LEAVING the voyages usually gone in to foreign countries by our nation, the next I will undertake, shall be to sail to *Newcastle*, which we may properly call our *North Indies*, because of the commodity and strength that ariseth to the kingdom by it, as shall appear by what follows.

The chief trade we have now-a-days to increase mariners and shipping, is our trade to *Newcastle*: there are yearly set to work in that trade two hundred sail of

#### Algarva.

*Lagos*, *Villa-Nova*, and *Faro*, all barred and small havens.

*Tavila*, a crooked, dry haven, and alters every year.

#### Andaluzia.

*Ayamonte* parts *Portugal* and *Spain*, and is one of the best havens in all the *Condado*, three fathom half-flood.

*Lepe*, or *St. Michael's*, not to be entred without a pilot, the channel alters so.

*Palos*, or *Saltes*, six fathom within, at the bar three and a half at half-flood.

*St. Lucar* has a great bar, but deep within for any ship.

*Cadiz*, a brave bay at eight, ten, twelve, or fifteen fathom: from thence to the *Streights* mouth eleven leagues.

#### Barbary.

Opposite to this part of *Spain* lies *Barbary*, though the king of *Spain* has most harbours in it, as namely, *Oran*, *Centa*, *Tangier*, *Alaracke*, *Mamora*, *Asamor*, and *Marzagoa*. The *Moors* have only *Salley* on the north, and *Safin* and *Santa Cruz* on the west.

*Arzila*, the north channel, good ships may enter.

*Alarache*, the river crooked, but a good road without, at fifteen or sixteen fathom.

*Mamora*, two fathom at entrance, but a good harbour within.

*Salley*, a barred harbour all that coast; a good road at fourteen or fifteen fathom.

*Marzagoa* must have a pilot to bring in a ship.

To cape *Cantyn* thirteen leagues, only a cape to ride under.

*Safin*, a good road, ten, eleven, or twelve fathom.

The island of *Magadore*, a good road for small shipping.

*Santa Cruz*, such a road as *Safin*.

ships, which ships and mariners are once in three weeks in the port of *London*, ready for his majesty's service, if there happen any sudden occasion.

All other trades are out of the kingdom, and upon their voyages in the summer-time, so that if his majesty has occasion but to furnish two of his ships with men, the kingdom cannot afford them at that time of the year, if it were not for the trade of *Newcastle*,

The

The course how to effect this project must be by increasing this trade, whereby more ships may be set to work, (as thus,) to prohibit all strangers to fetch coals at *Newcastle*; and for us to make our staple at *London* or *Woolwich* for all strangers to fetch their coals from thence, after we have with our own ships brought them thither; for whereas there are two hundred sail of strangers ships set to work to the trade of *Newcastle*, the same number of ships would be increased, if his majesty's subjects had the bringing of them for *London* or *Woolwich*.

*I will now prove it to be rather beneficial than hurtful to strangers.*

1. The stranger will be able to perform this voyage in ten or twelve days to *London*, when many times he is five or six weeks to *Newcastle*; so that he shall make three returns for one.

2. Whereas the stranger carries only ballast in his ship to *Newcastle*, because that country cannot vent such merchandize as they would otherwise carry, they need not come empty to *London*; for that *London* will take off all such commodities as they bring, to the increase of his majesty's customs.

3. Whereas most of the strangers that come to *London*, go away in their ballast, by which means they carry out of the kingdom such moneys as they receive for freight, if the staple of coals be settled in *London*, they will be glad to imploy their moneys in coals, which will be profitable to them; and we keep our moneys in *England*, which is now carried away.

4. The bar going into *Newcastie*, and there lying on ground with their ships, consumes and weakens them, having their weight of coals on board; I mean the strangers ships, that are not built with the strength that ours are. As in *London* their ships will ride and float, and take in their coals out of one ship into another, which will lengthen their ships four years in the ordinary age of ships; so that they will gain the third part of a ship in changing their ports.

5. They shall not be subject to the spoil

of pirates, as hath been of late years to *Newcastle*; for pirates never resort into the narrow seas, because his majesty's ships are continually there.

*The Stranger cannot except against this, because the like is used in other Countries.*

1. The *Venetians* have a law, That no strangers shall take in goods into their ships, in any of their ports, before their own ships be laden; or else they will take the lading out of other ships to lade themselves.

2. In *France* there is a penalty, That our *Englismen* may not bring salt for their own spending; if they do, it is forfeiture of ship and goods.

3. In *Calais* they will not suffer any passenger to go for *England* in other vessels than their own.

4. In *Dunkirk* they have lately taken up the *Venetian* law.

5. In *Holland* they will not suffer any ship of another town to take in goods from one town to another, but they must transport it in a ship of their own town; as for example, a ship of *Flushing* to go to *Rotterdam*, to carry to *Flushing*; but it must be sent in a ship of their own town: and this they do, because they will make an equality in setting their ships and men to work.

6. The *Biscainers* have the same privilege over all other *Spaniards* the *Venetians* have over strangers; and the reason is, because *Biscay* affords all the best mariners in the kingdom of *Spain*; and to encourage them to sea, this privilege is granted them.

Now I have strengthened this kingdom with defensive forces to withstand the power of an invasion, and shewed the means how to invade our neighbouring enemies, if they become so, I will not contain myself in the temperate zone, but seek what projects may be produced in the torrid zone, where the sun has such a scorching power, that the philosophers thought it was uninhabitable; and I will take *Guinea* in my way to the *East Indies*, it being the place from whence they were first discovered.

*A Project in the Days of Queen Elizabeth for the settling her Subjects in Guinea; shewing of what Conveniency it would be. Writ in the Year 1597.*

THE neglecting the opportunity in times past, by refusing the offer made by *Columbus* to *Henry VII.* for the discovery of the *West Indies*, which *Spain* then accepted of, has made *Spain*, which was one of the most inferior kingdoms in all *Europe*,

now become the mightiest in wealth, greatness, and esteem; and to think to lessen them in those parts where they are grown so mighty, is now too late, their footing is so strongly settled in *America*, and especially between the two tropicks, which naturally

ly affords gold and precious merchandizes ; for in colder climates we can expect little gold, by what we have found in *Norrenbega*.

But many are erroneously carry'd away with an opinion of *Guiana*, and the plenty of gold in it, which makes them forward to settle an habitation in that country. The only reason I conceive men can have to induce them to it, is the climate, that may afford gold, but no proof of any hitherto found there ; and I have given my reasons of the unlikeliness of finding any there in my fourth book.

My reasons for disapproving our planting in *Guiana* are these : first, it is in the continent of *America*, fronting upon the *Spaniards*; whom we shall find very ill neighbours to us. The second is, the men we send must be by sea, and that far off ; and the number cannot be so great to cope with the *Spaniards* that are there already : and it will so much concern them, not to accept of our neighbourhood in those parts, that they will rather employ their whole forces to remove us, it concerning them so deeply, not to have any partakers with them in their *Indies*.

Thirdly, we shall enter upon a poor barbarous country ; the people wild and rude, that can give us no assurance of their fidelity, being void of understanding. The provisions we must live on, must be carried by us, the country having no strength but by nature, no towns or houses to lie in ; and requires a long time and great charge to be furnished with victuals, fortifications, and buildings.

But leaving *Guiana* for the reasons here given, I will a little handle the planting and inhabiting *Guinea*, and will prove it the most convenient place for us, now in time of war, to possess and keep.

The country is nearer to us than *Guiana*, the trade certain to the *Portuguese* for gold, and other commodities, which *Guiana* affords not ; our settling in it in times past was so much feared by the *Portuguese* kings, that they sought by all means possible to divert us ; and king *John II.* understanding of a preparation of a fleet in *England* for a voyage to *Guinea*, doubting it would prove prejudicial to him, sent *Rui de Sonfa*, a principal man of his country, ambassador into *England*, to confirm the old league with *Edward IV.* and to acquaint him with the title he had to the feigniory of *Guinea*, desiring him to lay aside his fleet that was preparing for that coast under the command and conduct of *John Tynen*, as also not to suffer or permit any of his subjects to trade for *Guinea*.

The king was willing to yield to his request, and desirous to accept of his league ;

for in respect of his domestick troubles at home, he could not have leisure to seek the enlargement of his kingdom abroad : thus for necessity sake our country lost the opportunity of trading and inhabiting part of *Guinea* in the days of *Edward IV.*

And since the year 1553. there was a voyage undertaken by the persuasion of *Antony Ames Pinteado*, who being a man of good regard with the king of *Portugal*, by false suggestions was cast out of his favour, and forced to fly his country ; and coming into *England*, he discovered to certain merchants the benefit and commodity of *Guinea*, he having lived there some years himself.

The king of *Portugal* hearing of this fleet, sought by all means to take off *Pinteado* : first, by promise of great rewards to procure his return ; which failing, his death was practis'd by some *Portuguese* in *England*, which he having knowledge of, prevented.

Lastly, the king thought to frustrate his designs, and arm'd a galleon to intercept him at sea. This galleon met the *English*, but durst not offer any violence.

The voyage was proceeded on with great hope of good to follow ; but through the wilfulness of *Windham*, who had the command of it, a man both rash and headstrong, preferring his own stubbornness before *Pinteado's* experience, the voyage was overthrown ; for after they grew rich by trade, *Pinteado* persuaded their return for that year, alledging the danger of sickness by their longer stay upon that coast : But *Windham* neglecting his council, in few days after there grew a most contagious sickness amongst them, that they both died, and many of their company, before they could recover home.

Doubtless if this voyage had been discreetly carry'd, as it was projected, it had returned great profit for the present, and had settled a continual trade into *Guinea* in a small space ; for the negro kings offered them many immunities, and a place to dwell and fortify ; and this happen'd at the beginning of the *Portuguese* plantation, which in little time it would have been occasion for us to have eaten them out of their trade, and given us opportunity to discover new lands and trades within the country, as the *Portuguese* did from thence into the *Indies*.

Many more voyages have been attempted by the *English*, upon that coast, with profitable returns : but at the chief place, which is the *Castle de la Mina*, we could never attain to have a trade ; but if her majesty please, yet there is no time overpast, but that the country may be subdued, her subjects settled in it, and the trade maintain'd

tained with a yearly and certain benefit to her majesty, as now it is to the king of *Spain*.

The place of importance for strength and wealth is the *Castle de la Mina*, the taking whereof makes all the rest of the country tributary of course, it being the only place defended by the *Portuguese*, and where they have settled the chief trade of the whole country.

*John Baptista de Revolasco*, at my being in *Portugal*, had the country of *Guinea* in farm from the king, no man having licence to trade thither but himself, whose course was not to seek the negroes in their own ports, and make the voyage long and uncertain, but he sent his merchandize to *Castle de la Mina*, whither the negroes resorted, as well from the inward part of the country, as from the sea side, to utter their commodities; by which means he made *Mina* a continual mart, being always furnished with great quantity of gold.

The place being taken, the wealth in it will be great, the keeping it not chargeable, and the living in it secure, it being strongly fortify'd to their hands, with helps that we shall add unto it: it yields plenty of victuals: the town is fairly built, the people civil, the country not unpleasant; all these are sufficient encouragements and motives for us to inhabit it.

Though many object the sickness of that climate, by example of divers ships of ours that have felt it, yet the true cause has grown from want of experience: for there are divers observations to be followed by them that shall resort there to live.

The first is the time of the year in going, which is in *September*: the second, is the time of staying, which must not exceed *March*. And whilst they abide there, they must keep and observe a certain diet; for there are three things principally to be avoided, (*viz.*) the unmeasurable eating of fruits, the serene or dew that falls morning and evening, and the company of the negro women.

I have examined the voyages made thither by our *English* nation, and find the greatest death of our men is in their return home, coming out of the hot countries into the cold; which proceeds principally from want of cloaths in the poor mariners; and this is ordinary in our shorter voyages: but such as shall live in the country, no time of the year is to be respected for their health; for it is to be supposed that no man is so gluttonous as to over-eat himself, where he shall find so great a plenty, and so good a choice; for nothing breeds a surfeit so soon, as after a scarcity and want, to come to plentiful feeding, and want of government

and discretion to temper themselves in their diet.

Moreover, those that live ashore in *Guinea* shall have houses to defend them from the serene, or other infection of the air. And in answer of the negro women, I think no *Englishman* so barbarous as to offer it.

By possessing the *Mina* it may give us a great encouragement of other discoveries; neither do I see any reason but from thence we may find a way by land to *Tombagoto* and *Gago*; that would afford as great plenty of gold to the queen, as *Peru* does to the king of *Spain*.

The king of *Morocco* has a trade to those places; and the chief merchandize carried thither is salt: if we could get thither by land, I doubt not, but from thence, or near thereabouts, we shall find some river to fall into the sea, that in time we may come at it by water; and then shall her majesty become as great and rich in the eastern parts of the world, as the king of *Spain* is now in the western.

Her majesty having *Guinea*, may turn it to her best profit and commodity, as to plant such things as the earth will bear, the soil affording as great plenty of merchandize as the *West Indies*, (as for example,) *Guinea* and *Brazil* yield as good, and as great store of ginger as the other doth; but the king of *Spain* commands that no ginger shall grow in either of them both, but such as they preserve for their own use, and call it green ginger; for if he would give leave to plant it in *Guinea*, the increase would be so great, that he would make it of no value in the *West Indies*: likewise the *West Indies*, *Guinea*, and *Brazil*, will yield a better grape, and a greater quantity of wine will be made there than in *Spain*; but the king will not grant it, nor permit the general planting of grapes. Thus does he politickly keep one country under another in their commodities, and bars the earth from bringing forth the increase for the use of man, as God has appointed.

There will be required for this voyage five hundred soldiers, and convenient shipping to transport them, with all things necessary for such an action. The men that go must be choice in their abilities of body, and clear from sickness and diseases; for infected men carried from home, have been the overthrow of many enterprizes.

The greatest force the *Portuguese* presume upon, is their number, and the valour of their negroes, whom they make believe, we desire to conquer and kill; and that our quarrel is their defending them.

But to prevent this policy of theirs, we will carry negroes with us that speak their

language, and have lived in *Europe*, and seen the difference of our using of them, and of the *Portuguese*; for in *Portugal* they buy and sell them, as we do horses, in markets.

When these things shall be known to the negroes, it will be a means, not only to desire peace and friendship with us, but to animate and provoke them to rise against their masters.

In this journey there must be special care and choice in victualling, both for the goodness, quantity, and diversity; for our ordinary victualling with salt meats breeds a putrefaction of blood in hot countries, and is one great cause of their sickness in those parts. The men that go, ought to have shift and change of apparel; for the nature of the serene is to rot any kind of garment.

Though this voyage was not undertaken in the reign of queen *Elizabeth*, which was the active age for such enterprizes, and the time gave great advantage, by the weak

provision the king of *Spain* had thereabouts, yet since the war ceased, by our laborious endeavours, we have attained to a profitable trade on that coast of *Guinea*.

I must confess I much laboured to put this voyage in execution at the time we were authorized by a war with *Spain*, to justify our doings; and to shew my willingness the more, at my release out of my imprisonment in *Spain*, in 1591. I procured a rutter of the coast of *Guinea*, that shewed the distance, the height, and course from port to port; the dangers, and how to shun them; the conditions of the people; the commodities the country affords, and what they desire from us; which I think not fit to insert in this book, for making the volume too spacious and great; but will proceed to a design of the *West-Indies*, which was presented by me, and promised by the queen to have it undertaken as I projected it.

*A Project of a Voyage to the East Indies, with a Design to have had Footing in the hithermost Part thereof.*

I Will prosecute my voyage from *Guinea* to the *East Indies* with my insuing projects, as *Bartholomew Dios* proceeded in his discovery; and the first port I will arrive at, shall be *Mosambique*, a place of great importance and relief to the *Portuguese*, both going and coming from the *Indies*.

If her majesty will please really of herself, or by joining with her merchants, to undertake a voyage to the *East Indies*, it will prove a great annoyance to the king of *Spain* and his subjects, if the projects following be well undertaken and prosecuted.

The only good we are to expect of this *East India* attempt, must be the provident proceeding in our first voyage, as well to settle a certain and secure trade, as to have habitation in the country.

And therefore to go abruptly, and to offer them a trade, considering we are, or shall be disgraced by the *Portuguese*, and *Hollanders*, were a thing uncertain, and full of hazard; for though those two nations love not one another, yet to bar us of our resort thither, they would not stick to cast many foul aspersions on us.

For prevention whereof it were necessary her majesty made choice of an able and well experienced gentleman, who, besides the charge of the voyage, should have the employment of an ambassador.

His message and letters should import the greatness of her majesty's state, her power by land and sea, her protection of the *Netherlands*, and the several disgraces and overthrows she has given the king of *Spain*,

whereby it is to be supposed, that some of the *Portuguese* his subjects, in their secret hate to our nation, not being able otherwise to revenge themselves, have most unjustly scandalized our proceedings: therefore wishing them that they would receive what she writes for a truth, coming from so mighty a prince, and to give no further credit to the *Portuguese*, than as the behaviour of her subjects shall deserve.

What presents or obligations of friendship her majesty should send in sign of her love, I will omit, only there must be care to win such persons as have most credit with the princes with whom you shall traffick. And the conditions and articles settled, we desire that an ambassador may be sent to her majesty, with offer of pledges for his safe return.

The exceptions against this voyage, are, the great distance from *England*; the danger of the people, having no religion to engage themselves by; the force of the *Portuguese* by their long continuance there; and the commodities we must send, which are fine silver and oil, the one we may ill spare, the other our country doth not naturally yield.

The method to provide against these inconveniences, is, whilst there is no suspicion of us, to possess and keep some town of the *Portuguese* nearest us, it will prove a great refreshing to us, and make the journey both short and pleasant. Secondly, we shall be the more respected by the people, when they see we have footing so near them. Thirdly,

ly, we shall weaken the *Portuguese*, and prevent their carracks wintering at *Mosambique*, if they fail doubling the cape of *Good Hope*. The reason I prefer *Mosambique* before the rest of the *Indies*, is the nearness to us, and where the carracks certainly water in their way to the *Indies*; and the time is so certainly known to us, that we shall undoubtedly intercept them.

The riches of the town are both gold and merchandize; for the governors and dwellers of *Mosambique* are allowed only the trade of *Sofala*, lying under that jurisdiction. The keeping of the town will be easy, the dwelling in it safe; for it is seated in a strong and defensible island; it has plenty of victuals, corn excepted; the town is fairly built, with many commodities to it, and in every point like the castle *de la Mina*, I have formerly described.

When we are masters of the town, and have fortified it, and possessed our selves of the carracks, the enemy will be weakened, and unprovided of entertainment in their way to the *Indies*; for that it is the only place where they have refreshment.

The *Portuguese* use this place for their refuge and succour, not for trade, but only what the governor drives with *Sofala*, as I have shewed; but we will make it our chiefest town of mart, and thereby our voyage shall be made short and easy; for our ships

that go thither, shall fetch away the goods that our ships bring from *Goa*, and other parts of the *Indies*; by means whereof, every twelve or thirteen months we shall have a certain return of our adventures.

The way of proceeding upon this expedition must be to send an extraordinary number of sailors, besides the soldiers; the sailors to man the carracks, the soldiers to defend the town; they must depart from hence in *February*, and be at *Mosambique* by the last of *June*, which will be twenty days before the carracks arrival.

The money and goods taken in the four carracks, may amount well nigh to six thousand ton in bulk, which may be there unladen and kept in store-houses, and vended into the *Indies* by our ships yearly; for they are such commodities as will keep, and the return of them in truck will be more commodious than five times the bringing of them for *England*.

Our hope is no less in meeting their carracks in their return for *Portugal*, at the islands of *Santa Hellena*, where they never fail to water; and if we have the happiness to enjoy them both going and coming, we shall be masters of an inestimable wealth, and bring the *Portuguese* dwellers in the *East Indies* to such an extremity by it, that they must be forced either to revolt, or accept of our trade.

### *A Project and Reasons against our East India Voyage, fully answered before the Trade began.*

THE *Hollanders*, who are a people both apprehensive and laborious in what they conceive or undertake, having light given them by the two voyages of *Sir Francis Drake* and *Mr. Cavendish*, what the *East Indies* and *South Sea* afforded in wealth; and being likewise seconded and encourag'd by the sollicitation of some of their own nation, who put themselves into the service of the *Portuguese* trading into the *East Indies*, and whilst they were there, understood the depth and secrecy of it, revealing it at their return, were so far prevailed upon, as to spare no cost to make trial where there was likelihood of profit; and accordingly began a trade into the furthest part of the *Indies*, and have yearly since continued it with various success.

Not long after, we, who are rather imitators than first enterprizers of things, where there is not a present return of profit, finding by the success of the *Hollanders* that the voyage was worth our embracing, by the rumour of gain spread abroad, (though in this, as many other reports, fame proves as often false as true,) thought fit to venture

something upon it: and accordingly our *English* merchants gathered their joint-stocks together, and from thence-forward to this very day they have settled a trade in the *East Indies*; and what it has produced you shall understand at the end of this argument.

But forasmuch as every innovation commonly finds opposition; from some out of partiality, and from others, as enemies to novelty; so this voyage, though at the first it carry'd a great name, and hope of profit by the word *India*, and example of *Holland*, yet was it writ against, and answered, as in the ensuing discourse shall appear.

1. Object. *This voyage will be an occasion of exhausting our silver, which is already too much diminished by the Irish wars, and by the Hollanders drawing of it and our gold over into the Low Countries.*

Answer. I confess this is the strongest reason of the seven, that are alledged; yet I think not but there may be means to draw out of other countries such a quantity of silver, as would furnish this voyage yearly; if there

there could be means to keep our own silver from transportation into the *Low Countries*: for it is to be feared, that the best part of silver the *Hollanders* send into the *East Indies*, is drawn out of *England*. But this objection is fully answered by the project of *Mosambique*.

2. Object. *It will be the decay of many a good mariner, in the climate there, and by the way being so untemperate, that either the one half, or a third part of our people cannot but perish.*

*Answer.* This trade, in my opinion, will be so far from diminishing our seamen, that no voyage will or can breed better mariners; for long voyages make the skilfullest and best navigators. But whereas the unnatural heat is alledged for the cause of the death of men, we find by experience, that the greatest infection and death of people is not whilst they abide in the hot countries, but in the entering into the cold out of the hot, which comes principally for want of cloaths in poor mariners, as I have said sufficiently in my discourse of *Guinea*.

3. Object. *It will be the decay of shipping; because, unless they be sheathed with lead, they prove so worm-eaten, that they are never after serviceable, except it be for one voyage only.*

*Answer.* I cannot see how this can any way prove the decay of shipping, but rather the maintainance of greater ships than have been used among our merchants; for if they mean to maintain an yearly trade, they cannot have less than eight or nine ships of one thousand or twelve hundred tons each; which, upon the occasion of service, are of greater strength than the whole shipping of *London*; and where there are so many good ships set to work, it will be a maintenance both of ships and men; for as people die, double the number will be bred and harden'd by these voyages.

All this while we speak by conjecture, not by experience; for what greater trial can there be, than of the *Portuguese* ships, who make their voyages a year and half long; and yet most of them make twelve or thirteen voyages: after this proportion they continue much longer than ours; yea, I have known one carrack make twenty four voyages.

But if you allow that sheathing them will continue them the longer, we may better do it in *England* than *Portugal*, because our country affords it.

4. Object. *It will hinder the vent of cloth; for whereas now our merchants may put over their six months bills of debts, as well for spices as other merchandize, thereby to make the more speedy return; our East India merchants will be able to afford them so cheap at our own doors, that our merchants and adven-*

*turers shall be forced to abstain from bringing in of spices, and so want often times present commodities to make return of.*

*Answer.* Here we speak generally, that it will hinder the vent of cloth, because the merchants may put over their six months bills for spices; but the spices being afforded better cheap at home, the merchant must be forced to leave off his trade, as though our chief vent of cloth were in exchange of spices: but I conceive that in most countries where they utter our cloth, merchants do not return spices; as into *Barbary*, *Italy*, *France*, &c. From some parts of the *East Country* we have some spices, but very little, which was wont to have come from *Turky* to *Venice*, and so dispersed into the *East Countries*; but since our trade to *Turky* it has not been much.

What inconveniences can then grow of this trade, but to our *Turky* company? which, if they cannot have other commodities than spices, to exchange for our cloth, it were better for the commonwealth to dissolve that trade, than that to the *East Indies* which is the spring-head from whence spices flow.

As we are now served with spices, it is at the third hand, and at an unreasonable rate, which enriches some private men only; but surely, if this trade to the *East Indies* were encouraged, and carry'd with equality, the commonwealth would be the better for it; inasmuch that all manner of spices would be far cheaper than now they are. If any find prejudice by this trade, it will be the *Turks* themselves; when they shall see all *Europe* served with *Indian* commodities, directly by sea, their trade will be overthrown.

5. Object. *They will bring in such quantities of spices as will lie too long upon their hands, and not to be vended in due time; as was seen by the pepper of the carrack, which notwithstanding a general restraint against the bringing in of all other pepper, to the hindrance of many a merchant, yet it was a year before it could be made away.*

*Answer.* Allow that our trade will decay in *Turky*, especially for spices; and that we be serv'd with no other spices than shall be brought out of the *East Indies*, all casualties excepted; for you must understand they will sometime stay long for their lading; some of their ships, it is likely, may miscarry, others not return justly at the time appointed; so that I make no doubt, but *England*, *Scotland*, and *Ireland*, will be able to take off a great part: if not, the *East Country* and *Russia* will utter more than we can spare.

Whereas you refer yourself to the example of the carrack, it is thus to be answered: They that bought the spices of the queen  
in

in the carrack conditioned, That till they were vended, none should be brought into *England*; by which restraint, and they having ingrossed the whole quantity of the spices, before they made sale of them they provided that the whole store should be spent within the realm; and then they forced every man to pay what they listed, knowing we could not otherwise be supply'd: and this proceeded out of abuse; for when the greatest quantity of the carrack's spices was unfold, then were they at the greatest rate: and to the contrary, if there had been no spices in *England* when the carrack came in, and that they had not been engrossed by some few, no doubt but in a year they had been wholly vended.

6. Object. *The original of this voyage was secret malice of some against the Turkish company, and a greedy desire of private gain; the effect whereof would be such a molestation to our neighbours the Hollanders, and such hatred we shall reap at their hands, as all our gain shall not be able to countervail this one inconvenience.*

*Answer.* We are not to enter into the hatred or private grudges of men, but into the commodity or discommodity that will arise to our nation by this trade: if it be more profit to maintain traffick into the *East Indies* than into *Turky*, I see no reason that for the benefit of some private men of the *Turky* company, we should nourish the one, and neglect the other; but methinks if there were no more reason of gain than out of spleen to some merchants of the *Turky* company, they should not adventure so great a stock, without a hope of profit.

We see by experience what commodity the *Portuguese* have made this hundred and odd years by that trade, and we conceive the *Hollanders* find a great commodity by it, which may give us satisfaction in it: neither do I see that the *Hollanders* have more advantage to persevere in that voyage than we.

For offence to be given the *Hollanders*, I see not how in right and justice they can except against us; for they can challenge nothing of discovery, since of the two we gave them light thereof by the voyage of *Sir Francis Drake* and *Mr. Cavendish*, who had been there before there was ever mention of *Holland* or *Hollanders*.

Secondly, they are not subjects to them, with whom we shall traffick, but free princes of themselves, that may make election and choice with whom they will entertain leagues.

Thirdly, we may with better reason, and we have better means to bar the *Hollanders* of traffick with *Turky*, *Barbary* and *Russia*, than they to restrain us of this;

for we were the first light-givers of those trades.

And therefore, if all her majesty's gracious respects to them should in the end be recompenced with ingratitude, the world would confess their unworthiness and evil requital of so many favours: but suppose they should do their worst against us, we know how to be even with them by many advantages we have over them, as before has been declared.

7. Object. *Lastly, the money thus transported pays no custom at all to her majesty; nor are the merchants bound to return home so much treasure in value or quantity, but only upon their bare words.*

*Answer.* Though the money, upon the transportation of it, pay no custom, yet the merchandize which is bought with that money pays a great and extraordinary custom; and her majesty's custom will be increased by it: but to take away all exceptions to this point, the merchants offer to become bound to bring into the land so much silver as shall be transported in this voyage.

And seeing therefore the particular objections are answered, of exhausting our treasure, consuming our mariners, destroying our ships, hindring the vent of our cloth, bringing in commodities not utterable in due time, that malice was not the cause of it, that in justice it cannot be prejudicial to the *Hollanders*, that it will be no decreasing of customs, and the silver we send not to be our own; all these things being rightly weighed and considered, I refer my self to the censure of any indifferent man, whether the objections be fully answered, or not.

What was written in the former discourse, as well by the objector as the answerer, was but conjectural, till time and experience, which are the discoverers of truth, resolve the question doubted of.

But now having twenty and odd years trial, what this voyage to the *East Indies* has produced, a time sufficient to judge of the conveniency or inconveniency to the state, or the commodity or discommodity to the common wealth, and the profit or disprofit to the adventurer, I will thereupon collect out of the reasons aforesaid, betwixt the objector and answerer, and how near their opinion sorted to the truth, as also what errors, and by whose means they prov'd prejudicial to the subject.

The first objection of exhausting our coin was answer'd, and confessed to be the strongest argument of all the rest: but a third person, whom I term the moderator, says, That if the company had provided, as they promised, and as they might easily

have done, to have brought the quantity of silver out of foreign parts, and have put it ashore at *Dover*, for all people to behold, till their ships of the *Indies* had passed by, and then had embarked it, this would have taken away all occasion of repining by the subject, that their coin was transported out of the kingdom to uphold the *East India* trade; if this had been really done, without evasion or cunning, the objection had been salved, and our moneys found no impediments to the voyage.

The second, was the death of our men: and though this was answered fully, yet to confirm the opinion of the answerer, there cannot be a better proof than experience, that peoples bodies do as well agree with, and return from the *Indies* in health, as from shorter voyages; and that whosoever has been there once, desires to go thither again: some there are that have made six or seven voyages, and found no distemper or difference in their bodies; and if there were no greater objections than this of health, it were tolerable, and worthy to be encouraged.

To the third, that it will decay shipping, the answerer disproves it very sufficiently; but, indeed, the greatest abuse of the voyage shall now appear in the covetousness and desire of gain in our merchants, according to the nature of *Englishmen*, who strive to be presently rich, and have not patience to stay a time for it.

The bane of our *East India* voyage was, that they exceeded the proportion of eight or nine ships, treble to the number of those that were projected: this was the decay of timber, which this kingdom will hereafter smart for; for the loss of men and money, it will be regained in an age, when timber must be growing many ages.

*A Project how to intercept the Ships of Cambaya that trade yearly into the Red Sea.*

**T**HOUGH the trade of the *East Indies* was first found out and prosecuted by the *Portuguese*, and in these latter times frequented by us and the *Hollanders*, yet can we not say, but that the natives of these remote parts had use of navigation, commerce and traffick with one another, long before the resort of the *Europeans* amongst them; as is apparent by the continual intercourse and trade, to this day, betwixt those of *Surat*, subjects to the great *Mogul*, and *Ziden*, a part within the *Red Sea*, which is commonly called the fleet of *Mecca*.

The vessels which pass these seas we cannot properly call ships, because their built is much differing from ships; they are neither able to brook the waves of a grown

This proportion of eight or nine ships would not have overcloy'd the trade, either there or here; nor have brought the commodities of the *East Indies* to so great a price as now they are there; neither would it have drawn so mighty stocks of money by the company to maintain it, whereby all the kingdom find themselves aggrieved, imputing the want of money to this cause: thus it is apparent, that the voyage is not the cause of the inconveniency, but the ill ordering and managing of it by the merchants.

The fifth objection is imputed to malice against the *Turky* company, and the molestation we shall offer the *Hollanders*. The moderator alledges, that there are very few of the *Turky* merchants that are not admitted with their stocks into the *East India* company, and all questions accommodated; whereby their malice ceased: and to the point of the *Hollanders*, we see that it is not that trade alone, but all others in general they seek to deprave and deprive us of; and it is true, that it is trade that sets their hearts against us, not only in our own traffick, but that of late we have debarred them of their trades, which before, out of cunning, they only ingrossed and possessed; as namely, that of *Spain*, and the king of *Spain's* dominions, whilst they had subtilly engaged us in a war; but now that our peace debars them of it, and that we enjoy it our selves, these are the motives of their hates to us; and as for their love, it is to be valued according to the profit or use they can make of us, as in the next and last book I have at large declared.

This shall suffice for our *East India* trade; but I will still have relation to the *East Indies*.

sea, or of force to withstand the power of an enemy: these vessels are carry'd with a certain, settled, and constant wind, both outward and homeward, as I have declared, when I had occasion to speak of the nature of the winds, called the *Monsons*; yet, as ugly, and as unshapely as these vessels are to our eyes, they transport inestimable riches and wealth betwixt the places aforesaid.

And whensoever his majesty shall please to prohibit the trade of his subjects to the *East Indies*, and that the merchants shall be weary of it, which will be according to their loss or gain; for the nature of a covetous merchant is like an usurer, that values and esteems his own profit more than

than the conveniency or benefit of the state: they are not satisfied with abundance; for the more they have, the more they desire.

But leaving the passion and humour of such men who are only for themselves, let us enter into the true condition of this kingdom, and the way to benefit his majesty, as well as his subjects have been benefited by the *East India* trade; and here I present a design to his majesty, if he shall prohibit the trade of the *East Indies*, as I have said before.

It is not like other sea actions, that enemies are authoriz'd to take from one another in a broad and ocean sea, where ships are hard to be met, or shall contest with force and strength; or in such weather as shall forbid ships boarding; or such winds as shall make it difficult in fetching up a chace; or such vessels as shall make a doubt of the riches of their lading.

My project is to encounter the *Cambaya* fleet, in their return out of the *Red Sea*, in their course from thence to *Surat*: these vessels are not freighted with merchandize of mean and base condition, but with the richest that *Egypt* and *Turky* can afford: their strength not able to resist their sailing in a sea, that never endured storm; their winds and seasons so certain, as some of our *East India* ships can put us out of doubt of, who have heretofore friendly visited them.

The wealth in them, and the ease in taking them, being thus known, we are to

think of the hurt and mischief that may ensue upon it, and to ballance indifferently, whether it is to be embraced or rejected for conveniency sake.

There are two sort of people, and both infidels, that will find themselves aggriev'd if this design be set on foot. The one is the *Grand Seignior*, into whose country they resort, to barter their *East India* commodities, and make a return of merchandize there exchanged, to the great increase of customs, that accrue to the great turk by it.

The other is the great *Mogul*, king of *Cambaya*, but of late years known to us by the traffick of our merchants: they are the subjects of this king that trade into the *Red Sea*, who besides his customs and other adventures in the voyage, will receive detriment by the loss of his ships, which no doubt will exasperate him.

These are the considerations on which depends the conveniency or inconveniency to ground this voyage upon, Whether the forbearance of that trade by us, or the profit that will redound by it, will carry away the stronger force.

Two ships of his majesty's, for countenance and strength, will be sufficient, with choice of victuals, and other provisions for health; the rest of the ships to be rated in tonnage, according to the proportion that may be judged to contain the goods taken in the ships aforesaid.

### *A Project of the Genoese to have brought the East India Commodities into Muscovy by Land in 1520.*

AS commerce and trade draws a course of people where commodity appears, and by consequence acquaintance, and civility, knowledge of one another's customs and countries, and the ways and means to direct them thither; so did this trade of the *East Indies* most especially, being so lately discovered, and yielding such great wealth and riches, a thing not dreamed of, till time gave light thereof by the *Portuguese* new discovery.

The way, and the nearest way that could be thought of, to attain to the *East Indies*, was after attempted by several nations, sometimes by the cape of *Good Hope*, other some by the *Streights of Magellan*, and then again from *New Spain*, and, lastly, by the north-west passage; which shews a great willingness and desire people had to search out the secrets of those countries, which they found so plentifully stored with all manner of riches.

And because the *Genoese* were a people not much accustomed to voyages in the ocean, wanting both ships, sailors, and harbours,

for such navigations, yet because they would not be accounted slothful or idle, and seeing it was an age of wit, in which every nation sought to exceed one another, they in the year 1520. proposed a journey by land from the *East Indies* to *Muscovy* and *Russia*, and one *Paul Centeraneo*, a merchant of *Genoa*, was employ'd in it, and went with authority from that state to *Basilus*, then king of *Russia*, with offer to bring that trade thither. He shewed the rivers and countries they should travel through, and acquainted him that the *Portuguese*, who served all *Europe* with spices and drugs, brought them by sea, whereby they became mouldy, and lost their true operation and virtue, though indeed it was otherwise; for after the *Portuguese* loaded their goods in their carracks, they never moved or unshipped them, till they arrived at their port of *Lisbon*; as on the contrary, if they should come to *Muscovia*, they were to pass many rivers, where they should unlade, and lade again, to the spoil and loss of their merchandize, besides many dangers

dangers they should suffer by the Arabian thieves, which the king of *Russia* did wisely foresee and consider; and therefore re-

fused and rejected that offer made by *Paul Centeraneo*, and it was never after attempted or proposed.

*A Project how to attain to Tombagatu and Gago, the richest Parts of the World for Gold, seated in Africk, and never yet discovered by Christians.*

MANY and several attempts have been made by the *English* trading into *Guinea*, to arrive at the two places aforesaid, being incited to it by the fame of the abundance of gold they yield, and the fineness of it by the daily proof that is made of it in *Barbary*, whither it is brought in truck of mean commodities.

The king of *Morocco* or *Barbary* yearly sends certain camels, which pass with much hunger, pains, and peril, in going and coming thither; and many times they are taken with violent storms, and southerly winds, which swallow and devour them like the sea; but yet this danger does not hinder the trade, because the profit is so great, that a camel laden with salt will return his load in gold. And this is the encouragement our *Englishmen* have to attempt it by rivers; but have still failed, either by death of the undertakers, by want of victuals, by the encounter of the wild negroes, or shallowness of the water to hinder their passage.

I will set down the errors I conceive of the former undertakings, and deliver my opinion, how it is fitting to enterprize it with little charge or hazard to the actors or adventurers, by example of the *Portuguese* happy and honourable attempt made upon the discovery of the *East Indies*, which gave the first light to all succeeding discoveries, as I have touched in my fourth book.

King *John II.* of *Portugal*, wisely imagining with himself, that the riches of the *East Indies*, brought to us of *Europe* by the way of the *Red Sea*, might have a passage from thence by an open sea, if it could be discovered, and the trade convey'd from thence directly to *Portugal*, without being beholding to infidels, as then we were, he caused timber to be felled to build two small ships for that discovery of the *East Indies*.

In the mean time whilst he was employed in furnishing the pinnaces for this voyage, he employ'd these persons following to discover by land the state of the *Indians*, and to get what light he could to encourage his sea intention.

The first man he employ'd was a *Franciscan* frier; who for want of language returned from *Jerusalem*, without effecting

any thing. The next he sent were two servants of his own, both of them skilful in the *Arabick* language, the one called *Pedro de Govillam*, the other *Alphonso de Pava*. They left *Portugal* the 7th of *May*, 1487. and coming to the *Red Sea*, parted company: *Alphonso* went to *Prefter John's* country, where he died: *Govillam* travelled to *Callicut* and other places of the *East Indies*, where he fully informed himself of those countries.

In his return from thence he met with two *Jews*, the king of *Portugal* had sent to meet and advise him to inform himself thoroughly of the state of the *East Indies*.

One of these two *Jews* he sent back to the king, with a relation of the state of those countries; the other he carried with him to *Ormus*, from whence he sent him likewise to the king with a further relation, and himself travelled to *Prefter John's* country, where the king, whose name was *Alexander*, treated him courteously; who dying, the succeeding king detain'd him prisoner, where he died, and never sent more to the king of *Portugal*.

The king being truly informed by the relation of the two *Jews*, he hastened the preparation of his two ships; which voyage proved successful by the discovery of the *East Indies*. By the example of this land undertaking, we are to prosecute our intention for *Tombagatu and Gago*, and to labour how to arrive at them two places by land, that we may with more ease, after we are there arrived, find out a passage by a river, when the country is made known to us.

The men by whom we are to work our design, must be the black people of that country, whose complexions are suitable to those of *Africk*; for white men would seem monsters to them, and soon be destroyed by them. The climate of the country, the diet, the travels, the avoiding other dangers and inconveniences, the negroes can better suffer than white men can undergo.

Therefore I advise, seeing what we do must be by the travel and endeavours of the negroes of the country, that every *English* ship that goes yearly to *Guinea*, may be enjoined to bring from thence three negroes, with care to treat them civilly and kindly, that

that at their return they may have just cause to commend our usage of them.

These negroes being arrived in *England*, may be sent into several cities and corporations, two or three of them in company together, where they may be set into free schools, to be taught the *English* tongue, to write and read, and the true worship of God, with necessary provision for their apparel and diet; and when they are thus made capable to perform so much as they shall be employ'd about in their own country, then to send them back again, there to follow such instructions as shall be given them, for finding out the way and passage to the two places aforesaid; and after they return from thence, to assign them a place where they shall find a ship and men to entertain them; for the only thing that is to be required in this voyage, is to discover a way to *Tombagatu* and *Gago*, and to know the true state of that country, and a means how to settle a trade with the people thereof.

The rivers by which we must make this attempt, are *Senega* and *Gambia*; and though there be two entrances into them, yet they make but one river, and betwixt them compass an island.

I confess there have been many undertakings by the *English*, to find a passage by

the river to *Tombagatu* and *Gago*, but to little purpose, as it has been carry'd; therefore my design and desire is, that what follows may be put in execution.

Besides the ordinary ships that trade to *Guinea*, and make their return for *England*, I wish that two pinnaces, each of twenty tons, and two substantial shallops, be appointed to follow the discovery in the rivers, to be well manned, sufficiently victualled and armed, to stay out a whole year, with several commodities the negroes desire to have, to allure and entice them to us.

These two barks are to sail so high into the rivers, till they be stopped by shoals, and then to cause the two shallops to proceed further with their oars; for the greater way they go by water, the less journey the negroes shall have to travel by land.

These ships and shallops are to make their aboad thereabouts the space of nine or ten months, and to employ themselves in traffick, to know the state of the country, to learn the condition of the people, to win them by civility; and by consent of them to obtain a place ashore to inhabit and fortify, and make it a rendezvous for a yearly course and trade ever after, as the *Castle de la Mina* is to the *Portuguese*.

### *A Project for a private Voyage to Guinea.*

**T**HERE is much more use to be made of the country of *Africk*, than either we, or any other nation have laboured to find out; which I do impute to the unhealthfulness of the climate, and the neglect of people in not labouring to bring the blacks to civility by courteous handling and treating them, as I have touched in my precedent project.

And because I would have nothing attempted that may not bring a possibility of profit, I here present a private voyage with one ship of two hundred tons, and four or five shallops, to be quartered and carried in her.

It is not unknown to as many as trade to the *East Indies*, what succour they find in the bay of *Saldanna*, near the cape of *Good Hope*, especially of oxen, where there are the greatest abundance, and the biggest of body in the world; and the seas thereabouts afford great quantity of whales, out of which may be made train oil.

My directions in this voyage are to buy and freight a *Holland* ship of two hundred tons burthen, with the number of shallops aforesaid, to carry in her to the value of two thousand or three thousand pound cargo, two hundred ton in cask, with all things necessary to kill and boil the whales; and three or four butchers to slay their beefs.

The place whither they must first resort, is the bay of *Saldanna*, aforesaid; but in their way, to touch at the isle of *May*, at cape *Verde*, there to take salt to save their hides they shall truck for. At their coming to this bay, some of their men must be employ'd in traffick with the *Blacks*; some in killing their cattle for their hides; and others in fishing the whales, and making oil of them. And as they shall find a decay of either oxen or whales, then to remove to the northward, where I doubt not but they shall find a sufficient store of both, as also gold and other rich commodities, to settle a trade ever after.

*A Project how to trade to the West Indies for Tobacco, with the Consent of the King of Spain, or some one Merchant his Subject.*

THE colour of our *English* ships resorting to the *East Indies* in time of peace, is to seek a trade for tobacco; and under that pretence they have committed divers piracies, though the king of *Spain* has used all the strict means and courses possible to avoid that mischief: he has made it death by law, if any of his subjects, either directly or indirectly traffick or have commerce with any foreign nation; and has often used the rigour of that law, as well upon his own subjects that have offended in that kind, as upon strangers with whom they have traded; and yet gain is such a temptation, that in some places the *Spaniards* will not forbear traffick, though they run into imminent danger.

But to take away the occasion of this abuse, and that *England* may be served with better tobacco than any other growing elsewhere; and that the king of *Spain*, for his part, receive no prejudice in his customs for tobacco, this is the way that I devise.

That a merchant of *Spain*, and another of *England*, do make a contract, that the *English* shall take off such a quantity of tobacco, and at a certain rate agreed on, and receive it at one of the *Tercera* islands; which will be an ease to the navigation, having the less way to sail, and by consequence, the less danger of the sea and pirates; and this to be done with a ship of the *Spaniards*, and manned with *Spaniards*; and for such commodities as shall be brought out of *England*, to deliver either at the islands aforesaid, or in any port of *Spain*, at the election of the *Spaniards*; whereby the king of *Spain* shall not be deceived of his custom either going or coming.

When the *Spaniards* have a certain vent

for their tobacco, which is the thing they desire, they will not hazard to trade with any strange nation by stealth; and when the *English* perceive they are out of hope to truck for tobacco in the *Indies*, they will be disappointed of trade, and in a little time make them become strangers in those parts; and this is the reason that must be used for the king of *Spain* to grant his consent to it.

And when we shall be served with tobacco, and shall have proof of the goodness of it, in comparison of the beastly stinking tobacco that comes from other places, people will desire it for wholesomeness, and detest the other; which when our planters at *Virginia*, and other colonies, shall find their tobacco undervalued, it will be a cause that the people will apply themselves to more beneficial labours than they now do, in planting tobacco only.

And because tobacco shall be better used, and made up, to make it the more vendible in *England*, (for the goodness and badness of tobacco consists in the ordering of it,) we desire that two or three *Englishmen*, practised in that art of making up tobacco, may be hired by the *Spaniards*, and carry'd to the *Indies*, to make it merchantable there where it grows; so shall we be sure to serve *England*, with none but choice tobacco, where it will give a better price to the seller, and more content to the buyer.

Both the kingdoms and subjects of *England* and *Spain* will receive benefit by this project, if they be governed by the directions aforesaid; and if there be a question of the king of *Spain*'s consenting to it, it is no more than merchants within themselves may contrive, without making request or suit to either of the two kings.

*An Answer to a Project of the Hollanders for surprizing the Island of Canaria, and that of St. Thome, under the Equinoctial, Anno 1599. in Reproof of some of my Countrymen, who seek to prefer their Actions before ours.*

IT is wonderful to behold and see the mutability and uncertainty of this envious spiteful age of ours; and amongst many intolerable vices that reign, emulation is most rife; for let a man be advanced by virtue in his vocation, as, namely, a scholar to promotion and dignity by his learning, it breeds a secret hate in all scholars against him: the soldier for his service, makes all soldiers envy him inwardly: the courtier preferred by favour of the prince, makes all courtiers

repine at his fortune, and enter into examination of his merit above others, as though they should be judges of their own worth. This shews the corruption of mens minds in our time; for virtue was never envy'd, but by men of vice; nor honour despised, but by them that could not judge of it.

Envy stops not at private grudges; for very often it enflames the hearts of princes against the greatness of other potentates; it reigns in one kingdom against the prosperity

perity and welfare of another ; but this kind of emulation I confess to be tolerable ; for the example of one good prince may make another virtuous ; and the example of one kingdom, make another strive and endeavour to equal it.

But the fault I find, is with this malicious humour you shall find in my ensuing discourse ; where, in this expedition of the *Hollanders*, my countrymen are apter to give them honour, and to attribute good success to them, it being an action of their own, than if they had joined with us.

I know not what to impute it to ; whether envy to others, because they could not be actors themselves ; or a natural love to the *Holland* nation, not perfectly knowing them ; or to their popular government, because they have cast off all subjection to monarchy : but sure I am, that their partiality has discovered a great deal of envy, as they shall know by what follows ; for I will so unmask them, that they shall not deny it.

After their engaging us in a war with *Spain*, it is known, to as many as know any thing, that notwithstanding our prohibition of trade with *Spain*, which continu'd eighteen years, they never committed any hostile act by sea against *Spain*, nor had encounter with fleet or ships of *Spain* ; but to the contrary, supply'd them with all manner of provisions and ammunition against us.

Then seeing there appeared no act of theirs, to commend either their sufficiency of valour, it is strange to me, that my countrymen should extol them above our selves, only out of an imagination of what they would do, but not by proof of what they have done.

This trade of theirs into *Spain* continued all the reign of king *Philip II.* But he dying, and his son succeeding, he caused a general embargo and arrest of all ships within his dominions, which belonged to any parts of the *Netherlands*, that were not obedient to his father's government ; and published an edict, That it should be lawful, from that time forward, to use the same law upon any such ships as should be found in his country.

This was effected accordingly ; and the *Hollanders* being certify'd thereof, knew it was not their advantage to suffer their ships to lie and rot without employment : neither had they means to maintain so many mariners as were in the country, without they had the use of navigation. For these two reasons, and a desire they had to annoy the king of *Spain*, they sent this present year, 1599. seventy three ships to sea, the general whereof was *Peter Van Doist*.

Whilst this preparation of theirs held, there was an overture of peace made to her

majesty by the king of *Spain*, and archduke *Albertus*, which the queen was inclined to hearken to ; but upon the earnest intercession and request of the *Hollanders*, with promise to secure her at home, with their fleet abroad, from any hurt *Spain* should intend against her that present year, she, out of a gracious respect to them, was willing to surcease speech of that treaty for a time.

And now in answer to a book they published at their return from the *Canaries*, which they entitled thus, *The conquest of the Grand Canaries made this last summer by seventy three sail of ships, sent out by the command and direction of the States General of the United Provinces to the coast of Spain, and the Canary islands ; with the taking of a town in the island of Gomera, and the success of part of this fleet in their return homeward, which set sail from Holland the 25th of March, and returned home the 10th of September, 1599.* When you read the two first words, *The Conquest*, you will not think there followeth less than a kingdom ; for commonly it is not a phrase used to any state, but to a kingdom.

The *Grand Canaria*, which they think to blind the ignorant people with, to be a place of so great fame and renown, because of the length of the word in pronunciation, is an island of twelve leagues in length and breadth ; many villages in it, and one town bigger than the rest, called a city, where the bishop's seat is, for all the other islands.

There are in *Number seven* islands ; *Grand Canaria*, *Teneriff*, which is the biggest, wealthiest and strongest, *Palmo*, *Gomera*, *Fuerteventuta*, *Larezarose*, and *Ferro*.

Upon the first discovery of these islands, they were called the *Fortunate*, and now the *Canary Islands* ; and by setting down the *Canaries*, he would have the world think, that they had conquered all the islands ; whereas, if he would have spoken truth, and according to sense, he should have intitled his book, *The surprize, and taking of the city of Palmes in the island of Grand Canaria* : the title of this book is as ridiculous, as if we should write the story of the *Sack of Cadiz*, and intitle it, *The Conquest of Spain*, because *Cadiz* is a city in *Spain*. Thus you see they are people that will set a great gloss upon a small shew.

Their promise made to her majesty at their setting from home, was, to view and search all the harbours upon the coast of *Spain*, and to destroy the king's ships, whereby she should be secured at home.

The first port they fell in withal was the *Groyne*, being guided with a favourable and large wind ; for from *Holland* thither, they were sailing but eleven days ; but when they came

came before the harbour, they behaved themselves so unadvisedly, that the town took the alarm, and was provided to withstand them.

Here lay divers of the king's ships, which they would not attempt, but dishonourably departed; though I must confess they performed half their promise made to the queen, in viewing the harbours; but not the other half in destroying their ships.

If her majesty had rested upon their assurance of safety, and not otherwise provided to stand upon her own guard, I am of opinion the *Spaniards* had sooner visited us, than they them; and yet they stick not to boast, That they cast anchor in twelve or thirteen fathom water, and that the town shot two hundred cannon shot, but killed never a man: they also say they towed out their ships with boats, in despite of their shot; whereas it appears, they lay so far off, that they were in no danger of their shot, or that they were in fee with the gunners not to hurt them, as any man may conjecture.

But it seems they were so much discouraged with looking into this harbour, that they never offered the like to any other upon that coast; but forgetting their promise to the queen, the general made known his purpose to his captains, that he meant to attempt the islands of *Canaria*.

If this project was designed him from home, or that it was left to the discretion of the general to undertake what he thought fit; in the one, the states shewed themselves ignorant in marshal-sea affairs, or the general had no disposition to enterprize the service that might bring danger; for the *Canaries* are known to be of such small importance, that we never held it worth our labour to possess them, though it were many times in our power.

Says the author, "The place of landing was discommodious and difficult, but that most of the enemies were slain, to the number of thirty or thirty six. The lord general leaping first on land, was thrust into the leg with a pike, and had in his body four wounds more, being in great danger to lose his life, but that one of the soldiers slew the *Spaniard* that did it; but his wounds were of small moment."

Gentle reader, first you are to observe, that by their own confession, they had very great difficulty to land; and that before they landed, they slew most of the enemies, which were to the number of thirty or thirty six; then let us think whether it was greater valour in the thirty six, to withstand the twenty four companies, as they report of themselves after, or for the twen-

ty four companies to overcome the thirty six men: after this proportion it was three *Spaniards* to two companies of *Hollanders*.

Then follows a report of their lord general's valour: a lord we will allow him, because the author gives him the title, though, if it were examined, he was no more lord, than they have authority to make a lord: he was the first man, the author says, that leap'd ashore, and received a wound in his leg with a pike, and four in his body, which put him in great danger of his life; but that a soldier slew the *Spaniard* that did it; and that his wounds were of small moment.

Mark the improbability of the one, and the variety of the report of the other: for how is it likely that one soldier should come to the push of pike, upon the general's leaping ashore, and give him so many wounds, having his troops so prepared, that they would not suffer the head of a man to appear? This man's valour far exceeded the thirty six; for he undertook their whole force, being twenty four companies.

The author says the general was in great danger to lose his life; and in the line following, his wounds were of small moment: these two are contraries, and for my part I know not which to believe; but considering the probability of the manner of his hurts, and the contrariety of the state of his wounds, I do verily think the thirty six men could not make the resistance they speak of. Secondly, the general came not to the push of pike at his first landing. And, thirdly, he received not so many wounds, as for his glory they report of him.

After they had thus landed, they followed the victory with great loss to themselves, and little to the enemy, by their own report; for they say, They neither found wealth nor prisoner in the town, their goods being all carried into the mountains, and the people having quitted it, and escaped.

The memorablest thing they did in the town, was the delivery of thirty six prisoners, who reported that two others, one an *Englishman*, the other an *Hollander*, were carried into the mountains, being censured by the inquisition, whom they had not the means to redeem for want of two *Spaniards*.

The author reports, That after the taking of the town, their people committed such disorders in the country, the passages being known to the *Spaniards*, and not to them, that at one time twenty of them were killed; another time they returned with the loss of seventy men, and in the poor island of *Gomera*,

*Gomera* eighty, and made the rest retire; besides, at divers other places they received loss.

This proceeded rather out of disorder amongst themselves, than any unlawful act of the *Spaniards*; for those thus slain, were no less than free-booters that went a robbing, without leave of their officers; tho' the *Hollanders* rail and exclaim against their cruelty, alluding to their names, that the *Canaries* were so call'd, because of *Canes*, the abundance of dogs then found in the island: they say that the people would run as swift as dogs, and were as tyrannical and blood-thirsty as ravening wolves, which they sufficiently manifested; for as soon as they could lay hold on any of their people, like to mad curs, agreeing with their names, they would presently worry them: and they, I confess, had no other remedy but patience; for they took never a *Spaniard* to exercise accustom'd cruelty.

But though they did not sufficiently revenge themselves upon the people, as you have heard, yet they neglected not to rife their cloisters, monasteries, and churches; and not being content with the spoil of them, they destroy'd and burnt them down to the ground. This example they never learnt of us, in the actions they have been with us; for we ever had a respect to the churches, though we differed in religion, and held it was a house of our God as well as theirs, though we serv'd him not both in one kind.

The *Hollanders* are people that will omit nothing for their glory; and amongst many famous acts they have achiev'd in this expedition, they set down the taking of seven fishermen by one of their pinnaces, fishing under *Fuerteventura*, and the general's committing them to prison.

These seven *Spaniards* stood them in great stead for their reputation; for had it not been for the taking of these seven men, they had return'd without manifesting their landing in any part of the king of *Spain's* dominions; not having taken a man before, to have testify'd to the world they had met with an enemy.

After the sack and spoil of the city of *Palmes*, the general embark'd his army, and was willing to perform some other service that was not of danger; and call'd a council of his captains and pilots, enquiring of them which was the weakest island, for there he meant to land: you see he was not desirous to know the wealthiest, but the weakest island; making account where there was wealth, there was strength that would resist them: but he wisely considering that the taking an island, though it was of no importance, yet it would carry a great shew and gloss to the world, (for men would not enter into the value and worth,

but into the name of an island,) did here-upon courageously resolve upon the attempt of *Gomera*, a place of so small account, that they might have been asham'd to undertake it, but especially to publish it in print.

If all our deeds, according to that computation, were publish'd to the world, we have had many ships, not above three in company, that have perform'd greater service; and yet the *Hollanders* stick not to boast that they left the island of *Gomera* burning, which was never done before by any nation.

Some men that know not the state of this poor silly island, would think it were to be compar'd with *Vienna*, which the *Turks* have often assaulted with huge armies, and never had power to prevail against it. And in the same case men may imagine, seeing they did that which was never done by any nation, that it was a place of that invincible strength, as though many armies had attempted it, yet they had never power to prevail against it: whereas, in very truth, this island is poor in wealth, and weak in power, readier to yield to a weak enemy, than to withstand a mean army.

This island was subdued upon the first discovery without fight; all the rest withstood the conquerors; which it is like the general well knew by his demands, which was the weakest island, which embolden'd him upon the enterprize.

Here he found no resistance; for all the people abandoned the town and fled to the mountains, and committed many murders upon the *Hollanders* by their undiscreef straggling.

Once again the general embark'd, and dispatch'd thirty-four of his ships back for *Holland*; and himself with the rest meant to proceed to the *West Indies*: those ships that return'd took two prizes of small value, that had but thirty men in both, which takes up a long discourse in this book I have answer'd. If all our prizes were estimated, and the number set down, since the beginning of our wars with *Spain*, there have been at least six hundred greater and richer vessels brought to *England*, which we think not worthy to boast of: but indeed they are to be excused; for the taking of these two barks, and the thirty men, are the only deeds they did in their project to the *Canaries*.

You have heard, upon the division of the fleet, the general resolved for the *West Indies*; which resolution was suddenly altered, and he directed his course to *St. Thome*, an island under the equinoctial line: what becomes of them, I am not very inquisitive to know, till I see it published in print, as this was;

neither, in my opinion, can they expect any thing but death, the country and climate exceeding all parts of the world for sickness: and I verily believe this latter project to *St. Thome*, was designed by some traitors amongst themselves; for the *Portuguese* that live in that island confess, that no man born in *Europe*, ever liv'd there so long, as to have a white beard, or attain to fifty years of age.

And to conclude, seeing how indiscreetly the *Hollanders* have carry'd themselves in this last action, wherein they have deceiv'd the expectation of all their well-willers, that are not too much transported with partiality, I would not have my country-

men hereafter to magnify them above their worth; but that in reason, without affectation, they will compare the managing their actions with ours, which in discretion they are bound to do; and they shall undoubtedly find great difference betwixt us.

What I have here writ, I protest is neither in malice to the *Hollanders*, nor in partiality to our selves, but out of a sincere love of truth; for I am so far from any detracting humour, that if I can see amendment in them and their actions, I will be as ready to do them honour therein, as I am now willing to defend my countrymen from the scandal of spiteful tongues.

*A Project how to ruin Spain, with the Assistance of Holland, if his Majesty enter into a new War with that Crown.*

IF the king of *Great Britain* declare himself enemy to *Spain*, no man need doubt but that he shall have assistance of *Holland* to join with him in any action against that crown; and then it may be supposed what hurt in time may redound to *Spain* in the *Indies*, if both the nations do really join together, and their designs be well grounded, by example of what hurt the *Hollanders* alone have done the *Spaniards* in *Brazil* and the *Indies*, without the help of any other nation.

And to descend to particulars, there is lately an occasion, and an unavoidable opportunity offered, never thought on by *England* or *Holland*, when they both had wars, and studied how to vex the kingdom of *Spain* by their hostile actions: now, I say, there is a new discovery, wherein the *Indies* may be hazarded, the *Spanish* nation subverted, and all the rule, government, and riches, settled upon us and *Holland*, if we join mutually together, as we have done in sundry other actions heretofore.

The ground of this design stands upon the peopling and planting of an uninhabited island, eighty odd leagues from *Carthagena*, in *Terra Firma*, and not above ten or twelve miles in length, and, as I formerly said, six in breadth, five hundred leagues west from the other islands the *English* now possess, and where there are already seated six thousand able and sufficient soldiers, with their arms, and other habiliments for war, and are like daily to increase, by the forwardness of people that willingly put themselves into such actions.

Such islands as the *English* are seated in are in the hithermost part of *America*, and by which all ships that go to the other islands aforesaid, or to *Terra Firma*, are to pass by, with a certain and settled wind which never fails; and the men that there inhabit,

their bodies are made able and fit to live in such unnatural climates to their former breeding; their hard and evil diet, with drinking water, is made familiar to them, and they are become excellent soldiers.

These people thus planted, will much forward any enterprize that shall be made upon the *Indies*, by the conveniency and little charge to transport them consider'd; as likewise the ability of them, which we may account trebble to as many as we shall carry out of *England*.

But now I will proceed to the design, and to the way how to put it in execution, which may prove the most dangerous plot that was ever intended against *Spain*, since the first discovery of the *Indies*; though at the first apprehension it may seem ridiculous, and rather to be contemn'd than fear'd by the *Spaniards*: but if they will call to mind the precedent of other times, they shall find that their king *Don Rodrigo* and his country was conquer'd in two years by a few barbarous *Moors* not worth naming, and could not be recover'd in seven hundred and seventy odd years of wars after. The like may be said of *England*, when it was subdued and subverted by less than four hundred *Saxons* at the beginning; things not to be believed, but that times and stories make it manifest; and in reason this island may prove as dangerous to the *Indies*, as the others have been to *Spain* and *England*; for it is like a spark of fire, out of which greater fires may be kindled and made unquenchable.

This island, which I have spoken of in my fourth book, is near *Carthagena*, and not far from *Porto Bello*, and *Nombre de Dios*, whither the treasure of the *Indies* is brought first from *Peru* by Sea to *Panama*, and after to the places aforesaid by land, before it be embark'd for *Spain*.

This

This island has of late chang'd her name, from *Carthagena* to *Providentia*, out of a foreseeing providence and care that some well-minded *Englishmen* do owe to their country that have so named it, thinking to work the effect, for which they possess and so call it, as may be gather'd out of a discourse, it being of that importance, by reason of that impregnableness, and the commodity of an harbour, to receive some shipping of a reasonable bigness, and being naturally encompass'd about with rocks and shoals, that it is impossible for any bark or boat to make an enterprize upon it, but only in the harbour, which is so fortified, that no force is able to assail it; inso-much that it may be said of this island, That God has placed it with his finger, to impede and forbid the trade of the *Indies* upon that coast, as aforesaid.

And though this island affords nothing but water for the sustenance of the people that shall inhabit it, yet in a short space it may be supply'd from the *Tortugas*, which we enjoy near *Hispaniola* with hogs and beefs, sufficient to relieve as many men as the circuit of the ground can contain.

But now to the use that can be made of the island: It is to be consider'd, as aforesaid, how dangerous a thing it will be to the *Spaniards* navigations thereabouts. Secondly, that whereas in all our voyages and expeditions in the queen's time to the *Indies*, we have still quailed, because our fleets made their abode out of *England* above six or seven months, going, coming, and staying there, for want of provisions to abide there any longer, but were still forced to return when their greatest service was to be executed.

The use we must put this island to, is to make it a magazine to relieve our greatest enterprizes upon the main land, without either sending or turning back into *England*; for every thing that *England* can supply us with, this island may receive from thence without charge; and the ships thus freighted may return laden with salt that shall cost them nothing, to countervail the expence of their transportation.

Here shall we be fully furnish'd, and all difficulties taken away, to further our enterprize upon the main land; which upon our first landing we must divide our armies into two parts, the one to go to *Panama*, and possess the port of the *South Sea*, whilst the other enjoys *Carthagena* and the *North Coast*; that betwixt them they shall give the greatest blow to all the *Indies* as ever was projected by man, as well *Peru* as *New Spain*.

These places being taken, as it will prove no great difficulty, by example of fewer forces that have done far greater exploits

in the same place, seas, and towns, this is the way for *England* and *Holland* to become masters of that land and sea: for the strength of the *Indies* consists in the people and inhabitants of *Peru* and *New Spain*; the one north, the other south, thousands of miles from thence; which distance will debar them of succours, and all that coast will be left to their own defence; whose weakness the *English* have found in sundry actions heretofore: Or if it be alledged, that their ports and towns are better fortified than they have been; it may be answer'd, that if it were so, yet our army and strength will be twenty times double to that in former times: and that moreover, a country invaded (that relies upon the force of towns and fortifications) by an enemy that commands both land and sea, though it be never so impregnable, in the end must yield.

Leaving some attempts formerly made by our *English* before they were warranted by the war with *Spain*, who then joined with the *Shemeerones*, which are negroes revolted from their masters betwixt *Nombre de Dios* and *Panama*, a place where they seized upon the king's treasure ashore in those times, I will recite some particular exploits done upon the towns of the *Indies*, during the war of queen *Elizabeth*.

*Drake*, with fewer than a thousand men, took *St. Jago* in *Cape Verde*, *St. Domingo* in *Hispaniola*, *Carthagena* in *Terra Firma*, and *St. Antonio* and *St. Hellena* in *Florida*. 1585.

*Drake* and *Hawkins*, with seven hundred and fifty men, took *El Rio de Hacha*, *Rancheria*, *Tapia*, *Santa Maria*, *Nombre de Dios*, and *Porto Bello*; and were forced, for want of supplies, to return for *England*; as if the island of *Providence* had been theirs, the advantage of it foreseen, and they supply'd from it, as is now intended, they had taken *Panama*, and by consequence had an entrance into the *South Sea*; which would have proved the most dangerous design against *Spain* that was ever projected. 1595.

If we call to mind private mens undertakings, captain *Preston*, with one hundred and fifty men, took *Puerto Sancto*, *Clacbo*, the town and fort of *Chapa*, the city of *St. Jago de Leon*, and the town of *Camena*. 1594.

Captain *Parker*, with two small ships and one hundred and eighty men, took *St. Vincent* in *Cape Verde*, *Porto Bello*, and a fort call'd *St. Jago*, with the king's treasure in *Terra Firma*. The same captain *Parker*, in a voyage before, and with fewer men, took one town of importance, call'd *Campeche*. I could repeat many more; but these shall suffice. 1596.

The earl of *Cumberland*, with fewer than one thousand men, took *Puerto Rico*,

a place of great strength and defence, with the loss of twenty eight men. These precedents shew what these places are, or may be made in strength.

And if so few ships, and men could surprize and take so many cities and towns without the countenance or help of the queen, or the assistance of other princes or countries, and in time of war that gave continual alarms to them to provide for enemies, what may *England* and *Holland* now do, joining their forces together, that have the command of more bodies of men, more number of ships, and to be furnished with greater celerity to second their actions, than all the world besides? but especially, having this island that will serve for a key to open the lock of the *Indies*?

But to end with the design of the north sea, which is so distinguished by the *Spaniards*, I will now sail into the *South Sea*, and *Peru*, the fountain out of which the treasures of the *Indies* flow; and will set down the last resolution taken by the projectors, counsellors, and adventurers of this action, which in my opinion seems to be a thing of great reason. They conclude, as upon a matter of great consequence, to take away all occasion of help or succour from *Spain*, is to forbid the ordinary trades of their neighbour countries into *Spain*; which being done, the *Indies* is hopeless of help: and the way to put it in practice, as they conceive, is, to put out a general proclamation throughout *Europe*, for all nations, towns, and cities, to take notice of, that if such countries, towns, and princes, will from thence forward desist from their traffick with *Spain*, with ammunition, victuals, or other abilliments for the war, that then from that day they shall enjoy the immunities and privileges of trade into the *Indies*, as freely as now they do, or have at any time done, in their commerce, of *England* or *Holland*: as to the contrary, if they relieve *Spain* with the commodities aforesaid, they are to stand upon their perils, and not to expect favour. This will debar *Spain* of foreign helps, and be a means to unfurnish them of all materials to fit out fleets; so that the *Indies* will be left to themselves, and the dwellers there to defend them.

The conference and resolution of the treaty aforesaid, provided for all things to be presently put in execution, and to forecast all doubts that might be impediments to them; and they considered how easy a thing it was to go through the work they had projected: so on the other side, they weighed, that the substance of the wealth of the *Indies*, was thousands of miles from *Panama*, whither it was brought by sea, not having means or passage to transport it by

land; and therefore conclude, that the ruin of *Spain* in the *Indies*, was to have an entrance and command of the *South Sea*.

They know the condition of that sea, and all the harbours and towns inhabited and possessed by the *Spaniards*, from *Chile* and *Peru*, till they arrive at the ports of *Navidad* and *Acapulco* in *New Spain*, which are the harbours whither *Mexico*, and all that coast send their commodities, as well into the ports of *America*, as into the *Philippine* island; and that by the taking those ports, the whole country of *New Spain* must necessarily submit and yield.

They are not ignorant, that though that sea affords ships for trade from port to port, yet they and their ships are shut up from any other traffick out of that sea, by reason of the *Streights* of *Magellan*; and that the ships there built, are made only for merchandize, not for defence and strength, not one of them carrying one piece of ordnance.

They likewise know, that the *Spaniards* thereabouts are rich, and unaccustomed to war; that if they may have good conditions for life and goods, they may be easily drawn to live under our subjection and government.

They moreover know the evil disposition the people of those countries bear to the *Spaniards*, and how willingly they will be drawn to join with us against them; and to join the one and the other more heartily to the invaders party, they resolve to make a publick act and decree, *That all Indians, as well the one as the other, shall be freed from their labours; their slaveries, and forced tyrannies.* And because the *Spaniards* shall have no dependency or necessity of the help of *Spain*, it shall be lawful for all men to plant wine, oil, and other commodities they desire. It shall be also as lawful for them to enjoy their religion, as in former times. These will be motives and reasons sufficient, as well to draw the one as the other to the government of *England* and *Holland*, when all the possibility of relief shall be taken from them.

For the effecting of this they determine to send forty or fifty warlike ships into the *South Sea* by the *Streights* of *Magellan*, which shall carry a sufficient number of men to perform their design, with all manner of ordnance, with ammunition to strengthen the shores and ships; no part but shall be possessed, strengthened, and inhabited by us, till we come to *Panama*, where they shall find it planted and enjoy'd by their countrymen in as good a manner, as though they should arrive in *England* or *Holland*; and from thence they may easily pass to the ports aforesaid of *Navidad* and *Acapulco* in  
New

*New Spain*, and conclude an absolute conquest of the *Indies*; they may say as *Julius Cæsar* said, *I came, I saw, and I overcame*.

And because this counsel and resolution shall not seem vain, by example of the north seas aforesaid, where I have made a repetition of such towns and ports as have been taken by the *English*, so I will do the like in the *South Sea*, by one ship alone that departed *England* in 1586. and upon all occasions and services could land but eighty men.

The first exploit he did, was by taking away certain ordnance from a port, built by *Peter Sermiento* in the *Streights* of *Ma-*

*gellan*; where he found all the people dead, except three only. Sailing from thence to *Chile*, he took *Santa Maria*; he took and spoiled *Marmaroma*, *Arica*, *Pijca*, *Paraca*, *Cheripa*, *Paito*, the islands of *Puna*, a place of great importance for the building and trimming of ships; and arriving at *New Spain*, he took and spoiled *Acapulco*, the port of *Navidad*, the port of *St. Jago*, the bay of *Compostella*, the island of *St. Ambrose*, and the bay of *Massaclam*. And therefore let no man doubt that any part of that coast or seas can resist forty or fifty sail of ships sent from hence.

### *Projects for the Spaniards to annoy the Hollanders in several Trades.*

#### *The first Project.*

THE *Hollanders* have compassed a great and beneficial trade into several places of *Guinea*, which antiently belonged to the *Portuguese*, as the first discoverers of them: the *Hollanders* now resort thither daily, and are well accepted of by the negroes of that country, who bring them gold, and divers other rich commodities, in truck for their slight merchandize.

The project to hinder the trade of the *Hollanders*, and quite to banish them from that coast, is, to furnish as men of war, six or seven of those ships they ordinarily send to *Brazil* well mann'd; and these in their way to range along the coast of *Guinea*, where they shall undoubtedly meet and take the *Holland* ships that trade there in several parts and ports, as is apparent, having neither port, nor other strength to resist them. Or if it shall happen that they have made any defence on shore by the assistance of the negroes, they may easily supplant them with the soldiers they carry with them; whereas by giving them a longer time to inhabit that coast, it would become a more difficult enterprize to subdue them, by the example of the *Hollanders* possessing divers places in the *East Indies*, which at the first might have been prevented.

If the *Hollanders* be but once thus served, it will be a means to make them quit that coast, and clearly thrust them out of *Guinea*: for *Guinea* is not like the *East Indies*, where the *Hollanders* maintain an hundred ships by their several trades in sundry parts, as well those places they enjoy, as the others that accept of their commerce; whereas in *Guinea*, the traffick is but in particular places, whither the merchandize is brought them by negroes from afar off within the land, which cannot be of any great bulk, for want of carriage of ships or boats; neither are they design'd any particular harbour, as the *Portuguese* are at *Castle de la Mina*.

VOL. III.

The *Hollanders* have as litte hope of robbing and spoiling the *Portuguese*, because their trade is but small, and their ships few, whereby they are not able to maintain footing in that country, without greater expence than the profit will countervail: six or seven ships of *Portugal* will be a sufficient strength to drive them out of *Guinea*, those ships to range along the coast, and cut them off where they shall find them trading in their several places.

My project is, after they are thus destroy'd, that the six or seven ships of *Portugal* stand over to *Brazil*, and there take their freights of sugar, and other rich commodities, which, considering the safety and waftage by those ships of war, will be a means to ease the expence in furnishing the ships of war.

#### *The second Project to Russia.*

The north part of *Russia* was but a thing imagined, till *Sebastian Cabott*, by his persuasions in the reign of queen *Mary*, drew *England* to the discovery of it, Anno 1553. which enjoy'd the absolute trade thereof for many years, till the *Hollanders* encroached upon us, as they have done in all other trades, as I have said in my sixth book. In continuance of time the *Hollanders*, have increased from two ships to one hundred, as is apparent by so many as they yearly send; and have made a greater use of the country than to merchandize alone; for they have set up a trade of making cables, ropes, and other cordage in such abundance, that they outdo all other places in the *Baltick Sea*; and from hence they directly serve *Spain* with those commodities: and because the passage being through our channel, in time of war they feared to be intercepted by us, they directed their course to the north part of *Scotland* and *Ireland*, purposely to avoid us.

The advantage *Spain* is to take of them in this project, is to carry their designs dis-

5 X cretely

creetly and secretly; to be provided of pilots without suspicion or noise, which must be done out of *England*; for no other christian country trades into *Russia* but we and the *Hollanders*; and though their harbours are dangerous at their going in, by reason of their bar, yet it is familiar with the pilots that use it. The force the *Hollanders* have to guard their hundred sail of ships, is commonly three or four men of war, who suspect no annoyance from *Spain* at any time; and by these three or four ships you may judge of the strength you are to employ against them: though I advise you carry no less than thirty sail of ships, well manned, to man the *Hollanders* after you have taken them.

Besides the command you shall have over the ships aforesaid, you shall possess their storehouses, cellars, yards, and what else belongs to them, and spoil them, that they be never able to erect more, without an infinite charge.

The third consideration, is the season of the year; for they must cast to be at *St. Nicholas* by the 10th or 12th of *July*; for no longer than the 17th of *August* they can well abide there, by reason of the winter so suddenly coming upon them: or if they shall arrive earlier than the 12th or 14th of that month, perhaps they may come with the soonest, and find their goods not shipped; but though they should, it will not be very material, for they may row up with their boats to *Palmogro*, eighty miles distance, where the greatest part of their commodities are made, and shall either meet them in their transportation to the ships, or possess them on shore, where they shall undoubtedly find them.

Or if upon any other accident the *Spanish* ships shall not arrive at the port of *St. Nicholas*, before the others put out to sea, then they may stand to the north cape of *Norway*, and there lie off and on the headland, which the *Hollanders* must of necessity see and double, before they can direct their course for *Holland*:

If *Russia* were a country in league with *Spain*, or otherwise had correspondence or friendship with them in commerce and traffick, then I confess it were against the laws of nations and honour, to offer violence to an enemy within the port of another prince, when they are under his protection. But I could never understand, that ever leagues were treated of, or trade maintained betwixt *Russia* and *Spain*, or ambassadors employ'd, or other obligations of friendship, since king *Philip* was king of *England*; and therefore the king of *Spain* can be no more taxed or blamed, if he used this opportunity upon his enemy, that is offered him by this proposition, especially when none of his sub-

jects can receive prejudice or fear of hurt, or embargo to be made upon their persons or goods.

Let the *Spanish* commander, at his arrival in the road of *St. Nicholas*, have a care to summon such *English* ships as he shall there find in harbour, and to admonish them to forbear offering violence, or making other resistance in defence of the *Hollanders* ships; and let them understand in a friendly way, how they are to carry themselves by the articles of peace, which they may carry and shew them; and withal to tell them roundly, if they exceed their commission therein, that justice will be required at their hands by their ambassador residing in *England*, who will be sure to prosecute it with all rigour and severity: and in the *Spanish* fleets behalf, let the general give assurance, no way to impeach the *English*, or by any direct or indirect means to trouble or molest their peaceable traffick.

This project prevailing, the *Spaniards* will be enriched with one hundred sail of *Holland* ships, and their lading; great part whereof is cordage, and other things of considerable value, which *Spain* has most need to be furnished with, and need not hereafter be beholding to friends for them.

#### *A Rutter of Russia.*

He that will direct his course from *Spain* to the north cape of *Norway*, must steer a northerly course, till he arrive to *Iceland*, where upon occasion he may refresh himself with butter, flesh, and fish, and from thence steer away E. N. E. for the north cape.

From the north cape to the north *Kave*, E. and by S. thirteen leagues.

Thence to *Marcroft*, E. S. E. twelve leagues.

Thence to *Wardhouse*, S. E. fifteen leagues.

Here you may have your self from *Wardhouse*, to the point of *Kegro*, E. S. E. eleven leagues; no good road for great ships.

From *Kegro* to *Zouse*, S. E. nine leagues.

From the seven islands to *Swetnos*, twenty one leagues: there are islands where you may anchor.

From *Swetnos* to *Lombasco*, S. S. E. thirteen leagues.

From thence to *Orgolouse*, S. S. E. seven leagues.

From *Orgolouse* to cape *Caudenos*, N. E. forty seven leagues; but you must sail from the three islands to *Cross Island*, S. S. W. thirteen leagues.

From thence to *Calmouse Archangel*, and by W. seventeen leagues on this side of *Archangel* is *St. Nicholas*.

*The Third Project.*

That the *Spaniards* may practice against the *Hollanders*, and to be as easily effected as the rest, and of greater consequence than all the others, is a design against their fishing; which all men know is a means to uphold their state, to increase their ships, and to multiply their wealth; in which, if at any time they be prevented, or intercepted, they become more miserable than all other people, in that they shall be made a prey to their enemies.

This fishing I formerly treated of, with the condition of the *Hollanders* that only enjoy it by our permission: now will I proceed to the design upon them, for the *Spaniards* to execute, so it be with the approbation and sufferance of the king of *England*.

I have already declared the place of rendezvous, where the *Hollanders* meet; as also the time of the year, the month, and day, when they begun to fish, with the profit they make of it: the place of rendezvous is *Blazownde* in *Shutland*, an island in his majesty's jurisdiction of *Scotland*; thither commonly resort one thousand or more fishing vessels, called *busses*, which, by a law made amongst themselves in *Holland*, cannot put forth line or net to fish, till the 24th of *June*.

And therefore the *Spaniard* must so cast, as to be at *Blazownde* before that time, or at least two days, to take an opportunity before the others going out of harbour; which, if they have a care effectually to accomplish, they shall bring both the persons of the *Hollanders* and their ships to their mercy. And after this is effected, I need not teach

the *Spaniards* how to carry their business, or what conditions to make with the *Hollanders*; for they shall have time sufficient to compass their ends, after they have them in their power.

*The Fourth Project,*

Is for the king of *Spain* to keep a constant squadron of ten or twelve ships, choice failors, upon his own coast: they will be able to keep the *French*, the *Hollanders*, and the *Turks* pirates, from the incursions they usually make upon that coast, and put them to look their prey in a vast and open sea, which is as uncertain of meeting ships, as the finding a needle in a bottle of hay; for I have often shewed, if capes and headlands be well defended, the others will not be worth the cost and charges they shall be put to.

Besides the service done against ships of war in this manner aforesaid, they will secure their own trades, and impeach all such *Hollanders*, that shall go in or come out of the *Streights*, if they keep a squadron twelve or fourteen leagues south from cape *St. Vincent*, and spread themselves north and south a league and more in distance from one another; one ship of *Holland* that shall be taken in their course out of the *Streights*, will countervail the charge of a whole squadron for many months; and the example of it, seeing their good success will encourage the *Spaniards* to keep ships continually thus employ'd.

Here I end my projects, till I have occasion to speak of them again; and now shall follow my stratagems.

*Stratagems to be used at Sea.*

1. **A** Fleet that is bound to a port, and fears to meet an enemy, may avoid him by this stratagem following: Besides such pinnaces as must be sent to look out the ships expected, to give them warning of an enemy, they ought to have other pinnaces, choice failors, that should attend the enemies fleet; and finding they lie in a height, the others have order to sail in, to draw near them, and to entice them to chase them; and in pursuit of them, they will be drawn to leeward, and give passage for their fleet's entrance.

2. But if this prevail not, they may cause one of their pinnaces to be purposely taken to deceive them with false instructions; as for example, If their fleet have order to come home in thirty seven degrees; the enemy finding those directions, will not

suspect a deceit, but will stand into thirty seven degrees, when the others will come home in thirty six, the height former assigned them, and so avoid them.

3. Or if a fleet be sent out for guard of those ships expected, and not so good of sail as their enemy, to force them to quit their coast, it were better such a fleet should lie in a contrary height to that their ships have directions to sail in, than otherwise; for the enemy finding in what height they lie in, will verily believe they have orders to come home in the same height, and will strive to meet them in that height, before they shall join together, when the others have directions not to come within forty or fifty leagues of them.

4. If

4. If fleets shall meet in the night, or after an encounter they forbear fighting when it is dark, and one of them have a desire to quit the other, they may cause so many lights as usually their admiral, or other ships, carry in the night, to be carry'd by pinnaces in such a height as may equal the poop of their ships; and the enemy accompanying those lights, will not suspect the flight of the fleet, who in the mean time may convey themselves away, and leave only the pinnaces behind them.

5. If a fleet will deceive an enemy of a less force, that is so far to windward, that they cannot fetch them, they may do it with counterfeit flags, and working like merchants ships; and for a bait, may appoint part of a fleet to chace another stern, and the chaser to wear the enemies colours.

The ships must shoot, but miss one another; which they to windward spying, will come home in hope to have a part of the booty, and so be brought into the wake of the fleet, and entrapped.

6. This stratagem will serve as well for a road, to cause in the like manner one ship to chace another, as though she that is chased, laboured to recover the road: and a flag seeming to be a friend, may embolden them to go forth to the rescue of her, and so fall into the laps of the enemy.

7. People are not so easily deceived with counterfeit flags, as they have been; for the often practice of such stratagems, makes men more cautious: we were wont to make it a common custom, after we had taken a *Spanish* carvel, to cloth our men with the others garments, and to send them into the harbours of *Spain* to be informed of the state of their shipping.

8. In 1587. and the first time I went to sea as captain, I had two pinnaces, and one *Spanish* frigate with me: the frigate took a *Portuguese*, and after was robbed herself by a *French* ship of war: out of necessity this frigate was forced into the harbour of *Setuval* in *Portugal*, and the people seeing her *Portuguese* built, and the men attir'd in the habits of the *Portuguese* they had formerly taken, and having a *Portuguese* aboard with them, that came out of *England*, and whom they trusted, they were supply'd with what they wanted from the shore, and departed without suspicion.

9. One night I came into the road of *Cezimbra*, pretending to be a *Flemming* bound to *Setuval* to lade salt, and desired a pilot; under which colour I deceived the pilot, and divers other boats and barks that came aboard me, by whom I understood the state of the fleet at *Lisbon*, ready to set to sea in pursuit of me. I could recite many stratagems of this kind.

10. If a fleet intend an attempt upon an harbour, where a strong fort may impeach their entrance, by example of *Lisbon*, and the castle of *St. Julian's*, the stratagem is to set two or three old vessels on fire, fitted with all manner of necessaries to make a smoke, and to run them ashore under the castle, that the gunners may not see a ship, much less have an aim at them, and so they may pass without danger.

11. What stratagems may be used against such ships as are entred a harbour, and how to prevent it, I have expressed in the second book, where I treated of the last expedition at *Cadiz*, in 1625.

And because I have named *Lisbon*, I will set down a stratagem I had in mind after my imprisonment there.

12. Both many years before and after I was prisoner in *Lisbon*, the *Hollanders* had a free trade into all parts of *Spain*, which I took advantage of in this stratagem following: I devised that twenty *Holland* ships freighted with merchandize, under the colour of merchants, should repair to *Lisbon*, and that every ship should have a number of men secretly hid in them; and when they came to anchor at *Belem*, which they generally do, and are viewed by the king's officers, these men should not appear; and after their discharge from *Belem*, I had order'd that every ship should ride as near the king's palace at *Lisbon*, as conveniently they could; and that in the night when there was no suspicion of them, and the galleons had no more men on board than the ship-keepers, the *Hollanders* should sheer aboard, possess, and burn them; for they were sure to find no resistance: after this was done, there was no danger of their coming out; for it is an ordinary thing for ships to pass *Belem* in despite of the castle.

13. If a ship fall into company of a fleet at night, it is necessary to have a sudden and a ready answer; as also two or three of the nation to speak as they shall be directed; as for example, and as you shall read in my last voyage in the queen's time, how in the night I lighted amongst twenty four galleons of *Spain*, and being so nigh the admiral, I could not avoid her, had I been known to be an enemy, I commanded a *Spaniard* that served me to call the admiral, and tell him there was a strange ship entred amongst our fleet, which of all others he could not suspect mine, because of the warning I gave him; and in mean time I tacked from him, and so escaped in a secret manner, making no noise.

14. In the island expedition I met the *Indies* fleet, and it blowing little wind, I went off in my boat to descry them: when I perceived what they were, I made my self

self and ship known to them, urging them to pursue me; which if they had done, I had brought them into the wake of my lord of *Essex* and his fleet, from whom I departed but three hours before, where they had been taken, and the state of *Spain* utterly destroy'd.

15. It is a common use when ships are scattered, and chance to meet in the night, not knowing one another, to hail one another in a strange language, which I disapprove, as a thing dangerous; for the other being satisfied by his tongue, not to be his consort, or of his country, prepares to fight; and thus had it like to fall out with me: the *Mary-Rose* and I meeting one night, after we had lost company, one of my company hailed her in *Spanish* without my privity, whereat I was angry, and caused her to be called to in *English*, even as she was giving fire to her broad-side. It is folly in this case to counterfeit; for no good can come of it, seeing the one cannot part from the other, without knowing what they are.

16. The signs that direct a fleet in the day-time, are striking, or hoisting the top-sails, shewing their flag, or shooting their ordnance; by shewing lights in the night, many times I have known when a ship hath lighted in company of an enemy, that by chance she has made the very same sign given by the general, by which means she has escaped; and in the like manner ships have been taken by the same fortune: therefore there cannot be a better stratagem than when a ship shall make a sign, to be answered by the same; and the contrary ship begin a new sign, before the other make any; for it is not to be doubted, but the other ship will answer every sign that shall be made by her that makes the first.

17. I once knew an unlikely stratagem take good effect, in this manner; After three days chase of a rich ship, my lord of *Cumberland* was out of hopes of fetching her up, she was so far to windward, only a pinnace kept her company, and in the night carry'd a light for us to follow. I advised my lord to fire a culverin at her, though we could not fetch her at twice, saying, that perhaps she would yield to the countenance of the ship, that would not for shame do it to a pinnace. This seemed ridiculous; and I had much a-do to persuade my lord; yet upon my importunity he yielded to it, and the ship, as I foretold, submitted her self.

18. A ship that is chased and desires to shew fear, thinking to draw her that chases into her clutches, must counterfeit and work as though she were distressed, and lie like a wreck into the sea; she must cast dregs, hogheads, and other things overboard, to

hinder her way; she must shew no more men than an ordinary gang, and haul in her ordnance, and shut her ports, that her forces be not discerned, till the other ship come within command of her.

19. As ships ought to observe their admiral's working in the night, by his light, so ought they to be more careful when they are nigh a shore, lest they mistake a light on land, instead of their admiral, by example of 1597. when the *Adelantado* drew down his fleet from *Lisbon* to the *Groynes*, and coming nigh the north cape, the greatest part of the fleet steered with a light on the shore, mistaking their admiral, and cast away thirty six ships and five thousand men.

20. As lights direct one another at sea, so are they directors of ships from the shore, as I can instance in many cases, some of which I have already declared; to which I refer you.

21. Lights kept in the night off of a headland, as the *Lizard*, or such capes, are a safeguard to ships in their passage, that are in view of them. Lights likewise give warning of an enemy that is upon a coast, and for that use beacons were invented.

22. Ships that are appointed for more readiness of a service to ride in the sound of *Plimouth*, in the range of *Dartmouth*, or other roads upon our coast, and in the night are suddenly taken with a storm at south, which is a deadly wind in those roads, if lights be placed on either of the sides of the point of *Catwater* or *Dartmouth*, will be guided into the harbour, be it never so dark.

23. In a barred harbour, such as *Dunkirk*, that is continually beleaguered by an enemy, by keeping lights from half-tide to half-tide, he that enters, is directed how the tide increases or decreases, and thereby how to avoid the enemy.

24. Ships riding at the *Downs*, and fearing a surprize from an enemy in the night, with a southerly wind, by placing two boats with lights on either side of the brake, will direct one how to pass the channel, and avoid the sands; which being done, and the lights taken away, the ships that pursue them will run upon their death if they follow.

25. The cutting down mills, trees, taking away buoys, or other marks that direct the pilot, is a great safety to any port, or place, such as the *Thames*, where many sands must be passed.

26. The placing of ships for the advantage of wind, is a matter of great consequence; as for example, if an invasion against *England* be intended from the southward, that wind that brings an enemy for *England*, will keep in our ships in harbour, that they cannot stir out; only one place is advantageous to us, which is

*Limehouse* near *Plimouth*; for that wind that brings an enemy from the westward or southward, will serve our ships that lie in *Limehouse* to follow them, if they pass into any part of our channel to the eastward.

27. Prospective glasses, if they were not so common, were an excellent stratagem to be used in many cases at sea, and yet it is no hard thing to deceive those that use them; for a merchant-ship that carries not above ten or twelve men, may have the shapes of men made, and seem to be one hundred afar off; they likewise may have counterfeit guns made of wood, which the glass cannot discover from iron, to the terror of the assailant. It may as well serve for a man of war to stow his men in hold till a ship come near him.

28. The best and the greatest ship in the world may be sunk by a bark of twenty tons by this stratagem, *viz.* to place a cannon in the hold of a bark with her mouth to the side of the ship the bark shall board, and then to give fire to the cannon which is stowed under water, and they shall both instantly sink; the man that shall execute this stratagem may escape in a small boat hauled on the other side of the bark.

29. Two galleons may be manned, and furnished in the manner following, and will be as great a guard and safety to a fleet of galleys as the wings of an eagle to little birds, or a castle to a ship.

The two galleons shall carry each of them one thousand men, with all kind of arms for offence and defence: there shall be placed aloft such kind of fowlers as I will invent.

Their hatches shall be made with trapdoors, and pikes placed under them, that as fast as men enter they shall fall upon the pikes so placed; all the deck shall be strew'd with round pease tallow'd, that treading upon them, no man shall be able to stand upon his feet; the ships on the outside to be stuck with tenter-hooks, that they shall take no hold to enter with their hands; and their cloaths will stick upon the tenter-hooks, that they shall not be able to enter: there shall be barricadoes, and close fights made with all advantage, and all parts of the ship be made musket-proof for the safeguard of men.

Allow by the water and without board they shall be fortify'd with packs of wooll, that no shot shall pierce them, or galleys be able to board them; every ship shall have upon his yard-arm a barrel or two of gunpowder mixed with bullets, that as the galleys shall approach the distance of the yard, the barrel of powder shall be let fall with a pulley, and matches about the bar-

rel that shall give fire upon the fall, and breaking of the barrel: in this manner will the galley be burnt, and the men slain all at one instant.

30. If galleys attend a fleet of ships, thinking to cut off some stragglers, as they did to Sir *Francis Drake*, and after to us at *Cadiz*, where they took some few vessels; in such a case, the great ships must be a guard of the outside of the fleet to the lesser ships; and if the fleet chance to anchor, to place the least and weakest vessels outermost of the fleet in the day-time, which will imbolden the galleys in the night to assail them; but when the darkness of the night shall approach, then to remove them, and in their place to cause the best and the greatest ships of the fleet to anchor where the others did, that if the galleys attempt them they shall be entertain'd to their loss.

31. If a ship will board an enemy under a castle, let him that boards bring the ship boarded betwixt him and the castle; for then dares not the castle fire for hazarding their own ship boarded.

32. Sinking of ships full of stones is an old invention, and used as well to defend one's self in a barr'd harbour, as by an enemy to keep in ships from going out: but it is to little purpose to him that possesses a harbour; for when the water is decreased, such ships sunk may be waded to, the stones taken out, and the ships burnt without hurt to themselves or harbour.

33. Booming harbours for the safeguard of ships is usual; but at each end of the boom sconces must be built to defend it. For this I refer you to my first book, which will give you more particular light.

34. One of the known dangers in a ship of great burthen, and in a great storm, that carries weighty ordnance, is the breaking loose of one of her pieces in the lower tire; for before she can be muffled, or overcome by force of men, what with the rowling of the ship from one side to the other, the piece will carry the ship side, and founder her in the sea.

35. For avoiding these perils, there is but one remedy, if it take effect, which is suddenly to heave up the hatches of the deck, that in her recoil she may find the deck open, and fall into the hold, where she shall be easily overmaster'd.

I am of opinion, if any had escap'd aboard the king of *Spain's* ships that were wreck'd, which was impossible, they would confess the breaking loose of their ordnance was the occasion of their destruction; and no marvel, for they use to carry their great ordnance upon field-carriages, which makes them the more dangerous and unserviceable, when they come to traverse them.

36. If there could be made a ball of wildfire, as I have heard some take upon them to do it, which ball should burn without quenching, then were it an easy thing to convey one of those balls secretly into a ship, and privately to hide it till the party be gone out of the ship, which then being set on fire, will not only burn the said ship, but all others near her.

37. In passing a fort in the night, it is good to make both the ship and sails black, with a care that no light be seen in her: but the way for an enemy to prevent an entrance is this, to make a fire opposite to the fort, and to lay the ordnance point blank with the fire, that when they shall see the shadow of the fire taken from them by the ship and sails, then to discharge their ordnance, and be sure to sink the ship.

38. A ship that will keep another from boarding her, she being to windward, and may board her, the remedy is, to put forth two masts at two ports, that the ship coveting to board, she shall light upon the masts, and keep her from coming near the ship.

39. It is a good stratagem to board a ship though she presently fall off again; and during the time she is on board to appoint the carpenters with their axes to cut the port-ropes of the ships boarded, that at her coming off again, when she shall begin a new fight, her pieces may serve for no purpose, because her ports will be clogged, and not able to put forth a piece of ordnance, but lie to be annoyed by the enemy.

40. A number of ships lying in an harbour dry, from half-tide to half-tide, may be thus destroy'd: As I will make a comparison betwixt *England, Flanders, and France*, where two of them have wars with one another, and the third peace with both; I will suppose that a ship of *France*, and a man in her that I will trust, freighted for *Dunkirk*, where *English* barks are forbid to go; the bark is to be laden with deals, and other dry substance apt to burn, and under her boards there must be stow'd pitch, tar, rosin, and other ingredients not to be quenched: the *Frenchman* that shall execute this stratagem, must forecast at his entrance into the harbour to seek to lie aboard the best ships, and where he may do the most hurt and spoil to the rest when his ship is on fire.

All things being thus provided, and the train sufficiently made, the *Frenchman* must watch his opportunity that his match come to the train by that time it is low water, which he may compute by hours and the length of his match; and in that time he may have his horse in readiness to carry him over the river of *Gravelin*, but nine

miles from thence, where he will be in *France*, and free from danger.

The fire thus taking, and all things order'd by these directions, as well this ship as all others in the harbour will be destroy'd; for the water going from the ships, and they lying dry, they are not able to remove or stir, or have water to quench the fire till the flood rise; so that in the mean time they will be utterly destroy'd.

41. If ships desire to surprize a fort or sconce that would give them landing if it were taken, it is thus to be done: To imbarck the men secretly in their boats in the night, and without noise of their oars, and then to row as near the fort as they can, without being discover'd; and in the mean time to cause a small boat, not near the place where the others are, to shew a light or two with a match, as though it were accidentally done and not willingly, and to leave the boat adrift; which the fort perceiving, will presently let fly her ordnance against her; which the other boats seeing, they may suddenly land and enter the sconce by their scaling-ladders, before their ordnance can be laden again.

42. If an enemy should land in boats upon a shore, that the surge of the sea should be very inconvenient for the landing of themselves and arms, there is a kind of bridge to be made with boards, that may be laid over from the side of the boat to the land, and avoid the surge; and instead of wading, their men may go in ranks ashore without wetting.

43. If an army shall land where the shore is all beachy, and full of little stones, like *Deal* and the castles thereabouts, where they may bring ordnance to impeach the enemy's landing, I would advise, that the artillery shoot not so much at their boats, but suffer them to come on shore, and then to let fly at the stones or hills piled up on purpose in heaps, that will scatter and disperse, as not a man will be left alive.

44. A ship that desires to be boarded, and to be enter'd by his enemy, may use this stratagem; To haul in all his ordnance, to shut his ports, to hide his men, to strike his sails, and make all the signs of yielding; which the enemy perceiving, will be embolden'd to board him; and whilst they are suffer'd to enter and pillage, the defendants may suddenly rise, subdue and master them.

45. If an enemy sink ships to keep in others from going out, such ships sunk may be suddenly weigh'd, if the assailant quit the harbour, without any great detriment to the ship sunk; therefore they are to make choice of the shallowest place to sink their

their ships, and neareſt to deep water, where their own ſhips may ride and float, that with their ordnance you may keep the ſhip ſunk, that no boat, or other help, can weigh them; themſelves ſhall be kept from any danger of firing; for no enemy can approach them, ſo long as the ſhips ſunk lie there.

46. There is a ſtratagem as old as the invention of ſhips, though the common people attribute it to the wit of Sir *Francis Drake*, at *Cadiz*, in 1588. againſt the *Spaniards*, to fill old ſhips and veſſels with pitch, tar, train-oil, brimſtone, reeds, dry wood, and to join three or four of theſe ſhips together in the night, and then turn them a-drift with the tide, where the enemy's fleet rides, and either burn or diſperſe them, after they are thus put from their anchorage.

47. At my being at ſea in my youth, 1585. two ſmall ſhips of us accompanied together, we met a ſtrong and obſtinate ſhip of *Holland*, who refuſed to ſtrike his flag, or to ſhew his cocket: this ſhip had in her an *Engliſh* pilot, by whom we expoſtulated with the *Hollander*, without any ſemblance of boarding her; but being very nigh her our maſter cry'd to the man at helm, with great anger, to port the helm, leſt we ſhould come foul of her; but privately he gave charge to the helmsmen, to put his helm a-ſtar-board, when he ſhould have put it port, and cry'd with great vehemency to the *Engliſh* pilot to bear up; for our ſhip came againſt her helm, and willed them to get fenders, and have ſpikes to fend off, leſt we ſhould come foul of her: the *Hollanders* thought all we ſaid was true, and every one of them put their helping hand to keep off our ſhip with fenders and oars, not apprehending our intention; and when we ſaw their people thus employ'd, and not to have time to take arms, we ſuddenly boarded, entered, and took her by this ſtratagem.

48. As the greateſt advantage of a fleet of ſhips of war is to have intelligence of their enemy when they come upon their coaſt, ſo the way to obtain it, arriving upon the coaſt of *Spain*, is to let a ſhip's boat lie under the iſland of *Burlings*, where they ſhall not fail, by break of day in the morning, to take fiſhermen that will be able to inform them of the ſtate of things aſhore: it may as well ſerve for any other place, if they ſee fair weather in hand.

My lord of *Cumberland*, arriving upon the coaſt of *Spain*, was fore diſtreſſed for intelligence; and a ſudden calm ariſing, two or three leagues from us we ſpied two carvels; whereupon I put myſelf into the ſhip's boat, and rowed to them; one of them I took, the other might have eſcaped, but by this ſtratagem I prevented her: I took

out two or three of her men, and manned her with my own company, and immediately without delay ſent her to meet with her confort, who made ſigns that they might think her diſcharged, and rowed my boat on board the ſhip that there ſhould be no ſuſpicion; ſo that the carvel was thus taken by deceit, which otherwiſe might have eſcaped; but when I had ſo much as I deſired for intelligence at their hands, I diſmiſſed them, and after found, I being taken myſelf, that they reported well of my good uſage of them.

50. I had a ſtratagem upon prince cardinal *Albert*, when he was viceroy of *Portugal*, but was prevented by his ſudden going into the low countries; and thus it was: When I was priſoner in the galleys, about the 10th of *September*, the cardinal paſſed down to a pleaſant houſe called *Cintra*, with a ſmall train, where he ſpent his time in devotion. Uſually he repaired thither at the ſame time of the year, and to the ſame purpoſe; which I well obſerved, and meant, if ever God gave me liberty, to have ſurprized him in this manner: To have confortd with two or three ſhips of war, which would no way have hindered the hope of their voyage, to have anchored before *Cintra*, that is ſeated upon a hill, and not above two miles from the ſea. I meant in the middle of the night, when there was no noiſe or ſuſpicion, to have landed an hundred men with firelocks, who might, without difficulty, have ſurprized him and his houſe, and have brought him to the place, where the boats were commanded to attend.

51. When I was removed from the galleys to the caſtle of *Lisbon*, I had another ſtratagem on foot; but was prevented by a traiterous *Engliſhman*, whom I was forced to uſe as an interpreter, before I had the language.

There was in priſon with me a *Portugueſe* gentleman, called *Emanuel Fernandes*, who had been in *England* ſervant to Don *Antonio*, their pretended king: this man was much devoted to the ſervice of the queen; and I obſerved that a pilot of the king's uſually employ'd to meet the *Indies* fleet with letters of advice, to direct them the courſe they were to come home in, reſorted to him. I ſo dealt with ſeignior *Emanuel*, that upon conſiderations agreed on betwixt us, if my deſigns ſhould prove ſucceſſful, he did really undertake to prevail with the ſaid pilot, inſtead of carrying the letters of advice to their own fleet, to carry them to the queen, that ſo the treaſure might by this intelligence be intercepted; for I had ſo contrived it, had I not been prevented by the ſaid treacherous *Engliſhman*, that the queen ſhould have notice of it, by letters I wrote to the lord *Burleigh*, lord high treaſurer, and to the lord admiral

admiral, and convey'd the said letters in the soles of my boy's shoes; but by the false dealing of the *Englishman* aforesaid, my plot was discovered, and my boy carried into *Bellem* castle, three leagues from thence; so that when I thought my servant had been embarked for *England*, two months after I had intelligence by an *Englishman*, gunner of the said castle, that he was still there prisoner, and had famished, if he had not taken pity of him.

The first thing the *Spaniards* did, after the imprisoning my boy, was, to rip and search his shoes, according to the intelligence given them; but though it was unfortunate to me, yet in another kind it fell out luckily; for a great rain falling that morning he was carry'd away, it so moisten'd his shoes and letters, that they were mouldered, and could not be read, as the boy after confess'd at my arrival in *England*; so that they could have no witnesses, but the *Englishman* who was my accuser.

Since I am upon this project, though it may seem tedious to the reader, yet will I set down the danger that beset the gentleman and me, upon the occasion aforesaid: This seignior *Fernandez* had been prisoner in the castle of *Lisbon* almost seven years; and his offence for coming out of *England* with letters and messages to *Don Antonio's* friends in *Portugal*; yet such was the power of money, that by means thereof he was to receive liberty, had it not been for this treason discovered by this vile *Englishman*.

A day was appointed for his sentence of death, which with weeping eyes he acquainted me with, like a friend in a desperate case. I advis'd him, if all other hopes failed, to seek some stratagem to escape prison, with promise of my endeavour to help him, and to be short, for delay could do no good. He provided himself of a rope and a cudgel to put betwixt the battlements of the castle wall, thinking when we went to our necessary business, which was once a day, with a guard of two soldiers, to have taken an opportunity to have slipped down the wall, and to have run into a church, thereby seated, to take sanctuary.

But after four days trial made at our coming to the wall, as I have said, we found it impossible to put this stratagem in execution in the day time; and I considered withal, the danger that might have befallen me, if he had escaped; therefore we thought upon another course, though it was more improbable, and which was as followeth: over the little room he lay in, was a chamber where soldiers had been lodged, that a week before were embarked in a fleet to sea; the chamber was not so high, but that by the help of a high stool, which he had in his

room, the top of it could be reached to: here we put our helping hands, one of us still working, till we cut with our knives a trap door out of the boards above-head, that a man might creep through it; and finding by the almanack when the nights would grow dark, we contrived all things against that time, to perform our devised plot; and by means of his son, who had access to him, he provided of a sword-scabbard, and a stick to serve instead of a rapier, that he might seem to be a soldier as he passed the centinels, he carried his rope and cudgel, aforesaid, and a bag with a little bread and wine for his sustenance, under his cloak; and thus he went armed out of the chamber above, as a soldier, with a wooden sword by his side.

He passed the *Corps de Guard* and five centinels before he came to the wall, pretending he went for his necessary occasions, which they never mistrusted, seeing he carried the sign of a soldier, which was a stick in his scabbard. At his arrival at the wall, without fear, or any sense of age, he slipped down by the rope, and happily escaped.

Not long after, the round passing about the castle, espy'd his rope, cloak, cudgel, and wooden sword, which assured them of the escape of some prisoner; whereupon the drum beat, the alarm was taken, and the soldiers furiously came running into my chamber, as they did to others where prisoners lay, with their swords drawn, and threatening death. I confess I looked here to have ended my life; but that pass'd, and two soldiers were left to guard me till morning.

They finding it was my neighbour seignior *Emanuel Fernandez* that was escaped, the hue-and-cry went through the city and country, and command for his apprehension; but such was his fortune, that he escaped the fury of the tumult, and I was left at stake to be baited for the offence. In the morning early, I appeared before the judge, as the only delinquent, the rest of the prisoners casting it upon me; all agreeing, I was the likeliest to know of his escape, because of our continual conversation, but little knowing the true cause of our often meeting.

But neither threats, ill usage, or promise of liberty, could make me confess any thing to the prejudice of either of us. I was so urged and threatened, that I was forced to use for my defence this argument, (*viz.*) That I was no subject to the king of *Spain*, but to a prince his enemy; that I was taken in war; and therefore required the benefit of that law for my redemption: I came not willingly to their country to learn their laws, or to bring in others to breed inno-

vation: I was subject at that time to the universal law of honour and arms, by which I challenged the privilege of a gentleman for my freedom; and for the accident now in question, I deny'd that I had any knowledge thereof, or that I was any way privy to it; and that the unlikeliness of it should plead for me, and be a sufficient testimony of my innocency: I told them, they knew I was so unskilful in their language, that I could not devise a practice or plot with a man I understood not; and that my imprisonment had kept me from acquaintance, either in city or country, to contrive any evil against their state; and if it argued guilt to be accused, no man could prove innocent; and therefore I desired them that they would rather pity my misery, than accuse me unjustly: I intreated them to consider that I was a prisoner among my enemies, destitute of all relief, and in a place where no friend could resort to me; for I bemoan'd my wants, there being a restraint of intercourse and trade betwixt the two nations.

But what I could say did little prevail; for they aggravated my supposed offence with cruelty of threats; insomuch that I was forc'd to plead in another stile, and let them know, that by the law of arms they could prove nothing against me that deserved punishment; the privilege of which law I challenged, as being taken in war, and continued prisoner for my redemption; during which time, it was lawful for me to seek my own liberty, and to neglect no occasion, wherein I might do service to my prince and country; and therefore what they accused me of, could not be deemed an offence.

I told them moreover, though I used this but as an argument, yet their barbarous usage of me deserved a greater revenge than I had ability to perform; whereas, if they had treated me with courtesy, I had been more bound to them, than if they had reposed trust in me. I ended with this defiance, That they should be wary what violence they offer'd me; for I had friends in *England*, and was of a nation that both could and would sufficiently revenge what cruelty soever they should use towards me.

These reasons begot a more calm respect from them; and another while they used persuasive arguments, with promise of liberty and reward, making me believe the gentleman was taken, and confessed so much as they accused me of: but I well knew their words were but wind; for that they would never have warned me, if they could have justify'd their allegations by a personal testimony: yet I confess the thoughts of one thing much terrify'd me; which was a letter I gave to seignior *Fernandez* at his de-

parture, which might have been produced against me; the letter was in his behalf, to all *English* captains at sea, for his friendly entertainment, his design being to put himself into a fisherboat, to look out at sea for a man of war to transport him for *England*.

After a tedious examination of four hours, when they saw their subtleties could work nothing out of me, presumption being but an unequal judge, they returned me to prison, with charge to be more strictly looked to: and after neglected no cunning means to entrap me, as I have more largely express'd in another discourse, at the request of some of my friends.

I will again return to the gentleman seignior *Fernandez*, who no doubt was as much perplexed out of prison, as I who could not fly from the danger of my enemies, in whose custody I remained. All hue-and-cries; searches, promises of reward, and other devised policies, not prevailing for the apprehending of the poor gentleman, he liv'd in a disguised obscure manner, till time furnished him an opportunity to embark in a fisherboat, to make use of my letters aforesaid, where he spent fourteen days at sea, and failing of meeting any ship at sea, and wearied with sea-sickness, he was forced to return to shore, where he lived some time among poor shepherds and herdsmen, till he thought his disguise and disfiguring himself, had so altered him that he could not be known.

Now thinking his new-formed shape would secure him from being discovered; and hoping that the long time since his escape might make his fact to be worn out of memory, he was embolden'd, in a beggar's habit, to try the charity of good people; and chancing to repair to a gentleman's house for alms, it happen'd that the said gentleman and he, had been fellow-prisoners in the castle of *Lisbon*, who by his tongue, and other semblances and marks, discover'd who he was; and immediately called a servant, which gave a suspicion to seignior *Fernandez*, that it was to give warning to the officers to apprehend him; but to prevent what his heart misgave him, he suddenly ran into the church there by, and took sanctuary for his defence.

This accident being so strange, and falling upon a man the whole kingdom had an eye upon, because of his former escape, the prince cardinal was immediately with speed advertised of it at *Lisbon*, being above one hundred and twenty miles from thence. It was my fortune before this happen'd, to be released out of my imprisonment, which I account a happiness, that thereby I was brought into no danger.

The cardinal being advertised, as you have heard, of seignior *Fernandez's* taking sanc-

sanctuary, with all speed caused him to be taken out of the church, and brought to his old accustomed lodging in the castle of *Lisbon*, where not long after the law proceeded against him, and he received the doom of death due to such an offence; but not without grief and sorrow to many of the beholders, as well *Spaniards* as *Portuguese*; for indeed he was a man of much goodness and great charity, and to his ability obliged many a soldier in the garrison.

The day appointed for his execution being come, and having received all the rights and ceremonies of a *Christian*, he was brought out of prison, with a winding-sheet lapped bandelier-fashion about him; and many soldiers and others to behold him, to give him their last adieu; and for a farewell for himself, he took occasion to speak to the soldiers there present, in this manner; he told them, How much he had loved them; and that to some of them he had given testimony of it, in his better fortunes, which he knew they would thankfully acknowledge; and in lieu of all his former courtesies, and kindnesses, he desired them to requite him with one now at parting, as the last request he should ever make; which was, For one of them with speed to repair to the house of the *Misericordia*, an office of great reputation and trust concerning religion and charity, and his desire was, That they might be informed of the injury done to God, themselves, and the holy church, by taking per force a penitent sinner out of sanctuary: a thing so unjust and unsufferable, that it behoved them to take notice of it.

This little hope gave great content to the soldiers, and happy was he that could make greatest haste to the house of the *Misericordia*, to make relation of the strange accident that had happened. The gentlemen of the *Misericordia* weighing the dishonour and injustice done their house, delay'd no time, but posted on horseback to the place of execution, where they found poor seignior *Fernandez* ready to recommend his spirit to God, and the hangman as ready to perform his office; but such was his fortune, by the speed and courage of the gentlemen, that they redeemed him from present death, and returned him to the place from whence he came; for as they were loth to lose their privileges, so they were as unwilling to offend their king.

The strangeness of this accident may put a man in mind of an old *English* proverb, that *Marriage and hanging goes by destiny*.

52. In the forty eighth stratagem, I have shewed how necessary it is to get intelligence of an enemy, and how to obtain it, as you shall there find, for that part of *Spain* and *Portugal* I spoke of; so likewise you

shall read in my first book, how to compass intelligence of the south part of *Spain*, as namely *St. Lucar* and *Cadiz*, by example of a precedent of my own: as also in the same book, I refer you to the way how to procure intelligence at the *Tercera* islands; to which book I refer you for brevity sake.

53. When the queen lived, she was inclined to hearken to a project of mine, for the taking and inhabiting the castle *De la Mina* in *Guinea*, many years possessed by the *Portuguese*; and for defence whereof they rely'd most upon the number of negroes, in whose country *Mina* is seated; and to indear the negroes the more to them, and to exasperate them against the enemies, they make them believe, That what war soever they have with others, is in their defence against those who seek to slay them, and to possess their country. But to meet with this project, I devised to carry a number of negroes out of *England*, that could speak their language, and were able to report the difference betwixt the *Portuguese* usage of them and ours; for in *Portugal* they sell their negroes in open market for slaves, as we do horses, which they know we do not; by which means we shall be able to disappoint their designs.

54. The marquis of *Santa Cruz*, when he took the *Tercera* islands, made offer of landing at the city of *Angra*, and finding the island had drawn all their forces together to withstand him in that place, he instantly winded his galleys about, and rowed five leagues to the eastward of it, and landed where he found no resistance. The same did my lord of *Effex* at the island of *St. Michael*, who pointed to land at *Porto de Gallo*, but left that resolution, and went with his boats to *Villa Franca*, which he took easily, all their forces being drawn to *Porto de Gallo*.

55. Naming *Villa Franca*, I will say something that happened to me eighteen years before this I have spoken of, rather to make you laugh, than for seriousness sake, and yet I place it amongst the stratagems; and thus it was: You must know that notwithstanding the wars with *England* and *Spain*, some of those islands connived at the trade betwixt them and the *English* ships, which went under the name and colour of *Scots*: it chanced that one evening I came into the road of *Villa Franca*, but without the command of the castle, attending the darkness of the night to go aboard an *English* ship there riding, to avoid suspicion of being seen from the shore: upon my boarding of the same ship, I was carried by the master to banquet in his cabin; his company that were on board espied a boat rowing from the shore, and brought us news of it, being in the cabin, which

which put the master to a deadly fear; for my being discover'd would have proved his undoing. I comforted him, and willed him to follow my directions, and he should escape any such danger. I desired him to go out of the cabin, and leave me there, and to say what I should bid him. The boat came to the ship-side, and told the master, That the strange ship that rid not far from him was an *English* rover, and willed him to be careful; for that night 'twas thought he would surprize her: I willed the master to tell them, That he suspected as much, and stood upon his guard, but feared that the ship had descry'd their boat coming off from the shore, and it was likely they would intercept their boat in their return to land, and adviced them, as they loved their liberty, to hasten away. This put the *Portuguese* in such a fear, that suddenly, without speaking one word more, they put off their boat without entering into the ship; which made us laugh heartily, and was a good addition to our supper.

56. In the year 1600. there was a complaint made by the inhabitants of the cinque ports, that the *French* incroached upon their fishing at sea, a rocky ground five leagues south from *Rye*; which place serves all *London* with choice fish: whereupon I was sent down to redress this disorder, and made use of the stratagem following; because, if I had discovered my self with my ship, the *French* would have fled: therefore I mann'd the *English* fisherboats with my own company, and gave them order, as I should pass by with my own ship, and shoot a piece of ordnance, to board the *French* and possess them; which they did, and by means thereof the cinque-ports enjoy'd their ancient privilege.

57. The stratagem of taking the pirates in *Ireland*, Anno 1614, is amply set down in my second book, to which I refer you, wishing you to peruse it; for it will give you pleasure and content in reading it, and a light withal how to use the same stratagem, if there be occasion.

58. A ship, and by consequence he that is employ'd in her, may be deceived by touching the needle in the manner following: a ship going her course to the port she is bound, may be deceived in touching the north point south with a loadstone, which is contrary to the place she is going to, and may, perhaps, carry her upon some shoals and rocks, that in a right course there is no cause to fear.

59. In the voyage with my lord of *Lindsey*, in 1635, we sent over a fisherboat to *Brest*, *Baltour* bay, and other places upon that coast, to spy and view the state of the *French* and *Holland* fleets, which we knew

was thither retired, but with such instructions as the *French* could not suspect it; and that they might see we had great confidence in them, and to receive advertisement from them, we pretended the cause of our employing the boat was to look out certain *Turkish* pirates, who we supposed hover'd upon their coast. The boat returned with a true relation, as we after found which; gave us good satisfaction.

60. Not long after my being taken by the galleys in *Spain*, if I had not been by accident prevented, I had escaped the imprisonment I endured for many months in the said galleys at *Cascais* and *Lisbon*, which was most grievous to me, by this stratagem following. Whilst we rid in the harbour of *Lisbon*, there came aboard the galley where I was, a master of a ship of *Holland*, who spake good *English*: this man came from *Brazil*; for at that time the *Portuguese* freighted *Holland* ships in most of their long voyages, though they pretended to be in war one with another. This *Hollander* pitying my case, wished me privately aboard his ship, promising to conceal and hide me that I should not be found; besides his word, I took his protestation and vow to perform his promise, if I could devise to escape out of the galley. I verily believe the man meant truly and honestly; for he confirmed it by many protestations at other times and days. Whereupon I was not idle to devise an escape, and writ a letter with my own hand, directed to the rest of my company, then prisoners with me, declaring that my captivity was so hard, that I could no longer endure it, but chose rather to end my life by drowning my self, and wished them to signify so much to my friends in *England*: and one night, when all things were whist and silent in the galley, I intended secretly to escape, by stealing secretly into the ladder of the galley at the tide of ebb, and to convey my self into the water without noise, or moving either hand or foot, till I was brought clear off the galley's view, and then to swim on board the *Holland* ship, who lay just in the wake of the galley, and in view of me: this I might easily have done without suspicion, or notice taken of me; but unluckily it fell out, that the day before I meant to put this stratagem in execution, the galleys were commanded upon some service to sea; so that before our return to *Lisbon* the *Holland* ship was gone a new voyage, and I frustrated of my hopes.

As commonly one discourse begets another, so this accident puts me in mind of some others that befel me, or that I was witness to, in the time of my imprisonment, which

which I have been desired by my friends to put in writing, that there may remain a remembrance of them after my death : and what I insert is neither as project or stratagem, but only a plain narration of what I have heard and seen.

Riding in the port of *Lisbon*, (for there is no other place for the galleys to reside upon all that coast,) there was discover'd to the general a practice by an *Italian* to draw the *forçado's*, or galley-slaves, to take arms and rise against the soldiers, and possess themselves of the galley and men where he was, in order to recover their liberties, and dispose of the galley as they pleas'd. This treason being examined, the *Italian* confess'd it ; and for his reward his two arms were made fast to the stern of two galleys, and his two legs to two others, and he quarter'd by the rowing of the galleys. If this *Italian* had had the wit of an *Italian*, he would not thus have play'd the fool ; for he might well know where so many men were to be trusted, as are in a galley, it could not choose but be reveal'd. The slaves consisting of so many nations, and the trespasses being so different, some condemn'd for life, others for years more or less, and any one revealing it, was able to purchase his own liberty and reward. Or suppose they had prevail'd in their design, the rest of the galleys had been able to have master'd them ; or if not, they had been destitute of victuals to sustain them, not having so much as water ; for every second day they used to fetch their water from the shore : or though all those I have spoken of had been no impediment to them, yet there had been no place to have fled to but some port of *France*, no nearer than seven or eight hundred miles.

The next accident I take notice of, was in the same port of *Lisbon*, and in the same galleys that happen'd to the captain of the vice-admiral, a churlish and ill-natured man, as my self had some occasion to say ; for after my being taken prisoner, I found him discourteous and uncivil towards me ; for without leave, knowledge, or warning to my page that serv'd me, nor permission to see me, he sent him to the farthest part of all *Spain*, intending he should never return more into his country ; though after he failed of his purpose, by means of an *Englishman* that lived thereabouts, whither he was sent, and understanding this accident of his coming thither, and that he had been my servant, whose name and friends he well knew, though he was unacquainted with me ; yet at my request by letter, when I heard of the condition of the man, most courteously he procur'd means, and obtain'd liberty and licence for my servant to return to me, and of his own accord furnished him

VOL. III.

with money sufficient for his journey, who arrived safely, and continued to do me service during the time of my imprisonment ; whom after I prefer'd to be a captain in the service against the *Spaniards*.

This ill-condition'd *Spanish* captain after tasted a just reward for his ill disposition ; for as it is the use of captains of galleys to make choice of some *Moor* or *Turk* to attend them in their cabins, as people more neat and officious than christians, and more obsequious and desirous to please than their own natural countrymen : out of those supposed reasons the captain made choice of one of them, a *Turk* in religion, and most consonant to his humour, as he conceived. It happen'd, that as this *Moor* exceeded in diligence, so it increased his credit and trust with his captain ; who sending him one day ashore to wash his linnen, (for some of the *Moors* exceed women in that employ,) he carried with him one hundred crowns of his captain's, which he had in charge among other moneys and plate ; this *Moor* was incited by company to play, where he made a short end of his hundred crowns.

After some time his theft was discover'd to his captain ; who was so enraged, having no means to recover his loss, that he returned him to his oar and painful bank in the galley, where he remained in his former slavery. But this was not revenge sufficient to please the captain, but he ordered him a cruel punishment usually inflicted upon offenders, laying them flat over the *Cruzea*, where he was unmercifully beaten with a bull's pizzle till he was made unable either to stand or sit, or to do the king's work ; nor was the captain willing he should do him service till time had overcome his passion ; but then finding a great want of his attendance, he once more delivered him out of his chains, and accepted of his service as he was wont, and so he pass'd some time as he was formerly wont to do.

But the *Moor* carried a cakker'd revengeful heart against his captain, which he craftily dissembled, not giving any kind of suspicion till he had found a way and opportunity to compass it ; which was in this manner :

At his usual hour in the morning he repaired to get up his captain, but provided all things for his purpose ; as first, a cross-bar to keep down the scuttle ; and being below, he provided himself with powder, fire, match, and other necessaries, which he placed in the outward room, and suddenly rush'd into his captain's cabin with a naked dagger in his hand, to whom he gave eight stabs, making account he had slain him ; but hearing a noise without, he left the captain, and betook himself to a gentleman who cry'd out for help ; which

6 A

being

being done, he put the match to the train he had prepared, and set the galley on fire, which he leaped into and burnt himself to ashes; but by the help of the other galleys that rid near her, they suddenly boarded her, saved all her slaves, and the captain, who was not quite dead; but what else was in her was all consumed. A rare example of revenge in a heathen to a christian! and though the captain and he differed in religion, yet not much in condition and perverse natures.

This captain was after question'd as the author of the destruction of the king's galley, by the ill usage of this slave; and had it not been for the general's sake, Don *Francisco de Coloma*, brother to Don *Carlo Coloma*, who was after ambassador into *England* in king *James* and king *Charles's* time, he had deeply smarted for it.

Misfortunes thus left not the captain, but still attended him, as a thing fatal to his ill nature; for after the recovery of his hurts, and restitution of his command, he was once more rifled and robbed by another *Moor* he entertained in the place of his other servant: This *Moor* was enticed by two *Spanish* soldiers to commit the theft; and after it was done, he and the soldiers pass'd over the river without interruption, and kept company together till they arrived upon a spacious great hill, where the soldiers, finding a good opportunity for their purpose, slew the *Moor*, possessed the money, and escaped themselves; so that they were never heard more of whilst I was in *Spain*.

I will leave speaking of the galleys whilst I was in them: And now I was removed to the castle of *Lisbon*, where I remained prisoner a good space; but I will end with the hap of two of the said galleys, which my eyes beheld, and my self was made an actor of revenge upon them.

In my first book, and in the year 1591. you will find how I became prisoner to the *Spaniards*, and what passed in the fight betwixt six galleys and the ship I was taken in: It happened that about eleven years after, and as you shall likewise find in the same book, that Sir *Richard Leweson* and my self had the surprizing a carrack and two galleys, which we burnt in the road of *Zeimbra*; which two galleys were of the number aforesaid that took me, and one of them the very same wherein I was kept prisoner. This act of revenge to some men would have been very pleasing.

In *September*, which is commonly the month for the galleys to make their retreat into harbour for winter, I and eight of my company were strongly guarded to the castle of *Lisbon*, there to lie imprisoned till a course was taken for our redemption out of

*England*, with an allowance of 7 d.  $\frac{1}{2}$  per diem for each man for his maintenance, a proportion that did not equal 3 d. per diem according to the rate of things in *England*. All the time of our imprisonment we were close confined, only in the morning we resorted to the castle walls, with a guard of soldiers, to perform our necessary occasions.

It happened on *St. Andrew's* day following, being upon the walls, at our usual hour, we beheld a great galleon of the king's turning up the river in her fighting sails, being sumptuously deck'd with ancients, streamers and pendants, with all other ornaments, to shew her bravery. She let fly all her ordnance in a triumphant manner for the taking Sir *Richard Greenville* in the *Revenge* at the island of *Flores*, she being one of that fleet, and the first voyage she ever made.

I confess it was one of the greatest and sorrowfullest fights that ever my eyes beheld, to see the cause the *Spaniards* had to boast, and no remedy in me to revenge it but in my tongue, but hoped for future comfort, and took such *Englishmen* as were in my company to witness what I should say to them: I offered to give them one for ten, if I did live, to be at the taking and possessing of that triumphant galleon, that carry'd the name of that day, viz. *St. Andrew*. This passed but as an idle desire I had to see my word come to effect.

In the year 1596, which was five years after, ensued our *Cadiz* expedition, under the command of the earl of *Essex* and the lord admiral, where, amongst fifty-eight ships there destroyed and burnt, the said *St. Andrew* was, and she and another only, saved from the fire: but this was nothing to my prognosticating wager, for I could assume no more to my self than any other man of that fleet; but it happened, as I was captain of the *Repulse* under my lord of *Essex*, I was appointed in the *Repulse's* boat and some others to save the galleons that were run ashore, whose names were these, *St. Matthew*, *St. Andrew*, *St. Philip*, and *St. Thomas*: the *St. Matthew* and *St. Andrew* we preserved, though it was with some peril to us: the *St. Philip* and *St. Thomas* set themselves on fire, even as I was ready to enter the *St. Philip*: and I may boldly say, what I spake in the castle of *Lisbon* was now punctually performed; and for the truth hereof, it is not long since one of the *Englishmen* lived, and till his death vouched my words to be true.

These four strange accidents I have inserted in this fifth book, at the entreaty of friends that have heard me often relate them; but

but what shall follow was upon the impertunity of some of my children, who considered how young I was when I put my self into the wars at sea, how long I have since lived, and been acquainted with the affairs of the world, which amounts to fifty-six years, and the often dangers and perils I have gone through by the sword, by famine, by danger of the sea, and other casualties, as all men are subject to that run such desperate adventures. These reasons prevail'd with me, that I yielded to their request: and though in my first book I have had occasion to speak of most of them, when I treated of the voyages that then happened, and wherein there was occasion to mention them, yet, for brevity sake, I have added them to the latter part of this fifth book, that they may suddenly be turned to, and found referring to the year and book where you shall find them; and I will make my beginning in the year 1585. when the wars with *Spain* began, and wherein I was an actor at the taking of the first *Spanish* prize.

In that voyage of 1585. and in the month of *September*, I was a youth of sixteen years of age, and so inclined to see the world abroad, that without the knowledge of father or mother I put my self into an action by sea, where there was in company of us two small ships, fitted for men of war, that authorized us by commission to seize upon the subjects of the king of *Spain*. We departed from the *Isle of Wight*, to which place we returned with our dear-bought prize: she was a *Biscainer* of three hundred tons, well mann'd, sufficiently furnished, and bravely defended; she came from *Grand Bay* in *Newfoundland*, which at our first arrival upon the coast of *Spain* we met with, and refusing to yield to us, we suddenly boarded, and by consent of all our men entered her; but the waves of the sea growing high, we were forced to ungrapple, and to leave our men fighting on board her from eight of the clock in the evening till eight in the morning. The manner how, and all other circumstances, you will find in my second book.

My next escape was in the year 1587. and the first voyage I went captain to sea; where, abiding longer than I expected, I was put to great extremity of victuals, and coming from the *Canary* island towards *England*, I fell in with *Ireland*, and put into *Dingle* bay, where the same morning I was taken with a most dangerous and tempestuous storm, being upon a lee-shore, and the weather as dark and foggy as though it were night. The master found himself so nigh the land, that within an hour we could not escape shipwreck upon the devouring cliffs, if God did not send us the sight of a

little rock called the *Crow*, half a mile from the entrance of the port of *Dingle*: every man was as careful to look for this rock as for life, for our safety consisted in the sight of it; and by great fortune it was spy'd by a *Brazilian Indian* that serv'd me; which rock was a perfect director to our master, and in half an hour he harbour'd us in the port of *Dingle*. This put me in remembrance of what I had formerly read, that there was nothing more pleasant to a man than to see himself at the point of death by shipwreck at sea, and suddenly to escape the danger by arriving in a safe harbour.

Here I received two lives from God, the one was the escape of shipwreck, as you have heard; the other of famine; for when we were safely arrived, we took view of our bread, for other victuals we had none, and we had divided to every man his proportion of bread a fortnight before, and found but six bisket cakes amongst our whole fifty men and more.

Reckoning according to years, which course I mean to follow, my next shall be in 1589, when I served as vice-admiral to the earl of *Cumberland* to the islands *Azores*, and coming to *Flores*, the most westernmost island of the seven, my lord had notice of certain *Spanish* ships riding in the road of *Fayal*, ready to take the first wind for *Spain*, to the southward of which island my lord had passed eight days before. Upon this news my lord hastened thither, both to be resolved of the truth thereof, as also to make an attempt upon those ships, if he should see a possibility to prevail: but arriving two days after towards the evening, a calm took him, and he was not able to reach within two leagues of the road where the ships lay; whereupon there was a council called, as in all cases of difficulty there is, wherein my self and captain *Lister* very earnestly proposed, and by entreaty prevailed, that we might have leave in that calm to row to the road to take a view of the ships, that against morning we might see where to take advantage by surprizing them.

As we drew near the *Spaniards* the dashing of our oars was heard, which gave the alarm to the admiral, who only wore the flag, and instantly let fly her ordnance, without any certain aim, more than the dashing of the oars directed. Captain *Lister* and I seeing our selves missed by the shot, were so much encouraged, that, rather like mad than discreet men, we ran aboard the admiral with an intent suddenly to surprize her; but finding so great an inequality in our forces, (for the ship carry'd sixteen pieces of ordnance, was well mann'd and provided,) we were glad to put off our boat and retire, repenting of our bargain.

As we were rowing towards our fleet again, which all this while beheld the fight, and heard the report of the ships ordnance, we met another boat of greater burthen sent to succour us; and after joyful salutation, we resolved and concluded with both our boats to return again, and give a second assault upon the admiral, telling them the state and condition of the ship, which did so encourage both the one and the other, that by consent it was agreed they should board her in the quarter, and we in the hause, and we to cut her cable, and let her drive off to sea. All this was successfully acted, and the ship miraculously enjoy'd, notwithstanding the continual shot from the castle, to which the ship was moored; and which castle a month after we took, and afforded us forty five pieces of ordnance, mounted and dismounted. I must not forget, that as we entered the admiral on the one side, the *Spaniards* leap'd over-board on the other, except the captain, *John de Palma*, and one more.

Now having got an unexpected victory, rather by valour than reason, we towed out the ship with our two boats, the castle not sparing to fire at us, till we brought her without reach of the shot, and then we agreed to take out all our men, except one at helm to govern her, and struck down her sails; and we ourselves returned in our boats once more into the road, where we possessed ourselves of the other seven ships left behind, three of which were of reasonable good value. For the other particulars of this voyage I refer to my first book, where you shall find this relation following;

Coming into the island of *St. Mary's*, we found an unwelcome entertainment, though indeed we meant the people no farther hurt than to be supplied with water from the island; but it seems they were better prepared to forbid us than we expected; for at our offering to land with two hundred and odd men, two parts of them were suddenly hurt and slain; in which encounter my sword, which I placed naked, and the point upward, was shot asunder, and the bullet pass'd through the belly of my doublet, which, if it had not been for my sword, had done the like through my belly.

My lord being thus frustrated of all hope of water and other refreshment, was to seek the help of another island to give him relief; for now drink began to be scarce, and it was likely it would put us, to desperate want; and standing from hence to the island of *St. George*, by labour and pains, and by the help of my swimming, my ship drawing little water to come near the shore, I procured so much water as kept us after from perishing.

Passing by the other side of the island of

*St. George*, we might see a goodly spout, issuing out of the great cliff, which gave my lord a great comfort to be supply'd with drink by that spout. Now began our people to be in despair of any help of drink, either by sea or island, and by one consent, in a tumultuous manner, cry'd out to return to *England*, which much troubled my lord, who hoped for a better fortunate voyage before his return; and finding no man so heartily true to him as myself, he bewail'd himself and his case to me, how much it importuned him to try what water that spout would yield him, conjuring me, by the love I bore him, that I would put myself into a small boat that rowed with three oars, one man to steer, and myself to sit, and to venture ashore, to shew the possibility that spout would yield him for water, promising that he and his ship should stand within a mile of the land, to take me up at my return. I performed it as honestly as he reposed trust in me, though by an accident it had almost cost me my life.

In my way, rowing towards the shore, a great whale was spy'd from my lord's ship, lying with her back upon the water asleep, as is the nature of whales before storms. This whale was supposed to be a rock, and dangerous for the ship to bear further into land; and thereupon tacked about to sea leaving me to the mercy of the waves. I had no sooner set my foot ashore, but it began to be dark with night and fog, to blow, rain, thunder, and lighten, in the cruellest manner that I have seen. There was no way for me to escape death, but to put myself to the mercy of the sea; neither could I have any great hope of help or life; for the ship was out of sight, and only appeared a light upon the shrouds to direct me. This sudden alteration of weather, gave me lost in the opinion of my lord and all his company.

All this while the ship lay upon the lee; and seeing it was in vain to expect my return, the master called with the whistle to fill the sails; but the master-gunner being a countryman of mine, and one that loved me well, (an approved man of skill and art, by the place he held as master-gunner in the pope's admiral galley in the victorious battle of *Lepanto*, in which battle he was sore wounded,) he humbly besought my lord to forbear filling the sails one hour longer, which my lord willingly granted; and in that interim of time, one of the company in the ship spy'd a flash of fire, and heard the report of a musket; for all our powder was spent to that very last shot, by means whereof we were preserved, rather by miracle than any human art. And to make it the more strange, we were no sooner risen from our seats, and ropes in our

our hands to enter the ship, but the boat immediately sunk. And though I have passed many dangers, as will appear by this treatise, yet I account this the greatest of all, and none of the rest to be parallel'd with it.

What miseries we endured in the latter end of the voyage, you shall find in the first book, where I have occasion to speak of our return, and the extremity we endured, which was more terrible than besel any ship in the eighteen years war; for laying aside the continual expectation of death by shipwreck, and the daily mortality of our men, I will speak of our famine, that exceeded all men and ships I have known in the course of my life: for sixteen days together we never tasted drop of drink, either beer, wine, or water; and though we had plenty of beef and pork of a year's salting, yet did we forbear eating it, for making us the drier. Many drunk salt water, and those that did died suddenly, and the last word they usually spake was *drink, drink, drink*: and I dare boldly say, that of five hundred men that were in that ship seven years before, at this day there is not a man alive but myself, and one more.

The first port we arrived at was the *Vintury* in *Ireland*, five miles by land from *Dingle* church, that gave me succour in my former voyage, as I have said: here we made shift to furnish my lord with a horse, and myself and some other gentlemen followed a-foot. At our coming to the town, we found my lord in the house of the sovereign, which is the title of mayor, telling his strange adventures, and his dangerous escape of famishing with want of drink. The sovereign told his lordship, That about two years before, a gentleman came into their port, in as great a want of meat, as his lordship was of drink; and even as he was repeating my name I entered the door, who my lord took by the hand in their presence, and said, *Lupus est in fabula*. They beheld me with admiration, and told my lord, that it was my fortune that brought him thither; and held themselves happy that it was in their power to give him relief, as they had done the like to me before.

In the year 1590. my former sickness, you have heard, I took in *Ireland*, kept me from employment, or thought of the sea; but now finding my body as willing as my mind to follow my begun courses, this year of 1591. I attended my lord of *Cumberland* once more, and had the command of the *Garland* under him, wherein he went admiral. I can say little of any consequence of this voyage that concerned myself, but my imprisonment by six *Spanish* galleys,

near the island of *Burlings*, which I have had cause to remember, by some accidents you shall read in my succeeding voyage.

My constancy has been such, though to my cost, where I have made profession of love, that no small unkindness could suddenly divert me, when my affection has been grounded upon true friendship, as may appear by my faithfulness to the lord I now speak of, for whom I have often ventured my life, with little fruit of his favour. And I must confess it was some blemish to my judgment; for notwithstanding many admonitions, I was incredulous, still relying upon him, and followed him in this voyage of 1593. in the place I had formerly held, captain of the *Golden Lyon*, a ship of the queen's, wherein he served as admiral. What I shall say here relates to some principal accidents that concern myself in this voyage; and for the rest, I refer you to my first book, where I have shewed, that my lord being severed from his fleet about the *Burlings*, met with twelve hulks of the east country, that after some fight, yielded, and delivered him a large quantity of powder, which they carried for the king of *Spain's* service; my lord took the one half of those ships, and stood off to sea; the other half he left with me to examine and rummage. Towards night my lord cast off those of his company, whom I spy'd making towards me and their consorts, which seemed strange to me, that was left guarded but by a small ship, and his long boat with fifty men. I feared, as after I found true, that those ships had a resolution to board and take me; but to prevent their design, I leaped into my lord's boat on one side of the ship, as they boarded her on the other; in which leap I received a hurt in my leg, which to this day, in 1641. I have found a great decay to my whole body.

In the said book you will find, that from hence my lord stood to the island of *Cuervo*, where he was taken with a most melancholly sickness, and in despair of health or life, unless he might be relieved with the milk of a cow; and I seeing in what condition he was, and valuing his life as much as my own, I ventured my person to get him a cow from the hands of the enemy, either by fair or foul mean; and put myself into the hands of the *Portuguese* of the island of *Cuervo*; first shewing a flag of truce, I told them the cause of my coming to them, was out of love; and that we had a great fleet at sea thereabouts: and lest any of them should do them injury, I brought them a protection from our general, the earl of *Cumberland*, to defend them, if any violence should be offered them; and so insinuated to them, as they afforded

courteous entertainment; and because night drew on, they desired me to stay all night: I willingly imbraced their offer, and by my liberal carriage, obtained what I required; and the day following carry'd a cow and other refreshments aboard, which gave plenty of milk till my lord's arrival in *England*. This cow, in all likelihood, was the saving of my lord's life for the present; which he acknowledged.

In the ensuing year 1595. I was married; but before my marriage, I engaged myself by promise to attend my lord of *Cumberland*, as his vice-admiral, to sea. Himself went in the *Malice Scourge*, a brave ship, built by himself; his vice-admiral *Allsider*, a goodly ship of the merchants.

Now I began to have a proof of what before I had just cause to suspect, viz. the inconstant friendship of my lord of *Cumberland*; for though I was drawn by his sweet words and promises to this voyage, and that we had proceeded upon it so far as *Plimouth*, and from thence eight or nine leagues to sea, towards the coast of *Spain*, without imparting, or making shew of any thing to me, he suddenly quitted the voyage, and appointed another captain for his own ship, which did so much discontent me for the present, that I abandoned the company of his ship at sea, and betook myself to my own adventure: This bred an after-quarrel betwixt my lord and me; and it was a long time before we were reconciled.

My voyage produced no danger of famine or sword, as other voyages had done. The worst enemy I found were storms, which were such as forced me to cut my main-mast by the board, and compelled me to bear for *England*. After I had weathered the coast of *Spain*, the storm held on so outrageous, and of such long continuance, that I was driven to *Spain* before the sea, betwixt the *Groyne* in *Gallicia*, and *Blavet* in *Britany*, which port the *Spaniards* at that time possessed. The sea was so grown, and the waves so mighty, that they raked me fore and aft, for want of a main-mast to keep up the ship; so that I expected for many days together nothing but foundering in the sea; but at last it pleased God to send me to *Plimouth*, where I found the people much distracted, upon the news brought them of the arrival of four *Spanish* galleys, from *Blavet* to *Penzance* in *Cornwall*, which village they took and sacked. These four galleys could not chuse but pass me that night in a calm unseen. Sir *Francis Drake* was now at *Plimouth*, ready bound with his fleet to the *West Indies*, in which voyage he died. Upon the news of these galleys, he instantly put to

sea, and myself with him; and arriving at *Penzance*, we found the *Spaniards* were gone, and the poor spoil not worth their labour they found in the town.

The next offensive voyage by us, was to *Cadiz*, in 1596. under the command of the earl of *Effex*, and my lord admiral, whereof I had formerly occasion to say something, when I made mention of burning of fifty eight sail of ships, and the taking the *St. Andrew*. The principal and dangerouest thing that happened to me in that voyage, was the accident following:

My lord of *Effex* having made way through the town, at length came to the spacious market-place, where he found the greatest and sharpest resistance from the houses thereabouts, that forely flanked him, which way soever he passed or looked, and one house more than the rest seemed most dangerous; whereupon I desired my lord to spare me fifty old soldiers of the *Low Countries*, to give an assault upon that house, which his lordship granted, and I performed, and took it. In that conflict I was shot with a musket-bullet through my scarf, and breeches; and the handle and pummel of my sword shot from my side, without any further hurt. As I stooped for my handle, and pummel of my sword, Sir *John Winkfield* was next to me a horseback, who had received a hurt in his thigh a little before; and as he was asking me how I did, (for it seems he feared I was forely wounded by my stooping,) he was shot with a bullet in the head, and suddenly fell down dead; and these were the last words that ever he spoke. What more concerns this voyage in general, you will find in the first book: but by the way, this I note, that as the sword is the death of many a man, so it hath been twice the preserver of my life, the one at the island of *St. Mary's*, in 1589. the other now at *Cadiz*, in 1596.

The island expedition succeeded this to *Cadiz*, in 1597. equal with it both in greatness, goodness, and the person of the man that commanded it. In this expedition I was captain of the *Rainbow* of the queen's, which ship had a special cause to be remembered, by meeting the *Indies* fleet in the manner following.

My lord of *Effex* had intelligence from the island of *Graciosa*, where he had some men ashore, of certain ships descry'd off to sea. The night drawing on, his lordship divided his fleet into three squadrons, and myself being the next ship to him, he commanded me to stand away south that night; and if I spy'd any ships, to make signs, with shooting my ordnance, and making false fires, promising to send  
twelve

twelve ships after me. I instantly departed as I was directed, not doubting but the twelve ships would follow me. It blew little wind, and within less than four hours, about twelve a-clock in the night, I fell in company of a fleet consisting of twenty five sail; whereupon I put my self into my boat, the calm continuing, resolving, though it were with my apparent peril, to discover what ships they were, before I would presume to make signs, as I was directed: approaching near the fleet, I hailed them in *Spanish*, who answered me in the same language; and by their course, I knew them to be the *Indies* fleet; and having as much as I desired for the present, I returned on board the *Rainbow*, and afterwards performed so much as I was commanded, in shooting of my ordnance, and making false fires: I accompanied the fleet that night, and the next day, till I brought them into the road of *Angra*, in the island of *Tercera*; and what after befel me and them, I refer to my first book: all the hurt that happened to me in this desperate attempt of mine, besides the hazard of shot from the castles and fleet, my ship being shot through fifteen times, was foul words and railing language, with some shot from the *Spaniards* when I first hailed them in my boat.

In our return this voyage, I was in more peril, hazard, and danger, than any other ship of our fleet; for the *Rainbow* is known to be the most rowling and laboursome ship in *England*, especially in the condition I was in, having spent my foremast in a mighty storm, and mountainous seas, where we hourly expected death.

My next voyage, of all others, was most fortunate to me, wherein the carrack was taken, and the best service performed by so few ships, that happened in all the queen's time; and yet it gives the least occasion to speak of, of many others wherein I was an actor, save only that I must assume to my self to be the chief persuader of the attempt upon her. The resolution taken by consent of council, how to assail her, was in this manner, That Sir *Richard Lewson* and I should anchor in the road of *Zezimbra*, near the carrack and their other forces, the rest of our ships to ply up and down, and not to anchor: Sir *Richard*, according to his directions, made his first entrance into the road; but by the negligence of his master, much to his dislike, he failed in anchoring, and the current taking him on the bow, carried him out of the road; so that it was the next day before he could recover in again: my self having the rear, followed my admiral according to former order, till I had brought one broad-side against the galleys, and my other against the carrack and castle, which done I let fall my anchor; and for

what followed upon it, I refer you to my first book.

This voyage ending, the next was the last undertaken by the queen; for not long after she died: and this was the last voyage against *Spain*; for by her death the war ceased, and as I was a soldier and a youth at the beginning thereof, so I was general of this last fleet; and for the particulars of this voyage, more than these few following; I will refer you to the first book aforesaid.

I departed *England* the last of *August*, 1601. and arrived at the rock the 26th of *September*, where a light was espy'd by my ship in the night, which after we found to be a fleet of twenty four galleons, which I had intelligence of the day before by the carvel I sent into the shore to discover. I drew so nigh those ships, that I could not escape them if they had taken me to be an enemy; and finding my self thus intangled, I commanded a *Spaniard*, who served me, and held a dagger at his heart, upon his life to speak as I directed him, which was as follows; To call to them with a loud voice, that there was a strange ship fallen amongst their fleet, and that he knew not what she was; I conceived, that having warning from me of it, of all others she could not suspect I was she; and in the mean time, in a secret manner, I tacked about, and quitted my self of them, without further suspicion; but the *Adventure* (for only she and the *Whelp* was left with me) could not carry her self so dissemblingly, but she was in danger of being taken, and escaped with the loss of some men.

The next morning they chased the *Adventure* and *Whelp*, for I was gotten a little way to head of them; three of the best sailing ships of the *Spaniards* drew near the *Whelp*; and perceiving, that unless I acted some desperate thing she would be taken, I struck my top-sail, though it was much against the will of my master and company, crying out, that I would lose my self and ship; I stood with the *Whelp* and *Adventure*, and caused them to stand their course to sea, whilst I staid for the three *Spanish* ships, with whom I would make trial of their force, and hoped to make them have little list to pursue them. The *Spanish* admiral was astern with his whole fleet, who perceiving my working, and the little respect I had to his three ships aforesaid, tacked in with the shore, and shot off a warning-piece for his fleet, and the three ships to follow him.

Being thus luckily acquitted from the *Spanish* fleet, wherein Don *Diego de Borachero* was general, I returned to the south cape, with the *Whelp* only; for I had lost company of the *Adventure* two nights before: and arriving there the one and twentieth of

*October*,

October, I gave chase to a galleon of the fleet of *Ciriago*, who recovered under the castle of cape *Sagre*, before I could fetch her up; but though I knew the force of the castle, by sundry shot I had formerly received from it, and was acquainted with the excellency of the gunner, who was an *Englishman* of my acquaintance, in the fight of their general *Ciriago* and his squadron, I attempted, and had taken her, had it not been for the cowardliness of the helmsman, that sheard off as I was ready to board her; the fight was not long but dangerous, with the loss of twelve men on my side, and in no less danger of sinking; who was so beaten from the castle, that it was a spectacle to behold my ship, for she might be crept through from side to side. For all other circumstances I refer to my first book. And so I take my leave of the queen's reign.

This voyage ended, and I returned for *England*: at *Christmas* after, there was a consultation by the lords of her majesty's council, to prepare two fleets, the one for the spring, the other to second the first in *June* following; Sir *Richard Lewson* to command the former, and my self the latter, in some action against *Spain*; but though this was a pretence to satisfy the world, yet the lords had another intent in it; for at that time they knew the queen being sick, there was much danger of her death, because of her years, which made them the more willing to hasten this fleet to sea, to have it in a readiness to defend the kingdom, if the queen's death should happen.

And though Sir *Richard Lewson*, nominated general of this fleet, was not beloved by the lords, fearing his ambition; yet they continued him in his place and command: and whereas I was appointed to second him in a latter fleet, yet the lords by importunity persuaded me to accompany him as vice-admiral in this voyage, they having a greater trust and confidence in me than in him; and therefore I was ordered to command the *Merebonour*, a better ship than that Sir *Richard* served in.

All this was done out of policy; and few of the lords, but such as were intimate friends to the king knew of it; for their intention was, if the queen died, and king *James* had found any opposition, that my lord *Thomas Howard*, afterwards earl of *Suffolk*, should take charge of this fleet, and come aboard me, and I to go into Sir *Richard's* ship, and Sir *Richard's* authority to cease. But, God be thanked, there was no

cause for this wife forecast of the lords; for his majesty repaired peaceably to *London*, and we returned safely to *Chatbam*, after we had seen the king's entertainment by his well-affected subjects.

Two years after, and in the year 1604. I was nominated admiral of the *Narrow Seas*, without suit or seeking of mine: and the first service I was appointed to, was the transportation of the constable of *Castille*, who was to repair hither, to conclude a peace betwixt the two crowns, that had been eighteen years at variance. What happened in that employment, as also in the twelve years after, that I served as admiral, I refer you to my second book throughout: only I must say, that as in former employments, I went not without danger of life by enemies, by the peril of sea, and famine, as I have formerly repeated; in this employment I was to fear neither foe nor famine, the king having a general peace with all princes and nations, and my employment being not so far from home, but that in few days I might be supplied with victuals; though I account another danger greater than the rest, which consisted in accidents of the sea, and extremity of storms and foul weather, in the south and straitest part of *England*, where commonly I was to lie at anchor; and upon any occasion being put from my anchors, the narrowness of the seas betwixt land and land, would put me into imminent danger of shipwreck and life: the shoals and sands were no less dangerous, considering, that very often we were to be attended with fogs and mists; besides, that we were sometimes put to double a lee-shore, which, if we failed of, we presently perished.

But God so provided for me, that I escaped all these hazards; and at last found malice had a greater power and force against me, than by sea I found, or otherwise I deserved: for when I thought to have left my painful labours at sea, and to have enjoy'd tranquility of peace on land, envy, unluckily and unlooked for, seized upon my innocency: for being thought a bosom friend to a nobleman I much honoured, who at that time began to be aimed at, and was afterwards born down by a court-faction, though I was one of the meanest in number, and unworthy to have knowledge taken of me, as a man of no eminency; yet considering how my estate then stood by my engagements, and otherwise, I found fortune more averfed to me than most of the others had felt by malicious practices.

*The End of the Fifth Book.*

T O T H E  
K I N G ' s M o s t E x c e l l e n t M A J E S T Y .

**T**H E dedication of books is antient, usual, and useful ; though in these later times they are turned into apologies, expressing the unworthiness of the author, and the insufficiency of the matter, modesty carrying with it so shame-faced a countenance against the law of history ; for *Cicero* saith, *That eloquence is not so much to be respected in writing, as not to publish falsehoods, and disseminate truths.*

For me to follow the rules of apology, will betoken a great weakness and imbecillity, and look as if I had obtained victory over an art I am ignorant in ; for eloquence belongs to scholars, who by their witty pleading, will drive every circumstance to a consequence.

Silence were better in my case than speech, were it not I am to speak of things I know, of things needful and necessary, both for your sacred majesty, and your whole commonwealth.

I need not reiterate what the ensuing narration reports ; I only and humbly crave leave of your majesty, that my defects may not blemish the worthiness of the work now in hand, no more than a homely painter that takes upon him to draw a fair face : the benefit of my labour will be to your majesty an immortal honour and glory ; to your kingdoms an everlasting praise and profit ; and to your faithful subjects an essential proof of happiness.

All in one must applaud your sacred majesty for achieving this work, which never any of your famous progenitors had in agitation ; so that we may truly judge, That from the beginning (by God's providence) it was reserved for king *CHARLES* to make your name, your fame, your fortune, and all other blessings, equal with your progenitors *Charles's*, and especially *Charlemain*, from whom your majesty is lineally descended : and as that *Charles* worthily deserved the title of *Great*, so I doubt not but the same God will pour the same greatness and happiness upon your majesty, that our hemisphere may enjoy as great a renown by you, as other lands have done by those from whom you are descended.

If your majesty would have been sway'd by pretended policy of state, by solicitation, by affection, or other enticements, and left the common utility of your subjects, this work had lain still like a child in his swaddling-clouts, without care of nursing it ; but your majesty's virtue appears herein, and we, your loyal subjects, cannot honour you enough for it. And if we should speak all the truth of your sacred majesty, it were to say far more than we do of your most excellent virtue and goodness : but for want of parts otherwise to express me, my office shall be, to pray for your majesty's long life, for your victorious achievements, the confusion of your enemies, and that all men's hearts may be as sensible of your majesty's good, as the meanest of your subjects,

W. M.

T O

## ALL GENTLEMEN, and others, that have read my former Discourse concerning the SEA.

I Have annexed this relation of *fishing* to my former treatises of the SEA, which you have done me the honour to peruse: I confess it had been more proper to have inserted it at the beginning of these books, than at the latter end, for these reasons: the dedication would have required it, as being humbly presented to his majesty's protection; the subject would have challenged it, as a ground and foundation of the increase of ships, navigation, and traffick; *England* would have stood upon it in right, as a work of greatest consequence, goodness, and renown, due only to her.

But being thus in a consultation and dilemma with myself what to do, I considered and concluded, That the first view of a book either gave delight, or disgust, to the judicious reader; and if I should have presented you with this rude and laborious fishing, as the first dish of my banquet, it would have disheartened your farther proceedings; and therefore I chose rather to please your palate and taste with strange occurrences and accidents at sea, as most delicate meats to keep you from surfeiting.

There are two parts to be plaid in the scope of my discourse; the one by you, which is the speculative part, out of curiosity to inform yourselves of the secrets and practice of the sea, not intending to make profession or profit by it; but like to a student in *Alchymy*, who covets to know the depth of the art, but not to spend a penny in the practice, or design to compass it.

The second part is only proper to those that mean to make themselves apprentices to the sea and the art of navigation, to enlighten their future knowledge and understanding: but this is not attained to by ease or sloth, but by practice and pains; not by imagining and reading, but by peril, travel, and toil; not by youth and carelessness, but by years and stayedness: for though *Alexander the Great* was but twenty years of age when he began his conquest, yet none of his captains were under sixty; and though *Demosthenes* was the most famous of all philosophers for eloquence, yet at first he was but a scholar, and taught by *Plato*.

There are many things contained in the former several books, which cannot be accounted within your element; I commend therefore such things to your idle hours, as give delight and recreation to your wasteful and consuming time, when leisure admits no moment of matter to think on, like the sport of young whelps, that are to be used for pleasure, when one has nothing else to do, or for want of other company.

The reading of these discourses is not worthy the name of study; for they handle no serious thing, either of history or learning, but are to be esteemed for curiosity sake, as *Romulus* did carvers of stone, or *Caius Cesar* goldsmiths, or *Vespasian* painters.

Your wisdom knows better how to apply yourselves to the reading, and making choice and use of what is comprehended in the former discourses, than I can either advise, or instruct: And (for a farewell) I wish you as much happiness as one friend can do to another, that is, content to your mind, honour to your deserts, wealth to your will, and blessing from GOD. All happiness is comprehended in these few words, and they are made the subjects for the eloquence of tongues to amplify upon; for it is matter that makes a good orator, though I confess form adds somewhat to it.

# BOOK

## B O O K VI.

Which treats of a Fishery to be set up on the Coast of *England, Scotland, and Ireland*, with the Benefit that will accrue by it to all his Majesty's Three Kingdoms: With many other Things concerning Fish, Fishing, and Matters of that Nature.

---

*A Discovery of the Hollanders Trades, and their circumventing us therein; and the Means how to reduce the Fishing into our Hands, (as of Right due to us:) With the Honour and Security that will redound to his Majesty, and all his Subjects.*

**N**O man is so void of reason as not to know, that he is born for the service of God, his prince and country; God requires it for our own good; a prince, out of duty derived from the commandment of God; and our country, by the law of nature, next to our parents: God directs us by his written word how to serve him; a prince, by his human laws how to serve and obey him; and our country, by instinct of nature how to serve and reverence her. The city of *Paris* had a saying of old, *One God, one king, one faith, and one law.* These four words are effectual, and as much as can be comprehended in our service to God, prince, and country. *Cicero* saith, *That take away the piety towards God, and you take away all conjunction of human society.*

As most men differ in feature of face, in diet, condition, and education; yet all good men agree in an unity of the service of God, prince, and country, in these several degrees and qualities; the divine with prayer, the soldier with arms, wise men with counsel, and rich men with treasure.

These being done willingly, makes a sweet harmony betwixt king and commonwealth; for that prince is happy that has young men to take pains, and old men to counsel; the one supports the other in convenient time, like fruit that all comes not together, nor ends together; some teaching, and others obeying.

The next consideration is, how to make the people subsist in the service of God, prince, and country; for there must be a

rational means to work by, seeing monarchy cannot be upheld and supported without people employ'd, and set to work in their several labours: and therefore, considering God has created man for the service of him, his prince, and country, every one is bound to apply himself to the service of them, and to prefer them before all private respects. Let me follow that maxim, as the meanest of many thousands of other subjects, and offer my mite, as the first fruit of my harvest; not like the divine, the soldier, the wife or the rich man, I speak of, but with my poor talent God has endued me with, which is my experience, that could not have been compassed, if God had not given me a longer life than many others; if with that life he had not marvellously defended me from dangers of enemy, the sword, water, and many other casualties incident to mankind.

If with those days and years he had not given me a desire and means to observe, confer, and be inquisitive, I had not been able to have presented this my desire to serve my king and country, but should have gone as naked out of the world, as I came into it.

My meaning is, not to leave our fruitful soil untill'd, or seas unfrequented, our islands unpeopled, or seek remote and strange countries disinhabited, and uncivil *Indians* untamed, where nothing appears to us but earth, wood, and water, at our first arrival; for all other hopes must depend on our labours and costly expences, on the adventure of the sea, on the honesty of undertakers;

takers; and all these at last produce nothing but tobacco, a new-invented needles weed, as too much use and custom makes it apparent.

In what I propound, I will not direct you to the eloquence of books to persuade, to the inventing wits to entice, to the affecting traveller to encourage, nor to any man that with fair words may abuse you; you shall know as much as I can say, in casting a line and hook into the sea. His majesty doth instantly challenge his own; and by example of one line and net, you may conjecture by multiplication the profit that will arise by the work. You shall be made to know, that though you be born in an island feated in the ocean, frequented with invisible fish, swimming from one shore to the other, yet your experience has not taught you the benefits and blessings arising from that fish.

I doubt not but to give you that light therein, that you shall confess your selves blinded, and be willing to blow from you the foul mist that has been an impediment to your sight; you shall be awakened from your drowsy sleep, and rouse your selves to further this best business that was ever presented to *England*, or king thereof, nay, I will be bold to say, to any state in the world.

I will not except the discovery of the *West Indies* by *Columbus*; an act of greatest renown, of greatest profit, and that has been of greatest consequence to the *Spanish* nation.

You will wonder, being born a subject of *England*, and casting your eyes upon the gainful soil of the land, that you never conceived what the sea afforded: I confess it were impossible for you to live in that ignorance, if it did not appear by the ensuing discourse, how you, your country, and especially the princes of these realms, have been abused, and the profit thereof concealed.

*The Comparison betwixt the West-India Trade and our Fishing.*

To make my comparison good betwixt the trade of the *West Indies* and our fishing, which of them yields most honour to their king, and most profit to their country, most danger and most labour to the subjects, I refer to my collected reasons.

If men consider the divine work of God, and the end of his working, it is marvellous to behold, that *America*, being a continent, and equal to all the rest of the world in bigness, should be concealed from the creation till one thousand four hundred and odd years after the birth of Christ, and not so much as

thought of, though some philosophers seem'd to rove at it.

And when it pleas'd his divine majesty to cast that blessing upon *Europe*, if we consider the time he did it, and the occasion why he did it, it will put us into admiration and acknowledgment of the power of Christ, against the opinion of *Jews* and *Turks*; for could he shew himself a more just and loving God, than in pouring upon *Christendom* such a blessing of wealth, at the time it was likely to be swallowed up by barbarous *Turks* and *Moors*, who were only withstood by the wealth of the *Indies*?

We may hope the same God has the same happiness in store for this kingdom, to add immortal glory to his majesty's goodness; or else it was impossible, in human reason, that our loving neighbours, the industrious *Hollanders*, should for so many years enjoy this fishing, who, to their everlasting honour and praise, have increased thereby more vessels for the sea than all *Europe* besides can muster.

The first discovery of the *Indies* gave no great hope of profit, till after a long, chargeable, and painful navigation, it was brought to perfection.

The fishing upon his majesty's coast of *England*, *Scotland*, and *Ireland*, needs no discovery; the experience of our neighbours having found it out and practis'd it, since the year 1307. to their unmeasurable wealth, and our shame: and for the honour of him that first found out the secret of pickling of herrings, which was one *William Backalerw* by name, there was a famous tomb in the island of *Beverlute* erected, yet to be seen, where he was buried.

The *Indies* send forth more gold, silver, and other merchandize, than all the *European* trades besides.

The fishing produces more riches by its trade than the others do, as I will make appear when I come to compute the one with the other.

The wealth of the *Indies* is not brought from thence without great expence and hazard, considering the casualties of the sea, and the fear of enemies to intercept it.

The fishing is still in view of us and our shores, our vessels daily expected into our harbours, and others ready to ease them of their burthen, and to transport it into other countries not far remote, where they are in no danger of hurricanes, enemies, or other perils.

The insurance in going and coming from the *Indies* may be valued at a great rate, which we shall have in our fishing, there being no fear or hazard in it.

The wealth of the *Indies* being surpriz'd by an enemy, is more prejudicial to the king of *Spain* than four times that wealth would profit him, his enemy being made strong and rich, and he weakened and impoverished by it.

No such accident can prejudice us; for in the miscarrying of our fishermen, we shall only lose so many barks, salt, and nets, and no enemy enriched or fortified by it.

Inhabiting in the *Indies* causes a scarcity of natural *Spaniards*, whereby many times the king's affairs fall and perish. The fishing employs all our loose people, which abound in this kingdom, and makes them capable to serve their prince and country.

The *Indies* set to work four times more ships than all the rest of the dominions of *Spain*, and add more strength to them by sea.

The fishing will maintain twenty vessels to one of theirs, and *England* furnish them with most of the materials belonging to them; whereas in *Spain* they are brought, in time of war, with great peril and danger of the enemy.

The *Indies* are far remote from *Spain* to be supply'd, if there happen changes in any part thereof; which other nations may take notice and advantage of.

The fishing is one body, governed by a company, that no enemy can annoy; and if questions arise betwixt parties and parties, they are speedily to be determined without charge or detriment to either; whereas the others have their appeals to their courts of justice in *Spain* from the *Indies*.

The chief commodity of the *Indies* is bullion, hides, cocheneal, &c. Our only fish countervails the value of them all; and though for the present it affords no bullion in specie, yet it draws the money coined out of that bullion.

The ships that trade to the *Indies* are great in burden, and make but one return or voyage in a year; and when they are careen'd, the water in *Spain* not rising enough to ground them, it is done with far greater labour and charge than ours, that are brought on ground one tide, and hauled off another, ready for a new voyage, and never wanting freight.

But what I have observed is not to be effected with words, but works; not with talking, but doing and acting: for betwixt words and deeds there is great difference; words without effect are like water that drowns people, and does itself no good.

The property of a merchant is to have money in his purse, and credit upon the *Exchange* to advance his trade.

All men in this work must become merchants, not only for themselves, but for their prince and country; all are to reap profit by it, none pain or sorrow, but the slothful, idle, and base people, who are like drones amongst bees; for the purchase of sloth is dispraise.

There are three things necessary in every work; the man that works, the instrument to work with, and the matter. There is nothing required of the men in our work but labour and pains; the instruments to work with are ships of several kinds to be made and erected; and the matter to set on the work is money: All these concurring in one, will make it a work of fame, renown, strength, riches, and all the good that God can bestow on a nation and people. But if sluggishness and carelessness, or other mistrust of return of gain prevail, it being out of the element and breeding of gentlemen, and others that apply themselves to the profit of the land, and not the sea; and that they neglect the offer and proposition following, we are worthy to be chastened with penury and want, and unworthy to enjoy the blessing of God, which he has poured on this land above all others he has been pleased to create.

What better light can we have for this work, than from our nearest and intimatest friends the *Hollanders*? who, by their long travels, their excessive pains, their ingenious inventions, their incomparable industry, and provident care, have exceeded all other nations in their adventures and commerce, and made all the world familiar with them in traffick; whereby we may justly attribute to them, what the *Chinese* assumed to themselves, That only they have two eyes, the *Europeans* but one, and all the rest of the world none. How can this better appear than out of their labours and our fish only?

They have increased the number of vessels; they have supplied the world with food, which otherwise would have found a scarcity; they have advanced trade so abundantly, that the wealth of subjects and the customs of princes have found the benefit of it; and lastly, they have thus provided for themselves, and all people of all sorts, though they be impotent and lame, that want employment, or that are forced to seek work for their maintenance.

And because their quantity of fish is not to be vended in their own provinces, but to be dispersed in all parts of *Europe*, I will give you an account of it, as it has been carefully observed and taken out of the custom-books beyond the seas.

*The Quantity of Fish vended in other Countries.*

In four towns within the *Sound*, viz. *Koningsberg*, *Melvin*, *Stetin*, and *Dantzick*, there is vended in a year betwixt thirty and forty thousand last of herrings; which will amount to more than six hundred and twenty thousand pounds; and we none.

*Denmark*, *Norway*, *Sweden*, *Liefland*, *Rie*, *Regel*, the *Narpe*, and other towns within the *Sound*, take off above ten thousand last, worth one hundred and sixty thousand pounds.

The *Hollanders* send into *Russia* above fifteen hundred last of herrings, sold at twenty seven thousand pounds; and we not above thirty or forty last.

*Stode*, *Hamburg*, *Bremen*, *Emden*, and upon the river *Elbe*, in fish and herrings, above six thousand last, sold at one hundred thousand pounds; and we none.

*Cleveland*, *Juliers*, up the river *Rhine*, *Frankfort*, *Cologne*, and over all *Germany*, in fish and herrings near twenty two thousand last, amounting to four hundred and forty thousand pounds; and we none.

*Gelderland*, *Artois*, *Hainbault*, *Brabant*, *Flanders*, and the archduke's countries, eight or nine thousand last, sold at eighteen pounds the last, amounts to one hundred and sixty thousand pounds; and we none.

At *Roan* in *Normandy*, five hundred last of herrings, sold at ten thousand pounds; and we not one hundred last; there commonly sold for twenty, and sometimes thirty pounds a last.

Besides what they spend in *Holland*, and sell there to other nations, the value of many hundred thousand pounds.

Now having perfected the valuation of the *Hollanders* fish, caught on our seas, and vended into foreign countries, our shame will manifestly appear, that of so many thousand last of fish, and so many hundred thousand pounds in money made by them, we cannot give account of one hundred and fifty last taken and vended by us.

The *Hollanders* are no less to be commended, in the benefit they make of the return of their fish; for what commodity soever any country yields in lieu thereof, they transport in their own vessels into *Holland*, where they have a continual staple of all commodities brought out of the south, from thence sent into the north and the east countries: the like they do from out of the south into the north, their ships continually going and bringing inestimable profit, like a weaver's shuttle, he casts from one hand to another, ever in action, till his gain appear in the cloth he makes. And if we compare *Holland's* forecast with ours, the imputation of sloth and negligence will lie heaviest upon

us, like him that beats the bush for others to catch the birds: for *Russia*, with our adventure, charge, and shipwreck, was first known to us, that for many years together, afforded great profit, by the usual trade of eight or ten ships yearly.

About twenty years past, the *Hollanders* incroached upon us with two ships; and in continuance of time they brought us from ten to two or three, and themselves to sixty vessels, or more, and lately to one hundred; the chiefest gain arising out of our fish, and other *English* commodities they fetch from us.

*Newfoundland* being an ancient patrimony of *England*, and we the first discoverers thereof, immediately after the finding out of the *West Indies* by *Columbus*, has been since a great enriching to the western parts, with the fish there yearly taken; and now the *Hollanders* of late have found the way thither, and sent in the year 1629. and ever since, twelve or fourteen great ships, to buy the fish taken by his majesty's subjects; whereby his majesty does not only lose his custom in going out, if it be brought for *England*, but in the return of that commodity, which might amount to fourteen or fifteen thousand pounds, if his Highness's subjects had the carriage of it.

To say no more of the *Hollanders* greatest trade with *England*, there are three fishes of little note, and not regarded by us, which they make gain of themselves: the first is lobsters; the greatest part whereof that serves *London*, at the time of year, they bring from the furthest northern part of *England*; which is never practised by the *English*. The second is, the great quantity of oysters yearly transported by them into *Holland*, which causeth the decrease and dearth of oysters among us. The third, is lampreys, out of the river of *Thames*, which they use for bait for cod in the north seas; and this is the cause of the scarcity and dearth of this fish in *London*.

*The Hollanders Navigation into the Streights.*

But the greatest navigation of theirs, and of most importance to their state, for maintenance of ships of burthen and strength, is into the *Streights*, from the port of *Marseilles*, along the coast as far as *Venice*. In this trade I will compute but sixty ships of two hundred tons burthen each, having above as many more trading into *Spain*, *Portugal*, and the south part of *France*, and all with our *English* fish, taken by his majesty's subjects; as, namely, pilchards caught in *England* and *Ireland*, baccaloes of poorjohn in *Newfoundland*, and red herrings taken and made at *Yarmouth*.

The

The *Hollanders* are almost absolutely masters of these trades; what by combination made with the merchants that deal in that kind of fish, and what through the cheapness of the freight in their vessels; which makes them sell the cheaper.

During these eighteen years last past they have so increased their navigation, whereas before they had not above two ships to five of ours within the *Streights*, within the said eighteen years they are able to shew ten of theirs to one of ours, and merely by the trade of fish; for true it is, there is no commodity in the world of so great bulk and small value, or that can set so many ships of burthen to work.

As for example: A mean man may freight his ship of two hundred and fifty tons with fish, that will not cost above one thousand six hundred pounds, that forty merchants cannot do, of better and richer commodities: I speak not upon surmise, but what is approved by divers merchants; but especially one of good account, whose name I must conceal, unless authorized by him to publish it, who computed sixty ships of this sort of fish aforesaid; of the which there is not returned one penny profit into *England*, where they gather the sweet dew of their food.

The principal work I aim at, is how to undertake the *Hollanders* with our own weapons, and how to equal them with pinks, busses, and other vessels, till we be made partners with them in their fishing; not by hostility, or uncivil usage, nor to deprive them by his majesty's prerogative, which the law of nations allows us; or out of envy to their labours; or to revenge discourtesies, only we will seek to do what nature dictates, (*viz.*) to enjoy and make use of our own, by the countenance of our blessed king, that in justice gives all people their right and due.

*Holland* is enriched by the sixty ships aforesaid, which I have computed, by the carriage of red herrings, as I will after demonstrate, six hundred twenty one thousand seven hundred and fifty pounds, in their return out of the *Streights*.

*The Hollanders fishing in their Pinks, and Busses, that the English may not only equal, but out-do them in it; and the great Benefit it will be to the Nation demonstrated.*

There needs no repetition of any former relation; for truth has spoke it, which is so glorious of herself, that it needs no shade to give it better gloss: in what follows I will demonstrate by the particular proceedings of the *Hollanders*, in their pinks and busses, what certain gain they yearly raise

out of them; and when experience, the mother of knowledge, shall make it apparent to you, I hope you will remember what you are, and how easily you may make your selves and country by it.

I confess this fishing is a business I have taken into consideration. My lord of *Northampton*, if he were now living, was able to witness how much it was solicited and desired by me, and no less wished and desired by his lordship. I caused one *Tobias Gentleman*, a mariner by profession, but indeed a man of better parts than ordinary seamen, and much practised in their northern fishing, to dedicate a book to his lordship, which gave particular notice of the *Hollanders* proceedings in their pinks and busses, and what we shall do in the imitation of them.

But by the death of my lord, it rested unthought on by me, till the late duke of *Richmond* revived it, and importuned me once more to it. His death in the like manner made it die, till his majesty, of late, out of his princely care for the good of his loving subjects, for the renown of his kingdoms, and desire of the unity and equal benefit of his two realms of *England* and *Scotland*, took more than an ordinary care how to effect it, well becoming so blessed and benign a prince: and now I will descend to the particulars of the *Hollanders* busses, as well in their taking herrings, as cod, and ling, and the seasons of the year for both.

From the *Texel* in *Holland* to *Brafound* in *Sbetland*, an island belonging to his majesty's dominions of *Scotland*, is two hundred thirty and odd leagues, whither there resort the 22d or 23d of *June* well-nigh two thousand fishing vessels. The twenty fourth they put to sea, being prohibited till that day, and a penalty upon the breaker thereof, holding the herrings till then unseasonable to salt for their fatness.

Every one of these vessels that day directs its course to find out the shoal of herrings, like a hound that pursues the head of a deer in hunting. When they have laden their busses, which is sooner or later, as they find the shoal of herrings, they presently return home for *Holland*, and leave their herrings ashore to be there repacked, and from thence immediately to be sent into the *Sound*, where they receive them for a great dainty.

The busses having thus disburthened themselves in *Holland*, once more furnished with victuals, cask, and salt, they repair to sea to look out the shoal they had formerly left; and then finding them, and filling them once again, they do as they did before, return to *Holland*.

Nor thus ceasing, the third time they repair to the shoal, as aforesaid; and in their three fishings, computing with the least, they take to the number of one hundred lasts of herrings, which being valued at ten pound the last, which is no more than eighteen shillings a barrel, will amount to one thousand pound sterling each ship.

Many times this fishing fleet is attended with certain vessels called yawgers, which carry salt, cask, and victuals, to truck with the buffes for their herrings, and carry them directly into the *Sound*, without returning into *Holland*; for it is a matter of great consequence and gain, to bring the first herrings into the *Sound*; for there they are esteemed as partridges with us, at their first coming: but now of late years the *Hollanders* are prohibited by the state carrying or trucking away their herrings, till they first land them in *Holland*; which will prove the more commodious to us.

I will set down the rate of a buss new from the stocks, with the price of her nets, tackling, salt, victuals, cask, mens wages, and all other charges whatsoever belonging to her; and will rate the profit gained by her four months fishing, which is likely to continue twenty years, being the ordinary life of a buss.

*Imprimis.* A buss, with her furniture and tackling, will cost 500 *l.*

*Item.* One hundred lasts of cask, at 18 *s.* the last, 90 *l.*

*Item.* For salt, thirty weigh, at 3 *l.* 10 *s.* the weigh, 105 *l.*

*Item.* For beer for the men four months, a gallon a day. 16 *l.*

*Item.* For bread, after the same proportion, 12 *l.*

*Item.* For butter, cheese, billets, 20 *l.*

*Item.* For mens wages for four months 88 *l.*

*It is to be considered, that mens wages are not to be paid till the voyage be ended; so that the present disbursement is but 723 l.*

Rating the hundred last of herrings but at 1000 *l.* there is gotten clear in four months, 500 *l.* in a buss, and 165 *l.* in money; so the the total sum as appears gotten is 665 *l.*

Here plainly appears, that there is gotten six hundred and sixty five pounds in one summer; whereof, if you deduct one hundred pound for the wear of the buss, and the reparation of her nets against the next summer, yet still there remains five hundred and forty five pound, for clear gain by one buss in four months; a profit exceeding all other trades.

It is to be noted, that I have proportioned in this computation a buss of thirty five last, that is to say, seventy ton; but I consider with myself, that we will make a greater gain with a buss of twenty last, which is but forty ton, than the *Hollanders* do with their seventy ton, in respect of the nearness of our harbours to put in upon all occasions; and after the proportion of our buffes, we must lessen so much out of the seven hundred and forty five pounds, which is the first disbursement, as aforesaid.

Now having shewn you the charge of the buffes, I will shew you the charge of a pink of twenty last, that is forty ton.

A pink being built new, and all things new to her, will not cost two hundred and sixty pound, with her lines, hooks, and other fishing appurtenances.

|                                                  |            |
|--------------------------------------------------|------------|
|                                                  | l.         |
| <i>Imprimis.</i> A pink                          | 260        |
| <i>Item.</i> Twenty last of barrels              | 18         |
| <i>Item.</i> Five weigh of salt                  | 18         |
| <i>Item.</i> Beer, cask, bread, and petty-talley | 12         |
| <i>Item.</i> For mens wages for two months       | 20         |
|                                                  | Sum is 328 |

Twenty lasts of barrel cod, at fifteen pound the last, amounts to three hundred pounds; and deducting sixty eight pounds ten shillings, for the fitting her to sea, there remains two hundred and thirty two pounds ten shillings clear gain, by one pink in two months, rating the cod and ling, but as they are sold in *England*; but being transported, commonly they will double their price.

I present you not with toys to please children, or with shadows of untruths; for I know truth to be so noble of itself, that it makes him honourable that pronounces it; and that an honest man will rather bear witness against friendship than truth. I have made it appear with what facility the *Hollanders* go through with the golden mine of theirs, which they so term in their proclamation extant: I make proof their buffes and pinks are built to take fish; that they fill themselves thrice a summer with fish; that this fish is vended and esteemed as a precious food in all the parts of *Europe*; and that the return thereof gives them means to live and breath; without which they could not.

It is manifest that fish has brought them to a great strength both by land and sea, and fame withal, in maintaining their intestine war against so great and potent an enemy as the king of *Spain*.

And

And if all these benefits appear in them, and nothing but shame and scorn in us, let us enter into the cause thereof, and seek to amend it; let us labour to follow their example, which is better than a schoolmaster to teach us. Nothing is our bane but idleness, which ingenders ignorance, and ignorance error; all which we may be taxed with: for to a slothful man nothing is so easy, but it will prove difficult, if it be not done willingly.

There are but two things required in this work; that is to say, a will to undertake it, and money to go through with it: which being found, we will place charity to begin at home with ourselves, before we yield it to our neighbours; and then this business will appear to be effected with more benefit, more strength, more renown, more happiness, and less expence, than *Hollanders* have or can go through withal. Time is the most precious experience; and you shall find that time will cure our carelessness past, that reason could not hitherto do.

The instruments by which the *Hollanders* work, are their vessels of several kinds, as I have declared, not produced out of their own country; for it yields nothing to further it, but their own pains and labour.

Their wood, timber, and planks to build ships, they fetch out of divers other places; and yet are these no more available to undertake their fishing and navigation, than weapons are without hands to fight. Their iron, hemp, cordage, barrel-boards, bread, and malt, they are beholding for to several countries; and if at any time out of displeasure they be prohibited the transportation, they are to seek a new occupation, for the state fails.

Comparing their casualties and inconveniencies with ours, you shall discern the advantage and benefit God has given us, in respect of them; for all the materials formerly repeated, that go to their shipping, *England* yields most of them, or in little time the earth will be made to produce them in abundance; so that we shall not need to stand upon the courtesy of our neighbours, or to venture the hazard of the sea in fetching them.

Whereas all manner of people, of what degree soever in *Holland*, have commonly a share, according to their abilities, in this fishing; and that the only exception amongst ourselves, is the want of money to undertake it, you shall understand how God and nature have provided for us; for I will apparently answer the objection of money, and cast it upon the sluggishness and ill disposition of our people, who if they will take away the cause of this imputation they shall

VOL. III.

take away the offence due to it, and by which we are scandaliz'd.

In the objection of lack of money to set on foot this work, it would seem ridiculous to strangers that behold the wealth and glory of this kingdom, with the sumptuous buildings, the costly inside of houses, the mass of plate to deck them, the daily hospitality and number of servants to honour their masters, and their charitable alms distributed out of their superfluities. And to descend to people in particular, if they behold the bravery of apparel vainly spent, the rich and curious jewels to adorn their bodies, and the needless expences yearly wasted, they would conclude, that it were not want, but will that must be our impediment.

But leaving these observations, let me tell you, there is never a lord, knight, gentleman, or yeoman, of any account in *England*, but for want of money is able to furnish either timber, iron, wheat, malt, beef, pork, bacon, pease, butter, cheese, or home-spun cloth out of the wooll.

All which shall be taken from them at an ordinary rate, and the value allow'd them in adventure.

No man that has or hires land, but may as well plant for hemp, to make lines, nets, and cordage, seeing the laws of the kingdom command it, as any other grain; which hemp may be spun by their neighbours and tenants, and so all people set on work.

Then what need have we of money, but for the building of vessels? for you see with what ease every thing else is compassed.

Before these buffes shall direct their course to *Shetland*, to be there welcomed by the *Hollanders* in their own houses, (a thing not usual for strangers to entertain their true inhabitants,) I will first view all harbours and creeks, capable for buffes in his majesty's kingdoms of *England* and *Scotland*, and there lay such provisions for the benefit of our fishing, that it shall appear, if the *Hollanders* have usually made a thousand pounds in four months by their three fishings, we shall be able to exceed them in the course following;

I will suppose our buffes to be at *Brafound* in *Shetland*, ready the 24th of *June* to put to sea, in pursuit and chase of the herring-shoals. I will suppose likewise, that the one and the other have fished their vessels full, the *Hollanders* ready in their way to *Holland*, there to unlade and return again, as I have said before. If you compute the distance and loss of time in the four hundred leagues, running backward and forward, then shall you find great difference of gain betwixt us and them;

6 E

for

for we shall not need to run many leagues, nor perhaps not ten, till we make our repair into the next harbour, where provision shall be made of victuals, salt, and casks; and our buffes putting the herrings ashore to be repacked again, with all speed they hasten to sea in pursuit of the shoal; and the herrings being repacked, are immediately sent to the *Sound* to take their first market: all which will be effected before the *Hollanders* can be at home with their herrings; and after they are arrived in *Holland*, they are to sail very nigh as far to the *Sound*, as we shall be from *England* or *Scotland*. There needs no argument to prove the truth thereof, seeing a sea-card or plot will demonstrate it.

But I may be answer'd, that the yawgers, formerly spoken of, which truck with the buffes for herrings, will sooner be at the *Sound* than we, and make a great benefit by the first sale of their fish.

But to give you satisfaction herein, I pray you conceive our buffes are in harbour within the space of three hours after they have fished, and not subject to foul weather to hurt them. They shall have a convenience to mend and dry their nets; they are to unlade their herrings, and to lade their salt, cask, and victuals, without interruption, and to sea again speedily: whereas the yawgers must watch their time for fair weather, and a smooth sea, to exchange their salt, victuals, and cask, for herrings.

They must watch a fit time and weather to mend any defects in their nets, buffes, or in drying them: thus you may see, all casualties considered, our arrival at the *Sound* before them is more certain, for the reasons before expressed.

But there was never any business so easy, but it either found objection, or opposition, till made plain and apparent, as well to the doubters as the beholders; for most men are guided by opinion, rather than by judgment: and so fares it with this hopeful and unanswerable work, where some frame supposed reasons and impediments; but time will determine their doubts, and declare their mistakes.

There are three arguments, but rather errors, that possess people's tongues with the difficulty of our fishing; which I do not mean to convince with bare words, but with infallible truths; for I had rather offend in telling truth, than please by feigning falsehoods.

The first objection is, The taking our fish with greater charge than the *Hollanders*, by means whereof they will over-work us.

The second, That they would do no less in the vent and sale thereof, by their long practice in that trade.

The third is, The fear of fraud and deceit amongst ourselves, after the example of the *East Indies*, *Virginia*, and other companies lately erected.

Truth has no need of a ghostly father to absolve her; reason shall make her speak to the first objection in taking our fish, with the comparison of *Holland*.

You must know that the charges belonging to a fishing vessel, is her hull, tackling, nets, salt, casks, victuals, the number of men, and their wages.

Butter and cheese excepted, there is none of the rest of the materials growing in *Holland*, and most of them afforded in *England*, *Scotland*, or *Ireland*; by reason whereof *England* may yield them better cheap than *Holland*.

The several victuals carried to sea, are flesh, fish, bread, beer, butter, cheese, and pease: for fish we may value at an equal rate, for it costs neither of us more than the taking; and as flesh is more chargeable than the rest, it will cost us nothing; for it is to be considered that a fat beef, in the island of *Hybrides* is sold for less than twenty shillings, the hide and tallow whereof in *England* will give ten shillings, the other ten will be raised in carrying wine, strong waters, and other commodities desired by the people of the country; for every ten shillings so employ'd doubles the adventure; as, namely, *Aqua Vitæ*, ten shillings bestowed in *England*, will yield more gain than will purchase the carcass of a cow.

For bread, beer, butter, cheese, and pease, *England* affords them better cheap than *Holland*: first, in respect they grow in *England* in greater plenty than in *Holland*: secondly, they all pay excise in *Holland*, and not in *England*: and, thirdly, no man but knows the difference of feeding betwixt the *Hollanders* and the *English*; and that a *Hollander* eats half as much again as one of our *English* at sea.

Both the one and the other carries an equal proportion of men, and their wages are upon an even rate; but herein we shall over-work them by the reasons following:

In a buss of fifteen or sixteen men, the meanest amongst the *Hollanders* has twenty shillings a month; and we will ease the charge of wages eight in sixteen in our fishing about the *Lewes*, viz. we will carry but eight men to the place of fishing, where we will hire eight more for less than half the wages we give the rest; and herein shall we save forty eight pound a year in every buss, by means whereof we shall go cheaper than the *Hollanders* nine thousand six hundred pound in our two hundred buffes. And moreover, in the wages and victuals of the men, we shall save so much as will come to sixteen hundred pound.

Whereas

Whereas it is conceived that the *Hollanders* will transport their fish at a less charge than we, it will appear otherwise; for the yawgers that attend some of their buffes, to carry their herrings to their first market, as I have said, those herrings of theirs are not repacked, but allowed more than two barrels to each last, to make up their tale; by means whereof they pay two barrels freight in every last of herrings, more than we that have the shore near us to repack them; which in two hundred buffes will amount to five thousand pounds more gain to us than to the *Hollanders*.

Whereas every fishing vessel in *Holland* contributes to twenty or thirty ships of war to defend them from the *Dunkirkers*, our peace eases us of that expence: And this shall suffice in answer to the comparison betwixt the *Hollanders* and us, in taking their fish.

And to the second point, to prove that we shall vend our fish at as easy a rate as the *Hollanders*, (thus I say,) That your experience must teach you, that in the *Sound*, where the greatest quantity of herrings is uttered, as I have before shewed, necessity will compel them to take them off; for it is not their affection to the *Hollanders* above us that will make them refuse ours to accept of theirs; and then consequently ours will be better sold, in that we shall serve the market before them, by the means and reasons aforesaid.

And if we go further from home, as to *Spain* or the *Streights*; you must understand that the *Hollanders* ships go with fewer men than ours, occasioned by the slight building and tackling of their ships, in comparison of us: and as there is twenty or forty men difference in the sailing of them, the like difference there is in the strength of them: wherefore the merchant had better, for the safety of his goods, give fifty shillings freight to us, than thirty shillings to the *Hollanders*; his goods shall be better defended against pirates by our forty men, than the others twenty.

The *English* ships will double a lee-shore, when the others will be forced in foul weather upon the rocks; the cables and anchors of the *English* will hold, when the others will be forced to come home and break; the *English* will be able to put out at sea, when the others will take in fail; the *English*, upon some accidents, may come on ground, and by their strength come off again without hurt, when the others will perish; the *English* go deep in water, which makes them wholesome in the sea, and carry the merchants goods with little loss; the *Hollanders* are labourfome and dangerous in a storm, which causes great leakage in oil, wine, and such commodities,

to the great annoyance of the merchant; yea, oftentimes more than the difference of the freight.

As the *English* go in greater security than the *Hollanders*, so shall the merchants save by not insuring the value of difference in freight; which I could compute and prove, but that it is too tedious.

And moreover, if the *English* have the absolute carriage of the fish taken by them, and the laws of the realm warrant it, our ships shall never want imployment, nor have cause to look out for freights; by reason whereof a ship of two hundred tons may go cheaper by two hundred pounds than usually they have done. And thus much for our foreign trades.

Now let us return to the vending our fish in the kingdoms of *England* and *Wales*.

If the late proclamation for the observing of fish days be duly kept, it will be a means to vend our fish, and incourage others to venture in the fishing; so as there be a prohibition, as there is in *Holland*, that no fish be brought into any of his majesty's kingdoms but by his own subjects.

Neither will it seem a thing unreasonable to enjoin every yeoman and farmer within the kingdom to take a barrel of fish for their own spending, considering they save the value thereof in other victuals; and that it is no more than the fishermen will do to them, to take off their wheat, malt, butter and cheese, for their food at sea. The farmer by this means shall never be unprovided of fish; to observe the days commanded by his majesty, without sending to the market, as otherwise they would be compelled to do.

The farmer will find by experience that it is as cheap a food as any other they can feed upon, and gives a better delight to the taste, considering the several ways in dressing it.

The labouring man who works with the farmer takes of him his butter and cheese; for every poor man's case is not to keep a cow; and such labourers will be as willing to take fish from the farmer as any other victuals, if he be willing to spare it.

There are few farmers but will spend the value of a barrel of fish yearly; and he that does so shall save twenty in the hundred by buying the quantity of a barrel together, rather than by retail.

And because the country shall be better served with fish and other commodities than they have been, we will make several staples of salt, coals, and other merchandize desired by the country, where boats may have passage up the rivers not used heretofore;

as namely, *Middlesex*, part of *Hertfordshire*, *Surrey*, *Buckinghamshire*, and *Oxfordshire*, may be served by the river of *Thames*.

*Essex* may serve itself, part of *Hertfordshire*, and part of *Suffolk*.

*Norfolk* will serve *Cambridgeshire*, part of *Suffolk*, *Bedfordshire*, *Huntingtonshire*, *Northamptonshire*, and a staple there made will serve *Warwickshire*; for from thence go their empty carts to fetch coals, which may furnish the shire with little charge.

*Lincolnshire* will furnish itself, *Nottinghamshire*, part of *Rutlandshire*, and *Derbyshire* by the *Trent*; *Cumberland* and *Westmoreland*, will furnish themselves by the east and west sea.

We will leap over the land to the westward, as *Cheshire* and *Lancashire*, which will furnish themselves, part of *Shropshire*, *Worcestershire*, *Staffordshire*, and the north part of *Wales*.

That side of the sea will furnish *Wales* till you come to *Severn*.

The north side thereof will furnish *Pembrokeshire*, *Carmarthenshire*, *Glamorganshire*, and *Monmouthshire*, and the south part thereof will serve the north side of *Cornwall*, *Devon*, and *Somerset*; and up the river of *Severn* will serve *Gloucestershire*, *Herefordshire*, part of *Shropshire*, *Worcestershire*, and *Wiltshire*.

The south sea of *England* will furnish *Cornwall*, *Devonshire*, *Somersetshire*, *Dorsetshire*, *Hampshire*, and part of *Wiltshire*, *Sussex*, *Kent*, and part of *Surrey*.

Thus is *England* and *Wales* compassed, and a consideration to be had for the meetest place to erect our staples, to utter the commodities brought them, and to receive from them.

If at any time corn fails the countries, we will hereafter supply them at a reasonable rate with our trade to *Dantzick* with herrings: if plenty make it warrantable to transport by the statute, we will take it off from them, so as they shall have no just cause to complain either of dearth or abundance.

We will provide that no rogues or vagabonds shall be to them annoyance, or the poor of the parish charge them; for all such people shall be set to work by us: then will the contributions to the house of correction cease, which will be a more ease to the parishioners, than the value of many a barrel of herrings which they shall take off from us.

When our staples shall be erected in the country as aforesaid, out of them we will furnish every parish within the kingdom with hemp by weight, to set the people to work, and to receive it again by weight, allowing every one such a rate for their

work, that they may live well thereby. No girl nor boy of nine years of age, no man nor woman, how lame of their legs, for ever, but shall be able to get their livings; no person so blind, but may live without alms.

For besides the making of nets, and such work as belongs to it, we will set up a trade of making of cables, and all manner of ropes, as well to vend abroad, as furnish the kingdom at home; as also pole-davies for sails, and not be beholding to *France* for them.

All these reasons considered, it is apparent, that the farmers and people of the inward country, who hitherto have not tasted of these happinesses, and whose passages by water have not been frequented or known, shall reap as great a commodity and profit by this fishing, as our selves; and have no more reason therefore to refuse the taking of our herrings in the manner aforesaid, than we have to take off the commodities by which they live. And this shall suffice for the second point of vending our fish.

These six several trades following we will erect in all parts of *England*, not hitherto practised but in some places near the sea side:

|            |                             |
|------------|-----------------------------|
| Hempsters, | Rope-makers,                |
| Spinsters, | Weavers of Pole-Davies, and |
| Carders,   | Net-makers.                 |

Besides the increase of coopers, smiths, shipwrights, caulkers, sawyers, sailors, fishermen, basket-makers, sail-makers, labourers, and many other trades in great abundance.

In answer to the third allegation of countenance and deceits amongst ourselves, by example of the *East Indies*, *Virginia*, and other trades, I cannot say whether they deserve the imputation of the fraud that is cast upon them, or no; for report is like an echo, heard, but no man knows where: but to give satisfaction as well in the managing our trade, as that truth speaks it, no deceit can creep in at it, as that which follows shall declare: It is not intended (as I conceive) that a select company shall have the disposing of this fishing, as the other has, or to receive, disburse, or employ the moneys raised by the adventurers, or to direct and order things at their pleasure; but contrarywise, for example, whosoever shall be a member in it, shall have his choice what to adventure, with whom to adventure, and the manner how to adventure, without controulment of any other: as this, If he undertake for a buss or a ship, it shall be in his choice to accept of a partner, two, three, four, or more.

And

And after the value of their adventure, to erect so many ships as it shall please themselves to nominate, and appoint such persons for the ordering of it as they shall make choice of; so that if deceit appear, it will be among themselves, for no body else shall meddle in their adventure.

But because in all commonwealths there must be a head to govern and execute justice, to which the rest of the body must submit, it is convenient that the supreme commission and authority be given to some of the lords of his majesty's honourable privy council, and other persons of quality to be chosen, as well in the kingdom of Scotland and Ireland, as in England, to settle a form of government, with a judge to rule, and to provide for all mischiefs and inconveniencies that may happen betwixt man and man, and prevent the abuses and questions that may arise betwixt merchants, mariners, owners of ships, salters, coopers, and others whom it may concern: but these commissioners are in no wise to handle or meddle with the parties in their adventures, or with their stocks of money, or with the employment of it.

Farthermore, to stop the mouths of such suspicious conceits of fraud, you shall find it is not in the wit of man to overreach them, for the reasons following: The quantity of fish that a buss takes cannot be concealed; for of necessity she must repair to the ports of England or Scotland, where the customers enter every barrel of fish in their books, and none can be transported without a cocket: besides the number of cask they pay for, they must look to have them filled, and likewise the quantity of salt bought, to have it employ'd.

The price, as well of those that are vend- ed at home as transported abroad, is easily known; the usual freight of ships and the factorage is soon guessed at, and therefore no means left for deceit to enter in at.

Now to return once more to the fishing, where we left the busses for that summer, and provide them against the middle of November, to repair to the island of Lewes, where, till the beginning of February, they shall take the principal herrings of all others in loughs and harbours, as I have formerly declared.

Which being done, about the first of March they depart from thence to the island of Rona, betwixt fifteen and sixteen leagues from Lewes, from whence there runs a bank of one hundred miles in length, and as far as Tillhead in Ireland; which bank affords the best quantity of cod and ling of any part of the seas, and one hundred and odd years not used.

From the 1st of March, as I have said, to the 20th of June, is the time I have af-

signed to repair to *Brafound* in *Sbetland*; in which space I make account they will fill their vessels twice or thrice with cod and ling, and leave them in the island of *Lewes*, there to be fetched by other ships that shall bring salt, and all other kind of necessaries which shall be fitting.

The 20th of June approaching, the busses are to repair to *Brafound*, as I have said before; from whence they must prosecute their fishing of herrings, as in the former year, till their arrival at *Yarmouth*. If then they please to take an account of their year spent, it will appear that one buss employ'd by us, as I have projected it, will be of much more value than to the *Hollanders*, and be the way to teach us how his majesty's dominions shall flourish, not for a while, but for ever.

At *Yarmouth* we may account the goodness of the herrings spent; for betwixt *Winterton* and *Orfordness* they use to spawn, and are called by the *Hollanders* the ropefick herrings, which they forbear to take.

The nature of the young herring, after it is spawn'd, is to seek the comfort of the fresh water, and put themselves into the mouth of the *Thames*, or amongst the sands, where the water is not altogether so brackish; but like poor silly creatures they are here entrapped by the stale nets that use to take the sprats; but for one sprat they take they catch one hundred of these young herrings, and bring them to *Billinggate*, where they sell them not for above two-pence or three-pence a peck; which if let alone, would by *Midsummer* following grow to be a perfect and big herring, worth twenty-five or thirty shillings a barrel. This mischief must be prevented, and the fishermen enjoyn'd not to go to the westward of *Orfordness* to take sprats.

From *Orfordness* the herrings direct their course to the *North Foreland* in *Kent*, where they furnish both the *English* and *French* shores with so many as are taken by both nations, though they be both shotten, and of the worst kind.

Their abiding hereabouts is according to the winds; if it hang southerly or westerly, they remain the longer; but if easterly, they are taken, as it were, with the wind in the poop, which carries them the length of our channel, till they arrive at the *Landsend* in *Cornwall*, from whence they divide themselves like a fleet of ships that should be directed by a general: some go through *St. George's* channel, betwixt *England* and *Ireland*; others to the westward of *Ireland*, till they arrive at the islands of *Hybrides* or *Lewes*, the place of rendezvous; and we may suppose they are at home, by the strength and goodness they find in that place; for though they run the length of

our channel lean and sick, yet as soon as they repair to those islands, they become the largest, the fairest, and the best herrings in the world; and here they are taken in loughs and harbours, as I have said, and valued at forty shillings the last above others.

Here I will leave them taking their rest, and shew another benefit we shall receive upon the shoals of *Shetland*, *Orkney*, and the *Hybrides*, which the *Hollanders* have not, nor cannot make use of, in respect they are not subjects of his majesty.

And because I have pursued the herrings till I left them at the island of *Lewes*, I will begin with those islands, and truly say, they are placed for the benefit of fishing above all places in the world.

The condition and situation of those islands I refer to the map, that will give you light of their seat, their altitude, and their neighbourhood with *Scotland* and *Ireland*; but the nature and disposition of the people you shall receive from me, who have seen them, and can best speak of them.

Of many hundred islands belonging to this kingdom of *Scotland* and *Ireland*, I may say, those of *Lewes* exceed the rest in fertility of soil; it yields, with the labour of people (which they are not guilty of) all manner of grain, cattle, fish, and fowl; and although their fire be not of wood or coals, which we esteem the best fuel, yet it hath plenty of peat and turf, that they have little cause to fear cold.

There is an old saying, which may be well applied to those islands, and the inhabitants of them, That they have a good land, and are ill people; for, to speak the truth, the christian world cannot shew a more barbarous, more bloody, and more untamed generation. But his majesty being lately informed of their breeding, and uncivil living, is graciously pleased to reduce them to the knowledge of God, and the acknowledgment of him, which hitherto they are ignorant in.

This being done, and the islands being furnished as is intended, I will make it appear, that the seas about them, and the loughs and harbours within them, will yield more commodity to the subjects of his majesty's three kingdoms, than any other trades whatsoever, either near home, or far abroad.

Now will I stand over for the islands of *Orkney* and *Shetland*, which have no need of other description, but that it is pity so good and civil people should inhabit no better a country: we may say the contrary of them that we said of the island of *Lewes*, that it was a good land, but evil people; these are good people, but possess an evil soil.

The way to relieve them, is humbly to intreat his majesty to please to accept of his revenue in *Orkney* and *Shetland* in fish, to encourage the people of those islands to undertake and practise the use of fishing, which, through poverty and the want of trade, they are not now able to go through with.

Besides the rent to his majesty in fish, whatsoever fish they shall take by their own labours we will take off from them, and supply them with salt, nets, hooks, boats, and what else they shall stand in need of; by means whereof, every man in those islands shall be able to subsist and maintain himself, that now knows not how to get his living, but is brought up in sloth and idleness.

*What is requisite for the Planting of the Island of Lewes, and other Islands adjacent.*

1. It is fit his majesty call in the grant lately made by the earl of *Seaford* to the *Hollanders*, for inhabiting of the said islands, who take them purposely to erect a fishing upon that coast, whereby to defeat his majesty's subjects of that benefit.

2. That his majesty grant liberty and privileges to his subjects of *England* and *Scotland*, there to erect and inhabit towns, villages, storehouses, and all manner of manufactures and trades; that hereafter we shall not need to supply those islands, but find all things established to our hands, as in all other places of *Europe* where trades are upheld and maintained.

3. That his majesty institute a governor there, to be resident for the space of three years, and not exceed that time, lest in longer continuance abuses creep in through the avarice of governors.

4. That in every island there be erected one principal town above the rest, and a citadel in it, to keep the people in obedience; for the inhabitants of those islands are naturally inclined to incivility, treachery, and liberty, which are next neighbours to rebellion.

5. That every child be taught the *English* or *Scotch* language, and that their education be according to their abilities of body and disposition of mind, or as the estates of their parents are able to maintain them, some in learning, some in manuring and husbanding of grounds, but the most part in fishing and sea-affairs, having so convenient a seat for the same.

6. That the natural inhabitants of those islands have no correspondence with the *Hollanders* upon the main continent more than is needful, considering the danger that may ensue by their too great friendship, who are naturally the most dangerous and

worst

worst people of all his majesty's dominions; and that there be special care that they marry one with another in the island, or with *English* or *Scottish*, and in any cases to prohibit all marriages between them and the islanders aforesaid.

I have annexed hercunto what I think fit to be put in present execution, for planting the islands of *Hybrides*; which being done, all the good formerly expressed will follow; besides, there are other things, which I forbear to touch, as matters not fit for me to handle.

I have brought my intention to an end, and laid open the mischief our state has long suffered by resigning, at least conniving at the *Hollanders* fishing, who have made long use of it.

I have made it appear how easy it is for us to enjoy, or to be restored to what we have lost, and the profit all kind of people shall reap by it, if will and money be not wanting. I have made it plain to as many as desire to know the truth, that the increase of ships in *Europe* is occasioned by the taking and transporting our fish; that nine thousand *Holland* vessels are kept by it, and all their people daily set to work; in so much that I dare boldly say, if the food of fish were prohibited by all sorts of christians, and duly observed, it would lessen the number of shipping three parts in five. And therefore, seeing our fish is able to make us happy, and this narration lays down the way how to attain to that happiness, let neither excuses, false pretences, or affection to the *Hollanders*, divert us from it, as it did in the year 1609. when by proclamation the *Hollanders* were to resort to *London* for licence to fish on the coast of *England*; and *Edinburgh*, for the like in *Scotland*; and yet neither of them both was performed, nor the contempt questioned.

Two hundred usurers, with willing minds and forward purses, are able to master this work; but, I fear, the devil, whose friendship is not to advise, but to deceive them, will not allow a gain so well gotten. The excessive practice of usury is the decay of commonwealths, repugnant to all humanity, charity, and natural benevolence, and a slavery to those that desire to live poor to die rich.

But, to speak the truth, it is pity that a work of so great goodness and gain should be tainted by men of so penurious a condition, who are neither good nor evil by the disposition of another, but by their own perverse will and nature; God, I fear, will bless our endeavours the worse for them; they are like trees that carry no blossoms in the

spring, and therefore no hope of any fruit at the fall.

This work is unspotted, and pity it should be defiled with the sin of avarice; his majesty's greatness and glory will appear by it; for nothing can be to a prince more royal, than to make the state of his kingdom better than he found it; or of evil and slothful servants, to make them profitable to a commonwealth.

This shall suffice for so much as concerns our manner of fishing, our commodity arising by fishing, and the use other nations make of our fish, which I have divulged to many of my intimate friends; and now shall follow other matters, still concerning the subject of fishing: And the first shall be touching salt and cask.

*Concerning Salt and Cask.*

The next necessary thing we can endeavour and labour to advance our fishing by, without being beholden to other nations, is salt and cask; for in my former narration I have shew'd, that most of the materials belonging to our fishing may be found in *England*, except salt, pitch, and tar; and to take fish without salt to save it, is like choice of meats and no cook, or others to dress it; for both putrify without present help.

Such salts as are for the use of fishing, are of divers kinds and strength, some too hot and strong, others too weak and faint; and therefore if a mean betwixt both could be invented, and made within his majesty's dominions, we might esteem it a great jewel, and next in value to the philosopher's stone, and the finder out of the secret to deserve as great honour of his country as *William Bacalute*, who was the first deviser of packing of herrings amongst the *Flemmings*, as in my former relation I have declared.

There are many, as I am informed, at this day, who make trial to attain to the art and secret of making salt; I mean with the convenient strength for the salting and pickling of fish; I do not speak of the making of our white salt, long practised in *England* and *Scotland*; for that kind of salt of itself is not for this use, and yet not bad, if according to the quantity it be mixed with the stronger salt; for it makes a fish the whiter and better to the eye for sale.

Those that undertake this work and invention of adding strength to salt, above our ordinary white salt, must have a care of the place they choose to make it in; first, for the conveniency of the taking it off by fishermen when it is made; secondly, such a place where the salt water hath no mixture with

with freshes or sands; and thirdly, where they shall find plenty of fuel for their purpose.

The first practice that was made of it was in the *Isle of Wight*, a place, in my opinion, ill chosen by the projectors; first, for uttering of their salt, if they had brought it to perfection; for the greatest quantity they could vend, is at *Yarmouth* in *Norfolk*, and the coast towns thereabouts, to the northernmost part of all *Scotland*; which was almost as great a voyage as to bring it from the coast of *Britany*, where it is made.

Neither had the west country any advantage in the transportation; for that all the ports of *Dartmouth*, *Plimouth*, and all parts of *Severn*, which only use the fishing of *Ireland* and *Newfoundland*, shall be easier and more conveniently served out of *Britany* with salt, than from the *Isle of Wight*; *Southampton* and *Portsmouth* alone would receive benefit, by reason of their nearness; and not considerable, in respect of the little fishing they use.

The *Isle of Wight* was a place as ill chosen, in respect of the brackishness of the sea, and scarcity of fuel, in comparison of the northern parts, that can be supply'd with coals at an easier rate; and for proof of the freshness of the sea, in comparison of other seas, these are my reasons: where two lands make a freight so small, as betwixt *England* and *France*, and both the kingdoms send forth many fresh rivers which fall into the sea, the sea cannot have such force of strength or saltness, as the northern coast has, where the ocean comes pouring in upon them.

We see by experience in *Holland*, that the salt they make, is not with the water that comes near those towns where they make it; though a man that knew not the contrary would sensibly think it had sufficient saltness for that purpose; but they find it otherwise, and have ships purposely made to fill themselves with the salt water off at sea, and not near the land.

And if the *Hollanders* make so great a profit as they do, by their salt, imagine what we shall make of it; when we have obtained the use of making it, considering our water by proof is saltier, nearer hand, and our coals at a far cheaper rate, if our works be set up at *Yarmouth*, *Lynn*, *Boston*, *Hull*, *Tinmouth*, the *Holy Island*, and all the parts of *Scotland*; in which harbours our fishermen either dwell, or will resort thither daily for salt.

Therefore I conclude, if the perfection of the work may be brought to pass, either in making salt of sufficient strength, out of invention; or if not, in imitation of the *Hollanders* to make salt upon salt, the towns aforesaid are the meetest to set up that trade

of salt; and the rather because they have now in practice the making of white salt, and the other will be the sooner effected by it.

And for such salt as shall be used in the *Lewes*, there is no place lies more convenient for the making of salt of any kind, than in that island, the sea having an extraordinary saltness, and the country affording so great plenty of fuel.

The *English* and *Scotch* fishermen that shall use that fishing, shall find as great, and as extraordinary profit and gain, by receiving their salt at the island when they shall there arrive, as the freight of their ships will come to: for whereas they use now to bring in their ship the best part of their lading in salt, finding their salt made ready to their hands, instead of salt, they shall lade themselves with cask, and other things wanting for their use.

Salt upon salt is made out of the strength of salt that cometh out of other countries. *France* sends out the greatest part of salt; and according to its strength, the salt it makes is of less virtue and operation, and the more of it is spent in the salting of fish.

The *Portuguese* and *Spanish* salt is the stronger in substance, by reason of the sun's power; for according to the heat and force of the sun, salt increaseth in strength.

To the southward of *Spain*, and as far as cape *Verde*, and the island of *May*; as also westward from thence to cape *de Ray*, and other places in the *West Indies*, the salt is far stronger than in *Spain*, by reason of the force of the sun; and it will make double salt to the other.

But whereas it is alledged by some that know not what belongs to the business, that the going so far, as to the places aforesaid for salt, will not quit the charge: to answer that objection they must know, that if profit arise by this trade, it must be in the built and bigness of ships they employ; for I would not advise a ship of less than three hundred tons, but as much bigger as they please, to be sent upon that voyage; and such ships to be provided out of *Holland*, till we get use in building them; for they will sail with two thirds less men than ours.

And moreover it is to be considered, that the salt they there fetch costs nothing; for it is there naturally made of the sea water and the sun, and nothing is required but their labour and pains in bringing it aboard.

If we hit of our salt-making in *England*, it will prove a great benefit to us; for the king of *France*, and the king of *Spain*, lately finding a necessity for all nations to take of their salt, have laid a gabel and custom upon it, and thereby increased the price so much, that we and all *Europe* besides find it.

For

For such parts of the west country as border upon the *South Sea*, or upon the river of *Severn*, either on the *English* or *Welsh* shore, I will refer to their consideration, whether they will be served out of *France*, *Spain*, and the *Isle of May*, or other places; or whether they will follow the example of the northern parts in making salt upon salt, as I have shewed. If they intend this latter, their country lies very conveniently by the help of coals they shall have from *Swansey* in *Wales*.

After this work is settled and brought to perfection, I advise there may be an equal carriage of it, betwixt the buyer and the seller, that they may both live with an indifferent profit and gain; and so to accommodate it, that the buyer may be certain of the price; if not, this inconveniency will follow, That the salt-master will transport the salt beyond sea, where it goes at the greatest rate: like corn-masters, if they were not prohibited by a law, not respecting the good that would redound to their country; so much is their covetous desire of profit: but being bound to serve the kingdom at a certain price, and that we shall find no want or scarcity of it, let them after have liberty to dispose of it for the best benefit; but according to the old saying, charity should begin at home.

There must be a penalty also upon him that will buy or be furnished with salt, under colour of fishing, and shall notwithstanding transport the same into any parts beyond the seas, or otherwise, for his private gain. As well this abuse, as many others that can be imagined to creep in, must be foreseen and prevented.

According to the strength of our salt, you may rate the quantity that goes to the salting a barrel of herrings, and so estimate it from one barrel to one hundred last, *viz.* a weigh of salt is forty bushels, and every bushel will salt a barrel of herrings; so that twelve bushels will salt a last of herrings, being twelve barrels of thirty two gallons to a barrel. A last of herrings is two tons after the *English* account.

And if you can bring the salt to the proportion of three pounds ten shillings the weigh, it were a price indifferent betwixt the buyer and seller; yea, though you proportion the *Spanish* salt at a greater price, and our, white salt at a lesser, yet, if betwixt both it may be rated equal, as I have said, at three pounds ten shillings the weigh, it were very well.

The same proportion of salt you must use to the cod, *viz.* a bushel of salt to a barrel of cod. And as for ling, it is not to be barrell'd up, but to be salted in bulk, which will take up much the less salt.

VOL. III.

The next consideration about our fishing, is, How to make our provision of cask, as well for herrings as for cod; the greatest quantity which furnishes the *Hollanders*, is brought out of *Norway*, *Sweden*, and other parts of the *Sound*, which they return in their ships, after they have made sale of their fish in those parts.

The same course we may take, if we be so pleased, or that we cannot return a better freight for our ships: but we have an easier and a nearer way to be supplied with cask; for no country of *Europe* affords better provision of timber, or ash to make them, or more conveniency to transport them to what coast soever we shall fish on in his majesty's dominions: this benefit we enjoy above the *Hollanders*, who have not in their country one whole timber-tree for this purpose, but are served from abroad, as I have formerly said.

All kind of wood that belongs to the building of ships, or other works that have relation to timber, we do, and shall find, in a little time, a great want of; for wood is now utterly decay'd in *England*, and begins to be no less in *Ireland*, if there be not a speedy course taken to redress it, and a prohibition against the transporting of it out of *Ireland* into *Holland*, which the *Hollanders* make a continual trade of, not only of timber, but also of all other commodities *Ireland* affords, greatly to the prejudice of the *English*; and for the better proof thereof they have erected a company in *Amsterdam*, by the name of the *Irish Company*.

And therefore I would to God his majesty would take these things into consideration; as also to restrain the felling of timber in *England*, which is too common by the liberty that is given to widows, to fell and sell without impeachment or waste; and to young heirs, after they come to possess their father's lands; for the readiest monies they can think on towards their wasteful expences, is a sale of timber; and whilst this is suffered, and no provision for preserving or planting of trees, as the law provides for in that case, what can be imagined will fall to *England* hereafter in succeeding times? for if money, or wealth, decay in a kingdom, there may be means by trade to recover it again; if seamen die, so long as there are ships and navigation, they will soon increase, and make their deaths forgotten; but if our timber be consumed, and spent, it will require the age of three or four generations before it can grow again for use; which we ought the more to respect, because the *English* timber far exceeds the *Irish* in lightness and goodness.

6 G

Though

Though the carriage of ship-timber be prohibited, and as daily executed, yet there are divers abuses that must be looked to and prevented, as well in this kind of timber, as in vent of our own red herrings; the deceits whereof, betwixt the *English* and the *Hollanders*, combiners, you shall understand by this that follows.

The *Hollanders* have gotten a late practice, by their inwardness and friendship with some men of *Yarmouth*; (for naturally that town is more inclined to *Holland* than *England*, as descended from thence;) these *English* dwellers take upon them the building of ships, according to the direction of the other, who underhand disburse the money; and the ship being built, the *English* in shew make sale of her to the *Hollander*; when his title in the ship is, perhaps, thirty pounds, to colour the deceit. There are many other things to be proved, that upon examination would discover many abuses offered both to the king and subjects.

These combiners stop not here, but craftily avoid his majesty's proclamation; for whereas, as I have formerly delivered, the red herring is only made in *Yarmouth*, and the *Hollanders* have in a manner the absolute carriage of them into the *Streights*; and although the state is many times willing to prevent the carriage of them by strangers, yet craftily they use this policy, speedily to send away the herrings in *English* vessels to *Holland*, as soon as they are made, from whence they immediately ship them for the *Streights*, before our great ships can take them in at *Yarmouth*: other times they meet such ships as come from *Yarmouth* laden with herrings, off the sands of *Yarmouth*, where they ride, take them in, and carry them directly to the *Streights* many days before ours can be ready at *Yarmouth* in our great ships; by which advantage of time, they get their port, and make sale of their herrings, long before our arrival there, and sell them at a double price to us at our coming, to an inestimable loss, both to his majesty's subjects and to his customs, as I have said before; by the precedent of a ship freighted from *Yarmouth* to *Marfeilles*.

And therefore to avoid this cunning and cozenage, it is fitting his majesty prohibit the transportation of fish, except in his subjects bottoms, and a day to be limited for the transportation, that we may be sure to be near our port, before the strangers can follow us out of *England*; so shall we be sure to make our market before the strangers can depart *England*, which will be a great advantage to us.

As this deceit appears in the vent of our red herrings, so there is no less an unconcionable course held betwixt the *Hollanders* and *English* fishermen, that take the pilchards and poor-john, the one in *England*, the other in *Newfoundland*; for such is the necessity of the poor fishermen, that they receive impress of part of their money beforehand, to perform strict conditions they are bound to, much to their prejudice, and the *Hollanders* advantage; whereas, if the *English* had the absolute carriage of fish, they would attain to the secrets of that trade, and deal more reasonably with poor men than the others do.

I have before in this book computed the value of sixty ships, of two hundred and fifty tons each, what the *Hollanders* gain by the trade of our fish into the *Streights*, and not one penny thereof returned into *England*; and for a more authentick proof, I desire that merchants may be examined upon the truth thereof, and then you shall find my computation to fall out right; and for your better satisfaction, I will set down the several ports within the *Streights*, and the number of ships that repair to them; by which it will appear what loss this kingdom has for so many years sustained, and what gain and profit may be made by it, if it be reduced into our hands; besides the strength of ships, the increase of mariners, and fame this nation will reap by it.

*An Estimate of what went before.*

|                                                                                                                                |        |
|--------------------------------------------------------------------------------------------------------------------------------|--------|
|                                                                                                                                | l.     |
| A ship of two hundred and fifty tons, will carry, in fish, to the value of                                                     | 1600   |
| Freight for the same, at 5 l. the ton                                                                                          | 1250   |
| Affurance, 5 l. per Cent.                                                                                                      | 80     |
| Charges at <i>Venice</i> at the least                                                                                          | 400    |
| All this is lost by the stranger's carrying of it, and calculating sixty ships after this proportion, there is lost the sum of | 621750 |
| Twelve for <i>Venice</i> ; eight with pilchards, four with red herrings.                                                       |        |
| Four to <i>Ancona</i> ; whereof three with pilchards, one with red herrings.                                                   |        |
| Six to <i>Civita Vecchia</i> .                                                                                                 |        |
| Six to <i>Genoa</i> .                                                                                                          |        |
| Eight to <i>Naples</i> .                                                                                                       |        |
| Twenty to <i>Leghorn</i> .                                                                                                     |        |
| Three to <i>Villa Franca</i> .                                                                                                 |        |
| Forty six to <i>Marfeilles</i> , whereof thirty with dry fish.                                                                 |        |

In all one hundred and five ships, besides many more smaller for *Spain* and *France*; as I have shewed.

Here shall follow some indirect dealings of the *Hollanders*, which I forbore to insert in the former discourse of fishing, and shall be inserted at the end of this book, calling it an addition to my sixth book; but I will still prosecute the subject of fish and fishing, and will not cease till I have laid open every coast of the known world, whether fish resorts, and shew the benefit that is or may be made of it, as well by the inhabitants as strangers.

*Concerning Fish and Fishing.*

There are two natural foods for man to feed on; the one is flesh, maintained and increased by the fruitfulness of the land and soil of the earth; the other is fish, swimming in the common, spacious, and open sea, which no man can challenge a right to, as to the land they may; and therefore it may be called common.

This fish requires no head, as beasts and cattle do, to overlook them, or to keep them in their limits or bounds; no man can set his mark upon them, to challenge a property in them: no body that casts a net into the sea can say what belongs to them, till it be drawn again: no difficulty or care can be required to nourish it, seeing there is such abundance increased over all the seas and coasts in the world, as experience teaches us.

The difficulty in making use of this food is in the taking it, which is done by art, engines, and pains; for unless the prerogative of princes in some cases; and upon some coasts, prohibit the sufferance of taking fish, it is as lawful for a beggar as a king to challenge a right to it, after it is taken.

The use of fishing and the benefit that arises by it, needs no other repetition, than in my former declaration.

There now only remains my labour and observation to collect the sorts of fishes every country affords, and which are used for present food, and which are sent abroad by way of trade; and then I will refer it to consideration, what penury *Europe*, which is the most flourishing part of the world, would be brought to, were it not for the endeavours and labours of the poor fishermen.

Besides the general fishes of herring and cod, taken upon the coast of *England*, *Scotland*, and *Ireland*, and vended as in the narration aforesaid, there are many excellent fishes upon every maritime shire in *England*, which are of great sustenance to the inhabitants, and which I forbear to name, but will set down only such fish as is vended abroad, and returns gain and commodity to the kingdom by way of traffick.

As the northern parts of *England* yield both cod and herring, as aforesaid, so do the western coasts pilchards in such abundance, that many times they are not able to save the third part of them, for want of salt, as appears in the last wars with *France*.

*Ireland* affords these three kinds of fishes in as great numbers as *England*; and the herrings and pilchards exceed ours, which makes them valued above the *English* in other countries. They have another fish which frequents not our shores, called the hake, taken in the deeps betwixt *England* and *Ireland*, much prized in *Biscay*: they have plenty of kay, or thornback, and buckorm, which is dried whiting, much desired in *Britany*.

The several parts of *England* have several seasons of fishing, some whereof I have shewed; but will add to it our fishing at the *Sow*, a rocky ground, a league and more in length, and six leagues south off at sea to *Rye*. This is the principal place that yields that primest fresh fish that serves *London*, and the place *France* did lately incroach upon, under colour of five boats licensed by king *James*, at the request of the *French* king. But his subjects increased almost to as many scores as boats, till by order of the state, I reduced it to the allowed proportion, as is to be seen in my second book.

Upon the coast of *Lancashire*, the fishing for cod begins at *Easter*, and continues till *Midsummer*; for hake in the deeps, as I have said, betwixt *Whitsuntide* and *St. James's*; about *Padstow* for cod and ling, from *Christmas* to the middle of *Lent*; on the north part of *Ireland*, from *Christmas* to *March*.

*Englishmen* have not the use of barrelling up of cod; and if it be not barrellled, it is not vendible in *France*; neither can they make haberdine; for if they could, it would be well sold in *Spain* and *Portugal*.

Now to the fishing upon the coast of *Holland*, *France*, *Flanders*, *Portugal*, *Spain*, and other countries, where the sea affords fish, but no great use is made thereof, more than for present food; for neither herrings nor cod are there to be found, which are the staple and vendible fish for profit.

The coast of *Holland* yields the least quantity, and the worst choice of fish of all the rest; and yet fish is there most eaten out of necessity, having so many people that inhabit the country, and so little quantity of land for their sustenance. The greatest store of fish that maintains them is taken upon our seas, and kept in well-boats, and brought into *Holland*, where it is vended and sold.

Coming upon the coast of *France*, the first town you shall find to entertain you, will be *Calais*, which in truth exceeds all other places of that kingdom for the present food of fish; not that they are such fishes as I have named before, either for quality, for quantity taken, or provision to take them; for their boats are only shallops, not above a ton burden, unless it be in *October*, when their bigger vessels resort thither to take the last shoal of herrings that comes from the northward. And it happened in the year 1610. that fifty sail of those vessels were sunk, and eight hundred people in them, as they were there fishing.

If you keep along the shore of *France* till you arrive at *St. John de Luz*, the furthest part thereof, it affords no other fish, but for present spending, except at some time of the year that they salt their spare mackrels, which at the time of the year they take.

*Biscay* is like *France* in the nature of fish, and fishing upon their own coast: but what profit either of them make by their fishing upon the shores of *America*, I will after shew; only I must say, that *Biscay* is often visited with monstrous fishes, as whales and gramposses, which none of the rest I have spoken of are, in abundance, which yields the taker of them more commodity by the oil, than the value of other fish.

The next in order is *Galicja*, and *Portugal*, as far as cape *St. Vincent*, the southermost promontory of all that coast, or of *Europe*. I will join them in one, because they are all one continent, and subject to one king. They both afford fish alike in a reasonable quantity, but especially of pilchards; and here they are so excellent above others, and so necessary to the people of *Portugal*, that the country had better want their *East India* trade, than their fishing for pilchards upon that coast.

Doubling the cape of *St. Vincent*, you tend east, as far as the *Streights* of *Gibraltar*. Besides the fish these seas afford to equal the rest of *Portugal*, it is haunted with a fish called *Tunney*, a victual of great use, in that it is pickled up in barrels, and serves for sea-store, besides a great quantity that is transported into the *Streights*. The custom of this fish is worth in value to the duke of *Medina Sidonia*, forty thousand pound sterling a year. The fattest *Tunney* is near *Gibraltar*.

After you enter the *Streights*, that sea cannot be compared to the others, neither in quantity, nor in goodness of fish, though one kind of fish they have, which the others have not, which is anchovies, esteemed for a great dainty amongst us, because of the

rareness of it, and coming so far; and yet I think our sprats and young herrings in *England* might be made to equal them in taste.

In returning out of the *Streights*, we will keep the coast of *Barbary* westward, as high as cape *Canteene*, in which circuit there is very little fish taken, though no doubt but the sea affords as good fish as upon the christian shore, opposite to it, but that the *Moors* are no fishermen, nor have provision or harbours for it.

The christians enjoy all these sports, except *Sally*; so that if the *Moors* had conveniency of fishing, yet the christians would have hindered them, that they should have reaped no benefit by it.

From *Canteene* to the southward there are two roads upon the coast of *Barbary*, *Safin*, and *Santa Cruz*; and in the middle betwixt them there is a small island, called *Mogothore*; but no manner of fish in any of those places, nor vessels for that purpose.

To the southward of *Santa Cruz*, there is plenty of hake taken by the *Spaniards*, who go purposely out of *Spain* thither to fish: somewhat I can say hereof, by proof of a bark of mine that was freighted from *Seville*, and fitted with salt, hooks, and lines, and made a good return of her fish into *Spain* back again.

To the southward of this place, and as far as cape *Blanco*, the hithermost part of *Guinea*, there is an excellent fishing for porgeus, somewhat like to an over-grown sea-bream, but much bigger. There are yearly employed out of *Spain* fifty or sixty vessels, called canters, upon that fishing only; and if they escape taking at their return, they make commonly a good voyage. The only inconveniency is, That upon that coast the winds hang continually betwixt the north and the east; so that many times they are forced to run a westerly course as far as the islands of *Tercera*, which makes the voyage the longer and more dangerous for meeting with the enemies.

From this part of *Guinea*, to the southermost place thereof, which is the cape of *Good Hope*, the coast is inhabited by negroes, except it be in some few places, where the *Portuguese* have their aboad; but the negroes are so ignorant in fishing in boats, that they know not what belongs to it, though there is plenty of fish for food, if fishing were exercised.

It is an old saying, *That there is water enough in the sea*, but of no use, because of the saltness; and *Fish sufficient in the ocean*, but not possible to take it. The greatest store of fish for food is upon coasts, especially islands, where they have space to swim about it; or in shoal water, where  
a line

a line may reach the bottom ; for in the main and large ocean it's impossible to find ground with all the lines you can lengthen. Yet in the hot and southern seas, there are these kinds of fishes for food, which swim high, and sometimes appear above the water, (*viz.*) the dolphin, the bonito, the dorado, and shark ; the last whereof does not spawn, but whelp like bitches : she is ravenous, unwholesome to eat, and so eager upon a bait, or a thing she shall snatch at, as I have known them bite a man's leg and thigh away at a bite, as he has been swimming. These fishes are taken with harping-irons, fishgigs, and hooks made purposely.

Besides these fishes, which are good sustenance to long voyages, there are also flying fishes, but never taken but accidentally, when they are chased by the dolphin, and forced to put themselves to flight ; but as soon as their wings or fins grow dry, they may by chance light into a ship, for longer they cannot fly.

There are no islands to the southward, great or small, beginning with the *Tercera's*, the *Canaries*, cape *Verde*, all the islands of the *West Indies*, the *Bermuda's*, *St. Hellena*, &c. but have great store of fish flocking about them ; but the least number in all the seas, is betwixt the two tropicks, where there is no use made of them, for want of harbours, fear of enemies, and other inconveniencies. Such fish as are taken about the island of *St. Hellena*, or the coast of *Brasil*, the next westerly land to it, have a virtue above all fishes for delicious taste and wholesomeness, in both equal to the best flesh with us.

Having followed and chased the fish as far to the southward as any known land has given light, let me once more return to know what the northern seas and the islands yield in that cold climate and habitation, and we shall find it a great proportion for the food of man. The fish more naturally desire the cold and northern seas, than the hot and southern shores, where the sun has so predominant a power and heat.

And to begin with the northern parts of *Europe*, I will arrive at *Denmark*, *Norway* and *Liesland*, whose coasts abound in fish, as well for their own food, as for sale abroad : I will call it food to them ; for in many places of *Norway* and *Finland* it serves for bread to the inhabitants, after it is dry'd in the frost, and made stock-fish.

Now let us leave these shores, and stand over to the islands placed in those northern seas, a great many whereof belong to the crown of *Denmark* ; as namely *Northfare*, containing thirty in number ; *Frizeland*, *Iceland*, and others. And it is a marvellous

VOL. III.

thing to see with what abundance of fish they are frequented, and what a number of ships resort thither to take them, and after to vend them : for to speak of *England* alone, there go yearly from the northern and eastern coast one hundred and fifty ships, which employ two thousand five hundred seafaring men, that upon all occasions are ready to serve their prince and country.

All these trades aforesaid are not to be told like new stories, to breed wonders ; for time has approved it ever since those lands have been known to us : but as God gave a new light of a new world by the discovery of *America*, now daily known and frequented by us of *Europe*, and whose soil yields benefit to the christian world ; so did that God, that was the maker of the land, shew himself the same God, in pouring forth his blessing upon the sea, by the riches and increase thereof, wherein *England* had some honour thereby in the discovery of *Newfoundland*, that since proved most commodious to the commonwealth, and most especially to the western parts thereof, by their yearly employment of two hundred sail of ships thither.

The *French*, the *Biscainers*, and the *Portuguese*, were so much encouraged at our discovery of *Newfoundland*, as from that time, till this very day, they have upheld the trade thereof, by the fish they call *Baccallao*, and we *Poor-John* ; but by our continual haunting that coast, we have found an inconvenience alike, that the fish grows less, the old store being consumed by our continual fishing.

The *Biscainers* not being contented with this trade, where they found so many neighbours to join with them, went farther to the northward, and possessed themselves of a harbour which they named the *Grand Bay*, where they find, besides their *Baccallao* abundance of whales, where they make more advantage by their oil than of the other.

The *French* being desirous to try experiments, as well as the *Biscainers*, found a fishing-land fifty leagues off to sea from *Newfoundland*, and called it the *Bank*, where commonly they make two voyages yearly, without resorting ashore to dry their fish, and therefore it is called wet-fish : and this I hold one of the best means to maintain their mariners in all *France* ; which, if in time of war we seek to beat them from this fishing, we shall find them but indifferent enemies at sea.

The *French* alone, and no other nation, have continued a footing in these countries, though we have often attempted to do the like, and failed. But in the late years of our wars with *France*, in 1628. we took their port, and possessed it some time.

6 H

The

The *English* have had more absolute trade to *Newfoundland*, since the year 1585. than ever before; for in that year the war broke out betwixt *Spain* and us: whereupon the queen sent certain ships to take such *Biscainers* and *Portuguese* as fished there; a service of great consequence, to take away the ships and victuals from our enemies subjects; and since that they have almost abandoned their fishing thereabouts. Out from these men thus taken, and brought for *England*, came the great sickness that the judges and justices died of at *Exeter*.

Going southward from *Newfoundland*, the *English* have had a new plantation, by the favour of the sea, that yields them great store of better and a larger sort of fish than the other coast does; only it is too thick to dry; and therefore not to be vended in the *Streights*, or the southernmost part of *Spain*.

As you sail from thence farther to the southward, though it be as far as the *Streights* of *Magellan*, you shall find all that coast in the nature of the shores of *Africk*, as low as the cape of *Good Hope*, both in the condition of the fish, and in taking it: but something I will say of strange fish found in the *West Indies*, and the coast of *Brazil*, not known to us in these parts.

There is a fish in the *West Indies* called the *Malatia*, that has a stone in its head the most sovereign remedy for the cholick in the world.

The tortoise, now familiar to us, by our usual navigations into the *Indies*. They lay very large eggs, and a great quantity together, which are hatched in the sand by the heat and operation of the sun: the young ones as soon as hatched creep into the sea.

I will not speak of the *Remora* that stays and stops a ship in her course under sail, because I have spoken sufficiently of it, treating of the *East Indies*.

Upon the coast of *Brazil*, these several fishes are of account and name; the *Varania*, good meat to eat, and as big as any ox.

The ox-fish, a fish royal, esteemed above all fishes, and healthful to eat; of a good taste, either fresh or salt; it eats rather like beef than fish.

The *Benuperia*, like a sturgeon, of a good taste and wholesome; abundance of them are taken in the sea with hooks and lines.

The ox-eye, is like the tunney, an excellent fish, and looks like the eye of an ox.

The canury, a royal fish, and much esteemed; it is fat, wholesome, and of a good taste; it yields good store of butter.

The wild fish, which the *Indians* call

*Peckanube*, and know where it lies by its snoring: it is of a good bigness, taste, and much esteemed: all fishes found upon the coast of *Portugal*, are there also in abundance.

There are many sword-fishes and whales, betwixt whom there are frequent battles, as I have shewed before.

The whales upon these southern coasts are more furious and dangerous than in the northern, though the northern be the bigger, but not so nimble with the tail, which is the peril of the whale; for if a boat come a-head of her, she cannot do much hurt, but in rising from the bottom, as I have shewed before.

There are many venomous fishes upon that coast, as, namely, the toad-fish, of no small bigness; taking it out of the water it snorts, and poison lies in its skin, and whoever eats it with the skin dies.

There are other fishes of the same nature like toad-fishes.

The *Perachie* is like a scate, and whosoever toucheth it has the palsy, or is benumbed; the *Camaruma*, the *Amoratie*, the *Anicurub*, the *Irepourungo*; besides many others that are venomous.

There are many mermaids and strange shell-fishes, as well those that are known to our coast, as others unknown.

I have seen a fish very monstrous in the island of *Flores*, that appears with its fins about the gills, above the water four or five yards, and its jaws gaping above a yard broad, which puts the beholders in fear. This kind of fish I never knew nor heard of but in that place.

*Something concerning Whales, and several sorts of Monstrous Fishes.*

And now another while I will speak of monstrous fishes, that are useful and profitable, but not to be valued or eaten for food, and these they are: the whale, the grampus, the porpoise, the sea-horse, the morse, the seal, &c. All these affords the commodity of oil which is made of them, when dead; and the manner to kill them is so commonly known, that I need not repeat it. The whale yields, besides her oil, bones, which are for divers uses, employ'd in several trades; she yields *Spermæ Ceti*, the virtue whereof is known to us, and is sold by apothecaries. Some are of opinion that the ambergrease comes from the whale, and is cast ashore where it is found.

Some there are likewise that believe the teeth of the sea horse are medicinal; but for my part I believe the contrary, and that the only use to be made of them, is for hafts of knives, and other works that ivory is put to.

The

The whale and most of the other fishes are as frequent and common in the hot and southern climates, as in the cold and northern countries, though we only use the cold, as *Greenland*, where we kill and make great benefit of them.

The *European* shores have the least number of whales; which I impute to shallow-water, because the greatest quantity known are about the great bay of *Biscay*, from which place we were instructed in our whale-fishing, when we began it in *Greenland*.

The whales that are found dead amongst us, of which I have had some proof by one or two cast upon land, come dead ashore by some hurt received at sea; for the nature of the whale, after she is hurt, is to seek the land, where she leaves her body to enrich him that has right to her, by her coming upon his shore.

Besides the great number of whales that make their habitation in the north seas, and the farther northward the greater store, there are abundance of them upon the coast of *Brazil*, the *West Indies*, and *Guinea*, which may the better appear by the *Indians* conceit, who thought the first ships they saw, when the *Spaniards* came thither upon the discovery, had been whales.

Upon the coast of *Brazil* there are such abundance, that if the *Portuguese* who dwell there would employ themselves in killing them, it would prove a commodious thing; but, I conceive, the reason they put it not in practice, is the mass of gain they make by their wood and sugars, holding the other not worth their labour, and having no vent for it but in *Portugal*.

By this you may perceive the pains and industry of man, and the difference betwixt men and nations; for if the *Hollanders* were planted in *Brazil*, and had that benefit of the whale the others have, they would, and might very well, with their cheapness of freight, serve *Europe* with their train-oil from thence; for I remember that two ships of *Holland* went to *Saldanna's* bay, as far as the cape of *Good Hope*, to kill whale, (for upon that coast there are abundance;) but it happened that one of the two ships was there wrecked, which perhaps might discourage farther proceedings upon that voyage."

But if we consider the industry of the *Hollanders*, and compare it with the sloth of the *Portuguese*, that the *Hollanders* went two thousand leagues to lade themselves with train-oil, when the *Portuguese* might have done the like at their own home, and rejected it, we must consequently attribute as great praise to the one, as we may blame and sloth to the other.

There are many dangers that may happen, and have happened to ships, by their accidental meeting with whales at sea, some whereof I will mention upon my own knowledge. The nature of a whale is, when she receives a hurt, to seek the bottom of the sea, and with fury to rise up again, and shew her self above water; if in rising she chance to come under the keel of a ship, she utterly destroys the ship, and the men in her.

I remember, that being upon the coast of *Barbary*, and not far from a whale, in 1587. I saw her mount above the water as high as the top of a ship, occasioned, as we conceived, by the sword-fish, who is an enemy to the whale, and upon their encounter cunningly gets under the belly of the whale, and with his sword vexeth, and forceth her to mount above the water, as I have said: this whale, upon her falling down again into the water, made a greater noise than the report of a cannon.

A whale in a calm betokens foul weather; for there cannot be a truer sign of a storm, than whales and porpoises playing upon the water. It happened in the ship in which I was taken prisoner off the *Burlings*, in 1591. the day sevennight before my taking, in the night-time the ship gave stem to a whale that lay asleep with her back above the water; the accident was so strange and rare, that it amazed the company, who gave a sudden shriek, thinking the ship had been founder'd upon a rock; but looking over-board they beheld the sea all bloody, which comforted them, conceiving it to be, as they found it was, a stem upon a whale.

In the year 1589. being at the islands *Azores* with my lord of *Cumberland*, after our overthrow at *St. Mary's*, as I have shew'd in my first book, and have had more particular occasion to speak of it in my fifth book, to bring this for an example of the greatest hazard I ever endured in my life, occasioned by a whale there, as you shall understand; to which place I refer you, because I will not be too tedious in this discourse.

In the reign of king *James* there was a ship of *Portsmouth*, the owner thereof my good friend, captain *Towersson* by name, who in her way, in company of other ships, to a fishing in *Newfoundland*, gave stem to a whale as she lay asleep; the ship had all her sails drawing, and a large wind, but for want of the company's looking out, she gave such a blow to the whale, that she presently founder'd; but by the help of other ships of her company the men were preserved, who otherwise had perished.

Many other accidents of this kind have happened to ships, which I need make no repetition

repetition of, they are so common; and this shall suffice for the subject of fishing, as well for food, as others that yield the commodity of oil.

I will speak little of the mermaid, because there are diversities of opinions: some think there are none; others that there are, though there be little doubt thereof; for we shall find in the year 1322. in our *English* chronicles, one taken in *England*, another in *Holland*, and a third in *Britany*; for the relation whereof I refer you to the authors aforesaid.

There is a tradition to this day in *Galicia*, one of the kingdoms of *Spain*, that a mermaid coming out of the sea, engender'd with a woman ashore, and begat on her a child: and to speak of later times, I see divers have seen them, who are now alive, and can justify it.

There are other strange fishes to be seen on the coast of *Norway*, and especially in sixty eight degrees of latitude, which are very wonderful, besides the great dangers and other particularities belonging to that sea, more than any other yet discovered.

In the country and height aforesaid there is a well called by the name of *Neal-stream*, which well draws the water to it with an in-drought, and with so great a fore-noise and dread to the hearers, during the time of the flood, which is six hours, that it is to be wonder'd at, above all wonders a man can report.

The force and violence of this flood is such, that its power reaches two miles about it every way; so that if a ship or vessel happen to be within that compass, it draws her into its bottomless gulph, where she is swallow'd up, and perishes.

The ebb has the contrary effect, which endures the said space of six hours, and sets off with the same violence the flood draws to it, insomuch that it will not suffer the heaviest thing that can be thrown overboard to sink. At this ebb the fishermen use to take away many sorts of strange deformed fishes, not seen elsewhere upon any coast whatsoever; one whereof I will take special notice of, which has been avowed to me by a very sufficient man who saw it; it is like an eel, and one hundred fathom long, which has sometimes entered a boat on the side, and pass'd through her on the other side; and if it be cut asunder, which a knife may well do, it casts forth the greatest stink in the world, and enough to poison a man that smells it.

Some are of opinion, that the stream pass'es under the ground through the parts of *Norway*, and bursts out again at the northermost part of *Finland*, where is ano-

ther *Neal-stream*, though not so violent or dangerous as this, and where the same kind of fish are taken as in the other aforesaid.

This place is called by some the *Navel of the sea*; and some think the ebbs and floods upon all the coasts on this side the equinoctial are caused out of this miraculous *Neal-stream*. I set this down but as a conjecture, not to be rely'd on; for the secret of ebbing and flowing is only known to God, and not to be apprehended by man; and so the philosophers acknowledge.

There are other dangers appearing upon our coast, but not so terrible and fearful as those of *Norway*; and for which, there may be reasons given, (as namely,) the race of *Portland* in *Dorsetshire*, the race of *Conquet* in *Britany*, the race of *Lyons* in *Italy*; and I have seen another, not much inferior to the least of these, at the isle of *Palma* in the *Canaries*.

That of *Portland* has been the destruction of many a ship and man, though it may be avoided, either by going within it towards the land, or without it to sea. The ship of war wherein I went the first time to sea, in her return from the coast of *Spain*, in her second voyage after, where she had made a profitable voyage, taking sundry *Spaniards*, as her lading would have witnessed, out of a covetousness to gain a league or two, though she might have easily avoided it, put herself into the race, little valuing the danger, and was presently swallowed up in view of her comforts, and neither man nor boy escaped.

The cause of these races that makes the bubbling and turning of the water and streams is the meeting of tides, and the foulness and rockiness of the ground, which makes that space of the sea, where this happens, to boil up like a pot upon the fire.

There are other places where the tide sets with wonderful force and swiftness, as well upon the ebb as flood; and namely, *Pintley Fritb*, which divides the whole continent of *Britany* from the islands of *Orkney*: I have pass'd it, and found such admirable tides, that I was amazed. I have heard people thereabouts say, that the force of that tide is such, that if a ship chance to anchor in it, and the cable and anchors hold, the strength of the stream is so violent, that she will be swallowed up at an anchor.

In the island of *Orkney* joining to it, as also upon the coast of *Norway*, the tide sets with that force, that he who knows not the nature of it will be afraid to approach near the shore; and yet experience tells us, that the tide sets from the land, and keeps a ship from running on shore.

The

The sea produces many other strange things of nature, which I forbear to repeat; but the thing I covet to know, is what wonders the sea produces under the north pole, not yet attempted by any nation, though the *English* have approached nearest it, since the discovery of the island of *Greenland*, whither they resort to kill their whale.

Philosophers mention four indraughts in the ocean sea, in the four quarters of the world; from whence many conjecture, that as well the flowing of the sea, as the blasts of the wind, have their original: but these being mysteries above my capacity or reading, and nothing tending to the subject of fishing, which at last I have brought to an end, I will draw to a conclusion of my whole six books, making account, after a long and tedious navigation, I am at last arrived in a safe and secure port, where I have leisure to recollect my self, and think of my errors past, in taking so great pains to so little purpose, as to write so many lines and leaves of the sea only, few gentlemen delighting in it, or making profession of it: but before I end, as in my former navigation I have spoke of the profit of fishing, I will set down the enemy to fishermen and fishing in this that followeth.

There is no action at sea, be it great or small, that brings not with it both charge and danger; nor no business so easy that can be done, without pains and difficulty: and this subject we are now upon, that is, fishing, the only thing that is required in it, is labour and pains; for danger is little to be regarded, considering it is not far from home we are to seek our profit, nor our harbours so few, but they may be entered for our safeties both day and night, by erecting lights.

But indeed the greatest danger that may be feared to our fishermen, is interruption of pirates, who are the very scum of a commonwealth, and people to be abhorred by all honest and laborious men. It is usual, when these miscreants fail of relief of victuals, and are made desperate by want of it, to place all their hopes of food upon the poor painful fishermen, who, we may truly say, get their living with more hazard, with more pains, with more cold and watching, than any other trade or people whatsoever: their labour produces nothing that is ill, but the best help for man, which is food to live on.

Husbandmen and fishermen are the upholders of commonwealths; all other people live by their labours. They are stewards to provide sustenance to feed on; and yet comparing them together, there is great difference betwixt their lives and pains: the husbandman's work is without danger or ha-

VOL. III.

zard; and if he be wet, he has present help of fire to dry him; he is allowed a bed instead of the other's board to lie on; his diet is certain, and in a quiet manner, when the others are tost to and fro without a stedfast standing: if the one be cold, he may recover himself with exercise and work; if the other be cold, he is made colder, his labour being in cold water; the one keeps his certain hours for sleep, the other has no certain time to rest, but must attend his danger, which he is never free from: every hour he must be ready to look out for his shoal of fish, and watch his opportunity of weather and tide to take them: the one has pleasure on holidays, and is free from labour; all days are alike to the other; and the *Sunday* can give no more content or comfort, than the rest of the week.

What heart can be so hardened, or pirates so pitiless, as to disturb those harmless and innocent creatures, that make pains their pleasure, and their labour their countries plenty, procuring good for it by their own toils. And because such wickedness will never escape unpunished or unrevenged, as these pirates commit upon such harmless people, I will a while digress from the subject I have in hand, and relate a strange and tragical accident that deservedly befel two pirates that were disturbers of the innocent fishing.

#### *A Story of two Pirates.*

After my return from *Ireland*, in 1614, where I had been employ'd to suppress the arrogance and insolence of pirates, and where I punished the conniving that was betwixt those people and the inhabitants of that kingdom, I once again sent a bark for that coast, to be informed how things stood after I left them, and whether the severe course I had taken against them, in doing justice by death upon one of them, wrought better effect than before.

The first harbour my bark arrived in, she met a pirate named *Tucker*, a seaman bred from his youth, and continual practice made him excellent in his art and profession: he was very glad upon this occasion of meeting my bark to insinuate into my man's acquaintance, thinking thereby it would be a means for him to bewail himself to me, and to obtain the thing next to life he desired, which was his pardon, though he departed with the best part of his spoils, which were things of good value.

His persuasion prevailed so far with my servant, that though his directions were to view the northern parts of *Ireland*, where I had lately been, and there to inquire after the

6 I

behaviour

behaviour of pirates, and the entertainment the country gave them; yet, as I have said, by the importunity of *Tucker*, my man was diverted from his employment, and persuaded to return with his letter of submission to me, on whom he wholly cast himself to dispose of, with promise there to stay a certain time to expect my answer; and to sweeten me the more, he presented me with a token worth accepting, but that I was always cautious in such cases how to connive at pirates, as in my letter I expressed. I mistrusted, before he could receive my answer, the winds then hanging contrary, he would depart from *Ireland*; whereupon I directed divers letters to one effect, and sent them by several ships, if they should chance to meet *Tucker* upon their way in their voyages. But as I have shewed the last refuge pirates have for victuals, is to feed upon the fishermen; and *Tucker* finding that *Ireland* could not supply him, by the strict course I had formerly taken, was forced to go to the northward, to seek succour of the poor fishermen, a contrary course to the ships that carry'd my letters: and coming to the north *Farro*, there he met with another pirate of the same sort, but far less honest, as it proved. These two concerted together, as thieves use to do in mischief.

The islands of *Farro* are dangerous, by reason of the great tides, and their setting; and it happened that *Tucker's* ship was wrecked upon one of them, in company of his companion, the other pirate; who seeing it, did not degenerate from his kind, for all spoils were alike to him, friend or foe; instead of help in that case of distress, play'd the part of a hawk over his prey, and had no more pity of him than of a *Spaniard*, who were most obnoxious to pirates in those days.

To be short, this pirate, who falsely called himself *Monnocho*, suddenly possessed himself of *Tucker's* ship, himself, his wealth and company; and used them with that rigorous cruelty, as though his action had been lawful, and allowed by authority to punish delinquents and offenders, and rather out of fear than pity, he shewed mercy to their lives; and mistrusting if he should detain them in his own ship, they might make a party and faction; for the condition of such people, is never to be constant, or honest, no longer than their devilish humours hold; therefore to avoid any such tumult, *Monnocho* seized upon an *English* fisherman, amongst many others he had taken, and put *Tucker* and his company into her, to seek a new fortune; which you must think was like to thrive, if you consider their course of life. And here they parted company like two wolves

that should separate themselves to seek their prey, they care not where, nor of whom, purposing never to see one another, unless the gallows gave them a meeting. *Monnocho* was a fellow of as base a condition as his present profession made him, being not long before a surgeon's mate, in a pinnace serving under me. And now hovering about those islands, it was his hap to meet a ship of the king of *Denmark's*, to whom the islands belong: this ship, after a little encounter, apprehended, and knew well what to do with him, so just that nation is to the detestable course of sea-rovers.

Here *Monnocho* found worse usage than he gave *Tucker*; for the time was not long before his ship made a return into *Denmark*, and in as short a while after he tasted deserved death upon the gallows; where he hung a spectacle for all men to behold.

Now *Monnocho* is brought to the destiny by right due to him; I will go scour the seas, and look if I can spy *Tucker*, being out of hope to find his ship put to that use for which she was first designed; I mean fishing.

After *Tucker* had spent some time at sea, domineering over the poor fishermen; they now tired with the usurping tyranny of the pirates, and being desirous to live by honest labour, rather than by evil pains, privately practised, and watching their opportunity, effected that they had determined to put in execution; which was, suddenly to surprize and seize upon the pirates persons, when they should least suspect it.

The attempt proved fortunate; for some they slew, and others they hurt; and *Tucker* they took prisoner, and insulted over him, as he had done before over them.

This lucky accident made the fishermen repair to shore, to supply their wants, their provisions being consumed by the pirates; as also to deliver the men, as delinquents, into the hands of justice, who were after conveyed to the *Marsbalsea* in *Southwark*, where they daily expected the doom of death.

The poor man, captain *Tucker*, being hopeless and friendless, sent me word of his misfortunes after his departure from *Ireland*, bewailing his hard hap and heavy chance, not to meet with any of my letters, written to him as aforesaid: He shewed the comfort of life was taken from him, and confessed his offences were above satisfaction; and that I was the only sheet-anchor he was to rely on; otherwise he was to perish.

I confess I was much moved and grieved with his calamity, when I remember'd how his

his penitency appeared in his former letter to me, repenting his misdoings, and detesting his kind of life, with a desire of pardon and forgiveness of his offences past.

This complaint came at an unlucky hour, both for him and me, it being in the midst of the time that malice set herself against me; for in few days after I was unjustly committed to the *Tower*; and yet I thank God by his providence, not an hour before I was imprisoned, I had finished and ended his pardon, that I might say the ending of his trouble was the beginning of my own; but not through his cause or occasion.

*Tucker* being set at liberty, was to dispose of himself as he should be guided by grace. And to give some sign of his thankfulness for the favour I did him, he resolved not to depart *London*, what shift soever he made to live, till he had acknowledged his life from me; and though at that time there was a general restraint of all people's resorting to me in the *Tower*, yet that prohibition was no sooner taken off, but *Tucker* was one of the first that repaired to visit me, with that protestation of thankfulness, and vows of amendment of his life, that he gave me satisfaction it proceeded from a penitent heart. It joy'd me much to see his reformation, and I held myself happy for the deed I had done in regaining a lost sheep that had stray'd out of the flock.

His credit being lost, which made him unfit for employment, moved pity in me what course to put him into; for no beginner can set up a trade without a stock to enable him: and to requite his remembrance of me, by the token he sent me from *Ireland*, I returned him the better part of that gift, wishing that good fortune would attend his happy beginning.

He was not long determining with himself, but immediately took a voyage to *Denmark*, whither he had often traded. Arriving there, and having occasion to go about his affairs, it happened, that passing a river, the ferryman of the boat knew him by an infallible token; for not long before the man was taken by *Tucker* at sea. The fellow had no sooner landed him and his fare, but speedily he hastened to the magistrate, requiring a warrant for his apprehension, alledging the cause; which was no sooner demanded than granted, all people of that country being naturally bent to revenge themselves upon offenders in that kind.

Being thus arrested, he was carried to prison, where he received the rigour of justice; and upon trial, by the witness of the ferryman was sentenced to die. The gibbet was erected near joining to that where *Monnocho*, his former companion, was still

hanging for him to behold, which was very odd; for it is not the greatness of the person, nor of the accident, makes a wonder the greater; for all things, be they great or little, are at the disposal of God alone, who many times advances the mean, and casts down the mighty. And it is worthy of observation, how in many cases he gives light to men, to discern his just punishment to some, for example of amendment of life to others.

And amongst the rest, this accident of these mean and ungodly pirates is no less strange, if we call to mind God's justice towards them, if you will consider the first progress of their beginning, till death cut them off, as it does all people that commit unnatural crimes; for such men never escape without cruel revenge: for a father of the church saith, *He ceases to be a man, and becomes a brute beast, that leaves the rules of reason and honesty, and gives his mind to mischief and sensuality.*

These two mens cursed courses are not unlike a novel; first in their unexpected meeting in remote islands, where they were both strangers; secondly, that upon their meeting they protested and vowed friendship, though I must say, that the agreement of ilk men in mischief cannot be called friendship: but call it what you will, it did not long continue; for there was a bone cast betwixt them, as it were, betwixt two ravenous mastiffs, to strive for, and the stronger to carry it away.

After these two pirates had parted company, the one stood to the northward, the other to the southward, a quite opposite course to one another, and where there was never likelihood of meeting more; but rather to avoid and eschew each other, their quarrel was so mortal: and yet both of them tasted one fortune alike; first in their apprehension, and after in their manner of execution; but above all, the place never doubted or feared by them; and where, perhaps, in many ages the like will not happen again, it being out of the road-way for such people to resort to.

This shall suffice for God's justice by example of these two miscreant pirates, and his detestation to their wicked courses against the silly and innocent fishermen, who, we may truly affirm and say, of all other people, get their living with the painful sweat of their brows.

I must not omit to give divers precedents of God's miraculous working in the example of fishing. Some I have heard avowed in the places where these accidents have happen'd; others I have by report, which is not so much to be credited, as, namely,

at

at *Tenbigh* in *Wales*, a place not inferior to any that I know in his majesty's three kingdoms, for situation, air, plenty, and pleasure, which in times past enjoy'd a plentiful fishing; the other is the island of the *Lewes*, I have so often treated of.

These two places abounding at several times with an extraordinary quantity of fish, the minister of the one, and the bishop of the other, envying the prosperity of the poor fishermen, being led out of a covetous desire, sought to impose a greater tax by way of tythe, than had ever been before paid to their predecessors, which was no sooner questioned, but the fish vanished, and for a time became strangers to those shores where this happened; and as I will not conclude of the cause thereof, yet I will say with a father of the church, *Non est bonum ludere cum sanctis*.

This shall suffice for so much as is contained in my sixth book, touching fish and fishing, and the merchantable commodity arising out of it; in which I will compare myself to a merchant, that freights his ship with sundry and several commodities, and sends them to several ports, thinking by the variety of wars to counter-vail the charge of the rest; for what commodity is desired in one country, is commonly little esteemed in another, as by example of gold, which above all other things is coveted in these parts of the world where we live, and nothing accounted of by the *Indians* where it is produced: hatchets, knives, and glasses, are held gross, base, and of little value by us; and yet esteemed in the highest degree of treasure amongst them: and so fares it with these six books, which are freighted and stuffed with superfluity of needless collections. Some perhaps may be delighted, and take advantage of them, how unworthy soever they may seem of themselves; for I remember the saying of that matchless and generous gentleman Sir *Philip Sidney*, That there was no book so bad, but had something in it that was commendable.

Whosoever is desirous to be informed in sea affairs, and actions in the late wars betwixt *Spain* and *England*, will find it in one of my six books: Whoever will seek to avoid errors and oversights by example of that war, may learn it: Whoever shall desire to know how a general ought to carry himself in the government of his fleet, will be instructed in it: Whosoever covets to understand how to defend his country, and offend others by sea, shall be taught it: Whosoever is desirous to sail into any of the four quarters of the world, as *America*, *Europe*, *Asia*, and *Africk*, shall find the sea open, and discovered to his hands: Whosoever will delight himself with the passages, troubles, and conquests of the *Spaniards* and *Portuguese*, and their enterprises upon new worlds, shall understand it: Whosoever will hear how the *Indians* were reduced to civility and christianity, he shall not be ignorant in it: Whosoever will put his hand to further such projects as are contained in the six books, shall not only see reasons to induce him, but shall deserve everlasting praise of his country, for his forwardness in them: Whosoever of an *Englishman* will live no longer in ignorance of what our seas produce to enrich them, shall have it discovered to their hands. Things to be admired at, when they shall remember their former errors.

I will say with Sir *Philip Sidney*, if any of these prove profitable, commendable, or delightful, the author is not to be condemned or blamed; for indeed he is like the merchant, spoken of before, that must seek to put off his ware, not by words, but worth; and as he refers himself to the buyer, so do I this discourse to the reader, to judge at his pleasure; for things give better counsel to men, than men to things; and in recompence for my labour and pains, I only crave a favourable construction, howsoever they shall appear in your conceit.

T O T H E

Sixth and Last Book of FISHING,

A N D T H E

Reasons why it was divided from the other former Discourse.

**I** Forbear to annex this addition to the former relation of fishing, to avoid giving publick offence to the *Hollanders*; for it is an old saying, *That truth many times turns a Man to Ruin*; and I see that the present policy of our state is rather to dissemble an injury, than to revenge it, though the *Hollanders* secret envy is more to be feared, than when they declare themselves openly against us: but yet it shall appear that I have not been altogether ignorant of their beginnings and rise, but have carefully beheld their proceedings and actions, and can judge of their malicious detractions to us, and others; which is the nature of faction, at first to shew itself humble, till it mount to the top of ambition.

Our eyes and senses make it clearly appear, that they and their cunning courses are the mediate causes of the poverty that daily affails our glorious kingdom, as I shall instance some particulars within the land, before I ingulf myself into the open sea; which are as follow:

What trades and artificers of all kinds do they set up, to the ruin of many a poor *Englishman*, that has lived an apprentice and bondman seven years to attain his art and occupation?

What trades are there in which they have not stocks going, or scriveners with money to lend?

VOL. III.

What land is to be sold, or mortgage to be had, that they have not the first refusal of?

What marriages of man or woman, falls amongst them, that they will enrich the *English* with, so long as any of their country or tribe is found amongst them?

What maritime town, or other of account, within twenty miles of the sea, opposite to *Holland*, that is not stuffed and filled with their people, to the impoverishing of the inhabitants and dwellers?

What masses of money and gold have they, against the laws of the realm, transported out of it, as truth has made it plain?

What loss did they to the king and kingdom, when they and their faction opposed the brave work of dying and dressing of cloths, after it was in a good way of going forward?

What hurt or hindrance do they to our navigation, when they freight strange vessels, and refuse the *English* ships?

What an innumerable wealth have these people attained to, whose beginning was nothing when they made their first entrance into this kingdom? If it be consider'd, it will appear to be admirable.

And for all these domestick damages the subjects receive, his majesty has no

6 K

more

more benefit by them, than if they were natural *English*.

These are the least to what shall appear when I launch into the ocean, and there encounter them; but in the mean time I will unmask their craft and cunning, and discover the subtilty of their *English* friends to intrap us in the snares of their policy, under the false colours and pretence of security to the state.

As well the one as the other desires it may be held a maxim of state, That the security of *England* must depend upon the fortunes of *Holland*; a foul imputation they cast upon us, when we remember the noble and victorious actions of our forefathers, who made other nations fear them, and they to fear none: but this position is devised to serve private mens purposes, contrary to truth or reason, as I will make it appear to the judgment of wise men. But under this conceived colour the *Hollander* plays the part of a *Panther*, which has a sweet scent, but a loathsome face, which makes other beasts follow till he has got them into his clutches. And the *Hollanders* have so entrapped us, that we are caught in their nets, and by nets we must be freed: we are made silly fishes, to be ensnared by the subtilty of those fishermen; but I hope we shall be released and relieved by fish, with our endeavour and pains.

Now to hoist sail and put to sea, to encounter, at least to discover, the *Hollanders* infolencies, their practices, their deceits, and designs, wherein I will make the indifferent reader wonder, and after judge, how dangerous a thing it was to put arms into their hands, and how necessary it is to bring them into the same state of shipping they were before the wars.

I will begin with the days of queen *Elizabeth*, speaking to the watchmen of our commonwealth of that time, and use an old phrase without application, *That profit and bribery makes a judge blind*.

Was it discretion and safety in those men, after the *Hollanders* had ingaged us in the war with *Spain*, that our ships were arrested, our goods forfeited, and from thenceforward prohibited traffick, yet to suffer the *Hollanders* to continue as absolute a trade into *Spain* as in time of peace, and supply them with ammunition, shipping, mariners, and intelligence against us? and rather than their manner of war should cease, by which they ingrossed the intire trade into their hands, if ever the king of *Spain's* army in *Flanders*, or his armado in *Spain*, should have wanted powder, or other abiliments for the war, they would have supply'd him: for all their drift was no more than to keep us severed from *Spain*,

and to prolong the war for their benefit of commerce and traffick. This was the beginning of their rising, to our ruin; and from this very day we must reckon, as from the birth of a child, their first life and prosperity.

Was it security for us, when our watchmen gave way to Monsieur, brother, and next heir apparent to the crown of *France*, and who had succeeded his brother, if he had outlived him, to be invested duke of *Brabant*, who had then enjoy'd the *Low Countries* with *France*, and who was no sooner placed in it, but he began treacherously to practise, by example of *Antwerp*, and other places?

Was it the part of friends, and with whom they had lately leagued, that when the king of *Spain* imploy'd a fleet against *England*, or upon defence of his own coast, he had ships, men, and his principal pilots, *Hollanders*, who were either prest in *Spain*, or willingly served against us?

Was it not cunning in the *Hollanders*, and fraud to us, when the greatest trade of the *Spaniards* and *Portuguese* into the *West Indies*, *Guinea*, and *Brasil*, was in *Holland* ships, which defended the *Spaniards* goods from the *English*, with more slaughter to the *English* when they encountered, than ever we received from *Spain*? Here they supported an enemy by nature, to hurt and injure a friend by fact and proof.

Was it safety to us, or honesty in the *Hollanders*, in the year 1599. that her majesty rigged and furnished a royal navy upon a sudden service, and expected assistance of ships from them by contract, that in conclusion they sent but seven ships, and such, that the worst of ours was better than the best of them? Here they left us unprovided to encounter a danger; for a foe is as good that hurts not, as a friend that helps not.

Was it security, honour, or profit to us, that with an expence of more men and money than we have conquered kingdoms heretofore, we have maintained their principality, making mechanick persons equal with princes, raised a rabble commonwealth against the monarchy, trained up their people in discipline of war? that of a mean and timerous generation, we have put valour and knowledge of arms into their hands? And for all these unspeakable good turns done them, we have no more assurance from them, than discourtesies we receive in all parts where we meet: and no marvel; for popular states write favours in dust, injuries in marble.

Was it security, in all the time of war, to suffer our prime soldiers, and of all degrees, to be under their subjection, the most  
part

part of our wealth exhausted thither; and by consequence to be in their power to dispose of this kingdom as pleased most voices of their select council, which in their government is opposite to monarchy? For whereas monarchy propounds honour as the first thing, the second the publick good, and the third interest; a popular state prefers private profit, makes the common good the second, and honour the last.

Was it security to let go the cautionary towns, *Flushing* and *Brill*, being bridles to their insolencies? For by them we could at any time either curb, or give them their reins, as since we find by enjoying that liberty all their injuries towards us began, which before they durst not offer outwardly.

Was it, or is it security to us to suffer yearly three thousand vessels of theirs to fish upon his majesty's seas, and infringe his majesty's laws of *England* and *Scotland*, in which seas they are bound to acknowledge a sovereignty to the kings of both kingdoms? and under that pretence of fishing, they may use this stratagem, cunningly and secretly to put ten or twelve soldiers in every bus? and under colour of fishing, to land in some of his majesty's dominions, where it is to be feared they will not want a party?

Is it safety, when we enter into consideration, (by the multitude of their vessels increased out of fishing,) how they insult upon us at our own home and abroad, as, namely, in the *East Indies*, a thing able to move pity for the fact, and revenge for the doing it? and besides many other scorns and disgraces they put upon us, which need no repetition, because they are fresh in our memory? They resemble *Hecuba*, that has a human voice, speaking, like a friend, but is a wolf ravening like a fiend.

Is it good and beneficial to us to see the *Hollanders* enjoy our absolute trade of the world, and first discovered by us; and not contented with the moderate gain to themselves, labour by all indirect means to impoverish us, in uttering their commodities at an under rate, whereby to weary us of all such trades? For such is their covetousness, and such their unthankfulness, that they regard neither favours done, nor to be done them; and when there is no fear of revenge, there is little conscience of offence in a covetous man. *Lycurgus* says, *That riches and trade produce a scarcity of virtue.* And it is a rule, *That prove a man unthankful, and disprove him in all his other actions.*

By this false position, That *England's* safety must depend upon *Holland's* prosperity, we were driven to a war with *Spain*, and by

that war to defend their commerce; for they never undertook hostile act by sea against *Spain* till obliged by necessity that they were prohibited that trade: but the greatest mischief of all others, was tolerating their fishing, which we only might have enjoy'd; by means whereof we have resign'd our weapons, which are the ships increased out of it, into their hands out of our own, to dispose of to their advantage and our hurt, if at any time they comply with their king, and make him thereby mighty by sea, or if they cast themselves upon the protection of *France*, as they will do if *France* can bestead them more than we. This is a way, out of our cinders, to kindle a fire to burn and consume us.

It may be compared to a subtle woman, who, to abuse the simplicity of her weak husband with her hypocrisy and indirect practices, draws him to rely on her for the managing of his estate, being made believe he cannot otherwise subsist, according to the former proposition; but he dying, her voluptuous desires discover her foul intentions, and she despises his friends and children. In this simile *Holland* is the unnatural mother; this kingdom the silly husband; and the subjects the outcast and unrespected children.

Our watchmen, in their wisdoms, might have foreseen this, and prevented it by enjoying the fishing; for then had *England* kept the same strength by sea, which *Holland* has since attained to; then had *England* undertaken the same courses in fishing, as the *Hollanders* did; then would not *England* only have outstripped them, but all the world in strength of ships and wealth of subjects; and by consequence have caused not only an admiration, but a terror to all the world that should but hear of us, as now we are brought to reproach and scorn, by that mean nation of *Holland*, in remote countries, as far as the *Indies*, where they cast the imputation of a petty nation, and poor people upon us, and make themselves sovereigns and kings over this part of the world; and as vermine gnaw upon meat, so do they detract from the worthiest persons.

In this trade, as in all others, they either deprave us, or deceive us; by example of a merchant of note, who above five years since freighted a ship of red herrings, from *Yarmouth* to *Marseilles*, and departed in company of some *Hollanders*. It happened that by advantage of wind and weather the *Hollanders* arrived at their port, and made sale of their herrings to an exceeding gain before the other's coming. The *English* finding the *Hollanders* unburthened of their lading, some two hundred barrels excepted, desired to buy them at the rate the others had

had been sold, thinking thereby to keep up the price; but the *Hollanders* sold them at a low price to hinder and prejudice the others sale. This envy of the *Hollanders* was the greater, in that it was grounded upon malice, and not founded upon injury: for *Macrobius* says, *That anger is increased upon occasion, but malice upon ill condition.*

But if we enter into consideration of our other trades, which they seek to deprive us of, let their carriages in *Greenland*, in *Newfoundland*, and *Russia* appear, three places first known to us: in *Greenland* they contested with us in our whale-fishing, and were like to bring it to a naval battle, though the law of nations casts it upon us as the first discoverers. Here their envy appeared, and they shewed there is no such dangerous foe as the seeming friend.

*Newfoundland* being our ancient discovery, and that no nation could challenge interest therein but ourselves; not many years since the *Hollanders* practised to convey threecore or fourscore mariners, out of the west country, to instruct them in that manner of fishing; but it was discovered and prevented; beware therefore of them; for they are like a serpent, that never stings so deadly, as when it bites without hissing.

Notwithstanding, as I have shewed before, that they have brought the trade of *Russia*, from two ships of theirs to sixty, and the decrease of ours from fifteen to two, yet this would not satisfy them, but they practised with the *Muscovia* ambassador at the emperor's court at *Prague*, to forbid us the absolute trade of *Russia*; like envious persons that desire no good to any but themselves.

It is no less admirable how they take advantage of us, upon all occasions offered, as namely in the year 1628. when our wars with *France* prohibited our trading thither, whereby we were compelled to be served by the ships of *Holland* with the greatest part of wine that furnished this kingdom.

This prohibition much increased the *Holland* shipping; and they thereby raised their freight to their own price, and brought it from twenty four shillings to four pounds a ton; a sum never heard of, but upon that occasion.

One instance I will make apparent by a merchant of great account, himself being witness, and to whom it happened: a *Holland* ship being in the river of *Thames* to be sold, this merchant offered two hundred and fifty pounds for her, but could not have her under three hundred pounds; whereupon they parted for this difference of price, and the *Hollander* repaired to *Bordeaux* with his ship, and there procured a freight for

*England*, which cleared three times the value of what he would have sold her for; for to this merchant's knowledge, he gained nine hundred pounds by that voyage.

One great advantage the *Hollanders* have of us, is the built of their ships; there being little difference betwixt the *Hamburgerers*, or *Easterlings*, and them. This gives them a freedom of trade into all parts, as well friends as foes: as friends they pass for *Hollanders*, as enemies, they take upon them the name of *Easterlings*; so that betwixt the one and the other, they circumvent us in our freights of ships, and have just occasion to laugh at us; as, indeed, I confess we deserve it, when I consider what they do is under pretence of safety to this kingdom: for good words, and ill deeds, deceive the wisest.

They have many inticements to draw people and trade to them; they debar no man, be he *Turk*, *Jew*, or *Christian*, the freedom of religion; which made one truly say, *That the true religion was professed in Amsterdam*; for all sects, be they never so diabolical, are there allowed and maintained by some or other.

As for their customs and excises, though they be high, and indeed intolerable within the land, (for those mechanick people being in love with the word liberty, though they find it not in effect, live in excessive slavery, and pay impositions for every thing they eat or wear;) yet any thing brought in by sea, goes at a low rate; as for example of wine from *Bordeaux*, that which pays nine hundred pounds custom in *England*, will not come to above fifty pounds in *Holland*; and all other merchandize after that proportion. And this is the only cause of their great trade in their provinces above all other parts.

As these are their policies at home, so have they no less deceits abroad, but far less justifiable by the rules of honesty; for to make a man honest, is to take away the occasion of being dishonest; but contrary to the law of honesty, they injure, and will give no redress; they will suffer no wrong, nor yet give satisfaction in things of right: the thing they call good in themselves, how ill soever it is to others. But to come to them more particularly,

You shall not be ignorant of a policy of theirs, wherein they shewed craft and cruelty to the *Dunkirkers* they took at sea, only to abuse us; for when they had the chance to take one of them, which was not often, and that with the advantage of three ships to one, most inhumanly they would slay them, purposely to make us believe, their malice was implacable, and irreconcilable; and yet notwithstanding

notwithstanding these barbarous acts; they made their daily resort and trade into the ports of *Dunkirk* and *Flanders*, where they supplied them with victuals, powder, shot, or any other things they stood in need of.

And since then, as in the days of king *James*, in the view of all people; and though our articles of peace with the archduke did warrant our traffick thither, yet they would forbid it, and seize upon ships of ours as they entered the ports of *Flanders*, seeking to force us to *Calais*, from whence they knew our merchandise would be carried to *Flanders*, their drift being only to enrich *France* by our loss, with the customs we there paid: to thankful people the remembrance of benefits should never wax old; for no man is more bound to be grateful than they who have received such deep obligations, as I have proved the *Hollanders* have done from us.

Many grievances our merchants have received from *Spain* came by their foul practices, as namely, by their carrying counterfeit brass money into that kingdom, and laying it upon us; for which we have found a displeasure and punishment due for such an offence.

In time of peace, in the reign of king *James*, the *Hollanders* spared not to disperse rumours throughout this kingdom of fleets and preparations in *Spain* against us; to our no small scandal, as though we were born to fear, or that our intelligence seemed so weak as to receive it from them; when indeed they did it to nourish jealousies betwixt the two states, to eat us out of that trade, as they have done in all others.

He that shall read what is gone before, shall find that their ingratitude does as much appear, as a crow that picks out the eyes of him that first nourished him. And now I will apply my self to the watchmen of our time, to consider of these collections following;

1. Whether the ground and foundation of their positions, to make *Holland* equal in power with *England*, was laid with mature judgment, yea, or no? or out of some pri-

vate ends to advance themselves, fortunes, and credit?

2. In the second I would have them consider, in what estate *Holland*, and the people in it was in, before they contested with their lawful prince for sovereignty, to that they are now brought to?

3. The third, is to consider what a height they are now in, by our conniving with them; and we lessened and diminished by it.

4. The fourth, is the damage and hazard we have run in labouring to continue their greatness, and not seeking to abate it.

5. The fifth, is the discourtesies done us out of a covetous desire of gain, and we still to bear and permit them?

6. The sixth, is the condition of their *English* friends that still uphold their faction, and what the end of their designs are like to prove, if they be not let alone?

7. The seventh, is their strength by sea, and to think of a means to equal them in number of shipping, and how to bring their fishing and other trades into our hands; which may easily be effected, if my former proposition of fishing be prosecuted.

8. And lastly, it is to be consider'd, what tie or security we can have of them, longer than we yield to their insufferable injuries and insolencies? For they may well presume, that we bearing so many blows at their hands without revenge, demand the more:

And this shall suffice for a discovery of the *Hollanders* first beginning in greatness; their sixty and odd years of continuance, and their present state now in being; wherein their ingratitude to *England* is laid open, which the *Persians* define to be a spring of vice, the enemy of nature, the poison of amity, the ruin of gentleness and benignity. All men must confess they have found the true affection of friendship in us, described by *Plato*, That he is a good friend who does his friend good, but a mighty friend that defends him from harm.

*Some other Things I forbore to insert in this Sixth Book of Fishing, concerning the Islands Hebrides, and especially the Lewes, worthy of Consideration.*

I Forbore to handle the conditions of those islands, and the use the *Hollanders* may make of them, for the same reasons expressed before, as too tart a sauce for *Hollanders* tastes, and unfit to be published to the view of the vulgar sort.

But before I look so far to the northward as those islands, I will take a survey of my own country of *England*, and gather such collections as to make me understand the other the better.

I will not speak, as I am an *Englishman*; for all men naturally are partial to the country and soil that first gave them life and food; but I will speak according to sense and truth, to make my argument and reason the stronger, in what I shall say of the state of the islands *Hebrides*.

As God hath given a blessing to *England* above all other lands he hath placed and seated in this world; for, as it were, with his own finger he hath settled it in a sea for its own security, an annoyance to all other countries, in permitting and impeaching universal trades and navigations, as that we may truly say to that point, that we are only happy above all others.

For whereas the southern and richest part of *Europe* cannot subsist, nor the traffick of the *Indies* be maintained and upheld without such materials as are sent out of the northern regions; as also, that there is a necessity in the same case for the north to receive benefit of the south; all these navigations, as well the one as the other, must necessarily have their passage through our seas and channel, and by consequence fall into our mercies, as I have handled in my first book.

And as it has been an ancient position of state, for the kingdom of *England* to have an eye to its back-door, which was then *Scotland*, till both the kingdoms were blessed and united in one, whereby the occasion of jealousy, and the opportunity and practice of *France* ceased, that was wont to stir up coals, and set one nation against the other.

So I may say of these islands *Hebrides*, that they may be made as dangerous a back-door to *Scotland* and *Ireland*, as *Scotland* has been in former ages to *England*, being placed and seated with most advantage to annoy the two kingdoms aforesaid, if the *Hollanders* hold their footing they now have in them: the condition of the people of

*Holland* being considered with their popular government, which other nations begin naturally to affect, by the example and encouragement of their late successes and fortunes, by their wealth increased out of their trade, and by the excessive number of shipping, which are the dangers of islands; for without shipping they cannot be invaded.

By the *Hollanders* possessing those islands, they may make their rendezvous and staple of all their southern navigations, as well in peace as war; they shall find sufficient succours in those islands of victuals, both flesh and fish, to give them relief; they shall find that in those islands they shall be secured with several harbours of more importance and goodness, than their own coast can afford them; those islands will furnish them more natural helps against an enemy to defend themselves, if any attempt should be made against them; but above all, when they have thus settled and seated themselves, we shall lose our ancient and accustomed advantage of their passage through the *Narrow Seas*, which is the only awing power we have over them and all other nations; for they enjoying those islands, will be enabled to resort to them nine months in the year, and so to pass to *Holland* by the northern parts of *Ireland* and *Scotland*, and avoid our channel and us, and our means to intercept them.

Moreover, in those islands, which are seated as a back-door to *Scotland* and *Ireland*, as I have said, and in so remote a place and distance from *England*, the danger is, that the people who are untamed, uncivil, will easily rebel by the insinuating practices and instigation of the *Hollanders*, who are ready to allure, entice, and undertake any unlawful action, which shall tend to the overthrow of monarchy, and to settle their own form of usurped government.

And therefore it behoves us to have a circumspect eye over the *Hollanders*; for if errors and dangers are not remedy'd in the beginning, after follows great and unavoidable mischiefs, like what is past; which is sooner to be repented than recalled.

This shall suffice to those points I have treated of in this sixth book, wherein I have unmask'd and discover'd, out of my own experience and observations, the *Hollanders* long and subtle deceits to abuse us; for all true-

true-minded *Englisfomen* to behold with an eye of indifference, how with cunning and craft they have still laboured to nourish divisions betwixt the two mighty kingdoms of *England* and *Spain*, merely for their own profit and gain, till the death of queen *Elizabeth*; when they could no longer support their politick practice, king *James* succeeding, who brought the blessed effect of his motto, *Beati pacifici*.

I could follow this subject of the *Hollanders*, but for making the bulk of this book too big; and that I would not do injury to another book that is written by the same author, entitled, *Certain Observations that are not worthy the name of history, that happened to England since the year of our Lord*

1558. and a little before. Which book contains these particulars:

The favours *England* hath done *Holland*.

The state of *Holland* from the beginning of their insurrections. The continuance, and what the end is like to prove.

Collections gathered out of a book written by Sir *Roger Williams*, and printed 1618.

Whether *Holland* do injury to their prince, yea, or no?

The desperate condition *Holland* has been often reduced to.

The difference of times betwixt the beginning of queen *Elizabeth*'s reign, and the latter end.

### *A Relation of some Things that happened in the Reign of Queen Mary and Queen Elizabeth.*

**T**Hough I have made a description at large of the *Hollanders* inconstancy, faithlessness, and manifest injuries they have offered to us, yet I must say there is no man so wicked or vicious, but some kind of virtue will appear in him, for which he deserves cherishment, as well as chastisement for the other; but naturally they are people that desire rather to live without virtue, than die without money; and this that followeth shall set forth their praises in the worldly carriages.

They are frugal in expence, the benefit whereof themselves and country find; they are industrious, as their actions at home and abroad do witness; they are just in contracts, holding a conscience in the little religion they have, not to defraud any man; they labour to seek out the secrets of lands not inhabited, and countries undiscovered; they are inventors of arts, which to their praise they have enriched the world with; they are willing without excuse to contribute for the good of the state, not standing so much upon privileges or petition of right, as to neglect any occasion of advantage to benefit their commonwealth; they are laborious and painful of body, not admitting a beggar in their provinces, and willing to relieve and comfort one another in strange countries; they are enemies to the expence of law and the griping of lawyers, and end most of their controversies by arbitration of friends: their expences in drinking are saved, and mitigated by their misery in eating: for out of their excessive covetousness they almost starve their bellies, and by their unmeasurable frugality they scarce cloath their bodies; for it is verily believed the people in one of their chief

cities spend not so much in apparel as is spent in a prince's court.

But all these virtues are drowned in a covetous ingratitude, that holds friendship with no body but for interest, which ends in the self-same interest: and no marvel; for popular states are no longer thankful, than they receive benefits; nor nothing is of shorter life amongst them, than the memory of pleasures or favours past: they are so careless to give satisfaction for the ill they do, that if it be demanded, it is as much as to speak of valour to a faint-heart, or charity to an unmerciful man, or of courtesy to a churlish disposition; for it will prove but the telling a tale to him that is asleep. The definition by a philosopher in matters of friendship is as followeth:

A friend is long sought for, scarce to find, and hard to keep; a friend is always ready to comfort in adversity, to help in necessity, to bear with one's infirmity, and reprove his errors gently. But the *Hollanders* are contrary in their friendship; for they are like an ill bird that lays an ill egg, an ill tree that brings forth ill fruit, or a young cub that grows crafty like his dam; they practise and follow the steps of their predecessors; they make riches the heaven of their thoughts; and as it is held no hurt to know ill, but to do it, these people are perfect artists as well in doing as knowing mischief.

Yet, to speak truth, their natural ill has been nourished and made worse by us; for if we had not connived at them and their actions, to our own prejudice, they had wanted power to have executed their ingratitude: therefore it had behoved us to consider

consider what we gave, before we gave; as also to whom we gave, and how we gave it; for states ought to be governed by wisdom, and not by popular affection or passion. Wise men should not measure things by outward appearance, but by discretion and reason, or else they behold their actions in a false glass.

But now let us at last seek to avoid that evil we have done in making the *Hollanders* too great for us to tolerate, lest we feel the effect of repentance. It is not the meanest point of wisdom to doubt and mistrust the worst; for doubts beget understanding, and thereby prevention: and as in natural bodies the longer one lives in health, sickness is the more dangerous when it comes, so it is with us and the *Hollanders*; the longer

we have lived in a mutual and inseparable peace, now that they have over-wrought us with cunning, and made us feeble by the strength they have suck'd from us, it will behove us to recover our ancient vigour and valour, and be no longer deluded with false pretences of safety to us and the commonwealth. Let us follow the old rule in seeking to put out the fire of our neighbour's house, though he be our enemy, lest it should flame into our own; for it is an easier thing to oppose danger abroad than repulse is at home.

I have had occasion to insert some part of this last leaf in my former fourth book, which is there to be seen.

# DESCRIPTION

OF THE

Most Celebrated *East-India* Coasts

OF

*MALABAR* and *COROMANDEL*;

As also of the

*ISLE* of *CEYLON*:

With all the adjacent Kingdoms, Principalities, Provinces, Cities, Chief Harbours, Structures, Pagan Temples, Products, and living Creatures: The Manners, Habits, OEconomies and Ceremonies of the Inhabitants: As likewise the most remarkable warlike Exploits, Sieges, Sea and Field-Engagements betwixt the *Portuguese* and *Dutch*; with their Traffick and Commerce.

The Whole adorned with new Maps and Draughts of the chief Cities, Forts, Habits, Living Creatures, Fruits, &c. of the Product of the *Indies*, drawn to the Life, and cut in Copper Plates.

Also a most circumstantial and compleat Account of the Idolatry of the Pagans in the *East Indies*, the *Malabars*, *Benjans*, *Gentives*, *Brahmans*, &c. Taken partly from their own *Vedam*, or Law-Book, and authentick Manuscripts; partly from frequent Conversation with their Priests and Divines: With the Draughts of their Idols, done after their Originals.

**M**OST of the modern *East-India* voyages that have been published of late years, being very defective either in respect of the many fabulous relations that are inserted frequently, rather to please the reader, than to pursue the strict rules of truth, (not to mention the errors in the computation of the distances of places, and frequent unnecessary digressions,) it is no wonder, if the most curious in history have conceived a very indifferent opinion, if not an intire aversion to them. It was upon this consideration that the ensuing treatise coming to our hands, we thought it absolutely worthy the publick view, it being agreed by all who have had the opportunity of travelling in those countries, that the same may, in respect of its sincerity and exactness, challenge the prerogative before any other hitherto published upon the same subject. For, considering that the author thereof lived not only in the station of a minister in divers places of *Malabar* and *Coromandel*, and especially for several years in the kingdom of *Jafnapatnam* in the isle of *Ceylon*, but also assisted in person in divers sieges and expeditions, and thereby had more than ordinary opportunity to be informed concerning the nature and constitution of those countries, their products, inhabitants, manners, customs, religion, ceremonies, œconomy, traffick, manufacturies, civil and military exploits, and what else may be requisite for the accomplishment of a good history, founded upon the faith of one who had been an eye witness of those transactions; consequently he may challenge the preference before many, who relate matters chiefly upon hearsay. As to those things which are not grounded upon his ocular testimony, the same were taken from authentick records and manuscripts, and illustrated with maps and draughts of those several countries, cities, nations, &c. done to the life. What relates to the idolatry of these *Pagans*, we are convinced, by his own testimony, that besides the opportunity he had of visiting their *Pagodés*, or temples, (a thing rarely allowed there

there,) one of their most learned *Brabmans* lived with him in the same house for a considerable time, from whom he, by constant conversation, as well as out of their own records, learned the most secret recesses of their religion, and had the exact draughts of their idols, much beyond what *Abraham Royerius* (who writ upon the same subject) can pretend to upon that account. As for our part, we have made it our chiefest care to give you an exact delineation of the before-mentioned draughts in the best copper plates that could be procured; and that with all imaginable exactness, according to the true originals, contrary to what is practised by many, who study to represent matters of this kind, rather according to their own fancy, than to truth. We have only this to add, that to avoid all unnecessary prolixity, it was judged requisite to omit many digressions, tending not so much towards the elucidation of the history, (as we suppose,) to shew the author's criticism in the holy scripture.

C H A P. I.

*The Division and Limits of the Indies. The Author's Purpose in the ensuing Treatise. A Description of Cambaja and Suratte. The Treaty with the Great Mogul, by Mr. Van Teylingen.*

*Baldæus.* **T**HE main design of the ensuing treatise being to give an exact account of the *Indies*, as far as is come to our knowledge, either by our own experience, or the constant conversation with people of unquestionable credit, *viz.* the coasts of *Malabar* and *Coromandel*, together with the isle of *Ceylon*, and places thereunto belonging; we thought it not beyond our scope to insert the true limits and division of the whole *Indies*, whereby the reader (together with the annexed map) may form to himself the more clear idea of the situation of these places.

*The limits of the Indies.*

*India* therefore borders to the west upon the river *Indus*, towards the *Arabian Sea*; to the north it is inclosed by the mount *Taurus*, on the east side by the vast *Eastern Ocean*, and to the south by the *Indian Sea*. *India* was anciently divided into two parts by the river *Ganges*; thence the more eastern part was called *India* beyond the *Ganges*; and the western part *India* on this side of the *Ganges*, now known by the name of *Indostan*, and, according to the opinion of some authors, is the same mentioned in the scripture by the name of *Havila*.

*India* is besides this divided into several kingdoms and provinces, to wit, the empire of the *Great Mogul*, *Decan*, *Malabar*, *Coromandel*, *Crika*, *Bengale*, *Pagu*, *Siam*, and *Cambaja*, besides the *Maldivè* isles, (of which

there is a vast number,) the islands of *Ceylon*, (of which in the second book,) of *Sumatra*, *Borneo*, *Celebes*, *Amboina*, *Banda*, and the *Molucque* isles, *viz.* *Termate*, *Machian*, *Bachian*, *Tidor*, *Motir*, *Potbacker*, and divers others.

As it is not my intention to treat of the whole *Indies*, but to confine my self to those parts I have for the most part seen my self, and to give you a relation of such remarkable transactions, both of peace and war, as have happened there; so I will begin with the kingdom of *Cambaja*, and its capital city, having the same name, and end with *Bimilipatam* upon the coast of *Orixa*, bordering upon *Bengale*.

*Cambaja* is a different province from *Gururatte*, situate at twenty two degrees of northern latitude; it has got its name from its capital city named *Cambaja*, (formerly the *Indian Cayrus*,) seated at the mouth of the river *Indus*, (or *Sandus*,) known by different names among divers nations: it rises among the mountains of *Paramisus*, and being augmented by at least nineteen other rivers, (among which are the *Hydaspes* and *Hypasis*, whither *Alexander the Great* carried his arms,) it falls by seven different channels, or, as some will have it, by five, into the sea, two of which pass through and exonerate themselves into the sea in this kingdom of *Cambaja*. It borders to

*Baldeus*. the east upon the country of *Mandoa*, to the west upon the country of the *Nautakers* or *Gedrosiers*, to the north it has the kingdoms of *Sanga* and *Dulcinga*, and to the south that of *Decan*. It is one of the most fruitful provinces of the *Indies*, which furnishes the circumjacent places with corn, wheat, rice, pease, butter, oil, and divers other provisions. The inhabitants are generally either *Gufurattiens* or *Benjans*, being much addicted to traffick, and very quick in their dealings. They make here the best calicoes of all forts; and the country abounds in indigoe, granates, hyacinths, amethists, and divers other precious commodities. According to *Cluver's* computation, *Cambaja* is one hundred and fifty *German* leagues long, and as many broad.

The city of *Cambaja* (called the *Benjan Paradise*) lies, according to the common computation, sixteen leagues to the west of *Brochia*, seated at the entrance of one of the largest channels of the river *Indus*. About three leagues thence, on the opposite shore, is a great village, inhabited by the rebellious *Raspoutes*, a perverse generation, living for the most part upon rapine. This river is almost dry all the winter, though at high tide it rises several fathoms deep, so that then ships may come up to the very walls of the city, where at low tide it is fordable. This city is reckoned as big again as *Suratte*, being well built, and fortified with a tripple wall: it has three *Bazars*, or great market-places, for the sale of all forts of merchandizes, and twelve gates; besides that almost every street has a peculiar gate, which is shut up every night, to prevent disorders: its whole circuit is about six or seven *English* miles; and without the gates are four very delicious large cisterns or ponds, and fifteen gardens, for the diversion of such of the inhabitants as are pleased to divert themselves there with walking in the cool of the evening. They are for the most part pagans, and addicted to traffick, especially in all sorts of stuffs for clothing, which they transport to *Diu*, *Goa*, *Atchin*, *Mecba* and *Perfia*.

*Amadabath*, the capital city of the province of *Gufuratte*, lies eighteen leagues from *Cambaja*, about twenty three degrees and a half northern latitude, and consequently directly under the tropick of *Cancer*: it is seated in a great and most delightful plain, just on the bank of a very fine river; it is both strong and populous, being fortified with a goodly wall with round turrets and twelve gates.

The streets are very broad, the houses very handsome, and the pagan temples stately built. In the center of the city is

the castle, the residence of the governor, *Baldus*, surrounded with a very high wall; the gates whereof are guarded by a certain body of troops, who let no body pass or repass without leave, this being formerly the ordinary seat of their kings. The commodities found at *Amadabath* are girdles, turbants, gold tissues, silk stuffs, satins, damasks, tapestries, suchar, amspien or opium, gummi lacca, borax, preserv'd ginger, mirabolans, sal-armoniack, and indigo. Under the jurisdiction of *Amadabath* are twenty five considerable towns, and two thousand nine hundred and ninety eight villages.

The city of *Suratte* is a place of great traffick, both the *English* and *Dutch* having factories here: it lies open to the water-side, except that the castle is well provided with cannon brought from the ship *Middleburgh*, which was lost there 1617. But on the land-side it is fortified by a wall of stone, the old fortifications being only of earth: it has no more than three gates, but two governors independent on one another, one of the castle, the other of the city. Next adjacent to the palace of the last stands the custom-house, where all goods imported or exported pay three and a half *per Cent*. custom, except gold and silver, which pay only two *per Cent*.

These custom-house officers are very troublesome and injurious to strangers, and have often given great cause of complaint to our company, as will appear from the following petition, and the *Mogul's* patent (or *Firman*) granted to the said company, and dated the 15th day of the month *Rammafay*, in the 16th year of the king's reign, and since that of *Makomet* 1052.

“THE *Dutch* are approached to the gates of your majesty's court, expecting at the feet of your majesty's throne (whose brightness is like that of the sun, and reaches to the skies) the happiness of seeing the eyes of the greatest monarch, to offer their just complaints against the officers of your majesty at *Suratte*, who have been extremely troublesome to them, in exacting from them illegal duties of their goods bought at *Agra* and *Amadabath*, and thence brought to *Suratte*. they humbly request your majesty to send your orders by your *Duwan* or commissioner to the custom-house officers at *Suratte*, with strict command to regulate themselves accordingly, as they expect to be accountable for it to your majesty.”

The

The City of  
AMADABATH

SURATTE.

*Baldæus.* The king did immediately dispatch his orders, that the custom-house officers should not take from the commodities bought at *Agra*, and belonging to the *Dutch*, from ten to twelve *per Cent.* and those bought at *Amadabath* ten, or ten and one half *per Cent.* that they should be obliged to rest satisfied with the bills of loading given them by the *Dutch* merchants, and exact no more custom under any other pretence; that furthermore, all commodities bought at *Broderra* and *Suratte* should pay according to the price they were bought for; and that they should avoid giving any just reason of complaint to the *Dutch.* But these promises had not the desired effect, as will appear out of the next following letter of Mr. *John van Teylingen* president and governor of the *Dutch* factories in *Gusuratte*, *Indostan*, and *Mocha.*

Mr. Van Teylingen's Letter.

“ **W**Hereas by the manifold exactions and injuries, the robbing of the factory of our company, the detention of *Daniel Massouw*, barber's mate, and divers other enormous proceedings, the persons in the service of the company, in the empire of the *Great Mogul*, have received considerable detriment from divers of the *Great Mogul's* officers, (contrary to the intent of his *Firman*, or letters patents,) which must needs tend to the great damage of the company in general: it has, after mature deliberation, been thought expedient, by Mr. *Cornel. van der Lijn* governor-general, and the rest of the members of the council of the *Indies*, to redress the said affronts and injuries by force of arms. The yachts, the *Larck*, the *Sluice*, the *Lillo*, and the *Eight Churches*, being equipped lately for that purpose, and to be joined by divers other ships from *Batavia*, we give the command thereof, during my absence from the fleet, to the head factor *Gerard Pelgrim*, which however shall cease that minute, when I come aboard any one of these ships in person. To prevent all disorders, rapine, and other enormities, I do by these presents give a strict charge to all the officers, of what degree soever, and to all the soldiers and seamen aboard these vessels, not to hurt the *Moors*, either in their lives or estates, (this being contrary to the intention of the council,) but only to seize upon their ships, money, and goods, and to secure them, till satisfaction be obtained by the company upon their just pretensions. We therefore once more command all the officers, soldiers, and seamen, without exception, not to injure or rob (after the seizing of any of these ships) the *Moors* in their persons or goods, under the penalty of

“ corporal punishment, and (according to *Baldæus.* the nature of the crime) of the loss of their lives, as they will answer the same to the contrary at their peril.”

Given at the Dutch Factory at *Suratte*,  
Feb. 10. 1649.

JOHN VAN TEYLINGEN.

The following Order was likewise directed to the Head Factor *Gerard Pelgrim*, and the Factor *Peter Ruttens.*

“ **I**T being firmly resolved in council, the 25th of *October*, to prosecute with the utmost vigour the design laid formerly by the governor-general, and the council of the *Indies*, (which was delayed by our long stay,) with the first opportunity, the yachts, the *Sluice*, *Larck*, *Lillo*, and *Eight Churches*, are chosen for that purpose: but two of them being now at *Mocha*, and the other two ordered to stay there the winter at *Dabul*, we constitute the head factor *Mr. Gerard Pelgrim* commodore over the said ships, as soon as they are rejoined aboard the *Larck*, or any other of these ships he shall be pleased to chuse, where he shall carry the flag, with authority to call on board the council of war when occasion requires. In his absence, or separation of the ships, the factor, *Peter Ruttens*, shall exercise the same authority as *Gerard Pelgrim*, both which however shall cease with the arrival of the president *Mr. John van Teylingen.* Whether the two before-mentioned yachts shall leave *Mocha* together, or not, is not yet determined; but in the mean while we strictly charge you, that so soon as you have notice that the *Chasirovan*, (a ship of a vast bulk,) or any of the other ships belonging to *Suratte*, are preparing to depart you set sail some days before them, under pretence of being bound (according as we used to do) for *Gamron.* All which is to be understood, provided matters be not brought to a happy conclusion before that time; for if that were, you have nothing to do but to prosecute your voyage in good earnest thither, unless you had a sure prospect of gaining considerably by your stay, and increasing the price of your cargo. For the rest, it is to be your main concern, to take effectual care that none of the *Great Mogul's* ships, nay, even such as trade thither from *Diu*, escape your hands; and especially to keep a watchful eye over the *Chasirovan*, which commonly sails sooner than the rest, and has more ready money

*Baldæus.* “ money aboard. In case it should happen  
 “ (which we hope it will not,) that the  
 “ yacht the *Eight Churches*, which is to  
 “ return from *Gamron*, should, by some  
 “ accident or other, be detained in her  
 “ voyage, we have provided against it, by  
 “ dispatching to the commanders thereof a  
 “ copy of these orders for their direction up-  
 “ on occasion; which after the return from  
 “ their voyage they are to deliver, sealed  
 “ up, into your custody, where the same is  
 “ to remain till you set sail again; which  
 “ is to be redelivered to them to serve for  
 “ a sure direction, in case you should be  
 “ separated at sea. Silence ought to be  
 “ your most peculiar care in this case, for  
 “ fear the secret coming to the ears of the  
 “ *Moors*, they should stop the departure  
 “ of their ships. The *Larck* and the *Lillo*,  
 “ and in default of those, the *Post*, after  
 “ their first appearance here, shall be sent  
 “ to *Gamron*, whence they shall sail pret-  
 “ tily late, as if bound for *Batavia*; but un-  
 “ der pretence of being unable to prosecute  
 “ their voyage, come to an anchor in the  
 “ road before *Dabul*, from whence they  
 “ shall sail, Aug. 15. steering their course  
 “ directly for the river of *Suratte*; where  
 “ they are to stay till the arrival of the  
 “ president Mr. *John van Teylingen* a-  
 “ board them; and in the mean while  
 “ seize upon all the *Moors* vessels coming  
 “ from *Mocha*; yet so, as not to commit  
 “ any further outrages against them, ex-  
 “ cept only to keep them in safe custody  
 “ till the company shall have received sa-  
 “ tisfaction from the king *Cbastiaan*. So  
 “ soon as they have retaken a vessel, they  
 “ shall take the *Nachodas* merchants and  
 “ seamen over in their ships, and keep  
 “ them under a good guard, yet without  
 “ any molestation, rather shewing them  
 “ all the marks of respect and civility  
 “ that can be; and shall put as many sol-  
 “ diers and seamen of ours aboard such a  
 “ ship as shall be thought sufficient to keep  
 “ her: and proclamation is to be made,  
 “ enjoining every body to abstain from  
 “ doing the least injury to the seized  
 “ *Moors*, either in their persons or goods;  
 “ and officers are to be appointed to see  
 “ the same put in execution. After we  
 “ have got all, or most of the *Moorish*  
 “ vessels into our hands, you shall take  
 “ care to embark all the *Facquiers*, and

“ other loose people in one ship, and to  
 “ let them sail their ways where they  
 “ please, they being not worth our keep-  
 “ ing. This done, you shall take the first  
 “ opportunity of fair weather to trans-  
 “ port, first the ready money, and after-  
 “ wards the merchandizes aboard our ves-  
 “ sels; but so, as that they be well pack-  
 “ ed and sealed up first, an exact in-  
 “ ventory made, with the names or marks  
 “ of the respective owners; each parcel  
 “ is to be marked with a peculiar letter,  
 “ a copy of which is to be given to the  
 “ owners, and a written acknowledgment  
 “ to be taken from the *Nachodas* of what  
 “ is thus taken, and to be redelivered,  
 “ in case matters be adjusted hereafter,  
 “ that so every one may know where to  
 “ look for his own; the factor being to  
 “ be careful in this point, in the transpor-  
 “ tation, as well as the master of the  
 “ ship in receiving, as they will answer for  
 “ the loss at their peril. The *English*  
 “ yacht coming from *Mocha* you are to  
 “ let pass unmolested for weighty reasons,  
 “ pursuant to the resolution taken in  
 “ council the fourteenth. The same is to  
 “ be done in respect of all *French*, *Da-  
 “ nish*, and all other ships in amity with  
 “ the states, provided they don't attempt  
 “ any thing upon the *Moors* in your custo-  
 “ dy; in which case you shall defend your-  
 “ selves to the last extremity. Lastly, if  
 “ the matter could be so contrived, that  
 “ our vessels coming from *Mocha* might  
 “ intercept and seize the ships of *Cambaja*,  
 “ and carry them to the river of *Suratte*,  
 “ it would be a singular piece of service,  
 “ and much hasten the accommodation. I  
 “ conclude, wishing you health and hap-  
 “ piness in your voyage and undertaking,  
 “ for your own glory, and the interest of  
 “ the company.”

From the Dutch Factory at Suratte,  
 Feb. 20. 1649.

## C H A P. II.

*The Treaty carried on. What Articles were proposed by the Dutch, and agreed to by the King. His Patent, or Firman, and Ratification of the Treaty.*

FOR fear of exasperating the Great Mogul beyond redress, it was thought fit to dispatch the following letter to his majesty.

MOST renowned, most potent, and most illustrious king, and lord, filled with majesty and wealth, the brightest princes among the most powerful; As an unjust war is deservedly detested by all nations, and seldom comes to a happy conclusion; so our being obliged to act against your majesty (pursuant to the command of our general, and the council of the *Indies*;) is founded upon very just and legal pretensions. Had your officers thought fit to treat us according to the tenour of your majesty's patent, or *Firman*, granted to us, we should never have attempted to raise any differences betwixt your majesty and us, much less have had recourse to open hostilities. But when we were forced to see our traffick, not only in this place, but also at *Bengale*, interrupted and spoiled by most injurious monopolies (to the great detriment of the company) by intolerable affronts, and refusing our just request, and humble petitions, to have the two fugitives, and since circumcised servants of the company, delivered into our hands; and to have due reparation made for the damage sustained by the company in the robbery committed upon their factory. All these injurious proceedings have obliged our governor-general, and the council of the *Indies*, to have recourse to the law of arms, to procure us reasonable satisfaction; and having for this purpose sent us four ships from *Batavia*, we did the 12th and 16th of this month, seize your majesty's ships the *Genjawer* and *Sababbi*, (coming from *Mocha*;) and after having taken out of them all the ready money they had aboard, and understanding that the said *Genjawer* and *Sababbi* belonged properly to your majesty, we thought fit (out of respect to your person) to have them carried by our seamen into the river, and under the castle of *Suratte*, not questioning but what we have been forced to undertake upon this account, for the maintaining of our just rights, will meet with a favourable construction from your ma-

VOL. III.

“ jefty. The money seized by our vessels, shall not suffer the least diminution, but be kept with all security, till such time that your majesty shall grant us a new patent in due form, pursuant to such articles as we have orders from our superiors to represent to your majesty, and are as follows:

“ I. It is desired that leave be given to build a warehouse for our own use, either in or near the square of the castle, where we may lay up safely our merchandizes at the first hand free from those diminutions and losses we sustained yearly in the *Alphandigo*, paying exactly the usual customs; that done, we shall be at liberty to carry on our traffick, as formerly, undisturbed and unmolested.

The governor's answer was, “ That either a place or house should be granted us just without the castle, not far from the *Alphandigo*, for our proper use only.

“ II. We desire that our traffick may be carried on without disturbance at *Bengale*, and in the circumjacent places, free from paying any duties, except what is paid usually at *Pipeli*, (the place where goods are embarked,) pursuant to the patent formerly granted by his majesty, but contravened by the avaritious governors. Hereunto it was answered, “ That the governor *Miermosa* should endeavour to obtain this point from the king.

“ III. Restitution was required of such sums of money, as of late years had been unjustly detained, both at *Suratte* and *Amadabath*, and full satisfaction desired for what customs had been extorted from our ships betwixt *Agra* and *Amadabath*, contrary to the express words of his majesty's patent; the whole sum amounting to forty one thousand four hundred and seventy nine *Ropias*.

“ IV. His majesty was requested to issue his orders for the full restitution of what money was taken out of our factory at *Suratte*; and that a certain sum (as his majesty should direct) might be allotted in lieu of satisfaction for the robbery committed upon the said factory, the murdering of the company's servants, and the injuries and affronts put upon us: the sum of the money taken away from thence amounting to sixty six thousand *Ropias*.

60

Unto

*Baldæus.* Unto these two points the answer was made; "That the restitution of what was taken from us was a reasonable request; but to give satisfaction, for that other enormities were committed by robbers, (since fled from justice,) was not in their power; but if any of these criminals could be taken, they should be delivered into our hands.

"V. That for the future none of his majesty's ships, or any others belonging to those of *Suratte*, *Bengale*, or other places, should traffick to *Achin*, *Pera*, *Queda*, *Oedjang-Salang*, *Malacca*, &c. and in case they should, they might be seized and declared as good prizes by our vessels, by reason that the company being then engaged in a war against these places, were resolved to block up their rivers, and to keep all foreigners from trafficking with them by sea, till they have received entire satisfaction at their hands.

"VI. It was desired that his majesty would deliver to us the (beforementioned) two circumcised servants of the company; and if they were at present out of reach, to deposit into our hands, in lieu of them, four hundred thousand *Ropias*; which sum shall be restored immediately after the delivery of these two persons.

The answer was; "That one of these circumcised fellows was retreated many years before into *Persia*; and the last died in his flight about eight months before: but if they would have his bones, they would endeavour to procure them.

"VII. That if ever any of the company's servants shall run away hereafter, they shall not be protected, much less be circumcised; and in case any of the inferior officers should notwithstanding this detain any of them, (contrary to your majesty's knowledge) they shall be obliged to deliver the same to us.

"This article was granted, provided they did not take refuge among the *Raspoutes*, then in rebellion against the *Mogul*.

"VIII. That satisfaction should be given for what expences the company had been forced to be at both by sea and land, since the robbery committed upon their factory.

"This article was rejected, a general satisfaction being promised already.

"IX. That for the future a sufficient guard should be kept to protect the servants and goods of the company from the like danger; and that in case any such thing should ever happen again, the governor shall be obliged to make satisfaction.

"It was promised, that for the future a *Baldæus.* guard should be kept to secure the company against all danger.

"X. If our *Cassila*, or caravan, (which God forbid,) should be plundered by the way, that the governor shall be obliged to find out the goods; and if found, restore them to us, and in case of neglect, to make satisfaction for them.

It was answered; "That we must sue for a *Firman*, or patent, on that account, which would without question be granted.

"XI. That in all the cities, towns, and territories under his majesty's jurisdiction, we shall be exempted from paying any duties, custom, or impositions, except the customs at *Suratte* and *Brochia*; and in case any money should be exacted from the servants upon that account, the money shall be made good by his majesty's *Duwan*, or commissioner, at *Suratte*.

"XII. That the custom payable from such goods as are to be exported, shall continue on the same foot as settled by the king's last *Firman*, or patent.

"This article was granted without the least limitation.

"XIII. That the customs of the merchandizes imported, shall (as formerly) be satisfy'd with merchandizes each in its kind.

"This was also granted.

"XIV. That we shall be at liberty to dispose and sell our cargo's and goods where and when we please, without being controuled therein by the governor, or any other merchant.

"This was likewise agreed to.

"XV. That no governor, of what quality or degree soever, shall obstruct us in the buying up what commodities we have occasion for, or employing of brokers and other servants for that purpose, such as we judge may be most serviceable to us; neither shall they be taxed, or otherwise molested on that score.

It was answered; "That doubtless his majesty would grant that article; and that in the mean time no body should intermeddle with the traffick belonging to the company.

"XVI. That no body, of what degree or quality whatever, shall pretend to obstruct us in the sending away of our goods, or stop our *Cassilas* (caravans) or carts, and camels thereunto belonging, much less to endeavour to detain the same after they have been hired.

Unto this it was answered, "That the king would doubtless grant this request.

"XVII. In case of any contests arising betwixt both the nations, whereby mur-  
" der

*Baldæus.* “der or manslaughter may ensue, (which God forbid,) the governors shall have power only to punish the criminal, if he be one of his subjects; but if he belong to the company, he is to be put into the hands of our directory, in order to be punished according to the laws of our country; and if any of our people engage with any of the *Indian* women, the same shall be delivered up to us to suffer condign punishment.

Unto this it was answered, “That this article must be referred to the king’s determination; but that further satisfaction should be given upon this head to the *Dutch* company at *Suratte*.

“XVIII. If by tempests, or other accident, some of our ships should be stranded, or otherwise be lost in these coasts, the goods saved by your majesty’s subjects shall be restored to the owners.

“This was granted.

“XIX. That we shall be maintained and protected in the quiet enjoyment of the propagating and refining of the salt-petre; and that we shall meet with no opposition from the governors in transporting the same, or be burdened with new exactions, as it happened two years before when the prince of *Zaatfchan* squeezed six hundred ropias out of the company.

“This article was referred to the king.

“XX. That such as shall be injurious in words to any of our nation, shall be punished by the governor, in the presence of the affronted party, to prevent further inconveniencies, which otherwise might arise from thence.

“This article being very just, was agreed to.

“XXI. That we shall have full liberty to keep and maintain the yatch we always have had upon the river of *Suratte*, and (in case this becomes useless) to build another, and use it as formerly, for our diversion, or other occasions.

“We don’t in the least doubt, but that your majesty, according to your wonted bounty, will take into serious consideration this our humble, but nevertheless just and equitable request; it being our constant wish, that matters may be brought to a speedy accommodation: and we promise that immediately on the receipt of your majesty’s *Firman*, or letters patent, we will discharge what money and persons are in our custody, and carry on our traffick in your majesty’s dominions, as before: but in case your majesty (which we hope not) should refuse our petition, we desire notice may be given us thereof, that we may in time (with your majesty’s consent) remove our effects, and quit your territories; it being

“our firm resolution not to stay here, unless your majesty will be pleased to grant our just request; notwithstanding which we live in hopes of a favourable answer from your majesty’s goodness.”

Unto this was affixed another paper, as follows.

*Most potent King!*

JUST upon the conclusion of our humble petition, the deputies empowered by *Miermosa* the governor, to treat with us concerning the differences on foot betwixt us, viz. *Miersia Mamoeth*, *Hagie Siasbeecq*, *Zabandaar*, and several other persons of note, have promised us to give satisfaction for the money (pur-suant to your majesty’s orders) taken from us, to stop all traffick from *Bengale*, and this place, &c. to *Achin*, *Pera*, *Queda*, and *Oedjang-Salang*, &c. till the differences betwixt us and those places be brought to a conclusion; concerning which we expect further orders from our governor-general of the *Indies*. It was further promised us, that a place should be assigned us for the building of a warehouse, near the *Alphandigo*; which as well as the other articles being confirm’d to us by oath of the before-mentioned deputies, we were on our side willing to release the goods seized by our ships, which we have done accordingly, and resettled our traffick at *Suratte* as before: all which we hope will not be unacceptable to your majesty; humbly begging your majesty to be pleased to take our farther proposals into consideration, and to favour us with your royal *Firman*, to avoid all further differences, and to establish a mutual, firm, and everlasting correspondence betwixt us, which we shall very religiously observe, (as long as your majesty’s governors don’t act contrary to the said *Firman*.) without the least interruption on our side. We wish your majesty a prosperous and long life, and victory over your enemies.

Dated in your majesty’s city of *Suratte*, September 28. in the year 1649. after the birth of Christ.

The King’s Letter was thus:

*The King Chaasjan sends the following Directions to Miersia Arep, his Governor of Suratte.*

JUST as the *Sajetes* are esteemed among the saints, so is *Miersia Arep* respected in his family. I would have you rest secure of my royal favour: be-

“ fides

*Baldæus.* “ fides what dignities you were possessed  
 “ of before, we have thought fit to bestow  
 “ upon you the reward of *Paans Zeddi*,  
 “ and three hundred horses for your ser-  
 “ vices, in the government of the open  
 “ country; and since the departure of *Mi-*  
 “ *ermosa* have put you into his place; and  
 “ for the better maintaining of your gran-  
 “ deur, have allotted you the royal reve-  
 “ nues of both your governments, in the  
 “ administration of which you shall be very  
 “ vigilant and courteous; towards the  
 “ chief merchants you shall comport your  
 “ self very obligingly, and give a helping  
 “ hand to all the foreign nations traffick-  
 “ ing there, as tending to the no small  
 “ increase of our treasury. Your authori-  
 “ ty shall not extend to exact more than  
 “ the usual customs, even of the meanest  
 “ persons, but you shall act in every thing  
 “ as a man of honour and conscience: what  
 “ rarities you happen to meet with coming  
 “ from foreign places, you shall (like your  
 “ predecessor *Miermosa*) send to my daugh-  
 “ ter *Sabebbejen*, who twice a month pays  
 “ her respect before my throne; whatever  
 “ is extraordinary fine and rare, let it be  
 “ valued, and purchase it of the owner ac-  
 “ cordingly; but if you cannot agree, send

“ him hither, that he may be satisfied in *Baldæus.*  
 “ his just demands. So soon as my royal  
 “ *Firman* comes to your hands, you shall  
 “ endeavour to list ten christian constables,  
 “ well versed in their art, into our service,  
 “ and you shall spare no cost to have some  
 “ great cannon cast for our use. We have  
 “ been informed, that about two years ago,  
 “ the *Dutch* factory was robbed of fifty  
 “ thousand *Ropias*, for which they have <sup>*He makes*</sup>  
 “ seized divers sums of money belonging <sup>*it less than*</sup>  
 “ to our merchants, and coming in their  
 “ ships from *Mocha*, and have thereupon  
 “ declared their sentiments to the governor  
 “ *Miermosa*; it is therefore that I com-  
 “ mand you to oblige the *Hollanders* to  
 “ restore the said money to the owners,  
 “ who have neither the least share or know-  
 “ ledge in what relates to their loss: and  
 “ in case you should not be able to bring  
 “ things to an agreement with the *Hollan-*  
 “ *ders*, we command you to demand the  
 “ said sums of money of *Miermosa* and  
 “ *Ommerchan*, and pay the same to the said  
 “ merchants, (whose effects are seized,) in  
 “ recompence of their loss.

These are the contents of the king's let-  
 ter, as it was translated from the *Persian*.

### C H A P. III.

*The Chom of Suhali, or the Road before Suratte. Traffick of the  
 Dutch, English, Moors, and Portuguese to Suratte, Gufuratte,  
 Brochia, Goga, Pattepatane, Mangerol, Brodera, and other places.*

*Description* **T**HE city of *Suratte* did (pursuant to  
*of Suratte.* their ancient records) pay a yearly  
 tribute of two millions *Mamoidys*, or one  
 million of livres, or four hundred thousand  
 crowns, to their king *Achabaar*, one *Ganna*  
*Ganna* being then their governor, who had  
 eighteen hundred villages under his jurisdic-  
 tion. All about *Suratte* are abundance  
 of very pleasant and stately summer-seats,  
 and magnificent burying-places, (a thing  
 much in request among the *Moors*;) besides  
 several large cisterns, or rather ponds, faced  
 with freestone. Among the rest one de-  
 serves particularly to be taken notice of,  
 as having no less than a hundred angles of  
 twenty eight yards each, with stone steps to  
 lead you down into the cistern; in the midst  
 of which stands the tomb of the founder.

About an hour and a half to the north  
 from the mouth of the river of *Suratte*  
 (named *Tap-gyly*) is a road, where ships  
 may ride at anchor near a ridge of sand-  
 banks, which, together with part of the  
 continent, breaks the force of the winds.  
 This road, commonly called *Chom Suhali*,

or *Sualicom*, lies at twenty one degrees fif-  
 ty minutes north latitude, extending from *The Chom*  
 north-east to north, and again south-west *of Suhali.*  
 to south: the entrance of it is but narrow,  
 and at high water not above seven, but at  
 low water scarce five fathoms deep, with a  
 hard sandy bottom: the north-north-east,  
 and south-south-west winds make here the  
 highest tides. The harbour of *Subali* is not  
 above a musket-shot broad: the south-  
 south-west winds make this road unsafe, the  
 land-shelves lying then almost dry. The  
*English* settled their factory there 1609. and  
 the *Dutch* 1616. who carry their merchan-  
 dizes upon waggons drawn by oxen from  
 the said road four leagues to the city.

It is to the settlements of those two na-  
 tions *Suratte* owes its chief increase in *Traffick of*  
 trade, many rich merchants and artisans *Suratte.*  
 having been drawn thither since that time,  
 who send their commodities thence by the  
*Red-Sea* to *Arabia*, *Aden*, *Mocha*, *Hideda*,  
*Juda*, *Mecca*, *Cbibiry*, *Catziny*, *Doffer*, and  
*Souakin*, (in *Ethiopia*;) consisting in fine  
 and coarse *Indian*, *Gufuratte*, *Decan*, and  
*Bengale*

Of Reis mada

*Baldæus*. Bengale stuffs and cloths, callicoës, indigo, fugar, gums, ginger, tobacco, wheat, rice, butter, and other provisions, in which this country abounds. Besides that two or three of the king's ships trade into these parts, and transport certain precious commodities belonging to some peculiar merchants and persons of the first rank; these are generally obliged to the company, for furnishing them with some able seamen and constables, (the *Moors* being but ill versed in these things;) especially while they were at enmity with the *Danes*.

One of the king's ships, named *Saby*, arrived here 1618. in its return from the *Red Sea*; the cargo whereof consisted in coral, camblets, sattins, velvets, woollen and linen cloths, tin, quicksilver, cinabar, leather, saffron, slaves, (both black and white) gum arabic, aloes of *Socotora*, amber, civet, sanguis draconis, myrrh, raisins, almonds, dates, coffee-berries, and about six or seven hundred passengers returning from *Mahomet's* tomb at *Mecca* and *Medina*; the whole valued at two millions five hundred thousand *Ropias*, each *Ropia* being about half a rix-dollar.

The value of a Ropia.

Traffick of the Red Sea.

The Malabars enemies of the Portuguese.

These ships set sail in *March* and *April* for the *Red Sea*, and return in *September* or *October*; they seldom spend above twenty five days in their passage. The inhabitants of *Goa*, *Dabul*, *Bassain*, *Daman*, and *Diu*, do also send their ships to *Mocha* and some other places in the *Red Sea*; and the *Benjans* and *Armenians* used to come thence to *Suratte* in their light ships loaden with all all sorts of trifles, which they exchange for wheat, linen, rice, and coffee-berries.

Towards the latter end of the *Mousson*, viz. in *March* and *April*, abundance of *Malabars* resort hither: these being mortal enemies of the *Portuguese*, are commonly well armed with fire-locks and scymitars, and formerly used to be very mischievous to them. The commodities they bring to sale here, are coarse fugar, cardamon, pepper, and cayr, (of which they make cables and ropes,) and coco-nuts.

Formerly the inhabitants of *Suratte* used to send yearly one or two ships in *May* or *June* (when the *Portuguese* ships were in harbour) to *Acbin*, *Tanasseri*, *Queda*, and the *Maldivè* islands, laden with stuffs, and cloths, and callicoës; and returned with pepper, camphire, cloves, nutmegs, mace, sandel-wood, porcelain, *Chinese* silks, (brought thither by those of *Malacca*,) tin, benzorn, elephants teeth, and coco-nuts; the last being almost the only product of the *Maldivè* isles.

The men in power here are generally very haughty and fierce; and though sufficiently curbed by the king's absolute sway, yet by

reason of the distance of the provinces from *Baldæus*, his residence, commit many enormities; his territories bordering upon *Persia*, *Aurwa*, the river *Ganges*, and *Bengale*, thence to *Decan*, and to the west by the sea.

The province of *Gusuratte* (in which all the beforementioned cities lie) extends in length from south to north; it begins at *Damana*, and reaches forty *Cos* beyond *Amadabath*, bordering upon the country of *Patbane* inhabited by pagans, so that its whole length is one hundred and eighty *Cos*, or ninety *Dutch* leagues: to the east it borders upon the country of *Parta Basia*, or at least within forty *Cos* or twenty leagues of it, extending further eastward for three days journey towards *Amadabath*, and to the west to the sea, and the kingdom of *Suadi*, which is divided from *Persia* by a great desert. It was a most fruitful and populous country, before it was reduced by the *Great Mogul*.

Extent of Gusuratte.

Two Indian Cos one Dutch leagues.

About twelve leagues to the north of *Suratte* lies the city of *Brochia* about nine or ten leagues from the sea, and twenty one degrees fifty six minutes upon the river *Nardabath*, which coming down by *Decan* and *Mandourw*, affords a good passage for ships, about half way from the sea towards *Brochia*, the passage being stopt up there by a sand-bank, which has not above nine or ten foot water. The situation of this city is both very convenient and pleasant, upon a hill, being surrounded by a strong stone wall: this place is famous for its manufactories of linen and cloths, of which they make more here than in any other place of the *Indies*; and they have the best way of whitening the first. The *Malabars* used formerly to come hither every year with nine or ten ships. The *Dutch* and *English* have had their factories here a considerable time ago. Its inhabitants are for the most part *Benjans*, who are very expert in managing the linen manufactory: the two suburbs of the city are chiefly inhabited by callico-weavers and merchants: *Brochia* is reckoned to contain eighty seven villages in its territories, the country round about being all low grounds, except that about five or six leagues to the south-east, the mountains of *Vindat* have their beginning, which are very rich in *Achatstens*. All merchandizes passing through *Brochia* pay two *per Cent.* custom.

The city of Brochia.

*Goga* is a small city seated in the bay of *Cambaja*, where it grows so streight, that it rather resembles a river than an arm of the sea: it has neither walls nor gates to the land-side, but is defended by a stone wall towards the sea. Here all the ships designed for *Arabia*, and the southern parts, (by the merchants of *Cam-*

Goga thirty leagues from Cambaja.

*Baldæus. baja* and *Amadabatb*,) are careen'd and victualled, there being a safe road here, though somewhat shallow: here also the *Portuguese* convoys used to keep their station to expect the coming of their merchantmen.

There are besides these several other places of less note belonging to this province, as *Pattapatane*, *Mangerol*, (mentioned by some under other names,) the inhabitants whereof live upon husbandry and managing of cotton: *Brodera*, an inland town, inhabited by husbandmen and clothiers; the company used to keep some factors there, to buy up coarse cloth for the *Arabians* and *Ethiopians*; not to mention here its fortifications, gardens, tombs, &c.

*Mamadabath* was, for its pleasant situation, sometimes honoured with the residence of its kings, but is since come to decay to that degree, that it is no more than a poor village now. We will also make mention only of *Nariau*, *Wasset*, (a very ancient castle,) *Issempour*, *Batona*, and their products, such as indigo, saltpetre, borax, asa-foetida, amfion or opium, gummi-lacen, and divers other commodities.

But before we leave the province of *Gusuratte*, and take our way thence over *Diu*, *Daman*, &c. to *Goa*, and so to the *Malabars*, we may say something of its traffick. It is beyond all dispute, that the traffick of *Suratte*, and adjacent places, is of great consequence, provided there be no want of ready money, and the management thereof be committed to persons of understanding. I remember that the college of XVII. give these following by-rules to their factors: to inform themselves of the constitution and manners of the inhabitants; what commodities are vended, and best to be vended there; who, and how potent our enemies are; what religion and coin is most regard-

ed, and the true situation of the place where *Baldæus*. they settle, in respect to its northern or southern latitude. Certain it is, that the inhabitants of the province of *Gusuratte* are a cunning and subtle generation, who must therefore be managed with dexterity and much reservedness, mixed with a becoming gravity and outward splendor, wherewith these people are much taken, yet without ever attempting to lord it over them; a thing which after has proved detrimental, if not destructive to the undertakers. It is to the wise conduct of our forefathers that we are obliged for the establishment and improvement of our traffick at *Suratte*, where our factory was no sooner settled, but we sent from thence, 1624. Jan. 20. our first ship, called the *Heusden*, along the coast of *Melinde* and *Soffala*, and thence to the *Cape of Good Hope*, and so to *Holland*.

This was followed the same year, March 12. by another, called the *Peuca*, but was forced to winter on the coast of *Coromandel*. These were followed, April 23. 1625. by the ship the *City of Dort*, and the *Wesop* yacht, but were obliged to winter in the isle of *St. Maurice*. In the year 1626. the following ships were sent to *Holland*, taking their way through the *South Sea*, viz. the *Golden Lion*, *Walcheren*, and *Orange*. 1628. the *City of Dort* was sent thence to *Holland* through the straits of *Madagascar*, along the coast of *Fussalia*.

Our *Dutch* vessels generally arrive here from *Batavia* about the end of *August*, in *October*, or beginning of *November*, and sometimes towards the middle of *December*; the *Dutch* factors at *Suratte* taking always care to send their ships into *Persia* in *January*, or about the middle of *February* at farthest, that they may be at *Batavia* before the end of *March*.

## CH A P. IV.

*Of what Consequence the Traffick of Suratte is. A particular Description of the City of Mocha; and of its peculiar Customs. The City of Agra, and its Strength. The Descent of the Great Mogul; his Pomp and Riches.*

OF what consequence the traffick of *Suratte* is to the *Dutch*, they have been sufficiently made sensible by their factors ever since 1616. The chief commodities to be vended here are, lead, quicksilver, cinabar, ivory, tin, copper, cumeta's, cloves, nutmegs, mace, pepper, porcelain, &c. And this traffick is the more

considerable, in respect of the communication it maintains with our other factories in those parts, with *Agra*, *Mocha*, and divers other places upon the coast of the *Happy Arabia*, where our traffick seems to be well established, provided we take care to live in good correspondence with those nations, which must be maintained by all possible

*Baldæus.* possible means, by avoiding such things as tend to the dissolution thereof. Amongst these, the seizing of the *Moorish* ships has several times brought our traffick into no small jeopardy, as it happened 1621. when our ships the *Samson* and *Wefos* having made reprisals upon some *Moorish* vessels, our trade into *Arabia* was quite interrupted, and likely to have been quite lost. And we run the same danger 1628. after the yacht the *Grottenbroeck* had taken a ship of *Gufuratte* upon the coast of *Coromandel*; and though our late seizure happened not to prove much to our disadvantage, yet can't we at all times promise our selves the same success, it being certain, that though the *Moors* court our friendship, yet are they, on the other hand, very stubborn, and not easily reconciled.

Some remarks upon the traffick in those parts.

Another thing absolutely requisite for the carrying on of the trade here, is the king's *Firman*, or patent, to keep the avaricious governors of *Cambaja*, *Suratte*, *Brochia*, and other places, in awe; besides that the *Portuguese* priests are always busy to create an ill opinion of us in the *Moors*: they must be carefully watched in their measures and weights, without which they will play you the same game as *Godjanisan* and *Godjaassan* did many years ago to Sir *Henry Middleton*, an *English* knight, who put them in irons aboard his ship till they had given him full satisfaction.

Our traffick to *Mocha* is likewise of great consequence to us: *Mocha* is seated in the *Happy Arabia*, at the entrance of the *Red Sea*, at thirteen degrees twenty eight minutes northern latitude: it is of a considerable extent, without any walls, in a barren ground, but well built with red and blue stones, the houses flat on the top, like those of *Constantinople*; it has three very fine pagodes, or pagan temples, two whereof have no steeples, the third in the midst of the city, being adorned with a very high steeple. At the north end stands a small castle, like a redoubt, built of blue stone, for the defence of the harbour, 1612.

*Mocha* was about ninety or one hundred years ago no more than a village inhabited by fishermen; but since its reduction by the *Turks*, is so increased by degrees, that it is one of the chief places on that coast now; the traffick of the *Indian* ships that used to come to an anchor at *Aden* (formerly a great trading city) being transferr'd to *Mocha*, by reason of the caravans which come thither with more conveniency at certain times of the year. Its inhabitants are *Turks*, *Arabians*, *Benjans*, and *Jews*: here is constantly a great concourse of people from the beginning of *March* to the middle of *September*; about which time the great ship called *Mansouri* (which is kept by the *Tur-*

*kish Sultan* for the transportation of the richest commodities from the farthest parts of the *Red Sea* hither) arrives here, its cargo being generally esteemed at 2500000 or 3000000 of reals, and consisting in pieces of eight, golden ducats, *Italian* golden tissues, camblets, saffron, quick-silver, and divers other commodities, besides slaves of both sexes taken in the *Levant*, or thereabouts, being generally *Grecians*, *Hungarians*, or of the isle of *Cyprus*; of all which they pay ten *per Cent.* custom. The same ship sails back again the first of *January*, laden with spices, indigo, fine callicoes, turbants, and such like *Indian* commodities.

The trade of Mocha.

Besides this, there comes every year in *Caravans* *March*: *Cassila*, or caravan, consisting commonly of one thousand six hundred camels, the merchants being for the most part *Turks*, *Arabians*, and *Armenians*: these come by the way of *Aleppo* and *Alexandria* hither, and spend commonly two months in their whole journey, because they travel not above three or four *Dutch* leagues in a day. They bring along with them twisted silk, gold wire, red coral, cinabar, saffron, myrrh, divers sorts of small wares, needles, spectacles, knives, scissars, looking-glasses, &c. This caravan leaves the place again in *December*, loaden with all sorts of *Indian* commodities, and thus spends near a twelve-month in their whole journey.

Caravans over Aleppo and Alexandria.

At *Cairo* you see a vast multitude of pilgrims towards the beginning of the year, who take the conveniency of this caravan to travel to *Mocha*, eight leagues from whence lies *Medina*, where is the tomb of *Mahomet*, which is thus yearly visited by betwixt thirty and forty thousand pilgrims.

Pilgrims going to Mocha.

*Mocha* has been so rich for many years past, that in customs and taxes it pays no less than two hundred thousand reals, or pieces of eight every year to the *Grand Seigneur*, being one of the largest and most considerable places under the jurisdiction of the *bassâ* of *Yemak*. The governor of the city sits sometimes in person at the custom-house, visiting the packs and chests, he having a certain allowance out of every chest or pack. All *Indian* ships coming to an anchor here are obliged to pay, besides the ordinary customs, anchorage-money according to their bulk, from ten to fifty reals; which, with some other exactions, makes the whole amount to fifteen *per Cent.* The *Turks* here have also another invention of squeezing some money out of the *Moorish* *Nachodes*, or officers of the ships; for the governor having summoned them immediately after their arrival to appear in his presence, they are conducted thither in great state, attended

Anchorage-money.

*Baldæus.* attended by his drums, pipes, &c. and being reconducted to their lodgings, the clothes are taken away again. The same is repeated afterwards: just before their departure, when they are reconducted to their boats; and their clothes being taken off again, each officer is obliged to pay for this mock dress twenty or twenty five reals each time.

No sooner are the *Moorish* ships come into the roads after they have dropt their anchor, but they must carry their rudder and sails ashore, and unload the whole cargo of the ship, (whether they sell it, or not,) of which they are obliged to pay the full customs. After they are quite unloaden, they give a signal with a cannon for the governor or his deputies to come aboard to see whether any thing be left behind; and then they have liberty to sell.

In the spring the *Portuguese* come hither with their ships from *Goa*, *Goga*, and other places; their cargo is commonly indigo, farcaa, callicoës, sail-cloth, all sorts of *Gururatte* stuffs and clothing, tobacco, rice, and medicines; most of which commodities are sold to the *Turky* caravans, except the rice and tobacco, which is consumed in the country. They carry back reals or pieces of eight, golden ducats, a certain root used by the *Indians* in dying red. A little before, or about the same time, used also to come to *Mocha* the ships of *Daman*, *Cambaja*, and the *Malabar* coast, loaden with pepper, clothings of *Cambaja* and *Coromandel*, allegia's, taffecela's, red and white cassen, red jeta's, canekyns, basias, fine turbants, white and blue girdles, painted callicoës, rice, tobacco, coarse and fine porcelain: in lieu of which they carry back horses, raisins, almonds, camblets, elephants teeth of *Soffala*, red roots for dying, which grow only in *Arabia*, chauru or coffee-berries. Besides these the inhabitants of *Achin*, of *Paty*, and other places on the coast of *Melinda*, trade hither: they commonly set sail from home in *February*, or beginning of *March*, and return from *Mocha* about *August*, to take the conveniency of the *Mousson*.

The want of good water and fuel, which the ships must purchase here at a dear rate, is a great defect in *Mocha*: however, not far from the city lies a small isle, where the *English* used to lay up and careen their ships: here you may have provisions for old clothes in abundance, as likewise fuel and water enough; whence it is evident that the trade of *Suratte*, *Agra*, *Mocha*, and *Libiry*, (a city seated on the red sea, at fourteen

degrees fifty minutes, fortified with four round bastions, and adorn'd with three temples,) is one of the most considerable in those parts, as the *English* have found by experience.

But before we take quite our leave of *Suratte*, and the adjacent territories, we must say something also concerning the city and castle of *Agra*. This castle, the ordinary residence of the *Great Mogul*, is one of the most noble structures of the east, seated upon the banks of the river *Jemeni*, fortified with a strong wall of red stone, with large and deep ditches, draw-bridges, and four gates. Here is also kept the king's treasury, and the whole court, or general assembly of the great men of the empire, who oftentimes are not refrained by the absolute authority of their monarch from committing most barbarous enormities.

Thus it happened, *August* 4. 1644. in the evening after sun-set, when all the persons of quality used to appear in the *Go-salchanna* to salute the king, among the rest *Raja Ammersing* (a commander over five thousand horse, who had been absent some days by reason of his indisposition) making his appearance there, was asked by *Sillabatchan*, the king's chief *Bakia*, why he had not appeared there in several days? He answered him, That he had been prevented by his indisposition; wherewith the other being not satisfied, gave *Raja* some opprobrious words, which so exasperated him, that without more ado he run *Sillabatchan* with his scymitar through the body, laying him dead upon the ground. Another lord named *Galichan*, seeing the other murdered in the king's sight, cut almost off the arm of *Raja*, and another gentleman, the son of *Raja Rittelda*, dispatched him quite. The king seeing this tragical spectacle gave immediately orders that the body of *Sillabatchan* should be carried to his house in order to his burial; but that the body of *Raja Ammersing* should be thrown into the river: but scarce were they got with the body without the gate to execute the king's command, when some of the *Rasboutes*, (a rebellious crew,) who had served under him, seeing their commander's body dragged thus along, did fall upon the king's servants, and killed above thirty of them, among whom was the king's scepter-bearer; so that if the king would see his orders put in execution, he was obliged to send a considerable force to protect them against the *Rasboutes*.

The Murder Committed in the presence of the Great Mogul

**Baldæus.** *Agra* has four gates, one on the north-side, covered by strong works; the second on the west side, where is the market place, and the royal court of judicature; the third on the south side leads to the royal palace, being always chained up to prevent any body from passing through it on horse-back, except the king and his children: the fourth faces the river, where the king every day salutes the sun, and about noon sees the engagements of elephants, lions, and other wild beasts.

The city of *Agra* therefore is now the capital city (as *Labor* was formerly) of that part of the *Indies* on this side of the *Ganges*, which is under the jurisdiction of the *Great Mogul*. The castle is said to have been founded by king *Accabar*, (descended from the great *Tamerlan*,) after the conquest of *Guratte*.

**Wealth and strength of the Mogul.** I will not pretend to give you an exact account of the wealth of the *Mogul*, but leave you to guess at his strength by the forces he brought into the field 1630. against *Chasjaan*, which consisted in one hundred and forty four thousand five hundred horse, and five thousand elephants; these last the *Mogul* also uses for his diversions, and he is often seen in great state on the back of an elephant richly accoutred, attended by a great number of horse. When these elephants are to engage against one another be-

fore the king, they pay their reverence by **Baldæus.** bending their knees, and shaking their trunks to the king; which done, they fall on with a great deal of fierceness; but as soon as they are hotly engaged, certain persons are appointed to part them; which done, all enmity ceases betwixt them, they touch one another with their trunks, and are fed with sugar reeds, and arack, or strong-waters.

Combat of the elephants.

As to the wealth of the *Great Mogul*, the same appears in its lustre on certain festival days; the new-year's feast kept on the **Festival** day of the first new-moon in *March*, days, which lasts eighteen days. On the young **The prince's** prince's birth-day every body brings his offerings to the king, who in his turn makes presents to his courtiers, bestows new places and dignities upon such as have deserved well, and augments their yearly salaries. The people flock on that day to the queen's palace, (if she be living,) where having likewise made their offerings under the sound of their musical instruments, the prince is weighed in a golden pair of scales against gold and silver, which (after the weight thereof is set down) is distributed the next day among the poor.

The present king's birth-day is celebrated the second of *September*, when the king **The king's** is weighed in the same manner against pre- **birth-day.** cious

*Baldæus.* cious stones, gold, silver, gold tissues, silk stuffs, butter, rice, fruits, &c. which is afterwards bestowed upon the *Brabmans*; and nuts made so curiously of gold wire, (as likewise almonds, and other fruits,) are thrown among the people, that a thousand of them weigh not above twenty ropias, and cost about sixty ropias. The whole ceremony is concluded with drinking to a great excess all the night long, notwithstanding *Mahomet's* law. Sir *Thomas Row* relates that he had a golden cup beset with *Turquoises*, *Rubies*, and *Smaragdes*, presented him by the *Great Mogul* on his birth-day, but not till he had emptied it four or five times.

Another feast.

The *Moors* also celebrate a certain feast to the memory of two brothers, servants to *Mahomet Raly*, who being on their way to *Coromandel* on pilgrimage, were forced by the pagans of the country to seek for shelter in a certain castle; but being destitute of water, they sallied out courageously upon the pagans; and after having killed many of them, were at last slain themselves. Their memory is celebrated in *June*, ten days after the new-moon, when they carry a bear along the streets loaden with turbants, arrows, bows, and scymitars, certain priests singing doleful tunes, and flashing them-

selfes with knives, till the blood follows *Baldæus.* very plentifully. In the market-place they set up the figures of two men of straw, representing the murderers of these two saints, at which they let fly their arrows, and at last burn them to ashes. They keep also another feast in *June*, when they kill abundance of he-goats, and afterwards feast upon the meat. This is said to be done in commemoration of the sacrifice of *Abraham*.

The *Great Mogul* being absolute lord over thirty seven large provinces and kingdoms, the persons and estates of all which are at his sole disposal, beside the immense presents of his subjects, (none of whom dare approach his person without them,) must needs be master of immense treasures. The king of *Visiapour* sent at one time thirty elephants, two whereof were girded by golden chains, weighing four hundred pound weight, two others with silver chains, the rest of brass; besides five hundred horses, the saddles and bridles whereof were beset all over with diamonds, pearls, and rubies. Mr. *John Twist* has given the world an exact account of the treasury of king *Accabaar*.

## CHAP. V.

*The Title of the Great Mogul; and of the Kings of Achem and Siam. The Origin of Mahomet; some of his pretended Miracles, Alcoran, &c.*

IT is most surprizing to understand what god-like titles the subjects of the *Great Mogul* bestow upon their lord and master! How all his words are looked upon as oracles, and all his actions received with a profound amazement! Hence it is that the vulgar sort are really of opinion, that certain rays dart from his head and turbant, which admit not of the near approach of indifferent persons; and that they scarce ever mention his name without the additional titles of the *most potent upon earth, lord of the world, great monarch, the most exalted majesty, the brightest of princes among the great ones, &c.* 'Tis true, most of the *Indian* kings affect most magnificent, or rather vain-glorious titles; but the kings of *Achem* and *Siam* seem to outvy all the rest in this point: the first styles himself "King of the world, created by God, whose body shines like the sun at noon-day: a king unto whom God has given the lustre of full-moon; a king chosen by God; a king perfect as the north-star, king of

The king of Achem's titles.

" kings, of the posterity of *Alexander the Great*; a king before whom all other kings must bow their heads, and pay homage; a king as wise as a round globe, and happy like the sea; a king who is God's slave and servant, who sees God, and lets the world know the justice of God; a protector of God's justice; a king blessed by God; a king who covers the iniquities of men, and forgives their offences; a king under whose shade slaves seek for shelter; a king perfect and infallible in his counsels; a king and benefactor to his people; a just king, who maintains God's justice; the most beneficial king upon earth, the soles of whose feet emit a most odoriferous scent, beyond all other kings; a king whom God has blessed with his gold mines, whose eyes are as bright as the morning star; a king who is master of many elephants of all sorts; a king unto whom God has given riches, to adorn his elephants with gold and precious stones; besides

*Baldæus.* “ besides a great number of elephants of war, armed with iron teeth and copper shoes ; a king upon whom God has bestowed horses with golden harnesses beset with precious stones, and many thousand horses for war ; the choicest stone-horses of *Arabia, Turkey, Catti, and Balacki* ; a king whose territories extend from the south to the north ; a king who bestows his favours upon all that love him, and rejoices such as are disturbed in mind ; a king who has in his custody every thing that God has created ; a king whom God has placed above all things to rule, and to shew the lustre of the throne of *Achem.*”

The king of *Siam* goes still beyond it, as may be seen by his letter written 1636. to the late prince of *Orange, Frederick Henry.*

*The king of Siam's title.*

“ THIS is a golden letter of friendship and confederacy, replenished with the brightness of God, the most excellent, comprehending all that is to be known ; the most fortunate, above what is to be found by men ; the best and the most secure in heaven, earth, and in hell ; the most magnificent, delicious, and most agreeable words ; the glory and irresistible virtue whereof pass all over the earth, with the same vigour, as if through God's power the dead were revived from their graves, and purify'd from all their iniquities, to the surprize, not only of the priests, but also of merchants, and all the servile sort of mankind. For what king can compare with me, who am the most potent, most illustrious, and invincible ? The master of an hundred crowns, adorned with nine sorts of precious stones ; supreme lord [*we pass by some blasphemous expressions*] of the vast and most noble kingdom of *Siam* ; the brightness of the most beautiful city of *India*, the capital city of the world, the streets whereof are crowded daily with people ; a city adorned with all the beauties of the world, and irrigated with delicious brooks ; whose lord has a palace of gold and precious stones ; a master of gilded thrones, of the white, red, and round-tailed elephants, which three sorts God has not bestowed upon any other kings ; a divine lord, in whose territories is deposited the victorious sword, and who resembles the God of war with four arms.”

*The Mogul's court.*

But to return to the *Great Mogul*, and his court : The *Persian* language is the court

language there, though besides this there are at least three other languages used throughout his territories. The chief lords of his courts have their certain monthly salaries allotted them, out of which they are obliged to maintain a certain number of horses ; among these are four who maintain twelve thousand horses each, (the king's sons entertain fifteen thousand horse,) others one thousand, others one hundred, in proportion to their salaries ; the whole number of horse maintained by his courtiers, being computed at an hundred thousand horse.

The *Mogul* changes his cloaths every day for new ones, which he bestows upon his courtiers. The *Mogul* entertains certain officers of quality, called *Nababes*, at *Suratte* and other places, whose business is, to enter upon treaties with foreigners, and to keep the roads free from robbers, by punishing them with the utmost severity. The *Mogul* has also a laudable custom, to lay up vast sums of money and provisions in certain places, to be reserved for necessitous occasions. He appears three times a-day, and sits in council from seven till nine in the evening.

The *Moguls* profess the *Mabometan Religion* ; but are no great zealots in it, as *Abbasius Kircher* has well observed in *Galatædim Mabomet*, the tenth of the *Moguls* descended from the *Great Tamerlain* the first, who called the jesuits into his empire ; and their continual debaucheries in strong liquor (directly contrary to the law of *Mabomet*) is an infallible sign of their indifferency in point of religion : besides that, throughout all the empire, they are not near so well versed in the *Alcoran* and the law of *Mabomet* as the *Africans*, those of *Fez* and *Morocco*, &c. Notwithstanding all their ignorance, this accursed doctrine has spread itself within fifty or sixty years, from hence all over the isles of *Java, Borneo, and Celebes*, besides divers other countries in those parts.

The *Mabometans* are obliged to pray five times every day, viz. in the morning, at noon, in the afternoon, after sun-set, and at midnight ; certain people being appointed, who, from the steeples of the mosques, exhort them to their prayers, by crying *Laila illa illa, Mabomed Resul Lalla* : when they are going to pray, they stand upright upon a carpet spread upon the ground, holding both their hands to their ears ; sometimes bowing towards the ground, sometimes standing upright again. The *Alcoran* is the law-book of the *Mabometans*, containing one hundred and fourteen chapters, being a mixture of the *Jewish* and *Christian* doctrine. *Mabomet* flourished about the year of christ 600. and died 632. His companion was one *Sergius* an *Arian*. The father of

*Baldæus*. of *Mabomet* was one *Abdalla*, and his mother *Emine*, descended of the illustrious family of the *Koreishites*.

*Mahomet's origin.* *Mabomet* first served in the wars under the emperor *Heraclius*, and afterwards served a merchant; after whose death he married *Chadiga*, a rich widow; and being addicted to enthusiasm, he and his companion *Sergius* compiled the *Alcoran*, pretending that he kept correspondence with the archangel *Gabriel*, who in his trances (which were nothing but epileptic fits) had revealed to him these secrets. He was born at *Mecca*; but being forced from thence, fled to *Medina*, from which time *Mabometans* take their *Epocha*, and call it *Medina Alnabi*, or the city of the great prophet. His doctrine was first received by his wife *Chadiga*, and his servant *Seydin*; after-

wards by *Hali*, *Abubeker*, *Omar*, *Otman*, *Baldæus*, and others his followers, who were called *Caliphs*. The *Persians* prefer *Hali* before *Mabomet*, and the *Turks*, *Omar*. *Abubeker* reigned two years, *Omar* ten years: it is he who regulated the *Alcoran*, and instituted the fast in the month *Rammedan*. *Otman* reigned twelve years, and conquered *Mauritania* and *Cyprus*. *Hali* was by *Mabomet* appointed his successor; but the other three having usurped the kingdom, with the exclusion of *Hali*, this is the reason the *Persians*, who adhere to the last, abominate the three former.

The hatred between the *Persians* and *Turks* (though both *Mabometans*) proceeds from the different interpretations of the *Alcoran*, and certain ceremonies relating to their prayers, covering their heads, &c.

## CHAP. VI.

### The Feasts, Sabbath, and some other Things belonging to the Mahometans; their Priests, Holy Orders, Manners, and Customs.

NOT to insist here upon the fabulous trifles of *Mabomet's* visions, contained in some parts of the *Alcoran*, we will proceed to give you a short account of the most material parts of the *Mabometan* religion.

*Their circumcision.* They commonly circumcise boys and girls at thirteen years of age, viz. so soon as they are able to say their confessions, *There is but one God, and Mahomet his Prophet*. If a *Jew* turns *Turk*, he is not circumcised again, but only washed with water. Their washing, or bathing is performed upon a threefold occasion.

*Washing.* 1. After they have eased nature, or cohabited with their wives.  
2. When they are to go to the *Mosque*, or to read the *Alcoran*. And,  
3. After they have committed some enormous sins.

Their high priest is called *Mufti*, in great esteem with the grand seignior, and a member of his privy council. Next to him are the *Cadilesheri*, or provincial high priests of *Europe*, *Natolia*, &c. These are followed by the *Cady*, *Scriphes*, *Santones*, *Hoggy*, *Talismans*, and *Dervises*.

*Sabbath.* The sabbath of the *Mabometans* is on *Friday*, which they keep with the same strictness as the *Jews* do theirs on *Saturday*, at least with more devotion, as the christians their *Sunday*. They have in each city, besides the other *Mosques*, one great *Mosque*, where they then assemble to perform their devotion. Their lent begins in *February* with the new moon, and continues thirty days, with a great deal of severity, for they neither eat nor drink all the day long;

but some make themselves amends at night, though the zealots will not taste the least of wine, or any other strong liquor all that time, nor converse with their wives. They are permitted to marry as many wives as they please, though the *Alcoran* allows no more than four wives.

Their churches are flat on the top, commonly built on a rising ground, so as to be seen at a distance above the other houses. They have within nothing but bare white walls, without pictures or hangings; though on some of their tombs we see certain passages ingraved out of the *Alcoran*. On the south-east of the *Mosque* stands the pulpit made of brick-work, about three steps from the ground, from whence their teachers say their publick prayers, and explain the *Alcoran*. Their great *Mosques* are generally adorned with two high steeples, each having stairs within from the bottom to the top. Their *Mosques* have scarce any revenues belonging to them, except what the priest makes by letting some few chambers belonging to them: many of them are built by charitable persons, and some of these have a settled income. It is further worth observation, that if a *Jew* will turn *Mabometan*, he must first own *Christ*, before they will receive him among the *Musselmen*.

They have many ecclesiastical orders among them, three whereof have no possessions, or any other propriety; and some pretend to such a degree of purity, that they profess themselves born without manly seed. Some make certain vows, like the *Roman Catholick* monks; some appear quite naked,

*Baldæus*. naked, others only cover their privities. Some have vowed perpetual silence; some carry water without reward; some prick themselves with sharp-pointed needles or instruments; others carry a ring of three pound weight in their privy members.

Tenets of their religion.

For the rest, they believe God a corporeal being, who is carried in a throne by the angels, and Christ to be only a man, and *Mabomet* the comforter mentioned by *John* xiv. 16. They believe a third place besides heaven and hell, and therefore pray for the dead; as also a general judgment, but implicated in many fabulous absurdities; for they tell you that two black angels, one called *Munger*, the other *Quaregner*, will appear, the first with an iron club, the other with a large fork in his hand; that every man besides is to have two angels to assist him; but if after all he cannot give a good account of himself, the angel with the club knocks him down, and so he is carried to hell. And because they are of opinion that those angels appear to them in their graves, these are generally built hollow; whence also they often make the following ejaculation: *Good God, preserve us from the interrogating angel, from the pain of the grave, and from the evil way.* They add many fabulous things concerning the angel *Adriel*, who, at the approach of the day of judgment, is to kill all living things, and to hang himself at last, till after forty years the angel *Seraphiel* shall awaken the souls; and such-like fables too long to be inserted here.

Paradise.

Concerning beatitude, and the paradise, they believe it consists in a continued enjoyment of pleasures there. They divide it into seven different apartments; one whereof is of gold, the second of silver, another of pearls, precious stones, and so forth. Here they are to pass their time in pleasures with certain most beautiful women, created for that purpose by God, whilst their wives shall look through a grate, and be spectators of the enjoyments of their husbands with these most beautiful women, who shall not be subject to the monthly times, or child-bearing, and the men as vigorous as *Mabomet* himself, who gloried in his having out-done by double the number *Ovid* himself, *Et meminim, numeros sustinuisse novem.* They say they shall drink in paradise of the spring of *Alcazar* mentioned by *Mabomet*; they shall be delighted with the scent of the most odoriferous citrons, which shall produce most beautiful virgins that shall imbrace the *Musselmans* and delight them with their charms for fifty years together: and more such like notions, tending to elevate the thoughts with

imaginary corporeal pleasures, to be enjoy'd in the next world by such as have observed the following rules in their life-time, which they reckon absolutely requisite to attain to this bliss.

*Baldæus*.

To believe one God, and *Mabomet* his prophet, and a day of judgment; to pray at certain times; to wash, bow, and observe certain other ceremonies in praying: to pay the tenths; to fast in the month *Rammeden*; to go on pilgrimage to *Mecca*; to abstain from extortions, wine, and hogs-flesh, because they believe the hogs to have been progenerated out of the elephants and mens dung in the ark of *Noah*. They are also forbid not to use tables nor dice, not to swear by God, not to be rash in our judgment, or deceive a brother either in publick or private; not to part from a virtuous wife; not to be too forward to object and discover the faults of a brother, or to despise him; not to set the fear of God and his punishment out of our eyes, or to calumniate our neighbour, and spread what is heard upon slight reports. On the other hand, they are enjoined to be thankful for God's mercy; to be patient in adversities, and not to despair of God's mercy; and to believe that whatever happens to us does not come by chance; (for the *Mabometans* maintain strongly God's providence;) not to deny a brother's request out of avaritiousness; not to raise God's anger out of love to his creatures, or to prefer a temporal interest before that which is to come: in all ghostly affairs, to have a respect to him that is above us, and in temporal matters, to those that are below us: not to enter into any association with the devils; to refrain from vanity, allow orphans and widows their own; to instruct their children in such things as relate to the divine service; to do good to your neighbour; not to curse any of God's creatures, but to praise him in his works; to read the *Alcoran*, (except when you are unclean;) to appear at the publick congregations; and to do as you would be done by. It is further their opinion, that the souls of the brutes are likewise to be revived and joined with their bodies.

In relation to their manners and customs, I will begin here with the character given them by a person of extraordinary learning, viz. *That in their whole behaviour they are declared enemies to vanity, as well in their words and deeds as in their clothing, which makes them look upon many of us christians like monkeys, who are apt to imitate every thing they see; whereas the Turks of both sexes, young and old, rich or poor, are as regular and decent in their habits, as if they belonged to one certain order; and are*

*Their manners and customs.*

*Baldæus*, so careful in the education of their youth, that their schoolmasters prescribe every day a certain part of the Alcoran, which they learn by heart, and so in two years time pass through the whole Alcoran.

Tokens of marriage-  
ableness.

In their marriages, and the tokens of marriageableness and virginity, they observe the following rules: As soon as the monthly times begin to appear, they carry the maiden, for seven days together, adorn'd with flowers, and, as it were, in triumph, to the next brook, during which time she is to eat nothing but what comes from the cocoa-tree. The *Portuguese* (who perhaps have got it from the *Moors*) publish the marriageableness of their daughters by the sound of trumpets, and invite their next

Their mar-  
riages.

relations to a feast. When a marriage is to be concluded, they bargain very hard for the dowry; but this being past, and the agreement made betwixt the parents, guardians, or other nearest relations, the day for the consummation thereof is appointed: then the bridegroom on horseback, adorned with sweet-scented flowers, under two umbrello's, passes with his next friends through the chiefest streets under the sound of trumpets, hautboys, drums, and other such-like instruments, to the bride's house, where having stay'd half an hour at the door, and entertained his bride with the musick, and the throwing of some squibs, and other small fireworks, he is admitted into the house; and being seated upon a chair raised somewhat from the ground, and covered with tapestry, the bride is brought to him by her parents and relations in the presence of a priest and the judge of the place, (without whose consent no marriage is valid:) the priest having read certain passages out of a book, the bridegroom swears, that in case of a divorce from his wife, he will be ready to restore her dowry; which done, the priest gives the benedictions, and they are married, the whole being concluded at that time with a present of *Betel* and *Arrack* to the guests, yet not to any excess, though afterwards they keep the wedding for three, four, six, seven, or eight days together, according to every one's pleasure and ability.

Divorces.

However, divorces are very frequent among the *Moors*, (or *Indian Mahometans*;) which is soon done, if the husband, pursuant to his promise, returns the dowry, which consists commonly in nothing else but the woman's apparel. A man is at liberty to kill his wife in case of adultery; but a woman may not so much as sue a divorce upon the same score. When a woman is divorced from her husband, she takes generally her daughters along with her, lea-

ving the sons to the husband's disposal. *Baldæus*. The next morning after the bridegroom has lain with his bride, and found her a virgin, publick proclamation is made thereof throughout the whole town, (for the honour of her parents,) when the bride's mother hastening to her daughter's bed-chamber, and finding the usual tokens of virginity in the sheets or cloaths laid for that purpose, she carries them to the bridegroom's parents, who rejoice with her at the conquest of their son over the maiden's virginity. But if these tokens are not apparent, matters are carried off with less pomp and more silence.

The *Mahometans* in general are enemies to incest, so that even the *Grand Seignior's* son, after the death of his father, never touches his concubines, but shuts them up in a certain castle; on the other hand, they are extremely addicted not only to lust, but also to sodomy itself, and combination with brutes. There are instances, that two prostitutes in *Persia* have been condemned, one to be occupied by a horse, the other by an ass; the first died, but the second escaped with life.

The *Moors* feed generally upon rice instead of bread, which is well tasted here, and grows in great plenty in *Bengale*, and divers other provinces; the same is in much request throughout the *Indies*, in *China*, *Japan*, in the isles of *Formosa*, *Java*, *Celebes*, *Borneo*, *Ceylon* in *Malabar*, and other places, though *Japan* and *Bengale* produce likewise very good wheat. The poorer sort, who can't get above four or five pence a day to maintain themselves, are forced to be contented with *Kützery* (a mixture of beanflower and rice) boiled in water. Their habitations are also very low and mean, made of clay, and their household-stuff suitable to their houses; for besides a few vessels of brass, and the two bedsteads where the man and wife lie, (who never sleep together,) there is nothing to be seen there, they having neither benches nor chairs, but only mats to sit upon. In some places they use cording instead of wood for fuel: but the houses of people of fashion are spacious, and divided into many apartments, flat on the top, whereupon they take the cool air in the evening. They are very splendid in their entertainments, wives, and houses, but especially in gold and silver plate.

Their clothing is very grave, and they scarce ever change the fashion thereof; the men wear coats of callico, or rich tissues and silks; they are strait above, close to the body, fastened with a girdle round the waste, and reach down to the knees: their breeches are wide above, and narrow at the bottom, reaching down to the legs, and trimmed,

*Baldæus.* trimmed with fringes; their shoes are of gilt leather, which they turn down at the heels, for the conveniency of throwing them off upon occasion. When they salute one another, they touch the turbant with the hand only, but never move them as we do our hats. They are girt about their loins with a girdle of some fine stuff, over which they wear another of fine linnen, and a broad dagger on the left side. The ornament of the women consists chiefly in bracelets about their arms and feet, ear-pendants, nose-rings, and other jewels: when they are going abroad, they cover their heads with a veil, with several hair-locks twisted together, hanging down their backs.

*Their burials.*

They observe certain peculiar customs in their burials; for no sooner is the breath out of the body, but their wives, children, and neighbours, make a most lamentable outcry, asking ever and anon the deceased, What made him die? whether he wanted any thing in his life-time? This they continue for three days successively: then they invite his friends to a feast in memory of the deceased, whose corpse being in the mean while well washed, and sowed up in some white stuff, with all sorts of odoriferous drugs, is laid upon a bier, and accompa-

nied by three priests, (who sing and read *Baldæus.* all the way,) carried by ten or twelve persons to the grave: here they lay him upon his right side, with the feet to the south, the head to the north, and the face to the west. This done, they lay boards over the whole corpse to keep the earth from touching it; and whilst they are filling up the grave, the standers-by mutter out certain prayers, and then return to the house of the deceased with the priests, who for several days after pray for his soul, shorter or longer, according as they are able to pay them. During this time, no fire must be seen in the house, what victuals they use being dressed without doors. Upon the grave they lay two stones, one at the head, and another at the feet, the interstice being of the same length with the dead corpse underneath it: upon these the priests read certain chapters out of the *Alcoran*, and distribute some bread among the poor: upon the same, at the head, they set sometimes a turbant, and if a female be buried there, a kind of a bonnet. Thus much of the *Mabometan* subjects of the *Great Mogul*; of the idolatry of the *Gentives* we shall have occasion to treat at large in the third book.

CHAP. VII.

*A Description of Diu. A Sea-Engagement of the Portuguese with Jazy and Hocenus. The singular Bravery of Laurence d'Almeyda, and Nonnius Vasques Pereria. The Harbour of Diu taken by the Portuguese. The Flight of Jazy and Hocenus. Moorish Colours sent to Portugal.*

AT the uppermost southern point of *Gufuratte* lies the city of *Diu*, the draught whereof you see here annexed, where the *Portuguese* have three strong forts. It is commonly called *Diu*, though its right name is believed to be *Tivo*, i. e. an isle, in the *Malabar* language, as may be seen in the names of *Naynativo*, *Anchativo*, *Maltivo*, or the *Maldivè* islands, which being in all sixty in number, extend from the cape *Commoryn* from the seventh degree of northern latitude, to the third degree of southern latitude, a tract of one hundred and forty, or one hundred and fifty *German* leagues.

*Origin of Diu.*

As to the origin of *Diu*, they relate that one *Jazy*, a native of *Sarmatia*, did settle in this island; but being taken prisoner and made a slave by the *Mabometans* in these parts, he changed the christian religion for that of the *Turks*, and being sold into *Cam-*

*baja*, was at last, for his singular dexterity in managing the bow and arrow, prefer'd to the service of king *Madrafakaon*, the father of king *Mamudius*. *Jazy*, to give a proof of his skill, shooting one day a certain bird of prey flying, he gained thereby so much credit, that the king not long after gave him his liberty, and restored to him the isle of *Diu*.

This isle, which at that time had nothing to shew but the ruins and miserable remnants of a once-flourishing city, began to recover part of its former splendor under *Jazy*, by reason of its convenient situation betwixt the *Arabian* shore and the kingdom of *Decan*. Having provided for the security of the place, by erecting divers forts and other fortifications, and his wealth increasing in a few years, he began to equip a fleet in order to attack his enemies ships at sea. *Hocenus* (otherwise named *Mir Amirazem*) a *Persian* by birth, and commander

*Baldæus*, commander in chief of the ships that were to come from *Egypt* into the *Indies*, having lately had a smart engagement with the *Portuguese*, *Laurance* and *Francis d'Almeyda*, and coming that way, *Jazy* thought fit to enter into a confederacy with him, which was done accordingly: whilst they were consulting by what means best to annoy their enemies with their joint fleets, news was brought, that *Laurence d'Almeyda* was with a few ships come to an anchor before *Chaul*, and had landed his men, (as being quite ignorant of the arrival of the *Egyptian* fleet in those parts.) One *Nizamaluc* reigned at that time at *Chaul*; for the great persons of *Decan* having imprisoned their king, had divided his kingdom among themselves, whereof this part was fallen to his share. *Nizamaluc*, though no great friend to the christians, yet for interest sake had ordered his subjects to maintain a good correspondence with the *Portuguese* trafficking in those parts; which *Almeyda* being not ignorant of, he thought he might stay here with safety enough, till he had the opportunity of convoying the *Portuguese* merchant ships to *Cochin*. It was, indeed, rumoured abroad, that the *Egyptian* fleet had been seen on that coast; but the *Portuguese* imagining that the same

might be occasioned by the arrival of certain ships coming about that time of the year from *Mocha*, they made no great account of it: one of the ships crew at length espy'd a considerable fleet from the top of the main-mast, but could not discern their strength, till at last they began to suspect the truth; for *Hocenus* was advancing that way, and *Jazy* preparing to follow him, in order to attack the *Portuguese*. Certain intelligence being at last brought to *Almeyda*, that the enemy was at hand, he ordered his men aboard, which was scarce done when they saw the *Egyptians* advancing against them. These *Barbarians* had flattered themselves with hopes to surprize the *Portuguese*; but these having just had time enough to put themselves into a good posture of defence, received their enemies so warmly, that they thought fit to stay for the arrival of *Jazy*; however, they charged one another (but at a distance) all that day; but towards night *Hocenus* retreated with his vessels to the other bank of the river among the sands, for his greater security's sake.

The night being spent on the *Portuguese* side, in preparing for the combat against the next day, when *Almeyda* being ignorant of the confederacy betwixt *Hocenus* and

*Jazy*,

*Baldæus*. *Jazy*, attacked the first with great fury, in hopes of boarding the *Egyptian* ships; but not being able to come close enough up with them by reason of the sands, he was forced to rest satisfied with plying them with his cannon, which he did all the day long, notwithstanding the enemy were much stronger in ships and men. The engagement was very hot, *Laurence d'Almeyda* being himself wounded twice with an arrow: the combat continued thus with considerable loss on both sides, till towards night *Jazy* came to the relief of the *Egyptians* with forty ships, but not daring to engage with the *Portuguese*, came to an anchor at the entrance of the river, to be nearer to *Hocenus* in order to join with him the next day.

Advices of the Portuguese to their admiral.

The *Portuguese* being somewhat moved at this unexpected fight, represented to their admiral *Almeyda*, that having gained sufficient honour in the yesterday's engagement, they ought now to consult prudence, and to endeavour to bring their ships out of the harbour in the night time into the open sea. *Almeyda* did not disapprove the

Is rejected.

advice of his sea-commanders; but as he was of a haughty temper, so he could not resolve to steal away by night, but determined to make the best of his way to-morrow by day-light; with this resolution he ordered all his ships, as well merchants as others, to be ready to set sail with the first tide by break of day. The *Moors* no sooner perceived his intention, but they made towards them in order to intercept their passage; in this engagement a bullet happening to strike through the *Portuguese* admiral next to the rudder, she took much water, and was cast upon the rocks, whence she could not be got off: The *Portuguese* commanders seeing the impossibility of saving the ship, sent a boat to the admiral, desiring him to save his person, and preserve himself for another occasion; but in vain, for he told them, *that he would never be guilty of such a piece of treachery, as to leave those who had hitherto been his companions in danger in the lurch.* Accord-

The Portuguese admiral cast upon a rock.

His bravery.

ingly he animated his men both with his words and example to defend themselves to the utmost extremity; being thus animated by their admiral, they fought like lions, rejecting all proposals offered them by the enemy, resolving either to save the ship, or die in the defence thereof.

Is wounded.

In the mean while *Almeyda* having one of his thighs shot off by a bullet, lost however not his wanted courage, but ordering his men to place him upon a chair near the main-mast, he there gave his orders as occasion required; but whilst he was busy in encouraging his men, another

unfortunate ball took away part of his breast and ribs, so that his entrails falling out he gave up the ghost immediately, and his dead carcase was carried below deck immediately. This was the end of the brave *Almeyda*, who had signalized himself so often by his bravery in the service of his king and country.

*Baldæus*.  
And killed.

There were besides him two other brave fellows, though much inferior in rank, whose names do well deserve a place in this history; one was *Laurentius Frerius Catus*, a servant to the deceased admiral, who being wounded with an arrow in one of his eyes, threw himself notwithstanding this upon his master's body, and when he saw the *Moors* enter the ship, fell in pell-mell among them, and killed several of them with his sword before they could dispatch him. The other was a sailor, named *Andrew Van Portua*, who standing on the top of the main-mast, and being wounded by a musket-ball in his shoulder, and having before lost the use of his right-hand, defended himself from thence with his left-hand for two whole days against those *Barbarians*, till at length they promised him his life; upon which he surrendered, and afterwards returned safely into *Portugal*, where he was honourably rewarded for his bravery.

Two other brave exploits.

The taking of the admiral's ship of the *Portuguese*, though it cost the *Barbarians* six hundred men, (one hundred and forty being lost on the christian side,) yet occasioned no small joy in their fleet; as on the other hand, the loss thereof soon reached to *Cochin* by such ships as were fled thither: however the *Portuguese* were so far from being dismay'd thereat, that resolving to be revenged upon those *Barbarians*, they left no stone unturned to gather a more formidable strength at sea; and *Albuquerque*, after having settled matters at *Socotora*, (an isle at the entrance of the *Red Sea*;) did considerable mischief to the *Moors* near *Ormus*, as *Laurence d'Almeyda* (the father of the admiral lately killed) revenged himself for the death of his son, by the taking of *Dabul*, *Diu*, and *Panane*, whereof we shall give you a more ample account anon.

For *Emanuel* king of *Portugal*, being informed concerning the convenient situation of the harbour of *Diu*, sent his orders to *Sequeria* to build a fortress there, cost it what it would. Accordingly *Francis d'Almeyda*, after the taking of *Dabul*, steered his course for the harbour of *Diu*. *Hocenus* was for engaging the *Portuguese* without the harbour; but at the persuasion of *Jazy* laid aside that design, it being thought much more expedient to expect the coming of the christians with their joint forces,

*Diu attacked by the Portuguese.*

*Baldæus* forces, and to annoy them at their approach both by sea and land; for which purpose they had besides the *Egyptian* ships and those of *Diu* received eighty brigantines of *Calecut*, and had planted their cannon at convenient distances along the shore. The *Portuguese* admiral was somewhat surprized to see the enemy keep so close beyond expectation; yet interpreting the same as a good omen of his future victory, he spent the remainder of the day in viewing the posture of the enemy, and consultations what was best to be done.

He having declared his resolution of attacking the admiral's ship of the *Egyptians*, aboard of which was *Hocenus*, the same was approved; but he desired not to expose his person at this critical juncture, but to commit the management of the design to *Nonnius Vasques Pereria*: accordingly, every thing being got in readiness, they entered the harbour the next morning with the first tide, and a strong sea-wind, *Nonnius* leading the van in his ship with two hundred chosen men, being followed by the admiral *d'Almeyda* to protect and cover his rear. *Nonnius* advanced bravely under the thundering noise of the cannon, (by which ten seamen that were furling the sails were killed at once,) and making his way through the midst of the *Barbarians*, at last boarded *Hocenus* in his ship, though not without great slaughter on both sides, he himself having the misfortune to be wounded in the throat by an arrow, of which he died three days after.

The *Portuguese* not being dismay'd at the disaster of their commander, but inflamed with revenge, redoubled their fury, which the *Barbarians* being no longer able to withstand, they gave all over for lost, *Hocenus* himself narrowly escaping in a boat to the shore, and (being somewhat diffident of *Jazy*) took horse immediately, in order to fly to the king of *Cambaja*, where he was well received. Those of *Calecut* seeing the best of their brigantines ruined by the enemy's shot, thought it their best way

to save themselves with the lightest over the sands, and two of *Hocenus* his gallies were carried off by *Roderic Zoares*; many of the *Barbarians* leaped into the sea, where they lost their lives; the rest got ashore, and dispersed, *Jazy* not being able to stop their flight.

There was yet remaining the ship of *Jazy*, a vessel of a vast bulk, appearing like a castle, well provided with artillery and men, being besides this covered with oxes hides to keep off the arrows, and hinder the enemy from boarding by its slipperiness: the *Portuguese* made several attempts to master it, but being as often repulsed, at last sunk her with their cannon. The loss of the *Barbarians* was computed at three thousand men, the *Portuguese* had only thirty killed, but three hundred wounded. The *Portuguese* relate that *Nonnius* his ship being very old, yet held out very well during the combat, but immediately after was found leaky in many places; most of the *Mamaluques* or *Egyptians* were slain in this engagement. How slenderly the *Portuguese* were provided with all manner of necessaries, may be guessed from hence, that when *Nonnius* his wound was to be dressed, there was no linen in the ship to do it with, but they were forced to tear a shirt for that purpose. Certain it is that the *Portuguese* can make harder shift than most other nations, a thing of great consequence in time of war, plenty and luxury being often the ruin of the best armies. The booty got by the *Portuguese* in this engagement was considerable; for besides four war-ships, and as many merchant-men, with their artillery, they got a considerable quantity of gold, silver, and precious stuffs and cloths, all which was given a prey to the soldiers and ships crew: three of the sultan's colours were sent to *Portugal*, to be preserved there in memory of so remarkable a victory; which made an ample amends to the *Portuguese* for the loss they had sustained some time before near *Chaul*.

They attack the Moors ships in the harbour.

Ten men killed by one bullet.

Nonnius wounded.

Hocenus flies.

So do those of Calecut.

Jazy's ship sunk.

C H A P. VIII.

*Peace made with Jazy. Ferdinand Coutinho made Viceroy. Differences arisen betwixt Almeyda and Albuquerque. The Portuguese take Diu; which is refortified by Jazy. Nonnius goes to Diu. The Isle Betel taken. Saldania surprizes Goga.*

*Baldæus.*  
Jazy sues for peace.

**J**AZY thought it now time to sue for peace; to obtain which he was not sparing in his promises, to endeavour to engage all the neighbouring princes into the interest of *Portugal*; so the peace was concluded, under condition that he should surrender all the remaining *Egyptian* ships to the *Portuguese*, release the prisoners taken near *Cbaul*, and provide their fleet with all manner of necessaries. *Jazy* being very willing, or rather necessitated, to comply with the conditions, the *Portuguese* thought fit not to attempt any thing further against *Diu* for that time, as being unwilling to embroil themselves with the king of *Cambaja*. Thus *Almeyda* retired victorious to *Cochin*, having paid to *Nizamaluc*, as he passed that way, the usual presents that were in arrears.

*Almeyda is succeeded by Ferdinand Coutinho.*

But *Almeyda* did not long enjoy the fruits of his late victory; for *Ferdinand Coutinho*, a person of quality, was soon after sent with fifteen ships and three thousand men to join with *Albuquerque*, in order to attack the *Moors*, and especially the city of *Calecut*; for some differences being arisen betwixt *Almeyda* and *Albuquerque*, which were fomented by some malicious persons, the king of *Portugal* thought he could pitch upon no better expedient to prevent the ill consequences thereof, than by sending *Coutinho* to succeed *Almeyda*, who preferring the king's interest before his private interest, quietly surrendered his charge; and at the same time was reconciled to *Albuquerque*, after he had managed the government of the *Indies* with more than ordinary conduct and wisdom; a person worthy of a much better fortune than what happen'd to him afterwards. For in his return to *Portugal* having occasion to touch at the cape of *Good Hope*, to take in some fresh provisions, some of his men being got ashore, and falling into differences with some of the natives about the exchange of their commodities, *Almeyda* running thither with sword-in-hand, to see what was the matter, the natives began to fall upon him and his men; and being reinforced with fresh numbers, set so hard upon the *Portuguese*, that they were not able to get to their ships without fighting their way through them, which they did with a great deal of bravery; but, alas! not with-

*Differences betwixt Almeyda and Albuquerque.*

out the loss of their commander *Almeyda*, *Baldæus* (who was run through the body with a stick pointed at the end,) and twelve more of their best soldiers. This was the unfortunate end of this great man, so famous for his great achievements both in *Europe* and *Asia*, being forced to end his days upon the shore of *Africa*, which robbed him both of the rewards due to his services, and even of a christian sepulture.

*The death of Almeyda.*

We told you before, that the *Portuguese* thought fit not to attempt any thing further against *Diu*; it is now time to shew you what further measures were taken to bring about their design to erect a fort in that island. They had so far agreed the matter with the king of *Cambaja*, that he favoured their intentions, or at least was not against them; but *Jazy* not only used all his endeavours at court to obstruct the design of the *Portuguese*, but also prepared every thing for a vigorous resistance in case of need. In the mean while he was not sparing in fair words or promises, nay, even in deeds to the *Portuguese*; for no sooner arrived *Sequeria* at *Diu* from *Ormus*, but he regaled the fleet with fresh provisions, and the officers with presents, with a great many protestations of friendship to the crown of *Portugal*: but when *Sequeria* began to talk to *Jazy* concerning the intended fort, he declined the matter, alledging that it lay not alone in his power; and therefore they must obtain the king of *Cambaja*'s consent, in which he would assist them with all his interest.

*Jazy plays the hypocrite with the Portuguese.*

*Sequeria* was not so stupid as not to smell the rat; but thinking it best to repay him in his own coin, he dissembled the matter, and returning his compliments with much civility, he prepared underhand for war; but *Jazy*, who had a watchful eye upon all his actions, knew so well how to improve his time, and provide for his security, that *Sequeria* thought it most adviseable to delay his project till the next year, against which time he expected some considerable reinforcement.

*Is discovered.*

*Sequeria* was no sooner departed, but *Jazy* imbraced this opportunity of strengthening himself on all sides; he added several new works to the place, and erected a castle in the midst of the entrance of the harbour, and

and

*Baldæus*, and betwixt that and the city defended it with a strong chain: he kept several ships loaden with ballast ready to be sunk upon occasion, to stop up the passage on the other side, and ordered vast pieces of stones and rocks to be sunk under the walls, to prevent the *Portuguese* galleys from approaching near to them: he also for the better defence of the harbour hired one hundred and eighty brigantines, and some merchant-men, manned with *Arabians*, *Persians*, and *Turks*, (professed enemies of the christians,) leaving in the mean while no stone unturned to thwart the designed project of the *Portuguese* at the court of the king of *Cambaja*.

Nonnius  
Acunia  
goes for  
Diu.

His rendez-  
vous.

Sail for  
Dabul.

Betel begun  
to be forti-  
fied by the  
Cambajans.

Neither were the *Portuguese* idle on their side, but having made what preparations they thought fit for such an undertaking, *Nonnius Acunia*, the chief commander of the *Portuguese* in the *Indies*, set forward in order to put it in execution: but being resolved to make use both of cunning and force at the same time, he had by presents engaged several bold and cunning fellows, who were to pass to *Diu* in the quality and habit of merchants, but in effect to serve for *Spies*, and to give notice of what they thought worth his knowledge. Thus prepared, the time and place of the rendezvous of the whole fleet being appointed at *Chaul*, he set sail from thence with three hundred sail, great and small, well provided with artillery and ammunition, having aboard three thousand *Portuguese*, as many *Malabars*, and two thousand *Canarines*, for *Dabul*, a small city in the confines of *Cambaja*; where the *Portuguese*, being much animated by the presence and speech of a certain *Franciscan* frier, named *Anthony Petron*, declared that they would not desist, till they had forced the *Barbarians* from their strong holds in those parts. But finding the place deserted by its inhabitants, they steered their course towards *Betel*, (a small rocky isle not above a league in compass, separated from the continent only by a narrow streight,) about eighty leagues from *Diu*. The situation of this isle being such, by reason of the rocks which inclose the isle near the shore, that it might easily be made defensible by an indifferent force, the king of *Cambaja* had not long before sent thither a certain commander, a *Turk* by birth, with two thousand soldiers, and one thousand workmen, to erect certain fortifications there; but having not had sufficient time to bring them into such a condition as to be able to resist such a force as this, they thought it their safest way to capitulate.

The commander in chief (having obtained a passport for that purpose) had an interview with the *Portuguese* general, offering to surrender the isle, under condition

that they might have liberty to depart with all their baggage and goods. *Nonnius* allowed the first; but would not consent to their taking the least thing away with them, except what they had about them. This harsh answer was no sooner known in the isle, but they resolved to abide the utmost extremity, rather than comply with it. The king's treasurer found means to have a boat built, wherewith he transported all the king's money and goods to the continent. Many of the garrison enraged with revenge and despair, brought all their horses, best moveables, wives and children together, and burnt them and themselves. There were about seven hundred left, most of them votaries, resolved to die with sword-in-hand. These like mad-men fell upon the *Portuguese* with more fury than effect; for the *Portuguese* general having repulsed them, attacked the next night by the light of the moon, their intrenchments with so much vigour, that after a most obstinate resistance (in which the *Turkish* commander was killed) they left them to the *Portuguese*, some running to the rocks, from whence they precipitated themselves into the sea; others endeavouring to escape the sword by hiding themselves in the hollows of the rocks; but being discovered, some of them were cut to pieces, the rest made slaves. A certain *Moor* having nothing left but his sword, and seeing his comrade slain just by his side, and a *Portuguese* advancing with his pike towards him, in order to kill him, ran desperately towards him, and thrusting himself upon the *Portuguese's* lance, at the same time killed his enemy with his sword; so that they both died upon the spot.

The *Portuguese* lost in this action about seventeen persons of note, and had an hundred and fifty wounded, many of whom died afterwards. *Nonnius* thought fit to tarry here eight days, in hopes of receiving some intelligence from his spies at *Diu*; this proved of great advantage to those of *Diu*, for in the mean while *Mustapha* and *Sopbar* (who had been at the siege of *Aden*) coming to an anchor with six hundred *Turks*, and one thousand three hundred *Arabians* before *Diu*, the inhabitants thereof (who before that time thought of nothing else than how to come to a good composition) being encouraged by this reinforcement, were resolved to venture all for their defence. *Mustapha* was no sooner entered the city, but he ordered the women, children, and other defenceless people to be sent out of the town; the rest being mustered were found eleven thousand in number, (without the *Turks* and *Arabians*,) able to bear arms: strict watches were set in all places, to let no body pass in or out of the town without special

guese take  
the isle.

Loss of the  
Portuguese.

*Baldæus.* special licence ; the cannon were planted on the walls, mines dug and filled, chains made across the harbour, and the entrance thereof defended by seventy three well-manned brigantines. To be short, nothing was omitted that was thought necessary to strengthen themselves either by sea or land.

Preparations at Diu.

*Nonnius Acunia* in the mean time tarried at *Betel*, in expectation of the tidings he waited for from his spies there ; but these being too narrowly watched to send any intelligence, he resolved to take his chance, and so set sail for *Diu*, where he cast his anchor in hopes to come to a parley with the inhabitants ; but he was not a little surprized when he heard the cannon from the ramparts thunder among his ships, and three bullets that had passed cross the admiral's ship, gave him sufficient warning, that it was not safe staying there long, which made him give immediate orders for the whole fleet to weigh anchor, and to secure themselves without the reach of the cannon from the city. Being by this time sufficiently convinced, (without consulting his spies,) that there were but little hopes of peace or a surrender, he took a full view of the town, to see on what side it might

be most conveniently attacked ; and finding more probability to succeed on the harbour than on the land side, (especially since he was better provided for a sea than land enterprize,) he ordered all his ships and artillery to be got in a readiness, in order to attack the castle at the entrance of the harbour, break the chains, and to fall upon the enemy's fleet, from whence he might annoy the city with his cannon on the north side. The attempt was made accordingly, but without success, the *Portuguese* being so fiercely galled on all sides by the enemy's cannon, that they were forced to desist, and *Nonnius* thought fit to retreat to *Betel*, from whence he returned with his fleet to *Goa*, leaving *Anthony Saldania* with some ships on the coast of *Cambaja*, to watch the enemy's motions. *Saldania*, after having done considerable mischief to the enemy, by the taking of the small city of *Goga*, and burning twenty five brigantines, left *James Sylveria* behind him, and returned afterwards to *Goa* ; where having spent the greatest part of the winter in refitting their ships, *Nonnius* in the spring set sail for *Cbaul*, about two leagues from *Calecut*, to intercept the *Arabian* ships trading in those parts.

The Portuguese assault Diu in vain.

CHAP. IX.

*Nonnius routs the Mahometans ; takes Bazain ; and Martin Soza Daman. Badur King of Cambaja engages in a Treaty with the Portuguese. His Forces, and Expedition to Citor. The Destruction of that City. Badur twice defeated ; flies to Diu. His End.*

*SYLVERIA* was in the mean while not idle, but took many ships bound for *Diu*, burnt some villages, and kept the place so blocked up on all sides, that in a little time they were within reduced to great scarcity of provisions. The next following year *Sylveria* continued to play the same game by destroying many towns, villages, and ships : he also took the cities of *Pate* and *Patane*, as also *Mangalor* in *Cambaja*, with a vast booty, and a great number of prisoners ; the new king of *Cambaja* being not in a condition to assist those of *Diu*, by reason of some intestine troubles.

Nonnius's design against Bazain.

*Nonnius* at the same time keeping still in remembrance the disgrace he had received before *Diu*, and being resolved to let slip no opportunity of revenging himself, he laid his design against *Bazain* in *Cambaja* ; accordingly he set sail with a fleet of eighty ships great and small, with four thousand land-men aboard them, (half *Portuguese*, half

*Malabars* :) he sent *Emanuel Albuquerque* with some ships before, to secure the entrance of the harbour, sent for *James Sylveria*, who had his station on the other side of *Diu*, and followed himself with the whole fleet.

*Tocan* the chief of *Diu*, had, upon notice that the *Portuguese* were arming against him, intrenched himself with a considerable number of horse and foot at *Bazain*. *Nonnius* on the other hand, being well informed of the condition of the place by certain deserters, divided his troops into three bodies. The vanguard was led by *James Sylveria*, the main battle by *Ferdinand de Za*, the reer being commanded by *Nonnius* in person.

As they were advancing towards the town, they received several smart salutes from the enemy's cannon, and whole showers of arrows, *Tocan* having intrenched himself with ten thousand men in the

The Portuguese attack it.

*Baldæus*. out-works; notwithstanding which, the *Portuguese* lost not so much as one man whilst they were advancing towards the enemy, whom they charged so briskly, that they were forced to betake to their heels; and the inhabitants seeing themselves deserted by their protectors, followed their footsteps. Thus this city, with all its works, fell into the hands of the *Portuguese*, with the loss only of six men on their side; whereas the loss of the *Moors* was computed at five hundred and fifty. They found in it a considerable booty of provisions and ammunition, as bullets, gunpowder, and brimstone. *Nonnius* highly extolled the bravery of *Sylveria*, who commanding the vanguard, had behaved himself so gallantly, that the main battle did not as much as come to the charge, and as an acknowledgment of his services, made presents to him and all his officers. After they had destroyed all the fruits of the field round about it, they destroyed the city, and demolished the fortifications, as thinking it not for their interest to spare a sufficient number of troops to garrison it. Thus *Nonnius* having taken an ample revenge upon the *Barbarians*, returned with his fleet to *Goa*, and the *Mabometans* being convinced by this as well as the loss of the isle of *Betel*, (and afterwards that of *Daman*,) of the strength and bravery of the *Portuguese*, began to remit much of their fierceness, and were at last forced to submit to the building of a fort upon the isle of *Diu*, as will appear out of the sequel of the matter.

Soza attacks Daman.

*Martinus Alphonsus Soza* being come lately from *Portugal* (in the quality of admiral) to *Goa* with five stout vessels, and being joined by thirty five ships, and six hundred land-soldiers of *Nonnius's* squadron, he set sail for *Daman*, a city of *Cambaja*, about fourteen leagues from *Bazain*. This being a place of no strength, the inhabitants had deserted their habitations; but the *Rasboutes*, a daring and unruly generation, being joined by some *Turks*, to the number of five thousand in all, had intrenched themselves near the harbour, and defended the entrance thereof with a good number of great cannon.

Takes and demolishes it.

*Alphonsus Soza* took peculiar care in taking a view of the posture of the enemy; and as he was going in his boat from the harbour along the shore, having taken notice of a place in the city which was but ill guarded, he ordered scaling-ladders to be hung to the walls; so that whilst they were scaling the town the defenders fled, and thereby gave an opportunity to the *Portuguese* to make themselves masters of a gate: here it was the slaughter begun, the fight being carried on with equal obstinacy for

some time, till the *Rasboutes* being forced to give way, many of them were cut to pieces by the *Portuguese*, who lost no more than ten men in this action, but had many more wounded. Three days were spent in demolishing the fortifications, and laying the whole city level with the ground: which done, *Soza* turned his victorious arms towards *Diu*, and all along the coast of *Cambaja*.

*Badur* king of *Cambaja*, being extremely nettled at the success of the *Portuguese*, whom he was not in a condition to oppose, at a time when he saw himself entangled in another war, thought it his best way to sue for peace with *Nonnius Acunia*, offering not only *Bazain*, but also the adjacent isles, (among which were likewise the *Saljetes*,) and a considerable tract of land on the continent, thereby to engage the *Portuguese* in his interest against his enemies, viz. *Cremantina* the queen-dowager of *Sanga*, and the *Mogores*, a warlike nation descended from the *Scytæ*, who are frequently at war with the *Persians*: their king *Miramudius*, who boasted himself to be descended from the *Great Tamerlane*, having not long before made a powerful irruption into *Cambaja*.

Peace betwixt the Portuguese and Badur.

The intention of *Badur* was first to vanquish the queen of *Sanga*, and afterwards the *Mogores*: his whole force consisted in one hundred and fifty thousand horse and five hundred thousand foot, besides fifteen thousand hired foreigners, two hundred elephants trained for the war, and a very good train of great artillery: with this army he marched to *Citor*, a very fine and populous city under the queen of *Sanga*, who was not long before retreated thence with her children. The inhabitants of *Citor*, unable to resist so powerful an army, resolved to follow the footsteps of those in the isle of *Betel*, (mentioned before,) and having brought together all their gold, silver, and precious stones, &c. burnt themselves with their wives and children, with the treasure. It is said, that during the conflagration, which lasted three days, more than seventy thousand persons perished by the flames. *Badur* entered victoriously into *Citor*, where having rewarded the services of his officers that behaved themselves well with presents, he marched directly against the *Mogores*, but with very different success; for being twice put to the rout by them, and deserted by *Mustapha* his general, he was forced to fly to *Diu*; and being full of despair, would have taken a resolution to leave his kingdom, and to send his treasure to *Mecca*; but being, at the earnest entreaty of his friends, removed from that resolution, he sent an ambassador to *Soliman* the *Grand Seignior*, to offer him six hundred

His warlike preparations.

He takes Citor.

*Baldæus.* hundred thousand crowns, provided he would send a certain number of well-disciplined troops to his assistance; but fearing lest the desired succours should come too late, he offered to *Soza*, who then lay before *Chaul*, as also to *Nonnius Acunia*, a proper place for the erecting a fort near *Diu*, provided they would assist him against his enemies.

*Sues for place.*

*The Portuguese fort near Diu.*

*Boldness of James Bottelbo.*

*New differences betwixt Badur and the Portuguese.*

The *Portuguese* willing to take the opportunity by the forelock, *Soza* sailed to *Diu* immediately, and being followed by *Nonnius*, the treaty was signed, and a place assigned, *viz.* the hill which overlooks the harbour of *Diu*. This happened in the year 1535. The *Portuguese* went to work immediately, and laid the foundation of a triangular fort, the wall from the sea-side to the hill being seventeen feet thick and twenty high, at the end whereof, just upon a hill near the city, was erected a redoubt, and on the other end a stone tower, (such a one as the *Portuguese* have at *Cranganor* and *Cananor*;) from whence extended another wall to the other corner of the island: the wall was defended by a deep ditch, as far as the rocks would permit; in the midst whereof was a gate defended by two towers, named *St. Thomas* and *St. James*. Thus king *Badur* saw a goodly fortress perfected by the *Portuguese* within forty nine days, that part to the sea-side being set aside till another opportunity.

One *James Bottelbo*, a brave commander, but fallen into disgrace with *Emanuel* king of *Portugal*, being willing to court any opportunity of being restored to the king's favour, got a brigantine built on purpose of eighteen feet in length, and six broad; and having provided himself with as many seamen as were required to manage her at sea, he set sail from *Diu*, without letting them know whither they were bound, and proved so prosperous in his voyage, that without any remarkable accident he arrived safely at *Lisbon*, and brought the kind advice of their good success at *Diu*.

The *Portuguese* left a garrison of eight hundred men under *Emanuel Soza* in the fort, and were no sooner retired from thence with their fleet, but *Badur* began to repent of his having admitted the *Portuguese* into the isle of *Diu*, (especially since the promised succours arrived but slowly;) whereupon he ordered the governor *Ninaar* to surround the city with a new wall, and to inclose the royal square without the place, whereby their fortifications must approach very near to, and lie directly opposite to those of the *Portuguese*. These being resolved not to permit a thing of this nature,

which must needs tend to their prejudice, *Badur* was much incensed thereat, exclaiming highly against their proceedings, and endeavoured to have surprized them in their fort; which not succeeding, he sought for aid from the *Samoryn* of *Calecut*, and several *Malabar* kings against them.

*Nonnius* being advertised of all these treacheries, sets sail once more with twenty ships and five hundred chosen *Portuguese* foldiers for *Diu*, ordering *Martin Alphonso* to follow him from the *Malabar* coast. No sooner had he cast anchor before *Diu*, but feigning himself sick aboard, he sent certain persons to compliment king *Badur*, and beg his excuse for his not coming in person: whereupon *Badur* went aboard together with *Soza*, the governor of the fort, to give a visit to *Nonnius*, who met *Badur* at the door of his great cabin, and saluted him with a great deal of civility. For though the death of *Badur* was resolved on before-hand, yet, that they might not seem to violate the laws of hospitality, they had thought fit to defer the execution thereof till his return towards the shore: it was not long before *Badur* went into his boat again in order to return, but was no sooner got into it, and making the best way to the shore, when *Nonnius* giving the signal to his men, and exhorting them to do their duty, they leaped into boats kept for that purpose, and following that of *Badur*, attacked him on all sides. The king being grown desperate, exhorted his people to a brave defence, encouraging both by his words and example; which made the fight so obstinate, that the *Portuguese* were in danger of losing their prey, *Soza* himself being slain in the first attack. The bravery of a certain servant of *Badur* deserves our particular notice, he being observed to have wounded, with eighteen arrows, as many *Portuguese*, till he was killed by a musket-shot himself. In the mean while, three yachts, armed with *Turks*, were sent from the shore to succour the king; but being most of them killed, and the king's galley struck upon the bank, he leaped into the sea, and though sorely wounded, did swim to the galley of *Tristan Pavia*, and discovering himself to be the *Sultan*, begged his life; which *Tristan Pavia* would willingly have granted; but just as the king was entering the vessel, he was slain by a seaman, who knocked his brains out with a club. This was the unfortunate end of *Badur*, one of the most potent kings of *Asia*, who not long before had been a terror to all the circumjacent countries.

*Nonnius sails once more to Diu.*

*Badur gives him a visit aboard.*

*Is kill'd.*

*The bravery of a servant of Badur.*

*Badur slain.*

## C H A P. X.

*Sofar made a Prisoner. The Portuguese become Masters of the whole Isle. Mamud King of Cambaja. A considerable Number of Ottomans sent to the Indies. Diu besieged by the Turks. A smart Engagement betwixt the Mahometans and Portuguese. Diu relieved. Garzias Noronia constituted Viceroy.*

*Baldæus.* BUT to return to *Diu*, and the sea-engagement, where *Sofar* being taken prisoner, was kindly entertained by *Nonnius*. The death of *Badur* (though not very honourable on the *Portuguese* side) proved however of very great consequence, the *Portuguese* becoming thereby masters of the whole island without much opposition, the said *Badur* being deservedly hated by his subjects, by reason of his tyranny and cruelty; six hundred foot were left there in garrison, and all necessary care was taken that the customs both at *Diu* and *Rumenstadt* might be regularly paid. *Maffæus*, in his fourth book of the *Indian* history, says, that *Rumenstadt*, or *Rumopolis*, (lying not far from *Diu*;) was built by *Fazy*, (mentioned before) and got its name from the *Constantinopolitan Turks* that scour sometimes in the *Indies*, called by them *Rumes*.

*The Portuguese fortify the sea-side.* The *Portuguese* found no great treasure of ready money at *Diu*, but considerable stores of ammunition and provision, and the better to strengthen themselves, fortified the city on the sea-side.

*Mamud king of Cambaja.* *Badur* was succeeded in the kingdom of *Cambaja* by *Mamud* his sister's son, who being an infant, under the tuition of *Driacan*, *Madremaluc*, and *Alucan*, these were solicited by *Sofar* (out of a hatred to the *Portuguese*) to engage in a war for the recovery of *Diu*. *Alucan* having got together a body of five thousand horse and ten thousand foot, and *Sofar* three thousand foot and one thousand horse, they pitched their tents in *June* not far from *Rumenstadt*.

*His tutors engage in a war.* *Sofa* attacked the town vigorously; but being in one of the attacks wounded in both his hands, the *Portuguese* got a little breathing-time, and in the mean while repaired the walls of *Rumenstadt*, which for some reasons they had demolished before: for *Antonius Sylveria* having resolved to fortify and defend the whole island against the *Indians*, was disappointed in his design by *Alucan*, who improving the loss of some *Portuguese* ships by tempest to his advantage, galled the *Portuguese* so sorely from his ships in their entrenchments, that they were forced to quit their posts; so that *Alucan* landing his men, soon became mas-

ter of the whole isle and the suburbs, where there happened frequent skirmishes betwixt them, the *Indians* being not strong enough to attack the fort, which was bravely defended by *Lupo Soza Coutinho*.

Whilst these things were transacting in *Cambaja*, the *Grand Seignior*, to revenge the murder of *Badur*, (at the request of his widow,) had equipped a fleet of sixty four stout galleys, which being joined by seven ships of *Cambaja*, and three *Moors* of *Malabar* with three thousand five hundred landmen aboard them, under the command of *Soliman* *bassa* of *Egypt*, they set sail from *Aden*, not questioning but they would soon be masters of the *Portuguese* fort, and consequently of the island, from whence they might extend their conquests into the continent of the *Indies*. Matters being concerted beforehand betwixt *Soliman* and *Sofar*, the last went out to meet the *Turkish* squadron about fifteen leagues at sea; and *Antonius Sylveria* being advertised of their approach, took all imaginable precaution for his security, in disposing what force he had to make a vigorous defence, and at the same time gave notice thereof to *Goa*, to sollicite for prompt succours from thence, encouraging his men both by his example and exhortations. By this time *Soliman* having cast anchor in the road of *Diu*, he ordered seven hundred chosen men to land, and attempt the attack of the *Portuguese* fortresses; which they did accordingly, but were forced to retire to *Sofar's* fort with the loss of fifty janizaries killed, and a greater number wounded; the *Portuguese* had also six men killed, and twenty wounded.

About the same time the *Turkish* fleet being in great danger of being forced by a strong south wind upon the coast, and much exposed to the enemy's shot, he retreated to the harbour of *Madrassa*, five leagues from *Diu*; where having concerted new measures with *Sofar*, he sent back his landforces to renew the siege of *Diu*. But *Alucan*, one of the tutors of king *Mamud*, having conceived a jealousy of the design of the *Turks*, retired with his forces from before *Diu*; and having represented their ambitious projects to the king, he soon obtained of him a prohibition in all his territories

*Baldæus.* stories not to furnish the *Turkish* camp with provisions.

This proved no small disappointment to *Soliman*, who notwithstanding this did not lose courage, but pursued his design of carrying the place, cost it what it would :

*A fire-engine of the Turks.* for this purpose the *Turks* contrived a very large fire-ship, which, under favour of the tide, and the smoke of some burning wood, they intended to send into the harbour, and to fix to the fortifications ; and whilst the *Portuguese* were busied in quenching the flames, they were to attempt the surprising of the fort on the land-side : but whilst they were staying for the spring-tide, *Francisco*

*Set on fire by the Portuguese.* *Goveano*, a *Portuguese*, found means to set it on fire, though not without great hazard, being obliged to pass twice the enemy's fire ; twenty of the *Turks* aboard the fire-ship

*Rumenstadt left by the Portuguese.* leaped into the sea, and were all slain. The *Turks* were so incensed at this disappointment, that they exerted all their fury against *Rumenstadt*, the walls whereof being so ruined as not to be maintained any longer against a vigorous attack : *Patioco*,

*The Turks renew the siege of Diu.* the chief commander thereof, thought fit to quit it in time. The *Turks* flushed with this success, renewed the siege of *Diu*, both by sea and land, with more vigour than ever, leaving nothing unattempted, with canonading, mining, or whatever might be attempted to reduce the place ; whilst the *Portuguese*, on the other hand, with counter-mines, retrenchments, and frequent sallies, endeavoured to stop their fury.

*The Turks storm the place.* The *Turks* being at last, by means of a gallery, advanced over the ditch, and entering the breach, a most furious combat ensued for four hours successively, the *Portuguese* defending themselves like lions. *Maffæus*

*Are repulsed.* relates, that a *Portuguese* having spent all his balls, pulled out one of his teeth, and charged his musket with it. At last the *Turks* were forced to retire with the loss of five hundred men slain, and one thousand wounded : the *Portuguese* also on their side had fourteen of their best officers slain, and so many of their soldiers either killed or wounded, that they had scarce forty men left fit for service. Besides this, they began to be in such want of provisions and ammunition, that they were very near reduced to

the last extremity. However, they did not lose courage, but encouraged one another rather to die upon the spot, than to submit to the most fordid slavery ; the women and children were even not backward in giving all the assistance they were able.

In the mean time, *Nonnius Acunia*, being sufficiently sensible of the danger of the fortress of *Diu*, had left no stone unturned for the relief thereof ; but the case admitting of no delay, he sent sixteen *Patachos* or yachts thither : these coming to an anchor in the night-time before *Madrafaba*, had each put four lanthorns on their sterns, with an intention to terrify the enemy. This succeeded accordingly ; for the *Turks* having by this time lost above three thousand men, and fearing the succour expected from *Goa* might be much stronger than really it was, set fire to the city, and leaving five hundred wounded men, and most of their great cannon behind, reembarked the first of *November*, steering their coast towards *Arabia* ; and *Sofar*, with the remnants of his forces, retired to the continent, to the no small honour of the *Portuguese*, who, with so small a number, had defended themselves not against barbarous undisciplined *Indians*, but against a body of warlike, well-exercised *Turkish* troops. It is said, That *Francis I.* king of *France*, was so highly pleased with this brave action, that he desired, and had an original picture of the brave *Sylveria*, the governor of the place.

Whilst *Nonnius* was busied in making all the necessary preparations for the relief of *Diu*, *Goa Garzias Noronia* was sent by *Don John*, king of *Portugal*, with eleven men of war, and seven thousand land-men, to relieve *Nonnius* : among these there was one ship filled with malefactors and criminals of all sorts, who had obtained their pardon from the king ; but this being separated from the rest, was never heard of afterwards. *Nonnius Acunia* having surrender'd the government to *Noronia*, after a stay of ten years in those parts, set sail for *Portugal*, his native country ; but before he could reach it, died at sea, near the *Cape of Good Hope*, on the *African* coast.

## C H A P. XI.

*Noronia makes an Agreement with King Mamud. Lupius Soza constituted Governor of Diu. Sofar's sinister Designs against the Portuguese: He besieges Diu, in Conjunction with Mamud; is slain in the Enterprize. The City is vigorously assaulted, and is bravely defended. An unsuccessful Salley made by the Portuguese.*

*Baldæus.*  
Noronia  
sends his  
deputies to  
Mamud.

**N**ORONIA apply'd all his thoughts to the affairs of *Diu*; and having dispatched certain deputies to *Mamud*, to treat with him of a peace, they at last, not without a great deal of difficulty, came to the following agreement; in the negotiation of which they met with no small opposition from the grandmother of *Mamud* and *Sofar*, who were continually inciting the young king to revenge the death of his uncle king *Badur*, viz. That the king of *Cambaja* should remain in the possession of the city of *Diu*, and the *Portuguese* continue masters of the fort and harbour thereof; that they should divide the customs share and share alike; and that the *Cambajans* should be at liberty to erect a wall to front the castle, provided the same were done at a convenient distance.

*Their agreement.*

*Lupius*  
constituted  
governor.

Matters being thus settled, *Lupius Soza* was constituted governor of the place instead of *Sylveria*, with a garrison of nine hundred men. But it was not long before *Mamud*, at the instigation of his grandmother, sent a considerable body to attack *Bazain*; but *Laurentius Tavora* making a vigorous salley upon them, constrained them to seek for peace. *Sofar* in the mean time having recovered himself, had for six years together bent all his thoughts upon the ruin of the *Portuguese*; and having found means to ingratiate himself into king *Mamud*'s favour, they sent underhand their emissaries to the neighbouring *Indian* princes, to engage them against the *Portuguese*, who they told them did lord it over them, under pretence of trafficking in the *Indies*. The affairs of the *Portuguese* were at that time but in a very indifferent condition in those parts, their treasuries exhausted, their naval strength neglected, their seamen very scarce; and the land-soldiers deserted in such numbers, that of the nine hundred that were in garrison under the command of *Lupius Soza*, there were not above two hundred and fifty left in the government of *Mascarenbas*; and what was worse, there was not above a month's provision, and a slender share of ammunition left.

*Miserable*  
state of the  
*Portuguese*.

*Sofar* was not unacquainted with these things, having learned them from divers *Portuguese* merchants; so that looking upon this as a fit opportunity to execute their

projected design, they pitched upon the winter season, when they knew the *Portuguese* could not be so easily secured from *Goa*. *Sofar* being in the mean while not negligent to cajole *Mascarenbas*, the *Portuguese* governor, by his letters into a belief of his sincerity, the same did not discover his real intentions, till it was almost too late; but finding no other redress but in a brave defence, he made all the necessary preparations for it, by sending away all the useless mouths, and fortifying himself after the best manner he could; and having bought up what quantity of rice, flesh, and dried fish he could get of the *Portuguese*, he sent advice of his approaching danger to *Bazain*, *Chaul*, and *Goa*. This happened in the year 1546. *Sofar* took for a pretence the new walls that were to be erected at one end of the city, which being built too near the *Portuguese* fortress, these stopp'd the progress thereof, which soon gave occasion to open hostilities. *Mascarenbas*, to animate his soldiers, told them, "That they ought to remember the brave actions of the *Portuguese* in this very place, where they had frustrated the designs of the *Turks*, of which the same *Sofar*, who now came to attack them, had born his share; that God would certainly punish the breach of faith of this wretch; and that they ought not to be dismay'd at the winter season, there being no question, but that the *Portuguese*, by their skill in maritime affairs, would overcome these difficulties, and succour them in due time." The next thing he did, was to take care of all the posts: the water-redoubt he committed to the care of *Martinbo Carvalho* with thirty men, and the defence of the shore towards *Cambaja* to *Jacobo Leti*.

*Baldæus.*  
Treachery  
of Sofar.

*Breaks out*  
into open  
hostilities.

*Sofar* by this time had begun to carry on his approaches a good way, and ply'd the place warmly with his cannon, but could not without much difficulty attempt an assault by reason of the ditch, which being enlarged of late, was as broad again now as it was in *Sylveria*'s time; however he ceased not to play with his cannon, especially in the night time; and being sensible of what advantage it would be to him, if he could make himself master of the harbour, by taking

*Sofar at-*  
tacks *Diu*.

king

*Baldæus.* king the water-redoubt, he contrived such another engine, or fire-ship, as the *Turks* had made use of in the former sieg, which they intended to set on fire, and to carry with the high tide under the fort : but the *Portuguese* having received intelligence of this design, sent out *Jacobo Leti* with twenty men,

to burn her ; which he did with incredible *Baldæus.* bravery, and the loss of one man only, being forced to carry the vessel through the enemy's fire on both sides, till he brought her within a certain distance of the fort where she was set on fire, and consequently *Sofar's* project vanished into smoke. *fresh ship burnt.*

*The Portuguese receive some succours.*

Not long after the *Portuguese* were rejoiced with a fresh supply of men, provisions and ammunition from *Goa*, under the command of the young *de Castro*, a brave gentlemen; who, after he had been afflicted with very hard tempests at sea (in which several of his vessels were separated from his squadron,) came with the rest, being eight in number, into the road of *Diu*, and in spite of the besiegers, landed his men, ammunition, and provisions, which increased the number of the garrison to four hundred and fifty men. About the same time *Mamud*, king of *Cambaja*, came in person with a good number of troops into the camp : *Mascarenbas* being willing to know their exact number, sent out several desperado's, who engaging the out-guard of the enemy, three of them were killed in the skirmish, but the rest had the good fortune to carry off one of the enemy's sentinels, by whom *Mascarenbas* was informed of what he had a mind to know. *Mascarenbas* having or-

*King Mamud comes into the camp.*

dered certain signals of rejoicing to be made, the enemy sent a messenger to know the reason thereof; who was answered, that 'twas done on account of the king's arrival in the camp, which put them in hopes that for the future they should fight against a great prince, whereas hitherto they had been engaged with vagabonds and rogues.

*Mamud* immediately after his arrival levelled his cannon with great fury against the walls of the fortrefs, and having brought along with him an expert gunner, he ordered him to cast certain fiery balls into the place, though without much success, till the said constable being killed, another succeeded in his place, who was so unskilful in his art, that his fireworks did more mischief in the camp than to the enemy. However, by the continual battering of the enemies cannon, a large breach was made by this time in the wall, which the besieged repaired to the best of their power; but

*Makes a breach in the wall.*

*Baldæus*. but their main reliance was upon the breadth of the ditch; which the besiegers were endeavouring to pass, by the help of their galleries. To prevent this, the *Portuguese* had opened an old vault at the foot of the wall, in which they spent several days and nights, but turned to their advantage, since from thence they could take away great part of the materials the enemy had brought thither for the filling up of the ditch. From hence it was also that *Sofar* received his death's wound, being slain by a bullet which passed through his hand and forehead, which occasioned no small disturbance in the enemy's camp; and had it not been for *Rumecan* his son, the siege had been likely to have been raised at that time.

*Sofar kill'd.*

The joy the *Portuguese* had conceived at the death of *Sofar* their mortal enemy, was not a little allay'd by the perseverance of the besieged in filling up the ditch; and that with such success, that having stopped up the before-mentioned vault, *Mascarenbas* began to be reduced to the utmost stress, of which he gave notice to the viceroy at *Goa*, requesting immediate succours. It was now about the middle of *August*, when the mahometans were preparing for the general assault. They visited their mosques with a great deal of devotion, and *St. James's Day* being appointed for this attack, they advanced without the least noise in two bodies before the break of day towards the breach, in hopes of surprizing the *Portuguese*; but finding them upon their guard, they entered the breach with most terrible and dreadful out-cries; which, however, was so far from terrifying the brave *Portuguese*, that they were repulsed with great slaughter; some of the *Indians* taking the advantage of the low tide, got into the water-fort, where they pitched *Mahomet's* standard, which *Mascarenbas* no sooner perceived, but flying thither, he gave them such a reception, that after thirty of them were slain upon the spot, the rest were forced down headlong over the wall. This done, he returned to his post, where both by his words and actions he so encouraged his men, that *Rumecan*, after a hot dispute of six hours, saw himself obliged to sound a retreat. In this action not only *Mascarenbas*, but also *Ludovico Soza*, *Ferdinando de Castro*, *Antonio Passando*, and all the *Portuguese* in general, acquired immortal honour, several women having exposed themselves in the midst of the combat.

*The Indians storm the fort.*

*Are repulsed.*

Notwithstanding this repulse, the *Indians* did not cease to continue their fire against the fortress, which not succeeding according to expectation, they began to apply their mines, not without some success. *Mascarenbas* having taken notice that the ene-

my retreated sometimes without any necessity, near a certain tower, gave notice thereof to *de Castro*, and some other officers of note, commanding them to quit it; but these flushed with their last success, refused to obey, for which they paid dear soon after; for the enemy taking the opportunity, when they perceived the tower full of soldiers, blew it up on a sudden, with at least one hundred *Portuguese* in it, and among them *de Castro*, and several others of quality; and such was the barbarity of the *Indians*, that they thrust their swords through the half-dead bodies of such *Portuguese* as were thrown up into the air before by the mine. They were for improving this opportunity; and during the confusion occasioned by this disaster, attacked the fort with incredible fury, but were so warmly received by *Mascarenbas*, that they were glad to retreat. To prevent the like for the future, the *Portuguese* governor ordered his men to act with more caution for the future, and the tower of *St. James* to be blown up, which was executed; and not long after, finding the enemy ready to attack the tower of *St. Thomas*, he blew up the mine underneath it, and with it three hundred *Indians*.

*Baldæus.*

*A mine blows up an hundred Portuguese.*

*Three hundred Indians blown up by a mine.*

The *Portuguese* affairs in the fortress began, notwithstanding all this, to grow worse and worse; for though they had made intrenchments within intrenchments, yet had they (after a siege of four months) not above one hundred and fifty men left for the defence thereof; and being reduced to great extremity for want of provisions, were forced to feed upon unwholesome things; which so discouraged the garrison, that they were resolved to put an end to their misery by fighting their way through the enemy.

But being just upon the point of putting their design in execution, they were rejoiced with a most unexpected relief from *Goa*, *Diu* whence they had sent fifty frigats, under the command of *Alvares de Castro* and *Franciscus de Meneses*, who arrived happily at *Bazain*. *Alvares* sailed straightways thence with part of his forces (amounting to nine hundred in all) for *Diu*, and good store of ammunition and provisions, the rest followed before the end of *September*. You may easily imagine with what joy the poor emaciated soldiers of the garrison received this welcome news; which however they would not improve to so much advantage as they might have done, out of a perverse temper, peculiar to the *Portuguese*, who, as they are soon dejected in adversity, so are they insupportable in prosperity: for now the soldiery began to accuse *Mascarenbas* of cowardice and neglect, telling him in plain terms, that they were resolved no more to be shut up within the walls, but to act like brave *Portuguese*,

*Diu relieved with some men and provisions.*

*Mutiny among the Portuguese.*

*Baldæus. Portuguese*, to attack the enemy in their works, and to make him once for all to repent that ever he had attempted the *Portuguese*, whose glorious name was dreadful all over the *Indies*: this they told him they were fully resolved to put in execution; and if he refused to head them, they would chuse another, the first, the best they could. *Mascarenbas*, who knew very well the stubborn pride of the *Portuguese*, when flushed with success, did what he could to divert them from their design by all the mild insinuations and most forcible arguments he could invent, telling them that the securest methods were always the best; and how dangerous it might prove to hazard the losing of the fort when they were in a condition to keep it till the approaching spring, when they expected sufficient succours from *Goa*: but finding them deaf to his persuasions, he spoke to them in the following manner: "Soldiers, ye are not insensible that if you would consider your duty, you ought rather to follow my commands than your own directions; but since you have tied up my hands, and both by your words and actions, nay, by your very looks, give me sufficiently to understand, that instead of commanding I must obey, go on, and shew your courage, your knowledge, and expe-

*Mascarenbas has his speech to his soldiers.*

rience in martial affairs: go on, I say, *Baldæus*. "I will instead of leading you on, follow you, with this caution, however, that I would have you remember to take care to return with the same marks of bravery as you march out." Then dividing the whole garrison into three bodies, he ordered *Alvares de Castro* to command the van, the main battle he gave in charge to *Francisco de Meneses*, himself remaining to guard the rear. Thus they marched towards the enemy; but with far different success from what they had promised themselves: most of them after the first charge retreating towards the town, instead of pushing forward. The body commanded by *Meneses* being charged in front and flank, betook themselves to their heels, and *de Castro* himself, being forely wounded by a stone, was hardly saved by *Mascarenbas*, who crying out to the soldiers, that it was now time to shew their bravery they had so much boasted of before, would fain have stopped their flight, but in vain; for they retreated with so much fear and precipitation, that for some time after, they scarce durst look the enemy in the face, or keep their post; whereas the *Indians*, encouraged by this success, approached with their engines nearer and nearer to the walls of the town. *Their unsuccessful valley.*

CHAP. XII.

*De Castro comes to Diu. Takes some Arabian Vessels. Routs the Indians; who leave the Isle. Rumezan killed. Soliman's Transactions before Aden: He causes the King of that Place to be hang'd on his Mast, and makes himself Master of the City. A Description of Daman, Dabul, and Vifiapour.*

*De Castro sends Acunia to Diu.* **D**E *Castro*, viceroy of *Goa*, had no sooner received the unwelcome news of the death of his son, and the distressed condition of *Diu*, but he sent at the beginning of the spring *Alvares de Acunia* with five men of war and four hundred land-men thither, with strict orders that they should keep within their fortifications till the whole fleet with the intended succours should arrive there. *Alvares* in his passage thither took several *Arabian* vessels, aboard of which were several persons of note belonging to *Sofar*, who, though they offered a great sum of money for their ransom, were all cut to pieces, and their heads thrown into the river.

*He takes some Arabian vessels.*

The spring being pretty well advanced by this time, *De Castro* set sail for *Bazain* with forty yachts, having on board fourteen

hundred *Portuguese* land-soldiers, and three hundred *Canarines*. With these, after having for some time infested the coast of *Cambaja*, he arrived in the *Ilha dos mortos*, whence he sent an express to *Mascarenbas*, with orders to batter the enemies intrenchments near the sea-side with his cannon, to facilitate his landing; which being bravely executed by *Mascarenbas*, *De Castro* entered the harbour without much opposition, and soon after landed his men. *De Castro* being not a little surprized to see the fort appear more like a heap of rubbish than a fortification, the very ditches being laid level with the ground, he called a council of war to consult of the most proper means to put an end to the siege: some were of opinion, that some time ought to be allow'd to the soldiers to refresh themselves after

*De Castro relieves Diu in person.*

*Baldæus*. the fatigues of the sea ; but *De Castro* telling them, That it would be a great disgrace for a *Portuguese* viceroy to be locked up in a fort, it was resolved to attack the enemy next day.

The Portuguese make a general salley.

Accordingly they marched out in good order, *De Castro* ordering the draw-bridges to be drawn up, to cut off all hopes of retreating into the fort, and leaving *Antonio Correa* with some men to guard it against any sudden attempt. The better to distract the enemy's forces, *Nicolao Gonsalvo* was commanded to make a false attack with some ships on the backside of the island. *Rumecan* on the other hand, trusting to his number, took care to guard his posts on all sides, against which *De Castro* marched with a much lesser force, exhorting his soldiers in a few words, *That they ought to remember that they served a king, who never failed to reward such of his soldiers as fought bravely for God's cause, and the defence of his territories in the Indies, the preservation whereof depended on this battle ; that therefore they should fight like men, and consider that all their safety lay in their hands, all hopes of retreating being cut off by the shutting up of the gates of the fort, and the removal of the fleet to the backside of the isle.*

De Castro's speech to his soldiers.

Things being thus disposed, *Gonsalvo* made his false attack on the other side of the island, which so alarmed the *Indians*, that they hastened in whole troops thither ; which gave opportunity to the *Portuguese*, (who were about three thousand strong,) animated by the example of *De Castro* and *Mascarenbas* their leaders, to break in upon the *Indians* with such fury, that they were not able to resist them. *Rumecan* finding his forces to give way, and imagining that the fort was left destitute of men to defend it, assaulted the same full of despair ; but being repulsed by *Correa*, was forced to follow the rest, and being closely pursued by the *Portuguese*, quitted the isle, and with the remnants of his forces passed over to the continent. The *Portuguese* entered the city, where they killed all they met with, without any regard to age or sex, where they got an incredible booty, and among other things the standard of *Cambaja*, a prodigious quantity of arms, and thirty five brass cannon, one whereof being of an extraordinary size, is kept to this day in the arsenal at *Lisbon*, with certain *Arabick* characters upon it. The *Portuguese* lost, not above sixty men in this action ; whereas of the *Indians* were killed no less than four thousand, and six hundred taken prisoners : *Rumecan* himself lost his life, as he was preparing to pass over to the continent : *De Castro*, after having given the king of *Portugal* an account in his letter of this glorious victory, and the bravery of his officers and soldiers, gave

He routs the Indians.

Rumecan slain.

orders for the repairing the fortifications of *Baldæus*, the fort, and returned triumphant to *Goa*, where he was received with the general acclamations of the people.

*Castagnedo* gives a somewhat different relation of this action ; for he tells us, That *Rumecan* wanted neither bravery nor conduct ; and that he put the *Portuguese* so hard to it, that had it not been for *Mascarenbas*, who led in person the soldiers to the charge, the *Portuguese* would in all likelihood have lost the day. He says further, That they had one hundred and fifty men killed, and among them divers brave officers, *George de Souse*, *John Manoel*, *Francisco Azevedo*, *Cosmo de Paiva*, *Balthazar George*, *Eduardo Rodrigo*, *Juliano Ferdinando*, *Vasques Ferdinando*, and others ; that the *Indians* loss amounted to three thousand men ; and that the whole siege of *Diu* consumed the *Portuguese* at least two thousand men.

We told you before, that *Soliman* did come with his fleet before *Diu*, from *Aden* ; about twenty leagues thence, coming to an anchor, to take in fresh water, he sent certain deputies with a letter to the king of *Aden*, with the usual present of a brocado'd vest of tiffue of gold, offering him his friendship, and requiring him in the *Grand Seignior's* name to furnish his fleet with flesh and fuel, if he could not assist in person in the expedition he was going upon, to extirpate the *Portuguese* (declared enemies of the *Mabometans*) out of the *Indies*. The king of *Aden* was at that time a tributary to the *Portuguese*, unto whom he paid yearly ten thousand ducats tribute ; notwithstanding which he gave a very honourable entertainment to the messengers, promising to furnish them with what necessaries they wanted. About seven days after the whole *Turkish* fleet entering the harbour of *Aden*, was received with singular demonstrations of joy, the king sending one of his chief courtiers aboard to congratulate *Soliman* upon his arrival, and to invite him ashore. *Soliman* returned for answer, That he should be glad to embrace the king's kind offers ; but that the late fatigues of the sea had put him into such disorder, that he could not stir at present ; but as soon as he should be recovered of his present indisposition, he would not fail to pay his respects to the king.

The king's messengers were no sooner returned to the city, but *Soliman* sent three hundred men after them, under pretence of refreshing themselves, and taking a view of the place, (being all chosen men ; ) and the better to cover his treachery, he sent word to the king, that to prevent any disorders, he would send one hundred men the next day to bring them aboard again. The king of

Soliman's treachery with the king of Aden.

Aden

*Baldæus.* Aden was so credulous as to assign these three hundred men their quarters in his castle; which *Soliman* had no sooner notice of, but he sent the next day, instead of the one hundred men, no less than two thousand *Janizaries*, to the no small astonishment of the king, who now beginning to mistrust the matter, did not know what course to take; but whilst he was considering what measures to take, news was brought that a much stronger body of *Turks* was advancing into the city, who had no sooner posted themselves near the castle, but the commander in chief told the king with a smile, That he would be pleased to give a visit with two or three of his courtiers to *Soliman*, who was indisposed aboard his vessels. The king now began plainly to see the danger that threatened him; but not being in a condition to make any opposition, he was forced to submit; and being brought before *Soliman*, he asked them with an unparalleled magnanimity, under what colour he could presume to take in custody a prince in amity with the *Grand Seignior*, and to treat him no otherwise than as a criminal? Unto which *Soliman* reply'd, *And are you not ashamed to let the admiral of the grand seignior stay three days in your harbour with-*

*out paying him a visit?* The king returned, *Baldæus* Had the grand seignior been here in person, I ought to have done no more than what I have done; and I am sure I should not have been treated thus. 'Tis true, I am now in your power, which I might have prevented, had I not trusted my self and my kingdom with those who now are going to betray both; without which Aden need not have stood in fear of your strength: I am now, though too late, sensible of my approaching destiny, seeing myself in the hands of a treacherous tyrant; but though you may dispose of my body, I hope the bravery of the inhabitants of Aden, and the grandure of their princes will out-last your barbarous cruelties. He had no sooner ended his speech, but *Soliman* ordered him to be hanged on the main-mast yard, with four of his chief courtiers, and afterwards seized upon the city, excusing his treachery with the grand seignior's order, to punish the king for his being a friend to the *Portuguese*.

*Diu* being one of the chiefest places of the *Indies*, we thought it would not be unacceptable to the reader, to insert the entire history thereof here. We will now proceed to the description of the other places: *Daman* was one of the most ancient and noted places of the kingdom of *Cambaja*, which

The King of Aden forced aboard the Turkish fleet.

The King of Aden hanged.

The King of Aden hang'd aboard Soliman Bafsus Galley.

*Baldau*, as we told you before, was taken and destroyed by *Martino Alphonso de Soza*. As to *Chaul* and *Bazain*, there is scarce any thing remarkable to be said of them, except what has already been mentioned in the account of *Diu*.

Chaul,  
Bazain.

*Dabul* is a city seated at seventeen degrees forty five minutes of northern latitude, upon a most pleasant river, arising out of the mountain *Ballaguatte*, about two leagues from the sea; in former times much frequented by foreign merchants, and famous for its traffick and riches. *Sabajus* (a declared enemy of the *Portuguese*) had surrounded this city with a wall, and fortified the harbour thereof with a strong castle, which being garrisoned with six thousand men, (among whom were five hundred *Turks*;) he thought himself secure against any attempts of the *Portuguese*.

A description of Dabul.

But *D'Almeyda*, the *Portuguese* admiral, appearing with his fleet, (aboard whereof were thirteen hundred *European* land-soldiers, besides four hundred *Malabars*;) sent some of his galleys to make a false attack upon the castle, whilst he took this opportunity of landing his men at some distance from thence. The *Indians* perceiving their error, marched with all possible speed out of their gates against the *Portuguese*, whom they galled sorely with their arrows; but these advancing with sword-in-hand against their enemies, made such a havock among them, that they were glad to retreat towards the city, and being closely pursued by the *Portuguese*, these enter'd pell-mell with them, and made a great slaughter, killing all they met with, without sparing men, women, or children. They got here a considerable booty, though a great part of the best moveables were burnt with the city, which was set on fire by the *Portuguese*.

Is taken by the Portuguese.

Limits of the kingdom of Decan.

We have hitherto given you an account of the most considerable cities of the kingdom of *Decan*, bordering to the south upon *Malabar*, upon *Bisnager* to the east, upon the sea to the west, and upon *Cambaja* to the north: it's divided into three parts, viz. into *Cuncan*, *Canara*, and *Ballaguatte*, the last of which is a ridge of high mountains flat on the top, with most excellent pastures, extending even beyond *Goa*. The next in order is the kingdom of *Visiapour*: the length whereof is no less than two hundred and fifty leagues, and its breadth one hundred and fifty. Its capital city, which bears the same name, lies seventy leagues beyond *Goa*, eighty from *Dabul*, and is said to be five leagues in compass, with very strong walls, and five noble gates, on which are mounted above a thousand brass and iron pieces of great cannon. They tell us, that among these there is one carrying no less than five hun-

The kingdom of Visiapour.

dred and forty pound weight of gunpowder, cast by a certain *Italian*, a native of *Rome*, who being questioned by one of the king's commissioners concerning the money he had disbursed upon this account, threw him into the same hole where he had cast the cannon before. Some have reckoned this city; but erroneously, among the cities of *Cambaja*. The king of *Visiapour* was formerly absolute sovereign of this kingdom; but after a long and heavy war was forced, with divers other princes in those parts, to become a vassal to the *Great Mogul*: he used also sometimes to be embroiled with the *Portuguese*.

The king of Visiapour now a vassal to the Great Mogul.

This kingdom borders to the south of *Wingurla*, upon the river *Mirsee*, the boundary of the country of *Carnatica*, in the territory of *Sivipaneyk*. To the north of *Wingurla* lies the sea-port of *Danno*, the boundary of the kingdom of *Visiapour* on the side of the empire of the *Great Mogul*, about ten leagues from *Daman*. The river here has four fathom and a half water at high tide, and one fathom and a half at low water. The second river is named *Terrapour*, having at low water half a fathom, and with high tide two fathoms depth. The third called *Chnuam*, has generally two fathoms. The fourth, called *Machyn*, has two fathom and a half at high water, and half a fathom at low tide. The fifth harbour is called *Quelleny*; the sixth *Bazain*; the seventh *Bombain*, (*Bombay*;) where the depth is six fathom at high, and four at low water: the eighth is called *Siouwel*, where at high water there is six fathom deep. All these rivers belong to the kingdom of *Visiapour*; but are for the most part in the possession of the *Portuguese*, who have built their forts upon them: as for instance, at *Bombain*, (*Bombay*;) a spacious harbour, (at eighteen degrees fifty minutes northern latitude,) where ships may lie safe at anchor against all the winds. Here the *Portuguese* have built a very fine castle, (the draught whereof you may see in the next cut,) which commands the whole road; and was in 1662. given in part of a dowry, together with *Tangier*, in the *Streights of Gibraltar*, to the infant of *Portugal*, upon her marriage with *Charles II.* king of *England*; whereby the *English* thought to have got a great booty from the *Portuguese*; whereas they are in effect places of no considerable traffick. The rivers *Dabul*, *Radiapour*, and *Carapatan*, are entirely possessed by the natives.

For the rest, this kingdom abounds in salt-petre works. The royal palace lies in the center of the capital city, defended by a double wall and ditch, with one hundred battering pieces, and a garrison of two thousand men; the richest merchants dwell in the suburbs. The other cities of note

The royal palace.

*Baldæus*. of this kingdom are *Cintapour*, a sea-port town, *Razapour*, *Banda*, *Rajebaag*, inland cities; *Arec*, *Mirdsy*, *Asta*, *Tamba*, and *Wingurla*, where the *Hollanders* have a stately factory: it is seated at fifteen degrees seven minutes of northern latitude, a place very considerable, not only for its plenty in wheat, rice, and all sorts of provisions and refreshments, but also for its situation near *Goa*, which stood the *Dutch* in no small stead, whilst they were engaged in war

with the *Portuguese*, and had blocked up *Baldæus* that harbour. The forces of the king of *Visapour* consists in one hundred and fifty thousand horse, and eight thousand foot, of which more anon in the description of *Negapatan*. We will in the next place proceed to the description of *Goa*, together with its origin, and what afterwards happened most remarkable in those parts betwixt our nation and the *Portuguese*.

C H A P. XIII.

*Goa taken by Albuquerque. The Death of Sabajus. Hidalcari comes before Goa. Albuquerque takes Goa a second time; routs the Moors, and establishes Christianity in that City. The Life and Actions of Xaverius in the Indies, China, and Japan: His Zeal and Piety.*

*Goa has a bad air, and most of its provisions from the continent.*

THE city of *Goa* is seated in an isle of a considerable bigness, at sixteen degrees of northern latitude. The air or climate is not very wholesome here, so that the *Portuguese* have in this place (as the *Dutch* have at *Batavia*) their great hospital of the *Indies*; because many of the *Europeans* die here immediately after their arrival, and many more fall sick by reason of the moisture of the air, as it was formerly at *Batavia*, which has been remedied since in some measure, by draining the fens thereabouts. *Goa* is the capital city of the *Portuguese Indies*, the chief residence of their viceroy and archbishop. The city is built after the *Portuguese* manner, each house having its peculiar garden, as at *Cochin*, and other *Portuguese* cities in the *Indies*.

*Goa taken by Albuquerque.*

The famous city of *Goa* was conquered for the *Portuguese* by *Albuquerque* in the following manner: One *Timoja*, a famous person in those parts, having possessed himself of a small isle belonging to the kingdom of *Onor*, was a declared enemy of *Sabajus*, (of whom before,) and the *Mabometans* of *Goa*, who interfering with him in their commerce, he had destroyed many of the ships of the *Egyptians* and *Saracens* trading thither. Thus being linked in point of interest to the *Portuguese*, he had declared to *Almeyda* his readiness to do what service he was able to perform to *Emanuel* then king of *Portugal*.

*Albuquerque* coming into those parts, sent for *Timoja*, to consult with him concerning certain matters of moment relating to those parts, who informed him, that *Sabajus* being a declared enemy of the *Portuguese*, had, after the taking of *Dabul*, bestow'd vast sums of money in making prepara-

tions against the christians; but being prevented by death from putting them in execution, he was succeeded by his son *Hidalcari*, who being engaged in a war with the neighbouring kings, and *Goa* at this time embroiled with intestine divisions, which had made most of the garrison desert his service, he was of opinion, that in case *Albuquerque* would for this time set aside his expedition against *Ormuz*, and attack *Goa*, he might make himself master of that city without much opposition: and to convince him of the sincerity of his intention, he offered to go along with him in person, and to take his share in all the danger. *Albuquerque* approving of the counsel of *Timoja*, called together a council of war; in which it being agreed to lay aside the design upon *Ormuz* and in lieu thereof to attack *Goa*, *Timoja* lifted a good number of soldiers, (under pretence that they were to be employed against *Ormuz*,) and soon after having join'd *Albuquerque* with fourteen ships, they tarried near eleven days in the isle of *Anchedrova*: for some of the *Portuguese* began to question the success of this enterprize, alledging that there were four thousand men in garrison in the city, and that it was imprudence to rely too much upon *Timoja*: but *Albuquerque* persevering in his resolution; set sail from the isle, and came to an anchor before the bar of *Goa*.

*Sabajus his death.*

*Albuquerque sets sail for Goa.*

From hence he detached *Anthony Noronia*, his sister's son, and *Timoja* with some light vessels, to make themselves masters of the two forts that defended the entrance towards the city; which being done with all imaginable success, he sent his messenger to *Goa*, to let the inhabitants know, that if they would submit, they should be treated like friends, and be discharged of

*Two forts taken.*

*Baldæus*. one third part of the tribute they were obliged to pay to *Hidalcan*; but in case of refusal they must expect no mercy. The inhabitants of *Goa* seeing themselves reduced to this nonplus, in the absence of *Hidalcan*, most of their soldiers having deserted, and their forts in the enemies hands, thought it their wisest course not to abide the extremity, but to accept of the offers of the *Portuguese*; which they did accordingly, and received *Albuquerque* with all the demonstrations of friendship, who rode triumphantly on horseback into the city under the acclamations of the people, a *Dominican* carrying an ensign with a cross in it, and another the keys of the city (surrendered to him) before him. He was very punctual in performing all the articles agreed upon betwixt him and the inhabitants, forbidding the soldiers, under the most severe penalties, to commit the least outrages. His next care was to take a view of the condition of the city, where he found divers goodly vessels, some lately built, others upon the stocks; the arsenal very well provided with artillery, and the king's stables with a considerable number of the best *Arabian* horses. And finding, by the situation of the place, of what consequence it might prove to the *Portuguese* for the future, in carrying on the war upon the continent of *Cambaja* and the cape of *Corus*, and to keep the neighbouring princes in awe, he left no stone unturned to provide for its security.

Goa surrendered to the Portuguese.

Lost again by the Portuguese.

Thus much for the first enterprize of the *Portuguese* upon *Goa*. We will now also give you a short account of their further success, how they lost it again by treachery, and regained it a second time, the 25th of *November 1510*. where these following persons signaliz'd themselves to their immortal honour, *Manuel de Cunha*, *Manuel de Lacerda*, *Don John de Lima*, and his brother *Don Jeronimo de Lima*, *Denys Fernandes*, *Diego Mendes de Vasconcelos*, with many others.

For *Hidalcan* had no sooner received the surprizing news of the loss of *Goa*, but he made a peace with the neighbouring princes upon the best conditions he could, with an intention to bend all his forces towards the recovery of *Goa*. The better to compass his design, he sent *Camalcan* his general, a brave soldier, before with eight thousand foot, and fifteen hundred horse, to endeavour to pass a certain branch of the sea which incloses the isle, he himself intending to follow with an army of five thousand horse, and forty thousand foot, as soon as he had made all the necessary preparations for such an enterprize.

Hidalcan prepares for the recovery of Goa,

*Camalcan* having pitched his tents near the sea-shore, this, together with the news

of the approach of *Hidalcan* with a most powerful army, caused no small consternation in the island. *Goa* was inhabited at that time by two sorts of people, viz. the *Mahometans* and *Pagans*; the first out of an irreconcilable hatred to the christians, cry'd out for *Hidalcan* the son of *Sabajus*, who was of the same religion with them; and the pagans fearing lest they should be severely chastised for their having surrendered the city upon such easy terms, were for purchasing *Hidalcan's* favour by betraying *Albuquerque's* counsels to him. The worst of all was, that many even among the *Portuguese* began to upbraid *Albuquerque* with want of conduct; who they said, out of vain-glory only, without the least regard to the interest of *Portugal*, had with a handful of men ventured upon so desperate an enterprize, as the seizing of so populous a city.

*Albuquerque* nothing dismayed at all these obstacles, endeavoured to appease the *Portuguese* by fair words and promises, took one hundred of the chief inhabitants into custody; and having intercepted a letter directed to *Camalcan*, he punished the author thereof with death, with divers others who were convicted of a correspondence with the enemy. But as his chief aim was to dispute their passage cross the branch of the sea, he had erected batteries provided with cannon at convenient distances near the sea-side, and secured all their boats, by which means he had repulsed them several times in their attempts. At last, taking the advantage of a dark tempestuous night, they brought over both their horse and foot, without receiving any considerable damage from the *Portuguese*. Thus approaching to the city in battle-array, most of the inhabitants joined with them, which obliged the *Portuguese* to retreat thither, though without any great prospect of security.

*Camalcan* summoned *Albuquerque* to a surrender under certain conditions; but though he was sensible of the approaching danger, and the difficulty there would be of receiving any relief in the winter season from *May* till *September*, when the frequent storms render the seas thereabouts un navigable, and choak up the entrance of the harbour of *Goa*, yet was he resolved to expect the arrival of *Hidalcan*, and to abide the utmost extremities, rather than to surrender the place, resolving, if all failed to pass the winter in his ships in the harbour in spite of the enemy. *Camalcan*, astonished at the resolution of the *Portuguese*, made several fierce attacks upon them, but in vain; till at last *Hidalcan* appearing with all his forces, he resolved to cut off all

*Baldens.* all manner of provisions from the *Portuguese*, by which means he did not question to become master of the place without bloodshed.

He resolved however to send a herald to *Albuquerque*, to offer him honourable conditions, if he would depart; but whilst they were treating upon that head, he found means to have a ship loaden with ballast sunk below the city, where the branch of the sea is pretty narrow, and the channel very strait, with an intention to have another sunk hard by it: *Albuquerque* was no sooner advertised thereof, but he called a council of war; in which it was unanimously agreed, that they should embark the next night, before they had stopp'd up the whole channel, that the enemy might not intercept their passage.

Accordingly they marched out in the dead time of the night; but having set fire to their magazine, they were discovered and attacked by the enemy; so that with much ado they got to their ships, when they weighed their anchors, and with incredible difficulty passed through the narrow channel at some distance from the town: by which, however, they were not freed from their misery or danger; for by the continual windings of the river they were frequently exposed to the enemy's fire, and being destitute of fresh water, they were forced to drink salt corrupted water; what horse-flesh they had left being also consumed, they were reduced to feed upon mice, cats, and leather, which occasioned a great mortality among the *Portuguese*. Add to this, that they were continually annoy'd with the enemy's cannon from the two before-mentioned forts, (left by the *Portuguese* for want of men,) and saw no way how to pass them without a most manifest hazard.

*Albuquerque* being put to these straits, resolved upon a thing which at first sight appeared rather to be a madness, than founded upon serious considerations; but the event shewed, that in extremities the boldest and most hazardous undertakings are often the best. Both these forts were provided with good garrisons; but being sensible of the misery of the *Portuguese*, they regarded them so little, that they scarce thought it worth their while to guard their posts: *Albuquerque* having received some notice thereof, detached three hundred chosen men, whom he divided into two troops; these being animated with great promises and revenge, advanced towards the forts at the same time, and finding the centries asleep, killed them, and so entering the forts, soon put the rest to flight, took possession of the fort, and carried off the cannon aboard their vessels. *Hidalcan*

was so surprized at this bold enterprize, *Baldens.* that not thinking himself secure in the place where he was, he ordered his tent to be pitched at a greater distance.

The next thing the *Indians* attempted was, to endeavour to set fire to the *Portuguese* fleet by means of dry brush-wood and faggots dipp'd in pitch and rosin; to prevent which *Albuquerque* manned out certain boats to burn them before they could come near enough. This occasioned a smart engagement, wherein *Anthony Noronia*, (a *Anthony Noronia slain.* brave young gentleman, declared viceroy of the *Indies* after *Albuquerque*,) being dangerously wounded in the knee, died a few days after. The enemy's loss was also very considerable; but the death of *Noronia*, together with the manifold miseries, dangers, and difficulties they had daily to struggle with, made the *Portuguese* resolve to sail to the isle of *Anchediva* to set ashore their sick men, who stood in great need of refreshments for their recovery. *The Portuguese sail to Anchediva.*

Whilst *Albuquerque* was here ruminating with himself how to recover *Goa*, a squadron of ten *Portuguese* men of war arrived in the *Indies*. Strengthened with this succour, and having new modelled his forces by purging them of some mutinous spirits, he embarked one thousand five hundred land-soldiers, and three hundred *Malabars* aboard thirty four vessels; and steering his course to the isle of *Onor*, he concerted new measures with *Timoja* for the recovery of *Goa*: and having engaged him to lift as many forces as possibly he could, he set sail immediately towards *Goa* with such an astonishing confidence of success, that the *Indians* upon his approach deserted the forts without firing a cannon.

Advancing from hence to the city, a bloody engagement ensued near the royal palace, which *Hidalcan's* soldiers pretending to defend to the utmost extremity, but being routed, the rest threw down their arms, some precipitating themselves from the walls into the ditch, others seeking refuge, or rather death among the waves, whilst the rest dispersed in the island. This engagement lasted above six hours. Immediately after *Timoja* coming to the assistance of the *Portuguese*, they entered the city, where they made a most miserable havock among the *Moors*, whom they were resolved to extirpate root and branch; seven thousand whereof are supposed to have been slain in four days time, the pagans themselves being exasperated at them for having dispossest them of their lands, cut many of them to pieces, and among the rest the treasurer of *Hidalcan*, in whose house they found a good booty. Such of the *Mahometans* as were taken prisoners, *Albuquerque* ordered to be inclosed in a *Turkish* mosque, together with

*And take it.*

*Commit great cruelties.*

*Baldæus*. with a certain renegado christian, who had deserted to *Goa*, and to set it on fire; which was executed accordingly.

A cross found in the ruins of *Goa*.

The next thing *Albuquerque* took care of, was to have bricks and lime made for the rebuilding and strengthening of the fortifications; and (if we may credit the *Portuguese*) as they were digging under the ruins of some old walls, they found a brazen cross, which (considering no christians were ever known to have lived there before) was looked upon by them as a miraculous good omen, presaging the establishment of the christian religion there.

The church of the Franciscans and Dominicans.

*Albuquerque* having punished with death such of the inhabitants as had had a hand in the first mutiny, ordered that the *Portuguese* should marry the young women of the country, (after they had been baptized,) the better to people the city, which from that time began to increase considerably; *Sequeria* having caused the first church that was built, with the adjacent houses and convent, to be dedicated to *St. Francis*. And in the year 1548. the church and convent of *Dominicans* was erected of brick-work, twelve fathers of that order being about that time introduced into the *Indies* by *James Bermudius*, a *Castilian*. After the arrival of the jesuits in those parts, (who have also a fine college here,) there were in four years time baptized no less than seven thousand two hundred and ninety *Indians*, without reckoning those converted by the *Franciscans* and *Dominicans* before. In the jesuits chappel lies intrenched the body of *Francis Xaverius*, of which the *Portuguese* relate strange miracles, as well as of his whole life; an ample relation whereof may be seen in *John de Lucena* in *Portuguese*, by *Daniel Barboli* in *Italian*, and by several others in *Latin*; and in another treatise of *Bartholi*, printed at *Rome*, 1653. concerning the actions of the antient fathers of the jesuitical order. It will be sufficient for us to touch upon some of the chief heads related by the *Portuguese* of this Saint.

The death of *Xaverius*.

He died in the isle of *Sanchan* in *China*, 1552. the second of *December*, of a violent fever, in the eleventh year of his voyage over the *Indies*. His dead carcase was laid in a coffin with his cloaths on, filled with lime, with an intention to transport his bones thence after the flesh had been consumed by the quick lime. Many days after the *Portuguese* opening the coffin, found his body not only uncorrupted, but also of a lively colour, and most agreeable scent. Thence being transported to *Malacca*, and the coffin being opened a second time, above three months after his decease, they found neither the least signs of corruption, or any naufeous stench. After he had been

His body uncorrupted.

buried here five months, a certain jesuit travelling that way from *Goa*, being desirous to see the body of *Xaverius*, found not only the body, but also his cloaths uncorrupted; and of a very odoriferous scent.

Thus it being judged unseemly that his body should remain any longer under ground, *Didacus Pereria* caused a magnificent coffin adorned with gold and silk to be made, wherein the body was deposited at *Malacca*, till it could be transported to *Goa*, where it was received with incredible demonstrations of joy by the viceroy, all the persons of note, and especially by the jesuits, and deposited with a great deal of ceremony in the chappel of *St. Paul*. And finding that the people were so eager to touch his body, that it was to be feared they would in time consume it, or carry it away by piece-meals, it was inclosed in an iron grate; such being the zeal of the people of *Goa*, at that time, that they would embrace the body of *Xaverius* without intermission, lay their beads upon it, rub it with their hands, &c. and the whole city rung of the praises of this faint, of his uncommon zeal, piety, charity, mildness, his dangers in his voyages, his chastity, temperance, fasts, prayers, miracles, constancy, prudence, and great actions for the honour of christ.

The speech he made upon his departure for *Japan* and *China* to his friends, who were for dissuading him from so dangerous an undertaking, is so excellent in its kind, that it very well deserves a place in this treatise.

I Am surprized to see you who spend your days in the praise of God Almighty's power and mercy, should now be so diffident thereof in regard of my person. Have you forgot who is the supreme governor of the universe? and that every thing is ruled by his will? Can you be destitute of instances of this nature? Don't the waves of the sea, who opened a way to the servants of God through the depth thereof, furnish you with an undeniable example? Don't the winds who allay'd their fury by his command, proclaim his power? Pray look upon *Job*, who could not be afflicted by the devil, without God's special permission. The mouth of truth himself tells you, that the hairs of our heads are numbered. As we see ambassadors of temporal princes, relying upon their characters, and the power of their masters, pass unarmed and undisturbed, through an enemy's camp; so it becomes us, who bear the character of interpreters of the divine law, and of teachers of the heathens, to rely upon nothing but the assistance and power of  
" the

*Baldæus.* “ the divine majesty, which without any  
 “ other weapons can carry us safely through  
 “ all dangers both by sea and land, through  
 “ fire and sword, or what else may seem  
 “ to oppose the accomplishment of his  
 “ will. And if it happen that some of his  
 “ faithful ministers fall into the hands of  
 “ cruel persons, if they are devoured by  
 “ wild beasts, suffer shipwrecks, or are  
 “ exposed to hunger, thirst, cold, heat,  
 “ sicknesses, and other miseries; all these  
 “ are to be looked upon as the effects of  
 “ the divine pleasure, to try the faith and  
 “ constancy of his servants: for were it not  
 “ so, we are sufficiently convinced by ma-  
 “ ny examples, in what manner our God  
 “ has a careful eye over them; how he  
 “ has sent the ravens to feed them, the  
 “ angels to feed them; how the wildest  
 “ beasts have deposited their natural fury  
 “ and become mild? how the flame itself  
 “ has not been able to hurt them, nor the  
 “ greatest tyrants to execute their cruel-  
 “ ties upon them. 'Tis true, the victory  
 “ does not always incline on our side, and  
 “ we are often frustrated in the expecta-  
 “ tion of the fruits of our labour; but  
 “ those disappointments ought not in the  
 “ least stop the hand of a zealous minister,  
 “ in attempting every thing that may con-  
 “ duce to God's honour, and the salvation  
 “ of souls. If a soldier, in hopes of a small  
 “ share of honour, ventures his life in the  
 “ midst of his enemies; if the seaman for  
 “ the hopes of an inconsiderable lucre,  
 “ leave the shore, and commit his life to  
 “ the merciless waves, would it not be a  
 “ shame for a minister of Christ to refuse  
 “ to hazard his life for God's service, and  
 “ to look upon every thing as a trifle in  
 “ comparison of the kingdom of heaven,  
 “ and its increase? Let no such thoughts  
 “ enter our minds, there being nothing so  
 “ precious, that ought in this regard to

“ hinder us from the promoting of God's *Baldæus.*  
 “ service.”

A most excellent speech, worthy to be imprinted in the hearts of all faithful ministers of Christ; and the more valuable upon that score, that his deeds were altogether agreeable to his words; for embarking at Goa for Malacca, he thence set sail in a Chinese Jonke, or vessel, for Japan, where he arrived happily at Cangoxima, where this great man did not think it below himself to be instructed in the first rudiments of that language for Christ's sake. The next thing he applies himself to, was, to have the chief articles of the christian faith translated into the Japanese language, making use for this purpose of an interpreter, till he attained himself to the perfection thereof, in which he ceased not to labour day and night; being moved by an uncontrollable zeal of planting the gospel among these pagans. Truly a very commendable zeal, not to be forgotten by all who bear the name of christians; and though Xaverius's religion differs in certain points from ours, yet might his piety and other commendable virtues serve as an encouragement to all pious ministers, to follow his footsteps in performing the service of God to the utmost of their power. It must be confessed on all hands, that had not the active spirit of the jesuits awakened the Franciscans, and other religious orders from their drowsiness, the Roman church had before this time been buried in its ruins: and as for myself, I am very willing to own, that my pen is not capable of expressing the worth of so great a man; though at the same time I am of opinion, that if Xaverius were alive now, he would disown many things, especially as to his miracles, since published by his followers.

C H A P. XIV.

*Increase of the City of Goa: Its Traffick, Manners, and Way of living of the Portuguese there. The War betwixt the Dutch Company and the Portuguese. Their Ambassadors appear in the Great Council at Batavia: Their Propositions and Transactions.*

THE city of Goa increasing every year in riches and traffick, increased also in strength by the addition of several forts near the water-side; this being the capital city of the Portuguese in the Indies. Its traffick was much more considerable formerly than of late years, since by our blocking up the bar of Goa, they were not a

little disturbed by our ships. Whilst Goa increase was in its flourishing state, they used to *and traffick* send their ships to Pegu, Siam, Japan, Per- of Goa. sia, Cambaja, Arabia, Malabar, Coromandel, Bengale, Achem, besides divers other places. It is well inhabited, not only by *Inhabi:* Europeans, but also Canarins, Moors, and *ants.* Pagans of all nations, who live for the

*Baldæus.* most part upon trading, or are handicraftsmen. The great street of *Goa* has many rich shops well stored with silks, porcellain, and other precious commodities, druggiftry wares, manufactories, &c. Some of these, as well as fresh provisions, are sold every day in the market-places, where you hear a crier, or auctioneer, (called by them *Lalang,*) to sell in publick all sorts of goods, both movable and unmovable, cattle, slaves, &c. to the fairest bidder; but they leave off early, by reason of the excessive heat about midday.

*The way of living of the Portugese.* The manner of living of the *Portuguese* is the same here as in most other places of the *Indies*; they are distinguished into *Cazados*, i. e. married people, and *Zoldados*, single people; the last are most esteemed. The *Portuguese* here are generally very idle, seldom applying themselves to any employment, leaving the management of their business, for the most part, to their slaves; even the women committing the care of their children to the female slaves, who also give them suck. The men frequently marry with the natives of the country, yet not so much now as formerly: the children begot betwixt a *Portuguese* and an *Indian* woman are called *Mistices*, as the children of these *Mistices* are called *Castices*.

*Their lust,* The men are generally addicted to excessive lust; and I remember to have seen three women-slaves lie in at once, who were got with child by their masters; fornication and adultery being considered among them as errors of little moment: but they are very averse to drunkenness, notwithstanding which quarrels and murders are frequent among them.

*and pride.* The men are also generally excessive proud, there being scarce any of them that thinks himself removed a little above the vulgar sort, but what has his umbrello carried over his head, another servant to carry his cloke after him, and another who holds his sword: they use frequently snuff, not excepting even the maidens and women; and as they walk along the streets, they are continually stroking and setting up their whiskers. The women never appear abroad either a foot or in chairs unveil'd, their husbands being (and perhaps not without reason) very jealous of them; for which reason also they keep them at home in their apartments above stairs, the windows whereof are so contrived, that they can look upwards, but not downwards into the streets.

*Distempers.* The distempers most in vogue at *Goa* are the burning fevers, which the *Portuguese* cure by venesection, sometimes five or six times a-day, but they let but little at a time. The *French* or *Spanish* pox are also so common here, (as in most other parts of the

*Indies,*) that a *Fidalgo*, or gentleman, here *Baldæus.* does not look upon it as a disgrace to have been afflicted with it twice or thrice in his life-time. For the rest, the *Portuguese* use much sweetmeats, and take a draught of cool water after it, they being enemies to strong liquors, and moderate in their diet, a small share sufficing for a good number of people. The women feed much upon rice, though they have excellent wheaten bread; they also use frequently *Betel* and *Arek*, and all sorts of pickles, which makes them have a pale colour.

The king of *Visiapour* has more than once shewn his inclination of attacking *Goa* by land, especially at that time, whilst *Cornelius Simonsz* commanded the *Dutch* fleet in those parts, he being much respected among the *Mabometans* ever since his burning of the galleons near *Mormagon*: but the death of the said admiral prevented the design of that king, as much questioning whether his successor might be a man of the same stamp. In the year 1641. the said king promised a second time to form the siege of *Goa*, provided the *Dutch* company would engage to let a certain number of their ships winter at *Dabul*, *Orizery*, or some other of his majesty's harbours, which was no more than a necessary precaution, it being certain, that in case the siege should miscarry, the *Portuguese*, without our assistance, would have made themselves masters of these harbours. Formerly it was accounted dangerous to send our ships to the bar of *Goa* before *October*; but experience has taught us since, that this coast of the *Indies* is navigable towards the latter end of *August*, or in *September*, the exact time when the rich ships come from *Mosambique*, *Mascatte*, and divers other places, which have sometimes been taken by our ships; whereas if they come later, they have nothing else to do but to attempt the galleons under the castle. In the year 1640. the *Portuguese* made shift to bring into the harbour two caracks, and as many galleons, well provided with men and all other necessaries, which gave them the opportunity to fortify the isle of *Mormagon*; since which time, to render the blockade by sea the more effectual, the *Hollander* have ordered certain frigates to cruize with a sloop near the cape and the *Burned Islands*, (called *Ilhas quimadas*,) whereby the *Portuguese* *Cassikas*, which supply them with provisions, are prevented from going out or in.

It is sufficiently demonstrable, that the *Dutch* company did at first judge it for their interest to be masters of *Goa*, but laid it aside afterwards, thinking it more for their interest to block up the bar of *Gaa*; certain it is, that both the directors and the governor and members of the great council of the *Indies*, looked upon the war betwixt

*Baldæus*. twixt them and *Portugal* as propitious to them, as is evident from the petition delivered in *May*, 1641. by the said directors in the *Hague* to the states-general of the *United Provinces*.

The war betwixt the Dutch and Portuguese propitious to the first.

The chief intent of this petition, was to shew, That though it was beyond all question, that the *Dutch East-India* company was erected in its first beginning in the years 1601, 1602, and 1604. to carry on a peaceable commerce in the *Indies*; but that since experience had sufficiently convinced them, that the *Portuguese*, who had play'd the masters in the *Indies* for many years before, had left no stone unturned to disturb the commerce of the *Dutch*, by seizing their ships, and imprinting very disadvantageous notions of them into the *Indian* princes. That in 1602. when the *Dutch East India* trade was incorporated into one society, or company, two peculiar advantages were (among others) obtained thereby at that time: first, full authority of protecting their traffick jointly in the *Indies* by force of arms; the consequence whereof had been, secondly, that the *Indian* princes were entered into an engagement with the said *Dutch* company, out of hatred and fear of the *Portuguese*; that, by these means, the ships of the *Dutch* company having purged the seas of the pirates, had settled since the year 1604. their factories and traffick, not only in all the islands from the *Red Sea* as far as *Japan*, but also in the territories of the *Grand Seignior*, in *Arabia* at *Mocha*, in *Persia* even in the capital city of *Ispahan*, in the kingdom of *Cambaja*, and the empire of the *Great Mogul*, in *Decan*, in *Malabar*, *Narsinga*, *Coromandel*, *Golgonda*, *Bengale*, *Ara-can*, *Pegu*, *Achin*, *Sumatra*, *Jambi*, *Palimban*, *Bantam*, *Cambodia*, *Siam*, *Cochin-China*, *Tonquin*, &c. That since the establishment of these factories, the security of their commerce was chiefly founded upon this maxim, To maintain a war against the declared enemy of these *Indian* princes, their engagements to us being founded upon their opinion of our enmity with the *Portuguese*. To prove this, they alledge the following ten reasons.

Factories of the Dutch in the Indies.

Ten reasons for the continuance of a war with the Portuguese.

1. Because the *Dutch East-India* company was chiefly by means of the war with the *Portuguese* arrived to that greatness it is now at, their whole traffick in the *Indies* being founded upon this basis; whence they draw yearly a return of seventy eight thousand nine hundred and ten millions of guilders; and if the said foundation were not shaken, they might expect every year larger returns.

2. That in case of a truce, they should not reap the fruits of the victories, viz. to

put a stop to their power, a thing absolutely to be considered.

3. In case of a truce, the equipment of many ships of war would be laid aside, by which means *Holland* would be deprived of the strength of a considerable number of men of war in case of necessity.

4. That in case of an abatement of the equipment of ships of war for the *East Indies*, and consequently of the diminution of our trade in the *Indies*, and the return of our ships from thence, the advantage accruing to *Holland* by the convoys must also be necessarily diminished.

5. That many thousands of families in the *Indies* would thereby be deprived of their livelihood.

6. That the whole *East-India* trade, by which many millions are gained yearly, would decay in proportion as the *Portuguese* should increase in the said traffick.

7. That in regard of the interest of the *Dutch* company, it ought to be considered, that since of late years they had been at vast expences in providing ships of war, and listing of soldiers, they were (through God's blessing) in a probability of making farther conquests upon the *Portuguese*.

8. That in case the *East-India* trade should come to decay, and consequently their profit be diminished, they would be in danger of being quite oppressed by the heavy burden they lay under, of providing garrisons and other necessaries against the attempts of the *Europeans* their enemies.

9. That thereby the *Dutch* company would be exposed to the hazard of being deprived of all the advantages they had gained by right of arms from the *Portuguese*, or otherwise.

10. In case of a peace or cessation of arms betwixt the *Dutch* company and the *Portuguese*, it was to be feared, that the good understanding betwixt the said company and the *Indian* princes would soon decay, to the no small detriment and danger of the company and their servants, especially in *Japan*: which traffick, if it were lost, the trade of *China* would be of little consequence; a peace or truce with the *Portuguese* being absolutely contrary to the engagements they had with the *Indian* kings.

In consideration therefore of the great detriment that would accrue to the said company by a peace with the *Portuguese*, the said directors did most humbly petition their high and mightinesses to take it into serious consideration, whether the damages their subjects, and especially the company, were likely to suffer thereby, would not in

a great

*Baldeus*. a great measure over-balance the advantages the states might promise themselves from a peace with *Portugal*; and in case they judged the peace with *Portugal* absolutely for their interest, whether the *East Indies* might not be excepted in the said peace, as was done in the truce concluded 1609. and whereof other instances were in fresh memory betwixt *France*, *England*, and *Spain*, who notwithstanding they were entered into alliances since the conclusion of the peace in *Europe*, yet did continue the war in the *Indies*, as is evident from the *English* squadron's appearing before *Mosambique*, *Goa*, and *Manilba*, and the assisting of the *Persians* in the conquest of *Ormuz* against the *Portuguese*.

Lastly, They requested, that in case their high and mightinesses did not judge their reasons of such weight as to stop the truce in the *East Indies*, betwixt the company and the *Portuguese*, who lately have shaken off the *Spanish* dominion, and embraced the interest of king *John IV.* their high and mightinesses would be pleased at least to delay the conclusion thereof till advice could be had whether any of the places belonging to the *Portuguese* in the *Indies* had declared for the new king, that the directors might have the opportunity (in case of an ensuing truce) to recal such of their servants as were perhaps engaged in the service of some of the *Indian* princes, without which they might be in danger of being surprized and seized there, to their irrecoverable detriment.

*Goa block'd up by the Dutch.* The bar of *Goa* had for a considerable time been kept blocked up by a squadron of *Dutch* ships, the better to annoy the *Portuguese* in their traffick. *James Cooper* kept the said harbour block'd up for three years successively, as commodore, who was succeeded by *Adam Westerwold*, (of which hereafter in the description of *Ceylon*,) and he by *Anthony Kaan*. In the year 1639. commanded before that place *Cornelius Simonson Van der Veer*, (mentioned before,) a brave commander; and 1641. *Matthew Hendriksz Quast*, with ten ships, and one thousand one hundred and forty seven men: this fleet took a carack richly laden from *Portugal*; but he being killed in the engagement, was succeeded by *Cornelius Leenderisz Blaau*, reer-admiral.

*Two Portuguese ambassadors come to Batavia.* In the year 1642. two *Portuguese* ambassadors, named *Diego Mendes de Britto*, and *Gonsalvo Villosa de Sanct Joseph*, a religious of the order of *St. Francis*, being sent by the *Portuguese* viceroy of the *Indies* to the general and great council of the *Indies* at *Batavia*, the same were ordered to be received with all marks of honour and respect: for which purpose Mr. *John Maatzuyker*, chief pensionary, *Justus Schouten*, a mem-

ber of the great council of the *Indies*, *Si-Baldeus*, *mon van Alphen* doctor of the laws, sheriff of the city of *Batavia*, *Sebald Wanderaar* receiver-general, *Peter Soury*, *Barent Wichmans*, *Dirk Snoek*, *Ewoud Spieringb*, head factors, *John Lamoot* serjeant-major, *Gerard Herbers* doctor of the laws, head factor, *Francisco de Souza de Castro*, and *Antonio Fialbo Ferreira*, both *Portuguese* gentlemen, were sent to conduct them from aboard their vessel to the general's palace, under the discharge of five pieces of cannon; and being immediately introduced into the apartment where the great council was then assembled, after the first compliments on both sides, one of the ambassadors began to make his harangue: "That *Portugal* having withdrawn itself from the *Spanish* jurisdiction, had chosen *Don John*, duke of *Braganza*, their king; that the said king having soon after sent an ambassador to their high and mightinesses to treat of a peace and an alliance betwixt both nations, they had all the reason to believe that the same was brought to a happy conclusion before this time: in regard of which they were sent by the viceroy of *Goa* to treat with their excellencies about a cessation of arms, as would more at large appear out of their credentials." Which they delivered at the same time to the governor-general with this superscription:

*A. O. Senbor Antonio de diemen, Capitaon General de Nacaon Ollandesa n'este Oriente.*

On the other side was written,

*De Conde d' Aveiras Viceroye Capitaon d' India.*

The letter was sealed with the arms of *Portugal*, and written in the *Portuguese* language, as follows:

"IN the beginning of *September* arrived in our fort *Onor*, a caravel, sent from *Portugal*; whereby we were informed, that the *Portuguese* have proclaimed and acknowledged a king of their own, by the general consent of that nation. His majesty of *Portugal* did, in one of his letters, give notice to us, that certain ambassadors having been dispatched to their high and mightinesses the states general, to treat about a peace, it was not doubted but the same would be soon concluded, a truce having been already agreed upon betwixt the two nations in *Europe*, whereof notice had been given to the said majesty to the commodore *Quast*, intimating, That as a cessation of arms was concluded in *Europe*, so the same might take effect in these parts, and

*Baldæus.* "and that he had given orders to the viceroy of *Goa* accordingly. After the decease of the said commodore we gave notice thereof to *Cornelius Leendertsz.* *Blaau* his successor, who excusing himself with his want of power, as being obliged to follow strictly the orders of the great council of the *Indies*, we thought fit to send *Diego Mendes de Britto*, gentleman of the king's household, and father *Gonçalvo Villosa*, to treat with your excellencies concerning this point, they being provided with credentials from his majesty, that whatever shall be agreed upon with them shall be valid, and kept inviolably. We wish all blessings to the crown of *Portugal* and the *United Provinces*. Dated *Decemb. 6. 1641.*

Subscribed,  
*Conde d' Aveiras.*

The great council having told them, that they would take the matter into serious consideration, the discourse began to turn upon indifferent matters, and among the rest concerning the carrack lately taken by the *Dutch*. The ambassadors being asked whether the captain did not present the viceroy with two or three casks of wine, they answered, No; at which the governor-general shewed a great dislike, telling the ambassadors, that they must pardon the matter, it being a common thing for the best seamen to make the worst courtiers. After the ambassadors had dined with his excellency, they were conducted to their lodgings at Mr. *James Harder's* house. They were both persons of a goodly aspect, the *Franciscan* being being betwixt sixty and seventy years of age, the other of about fifty. Their train consisted in two pages, and four *Portuguese* footmen, besides the negroes and mistices, a gentleman, a secretary, surgeon, and two boys; their livery was orange colour.

Their age,

and train.

Their second audience.

The 8th of *February* the said ambassadors demanded a second audience; which being for weighty reasons deferr'd till the 10th, they appeared a second time at nine a clock in the morning in the great council, reiterating their former propositions concerning a cessation of arms: and lest the governor-general might not as yet have received a full account of what had been transacted in *Europe*, they produced certain original letters, sent by his *Portuguese* majesty to the viceroy: but these being only private letters from certain *Dutch* merchants living at *Lisbon*, and another letter from the states-general to the admiralty of that place, and consequently the same that were before sent hither from our squadron at *Goa*, by the way of *Coromandel*, by the sloop called the *Pipeli*. His excellency the governor-general

reply'd, That the last being sent to the *Baldæus.* council before by the commodore *Quast*, they had perused the same, and found, that in the letter of the states-general, it was expressly said, *That the Dutch should not molest the Portuguese on the other side of the line*; which being to be understood of the north side, the *Indians* were not comprehended therein; besides, that they had not received any instructions upon that account from the governors and directors of the *East-India* company.

But to convince the ambassadors that they were not entered into this war out of any other motive than to obtain an honourable peace, they could not but put them in mind, that though they had delivered their credentials from the viceroy, they had not brought along with them any positive proof, whether the said viceroy were authorized by his majesty of *Portugal* to treat concerning matters of such great consequence; and it was consequently to be doubted whether the same would be approved of and ratify'd by his majesty.

One of the ambassadors reply'd, That the viceroy of *India* was always endowed with a power of making peace and war, many instances of which could be alledged upon divers occasions, which would leave no room to question his authority in this case; but if they did, they were ready to remain as hostages for the accomplishment of what should be agreed upon. His excellency the governor-general return'd, That he was satisfied of the authority of the viceroy in making peace or war with the *Indian* princes, but remained doubtful, whether the same did extend also to the *European* nations: nevertheless, that he believed the viceroy would not transgress his commission, and that therefore they had been acknowledged as plenipotentiaries; which being done, there remained nothing now to do, but to proceed to the treaty itself, and to make their propositions under what conditions they would have the truce settled.

The ambassadors answered, That they looked upon it as unnecessary to insist upon many conditions or limitations at this juncture, when they expected every day to hear of a peace concluded betwixt both nations in *Europe*; according to the conditions of which, both parties would be obliged to regulate themselves hereafter: that their only aim now being to obtain a cessation of arms, the main thing in question, was to fix a certain time of its beginning, which they thought ought to be taken from that very hour the truce was agreed upon and sign'd betwixt them.

*Baldæus.* The governor-general told them, That he agreed with them in that point; that not many conditions were required at this time; but that it would be next to an impossibility the truce should commence from the very hour the same was signed, it being very probable that the *Dutch* squadron would, in the mean while, not let slip any opportunity of taking their advantage over the *Portuguese*; as the forces lately sent to *Ceylon*, perhaps, might have made an enterprize upon *Negumbo* or *Columbo*; as, on the other hand, the *Portuguese* might probably have undertaken something against *Gale*, or have obtained some advantages against the *Dutch* in other places: the viceroy himself having commanded *Don Philippo Mascarenbas*, that he should (till the news of the truce did arrive) act with his utmost vigour against the *Dutch* in *Ceylon*. He urged, That all these things considered, it was to be feared, that in case the truce commenced according to their desire, this might furnish occasion to new misunderstandings, it being more than probable that neither of the two parties would be willing to restore what they had conquered in the mean while; that therefore it was his opinion, that the beginning of the said truce must be so fixed, as that sufficient time might be allowed for giving notice thereof to the subjects of both parties.

The ambassadors made many objections against this, insisting to have the beginning of the truce settled from the date of the signing thereof; alledging, among the rest, that they could scarce imagine the viceroy should have sent such orders to *Mascarenbas*. The governor-general reply'd, That he had certain advice of it from *Ceylon*; but that notwithstanding this, he hoped the ambassadors should not leave *Batavia* unsatisfied. He at the same time invited them to dine with him, where they were splendidly entertained, and drank to the health of the king of *Portugal*, and the prince of *Orange*.

The third audience.

The 18th of *February* the said ambassadors had another audience; wherein they desired a positive answer to their propositions, the time desired by the governor to consult with the great council being expired. They urged, That since the 14th of *February* some yachts were arrived, which had brought the confirmation of the news of the peace lately concluded betwixt both nations; therefore they did not question but their excellencies would no longer deny them the desired trade.

The governor-general gave for answer, That the said yachts had touched at *Fernambuco*, from whence they had brought the articles of a ten years truce betwixt his *Portuguese* majesty *Don John IV.* and the

high and mighty the states-general of the *Baldæus. United Provinces*, in respect of their territories in *Europe*, with exception however of the places and colonies belonging to the *East* and *West-India* companies; that they had also brought along with them the articles or conditions agreed upon betwixt their high and mightinesses and *Tristan de Mendoza* the *Portuguese* ambassador, concerning the *West-India* company: whence it appeared, that the same ought to be first ratified by his *Portuguese* majesty, and sent back to the states-general; and that the same after that should not take effect before notice be given thereof in *Brazil*: and the same being agreed upon in reference to the *East-India* company, and our ships which left *Holland* in *September* last, being expected every day in these parts with the ratifications of the said treaty, it was thought convenient by the great council to expect their coming, and to regulate themselves according to the conditions agreed upon betwixt their respective masters; especially since the said ships would probably arrive before the season would permit the ambassadors to depart for *Goa*, and consequently there would be no loss of time in this respect.

The ambassadors told them, That they could not but think it strange, that since both nations lived in amity in *Europe*, they should act in a hostile manner against one another in the *Indies*. The governor-general reply'd, That since their respective masters had thought it convenient it should be so, till the ratification of the treaty by his *Portuguese* majesty, and that notice had been given thereof to them, they were obliged to take their measures accordingly. The ambassadors answered, That they had promised themselves a quite other answer; though in all other respects they acknowledged the honours and obliging entertainment they had received, desiring that a copy might be given them containing an exact account of all the transactions, during their stay here, betwixt their excellencies and them, by which it might appear that they had not been defective in their zeal and industry to bring this matter to the desired effect. This was promised by the governor-general, with this addition, That to give them all imaginable satisfaction concerning the truce, they would also give them a faithful copy of the articles thereof, not questioning but that the ships would arrive in the mean while; but if they should happen to stay longer, beyond expectation, they would consult all proper means to give them what satisfaction they could. They thankfully received this answer, extolling once more the obliging entertainment they had met with at their hands; they dined with most

*Baldæus.* of the members of the great council at the governor-general's house, and towards the evening took the air on horse-back

*Their fourth audience.* The 30th of *March* the said ambassadors had another audience; in which they delivered a memorial to the great council: which being read, the governor-general told them, That what was alledged in the said memorial was a matter of fact, and agreeable to what had been entered in their records; but that they would not have them despond concerning the arrival of the ships, which he was sorry staid so long behind; but that notwithstanding this, he hoped they should not depart without satisfaction. The ambassadors reply'd, His excellency would be pleased to remember his promise, of not letting them depart without satisfaction, or obtaining the end of their commission, in case the ships should not arrive.

The governor-general returned for answer, That by saying so, he did not intend to consent to the truce, which was beyond his power, at least till the arrival of the said ships; but to give them all the possible marks of his good-will and esteem, and that they should be dismissed with all the marks of respect they were able to pay them. That since his masters had thought fit to limit the beginning of the truce to the time of its being ratified by his majesty of *Portugal*, and being returned into *Holland*, and thence to the *East-Indies*, they were absolutely obliged to wait for the arrival of it, lest it should seem as if they thought themselves more understanding in this point than the states-general.

One of the ambassadors made answer, That they were persuaded his excellency the governor-general was sufficiently authorized to make peace and war at his pleasure in these countries, the same tending to the advantage of the *Dutch* nation; and that this cessation of arms could not but be acceptable to the states-general, who had so lately concluded a peace with the king of *Portugal*. He further told them, That the viceroy of *Goa* was always authorized with such a power; but in a more peculiar manner at this time, having received express orders for that purpose by a carvel from his majesty.

At last the ambassadors perceiving that the great council remained stedfast in their resolution, they thought it unfit to push the matter any further for that time, reiterating their former request, of having a copy granted them concerning their transactions here; and desiring, that since the season began to open the passage by sea to *Coromandel*, they might be dismissed forthwith, in order to prosecute their journey by land to *Goa* before the winter, the same being impracticable afterwards, by reason

of the frequent rains. The governor-general *Baldæus.* promised them entire satisfaction upon both these heads, and that a ship should be got ready for their excellencies; but that however, he could not forbear to tell them, That in his opinion they would do better to tarry a little longer, in expectation of the before-mentioned ships, and the ratification expected to be brought over by them. They replied, That having received express orders from the viceroy to return to *Goa* with the first opportunity, they were obliged to obey, unless his excellency would lay his commands upon them to the contrary. The governor-general answered, That it was not in his power to command them, what he had said being only by way of advice; but if they were resolved to the contrary, they should not be in the least detained: that if they thought fit, advice might be sent thereof to the viceroy by the ship that was then just ready to sail for *Coromandel*; or if they disliked this proposition, one of them might tarry at *Batavia* till the arrival of the ratification, whilst the other return'd to *Goa*. This expedient being approved by them, it was agreed that the *Franciscan* father should go back to *Goa* by the way of *Coromandel*, and the other stay at *Batavia*, till the arrival of the ratification.

Then the ambassadors desired the release-  
*Some particular requests of the ambassadors.*  
ment of certain *Mistices* and *Negroes* that were prisoners among us; which being soon granted by the governor-general, he asked the same favour in behalf of four other persons who had been clapp'd in irons on occasion of some mutiny at *Batavia*, in which they were the ringleaders; which was also granted, under condition that they should depart the country with the *Franciscan* father. They also made the like request concerning *Francisco de Souza de Castro*, who (at the request of the governor-general) being released out of his prison by those of *Acbin*, was delivered up to the *Dutch*; he had likewise leave given him to depart with the *Franciscan* father, provided he paid his debts before his departure.

The first of *April* the two ships called the *Tyger* and *Nassaw*, which had left *Holland* the 16th of *September* last, being arrived at *Batavia*, the said ambassadors appeared once  
*Another audience.*  
more in the great council, intimating, That they being informed that at the time of the departure of these ships out of *Holland*, the ratification of the articles of his *Portuguese* majesty concerning the *East-Indies* was not arrived; at which they were much surpriz'd, as not knowing what might be the reason thereof; they desired to know whether his excellency had not received any more particular intelligence, which might induce him to grant the desired cessation of arms. The governor-general reply'd, That he had

*Baldæus*. had put it beyond all doubt, that the ratification would have been brought along with these ships; but since it had happen'd otherwise, it was not in his power to grant the required truce. The ambassadors ask'd, Whether they should both depart? or whether his excellency thought convenient that one of them should stay behind? The governor-general told them, That they were at their own disposal; but that since they expected every day the arrival of their winter-ships, which infallibly would bring over the said ratification, he judg'd it might be best for them to continue a little longer at *Batavia*.

One of the ambassadors returns to Goa.

Hereupon they resolv'd once more, that the *Franciscan* father should go back over *Coromandel* to *Goa*, whilst the other should stay at *Batavia* for the arrival of the ratification. Accordingly a written certificate was given to the ambassadors concerning their zeal and industry in compassing their commission, signed by his excellency the governor-general *Anthony van Diemen*, by *Cornelius van der Lijn*, *John Maatzuyker*, *Justus Schouten*, *Cornelius Wizen*, and *Peter Boreel*, in the castle of *Batavia*, April 9. 1642. To the *Franciscan* father the council gave the following letter, directed to the viceroy of *Goa*.

Most Illustrious Lord!

A Letter to the viceroy of Goa.

*Diego Mendes de Britto*, gentleman of the king's household, and the reverend father, brother *Gonsalvo de S. Joseph*, your excellency's ambassadors, being come in our road the 28th of *January* aboard the *Dolphin*, were honourably received by us the next day. They delivered to us your excellency's credential letters, dated in *Goa* the 6th of *December* of the last year; as also the letters of his *Portuguese* majesty to you, concerning the truce betwixt *Portugal* and the *United Provinces*. The before-men-

tioned ambassadors have not been remiss in their zeal, industry, and duty, to press in their several audiences the obtaining of a truce; which we would willingly have granted, had not we received certain advice by some ships arriv'd the 14th of *February*, by the way of *Fernambuco*, and others arriv'd the first of *April* here, of a truce concluded betwixt his majesty of *Portugal* and the states-general of the *United Provinces*; wherein it was expressly agreed with his majesty's plenipotentiary *Tristaon de Mendoza Furtado*, among other points, that the truce agreed upon for ten years in *Europe*, should be of the same validity in these parts, yet so that the same should not commence before that his *Portuguese* majesty should have sent back his ratification into *Holland*, and the same be publickly proclaimed afterwards in these parts, as will more fully appear to your excellencies out of the enclosed letters. Thus being oblig'd to follow the directions of our lords and masters, we could not proceed further in this business till the arrival of the next ships from *Holland*; which being expected daily, with the said ratification, we did advise your ambassadors to stay (or at least one of them) for the coming of the said ships, as the only means not to render your excellency's embassy altogether fruitless: accordingly *Mr. Diego Mendes de Britto* intends to hasten his journey to *Goa*; immediately after the first further notice of the said ratification, which we hope will prove agreeable to your excellency's sentiments. We recommend your excellency to God's protection. Dated in the castle of *Batavia*, the 8th of *April*, 1642.

Subscribed,

The governor-general for the *United Provinces* in the *East-Indies*.

## CHAP. XV.

*The Ratification of the ten Years Truce brought to Batavia. A Protestation sent to the Count d'Aveiras. Treaty of Peace with the Viceroy: The Articles thereof. Agreements about the Division of the Limits betwixt the Portuguese and Hollanders in the Isle of Ceylon. Agreement betwixt Mascarenhas and Cornelius van Sanen.*

The ratification published.

THE so-much-desired ratification (signed at *Lisbon* the 16th of *January*, 1642, and delivered at the *Hague* the 15th

of *February* following,) being at last brought to *Batavia*, the same was published the 8th of *October* throughout the *Indies*.

*Anthony*

Baldaeus. “ *Anthony van Diemen* governor-  
 “ general, and the members of the  
 “ great council of the *East Indies* under the  
 “ jurisdiction of the *United Provinces*, make  
 “ known to all it may concern; That  
 “ whereas by two several letters, dated the  
 “ 22d of *February*, and the 15th of *March*,  
 “ 1642. brought over by the ship the  
 “ *Salamander*, we have been advertised,  
 “ That the 12th of *June* 1641. a firm  
 “ alliance and truce has been concluded for  
 “ ten years betwixt the most potent *Don*  
 “ *John IV.* king of *Portugal*, *Algarve*, and  
 “ lord of *Guinea*, and of the conquests  
 “ made on the shore of *Ethiopia*, *Arabia*,  
 “ *Persia*, and *India*, on one side, and their  
 “ high and mightinesses the states general  
 “ of the *United Provinces* on the other side,  
 “ including all the before-mentioned king-  
 “ doms, countries, provinces, islands, and  
 “ other places on both sides of the equi-  
 “ noctial line, (without exception,) all such  
 “ as now actually are, or for the future  
 “ may be under the jurisdiction of the said  
 “ king and the states-general; during which  
 “ space of ten years successively all hostilities  
 “ betwixt their respective subjects shall cease  
 “ both by sea and land, without limitation  
 “ or exception of any places, persons, or  
 “ circumstances, as by the articles of the  
 “ said truce does more amply and fully  
 “ appear. It is therefore that we are com-  
 “ manded to surcease all manner of hostili-  
 “ ties from this day for the next succeeding  
 “ ten years, according to which all our sub-  
 “ jects shall regulate themselves; and to  
 “ take effectual care that nothing may be  
 “ transacted any wise contrary to the true  
 “ intent of the articles of the said alliance  
 “ and truce, but to maintain the same  
 “ inviolably. And that nobody may plead  
 “ ignorance in this case, we have ordered  
 “ these presents to be published, enjoining  
 “ every body, under severe penalties, not  
 “ to infringe any of the before-mentioned  
 “ articles, as they will answer the same at  
 “ their peril. Dated in the castle of  
 “ *Batavia*, *Octob.* 4. 1642. and first pub-  
 “ lished the 7th of the same month, under  
 “ the great seal of the company in red  
 “ wax.

*Anthony van Diemen.*

By order of his excellency,

*Peter Mejdach*, Secretary.

However, this truce was but ill observed by the viceroy of *Goa*, especially in the territories of *Gale*, in the isle of *Ceylon*, which induced the *Dutch* general and great council to send him this following protest.

VOL. III.

“ BY letters from our commissary *Peter Baldaeus*.  
 “ *Boreel*, whom (after the ratification  
 “ of the truce betwixt his *Portuguese* ma-  
 “ jesty and the states-general of the *United*  
 “ *Provinces*) we dispatched to *Goa*, to  
 “ give notice thereof to your excellency,  
 “ we have been informed beyond all ex-  
 “ pectation, that upon his arrival there,  
 “ and his earnest request to your excellency,  
 “ (pursuant to our orders,) to withdraw  
 “ the army under the command of *Don*  
 “ *Philip* of *Mascarenbas* from the terri-  
 “ tories of *Puntegale*, under our jurisdiction,  
 “ your excellency has been pleased to  
 “ shew so much aversion to comply with  
 “ his demands, though founded upon un-  
 “ deniable and just grounds represented to  
 “ your commissioners in the several con-  
 “ ferences held upon that subject\*, that  
 “ he finding his presence useles at *Goa*,  
 “ he was forced to return from thence  
 “ without being able to encompass his just  
 “ designs, and (pursuant to his orders  
 “ received from us) to denounce before  
 “ his departure, the continuation of the  
 “ war to your excellency, till satisfaction  
 “ might be obtained upon this score.  
 “ And since the unjust detention of the  
 “ territories of *Gale* tends to our consider-  
 “ able detriment, we declare, That upon  
 “ perusal of the writings sent to us by  
 “ your excellency by the hands of our com-  
 “ missary, we can make no better construc-  
 “ tion of the whole matter, than that

 “ framed pretext, to render the truce con-  
 “ cluded betwixt our respective masters  
 “ invalid, and of no worth. It is there-  
 “ fore that we think ourselves obliged to  
 “ approve every thing that has been trans-  
 “ acted upon this head by our commissary,  
 “ and to make use of such means for the  
 “ justification of our rights, as God has  
 “ put into our hands, and are altogether  
 “ suitable to the laws of nations. And as  
 “ upon these considerations, we have sent  
 “ back this fleet, by which your excellency  
 “ will at once receive this *Protest*, and  
 “ be made sensible at the same time of  
 “ our resolution of maintaining our just  
 “ cause, which will questionless prove the  
 “ occasion of new differences betwixt  
 “ his *Portuguese* majesty and the states-  
 “ general of the *United Provinces*, as  
 “ also of much effusion of blood, of vast  
 “ expences, and many other inconveni-  
 “ ences; we call God to witness, and  
 “ declare and protest by these presents,  
 “ that we are innocent, and are not an-  
 “ swerable for the direful consequences of  
 “ this breach of the truce, which we were  
 “ ready to have punctually observed  
 “ on our side, pursuant to the inten-  
 “ tion

*Baldæus.* “ tion of our masters, had not your excellency bereaved us of all hopes of adjusting matters by an amicable composition for the recovery of our rights in the country of *Gale*, unjustly detained by your excellency.

Dated in the Castle of Batavia, the 5th of August, 1643.

Signed, *Anthony van Diemen,*

*Solomon Sweers.*

Thus matters remained in suspense betwixt the *Portuguese* and us, till the year 1644. when Mr. *Maatzuyker*, being authorized by their high and mightinesses, as also by the general and great council of the *Indies*, to treat with the count *d’Aveiras*, viceroy of *Goa*, concerning a firm truce, and to adjust the remaining differences for that purpose, (yet upon approbation of their respective masters,) the same at last concluded a truce the 10th of November, upon the following conditions.

Truce betwixt the Portuguese and Dutch in the Indies.

The conditions.

I. “ **BOTH** parties declare that this present agreement, intended for the composing of such differences as have hitherto occasioned much bloodshed, and obstructed the so-long-desired peace, shall in no wise be deemed, or be prejudicial to the rights and sovereignties either of the most illustrious king of *Portugal*, or of their high and mightinesses the states-general of the *United Provinces*, as the same are established (by the truce agreed upon betwixt his *Portuguese* majesty, and the said states-general) in their respective cities, castles, fortresses, towns, harbours, and seas in the *Indies*; and that this agreement shall be inviolably observed on both sides immediately after its second publication at *Goa*.

II. “ Since the happy effects of the truce have been obstructed hitherto by certain differences arisen about the just division of the limits in the isle of *Ceylon*, it is agreed that the decision thereof shall be entirely remitted to the respective masters and lords of both nations, and in the mean while a full cessation of arms and all hostilities to be kept inviolably, and all forts, territories, and other matters, to remain in the same state as they were at the day of the publication of these presents at *Goa*; so that not the least alteration or innovation is to be

“ made either in building, rebuilding, or mending any thing, much less in making any preparations either for a defensive or offensive war.

III. “ But that whilst the before-mentioned differences remain undecided, the products of the country may not be neglected or lost by reason of the differences betwixt the possessors, it is agreed that the same shall be divided into two equal shares betwixt the *Portuguese* and the *Dutch*, yet so that the same shall be deposited (remain in custody) with the last, till the decision of these differences by their respective principals in *Europe*: whereby they oblige themselves at the same time to a full restitution in case the same be agreed upon by the said principals. And the said ambassador declares and protests, that the word *deposited*, inserted at the request of the viceroy (for the better adjusting of matters) shall not in any wise be interpreted as prejudicial to the possession and title of the states-general to these lands and their products. And to avoid all contests concerning the gathering of these fruits, it is agreed the *Portuguese* shall have full liberty to gather, without any molestation or hindrance, such fruits as grow in one part of the lands in dispute, *viz.* that part which is next adjacent to their fort; as on the other hand, the *Hollanders* shall enjoy the same freedom in gathering the fruits in that half part adjoining to their fortresses. The same is also to be understood of equally sharing the administration of justice in these parts, lest malefactors may be encouraged, and crimes pass unpunished, by reason of the uncertainty of the administration of justice; publick proclamation hereof being to be made in this isle by the respective governors of both nations.

IV. “ *Raja Singa* the king of *Candy* shall be comprehended in this truce, (according to the third article,) with all his kingdoms, provinces, and possessions.

V. “ All proprietors, owners, or farmers in the villages, shall have full liberty to return to their possessions and farms, of what nature soever, with their families, provided they return within the space of six months, either in person, or send their deputies, and pay the usual taxes and duties to those under whose jurisdiction they live, without any trouble. And that no inconveniencies may arise in point of conscience, it is agreed, That liberty of conscience shall be allowed, and the free exercise of religion in all parishes or villages, except in the fortified places belonging

*Baldæus.* “longing to the *Hollanders*, till the before-mentioned decision be arrived out of *Europe*.

VI. “The labourers of the isle of *Ceylon*, called *Schalias*, employ’d in peeling of the cinnamon, shall have liberty to work with both parties, yet not without the consent of that party under whose jurisdiction they live; and the better to maintain the truce, neither party shall be permitted to entice these labourers of *Ceylon*, or any other of the natives out of one another’s service, without mutual consent, but shall be obliged to send them back to their respective dwelling-places.

VII. “All the goods seized on account of, or during these differences, shall be restored, or else the value thereof paid in money, provided they were actually in the possession of either party, and not otherwise; upon which account the *Dutch* ambassador promises to pay here at *Goa*, or at *Surattè*, in the next following month of *January* at farthest, the sum of one hundred thousand *Spanish* reals, to be accounted for according to the true value thereof they bear at *Batavia*, as the payment of the money shall be made, according to the course of money in those places where these goods were taxed; to be understood of such goods as, notwithstanding the payment of the before-said money, are found to remain as yet unsatisfied for from the 22d day of *February*, 1643. being a twelve-month after the ratification of his *Portuguese* majesty was sent to the *Hague*.

VIII. “In case during this truce any differences should arise betwixt both parties, this agreement shall remain firm and inviolable, and every thing remain in the same state, till the decision of the respective principals; and in case the nature of the matter admits of no delay, the same is to be referred to the determination of certain arbitrators, to be chosen by both parties; and whilst the same is in agitation, the pretended party to remain in possession till the point is decided by the said arbitrators.

IX. “This present agreement is not in the least to be prejudicial to such judgments or decisions as have been made or given betwixt contending parties, or may be given for the future by our respective principals; but the same shall be regarded and taken as valid in all respects by both parties, notwithstanding this agreement, intended only for the removing of differences till the same can be approved of by our respective principals; which agreement for the ceasing of all manner of hostilities, and maintaining a firm truce in the isle of *Ceylon*, is promised by

“both parties to be published immediately, and inviolably observed both in respect of the governors and subjects, as his excellency the viceroy engages the same for himself and his successors, generals, and governors; and my lord ambassador for the states of the *United Provinces*, and the *East India* company, pursuant to the authority granted him by the most noble *Anthony van Diemen*, general-governor of the *Indies*. In confirmation whereof this agreement is authorized and confirmed by a solemn oath taken upon the gospel in the presence of the most reverend archbishop and primate of *Goa*, *Don Frey Francisco de Martyres*, and *Don Alphonso Medis*, patriarch of *Ethiopia*, members of the privy council of his majesty, and in the presence of the other privy counsellors of *Goa*, who have given their full approbation and consent thereunto, as also in the presence of *Wollebrand Gleynz* chief director in *Persia*, *Abraham Fierens*, minister of the gospel, *John Pottey* fiscal, *Andreas Frisius* secretary, *Thomas Kuyk* head factor; who, together with his excellency the viceroy, and his excellency the ambassador, did set their hands to it; *Joseph de Chaves Coto Major*, his excellency the viceroy’s secretary, having taken care to make the draughts thereof.

Signed thus,

*Conde d’Aveiras,*  
*John Maatzuyker,*  
*Fr. Francisco de Martyres,*  
*Alphonso Medis,*  
*Francisco de Melo de Castro,*  
*Don Manoel Pereira,*  
*Antonio Saria Mochado,*  
*Antonio Movis Baretto,*  
*Joseph Pinto Pereira,*  
*Wollebrand Gleynz, jun.*  
*Abraham Fierens,*  
*John Pottey,*  
*Don Bras de Castro,*  
*Louis Mugilbaon,*  
*Andreas Frisius,*  
*Andr. Selem.*

“Several draughts of this agreement having been made both in *Latin* and *Portuguese*, it is agreed betwixt the viceroy and the ambassador, That in case any doubt should arise about the interpretation of certain words, recourse is to be had to the *Latin*, which being the original, is to be interpreted according to the plain signification of the words, without any collateral construction: in confirmation of which this declaration

“ was

*Baldæus.* “ was thought fit to be made. Subscribed  
 “ a second time on the same day by the  
 “ under-written persons.

*Conde d’ Aveiras,*  
*John Maatzuyker,*  
*Fr. Francisco de Martyres Arch-*  
*bishop and Primate,*  
*Alphonso Medis Patriarch of Ethio-*  
*pia,*  
*Francisco de Melo,*  
*Don Manoel Pereira,*  
*Anthony Saria,*  
*Anthony Monis Baretto,*  
*Joseph Pinto Pereira,*  
*Wollebrand Gleyinz, jun.*

In the year 1645. January 10. the division of the limits in the isle of *Ceylon* was agreed upon in the city of *Columbo*, *Don Philippo Mascarenbas*, successor to the count d’ *Aveiras*, being then viceroy of *Goa*.

“ THE countries betwixt *Columbo* and  
 “ *Negumbo* shall be divided into  
 “ two equal shares, according to their several districts, (called *Corles*;) as far as the same can be done, to prevent the confusion which might otherwise arise from the division of the antient jurisdictions: but in such places where the same is not to be done, this division is to be made by sharing the villages; so that considering there are seventeen districts betwixt the two before-mentioned forts, seven thereof are to be annexed to the jurisdiction of *Columbo*, viz. *Herra Corla*, *Omapauduna Corla*, *Quatigora Corla*, *Bigal Corla*, *Galbare Corla*, *Apitigan Corla*, and *Pernacur Corla*, lying altogether towards that side. To the fort of *Negumbo* are to be annexed eight districts, viz. *Pitigal Corla*, *Diomede Corla*, *Urupula Corla*, *Carvagal Corla*, *Vili Corla*, *Madura Corla*, *Hieriela Corla*, and *Mangur Corla*; the rest to be divided into two equal shares, *Alicur Corla* by the river *Dandagan* to be the common boundary of both nations; so that part which lies to the north shall belong to *Negumbo*, and to *Columbo* what lies on this side. The province of *Catugambala Corla* is to be divided by the same river, together with its three lesser districts, *Udacaba Pato*, *Mienda Pato*, and *Jetigala Pato*; so that *Jetigala* shall fall to the share of *Negumbo*, and *Udacaba* to *Columbo*; but *Mienda Pato* shall be divided into two equal parts, in proportion to its villages, such villages as lie next *Jetigala Pato* to be under the jurisdiction of *Negumbo*, and those on the side of *Udacaba* under *Columbo*. The *Portuguese* shall remain in the possession of *Putelaon* and

“ *Calpentyn*; but the river of *Alican* is to  
 “ be the boundary betwixt *Columbo* and  
 “ *Gale*; so that part lying on the other  
 “ side of the river shall remain to the  
 “ *Hollanders*; but the other part on this  
 “ side, together with the river and har-  
 “ bour, to the *Portuguese*, in the same  
 “ manner as they were formerly possessed of  
 “ it; under this condition however, That  
 “ the *Hollanders* living here, or in any other  
 “ parts, shall have the free use of the said  
 “ river in fishing, or exporting and im-  
 “ porting their merchandizes without pay-  
 “ ing any customs. And whereas by the  
 “ seventh article of the agreement made at  
 “ *Goa* it was agreed, that the labourers  
 “ (called *Schalias*) who peel the cinnamon,  
 “ shall be employ’d by both parties, to pre-  
 “ vent all further differences for the future  
 “ upon this head, it is agreed, That the  
 “ *Hollanders* shall every year, in harvest  
 “ time, send one half of these labourers  
 “ out of the villages of *Bili* and *Cosgure*,  
 “ under their jurisdiction on the other side  
 “ of the river *Alican*, to assist, as formerly,  
 “ the *Portuguese* in peeling of cinnamon,  
 “ under condition that the cinnamon thus  
 “ peeled by them in the *Portuguese* territo-  
 “ ries, shall be laid up in a certain place  
 “ upon the river *Dandagan*, to be divided  
 “ once every year in two equal shares be-  
 “ twixt the two parties, provided that each  
 “ party pay the usual price to the *Schalias*  
 “ for the peeling of their share of cinnamon.  
 “ This division is to take place, and to  
 “ stand firm till the same be otherwise de-  
 “ cided by our respective principals in *Eu-*  
 “ rope, with this reserve nevertheless in re-  
 “ gard of the *Hollanders*, who being igno-  
 “ rant hitherto in the true situation of the  
 “ country, may easily be deceived, in this  
 “ point; and therefore ought to have the  
 “ liberty to appeal to better judgment, and  
 “ desire a recompensation of their losses.  
 “ But in case the parties should disagree  
 “ upon this head, this shall not occasion  
 “ any rupture, but the truce shall notwith-  
 “ standing this remain in as full force, ac-  
 “ cording to the intent of the ninth article  
 “ of the before-mentioned agreement. *Don*  
 “ *Philippo Mascarenbas* the present viceroy,  
 “ and *Mr. John Maatzuyker*, do also engage  
 “ to cause this treaty of the division of the  
 “ limits to be published immediately, for  
 “ the general benefit of all such as have any  
 “ concern therein, that the inhabitants of  
 “ this isle may no longer remain in igno-  
 “ rance under whose jurisdiction they live;  
 “ and for the due performance thereof,  
 “ have confirmed the same with their oaths,  
 “ and subscribed the draughts thereof both  
 “ in *Latin* and *Portuguese*; yet so, that  
 “ in case of any doubt, recourse is to be had  
 “ to the *Latin* original.”

557

*Baldæus.* In the year 1647. a provisional agreement was made by *Don Philippo Mascarenbas*, the then viceroy, and *Cornelius van Sanen*, head-factor and director of *Wingurla*, for the adjusting of the differences concerning the fortrefs of *Malacca*.

“ the least tend to the prejudice either of *Baldæus.*  
 “ his *Portuguese* majesty, or of the states-  
 “ general, in their respective rights and  
 “ possessions. That his majesty’s ships,  
 “ as well as the *Dutch* merchant-men bound  
 “ to *China*, or any other of the southern  
 “ parts, coming to *Malacca*, shall only be  
 “ obliged to pay six *per Cent.* for such  
 “ goods as they shall actually sell there;  
 “ the same to be paid to the *Dutch* from  
 “ all such goods as they shall sell in any  
 “ of his majesty’s harbours. Pursuant to  
 “ the agreement made at *Batavia* by the  
 “ great council with the merchants of *Ma-*  
 “ *cau*, in the presence of the reverend *Frey*  
 “ *Gonsalvo de S. Joseph*, each vessel, whe-  
 “ ther small or great, bound to *Macau*,  
 “ whether it sells or unloads any goods at  
 “ *Malacca*, or not, shall pay two schutleins  
 “ of gold for its passage thither and back-  
 “ wards; from which duties, however,  
 “ are to be exempted his majesty’s ships,  
 “ provided they may be searched, and an  
 “ oath taken thereupon, that they have no  
 “ merchandizes aboard; and if any are  
 “ found, the owners are to pay four and  
 “ a half *per Cent.* That such ships as pass  
 “ by *Malacca*, and are not bound to *China*,  
 “ shall pay four and a half *per Cent.* whe-  
 “ ther they unload or sell any goods or  
 “ not; then they may proceed in their  
 “ voyage without any molestation. Which  
 “ agreement is to be published and strictly  
 “ observed by both parties, and confirmed  
 “ by oath, till the decision of our both  
 “ sides respective principals.

Agreement  
betwixt  
Philippo  
Mascaren-  
bas and  
Cornelius  
van Sanen.

“ **I**N the name of God, Amen. Be it  
 “ known to all who are concerned in  
 “ this present agreement, That 1647. April  
 “ 18. the following agreement has been  
 “ made in the castle of the city of *Goa*,  
 “ in the presence of his excellency *Don*  
 “ *Philippo Mascarenbas*, viceroy of *Goa*,  
 “ and *Cornelius van Sanen*, head-factor and  
 “ director of *Wingurla*, authorized by the  
 “ governor-general and great council of the  
 “ *Indies*, for the adjusting of the differences  
 “ arising concerning some pretended rights  
 “ of the city and fortrefs of *Malacca*, con-  
 “ cerning the customs and duties to be paid  
 “ at *Malacca*; several conferences having  
 “ been held with the merchants of *Macau*,  
 “ yet could not the same be reduced to any  
 “ just equilibrium, or settled upon a firm  
 “ basis, though we made as reasonable of-  
 “ fers as possibly could be expected: so  
 “ that in case your excellency thinks it con-  
 “ venient to proceed further in this matter,  
 “ you may treat upon this head with *Corne-*  
 “ *lius van Sanen*, our head-factor at *Win-*  
 “ *gurla*. By virtue of this commission, I  
 “ represented to the viceroy, that in point  
 “ of justice such of our ships as pass by  
 “ *Malacca* without unlading or selling  
 “ any of their commodities, ought to pay  
 “ no customs there: unto which his ex-  
 “ cellency having given for answer, That  
 “ it appeared out of the treaties and writ-  
 “ ings agreed upon betwixt both parties,  
 “ that they ought to pay the same, it was  
 “ thought fit, for the preventing of further  
 “ differences, and maintaining a good cor-  
 “ respondence betwixt both nations, to  
 “ agree upon the following provisional  
 “ treaty, till the full decision of our re-  
 “ spective principals; and with this pro-  
 “ viso, That this agreement shall not in

Signed, *Don Philippo Mascarenbas*,

*Jacob Roscam*,  
*Leendert Johnson*.

CHAP. XVI.

*A Description of Anchediva, Canara, Onor, Batecalo, Malabar. Cananor built, and besieged by the Malabars; bravely defended by Laurence de Britto; besieged and taken by the Hollanders.*

The isle of  
Anchediva.

**T**HE isle of *Anchediva*, not far from *Goa*, and about fifty leagues from *Calecut*, is almost covered with woods and forests, but well stored with fish: the *Portu-*  
 VOL III.

*guese* had formerly a fort here. *Sebajus*, the father of *Hidulcan*, sent a fleet of sixty ships to *Anchediva*, (whilst *Glineyda* was at *Cananor*;) to chase the *Portuguese* from that island,  
 7 C

*Baldæus*. island, under the command of *Anthony Fernando*, a most impious wretch, who having forsaken both his religion, and the service of his native country, turn'd *Mahometan*, assuming the name of *Abdala*; and being well versed in maritime affairs, was in great favour with *Sebajus*. This renegado having landed a good body of men in this isle, left no stone unturned to make himself master of the fort erected there by the *Portuguese*: but being bravely defended by *Emanuel Passangie*, a native of *Genoa*, descended from a great family, and famous for his brave actions, *Abdala*, hearing of the return of the victorious fleet, was glad to leave both the fort and the isle. The fort was not long after demolished by the *Portuguese* themselves; who had been taught by experience, that too great a number of fortresses consumed all their profit, and exposes them besides to no small danger; like a hen who has more chickens than she can protect with her wings, often loses one by the rapacious kite.

The Portuguese fort besieged.

Is demolished.

The reason thereof.

Canara.

Onor.

Batecalo.

The country of *Canara* is very fertile in rice and other necessaries of human life; its inhabitants, commonly called *Canarins*, are very robust, and fit for all manner of hard labour. The chief cities near the sea-shore, are the city and kingdom of *Onor*, not far distant from *Goa*, where the *Portuguese* had also a fort, it being formerly a place of considerable traffick. Next to *Onor* lies *Batecalo*, about twenty five leagues from *Goa*, the king whereof became tributary to the crown of *Portugal* under the reign of *Emanuel*; but refusing afterwards to pay the usual tribute, *Sequeria* sent *Alphonso Menes* with some ships to block up the harbour, which soon reduced the king to obedience. Afterwards the queen of *Batecalo* entertaining the pirates in her harbours, and refusing likewise to pay the tribute, *Sosa* sailed thither with forty nine ships and one thousand five hundred land-men; and after he had cast anchor in the harbour, sent his messengers into the city to require the payment of the tribute, and the surrendering of the pirates. She being frightened at the sight of so powerful a fleet, surrendered four of the pirates ships; but endeavouring for the rest to detain the *Portuguese* with fair words, these landed their men, not a little incommoded by the arrows shot at them by the inhabitants from the cocoa-trees; but having put themselves in order of battle, they advanced towards the city, where they were (in the absence of the queen) so warmly engaged by the inhabitants, that the combat remained doubtful for some time, till these being worsted, they set the city on fire, with the loss of twelve men only on their side. In this

action one *Almeida*, a brave *Portuguese*, seeing his comrade inclosed on all sides by the enemy, fought his way through them; and having rescued his companion, withstood the whole force of the enemy, till he was relieved by a body of the *Portuguese*. Afterwards they made incursions into the country, which soon obliged the queen to consent to the payment of the tribute.

*Barcelor*, *Baranor*, and *Mangalor*, being places of no great consequence, deserve no particular descriptions; wherefore we will proceed to the country of *Malabar*, which (according to common computation) begins about fifty leagues to the south of *Goa*, and extends to the cape of *Comoryn*, to the utmost borders of *India*, on this side of *Ganges*. This whole country being full of rivers, is consequently of an easy passage; though most of the rivers here are so shallow, that they are not capable of bearing any ships of bulk or burden. The largest rivers are *Bergera*, (a great receptacle for pirates,) *Panane*, and *Cranganor*, the common boundaries of the kingdoms of *Calecut* and *Cochin*: these, as well as the river of *Cochin*, are about eighteen or nineteen foot deep at high-water. The whole country of *Malabar* is divided into five kingdoms, viz. *Cananor*, *Calecut*, *Cranganor*, *Cochin*, and *Coulang*, unto which some add the kingdom of *Trevancor*, the least fertile of all, and the two petty kingdoms of *Porca* and *Calecoulang*.

In former ages *Malabar* was subject to one sovereign prince, who kept his court at *Calecut*, now the residence of the great *Sammoryn*. This king having, at the persuasion of some of his courtiers, undertaken a voyage over the *Red Sea*, to visit *Mahomet's* tomb, and to be thorowly instructed in that faith, died in his return from thence; and leaving no issue, the whole empire was divided between his esquire, sword-bearer, and sceptre-bearer: the first taking for his share *Cananor*, the second *Calecut*, and the third *Cochin*.

The nights are very cold all along the coast of *Malabar*, with very thick fogs, especially in *January*, *February*, and *March*, when the days are excessive hot. They have every day a sea and land wind; the first begins every morning at nine or ten a clock, and holds till sunset. This coast is scarce navigable from *June* till *November*, the best time here being from *April* till *June*. Their winter begins in *May*, and continues till *November*.

The chief products of *Malabar*, are pepper and cardamum: *Cochin* affords great quantities of pepper; but *Cananor* yields the best, especially in the inland countries, whence

*Baldeus*, whence the *Moors* and other merchants from *Carnatica* and *Vijapour* use to fetch it in considerable quantities. The pepper of *Calecut* is lesser of grain than those of *Cananor* and *Cochin*. This commodity is generally cheaper at one place than another. They buy it by the canda, at the rate of three hundred and ninety or four hundred fanams a canda, a fanam being worth about ten pence of our money. In the year 1640. the price rose to four hundred and fifty fanams. The pepper delights in shady places; the stem is weak like those of the vines, and uses to be upheld by stalks like our hops: each stem bears commonly six bunches, every one a foot long, resembling in colour to our grapes before they are ripe. They are gathered green in *October* and *November*, and dry'd in the sun upon mats, when they turn black. Besides the pepper and cardamum, this country produces also ginger, and borborri of a saffron colour. Formerly these two commodities used to be sold for five fanams a man; it affords also some aloes, but in no great quantity. Besides these, *Malabar* affords very few commodities, ex-

Man is a certain weight.

\* Found in the baboons, and sold at six or seven reals a piece; some are as big as a hen's egg, and sold for twelve reals a piece.

cept a few bezoar-stones, \* found about *Cananor*, salt-petre, gummilacca; (though none of the best, being sold for a fanam the man,) and abundance of wax and honey. The whole country is covered with innumerable cocoa-trees, besides such other trees as generally grow in the *East Indies*. The commodities carried to, and to be sold in *Malabar*, are amfion or opium; much in use here, especially among the *Nairos*, when they are to fight, to intoxicate their brains. Ambergreese is also in great esteem among the *Malabars*, and transported thither from the *Maldive* islands. I have seen an ounce of it sold at *Cananor* for six reals. *Malabar* consumes also abundance of cloves, nutmegs, and mace, as also allom, china-root, lead, tin, brass, copper, brimstone, cinnabar, scarlet and crimson clothes, red damasks, benzorn, and coarie porcellain.

The whole coast of *Malabar* abounds in fishes, and at *Cochin* they have most excellent cods. Belly provisions are also here in great plenty, and bought at an easy rate; for they abound in oxen, swine, and poultry. The cocoa-trees furnish them with drink, which if not used to excess, is tolerable wholesome. Out of this liquor they distil their arrack, much courted by the common soldiers and seamen, to their great detriment.

The first is the king of *Cananor*, not in respect so much of his power, but of

his situation next to *Goa*. His residence *Baldeus* is about three or four leagues in the country from the river of *Balipatan*; the extent of his kingdom is from *Montedely* to *Bergera*; he maintains a considerable number of musketeers and archers, who are very expert in managing their scymetars.

*Cananor* is a populous city, inhabited chiefly by rich *Mabometan* merchants, who live without, yet under the cannon of the fortifications. They had formerly a considerable traffick to *Suratte*, *Cambaja*, and the *Red Sea*, whither they used to send yearly twenty five or thirty ships; but this place is much decayed in trade of late years, and is likely to be worse.

About two leagues to the south of *Cananor* lies the city of *Termapatan*, under the jurisdiction of a *Mabometan*; it is strengthened to the land-side by a good wall. The rebellious pirates of *Bergera* do considerable mischief to the king of *Cananor* and his subjects, who, as well as the other nations trading in these seas, are forced to buy passports of them for their security. They used formerly to infest these seas with forty frigates at a time, but are not so potent of late years, since the *Dutch* have frightened the *Portuguese* out of these parts; since which time they have now and then attempted the *Dutch*, as they did with the ship called the *Dolphin*, but got nothing but blows. Their chiefs are *Mabometans*, and the soldiers partly *Moors*, partly *Pagans*.

Pirates of Malabar.

*Cananor* lies about forty leagues to the north of *Cochin*, having a spacious and secure harbour: the country thereabouts abounding in pepper, cardamum, ginger, mirabolans, tamarinds, &c. *Peter Alvarus Capralis*, commander in chief of the second fleet sent by *Emanuel* king of *Portugal* into the *Indies*, after having given a visit to the king of *Cochin*, and the great *Sammoryn*, came also to *Cananor*; where being kindly received, the king sent an ambassador along with him to the king of *Portugal*. *Al-Meyda* did erect here (with the king's consent) a strong fort for the security of their commerce; which being afterwards most vigorously attacked by those of *Calecut* and *Cranganor*, was bravely defended by *Laurence de Britto*, to his immortal honour. And upon this occasion it will not be beyond our purpose, to give you the reasons which induced the *Moors* to enter upon this war, which was accompany'd with many most remarkable actions.

The Portuguese build a fort at Cananor.

*Baldæus.* The Portuguese having made themselves masters at sea, not only on the coast of *Ethiopia*, but also of *India* and *Arabia*, would not permit the inhabitants of these countries to send out their ships without passports obtained from them; for which purpose they kept a strict eye over all the *Malabars*, in a most peculiar manner. A certain Portuguese, captain of a man of war, having attacked a vessel of *Cananor*, which he supposed to have come from *Calecut* without a pass, he caused the master thereof, and another person of note on board her, to be sewed up in a cloth, and so threw them overboard; which being done not far from *Cananor*, the dead carcasses were cast ashore there. The inhabitants knowing the persons, and understanding their fate, were so exasperated at the Portuguese, that they cry'd out for vengeance, and assaulted the fort. *Almeyda* offered them satisfaction, and cashier'd the captain; but in vain, the *Moors* continuing obstinate, and resolving to revenge the death of their countrymen upon the Portuguese in the fort.

*Laurence de Britto* being sensible that he must expect a formal siege, resolved to stand the brunt bravely; and sent his messengers

to *Almeyda*, to desire prompt succours. In the mean time the king of *Cananor* was not idle, but having intrenched himself near the harbour, all along the sea-side he erected certain forts, to cut off the communication betwixt the city and castle. At the same time being reinforced by twenty thousand men, sent from *Calecut*, they now resolved upon a formal siege. There was a certain spring betwixt the city and castle, which being the only one whence the Portuguese garrison could be supplied with fresh-water, this occasioned frequent and bloody skirmishes; so that they were forced to purchase their water with much effusion of blood. *Laurence Britto* had with him in the fort a certain mathematician, named *Thomas Ferdinand*, by whose advice they digged from the fort underground to the spring, and by pipes conveyed it to the place where they had occasion for it; so that after having supplied their own wants, they stopped in the next valley the spring; so that the *Moors* were forced to remove their camp from thence; but they in the fort enjoy'd the benefit thereof. They then began their attack on the other side, and by the help of sacks filled with cotton, advancing to the ditch,

Reasons why the Malabars entered into a war with the Portuguese.

The spring was afterwards enclosed with in the fortifications.

*Baldæus* ditch, filled it with faggots, and made a fierce assault; but being bravely repulsed by the *Portuguese*, and forced to retreat, these fall'y'd. out upon them, and made a great slaughter of the barbarians.

These finding that force was not likely to do their business, resolved to reduce it by famine, knowing that the winter seasons would cut off all hopes of relief to the besieged. On the other hand, the *Portuguese* made many successful sallies upon them; in one of which a *Castilian*, named *Guadalajara*, charged with one hundred and fifty men, a strong body of the enemy, killing above three hundred of them upon the spot, and taking some of their great cannon. Soon after it happened unfortunately for the *Portuguese*, that a fire arising in the fort by the carelessness of a slave, some part of their magazines of provisions was consumed, whereby a great scarcity being occasioned in the fort, many negroes run over to the enemy, and gave them a full account of the condition of the garrison, who were now forced to feed upon cats, rats, mice, &c. At last heaven was pleased to commiserate the miserable state of the *Portuguese*, by sending a prodigious quantity of locusts from the sea, (a thing not unfrequent in those parts,) which served them both for food and refreshment. The spring beginning to approach, when the *Sammoryn* fearing the besieged might be shortly reliev'd by their countrymen, redoubled his fury against the fort; and having sent them divers considerable supplies of men, (which had increased his army to fifty thousand men,) he resolved to try his utmost to reduce them by force, (the *Portuguese* being in the mean while supply'd with provisions

Great distress in the fort.

by a certain prince of the country, an enemy *Baldæus* to the *Sammoryn*.) *De Britto* having received intelligence that the enemy were preparing for a general assault, took care to guard all the avenues both on the sea and land-side. The *Moors* assaulted the *Portuguese* with their utmost fury, promising themselves an assured victory, by reason they continually relieved their men with fresh troops: but the *Portuguese* received them so warmly, that after a smart fight they put them to the rout, and pursuing them with great slaughter, the king of *Cananor* thought it his best way to make peace with the *Portuguese*.

Peace with the king of Cananor.

Thus much of *Cananor*, whilst in the hands of the *Portuguese*: the next thing which falls under our consideration, is how it came to fall into the hands of the *Hollanders*. These having made themselves masters of *Cranganor*, *Cochin*, and *Coulang*, sailed 1663. from *Cochin* with a considerable fleet, and a good number of land forces, under the command of *Jacob Hustar*, *Peter du Pon*, *Henry van Rbede*, and divers other brave officers, for *Cananor*. Having landed their men, and soon made themselves masters of the city, (which was without defence,) they battered the fort with their great cannon, but without any great success, the bastions and ditches on the land-side being cut out of the rocks, and the fortifications to the sea-side impregnable. However, after a siege of few days the *Portuguese* considering, that by the taking of *Cochin* all hopes of relief were banished, they surrendered upon honourable terms; and the *Dutch* having put a garrison of two hundred men in the fort, entered into a strict alliance with the king of *Cananor*, 1664.

How Cananor was reduced by the Dutch.

Cananor surrendered to the Dutch.

C H A P. XVII.

*A Description of Calicut and Panane. The Arrival of Vasco de Gama. His Treaty with the Sammoryn. Panane fortified, besieged, and demolished by the Portuguese. Alliance betwixt the Dutch and the Sammoryn. The Portuguese Fort in Calicut attacked by the Sammoryn, and defended by John de Lima.*

The Kingdom of Calicut.

THE second kingdom of *Malabar* is that of *Calicut*, under the jurisdiction of the *Sammoryn*: it begins about three or four leagues to the south of *Bergera*, and ends at the river *Cranganor*; its whole extent being in length thirty two leagues, and twenty in breadth. This king is the most potent of all the *Malabar* kings, having a considerable number of *Nairos* under his jurisdiction, who are very expert both in handling the bow and fire-arms. He

has made considerable encroachments upon his neighbours of late years, the revenues of his new conquests amounting now to three hundred thousand *Fanams* yearly. The *Sammoryn*, who reigned 1662. was, when I saw him, not above fifty years of age, and yet much impaired in his intellectual parts by the excessive use of *Opium*, a drug much in request among the *Malabars*.

In the kingdom of the *Sammoryn*, and in most others along the coast of *Malabar*,

An. 1502. the *Sammoryn* brought in to the field sixty thousand men; and 1529. one hundred thousand.

*Baldæus.* the crown is not inherited by the son of the king, but by him who is next of kin to his mother or sister; for they looking upon that as the surer side, they have introduced this custom to prevent the bastardizing of the crown. Thus the king who reigned 1642. was succeeded by his uncle on the mother's side, and he was to be succeeded by his sister's son. The *Sammoryn* monopolizes all the pepper of the growth of his country, none of his subjects being allowed to sell it to any but his factors.

*Pananc.* Betwixt *Cananor* and *Calecut* lies the town of *Panane*, seated upon the sea-shore: here the *Dutch* came 1607. to treat with the *Sammoryn*; but he being then in the field against the *Portuguese*, the admiral sent three deputies to him with a letter from prince *Maurice of Nassau*. In this place the *Sammoryn* kept his residence at that time, when *Don Vasco de Gama* came into these parts. He having cast anchor before *Calecut*, dispatched immediately a messenger to the *Sammoryn*, to give notice of his arrival, and to let the king know that the renown of his great name having reached the ears of the king of *Portugal*, his majesty had entrusted him with a letter, which he being desirous to deliver in person, therefore desired leave to wait on his majesty.

The *Sammoryn* being extremely pleased with the compliment, sent immediately certain pilots to conduct the *Portuguese* fleet into the harbour of *Capocate*, where there was much better and safer anchorage; from whence he was conducted with extraordinary pomp to the *Sammoryn*.

For *Don Gama* being got ashore, attended by eight gentlemen richly attired, was received in the *Sammoryn's* name by the *Catual*, (or he that manages all foreign affairs,) accompanied with a vast number of guards, hautboys, drums, and litters, and thence carried through *Calecut* to *Panane* (where the *Sammoryn* then resided) under such a vast concourse of spectators, that several were crowded to death. At court *Gama* was welcomed by the *Caimales*, (or chief courtiers,) and afterwards by the high priest of the *Brabmans* dressed in white callico, who taking *Gama* by the hand, conducted him to many spacious apartments (at the door of each whereof stood about ten sentinels) into a spacious hall, the walls and floor whereof were covered with rich tapestry, and carpets of silk and gold; the chief men of the kingdom sitting round the hall upon wooden seats, artificially wrought one above another, like the seats in an amphitheatre. The *Sammoryn* himself was

*Baldæus.* seated (according to the custom of the country) upon an *Alkatyf*, or carpet, dressed in white fine callico, brocado'd with flowers of gold, adorned with divers rows of diamonds of great value: in his ears he had stately pendants of precious stones, and on his head a cap (after their country fashion) covered with diamonds, pearls, and other precious stones; his bare feet being likewise adorned with rings set with all sorts of precious stones.

The Sam-  
moryn's  
dress.

One of the king's attendants offered his majesty a golden vessel with arrack and betel, which the *Indians* chew almost continually to preserve their teeth and gums, and treat their guests with it as we do with wine, strong liquors being not much in use here. *Gama*, after having paid his obeisance to the king, began thus:

Gama's  
speech to  
the Sam-  
moryn.

“**E**manuel, the present king of *Portugal*, my master, moved by the renown of the greatness of your majesty among the kings of *Malabar*, has sent me with credentials, to enter into a strict league with you, in order to settle a firm correspondence and commerce betwixt both nations; which my master would have been willing to have performed in person, had not the vast distance of your majesty's dominions prov'd an invincible obstacle to his generous intentions”.

After which having delivered his presents, the king answered by his interpreter:

The king's  
answer.

“**T**HAT he had not the least doubt of the good intentions of his brother *Emanuel*, king of *Portugal*, having such convincing proofs thereof before his eyes, by honouring him with so splendid a legation, notwithstanding the vast distance of their countries; that he was willing to enter with them into a strict league and amity; and that they should enjoy the benefit of a free commerce in his territories.”

Then the king having asked them several particulars concerning their voyage, shipping, and traffick, order'd *Gama* to be conducted to the lodgings prepared for his reception.

The Moors  
endeavour  
to obstruct  
the design  
of the Por-  
tuguese.

The news of this embassy soon came to the ears of the *Moorish* merchants in those parts; who fearing, not without reason, that the *Portuguese* would do them considerable mischief in their traffick, joined with the *Arabians* trading in those parts to hinder the consummation of this treaty; for which purpose having purchased the favour of many of the courtiers by money, they insinuated into the king, that *Gama* was no more than a great pirate, who endeavoured to get a footing in the king's dominions, which in time might prove his

ruin; whereas he might rest secure in his dominions by encouraging his subjects in their traffick with the exclusion of foreigners. These insinuations proved so effectual, that the *Sammoryn* began to give a favourable ear to them, and had, perhaps, proved of very ill consequence to *Gama*, had not a certain *African*, a native of *Tunis*, who understood *Portuguese*, and had formerly conversed with them, discovered the danger to him; who thereupon, without further delay, got aboard his own ships with his attendants, and having weighed his anchors, kept at a greater distance from the shore; whence he writ to the *Sammoryn*.

*Baldæus*

*Gama gets  
privately  
aboard.*

“**T**HAT the ill designs of the *Moors* against his person being discovered him, he had thought fit to retire aboard, to and to desire his majesty not to be diverted from his promise by their false insinuations, assuring him that he would reap much more benefit by the friendship of the king of *Portugal*, than by the *Moors* and *Arabians*.”

*His letter.*

The *Sammoryn* promised the messenger to make a strict enquiry after, and to punish severely these offenders, who had infringed the law of nations; and in his letter to the king of *Portugal* assures him,

“**T**HAT the arrival of the *Portuguese* in his dominions was very acceptable to him, provided they might regulate themselves so, as not to give any occasion of disturbance there; and that the league he was entering upon with his majesty, might not prove prejudicial to the good correspondence he had hitherto entertained with divers other nations.”

*The king's  
answer to  
it.*

*Gama* having received this letter, set sail for the isle of *Anchedrova*, where having furnished himself with fresh provisions, he returned to *Portugal*, to give an account of his transactions to king *Emanuel*. The famous *Vasco de Gama* died 1524. being the first who discovered the passage into the *East Indies* by the cape of *Good Hope*.

And upon this occasion I cannot pass by in silence what is mentioned by *Ferdinand Lopez de Castanbeda*\*, viz. That *Gama*, with some of his retinue, being at *Calecut*, and entering into one of the pagan temples, paid their reverence to the images, as taking them for the same they had left in their own churches in *Portugal*; a convincing proof that superstition and idolatry very near resemble one another.

\* *Hist. In 2.  
l. 1. c. 16.*

*Panane* being well fortified by the *Sammoryn* with two forts, erected on both sides of the entrance of the harbour, the *Portuguese* notwithstanding this resolve to attempt it. They no sooner appeared in sight of the harbour, but a certain number of the *Mahometans*

*Panane.*

*Baldæus*. *Mabometans* associated themselves in one of the pagodes, and with direful execrations engaged to one another to defend the city, or die in the attempt. *Tristan d'Acunba*, the *Portuguese* general, detached a certain body of his best troops, under the command of *Laurence* and *Nonnius*, in small galleys, to lead the van, being to be followed by the great ships: these entered the harbour with unspeakable bravery, notwithstanding the enemy's fire, who sent their great and small shot very thick upon them from both sides of the shore, but without any considerable effect, most of their bullets passing over their heads, because the soldiers kept close, lying upon their bellies in the galleys. The enemy seeing them, enter'd the harbour, leap'd in whole troops into the water, attacking them with incredible fury, in hopes of boarding them: but the *Portuguese* stood to it with so much resolution, that at last they forced the *Indians* to give way; and pursuing them to the shore, made themselves masters of the two forts, and set fire to all the ships in the harbour, which were richly loaden, as also to the city. In this action a certain *Portuguese* ensign, with his soldiers, did wonders, and the *Mabometans* fought like lions; but one of their commanders, a fel-

low of a huge bulk, being slain by *Laurence*, the rest betook themselves to their heels. The *Indians* lost five hundred men in this engagement, and the *Portuguese* about twenty two. After which *Almeyda* and *Acunba* failed to *Cananor*, from whence the first steered his course to *Cochin*, and the second for *Portugal*. About *Panane* grows, besides cardamum, the best pepper, and is sold here at a very reasonable rate.

Thus much of *Panane*: we will now proceed to give you an account of *Calicut*, the capital city of *Malabar*, and the residence of the *Sammoryn*, where *Steven van der Hagen*, the then *Dutch* admiral, in 1604, entered into a strict league with that king, who granted a free commerce to the *Dutch* throughout all his dominions. Many years before the *Portuguese* had obtained the same liberty of the *Sammoryn*, who had assigned them certain habitations in that city; so that they began to flourish in their commerce, and the *Portuguese* priests were very successful in the conversion of many of the pagans. This exasperated the *Moors* and *Arabians*, who inticed the *Nairos* (always greedy after prey) to fall, to the number of four thousand, upon the

The forts taken.

The Factor of the Provinces of Calicut assaulted by the Indians.

*Baldæus*. Portuguese (not above seventy strong) in their factory, who were almost all massacred by them.

Portuguese massacred.

*Pedro Alvarez Capral*, the Portuguese general in those parts, being informed of this barbarous attempt, and finding that the *Sammoryn* had not been altogether ignorant of the matter, to revenge the death of his countrymen, burnt ten of their merchant ships richly loaden, battered the city with his great guns, and killed them above six hundred men. The same treatment these barbarians received afterwards from *Meneses*. We will not in this place pretend to give a particular account of all the differences and warlike exploits of the Portuguese here, and of the famous actions of *Albuquerque*, *Henry Meneses*, *James Sylveria*, *Capral*, &c. we will only mention in this place, that the Portuguese having found means to erect a fort at *Calecut*, by the connivance of *Nanbeadar*, the old *Sammoryn*'s sister's son, (who favoured the Portuguese,) the kings of *Cannor* and *Cochin* were so nettled thereat, that they did not desist till they had engaged the *Sammoryn* to attack it.

Their death revenged.

The Portuguese fort besieged.

It being then in the winter season, when the Portuguese could scarce expect any relief, and the fort provided with a garrison of three hundred men only, they were driven to great distress. A certain renegado, a native of *Sicily*, who had served as an engineer in the siege of *Rhodes*, directing the *Moors* in their attack. Hereupon *John de Lima*, governor of the fort, did all he could to defend himself, in hopes of the approaching spring; and having extended his fortifications (by means of great casks filled with sand) to the shore, sent notice of his distressed state to *Henry de Meneses*, who without delay sent one hundred and forty land soldiers aboard two ships, commanded by *Christopher Jusart* and *Edward Fonseca*, to his relief; but the last being becalmed near the shore of *Calecut*, and the other not having above eighty men aboard, *John Lima* did not think it advisable to land with so small a number, as being not sufficient to break through the enemies works into the fort. However *Jusart* being resolved to venture at all, landed in a boat with thirty volunteers, who fought their way through the enemy, and with the loss of four of their men reached the fort, which in the mean while was assaulted by the barbarians, who were so warmly received by the Portuguese grenadeers, that they were glad to retire in great confusion to their works.

Bravery of the Portuguese.

Soon after *Fonseca* arriving with his ship, convey'd a letter, fastened to an arrow into the fort, intimating his arrival, and desiring his instructions how to serve him. *Lima* sent an answer, That he thought it not advisable to expose himself and his

men to the same danger as *Jusart* had done, but that he should return with all speed to *Meneses*, and solicit a succour of five hundred men, with a good quantity of ammunition, wherewith he did not question but to defend the place. *Fonseca* being returned to *Cochin*, and having delivered his message to *Meneses*, he dispatched immediately *Anthony de Sylva*, with some ships for the relief of the besieged, whilst he was making all necessary preparations to follow with a much greater force in the spring.

*Baldæus*. *Fonseca* ordered not to land.

The *Sammoryn* fearing the worst, left no stone unturned to oblige the besieged to a surrender before that time; and the before-mentioned *Sicilian* having done his utmost endeavours with mines, mortars, and battering pieces, but in vain, he resolved to reduce them by famine, which he might questionless have effected, had he had only a small squadron of ships to block up the harbour. But the besieged being from time to time supplied with provisions and refreshments by small boats, which entered in the night time, they held it out bravely till spring; when *Meneses* arriving with fifteen hundred Portuguese, landed his men, and having put the *Malabars* to the rout, with the loss of three thousand men on their side, (among whom was also the *Sicilian*,) the *Sammoryn* was so terrified thereat, that to prevent his country from being ravaged by the Portuguese, he clapped up a sudden peace; and the Portuguese judging the fort too chargeable to keep, did afterwards demolish it of their own accord; in the springing up of which many *Malabars* (greedy after prey) were blown up into the air.

The fort relieved.

And demolished.

Notwithstanding this peace, the *Sammoryn* let slip no opportunity of doing mischief to the Portuguese, being encouraged thereunto by the differences arisen betwixt the Portuguese generals, as betwixt *Meneses* and *Gama*, and *Sampajo* and *Mascarenbas*, about the viceroyship, which had almost proved fatal to the Portuguese affairs in the *Indies*. This is evident from a letter writ by *Christopher de Sousa* to the said *Sampajo*; in which he represents to him the danger unto which the Portuguese (a small number in comparison of their enemies) were exposed daily in the *Indies*, by his difference with *Mascarenbas* about the viceroyalty, exhorting him not to have recourse to violence, but the arbitration of such persons as were competent judges; telling him, That in case of refusal he must not expect to be obey'd by him. Which coming from a person noted for his courage, liberality, and generosity in these parts, did not a little abate the haughtiness of *Sampajo*; and *Mascarenbas* returning into *Portugal*, was favourably received by the king, who having recalled *Sampajo*, obliged him to

Differences among the Portuguese generals.

*Baldæus*. give full satisfaction to *Mascarenbas* for the imprisonments, affronts, and damages, he had sustained upon that account. For the more ample relation of which, we refer ourselves to the *Portuguese* historians. From

*Calecut*, we will turn towards *Cranganor*, *Baldæus*. in order to give you a description of its origin and situation, and by what means it fell into the hands of the *Hollanders*.

## C H A P. XVIII.

*A Description of Cranganor : How it was besieged, and taken by the Dutch : Its Excellencies. The Isle of Vaypin. Cochin fortified ; Its Inhabitants, Buildings, Plenty of Provisions, &c. Is besieged the first Time by the Dutch, who raised the Siege.*

The river and city of Cranganor.

**C**RANGANOR lies five leagues to the north of *Cochin*, and twenty to the south of *Calecut*, upon a sandy hill. On the south side of the entrance of the river, is built a small fort called *Paliport* ; a mile above which, higher up the river, lies the city and fortress of *Cranganor*, a place strongly fortified by the *Portuguese* at divers times ; for in the beginning they had only a tower, which they afterwards strengthened by a wall, and at last enclosed the whole by regular fortifications of earth. The king of *Cranganor* keeps his residence not far from *Cranganor*. He that then reigned was a young, lusty, and tall person, a declared enemy of the *Portuguese*, as well as the *Sammoryn*.

In the year 1661. after the *Dutch* had made themselves masters of *Coulang*, and by strengthening the same with fortifications, and a good garrison, had secured the south side, they thought it expedient (before they attempted the conquest of *Cochin*) to get also a firm footing on the north side at *Cranganor*, especially since they feared they might be obliged to pass the winter thereabouts, it being in *December*. Accordingly we landed our men ; but found (beyond expectation) the fortifications in such a state, as not to be attacked without great cannon. Above fourteen days being spent in raising batteries, making of trenches and breaches, but to no great purpose, and the approaching season obliging us to carry on the siege with all possible expedition, it was resolved (upon intelligence given by a certain person, concerning the condition of the place) to attack the point next to the river on *Sunday, Jan. 15. 1662.* very early in the morning.

Is besieged by the Dutch.

And taken by storm.

The signal being given accordingly by a cannon-shot, our forces advanced under the favour of the smoke of our great artillery to the bulwark, which they took with sword-in-hand, chasing the *Portuguese* thence to the jesuits church. In this action the *Dutch* captains, *Poolmann*, *Schulenburg*, and *Simon Werding*, as also lieutenant *Syl-*

*vester*, acquired 'immortal honour, being slain as they were mounting the breach, with seventy eight common soldiers, and many wounded.

On the *Portuguese* side above two hundred christians were killed, besides a great number of the *Nairos* ; and among the rest, *Urbano Fialbo Ferreira* the governor of the place.

The *Portuguese* then hung out a white flag, desiring a parley upon reasonable conditions, which were granted them ; and by virtue thereof the *Portuguese* soldiers transported into *Europe*. During this siege we found the nights very cold, though the days were almost insupportable by the excessive heat. And after the conquest thereof, being ordered to preach the thanksgiving sermon in one of the parish churches, (of which there were seven,) I pitched upon a text in *Deuteronomy xxiii. 14.*

The *Hollanders* judging it at that time convenient to surrender the place into the king's hands, the same was done accordingly ; but regained and refortified the same afterwards, when they found themselves engaged in a war with the *Sammoryn*, who made frequent excursions as far as *Cochin*, a thing so common among these barbarians, that no settled peace can be expected with so many kings.

And upon this occasion I cannot sufficiently commiserate the condition of the inhabitants of the countries about *Cranganor* and *Cochin*, who being guided by ignorant *Romish* priests, are in great danger of falling by degrees into paganism again, the district of *Cranganor* having formerly been so considerable for the great numbers of christians of *St. Thomas* (as they are called) inhabiting there, that a *Portuguese* archbishop had his residence in that city. It is the general opinion here, that *St. Thomas* the apostle coming first to *Socotora*, an isle at the entrance into the *Red Sea*, there preached the gospel with good success ; whence coming to *Cranganor* and *Coulang*, he converted a great number to the christian faith.

Cranganor once an archbishoprick.

The Prospect of CRANGANOR  
on all sides.

Vol. 3. p. 568.

*Baldæus*. faith. From hence taking his way through *Coromandel* into *China*, he returned to *Malapour*, where he suffered martyrdom. But of these christians of *St. Thomas* we shall have occasion to say more hereafter, our present purpose being to say something of the state of affairs in the *Portuguese* times.

*The jesuits college.* First then, at our arrival at *Cranganor*, we found there a noble college of the jesuits, with a stately library belonging to it, the structure itself being not inferior to many in *Europe*; besides the church of the *Franciscans*, they had a stately cathedral, adorned with the tombs of the archbishops of this place. Without the wall of *Cranganor*, was the college of *Chanotte*, famous for the resort of the christians of *St. Thomas* hither, who exercised their religious worship here in the *Syriac* language; and having erected a school for the education of their youth, had several masters and priests of their own; of which more in the description of *Cochin*.

*The college of Chanotte.*

This language being in high esteem among the natives here, and used sometimes also by our saviour and his apostles, not only a printing-house, but a seminary has been erected at *Rome* for the cultivating thereof, and propagating the same among the youth.

*The Syriac language propagated at Rome.*

Thus, 1622. a *Syriac* dictionary was published at *Rome* by *John Baptist Ferrarius*, a native of *Siena*; and the *Syriac* grammar of *Georgius Ameira*, a famous divine and philosopher of the college of the *Maronites*, born near the mount *Libanus*. And 1628. *Abrahamus Eccebelensis* obliged the world with his *Introduction to the Fundamentals of the Christian Faith* in the same language. Whence it is evident that the *Roman* clergy exceed ours, in their zeal of propagating the *Roman* religion; though on the other hand, it must be allow'd that their plenty furnishes them with sufficient opportunities of performing of those things, which the reformed ministers for want of means are forced to let alone. I have seen divers books printed with the *Portuguese* characters, in the *Malabar* language, for the instruction of the *Paruas*; one whereof I keep by me to this day; though at the same time I must confess, that in case we should follow the same method in printing with our characters, though in their language, it would not have the same effect, they being much bigotted both to the *Roman* clergy, and the *Portuguese* language; so that I have met with some of the *Paruas*, who spoke as good *Portuguese* as they do at *Lisbon*. For the rest, the products of *Cranganor* are the same as in the other parts of *Malabar*, except that now and then they meet with some gold dust, but in no great quantity.

*The isle of Vaypin.*

Betwixt the river of *Cranganor* and that of *Cochin*, lies the isle of *Vaypin*. When the

*Dutch*, in *February*, 1662. besieged *Cochin* *Baldæus*. the first time, they erected a fort upon the bank of the river, from whence they battered the place, the river being there not above a musket-shot over. This fort was called the *New Orange*; and here we found a goodly edifice, formerly belonging to the bishop of the place, as also a very large church, in which I preached the 29th of *Jan.* 1662. The isle itself is tolerably fertile, under the jurisdiction of the king of *Cochin*, whose dominions extend from the river of *Cranganor*, six leagues south of *Cochin*, the whole length being about ten leagues. The kings of *Cochin* have always kept firm to the *Portuguese* interest, ever since *Triumpara*, being conquered by the king of *Calecut*, sought for refuge among the *Portuguese*, who restored him to his kingdom, though he afterward preferred a private life before his crown.

*Cochin* is a very antient city; but was not fortified till 1504. in the time of the two *Albuquerque*s, who set sail 1503. from *Belem* in *Portugal*; and after many smart engagements with the *Sammoryn*, *Alphonfus* returned into *Portugal*, where he obtained the surname of *The Great*, his actions being described in a peculiar treatise published at *Lisbon* 1576. by *John Batreira*. Soon after the *Portuguese* built a church there, and entered into a league with the *Sammoryn*, and the fortifications were considerably augmented by *Edward Patioco*, and a wall erected by *L. Vasco* towards the sea-side. In some years after this city began to increase so considerably, that it might compare with some of the best in *Europe*, its length being near two *English* miles.

At first the christians and mahometans lived promiscuously in the city, which occasioning frequent disturbances, *Albuquerque* obtained from the king *Naubeadora*, that each should have their peculiar quarters assigned them to live in. In and about the city of *Cochin* lived also formerly some *Jews*, who even now have a synagogue allowed them without the fortifications; they are neither white nor brown, but quite black. The *Portuguese* histories mention, that at a certain time certain blasphemous papers against our saviour, with some severe reflections against the jesuit *Gonsalvus Pereira* (who afterwards suffered martyrdom at *Monopatapa*;) being found in a box set in the great church for the gathering of alms, and the same being supposed to be laid there by some *European Jews*, who now and then used to resort thither privately, this gave occasion to introduce the inquisition into *Goa*.

*Cochin* may for its bigness justly challenge the second place after *Goa* among the *Indian* cities formerly in the possession of the *Portuguese*, though at present it is not near

*Baldæus.* so big as the city of *Batavia*. Its situation lies at ten degrees of north latitude, bordering to the west upon the sea, and the river has about seventeen or eighteen fathom water at high tide; but its entrance is very difficult in the winter-time, being commonly choaked up by the sands which are carried thither by the stream in the winter-season; which, however, are again removed by the violence of the current in the summer-time.

About *Cochin*, as well as all along the coast of *Malabar*, they have every day two sorts of winds, viz. the land-wind, beginning in the evening; and the sea-wind, at ten in the morning. *Cochin* is not accounted so wholesome as most of the other places seated on the coast of *Malabar*, by reason of its situation in low and marshy grounds, but abounds both in fish and flesh; and its situation is extremely delightful, by reason of the many brooks and adjacent little islands in the river, wherein many of the *Portuguese* have built themselves very pleasant summer-seats.

The river runs on the back-side of the best houses of the city, where they catch fish with casting-nets, at which the *Chinese*, inhabiting here, are very dexterous. Formerly this city could boast of divers stately churches, since demolished by the *Dutch*. The jesuits church and college facing the sea-shore, had a lofty steeple, and a most excellent set of bells: the college, which was three stories high, and contained about twenty or thirty apartments, being surrounded with a strong wall. The cathedral was also a noble piece of architecture, adorned with two rows of pillars, and a lofty steeple.

*Antient churches and convents of Cochin.*

The church and convent of the *Austin* friers stood upon the bank of the river; and the church of the *Dominicans*, with their convents, were two rare pieces of workmanship, beautified with a double row of pillars of most excellent stone. The church and monastery of the *Franciscans* is the only that remains standing as yet, but has no more than two brothers left, who are allow'd the free exercise of their religion.

The best houses of *Cochin* have their court-yards and gardens belonging to them, enclosed with very thin, yet strong and high walls, so that the neighbours cannot overlook one another. The situation of the city is much more in length than breadth, without any channels in the streets; however, that end towards the sea-side is much broader than the other, as may be seen by the annexed draught; which also representing an exact view of its fortifications, we will refer the reader to it.

*The Malabar Cochin.*

The *Malabar Cochin* is seated somewhat lower, and built after the *Indian* fashion, with very broad streets: it is very populous,

and the royal palace is built with bricks *Baldæus.* and mortar after the *European* way, with apartments very spacious and lofty; near which stands the *Pagode*, with a very large cistern adjoining to it.

*Anno* 1662. in *February*, at the time of our first landing before *Cochin*, the *Nairos* inhabiting hereabouts (notwithstanding we positively declared we were no enemies of the king, but only of the *Portuguese*) assembled in great numbers in this palace and the *Pagode*, and from thence assaulted our forces; which obliged us to drive them from thence, with the slaughter of four hundred on their side, they fighting very desperately, by reason they had beforehand intoxicated their brains with very large doses of *Opium*. The old queen of *Cochin* being taken prisoner in the fray, by *Henry van Rbede* an ensign, was kept in safe custody for some time after.

*Four hundred Nairos slain.*

*The queen of Cochin taken prisoner.*

Afterwards we began to form our attacks against the *Portuguese Cochin* in three several places; that on the land-side near the church of *St. Thomas*, (which served us for a chapel and hospital,) being commanded by the general in person; that along the sea-side, by *Isbrand Gotsken*; and the third, near the river by the commodore *Rootbaus*. After some time spent in making of trenches, and raising of batteries, it was thought expedient to surprize the enemy on that side near the river. The first *Sunday* in *February* being appointed for that purpose, captain *Peter Wash* was ordered to begin the assault with a certain detachment at four a clock in the morning: but it being after sun-rising before they could reach the place, the *Portuguese* took the alarm; and being timely sustained by fresh troops drawn thither by the ringing of the bells, gave such a warm reception to the *Hollanders*, that after a most obstinate engagement, they were forced to found the retreat, with the loss of divers of their best men, and among them the beforementioned captain, who was killed by two musket-bullets. The general *Ryctos van Goens* and the commodore *Rootbaus* were also both in great danger, the first receiving several shots through his hair, the last being likely to have been cast into a deep well.

*An unsuccessful assault upon Cochin.*

Notwithstanding this disappointment, the trenches were carried on with all imaginable speed, though not without great difficulty, by reason of the marshy grounds, which cost us a good number of men, more than we could conveniently spare at that time, when our forces were not a little weakened before, we having left at least three hundred sick and wounded at *Coulang*, and a considerable garrison at *Cranganor*, and in the fort of *New-Orange* on the point of the isle of *Vaypin*. We continued, however, to batter the town incessantly with our

*Baldaus.* our great artillery, and to omit nothing we thought might annoy the enemy; till a whole month being spent in this siege, and the number of our men reduced to fourteen hundred, we began to consider of the approaching winter, the uncertainty of the event, and the want of several things necessary to carry on a long siege; so that after mature deliberation, it was judged necessary to raise the siege, and delay the execution thereof to a more convenient time.

*The siege raised.*

Accordingly our cannon, ammunition, and other moveables, being sent aboard upon floats, the general made a safe retreat in the night-time, without beat of drum; and the better to cover his design, had gained a certain Jew by money to make the clock of *St. Thomas* church strike as usually: to which also contributed not a little the ingenious invention of a certain gunner, named *Henry Boerdorp*; who went the rounds all night long, and calling, *Who is there? Stand,* and that in a different tone, deceived the enemies centinels, that they had not the least suspicion of our retreat; so that all the *Dutch* forces got safely aboard, without the loss of as much as

*The retreat of the Dutch.*

one man, except a negro slave. When the *Baldaus.* *Dutch* soldiers saw the artillery and baggage going on board, they were not a little dissatisfied thereat; but being appeased by commodore *Roothaus*, who told them that it was done only to secure them against the enemy, who intended to make a general salley, they were afterwards glad to follow their officers directions in the retreat.

It was almost noon before the *Portuguese* were convinced of our retreat, as suspecting the same to be only a stratagem to draw them into an ambush; but when they saw us weigh our anchors, they expressed their joy with the discharge of their cannon round the walls. The *Dutch* general having left a sufficient garrison for the guard of the fort of *New-Orange*, another at *Cranganor* under the command of captain *Verspreet*, and constituted *Peter du Pon*, a brave soldier, commander in chief of all the forces in those parts, sailed to *Coulang*; which place being likewise provided with all necessaries, he took his course towards *Batavia*, with an intention to give *Cochin* a second visit in the spring; which he did accordingly with better success.

CHAP. XIX.

*The Isle of Formosa surprized by the Chinese. Cochin besieged a second Time by the Dutch, is forced to surrender; the chief Articles of the Capitulation, The City made more compact, and strengthened with regular Fortifications. The Roman Catholick Bishop of the Christians of St. Thomas comes to Cochin. His Original Bull of Indulgence.*

BY this time we were sufficiently inform'd of the miserable state of our countrymen in the isle of *Formosa*; (which the *Portuguese* would often upbraid us with during the siege.) A compleat account whereof would be perhaps too tedious, and looked upon as beyond our purpose; therefore I will only for the satisfaction of the reader, insert a letter written by the reverend Mr. *John Kruyf*, minister of the gospel there in the fort of *Zealand*, and afterwards at *Negapatan* on the coast of *Coromandel*, (where he died,) and directed to me and Mr. *A. Breyl* my fellow-minister in these parts.

AFTER my arrival here the 6th of *October* with my family, I was seized with so violent a fever, as disabled me to write to you, yet did not hinder me to remember my hearty service to you by Mr. *Roos*, captain of our ship, and the factor Mr. *Reuf*. Whether the same was brought to you, or not, I am

ignorant as yet, having for some time after been so dangerously ill with my distemper, that my recovery was almost despaired of; but am now by God's peculiar mercy so far recovered, that I went first to church on *Thursday* last, and preached twice the *Sunday* following, and intend to visit the sick to morrow, and to administer the holy sacrament on *Sunday* next. To give you a particular account of the late miserable state of the isle of *Formosa*, is both beyond the compass of a letter, and my present strength; and though I tremble at the very thoughts of it, yet will I mention the chiefest transactions: The first assault of the furious *Chinese* was made against the castle of *Sacam*, whereabouts, after they had cut some of our soldiers in pieces, they took my eldest son and my wife's brother, who, though very young, had one of his arms cut off. The next day our ship, called the *Hector*, being engaged

*Miserable condition of Formosa.*

*Baldæus.* “ engaged with a vast number of *Chinese* *Joncks*, was blown up, and in her some of our best foldiers, among whom was also my father-in-law *Thomas Pedel*. The fort of *Sacam* being, after a defence of a few days, forced to surrender for want of fresh water and other necessaries, the ministers, officers, schoolmasters, foldiers, and in general all the inhabitants of the flat country, were forced to make the best terms they could for themselves. The squadron of ships commanded by Mr. *Kauw*, (after it had for a small time rejoiced our drooping spirits,) being dispersed by tempests, and the ship the *Urk* forced upon the sands, and taken by the enemy, the same was neither seen nor heard of in five or six weeks after. To be short, the whole country being over-run by the *Chinese*, our foldiers every where routed, *Koukerken* laid in ashes in sight of our fort; such of our countrymen as had not secured themselves by a timely flight, fell into the hands of the merciless enemies, who sacrificed the reverend Mr. *Hambroek*, with his son, and divers others in *Tilocen*, to their fury; as also Mr. *Peter Mts* minister of *Favourlang*, and Mr. *Arnold Winsheim* minister of *Sinkan*, who had their heads cut off, and their wives, with many others, carried into slavery. By this there being great want of necessaries in the fortrefs, the foldiers died daily of the bloody-flux, scurvy, and dropfy; so that in nine months time, having lost above one thousand six hundred men, both by famine and the sword, we were forced (for the preservation of our lives) to capitulate. Who can without tears remember the unexpected destruction and ruin of so many families, and of near thirty ministers, partly in their lives, partly in their fortunes, (among whom I had my share, having lost all that I had gathered in fifteen years time,) the loss and dishonour of the company, with the unspeakable miseries, among which I reckon mine none of the least, as the loss of three parts of my library? all which we ought to look upon as the effects of God’s just indignation, on account of our manifold sins. I have no more to add, than that it is none of the least among my other afflictions, that matters are both so ill represented, and worse taken at *Batavia*.”

Subscribed,

Your affectionate colleague,  
Negapatnam 13.  
Octob. 1662.

to serve you,  
*Joannes Kruyf.*

But it is time to leave the miserable in the isle of *Formosa*, and to come to the second siege of *Cochin*. Anno 1662, in September, *Jacob Hustart*, late governor, of the *Moluques* and *Amboyna*, and afterwards residing in the same quality in *Ceylon* and *Malabar*, set sail from *Batavia* with a good squadron of ships; *Ysbrand Gaske* commodore, for *Cochin*, leaving Mr. *Ryloff Van Goens* at *Batavia*, by reason of his sickness, but followed soon after. In November we began to batter the place most furiously, being willing to reduce it before we could receive the news of a peace concluded betwixt us and the *Portuguese*, (which we expected every day,) and having the last year received certain instructions from the governours of our company to allow free commerce and liberty of religion to all such *Portuguese* as would submit to us, we proposed to the besieged, That they should be left in full possession of their churches, (except one,) provided they would receive a *Dutch* garrison. This was not ill relished by some; but *Ignatio Sermento* the governor refusing to comply with it, we resolved to lose no time to reduce the place by force.

Accordingly it was resolved in a council of war to assault it on the river side at low tide; and to render the passage the less difficult, a great number of sacks filled with sand were prepared to be thrown into the river. But this attempt proved unsuccessful, our people meeting with so hot a reception there, that they were glad to think of retreating. But as we had no time to lose, so we soon pitched upon another, which was carried on with better success: for that brave commander *Peter du Pon* being ordered to assault the bastion on the bank of the river, he executed his commission so successfully, that (though not without great resistance) he broke through the enemy, and maintained himself in some of the adjacent houses against the whole force of the enemy, till being seconded by fresh troops of his own, they put out the white flag, and sent their deputies to capitulate upon the following conditions.

THE *Franciscans* to enjoy the free exercise of their religion under the protection of the states. The clergy to have free liberty to carry away all their images, church-ornaments, relicks, &c. and what else belonged to them. The governor *Ignatio Sermento* and his family, together with all the officers, to be received civilly by the *Dutch*. The garrison to march out with ensigns displayed, drums beating, with bag and baggage; and to be conducted in *Dutch* vessels to *Goa*, except such of the foldiers as were in immediate pay of his majesty, who were to be transported to *Portugal*.

THE CITY OF COCHIN  
in its Present State.

Lands laid under water.

The Entry of a Dutch General into Cochin

*Baldæus.* Such of the inhabitants as were willing to stay behind under the jurisdiction of the Dutch company, to have free liberty to remain in their full possessions. And that care should be taken of the sick and wounded.

All which was punctually performed, and the keys of the city delivered to our general, who soon after entered victorious on horseback in great pomp, and ordered a solemn thanksgiving to be made in the great church lately belonging to the jesuits for the conquest of so important a place; which was done accordingly.

Orders given by the Dutch general.

Being thus become entirely masters of Cochin, after it had been one hundred and fifty years in the possession of the Portuguese, the Dutch general made it his chiefest care to issue his orders not to molest the Portuguese, but to observe punctually the articles of the capitulation. The next was to demolish a certain part of the houses and churches of the city, in order to draw it into a more narrow compass, and to render the fortifications the more regular, the former requiring too great a number of men to defend them. The king of Cochin being crowned, and divers of the neighbouring petty princes obliged to become his tributaries, several strict alliances were made with the neighbouring kings to the south of the river of Cochin.

About the same time *Joseph de Sancta Maria*, of the order of the *Discalceated Carmelites*, sent by the pope in quality as a bishop among the christians of *St. Thomas*, came (in his return into Europe) to Cochin to salute our general, and was very kindly received by his excellency. He had two sorts of enemies to contend with during his stay in these parts: first of all, with the Portuguese, who could not brook that any other but their countrymen should be exalted to that dignity; and that not by the pope, but by their own king; the other was the *Archidabo*, (as the Portuguese stile him,) or chief head of the christians of *St. Thomas* hereabouts, who being a negro, would neither submit himself nor his flock to the *Romish* jurisdiction.

A Roman bishop over the Christians here, comes to Cochin.

Concerning the christians of *St. Thomas*, we shall speak more at large anon. But to return to the bishop, brother *Joseph de Sancta Maria*, he was sent from Rome with a bull of indulgence, granted Jan. 16. 1660. in the fifth year of *Alexander VII.* pope of Rome, subscribed by the cardinal *Barberini*, *Joseph Caetanus*, &c. the true original whereof being in my custody, and containing many things tending to the elucidation of the affairs of the christians of *St. Thomas*, (of whom we are to treat immediately after,) we thought it not beyond our scope to oblige the reader with the translation thereof.

Franciscus

Baldæus.

Franciscus, *Bishop of Portua; Cardinal Barberini, Vice-Chancellor of the holy Roman Church, and Protector of the honourable Fraternity of the Church of St. Jerome.*

Josephus Caetanus, *Keeper of both the Seals of his Holiness, Referendary and Prelate; Carolus Antonius à Puteo, Knight; Franciscus Cinus, Solicitor-General of the Court of Rome; Johannes Baptista Valentis, Abbot; Petrus Bassanus, Carolus de Comitibus, Pompejus Serinus, Marianus Vecchiarellius, and Joh. Bapt. Ciofanus, Commissioners.*

The bull of indulgence.

WISH to our dearly beloved brothers and sisters in Christ, of the most reverend fraternity of the apostle of St. Thomas, of the church dedicated to that saint, without the walls of Cochin, founded by legal authority, eternal salvation in the lord.

The more than ordinary inclination you have shewn to piety, charitable works, and other holy exercises, have induced us, who, according to our duty, are to take care of the salvation of the faithful, and promoting of piety and religious exercises, to receive into and unite with our society your fraternity intended for the exercise of pious and charitable works, and by these presents receive you as such, and thereby make you partakers of all the indulgences, authority, and other spiritual gifts granted us by pope Paul V. of happy memory. And the reverend father, brother Johannes de Sancta Maria, frier of the order of the discalceated Carmelites, president of your fraternity, having in your name earnestly sollicitated for the said reception, and a grant of the indulgences, we the above-mentioned prelates and commissioners, relying upon the authority of pope Clement VIII. of happy memory, and his grant of Nov. 7. 1604. and moved with a holy zeal and christian love for the promoting of the true religious worship, we do, by virtue of these letters, receive your fraternity, founded according to the apostolical and canonical institution, with the approbation of the most reverend

bishop, or the ordinary of that place, into our communion and society, pursuant to the apostolical authority granted us for that purpose; and therefore impart to the said fraternity, and to all its members, all the indulgences and other spiritual gifts, specified and granted to our society by the said papal bull of Paul V. to give encouragement to your fraternity for the performance of all sorts of pious works, and the obtaining of eternal salvation (by God's mercy) after this life.

[N. B. The bull of Paul V. being very long, fulsome, and not material, was not thought fit to be inserted.]

And it being our full intention, that all the indulgences, and other spiritual gifts granted us at large, as before said, should be enjoyed by your fraternity and its members, pursuant to the institution of pope Clement VIII. of happy memory, we will and command, that these our letters shall have the same authority, (when produced,) as if they contained the original itself. For the confirmation whereof, we have ordered this letter to be signed by the secretary of our society, and our seal, together with that of the protector thereof, to be affixed to it. Given in Rome, at the usual place of our assembly, in the year, after the nativity of our saviour Jesus Christ, 1660. of the XIIIth indiction, the 16th of January, in the fifth year of the reign of our holy father Alexander VII."

CHAP. XX.

*The Voyages, Miracles, and Death of St. Thomas the Apostle. The Doctrine of the Christians of St. Thomas; of the Greek, Syriac, and Georgian Christians; of the Russians, Nestorians, Jacobites, Coptes, Abyssines, Armenians, Maronites. A good Correspondence betwixt the Eastern and Western Churches very necessary.*

*Baldæus.*  
St. Thomas  
his arrival  
in the In-  
dies.

IT is the general opinion, that the apostle St. Thomas did come into the Indies, but especially into these parts: his first coming was in the isle of Socotora, (at the entrance of the Red Sea,) where he converted many to the christian faith; it being certain, that to this day many of the inhabitants stile themselves *Christians of St. Thomas*, which also induced *Xaverius* to touch at that island in his voyage to the Indies, and, if we may credit *John de Lucena*,

His several  
voyages.

would fain have staid there. From Socotora St. Thomas sailed to Cranganor, whence, after he had converted many to the christian faith, he went to Coulang. Upon the rocks near the shea-shore of Coulang stands a stone pillar, \* erected there (as the inhabitants report) by St. Thomas. From Coulang crossing the high and dangerous mountains he travell'd into Coromandel, where having likewise planted the seed of the gospel, he sailed into China; where, after he had preached the gospel to the infidels, he returned to Maliapour to confirm some of the new converted christians in their faith, and there suffer'd martyrdom.

\* I saw this  
pillar 1662.

Maliapour (afterwards called St. Thomas by the Portuguese) was at that time a famous city in Coromandel, where this holy man would fain have built a church, but was prevented by the *Brabmans*, and their king *Sagam*. They relate a very miraculous thing of St. Thomas: The sea having cast up a tree of a vast bulk, the king, who was desirous to use it in the building of a house, had employed a great number of men and elephants to bring it from thence, but in vain, the wood being not to be moved from the place: St. Thomas standing by, told the king, That if he would present him with the piece of wood, he would carry it alone to the city, (then ten leagues from the shore.) The king looking upon him as a mad-man, told him, He should do with it what he pleased. Whereupon St. Thomas tying his girdle to one of the branches, and making the sign of the cross, drew the whole tree after him with a great deal of ease, followed by a vast number of people; and coming to the city, erected a stone cross there, telling the spectators, That whenever the sea should rise up to that

One of St.  
Thomas's  
miracles.

place, God would send certain strangers from far distant places to settle the christian religion here; which the Portuguese would have to be verified at the time of their coming there.

*Baldæus.*

St. Thomas having by this miracle, and the conversion of a vast number of pagans, arrived to a great authority among them, this so incensed the *Brabmans*, that one of them killed him with his lance upon a hill near the city, where he used to perform his devotion. They had before that accused him falsely of a murder; but St. Thomas having resuscitated the child from death, he declared his own father to have been his murderer; which had so powerful an influence upon many of the chief men of the country, and the king himself, that they received baptism. Some say that St. Thomas was killed at Calaminba, by mistaking this word for Calurmina, i. e. upon a stone; Calur signifying in the Malabar language a stone, and mina upon, St. Thomas having been slain upon a rock: whence it is, that if to this day you ask one of the christians of St. Thomas, where St. Thomas suffered martyrdom, they will tell you, Maliapour Calurmina, at Maliapour upon the stone, where he was stoned, and at last run through with a lance.

Another mi-  
racle.

His death.

They tell you of a certain cross made by his blood, and a vast number of miracles wrought by it, for which I will refer myself to *Lucena*, *Oforius*, and *Baronius*. \* \* Tom. I. The christians of St. Thomas teach their children in their very infancy these following heads concerning St. Thomas. St. Thomas was the man who first abolished idolatry; it was he who converted the Chinese and Negroes; it was he that baptized them, and taught them the true faith, and to profess God the Father, the Son, and Holy Ghost. They also tell you, that he converted the three kings of the east, (one of whom, called *Perumal*, they say was king of Ceylon,) and that St. Thomas's body was transferred from Maliapour to Edessa in Mesopotamia.

1557.

But setting aside all these uncertain relations, the most secure way (founded upon no small probabilities) is, that St. Thomas was actually in these parts, and converted a

*Baldæus*. great number of people to the christian faith: which contradicts that bold assertion of the *Roman* catholicks, that all nations have received the christian faith from *Rome*; it being beyond all question, that at the time of the arrival of the *Portuguese* in those parts under *de Gama*, the inhabitants declared themselves to be christians from most ancient times, desiring the protection of the king of *Portugal* against the pagans, and in token of their obedience presented him with a silver sceptre gilt. Nay, the church of *Rome* cannot boast of that honour, even of all parts of *Europe* itself; since the kings of *England* and *Scotland*, *Lucius* and *Donaldus*, embraced the christian faith one hundred and twenty four years after our saviour's nativity, without having the least communication with the church of *Rome*; whence *Tertullian* rightly says, *Britannorum loca Romanis inaccessa Christo subdita sunt*. And *Cyprianus* says to the same purpose, two hundred and forty years after the birth of Christ, *That the vine-branches of the gospel have spread themselves beyond the extent of the Roman empire*. Thus *Dorotheus*, bishop of *Tyrus*, under the reign of *Constantine the Great*, positively asserts, That the chamberlain of queen *Candace* did introduce the gospel into *Ceylon* and the *Happy Arabia*.

Vain boasts of the church of Rome.

The christians of St. Thomas decay'd, and afterwards restored to their primitive purity.

The christians of *St. Thomas* remained many years in the primitive purity of the christian religion, till in time, for want of good pastors, they began to be infected with some pagan superstitions, and were in most imminent danger of losing the remnants of the truths of the gospel, had not *Martome*, a native of *Syria*, taken care of the decay'd state of christianity in these parts; and being seconded in his endeavours by divers other teachers out of *Syria*, *Babylonia*, *Chaldea*, and *Egypt*, the *Syriac* language was introduced, and the former purity of religion restored among them, till in time the *Nestorian* heresy got footing in *Syria*, and was from thence transplanted hither, as is sufficiently evident from the records of the *Malabars*.

Had their own bishops.

This *Martome* (signifying in their language as much as lord *Thomas*) being much respected by the kings of *Cranganor* and *Coulang*, and by the christians of *St. Thomas* in general, was declared by them their head: and the bishops of *Cochin*, *Coulang*, and *Cranganor*, being afterwards sent for out of *Syria*, these introduced the *Syriac* language, and acknowledged the patriarch of *Alexandria* or *Babylon* for their metropolitan, till at last they submitted to the pope of *Rome*; for the supreme ecclesiastical head of the *Indians* (at the persuasion of the *Portuguese*) did, 1562. acknowledge the supremacy of the pope of *Rome*, pro-

Acknowledge the jurisdiction of Rome.

vided they might continue in the former *Baldæus*: free exercise of their religion, which was confirmed in the synod of *Goa*, where they would not consent to the least alteration of any of their church-ceremonies. But after the decease of this bishop, his successor, 1599. embraced, with the rest of his clergy, in another synod, the *Roman* faith.

The christians of *St. Thomas* inhabit for the most part on the coast of *Malabar*, about *Cranganor*, *Cochin*, *Coulang*, *Travancor*, and some in *Coromandel*, amounting in all to a considerable number. Before they were united with the church of *Rome*, they were infected with the *Nestorian* heresy, as some are still to this day; whence it is that they deny the two natures in the person of Christ. This *Nestorius* was bishop of *Constantinople*, and *Eutyches* *Archimandrit* was abbot in the same city. His doctrine was received at first in the council of *Ephesus*, by the interest of *Chrysapius*, (to please *Eudoxia* the empress,) lord-chamberlain to *Theodosius* the emperor; but *Chrysapius* being slain at the instigation of *Pulcheria*, the sister of the emperor, the same was afterwards condemned in another synod of *Ephesus*, held in the year 431. two years after the death of *St. Austin*, wherein *Cyril* bishop of *Alexandria* presided, as the before-mentioned council of *Ephesus*, and the doctrine of *Eutyches* was condemned in the council of *Chalcedon*, 451.

Where the christians of St. Thomas inhabit.

For the rest, the ancient christians of *St. Thomas* did administer the holy sacrament in both kinds, using salt, bread, and the juice of raisins instead of wine. It was a very ancient custom among them, not to baptize their children till they were forty days old, except in case of imminent danger of life. They used no unction, neither any images, except that they had crosses in their churches. Their priests were forbid to marry a second time. They were declared enemies of *Cyril* of *Alexandria*, a great antagonist of the *Nestorians*, but revered *Nestorius* and *Dioscorus* as saints. They did not acknowledge the superiority of the pope of *Rome*, and used the *Syriac* New Testament in their churches.

As divers religions have been broached of late years in *Europe*, so there are many of late years in *Europe*, so there are many in the *East*. The chiefest of these are the *Greeks*, who acknowledge the patriarch of *Constantinople* for their head, viz. those of *Natolia*, (except *Armenia* and *Silicia*.) *Grecia*, *Russia*, *Bulgaria*, *Servia*, *Bosnia*, *Walachia*, *Moldavia*, *Podolia*, and *Muscovia*.

The next are the *Melchites*, the most numerous of all the sects in the *East*: they are called *Syrians* from *Syria*, and *Melchites* by their enemies, because they conformed themselves

2. The Melchites.

*Baldæus*. selves in their religious worship, according to the emperor's orders. \* They acknowledge for their head the archbishop of *Damascus*, who anciently had his residence at *Antioch*.

3. The *Georgians*. The third sect is that of the *Georgians*, inhabiting the ancient *Iberia* between the *Euxine* and *Caspian* seas. Some would have them to be called *Georgians*, because, as they say, they reverence *St. George* as their patron; but erroneously, the *Georgians* having been mentioned both by *Pliny* and *Mela*, long before *St. George* was known. They are of the same religion with the *Greeks*, and have eighteen bishops of their own, besides a metropolitan.

4. The *Russians*. The fourth sect is the *Russians*, who likewise profess the *Greek* religion, denying with them the proceeding of the Holy Ghost from Father and Son, the main point in question betwixt the eastern and western churches.

5. The *Nestorians*. The fifth sect of the *Nestorians* follow the heretical doctrine of *Nestorius*, and live for the most part among the *Pagans* and *Mabometans* in *Babylon*, *Assyria*, *Mesopotamia*, *Parthia*, *Media*, &c. Nay, *Paulus Venetus* affirms, that they are found from the north side of *Cataja* to the most southerly parts of the *Indies*; so that on the east side beyond the river *Tigris* scarce any other christian sect is to be met with: the reason whereof they alledge to be, that *Cosroes* king of *Persia*, a declared enemy of the emperor *Heraclius*, forced all his subjects to embrace this doctrine. The patriarchal seat of the *Nestorians* is at *Muzal*, a city of *Mesopotamia* upon the river *Tigris*, now subject to the *Turks*; notwithstanding which it has forty thousand christians, and fifteen churches. Some of the *Nestorians* did submit to the *Roman* jurisdiction under Pope *Julius III.* who was created pope 1550. and reigned five years. And the patriarch *Abdiesu*, who was invested with the episcopal dignity by pope *Pius IV.* was present at the council of *Trent*.

6. The *Jacobites*. The sixth is that of the *Jacobites*, having got their name from one *Jacob*, a native of *Syria*, and a follower of the doctrine of *Eutyches* 530. according to *Nicephorus* and *Damascenus*. They inhabit for the most part in *Syria*, *Aleppo*, *Cyprus*, *Mesopotamia*, *Babylon*, and *Palestina*, whence the patriarch of *Jerusalem* is also a *Jacobite*; but the patriarch of the *Jacobites* resides at *Caranut*, an ancient noted city in *Mesopotamia*. They acknowledge but one nature in *Christ*, make the sign of the cross with one finger only; they mark their young children with the sign of the cross by means of an hot iron; use both baptism and circumcision, and reject the purgatory, it being their opinion that the soul remains with the body

under-ground till the day of judgment; and *Baldæus*. that the angels are composed of a fiery and lucid substance.

The seventh are the *Coptes*, or *Egyptian* christians, being rather the name of a nation, than belonging to any peculiar religion: they are the same with the *Jacobites*, the word *Copti* being the same with *Egopti*; for notwithstanding the doctrine of *Eutyches* was condemned in the council of *Chalcedon*, and *Dioscorus* patriarch of *Alexandria* deposed upon that score, the same took deep root in the eastern parts, and more especially in *Egypt*. These *Egyptians* (according to *Tecla Maria*, an *Abyssine* priest) agree in point of doctrine with the *Abyssines*, and acknowledge the jurisdiction of the patriarch of *Alexandria*, whose residence is now at *Cairo*.

The eighth sect is that of the *Abyssines*, or *Mediterranean Ethiopians*, being generally *Jacobites*, whence their king (called erroneously by some \* *Prestor John*) is stiled *Prince of the Jacobites*. They reject abolutely the council of *Chalcedon*, and will allow it no place in their writings. To their patriarch they give the name of *Albuna*, i. e. *our father*, who must be a native out of the territories of *Alexandria*, and of *St. Anthony's* order; for it is observable, that all the patriarchs and bishops in the *East*, are either of the order of *St. Basil* bishop of *Cesaria* and *Cappadocia*, or else of the order of *St. Anthony*. The patriarchs of *Constantinople*, *Antiochia*, and *Armenia*, are of the order of *St. Basil*; those of *Alexandria* and *Ethiopia*, as also those of the *Jacobites* and *Maronites*, of *St. Anthony's* order; but the patriarchs of the *Nestorians* are promiscuously of either of these two orders. The *Abyssines* have for their head the patriarch of *Ethiopia*: they are rebaptized once every year, on the 12th day, as indeed are most of the other eastern christians. They follow the rules of the *Old Testament* in reference to clean and unclean things. It is observable that, contrary to the custom of all the other eastern christians, (except the *Armenians*,) they use unleavened bread in the holy sacrament: though some affirm, that this is only done on *Thursday* in the holy week, and that at other times they use leavened bread. All persons, both ecclesiastical and civil, take and receive the sacrament standing; and that always in the church, the king himself not being dispensed with in this point: the priest gives the bread, and the deacons the wine; and that day the sacrament is received (which is generally once a week) they are forbidden to spit. They baptize both with fire and water; besides which, they circumcise their children on the eighth day; and that both sexes, not according to the manner of the *Jews*, but

*Baldæus*. but after the mahometan way; whence it seems as if it were rather a custom than a point of religion. And if we deduce their original from the antient *Ethiopeans*, *Herodotus* tells us, that they used to practise the same in very antient times; if from the *Arabians*, the matter is sufficiently evident, the *Arabians* being descended from *Abmael*, though they are generally ambitious to trace their origin rather from *Sarab* than *Hagar*. For the rest, they reject purgatory, and prayers for the dead; as also all traditions, looking upon the word of God as the only rule of faith; but, with the *Jacobites*, allow no more than one nature in Christ. Of the religion of the *Abyssines*, *Damian a Goes*, *Athanasius Kircher*, *Alvarius*, and others, have given a more ample account.

9. The Armenians.

The ninth sect is that of the *Armenians*, in great esteem among the *Mahometans*, by reason of their traffick and riches; though some alledge another reason, viz. That an *Armenian* did foretel *Mahomet's* future greatness. In the year 1656. a certain *Armenian* merchant, named *Goja Salomon*, a very grave and sober person, travelled in our company to *Macassar*, where we were to treat about a peace with the king, and he to fetch some money due to him from the *Danish* company, who gave us several needful instructions concerning both the ecclesiastical and political affairs of the *Armenians*. They antiently belonged to the jurisdiction of the patriarch of *Constantinople*, pursuant to a decree of the council of *Chalcedon*; but afterwards having withdrawn themselves from the *Greek* church, set up two patriarchs of their own, viz. one in the *Greater*, the other in the *Lesser Armenia*. We were told that they administer the sacrament to the very infants; whereas the *Russians* don't allow it to children under seven years of age. They declare positively against the purgatory and transubstantiation. They rebaptize such as turn to their religion from the western churches: they don't allow any happiness to the souls of the deceased till after the day of judgment.

10. Maronites.

The tenth sect is that of the *Maronites*, having got their name, not from the famous heretick *Maron*, (as *William Tyrius* and *Præteolus* falsely imagine,) but from a certain holy man, in certain antient records, mention being made of the convent of *St. Maron*, the friers whereof were called *Maronites*: some of them inhabit in *Aleppo*, *Damascus*, *Tripolis*, *Syria*, and *Cyprus*; but their chief seat is the mount *Libanus*, whose whole compass being computed of seven hundred leagues, but in most places rocky and barren, is inhabited by about twelve thousand families of the *Maronites*, who pay to the grand seignior seventeen crowns *per annum*

The mount Libanus inhabited by the Maronites.

apiece for every head that is above twelve years old; and a crown a-year for each piece of ground of sixteen spans in the square. The mountain is of such a height, that it may be discovered at forty leagues distance. The patriarch of the *Maronites* has eight or nine suffraganean bishops, he himself being always a frier of the order of *St. Anthony*, and resides sometimes near the mount *Libanus*, in a convent of *St. Anthony*, sometimes at *Tripolis*. The *Maronites* are at present under the jurisdiction of the see of *Rome*; and pope *Gregory XIII.* (the same who caused the alteration of the new stile to be inserted in the almanack) erected a college of the *Maronites* at *Rome*. The *Maronites* agree with the *Greek* church in this opinion, That the Holy Ghost proceeds only from the Father, that every soul was created in the beginning. They look upon a female infant as unclean for eighty days after its birth, and the males for forty, which is the reason they don't baptize them before that time; and administer the sacrament to the children soon after they are baptiz'd. They don't carry the sacrament in procession, and allow not of a fourth marriage; but don't ordain any priests or deacons without they are married before; and allow a parent the power of annulling the marriage of his son or daughter, if the same be done without his consent. Beatitude they do not believe till after the day of judgment. For the rest, they follow the opinion of the *Monotheites*, that there is but one nature in Christ. The *Maronites* had united themselves four hundred years ago with the see of *Rome*; but when *Saladyn*, king of *Egypt* and *Syria*, did conquer those parts, the *Maronites* relinquished the *Roman* communion, till they were reunited to them a second time under *Gregory XIII.* and *Clement VIII.* Of the *St. Thomas* christians we have spoken before.

Among all these eastern sects, there are few who teach any points contrary to salvation, except those of *Nestorius* and *Eutyches*; for they execrate the adoration of images, reject purgatory, allow marriage to the clergy, administer the sacrament to the laity in both kinds, deny transubstantiation, and do not acknowledge the jurisdiction of the see of *Roome*.

*Maffæus* relates, that the patriarch of the *Abyssines* being desired by their king to dispute with the jesuit *Roterigio*, told the king, That he would not enter into dispute with an heretick, and charged the king, under pain of eternal damnation, not to read their writings. It is beyond all dispute, that the *Coptes* avoid the *Latin* church as much as the *Jews*. Cardinal *Baronius* tells us indeed, that *Marcus*, patriarch of *Alexandria*, did send his deputies to pope *Clement VIII.*

*Baldæus*.

See Will. Tyrius de Bel. Sacr. l. xxii. c. 8.

The eastern churches deny the supremacy of the Roman church.

The Greeks used always five days before Easter to excommunicate the in Pope.

*Baldæus*. in order to subject himself and all *Egypt* to the papal chair; but the same proved abortive, and proved no more than a complement in the end. See *Thomas a Jesuit*, l. vii. c. 6. Whence it is evident, that setting aside the doctrine of the Holy Ghost proceeding from the father only, they are subject to not near so many errors as the Roman catholicks.

In what language the christians worship God.

The eastern christians exercise their religious worship in different languages. Some are of opinion that all the primitive christians, for one hundred and twenty years after Christ's nativity, viz. till the reign of *Hadrianus* the emperor, used only one language, viz. the *Hebrew*, but without any certainty. Certain it is, that the *Armenians* have a translation of the bible into their own language; which by some is attributed to *Chrysoptom* while in exile. *Alvares* affirms, that the *Abyssines* have translated the bible in their own language, and so have the *Russians*, or *Muscovites*, contrary to what is practised by the *Romans*; for pope *Pius IV.* put the bible among the prohibited books. And *Erasmus*, in his letter to *Charles Utenbofer*, tells him, that *Lewis Berquin* was, 1529. burnt at *Paris*, for no other reason, but his having asserted, That the bible might be translated into the vulgar tongue, and read by the common people; notwithstanding *St. Jerom* and *Chrysoptom* had employ'd themselves in the work.

A correspondence with the eastern christians necessary.

The other eastern christians perform their religious service in the *Greek*, *Latin*, and *Chaldean* languages; and use divers liturgies, as those composed by *Petrus*, *Jacobus*, *Sixtus*, &c. Whence it is evident that it would be no very difficult task to settle a good mutual correspondence betwixt them and the protestant churches of *Europe*, which has been too much neglected hitherto, though we have had several opportunities given us by the eastern christians to embrace so useful a design. Thus (as *Camerarius* tells us) the *Greeks* of *Constantinople* did encourage the *Bobemians* and *Hussites* against the *Roman Catholicks*. *Joseph*, patriarch of *Constantinople*, sent one *Demetrius* a deacon, to *Wittemburgh*, to confer with the divines there concerning an union, who carried a *Greek* copy of the *Augustan* confession back with him to *Constantinople*. At the synod of *Thorn* in *Poland*, 1595. certain deputies sent by the *Greek* christians appeared to exhort to a unity, and endeavour a reconciliation betwixt the *Calvinists* and *Lutherans*. And in the year 1616. *Cybil*, patriarch of *Alexandria*, sent one of his priests to *George Abbot*, the famous archbishop of *Canterbury*, in order to have him instructed in the university of *Oxford* in the true principles of the protestant churches. Neither ought we to pass by in silence the confession of *Cybil*,

patriarch of *Constantinople*, of his adhering to the doctrine of *Calvin*, which drew upon him the hatred of the jesuits, who could not rest satisfied till they had underhand procured his death, 1638.

His Letter writ upon that Subject to a certain Friend of his, and preserved by the learned *Andrew Rivet*, is as follows:

“ PERCIO ho voluto scriver a V. R. e protestarvi che mi siate testimonio se jo more, que jo more *Catholico* *Orthodoxo*, nella fede del N. S. *Jesu Christo* nella dottrina Evangelica conforme la *Confessione Belgica* la confessione mia e le altra delle chiefe Evangelice che soni tutti conformi. Abhorrifco li errori delli *Papisti*, e le superstitione delli *Greci*, provo e abbraccio la dottrina del dottore meritissimo *Giovanni Calvino* e de tutti che sentono con lui; in questo voglio che mi siate testimonio, per che con sincera conscienza cosi tengo, cosi professo e confessò como anco la mia confessione mostra, e recommando a vos questo deposito, caso che morssi, di farne participi Tutti li fratelli Christiani *Orthodoxi*: e mi recommando alle preghiere di V. R.”

Alli 15-25. Marzo.

*Cyrillo Patriarcha di Constantinopoli.*

Which translated into English runs thus:

“ Therefore I was willing to declare to you, and desire you to be my witness, that in case I die an *Orthodox Catholic*, and in the purity of the faith taught by *Jesus Christ*, agreeable to the Confession of faith of the church of the *United Provinces*, mine being altogether the same with theirs, and with the other evangelical churches. I abhor the errors of the *Roman* church, and the superstitions of the *Greek*, but approve and embrace the doctrine of the most worthy *John Calvin*, and of all those that have the same sentiments with him. I call you to witness, that I believe, confess, and attest the same by these presents, recommending this my confession to your care, in order to communicate the same (in case of my death) to all truly-believing brethren, and myself to your prayers.”

March 15-25.

*Cybil*, Patriarch of *Constantinople*.

*Baldæus.* As the preceding letter is a convincing proof of the stedfastness of *Cyril*, in his adhering to the doctrine of *Calvin*, so out of what hath been said before, it is evident that most of the eastern christians have an aversion to the *Roman* religion. And I remember that *Benjamin* the Jew, in his travels, makes the same observation, in particular, in respect of the patriarch of *Constantinople*. In the year 1664. being at *Cochin*, I address'd myself to Mr. *Jacob Hustart*, our general, to grant leave to the archdeacon, or chief of the christians of *St. Thomas* in ecclesiastical affairs, to come thither, in order to have a free conference with him: which being readily granted, he sent his letter to the archdeacon for that purpose;

but he excused himself, alledging, (and not *Baldæus* without reason,) That we having given so extraordinary a reception to the *Roman* bishop, *Joseph de Sancta Maria*, he could not appear in person among us, without his prejudice, to my great dissatisfaction, being extremely sorry it was not in my power to perform my promise made in my letters to the states-general 1662. And upon this occasion I cannot, without praise, mention the generous zeal of the states-general, who at their own charge did order to have the New Testament and our Catechism translated in the tongue used among the modern *Greek* christians, the same being very different from the antient *Greek* language.

## C H A P. XXI.

*A Description of the Kingdom of Percatti, and Calecoulang. Coulang twice taken by the Hollanders. The Nature and Manner of living of the Nairos. The Paruas made Christians. Extraordinary Zeal of Don John King of Portugal.*

*The kingdom of Porca.*

THE kingdom of *Percatti* (called by some *Porca*) begins about four or five leagues to the south of *Cochin*, and extends to *Coulang*, its whole length being about twelve leagues.

*The Dutch treat with that king.*

In the year 1642. the *Dutch* appeared the first time in this place, and treated with the then king of *Siam*, *Baatchery Vaubaar*, (who was not above twenty three years of age,) concerning a free trade with pepper: Which the king was very glad to accept of, being three years past engaged in a war with the *Portuguese*, who had seized upon part of his dominions, and would have erected some fortifications there. He delivered to our deputies a sealed letter, directed to the general and great council of the *Indies*, in which he requested, that we would at least once a year send thither a ship freighted with such commodites, as before that time used to be carried to *Cannor* and *Calecut*: whereupon an interpreter was sent aboard the next day, to desire a passport from his majesty for such of our ships as passed that way, which was granted.

The king who reigned here 1664. of whom Mr. *Jacob Hustart* and I had audience at that time, was about twenty four years old, a very active and well-limbed person, his hands, feet, and ears adorn'd with jewels of a great value. Formerly they used to transport their pepper from hence to *Mocha*; but since that time the *English* have trafficked there in that commodity, who had their factory just upon the sea-shore. The great-

*Factory of the English.*

est strength of this king consists in about five hundred small galleys, wherewith in the rainy season, when the rice-fields lie under water, he used to make his excursions from the utmost point of the cape of *Comoryn* as far as *Panane*, and especially to annoy the king of *Cochin*. He proved a troublesome neighbour to the *Dutch* company, till by the terror of their arms they brought him to submission, having in the siege of *Cochin* sided with the *Portuguese* against us.

Deeper into the country live abundance of christians converted by the *Portuguese*: they get their livelihood by managing and gathering the pepper; which they are obliged to sell to the king's factor, a *Brabman*.

The air of this country being accounted *The air unwholesome.* extremely unwholesome, hence it is, that most of the inhabitants are troubled with swelled legs; the cause whereof they attribute to the nitrous water, which they use for their common drink: blindness is also an ordinary distemper here. For the rest, the ground is exceeding fertile, and very fit for tillage; so that most of the inhabitants live upon husbandry, especially of rice.

The next adjoining kingdom is that of *Calecoulang*, of no great extent: here the *Dutch* company has had their factory many years ago, which used to buy up a great quantity of pepper in these parts.

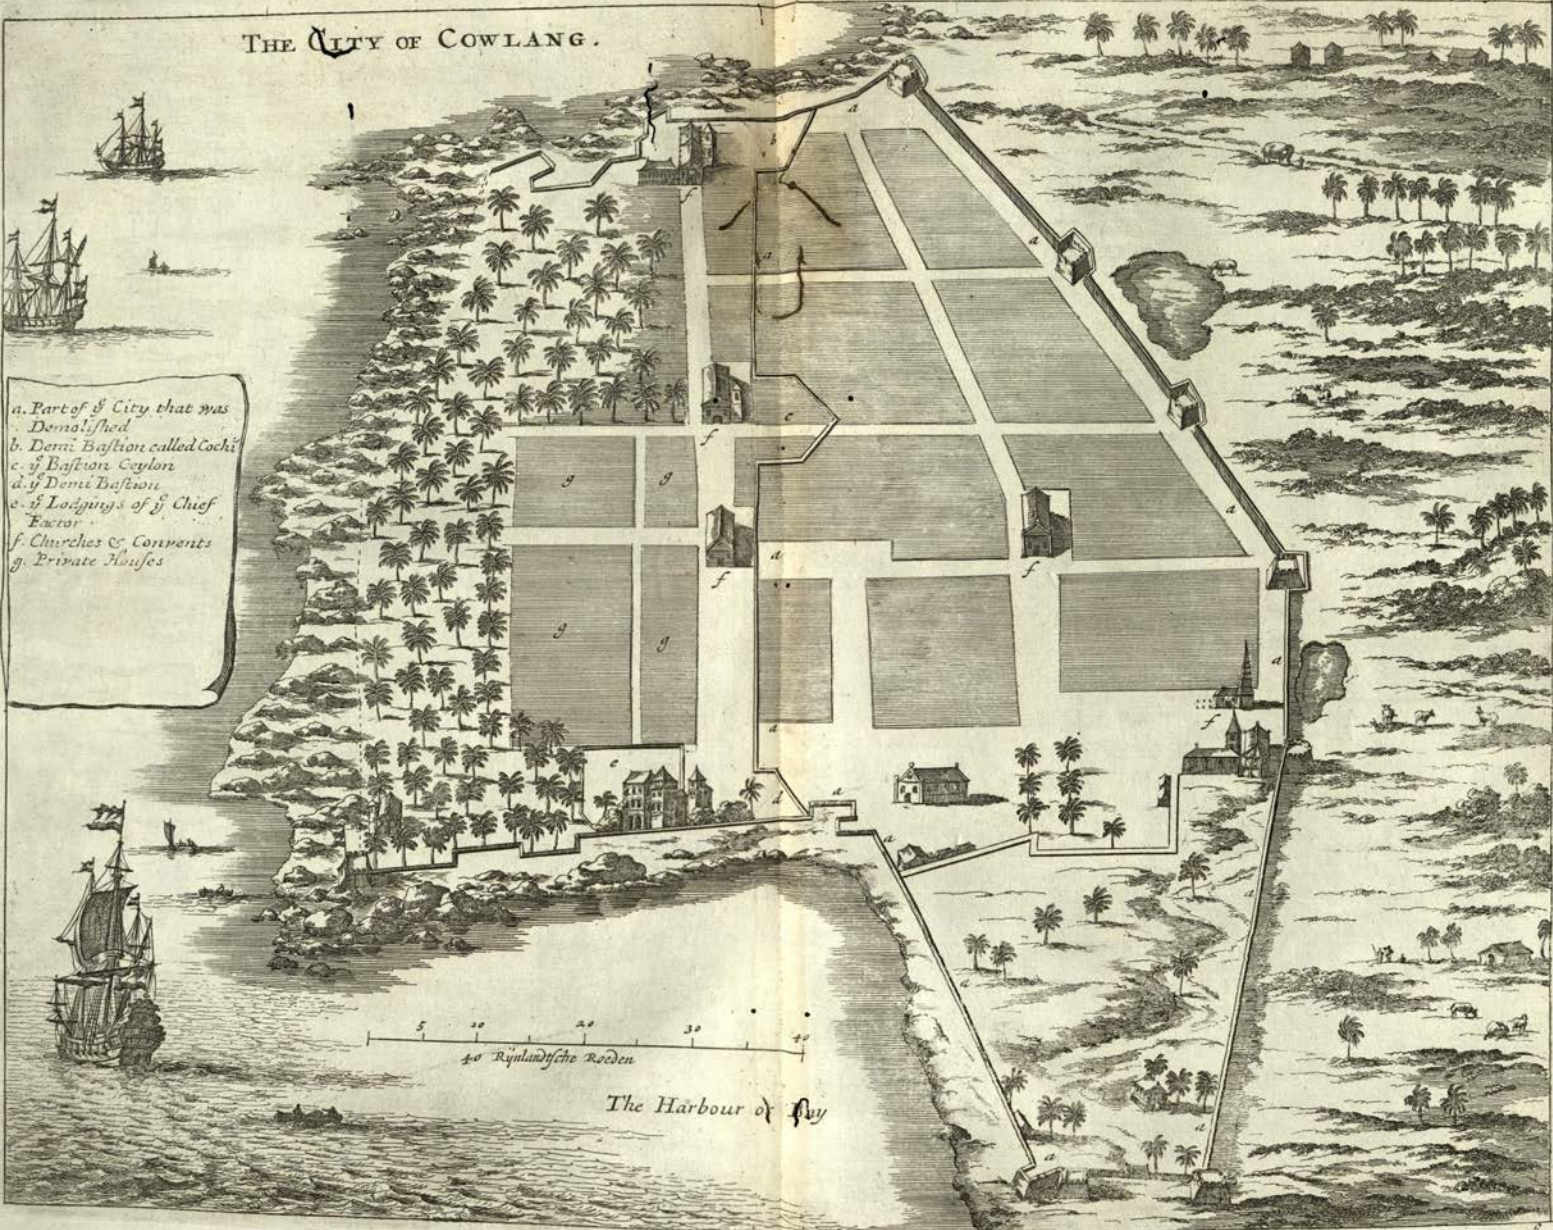

The least among the *Malabar* kingdoms is that of *Coulang*, extending to the utmost point of the cape *Comoryn*, about fifteen or sixteen

# THE CITY OF COWLANG.

 40 Rijnlandfche Roden

The Harbour of *Suy*

*Baldæus*, sixteen leagues in length. The city of *Coulang* was first built by the *Portuguese*, being much of the same bigness as *Puntegale* in the isle of *Ceylon*, having no less than seven churches, some very good houses, and many thousands of trees, especially towards the sea-side. This city is reckoned one of the wholesomest on the whole coast of *Malabar*, by reason of its pure air, and most excellent springs. The *Portuguese* at their first coming erected only a strong house, to defend themselves in case of necessity against the inhabitants; notwithstanding which, they were at a certain time surprized by them, and all cut to pieces; which barbarity was afterwards revenged by *Laurence Almeyda*, son to *Francis Almeyda*, who burnt twenty of their ships richly laden.

The air  
very whole-  
some.

In the year 1503. one brother *Rboteric*, a *Dominican* frier, coming into these parts to propagate the gospel, did convert many of the pagans, and encouraged the christians of *St. Thomas* inhabiting here to persevere in their faith.

The inhabi-  
tants  
treache-  
rous.

The inhabitants are generally very barbarous and treacherous, of which they have given several times sufficient proofs to the *Dutch*. At a certain time they assaulted the city by night, and had almost carried it by surprize; and at another time captain *Henry Gluwing* taking the fresh air with some officers without the gate, were treacherously murdered by them.

In the time of the *Portuguese* there stood a certain *Pagode* about four leagues without the city, famous for its riches throughout the *Indies*, which induced *Sofa* to plunder it, notwithstanding there was then a peace betwixt them and the *Portuguese*. The *Nairos* revenged the loss by killing about thirty of the *Portuguese*; and *Sofa* having sent a large vessel full of fanams (their coin) to *John* king of *Portugal*, the same was by the advice of the pope sent back to the king of *Coulang*, by whom it was placed again in the said *Pagode*.

A pagan  
temple  
plundered  
by the Por-  
tuguese in  
time of  
peace.

In the year 1661. when the *Hollanders* came to these parts to besiege the city of *Coulang*, they were forced to have three smart engagements with the *Nairos*, who, to the number of seven or eight thousand men, armed with scymetars and muskets, and being intoxicated with opium, fell upon them like desperate men; in which action *Mr. Dublet*, our under-factor, lost his life.

And upon this occasion we ought not to pass by the *Nairos*. These are the gentlemen of *Malabar*, descended for the most part either from royal families, or *Brabmans*, and are for that reason exceedingly haughty, proud, and bold: if they meet any of the common people in the streets, they cry out, *Po, Po*, i. e. *Give way, Give way*. They seldom appear without their scymetars and

The Nairos.

shields, which they leave at the door when *Baldæus* (by a peculiar privilege) they go to give a private visit to one of their neighbours wives, as a sign that no body must enter there in the mean while to disturb them. They are all bred to the war, even from the seventh year of age, when they begin to anoint their limbs with certain ointments, to render the nerves pliable, which makes them very active and nimble, and the best wrestlers in the world. They are not only well acquainted with the use of bows and arrows, but also with muskets and great cannon; for I have seen them give a salvo with the same order and dexterity as our best-disciplined troops in *Europe*; and they are of late years arrived to that perfection, that they make their own gun-barrels, gun-powder, and matches. They commonly engage naked, having only a piece of stuff wrapp'd about the middle: being very nimble they often turn their backs, but soon return to the charge, when they find the least opportunity of having an advantage against their enemies. On the hilts of their swords they wear certain pieces of metal, which making a noise as they move, serves them for a certain musick: they are very dextrous in defending their bodies with their shields; and consequently are better at handy blows than at firing, for they commonly fire too high. Among the *Nairos*, those who call themselves *Amok* are the worst, being a company of desperadoes, who engage themselves and their families by oaths, to revenge such injuries as are done them. They are often seen at *Batavia*. The power of the kings of *Malabar* is generally esteemed by the number of the *Nairos* under their jurisdiction. If any of their kings should be murdered, they would sacrifice all to revenge his death. As they are naturally fierce, and addicted to all manner of lust and pride, so they are declared enemies of the christians.

The Amok!

Scarce were the *Dutch* masters of *Coulang*, but their fleet, consisting of twenty three ships, great and small, were surprized by so violent a tempest, (which lasted three days,) that they thought to have been all lost, lying at anchor under a low shore, and therefore exposed to the utmost fury of the winds. The ships names were, the *Ulieland*, *Sea-horse*, *Haddock*, *Bantam*, *Flushing*, *Marygold-flower*, *Cat*, *Tertolen*, *Red-Lion*, *Erafmus*, *Sluyce*, *Achilles*, the *Romer*, *Flower-Valley*, *Walnut-tree*, the *House of Swieten*, the *Elburgh*, *Stadthouse of Amsterdam*, and the *Exchange of Amsterdam*; the four last being lately come from *Holland* freighted with provisions, such as meal, bacon, cheese, wine, oil, and mum, besides a good number of land-men, many whereof were ill of the bloody flux. During this storm we sent

The Dutch  
fleet in  
great dan-  
ger of being  
lost.

*Baldæus*. our fervent and constant prayers up to heaven for the delivery of our fleet, on which depended all our safety; for the *Stadthouse* of *Amsterdam* was in such distress, that she gave one signal after another for relief, having above six foot water; the *Erasmus* had lost all her anchors, but by good fortune got clear of the sands; the *Sea-horse* had taken fire, but was soon extinguished; so that we came off with the loss of three sloops only. The fury of the tempest beginning to allay on the third day, just at the very time when we were coming from prayers out of the church, and by midnight the same being quite ceased, a solemn thanksgiving was ordered to be kept the 23d of *November*, 1661. when I preached upon the text of *Psal. lxxvi. 12.* By this time it being judged fit for our fleet to depart, a convenient garrison was left in the place under captain *Kocks* and Mr. *Nybof*, for the defence of the fortifications of the city, which were lately made of earth.

The fleet sails for Cochin.

The kingdom of Trevancor.

The kingdom of *Trevancor* borders upon that of *Coulang*: all along the sea-shore inhabit the *Paruas*, who being for the most part christians, you see the shore all along as far as *Comoryn*, and even beyond it to *Tutecoryn*, full of little churches, some of wood, others of stone. These people owe their conversion to *Franciscus Xaverius*, he being the first who planted the principles of christianity among them; they being so much taken with the reasonableness of the ten commandments, that they received baptism in great numbers, though an accidental quarrel betwixt a *Paruas* and a *Mahometan* proved a strong motive to their conversion: whence it is that *John de Lucena* says, *As the differences arisen betwixt the Jews and the Egyptians, proved the means of the delivery of the people of God, and of the recovery of their spiritual and temporal liberty; so by God's direction, a quarrel which happened betwixt a Paruas and a Mahometan, proved the delivery of the first from their spiritual and temporal slavery.*

Conversion of the Paruas.

The *Paruas* being sorely oppressed by the *Mahometans*, one *John de Crus*, a native of *Malabar*, but who had been in *Portugal*, and honourably treated by *John* the then king of *Portugal*, advised them to seek for aid at *Cochin* against the *Moors*, and to receive baptism. Accordingly some of the chief men among them (called *Patangatys* in their language) were sent upon that errand to *Cochin*; where being kindly receiv'd, they (in honour of him who had given this advice) took upon them the surname of *Crus*; a name still retained by most persons of note among the *Paruas*. In short, being delivered from the *Moorish* yoke, and the pearl-fishery (which formerly belonged to them) restored to the right

owners, above twenty thousand of them received baptism.

*Baldæus*.

But though they were baptized, most of them being deficient in the knowledge of the true fundamentals of the christian religion for want of teachers, they had in a little time scarce any marks of christianity left among them, except the ceremony of baptism; as *Maffæus*, *John de Lucena*, and *Michael Vas* in his speech to *Franciscus Xaverius* sufficiently testify. For the *Portuguese* being too eager in baptizing these people; provided they could say by heart the *Creed*, *Our Father*, and *Avenary*, and being unprovided with teachers to instruct them, they soon returned to paganism; so that upon this score the *Romish* priests need not talk so big as they often do.

*John* the then king of *Portugal* being sensible of this defect, did all that in him lay to remedy this evil, by sending divers young scholars to the universities of *Salamanca*, *Paris*, and *Conimbrina*, to be educated and fitted for the missions into the *Indies*. About the same time *Ignatius Loyola*, the founder of the jesuits order, began to be famous at *Rome*, for having with his society made a vow to preach the gospel throughout the world: whereupon the king of *Portugal* ordered *Peter Mascarenhas*, his ambassador there, to confer upon that head with *Ignatius*, and to desire six *Missionaries* for the *East Indies*; two being only granted, *Simon Roterigijs*, a *Portuguese*, (who had studied at *Paris* at the king's charge,) and *Franciscus Affilcota Navarrus*, surnamed *Xaverius*, were selected for that purpose: but the first being seized by a quartan ague, and forced to stay at *Lisbon*, *Xaverius* (after having received pope *Paul's* benediction) set out, 1540. for the *Indies*.

Care of the king of Portugal for their conversions.

Xaverius goes to the Indies.

He was no sooner come thither, but having understood the deplorable state of the *Paruas* from the mouth of *Michael Vas*, he did not rest satisfied till he might deliver them out of their darkness: for this purpose having had several conferences with *John Albuquerque* bishop of *Goa*, and *Martin Alphonso de Sousa* the viceroy, he obtained leave to go among them; for though he appeared there in the quality of the apostolical nuncio, yet would he pay his due respects to the civil government.

He left *Goa* in the beginning of *November*, 1542. in company of *Franciscus du Man-cias*, and two young interpreters educated in the college of *St. Paul*; and coming among the *Paruas*, applied all his care in having the chief fundamentals of the christian religion translated into the *Malabar* language, or in instructing the schoolmasters in the right way of educating their youth. For the rest, with what zeal *John* king of *Portugal* prosecuted the propagation of the christian

Comes among the Paruas.

*Baldæus.* christian religion in the *Indies*, will best appear out of his letter written 1546. to *Don John de Castro*, his viceroy of the *Indies*, as follows :

To John de Castro, Viceroy of India, all Happiness :

John king of Portugal's letter.

YOU knowing what an abominable thing idolatry is in our eyes, the same shall for the future not be tolerated in my dominions. Being informed that in the country about *Goa* the pagan temples are suffered and frequented both in publick and private, as well as divers sorts of pagan diversions, we command you once for all to have the same demolished, burnt, and rooted out ; and that all imaginable care be taken to prevent the importation of idols, either of wood, metal, earth, or any other matter. The heathenish sports shall be abolished, and the *Brabmans* not in the least encouraged, and such as contravene this our mandate shall be severely punished. And considering that the pagans may be brought over to our religion, not only by the hopes of eternal salvation, but also by temporal interest and preferments, you shall for the future not bestow any offices, or any other places in the custom-house, (as has been practised hitherto,) upon the heathens, but only upon the christians. We understand also, that you commonly press the *Indians* for our sea-service ; in which case we would have you shew as much favour as you can to the christians ; and if necessity will not allow you to excuse them from that service, to encourage them with good pay and rewards : In which point you shall consult with *Michael Vas*, a person well known to us for his piety and zeal in propagating the christian religion. Being further informed, that oftentimes negro slaves, that might be instructed in the principles of our religion, are for filthy lucre sake sold to the *Mabometans*, the same shall be strictly prohibited, and care taken against all manner of usury. In the city of *Bazain* you shall build a church, and dedicate it to *St. Joseph*, and provide for the subsistence of the vicar and his assistants ; to accomplish which you may employ something out of our revenues, and the three thousand pardaus formerly employed to the maintenance of the *Mabometan* mosque and their service, shall for the future be allotted for the subsistence of the priests, and such other persons as give a helping hand towards the conversion of the infidels. Among the new converts, or all such as have

VOL. III.

hitherto, or for the future may be brought over to the christian religion, by the care of *Michael Vas*, you shall distribute yearly nine hundred quarters of rice out of our revenue : it being our will, that all the agreements made with the christians of *St. Thomas*, concerning the weight, measures, and price of their commodities, shall be inviolably observed. And understanding nevertheless that the contrary is practised in and about *Cochin*, in the pepper-trade, we command you to assist these christians, and to take effectual care they may not be damnified, but treated with all mildness, as becomes christians. You shall also sollicite the king of *Cochin*, not to permit any sorcery, or such like things to be transacted, by the sale of pepper ; and being informed that the said king bereaves such of his subjects as embrace christianity of all their means, you shall earnestly intercede with him on their behalf ; and we will also write to him for that purpose. We could wish heartily, that the business of *Socotora* (which you have recommended to our care in your letter) might be settled so as to deliver those miserable people out of their slavery, provided the same could be done without exasperating the *Grand Seigneur*, under whose jurisdiction they live. You may upon this head consult with *Michael Vas*, and act in the matter according to your discretion. It being also come to our ears, that the *Paruas* are sometimes but very indifferently used by our officers, who force them to sell their pearls (got by fishing or diving) at what rate they please to take them ; this you shall not allow of, but permit them to dispose of their commodities at the best price they can get. You shall make an exact enquiry, whether the inhabitants of the sea-shore might not be protected, and our revenues secured without a fleet ; so that the ships employed in that service might be made use of upon other occasions. You shall consult and debate with *Franciscus Xaverius*, whether it were not practicable, for the better increase of the christians, that the pearl-fishery might not be permitted only to the christians, with exclusion of the *Mabometans* and *Pagans*. And as many among the *Paruas*, who have embraced christianity, meet with very ill treatment from their *Pagan* friends and relations, and are despoiled of all, these you shall assist out of our revenues, according as *Michael Vas* shall judge it convenient.

Extraordinary care of the Paruas.

We have further understood that a certain royal youth has escaped from his father

*Baldæus.* “ father or uncle to *Goa*, in order to be baptised: as his conversion is of great moment, so you shall be very careful of his person, and of his instruction and education in the college of *St. Paul*, and provide for his entertainment in cloaths, attendance, and other matters, suitable to his quality: he having notify'd to us in his letter, that he is the legal heir of the crown of *Ceylon*, you shall make due enquiry after that matter, and write to us your sentiment thereof. The furious attempts of the tyrant of *Ceylon* against such of his subjects as embrace christianity, oblige us to command you to take a slow and secure, but a severe revenge of him, to let the world see, that we are ready to give all imaginable protection to those poor creatures, who have renounced their pagan and diabolical idolatries. It being a general rumour here, that the images of our saviour and the virgin *Mary* are made and sold by the pagans, a thing unseemly, and unbecoming the christian name, the same ought not to be allowed of. The cathedral churches of *Cochin* and *Coulang*, which have been building for a considerable time, being (as we hear) going to decay, we command

“ to be finished, and covered with a good roof, to keep out the rains. It is also our pleasure that a church dedicated to *St. Thomas* shall be built in the street of *Norooa*, and that the church of *St. Cruz*, lately begun to be built at *Calapor*, shall be brought to perfection. In the isle of *Cioran* you shall order a church and some meeting-houses to be built, for the conveniency of the new converts to be catechiz'd in, and to be instructed in the word of God. We could also wish with all our heart, that idolatry might be banished out of *Salfete* and *Bardes*; but in this matter you must proceed with caution, for fear of exasperating the minds of the people; which end may be most conveniently obtained, by shewing them with all imaginable mildness their gross errors, and how, instead of the true God, they pay their devotion to insensible images and idols. For the same reason you shall not neglect to confer with their principal men upon this head, and to encourage such as embrace christianity by your favour, presents, and otherwise. It is our will that a peculiar regard shall be had to this our letter, and the contents thereof punctually observed.”

## C H A P. XXII.

*A Description of Tutecoryn, and the Pearl-Fishery: That City taken by the Hollanders. The Isle of Rammanakoyel. Adam's-Bridge; the Shape of his Foot imprinted in a Stone. Tindi. The taking of Megapatan, which is besieged by the Naike; reduced to great Extremity by Famine: Once more attacked, and maintained.*

*The Paruas are now very obstinate in the Romish superstitions.*

THE *Paruas* ever since this union with the *Romish* church, are such zealots in that religion, that there are scarce any hopes of ever bringing them over to our side; their ignorance in religious concerns being such, that besides the use of their beads, and making the sign of the cross, they know nothing of the true fundamentals of the christian religion they pretend to profess. In the year 1661. I was ordered to take a journey from *Tutecoryn* to *Coulang*, to visit the churches along the sea-shore, and endeavour to introduce a reformation there; but my endeavours proved ineffectual by reason of the great number of popish priests yet remaining in that country; and supposing a reformation could have been introduced, there were no ministers to maintain it in so large a tract of land, where the *Paruas* were for the most part great favourers of the *Portuguese*, and blind zealots in their religion, of which I had

sufficient proofs before at *Tutecoryn*. For the *Dutch* being become masters of that place, 1658. I was soon after employ'd in the business of reformation, but without success; for when I preached in *Portuguese*, scarce any one of the *Paruas* durst enter into the church, but remained in the porch for fear of the *Romish* priests living among them; for though these priests did not then live in the city, nevertheless the inhabitants would carry their children a great way into the country, to be baptiz'd by the priests.

I remember that passing one time through the market-place of *Tutecoryn*, a great number of people, at the accidental ringing of a bell, prostrated themselves upon the ground; whom I asked, whether they thought this a fit place for their devotion, when the church was so near at hand, desiring them to follow me thither. They answered, That since the church was despoiled of the images and other

TUTECORYN.

PEARL

FISHING.

*Baldæus.* other ornaments by us, they must look upon us as enemies to their religion. I replied, That we were no enemies of images, but only of the worshipping of them, as appeared by several histories of the baptism of our saviour, the conversion of *St. Paul* and others, remaining in the churches. To be short, I found that the whole knowledge of the *Paruas* (both young and old) consisted in being able to say by heart the *Creed*, *Our Father*, the *Ten Commandments*, and the *Ave Mary*.

After my departure the reverend Mr. *John Ferreira* employ'd in reforming the *Paruas*. *Ferreira Almeyda*, a native of *Lisbon*, was for a whole year employ'd in the reformation of the *Paruas*, but with less success than myself, they having conceived an *Odium* against him, as one who had quitted that religion, and whose effigies upon that score was burnt at *Goa*.

In the year 1658. in *January*, we set sail from *Negumbo*, and in the beginning of *February* landed near *Tutecoryn*, after some resistance from the natives, who set the city and their small galleys on fire, and so retired deeper into the country. *Tutecoryn* is properly no more than a large village, without walls, ditches, or gates; it has three spacious churches, and abundance of goodly houses built of stone, which afford a good prospect at sea. Hereabouts they make the best lime in *India*. The *Dutch* company has been several times endeavouring to erect some fortifications here; but the *Naike*, or lord of the country, not willing to consent to it, they have hitherto been contented with a factory in one of the three churches; where always resides a factor and under-factor, with three assistants, and six or eight soldiers.

Near this place is the famous pearl-fishery, whereof there are no more than three in the east, viz. one near *Ormus*, the second in the bay of *Ainam*, on the *Chinese* coast, and the third in the bay betwixt cape *Comoryn* and the isle of *Ceylon*, wherein are also comprehended *Manaar* and *Aripou*. The pearls are found in certain oyster shells, (which are not good to eat,) and are taken by diving seven, eight, nine, or ten fathom deep, sometimes not without great danger. The pearl-fishery is not allowed every year, sometimes the oyster-banks being covered with sand, and sometimes the oysters not being come to their full maturity. To make a trial of the last, they take out a few, and by the quantity and quality of the pearls taken in them, judge whether it will quit cost to fish, or not. If the fishing be resolved upon, the inhabitants of the circumjacent parts come in great numbers with their families and boats, and pitch their tents near the sea-side, where they remain until the fishery is over. The *Dutch* com-

pany has a certain share in what is taken for their protection, the rest being sold publickly in the markets of *Tutecoryn* and *Calipatnam*. The *Paruas* also dive sometimes for certain hours for a kind of sea-snails, called *Cbancos*, whereof they make rings, that bear a good price at *Bengale*.

The pearls of *Tutecoryn* and *Manaar* are neither in colour nor brightness comparable to those taken near *Ormus* on the *Persian* coast. The pearls are questionless nourished both by the sea and river water, as being often found at the time of low tides in the rivers. Abundance of pearl dust is from hence transported into *Europe*, where it is used in the cordial medicines. The large pearls are valued according to their bignets, shape, and whiteness. Much cloth is made at *Tutecoryn*, the weaving-trade being very considerable here, which, together with the plenty of eatables, rice, sugar, &c. makes this place to be much regarded by the company.

This tract of land is subject to most furious winds in *October*, *November*, and *December*; and in the winter seasons to heavy rains. It is very sandy near the sea-shore, and has nothing but salt-water, which produces scabs, and other cutaneous distempers, as I can testify by my own experience. During the months of *January*, *February*, and *March*, the nights are extremely cold, by reason of the thick fogs, which fall constantly at that time, the days being at the same time so excessive hot, that there is no touching of the ground without their shoes, called *Seripous* by the inhabitants.

And upon this occasion I cannot pass by without making this observation, That notwithstanding the nearness of *Tutecoryn* and *Comoryn*, they at the same time have very different seasons: for in *April*, *May*, *June*, *July*, *August*, and *September*, those inhabiting on the south-side of the said cape, enjoy all the blessings of the summer season, whilst those living on the north-side are at the same time subject to all the inconveniences of the winter; this side being then constantly pestered with tempestuous winds, whilst on the other side the air is serene and calm; the difference of which must needs be looked for among the mountains, the receptacles of winds, rains, and snow, the same being observed in other parts of the *Indies*, as well as in *Africa*. For if *Africa* were not mountainous, it would be altogether barren and uninhabitable, no more than the countries under the *Torrid Zone*, which if they were destitute of mountains, would also want rivers, (the sources of them being all in the mountains,) nor hard rains. Thus it is observable, that about *Columbo*, *Gale*, and *Mature*, abundance of rains fall at different times, because that part of the isle of

*Ceylon*

*The Paruas though christians, never dive before they have made certain conjurations to prevent their being hurt by the sharks.*

*The climate of Tutecoryn.*

*Different Seasons on the north and south side of the mountains.*

*Baldæus*. Ceylon is mountainous; whereas near *Manaar*, *Jafnapatnam*, and the other places, where there is a flat country, it rains only in *October*, *November*, and a little in *December*, all the rest of the year being without the least rains; the defect whereof is however supply'd in some measure by the fogs or dew; the south winds which blow then from the cape of *Comoryn*, prevent the rains on that side. The inhabitants of *Peru* are very sensible of this difference; for whilst the inhabitants of the mountains are often rejoiced with sudden showers of rain, those of the flat country, and especially near the sea-side, never feel any rain, but only a thick fog or dew.

The mountains occasion the difference of seasons.

Whence it is evident, that according as the mountains send forth the winds and rains on one side or the other, they produce the difference of seasons in these parts; this is very perspicuous on the cape of *South Point of Africa*, where such violent gushes of wind are sometimes sent forth out of the concavities of the mountains, that they are able to overturn all that meets in their way. I remember that travelling once that way, I had enough to do to keep myself and my horse upright; and at another time a coach belonging to the *Dutch* company there, was overturned by such a gush of wind. They take it for an infallible sign of an approaching tempest on the cape of *Good Hope*, when they see thick clouds appear on the top of *Tablemountain*. The same is observed in most other mountains under the *Torrid Zone*; for the inhabitants near the *Equinoctial Line* have their due rainy seasons twice a-year, viz. in spring and autumn, occasioned by the gathering of the clouds in the mountains, the pinacles of which reaching very high, stop the course of the air, (which in those parts moves constantly from east to west,) which thereby being condensed into clouds, these produce of necessity either sudden winds or rains on one side, and blesses the other side at the same time with a serene air and happy climate, the tops of these mountains being in these parts like a partition-wall to summer and winter: for the further elucidation whereof, I will refer myself to the most ingenious lord *Bacon*, and *des Cartes*.

Isle of Ramma-nakoyel.

From *Tutecoryn* towards the isle of *Rammanakoyel* are to be seen divers churches of the *Paruas*, as at *Baipaar*, *Manapaar*, &c. where *Xaverius* planted the christian doctrine. The isle of *Rammanakoyel* abounds in cattle, having got its name from *Bramma* or *Ramma*, and the *Malabar* word *Koyel*, i. e. *The Temple of Ramma*; for near the sea-side is to be seen the pagode of the *Tewver*, or lord of the isle, which they say contains an incredible treasure. The foundation is strengthened and sup-

ported with stones of a vast bigness towards the sea-side, to break the force of the raging waves, when the south winds blow. The isle is however but indifferently fertile, being in some parts very sandy, which is very troublesome to the eyes when the winds blow very hard. The lord of the isle has built a strong castle opposite to the coast of *Coromandel*, and the country under the jurisdiction of the *Naike*. In the year 1662. I and lieutenant *Herman Egbertsz* travelling that way, were seized upon by the inhabitants, and committed prisoners, being forced to live without victuals or drink for a considerable time, till a certain inhabitant of *Manaar* coming that way, and knowing me, released us out of our captivity. The cannon of the castle commands a certain strait passage, which leading to *Manaar*, *Jafnapatnam*, and *Negapatnam*, the same may be stopped at pleasure by the lord of the isle, by sinking only a few stones in the channel, whereby the navigation that way is at his absolute disposal.

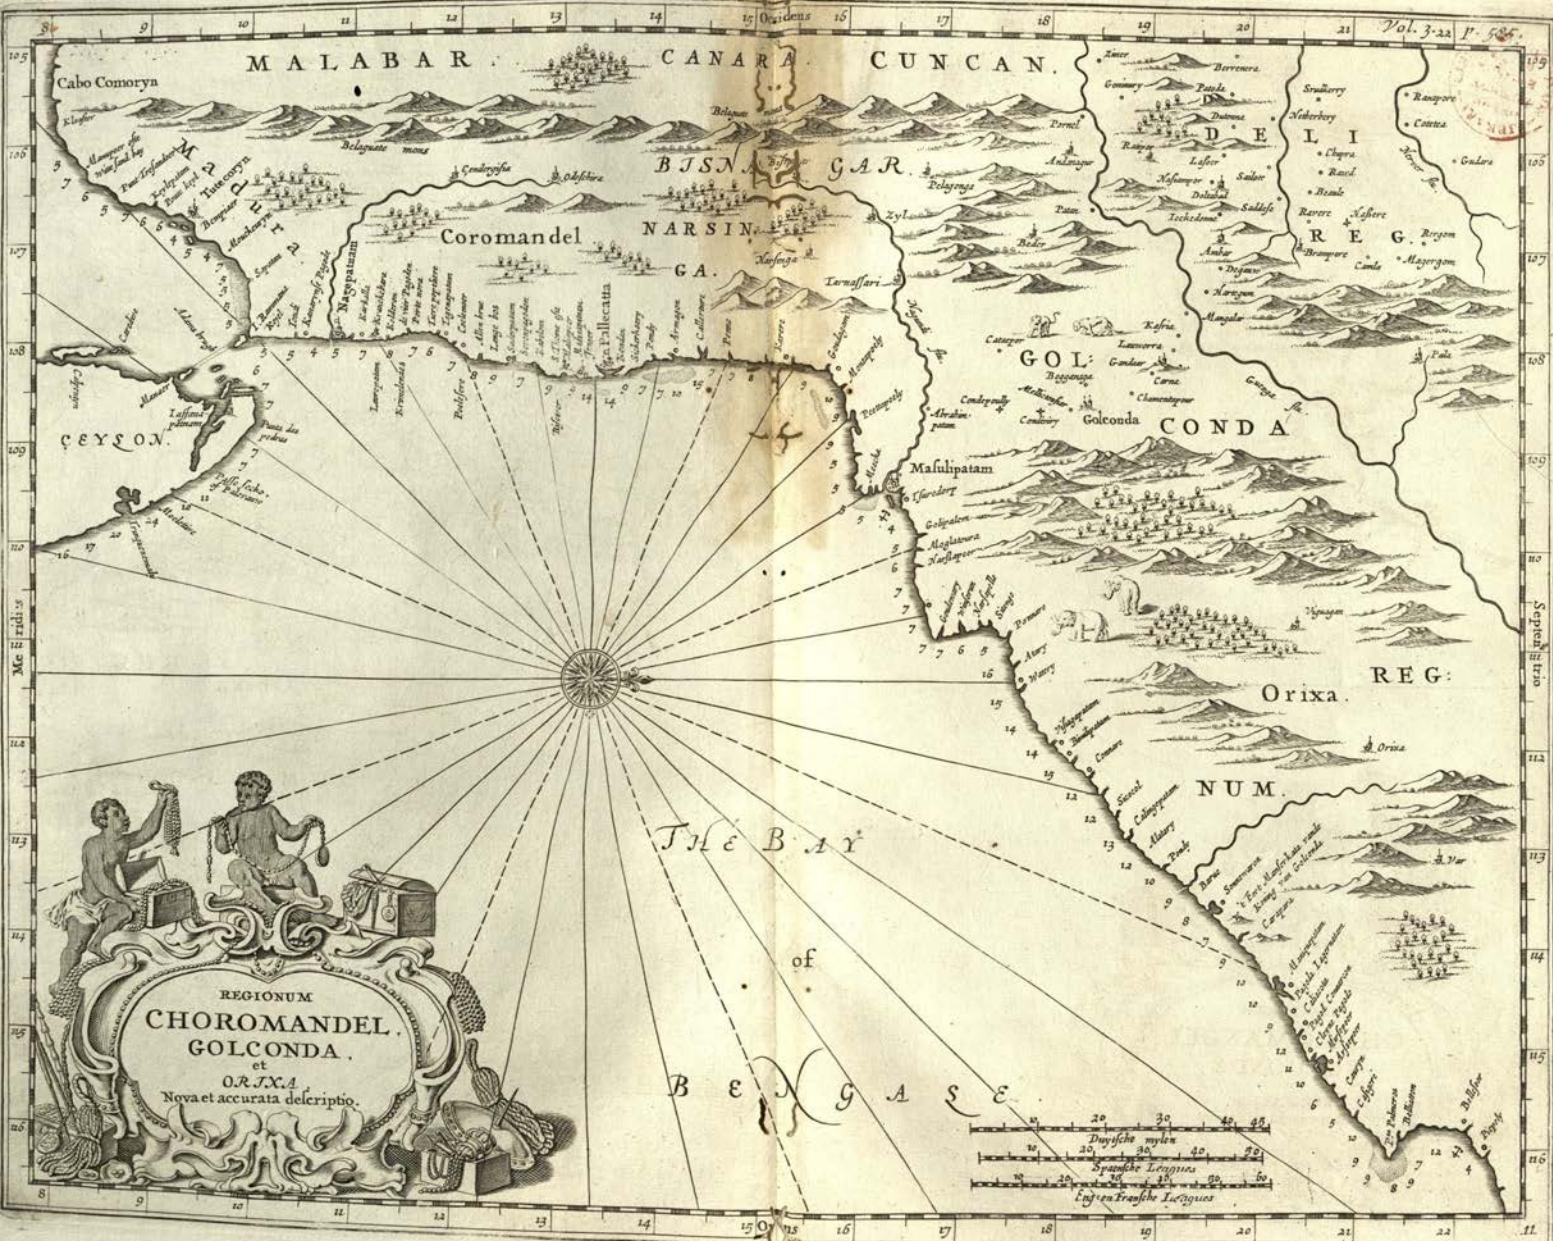

Strait passage under the castle of the isle.

Not far from hence is that they call *Adam's-Bridge*, being a ridge of sands and rocks extending as far as *Manaar*, being sometimes passable in small boats. In the description of *Ceylon*, we shall have occasion to speak something more of this *Adam's-Bridge*, and the *Adam's-Mount*. Certain it is, that the *Cingaleses*, as well as the *Siameses* have some knowledge of *Adam*; for the last shew you the print of a foot (said to belong to the first man) in a rocky mountain of a yard and an half in length, three quarters broad, and a quarter deep, edged round about with silver, near which is built a most magnificent temple, much frequented by the *Siamese* priests, and other inhabitants of the circumjacent country, it being their opinion, that the least drop of the water gathered in this print of the foot, and dropped upon their heads, cleanses them from their sins: for which reason they never use it without a great deal of reverence, no body daring to enter the temple without ten, twelve, or more wax candles lighted, according to their respective abilities; and when they return, they take some of this holy water along with them in bamboe-canes, for the use of their friends, that have not the opportunity of coming thither in person. The king himself goes once every year on pilgrimage, with all his *Mandarines*, (or great courtiers,) to this temple, where they use this water at the time of the full moon, and conclude the night with dancing and drinking. Some of the *Siamese* priests did, by special leave from his majesty, shew to certain *Hollanders*, 1654. in *March*, a plate of gold, of the same length and breadth as the before-mentioned *Adam's-Foot*, with sixty eight figures engraven upon it, which they

Adam's foot shewn by the Siameses.

NEGAPATAM.

Bynaußliche Weichn.

*Baldens.* they said were formerly to be seen in the print of Adam's foot in the rock; but vanished as soon as they were engraven in this plate, and were the following: *A queen*

*The figures in Adam's foot.*

*with a ring on her finger, divers roses, a chain, an arm, a bed of gold, a chair of the same metal, an elephant's tooth, a royal palace, a golden sword-belt, an umbrella, a royal banger or scymitar, a fan made of the leaves of the terry-tree, a fan made of a peacock's tail, a royal crown, a priest with his mendicant pot of iron, a chain of precious stones, a red coustip-flower, a double one of the same kind, a white one and a double white one of the same kind, a cup full of water, a pot full of water, the sea, the world, a forest beyond the world, the purgatory of the Siamese, the highest mountain of the world, the sun, the moon, the evening-star, the great God of the heavens, the god of the four winds, two thousand servants of the four winds, a sea-snail, two fishes of gold, the seven chief rivers, seven mountains with precious stones, seven royal ladies, the king of beasts, the king of the caimans or crocodiles, an ensign, another of paper, a chair or litter, a fan with a long handle, a mountain in an island, the king of serpents, the king of tygers, a leaping horse, a large elephant, a white one of the same kind, a water-serpent, a caluarius, (a bird like an ostrich,) the king of the white cows, an elephant with three heads and as many tails, a serpent, a ship of gold, an angel, a cow with a sucking calf, a certain bird, half a man and half a bird, a female of the same sort, a singing bird, the king of the peacocks, the king of the cranes, a bird called Krapat, a bird called Kuyhit, six heavens, sixteen sorts of heavens.*

Concerning all which the priests give you their interpretations. The before-mentioned *Adam's-Bridge* extends to *Tellemanaar*, the furthestmost point of the isle of *Mandaa*, of which more anon in the description of *Ceylon*.

We will now take our turn in the southern parts of *Coromandel*, subject for the most part to the *Naike* of *Madure* and *Tanjourwer*. *Tondy* is the first place next to the territories of *Jafnapatnam*; and I remember myself, that setting sail one morning, about eleven of the clock from *Jafnapatnam*, we were within sight of the shore by four in the afternoon, and the same night, at nine of the clock, cast anchor before *Negapatan*. From *Tondy* they transport yearly many hundred heads of cattle to *Jafnapatnam*; near the first stands a certain *Pagode*, called *Kailiemoer*, a very high structure, in the road to *Negapatan*, or *Negapatnam*, i. e. the *City of Serpents*, *Nega* signifying in the *Malabar* language a serpent, and *Patnam* a city; because the country hereabouts abounds with a certain sort of venomous serpents, called by the *Cobres Capellos*, which are in

*Tondy up on the coast of Coromandel.*

such reverence among the *Rajans*, that if *Rabban* they should happen to kill one of them, they will look upon it as an expiable crime, and to forebode some great misfortune.

This city was taken by composition, without striking a stroke, by *John van der Laan*, and *Lucas van der Duffen*, commanders of the *Dutch* forces, 1638. the last of the two being since made governor of *Cochin*, and the other forts on the *Malabar* coast, subject to the *Hollanders*. The *Portuguese* were permitted to depart with their goods, families, church-ornaments, &c. in certain ships appointed for that purpose by the *Dutch* company. The city is seated near the shore, has no convenient harbour, as indeed the whole coast of *Coromandel* is destitute of them; its buildings are very stately, especially the church, which affords a very goodly prospect towards the seaside; the land winds are excessive hot and stifling here, as on the other hand, the sea-winds are refreshing both to men and beasts. It is observable, that whilst the land-wind blows, they gather water in stone vessels, which keeps very cool; the worst is, that these winds prevent people from sweating, which makes the heat the more insupportable. The same is to be observed at *Mafuilipatan*, where they are so stifling, that many people are killed by them.

*The city of Negapatnam.*

*Mastered by the Dutch.*

In the year 1660. July the 14th, I set sail from *Jafnapatnam* to *Negapatnam*, to introduce the reformed religion there; and accordingly preached the first time the 18th, both in *Dutch* and *Portuguese*, and administered the holy sacrament to twenty persons, and baptism to several children. After *Mr. Frederick Frontenius* and myself had spent some time there in settling the protestant religion, *Mr. John Krusf*, formerly minister in the castle, called the *Sealandia* in the isle of *Tajowan*, was constituted minister at *Negapatnam*, who after his death was succeeded by *Mr. Naibaniel de Pape*, a person of indefatigable care, who in a very small time has made considerable advancements in the *Portuguese* and *Malabar* languages, who by the encouragement, and under the protection of *Mr. Cornelius Speelman*, governor of the coast of *Coromandel*, and famous for his late victories obtained against the *Macassars*, and the king of the isle of *Celebes*, has settled and spread the doctrine of the gospel in the circumjacent villages.

*The protestant religion introduced in Negapatnam.*

At the time of our first arrival, we found the affairs of *Negapatnam* in no small confusion; the city having been just before besieged by the *Naike*, who, after a vigorous fallie made by the besieged, had been forced to retreat with the loss of three or four hundred men. Besides this, the king of *Vistapour* had not long before the siege made

*Misery about Negapatnam.*

*Baldæus.* an inroad into the country, and by destroying all the fruits of the earth, and whatever else he met with, occasioned such a famine, that the poor country wretches being forced to fly to the city for want of rice and other eatables, you saw the streets covered with emaciated and half-starved persons, who offered themselves to slavery for a small quantity of bread; and you might have bought as many as you pleased at the rate of ten shillings a head; above five thousand of them were there bought and carried to *Jafnapatnam*, as many to Co-

*lumbo*, besides several thousands that were *Baldæus.* transported to *Batavia*.

In the year 1669. the *Naike* was again embroiled with the *Dutch* company; but being bravely repulsed, was glad to be at quiet. Without the gates, on the north-side of the city, stands a very lofty *Pagode*, called *Cbina*, near which is a summer-seat, with very pleasant gardens and orchards, formerly belonging to *Francisco d'Almeyda*, an antient rich *Portuguese*, now living at *Trangebar*.

## C H A P. XXIII.

*A Description of Carcal, Trangebar, Trinilivaas, Colderon, Porto Novo, Tegnatan, Tirepoplier, Chengier, Sadraspatan, Madraspatan, St. Thomas, Paliacatta, Carnatica, Penna, Caleture, Petapouli, and Mafulipatan.*

*Carcal.* TWO leagues from *Negapatan* lies *Carcal*, where, as well as in most other southern places, *Adrian van der Meyden*, head-factor of our company, did erect a factory some years ago; but since we have been masters of *Negapatan*, the factory of *Carcal* is not regarded. The chief commodities here are certain stuffs, especially those called rambotyns, much in request among the *Japonefe*.

*Trangebar.* From *Carcal* to the *Danish* fort, called *Trangebar*, are about three leagues: it has four bulworks, and the garrison consists for the most part of *Topasses* and *Negros*, under the command of one *Eskel Andres*. The inhabitants consist of *Portuguese*, *Pagans*, and *Mabometans*: their traffick is very inconsiderable, their chiefest advantage arising from the excursions they make upon the neighbouring *Mabometans*, with whom they are in constant enmity, by reason of the ill usage they have ever received from them. About two years before our departure thence, one *Simon van Medenblick* had got a commission from the *Danes*, and took a rich *Moorish* vessel, and killed the whole ship's crew. I have often wondered why the *Danes* should not more encourage their trade in the *Indies* than they do, since they have the same, or rather a better opportunity for so doing than the *English*.

*Colderon.* From *Trangebar* you go by the way of *Trinilivaas* to *Colderon*, where there is a very dangerous sand-bank. From thence you come to the place called the *Four Pagodes*, and so to *Porto Novo*, or *Newhaven*, about four or five leagues from *Trangebar*. *Porto Novo.* At *Porto Novo* inhabit some *Portuguese*: their trade consists chiefly in a certain hard

wood called *Hunter's-wood*, *Coco-nuts*, *Arek*, *Cair*, &c.

About a league from *Porto Novo* stands *Tegnapan.* *Tegnapan*, where the *Hollanders* have likewise a factory. Next to this lies *Tirepoplier*, upon a river which is navigable, *Tirepop-* within half a league of the *Dutch* factory. *lier.* The road lies at eleven degrees one fourth of northern latitude, having seventy seven fathom water, with a grey sandy ground, very fit for anchorage, not above a mile from the shore. There is safe riding at anchor here (as all along the coast of *Coromandel*) during the south *Mousson*, but very dangerous in the north *Mousson*. The castle of *Tirepoplier* is tolerably strong, according to the fashion of the *Gentives*. The factory formerly belonging to the *Dutch* was within the castle, where is also a stately large *Pagode*, with a high stone-tower flat at top, which serves the mariners for a guide. The mines of the old castle, belonging formerly to the *Portuguese*, upon an ascent near the sea-shore on the north-side of the river, are also seen a good way at sea. The country hereabouts is generally sandy, and sometimes rocky. *Tirepoplier* is under the jurisdiction of the *Cristappaneyk*, whose residence is at *Chengier*, about two days journey to the south of *Tirepoplier*.

The city of *Chengier* is very populous, *Chengier.* and three times as big as *Rotterdam*, seated in a most pleasant valley, near a delightful river, to the south of it: it is fortified with double stone-walls, and has four high rocks without, upon three of which are as many strong forts, and upon the fourth a *Pagode*. The first of these rocks is inclosed with a very strong wall, the second with four

PALACATTA  
or  
GESDRET

*Baldæus*. four walls, and the third with no less than seven, with as many gates all of stone, and kept by a considerable garrison; the ascents to the forts being cut out of the rock, and scarce accessible by reason of their steepness and straitness. On the top of these rocks are most delicious springs, fresh-water ponds, and gardens. Besides which there is another fortress upon an unaccessible rock without the city, commanding the avenues towards it on that side. The *Naike's* palace stands betwixt two of the before-mentioned rocks, most pleasantly situate, and well fortified. Great cannon are a kind of rarity here, and those few they have, (like those in the siege of *Negapatan*, 1658.) are made of long and broad bars of iron joined together with iron hoops; their bullets are of stone, and cut round.

The *Naike* was, at our first arrival in these parts, very obliging to our deputies, whom he treated very splendidly for fourteen days together: and after he had given them a full view of his prodigious wealth, consisting in most sumptuous apparel, silver, gold, and jewels, as also of his wives, concubines, and forces, both horse and foot, he dismiss'd them very honourably, upon the news of *Iteragio* being on his march against us.

The *Naike* being almost arrived to the age of dotage, one *Trinvingelaya* (who had emasculated himself) was administrator of the kingdom, a cruel and bloody-minded person, very covetous and implacable in his hatred, who, by his severity against criminals, had rendered the country free from robberies and pillages. This *Aya*, or administrator-general, was very urgent with our deputies to agree with him once for all for the yearly sum of one thousand eight hundred rixdollars in lieu of the customs, offering to us the government of *Tegnapatan*, the free exercise of the christian religion, and full power to rebuild the ruined castle of the *Portuguese*.

The country hereabouts abounds in rice, salt, fruits, and other eatables; notwithstanding which, by reason of the vast number of the inhabitants, they must be supply'd with provisions from abroad. Their chief commodities to be exported are linen and woollen stuffs, much in request among those of the *Moluques*, *Amboyna*, *Banda* and other *Malajan* places. But great care must be taken these stuffs agree with their patterns, especially in the goodness of the colour, wherein they are very deceitful. The commodities imported and exchanged here, are nutmegs, mace, pepper, sandalwood, *Chinese* silks, velvets, sattins, embroidered and wrought carpets of all sorts of colours, raw silks, *Patana* girdles, musk, cinnabar, quicksilver, (but no porcellain

or *Chinese* camphire,) brazain, tin, lead, *Baldæus*: copper, &c.

From *Tirepoplier* you go over *Poelezere*, *Poelemer*, and *Alembuc*, to *Sadrâspatan*, *Sadrâspatan* where the *Dutch* have a factory, and from thence to *Madraspatan*, otherwise *Cbinne-Madraspatan*, where the *English* have the fort of *St. George*, garrisoned with *Topatzes* and *Mistices*; and from whence they send their ships every year, as well as from *Surat*. *St. Thomas* is a city belonging to the *Portuguese*; *S. Thomas*; situate in *Maliapour*, at twenty three degrees one half northern latitude, about a days journey from *Paliacatta*; but taken from them about eight or nine years ago by the *Moors*. It is an ancient trading city, their chief traffick consisting in coloured stuffs, their weavers here being famous throughout the *Indies*, as well as their dyers: they are transported to *Malaga*, *Java*, the *Moluques*, *Siam*, *Pegu*, &c. The excellency and lastingness of their dying are attributed to a peculiar quality in their water, the springs whereof arise out of very white sandy ground, without the least mixture of clay.

*Paliacatta*, i. e. the *Old Fort* in the *Malabar* language, is seated at thirteen degrees twenty two minutes of northern latitude, five long leagues from *St. Thomas*. About six leagues into the country, in a direct line from the harbour of *Paliacatta*, you see a ridge of high mountains extending from south to north; on the southern part you see an interstice or valley, where in ancient time stood the castle of *Rama Geridorgon*; in lieu whereof was afterwards built the fort *Geldria*, where the *Dutch* governor keeps his residence. It is not very large, yet fortified with some bulworks, sufficient to resist the power of the neighbouring *Moors*. Mr. *Anthony Pavilion*, counsellor of the *Indies*, had at that time his residence there as governor, after Mr. *Cornelius Speelman*; and the garrison consisted of about eighty or ninety men. The road is very good at half a league from the shore, where you may ride safely at anchor at seven or eight fathom depth during the southern *Mousson*; but not in the northern *Mousson*, when the waves breaking forth with great violence out of the bay of *Bengale* and the *Ganges* against this shore, render anchorage very dangerous.

About three leagues and a half from the road is a certain sand-bank, extending from the river into the sea for a league together, where there is no anchorage within four and a half, or five fathoms water. Two leagues to the north is the point of *Sicerecourdi*; from whence jets out into the sea a sand-ridge for above two leagues and a half, near which there is no safe anchorage within six and a half

*Baldaus*. half or seven fathoms water. Near the bar there is from six to ten fathoms water in the south *Mousson* at high tide; but the boats or lighters that carry the merchandizes must keep under the southern shore, there being abundance of shelves under the northern shore. About a good cannon-shot within the mouth of the river, within reach of the castle is a good winter-road for the *Indian* ships. This river lies at least five leagues to the north-west into the country, by the city of *Armagon* and the forest of *Sicerecourdi*; from whence *Paliacatta* is furnished with wood for building and fuel, whereof there is great scarcity in the barren grounds round that city. A small brook runs also by the fort, where we used often to divert ourselves in boats.

The canal leading to *Paliacatta* is almost dry during the south *Mousson*; but overflows the country for two leagues round in the northern *Mousson*. The grounds about *Paliacatta* are very nitrous, sandy, and unfit to produce any thing in great quantity; which is the reason that they must be supply'd with most sorts of provisions (except fish, whereof they have plenty) from other places. The fortifications being built upon fenny grounds, which reach for four or five leagues round, have been often in danger of being swallowed up by the waters in the rainy season, and were therefore not maintained without vast charges. Under the cannon of the fort of *Geldria* lie two villages, one to the south, called *Diramanzy*, built upon a small isle, the other on the north-side within reach of a musket, called *Coupen*, and inhabited by christian fishermen, being converted to the christian faith in the time of the *Portuguese*.

We will now proceed to the kingdom of *Carnatica*, extending sixty *Badagarian* leagues (one whereof is equivalent to three *Dutch* miles) from south to north, and forty from *Paliacatta* to the coast of *Malabar*. In this country it was that the three *Naikes*, or chief lords of the crown of *Nelour*, keep their residence, who pay a certain yearly tribute to that crown, viz. the vitipanaïke of *Madure*, the king's bason-bearer, two hundred pagodes (each of which is worth six *Holland* guilders) *per annum*; the christapanaike of *Chengier*, the king's betel box-bearer, as many; and the naike of *Tanjouwer*, his umbrella-bearer, (who is lord of *Negapatan*,) four hundred *per annum*. These dignities being hereditary time out of mind, the countries of *Mardere*, *Chengier*, and *Tanjouwer* have been annexed to them, under condition of a yearly tribute, and are besides this obliged to give their personal attendance at the coronation of the lawful successor of the before-mentioned kingdom.

Further to the north (about a day's *Baldaus* voyage) from *Paliacatta*, lie *Penna* and *Caleture*, betwixt which places is found the best essaye-roots, which are also to be found in the isles near *Jafnapatan*: it is a small root no bigger than a little sprig of about a span in length, used by the dyers. The way to try its goodness, is to break it to pieces, and to see whether it be very red within, or else to chew a piece of it; and if you perceive a nitrous taste in it, it is very good. To try the true dye thereof upon callicoe's, you may squeeze some lemmon juice upon it, and let it dry in the sun; if it be not true it will change pale. There is also a five-cornered fruit, called carunbolle, the juice whereof being sharper than that of lemmons, is likewise made use of in trying the true dye of the essaye-colour. For this nation being very cunning in their way of dealing, oftentimes make use of a dye called *sordaco* instead of the essaye, and of the bark of a certain tree growing in *Orixa*; but may easily be distinguished by the colour, being somewhat darker than the true essaye, and if rubbed with water, will tinge it. They have a nice way of refining and trying the gold here; and the *Dutch* company coin abundance of golden pagodes here, with the king's stamp upon them. Abundance of nely, rice, gingely-seeds, oil, butter, coarse cloths, iron, honey, and yellow wax, is brought hither from *Orixa* and *Masulipatan*, the whole voyage thither and back again being commonly performed in four months. From hence to *Arracan*, *Pegu*, and *Tanassery*, you pay eight or ten *per cent.* for freight of pepper, sandalwood, stuffs, steel, and iron, and make your returns in gold, rubies of *Asia*, gummi-lacca, long white-pepper, lead, &c. Betwixt *Tanassery* and *Orceda*, towards *Malacca*, are the harbours of *Tamangan*, *Sencaza*, and *Perach*, opposite to *Achem*, whither they trade with vast profit, and bring back abundance of tin, a commodity much in request with the *Moors*, wherewith they tin their copper vessels.

*Petapouli* is situate at sixteen degrees of north latitude; as you sail east-and-east to the north towards this road, you see an isle at a league and a half distance, made by the north branch of the river covered with coco-trees, an infallible guide to the road, where at a league's distance from the shore, there is good anchorage at six fathom water in a sandy bottom. This is the securest harbour on all this coast during the north *Mousson*, by reason of a point of land jetting out for three leagues in the sea to the north of the isle, and enclosing as it were the road by a demi-circle; whereas in the south *Mousson*, the sea is very boisterous, and the waves very turbulent here.

The

The kingdom of Carnatica.

The three Naikes.

# The City of MASULIPATAM.

*Baldæus.* The bar of *Petapouli* has some shallows scarce passable but by small vessels. The city lies a league within the river, which is pretty large, and runs up into the country till it joins its waters with the river *Meca*.

*Petapouli* is of no great extent, inhabited by some *Moors* and *Persians* of note; but for the most part by *Gentives*, subjects of the king of *Golgonda*. As hereabouts grows a kind of essaye-colour, exceeding all the rest, called *Tambrevelle*, so the painted and dyed stuffs of *Petapouli* exceed even those of *Masulipatan*. The root grows like a small sprig of a foot long, the colour whereof is so deep that they are obliged to mix it with the essaye of *Arrical* and *Ortacour*, to make it the more lively. This essaye-root grows in the isle made by the river over-against the city, whereof the governor has the monopoly, and pays a certain yearly sum for it to the king; which, as it is paid most commonly in dyed stuffs and cloths, so he employs the weavers himself; and for that reason will not easily permit them to be sold to the merchants, (at least not without his consent,) who transport them from thence into *Persia*. Here good indigo is to be bought, but much dearer than at *Masulipatan*: from hence we also transport cotton-yarn, white stuffs, and several other commodities to *Holland*.

*Masulipatan.*

*Masulipatan* is a city seated near a large river, where the *English* and *Dutch* have their factories. It is very populous, and the residence of a governor, who pays a certain yearly tribute to the king of *Gol-*

*condar*, which he squeezes out of the inhabitants, especially the *Gentives*, who are forely oppressed by the *Persians* and *Moors* here, who farm all the weaving trade from the great persons; wherefore there is scarce any trafficking here with profit, unless you have a patent from the king, which is not easy to be obtained, because the governors (who pay one hundred and forty thousand pagodes of annual tribute to the king) constantly oppose it; and it is a difficult matter to approach the king (who keeps his court at a great distance thence,) without purchasing their favour, or some other great mens at court. For the rest, this city is a place of great traffick, where most of our commodities, as also those transported hither from the *Molucca's*, *China*, &c. are sold at a very good rate. Here is also a great concourse of merchants from *Cambaja*, *Suratte*, and other places under the jurisdiction of the *Great Mogul*, as also from *Goa*, *Orixa*, *Bengale*, and *Pegu*. Here is likewise a considerable traffick in diamonds and rubies: the first are digged in the kingdoms of *Golgonda* and *Decam*, near the city of *Bysilaga* beyond *Suratte*, each stone weighing above twenty five mangelies or carats, belonging to the king of *Bysilaga*, the rest to those that have farmed the mines. There is a certain mountain, called *Cotfa Vuyttbia*, in the country of *Decam*, which affords the choicest diamonds. *Borneo*, but especially the city of *Succadana*, are likewise very famous for diamonds.

CHAP. XXIV.

An Account of most Sorts of precious Stones, as Diamonds, Rubies, Smaragds, Saphirs, Amethists, Jaspers, Sardonicks, Agates, Granates, &c.

*The diamond.*

THE most noble of all precious stones is the diamond, called *Adâmas* by the *Greeks*, from *adâmas*  $\Theta$ , i. e. *impregnable*. *Pliny*, and others of the antient naturalists, being of opinion, that it is neither to be broken by the force of the hammer, nor penetrable by the violence of the fire; which however has since been sufficiently contradicted by experience, though the same is several times used in the same sense in the scripture.\* It is likewise called *Adamas* by the *Latins*, *Deamant* by the *Germans*, *Adamanto* by the *Spaniards*, *Almaes* by the *Arabians*, *Jutan* by the *Malajars*, and *Hiera* and *Jua* by the *Indosthans*. The beauty of a diamond consists in its hardness, transparency, and lustre; though to speak the truth, there are but few diamonds without some defects, which however pass current among

those who are no nice judges of it. Lead is reckon'd to be exactly three times as heavy as a polished diamond.

There is a certain kind of diamonds, called *Boschiers*, which are not by a third part so valuable as the rest, though sometimes they exceed for brightness all the other sorts; but if they incline to a reddish or yellow colour, they are not worth half so much, they being only valued according to the weight of the carats, without any multiplication. To try the goodness of a diamond you must cut one diamond with another; and if the powder thereof be of an ash-colour, it is right; but if white, otherwise; for all other precious stones except the diamond afford a white powder; and the more the powder of the diamond approaches to a grey, the more precious

*The goodness and value of the diamonds.*

\* Zech. vii. 12. Ezek. xlii. 9. Isa. xxxii. 13. Jer. vii. 1.

*Baldæus.* it is. They have another way of trying the diamonds, by making them red hot, and afterwards quenching them in cold fresh water; and if they do not crack, they are true and good. The true value of the best diamonds (provided they are clean, and of a just thickness) is computed thus: The just value of a good diamond, weighing a carat, (each whereof is equivalent to four grains,) is eighty gilders, or thirty two rix-dollars. Now to know the just value of one or two carats, you must multiply two with two, the product whereof being four, this must be multiplied with the value of a diamond of one carat, viz. eighty gilders, the product whereof amounts to three hundred and twenty gilders; so that according to this computation, a diamond of twenty carats is worth thirty two thousand gilders; and, according to the same proportion, one of an hundred carats, no less than eight hundred thousand gilders.

*The ruby.* The ruby, called *Rubinus*, or *Carbunculus* by the *Latins*, *Mamwikam* by the *Malayans*, *Battamora* by the *Siamese*, and *Laal* by the *Indosthans*: it will endure the fire for a considerable time. There are three several sorts of rubies; some are of a high-red and brilliant colour: those of a dark-red colour, though they carry a very fine lustre, yet are not so much valued as the former. The oriental rubies are called *Espinelles*; those of *Germany* are very hard, but inclining to a dark-brown, and therefore of less value, notwithstanding which they are true rubies. They seldom exceed the bigness of a good pea, and are very thin, and the stone-polishers make them thinner still, to increase their lustre. The *Espinelles* are of much brighter colour, but not so hard, and consequently of less or more value, in proportion to their hardness, some being as hard as a saphir.

*Their different kinds, daracha, but these false colours are soon discovered in the corners of the polished stones, which do not receive these colours. The oriental carbuncles are likewise of two different kinds; some are of a dark-brown colour, the others are bright, and carry lustre like fire; and these are the most precious. The rubies are appraised like the diamonds by carats, one, two, three, or more; with this difference, that the rubies, though of the same weight, are somewhat bigger in proportion than the diamonds, and without the least clouds, or other defects.*

*The emerald.* The smaragd, or emerald, called *Tamarul* by the *Arabians*, and *Fasche* by the *Indians*, is one of the precious stones, called *Σμαράγδος* by the *Greeks*, and *Esmarande* by the *French*. They are of three different kinds. *Scythia* and *Egypt* produce these

stones, as well as the *East Indies*. They endeavour to imitate them at *Paliacatta* and *Bisnagar* in glass. Those of *Scythia* are accounted the best; those of *Peru* are the next in goodness, of a dark-green colour, very hard, and more transparent than those of the *East Indies*. These last are harder than those of *Peru*, but much less regarded. Those of *Peru* are of a pale colour, and brittle. The general opinion is, That in case an emerald should be found excellent in all its parts, viz. in colour, shape, and transparency, it would be comparable to a diamond of the same bigness, nay, would even surpass it in value, by reason of its rarity.

The saphir is called *Mila* by the *Arabians*, and *Millam* by the *Malayans*. They are of two sorts: those of a dark-blue colour are the best; those of a pale colour resembling the diamonds, the worst. They are found in *Malabar*, *Calecut*, *Cananor*, in the kingdom of *Bisnagar*, in the isle of *Ceylon*; but *Siam* and *Pegu* produce the best.

The hyacinth, called *ῥάκινθος* by the *Greeks*, is a red stone, not unlike the carbuncle, but does not endure the fire. It is found in *Spain*. The jewellers sell sometimes the stone called *Ethiopsis* for a hyacinth: they are of two kinds; one red, the other inclining to a yellow.

The amethyst, called *ἀμέθυστος* by the *Greeks*, is of a purple colour; those that are found in the *East Indies* are preferred before the rest.

The *Jaspir*, so called by the *Latins*, and *ἰάσπις* by the *Greeks*, is of two different kinds; some being of a lovely green colour, like the emeralds, and of such a bigness, as to serve for materials for drinking-cups; some have the green mixed with white; some are of purple, others of a rose colour, with variety of flowers in them; others are dark-brown and blew, with white veins; some are marble on one, and jasper on the other side.

The sardis has got its name from *Sardia*, where it is frequently found, as well as in *Epirus*. There are three several kinds, and were by the antients distinguished into the male and female. That the sardis is different from the sardonick, is evident out of the holy scripture.\*

The *Sardonick*, called *Σαρδόνικος* by the *Greeks*, has got its name from *Sarda* and *Onyx*, or its resemblance to a human navel.

The *Agate* is found about *Suratte*, but is of no great value, unless it be curiously chequered with figures.

*Amber*, called *Succinum* by the *Latins*, *ἄμβρα* by the *Greeks*, and *Alambre* by the *Portugueses*, is a kind of a gum or resinous substance, found near *Koningsberg*, and some other places in *Prussia*; in great esteem among

*Their value.*

20. The sardonick.

The agate.

Amber.

*Baldæus.* and *September*, the ordinary rainy months here, which, together with the heat of the sun-beams, brings it to maturity, it being certain, that too much rain is pernicious to this shrub. Great care is to be taken that the grounds be well cleared from thorns and thistles. The buyers of indigo ought to be cautious how they buy it; for if it happen to be not very dry, they may lose three pound weight in ten in eight days time.

*The Indigo Laura.* The *Indigo Laura*, or *Indigo de Bayana*, is of three different sorts; the first crop is called *Voutby* by those of *Gufuratte*, the second *Gerry*, and the third *Catteel*. The first is cut in *October*, the second about the middle of *November*, and the third in *January*. The first is of a light blue colour, and held against the sun, and squeezed with the nail of the thumb, shews a violet colour. The second, called *Gerry*, the nearer it approaches to a violet colour, the more valuable it is. The third, called *Catteel*, is the worst of all, of a ruddy colour, and so hard as scarce to be broken to pieces.

*Tryal of the Indigo.* The goodness of the indigo is tried in the following manner; about nine or ten a-clock, in a clear sun-shiny morning, they take a piece or two, and after they have broken it in pieces, hold it against the sun, to see whether they can discover any sand in it: they also squeeze with their nails some of the colour out, which the nearer it comes to a violet, the better it is. They also try

it with water and fire: They throw a piece of indigo forty or fifty times successively into a cask filled with water; and the longer it swims upon the surface, the better it is deemed. They also cast a piece of indigo upon burning coals; and if the smoke or flame appear of a high violet colour, the indigo is good.

It is sowed in several places: the *Indigo Laura* about *Agra*; in *Fettapour*, twelve *Cos* from *Agra*; near the city of *Byana*, thirty *Cos* from *Agra*, (where is the best;) near the city of *Bassaune*, thirty eight *Cos* from *Agra*; near the city of *Kindowen*, forty *Cos* from *Agra*. The country people are obliged to carry their indigo into the next adjacent city.

Next to *Masulipatan* we must also say something of *Bimilipatan*, where the *Dutch* have had a factory a considerable time ago; and from thence, as well as most other parts of *Orisa*, transport abundance of rice, pease, and other provisions, into other parts. The whole country hereabouts enjoys a wholesome air, though in one place more than in the other: for though the heats are excessive, nay, almost intolerable, yet are the same in a great measure qualified by the cool sea-winds; so that the reason of the many distempers and pale countenances, which often attend the *Europeans* in those parts, is not so much to be attributed to the unhappiness of the climate, as to their own intemperance and debaucheries.

CHAP. XXV.

*The Manner of Living of the Hollanders in the East Indies: Their Use of Tea and Chocolate: Their ordinary Drink; Manner of Sleeping. A Description of the two Rivers, the Ganges and the Nile.*

*Manner of living of the Dutch.* AS the manner of living of the vulgar sort among the *Dutch* in the *East Indies* is none of the best, so we will be satisfied with giving an account of those of the better sort. They commonly rise with the sun, sleep after sun-rising being accounted very unwholesome here in the morning. Some have a custom of washing their heads, nay, the whole body with cold water, immediately after their coming out of bed; others do it with lake-warm water, three or four times a-week; the last of which I have found the best by experience. They commonly shift their linnen every day. Brandy, or any other strong liquors are not much used by the wiser sort in the morning, unless it be a spoonful just before dinner, and a little at night before they go to bed.

*The use of tea.* The tea (always used fasting by the *Chinese*) has got a mighty ascendant over the *Hollanders* of late years. The best grows in *China*, being a shrub, rising not very high

above-ground, especially in the province of *Kiangnan*, near the city of *Hocichieu*: the leaves are dried, rolled up, and preserved for use. Father *Martinus Martini*, in his *Chinese Atlas*, gives us the following account of the tea. The leaves are very like those of the *Rhus Coriaria*, called *Sumach* by the *Arabians*, and *ῥῖς* by the *Greeks*, of which it seems to be a species, though it does not grow wild, but is planted, being a shrub with small twigs. In the beginning of the summer it buds out a light-coloured blossom of an agreeable scent; after which come green buds that turn black at last. They take a leaf, and after they have warmed it in an iron pot with a gentle heat, they lay it upon a clean mat; and having well rolled it, put it again over the fire, till it be thoroughly dried, and twisted together; when they put it up in tin or leaden vessels, to preserve it from the moist air, which would soon corrupt it. The tea being of different sorts,

*Baldæus*, consequently bears a lower or higher price, according to its goodness. Its chief virtues are to disperse the gross vapours of the head and stomach, and consequently to exhilarate our spirits. The *Chineses*, as they are never troubled with the gout; so they attribute the same to the tea; and *Kircher* ascribes to it a diuretick quality. Its taste is somewhat bitterish, and not very agreeable at first; but well enough afterwards. The *Turks* tell us wonders of their *Cauwa*, or coffee, and the *Spaniards* of their chocolate; but it has been found by experience, that the first increases the gall, and the last inflames the blood; and nourishes too fast; whereas the tea is much more moderate in its nature; notwithstanding which its immoderate use hinders the concoction of the stomach, (especially if taken after dinner,) and too much dries up the moistures of the body; which is the reason the *Chineses* never take it after meals. The *Chinese* tea is, both in goodness and price, much superior to the *Japonesse*. I have found by experience that four or five cups of the extraction of the fresh leaves of the tea makes one light-headed; and I remember, when the best tea was sold at the rate of twenty four gilders per pound in *Holland*.

The ordinary drink of the *Hollanders* is a mixture of water and sugar boiled together. Some fill certain earthen vessels overnight with water, and add to it three or four glasses of *Spanish* wine, which, exposed together all night in the dew, turns white, and affords a pleasant liquor: but is a little too cool; for which reason some put a certain quantity of mum in the vessel. The *Brunswick* mum is both more pleasant and wholesome here than in *Europe*; the worst is, that it is excessive dear, a cask being sometimes sold from forty to one hundred rix-dollars. Among the wines, those of *Spain* are most in request: its true, they sometimes inflame the gall; but against that they make use of *Rubarb* and *Cremor* of *Tartar*. The *French* and *Rhenish* wines are not strong enough in these hot countries, where the stomach requires more lively cordials, as a little brandy, or a moderate share of canary. Their ordinary food is goats, sheep, fowl, hares, peacocks, and such like.

The *Hollanders* most generally take their afternoons sleep here, as the *Italians* and some other *Europeans* do in hot countries; a thing sufficiently commendable in the *Indies*, where the heat of the sun beams invites the inhabitants to pass away the middle of the day (when they are unfit for business) at their ease. They have also a constant custom of washing their mouths after dinner. About three or four a clock in the afternoon they take their tea, and after that a walk; the evenings and nights being pretty cool and very pleasant here, especially when the moon shines. They

sup commonly about seven or eight a clock, *Baldæus*: but very moderately, and go to sleep about ten or eleven upon quilts, feather-beds being not used in the *Indies*: but care must be taken to cover well your belly, hips and legs, for fear of the cramp, especially if you lie exposed to the open air in moon-shiny nights, the neglect of which often proves fatal to the soldiers and seamen, after they have heated themselves with arrak, or other strong liquors.

Thus much of the manner of living of the *Hollanders* in the *East-Indies*: concerning the different clans or families of the *Indians*, the manner of living; austerity and prerogatives of the *Brabmans*, their *Vedam* fasts, marriages, feasts, burials, Mr. *Abraham Rogerius* has given so exact an account, that it would be needless to repeat them here. The foundation, strength, and magnificence of their *Pagodés*, especially of those dedicated to *Wishnou* and *Eswara*, with their revenues and idols, are likewise most exactly described by the same author: and among other things, that their *Pagodés* have no other light but what they receive through a hole on the top; that they are divided into three several vaults, supported by stone pillars; the first whereof stands open to all goers and comers; the second has two strong doors, which are kept open in the day-time, and guarded by a certain number of *Brabmans*; the third part is always kept close, being the residence of the idol, before which hang lamps, which never cease to burn. But of the religious worship of the inhabitants of *Coromandel*, *Malabar*, and *Ceylon*, we shall treat more at large in the third part of this treatise.

And since we have had occasion to speak so much of the places between the rivers *Indus* and *Ganges*, commonly known by the name of *India* on this side the *Ganges*, we must also say something concerning these two rivers. The *Ganges* exonerates it self into the sea of *Bengale*, called otherwise *Sinus Gangeticus* and *Sinus Argaricus* by *Ptolemy*, dividing the most easterly part of the *Indies* from the western parts; the first whereof comprehend *Bengale*, *Aracan*, *Pegu*, *Malacca*, *Sumatra*, &c. According to the opinion of *St. Austin*, *St. Jerom*, *Ambrose*, and many others of the ancient fathers, the *Ganges* is the same which is in the holy scripture called *Pison*; but *Cornelius a Lapide* has sufficiently demonstrated that *Pison* cannot be the river *Ganges*, no more than *Gibon* the *Nilus*. The general opinion is, That the source of the *Ganges* is in the mount *Caucasus*, as those of the *Euphrates* and *Tigris* are in the *Armenian* mountains; and that of the *Nile* among the *Mountains of the Moon*, near the cape of *Good Hope*, on the *African* coast; though father *Kircher* puts the original rise of the *Nile* in the country of *Agæos* near *Sagetz*

Feather-beds not use in the Indies.

What sort of drink is most proper for the Indies.

The river Ganges.

*Baldæus*. *Sagela*, bordering upon the kingdom of *Gojam*. The source arises in a plain on the very top of the mountain, surrounded with delightful trees; but does not gather into a rivulet till at the foot of the said mountain; and being augmented by the accession of divers other brooks, gathers into a lake of thirty leagues in length, and fourteen in breadth. From hence it pursues its course, and by various turnings and windings returns near the place of its source, whence passing through the rocks and precipices, it continues its course into the middle of *Ethiopia*. \* *Isaac Vossius* derives the rise of the *Nile* out of *Goyome*, a province of the *Abyssines*, and says, that among other titles that king makes use of this, *King of Goyome, where the Nile has its rise*. The ancient *Egyptians* had so great a veneration for the *Nile*, that they bestowed the title of the arm of *Osiris* upon it: for as the pagans numbered the rest of the elements among the gods, so they had no less opinion of the waters, especially in the great rivers. Hence it is that the inhabitants near the *Ganges* call it the heavenly river; and are of opinion, that the waters of that river cleanse them from their sins; nay, those of *Bengale* are so superstitious in this point, as to carry their sick and dying friends to this river, where they lay them up to the middle in water: and for such as have no opportunity or strength to be carry'd thither, they are persuaded, that if they wash themselves with any other water, and at the same time think upon the said river, saying, *Ganges, purify me*, they shall be cleansed from their sins. † *Servius* observes, that it was the general opinion of the heathens, that the water would cleanse them from their sins: which seems to agree with what is related of *Pilate* \*, and of the *Pharisees* and *Jews* in general. The *Mabometans* are, to this day, not free from that superstition; the water of the *Ganges* being sold among them in bottles at a very good price, as we do our spaw-waters; and they pay a considerable custom for it.

\* L. ii. c. 7. *Egyptii habent O- fia Nili Ethiopes autem ejus montes.*

† Annot. in lib. vi. *Ercid.*

\* Mat. xxvii. 24. xxv. 26. Mark. vii. 3.

Hence it is, that the *Persians* look upon it as a crime to do one's need into the river, or to throw carrion into it, nay, even to spit into it; and that they have attributed such

surprising qualities to the waters of many rivers. When the water of the *Nile* is carried, in order to be sacrificed upon the altar, the people pay their reverence to the vessel that contains it, by prostrating themselves upon the ground in the same manner as the *Malabars* do to the water of *Rameswara*, near the *Pagode*, called *Ramanakoyel*, to which they attribute likewise a peculiar virtue of purging them from their sins.

*Kircher* puts the source of the river *Ganges* in the mount *Thebeth*, where, he says, is a large sea, whence arise the four capital rivers of *India*, viz. the *Indus*, *Ganges*, *Ravi*, and *Atbec*. The *Indian* pagans deduce its origin from *Dewendre*, or the heavens; from whence it descends into the *Dewendre Locon*, or sublunary world; and thence into the earth, as may be seen in the before-said *Abraham Rogerius*. They farther believe, that if they cast the bones of their deceased friends into the *Ganges*, their souls will enjoy the bliss of *Dewendre* for as many thousand years as the bones remain single years in that river; it being their opinion, That though this water has not the power to introduce them to future bliss, yet it is a guide to heaven through the seven sublunary worlds, which they believe every one must pass through before he can enter the heavens. They have each its proper name, but are comprehended under one general name, viz. *Dewendre Locon*; and among them, that of *Bramma Locon*, or the place where *Bramma* governs, is next to heaven; and none are suffered to enter there, except such as are passed from heaven to the earth; and thence again through the before-mentioned sublunary worlds. It is beyond all doubt, that many, both among the *Jews* and *Gentiles*, have assigned certain places for the souls to dwell in, besides heaven and hell; in which they are imitated by the purgatory-mongers, and such as believe a separate place for the antient fathers and innocent children.

Before the river *Ganges* puts a stop to our voyage, and the description of the places mentioned in this treatise, we must add something concerning the *Malabar* language.

A S H O R T  
 I N T R O D U C T I O N  
 T O T H E  
 M A L A B A R Language.

*Baldæus.* **T**HE *Malabars* write upon the leaves of the wild palm-trees with iron pencils; their letters are very ancient, and distinguished into, (1.) *Short or running letters*; (2.) *Long ones*; (3.) *Vowels*; (4.) *Consonants*; (5.) *Diphthongs*; (6.) *Letters used only in the beginning of a word*; (7.) *Such as are used only in the middle*; and (8.) *Such as are used only in the end*; as will more clearly appear out of the annexed cuts. And seeing that the *Malabar* letters have hitherto not appeared in publick print, either in *Holland* or *Germany*, it will not be amiss to alledge the reasons thereof, and to shew that this language is no less worth our care now-a-days, than the *Hebrew*, *Chaldean*, *Arabian*, *Persian*, *Samaritan*, and other languages.

The main reason why the *Malabar* language has remained so long unknown to us, is, because that country was not conquered by the *Dutch* company till in the years 1661, 1662, 1663. from the *Portuguese*; and it is not their custom to send any ministers into those places, where they are not sovereign masters. 'Tis true, I assisted at the sieges of *Coulang*, *Cranganor*, *Cochin*, &c. and, 1658. at the sieges of *Tutecoryn*, *Manaar*, *Jasnapatnam*, and *Negapatan*; but was immediately after ordered to *Psepbina* in the kingdom of *Jasnapatnam*, where I had the oversight over twenty four churches. During the space of near four years, that I staid here alone, I was sensible what obstacle the ignorance of the native language was to my good intentions; for though many of the christians here were well enough versed in the *Dutch* and *Portuguese* languages, yet some belonging to the more remote churches, who had been but slenderly instructed in the principles of the christian religion by the *Roman*

missionaries were strangely at a loss till I *Baldæus.* got a good interpreter, who being well skilled, both in his mother-tongue, the *Malabar*, and the *Portuguese* languages, did me great services for eight years together. His name was *Francis*; and it was chiefly with his assistance; that the fundamental points of our religion, being comprehended in a small treatise, were translated out of the *Portuguese* into the *Malabar* language, which has been since printed, 1671. at *Rotterdam*, by *John Borstius*. The multiplicity of business in so weighty a concern as the salvation of souls, having been no small hindrance in encompassing so difficult a language as the *Malabar*, I was forced to be contented with what part thereof I could attain, and those few intervals of time I had left, whereof I have given some specimens in the following pages and cuts. I cannot upon this occasion pass by in silence the considerations which might induce us to propagate the *Malabar* language with more care, than has been done hitherto; it being certain, that if our religious worship could be firmly established in those parts, (whereof the knowledge of the language is one of the chief means,) it would be very instrumental to reconcile not only many of the inhabitants, but also even of the *Indian* princes themselves to our interest; a piece of policy well understood by *Emanuel* king of *Portugal*, when he introduced the *Roman* catholic religion by the help of the jesuits in the *Indies*.

*I rest your Servant and Friend in  
 Jesus Christ,*

*Geervliet, July 21.  
 1671.*

PHILIP BALDÆUS.

# A Short Orthography of the MALABAR LANGUAGE.

The Malabars Commonly write upon the Leaves of Palm trees, with Iron Pencils, Their Letters are distinguished thus (1) some are accounted short (2) others long. (3) some are Vowels which they call Letters of life, because they give life to the Consonants. (4) some Consonants which they call Deadly letters, because the vowels are their sound and life. (5) others they call Mixed Letters, the same with our Diphthongs, composed of two Vowels, (6) some are called Initiall letters, used in the beginning of a word (7) some only in the middle, (8) and some in the end of a word.

The following are the Vowels

|    |        |              |    |
|----|--------|--------------|----|
| അ  | ana    | a short      | a  |
| അറ | arana  | a long       | á  |
| ഇ  | ina    | a short      | i  |
| ഇറ | yana   | a long       | í  |
| ഉ  | una    | a short      | u  |
| ഉറ | urana  | a long       | ú  |
| എ  | ena    | a short      | e  |
| എറ | cana   | a long       | é  |
| ഈ  | ayana  | a diphthong  | ay |
| ഊ  | ona    | a short      | o  |
| ഊറ | orana  | a long       | ó  |
| ഋ  | urana  | a diphthong  | au |
| ഠ  | aquana | ae           | ae |
| ഡ  | ai     | ai diphthong | ei |

Consonants, united with the Vowels, make a Syllable short.

|     |          |      |           |      |
|-----|----------|------|-----------|------|
| ക   | cana     | ca   | short     | ca   |
| കറ  | carana   | ca   | long      | ca   |
| കി  | quina    | qui  | short     | qui  |
| കിറ | quyana   | qui  | long      | qui  |
| കു  | cuna     | cu   | short     | cu   |

## Some Rules for the attaining the Knowledge of the Malabar Language.

*Baldæus.* **T**HE first declension among the Malabars comprehends the nouns only of the Masculine Gender which terminate in the singular number in *n*, and in the plural in *r*. They have their singular and plural numbers like us, and name their cases as follows.

|                |                  |
|----------------|------------------|
| The Nominative | <i>Pradamei,</i> |
| Genitive       | <i>Dutiei,</i>   |
| Dative         | <i>Tritei,</i>   |
| Accusative     | <i>Chadurii,</i> |
| Vocative       | <i>Panchami,</i> |
| Ablative       | <i>Xasti.</i>    |

*An Example of the first Declension.*

|            |                                            |
|------------|--------------------------------------------|
| Sing. Nom. | <i>Vanar,</i> fullor, the fullor of cloth, |
| Gen.       | <i>Vananureja,</i> the fullor,             |
| Dat.       | <i>Vananucû,</i> to the fullor,            |
| Accus.     | <i>Vananer,</i> the fullor,                |
| Vocat.     | <i>Vanano,</i> O you fullor,               |
| Ablat.     | <i>Vananiratil,</i> of the fullor.         |

It is observed that they have four sorts of ablative cases.

1. The *Localis*, as the last mentioned,
2. *Causalis*, *vananale*, because of the fullor,
3. *Socialis*, *vananore*, with the fullor,
4. *Comparationis*, *vanamil*, in comparison with the fullor.

|            |                                                                    |
|------------|--------------------------------------------------------------------|
| Plur. Nom. | <i>Vanar,</i> fullones, the fullors,                               |
| Gen.       | <i>Vananareja,</i> the fullors,                                    |
| Dat.       | <i>Vanarcul,</i> <i>vanaruccu,</i> to the fullors,                 |
| Accu.      | <i>Vanarei,</i> the fullors,                                       |
| Voc.       | <i>Vanare,</i> O ye fullors,                                       |
| Abl.       | 1. <i>Vanar iratil,</i> <i>vanar iratile,</i> of the fullors,      |
|            | 2. <i>Vannaral,</i> <i>vanarale,</i> because of the fullors,       |
|            | 3. <i>Vanarore,</i> <i>vanarorum,</i> with the fullors,            |
|            | 4. <i>Vanaril,</i> <i>vanarilum,</i> in comparison of the fullors. |

*An Example of Conjugation in the Affirmative.*

*Baldæus.*

The Present Singular Tense.

|     |            |                                       |                                                                  |
|-----|------------|---------------------------------------|------------------------------------------------------------------|
| I   | <i>nan</i> | <i>Vichuvadigirren,</i> I believe,    |                                                                  |
| you | <i>ni</i>  | <i>Vichuvadiguirray,</i> you believe, |                                                                  |
| he  | }          | <i>avan</i> {                         |                                                                  |
| she |            |                                       | <i>Vichuvadiguirran,</i> he believes,                            |
| it  |            |                                       | <i>Vichuvadiguirral,</i> she believes,                           |
|     |            |                                       | <i>Vichuvadiguirradu,</i> it believes, or <i>Vichuvadiguidu.</i> |

The Plural.

|      |               |                                                                         |
|------|---------------|-------------------------------------------------------------------------|
| We   | <i>nangal</i> | <i>Vichuvadiguirron,</i> we believe,                                    |
| you  | <i>ningal</i> | <i>Vichuvadiguirgal,</i> you believe,                                   |
| they | }             | <i>adugal</i> {                                                         |
|      |               |                                                                         |
|      |               | <i>N. Vichuvadicradu,</i> or <i>Vichuvadiguidu,</i> the things believe. |

*In the Negative.*

The Present Singular Tense.

|            |             |                                                      |
|------------|-------------|------------------------------------------------------|
| I          | <i>nan,</i> | <i>Vichuvadicren illei,</i> I do not believe,        |
| &c.        |             |                                                      |
| as before: |             | <i>Vichuvadicren illei,</i> you do not believe it,   |
|            |             | <i>Vichuvadiezal illei,</i> he does not believe it,  |
|            |             | <i>Vichuvadiezal illei,</i> they do not believe it,  |
|            |             | <i>Vichuvadicrad' illei,</i> it does not believe it. |

The Plural.

|     |                |                                                                                    |
|-----|----------------|------------------------------------------------------------------------------------|
| We  | <i>nangal,</i> | <i>Vichuvadicrem illei,</i> we do not believe it,                                  |
| &c. |                |                                                                                    |
|     |                | <i>Vichuvadicringal illei,</i> you do not believe it,                              |
|     |                | <i>Vichuvadicrargal illei,</i> they do not believe it, [ <i>Masc. &amp; Fem.</i> ] |
|     |                | <i>Vichuvadicrad' illei,</i> they [ <i>Neut.</i> ]                                 |
|     |                | <i>Vichuvadiguid illei,</i> do not believe it.                                     |

Baldæus.

The present Tense of Honour, *i. e.* when you speak to persons of quality in the affirmative.

*Vichuvâdicrora*, we (our majesty, highness, &c.) do not believe it.  
*Vichuvâdicrir*, you (your majesty, &c.) do not believe it.  
*Vichuvâdicrare*, they (their majesties) do not believe it.

In the Negative.

*Vichuvidicron illei*, we (our majesty) do not believe it.  
*Vichuvâdicrir illei*, we — do not believe it.  
*Vichuvâdicrar illei*, they — do not believe it.

Whence it is evident that the Malabar language is very difficult to be learned; especially by reason of the vast number of words whereof it consists, one and the same thing being frequently expressed by divers words or names. Thus not only every day in the week, but also throughout the year, has its peculiar name. It is further manifest from hence, that the *Indians* are not so unpolished as some *Europeans* represent them; and that they treat one another (especially persons of quality) with singular civility and respect.

The Imperfect Tense.

*Vichuvâdicrana* *apo* *Vichuvâdieren*, I believed.  
*Vichuvâdicreya* *apo* *Vichuvâdierom*, we did believe it.

The Perfect Tense.

*Vichuvâditen*, I have believed,  
*Vichuvâditom*, we have believed.

The Preterperfect Tense.

*A ducu mune vichuvâditay*, I had believed,  
*A ducu mune vichuvâditom*, we had believed.

The Future Tense.

*Vichuvâdipen*, I will believe,  
*Vichuvâdipon*, we will believe.

Baldæus.

### Our Father in the Malabar Language.

**V** *Anan galil yrucrà engal pidave*,  
 In heaven who art our father,  
*unureya namam ellatcum chutamga*; un-  
 thy name be sanctified; thy  
*reya irakjam vara*; un manadin paryel  
 kingdom come; thy will be done  
*à navargal vanatil*; *cheyuma pelepumy-*  
 in earth as in heaven; give our bread  
*lum elarum cbeya*; and andulla engal piley-  
 to us daily; pardon us our  
*caran, carracucu nângal pava caran-*  
 trespasses, as our trespassers for-  
*galey perru*; *engaley tolxatriu è duvagi*  
 give we; lead not into temptation us,  
*otlâde engalucù polângn varâmal. Vilagù.*  
 but of the evil deliver thou us. So it be.

### The Creed.

*Baldæus.*  
Ceylon.

**T**HE isle of Ceylon (the *Taprobana* of the antients, according to *John de Barros*) has got its name among the *Portuguese*, as well as the other *Europeans*, from its capital city, called *Ceylon*, known among the natives by the name of *Laukauwn*.

This isle extends from the sixth to the tenth degree of northern latitude. Formerly its circumference was reckoned to be about four hundred leagues, though since that time the sea has washed away about forty leagues on the north-side of it. In ancient times it was questionless (as we shall see anon in the description of *Manaar*) annexed to the continent. The figure of this isle represents (according to *Maffæus*) an egg; but in my opinion resembles rather a *Westphalia* ham; whence, without doubt, the *Dutch* fort near *Jafnapatnam*, has got the name of *Hams-Heel*.

*Its Extent.*

The before-mentioned *Maffæus* affirms that its circumference is at this time not above two hundred and forty leagues, its length seventy eight, and the breadth forty four. But the *Dutch*, since they have been masters of it, after the taking of *Columbo* 1656. and of *Manaar*, and *Jafnapatnam* 1658. have more exactly computed its compass to be three hundred and sixty leagues. It has many excellent harbours, cities and fortresses; and is divided into several provinces, as may be seen by the title of the king of that island, who styles himself *Raja Singa*, emperor of *Ceylon*, king of *Candea*, *Cota*, *Ceytavaca*, *Dambadan*, *Amorayapore*, *Jafnapatnam*; prince of *Ouva*, *Mature*, *Dinavaca*, and the four *Corles*; great duke of the seven *Corles*, *Ma-*

*Title of the king of Ceylon.*

*tale*; earl of *Cotiar*, *Trinquenemale*, *Batecalo*, *Velase*, *Vintana*, *Drembra*, *Panciapato*, *Veta*, *Putelaon*, *Valare*, *Gale*, *Belligaon*; marquis of *Duranura*, *Ratienuva*, *Tripiane*, *Acciapato*; lord of the sea-ports of *Alican*, *Columbo*, *Negombo*, *Chilau*, *Madampe*, *Calpentyn*, *Aripiture*, *Manaar*, and of the fishery of precious stones and pearls; lord of the *Golden Sun*. All which places, cities, and fortresses we shall have occasion to treat of hereafter.

The isle *Ceylon* abounds also in excellent rivers, such as *Chilau*, *Matual*, *Alican*, *Mature*, *Batecalo*, *Trinquenemale*, and others. It produces various sorts of precious stones, and is extremely fertile, especially in cinnamon. Here also found the best elephants of the whole *Indies*.

This isle was first discovered by the *Chinese* in the following manner: Certain *Chinese* having suffered shipwreck, were forced ashore on that island, where they professed their king to be the *Son of the Sun*. The inhabitants of *Ceylon* adoring at that time the *Sun*, as the *Malabars* do to this day their *Esvara*, i. e. *the Sun*, they were so well pleased with their new guests, that they elected the captain of the *Chinese* *Jonke*, or vessel, their king; whence the present kings of *Ceylon* trace their origin, and have taken upon them the title of *Lord of the Golden Sun*, this first *Chinese* king having stiled himself, *The much-beloved son of the always-moving Sun*. From this king *Lankauw Pati Mabadascyn* deduced his origin, who took upon him the name of *Well-beloved lord of the whole isle*. His son was *Lankauw Singe Madabascyn*, i. e. *the well-beloved Lion of the isle*; and after him, his son *Marasinge Mabadascyn*, i. e. *The*

*Baldæus.*  
The titles of duke and earl have been introduced by the Portuguese.

*Its discovery by the Chinese.*

*Pedigree of the kings of Ceylon.*

*Baldæus. i. e. The well-beloved conqueror of the lion.*

This king left behind him two sons; the first named *Lankauw Patti Mabastane*, or *the eye-apple of the country*; the second *Radgora Adascyn*, or, *The well-beloved king*. These two quarrelling about the succession, at last divided kingdoms, that of *Candy* falling to the share of *Radgora Adascyn*, and all the rest to the eldest. The posterity of these two kings ruled for a considerable time after, the eldest son always succeeding before the others. Among these *Lankauw Patti Mabastane* dying in the seventieth year of his age, left a son named *Marandonna Madgora*, i. e. *The conqueror of the eye-apple*; who came no sooner to the crown, but he engaged in a heavy war against his uncle by the father's side, which was ended

at last by a marriage betwixt *Marandonna Baldæus. Mabastane*, the son of *Madgora*, and *Malabande Wandige*. They left a numerous issue of sons and daughters, and among the rest one named *Fimala Darma Soria Adascyn*, i. e. *The conqueror of the whole kingdom*, (born after his father's death,) who no sooner came to age of maturity, but he attacked all the neighbouring princes that refused to submit to his jurisdiction; and having by degrees subdued them all, and established himself in the throne, by the death of all such as had opposed him, he married at last *Rokech Wandige*, i. e. *The beautiful queen*, his sister's daughter, by whom he had a numerous issue of sons and daughters, from whom the present kings are descended.

## CHAP. II.

### *The first Arrival of the Portuguese in the Isle of Ceylon, under the Command of Laurence d'Almeyda.*

*Arrival of the Portuguese in Ceylon.*

WHILST these intestine wars were carrying on in *Ceylon*, *Laurence d'Almeyda*, by the command of his father, was employ'd in cruising upon the *Mabometans*, who were then transporting their effects from *Malacca* and *Sumatra* over the *Maldivè* islands into *Arabia*. The *Portuguese* being informed of the condition of the island, and knowing that it was best fishing in troubled waters, did turn their arms against it, and after many bloody engagements, made themselves masters of all the places which produce the best cinnamon, which they used to transport in vast quantities into *Europe*.

*Raja Singa Adascyn, an enemy of the Portuguese.*

At that time *Raja Singa Adascyn* reigned in *Ceylon*. The general opinion is, that he was a king's son, and nephew to the king of *Cora*, though I have often heard the *Portuguese*, and some of the *Hollanders*, say, that he was no more than a barber, who being well skilled in divers languages, and of a warlike inclination, aimed at the crown; and, at last, was so fortunate as to reduce the whole island (after he had killed all the great men) to his obedience. This king being a declared enemy of the *Portuguese*, he besieged *Columbo* with a powerful army, and reduced them in a short time to such extremity for want of provisions, that the garrison knowing the governor to be averse to come to a capitulation, they at first broke out into injurious words, and at last resolved (unless they received relief from *Goa* in a week's time) to kill their officers, and to surrender at discretion. But the governor being advertised of their design by one of his pages, did all that lay in his

power to keep the soldiers in obedience with fair promise, till the arrival of *the so Columbo long wished-for succours from Goa*; which having defeated the *Indian* fleet, they forced them to raise the siege.

This *Raja Singa Adascyn* having made himself master of the whole kingdom, except *Gale* and *Columbo*, forced the emperor *Mabadascyn* to fly the country; who in his pursuit scattered his treasure of gold and jewels upon the road, thereby to stop the pursuit of his enemies. *Raja Singa* being thus become master of the empire, constituted *Vinne Lamantia*, one of the late emperor's favourites, governor over the highland countries, whose son, named *Don John*, afterwards obtained the sovereignty. This *Vinne Lamantia* finding himself in a condition to cope with his new pretended master, took up arms against him; and having brought over the greatest part of the country (grown weary of the tyrant) to his side, was proclaimed emperor, under the title of *Vinne Ladarma Soria*, i. e. *The deliverer of the Empire*.

This war being carried on with various success for a considerable time, the *Portuguese* got time to breath, and induced *Raja Singa* to come to a composition with *Vinne Ladarma Soria*, offering him the whole treasure he had taken of *Mabadascyn*, the late emperor, provided he would resign the whole sovereignty into his hands.

Whilst they were treating of the peace, *Vinne Ladarma* had a son born him, (who, bearing his father's name, succeeded him in the empire;) but he was scarce a year old, when *Raja Singa*, not thinking himself se-

cure

*Baldæus.* cure in the late treaty concluded with *Vinne* *Ladarma*, he at last found means to cajole him to his court, (notwithstanding those of *Candy* strongly opposed it,) where he was no sooner arrived, but being seized upon, with all his attendance, *Raja Singa* ordered him to be buried in the ground up to his breast, and so to be killed by the means of certain wooden balls, which were thrown at his head, till his brains were dashed out; the chiefest of his attendants being likewise put to death by the tyrant's orders.

This done, he bent all his force against *Candy*; and having made himself master of the whole country, sold many of the inhabitants for slaves, and disarmed the rest, making the empress his prisoner. The *Cingaleses* being much oppressed by the tyrant, who forced them to carry earth and other materials upon their heads, for the building of fortifications all the way betwixt *Candy* and *Settavaca*, who sought for relief by the *Portuguese*; who, glad of so favourable an opportunity of strengthening their interest in that island, sent *Andrew Furtado*, a great warrior, with a considerable force to *Jafnapatnam*, which he surprized, and having got the king of that place in his power, required his consent and assistance to pass through his country for the relief of *Candy*. The inhabitants of that kingdom being not

as yet entered into any settled treaty with *Baldæus*, the *Portuguese*, were not a little surprized at the sudden arrival of the *Parangys*, (so they call foreigners,) fearing, (which proved true afterwards,) that instead of their pretended delivery, they should only change their slavery; which the cunning *Portuguese* generals having well foreseen, had brought *Don John* and *Don Philip*, the last uncle of *Donna Catharina*, and both educated in the *Romish* religion, to *Candy*; the last of which he constituted king, and *Don John* generalissimo; leaving *Donna Catharina* the daughter of the late emperor *Mahadascyn*, and the sole heirs of the empire, at *Manaar*. He also took care to give notice of his coming to those *Candy*, with full assurances, that he was come for no other end than to deliver them from the usurper's yoke; which had so good an effect upon them, that they entered with him into an offensive and defensive alliance against *Raja Singa Adascyn*.

The usurper got soon scent of this treaty, which made him advance with a potent army towards *Jafnapatnam*, to prevent the *Portuguese* from marching to *Candy*; but these were too nimble for him, and coming to *Candy* before he was arrived in that kingdom, immediately crowned *Don Philip* king, and declared *Don John* generalissimo, under condition

*Baldæus*. condition, that both should marry *Portuguese* ladies, and the inhabitants take an oath of allegiance to the king of *Portugal*.

*Don John* *Don John* in the mean time seeing *Don Philip* preferred before him by the *Portuguese*, conceived a mortal hatred against them, but thought fit to dissemble it, till he should meet with a favourable opportunity of shewing his resentment. With this

intention he took care to have *Candy* fortified so, as not to fear any thing from *Raja Singa*, and the royal palace (lately demolished by that usurper) to be rebuilt with more splendor than before, for the reception of the new king; though at the same time he consulted with a certain famous forcerer, how to remove the said king by poison, which he effected afterwards.

## C H A P. III.

*Don Philip poisoned. Don John succeeds him. He routs Raja Singa; who dies soon after. His Secretary Janiere takes up Arms against Don John.*

THE *Portuguese* fearing, not without reason, the approach of *Raja Singa*, had fortified *Gannoor*, and sent *John de Melo* in company of certain religious men to *Manaar*, to bring them fresh supplies of men, arms, and ammunition to *Candy*, the inhabitants whereof were all disarmed by the usurper, having first introduced *Don Philip* in great pomp, and placed him in the royal palace with the general applause of the inhabitants.

*Don Philip settled at Candy.*

But he scarce tasted the first fruits of his greatness, when *Don John* (taking the opportunity of the absence of the chief of the *Portuguese*) got some poison administered to him, which not having the desired effect, he gave him another dose, which put an end to his life; and by promises of great rewards, and other inticements, brought most of the inhabitants of *Candy* over to his side, who declared him their emperor, and gave him the title of *Vinne Ladarma Soria*, after his father, mentioned before to have been murdered by the command of *Raja Singa*.

*Is poisoned by Don John.*

*Who is made emperor.*

The *Portuguese* foreboding themselves no good from *Don John*, whom they knew to be their enemy, sent messengers after messengers to *John de Mela* at *Manaar*, to represent to him their dangerous state, wherein they found themselves not mistaken: for no sooner was *Don John* seated in the throne, but he sent a herald to the *Portuguese* in garrison at *Gannoor*, who upbraiding them with perjury and perfidious designs, ordered them in the emperor's name, to quit their posts within five or six days, which, if they refused, they must expect no quarter. The *Portuguese* finding themselves unable to resist his power, and despairing of the desired relief, thought it their safest way to come to a capitulation with *Don John*, who granted them a free passage with their swords only, being forc'd

*And forced the Portuguese out of Gannoor.*

not only to leave all their booty, but also their bag and baggage behind them.

The very next day *John de Melo* arrived with succours from *Manaar*, but too late, whilst *Raja Singa* was advancing towards *Candy*, threatening a most severe revenge to the inhabitants of that country. *Don John* finding himself now destitute of the assistance of the *Portuguese*, and understanding that his enemy had pitched his tents near *Walane*, was sorely put to it how to cope with so great a force; but being obliged either to fight or quit his advantage, he resolved to engage the enemy, cost what it would: for which reason, having afresh taken the oath of allegiance from the inhabitants, and furnished them with arms, (such as they could get in haste,) he advanced towards them in order of battle. *Raja Singa* being not a little surprized at his boldness, sent him word, That he had best take

*Message of Raja to Don John.*

warning by his father *Vinne Ladarma Soria's* death; and that in case he refused to submit to his mercy before it was too late, he must expect no other treatment than to be cut in pieces. Unto whom *Don John* smiling, sent for answer, That he would take care to put it out of his power; and if his father had been as cautious of him as he was resolved to be, he need not have come to so lamentable an end; to revenge which he was come to this place; exhorting him at the same time to implore his mercy before it was too late. *Raja Singa* was so exasperated at his message, and the aversion he found in the inhabitants of the country, that he declared, He would punish with death all that should oppose him; and so ordered his whole army to march to *Donlan*, with an intention to surprize that place before *Don John* could come its relief. *Don John*, though he knew himself much inferior in number, yet resolved to follow him close at the heels; and to put the better countenance on the matter, marched

*Baldæus*. marched in great pomp, with most splendid umbrellos born before him, and such other royal ensigns, as the kings in those countries use in their wars. *Raja Singa* seeing *Don John* thus bravely advancing towards him, resolved either to vanquish or to die gloriously in the enterprize, could not forbear to break out into these words, *Verily Don John is a courageous warrior, and I presage that one day or other he will ascend the throne. O Raja Singa! where is thy noble boldness? where are all thy great and ambitious designs? where thy fortune which nobody could resist! I am afraid of a sudden change: O changeable fortune, why hast thou turned thy back towards Raja Singa, who was once thy favourite!*

Raja's surprise.

Is defeated.

Dies.

The priests of Daldowanse burnt.

Raja's remorse for that action.

Thus the signal being given, the battel begun, wherein *Don John* and his forces gave way at first, the better to bear the first assault of the enemy; but afterwards *Don John* at the head of his guards charged them so furiously, that (notwithstanding *Raja Singa* did all that could be expected from a great captain) they were forced to give way, and at last to seek for their safety in their heels: and so he returned victorious to *Candy*, having lost no more than seven hundred men in the whole engagement; whereas the loss of *Raja Singa* amounted to above three thousand, who was so dejected at this defeat, that he struck voluntarily a thorn into his foot, and refusing to have his wound dressed, it gangrened, and put an end to his days at *Stetevaca*.

He shewed not the least remorse upon his death-bed for his cruelties, except those committed against the priests of *Daldowanse*, whom he caused to be burnt alive; for being asked by the tyrant, whether the murder he had committed upon his uncle, mother-in-law, and brothers, could not be forgiven, they answered No; *Well then* (said the usurper) *I am now at liberty to do what I please*, and so committed them all to the fury of the flames, except the high priest, called *Tireanco*, i. e. *God's vicegerent*, by the *Cingaleses*. The priests of *Paraneydeyo*, being asked the same question, forewarned by the disaster of the others, gave for answer, *That a person guilty of such a sin could not enter into heaven; but if truly repenting, he might by their intercession be brought to remain betwixt heaven and earth, without being sensible of they torments of hell*. This answer was so pleasing to *Raja*, that he dismissed them unmolested, telling them, *That he had ordered the priests of Daldowanse to be burnt, because they would make God delight in evil; but you, who make him a merciful God, I will always look upon as my friends*. Just before his death, he sent for the before-mentioned *Tireanco*, or high-priest, desiring him to forgive the death of his brethren, offering him con-

siderable presents at the same time; he refused the last, but pardoned the crime, and so returned to *Candy*, where he died in the hundred and twentieth year of his age.

*Baldæus*.

*Don John* had no sooner received intelligence of *Raja's* death, but he put himself at the head of his army, to take possession of the whole kingdom. But the chief secretary of *Raja Singa* having got all his master's treasure into his hands, and thinking himself in a capacity to cope with *Don John*, got himself proclaimed king, under the name of *Janiere Wandaar*, and at the same time solicited for succours by the *Portuguese*. Neither was it long before *Pedro Lopes de Sousa* arrived from *Goa* at the head of twelve thousand five hundred *Portuguese*, besides a good number of *Mistices* and *Indians*, which occasioned no small consternation in *Don John's* army, who had been lately spectators of the ravages committed by those of *Gale* and *Columbo* (with the assistance of the new king) in the *Low Lands*, and therefore had all the reason to fear so strong a force of the *Portuguese* ready to join with his enemies. However *Pedro Lopes* finding the *Low Lands* laid desolate, (the best of the country,) and consequently promising himself but small advantages by his stay, was for returning to *Goa*, had he not been opposed by the rest of the officers, who alledged, That the best part of the late king's treasure remained as yet entire at *Candy*; and that in order to make themselves masters of the whole isle, they must take this opportunity of conquering the petty princes one after another, which they put in execution accordingly. For having partly by force, partly by promises, brought the kings of the *Low Lands*, over to their party, it was agreed to assemble a strong army against *Don John*. The *Quota's* of the several princes to be furnished for this expedition was regulated in the following manner.

Janiere usurps the crown.

Seeks for assistance by the Portuguese.

A great army raised against Don John.

The king of *Cota*, six thousand eight hundred men, four war-elephants, fifty other elephants, one thousand eight hundred oxen for carriage, and one thousand *Colys*, or pioneers. King *Janiere Wandaar Ragora* twenty eight thousand nine hundred and eighty men, twenty four war-elephants, two hundred others, five thousand oxen for carriage, three thousand pioneers. The kingdom of *Jafnapatnam* nineteen thousand nine hundred men, ten war-elephants, forty of the common sort, three thousand oxen, and two thousand pioneers. The king of *Cotiar* seven thousand nine hundred and eighty men, six hundred pioneers, one thousand oxen, thirty war-elephants, twenty five others. The king of *Palugan*, five thousand eight hundred and ninety men, one thousand pioneers, three war-elephants, and

*Baldæus*. and twenty five others. The king of *Batecalo* nine thousand eight hundred men, two thousand pioneers, two thousand five hundred oxen, four war-elephants and thirty others. The king of *Panua*, in conjunction with some other princes, fifty nine thousand eight hundred and ninety six men, two thousand one hundred and forty pioneers, six hundred and thirty elephants, and sixteen thousand oxen. So that the whole number of these forces amounted to one hundred fifty one thousand and eighty six heads, among whom were one hundred thirty nine thousand two hundred and forty six fighting men, and eleven thousand seven hundred and forty pioneers, seventy five war-

elephants, one thousand other elephants, *Baldæus*. and twenty nine thousand five hundred oxen for carriage. The quota of the *Portuguese* under *Pedro Lopes* amounted to one thousand four hundred and seventy four *Portuguese*, one thousand two hundred *Mistices*, and one thousand two hundred and twenty four *Indians*, forty seven war-elephants, nine hundred and forty five others, and nineteen thousand nine hundred oxen.

The first thing they took care of was to secure their retreat, by erecting three forts, called *Manikeroweri*, *Mapati*, and *Gannatari*; which done, they directed their march with their joint-forces towards *Candy*.

#### CHAP. IV.

Don John draws out his Forces against Janiere and the Portuguese : Attacks them with Success ; but is routed at last. Donna Catharina declared Empress. Janiere murdered.

**D**ON John having received intelligence of their march, was put to a great nonplus what course to take in this exigency of his affairs, his whole army consisting of no more than betwixt thirty and forty thousand men; but knowing them to be resolute and intirely devoted to his interest, he kept as close to the enemy as possibly he could, and in several engagements got the better of them; till at last being attacked with incredible fury by the *Portuguese*, they put him to the rout, and took the city of *Walane*, with the loss of forty nine men only on their side, killing above fifteen hundred of the inhabitants; which struck such a terror into the rest, that the whole country submitted without the least opposition, except *Dollewagge*, which they were not able to take.

Don John routed.

Retreats into the deserts.

*Don John* not being able to rally his scattered forces, retired with his empress into the woods and deserts, where they were forced to feed upon herbage for some time; and the *Portuguese* being now masters of the country, required the *Cingaleses* to own the king of *Portugal* for their sovereign lord. These on the other hand desired that *Donna Catharina*, the daughter of *Mabadascyn* their legal emperor, might be brought from *Manaar*, and declared their empress. *Don Pedro Lopes* being well enough pleased with this proposition, yet willing to consult with *Janiere* about the matter, he found him not averse to it, his intention being to marry her with the consent of the *Portuguese*, who had underhand promised the same as a reward of his services done to them.

Accordingly a numerous train and splen-

did equipage was sent to bring the new empress to *Candy*; but one of the ships foundering at sea in a storm, one hundred and fifty soldiers, a great number of slaves, and two chests with money were lost with her: one *Portuguese* and two negroes only had the good fortune to escape of the whole ship's crew, who heard the captain of the ship, whose name was *Perere*, take his last farewell in these words, *O brave Perere, is it thus thy fate to be swallowed up by the sea!* *Portuguese* but since it is God's will, patience: *Christ receive my soul.* *Ship lost.*

Donna Catharina brought from Manaar.

A Portuguese ship lost.

In the mean while all imaginable preparations being made for the reception of *Donna Catharina*, she was preparing for her departure from *Manaar*: as she was carried along in her litter, or chair, one of the poles of cane happened to break, which the new empress looking upon as an ill omen, she cried out aloud, *Stop, stop, do not carry me any further.* *Superstition for this portends some great misfortune.* Unto which the governor of *Manaar*, who attended her person, replied, *May it please your majesty, we ought to consider that we are no heathens but christians, and must therefore despise such superstitions; God will be the supporter of you and your cause.* Then the empress bid them take another pole, and soon after embarked with a fair wind, which carried her in eight days to *Candy*.

Superstition of Donna Catharina.

Leaves Manaar

Here she was met by *Pedro Lopes*, the *Portuguese* general, and several of the *Cingalese* kings and princes, attended by a great number of nobles, who paid their reverence (according to the custom of the country) by laying their faces flat upon the ground: this they call *Sambaja*. The empress arising

*Baldæus*, arising out of her litter, returned them hearty thanks; and returning to her litter was accompanied into the city by *Lopes* and the before-mentioned princes with incredible pomp; and under the general acclamations of the people, who were infinitely pleased with the gold and silver that was thrown among them as the cavalcade marched along; which was so splendid, that the whole charge thereof amounted to one million nine hundred thousand livres, the remnants of the treasure of the late deceased usurper, *Raja Singa Adascyn*. *Donna Catharina*, after having rested herself from the fatigues of the voyage for three days, was crowned with the usual solemnities, and put into possession of the empire.

*Is crowned there.*

About that time *Don John* came in the disguise of a beggar into *Candy*, where he set several houses on fire, in hopes of firing the whole city, but was frustrated in his design, the fire being always quenched in good time, though it often broke out in divers places at once.

*The Portuguese offer a good sum for his head.*

The *Portuguese* suspecting the matter, offered a reward of ten thousand *Pagodes* (twenty thousand crowns) to any that could take him dead or alive; which made *Don John* desist from his enterprize, and to return to his desert.

The *Portuguese* finding themselves now

in the quiet possession of the country, were no longer able to disguise their natural vices, their pride, avarice, and insolence; which occasioned frequent complaints to the empress, but without redress; which obliged the inhabitants to enter into an association to deprive them of all subsistence, by cutting off their supplies of provisions. This obliged the *Portuguese* general to send, in conjunction with king *Janiere Wandaar*, two thousand *Cingaleses* and one thousand *Portuguese*, to the dukedom of *Ouve*, and two thousand *Indians*, and two hundred *Portuguese* to *Halalmia* beyond *Candy*, to fetch in rice and other provisions.

*Baldæus*

The *Portuguese* foldiers, though they were very well received by the inhabitants, yet did they commit all manner of insolences in their quarters, even to the ravishing of their wives, killing their children, and setting their houses on fire; so that the *Cingaleses* finding themselves in a worse condition now than they were under their tyrannical emperors, entred into a conjuration to kill the *Portuguese* at a certain appointed time.

*They commit great insolences.*

In the mean while *Janiere* solicited the *Portuguese* general *Lopes*, for leave to marry the empress *Catharina*; which he handsomely denied, alledging, that he could not consent to it, without special order from the king of *Portugal*; but that he would write

*Baldæus*. to the king about it. *Janiere* looking upon this only as an excuse, desired to let him marry his sister's daughter; which being likewise refused by the general, *Janiere* conceived from that moment a mortal hatred against the *Portuguese*, and could not forbear to tell the general, That he did not expect to have met with such a reward for the services he had done them, swearing that they should have occasion to repent it. The *Portuguese* being somewhat exasperated at this unexpected reply, told him, That he ought not to take it amiss, if he denied him what was not in his power to give, viz. *Donna Catharina*, the legal heiress of the empire, to him who had usurped the title of a king, merely by being got into the possession of the treasure of *Raja Singa Adascyn*, but that he should be very ready to serve him upon any other occasion. *Janiere* being put out of all patience by these insulting Words, replied smartly, *I am sensible of your design; you that came here as strangers, now you have got your ends through my means, are the first who would tyrannize over me.* Then recollecting himself, he began to turn the discourse, dissembling his resentment; but the same night dispatched a letter to *Don John* in the desert, wherein he advertis'd him of what had passed betwixt him and the *Portuguese* general, offering him the empire, provided he would receive him as

Difference  
betwixt  
the Portu-  
guese and  
Janiere.

Janiere  
enters into  
a league  
with Don  
John

king of the *Low Lands*; which *Don John Baldæus*, approving of, they entred into a confederacy to rid their hands of the *Portuguese*.

Things being thus settled, *Don John* began to appear among the *Cingaleses* (already much exasperated against the *Portuguese*) representing to them the danger they were in, and how he was resolved, in conjunction with *Janiere*, to drive them out of the island, which they readily accepted of, promising all the assistance they were able to give. But as *Janiere* sent frequent letters to *Don John*, it happened that some of them fell into the hands of the *Portuguese*, who being thereby fully convinc'd of the design carried on against them, begun, not without great reason, to fear, that unless they consented to the marriage of *Janiere* with *Donna Catharina*, they would scarce be able to maintain themselves in the isle.

A council being called for this purpose, The Portuguese consulted about Janiere. they were much divided in their opinions, some being for consenting to the marriage, to prevent farther mischief, and to have *Don John* murdered; whilst others were for hazarding all, rather than to consent to the match, and to have *Janiere* murdered, under pretence that he had laid a design to murder the empress and the general; for which purpose some forged letters were to be produced, to justify their conduct.

*Baldæus.* To encompass this design, they took the opportunity, when *Janiere* was one day in conference with the *Portuguese* general and some other officers: the general seeing him have a scymetar on his side beset with precious stones, he desired to let him see it, feigning that he liked it so well, that he would take it for a pattern to have such another made after it. *Janiere* not suspecting their design, unadvisedly parted with his scymetar, which was no sooner done, but a certain *Portuguese* captain (upon the signal given by the general) did run him through the body with his sword, his attendants undergoing soon after the same fate, his guards being advertised thereof, cryed out, *Haddy, Haddy, Treason, Treason, Radgore Janiere Marupue, King Janiere is murdered*; which being a signal to the rest, all the *Indians* left the *Portuguese* camp, except the king of *Cota* with his forces, who had not immediate notice of this most detestable murder.

*Resolve his death.*

*Is murdered.*

stify their proceedings upon this account to *Baldæus*, the empress, who (though but young) being highly displeas'd thereat, told them, *That supposing he was a traylor, he ought not to have been thus barbarously murdered, but either kept a prisoner, or at least had the benefit of a legal tryal.* Rest assured, added she, *that this treacherous fact will turn to your ruin; for who is it that hears of it, but will curse you, and never trust you in whatever you pretend to?* And, *alas!* said she, *how ill have you served your king and me, who am likely to be involved in your ruin? Be therefore upon your guard, for you will pay dearly for having rewarded thus a man who had done you such signal services.* These words, though coming from a young woman, and scarce well initiated in the fundamentals of christianity, were actually fulfilled afterwards, when the *Portuguese* were driven by our forces out of *Batecalo, Gale, Columbo, Negumbo,* and last of all out of *Jaf-naptanam.*

*Donna Catharina's reflections upon it.*

The *Portuguese* did all they could to ju-

CHAP. V.

*The Portuguese leave Candy; are routed by the Cingaleses. The Empress taken Prisoner. Don John becomes Master of the Empire; Marries Donna Catharina. Jeronimo Oriedo defeated.*

*Don John improves the fact to his advantage.*

**D**ON *John* was not wanting to turn the hatred of the people (which must needs ensue upon so barbarous a fact) to his advantage, and to represent the perfidious designs of the *Portuguese* in the worst colours, offering them his assistance against these foreigners, as he had done before against *Raja Singa*; which succeeded so well, that they resolv'd unanimously to side with him, in order to drive them out of the country.

*The Portuguese leave Candy.*

The *Portuguese* having receiv'd intelligence of the great preparations made against them, and that *Don John* was advancing with his army towards *Candy*, began now, but too late, to repent of the murder of *Janiere*; and seeing their ruin at hand, unless they took timely care of their safety, they retreated from *Candy* to the fort of *Gannoor*, whence they sent to *Columbo* for relief. The *Cingaleses* having got notice of their flight, pursu'd them so closely, that many of them fell into their hands, especially of those detachments sent to *Goa* and *Halalmia* for provisions, fifty whereof they sent back with their ears, noses, and privy parts cut off, in revenge of the ravishments committed upon their wives and daughters.

*Are miserably treated by the Cingaleses.*

The *Portuguese* were so terrify'd thereat, that finding themselves destitute of all hopes of relief, they resolv'd likewise to leave

*Gannoor*, and to retire to *Walane*, which they put in execution in 1590, on a Sunday; and the better to cover their flight, or at least to divert the *Cingaleses* from pursuing them, set the circumjacent country on fire. But these preferring their revenge before all other considerations, followed them at the heels, and attacked them most furiously in four several parts at once. The *Portuguese* defended themselves most courageously; but being over-

1590.

*And routed.*

power'd in number, were forc'd to give way with the loss of many of their best soldiers, either kill'd or taken prisoners, among whom was the *Portuguese* general *Lopes* and *Donna Catharina*. The general died within three days of his wounds, after he had recommended his son to *Don John's* care, who was afterwards by him (pursuant to his promise) sent to *Columbo*.

*Pedro Lopes and D. Catharina taken Prisoners.*

The *Indians* got a considerable booty, besides a vast quantity of arms, cannon and ammunition, in this engagement; and *Don John* pursuing his victory with the utmost vigour, made himself master of all the forts belonging to the *Portuguese*; some by assault, the garrisons whereof he put to the sword; some by composition, which was punctually observ'd. All which struck such an amazement into the circumjacent kings and

*Baldæus*. and princes, that they appear'd in person before him, and asking pardon for their having been engaged with the *Portuguese*, brought him considerable presents, and did him homage with the usual solemnity of prostrating themselves with their faces to the ground.

Don John restored to the King-dom.

Marrries D. Catharina.

Being thus settled a second time in the throne, he thought it the safest way to secure himself of the fidelity of his subjects by marrying *Donna Catharina*, (she being then but twelve years old,) which was celebrated with great solemnity for one hundred and ten days successively; notwithstanding which the charges thereof did not amount to above five thousand *Pagodes*: but the presents bestow'd upon many of the nobility (to reconcile them to his interest) to no less than nine hundred sixty eight thousand seven hundred fifty four *Pagodes*, four million eight hundred fifty nine thousand five hundred thirty eight *Dutch* guilders, making the sum of one million nine hundred forty three thousand eight hundred and fifteen rix-dollars. His next care was to strengthen his frontiers by three strong forts; and he built himself a palace, surrounded with several bulworks, wherein he employ'd the captive *Portuguese*; who, to their great grief, were forc'd to see their ensigns display'd upon the towers of their enemies.

Oriedo a Portuguese General in Ceylon.

*Don John* having for some time enjoy'd the quiet possession of the throne, *Don Jeronimo d'Oriedo* was sent in the quality of *Portuguese* general to *Ceylon*, with a considerable number of land forces, compos'd of *Spaniards* and *Portuguese*s, brought thi-

ther from *Goa* and other places on the *Indian* coast. Having by great presents brought over to his side most of the princes of the *Low Lands*, he order'd several forts to be erected to serve him for a retreat upon occasion. *Don John* was so far from annoying his men in perfecting these fortifications, that he seem'd to despise it, saying, *Let them go on, I will find a way to pull down as fast as they can build*: but understanding that the *Portuguese* were advancing towards *Walane*, in order to surprize *Candy* (where they intended to erect a strong fort betwixt *Triquenam* and *Palugan*, to bridle the country) he attacked them in their march; so that a most furious battle ensu'd, which remain'd dubious for some time, the *Portuguese*s fighting like lions; but at last were forc'd to yield to the number of their enemies, who pursu'd them for five days as far as *Columbo*; they keeping their ranks close, and making good their retreat with unspeakable bravery, though not without considerable loss on their side. Among their wounded was *Oriedo* the general, who was oblig'd to king *Cota* for his liberty, he having concealed him in some retired place, without which he had infallibly fallen into the hands of the *Indians*. These, though not a little tired, with so long and troublesome a pursuit, yet in their return made themselves masters of the new *Portuguese* forts, and cutting the garisons in pieces, laid them level with the ground. This victory prov'd so considerable to *Don John*, that during his life *Oriedo* either durst or could not attempt any thing further against him.

Is routed by D. John.

## CHAP. VI.

*Dominico Corré* goes over to *Don John*: *Besieges Gale*, but is repuls'd. *Simon Corré* returns to *Columbo*. The *Portuguese* miserably massacred. *Joris van Spilbergen* comes to *Ceylon*.

*Dominico Corré* deserts.

ABOUT that time *Dominico Corré*, a renown'd soldier (known by the name of *Goliab*) being disoblig'd by the *Portuguese*, came over to *Don John*, having first cut off the noses and ears of several monks who had offended him. He also enticed *Corke Bandaar*, a revolted prince, into *Don John's* camp, who caus'd him to be torment'd to death, and bestow'd his principality upon *Dominico Corré*, to whom they gave the name of *Idel Soria Bandaar*. Whilst he was doing homage to the emperor, a very large tree that stood hard by, split in two pieces, without being touch'd; which the inhabitants (a superstitious generation) interpreted as an ill omen.

Is made General.

Not long after the emperor sent a considerable army under the command of *Do-*

*minico Corré*, and his brother *Simon Corré*, to besiege *Gale*: but the *Portuguese* defended themselves so well, that the greatest part of this army was ruined, and *Dominico* himself taken prisoner, whom the *Portuguese* (contrary to their promise) carry'd to *Columbo*, where he was privately murdered. This barbarous action so highly exasperated *Don John*, that he ordered some *Portuguese* to be killed by the elephants, others he cut off their noses and ears, and sent them to *Columbo* to tell the general, That in case they did not set all the prisoners at liberty, the *Portuguese* in his hands should receive the same treatment.

Is murdered.

His Death revenged by Don John.

The soldiers in garison at *Columbo* seeing this miserable spectacle in their companions; broke into a mutiny against the general,

*Baldæus*. ral, who by murdering *Corré* against his parole, had given occasion to this disaster. There was nothing to be heard among them but, *Kill the dog, kill him*; whilst *Jeronimo d'Oriedo* cry'd for mercy. Notwithstanding which, a whole troop of them were advancing with their drawn swords against him, and had certainly killed him upon the spot, had not some monks thrown themselves (to their no small danger) betwixt him and them; and speaking to the soldiers, calling them gentlemen, and begging them for the love of christ, not to act against the crown of *Portugal* in the person of their general, appeas'd their wrath; though even then the general was forced to hide himself in a convent, till the tumult could be entirely appeas'd, which was not till sixteen days after.

Notwithstanding the barbarous usage *Dominico Corré* had met with from the *Portuguese*, his brother *Simon Corré* went over to them, pretending to the emperor that he intended to advance towards *Columbo* to revenge his brother's death. He was very honourably received by the *Portuguese*, who not only bestow'd the government of a province upon him, but also marry'd him to a *Portuguese* lady, whom together with his son (begotten in this marriage) they kept as pledges of his fidelity, whilst he was employ'd in carrying on the war against *Don John*. However, having got intelligence that the *Portu-*

*guese* had formed a design against the life of *Baldæus*: the said *Don John*, he gave notice thereof to him, desiring him to be upon his guard.

The emperor being willing to be fully satisfi'd in a matter of such moment, apply'd himself to one *Emanuel Dias*, who being formerly a foot-boy to the *Portuguese* general *Lopes*, was advanced by the said *Don John* to the dignity of one of his gentlemen of the first rank, and had received many other favours at his hands. *Emanuel Dias*, willing to contribute what lay in his power to his master's satisfaction, propos'd to go to *Columbo*, under pretence of having deserted his service, but in truth to dive into the design of the *Portuguese*. Accordingly he arriv'd at *Columbo* on easter-day in the year 1602. where he propos'd to *Don Jeronimo Oriedo* several ways of murdering *Don John*; and that with so much assurance and seeming probability, that he was highly carress'd by that general, who agreed with him concerning the method how the design should be put in execution. For this purpose five *Portuguese* were pitched upon to share the danger and glory of so brave an action, (as they stiled it,) among whom were three captains, viz. *Christian Jacobo*, *Alberto Primero*, and *Caspar Perere*. *Emanuel Dias* being promised no less a reward than the crown of *Candy*, play'd the hypocrite so artificially, that he took a solemn oath up-

Simon Corré goes over to the Portuguese.

1602.

He deceives the Portuguese.

Sebert de Weerts Audience.

*Baldæus*. on the crucifix to be true to his trust; and so he was dismissed to *Walane* with a good sum of money, from whence he returned to *Candy*.

Betrays them.

There he gave an account to the emperor how measures had been concerted betwixt *Don Feronimo* and him; That a certain body of troops should be posted near the fort of *Walane*, to be ready at hand to surprize that place as soon as they should receive the signal of the murder of the emperor being put in execution; for which purpose those who had undertaken that task were within a limited time to appear near *Candy*. Hereupon the emperor advanced secretly in the night time at the head of a good body of troops to *Walane*, where the before-mentioned accomplices appearing according to agreement, well armed with *Japonesse* scymetars, called *Trassados*, they were kindly received by *Emanuel Dias*, and introduced into the emperor's presence; but soon after were seized by his guard, and the signal given at the same time from the fort of *Walane*. So that the *Portuguese* believing every thing to have succeeded according to expectation, advanced with all possible speed towards the fort, where they questionless would have met with so warm a reception, that few of them would

have returned home, had not a certain Ser-*Baldæus*,  
vant, who had deserted from the enemy, discovered the whole matter to them; which made them retreat with all speed towards *Columbo*, leaving all their baggage and some arms a prey to the enemy. *Emanuel Dias* got a vast reputation by this bold enterprize, and was rewarded with vast presents by the emperor; but the five *Portugueses* were after a long captivity put to a most painful death.

Joris Spilbergen comes to Ceylon.

About this time the *Dutch* general, *Joris Spilbergen*, coming with two ships on the coast of *Ceylon*, went to *Candy* on purpose to salute the emperor in the name of the states of the *United Provinces*, and his excellency prince *Maurice of Nassau*; and was favourably received by *Don John*, and dismissed with considerable presents. Having left *Erasmus Martens* and Mr. *Hans Pempel*, two very good musicians, there, he returned highly satisfied, *September 3. 1603.* by the way of *Metecola* to *Achen*. But the *Portuguese* were not a little dissatisfied at his arrival there, as fearing that in case the *Dutch* should enter into a confederacy with the emperor, their stay would not be long in that island; which proved true afterwards, they being quite chased thence in the year 1658.

## CHAP. VII

*Sebald de Weert comes to Ceylon. Great Dissatisfaction betwixt the Emperor and him. Is murdered. Don John falls sick, and dies: His Qualifications.*

Sebald de Weert comes to Ceylon.

*Sebald de Weert* and *Vibraads van Warwick* came soon after into *Ceylon*, where they entered into agreement with the emperor. Afterwards they sailed to *Achen* to assemble more forces, and landing at *Matecola* with seven ships the 26th of *April, 1603.* *De Weert* gave notice thereof to the emperor, who desired him to come and put an end to the conferences begun before for the consummation of the treaty. *De Weert* coming into the emperor's presence, was asked by him why he had set the *Portuguese* prisoners at liberty; which, as it had been done unadvisedly, so he made the best excuse he could upon that score; which being not satisfactory to the emperor, caused in him no small suspicion; the same was much augmented by what his ambassador (who had been with the vice-admiral *De Weert* at *Achen*) related to him, that during his stay with the *Dutch* he could not observe but that they were friends of the *Portuguese*, whereof they had given sufficient proofs, when they set the *Portuguese* officers, that were their prisoners, above him at the table. He further added, that

Difference betwixt the emperor and him.

Is augmented by the emperor's ambassador.

he had received information from credible hands, That the vice-admiral intended to invite the emperor and the chiefest men of his court, aboard his vessel to a banquet, but in effect, to detain them prisoners, and make themselves masters of the country; That he had thought it his duty to give this caution to his majesty, that he might not trust the *Dutch*, and thereby with the rest of his princes be drawn into the snare, to the irreparable ruin of the whole country.

*Don John* finding the ambassador's reasons not to be ill grounded, and having conceived no small jealousy at the vice-admiral's discharging the *Portuguese* prisoners, contrary to his promise, it was debated in council, whether they ought to treat with him any further, or break off the treaty already begun. After various deliberations, it was agreed to endeavour to persuade the vice-admiral to sail with his fleet to *Gale*, in order (according to mutual agreement) to besiege that place, whereby they would not want opportunity to judge of his conduct in reference to the *Portuguese*.

*Sebald*

*Baldæus.* Sebald de Weert soon after invited the emperor aboard his vessel; which he refused, alledging, That the chief men of the empire did not approve of a thing never known before. *De Weert* seeing the emperor resolute in his refusal, desired him to do him the honour of coming only to the sea-shore to view his ships; and that he had ordered a tent to be pitched there for his reception. The emperor not only refused also this offer, but his suspicion was increased, the before-mentioned ambassador whispering him in the ear, *Are you now sensible, my most gracious Lord, that I was in the right, and that they intend to catch you in the snare?* And the Dutch vice-admiral *De Weert* being not a little disturbed at so flat a denial, told him frankly, *That since his Majesty did not think fit to come either aboard him, or at least to the Shore, he was resolved not to fight for him against the Portuguese.* *Don John*, though not a little exasperated at so bold a reply, yet dissembled his Anger, telling him only, That he should, pursuant to his

*De Weert invites the emperor on board.*

*Which is refused.*

promise, sail to *Gale* with his fleet, whilst he would take a turn to *Candy* to visit the empress who was alone there, his brother-in-law having taken a journey to the frontiers; and that from thence they would hasten with all their forces to the siege. *Sebald de Weert* being somewhat heated with strong liquor, replied undiscreeply, *That certainly the empress could not be in distress for a man; and that he was resolved not to sail to Gale, or to fight against the Portuguese, before the emperor had done him the honour of viewing his ships.* *Don John*, who was naturally a choleric person, was so incensed at this answer, that he left the room, and in going out said, *Bind the dog*: whereupon four of his gentlemen advanced to lay hold of him; but he endeavouring to draw his sword, and making a noise to call his attendants to his assistance, (who were left near the sea-side by the emperor's order,) they laid hold of him from behind, and one of them splitting his head with a scymetar laid him dead upon the ground.

*Baldæus.*

*De Weert speaks with too much boldness.*

*Which proves the occasion of his death.*

The prince of *Ouwe* being the only person who durst give an account to the emperor of what had happened, he appeared somewhat disturbed thereat, asking him, *Why they did not make him a Prisoner, according to his order.* Whereupon the prince telling him, that it was impossible to be

done, because he stood upon his defence, *Don John* replied, *Nay, since he sought for his death, let him have it, and let his attendants follow their Master;* which was put in execution immediately, scarce any one of those that came ashore with him escaping the fury of these barbarians, except a boy, named

*And of his attendants*

*Baldæus*, named *Isaac Plevier*, a native of *Flissingen*, who was still alive, and in the then emperor's service, Nov. 22. 1614. Some few also had the good fortune of escaping by swimming to the ships.

The emperor soon after went to *Candy*, from whence he writ these few lines in *Portuguese* to the commanders of the *Dutch* vessels; *Que bebem vinho, noa be bon. Deos fes justitia; se queşeres pas, pas; sequires guerra, guerra: i. e. Who drinks wine is not good: God shews his justice: If you desire peace, you shall have peace; if war, war.*

Don John falls sick of a burning fever.

However *Don John*, did not survive long this barbarous action, being seized with so violent a burning fever, that to cool himself he was kept in cold water, without any relief: He also drunk frequently of the water of the brook called *Hal Gradoje*, betwixt *Ouve* and *Matarette*; which being so cold, as not to be held in the mouth without shivering, yet could not in the least quench his thirst. He often bewailed the barbarous murder of the *Dutch*, but said that *De Weert* had no more than what he deserved. Thus languishing for some time in continual agonies, he was in no condition to dispose of his affairs, but ended his life in misery, 1604. He left behind him one son, named *Mabaſtanne Adascyn*, and two daughters, one named *Soria Mabadascyn*, i. e. *Beloved Sunlight*, the other *Catben Adascyn*, i. e. *Beloved Peace*; all three born from *Donna Catharina*, called by the *Cingalese* *Mababandige Adascyn*, i. e. *Beloved Empress*.

Dies. His Issue.

*Don John* was a valiant and great captain,

as his whole life sufficiently testifies: He was *Baldæus*, tall of stature, and well-limbed, black, and rustical in his speech. He had gathered a vast treasure of gold and jewels, and had founded many forts, palaces, and publick-inns, called by the *Cingalese* *Ambolan*, i. e. *Resting places*. He kept a strict hand in the government; and as he never pardoned crimes, so he was very liberal to all such as behaved themselves well in their civil or military stations, on whom he conferred honours and riches. He was a compleat statesman, and stood firm to his engagements with all foreign princes, except the *Portuguese*; upon whom looking with a jealous eye, he had conceived a mortal hatred. As he despised all religions, so he allowed the free exercise thereof to all without distinction.

His Character.

The corps of the deceased emperor was no sooner interred with extraordinary magnificence, but the great men of the kingdom began to divide into several factions, every one aiming at the crown: The most potent among them was the prince of *Ouve*, who publicly set up for the empire, but was opposed by *Cenuwieraat*, brother-in-law to the late emperor, who pretended to be regent for his nephew, (his brother's son,) till he should come to age of maturity. *Donna Catharina* well foreseeing the ill consequences that might ensue upon those pretensions, declared herself regent of her young son, and by taking off the heads of some of the most suspected lords, removed the present danger, and appeased the troubles that threatened her ruin for some time.

Divisions among the Great Men.

Appeased by Donna Catharina.

## CHAP. VIII.

*Divisions among the Great Men in Ceylon. The Prince of Ouve murdered by Cenuwieraat, who marries Donna Catharina the Empress.*

The Portuguese offer a Confederacy, which is denied.

THE *Portuguese* rejoiced at the death of *Don John*, sent messengers after messengers to *Goa*, to advertise the viceroy of this welcome news, and to desire his advice in this juncture. The said viceroy being of opinion, that they ought to engage in an alliance with *Donna Catharina*, (as a means to make themselves masters by degrees of the whole isle,) the same was proposed accordingly; but rejected by *Donna Catharina*, who told them, That she would remain sovereign mistress in her territories. However the princes of the *Low Lands* being sorely oppressed by the incursions and ravages committed in their territories both by the prince of *Ouve* and the emperor's brother-in-law, hearkened to the enticements of the *Portuguese*, and entered into a confederacy with them.

The empress being not a little disturbed at these intestine commotions, fearing she should be sacrificed to the prevailing party, called a general assembly of all the lords of the empire; who all appeared accordingly in person, except the prince of *Ouve* and *Cenuwieraat Adascyn*, who thereupon were by proclamation declared rebels by the empress, and their estates confiscated. However *Cenuwieraat* having given sufficient reasons for his absence, and the prince of *Ouve* having, at the intercession of his friends, obtain'd his pardon, they afterwards appeared at court, but well guarded, neither party trusting one another.

Ouve and Cenuwieraat do not appear at court.

Things thus passing on for some time, the prince of *Ouve* resolved, after the conclusion of the assembly of the states, to rid his hands of *Cenuwieraat*, and afterwards to secure to himself the crown by marrying *Donna Catharina*.

Prince Ouve resolves to kill Cenuwieraat.

*Baldeus. Catharina*: but *Cenuwieraat* having got scent of this design, resolved to be beforehand with him; to accomplish which, he disturbed his thoughts, shewing to the prince of *Ouwe* upon all occasions most singular marks of his respect and friendship. But having in the mean while strengthened his interest, by ingaging most of the great men to his side, he took his opportunity, when they were both going to take their leave of the empress: for coming at the outward gate, the prince of *Ouwe* would have given the precedence to prince *Cenuwieraat*, as descended from the imperial blood; which he refusing to accept of, told him, That it was his due, by reason of his age: so that, after some time spent in compliments, prince *Ouwe* went in first, and was instantly run through the back, and laid dead upon the ground by *Cenuwieraat*, who said no more than, *Traitor, thou hast thy reward*; and so retiring to his people, left the city immediately.

*Is murdered by Cenuwieraat.*

Those belonging to the prince of *Ouwe* hearing of the murder of their master, run through the streets, crying out, *Treason, Treason*; which put the city into such an alarm, that the people (believing the empress was killed) cut all to pieces they met with, so that the streets were every where filled with horror and slaughter; which would have continued longer, had not *Donna Catharina*, by shewing herself to the people, somewhat appeased their fury. However, they not ceasing to exclaim, and uttering most horrid threats against the prince of *Cenuwieraat* for the murder of prince *Ouwe*, the empress, to prevent further mischief, thought it her safest way to prohibit, under pain of death, that any injury should be done to prince *Cenuwieraat*, declaring that what had been done was by her own orders; which somewhat settled the minds of the people.

*A commotion in Candy.*

*Is appeased by the empress.*

But her thoughts were very different from what she shewed to the people, having conceived such a horror at the fact, that she resolved not to let it go unrevenged upon the prince *Cenuwieraat*. He being advertised hereof by his friends, kept constantly upon his guard, not neglecting in the mean while

to have it represented to the empress, (not *Baldeus* without good reasons,) that he had been forced to undertake this fact for his self-preservation, and the welfare of the kingdom, her majesty, and his brother's children: which had so good an effect upon the empress, that by the mediation of certain great men, a match was concluded betwixt the empress and him, as the most proper means to restore tranquillity to the empire. At his coronation he took upon him the name *Camapati Mabadascyn*.

*Baldeus.*

*Cenuwieraat clears himself.*

*Marries the empress.*

He no sooner saw himself established in the throne, but he applied himself to the *Hollanders*, in order to enter into an alliance with them against the *Portuguese*, as will appear out of the sequel of this history.

For their high and mightinesses the states-general of the *United Provinces* having, 1609. made a truce for twelve years with archduke *Albert* and *Isabella Clara Eugenia* infanta of *Spain*, by virtue whereof it was among other matters agreed, That the same should take place also in the *East Indies*; the then directors of that company being willing to improve this interval for the better settling their commerce in these parts, did petition their high and mightinesses, and his highness the prince, to send their letters to all the *Indian* kings and princes, to enter into a confederacy with them; which being granted accordingly, the said letters, with certain articles and instructions, were by the directors of the said *Dutch East-India* company dispatched immediately to the *Indies* aboard the *Grey-bound yacht*, captain *Wemmer van Berchem* commander: which done, they equipped a squadron of ships, which set sail out of *Holland* the 30th of *January* under the command of *Peter Both*, governor-general of the *Indies*, and arrived safely the 18th of *November* following at *Bantam*, with full power from their high and mightinesses, and his highness the prince, to enter into such alliances with all the *Indian* kings and princes, as they thought most expedient for the settling of their commerce, and ruining that of the *Portuguese* in those parts.

*Truce betwixt the Spaniards and Dutch.*

## C H A P. IX.

*Letters from the States-General of the United Provinces and Prince Maurice, sent by Marcellus de Bofchhouwer to the Emperor of Ceylon.*

*Baldæus.* THE letters from their high and mightinesses and his highness the prince of Orange to the emperor of Ceylon, were as followeth.

Most Potent King!

*The Letter of the states-general to the emperor of Ceylon.*

“ IT has pleased the almighty God, through his mercy, so to bless our arms, taken up for the maintaining of the rights and privileges of our native country against the king of *Spain and Portugal*, that after a bloody war carried on forty two years successively both by sea and land, the said king being convinced of our unanimity, power and constancy, supported by the strength of our friends and neighbouring allies, has thought fit to make us the same offers, for which we had been obliged to commence a war, viz. to declare us a free people, independant from his power; and that he was inclined to enter upon a treaty of peace or truce with us for a considerable number of years. Which offers (after mature deliberation) having been accepted by us, a treaty was set on foot accordingly with the said king of *Spain and Portugal*; which being brought to a conclusion the 9th of *April* last past, a truce was agreed upon for twelve years next ensuing; by virtue whereof all the subjects of this state are not only at liberty to carry on their traffick, commerce, or navigation, in all the kingdoms and countries where they used to enjoy the same before the war, but also in all other countries, kingdoms, or princes, and with all other nations or provinces, without exception; and with this proviso, That neither the king of *Spain and Portugal*, nor his officers and subjects, shall, in respect of this traffick hitherto carried on, or to be carried on for the future, molest or be troublesome (either directly or indirectly) to our subjects, or those belonging to any king, prince, or other superior power, with whom we have any commerce; and that your majesty, as well as all other kings, princes, states, and nations, as well in the *Indies* as in other parts, shall be comprehended in the said twelve years truce, and not be molested or attacked on account of their friendship and commerce with us,

“ But if (contrary to our expectation, and the solemn promise made by the king of *Spain and Portugal*, confirmed by his hand and seal) it should happen that your majesty's subjects and countries should be involved in any troubles with the said king, either by sea or land, by reason of their friendship, alliance, or commerce with us, your majesty may rest assured, that we shall want neither will nor power, neither ships, ammunition, nor forces, as well of our own, as of such other kings and princes our allies, as are guarantees of the said treaty, and have engaged to see the same executed in all its particulars, and consequently in respect of your majesty's dominions, as well as of all other countries and dominions, both in the *Indies*, and elsewhere, to protect and defend your majesty's dominions and subjects against all aggressors, who upon that account shall molest them. We do not doubt, but that some of the king of *Spain and Portugal* his creatures and officers, will be apt to insinuate into your majesty, his subjects, and other kings, princes, nations, and republicks, a quite different sentiment of the said treaty. But we assure your majesty by these presents upon our faith, without any tergiversation, unto which your majesty and subjects, and all other kings, princes, nations, and states, may give entire credit, and desire that your majesty will be pleased to rely upon it accordingly, to the firm settlement of a mutual and good correspondency, navigation, and traffick, betwixt our subjects; we on our side will not be wanting to entertain the same with the utmost sincerity, confiding in the omnipotent God, the king of kings, who knows the depth of the hearts of men, that he will be pleased to take both your and our subjects into his protection, and increase their well-being through his power and mercy. Dated in the *Hague*, Sept. 15. 1609.”

Subscribed, *A. Coenders.*

And somewhat lower,  
Your highnesses most hearty friends the states-general of the *United Provinces*, by their order and command,

*C. AERTZEN.*  
*Maurice*

*Baldæus.*

*Maurice, Prince of Orange, Earl of Nassau, Catzenellebogen, Diest, Vianden, Meurs, Marquis of Vere and Ulissingen, Governor, Captain, and Admiral General of Guelders, Holland, Zealand, West-Friesland, Zutphen, Utrecht, Over-Yssell, &c.*

“suppose, that the intention of the said *Baldæus.*  
 “king is, to separate by this artifice your  
 “majesty from our interest, which ought  
 “to be a mutual caution to us, to be upon  
 “our guard for the future; for since the  
 “occasion of dividing us by force of arms  
 “is removed, they will not be sparing to  
 “attain to their end by fraud and other  
 “finister means. It is therefore, that we  
 “have ordered our governor-general to  
 “treat with your majesty, and to find out  
 “such means as may be most proper to  
 “prevent their intrigues, and to unite us  
 “against those whose word and faith we  
 “dare not altogether rely upon. We did  
 “not think fit to stipulate in the said  
 “treaty, that his subjects should be ex-  
 “cluded from the traffick of *Ceylon*, but  
 “left the same to your majesty’s discretion,  
 “not questioning, but that according to  
 “your wisdom and understanding, you will  
 “act in that respect, so as that nothing  
 “may be transacted that may tend towards  
 “the dissolution of our alliance; which we  
 “hope the almighty will maintain by his  
 “blessing, to the honour of his holy name,  
 “and the welfare of your majesty, and our  
 “beloved subjects.”

*Prince Maurice’s letter to the emperor.*

*Most Potent King!*

“GOD protect your majesty, and give  
 “you all the blessings upon earth.  
 “We have for a considerable time been  
 “engaged in a war against the king of  
 “*Portugal*, in order to oppose his ambi-  
 “tious designs, the same motive having  
 “induced your majesty to defend your do-  
 “minions against his attempts: the Al-  
 “mighty God has been pleased to bless  
 “our arms with such success, as to oblige  
 “our enemy to a twelve years truce;  
 “which, by the mediation of several neigh-  
 “bouring kings, has been brought at last  
 “to a happy conclusion: but finding that  
 “the said king did continue his warlike  
 “preparations, and imagining that the  
 “same was intended chiefly, in order to  
 “tack your majesty and some other princes  
 “in the *Indies*, our allies, (after being be-  
 “reaved of our assistance,) we thought it  
 “absolutely requisite, not to agree to the  
 “said truce, unless your majesty were in-  
 “cluded therein, together with the rest of  
 “our friends and allies. Whereupon the  
 “same was concluded at last, under con-  
 “dition, That we, and all our friends and  
 “allies, should enjoy full liberty to send  
 “our ships into what countries we pleas-  
 “ed, without any molestation from the  
 “*Portuguese*; and that in case your ma-  
 “jesty, or any other of our confederates,  
 “should be attacked by him, we should  
 “deem the same as done to our selves:  
 “to accomplish which we shall be ready  
 “upon all such occasions to be affi-  
 “sistant in revenging any damages done upon  
 “that score to your majesty, or any other  
 “of our allies. We have some reason to

*Dated in the Hague Octob. 5. 1609.*

*Maurice de Nassau.*

The superscription was as follows:

“To the most illustrious and most noble  
 “emperor of *Ceylon*, king of *Candy*,  
 “*Trinquemale*, *Jafnapatnam*, *Sette-*  
 “*Corles*, *Manaar*, *Chilaw*, *Cota*, *Ba-*  
 “*tecalo*, *Punie-Gale*, our beloved bro-  
 “ther in the wars.

These letters were no sooner brought in the *Greyhound* yacht to *Coromandel*, but the director of our *East-India* company there, named *John van Wesick*, ordered immediately *Marcellus de Boschhouwer*, our Marcellus Boschhouwer sent to Ceylon. under-factor, aboard the ship called the *Black Lyon*, to *Ceylon* along with *Peter Both*, a native of *Amenfort*, commodore, bound likewise for that island.

CHAP. X.

*Marcellus de Boschhouwer comes to Candy. His Treaty and Agreement with the Emperor of that Isle.*

**M***arcellus de Boschhouwer* coming accordingly, *March 8. 1612.* to *Candy*, had audience of his imperial majesty *Cenurwieraat Adascyn*, unto whom having delivered the before-mentioned letters, the emperor received him with all imaginable demonstrations of joy, placing him on his side on a chair of gold, clad in a white garment: whereupon the treaty being be-

gun, immediately the same was concluded *May 11.* following, upon the following conditions.

- I. This confederacy shall be kept inviolably, and stand firm for the future.
- II. All hostilities shall cease, and a general amnesty be granted.

*Baldæus.* III. In case the *Portuguese* should attack his majesty, the states-general shall be obliged to assist his majesty with all their forces.

IV. His majesty grants leave to the *Dutch* to erect a fortress at *Cotiarum*, provided the king of *Cotiarum* may enjoy his customs and other revenues.

V. The emperor obliges himself to furnish bricks, lime, and other materials, for the building the said fortress, as also labourers, to be paid by the company.

VI. His imperial majesty shall take care to have ware-houses of stone or brick erected at *Candy*, for the security of our company against fire.

VII. His majesty shall take our ships and seamen under his protection, and defend them to the utmost of his power against the *Portuguese*, as the *Hollanders* shall be obliged to do the same, in respect of his majesty's subjects.

VIII. His majesty obliges himself to transact nothing in all military affairs that have any relation to our company, without the knowledge of their officers; for which purpose two *Hollanders* shall sit constantly in his council of war, to be present at all debates, and other matters to be transacted there.

IX. He engages himself to have all the merchandizes of the *Dutch* carried upon beasts fit for carriage to *Candy*, and such commodities as are bought there, to be carried back to the sea-shore at *Cotiarum*, at his own charge.

X. In case any vessels, sloops, or boats, should happen to be cast away on these coasts, his majesty's subjects shall be obliged to save as much of the goods as they can, without any reward, for the use of our company.

XI. The *Dutch* shall be permitted to export their merchandizes, without exception, custom free.

XII. All and every one of his majesty's subjects shall be at liberty to traffick with our company.

XIII. His imperial majesty obliges himself to purchase any rarities, or other uncommon commodities at such a rate, as may bear a proportion, in respect of other commodities agreed upon with our company in their exchanges.

XIV. His majesty engages to deliver yearly all the cinnamon that is to be got to our company; to be paid either in money or in merchandizes, according to the usual exchange.

XV. It is agreed, that not any sorts of merchandizes shall be delivered to such persons as are entered into contracts of commerce with the *Hollanders*, before the natives of *Holland* are satisfied in this point;

and in case the contrary be proved, their *Baldæus* persons and goods shall be detained till they have made good the said contract.

XVI. His majesty shall not allow free commerce to any of the *European* nations, without peculiar consent from their high and mightinesses and his highness the prince of *Orange*.

XVII. His majesty obliges himself to furnish timber and other materials, for the building of vessels, yachts and boats, to be delivered upon the shore.

XVIII. All prisoners taken on both sides shall be released.

XIX. All the officers of the *Dutch* company shall be exempted from his majesty's jurisdiction; and if any of them happen to commit any trespass, they are to be punished by the heads of the *Dutch* company, as his majesty's subjects shall enjoy the same benefit.

XX. His majesty obliges himself to dispose of all his precious stones and pearls to the *Hollanders*; as they on their side engage to sell all their extraordinary jewels, precious things, and other rarities, at a reasonable rate; but in case any difference should arise upon that account, the same shall not be alledged as a reason for the dissolving of this confederacy.

XXI. For the same reason his majesty and the states-general shall maintain this alliance inviolably, and assist one another upon all occasions.

XXII. All acts of hostility committed on both sides, shall be buried by a general oblivion.

XXIII. No body, except his majesty, shall have power given him to coin money, or to enhance the value of the coin, beyond what has been agreed betwixt his majesty and the *Hollanders*, in proportion to the money transported hither from *Holland*; and if any of his majesty's or our subjects are found to have coined false money, they are to be punished with death.

XXIV. His majesty and the *Hollanders* shall agree upon the most proper methods for settling both the larger and lesser coin, for the promoting of traffick.

XXV. Such coin as shall be adjudged current by both parties, shall be changed every three years by turns, once at *Candy*, and the next three years in one of our places.

XXVI. The coin shall be either enhanced or lowered, according to the present exigency of affairs in time of war.

XXVII. All the *Indian* nations shall be free to come and traffick in their own vessels in his majesty's dominions, without paying any customs, for the space of three years next ensuing.

XXVIII. After

*Baldæus.* XXVIII. After the expiration of the term of these three years, his majesty shall be at liberty to enter into a treaty with the plenipotentiaries of their high and mightinesses, concerning the rate of customs of all commodities.

XXIX. His majesty agrees, that their high and mightinesses, and his highness the prince of *Orange*, shall enjoy one moiety of all the customs; for which purpose certain commissioners and clerks shall be appointed by the consent of both parties.

XXX. All the prizes taken on the coast of *Ceylon*, shall be divided, share and share alike, betwixt your majesty on the one side, and their high and mightinesses and his highness the prince of *Orange* on the other side; provided that what prisoners are taken shall be ransomed, but never put death.

XXXI. All factors, or other officers belonging to their high and mightinesses, and his highness the prince of *Orange*, shall give passes to such of your majesty's subjects as intend to traffick in those parts; as his

majesty shall do the same; without which they shall be liable to be seized, and their goods confiscated. *Baldæus.*

XXXII. His majesty, their high and mightinesses, and his highness the prince of *Orange*, shall be obliged to take effectual care to have the roads and passages, both by sea and land, in the isle of *Ceylon*, to be kept well and clear from highwaymen and pirates; for which purpose his majesty obliges himself to furnish timber, for the building of galleys and other vessels, for the clearing of the seas; and in case any highwaymen or pirates are taken, they shall be punished with death.

XXXIII. His imperial majesty, their high and mightinesses, and his highness the prince of *Orange*, do promise to keep this confederacy inviolably, to the utmost of their power, nor to suffer the same to be violated by their subjects; to inflict severe punishments upon such as shall go about to violate it; and give full satisfaction for all damages sustained upon that account.

CHAP. XI.

*Marcellus de Boschhouwer desires Leave to depart; which the Emperor will not consent to: Has considerable Dignities bestowed upon him: The Portuguese rob and murder the Dutch at Cotiarum. The Emperor convenes the States of the Empire. The Portuguese routed near Jafnapatnam.*

*Boschhouwer desires to be dismissed.*

*Which is denied.*

*Has great dignities bestowed upon him.*

THE articles of this confederacy being thus concluded Mr. *Boschbouwer* desired leave from his imperial majesty to depart, with the elephants that were ready to carry certain commodities to *Tegnapatan*, for the use of the *Dutch* factory there; from whence he might go to *Paliacatta*, to give the *Dutch* governor of that place an account of his negotiation. But the emperor and his council were not willing to consent to his dismissal, alledging, That since, according to one of the before-mentioned articles, they were obliged not to transact any thing in warlike affairs, without the knowledge and consent of the *Dutch*, it was requisite he should stay with them for that purpose. These reasons prevailed so far with Mr. *Boschbouwer*, that he resolved to stay; and the emperor heaped favours after favours upon him, having created him prince of *Migonne*, *Kackele-Carle*, *Ananagepora*, and *Mirwitigael*, knight of the order of the *Golden Sun*, president of the council of war, the second person in his privy council, and lord high admiral; and he knew so well how to improve the emperor's good opinion of his person, that scarce any thing of moment was undertaken without his advice.

VOL. III.

In the year 1611. June 20. the *Portuguese* took the field with a body of one thousand *Portuguese*, and three thousand *Indians* their allies, under the command of *Simon Corré*; and having got a certain *Candinese* for their guide, they marched through unknown ways to *Cotiarum*, where they surprized the *Dutch* belonging to Mr. *Boschbouwer*, put them all to the sword, and plundered the place, and then retired with all speed to *Sette-Corle*, for fear of being overtaken by the emperor's forces. *murder and plunder the Dutch.*

For the emperor had no sooner notice of their march, but he sent a body of five thousand men, commanded by *Marasinge Affile*, an old experienced captain, and under him *Mayndappa* and *Vire Segre*, two brave noblemen, to *Cotiarum*; but coming too late, they pursued the *Portuguese* day and night, till they overtook them near *Sette-Corle*, killed twenty three *Portuguese*, six hundred *Indians*, set several villages on fire, and returned with many prisoners, and a good booty to *Candy*.

About the same time an envoy of the king of *Palugam* came to court, representing that *Jahn Sangati* his master's brother, and king of *Podere*, was entered into an alliance with *Difference betwixt two brothers.*

*Baldæus.* the Portuguese, in order to deliver all his harbours into their hands, and afterwards to carry on a war against his imperial majesty with their assistance. Hereupon the king of *Podere* being summoned to appear at court at a prefixed time, he sent an envoy to clear his innocence with the emperor, unto whom he represented the perfidiousness of the king of *Palugam*, who had killed his own brother at table, for no other reason but that he might be sole master of the whole kingdom, offering besides to remain there as a hostage for his master's fidelity. The emperor, though not very well satisfied with the king of *Podere*, by reason of his not appearing in person, yet considering that what had been alledged by his envoy, concerning the murder of his elder brother, was no more than truth, and that certain differences were arisen lately betwixt them about the customs of the river of *Palugam*, one half whereof was allotted by the estates to the king of *Podere*, he dismissed the envoy well satisfied, resolving to suspend his judgment, till time should unfold the matter.

The emperor convenes the estates.

The emperor having bent his thoughts upon a war, he convened the estates of the empire, viz. *Idele* king of *Côtiarum*, *Celle Wandaar* king of *Palugam*, *Comaro Wandaar* king of *Batecalo*, *Corre Witty Raelbamy* prince of *Ouve*, *Marcellus de Boschbouwer*, prince of *Migonne*, *Meter Raelbamy* prince of *Vellene*, *Jallago de Ralle* prince of *Cotomale*, *Mewater Rale* prince of *Mewater*, *Wik Venesinge* earl of *Quatre-Corle*, *John Sangati* prince and lord of *Podore*, *Cole Rale* duke of *Ode*, *Jattenore* brother of the prince *Jalagode*, *Gael Heberad* governor of the county of *Harcipate*, *Corope* governor of the county of *Odogo d' Askeri*, *Wanategere* governor of the province of *Matere*. In the same assembly appeared also the governors and commanders in chief of the lesser provinces, and the ambassador of the king of *Jafnapatnam*, the king of *Patania* being the only one, who, though summoned by a peculiar letter, dated July 16. 1611. made several frivolous excuses for his not appearing there.

What was concluded there.

Among other matters of the greatest moment, it was resolved in this assembly to raise an army of fifty thousand men, one half whereof was to be employed in the siege of *Puntegale*, under the conduct of the prince of *Ouve*; the other against *Walane*, under the command of the prince of *Migonne*: and in case they met with good success, both armies were to join and attack *Columbo*. For the carrying on of this enterprize, four millions five hundred thousand livres were to be raised. Concerning the differences betwixt the king of *Palugam* and his brother *John Sangati*, they were both enjoined, under pain of death, not to hurt one

another, till the matter could be further enquired into. *Baldæus.*

A high court of judicature was also settled, to examine and decide all such matters as before that time used to be determined by the emperor and his privy council. The judges of this court were the prince of *Migonne* president, the prince of *Ouve*, the prince of *Velaren*, and the prince of *Cotomale*. None of the inferior courts were to take cognizance of criminal matters, without the approbation of this high court, from whence no appeal was to be allowed. The prince of *Ouve*, the prince of *Migonne*, the prince of *Velaren*, the prince of *Cotomale*, and the earl of *Quatre-Corle*, were appointed members of his majesty's privy council.

It was also further decreed, That not only liberty should be granted, but also houses and lands allotted to such seamen as would settle in his majesty's dominions; by which means they proposed to get in time a sufficient number of able seamen to man their galleys, of which three were ordered to be built immediately, with some other vessels, to cruise upon the Portuguese on the coast of *Orixa* and *Bengale*, &c. It was also agreed, that no quarter should be given to the Portuguese and their confederates, unless they were women or children; and that a pardon should be published for all deserters that would return within sixty days into his majesty's service; which was done accordingly at *Candy*, July 23. 1612.

Whilst these things were transacting advice was brought that the Portuguese were on their march towards *Jafnapatnam*; whereupon the emperor having sent part of his forces, designed for the expedition against *Walane* and *Gale*, to observe their motions, they attacked the rear of the Portuguese, who imagining no otherwise than that the whole force of the emperor was on their back, were soon brought into confusion; but finding their mistake, rallied again, and retreated towards *Columbo*, making themselves masters in their march thither of the dukedom of *Migonne*, where they committed all manner of cruelties. The *Modeliar*, or governor, being accused of having betray'd his trust, sent a letter to the prince of *Migonne*, wherein he declared, That after having sustained three assaults, he was forced to surrender; adding, That they were ready to shake off the Portuguese yoke with the first opportunity that offered, though the Portuguese had taken most of their wives and children, (and among the rest the governor's wife,) along with them, as hostages and pledges of their fidelity to *Columbo*. They sent also a present to their prince, as a token of their obedience. The letter was dated August 30. 1612. by the command of the chief *Visego Modeliar*.

The

*Baldæus.* The prince, after having consulted about this letter with the emperor, sent answer, That he was extremely concerned at the loss of his country and subjects, exhorting them to persist in their fidelity; and that as soon as possible he would appear among them at the head of the imperial army. *Baldæus.*

## C H A P. XII.

- *The Death of the Hereditary Imperial Prince: His Funeral. The King of Panua rebels, is taken Prisoner; and killed, with all his Adherents.*

*Death of the imperial prince.*

ABOUT the same time the hereditary imperial prince *Mabaſtanne*, son of the late emperor *Don John*, died after a sickness of six days. The occasion of his death was variously reported; but the general opinion was, That he had been poisoned by *Cénuwieraat*, his father-in-law, to make way for his eldest son *Comara Singaſtanne*, to succeed him in the empire. Certain it is, that his death was generally lamented; the guards were doubled all round the imperial palace, and great preparations made for his funeral; which was performed the 23d of *August*, in the afternoon. The empress especially gave most evident marks of her grief, calling him at parting, *Her own precious flesh and blood, her only hopes, life, and satisfaction*, vowing to revenge his death, and not to take any nourishment, that she might follow her son. She did afterwards fall into a swoon, and was fain to be removed out of the room by her two daughters, who also were melted in tears.

The corps of the deceased prince being exposed to the view of the people, they broke out into most lamentable exclamations, crying, *Where is the traitor that murdered our prince? we will tear him to pieces*: So that the emperor fearing a general insurrection, got the prince of *Migonne*, and the prince of *Ouve* to tell them, That the prince was not poisoned, but died of a fever; which somewhat appeased the tumult. The corps being put into a mourning hearse, adorned with gold and precious stones, was carried to the place of burial in the following manner:

*His funeral.*

First of all went the prince's musicians, clad in black *Gingam*, or linnen; then the musqueteers and pikemen, three in a rank: these were followed by the shield-bearers and halberdiers with their halberds downwards: after these came forty war-elephants, guided by as many gentlemen; and eight *Persian* horses led by eight knights of the *Golden Sun*; and after these the grooms of the bed-chamber all richly attired. Then came the scp-

ter and crown, carried each upon a black velvet cushion, and the prince's arms. These were followed by the corps, attended by eight of the greatest lords of the country; then the empress's *Palankin*, or litter, attended by sixteen with fans, four umbrello's, and eight betel boxes, as also a nosegay of gold to be worn by the emperor only. After these came the emperor supported by the princes of *Migonne* and *Mewater*, followed by the chief lords of the empire and the governors of the provinces. They passed along the streets under several arches made of fine stuffs and plaister-work. The corps being deposited on the place of burial with a deal of solemnity, the priests muttered out certain prayers, and the common people expressed their sorrow by frequent mournful outcries.

The place of burial (called *Hona* by the *Cingalese*) was a four-square raised from the ground seven steps high: it was level on the top, and adorned with several rows of trees. In the midst of it was the grave, into which the lords who had carried the corps threw a great quantity of sandal-wood, and sweet-scented spices; and having put the corps upon it, covered with the same spices, as high as a man could reach; they also poured in among it three large vessels full of oil of cinnamon, and another with butter. Over the grave was erected a large canopy rising up like a pyramid of seven foot high; under which stood the lords whilst the ceremony lasted; which being over, the prince of *Migonne* took a bundle of straw, which was given him by the prince of *Amme*, and a golden chafin dish with fire, and two lighted torches; and being attended by the said prince of *Amme*, and two gentlemen of the bed-chamber, set fire to the spices and corps in the grave, under the most dreadful ejaculations and outcries of the people, which lasted till the corps was quite burnt to ashes: which done, the whole train returned to court to condole the empress and her daughters. *His corps burnt.*

*The Funeral Pomp of a Royal Prince.*

*The Funeral Rites of a Royal Prince.*

*Baldæus.* In September advice being brought to court that the king of *Panua* had joined the *Portuguese* against the emperor, and that the king of *Cotiarum* intended to follow his footsteps, the emperor with the advice of his privy council sent his letters, dated the 23d of September, to both these kings, to make their personal appearance at court within sixteen days, under the forfeiture of all their estates, and banishment. The king of *Cotiarum* happening to be ill at that time; he sent his uncle to know the reason of his being summoned to court; and thereupon appeared in person on the 9th of October following, giving such proofs of his innocence, that he was soon cleared by the emperor. But the king of *Panua* knowing himself guilty, did not think fit to appear; so that it was resolved to reduce him by force, his defection having put a stop to the expedition against *Walane* and *Gale*. Accordingly the princes of *Migonne* and *Gurve*, at the head of an army of thirty five thousand men, marched, Jan. 1. 1613. directly towards *Panua*, with a resolution to destroy all with fire and sword: but the inhabitants finding themselves not in a condition to oppose so formidable a force, sent deputies with presents to the princes, desiring they might be spared, as having no hand in this defection; which being granted, they were amerced in four hundred and fifty seven thousand *Larynes*, (besides their yearly tribute,) amounting just to two months pay of the whole army, and to give hostages for the king's appearance at court in five or six days after.

Appears at court, and is accused of treason.

Accordingly he was no sooner come there, but being brought before the privy council, his accusation was read to him in writing, viz. "That he had entered into an engagement with the *Portuguese* against the emperor, and was to have married the young princess *Hantan Adascyn*, and with her, as a dowry, the kingdoms of *Batecalo* and *Palugam*: That he had despised the emperor's order in not coming to court; and hired a certain ruffian for five thousand *Larynes* to murder the emperor, with a promise of twenty thousand more, and certain possessions, after the same was accomplished, as appeared both by his own hand-writing, and the confession of the ruffian." Which being so evident against him, that he had scarce any thing to reply, he acknowledged himself guilty, craving the emperor's mercy, in regard of his being descended from the imperial blood, and of the many services done to the crown by his ancestors.

Is committed to prison.

He was by order from the council ordered to be committed prisoner in the castle of *Meddema Honore*; from whence he sent a

most submissive letter to the emperor; imploring his mercy to save his life, and to condemn him to a perpetual imprisonment. About sixty two persons, found to have been his accomplices in this conspiracy; were sent to other prisons, and afterwards punished with death.

*Baldæus.*

The 20th of *March* being the day appointed for the trial of the king and his accomplices, fifty lords of the empire appointed for that purpose, after a full hearing, found them all guilty of high treason, and accordingly pronounced the following sentence: *That the king of Panua should be beheaded; and the rest be thrown before the elephants, and all their goods and estates confiscated.* This sentence being signed by his imperial majesty, was put in execution accordingly the 24th of *March* following in the forenoon.

His trial.

Sentence.

Accordingly a scaffold covered with white (the royal colour here) being erected in the castle of *Meddema Honore*, the king was brought thither, and seated himself upon a gilt chair. He at first appeared undaunted; but being deprived of all his dignities; in the view of the people, and the sentence read to him, he began to bewail his unfortunate condition, asking frequently whether there were no hopes of a pardon? Being told no, he suffered himself to be undressed by some of his gentlemen of the bed-chamber, (who were all in tears,) unto whom he made rich presents of jewels, and ordered his chancellor (who had not had the least knowledge of this design) to bind up his eyes. In the mean while the king took some *Betel* and *Arek*, and then said, *Why do we stay? Unfortunate I, what am I reduced to?* Then taking three turns round the scaffold, he sat down, and taking a little *Betel*, told the spectators, *I am a king descended from the imperial blood; but since I must die, this is my only request, That my dead corps may not be left to the management of vile persons, but be honoured with a royal sepulture.* Which being promised by some of the lords there present he seemed to be well satisfied; and having asked their pardon for what had passed, he had his eyes tied up, and laying his head upon a block, it was severed from the body, which (at the intercession of the said lords) had a royal sepulture allowed it by the emperor.

Execution.

Behaviour.

Un-Speech:

After his death *Samatway*, the king's uncle, being with a general approbation declared his successor, marched at the head of an army of fifty thousand men, the 8th of *April* to *Panua*, to take possession of that kingdom, which he found involved in no small troubles, there being a strong party who opposed his succession: But one hundred and twenty five of the ringleaders being cut

His successor.

for.

*Baldæus*. to pieces by the new king's forces, the rest thought fit to submit. So soon as he found himself in the quiet possession of the kingdom, he sent back the forces, as also the arrears of the annual tribute, besides confi-

derable presents. The *Portuguese* not long after sent their deputies to entice those of *Panua* with vast promises, to engage with them afresh; but these were sent back without being heard.

## C H A P. XIII.

*The Emperor sits down before Walane. The Prince of Migonne equips a Squadron of Ships. The Empress falls sick, disposes of her Affairs, and dies.*

The emperor besieges Walane.

It was not long after that the emperor, with a good army, formed the siege of *Walane*, and took the castle by assault; but his soldiers being too intent upon the plunder, the *Portuguese* recovered themselves, and beat them from thence. The emperor being highly exasperated at this miscarriage, caused one hundred and five *Cingalese* to be hanged, which proved of the worse consequence; because the *Portuguese* receiving fresh succours soon after, he was forced to raise the siege.

Raises the siege.

A Squadron of ships sent a cruising.

In the mean time the prince of *Migonne* had not been idle to equip some galleys and *Fustes*, (small vessels,) to cruize upon the *Portuguese*, between the cape of *Comoryn* and the isle of *Ceylon*. The same set sail the 16th of *May* out of the harbour of *Cotiarum* under the command of a nephew of the prince of *Ouwe* as admiral, and *Wandige Nay Hanni* vice-admiral. The first galley was called the *Candy*, one *Sanderappo* captain; the second called the *Holland*, *Kistena* captain; the third the *Migonne*, one *Dingappe* captain; the fourth called the *Fortune*, one *Ordia* captain; fifth, the *Good Luck*, one *Marasinge* captain; sixth, the *Faithful*, commanded by captain *Sanderappo*. These ships returned the sixth of *March*, 1613. with a great booty, amounting to near six hundred thousand livres. For they had taken two *Portuguese* vessels near *Chilau* to the north of *Negumbo* and *Manaar*, called *Patasios*, and three *Fustes*, besides twenty barks which they set on fire. Not far from *Calecut* and the cape of *Comoryn*, they took another ship, whereof they threw (according to order) the *Portuguese* overboard, forced another ashore, and took a *Moorish* vessel richly laden coming from *Ormus*, and bound for *Cochin*, and another *Portuguese* ship coming from *Bengale*. The *Portuguese* and *Mistices*, of all which they threw into the seas, keeping only the *Portuguese* women and *Negros*. In the road of *Panaca*, they met with another *Portuguese* ship riding at anchor, deserted by the ship's crew, which they brought into the harbour of *Cotiarum*. His majesty ordered the

booty to be distributed among the officers and seamen.

In July 1613. the empress *Donna Catharina* being with child, fell dangerously ill of a fever: she sent for the prince of *Migonne* and the prince of *Ouwe*, unto whom (after having taken an oath of secrecy from them) she discovered the whole sentiments of her heart, and (with the emperor's consent) constituted them governors of her children. She had conceived such an immoderate grief at the death of her eldest son, the prince of *Mabaftanne*, that she would scarce take any sustenance. She declared, that nothing troubled her more, than that before her death she should not see the downfall of the *Portuguese* in *Ceylon*; and would often, with a great deal of eagerness, enquire whether the expected succours were not arrived out of *Holland*. Such was her grief, as I told you before, about the loss of her son, that she would scarce rest day or night; which had questionless proved the occasion of this distemper: and she was no less troubled how to dispose of her children after her death; she bequeathed to them all her jewels and treasure she had been gathering for a considerable time; as also certain legacies to all her servants, and restored all her slaves of both sexes to their liberty.

1613, The empress falls sick.

Takes care of her children and servants.

Her sickness increasing daily, she was carried from *Welmantotte* (her ordinary residence) to *Modeni*, where, in the presence of the emperor she charged her eldest son to revenge the late deceased prince's death upon the physician, who, she said, was the author thereof: but as she was sometimes not well in her senses, so this was not much regarded. In the mean while the emperor took care to prevent all disorders which might be occasioned by the empress's death, by reinforcing the frontier garrisons, and doubling the guards in other places. The empress having pretty well recovered her senses, sent for her five children, *Comara Singastanne* hereditary prince of the crown, and his two brothers *Janiere Astanne* and *Lamait*, and the two princesses *Mabadascyn* and *Hantan Adascyn*: she clasped

*Baldæus* clasped them one after another, with tears in her eyes, in her arms, and kissing them, said, *See here, you dearest part of my own flesh and blood, your mother that has brought you into the world, but must leave you in a little time.* Then she called to her the two before-mentioned princes, unto whom she delivered her children in these words: *I now deliver to you the dearest pledges I have; take care of them as of your own eyes, and retaliate upon them the many obligations you have received at our hands.* Then turning towards the emperor, she told him, *You are the occasion of my death.* Which so sensibly touched him, (he loving the empress extremely,) that soon after it threw him into a violent distemper. After that she scarce spoke to any body, except the prince of *Ouve*, unto whom she declared her sorrow, for having adored and sacrificed to the pagan idols, contrary to her better knowledge, having been educated a christian, telling him, *That she saw the devils ready to strangle her.* The prince of *Migonne* (upon whom

she fixed her eyes all the while) answered *Baldæus*: her, *That the infernal spirits had no power over a christian, provided they heartily repented of their sins; that therefore she ought to rest satisfied, and to implore God's mercy for her soul, for Jesus Christ's sake.* She returned for answer, *I am a christian, and would willingly pray, I desire you to pray with me.* The prince of *Migonne* prayed aloud, *Our Father*, and the twelve articles of the christian creed: unto which the empress replied in *Portuguese*, *O Christ! ajuda mi! O Christ help me!* Soon after being carried back to *Welmantotte*, she spoke her last words: *O my dear princes and princesses, said she, where must I leave you? My sons* (pointing to the prince of *Migonne* and prince of *Ouve*,) *perform your promises; farewell, I am departing; O God, take care of my soul: and so she expired the 20th of July 1613: in the thirty fifth year of her age, and was buried the twenty first, with the same pomp, and in the same place, as the prince her son was before.*

## C H A P. XIV.

*The Emperor falls very ill: Assembles the Estates. The Transactions of that Assembly.*

*The emperor falls sick.*

*Assembles the estates.*

THE emperor finding himself worse and worse, would needs be carried to a small city, called *Dilege*, where he appointed the states of the empire to meet *Aug. 18.* in order to settle the succession of the crown. The members of this great assembly (according to the schedule read to the king) were, *Idele*, king of *Cotiaram*; *Celle Wandaar*, king of *Palugam*; *Comaro Wandaar*, king of *Batecalo*; *Samarway*, king of *Panua*; *Namacar*, the king of *Jafnapatnam's* ambassador; *Coriwitte*, prince of *Ouve*; *Marcellus*, prince of *Migonne*; *Materael Hani*, prince of *Velaren*; *Jalagode Rate*, prince of *Catemale*; *Mewater Rate*, prince of *Mewater*; *Jane Sengati*, prince and lord of *Podere*; *Wiek Venesinge*, earl of *Quatre-Corle*; *Gael Henerad*, governor of the earldom of *Haripate*; *Corope*, governor of the earldom of *Odogodas*; *Kerry Wanasegre*, governor of the province of *Matele*; *Atapatte*, governor of *Wuat Gamme*; and *Palgrame Halvenrale*, governor of *Atapeli* and *Wilwele*; besides a great number of other noblemen, unto whom his imperial majesty made the following speech.

*My Lords,*  
 His Speech. "THIS present assembly being occasioned by my sickness, (perhaps the fore-runner of my approaching end,) I first of all desire you to forgive me all

miscarriages I have committed, the same having been done without my knowledge; and feeling my self very feeble, and decaying in strength, I thought fit to take effectual care about the succession, to avoid all contests that might likely arise after my decease. You cannot be forgetful what disturbance arose in the empire after the death of my brother *Vinne Ladarma Soria*, which ought to serve us as a caution to prevent the same at this juncture, by committing the tuition of *Comara Singastanne*, the eldest hereditary prince of the crown, to such as you shall judge best qualified for so high a trust, with a full authority to manage the administration of all publick affairs during the prince's minority; the choice whereof I recommend to your present care."

The lords being not a little surprized at this proposition, gave in their opinions in writing, wherein they pitched upon the prince of *Migonne* and the prince of *Ouve*, who both excused themselves, pleading their inability, and desiring his majesty to chuse some more able persons in their steads. The emperor reply'd, sighing, *And are you then so backward in doing me this piece of service? Can you be so forgetful of all the obligations I have heaped upon you?* They answered, *That they were ready to sacrifice their lives and estates*

*Baldæus* estates for his majesty; but that they were afraid, their shoulders were too weak for so great a burden. *Well then,* reply'd the emperor, *we will leave the choice to my son the prince,* wherewith the whole assembly was satisfied. The emperor then ordered the king of *Cotiarum* to bring in the prince; which being done accordingly, he told him, *Son, make your choice from among all these kings and princes of two persons, such as you love best, who shall be administrators of the empire after my death.* The prince answered all in tears, *Good father! and will you die, dear father? pray do not leave me!* which words drew tears both from the emperor and the whole assembly. The emperor answered, *I do not know how soon my time may come to leave you; wherefore I would have you pitch upon two persons, such as you love best next to my self.* *Well then,* reply'd the prince, *I love the prince of Migonne, and likewise the prince of Ouve, and next to him the prince of Velaren.* *I am satisfied,* said the emperor, *bring them to me, that I may surrender you to their care.* Accordingly the prince having led the two before-mentioned princes to the emperor, he told him, *These shall be my governors now, and when come to maturity my chief counsellors.* The emperor returned for answer, not without some emotion, *My dear son, see here your father, whose life, perhaps, will not be long; you are but young, therefore be always advised by these two princes.* A torrent of tears which trickled down his cheeks having stopped his voice, he ordered himself to be carried out of the assembly, enjoining only in a few words all the lords there present, to persist in their fidelity, which they unanimously promised to do, and in token of their entire submission, saluted the emperor with the usual *Sambaje*, or reverence, according to the custom of that country.

The next day the royal patent, to invest the before-mentioned two princes with the administration of the empire, was read in the assembly. *Genuwieraat*, by the grace of God, emperor of Ceylon, king of Candy, *Settevacca*, *Trinquenemale*, *Jafnapatnam*, *Sette-Corles*, *Manaar*, *Chilaon*, *Panua*, *Batecalo*, *Palugam* and *Jale*; Prince of *Ouve*, *Dennevaque*, *Passadon-Corle*, *Velaren*, *Coromale*, *Mewater* and *Ventane*; duke of *Willegame*, *Cale*, *Ody* and *Jattenore*; earl of *Quatre-Corle*, *Harkepattee*, *Odogodascary*, *Craiwitty* and *Batagedre*: Peace to all those that read these presents.

The administrators of the empire declared.

“ **B** EING much indisposed, and consequently in no small danger of life, we thought fit to convene all the great men of the empire to consult the welfare of the publick, and of our dearly

“ beloved son *Comara Singastanne*, (whom *Baldæus*, God preserve.) It is for this reason that we have appointed two princes administrators (after our decease) not only of the empire, but also of our hereditary prince during his minority, with full authority to govern the realm; the two princes chosen for so great a trust, being the prince of *Migonne* and the prince of *Ouve*, declared such by the unanimous consent of the assembly. We do by these presents surrender to the said princes all our kingdoms, provinces, and dominions, to be governed by them, during the minority of our dearly beloved sons; and as we are very glad to have been able (in our life-time) to prevent all intestine commotions by this settlement, so we require and desire the two before-mentioned princes to take upon them the government of all our dominions till our recovery; or in case of my decease, till the hereditary prince comes to an age of maturity, or his brothers, in case he should happen to die before that time: we therefore command by these presents expressly, that no body else shall presume to take upon him the administration and tuition of the before-mentioned princes and princesses, but shall obey the said two princes without the least opposition, under forfeiture of their lives. These two princes shall take effectual care of the education of the young princes and princesses under proper tutors, and to see the eldest prince, when come to age, quietly settled in the throne; and in case of his decease, *Janiere Astan* to succeed, as after him *Lamoostanne*, the third is to be the next heir to the crown; but in case all the said princes should die without issue, our dearly beloved daughter, the princess *Mahadascyn*, and after her her sister, the princess *Hantan Madascyn*, shall succeed them in their due turns. But in case these also should leave no children behind them, the empire shall devolve into your hands, and you shall be at full liberty to chuse, with the unanimous consent of the great men of the empire, such a person of the imperial blood as you think the best qualified for the welfare of the empire, which I leave to the wisdom of this assembly. In the mean while, every one (after my decease) shall be obliged to be accountable to the two administrators for all the revenues of the respective lands without failure, upon pain of death and loss of their estates. The two administrators shall have a due regard for all such counsellors as were in our life-time, and not turn them out, unless they should

Settlement of the empire.

*Baldæus.* “ should not behave themselves as they ought to do, when they shall have power to put others in their places.  
 “ All mandates shall be issued by the two administrators in the name of the whole empire, and the hereditary prince; according to which all the great men and nobility, without exception, shall appear at court when required, and obey them in all other respects: they shall also be obliged to take the usual oath of allegiance to the hereditary prince, and his two administrators, and to promise to persist in their fidelity, and not to suffer any alliance or engagement to be made with our enemies the *Portuguese*, or any rebels, under what pretence soever. They shall be obliged to assist in the reducing of all such (though of the next kindred) as pretend to disturb the publick peace: and lastly, all the kings and lords shall take an oath, That after our decease they will raise no disturbance in the empire, but will submit quietly to the present disposition, under forfeiture of their lives. For which reason our grant written in golden letters, is to be delivered to the princes of *Migonne* and *Ouve*; pursuant to which they shall have full authority to govern and protect in our and the hereditary prince’s name our dominions, and to administer justice both in civil and criminal causes. We therefore order and command all kings, princes, dukes, earls,

“ clergymen, nobles, governors, and heads of provinces and cities, captains, presidents, counsellors, admirals, chancellors, and all other persons in our service, as deputies, administrators, farmers, inhabitants, soldiers, citizens, and others inhabiting the cities, villages, or any places whatever, all and every one in particular, to receive and acknowledge the before-mentioned two princes, administrators, and governors of the realm, till the hereditary prince came of age, and to take the oath of fidelity to them, and shew them the same respect as to our own person, and, as becomes faithful and true subjects, to behave themselves in all respects according to the true intent of this patent. We also annul by these presents all laws or constitutions which may seem contrary to the true meaning thereof; and to give it all the authority and weight that can be, have in conjunction with the hereditary prince, and the princes, dukes, and lords of this assembly, signed it with our own hand, and ordered the great seal to be affixed to it. For the same reason we have also commanded the same to be registred in all the courts, councils, and treasuries of our empire, that no body may plead ignorance of this our last will.”

*Dated at the Imperial Court at Digelege, 19 Aug. 1613.*

C H A P. XV.

*The Hereditary Princes are carried to Cockele-Corle. Gael Heneraed is routed; and being summoned to Court, is made Prisoner, and executed.*

*The emperor surrenders his children to the administrators.* THE said patent being published by his imperial majesty’s order, the administrators, as well as the rest of the estates, took the oath of allegiance to the hereditary prince; which done, the administrators upon their knees returned his majesty thanks for the honour he had bestowed upon them, wishing him a long and happy life. His majesty lifting them up, ordered them to sit down by him, and disclosed to them some of his treasures which were buried under ground, besides several other matters relating to the administration of the state.

Then the three princes and two princesses being called in, he exhorted them to follow the directions of their governors;

and taking the eldest prince in his arms, *My dearest son*, said he, *I wish you and your brothers and sisters all imaginable prosperity*: and then turning to the princes of *Migonne* and *Ouve*; *Receive*, says he, *from my hands these my dearest treasures, which I commit to your care*; and thus delivered them up to the two administrators, who took care to have them convey’d in the night-time to the dukedom of *Cockele-Corle* for their better security, charging those who conducted them, upon their lives not to divulge whither they were carried: which done, the assembly was dissolved the twentieth.

The *Portuguese* had no sooner notice of the death of the empress, and the sick-

*Baldæus*. nefs of the emperor, but they left no stone unturned (notwithstanding the miscarriage of their design upon *Panna*) to raise new troubles. For this purpose they had found means to bring over to their side the son of *Gael Heneraed*, governor of *Harcipate*, president in the dukedom of *Cockele-Corle*, who all along had supplied them with provisions at *Walane*, and had engaged several of the nobility to raise divisions, thereby to give opportunity to the *Portuguese* to make themselves masters of the kingdom. The two princes administrators having got some notice of the matter, they resolved to find out the bottom of this design. For this purpose the prince of *Migonne* marched the 15th of *September* at the head of a good body, under pretence of changing the garisons on the frontiers, but near *Ode* and *Jatteno* met *Heneraed's* forces, who being not a little surpris'd at the sight of the prince, pretended they were ordered for *Cottamale* upon some particular business. The prince being now more than ever confirmed in the matter, ordered their chief commander to be brought before him immediately, who being searched, a letter of *Gael Heneraed* was found about him, viz. *That all things looked with a good face towards the accomplishment of the design concerted betwixt them. That he had consulted with his Son Abecque, president of Cockele-Corle, and that they had agreed with many of the nobility to murder the princes and princesses, and likewise the princes of Migonne and Ouve, the issue whereof they should know as soon as it was put in execution. He sent them in the mean time, a certain quantity of powder, ball and provisions, advising them to be upon their guard, because the garison of Candy had been reinforced considerably of late, which seem'd as if some design were in hand against them.*

A letter intercepted of Heneraed's.

Heneraed's forces routed.

He is summoned to court.

The prince gave immediate orders to seize the commander, who standing upon his defence, was cut to pieces: His soldiers and pioneers attempted to save themselves by flight; but being pursued were most slain, except a few that saved themselves in the woods. The prince dispatched a messenger immediately to the governour with orders to come immediately to court, having particular occasion to concert some matters of moment with him.

He who knew nothing of what was pass'd, appeared accordingly the 17th of *September* at the court in *Candy*; where being well received by the prince, they talked of several matters relating to the government; upon which occasion he gave him repeated assurances of his fidelity, telling him, That he was ready to venture his life for the welfare of the empire. The prince of *Migonne* had much ado to dissemble his anger, only

told him, *We have nevertheless received certain advice that you hatch treason against the crown, and are entered into a confederacy with the Portugueses our enemies, contrary to the oath you have so lately taken.* He declared his innocence with many asseverations, desiring that he might be confronted with his accusers: Whereupon the prince of *Ouve* told him, *We could wish you innocent, but are too well informed of your treachery,* and so ordered him to withdraw (after some further excuse) to be disfam'd, and his person to be secured.

Is seized

The captain of the guard coming to seize him, he said, *Friend, you are wrong;* and so made the best of his way towards the gate, in hopes of making his escape; but the captain asking him, *Are you not the governor Gael Heneraed?* he answered, *Yes.* The captain reply'd, *Then I am not wrong; I beg your pardon, being obliged to execute his majesty's orders.* So that seeing there was no hopes of escaping, he desired to be brought before his majesty, or before the prince's administrators. The captain told him, That he had no such orders. Whereupon some of the governor's soldiers put themselves in a posture of defence; but were all made prisoners, and put to death the next day, being thirty two in number. Another party attempted to escape by night; but fifty of them were taken and committed to prison, which made his case worse.

His soldiers taken.

In the mean time the two administrators took care to have the emperor's children transported to another castle, and sent orders to all the governors to stop all the soldiers of *Heneraed*, unless they were provided with a passport from his majesty.

The emperor's children carried to another place.

The 22d *Heneraed* was examined in the council; where at first he boldly deny'd every thing alledged against him; but soon after confessed the whole, and begged mercy, alledging, That what he had done was out of discontent, because he had not been promoted to a higher station. He did not deny that twenty six noblemen had been concerned in this conspiracy, yet refused to name them; but seeing the *Brabman*, who had made the first discovery appear, he said, *No question but you will soon know their names now; however, I will not discover them.* The *Brabman* declared, That *Gael Heneraed* had caused two gentlemen to be murdered, because they refused to have a hand in this conspiracy. The twenty six noblemen being apprehended, confessed the fact; and the 25th being appointed for their trial, they were all condemn'd to death. The 27th they were executed in the following manner: The fifty soldiers who had endeavoured to make their escape, had their heads cut off. The twenty six noblemen,

He is examined.

Tried and condemn'd, with twenty six gentlemen.

Their execution.

*Baldæus*. who had signed the confederacy, had the heads cut off first, and then their bodies thrown before the dogs. Four of his chief counsellors were drawn with hot pinchers, had afterwards their hands cut off, and their bodies quartered, which were hung up about the castle. The unfortunate governor, who had been a spectator of the miserable exits of his accomplices, being likewise burnt

with red hot pinchers at each corner of the *Baldæus* streets, was broken alive upon the wheel, and afterwards thrown before the elephants, one of which threw him up to a considerable height, and afterwards catching him again, crushed him to pieces with his teeth. The rest had the good fortune to escape to *Columbo*.

CHAP. XVI.

*A Battle betwixt the Emperor and the Rebels. The Portugese propose a Treaty of Peace; which is refused. They march towards Candy; but are routed.*

SOON after the princes of *Migonne* and *Ouwe*, together with the earl of *Quatre-Corle*, took a progress to *Cockele-Corle*, being followed by two thousand men, and honourably received by the inhabitants; they settled matters upon the old foot, and made some alteration in the coin, giving strict orders not to raise the money above the prefixed value.

of *June*, *Don Francisco de Menezes* his envoy to *Candy*, with full power to treat with the said emperor upon the best terms he could. Accordingly the said envoy delivered to the emperor a letter from the general, and another from the viceroy of *Goa*, written in the king of *Spain's* name, the chief contents whereof (besides some compliments) were,

An engagement betwixt the emperor and rebels.

In the year 1614. there happened a bloody engagement betwixt the imperial forces and the rebels, wherein four thousand men being killed on both sides, and the last finding themselves too weak, retreated in the night time, and solicited the *Portugese* for help. The emperor remaining thus master of the field, ordered his camp to be strongly fortified; and keeping only two thousand men, and one thousand pioneers for his guard, he sent his general with the whole army to cut off the retreat of the enemy. The *Portugese*, having got notice thereof, gathered secretly a body of one hundred *Portugese*, and five thousand natives; and marching through unpassable ways, surprized the outguards, and entred the camp without much opposition, every one seeking how to save themselves by timely flight. In this action the prince of *Migonne* was wounded with a lance in his right leg, and the prince of *Ouwe* in the right arm, and five hundred were slain upon the spot on the emperor's side.

“ That his catholick majesty being averse to the effusion of human blood, was inclined to enter into a treaty with his majesty, in order to settle a firm and lasting peace; for which purpose he had granted full power to certain persons of hote to treat upon that head, desiring that his majesty would be pleased to accept of them as such, and give them a favourable reception.

*Goa, Feb. 22. 1614.*

The Portugese surprize the emperor's camp.

Anno 1614. March 14. *Don Munno de Feriera*, brother of the earl of *Fere*, arrived at *Columbo*, in the quality of viceroy of *Goa*, to relieve *Don Feronimo d'Oviedo*. He brought along with him about one hundred thirty two *Portugese*, besides a good number of *Mistices*, to reinforce the garrisons, with positive orders to endeavour, if possible, to procure a peace with the emperor of *Ceylon*.

The general's letter was much to the same purpose.

The emperor having proposed the matter the 13th following in council, it was resolved they should bring in their propositions in writing, which being done the 18th of the same month, were as follows.

1. The king of *Spain* is willing to enter into an amicable treaty with the emperor.
2. The peace to be concluded either for ever, or for a certain space of years, to be kept inviolably, and all hostilities to cease both by water and land immediately.
3. Each party to keep what they are in possession of at present.
4. His imperial majesty shall renounce his alliance with the *Dutch*, and engage himself never to enter into any other with them for the future, or any other state at enmity.

*Baldæus*. charge he had been at in the equipment of this Squadron; for which reason he seized upon all *Boschbouwer's* effects aboard his vessels, after having taken care of his burial, which was performed with little pomp; but that of his son of three years of age, (who being born at *Copenhagen*, was godson of king *Christian IV.* and died likewise in this voyage) was done with more solemnity. The seizing of *Boschbouwer's* effects being performed in the harbour of *Trinquemale* by *Gule Gedde*, he sent his widow at her request to *Candy*, stripp'd of every thing, except what she had saved privately by the assistance of some friends, from whence after a stay of seven years, she was by the emperor *Zenerat*, (at the request of general *Roland Crape*) sent with some servants to *Tranquebare*.

After the departure of *Boschbouwer's* widow for *Candy*, the commodore *Gule Gedde* set sail with part of his Squadron from *Coutjare*, in order to join the rest of his ships at *Batecalo*, and to sollicite once more satisfaction from the emperor; but in the mean while, one of his ships that was left at *Trinquemale* being seized upon by the ship's crew, and afterwards split upon the rocks, the seamen and soldiers got with their boats to the coast of *Coromandel*, where some of them took service among the *Portuguese* at *St. Thomas*, the rest among the *Dutch* at *Palliacatte*. *Gule Gedde* having but small hopes of success, and fearing that some of the other ships might follow their example, thought fit to weigh anchor, and take his next course for *Denmark*.

The *Portuguese* being infinitely glad at the departure of these unwelcome guests out of *Ceylon*, now bent all their thoughts how to exclude all other nations from the traffick of that country: to encompass which, they judged it the most proper means to erect a fort near that harbour, the place whereof (after a narrow view taken of the ground, and various debates) was pitched upon at the north-west point of the bay, upon a neck of land jetting out into the sea, on the back-side of the *Pagode* of *Trinquemale*, the walls whereof would be of considerable advantage to them.

Accordingly the said fort being begun *The Portuguese erect a new fort.* 1622. was carried on with all imaginable vigour to bring it to perfection, before the emperor of *Candy* (with whom they were at peace then) could have any notice of it. For no sooner was that prince advertised of this treacherous design, but he protested against it, and sent a considerable force to demolish it; but being repulsed by the *Portuguese*, these continued the fortifications, being an irregular triangular fortress, which they furnished with great cannon taken out of the sea, belonging formerly to the *Da-*

*nish* ship that was cast away near that *Baldæ* place.

Whilst the *Portuguese* were embroiled with the *Cingalese* upon that account, a certain *Radye* of the *Malabars* entered the kingdom of *Jafnapatnam* with a considerable force, in hopes to recover the same from the *Portuguese*, who had lately conquered the same: but *Philippo d'Olivero* their general, an old experienced captain, received them so bravely, that few of them returned into their native country.

The *Portuguese* having thus once more rid their hands of their enemies, yet not thinking themselves secure, unless they strengthened their conquests by some additional fortifications, ordered certain new works to be made, which afterwards were changed into a royal fortress with four bastions. The foundation whereof was laid, 1624. but not brought to perfection till the year 1632. being lined with white stone.

But to establish themselves the better in this island, they concluded a peace (by the mediation of certain clergymen) with the emperor, who was willing to embrace it, till he could find a more convenient opportunity of revenging himself for the many affronts they had put upon him; one of the main conditions of this peace was, That the *Portuguese* should not build any other forts or fortifications in any place of the empire, but might remain in possession of what they had at present.

Notwithstanding this agreement, which was so advantageous to the *Portuguese*, finding that the *European* nations had still a free access into the kingdom of *Candy* by the river *Palliagamme*, (otherwise called *Batecalo*,) they were contriving all possible means to secure that passage to themselves.

To accomplish their end with all imaginable secrecy, they pitched upon a *Mistice*, an experienced engineer, who, being of a dark colour, was sent in the disguise of a *Gufuratte Foggy*, or mendicant frier, from *Columbo* to *Batecalo*, who settled himself in the village of *Samanture*; from whence having taken a full view of all the circumjacent country for two years together, he pitched upon a sandy place, about two leagues one half from the village, for the erecting of the designed fort; but finding, upon strict enquiry, that the channel leading that way from the mouth of the river, was the greatest part of the year choked up with sand; and that consequently there would be no conveniency of getting fresh water there, he was forced to go about six leagues lower down the river, where meeting with a small isle of a league in circuit, and not above a mile distant from the main channel, convey'd thither directly from the mouth

*Baldæus*. mouth of the river, he returned to *Columbo*; and having given a full account to the government there of the advantageous situation of this isle for their intended project, the *Portuguese* sent him back in 1627. with thirteen companies of soldiers, in order to put it in execution. These, at their arrival, having secured themselves by throwing up some intrenchments inclosed with palisadoes, to work they went with all expedition to perfect the intended fortrefs, which was of a quinquangular figure, with three bastions.

The Cingalese are repulsed.

The king of *Candy* had no sooner intelligence thereof, but he sent a good body of troops thither to prevent their design: they made shift to land in the island, but were forced to retreat without effecting any thing, and leave the *Portuguese* to perfect their fortifications; which they did soon after, being well provided with all sorts of materials for such a purpose.

The emperor engages with the Cingalese at Columbo.

The emperor finding himself thus by no less than seven capital forts, built on all the best avenues of the isle, reduced to such straits by the *Portuguese*, that without their consent he was not in a condition to keep the least correspondence with any foreign nation, resolved to try his utmost to draw these thorns out of his flesh. For this purpose he thought fit to try the inclinations of the *Cingalese* inhabiting at *Columbo*; and finding them ready to revolt by reason of the many indignities received from the *Portuguese*, he engaged them to his party. Things being thus settled, the only thing remaining was, how to entice their general *Constantine de Saa* to take the field, by which means they might find an opportunity of going over to the emperor. Knowing therefore that *Don Michael de Noronba, Conde de Linbaros*, the then viceroy of *Goa*, had lately wrote an affronting letter to the said general, wherein he told him, That he was more fit for a merchant than a soldier, and that he regarded more his own profit than the king's glory, and his conquest, they insinuated into him, That since both his expeditions against *Candy* had proved unsuccessful, it would not be amiss (to retrieve his honour) to try his fortune against *Ouve*, promising to appear in the field with all their power; which they did accordingly.

*Constantine de Saa*, the *Portuguese* general was so highly pleased at this proposition, that he not only gladly embraced it, but also sent a challenge to *Comarra Singe Hastanne*, prince of *Ouve*, eldest son of the emperor *Zenerat Adascyn*, who sent him word, that he would expect his coming like a man of honour. Accordingly the *Portuguese* general took the field the 30th of *August* with one thousand three hundred of his own countrymen, one thousand seven

The Portuguese take the field.

hundred *Mistices*, and eight thousand *Cingalese*; and the prince of *Ouve* being joined by his two brothers, *Vysiapalla* and *Raja Singa*, made up an army of twenty three thousand men, who (according to the advice of the emperor their father) kept at a distance, seeming to avoid an engagement. The *Portuguese* being much surprized at their being suffered to pass the mountains of *Ouve* without the least opposition, marched directly to *Badule* the capital city of that dukedom, which they took and plundered with all the circumjacent country, and so retired again towards the mountains, the princes being all the while spectators of their ravages, with a resolution to watch their opportunity of taking a severe revenge, so soon as the *Cingalese* (according to their promise) should desert the *Portuguese*.

Plunder Badule.

These things were not so secretly carried on, but that *Constantine de Saa* got some scent of the matter. This made him summon before him all their chief officers, unto whom he represented the reasons of his suspicion, but in very obliging terms, thinking it his best way to dissemble, yet to use all imaginable precautions against them. They positively denying what was alledged against them, he continued his march till night, when finding the enemy to keep closer to him than they used to do, and being confirmed in his former suspicion by fresh intelligence, he ordered the *Cingalese* (contrary to what they used to do) to pitch their tents in the center of the camp, and the next morning with break of day for the whole army to set fire to all their baggage; (except wearing apparel,) the better to further their march. They had scarce marched a few hours, when the princes coming up pretty close with the *Portuguese* army, the eight thousand *Cingalese* joined with their countrymen, and with their joint-forces attacked them in the flank at the descent of a mountain, firing upon them very furiously through an adjacent wood, whereabouts a great number of the *Portuguese* were slain, the *Cingalese* falling in pell-mell among them with their scymetars and pikes, especially after a sudden storm had rendered the *Portuguese* firelocks almost useless, without which they might probably have made a tolerable good retreat. *Constantine de Saa* their general had his head cut off by one of the rebellious *Cingalese*, which he presented to *Raja Singa* upon a drum, whilst he was washing himself in a neighbouring brook. To confess the truth, *de Saa* deserved a much better treatment, both in respect of his valour, and the many good offices he had done to the same *Cingalese* at *Columbo*, who now so basely betray'd him and his whole army.

Are attacked in their march

And routed.

*Baldæus.* It is not easy to be imagined what a consternation this general defeat occasioned among the *Portuguese* in the isle of *Ceylon*, and especially at *Columbo*; for the defence whereof there were scarce any troops left behind, except a few of the most antient among the inhabitants. This encouraged the emperor to send his youngest son *Mabastanne*, (afterwards named *Raja Singa*;) to form the siege of that place, which he did accordingly; but was so bravely received by

Columbo besieged by the Cingalese.

*Lancerotte de Sefies* their governor, that after a whole month's siege, he was forced to retreat without effecting any thing. The besieged being afterwards reinforced from *Goa* with four hundred men, (among whom were three hundred *Caffers*;) with a considerable quantity of provisions, ammunition, and other necessaries, began to hold up their heads again, and bid defiance to the *Cingalese*.

## CHAP. XVIII.

*The Emperor dies. Intestine Divisions betwixt his two Sons. The Portuguese at War with the new Emperor; make Peace with him. The Hollanders invited, by his Majesty's Letter to the Governor of Paliacatta, to come into the Isle of Ceylon.*

*The old emperor dies.* SOON after, viz. 1632. the old emperor happening to die, left the empire betwixt his three sons, viz. *Ouwe* to *Commarra Singa Hastanne* his eldest son, *Matele* to *Visia Palla Hastanne* his second, and *Candy* to *Mabastanne* the youngest, who, besides this, assumed the imperial title under the name of *Raja Singa Adascyn*, to the no small dissatisfaction of his eldest brother *Comarra Singa Hastanne*, whom he knew so well how to amuse under different pretensions, that the matter remained undecided as long as he lived; and, immediately after his death seized upon the province of *Ouwe*, which *Visia Palla* the second brother (who claimed one half for his share) took so heinously, that matters came betwixt them to an open rupture.

The youngest son seizes upon the imperial title.

The *Portuguese* having by this time received divers supplies from *Goa*, and pretty well recovered of their late disgrace, resolved to improve this opportunity to their advantage. For which purpose entering the *Low Lands*, they forced most of the princes there to side with them, but durst not venture to attempt the passage of the mountains. They pitched their tents therefore near *Allago*, as the most proper place to keep the adjacent country in awe: but *Raja Singa*, the new emperor, surprized them in their

The Portuguese begin a war against the emperor.

Are beaten.

camp, and forced them to retreat with all haste to *Columbo*.

The *Portuguese* now finding themselves unable to cope with the emperor, thought it requisite to come to an agreement; for which purpose having sent their envoys to *Candy*, a peace was concluded accordingly; but soon broken again on the *Portuguese* side, who let slip no opportunity to improve their advantage, notwithstanding the said peace.

Make peace.

*Raja Singa* being thus fully convinced, that no firm peace was likely to be settled with the *Portuguese* in *Ceylon*, dissembled his resentment; but in the mean time resolved to invite the *Hollanders* to force them out of the isle; and accordingly sent the following letter, dated Sept. 9. 1636. to the governor of *Paliacatta*.

I *Raja Singa*, emperor of the isle of *Ceylon*, king of *Candy*, *Settevaca*, *Danbadany*, *Anorayapore*, *Jafnapatnam*, prince of *Ouwe*, *Mature*, *Dinawaca*, *Quatre-Corle*, great duke of *Sette-Corle*, *Matalte*, earl of *Catajar*, *Trinquenemale*, *Batecalo*, *Valefebuitena*, *Dumbra*, *Panoa*, *Patoveta*, *Putelaon*, *Vassare*, *Gale*, *Billigaon*, marquis of *Duramira*, *Ratenura*, *Tinipane*, *Axcepaoon*, lord of the ports of *Alicaon*, *Caleture*, *Columbo*, *Negombo*, *Cbilao*, *Madampe*, *Calpentyn*, *Aripature*, *Maenaar*, and of the pearl-fishery.

“ Though I do not question but that the Dutch fame has already made known to you the good success of our arms against the *Portuguese*, yet did judge it absolutely requisite to give a more particular account thereof to the governor of the fortresses of *Paliacatta*. First of all the emperor did regain from the *Portuguese* the two fortresses of *Walane* and *Forago*, as likewise the city of *Marua Goma*, with five hundred *Portuguese* inhabitants, and a good number of monks of divers orders. *Don Nuno Alvares Perere* being then their general, thought thereupon fit to make peace in order to recover the prisoners taken by the emperor's forces. About eleven years after the conclusion

The Dutch invited to Ceylon by the emperor's letter.

*Baldæus.* “ conclusion of the said peace, *Constantine de Saa*, being made their general, did treacherously surprize *Jafnapatnam*, and built the forts of *Batecalo* and *Trinquemale*, giving no other reason for their so doing to the emperor, than that having certain intelligence, that some of their *European* enemies were coming to settle there, they were forced to erect these fortifications for their own defence. About a year after the frier they had left their hostage at *Candy*, being released by the emperor, (according to his parole,) they made a powerful irruption into the empire: and after their retreat the emperor happening to die, I had scarce ascended the throne, but within eleven months after they made another incursion; but encountering them near *Ambatana*, we forced them to retreat with considerable loss. Seven months after they invaded the dukedom of *Ouwe*, where we routed them in a smart engagement; and the rebellious natives having deserted them, and joined with us, (according to their duty,) compleated our victory: their general, a major-general, and the governor of *Dinavaca*, being slain upon the spot, with four hundred soldiers, and their colonel of the artillery, their governor of the seven *Corles*, and *Matura*, with three hundred soldiers, many captains, and ensigns taken prisoners. Since that time we took the fort of *Mantea Ravane* with one hundred *Portuguese* soldiers with their captains, and another fort in *Sofragaen*, with three companies, besides that two other fortifications of theirs were demolished. It was much about the same time that I kept the city of *Columbo* invested for thirty days; but finding my self ill, I returned to *Candy*, leaving the command of my forces to *Mara Tana Wandaar*, who, within fifteen days after my departure retreating thence, thereby gave an opportunity to the enemy to protract the war for a year and half, and afterwards deserted in person to the enemy. I did also fall into the enemies dominions, and having entrenched my self near *Ganetena* in the four *Corles*, I did considerable mischief, so that the new governor of *Columbo*, *Diego de Melo de Castro*, (formerly governor of *St. Thomas*,) sent thither from *Goa*, was forced to sue for peace, which I granted to prevent the miseries and calamities of a long war, the said general having sworn by the name of his God, and in his king's stead, to deliver up the forts of *Trinquemale* and *Batecalo*, and to release all prisoners on both sides. Thirteen months after the conclusion of this peace, the governor of

“ *Batecalo* did side with certain rebels, in order to assassinate one of my governors, aiding and assisting them also in robbing a bark belonging to me, and committing divers treacherous acts in many parts, as well of our own kingdoms, as those of other *Indian* princes; therefore I have taken a resolution to rid my hands of these enemies, and to declare my self a brother in war with the king of the *Hollanders*, as long as the sun and moon shall rejoice us with their light, and the viceroy of *Jacatra* and the governor of *Paliacatta* shall be willing to assist me, in hopes that this confederacy with the *Dutch* nation will answer my good intentions and sentiments of them. I the king let the governor of *Paliacatta* know, that during the seven years since my accession to the throne, I have made the best enquiry I could who was the most potent king in *Europe*, in order to oppose the designs of the *Portuguese*: and being at last informed that the king of the *Hollanders* was not only a scourge to their king, but also supported by the strength and power of several other kings his confederates, I took a firm resolution (relying upon the fidelity of the governor of *Paliacatta*) to declare my self a brother in war to the king of the *Hollanders* as long as sun and moon shall continue in the firmament. 'Tis true, some treaties of this kind have been made formerly betwixt my predecessors and the viceroy of *Jacatra*, and the governor of *Paliacatta*; but these having proved ineffectual, it seems as if it had pleased God to bring the same to perfection under my reign, in hopes that the governor of *Paliacatta* will with all possible care second our endeavours, whereof we give him assurances upon our royal word, that they shall be at liberty to erect a fortress either at *Cotiar* or *Batecalo*; for which purpose they may employ a squadron of five ships, (a force sufficient to ballance the present strength of the enemy,) who may be secure of our assistance, either by my self in person, or by my brother. All the cannon or booty taken by them shall be at their own disposal; and they shall be provided with all sorts of materials requisite for the building of a fort either at *Batecalo* or *Cotiar*. I further engage my self by my royal word, to repay the governor all the charges he shall be at in equipping the said squadron to be sent to my assistance, to which of the before-mentioned harbours you please. If the governor approves of these propositions, let him send a vessel to *Trinquemale* or *Cotiar*, in order to transport

*Baldæus.* “ transport my ambassadors with safety to him, whom I would have rest secure, that in case he can bring this business to perfection, he shall be well rewarded for his service according to his dignity and merits: but if it be beyond his power, let him dispatch this messenger with all speed to the viceroy of *Jacatra*.

Dated the 9th of Sept. 1636. *Raja Singa Imperador.*

A certain *Brabman* being dispatched with *Baldæus*, this letter, the same lived for six months undiscovered among the *Portuguese* at *Jafnapatnam*, before he could meet with a conveniency to be transported to the coast of *Coromandel*; from whence he pursued his journey by land to *Paliacatta*, where he delivered *Raja Singa's* letter to the then governor *Charles Reyniers*.

## CHAP. XIX.

*A Treaty; and Letter in return of that of the Emperor's. The Dutch Deputies in Ceylon are honourably received. Their Transactions; and return with the Emperor's Ambassadors. The Portuguese endeavour to render the Dutch suspected. The Emperor's Answer to the Dutch Admiral.*

*Charles Reyniers*, the governour of *Paliacatta*, (afterwards general of the *Indies*) had no sooner received this letter, but he sent the same to *Batavia* to the general and great council of the *Indies*, who after mature deliberation resolved to send a person fitly qualified for such a trust aboard the *Falcon* yacht, in order to enter into a strict amity and commerce with the emperor, and to procure a considerable cargo of cinnamon; whereof immediate notice was also to be given to the *Dutch* fleet before *Goa*.

Resolution of the council of the Indies.

It is to be observed, that sometime before this letter was brought to *Batavia*, the general *Anthony van Diemen*, and the council of the *Indies*, had already taken the affairs of *Ceylon* into their consideration, having ordered the beforefaid Mr. *Reyniers* to make all possible enquiry, whether it were not feasible to get some share as well as the *Portuguese* in the cinnamon trade. One *John Thijsen*, a master of a vessel, (afterwards governour of *Malacca*, and now a member of the council of the *Indies*,) who had been a prisoner in *Ceylon*, having also lately given the said council an exact account of the condition of the isle, it was resolved 1637. to send him forthwith with three yachts, the *Falcon*, the *Voorburgh*, and the *Lesser Hollandia*, and the *Ruitem* frigate, to the coast of *Coromandel*; where coming to an anchor before *Paliacatta* the last day of *August*, and their commissions being opened, he was, in conjunction with the factor *Andrew Helmont*, constituted envoy to the emperor of *Ceylon*.

Accordingly the 21st of *October* they took their way towards *Tegnapatnam*, where having furnished themselves with two negroes

Dutch envoys sent to Ceylon.

acquainted with that country, they set sail for *Ceylon*, where they arrived within five or six days after, and cast anchor near the village of *Calmony*, or *Calarme*, about seven leagues from the *Cabo de Frades*, i. e. the *Monks Cape*. They sent immediately one of the two before-mentioned negroes ashore, to get intelligence what part of the country they were in; which being done by a certain signal, (a fire made upon an adjacent hill,) they sent him, after his return, in company of the other negro with a letter of recommendation from the factor *Chrimma* to the emperor of *Ceylon*, under promise that they were to return in sixteen days; which they did accordingly, bringing along with them not only certain hostages, and among them a certain *Hollander*, who, living at the emperor's court, was willing to accompany them, and gave them very good intelligence, but also the lord high-treasurer of his majesty, and *John Alberts* another *Dutchman*, a native of *Emdden* (who having deserted from Mr. *Anthony Caen's* ship, had since served the emperor in the quality of a court-martial) in order to conduct our envoys to the imperial court.

Accordingly they set out on their journey from the village of *Samanture*, and in four days arrived at *Pangergame* in the country of *Vintane*, where they were introduced the same night by the light of torches into the emperor's presence, who then kept his residence at one of his pleasure-houses on the other side of the river *Mavilgange*. Their reception was very magnificent, as will appear anon by the entertainment given to Mr. *Gerrard Hulst*, whereof we shall have occasion to give a more ample description. The

credential

*Baldæus.* credential letters written by the governour of *Paliacatta*, and delivered by the envoys to his imperial majesty, were as follows:

To the most potent emperor *Raja Singa*, &c.

Most Potent Emperor!

Letter from the governour of Paliacatta to the emperor of Ceylon.

GOD protect your imperial majesty. Your majesty is not ignorant of the long and tedious wars we have for so many years last past carried on (by the blessing of God) with good success, both in *Europe* and the *Indies*, against the king of *Spain* and *Portugal*; and how at this time we keep *Goa*, their chief city in the *Indies*, blocked up with so numerous a squadron of men of war, that they are not in a condition to relieve any of their subjects from thence. We have understood by your majesty's letter the many outrages, insolencies, treasons, and wars, carried on by the *Portuguese* against your majesty since their settlement in your territories, contrary to the engagements, treaties and confederacies made betwixt you and them; all which they have treacherously broken, in order to make themselves masters of your empire, and to impose the most miserable slavery upon your subjects. Our general of *Jacatra* being informed of these designs, and your majesty's most commendable intentions to free your country from such unwelcome guests, and to secure your subjects against all violences, by sweeping out the very remnants of the *Portuguese*: the general, I say, being extremely rejoic'd at this resolution, and more especially that your majesty desired our assistance, did give immediate orders for the dispatching of these envoys, to treat with your majesty, and to declare to you the sincerity of our intentions towards your majesty and your subjects, in the same manner as the effects thereof have been sufficiently approved by many of your neighbouring princes and nations. If your majesty will be pleased to allow us the exportation of some cinnamon, we oblige our selves to assist your majesty with muskets, powder, ammunition, and other arms; so that in case you will order two or more ships cargoes of cinnamon to be got ready for our use against *May* next, we either will pay ready money for it, or exchange the same for ammunition or other merchandizes, as your majesty shall think fit. So soon as our envoys are assured of your majesty's resolutions upon this head and of your intentions to enter into a further treaty with us, they shall (according to orders) set sail im-

mediately to our fleet before *Goa*, to confer with the admiral how soon and how many ships may be detached out of his fleet either for the transportation of the cinnamon, or your majesty's aid, according to the present exigency of affairs. We desire therefore your majesty to give these envoys, sent with a most sincere intention to your majesty, a suitable reception, and a favourable audience: and afterwards to dispatch them with all convenient speed, to further their arrival at our fleet before *Goa*, before the *Mousson* be passed, which otherwise might prove no small obstacle to our design. We acknowledge we ought to have presented your majesty with some foreign rarities (according to custom;) but being ignorant of the condition of your country, and in no small fear that these envoys might perhaps be detained by the *Portuguese*; we hope your majesty will excuse the same for this time. We pray, most potent emperor, that god may grant your majesty health, prosperity, and victory over your enemies.

Dated in the fort *Geldria*, the 20th of *Octob.* 1637.

Subscribed,

You majesty's most devoted servant,

*Charles Reymiers.*

The emperor, whilst the envoys were making their propositions, stood with the crown on his head, and a scymetar in his hand, his head, arms, and legs adorn'd with jewels, rings, and chains of gold. He enquired after the state of affairs in *Holland*, the health of the prince of *Orange*, and whether the envoys had a full power to treat with him. Unto which they answered, No: but that the admiral of the *Dutch* squadron before *Goa* had. So they were conducted to the apartments prepared for their reception, to rest themselves after so fatiguing a journey.

The next day, being again admitted into the emperor's presence, he asked them several matters concerning the present state of affairs in *Europe*: The *Portuguese* having made it their business to represent the *Dutch* as an inconsiderable *Mob*; and the emperor nevertheless having, by the great naval strength that appear'd of late years in the *East-Indies*, conceived a quite different opinion of their strength than what had been whispered about by the *Portuguese*, was very glad to find the truth to prove agreeable to his former sentiments, concerning the power of a nation with whom he was going into a strict confederacy against the *Portuguese*.

*Baldæus. guefe.* The next following day they began to enter upon a treaty about the cinnamon, and the fort of *Batecalo*. Whilst his majesty held frequent conferences (twice a day for a whole week) with our deputies, a letter was sent to the king or prince of *Mateli* (the emperor's brother) by *Diego de Melo de Castro*, governor of *Columbo*; wherein he complained of the intended breach of the peace, styling the *Hollanders rebellious subjects of the king of Portugal, who had incurred the hatred of all the other Indian princes.* He added, *That the emperor was guilty of this rupture, whereof he had given notice in a letter to the viceroy of Goa.* His majesty desired that the said letter should be translated into the *Dutch*, and be delivered by the envoys to the admiral before *Goa*; and told them for the rest, that he was too well acquainted with their ways, to give ear to these calumnies: That he would endeavour to amuse them with compliments, till he he could find an opportunity of surprising the fort of *Mankeware* in the *Low-Countries*, near the south shore of the isle. He writ also a letter to the admiral *Westerwold*, and ordered three deputies to go along with our envoys to take a view of the fleet before *Goa*, and to give account thereof to him.

The Portuguese endeavour to render the Dutch suspected.

The emperor's courtesy to the Dutch.

The 27th of the same month his majesty thought fit to dispatch the envoys: *Palankyns*, or litters, were ordered for their journey, with some elephants for their baggage, and a convoy of twenty *Lascaryns*, under the command of a colonel to conduct them, with orders to defray their charges in all places through which they passed. It was further remarkable, that whilst the governor of *Paliacatta*'s letter was delivered to his majesty, and the envoys made their propositions, he arose from his chair, and remained standing all the while, an honour never done to the *Portugueses*. The *Dutch* envoys set sail the 4th of the next following month of *December*, with the three before-mentioned deputies aboard the *Falcon* yacht, and coming up the 19th following with the *Dutch* squadron before *Goa*, they delivered to *Adam Westerwold*, their admiral, the following letter from his imperial majesty.

Their honourable dispatch.

Letter of the emperor to the Dutch admiral.

“ HAVING sent a letter in *September* to the governor of *Paliacatta*,

“ I received an answer thereupon the 19th *Baldæus.*  
 “ of *November*, 1637. but the envoys  
 “ not being instructed sufficiently to treat  
 “ with me, but the same being referred  
 “ by the general of *Jacatra* to the admiral of the fleet, I thought fit to send certain deputies to treat with your excellency. The before-mentioned governor having made mention also of the transportation of a certain quantity of cinnamon, your excellency, if you please, may send five men of war to attack the fort of *Batecalo*, and some other vessels to other harbours, in order to take in all the cinnamon that is to be had there. I am informed that you intend to stay before *Goa* till *April* next, and then are to return to *Jacatra*, in order to return afterwards with all possible speed to the harbour of *Columbo*; and thence to detach three ships to the harbour of *Batecalo*, in order to make themselves masters of that place. I will at the same time advance with my forces to *Columbo*; and in case god be pleased to bless our arms with victory against our enemies, I dare assure you, upon my royal word, that the city shall be preserved for our mutual use; and that we will enter into a contract with you concerning all the pepper and cinnamon in the isle. It is therefore that I judge it advisable to come with your whole strength, in order to accelerate our confederacy, which may be as durable as the sun and moon: But if this should not be convenient, pray send a trusty person whom we may treat with, there being little time to be lost, since things being already come to a rupture with the *Portuguese*, we shall stand in present need of your assistance. I expect the return of the three deputies with the arrival of your fleet.”

From *Vintane*  
28 Nov. 1637.

Signed,

Imperador *Raja Singa*.

Sealed with the pummel of his majesty's scymetar printed in red wax.

It was directed,

To the lord admiral of the *Dutch* fleet before *Goa*.

## C H A P. XX.

*Sea Engagement before Goa betwixt the Dutch and Portuguese Fleets.*

*Baldæus.*  
Sea engage-  
ment before  
Goa.

WHILST the envoys were honour-  
ably entertained aboard the fleet by  
Adam van Westerwold, the Dutch admiral,  
a sea engagement happened the 4th of Ja-  
nuary 1638. betwixt us and the Portuguese.  
The Dutch squadron was composed of the  
following ships.

A list of  
the Dutch  
squadron.

The *Utrecht*, aboard whereof was the ad-  
miral Adam van Westerwold, captain Ray-  
nier Wybrandz, head factor James Nolpe,  
carrying forty two brass and iron cannon  
mounted, and one hundred and fifty men,  
among whom were thirty five soldiers, com-  
manded by lieutenant Hans Maagdelyn.

The *Flissingen*, aboard of which was the  
vice-admiral, head factor, fiscal, and com-  
missary John van Twist, Hubert Hubertson  
captain, carrying thirty eight pieces of can-  
non, and one hundred and forty men, among  
whom were twenty soldiers, commanded by  
a serjeant named Cornelius Bloem.

The *Arms of Rotterdam* rear-admiral,  
commanded by Herman Wolters Baak, and  
John David Wolfwinkel clerk, carrying thirty  
eight pieces of cannon, and one hundred  
and thirty men, among whom were twenty  
soldiers.

The *Hague*, aboard of which were Floris  
van Castel head-factor, Minne Williams Keert  
de Koe captain, and James van Chapel un-  
der factor, carrying thirty four pieces of  
cannon, and one hundred and ten men,  
among them twenty soldiers.

The *Harderwyk*, commanded by Paul  
Clafen, Peter Bruchart under factor, carry-  
ing thirty six pieces of cannon, one hundred  
and fifteen men, among them twenty sol-  
diers.

The *Vere*, commanded by Isaac Dickson  
Kien, Laurence de Marshal under-factor,  
carrying thirty pieces of cannon, and one  
hundred and five men, among them twenty  
soldiers.

The *Texel*, commanded by captain Cor-  
nelius Leendard Valk, Joost van Wielyk un-  
der-factor, carrying twenty four pieces of  
cannon, and seventy seven men, among them  
twelve soldiers.

The *Breda*, commanded by Francis Tbyse,  
John Fox under-factor, carrying twenty four  
cannon, seventy seven men, and among them  
twelve soldiers.

The yacht the little *Amsterdam*, Jacob  
Jacobson Struck commander, carrying eight  
guns, and twenty five men.

The little *Enchuyfen* yacht, commanded  
by captain Reynier, carrying two brass and  
six iron guns, and twenty men.

The *Falcon* yacht, John Thiissen captain,  
Adrian Helmont factor, carrying sixteen iron

VOL. III.

guns, forty men, and among them six sol-  
diers.

The *Dolphin* frigate, commanded by Peter  
van der Kamar, carrying six iron guns, and  
twenty men.

The Portuguese squadron consisted of these  
following ships.

The *Bon Jesus*, Don Antonio Telles de  
Meneses admiral, carrying seventy six brass  
guns, and four hundred men, among whom  
were three hundred Portuguese, the rest ne-  
groes.

The *St. Sebastian* vice-admiral, com-  
manded by captain Authonio Meneses Bourette, car-  
rying fifty brass guns, one hundred and fifty  
Portuguese, and two hundred negroes.

The *Madre de Deos* rear-admiral, commanded  
by Lewis Gonsalves, carrying thirty five iron  
and brass guns, one hundred and thirty Por-  
tuguese, and one hundred and twenty ne-  
groes.

The *St. Bartholomew*, Lewis de Castel-  
branco commander, carrying twenty six iron  
and brass guns, one hundred and forty  
Portuguese, and one hundred and sixty ne-  
groes.

The *St. Francis*, captain Domingo Ferreira  
commander, carrying twenty six guns, one  
hundred Portuguese, and one hundred ne-  
groes.

The *St. Philip*, commanded by Don Diego  
de Vaes carrying twenty four guns, one  
hundred Portuguese, and one hundred ne-  
groes.

With these six galleons, and twenty small  
frigats, the Portuguese set sail out of the  
road of Goa, Jan. 4. 1638. in sight of the  
Dutch, who no sooner got sight of them;  
but they weighed their anchors, and in form  
of a crescent sailed with a land-wind and low  
water out into the main. The Portuguese,  
divided into two squadrons, followed them  
with all the sails they could make, their  
admiral making up towards the Dutch ad-  
miral, as their vice admiral (though not so  
good a sailer as the rest) did to the ships  
the *Rotterdam*, the *Vere*, and the *Falcon*  
yacht. In the morning about nine a clock

both fleets began to come within cannon-  
shot, about three leagues from the road of  
Goa, where the engagement began betwixt  
the two admirals, who plentifully exchanged  
their broad-sides for three hours successively;  
as did three others of the Portuguese ships  
with the Dutch fleet, the rest of their gal-  
leons not being able to come up immedi-  
ately for want of a wind. The Portuguese  
vice-admiral coming at last up with the  
rest, was briskly saluted by our ships the  
*Rotterdam* and the *Vere*, whilst the rest of

*Baldæus.*

A list of the  
Portuguese  
ships.

Sea engage-  
ment be-  
twixt the  
Portuguese  
and Dutch.

*Baldaus.* the Dutch vessels did what they could to advance closer to the enemy; and at last having got the advantage of the sea wind, they were for boarding the Portuguese ships, having sent the *Texel* and *Dolpin* frigats, two fire-ships, to get in among them; but these setting it before the wind, avoided that danger. The Dutch admiral *Westerwold*, did his utmost in his ship the *Utrecht* to board the Portuguese admiral; which he perceiving, retreated towards his squadron, which made the Dutch admiral set it with all the sail he could make upon their vice-admiral, which he did with such success, that the Portuguese was forced to cut his sails and cables to get rid of his enemy, whilst the whole Portuguese squadron plied the Dutch admiral with their cannon, who thereby received considerable damage, especially in his rigging. Our ship the *Vere* would have boarded the *St. Bartholomew*, but they got clear of one another; yet not without receiving a good broad-side from the ship the *Hague*; and the *Fliissingen* finding the Portuguese admiral engaged with these two ships, she laid the *Bartholomew* aboard, and with the assistance of the *Hague* plied her so warmly, that she was set on fire, the rest of the Portuguese ships retreating in the mean while towards the shore. Such was the violence of the flames, that notwith-

A Portuguese ship with two Dutch vessels set on fire.

standing all the endeavours that were used, *Baldaus.* the *Hague* was also set on fire, and soon after the *Fliissingen*, and were all three consumed by the flames.

The Portuguese in the mean while taking the advantage of the confusion, made the best of their way towards the road of *Goa*, being pursued for one league and an half by the *Rotterdam*, *Vere*, and *Texel*, close under their forts; the rest of our ships being busied in saving the men from the danger of the fire, and in repairing their masts and rigging; so that the victory remained on our side, which would have been very considerable, had the same been not allay'd by the burning of the two before-mentioned ships.

The loss of the Dutch amounted to thirty five men, among whom were captain *Herman Wolters Baak*; besides fifty wounded, among whom was the factor *James Nolpe*. The loss on the Portuguese side amounted to seventy eight Portuguese, and one hundred and fifty *Mistices* and negroes. *Don Lewis de Castelbranco*, and father *Laurence de Merinda*, a jesuit, were taken prisoners, with ninety Portuguese, and forty nine *Mistices* and negroes, being saved by the same boats that came to save their own men, and exchanged afterwards for a captain and a factor, and eight other Dutch-

Loss on both sides.

Dutch-

*Baldæus*. Dutchmen belonging to the *Wieringen* yacht, (burnt near *Mallacca*,) besides a sum of two thousand crowns paid to *Don Pedro de Silva* viceroy of the *Indies*. The 1st of *March* a *Portuguese* carrack, half loaden with pepper and cinnamon, and bound for *Portugal*, immediately after the departure of the *Dutch* fleet was burnt by accident; and the galleon the *Madre de Deos*, underwent the same fate in *April* following, to the great detriment of the *Portuguese*, whose naval force in the *Indies* was not a little impaired by the loss of these three great ships.

The emperor of *Ceylon's* deputies, who were present in the engagement, were surpriz'd at the bravery of the *Hollanders*, who with their small ships durst board the *Portuguese*, so much stronger both in men and

cannon. After the engagement the *Dutch Baldæus* fleet came to an anchor near the islands on the south-side of *Goa*, to refit their ships, and to venture a second engagement. Soon after the *Hertogenbosch*, a brave vessel, commanded by *William Jacob Koster*, joined our fleet, coming lately from *Suratte* with a rich cargo of the best *Indian* stuffs, indigo, salt-peter, and other *Indian* commodities, valued at four hundred and twelve thousand guilders at the first hand, which for meer safety sake were dispersed among the other vessels. The 12th of *January* arrived likewise the ship *Henrietta Louisa* from *Batavia*, having on board seventy six thousand crowns, besides other merchandizes for our factory of *Suratte*, and was sent thither in company of the *Breda* and *Enchuyfen* yachts.

CHAP. XXI.

*William Jacob Koster sent to Ceylon by Admiral Westerwold. The Portuguese march to Candy; are totally routed by the Emperor. The Dutch besiege Batecalo.*

A Dutch Squadron sent to Ceylon.

THE 23d of *January*, 1638. the *Falcon* yacht being likewise dispatched to *Batavia*, with advice of the late engagement, and some merchandizes, as also the sick and wounded to be disposed in the hospital there, our squadron consisted only of seven capital ships and two yachts. But the *Dutch* admiral perceiving the *Portuguese* to make not the least preparations of attacking them a second time, it was resolved in a council of war, to send Mr. *William Jacob Koster* commodore, with the *Texel*, the *Amsterdam*, and *Dolphin*, mann'd with one hundred and eighty men and seventy soldiers, to the isle of *Ceylon*, to give notice to the emperor of the intended succours against *May*, and in the mean while to offer his assistance in the siege of some fort, or other, belonging to the *Portuguese*; for which purpose the admiral writ the following letter to his imperial majesty.

*Adam van Westerwold, counsellor extraordinary of the Indies, and admiral of the Dutch fleet, wishes the most potent emperor of Ceylon, king of Candy, &c. all happiness and prosperity, with the utmost offer of his service, for the throwing off the intolerable yoke of the Portuguese.*

*Most potent Emperor!*

The Dutch admiral's letter to the emperor of Ceylon.

 “ out our common enemies, offering for  
 “ that purpose to have either *Batecalo* or  
 “ *Cotiar* (which of the two we should  
 “ pitch upon) fortified at your own charge  
 “ for our use, as likewise to give satisfac-  
 “ tion for all the charge we should be at  
 “ in the equipment of such ships as should  
 “ be sent to your assistance: these proposi-  
 “ tions having been well weighed by the  
 “ general and council of the *Indies*, it was  
 “ resolved by them, pursuant to the good  
 “ inclinations they have to your majesty,  
 “ to comply with your desires. And it  
 “ appearing by your majesty's letter, dated  
 “ *November 21. 1637.* and sent to me by  
 “ the *Falcon* yacht, that you still persist in  
 “ the same laudable sentiments, I took im-  
 “ mediate

*Baldæus.* “mediate care to fend a vessel and two yachts, to advertise your majesty of our coming under the commodore *William Jacob Koster*, the second member of my council, who is to treat with your majesty concerning our intended design, and to concert measures which of the *Portuguese* forts may be most conveniently attacked at our arrival, and where your majesty’s forces are to rendezvous, in order to assist in the taking of the said forts; for which purpose a certain quantity of ladders of bamboes, besides some other materials, must be got ready. Your majesty’s deputies who come with these ships, will be able to give you a more compleat account by word of mouth, concerning our intentions. If the blockade of *Goa* be raised by the end of *April*, I intend (pursuant to the orders received from the general and council of the *Indies*) to set sail in person with three of my biggest ships well provided with men and ammunition for *Ceylon*, to confer and treat more amply with your majesty concerning our projected design. I hope your majesty will according to your promise, order two ships cargoes of cinnamon to be got ready against our arrival. I wish your majesty a long life, and victory against your enemies.”

*Commodore Koster arrives in Ceylon.* The before-mentioned commodore *Koster* having set sail accordingly, *March 17*, from *Goa*, with the three ships, the *Texel*, *Little Amsterdam*, and *Dolphin*, came to an anchor the 2d of *April* following, near *Trinquenemale*, a harbour on the north side of the isle of *Ceylon*, where the emperor’s deputies being set ashore, in order to deliver the admiral’s letter at *Candy*, and give notice of the arrival of the *Dutch* ships, they understood, that the emperor immediately after the departure of the *Falcon* yacht, had caused a good quantity of cinnamon, wax, and pepper, to be laid up for our use. The *Portuguese* had no sooner notice thereof, but they sent a letter to his majesty, asking the reason, *Why he had ordered such a quantity of merchandizes to be laid up, which, pursuant to the contract stipulated betwixt them, belonged only to them?* The emperor returned them no other answer, than *That he having promised the same to his friends the Hollanders, he would try who should dare to oppose it.*

*The Portuguese put to a great nonplus.* This resolute answer so nettled the *Portuguese* at *Columbo*, that being now fully convinced of the confederacy betwixt the emperor and the *Dutch*; and that they must soon expect to be attacked at *Batecalo*, they were put to the greatest nonplus, what resolution to take in this present exigency

of affairs. Some considering, that having scarce been able to cope with the emperor alone, they would not be able to resist his efforts when sustained by the *Dutch*, were of opinion to embark all their treasure, men, and artillery, to demolish the fort, and set sail for *Goa*.

But the braver fort rejecting this proposition as base, and inconsistent with their king’s honour, resolved, rather than thus to quit an isle, which they had fixed themselves in with the loss of so much blood and treasure, to venture the utmost, and die in the attempt. *Damijao Bottado*, who had laid the first foundation of the fortress of *Batecalo*, proposed, among the rest, That they ought to gather all their forces, and march up to *Candy*, before *Raja Singa* could be joined by the *Dutch*.

This advice being approved of, they marched in *March 1638*, under the command of their general *Diego de Melo*, the before-mentioned *Damijao Bottado*, and the major-general *Sorde*, towards *Candy*.

The emperor having got notice of their march, retired from thence with all his people, leaving the city to their mercy, which they took without any opposition; and having plundered and burnt the same, directed their march to the mountains of *Gannor*, or *Gannero*, where they pitched their tents, their whole force consisting of two thousand three hundred *Portuguese* and *Miscics*, and six thousand negroes.

This it was that the emperor had so long looked for, who immediately ordered the road to *Walane*, and all other places through which they were to pass, to be stopped, by laying great trees cross the roads. The enemies finding themselves reduced to these straits, the *Cingalese* unanimously revolted to the emperor; so that the *Portuguese* seeing not the least hopes of escaping by force of arms, had recourse to two friers, one a *Franciscan*, and the other an *Austin* monk, who were sent to endeavour to obtain them a free passage from the emperor to *Columbo*. But the emperor gave them such an answer, that the friers thought it their safest way not to return to their camp; so that the *Portuguese* finding themselves past all reprieve, the general *de Melo* asked *Bottado* what was to be done, and which way they should escape the danger into which they were drawn by his rash advice, who gave him no other answer, than that they must die together.

The emperor *Raja Singa* in the mean while kept close in his camp, watching all the opportunities of attacking them with the utmost advantage, which soon happened; for a violent storm of rain (which he knew would render the *Portuguese*

*Baldæus.* *guese* firelocks in some manner ufeless) made him draw out his troops against the enemy; and putting the musqueteers in front, he ordered them after the first discharge to retire, and give way to five thousand bowmen of *Mangel-Corle*, who being sustained by as many pikes, did break in with such fury among the *Portuguese*, that they soon put them into disorder, and immediately after to the rout, with the slaughter of all the *Portuguese*, except a very few who obtained mercy at the conqueror's hands, amounting in all not to above seventy persons.

And put to the rout.

A pyramid of heads.

The emperor was a spectator of this engagement from a tree near the bank of a river, which ran betwixt him and the mountain of *Gannoor*, whither they brought the heads of the *Portuguese* slain in the battle, which were heaped up in form of a pyramid before him. All the great officers of the *Portuguese* lost their lives near the mountain of *Gannoor*; and among them their general *de Melo*, whose sword was afterwards

presented by the emperor to the admiral *Baldæus Westerwold*.

In the mean while matters having been concerted with the *Modeliar*, or governor of *Mattaclape*, concerning the *Portuguese* fortress of *Batecalo*, they set sail thither; and having landed one hundred soldiers, and as many seamen in two troops, they soon raised two batteries with the assistance of the natives, one on the east, the other on the south-side of the fort, upon each of which were mounted four brass demi-culverines; and the emperor having left the gross of his army under the command of his brother the prince of *Mateli* to invest *Columbo*, joined our forces before *Batecalo*, April 14. in person, with a detachment of two thousand men. Commodore *Koster* being received by his imperial majesty with all possible marks of honour, they immediately entered upon a debate, how to attack the fortress with the utmost vigour upon the arrival of the rest of our ships.

Siege of Batecalo.

CHAP. XXII.

Adam Westerwold's Arrival in Ceylon. Batecalo taken. A Treaty betwixt the Emperor and Mr. Westerwold.

Westerwold comes before Batecalo.

THE admiral *Westerwold* having set sail the 22d of *April* from before *Goa*, arrived at *Batecalo* the 10th of *May* with the ships the *Maeſtricht*, *Harderwick*, *Rotterdam*, *Vere*, and the *Enchuyſen* yacht, having on board eight hundred and forty men, officers, soldiers, and mariners. The next following day having landed his men, with six great pieces for battery, the same were mounted immediately, in order to facilitate the passage of their forces into the isle upon which the fort was built: this being executed accordingly the 18th, and five hundred men brought over under favour of the cannon, which play'd incessantly for four hours upon the *Portuguese*, they put out the white flag immediately, and sent two deputies to capitulate with the *Dutch* admiral, which was soon done upon the following conditions: That they should surrender the fort immediately, and be permitted to march out without arms or baggage. The *Portuguese* and *Mistices*, to the number of one hundred and eight, with their wives and children, to be transported in a *Dutch* vessel to *Negapatan*, but the natives to be delivered up to the emperor; which was executed accordingly, fifty of them (who had murdered one of his majesty's gentlemen) being empaled alive, and the rest sold for slaves with their wives and children.

Batecalo surrendered upon articles.

Severe punishment of the Cingalese.

The fort of *Batecalo* is seated in an isle of about two *Dutch* leagues in compass, three leagues within the mouth of the river of *Batecalo*, which has given it its name. It was fortified with high stone walls and three passable bastions, upon which were mounted eleven iron and brass cannons, besides some lesser ones, with a suitable proportion of ammunition. We found in it rice sufficient for two months; but their fresh-water being about a musket-shot without the fortress, the *dutch* had made themselves masters of that spring. Commodore *Koster* was made governor of the fort, with a garrison of one hundred *Dutch* soldiers.

A description of Batecalo.

After the taking of this fortress, the admiral *Westerwold* made an alliance with the emperor of *Ceylon* in the name of their high and mightinesses the states-general of the *United Provinces*, his highness *Frederick* prince of *Orange*, and of the honourable *East-India* company, with the approbation of the general and council of the *Indies*, upon the following conditions:

I. A Firm and stedfast amity shall be maintained betwixt his majesty and his subjects and the *Dutch* nation and their *East India* company, who shall assist his majesty upon all occasions against the *Portuguese*.

Alliance betwixt the emperor of Ceylon and the Dutch.

The Impaling of Some rebels.

*Baldæus.* II. As often as any place or fort is taken by the *Dutch*, with the assistance of his majesty, from the common enemy, the booty to be divided share and share alike.

III. After the taking of any forts, the *Dutch* shall provide the same with necessary garrisons and ammunition; and if any thing be wanting to compleat the fortifications, the same shall be done at the charge of his majesty, as it shall be thought requisite by the *Dutch*.

IV. His majesty obliges himself to pay punctually every month their soldiers and officers.

V. As also to build in the conquered places or forts (where no houses are before) a house of stone, (as the *Dutch* shall think fit,) to be used for a warehouse, as also a magazine for their arms and naval stores.

VI. In case his majesty designs any thing against the common enemy, the same is to be consulted with our chief officers.

VII. For the security of the rivers, his majesty is to furnish a certain number of galleys and galley-slaves, which are to be provided with soldiers and ammunition by the *Dutch*.

VIII. His majesty and his subjects oblige themselves to make full reparation of the charges the *Dutch* have been at in equipping the present fleet, yachts, vessels, &c.

C

and furnishing them with men, soldiers, of *Baldæus*, officers, ammunition, provisions, &c. or of such other ships as the general and council shall for the future send to his majesty's assistance into *Ceylon*, with their necessary men, ammunition, provisions, &c. the charges whereof shall be reimbursed in cinnamon, pepper, cardamum, indigo, wax, rice, and such other commodities as are of the product of his majesty's dominions, except the *Mata* or *Wild cinnamon*.

IX. His majesty, in respect of his friendship and good inclinations to the *Dutch* nation, allows them free passage and traffick in all his dominions, in the isle of *Ceylon*, in all his cities, towns, villages, seaports, roads, bays, rivers, &c. with their vessels, yachts, boats, &c. to buy, sell, or exchange, import or export, without the least molestation, or paying any customs under any pretence whatever. His majesty's subjects shall not be permitted to sell the *Dutch* any cinnamon, pepper, wax, and elephants teeth, except what is sold by the emperor's order; who engages himself, that in case he should have occasion to sell four, ten, twenty, or more elephants, he will procure them the like number at the same rate as they were sold.

X. His majesty, and all the great men of the empire promise not to allow their subjects

*Baldæus*. subjects to traffick either with any *European* or *Eastern* nation, either by sale or exchange, in such commodities as are of the product of *Ceylon*, much less to permit the ships of these nations to tarry in the harbours of *Ceylon*, but to oblige them to depart forthwith. However the neighbouring nations of *Daucy* and *Tanjourwer* may pass and repass freely with their vessels to and from *Ceylon*.

XI. His majesty obliges himself to send yearly to *Batavia* one or two ship-loads of cinnamon, pepper, cardamum, indigo, wax, &c. as a reimbursement of the charge bestowed in the equipment of the vessels sent to his assistance; and in case the said cargo should amount to more than the charges, the surplus to be paid to his majesty, either in ready money, or such commodities as his majesty shall think fit.

XII. His majesty having granted full liberty for the *Dutch* merchants, to travel, traffick, buy, and sell, the inhabitants shall be obliged to furnish them with beasts fit for carriage, for the carrying of such goods as they have bought either to their warehouses, or aboard their vessels. Furthermore, the said merchants or other *Hollanders* shall remain under the jurisdiction of the respective commanders or heads of their own nation, as the natives of *Ceylon* stand under the subjection of the emperor.

XIII. No body, without exception, that trades with the *Dutch* here, shall have freedom to sell any such commodities bought from them to others, before the *Dutch* have fully received their quota; and in case of contravention, the *Dutch* shall have a power to seize his person, and to compel him to produce the said goods. Furthermore, in case any of the natives stand indebted to the *Dutch* for a considerable sum, they shall be subject to the same treatment; with this proviso nevertheless, that in case any of his majesty's subjects be taken into custody by the *Dutch*, notice shall be given thereof to the emperor or his governor.

XIV. No body, of what quality whatever, shall pretend to raise or diminish the coin, otherwise than has been agreed betwixt his majesty and the *Dutch*; and such as contravene this article on either side, shall without mercy be punished with death and confiscation of their estates to his majesty's use.

XV. In case a *Hollander* should fly into his majesty's dominions, the same shall be delivered up; as on the other hand the same shall be done on our side, in case any of his majesty's subjects shelter themselves in our dominions.

XVI. After the conclusion of this treaty, neither his majesty, nor any of his subjects, shall maintain any secret or publick com-

merce or correspondence with the *Portuguese*, *Baldæus* our common enemies; much less to traffick with them under any pretence whatever, but look upon them as their constant declared enemies: and in case any of his majesty's subjects shall be discovered to have sold them any commodities, the transgressors shall be punished with death.

XVII. His majesty shall not suffer any priests, friers, or clergymen to dwell in his dominions, but oblige them to depart as the authors of all rebellions, and the ruin of governments.

XVIII. In case any *Dutch* ships employed in his majesty's service shall take any prizes from the enemies, the same shall belong to the *East-India* company, with this proviso however, That the said company shall alone bear all the damages sustained by the said ships in any of these engagements.

XIX. In case the *Dutch* furnish any great cannon for the fortresses, or otherwise for his majesty's service, the same may be freely taken back, if occasion requires, without any hindrance, and be brought aboard of ship, or otherwise, where it shall be thought most convenient.

XX. Transacted and concluded thus, in the presence of his imperial majesty of *Ceylon*, and of *Adam Westerwold* member of the council of the *Indies*, and commodore of the squadron of ships on the coast of *Ceylon*; as also of *William Jacob Koster*, vice-commodore of the said squadron, at the royal palace, in the country of *Batecalo*, May 23. 1638.

Additional Article.

The *Dutch* oblige themselves to shew all possible favour and assistance to such vessels, as shall go from hence with his majesty's, or any of his governors passports to other harbours.

Signed,

*Raja Singa* Imperador,  
*Adam Westerwold*,  
*William Jacob Koster*.

Sealed with his majesty's and  
Mr. *Westerwold*'s seals.

Pursuant to this agreement his majesty ordered four hundred balls of cinnamon, eighty seven quintals of wax, and three thousand and fifty nine pounds of pepper, to be delivered to Mr. *Westerwold*, in part of the reimbursement of charges they had been at, promising to deliver the rest, as soon as it could be brought together at the seaport of *Samature*; and to hasten the ratification of the said alliance, his majesty sent two ambassadors to *Batavia*, in company of

*Ratification of the said alliance.*

*Baldæus*, of Mr. *Westerwold*, with some presents to the general and council of the *Indies*; who being honourably received and treated there, were afterwards sent back with letters and presents for his majesty, with the yachts the *Griipskerk*, *Faulcon*, and *Venlo*, bound for the coast of *Coromandel*.

The emperor's army, in the mean while, being about twenty thousand strong, conti-

nued before *Columbo*; and the *Portuguese* having been very unsuccessful in divers sallies, it was more than probable that this place (though the capital city of the *Portuguese* in this isle) would be forced to surrender upon the arrival of the expected *Dutch* fleet under the admiral *Anthony de Caan*.

*Baldæus*,  
*Columbo*  
*besieged*.

## C H A P. XXIII.

## Puntegala taken by Storm by William Jacob Koster. Caleture besieged.

*Puntegale*  
*besieged*.

THE 8th of *March*, commodore *Koster* being come to an anchor about noon in the bay of *Puntegale*, under the enemies cannon, he landed his men before night on the north-side without any resistance. Intelligence was brought by some negroes, that they expected a reinforcement in the city of two hundred and fifty *Portuguese* from *Columbo*; notwithstanding which the *Dutch* divided their forces into three bodies, and advanced close under the fort: the 9th early in the morning, they were attacked by the said *Portuguese*, whom they repulsed, though not without some loss.

Nevertheless they kept our forces in constant alarm, those of *Candy* being the 11th of *March* advanced no further than *Billigamme*, six leagues from *Gale*; but (through God's singular mercy) three of our ships, viz. the *Harlem*, *Middleburgh*, and *Breda*, coming on the same day to anchor in the bay, and landed four hundred men, as well soldiers as seamen, we were soon exempted from all fear.

The 12th finding they had made a sufficient breach in the bastion of *St. Jago*, they began to make all necessary preparations for the storming of the place, which

THE CITY OF GALE

THE ART  
OF THE  
SUN  
OF THE  
SUN

*Baldæus.* was done accordingly the 13th with such undaunted bravery, that, after an hour and half's stout resistance, it was taken by assault. This city was afterwards, viz. 1663, and 1664. rendered almost impregnable by the Dutch by several additional fortifications; and this day is ever since celebrated yearly by a solemn thanksgiving.

Is taken by storm.

Mr. *Koster* (who was treacherously murdered by the *Cingalese*, as *Sebald de Weert* was by his own imprudence) was succeeded by *John Thiissen*, who is yet living, and has rendered himself famous for his many services done to the company in those parts. In his stead came *John Maatzuyker*, since governor of the *Indies*, who has served in that station fifteen years. He was succeeded by *Jacob van Kittenstein*, in the presidentship of *Gale*; (the affairs of the company hitherto not admitting of the quality of a governor here) who died afterwards at *Batavia*, and was succeeded by *Adrian van der Meyden*, in whose time *Caleutire*, *Columbo*, *Manaar*, and *Jafnapatnam*, were taken. He was succeeded by *Rylof van Goens* and *Jacob Hustart*; by which time the company having considerably enlarged their limits in this isle, a governor was constituted at *Columbo*, the city of *Gale* being left to the management of a commander in chief, the first in that station being one *Ysbrand Gotsken*, a native of the *Hague*,

a brave soldier, sufficiently known for his signal services done at the sieges of *Columbo*, *Manaar*, *Jafnapatnam*, and *Cochin*, whereof he was governor afterwards, and since chief director in *Persia*. *Adrian Rootbaas* his successor is a person who has rendered his name famous by sea, especially in the *Levant* and before *Goa*, as the former had done by land.

*Gale* has a commodious bay, fit for anchorage, except that with a south-west wind the sea runs very hollow there. At the very entrance of the harbour lies a dangerous rock, near to which all ships must pass, and against which the *Hercules*, one of our ships was stav'd to pieces. There is no coming into the bay, unless you pass by the water-fort, which is well provided with cannon for the security of the harbour. The fortifications of the city it self consist only in three bastions, the rest being so inclosed with the sea and rocks, that there is no approaching to it, even with the smallest boats. On the top of a rock, which jets out into the sea, is a lanthorn, and an iron cannon, wherewith they give warning to the ships; and near it you see the company's flag displayed. The city is well built of stone, very high, with goodly houses, a stately church, pleasant gardens, and most delicious springs; the mountains which surround it, affording a pleasant prospect;

A description of Gale.

*Baldæus*, over which you pass through roads cut out of the rocks, called by them *Gravettes*.

Caleture.

About a days journey from *Gale* stands the fort of *Caleture*, in a most delightful country, near the entrance of a large and broad river, on the sea-shore, surrounded by a double strong wall of earth. It was reduced by the director-general *Gerard Hulst*, Oct. 15. 1655. in the following manner.

Is invested by the Dutch.

Having rendezvoused his forces, consisting of five hundred ninety three men near *Bentotte*, and being joined the 28th of September by some more troops under *Christophor Egger*, *Leonard Wilschut*, and *Melchior van Schoonbeek*, they directed their march towards *Caleture*. But being informed that the enemy were resolved to make a vigorous defence, and our artillery being not yet come up, it was thought advisable to detach captain *Abraham Cous* and *Jurian Gevels* with five companies, to secure the pass of *Oucatte* over the river, thereby to prevent the enemy from receiving any supplies, till the arrival of our ships, that were expected every day with more forces.

The 29th we took a view of all the avenues leading to the place; and guards being placed in all convenient posts, the factor *Renier Serooskerken* and Mr. *Ysbrand Godsken* were dispatched to our ships, to send us the necessary artillery and ammunition.

The 5th of October advice was brought by two of the natives, that the garrison, consisting of three hundred men, was but slenderly provided with provisions, their whole store consisting only in 50 \* *Parras*, and two small packs of dried fish; and that they were forced to live upon *Cansies*, or water and rice.

\* Each *Parras* is forty pound.

The 6th of October after we had mounted some great guns upon our batteries, a cer-

† A *Topas* is the son of a Portuguese and an Indian woman.

tain † *Topas*, who had been secretary to captain *Marcello Fialbo*, came over to us, who discovered to the general *Hulst* the whole strength of the enemy, and the names of their officers; adding, that four or five days before his departure, there were about 210 *Parras* of rice in the store-house, whereof they distributed a certain quantity to each soldier every day, and to the king's negroes, called \* *Cassers*, a quart a piece: That they had no *Lascaryns* in the place, and, as he believed, could not hold it above ten days, though they seemed resolved to defend it to the last extremity, in hopes of being relieved the next week by *Caspar Figeiro*.

\* *Cassers* are Negroes like those of Angola.

The same day major *John van der Laan* brought word, That all was well secured on his attack; and captain *James Swart*, and the factor *Abraham Hartman* brought up, with sixty seamen, the two great cannons that were left behind. Captain

*Dianteiro* was also detached with forty Dutch soldiers, and a good number of *Lascaryns*, to the pass of *Wellikande*, and the general *Gerard Hulst*, with Mr. *Adrian van der Meyden*, having taken a view of our batteries, did go to take a view of the pass near *Palletotte*, where, as well as on the other side, they found every thing to their satisfaction, seven hundred fifty six men being employed on that side.

The 7th of October they went up the river as far as *Wellikande*, to see whether the enemy could receive any supplies of provisions by the brook, or from above by the way of *Anguratotte* and *Tiboene*; but found it not feasible, by reason of the shallowness of the water. However, five ferry-boats were shewed them in the narrowest places of the river, where, having placed some *Lascaryns*, they committed the management thereof to Mr. *John van der Laan*. The 11th of October, a mortar of a large size, and a twelve pounder, were mounted on the battery; and Mr. *John van der Laan* came to tell the general, that the second battery would be ready to play on his side the same night.

The 14th, in the morning, we saw a Portuguese lieutenant and drummer, with a white flag, coming out of the fort, sent by *Antonio Mendes d' Aranba*, their commander in chief, with the following letter.

“ HAVING for several days past discharged our trust as a captain ought to do, and finding you not so furiously employed to day, I thought fit to take this opportunity, to try whether you would treat with me according to the custom of war; for which purpose, I have sent you a trusty person. In the mean while all hostilities shall cease on our side, hoping the same from you. We recommend you to God's protection. *Caleture*, Oct. 14. 1655.”

They offer to capitulate.

*Antonio Mendes d' Aranba.*

A cessation of arms being agreed upon, *Martin Scholtes*, an ensign, was sent back with the Portuguese officer, to treat about the conditions, whilst a messenger was dispatched with a letter to the *Dissave* (or deputy-governor) of *Saffra Gamme*, to desire him to have it rumour'd abroad, that the Portuguese in *Caleture*, had lately been supplied with provisions; in hopes thereby to amuse *Caspar Figeiro*, (who stood with his forces near *Moutapelle*,) not to hasten to their relief.

The capitulation was soon after concluded upon the following terms:

“ THE soldiers to march out with their matches not lighted, balls in the mouth, and ensigns display'd; the off-”

Articles of the capitulation.

*Baldæus.* “cers with their scarfs, which they shall  
 “lay down rolled up before the standard  
 “of the company. All the great officers,  
 “to the captains inclusive, to be transported  
 “during this *Mousson* to *Goa*; the rest of  
 “the officers and soldiers to *Batavia*, and  
 “from thence to *Portugal*, at the charge of  
 “the company. All the officers and sol-  
 “diers shall be allowed to carry their bag-  
 “gage along with them; but their servants  
 “shall be left to the discretion of the *Dutch*  
 “general. All church ornaments shall be  
 “removed. All such as have married *Por-*  
 “*tuguese* women and the *Mistices* shall  
 “be conducted to *Columbo*, or wherever  
 “else they think fit. But the *Lascaryns*  
 “and *Negros*, whether married or unmar-  
 “ried, shall remain prisoners of war. The  
 “fathers and clergymen shall enjoy the  
 “same liberty as the highest officers, and  
 “shall be transported from *Caleture* on the  
 “same day. These articles are to be rati-  
 “fied to morrow morning by sun-rising.  
 “All the superior officers, including the  
 “captains, shall have liberty to take their  
 “swords along with them. It was signed,

*Antonio Mendes d'Aramba.*  
*John Alonzo.*

“ After the ratification, it was thus sub-  
 “scribed by both parties.

*Gerard Hulst.*  
*Adrian van der Meyden.*  
*John van der Laan.*  
*Antonio Mendes d'Aramba.*  
*John Alonzo.*

*They march* The 15th, early in the morning, the *Por-*  
*out.* *tuguese* officer returned with the articles; to-

*Baldæus.* wards noon the garrison, consisting in nine  
 companies, making in all, two hundred and  
 fifty five men, marched out of the fort, and  
 having paid their reverence with their ensigns  
 as usual, the soldiers were disarmed. The  
 companies were the following: The royal  
 company, commanded by the captain-major  
*Marcello Fialbo*, consisted of thirty one *Por-*  
*tuguese*; that of *John Antonio Felbaon* of  
 twenty seven; that of *Pedro de Barbos* of  
 twenty eight; that of *Manuel Rodrigos* of  
 twenty eight; that of *Diego Frois* of thirty  
 six; that of *Jacomo Padraon* of twenty  
 eight; that of *Manuel Mendes* of twenty  
 seven; that of *Lewis Alvares Periero* of  
 twenty four; and that of *Leonardo de Silva*  
 of twenty six: in all two hundred fifty five.

Besides the persons of note living in the  
 place, with their families, that were con-  
 ducted to *Callamoende*, and fifty more that  
 were with the governor *Antonio Mendes*  
*d'Aramba*, (afterwards our prisoners at *Jafna-*  
*patnam*.) that were carried to *Gale*, the other  
 superior officers were sent to *Macoene*, and the  
 rest kept under a good guard in the fort.

Immediately notice of this victory having  
 been given to the emperor *Raja Singa*, gene-  
 ral *Hulst* and Mr. *Adrian van der Meyden*  
 took a view of the fortifications of the place,  
 whereat they were not a little surprized, and  
 found therein, ten ensigns, five great guns,  
 four brass ones, ten eight and five pounders,  
 and one iron eight pounder, forty barrels  
 of gunpowder, two hundred and four bam-  
 boe canes filled, seven hundred and ten bul-  
 lets, one hundred and eighty muskets, sixty  
 two pikes, seven chests with musket balls,  
 another barrel with larger bullets, fit for  
 musketoons, one hundred and sixteen am-  
 munition pouches, five musketoons, some  
 fiery bullets; sixty spades, and eight hatchets,

CHAP. XXIV.

*Engagements near Paneture, and near Montual; both to the Disadvan-*  
*tage of the Portuguese.*

*Ysbrand*  
*Godskens*  
*made go-*  
*vernour of*  
*Caleture.*

**Y** *Sbrand Godskens* being constituted go-  
 vernour of *Caleture*, with a company  
 to keep garison there, major *John van der*  
*Laan* marched the 16th from the other  
 side of the river, towards *Paneture*, being  
 followed by the general and Mr. *Van der*  
*Meyden* with the rest of the forces. In  
 the dusk of the evening, we came up with  
 the *Portuguese*, whom we saluted so briskly  
 with our firelocks, that they thought fit to  
 retreat, leaving seventeen dead, and all  
 their ammunition, with their standard, be-  
 hind them. On our side, we had fifteen  
 wounded, besides *Arent Janfz van Norden*,

an ensign. According to the report of  
 one of their captains, who was taken  
 prisoner, they consisted of six companies,  
 commanded by *Dominges Sermento*, cap-  
 tain-major of *Montual*, detached to-  
 wards *Caleture* to secure this pass till to-  
 morrow for *Caspar Figeiro*, who was on  
 his march at the head of six hundred  
 men, to attempt the relief of that place.  
 Whereupon it was thought convenient to  
 make a halt betwixt *Paneture* and *Gal-*  
*kisse*, near a good spring, and there to  
 expect the coming up of the rest of their  
 forces.

The

*Baldæus.* The same night, the moon shining very bright, a prisoner was brought into our camp, who being a native of *Antorf*, and well versed in the *Dutch* tongue, told the general, That he had served the king of *Portugal* eleven years; and that *Figeiro* would doubtless be with them by day-light.

*An engagement betwixt the Dutch and Portuguese.* The 17th, being *Sunday*, word being brought that the *Portuguese* were at hand, major *John van der Laan* and captain *Kous* were posted with five companies, and two field-pieces, on a convenient place, to receive the first shock of the enemy; whom, after a general discharge of their fire-arms and cannon, they received so warmly with sword-in-hand, that they were soon brought into confusion, and pursued as far as to the church, called *Nossa Senhora de Milagres*, i. e. *That of our Lady of Miracles*, with a slaughter of one hundred and fifty on the enemies side. Among our troops major *Van der Laan* was wounded in the cheek; and a gunner, two common soldiers, and a serjeant killed.

*A second engagement.* The 18th of *October* happened another engagement betwixt us and the *Portuguese*, near *Montual*. Our forces attacked them in their entrenchments, from whence they fired furiously upon them; but no sooner had they broke through their works, but they threw down their arms, and made the best of their way to *Columbo*, leaving all their ammunition behind them, and twenty two killed upon the spot; whereas we had not so much as one wounded on our side. We left two companies as a guard of the church of *St. Sebastian*; and advancing nearer towards *Columbo*, a body of *Portuguese* retreated in boats from *Montual* to *Columbo*, leaving the pass open to us, where we found three iron guns, and some cinnamon, and put a guard of sixteen soldiers in it under a serjeant.

Here we received intelligence, That of the whole body commanded by *Caspar Figeiro*, consisting of six hundred *Portuguese*, and sent from *Columbo* to the relief of *Caleture*, not above one hundred and sixty were returned to that city.

The 19th, before noon, some *Portuguese* being got into a coco-garden, some of our soldiers forced them to retire; but those of the city firing upon them, killed one of our serjeants, and wounded *Hans Christophers*, a lieutenant, and two common soldiers. The same day the general was certified, by letters from captain *Kous* and lieutenant *Wilstchut*, that they had already told above three hundred slain of the *Portuguese* upon the roads; and that daily more heads and prisoners were brought in. They sent at the same time a waistcoat of *Caspar Figeiro*, wherein was the following letter:

“ YOU are not ignorant of the resolution taken the 12th of *October* concerning your endeavours to relieve the fort of *Caleture*. All the forces we have been able to gather for this expedition consist in four hundred and twenty men, which we hope will prove sufficient, through the blessing of God and your good fortune and conduct, to make you return victorious. We leave the management of that affair to your approved experience, it being impossible for us to foresee all the circumstances and accidents that may attend a business of this nature. It must be your care to get frequent intelligence of the posture of the enemy, and how to bring the provisions laid up for the relief of the place at *Belantotte* into the fort; the success whereof you shall notify to us with the first opportunity, that we may send fresh supplies of rice both for your use, and of the garrison in the fort. If you can meet with any provisions in the country, you will not fail to seize them for your convenience.”

“ In case you should prove successful in the relief of *Caleture*, you must join your forces, and the captain-major of the place must submit to your command. We do not question but you will not be wanting in your duty in a business of such vast moment, whereon depends the preservation and welfare not only of this city, but also of the whole isle.

“ If after the relief of *Caleture* you find, that for want of provisions, or for other weighty reasons, the fort is not to be maintained, you shall agree among yourselves what is fittest to be done for his majesty's interest, whether it be not the best way to bring the fortifications into a narrower compass, and leaving only one hundred and fifty men for the defence thereof, to join the rest with your body.

“ If you find it impracticable to bring any supplies into the fort, you shall entrench yourself at a convenient distance, and from thence give notice to *Antonio Mendes d'Aranka* the governor, that he shall nail up all the cannon, destroy all the ammunition, and make the best of his way to your camp, thereby to preserve such brave troops, on whom, in some measure, depends the defence of this city.”

*Columbo, Oct. 13.*  
1655.

Signed,

*Antonio de Souza Coutinho.*

*Baldæus.*

And lower.

“ Just upon the conclusion of these presents we have received the expected succours from the *Indian* coast, which con-

“ sisting of two hundred men, is to be joined with your troops. We recommend you to God’s protection.”

*Columbo, Oct. 15.  
1655.*

CHAP. XXV.

*A famous Highwayman taken. The Beginning of the Siege of Columbo. The Emperor offers the Dutch his Assistance : His Letter to the Dutch General.*

\* *Apahamie is an officer of note.*  
† *Haratic is a serjeant.*  
‡ *Lascaryn a common soldier.*  
§ *Diffave a governor.*

ABOUT the same time arrived three *Apahamies*,\* and as many *Haraties*,† with some *Lascaryns*,‡ from the imperial court; and the *Diffave*\* of *Saffragamme*, with letters from Mr. *Foris Hervendonk* our resident at *Candy*, intimating that he had been commanded by his majesty to notify his being ill of an ague; and that he hoped before long to be with all his nobility at *Columbo*. In return of which, another letter was sent to his majesty, to notify our victory over the enemy.

*A famous Robber taken.*

The same day advice was brought that the famous highwayman, *Francisco Antbunes*, was fallen into the hands of some of our *Lascaryns*; wherefore a detachment was ordered to bring him into the camp; but either through the cold and inconveniencies of the journey, or rather out of fear, he died by the way, and was buried.

*A Thanksgiving-day.*

About the same day a thanksgiving-day was also appointed to be held the 28th of *October*, to return thanks to God for having blessed our arms with success, and begging his mercy for the future.

The 21st the general, with some other officers of note, having taken a view of the situation of the city of *Columbo* at *Quia de Lobo*, ordered all sorts of materials to be brought thither from *Montual*, for the raising of a battery, and hired fifty pioneers for that purpose.

The 22d the *Diffave* of *Saffragamme* appeared in person in a house formerly belonging to *Diego Melo de Castro*, governor of *Columbo*, offering certain supplies of men from his majesty, which was thankfully received by the general.

The 23d another battery was erected near the church of *St. Sebastian*.

Two days after came into the camp the emperor’s *Diffave* of the four *Corles* at the head of seven hundred men; and the same evening the general received a letter, writ with his majesty’s own hand, and brought by one of his own post-men. It was curiously perfumed with all sorts of spices, and on each side you saw the figure of a woman, with her hands folded, lifting her eyes up

to heaven, being an answer to Mr. *Adrian van der Meyden*’s letter writ to his majesty from *Batecalo*. The king seemed not well satisfied, that the said letter had not been wrapped in white linnen as usual; and that some of his titles had not been inserted; yet he testified his satisfaction about the arrival of the *Dutch* fleet, alledging for the rest, “ That pursuant to the promise made him by Mr. *Jacob Kittenstein*, and the agreement with him and *Adrian van der Meyden*, the city was to be delivered into his hands: but that as he made no great account thereof, he was satisfied, provided they would allow him the honour of the conquest, which he would acknowledge upon all occasions.” In the conclusion of the letter he told them, “ That he had ordered lodgings to be prepared for them in all the places through which they were to pass.”

The 26th we were busy in mounting the cannon upon a battery, and had four men wounded, and one killed. The same day we received a supply of ammunition and provision, brought aboard the *Lion* yacht to *Puntegale*. Sunday the 28th, after sermon, a deserter with a negro came into the camp from the city, who having made his escape through the fens, told the general, That *Caspar Figeiro* was by the governor of *Columbo* welcomed with these words: *You deserve to be banged*; and that he had alledged many falsehoods in his defence, and among the rest, *That he could not attack us, because we were so deeply entrenched near the sea-shore.*

*Welcome of Figeiro at Columbo.*

The same day the emperor’s *Diffave* of the seven *Corles* arrived in the camp with five hundred men, who, together with the other *Lascaryns*, were employ’d in carrying ammunition.

The 29th a deserter came over to us from the city: his name was *Herman Lucas*, a native of *Hertogenbusch*; who having formerly deserted our service at *Gale*, in company of one named *Walraven*, had obtained the name of *John de Rosa* among the *Portuguese*; but having had the misfortune of killing

*A noted deserter gives an account of the condition at Columbo.*

*Baldæus*. another at *Columbo*, was fled to *Candy*, where he pretended to have been sent by the governor, to view the outworks of the place. He gave the general an account of divers remarkable passages, and among the rest, that he had been present in the engagement which happened the 17th; and that of that whole body, not above one hundred and fifty *Portuguese* returned to *Columbo*, where there were as yet nine companies, amounting in all, with the citizens able to bear arms, to eight hundred men; that the governor was highly concerned at the loss of these troops, and the ensuing siege, especially since some of the citizens shewed no great inclination to fight. We play'd the same day very furiously upon the city, and the battery raised against *St. Sebastian* was likewise brought to perfection.

Columbo furiously plied with great cannon.

The next following day a certain *Portuguese* prisoner was brought into the camp; he was sent from *Milagre*, and had lived fourteen days upon grass and herbs in the woods. The 3d of *November* a carpenter and cannoneer were killed by a cannon-shot upon the battery raised at *Quia de Lobo*; and the same afternoon the sloop, called the *Delft*, arrived from *Caleture* with powder. About the same time a deserter came to us out of the city; but being lately come from *Goa*, he could tell no great matter. The same evening the ship, called the *Brownfish*, arrived with letters from *Laurence Pit*, governor of the coast of *Coromandel*, having on board forty four thousand five hundred and forty four pounds of gun-powder: she brought also advice, that the yacht the *Popkensburg* was safely arrived at *Gale*, but that they had no news of the ship called the *Haddock*. The same night we were busy in raising a battery near the sea-shore.

News of twelve sail being discovered.

The 4th of *November*, early in the morning, news was brought to the general from *Negumbo*, That, according to the report of certain inhabitants of *Annarolundane*, twelve sail of ships were discovered off of *Cbilaon*; whereupon immediate orders were given to the commodore *Edward Hauw*, to use all possible endeavours to get intelligence thereof: the same was also recommended to the head-factor of *Gale*, *John Kroon*, and to be upon his guard. The same afternoon, a cannon bullet from the bastion of *St. Stephen*, passing through a gallery of the church of *Quia de Lobo*, whilst the surgeons were dressing some wounded soldiers, a soldier was killed, two others had their arms shot off, and three more were dangerously wounded.

About the same time *Tenecon Apubamy*, came in the quality of the emperor's mes-

senger, with a breast shield of gold, beset with precious stones, and fastened to a gold chain, and brought the following letter from his majesty to the general.

“**R**AJA Singa, the greatest monarch and most potent emperor of the empire of *Ceylon*, wishes health to Gerard Hult, admiral of the fleet, belonging to the most faithful nation of the *Dutch*.  
 “By the letters sent to me from the governor of our fortress of *Gale*, I have understood, that immediately after your arrival with the *Dutch* fleet there, you have made yourself master of the fort of *Caleture*; and that one half of the *Portuguese* prisoners were sent aboard a ship, the rest being reserved for our service. The news of your success in the engagement betwixt *Caleture* and *Columbo*, without any considerable loss on the side of our faithful *Hollanders*, being likewise received by me with singular satisfaction, I sent immediate orders to all my *Dissaves* (governors) and chief commanders to bring into the field all the forces of our empire. In the mean while I received an *Ola* (letter) from the *Dissave* of *Saffragamme*, dated Oct. 23. wherein he informs me, That having been sent for by your excellency, you enquired after my health, telling him at the same time that you were come to no other end, than to deliver the cities of *Columbo*, *Manaar*, and *Jasnapatnam* into our hands; which done, you would in person appear in our imperial majesty's presence. I have been very ill for many days past, which however has not prevented my taking the necessary measures for the raising of the forces of the empire. No sooner had I received the welcome news of your excellency, but I was in a manner immediately restored to my former health, being now twice as strong as before, and able (through God's mercy) to assist in person in the intended expedition, which I intend to begin the 2d of *November*. I have sent with this letter one of the officers of our court, to enquire after your excellency's health, and to bring you a present from me; which I hope your excellency will value, not so much in regard of its value, as in respect of the love and good inclination of the giver.”

The emperor's letter to general Hult.

Dated at our imperial court in the city of *Candy*, Oct. 29. 1655.

Raja Singa Raju, most potent emperor of *Ceylon*.

CHAP. XXVI.

Resolutions and Instructions concerning the intended General Assault upon the City of Columbo.

*Baldæus.* THE 9th of November a new battery, with four great brass cannon, having began to play against *St. Stephen's* bastion, a general council of war was called of all the chief officers, in order to consult, (after having implored the divine assistance,) Whether it were convenient to venture a general assault upon *Columbo*: the general having openly declared, that every one there present should be at his full liberty to discover his real sentiments concerning this great undertaking; it was agreed by unanimous consent, that seeing the alacrity of the soldiers, it was convenient to attempt a general assault.

*A general assault is agreed upon by general consent.*

Soon after the general dispatched a trumpeter, bearing a flag of truce in his hand, to the Portuguese governor, *Anthony de de Souza Coutinbo*, with the following letter:

*The Dutch general's letter to the governor of Columbo.* THE success that has attended our arms in the taking of *Caleture*, and the defeat of the troops under *Caspar Figeiro*, near the shore of *Panature*, together with the advantages obtained already in the siege of *Columbo*, may, as I suppose, sufficiently entitle me to demand, without vanity, the delivering up of the city, in the name of his imperial majesty *Raja Singa*, and the most noble *Dutch East-India* company. I hope your excellency will not put a wrong interpretation upon this demand, when you consider, that pursuant to the tenor of your own letters sent to *Don Anthonio Mendes d' Aranba*, and *Caspar Figeiro*, the first dated September 30. and the second the 13th and 15th of October, (both which are fallen into our hands,) you were then sufficiently sensible, that the defence of *Columbo* depended on the preservation of the forces in *Caleture*, and those under the command of *Caspar Figeiro*. It is upon this score that I am of opinion, I do not put the least blemish upon your courage, since being bereaved of these means, you have nevertheless given such ample proofs of your zeal and bravery in the defence of this place. My request is only founded upon this, To avoid the effusion of innocent blood, the almost necessary consequence and unavoidable fate of all places taken by assault, it being sufficiently known, that the fury of the con-

“ quering soldiers is not easily stopped upon those occasions. *Baldæus.*  
Nov. 9. Gerard Hulst.

The trumpeter returning a little while after, told, That coming near to *St. John's* bastion, the letter was taken from him by a Portuguese officer; who assured him that the governor should return an answer the next day: hereupon the cannon being ordered to play as before, three companies under the lieutenants *William de Wit*, *Henry Gerritsz*, and *Christopher Egger*, were sent to *Montual*, in order to be put on board the two yachts, the *Ter Goes* and the *Erasmus*.

The 10th of November an answer was sent to the general upon his letter.

“ AS God Almighty disposes the chances of war according to his pleasure, so he may as well declare now for our side, as he has done for you before: the place you require belongs to the king of Portugal, my master, who having entrusted me with the same, I must be accountable to him for it. The reasons alledged by your excellency are not sufficient to move me to lay aside the defence of this city; not questioning, but that time and experience will convince you, that our condition at present is much beyond what you imagine. I recommend you to God's protection. *The governor's answer.*

Nov. 9. Antonio de Souza Coutinbo.

After the receipt of this resolute answer, the general thought fit to give the following instructions for the intended general assault.

“ The yachts, viz. the *Maid of Enchuy-sen*, commanded by *Volkert Adrian Sbram*, (who afterwards rendered himself famous in the north, during the English war,) and the *Workum*, *Arent Groenfield* commander, shall approach into the bay, as near to the water-fort as possibly they can; for which purpose they shall be provided with one hundred and ten chosen seamen, five thousand pounds of gunpowder, and with shot in proportion. *Instructions for the general assault.*  
“ The yachts shall anchor in any part of the bay, where they can best annoy the water-fort, and under favour of their cannon

*Baldæus.* “cannon land their men. For this purpose  
 “ the yachts the *Ter Goes* and *Erasmus*, shall  
 “ keep within cannon-shot of the other two  
 “ yachts, and have aboard, besides their  
 “ ship’s crew, one hundred landmen each,  
 “ viz. the companies of *William de Wit*, *Henry*  
 “ *Gerritsz*, and *Christopher Egger*, in order  
 “ to land, in conjunction with the men of  
 “ the other yachts. The boats, tenders,  
 “ and other small vessels, shall keep near the  
 “ before-mentioned ships, viz. the tender  
 “ the *Amsterdam* with her sloop, near the  
 “ *Ter Goes*, and the sloop the *Wesel* the  
 “ boat of the *Marygoldflower*, with her  
 “ sloop the *Delft*, and the tender the *Naar-*  
 “ *den* with the rest. The tenders the *Hair*  
 “ and *Brownfish* shall keep near the shore,  
 “ to be ready upon all occasions to carry  
 “ advice where it shall be thought necessa-  
 “ ry. In short, all the boats shall attend  
 “ the vessels that are engaged against the  
 “ fort, in order to save their men, in case  
 “ any of them should be sunk or disabled.  
 “ When the companies standard is fixed  
 “ above the red flag, this shall be the signal  
 “ of landing: if the said standard is set up  
 “ on the mainmast-yard’s arm, it shall be  
 “ the signal for the boats to come to succour  
 “ the ship, she being in danger of sinking.  
 “ When the prince’s standard is set up on  
 “ the ramparts, it is a sign that we are  
 “ masters of that part of the fortifications,  
 “ when the attack, either upon the castle or  
 “ fort may cease, till the said standard be  
 “ set up in captain *Kuylenburgh*’s quarters,  
 “ near the sea-shore; this being intended  
 “ for a signal, that we are also masters of  
 “ the town on the land-side, when the of-  
 “ ficers in their respective attacks may either  
 “ stop or go forward, according as it shall  
 “ be thought convenient by the majority of  
 “ voices.

“ Whilst the ships the *Maid of Enchuyfen*  
 “ and *Workum* are under sail to enter the  
 “ bay, all the rest of the ships shall weigh  
 “ their anchors, and put up the red flag,  
 “ as if they would enter the bay, but keep  
 “ without cannon-shot. So soon as the  
 “ forces are landed, all the officers, soldiers,  
 “ and seamen, shall obey Mr. *Adrian Roo-*  
 “ *tbaus*, as their supreme commander.

“ Whilst the ships and men are engaged  
 “ against the water-fort, the city is to be  
 “ assaulted at the same time, near the sea-

“ shore, at the bastion of *St. John*, and on  
 “ the land-side near the gate of *Rajuba*:  
 “ the attack upon the bastion of *St. John*  
 “ shall be commanded by captain *Kous*, and  
 “ the other by captain *Kuylenburgh*, either  
 “ of them to be seconded, as occasion re-  
 “ quires, by Mr. *John van der Laan*, the  
 “ companies of *Kuylenburgh*, *Goverit Quar-*  
 “ *tel*, *Jurian Gevel*, *Andrew Steckens*, *Lam-*  
 “ *bert Steenbagen*, *Hans Christopher*, *Jo-*  
 “ *achim Block*, *Melchior van Schonenbeck*,  
 “ and *John Moll*, with thirty six *Javane-  
 “ se*, and half a company of *Bandanese*, to be  
 “ employ’d in the assault of the first bastion:  
 “ the scaling-ladders shall be carried and  
 “ fixed by the *Bandanese*, *Javane-  
 “ se*, and *Mardykers*, mixed with some *Dutch*  
 “ seamen, armed with hand-granadoes,  
 “ pikes, and hangers. The bastions of  
 “ *Clergos* and *St. Philippo*, near that of *St.*  
 “ *Sebastian*, (at the gate of *Rajuba*,) shall  
 “ be attacked by the companies of captain  
 “ *Westrenen*, lieutenant *Wildtschut*, *John*  
 “ *Hartman*, *John Cooper*, *Hardenbergh*  
 “ *Roggenkamp*, *James Alenbier*, *Diedelof*  
 “ *van der Beek*, *Henry Broekhuysen*, *John*  
 “ *Coertsen*, with the *Javane-  
 “ se*, half a com-  
 “ pany of *Bandanese*, and the company com-  
 “ manded by captain *Ruyfch*.

“ Captain *Westrenen* shall command the  
 “ attack against the bastion of *Clergos*, and  
 “ captain *Ruyfch* that of *St. Philippo* to be  
 “ seconded by fresh forces, as occasion re-  
 “ quires. The *Bandanese*, *Javane-  
 “ se*, and *Mardykers*, in conjunction with the *Dutch*  
 “ seamen, shall fix the scaling-ladders, and  
 “ the *Lascaryns* of *Ceylon* be employed in  
 “ carrying off the slain.”

About the same time we received intelli-  
 gence, that the *Portuguese* succours were ar-  
 rived at *Goa*; and that they intended to  
 come to the relief of *Columbo*: word whereof  
 was sent immediately to *Gale* to be upon  
 their guard, for fear of a surprize. The  
 11th of *November*; (the day appointed for  
 the general assault,) it being calm, so that  
 the ships could not enter the bay, the same  
 was deferred till the next day, though we  
 did not cease in the mean time to play more  
 furiously with our cannon than ever before;  
 and we observed that the enemy had taken  
 in their red flag upon the bastion of *St.*  
*Crus*.

C H A P. XXVII.

*A General Assault both by Sea and Land made upon Columbo; but without Success. Letters from Raja Singa to the General. Dutch Prisoners come out of Columbo.*

*Baldæus.*  
*The water-  
fort batter-  
ed by the  
ships.*

THE 12th, by break of day, the *Maid of Enchuyfen*, and soon after the *Workum*, being followed by the *Ter Goes* and the *Erasmus*, thundered most furiously against the water-fort, from whence they answered them very briskly. Immediately after the assault was begun on the land-side in three several places: the general in person with ten companies attacked the gate of *Rajuba*, and the bastions of *St. Philippo* and *Clergos*; and major *John van der Laan* with nine companies, those of *St. John* and *Couras*; whilst *James Lippens* with two companies of soldiers, and some seamen, passed the fens in seven *Chinese Champans*, or boats, in order to attack the city where it was least fortified.

*Columbo  
assaulted by  
sea and  
land.*

But the besieged fired so furiously upon our men, especially with their firelocks, that the seamen could not be brought forward to fix the scaling-ladders; which the general perceiving, he advanced in person with some of the bravest officers, and fixed the scaling-ladders to the curtain: but having received a wound in his left thigh, he was forced to be carried off. In the mean while news being brought that they had entered the breach on major *Van der Laan's* attack, he returned to his station (before his wound was dressed,) but found things in such a confusion, that he was forced to retreat, the major and his forces not being able to maintain themselves in the breach, retreating at the same time, after they had in vain attempted three times to recover it. Lieutenant *Melchior van Schoonbeek*, a *High-German* by birth, and of a noble family, was the only person who got upon the bastion of *St. John*; but for want of being seconded, lost his life there like a brave soldier, his head being afterwards stuck upon a pike by the *Portuguese* upon the same bastion.

*With ill  
success.*

The forces under captain *Lippens*, having not without some resistance from four *Manchous*, or boats, passed the fens, got into the city; but the captain being sorely wounded, made shift to retreat with some few, the rest for want of timely succours being all made prisoners of war. The yacht the *Maid of Enchuyfen* was so sorely battered from the fort, that being ready to sink, her crew was carried off by the sloop the *Langerack*; but the *Workum* cut her cables, and got out of the bay without any considerable loss. The number of the slain on our side amounted to

two hundred, and three hundred and fifty wounded, not including the two companies of *John van Hardenburg* and *Roggenkamp*, and the seamen commanded by *John Lippens*, that were made prisoners in the city. The ships the *Ter Goes* and *Erasmus*, who had aboard the soldiers that were to assault the water-fort, not being able to get near enough by reason of the wind, soon got out of the bay.

*Baldæus.*

ON this unfortunate day the general received a letter from his imperial majesty, testifying his good opinion of his excellency, not questioning but that after the taking of *Columbo* he would deliver the said city into his hands, pursuant to the agreement made with *Mr. Westervold*. That he desired to have such of his rebellious subjects, as should fall into our hands, delivered up to his *disposes*, either alive or dead, in order to punish them with the same severity, as he had done those at *Batecalo*; and that he had ordered his governors to ravage and destroy all the villages in the *Low Lands*. [He sent at the same time enclosed a letter from the *Portuguese* governor, *Antonio de Souza Coutinho*, dated *October 27*. at *Columbo*, to the emperor, the chief contents whereof were,] "That he could not forbear to put his majesty in mind of the ancient friendship betwixt him and the *Portuguese*, which he was sorry to have been interrupted by the *Dutch* making themselves masters of *Caleture*, and having routed their forces near *Paneture*, by laying so close and vigorous a siege to the city of *Columbo*, that they were in great danger of being forced to surrender. Wherefore they craved his majesty's assistance against the *Hollanders*, who, after they were masters of the city, would certainly not deliver up the same to his majesty, but lord it over his subjects; which his majesty, according to his wisdom, might easily see how much it would tend to his dishonour; whereas if he joined with the *Portuguese* against them, he might promise himself all the advantages due to so great a monarch."

The 13th of *November* was spent in carrying the wounded soldiers to *Negumbo*, ed sent a-  
*Gale*, and *Montual*: tthe same day the  
enemy

*Number of  
the slain and  
wounded.*

*Baldæus* enemy, in a bravado, put two of our ensigns upon the bastions of *St. John* and *St. Philippo*. At the same time advice was brought, that the ships the *Avenborn* and *Campen*, richly laden from *Persia*, were arrived at *Gale* in their voyage to *Batavia*. For which reason the yacht the *Brownfish* was dispatched to *Gale*, to carry some letters thither, to be sent further to *Batavia*, as likewise a letter to be sent by land to the emperor *Raja Singa*. The yacht the *Popkensburg* arrived also with gunpowder, and other necessaries for our camp.

The 19th, a letter from the emperor *Raja Singa* was delivered by his messengers to the general, wherein he condoled him about his wound, and the ill success of the late assault, telling him, That he was employed day and night in making preparations to join him with his forces, and desiring not to venture a second assault before his arrival. A letter of thanks being ordered to be written to his majesty, the yachts the *Workum* and *Popkensburg*, with a frigate, were dispatched to *Negumbo*, to cruise to the north of that harbour, to get timely intelligence of the enemies approach.

Some Ships  
sent a cruising.

The 26th some cannon-shot being heard at a good distance it was generally believed to be the signal from the fortress of *Negumbo*, to advertise the arrival of the *Portuguese* fleet. Whereupon Mr. *Adrian van der Meyden* took two companies of soldiers and as many seamen out of the church of *Quia de Lobo*, (where they had their post,) and marched directly to *Montual*, in order to embark them there, to prevent the enemies landing. The general, notwithstanding his wound, followed thither in person, and found them ready to

embark, which was however deferred for *Baldæus*: that time, till they should receive more certain intelligence. Only the yachts the *Mars* and the *Flissingen*, with some officers aboard them, were commanded to cruise off the northern point of *Montual*.

Much about the same time arrived the *Roman* yacht from *Suratte*, with sixteen loads of wheat. The officers reported, That a *Portuguese* fleet, consisting of thirty frigates was entirely destroy'd by a tempest near *Wingurla*; but that no body knew from whence they came, or whither they were bound; and that the cannon we heard some days before, was discharged by them as a signal of their distress to the *Workum* and *Popkensburg*.

A whole  
fleet of  
Portuguese  
lost.

The 29th captain *Kuylenburgh*, who died of the wounds he received in the late assault, being honourably interred, the 1st of *December* two serjeants came into our camp, who being formerly taken prisoners at *Anguratotte* by the *Portuguese*, had taken the opportunity, as these were flying from *Manaar* to *Tutecoryn*, to desert and hide themselves among the *Moors* of *Kilicare*, from whence they were brought in one of our vessels hither. On the other hand a certain seaman, named *Claas Claasz*, did swim cross part of the bay into the city.

The same night a new trench was opened against the bastion of *St. John*, and carried on with all imaginable diligence. The yacht the *Roman* was sent a cruising to get intelligence, whether any of the enemies ships could be discovered at sea, as the *Flussing* yacht was dispatched to the coast of *Malabar*, and the *Erasmus* sent out in her stead a-cruising.

## C H A P. XXVIII.

Want in Columbo. Anthony Amiral de Menezes taken Prisoner.

The Continuation of the Siege.

Want in  
Columbo.

THE 7th of *December* we got intelligence, that most of the inhabitants of *Columbo*, for want of rice and other provisions, had been forced to list themselves among the regular forces; that in the late assault they had taken seventy or eighty of our prisoners; whereas their whole loss did not amount to above twenty or twenty five *Portuguese*; among whom were, however, two persons of note, viz. *Antonio Barbozo*, and *Felicio Leesio*, lord of *Macoene*. That they had mounted the cannon taken out of the *Maid of Enchuyzen* upon their bastions, and were busy in making divers retrenchments, in hopes of being soon succoured from *Goa*; and that their whole

force consisted in seven hundred *Portuguese*.

The 10th of *December* *Antonio Amiral de Menezes* (then governor of *Jafnapatnam*, and afterwards, 1658. killed at the taking of *Manaar*) was taken prisoner at *Montual*, as he was going from *Manaar* to *Columbo* with some letters, one whereof being written in characters, was uncyphered by the general's order, and was as follows:

Antonio  
Menezes  
taken with  
letters.

To the general Antonio de Souza Coutinho.

“BEFORE I had the least intelligence of the approach of the enemies ships, I writ to your excellency by land, though  
“ I have

*Baldæus.* “ I have not heard since what is become of the messenger. The three *Pado's* are well arrived at *Goa*, and the five messengers sent thither; the sixth, sent by *Anthony d'Abreu*, did not stay in the least in this fort, but tarried two days at *Negapatan*, and brings along with him full instructions concerning the relief of *Columbo*. I have not been idle in my station, both in advising how to raise men for our service in the *Indies*, and in contributing all that lay in my power, of my own accord, which by some others has not been done without reluctance; especially in giving my assistance in equipping some vessels of bulk, and galleys well-manned, for the relief of the city. I have hitherto heard no news from the fleet at cape *Comoryn*, sent for that purpose. I wish they may reach the isle of *Manaar*, when we shall have opportunity to debate the whole matter with the commander in chief, how to contrive matters for the defence of the place: you may rest assured, that nothing shall be wanting on my part, that may tend towards the accomplishment of its relief, which I heartily wish may take effect, it being my opinion, that a good fleet is the very means now to preserve that place, till we receive our supplies from *Goa*. Perhaps it may please God to destroy the hereticks in this siege, and to abate their haughtiness, occasioned by their late success, caused by our neglect; it being certain, that the same might have been foreseen a considerable time ago. Orders are given to have a good quantity of matches made, which shall be brought by the first *pado* that goes from hence; the other two shall follow soon after, one of them being to be armed for the defence of the other: their approach you will know by the signals agreed upon. Perhaps the governor of *Manaar* may have got intelligence of our fleet, and has given you intelligence thereof. God preserve and deliver your excellency from all danger.”

*Jafnapatnam, Antonio Amiral de Menezes.*  
Nov. 11. 1655.

The Contents of another Letter were as follows:

“ I Writ to your excellency under covert of *Sebastian Martino* with the galliots of *September*, when I little dreamed of what we heard afterwards at *Cochin*, and on the cape *Comoryn*, concerning the present danger of the city, and of the loss of so brave a captain as *Antonio Mendes d'Aranba*, with a good number of our

“ choicest men. I have since understood several other things of this nature, which have cost me many tears. We did all we could to make the cape *Comoryn*, but the contrary wind prevented us: however, though we have failed in this, you may assure yourself, that the viceroy will not fail to succour the city of *Columbo*, with all his forces in the *Indies*. It is rumoured here, that *Don Manoel Mascarenbas* intends to leave this place, there being very bad news brought lately from *Jafnapatnam*; but we hope, and pray to God that he will be pleased to preserve the city till *February*.”

Novemb. 11.  
1655.

*Nicolao d'Olivera.*

The rest of the letters were very near the same, with this addition only, That the *Portuguese* set sail in *October* with fifteen frigats, but were forced back near the cape *Comoryn*, so near that they had landed some soldiers, who were marched by land to *Jafnapatnam*, with an intention to come to *Columbo*, to give notice there of the equipment of six galleons at *Goa*, intended for the succours of the city; and that in case the *Dutch* should block up that harbour, they would fight their way through them. All these letters were sent to his imperial majesty.

The 12th of *December*, two hundred negroes being seen to salley out of the gate of *Mapane*, keeping along the sea-shore, three companies were ordered to attack them; but they no sooner espied our people advancing towards them, than they retreated in haste to the city: however three of them deserted to us, and gave an account, That the reason of their coming out was only to fetch and cut some faggot-wood for the repairing of the bastions of *St. John*, *St. Stephen*, and *St. Philippo*; and that they had made betwixt the two former a retrenchment, in case they should be forced to quit the bastions.

The same day we finished our second redoubt, and the next two *Portuguese* deserters confirmed the report of the negroes, adding, That they much dreaded our mines; that the bastion of *St. John* was guarded by two companies, (of twenty five or thirty men each,) under *Caspar* ~~in the~~ gate of *Mapane* with three, and the rest in proportion. At the same time we saw a whole troop of half-starved wretches forced out of the town; but were made to return from whence they came, except a few *Portuguese*, who could give good intelligence about the condition of the place.

*Baldæus.* The 14th, in the morning, ten or twelve boats came out of the town to fetch faggot-wood; but finding us prepare to attack them, they retired with precipitation, after they had wounded three of our men.

The 15th the general agreed with twenty pioneers to work continually (six at a time) in the trenches, at the rate of twenty pence *per diem*, besides a good reward after they had finished the work. In the afternoon a battery of six guns was ordered to be erected.

*An unfore-  
seen ac-  
cident.* The 18th a gunner having, out of care-lessness, doubly charged a gun upon a battery, killed three of our own pioneers, and wounded seven negroes; and in the evening four great cannon were not without some loss planted upon the before-mentioned battery.

The 19th we played thence most furiously upon the bastions of *St. John* and *Stephen*, and two more cannons were mounted upon it the same evening.

The 20th a new redoubt was begun, the trenches being then carried on within two rods of the counterscarp. In the evening we missed *Simon Lopes*, who was again gone over to the enemy.

The 26th three negro carpenters coming over to us, reported that the *Portuguese* had

undermined the bastion of *St. John*, and laid five large barrels with gunpowder in five divers places underneath it, having laid the train by the means of certain bomboecanes, which were to be lighted on the top whilst we were assaulting the said bastion, which was the reason that they had not discharged their cannon from thence these two days past. They added, that the son of *Antonio de Souza Coutinho*, the governor of *Columbo*, being busy in encouraging the workmen by his own example, received a wound by a musquet-shot in the head, of which he died soon after. A council of war was called, in which it was resolved to carry on the trenches with all imaginable vigour, to prevent the enemy in perfecting his retrenchments before the breach of the bastion of *St. John*, and to fix our miners there.

The 27th the general gave notice to the *diffaves* of *Saffragam* and the four *Corles*, that he intended to send an envoy to his majesty, to know his inclinations, whether he intended to appear in person in our camp, or not: he desired them to write to him upon the same subject, the time for attempting a second general assault drawing near; and that in case his majesty had the least doubt left of our sincere intentions, he would give him full satisfaction upon that head.

## CHAP. XXIX.

*The Portuguese throw Stones out of a Mortar, We make a third Redoubt: Endeavour to lay the Gallery over the Ditch. A Spy hanged: Letters from Coromandel.*

*Another re-  
doubt e-  
rected.* THE 28th of *December* in the evening the *Portuguese* began to throw several stones out of a mortar into our works, which something surprized us at first, but afterwards we guessed that it was *Simon Lopes*, who lately deserted our service, that had put them in the way of it. The next day captain *John Hartman* was sent with letters to the emperor at *Candy*, and we were hard at work to bring the third redoubt near the sea-shore to perfection, where we planted a mortar, and continued our approaches to the counterscarp.

A *Chinese* deserter, a native of *Macao*, reported, that they were indifferently well provided with provisions in the city, and that it was true that the governor's son was dead. Letters were at the same time dispatched to Mr. *Laurence Pit*, governor of *Coromandel*, to send us some ammunition, and to order the ships which, upon the arrival of the vessels from *Tajouan*, sail from thence to *Batavia*, to touch at *Gale*, to be employed

in thwarting the intended succours of the *Portuguese*, or take aboard part of the *Portuguese* prisoners among us.

The 8th of *January*, finding the enemy busy in planting palisado's in the ditch, some seamen, armed with hand-grenadoes made them soon quit that enterprize. But the next following day finding the enemy to have made some entrenchments there, a hole was ordered to be made in the wall; and captain *Henry Gerard*, the head gunner and engineer, and carpenter, being ordered to view the work, they reported that the enemy had planted a row of palisado's close to one another, extending to the sea-shore, which made them imagine that they expected the most fierce assault on that side.

Six expert carpenters having offered their service for perfecting the gallery, a hundred crowns were promised them a reward; and it being resolved to fix the said gallery the next day under fa-

vour

*Baldæus*. your of our great cannon and fire-locks, a certain number of musqueteers were ordered to the extremities of the trenches: but the wall being thicker at the bottom than at the top, it was almost evening before they could make a breach in it; when attacking the enemy with their hand-grenadoes, they forced them from the ditch, where they posted twelve fire-locks: but these received so warm a salute from the enemies cannon and fire-locks, both of the bastions of *St. John* and *St. Stephen*, and the palisado-work, that they were forced to retreat, and the fixing of the gallery was thought fit to be delayed till a more convenient time, having lost only one carpenter and two negroes in this enterprise. *John Rootbaus* the Dutch reer-admiral sent *January* 12. three negro prisoners from the fleet into the camp, who were taken coming with letters from *Manaar*, in order to carry them into *Columbo*; but they were of little moment, except what was contained in the following passage, taken out of *Lorenso Barboza's* letter, directed to *Don Francisco de Souza*.

The Dutch endeavour in vain to fix their gallery.

Some letters intercepted.

“ Your fleet could not make the cape  
 “ *Comoryn*, because they came too late,  
 “ and were overtaken by a violent tempest;  
 “ the soldiers aboard were sent by land to *Tutecoryn*, and from thence by sea to *Manaar*. That they understood that great endeavours were used to equip a squadron of great ships and frigats, to be joined by eight galeons for the relief of *Columbo*; and that they had certain advice that the galeons were getting ready for that purpose: That the rest they would be informed of by the captain-major's letter to the governor, &c.

The said prisoners reported, That *Antonio Amiral* had brought a reinforcement of six companies from *Jafnapatnam* to *Manaar*; and that it was reported there, that five galeons and twenty eight frigats were to come from *Goa*, and being joined with some other vessels and forces at *Manaar* were to sail to the relief of *Columbo*: whereupon the general sent his instructions to our squadron to watch the coming of the enemy, but especially to our cruizers, the *Workum*, *Popkensburgh*, *Mars* and *Erasmus* yachts; thirty *Bandanese* soldiers, and as many *Mardykers* were also ordered aboard these vessels; and a negro deserter reported that those come from *Manaar* to *Columbo* were half naked, and had brought letters; one of them being wounded; but knew nothing further.

New instructions sent to the Dutch fleet.

The 15th of *January* some of our

*Lascaryns* brought in a spy, whom they had taken under pretence of going into the city to sell tobacco; but upon the evidence of two *Cingalese* carpenters that he was a spy, he was hanged on a gibbet near the place where he intended to have got into the place.

The 19th letters were brought to the camp, sent by *Laurence Pit*, then governor of *Coromandel*, intimating that we might expect a supply of thirty five thousand pounds weight of gun-powder with the yachts the *Codfish*, *Rabbit*, and *Patience*; that for the rest the company had lost fifty loads of rice, and two hundred fifty *Ammeñams* \* of *Areek* † by an accidental fire. That several private merchants having lately sent certain ships loaden with all sorts of provisions, we need not fear any thing upon that account. The *Rabbit* alone had a cargo of twenty six thousand eight hundred twenty two pounds weight of gun-powder, fifty packs of *Guinea* linnen cloth, and ten loads of rice, valued altogether at twenty three thousand eight hundred sixty gilders.

Letters from Coromandel.

\* A certain measure.

† Areek is a certain Indian fruit, of which they make strong liquors.

It was further advised, That in all probability the king of *Golconda* was likely to be embroiled in a war with *Mirza Mula* his general, who had put strong garisons in the fortresses of *Gendecalte*, *Gronconde* and *Goeti*: That the general *Chan Chanhe* was lately retired with the forces of *Visapour*, consisting of eight thousand horse, and forty thousand foot, from *Velour* to *Visapour*; but for what reason was not known. A copy was also sent of a letter, written by *Leonard Johnson* factor, *Decemb.* 8. from *Wingurla* to *Batavia*; whence it appeared, that they were making great preparations at *Goa* for the relief of *Columbo*. “ But, added he, the Portuguese viceroy having sufficient intelligence of our strength before *Columbo*, it seems to me to be rather a bravado, than a real design, unless it were (as some affirm) that the relief of that city was so positively commanded by the king of *Portugal*, that the viceroy would be forced to attempt it, unless he were prevented by the *Dutch* blocking up the harbour of *Goa* before that time: That it was rumoured there that the *Portuguese* soldiers should be obliged by oath, confirmed by the blessed sacrament, that in case they were not able to w<sup>o</sup>rtine *Dutch* fleet, they should set fire to their own ships: but he hoped that the city would fall into our hands before they could put their design in execution. But as it were not safe to despise one's enemy, so he would take care to give from time to time intelligence of what he could learn to the director-general *Gerard Hulst* with all imaginable

*Baldæus.* “imaginable speed; for which purpose he hoped to purchase the diligence of some of the natives by money.” The following list was annexed of such ships as were to be employ’d in the said expedition: two carracks, two large galleons, one lesser one, two carvels, six *Patacho’s*, or yachts, twenty light frigats, twenty four more from the coast of *Sipaveneick*, with some galleons and other boats called *Singazeelles*. His further opinion was, That the said squadron might be ready towards the end of *January*; and that the same was to be reinforced by some yachts from *Cbaul*; that besides the garrison to be left at *Goa*, two thousand *Europeans*, not reckoning the *Mistices* and negroes, were to be embarked aboard the said fleet. He advised further, That two *English* ships being some days before come to an anchor before *Goa*, the viceroy had offered the captains a considerable sum of money, provided they would sail along with the fleet to *Ceylon*; but that they refused to accept of the same, and were sailed to the northward.

List of the Portuguese ships for the relief of Columbo.

The 21st of *January*, two hours before break of day, the general being got aboard the *Ter Goes*, called a council of war there, wherein it was resolved to send forthwith the ship the *Codfish* to *Negumbo*, in order to unlade her cargo (intended for *Gale*) there, in company of the *Amsterdam* and *Marygold-Flower*; and the *Hare* yacht was ordered to keep as close to the bay as possibly she could, to observe the small vessels that might pass and repass in and out of the city.

The 24th of *January* the *Flushing* yacht coming from *Wingurla*, brought letters from our factor *Leonard Johnson*, dated the 6th of *January*, intimating, That the viceroy of *Goa*, instead of sending the pretended succours to *Ceylon*, had now resolved to send two carracks to *Portugal*, and three yachts to *Mosambique*; and that the design of the relief of *Columbo*, seemed to be laid aside: in confirmation whereof he sent the following translation of a letter written by one of our spies there.

To the Commodore of the Dutch Squadron *Baldæus*, near *Wingurla*.

“TWO ships, (both arrived this year,) viz. *Bon Jesus*, carrying sixty five guns, and the *Nossa Senhora da Grazia* of sixty guns, are intended to be sent to *Portugal*, being now busy in unloading, and expecting only the return of our fleet from *Cochin*, and the cape. It is supposed they will be ready to sail by the end of the first month of the year. Three yachts more are ordered from *Mosambique*, being now taking in their cargo, besides another yacht, designed for *Maccassar*. The carvel intended for *Cbina* is not ready to sail, and it remains uncertain whether she will go thither. But, if she does, it will not be till next spring. Hitherto we see no preparations either of men or ships for *Ceylon*; and they seem unresolved, whether they had best send any relief thither, for fear they should fall into the hands of the *Dutch*. But if any be sent, it will certainly not be till after the departure of the ships for *Portugal*, for which the viceroy shews a great concern being afraid they will be intercepted by the *Dutch* before they can reach *Portugal*.

Your Excellency’s constant Slave.

Dated Jan 6.  
1656.

URAGAMI SINAY.

Hereupon it was agreed in a council of Dutch ships war, to order the ships the *Ter Goes*, *Mars*, sent to *Goa*, the *Arms of Holland*, *Amsterdam*, *Flushing*, *Erasmus*, *Naarden*, *Zierik-see*, *Marygold-Flower*, and the *Hare*, forthwith towards *Goa*, there to expect the coming of the ships from *Trajouan*, in company of those from *Persia* and *Suratte*. And that the yacht the *Workum*, *Popkensburgh*, *Cod-Fish*, and *Rabbit*, with some light frigats and sloops, should be kept for the blockade of the harbour of *Columbo*.

## CHAP. XXX.

*Mr. Hartman’s Present by the Emperor. Some Spies hanged. The Arrival of several Ships. Letters from the Emperor and Dutch General.*

ABOUT that time the emperor sent his letter to the Dutch general Mr. *Hulst*, in answer to his sent by Mr. *Hartman*, the chief contents of which were,

“THAT he intended to come into our camp in the night-time, having been detained hitherto by the advice of the

“great men of his court, [these pagans being very superstitious in chusing their time;] but that now he was resolved to speak with the general in spite of all the pretended obstacles. That he was glad to understand, that notwithstanding our loss in the last general assault, we kept our posts; and that he intended to

“dispatch

Baldæus. "dispatch Mr. Hartman the next thurs-  
"day."

It was dated at Balanc,  
January 20. 1656.  
and subscribed,

Raja Singa Rajou, most potent em-  
peror of Ceylon.

Mr. Hart-  
man's re-  
turn.

Mr. Hartman returned, being presented with a golden chain and a ring; and reported, That some of the emperor's *Dissaves* having brought him the news, that we had lost a considerable number of men by springing of a mine, he was very glad to hear the contrary afterwards. The 26th of *January*, early in the morning, a letter was delivered from our head-factor at *Gale*, *John Kroon*, That the ships the *Patience*, the *Bengale*, the *Black-Bull*, and the *Grey-Hound* from *Tajouan* by the way of *Masulipatan*, loaden with merchandizes from *Persia*, and the *Vlieland* belonging to those of *Suratte*, were arrived there; and that he had ordered them to sail for *Columbo*. Two spies come lately out of the city, to view the condition of our attacks and batteries, were hang- ed two days after.

Some Dutch  
ships arri-  
ved.

Two Spies  
hanged.

At the same time letters were brought into the camp, dated the last of *November*, at *Malacca*, intimating, That the 14th, 15th, and 19th of *November*, 1655. the ships the *Vlieland*, *Black-Bull*, *Arnhemuyden*, and the *Sweet-Briar*, were arrived there from *Tajouan*, their loading being valued at one million three hundred forty nine thousand four hundred and thirty six gilders at the first hand; and that the *Sweet-Briar*, the *Domburg*, and *Lion*, were with a good quantity of tin of *Malacca* sent to *Bengale*. The cargo of these ships consists commonly of *Japonefe* silver, bars of copper, allum, gold, *Cbina* tea, and sugar of *Formosa*, besides a considerable quantity of tin of *Malacca*. Upon the coast of *Malabar*, and in *Ceylon*, (where they commonly arrive at the same time,) they load with cinnamon, pepper, and cardamum. They generally make a long voyage; for they set sail from *Batavia* to *Japan* and *Tajouan* in *May*, and come to *Malacca* in *December*: from thence they steer their course by the *Nicebares* to *Ceylon*, or *Bengale*, or *Coromandel*, (but never from these places to *Ceylon*, but sometimes return from *Bengale* or *Ceylon* to *Malacca* or *Batavia*;) and from thence by *Malabar* to *Suratte* and *Persia*, and return in *May* to *Ceylon*, (and sometimes straitways to *Batavia*;) and so further with their cargo (they have taken in at *Suratte* or in *Persia*) to the coast of *Coromandel*, where being loaden with linnen cloth, painted calicoes, and other merchandizes, they return to *Batavia* in *June* or *July*. By letters from *John*

*Tbuisen*, governor of *Malacca*, advice was given, that the tin trade (the chiefest of that country) had been but very indifferent that year.

Baldæus.  
Advices  
from Ma-  
lacca.

But it is time to return to the siege of *Columbo*. The last day of *January* two *Portuguese* deserters, who had made shift to let themselves down by ropes from *St. Stephen's* bastion, reported, That many of their comrades were willing to desert for want of pay, but that they were strictly guarded; that the garrison consisted still of six hundred and fifty *Europeans*, and they had rice for two months longer; that they still relied upon the promised succours of six galleons. Soon after we saw a whole troop of half-starved wretches coming out of the town; but one hundred and twenty were forced to return without relief. The 12th of *February* about five hundred of them, men, women, and children, being forced to extremity of hunger, came to the general's quarter imploring his mercy; but they were forced back into the town along the sea-shore near the bastion of *St. John*. In the mean while the emperor sent the following letter to the general:

Two deser-  
ter: give an  
account of  
the condi-  
tion of the  
city.

Raja Singa Rajou.

OUR imperial majesty has former-  
ly (through God's mercy) been  
victorious over our enemies in *Malvane*,  
where I routed their whole army com-  
manded by *Don Constantino*; after which  
laying siege to *Columbo*, I had my head  
quarters in the garden of *Lewis Gomes*  
*Pinto*. It then pleased God to afflict me  
with a distemper, which the viceroy ha-  
ving got notice of, he desired me to re-  
turn to *Candy*; which I did according-  
ly, leaving my brother *Carnana Singa*,  
king of *Ouwe*, with the prince of *Visia-  
palla*, to command the siege, who put no  
small blemish upon our imperial family.  
Whilst they were employ'd in that siege,  
the treacherous *Portuguese*, having at that  
time forced a multitude of starved  
wretches out of the city, they had mixed  
with them certain villains, who set all  
our works on fire. Wherefore I hope  
your excellency will keep a strict guard;  
for I cannot forbear, for the love and  
good inclinations I bear to your excel-  
lency, to put you in mind, that the *Por-  
tuguese* are a most perfidious nation; and  
that even my forces are composed of di-  
vers sorts of people; so that your excel-  
lency ought to have a particular regard  
for your own person, which will be a  
singular satisfaction to me. For you  
must know, that there being variety of  
people in the isle of *Ceylon*, who have  
served divers princes, and are used to ra-  
vages,

The empe-  
ror's letter

ral.

*Baldæus.* “vages and rapines, these are generally  
 “treacherous, and not to be trusted by  
 “your excellency, though perhaps they  
 “will endeavour to obtain your favour by  
 “flatteries and pretences of friendship, they  
 “being such profligate wretches, as to be  
 “induced by the hopes of a small gain to  
 “undertake any base and treacherous act.  
 “The letters sent from this court to your  
 “excellency being generally written in an  
 “unknown tongue, I desire you, if you  
 “find any defect or inconveniency in them,  
 “to give notice thereof immediately, to  
 “remove all obstacles and misunderstand-  
 “ings on our side, it being our resolution,  
 “that the peace made with you shall con-  
 “tinue as long as the sun and moon furnish  
 “us with light, as you, on your behalf,  
 “have engaged it shall last as long as the  
 “world stands. I once intended to have  
 “sent you an answer to your letter, dated  
 “Jan. 8. but understanding that your ex-  
 “cellency had dispatched to this court a  
 “captain of the guards, I thought fit to  
 “defer it for some time. In former times,  
 “whilst I was very young, I was encamp-  
 “ed with my army in *Malwane*; but that  
 “being many years ago, I did send thither  
 “certain persons to view the place, who  
 “assured me, that the place pitched upon  
 “by the dislave of the four *Corles* was un-  
 “fit for our reception, which was the rea-  
 “son I ordered my head quarters to be  
 “settled in the fortress of *Reygamwatte*. In  
 “consideration of which, and other mis-  
 “carriages of the said dislave, I have put  
 “another in his place, with whom you  
 “may consult in relation to such matters  
 “as tend to our service. I further issued  
 “my orders to the dislaves, and sent cer-  
 “tain persons to prepare my quarters with  
 “the utmost expedition; which done, I  
 “intend to be there immediately after.”

Dated in the camp and  
 court of *Guirambula*,  
 Feb. 14. 1656.

Subscribed,

*Raja Singa Rajou*, most po-  
 tent Emperor of *Ceylon*.

The general being extremely pleased with  
 the emperor's approbation concerning the  
 sending back of the poor starved wretches  
 forced out of *Columbo*, thought fit to send  
 the following letter to the governor of *Co-

Dutch ge-  
 neral's let-

 governor of  
*Columbo*.

“FINDING that you suffer the poor  
 “negro citizens, after that you have  
 “received all the services you possibly  
 “could from them, to perish for want of  
 “sustenance; and whereas you prevented  
 “their desertion formerly by strict watches,  
 “you now permit them to go where they  
 “please, in order to be rid of them, I

“thought it my duty (for the discharge of *Baldæus*.  
 “my conscience) to desire you to let the  
 “said negro citizens know, that such as for  
 “the future come out of the city, shall be  
 “punished with death. This I thought  
 “fit to let your excellency know, in hopes  
 “of moving you to compassion. I remain  
 “for the rest, your excellency's servant.”

Dated in the Dutch camp

 15. 1656.

*Gerard Hulst.*

The 17th of *February* the yacht the *Sa-  
 pbir* came into the road from *Coromandel*;  
 and brought a letter from the governor  
*Laurence Pit*, dated *January 29.* at *Palia-  
 catta*: her cargo consisted in rice and gun-  
 powder, though not so much as was expect-  
 ed, the full quantity of brimstone not being  
 brought from *Tajouan*.

But notwithstanding the before said warn-  
 ing given to the negro citizens, many of  
 them coming every day into our camp, one  
 of them was ordered to be hanged, to deter  
 others from doing the like; so that after-  
 wards fifteen and more died every day in the  
 city of famine, and a scorbutick dropfy be-  
 gan also to reign among the *Europeans* there. *Famine in  
 Columbo!*  
 The 19th a *Mistice* deserter brought advice,  
 that they had equipped a boat, which lay  
 ready to sail against the next night for *Ma-  
 naar*; whereupon orders were sent to com-  
 modore *Rookhaus* to intercept her, if possib-  
 ly he could. The 20th Mr. *John Hartman*  
 came with the following letter from the em-  
 peror to the general.

*Raja Singa Rajou.*

“YOUR letter, dated the 8th of *Fe-*  
 “*bruary*, I received the next fol-  
 “lowing day, wherein you testify your de-

 “the time of your arrival with your fleet  
 “in our empire. It has always been my  
 “hearty wish to see you in my presence,  
 “which I hope will be fulfilled with the  
 “arrival of your excellency in our camp  
 “near *Raygamwatte*. You further mention  
 “the misbehaviour of some of our lascaryns  
 “under the dislaves; so soon as our imperial  
 “majesty arrives in the above said camp,  
 “these forces and officers shall be relieved  
 “by others, and such as have not done  
 “their duty to the crown be punished, as  
 “is practised in the camps of other great  
 “kings and monarchs. Your excellency  
 “did also give notice, that you had sent  
 “away nine ships the fifth of this month.  
 “God Almighty, I hope, will bless your ex-

 to

*Baldæus.* "to the utmost of my wishes, there being nothing that can more rejoice our imperial majesty than the welfare and prosperity of the *Hollanders*. And I hope, that after my arrival in the camp, such measures may be taken betwixt us, as may soon reduce the city. The refractory party among my troops you have mentioned, shall be branded with infamy, not only for themselves, but also their generation; so that their names shall be despised hereafter for ever. Whenever I shall see your person, I shall imagine to have the whole state of *Holland* before me; and since, according to our constitutions, matters of this nature are not to be transacted but on fortunate days and hours, your excellency shall be advertised thereof by some person of note. Just as I was leaving *Candy*, the prince my son, given me by God for the welfare of my faithful *Hollanders*, took leave of me, desiring to be remembered to your excellency."

*In the camp of Guiramibula, Feb. 18. 1656.*

The said Mr. *Hartman* was presented by *Baldæus.* the emperor with a tame elephant, and told the general, that the emperor had given him some private hints, that the prince his son would take it as a peculiar obligation if the general would honour him with a small present.

*Hartman presented with an elephant.*

The emperor's messengers coming the 21st of *February* to the general, in order to fetch the answer to the emperor's letter, they were told, That the letter was not finished, by reason of many things of moment to be inserted therein: but the general took this opportunity to advise with them what present might be most acceptable to the prince. They answered, They could not tell; but would consider of the matter. In the afternoon they received the desired letter, sealed up under the discharge of the cannon, as is usual upon such occasions, when each of the captains is presented with a piece of sattin, and two of the messengers with a red *Roan* cap, a thing highly valued by them; (called *Toppo Honday* in their language,) with a *Japoneſe* buckler, for one of the prince's attendants.

C H A P. XXXI.

*The Besieged fire furiously upon the Besiegers. The Emperor's Envoys: Negro Deserters forced back. Letters intercepted. The Emperor presents the General with an Elk. A new Battery erected.*

*The besieged fire briskly upon the besiegers.* THE 22d of *February* the enemy play'd most furiously with their cannon from the bastions of *St. Stephen* and *St. John*, and killed us several men. His majesty being that day come to his camp at *Reygamwatte*, to take a view of the quarters prepared for his reception, perceiving a more than ordinary smoke, sent a messenger to know the truth of the matter. In the evening, about supper-time, word was brought that certain deputies from his majesty were arrived at a farm about two miles from the camp; and that they had sent a messenger to signify, that they were desirous to speak with the general that evening; which being readily granted, an ensign was sent thither with some soldiers to conduct them to the camp, and to make an excuse, that the time of the night had hindered their reception to be suitable to their quality. They told the general, That his majesty had received his letter with a great deal of satisfaction; and that they were sent to tell his excellency, That his majesty was at present at *Walewitty*; and that as soon as his quarters were fitted up, he should be sent for; for which reason they were commanded by his majesty to order the messengers of *Saffragamme* to have the roads leading to *Reygamwatte* repaired. They would

*Deputies sent into the camp from the emperor.*

willingly have returned the same night; but it being excessive dark, their quarters were assigned them in the camp till next morning.

The same day *Edmund Ruysch* sent word, that a great number of poor wretches were coming out of the city: The men, to the number of fifty, were secured at *Milagre*; but the women and children being brought before the general, he ordered them (pursuant to their former resolution) to be whipped back into the town near the bastion of *St. John*; this being looked upon as the most proper means to straiten the enemy, and bring them to our terms. Towards the evening the men with twenty more, who since had joined them, being also brought into the camp, the general took two of them aside, and told them, That they must look upon it as a particular favour, to be sent back once more; but if they returned they must expect nothing but the gallows, unless they would engage with some of the *Aratches* that had deserted our camp, to surprize some bastion or other for our service. They were likewise forced back with a good whipping, and the 24th one hundred and fifty more had the same entertainment.

*Deserters whipped back into the city.*

The 26th of *February* the messengers of the four *Corles* came to tell the general, that those

*Baldæus*. those of *Saffragamme* were still busy in repairing the roads and bridges, and produced a letter from certain great men of the court, enjoining him to demand ten certain persons, that had made shift to get out of the city with the enemies troops, and shelter'd themselves in the adjacent villages, having deserted the king's service before. The general was not unwilling to grant his request; but withal told him, That if these persons of quality had been as forward in furthering their king's service as we, there would not have been so many deserters. The same day a letter was delivered to the general written by one of our *Aratches* to the *Vidane* of *Pasdjun-Corle*, as follows:

An intercepted letter.

“ *H* *Angedera Lionayde*, son-in-law to *Ranatonge Ararchie*, wishes health to *Vidane*, and the three chieftains of the three *Pattos* of *Pasdjun-Corle*. Immediately upon the receipt of these, you shall without fail or delay gather, in the time of eight days, out of all the circumjacent villages, fifty pingues of pullets, butter, pepper, atchiar, and earthen vessels; and with them, in company of all the heads, or *Majorals*, of the villages of *Anguratotte*, come towards *Horne*, and from thence into the imperial camp, there to pay your obeisance to his majesty. Such as fail in their duty must expect to receive condign punishment. You must not publish my name, what I do in this respect not being by my own authority; but when you come to court, you may then declare, that it was *Hangedera Lionayde*, *Ranatonge Rale's* son-in-law, who gave you this invitation.”

The *Aratche*, who had been the author of this letter, being seized and examined the same evening by Mr. *Adrian van der Meyden*, and major *Van der Laan*, did not disown his hand, but refused to discover (though he was threatened with present death) by whose command he had writ it. The general being of opinion, that there was some mystery hid under this pretence, especially since this *Cingalese* lived under the company's jurisdiction, and had received signal obligations from them, commanded his head to be cut off, and delivered him up for that purpose to the provost, in hopes of extorting a confession from him by this means; but under-hand ordered him to be secured only aboard the ship the *Arms of Amsterdam*, for fear, that in case he should be executed on a sudden, they might be bereaved of the opportunity of discovering the truth.

Letter sent to the emperor.

February 27. being Sunday, the general sent a letter to *Raja Singa*, to advertise his majesty what had passed with the *Aratche*,

and at the same time enclosed the original *Baldæus*. of the intercepted letter. The same day the *diffave* of *Saffragamme* coming to the general to tell him, That the roads and bridges were now repaired according to his majesty's orders; he was commanded by him to employ the same people in perfecting the pallisadoes intended for the new redoubt near the gate of *Rajuba*, which he promised to do. The general also told him what had happened with the *Aratche*; which he approving of, the general further desired him to provide some *Bufflers* for the use of the seamen, who were sorely afflicted with the scurvy; which he likewise agreed to.

Word being brought that four fishermen were coming over to us in a *Tony*, or fisher-boat, they were forewarned not to come into the camp, under the pain of being hanged, unless they could engage all the fishermen to come at once. About the same time a certain *Moorish* vessel came into the road from *Puntegale*, with a passport from *John Kroon* our head-factor there. They brought advice that the lands and villages under the jurisdiction of *Gale* were farmed out at fifteen thousand eight hundred and forty nine rixdollars, for the next year, to be paid by four quarterly payments; and that the *Areek*, which the company had taken at the rate of twenty four laryns the ammenam the last year, was now to be delivered at the rate of sixteen laryns. Five more ships arrived at the same time laden with rice.

A Moorish vessel brings advice concerning the condition of Gale.

The last day of this month, finding that the enemy worked against us, near the gate of *Rajuba*, lieutenant *Alenbier* was sent with six firelocks to secure their workmen; but these saved themselves by an early flight, and our people returned without receiving any damage. About the same time letters were brought by the yacht the *Arnemuyden*, dated the 17th of *February*, on the coast of *Coromandel*, others being also expected, dated the 11th, with the yacht the *Codfish*, not arrived as yet, having aboard one hundred load of rice of *Bengale*, a good quantity of gunpowder, and sixty soldiers. The other vessels cargo consisted in eighteen thousand eight hundred and seventy seven pound weight of gunpowder, two thousand seven hundred and eighty one bullets of divers sizes, viz. two hundred and thirty one of twenty four pounds, seven hundred and fifty of eighteen, eighteen hundred of twelve, fifteen hundred stone-bullets, and ten thousand pound weight of lead, besides some other merchandizes, and sixteen loads of rice, amounting to the value of six thousand ninety eight gilders, on account of those of *Ceylon* only. At the same time the *Rabbit* sailed out of the road, being ordered to cruise on the south point of *Negumbo*, and to be relieved every eight days by another ship.

Ships from Coromandel.

Pretty

*Baldæus.* Pretty late in the evening, three deputies from the emperor presented the general with an elk, which his majesty himself had hunted the same morning in an adjacent wood, which was received with great reverence by his excellency.

*The general presented with an elk by the emperor.*

The general and Mr. *Van der Meyden*, hearing the beat of drum in the new redoubt, near the gate of *Rajuba*, they went thither in person; and in their way met with seventeen *Lascaryns*, and two *Aratches*, who being posted in an outwork near the said gate, had quitted the same: they being ordered to be secured in the head quarter, they went forward, and found that the alarm had been occasioned by the coming over of the *Lascaryns*, whom they mistook for enemies.

*Deserters give an account of the condition of Columbo*

They reported, That the city was provided with provisions till *May*, their allowance, viz. twenty five *Mididos* to a head, being given them for the month of *April*: they added, That it was whispered about, that

the governor had embarked all his moveables, money, and jewels in a boat, and sent them in the night-time to *Manaar*; which news was very unpleasing to us, because they had escaped the sight of our ships.

*Baldæus.*

The 6th, 7th, 8th, and 9th of *March*, we advanced bravely towards the gate of *Rajuba*: two *Portuguese* deserters, with some *Lascaryns* well armed, being examined apart, deposed, That the city could not hold out longer than towards the end of *May*, the remnants of the rice being very stony and unclean, nay, wet and corrupted. Hereupon the general ordered that a battery of two guns should be erected opposite to the utmost point of the bastion of *St. John*, the better to batter and lay level the flank of that of *St. Stephen's*, and under favour thereof to open again the trench leading to our mine; and so working along the wall, to take post upon the counterescarp.

C H A P. XXXII.

*Many Deserters give Account of the Condition of Columbo. Ysbrand Gotskens sent Envoy to the Emperor. His Letter to the General; and that of the Besieged to the Emperor.*

**A**BOUT that time divers *Lascaryn* deserters, and among them a *Portuguese*, made heavy complaints that they were forced to feed upon corrupted rice: the last told us, that there were no more than forty left of our prisoners, and that such of our officers as were not slain in the assault, died afterwards of their wounds, except a serjeant. He also discovered to us, that the besieged had carried all their guns from the bastions of *St. Stephen*, *St. Philip*, and *Clergos* into their outwork, before the gate of *Rajuba*, in order to discharge the same the next following night upon our pioneers. *Paul Meno*, who was then upon the guard there, was thereupon ordered to let the labourers cease, till they had spent their powder and ball in vain, and then to let them return to their work. In effect, they shot very furiously the next night, both with their cannon and firelocks, upon our works; and by break of day the general went on horseback to *Milagre*, to view the works of the slaves on that side, which he found to be well secured by a strong set of palisadoes, reaching from the sea-shore to the fens; and being guarded by four companies, these were thought sufficient to oppose any folly of the enemy on that side.

One of our soldiers being some days before missing, we understood that he had sought for shelter with his majesty for a crime he had committed; which at his majesty's request was remitted him, yet not

without being discharged from our service. The slave who made this request, told the general, that the grapes sent to the emperor had been very well accepted.

The 13th of *March* a boy, who had deserted the *Portuguese*, came to the general, and told him in private, that having been let down from the bastion *Clergos* with a rope, by some *Lascaryns* who kept guard there, they intended the next night, with the rising of the moon, to come all over to us, or else deliver up the bastion. The boy, according to his own desire, being soundly whipped, was sent back into the city, to take away all suspicion of a private correspondence with us.

*A boy deserter brings certain advice.*

To second his endeavours, a company of the guards was posted in a convenient place; but the besieged fired so briskly from the bastions of *St. Stephen* and *St. Philip* that night, that there was no opportunity of putting it in execution at that time. A *Toupas* deserter reported the next day, that the bastion of *St. Stephen* was guarded only by sixteen men, having questionless disposed the rest in other places, as being sensible that the gaining of that bastion would stand us in no great stead. Six *Lascaryn* deserters confirmed the same soon after; and two among them assured the general, that the governor of *Columbo* had sent a letter to the emperor *Raja Singa*.

*Baldæus.* The 14th *Edmund Ruysch*, whose quarters were at *Milagre*, sent word, that *Henry William Boogare* a corporal, and *Peter van Bruysingen* a common soldier, were gone over to the enemy. The same day ten *Lascaryns* well armed came over to us; and the same evening, with the rising of the moon, two cannon for battery was planted upon the battery against *St. John's* bastion. His majesty having desired that some person of note might be sent to him, to confer with him in private, our factor *Ysbrand Gotskens*, a native of the *Hague*, a person equally dextrous with his pen as the sword, was sent with all expedition thither. About the same time some *Lascaryns* with their wives and children coming out of the city, were turned back again; a letter being at the same time delivered to a certain boy for *Simon Lopes*, lately gone over to the enemy, intimating, that, *If he would endeavour to make the negroes in the city rise, he should not only deserve his pardon, but also a good reward.*

*Two Dutch soldiers go over to the enemy.*

*A letter to the deserter Simon Lopes.*

*A false attack upon Columbo.*

At midnight we made a false attack, which put the whole city into such an alarm, that there was nothing to be heard but ringing of bells, and the noise of drums; but in half an hour all was quiet again. The next day his majesty sent three deputies, to know the reason of such fierce firing; which being told them, they informed the general that *Ysbrand Gotskens* had not as yet had audience of the emperor, but would questionless be admitted the next day. A letter was also sent to the general from the emperor *Raja Singa*, wherein were enclosed twenty others, one from *Antonio de Souza Coutinho* governor of *Columbo*, the other from the chief citizens of that city, both dated the 10th of *March*, in which they implore his majesty's assistance.

#### RAJA SINGA RAJOU.

*The emperor's letter to the general.*

THE present opportunity has invited our imperial majesty to dispatch these few lines to your excellency: two days ago, being *Wednesday* the 15th of *March*, I broke up from *Guiramibula*, and marching along the other side of the river, by the way of *Walewitty*, have fixed my tents in this place; from whence I dispatched immediately some of my great courtiers, to notify my arrival in the camp at *Reygamwatte*, and to enquire after your excellency's health. I commanded them at the same time (having not as yet an answer to some of your excellency's letters directed to me) to desire you to send a person of note, unto whom I might by word of mouth give an answer to the said letters. It being night when I arrived in the camp at

*Reygamwatte*, I could not order the disposition of my forces till next morning, when the two enclosed letters were delivered to me, one from the governor, the other from the citizens of *Columbo*; the contents whereof you will understand from the originals.

Subscribed,

At our court and camp  
of *Reygamwatte*, *Mar.*  
17. 1659.

*Raja Singa Rajou*, most potent emperor of *Ceylon*.

Most Potent Emperor *Raja Singa*, &c.

IMmediately after our enemies did engage into this unjust war, which continues to this day, I let your majesty know the reasons which induced me to sollicite some supplies from your majesty; not questioning, but that you would not leave me in such an extremity, it being always the ambition of great monarchs to take the less powerful under their protection; though through God's mercy, we have hitherto not only defended this city, but also at several times given the enemy sufficient proofs of our bravery, in destroying and dispersing his forces, of which we have sent an account to your majesty. But perhaps these letters never came to your majesty's hands, being intercepted by the enemy; which seems the less surprising to me, since they have treated the natives of this island, (without any just cause,) that went out of this city like slaves, forcing many of them to retire back without the least mercy. The city of *Columbo* is an antient inheritance of the *Portuguese*, bestowed upon them by the kings and emperors, your predecessors, who always were ready to honour them with their protection; neither do we want opportunity to make your majesty (if you please) sensible of the manifold services done by the *Portuguese* in this isle, in case we did not believe the same to be still in the memory of your majesty, and many of your great ones. We do not know to have given the least reason of displeasure to your majesty; which makes us imagine, that you will be pleased not to leave us in this extremity, in regard it seems much more reasonable to assist the *Portuguese*, your antient friends, than the *Hollanders*, your new guests. Time has already discovered the intentions of the *Dutch*; and experience will soon convince you, that all their aim is founded upon lucre and interest, which they dissemble for the present; but so soon as they are masters of this place, your majesty will too late be convinced of the truth of what I say. I will not

*The governor's letter to the emperor.*

*Baldæus.* “not pretend to urge that matter any further for the present, leaving the determination of the whole to your majesty’s wisdom, and the conduct of your counsellors. God preserve your imperial majesty.”

Columbo, Mar. 10. 1656. *Antonio de Souza Coutinho.*

*Most High and Most Potent Emperor and Lord, Raja Singa, &c.*

*The citizens letter to the emperor.* “Immediately after the *Hollanders* had laid siege to this place, our magistrates and governors did give notice thereof to your majesty, as likewise of the ensuing general assault made by the enemy both by sea and land; which being done in the day-time, we let them advance into the city, but afterwards made them glad to ask for quarter, which was granted them. According to the confession of the *Dutch* themselves, they were two hundred and forty strong when they passed the fens, the greatest part whereof with their boats fell into our hands, besides a ship of thirty guns taken by us, and another much damaged, which they had enough to do to carry off, not to mention those that were slain in the ships, and in the assault. Being afterwards advanced to the ditch, they fixed their miners, and were busy in bringing over their gallery; but we forced them to retire with considerable loss, and took the gallery with the loss of one man only. There remains nothing now but for your majesty to vouchsafe us your favour, which we heartily wish for and

“desire. From what has been said, we hope your majesty is sufficiently convinced of our good will and zeal, in defending a place, bestowed upon us by your imperial majesty’s ancestors; and that, if supported by your favour, we shall never cease to persist in the same resolution, in hopes that your majesty will rather assist the *Portuguese*, your ancient friends, than the *Hollanders*. God protect your majesty, and your dominions.”

Columbo, Mar. 11. 1656.

By order from

*Diego Leitaon de Souza,*  
chief secretary.  
*Manoel de Fonseca.*  
*Diego de Souza de Cunha.*  
*Ruy Lopes Coutinho.*  
*John Coelbo de Castro.*  
*Bento Fereiro d’Abreu.*

The 20th of *March* a negro pioneer came to us, who, having worked in the ditch, discovered the place to us; and that four *Portuguese* being taken as they were coming over to our camp, had been hanged: that our new battery had killed two *Canaryns* and a gunner, and wounded several others upon the bastion of *St. Stephen*. Concerning their provisions, they confirmed what had been told us before. The general went with the said negro in person to the ditch, to see the place where the negro had been at work, and perceiving three *Portuguese* close together in the ditch, he got upon the wall, and discharged his fusce twice at them; but soon got down again, without which he had been in great danger, three bullets passing immediately after that way.

*The general in danger of being killed.*

C H A P. XXXIII.

*Ysbrand Gotskens returns from the Emperor’s Court: Gives an Account of his Transactions. Letters sent to Columbo. A Battery raised. A circumstantial Account from Goa, and its Condition.*

*A boy taken as a spy.* ABOUT noon a boy was taken in our works, where *Paul Meno* then kept guard, inquiring after our strength: and being asked why, he answered, That the governor of *Columbo* had sent him to enquire after it. In consideration of his youth and simplicity, he came off with a good whipping, and so was sent back into the city. Major *Van der Laan* sent word, that the enemy having made a hole through the wall, played from thence directly upon his works, and had killed a negro; and the same night they played with a cannon upon the same works, but without hurting any body.

The 23d of *March* towards evening, the

factor *Ysbrand Gotskens* having taken his leave the same day of the emperor, returned to our camp, where he gave the following account in writing of his negotiation:

“That in answer to five several letters written by general *Hulst* to his majesty, he had commanded him to tell the general, That having received a letter dated the 16th at *Columbo*, he would let him know the contents thereof. That his majesty was well satisfied with the proceedings against such as were fled out of the city; which though it might seem somewhat

*Gotskens gives an account of his negotiation.*

*Baldæus.* “ somewhat cruel, yet was he contented to  
 “ have the blame thereof himself, as tend-  
 “ ing to his service, and the speedy re-  
 “ ducing of the city. That because his  
 “ majesty was sensible that whatever pre-  
 “ sents he could make to the general of  
 “ rich apparel, and such like ornaments,  
 “ he was sufficiently provided with before,  
 “ he had thought fit to bestow upon him  
 “ the title and dignity of his *Director-gene-*  
 “ *ral*, and that for the future he should be  
 “ acknowledged as such throughout his  
 “ dominions. That he further desired the  
 “ general not to take it amiss, that after  
 “ the *diffaves* had notified his arrival in  
 “ the camp of *Reygamwatte*, a guide had  
 “ been denied to the captain of the guard,  
 “ it being contrary to the custom of his  
 “ country for any one to be introduced at  
 “ court, without notice being given of his  
 “ arrival to the emperor.

“ What the general had alledged con-  
 “ cerning the *Mousson*, and the soldiers be-  
 “ ing fatigued by so tedious a siege, his  
 “ majesty was very sensible thereof, and  
 “ that when the general should come into  
 “ his presence (which he hoped would be  
 “ within three or four days) they would  
 “ confer upon that point, and settle the  
 “ matter to his satisfaction: But his ma-  
 “ jesty being informed that his excellency  
 “ frequently exposed his person, and re-  
 “ garding him with the same tenderness as  
 “ his own eyes, had desired his excellency  
 “ for the future to take more care of his  
 “ person, commanding all his officers of  
 “ what quality soever, to be careful of him  
 “ to the last degree.

“ What his excellency had alledged,  
 “ concerning his majesty’s being constant-  
 “ ly employed in weighty affairs, and that  
 “ therefore he was unwilling to disturb him  
 “ with frequent letters; His majesty re-  
 “ plied, that the subject of his excellency’s  
 “ letters being such, as most nearly con-  
 “ cerned his service, nothing could be more  
 “ acceptable to him, than to bestow his  
 “ time in perusing the letters of the most  
 “ trusty servant that ever he had in his life,  
 “ desiring therefore, that his excellency  
 “ might supersede these excuses. That  
 “ what his excellency had alledged in his  
 “ behalf, concerning the mistake in com-  
 “ manding his forces at *Reigam-Corle*, as it  
 “ was intended for his majesty’s service, so  
 “ it was very acceptable to him, and need-  
 “ ed no farther excuse; as was likewise  
 “ the punishment inflicted upon the author  
 “ of the letter writ from *Pasidun-Corle*,  
 “ to deter others from the like undertak-  
 “ ings. Concerning the treaty made with  
 “ Mr. *Westerwold*, his majesty declared,  
 “ he would keep the same inviolably, not-  
 “ withstanding that several generals of the

“ *Indies*, and Dutch governors of the isle *Baldæus.*  
 “ in *Ceylon*, had done many things which  
 “ had given occasion to no small disturban-  
 “ ces: but that as he called God to witness  
 “ of his innocence, so he was extremely  
 “ glad to have meet with a person of ho-  
 “ nour in his excellency’s person, who hav-  
 “ ing done already considerable services to  
 “ his crown, he intended to enter with him  
 “ into a strict confederacy, which should  
 “ stand firm as long as the sun and moon  
 “ should furnish the world with light.

“ It was therefore that his majesty was  
 “ very desirous to know his excellency’s in-  
 “ tentions, whether, after the taking of  
 “ *Columbo*, they should attack the king-  
 “ dom of *Jafnapatnam* or the isle of *Ma-*  
 “ *naar*, and whether it were not conveni-  
 “ ent to send some of his forces under cer-  
 “ tain *diffaves* thither immediately: That  
 “ he had received two letters from the be-  
 “ fore-mentioned places, which should be  
 “ communicated to his excellency. His  
 “ majesty also declared, That either next  
 “ sunday or thursday (which of these two  
 “ his excellency should pitch upon) he  
 “ would expect him at court, and that he  
 “ would send some of his courtiers to con-  
 “ duct him thither.

At the same time certain deputies from *Two let-  
 ters sent into  
 Columbo,*  
 his majesty brought along with them two  
 letters penned by Mr. *Hulst* our general, in  
 answer to those sent from *Columbo* to the em-  
 peror, and dispatched to his majesty; which  
 being well approved of by him, and signed  
 by his excellency in his majesty’s name,  
 were carried the next day into the city.

Soon after news was brought from *Mon-  
 tual*, that four hundred *Portuguese*, com-  
 manded by four officers, had been seen near  
 the sea shore on the other side of the river,  
 but hitherto had not made the least attempt  
 of passing the same. Abundance of the  
 inhabitants of the inland countries, who  
 perhaps had never had a sight of a man of  
 war, or any well-disciplined forces, flocked  
 thither (with his majesty’s permission) to  
 see them. About the same time we receiv-  
 ed a reinforcement of fifty men from *Pun-  
 tegale*, being all they could spare.

The before-mentioned letters sent in his  
 majesty’s name, and carried by some of his  
*Aratches* and *Lascaryns* into *Columbo*, were  
 at first received with a general salute of the  
 cannon and small arms; but being opened,  
 the inhabitants sufficiently testified their re-  
 sentment, telling the messengers, that in case  
 their condition was not so desperate, they  
 would play them another game before they  
 returned; of which usage the messengers  
 desired the general to make his complaint  
 to the emperor.

*Baldæus.*  
A violent tempest.

The same day arose a violent tempest, with rain, thunder, and lightning, which killed one of our sentinels, and struck three musquets, in the church of *Quia de Lobo*, all to pieces. The emperor was so complaisant, as to enquire the next day by one of his messengers, whether we had suffered any damage in our tents or works, and was answered, that God had preserved us from all the danger. The same day, being the 25th of *March*, two *Europeans* came over to us; one of them, a native of *Marseilles*, was overtaken by the way, and received nine wounds, so that he narrowly escaped to our works, but died the next morning.

The 26th a serjeant, a *Mistice*, came over to us, and reported, That two more of the same company watched only an opportunity to desert: That they had already distributed to each soldier his quota of provisions, viz. a *Parra* of rice *per diem*, for the month of *April*: That they were much afflicted with the dropsy and the *Beribery*, a swelling in the knees, which takes away the use of their legs.

Some fishermen taken.

Soon after commodore *Roothaus* sent in three fishermen, taken by our boats within musquet-shot of the water-fort. The seamen had fifty crowns given them (the usual reward for every *Tony* or fisher-boat) and twenty five more as an encouragement. These fishermen being the chief persons who supplied the city with provisions. Orders were also sent to the commodore, not to expose his seamen without an absolute necessity.

Some of our best workmen were also consulted about the erecting another battery against the bastion of *St. John*, in order to destroy their palisado work in the ditch, and to facilitate the bringing over of the gallery. The general told the emperor's dislike, that he stood in need of four or five hundred pioneers and workmen; but he declined the matter, telling him, That when he came to the emperor, he would doubtless not deny his request.

A Portuguese merchant comes into the camp.

About the same time a *Portuguese* merchant came in a boat cross the bay into our camp, in company of a *Negro* trumpeter. They reported, That they were reduced to great extremity in the place; that no less than one hundred thirty had been buried yesterday; and that if most of the *Portuguese* had not their legs swelled by the dropsy, they had deserted long before this.

The 29th of *March* the enemy were preparing to attack the redoubt of *Paul Meno* two hours before day. But the *Negro* pioneers with the sentinel retreating in time, and giving the alarm, they retired, after having exchanged some musquet-balls without doing any harm. Four deputies arriving soon after to enquire the occasion of such smart firing, they were shewn the

works, and told, That we wanted four or five hundred *Colys*, or labourers. Three other fishermen were also brought up by the seamen, who had the usual reward given them.

At the same time the *Popkensburgh* yacht arriving from *Wingurla*, brought the following advice:

*Baldæus.*  
News from Goa advised by Leonard Williams.

That *Don Rodrigo de Lobo*, *Conde de Seicredo*, viceroy of *Goa*, and his secretary, with three of his domesticks, having been poisoned, died within four or five days after. His death being concealed for some time, *Manuel Mascarenhas Homem*, formerly governor of *Ceylon*, was (pursuant to the king's orders) constituted two days after viceroy in his stead: but the *Fidalgos*, or gentlemen, not being satisfied with his person, they expected daily a revolt (just as it happened against him at *Columbo*, 1652.) However, not long after the viceroy's death, the merchants of *Goa* began to load all the yachts that were there, as also one galeon and a carrack, whilst the governor was busy in equipping of men of war and other vessels, intended for *Ceylon*, offering twenty *Seraphyns* (or *Dutch* guilders) to every soldier that would lift himself. Our resident of *Wingurla* further advised, That they had sent from *Goa* one hundred sixty ships, and among them sixteen men of war, the 8th of *February*, to the north, to fetch provisions and some other necessary commodities; and that the said fleet had tarried four or five days in sight of *Wingurla* by reason of the contrary winds. That three *Patachos*, or yachts, were sailed for *Mosambique*; but one being leaky, was forced to return to *Bombassa*; two more to *Macassar*, two more to *China*; and one carrack and a galeon, viz. the *Bon Jesus* and *Nossa Senhora de Gratia*, set sail the 19th of *February* for *Portugal*, aboard of which were carried the following gentlemen, being accused of certain crimes against the government, viz. *Don Bras de Castro*, late governor general; *Don Lewis de Souza*; *Don Pedro de Castro*; *Manuel de Souza Cabraer*, master of the artillery; *Diego de Salvaar*, captain major; *Estevaon de Melo*, late governor of *Bassyn*; *Charles Hudfart*, a rich merchant; *Dr. Caldero*; and *Jeronimo Lobo de Falbetta*. In the *Bassyn* (under the jurisdiction of *Goa*) remained prisoners, on account of being concerned in the declaring *Don Bras de Castro* viceroy, *Don Rodrigo Monsanto*, a captain in the *Bassyn*; the *Veador de Fazendas*, or sur-intendant of the merchants; and *Leon Corre*.

He advised, That the before-mentioned carrack and galeon had aboard a very large cargo of stuffs and callico's, of cinnamon, indigo, pepper, bezoar-stones, cloves, &c. And that several of the richest merchants of

*Baldæus*, Goa having embarked all their effects aboard the said two vessels, were gone privately along with them to *Portugal*.

Two days before the yachts the *Ziericksee* and *Naerden* arrived before *Goa*, four *Patamars*,\* with a *Portuguese*, came to that place to bring advice of the desperate condition of *Columbo*; and that they stood in great need of the so-long-expected succours. But the government of *Goa* finding a great aversion in the *Portuguese* soldiers, as well as the *Negro* seamen, to go to *Ceylon*, especially in this dangerous season, they pretended to have received letters from *Dan Antonio de Souza Coutinho*, governor of *Columbo*, with advice, That the *Dutch* had been forced, with the assistance of *Raja Singa*, to raise the siege; and to make this news pass for current, the new viceroy *Manuel Mascarenbas Homem* got the governor of *Columbo*'s hand counterfeited, and ordered for three days successively ringing of bells, illuminations, bonfires, and other demonstrations of joy to be made for its relief.

By the same letters from *Wingurla* advice was brought, That our ships designed for *Persia* and *Suratte*, were sailed from thence; and that according to the intelligence received from *Dufely*, (a *Mahometan* city not far from *Goa*;) the so-long-expected squadron, consisting of between twenty and thirty ships, was to sail within three days with men and

\* *Patamars* are Indian advice-boats covered all over for the carriage of letters, which they tie round in wax cloths to the masts. *Patamars* are also flying foot-posts.

provisions for *Ceylon*: though this proved *Baldæus* afterwards only rhodomontade.

He further added, That after the departure of the before-mentioned vessels bound to *Persia* and *Suratte*, frequently yachts had been sent to the river of *Goa*, to get intelligence of the motion of the said squadron: that as far as they could learn, they stay'd only for the return of the before-mention'd fleet sent out to fetch provisions from the north; when they intended to force all the seamen, before they could set foot ashore, aboard the men of war, in order to carry them, together with seven or eight hundred *European* soldiers, and good store of provisions, to the isle of *Ceylon*, for the relief of *Columbo*. According to the governor of *Wingurla*'s opinion, the said succours could not be ready before *April*; and that if by that time they had no certain news at *Goa* of the surrender of *Columbo*, they would, besides the before-mentioned squadron, gather all their naval and land-forces, and endeavour to penetrate, with the strong north wind, which commonly blows in that season, into the harbour of *Columbo* for its relief.

He further added, That there lay two galleons and a carrack at anchor in the river of *Goa*; one whereof, which lay near *Marmagon*, would scarce be fit to go out this season. Lastly, That the yacht the *Roman* lay ready to sail upon the first news he should receive of the going out of the said squadron for the relief of *Columbo*, to give us timely notice of their coming.

## CHAP. XXXIV.

*Letters betwixt the Emperor and General. Several Deserters come over to us. The General invited to the Emperor's Camp.*

THE 30th of *March* a good number of *Portuguese* passing the fens in two boats, called *Manchous*, attacked our forces in their works near the gate of *Mapane*; but after some firing on both sides, were forced to retire in confusion. Soon after a certain captain of a village was taken by our people, who was sent out to fetch in some fascines, intended to be made use of in strengthening the cortin betwixt the bastions of *St. John* and *St. Stephen*. Two *Tonys*, or fisher-boats, were likewise brought in with five fishermen, and the seamen rewarded according to custom.

Letter from the general to the emperor.

At the same time the general writ a letter to the emperor, wherein he imparted to his majesty the news he had received concerning the intended relief of *Columbo*. In the evening two *Portuguese* deserters that came from the bastion of *St. Stephen*, (having sent the sentinel upon an errand,) gave us a tolerable

account of the condition of the city; and the next day another *Portuguese* deserter bore the marks of their extremity in his countenance, which was very meagre. The seamen also brought in four fishermen more; who making up the number of fifteen in all, they were sold for slaves by the sound of trumpet, to reimburse us the money that was given to the seamen for the taking of them.

The first of *April* the disavoes of *Ourve* and the four *Corles* came at the head of a troop of one hundred *Lascaryns*, divided into certain companies into the camp; and bringing along with them a letter from his majesty to the general, neatly laid together, they were received with all possible marks of honour. The letter ran thus:

“YOUR excellency's letter, dated the 24th of *March*, I received the same day; wherein you declare your readiness

Fifteen fishermen sold for slaves.

The emperor's letter to the general.

*Baldæus.* “to serve our imperial majesty upon all occasions; which, together with the proofs we have received thereof ever since your landing in this island, could not but be highly acceptable to our imperial majesty. Your excellency declares, that you will reserve what you have further to propose till the time you shall be admitted into our presence. Our dearly beloved director-general being so near our camp, has nevertheless not as yet appeared in our presence, which we easily pass by in regard of the affection our imperial majesty bears to your person. We have sent the *diffaves* of *Ouve* and of the *Four Corles* to conduct you hither. When they are arrived, your excellency may order the *diffaves* of the *Four Corles*, and of the *Seven Corles*, and of *Saffragamme*, to take care in the mean while of the forces, and what else you shall find most requisite for our service, and to chuse one of them (whom you please) for your conductor, not questioning, but that (according to your wisdom and experience) you will provide for the security of our forces, and our dear *Hollanders*. God conduct your excellency with his blessing, that our imperial eyes may see your person, which happy hour and day I expect with joyful eyes; assuring your excellency, that whatever you shall propose to us will be as acceptable to our ears as the most harmonious musick in the world.”

At *Reygamwatte*, April 1. 1656.

*Consultations about the general's going to Raja Singa.*

*Two more cannon planted on a battery.*

*Sixteen de-jesters.*

It was then consulted what method was most convenient to be taken, and what preparations were necessary in order to attend the emperor with the utmost splendor; his *diffave* having (by his majesty's orders) appointed the next following wednesday for the general's reception. But before his departure he ordered two twelve-pounders to be planted upon the battery against *St. John's* bastion, where the next day a seaman was killed, and a soldier shot by the same ball through the hat, without touching his head, or any other part. The same day sixteen *Lascaryns* well armed, coming over to us from the bastion of *St. Steven*, were overtaken by some *Portuguese* forces, with whom there happened a smart skirmish before they could get clear, two of them being wounded. They were employ'd in our works near the gate of *Rajuba*.

In the afternoon the *diffaves* of *Ouve* and the *Four Corles* came with a numerous retinue to attend the general, leaving it to his choice whom of the two he would pitch upon to conduct him to his majesty. After some discourse the *diffave* of *Saffragamme* was named by his excellency for that purpose, and ordered to get every thing in rea-

*Baldæus.* dine's for their departure against the next morning. News was brought at the same time, that seven *Canaryns* were taken by some of the emperor's forces above *Negumbo*, coming in a fisher-boat from *Columbo*.

The 4th of *April* in the afternoon, advice being given that his majesty was come on horseback to the pass of *Welecande*, the general was preparing to meet him there; but as they were just ready to take horse, certain *diffaves* came post with a message from the emperor, desiring the general not to come till to morrow, because his majesty was returned immediately.

Accordingly the 5th of *April* the general *The general sets out on his journey to the emperor.* set out on his journey, in order to wait on his majesty, attended by the two factors, *Edward Ooms* and *Ysbrand Gotskens*; the fiscal *Lucas van der Dussen*, *Cornelius Valkenburg* secretary, *James van der Rhee* the interpreter, *George Bloom*, and *Don John de Costa*, accompany'd by the imperial *diffaves* of *Ouve* and *Saffragamme*, and a company of firelocks under captain *John Hartman*; Mr. *Adrian van der Meyden*, major *Van der Laan*, the *diffave* of the *Four-Corles*, besides several officers of note, conducting them as far as to the pass of *Nacolegamme*, his majesty being then encamped upon the river of *Reygamwatte*.

The first testimony of respect shewed to *Honourable reception of the general.* the director-general of his majesty, was the offer of three fine and well-accounted horses, for the courtiers to make use of them at pleasure. These were followed by five tame elephants, with their guides, who were ordered to keep in the van. Then came a considerable number of noblemen and officers, at the head of their respective troops, paying their respects to his excellency, and asking after his health. As they approached the imperial head-quarters they were met by some of the chief men of his majesty's court, accompany'd by a vast number of soldiers, umbrella-carriers, trumpets, musicians, eleven elephants, and two fine horses, with saddles, bridles, and other ornaments beset with gold and precious stones, to compliment his excellency in his majesty's behalf. Thus they marched on through a guard of fusileers and bowmen ranged on both sides for a quarter of an hour together, till they came to a house prepared for the general's reception, neatly furnished, the outward-rooms being hung with hanging of a white linen cloth, and the bed-chambers with gold stuffs. Here the general entered with his retinue under a salvo of firelocks, placed on the other side of the river near the imperial palace. They had scarce arrived here two hours, but his majesty's *diffaves* came to enquire after the general's health, being informed that his excellency was seized with an ague, which had made him resolve

*Baldæus*. to come to him in person, had he not received nearer advice, that his dearly-beloved director was on the mending-hand, of which he expected the confirmation with the utmost impatience. These compliments were returned by the general with the utmost demonstrations of respect and duty, telling the diffaves, That he was highly desirous to appear in the presence of so famous and potent a monarch so soon as possible could be, his presence being absolutely necessary in the camp.

*The general prepares for his return.*

Next day being the 6th, great store of provisions of the best kind were brought in boats for the general and his whole retinue. In the afternoon some courtiers brought word to the general in private, that his majesty being seized that morning with a sudden illness, could (to his great affliction) not speak with his excellency that day. His excellency reply'd, That he was heartily sorry his presence was so absolutely necessary in the camp, that he could not without great hazard stay, since it was uncertain how soon his majesty might recover; for which reason he desired leave to depart for this time till a better opportunity, desiring that four horses might be laid by the way, which, as soon as his majesty thought convenient, might carry him with all speed to court; whereupon orders were given to *John Hartman* to prepare for the march; which was done accordingly the same night.

Soon after we understood that his majesty had been forced to have been let blood in the arm; and that he had shewed a great deal of sorrow for the intended departure of the general, telling his courtiers, That being sensible how necessary his presence was in camp, he would either the next morning, or at furthest in the evening, admit him into his presence, in case he found the least abatement of his illness. In the mean while the general sent the following letter to his majesty:

*Most Serene Emperor,*

*The general's letter to the emperor.*

“ THREE days being already passed since I came hither by your majesty's command and desire; but not being able hitherto to appear in your majesty's presence, I most humbly beg leave to return to the camp, the whole burden whereof rests upon my soldiers, promising to be ready to attend your majesty, whenever you shall think fit to send for me; and living in constant hopes, that in case some miscarriage or other should happen in my absence, the same

“ will not be alledged against me, and put *Baldæus* upon me as a blemish to blot out the remembrance of my former service. God protect the emperor.

*April 7. 1656.*

Your majesty's most humble servant,

*Gerard Hulst.*

This done, the general ordered *Ysbrand Gotskens* and *Don John de Costa*, with some of his trusty *Lascaryns*, to take a view of the king's guards upon the road, with an intention, that in case he saw no certain prospect of going to court to day, (as indeed there was but little appearance he should, considering the emperor's indisposition,) he would privately go post to the camp. The 8th<sup>o</sup> of *April* the following letter was delivered to the general from the emperor.

“ THE persons sent to enquire after your excellency's health, delivered to me, with a great deal of satisfaction, your excellency's letter wrote on friday last at four a-clock. I was extremely pleased to hear you were in health, and retained the same inclinations for our service. It was on the other hand no small affliction to me, that you had stay'd so long in my court, without being able to see you. I assure you, that the same has happened far beyond my wishes or intention; but it seems to have been so ordained by God, that your excellency should be a witness of my illness, and at the same time have an opportunity of receiving the present sent to you by the prince, (born by God's providence for the welfare of my subjects,) and deliver'd into my hands before my departure from *Candy*. Your excellency may prepare your self against to morrow, when I will send word for your appearance in my presence; which done, you shall have liberty to return into the camp: when I will also issue my orders for the furnishing you with all things requisite for the accomplishment of such measures as shall be taken betwixt us. After my recovery I intend to come in person into your camp, for which reason I have commanded the diffave of *Ouve* to prepare my quarters there. No more, but that our imperial majesty does not cease to pray to God for your excellency's welfare.

*April 7. before break of day.*

*Raja Singa*, most potent emperor of *Ceylon*.

*A Draught of the most Splendid Audience given by the Emperor of Ceylon, King of Candy &c. to Gerard Hult of Dutch General. vol. 1. p. 67.*

CHAP. XXXV.

*The General's most magnificent Entry: He is admitted into his Majesty's Presence. What passed at their Interview. The General's Return: His Unfortunate End.*

*Baldæus.* **A**BOUT noon, just as the general was at dinner, we heard a noise of drums, trumpets, and other musick on the other side of the river; and soon after saw some of the chief courtiers of the emperor, with three of the choicest horses of his stable, adorned with most magnificent saddles, bridles, and other accoutrements, to advance in very good order towards us; some persons of the first quality marching before to invite his excellency to court. The general ordered immediately his guards to pass the river with the presents, with an intention to follow them in person with his whole train; where his excellency was complimented by the dîffaves of *Ouwe* and *Matule*, the

captain of his majesty's *Guard du corps*, and a great number of other courtiers. The whole cavalcade was ordered in the following manner: His excellency's guards led the van, fifteen ensigns and standards being by the first ranks carried trailing upon the ground to shew the spoils of their enemies. These were followed by his majesty's horses and musicians, and then by five tame elephants: without the gate of the palace were ranged a vast number of musketeers; and passing over the bridge they found the guard in the outward-court ranged on both sides, through which they marched into the imperial palace.

*His audience.*

The doors being shut after them, all the *Hollanders* there present were conducted through a large square into a spacious hall, (called by them *Mandonoe*;) on the west-side whereof they found his majesty seated

in great pomp upon a chair of state, mounted some steps from the ground. No sooner had they entered the hall, but all the great courtiers paid their reverence by falling flat with their faces upon the ground, and the *Dutch* upon

*Baldæus.* upon their knees, till his majesty was pleased to order them to rise by a nod. Then they began to approach the imperial throne, adorned with most precious tapestries of gold, (called by them *Alcatives*;) coming to the middle of the hall, they fell upon their knees, a second time, according to the custom of the eastern nations, till his majesty was pleased to arise from his seat, and commanded the general to come nearer, who made the following speech to his majesty:

*Most Potent Monarch!*

*His speech to the emperor.*

“YOUR most humble servant approaches your imperial throne with a most violent passion, in confidence of your generous inclinations and wonted clemency, which has encouraged me to address myself to your majesty (whose name is renowned throughout the world) with a most sincere wish, that God Almighty will be pleased to bless your most illustrious imperial majesty, and the prince, with a long and happy life for the welfare and protection of your subjects.

“I am come hither to renew and confirm the most sincere confederacy established betwixt your most potent majesty and the *Dutch* nation; and to desire, That whatever differences or disturbances may have happened hitherto betwixt your imperial majesty and our nation, may be buried in eternal oblivion, in order to establish an eternal peace and confederacy, which may be as durable as the bodies of the sun and moon. It can't be denied but that several misunderstandings have happened betwixt your majesty's officers and those of our company; but these ought now to be removed even out of our memory, at a time when we are so profuse of the blood of our countrymen, to force our common enemies out of this isle, and ready to give your majesty every day new proofs of our sincerity and hearty inclinations towards you.”

*What passed betwixt him and the emperor.*

His majesty appeared highly satisfied with what his excellency had said, ordering him at the same time to rise; which he seemed not to understand, and at the same time offered certain presents, being, as he said of little value in themselves; but nevertheless much regarded by the most potent emperors and monarchs, to wit, some standards taken from those very enemies who had for many years together so cruelly and barbarously oppressed his majesty's subjects, especially in the *Low-Lands*. His majesty then, speaking of the presents sent to his excellency by the prince his son, his excellency acknowledged the same with extraordinary re-

verence, pointing at the same time at a *Baldæus* jewel he wore upon his breast, presented him before by his majesty; and so approaching the throne, he kneeled upon a cushion laid upon the step of the throne, and touching his majesty's hand, told him, That he thought it the greatest honour he ever was capable of receiving, to be admitted to kiss his majesty's hands.

The emperor took a *Gargantimbo*, or collar of gold, which he threw about his excellency's neck, and drawing his own ring from the first finger of his left hand, he desired he should extend his finger, and wear it in remembrance of his majesty, who put it upon his finger. His excellency was so surprized at this extraordinary favour, That he had scarce power to put out his middle finger of his left-hand, telling his majesty, That this finger having had the misfortune to be disfigured by his enemies, was now abundantly recompensed for his pains by the honour his majesty had been pleased to bestow upon him.

Then retiring somewhat backwards, and standing upon a tapestry, he declared to his majesty, “That he was sent into this isle

“with full power by the general and council of the *Indies*, to propose to his majesty, whether he would be pleased to continue the antient alliance, (made with Mr. *Westerwold*;) or have the same renewed, and some other articles added; assuring his majesty, That whatever should be agreed upon should be kept inviolably on their side.”

Unto which his majesty replied, “That he was highly satisfied with his proposal.”

Then the general giving a short account of their success against the enemy, his majesty said, That he had heard of the same to his signal satisfaction; and that he had a present from the prince his son for his excellency: whereupon approaching the throne a second time, his majesty presented him with a garter of gold, which he said had been worn by the prince himself.

This done, our presents being ordered to be brought in, Captain *Hartman* entered with fifteen of his stoutest soldiers, each of them trailing one of the enemy's colours upon the ground; which being thrown carelessly down in the hall of audience, a white buckler, formerly belonging to the *Portuguese* governor *Antonio Mendes d' Aranba*, was laid upon them, as also an *Indian* scymetar, the hilt whereof was of agate and gold curiously wrought, which his excellency declared to be intended for the prince, wherewith to defend his subjects (when come to riper years) against all the enemies of the crown, not excepting

*Extraordinary honour done to the general.*

*Certain propositions made by the general.*

*Is presented with a garter.*

*Baldæus.* ing the *Hollanders* themselves, if they deserved it. Wherewith his majesty seemed so highly satisfied, that he put the scymetar next to his throne.

The presents sent by the company to his majesty were as follows :

Two very fine *Persian* horses, one *Turky* gun, two *Persian* bows, with their arrows and quivers richly embroidered, one *Japoneſe* gown very rich ; two greyhounds, two *Persian* sheep, two rock-goats of *Viſtapour*, one piece of *Sandal-wood*.

Those for the young prince were :

One very fine *Persian* horse, two fuzees with very curious barrels, one silver basin, wherein were laid two pieces of *Persian* stuffs wrought with gold, two silver boxes of *China*, one hog-stone, called *Pedra de Poſco*, one piece of sandal-wood, &c.

Whilst the presents were delivered, his excellency begged his majesty's pardon for having detained him so long ; and as the time of his stay could be but short, he told him, That he had three things more to propose to his majesty, (whereof the want of the pioneers was one,) desiring, that he would be pleased to hear the same from the mouth of *Ysbrand Gotskens* in private; he being the only person whom he had entrusted with the secret. The emperor then commanded all his courtiers to withdraw; desiring that our officers might be ordered to do the same : which being done accordingly, his excellency again approached the throne ; and having by his interpreters, *George Bloem* and *Cottemaley*, discoursed with his majesty a quarter of an hour, he desired leave to depart to the camp ; which being granted, he was re-conducted with the same pomp to his lodgings.

*The general takes leave of the emperor.*

The same evening the general sent to the emperor by *George Bloem* two noted partisans, who had done a great deal of mischief in the country under *Gaspar Figeiro*, to dispose of them at pleasure. Mr. *Bloem* was received by the emperor in a private room, and presented with a golden chain and ring.

*He returns to the camp.*

The 9th of *April*, early in the morning, the general took horse, and came pretty early with his whole retinue to *Nacclegamme* ; from whence he was conducted by Mr. *Adrian van der Meyden* and Mr. *John van der Laan*, with two companies, to the camp.

At his arrival there he found the gallery *Baldæus.* fixed in the ditch, (without any considerable loss,) and every thing else in a good condition.

The 10th, in the afternoon, the general *Takes a view of the works.* took a view of all the works ; and among the rest commanded captain *Henry Gerard* to set up a ladder, and take a view of the condition of the enemy on the other side of the ditch : he found the enemy had made an entrenchment extending towards the sea-shore, with a ditch before it, eight foot deep ; upon which having planted two pieces of cannon, they were likely to prevent our fixing the miners on that side, our trenches being carried on directly against that place. Whereupon it was agreed to make a breach in the wall on this side of the ditch, and to plant a cannon there, in order to ruin the said entrenchment.

About sun-set his excellency returning to the same place, to encourage the workmen both by his words and example, the *Portuguese* began to use their utmost endeavours to set fire to the gallery, throwing all sorts of combustible matter upon it, which the general perceiving, he advanced with the rest to assist in extinguishing the fire ; but whilst he was busy in the midst of the gallery, in performing his duty with his breast open, he was heard on a sudden to cry out, *Good God, help me ! O help me !* Which captain *Joachim Block*, who stood hard by, hearing, and finding him all over bloody, he carried him, with the assistance of major *Van der Laan*, from thence to a bed, where, without speaking one word more, he expired. His wound being searched, they found it to be done by a musquet-bullet, which passed in under the right-shoulder, quite through under the right-arm.

*The Portuguese set fire to our gallery.*

*The general wounded.*

*Dies.*

This was the unfortunate end of this most excellent person, in the vigour of his age, descended of a good family, and of great experience, both in civil and military affairs ; being for the rest of a very affable conversation, eloquent, and well-versed in divers languages. He was, besides this, of a very good aspect, tall, and well-made, brisk, and indefatigable in what he undertook : and to be short, *Nature and industry had framed so exact an harmony betwixt his soul and body, that few men can pretend to the same degree of perfection.*

*His character.*

His Excellency GERARD HULST, first Counsellor, and Director Generall of y<sup>e</sup> INDIES, Comander in Chief of all the Sea & Land Forces sent to CEYLON, and the Coast of the INDIES.

C H A P. XXXVI.

*The General's Death notified to the Emperor; who sends his Envoys into the Camp. Mr. Adrian van der Meyden succeeds him. A Portuguese Captain comes over to us.*

*Baldæus.* THE same night *George Bloem*, interpreter, being dispatched with a letter to the emperor; to carry the doleful news of the general's death, his majesty sent the 11th of April the diflaves of the five and seven *Corles*, to take a view of his corpse. It being also agreed in a council of war, that the same should be conducted by the factor *Ysbrand Gotskens* and captain *John Hartman*, under a guard of twenty firelocks, to *Puntegale*, (nine German leagues thence,) the same was done accordingly with a great deal of splendor. The same night his majesty sent the diflaves of *Matule* and *Adigar*, attended by divers other courtiers, to condole the death of his dearly-beloved director-general. They were very inquisitive, whether he was slain by some of his own people, or by the enemy, or by some unexpected accident. Being shewn the place where he received his wound, they crawled thither, trembling for fear upon the ground; from whence they took a handful of earth, and desired that no body should set a foot in that place.

*His corpse carried to Gale. Envoys sent from the emperor.*

*Take a view of the place where he was wounded.*

His corpse was deposited in a vault under ground at *Gale*, till 1657. when by order from *Mr. Van der Meyden*, it was interred with great solemnity in the church there near the pulpit, his arms, buckler, sword, and spurs being hung against the wall. In the year 1658. the said corpse being transported from thence to *Columbo*, was put into a stately monument there, with an inscription upon it, containing in substance, *That he had purchased the conquest of Columbo by his death, for the honour of his native country.*

After the decease of the general, the burden of the supreme command of the siege was laid by unanimous consent upon the shoulders of *Mr. Adrian van der Meyden*, governor of *Gale*, who had the good fortune to see the city reduced in the next following month of *May*.

*Mr. Van der Meyden succeeds the general in that dignity. A letter from Wingurla, concerning the Portuguese succours.*

The 13th of April a letter was brought to the camp from *Leonard Johnson*, dated the second, at *Wingurla*, intimating, That twenty two frigates, under the command of *Francisco de Seix Cabreira*, with all sorts of provisions, and eight hundred Portuguese landmen aboard, were sailed from *Goa*; whereupon the commodore *Rootbaus* and *Peter de Bitter* being sent for, to consult what

was best to be done, it was resolved (in order to prevent their bringing into the city the intended succours) to attempt a vigorous assault upon the bastion of *St. Stephen*, for which purpose four brave officers were chosen; who, with eighty volunteers, (who had offered themselves for a reward of fifty crowns a-piece,) were to make the attack.

The same evening the *Flussing yacht* coming to an anchor in the road, soon after *Adrian van der Maart*, her captain, came ashore, and told the general, That about three days before, meeting with the Portuguese Squadron near *Coulang* and the cape *Comoryn*, he had attacked one of their frigates so successfully, that he saw her sink before his eyes, sixteen Portuguese only, with captain *Simon Souza* being saved of all that were aboard her; that soon after he had lost sight of them all, supposing they were returned to the cape *Comoryn*, it being his opinion, that as the wind stood, they must before this have been near *Columbo*. In the night time, a certain Portuguese captain, one of the *Fidalgos*, or gentlemen, who had been concerned in declaring *Don Bras de Castro* viceroy of *Goa*, came over to us, having been detained prisoner in the bastion of *St. Stephen*, and made his escape with four of his servants through *Don Francisco de Rolyn's* house, by means of a boat. He entertained the new general for a considerable time. It was in the mean time resolved to delay the assault upon the bastion of *St. Stephen* for two or three days. Our interpreter, *George Bloem*, returned also with the following letter of condolance from his majesty.

*Baldæus.*

*The Flussing yacht meets the Portuguese fleet.*

*A Portuguese gentleman comes over to us.*

*Raja Singa Rajou, most potent emperor of Ceylon, wishes health to Mr. Adrian van der Meyden, governor of the imperial fortrefs of Gale.*

“ YOUR letter, dated in the evening at seven a clock on monday, the 10th of April, did arrive in the imperial camp about midnight, and was delivered to our imperial majesty on tuesday about noon. The death of our director-general has caused an excessive affliction in our imperial heart. Whilst our beloved director was at our court,

*Letter of condolance from the emperor.*

*Baldæus.* “ I was unwilling (according to the singular love I bore to his person) to let him know my illness; but being now on the mending hand, I am forced to hear of his death, which now we must commit to providence, and submit to his will. Our imperial majesty has likewise understood by your excellency’s letter, that you are invested with the same power as our beloved director-general was. It is a general received custom in the courts of all the great monarchs, that in case a person of note, and in good esteem with them, dies, his successor appears before the said monarch, and receives his confirmation and blessing at his hands. As you have always been serviceable to us, it is our pleasure that you come to court, (in the same manner as the director-general did,) in order to receive the honours due to your merits; being sensible that you have rendered us considerable services, without having received any reward hitherto; wherefore it is my pleasure, that when you resolve to come, you give notice thereof beforehand what day you have pitched upon, in order to receive you with the same respect as the director-general, your predecessor. I doubt not in the mean while, but you will be very careful in your high station. At the closing of this letter, advice is brought, that the *Portuguese* expect every day succours, which has made me give strict orders to keep a strict guard, both by sea and land.”

In the camp and court of *Regamwaste*, 15 April, 1656.

*Raja Singa Rajou*, most potent emperor of *Ceylon*.

*Eleven Lascaryn, three Topasses, two Portuguese deserters.* In the night two *Portuguese*, three *Topasses*, and eleven *Lascaryn* deserters, gave a doleful account of the miserable condition of the city, and of the sickness and mortality that reigned there. The sixteenth we played most furiously against the gate of *Rajuba*; and the general having sent advice of the expected succours in the city to the emperor, gave orders to commodore *Rootbaus*, to keep the *Flussing*, *Popkensburgh*, and *Lion* yachts in readiness, to pursue the enemy’s squadron. About the same time a *Portuguese* captain came over to us, with eighteen *Lascaryns* and three *Topasses*: his pretence was, That having received an affront from the governor, he had taken this method to revenge himself. *Diedelof van der Beek* writ from *Mapane*, that the poor starved wretches in the plain betwixt our works and the city, butchered one another, two women having lately de-

More deserters.

voured their new-born babes. The 19th of *Baldæus*, April a letter was delivered to the general from the emperor.

“ YOUR excellency’s was delivered to me after midnight; by which you declaring your readiness to serve me; the same was received with singular satisfaction, knowing that your excellency, ever since your landing in this isle, has shewn a more than ordinary inclination for our service. Your excellency being now, through God’s mercy, put into this high station, it is expected you should give more signal proofs thereof than before. You also mention the expected *Portuguese* succours, and the success of our faithful *Hollanders* against them. I hope in God, that this victory will prove the forerunner of others. What I writ in my last, concerning your care in the camp, was not intended as if I questioned your conduct, but because it belonged to me to mention it. You further advise, that the enemy’s squadron has orders to sail directly for *Columbo*; but considering the ill treatment *Manoel Mascarenbas Homem*, the present viceroy of *Goa*, met with at *Columbo*, (whilst governor there,) it seems to me most probable, that he has sent this fleet rather to be worsted by the *Hollanders*, than with a real intention to relieve *Columbo*.

“ Your excellency says, That one *Nicolao de Moura*, captain-major of the city, is come over to us: I desire you would give a good entertainment to all such as come to us with a sincere intention. The other news has been very acceptable to me: God, I hope, will crown our endeavours with success. Your mentioning the late deceased director-general’s name has renewed my grief; and as I loved him entirely, so I must recommend to you the jewels which were presented to him (whilst living) from our imperial majesty, that the same may be sent into *Holland* to his next kindred; it being our will and pleasure to give upon this occasion a convincing proof to our *Hollanders* of the most sincere affection we bear them. For though the unfortunate death of the said director has robbed him of the opportunity to execute those designs he had projected for our services, yet his counsels, care, and watchfulness, will remain for ever in our memories. I am very solicitous to know what method you intend to take in reducing the city, whether by force or famine. If you intend to take it by assault, let me know of it two or three days before-

The emperor’s letter to the new general.

He orders the late general’s jewels to be sent into Holland.

*Baldæus.* “ before-hand secretly. My illness has hitherto prevented me from prosecuting my resolution of coming into the camp, to take a view of all the works of the *Hollanders*; however, I am resolved to come nearer to the camp; which, as soon as it is done, I will give you notice thereof, and desire your presence there, in order to concert measures with you before you return to the camp. No more, &c.”

Reygamwatte, 28 April 1656. *Raja Singa Rajou*, most potent emperor of *Ceylon*.

*P. S.* “ It is desired that the captain who sunk one of the enemies frigats, and forced the rest to return back, may come along with the general to the emperor, in order to make himself known to his majesty.”

The superscription was,

*Raja Singa Rajou*, most potent emperor of *Ceylon*, wishes health to *Adrian van der Meyden*, governor of our imperial fortress of *Gale*.

In the afternoon a cessation of arms being ordered for some time, the following summons were sent into the city.

*Summons sent into Columbo.* “ **H**AVING by the present siege reduced the citizens of *Columbo* to the last extremity, and bereaved them of all hopes of the so-long-expected succours from *Goa*, we thought fit to summon the city a second time in the name of his imperial majesty, *Raja Singa*, and of the honourable the *Dutch East-India* company. For the Squadron sent the 11th of this month from *Goa* by the new viceroy *Manoel Mascarenhas Homem* (*Conde de Secredo*, his predecessor dying the 13th of *January*) to the relief of *Columbo*, being pretty well provided with provisions, but very indifferently manned, was engaged so briskly by our people, that some of their frigats were lost, others much damaged, and the rest forced to retire in confusion to *Tutecoryn* and *Manaar*. Ac-

“ cording to the opinion of your own captain *Simon de Souza*, and some others, that are our prisoners, most of the men aboard them are likely to desert, for fear of falling into the hands of our ships that are cruising thereabouts; and the rest will scarce be able, by reason of the *Mousson*, to reach this place. Perhaps you may flatter your self, that the same *Mousson* will oblige our ships to leave before long, as well those parts as this bay; but if you rely upon this point, we declare our selves innocent of all the grievances and sufferings put upon the poor citizens, who will, besides this, be thereby put in danger of losing all they have; whereas at present they may expect honourable conditions, which they cannot hope for hereafter. We recommend this to your excellency’s consideration, and your person to God’s protection.”

*Baldæus.*

In the imperial camp before *Columbo*, 18 April 1656.

*Adrian van der Meyden.*

The following letter was sent in answer to the former.

“ **T**HE letter sent to me by the most noble general *Gerard Hulst*, dated the 9th of *November* last, I answered at that time; which, as it cannot be unknown to your excellency, so the same answer may serve to your letter; neither the change of war, nor want of provisions having given me sufficient occasion hitherto to alter my resolution, which is, to take care of and defend the city to the utmost of my power, for the service of the king my master. God protect your excellency.”

*The answer.*

*Columbo*, April 19. 1656.

*Antonio de Souza Coutinho.*

Being convinced by this letter, that nothing but force could reduce them to reason, the cannon were ordered to play again as before.

CHAP. XXXVII.

*Many Deserters. Letters from the Emperor. Ysbrand Gotskens sent to his Majesty. Resolution taken to assault the City. Succours arrived from Batavia.*

**T**HE 21st of *April*, seven *Lascaryn* deserters reported, That the citizens and soldiers beginning to murmur for want of

rice, it was resolved to give to each citizen and soldier three fourths, and to each *Topas* and *Lascaryn* an half *medide per diem*, besides

*Baldæus.* fides their former allowance. Soon after a *Portuguese* deserter related, That they had barricadoed up most of the streets, and planted cannon in them. About the same time the new general received the following letter from the emperor.

RAYA SINGA RAYOU, &c. ¶

*The emperor's letter to the general.*

“ OUT of your letter, dated the 19th  
 “ of April, I have (with a great deal  
 “ of satisfaction) understood your good  
 “ health, and good inclinations for my ser-  
 “ vice, as well as of major *John van der*  
 “ *Laan*, and the rest of the chief officers.  
 “ Before the arrival of the late director-ge-  
 “ neral (of blessed memory) I had taken a  
 “ resolution within my self to come and  
 “ take a view of your camp; but being  
 “ then prevented by my illness, I still con-  
 “ tinue in the same resolution, not only to  
 “ view the works there, but also to be a  
 “ spectator of the brave actions performed  
 “ there for my service. My faithful *Hol-*  
 “ *landers*, who are come hither from far  
 “ distant countries, have for several months  
 “ last past endured many miseries, not with-  
 “ out much effusion of blood; and as I am  
 “ stedfastly persuaded that both I and our  
 “ imperial family may promise our selves  
 “ the same and more for the future, so shall  
 “ I think it no trouble to come so far into  
 “ the camp, to be an eye-witness (to my  
 “ great satisfaction) of the brave actions  
 “ performed there for our imperial majesty's  
 “ service. That no notice has been taken  
 “ hitherto by this court of the captain-ma-  
 “ jor, is to be attributed to his being em-  
 “ ployed day and night in the company's  
 “ service. Some foolish people are much  
 “ deceived, if they judge that there can be  
 “ the least separation of interest betwixt our  
 “ majesty and the company, the wiser sort  
 “ being convinced that our interest is the  
 “ same. The said major *John van der*  
 “ *Laan* has done me considerable service  
 “ ever since his coming into this isle; and  
 “ therefore I declare, That since the late  
 “ director-general appeared at this court, I  
 “ did lay aside all animosity, in considera-  
 “ tion of his great qualities and services;  
 “ so that now the said major who has spill-  
 “ ed his blood more than once, and been  
 “ wounded with bullets in my service,  
 “ shall be made sensible of the love and  
 “ affection I bear him, whenever he comes  
 “ into my presence. What you mention  
 “ about *Mascarenhas*, is no less than the  
 “ truth, and an undeniable one, to con-  
 “ vince the world, that God will take re-  
 “ venge of such as offend their sovereigns,  
 “ which induces me to believe, that this  
 “ war, we jointly carry on against our  
 “ enemy, will be blessed by God with suc-  
 “ cess. I was very glad to understand by  
 “ your excellency's letter, that the jewels  
 “ presented by me to the director-general  
 “ have been sent to *Batavia*, in order to be  
 “ transported from thence by trusty per-  
 “ sons into *Holland*. The said director-  
 “ general having done me such signal ser-  
 “ vices, ever since his coming into this  
 “ country, I intend so soon as the war is  
 “ brought to a conclusion, to send a letter  
 “ with the first ship to the states-general of  
 “ *Holland*, to give them an ample testimo-  
 “ ny thereof. The resolution taken in the  
 “ council of war is very acceptable to me:  
 “ but as your excellency in his high sta-  
 “ tion has the chief management of such  
 “ matters as tend to our majesty's ser-  
 “ vice in your hands, so I am most in-  
 “ clined to follow your advice. The meth-  
 “ od proposed for the reducing of the  
 “ city has been debated in our imperial  
 “ council; but as the same must be expres-  
 “ sed in a different language (which carries  
 “ along with it a considerable alteration)  
 “ I will pass it by in silence, earnestly re-  
 “ quiring you, that whenever the said re-  
 “ solution is to be put in execution, to send  
 “ me advice of it, that I may assist you  
 “ there in person. You are of opinion  
 “ that it would be more convenient for me  
 “ not to come into the camp, till after the  
 “ taking of the city; but what business  
 “ have I in the camp then, unless it be to  
 “ see the conditions performed; whereas  
 “ the late director-general had given me  
 “ his word, that the city should be deli-  
 “ vered into my hands. In the letter I  
 “ sent to your excellency, I desired that  
 “ the captain who had sunk the *Portuguese*  
 “ ship should come along with you to our  
 “ court; and you having made no mention  
 “ of him in your answer, I am at a stand  
 “ to guess the reason thereof. The auk-  
 “ ward answer of the *Portuguese* in *Colum-*  
 “ *bo* to your summons, shews them to be  
 “ void of sense; and I, who am well ac-  
 “ quainted with their bravadoes, look up-  
 “ on it as an infallible sign of their distress,  
 “ being convinced, by my own experience  
 “ in divers engagements, that when they  
 “ were most at a pinch, they would brag  
 “ most. I have for a considerable time  
 “ considered with my self, whether I should  
 “ write a letter to those in the city, but  
 “ for fear of a haughty answer, I resolve  
 “ to let it alone. No more, &c.”

The 22d of April,  
1656.

Raja Singa Rajou, most  
potent emperor of  
Ceylon.

The

*Baldæus.* The following letter was inclosed, and directed to the *Sabandaar of Gale, Don John de Costa.*

“ HAVING been informed by several of our messengers sent from hence with letters, That since the arrival of the late director-general of blessed memory, you have given all imaginable satisfaction in reference to his person, I intended to have sent you a present at that time ; but that the said director’s departure (which was so sudden, that my servants did not overtake him before he came to *Krabenhof*) prevented it. But when the new general shall appear at court, you, as well as the rest of the officers, shall not be forgot. You have been an eye-witness of the respect paid by me here to the director-general ; and when ever the new general makes his appearance before us, the same shall (not without great reason) be increased, our imperial majesty having received more signal services from his excellency, whereof I would have you give notice to him at the first opportunity. If you should happen to discover any error in such letters as are sent from this court, you shall excuse them to the general. You shall also put him in mind, that we stand in need here of an anvil, and a pair of smith’s bellows ; and as there is frequent occasion for writing, do not forget to let us be furnished with some white paper ; you may send also some *China ware.* Farewel.”

*At the Court of Reygamwatte, April 23. 1656.*

*A Topas deserter brings a letter from a merchant in Columbo.*

The 24th of the same month, a *Topas* deserter, named *Lazaro Henrico*, who came over to us, during the siege of *Caleture*, but afterwards run over again to the enemy, (notwithstanding he was well entertained by the late director-general,) brought a letter from *Manoel Fonseca de Monis*, a merchant of *Columbo*, directed to major *Van der Laan*.

Mr. *Van der Laan*,

“ I Beg of you to believe what I am going to tell you concerning the present condition of the city. Be careful not to venture a storm, they having provided retrenchments in all posts, well provided with cannon, besides four mines, to be discovered to you by my servant. The rice is sold still at three *Seraphyns*, and is very scarce. If you intend to hasten the surrender of this city, send somebody from *Caleture* hither, to convince them that they are still living there : this being the reason why they would not hither-

“ to hearken to any conditions. I send my *Baldæus.* servant with this letter to you, to shew the same to the general, though it is rumoured abroad here that general *Hulst* is dead ; but I don’t believe it. The next thing I have to request, for God’s sake, and as you tender our friendship, is to preserve and secure the bearer hereof, being resolved likewise to come over to you, which I cannot do at present, being so narrowly watched ; but hope to be with you in a few days. God grant you a long life.”

Your Servant and Slave,

*Manoel Fonseca de Monis.*

Whereupon it was resolved to secure the said *Topas* aboard a ship till further order.

Soon after *Ysbrand Gotskens* was dispatched to his majesty, to represent to him some matters of the greatest consequence, and to know his sentiments. It was not long before he returned in company of the dislates of *Saffragamme*, and the *Four Corles*, and the *Curupele Apobami*, and gave an account of his negotiation to the general *Van der Meyden* ; and among other things, That his majesty was well satisfied with the resolution taken *April 21.* but seemed to be inclined to have the assault delay’d till Sunday the last day of the month, when he intended to be an eye-witness of it.

The 23d of *April*, it being resolved to give the general assault the next following night, especially upon the bastions of *St. Stephen* and *Clergos*, and (in case they succeeded) afterwards upon that of *St. Philippo*, every thing was preparing for the execution thereof, and every one ordered to his post.

The following instructions in writing were given to each commanding officer in chief, which they were strictly to obey.

“ THOSE that are ordered to give the assault upon the bastions, shall be obliged to fix the scaling ladders themselves, and use their utmost endeavours to make themselves masters thereof, and to maintain themselves there. In case the bastion of *St. Stephen* be taken, the commanding officer shall let the trumpet sound the tune *William of Nassau*, as a signal that God has blessed us with victory on that side. So soon as the assault begins from the redoubt, betwixt *St. Stephen* and *St. John’s* bastion, the companies of *John Hartman*, *George Gebel*, *Henry Gerard*, and *James Baker*, shall be in a readiness to second them, as occasion requires.

“ During the assault, the *Javaneſe*, *Bandaneſe*, *Lascaryns*, *Topasses*, with some *Europeans*, shall endeavour to pass the ditch,

*Baldæus.* “ ditch, in order to force the enemy from their works at the foot of the bastion of *St. John*, and shall be commanded by captain *N. Scherf*, *Arent Johnson*, *N. de Wit*, *N. Chample*, and *James van Driel*. “ Whilst the assault continues upon the bastion of *St. Stephen*, major *Van der Laan* shall with his forces attack the gate of *Rajuba*; and in case God bless us with success, no officer, of what degree soever, shall presume to grant leave or suffer any of his soldiers to leave their colours, or enter the city, being forewarned that the enemy have planted their cannon there, charged with small-shot.

Dated Apr. 27. Subscribed, by Command from the General,

*Adrian van der Meyden*,  
*James van Rbee*, Secretary.

*It delay'd till another time.*

Immediate notice of this resolution was given to the emperor; but there happening no small differences and heats in the council of war that was held that evening about the execution of this design, the same was thought fit to be deferred to another time. Scarce was the council broken up, but a *Lascaryn* deserter coming from *St. John's* bastion, reported, That this evening they had reinforced the ordinary guard of the bastion of *St. Stephen*, with thirty of their choicest men, called *Valiantons*, or *bravoes*, by them, besides ten other soldiers; which made us imagine that a *Javanese* deserter, who had got perhaps some scent of the matter, had discovered our design to them.

*Three ships arrived from Batavia.*

At the same time news was brought of the arrival of the yachts the *Red Lion*, *Avenhorn*, and *Pelican*, who left *Batavia* in *March*. The 28th of *April*, the lieutenant *Christopher Egger*, *James Viry*, *Martin Scholtes*, and ensign *Brewer*, were sent in the night-time to view the ascent to the bastion of *St. Stephen*; they gave an account that they had found them well upon their guard there, and the ground being sandy would afford no firm footing. The 29th of *April* a letter was brought into the camp from *Abraham van der Mart*, sent by the *Lion* yacht

*The condition of St. Stephen's bastion viewed.*

from the isles of *Tutecoryn*, with the joyful news, That the *Portuguese* Squadron being met by the *Dutch* the 19th off of *Tritchia* nadour and *Caypatnam*, they were forced to retreat betwixt the isles of *Tutecoryn*, where they were blocked up by our ships, and *Van der Mart* gave no small hopes of preventing their coming out again, provided he were reinforced in time with two or three nimble yachts. Letters were at the same time delivered from the head-factor, *Reynier Serooskerke*, concerning the preparations of the *Portuguese*; and that they intended to pass the *Mousson* on the coast of *Malabar*: That the traffick of the company at *Calecoulang* was in a good condition; and that he intended to buy up a good quantity of pepper and other commodities against the year 1657. News was also brought from *Batavia*, That a succour of two hundred and twenty five men was sent from thence to *Ceylon*, who within a few days were to come by land hither from *Gale*. At the same time we received a letter written in *Latin* by the serjeant *Severin Dolander*, which being thrown over the ditch, required a speedy answer.

“ *SEVERIN* wishes his ensign health: The message brought me by the father was very acceptable to me. I and my comrades are above half dead, of seventy four there being no more than ten left, and these in a most miserable condition for want of bread, wine, and meat, being not used to feed upon rice; therefore we desire to be supplied with the same (if possible) for the preservation of our lives, and the recovery of our strength; in return whereof I will acknowledge you the preserver of my life, as long as I live. Mr. *Cornicularius* is also very near death's door; but perhaps a little bread and wine might recover him. I beg you once more, for God's sake, not to forget us, and to deliver it to the before-mentioned father, who is our trusty friend. “ God protect you.”

*Severin Dolander.*

## C H A P. XXXVIII.

*Ships sent to Tutecoryn. Raja Singa dissatisfied. Prisoners exchanged. Letters from Raja Singa. The Bastions of St. John and St. Stephen taken by Storm, not without a considerable Loss.*

*A reinforcement sent to the Dutch fleet near Tutecoryn.* THE council having taken into deliberation the condition of the enemy's fleet near *Tutecoryn*, it was resolved to dispatch thither forthwith the yachts the *Mars*,

*Rabbit*, the *Roman*, and *Lion*, besides two other vessels, under commodore *Roothaus*. At the same time an answer was ordered to be sent to the *Dutch* prisoners in *Columbo*.

YOURS

*Baldæus.* "YOURS we have received by the father, and understood your miserable condition: these are the chances of war, the best comfort you can have in this extremity with your fellow-prisoners. At your earnest request we send you a bottle of Spanish wine, ten new-baked loaves, and a piece of meat and bacon; the effects and money designed for captain Simon de Souza, who is kept among the prisoners at Caleture, are put aboard the ship: and because one of the Portuguese soldiers did this forenoon call from the bastion of St. John to one of our sentinels, that the governor was willing to exchange ten of his men, that are our prisoners, for your ten, we have sent word to the governor Antonio de Souza Coutinbo, that as soon as he will discharge you, we will send back ten Portuguese prisoners from Caleture."

May 1. 1656.

Adrian van der Meyden.

*An offer for the exchange of prisoners.*

Accordingly the 2d of May, in the forenoon, a Portuguese captain, named Domingo Coelbo, delivered a letter to ensign Peregrin in our service, offering, that in case we would exchange eight Portuguese prisoners at Caleture for the serjeant and seven soldiers, they would send them to us; which was denied, and in lieu thereof offered seven common soldiers and one officer in exchange for them. About the same time his majesty sent back a letter, which he seemed highly displeas'd at, with another as follows.

*An angry letter from the emperor.*

"YOUR letter writ to some of my courtiers last monday was delivered to them before sunset; what you relate of major Van der Laan's going to Mapane, to observe what pass there, and that finding those that were come out of Columbo, to be supplied underhand with provisions, he commanded to fire among them, and to secure the Modeliar Jazondere, who had been accessary to the matter, has been very acceptable to me, as tending to my service. The letter delivered to me by Curupule Meynda, written upon half a sheet, I did not think fit to read, much less to answer, being filled with nothing but insipid stuff: if perhaps a sudden mutiny, or accident, or any other misfortune, had happened in the camp, I could have excus'd such a letter, in respect of the love and inclination I bear to the Hollanders, my most trusty servants; but every thing being in a very good condition, I cannot sufficiently admire what could induce George to write such a letter. Truly the general (who has the supreme command there) ought not to have been so careles in this matter, such

"a neglect being not very suitable to the conduct that may be expected from a person entertained in the service of a great monarch; wherefore I send you this letter, together with the *Ola* [letter] in order to have it read in the presence of the general, and to let him know word by word the true contents thereof."

Thursday, May 2. 1656.

Considering the nicety of the Cingalese and Malabars in this point, it must be confessed, that more caution ought to have been used in this respect.

Towards evening the Portuguese sent our eight prisoners out of the city, half dead for want of food, three of them being so weak, that they could neither go nor stand. They unanimously depose, That there had been a great disorder among the officers, which had prevented their marching to the bastion of Clergos, after they had entered the city, as they ought to have done, the same being guarded only by fifteen men. But whilst they staid in expectation for orders from the sea-captain Lippens, (of whom they spoke very indifferently,) they were attacked both in front and rear by a great number of Portuguese, and charged so furiously, that scarce twenty six of them escaped, without being either killed or wounded, after they had spent all their powder and ball. They added, That what had been related of their having fell to plundering, was not true; that they were secured in a warehouse belonging to Lewis Tavera, where they had the same daily allowance of rice with the king's soldiers; and that they had fed, as well as the rest of the inhabitants, upon the flesh of elephants, bufflers-hides, nay, upon dogs, cats, and rats: that most of the seventy four prisoners died for want of good food, and according to all appearance these eight would not live long. They further said, That as they were going out of the city, they saw a body of four or five hundred men, some Europeans, some negroes, near St. John's gate.

The 4th of May the emperor Raja Singa sent the following letter.

"About three years ago captain Foris Harvendonk, with some other officers and soldiers entring into our service; and their time being expired since, for which they had agreed with the company, I resolv'd with my self (since I had no great occasion for them here) to send them to the camp. An account of what services the said captain had done me, may be seen in a letter written by him (according to my command) to the late director-general, immediately after his landing

*Baldæus.* “ landing near *Columbo*. He had neither before nor since the same sense he had when he writ that letter; which then induced me to a resolution to bestow certain favours upon him before his departure. But his insolent behaviour having drawn upon him several chastisements, without any hopes of amendment, I thought fit to remove him from his station, and to put *Francis Has* (who happened then to come as a messenger with letters to our court) in his place. This man having lived for some time among the *Portuguese* our enemies, seemed to have laid aside all the modesty of the *Portuguese*, and addicted himself to all sorts of villanies, which made me discharge him from my service, and to restore the before-mentioned *Joris Hervendonk* to his former place. I would not have my *Hollanders* entertain such an opinion of me, that I would let any one who has served so long in our imperial court, be dismissed without a reward; for whoever gains our imperial favour, shall never depart unrewarded: but such as are not willing, or cannot apply themselves to that study, may be sure that they will be sent away like this person. The reason why the said *Francis Has* staid in *Candy*, is not unknown to your excellency; but as he is a *Hollander*, it is but just he should be dismissed at his due time. I will not say all concerning him what I could; my discourses will give your excellency a more ample account of him, or when your excellency appears at this court, you will be further satisfied in this matter. No more: God protect your excellency.

At *Reygamwatte*, *Raja Singa Rajou*, most potent emperor of *Ceylon*.  
May 4. 1656.

It is beyond all question, that the differences arisen betwixt this *Joris Hervendonk* and *Francis Has* gave occasion to many disturbances; *Hervendonk* being accused of having, by his insinuations, been the occasion of *Francis Has*'s detention in *Candy*, even to the year 1656. from whence, perhaps, he may not be discharged whilst he lives. These and some other accidents had put the emperor's mind into such a ferment, that for three days together he shewed all the marks of a severe displeasure, even to the best of his Courtiers, so as to turn even his face from them. But his majesty's letter delivered to the new general, *May 6*. seemed to leave him in a much better humour.

RAJA SINGA RAJOU, &c.

Another letter from the emperor.

“ YOUR excellency's letter dated the 3d, was delivered to me on thursday the 4th, wherein you express your

“ sorrow for the mistake in the letter I *Baldæus.*  
“ sent back with my last letter: as among  
“ all other foreign nations, our imperial  
“ majesty has chosen the *Hollanders*, as the  
“ fittest to be employ'd for the increase of  
“ our glory, fame, and empire, by reason  
“ of their fidelity, (which render them ve-  
“ ry dear to me, beyond my own subjects,)  
“ so when they commit any mistake, it  
“ touches me so sensibly, in regard of  
“ the other nations that frequent our court,  
“ that I cannot forbear to make them sen-  
“ sible of their error, even upon the least  
“ occasion, in order to their amendment for  
“ the future. If therefore your excellency  
“ will apply yourself to such things as tend  
“ to our imperial service, the same will be  
“ highly acceptable to us. Our beloved  
“ director-general, of happy memory, did,  
“ during that small time he continued in  
“ our empire, follow this rule with the  
“ greatest exactness imaginable: but being  
“ snatched away on a sudden by death, we  
“ were deprived of the opportunity of re-  
“ warding his services according to our  
“ wish. And as the said director-general  
“ has not been wanting, in leaving certain  
“ marks of the methods and customs to  
“ be made use of in our service, so it will  
“ be no difficult task for your excellency to  
“ follow his footsteps. Your excellency  
“ mentions the resolution you have taken  
“ of attempting a second assault upon  
“ the city, by reason of the approaching  
“ season, which does not permit our ships  
“ to tarry longer with safety in that road;  
“ and that the enemy is much lessened in  
“ his strength since the last assault: all  
“ which, as it is altogether reasonable, so I  
“ approve of it with much satisfaction. On  
“ the other hand, our present illness is no  
“ small affliction to us, which bereaves us  
“ of the opportunity of appearing there in  
“ person, and being an eye-witness of this  
“ engagement, and to be nearer at hand to  
“ second you with our troops, in case there  
“ should be occasion; but let come of it  
“ what will, we are resolved to be in the  
“ camp by next Sunday. If your excellency  
“ thinks fit to stay for our coming, it is  
“ well; but if not, and that an opportu-  
“ nity presents of gaining the place with-  
“ out impairing our honour and reputation,  
“ I am satisfied, living in hopes, that God  
“ Almighty will crown our endeavours with  
“ victory. Your excellency mentions, at  
“ the end of your letter, that you have ex-  
“ changed eight of your people that were  
“ prisoners in the city (the remnants of se-  
“ venty four) for as many *Portuguese* your  
“ prisoners. I am very glad you sent word  
“ of it, that it may not be alledged against  
“ the *Hollanders*, that they treat with the  
“ enemy without our knowledge. In the  
“ mean

*Baldæus.* "mean time I am desirous to know how the rest died, whether for want of food, or being well looked to in their sickness; and further, what instructions you have sent to the Portuguese by those that were sent into the city; if it be a secret worth knowing, your excellency will be pleased to reveal it to us. Ever since the death of our director-general, no sound of the drum has been heard in our camp; but in our march nearer to the enemy and your camp, it will be requisite to make use of our drums and other warlike musick; whereof we thought fit to give notice to your excellency. No more for the present: God protect your excellency's person."

*Raja Singa Rajou*, most potent emperor of Ceylon.

The Dutch enter the city.

Are forced to retreat to the bastion of St. John.

This letter being read in council, it was resolved to give the assault the 7th of May about seven or eight a-clock in the morning, and to make the fiercest attack upon the bastion of *St. John*; which was put in execution accordingly, *Martin Scholtes* lieutenant of the fusileers of *Gale* (now captain in *Gale*) being the first who with undaunted courage mounted the breach, and being bravely seconded by his men, they entered even into the city; but being surrounded on all sides by a great number of Portuguese, were forced to retreat to the bastion of *St. John*, where at last they maintained their post, after having three several times repulsed the enemy, who endeavoured with all the force they could bring together to dislodge them from thence, (our men being constantly relieved with fresh troops,) till the evening, when the firing somewhat ceasing, they took that opportunity of entrenching themselves with fascines and earth towards the side of the city, being nevertheless still exposed to the enemies shot from the water-fort and the bastions of *St. Stephen* and *Couras*, which cost us many a brave soldier.

In the beginning of the assault the disavves of *Saffragamme* and of the *Four Corles* came into the trenches with the *Cingalese* forces; and soon after his majesty sent likewise the

disavves of *Ouve* and *Matule*, the *Adigar Baldæus*, *Amracon*, and *Curupele Apobamy*, at the head of a great number of *Lascaryns*: but these brought along with them more confusion than real assistance, the *Cingalese* being always better at making a noise and plundering, than fighting.

We had no sooner fixed our guards upon the bastion, but a negro slave (called *Cassers*) brought us advice, That in the last assault the enemy had, the captain-major, the city-major, and a good number of their best men wounded, and betwixt forty and fifty killed. We employ'd the greatest part of the night in fortifying ourselves with palisadoes and earth-works on the bastion, in discovering the mines, and planting some cannon: to facilitate which, it was ordered that a false attack be made at two a clock in the morning, and with break of day we saw the prince's standard display'd there in token of our victory; which, however, we had purchased at a dear rate, being even then much exposed to the enemy's shot from three bastions. Upon a general muster we found two hundred and ninety wounded, eighty sick, and eighty six killed; so that we had in all not above one thousand two hundred and eighty seven Europeans left fit for service. However, *John Maatzuyker*, a lieutenant, brought a supply of seventy five men into our camp, and thirty more from *Candy*; besides these lieutenant *Didelof* was posted with sixty six men at *Milagre*, and at *Montual* sixty eight.

Among the slain were the following officers, whose names well deserve to be transmitted to posterity: *Christopher Egger*, *Jurian Gebel*, *James Viry*, *James Scherb*, *Jurian Smith*, *Paul Meno*, *Warnaer van der Heyde*. Among the wounded, major *Van der Laan* wounded by a splinter on his shoulder, and near the ear; captain *Henry Gerard Gluwingb* mortally wounded in four places; *James de With* wounded with a ten pounder in the thigh, of which he died afterwards; *Martin Scholtes* in the arm; *John Cowper* in both hands; *James Alenbier* in the leg; *Paul Ketelaer* in the hand; *John Bartels* in the belly; *Herman Wynantz*, &c.

Slain and wounded in the assault.

## C H A P. XXXIX.

*Our Cannon upon the Bastion of St. John turned against the City. The Portuguese offer to capitulate. Articles for the Surrender of the Place. The Ratification. The Portuguese march out of the City.*

*Baldæus.*  
Our cannon ready to play from the bastion of St. John.

THE 10th of *May*, having planted our cannon upon the bastion of *St. John*, against the city, the general and major *Van der Laan*, came in the afternoon to take a view of them. Soon after we saw the enemy put out a white flag, and captain *Manuel Cabreira de Pontes* delivered the following lines to major *Van der Laan*.

“CAPTAIN *Manuel Cabreira de Pontes*, the bearer hereof, comes to desire a passport for three persons of note to come into your camp, to treat with you concerning some matters of moment. God protect your excellency.

Columbo, May  
10. 1656.

*Antonio de Souza Coutinho.*

Major *Van der Laan* having told him, That he would deliver it to the general, asked him, Whether he desired a formal passport in writing, or would be satisfied with his parole. The *Portuguese* officer replied, That his parole was sufficient; so they parted, and all hostilities ceased.

Within two hours after, our people were ordered to call to those in the city, and to ask them why they did not send their deputies; but they answering, That they would not come without a passport, the same was sent with all possible speed; but it being then pretty late, they excused themselves, that it was not customary to stay a night out of a fortress at such a conjuncture. Whereupon we began to fire again, till next morning about eight a-clock, being the 11th, when the deputies came into the camp, *viz. Lorenzo Feriera de Britto*, late captain-major of *Puntegale*, *Hieronimo de Luzena Tavares*, late *Viador das Fazendas*, i. e. sur-intendant of the merchants in *Columbo*, and *Diego Leitaon de Souza*, secretary of the city, who delivered to the council the following articles:

Articles proposed by those of Columbo.

I. THAT a cessation of arms shall be agreed on till the 20th of *May* next, in order to see the issue of the expected succours, which if it arrives before that time, and is strong enough to raise the siege, this treaty shall be of no effect. In the mean time, no correspondence or commerce is to be allowed on either side, except what is done by messengers; for the performance

whereof, hostages are to be given on both sides.

II. In case of a surrender of the city, the churches and images shall not be defiled, and the priests and friars shall have full liberty to take along with them, without any molestation, all the images, relics, sacred vessels, silver lamps, and other church ornaments, belonging to the performance of divine service, not excepting the moveables belonging to each clergyman in particular.

III. The governor and deputy-governor, *Antonio de Souza Coutinho*, and *Francisco de Melo de Castro*, as likewise the son of *Antonio de Souza Coutinho*, shall be treated with all due respect and civility, and have full liberty to leave the city, with all their moveables, gold, silver, rings, jewels, servants, *Portuguese* pages, and slaves of both sexes; and to remain in their houses till they imbarck, under the special protection of the general, who shall be obliged to provide them (for their money) with provisions during their stay here, and with necessaries for their voyage, as likewise with convenient shipping for themselves and their families, with able seamen, arms, ammunition, and what else may be requisite for that purpose, whenever the same shall be required.

IV. The major of the city, captain-major of the garison, and serjeant-major, and the late deceased captain's family, shall receive the same treatment.

V. The captains of foot, reformado's, and other officers, of what degree soever, shall march out with all the marks of honour, ensigns displayed, matches lighted, balls in the mouth, and with their baggage, and shall be provided with shipping to transport them beyond sea, to the *Indian* shore: they are in the mean while to be maintained by the *Dutch* general, out of the superplus of the money belonging to the king of *Portugal*, or for want of such, at his own charge, or of the company, till the time of their transportation, and they shall not be molested, either by sea or land.

VI. The *Ovidor*, judge, and other officers of the exchequer, the head-factor, alcade-major, or chief magistrate, and the farmers of the king's demesns, shall enjoy the same favour granted to the major of the city.

VII. All

*Baldæus.* VII. All gentlemen, cavaliers, and the chiefest citizens and inhabitants, shall have liberty to challenge the same conditions granted to the city-major; and, if any of them are inclined to remain under the jurisdiction of the *Hollanders*, they shall be left undisturbed in the full possession of their houses, estates, villages, and every thing belonging to them, and be treated in all other respects like the natives of *Holland*. For the free exercise of their religion, they shall have a church, with a convenient number of clergymen allowed them; and if hereafter any of them shall think fit to go to some other part of the *Indies*, they shall be at liberty to sell both their real and personal estates, or otherwise dispose of them without molestation. They shall also be provided with shipping at the publick charge, except such as have ships of their own, who shall be free to traffick where they please, paying the usual customs.

VIII. All foreign merchants, both *Europeans* and negroes, that were come to *Columbo* to traffick, shall be free to depart with their vessels, goods, gold, silver, and other merchandizes, bought up here, especially the cinnamon bought for the king or the city's use, whether aboard a ship, or not. Provisions shall be likewise provided them for their money, and a safe retreat; and in case they stand in need of seamen, they shall be supplied with them.

IX. The negro inhabitants, both married and unmarried, and even the foreigners, of what condition soever, shall enjoy the same freedom granted to the *Portuguese* citizens.

X. All the *Modeliars*, *Aratches*, and *Lascaryns*, that have hitherto been in the king of *Portugal's* service, (notwithstanding they have left the service of the company, or of his majesty,) shall be at liberty to depart with their moveables whither they please.

XI. XII. *Simon Lopes de Basto*, a *Portuguese* by birth, but since in the service of the *Dutch*, shall be pardoned for his offence in coming over to us, and be free to depart in company of the governor. Likewise all *Dutch* deserters that have taken service in the city, shall not be molested, but have liberty to march out along with our forces.

XIII. All sick and wounded soldiers, or inhabitants, shall be entertained there at the charge of the company, (if the surplus of the king's money proves insufficient,) till they recover their health, and afterwards provided with conveniences for their transportation.

XIV. Upon the surrender of the city, after the *Dutch* are put in possession thereof, their general shall take effectual care that no affront or mischief be done to the governors, other persons of note, soldiers, and

inhabitants, and their families, but the same shall be protected by the said general, as well within as without the city, against all violences from the king of *Candy's* forces.

Sign'd, *Antonio de Souza Coutinho*.

After mature deliberation in the council, the following articles were, in answer to the former, delivered the 12th to the three deputies, in the name of his imperial majesty of *Ceylon*, their high and mightinesses the states-general of the *United Provinces*, the governors of the *East-India* company, and of *John Maatzuyker* governor-general, and the council of the *Indies*.

THE city shall be surrendered this day before noon, without any further delay, upon the following conditions.

*Articles granted to the Portuguese.*

What was desired in the second article, in relation to the clergy, is granted, and two places shall be appointed for them to be in till their departure.

To the third article it is answered, That it is not in the power of the general to have the governors, &c. transported at this time to *Tutecoryn* or *Manaar*, but that it shall be done with the first conveniency, or else to *Cochin* or *Wingurla*. But in case they have a mind to be transported to the other shore, the same shall be performed by some of the company's ships, within fifteen days after the date hereof. They are allowed to carry along with them all their slaves of both sexes, and those belonging to the governor's son, *Christovaon de Souza*, in hopes that they will not take any but their own, as likewise all their moveables, gold, silver, rings, and jewels; and they shall be protected in their houses till the time of their departure.

The officers mentioned in the fourth article shall be treated according to their respective dignities, and be protected against all harm. They may take along with them their gold, silver, clothing, and what else they carry about them; but as to their slaves of both sexes, they shall be considered according to their respective qualities. In what they carry about them, shall be comprehended beds and bed-clothes, hangings, tapestry, bolsters, quilts, &c. The officers and reformadoes shall march out with the usual marks of honour, and be transported to the coast of *Coromandel*, with as much of their moveables as their slaves or other servants (allotted them by the general's favour) shall be able to carry.

The soldiers shall march out with their baggage, colours displayed, matches lighted, ball in their mouth, and drums beating to the general's quarters, where they shall surrender their arms under the great stand-

*Baldæus*. dard, and from thence, with the first conveniency, be transported into *Europè*. Such as are married or born in the *Indies* shall be transported to the coast of *Coromandel*, and be maintained till the time of their departure at the charge of the company.

The officers mentioned in the sixth article shall partake of the same favour granted to other persons of note; the city-major and head-factor to be comprehended in the same.

All such as intend to submit to the jurisdiction of the *Dutch* shall be civilly and favourably treated, and remain in the quiet possession of their estates; but in case they have a mind to depart, their goods are left to the discretion of the general.

The chiefest of the citizens and married *Portuguese*, with their children, who are not inclinable to stay in this isle, shall, at the time of their departure, receive the same treatment as the officers; but the natives of the isle shall be left to the disposition of the general.

The *Modeliars*, *Aratches*, and *Lascaryns*, shall receive the same treatment as the *Dutch* deserters.

All sick and wounded persons, whether inhabitants or soldiers, now in the hospital, or any other place of the city, shall stay there till the recovery of their healths, and be furnished with what they desire.

All the officers, inhabitants, soldiers, and unmarried women, shall be protected by the general against all violences and oppressions.

The general does also agree, That if any ships approach the city for its relief betwixt this and the 30th of *May*, notice shall be given them of its surrender, with orders to depart, and shall be protected, at least, till they are out of sight of *Columbo*. The 11th of *May* 1656.

Signed,

*Adrian van der Meyden,*  
*Peter de Bitter,*  
*Ysbrand Gotskens,*  
*John van der Laan,*  
*Edward Ooms,*

I *Adrian van der Meyden*, governor-general for the *Dutch East-India* company in the isle of *Ceylon*, with the rest of the members of the council, promise and engage, by these presents, That, in case the deputies bring back this capitulation, approved as such by the governor *Antonio de Souza Coutinho* and his council, we will punctually observe all the articles contained therein, without the least limitation or exception; and further grant such favours as are in our power to allow of. In confirmation whereof

we have, in conjunction with the said deputies, signed the same in the *Dutch* camp before *Columbo*, the 12th of *May* 1656.

Signed on our side by

*Adrian van der Meyden,*  
*Peter de Bitter,*  
*Ysbrand Gotskens,*  
*John van der Laan,*  
*Edward Ooms,*  
*John Hartman.*

On the enemy's side by

*Antonio de Souza Coutinho,*  
*Francisco de Melo de Castro,*  
*Antonio de Silva,*  
*Gaspar de Ronga Pereira,*  
*Laurenzo Ferreira de Britto,*  
*Hieronimo de Luzena Tavares,*  
*Diego Leitaon de Souza.*

In the morning about nine a clock the deputies returned with the capitulation approved and signed as before, with a letter of intercession from the governor and deputy-governor for *Simon Lopes*, who had deserted our service. The capitulation being signed once more, and the council dismissed, *Ysbrand Gotskens* and *James van der Rbee* our secretary of war, were immediately after dinner sent into the city, to demand the keys from the two *Portuguese* governors, and to take account of all the arms, ammunition, and provisions, as also to settle certain matters concerning the marching out of the troops pursuant to the capitulation.

Accordingly there marched out of the place *Antonio de Melo de Castro* captain-major at the head of the king's troops, consisting in fourteen companies, and thirty six captains, (called *Reformadoes* by the *Portuguese*,) with their ensigns displayed, drums beating, matches lighted, and ball in the mouth, marching through our forces ranged on both sides, to the general's quarters, where having surrendered their arms, they were conducted to the place prepared for their lodging that night. These were followed by the citizens, sick, wounded, and cripples. In the mean while their chief engineer discovered to two of our deputies four mines on the side of the bastion of *Rajuba*, betwixt the bastions *St. Stephen* and *Clergos*, each whereof being filled with four barrels of gunpowder, the trains were removed, and sentinels placed near them.

This done, our forces marched into the city, followed by the general major *Van der Laan*, and the rest of the head officers. Near the sea-shore, not far from the bastion of *Couras*, the governor and deputy-governor (both

*Baldæus.* Both venerable aged *Portuguese* came with their retinue to salute the general. After some compliments on both sides, orders were given to our forces where to take their posts, and to disarm all the *Lascaryns* in the city. Towards evening the prince's standard was planted in the water-fort, and the great cannon discharged round the place as a signal of our victory. Thus the city of *Columbo*, not inferior in strength to most of

*Baldæus.* *Europe*, fell into the hands of our nation, after she had been one hundred and fifty years in the possession of the *Portuguese*. In acknowledgment of which a thanksgiving-day was appointed the funday following, being the 14th of *May*, which was celebrated accordingly, and the thanksgiving sermon was preached by the reverend *Francis Wyn-garten* in the church of *St. Francis*, since called the *Town Church*. *A thanksgiving sermon.*

An Account of the Siege of *Columbo*, taken from their own Journals; and (for the publick Good) communicated to the Author by *Matthæus van den Broek*, formerly a Member of the Council of the *Indies*, now Governor of the *East-India* Company. Faithfully translated from the *Portuguese*.

A true Account of the Siege of *Columbo*, carried on by *Raja Singa*, King of *Candy* and the *Hollanders*, till the Surrender of that Fortrefs under *Anthonio de Souza Coutinho* Captain General in the *Ile* of *Ceylon*.

IN the month of *September* 1655. ten *Dutch* ships came to an anchor near *Negumbo*, two more being out at some distance at sea, having landed eleven companies of *Europeans* of eighty men each; and being joined by a good number of negroes, they marched to the pass of *Betal*, but, by reason of the violent rains, were forced to return to *Negumbo*. Mr. *Gerard Hulst*, the *Dutch* general, having reimarked his forces with some others taken out of *Negumbo*, failed with the before-mentioned twelve ships to *Columbo*, where much about the same time we had received a supply of provisions in three galliots sent from *Cochin* by the brave and faithful *Simon Gomes de Silva*, governor of that place. Our governor *Coutinho* took part of the rice, in order to carry it to *Caleture*, where they stood in great need of it, but was prevented in his design by the shallowness of the river. The 22d of *September* we received another supply from *Tutecoryn*, consisting in twenty eight sail, under the command of *Nicholas de Moura*, the fleet being chiefly laden on the account of private merchants.

The enemy having left six of their best ships before *Columbo*, failed with the rest to *Caleture*; whereupon our governor gave orders to captain *Gaspar Figueira de Serpe*, then encamped upon the frontiers of the king of *Candy*, to come to *Columbo*, which he did accordingly *October* 7.

Without the city were at that time encamped the famous dissave *Francisco Antunes* towards *Mature*, and *Alvares Rodrigo Borralbo*, sent out with three companies to get intelligence of the enemy, who, from the 23d of *September* to the 15th of *October*, laid before *Caleture*, and had raised three batteries against it.

Our governor being sensible of the condition of the place, sent thither a convoy of provisions, commanded by *Nicholas de Moura*, under a good guard of *Europeans* and negroes, landed by *Manoel de Gil*, dissave of *Negumbo*, who has so often signalized himself in our king's service in the isle of *Ceylon*. This brave man attempting to pass the river with twelve of his choicest men, (the boat holding no more,) was so warmly received by some of the enemies forces, that, after they had killed several of his men with their fire-arms, he was forced to retire; the commander in chief followed his footsteps, contrary to the opinion of captain *Domingo Coelbo de Alla*, who would fain have persuaded him to advance as near as he could to *Caleture*, to incommode the enemy in the siege. Upon this occasion *Alvares Rodrigo Borralbo* did considerable service, in sending intelligence from time to time of what passed, till at last this whole body came back to the city.

It being then resolved to succour *Caleture* to the utmost of our power, and four galliots being at the same time arrived from the viceroy of *Goa*, we made up a body of six hundred *Portuguese*, the command whereof was committed to *Gaspar Figueira* to attempt the relief of the place in conjunction with some *Cingalese*, notwithstanding the enemy's force consisted of three thousand *Europeans*, besides a good number of *Bandanese* and *Cingalese* sent to their assistance by the king of *Candy*.

Accordingly *Gaspar Figueira* encamped with his troops the 16th of *October* two leagues from *Caleture*, having received advice before, that the enemy were already possessed of the pass on this side, and had posted three companies there. Pursuant to this

*Baldæus*. this intelligence he ordered six companies, under the command of *Domingo Sarmiento* and *Francisco Antunes*, to attack the enemy in the night, which they did accordingly with incredible bravery for a considerable time, but very indifferent success; for instead of being engaged with three companies of eighty men each, (as they supposed,) they found the enemy much superior in number, to charge them so furiously both in front and flank, that they were put into confusion, with great slaughter, before they could recollect themselves. *Figueira* being by this time come up with the rest of his forces, unadvisedly attacked the enemy a second time; but these opening their ranks on both sides, discharged two cannon among our forces, which occasioned such a confusion, that the enemy improving their advantage, once more put us to flight. *Figueira* and his lieutenant *Manoel Cabreira* were for trying their fortune once more; but finding the flower of their forces either slain or dispersed, and no means left to make them return to the charge, they thought fit to retreat and bring off their wounded men; among whom were *Sebastian Pereira*, and *Joseph Antunes*, the only two that escaped alive of eleven captains. Of the reformadoes, *John Cordeiro*, *Manoel Fernandes de Miranda*, *Manoel de Santjago Garcia*, with two hundred common soldiers came off alive.

*Figueira routed.*

Consternation occasioned by this defeat at Columbo.

This ill success caused an unspeakable consternation in the city of *Columbo*, where there was nothing to be heard but outcries and lamentations in the streets; the shops were shut up, and the gates kept close, with strict orders that no body should appear armed without doors. The next thing to be done, was to give an account of their present ill condition to the viceroy of *Goa*; and the same being (at their earnest request) committed to the care of *Damian Vieira*, a jesuit, and *Manoel Saraiva*, an inhabitant of *Manaar*, the last of these two went no further than from *Columbo* to *Manaar*, from whence he dispatched the letters to *Antonio Amiral de Menezes* at *Jafnapatnam*, a neglect that deserved a very severe punishment.

By this time the hospital was filled with the sick and wounded soldiers, where brother *Golsal*, an *Austin* frier, did both the duty of a devout, religious, and charitable layman. The number of those that died here for want of good looking after, being scarce inferior to what was lost in the engagement.

On the other hand, the *Dutch* had purchased this victory with very little loss on their side; notwithstanding which, major *Van der Laan* (a mortal enemy of the *Portuguese*, and a zealous heretick) having received a wound in the cheek, took a most

barbarous revenge from all the *Portuguese* he met with, who were all massacred in the woods (sometimes twenty and thirty together) by his orders in cool blood, he having been often heard to say, *That if the Portuguese were at his disposal, he would cut them all off at one stroke.* Their general *Mr. Hulst*, being of a more compassionate temper, ordered quarter to be given to the new-listed forces; but this heretick told him, *That they ought to be cut to pieces, in retaliation of what they did to the Dutch, whom they never gave any quarter: however; through the general's mercy above sixty of the new-listed men had their lives given them.* In this engagement the brave *Francisco Antunes*, who had rendered his name so famous in *Ceylon* by his many victories, also lost his life in a wood, who deserved to have had a *Mausolæum* erected to his memory.

Thus the enemy by this victory becoming master of the field, afterwards soon made himself master of the whole island of *Ceylon*, the city of *Columbo* (after the loss of *Caleture*) expecting no less than to be reduced to the utmost extremity: for after they had endured for some days all the inconveniences of hunger in *Caleture*, *Antonio Mendes d' Aranba* represented to his soldiers, *That they had rather try the utmost, than to perish for want of food, exhorting them to fight their way with sword-in-hand through the enemy.* He prevailed at last so far with them, as to agree with him in his resolutions; but the appointed time approaching, they found themselves so enfeebled for want of good food, that not being able to put their design in execution, they were forced to surrender, upon condition that they should march out with their arms, &c. Thus the king of *Portugal* lost at once a strong fortress, one of his most experienced officers in the whole isle, and two hundred and fifty choice men, through the mismanagement of some who preferred their own interest before that of his majesty.

The 17th of *October* the enemy marching directly to *Columbo*, posted themselves in sight of the city near *St. Sebastian*, where *Antonio de Souza Coutinho*, the then governor, together with *Francisco de Melo de Castro*, ordered immediately some works to be cast up, to hinder their approach: but the 18th they were so vigorously attacked in these intrenchments, that they had enough to do to escape to the city, and to cut down the bridges behind them.

We then applied our selves to the strengthening of our batteries, whilst the enemy killed all they met with without the city, and immediately fell to the raising of their batteries; which was no difficult task for them to do, being backed by an army of twenty

*Baldæus*  
This must be looked upon as a calumny.

*Surrender*  
of *Caleture*.  
The garrison was kept in prison at *Gale*.

The *Dutch* come before *Columbo*.

*Baldæus* or thirty thousand men under *Raja Singa* king of *Candy*, and furnished by him with pioneers and other necessaries in abundance.

*The several posts assigned upon the bastions.*

Our governor and *Francisco de Melo de Castro* did leave no stone unturned for the defence of the city; they visited the magazines and armouries, and furnished with arms all such as were capable of bearing them, not excepting even the old men and school-boys. The posts on the bastions were assigned to the following commanders: on the bastion of *St. John*, *Manoel Correa de Barros*; on that of *St. Sebastian*, *Francisco Gorian de Fialbo*; on that of *Madre de Deos*, *John de Pavia de Quintal*; on that of *St. Conception*, *Domingos Peixoto*; on that of *St. Hieronymo*, *Alphonso Carvalho de Souza*; on that of *St. Antonio*, *Manoel Carvalho de Maya*; on that of *St. Jacob*, *Manoel Nunes*; on that of *St. Austin*, *Luis de Paiva Quintal*; on that of *St. Laurence*, *Antonio de Silva*; on that of *St. Crus*, *Caspar d' Aranja Pereira*; on that of *St. Francisco Xaverio*, *Manoel Caldeira de Brito*; and on that of *Galvoca*, *Dominges Pires*; who all gave sufficient proofs of their bravery in their respective posts during the siege, as did likewise father *Damian Vieira* a jesuit, especially in the attack upon the garden of *Antonio de Mota*, and some houses standing upon an eminency at *St. Thomas*, in which, though they were repulsed the first time, yet the next day our forces, commanded by *Alvaro Rodrigo* and *Manoel Caldeira*, being seconded by some companies posted on the other side of the ditch, made themselves masters of it, being of no small conveniency to us, to hinder the approach of the enemy.

Notwithstanding this the enemy advanced apace under favour of their artillery, of which they brought great store daily from their ships. And on our side we found the bastion of *St. John* most exposed, we strengthened the same with masts, earth, and fascines; we made also a covered way from the wall to the brink of the ditch; the same was done near the bastions of *St. Sebastian* and *Rajuba*, both clergy-men and lay-men, without distinction of persons, imploying themselves in this work, and furnishing materials for so useful work, especially *Caspar Figueira de Serpe*, who having great store of baskets, spades, and other such like instruments, sacrificed them all for the publick service.

*The enemy play from their batteries.*

The 20th of *October* the enemy began to salute us with twelve great pieces of cannon from three batteries, viz. three from that of *St. Thomas*, five from that at *Agua de Lupbe*, and four from that of *St. Sebastian*, from whence they sent eight hundred bullets, eighteen, twenty, twenty-four, and twenty-eight pounders, in one day into the city. But though the enemies bullets did considerable execution, some of the king's unfaithful servants did more mischief by intro-

ducing adulterated coin, and engrossing the provisions, under pretence of the king's service, for their own lucre's sake.

There were at that time not above one thousand three hundred souls, young and old, *Europeans* and *Indians*, viz. five hundred that received pay, and among them, some married, some unmarried, some children and *Topasses*; three hundred married people who served without pay, four hundred *Lascaryns*, and about sixty labourers; the whole number of the *Europeans* not amounting to above five hundred men. The governor, with the consent of the whole city, pitched upon *Antonio d' Abreu*, an inhabitant of *Ne-gapatnam*, to be sent to *Goa*, to give an account to the viceroy of the city. He was favourably received by the viceroy, who told him, that he had already sent a squadron under *Manoel de Magalbais Coutinho*, to carry a supply of provisions and men thither, brought together for that purpose by *Antonio Amiral de Meneses* at *Manaar*. But this convoy came no farther than the cape *Comoryn*, and could not make the cape, though some were of opinion it was rather for want of will; so he returned to *Columbo*, where the viceroy being dead in the mean while, the whole face of affairs was changed, and *Columbo* lost for want of timely supply.

*Number of people in the city.*

*Antonio d' Abreu sent to Goa, to give an account of the condition of Columbo.*

The before-mentioned three batteries being raised above two hundred paces from our walls, they erected another against the bastion of *St. John*, within four hundred paces of it, from whence they battered us most furiously with three demi-cannon. Immediately after, one of our engineers, a *Hollander* by birth, named *John de Rosa*, deserted to the enemy: 'tis true, he was no great conjurer in his art, yet did us considerable mischief. For the enemies batteries played so furiously upon our out-works, that in two days time they were all laid level with the ground, and our bastions and walls were so forely battered, that with much ado we could stop the breaches, which was done by continual and indefatigable labour, each soldier and officer employing the intervals they had, when they were not upon duty, in working like the meanest labourer.

*One of our engineers deserts.*

The governor *Antonio Coutinho* spent day and night in visiting the works, animating his soldiers both in words and his example, leaving his habitation, and contenting himself with a small tent near the bastion of *St. John*, where the enemies made their greatest effort. Afterwards he took up his quarters in a warehouse, scarce undressing himself all the time the siege lasted, and employed much of his time in keeping an exact account of the stores, and distributing provisions with his own hands, without which precaution the city could not have held out half so long. *Francisco de Melo de Castro*

*Care and conduct of the governor.*

*Baldens* followed his footsteps, having not been seen without his clothes and arms for seven months together. The city-major *Manoel Marques Gorjaon* did assist them in his station, as did likewise *Caspar Figueira de Serpe*, the disflaves of the *Corles* of *Negumbo*, and of *Mature*, *John Coelbo de Castro*, *Manoel Gil*, *Manoel Seixas*, and *John Banba*, who were present in all places where there was the most danger to encounter. The clergy, but especially the capuchins, were very assiduous in confessing the soldiers, in praying and doing all manner of good offices, without intermission; and some of them would not be backward in being upon the guard with the soldiery, and give the enemies ample proofs of their valour.

The enemy thundered so furiously against the bastion of *St. John*, that it appeared like a heap of rubbish; then they turned their fury against the horn-work of *St. Stephen*, and the adjacent point; but *Manoel da Veiga*, the commanding officer on the bastion of *St. Stephen*, *Francisco Gorian Fialbo*, *John Ferrao d'Abreu*, *Gonzal Martinho Piemental*, *Manoel Carvalho*, and others employed in the defence of the works towards *St. Sebastian*, were indefatigable in repairing the breaches, and rendering the bastions tolerably defensible.

Bravery of the besieged.

*Hieronymo Lucena* shewed the same care in the bastion of *Madre de Deos*, till he was relieved by *Lewis Tavera de Cunha*; and the wall which extended towards *St. Sebastian* being found very weak, the general recommended the defence thereof to the four captains of the *Galliois* lately come from *Goa*. These ordered an intrenchment to be made there of a hundred and fifty yards long, one broad, and six foot high. Father *Damian Vieira*, the jesuit, being employed in furthering this work, a bullet taking away a great piece of the wall, struck him on the head, so that he fell dead upon the ground; but soon recovering himself, he fell to his work again, his servant constantly attending him with a sword and fusée, wherewith he did considerable execution, being commonly one of the foremost in charging the enemy. Finding that the bastion of *Xaverius* (otherwise called *Couras*) began also to be sorely battered by the enemy, the care thereof was committed to an old famous soldier, *Manoel Radrigos Franco*, who soon put it out of all danger.

The city summoned to surrender.

The 29th of *November* the *Dutch* general, *Gerard Hulst*, sent a drummer, with a white flag, with a messenger into the city, to summon our governor to a surrender, who delaying his answer till next day, the nemy fired most furiously with his cannon all that night; but the next morning went *Diego de Souza de Castro*, and *Thomas Pereira Leite* with an answer, the last perso-

nating a drummer, in order to get some intelligence of the condition of the enemy but they were upon their guard, and therefore sent a captain and a lieutenant, attended by two soldiers, to receive our governor's letter, wherein he told the general, That he wanted neither will nor power to defend the place to the utmost for his king's service, being still sufficiently provided with powder and ball, and other necessaries; and to add the more weight to his words, we fired most furiously all that night.

The *Dutch* repaid us in the same coin, sending us commonly a present of eight hundred cannon-ball, and nine hundred granadoes every day. The 12th of *November* they celebrated the feast of *St. Martin*, the pope, by a new invention of fireballs, whereof they sent a good number into the city, and seconded the game by a general assault. For early in the morning, three of their stoutest ships appearing in sight of the city, one of them, called the *Mara of Enchuyser*, entered the harbour, carrying the red flag in her stern; and coming to an anchor within musquet-shot of the bastion of *St. Crus*, gave us several warm salutes, under the found of drums and trumpets; but *Manoel d'Abreu Godinho* and *Antonio de Silva*, the commanding officers on the bastion of *St. Laurence*, did ply them thick with their cannon, that having first brought by the board all her masts, they made soon after so many holes in her sides, that she was ready to sink, and a few of her crew made hard shift to escape in their long-boat. The other two ships seeing the other so ill treated, did not think fit to follow her footsteps, but made the best of their way to the road, alledging in their behalf, that they were not able to come up with the other.

General assault given upon Colombo.

At the same time they attempted the assault on the land side. Mr. *John van der Laan* assaulted, with seven companies, the gate of *Acouras*, advancing boldly with sword in hand to the very faces of our people, the foremost of which began to give way, and in all likelihood the rest would have followed their example, had not father *Antonio Nunes*, a jesuit, with his drawn sword, threatened such as were ready to fly with present death, nay, his comrade, *John Cordeiro*, wounded one of his soldiers, as he was flying, with his long rapier. Soon after *Caspar Figueira de Serpe* coming with fresh supplies, this so animated our soldiers, that they not only stopped the enemies fury, but also made them give way in a little while after. In this action an ensign and serjeant acquired immortal honour, and *Manoel d'Almeida*, though a very old soldier, yet did not leave his post till he had received eleven wounds. *Felicia de Seixas* and *Contrao de Seixas* lost their lives with their swords

*Baldæus* swords in their hands; *Manoel Guerreiro*, i. e. the warrior, did great service with his cannon from his redoubt, he being an expert cannoneer.

*The Dutch repulsed.* Major *Van der Laan* seeing there was no likelihood of succeeding, founded a retreat, leaving the ground covered with the dead carcasses of the *Hollanders*. The enemy received also considerable damage from the tower where *Diego de Souza de Castro* commanded, and no question much more might have been expected, had we been provided with good gunners; for it must be confessed that we wanted not officers of courage and experience, but only such as understood the mathematicks and the art of gunnery; an instance of which might be given in one of our gunners, who having double charged a cannon, did wound one of our captains, and two others, viz. *Thomas Ferreira Leite* and *Pedro Gonçalves Salgado*; though for the rest, their fidelity ought not to be passed by in silence, it having been observed, that not one of our cannoneers deserted to the enemy, but most of them lost their lives in the service.

*Not one Portuguese cannoneer deserted.*

The gate of *Rajuba* was attacked with eight hundred choice men by general *Hulst* in person, who endeavoured to mount the walls with scaling-ladders. As they passed the bridge, they were sorely galled from the bastions of *St. Stephen*, *St. Sebastian*, and that of *Madre de Deos*, the defence whereof being committed to *Rodrigo Boralbo*, *Antonio de Mota d'Oliveira*, and *Manoel Cabreira de Ponte*, they gave such a hot salute with their firelocks from behind their pallisado works to the *Hollanders*, that many of them were laid dead upon the ground. A certain cannon of stone did them considerable damage, and would have done more, had it not burst in pieces. Three times they renewed the assault with incredible fury; and as often were they repulsed with an unspeakable bravery. At last, general *Hulst*, to encourage his men, cried out aloud, *Soldiers, the prince's standard is set upon the bastion of St. John*, (which in effect was not so,) and so with a curse, (*Sante Diabo*, i. e. holy devil,) he snatched a ladder out of a fellow's hand, but finding no body ready to follow him, whilst he was encouraging his men, and fixing his ladder to the very gate, he was wounded in the thigh, and so forced to retreat. On the side of the lake, or fens, (called *Lagoa* by the *Portuguese*;) two hundred and forty men were embarked in eight *Chinese* boats brought from *Batavia*, for that purpose. They were met by *Domingos Coelho d'Alba* in five *Maucohs*, or barges, who fought with them courageously for some time, but was forced at last to suffer them to land, but retired into a pallisado work near *Maria Telles*, from whence

he, with *Sebastian Caldeira*, and five or six more (the rest being run away) fired briskly upon the *Hollanders*, who at last finding a hole or gate near the house of *Sebastian Caldeira*, they forced their way, notwithstanding the brave resistance made by *Manoel Rodrigues Franco*, *Guardian de Varo*, and *Francisco Rebello de Palfares*, who sent a good quantity of hand-granadoes and fire-balls among them, the said *Guardian* having received two wounds by musquet-balls. The *Dutch* forcing their way into a narrow street, were there met by *Manoel Fernandes de Miranda*, who, though sorely wounded, yet continued fighting with his sword and buckler, till exhausted of his strength by the loss of blood, he was ready to drop, and would infallibly have died upon the spot, had not *Francisco de Lemos* carried him off. In his place succeeded *Diego Leitao de Souza*, who discharging a musquetoon on the corner of a street among the *Dutch*, made them halt; the same was done by father *Damian Vieira*, the jesuit, who with another musquetoon made such a havoc among the enemy, that these two stopped their farther progress, till *Antonio de Leao* appeared at the head of a good troop of soldiers; he being provided with another musquetoon, charged the enemy so briskly, (as they were endeavouring to break into the backside of some gardens,) that they were forced to retreat back into the narrow street, where he maintained the fight (though his musquetoon, by reason of its being too frequently charged, struck him down to the ground) till *Antonio de Melo de Castro* came with his whole company to his relief, when after some firing, quarter being offered to the remnants of the *Dutch*, they accepted of the same; so that seventy four, though most of them wounded, were made prisoners of war, whereof eight only returned into the *Dutch* camp afterwards, the rest dying in the city, many whereof were converted to the catholic faith, by the indefatigable care of the jesuits, and especially of *Damian Vieira*.

This was the success of the general assault begun early in the morning, and not ended till two in the afternoon, during which the governor *Antonio de Souza Coutinho* and *Francisco de Melo de Castro* kept in person the guard, with some other officers of note, in the market-place, from whence they dispatched their orders, as occasion required. The city-major, *Manoel Marques Garian*, did likewise appear in all places where the danger was most pressing; and *Caspar Figueira* was very careful in sending what succours he could spare from the bastion of *St. John*. In short, the streets, breaches, the lane, and ditch, were all tainted with the blood of the *Hollanders*, and the

*Baldæus*. the ground covered with colours, arms, drums, scaling-ladders, and dead carcases, their loss being computed at no less than a thousand men, and among them many brave officers. On our side we had not above thirty men killed, though the enemy, to dissemble their loss, gave us a general salvo of at least a thousand musquets. The next day father *Damian Vieira* going without the walls, in order to bury the dead, was saluted by three firelocks from the enemy, which made him retire, and defer his charitable resolution till the next following night. We observed a black flag in one of their works, as a signal, that they would give quarter to no body without exception, the same order having been given them likewise before the assault begun. We got no less than thirty pieces of cannon out of the ship that lay under the water-fort, which were planted on our works. Some refreshments were also distributed among the soldiers, though, to confess the truth, the publick stores being very low, every one provided for himself as well as he could, without any regard to the poor soldiers. However, about eighteen days after father *Damian* (by order from the general) went with some Dutch prisoners aboard the vessel, where they found some casks of wine, and some meat and bacon.

*Some provision taken out of the Dutch vessel.*

In the mean time the enemies were not idle, but daily increased their works: they made a covered way, within forty paces of *St. John's* bastion from west to the east, in form of a redoubt, upon which they planted six great guns, viz. three against the bastion of *St. John*, and the other three against that of *St. Stephen*. From thence they carried on their trenches to the sea-side, from south to north, closed with another redoubt, which being provided with two pieces of cannon, much annoyed the wall betwixt the bastion of *Couras* and *St. John*. This made the governor *Coutinho* order some of the citizens to raise a kind of an intrenchment of about two foot thick and three high, behind it. From the second redoubt the enemy carried on their trenches into the open field; and at last added a third redoubt, from whence they could batter the wall betwixt the bastions of *St. John* and *St. Stephen*; which being likewise forced to be strengthened by some works of earth and fascines, no body, not even the governor himself, were sparing in laying hand to so useful a work, which being four hundred ells in length, each division had its share allotted, in order to bring it the sooner to perfection.

*Domingo Coelho d'Ala*, assisted by *Caspar d'Aranja Pereira*, *John d'Andrade Machado*, and *Don Francisco Rolim*, all inhabitants of

the city, did great service with their slaves, *Baldæus*, in the *Manchous*, or boats, in protecting our workmen on that side, as well as the slaves; and, to be short, there was no body so young, no body so old, that was exempted from continual labour or watching.

The *Dutch*, on the other hand, carried on the trenches from the redoubt with six guns, to the hill of *Aqua de Lupe*, and made another trench from the redoubt in the plain, which was to meet another redoubt thrown up on the front of the bastion of *St. Stephen*, beyond the lake or fens. They also raised another battery in the garden of *Antonio de Mota*, against the bastion of *St. Stephen*, and another near the before-mentioned redoubt of six guns, in a parallel with that in the plain, and another just at the foot of the bastion of *St. Crus*, which being so near the ditch, was likely to be a thorn in our eye, there being nothing but the ditch betwixt us and the enemy, so that we could throw stones at them, and often talked with one another.

About the same time *Caspar Figueira de Figueira Serpe*, desired leave to lay down his commission, not to shun the danger or trouble of his station, but because many of the gentlemen and subaltern officers refused to obey his command; so he was discharged, and *Antonio de Melo de Castro*, nephew to the late governor *Francisco de Melo de Castro*, who had behaved himself with more than ordinary bravery in his post during the siege, put in his place.

As we shrewdly suspected the enemy to have a design of undermining the bastion of *St. Stephen*, a cavalier was ordered to be raised near it, in case the same should succeed. This was done by the contrivance of a certain *Indian* merchant, of the coast of *Coromandel*, who also ordered the redoubt, demolished since the last general assault, to be repaired. By the direction also of another certain merchant, (who was surveyor of our magazine,) a countermine was contrived, which did us great service. It was a most deplorable thing to have in such a fortress as this, not so much as one *Portuguese* engineer, nay, not so much as a *Covetousness* good carpenter of our nation, the defectness of whereof can be attributed to nothing else, *some of the officers* but to the covetousness of some of the king's officers, who put the money designed for that use into their pockets, and at the same time put it to the king's account: neither were our fortifications in such a condition as they ought to have been; for whereas we had had sufficient time to inclose that part of the city near the sea-side, called *Galvoça* (comprehending a third part of the whole) with strong walls, and to render it impregnable, by reason of the natural

*Baldæus.* natural situation thereof being accessible only in certain places in small boats, they had planted only some coco and palm-trees there, which perish, and are washed away by the waves in a short time. Thus the bastions which ought to have been faced with stone, were only made of earth, which are not durable, and easily spoiled by the water-floods; the effects whereof were then obvious enough, from the hospital to the gate of the jesuits college, which comprehends a very large tract of ground. Besides this, the carriages of our great guns were so rotten, that most of them after the first discharge broke to pieces; so that we were forced to take the wood from the houses, nay, even out of the churches (as we did in that of *St. Domingo*) to make new ones.

My pen wants words to express the affronts put upon the holy images by the heretics, whereof I will give you only one instance. They took the image of the holy apostle *St. Thomas*, and after they had cut off the nose, ears, and arms, set it up for a mark to shoot at; afterwards they knocked it full of great nails, and so shot it out of a mortar *November 16.* into our ditch, whence it was taken up and carried to the jesuits college, by father *Damian Vieira*, and two reformed officers, *Manoel de Seixas*, and *Manoel de St. Jago Garcia*. But the *Franciscans* laying claim to it, they carried it in publick procession to their church, and placed it upon the high altar. Father *Francisco St. Mattheus* solemnized the day with a learned speech.

The 20th of *November* the holy *Thomas* blessed us with the arrival of a certain *Portuguese*, a native of *Aveiros*, named *Simon Lopes de Basto*, who for certain reasons being retired from *Goa* to *Wingurla*, had served among the *Dutch* in a very good station in the camp; but finding his countrymen in distress, left all and came over to us, and did us most singular service in the siege.

The enemy carried on their trenches from the foot of the bastion of *St. Crus*, to the edge of the ditch, with an intention to fix their miners under the bastion of *St. John*; but we made a countermine, and defended the ditch on the other side with a good breast-work, to secure our people against the grenades which the enemy threw in without intermission. This post being recommended to the care of *Domingos Coelbo*, he strengthened the same by pallisadoes, from whence he commanded the passage over the ditch with his fire-arms; and *Manoel Rodrigues Franco*, and *Manoel de St. Jago Garcia*, would often skirmish with the enemy on their own bridges; two whole companies under the said *Coelbo* and *Diego de Souza de Castro* being appointed to second them as necessity required.

VOL. III.

The 10th and 11th of *January* the enemy *Baldæus.* advanced to the ditch in two places, viz. through the before-mentioned breast-work, and somewhat lower: from the first place they played with a great cannon; and on the other side, having made a great breach through the wall, they threw fascines, logs of wood, baskets with earth, and such like materials into the ditch; and the better to cover their workmen, and afford an easy passage to their soldiers, they fixed their gallery: but *Emanuel Guerreiro*, at the head of his company, *Domingos Coelbo d' Alla*, *Emanuel de St. Jago Garcia*, and *Diego de Souza Castro*, did receive them so courageously, that from ten at night till break of day, there was nothing to be heard or seen but firing, both at the entrance of the mine, and from the bastion of *St. John*, from whence *Don Diego Vasconcelbos* did considerable mischief to the *Dutch* with his great cannon, who meeting with so unexpected a reception, thought fit to retire with considerable loss, leaving most of their materials behind them, which were brought into the city. We lost only two men in this action; and the *Dutch* for ever after were not so forward to come so near us, but plyed us chiefly with their cannon-balls, stones, and bombs; whereas we had but one mortar, which was useless to us (for want of expert cannoneers) till *Simon Lopes de Basto* came over to us, who now and then saluted the enemy with stones out of that mortar, who answered us briskly though most of them broke in the air, and did no other mischief but to some houses that were miserably shattered. One of the enemies bombs happening to fall entire upon the ground, *Matthias d' Albuquerque*, a native of *Goa*, standing hard by, took it up, and threw it into the next *Dutch* mine, with an unparalleled courage, with such success, that it blew up into the air immediately.

The 28th of *January* four ships arrived from *Gale*, and soon after two more, which, with the fourteen that were in the bay before, made up twenty in all. The same day the *Dutch* planted a cross upon the redoubt, called *Conception*, under the tripple discharge of their cannon and small arms. This redoubt had been made by the direction and assistance of the governor, the master of the ordnance, and several of our best officers, and the slaves. That day two new-listed men, belonging to *Don Rodrigo de Castro's* company, deserted to the enemy; and *Fernaon Martinho de Souza* the governor's son, a gentleman who had given several proofs of his courage, was unfortunately shot with a musket-ball in the head on the bastion of *St. John*, of which wound he died soon after. About the same time died also *Antonio Barboza Pinheiro*, one of our captains of the artillery, a person of indefatigable care,

*Baldæus*. care, and who had signalized himself upon many occasions, both in the field and the city.

The 1st of *February* two other new-listed foldiers of *Manoel de Veigas's* company deserted to the enemy, and the 6th nine ships returned from the bay to *Gale*. By this time we began to be reduced to great extremity for want of provisions, a little measure of rice being then sold at half a *Seraphyn*; so that we saw the poor wretches (as well *Europeans* as *Negroes*) drop down dead in the streets: the *Berbery*, bloody-flux, and spotted fevers, being grown so common, that few were free from them. To be short, we were in a constant conflict with three most dreadful enemies, the plague, hunger, and sword. To add to our affliction, the heat was so excessive for want of rain, (which usually falls in *Ceylon*;) that many were stifled for want of air, which made us drive about three hundred of these miserable creatures (unfit for service) out of the city on the 8th, who were forced to return by the *Dutch* the 9th. The 12th, five hundred *Negroes* were forced out of the city, but were sent back by the *Hollanders* the same day. The 17th we saw divers gibbets erected without our walls, on which they did hang divers of the miserable creatures that were forced out of the town. We had so many dead in the city, that we wanted room to bury them. The 19th two of our foldiers deserted; one whereof being taken, was hanged up immediately. The 23d fifty negroes (the remnants of the last five hundred) returned to the city. The 27th, the bridge made by the enemy on this side of their trenches, was set on fire from the bastion of *St. John*; but the fire was soon quenched. The 29th the besieged made a kind of a covered way, near the gate of *Rajuba*, from the bastion of *Madre de Deos*, to that of *St. Sebastian*.

The 2d of *March* our city-major was sent in a small vessel to *Manaar*, to sollicite for succours there, in case any should have been lately arrived from *Portugal*; for at *Goa* they thought of nothing less than *Ceylon*; for they did not want either men or ships to send to *Macassar* or *Mosambique*, but could find none for *Columbo*; for though the cinnamon was upon the king's account, the rest of their cargo belonged to private persons, who would not venture their ships for the publick without extraordinary rewards.

The same day an advice-boat arrived from *Gale*, and we made the beginning of a *Cavalier* on the bastion of *Madre de Deos*; but finding that the enemy were raising a battery against it, it was not brought to perfection. Two *Portuguese* and nine *Lascaryns* deserted. The 3d the enemy began to open their trenches on the side of the

*Mapnese* fields. The 6th one *Dyke* deserted, and the 7th another did the same, leaving the boat, where were some *Canaryns*, who returned. The 11th another foldier belonging to *Alvaro Rodrigo Borralbo's* company, went over to the enemy who received that day a reinforcement of ten ships.

The 12th early in the morning we found that the enemy had posted himself upon an eminency at the foot of the bastion of *St. Crus*, just over-against our redoubt, and that they had carried on their trenches a good way into the field. A foldier of *Manoel Cabreira* deserted to the enemy. The 13th we sent away four *Pachas*, or advice-boats. The 14th we discovered three sails, with some sloops, which occasioned great joy in the city, thinking that it had been the so-long-looked-for succours, but soon found our mistake. The same day two *Dutch* deserters and a boy came into the town. The enemy having strengthened their battery against the out-works of the bastion of *St. Stephen* and *St. John*, they laid, the 16th, one side of *St. Stephen's* bastion level with the ground.

The famine increased every day, a fig-tree or a papey-tree was now sold for fifty *Pardaus*: herbage we had none; some roots there were, but miserably dry, by reason of the heat of the season, which caused a great mortality.

The 17th an *Aratche* and two *Lascaryns* went over to the enemy; and perceiving that they had raised an eminency, in order to erect a redoubt and battery near the gate of *Rajuba*, we demolished the same by planting a twenty eight pounder against it. We had an advice-boat sent us from the northern-quarter, and about mid-night the enemy alarmed us by a false attack. The 20th five soldiers being taken that were going over to the enemy, four of them were hanged immediately, the fifth, who had discovered the rest, escaping with his life.

The 21st we made a countermine about ten foot from the enemies, which was carried to the palm-trees planted on the fortifications; whilst *Simon Lopes de Basto* master of our ordnance, *Manoel Fernandes da Miranda*, *Manoel de St. Jago Garcia*, father *Damian Vieira*, and several other *Portuguese* officers, were employed in encouraging the workmen; one of our cannon-balls fell among some grenadoes and other fire-works, which caused a great alarm in the whole city, and the brave *John Pereira Corte Real* a native of *Negapatnam*, who had signalized himself upon a thousand occasions in the service of our artillery, here lost his life, being generally regretted by all who knew his merit. The 22d and 23d, the enemy continued to perfect their works near the gate of *Rajuba*, against which we played with a demi-cannon from behind the wall of *St. Stephen's* bastion.

The

*Negroes forced out of the city.*

*Columbo neglected by those of Goa.*

*Baldæus.*

*Famine increased.*

*Four deserters hanged.*

*Baldæus.* The 24th, two messengers from the king of Candy brought a letter to the governor, and another to the inhabitants of *Columbo*, in answer to a letter sent to that king at the beginning of the siege. They appeared in mourning apparel, to intimate (according to the custom of that court) how much concern'd his majesty was at the many injuries and affronts put upon him during the late war. They contained in substance, That the king summoned them to a surrender, promising all the inhabitants the free possession of all their estates, villages, &c. for their sustenance, as the only means to deliver them from the miseries and oppressions they now groaned under, alledging, That the same were the effects of God's just vengeance for their ingratitude, shewn upon so many occasions to his imperial majesty, in return of the many benefits they had received at his hands, and not admitting his ambassadors sent to them with proposals of an alliance. These letters were likewise subscribed by the *Dutch* general *Hulst*, which being read publicly, the messengers were dismissed with much respect, but were scarce got out of the city, when they were overtaken with a most dreadful storm of rain, thunder, and lightning.

The 25th *Alvaro Rodrigo Borralbo* killed a soldier as he was going over to the enemy.

*They send an advice-boat for news.* The 26th an advice-boat was dispatched to get intelligence whether there were any hopes of succours for *Columbo*; but all the news we could learn, was, That the viceroy of *Goa* (the only person we put our confidence in next to God) was lately dead; which though it was doleful news for us, yet was it resolved to hold out to the last extremity; which was performed to the greatest nicety, the *Dutch* never being able to become masters of the place, till most of us were consumed either by the sword or famine. Advice was also brought us, That bonfires had been made at *Goa*, upon certain advice brought by some negroes (under protection of the *Dutch*) taken at *Putelaon* in *Ceylon*, that *Columbo* was not in so desperate a condition as had been represented, which they had reported upon the credit of a certain *Dutch* master of a vessel.

The 27th of *March* one of our serjeants was devoured by a crocodile in the fens, his cloaths and arms being found afterwards. At this time a *Parra* of rice was sold at twenty five *Seraphbins*, or gilders; and all our church-yards being filled with dead corps, we were forced to have another consecrated for that purpose.

The 28th in the morning the enemy had thrown up another redoubt near the wall of the gate of *Rajuba*. One of the inhabitants, a native of *Cranganor*, went over to

the enemy from the bastion of *St. John*, being forced thereunto by hunger, which was grown so excessive, that dogs, cats, and rats, and other such like things, were sold at a very high rate.

*Baldæus.* Cats and dogs sold at a great price.

The 31st two soldiers and a *Lascaryn* went over to the enemy. The next morning we saw some small batteries raised against the redoubt of *St. John's* bastion, where our people had made some entrenchments, raised like steps of ten paces high, cover'd with a breast-work, like a cover'd-way, called *Aleapaon* by the *Portuguese*. At the same time we began to work on a countermine, within twenty paces of the enemy's mine at *St. John's* bastion. The same day above fifty of our sick died in the hospital, besides what were daily found dead in the houses and streets, the ammunition-bread being by this time become a most precious commodity.

The first of *April* one of the enemy's advice-boats came into the road. The second seven *Lascaryns* deserted, and ever after twenty or thirty a-day went over to the enemy. The 3d two *Dutch* yachts came into the road, aboard one of which was a surgeon. At the same time a *Parra* of rice was sold for fifty nine *Seraphbins*, or gilders; but the worst was, that there was not enough of it, and could not be purchased but with ready-money. The governor's steward (though without his knowledge) \*refusing to part with any without ready gold, to the great disreputation of his master, who, though a gentleman of great honour, yet was highly blamed for committing a thing of such moment to the management of so avaritious a person.

\*Semper invenitur mercator mercatorum calamitatum. *Basil.*

The 4th of *April* the enemy had raised a new redoubt and battery, provided with two pieces of cannon, near the gate of *Rajuba*; wherewith they had so battered our palisadoes, and other wooden fences, that there was no safe passing betwixt the fortifications and the wall on the other side of the ditch. The enemy received a succour of two ships, and the next day four more. The enemy made their approaches with so much circumspection, that they advanced to the ditch (where it was dry) with the loss of a few of their men, who improvidently exposed themselves to our fire-arms.

The 6th we began another countermine, and the 7th the enemy threw abundance of fascines and faggots into the dry ditch, and set fire to our palisadoes; which was soon quenched by the industry of our men; whilst the *Dutch* were employ'd on the other side to cut a breach with pickaxes in the wall; but were soon chased from thence by our firelocks, not without considerable loss.

The 8th of *April* we began another countermine; which being fenced with a kind of

*Baldæus*. of palifado beams covered with earth, to resist the enemies fire-works, was carried on under the conduct of the master of the ordnance *Antonio de Melo de Castro*, the serjeant-major *Antonio de Leao*, *Diego de Souza*, and *Manoel de St. Jago Garcia*. The same day at least seventy sick persons (most Europeans) died in the hospital; many of the negroes lay dead in the street for want of room to be buried in, which produced a most nauseous scent. The hunger was increased by this time to such a degree, that they began to feed upon mens flesh; several mothers murdered their own children to feed upon, two whereof were executed. It was a most doleful spectacle to hear the poor miserable wretches cry out in the streets for bread; some imploring heaven for assistance, others cursing those who were the occasion of their misery, others expiring and breathing their last in the houses and streets.

Utmost extremity for want of provisions.

The 9th *Domingo de Ramos* forced a multitude of poor wretches out of the town; but these being driven back by the enemy, and exposed to our small-shot, perished either by them, or by famine upon the shore.

The enemy advanced this day briskly with their trenches, as we did on our side in our retrinchments.

The 10th we set fire to the enemy's gallery; which, however, did not succeed according to expectation, for want of sufficient fuel; but father *Damian Vieira*, *Manoel Guerreiro*, and *Simon Lopes de Basto*, did kill many of the enemy upon this occasion.

The 11th we planted a cannon betwixt our palifadoes against their gallery; but they had strengthened it so well that we could effect nothing of moment. One of our soldiers run over to them.

The 12th we began two other mines with incredible labour, but indifferent success, for want of skilful engineers. Four selected men were posted in the redoubt of *St. John's* bastion, who defended that post, which was within a few rods from the enemy's works, with a great deal of bravery, as they did in most other places, notwithstanding we were reduced to a very inconsiderable number, there being not above five or six men left in some companies, as those of *Diego de Souza de Castro*, *Manoel de St. Jago Garcia*, and *Don Diego de Vasconcelbos*, who performed wonders in the defence of the bastion of *St. John*.

The 13th the enemy having received a reinforcement out of two yachts, they labour'd very hard in their mine on the bastion of *St. John*, under favour of their cannon, which play'd incessantly. At that time father *Damian Vieira* killed a stout *Hollander*, who had the direction of the work, which

advanced apace, though we ply'd them very warmly with our fireworks. Two of our soldiers deserted to the enemy.

The 18th we began to work on our countermine from the foot of the bastion of *St. John* towards that of *St. Stephen*, under the direction of father *Damian Vieira*, *Simon Lopes de Basto*, and *John Ferreira d'Abreu*, whilst the serjeant-major *Antonio de Leao*, *Diego de Souza de Castro*, and *Ruy Lopes Coutinho* ply'd the enemy with the fireworks, and other combustible matter.

The same day we got intelligence by an advice-boat, That the so-long-expected succours, under the command of *Francisco de Seixas Cabreira* was come upon our coast; it consisted of twenty one ships, and two galliots with provisions, one whereof was upon the king's account, the other of *Simon Souza*; a gentleman of honour, who took compassion of our present condition. They set sail from *Goa* the 29th of *March*, but as they were endeavouring to make the cape *Comorin*, one of the galliots, in which was *Simon de Souza*, was attacked so furiously by a *Dutch* vessel coming from *Caleoulang* with pepper, that after having lost her mast she funk, *Simon de Souza* being narrowly saved with a few soldiers, and carried to *Columbo*.

News of the defeat of the succours designed for Columbo.

The *Dutch* ship then falling in among the rest, fought so manly, that she forced our ships to retreat into the harbour of *Tutecorin*; from whence they could not come to *Columbo* till *August*; though if the said fleet had arrived safely, they had brought scarce rice enough to serve only for a little time.

About the same time father *Damian Vieira*, *John Ferreira d'Abreu*, and *Simon Lopes de Basto*, went with some other officers, (called *Reformadoes* by the *Portuguese*;) into one of our mines. Father *Damian*, and lieutenant *Nunes* going about six paces before the rest, to discover whether any of the enemies were at hand, and being mistaken by their comrades for *Hollanders*, these discharged their musketoons upon them; notwithstanding which the jesuit escaped miraculously the danger, without receiving the least hurt. This happy escape was attributed to the prayers of father *Frey Luys*, a *Capuchin*, to whom such as were going upon some desperate enterprize used to commend themselves.

A strange escape.

The 15th *Nicholas de Moura* escaped out of prison, (where he was detained ever since the business of the count *d'Obidas*;) and with five *Mistices* went over to the enemy, as did much at the same time a serjeant and a soldier. About eighty paces from the gate of *Rajuba*, the enemy battered part of our wall betwixt the bastions of *Madre de Deos* and *St. Sebastian*, from a battery of five pieces

*Baldæus.* pieces of cannon, from whence they shot three hundred and fifty cannon balls against it in one day.

The 16th we made a false alarm to try whether every one would repair readily to his post: two new-listed soldiers took this opportunity to desert, and being now destitute of men to work in our mines, no body was excused from that service, from the governor to the private centinel.

The 17th the enemy having fixed another cannon upon the battery, before the gate of *Rajuba*, they laid the wall level with the ground; our people being so weakened by famine, that they were not in a condition to carry thither any fascines or earth to repair it. At the same time *Manoel Fragoza*, a reformed captain, who had done signal services in the *Indies*, and especially in *Ceylon*, went over to the enemy, because his pay (which was given to others who much less deserved it) was refused him, nay, he could not even get sustenance for his money, which put him upon this desperate resolution; two common soldiers, natives of *India*, deserted at the same time. There died such a vast number every day in the hospital for want of necessaries, that many of the soldiery chose rather to abide with their companies, where they expired in fight of their comrades.

Great mortality at Columbo.

The enemy received a succour of two ships, a yacht, and a galliot, whereas the poor besieged had not the least relief in seven months.

The 18th Mr. *Adrian van der Meyden*, governor of *Gale*, sent us a letter, (their general being lately dead,) and to terrify us the more, presented all his forces in order of battle, betwixt his trenches; but our men, commanded by *Alfonso Correa*, *Joan Ferraoon d'Abreu*, *Manoel Pereira Matoso*, *Ignatio Fernandes*, *Simon Lopes de Basto*, and father *Damian Vieira*, made a vigorous sally the next following night out of the gate *Rajuba*, when *Francisco Asca*, a reformed captain, took the opportunity to desert us.

The 19th *Diego de Souza de Castro* was sent with an answer to the governor's letter; and the son of *Manoel de Souza* went over to the enemy.

The 20th a soldier deserted from the bastion of *St. Crus*, on which side the enemy had attacked us with the greatest fury ever since their loss sustained there, under the command of *Caspar d'Aranja Pereira*, who succeeded *Manoel d'Abreu Godinbo*, after his post was assigned him, behind the wall, betwixt *St. John's* and *St. Stephen's* bastion. The city-major having four buffers left, which had drawn a waggon for a considerable time, had them killed for the use of the garrison, who, after the meat was consumed, feasted also upon the hides, which they cut into small pieces.

The four last buffers.

The 21st the enemy had drawn a line of *Baldæus.* communication from the battery, near the gate of *Rajuba*, to the lake. At the same time five persons were wounded by one of their bombs, and captain *Manoel Guereiro* mortally, who had killed many a brave *Dutchman* with his fusée during this siege. *A bomb kills five persons.*

The 22d the enemy having set fire to our countermine, the brave *Joan Ferraoon d'Abreu*, and *Simon Lopes de Basto*, were the chiefest that gave their assistance in quenching of it, amongst a shower of bullets and hand-grenadoes. At the same time a *Topas* went over to the enemy, the only one that deserted of that kind, though we had a good number of them among us, who for the most part died with the *Portuguese* in the defence of the city.

The 23d, father *Damian Vieira*, *John d'Abreu*, *John Pereira*, (inhabitants of *St. Thomas*,) *Simon Lopes de Basto*, *Manoel Pereira Matoso*, *Sebastian Rodrigues*, *Ignatio Fernandes*, *Joseph Coelbo*, and *Manoel Ferreira Gomes*, got early in the morning cross the fens, in order to surprize one of the enemy's works, but were so warmly received, that they were glad to retreat, and fight their way through the *Dutch*, who had inclosed them on all sides.

The 24th a *Tony* was sent to get intelligence; the enemy fired most furiously from their battery against *St. Stephen's* bastion, and the gate of *Rajuba*, where the wall being laid level with the ground, the houses suffered much by their cannon.

The 25th the enemy planted two pieces of cannon at the extremity of their trenches against *St. Stephen's* bastion; and *Raphael de Torres*, a prisoner for debt, escaped out of prison.

The 26th the *Dutch* continued to play without intermission upon the bastions of *St. John*, *St. Stephen*, and *Madre de Deos*. The same day nine *Portuguese* were buried in one pit, or grave, there being no place left to bury them in. A candil of rice was sold at that time for two thousand five hundred seraphyns, or guilders, and a candil of wheat for three thousand four hundred guilders, and happy was he who could purchase it; for you would see women throw their babes into the streets for want of suck and other sustenance, and others to part with their jewels for a slender measure of rice, a commodity more precious at that time than all the precious stones. During this general calamity, the city-major *Manoel Marques Gorian* shewed himself a true patriot in all his actions, but especially in distributing what rice he had left among the soldiers, which if he had sold, must have amounted to a considerable sum of money at that juncture;

Great extremity in Columbo.

*Baldæus*, but he was willing to part with all, in hopes to preserve the place for his king. At the same time a false attack was made near the gate of *Rajuba*.

The 27th, one of our serjeants belonging to captain *St. Jago's* company, deserted to the enemy. At the same time we saw them carry on their trenches from the battery raised against the gate of *Rajuba*, towards the bastion of *St. Sebastian*: their batteries continued to play without intermission day and night. The same night father *Damian Vieira*, with seven more, made a salley upon the said trenches, and carried off most of the tools of their workmen. *Simon Lopes de Basto* took this opportunity of sending two spies into the enemy's camp, who being discovered, had much ado to save themselves, being forced to pass through a shower of the enemy's bullets: they returned the 29th, and brought advice of the death of general *Hulst*, and the commodore \* of the *Dutch* fleet.

\*He means Dirk Ogel, the vice-commodore. † Called the Lion, which brought the news of the defeat of the Portuguese succours.

At the same time an advice-boat, † carrying three guns, came into our harbour, aboard whereof was the fiscal. An alarm was ordered to be given at four in the morning, with the sound of drums, trumpets, and other warlike instruments, and a general discharge of our cannon and small arms.

The 30th, father *Damian Vieira*, *Simon Lopes de Basto*, *John Pereira*, *Alphonso Correa*, *Sebastian Rodrigues*, and *Joseph Coelho*, went out to take a view of the enemy's works, and advanced within ten paces of them, which they found defended by a kind of breast-work made up with hurdles; notwithstanding which, they attacked them with sword-in-hand.

The 1st of *May* the enemy desired to have their prisoners exchanged for some of ours, which being agreed to, the second we delivered up eight of their prisoners, the only remnants of those taken in the last general assault, in lieu of which we had as many of ours restored to us: they then began afresh to play most furiously from their mortars and cannon.

The 3d, at seven in the morning, father *Damian*, *John d'Abreu*, and *Simon Lopes de Basto*, went without the fortifications, to gather up the bullets near the bastion of *St. Stephen*, which used to be taken up by the enemy in the night time. Father *Damian Vieira*, *Simon Lopes*, and two more, made another salley, to level some of the enemy's works, but without success. The same day two soldiers went over to the enemy.

A successful salley.

The 4th, father *Vieira*, *Simon Lopes*, *Francisco Valente dos Campos*, *Antonio Madeiro*, *John Pereira*, *Manoel Pereira Matoso*, *Alfonso Correa*, *Manoel Ferreira Gomes*, *Manoel Nuguera Freire*, and *Thomas Ferreira Lete*, made a vigorous salley, and with sword-

in-hand attacked the enemy's batteries raised against the outworks of *St. Stephen*, *St. Sebastian*, and the bastion of *Madre de Deus*, with such success, that they ruined them entirely, and set fire to the fascines, hurdles, and other wood-work that sustained them, notwithstanding the *Dutch* came with a considerable body to the relief of their countrymen, but were repulsed, not without a considerable loss, and among the rest, one of their bravest officers, who was buried under a tripple salvo of their firelocks; so that our people remained masters of the posts, and returned victorious into the city.

The 5th, *Ignatio Fernandes*, *Manoel de St. Jago Garcia*, *Sebastian Rodrigues*, *John Pereira de Lago*, and father *Damian Vieira*, (who never staid behind upon such like occasions,) made another salley, but not meeting with any enemy where they expected him, returned without effecting any thing.

The 7th, about six in the morning, (it having been rainy before, which is a rarity here at this season,) the enemy made an assault upon the bastion of *St. John*, defended by *Don Diego Vasconcelbos*, and two youths, *Don Constantino de Meneses*, and *Diego Jaques*, both under fourteen years of age, all the soldiers being swept away by famine; for within these two months, above four hundred men died in our hospital, and our so-long-expected succours being blocked up at *Tutecoryn*, we were past all hopes of succours; whereas at *Goa*, there was nothing to be heard of but divertisements. To be

short, the enemy made themselves masters of the bastion, after having killed the captain and the two youths, who defended themselves like lions, set upon by a multitude of *Dutch* dogs. This done, they turned the cannon against the city, whereby many of the *Portuguese* that were hastening to its relief, were slain in the streets. The second bastion, assaulted at the same time by the *Dutch*, was bravely defended by *Manoel Figueiros*, who with two pieces of cannon killed abundance of them; but being constantly seconded by fresh troops, especially of the *Cingalese*, they sent such showers of arrows and bullets among our people, that they were forced to quit that bastion also.

From thence marching into the city, they were met at the entrance of a street by the commander in chief, *Antonio de Melo de Castro*, *Diego de Souza de Castro*, father *Anthony Nunes* the jesuit, *Sebastian Rodrigues*, *John Pereira*, *Vincente de Silva*, *Francisco Valente dos Campos*, *Alfonso Correa*, *Sebastian Pereira*, *John Ferraon d'Abreu*, *Antonio de Magalbanes*, and an ensign under captain *Alla*: these, though few in number, but many in valour, charged the *Dutch* with incomparable bravery. The *Portuguese* *Alexander Manoel Marques Gorjaon*, making the

\* Martin Scholtes first entered the breach.

*Baldæus*. the best of his way over the dead carcases, that covered the ground, singled out a *Dutch* captain of a gigantick bulk, who shot him with a pistol through the body; notwithstanding which, he run him through with his sword, and sent him immediately to the other world; then pushing on his fortune, made the *Dutch* give ground, and having rallied his men, secured the post for that time. The *Dutch* renewed the charge five times successively, but were as often courageously repulsed by *Antonio de Melo de Castro*, and those few that followed him; and being resolved either to conquer or to die, they broke in with sword-in-hand amongst the enemy, and again possessed themselves of the first bastion, and soon after also of the second. The first who entered the last, was *Antonio de Magelbanes*, who fought with an uncommon zeal against the enemy; for before they became masters of our cannon, he ply'd them very warmly from behind the wall, (the only defence he had left,) so that it cost them many a brave fellow before they could make themselves masters of it; and being now posted again upon the same bastion, he was bravely seconded by two demi-cannons from the new bastion, and a smart shower of fire-works, which set the circumambient air into such a flame and smoak, that at a distance it appeared like the mouth of hell.

A sharp engagement in the city of Columbo.

At the same time the governor *Antonio de Souza Coutinho*, and *Francisco de Melo de Castro*, did all that could be expected from brave men on the *Couras*, or the bastion of *Xaverius*, both by way of command, and by charging the cannon in person, and performing the duty of common soldiers. The fathers *Philippo* and *Pedro de Castelbranco*, both *Austin* friars, were not behind-hand with the rest, in giving their utmost assistance for the defence of the place, being appointed to keep a watchful eye upon the enemy, whenever they were going to alarm, or amuse us with false attacks.

It must certainly be confessed, that this engagement was one of the most remarkable that ever happened in the east, considering that a few, and these most wounded, sick, or weakened by famine, did engage a much greater number, continually sustained by fresh troops, from six a-clock in the morning, till eight in the evening, during which time the enemy was repulsed, not only once, but five several times, by a much inferior number, who having not the least relief or time to breath, were forced all that time to endure the danger and fatigues of the action, which cost the enemy above four hundred men killed, besides those wounded and burnt by our fire-works. On our side we lost also the flower of our forces, some whereof were slain, others wounded,

Incredible bravery of the Portuguese.

Their loss.

w

and burnt to that degree, that they were disabled from bearing of arms for a considerable time after. Among the slain, were *Diego de Vasconcelbos*, who had given a thousand proofs of his bravery in this siege; father *Antonio Nunes*; the jesuit, a pattern of virtue, who signalized himself not only all along on the bastion of *St. John*, as well as in other parts of the city, by encouraging the soldiers, comforting the sick, and burying the dead: he was shot at the gate of the bastion with a musket-ball, received afterwards a deep cut, and at last slain by a hand-grenado, after he had killed several of the enemy with his musketoon. At the same time died in the bed of honour (after they had given a thousand proofs of their bravery) *Alfonso Correa*, *Vincente da Silva*, *Francisco Valente de Campos*, *Sebastian Pereira*, and that brave sea-commander *Sebastian d'Abreu Godinho*, besides an ensign, a native of *Bazain*, belonging to captain *Alla's* company; *Manoel de Seixas*, an inhabitant of *Columbo*, and *Antonio Caminha d'Alzevedo*, were forely burnt; *Diego de Souza de Castro* was mortally wounded with two bullets, notwithstanding which, he would not retire from the engagement till he received a deep cut. *Manoel Caldeira de Britto Vidave* was wounded by a musket-ball, as were likewise *John Ferrao d'Abreu*, *Andreas de Seixas*, *Manoel Nogueira Freire*, *Manoel de Souza*, and *Manoel Segaldo*. *Laurence Days*, a native of *Columbo*, was wounded with no less than three musket-balls; *Ruy Lopes Coutinho*, *Domingos Pires*, inhabitants of *Negapatan*; lieutenant *Arrais*, captain *St. Jago*, *Manoel Correa*, commander in chief upon the bastion of *St. John*; *Francisco Pereira*, *Simon Lopes de Basto*, and many more were miserably burnt. Most of these received their wounds by the accidental setting on fire of a vessel filled with gunpowder, through the carelessness of our own people. The reverend father *Paulo* was wounded, as he was furnishing the combatants with fire-works, as was likewise father *Manoel Velles*, who was touched by two bullets, without receiving the least harm by them; a grenado did also fall just before his feet, without doing him the least harm, as he was busy in defending his post with *Alvaro Rodrigues Boralbo*, at the gate of *Rajuba*.

*Baldæus*

Father *Damian Vieira*, with his company did considerable mischief to the *Dutch* from the church of *St. Domingo*, being bravely seconded by *Caspar Aranja Pereira*, knight of the cross, and an old servant of the king, (who succeeded the city-major in his place,) with nine or ten of his followers, this being the place most exposed to the enemy. The commander in chief *Antonio de Melo de Castro*, no less annoyed them from the new bastion, and with their shot

fo

*Baldæus*. so scoured the streets, that there was no safe passage for the *Dutch* and *Cingalese*.

The *Dutch* without the town, did on the other hand exert their utmost efforts against the old bastion, which being almost laid level with the ground, the wall without served for a breast-work; and being continually supply'd with fresh troops of the *Candinese* and others, put our men, but few in number, most of them sick, wounded, or half-starved, and, besides that, but ill provided with ammunition, very hard to it on that side. For by this time we had not only but few men, but also not above fifteen days provisions left, and scarce so much gunpowder as would suffice for two charges of our artillery.

Consultation about a surrender.

Things being come to this pass, it was debated in the council, (consisting of thirty-four persons,) whether it were not best to think of a surrender; thirteen were of opinion rather to die upon the spot, than to treat with the enemy; but the most being of a contrary opinion, and nine of them positively insisting upon it, that it would be most conducing for the king's interest, that seeing the place was no longer tenable, to preserve the remnants of these brave fellows, who had behaved themselves so courageously, it was agreed to enter upon a treaty.

Accordingly the 10th, *Manoel Cabreira* was sent with a letter to Mr. *John van der Laan*, concerning the conditions of the intended treaty; an answer to which being sent the 11th, *Laurence Ferreira de Britto*, *Diego Leitao de Souza*, and *Hieronymo de Lucena* were dispatched as plenipotentiaries, to demand a cessation of arms till the 25th of *May*, against which time we expected the so-long-desired succours. But the enemy, who were not ignorant of our present circumstances, would hearken to no other conditions, than to surrender the city the next day by twelve a-clock at noon, which if we refused, they threatened to give us no quarter; so that we were forced to obtain the best terms we could, without any longer hesitation, the articles whereof being drawn up in haste (for want of time) I had not the opportunity to peruse them; and therefore can only tell you upon this head, that *Columbo* was forced to surrender, though I cannot precisely tell upon what terms.

Is surrendered.

No sooner was the news of the treaty divulged among the people, but nothing was heard but dreadful outcries and lamentations. The ecclesiasticks (or at least the most cautious among them) hid the images and relicks, and unfurnished the altars, for fear they should be defiled by the hereticks, as had frequently been done before upon such like occasions. The *Dutch* having taken possession of the bastions, our garrison,

consisting of ninety soldiers and one hundred armed inhabitants, including officers, nay, even the lame and maimed, marched out, some with their swords and muskets in one hand, and a stick or a crutch in the other.

*Baldæus*.  
The garrison consisting of one hundred and ninety men march out.

The *Hollanders* seeing these poor remnants, most of which appeared more like skeletons than living men, were astonished at their bravery, in the defence of a place they had been forced to purchase with so much blood. Ten *Dutch* companies marched into the city, at the head of which appeared the general *Adrian van der Meyden*, and Mr. *John van der Laan* on horseback, not to reckon the *Cingalese* sent to guard the governor of *Columbo's* house; which was no sooner done, but a messenger was sent to him to demand *Simon Lopes de Basto*; being not in a condition to refuse him, he ordered immediately the said *Simon Lopes*, with a certain *Aratche* of *Negumbo*, and some *Dutch* deserters, to be delivered to him, who were all hanged on a gibbet soon after in sight of the *Portuguese*, who were forced to be eye-witnesses of the miserable exit of this *Simon Lopes*, who for the signal services he had done them in the siege, deserved to have had a monument of brass erected to his memory. To the shame of those be it spoken, who ought to have endeavoured to afford him a much better recompence for his past services, and rather exposed him in a boat to the chance of the seas, than to a certain shameful death.

The *Hollanders* were sufficiently sensible of the bravery of the *Portuguese* during this siege, which lasted seven months, (without receiving the least succours or supplies,) by the loss they sustained of their bravest soldiers and best officers, which amounted to three thousand men, besides the wounded and maimed; besides that, the charges of the siege amounted to more than would have built such another *Columbo*.

The general and Mr. *John van der Laan* were no sooner settled in their habitations, but they gave liberty to the soldiers to plunder the place (contrary to their parole) for one day, which was extended to five by Mr. *Van der Laan*, viz. from the time of their coming into the city, till the time we marched out, which was performed by the hereticks with the utmost rigour; nay, whilst our soldiers were embarking, and the inhabitants within three days after, they continued their robberies even upon the sea-shore. Almost all our people went aboard along with them, except a few who staid behind with the governor and deputy-governor; and some, that (by great promises) were engaged in the king of *Candy's* service, which, perhaps, has happened by a singular providence of God, as a means to influence that

This is a gross falsehood, a soldier having been whipped at that time for stealing.

*Baldæus.* that king's counsels, in order to expel the *Dutch*, one time or other, out of the isle of *Ceylon*.

Our people were transported to *Negapatana*, where they were most kindly received and provided with medicines, cloathing, and other necessaries by the inhabitants, till they received their pay : after the arrival of *Antonio Amiral de Menezes*, governor of *Jafnapatnam*, who at the same time intreated *Antonio Mendes d' Aranba* (who after having been detained a prisoner at *Gale*, was now come to *Negapatan*.) to go along with him to *Jafnapatnam* in the quality of his deputy-governor, as not questioning but that he should be the next, against whom the enemy would exert their utmost efforts ; which he accepted of ; though considering the fatigues and miseries he had endured of late, he might very well have excused the same, as well as the rest of the soldiers ; who, notwithstanding this, half-sick, and half-starved as they were, did embark for one of the most dangerous places in *Ceylon*, to give fresh proofs of their bravery.

This was the end of this siege, one of the most remarkable in all its circumstances that ever was heard of, considering that a place of that bigness was defended by so slender a number for the space of seven months (without the least supplies) against a powerful force of the *Dutch* and *Cingalese*, who first defeated the *Portuguese* forces (composed of the flower of their men) in two smart engagements ; so that the whole number of the *Portuguese* was at last reduced to two hundred souls. The account of this siege being spread among the eastern moors and pagans by several persons, who had been eye-witnesses of the great actions performed there, did beget an incredible reputation of the bravery of the *Portuguese* among those nations, though the same proved unfortunate in the end.

Thus his majesty of *Portugal* lost a place, and with it a whole kingdom, three times

bigger than *Portugal* itself, and much richer and more plentiful, the very center of the world, the richest tract of land under the sun, and with it (probably) all that is in the possession of the *Portuguese* to the south of cape *Comoryn*. His majesty lost a considerable squadron of ships sent to the relief of *Columbo*. The first squadron intended for this expedition did come no higher than the cape *Comoryn*, the pretended succours from *Manaar* came to nothing : and the second squadron promised by the viceroy of *Goa* in *January*, did not set sail till the 29th of *March*, and was forced to retreat without effecting any thing.

The want of money was alledged as the main reason of this delay, when it is sufficiently known, That the king had both ships and money enough at *Goa*, which could not have been better employ'd than for the relief of a place of such vast importance. We know what vast sums *Nuno Alvares Botalbo* consumed at *Mosambique* ; which was nevertheless not disapproved by the king of *Castile* ; and why might not the same be expected from the king of *Portugal* ? To conclude, *Columbo*, and with it, the whole isle of *Ceylon*, being lost for want of succours, all such as have deserved well in the defence of that place ought to be rewarded for their services, as those who have been neglectful in their duty for the preservation thereof deserve condign punishment at his majesty's hands. And as nothing is more common, than that courtiers employ their favourites in places of trust, (without any regard to merit,) and afterwards to conceal their miscarriages from the king ; it is for this reason, that we lay this account at your majesty's feet, taken from the journal kept at *Columbo*, and other authentick records, confirmed by the testimony of many persons of credit, both ecclesiasticks and laymen, that were present from the beginning to the end of this siege.

C H A P. XL.

*The Origin of Columbo. Arrival of the Portuguese : Their Engagements with, and Conquest of the Moors. They fortify Columbo. Raja Singa dissatisfied.*

*Origin of  
the city of  
Columbo.*

THE city of *Columbo* is an antient city, seated at six degrees one half of north latitude, in a pleasant country, near a delightful river ; which, questionless, induced the *Portuguese* to fix upon this place for their chief residence in this island. For *Emanuel* king of *Portugal*, having been fully informed concerning the condi-

tion of *Ceylon*, ordered a fort to be erected there, for the better establishment of his affairs there, and to curb the emperor. *Lup. de Britto* being sent thither with a good number of soldiers and workmen, *John Silva* delivered the said fort up to him. For *Zoares* who was lately sailed with twenty ships and seven hundred land-

*Baldæus*. men to Ceylon (after *Laurence d'Almeyda*, who some years before entered into a confederacy with the king of Ceylon) had just before made an agreement with the governor of *Columbo* about a settlement in that place, which he looked upon as the most proper for a fortification, both in respect of its situation, and the plenty of the best cinnamon that grows in the whole isle, being seated in the form of a crescent, and affording safe anchorage for ships, provided they are not too bulky.

Accordingly it was agreed to erect a fortification there, under pretence of securing the commerce of the *Portuguese*, but in effect to curb the king and the natives. He who reigned at that time in the isle being a *Brahman*, was not a little jealous of the *Europeans*; but being sensible to what pitch of greatness the king of *Cochin* was lately arrived by the assistance of the *Portuguese*, he gave his consent, though not without some reluctance, and consequently was of no long continuance: or the *Saracens* who were chased thither from the continent, and had settled their traffick in this isle, found means, by the promises of great sums of money, and of their assistance, to entice the king and court to oppose the designs of the *Portuguese*, who intended to enslave them, under pretence of settling their commerce; for which purpose they raised some works, and having mounted some iron cannon upon them, seized some *Portuguese* that came ashore, without suspecting any harm.

Treaty betwixt the Portuguese and the Cingalese.

Is soon broken.

The Portuguese rout the Cingalese.

*Zoares* coming ashore with his workmen, in order to raise the intended fortifications, was surprized to find some forts erected by the *Cingalese*; and having received certain intelligence, that the same had been done at the instigation of the *Moors*, he easily guessed that nothing but force was likely to establish the *Portuguese* in Ceylon. Accordingly having landed his men, he attacked the enemy, who at a distance somewhat galled his forces with their arrows; but after they came to a close engagement, the *Cingalese* were quickly put to the rout, and pursued by the *Portuguese* with considerable loss: the *Portuguese* had many wounded, but few killed, among the last was the brave *Patieco*, lately come from *Malacca*.

*Zoares* having allowed one day only to his people to refresh themselves, began the next morning an entrenchment, reaching from the harbour to the sea-side, without the least opposition: within this he ordered a fort to be erected, whereupon having mounted his cannon, and strengthened it by a wall that surrounded it, he soon made the king repent of his inconstancy, who sent his envoys to *Zoares*, asking pardon for what was passed, and desiring that the former alliance might be renewed: but *Zoares* refused to

hearken to these propositions, demanding satisfaction for the affront, and a yearly tribute to be paid to king *Emanuel*; which the king of Ceylon (who dreading the *Portuguese*) not daring to refuse, it was agreed that he should pay to *Portugal* an annual tribute of one hundred twenty four thousand pound weight of cinnamon, twelve rings set with the most precious rubies and saphirs, and six elephants, under condition that king *Emanuel* should assist the king of Ceylon and his successors, both by sea and land, against all his enemies.

The treaty being thus concluded, *Zoares* continued his fortifications; which being brought to perfection with the assistance of the *Cingalese*, he left *John de Silva* with a good garrison there, and *Antonio Miranda Azevedo* with four ships to guard the coast; which done, he returned in December to *Cochin*, where he was received with all imaginable demonstrations of joy. *Lup. de Britto* (before mentioned) succeeding *John de Silva*, brought along with him abundance of workmen and bricklayers, who made a kind of mortar of the sea-cockles, and lined the fortifications with a strong wall, deepened the ditches, and added what works they thought necessary for the accomplishment thereof.

This created no small jealousy (not without reason) in the *Cingalese*, which was increased by the insinuations of the *Moorish* merchants, who told the king, That their prophecies were like to prove too true, since he was now made sensible, that these foreigners had not only excluded all other strangers from the traffick of this isle, but also had made him a tributary of *Portugal*, and shortly would make him their vassal, if he did not in time hearken to the counsel of his friends.

These insinuations had the desired effect; for the king not only cut off all supplies of provisions and other necessaries from the fort, but the common people being also incensed by these discourses, murdered several *Portuguese*, who ventured a little too far without the fort. *De Britto* at first dissembled the matter, finding he could no longer contain his soldiers (burning with revenge) he chose one hundred and fifty of his best men and with them assaulted the city of *Columbo* (which lay near the fort) just about noon, when most of the inhabitants were asleep to avoid the heat of the day, and at the first alarm betook themselves to their heels, leaving the city to the enemies mercy.

*De Britto* seeing himself master of the place without the least opposition, forbid his soldiers to plunder, or commit any other outrages; but ordered the women and children to be tied to the posts of the doors, with an intention to convince the *Cingalese*

*Baldæus*

Force the king to pay a yearly tribute.

Is ill digested by the Cingalese.

*Britto* surprises *Columbo*.

*Baldæus.lese* that he was not come like an enemy to destroy, but like a friend to preserve them. But as he had but little reason to rely upon their generosity, he thought fit to make a trial of their inclinations; so he ordered some houses that lay next the *Portuguese* fort to be set on fire: this had the desired success; for the *Cingalese*, out of the affection they bore to their wives and children, had gathered all their force, in order to relieve them at any rate; but finding their houses on fire, run first with all speed to quench the flame, whereby *Britto* got leisure to retreat in good order into the fort, and to provide himself against the intended assault, which however could not be done without some loss, above thirty of his men having been wounded in the retreat.

However *Britto* reaped no other benefit by this enterprize, than that the *Cingalese* (exasperated to the highest degree) besieged the fort with twenty thousand men; and though they were often bravely repulsed, yet did they persist in their resolution, in hopes of reducing the place by famine, because the approaching month of *May* (the first of the winter-season) did bereave them of all hopes of succours. In the mean while the *Cingalese* did not cease to carry on their works to the very ditch, from whence they annoyed the *Portuguese* with their arrows, their number making up the defect of their force, which was not comparable to the *Portuguese* artillery and fire-arms. They also gathered up six hundred bullets that were shot at them from the fort, of which they made the best use they could.

Portuguese besieged in the fort.

But what most troubled the *Portuguese* was, that they were to fetch all their fresh water without the fort, and that they were extremely harassed with continual watching. However, they hoped to defend the place till the next summer, in hopes of succours, in which they at last found themselves frustrated; *Antonio de Lemos* coming only with one galley and fifty landmen to their relief, *Seguera* with the rest of the forces having staid behind.

Make a vigorous salley.

The *Cingalese* in the mean time had found means to erect two wooden towers filled with earth, which being placed near the ditch, they intended to make use of to cover their pioneers, whilst they were busy in filling it up. *Britto* was not a little startled at this device, and finding himself now reduced to such straits, as to be obliged to venture at all, he ordered *Antonio de Lemos* to draw as near to the shore as possibly he could, and to endeavour to ruin these towers with his great cannon, whilst he would make a salley with three hundred and fifty men, and attack the enemy with the utmost vigour. This was put in execution accordingly with such success, that the towers

w

were intirely ruined, and the *Cingalese* *Baldæus.* beaten out of their works.

Notwithstanding this defeat, the *Cingalese*, encouraged by the *Moors*, who came to their assistance with an hundred and fifty horse, and twenty five elephants, resolved to try their utmost against the *Portuguese*. These elephants having turrets filled with men armed with cutlasses on both sides, did strike no small terror at first into the *Portuguese*, but afterwards turned to the disadvantage of the *Cingalese*; for these beasts not able to bear the wounds that were given them by the *Portuguese* artillery, soon turned their backs, and put their own troops into disorder, with a great slaughter among the *Cingalese* and *Moors*; who now beginning to despair of success, raised the siege immediately, and the king sent his ambassadors to *Britto*, to ask pardon for what was past, and to desire a reconciliation.

The siege raised.

Thus we see how the *Portuguese* have been forced to settle, or at least to maintain themselves in *Ceylon* by the sword; and the better to attain their end, it was their constant practice in the *Indies* to sow the seeds of division among those princes; an instance whereof is given us by *Maffæus* himself, in his history of the *Indies*.

The king of *Cota* had three sister's sons, who (according to the custom of the country) being his legal heirs, began to be very uneasy at the long life of their uncle, found means to remove him out of the way, and to divide the country betwixt them; but *Parea Pandar*, the eldest of the three, having murdered the second, *Maduyn* the youngest began also soon after to conceive a jealousy at his brother's proceeding, complaining that he was not rewarded according to his deserts, as having been the adviser and executer of the murder of their uncle. *Parea Pandar* finding his brother dissatisfied, thought it his securest way to fore-arm himself against him, and therefore entered into a treaty with the king of *Portugal*, to settle the succession of the crown upon his daughter's son, (with the exclusion of *Maduyn*;) directly contrary to the custom of that country. *Maduyn* exasperated to the highest degree at this proceeding, denounced open war against his brother; and after having ravaged the country through which he passed, laid siege to *Cota*.

Differences betwixt two brothers, fomented by the Portuguese.

The elder brother disdainng to be attacked in his city, marched out against *Maduyn*, and pitched his tent in an advantageous post: he had a troop of *Portuguese* in his camp, one whereof (whether hired thereunto by *Maduyn*, or by chance, is uncertain) shot him through the head. After his death, the *Portuguese* set his daughter's son upon the throne with the usual solemnities; but in consideration of his youth, and the weakness

*Baldæus.* weakness of his title, introduced contrary to the custom of the country, they much feared the hatred of the people, backed by the interest of *Maduyn*; they sent therefore for succours to *Noronba*, who soon after arrived with a good squadron of ships and three thousand men, under pretence of assisting the young king, (as *Maffæus* expressly tells us,) but in effect to make himself master of the treasure buried at *Columbo*, one hundred thousand crowns of which he carried off along with him.

In the mean while *Maduyn* fortified himself with all possible diligence in the city of *Ceta-Vaca*, nine leagues from *Columbo*, (according to *Maffæus*;) but *Noronba* having with little opposition taken and burnt the said place, returned victorious to *Goa*. What further became of *Maduyn*, is not mentioned by *Maffæus*, or any other historian.

What was found in *Columbo*.

Thus we have seen the beginning of *Columbo* under the *Portuguese*, and its surrender to the *Dutch* 1656. They found about six or seven loads of musty rice in the place, some packs of cinnamon, good store of *Areek*, some good, some not; twenty four light frigats, nine whereof were sunk; one thousand five hundred guilders ready money coined in the city; thirty three packs of clothes; twenty five bells of metal; sixty brass, and sixty eight iron pieces of cannon,

one mortar, and six lesser pieces; ten thousand cannon bullets of different sizes and weight; six thousand five hundred pound weight of good gun-powder, and one thousand one hundred fifty bad; a good quantity of brimstone and saltpeter. No sooner were we in possession of *Columbo*, but *Raja Singa* shewed his dissatisfaction by the following letter.

“ Yesterday and the day before yesterday, it was reported at our court, that there was a treaty on foot with the *Portuguese* about the surrender of the city, since which I have received intelligence, that the same is brought to effect. If it be true, you ought to have given notice thereof to our imperial majesty, which is the reason, I cannot as yet give entire credit to it: But in case it should be so, I desire to know with all possible speed the articles of the said treaty. Whilst our beloved director-general was alive, I writ to him concerning certain matters he promised should be performed, which I desire you to remember.”

From our imperial court at *Reygamwatte*, May 11. 1656.

Signed,

*Raja Singa Rajou*,  
Most potent emperor of *Ceylon*.

## CHAP. XLI.

*Deserters severely punished. Raja Singa forbids all Commerce with the Hollanders. His Letter of Complaint. Divers Portuguese Ships taken. Raja Singa ravages and plunders the Lands and Subjects belonging to the Company.*

Deserters punished with death.

IT was now thought high time to punish such as had deserted our service during the siege. Among these *Simon Lopes*, a *Portuguese* by birth, who had fifty guilders per month pay in our service, and after we were repulsed in the general assault was gone over to the enemy, did lead the van, and was, notwithstanding all the intercessions of the *Portuguese*, hanged on a gibbet. Two other *Europeans* (whose names we will pass by in silence) underwent the same fate; and another was severely whipped, and forced to stand with a rope about his neck for twelve hours under the gallows.

The next thing to be done was to take care of the transportation of the *Portuguese*, among whom the ecclesiasticks and inhabitants of *Columbo* were sent beyond sea to *Mr. Laurence Pit* our governor, who was to dispatch them further to the isle of *St.*

*Thomas*. About that time we received a letter from *Raja Singa*, wherein he sufficiently testified his dissatisfaction. *Walraven Thomas* our book-keeper sent word from *Montual*, that he had sent the corporal *Hans Jacob Lambert*, ten *Mardykers*, and a serjeant to the pass of *Nacclegamme*, with orders to oppose the forces gathered thereabouts by the slaves of *Ouva*, of the four and of the seven *Corles*; which not agreeing with the sentiments of the general and his council, they ordered the said corporal to send back the *Mardykers* to *Montual*, and not to stop the passage of any of the royal forces, for fear of giving any occasion of offence to the emperor.

Notwithstanding this, we soon found the effects of the dissatisfaction of *Raja Singa*, who having cut off all means of receiving supplies by land from the *Sabandar*, *Don John*

*Baldæus.* *John de Costa* was dispatched to the diflaves of *Saffragamme*, and those of the four and seven *Corles*, who told him, that their people were at their full liberty (though we knew to the contrary) to bring their provisions to our market, but that they durst not give a visit to the general, without express orders from court.

*Two yachts come before Columbo.* The 22d of *March*, the yachts the *Mars* and *Lion* came to an anchor in the road of *Columbo*, aboard one whereof was the vice-commodore *Rootbaus*, who (upon the receipt of a letter from our head-factor, Mr. *Reynier Scrooskerke*, intimating that a small yacht laden with provisions, upon the king of *Cochin's* account, was gone from thence to *Columbo*) had left the yachts *Flissingen*, *Popkensburg*, *Sea-Coney*, the *Haddock*, and the *Roman*, with two other vessels on that coast, who were supplied with fresh provisions by the inhabitants of *Caylpatnam*. The inhabitants thereof being very desirous to renew their commerce with our company, they were then equipping two frigats there.

*Cingalese go over to the emperor.* About the same time notice was given us, that *Cannangere Aratchie*, a faithful servant of the company, had (to our great dissatisfaction) submitted to the king of *Candy*, and that ninety of the *Lascaryn* deserters had taken the way of *Angretotte*. These proved the forerunners of many ensuing misfortunes. In the mean while *Raja Singa* urged stiffly the surrender of *Negumbo* and *Columbo* into his hands, under pretence that these places belonged to him, by virtue of an agreement made betwixt him and the late director-general Mr. *Gerard Hulst*; upon which account he writ the following letter:

*Letter of complains from the emperor.* “OUR imperial majesty being very desirous to introduce the *Dutch* nation into our dominions, *Adam Westervold* came on this coast with a squadron of ships just as we had made our selves masters of *Batecalo*, when we thought fit to conclude a peace with him; which being confirmed by oath, was but slenderly observed by some officers afterwards; as for instance, by captain *Burchart Kocks*, alias *Coque*, (who was afterwards killed by a soldier at *Puntegale*.) and commissary *Peter Kieft*, who being sent as plenipotentiaries to our court, did confirm the before mentioned peace by oath: pursuant to which at their departure for *Gale*, they took along with them one of our diflaves, in order to deliver into his hand, the country of *Mature*. But at his coming there, they found means to render the same ineffectual, by finding out certain difficulties, which made the

“said diflave return to our court, to our great dissatisfaction. It was about that time that our beloved director-general did come into our kingdom from *Holland*, with full power to act as he should find it most suitable to our service, and to the establishment of a firm peace and friendship: pursuant to which, he desired us by word of mouth to bury all passed miscarriages in oblivion, promising at the same time, in the name of the prince of *Orange* and the *East-India* company, full satisfaction for the same; as also that the fortresses of *Negumbo* and *Columbo* (when taken) should be delivered into the hands of our imperial majesty, and certain *Hollanders* to be allotted in the said places for our service. It is upon this account that we sent our auxiliaries to assist our dearly-beloved *Hollanders* in the taking of *Columbo*; which being taken since, they are become forgetful of their promise, and do continue to do so to this day. Your excellency is left at your own liberty to do what you think fit, till notice of this proceeding can be given to the prince of *Orange*, and the honourable company: but I would have you remember that such as do not know God, and keep their word, will one time or other be sensible of the ill consequences thereof: I am sensible I have God on my side.

By way of Postscript was writ.

“TWO letters have been dispatched from our imperial court. Your excellency has writ in *Dutch* to *George Bloem*, but without mentioning any thing relating to our service. Your excellency may write such frivolous pretences to whom you please, but ought not to impose them upon our imperial majesty; it being in vain to alledge, that the director-general had received his instructions from *Batavia*, whereas he brought his full power along with him out of *Holland*. Such sinister dealings, as they create no small jealousy, so I cannot see with what face you can expect any further credit from us. I have taken care to have this translated into *Dutch*, that you may have no reason to plead ignorance. *George Bloem* shall stay here, till I receive your answer, when I intend to send him back with a letter. No more, &c.

From our imperial Court at *Reygamwatte*, May 11. 1656.

*Baldæus.* Unto which was annexed the following account, not thought fit to be inserted in the imperial letter.

“ THIS day, being the 22d of *March*,  
 “ his imperial majesty having sent  
 “ for me, ordered the letter writ in *Portuguese*  
 “ to be translated into *Dutch*, to  
 “ be sent, among others, to your excellency.  
 “ When I shewed the translation to  
 “ his majesty, he told me, That after the  
 “ arrival of the director-general in *Ceylon*,  
 “ he had sent word to him, That  
 “ several rebels sheltered themselves in  
 “ and about *Columbo*, especially one *Caspar Figueiro*,  
 “ who had done considerable damage to his  
 “ majesty’s lands ; as also concerning certain  
 “ presents sent to his court by the viceroy of  
 “ *Goa* ; some whereof were sent only by the  
 “ said director-general. His majesty further  
 “ desired me to give you to understand,  
 “ That it had been agreed not to recede in the  
 “ least from the literal sense of the treaty,  
 “ especially in what related to that article  
 “ concerning any city or place taken with the  
 “ assistance of his majesty’s forces ; whereas  
 “ your excellency had not as much as taken  
 “ the least care (since the taking of *Columbo*)  
 “ to send to his majesty his rebellious subjects,  
 “ nor any of the presents, except two *Persian*  
 “ cats, a ship, &c. delivered by me to his  
 “ majesty. The not sending of the rebels has  
 “ been very ill relished here.”

Raja Singa is angry with the Dutch. Our general took care to send a most obliging answer to the emperor’s letter ; which, however, was so far from giving any real satisfaction to *Raja Singa*, that, on the contrary, he conceived such a hatred against the *Dutch*, as made him engage with the *Portuguese* against them. For notice having been sent to our council by *Antonio de Motte* and *Manoel Fonseca de Moniis*, two *Portuguese*, that they had been solicited by *Raja Singa* to enter into his service, with promises of vast rewards, and the full enjoyment of the same revenues they had been possessed of before in their most flourishing estate, it was ordered that none of the imperial soldiers should be for the future admitted into the city, except such as should be sent in the quality of messengers from the king, or any of his slaves, to the general and council : thirty two men were also commanded to guard the passes near *Caleture*. Most of the *Portuguese* at *Columbo*, were sent under a convoy of a whole company to *Gale* ; and upon a scrutiny of the muster-roll, it was found that there were three hundred

men missing from among the *Lascaryns* of *Baldæus*. *Matule*, and many more followed their footsteps soon after.

The 30th of *May*, early in the morning, three *Portuguese* frigats being discovered near the shore, towards the side of *Galkisse*, we took in our prince’s flag, in order to entice them into the road. The commodore, who led the van, perhaps began to suspect the matter ; and therefore steered his course to the north ; but the other three were no sooner come within the reach of our cannon, but we sent out our small vessels to fetch their officers ashore. These told us, That they left the bar of *Goa* the 22d with six frigats ; and that two of them being separated from the rest by a most violent tempest near *Coulang*, were either lost, or perhaps had saved themselves in some port or other, one of them having been seen without masts. They added, that a *Portuguese* caravan was come to an anchor in the river of *Goa*. These six frigats had aboard sixty eight soldiers, besides good store of provisions, ammunition, and all other necessaries, intended for the relief of *Columbo*, in case the squadron under *Francisco de Seixa* should miscarry. Their cargo stood us in great stead, considering the scarcity that was among us at that time.

The 1st of *June* we took another frigate and a yacht ; the officers whereof being likewise brought ashore, told us, That the city of *Cochin* had contributed a good sum of money towards the relief of *Columbo*. Their letters being opened, contained nothing material, except that they were embroiled with the king of *Cochin*.

Certain advice was brought to the governor, That the day before, as the before-mentioned ships of *Cochin* were passing along the shore of *Galkisse*, the imperial slaves of *Matule* and *Ouva* had been seen to give them a signal with a white cloth, and had taken abundance of pains to get aboard them, offering four hundred *Larynes* to the fishermen, if they would carry them aboard of one or the other ; that they had got ready two boats, but durst not venture through the waves. Considering the pains the emperor had lately taken to entice away some of the best officers belonging to the company, and divers outrages committed by the king’s *Lascaryns* in the park of the company ; these together, I say, seemed to us the infallible forerunners of the ensuing broils.

For it was not long before *Cornelius van der Duyn*, deputy-governor of *Mature*, sent word from thence, that the king’s officers and soldiers had forbid all the inhabitants thereabouts to furnish the *Hollanders*

*Baldæus*.landers with provisions, or to obey their orders, but to retire into the king's dominions; where they should have full liberty to make their excursions into our dominions, as they had done already at *Billigam*, *Mallimande*, and *Baigam*.

To prevent such like outrages for the future, three companies of forty men each were sent out of *Gale*, two of which were ordered towards *Accuras*, to protect the inhabitants against the inroads made by the king's soldiers, in the quiet possession of such lands as were granted to the company by the emperor; for by this time we began shrewdly to suspect, that most of the great ones were entered into a confederacy with the king against us; this appeared by the tergiversations of the *Adigar*, who passing by the way of *Angretotte* to *Mature*, pretended he was come by orders from our general, which was a manifest falshood: some of their proceedings may be seen out of the following letter.

“ *C*Attepitty *Apubamy* is come to *Mallimanda*, from whence he has sent an *Ola*, or letter, intimating, that he was come by the king's special order, to take possession of the country of *Mature* in his majesty's name, and to enjoin all the inhabitants, not to supply the *Dutch* with any provisions, or otherwise. He furiber said, that he had intended to have been with them before this; but being now come with full authority, he exhorts them to obey the emperor's orders, for the honour of his court, and of the dissave of *Mature*, which if they do, they may assure themselves of all imaginable favour from the court. The dissave of *Saffragamme* has sent the dissave of *Mature*, to assist you upon all occasions.”

In *Pasidum-Corle* and *Caleture* things went at the same rate, where they had taken *Cottencynde*, his mother, and brother, (besides many others,) prisoners, and carried them to the pass of *Caleture*. Their intentions appear by the following *Ola*.

“ *T*Udoculle *Mandonna Apobami* makes known to all the *Aratches*, *Lascaryns*, and the chief *Majorals* and colonels of *Caleture*, *Macoene*, and *Barbaryn*, That as soon as this *Ola* comes to their hands, they shall not keep the least correspondence with the *Dutch*, nor pay any duties to them, from the villages, (formerly granted to them,) or furnish them with labourers to work on their fortifications. Those that shall act contrary to the tenour of this, must

“ expect to be severely punished; wherefore come, and join with me.” *Baldæus*.

*Manoel Andrada* (who signaliz'd himself before *Jafnapatnam*, of which anon) was likewise advertised by a letter from his brother-in-law, That the king's forces had wounded a woman and a slave near the pass of *Caleture*; and that therefore he should keep a watchful eye over his *Lascaryns*. About *Negumbo* they play'd the same game, and *Raja Singa* had made his addresses to *Patangatti*, the colonel of *Coquielle*, in hopes by great promises to bring him over to his party. On a certain tree near the church of *Guia de Lobo*, was affixed the following paper:

“ THE city of *Columbo* is now taken; and was according to agreement to be surrendered to his majesty, but has not been performed; if any fatal consequences attend this breach of promise, we declare ourselves innocent thereof: but as we are well assured of his majesty's good inclinations towards the *Dutch* nation, so if you intend to send any deputies to treat with him, you shall have liberty so to do, and a passport for them.” *A paper affixed to a tree.*

Our general and council finding themselves under an absolute necessity of representing to *Raja Singa* the injustice of his proceedings in a letter, they told him, That these proceedings being directly contrary to their mutual intentions of annoying the *Portuguese*, and consequently tending both to his majesty and the company's prejudice, they desired that all hostilities might be laid aside, and instead thereof their former good correspondence be renew'd. They desired *Raja Singa* to send his answer, and with it an envoy, or one of his dissaves, unto whom they would deliver the fortrefs of *Negumbo*, after the fortifications are demolished. And to leave no room for any further pretences, the general acquainted the emperor, That in case his majesty would let him know what further satisfaction he required at his hands, he would be ready to comply with his majesty's demands, provided the same could be done without great prejudice to the company's service. But that in case his majesty thought fit to persist in his unjust oppressions of the *Dutch*, and others under our jurisdiction, he protested and declared, in the presence of God, and to all the world, That he was innocent of all the calamities and effusion of blood that needs must be the consequences of such proceedings, which must

*Contents of the letter sent to Raja Singa.*

*Baldens*. must oblige us (though much against our will) to have recourse to such means as God had put into our hands for the defence of our subjects. With this letter they sent a falcon and a sparrow-hawk, with a *Persian* falconer, as a present to the emperor.

Outrages committed by the *Lascaryns*.

Advice was brought at the same time from *Caleture*, That the king's *Lascaryns* were very troublesome to our subjects, who were forced to leave their habitations for fear of being carried away; and that they had wounded some, and pursued them to the river-side; that the two *Aratches Cannangere* and *Pittikeri* lay incamped near

*Alican*, and had summoned the country *Baldens* thereabouts to join with them within three days; that ten of our *Lascaryns*, and forty two labourers sent from *Caleture* to *Columbo*, were carried away by a party of vagabonds. To prevent the like for the future, and especially to protect our workmen employ'd in the peeling of the cinnamon, (called *Chalias*;) two hundred soldiers were ordered to *Bentot*, under the command of *Martin Scholies*, *Peter Cham-ple*, and *Joris Hervendonck*, who, for their better security, were to be joined by the *Lascaryns*, under the captain of *Gale-Corle*.

Two hundred men sent against them.

## C H A P. XLII.

*A Feast appointed. Two Caffers come over to us. George Bloem escapes from Candy. A Skirmish betwixt the Dutch and Cingalese. Robbers punished. News of the Portuguese Squadron. The Arrival of some Dutch Ships: Their Mistake. A strange Notion among the Indians concerning Columbo's being impregnable. Negumbo taken, and retaken.*

IT being now a month since the surrender of *Columbo*, a thanksgiving day was appointed, to give thanks to God Almighty for this great success, and to implore his mercy to bless our arms for the future. The said day is kept ever since on the 12th of *May*.

Raja Singa's answer to no purpose.

*Raja Singa* did send an answer to the general's letter; but said scarce any thing in relation to the matter in hand, declaring only his satisfaction about the present, and desiring that the *Persian* falconer might stay with him, which the general (to gratify the emperor) did consent to, at least till such time that the ships should be ready to return to *Gamron*. However, these civilities did not answer the end for which they were intended; *Raja Singa* ordering soon after his *Lascaryns* to take all the *Dutch* they could light on prisoners, and to cut off the noses and ears of all the negroes, *Cingalese*, *Moors*, and slaves that served the *Hollanders*; but the two hundred before mentioned soldiers struck such a terror into the king's forces, that they retreated back, and gave liberty at least to a thousand of the inhabitants to return to their houses.

*Raja Singa* in the mean time continued now as before his hostilities, one of his parties having lately carried away a *Duria* and two labourers within half a league of *Columbo*, which obliged us to be continually upon our guard. The *Dutch* still residing at *Candy* being afraid they

should be detained there against their will, writ to the general to hasten the departure of the *Persian* falconer with the hawks, in hopes that thereby the king might be brought into a good humour to let them depart.

About the same time a certain messenger named *Chitty Maley*, came to *Columbo* with some hawks and other presents for the emperor; six hawks more with their falconers were also brought from the coast of *Coromandel* for the same purpose.

The 20th of *July* two *Caffers* came over to us, one whereof having been the king's trumpeter, the other a drummer, they reported that his majesty continued still in his camp at *Reygamwatte*, but intended shortly to break up for *Ruanelle*, the disservice of *Matule* having been sent before already to take care of the highways, through which they were to pass. They further told us, That the emperor having granted to divers *Portuguese* certain goodly villages, this had created ill blood among the courtiers.

Two Caffers come over to us.

Our interpreter *George Bloem* was forced to continue there till he found means to make his escape in the night-time from the camp of *Reygamwatte*, by means of a preceptor, or boat, wherewith he got to *Montual*, having deceived his guards, by giving them a good dose of strong liquors. Five other *Dutchmen*, who had deserted our service, continued with the king at court.

Our interpreter escapes from the camp of the emperor.

*Baldæus.* News was brought at the same time, that some of the king's forces, having got intelligence that Mr. *Rabel*, a brave *Cingalese*, a native of *Mature* in our service, was absent from *Hakman*, with a serjeant and most of the soldiers, having left only a guard of ten *Europeans* and fifteen *Lasccaryns* in the place; they to the number of a hundred men, attacked them on a sudden, in hopes to carry the place by surprize, but were notwithstanding so hotly received, that they were glad to retire.

The Cingalese in vain attacked.

Things began thus to grow worse and worse, without hopes of amendment, because we were frequently bit by our own dogs, I mean the perfidious *Cingalese* under our jurisdiction, who gave constant intelligence of all our designs, so that we could not send abroad the smallest party but the enemy had before-hand notice thereof; whereas we could never discover the least of their intentions, of which we were sufficiently convinced by divers intercepted letters.

The king's forces having surprized a serjeant, named *Peter Johnson*, a native of *Dantzick*, with some inhabitants of the country, and four soldiers wives, they carried them before the dislave of the seven *Corles*, who told them, That they had been long enough in the *Dutch* service, and must resolve now to be his majesty's slaves.

Two robbers punished.

The 2d of *August* we received a letter from *Laurence Haurwyk*, our under-factor at *Caleture*, that several robbers had been seen about *Boemboele*, who had cut down the fruits of the earth; that *Andrado* being sent after them with some *Lasccaryns*, had met only with two of them, who refusing obstinately to confess by whom they were sent out to cut down the rice, they had cut off their heads, and set them upon poles near the place where they had spoiled the rice.

The 13th of *August* being sunday, the yacht called the *Columbo* came into our road, having left *Tutecoryn* the 11th: she brought letters from the commodore to the general, intimating, That the enemy's Squadron, composed of fifteen frigats, had escaped his hands the 7th of *July*, taking the opportunity of the night, and the advantage of the flats betwixt the isles; that they were pursued by our ships as far as *Pambanaar*, which could not come up with them by reason of the sands. He further told him, That suspecting the *Teuver* or governor of the country to have been corrupted with money, and to have given them a free passage betwixt *Manaar* and *Jasnapatnam*, (which he commands by either laying in, or removing certain stones from the entrance thereof,) he had been obliged to return to *Tutecoryn*.

The Portuguese Squadron gets clear of the Dutch.

We had at the same time advice of the *Baldæus*, arrival of our ships, the *Amsterdam*, the *Avenborn*, *Sapbir*, *Haddock*, *Workum*, *Pelican*, *Patience*, and *Black Bull*, upon the coast of *Coromandel*: but it was no small mortification unto us, that the *Sapbir* (contrary to the general of *Ceylon's* orders) had left the prisoners and *Portuguese* soldiers (who, according to the articles of surrender, were to have been carried to *Batavia*) ashore near *Negapatnam*; and that she had not touched in the southern harbours, where there was a considerable cargo of clothes and other commodities ready, which could not be disposed of otherwise: and by the first oversight, the enemy had been reinforced with eighty brave soldiers, contrary to the intention of the agreement.

Over-sight of the ship the Sapbir.

We had at the same time letters from the factor *Adrian van Newland*, dated in the *Danish* fort called *Franguebare*, whereby we understood that the before-mentioned *Portuguese* frigats were passed through the *Streights* (by the assistance of the governor) to *Jasnapatnam*, from whence *Anthony Amiral de Menezes* (afterwards killed by one of our cannon-balls near *Manaar*) had sent his forces in boats to *Negapatnam*, in order to gather a body (at the request of *Raja Singa*) in those parts, which, as the case then stood, might have proved very dangerous to us, had not God through his mercy prevented their designs.

During all these troubles, our general kept a watchful eye upon the enemy's motions, and ordered Mr. *John van der Laan* with three hundred men to scour the country: these differences continued for a considerable time, viz. to the year 1665. and though some glimpses of peace appeared at certain intervals, yet is it certain that *Raja Singa* is not reconciled to us to this day, and perhaps never will whilst he lives.

We have hitherto treated of *Columbo*; we now will pass the river at *Montual*, and take our course higher up to *Negumbo*. But before we come thither, I cannot forbear to say a word or two concerning the general opinion of the *Indians*, viz. That *Columbo* was impregnable. Hence it was that the *Portuguese* boasted in all places, that the king of *Portugal*, and viceroys of *Goa*, would never suffer so strong a fortress to fall into the hands of the hereticks, especially after we were repulsed in the first general assault. I happened to be then at *Macassar*, where the *Portuguese* father, and some missionaries lately come from *China*, used to make this siege their sport; and one *Francisco Vieiro*, one of the richest merchants in the *Indies*, offered to lay vast wagers that it was not taken by the *Hollanders*.

Opinion concerning the strength of Columbo.

*Baldæus.* The king of *Celebes* and *Macassar* (the capital city of that isle) had the same opinion concerning the strength of *Columbo*, he and most of his courtiers being much inclined to the *Portuguese* side. But within three months, just at my return to *Batavia* (after the conclusion of the peace betwixt us and the king of *Macassar*) we had the news of the surrender of *Columbo* brought to *Batavia* by *Peter Bitter*, to the general satisfaction of the people.

But after this digression it is time to come to *Negumbo*; which lies about two leagues and a half, or five good hours walking, along the banks of the river to the north. I am not able to tell you the exact time of its beginning, the *Portuguese* historians being silent as to this point, being no more than a fort built for the conveniency of protecting the country, which abounds in cinnamon.

I told you before how *Adam Westervold* made himself master of *Batecalo*; after which *Anthony Caan* took, 1639. the fort of *Trinquemale*, the most spacious harbour on the east side of *Ceylon*. *Philip Lucas*, the *Dutch* director-general in the *Indies*, took *Negumbo* the first time, Feb. 9. 1640. and soon after (as has been told before, viz. March 13. following) our commodore *William-Jacob Koster* took *Gale* by storm; but was afterwards treacherously murdered by some of *Raja's* people, with four of his guards.

For the said Mr. *Koster* coming to *Baldæus*, *Candy* in person, was detained there with vain promises, without the least probability of success, till growing impatient, he began to utter threats and very harsh words (a great piece of imprudence) against some of the great ones at court; which coming to *Raja's* ears, he was dismissed without the usual marks of honour, and conducted towards *Batecalo*, but murdered by the way by the *Cingalese*, his conductors. This was the reward bestowed by *Raja* upon *Koster*, who had reduced *Trinquemale*, *Gale*, and *Mature*, with all the countries thereunto belonging, to his jurisdiction.

Certain it is, had *Raja* been sincere, we might with his assistance easily have made ourselves masters at that juncture of *Columbo*, when all their regular forces being sent to the relief of *Gale*, there were but a few old soldiers, priests, and citizens left for the defence of the place. But *Raja* thought it better to play the trimmer betwixt two *European* nations, than to be in danger of being conquered by one, and so thought it his best way to give opportunity to the *Portuguese* to recover a little breath.

For the *Portuguese* having received a strong reinforcement from *Goa*, found means to regain the fort of *Negumbo*; which done, they sat down before *Gale*, but were bravely entertained by *John Thyssen*, who gave them many a brush; *Raja Singa*

*Baldæus*, sitting all this while by like a spectator, though the *Portuguese* remained masters of all the *Low-Lands*, though we delivered *Batecalo* into his hands, and made much greater offers by *Peter Barrel* our ambassador. Things continued in the same state till the year 1644. at the beginning whereof *Francis Caron* took *Negumbo* from the *Portuguese* a second time; and having strengthened it with four new bastions of earth, surrounded with strong pallisadoes, left a garrison of five hundred men there for its guard. After the departure of our fleet, and some detachments sent to *Gale*, and

*Negumbo taken a second time by the Dutch.*

other places, *Don Philippo Mascarenhas Baldæus*, made an attempt upon the place; but being bravely repulsed, was glad to retire in confusion to *Columbo*. It was about this time that *Mr. John Maatzuyker* (now governor-general of the *Dutch East-Indies*) coming to *Goa*, entered into a treaty with the *Portuguese* viceroy, *John de Silva Telles de Menezes*, earl of *Aveiras*, concerning the limits betwixt both nations in the isle of *Ceylon*; which being brought to a conclusion 1645. the said *Mr. Maatzuyker* remained in those parts in the quality of governor of *Puntegale*.

*The Portuguese attempt in vain to recover it.*

CHAP. XLIII.

*Raja Singa treats underhand with the Portuguese: His Tame Elephants detained. Raja declares against the Portuguese. The Dutch lose Angretotte. Both the Portuguese and Dutch are reinforced. Engagement near Tiboene. Caleture deserted. Portuguese worsted both by Sea and Land. Manaar taken.*

*Raja sides with the Portuguese.*

**R**AJA Singa, at the instigation of the *Portuguese*, being grown very jealous of the *Dutch* being in possession of the seven *Corles*, connived at the robberies that were committed in those parts by his people, which at last obliged *Mr. John Thyssen* to proclaim open war against them; and accordingly *Nicholas Jacobson Overschie*, governor of *Negumbo*, and overseer of the *Dutch* limits (who died afterwards at *Voorburgh*) caused all the king's tame elephants to be seized; which so exasperated his majesty, that he drew all his forces together, and entered the seven *Corles*, where our people had the worst of it, because they surrendered without being reduced to the utmost extremity. However, after the return of *Mr. Maatzuyker*, *Negumbo*, *Gale-Corle*, and *Mature*, with the countries thereunto belonging, were soon secured against all further attempts; the cinnamon was gathered and peeled as before, the wild elephants tamed, and every thing else settled for the advantage of our company: nay *Raja Singa* himself was appeased, who retreated with his forces, though without doing any harm to the *Portuguese*; an infallible sign that there was no ill understanding betwixt them.

*His elephants seized.*

Matters thus continued till 1649. when *Mr. Maatzuyker* redeemed all our prisoners; and by a messenger, sent with some presents, brought matters to an honourable composition. In the beginning of the year 1650, *Mr. Rampot* left *Gale* and *Mature*, to the great dissatisfaction of *Raja*

*Singa*, who, however, was so far from breaking with us upon that account, that when we entered into a war with the *Portuguese*, 1652. *Raja* declared against them, laying hold of the opportunity that presented it self, by a late mutiny among the *Portuguese* soldiers, and chief inhabitants of *Columbo*, raised against *Manoel Mascarenhas Homem* their governor, whom they had taken into custody.

*Mutiny against their governor.*

These mutineers having gathered what forces they were able near *Columbo* marched on a sudden with eight hundred *European* soldiers and as many negroes towards our fort of *Angretotte*, which they obliged to a surrender the 8th of *January* 1653. after a siege of eleven days, in which they lost a considerable number of men, ninety eight *Germans*, twenty four *Javanese*, and a greater number of *Lascaryns* were made prisoners of war, under condition that they should be dismissed for a reasonable ransom. The same afternoon a body of three hundred men were sent to their relief, who happened to come too late; though as the case stood, their endeavours would have proved in vain, considering the enemy was twice as strong and advantageously posted; and we had not come off at so cheap a rate, had not *Raja Singa* given the enemy a strong diversion near *Cottogore*, whereabouts they attacked the pass near *Columbo* with such vigour, that the governor and deputy-governor were glad to send for their forces from *Reygam* and *Pasdum-Corle* to oppose the imperialists. There were no sooner re-

*Angretotte lost by the Dutch.*

*Raja makes a diversion in favour of the Dutch.*

treated,

*Baldous*. treated, but the *Portuguese* attacked our outguards near *Negumbo*, and possessed themselves of the four and seven *Corles*, but *Raja Singa* rallying his forces, marched from *Ouva* to *Saffragamme* (the capital city of the five *Corles*) the *Portuguese* disfavve was glad to retreat with his forces to *Gurbeville*, and thereby gave us opportunity to join our forces, and secure the countries of *Gale* and *Mature*.

The Portuguese are reinforced.

In the mean while, viz. the 10th of May, the *Portuguese* in *Columbo* received a reinforcement of twelve frigats, with a good number of officers and soldiers from *Goa*, under the command of *Francisco de Melo de Castro*; our cruizers being scarce two days before (to our great misfortune) forced to retreat from their stations by streffs of weather into the harbour of *Gale*. Notwithstanding which they made no considerable attempt against us, being contented to secure only their workmen employed in peeling of the cinnamon, and other inhabitants of the country, against our parties.

*Raja Singa* finding that in 1653. in September, the *Portuguese* had received a fresh supply from *Tutecoryn*, whereas our four ships did not bring one single soldier to relieve the rest; that our governor *Jacob van Kittenstein* had obtained leave to depart; and that when commissary *Ryklof van Goens* touched with his four ships towards the latter end of October in *Ceylon*, in his way to *Persia* and *Suratte*, without bringing us the least succours, he retreated with his half-starved tattered troops from *Caravanella*, through the seven and four *Corles* to *Candy*, to refresh themselves.

The *Portuguese* finding themselves secure on that side, did appear with all the forces they could bring into the field before *Columbo*, in hopes of drawing our forces out of the fort; but finding themselves frustrated in their hopes, they retreated in the beginning of 1654. towards *Reygam* and *Pasdum-Corle*, whence they sent frequent parties to take away our cattle, and to spoil the fruits of the earth. But major *John van der Laan* was always at hand with a good body to observe them.

The 20th of March our governor, *Adrian van der Meyden*, marched from *Gale* to *Caleture*; and being joined there the 23d by all his forces, he followed the *Portuguese* through *Berberin*, *Dodangodde*, and *Tiboene*, where he attacked them the 26th in the morning, in their advantageous post:

An engagement betwixt the Portuguese and Dutch.

The engagement was very fierce for a whole hour; when our forces feigned a retreat, in hopes to draw the enemy from his post: but they were too wise to follow us; they had more men slain on their side than we.

After our forces had refreshed themselves a little while at *Tiboen*, we marched to *Caleture*, and the enemy retreated out of our dominions cross the river to *Columbo*.

Soon after five galeons, with one thousand *Portuguese* landmen aboard them, arriving upon our coast, engaged three of our yachts called the *Greybound*, the *Rhinoceros*, and *Dromedary*, and pursued them to the flats of *Negumbo*, but took none of them, our vessels retiring under the cannon there, and the *Portuguese* to *Columbo*, having lost their captain-major and many others in this engagement.

A council being called to consult what to do in this emergency, it was resolved to leave *Caleture*, and to employ our whole force in the defence of *Negumbo*, without which we were not in a condition to maintain that fortress, which was of the greatest consequence to us. Accordingly *Negumbo* being well provided with what forces we were able to gather, the enemy (whose forces were considerably encreased by the late reinforcements) marched from *Galkisse* to *Caleture*, and thence to *Alicaon*, where they pitched their tents: to oppose which we brought into the field about two hundred *Europeans*, eighty *Javaneze*, and a good number of *Lascaryns*, wherewith we made a shift to defend our country as well as we could.

About this time commissary *Van Goens*, in return from *Persia* and *Suratte* to *Ceylon*, had the good fortune to beat the galeons near the cape *du Ramos*, and thereby to release twenty of our people made prisoners at *Angretotte*, who were set ashore at *Puntegale*. This was the reason that the *Portuguese* could not spare many men for the use of their frigats, having sustained a considerable loss of them in the late engagement with Mr. *Van Goens* near *Achiera*; neither were they so active in the field till the ensuing July, when we having received some reinforcements, appointed our rendezvous at *Bentotte* in sight of the enemy, having only a river betwixt us and them. We killed the *Portuguese* about thirty *Europeans* in divers skirmishes, and took from them divers boats; which made them not so eager afterwards to attack our countries, in order to spoil our cinnamon and *Areek* harvest, and the taking of elephants, wherein consists the chief revenue of this isle, belonging to the company.

The 13th of September, the yachts the *Turtle-Dove*, the *Red-Lyon* and the *Haddock*, arrived with fresh supplies and fifty soldiers. The fourth of December the yacht

the

*Baldæus*, the *Kanien* brought us a supply of fifty four soldiers more; besides which, one hundred fifty nine seamen were taken out of four ships, (come with the director *Henry van Gent* into *Gale*, to provide themselves with fresh water;) all which being joined with our forces, encamped at *Bentotte*. We embarked the 16th of *December* all our forces, six hundred ninety strong, (including officers) composed of seamen, land-soldiers, *Javanese*, and *Cingalese*, in twenty *Catapaneeles*, or land-boats; and thus passed the river *Alicaon*.

The Dutch pass the river Alicaon.

But scarce had we reached the opposite bank of the river, but we met with so warm a reception from three hundred chosen *Portuguese*, and some *Topasses* and *Cingalese*, that most of our *Indian* forces betook themselves to their heels: but being rallied again upon the bank of the river, returned to the charge; and being bravely seconded by the rest, forced the enemy to retreat, leaving one of their cannon of one thousand pounds weight behind them, sixty slain, and many more wounded. They behaved themselves bravely; but were forced after this defeat to retire by the way of *Malvane* to *Columbo*.

Beat the Portuguese.

The *Portuguese* finding us not ready to attack *Caleture*; (after they had given the usual pay to the soldiers,) they broke up in the beginning of 1655, and surpris'd *Raja's* forces, under the command of the *dislave* of the four *Corles*; and being reinforced by some other forces from *Jafnapatnam* and *Manaar*, besides a good number of *Lascaryns*, they pursued the *dislave* of the seven *Corles* as far as to the straits of *Candy*, plundering all the country through which they pass'd; which so exasperated the king, that he ordered all his forces to appear in the field; but his van being routed in *April* near *Attapitin* by *Caspar Figeiro*, the king quitted the field full of dissatisfaction.

Raja's troops routed.

It happened, to our good fortune, that the new governor and *Portuguese* admiral, *Antonio de Souza Coutinbo*, (under whose government *Columbo* was lost) coming with eight frigats and five hundred landmen into these parts, was the 18th of *May* forced towards the coast of *Gale*: we sent out two yachts, viz. the *Lion* and *Kanien*, who, coming up with them, took two, with all the men and provisions, and forced three or more four ashore; so that two or three of them got safe to *Columbo*; and *Continbo* himself was forced to take his course round the point *das Pedra* to *Jafnapatnam* and *Manaar*; from whence he came with a good troop by the way of *Putelaon*, *Calpentyn*, and the seven *Corles*; in *August* to *Columbo*; where he was no sooner established in his dignity, but he

The Portuguese routed at sea.

visited with *Antonio Mendes d' Arangie* the *Baldæus*, fort of *Caleture*, where he left a garison of three hundred *Europeans*, and a good number of negroes; but resolv'd to keep *Caspar Figeiro* near his person.

Baldæus.

By that time the director-general *Gerard Hulst* came in company of Mr. *John van der Laan* (a person well versed in the affairs of *Ceylon*) into those parts. About the middle of *September* three yachts were dispatched from cape *Comoryn*, in order to observe the frigats sent from *Columbo* to *Tutecoryn* for provisions, and either to take them, or to block them up betwixt the islands. It was also resolv'd to force the *Portuguese* to quit *Caleture*, whilst the enemy were yet under apprehension of the strength of the forces come along with the director-general, and lately landed at *Negumbo*; from whence he intended to give the enemy a visit on the other side of the river at *Montual*.

However, the *Portuguese* squadron, consisting of twenty frigats and some barks, loaden with all sorts of necessaries at *Jafnapatnam*, and some other places on the *Indian* coast, made shift to pass by with full sails within sight of *Negumbo* (where our ships lay at anchor) and to our signal regret got into *Columbo*. Mr. *Hulst* received at the same time advice, by a small *vice-boat*, that a new viceroy was arriv'd at *Goa* with three galeons, one yacht, and a good number of landmen. A council being called, it was thought convenient to try whether these galeons might not be surpris'd near *Marmagon*, or *Agoada*, (two castles in the bay of *Goa*.) At the same time Mr. *Hulst* came with four ships and a good number of soldiers before *Berberyn*; where having landed and joined his forces with the rest the 28th of *September*, he soon after made himself master of *Caleture*, an account whereof has been given before.

A new viceroy comes to Goa with some galeons.

But it is time to leave *Negumbo*, provided with a good garison, (first by major *John van der Laan*, and afterwards by the head-factor *Edward Hauw*.) and to go towards *Manaar*. In the year 1661. I undertook a journey over land from *Jafnapatnam* to *Columbo*, forty nine or fifty leagues distant from one another; which I accomplished in seven days.

Distance betwixt Jafnapatnam and Columbo.

From *Negumbo* you travel by the way of *Cajuel* to the river *Chilaww*, and so through the countries of *Madampe* and *Putelaon*, leaving the isle of *Calpentyn* to the left; then through *Aripou* (where the christians have a church) to *Manaar*; thence to *Wannias*, the church of *Mantotte*, and so to *Jafnapatnam*; of which more hereafter. We made this observation in this

*Baldens.* journey, that no cinnamon grows, except on the other side of the river *Chilaw*, and beyond *Jafnapatnam*. For the rest, all these before-mentioned countries have a very fruitful soil, (except *Calpentyn*, which is somewhat barren,) especially about *Madampe*, but are destitute of inhabitants; the bufflers feeding here in vast herds; which makes me believe, that it would afford plenty of every thing, were it well cultivated.

*Goodness of these Countries.*

We will now proceed to give you some account of the isle of *Manaar*, which formerly adhered to the continent, as sufficiently appears by the sand-bank, called *Adam's-Bridge*. Next unto this lies the isle of *Rammanakoyel*, where is to be seen a rich and famous *Pagode*, belonging to the *Teuver*, or governor, who has a fort on the continent. At certain seasons there

is a passage with small boats through some *Baldens.* depths of this *Adam's Bridge*, one whereof I had once occasion to pass myself.

The said isle was reduced by the *Hollanders*, 1658. in the following manner, *The isle of Manaar taken by the Dutch.* by Mr. *Ryklof van Goens*. The *Portugueses* had made entrenchments all along the shore; which were defended by one thousand chosen men, and twelve frigats, to hinder the approach of our boats. Our great ships were ordered to advance as near as they could; under favour of which, our boats landed the men. Serjeant *Henry van Wel* (since a lieutenant) was the first who set foot on shore; and being bravely followed by the rest, were as courageously received by the *Portuguese*, who did all that men could do to second their comrades: but our cannon from the ships, together with our small arms, made such

a havock among them, that they were forced to quit their entrenchments. Here it was that *Antonio Amiral de Meneses*, the *Portuguese* general, lost his life by a cannon-bullet, and *Antonio Mendes d'Arangie*, a famous soldier, was mortally wounded, with many other brave officers.

On our side we lost an ensign; and before our landing, (when the long-boat of

the ship *Naarden* was taken,) the brave lieutenant *Block*, which we returned them with full measure; all their frigats, as they passed by our squadron, being either sunk or taken, with a great slaughter of their men. Major *John van der Laan*, (though he had a heavy fall before our landing, being a very large and fat person) did nevertheless behave himself upon this occasion

*Baldæus.* occasion with incredible bravery, breaking through the thickest of the ranks of the enemy, whereby he made good the title bestowed upon him long before, of being *the terror of the Portuguese.*

*Portuguese leave the fort Manaar.* After this defeat, the *Portuguese* not thinking themselves secure in the fort *Manaar*, retired over the water to *Jafnapatnam*, leaving only *Andrew Villosa* with a very moderate force in the castle of *St. George*. They would not have escaped our hands at so cheap a rate, had we not been stopped by the great rains and tempests.

*St. George surrenders.* The 22d *Andrew Villosa*, being deserted by most of his men, was obliged to surrender the castle of *St. George* upon reasonable terms. We took about two hundred prisoners, both *Europeans* and negroes, and among them a *Caffer*, (or *African negro*,) who pretending to be a captain, was so stubborn, that he would not take up his arms, or arise from the ground, (as he was commanded to do,) without a good bastinado.

The 24th of *February* I preached the thanksgiving-sermon in the great church upon the text of *1 Sam. vii. 7.* for the most fortunate reduction of this isle, whereof our general might say with *Cæsar, Veni, vidi, vici*, being beyond all question one

of the greatest actions that ever happened *Baldæus.* betwixt us and the *Portuguese* in the *Indies*, considering we were forced to attack the enemy's forces, composed of veteran *European* soldiers, and to chase them from their advantageous posts; and that only with eight hundred men, and consequently with the utmost hazard; being resolved either to overcome or die in the attempt, because we had quite drained the garrison of *Columbo*, leaving only a few, and those infirm persons, to guard that place, because we expected hourly the arrival of the ship the *Salamander*, with some hundreds of soldiers, and good store of ammunition and provision, having aboard the commodore *Peter de Bitter*, the factor *Edward Ooms*, and captain *Peter Wasch*. The same having been detained by calms and tempests for near six months, and endured great hardships about the *Maldivè* islands, *The Salamander* arrived at last safely at *Columbo*; but was soon after ordered by the governor, *Adrian van der Meyden*, to sail to *Manaar*; where she came to an anchor immediately after we had made ourselves masters of that isle, and were just then preparing to march towards *Jafnapatnam*. But before we leave *Manaar*, we must add something concerning the true condition of this island.

CHAP. XLIV.

*A Description of Manaar. How the Christian Religion was planted, and might be further promoted there. A Description of the Country of the Wannias. Our March towards Jafnapatnam: We pass the River, rout the Portuguese, and take the Water-Fort.*

*Manaar, whence it got its name.*

*The Cingalese and Malabar languages are spoken in the isle of Ceylon.*

**M**ANNAAR derives its name from the *Malabar* language, from the word *Man*, i. e. *Sand*, and *Aar*, a river, signifying as much as a *Sand-River*, it being observable, that both the *Cingalese* and *Malabar* languages are spoken in the isle of *Ceylon*. The first is used beyond *Negumbo*; viz. at *Columbo*, *Caleture*, *Berberyn*, *Alican*, *Gale*, *Belligame*, *Mature*, *Dondere*, &c. But in all the other parts of this isle opposite to the coast of *Coromandel*, and all along the bay, they speak the *Malabar* tongue; whence it seems very probable, that that tract of land (as the inhabitants of *Jafnapatnam* themselves believe) was first of all peopled by those of *Coromandel*, who brought their language along with them; it being certain, that in the inland countries, about *Candy*, *Vin-*

*tane*, *Ballaney*, &c. they speak only *Cingalese*.

The isle of *Manaar* is situate at nine degrees of northern latitude, its length being about two and a half *German* leagues, and one broad, including the salt-water river, (as you will see in the map,) which reaches as far as the great church called *Carcel*. The castle is seated upon a canal able to bear small yachts, which draw three, four, or five foot water, and can go from thence to *Jafnapatnam*. This castle was strengthened with some additional fortifications, and surrounded with a deep ditch, after we had taken it from the *Portuguese*. The whole isle has no more than seven churches, unto each whereof belong divers considerable villages: the first is the *City Church*, next that

*Baldens.* that called *Tottavaly*, then *Carcel*, *Erkelampatti*, *St. Peter's* church belonging to the fishermen, *Peixale*, and the last *Tellemanaar*, lying at the furthest, and near the sea-side.

Pearl-fishery at Manaar.

This island was formerly celebrated for the pearl-fishery, as well as the city of *Tutecoryn*; but no pearls having been taken there for these ten years last past, the inhabitants are reduced to great poverty; whereas the sumptuous edifices, churches, and monasteries, with their ornaments, are sufficient demonstrations of its former grandeur.

In the year 1666. (after my departure,) our company ordered the first time the pearl-fishery to be renewed again, with no ill success; and according to several letters I have received from thence, they took a considerable quantity of pearls the second time, in the year 1669.

The inhabitants of Manaar speak also Portuguese. Persecution of the christians in Manaar.

The inhabitants of *Manaar* speak (besides the *Malabar*) most generally *Portuguese*, being long ago converted to the christian faith; for which reason they have suffered most cruel persecutions from the kings of *Jafnapatnam*; who baptized many of the new converted christians with blood, after they had received the baptism with water. Many of them fled for this reason to *Goa* by land, being above a hundred leagues, and among them a young gentleman of royal extraction, who embraced christianity there.

It was *Franciscus Xaverius* who converted the inhabitants here, as well as those on the cape *Comoryn*, and the *Paruas*, as we have told you before in the description of the *Indian* coast, and in the account of his life. The said *Xaverius* established among them certain teachers, called *Cana-cappels*, who were to instruct the inhabitants in the first rudiments of the christian religion, as the ten commandments, the creed, our father, &c. which they did with indefatigable care and industry.

These were succeeded by the jesuits, (called *Paulites* here, because they were sent into the *Indies* by pope *Paul III.*) who in their way of teaching both the old and young ones, did far exceed the *Franciscans*, and all other orders among the *Romanists*. And I am very free to confess, that I have frequently followed their footsteps in reforming the churches and schools in *Manaar* and *Jafnapatnam*, as far as they were consistent with our religion, and consonant to the genius of these nations; it being ab-

What method is most proper for the conversion of these nations.

solutely necessary that he who undertakes this task, should be well acquainted with the method to be used among these people in the infancy of their conversion, intricate questions and mysteries being more

apt to confound, than to instruct them; for *Baldens*, which reason it is most proper to teach them the naked truth of the gospel in as few points as possibly can be done, (the youth being very apt to retain here what they have been told,) to catechise frequently the young-ones in the presence of their parents, thereby to excite in them a laudable emulation to follow their footsteps. *St. Paul* himself leads us the way, when he says, That you must first lay the foundation of the doctrine of *Christ*, before you can raise the edifice of the church.

It is also absolutely requisite that the same catechism that has been at first introduced among the native christians, should be retained without any alteration; which, as it would over-charge their memory, so it would breed nothing but confusion instead of profit. It was for this reason, that when by order, from the supreme magistrates, the reformation of these churches was committed to my care, I reduced the chief points of the christian doctrine into questions and answers, which were afterwards introduced into the churches of *Jafnapatnam*, *Manaar*, *Gale*, *Columbo*, *Negumbo*, and *Mature*, and received by the succeeding ministers, by special command from the general and council of the *Indies*, and the governor of these places, and were afterwards confirmed by the general assembly of the clergy of *Ceylon* held at *Columbo*, 1659. from the 24th of *February*, till the 3d of *March*.

They had had enough of the mischiefs that ensued upon these alterations, introduced by new ministers into the isle of *Formosa*, who instead of following the footsteps of *Robert Junius* and *George Candius*, (ministers of the gospel there,) would introduce certain novelties. I found it also absolutely necessary to have these questions and answers put not only in the *Portuguese*, but also in the *Malabar* tongue; several copies whereof were sent to our brethren at *Columbo*, *Gale*, and *Negapatnam*.

It is beyond all dispute that the *Low Dutch* tongue is not so proper to propagate our religion here as the *Malabar* and *Portuguese*; and consequently, that the ministers of the gospel sent into those parts should rather apply themselves to these languages, than to impose their own upon the new converts, which always meets with great difficulty, and cannot be introduced without vast trouble and charges: besides, that it is much more reasonable one man should accommodate himself to many, than these to one man. It is furthermore requisite, that as the ministers ought to pay all due respect to the magistrates, so these should treat them with all imaginable civility

*Baldæus.* civility and honour, to acquire them the more authority among the natives.

*Manaar has plenty of fish.* The isle of *Manaar* abounds in fish to such a degree, that the inhabitants here (as well as at *Negumbo*) dry and send them into other parts in vast quantities. They

*A peculiar kind of fish.* have here a peculiar fish (properly a sea-calf) of an amphibious nature; the females have breasts, and give suck; and the flesh, when well-boiled, tastes not unlike our sturgeon, and might easily be mistaken for veal.

But it is time we pass the river of *Manaar* towards *Mantotte*. This river is not very deep, nay, on that side where you come to it over the canal near the castle, it is so shallow, that you may wade through it with ease, the water scarce coming up to your knees, though it is so broad, that it will take up half an hour before you can pass it. The country on the other

*The country of the Wannias.* side is called the country of the *Wannias*, under the jurisdiction of our company; their churches make up, together with those of *Manaar*, no less than fourteen, and are under the inspection of the minister who resides in the isle of *Manaar*, and duly visits them once a month. This country, though it acknowledges the jurisdiction of our company, pays the usual taxes, furnishes them with elephants, &c. yet must they be mildly treated, it being their general maxims to disoblige neither *Raja Singa*, nor the company.

In the year 1658. in the beginning of *March*, (after the taking of *Manaar*, and providing it with a good garrison,) we marched into that country towards *Jafnapatnam*. *Mantotte* begins to the north of the salt-river, near the village of *Peringaly*, extending to the south along the sea-shore, as far as the river *Aripouture*, where *Mousilipatte* begins, near the village of *Aripou*, extending further southward to the mountains of *Condremale*, which face the bay, opposite to the isle of *Calpentyn*, and cross the country *Mantotte*, stretching to *Settecoulang*, six villages whereof belong to *Manaar*, six to *Jafnapatnam*, and five to *Mantotte*.

The rest of *Mantotte* and *Mousilipatte* extends to the east to the great forest, (the boundary of the country on that side.) *Mantotte* itself has sixty four villages, *Mousilipatte* twenty four, and that part of *Settecoulang* six, amounting in all to eighty four. All these countries are very fertile, especially in rice, which produces a hundred-fold crop; but the worst is, the elephants do great mischief in those parts that are not very populous.

It is very remarkable what *John de Lucena* observes in the life of *Xaverius*, viz. that on the cape *Comoryn*, and all along that

tract of the *East-Indies*, whilst it is summer and dry season on the west-side of the cape, the winter and rainy season appears on the opposite side. The same is to be observed in the isle of *Ceylon*; for whilst the winter continues about *Jafnapatnam*, the *Wannias* and *Manaar*, during the months of *October*, *November*, and *December*, it is summer in all the other parts. On the contrary, in the months of *April* and *May*, whilst it is summer about *Jafnapatnam*, which continues six or seven months, it is winter and rainy weather at *Columbo*, *Gale*, and the countries thereabouts. In the low-lands, remote from the mountainous part of *Ceylon*, there blow only two winds; but about *Columbo*, *Gale*, and some other places, you have duly a day and night wind, as upon the coast of *Coromandel*. From *April* till *October* the wind blows constantly a brisk gale from the south, with a clear air and bright sunshine; as does the north wind from *November* till *April*. In *January*, *February*, and *March*, it is generally very calm, with intolerable heat; but a dew falls in the night; which being very unwholesome, the inhabitants return with sun-set into their houses: and were it not for these dews, and the strong winds which cool the air, the heat would be unupportable here.

As we marched through the country of *Wannias*, we kept a most exact discipline; and as we had no great plenty of provisions, we allowed only a small measure of rice every day to each soldier, rather than incommode the inhabitants; and finding our forces to be extremely tired by long marches, and consequently incapable of engaging with the same advantage with the enemy, in case they should be attacked, it was resolved instead of marching up to the head of the river through the sandy ground, to pass the river in boats, though it would require near an hour and a half for every boat to pass it.

The worst was, that upon our arrival on the other side of the river, we expected the enemy ready to give us a warm reception, because we could not transport above two hundred, or at most three hundred men at once over the river, and that the bank was very muddy; for I remember that some years after two elephants passing over to the *Jafnapatnam* side, one of them stuck in the mud, and was killed by the inhabitants, nothing being more common than for the elephants to come cross the river to feed upon the fruits of the palm-trees, to come at which they trample the roots of the trees so long with their feet till they loosen, and afterwards throw them down with their bodies, and so eat the fruit.

*Baldæus.* However the first troop of our forces got over without any opposition; and no sooner had put themselves in order of battle, but received intelligence that the enemy were retreated from thence the day before, in order to expect us at the head spring of the river.

*We march towards Jafnapatnam.*

After we had transported all our forces over the river, the inhabitants treated us very civilly, and furnished us with plenty of provisions and fruits. The first place we came to was the chief church of the province of *Tenmarache*, called *Charvagatzari*; where after we had refreshed ourselves with a good dinner, we marched forward the same day with two field-pieces to *Nava-couli*, (two hours from *Jafnapatnam*,) where we encamped that night.

The next day (after morning-prayer) we marched on to the river, where we expected to meet with a vigorous opposition; but finding no resistance, we advanced by degrees towards the castle near the church of *Sundecouli*, where in the evening we had a smart skirmish with the *Portuguese*, of whom we killed many upon the spot, and posted ourselves that night round about the before-mentioned church.

The next following day we advanced to

the city; which being without any fortifications, we broke through the wall and houses; and pursuing the enemy from street to street, under the favour of our cannon, which opened us the way, we advanced towards the castle. The 9th of *March* we made ourselves masters of the jesuits church and college at the west-end of the city, and the 18th following of the church and monastery of the *Dominicans* on the east-side: which made us give publick thanks to God Almighty for his blessings, the text being the 7th verse of the 20th *Psalm*.

The enemy being thus forced to quit their houses, had no other way left than to retreat to the castle, which they did in great disorder, many of the inhabitants of the country thronging in among the *Portuguese*; so that the castle was so crowded with people that they had not room enough to dispose them to any advantage.

But the better to straiten the castle of *Jafnapatnam*, and take away from the garrison all hopes of relief, it was thought necessary to attack a certain out-work, or redoubt, built upon a small isle in the middle of the river, not far from its entrance, which it commands. This fort was built by *Antonio Amiral de Meneses*, and may justly

*Baldæus*. be called the key of *Jafnapatnam*; and if such another were made on the point of *Calmom*, no vessel could approach the castle without leave.

Accordingly we detached a good body of men to the isle of *Ourature*, in order to attack the said fort, in which at that time commanded one *Hieronimo de Paiva* with a good garrison. The isle of *Ourature* (where formerly the *Portuguese* had a castle, the ruins of which are yet to be seen) lying at some distance from this water-fort, we

were forced to raise our batteries against it *Baldæus*, upon the isle of *Caradiva*: but finding that by reason of the distance betwixt us and them, and the strength of the wall, we could make no breach in it, it was resolved to assault the place by the help of certain vessels provided with breast-works and cannon. But before we thought fit to venture at so desperate an attempt, it was resolved to send the following summons to the commander of the fort.

The fort  
Cays sum-  
moned to a  
surrender.

“ IT having pleased Almighty God to  
“ bless our arms with such success, that  
“ there is no possibility left for you to  
“ resist us, or defend yourself against our  
“ attacks: it is therefore that we have  
“ thought fit to let you know (as is usual  
“ upon such occasions) that we are come  
“ to summon the fort of *Cays*, in the name  
“ of the states-general of the *United Pro-*  
“ *vinces*, of the governors of the *East-*  
“ *India* company, and his excellency *John*  
“ *Maatzuyker* governor-general, and the  
“ council of the *Indies*; as by these pre-  
“ sents I summon the said fort, not ques-  
“ tioning but that after you have given  
“ sufficient proofs of your courage, you

“ will now consider how unable you  
“ are to resist our force. Do not there-  
“ fore obstinately resist God’s will, and  
“ our strength, since we offer you such  
“ conditions as are generally allowed to  
“ brave soldiers. But in case you will be  
“ obstinate in making trial of our strength,  
“ we protest before God and the christian  
“ world, that we are innocent of all the  
“ fatal consequences and miseries that are  
“ likely to befall you; being resolved on  
“ our side, (if God grants us victory,)  
“ to treat you after the severest manner,  
“ according to the custom of war, and  
“ not to hearken to any conditions. You  
“ have given sufficient proofs of your  
“ courage

*Baldæus.* “ courage to admiration; it is time therefore you should now act with prudence, and consult your safety. We expect your positive answer within three hours by the bearer of this, or whom your excellency shall think fit to send to us, who shall return safely upon our word and honour: subscribing my self (as you think fit) either your friend or enemy.”

From the camp,  
10 April 1658.

The admiral and general of the Dutch forces, both by sea and land.

This letter being translated into Portuguese, was sent into the fort; the commander whereof remembering the old verse,

*Fistula dulce canit, volucrum dum decipit auceps,*

sent the following answer.

*The answer thereupon.* “ THAT the fort belonging to nobody but to the king of Portugal his master, he was obliged to maintain the same for his majesty till the last drop of his blood. That he could do no more than what pleased God to permit him; but neither he nor his men were to be terrified by threats.

This bold answer made us think of nothing else but force; so that we were preparing every thing for an assault; which would have cost us many a brave fellow, had not the want of fresh water in the fort obliged them to come to a capitulation. For having no other fresh water in the fort, but what was preserved in a large wooden cistern, part whereof was taken away by the ships, that transported some women of quality with their riches from *Jafnapatnam* to *Negapatnam*, and the rest being spoiled by our bombs, they were glad to accept such articles as we were willing to give them, which however were very honourable, the soldiers being allowed to march out with all the marks of honour, and to be transported into *Europe*. The commander, who had a wife and children, was permitted to go to the *Indian* coast, or that of *Cornandel*. The 28th of *April* I preached the thanksgiving sermon for this surrender, upon the text out of the 48th *Psalms*, ver. 8. Upon this occasion captain *Cornelius Rob*, the younger, (who died two years after at *Amsterdam*,) captain *Peter Wasch*, (who was killed afterwards before *Cochin*,) and *Mr. Van der Rbeede*, gave most signal proofs of their courage. Since that time divers vaults for fresh water have been made in this fort, and in *Manaar*.

## CHAP. XLV.

*Continuation of the Siege of Jafnapatnam. Sea-fight before Goa. Divers Engagements betwixt the Dutch and Portuguese. Jafnapatnam surrendered. Some Portuguese living among the Hollanders there, plot against them: Are betrayed by a Topas. The Provinces and Churches of Jafnapatnam.*

*Strength of the castle of Jafnapatnam.* BUT it is time to return to the castle of *Jafnapatnam*, which being built upon a rock, and surrounded with a strong triple wall, seemed to defy both our mines and cannon, especially since we were not so well provided with gun-powder as we should have been; wherefore we thought it our safest way to expect that from time, which force was not likely to procure, resolving in the mean while to annoy the enemy as much as possibly we could with our bombs, which killed them abundance of men.

*The Portuguese endeavour in vain to fetch provisions.* The enemy finding themselves in a little time reduced to great straits, sent out divers boats to fetch some fresh provisions from the islands, but were always forced to return without success. Upon this oc-

caſion *Ysbrand Gotskens* born at the *Hague*, then director of the company in *Persia*, and *Barent Clebont*, then a lieutenant, ſince a captain at *Jafnapatnam*, behaved themſelves bravely, being both wounded, one near the mouth, the other in the knee.

The *Portugueſe* in the mean while living in hopes of ſuccours from *Goa*, ſent a letter by a certain *Topas* from *Trinquemale*, named *Ignatius Feras*, to their admiral; but this negro coming over to us with the letter, we ſent a good body of our beſt forces to prevent their landing, but we heard none.

On the other hand, we received the joyful news, that commodore *Adrian Kooſthaus* had, *March* 23. in an engagement with

*Baldæus.* with the *Portuguese* near *Goa*, burnt one of their biggest galleons, called the *St. Thomas*, and had so disabled the rest, that they had but little hopes left of relieving *Jafnapatnam*. For which victory we gave publick thanks to God the 26th of *May*, 1658. The text was taken out of *Exodus* xv. 9.

Several sea engagements be-twixt them.

About the same time I received a letter from the reverend *Theodoro Sas*, (since minister at *Malacca*.) then in the *Dutch* fleet before *Goa*, intimating, That the 20th of *January*, in the same year 1658. the *Portuguese* attacked us with ten galleons and some frigats: the engagement lasted till night, without any considerable damage on our side. That on the 27th and 29th of the same month, another combat ensued, without any great loss on both sides. The 3d of *February* the enemy attacked us once more; but were chased under their castle. In all these three engagements the *Dutch* had no more than nine men killed, and a few wounded. The letter was dated aboard the *Phoenix*, cruising before the bar of *Goa*, *February* 11. 1658.

Jafnapatnam surrendered.

The conditions.

In the mean while our forces having so closely surrounded the castle of *Jafnapatnam* with their lines and works, that they could not stir even with the least boat, without being taken or sunk; and being now destitute of all hopes of relief, they hung out the white flag the 21st of *June* on the south-east bastion. The capitulation was agreed upon the next following day, under these conditions: That the garrison should march out with their arms, colours flying, drums beating, &c. and take along with them one piece of cannon, and to be transported to *Europe*: the head-officers shall be civilly treated, and to be conducted to one or other of their forts, and the ecclesiasticks to the coast of *Coromandel*. All gold, silver, and other precious moveables, shall be left to the disposal of the conquerors; the inhabitants shall likewise be transported to what part of the *Indies* they like best, most of whom went afterwards by the way of *Malacca* to *Batavia*.

They march out.

Accordingly *John de Melo*, *Leonardo d'Oliveiro*, *Viador de Fazendas*, and *Antonio Mendes d'Aranba*, marched out of the castle with the rest of the head-officers, *Rodrigo Boralbo* delivering the keys at the same time to major *John van der Laan*; but they were so weak, that they did not think fit to carry along with them their piece of cannon, though they spent two whole days in marching out. A considerable number of soldiers laid down their arms and colours before the standard of the compa-

ny, as did many of the inhabitants, (a-*Baldæus.* among whom was *Caspar Figeiro*, the scourge of the *Cingalese*.) with their wives and children, negroes, forty or fifty ecclesiasticks, *Franciscans*, *Jesuits*, and *Dominicans*; notwithstanding that during the siege (which lasted three months and a half) they had lost near one thousand six hundred men by the sword and mortality.

Immediately after commodore *Peter de Bitter* was sent to *Batavia*, by the way of *Malacca*, to bring this joyful news to Mr. *John Maatzuyker* our general, and the council of the *Indies*. The 23d of *June* I preached a thanksgiving-sermon out of *Exodus* xvii. 15. which was continued every year on the same day.

When we entered the castle, we found it all battered to pieces by our bombs; and such was the stench, that for some time no body could abide there. We took care to have the springs cleared, the dung removed, the churches, houses, and walls repaired; three hundred cocoa-trees were also to be planted, and many houses that stood too near the ditch of the castle, to be broken down; and to encourage the inhabitants of the country to settle here, the custom upon tobacco was taken off, and *Jacob Rhee* our head-factor, a very understanding person, constituted, *pro tempore*, commander in chief here.

Things being thus disposed, our forces were soon after transported to the coast of *Coromandel*, in order to reduce the city of *Negapatnam*. We left but a slender garrison at *Jafnapatnam*, composed for the most part of *Portuguese*, who had taken service among us; besides which there was a considerable number of prisoners in the castle.

These, in conjunction with some of the natives, (not without the consent of *Rajou Singa*.) framed a plot against us. Their design was to murder all the officers in the castle, whilst I was preaching in *Portuguese* in the city; which done, certain persons of their gang should attack and kill the guard, and thus to make themselves masters of the castle.

It happened by accident, That whilst I was preaching, *Don Manoel Andrado*, one of our *Cingalese* captains and *Modeliar*, coming with eighteen of his followers (who generally attended him) to the church, remained in the porch, where he could hear as well as within the church. He was not a little surpriz'd (as he himself told me afterwards) to see the *Portuguese* remain standing likewise without the church door, and laying their hands upon their swords; yet not being able to guess the true reason thereof, this treachery was not discovered

*Baldæus*, discovered till some days after, when the whole design being laid open to Mr. *Jacob Van der Rbee*, he took care to double the guards, to shut the castle gates, and to secure all such as had a hand in the plot. The next thing was to send for me by a letter, (I being then visiting the churches in the country.) Upon the receipt whereof I returned immediately to the castle; where with great astonishment I had an account given me of the whole design; how it had been discovered; and the traitors secured: for which delivery I preached a solemn thanksgiving-sermon in *Low-Dutch* the 15th of *September*,

1658. out of the book of *Esther*, Chap. ix. *Baldæus*, 20, -- 24.

Not long after most of the traitors having confessed their crimes, some were condemned to be hanged, others to be beheaded, and some to be laid upon the wheel. The three chief heads of this conspiracy, were a certain inhabitant of *Manaar*, one *Don Louys*, and another *Portuguese*: these three were laid upon the wheel, or a cross; and after they had received a stroke with the ax in the neck and on the breast, had their entrails taken out, and the heart laid upon the mouth.

A certain jesuit, named *Caldero*, a native of *Malacca*, was beheaded. This unfortunate person being prevented by sickness from going along with the rest of the *Portuguese* clergymen, had not been concerned in this treacherous design, much less given his consent to it: but some of the traitors having given notice thereof to him by letters, wherein they stiled him the *Father of their souls*, he was unwilling to betray his countrymen, for which he paid now with his head: eleven more were hanged, and afterwards exposed in the open country on trees; but the heads of

the ringleaders were fixed upon poles in the market-place.

The castle of *Jafnapatnam* is of a quadrangular figure, and strongly fortified with very high and thick walls. It is bigger in circuit than the castle of *Batavia*, being the capital city of the whole kingdom. *Philippo de Olivero*, after having defeated the *Cingalese* near *Achiavel*, *The Portu-* *li*, not far from the great pagode, (the *guese con-* *ruins* whereof are to be seen to this day,) *quer Jat-* *napatnam.* Hard by this pagode is to be seen a most *A miracu-* *miraculous spring*, twenty four rods in *lous spring.* circum-

*Baldæus*. Father, the Son, and the Holy Ghost? and being answered *Yes*, he reply'd, *That thus Jesus Christ was baptized in his own name; which he could not well comprehend.* I told him, there was not the least absurdity in the matter, since *Jesus Christ* was not baptized upon his own account, or as God alone, nor as a bare man, but as being endowed both with the divine and human nature. That the *Son of God* could not be baptized otherwise but in the name of God; and that under the word God, was not only comprehended the father, but also the son and holy ghost: that *Jesus Christ* was the same in essence with the father and the holy ghost; and that there were no degrees in the deity; for though the father was the first, yet were the son as well and truly God as the father and holy ghost: wherewith he was well satisfied. For the *Indians* being generally very ingenious, they will ask many acute questions, as concerning the *creation and end of the world, the immortality of the soul, hell,* and such like.

Theatres  
near the  
churches.

Most of the churches here have certain scaffolds or theatres near them, especially that of *Telipole*, where the jesuits used to represent certain histories of the bible to the people on holidays.

The church  
Mallagam.

About half an hour thence stands the church *Mallagam*, of good brick-work, with an adjacent house built upon two arches, and a handsome pair of stairs leading to the top of it. The church was begun by the *Portuguese*; but finished by the *Dutch*. It has two hundred school-boys; but not above six hundred auditors.

The church  
Mayletti.

The church *Mayletti* is about five quarters of an hour from *Telipole*. Here are seven hundred fifty school-boys, all taught by one master, who has more work than the two at *Telipole*: the auditors of this church amount to one thousand five hundred, or one thousand six hundred. The church is a large structure of stone: the house belonging to it is lofty, with a balcony on the top of it, affording a very fine prospect into the main sea; so that it may well deserve the name of *Belle videre*. The church is not above half a mile from the sea-side. They abound here in fish, such

J

as crabs, soles, plaice, &c. as likewise in *Baldæus*, hares and partridges.

The church *Achiavelli* lies about two hours from *Telipole*: it is a large and lofty structure built of stone, capable of containing two thousand persons; it was not finished till in our time. The village lies extremely pleasant among the woods, stored with vast quantities of turtle-doves, which coo at certain hours three times a day, and serve the inhabitants instead of a clock, to know the time of the day. They have also plenty of hares, stags, and wild-boars; but are also annoyed by the serpents.

As divers old *Brabmans* live in this place, so were the inhabitants not so forward in embracing the christian religion; the antient *Brabman*, named *Philippo*, does not want the knowledge of the fundamentals of our religion; but is more inclined to the historical, than the doctrinal part. Among others there lived here a certain *Brabman*, a learned person, with whom I used to have frequent conversation, whilst I lived at *Achiavelli*: he was baptized at last in the 46th year of his age, and afterwards writ the *History of the Life and Passion of our Saviour*, in a lofty poetical stile, in the *Latin Malabar*, called *Hanscreeet*, which is quite different from the common *Malabar* characters. The school here has about four or five hundred boys, and the church seven or eight or nine hundred auditors.

About an hour from *Telipole* stands the church *Ondewil*, in a great plain, with an adjacent large stone-house, formerly the habitation of a *Franciscan* fryar. The soil is very luscious here, and fertile in rice, *Naceny*, and other eatables. The school-boys amount to six hundred, and the auditors to nine hundred or one thousand.

Two hours distant from the castle is the church *Batecotte*, with a lofty adjacent house, flat on the top, and adorned with a pleasant garden, well stored with trees; the fields round about it are extremely fruitful. It is seated near the *Salt River*, and abounds in fish and all manner of other provisions. Of school-boys they have here about eight or nine hundred, and of auditors in the church near two thousand.

*The Church House*

*The Church*

Oudewil .

*The Church*

*The Church House*

*Baldæus.* About half an hour from *Batecotte* is the church *Paneteripou*, a neat and magnificent edifice of stone, with a pleasant house near it built upon arches, with two spacious rooms and a gallery, fine gardens, and a delicious fish-pond, or cistern. The school is frequented by six hundred boys, who in my time had made such considerable progress, that they could refute the popish errors concerning purgatory, the mass, indulgences, auricular confession, &c. Mr. *Andrew* the school-master, and his usher, being persons very diligent in their stations. The inhabitants are very devout here, and at sermon-time seldom less than twelve or thirteen hundred come to church.

*The church Changane.* The church *Changane* is not above a good mile from *Paneteripou*, lying with this and *Batecotte* in a triangle, almost at an equal distance from one another. Both the church and adjacent house are built of stone, as is also *Paneteripou*: they are very conveniently built with a court before, surrounded by a brick wall; behind is an orchard of *Cocoe* and *Portuguese* fig-trees, besides *Potatoes*, *Bananoes*, &c. The school is frequented by seven hundred boys, who are carefully instructed by their school-master

named *Ambrosio*. The inhabitants flock to church with so much zeal, that there is scarce room to contain them all.

Two hours from *Jafnapatnam*, and one from *Changane*, stands the church *Manipay*. About five hundred sixty children are educated in this school. It is scarce to be imagined, that at so small a distance there should be so great a difference betwixt the people, the inhabitants here being a malicious generation, superstitious, and still much inclined to paganism. The church is big enough to contain two thousand souls, but seldom above seven or eight hundred come to hear the sermons. The house is built only of clay, and covered with palm-tree leaves. Just before the church is a fine pond or cistern with fresh water, near which stood formerly one of their *Pagodas*. This place is inhabited by several of the family of *Madapoli*, who were concerned in the plot (lately mentioned) with *Don Louys*.

The church *Vanarponne* stands just under the castle of *Jafnapatnam*, most inhabited by washers, *Vanar* signifying as much as a washer in the *Malabar*. It is not very big, nor has a house belonging to it. The school-boys amount to two hundred,

*Baldæus.* and the auditors in the church to about five or six hundred souls.

*The church Nalour.*

Just by *Vanarpone* is the church *Nalour*, built only of clay, and slenderly covered. Here also stood formerly a *Pagode*. The school is frequented by about five hundred and ninety children, who are not so well versed in the points of the christian religion as most of the rest, the people here retaining still a strong inclination to paganism, especially since some years ago a-

bout an hundred printers of callicoës were *Baldæus.* transplanted hither from the coast of *Coromandel*, to the no small prejudice of the christian religion, though the company were no great gainers by it; since it is evident, that for want of good water at *Jafnapatnam*, the same cannot be brought to their true perfection, and therefore are much better bought and transported, from the coast of *Coromandel*.

This is certain, that this generation is very mischievous to the christians here, it being frequent to see them appear in publick painted with *Cinza*, or ashes, (accounted holy among them,) and to carry their beads; besides that, the *Moors* have their publick schools allowed them of late years. I must confess that whilst *Mr. Anthony Pavilioen* (at the time of my being there) was governor of *Jafnapatnam*, he did all in him lay to assist me (at my request) in stopping the progress of the pagan superstitions, and was not well pleased to see the callico printers introduced here, it being (not without reason) to be feared that in time they may (by promiscuous marriages) increase to such a number as may endanger

both the church and state, especially if they are allowed the burning of their dead, and some other pagan ceremonies they much insist upon.

It is further to be feared, that in time there may be a promiscuous copulation betwixt the christians and pagans, which must needs produce direful effects in the church. It may be objected, that severe punishments will put a stop to that evil, (some having already been punished with death upon that account;) but this does not altogether removed the danger: besides that, it ought to be considered whether such a severity be consonant to the word of God, or not.

*Baldæus.* The last church, not far from the city, is called *Sundecouli*, belonging to the *Civias*, or chairmen and water-carriers. The church is a neat structure; but the inhabitants an idle and base generation. About four hundred and fifty children belong to the school; but seldom frequent it, because

*The church Sundecouli.*

they generally go abroad a fishing with their parents. Seldom above four hundred come to church; whereas there are about fifteen hundred inhabitants. It is a pleasant place, deliciously seated among trees of a considerable bigness. Thus far we have spoken of the province *Belligamme*,

*Baldæus.*

and its churches, unto which belong likewise *Copay* and *Pontour*, containing about eight hundred school-boys, and two thousand souls. The children in these schools are distinguished into several forms, according to their respective degrees of proficiency; so that those who have learned

(for instance) the *Creed* and *Our Father*, teach those that scarce know to say *Our Father*. Among these boys, they have some they call *Merimbos*, who take an account of such as are absent, and return them to the master, or the head *Merimbo*.

CHAP. XLVI.

*The second, third, and fourth Provinces, with their respective Churches, belonging to Jafnapatnam. The Isles of Jafnapatnam. Vast Number of Christians. The Author's Zeal in promoting the Christian Religion.*

**T**HE second province of *Jafnapatnam* is *Tenmarache*, which contains five churches, with the villages thereunto belonging. The first is the church *Navacouli*, seated in a pleasant plain, abounding

*The church Navacouli.*

in cattle and fruit, as the woods afford great store of apes and monkeys, and all sorts of venison and wild fowl. Both the church and adjacent house are only of clay, and covered with palm leaves. The school

J

is

*Baldæus.* is frequented by four hundred children, and the church by seven or eight hundred auditors.

The church of Chavagatzery.

An hour from *Navacouli* stands the church of *Chavagatzery*, the biggest of the whole province, and the adjacent house very strong and well-built, having a pleasant prospect towards the sea, with fine gardens, well stored with all sorts of *Indian* fruits: they abound in fish, for they

live upon husbandry and fishing. The *Baldæus.* school is frequented by a thousand children, who are instructed by two masters and an usher, and the church by betwixt two and three thousand souls.

The church *Cathay* is an hour from *Chavagatzery*, through sandy and difficult ways, but full of ponds stored with wild ducks; besides which they abound in snipes, hems, *Indian* ravens, and all sorts

The church of Cathay.

of small birds. The church and house are only of clay, and covered with leaves, like that of *Navacouli*. The school has five hundred and fifty children, and the church eleven or twelve hundred auditors.

The church Waranni.

Betwixt *Cathay* and the church *Waranni* are sandy and difficult ways. The church stands in the midst of a small wood of areek, coco, palm, banano's, mango's,

cajou, and guiavo-trees. This place affords, besides the ordinary melons, the most delicious water-melons in the *Indies*. The church is but slenderly built, and inclosed with a wall of earth, as is likewise the house; yet has it divers spacious apartments, and a handsome entrance. The school has about eight hundred children, and the church two thousand five hundred auditors.

C

The

Poutour

Chavagatzeri

Illondi Matual

Catavelli

*Baldæus.* The last church of *Tenmarache* is that of *Illondi Matual*, unto which belongs the village of *Nagar Kojel*, famous for a large pagode that stood there formerly. The church is only of clay; but the adjacent house of stone, unto which you ascend by steps: it has three large apartments, a neat entrance, and a fair prospect. Hereabouts are great numbers of peacocks; and sometimes they see some elephants in this tract of land. The company also maintains here some tame elephants, as in divers other places, they being separated at some distance for the better conveniency of their fodder. Unto this school belong about six hundred and fifty children, and to the church eleven or twelve hundred auditors.

*The province Waddemarache.* The third province is called *Waddemarache*, having only three churches. It affords such plenty of pasture, of cows, sheep, goats, fowl, pigeons, and partridges, that you may buy a sheep for eight pence or ten pence, sixty eggs for three pence, and four good pullets for a fanam, or five pence.

*The church Catavelli.* The first church is called *Catavelli*: the church and adjacent house are both of brick, the last having a summer-house on

the top of it, from whence you have a delightful prospect into the plain. The school has six hundred children, and the church ten or twelve hundred auditors.

The second church is *Ureputti*; the village is inhabited by a set of vagabonds and thieves, of the family of the *Nalloas*, not much inclined to religion. The school is frequented by six hundred and ninety children, and the church by eight or nine hundred auditors, less or more. The children are taught here to make their letters in the sand.

The church *Paretiture* is the finest and largest of this province, called by the Portuguese *Punta das Pedras*, or the *Rocky Point*. *Paretiture*, signifies in the *Malabar* tongue, as much as *Cotton's Harbour*, from the great quantity of cotton that grows thereabouts on small trees. Not long ago, whilst we were engaged in war with the *English*, a fort was ordered to be erected here. During the war with *Portugal* the *Dutch* carried off from hence one of their priests, and plundered *Manaar* at the same time. Hereabouts also happened a smart engagement betwixt the Portuguese and us, wherein we were hard put to it, *A smart skirmish betwixt the Portuguese and Dutch in this place.*

Baldæus. and lost, among others, captain *John Hooghsaten*. During the siege of *Jafnapatnam*, the *Portuguese* expected the landing of their succours in this place.

A good road.

The road is so good here, that ships may ride safe at anchor for seven or eight months; but they must take care to depart before the northern *Mousson*, which renders this shore very dangerous: so soon as any ships are discovered at sea, a flag

is put out on a long pole for their direction. The church was much decay'd, but has been repaired of late. Just before the church stands a tall tamerind tree, which affording a very agreeable shadow in the heat of the day, the people are often instructed by the minister, to the number of three thousand. The school has about one thousand children.

Great numbers of christians at the retirement

A Large Tamerind tree under the shade whereof they frequently hear Sermons.

The last and furthestmost province is called *Patchiarapalle*, which has four churches, and as many schools. This province is very sandy and unwholesome, wants good water, and is much infested by the elephants, by reason of the vast quantity of wild palm trees that grow here, and afford food to the poorer sort of inhabitants, though the elephants throw down some hundreds every year, being very greedy after the fruit when it comes to maturity. At a certain season of the year the children are seized here with a certain swelling in the belly and groin, which sweeps away a good number of them. They are also afflicted with certain fevers, (like those of *Manaar*,) which regulate their fits according to the moon,

The province of Patchiarapalle unwholesome.

and kill in a little time. The itch and small-pox, are also very common here: The inhabitants being very poor, and feeding most generally upon unwholesome diet, such as dried fish, pounates, kelenges, and a little rice. As this province borders upon *Raja Singa's* country, so they are subject to the incursions of the *Cingalese*, which is the reason that the house belonging to the church of *Poelepolay* (the first in this province) is surrounded with a high wall, with port-holes in the nature of a redoubt. The school has about three hundred children, and the church six hundred auditors. Here are certain women who have a way to play upon earthen vessels, or mugs, (called *Callang*;) by blowing into them, as into a trumpet.

The church Poelepolay.

This

LIBRARY  
H. S. P. S.  
1810

The Elephants throwing down y Palm trees

*Baldæus.* This province affords a kind of wood, called *Jager's-Wood*, (or *Hunter's-Wood*;) which for its goodness is transported to the coast of *Coromandel*.

*The church Mogommale.* Two good hours from *Poelepolay* stands the church of *Mogommale*, in a wood, with an adjacent house, both well built; the school has about four hundred and fifty children, and the church nine hundred auditors.

*The church Tambamme.* The church *Tambamme* is the largest and best seated in the whole province. The school has five hundred children, and the church nine hundred auditors.

*The church Mulipatto.* *Mulipatto* is the last church, about a day's journey from *Jafnapatnam*, near the head of the river, called *Passo Seco*, or the *Dry Passage*, where we have a *Palenka* guarded with some soldiers. The church-house is provided with port-holes for its defence; but the church is mean and small. The school has no more than two hundred and fifteen children, and the church scarce three hundred and fifty auditors.

Thus far of *Jafnapatnam*, and its provinces, churches, and schools: we will now pass over into the adjacent isles, which are fix a number.

The first of these isles is *Ourature*, which *Baldæus.* has three churches, viz. *Aleputti*, *Welande*, and *St. John*, or *Ourature*; all which have together about eight hundred school-boys, and two thousand six hundred auditors. This isle has been subject to great floods both before and in the time of the *Portuguese*, to such a degree, that the people were forced to save themselves on the tops of the trees. Of this we saw an instance in the year 1658. when a most furious tempest, accompanied by a hurricane, raised the waters beyond the shore to such a height, that it broke into the water-gate of the castle, throwing down every thing that stood in the way; the tiles were all blown from the houses, the trees tore up by the roots, and unspeakable damage done, both to men and cattle. After the fury of the tempest was somewhat allayed, several fishes were taken in the church-porch, which had been carried along with the water over the curtain. This isle has plenty of fish and stags: it produces also a certain small root, called *Saye*, used by the dyers to dye red cloths. They make also very good butter here, and have store of larks, and some sea-gulls.

*Ourature the first isle of Jafnapatnam.* An instance of a flood.

The products of this isle.

*Baldæus.* The isle of *Ourature* and *Caradiva* are separated by the river; in the midst whereof lies the fort *Cays*, (or *Ham's-Heel*,) of which we have spoken before. From this isle the elephants are embarked by means of a bridge, and transported to *Coromandel* and *Bengale*. This isle is supposed to produce the best *Saye* in the *Indies*.

It has a well-built church and house belonging to it of stone: the church was finished in my time, as was that of *Ourature*, which was set on fire by the *Portuguese*. The school is frequented by four hundred and ninety children, and the church by ten or eleven hundred persons.

*The Desert Island.* Somewhat further into the sea to the right, as you sail to the isle *Pongardiva*, lies a little island called *Ilba Deserta*, i. e. the *Desert Island*, by the *Portuguese*. This isle, as well as that of *Carativa*, abounds in serpents, and furnishes our ships with fuel.

*Pongardiva.* *Pongardiva* is a large isle; but the ground being rocky, produces but little for the sustenance of mankind, except stags, hares, and peacocks, in great quantities; they abound also in fish, and especially in large oysters, which are better to stew than to be eaten raw. The men are generally much taller here than in any other part of the *Indies*. The school has two hundred children, and the church eight hundred auditors.

*Analativa, or D. Clara.* The isle *Analativa* is small, but produces vast plenty of oysters. The inha-

bitants of both sexes amount to about eight hundred, and two hundred children. It has a little church and convenient house near it. It was formerly called *Donna Clara*, from a certain lady that lived there, and was mistress of it in the time of the *Portuguese*. They still shew there a chair wherein she used to sit, which is big enough to hold conveniently two persons at once.

The island *Nainativa* has got its name *Nainativa*, from the great number of *Jacks* that are found there; of which more anon. It is very small, and inhabited by *Brahmans* turned christians, who lead very sober lives. The school has seventy children, and the church three hundred auditors. The church is very small, yet has an adjacent house fit to lodge strangers in.

Nindundiva

*The Catching of Horses in Casnapatnam.*

*Baldæus*. *Nindundiva*, or the *Long Isle*, from its length, which is about six leagues, is called *Ilha das Vacas*, i. e. the *Cow Island*, by the *Portuguese*, because abundance of cattle are transported thither from *Tonday*, which makes cattle so cheap there, that you may buy a good cow for four *Dutch* shillings, (or half a rixdollar;) but their oxen and cows are not near so big as those on the continent of *Jafnapatnam*. Oftentimes a mortality happens among the cattle, because the ground being hot and dry, produces divers venomous herbs, which they feed upon. The inhabitants are very poor, and live upon miserable diet: I remember that being once eight days in this isle, I and my company could scarce get provisions for our sustenance. The isle is of difficult access, because the shore is rocky, and has no bays, but only a few narrow creeks, where there is no coming in except in very calm weather; otherwise the sea beats with such violence against the rocks, that there is no coming near them, though there be sometimes five or six fathom water. For which reason there is no coming at it except in the calm seasons, which happen twice a year at the change of the *Moussons*: For the south-wind forces you upon the rocks, and with the north-wind the shore is too shallow to approach it. The *Portuguese* had formerly a fort here; the ruins whereof are to be seen to this day. They also brought some horses into this isle; which multiplying, in time produced a certain kind of horses that are very small, but hardy, and very fit to travel on stony and rocky grounds: They live in the wilderness, and are taken by forcing them unto the bank of a river or pond, where they catch them in snares or ropes. This isle produces also a certain kind of goats, out of which they take bezoar-stones; but they are none of the best. It has about nine hundred inhabitants, and one hundred and seventy children.

*A remarkable spring.* It is very remarkable that there is no fresh water in all this isle, except what is found in one place among the rocks, being above half a mile in circuit. If we may credit the inhabitants, these rocks were split by a thunderbolt, which occasioned these springs, some whereof have not above half a foot, others a foot deep water: the entire rocks arising betwixt these springs, have often cast men and beasts down the precipices.

There are some other islands near this shore; but being very small and not inhabited, (as the *Paletiva*, and the two brothers, since called *Hoorn* and *Enchuyesen*.) are not worth our particular observation.

VOL. III.

In the year 1663. I and my colleague, *Baldæus*. Mr. *John à Breyl*, sent the following account to Mr. *Maatzuyker*, general of the *Indies* for our company, viz. that in *Jafnapatnam* were at that time fifteen thousand and twelve children under the tuition of the respective school-masters there, being all natives, not reckoning those of *Manaar* and the country of the *Wannias*, *Christians* where, in my visitation 1665. in *March* in the *Wannias* and *April*, I found in those of *Poenery*, *Polveraicatti*, to *Peringale*, *Mantotte*, *Natam*, and *Aripou*, all churches belonging to the *Wannias*, and in the churches of *Manaar*, viz. *Totavalli*, *Karsel*, *Irkelpatti*, *Tellemanaar*, *Peixale*, the fishers and city churches, one thousand three hundred and fifteen children of the natives. Such as were come to age of maturity amounted in the *Wannias* to four thousand five hundred and thirty three; and in the isle of *Manaar*, to three thousand five hundred and twenty, not including two hundred and fourteen slaves lately converted, who had already learned certain forms of prayers. According to the church-registers, (called here *Patolas*,) in the year one thousand six hundred sixty three, there were of christian men and women in the kingdom of *Jafnapatnam* sixty-two thousand five hundred and fifty eight, not including the slaves, whereof there were two thousand five hundred and eighty seven: the number of the baptized children from 1658, till 1661, viz. in three years and a half, in the church of *Jafnapatnam*, amounted to five thousand seven hundred and ninety nine children, and thirty six that were come to age of maturity. During that time were married two thousand one hundred and fifty eight couples, not reckoning those baptized and married in the *Low-Dutch* and *Portuguese* churches. At the time of my departure the number of the children in the schools was risen to eighteen thousand, and that of the baptized children in 1663, to twelve thousand three hundred eighty seven. From the year 1651, till 1661. the whole burden of visiting all the before-mentioned churches lay upon my shoulders, till Mr. *Breyl* was joined with me; who dying in his return to *Holland* (his corps being interred at the *Cape of Good-Hope*) 1665. Mr. *Bartholomew Heyne* succeeded in his place.

In the churches of *Jafnapatnam* the ten commandments, written in large *Malabar* characters, are hung up on a table, on both sides whereof are the *Our Father*, and the *Creed*. Every Sunday the people come to church about ten a clock, and after they have sung a psalm, the school-master reads a sermon in the *Malabar* language.

9 A guage,

*Baldæus*. guage; for which purpose a certain number of sermons are allotted to each church, to be read in the absence of the minister. This done they conclude with singing another psalm.

But the greatest trouble that belongs to a minister in these parts, is the instruction to be given both to young and old by way of question and answer, which makes the deepest impression into the minds of these tender christians. Besides, as the *Malabar* tongue is so difficult to attain to, that none of our ministers dare pretend to the perfection of it; so on the other hand, they may learn without much trouble, as much as is requisite for the instructing them in the main points of our religion. Add

The Dutch ministers in the Indies undergo more difficulties than the Romanists.

to this, that our ministers undergo much more fatigue in their stations than the *Romish* ecclesiasticks, who preach very seldom, and each church having its peculiar attendant, they are not obliged to travel from place to place as we do. Besides that, they bring the *Portuguese* language commonly along with them, which ours are forced to learn upon the spot, not without great difficulty; not to mention several other disadvantages on our side, sufficient to convince those who extol the merits of the *Romish* clergy upon that score, and vilify ours: these I would have considered, that at this time there are no more than two or three ministers belonging to all these churches, which had no less than forty in the time of the *Portuguese*; and we have three sermons every Sunday, and one in the week; besides the constant visitations of the churches in the country.

Before my departure, I took care to have the next following pieces translated (the same being revised by me before) out of the *Portuguese* into the *Malabar*, by *Francis de Fonseca*, a member of the reformed churches.

“ The gospel of *St. Matthew*: the lesser catechism: instructions for communicants: questions and answers out of the new testament: short questions and answers concerning the chief matters contained in the old testament. [This was not quite perfected at the time of my departure.] “ Consolations for the sick: formulary of baptism, both for children and others: morning and evening prayers; as also devotions to be used both before and after sermons, and before and after meals: prayers for rain and a fruitful season: thanksgivings on account of victories obtained against our enemies: prayers to be used in the army before an

engagement: prayers for criminals before execution: formulary and prayers of marriage: some psalms of *David* set in metre after the *Malabar* fashion: some sermons, viz. upon the nativity of christ, upon his passion, and death, resurrection and ascension; upon the sending of the holy ghost, the circumcision of our saviour, the history of the wise men of the east, the resurrection and day of last judgment; upon charity due from one christian to another, out of *Luke x. Who is our neighbour?* the rejoicing of the angels in heaven for the conversion of a sinner; upon the question of the pharisees, *Matthew xii. 38.* and such like.

I had abundance of other sermons by me in the *Portuguese* language; but for want of a good interpreter (whom I mentioned before having his hands full with the rest) the same was fain to be deferred till another opportunity; though at the same time I never thought it convenient to overcharge these people with many books, pursuant to the opinion of Mr. *John Maatzuyker* our general, in his letter sent to me from *Batavia*, September 18, 1662.

I could not without an extreme satisfaction understand the happy condition of the churches in *Jafnapatnam*, and the effects of your industry. God almighty bless your endeavours and zeal to the honour of his holy name, and the salvation of many thousand souls. Being in great want of books for the churches and schools of this country, it is impossible to gratify your desire, especially since many of these books are very ill managed by some people. I hope you are pretty well provided by this time, but that your good intentions may not be disappointed for want of them. Though in my opinion reading and writing are things not so absolutely necessary for the edification of these poor wretches, as that they may be instructed in the fundamentals of religion, which consists in few points. For in case we pretend to propagate christianity by reading and writing, I am afraid it will prove both tedious and chargeable to the company. To promote this holy work we have sent three ministers; whereof two are gone with the ships to *Malabar*, and the third is lately arrived with the yacht the *Achilles*: they are all three young men, and not long ago came from *Holland*, and consequently most likely to do considerable service for a long time, provided

Baldæus. “ ded they are indued with due zeal, as  
 “ I hope they are for the benefit of the  
 “ ifle of *Ceylon*, and the places thereunto  
 “ belonging. We have alfo ſent a miniſter  
 “ to *Negapatnam*. So recommending

“ you to the proteccion of Almighty God, *Baldæus*,  
 “ I reſt,

Your affectionate Friend,

From the Caſtle  
 of *Batavia*, 18.  
 Sept. 1662.

John Maatzuyker.

CHAP. XLVII.

The Nature and Qualifications of the Inhabitants of *Jafnapatnam*.  
 The *Bellales*; and their Manner of living. The *Brahmans*: Their  
 Doctrines ſhewn and refuted.

Qualifications of the inhabitants of *Jafnapatnam*.  
 IT is time to ſay ſomething of the inhabitants of *Jafnapatnam*; which done, we will return to *Batecalo*, and ſo leaving the ifle, we will turn ourſelves another way.

In *Ceylon* are divers clans, or families, as well as on the coaſt of *Coromandel*. The

generation of the *Bellales* is the chiefſt here, ſince chriſtianity has been introduced, the *Brahmans* challenging the firſt rank among the pagans.

The *Bellales* wear a kind of garment *The habits* from above the navel, turning betwixt the legs like a pair of drawers. They alſo *of the Bellales*.

make uſe of *Seripous* (or ſoles) tied to the bottom of the feet with leather ſtraps, the upper part of the feet being bare to prevent their ſweating. Upon the belly they have a kind of a bag, (called *Maddi*;) being part of their garment rolled together,

wherein they keep their *Areek* and *Betel*, and ſome paper to make uſe of upon occaſion. On the right ſide they carry a kind of a knife in a ſheath, and an iron pen pointed with ſilver, as is likewiſe the ſheath, in which they keep alſo a piece of ſteel

*Baldæus.* steel to sharpen their knife upon. They make holes in their ears from their infancy; which being adorned with golden pendants, draw them down to their shoulders. They live upon husbandry, and are rich in cattle, such as cows, oxen for the plow, sheep, goats, and bufflers. Their habitations are both convenient and neat, with pleasant gardens, well planted with *Betel*, and furnished with excellent springs, which

*Are rich in cattle.*

furnish them (during the dry summer-season) with water for the watering of the gardens. Their harvest is in *January* and *February*; their winter or rainy season being in *November* and *December*. In some places, viz. in the low marshy grounds, they have harvest twice a year: they thresh their corn (after the manner of the *Israelites*) with oxen not muffled: these tread the seed out of the ears.

*Their manner of threshing the corn.*

*Great rains.*

During the rainy season it rains with such violence, that the fields are all overflowed; and I remember, that in my time a considerable part of the *Cortin* of the castle was washed away by the rains. This continues for two months; and it happens oftentimes, that for eight months after it rains not above three times, which is the reason that they are obliged even to water the coco-trees till they are six years old. If you dig about two foot deep you meet with rocky ground; so that if you will have a spring, you must cut them out of the rocks with vast charge.

*The ground rocky.*

*Their way of making butter.*

The before-mentioned *Bellales* make likewise butter; but not after the same manner as we do in *Holland*. They take a kind of a mill made like a star at the bottom: this they roll betwixt both hands

(as we do with our chocolate) till the butter comes. Some of our *Dutch* women make also good cheese; but it is not regarded among the inhabitants; but butter is in great esteem among them, as well as among the *Moors*, nay, the family of *Commety* use butter like drink. Milk turned to curds (called by them *Tayr*) is also in great request with them, and used like a cooling medicine in fevers, and the small-pox, which are very frequent here.

Their cattle they keep both day and night in the field; though towards night they drive them into a certain inclosure: they are never housed in the winter, but feed in the grounds where the corn first sprouts forth, and afterwards are fed with hay till harvest-time. If the cattle happen to break into a neighbour's field, the owner

*How they manage their cattle.*

*Baldæus.* owner is obliged to make good the damage. The *Bellales* are generally the richest of the country: they do not marry except in their own family, and commonly in the spring, as the *Romans* did formerly in *May*, and the *Persians* in the spring. If it happens to be a fruitful year, they are the more inclined to marry: they are very litigious, and will go to law for a trifle, because they are constantly envious at one another.

Are litigious.

The Brah-  
mans.

The *Brahmans* living in *Jafnapatnam*, or any other part of the *Indies*, are for the most part men of great morality, sober, clean, industrious, civil, obliging, and very moderate both in eating and drinking: they use no strong liquors, wash or bathe twice a day, eat nothing that has had, or may have life, yet are much addicted (like all the rest of the *Indians*) to pleasure. Notwithstanding they are christians, they carry still certain beads, and (as *Rogerius* observes, fol. 71.) like those of *Coromandel*, never marry out of their families, but frequently their brothers and sisters children; though else they are great enemies to incest, but excuse this near alliance by the great value they put upon their generation, which they deduce from

VOL. III.

*Bramma*, and some learned men from *Baldæus*, *Abram* and *Ketura*, whose children, according to *Gen. xxv. 6.* went into the eastern country.

From whence descended.

Though they bear the name of christians, and know how to discourse rationally of the ten commandments, and the other points of the christian doctrine, they still retain many of their pagan superstitions. If you tell them of the christian liberty in victuals and drinks, they reply, That they are not ignorant of it; but as the essence of christianity does not consist in eating and drinking, so they did not think themselves obliged to feed upon such things as are contrary to their nature and education, being from their infancy used to much tenderer food, which agrees best with their constitution, and makes them generally live to a great age.

Retain some pagan superstition.

Their reasons for it.

They are not ignorant in the course of the stars, in calculating the eclipses of the sun and moon; know the seven stars, which they call *Arramien*, i. e. *Six-Fishes*, because, say they, we see no more than six. They understand also the names of the planets, and chiefest of the fixed stars; but this must be understood from the most learned among them.

9 B

Though

*Baldæus.* Though we shall treat in particular here-  
after of the errors of the pagans, yet can I  
not pass by here in silence, what I have ob-  
served myself concerning their opinion of  
the creation of the world, its age, and trans-  
migration of the soul. In the year 1665.  
after I had catechized the people after ser-  
mon in the church of *Paretiture*, happen-  
ing to discourse concerning the creation and  
age of the world, some of the *Indians* af-  
firmed, That the world had stood four  
thousand eight hundred and sixty four  
years since their *Kaligam*, or fourth pe-  
riod: for they have four periods; the  
first called *Creitagam*, the second *Treita-*  
*gam*, the third *Dwaparugam*, and the  
fourth *Kaligam*. And whereas the *Indians*  
in *Coromandel* did, in the year 1639. com-  
pute no more than four thousand seven hun-  
dred and thirty nine years since the creation  
of the world, I told them, That they fol-  
lowed the footsteps of the *Chinese*, who in  
their computations made no great account  
of one hundred years less, or more;  
which made them smile. I told them  
further, That there was no certain compu-  
tation from the beginning of the world,  
except what was founded upon the holy scrip-  
ture; and that in the year 1665. (accord-  
ing to the *Jewish* computation,) the world  
had stood five thousand four hundred and  
twenty five years. Concerning the origin  
of the soul, I found them of the same opi-  
nion with the great *Rabbi*, viz. That all  
souls were created in the beginning, and kept  
till they were to be communicated to certain  
bodies. Unto which they have added the  
*Pythagorean* tradition of the transmigration  
of the soul.

Their be-  
lief concern-  
ing the be-  
ginning of  
the world.

Their be-  
lief con-  
cerning the  
beginning  
of the soul.

I remember that at a certain time, as I  
was walking with some of them, and en-  
deavouring to refute this opinion, they  
objected that it was impossible for a child  
to be born blind, dumb, or lame, with-  
out having received a soul that had been  
guilty of very gross sins. For, said they,  
since the child has not committed any sins,  
and God does not punish any body with-  
out sinning, this must be attributed to the  
sins committed by the soul whilst yet in an-  
other body, and now entered into the  
child. Unto which I reply'd in our fa-  
vour's words, out of *Jobn* ix. 1. when  
his disciples asked him concerning the  
blind man from his birth, *Neither had this  
man sinned, nor his parents, but that the  
works of God should be manifest in him.*  
Whence it seems that the *Jews* were some-  
what infected with this tradition, mention  
whereof is also made by *Joseph. Antiq.* l. 18.  
c. 11. and *De Bello Judaico*, l. 2. c. 8.  
The words of *Herod*, *Mat.* xiv. 2. when  
he says concerning Christ, *This is John the*

Error a-  
mong the  
Jews, con-  
cerning the  
transmi-  
gration of  
the soul.

*Baptist*, he is risen from the dead, intimate *Baldæus*  
the same; as likewise what the *Jews* said  
concerning Christ, *Mat.* xvi. 13, 14. some  
that he was *John the Baptist*, some *Elias*,  
and others *Jeremiab*. Hence *Elias*, (com-  
monly called *Levita*,) in his book *Tisbi*,  
and the other cabalists of the *Jews*, were  
of opinion, that the souls pass through three  
distinct bodies, which they pretend to  
evince from the words of *Job* xxxiii. 29.  
*Lo! all things worketh God twice or thrice  
through one man.* Thus the *Jews* affirm  
that the soul of *Adam* was translated into  
the body of *David*, and afterwards into  
that of the *Messiah*: which error having  
been introduced into *Palestine* by *Antio-*  
*chus's* philosophers, the *Jewish* doctors did  
not stick to maintain that the souls of sinful  
men did transmigrate into the bodies of beasts,  
according to the degrees or heinousness of their  
crimes. Whereas it is manifest, that a ra-  
tional soul cannot fix its habitation but in  
the body instructed with proper organs,  
whereby it exerts its operations; and  
the scripture tells us expressly, that the soul  
and spirit returns to God, who gave it; be-  
sides many other arguments I alledged to  
them upon this head against their opinion.

The learned *Vossius* is of opinion, That this opinion  
this error took its beginning from the true  
tradition of the resurrection of the dead,  
which was spread even among the *Druids*  
in *Gaul*, according to *Cæsar*, lib. vi. with  
this difference however, That the *Pytha-*  
*goreans* affirm the souls to transmigrate even  
into the bodies of beasts; whereas the first  
restrain it only to the bodies of men,  
which made them face death with an un-  
daunted courage, according to *Lucan*.  
lib. 1.

*Felices errore suo, quos ille timorum  
Maximus baud urget leibi metus, inde  
ruendi  
In ferrum mens prona viris, animæque  
capaces  
Mortis, Et ignavum est reditura parcere  
vitæ.*

*Appian* says of the ancient *Germans*, a-  
mong other things, That they despised  
death in hopes of another life: and *Tho-*  
*mas Aviot*, an *Englishman*, assures us, That  
the same had been found in *Virginia*. *Jo-*  
*seph Acosta* says the same of *Peru* and  
*Mexico*; and the same is related of *Guinea*,  
of the *Chinese*, the ancient *Egyptians* and  
*Getes*. The *Pythagoreans* say of *Athalides*,  
That his soul, before it entred the body of  
*Pythagoras*, transmigrated into three sever-  
al other bodies, first into that of *Euphor-*  
*bus*, the son of *Pantibus* in the *Trojan* war;  
afterwards into *Pyrrhus*; next into *Eleus*,  
and

*Baldæus.* and then into *Pythagoras.* All the Indian pagans are infected with this erroneous opinion, as we shall see more at large hereafter: but what is more surprizing, is, That the *Sadducees* among the *Jews*, who had so much veneration for the books of *Moses*, should deny the *immortality of the soul*, when it is said in *Gen. i. 16.* *That the soul of man was not created like material substances, but was part of the Spirit of God.* The same say all the *Gentiles*, as *Hermes*, *Zoroaster*, *Chalcidius* and *Epicharmis.* *Cicero in Somnio Scip.* says, *There is a near re-*

*lation betwixt God and our souls.* *Seneca Baldæus.* in his letter to *Lucilius*, tells him, *That the souls are in heaven;* and speaking of the deceased son of *Marcia*, he says, *in meliori statu est, he is in a better state.* The *Turks*, and *Persians*, and *Mahomet*, in his *Alcoran*, acknowledge the *immortality of the Soul;* which put these christians to the blush, who affirm, *That the souls of the wicked are annihilated;* or what others assert, *That the souls rest in the matter till the day of judgment.*

CHAP. XLVIII.

*Marriages of the Ballales and Brahmans. Divers Circumstances observed upon that Account. Families, Degrees, and Handicraftsmen of Jafnapatnam. The Taking and Description of Trinquenemale.*

**I**N the preceding chapter we told you concerning the marriages of the *Bellales*, and how the *Brahmans* often marry their brothers and sisters children. Among some of the christians in *Ceylon* obtains a certain custom to this day, to tie the *Tali* or bracelet of the bride about the bridegroom's neck, a thing introduced by the pagans, and imitated by the christians: for, as *Rogierius* observes, the inhabitants of the coast of *Coromandel* look upon it as a ceremony so necessary towards the confirmation of the marriage, that whenever the husband dies, the *Tali* he wore about his neck on his marriage-day is to be burnt with him.

Marriage customs.

As maidens without a good portion are a very bad commodity here, hence it is that frequent collections are made to help the poorer sort to husbands. They are of opinion, that a single man is but half a man, nay, that those who neglect or lose any time in propagating their own kind, are not far different from a murderer and a destroyer of human kind, (according to the opinion of *Plato*, which was likewise encouraged among the *Athenians* and *Romans*;) which is the reason they often marry their daughters at ten and eleven years of age, and nothing is more frequent than to see them bring forth children at thirteen or fourteen.

Weddings.

After they have been three times proclaimed from the pulpit, the marriage ceremony is performed by the minister, the house where the wedding is kept being generally adorned with a kind of triumphal arch raised without doors, made of fig-tree branches, flowers, pomegranates, and such like. The richer sort seldom fail to give

a good entertainment to their friends, of venison, hares, partridges, fish, fruits, preserves, &c. and the evening is spent in dancing, singing, and divers other diversions. However, strong liquors are never made use of on such occasions, unless the *Hollanders* (who cannot well be merry without them) bring some along with them. These marriage diversions continue sometimes four or five days successively.

I remember, that during my residence here, sometimes children of eight or nine years of age would have engaged in mutual promises of marriage in mine and their friends presence; which I always opposed, fearing, not without reason, that they might repent their bargain, before they came to a marriageable age. For the rest they constantly observe this custom, That the female is younger than the bridegroom, nay, they seldom will chuse a maid, that has already had her monthly times: this custom is so strictly observed on the coast of *Coromandel*, that if a *Brabman's* daughter remains unmarried till that time, she must lay aside all hopes of it for the future.

They marry very young.

The learned *Selden* shews out of *Rabbi Moses Maimonides*, that the *Jewish High-priests* were not allowed to marry a maid, unless she was under twelve years of age; and the ancient *Romans* commonly married their daughters at ten, eleven, or twelve years of age. It is sufficiently known what *Moses* says, in relation to the marks of virginity, *Deut. xii. 17.* which to this day is followed by the *Moors* of *Fez* and *Morocco*. If they happen to die without issue, the woman's portion returns

*Baldæus*. turns to her friends, the rest to the husband's. One laudable custom they have, which is, that scarce ever children marry here without the consent of their parents; a custom not only agreeable to the express command of God, expressed in divers places of the scripture, and the practice of all ages, even among the pagans, but also consonant to the civil constitutions, and the decrees of the council of *Lateran*, and other councils, which declare a marriage betwixt *Raptorem* and *Raptam* invalid in itself.

*Divers*

*tribes.*

*The tribe of*

*the Chivias.*

The tribe or family of the *Chivias*, use formerly to attend the service of the king of *Jafnapatnam*, but now do all sorts of drudgery, as carrying of water and wood for the *Dutch* inhabitants; they make use also of them for littermen, ten or twelve of them being sometimes employed at a time to carry a good bulky *Hollander*, ten, twenty, nay, thirty leagues in a litter. However, as they are descended from courtiers, so they are too proud to carry any ordinary person, who must be contented to be carried by the ordinary *Coelys*, or labourers, who live all over the country; whereas the *Chivias* inhabit in the district of the church of *Cbunde-couli*.

*Of the Par-*

*ruas.*

Those of the tribe of the *Parruas* do not live in such great numbers in *Jafnapatnam*, as they do about *Tutecoryn*; they apply themselves to the sea, and especially in diving for sea-horse teeth and pearls. They generally speak *Portuguese*, and are an active sort of people.

*Of the*

*Chittiis.*

The *Chittiis* live for the most part upon the linnen manufacture and traffick, the word *Chitty* signifying as much as a merchant: they are a crafty generation. Each of these tribes do not marry into any other besides their own, nay, commonly in the same family. Besides which each handicraftsman educates his son to the same trade he is of: thus a weaver's son follows the weaving trade, as the smith's son does that of a smith.

*Of the Car-*

*reas.*

The tribe of the *Carreas* live upon fishing, which they perform with monstrous large nets: they inhabit near the sea shore of *Jafnapatnam*, and the banks of the *Salt River*. Those of the tribe of the *Mokkuas* are likewise fishermen.

*Of the Nal-*

*louas.*

The *Nallouas* are generally slaves to the *Bellales*, and much blacker than the rest. Their business is to gather the liquor that flows out of the coco-trees, called *Suyri*, and *Euwak* by the *Indians*; to dig the ground, tend the cattle, water the trees, and such like drudgeries, as is commonly done also by the *Coelys*, or ordinary labourers. They are a nasty generation; you

may smell them at a good distance; not *Baldæus*, unlike the *Hottentots* on the cape of *Good Hope*.

The *Parreas* are the most despicable of all, their employment being to carry out dung and such like filthy things; they feed upon rats and mice.

It is observable that the tribes of the higher rank, look upon the inferior ones with a great deal of scorn, these being obliged to salute the others in the streets with deep reverence, and other ceremonies, to shew their submission. On the other hand, all the men, of what rank or quality soever, exercise a great authority over their wives, whom they rarely honour so far as to eat with them, but commonly dine alone. None of all these tribes eat cow's flesh, which is the reason that that no cows are killed but by the *Dutch*, the cow being looked upon among the rest as a sacred creature, as it was formerly among the *Egyptians*,\* of which more hereafter.

*Great difference in the degree of their tribes.*

\*See Exod. viii 26. Gen. xliii, 32.

Though their tribes are very numerous, yet do they relate to some few families, from whence they take their original, like the branches from the stem of a tree. The same was practised among the ancient *Egyptians*, who distinguished their nation into four head-tribes, viz. the *Priests*, the *Soldiers*, the *Artisans*, and *Handicraftsmen*, and the sheep and cowherds. Just as now-a-days some of the *European* nations are distinguished into four estates, viz. *Noblemen*, *Patricians* or *Gentlemen*, *Citizens*, and the *Common People*.

For the rest, the generality of the inhabitants of the kingdom of *Jafnapatnam* are naturally ingenious, and have a strong memory; they are very sober and moderate in their diet, and (except the *Nallouas* and *Parreas*) very clean in their apparel, not quarrelsome, but very free with their tongue.

*The inhabitants of Jafnapatnam.*

Their general vice is fornication and adultery, especially among the young men; as the old ones are much addicted to superstitions, as to the choice of certain days, (whereof something was said before concerning *Raja Singa*,) the cries of birds, and such like things, used among the ancient *Romans*. Hence it is that the *Portuguese*, in those parts, have a proverb to this day, *I know not what unfortunate sight [Rosto Mofinho] did come in my way this day*.

Thus on the coast of *Coromandel* they look upon it as fortunate, if they see certain red bird with a white ring about his neck. *John van Twist*, in his description of *Gusuratte*, tells us of the natives there, That they look upon it as a good sign,

*Their superstition.*

*Baldæus.* sign, if they meet an elephant, or camel, laden or unloaden, a horse without a burden, or a cow or buffler with water on their backs; for without a load they were accounted unfortunate; a ram, or dog with a piece of meat in his mouth, a cat passing to the right hand of them. They also reckon it fortunate, if they meet any body that carries meat, milk, and butter, or if a cock crosses the way.

It is certain, that the observations of the cries, and flights of the birds have not only been usual among the antient Romans, but also the Jews, with several other such like superstitions, predictions, asking advice from the Devil, the finding out of stolen or lost goods, &c. for necromancy was forbid, *Isa.* viii. 19. Incantations, *Acts* xix. 15. observations of the cries of the birds, *Ezek.* xxi. 21. the choice of certain days, *Esther* iii. 7. & ix. 24. the consulting of woods, *Hosea* iv. 12. Besides which, the predictions from the different appearance of the water, air, fire, and earth, out of certain union of characters or numbers, (called *Cabala*,) chiromancy, astrology, inspections into the magick glafs, and such like diabolical illusions, described more at large by *Peucerus*, in his treatise *De variis divinationum generibus*.

*Lawyers in Jafnapatnam.*

Besides the artisans and handicraftsmen, whereof there is great plenty in *Jafnapatnam*, they have certain persons who apply themselves to the law; and in the high court of justice, composed of *Hollanders* and *Indians*, were set always (besides the *Modeliars*) a certain person well versed in the laws and constitutions of his native country. They have also their advocates, who make very long speeches in their pleadings.

*Their physicians.*

Neither are they destitute of physicians, such as they are; for, to speak truth, they are more than empyricks, who practise according to certain books and traditions, transmitted to them by their ancestors, and confirmed to them by their own experience. They know not what anatomy is, and very little of the nature of purging medicines, which are not often used in this hot climate: however, when a purge is to be given, (whether a potion or pills,) the composition is always made of fresh herbs; and if it works too strong, they mix some powdered pepper with water, and apply it to the navel in the nature of an ointment. I can tell it, by my own experience, That it is a good remedy against the belly-ach and looseness.

*Surgeons and barbers.*

They have also good store of surgeons and barbers; the last carry always a small

looking-glass along with them, their razors *Baldæus.* are thicker on the back than ours; they not only shave your beard and head, but also pare your hand and toe-nails, and cleanse your ears.

Weavers are here in abundance. These *Weavers.* sit flat upon the ground, their feet being placed in a hole dug for that purpose, whilst they are at work.

Callico-printers, or painters, are numerous here, who have a way of preparing their colours, that they never go out by washing, though those printed at *Jafnapatnam* are not near so good as those of the coast of *Coromandel*, and especially those done at *Masulipatan*.

They are excellent workmen in ivory and ebony-wood, as likewise in gold and silver, and will come with their tools (which are but few) to work in the houses of the *Dutch*. They are exactly well versed in the essaying of gold.

They are as well provided with smiths, *Other handicraftsmen.* carpenters, and bricklayers, as most places in *Europe*, though a carpenter or bricklayer gets not above five or six pence a day.

Having thus given you a full account of the kingdom of *Jafnapatnam*, we will now go from thence along the sea-shore to *Trinquemale*, taken 1639. by Mr. *Anthony Caan*; which might have been done before, whilst Mr. *Adam Westermold* was in *Ceylon*, (there being no more than fifty men in garrison,) had not *Raja Singa* bent his thoughts upon *Batecalo*, or, as some will have it, upon *Matecalo*. *Trinquemale* has a most excellent harbour, (as you may see by the draught,) nay, to speak the truth, the best and largest in the whole isle of *Ceylon*, there being more secure riding at anchor here, than in the harbours of *Belligamme*, *Gale*, or *Columbo*.

This place was several times relinquished, and rebuilt by our company, especially during our war with the *English*, it being not thought convenient to leave so good a harbour, and so conveniently seated for the interrupting all correspondence betwixt foreigners and *Raja Singa*, to the discretion of an enemy; though the repairing of it, (during my stay in *Ceylon*,) under captain *Peter Wafch*, cost us abundance of people, that were swept away by a phrenical distemper, which made them drown themselves in the sea. Some of their bodies being opened, certain worms were found in the substance of the brains, occasioned, questionless, by the violence of the heat, the continual labour, watching, and the feeding upon salt-provisions, but more especially by

*Baldæus.* the cold night-fogs. After which time it was strengthened with some additional fortifications, as appears by captain *Peter du Pon's* letter, dated the 5th of October 1667. from *Macassar* in the isle of *Celebes*.

“ I Was once more ordered to sail with some forces to *Trinquenemale*, to take once more possession of that harbour and bay for our company, which I did accordingly with good success; and having refortify'd the place with four bastions, and reduced the circumjacent inhabitants to our subjection, I left a sufficient garrison there, and so returned to *Columbo*.”

From *Trinquenemale* you travel by the way of *Capello* to *Batecalo*, the first place

conquered by the *Dutch* in this island, *Baldæus.* whereof we have given you the best account we were able, not questioning but that in case we should once live in peace with the king of *Candy*, (who is very old, almost doating, and much addicted to strong liquor,) our countrymen will be much better acquainted with the inland countries, than they have been hitherto.

According to the last letter I received from *Tutecoryn*, dated *December 20. 1668.* there had been lately an insurrection in the isle of *Ceylon*, so that they were forced to draw their forces together out of *Saffragamme* and *Mannekewarre*; but was appeased since, though the forces were not as yet dismissed.

Baldæus.

Baldæus.

CHAP. XLIX.

Natural History of Ceylon. Their Pagodes, Convents, Monks, Manners, Habit, and OEconomy of the Cingalese.

HAVING hitherto taken a view of those places of *Ceylon* that are under the jurisdiction of the *Dutch* company, we will now take a turn to *Candy*, the imperial residence, as the most proper place to be informed concerning the real constitution of this isle and its inhabitants.

The city of Candy.

The city of *Candy* is seated about thirty leagues from the sea-side, and nine from *Vintane* up the river of *Trinquenemale*, about twenty-one leagues by land from *Matecalo*, and nine from the sea-shore, where the emperor has his docks for building and refitting his ships and gallees. The other cities of *Ceylon* being not described in any books, we must also pass by in silence here. All over the isle you see abundance of very splendid *Pagodes*. The foundation of that of *Vintane* has no less than one hundred and thirty foot in circumference; it is of a great height, and gilt on the top; it is oval on the bottom, and arises into a four-corner'd point like a pyramid. The *Great Pagode* betwixt *Gale* and *Matecalo* is also much celebrated, serving for a light-house to ships as well as that of *Trinquenemale*. In the large high *Pagode* before mentioned stands an idol representing a man with a naked sword in his hand, lifting up his arm, as if he were ready to strike. To this idol the *Cingalese* pay their reverence, and offer their sacrifices upon all emergencies, or in time of sickness; for which reason they keep a basket in every house, wherein they gather such provisions as they are to sacrifice. They believe that the world will not have an end so long as that *Pagode* stands. Some worship an *Elephant's Head* of wood or stone, to obtain wisdom. They adorn their idols with flowers. These elephants heads are placed sometimes on trees in the highways, sometimes in little brick houses or chapels. You see also frequently in the high road certain heaps of stones, earth, or dung, upon which each passenger throws something as he passes by.

Their temples.

And idols.

Just by *Belligamme* I saw the figure of a man, at least six yards high, cut in a rock about half a yard deep, who used to be worshipped by the *Cingalese*.

Near it is a high-peaked mountain, accounted the highest in the *Indies*, called *Adam's Pico de Adam*, or *Adam's Peak*; because they are of opinion, that here stood formerly the paradise, where *Adam* was created. They also tell you, that the print of the foot of *Adam* is to be seen to this day in the rock, the draught whereof is kept in the imperial court. Unto this rock a vast number of people flock from far distant places, to see this sacred relick, though the mountain is of very difficult access, nay, (if we may credit *Maffæus* the jesuit,) quite inaccessible, unless by means of certain iron chains and iron spikes fastened to the rocks.

Adam's mountain.

Some are of opinion that they reverence the chamberlain of the queen *Candace* in this place; who, according to some historians, but especially *Dorotheus*, bishop of *Tyrus*, (a man equally famous for his learning and sanctity under *Constantine* the great,) preached the gospel in the *Happy Arabia*, *Erythraea* and *Taprobana*.

There are also divers convents in *Ceylon*, and a great number of *Brabmans* and priests, who are in great veneration among the common people: they never eat any thing that has been living, or is capable of producing any living substance, as eggs, &c. Their friers wear yellow habits, with their heads shaven all over, for which reason they never appear in the streets without umbrello's, and beads in their hands, muttering out certain prayers as they go along. Their convents have divers galleries and chapels, wherein are placed the statues of several men and women, who, as they say, have led holy lives. These are adorned with gold and silver apparel, and attended with burning lamps and wax-candles day and night, placed upon altars, the candlesticks being supported by naked boys artificially carved. The friers have their certain hours for prayers, which they perform in these chapels.

Convents and monks of Ceylon.

They have also their publick processions: the head or abbot of the convent being mounted on a fine elephant, sumptuously harnessed with an umbrello over his head, marches along the street in great pomp, under the

Their processions.

found

## The Indian Procession.

*Baldæus.* found of horns, trumpets, and other such sort of musick, making an odd kind of harmony, accompany'd by a great number of men, women, and children; the maidens of quality dance all along before the elephant naked down to the middle, their heads, arms, and ears adorned with golden bracelets and jewels; the garments which cover their under parts are of different colours. They pay their daily devotions to a certain idol called *Sambaja*, by prostrating themselves upon the ground, and afterwards clasping their hands together over their heads. But concerning the religious worship of the *Cingalese* we shall have occasion to say more in the following treatise, which in effect differs very little from the *Malabars* and those of *Coromondel*, except that they are not altogether such bigots, the emperor of *Ceylon* allowing liberty of conscience to all nations. The *Cingalese* are not so stubborn, but that many of them have been, without much difficulty, converted to the *Roman* faith, and since that to the reformed religion.

The genius of the Cingalese.

For the rest, the *Cingalese* are naturally active and ingenious, and good work-

C

*Baldæus.* men in gold, silver, ivory, ebony, iron-works, &c. arms inlaid with silver; eloquent, nimble, courageous, fit for warlike exploits; sober and watchful. They march one single man after another, by reason of the many narrow lanes in this country; their arms are a half-pike; their drums are small, but make a great noise, which may be heard at three leagues distance in the mountains; they are best in the pursuit of a routed enemy. Since they have conversed so much with the *Portuguese*, and other *European* nations, they are grown so cunning that they must not be too much trusted, nor despised.

Incest is so common a vice among them, that when husbands have occasion to leave their wives for some time, they recommend the conjugal duty to be performed by their own brothers. I remember a certain woman at *Gale*, who had confidence enough to complain of the want of duty in her husband's brother upon that account. The like happened in my time at *Jafnapatnam*; which had been likely to be punished with death, had not, at my intercession, and

in

*Baldæus.* in regard of the tender beginnings of christianity, the same been passed by for that time.

*The habits.* The *Cingalese* are in shape and manners not unlike the *Malabars*, with long hanging ears, but not so black. The dress of the men is a vest, called *Ropillo*, of woollen or linnen cloth; their under-garment is a piece of linnen wrapped about the middle, and drawn through both their legs, like a pair of breeches. On their heads they wear a kind of red caps, such as we call rock-caps, which they look upon as a singular ornament; and in their ears rings and precious stones. The hilts of their swords or scymetars are commonly of silver, ivory, or gold, with flaming blades.

The common people appear for the most part naked, having only a piece of cloth wrapped round the middle to cover their privy parts. The women go with their breasts uncovered, being generally well-limbed. Instead of a head-dress, they have a way of tying their hair together like a cap: they wear golden or silver necklaces about their necks, and rings on their fingers and toes.

The *Cingalese*, as well as the *Malabars*, are much addicted to idleness and pleasures, and insist much upon their pedigree: they marry as many wives as they think fit, as

well as the *Mabometans*, of which there live a considerable number in this isle: they marry their daughters at ten or eleven years of age, a custom not to be rooted out among them, they being very fond of the virginity of their wives. They bury their dead after the manner of the pagans.

In their houses they are excessive neat; and use instead of trenchards and table-cloths the leaves of fig-trees; their spoons are made of coco-nutshells, and their drinking vessels of earth, with hollow pipes, through which they pour (like the *Moors*) the drink into the mouth, without touching their lips; for as the *Cingalese* and *Malabars* insist much upon their noble descent, so they will neither eat nor drink with those of an inferior rank, nay, many of them are so proud, as not to eat with their own wives.

The most current coin here are the silver *Laryns*, each whereof is worth about ten pence; a *Fanam* is only five pence, though they have golden and silver *Fanams*; a *Pagode* was formerly no more than eighty four stivers, but is since raised to an hundred and twenty, or six *Dutch* guilders; as well in *Ceylon* as *Malabar*, two golden *Fanams*, at five pence a piece, make a *Laryn*.

CHAP. L.

Fertility of Ceylon. A Description of the Cinnamon and Snakewood. A strange Tree.

*Fertility of Ceylon.* THE isle of *Ceylon* is very fertile in rice, and all sorts of fruits, as ananas, cocos, the best oranges, lemons, and citrons, exceeding by far those of *Spain* and *Portugal*; fig-trees, cajouves, grapes, potatoes, quiavos, papajes, and pomgranates. You have here fresh grapes the whole year round, except in the three winter or rainy months. It abounds also in sugar-reeds, and mulberry-trees, which produce a good quantity of silk; as in ginger, pepper, cardamum, tobacco, wild palm-trees, affording vast quantities of a kind of sugar, and the juice called *Suyri*, their ordinary drink: they are stored also with calabass-trees, cotton-trees, areek-trees, *Portuguese* figs, mangos of divers sorts, long pepper, melons, water-melons, onions, and garlick. Since the settling of the *Dutch* here, they have also propagated, with good success, cabbages, asparagus, carrots, and radishes: but the *Helen*, or the bride, in contest of this isle, is the finest and purest cinnamon, which growing only in this island, no wonder if we have disputed the entire pos-

session thereof for so many years with the *Portuguese*.

This precious spice is called by the *Cingalese*, *Cureneo Potto*, and the tree *Curindo Gas*, some of which are of a great bulk, their leaves resembling those of the lemon-trees, but not quite so broad; the blossom is white, and of an agreeable scent, which produces a yellowish fruit, not unlike a small olive; out of which the inhabitants press an oil, not much differing both in colour and virtue from that of nutmegs, but in smell like the cinnamon itself.

The cinnamon-tree has a double bark, the outward bark being taken off with a crooked knife; the inward rind is cut with a knife, first round the tree, and then in length, which being exposed to the sunbeams in the fields, shrinks together into such small rolls as we see them in *Europe*. The trees that are thus peeled, perish, instead whereof the fruits that fall upon the ground produce other cinnamon-trees. The wood is very white, and used by the

*The Manner of peeling Cinnamon.*

*Baldæus*. inhabitants for building. It is observable, that these cinnamon-trees do not grow all over *Ceylon*, but only in some certain places; for in the whole kingdom of *Jafnapatnam*, and the isle of *Manaar*, none of these trees are to be seen, but only beyond the river *Cbilau*, in the country about *Negumbo*, and the inland countries, as likewise near *Gale*. These trees seldom grow together, but are generally seen in woods mixed with other trees. Whilst I was minister at *Gale*, some of my slaves used now and then to bring some cinnamon-wood among the rest into the kitchen, which when put into the fire, emitted a very odoriferous scent.

It is further worth taking notice of, that whereas, according to the judgment of the naturalists and physicians, the cinnamon is very hot, yet does the root of the tree produce not only a water smelling exactly like camphire, but also the strongest-scented camphire itself. I have several pieces of it, which smell so strong, that I am scarce able to endure it. Out of the cinnamon-wood, whilst yet green, they distil a water of an agreeable smell, and very wholesome to our bodies. The natives make out of the outward bark of these trees curious cabinets: I have such a one by me of a considerable bigness, which was presented me by major *Peter du Pon*, 1665. just upon my departure from *Ceylon*.

Three sorts  
of cinnam-  
mon.

The *East-Indies* produce three different sorts of cinnamon; 1. Is the finest cinnamon, called *Canel Fino* by the *Portuguese*, being the same that is taken from very young, or at least not very old trees. 2. The coarse cinnamon, called *Canel Grosso* by the *Portuguese*, taken from very thick and old trees. And, 3. The *Canel de Mato*, or wild cinnamon, which grows likewise on the coast of *Malabar*, but is in no esteem; for whereas a *Baar* of *Ceylonese* cinnamon is sold for fifty or sixty rixdollars, the wild cinnamon yields not above ten or twelve. Though I have heard some of the most ingenious of the natives affirm, That the wild cinnamon might be much meliorated, and made fit for use. The *Dutch* company is now, through God's blessing, in the possession of the cinnamon of all kinds, as likewise of all the spices, viz. of the nutmegs, mace, and cloves, except the pepper, which grows in several places.

The Snake-  
wood.

The *Snakerwood*, or *Lignum Colubrinum*, grows most frequently in the isle of *Cey-*

*lon*: it is white, inclining to yellow, very hard, and of a bitter taste; it is in great request among the *Indians*, and accounted a good remedy against several distempers: they powder it, and rub the whole body with it to cure the itch: they also take an ounce of powdered *Snakerwood* in water or wine against the cholick, burning fevers, and other distempers, but especially against the stings of the serpents, of which there are many in this island.

*Baldæus*

Its use  
among the  
Indians.

The *Cingalese* naturalists say, That the virtue of the *Snakerwood* was first discovered by a certain small creature called *Quil*, or *Quirpele*, by the *Portuguese*, being of the bigness of our ferrets, wherewith we catch the rabbits. Of this kind the *Indians* keep many in their houses, partly for sport, partly to catch rats and mice with. This creature having a natural antipathy against the snakes and serpents, whenever it is stung by them runs to the *Snakerwood*, and after having eaten of it, is cured of its wound. *Marcellus de Boschbower*, a person in great esteem in *Ceylon*, relates, That he has several times seen this *Quirpele* engaged with snakes, and amongst the rest, one that vanquished a serpent; but being wounded, run to the next wood, and having eaten some of this *Snakerwood*, returned in half an hour to the place, where its vanquished enemy lay extended dead upon the ground. The *Cingalese* call the root of this tree *Nay Lelli*, unto which they attribute a singular virtue for the cure of divers distempers.

Antipathy  
betwixt the  
Quirpele  
and the  
serpents.

There grows a strange tree in the isle of *Ceylon*, called the *Root-Tree*, because its branches turn to the ground like ropes; where taking root again, they produce a tree that spreads in a short time over a spacious tract of ground. *Ceylon* produces also tamerind-trees of a considerable bulk, the fruit whereof is accounted an excellent remedy against the scurvy and dropsy. There grows another tree in *Ceylon* like our *Noli me tangere*; for if you go to touch it, it moves backwards, and gives way to your hand.

For the rest, *Ceylon* is sufficiently provided with medicinal herbs, and they cure all their distempers with green herbs, in the use whereof their physicians are better versed, (by experience,) than many of our pretending surgeons, God Almighty having provided remedies suitable to the distempers of each country.

## C H A P. LI.

*Great Number of Elephants in Ceylon: Are very pernicious: Divers Instances of it. How they take the Elephants. Their Bufflers, Tygers, Bears, Birds, Fishes, Crocodiles, and Porcupins, or Sea-Hogs.*

*Baldens.* THE isle of *Ceylon* abounds in all sorts of four-legged creatures, birds, fishes, stones, and certain products of the sea, of each whereof we must say something.

*Elephants of Ceylon.*

Among the four-legg'd beasts, the elephant challenges the first rank: of these there are great numbers here; and so pernicious, that it is not safe travelling without some soldiers with their drums and kettles, the noise whereof frightens these creatures: they are most dangerous towards evening when they are hungry; for the *Coelys*, or littermen, often run away at the sight of an elephant, leaving those they carry to shift for themselves.

I remember, that in my time, a *Portuguese* reformed minister, named *John Ferreira d'Almeyda*, travelling with his wife from *Gale* to *Columbo*, the litter-carriers (according to their custom) ran away at the sight of an elephant; who did, however, not the least harm, but laying his trunk upon the woman's *Palankin*, or litter, went away: but things of that nature happen not always alike.

I observed once as I was travelling from *Manaar* to *Jafnapatnam*, that the elephants had done considerable mischief hereabouts; and during the rainy season had rendered the ways almost unpassable. We had the good fortune to escape narrowly the danger of an elephant who killed a certain negro, one of the commanders of the elephant-hunters, in a place we had passed not long before.

*How they take and tame the elephants.*

At *Mature* are vast stables, where the wild elephants are tamed, and afterwards sold to the *Moors* of *Bengale* and *Coromandel*. They take the elephants near *Mature* in the following manner: they fix abundance of large stakes or trunks of trees in the ground, so as to leave the entrance wide enough, but growing narrower within by degrees; in these they have certain traps, and the wild elephants being decoyed by the tame ones into these enclosures, are caught in the traps, or snares, like as we do in our decoying ponds. They are very hard to be tamed, and require sometimes four whole months before they can be brought to lie down: all this while they must be carried twice a day to some river

or other to swim. This is done by putting a wild elephant betwixt two tame ones, who take such care of the other, that they hit him from both sides with their trunks, till they make him pliable, and at last quite tame.

It often happens that the young elephants are taken in following the old ones. These are very unlucky: I remember, that one time as several of us were talking together, one of these young elephants came slyly and pushed with his back-side against one of our company, that he was ready to fall upon his nose.

They feed upon green herbs and leaves of fig-trees, coco, and other trees; neither do they refuse areek and sugar. At a certain time of the year an oil issues out of the heads of the old elephants, when they run mad, and oftentimes kill their *Farnak*, or guides. *Ceylonesse* elephants are accounted the largest and best in the *Indies*; and, if you will believe the natives, are adored by the other elephants.

Horses (great enemies of the elephants) were brought first from abroad into this isle. The *Portuguese* having some years since sent horses into the isle of *Vacas*, they are multiply'd to such a degree, that you may see them feed in herds of sixty, seventy, eighty, or one hundred.

Of bufflers they have a great store in *Ceylon*: I have seen whole herds of them of one hundred, and more, feeding in the countries of *Cbilau* and *Madampe*, which were but indifferently peopled at that time. They have also hedge-hogs, oxen, cows, bulls, sheep, goats, stags, does, elks, tame and wild boars, hares and partridges, peacocks and apes in abundance.

The woods here produce also some venomous beasts, as tygers; though I never saw any, but had a grey-hound given me by a *Portuguese* who bore the marks of a tyger's claws on his buttocks. Bears I have seen, both in *Jafnapatnam* and *Manaar*: I saw once five or six young ones drowned in *Manaar* by the inhabitants, who had found them at *Mantotte*, and thought fit to take this course with them, to prevent their increase.

• They

The Catching of Elephants on the Island of CEYLON.

*Baldæus.* They abound also in *Jackals*, a creature very greedy after mens flesh; for which reason they cover their graves with great stones; they sometimes take them with grey-hounds, but when they are hard put to it, they piss, which emits so nauseous a scent, that the hounds cannot endure it. The flesh of the *Jackals* is given with good success by the physicians of the country to cure the consumption. Towards the evening the *Jackals* meet, and make a most dreadful noise, and will some times fall upon passengers. In my time a *Caffer*, who was in drink, had his teeth eaten out by the *Jackals*. The *Jackal* is not unlike a fox, and has exactly such a tail. The *Malabars* call the *Jackals* *Adiviis*. I saw but one leopard in the isle of *Ceylon*; and not one unicorn or rhinoceros.

*Crows.* *Ceylon* affords vast quantities of birds, called by the inhabitants by peculiar names. Crows you shall see by thousands about noon upon the houses; but they are so cunning as not easily to be shot, except through a hole or small window. Towards night they leave the towns, and retire to the trees in the country, and in the morning early look about for prey. If one of them happens to be killed, the rest make a most terrible out-cry.

*All sorts of Fowl and Birds.* There are certain birds in *Ceylon* called *Minbotos* by the *Portuguese*, who often make bold with the young chickens: they have also owls that make a dreadful noise in the night-time. They abound in geese, herons, wild and tame ducks, peacocks, pigeons, turtles, partridges, parrots of most delicious colours, peewits, swallows, bats, &c. Among the rest, here is a certain bird which builds his nest hanging on the branches of the trees. They have also abundance of fine singing-birds, nightingales, and larks in abundance; sea-gulls, water-snipes, bees, fire-flies, gnats, and locusts.

*Fishes.* *Ceylon* produces great plenty of fish, as cacap, plaice, crabs, pikes, king-fishes, sail-fishes, craw-fishes, haddocks, galleon-fishes, sharks, orados, sardins, large smelts, bat-fishes, seals, oysters, muscles, shrimps, pampus, barbels, bomtos, corquados, &c.

Among the amphibious creatures, the *Baldæus*. *Kaiman*, or crocodile, called *Lagarto* by the *Portuguese*, is very frequent here; some of which are eighteen foot long. They have four feet with crooked claws, their skin covered with scales, which are so hard upon the back, that they are musket proof; so that they are not vulnerable except in the belly and eyes: their under-jaws are unmovable, but they have sharp teeth: their back-bones being without joints, they cannot turn short, whence the best way to escape them, is to get away from them by many windings and turnings. 'Tis generally believed here that the crocodile has a stone, or rather bone in the head, which given in powder is an excellent remedy against the stone. The bones of the sharks are accounted very good against the same distemper.

Mr. *Rochefort* says, That in some of the rivers of the isles of *America* are certain crocodiles that smell like musk. I have with amazement seen crocodiles lying upon the water like logs of wood, with their eyes shut; and if they happen to meet with a prey, they leap at it on a sudden, like an arrow from the bow.

*Vincent le Blanc* tells us a story of a burger-master's servant of *Alexandria*, who passing near the river-side, was devoured by a crocodile which he took for a log of wood swimming upon the water. They say, that they have a white fat, which is an excellent remedy against sharp humours that settle in any part of the body. In *Jafnapatnam* there are many crocodiles in the fens, ponds, and lakes; which if they happen to dry up in the summer, they dig holes to live in; we were often visited by them in our camp before *Jafnapatnam*, but they did no mischief. The *Chinese* make a dainty dish of the young crocodiles.

In the isle of *Manaar* are great numbers *Porcupines*. of very large porcupines, or sea-hogs; they have very sharp teeth, and their flesh is fit for food; the females have breasts and milk; they come often ashore and feed upon herbs.

## CHAP. LII.

*Serpents of Ceylon: Remedies against their Stings. An odd Story of a Serpent-Catcher. Precious Stones, Products of the Sea. Amber-Grease; its Goodness.*

*Baldæus.*  
*Serpents.*

**S**ERPENTS are very common all over the isle of *Ceylon*: the *Sea Serpents* are sometimes eight, nine, or ten yards long. The *Land Serpents*, called *Ratcatchers*, are also very large, live on the tops of the houses, but are harmless creatures. The most dangerous are those called *Cobres Capellos* by the *Portuguese*, which frequently used to kill people whilst I lived in *Jafnapatnam*. So soon as any body is stung or wounded by these serpents, they apply the *Adderstone* to the wound, and give the patient some milk. Our surgeon, *Albert van Lambergen*, writ to me 1666. that being stung by a serpent, he became blind, but after some time recovered his sight. A parishioner belonging to the *Church of Manipay*, as he was mending the top of the church, happened to be wounded by a serpent that lay hid among a heap of leaves, and died soon after. I

*Remedies*  
*against*  
*their sting.*

fav once two serpents twisted round one another sporting under the wall of the same church, which I ordered to be cut to pieces by a soldier. Such of the inhabitants as retain still some remnants of paganism, will not allow the serpents to be killed.

The *Malabars* call the serpents *Pambo* and *Naga*, and give their cattle and children their names, nay, they feed them because they should do them no harm. The serpents come frequently into the houses, especially in the rainy season. During my abode at *Jafnapatnam*, two dogs were stung to death in the house; and I have seen them sometimes pass up stairs over the beds. Another time a serpent passed so near my wife in the house, that he touched her leg with the tail, and was afterwards killed by the servants.

*Baldæus.* There is also here a kind of adders, called vipers by the *Portuguese*; they are speckled, and very venomous. Whilst I lived at *Jafnapatnam*, a certain *Higb-German* foldier belonging to the garrison (commonly known by the name of the *Serpent-Catcher*) being sent for by Mr. *Anthony Pavilion*, governor of *Coromandel*, to take a certain *Cobre Capel* that was in his lodging-room. He came accordingly; and with his hat only before his face, laid hold with his other hand of the serpent, without receiving the least harm: he did handle the creature afterwards in our presence, and not only carried it away in his snafack, but also used to sleep near it. I suspecting some witchcraft in the matter, talked to him seriously about it; but he assured me, That nothing was done but by natural means; and that he always carried the head and heart of a serpent about him: wherewith I was forced to rest satisfied, he being not willing to discover the whole mystery.

An odd story of a serpent-catcher.

Among the inhabitants of the coast of *Coromandel*, and the *Cingalese* and *Malabars*, are certain fellows, who have an art of making the serpents stand upright, and dance before them, which they perform by certain enchanting songs. Those that are to take an oath in those parts, put one of their hands into an earthen vessel, wherein is a serpent: if they escape without being wounded, they are supposed to swear true; but if not, on the contrary.

Remedies against the stings of serpents.

Upon this occasion I cannot forget to mention some remedies used against the stings of serpents. First of all, it is requisite to bind the affected part, above and below the wound, to prevent the poison from being communicated to the mass of blood; and afterwards hold it over, or as near to the flame as it is possible. I would have every body that goes to the *East-Indies*, to provide himself with some *Orvietan*, *Theriac*, *Mitbridate*, confection of *Alkermes*, balsam of *Peru*, *Rue*, *Scordium*, *Scorzonera*, *Angelic*, and *Contrabier-va* roots, these being great cordials and antidotes.

They must keep to a cooling diet, and avoid purging and bleeding; but instead thereof make use of bathing, to open the pores of the body. The peel of lemons or citrons taken fresh from the tree, is accounted an excellent remedy, and fasting spittle applied to the wound. If you can take the serpent that has given the wound, bruise the head, and apply it to the affected part. However, the *Adderstone* surpasses all the rest; but is often adulterated. The right one raises no bubbles

upon the water, and sticks close to the lips, if put to the mouth.

*Baldæus.*

The serpents of *Ceylon* are not altogether so large as those of *Java* and *Banda*. At *Batavia* there was once taken a serpent, which had swallowed an entire stag of a large size, and one taken at *Banda* had done the same with a negro woman.

Besides these serpents, *Ceylon* produces several sorts of other crawling creatures, as *Thousand Feet*, called *Millepie* by the *Portuguese*, which are sometimes seven inches long; scorpions, spiders of a prodigious bigness, frogs, tortoises, toads, &c. *Ceylon* also affords divers precious stones, as *Sapphires*, *Rubies*, *Topazes*, *Granats*, &c. Some say it also produces gold, silver, iron, and other metals; but that their kings will not allow these mines to be dug. This seems not improbable, it being certain that iron has been bought out of the country. It affords also chrystal in abundance. The commodities chiefly vended here by the *Portuguese*, were coloured stuffs of all sorts, velvets, silks, red caps, porcelain spices, *Amfra* or *Opium*, *China* root, camphire, musk, sandal-wood, lead, copper, tin, salt-petre, brimstone, gilt looking-glasses, glass bottles, painted calicoes of *Suratte* and *Coromandel*; all which are still in vogue here.

Commodities sold here.

The isle of *Ceylon* has besides fish, several products of the sea. Of the pearls and pearl-fishery we have spoken before, in the description of *Tutecoryn*. *Ambergreese* is found here sometimes near the sea-shore, in good large pieces, and of the best kind: they call it *Panabambar* in the *Maldive* islands. This precious drug was altogether unknown to *Hippocrates*, *Dioscorides*, and *Galen*; and to this day its true origin is a riddle to us, though some will have it to be the seed of the whales, others a certain fine earth, others a certain pitch or rosin, growing at the bottom of the sea, and forced thence to the shore by tempests. Certain it is, that it is generally found after stormy weather. Mr. *John Huygan van Linschoten* mentions a piece of *Ambergreese* taken up near the cape *Comoryn*, 1555. which weighed thirty quintals. It is said, That the birds are very fond of the scent of it; and the prints of the bills of birds have sometimes been perceived in the *Amber*, and is accounted a certain sign of its goodness.

Its origin.

Mr. *Rochebford*, in his *Natural History* of the *American Islands*, says, That the amber there, when first taken, has so nauseous a scent, that the birds are drawn towards it as by the smell of a carrion: he says it smells like rank bacon.

The

*Baldæus.* The *Amber* is of different kinds; the black (the worst of all) is found near the isle of *Mauritius*; next is the white, and the grey, the best of all. In some parts of *America* there is a kind of amber, they call the foxed amber, because it is swallowed and vomited up again by the foxes without any alteration, except that it loses something of its scent. The best ambergrease is of an ash-colour, like ashes mixed with wax. It is adulterated with wax, rosin and pitch; to know the real goodness of it, you must thrust a hot needle into it, and by the smell of the moisture that adheres to it, you may judge of its goodness: you may also lay a small quantity of amber upon a hot knife; if it be good, it will melt im-

Goodness,  
how to be  
tryed,

mediately like wax; and provided the knife be very hot, it will quite evaporate without leaving the least dregs behind. *Scaliger, Garcias, Monard, Fernandes Lopes, Clusius, and Rocheford,* have written of the ambergrease; its medicinal virtues we leave to the judgment of the physicians.

The sea about *Ceylon* produces likewise whole coral-trees, some branches whereof curiously grown I preserve in my study. It affords also certain horns of sea-horses, called *Chankos*, which are frequently transported to *Bengale*, besides divers other sorts of horns and shells, (but not so curiously twisted as those of *Amboyna*;) sea-aples, sea-stars, and such like.

A true and full Account of the Religious Worship of the *Indosthans*, the Inhabitants of *Coromandel*, the *Malabars*, and *Ceylonefe* ; with a Description of their Idols.

P A R T I.

C H A P. I.

*The general Consent of all Nations concerning the Existence of God. Divers Sects of the Brahmans. Their Opinion concerning the Creation. The Idols Ixora and Quivelinga.*

*Baldæus.*  
The existence of a God.

**T**HE existence of a God, or supreme being, is so firmly rooted in the heart of mankind, that there is no nation in the world but what has acknowledged the same. What is alledged to the contrary by some of the *Chilese*, *Tapujars*, *Brasilians*, *Madagascarians* ; as also of the inhabitants of *Florida*, the *Caribee Islands*, and especially of the cape of *Good Hope*, must rather be attributed to the want of knowledge of those authors, than real truth. Of this I was sufficiently convinced, 1666, when I tarried three months at the cape of *Good Hope*, where I found these barbarians to perform their religious service in the night-time, which I had no opportunity to observe in 1665, when I came that way before. What is said of *Diagoras*, *Theodorus*, *Cyrenaicus*, *Bion*, *Evemerus*, *Lucianus*, *Epicurus*, and especially of *Protagoras*, *Abderites*, and *Socrates*, and their denial of the existence of God, being to be understood only of the plurality of Gods, which was always

VOL. III.

rejected by the wiser sort among the pagans : Whence it is, that we meet with the titles of *Ens Entium*, the *Being of all Beings*, *Ens primum*, the *First Being*, *Primus motor & vis motrix*, the *First Moving Cause and Substance*, in their writings.

This being laid down as a fundamental rule, we will proceed to give an account of the idolatry of the pagans inhabiting the coast of *Malabar*, and the *Indies* on both sides of the cape *Comorin*, viz. at *Tutecoryn*, *Trevanor*, *Coulang*, *Calecoulang*, *Cochin*, *Cranganor*, *Calecut*, *Cannanor* ; as also on the coast of *Coromandel*, and the isle of *Ceylon*. According to *Rogierius*, the *Brakmans* are distinguished into six sects, viz. *Weistnouwas*, *Seiria*, *Smaerta*, *Schaerwaeka*, *Pasenda*, and *Tscheetea* ; and the *Benjans* of *Gusuratte* into no less than sixty-three : But in the forementioned parts, the *Brakmans* are divided into four head-sects.

The first are the *Centrawack*, who use neither fire, nor candles, nor cold water,

*Baldæus.* for fear it should contain some living creatures; they do not pass the streets, unless they be swept before with a broom, which they always carry with them, for fear of treading upon any thing that is living. They believe neither God, nor providence, but that all things are produced by chance.

The second sect is called *Samaræth*: they actually believe a God.

The third *Bisnou*, who call their god, *Ram*. They have a fast, which begins in *August*, and holds forty days.

The fourth sect is that of the *Goegii*, who have no habitations of their own, but sleep in the night-time in the churches: they walk generally naked, having only a cloth to cover their privities, and besmear themselves all over with ashes. They believe a God, (whom they call *Bruyn*;) the creator of the universe, who is in every thing, whether man or beast, (though he cannot be seen by the creature,) gives light to sun and moon, and annihilates what and when he pleases. They say, that such as die in their faith, go directly to their god *Bruyn*: They do not burn, but bury their dead. Whoever embraces their sect, is obliged to take near a pound of cow-dung, every day among his ordinary food, for six months successively, the cow being accounted sacred, and her dung the purest thing among them. They are very superstitious: a cart, buffler, or ass without a load, a dog empty-mouthed, a he-goat, ape, a goldsmith, carpenter, barber, taylor, smith, cotton-weaver, a widow, a burial, or some body going to a burial, are altogether ill omens to them; as an elephant, camel, an horse without a burden, a cow, an ox and buffler laden with water, portends good luck in their opinion. Some acknowledge one *Vistnou* for their supreme god; but the most, one *Ixora*. We will first treat of *Ixora*, and afterwards of *Vistnou* and *Bramma*.

See Rogerius, Texeira, Carolina, John van Twilt, &c.

Opinion of the Brahmans concerning the creation of the world.

The *Brakmans* have a very odd opinion of the creation of the world (of which more hereafter.) They say, that this world will diminish by degrees, till it comes to a drop of water, which is the *Ixoretta*, or *Divinity* itself: after that, it shall encrease again, when *Ixoretta* crying out aloud, *Quen, quen*, will make it turn again into a single drop of dew. This will make it revive again, first into a mustard-seed corn, then turn to a pearl; and, lastly, into an egg, containing the five elements. This egg, they say, is to have seven distinct shells or partitions, like an onion; whence will break forth the fire and air upwards, and the others down-

wards; and the egg being thereby broken into two pieces, the upper part produced the heavens, as the under part did the earth; and because the egg had seven shells, which by the division thereof made fourteen half ones; the seven uppermost parts furnished the matter for seven heavens, as the seven undermost did for as many worlds. An unpardonable contradiction, when they themselves acknowledge their *Bramma*, and implore him, as the creator of heavens and earth; and how incongruous is it, to make the *Ixoretta*, or divinity, subject to decrease?

They further add, that at the opening of the before-said egg, there appeared a thread drawn all along the middle, which joined the fourteen upper and under worlds: *Ixoretta* then taking his place in the highest sphere of the heavens, there arose at the same time, a mountain on the earth, named *Calaja*; on the top of which, stood a triangular substance (*Tricon Sa-cra*) which produced a round substance, called *Quivelinga*, i. e. the members of generation of both sexes; which *Quivelinga*, they say, is *Ixoretta*, or the divinity: for finding that all living creatures were procreated by the carnal copulation of men and women, they revered this *Quivelinga*, as the original of all created things, and adorned him in their temples with the best sweet herbs and flowers. They have a certain religious order called *Joguis*, who wear the figure of this *Quivelinga*, either of wood or copper, about the neck, and offer him daily the best of their victuals. *Rogierius* speaks to the same purpose of the *Lingam*, i. e. *Membrum virile in muliebri*, as the *Ixora*, or *Eswara* is represented in their *Pagodes*.

*St. Austin* \* tells us something like this of the *Priapus*, which used to be carried in procession, in honour of *Bacchus*, through the cities of *Italy*; and that the matrons used to crown his *membrum virile* with garlands. I have read in several authors of known integrity, and speak it upon the credit of divers people yet living, That the *Canarins*, and inhabitants about *Goa*, do carry their brides to such a *Priapus*, in order to deliver them of their virginity. The whole matter whereof, I will, for modesty's sake, relate in *Latin*: *Sponsa magno comitatu multaque cum pompa inter plausus ac sonos musicos ducitur ad idolum, quod aenea virga vel ferrea, vel eburnea prominente præditum conspicitur, & ad hanc nudata veste sponsa a matre vel a proximis sanguineis vehementer impellitur, quod cumque gravi dolore fieri nequeat, illi qui adsunt, cantando & saltando sponsæ flebiles voces opprimant*

\*L. 7. c. 21. de Civitate Dei.

Canarins offer their brides to Priapus.

*Baldæus opprimant, si quæ est, quæ dolorem immensum verita, hoc modo Virginitate privari recusat, blandis consanguineorum verbis ad idolum paulatim adducitur, atque ad id a matre tamdiu (invita quamvis) adigitur, donec virginitatem amiserit; postea sponsa domum rediens sponso traditur, qui de hoc præ se suscepto Labore sibi maximopere gratulatur.*

*Baal Phegor* seems to have been the *Priapus* of the *Jews*. *Jerome*, in his commentary upon the prophet *Hosea*, says, That the *Jewish* women worshipped *Baal Phegor*, ob *obscæni magnitudinem membri, quem nos Priapum possumus appellare.*

The *Brahmans* will indeed not allow of this interpretation, alledging, that they adore under this, the circular figure, which is infinite; whereas the signification of the word sufficiently contradicts them. *Quivelinga* being composed out of the word *Linga*, or *Lingam*, i. e. the *manly yard*, and *Quiven* the same with *Ixora*; and the figure carried by the *Fogii*, expressly represents the conjunction of the members of both sexes.

*Quivelinga* then (as we said before) is *Baldæus* of a circular figure, which being inclosed in three distinct rinds or shells, which they say are transmuted into three gods, *viz. Bramma, Vistnum, and Quiven*; the first and hardest produces *Bramma*, the second *Vistnum*, and the innermost *Quiven*. *Quivelinga* being thus despoiled of his shells, was burnt to ashes by fire, and fixed in the triangle. *Quivelinga* being thereby become a thing without sense or motion, it was requisite it should be guarded by some body; which *Bramma* and *Vistnum* refusing to do, *Quiven* undertook the task, and constantly attending *Quivelinga* with prayers and sacrifices of flowers, deserved thereby to be ranked above his brothers, and obtained the title of the *great god*, as their poets call him. The *Brahmans* say, that *Bramma, Vistnum, and Quiven*, or *Ixora*, are commissioned by the first being to rule the world in the nature of his viceroys. They say *Ixora* resides in *Calaja*, *Vistnum* in the *Milk-Sea*, and *Bramma* in *Sattiolagam*, or the highest place in heaven; of which more hereafter.

CHAP. II.

A Description of *Ixora*: His Wives. Abstinency of the *Brahmans*. Divers Sorts of *Eunuchs*.

A Description of *Ixora*.

**I**XORA is as bright and white as milk, with three eyes; two whereof are placed as those of other men, and the third in the front, being so full of fire, that it consumes every thing it looks upon. His stature is immense; for *Bramma* being desirous to see his head, soared up high into the earth, but could not reach it. *Vistnum* (whom they call the god of inventions and changes) having the same curiosity to see his feet, which reached deep into the ground, transformed himself into a hog, the better to dig up the earth, but could likewise not obtain his wish; for, say they, *Ixora* is of so vast an extent, that the serpent *Bategu* (which is so long as to compass the seven worlds and the seven seas) was not big enough to serve him for a bracelet. I heard a pagan once ridicule a *Brahman*, because he put the figure of *Ixora* in his chamber; whereas, according to their opinion, it was much larger than the serpent *Bategu*.

*Ixora* has no less than sixteen hands, wherewith he holds the following things: a heart, a chain, a fiddle, \* a bell, porcelain basin, capalla, i. e. *Bramma's* bead, a trident, a rope, an ax, fire, gold, a drum, beads, a staff, an iron wheel, a serpent, with a crescent or half moon on his fore-

head. His apparel is a tyger's skin, his cloak the hide of an elephant, surrounded with serpents †. He wears about his neck a collar of the skin of a certain creature, called *Maudega*, on which is fastened a bell, such as our oxen or sheep commonly have about their necks.

He has also about his neck three chains, one whereof being intermixed with roses and other flowers, affords an odoriferous scent. The second is made of the heads of *Bramma*; for they say, that *Bramma* dies and revives every year; and that *Ixora*, gathering his heads as often as he dies, had made this chain of it. The third is made of the bones of *Chatti*, one of *Ixora's* wives; for it is to be known, that he has two wives, one named *Grienga*, or the *Goddess of the Seas*, whom he always carries in his hairlocks; the other this *Chatti*, otherwise called *Parameferti*, who they say dies and revives once a year; and as often as she dies, he takes one of her bones, which are put into this chain. He carries also the same beads as the *Brahmans* do, his whole body being besmeared with ashes, and thus rides in triumph through *Calaja* upon an ox named *Irixapatan*, unto whom they offer certain sacrifices.

† Part wore the skin of a panther, the spots whereof imitated the variety of stars, flowers, &c.

This Pan was anciently represented with horns, reaching up to the clouds.

\* As Pan had his flute.

The Idol Ixora

*Baldæus.* His attendants are called *Pudas*, *Pixaros*, and *Pes*. *Pudas* is represented like a fat and short person, with a large paunch, without a beard, having serpents hanging down, with their tails from his head. He wears a bracelet on his left arm, and two others about his thighs, made of serpents, and a staff in his right hand. The *Pes* and *Pixaros* are represented much taller, with burning torches in their hands in the night-time.

They say that *Bramma* has created the universe, *Vistnum* governs it, and *Ixora* kills and puts a period to every thing. They further add, that *Ixora* has communicated part of his substance to his wife *Paramesceri*, alias *Parvati*, and she again to him; so that they are both hermaphrodites; and *Ixora* is sometimes represented as such; and *Rogierius*, *Lib. II.* says, That the *Brakmans* call their *Ixora*, *Arakhanari*, i. e. a *Manwife*. There are, however, a certain sort of *Brakmans* called *Tirimimpi*, who are so far different from the rest, that they won't as much as cast an eye upon a woman; for which

A strict  
sort of  
Brahmans.

reason as often as they pass through the streets, they have certain persons, who bid the women go out of the way: thus the *Hierophantes* of *Athens*, and the priests of the goddess *Cybele* among the *Romans*, used to deny themselves the use of venerary, the first by castrating themselves, the others by certain drugs. The *Jews* distinguish betwixt eunuchs made by God, and those made by men; the last are believed to owe their original to the *Persians*; and among the *Jews* they had certain persons, called *Impingentes*, because they used to run against posts and doors, rather than to look upon a woman.

*Rogierius* \* mentions another sort of *Brakmans*, called *Sausiazii*, who renounce all worldly pleasures, abstain from women, and even the *Betel*, (though generally used all over the *Indies*), eat but once a day, have no fixed habitations, use nothing but earthen vessels, and live upon alms. The fundamental rules of their sect being to withstand *lust*, *anger*, *covetousness*, *pride*, the pleasures of the world, and *revenge*.

*Baldæus.*

c. 4.

## C H A P. III.

*Contest betwixt Bramma, Vistnum, and Ixora, who is obliged to be a Mendicant twelve Years. A Child produced out of the Blood of Vistnum, occasions new Differences.*

*Baldæus.* THE residence of *Ixora* is upon the silver mount *Calaja*, to the south of the famous mountain *Mahameru*, being a most delicious place, planted with all sorts of trees, that bear fruit all the year round. The roses and other flowers send forth a most odoriferous scent; and the pond at the foot of the mount is inclosed with pleasant walks of trees, that afford an agreeable shade, whilst the peacocks and divers other birds entertain the ear with their harmonious noise, as the beautiful women do the eyes. The circumjacent woods are inhabited by a certain people called *Mumis*, or *Rixis*, who avoiding the conversation of others, spend their time in offering daily sacrifices to their god.

It is observable, that though these pagans are generally black themselves, yet do they represent these *Rixis* to be of a fair complexion, with long white beards, and long garments hanging cross-wise, from about the neck down over the breast. They are in such esteem among them, that they believe, that whom they bless, are blessed, and whom they curse, are cursed.

Within the mountain lives another generation, called *Jexaquinnera* and *Quendra*, who are free from all troubles, spend their days in continual contemplations, praises, and prayers to God. Round about the mountain stand seven ladders, by which you ascend to a spacious plain, in the middle whereof is a bell of silver, and a square table, surrounded with nine precious stones, of divers colours. Upon this table lies a silver rose called *Tamara Pua*, which contains two women as bright and fair as a pearl; one is called *Brigafiri*, i. e. *the Lady of the Mouth*; the other *Tarafiri*, i. e. *the Lady of the Tongue*, because they praise God with the mouth and tongue. In the center of this rose is the *triangle* (mentioned in the *first chapter*) of *Quivelinga*, which they say is the permanent residence of god.

*Ixora* being one time diverting himself in this *Cajala*, or *Paradise*, with *Pudas*, *Pes*, and *Pixajos*, let fall some words, intimating him to be the greatest in all the world, which *Bramma* and *Vistnum* not able to brook, a contest arose about the precedence; to decide which, *Ixora* told them, that which of the two could take

a full view of him from head to foot, *Baldæus.* should be accounted the greatest.

*Bramma* hereupon got upon his bird *Annam*, (whereof more anon) and passed up into the air, to get sight of *Ixora's* head, whilst *Vistnum* transforming himself into a hog, dug into the ground, to come at his feet. Whilst he was thus employed, meeting with a most poisonous serpent, he was so startled at it, that he desisted from his enterprize. This story is related more at large by several of the *Malabar* poets.

*Bramma* on the other hand, resolute in his designs, soared very high into the air, when being met by three flowers, they asked him whither he was a going; he replied, to get sight of the head of *Ixora*: they told him, *his labour was in vain*, by reason of the vast distance; which made *Bramma* change his resolution; but at the same time desired the flowers to tell *Ixora*, that he was prevented from coming so high as his head by a sudden giddiness in his brains; which they promised, and did accordingly; but *Ixora* being sensible of the deceit, did with his *Chacra*, or scymetar, cut off one of the four heads of *Bramma*, and cursed the flowers. Out of the blood of *Bramma's* head, came forth a man with five hundred heads, and a thousand hands, named *Sagatracavaxen*. The day on which *Bramma's* head was cut off, was ever after looked upon as ominous, and named *Pongalacha*, i. e. *Dies infestus*; whence arose the proverb of a thing that is never to be done, *It shall be at Pongalacha*.

The three flowers were cursed, *viz.* That one of them should grow upon a dunghill, and be cut down there; the other to be turned into a crow, and the third into a cow.

The *Brabmans* further say, That *Ixora* to expiate the crime he had committed, by cutting off the head of *Bramma*, turned mendicant as the *Jogü* do, with *Bramma's* skull in his hand, till the same should be filled with alms; whence arose that custom practised to this day, that he who kills a *Brakman*, must beg alms for twelve years in the skull of the *Brakman* killed by his hands. *Ixora* therefore begged alms for twelve years; for though he received sufficient alms, yet by the fiery

*Baldæus*. rays that darted from his eye in his forehead, it was all consumed and turned to ashes in an instant.

*Ixora attacked by the Mumis.*

One day as he was gathering alms among the beforefaid *Mumis*, their wives came running with whole ladles of blood to fill the skull; but not being able to sustain the glance of his eyes, they were so surprized, that they let slip not only their ladles, but also their clothes. The *Mumis* seeing their wives naked, did fall pell-mell upon *Ixora*; one attacked him with an ax, which he seized and got up into the air; another would have killed him with a serpent, which he took in his hands, without receiving any harm; then they brought a furious tyger to devour him; this he killed and scald, and made a garment of the skin; then they set upon him a wild elephant, who underwent the same fate, his hide serving him afterwards for a cloak; this *ax*, *serpent*, *tyger*, and *elephant*, are the same trophies he holds in his hands.

*Vistnum* willing to deliver *Ixora*, appeared to the *Mumis* in the shape of a most beautiful virgin, which occasioned such a surprize to them, that the men (as their wives had done before) fell into a trance, and *Ixora* spilled his seed upon the ground, which *Vistnum* with his hand formed into a child.

*Relieved by Vistnum.*

*Ixora* being towards the end of the twelfth year quite tired with his mendicant life, had recourse to *Vistnum*, who

commiserating his condition, put out the *Baldæus* fiery eye, that consumed all the alms in the skull; which done, *Vistnum* wounded himself in one of his fingers, and filled the skull with the blood, which put an end to his pilgrimage, but gave birth to the order of the *Jogii*, who in the memory of *Ixora's* pilgrimage, lead a mendicant life to this day.

*Another contest.*

Out of the blood of *Vistnum* a child was procreated, called *Vareu*, which occasioned new contests, *Bramma* challenging it as his own, because it was begot in his skull, *Vistnum* because it came forth out of his blood, and *Ixora* because it came out of his hands. To reconcile this difference, *Devaindra*, a king of the aerial spirits, persuaded them to relinquish their pretensions by joint-consent; which they having consented to, *Devaindra* educated the child at *Devalogam*, where becoming a famous bowman, he protected that place against *Sagatracavaxen*, who, as we told before, being the product of *Bramma's* head, had five hundred heads and a thousand hands. Afterwards *Ixora* returned to *Calaja*, his former residence.

It is observable, that if one of their kings dies, they tie his hands and feet, when certain soldiers come to threaten him with their sticks; which affront, they believe, is a means to expiate the trespasses committed by him in his life-time against his subjects.

#### C H A P. IV.

*The Children of Ixora. The Nativity and Constitution of Quenavady. The Origin of Sura. Quenavady castrated. Contest betwixt him and Superbennia. His Habitation and Gluttony. Funeral Feasts of the Malabars.*

*Children of Ixora.*

**I**XORA had three sons and one daughter, the eldest resembling an elephant, the second an ape, the third had six faces and twelve hands. The daughter, who was as black as a coal, had the face of a hog. The eldest son named *Quenavady*, was born in the wood by *Piragu*, with an elephant's head and face, the rest of his body being like other men; for *Ixora* walking one time with his lady *Paramefceri* towards the wood *Piragu*, she saw an elephant sporting with a female of the same kind, and so raised her appetite, that she desired *Ixora* to be both transformed into elephants; which being done accordingly, they eat of a certain fruit in the wood, which made them quite frenzical, so that they made the same

*Quenavady's original.*

noise, overturned the trees, threw up the sand with their trunks, and did all the other actions of elephants, not excepting even their copulation. The female having conceived immediately, brought forth this child with the elephant's head and face, and soon after they resumed their own shape. *Paramefceri* tried to give suck to this young monster, but being in danger of having her breast torn in pieces by it, she delivered it up to *Ixora*, who had it brought up in *Calaja*.

This *Quenavady* had the hand, teeth, and face of an elephant, with large hanging ears, and ugly lips, with red pimples all over the face: His hair is long, (like his father's,) tied about with a serpent, or adder, with a crescent or half moon

*A description of him.*

The Idol Quenavady, Ixora's Son

*Baldæus.* moon on his forehead, and four hands, besides the trunk; the rest of his body like other men, but shining like gold, with a large paunch tied about with a red piece of stuff: he wears also the girdle of the *Brahmans*, and on his feet divers gold rings and bells.

They tell you another story of *Ixora*, viz. That being one time inebriated with the *Sury*, or juice of the coco-tree, and having carnal copulation with *Paramesceri*, a small quantity of *Ixora's* seed was spilt upon the ground, and afterwards covered with earth by *Paramesceri*, this produced a palm-tree. *Ixora* coming soon after into the wood, and seeing the young tree, cut off the top thereof with his *Chakra*, or weapon. The liquor which issued thence so well pleased *Ixora*, that he took a good quantity of it in his cup he always carried along with him; and having drank his full share, tied up the tree, and so returned to *Calaja*. He repeated this so often, that *Paramesceri* finding him always return in drink from the wood, took the next opportunity to follow him thither; and finding the juice very acceptable, she tasted so long of it, till she was also inebriated. *Ixora*, when he first

A story of Ixora.

espied his wife behind him, cried out to *Baldæus*, her, *Calli*, that is, you *she-thief*; whereupon she answering, *Calla*, i. e. *thief*: the *Malabars* to this day call the said juice *Calla*. *Ixora* being well pleased with the young tree, he stretched it with his hand higher and higher, and so turned it into a palm-tree.

It seems somewhat odd, that the *Brahmans*, who pretend so much to sobriety, should make their *supreme god* a drunkard, when they are so nice in this point, that they will never make use of our ink, for fear there should be some wine in it. Thus the *Samoryn* of *Calecut* killed his own brother-in-law, because he was drunk; and the king of *Cochin* did the same to a company of drunken *Nairos*.

The *Brahmans* averse to drunkenness.

They further tell us of this *Ixora*, that he caused his son *Quenavady* to be castrated, because he once, whilst yet in his mother's arms, touched her privy-parts with his trunk: others say, he actually enjoyed her; which is the reason the *Malabars* say, that the elephants have no testicles.

*Quenavady* castrated.

It is to this *Quenavady*, the pagan artificers, workmen, &c. offer the first-fruits of their labour. After they have revered, and offered sacrifices to him for

twelve

*Baldens.* twelve years, he moves one of his ears, as a sign that they must continue the same; which being done twelve other years, he shakes the other ear, to give them to understand, that he requires still more at their hands; if they hold on twelve years longer, he opens his eyes, and grants their requests.

How wor-  
shipped.

*Ixora* being at a certain time desirous to try the agility of his two sons *Quenavady* and *Superbennia*, offered a very fine fig as a reward to him who should carry the day. *Quenavady* having a very thick skin, and riding only upon a mouse, whereas *Superbennia* had six faces, and twelve arms, and rid upon a peacock, being sufficiently convinced, that his brother would carry the prize, took his opportunity, whilst the other was riding round the *Calaja*, to turn short, and so lay hold of the fig. *Superbennia* having taken his turn, pursuant to the wager, and not finding the fig, did fall upon *Quenavady* so furiously, that he beat out one of his teeth: but *Ixora* giving *Superbennia* another fig, the difference was soon ended. But not knowing what to do with the tooth, he gave it to *Vistnou*, desiring him to restore it to *Quenavady*; which he did accordingly, by putting it into a fig which he gave to his nephew, who, as he was going to eat the fig, found the tooth, which he turned into a nice writing-pen, and kept it to write his poetry with.

Difference  
betwixt  
*Quenava-  
dy* and *Su-  
perbennia*.

For the rest, *Quenavady* is represented as very voracious; for they say, he could devour the whole world; nor is he to be fatiated, but in the *Sugar-Sea* called *Jexucadhil*, which is of a vast extent; and always boiling-hot, having in the midst a mount composed of nine very fine stones, with a plain on the top, deliciously seated, in the center whereof, stands the tree *Luola*, inclosed with a row of precious stones curiously wrought. In this enclosure, is a structure of the finest red coral, covered with precious stones: the doors whereof, as well as the avenues to the place, are guarded by a good force of the *Pudas*, who spend their time in holy meditations and prayers in the company

The Sugar-  
Sea.

of a good number of women, who sing to the praise of God. Close about the tree *Luola* are seats of gold, and a table made of the most precious stone called *Bairacalle*, upon which stand a bright shining mouse, and a rose, in the leaves whereof are written fourteen letters or characters. This is the residence of *Quenavady*, who rides upon the said mouse.

*Baldens.*

He has on each side of him a most beautiful woman, who are continually employed to lade sugar mixed with honey into his mouth; and for fear he should be tired with the same diet, good store of *Affes*, (*Indian cakes*;) fried in butter-milk, butter, and divers other provisions, stand always before him. The hills near it, afford also figs, grapes, coco-nuts, and all other sorts of the best fruits, as well as roses and other flowers. The musicians that attend divert him with fiddles, trumpets, flutes, hautboys, and other musical instruments; as many women are employed to make rich incenses, and to anoint his body with sandal-wood, civet, musk, and to offer all sorts of odoriferous flowers.

The *Malabars* celebrate yearly the memory of their deceased friends with great pomp and vast charge, according to their abilities. The kings upon this occasion, entertain the *Brabmans*, (who are in high esteem there, as being the interpreters of their *Vedam*, or law-book) magnificently, and distribute money after the feast. And, because in the *Indies*, but especially on the coast of *Malabar*, there are many petty kings, as those of *Trevancor*, *Coulang*, *Calecoulang*, *Porca*, *Cochin*, *Cranaganor*, *Cananor*, &c. these feasts are frequent in those parts, and the *Brabmans* will be sure to partake of them, though they travel sometimes ten, fifteen, nay, twenty leagues for it, and take their full share; for though they value themselves much for abstaining from flesh, fish, eggs, wine and other strong liquors, yet will they make themselves a full amends with such victuals, as are allowable by their constitution.

Funeral  
feasts of  
the *Malabars*.

## C H A P. V.

Of the other Children of *Ixora*. *A Coco-Nut in the Head of an Ape.*  
*Siri Hanuman born an Ape. Revived from the Dead. Combat betwixt Superbennia and Quenavady. His Cursing of the Moon.*

THE next to *Quenavady*, is stiled *Egafourubum*, or the true God, represented with an elephant's head, and

eleven hands. He is only to be worshipped by the *Brabmans*, though others also sacrifice to him, but must at the same time, abstain

*Baldæus.* abstain from flesh, fish, eggs, and wine. Next to him, comes *Ceuxci*, whose origin is related thus: *Paramesceri*, *Ixora's* spouse, having anointed her body with oil and saffron, and washing herself in a pond, did form from the impurities of her body, a living man; *Ixora* seeing him at a distance, and believing him to be her lover, hastned thither, and struck with his weapon his head off at the foot of the mountain *Calaja*, which was turned into a coco-tree; whence it is, that the *Indians* say, that the print of a man's face was fixed in the coco-nut. *Paramesceri* being sorely afflicted at her son's death, *Ixora* pleaded his ignorance; and to comfort her in her affliction, cut off the head of a white elephant, which he put upon the shoulders of her dead son, and so restored him to life again. He is represented with an elephant's head, and two hands.

Why the coco-nut has the print of a man's face.

The wives of the Nairos slip off their clothes in dancing.

*Ixora* had also another son, named *Siri Hanuman*, by *Paramesceri*, which was born an ape. *Ixora*, it seems, was a most celebrated dancer, and used frequently to shew his activity in the presence of the celestial spirits, as well as his spouse *Paramesceri*, who was so active in dancing, that one time when she had lost a ear-jewel out of one ear, she took it up with two toes of her feet, and put it in her ear again, to the incredible surprize of the spectators. Hence, perhaps, arose the custom used among the ladies of the *Nairos*, who, whilst they are dancing at a certain feast celebrated in honour of one of their idols, let on a sudden slip all their clothes, and remain naked. But to return to *Ixora*: Having invited many of the celestial spirits to see him dance, *Paramesceri* happened to see two apes sport together in the adjacent wood, she desired *Ixora* to transform both her and him into apes; which done, they leaped about in the wood, till coming to a bambo-tree, *Paramesceri* then conceived an ape. In the mean time the celestial spirits being come, according to invitation, and among them *Jecxa*, *Quinnera*, and *Quendra*, and finding their host abroad, they sent the *Wind* (as the nimblest of all) to find out *Ixora*, who having told him his errand, they both resumed their former shapes.

*Paramesceri* being now ashamed of her burden, requested the *Wind* to convey the ape into the womb of *Anbema*, one of the ladies of the celestial spirits; and so they returned home, where *Ixora* danced to the admiration of the whole assembly. *Anbema* afterwards brought forth an ape as white as *Ixora* himself, who being endowed with peculiar virtues by his father, performed many noted exploits; of which more hereafter in the history of *Siri Rama*.

VOL. III.

Two odd stories they tell of this ape: First, That being one time very hungry, and taking the fun for a dainty bit, he was endeavouring to leap up towards it, but was beat back by the iron weapon of *Ixora*, who gave him a good knock on the pate, but without any harm, whence he got the name of *Hanuman*. The other is, That meeting one time with a white elephant called *Acrapadia*, on which was mounted *Devaindra*, king of the celestial spirits, a quarrel arose betwixt them, in which *Hanuman* was slain: his father, the *Wind*, being afflicted at his death, hid his face under ground, so that the inhabitants of the earth being ready to perish for want of air in the extremity of heat, they addressed themselves to *Ixora*, who restored *Hanuman* to life, and recalled the wind above ground.

*Baldæus.* Odd stories of the ape. *Siri Hanuman.*

Thus the wind was adored as a god both by the *Greeks* and *Romans*. The *Atbenians* erected a temple to the wind, as *Augustus* did in *France*; the *Phenicians* did the same. This ape has divers celebrated *Pagodés* erected to him by the *Indians*. We read in the *Portuguese* histories, That in 1554, when they plundered the famous *Pagode* upon the *Adam's-Mount* in *Ceylon*, they found an ape's tooth (the most sacred relick of the pagans of *Pegu*, *Ceylon*, *Malabar*, *Bengale*, *Coromandel* and *Bisnagar*) enclosed in a box set with precious stones, which they carried to *Goa*; some of the *Indian* princes offered seven hundred thousand ducats to redeem it, but it was not accepted of, by reason the bishop of *Goa* opposed it.

Another son of *Ixora* was called *Superbennia*, with six faces, and twelve hands; the occasion whereof happened thus: *Paramesceri* being one day employed in washing herself in a cistern, six weavers happened to pass by, who inflamed with lust, looked very wishfully at her: this having the same effect upon her, she conceived the same instant; but fearing *Ixora's* anger, she threw it out with her spittle upon the ground, which turning in an instant into a child with six faces and twelve hands, much resembling in all other respects the six weavers, they took it along with them, and educated it in all manner of accomplishments. One time being engaged in a dispute with *Ixora*, he was so taken with his wit, that he received him for his son, assigned him a place at *Calaja*, and presented him with a peacock to ride upon.

A conception by fantasy.

Before I conclude this chapter, I must tell you one thing more of *Quenavady*. Returning one day pretty late at night from a banquet, when the moon was not very

*Baldæus*. light, it being only the fourth day after the new moon in *August*, with his umbrella in one hand, in the other a poem, and some cakes under his arm, he ran unwarily against a post with such violence, that he fell upon the ground, and dropped not only his umbrella, but also his poem and cakes. As he was most concerned for the last, so he took a good bite or two of them before he rose again, or looked for his book and umbrella. The moon seeing this pleasant spectacle, could not forbear laughing; which *Quenavady* perceiving, broke out into this curse, *Who-*

*ever, O moon, shall see thee for the future Baldæus, upon this day in August, shall be damned in his privities.* Hence it is that the pagans will not stir abroad the 4th of *August* after sun-set, nay, even not on the 5th, for fear of partaking of this curse; and if any one is obliged to stay without doors, he covers his face, and even will not look into the water for fear of seeing the moon, though they see the *St. Thomas* christians, the *Jews*, and *Magometans*, look upon it at the same time without the least detriment.

## CHAP. VI.

*Ixora's Daughter; and the Origin of the Small-Pox: Fear of the Malabars of that Distemper. Their Pagode Amadyri plundered by the King of Cochin. She comes to Coulang.*

A Certain giant named *Racxada* (of which more anon) having lived twelve years with *Bramma*, he received, among many other presents, a book from him, and some bracelets, as also the virtue of being invulnerable. The natives of *Coromandel* believe these giants to have been children of the *Brakman Cassiopea*, by his wife *Aditi*, just as the *Jews* say, that *Lilith* brought forth devils begotten by *Adam*. *Darida* finding himself thus placed above the common rank of men, by his strength bestowed upon him by *Bramma*, would needs challenge *Ixora*, who knowing his strength, sent against him a certain female, named *Sorga*, who cut off one of his heads; (for besides his true head, he had many others, but only in appearance.) But *Darida* returning the next day, reiterated his boasts, when *Ixora* engaged five holy women, called *Chamundigal* by the *Malabars*, in his quarrel, who cut off his false heads; but all to no purpose; so that *Darida* persisting in his insolence, *Ixora* consulted with *Vistnum* what to do in this exigency. Whilst they were debating the matter, *Vistnum* sent forth from his body a certain matter, (called *Bixa* by the *Malabars*,) which entering that of *Ixora*, passed again through the eye on his front, and falling upon the ground, produced in an instant a female, which *Ixora* acknowledging for his daughter, gave her the name of *Patragali Pagode*.

Darida.

A description of Ixora's daughter.

This daughter had eight faces, sixteen hands as black as a coal, with large round eyes, her teeth like the tusks of a boar. In lieu of pendants she has two elephants

in her ears, and serpents about her body, instead of a garment; her hairlocks are peacocks tails; in her hand she carries a sword, a trident, a large porcellain basin, another vessel called *Capala* by the *Malabars*, a scymetar called *Mautegam*, a hanger called *Carutela*, an arrow, a weapon called *Cona*, a rope, an ape with an iron wheel.

This monster was no sooner born, but she went to revenge her father's quarrel, and fighting for seven days successively, she cut off seven of his imaginary heads; but finding all her endeavours in vain, and that *Darida* was not vulnerable as long as he kept the book and bracelets given him by *Bramma*, she applied herself to *Sorga*, intreating her to take upon her the habit of a beggar, and by that means endeavour to get the before said things into her hands. Accordingly *Sorga* took the opportunity to ask alms of *Darida*, when he was at some distance from his house, who told her, That if she would go to his house, his wife would answer her desire; which if she did not, he would do it himself. *Sorga* then went to his house, and asked his wife for the bracelets and book in her husband's name, who freely delivering the same, she brought them instantly to *Patragali*. *Darida* having thus lost his best treasures, wherein *Bramma* had inclosed all his happiness, and thereby being bereaved of his former strength, was soon after engaged again, and had his true head cut off by *Patragali*.

Being much exalted by this victory, she came strait to *Ixora*, who being then just undressed,

*Baldeus*. undressed, leaped into a cistern, for fear of being seen by *Patragali*, from whence he gave her some flesh and blood; but finding her not satisfied thus, he ordered her to hold out her basin, and cutting off one of his fingers, he filled it with his own blood; but *Patragali* continuing still unsatisfied, took one of her golden chains, (composed of small pieces, like pepper corns,) and threw it into his face, which raising in his face great numbers of pimples, or small ulcers, he cried out with great surprize, *Basuri*, i. e. *O you revengeful woman!* and desiring her to desist, created two young men, named *Birapatrem* and *Quetraquele*, whom he bestowed upon her, and thus pacified her anger; but to rid his hand of her for the future, he presented her with a vessel of sandal wood, ordering her to go with it into the world, and to reside (though unknown) among the mortals, and to require vows and sacrifices at their hands.

Opinion of the pagans about the small-pox.

The pagans therefore imagining that it is *Patragali* sends the small-pox among the people, leave the patient so soon as he is seized with it; and hence perhaps it is, that they have a certain idol representing a female, with a child laying his arms about her neck, and imploring her assistance. They deliver up these patients to the care of the *Comaras*, a fraternity belonging to the *Pagode* of *Patragali*: these offer the blood of some cocks and other sacrifices to the goddess in behalf of the sick; and for the rest give them only some *Cansies*, or rice boiled in water; and leaving them for the rest to their own disposal, more die for want of good looking after, than by the violence of the distemper, nay, sometimes are killed by *Comaras*, who inherit all their moveables.

We told you before, that *Ixora* called his daughter *Basuri*, which to this day signifies the *small-pox* among the *Malabars*, which they say is the sword of *Patragali*, and for that reason endeavour to mitigate her wrath by sacrifices, wherein they follow the footsteps of the antient *Greeks*.

The Pagode of Patragali in Cranganor.

They say that *Patragali* has her chief residence in the *Great Pagode* of *Cranganor*.

*nor*, called the *Pagode of Pilgrims*, from *Baldeus*. the vast number of zealots that flock thither; and as this brings in a revenue of many thousand *Fanams* to the king of *Cranganor*, so the king of *Cochin*, who said would have had a share in the booty, did post some forces on the passes, who robbed and plundered the pilgrims, intending by this means to oblige them to resort to the *Pagode*, built in the kingdom of *Palurti*, under his jurisdiction. Thus the old king of *Cochin* did plunder and rob the famous *Pagode* of *Ammadiri* of all its treasure, at the head of a body of ten thousand men, and afterwards laughed at them into the bargain, saying, That he had taken it only as his inheritance, as being the son and heir of the idol; just as *Dionysius*, the *Sicilian* tyrant, did with *Jupiter* and *Æsculapius*.

The king of Cochinchina robs a famous Pagode.

But to return to *Patragali*; she was no sooner got out into the main with her vessel of sandal-wood, but being attacked by some fishermen and ape-hunters, was forced to return to *Calaja*, where finding *Ixora* overwhelmed with sleep, she overturned his bedstead; which awakening him, she told him her disaster; whereupon being endowed with new vigour by *Ixora*, she returned to her vessel, and having defeated the ape-hunters, and landed safely on the south side of *Coulang*, (a city of *Malabar*;) the queen thereof sent for her to court, and entertained her there for twelve years as her own daughter.

Adventures of Patragali after she left Ixora.

The lord of *Couleta* (a country seven leagues to the north of *Calecut*) then desiring *Patragali* in marriage for his son, the same was concluded, and she taken home, where she lived for twelve years, without ever cohabiting with her husband, as boasting herself to be the daughter of *Ixora*. *Mendoza* speaks of a certain idol in *China*, with a child hanging about her neck, which the jesuits would fain persuade the world to have been intended for the virgin *Mary*, though it seems much more probable, that it was intended for this *Patragali*. What *Mr. Le Blanc* tells us of the female idol of *Calecut*, seems very suspicious to me.

## C H A P. VII.

*Patragali's Father and Mother suffer Shipwreck: She sends her Husband to sell her Jewels; and goes in quest after him. Nine several Adventures which happen to her. The rest of Ixora's Children: Their Adventures. What further becomes of Paramesceri.*

*Baldæus.* **A**fterwards *Patragali's* father and mother-in-law being embarked aboard a ship with all their riches, in order to traffick with them in foreign countries, they were attacked at sea by the ape-hunters, who sinking their ships, they lost all their riches. *Patragali* then gave her golden foot-rings to her husband to sell them; who departed accordingly; but meeting upon the road a goldsmith, (a highwayman of *Pandy*;) he under pretence of viewing the rings, entertained the husband, till by several by-ways they brought him to *Pandy*. Here the pretended goldsmith (who had not long before stolen just such rings from the queen of *Pandy*) accused *Patragali* of the robbery; who was put in prison, and afterwards empaled alive on a palm-tree. The goldsmith's wife having an aversion to so foul a fact, upbraided her husband with it, who killed and buried her near a well.

*Patragali's husband executed.*

*Patragali* having staid six days without hearing any news from her husband, resolved to go in search after him.

*Patragali's adventures whilst she goes in quest of her husband.*

The first thing she met with, was a pigeon, which she asked, *Whether she had seen her husband?* The pigeon replied, she had seen him go that way, but not return. In recompence whereof *Patragali* gave her this blessing, That she should never want water in *February*, (being the driest season here,) and presented her with a piece of her chain, which she threw about her neck: (the turtles have such a ring about the neck.)

*Patragali* following the way shewn her by the pigeon, met with another bird; of whom having enquired as she did before of the pigeon, she received the same answer; which made her bestow a tuft upon his head, being perhaps the same we call the *Pievot* in our country, called *Carpenteiro* by the *Portuguese*.

Afterwards *Patragali* coming to a mango-tree, she asked the same question; but receiving no answer, she cursed it, That for the future the dead corpse should be burnt with no other wood; and that all vessels built of that wood should rot, and be worm-eaten at sea.

•Meeting next a cow, she was kicked by her hindermost legs; which she re-

*Baldæus.* sented so ill, that she gave her this curse, That of her four teats one should be for the use of the *Pagode*, the other for the prince of the country, the third for the owner, and the fourth only for her calf; that they should make drums of her skin, and that consequently she should be subject to blows, both dead and alive.

The fifth she met with being a *Nairo*, or soldier of *Malabar*: this fellow had dug a hole, and having covered the same with some twigs and sand, *Patragali* fell into it as she passed along: she gave him this curse, That he should be called coward all his life-time.

The next was a *Naira*, or a *Nairo's* daughter; who being asked by her, whether she had not seen her husband? she clapped her hands, saying in a scornful tone, What are you running after your husband? I have not seen him. She gave her this curse, That she should be married to a *Nairo*, a coward, who as soon as he turned soldier should leave her in forty days after.

She then coming to a jaquo-tree, she asked after her husband again: the tree bowing its twigs, furnished her with some of its milky liquor, (as this tree does, if you cut any of its twigs,) she bestowed this blessing upon it, That its fruits should be highly esteemed by the kings and princes; and that though its stem might corrupt, it should continue to bear fruit, (as in effect it does,) and that they should employ its wood in making their cymbals, called *Tabelyne*, and the statues of their idols.

The eighth she met with was a *Polia*, a man of mean extraction, who not going out of her way, (as they usually do,) she told him, That he should not be admitted into the houses of persons of quality from *October* till *February*.

The last she met with was a *Parrea*, likewise a person of low birth; but having paid her the usual reverence, she admired at his civility, which made her ask him, Whether he did know her? He replied, that he took notice of her swines tusks, and the elephants in her ears; which so pleased her, that she told him, He should drink of the liquor of the palm-tree, (which in effect they do when they gather it,) and that

*Baldæus.* that he and his family should feed upon cow's flesh; then tracing the way shewed her by the *Parrea*, she found her husband empaled upon the palm-tree; which being too high for her, she obtained by her prayers, that the palm-tree broke, and so delivered her husband, whom she brought to life again.

Patragali  
revenges  
her hus-  
band's  
death.

*Patragali* now burning of revenge to punish the murderers of her husband, addressed herself to *Ixora*, who having furnished her with a strong body of *Raxaxos*, or devils, (having been wicked men in their life-time,) she entered the territories of *Pandy*, and at last killed the king and the goldsmith. His wife she revived from the dead; who having brought forth a son, she granted him a privilege to work in the *Pagodes*, and to receive to himself the tenth part of all the gold he should make use of, the fourth in ten of what he should work for the king, and as much as he could get from private persons.

We told you before of the *Pagode* of *Patragali* in *Crangavor*, where, besides her statue, stands that of a large man in marble, which the *Brahmans* knock every day with hammers upon the head, to keep it from growing too big.

Pedegree of  
Paramesceri.

Thus much of *Ixora's* children, who were, properly speaking, only four in number, (*Superbennia* being only an adopted son:) we must also go on in the story of *Paramesceri* his spouse, and her origin. *Jecxa Prajava*, king of the *Peringales*, had four daughters, the eldest whereof was *Paramesceri*, otherwise called *Parvati*; *Sarossodi* and *Gojatris*, the second and third, being married to *Bramma*, and *Pagode Siri* to *Vistnum*. Their father being desirous to see his daughters in their full glory, invited *Bramma* and *Vistnum* to a most magnificent feast. *Vistnum* asking him whether he had invited *Ixora*; he answered, No, (*Ixora* being then in his mendicant state;) but afterwards considering the matter, he invited him at last; which *Ixora* took so heinously, that he resolved to spoil the feast.

Rogierius  
gives a  
somewhat  
different  
relation.

The day appointed for the feast being come, *Siri-Pagode* came in great pomp in a stately chariot, made of nine most precious stones, most artificially wrought, herself being adorned with numberless jewels and pearls, and attended by a splendid retinue of servants and musicians. *Sarossodi* and *Gojatris*, the other two sisters, appeared with the same splendor. *Paramesceri* in the mean while having obtained leave to go to the feast from *Ixora*, he ordered her to put on her best apparel, and gave her his serpents, his umbrella of peacocks tails, his chain of bones, his tyger's skin, and elephant's hide: thus equipped, she mounted upon

an ox, and with a large attendance of *Baldæus.* drummers, and *Pudas* and *Pixares*, came to her father's palace, where being met at the gates by her sisters and the other guests, these seeing her equipage much below what they expected, instead of welcoming her as they ought to have done, burst out into laughter; which so vexed *Paramesceri*, that without more ado, she returned to *Calaja*, where she gave an account of what treatment she had met with, because her sisters appeared at the feast in a most sumptuous equipage, their apparel being covered all over with precious stones and pearls, whereas she, who was the eldest sister, and married to *Ixora*, had been despised for her mean appearance.

*Ixora* moved at the just complaints of his spouse, sent his son *Quenavady* to spoil the feast. *Vistnum* being well acquainted with *Quenavady's* temper, ordered good store of cakes to be set before him in the hall; which pleased him so well, that he soon forgot his father's orders. *Ixora* wondering at *Quenavady's* long stay, sent his brother *Superbennia* upon the same errand; *Vistnum* knowing him not to be diverted with trifles, sent out to him some ingenious perions, who entertained him so well with subtle discourses and arguments, that he likewise neglected his father's commands.

At last *Ixora* finding both his sons to stay behind, ordered his daughter *Patragali* thither. *Vistnum* no sooner heard of her coming, but he commanded a most delicious banquet to be set before her in the hall, through which she was to pass, which so diverted her senses, that she soon forgot what she came about.

*Ixora* finding all these endeavours to prove ineffectual, resolved to go thither in person. Which *Vistnum* no sooner got notice of, but he told king *Jecxa Prajava*, his father-in-law, that not being able to cope with *Ixora*, he would retire with his wife; and *Bramma* doing the same, the sun and the moon (two of the guests) staid only behind. *Ixora* coming to his father-in-law's palace, upbraided him with the contempt he had put upon him and his wife *Paramesceri*, and so taking him by the hair, full of anger, there came forth at the same instant, a stout warrior armed cap-a-pee, (like the *Mars* of the ancient pagans,) called *Virapatnen* by the *Malabars*, who cut off *Jecxa Prajava's* head, the hands of the god of the fire, and beat out the teeth of the sun. What *Rogierius* says concerning *Jecxa Prajava's* having got a goat's head instead of the other, and that the moon also got a good banging, I could never learn either from these pagans themselves, or from the *Portuguese* histories.

## PART II.

## CHAPTER I.

*The Idol Vistnum; and his Transformation into a Fish. Mat's Altar.  
Another Transformation of Vistnum. An Account of the Milk-Sea.  
Cauram's Altar.*

*Baldæus.*  
Vistnum's  
descent  
and resi-  
dence.

**V**istnum, the second in rank among the gods next to *Ixora*, is also descended from *Quivelinga*. He is of a black colour, with one head, and four hands; he resides on the *Sugar-Sea*, and governs the world sleeping. Instead of a bed, he reposes upon a noted serpent called *Annatan*, with five heads; two whereof serve him for pillars, one for a bolster, and two under his hands. This serpent, as they say, being once in the humour to try the power of *Vistnum*, got a sixth head, which *Vistnum* no sooner saw, but he got another hand to lay upon the head, and the serpent having got a seventh head, he got likewise another hand; so that as the serpent's heads did grow to the number of a thousand, his hands increased in proportion; whence it is that they look upon the serpents as celestial spirits, keep them in great veneration, and never kill them, though they are often hurt by them. Thus the serpents were reckoned by the ancient *Lithuanians*, *Samogitians*, *Prussians*, and *Egyptians*.

Wears a  
print on his  
breast.

They tell us further, that *Vistnum* wears the print of a foot upon his breast: for one *Ricxi Sirwelstena* being desirous to know which of the three was the most *Potent God*, came to *Calaja*, and gave *Ixora* a good box on the ear, who transformed him into a stone; but having after twelve years recovered his life, he did the same to *Bramma*, who let him go without doing him any harm. Then coming to *Vistnum*, and finding him upon his bed, he set his foot upon his breast, which *Vistnum* fixed there, so that he was forced to continue there one hundred years.

Vistnum's  
wives.

*Vistnum* had two wives, one called *Leximi*, alias *Laetzemi*, and *Siri Pagode* beforementioned. The first, *Vistnum* found in the *Milk-Sea*, in a rose of one hundred and eight large, and one thousand and eight lesser leaves; her chief business is

to scratch his head. The other is called *Baldæus*. *Pumi Divi*, i. e. the *Goddeſs of Heaven*, in whose lap he lays his feet, which she is to rub with her hands.

They attribute no less than ten several transformations to *Vistnum*, nine whereof, they say, are accomplished already; but the tenth is to come. *Father Kircher* the jesuit \* mentions the same to have been \* China related to him by *father Hen. Roth*, an *illustr. Austin* frier; and *Rogierius* says likewise *part 3. Ed. 6.* something of them: but as under these ten transformations are hid the chief mysteries of the pagan religion on both sides of the *Ganges*, so we will treat of them *Vistnum* at large with this precaution, That these *ten times* pagans often give divers names to the *trans- formed.* same god, by reason of the great difference betwixt the languages of the *Benjans*, *Gentives* and *Malabars*: so, though they acknowledge the same *Ixora*, *Bramma*, and *Vistnum*, some of them called *Ixora Mabex*, or *Makadeuw*, *Bramma*, *Bruma*, or *Ram*, and *Vistnum Bexuo*, &c. which seems to intimate as if they had a certain respect to the *Trinity*; just as the *Chinese* worship three divine attributes under the name of *Pussa*, and the *Greeks* placed the three *Charities* near the throne of *Jupiter*; and if the modern *Jews* were not quite obstinate in the denial of the *Trinity*, they might be convinced by their own *Rabbies*, *Rabbi Isaac*, *Rabbi Judas Nagi*, and *Rabbi Simeon*.

The first transformation was into a fish, *The first* occasioned by *Raxiata*, alias *Adirem*, *transfor- mation was* who having carried away the law-book into a fish. of the inferior gods called *Devagal*, or *Dewetas*, hid himself at the bottom of the sea. The inferior gods making their complaints to *Vistnum*, he transformed himself into that ravenous fish the *Shark*; and thus diving to the bottom of the sea, laid hold of *Raxiata*, otherwise called *Seremiasen* and *Sancafoor* by the *Benjans*, killed him, and seized the law-book, divided into four parts; the first whereof

*Baldæus* whereof treated of the souls of the Blessed; the second of the vagabond souls; the third of good works; the fourth of bad works. But what *Rogierius* says l. 1. c. 5. viz. That the fourth part is lost, I could never be convinced of. The fish is called *Mat*, or *Mathia*, though the *Malabars* and *Benjans* call it *Zecxis*. The *Benjans* tell us, that these books were stolen from *Bramma*, but the *Malabars*, from the *Dewetas*, or inferior gods. The *Benjans* say, that *Bramma* was transform-

ed into a fish, whereas the *Malabars* ascribe it to *Vistum*. The *Benjans* call these transmutations *Altars*; so that according to their supposition, *Mat's* altar being the first, has now stood two thousand five hundred years.

Upon this occasion, I must agree with *Rogierius*, when he says, l. 2. c. 3. That he could not dive into the mysteries of the transformations; because I am certain that it cost me a great deal of trouble, before I could attain to the knowledge thereof,

*Baldæus*. thereof; and that not without the assistance of a certain *Brahman*, who coming from *Bengale*, settled at *Jafnapatnam*: and as I frequently conversed with him, so I often used to discourse with him concerning the animadversions made upon this head by *Rogerus*. He being afterwards converted to the christian faith, and baptized in the church of *Vanarponne*, and our discourse running upon the transformations of *Vistnum*, he told me, That this *Vedam*, or law-book, being inclosed in a *Chanki*, or sea-horse's horn, the same was found out by *Vistnum*: whence it is that they say, the prints of the fingers are to be seen in these horns to this day; and that they have put the *Saccaram*, or sword, and the *Chanki*, or horn, into his hands, as you see in the preceding draught; though some ascribe the same to *Bramma*.

But before we enter further upon the description of the transmutations, we must add certain preliminaries, as tending to the explanation thereof.

Four remarkable divisions of time.

All these transformations were performed in four different times or spaces: The first, called *Kortefinge* by the *Benjans*, they say, continued one million seven hundred and twenty-eight thousand years. The second *Tretafinge*, one million two hundred and ninety-six thousand years. The third *Duaperfinge*, eight million and sixty-four thousand years. The fourth, *Kallifinge*, four million and thirty-two thousand years, being the same term of time we now live in; so that according to their computation at *Suratte*, there were in 1657, at least four thousand seven hundred and fifty-eight years elapsed of this last term of time. For it is to be known, that the *Benjans*, and most other pagans, *Egyptians*, *Chinese*, and *Japonesse*, differ several thousands of years in their computations from ours. And to convince you, that the *Benjans* have the same years with ours, it is to be observed, that they, as well as we, divide their years into twelve months, amounting in the whole to three hundred and sixty days in the year; and to make amends for our odd-days, they have thirteen months in every fourth year; yet so that the thirteenth month hath no more than sixteen days. And it is further their opinion, that after the expiration of this last term of time of four million and thirty-two thousand years, the world shall be renewed. In which point they follow, in some measure, the foot-steps of *Plato*, who allowed no less than thirty-six thousand years before the sun could pass through the three hundred and sixty degrees of the *Zodiack*; though they make their *Anus magnus*, as the antient pagans called it:

T

*Interea magnum sol circumvolvitur annum*\* *Baldæus*.

The pagans on the coast of *Coromandel* and *Malabar*, call these four terms of time, *Critagom*, *Treitagom*, *Dwaparugom*, and *Kaligom*; where it is to be observed, that according to the computation of the pagans and the *Gentives* of *Suratte*, there are in this year 1670, elapsed four thousand seven hundred and seventy-one: whereas those of *Coromandel* compute four thousand seven hundred and seventy, being only one year's difference: but finding in 1665, that the inhabitants of *Jafnapatnam* computed then the four thousand eight hundred and sixty-fourth year of the last term, I told them that they did not stand for one hundred years, less or more, whereat they smiled.

But it is time we should now proceed to the second transformation. The thirty-three gods and the *Adires* held an assembly in the *Milk-Sea*, to consult how to get into their possession the *Ambrosia*, called by some *Amurtam*, and *Amortam*, by others *Amratam*. Some say, That *Ixora* and *Vistnum* having called together all the good and evil spirits, entered upon a debate, how to find out something endued with such a virtue, as to make men live without victuals or drink, and without danger of death, or being tired. Whereupon it being agreed, that they should turn the mount *Mahameru*, (called *Merrawwa* by *Rogerus*.) like as the turners do, and instead of a rope, make use of the serpent *Harugu*, called *Sescha* by the *Brahmans*, being of so vast a bulk, as to enclose the seven worlds and seas: accordingly they began their turner's-work; but finding the mount immoveable, they addressed themselves to a noted ape called *Baly*, (of whom more anon in the history of *Siri Rama*.) by whose assistance the mount began to stir; and meeting at the same time with a beautiful woman named *Dara*, they bestowed her upon *Baly*, as a reward for his services. But continuing their work, the mount by turning round, tumbled into the sea; so that being destitute of all means to recover it thence, they were forced to have recourse to *Vistnum*, who taking the shape of a *Tortoise*, dived to the bottom, and brought the mount up on his back. Here it was, that *Vistnum* met with the beautiful *Macha Lecxemi*, whom he married afterwards. But the mount being exceeding high, *Vistnum* took the shape of a bird, and flew round about it, till it was brought lower. This story seems to have some relation to the fable of mount *Atlas*, and what is said *Heb. i. That God bears up the world*.

\* *Virgil.*  
1.3. *Æneid.*

The

*Baldaeus.* The gods and the *Adires* then continuing their work, did light upon some poison; which being too strong for them, they sent to *Ixora*; but were still in pursuit after the *Ambrosia*, which they intended to present to their great king *Deva Indra*, (who was then very sick,) surnamed *Quiera Navam*, because his whole body was covered with *manly yards*, in revenge of the adultery he committed with the wife of the great *Rixi Quendama*: For *Deva Indra* being extremely in love with the said lady, transformed himself into a cock, and coming to her house in the night-time, began to crow most briskly. *Rixi* thinking it had been near break of day, got out of his bed; and whilst he was going to an adjacent pond, to perform his usual devotions, *Deva Indra* took the opportunity to enjoy his wife. *Rixi* returning from his devotion, and perceiving the cheat, transmuted his wife into a stone, and laid the other punishment upon her lover.

By this time the *Adires* having seized upon the *Ambrosia*, without giving a share to the gods, these made their applications to *Vistnum*; who, thereupon taking the shape of a most beautiful nymph, sat down at table with the *Adires*, when their attendants were just ready to distribute the *Ambrosia* among them. Being all extremely enamoured with her beauty, every one courted her for his spouse. To decide the matter, she told them, That they should put the *Ambrosia* into her hand, and with their eyes shut, and hands tied behind them, but their mouths open, receive every one their share of the *Ambrosia*; and that he, upon whom she should pitch for her husband, should be the last. This being done accordingly, she seized upon the *Ambrosia*, and carried it to the gods. But whilst they were all opening their mouths to receive the said *Ambrosia*, *Ravaben* (who had assumed the shape of one of the gods,) shewed his boar's tusks; which *Vistnum* seeing, gave him such a powerful blow, that his head flew from his shoulders; whence the *Adires*, whatever shape they assume, always retain their tusks. However, *Vistnum* throwing the body and head into the air, the same were transformed into two planets, called *Rahu* and *Quendaum*. *Rogierius* calls them, *Ragou* and *Ketou*, which, in the *Malabar*, signifies as much as *Caput* and *Cauda*, or the *Dragon's-head* and *tail*. But here, the *Brahmans* commit an error in astronomy; for they have no planets, but a fixed *sidus*, consisting of thirty-one stars on the north-side without the *Zodiac*; where the moon passing from south to north, and again from the north to south, goes through this *Ecliptick-line*, being the same the sun passes through eve-

*Baldaeus.* ry year, and the moon every month in the year; for when she takes her course from south to north, the place where she passes through the ecliptick-line, is called the *Dragon's-head*, as the place of the said line through which she passes in her return from north to south, is called the *Dragon's-tail*. Hence it is, that (according to *Rogierius*) these pagans say, that there is an antipathy betwixt sun and moon, and *Ragou* and *Ketou*; and when they see an eclipse of the sun or moon, that they are fighting with *Ragou* and *Ketou*, or that they are devoured by them.

The inferior gods employ part of the *Ambrosia* they had got, in restoring their great god to health, and removing the *manly members* from his body, instead whereof, he got as many eyes.

The before-mentioned poison taken out of the mount *Mahameru*, being so virulent, that whatever it touched, was consumed to ashes, was given to *Ixora* in the presence of *Paramesceri* his spouse, who dreading the effects thereof, clapped her hand to his throat, to prevent him from swallowing it; and laying the other hand upon his mouth, for fear he should spue it out again, and set the world on fire, mingling at the same time her prayers (*Nila candamtre acxeram*) with her endeavours, the poison forced its way through *Ixora's* ear, and was in an instant transformed into a devil, called *Canda Carna Pixaxo*. The prints of *Paramesceri's* finger left three black spots on *Ixora's* throat, whence he got the surname of *Nili Candaon*, i. e. *black throat*, or *black head*.

The *Benjans* and *Gentives* give a different relation of this second transformation. They say, That the sea being swollen with pride, broke out in these words: *Who is it that can compare with the riches contained in my azure marble vaults? here it is, the moon has fixed her habitation; the water of Tammarith, which renders those that drink it immortal, is enclosed in my bosom! The elephant with his seven trunks, and the seven-headed horse dwell in the depths, which produce black, white, and red coral in vast quantity!* The great god of heaven being exasperated at this vanity, commanded the giant and the four-headed god *Bramma*, to go to the river *Siam Boerwetty*, near which lies the golden mount *Meeperwat*, seated in the center of the earth, and forty thousand leagues high; and to remove the said mount into the sea, by winding the serpent *Signage* about it, and thereby force the sea to cast out her treasure, which had rendered her so vain-glorious. This being put in execution accordingly, the sea cast out the following fourteen things. 1. The money

*Baldæus*. called *Leefemy*. 2. The most precious jewel *Consenckmany*, or the carbuncle which carries a lustre like the full moon. 3. The tree *Paertsatig*. 4. The vessel *Silxeren*, with the water of *Sora*. 5. *Doctor Dannerwanter*. 6. *Indemademaen*. 7. The white cow of plenty, called *Camdoga*. 8. The immortal water, called *Amarith*. 9. The elephant with seven trunks, *Hiera Wannesty*. 10. The beautiful female dancer, *Remba*. 11. The seven-headed horse,

*Exmognora*. 12. The bow *Dennok*. 13. The *Baldæus* horn *Chiank*. And, 14. The poison *Sabar*. This done, the sea began to abate of its pride, the mount and serpent had their peculiar places assigned them, and the treasures of the sea were distributed to different places and persons. Thus far of the second transformation, containing two thousand five hundred years of the first term of time.

CHAP. II.

Vistnum transformed into a Hog: Waras's Altar. Some Reflections upon the Fables of the Pagans. Vistnum's fourth Transformation into half a Man, and half a Lion.

*Baldæus.*  
The third transformation.

A Certain *Adiren*, named *Renniacxem*, was of such vast length, that taking up the earth, he rolled it together like an anchor-cable, and carried it upon his

shoulders to the infernal places called *Baldæus*, *Padalas*, whilst *Vistnum* was asleep in his bed. He no sooner heard of the presumption of this *Adiren*, but he assumed

The Idol of *Vistnum* in his third Transformation, as describ'd by *y* Benjans.

*Baldens* the shape of a hog, and digging with his snout through the earth, till he came to the *Padalas*, killed the robber, and taking the earth upon his tusks, fixed it in its former place. Hence it is, that in the *Pagode*, called *Adi Warraku*, in the city of *Trimottam*, not far from *Sinzi*, there is to be seen the head of a hog, which the *Brabhans* say was the product of the earth, and is revered as the true idol of *Vistnum*, in memory of this transformation.

The *Benjans* and *Gentives* of *Indosthan* and *Suratte*, give us the following account of it. During the first term of time, say they, the world was so over-burthened with sin, that the serpent of a thousand heads, unable to bear the weight thereof any longer, withdrew herself from underneath it, whereby the world, together with men and beasts, were cast into, and perished in the depth of the sea. *Bramma* addressing himself to the great god, desired him to retrieve the world out of the abyss of the sea, which he willingly granted; whereupon *Vistnum* assumed the shape of a boar's head, with tusks as big as an elephant's trunk, white all over his body, with four arms and hands, having in one hand a great sword, called *Godda*, and in the other a book, as likewise a horn and round *Ticker*: thus transformed, he threw himself into the sea, being at first no bigger than a man's finger, but increased before he reached the bottom to such a degree, that in case the earth had been placed on the surface of the water, and he stood upon it, his head would have touched the stars. Coming to the bottom of the sea, he killed the dreadful giant *Hirnaks*, whose blood tinged the whole sea with red. *Vistnum* having trampled him under his feet, lifted with his tusks the earth out of the sea, and placing the tortoise upon the water, and the serpent with a thousand heads upon the tortoise, he retired to his residence, and *Bramma*, with one word, created a new generation of men. This transformation comprehends two thousand and seven hundred years, in the first period of time.

This story seems to intimate, that these pagans have heard something of the deluge, considering especially that the *Benjans* do live nearer to the borders of *Persia* and *Armenia*, than the rest of the *Indians*; there being also mention made of the giants, *Gen. vi. 4.* And it is very probable, that the antient pagans were not quite ignorant of the history of the deluge, which they afterwards ushered into the world, under divers peculiar deluges, as for instance, the *Diluvium Ogygium*,

which happened in *Attica*; and *Deuca-Baldens* lion's deluge in *Thessaly*; and the *Prometheus* of the antient pagans, is by most critics taken for the same with *Noah*.

But we come to the fourth transformation; yet before we enter upon the particulars thereof, we must add something more relating to the third transformation. The earth being restored to its former station, *Vistnum* upon an exact view found it something inclining to the south; which *Vistnum* not being able to remedy, he addressed himself to a certain saint of very low stature, named *Rixi Agassia*, (*Rogorius* \* calls him *Agastea*), who having laid \*Lib. II. his holy book upon that part inclining to the south, put it into a just equilibrium.

*Vistnum* walking with this *Agassia* near the sea-side, the sea asked *Vistnum*, *Who it was that walked with him?* *Vistnum* replied, *He is a saint who is going to restore the earth to its true ballance*; whereupon the sea, scorning his low stature, (he being not above the height of a joint of a finger,) wetted him with its waves; which affront being highly resented by *Agassia*, he took some of the sea-water in his hand, and beginning to drink, did not desist till he had drunk up the whole sea. *Dewetas* and *Rixis* seeing the sea thus exhausted, interceded with *Agassia* not to rob the world of so singular a benefit, and prevailed upon him so far, that he pissed out again all the water he had drunken before; and this is the reason their philosophers alledge for the saltness of the sea.

*Agassia* after having restored the ballance of the earth, took his leave of *Vistnum*, who to prevent the like for the future, ordered the great serpent to wind herself about the seven worlds and seven seas; and for more security's sake, appointed eight guardians to watch over it, called in the *Malabar* by the following names, 1. *Indra*, the king of the celestial spirits. 2. *Vanni*, the god of fire. 3. *Padurpati*, king of the evil spirits. 4. *Nirurdi*, king of the infernal spirits. 5. *Varunna*, the god of the sea. 6. *Maril*, the god of the winds. 7. *Cubera*, the god of riches, called otherwise *Bassironnem*. 8. *Ixananam*, or *Ixora* himself. Hence it is, that you see frequently eight stones placed at the entrance of and about their *Pagodes*.

The fourth transformation, into half a lion and half a man, was occasioned thus: During the first period of time, a certain giant, *Hirrenkessop*, (as the *Benjans* call him, but the *Malabars* *Remiacxen*) having been forced to abscond for twelve years, on the account of *Bramma*, afterwards made the following request to him:

Baldæus. him: Most potent Bramma, grant me the favour to make me a great monarch upon earth; and bestow this farther blessing upon me, that I may not be killed either by day or by night, either within or without my house, either by heaven, earth, sun, or moon, by thunder, lightning, stars, or comets, neither by clouds, winds, hail, snow, or rains, or birds, beasts, men, devils, fishes, or water, not by serpents,adders, poison, sword, arrows, or any other

weapons. Bramma having granted the Baldæus. giant's request, he soon made himself master of the whole earth; and overcome with pride at his success, issued out a mandate, That no body should be adored but himself, under the forfeiture of the lives of such as should contravene it. Things continuing in this state for some years, the Brakmans began to murmur, That they should be obliged to adore any terrestrial power, though never so great, to

The Idol of Vistnuum transformed into half a Man & half a Lyon.

*Baldæus*. the prejudice of the celestial spirits: they resolved therefore, to make their supplications to *Vistnum*, imploring him, to deliver them from the oppressions of this tyrant; who gave them for answer, That the giant should have shortly a son born, who should be their deliverer, and till then they must have patience.

Within ten months after, *Naeckseu*, the giant's wife brought forth a son named *Prellade*, who, when he was five years old, was put to a school-master; being one time sent for by his father, his master instructed him how to pronounce his father's name in short writing, which was *Irenia*; but instead thereof, the boy said, *Ary*, being the abbreviated name of *Vistnum*. The master astonished, put his hand upon his mouth, bidding him to forbear, for fear of being the occasion of his own death; but the more he forbid him, the more the boy persisted in saying, *Ary, Ary*, instead of *Irenia*.

The school-master not knowing what to do, brought him to his father, telling him, That his son would not pronounce his name, which he had taken so much pains to teach him. The father asking him the reason, the boy answered, Your name is not the true name, but the other is the truth itself. His father asking further, What is truth? the son answered, *Vistnum*, who fills the fourteen worlds, is the truth. What benefit, said the father, do you receive from *Vistnum*? And what benefit, replied the son, shall I receive by yours? The giant told him, Whoever repeats my name, shall be blessed with riches, honour, dignities, and life. How, says the son, can you give life and riches? Yes, I can, replied the giant, and will convince you immediately, it being in my power to take away your life. That will scarce happen, answered the son, according to your providence and discretion. What is providence and discretion? asked the giant. That is the eternal divine name of *Vistnum*, replied the son, the creator of the fourteen worlds. The father asking him, Where is this name to be found? The son answered, In every thing, both in heaven and earth, every thing being filled with *Vistnum*. What, replied the father, and is *Vistnum* also in this pillar? Yes, replied the son, and likewise in you and

me. The giant not longer able to contain himself, told him, Boy, because thou insistest thus upon the name of *Vistnum*, I will beat your brains out with this stick: but if thou wilt pronounce my name, thou shalt neither die, neither be beaten. That will not be, says the boy, for your name's sake; because God has ordered it otherwise. But I will spoil that ordinance, replied the giant; and with that, struck with his golden staff at the boy, who hiding himself behind the pillar, implored the name of *Vistnum*. The giant turning again with more fury than ever against the son, struck with such violence, that the pillar burst, and produced a monster, half a man, half a lion, an hermaphrodite, with breasts both above and below, breathing fire and flames out of its nostrils.

The *Benjans* say, That the giant did erect a red-hot pillar to tie his son to, telling him at the same time, Let us see who can deliver you out of my hands. The son then invoking the assistance of *Vistnum*, the pillar burst, and forth came the monster. All the standers by were amazed at this spectacle, and the giant himself trembled for fear. *Vistnum* resolving to revenge his own quarrel, and at the same time not to break the promise made by *Bramma* to the giant, laid hold of the giant, and hurrying him under ground directly under the threshold of his own house, and keeping him there till sun-set, tore his body in pieces, thereby fulfilling *Bramma's* promise, That he should not be killed within nor without his house, neither in heaven nor upon earth, neither by beasts, birds, sword, wind, rain, hail. The giant's son succeeding his father in the empire, ruled with great applause, for many succeeding years.

Thus ended the fourth transformation of the first period of time, called *Kortefinge* by the *Benjans*, comprehending in all one million seven hundred and twenty-eight thousand years; for though all these transformations were transacted within the time of seven thousand seven hundred years and three days, the rest, viz. one million seven hundred and twenty thousand years, three hundred and sixty days, must be supposed to have been the intervals of these transactions.

## C H A P. III.

*The fifth Transformation of Vistnum into a Brahman. Great Plenty under Mavaly. The Request of the transformed Vistnum. Praflaram's Altar and Birth: He kills Reneca his Mother. Raja Inder's Cow of Plenty. Praflaram's great Actions.*

*Baldæus.* **W**HILST Mavaly (called Belragie by the Benjans and Gentiwes) ruled the world, the inhabitants thereof were so plentifully provided with every thing by his bounty, that poverty was a thing unknown among human race. Vistnum perceiving that as the case then stood, there were no different degrees, nor any dependance in the world, either on God or man, resolved to divest Mavaly (by fraud) of the government of the world.

With this intention Vistnum assumed the shape of a Brahman, and appearing in a mendicant posture before Mavaly, he asked him, *Who he was, and upon what errand he came?* The pretended Brahman replied, *Having heard of your charity, I am come to crave some alms.* Mavaly answered, *I who have granted the requests of many kings and princes, will not deny thee, let it be what it will, whether kingdoms, money, honours, or whatever else you can ask.* The Brahman replied, *My aim is not at such mighty things; but after all, for fear of denial, I beg of you to promise me, without exception to grant my request.* Mavaly answering that he would, the Brahman begged him to confirm it with an oath.

Mavaly being just upon the point of confirming it by oath, the planet Venus (who stood just by) told him, *And is it customary to swear to the giving of alms?* Which Mavaly being not in the least moved at, swore to the Brahman, who told him, *I am not covetous of kingdoms or provinces; my desire is confined to three foot of ground, where I may erect a hut, where to lay up my books, umbrella, and drinking-cup; I beg you therefore to pour some of your water upon the ground.* For it is a custom among these pagans, that whenever they dispose of, or sell any thing, they confirm their promise or bargain by pouring some water upon the ground, part whereof the buyer catches with his hands, and drinks, in confirmation of the bargain; just as Jacob desired Joseph to lay his hand under his hips, when he was going to make him his promise upon oath, *Gen. xlvii. 29. & xxiv. 2.* where the hips (according to some interpreters) are

*taken pro partibus generationis, in quibus circumcisionis signum dabatur.* *Baldæus.*

Mavaly told him, *Ask a kingdom, and I will grant it.* The Brahman replied, *Were I a king, I must punish criminals, which I could not do without trespassing the rules of the order of the Brahmans; wherefore I desire no more, than three foot of ground.* Mavaly replied, *That will not be enough to build you a house upon.* I want no house, said the Brahman, *having neither wife nor children, I desire only three foot of ground, which you cannot refuse without being perjured.* Mavaly telling the Brahman that he never broke his promise, and ordering Venus to bring him some water, she desired him not to pour the water upon the Brahman, whom she looked upon as an impostor. Mavaly replied, *Of what consequence can three foot of ground be? Take heed, answered Venus, for this is Vistnum himself, who is come in disguise to deceive you.* Mavaly returned, *I have not sinned against Vistnum, and therefore have no reason to fear him.* Notwithstanding which, Venus continued to persuade him by many arguments, not to trust him: but Mavaly persisting in his resolution, told her, *Let come on it what will, if it should cost me my life, I will not break my oath.* Then taking the vessel with the water, he bid the Brahman to hold up his hands, which Venus perceiving, she held Mavaly's arms, desiring him not to pour out the water; but Mavaly pushing back her hand, bid the Brahman a second time to hold up his hands. Venus then changing her shape, stopped the pipe of the vessel, which Mavaly endeavouring to loosen with a twig, he hurt Venus's one eye, whence she got the name of *Cbueren*; then water coming out of the spout of the vessel, the Brahman did drink. This done, Mavaly ordered him to measure the three foot of ground where he pleased. Vistnum having by this time reassumed his own shape, he covered the whole earth with one of his feet, and with the other the paradise called *Sorgalogam*. Whilst Vistnum was extending his foot, *Bramma* poured water upon it, which produced the river *Ganges*, so highly celebrated among

*Baldæus.* among the *Indians* and other pagans. *Vistnum* having thus measured two foot, *Mavalay* told him he might also take the third, which he did, by measuring the inferior region, called *Padalas*, and thus became master of the whole world.

*Vistnum*  
master of  
the world.

The *Gentives* add, that this *Brakman*, (whom they call *Vanam*, i. e. a black dwarf, and *Rogerus* calls him *Barmasari*, i. e. a young *Brakman*, by the name of *Wamara*\*) set his left foot upon *Mava-*

*ly's* breast or head, and thus kicked him *Baldæus.* through the ground into the infernal region, whereof he made him king. But *Mavalay's* wife upbraiding *Vistnum* with ingratitude, he carried her to her husband; and as a reward of his piety, bestowed upon him the government of the place of darkness, *Vistnum* himself remaining with him nine days to guard the entrance thereof. *Rogerus* calls this *Mavalay* a devil, named *Belli*, and says, That whilst

\* Lib. II. c. 19.

*Baldicus*, whilst the waters of the *Ganges* were flowing from above *Ixora's* head, and risen out of the hip of a faint, sixty thousand men were brought to life. This fable had questionless its origin from the want of knowledge of the true source of the river *Ganges*, for which reason they generally stile it the *Heavenly River*.

*Mavalv* being not satisfied with his present station, made his complaint to *Vistnum*, who told him, That in regard he had been a charitable person, a man of truth, and without sin, he would constitute him king of the paradise. *Mavalv* making a deep reverence, (called by them *Sambaja*,) returned for answer, It is not my ambition to reign; being only affected with the hardships of my former subjects, who have no body now to provide them with necessaries, as I used to do. *Vistnum* replied, The poor shall serve the rich; and be maintained by them; so that he that will work, shall want for nothing. I will also constitute you the door-keeper of the paradise, so that no body shall enter there without thy knowledge. But, replied *Mavalv*, how shall I then be able to judge at such a distance, how you deal with mankind upon earth? I will, answered *Vistnum*, assign you a certain place in heaven, from whence you may overlook the earth; and so made him door-keeper of the paradise.

*Three sorts of people.* Accordingly *Vistnum* distinguished mankind into three sorts, rich, poor, and middle-sized, which were to have a reciprocal dependance on one another; that such as had lived piously, and done acts of charity, should be received after their death, and live in plenty and splendor; but such as did otherwise, should, after their decease, be transformed again into slaves and drudges, to do penance for their former sins, till by their good works they should merit paradise, which they were not to enter, however, without *Mavalv's* consent. He also constituted a feast, (called *Ona* by the *Malabars*,) to be celebrated yearly in *August*, when they spend several days together in feasting, and other sorts of diversions, and appear in all their best apparel.

*The sixth transformation.*

The sixth transformation happened thus: After the appearing of *Hanumans*, mentioned in *Chap. v. Part. I.* one *Braman* and *Bramani* being joined in wedlock, did for a considerable time lead a pious and contented life near the river *Bewa*; but the woman being barren, (a thing much despised among the *Benjans*,) they resolved to retire into some desert, there to implore God's assistance. Having

thus for some time led a vagabond life, *Baldicus*, they came to a certain *Pagode*, built in a forest, near which stood a very fine tree, under the shade whereof they reposed themselves for some time, and sent forth their prayers upon their bended knees. After some time, finding their prayers ineffectual, the woman told her husband, That they ought to leave this shady place, and in lieu thereof to expose themselves to the injuries of the sun, rains, and storms, to try whether, perhaps, by this humiliation and penance, God might be prevailed upon to bless them with children. They persevered in this austerity and continual prayers for some longer time, but in vain; the woman growing beyond all patience, told her husband, That being quite weary of life, she desired him to fast with her, till thereby they could put a period to their miserable life. Accordingly having spent nine days without eating or drinking, *Vistnum* appeared to them in the shape of a child, asking them, What was the occasion of their mortification and fervent prayers. The woman answered, All our prayers are directed to *Vistnum*, to bless me with such a handsome child as thee. *Vistnum* replied, And do you instead of gold and silver desire children, who commonly prove the toils of life? *Bramani* answered, All the riches and pleasures of this world are not so valuable to me, as a son of my own, so well shaped as thyself. *Vistnum* replied, Your prayers are heard; and as you have three several times mortified your bodies, so three sons shall be born thee successively; and so he vanished.

Being both exhausted with fasting, they died soon after; but the soul of *Bramani* was infused into the body of the new-born *Reneca*, and that of *Braman* into the body of the new-born *Braman*, surnamed *Siamdickemi*, who being come to their riper years, were joined together in marriage; *Reneca's* sister being at the same time married to the great *Raja Sestraarsum*, who had a thousand arms.

*Siamdickemi* retired with *Reneca* to a solitude near the river *Ganges*, where they built a hut of straw, with an intention to live upon the fruits of the earth, and pass their time in praying to *Vistnum*.

It was not long before *Reneca* (pur-Prassaram; suant to the promise made by *Vistnum*) the son of *Reneca* brought forth a beautiful son, unto whom she gave the name of *Prassaram*, who being carefully educated under the tuition of his father, did, in his twelfth year,

*Baldæus* interpret the most abstruse characters that could be laid before him. His mother having received a certain cloth from *Vistnum*, which, keeping water as well as any earthen vessel, *Reneca* going to fetch water one time out of the river *Ganges*, she happened to see the great *Raja Sestraarsum* with his spouse (her sister) a hunting near the river-side. *Reneca* asked one of his attendants, who it was? and being answered, that it was *Raja Sestraarsum* with his queen, she advanced towards them; but finding that her sister took no notice of her, she sat down in a very melancholy posture upon the bank of the *Ganges*, complaining of the vast difference there was betwixt her sister and her.

*Alas!* said she, *she is a queen, and I a poor Brahman's wife; she is possessed of riches, honour, and plenty, and I know nothing but want and misery.*

She was then going to fill her cloth with water, but found it, to her great astonishment, leaky; and being afraid to return home, staid abroad till after sunset. *Siamdichemi*, surprized at her long stay, looked out at the doors, and finding her sitting in a melancholy posture, asked her whether she had brought any water; but she answering, she had not, and giving him the reason for it, he told her, that he was certain she had uttered some expressions contrary to his zeal and piety; and being exasperated to the highest degree, commanded his son *Prassaram* to cut off his mother's head with an ax. *Prassaram* would have excused himself; but finding his father resolute, he was forced to obey, and cut off his mother's neck. The father being highly taken with the obedience of his son, told him, That he should ask him what he pleased, and it should be granted him. Then, said the son, *Resuscitate my mother from the dead.* The father then taking some of the sanctified water of the *Ganges*, besprinkled the body with it, and muttering out certain prayers, restored it to life again.

*Reneca killed;*

*And revived.*

*Reneca* could not forbear to make her complaints concerning the harsh usage of her husband, occasioned only by some weaknesses and reflections upon her sister's good fortune, representing to him her piety, fidelity, and obedience, she had shewn upon all occasions. These reasons were so prevailing with the husband, that he received her into his arms, and banished all revenge from his thoughts.

*Prassaram goes to Raja Inder.* *Prassaram* (though not above twelve years of age) being by this time advanced so far in the knowledge of the

T

law, that he was past his father's teaching, was advised by him to apply himself to *Raja Inder*, king of the *Blessed Souls*, for his further accomplishment, which the son did accordingly. So soon as the son had left him, he resolved to pay his devotions to *Vistnum* for twelve years successively, sitting cross-legg'd with without intermission upon the ground (a thing much practised among these pagans.) Thus 1659, I saw a certain *Jogy*, or mendicant, at *Columbo*, whose arms were grown together over his Head, by sitting in that posture.

Soon after it happened, that the beforementioned king *Raja Sestraarsum*, coming to give a visit to his brother-in-law with a great retinue, he was so fast asleep, that all the noise of the hounds, horns, and drums, could not awaken him: his wife *Reneca* therefore having roused her husband, by sprinkling some warm water upon his head, he arose; when *Raja* saluting the *Brakman*, told him, That the fame of his piety had induced him and his retinue to come to sup, and to take a night's lodging with him.

The *Brakman Siamdichemi* being much concerned how to provide for so many thousand persons, at last considered of the *White Cow*, called *Camdoga*, belonging to *Raja Inder*, which furnishes those that have her in their possession with every thing they wish for. Having therefore desired *Inder* to send him the said cow, he granted his request; and the cow being sent down, the *Brakman* desired *Raja* and his attendants to sit down at supper; which was served with such variety and plenty, that *Raja*, who was come upon no other account than to ridicule his brother-in-law's poverty, stood amazed thereat; and further to try his ability, asked him, to present him with some jewels; which the *Brakman* having presented him with, (much beyond what could be expected,) *Raja* asked him for some clothes and money for his people; which being likewise brought him by his brother-in-law, he resolved also to stay the next day: and being served at table with the same plenty as before, he stayed also the third day; when meeting with the same entertainment, he was amazed to find out whence all this plenty of provisions, clothes, and riches, could come, in a place where he expected so little; especially, since he observed that all was brought out of the *Brakman's* hut, which was not big enough to hold half the quantity. This made him order some of his spies to take particular notice, whether there was not a vault under-ground, from whence these things were brought. The spies

*Baldæus.*

*Raja Sestraarsum visits the Brahman.*

*The cow of plenty.*

*Raja plentifully entertained.*

*Baldus.* Spies watching all opportunities to satisfy their master's curiosity, found at last that a slender white cow did bring forth all these things, (which she threw out of her stomach,) whereof immediate notice was given to *Raja*.

The next morning as he was taking his leave from the *Brakman*, being asked by him, whether he was desirous of any thing else, he told him, That he wanted nothing more, but only the white cow he had

seen in his hut. The *Brakman* replied, *Baldus*. That being not his own, she was not in his disposal. And, said *Raja*, will you deny me so small a request, after you have heaped so many obligations upon me before? What I did before, said the *Brakman*, was in my own power, but this is not. How, replied *Raja*, don't you know, that it is in my power to take her against your will? And then calling to some of his followers, he commanded them to fetch the white cow out of

*Baldca.* of the hut. The *Brakman* seeing this beloved white cow thus snatched from him, told her at parting, *Dear Camdoga, whyt I thus leave you, how can I answer this to Raja Inder, your master? Revenge thy self at once both of thine and mine ene-*

Raja's people defeated by the white cow.

Siamdichemi murdered.

Reneca burns herself with his corpse, whence the custom of burning the dead.

Prassaram revenges their death.

*mies.* The cow *Camdoga* no sooner heard these words, but assuming a shape three times bigger than her own, she laid about her with her horns to that degree, that she killed and trod under foot several thousand of *Raja's* people; which done, she flew like lightning up into the air to her own master. *Raja* exasperated at the slaughter of his men, and burning with revenge, returned to the hut of the *Brakman*, where they killed and left him wallowing in his blood. The unfortunate *Reneca*, unwilling to outlive her husband, set fire to the hut, and burnt herself with his dead carcase.

*Camdoga*, in the mean while, meeting with *Prassaram* not far from her master's house, told him what had happen'd; who declared he would revenge the same twenty-one times upon all the *Ketteriis* (a wicked generation;) and thus making the best of his way with his *Perzy*, bow and arrow, he penetrated into the middle of *Raja's* troops, and killed him with all his guards; thence travelling through the world, he killed all the *Ketteriis* he met with; but could not do it so effectually, but that some escaped his fury; who multiplying by degrees, he was forced to renew his revenge against them; which he did twenty-one times, till they were quite rooted out from the face of the earth.

By this time *Vistnum* remembering his promise made to *Prassaram's* parents, viz. that they were to be blessed with three sons, he commanded *Bramma* (the god with four heads) to send down from heaven the souls of *Siamdichemi* and *Reneca*, and to convey them into the bodies of *Ragia d'Asserat* and his wife *Couzila*, (slain among the *Ketteriis*;) unto whom he had made a promise of exalting their posterity.

*Bramma* finding by the celestial records, That their time was expired, (for these pagans believe that nothing is done without divine providence, and that the fate of men is written in *Bramma's* hand,) infused the soul of *Reneca* into the body of *Couzila*, and the spirit of *Siamdichemi* into that of *Ragia*, which brought forth a son

The story of Ram.

Prassaram endeavours to kill Ram.

named *Ram*. This *Ram* having married *Sytka*, and making his publick entry into the city, (according to the custom of the *Benjans*;) was met by *Prassaram*; who being informed, that he was descended of the race of the *Ketteriis*, did let fly at him; which *Ram* perceiving, did the same from his elephant on which he was mounted; but the arrows hitting against one ano-

ther in the air, did no mischief, except *Baldca.* that all the strength of *Prassaram's* arrow being lodged in that of *Ram*, he was thereby bereaved of all his advantage, being no more than a common *Brakman* for ever after, whereas *Ram* increased every day in power.

The *Malabars* say, That this transformation was made by *Vistnum* in the shape of *Siri Parexi Rama*: for the *Rixi* living in the desarts, being no longer able to endure the oppressions from the neighbouring kings, offer'd their sacrifices to *Vistnum*, desiring his assistance against them. A certain famous *Rixi*, named *Para Jara*, sacrificing one day to *Vistnum*, he appeared in the shape of a child, and assisted at the ceremony of the sacrifice; which done, *Parexi Rama* took up an ax, and killed forty-four kings, who used to infest the *Rixi*, and put them into the possession of their territories. *Siri Parexi Rama* being afterwards desirous to erect certain temples, and not finding sufficient room for that purpose, (because the sea then touched the mount *Gatte*) he offered his sacrifice, when a sieve appearing to him, (such as they used to cleanse the rice with,) he found that as often as he did shake it, the sea retreated backwards from the shore; but whilst he was doing it a third time, *Varrinem*, the god of the sea, having transformed himself into pismires, (called by them *Carreas*;) gnawed the sieve in pieces. However, *Siri Rama* built one hundred and eight temples, and erected as many stones near them, from *Mangalor* to the cape *Comoryn*, much revered to this day by the *Indians*.

In the mean while the fishermen of that coast making their complaints to *Parexi Rama*, That by this means they had been bereaved of their subsistence, he constituted them his guards of the temples he had built, with a sufficient allowance for their maintenance; so that these fishermen being thus become *Brakmans*, they used always to wear a thread of a fishing-net about their necks whilst they were performing their sacrifices, and introduced that custom among the pagans, for a new-married couple to go a fishing with a linnen cloth instead of a net.

*Parexi Rama* being one time employed, in his solitude, in sacrificing to the gods, *Siri Rama* (or *Vistnum*) appeared in the shape of a man; which *Parexi Rama* taking notice of, his jealousy was raised to such a height, that he would needs enter into a single combat with him; but being prevented by the *Rixii*, they discovered themselves to one another, and entering into a strict friendship, *Parexi Rama* presented his bow to *Siri Rama*, who returned to the *Milk-Sea*.

The origin of the Brahmins.

CHAP. IV.

The seventh Transformation of Vistnum into Rama. His Birth. He gains his Bride Sytha by shooting. Beauty of Lekeman. His meeting with Souppenekhia. Rawan takes away Sytha; performs Wonders. Ram and Lekeman go in quest of Sytha. Hanuman's great Actions in Ceylon.

*Baldæus.* **I**XORA being revered by all the world, but especially by one *Rawan*, (called *Rawana* by *Rogeri*, who makes him a son of the *Brahman Kassopa*.) who for three hundred years offered him a hundred flowers every day. *Ixora* having one time a mind to try his sincerity, took away one of the flowers, and afterwards charged him with want of duty. *Rawan*, ignorant of the deceit, counted his flowers, and finding no more than ninety nine, would have torn out one of his eyes, to compleat the number of a hundred. But *Ixora* stopping his hand, told him, That having now had a sufficient proof of his integrity, he should ask what he pleased, and he would be sure to grant it. *Rawan* then asked a share with *Ixora* in the government of the world; which being granted him by *Ixora*, *Rawan* nevertheless continued his daily devotions, and being asked the reason by *Ixora*, he told him, That he would not desist from his prayers, till he had given him ten heads and twenty arms; which being likewise granted by *Ixora*, he fixed his residence in the country of *Lanka*, in the famous isle of *Ceylon*, called by others *Sanka*, who also say, that he built seven palaces there of gold, silver, steel, iron, and other metals.

*The story of Rama, or Siri Rama, is so famous in the Indies, that kings and princes paint it upon their arms and palace.*

Having thus ruled for some thousand years over all the neighbouring kings, he became so proud, as to force his subjects to worship him instead of *Ixora*; which they were forced to do for twenty five years, till being quite tired out of all patience by his tyrannies, they implored *Ixora* to deliver them from *Rawan*, that so they might recover their former freedom of adoring him.

About that time, there lived a certain *Ragie*, named *Dasserat*, or *Desseratha*, or *Decxareda*. This king having three wives, one of them named *Cousila*, after some time brought forth a son, named *Ram*, by the *Brahman Wissiroe*, who increased daily in wisdom and understanding, beyond what could be expected from his tender years. His second wife *Keggy*, (called *KaiJa* by the *Malabars*.) brought forth another son, named *Barrat*; and

*Somettery*, or *Somittra*, the third wife, *Lekeman* and *Setteroukan*. The *Malabars* say, that these four sons were born from these three women by the means of four pills.

*Vistnum* being thus brought into the world, in the shape of a *Ram*, was educated by the *Brahmans* in all manner of wisdom and knowledge. There happened to live at that time a certain *Ragie*, named *Sannek*, in the country of *Siannak*, who having fixed a prodigious strong bow in a certain inclosure made for that purpose, issued his proclamation to encourage all such as would venture to draw and break the said bow, offering his daughter *Sytha*, with a great portion, as a reward to him who should accomplish it. This being likewise come to the ears of the *Brahmans*, *Ram* solicited his tutor to let him try his strength, which the master, not without some reluctance, having consented to, he went along with him, under the notion of his servant, and coming to *Rag. Sanneck's* court, heard him offer the same reward to any one that could manage and break the bow, telling them, that he who would enter the list, should take the vessel with *Betel*, which was offered by his own hand.

*How Ram or his bride Sytha.*

*The Malabars say, That he was a going to sacrifice, and invited the Brahman to oppose the demons, that sometimes used to disturb those ceremonies.*

Immediately after he saw the before-mentioned *Rawan*, with ten heads, take the *Betel*, and boasting of his strength, told them, that no body but him should pretend to *Sytha*. Then drawing the bow with his utmost strength, he let slip the sinew, which striking his thumb off, he fell into a swoon. Divers other *Ragies* tried to manage the same bow, but finding their strength fail them, were forced to desist.

The *Betel* being next brought to the *Brahmans*, among whom stood *Ram*, he at last obtained leave from his master, to accept of the *Betel*, which he did accordingly, and entering the list, found a tall mast, or poll, fixed in the center of the court, on the top whereof was a fish, and at the bottom a cistern, with water, wherein plainly appeared the shade of the fish. *Ram* then drew the bow with

*Baldæus*. such violence, that he not only shot the fish into several parts, but also broke the bow to pieces.

The bride, rejoiced at his success, presented him with a whole dish full of jewels, as did all the rest there present proportionable to their abilities: his parents being also sent for to partake of the honours done to their son, they came with their other three sons, who married the three daughters of *Raja Sannek*, viz. *Barrat* married *Onnemela*; *Lekeman*, *Sekby*; and *Setteroukan*, *Lila*.

*Ram* then desired to return to his native country; which being granted, not without great reluctance, he went back with his father, mother, and three brothers, with their wives, where his father delivered up the kingdom to him; but having received a wound in his thumb, which proved very painful to him, it was healed at last by his wife; in acknowledgment of which benefit he told her, that he would grant her whatever she would ask. She then desired her husband to send his three sons, *Ram*, *Lekeman*, (called otherwise *Laatsmana*, and *Settrugna*.) and *Setteroukan*, for twelve years into foreign countries, and to surrender the kingdom to her son *Barrat*, (called *Baratka*, and *Pareda* by the *Malabars*.) *Barrat* on the other hand, was unwilling to accept of this offer; notwithstanding which, *Ram* departed with his family and two brothers to the village of *Baratpery*, twelve *Cos* from *Afonti*, but leaving a pair of his slippers behind, *Barrat*, who still refused to encroach upon his eldest brother's right, used to sacrifice flowers, sandal-wood, and saffron, to them in his absence.

*Ram* in the mean while travelling along the river *Ganges* to *Pousourwattivan*, where, after a month's stay, whilst the brothers were busy in erecting the huts, *Lekeman* used to go every day to gather fruit for their subsistence; he being a very handsome person, and got upon a tree to gather some fruits, was espied by a certain woman, named *Souppennekkia*, (and *Churpanaga* by the *Malabars*.) the sister of *Rawan*, and widow of one *Vivali*, (killed in *Rawan*'s service,) who being come to wash herself in the *Ganges*, told him, That she looking upon him as the handsomest person in the world, she must be miserable for ever, unless he would vouchsafe to love her; which if he refused, she would turn her love into hatred, when he must prepare to engage with her in single combat. *Lekeman* replied, That his love being fixed in another place, he could not oblige her; and that to fight with her, would not turn to his honour. O unfortunate man! cried she,

how little best thou acquainted with my *Baldæus* strength! if I cannot enjoy thee, I will have thy life before I part from this place.

*Lekeman* then considering whom he had to do with, told her, That though he was willing, it was not in his power, she being of the family of the *Raches*, and he of the tribe of the *Bram-Ketteris*; but that if she would go to his brother *Ram*'s hut, which was not far thence, and obtain his consent, he would not be backward to gratify her desire. She no sooner came to *Ram*'s hut, but he knew her at first sight, and looking upon this as a fit opportunity to revenge the affront he had received of *Rawan*, he gave her a letter directed to his brother *Lekeman*, wherein he ordered him to cut off those parts in which her strength was lodged. Thus she left *Ram* well satisfied, hastening to her pretended bridegroom, whom she found busy in gathering of fruit; and delivering the letter to him, bid him read his brother's consent. But *Lekeman* understanding his brother's intention, run towards her, and under pretence of taking her up in his arms, cut off her nose and ears, wherein her strength was lodged.

Thus mortified, she went away, threatening revenge to the two brothers, and making the best of her way to her brother *Rawan*'s palace; but lighting by chance upon an uncle's house of hers, named *Char*, who commanded ten thousand horse, she stopped there; and being asked how she came so defaced, she told them that some robbers near the *Ganges* had treated her in this manner.

The youngest of her uncles ordered immediately three hundred horse to be in readiness to march with him to the *Ganges*, where they attacked *Ram*'s habitation with such fury, that *Lekeman* was put under no small consternation; but *Ram* defended his habitation so courageously, that he killed most of the horsemen with his bow, called *Dienuoekbaanne*, with their leader. *Char* had no sooner received intelligence of this defeat, but putting himself at the head of the remaining nine thousand and seven hundred horse, he marched to the same place; but with no better success, being slain by *Ram*, with all his forces.

*Souppennekkia* having been an eye-witness of this defeat at a distance, made all the haste she could to come to her brother *Rawan*; who having asked her the reason, she told him, That meeting with a very beautiful woman near the river *Ganges*, she endeavoured to persuade her to come along with her, with an intention to present her to him; but being overtaken by her husband and his brother, they had so mortally

*Ram* travels along the *Ganges*.

He cuts off her nose and ears.

Ten thousand horsemen killed by *Ram*.

*Rawan*'s sister in love with *Lekeman*.

*Baldæus*. mortified her in that manner as they now saw her. *Rawan* highly exasperated at this usage, bid her to shew him the place where it happened; which she did accordingly, and at the same time gave him an account of what had happened to her uncle and the ten thousand horsemen.

*Rawan* transformed into a stag.

*Rawan* thus fore-warned, assumed the shape of a stag with two heads, and so did feed near *Ram's* hut, the better to surprize him with the first opportunity;

but being espied by *Sytba*, *Ram's* wife, *Baldæus*. she was so much taken with his bright skin, that she desired her husband to shoot him, and to make her a vest of his skin. *Ram* told her that the same could not be done without danger; but she persisting in her intreaties, he consented, yet under condition, That she and his brother *Lekeman* should not pass three certain circles he made with chalk cross the hut. He no sooner got into the field, but the two-headed stag set up his heels, and being

*Baldeus*, pursued by *Ram* for three *Cos*, was shot with an arrow in the breast.

*Is first of Ram.*

*Rawan's* ghost at the same time entering into the body of a *Fakier*, he went traitways to *Ram's* hut, and with a doleful voice cried out to *Lekeman*, to succour his brother, who was in danger of perishing by his enemies hands. *Sytba*, thunder-struck at this voice, begged *Lekeman* to succour her husband, who told her, That he believed this voice to be fictitious, as not questioning that his brother, who had so lately slain ten thousand men, could be in a condition to cope with one. But *Sytba* imploring his assistance with a flood of tears, he went accordingly.

In the mean time the *Fakier*, endowed with *Rawan's* spirit, having assumed the shape of a beggar, came to beg some alms of *Sytba*, who excused the matter; yet at last was prevailed upon to give him some fruit that were left the day before; but as she was extending her arm towards the beggar, he caught hold of her hand, and pulling her over the circle, (under pretence of bringing her to the place where her husband was engaged,) he carried her to the country of *Lanka*, in the isle of *Ceylon*.

*He carries away Sytba.*

As he was carrying her along, he met with the giant *Siattank*, of the tribe of the *Raches*, who begged some victuals of him in a threatening tone. *Rawan* having no provisions to give him, took up a stone, which he rubbing against his thigh, made a large hole, the blood whereof turned the stone into meat, which he gave the giant, who had no sooner eat it, but it turned to a stone again in his stomach, and oppressed him to such a degree, that he was not able to stir or move.

Then *Rawan*, pursuing his journey, came to the mountain *Resmokperwat*, where he met with the apes with bears heads, called *Hanuman*, *Suckerige*, *Anget*, and *Siamboemt*; and *Sytba* dropping her ring, the same was taken up by *Hanuman*.

*Places her in a garden in Ceylon.*

*Rawan*, coming into *Ceylon*, and not daring to bring *Sytba* into his house, placed her in a garden under a certain tree called *Sysem*; and having appointed her a guard of twelve giants, he daily made his courtship to her; but she refused all his offers.

In the mean time *Ram* returning homewards, and meeting with his brother *Lekeman* by the way, they both came to the hut, but to their great surprize found *Sytba* gone. *Ram* in a most violent rage upbraided his brother with leaving the hut; but having understood the reason, they resolved to go in quest of *Sytba*.

As they were passing through a very

long subterraneous passage, they met with *Baldeus*, a certain giant at his devotion, who being surprized to see them, *Ram* told him, That the desire of finding out his spouse had brought him through this dangerous place, asking him, Whether he had not heard any thing of her. He answered, that he had seen a giant flying through the air, holding a woman upon his hand. *Ram* further enquiring what way they were gone, he answered, Towards the country of *Dekendesfa*.

*Ram and Lekeman go in quest of Sytba.*

*Ram* verily believing this to be *Sytba*, blessed the giant, and pursuing his journey to the mount *Resmokperwat*, met with the beforementioned apes with bears heads, where *Hanuman* prostrating himself at his feet, asked him, What brought him to this remote part of the world? *Ram* answered, To look after his spouse. *Hanuman* replied, I saw a giant pass through the air, with a woman sitting upon his hand, who dropped this ear-ring. *Ram* infinitely rejoiced at the sight thereof, (knowing it to be his wife's,) asked him, What way they had taken? *Hanuman* replied, To the country of *Lanka*, in the isle of *Ceylon*; and at the same time offering his service for the recovery of his spouse, he entreated the ape *Suckerige* to assist him in this enterprize; promising him, that in case they succeeded, *Ram* should restore to him his wife and his estate in the valley of *Kieckenda*, taken from him by his brother *Bael*. But *Suckerige* remembered his brother's strength, how he had worsted the giant *Rawan*, and held his head two months under his arms, (before the government of the world was committed to him by *Vistnum*;) besides, several other giants told him, that *Ram* being only of a middle stature, was not likely to conquer him.

*Hanuman gives an account to Ram of Sytba.*

*Hanuman*, however, persisting in his persuasions, and extolling the power of *Ram*, *Suckerige* asked a token, viz. that he should shoot his arrow through some of the branches of the trees, whilst they were agitated by the wind. *Lekeman* having understood his request, spoke to his brother *Ram*, who bidding them shut their eyes, he shot at once with his arrow through seven trees, and at the same time ordered *Suckerige* to challenge his brother *Bael* in his name; which being done accordingly, *Bael* appeared, and in a scornful tone told *Ram*, That he would cut off his head at one stroke; whereat *Ram* being exasperated to the highest degree, he drew his bow, sent his arrow through his body, and restored the valley of *Kieckenda* to *Suckerige*, and with it his wife.

*Ram kills Bael.*

*Baldæus.* Ram having now taken a resolution to stay with his brother in the mountain, sent *Hanuman*, *Anget*, *Suckerige*, and *Sucking*, chieftains of the apes, into the valley of *Quicxinta*, (as the *Malabars* call it,) not far from the valley of *Kieckenda*, in quest of his spouse. *Hanuman* being ready to depart with his company, gave him his ring as a token to shew to his spouse *Sytba*. Accordingly they set out on their journey, taking two different roads, two and two together; but not meeting with *Sytba*, they met at a certain place near the sea-side, full of despair at their ill success. However, *Hanuman* bid them have a good heart, telling them, that *Ceylon* lying opposite to them cross the seas, he would, according to the power granted him by *Vishnum*, fly over the sea into *Ceylon*, where *Rawan* kept his residence.

*Hanuman*  
flies into  
*Ceylon*.

*Hanuman* being at last, in disguise, arrived in the isle of *Ceylon*, met with ten female giants that were appointed her guard by *Rawan* in the air: these refusing him passage, he assumed the shape of a fly, and thus escaping their hands, advanced to the shore of *Ceylon*; but being there met by a huge giant, who stopped his passage, was forced to reassume his own body of an ape, and so to engage the giant, who seeing him to fight so courageously, commended his bravery, telling him, That he should succeed in what he desired. *Hanuman* answering, That he came only to look for his master *Ram's* wife. The giant replied, She is kept by the most potent *Rawan* in a garden under a sycem-tree.

Hears of  
*Sytba*.

*Hanuman* then pursuing his journey, and being extremely tired, did fall into a swoon upon the sea-shore; where having slept eighteen hours, and forgotten the name of the place assigned him by the giant, he transformed himself into a cat, and running through all the houses and corners of *Ceylon*, but without success, at last happened to light upon the top of *Rawan's* house, from whence espying the tree where *Sytba* was kept, he advanced towards it; but whilst he was in doubt whether it were *Sytba* or not, he saw *Rawan* coming towards her, and renewing his courtship, offering all his territories and treasures, in case she would consent to be his wife; but *Sytba* replied, That being *Ram's* alone, she would never encourage his addresses, threatening to consume him by fire, if he persisted in his demands.

*Rawan* was no sooner gone, but *Hanuman* dropped the ring given him by *Ram* into *Sytba's* lap; who burst out into tears, imagining that *Ram* had been killed by some of the giants: but *Hanuman* throw-

VOL. III.

ing himself at her feet, told her, That *Baldæus.* *Ram* was in good health, and had sent him to look after her. *Sytba* still questioning the truth, *Hanuman* told her, That the ring was given him as a token to her, yet not with an intention to bring her to him, but only to learn news of her. Then haste away, replied she, and desire *Ram* to deliver me out of the hands of the tyrant *Rawan*.

*Hanuman* went his way; but considering with himself, he would not forsake *Lanka* without leaving behind him some remembrances of his having been there, he returned to *Sytba*, asking her leave to gather some fruits, which she denied, telling him, That he would be unfortunate in his enterprize, if he fed upon any other fruit but what he found upon the ground. Well, said *Hanuman*, and so laying hold of the next fruit-tree, and tearing it up by the root, he eat the fruit; the same he did to most of the other trees in the garden, except that where *Sytba* was placed. The gardiner seeing the next morning what havock *Hanuman* had made, told his master what happened, who being incensed to the highest degree, ordered ten thousand giants to kill this ape. *Hanuman* seeing them advancing against him, laid hold of one of the biggest trees, and made such havock among these giants, that scarce one of them escaped.

*Hanuman's*  
actions at  
*Ceylon*.

*Rawan* no sooner heard of this defeat, but he sent twenty five thousand more to revenge the quarrel of their comrades; but these having undergone the same fate, he sent his youngest son at the head of twelve thousand of the choicest giants, *Great* who put *Hanuman* so hard to it, that they *slaughter* made him reel several times; but his *of the gi-* strength being continually renewed by *ants.* *Ram's* care, he at first slew *Rawan's* youngest son, and at last the whole army.

*Mandory*, *Rawan's* spouse, did all that lay in her power to persuade her husband to deliver up *Sytba* to *Ram*, for fear of losing his whole estate; but *Rawan* was so far from hearkening to her counsel, that he issued a proclamation, that he who thought himself the strongest man in the isle of *Ceylon*, should engage with the ape: but there being no body who durst compare for strength with *Rawan's* eldest son, named *Inderfiet*, (who formerly had vanquished *Raja Inder*,) he ordered him, That whenever he was a going to shoot his arrow, he should utter certain words taught him by *Bramma*, which had that effect, as to turn the arrow into a serpent, and to entangle his adversary.

*Inderfiet* thus bold with hopes, advanced at the head of his giants against *Hanuman*,

*Baldau* man, who laid so bravely about him, that he made the giants shrink, which *Inderfiet* perceiving, let fly his arrow against *Hanuman*, which being in an instant transform'd into a serpent, was tore to pieces by *Hanuman*; which *Inderfiet* seeing, he flew like lightning thro' the air to the holy *Bramma*, upbraided him with deceitfulness, and threatening him with no less than the loss of his life, unless he shew'd him the right way of vanquishing his enemy.

*Inderfiet* makes use of a bewitched arrow.

*Bramma* being put to such a nonplus, hastned to *Hanuman*, and casting himself at his feet begged of him not to oppose *Inderfiet's* arrow, as wanting not means to protect himself against his attempts, by divers other ways. *Hanuman* taking compassion of *Bramma*, granted his request; who then told *Inderfiet*, that by his charms he had so ordered the matter, as to render his arrow more effectual than before. *Inderfiet* encouraged by his promise, sent forth his arrow against *Hanuman* a second time; which turning into a serpent, stuck close to his limbs, that the giants had sufficient opportunity to exercise their weapons upon him, though he received no more harm by it than if he had been touched with a feather. However, they carried him before the ten headed *Rawan*; who asked him by what means he was become invulnerable. *Hanuman* replied, by *Ram's* blessing, whose wife thou hast carried away; which if thou dost not restore forthwith, thy whole country shall be laid desolate.

This story seems to have some relation to that of Sampson.

*Rawan* exasperated at this answer, commanded ten thousand giants to kill him; but finding their endeavours prove unsuccessful, he asked *Hanuman*, by what means he might be bereaved of his strength; he replied, If you dip my tail in oil, wrap it in cotton, and then set it on fire, all my strength will vanish in an instant. *Rawan* believing the matter, put it in execution, notwithstanding which, *Hanuman* pulled the serpent to pieces like a piece of thread, killed most of the giants, and set fire to the houses. This done, he took his leave of *Sytba*, who gave him one of her bracelets as a token, to shew *Ram* that he had seen her, charging him at the same time not to look back till he had past the seas, else he would be in great danger. *Hanuman* strictly observed this rule till he came to the sea-shore, when approaching on a sudden to a great flame, he looked back, and the flame reaching his tail, he was glad to run into the sea, to extinguish the fire.

Then taking his course through the air, he passed the seas, and meeting with

his comrades, told them what had happened; who thence made the best of their way to the mountain *Resmokperwat*; and having shewed *Sytba's* bracelets to *Ram*, who immediately ordered *Suckery*, lord of the valley of *Kieckenda*, to summon all the apes under his jurisdiction to arms against *Rawan*; he accordingly appeared under their eighteen kings, each whereof appeared at the head of twenty thousand apes, amounting in all to three hundred and sixty thousand apes.

*Ram* and his brother *Lekeman* marched at the head of this powerful army to the sea-side, directly opposite to the isle of *Ceylon*; where *Ram* having spent three days in fasting and praying, to open a passage for his forces through the sea, but in vain, he drew his bow, threatening the sea to reduce it into such narrow bounds, that where then was nothing to be seen but water, the terrestrial creatures should sport upon the pleasant sands without danger. The waves of the sea thereupon humbling themselves before *Ram*, told him, That to open him a passage through the depth, could not be done without a total destruction of a vast number of fishes; but that there was in his army a certain ape called *Sichem*, endowed with such a quality by his master the holy *Narsy*, that whatever stone he should only touch, would swim on the surface of the water like wood. Accordingly *Ram* ordered a vast quantity of stones to be brought from the neighbouring mountains, which being only touched by *Sichem*, and then thrown into the sea, did swim upon the surface thereof, and making a bridge of one hundred leagues in length, afforded an easy passage for his whole army.

A stone bridge of a hundred leagues across the sea.

The inhabitants of *Lanka*, or *Ceylon*, being soon alarm'd by the noise of their drums, and other warlike instruments, *Rawan's* wife intreated her husband to take a view of that prodigious army from the top of his house; whom *Ram* no sooner spied at a distance, but with his arrow he shot off his ten crowns from his ten heads. His wife laying hold of this opportunity, exhorted him once more to deliver up *Sytba* to *Ram*, who, says she, can with the same arrow, which took off your ten crowns, also take off your ten heads.

But *Rawan* persisting in his resolution not to part with *Sytba*, *Ram* told his brother *Lekeman*, that to leave nothing unattempted to reduce *Rawan* to reason, they would dispatch the ape *Anget* to him to demand *Sytba*; and in case of refusal, to tell him now, that they were

*Baldæus*. were come to destroy all with fire and sword.

*Rawan* being advertised of his arrival, called together all his giants, (among whom was his brother *Bebickbem*;) and having caused ten statues to be made with ten heads like himself, he took his place in the midst of them: *Anget* coming boldly into the room, asked, What monsters these were, and which of them was *Rawan* himself? Whereat *Rawan* being highly exasperated, asked, Who it was that dares affront him thus? threatening to make him repent his boldness. *Anget* replied, *Were I not here in the quality of an ambassador, I would try my strength with thee, being sent by Ram to let thee know, that he did not come with this army to destroy thy subjects, but to recover his wife Sytha; which if thou refusest to do, he declares himself innocent of all the effusion of blood that shall ensue.* But *Rawan* answering, That he was resolved not to deliver her; *Anget* brought this answer to *Ram*.

*Raman's brother comes over to Ram.*

At the same time, *Rawan's* brother, with five of his chief counsellors, finding him not in a capacity to cope with so powerful an army, assumed the shape of apes, and throwing themselves at the feet of *Ram*, craved his mercy and protection.

The apes of *Ram's* army taking them for spies, handled them very roughly at first coming into the camp; and *Hanuman*, or *Hanneman*, especially, would have dissuaded him from having the least concern with them; but were appeased by *Ram*, when he told them, That he knew them to be men of honour and probity.

*Rawan's obstinacy.*

By this time *Rawan* had armed ten thousand of his boldest giants to attack *Ram's* camp; but these being soon defeated, he sent eighteen thousand more; who having undergone the same fate, he sent thirty thousand more; and these also succeeding no better, he sent fifty thousand more, who were all routed like the rest.

Then *Rawan's* eldest son entreating his father to let him engage alone against the whole camp of *Ram*, he could not consent to his request; but having convinced his father of the advantages he had lately got by the instructions of *Bramma*, he put him at the head of ten thousand of his choicest giants. With these troops being advanced to *Ram's* camp, he encouraged them to fight bravely, whilst he soaring up into the air, did hide himself behind one of the wheels of the chariot of the sun, till coming directly over *Ram's* camp, he sent forth one of his magical arrows, which turning immediately into a serpent, sent forth such a

vast number of other serpents among the *Baldæus*. apes, that their arms and legs being quite entangled, they were knocked down on all sides by the giants.

*Ram* not a little surprized at this disaster, asked *Rawan's* brother, what was best to be done; who told him, That if he would send for his winged *Garroude*, the serpents would vanish in an instant. *Ram* following his advice, *Garroude* no sooner appeared, but the serpents vanished; and the apes fought it out bravely with the giants.

In the mean while, *Ram* having advised with his council, how to attack *Inderfiet*, *Rawan's* eldest son, in the air, and *Lekeman* having offered his service, he got upon *Hanuman's* back, who carrying him up into the air, *Inderfiet* sent a shower of arrows against him; but these being repulsed by *Lekeman's* shield, and *Inderfiet* seeing him advance towards him, threw away his bow and arrows, and laying hold likewise of his sword and buckler, a most furious combat ensued, which remained dubious for some time; till *Lekeman* giving him a blow on his *Rawan's* neck, cut off his head at one stroke, *eldest son* which dropt down before his father's feet. *slain.*

*Mandory*, his mother, burst out into a most violent passion for the loss of her beloved son, tearing her hair and breasts with her nails, and upbraiding her husband with cruelty, injustice, and lasciviousness; but to little purpose, *Rawan* persisting in his resolution of not delivering *Sytha*.

Being resolved to make his utmost efforts, he craved the assistance of his brother, a most famous giant, named *Coukeringh*, (or *Kompacarna*, as *Rogerius* \* \* C. 3. *He seeks for assistance by his brother.*) this giant calls him after the *Malabars*;) this giant used to spend his whole life in sleeping, except one day, when he appeared in his full activity; and to spend his time in filling his belly with victuals for the whole succeeding year. It being then in third month of his sleep, *Rawan* called to him aloud, Brother *Coukeringh*, rouse, rouse, and come to my assistance, or else we are lost! *Coukeringh* asking him, half asleep, what was the matter; *Rawan* told him, That being attacked by a vast body of apes under the command of one *Ram*, who had killed two of his sons, and no less than seven generals, with two hundred thousand giants, he had no other means left to relieve himself and his subjects from destruction, but to implore his aid. The giant reply'd, Thou beest unfortunate, *Rawan*, to have entangled thyself in an unjust war against an army headed by the divine *Ram*; I have foreseen it in my sleep, that the same will turn to the

*Baldens* the destruction of thy self and thy country.

*Rawan* stood amazed, but full of despair, told his brother, That if it was his fate (written in his forehead) to die by the hands of *Ram*, it was in vain to avoid it, desiring once more his assistance. The giant replied, My life is at your service: and so ordering his chariot drawn by ten pair of asses, to be got ready, put himself at the head of *Rawan's* army composed of giants. *Ram* in the mean while, understanding that the great giant was coming against him, he appointed some thousands of apes to throw upon him the tops of the rocks; which they did accordingly, though in vain, the giant piercing the mount that was thrown upon him with his arrow, notwithstanding it had one hundred leagues in compass.

This made *Ram* ask *Bebickbem*, *Rawan's* brother, by what means the giant *Coukeringb* might be vanquished. *Bebickbem* replied, You must retreat three paces backwards. That cannot be, answered *Ram*, because I am descended of the race of the *Ketteriis*, who dare not retreat under pain of banishment. But there is no other remedy, returned *Bebickbem*; but the best advice I can give you, is to descend from your chariot, and let the same be carried three paces backwards. This being approved by *Ram*, was done accordingly; so that whilst the giant was making a most horrid slaughter among the apes, he shot his head off, which falling upon the ground, shook the earth, as if a whole mountain had tumbled down, a whole river of blood, as black as pitch, gushing out of his veins.

The giant  
Couke-  
ringh slain.

Notwithstanding this, the trunk of his body continued to make a great slaughter among the apes; so that *Ram* being again obliged to have recourse to *Rawan's* brother, he told him, That if he sent out a party of apes, to get a blue cloth died with indigo, and therewith covered the body, it would become immovable. In the mean while, the trunk of the giant continued to make great havock among the apes, but to little purpose, they being revived (by the aspect of *Ram*,) as fast as they were killed.

By this time, the blue cloth being brought, was thrown upon the trunk, which in an instant remained as unmovable as a stone in the field. *Rawan* seeing himself thus reduced to despair, had recourse to the goddess *Bowanni*, unto whom he offered a sacrifice of fresh butter, sandal-wood, flowers, and spices,

*Rawan's*  
last sacrifice

implored her aid against *Ram* with such fervency, That it is believed he would have obtained his request, had not the ape *Hanuman* defiled the sacrifice by throwing one of the dead carcases of the slain giants upon the altar, erected in a deep hole for this sacrifice.

*Baldens*.

*Rawan* thus drove to the last extremity, put himself again at the head of his forces, and like a desperate person slew all the apes he met in his way, forcing all the hills before him the apes threw in his way, till *Ram* drawing his bow, shot off nine of his heads. And then calling to him aloud, *Rawan*, said he, Desist from blood-shed, return me my *Sytha*, and I will heal thy wounds, and restore thee thy heads and kingdom, without which thou wilt certainly lose all. But *Rawan* replying, That if fate had so ordained it, he would rather lose his ten heads also, than *Sytha*. *Ram* shot likewise his tenth head off: but perceiving that the headless body laid still about him with its twenty-four arms, he threw some water upon it, and muttering out certain words, made it as immovable as a stone.

*Rawan*  
slain by  
*Ram*.

*Mandory* was no sooner informed of her husband's death, but she threw herself at *Ram's* feet, bewailing his obstinacy, notwithstanding the many forebodes of his fall, an unfortunate raven and a doleful owl having settled upon his house, with very dreadful lamentations and outcries, the fore-runners of his misfortune. As I have, added she, been innocent of what has happened, so I hope you won't deny me my protection. *Ram* bid her be satisfied, ordering her at the same time, to pass seven times through the smoke of the fire kept at *Tchie*, to purify herself, and renew her virginity; which done, he would marry her to her husband's brother *Bebickbem*, who accordingly was put into *Rawan's* place. Then *Ram* being carried in his rose-litter to the tree *Sysem*, where *Sytha* was kept a prisoner, she embraced him, returning him a million of thanks for her deliverance. The next thing *Ram* did, was to revive his apes slain in the late engagement; and so marched back over the same bridge that had carried him into *Ceylon*. Being come to the opposite shore, he ordered the stones to be carried to the place whence they had been taken, and marching to the valley of *Kieckenda*, he would there have taken his leave of *Suckery*; but he refusing to part with him thus, would needs accompany him with all his forces as far as the village of *Baratpoeri*, where *Ram* was received by his father, mother, and brother, with great demonstrations

His wife  
married  
to his brother.

*Ram* meets  
again with  
*Sytha*.

Returns  
home.

*Baldæus.* strations of joy, the sweet-scented rose-water, saffron, betel, and other perfumes, being lavishly bestowed upon him and all those that had attended him home.

Ram having bestowed his blessing upon Suckery, he returned home; but Hanuman staid with him. He reigned in peace eleven years after his return, and begat two sons, Lan and Chus. Then taking his opportunity when he had sent Hanuman out of the way, he ascended into heaven with the inhabitants of the earth, except his two sons.

The Malabars say, That Ram being jealous of Sytha, would have murdered her, had she not cleared herself by the fire and a solemn oath. Another time being again seized with a jealousy, because she had Rawan's picture drawn upon a piece of board, she purged herself, by putting her hand into a vessel filled with serpents.

They further add, That her husband *Baldæus.* being become extreme jealous, caused her to be thrown before the elephants, and afterwards before the tygers, but she escaped without the least harm. They say, That when Hanuman saw Ram ascend into heaven, he cryed aloud to him, O divine Ram! what have I done, that you will leave me behind! Ram answered, Hanuman, be not dissatisfied, thou shalt never die, and many Pagodes shall be erected to thy memory. Farewell.

Thus ended the second period of time, which, according to the computation of the Benjans, contains one million two hundred and ninety-six thousand; whereof Ram reigned two thousand. This second period is called *Treitagom* by the Malabars, and *Tretanike* by the Benjans.

C H A P. V.

*The eighth Altar. The Parents, Birth, and Education of Kifna: His miraculous Deliverance. Ragia Kans endeavours to murder him. Kifna turns a Shepherd, and flies with his Company to Goggel.*

*The eighth transformation the most remarkable.*

AS the eighth transformation of *Vistnum* is accounted of the greatest moment above the rest; for, say the pagans, in all the others, *Vistnum* appeared in the world with some part of his divinity; but in this, he carried along with him the whole substance of it, so that he left his place vacant in heaven. This transformation happened with the beginning of the third period of time; and, according to the relation of the Benjans, was thus:

One *Ragia Kans* living in the city of *Mottera*, twenty-five *Cos* from *Agra*, upon the river *Siemmena*, had a young sister named *Deuki*. About three *Cos* higher up the same river, lived a certain *Brahman* named *Wassendeww*, in the city of *Goggel*; The said *Deuki* being arrived to a marriageable age, her brother *Ragia Kans* looked out for a husband for her; but meeting with none for his purpose in that city, he sent to the city of *Goggel*; where his messenger hearing of the worth and piety of *Wassendeww*, the same was, at his recommendation, married to him when he was only nineteen, and she no more than twelve years of age.

The said *Ragia* having understood that there was among his subjects a certain *Brahman* named *Narret*, well skilled in chiromancy, (a thing in high esteem among the pagans,\*) he sent for him, desiring him to look into his sister's hands,

and to foretel, without dissembling the matter, what good or bad fortune was like to befall her. The *Brahman* having viewed her hand, told the king, That according to the lines of her hand, she was to bring forth six sons, and one daughter; the youngest of whom will not only take away thy kingdom, but also thy life.

The king being not a little surprized at this prophecy, ordered the said *Deuki* and her husband to be imprisoned in a strong castle; and that all the children begotten upon her body, should be killed immediately. Accordingly, the midwife brought the new-born babes to her brother, who beat out the brains of six of them (*viz.* five sons and one daughter) against a stone. Afterwards understanding that she was with child with the seventh, he enclosed her in a room with iron doors, and appointed her a guard of one hundred soldiers, with strict orders, That the child, as soon as it was born, should be brought to him. Upon this occasion, I cannot but observe, that this, as well as the ensuing part of the story of *Kifna*, seems to have a near relation to the history of the birth of our saviour, his flight into *Egypt*, the murder of the innocent children by *Herod*, Christ's miracles, and ascension, &c.

\* See Vof. sius, l. 2. Idol. c 47 & Pucer. de Divin.

*Baldæus.* The time of her reckoning being expired on the day \* *Aetben*, of the month *Sowwanne*, this unfortunate lady being overwhelmed with grief, she brought forth a son about midnight, without the least pain, whose face was as bright as the full moon; but as she had occasion to rejoice at the birth of so fine a child, his fate put her into incredible affliction: but *Vistnum* (whose divine virtue was infused

into this child) comforted his mother, *Baldæus.* telling her, that he would find means to escape the hands of his uncle, and deliver her out of her prison. Then speaking to his father, Pray, says he, carry me to *Goggel*, on the other side of the river *Siemmena*, to the *Brakman Nen*, whose wife being lately brought to bed of a daughter, exchange me for her, and leave the rest to my disposal.

\* The 8th day of the decreasing moon.

The deliverance of Kisna

BRITISH MUSEUM

*Baldous.* *Wassendeww* answered, How is it possible to remove thee out of a chamber so closely guarded and kept, that not the least thing could pass in or out? *Kisna* (this was the child's name,) replied, the doors shall be opened to thee, and the guards so overcome with sleep, that nothing shall stop thy free passage. He had no sooner spoke these words, but the seven doors opened themselves, so that *Wassendeww* took the child, and carried him off without the least hindrance. But coming to the river *Siemmena*, directly opposite to *Goggel*, *Kisna's* father perceiving the current to be very strong, (it being in the midst of the rainy season,) and not knowing which way to pass it, *Kisna* commanded the water to give way on both sides to his father; who accordingly passed dry-footed across the river, being all the way guarded by a serpent that held her head over the child, to serve it instead of an umbrella. The *Benjans* call this serpent *Sickenasy*. Coming to the *Brahman's* house, the door opened itself, and finding the *Brahman* and his wife asleep, he exchanged his son for their daughter, which he carried along with him to the castle. In short, the water afforded him once more a free passage; and finding the doors of the castle open, and the guards asleep, he locked them after him, and delivered the girl to his wife.

The guards hearing the child cry soon after, entered the chamber, snatched it from the unfortunate parents, and brought it to *Ragia Kans*, who finding it a girl, upbraided the *Brahman* with want of skill, yet for fear of the worst, was going to strike the head against a stone; but the child slipping out of his hands, flew up into the air, and told him, *It was in vain to attempt to murder her, since he that was to take away his head and his kingdom, to revenge the death of his five brothers, and a sister, was safe at Goggel.* This said, it flew up high into the air, where it was turned into lightning by *Vistnum*, a thing never seen before in the world.

*Ragia Kans* not a little surprized at this accident, consulted all his friends, what he had best do in this emergency; but none being able to advise him to any purpose; whilst he was very melancholy, and ruminating upon the oddness of the thing, he understood that the pious *Brahman Nen*, who lived at *Goggel*, had a most beautiful son, which put it into his head, whether it might not perhaps be he who was to take revenge of him for his tyrannies. At last, to make sure work, he resolved to have the child killed; but not

thinking it safe to undertake so heinous a thing barefaced, (for fear of the common people,) he made his applications to his eldest sister *Poetena*, enjoying her, as she tendered his life, to go with some presents to this *Brahman's* house, and to endeavour to kill this child by anointing her teats with poison.

Accordingly coming with considerable presents to the child's mother at *Goggel*, she wished her much joy; and taking the child in her lap, she gave ample recommendations of its beauty; and then kissing and playing with the child, laid it to her breast: but this child being proof against all poison, did suck away, not only all her milk, but likewise the blood out of her veins, till she dropt down dead upon the spot.

*Ragia* sorely afflicted with this news, released his sister *Deuki* and her husband, asking his sister's pardon for his having pretended to thwart the immutable decrees of destiny, and desiring that all things past might be buried in oblivion. However, as the child at *Goggel* lay constantly in his head, he advised with his *Vizier*, or chief minister, upon the matter: he told him, That there lived a certain giant named *Sectasor*, at *Mottera*, who had the gift of transforming himself into a cart and oxen, by which means he might carry the child into the air and murder it. The king, pursuant to his advice, sent for the said *Sectasor*; who, at his request, crossing the river *Siemmena*, when he came near the city of *Goggel*, transformed himself into a little neat cart, drawn by two white oxen with gilt horns; and passing thus through the streets of the city, at last stopped near the *Brahman Nen's* door. One of the neighbouring women having just at that time *Kisna* in her arms at the door, set the child upon the said cart, which was no sooner done, but *Sectasor* flew with the child up into the air. The mother amazed at this spectacle, cried out aloud, *O Vistnum, protect my child!* her prayers were heard; for *Kisna*, when he saw himself high in the air, assumed the shape and strength of a giant, and gave such a blow near the giant's heart, that he beat the breath out of his body; then reassuming his former shape of a child, got upon his dead carcase, and so fell down with it upon the ground. His parents being eye-witnesses of the deliverance of their supposed son, were so surprized thereat, that looking upon him as something extraordinary sent them from heaven, they sacrificed to the gods, and gave abundance of alms to the poor.

*Baldæus.* *Ragia Kans* finding himself disappointed in his hopes, had recourse once more to his most trusty counsellors: one of them told him, That there was a certain *Deyt*, or giant, named *Turnawent*, who being endowed with the virtue of transforming himself into a whirlwind, the king engaged him on his side, in order to carry the child into the air. *Kisna*, who heard the whirlwind rolling cross the river *Siemmena*, towards the city of *Goggel*, being then in his mother's lap at the door, rolled down upon the ground; whence the whirlwind snatching him up into the air, his parents stood amazed at so strange a spectacle, imploring *Vistnum* for his assistance.

*Kisna* being carried to a vast height by the wind, assumed the shape of a man, and taking the giant *Turnawent* by the throat, turned his neck round; and then reassuming his former shape, got upon the dead carcass of the giant, and fell down along with it upon the ground, just before his parents door, to the great amazement of the inhabitants of *Goggel*, who could not but look upon this accident as miraculous, or that had something of divine in it.

*Kisna* in the mean while remaining upon the giant's back, cried most vehemently; his mother laid him to her breast, but he not ceasing to cry, she laid him in a hanging cradle; notwithstanding which, he continued crying, till his mother having recounted to him the story of *Ram*, (as related before,) he leaped out of the cradle, and taking the shape of *Ram*, with his bow and arrow, he cried out, *Lekeman*, let us go after *Rawan*, and deliver *Sythba*. His mother being ready to prostrate herself at his feet, he soon reassumed his former shape, and increased miraculously, both in strength and wisdom.

It happened one time, that his mother did bring upon the table a golden dish with rice-milk, and some herbs, dressed after the way of the *Benjans*, which *Kisna* seeing, he told her, He could not eat it, unless these things were all mixed together, which she did accordingly; but *Kisna* tasting it, desired her to separate them again; his mother answering him, That it was not in human power so to do, he laid his hand over the dish, and separated them immediately, to the astonishment of his parents.

His father being a *Brakman* of the cowherds, maintained his family by breeding of cattle; which, since the bringing of *Kisna* into the house, was increased to nine hundred thousand.

His mother being one time busy in

churning, he asked her for a little butter: *Baldæus.* she gave him a little, but not thinking that enough, he asked for more, which she refusing, he took the opportunity whilst she was gone out of the way, to take away some. His mother returning, asked *Kisna*, What was become of the butter? He answered, That the cats and rats had eat it. But the mother not thus satisfied, looked into *Kisna's* mouth, where she had a view of the whole world with its waters, forests, mountains, &c. inclosed in a blue circle. The mother astonished at so strange a spectacle, yet soon recovered herself, when she saw *Kisna* return to his childish shape and game again; so taking up a twig, threatened to strike him; but he running out of the town, she pursued him; but not being able to overtake him, he stood still at last, when she gave him three or four blows, urging him still to tell her what was become of the butter; he persisted in his former story, that the cats and rats had eaten it. She took all the ropes belonging to the hundred and ninety nine thousand cows, endeavouring to tie them together in knots; but notwithstanding all her endeavours, the knots would not tie, till *Kisna* finding her much out of humour at this disappointment, he permitted the ropes to be knotted, and himself to be tied with the ropes; but his mother finding him cry bitterly, she released him soon after.

Another time his mother being gone to milk the cows, ordered him to hold a stick in his hand, to make the cows stand still whilst she was a milking; but finding she had left her brass vessel, wherein she used to gather her milk, behind, and not daring to send *Kisna*, he told her, He would soon find a way to fetch the vessel, without stirring from the place, and so extending one of his arms so far as to reach the vessel, he gave it to his mother, and so reassumed the shape of a child.

In the mean while *Ragia Kans* being informed that the inhabitants of *Goggel* increased considerably in riches, (for *Kisna's* sake,) he ordered his governor to load them with heavy taxes; which being done accordingly, with the utmost severity, they advised with *Kisna*, whether they had not best remove with their cattle to the fertile valleys of the mountain of *Perwet*. *Kisna* approving their proposition, persuaded his parents to do the same; so that they transported all their moveables and cattle, to the most fertile valleys about the mount *Perwet*, or *Ooden Perwet*, near the river *Siemmena*. Here they fixed their habitations in a certain

*Baldæus*. certain village, called *Brindawink*, seated in the midst of most pleasant pasturages, planted with trees, and so abounding in grafs, that those vast herds of cattle were not able to consume it. *Kisna* was so

well pleased with the place, that he clad himself after their fashion, with a garland of peacocks feathers upon his woollen cap, and a flute to play away the rest of the cowherds.

C H A P. VI.

*Further Designs of Ragia Kans against Kisna by the means of certain Giants. Raja Inder and Bramma. Kisna produces a Pearl-Tree, and is made a King of the Cowherds.*

**R**agia Kans, highly exasperated at this removal of his subjects, summoned a certain giant, named *Bacassar*; who having the virtue of transforming himself into a hern, he sent him to carry away *Kisna*; which he did accordingly; and having carried him up into the air, endeavoured to swallow him; but *Kisna* transforming himself into a fiery flame, burnt the hern to ashes, and he returned to his parents, without receiving the least harm. The news thereof having soon reached the ears of *Ragia Kans*, he sent another giant, named *Wickeraak*, who transforming himself into the shape of a boy, came to *Kisna* as he was looking after the cattle in the field, and engaged in a wrestling match among the other boys, not questioning by this means but to draw *Kisna* into the game, and so make an end of him; but *Kisna* (who was not ignorant of his design) challenged him; and as they were wrestling, gave him such a kick upon his breast, that he tumbled down dead upon the spot.

*Ragia Kans* finding himself once more disappointed in his aim, sent the dreadful giant *Agasor*, whose entrails were all fire. This giant having laid himself close to the cowherds huts, opened his dreadful jaws, so that the uppermost reached up to the skies, his teeth representing like coco-trees, and his throat like the entrance of the huts. *Kisna* knowing the deceit, drove his cattle to his own stables, but the rest went straitways with their cattle into the giant's throat; which the giant no sooner perceived, but he shut his teeth, so that the poor wretches finding themselves in the midst of fire and flames, applied themselves to *Kisna*, who was got among them on purpose to make himself an instrument of their deliverance. He bid them not to despair; and then extending himself with all his might, made the giant to burst in pieces, and thus opened a passage for the rest to escape the flames.

This miraculous deliverance being soon spread all over the neighbouring coun-

try, *Ragia Kans* intreated the giant *Dawanneel* (who had the power of transmuting himself into a flame) to destroy *Kisna*. Accordingly he came to the place where *Kisna* and his companions were feeding the cattle, and setting all (not excepting even the trees and grafs) into a light flame, the cowherds fled to *Kisna* (who was at some distance) for help, which he promised them in an instant; and so advancing towards the giant, took and held him round the middle, till he forced him to swallow all the fire again.

*Ragia Kans*, almost reduced to despair, had recourse to the giant *Kasep*; who having assumed the shape of an afs of a prodigious bigness, advanced towards the cowherds, with a dreadful countenance; who being terrified at so dreadful an aspect, left *Kisna* alone, who was so far from being surprized at this monstrous sight, that he laid by his pipe, and advancing towards the afs, who came open-mouthed upon him, endeavoured to take him by one of his hindermost heels; but the afs gave him so terrible a kick with his foot, that he threw him eight or ten yards high into the air. *Kisna* finding himself thus roughly handled, thought fit to assume the shape of a giant, and so taking the afs by the hinder leg, did swing him three or four times about his head, and then throwing him against the ground, squeezed the breath out of his body.

The god *Bramma* being not ignorant of what had passed, and curious to know whether *Kisna* was not endowed with some divine virtue, took his opportunity, and carried off all the cattle belonging to *Kisna* and the other cowherds; who running to *Kisna*, and imploring his assistance, he bid them shut their eyes, which they had no sooner done, but he produced the same number of cattle they had lost. *Bramma* came about a year after, and brought back all the cattle, asking his pardon for what was past. *Kisna* told *Bramma*, That he had better keep within his own bounds; and causing

*Baldeus*. the cattle he had produced, to vanish immediately, he kept them brought back by *Bramma*.

Another time, all the cattle just after they had been drinking about noon out of the river *Siemmena*, fell dead on a sudden upon the ground. *Kisna* surprized at this accident, and knowing that *Garroude* having lately dislodged the monstrous serpent *Kallinaegb* from her dam, called *Rammene Drepek*, he shrewdly suspected that she had taken to this river, and infected the same with her venom; then getting upon a palm-tree, he assumed his white and black skin, and two more arms and hands; and sending for *Garroude*, ordered him to go to *Bramma*, and to demand of him the things taken out of the sea in the times of *Couram*, and left in his custody till his return. *Garroude* hastening to *Bramma*, brought back to *Kisna* the *Chianko*, or horn, the beauteous woman *Lekfemy*, and the jewel *Consenkmany*. This done, he took the horn in one hand, a piece of iron in the second, another weapon in the third, and a flower in the fourth hand. Thus equipped, he leaped into the river, in the presence of his companions, and diving to the bottom, met with the wife of some of the attendants belonging to the serpent *Kallinaegb*, who asked him what had brought him thither, forewarning him to retreat in time, before he should be seen by the serpent, which questionless would devour him in an instant. *Kisna* replied, That being come on purpose to find out the serpent, he desired he might be shewed him; which they refusing to do, he turned his eyes on all sides, and at last espying the serpent, he awakened him out of his sleep, bidding him to leave this river, unless he would pay for it with death. The serpent *Kallinaegb* swelling with rage, flew upon *Kisna*, and beat him backwards; but he recovering himself, squeezed the serpent's head to that degree, that not knowing what to do, he twisted himself about his body; but *Kisna* increased the bulk of his body in such a manner, that the serpent, ready to burst, was forced to let go his hold, being ready to drop down dead for want of strength. *Kisna* then got on the top of his neck, and putting an awl through his nostrils, rid upon him as if he had been on horseback. The wife and attendants of the serpent finding him quite out of breath, intreated *Kisna* to spare his life, promising to quit the river immediately. But *Kallinaegb*, not willing to consent to what they had offered, still endeavoured to get rid of *Kisna*; but finding all his endeavours in vain, and that *Kis-*

w

*na's* body increased every minute in *Baldeus*. weight, he was glad to approve of what had been offered by his wife. *Kisna* having pardoned his offence, told him, That he would double his strength, (because he had been engaged against a god,) and that *Garroude* should not any more disturb him in his den, provided he would leave this river, and for the future never hurt either men or beasts.

The serpent, with his wife and attendants, having paid their reverence three times to *Kisna*, left the river *Siemmena*; and *Kisna* arising on a sudden above the surface of the water, reassumed his own shape, and coming ashore, blew his horn, by the sound whereof all the cattle were in an instant restored to life.

All these miracles wrought by *Kisna* had such an influence upon the cowherds, that they consulted all possible means to pay him due reverence. One among the rest told him, You know that *Raja Inder*, the king of heavens, and the blessed souls, keeps an annual feast in the mountain of *Ooden Perwet*, with the believers; and since we have no less obligations to *Kisna*, let us make also a feast to his honour, and invite him to the said mountain. This being approved of by a general consent, they prepared a most splendid feast; which they celebrated with such demonstrations of joy, that the noise thereof coming to *Inder's* ears, and looking upon it with a jealous eye, called together the rains, (disposed in twelve peculiar places,) ordering them to pour down their waters upon the fields and cottages of these cowherds. They were ready to obey, and poured forth such prodigious showers of rain, that the fields being all laid under water, men and beasts were upon the point of being drowned. The cowherds highly surprized at the oddness of the thing, (it being in the dry *Mousson*,) had once more recourse to *Kisna*, who ordered them to get up to the top of the mount *Ooden Perwet*, till the rains ceased; and they had no sooner obeyed his orders, but he took the whole mountain, with cattle, men, and all upon his little finger, and lifted them up seven times higher than the waters could rise.

The rains finding their endeavours frustrated, returned to *Inder*, and told him, That they had poured down their waters seven days and nights without intermission, but in vain, there being a certain person in those parts who could lift the whole mountain with his little finger into the air. *Raja Inder* then perceiving his error, came to *Kisna* to make his excuse, and dismounting from his elephant,

*Baldæus.* phant, begged forgiveness for having attempted any thing against him, pleading his ignorance, and as a token of his repentance, presented him with the *Camdogga*, or cow of plenty; which *Kisna* was pleased to accept of, and pardoned his fault.

Not long after, *Kisna* coming home one day, found his mother busy in putting some pearls on a string; he asked her from what tree she had gathered them; but she answering, That she never knew pearls to grow on trees, but only in oyster-shells; *Kisna* took one of the biggest, which he had no sooner put into the ground, but they saw a pearl-tree sprout forth full of the most exquisite pearls. The mother standing amazed, and ready to worship him, he caused the tree to vanish immediately.

*Kisna produces a pearl-tree.*

Soon after some of the cow-herds and their wives, as they were walking in the forest, agreed to wash themselves in the river; *Kisna* espying them at a distance, secretly got all their clothes, and getting upon an adjacent palm-tree, had his sport to see them coming naked out of the water, without being able to find their clothes. They were not a little surprized at first, but looking up, and seeing *Kisna* in the palm-tree, they desired him to restore their clothes; which, he told them, (to try the modesty of the women,) he would, provided they would come underneath the tree; but they excusing the matter, he threw the women their clothes.

*Makes sport with the women.*

*Is chosen king.*

At a certain time, *Kisna* taking a walk with the other cow-herds, they chose him their king; and every one had his place assigned him under the new king. There lived among them a certain charitable *Brakman*, whose wife (without the knowledge of her husband) paid her daily devotions to *Kisna*; who sent two of his messengers to let her know, that being disposed to make merry at her house with some of his companions, she should provide something for their entertainment. The messengers meeting with the *Brakman*, told him the message; who told them, That he knew nothing of *Kisna*, neither would he make any entertainment for him. With this answer they returned to *Kisna*; who chiding them for their mistake, bid them speak to the woman; which being done accordingly, she no sooner heard the name of *Kisna*, but

making a low reverence, to work the *Baldæus.* went; and having dressed five or six good dishes with a handsome desert, she carried them herself to *Kisna*, begging him to accept of what she was unworthy to offer; which he did, and gave her his blessing, That as long as she lived, she should want for nothing, and that after her decease, her soul should not transmigrate\* into another body, but that being purified by him, she should go directly to heaven.

\* These pagans look upon it as a singular blessing when their souls are not to enter into other bodies.

*Kisna* with his companions having feasted plentifully upon what the *Brakman's* wife had brought them, as they were returning home, met with some milk-maids, unto whom *Kisna* told, That they must not pass by without paying toll to him, who was king of the place. The maids not thinking he had been in earnest, went on their ways; but *Kisna* with his stick breaking their milk-vessels, one of them was so exasperated thereat, that she made complaint thereof to his mother; who calling him to an account for this outrage, he denied the matter; but his mother believing the contrary, told him, That he had broken the peace, and that if it should come to *Ragia's* ear, he might be punished for it. He replied, I did not know I had done them any wrong; but as for *Ragia Kans's* anger, I don't fear it, though he knew it to-morrow.

It happened not long after, That in a certain moon-shiny night, in the month *Alsoor*, (in which begins the new year,) *Kisna* with some of his companions were diverting themselves with their pipes in an adjacent wood; and *Kisna*, especially, played so charmingly upon his flute, that the women in the village being awakened by the sound of this harmony, came running into the wood to partake of their diversions. *Kisna* asked them, whether they were not afraid to come into the wood at that time of night? They answered, That their ears and hearts had been so touched with his melodious harmony, that they were not able to stay at home: so *Kisna* gave them a tune or two, which so surprized them, that most of them stood amazed, gazing all the while at his beauty, whilst others passed their time in dancing. This they continued till midnight, when having bestowed his blessing upon the women, he sent them home, he and his companions passing their time in the same jollities all night till break of day.

## C H A P. VII.

*A further Account of the Designs of Ragia Kans; who is killed at last by Kifna. New Decrees against Kifna, which prove ineffectual. His other Miracles.*

*Baldæus.* **R**agia Kans, being more and more alarmed at these miracles, sent for his chief minister, named *Panjewello*, and his two chief generals, named *Sianoor* and *Mostik*, to consult with them, how to rid his hands of *Kifna*. *Panjewello* told him, that all clandestine means having proved to no purpose hitherto, he knew no other way than to engage the strongest of all the giants, (named *Keby*) against him.

*Ragia* approving his advice, sent accordingly the said giant, who meeting with *Kifna*, asked him, where he was going. Where I please, replied *Kifna*. Ho ho, answered the giant *Keby*, I will take care of that; and so was going to lay his great paws upon him. But *Kifna* taking him by the throat, did not let go his hold till he had squeezed the breath out of his body; which done, *Kifna* put his hand into his throat, and pulling his heart out, first laid it upon his mouth, and afterwards threw it to the ravens.

*Ragia Kans* being now put to the last shift, a certain *Brakman*, named *Naret*, advised the king to invite *Kifna* with his followers to a feast, and so to have him killed at table. *Ragia* approving his counsel, sent messengers to invite them accordingly; but they were so far from granting their request, that they desired *Kifna's* parents not to let him go; who with tears in their eyes, begged him to stay at home. But *Kifna* refusing to hearken to their advice, ordered his chariot to be got ready; and taking his father, his eldest brother, and mother, along with him, went forward to *Goggel*, upon the river *Siemmena*, opposite to *Mottera*.

Here it was that *Akerøer*, one of the king's messengers, bathing himself in the river, and diving three times successively (after the manner of the *Benjans*) saw *Kifna* under water, seated upon his throne; which apparition being seen by him again in the same state above water, he could not forbear to break out into these words: *O holy Kifna! thou beest truly god in human shape, because thou appearest both under and above water; a sign thou beest present in all places, a quality belonging only to the gods! pardon me for having invited thee to this feast.* *Kifna* told him, he was sensible it was not his fault, and dined with him the same day

in a garden *Akerøer* had just near the bank of the river. *Baldæus.*

After dinner they passed the river, but had not gone far before they met the king's washerman with a pack of clothes on his back: some of the company of *Kifna* having a mind to divert themselves, pushed one another against the washerman, who giving them foul language, *Kifna* bid his companions to thresh him handsomely, which they did.

*Ragia Kans* exasperated to the highest degree at this usage of his servant, resolved to declare open enmity against *Kifna*. Not long after *Kifna* meeting upon the road a barber, he presented him (according to the custom of that country) a looking-glass to look in, and paired his nails; the barbers in the eastern countries always pairing the nails on the hands and toes, after they have shaved the beard. *Kifna* gave him his blessing, telling him, That his soul should directly go to god, without being transplanted into another body.

As they were entering the city, they were met by a gardiner's wife, who used to serve *Ragia Kans* with flowers: this woman prostrating herself at *Kifna's* feet, said, *O divine man! having never seen any thing so beautiful as thy self, I offer to thee these flowers designed for Ragia Kans, thinking myself much more obliged to your divinity than his majesty, entreating thee not to despise my cottage, but to take up thy lodging there for this night.* Then presenting *Kifna* with a garland of flowers, he took up his lodgings in the house, being welcomed by the husband in the most devout manner in the world, who declared himself unworthy of receiving so great a guest, and served *Kifna* and his company at table; who at parting, bestowed his blessing upon him, *viz.* That they should never want, and their souls go directly to heaven.

Being advanced a little further, they met a poor cripple, or lame woman, having a vessel filled with spices, sweet-scented oils, sandal-wood, saffron, civet, and other perfumes. *Kifna* making a halt, she made a certain sign with her finger on his forehead, casting the rest upon his head. *Kifna* asking her what it was she would ask him. The woman replied,

*Baldæus.* *Kisna* then setting his foot upon hers, and taking her by the hand, raised her from the ground, and not only restored her limbs, but also renewed her age; so that instead of a wrinkly tawny skin, she got a fresh and fair one in an instant. At her request *Kisna* and his company lodged the following night in her house.

*Kisna breaks the strong bow of Mottera.*

The next following day *Kisna* and his company walking through the streets of *Mottera*, they were shewed the strong bow, which none of the giants had been able to manage; but *Kisna* broke the string of it at the first pull. Thence they walked towards the court, where the courtiers were expecting the coming of the king: these seeing a whole troop of country fellows, would not allow them entrance into the court; but pushing *Kisna* back roughly, he struck ten of them, (among whom were two colonels) down to the ground, so that they expired at his feet, and their souls were conveyed immediately to heaven, a favour he bestowed upon the souls of all such as were slain by his hands.

*Kills ten courtiers.*

*Ragia Kans* being informed of all these transactions, and almost reduced to despair, ordered a turret to be erected upon the back of an elephant, furnished with two warlike engines, to be managed by as many men. He ordered the guide of the elephant, that as soon as he saw *Kisna* coming to the castle, he should send out the elephant to trample him under feet, or else endeavour to kill him by the means of the engines.

*Kills an elephant.*

The following day *Kisna* going towards the court, the guides set loose the elephant upon him; but *Kisna* not only stopp'd him in his full career, but also putting his foot against his trunk, pulled out both of his teeth; afterwards seizing him by the tail, swung him three or four times round his head, and then dashed his head against the stones. *Ragia* now finding himself reduced to the last extremity, and enraged with anger, addressed himself to his two renowned generals *Kansjamdoor* and *Moftik*, telling them, That since they had eaten his bread so many years, it was now time to shew their fidelity and bravery, and to deliver him from his mortal enemy.

*Kills two generals.*

Accordingly they having sent a challenge to *Kisna*, he appeared at the appointed time and place, where a most fierce combat ensued, which remained dubious for three hours; till at last *Kisna* threw them (one after another) with such a prodigious force to the ground, that the blood, and with it their souls, gushed out of their mouths.

During the combat *Ragia Kans* hap-

*Baldæus.* pening to look over the wall of the castle, no sooner saw *Kisna*, but he thought he heard a voice telling him, that he was the person who should at once take away his life and his crown. He was scarce returned into his apartment, when news being brought him of the death of his two generals, he commanded every one to betake themselves to their arms, to fight against *Kisna*, offering a great reward to any that could deliver him up into his hands, either dead or alive. Accordingly the whole city rose in arms, and engaged *Kisna* without the castle gates; but were not able to conquer this invincible hero.

*Routs a whole body of men.*

For *Ragia Kans*, having in the mean while ordered *Kisna's* parents to be whipped with *Siambokken*, or brags scourges, in his presence, *Kisna* (according to his omniscency) being not ignorant of the matter, leaped over the wall into the palace; where finding *Ragia Kans* sitting upon his throne, he got hold of his head, and pressed it to the ground, till he broke his neck, and to consummate the matter, gave him three or four terrible blows, which beat out his brains.

*Kills Ragia Kans.*

The next thing he did, was to send his eldest brother to deliver their parents from their captivity, who finding the guards fled, brought them to *Kisna*, where they received one another with mutual embraces, *Kisna* declaring his sorrow for their sufferings upon his account, and these declaring themselves amply rewarded with the sight of his person. *Kisna* having put *Ongefeen Ragia Kans's* father in his stead, returned with his parents, brothers, and companions to their usual habitations; where he put himself under the tuition of a certain learned *Brakman*, having chosen a certain poor scholar named *Sedamma* for his attendant at school, to carry his books and writings.

*Kisna under the tuition of a Brahman.*

There lived at that time at *Mottera* a certain merchant, a relation of *Kisna's* mother, whose daughter called *Conta*, being married to *Ragia Dandon*, king of *Estenapour*, had brought forth five sons; the first-born whereof his father had obtained by his prayers to *Inder* the king of the celestial spirits, the second from *Bramma*, the third from the wind, and the two last from the famous hero *Essonocomaer*.

The five brothers did at a certain time undertake a journey with their mother to *Mottera*, to visit their grandfather, where they contracted something of acquaintance with *Kisna*, and frequently revered him. About the same time, the women of *Goggel*, and of the village inhabited by the cowherds, were very earnest

*Baldæus.* In their solicitations for *Kisna's* return, without which they said, they neither could, nor would eat or drink.

In the mean while, the five brothers having received the unwelcome news of their father's illness, were forced to return to *Eftenapour*; and the fatal exit of *Ragia Kans*, and so many of his giants, being come to the ears of *Jerasjanda*, his brother-in-law, he resolved to revenge the same to the utmost of his power. Accordingly having gathered a body of ninety five thousand chosen horse, he laid siege to *Mottera*; but *Kisna* having by his frequent sallies quite ruined his army, took him prisoner at last; but knowing that he had by his constant prayers obtained from *Bramma*, that he should live one hundred years, and at last be killed by one *Rhim*; he released his prisoner, who having soon gathered another army, besieged *Mottera* a second time, and was worsted again as before by *Kisna*. The same he continued to do sixteen times, till all his people being slain in the wars; he passed through all the corners of the world to raise new forces, and meeting with the famous giant *Sialinder*, he put him at the head of his forces, and so forced the siege of *Mottera* a seventeenth time.

*Jerasjanda*  
ref. lves to  
revenge  
*Ragia*  
*Kans's*  
death.

Is sixteen  
times wor-  
sted by  
*Kisna*.

The situation of *Kisna's* house, was such as to be plainly discovered in the camp, as from thence he had a full prospect of their army. *Kisna* having posted his brother at the entrance of his house, he happened to be seen by the enemies general, who mistaking him for *Kisna*, advanced towards the house: *Kisna*, who saw him coming at a distance, considering with himself, that in case he should fall by his hands, his soul must go straitways to heaven, (a favour he thought him unworthy of,) run out of the back-door, making the best of his way to a cave of a certain *Brakman*, about four *Cos* from *Mottera*; this man had by his continued prayers obtained from *Bramma*, that if any one should disturb him in his devotions, the same should be consumed to ashes. *Kisna* being not ignorant of this, and seeing his adversary pursuing him, entered the said cave, and throwing a piece of cloth over the *Brakman's* head, sheltered himself behind it. The giant who followed his footsteps, soon after entered the cave, and finding the *Brakman* covered with a piece of cloth, gave him two or three sound boxes on the ear, telling him, That he should take that as a reward for his care in hiding *Kisna* in his cave. *Retreat, retreat*, said the *Brakman*, *before I uncover my face, unless thou wilt be consumed by fire.*

Then taking away the cloth, the giant was immediately in a flame, and burnt to ashes. *Kisna* returned to *Mottera*, and having routed *Ragia Kans* brother's forces, he took him prisoner; but in respect of *Bramma's* promise, dismissed him soon after.

*Kisna* in the mean while considering that *Jerasjanda* was to live one hundred years, and that consequently he would not lay aside his designs against *Mottera*, it happened that *Wissuckre*, the son of *Bramma*, being come from heaven to give *Kisna* a visit, and asking him what it was he would request of him? He answered, Build me a city in all respects like that of *Mottera*; which he did accordingly, the same night in an adjacent island, being altogether like that of *Mottera*; except that this was of gold instead of stone. *Kisna* being informed thereof by *Wissuckre* himself, over-whelmed the inhabitants of *Mottera* with so heavy a sleep, that (unknown to them) he carried them with all their cattle, and *Ragia Ongefeen* their king to this new city, unto which he gave the name of *Davarca*; leaving *Sedamma* his old school-fellow and attendant behind him in a certain village, which since has got the name *Sedamma-poer*; which done, he returned with his brother to *Mottera*.

Another  
miracle of  
*Kisna*.

By this time the giant *Sialinder*, having gathered a vast army, sat down before *Mottera*; but *Kisna* and his brother after having killed a great number of the enemy, feigning a retreat, were pursued by *Sialinder's* forces, till coming to a high mountain, they vanished, and retired to the city *Davarca*; and *Sialinder* being thereby become master of *Mottera*, settled his residence there.

In the mean while *Kisna's* school-fellow being married, was grown so poor, that he was forced to sell his clothes to buy victuals. Being almost reduced to despair, his wife advised him to take a journey to his old school-fellow *Kisna*, who, she did not question, would commiserate his condition. How is this possible, replied the husband, being quite naked, and not fit to appear before any body? *Kisna*, answered the wife, does not despise the poor; go, and take a handful of *Kam*\* along with thee for a present.

\* A certain  
seed.

The husband followed his wife's advice, and went to *Davarca*; who was no sooner entered the street where *Kisna* lived, but being discovered by him from a window, he came out to meet and embrace him; and carrying him into his house, ordered him to be washed, and provided with new clothes. *Kisna* asked him, whether

*Baldæus.* whether he had brought him any presents. *Being a poor man,* replied *Sedamma,* I had nothing to give but this; which my wife sent to thee, in hopes that the gods would not refuse the meanest present. *Kisna* received it kindly, and put it in a corner of a cottage belonging to one of his neighbours; and at the same instant *Sedamma's* cottage was turned into a spacious palace: his wife was much surprized at this change; but imagining that it was done by *Kisna,* she searched all the corners of the house, and wherever she turned her face, found such a vast quantity of gold and silver, and of *Ropias,* that she had sufficient, wherewithal to provide herself with servants, provisions, and every thing in proportion, to the grandeur of her palace. *Sedamma* being ignorant of what had happened, returned full of melancholy from *Kisna,* ruminating upon the road, whether he had not best leave his wife and children; but soon recollecting him-

self, that he ought not to lay the whole *Baldæus.* burthen upon his wife's shoulders, and despair of God's mercy, he made the best of his way homeward; but approaching the village, he was amazed to see the change that had happened since his departure, which made him suspect he had missed his way; but finding by some undeniable circumstances that he was in the right, he went into the village, where finding, instead of a cottage of straw, a royal palace, he stood astonished, not knowing which way to turn, till being discovered by his wife out of a window, she sent one of the servants to desire him to enter; which he did; and being kindly received by his wife and children, he asked the exact time of this sudden change; which happening (as far as they could guess) precisely at the same time he presented the seed, they paid their devotions to *Kisna,* distributed alms among the poor, and lived in great plenty for a long time after.

CHAP. VIII.

*A King's Daughter in love with Kisna; sends him word of it. Kisna delivers sixteen thousand royal Virgins, and cures the Leprosy.*

Sometime after *Ragia Bhiemeck,* king of *Poerep,* had a son and daughter born him, the first named *Rockemeya,* the other *Rockemy,* who being grown up, the father was very desirous to have his daughter well matched before his death. Among others he consulted with upon this matter, there was a certain *Brahman,* named *Naret,* much celebrated for his wisdom and learning, who being desired by the king to inspect his daughter's hands, and to foretel him by the art of chiromancy who should be her husband, *Naret* having taken a full view of the lineaments of her right-hand, told her, *Blessed virgin! who beest ordained to be the spouse of the holy Kisna.* The father rejoiced thereat to the highest degree, told this good news to his son; who being of a contrary sentiment, replied, *That he would never suffer so beautiful a creature to be married to a country clown.*

*Rockemy*  
*designed*  
*for Kisna.*

It is to be observed, that the soul of *Sytba,* *Ram's* spouse, being transplanted into the body of this virgin, in order to be espoused to *Kisna,* this young lady was not insensible thereof; for which reason she had resolved to think of no body else but *Kisna;* which her brother being resolved to prevent, he sent to the giant,

*Is opposed*  
*by her bro-*  
*ther.*

the king of *Mottera,* that in case he was inclined to marry his sister, he should come with all speed, his father intending to marry her to *Kisna.* The giant, ravished at this joyful news, ordered a most magnificent equipage of elephants, camels, horses, oxen, and chariots, to be got ready, and attended with trumpets, hautboys, kettledrums, and other musical instruments, and a numerous retinue, set out from *Mottera.*

No sooner were they come within two days journey to *Rockemy's* father's residence, when she, not knowing what to do in this exigency, thought fit to give notice thereof to *Kisna* by a letter, which she ordered one of her servants to deliver to the first *Brahman* she met, in order to carry it to *Kisna;* the contents whereof were as follows:

“ **H**OLY *Kisna!* worthy to be be-  
 “ *Rockemy*  
 “ loved of me and all the world; *my'sister*  
 “ being resolved to be no body's, but only *to Kisna.*  
 “ yours as long as I have breath to draw,  
 “ I thought fit to let you know, that my  
 “ old father likewise wishes nothing more  
 “ than to see that happy day; but my  
 “ brother, who has more ambition than  
 “ piety, having sent for the giant of  
 “ *Mottera* to marry me, and being come  
 “ within

*Baldæus.* "within two days journey of our residence, I desire you to provide against their attempts, nothing being able to resist your divine power."

Your Highness's always devoted,

ROCHEMY.

The servant having brought a *Brahman* to the princess, she, by a present of a golden dish filled with *Ropias*, and a promise of more if he performed his errand, engaged him to undertake the task. Accordingly he went full speed for five *Cos*, when being somewhat tired he sat down under a shady tree, to refresh himself with a draught of cool water, and falling asleep, was carried by *Kisna* to *Davarca*. The *Brahman* awaking out of his sleep, and finding himself at *Davarca*, soon guessed the truth; and going straight to *Kisna's* house, delivered the letter at his feet. *Kisna* had no sooner read the letter, but assuming the shape of a man with four arms, and taking his bow and arrow, he got upon his cow with the *Brahman*, and so set out on their journey from *Davarca*.

In the mean time the giant approaching to the residence of his pretended spouse, was met by her brother, and conducted into the palace; and *Kisna* arriving soon after near the city, rested himself under the shade of a tree, near a pagode, whence he sent the *Brahman* to *Rochemy*; to give notice of his arrival; who rewarded him with vast presents for his fidelity.

*Rochemy* knowing that her brother was in the evening to make a cavalcade with her pretended bridegroom through the city, (according to the custom of the *Benjans*;) she resolved to lay hold of this opportunity to escape their hands: for this purpose, she entreated her father, That being now arrived to the age of nine years, she might offer her sacrifice to the goddess *Robani*. The father having granted her request, she took a dish full of pearls, and with two of her attendants went towards the pagode, whither her pretended bridegroom and her brother would needs accompany her, but staid without the temple whilst she performed her sacrifice; which done, she came out of the temple near the door, where she knew *Kisna* had placed himself; who no sooner saw her appear, but he took her up and carried her away.

*Rochemy delivered by Kisna.*

At the outcry of the maids, the pretended bridegroom came with his whole attendants to snatch her from him; but *Kisna* received them so courageously with

his bow and arrows, that they were forced to retreat with the loss of several thousands of their best men. *Rochemy's* brother seeing the bridegroom defeated, would nevertheless try his strength with *Kisna*, and coming up with him, was going to cleave his head with his scymetar; but *Kisna* having disarmed him, threw him upon the ground, and after having given him some blows, tied him neck and heels together under his cart, and so made his entry into *Davarca*, where he was received with all imaginable demonstrations of joy. *Rochemy's* brother was released at her request; and *Kisna* consummated his marriage with great pomp in the city of *Davarca*.

Some time after it happened, That a very strong elephant being seized by a crocodile, in a certain cistern or pond, where the elephants used to drink, a furious combat ensued, which put all the elephants that were spectators thereof into no small confusion. At last, seeing they were not able to assist their companions, and pressed with hunger, they went away, and left the poor elephant in the lurch. He seeing himself thus destitute, kept on struggling with the crocodile, sending up at the same time his prayers to *Vishnum*, to deliver him from the jaws of the crocodile.

But it being then the time of *Kisna's* <sup>leaving an elephant from a crocodile.</sup> *Kisna* appearing upon earth, he heard his prayers after twenty days, and sending for *Garroude* to carry him immediately to the pond, he threw his weapon at the crocodile, and cutting off his neck, released the elephant; who kneeling before *Kisna*, he told him, he should ask what he pleased, and it should be granted him. Nothing, replied the elephant, but that I may go immediately to heaven, being quite weary of this world. *Kisna* granting his request, took him into his *Palaukin*, or litter, and carrying him to heaven, ordered *Garroude* to convey him immediately back to *Davarca*.

About the same time one *Ragia Boettaenpat* having two wives, named *Somuta* and *Surisa*, the first brought forth a son named *Droe*, and the other one named *Rasapoeter*: but *Surisa* being most beloved by her husband, *Somuta*, when her son *Droe* was about five years of age, sent him very neatly dressed to pay his respect to his father; who being extremely delighted with him, highly caressed, and set him in his lap. *Surisa* having got notice thereof, sent immediately her son to the king, whilst she remained at some distance to observe what passed. But the king being so much taken with *Droe*, that he scarce looked at the other, *Surisa*

*Baldæus* entered the room, and upbraiding him with ingratitude, made him send away *Droe*, and take her son in his lap.

*Droe* exasperated to the highest degree at this affront, went away without making his reverence; and making his complaint to his mother, told her, That he was resolved to retire into a desert, to spend his time in prayers. The mother did all she could to dissuade him from it, but in vain; for taking the next opportunity of his mother's absence, he got privately out of the house. He had scarce travelled two *Cos* from the city, when being met by the learned *Brabman Naret*, he asked him whither he was going? He answered, As young as I am, I have taken a resolution to retire from the world, where I find there remains nothing but malice and envy: then relating all that happened to him, he told him, That he was resolved to pass his days in the desert.

Go on my son, replied *Naret*, thou wilt be heard by *Kisna*. Then going forward, he came to a forest, where seeing a mango-tree, he reposed himself under its shade, and spent three days and nights in tears, prayers, and fasting. *Kisna* moved with compassion at his tender age, appeared to him, asking what made him pray with so much fervency? *Droe* prostrating himself at the feet of *Kisna*, said, O divine *Kisna*! my request to thee is, That the affront given me by *Surisa* may turn upon their heads; that she may be a slave to my mother; that I may succeed my father in the kingdom; and after my death, be placed in some pleasant place you shall choose for me.

*Kisna* answered, Thy prayer is granted. Go, return to thy parents, *Surisa* shall live a slave to thy mother; thou shalt succeed thy father in the throne; and after thy death, I will place thee in the heavens in the form of a star, that shall remain for ever in the firmament, and serve the mariners for a guide. *Droe* having paid his reverence to *Kisna*, returned full of joy to his father's palace. The old king, who had been almost distracted at his absence, received him with more than ordinary satisfaction; and for ever after shewed so much affection to his mother, that *Surisa* was, in comparison of her, no more than a slave; and after some years surrendered the kingdom to him. He ruled very fortunately for many years; and after his death, was placed among the stars, being the same the *Benjans* call to this day *Droe Katara*, i. e. *Stella Polar*, or the *North-Star*.

It happened some time after, That *Ragia Nerkafeur*, a most potent monarch, having conquered sixteen thousand kings,

kept them close prisoners with their wives *Baldæus* and daughters: these offered their constant prayers to *Kisna* for their delivery from this oppression. *Kisna* considering, that they having spent these three years in prayer, it would be high time to deliver them, sent for *Garroude*, whom he ordered to carry him to *Nietskanda*; where he was no sooner arrived, but he told the king *Nerkafeur*, That unless he released the royal captives, he must pay for it with his head. The king answering *Kisna* with threats, they prepared both sides for a combat: for *Kisna* having killed those that were sent against him, the king himself, at the head of a strong troop, attacked *Kisna* with great fury, who killed every man of them except the *Ragia*, who, persisting in his obstinacy, had at last his head cut off by *Kisna*; who released all the prisoners in an instant, and among them, sixteen thousand royal virgins, who prostrating themselves at his feet, he gave them leave to return to their parents, or where else they pleased: but they desired to stay with him, imploring his protection; which being granted by *Kisna*, he carried them to *Devarca*, where he built a seraglio for their reception, wherein each lady had her own apartment.

In the country of *Amaramo*, lived a certain zealous *Ragia*, named *Amarich*; who having published a general fast by beat of drum, (according to the custom of that country,) the same was observed with the utmost strictness. It happened, that the *Brabman Doerwassa* passing that way the same day, he was invited by the said king to stay there till the next day after the fast-day.

The *Brabman* complying with the king's request, he sent for some of his chief *Brabmans*, to know the exact hour when they might begin to eat. These having consulted their books, and told the king, that the just time would be two hours after sun-rising, he invited the before-mentioned *Brabman* against that time to a collation. But the *Brabman* missing the appointed hour, the king went to the river to wash himself; but finding after his return, that the *Brabman* was not come yet, he advised with four of his *Brabmans*, what was best to be done; who told him, That if he let slip this lucky hour, all his fasting would avail him nothing, advising him at the same time to take only a little water, and a leaf of the tully-tree, till the *Brabman* should come.

This *Brabman Doerwassa* having a prophetick spirit, was not ignorant that the king had eaten something in his absence,

*Droe*, or  
the *North-  
Star*.

*Baldæus*, and therefore went to the king, asking him, why he had put such an affront upon him. The *Ragia* was for excusing the matter, but to no purpose; for the *Brahman* going out of the doors, gave him this curse, That he might from head to foot be covered with boils, and the leprosy; which being fulfilled in an instant upon the unfortunate king, he prayed to *Kisna* to deliver him from this evil; but in vain, his evil increasing every day; so at last being quite tired with life, he resolved to put a period to it by fire. Every thing being got in readiness for this purpose, *Kisna* appeared to him, asking, what was his request. He replied, to be freed from my distemper. *Kisna* cured him not only of his leprosy,

*Kisna cures  
the leprosy.*

but also turned the same into a fiery wheel; which following the *Brahman Doerwassa* wherever he went, put him into such a fright, that he offered his prayers to *Ragia Inder*, to deliver him of this fire; but *Ragia Inder*, telling him, That he must apply himself to him who was the author thereof, he made his applications to *Bramma*; from whom having received the same answer, he implored the assistance of *Kisna*, begging him to pardon his sudden passion, and to deliver him from the evil he had been pleased to lay upon him. *Kisna* chiding him for his unruly passion, advised him to lay the same aside for the future; and then delivered him from the plague of the fiery wheel.

### C H A P. IX.

*The Origin and Qualifications of Droepeti: She binds up the Wound of Kisna. Sussuster forced out of his Kingdom. Droepeti exil'd with her Brothers, and fed by the Sun: They come to Court: Their further Transactions.*

IN the country of *Estenapour*, lived a certain *Ragia*, named *Pandourw*; whose wife was called *Droendy*. His brother, named *Deuteraes* being blind, had a wife called *Sendary*, and by her a hundred sons; the eldest whereof, was named *Derfiende*. In the country of *Ransiaandoes* lived at the same time a certain king, named *Droepet*, whose daughter was reputed the most beautiful woman that ever was seen. *Ragia Pandourw* happening to die, left behind him five sons; the eldest of which succeeding him in the throne, one of the other four was put to school to a certain *Brahman*, to be instructed in all matters relating to their divinity. The daughter of *Ragia Droepeti*, being now come to a marriageable age, her father was not a little solicitous how to bestow his daughter to the best advantage. For this purpose, he sent his messengers to invite the neighbouring kings, and the chiefest *Brahmans* to a great feast; and caused a long poll to be erected, with a strong bow underneath, and a fish on the top, in the same manner as we have mentioned before in the story of *Ram*.

*Kisna* appearing here among the rest, yet would not attempt the bow, having promised his assistance (upon this account) to a certain *Brahman*, named *Aerffing*; he managed the bow with that dexterity, that he shot down the fish, and received a fine necklace of pearl from the hands of his bride.

*Aerffing  
gains Dro-  
epeti by  
shooting.*

One time *Droepeti* seeing a cow pass through the fields with five bulls following her, she stood amazed at the novelty of the thing, as she thought; this coming to the ears of *Camdoga*, the cow of plenty, she was so offended thereat, that she told her, She would make her <sup>Camdoga's</sup> to be thus pursued by five men. The <sup>curse.</sup> king entertained his guests with a splendid feast; but the the bridegroom having made a vow, not to enjoy his bride till after his return home, they came no sooner to his own house-door, but being met by his mother, he told her, That he had brought something along with him. Then, replied the mother, Your two brothers must have each his share. That cannot be, returned *Aerffing*, for it is a woman. That signifies nothing, answered the mother; what I have once said is impossible to be recalled. *Aerffing* full of grief, told his brothers what had happened; who abominating the matter, communicated the same to *Droepeti*.

It happened afterwards, that *Kisna* having invited the *Panspendaons* with her mother, and *Droepeti*, to dine with him at *Davarca*, as they were walking after dinner in the fields, *Kisna* had a mind to cut some sugar-reeds; but cutting his finger, all the standers-by called *Kisna's* <sup>fin-</sup> for some linnen-rags, to tie it up: <sup>but ger tied up</sup> *Droepeti*, immediately tearing a piece of <sup>with a piece</sup> her golden brocado'd gown, she tied it <sup>of golden</sup> <sup>stuff.</sup> about

<sup>Baldæus.</sup> about his finger. *Kisna* (according to his omniscency) knowing how many threads there were in the piece she had torn off, *viz.* nine hundred ninety nine, he told her that she should have as many garments of cloth of gold as there were threads in it. They then took their leave; and though *Kisna* knew well, that *Droepeti* was still a virgin, yet he took no notice of it.

After their return home, one *Senhem*, brother-in-law to *Droepeti*, began to be much out of humour, alledging, That *Sussuster* was not the rightful heir of the throne; for, said he, Though *Deuteraes*, by reason of his blindness might be incapable of the government, and therefore *Pandouw* was put in his stead, yet after his decease *Sussuster*, his son could not succeed him, the right of inheritance of the crown belonging to the eldest of the hundred sons of *Deuteraes*, and consequently to *Derfiende* his eldest son.

This gave occasion to pitch upon some way to restore *Derfiende* to his right; and knowing that *Sussuster* was much addicted to play at dice, they looked upon this as the best means to encompass their design. *Sussuster* having been for some time a favourite of *Kisna*, grew so ambitious as to despise him at last. *Kisna* remembering this affront, whilst he was playing with *Derfiende*, so ordered the matter, that *Sussuster* lost all his ready money; whereby being egged on more and more to recover his loss, he at last threw at all, and lost his estate and kingdom.

It had happened some time before, that *Derfiende* being in *Sussuster's* palace looked into *Droepeti's* apartment, which being paved with glass, (a thing he never had seen before,) he took it for water, and would not venture to go in. *Droepeti* perceiving his error, told him, *How, are the sons like the father? Is the whole family blind?* which put *Derfiende* into such a rage, that he swore he would revenge it with the first opportunity.

*Derfiende* remembering his oath, whilst they were at play, proposed to set as much money against *Droepeti* as he would desire; which being agreed to, *Derfiende* won that stake likewise. Things being come to this pass, he proposed to *Sussuster*, that he would lay all he had got of him at one stake, provided he would engage, that in case he did win it, he would choose a voluntary exile for twelve years. *Sussuster* in hopes of better fortune, consenting to the proposition, they threw the dice; but fortune frowning again upon *Sussuster*, *Derfiende* remained in possession of all.

By this time *Derfiende* remembering the

affront *Droepeti* put upon him in her apartment, ordered her to be stripped stark naked, and to expose her to the view of her servants. The distressed *Droepeti* reduced to this extremity, implored *Kisna's* assistance, to relieve her from the shame she was likely to undergo, putting him in mind of his bounty, after she had torn her garments for his sake. In the mean time the servants being employed in undressing *Droepeti*, they had no sooner pulled off one of her garments, but another succeeded in an instant; which continuing thus nine hundred ninety nine times, they were seized with such an astonishment, that they treated *Derfiende* to desist, lest *Kisna* should give him some severe proofs of his anger; which had such an influence upon *Derfiende*, that he dismissed her without any further harm.

The time of the appointed exile now approaching, the five brothers, with their mother *Sendary* and *Droepeti*, left their native country; but beginning to want provision upon the road, *Droepeti* paid her devotions to the sun, to supply their wants. The sun commiserating their condition, filled them every morning a vessel with victuals, sufficient to feed one thousand men. At last coming to a certain village called *Widoenougan*, they lodged in the house of one *Widoenougarre*, where she left her mother, who was grown so decrepit, that she was not able to follow them.

Thence wandering through vast deserts without meeting either with man or beast, they at last came to a pleasant river, where whilst they were reposing themselves, they saw a certain famous and learned *Brakman*, named *Derwasa*, walking along the bank of it, at the head of one thousand *Brakmans* his followers; who being not ignorant (by his skill) who they were, after the usual salute, immediately addressed himself to *Sussuster*, telling him, That he and his company had a mind to take a dinner with him, which *Sussuster* approving, (trusting to the bounty of the sun, and the *Brakman's* piety,) he desired them to come, which they promised to do as soon as they had washed themselves in the river.

*Droepeti* understanding what had happened, had recourse to the vessel; but finding it empty, knew not what to do, but advised them to have recourse to *Kisna's* bounty. Accordingly they sent for their joint and fervent prayers to *Kisna*; but finding no relief, and the time of the *Brakman's* coming being near at hand, they resolved rather than to be exposed

*Sussuster* and *Derfiende* play for the crown.

*Baldæus.*  
*Droepeti* ordered to be stripped.

is delivered by *Kisna*.

They go into exile.

*Baldous.* to such shame and confusion as this, to make a large wood fire, and therein to put a period to their miserable life. They went to work immediately; and having gathered a sufficient quantity of wood, *Droepeti* was shewing the rest the way, and these following to tread in her footsteps.

*Kisna* then seeing their constancy, stopped them; and asking what was their grievance, *Suffuster* replied, O *Kisna*! who knowest every thing, thou canst not be ignorant of what has happened to us this day! *Kisna* answered, Let me see the vessel that was presented you by the sun; which being produced, *Kisna* viewed it on all sides, and finding a grain of rice on the brim, he eat it; and by its multiplying power, gave it such a virtue, that it not only satisfied him, but also the *Brahman* and his thousand followers; who thanked *Naccod*, the youngest brother of *Suffuster*, (who was sent to bring them to dinner,) that though they had not the least appetite to eat since they had been washing in the river, yet they thanked his brother for his good intentions.

*They leave the desarts.* This unfortunate company having thus wandered for nine years through the desarts, at last resolved to try their fortune at the court of king *Weraart*, of the tribe of the *Ketteriis*, in the country of *Messedees*. *Suffuster* being the first that went to king *Weraart*, being demanded who he was, he asked the king, whether he had not heard of the five brothers *Panspendaons*: The king replying, he had; he told the king, that he had served them as their historian; and that if the king would receive him in the same station, he would relate to him the adventures of that king, how he had lost his kingdom at dice, &c. The king pleased with his proposition, ordered him to stay at court. The second brother encouraged by his success, addressed himself likewise to the king, telling him, that he had served *Suffuster* in the quality of a cook; who ordering him to dress a dish of meat, he did it accordingly, and pleased the king so well, that he made him his head-cook.

The third, who was an excellent bowman, thought fit to lay his bow and arrows aside; and appearing in the presence of the king without any weapon, told him, That he had served *Suffuster* in his prosperity, in the quality of a *Brahman*; but being now forced to bear his share in the misfortunes of his master, he came to shelter himself under his royal protection. The king being taken with his discourse, received him into his service. The fourth, after having paid his

reverence to the king, told him, That he had been gentleman of the horse to *Suffuster*, in which station he was received by the king. The fifth brother not knowing what to say in his own behalf, told the king, That he had been shepherd to him: in which station he was likewise received by king *Weraart*.

*Droepeti* being now alone, made likewise her applications to the king, alledging, That having served in the quality of a maid of honour in the court of *Suffuster*, she hoped to be received among the ladies of the court; which was willingly granted her. Having thus continued two years in their respective stations, they began to revive their hopes of seeing their native country again, there being but one year more to the end of their exile.

But *Derfiende* finding the time of their exile near expiring, sent out certain famous wrestlers to try their skill with them. These passing through several countries, had vanquished many of the *Ragias*, and in scorn, carried their pictures tied to their knees. Coming at last to king *Weraart's* court, they challenged, and killed the king's brother-in-law; and were for doing the same to the king; who rather than hazard his person, offered them his picture, to be carried in triumph upon their knees. But *Suffuster* being informed of the matter, told him, That such a piece of cowardice being unworthy of the name of the *Ketteriis*, he advised him to match him with his head-cook whom, as he said, he had often seen wrestle stoutly at the court of *Suffuster*. The king extremely pleased at this proposition, asked the cook, whether he durst engage with one of these famous wrestlers; who having answered, Yes; and the appointed time being come, they went to it bravely, and held it for a considerable time with equal advantage; till at last the cook found means to twist his arms back, and setting his foot against his rump, threw him backwards, and killed him upon the spot.

*Derfiende* had no sooner heard this unwelcome news, but he sent his uncle with two hundred thousand horse into king *Weraart's* country, to drive away all the cattle; which being done accordingly, and notice thereof given to king *Weraart*, he put himself at the head of six hundred thousand horse, and overtaking the enemy in a great plain, a bloody battle ensued; but his forces being routed, he was taken prisoner by the enemy.

The prince overwhelmed with tears, engaged the cook who had so lately obtained the victory, to go in pursuit of the

*Baldous.* the enemy; who coming in fight of them, cryed aloud, Halt you robbers, release the king, or this day shall be your last. They laughed at this madness, till seeing him lay about him with his weapons amongst the hindermost, they turned their arms against him; but the cook assisted by *Kisna's* strength, slew the whole army, except one, whom he sent to *Derfiende*, to carry him the news of this defeat.

He had no sooner received these dismal tidings, but he told them, Certainly these are the *Panspendaons*; go and put thy self at the head of six thousand chosen horse to revenge our quarrel. Accordingly, he entered king *Weraart's* territories, making great havock among men and beasts, without the least opposition, *Weraart* not daring to oppose his forces (that consisted only of two hundred horse) to so powerful an enemy. *Suffuster* vexed at his cowardice, told him, That if he did not think fit to hazard his person, he should give leave to the prince and his governor the *Brahman*, to go along with what forces he had, in quest of the enemy: which the king not refusing, the prince and the *Brahman* went after the enemy in their chariot; and finding them in battle array ready to receive them, the prince was so frightened thereat, that the *Brahman* was forced to tie him in the chariot, and cover him with a cloth. Then the *Brahman* attacked the enemy with such fury, that notwithstanding the inequality of their number, he slew them all (after a bloody engagement) upon the spot, except their general, who being made a prisoner, the *Brahman* gave him three or four sound boxes on the ear, telling him, That he should go to his king to carry him the good news, but have a care how he ever came there again. The *Brahman* was so humble, as to bestow both all the honour of the victory, and the booty upon the prince; who willing enough to accept of the same, made his entry in a triumphant manner into the city.

Not long after king *Weraart* playing at tables with one of his nobles, made his boast of the late victory obtained by his son, which *Suffuster* not able to brook, told the king, *That what he boasted of did not belong to his son, but to the Brahman.* The king hearing him say these words, threw the dice with such violence into *Suffuster's* face, and drew some blood from him: *Suffuster* highly exasperated at this affront, consulted with his brothers and sister to leave the court secretly, and return into their native country,

VOL. III.

the time of their banishment being near expired; which they did accordingly. *Baldous.*

The prince no sooner understood their departure, but he went immediately to the king, telling him, he was sorry the king had taken so ill what *Suffuster* had told him, it being nothing but the bare truth: for, said he, it was not I, but the *Brahman* that obtained the victory; and it were they who have twice delivered our country and your self from destruction. I advise you to take care what you do; for I assure you, they are the *Panspendaons* themselves.

The king stood amazed at these words; And, is it possible, said he, that I who am but a petty king, should be served by them? And so ordering all his elephants, horses, and chariots, to be got ready, he followed them with all possible speed; and having overtaken them at last, he prostrated himself before *Suffuster*, saying, *Most potent king! whom I am unworthy to serve, pardon me for having received services from you contrary to my knowledge; pray return along with me, that we may not take our leave without a merry cup. I will afterwards provide you with camels, elephants, horses, chariots, and what else shall be requisite for your journey.* *Suffuster* being prevailed upon to return with the king to the city, they took their mutual leaves at a most solemn feast, with mutual demonstrations of friendship; and being provided with all necessaries for their journey, returned towards their native country.

But whilst they were upon the road, *Suffuster* repenting of his former pride, frequently sent his prayers to *Kisna*, acknowledging his crime, for which he owned he had been deservedly punished by him: but the time of his twelve years banishment being now expired, he promised to serve him with all humility, if by his assistance he and his brothers might be restored to their native country. *Kisna* well satisfied with this acknowledgment, appeared to them, asking what was their request. *Suffuster* answered, *That Derfiende* may be put out of the throne, and I be placed there in his stead. *Kisna* having promised him his assistance, said, *That they had best send a certain poet (who stood hard by) to demand the kingdom of him.* The poet went accordingly, demanding the kingdom to be restored to the true owners, the term of the twelve years banishment being now expired. But *Derfiende* answered, *That he did not know the* *Panspendaons*, and was resolved to keep his crown in spite of them; and so bid

*Baldæus*. the poet to go out of his presence. *Kisna* understanding this answer, told them, Perhaps he has taken it amiss, that we have not sent to him a person of a higher rank. The *Panspendaons* replied, That they were ready to throw themselves at *Baldæus*'s feet, if he thought he would grant their request; which being approved of, *Kisna* promised to go along with them in person.

## C H A P. X.

*Kisna lodges with a Brahman : Goes to the Court of Derfiende, who engages in a bloody Battle with Sussuster, and is routed. Droepeti is enjoyed by five Brothers. Kisna visits divers wicked Kings. The Conclusion of his Reign.*

*AT Estenapour* lived a *Brahman*, named *Widder*, who fed upon alms, his wife was called *Prediwette*, both persons very zealous in their devotions to *Kisna*; who being not ignorant of their zeal, resolved to bless them with a visit. Accordingly he came to the cottage of the poor *Brahman*; who, after having prostrated themselves at his feet, brought some rock-water (according to the custom of the country) to wash his feet. *Kisna* told them, I intend to dine with you; and so laying himself down, pretended to sleep, with an intention to observe all that passed in the cottage.

*Kisna visits a poor Brahman.*

*Ragia Derfiende* hearing of the coming of *Kisna* to this poor cottage before he had visited his court, forbid all the inhabitants, under pain of death, to furnish the poor *Brahman* that day either with money or provisions. The *Brahman* being in a great necessity, would fain have pawned his brass kettle and frying-pan; but no body daring to lend him any money, or give the least provisions, he returned in a very melancholy posture. His wife bid him not despair; telling him, that *Kisna* knowing their poverty, would accept of the will for the deed; and so ordering him to go into the garden to gather such herbs as were there, and allowed them to eat, (for the *Brahmans* dare not eat all sorts of herbs or roots, as, for instance, the beets, because they are red, and resemble blood;) which being done, she dressed them, and having awakened *Kisna*, offered it to him upon a *Pysang* leaf: *Kisna* asked them, Have you nothing else? I supposed you would have made some cakes. The woman answered, That their poverty being such as not to permit them to do it; *Kisna* bid her look backwards, where seeing in a corner a fine basket of fruits and sweet-meats, she prostrated herself at his feet.

Thus feasting together, *Kisna* asked them after dinner, what they requested of him? The *Brahman* replied, Nothing, but that I may serve and love thee with a sincere heart; that I may never cease to pray to thee; and that when my soul and body must be parted, my zeal for thee may nevertheless continue with me. *Kisna* replied, All this shall be granted thee; and because thou hast preferred piety before riches, you shall likewise have your full share of them. He had no sooner spoken these words, but the *Brahman*'s cottage was in an instant changed into a magnificent structure; and *Kisna* presented them with as much gold as was sufficient to maintain them in great plenty all their life-time.

*Blessed him with riches.*

*Kisna*, after having once more imparted his blessing to his host, departed, taking his way toward the castle of *Derfiende*, it being then just three hours before sun-set, the usual time for the kings in the eastern countries to give audience to their subjects. *Kisna* was received with a great deal of reverence by some of the court; but the king looking upon him with an indifferent eye, asked him, when he came into the city, and why he would not pay him a visit before the poor *Brahman*? *Kisna* replied, Riches are of no value to me; the meanest cottage of a believer I prefer before the most sumptuous palace of a king. And why then, said the king, would you come to court? I did come, replied *Kisna*, in the name of the *Panspendaons*, to demand thy kingdom, the twelve-years exile being now expired. The king answered, I know them not, neither will I deliver the kingdom. *Kisna* told him, That if he would not, he should at least allot a village for their maintenance. I will not give them the breadth of a foot, answered *Derfiende*. Then prepare your self, said *Kisna*; you must fight for it.

The

W

*Balkous.*  
A battle  
fought for  
eighteen  
days.

The *Panspendaons* hearing this answer, prepared for a vigorous war; and having engaged king *Weraart*, and the potent *Ragia Droepet* (*Droepeti's* father) in their quarrel, with four other kings, they attacked *Derfiende*, who having drawn up his horse in a great plain, a fierce battle ensued, which lasted eighteen days, *Kisna* fighting in a chariot drawn by oxen.

In *Derfiende's* army was a famous warrior, named *Caran*, who having (by his constant prayers) obtained a prodigious strength from *Kisna*, did perform wonders in his chariot: *Kisna* espying him at some distance, ordered *Erfsende*, (who sat with him in the same chariot,) to break the wheel of *Caran's* chariot, which being done accordingly by a strong arrow, *Caran* came down out of his chariot, but whilst he was busy in mending the wheel, was by the same *Erfsende* shot with an arrow into the breast: He drawing the arrow out of the wound, cried out to *Kisna*, And is this the reward thou givest me for so many offerings. *Kisna* answered, Have patience; my will is to deliver thee out of this troublesome world, and to allow thee a place in heaven, whither I am going to meet all the believers; (my time upon earth being almost expired,) after I have purged the world of the wicked. *Caran* was no sooner slain, but the victory declared against *Derfiende*, whose forces were all slain upon the spot; (as were king *Weraart* and king *Droepet* on the other side,) and among them *Derfiende* himself, with his ninety nine brothers. Thus the *Panspendaons* being restored to the kingdom, they payed their constant devotions to *Kisna*, who from thence returned to *Davarca*.

All this while *Droepeti* had lived without the knowledge of any man; but peace and quietness being now restored in the kingdom, the five brothers were concerting all possible means how to enjoy *Droepeti*, without incest. At last a certain *Brabman*, named *Wissumna*, proposed the following expedient. The year, said he, has three hundred sixty days, which divided into five equal parts, each amounts to two months and twelve days. And it being your mother's will that the five brothers should have an equal share in *Droepeti*, *Sussuster* must cohabit with her the first two months and twelve days, and the other four brothers successively each his two months and twelve days: But to wipe off the stain of incest, *Droepeti* must after the expiration of each respective term of two months and twelve days, purify herself

three times by the fire; whence it is evident, that the pagans ascribed to the fire a purifying quality; from whom the jews questionless took that doctrine, and the roman catholicks their purgatory. This being approved of by the joint-consent of the five brothers, it was further agreed, That he who should transgress his limited time, should be banished for twelve years. But *Sussuster* willing to appease the gods by sacrifices, in consideration of the great effusion of blood, occasioned by his restoration, consulted the *Geogys*, (a certain order of the *Brabmans*;) who advised him to institute a solemn feast, offer sacrifices, be liberal to the poor, and to maintain a certain number of learned *Brabmans*, to read and explain their holy writings. *Sussuster* obeyed, and performed every

thing with all imaginable exactness, ordering a hole to be digged, which he filled with sugar, butter, sandal-wood, milk, rice, and betel, and offered roses, flowers, spices, and other rich incense. This done, he invited *Kisna* to a sumptuous feast; and asking him, what acknowledgment he was able to pay him, for the many favours he had received at his hands, *Kisna* answered, Take a white horse with black ears and a yellow tail, and fasten a paper on his head with the following lines written in gold characters. *Whoever meets me, and lets me pass unmolested, shall worship me and Kisna, who will reward their piety; but whoever stops me, let him prepare to fight.* He further told him, That he should give him his brother *Erfsende* for his companion, his intention being to purge the world of the wicked, during that short time he had to stay as yet upon earth. The king obeyed, and having presented his brother with a chariot, and put him at the head of a good body of horse, he took his leave of *Kisna*, who went his way, the horse leading the van without a guide.

This horse passed through many kingdoms, where every one that did read the inscription, payed reverence to *Kisna*. But coming into the territories of *Sindera*, who having received several signal obligations from *Kisna*, seized upon the horse, by that means to engage *Kisna* to come to court. Accordingly *Kisna* (who knew his intention) visited him in his court, where being revered and presented by the king, he gave him his blessing, and so set forward again to the king of *Sudannewa*.

This king stopping the horse, worshipped *Kisna*, alledging, That he did not do it to engage with *Kisna*, but to try

*Balkous.*

*Sussuster's sacrifice.*

*Kisna visits the world, to purge it from the wicked.*

*He blesses Sindera.*

The giant Caran killed.

*Baldews* try his strength against *Ersiende*. *Kisna* accepted his excuse, *Ersiende* drew his bow, and shot an arrow into his breast. The king lifting up his eyes unto heaven, and tearing the arrow out of his wound, cried, O *Kisna*! dost thou thus reward thy adorers. My soul must now transmigrate into another body. No, answered *Kisna*, thy soul shall ascend to heaven in an instant, and enjoy eternal bliss.

Hence he travelled to the impious king *Anssalauw*, who stopping the horse, and bringing his forces to fight against him, were all slain upon the spot. Next coming to king *Sallauw*, he followed the footsteps of *Anssalauw*, and had the same fate. Afterwards they came to *Mottera*, the residence of the famous giant *Ragia Jerasingh*, who had been formerly deated, no less than eighteen times by *Kisna*. This giant having fortified *Mottera* with high and strong walls, drew out his forces into the field, himself being covered with a cuirass, or armour, that was both sword and shot-proof. Both armies engaged one another with such fury, that the like had never been seen before, with such various success, that it remained dubious, who was likely to be the vanquisher, the night putting an end to the battle for that time.

*Kisna* being sensible that it would be a hard task to kill this giant, as long as he made use of this armour, got with *Ersiende* over the city walls, having transformed both himself and *Ersiende* into the shape of two old and tall *Brakmans*. In this posture they seated themselves near the *Pagode*, where the giant used to wash himself, who coming thither, asked them, *What is it you two devout men desire? ask and you shall have it, be it what it will.* *Kisna* replied, That kings were apt to promise much more than they intended to perform. The giant answered, That was never his custom, desiring them to ask what they pleased, it should be granted. The disguised *Kisna* then asked the king to give him his hand, as a token of his sincerity, which the king having done accordingly, *All that we ask of thee*, said he, *is, that whenever thou engagest again against Kisna, thou shalt not put on thy shot-free armour.* The king, (though suspecting the matter) answered, Well, since I have given my word it shall be done, provided that he who engages in a single combat with me, shall bring no bow and arrow; but if he fight with a *Gors*\*, or try his skill with me in wrestling, I am ready to answer him.

\* A kind of Indian weapon.

*Kisna* and *Ersiende* disappeared without answering one word, and *Ersiende's* skill lying chiefly in his bow, he engaged

*Ersiende's* brother, (a famous wrestler) in his stead. The combat was so equal, that the night parting them, they referred the whole decision of the quarrel till next day; being both equally tired with wrestling, they fought with the *Gors* the next day; they engaged most furiously all the day, giving one another most terrible blows, but with equal advantage; so that night approaching, they were forced to defer the final decision till the third day. Then it was that the giant exerting all his force, gave such frequent and terrible blows to *Rhim*, *Ersiende's* brother, that being ready to faint, he was knocked down several times. But imploring *Kisna's* assistance, he was endowed with new vigour; so that recovering his strength, he attacked the giant *Jerasingh* afresh, and at last laying hold on his legs, tore him asunder, with his entrails hanging down upon the ground. *Kisna's* forces seeing this spectacle, attacked his army, and slew them all upon the spot.

*Kisna* in his return being met by *Suf-suster*, was entertained by him in a garden without the city, *Ersiende* at the same time presenting him with a garland of flowers. *Kisna* being highly satisfied with him, said, *Desire what you think fit.* But *Ersiende* excusing himself, *Kisna* told him, *That his time upon earth being near expired, he intended to grant him whatever request he could make.* Then, replied *Ersiende*, bestow one of your wives upon me. *Kisna* answered, Take my chariot, and go to *Davarca*, visit all the chambers of my *Seraglio*, and which of the ladies thou findest without me, take her for thy own. *Ersiende* went instantly to the *Seraglio* at *Davarca*, and entering the first chamber found *Kisna* talking with the lady; then going to the second, he found him there likewise; and so in the third, fourth, and all the rest. Being struck with amazement, he returned to the garden, where he had left *Kisna*, and prostrating himself, said, O *Kisna*, *thou beest the true god, and present every where, pardon my errors!* *Kisna* giving him his blessing, told him, He should persevere in his prayers, and so returned to *Davarca*.

*Kisna* afterwards seeing the cowherds multiply to fifty six *Karool*, (each *Karool* create of making one hundred *Lak*, each whereof is one hundred thousand,) or five hundred and sixty millions living souls, and that they had increased as well in iniquity as in number, he was highly incensed against them, declaring that he would root them out, not by his or other mens hands, but their own.

*Baldæus.* It happened that a great number of them being invited to a feast where *Kisna* was also present, they were so full of wantonness, as to stamp upon the precious flowers called *Massiou* and *Cassomba* (affording a most delicious tincture for dying) with their feet. Not contented thus, it being a moon-shiny night, they contrived to ridicule the famous prophet *Ruchi*, whom they saw sitting very thoughtfully under a tree. For this purpose they put a basket under a certain man's clothes, dressed like a woman; and carrying her to *Ruchi*, asked her, Whether this woman was to bring forth a male or female child? He not minding them the first time, they pulled him by the arm, and asked him the same question in a very rude manner a second time; when being, as it were, awakened out of his pensiveness, he told them, He should bring forth an iron bar, which should break all their skulls. He had no sooner said these words, but the disguised man was seized with most intolerable pains, which did not cease, till he had brought forth an iron bar. Being amazed at so odd an accident, they had recourse to *Kisna*, who ordered them to go to the village of *Perwatspatang*, seated upon the river, where they should find a stone, wherewith they must rub the iron bar till it was reduced to powder, and then throw it into the river. They did as they were ordered: but no sooner had they thrown the powder of the iron into the water, but the whole river was filled with reeds, or small canes, as if it had been a forest. They gave an account of it to *Kisna*; who told them, It was well.

It happened upon another festival, that the young tribe being merry toge-

ther, one of the company took up one of these reeds from the ground, and striking another over the head in jest, he saw him drop down dead before his feet. The friends of the deceased taking up another such reed, struck the other young fellow over the head, who likewise falling down dead, his friends did the same to them, and so one to another, till they were all killed; according to the prediction of *Ruchi* the *Brahman*.

*Kisna* having now fulfilled his office in rooting out wickedness among men, sent for the *Panspendaons* and *Droepeti*, and their mother, to *Davarca*, where he told them, That having selected them as well as his wives from the rest, he would have them go to the mount *Hemaatsiel Perwet*, whence they should be taken up into heaven. Accordingly they went with *Kisna's* sixteen thousand wives to the said mount, the peak whereof nobody could reach but *Sussister*; however, they were all together drawn up insensibly through the air into heaven.

*Kisna* knowing that his time was come to leave the earth, he took a handful of dust, and throwing it over the city, their golden streets and houses were in an instant transmuted into straw, dirt, wood, and stones; which done, he ascended *Kisna ascends to heaven.* the strait to heaven. The pagans are unanimously of opinion, that in case the whole sea was filled with ink, and the earth made of paper, and all the inhabitants of the terrestrial globe were only employed in writing, they would not be sufficient to give an exact account of all the miracles wrought by *Kisna* in one hundred years time, in the third period of the world called *Duaperfinge*, containing *Joh. 21. 25.* eight hundred sixty four thousand years.

CHAP. XI.

*The ninth Appearance of Vistnum in the shape of Boudha, or Bodhe. His tenth Transformation into a flying Horse, called Kallenkyn. The Origin and Actions of Bramma.*

*The ninth appearance.*

THE *Benjans* tell us of *Bodhe*, that he has neither father nor mother; that he is invisible; but whenever he appears, it is with four arms. He spends his whole time in praying with a dejected countenance to the great god, (called *Mabadeuw* by the *Benjans*;) and that after having continued twenty six thousand four hundred and thirty years, without performing any miracles, his time is expired upon earth, being the time we now live in, according to the computa-

tion of the pagans. For pursuant to the computation of the *Benjans* at *Suratte*, there were in the year of Christ 1649 passed four thousand seven hundred and fifty years, and consequently twenty one thousand six hundred and eighty years to come.

What is said of this idol concerning his being born without father and mother, and his invisibility, seems to have some relation to what they may perhaps have heard of Christ, as his four arms intimate

*Baldens.* timate his power, a thing frequently attributed to the pagan gods; just as the ancient poets made their giants with a hundred hands. The jesuit *Kircher* attributes likewise four heads (but erroneously) to this *Bodhe*, (called *Bhavani* by others,) and says, That by his four arms they would represent the four elements. What the said jesuit relates of *Rantzander*, the son of *Bal*, who came from heaven to deliver his people from the oppression of the

giants and tyrants, seems to be a confirmation of what we said before, concerning some obscure remnants of knowledge among these pagans of Christ. *Baldens.*

The *Benjans* tell us, That *Kallenkyn* is a white winged horse, standing upon three feet only in heaven, holding one of the foremost legs up without intermission. They say, That at the beginning of this transformation the *Benjans* shall live piously and happily; but by degrees

*Baldæus*. grees turn to all manner of impiety and wickedness for forty thousand five hundred and seventy years. Then, say they, this horse is to trample upon the earth with his right fore-leg with such a force, that the serpent *Signagie* being no longer able to bear the world, the *Tertoise* finding the whole burden laid on her back, will run to the sea and drown the world; which is to be the conclusion

of the last period of the world: after *Baldæus*, which, the first is to begin again. For it is observable, that all, the eastern pagans believe the eternity of the world, allowing only some changes from one time to another.

The whiteness of this horse intimates the cleanness, its wings the activity and agility, and the horse itself the strength of the god *Vishnum*. It being certain, that

*Baldæus*. that though most of the *India* pagans, and especially the *Malabars*, are black themselves, yet they have a peculiar esteem for the white colour; as may be seen in the white cow of plenty, called *Camdoga*, and the famous white elephant of the king of *Siam*, mentioned in the first book. Thus *Virgil* describes *Turnus*'s horse to be white.\* And of the strength, activity, and excellency of a horse, there are many passages to be found both in sacred and prophane history. The wings attributed to this horse, seem to be done in imitation of the *Pegasus* of the ancient pagans, which was placed by them likewise among the stars. What they say of the world's being cast into the sea by the tortoise, appears to have some relation to *Noah*'s flood. And it is observable, that according to the doctrine of the *Malabars*, before the last metamorphosis of things, there shall be such disorders in the world, that the whole race of families and tribes shall be confounded. They say there shall but two pious kings be remaining upon earth at that time, *viz.* The kings of *Vappi* and of *Asari*.

L.9.Æ.

Origin of Bramma.

Thus much of the god *Ixora* and *Vistnum*: we must also say something of the third, *viz.* *Bramma*, who owes his origin to *Quivelinga*. *Rogeri* deduces his origin from a flower-pot; but the commentator upon *Rogeri* had sufficiently shewn, that *Tamara* is quite another thing: Though this opinion seems to agree in some respect with what father *Kircher* says in the ninth transformation of *Vistnum*, *viz.* That he was transformed into *Lotum*, being a certain product of the sea, and the opinion of the *Egyptians*, of *Thales* and the *Stoicks*, who acknowledged the water either the principal or the nourisher of every thing.

The Creator of the world.

The chief things attributed to *Bramma* by these pagans, are, That he has not only created the world, but also determines the duration and times of all created matters: and as they also acknowledge him the son of God, and the supreme governor of angels, nay, even ascribe to him a human nature, so it is evident that these attributes must have their origin from what they have heard (though perhaps confusedly) of *Jesus Christ* the Son of God.

They represent it with four heads, but say he lost one by *Ixora*'s means, to punish his pride. Hence it is, that the *Brakmans* now-a-days have no more than three books of the *Vedam*, the fourth, which treated of God, being lost.

For the first of these books treated of God, and of the origin and beginning of

the universe. The second of those who have the government and management thereof: The third, of morality and true virtue. The fourth of the ceremonials in their temples, and sacrifices. These four books of the *Vedam* are by them called *Roggo Vedam*, *Jadura Vedam*, *Sama Vedam*, and *Tarawana Vedam*; and by the *Malabars*, *ICCA*, *ICCIYSA*, *SAMAN*, and *ADARAVAN*. The loss of this first part is highly lamented by the *Brakmans*. They also attribute to him the preservation of all created things; whence the modern *Brakmans* ascribe all the good or bad fortune which befalls mortals here upon earth, to the direction of *Bramma*, who, they say, has also prefixed every living creature his time of life and death.

They further say, That not only the several worlds, but also the different families and tribes have their origin from *Bramma*. The *super-aereal* world, they say, came out of his brains or face; for these pagans acknowledge certain *celestial* orbs, with *Aristotle*. The second world, they say, did come out of his eyes; the third out of his mouth, the fourth out of his left-ear, the fifth out of his tongue and gums, the sixth out of his heart, the seventh out of his belly, the eighth out of his privy-parts, the ninth out of his left thigh, the tenth out of his knees, the eleventh out of his heels, the twelfth out of the toes of his right-foot, the thirteenth out of the ball of his left-foot, and the fourteenth out of the air that surrounded him.

The *Brakmans* say they are the product of his brains, and the *Nairos* or soldiers, of his feet; as the *Exastri* (a sort of kings) are out of his arm; which is the reason that they never make the same low bows before their kings, as their other subjects, but have the privilege of sitting down in their presence. Unto these fourteen worlds as many divers sorts of people attribute their origin.

1. Such as are endowed with wisdom.
2. Those that are provident in their actions.
3. Those that are eloquent.
4. Such as are cunning and designing.
5. Drunkards and gluttons.
6. The generous and brave.
7. The idle and lazy.
8. Whore-masters and voluptuous persons.
9. Labourers, artisans, and handicrafts-men.
10. Peasants and gardeners.
11. The *Parreas*, and other sorts of nasty people, who, they say, came out of the heels of *Bramma*.
12. Thieves, murderers, and robbers.
13. Those that oppress the poor.
14. Those endowed with peculiar qualities, and an active spirit. They further say, they can judge by the physiognomy of a person, what part

*Baldæus* part of *Bramma* he was come from. Of the worlds and the seven seas we shall say more presently.

The *Malabars* say, *Bramma* has two wives, *Sarossody* and *Quiatry*, who are both barren. The first being his own daughter, has given occasion to a proverb among the *Malabars*, *You must not do like Bramma*. The equipage, or rather carriage of *Bramma* is a certain bird called *Annam* by the *Malabars*; for these pagans attribute to every one of their gods a certain horse, or carriage, called *Wabanam*, which carries them from place to place. They further say, That this bird *Annam*, if milk mixed with water be fet before him, he will drink the milk, without touching the water; an emblem of such as

know how to distinguish good from evil. *Baldæus*.

They relate many other fabulous things; as for instance, That *Bramma* after a period of many ages, is to die, and be revived; that he has certain deputies or assistants, the chief of whom is *De-wendra*, the head of all the governors of the seven worlds which are beyond our world, met below the heavens, or *Bramma's* residence. In these worlds (say they) the believers live after their death. They allow that some things of lesser moment, such as herbs, cucumbers, &c. have been created by others; but that all things of moment owe their origin to *Bramma*, who lost one of his four heads, because he had told a lie to *Ixora*; and several such absurdities more.

C H A P. XII.

*Of the Creation, Quality, and Division of the World, according to the Opinion of the Learned Heathens.*

THE *Benjans* and *Malabars* constitute God the creator of the Universe; for they frequently give God the title of *Creator of Heaven and Earth*. We told you in the preceding chapter, that they attribute the creation of the world to *Bramma*; whereunto we will now add, that they say the power of creating the world was communicated to him by *Vishnum*. They believe, with *Epicurus* and *Metrodorus*, more than one world, of which before; besides which, they make seven great seas. 1. The *Water-Sea*. 2. The *Milk-Sea*. 3. The *Cream-Sea*. 4. The *Butter-Sea*. 5. The *Salt-Sea*. 6. The *Sugar-Sea*. 7. The *Wine-Sea*. The paradise they place in the *Water-Sea*; the priests and *Gogyes* belong to the *Milk-Sea*; the voluptuous in the *Cream-Sea*; the fortunate and blessed in the *Butter-Sea*; the merciful in the *Salt-Sea*; those who are liberal in giving alms in the *Sugar-Sea*; and those that live in great plenty in the *Wine-Sea*.

Notwithstanding this general opinion, the *Brabmans* maintain that the world was produced from an egg; of which opinion, it seems, were also the ancient *Egyptians*, the *Thebeans*, *Orpheus*, *Plato*, and the *Persians*.

The *Malabars* look for the origin of all things in the privy-member of their god; which being too large, he could not enjoy his Wife *Chatti*; wherefore he was forced to cut it into eighteen pieces, which turned into divers sorts

of arms; but the blood which issued thence, produced the sun, moon, and stars; and some few drops falling upon the ground, the roses, and other sorts of flowers: but all living creatures, both rational and irrational, were brought forth by *Ixora's* cohabiting with *Chatti*.

The *Brabmans* further are infected with a ridiculous opinion, That the world is not round, but flat; and that consequently the terrestrial globe is not enclosed in, or surrounded by the air, but limit its extent by the horizon that is obvious to our sight: for they maintain, that the heavens are the uppermost half, and the earth the lowermost of the egg-shell; whence it is, that they consider the heavens as immovable, and the motion of the sun, moon, and stars (unto whom they attribute peculiar souls) to be like the fishes at sea in the day, from east to west, and in the night from the west (not below, but along the edge of the horizon) to the north, and so again to the east. If you object, that, according to their supposition, the sun must never cease to shine, they answer, That to the north there is a vast ridge of mountains called *Mabameru*, or *Merouma*, behind which the sun, moon, and stars, withdraw from our sight. They add, That the world rests upon an ox who, when he has a mind to ease himself, he throws the world from one of his horns to the other, which occasions what we call earthquakes.

Seven Seas.

Ridiculous opinion of the Brabmans concerning the figure of the world.

*Baldæus.*  
As also  
concerning  
its magi-  
tude.

They are also grossly mistaken in the computation of the extent of the earth, which, the *Brabmans* say, is from north to south a hundred thousand *Foxena's*; whereas it is beyond all doubt, that the whole circumference of the globe amounts to no more than five thousand four hundred *German* miles, reckoning fifteen of these miles to a degree, of which there are three hundred and sixty. They also constitute no less than five elements, adding the heavens to the rest; in which point, they follow the foot-steps of *Aristotle*, who calls the heavens the first element. These five elements, both the *Brakmans* and *Benjan's* reverence like

gods; because, say they, they enter into the composition of every thing upon earth; whence they allot every one of them his peculiar *Wabanam*, or horse. They have also invented no less than seven *Padallas*, as they call them, or subterranean places, (not unlike the purgatory and *Limbus Patrum* of our modern *Roman* catholicks;) which inferior worlds are known among them by these following names, *Adela*, *Bidela*, *Sudela*, *Taladelam*, *Sadelam*, *Mabadelam*, and *Padelam*; and are inhabited by men, who receive no other light but what certain serpents, carrying very bright stones on their heads, afford them.

### C H A P. XIII.

*The Opinion of these Pagans concerning the Soul, and its Transmigration. The Form, Structure, Splendor, and Revenues of their Pagodes, or Temples. Of the Ceremony of washing of these Pagans.*

THE modern *Brabmans*, in imitation of the ancient *Egyptians*, *Ibracians*, *Druids*, and *Germans*, believe that the souls were not such from eternity, but created by God, and kept as part of his essence, till after the creation of the earth they were infused either into men or beasts. Concerning the *Pythagorean* doctrine of the transmigration of souls, (so generally received among the modern pagans,) we have had occasion to speak before in the description of *Ceylon*; we will only add in this place, what the *Malabars* say on this head, they are of opinion that this transmigration of the souls from one body to another, is instituted by God as a punishment for our sins, which continues till they are either conveyed into heaven or hell. They say there is a certain judge, named *Cbitra Putta*, who judges of the actions of mankind when they lie upon their death-bed, and determines according to their past actions, whether the soul of the deceas'd shall transmigrate into a dog, cat, crow, cow, king, *Brahman*, serpent, &c. So that in case a person in his life-time has done a notorious injustice to another, his soul shall be transplanted into the body of a slave of the offended party. The reason why they abstain with so much strictness from all sorts of meat, is no other, than that they are afraid, as *Tertullian* expresses it, that in feeding upon a piece of beef, they may eat a piece of their father or grandfather.

The Pythagorean transmigration of the souls.

These pagans have their *Pagodes*, or temples, erected to the honour of their idols. In the choice of the places, and manner of the building, they follow rather their instinct, or pretended inspiration, than any general rule or method. These *Pagodes* are, on the coast of *Malabar*, most commonly built of marble; and on the coast of *Coromandel*, of very large square stone: such is the most celebrated *Pagode* at *Rammanakojel*, a vast structure, and endowed with vast revenues, by the great conflux of pilgrims that continually resort thither; of which I have been an eye-witness my self.

The building of their Pagodes.

The *Pagodes* of the *Malabars* are generally covered with copper, adorned with balls gilt on the top; within and without stand their idols with many heads and arms, surrounded on all sides with serpents. The *Pagode* is enclosed by a brick-wall, for the reception of the people, who do not enter the *Pagode*, but perform their worship in the court, as the *Jews* did in the hall of *Solomon*. Hence it is, that the gates are well guarded, being commonly either of marble, or covered with brass, with the figures of elephants, tygers, bears, and lions upon them; and on the frontispiece many dreadful heads of lions, with hogs tusks, representing the idol *Patagali*, *Ixor's* daughter.

These *Pagodes* are not only maintained by the presents that are constantly made, but have also a constant revenue from the customs of all commodities bought

Their revenues.

*Baldæus* or fold, an exact account whereof may be seen in *Rogerijs*, l. 2. c. 10. These pagans have also a great reverence for their *Pagodés*; whence it is, that they will not enter a *Pagode* with their *Seripous*, or slippers: and they always have their cisterns at the entrance of the *Pagodés*, to cleanse themselves before they enter; just as the same is practised among the modern *Mahometans* in their *Mosques*, and as the *Jews* had the *Brass Sea* belonging to the temple, for the *Levites* to wash themselves in. *Linscoten* mentions, that the *Pagan* priests in *Calecut* besprinkle those that are entering the *Pagode* with *holy water*, like our *roman catholicks*. The pagans in *Coromandel* have abundance of small *Pagodés* on these places, where they burn their dead, whereof I took particular notice at *Negapatan*; and in *Bantam*, the richer sort maintain frequently small chapels for their private use. Of the *Pagodés* in *Pegu*, see *Casp. Balbi*; of those of *Japan*, *Caron* and *Almeyda*; and of those of *China*, *Ferdinand Pintko*.

Their custom of washing themselves daily, seems not only to be introduced for the cleansing and cooling of their bodies, but chiefly for the purifying of them from their sins; for as these pagans make a distinction betwixt *venial* and *mortal* sins, they regulate their washing accordingly. The first they are cleansed of by dipping the head under water; whereas to purify themselves of the others, *viz.* (such as include the loss of life or family, and fall under the cognizance of the civil magistrates,) they dive the whole body under water. Their constitutions (being to them the same as our ten commandments) are,

1. That those of an inferior rank must not touch those of a superior quality, and the greater the difference the more is the distance; whence the inferior people cry out in the streets *Tintelas*, i. e. *do not make your self unclean*, and those of superior rank *Popo, give way*; for if any of the common sort happen to touch a person of a high rank, he becomes unclean, and must wash himself with water.

2. Those that touch a dead carcass, nay, even any of the deceased kindred, within fifteen days after, become unclean.

3. Those that touch a woman in child-bed, or the child.

4. Or a woman that has her monthly times, till the fourth day.

5. All such as are become unclean, if they touch another, he becomes so likewise.

6. If one that is unclean eats rice before he has cleansed himself, he loses the advantage of his family, and commits a mortal sin.

7. Persons of quality commit a mortal sin, if they eat rice boiled by one of an inferior rank.

8. The same it is, if he lies with a woman of a low extraction.

9. The *Brakmans*, though all of the same tribe, yet are not permitted to eat with one another: thus if any one touches with his right hand (wherewith he eats) his neighbour, it is a venial sin, because that hand is unclean by touching the rice; the same it is, if the fig-leaf (which they use instead of a twine thread) touches his that sits next to him: but if but one single grain of rice should happen to fall upon the fig-leaf of the others, he must not eat it, without committing a mortal sin.

10. Immediately after dinner, or supper, they take away the fig-leaves, and the least grain of rice that perhaps may be fallen upon the ground, which is laid up together in a certain place, because all the remnants are unclean. The place where they have eaten, they purify with cow-dung; and if the least grain of rice should be left behind, he that touches it, becomes unclean immediately on that part of his body which touched it, which must be purified by water. Thus if any body puts his finger into the mouth, nay, if two persons of a different rank meet at a cistern, if but one drop of water that has touched the body of him that is of an inferior degree, happens to fall upon him of a superior rank, he becomes unclean, and is guilty of a venial sin.

Their ceremonies observed in washing are, first of all, they fancy that the stone on the edge of the cistern is *Bramma*, the place where they wash is *Vistnum*, and the cistern itself *Ixora*. They enter the cistern quite naked, (their privities being covered only with a leaf,) and write with their fingers the syllable *om* in the water, and then with three fingers cast up a little water into the air, intimating, that *Ixora, Vistnum, Bramma*, have bathed themselves there; at the same time pronouncing these words, *Totum quencia bitten pava*, i. e. *By the touching of this water, I have cast away my sin*. Then parting the water with both their hands, they dip their hands in it, and thereby believe themselves cleansed from all their sins committed by touching. Afterwards they cast some water with both hands towards the eight parts of the world, as a sacrifice to the eight guardians

Reverence for their Pagodes.

Their washing.

Cow-dung used for purifying.

Their ceremonies in washing.

*Baldæus*. guardians thereof, say the *Siri Pagode*, wash their faces three times successively, saying, *Purify me*. This done, they throw likewise some water towards heaven, as a sacrifice to the sun; and having washed their hands and feet, take a small quantity of the ashes of cow-dung in the left hand, which being mixed with a little water, they say *Sudamaga*, i. e. *be clean*. Furthermore, as they suppose the left hand to be the earth, and the right the heavens, and the inside of the hand the place of propagation, they lay the right hand close upon the left, saying, *Let this be the end of the world*; and as they believe that at the end of the world, *Ixorretta* is to be transformed into an egg, they imagine that the concavity betwixt their two hands represents the said egg; whence (after having paused a while) they take away the right hand, saying, *Heaven and earth are separated*; and then write with the forefinger of the right hand in the ashes contained in the left the two syllables *ja ra*, intimating the contest betwixt the fire and air in the egg, in carrying the heavens to the top, and the earth underneath. This done, they lay their hands below the navel, on

the upper orifice of the stomach, upon the breast, front, head, and crown of the head, and afterwards upon the inferior parts of the body; they likewise touch the eyes, ears, feet, and heels with their fingers, extending now and then their hands, as if they were going to give something: they likewise shew their empty hands to the eight guardians of the world; and afterwards besmearing themselves with ashes, with three fingers of the right hand (in honour of *Bramma*, *Vistnum*, and *Ixora*) on the breast, front, and shoulders, they then reckon themselves clear and purified of all their sins. If you ask them what makes them use all these ceremonies, they give for answer, That they have two different laws, viz. the *Carma* and *Nbana*, one whereof contains instructions for the inward service of god, the other for the exterior or ceremonial part. They add, that *Parexi Rama*, when he made the sea recede from the coast of *Malabar*, did recommend, in a most peculiar manner, the observance of the *Carma* to the *Malabars*, whence *Malabar* to this day retains the name of *Carma pumi*, i. e. the country of *Carma*.

## C H A P. XIV.

## Of the Holy Ashes used in anointing themselves, and of their Festivals.

THE ashes of cow-dung are a thing in such request among the *Indian* pagans, that they with it besmear every morning their front, breast, and shoulders; every king maintains in his court a certain person, who every day, early in the morning, exposes a good quantity of these ashes upon a fig-leaf in the marketplace, when every one that pleases comes and takes some part thereof for his use: of these ashes they also offer daily sacrifices to their gods. The *Gogyes* attend constantly near the *Pagodes*, with a whole bag full of these ashes, which they distribute to the people; who in return give them some alms. They always appear besmeared with these ashes, in which consists a great part of their holiness, their god *Ixora* being also bedaubed with these ashes; the reason whereof, as they relate it, is this.

Why the ashes of cow-dung is sacred with them.

We told you before, that *Ixora*, or *Quiven*, having undertaken to keep *Quivelinga*, the ashes which settled within the shell rendered *Ixora* immortal. *Vistnum* being desirous to enjoy the same prerogative, seized upon a cow, and carrying her to *Calaja*, *Ixora's* residence, he

vv

snatched away some of these ashes; which *Ixora* perceiving, he struck out several of her teeth by a blow he gave her; which falling upon the earth, produced a kind of large water melons, called *Abobacus* by the *Portuguese*. However, *Vistnum* keeping close behind his cow, he gathered the next dung, and burnt it to ashes; whence it is, that to this day, these pagans have so great a veneration for the cow-dung, that they believe it purifies every thing upon earth. The said cow brought forth a bull-calf; unto which *Ixora* gave the name of *Irixipaten*, and used him instead of a horse. The *Malabar* women, though otherwise pretty cleanly, yet are so intoxicated to this superstition, that they cleanse their chambers and their cisterns with cow-dung.

The *Samoryn* or king of *Calecut*, washes himself every day before dinner; and when he goes to the *Pagode*, the way from the cistern to the *Pagode* is covered with cow-dung, upon which they strow roses and other flowers; besides that two women, each with a pot of cow-dung mixed with water, walk just before him; and

How the king of Calecut purifies himself.

*Baldæus*. and the place where he dines is afterwards constantly cleansed with cow-dung. They relate farther of the cow, that *Quenavady* and *Superbennia* did sit betwixt her horns, the sun and moon in her eyes, *Bramma's* two wives in her ears, *Ixora* in her nose, *Vistnum* in her tongue, in her thighs the *Rixii*, the four books of the *Vedam* in her four legs; that her milk is the true *Ambrosia*, or *Amortam*, and her piss the *Tirtam*, or the water fit to purify themselves from their sins: whence it is, that when they see a cow ready to piss, they catch it with their hands, drink a little of it, and with the rest wash their faces. As these pagan kings claim the patronage of cows, so the *Samoryn* of *Calicut* is attended every morning early by six boys, all over besmeared with fresh cow-dung, with garlands of flowers on their heads: as soon as the *Samoryn* rises, they pay him reverence; who orders them immediately to give the flowers to the cows, which they do.

They have not the same regard for the bulls and oxen, though they make a bull the father or author of the royal family of the *Exastri*, from whence the kings of *Cochin*, *Cranganor*, *Cananor*, and others are descended: they relate that all the males of this family being extinct, a woman of the same tribe being begot with child by a bull, revived the said family.

Opinion of the Malabars of the cow-dung.

The *Malabars* alledge the following reason for the ashes of the cow-dung; They say that the *Lingam*, (i. e. *membrum virile*) of *Ixora*, before it was cut in pieces, being so long that it reached up to his forehead, let fly some few drops of seed, which happening to light into his fiery eye in the front, was burnt to ashes immediately. Hence it is that in *Canara*, betwixt *Cananor* and *Mangalor*, there are to be found a certain order of pretended holy religious men, living constantly in the *Pagodes*. These appear in the streets quite naked; and making a noise by the ringing of a bell they carry along with them, the women (without distinction of age or quality, even to the queens) come running out to touch their privy members.

That the *Egyptians*, and after them the *Jews*, had a peculiar veneration for cows and calves, is sufficiently evident from many passages in the scripture; and the ashes of the red cow are mentioned, *Heb. ix. 13.* and *Numb. xix.*

Besides this purification, these pagans have also their meritorious acts of piety; some of the *Gogys* carry iron collars about their necks, walk constantly with iron fetters and chains, and have

VOL. III.

iron nails with the points inwards in their wooden slippers, or sandals. Some have been known to tie themselves with ropes to a tree, till they expired in great torments.

I saw 1657 one of these *Gogys* at *Columbo*, whose arms were grown together over his head, a posture he had chosen out of devotion. Others of this order never sleep, but pray incessantly; of this kind are also to be found in *Japan* and *China*.

Another meritorious act of the pagans, is the visiting their celebrated *Pagodes*, and other holy places, (like the pilgrimages of the romanists,) as the famous *Pagode Rammanakojel*, the *Adams* mountain in *Ceylon*, and divers other places at *Suratte*, *Davarca*, *Mottera*, *Casi*, *Bengale*, and *Ayotia*, twelve leagues from *Casi*; for which reason it is, that the rich erect *Pagodes*, *Fans*, (called *Ammalams*,) and cisterns, for the conveniency of the travelling men and beasts.

The *Malabars* have a peculiar way to merit the forgiving of their sins; There grows a certain stone, called *Talagramma*, on one side of the mount *Mahameru*, near a river-side, (which the *Gogys* always carry about them,) some whereof contain gold, and are then called *Ferenia Querpam*; one of these carried in a vessel, and in another the five following things belonging to the cow, viz. the cream, milk, butter, piss, and dung, mixed together, called by them *Panchaviam* wine, and afterwards put into the other vessel, wherein lies the *Talagramma*, and given to any person whilst he recites the *Vedamantiram*, (a prayer of five words,) purchases pardon for all sins, destroys his enemies, reconciles him to his friends, and procures riches. This prayer is in high veneration among the *Brahmans*, which they use constantly when they are sitting down to eat; but no body dares to say it in the streets. The five words are *Panesua*, *Apanesua*, *Vinesua*, *Udanesua*, and *Sumanesua*; the first signifies the soul or spirit; the second the posteriors, where the excrements are discharged; the third the bearing; the fourth seeing; the fifth the smelling.

They have also their festivals: One of the most remarkable festivals of these pagans, is celebrated in honour of *Vistnum* or *Ixora*; though the *Malabars* solemnize certain festivals, as that in honour of *Ixora's* spouses, which are not regarded by other *Brahmans*, which beginning the 8th of *Jan.* continues for nine days, the ceremonies may be seen in *Rogerijs*, l. 2. c. 12. The feasts celebrated in

9 Y

honour

*Baldæus*. honour of *Ixora* and *Vistnum*, are called *Trenaca* and *Panduga*. The *Gentives*, *Malabars*, and inhabitants of *Coromandel*, also solemnize a feast to the memory of the nativity of *Vistnum*, and his transformation into *Kisna* in *August*, when they adorn their houses with all sorts of greens, which seems to have some resemblance to our christmases. They also use another feast to the honour of *Vistnum*, in remembrance of the sixteen thousand virgins; it begins the eighth day after the full moon in *October*. They have also a feast in honour of *Vistnum's* spouse, called *Lasceni* by those of *Coromandel*: this is celebrated by the *Brabmans* wives in *September* for nine days, when they pray for the long life of their husbands, and to obtain riches. They have also two other feasts in *July* and *November*. They observe besides this certain days, as sacred and fortunate; as the first day of every month, the day of the *Solstice*, when the sun turns from the north to the south.

They pay every morning their reverence to the sun, and having washed themselves three times, they throw the water with their hands upwards, to prevent (as they say) the evil spirits from keeping the sun betwixt the mountains. The new year they begin with the new moon in *April*, as the modern *Jews* in the month *Abib*. They call the new years feast *Samwatsaradi Panduga*, *Panduga* signifying as much as a feast, and *Samwatsaram* a year, as *Adi* is the first day of the month; for they have twelve

months in the year, viz. *April* called *Paldæus*, *Thestram*, *May* *Weiwian*, *June* *Jestam*, *July* *Ajadam*, *August* *Spawanam*, *September* *Badrapadam*, *October* *Aswysam*, *November* *Carticam*, *December* *Margisaram*, *January* *Ponjam*, *February* *Magam*, *March* *Paelgouwan*. And because these twelve months are not equivalent to the months of the sun, they have every third year a leap-year, consisting of thirteen months, which we have only once every four years.

Besides the names of every month, and of every day in the week, the *Malabars* have a peculiar name for each day in every month. They have also peculiar names for each year, as far as sixty years, unto which they add the word *Samwatsaram*, signifying a year, which however is often left out for brevities sake; then they say, *Prabarwa* the first, *Pinawa* the second, &c. *Tsaja* the sixtieth, meaning the *Samwatsaram*, or year. They compute by sixty years, just as the *Greeks* do by their *Olympiads*; they also name the days of every week (like the antient pagans) after the planets: thus *Suria* signifies to them the sun, and *Jendra* the moon, whence they call *Suria Waram* the Sunday, and the Monday *Jendra Waram*.

They divide each day into thirty hours, just as the *Gentives* divide their day and night into sixty hours, some whereof they account fortunate, and some unfortunate. Of the pagan feasts you may consult *Carolinus*, chap. 22.

## CHAPTER XV.

### Of the Fast-Days of the Pagans; and their Origin. Their Marriages and Solemn Oaths; Ceremonies used with their Sick and Dead.

AS the pagans pray constantly thrice a day, viz. in the morning, about noon, (when they repose themselves,) and in the evening, so they have their solemn fast-days: one of these is called *Egadexi*, which word (in their learned language, called *Samoscrad*, or *Hanscret*, as *Kircker* styles it, which is in the same esteem among the *Malabars*, as the *Latin* in *Europe*) signifies as much as *eleven*, or the *eleventh*, because it is kept the eleventh day after the full moon, and again the eleventh day after the new moon; so that they have two of these fasts every month, viz. one every fifteen days, when they abstain from eating all the day long, or at least till four or five a-clock in the afternoon, when they must

not feed upon flesh, or fish, or rice; but only upon fruits, pease, beans, milk, and such like, and not drink the least strong liquor.

The origin of this fast-day is ridiculous enough. They tell you, That a young fellow, much addicted to venery, going one night very late to visit his mistress, could not light on a boat to ferry him over the river; however, being resolved not to depart, he staid there all night, and did fall asleep, without having eaten any thing all that day. Next morning early passing the river, as he was going to his mistress's house, he met with a camel just at sun-rising, which throwing a stone, it hit accidentally upon some flowers, and cast them from

*Balacens* from the stalks upon the ground, and so he came to his mistress.

After some years happening to die, and being carried before *Chitraputren*, he could not produce any good works he had performed in his life-time to intitle himself to the paradise, except this his accidental fasting, and the throwing down of the flowers at sun-rising, which he interpreted as a sacrifice intended for the sun. *Chitraputren*, after a long hearing condemned him to the infernal regions; yet in consideration of his fasting on the 11th day after the full-moon, having the favour granted him of abiding for some days in the paradise, he was asked what paradise he would chuse; he answered, *The Woman's-Paradise*. Being conveyed thither accordingly, as he was in bed the next night with one of the ladies, he broke out into most dreadful ejaculations; and being asked by his bed-fellow the reason, he replied, *Because I have so short a time to stay in this paradise*. The woman, who had taken a liking to him, told him, That he should rise early in the morning, wash himself all over, and at the gate watch the coming of the servants of *Ixora*, who were then going into the wood of roses, to gather flowers for their master; she bad him to crowd in among them, and having gathered the most odoriferous flowers he could find, offer them as a present to *Ixora*. He followed the woman's advice; and having gathered the most sweet-scented flowers he could, offered them to *Ixora*; who extremely pleased with this present, asked *Chitraputren*, who this young man was; he told him, he was a person condemned to the infernal punishments. But *Ixora* ordered him to remain in paradise with the same woman, and to gather flowers for him. Now, because this young man got into paradise by his fasting, the pagans fast upon the before-mentioned eleventh day.

*The second fast.*

They have another fast, called *Quiverasiri*, which deduces its origin from *Quiven*, (the same as *Ixora*,) and *Rasiri*, i. e. the night, signifying as much as a night-fast, or *Quiven's* night. It falls out in *February*; and being one of their established fasts, is kept with a great deal of strictness, they being forbid either to eat or drink, or to sleep all that night, which they spend in rehearsing the fictions of their gods, and walking round the *Pagodas* till day-break, when they sacrifice to the idol, and give alms to the poor; which done the fast is ended.

*Its origin.*

The origin of this fast they ascribe to one *Beri*, a famous hunter; who going

one evening abroad to shoot some birds, *Baldens*, got upon a certain tree near a cistern, called *Cuola*, the leaves whereof smell as sweet as flowers. Being very eager at the sport, he tarried upon the tree all night; and to pass away his time without sleeping, he pulled off constantly the flowers of the tree; which he throwing one after another upon the ground, one of them did fall upon *Quivelinga*; who happened just to lie under the tree without *Beri's* knowledge, who returned to his own home the next morning.

Some years after the said *Beri* happening to die, and being carried before *Chitraputren*, the judge of the dead, he found, upon examination, that having committed many crimes in his life-time, by killing the wild beasts, he was condemned to the infernal regions. But as *Jewen*, or *Jamma*, the chieftain of the devils, and his company, were hurrying him along, they were met by *Ixora*; who being informed of his fasting all the night long upon the tree *Cuola*, and his offering of the flowers to *Quivelinga*, he delivered him immediately out of the devil's hands, and sent him into paradise.

Some tell a different story upon this head, viz. That *Beri* perceiving a tyger under the tree, was forced to remain upon the tree all night without eating any victuals. They also tell you the dialogue betwixt *Beri* and the tyger. *Beri*, it seems, told the tyger, That whereas he was not able to fast above three days, he desired him to let him go unmolested to his house, where he would take leave of his wife, and return again. The tyger replied, No; for, said he, if I let thee come down safely, thou wilt certainly kill me with thy bow and arrow, which thou didst leave under the tree whilst thou wast climbing up to fetch a pigeon thou hadst shot before. But *Beri* taking an oath by *Ixora*, that he would return, the tyger let him pass. *Beri* being returned home, told his wife what had happened, and that he must return to the tree, where the tyger staid for his coming. The woman offered to go in his stead; and so did his children, to be devoured by the tyger, alledging, That without him, they should be deprived of all subsistence. But *Beri* not approving their choice, they went all together to the tyger; unto whom *Beri* said, pursuant to his oath, he was come to be devoured by him. But the woman entreating the tyger to devour her in his stead, as not being able to subsist without him, and the children making the same petition

*Baldæus.* titution to him, the tyger was put to such a nonplus, that he did not know what to chuse; but whilst he was ruminating upon the matter, *Ixora* threw a net over them, and so drew them all into paradise.

*The third fast.* The third fast, called *Tirinadiva*, is kept only by the women, having got its name from the 27th day of the 9th month; on which day *Canteven*, the god of love, being killed by *Ixora*, the women were so grieved thereat, that they would not touch the least eatables all that day; and ever since kept a fast on the 27th of *December*, in memory of this disaster, being much about the same time we celebrate the feast of our Saviour's nativity. They say, the reason why *Ixora* killed this *Canteven*, or *Cupid*, was because the last was fallen in love with *Paramesceri*, *Ixora's* spouse; for which reason he burnt him to ashes with his fiery eye on the forehead. But the *Brakmans* say that *Ixora* being for a considerable time employed in holy matters, and thereby become forgetful of *Paramesceri*, she addressed herself to *Canteven*, to infuse into her husband fresh sentiments of love; but she afterwards no sooner understood his death, than she died for grief. Being however brought to life at the foot of the mount *Timana*, (where she staid for some time after to do penance, and thence got the name of the daughter of the mount *Timana*,) *Ixora* appeared to her, promising to continue his conjugal love hereafter. *Paramesceri* took this opportunity to desire *Ixora* to revive *Cupid* from the dead, with this addition, That he should remain immortal for ever after: whence they say, that *Cupid* reigns all over the world by the strength of imagination in both sexes. By which they seem to intimate, that as the inclination to love ceases in old persons, it is constantly revived in the young ones; and so will continue as long as the world stands.

*Why the god of love was killed by Ixora.*

*The 5<sup>th</sup> fast.*

They have another famous fast, called *Majaupasa*, from the word *Masa*, (which in the high *Malabar* tongue signifies a mouth,) and *Upada*, a fast, being the most sacred of all their fasts, beginning with the last day of *October*.

Such as keep this fast, having first washed and dressed themselves very clean, repair to the *Pagode* of *Vistnum*; and the next day being the 19th of *November*, after having changed their clothes, go round the said temple early in the morning one hundred and one times, and the most devoted one thousand and one times. The same they repeat every day during the whole *November* and *December*, mut-

tering all the while by themselves the words *Naraina* and *Aquanama*, firmaments belonging to *Vistnum*. All this while they must eat nothing but milk and figs, neither look upon a woman, and think or speak of nothing but what relates unto *Vistnum*. The next following year they take the same course, beginning with the 1st day of *December*, and continuing till the 10th of *January*, in all, forty days. The third year they begin with the 1st of *January*, and continue the same devotions till the 10th of *February*; and thus the same successively for nine years longer, till the number of twelve years being compleated, they obtain a general pardon for all their trespasses.

Concerning their marriages, *Poligamy*, and some other matters relating to this purpose, we have had occasion to say something already in the description of *Ceylon*: we will now give an account of such things as were not mentioned, or at least, not circumstantially in that place. The first is, That the *Brakmans* are not only at liberty to marry as many wives as they think fit, (a privilege they always enjoyed, as may be seen out of their ancient records, called *Poranes*,) but also may chuse their wives out of four different tribes, just as the *Levites* enjoyed the privilege of marrying in what tribe they thought fit among the *Jews*.

As to their marriage ceremonies, some precede the marriage it self, some are concomitant to it, and the rest follow it.

The first thing they observe, is to consult an astrologer about the position of the planets, and the time or hour when it is fortunate for the bride to be married; for which reason they also consult on what day of the month, and under what conjunction the bridgroom is born. Next they apply themselves to a *Brakman*, or priest, who for four days successively before the wedding, burns a little rice and butter mixed with eggs, for a sacrifice. The time of the solemn promise or engagement approaching, they light a large wax-candle, and put some rice upon the table of *Quenavady*, the huge devouring elephant before mentioned. This done, the bridgroom throws a necklace, or *Taly*, with some gold fastened to it, about the bride's neck, as a token, that the engagement is now made; whence the *Malabars* call marriage *Quitha*, i. e. an obligation. The wife, after the death of her husband, always breaks this necklace, as a token, that the obligation is dissolved; after which the bride fasts fifteen days.

After

*Baldæus.* After the copulation is performed, they entertain their friends at a feast; but the young couple are not bedded till about eight or ten days after: for before they can actually cohabit, they must attend a fortunate conjunction of the planets; and before they enter the bed-chamber, perform their prayers at the door, in the company of a priest, who gives them his blessing. The next following day the new-married couple take a piece of cloth cut at one end, wherewith they go a fishing in a river. The first fish they take, they touch on the head with a great deal of reverence, and according as they take more or less fishes, they shall have few or more children; if they catch nothing, the woman is to prove barren.

As the chief reason why they marry so young among the *Brabmans*, is their fondness of a maidenhead, so, on the other hand, nothing is more despicable among them than a maiden come to a full age; which has introduced the custom of begging portions for maidens that they may be married in time.

The *Indian* kings that are not *Brabmans*, never marry, but only keep certain mistresses, whose children do not inherit, nay, cannot as much as challenge the least prerogative in respect of their nobility: so that here obtains the axiom, *Fructus sequitur ventrem*. The kings sisters are generally married to some other sovereign princes; who must fast fifteen days before marriage. The *Nairos* have likewise no settled marriages; whence their wives are called *Parasceri*, i. e. *women for many*. The *Brabmans* take as much care to couple a bull and a cow together, as other people do in marrying their children.

Their manner of taking an oath.

These pagans perform their solemn oaths near a *Pagode*; and the *Brabmans* of *Coromandel*, in the presence of a priest, near a holy fire, just as the *Romans* use to do in the presence of their priests, the *Athenians* before the altar, and the *Arcadians* during the sacrifice. These pagans being ready to take an oath near the *Pagode*, they put three fingers of the right hand, *viz.* the thumb, the next, and the middle-finger, into an earthen vessel filled with melted butter; this done, they put a leaf into the same butter, which they tie close round their three fingers: after three days the said leaf is taken off in the presence of the king or prince of the country; if his fingers are not burnt, his adversary suffers punishment; but if he proves hurt, he is sure to be punished.

VOL. III.

They have another way of taking an oath, no less dangerous than the former: he that takes the oath is obliged to swim cross the river, betwixt *Cochin* and *Cranaganor*, which is full of crocodiles; and if he that has taken the oath escapes without hurt, he is supposed to have taken a just oath.

In *Canara* they have another way: for they put some adders and a lemon into an earthen vessel; and if he that takes the oath, takes the citron out of the vessel without receiving any harm, he has truly sworn. The inhabitants of *Formosa*, when they take an oath, break only a straw to pieces.

Whenever any body falls sick, the patient need not fear to be disturbed with much physick, bleeding, clysters, and such like, their chief remedy consisting in fasting, sometimes more than is convenient. They also send forth continual prayers, to obtain a happy transmigration of the soul, and exhort the patient to rehearse continually the name of god; and when his strength fails, his friends repeat the same in his presence; because the *Brabmans* are of opinion, that he who dies with the name of god in his mouth, goes directly to the paradise: for the same reason they also distribute alms to the poor. If they give the patient any medicines, they are generally laxatives of fresh herbs, a little milk, *Cansic*, (or rice and water boiled together,) a little saffron, ginger, or leeks.

When the patient is near expiring, they reiterate their prayers, besprinkling them with holy water of the river *Ganges*; for they say, that the infernal judge sends his servants to torment them at that time, and that they send forth their prayers to *Vishnum*, to send one of his servants to deliver the dying person out of their clutches.

After their decease they wash the corps, afterwards shave his beard, stop his mouth with betel and lime, wrap him in a shroud, and last of all close his eyes. Of the burning of their dead, we have spoken before, in the description of the funeral ceremony of the prince of *Ceylon*, and *Rogerius* \* has given a more ample

account of the whole matter. Some of these pagans bury their dead near their habitations, and without the cities, (like the *Athenians* and *Romans*,) and cover them with stones, for fear the jackalls and other wild beasts, should dig them up and devour them.

They fast and shave their heads for their deceased friends; and if they be of royal extraction, all the subjects are obli-

9 Z

ged

*Baldæus.*

What ceremonies they use with their dead and sick.

\* l. r. c. 10.

*Baldæus* ged to have their heads shaved. In *Malabar*, the next relations do not stir out of doors for fifteen days, sleep only on mats upon the ground, and do not assist at the usual sacrifices. When I mention fasting, I mean, that they only eat a little rice at noon. After seven days, they send for the barber ; who having cleansed the house with milk and cow-piss, and the persons belonging to it, they gather up the ashes of the deceased person, after the expiration of the fifteen days; and having put the same into an urn, they throw it with great lamentations into the river, the sea or any other water. This done, they purify the place where the corps was burnt, and plant there a fig-tree. Afterwards changing their clothes, and being cleansed by repeated washings, they put an end to the mourning, except the next heir, who continues in mourning a whole year, during which he abstains from flesh, fish, eggs, wine, nay, even from their beloved *Betel*. No person must touch his head, neither must he cohabit with his wife: besides which, he is obliged to perform daily the following ceremony: he takes a small quantity of boiled rice, made up in form of a little ball; this he lays upon a fig-leaf spread upon the ground without the house-door, and taking part of another fig-leaf, he bends it together, fancying all the while, that the deceased is there present to eat the rice-ball; then taking a little rice mixed with butter in both his hands, he turns his face about, as if he were looking to put it into the mouth of the deceased person. This done, the standers-by clap their hands together, a signal to

the crows (of which there are vast numbers in *Malabar*) to come to take the ball of rice prepared for the deceased person; which if the crows do, the heir is at liberty to go to his dinner; but if they do not, it is looked upon as an ill omen, and the whole ceremony considered as fruitless.

At the conclusion of the mourning, the relations of the deceased are invited to a splendid feast, where however they must not eat either flesh, fish, or eggs; and none but the richer sort are invited to partake of it. This they repeat once a year, on the same day the deceased died, to the memory of their friend. I will not enlarge myself in this place upon that most barbarous custom of some of these pagans, for the wives to burn themselves alive with the dead carcases of their husbands, a thing still practised in the most populous city of *Pandi*; for when the funeral ceremony of *Vinepi Naigne*, the prince of the country, was solemnized with great pomp, three hundred of his wives did precipitate themselves alive (under the sound of drums and trumpets,) into the same hole filled with burning oil, butter, and other combustible matter, which burned both his and their bodies to ashes. We conclude with a hearty wish, that these poor wretches, quite entangled in the darkness of paganism, may through his mercy, and with the assistance of such magistrates as ought to keep a watchful eye over their actions, be in time brought to the true knowledge of the gospel.
