May 1950

PRELIMINARY CHECK LIST OF RESERVOIR SEDIMENTATION SURVEYS

MADE IN THE UNITED STATES TO APRIL 1, 1950

FOREWORD

This Check List of Reservoir Sedimentation Surveys made in the United States to April 1, 1950, was prepared to facilitate the preparation of the RESERVOIR SEDIMENTATION DATA SUMMARY form prepared by the Subcommittee on Sedimentation, Federal Inter-Agency River Basin Committee, and made available by the member agencies to their respective field offices. This check list will also serve as a reference to the existence and location of data pending completion of the data summary forms. While an effort has been made to assure the completeness of the check list, the Subcommittee will welcome corrections and additions, submitted through agency channels, as a basis for preparing eventually a final list of past surveys.

Reservoirs are listed under the state in which the dam is located. If the dam lies between two states, it is generally listed under the state in which operations headquarters are located. The major drainage basin is designated under the heading D.B. according to the attached map. The name and location are given as submitted by the reporting agencies. The average date of last survey is given to the nearest month wherever possible. The type of survey is listed as D if it is based on horizontal control by surveying instruments and R if it is based only on sampling of sediment thickness without horizontal control. The responsible agency is the one that made the last survey, and could be expected to furnish the latest data. Earlier surveys, in some cases by other agencies, are not listed on the assumption that the agencies making the latest survey will have taken into account and can report earlier data.

Surveys made or authorized to establish a base for future sedimentation surveys are listed for each state under the heading Initial Surveys Only. Sedimentation data for these reservoirs will not be available until resurveys are made.

It is the expectation of the Subcommittee on Sedimentation that each member agency will be responsible for the preparation of the data summary forms for all reservoir surveys credited to it. Data from non-member and non-federal agencies and organizations will be obtained by one or another of the member agencies by agreement in the Subcommittee. Although no dead-line is suggested for the completion of the data summary forms it is the hope of the Subcommittee that this task can be finished at a relatively early date.
