Company by the Pennsylvania Railroad for the benefit of the Standard Oil Company's people. I have a vivid remembrance of that time. I was interested in a pipe line that was competing with the American Transfer Company for the oil produced in Clarion county. I do not believe that at that time the American Transfer Company had over \$60,000 invested in all their pipe line system, and yet in two months they received in rebate from the Pennsylvania Railroad Company alone \$68,753.50. I remember what a hard time we had in keeping alive, financially, the old Atlantic Pipe Line Company. The American Transfer Company was paying a little more for oil at the wells than we could get for it after we had piped it and loaded it on the cars. I can imagine now how financially easy the old Atlantic Pipe Line Company would have been if the Pennsylvania Railroad Company had poured into its coffers \$30,000 or \$40,000 a month. Remember, this \$68,753.50 was from the Pennsylvania Railroad alone. What the Erie and the New York Central were paying them I do not know, for there is no record; but men who have studied the evidence in the Hepburn committee's report claim that the evidence shows that the five trunk railways paid to the Standard Oil Company people \$11,000,000 in rebates in 16 short months. Reverse these conditions and the Atlantic Pipe Line Company would have driven the American Transfer Company into bankruptcy, just as the Atlantic Pipe Line Company was driven. Railway discrimination means ruin to any enterprise that is discriminated against, and it means monopoly for any enterprise discriminated for.

DESTRUCTION OF INDEPENDENT PIPE LINES.

Upon the question of the destruction of these independent pipe lines, Mr. W. T. Shidey, testifying before the Hepburn committee, said, in answer to a question as to whether the Hunter and Cummings Pipe Line, which was one of these independent lines, was shut out of the market: "Yes, sir; they were shut out of the market practically." The history of the Hunter and Cummings Pipe Line was the history of all the independent pipe lines in the oil regions. By railway discrimination they were practically shut out of the market. Concerning the effect which the Rutler circular—providing for a rebate for certain pipe line companies—had upon all the pipe lines not in the United (Standard) Pipe Line pool, Mr. E. G. Patterson testified before the Hepburn committee as follows: Question. "To whose benefit did the 20-cent rebate provided for in the Rutter circular inure?" Answer. "Entirely to the United (Standard) Pipe Line. The result of it was that the United Pipe Lines absorbed 80 per cent. of the 20 lines that were then in existence in the country." To which I desire to add that they ultimately absorbed them all. The testimony before the Interstate Commerce Commission in the Titusville and Oil City independent cases goes to prove that the railways had turned their terminal facilities for the transfer of oil from the cars to the seaboard in New York over to the Standard Oil Company, so that the independent oil refiners could not use their tank

cars in transferring oil to the seaboard, and had to ship their export oil all in barrels.

Q. (By Mr. Jenks.) Do you recall the date of these cases? A. They were about 1878 and 1879. Then came the discrimination against barrel shippers and in favor of tank shippers and in the interest of and for the benefit of the Standard Oil Company, and when the Interstate Commerce Commission ordered the railway companies to stop this discrimination they ignored the order. The evidence goes to prove that the railway companies adopted a system of false billing in the interest of the Standard Oil Company and against the independent refiners. The evidence further goes to prove that after the independent oil refiners had spent many years in building up a trade for their oil in the New England States the railway companies, in the interest of the Standard Oil Company, put up the railroad rates to New England to the independent refiners and shut them entirely out of that market. The work of years was destroyed in an hour by an act of these railway conspirators.

All of this evidence, hundreds and hundreds and hundreds of pages of it, goes to prove without a shadow of a doubt that the railway companies all through these years were doing for the Standard Oil Company secretly just what they had publicly contracted to do for the South Improvement Company in 1878.

NO REMEDY FOR RAILWAY DISCRIMINATION IN THE COURTS.

Now, what is the remedy? There is practically no remedy in the courts. They are too slow and expensive. These great railway combinations, in cooperation with the trust organizations, can "razoo" a man up and down through the courts, from one to another for 10 long years, until he is financially exhausted and his business ruined. Why, gentlemen, the Cox case, which related to anthracite coal shipments, with all the power and influence of the Interstate Commerce Commission behind it, has been before the courts for 11 long years, and is yet unfinished. This evidence goes to prove that these railway discriminations and favoritism were continued in favor of the Standard Oil Company and against the independent refiners even after the interstate commerce law was upon the statute books.

Now, then, in the face of all the wrongs which I have enumerated to you, the Oil Producers' Council, a body elected from the different producing districts, began criminal action in 1879 against the Standard Oil Company and the Pennsylvania Railroad for conspiracy against the public. This action was brought in the courts of Clarion county, Pa. The case was brought in the names of Col. J. A. Verra and myself. The case was prepared at enormous labor and expense. The evidence at hand to prove the facts, some of the conspirators were before the court and the jury, with almost a certainty that, with the evidence at hand, they would be convicted and sent to the penitentiary to pay the penalty of their crime; and then three members of the supreme court of Pennsylvania took original

jurisdiction in these criminal cases and took the indicted conspirators away from the courts of Clarion county and hung the case up.

The late Franklin B. Gowen, a man of great integrity and ability, who was a member of the constitutional convention of Pennsylvania in 1873, said before a committee of Congress here in Washington: "That if that constitutional convention did anything effectually it was when it took original jurisdiction in criminal cases away from the supreme court of the State." And yet when the men who had entered into a conspiracy to monopolize the great oil producing and refining industries of that State had been indicted and were before a jury of their peers, we find members of the supreme court ready to stretch, aye, violate, the constitution in order to protect them from just punishment. The producers and refiners, exhausted and impoverished, fighting for their right to do business in this free country, found not only the railway companies, in league with the Standard Oil Company, against them, but members of the supreme court ready to do the bidding of the Pennsylvania Railroad and the Standard Oil Company and protect indicted conspirators from just punishment for their crimes.

Read the record of the Matthews case against the Standard Oil people for conspiracy to blow up his refinery and ruin his business. Read the evidence of Matthews; read the evidence of his partner, whom they had bribed and debauched to betray his associate. Read the evidence of this man, whom they had spirited about from the Atlantic to the Pacific, keeping him under cover, under an assumed name, at Boston and elsewhere—keeping him under cover for four long years, that his evidence might not be had by the courts; keeping him until the load of crime in his heart became too great for him to bear, and conscience forced him to go back to Buffalo and confess to Matthews. Note how Matthews, struggling with poverty, yet determined that justice should be done, had spent the few remaining thousands he had left in these litigations, and how finally his little refinery was forced into the hands of a receiver, and he was financially ruined. Read it all, for I say to you that no honest man can read the record of this case without feeling that there was a crime committed against the State. And that's not all. Matthews had verdicts for \$270,000 against the Standard Oil Company people in his civil damage cases, and the creditors of Matthews, under this receivership, had to settle these \$270,000 verdicts for \$13,700. And this is not all. These great monopolies and the political bosses—who are but the creatures and servants and instruments of these great monopolistic combines—these bosses secure, in my opinion, nominations of judges, and then, through the help of the party machinery and a liberal supply of corruption funds, succeed in electing them; and there, in our higher courts, men, elected by corruption funds, sit to dispense their kind of justice to the American people.

The remedy is not in courts. You cannot reach these fellows in the courts. They will circumvent you. The thought is fast becoming fixed in the minds of the common people that these great railway combinations, extending as they do from the Atlantic to the Pacific, and from Canada to the Gulf, these great combinations

of corporate capital, are gradually packing our higher courts with men who will do their bidding, or, rather, with men who are in sympathy with the present monopolistic condition of things.

THE INTERSTATE COMMERCE ACT.

Now, then, in 1878 the producers of petroleum in Pennsylvania had the old Anglo-Saxon confidence in the justice of the courts and in the power and omnipotency of the law. If we could get a law enacted by Congress prohibiting railway discriminations we thought then there would be no more trouble. We paid \$1,000 to a retired railway attorney of great ability to draft us an anti-discrimination railway bill. The conditions were that it should be such a bill that when enacted into law the railroad companies could not drive a train of cars through it. I shall never forget the report which that committee made when they came back without bringing that bill from Washington. They found Judge Reagon, of Texas, chairman of the Committee on Commerce, and took the bill to him. He read it over and said: "Well, my God! this is just what we need down in Texas." You all know what a magnificent fight Reagan and the friends of that measure made in Congress for its passage. We always thought that the Cullom amendment in the Senate very much weakened it, but at last it was passed, and we had the interstate commerce law. But do you know that these great railway and trust combinations do not seem to care any more for that law than though it was not upon the statute books? On every subterfuge they evade and violate it. If they can control the appointment of Attorneys General and supreme court judges they do not care what the law is. They have become bigger than the government itself. They dare to threaten the Interstate Commerce Commission and ignore its orders, and that commission of this great government seems powerless to perform the duties provided for it in the law that created it.

Four or five years ago the Atchison, Topeka & Santa Fe Railroad went into the hands of a receiver, and about the first thing the receiver found out was that the officers of the road had paid over \$7,000,000 in rebates to trusts, monopolies and favored shippers. And, while this was a State prison offense, there did not seem to be any disposition on the part of the Attorney General of the United States to bring these great criminals to judgment. These great railway combinations and monopolistic organizations seem to overshadow the government and direct and control the action of its officials.

Q. (By Senator Mallory.) Was not that before the passage by Congress of the law which subjected the party who received a rebate to liability under its provisions and which bound all parties concerned in the rebate business? A. It was at the time the Santa Fe Railroad failed, in 1893-4, long after the interstate commerce law was in operation.

Behind the power of railway discrimination the Standard Oil Company, the Sugar Trust, the Steel Combination, the Big Four Beef Combination, and the rest of these trust organizations feel so secure in their

power to throttle competition and plunder the producers and consumers of America that the stock of these companies, some of it from 50 to 90 per cent. water, is selling to-day at from 200 to 400 cents on the dollar.

THE CASE OF GEORGE RICE, OF MARIETTA.

The greatest battle in the record of time has been fought by George Rice, of Marietta, Ohio, for the right to do the business of his choice in this free country. What is the record of that case? In the latter part of the 70's the railway managers, in order to cripple Rice in the interests of the Standard Oil Company, doubled the freight on oil at Marietta, where Rice's refinery was. But the raise was only on oil; no other freight was raised. It was also only at Marietta. Ten miles below, at Parkersburg, on the Ohio River, the Standard Oil Company had a refinery, and the rate was not raised on oil from there, nor was it raised at Wheeling, above Marietta. The railroads raised the rate on Rice's oil at Marietta, but no raise was made anywhere else. There is evidence to prove this statement.

What further? The railroads over which Rice had been shipping to the southern markets raised the rate to him from 29 to 212 per cent. over and above what the Standard Oil Company had to pay. Finally they refused to give Rice any rates at all.

What further? The railroads paid the Standard Oil Company rebates on the oil that Rice shipped.

Q. (By Mr. Kennedy.) How much? A. I have given you the reference so you can tell. I did not go into that.

What further? The railroad companies discriminated against Rice in favor of the Standard Oil Company to an amount equal to \$199 per car on cars carrying 100 barrels.

I hope I am not asking too much when I ask the members of this commission to read these 43 pages giving the history of George Rice's exertions to do business over these American railways. Every statement therein made is supported by sworn evidence before the Interstate Commerce Commission, before the courts, and State and national investigating committees. When you have read this report of crime and seen how the rights of American citizens are destroyed by these railway companies, I would suggest, and I think it proper, that when John D. Rockefeller appears before you, you ask him whether, if the railway companies had treated him as they did George Rice, he thinks that he could have succeeded in business.

Q. (By Senator Mallory.) What is that (referring to book in witness' hand)? What book is that? A. Three chapters of H. D. Hyde's great book called *Wealth vs. Commonwealth*.

It does not seem possible that, under this great government, based upon the doctrine of the equal rights of man, such outrages could be possible. Yet this great government, through its Congress and its commissions, seems powerless to prevent the wrongs which I have enumerated.

THE REMEDY FOR RAILWAY DISCRIMINATION.

What is the remedy? Take the railroads away from the corporations; make them public property; let the government own and run them; make them highways over which the people can go to market upon even terms. The \$11,000,000,000 of capital combined in the railways of the republic, organized under joint tariff and passenger associations, has throttled the law of competition and constituted one gigantic railway trust, controlling the highways of the people dictating who shall and who shall not do the business of the country, and condemning this man to poverty and that man to riches. The holders of this \$11,000,000,000 of capital, with those holding the capital of the trusts and monopolies, have constituted themselves the political dictators of this country. They furnish millions of dollars for corrupt political campaign purposes. They assume to own the votes of all the men in their employ, and he who becomes politically obnoxious to them is black-listed and turned out to starve or to hunt a new occupation. Shrewd politicians, backed by this combination of capital and this power, have constituted themselves political bosses. These political bosses are but the creatures and servants and instruments of this great corporate power, and these bosses are dictating the nominations of legislators, congressmen, senators, and judges satisfactory to their masters. In this way they are controlling legislation and escaping punishment for their crimes. It takes a strong man, Mr. Chairman, well anchored in the confidence and affection of his people, to triumph politically against this combined capital and power, and just in proportion as these great trust combinations are enabled to absorb the wealth produced by the people and impoverish them, just in that proportion will the people become subservient and cowering, because the fear of hunger for wife and babies makes cowards of us all. Can the Republic survive with these railways in the hands of corporations which are fastening these monopolies upon us? These corporations, in justification of their management of the highways of the people, the railways, set forth that they are moving the freight of this country cheaper than the freight of any other country upon the globe. True; but out of their own mouths they convict themselves of a great crime. I hold in my hand a receipted freight bill for the shipment of a carload of oil-well supplies from Harmony, Pa., to Unity, Pa., a distance of 49 miles. The cost was \$46.60 for this carload of 16 tons, or \$2.91 a ton for the 4 miles, or \$0.0593 per ton per mile. I have freight bills showing that I have paid \$0.0432 per ton per mile in carload lots. A large percentage of the freight of the American people is moved in less than carload lots. I have here receipted freight bills for one and two ton lots, and I find that I paid \$0.1357 per ton per mile.

Q. (By Mr. Jenks.) Have you any evidence to show that, over the same road for the same distance and the same kind of freight, any lower rate has been given to anybody else? A. No; I have not. It is a small matter and I am only shipping occas-

sionally, you know. A large percentage of the freight of the country is shipped by men who ship a car this month, a car next month, etc.

Q. These freight bills are for fifth and sixth class freight, which I think oil-well supplies are. Does not everybody pay the same freight? A. For small shipments I suppose they do. Now, statistics show that all the freight of this country, including everything, is moved at the average rate of \$0.0085 per ton per mile. These facts convict the railroad managers of a great wrong, for these freight bills show that the people are being robbed for the benefit of the stockholders of the railroads; and the statistics show that the stockholders of the railroads are being robbed for the benefit of the monopolies, trusts, and favored shippers. Here is the problem: If the people are obliged to pay upon their shipment of freight, as these bills show, from \$0.0432 to \$0.1357 per ton per mile for the movement of their freight, and all of the freight of the country is moved for \$0.0085 per ton per mile, how much less than \$0.0085 do the monopolies, trusts, and favored shippers pay in order to bring this average from \$0.1357 per ton per mile down to \$0.0085 per ton per mile? The answer to the question will answer the oft-repeated question of why so many of our railroads are in the hands of receivers. A proper answer to this question will answer why it is that so many of our railway managers are becoming multimillionaires while the railroads are becoming bankrupt. The record of the last 25 years has demonstrated that as long as the railways are in the hands of corporations they will use them for the benefit of their friends, or inside combinations, and for the purpose of destroying the great principle of equal rights, which is the foundation stone of our Republic.

Take the railroads away from these corporations, and give every man an equal right in the transportation of his products. I know the independent oil producers and refiners of America, and if you will establish equality over the railways, with a guaranty that that equality will continue, I feel safe in saying that in less than 15 years the independent oil producers and refiners will drive the Standard Oil Company into a secondary position in the oil trade of the country. These great trust combinations do not know the first principles of economical management. By virtue of the great flow of wealth which has come to them from railway rebates and trust possessions, they have not been obliged to study the principles of economy a moment in their lives. By this monopoly process they have been able to take more money from the people than they absolutely know what to do with. Reestablish the equality of our people with respect to the railways of the country and there will be no more coal miners strikes; soldiers and deputies will not be called upon to shoot down American citizens like dogs in order to force them back under monopolistic control, for then the miner can ship his car of coal just as cheap as the biggest coal combine in the land. Men do not strike and go out and starve except as a last resource. Establish the equality of our people over

the railways of the country and then the coal miners, when they become dissatisfied for any reason, will get together and form a little coal company of their own instead of striking. They will lease McCoomse's or McLaughlin's farm, open up a coal mine of their own, and ship their coal, the product of their own labor, to market upon equal terms with the biggest coal combination in the land. How could these great overcapitalized and extravagantly managed coal combinations stand such competition as that? They could not stand it at all; it would be mighty hard on the big coal combinations, but it would be justice and a wise national policy. With absolute equality over the railways of the country, so that every butcher could ship a car of cattle just as cheaply as the Big Four Beef Combine, that combine could not hold the monopoly of the meat trade of America for 24 hours. Under government control, the letter of an oil producer, a coal miner, or butcher goes to its destination with the same speed, at the same cost, and with the same precision as the letter of an Armour or a Rockefeller. Send their oil, meat and coal to market upon the same terms of equality and it will not be long before these monopolistic combinations will be getting rid of their \$25,000 a year lawyers and managers upon the plea that their business will not stand such high-priced men. These managers will soon be engaged in building up businesses of their own, and the lawyers in a better business than advising their principals just how far they can go without getting behind the bars.

GOVERNMENT OWNERSHIP AND CONTROL OF THE RAILWAYS FEASIBLE.

How can the railways be taken away from the corporations? The public welfare demands it, and the power exists under the right of eminent domain of the State. The States can condemn the railways for the public welfare just as the private lands were condemned upon which the railways were built for the public welfare. Pay the corporations for them just what they are truly worth, and in this transaction let there be no injustice either to the people or to the stockholders. But, someone will say, how could the government pay the interest on the immense public debt which this purchase would create. Mr. Chairman, the people in this land, who are the government, are paying it today. These railway companies are taxing the people under exorbitant freight rates for the payment of the interest on all of their corporate debt, money dividends upon watered stock, and hundreds of millions annually for the benefit of the trusts, monopolies, and favored shippers. The railways are the peoples' highways, and under government ownership they are only changing their managers. One of the greatest judges that this land ever produced, in my judgment, once said that "a public highway cannot be private property." An important reason for government ownership consists in the fact that the bonded debt of the United States for the purpose of

acquiring the railroads could be placed at from 1½ to 3 per cent less interest than is now being paid upon their bonded debt. This great reduction in interest would be an important factor in cheapening the cost of transportation. But a greater and more overshadowing reason for government ownership is that then we should be able to shake off the grip of these monopolies from the throats of the people. But some very good men, however, fear the power of patronage which government ownership would give the party in power. I do not fear it. That can be controlled by civil service laws. But even if government ownership should be a source of strength to the party in power, that party would have to be responsible to the people for a just, wise, and fair administration of this great public property in the interests of the people. Under corporate management, all of the power and influence of these great railway combinations, together with that of the men whom they control, is thrown into the balance in favor of this party or that party, according to whichever will secretly agree to serve them the best. They hold the balance of power in many of the States, and can elect the candidates of the party whose bosses will guarantee the greatest subserviency to their will. The party that obtains control by virtue of this influence is not held responsible to the people for the maladministration of these public highways, as they would be under government ownership. It is because these \$11,000,000,000 of railway capital, together with all the men which it controls, are in politics clear up to their armpits, and it is because this capital and these men are in politics for corrupt and selfish purposes, irrespective of the public welfare. That capital of \$11,000,000,000, together with all the capital of the trusts, is corrupting our public affairs and debauching our public men. That constitutes one of the most important reasons why the people should take the railways away from the corporations. The record of the last 25 years has demonstrated that the government must own and control them or else they will control the government.

In the oil regions of Pennsylvania there is left a set of men who have never bowed the knee to Baal, but have battled on continually for their rights as American citizens in the use of the railways of the country. It has been a long battle; some of them who buckled on the armor in 1872 have been claimed by the hand of death; some of them have gone down under the blandishments and money of the Standard Oil Company; many of them have become bankrupt and been reduced to servitude and even obliged to go to work for that great monopoly in order to obtain bread for their families; some of them, with a deep sense of the great wrong that has blighted all their hopes and darkened all their future lives, with a deep sense of the great wrong that has driven them from the highways of the country, and chained them to the rock helpless while that great monopoly robbed them, have been driven to the grave of a suicide and to the insane asylums; but there are enough left to keep the faith

and battle on for commercial liberty and equality. They have never faltered, but have battled as best they could with the means at their command. They first built the 26 pipe lines to which I have referred and then found it was railway discrimination. They then went to the courts, and when the courts failed them, they went to Congress for the inter-state commerce law. When the inter-state commerce law failed them, they attempted to hew a way for themselves by building a pipe line to the ocean where commerce is free, thinking, hoping, praying that somewhere beyond our borders they might find a government where the equal rights of man are maintained upon the highways. We have found it in the great Empire of Germany, where the government owns and controls the railways. The poorest man in Germany can ship a barrel of oil from one end of Germany to the other just as cheaply as the Standard Oil Company can. In Germany the independent oil producers and refiners of America are not only able to compete successfully with the Standard Oil Company, but in addition they are enabled to earn flattering profits upon their entire capital. Give us national ownership of the American railways, which will insure and perpetuate equal rights, and we will soon give the people of America their oil at competitive rates. The people of America will not then be obliged to pay 40 per cent dividends on Standard Oil Trust stock, at least 50 per cent water, because there will be plenty of capital ready to serve them at 6 per cent profit upon the actual amount invested. I take no stock in the idea that inordinately great capital produces cheaply; where monopoly begins there improvement ends; it is competition that drives men to economy, improvement, and invention; it is monopoly that demands great profits. While competition was putting refined oil into tank steamers for the competitive markets of Germany at two cents a gallon, monopoly, backed by railway favoritism, was forcing the people of Texas and Arkansas to pay 25 cents a gallon for the oil that they burned in their lamps. The attorneys of the Standard Oil Company, by a liberal use of the public press and a system of comparisons, have imposed upon the American people the thought that the Standard Oil Company has furnished them their oil cheaply. If the people have been served cheaply by this great monopoly what is the meaning of the \$500,000,000 which it has garnered? It is not the purpose of trusts to serve the people cheaply. It is their purpose to create monopoly and then force producers and consumers to pay dividends on billions of watered capital. Before the Sugar Trust had fully fastened its fangs upon us I bought good granulated sugar for my family use at \$3.90 a hundred. Today the Sugar Trust is forcing the American people to pay from \$5 to \$6 a hundred upon the same grade of sugar, a difference, I am told, of more than \$200,000,000 annually. Two hundred million dollars, produced by the American people, are by this process transferred from the pockets of the people to the coffers of the Sugar Trust; and then

Havemeyer says, "What are you going to do about it?"

How can this be prevented? First, by assuming control of the railways and guaranteeing to every man equal rates on the transportation of his products, and then by enacting a law forcing the great trusts and monopolistic combinations to fix a price upon their goods which, freights considered, will be the same in every township and hamlet of the land. When the price is changed at any point it must be changed everywhere. Make a violation of this law by the managers of corporations a State prison offense. Corporations are the creatures of the State; the State has created them and has the right to control them in such a way that they will not be detrimental to the public welfare. Such a law would prevent the trusts and combinations from putting up the price in one section of the country, where there is no competition, and forcing the people there to pay the cost of destroying competition in another section. Such a law would prevent the corporations from forcing the people to pay for a war of annihilation against growing competition. It would protect and encourage competition upon every hand and cure the evils which are upon us. Say to all of our people—mine, manufacture, produce—the product of your labor shall go to market at rates equal for all, and you shall be protected in fair competitive combat. Do this, and the great over-capitalizer and unweildy trust combinations will wither and go down before the energetic, intelligent, and active competitive capacity of the American people.

Q. (By Mr. Kennedy.) I gather from the statements which you have just made that you believe freight discrimination and favoritism to be the mother of all the great trusts of this country? A. I do, largely, yes; that is really the foundation; a trust must be protected in some way; the brains of the country are not in the heads of a few men. The protection which has created the Standard Oil Company, the Big Four Beef Combine, and trusts and monopolies of that class, is that of discrimination in freights.

(After a recess from 1 to 2 p. m. the examination of Mr. Lockwood continued.)

METHODS BY WHICH THE STANDARD OIL COMPANY SECURED CONTROL OF THE PIPE LINES.

Q. (By Mr. Jenks.) I understood you to say that there were quite a number of different pipe lines in the earlier days in Pennsylvania that were either forced to suspend operation or were bought up by the Standard Oil Company and united. How many pipe lines did you mention? A. I have a record of, I think, about twenty-six.

Q. Can you tell us the methods by which the Standard Oil Company secured control of the pipe line industry? A. Well, in those early days their policy was to go to the wells and bid more for the oil than anybody else could pay. For the last 15

years they have adopted a policy of paying what they call a premium on oil that is accessible to the competing pipe lines. When a new pipe line starts into a particular district then the oil of that district becomes very valuable, the Standard Oil Company will put a premium on it, say, of 20 or 30 cents a barrel. When they have finally succeeded in driving out or buying up the competing pipe line the oil is no longer any more valuable than other oil, and then they take the premium off. Let me give you an illustration: In 1887 the Craig, Elkins & Kimble Company built the Western and Atlantic Pipe Line. They made their first shipment of oil on October 11, 1887. At that time the Standard Oil Company was paying 69 cents a barrel for crude oil at the wells. The Western and Atlantic Pipe Line did not fairly get started in business until the spring of 1888; but by that time the exchange market for crude oil, under the growing competition, was 88 cents per barrel, and the white sand oils of Butler, Armstrong, Allegheny, and Washington counties, into which the Western and Atlantic Pipe Line ran, had become so valuable that the Standard Oil Company was paying a premium of 20 to 25 cents a barrel, which, added to the 88 cents, gave the producers of those counties \$1.08 and \$1.13 a barrel for their oil at the wells.

Refined oil was selling in August of that year for 7 $\frac{3}{8}$ cents a gallon, including the barrels, in New York City and export points. In November, 1889, the Standard Oil Company was paying us \$1.30 a barrel for oil at the wells, and refined oil was selling in New York for 7 $\frac{1}{2}$ cents a gallon. Competition was putting crude oil up to the producers and refined oil down to the consumer. I have a very vivid remembrance of this time, because I was opening up some territory on the Little Connequenessing creek, in the western part of Butler county, Pa., in what is known as the 100-foot rock. I had leased the Cable, Charley Young, Edward Young, Eyeholtz, and Hayes farms. I was getting some magnificent wells. One on the Eyeholtz farm started off at 125 barrels an hour. I had one well on the Charley Young farm that averaged 1,000 barrels a day for a long time. I think I drilled about 40 wells on this property. Competition was giving me all this oil was worth, as compared with what the consumer was paying for it, and I was getting rich. I was getting from \$1.10 to \$1.30 a barrel. About this time it became evident there was a 100-foot oil belt extending from the western part of Butler county down into the eastern part of Beaver county, Pa.

I worked night and day, and never stopped for anything, until I became interested in about three miles of this oil belt. Starting on the southwest I got the Fogle, Kaneff, Shrumm, Trautman, Allen, Passavant, Coker, Fankee, McCurdy, Eyeholtz, Getman, Eichenower, and Moyer farms. I was interested in 2 $\frac{1}{2}$ miles of this oil belt solid; I had it all. I thought I would make a million. I got some grand wells; one on the Trautman farm started off 1,200 barrels a day. About this time the Standard Oil Company gave the Elkins and Kimble crowd their price, and bought their pipe lines and re-

fineries. The very next day the premium came off from that oil. It was not any better than any other oil. As soon as there was no competing pipe line its superior qualities were gone, and from that day competition was gone. The price of oil gradually fell to 53 cents. They kept the market below 60 cents for one whole year. I did not sell a barrel of oil for one year above 60 cents. The average, I think, was about 56 cents. The next year I was obliged to sell all my oil at less than 70 cents a barrel, and below the cost of production. This condition continued for two years. The Standard Oil Company practically confiscated all of that magnificent property, and instead of having \$1,000,000, which I should have had, if I had been able to secure my share of the profit that was made on that oil, I absolutely had to mortgage my property to get money to pay my debts contracted for the tubing, casing, engines, boilers, rope, tools, and men. All the value of that immense property, that would have made any man a millionaire, was transferred to the coffers of the Standard Oil Company.

Q. (By Mr. Kennedy.) What did you say was the price per barrel when it started? A. \$1.30.

Q. And what was the price of refined oil? A. The price of refined oil at the time was 7 $\frac{3}{8}$ cents a gallon in New York City.

Q. The cost of refined did not go down at all compared with the cost of the crude? A. No; it did not. You can see from the dates I have just given that during the period of competition when that pipe line was in existence, the price of crude oil went up and that of refined oil went down, I think, a fraction of a cent. The history of that case is the history of the manipulation of the Standard Oil Company over and over again. If the oil producers are lucky enough to find and open up a great field the Standard puts the price down and practically confiscates the profits. Of course the Standard Oil Company's newspapers will be full of cock-and-bull stories about the increase of production and increase of stocks of oil, but the facts are, that during the year which I have described, when the price of crude oil was pulled down from \$1.30 to 53 cents a barrel, the entire increase would not have supplied the consumptive demand of the world for two and one-half months. All this talk about production and stock was a mere subterfuge to take from the producers the wealth they had created and transfer it to the coffers of the Standard Oil Company.

Q. (By Mr. Jenks.) Does that practically cover the explanation of the way in which the pipe lines were absorbed by the Standard Oil Company and the effects upon the producers?

Q. (By Mr. Phillips.) About 28 in number? A. Yes; I have a record here of the number and names of them, if it would be of any benefit.

Q. It is, perhaps, not worth while to name them here, if you can give us the reference to the book. [Book held by the witness.] A. Now, this is in a biographical book in which there is a speech delivered by myself on the free pipe line question 20 years ago.

DOES THE STANDARD OIL COMPANY AT PRESENT RECEIVE
FAVORS FROM THE RAILROADS.

Q. In your testimony this morning you gave a great many instances of special railroad rates that were secured by the Standard Oil Company a good many years ago, and showed how, in your judgment, by virtue of these special rates, the Standard Oil Company had been built up. You cited us also the authorities by which these statements could be verified. Have you any information or any proof that the Standard Oil Company is at the present time getting any special privileges from any of the railroads? A. The evidence in the Titusville and Oil City Independent cases goes to prove that.

Q. (By Mr. Jenks.) How long ago were these cases brought? A. They were brought in—

Q. (By Mr. Kennedy, interrupting.) Did you not say 1893 this morning? A. It was about then; they were along after the inter-state commerce law was enacted. The evidence all goes to prove that the railroad companies are manipulated in some way so that the Standard Oil Company gets an advantage, and the great fear among the independent producers and refiners is that, after they have gone on and extended their trade and spent money to build up stations in which to do business in any section of the country, by some scheme the railroad companies will put up the rate on them and shut them out of that district, just as they shut them out of the New England States in the case which I cited this morning. It is the fear of railway discrimination that paralyzes men.

Q. (By Mr. Jenks.) We have had some evidence offered tending to show that the Standard Oil Company is at the present time receiving special favors. Have you yourself anything of a definite nature to offer in that direction? A. No. I am an oil producer and I do not get in touch with the railroad people so much as the refinery men do. I have no doubt that they are getting a great advantage today and probably at the end of four or five years we will find out just what that advantage is. At the time when they were getting \$1.50 and sometimes more in rebates they persistently denied that they had any advantages, but ultimately the truth came out in some way and we saw then why it was that they were triumphing over the independent companies.

Q. Have you any information at the present time with reference to the freight rates on oil over the Canadian roads? A. No; I have no information on that subject.

Q. Did you not give us some instances this morning of very high rates which you had paid on some of the roads that run from Pittsburg to Union City? A. To Unity station.

Q. You showed that these rates were very much higher than the average rates throughout the country. Have you any proof of discrimination in rates between different persons or companies by those railroads? A. The road that extends to Unity is a coal road. It was built into that district to take out coal for, I think, the Buffalo and Cleveland

Coal and Gas Company. I was told, while operating in that district, that the rate of freight on coal to anybody outside of that company was so high that it was impossible for them to compete at all in the market at Buffalo and in Canada.

Q. Were the rates on coal different to members of the company from what they were to outsiders, or were the rates the same to all parties, the members of the company getting their profits simply from the high rates that put money into their pockets as railroad owners? A. I really do not know the inside workings of that coal road. All I know is that the men who own coal farms there can not ship their coal. They are powerless to do any business in competition with the coal combination.

Q. Of course that might have been true, even though the owners of the road were paying the same rates, because what they were paying out in one form they were possibly getting back in another. Have you any information to show that this railroad has been acting contrary to law in making discriminations? A. I imagine that on the class of freights which I ship everybody pays the same.

Q. Is there very much freight shipped over this road besides coal? A. There has been quite a development in the oil and gas business in the region, which has made that road necessary for shipping oil supplies and pipes.

Q. You speak of this railroad running from Pittsburg to Unity. Is it a small line or a large road? A. It is part of the Allegheny system, which is a branch of the Pennsylvania Railroad.

PIPE LINES OF THE INDEPENDENT COMPANIES.

Q. (By Mr. Kennedy.) Did you not say the independent companies had their own pipe lines to the seaboard? A. After the purchase by the Standard Oil Company of the Elkins, Kimble & Craig pipe line system, when oil got down so low that it meant bankruptcy and ruin to all of us, the independent oil producers went to work and tried to hew a way out for ourselves by building a pipe line through to the seaboard. The first movement was in building what was known as the Producers and Refiners Pipe Line Company, Limited. I think that was built into the McDonald field, with the expectation of piping oil to the railroads and then shipping it in cars to the independent refineries at Oil City and Titusville. As soon as that was completed and business began, a system of discrimination was set up against them in some way. I do not remember just how it was, but it resulted in the producers having to lay a line from the McDonald field, where the first line was started, through to Oil City and Titusville and the refineries. After they had done that the discrimination began against the refined oil again. As long as these refinery men were taking the inferior oil of the Standard Oil Company which had been in tanks until the finer parts had evaporated, there was not much discrimination against them, I understand, but after they

were able to get good fresh oil from the wells shipments of refined oil were blocked. Then we undertook to lay the seaboard line from Titusville to New York or Jersey City.

Q. Have you a line there? A. The line has been built down into New Jersey, but the railroads have blocked us. The managers bought a piece of land in fee simple that went under where the highway, a wagon road, passed. In the lower courts I believe we got a verdict in favor of our right to lay the line under there and transport oil, but they finally carried the case up to the supreme court in New Jersey, and after we had laid our line, I think, 60 miles further on, that court reversed the decision and forced us to stop. I do not know, but I think we are still putting oil through there, but it is subject to final decision of the court. The verdict was reversed by which we had the right.

Q. Does the line go to the seaboard? A. It goes down now from New Jersey over the Central Railroad.

Q. (By Mr. Phillips.) From what point? A. From the end of the pipe line, I think 80 or 90 miles; it may not be as far as that to the tanks at the seaboard. This line that the Producers and Refiners Company has built is a double line. They transport the refined oil from the refineries at Oil City, Bradford, and Titusville, through to the end of this pipe line, as they do the crude oil, and then it goes on board the cars to the seaboard. The refined oil is there put into steam tank vessels and sent to Germany, where the independent producers and refiners have built three large stations, each one of them, I think, capable of holding 70,000 barrels of oil. The crude oil is refined at the seaboard. In Germany there is no railway discrimination.

Q. What I wish to get at is whether the railroads now give the Standard Oil Company any advantage over you in getting oil to the seaboard; but I judge, by what you say, that, with the possible exception of the Jersey Central, no road can do it. A. No road except the Jersey Central Railroad has anything to do with our oil from the time it leaves the well until it gets to the seaboard.

Q. They cannot, then, give the Standard Oil Company any advantage over you? A. No, not on export oil; we are on even terms with the Standard Oil Company, with the exception, I think, of about 7 cents freight per barrel.

Q. (By Mr. Phillips.) It does not exceed 15? A. No, it does not exceed that.

SHIPPING REFINED OIL THROUGH PIPE LINES.

Q. A great deal has been said about the Standard Oil Company's methods of doing business. Were they ever able to, or did they ever, ship refined oil any distance through pipe lines? A. Not to my knowledge; they have always claimed that it could not be done; that it would injure the quality of the oil.

Q. What has been proved by this pipe line running through to New Jersey? A. It has been proved that it can be done successfully. You can

ship 110 fire test, which is export oil, and put through right behind it 150 fire test, and separate the oil at the end of the line without making a change of more than a barrel, which is within 20 or 30 feet of the column of oil.

Q. Is that an improvement by the independents over the Standard Oil Company's methods of handling oil? A. Certainly; very much.

Q. (By Mr. Kennedy.) Then the independent companies do have some advantage over the Standard Oil Company in getting their oil to the seaboard? A. In that connection.

Q. (By Mr. Phillips.) Does the Standard Oil Company refine a percentage of theirs at the seaboard after pumping it through in a crude state? A. Yes; I understand their export oil is nearly all refined at the seaboard.

PRICE OF OIL SHIPPED TO GERMANY.

Q. (By Mr. Jenks.) Did I understand you to say this morning that the independent refineries were supplying refined oil in Germany at two cents a gallon? A. In the contest for that trade the producers sent shiploads of oil to Germany at from $2\frac{1}{8}$ to $2\frac{1}{2}$ cents a gallon; one cargo of oil, I believe, was sent at one and nine-tenths cents a gallon.

Q. Was that for the purpose of starting the German trade? A. Yes; it was to get into the trade.

Q. They were then selling oil in Germany considerably cheaper than here? A. I think so; a good deal cheaper than it was sold to American people generally.

RELATIONS BETWEEN INTERSTATE COMMERCE COMMISSION AND THE STANDARD OIL COMPANY.

Q. Did I understand you to say that the independent oil producers were chiefly instrumental in starting the idea of the inter-state commerce law? A. Yes.

Q. And also that since the inter-state commerce law had been in force the Standard Oil Company, in particular, and the railroads, who were opposed to any restrictions upon their powers, had succeeded in your judgment, in defeating largely the purpose of the law? A. Yes.

Q. And in that connection, did you make the statement that the members of the Inter-State Commerce Commission have been threatened? A. Yes.

Q. In what way have they been threatened? A. That their powers would be tested.

Q. You do not mean, then, that the members of the Inter-State Commerce Commission had been personally threatened? A. Oh, no; they simply questioned their authority and threatened to test their powers.

Q. From the connection in which you used the expression I was not certain but that you meant to say that the members had been personally threatened. You meant simply that the Standard Oil Company and the railroads had asserted that they thought they could defeat the law? A. That the Com-

mission did not have the power to perform the duties required for it under the law.

Q. And they proposed to test that in the courts? A. Yes; in the courts. There was one case taken into the courts by the Commission. You remember the Cox case; that was eleven years ago, and it has not yet been finished.

THE PRESS SUBSIDIZED BY THE STANDARD OIL COMPANY.

Q. You made the statement also that the press had been subsidized by the Standard Oil Company. Have you any positive information of special cases in which the Standard Oil Company has subsidized the newspapers? A. Well, they have bought out the Oil City Derrick, and have hired Pat Boyle to run it. He runs it in their interest. I do not know just what the arrangements are, but the paper is conducted in the interest of the Standard Oil Company, and attacks the independent producers and their movements.

Q. (By Mr. Phillips.) Has there ever been any action brought against that paper for libel? A. Yes. I think that Senator Lee sued them for libel; they published some very damaging statements, and he brought suit against them. I think Senator Emery also brought suit against them for what they stated about him.

Q. Were either or both of these suits carried to a conclusion? A. I am not certain as to how those cases ended. My memory is that they were settled in some way, but I do not know just how.

Q. (By Mr. Jenks.) Have you any other specific cases in mind besides the Oil City Derrick? A. Well, the Titusville papers, particularly the Titusville Herald, seemed to be under their thumb, and the Pittsburg papers have now reached a point where they take all of the oil information that they publish from the Standard people. The Standard publish what they want to in the reports and in the daily papers.

Q. Your statement, then, means substantially this, that there are several papers in the section of the country in which you live that regularly make favorable reports with reference to the Standard Oil Company's methods and unfavorable reports with reference to the methods of those opposed to it? A. Yes.

Q. More particularly the Oil City Derrick? A. More particularly the Oil City Derrick.

Q. But you have no direct personal knowledge that the paper is owned by the Standard Oil Company, and your make assertions largely upon the nature of the material that is published by that paper? A. That is the source of the knowledge I have of the transaction.

Q. (By Mr. Phillips.) Has the Oil City Derrick generally been favorable or unfavorable to the independent movement? A. It is bitterly opposed to the independent movement and attacks the credit and reputation of the men who are exerting themselves for an outlet.

Q. Do you not remember the termination of their suit at Warren in regard to the libel case? A. Now, I am not sure as to that.

RAILWAY DISCRIMINATIONS RESUMED.

Q. (By Representative Bell.) Have you ever read Larrabee's book on railroads? A. Yes.

Q. What would you say as to the merits of it? A. Well, I think it is a full exposition of the railroad question in this country.

Q. Does he not develop the fact that as early as 1876 there was a tendency in the United States to interfere in political affairs? A. That is, a tendency of the Railroads to manipulate political parties?

Q. Yes. A. Yes.

Q. And to fill judicial positions with their sympathizers? A. Yes.

Q. Now, you spoke of the Standard Oil Company building up their trust through railroad discriminations. Was there any reason whatever at that time for creating the trust or anything that would enable them to build up the trust other than railroad discriminations? A. I do not think there was. The men who were refining oil were men of ability and business capacity. At least equal to the business capacity of the Standard Oil people, with the exception that the Standard Oil people recognized that it was a question of advantage in freight rates instead of a question of superior goods; that superior goods could not go over the railways unless the railways let them.

Q. They raised the price on crude oil from about 40 to 80 cents a barrel, and then if an independent company shipped a barrel of oil did they not take 40 cents of that and hand it over to the Southern Improvement Company? A. From 40 cents to \$1.10.

Q. And that had the effect of destroying not only the competitors, but of destroying the value of all the independent oil wells in the United States? A. Very largely.

Q. And the market fell off? A. Very much.

Q. And forced them out of business? A. In a great many cases.

Q. Have you given any attention to the coal fields of Pennsylvania? A. No; I have not, except in a general way.

Q. Is it a fact that the railroads of the United States refuse to let any private individuals operate a coal field? A. Yes; I know that to be the case in Allegheny county.

Q. They have an independent coal company, which is a kind of wheel within a wheel, gotten up among the railroad stockholders? A. Yes; and that company is the only one that can successfully ship coal over that special railroad.

Q. If they give you a rate, do you ever have any trouble in your country in getting cars? A. Why, in those early days and throughout the time of the independent refiners' struggle that was one of the principal ways in which the railroads discriminated in favor of the Standard Oil Company. They refused to give cars to men who had oil to ship. For instance, if a man wanted 20 or 30 cars, perhaps two or three days after he needed them one or two would come, and he would not be able to get his oil into the market at the time he expected.

Q. What have you seen in the way of discrimination against towns? Has anything of that kind come

under your observation? A. Well, not personally, but in the investigation of this question I have found that towns are built by railroads and that towns are practically destroyed by railroads as far as their commerce and industry are concerned.

Q. Is it the tendency of private ownership to create commercial centers, great centers? A. Yes.

Q. Like Chicago? A. And New York.

Q. Now, what, in your judgment, would be the effect of government ownership or government control that would require all railroads to carry freight for one man at the same price as they carry it for all others, the distribution of population being taken into consideration? A. I think that it would be especially beneficial. It would give individual enterprises that they do not dare to enter under the present system

Q. As I understand you, there is a timidity about building up enterprises in your part of the country for fear of discriminations in favor of some strong company and against the men that are starting new enterprises? A. Yes.

Q. These men are afraid to meet competition? A. Yes; the great, overshadowing fear that men have in the oil country in starting in to compete for the oil trade and the refining business is that the railways will design against them and shut them out of the markets; that is the trouble. If these was a guaranty that everybody would be treated equally by the railways, the men of the oil regions have the courage, the ability, and the resources to go in and do this business.

Q. Now, what has been the experience in your part of the country with regard to the individual farmer marketing his product and the elevator companies shipping the same product from the West? A. We do not have any elevator companies in our section.

Q. No; not in your section; I refer to the elevator companies in Chicago and the West. How does the freight rate from Chicago to New York correspond with that from Pennsylvania to New York? A. Well, from the information that I have gathered on investigation of the subject, the rate from Chicago to New York is sometimes much less than it is from Pittsburg to New York.

Q. That is, the elevator companies and the beef companies can reach the markets in New York for less than the individual farmer in Pennsylvania? A. Yes; I believe that.

Q. Is that a general principle now established with regard to the beef combines, the elevator combines, and all like combines? A. I think it is.

RELATIONS BETWEEN RAILROADS AND THE SOUTH IMPROVEMENT COMPANY RESUMED.

Q. (By Mr. Ratchford.) Did I understand you to say this morning that the South Improvement Company made a contract with the railroad companies in 1872? A. Yes; in 1872.

Q. Was that a contract to transport their product at certain prices? A. Yes; at certain prices; they raised the prices.

Q. Would you care to state those prices? A. I can-

not state the prices without referring to the testimony in those cases.

Q. (By Mr. Phillips.) Have you referred to where that testimony can be found? A. I have referred to the sworn testimony.

Q. (By Mr. Ratchford.) Can you state who composed this South Improvement Company? Was it composed of the independent producers and refiners? A. The South Improvement Company was composed of 13 men. Ten of them were afterwards the prime movers in the Standard Oil Company combine.

Q. It appears that the contract to which you refer was not carried out on the part of the railroad company? A. No; publicly it was not. I wish you would let me answer that. That contract was so abhorrent to every idea of American right that the men in the oil regions went into revolt. They would not stand it; they created such an excitement that the legislature took up the question and repealed the charter of the South Improvement Company.

Q. Did the producers bring action against the railroad company? A. There was a settlement of the difficulty at the time, in which the producers, or a committee of the producers, entered into a contract with the railroad company that henceforth there should be no discrimination for or against anybody; that everybody was to have equal rights. I have given the reference to that contract; it is on record.

Q. Is the South Improvement Company still in existence? A. The charter of the South Improvement Company was repealed by the Pennsylvania legislature in 1872, and the company, of course, went out of existence; but as you will note, by referring to my statement, everything that the railroad company contracted to do publicly for the South Improvement Company in 1872 they have since secretly and persistently done for the benefit of the Standard Oil Company. If the South Improvement Company had been allowed to go on, they would have reached a monopoly and controlled the oil business just exactly as the Standard Oil Company, enjoying the same advantages which the railroad companies had contracted to give the South Improvement Company, was afterwards able to do.

THE CASE OF MR. RICE RESUMED.

Q. In referring to the case of Mr. Rice, of Marietta, against the Standard Oil Company, did you say that the railroad companies increased the rate on Mr. Rice's product, charging him an exorbitant price? A. Yes.

Q. And that in doing so they paid a certain percentage of the amount received from Mr. Rice to the Standard Oil Company? A. That is right. Now let me answer that a little further. Rice got the crude oil for his refinery from the Maxburg field, which, I think, is something like 70 or 80 miles from Marietta. Rice had a pipe line and a car. He obtained a rate, I think, of 15 cents a barrel from the Lake road for his car, running it back and forth. He was extending his business, and the Standard Company got after that railroad and told those men that he had to be stopped. When the road went into the hands of a receiver, Daniel O'Day went to the receiver and threatened that unless they would carry the Standard oil for, I think,

10 cents a barrel and charge Rice 35 cents a barrel—I am not quite sure as to these amounts, but I can fix that—they would lay a pipe line and ship all their oil by pipe line to their refineries in Marietta. The evidence shows that the receiver made that arrangement, and out of the 35 cents that Rice paid he turned over 20 or 25 cents in rebates to the Standard Oil Company. It is in evidence; it is on record; it can all be seen.

Q. Do you believe that it was the result of a demand on the part of the Standard Oil Company? A. Yes.

Q. Following that question, now, a little further, have you not stated that the railroad company finally refused to ship Mr. Rice's oil at any price? A. Yes; that was afterwards. Rice extended his pipe line to the Muskingum River, I think, or some river that runs in there at Marietta, and got some flatboats. The refusal to give Rice any rate at all was when he attempted to get his oil into the southern markets.

Q. Do you believe that was also the result of the influence of the Standard Oil Company? A. I have no doubt of it in the world; not the least.

Q. Now, if the Standard Oil Company found it advantageous to get from the railroad company a certain percentage of the money paid by Mr. Rice for his shipment, how could it be advantageous for it to influence the railroad company to give Mr. Rice no transportation? A. The profit of this monopoly has been enormous. The \$500,000,000 which it is said they have accumulated is an immense amount of wealth, and they have gotten it by working the railroads to destroy all competitors so that they could force the consumer to pay a large price for their oil. The 25 cents rebate which they got on Rice's oil was only a drop in the bucket compared to the profits that they could obtain by shutting Rice out of the market and selling their oil in Rice's territory.

Q. I take it from that that the company obtained the best conditions they could and that when they could improve them they did so. Is that it? A. The Standard Oil people?

Q. Yes. A. They are always looking out for the Standard Oil.

Q. (By Mr. Kennedy.) Can you state approximately what per cent of the refined oil of this country is turned out by the independent companies? A. We calculate that they are handling about 4 per cent.

Q. Only 4 per cent? A. Only 4 per cent. You know it is an immense business.

Q. (By Mr. Phillips.) That is, taking the Ohio oil? A. The Ohio oil and the Pennsylvania oil and all the different grades.

Q. (By Mr. Kennedy.) Can you state what per cent of the oil you refine is sent into the German market? A. I am not one of the managers of that enterprise. I know that the larger percentage of the oil is exported.

Q. Then, I gather from your testimony that the business you do in this country is done at a loss, and that the companies are enabled to live and make a profit by the advantages they have in the German market; is that so? A. Yes; the independent producers and refiners went into the New York City market to supply the consumers, but the Standard immediately brought the price down there and they hold it down so that

there is no profit. I think I am not revealing any trade secrets when I say that the independents have lost money continuously in New York and Philadelphia in their attempt to supply those cities with oil; but the profit which they make in their export business, in their trade in Germany, in which they have an equal show all around, is sufficient to make up those losses and still show quite a favorable earning for the amount of capital invested.

STANDARD OIL COMPANY'S METHODS OF COMPETITION.

Q. (By Mr. Phillips.) How does the Standard meet competition at the different points in the country? Have you any specific knowledge of discrimination against the independent producers at any particular point or points? A. When the independent producers come into a district to sell refined oil the Standard brings the price of oil down in order to try and make them lose money. Another plan which the Standard Oil Company people—I always like to use that word "people" because it is such a hydra-headed concern that if you do not you may not hit the right thing—follow is to intimidate merchants and prevent them using or selling anybody's oil except their own. Of course, I have read of a good many instances of that kind, but I have in mind a special instance. In 1888 I was in the Panhandle of Texas, at Wichita Falls, and bought some land there from a gentleman by the name of W. W. White. He was quite a prominent merchant. He had a large store and fitted out the wagon trains that went over the plains. While I was there he told me of his experience in the oil business. He had been buying his oil from the Standard Oil Company, but one day a man came along with some specimens of oil that were very much finer than any he had been able to get, and the price being satisfactory, he purchased a carload of oil from him. After two or three weeks the car of oil arrived, and the next morning the Standard Oil Company's representative from Fort Worth appeared on the scene and challenged Mr. White's right to buy anybody's oil except theirs, and declared that they would not stand it. He finally threatened to establish a store and run White out of business if he insisted on selling any other oil than theirs. White was a conservative, close-fisted fellow, and, of course, the prospect of having to lose his business was sufficient; and it was settled and agreed that he could sell this car of oil if he would agree not to buy any more of it and to buy only from them.

THE STANDARD OIL COMPANY AS A PRODUCER OF OIL.

Q. Has not the Standard Oil Company become quite a large producer of oil? A. Yes.

Q. They own a very large percentage of the Ohio oil fields which produce what is called the Lima oil? A. Yes.

Q. Did they purchase that after the price of Lima oil had fallen to, say, 10, 15 or 20 cents? A. Yes.

Q. When they entered that field and purchased a large body of it, was it very cheap? A. Yes.

Q. And did they fix the prices? A. I remember that very well. When the first oil was struck in Ohio

the independent people, who were interested in it, went out and found a market for it for fuel and manufacturing purposes, and were enabled to get from 40 to 50 cents at the wells. That is what it would net them after they had paid the expenses of delivering it. Finally the Standard Oil Company reached out after this new field, and by manipulation of the railways they interfered with the independents and got control, and pulled the price of that oil down to 15 cents a barrel. They held it at 15 cents a barrel in Ohio until they broke the hearts of the producers, and then bought nearly the entire country upon that basis.

HOW THE PRICE OF OIL IS DETERMINED.

Q. Is the price of oil now determined by the exchange, or is it fixed absolutely by the Standard? A. I do not remember the date, but it is quite a number of years since Joseph Seep, the purchasing agent, gave notice that the price of oil upon the exchange would not be the price that they would pay for oil, and that they would fix the price for credit balances, that is, what the producer had and wanted to sell, at what the markets of the world would warrant. Since that time the Standard has fixed the price. Often there has been a wide divergence between the price of oil on the floor of the exchange and the price fixed by the Standard Oil Company for credit balances.

STANDARD'S METHOD OF PURCHASING OIL PROPERTY.

Q. You have explained about the reduction of the price of oil in Ohio. Has not the Standard bought a large amount of producing territory in Pennsylvania and Virginia fields, and were not those purchases made at an extremely low price as a rule? A. I think that their policy has been to depress the price of oil and to discourage men who had oil properties and who were loaded with debt until a point was reached where they could go to them and buy up their property. They bought a very large amount of property. It was just before the great rise which occurred after they had bought all the property they could.

Q. What was the date of that? A. I think it was 1896 or 1897. After they had bought all the property they could the market went up very high, as high, I think, as \$2.60, and prices remained high for quite a long period. Evidently they had in mind the idea of depressing prices and obtaining this property, but the law of supply and demand will ultimately make itself felt. For instance, the low point at which they had maintained the price of oil had impoverished the producers and stopped their development, and as a result of that long depression the stocks ran down in the storage tanks to 4,000,000 or 5,000,000 barrels. Then that movement in which they fixed a very extreme, fictitious price was begun for the purpose of getting everybody excited and getting producers out into the field to develop new territory and increase the supply of oil.

Q. And did that great advance shortly after the purchase of the territory aid them in paying for it? Did they not advance the price of refined oil also? A. Oh, very largely; very largely. I cannot give the

exact figures, but I have them here; I can give the commission the benefit of these figures.

Q. You think, then, that they assessed the world to pay for that property? A. Yes, two or three times over; yes, 40 times over.

Q. When they have bought out pipe lines they have, as a rule, depressed the price of oil? A. Always. I gave that, I am sure, to the commission.

Q. Upon whom would the payment for these pipe lines fall? A. Four or five times more than the amount would come from the producers. I gave the commission a statement as to how they pulled the price down from \$1.30 to 53 cents a barrel.

Q. Do you think, then, that when they buy a large amount of property they are enabled to assess the consumers not only in this country but abroad, to pay for it? Is it in their power to do that? A. They practically control the markets of the world and are working them to get all out of them they can.

Q. When they buy out a pipe line at a high price and depress the price of oil— A. (Interrupting.) The producer has to pay for that pipe line many times over.

Q. Has any member of the commission any further questions to ask? Have you any brief statement you wish to make? A. I have nothing further.

Testimony closed.

WASHINGTON, D. C., September 6, 1899.

TESTIMONY OF PATRICK C. BOYLE,

PROPRIETOR AND PUBLISHER OF THE OIL CITY DERRICK.

The commission met at 10:30 a. m., September 6, 1899. Vice Chairman Phillips presided and introduced Mr. Patrick C. Boyle, of Oil City, Pa., who, being duly sworn, testified regarding the oil industry.

THE OIL CITY DERRICK THE ORGAN OF OIL PRODUCERS.

Q. (By Mr. Phillips.) Please state to the commission your name and residence. A. Patrick C. Boyle, Oil City, Pa.

Q. What business are you engaged in? A. Just now I am an editor and publisher.

Q. Of what paper? A. The Oil City Derrick.

Q. You are the editor and publisher of that paper? A. And proprietor.

Q. Who are the owners and stockholders? A. Well, there are five stockholders. I own all of the stock but enough to qualify—all but four shares; there are four other stockholders owning one share each, enough to qualify them as directors.

Q. Are any of the Standard Oil Company interested at present, or have they been, in the Oil City Derrick? A. They are not now and have not been for very many years. I have been the proprietor of the paper for a great many years.

Q. Were they not the original purchasers of the paper before you came into possession of it? A. When I came into possession it was known as the Derrick

Publishing Company, and W. J. Young was manager; that was in 1885.

Q. Was W. J. Young managing it in the interests of the Standard Oil Company? A. Not as I understand it. He did not conduct it in the interests of any particular party, but employed editors, and they printed the news, as other papers did.

Q. Is it not publicly and fully known to be the organ of the Standard Oil Company? Is it not so considered throughout the whole oil field? A. It may be assumed to be the organ of the Standard Oil Company, but it is not. I am speaking of my personal connection with it. From 1879 to 1885 I knew very little about the paper, but up to 1879 and since 1885 it has not been the organ of any special party.

Q. Has there ever been any adverse criticism of the Standard Oil Company in the Derrick? A. Oh, unquestionably; any number of them.

Q. Within the last 10 years? A. Oh, I cannot recall any particular time. Within the last 10 years there has been no occasion for adverse criticism of the Standard Oil Company. There unquestionably would have been if there had been any occasion for it.

Q. Since you have been manager it has always been very friendly to the Standard Oil Company? A. I cannot say that. It is very friendly to the entire oil trade. As the Standard Oil Company is a part or division of that trade, it is friendly to that as well as the other interests.

Q. Has it not been adverse to all the independent movements that have been started since you have been manager and editor? A. No, sir.

Q. And especially to the independent pipe lines? A. Only to those involving an unnecessary outlay of money and a taxation of the producers. It has stood hand in glove with the producers except those who would impose a tax on them for useless service.

Q. Do you consider it imposing a tax on the producers for the refiners and producers to build a pipe line into a given field for their own benefit? A. So long as there was an efficient service already performed at the same cost I should consider it a hardship to have a duplicate.

Q. If you owned a refinery would you consider it a hardship on yourself and stockholders to lay a pipe line to gather oil from the fields? A. We have taken the position that the producer would not be benefited by the duplication of the pipe line, and in that position we have been sustained by the results. Most of the pipe lines erected 10 years ago have never paid a cent in dividends.

WHY THE WITNESS IS BEFORE THE COMMISSION.

Q. You may proceed in your own way to make a statement of whatever facts you have to the commission, but there is one question I will take the liberty to ask before you proceed. By whose solicitation did you come before this commission to give testimony? A. My own.

Q. Your own solicitation. Did you have any conversation with the principals of the Standard Oil Company before coming before this commission? A. None whatever, before or since. I should like to state in

way of explanation that it was the outrageous testimony which I had heard here by previous witnesses that impelled me to ask the privilege of coming before you as an observer and as a person in a position to know the facts and to make some statements concerning the oil industry.

EARLY HISTORY OF THE OIL INDUSTRY.

There was an oil business in existence before Drake drilled his experimental well in 1859. The manufacture of shale oil began about 1840 in France, 10 years later in England, and three years later in America. While America was perhaps the latest among the Anglo-Saxon races to embark in the new industry, it made up in enterprise what it lacked in precedence. With the discovery of petroleum in 1859 the coal oil industry of this country within a year or two practically ceased to exist, and plants constructed for the distillation of oil from shale were converted into refineries for the crude petroleum. By this means the refining industry was fully established, when petroleum appeared to claim the attention of commerce. The product, crude from the wells, found a ready market at remunerative prices. Petroleum was produced from gravel beds, salt wells and oil springs long before it was obtained by the artesian process, and a considerable commerce established by Kier, Badger, Ferris, Peterson, Lockhart and others when the Drake well came to increase the production. It was not at once used in the arts, but a demand was found for it among the apothecaries, and for many years it was known to the pharmacopœist as a liniment. Artesian borings were first applied in America by salt producers. At this point I should like to present petroleum in the original package. That is the way it appears. (Presenting small bottles of crude petroleum.) The first is from the Kiers well, and the second is from a well in Kentucky—from the American oil well on the Cumberland River. Prof. S. F. Peckham describes at some length in the Tenth Census reports the process employed by Colonel Ruffner, the pioneer salt-well driller, in 1808. Colonel Ruffner is given credit by this writer for having devised drilling tools not differing materially in form from those now in use. The jars, an essential implement in the oil well driller's outfit, are said to have been devised and first used by Colonel Ruffner, and every salt well borer since his time has laid claim to the use of this indispensable implement. As a matter of fact, drilling tools, substantially the same in form, were employed by the English coal hunters a hundred years before. This, however, does not detract in the least from the credit due to Colonel Ruffner and those who succeeded him with light tools, suspending from the end of a flexible pole, which rose and fell by hand power manually applied. Oil, often in very considerable quantity, was noticed in salt wells, in some of which the flow was so free as to interfere with the operation for brine. The demand for salt, about 1810 to 1814, along the western slope of the Alleghenies from New York to Alabama was so great as to excite adventure in many parts, and salt wells were bored simultaneously in widely separated localities on the Ohio, Monongahela, Allegheny, and Kanawha

rivers and their tributaries in large numbers, and with what might pass for spontaneous effort. Every district so explored has its traditions of oil discoveries, and, singular to say, the later oil developments in almost every instance have been faithfully outlined by the salt wells. In the absence of surface indications, at one time much in demand, all the earlier oil developments were conducted in the vicinity of salt districts, with the single exception of Oil Creek, and here it was found exuding from crevices in the rock or from gravel bed deposits. Rev. S. J. M. Eaton, one of the most intelligent observers among the early writers on oil topics, reports the first shipment of petroleum from the region of Oil Creek to consist of two five-gallon kegs, conveyed to Pittsburg on horseback by a Mr. Carey, one of the first settlers in Venango county. General Samuel Hays, another pioneer settler of Venango county, at a later period purchased the oil product of the county, 16 barrels in all, representing a year's production, which was conveyed to Pittsburg by raft and sold to apothecaries at a dollar a gallon. Previous to 1820 the production of oil from salt wells, added to a somewhat extensive dipping interest at various places in several States, had reached a very considerable amount; so large, indeed, that the supply seemed inexhaustible, and a writer in the Pittsburg Gazette in 1828 agitates the use of petroleum for street lighting purposes.

THE FIRST FLOWING OIL WELL.

The first flowing well anywhere was the famous American well, near Burkesville, on the Cumberland River, in Kentucky. It was drilled for brine in 1829, on the land of Mr. Lemuel Stockton, who passes into history as the first of his race to literally "set the river on fire."

Niles' Register (1829) says: "Some months since, in the act of boring for salt wells, in Cumberland county, Ky., a vein of pure oil was struck, from which it is almost incredible the quantity of the substance issued. The discharges were by floods, at intervals of from two to five minutes between each flow, vomiting forth many barrels of pure oil. These floods continued for three or four weeks, when they subsided to a constant stream, affording many thousand gallons per day."

Another writer says: "The oil found its way into the Cumberland River, was set on fire, and is said to have burned on the surface for a distance of 40 miles below." In 1833 Professor Silliman describes a visit to the oil springs near Cuba, N. Y., and the manner of collecting the oil from the surface of the water. Charles B. Tergo, in his *Geography of Pennsylvania*, 1843, describes the oil springs on Oil Creek, from each of which from two to ten barrels of oil were collected in the season by the proprietors. In 1845 petroleum obtained from Peterson's salt well, at Tarentum, was experimentally used as a lubricant at the Hope Cotton Factory, in Allegheny. Two years later, Thomas and Samuel M. Kier, deeming the oil more important than salt, set about to find a market for it. A description of his efforts in this direction is set forth in the *Derick Handbook*, pages 945 and 947. No one who is

familiar with the history of the petroleum industry can withhold from Kier the credit of being the first trader and one of the earliest manufacturers of mineral oil. His efforts in behalf of an infant industry merit more than passing notice, and his contribution to it should be perpetuated in permanent form by a grateful people.

ORGANIZED ATTEMPT TO PRODUCE PETROLEUM.

The first organized effort to produce petroleum appears to have been set on foot in 1853 by Jacob D. Angier, of Titusville. The first recorded lease, the one under which he operated, contained these stipulations, to wit:

"Agreed, this 4th day of July, A. D. 1853, with J. D. Angier, of Cherrytree township, Venango county, Pa., that he shall repair up and keep in good order the old oil spring on land in said Cherrytree township, or dig and make new springs, and the expense to be deducted out of the proceeds of the oil, and the balance, if any, to be equally divided, the one-half to J. D. Angier, the other half to Brewer, Watson & Co., for the full term of five years from this date, if profitable.

"BREWER, WATSON & Co.

"J. D. ANGIER."

The royalty or rental fixed in the above lease served as a model for the oil leases later on, and the terms were adopted to a very considerable extent during the earlier periods of development. Under this agreement Angier proceeded to dig ditches and pits, and in so doing frequently struck pockets of oil in the gravel a few feet below the surface. When the ditches were first opened from four to six gallons were collected per day from the surface of the water, but the labor required to keep the oil flowing consumed the entire profit, and after a few months the experiment was abandoned.

Angier appeared to have been unfortunate only in his location. A slight change of a very few rods north and westward would have brought him to the vicinity of what was subsequently known as the bonanza district, where, in 1877, oil springs were developed at a depth of 15 feet in a bed of gravel confined above and below by a casing of clay, impervious to water, from which, in the course of a very few months, thousands of barrels of oil were obtained.

The next organized effort to obtain oil from the springs was by George H. Bissell and Jonathan G. Eveleth, who in 1854 purchased 135 acres in Cherrytree township, Venango county, from Brewer, Watson & Co., upon which the subsequent experiments of Drake were conducted. Preliminary to the boring of the Drake well a lease, dated December 30, 1857, was effected by and between the Pennsylvania Rock Oil Company, and E. D. Bowditch and E. L. Drake, conveying the same land purchased by Bissell & Eveleth from Brewer, Watson & Co. As the first oil lease under which operations were actually conducted it is worthy of notice. The lease in substance makes acknowledgment of the payment of \$1 in hand, then is mentioned the demise and let of the lands, "owned or held under lease by the said company in the county of Venango, in the State of Pennsylvania, to bore, dig,

mine, search for, obtain oil, salt, coal, or other minerals existing in and upon said land, and to take and remove and sell such for the exclusive use and benefit, for the term of 15 years, with the privilege of renewal for the same term. Rental, one-eighth of all the oil collected from the springs in barrels furnished or paid for by lessors. The lessees may elect to purchase the said one-eighth royalty at 45 cents a gallon, but when such election be made it shall remain. On all other minerals, 10 per cent of the net profit. Lessees agree to prosecute operations as early in the spring of 1858 as the season will permit, and the failure to work the property for an unreasonable length of time or failure to pay rent for more than 60 days, the lease to be null and void." By agreement, February 12, 1858, the lease was amended so that 12 cents for every gallon of oil should be payment in full for all rental; the amendment also gave the lessees the privilege of renewal for 25 years.

SUCCESSFUL PRODUCTION IN THE OIL CREEK TERRITORY.

The experimental boring, begun in 1858, was not carried to a successful conclusion till the latter part of August, 1859. The excitement attending the success of Drake's experiment finds a parallel in the gold discoveries in California, to which it is second only in degree and importance. The fact that the oil could be obtained by artesian boring with so little labor and expense was sufficient to create a demand for territory in the vicinity and to inspire others to follow his example. During this and the year following wells were completed in various parts, embracing the entire length of Oil Creek, south of Titusville and extending to Franklin, below its mouth and Tidioute above. The produced oil did not go begging for a market; rather, buyers came begging for the oil. Colonel A. C. Ferris claims to have purchased the first thousand barrels produced from the Drake well, which he distributed among the New York refineries. The early writers, Gesner, Hodge, Redwood, Antisell and others, inform us that the art of refining coal oil had attained to an advanced stage before petroleum was commercially known. Both Gesner and Antisell published lists of patents covering almost every process of manufacture as practiced by the oil refiner of the present day, all known and many of them used prior to 1860. Steam was freely used in distillation and suggestions offered for various processes of continuous distillation. In 1860 Joshua Merrill took out letters patent for a process for "cracking" oil, which demonstrates that chemistry was abreast of the drill, in devising useful methods of manufacture.

TRANSPORTATION AND MEASURES OF OIL.

The one problem left unsolved was that of transportation. The oil district, then 30 miles distant from the nearest railway points, was dependent upon teams for an outlet. Oil was conveyed by wagons from Titusville to Union Mills (now Union City) and Erie, by raft and barge to Pittsburg, by way of Oil Creek and the Allegheny River. Oil refineries rose as if by magic throughout the region. Before the industry had closed

its first year there is said to have been upward of a dozen so-called refineries in Erie, 50 miles distant from the fields of production. One of the difficulties met at the outset was the scarcity of packages. The demand for barrels outgrew the supply, and any cask fit to retain fluid was impressed into the service of the oil producer. The unit of measure at the outset being the gallon, sales were made on that basis, therefore the size of the package was not a necessary condition to trade. But later on, when the barrel became the unit, discrepancy in the size of barrels became a matter of embarrassment to the producer. The resources of the seaport towns were drawn upon for coopers, and as a consequence men from the Eastern States were among the first to recognize the importance of establishing barrel works in the new oil fields. The whaling industry, at that time unprofitable, owing to the extended voyages and hardship of the chase, had a fully developed cooperage industry, and mechanics drawn from this trade found employment in the oil-producing country. The capacity of the barrel became a matter of comment among producers about the time of the advent of the whale oil men, who brought casks of enormous size with them, which in periods of surplus production were offered and accepted as ordinary barrels. Therefore the necessity for a uniform barrel was clearly apparent. As the result of these discussions, 40 gallons became the trade-customs barrel for crude oil, and this continued from 1860 to 1866, when representative producers got together and issued the following:

"Whereas, it is conceded by all producers of crude petroleum on Oil Creek that the present system of selling crude oil by barrel without regard to the size is injurious to the oil trade, alike to the buyer and seller, as buyers with the ordinary sized barrels cannot compete with those with large ones, we therefore mutually agree and bind ourselves that from this date we will sell no crude oil by barrel or package, but by the gallon only. An allowance of two gallons will be made on the gauge of each and every 40 gallons in favor of the buyer."

It will be seen that the barrel by resolution differs from the barrel by adoption only in the addition of two gallons for tare or waste. Later on, after the establishment of pipe lines, buyers began to demand 42 gallons net with the addition of two per cent for tare, which is the accepted barrel of to-day, although the construction placed upon the barrel by the government during the period of excise, April 1, 1865, to March, 1866, was "any vessel containing not more than 45 gallons and not less than 28 gallons." This amount was subject to a duty of \$1. The railroads, for transportation purposes, when bulk shipments began, constructed the barrel to be 45 gallons, and so it remains, but the barrel of commerce is 42 gallons.

NUMBER OF WELLS IN OIL CREEK REGION PREVIOUS TO
- 1869.

The development after the striking of the Drake well was necessarily slow, and its history is somewhat obscure. We can do no better than quote from the

Derrick's Handbook, page 788, in regard to this period:

"There is a great deal of uncertainty in the early records of field operations. No systematic effort at collecting the statistics of rigs, drilling wells and completed wells was made, except by spasmodic efforts now and then, until May, 1875, when the Derrick commenced to publish its regular monthly report of oil developments."

On November 21, 1860, the Venango Spectator published a report containing the names and location of 74 producing wells in the Venango oil region. These wells had a combined daily production of 1,165 barrels, and were distributed from the head of Oil Creek to its mouth and along the Allegheny from Tidioute to the Hoover well, three miles below Franklin. In this report the output of Drake No. 1 is given as 12 barrels, and No. 2 at 30 barrels a day.

A year and a half later, May 18, 1863, the Oil City Register made a careful estimate of the entire field and gave the results as follows: "Number of producing wells, 75; number of wells that had formerly flowed and pumped, 62; wells drilling, 358; total, 495."

On January 1, 1869, according to Cone & Johns, in Petrolia, there were 1,186 producing wells in the region. About 150 of these wells produced less than two barrels. There were 200 of which the production was less than five barrels a day. Of the entire number on the producing list, 724 were completed in 1868 and the remainder during the preceding years, as follows: 1867, 148; 1866, 92; 1865, 99; 1864, 46; 1863, 29; 1862, 20; 1861, 17; 1860, 10; 1859, 1.

The total number of wells drilled in the region from 1859 to 1869, as given by Henry E. Wrigley, in the Second Geological Survey, was 5,560. This would show that 4,374 wells had been completed and abandoned as dry or unprofitable during the first ten years of the industry.

Before the closing of Professor Wrigley's report the oil business had become firmly established and thoroughly systematized in all its departments.

FLOWING WELLS AND THEIR DISASTROUS EFFECTS.

At the close of 1869 fully 500 teams found employment in the transportation of oil from the wells and the movement of supplies, in addition to the flats and barges employed on the creek and river to the number of 100 or more. In 1861 flowing wells appeared to vex the producer and embarrass the trade. The first flowing well, which was also the scene of the first tragedy in connection with oil development, was struck in April by Little & Merrick, on the John Buchanan farm, Rouseville, three miles above the mouth of Oil Creek and 12 miles below the Drake well. The sight of a flowing well was so unusual as to attract many spectators, who crowded about the derrick to the number of some hundreds, and while they were looking on in amazement at the phenomenon before them, fire was communicated to the floating gas by a nearby boiler, when a terrific explosion occurred, and in the resulting fire 17 persons lost their lives, among them being the Hon. Henry R. Rouse, ex-member of the legislature and one of the leading spirits in the oil development.

In June following, the Funk well, about midway between the Rouseville and the Drake wells, began to flow, and in September of that year Phillips & Co. No. 2 on the Tarr farm, about midway between the two flowing wells, began to gush at the unheard rate of 4,000 barrels a day. In December the Woodford well, 400 feet from Tarr No. 2, was flowing at the rate of 3,000 barrels a day. The effect of the flowing wells upon the oil trade was little short of disastrous to the small producers, and for the time being were not a little embarrassing to the owners thereof. The scarcity of barrels and the absence of tankage made it extremely difficult to save the oil, but as fortune would have it, all these flowing wells were located on the bank of Oil Creek and the barges became available to store the surplus production. One of the effects of the enormous production was to smash the market, which, at the close of 1860, was not very strong, having declined from \$20 a barrel in January to \$2 in December. January, 1861, prices opened at \$1.75; the market continued to soften until the advent of the gushers, when it went off to nominally nothing, 5 and 10 cents a barrel being offered.

The condition of the trade at the close of 1861 was very much worse than it was at the beginning, and this period, owing to overproduction and the political disturbances due to the opening of the rebellion, was one of the worst known in the history of the business. One of the results of the flowing wells was to create a corner on the oil barrels, coopers refusing to sell except for cash, and the value of a barrel at this time expressed in terms of oil was 20 to 1.

CONDITION OF THE INDUSTRY IN 1862—CONSTRUCTION OF THE FIRST PIPE LINE.

Unremunerative prices checked production, and the spring of 1862 witnessed a gradual rise in the price of oil. The suspension of specie payment and the rapid advance in the price of gold caused a general advance in the values of all kinds of commodities. Petroleum was in good demand and better prices began to prevail. Oil at the wells rose from 10 cents a barrel in January to \$1 in June and \$2.50 in December. The most reliable estimate of the average for the year is \$1.05 per barrel.

The development work in 1862, while not large, was exceedingly important in the discovery of large wells. Operations for the most part were confined to the Upper Allegheny—that is, Tidioute, Oil and French creeks. Smith's Ferry, 100 miles in a bee line from the Drake well, marks the first important extension of the oil development. The cost of sending a barrel of oil to New York from the producing field in January of this year was \$7.45; the cost of delivering a barrel of oil in Pittsburg by steamboat, \$2; teaming from Oil Creek to Meadville, \$2.25. The producers, appreciating by this time the value of good resolutions, held a town meeting and resolved to sell no oil at less than \$4 per barrel.

A bill was this year introduced in the legislature for a pipe line from the upper oil farms to the mouth of the creek. A charter was granted under the title of

the Oil Creek Transportation Company to carry oil in pipes or tubes from any point on Oil Creek to the mouth or to any point on the Erie Railroad. No line was built.

In March of this year the first shut-in movement for the betterment of prices was inaugurated, owing to the stagnant condition of the trade. Stopcocks were turned on the wells, production ceased for a considerable period, and the movement was carried to a successful conclusion. Congress during this year imposed a tax of 10 cents per gallon on refined oil and proposed to tax crude oil 5 cents per barrel; but the producers, conscious of the power to be attained by uniting, held a town meeting in Titusville, where resolutions were adopted and Congress petitioned to lay a tax on refined oil only, and for the benefit of refiners recommended a drawback on all oil exported to foreign countries. Congress assenting, laid a tax of 10 cents a gallon on refined oil and absolved the producer from any levy whatever.

The first successful pipe line was constructed during this year by J. M. Barrows, to convey oil from the Densmore wells on the Tarr farm to his refinery, distant about 1,000 feet. This was the first pipe line, "correct in principle and successful in operation."

About the same time a pipe line two and one-half miles long was constructed from Tarr farm to the Humboldt refinery. Cast iron pipe with lead joints was used as a conduit. Great loss resulted from leakage at the joints. After an experiment of some months' duration, the loss from this source proving greater than the cost of transportation by team, the enterprise was abandoned, and no other attempt was made to solve the great problem of hydraulic engineering until Van Sickle's experiment, 2½ years later. Railways were extended into the region this year—the Oil Creek road south from Corry to Titusville and the Atlantic & Great Western eastward from Meadville to Franklin. By means of the latter the Cleveland refining interest received its first great impulse, since it was possible to receive oil by rail direct from the wells without trans-shipment, and the advantage thus derived gave them a trade position later on which was practically impregnable.

On the other hand, Samuel Downer, availing himself of the advantage of rail transportation, located an oil refinery, the largest of its day, at Corry, a point most admirably adapted because of the facilities afforded by two competing railroads.

DEVELOPMENTS IN 1863 AND TRANSPORTATION BY BOATS.

The production of the large wells had greatly declined and the total yield for 1863 was hardly one-half that at the beginning of 1862; developments throughout the year did not materially add to the production. The development work of the year was neither large nor important, though not entirely lacking in sensational features, as attested by the striking of the Noble and Delamater well on the Farel farm, Upper Oil Creek, which started with an initial production of 3,000 barrels, and maintained an average of 1,000 barrels per day throughout the year. This was followed in midsummer by the Maple Shade well on the Hyde

and Egbert farm, which started with an initial production of 1,000 barrels per day. During this year the pond fresh obtained its highest development. A conservative estimate of the number of boats plying on Oil Creek at this time would be 300, and upon the Allegheny River 700, making a total of 1,000 boats employed in transporting oil.

The pond fresh was unique in that it was an artificial flood, made by confining the water in several days, all of which were cut at a given time, letting out vast quantities of water and creating a boating stage that continued from two to three hours, during which hundreds of boats would float out with the tide and reach the Allegheny River. The pond fresh had its days, when water was comparatively plentiful, as many as two a week would be arranged when water was plentiful, but during the dry season it was generally limited to one—Friday usually being the day selected. It was not unusual for 20,000 to 60,000 barrels of oil to pass out of the creek upon one of these artificial freshets. If a source of convenience to the trade it was also a source of annoyance because of accidents occurring to boats and the consequent loss of oil. A careful writer has estimated that fully one-seventh of the oil produced was wasted by the oil freshets, leaky barrels, etc., which loss, as a rule, was incurred by the shipper. The pond freshet was a source of considerable expense to shippers and boatmen, and to meet the cost of creating the artificial rise a tax upon the boats or oil shipments was levied by an agent of the mill men who controlled the water. The method of collecting the tax, though somewhat simple, was exceedingly laborious, an agent passing along the creek from point to point making the collections before the boats started. It frequently occurred that when collections were difficult the fresh was delayed often as much as a day.

The fall of this year was exceedingly dry, and the mill men, taking advantage of it, raised the price of water upon shippers. The difficulty in making collections at this particular time caused the insertion of the following notice in the Oil City Register, October 29, 1863, signed, A. S. Dobbins, superintendent:

"A statement in regard to the cost of a pond fresh in dry weather, or when all the dams are needed, may be interesting to those who have to pay for them, and will serve to explain why 4 cents per barrel per pond-fresh tax is charged this season instead of 2 cents for the same purpose last season. I here give the cost of the dams and other necessary expenses of the pond fresh this year: Kingsland's dam, \$200; Pearson's dam, \$12; Stanton's, \$20; Childs, Benedict & Rouse's, \$20; Tallant's \$5; Newton's, \$20; Langworthy's, \$7; Tryan's, \$20; Lyttell's, \$10; Hide Creek, \$29; for superintendent's horse, expenses and hire of the two men to cut dams, one on each creek, \$40; thus making a total of \$383. All these dams cannot often be had, as their owners will not set them up for us. In dry weather Mr. Benedict will not cut his at any price, hence we cannot get the Rouse dam, which is right above it. In dry seasons a freshet cannot be had every week, and if the superintendent spends a week or two extra between freshets collecting along the creek, this must be added to the expense. So that in some cases a fresh actually costs \$400. The same dam which we

now pay Mr. Kingsland \$200 for cost us in the early part of last season but \$55, and at no time during the summer of 1862 over \$100. Other owners of dams have raised their prices, but not in the same proportion. The rise in the price of oil and the railroads at Titusville and Franklin have greatly diminished the amount of oil run out of Oil Creek. While the cost of a pond fresh is fully as much as last year, the amount of oil shipped is fully one-third less. During the prevalence of the smallpox and cholera scare it was impossible to collect the tax; and then many boats run through to Franklin without stopping, and they 'haven't stopped since.' This leaves us with a debt of nearly \$800 to commence the coming season."

Transportation by teams and boats received their first effective blow by the completion, that year, of the Atlantic & Great Western Railroad to Franklin, and the Oil Creek from Corry to Titusville.

CONDITION OF THE OIL PRODUCING INDUSTRY IN 1864.

During 1864 the Oil Creek developments were extended to Upper Cherry Run, and there was great excitement over oil in all parts of the country. It was the beginning of the era of oil stock companies and every part of the known oil region was purchased or leased by them. In July, 1864, the Reed & Criswell well, on the Reed lot, Cherry Run, was struck and flowed at from 280 to 300 barrels a day. A quarter of the land interest in this well was sold for \$280,000, and the first purchasers realized nearly \$1,000,000. Oil in July sold as high as \$13.75 per barrel. In this year the export trade began to assume large proportions, and the total shipments of refined oil abroad amounted to nearly three and one-half times as much as was sent abroad in 1863. Prices reached the highest point this year since 1859 and 1860 and have not been paralleled in the history of any succeeding year. Starting at \$4 per barrel in January, values rapidly appreciated until July, when some sales were made at \$14. There was afterwards a falling off which carried prices down to \$6.50 a barrel in October, but this was followed by another rally, and the year closed with oil bringing from \$10.50 to \$12.

In July, 1864, the Oil Creek Railroad was completed from Titusville to the Schaffer farm. There was an active demand for lands along the Clarion River, but the experimental wells were all failures.

COST OF DRILLING WELLS IN 1864.

Drilling extended to the hill slopes and hilltops during 1864, and the use of machinery for drilling purposes became more general. The cost of drilling a well to a depth of 600 feet at this time, as given by Eaton, page 125, is as follows:

Forty feet of metal pipe, at \$6 per foot.....	\$ 240
One engine, 10-horse power.....	1,600
Band wheel and belting.....	125
One set boring implements.....	325
Derrick, complete, bull wheel, etc.....	100
600 bushels of coal at 50 cents.....	300
Drilling, 600 feet, at \$2.50 per foot.....	1,500
600 feet of cable and sand-pump rope.....	100
<hr/>	
Total.....	\$4,290

SPECULATION AND AMOUNT OF CAPITAL INVESTED IN THE BUSINESS.

It is difficult for the average mind, unfamiliar with dealings in speculative interests, to appreciate the magnitude of the oil business at the time. The capital represented was greatly in excess of that necessary to produce the results attained on the side of production. Speculation had become such a prominent feature of the business that the most extravagant prices were offered and declined for desirable producing properties. The same is true of the refining branch of the business, which was so enormously remunerative, transportation alone being unaffected by the spirit of speculation. John W. Forney is authority for the statement, made by Governor Curtin at Titusville, on the occasion of a visit to the oil region this year, that "4,000 teams were employed in the transportation of oil and supplies in the oil fields, and that 1,000 boats, employing from 2,000 to 4,000 men and as many horses, found employment upon the creek and river."

The capital invested in teams and paraphernalia, reckoned at the prices ruling for this time, namely, \$600 per outfit, amount to the enormous sum of \$3,000,000. Adding to this \$3,000,000 for the 1,000,000 oil barrels required to handle the product, estimated at the ruling price of \$3 each, there would be a sum total of \$6,000,000 embarked in the single feature of transportation. In the above I have averaged the barges with their outfits as equaling in value the price of a team of horses and its outfit. The average production for the year did not greatly exceed 6,000 barrels a day, and had reached the full limit of the existing transportation facilities. That is to say, if production had increased at this time beyond the capacity of the teams and boats to haul the product to the market, oil would have backed up at the wells, gone into permanent storage or to waste. The capital engaged in transportation would have purchased the entire production of the region at \$1,000 a barrel, a sum greatly in excess of the cost of production. In other words, transportation had so fully kept pace with field developments that the cost of moving a barrel of oil to the river or railroads exceeded that of producing it.

IMPORTANT EXTENSIONS IN THE OIL FIELDS IN 1865.

This tax has to be deducted when figuring what was actually realized by the producers for their oil at the wells. Starting at \$10 a barrel in January, the lowest point, \$4, was reached in August. After that there was an advance to \$9.50 in October, but the year closed with oil at \$5 a barrel. The statisticians of the New York financial journals placed the average realized for oil in 1865 at \$4.27 in gold, and \$6.61 to \$7 in currency. At New York the average price for refined for the year was 87½ cents per gallon. The Columbia Oil Company realized \$6.65 per barrel for their product during the first half and \$5.87 for the latter half of the year 1865. Their average for the year was \$6.18. It is well to recall that these are quotations along Oil Creek, and that a tax of \$1 a barrel had to be paid from the producers' receipts. Oil at Pithole sold as low as

\$2.50 per barrel in August and \$4.50 to \$4.60 in December. It was not unusual previous to the establishment of pipe lines to find a difference of 50 per cent between the ruling prices on Oil Creek and those at the wells at Pithole, the difference being due to the cost of transportation.

IMPORTANT IMPROVEMENTS IN 1865.

In many respects 1865 stands forth as the red-letter year in the oil business. During this year casing was introduced, by which the life, so to speak, of an oil well was greatly prolonged, as well as its production materially increased, by permitting the free escape of gas in such manner that it could be utilized for fuel purposes in the production of steam. Tank cars appeared on the railroads, due to the inventive genius of the Densmores, admitting of bulk shipment for the first time by rail, and dispensing with the cumbersome barrel, which had proved both an incubus and an embarrassment to the trade. There were sundry improvements in drilling; a notable increase in the weight of the tools; the torpedo appeared as an aid to production, upon the appearance of which the crevice searcher, sand scraper, volcano burner, steam injectors and various other devices for increasing production disappeared. The cylinder gas pump came into limited use this year, displacing the rotary gas blowers and atmospheric injectors previously in use. The use of benzine as a dissolvent for paraffin was beginning to attract public notice. Careful observers estimate that in the five years ending 1870 a million barrels of benzine went into oil wells to dissolve paraffin, came out as crude oil, and was sold back to the refiners at an advance of 300 and 400 per cent on the original cost.

Shippers eventually were compelled to apply a gravity test upon all oils to protect themselves from the benzine habit, and for many years high gravity oils, now so much in demand, were not considered a good delivery at export points. I think the limit of gravity was placed at 48°. Oils above 48° were not a good delivery at export points.

The increase in the refining capacity during 1864-65 was a matter of very general comment throughout the region. Eaton estimates that there were 90 refineries in the oil region, with a crude capacity of 18,000 barrels a week, costing on an average \$10,000 each. The whole he roughly estimated at \$1,000,000 in value.

PROGRESS IN THE CONSTRUCTION OF PIPE LINES.

The successful pipe line was completed during this year, the Miller Farm line, using force pumps to deliver the product at a railroad point five miles distant. About the same time the Pennsylvania Tubing Transportation Company completed a gravity line from Pithole to Oleopolis, on the river. Both were successful and well patronized. The effect was to reduce the cost of delivering oil to shipping points from \$2 and \$3, according to the condition of the roads, to a uniform price of \$1 a barrel, the fixed price established by the pipe lines.

Within a year five lines centered in Pithole, competing for a business scarcely sufficient for one, namely, the Miller Farm Pipe Line, the Pennsylvania Tubing and Transportation Company (later known as the Rochester and Oleopolis Pipe Line), Pickett & Sherman's Titusville Pipe Line, John Warren & Bros.' Pipe Line to Henrys Bend, and Smiley & Coutant's gathering line about Pithole. When pipe lines were first established they did not reach out for the producers' wells, but established a tank at a fixed point, called a "dump," at which the producer was obliged to deliver his oil in barrels. Smiley & Coutant's line was the first to connect with the producers' wells and its function was limited to delivering the producers' oil to the dump tanks of the pipe lines. Later on they sold their gathering system to the Titusville Pipe Line and from that time forward the pipe lines were extended to the producers' tanks and gathered their oil on their own account. The tariff charged for gathering this oil by Smiley & Coutant was 25 cents a barrel, being slightly below the cost of delivery by team in barrels.

I want to call your attention especially to the following fact: It has been stated before you that piping the refined oil is a recent thing. During this year, 1865, refined oil was successfully transported by pipe lines a distance of three miles by John Warren & Brother from Osceola refinery, at Plummer, to McMahons Run, on the Allegheny river, near Oleopolis.

The following year Vandergrift & Forman's Pipe Line put in an appearance and made the sixth pipe line competing for business in the Pithole watershed.

Commenting upon the pipe line system, just then introduced, the Pithole Record, in its issue of October 16, modestly says: "One of the most wonderful of the many wonders produced at Pithole is the oil pipe running from the United States well to the Miller farm, on Oil Creek, a distance, on an air line, of about five miles. The pipe is two inches in diameter and lies most of the way on top of the ground. Three pumping engines are stationed along the route, forcing the oil through the pipe at the rate of about 80 barrels an hour, doing the work of about 300 teams working 10 hours a day. This machine can work all day and all night. This was considered experimental, but proved a decided success. The 6-inch pipe line laid from Pithole creek to the Island well, distant 7 miles, by the Pennsylvania Tubing Company, is likewise a success."

COST OF TRANSPORTATION IN 1865.

The cost of moving a barrel of oil from Pithole to New York in December, 1865, was \$5.55, to wit: Pipe transportation from Pithole to Miller farm, \$1; barreling, shipping, etc., at Miller farm, 25 cents; freight to Corry by the Oil Creek Railroad, 80 cents; freight from Corry to New York, \$3.50. Cost of delivering a barrel of oil to New York by the way of Pittsburg: Transportation charges by pipe from Pithole to the river, \$1; freight on river to Pittsburg,

\$1.50; wharfage, loading, etc., at Pittsburg, 25 cents; freight from Pittsburg to New York, \$2.44; total, \$4.59; difference in favor of Pittsburg route, 56 cents.

The price of moving a barrel of oil from any part of the region to the seaboard to-day is 50 cents or less, owing to the existence of pipe lines, the price for rail and pipe being the same since 1879. -

THE PRODUCTION AND PRICE OF OIL IN 1866.

The tax on crude oil was repealed in May, 1866, but it did not stay the downward tendency in prices. Production had been increasing under the impetus of higher values and the daily yield for the winter of 1866 was at least 12,000 barrels. By May this had largely declined, owing to the falling off in the output of the wells at Pithole, and prices again began to strengthen, but the collapse of numerous oil companies and the general scare over the bursting of the great oil bubble exercised a depressing influence. The Columbia Oil Company's statement (we have a good deal to say about that company, because it is the only company that has been in existence constantly from the beginning of the oil business to the present time; their prices were given at stated periods and they were producing continuously from 1861 to 1890) shows sales at \$1.65 to \$5, and an average price of \$3.78 per barrel for the year. Another good strike was made at Brady's Bend this year, promising the opening up of new territory in that section.

RAILWAY TRANSPORTATION AND BANK FAILURES.

Railways were now in general operation throughout Venango county, and the beginning of increased shipments of oil by rail is to be noted. The railroads and the pipe lines eventually superseded the water transportation of petroleum down the Allegheny River. At the beginning of this year the Oil City & Pithole Railroad was ready to carry freight from Pithole to Oleopolis. The failure of the banking house of Culver, Penn & Co., the prime movers of which were interested in financial institutions throughout the oil country, caused great excitement and the closing of several of the smaller banks. Among them were the Petroleum Bank, Venango County Bank, Crawford County Bank, and Cotton & Co.'s Bank, located at Oil City, Meadville, Titusville and Petroleum Center.

Q. (By Mr. Phillips.) Were these banks all under the control of Culver, Penn & Co.? A. They were supposed to be under the control of Culver, Penn & Co.

Q. They, therefore, did not affect other banks so as to cause failures? A. But Culver, Penn & Co. were so closely identified with the oil interest at this time that it seemed to affect it at every point.

LOSS OF OIL BY FIRE—INCENDIARY.

In April, 1866, the oil tanks of Henry Harley & Co., at Shaffer, which received the oil from Benninghoff Run, two miles distant by pipe line, were set on fire by an incendiary mob, composed, it is said, of teamsters, who had been thrown out of work by the con-

struction of this and other pipe lines. Four Oil Creek Railroad cars, with two tanks on each, together with pipes, platforms and about 1,000 barrels of oil, were burned. In July, 1866, the Titusville Pipe Company perfected arrangements whereby oil shippers could have their product shipped direct to New York by the Empire Line, the pipe line lading bill answering for the entire distance. The effect of that innovation by the Empire Line, 1866, was to make one rate on the oil from the well to the seaboard or refinery, a matter which caused a great deal of discussion later on between the shippers, producers and railroads. The Oil City Register estimated that the loss of oil by fire during the first six months of 1866 amounted to 70,000 barrels. The Warren and Franklin Railroad was completed to Oleopolis, where it connected with the Oil City and Pithole Railroad. It was noted that Professor Hamar, in July, 1866, successfully exploded a torpedo in a well on the Tarr farm, which is reported to have brought the well up from nothing to 300 barrels.

CONDITION OF THE INDUSTRY IN 1867.

The year 1867 proved another one of low prices and general depression owing to overproduction. Dennis Run and Triumph Hill, near Tidioute, with Shamburg and Scrub Grass, were added to the producing area this year. The advent of railroads and the established success of the pipe line system had greatly improved the methods and lessened the cost of oil transportation. Pipe charges from Benninghoff Run to Shaffer were 50 cents per barrel; Pithole to Titusville, 50 cents; Bull Run to the Miller farm, 45 cents.

West Virginia had assumed some prominence as an oil field, and the daily production of the various fields was reported in January as follows: Burning Springs, 500 barrels; White Oak, 200 barrels; Sand Hill and Horse Neck, 100 barrels; lubricating oil district, 100 barrels a day.

Q. The first production was at Burning Springs, on the Little Kanawha, and was for many years confined to that region? A. The first was at Burning Springs; that is, the first actual operations were there; but almost contemporary were the operations on Duck creek in Ohio.

Q. But both these fields ceased to be any factor? A. They ceased to be any factor from 1861 to 1867. In 1867 there was an increase. They came into prominence then through the operations in the vicinity of Newells run and Cow run in Ohio. The production had not entirely ceased at any time on Duck creek.

In March, John Ponton published his much-abused pamphlet on the Crisis in the Oil Region, in which he figured the stock of oil in the United States on March 10 to be 386,105 barrels; in Europe, 325,000 barrels; a total of 711,105 barrels. He figured the foreign and home consumption of oil during 1866 at 8,577 barrels per day, and declared that it would require a net daily production of 11,237 barrels to supply the probable demand of the year. The production he placed at about 6,000 barrels a day, showing a deficit of over 5,000 barrels.

At an estimated value of \$2 a barrel for crude oil for that period Ponton proceeded to demonstrate by figures that the production of oil was a losing business. He went into figures showing the cost of producing or lifting oil by gas on an estimated value of \$3,500 a well, and was able to show a profit of \$504 by the use of gas that cost nothing; by the use of coal, at 50 cents a bushel, he was able to show a loss of over \$1,500 to the producer at existing prices; with wood fuel, at a cost of \$10 a cord, there was a loss of upward of \$1,000.

HIGH COST OF FUEL IN THE OIL REGION.

Q. Will you state why fuel was so high at that time? From where was the coal supplied? A. The high cost of fuel was owing in very great part to the difficulties in teaming. Coal was procured from various places.

Q. But largely from Pittsburg? A. Largely, and from points on the Allegheny river.

Q. There was no coal produced in the immediate oil field? A. Not on Oil Creek; the nearest coal to Oil Creek was at the Cranberry mines, four miles south of Oil City and substantially twenty miles south of the Drake well.

Q. A very large number of people think that coal and oil have some connection; I bought it up for that reason; there is no coal overlying the original oil fields? A. There is no coal overlying the original oil fields, but, with the completion of the Jamestown road, the coal was brought in from the Jamestown fields at a very much less cost.

PROFIT AND LOSS IN THE PRODUCTION OF OIL.

I will read an extract from John Ponton's A Crisis in the Oil Region, 1867:

"The cost of sinking wells at the present time is less by from \$2,000 to \$3,000 than it used to be when new engines and machinery had to be bought and labor was more expensive. With second-hand machinery the average cost of sinking a well is \$3,500; very rare instances occur where men have been fortunate enough to put down their wells for \$2,500, while in other cases it has cost \$6,000. We will, therefore, take \$3,500 as the average. From accurate statistical information it has been ascertained that upward of 50 per cent of all the wells that have been sunk in the region have produced no oil; this is an actual loss of capital to the extent of \$350,000 in every hundred, and the hundreds of wells yearly put down will give an idea of the exhaustion of the life principle of the region. Of the producing wells, 14 per cent are under five barrels, and three-fourths of the oil is obtained from wells under thirty barrels per day. What is meant by a 30-barrel well is one which produces 210 barrels per week. This class of wells sometimes pump 40, 50, and even 60 barrels when running, but as they are constantly breaking down they average only 30 barrels per day.

"About 50 per cent of this class of wells use, in

some cases partially, in others totally, gas for fuel; the other 50 per cent use wood and coal. In nearly every instance one-half the oil goes to pay the land interest; this reduces the supply to 15 barrels per day. Now the average life of wells does not exceed six months, and we shall see whether or not it is a paying business.

"The average daily cost of running a 30-barrel well by gas, coal, and wood, is as follows:

BY GAS.

Two engineers, at \$3.....	\$6.00
Waste oil and repairs.....	2.00
	<hr/>
	8.00
	<hr/>
By 15 barrels of oil at \$2.....	30.00
Deduct expenses.....	8.00
	<hr/>
Surplus to pay back capital.....	22.00
	<hr/>
\$22 per day for 182 days or 6 months.....	4,004.00
Original capital invested.....	3,500.00
	<hr/>
Profit	504.00

BY COAL.

Two engineers, at \$3.....	6.00
Waste oil and repairs.....	2.00
Seven-eighths ton coal, at \$12 delivered...	10.50
	<hr/>
	18.50
	<hr/>
By 15 barrels oil, at \$2.....	30.00

Surplus to pay back capital.....	13.50
	<hr/>
Original capital invested.....	3,500.00
\$13.50 per day for 182 days, or 6 months...	2,457.00
	<hr/>
Loss	1,043.00

"These figures clearly prove that the present low price of oil has a direct tendency to destroy the entire oil production of the territory, and not only is the capital of the country becoming rapidly exhausted, but, owing to the reckless speculation in lands in the years 1864 and 1865, hereby it is supposed over \$100,000,000 were withdrawn from other

useful occupations in the United States and lost, it has become a practical impossibility to induce capital to return to the region for the purpose of development. The class of men who have during the past year been instrumental in developing the territory were not men of capital. One would put in his labor, another supply an engine, a third build the derrick, a fourth supply the tools, a fifth the fuel, etc., dividing the proceeds into shares or interests. It is almost unnecessary to state that the bitter experience of the past few months has made them sadder and wiser men. In fact this process of development has become almost extinct. The development of the territory is now left to those parties who have been successful in making large strikes, and to land interest.

"It is a very significant fact that the chances of striking large wells are becoming less, in a ratio that is, to say the least, truly alarming. The 1,200 and 1,400 barrel wells of 1865 were replaced by 300 and 400 barrels in 1866; and at the present time a man who strikes a 100 or 200 barrel well may be considered to have realized the extreme of success. If this diminution takes place in the future in the same ratio, a 30 or 40 barrel well will be considered at the close of this year as much the extreme of success as a 200-barrel well is today, and those parties upon whom we now depend for development will, if they do not receive a proportionately remunerative price for their oil, become actually ruined with those upon whom we depended for the production of last year.

"Our philosophers will look wise and say that the law of supply and demand will regulate itself, which is certainly not true in this case; but, even supposing it to be so, if the law of supply and demand takes so long to regulate itself that before that much-to-be-desired end is accomplished we must ruin our capitalists, reduce our mechanics to the brink of starvation, and deplete the territory of its inhabitants, it is high time that we take the supply into our own keeping and give it only to those who are willing to pay a remunerative price for the same."

In this connection I will say that this refers to 1868, but, owing to the general improvements in the means of transportation and the decline in prices of oil machinery and the uniform success in drilling operations, that year proved highly prosperous to all concerned. Large casing was introduced for drilling operations during the year, and to some extent in the year previous; it enabled the driller to have a dry well clear to the bottom, and water could enter it to no very considerable extent.

Q. Will you state what the casing was put in for? A. It was use to exclude fresh water; it was put in at what would be considered the lowest point of fresh water supply—the mountain sand as we call it. That was the point below which no fresh water was found, and salt water was not considered so detrimental to the wells and no provision was made against it. The casing was used to control the water.

CONDITION OF THE INDUSTRY IN 1868—REPEAL OF THE
WAR TAX.

The Armstrong and Clarion fields began to attract the attention of oil operators, but the greater part of the oil developments during 1868 were confined to the older sections of the region. The improved methods of transportation were gradually placing the industry on an entirely new basis. In January the Titusville Herald estimated the production of the region at 11,035 barrels a day, with 182 wells drilling. On February 3, a convention of Oil Creek oil refiners was held at Petroleum Center and resolutions passed demanding that the tax on refined oil be repealed. The production was greatly in excess of the demand, and the price had consequently declined below the cost of placing the refined product on the market. On July 1 the production for the month of June was reported at 11,229 barrels a day, with 200 wells drilling. On July 16, 1868, Congress passed a bill exempting petroleum and its products from taxation. Refined oil at this time was subject to a tax of 20 cents a gallon.

Q. What was the tax on crude oil levied by the government? A. One dollar a barrel, and it existed practically a year.

Q. That tax ruined quite a large number of small producers, did it not, who were not able to pay such a tax? A. The government war tax on crude petroleum of \$1 a barrel, which remained about one year, worked very unequally, because small producers could not afford to pay it, whereas if a man struck a very large well, 500 or upward, he could afford to pay it. A large number of farms that were only capable of producing from 10 to 25 barrels a day could not be operated, whereas farms adjoining them having a larger producing capacity would drain the other farms. It operated very unequally? A. My answer to that would be that the period of taxation on the oil was three or nearly four years, but it was repealed on the refined. There certainly were a great many failures in that period, but coexistent with them was the bursting of the oil bubbles—a great number of companies that started at that time. There was so much disaster that it is difficult to tell what was the cause of it. I can not say that I know of any producing well which was ever stopped on account of the tax; but my knowledge extends to hearsay only, as my experience does not extend back that far. I went to the oil country the year the tax was repealed on crude oil.

Q. (By Representative Livingston.) Why was the tax levied? A. It was an excise war tax.

Q. What is the tax on oil now? A. There is no tax.

Q. Why not? A. That is beyond my knowledge. There is no tax on any manufactured products except whisky and cigars and tobacco of which I know.

Q. If you should levy a small tax on oil would it not be a good source of revenue? A. It would be

a source of revenue, but it would be bad for the oil interests.

Q. Would it be good for the people who burn it? A. It would be bad for the consumer; the price would follow. The subject of levying a tax on oil was pretty thoroughly discussed in Congress.

COST OF FUEL IN OIL REGION RESUMED.

Q. (By Mr. Ratchford.) In one of the papers you read it is stated, I believe, that coal delivered was \$12 a ton for a certain time. What date was that? A. The figures, as stated, I read from Ponton's Crisis in the Oil Regions, 1867.

Q. Are you prepared to state what the cost of crude oil was at that time? A. I have just read that, by pipe line at that period, the cost from Benninghoff run to the Shaffer farm, a distance of two miles, was 50 cents a barrel. From Pithole to Titusville, a distance of ten miles, the rate was the same.

Q. Now, I should like a comparison between the cost of coal, oil, and transportation at that period and their cost at present. What is the cost of coal today? A. There is no consumption of coal in that region today for the purpose then used. They use gas engines. There is oil produced in the same locality, but there is no consumption of coal except to a very limited extent.

Q. What does it cost where it is used? A. About \$2 a ton delivered at the wells.

Q. A reduction of \$10 as compared with the other period. What is the cost of oil per barrel? A. About \$1.37.

Q. Does not that show that the reduction in the price of oil has not equaled the reduction in the price of coal? A. If the commission will indulge me, I should like to answer by a little explanation. At the time to which you refer, 1867, coal at the mines did not exceed \$2 a ton and the difference was made up in transportation. There were a great many transfers to the boats and each transfer added cost and the teamsters charged enormous prices for hauling a little coal. A load of coal might be anywhere from 500 to 800 pounds, or three loads to the ton, and they charged \$2 to \$2.50 a load. I am speaking of conditions that would make the rate that I am quoting a writer of that day, a man that has a considerable reputation as a statistician. He was a newspaper editor at the time. I am giving his figures.

Q. I asked these questions because it is claimed by the friends of the oil producers, particularly the Standard Oil Company, that the reason for the existence of the trust is that the prices of their products have been reduced much more than the prices of other products. When you spoke of coal I supposed you spoke of soft coal. There has been no trust in soft coal, excepting one formed within a week or two past. There was none at that time. The figures you have quoted show that there has been a very much larger reduction in coal than oil. A. I should say that the comparison is rather unfair, for you take oil at the point of production and coal

at the point of delivery, where it has acquired cost by every movement. Let us reverse the case, and take oil at the seaboard; take the price of oil at the seaboard at that time.

Q. Take them both at the point of production. I believe the same conclusion would hold good. What would it cost to ship a ton of that coal from the initial point? A. It depends on the initial point.

Q. In the vicinity of Pittsburg? A. It would have cost more than one-half of the \$12, at least, to get it there. I am not competent to state the price of coal, and I am not defending this gentleman's figures. We are speaking of the conditions of the time in the mind of the man who did the writing.

PRICES OF CRUDE OIL AT THE SEABOARD IN 1867 AND AT PRESENT.

Q. (By Mr. Smyth.) I should be glad to know as to the comparative cost of oil delivered at the seaboard today and in 1867, and the cost of coal delivered at the seaboard today and in 1867. A. In 1865 and 1867 existing conditions were very much the same, with this difference, that crude oil was higher. The price of coal remained about the same between 1865 and 1867, but in 1865 the statistics show that the cost of crude oil at the seaboard was 37 cents a gallon.

Q. What is the price of crude oil delivered today? A. \$1.37 or \$1.40.

Q. Per gallon? A. Per barrel.

Q. Can you give us the gallon price today, so as to make a comparison? A. It is somewhere in the vicinity of 5 cents a gallon.

Q. Then the reduction has been from 37 cents to 5 cents. Can you tell us about coal? A. I do not know anything about that.

Q. (By Mr. Ratchford.) Was that 37 cents the normal price of the period of which you speak? A. I can not tell you as to that.

Q. I asked the question because you stated in one of your papers that oil fluctuated from 10 cents to \$2.50 a barrel at the well. A. From 10 cents to \$1.75.

Q. I understand you to say \$2.50. It seems the price of oil has taken some rapid jumps up and down. A. We are now discussing a period in the oil business when it was controlled entirely by speculation. The business had hardly gotten down to a stable basis and the value necessarily changed rapidly in those days.

Q. (By Mr. Farquhar.) In the statement you were reading from, were the prices conditioned on speculation entirely, on production, or on transportation; that is, the fluctuation from 10 cents to \$1.75? A. I think they were conditioned on all three, but mostly on transportation—the difficulties of getting the oil to market.

Q. (By Mr. Phillips.) Was not the fluctuation from 10 cents to \$1.75 caused by striking a large number of flowing wells? A. Overproduction. We had never had a consumption equal to over 1,200

barrels a day up to that time. The consumption was 1,200 barrels a day, and a constant outflow of 7,000 or 8,000 barrels a day caused depression.

Q. (By Mr. Farquhar.) Overproduction at that period—it is not possible to account for it by a combination of producers? A. Oh, no; not at all.

THE PRODUCTION OF OIL IN 1869.

For 10 years up to 1869 the amount of oil produced was about 25,700,000 barrels. Butler, Armstrong, and Clarion counties, and Church run, near Titusville proved the most active centers of oil development during that year. Small extensions in the producing territories at Rouseville and Cherry Run were made and there was some excitement over a few large strikes on West Pithole creek. On January 30, 1869, the Pittsburg Commercial Gazette reported 68 refineries in operation in Pittsburg, and stated that the petroleum trade of the city amounted to \$13,000,000 per year. On February 12 a meeting of oil producers was held at Titusville and the Petroleum Producers' Association of Pennsylvania organized (being the first association of producers), with George K. Anderson, president, and F. W. Andrews, vice president. This association was called into existence to take cognizance of the statistics of the region, for the better protection of the trade. The shippers and buyers of that day had begun to influence the speculative market by reports and by bulling and bearing it to their advantage. The purpose of this association was to gather statistics and to inquire into the general condition of the trade for the betterment of the producers, and from what I know of it I say now it was necessary. On March 11 it was reported that the Vera and Blake well, Petroleum Center, which was opened September 22, 1868, had sold, up to date, 22,699 barrels of oil, for which the owners had received \$98,500. July 1, 1869, work was begun on the extension of the Jamestown and Franklin Railroad, from Franklin to Oil City, contracts being let for the entire distance, including the tunnel at Oil City.

Q. (By Mr. Jenks.) Was the producers' association distinct from the refiners? A. Yes; it was distinct from the refiners' association.

Q. (By Mr. Phillips.) It was not a chartered company? A. No; it was not a chartered company at that time, but it led into other associations and agencies by which stock was issued.

PRICES OF PETROLEUM IN 1869 AND 1870.

At the close of 1869 the New York Daily Bulletin said: "The price of petroleum ruled higher during 1869 than during any of the three previous years, and those engaged in the production of oil have received larger profits in comparison with the capital employed than during any previous year. The profits of the refiners and dealers have been fair, but very much less than those of the class first mentioned. Speculation has been pursued on a colossal scale, and prices underwent great and vio-

lent fluctuations. But notwithstanding this the year closed with a much smaller volume of failures than usual, and on the whole was singularly exempt from any serious financial disasters."

Values showed a downward tendency in 1870, and the market steadily declined from the prices established during 1869. The extreme range was from \$4.90 per barrel in January to \$2.75 in August. The year 1870 closed with petroleum at from \$3.30 to \$3.50 per barrel.

That decline may be accounted for in a great measure by the hostilities between Germany and France, for the closing of their ports against us operated seriously with the oil business of this country.

In January, 1870, the first well drilled on the bluffs on the Robinson farm, at Parkers Landing, started at 40 barrels a day. In February a petroleum association was formed by Cleveland refiners for the purpose of protecting the refining interests of that city.

Q. (By Mr. Jenks.) In February of what year was this refiners' association made? A. 1870; refiners' associations were very prolific in those days; they were found wherever the refiners were, exactly as the producers were associated.

The year 1870 was a very important year in many respects, because of the striking of the well at Brady's Bend; that developed fourth-sand territory. The finding of a flowing well in that country rather agitated the trade and stimulated things. Large and important developments were made at West Hickory. Coming all at the same time, these new developments created a very serious situation.

Q. (By Mr. Smyth.) What was the percentage of increase just at this time from the flowing wells? A. I can not state the percentage, but it was very large.

Q. You said a little while ago the consumption of the world was twelve hundred barrels a day? A. I was speaking then of the overproduction in 1861, which was caused by large flowing wells.

PRODUCTION AND PIPE LINES IN 1870.

Q. What period are you now speaking of? A. 1870, or a year later. Parkers Landing at that time assumed very formidable proportions. There were at least twelve to fifteen separate, individual pipe lines; and there was one, named the Mutual Pipe Line, just reaching the Karns Pipe Line, organized that year or the year before, which began buying oil on the same terms as the other lines. At this time the other pipe lines were bidding for the production, probably 800, but not exceeding 1,000 barrels a day, at Parkers Landing. The Karns was one of them. It would take oil on the same terms as another line; each line framed its own terms, and many of them had drawbacks, rebates, and private contracts with producers and shippers. Competition was such that they were forced into that in order to get business and prevent others from going in.

On April 9 the production of the Petroleum

Center district was estimated at 1,426 barrels a day. The Karns Pipe Line began taking oil upon the same terms as the Mutual—25 cents a barrel transportation charges and 2 per cent for loss. By October, 1870, the total production of the region had reached nearly 20,000 barrels a day. The James S. McCray farm, which had a daily production during October of 2,686 barrels, declined to 1,944 barrels in November, a falling off of 742 barrels a day.

The important development of the year was in April, at Armstrong Run, eight miles southwest of Parkers Landing, which had an initial production of 1,000 barrels a day. The production declined rapidly, but other wells equally productive, with better staying qualities, came in later on. This was the first flowing well found south of Scrub Grass, and attracted universal attention.

OPERATIONS IN 1871.

The Titusville Oil Exchange was organized in 1871, and was the first regularly organized exchange in the oil country, although the trade at Pittsburg was organized some years previously. Exchanges were likewise opened at Oil City and Franklin.

The Titusville Herald places the daily production of the Pennsylvania field, on April 11, at 13,531 barrels.

Q. (By Mr. Phillips.) That was in 1871? A. That is in 1871; yes, sir. A. D. White, reporter for the Petroleum Producers' Association, for the lower district, issued the following report for July in Parkers Landing district:

"There are 441 producing wells, of which 63 produce all the oil, and average ten and one-tenth barrels per day, while the daily average of all wells is five and one-half barrels. The average depth of the wells is 1,060 feet, and the average cost of completing a well \$5,200."

Hints of speculation by pipe lines in the production of oil increased; there were more than hints; there were rumors, and in some instances the result of that being that oil was not held the same by any two of the existing lines. There were scarcely any two of them that offered the same price for oil. The price was dependent very largely upon the reputation of the line for integrity. Those lines having a reputation for integrity—that is to say, oil put in their custody would be found when wanted—got the highest price. Those lines which were sometimes considered short got a lower price.

Q. (By Mr. Phillips.) Did the producers ever lose any oil through these pipe lines to which you refer, to your knowledge? A. To my personal knowledge, no; except the difference in valuation of their product; there was a difference in valuation, but I know of no loss.

Q. No embezzlement of oil that was left in the line? A. No embezzlement of oil. I have no personal knowledge of that. Rumors were circulated in midsummer of 1871, that the various pipe line interests of Pennsylvania were about to merge their

holdings into a single combination, the whole to be under one management. No merger ever took place, or at that time; no merger took place at that time.

Operations this year took a very wide range. Bradford appeared for the first time in the oil reports. A correspondent of the Petroleum Center Record, writing under the date of September 29 concerning a trip made to Bradford, says:

"Bradford is a village of 300 inhabitants, and is altogether a very desirable point for the coming oil excitement which we feel sure is bound to break out in the vicinity. The Bradford well is down 90 feet and being pushed as fast as possible. It is located near a well sunk in 1864, which had an excellent showing and produced some oil, but was abandoned. About three and one-half miles south of this point Col. J. K. Haffey has a well drilling, and the indications are good for finding oil. North of this latter point are the two Job Moses wells, one of which is producing about two barrels and the other drilling deeper. The oil from the Moses wells sells for \$22 a barrel (for lubricating purposes)."

It is important here in this connection as pointing out that the discovery of the Bradford region, which was developed say ten years later, or less than ten years later, the greatest field ever discovered, was long before actual developments ever took place there. The existence of oil, the presence of it, was known in that field at least eight years, and wells actually sunk even before the Butler and Clarion county fields were fully developed.

Q. (By Mr. Phillips.) It did not become a factor in the oil business until 1876 and 1877, did it? A. 1876, I think it was, or 1877; yes, sir; 1877.

Q. It became a factor? A. It became a prominent factor, a leading factor at that time, but the possibilities of the field always pointed to it as a field for wildcats, for some place that producers occupy their time, and led to overproduction, great overproduction. Operations in Clarion county had reached a point near the mouth of Turkey Run, where D. L. Kistler and others found a ten-barrel well. S. M. Kier, the pioneer petroleum merchant, developed a 20-barrel well on the Faust farm, near St. Petersburg. Marcus Huling's well, on the Ashbaugh farm, near St. Petersburg, was reported flowing 250 barrels a day, and 300 wells were reported in various stages of operation between Alum Rock and the mouth of the Clarion river at the close of October. These were all pioneer wells at that time.

HISTORY OF THE SOUTH IMPROVEMENT COMPANY.

The year 1872 is conspicuous for the remarkable progress in Butler and Clarion counties. Starting from a point at the Clarion river, remunerative developments penetrated to a point beyond Antwerp, more than five miles, and southwestward to Millers-town and Greece City, in Butler county, a distance of fifteen miles, with the prospect of further extension at both ends. The increase in production was rapid, owing to the large capacity of the wells de-

veloped in all of the new fields. In addition to a very large production of crude oil, there was an unquestioned over-capacity of pipe lines, and an over-production of refining plants, so that these two divisions of the business, refining and transporting oil by pipes, became unprofitable. This is the year of the South Improvement Company, a movement which found few supporters in the region and was very generally execrated by the trade, and died, so to speak, "a-bornin'." Of all the multifarious movements having for their object the betterment of trade conditions, this one is perhaps the least understood. The movement was a combination of the railroads and certain refining interests. It had its inception with certain Philadelphia and Pittsburgh refiners, with an agreement for co-operation on the part of certain Cleveland refiners. But philosophical minds, viewing the subject from this distance, are agreed that it had its origin, as a matter of fact, with the railroad interests, rather than the oil interests. Refiners, ever satisfied with a fair profit, had been able and were willing to accept their chances with the trade, but with the railroads the case was slightly different.

The development southward from 1870 brought about conditions through which some of the important railroads of the country might be deprived of a share of the oil carrying trade. The Pennsylvania road, however, was not affected by the transfer of activities from the Venango region to that of Butler and Clarion counties. The Allegheny Valley Railroad, on the one hand, serving as a feeder for rail shipments, and the Allegheny river serving the Pittsburgh refiners, on the other, with barge shipments, the product ultimately coming to the Pennsylvania Railroad for export and interior shipments, gave them not only a fair but the lion's share of the carrying trade. The northern railways lines—namely, the Erie and New York Central—were naturally affected by the transfer of operations to distant fields which they could not reach with their existing connections. The first named road was materially aided by the gathering lines of the Pennsylvania Transportation Company, operated by Henry Harley, but the New York Central and its connecting lines were left without petroleum feeders of any description. This resulted some years later, and after the failure of the South Improvement Company to establish itself, in the creation of pipe lines by the New York Central interests. Therefore, at the close of 1873 all the principal railway lines touching the oil regions at any point were served by feeders or pipe lines specially provided. From this period developments were so rapid that no attempt will be made to trace the progress of the business chronologically, except by movements in the order in which they take place.

Now this leads up to the time of the South Improvement Company, when the overproduction of the pipe lines and the competition of the railroads were so very sharp, and it sought to correct all the difficulties that the region has ever been troubled with in the way of discrimination in freights.

Q. (By Mr. Jenks.) Have you anything further to

state with reference to the South Improvement Company? A. I have here about 1,000 pages touching the whole question—the history of the proposed movement.

Q. You could, perhaps, make a brief statement concerning the South Improvement Company, and then give us additional information? A. I have nothing further on that branch of the subject, unless I refer to the Derrick's handbook, about what was done. The first move was to meet and combat the South Improvement Company. The producers combined, and the combination took in all the oil interests of their class; well owners, producers, and the railroads—that is, the Oil Creek Railroad and the small railroads of that region—felt satisfied.

Q. I understood you to say that the railroads themselves organized an association and made special discriminations in rates, and that the South Improvement Company was organized afterwards? A. Yes; but its inception was with the railroads through the carrying trade.

Q. Then it was your idea that the railroads suggested the formation of the association called the South Improvement Company, and that they then offered it special rebates, or more favorable rates than they were giving to other refiners? A. That is my idea; and it is, further, my idea that it originated in Pennsylvania. The Standard Oil Company has been very much maligned in connection with the South Improvement Company.

Q. (By Mr. Phillips.) You said that the Cleveland and Pittsburgh refiners were in this movement, and then that the refiners after defending it were opposed to it? A. I said the local refiners.

Q. (By Mr. Jenks.) Then the association was made up practically of Pittsburgh and Cleveland refiners for the purpose of getting differential rates from the railroads? A. It was the purpose to make differential rates, but it was never carried out.

Q. (By Representative Livingston.) Were any advantages given by the railroads to any oil producers or refiners? A. I am not aware of any.

Q. (By Mr. Farquhar.) Was this South Improvement Company incorporated by the legislature of Pennsylvania? A. It was incorporated under some other name; I think they purchased one of the numerous charters under the old constitution, prior to 1873. I do not know just what name the charter was first issued under; but whatever it was, they had, among other things, power to change the name of the corporation. It was a charter issued by the State of Pennsylvania.

Q. (By Mr. Phillips.) A special charter?

Q. (By Mr. Farquhar.) That is the very question I wanted to ask. Was it a special enactment that gave authority to this South Improvement Company? A. Yes.

Q. It was incorporated for the purpose of refining, transportation, sales, and everything else? A. That is the way I understand it, and I think to operate railroads also.

Q. What interest did the Pennsylvania Railroad have in the South Improvement Company? A. The conviction was general in the oil region that

the Pennsylvania Railroad was really behind it. It never passed beyond suspicion; there was no proof of it.

Q. (By Mr. Jenks.) Then, if I understand you, when this agreement came to the knowledge of the public, there was so great an outcry on the part of the other refiners that the company was itself abandoned and its charter annulled by the legislature?

A. That is substantially the whole story; it rose and fell within six months.

Q. And nothing further was attempted? A. Nothing further was then attempted.

Q. (By Mr. Phillips.) Are you aware that after the South Improvement Company charter was annulled and the subsequent contract with the producers and refiners of oil by the railroads was made, giving equal rates to all without rebates or other discriminations, that George R. Blanchard, second vice president of the Erie Railway, testified before the Hepburn committee, in 1879, that said contract only lasted two weeks? A. I have no knowledge on the subject at that particular time; I am not familiar with the investigations of the Hepburn committee, but I understand that such an inquiry was made in 1879; I can not testify as to exact date.

Q. If this were a fact, would it not leave the same rates prevailing that prevailed under the South Improvement—that is, the same discrimination? A. No; I can not say that. I merely recall now my own assent; and I wish to substitute for that, that I do not know.

REBATES IN VOGUE BEFORE THE TIME OF THE SOUTH IMPROVEMENT COMPANY.

Q. (By Mr. Farquhar.) Is it a fact or not that every one of the pipe lines, up to the time of the establishment of the South Improvement Company, gave rebates and drawbacks? A. I believe it is; they gave special rates to favored customers.

Q. Without an exception? A. I can not testify so broadly as that, but I have heard it variously stated that such was the case, and I know one particular instance.

Q. (By Mr. Phillips.) You know one particular instance? A. One instance came to my knowledge in such a way that it was impressed on my mind.

Q. But you have no personal knowledge that there were such rebates? A. Yes; I have personal knowledge of that—my knowledge of the contract.

Q. Of the different pipe lines? A. Not of the different pipe lines. I said it had been variously stated, and that I know of one particular case.

HISTORY OF THE CONSTRUCTION OF PIPE LINES.

Q. You know of only one particular case in which rebates were given? A. Yes. We now come to the question of pipe lines. The first line, as I said this morning, was the Vansickle line, five miles in length, extending from Pithole to the Miller farm.

Q. About what distance? A. About five miles. Simultaneously with the starting of that line, an-

other line was begun from the same point, that is to say, Pithole, and extended to the Allegheny river—seven miles in length, called the Pennsylvania Tubing and Transportation Company. The next enterprise in order was the Pickett & Sherman pipe line, extending from Pithole possibly ten and one-half miles. About the same time Harley & Abbott constructed a pipe line from Benninghoff run to the Shaffer farm, a distance of two miles. The next enterprise was Warren's line, from Pithole to Henrys Bend. From this small lines of one and one-half to five miles in length, but more generally two miles than five, were extended from year to year. There were very few five miles in length, but at various times they were all different concerns. Tidionte had its system of pipe lines, and the Empire Transportation Company was operating Pickett & Sherman's line, and several distinct gathering lines in different parts of the field at the same time. The first pipe lines were laid in what is called Parker's district, in 1869. Possibly there was a small beginning in 1868. In 1869 pipe lines began to be recognized as carriers. The first line there was the Parker, Thompson & Company; the next was the Karns. About the same time, however, Martin & Harms, of Petroleum Center, built a line known as the Foxburg line, subsequently named the Mutual Pipe Line. Then followed the whole Mutual Pipe Line System extending out to St. Petersburg and running throughout Clarion county, throughout the entire field ten or twelve miles. The Mutual became quite an extensive concern. The next in order was the Grant Pipe Line, at Parkers Landing, a small gathering line, getting its oil from the Black and Milford farms, at Parkers Landing, and terminating at the river and railroads. Previous to this time and during the Pithole developments and those immediately following it around Fagundas, Vandergrift & Forman started a system which was later extended to the Cranberry district, Pine Grove township, and the Milton farm, and, with the opening of the large wells in Bear Creek valley, to the river at Bradys Bend and throughout the producing district in Butler county, and subsequently to Concord township, in Butler county, on the development of what became the Greece City field. This line formed a nucleus of what is now known as the United Pipe Lines System. The next in order was the Relief Pipe Line Company, starting at Millerstown and terminating on the Allegheny river. This pipe line development brings us down to the period 1874-75, and what I have named thus far had been constructed on one side of the river; that is, on the side of the Butler and Armstrong developments. On the other side there was equal activity. Marcus Hulings constructed the Antwerp Pipe Line, taking oil in opposition to the Mutual Pipe Line. Later on the American Transfer Company commenced to compete for business. Then came the Atlantic Pipe Line. All these lines would average about ten miles in length—from seven to ten miles in length; possibly the Atlantic might exceed that, for the reason that they had two termini, one on the river and one

on a branch railroad. Two of these lines subsequently constructed trunk lines from the Clarion field to Oil City, and delivered oil there, which was at that time a common point. Common points were points of common shipment where stated rates were given. The aim of the pipe line, so far as possible, was to reach a common point, to get the advantage of the freight rate. The original pipe lines were merely transporters of oil, but through the exigencies of operation they became buyers of oil; not in their corporate capacity but by some arrangements outside of the corporation. Each one of them had a purchasing department and the prices in all lines varied to some extent. Very rarely was the same price stated at the same time on two lines. This condition existed up to 1877.

AGREEMENTS WITH RAILROADS FOR THE ESTABLISHMENT
OF THROUGH FREIGHT RATES.

The result of this enormous competition and over capacity of pipe lines was that no line was able to earn by its legitimate function sufficient to sustain itself. Therefore, the purpose of the association you speak of by the railroads was to establish a through freight rate. These pipe lines were in some manner connected with one or the other of the four leading railway lines and the rate of freight was established from the wells to the seaboard, or from the refinery, wherever it was, to the termini. In 1874 Mr. Rutter, general agent of the New York Central Railroad, issued a new freight tariff in which it was expressly stated that all shippers receiving oil from pipe lines would have rebated to them 22 cents a barrel.

This was the beginning of the rebating assessment or charge. Considerable tumult was occasioned by this circular; meetings were held, resolutions adopted, and an attempt made to influence the railroads to abandon the rate; at all events that is where the rebate charge of 20 or 22 cents a barrel, about which testimony has been taken by other commissions and which was given to pipe lines, started. Both the pipe lines and the railroads wanted the oil, and their principals, or whoever they were, whatever railroad was back of them, were satisfied to divide the freight tariff with the pipe lines in order to get oil freight for the railroads.

Q. (By Mr. Jenks.) Did all those who shipped oil over these lines generally receive this 22 cents rebate? A. Yes; all shippers who patronized the pipe lines within the pool, but not all pipe lines, either—I want to correct myself on that point, because through the active competition, about 1873 or 1874, a pooling arrangement was entered into by the pipe lines; it was an attempt on their own part to get the pipeage. Failing in that they failed to make a success of their organization with the pipe line association. Then they brought out the Rutter circular in which I think all the railroads concurred. If the circular is of any interest you will find it already published in the investigation

before the Manufacturers' Committee in 1888. It would be loading down your records to note it again.

THE CONSOLIDATION OF THE PIPE LINES THE RESULT OF
EXCESSIVE COMPETITION.

This condition existed from 1874 until some time in 1877, when there was a consolidation of certain pipe line interests. This consolidation grew until about all the pipe lines in the region were members of one firm known as the United Pipe Lines Company. The organization was effected some time in 1877 or 1878. The United Lines started, as I understand it, with a capital of \$3,000,000, and acquired by purchase the property of the Columbia Conduit Company and the Empire Line, these two being the strongest, and a lot of smaller lines.

Q. Do you think the cause of this combination among the pipe lines was the extraordinary competition that existed among them practically making the business unprofitable? A. There is no question about that. It was the overcapacity of pipe line enterprises, or the eagerness with which individuals rushed into it. Nearly every person within a mile of the railroad handled his own oil, so far as it was possible. By getting the small lines in that way they formed the nucleus of other lines. Having to take a little capital here and there, they got into the pipe line business. The pipe lines were not equal in strength and capacity or integrity. This period of overproduction of pipe lines resulted in a great deal of embarrassment to the trade. It is a matter of public information that some of the lines were not able to make deliveries on demand. Suits were entered in the courts for false statements after the pipe line law of 1874 went into effect. That was the cause of the consolidation of the pipe lines. It was a necessity. The business could not have existed had it not been done.

Q. (By Mr. Phillips.) Was not there more than one suit entered of the kind of which you speak? A. I recall but one at this time.

Q. Yet there was a multitude of pipe lines at the time when the suit was entered for false statements? A. I say that from information, because I have the information here. I only speak of what I know. This leads up to the consolidation of the pipe lines. When this consolidation took place, during the period of the greatest tribulations among the pipe lines, from 1874 to 1876, the daily production fell from 29,937 barrels in 1874 to 24,504 barrels in 1876. It rose in 1877 to 35,988 barrels, and in 1878 to 41,544 barrels. From that time on until the highest production in 1897, which was 96,357 barrels, there was an annual increase in production.

Q. Was not the production in 1878 larger than you have named there, being after the Bradford field was opened up? A. Eighty-one thousand barrels.

Q. Did not the Bradford field at one time produce 80,000 barrels per day? A. That was said to be the case; it was about 1880 or 1881. The year 1878 was

the period of the earlier developments. I have heard it stated as a matter of fact that the United Pipe Lines, which began business on a capital of \$3,000,000, afterwards increased it to five million, but paid no dividends for three years after its organization, or until after the opening of the Bradford field.

THE OWNERS OF THE UNITED PIPE LINES.

Q. Who were the owners of the United Pipe Lines then; and who are they now? A. I can not say who they were then; the National Transit Company owns it now.

Q. Did the Standard Oil Company control the National Transit Company when it was organized? A. I can not say as to that; I do not know that they did.

Q. Do they probably now? A. The National Transit Company?

Q. Yes. A. It is a part of the Standard system.

Q. And was from its inception, A. I do not know who the owners were.

Q. It is the Standard's system, then? A. Yes.

Q. (By Mr. Faruhar.) Can you state at what time the Standard took an interest—an immediate pecuniary interest in this pipe line; what year? A. Well, that would be very difficult to answer. I should say about 1877.

Q. (By Mr. Jenks.) It was the refiners practically who organized the United Pipe Lines system? A. Yes; the Standard was an aggregation of firms. It was not a Cleveland concern alone. What we know of the Standard is that it was an aggregation of the strongest refining concerns in the country.

Q. And they organized themselves into a pipe line system? A. Well, they were in it.

Q. (By Mr. Phillips.) They controlled it then and control it now, do they not? A. It is a part of what is known as the Standard system. That is as near as I can answer you. I guess there is no secret about that.

Q. (By Mr. Farquhar.) What proportion of interest did the Standard Oil Company have in the United Lines in 1877? A. Well, I have heard it estimated that in 1877 they took a little more than one-half, because in the formation of the United Pipe Lines, a number of pipe line owners retained their interest and became officers in the United Pipe Lines.

Q. So that the establishing of the pipe line was a mutual arrangement between the refiners? A. It was a mutual arrangement.

Q. But principally of interest to the Cleveland men? A. Principally of interest to the Cleveland men.

Q. (By Mr. Phillips.) They were the largest holders? A. Well, I am not prepared to say that, because I do not know.

Q. (By Mr. Farquhar.) But the parties in Cleveland interested at that time in the so-called Standard were the same parties as are now interested in the Standard companies? A. I believe so, with very few exceptions.

Q. This Vandergrift & Forman Company? A. Yes; Mr. Vandergrift was president of this line. He was the first president of the line and remained the president.

Q. The Rockefellers were in there as managers? A. I never understood that they were.

Q. (By Mr. Phillips.) Was not Vandergrift president of this line for some years? A. I believe he was; I know that he was.

Q. You do not know when he resigned? A. Yes; I do. He left the service about 1885, or within a year or two of that time.

Q. And about the same time resigned his position as director of the Standard Oil Company? A. I never understood that he was a director of the Standard Oil Company; I am receiving now my first information on that point.

Q. I have been informed that he was acting in that capacity. A. It is needless for me to say the information is not common in the oil country or I certainly would have heard it. He was connected with the Imperial Refining Company. Vandergrift & Forman and John Pitcairn were very large holders in that; it passed to the Standard Oil Company.

Q. (By Mr. Farquhar.) But that was chiefly Pittsburg money and not Cleveland? A. It was all Pittsburg money or railroad money in the Imperial Refining Company.

THE FALL OF PRICES AND ATTEMPTS TO LIMIT PRODUCTION.

In 1882 I find the largest daily output. That was the period of the development of the Bradford field. It was 82,358 barrels. The sudden increase could have but one effect upon the prices, and there was a downward tendency. Prices dropped of necessity because there was more oil than the world could take. I will run over hastily the period when this depression made itself most manifest. In 1866 there was an agitation for a shut-down movement with the object of bettering the condition of the producers. In 1862 right after the period of the flowing wells we have noticed that there was a movement to turn the stopcocks on the wells and retard production. In 1872 there was an agitation for a suspension of operations both before and after the agitation concerning the South Improvement Company. The first practical shut down went into effect that year—a shut down that was very successful and included both production and drilling. It was almost absolute, as nearly absolute as anything human can be.

Q. What effect did that have on the price of crude oil? A. It raised the price of oil.

Q. (By Mr. Ratchford.) Was that the main object of that agitation? A. The object of the combination was to increase the price of crude oil which had been depressed by competition.

Q. (By Mr. Farquhar.) How long did that shut down last? A. Thirty days.

Q. Do you know how many barrels were com-

prised in that shut down? A. Well, I said it was almost total.

Q. Total? A. Yes; the daily production then was 17,000 barrels; it was practically total.

Q. This was an agreement between all the producers in that field? A. An agreement between all the producers in all the fields.

Q. In all the fields? A. In all the fields.

Q. (By Mr. Phillips.) Do you know about the effect of that afterwards? Did it induce a large amount of drilling and increase the production? Do the facts show that there were a great many more wells drilled immediately after the shut down than before, through anticipation that prices would remain high? A. That effect was apparent, but it does not account for the great decline in production during the next year. There was an impetus given to drilling for the next three months after the shut down that made itself seriously felt in prices; but the decline that took place in 1873 was due to the large wells in the neighborhood of Millerstown. At that time we had, to vex the trade, several points where they were getting wells averaging from 700 to 1,400 barrels a day. I am speaking now of initial production. Take what was known as the Troutman, Modoc, Millerstown, and Buena Vista—that section has been productive of very large wells.

PRODUCTION INCREASED BY DEEPENING OLD WELLS.

Q. Was not that enlarged production caused by the fourth sand running through under the third sand belt, so that it was only necessary to deepen the wells about 60 feet? Were not a large number of third sand wells deepened to fourth sand at comparatively little cost at the period to which you particularly refer? A. That period comes later. Fourth sand discoveries were made in 1873, but the development had no considerable effect until 1874. Its presence was felt in 1873 in the Karns City district, in the Tack and Morhead wells.

Q. That was the reason that the others were deepened? A. That was what caused the wells to be deepened. From that time forward during the next year the most remarkable development ever seen in the oil region was sprung upon the trade. No one was in condition to receive it. All that was needed was to drill less than a hundred feet, from 65 to 85 feet—that is, one day's drilling—to deepen a well from one rock to another and oftentimes quadruple its capacity.

Q. The increase by deepening those wells was about 13,000 barrels per day, was it not? A. I have no doubt but the rapid development of the field lasted for about six months. Most of the wells were not deepened before midsummer, 1874, because we found the production of 1874 only 2,000 barrels greater than the production of 1873; that is, the daily production.

THE SHUT-DOWN MOVEMENTS OF 1873 AND 1874.

Now, about 1873 there was a disposition on the part of the producers in every section outside of

that in which these large wells were found to suspend operations. The remuneration was so small as to leave no inducement to continue, except for a big well. In 1874 an independent shut down plan originated in Clarion county. I will not call it independent because it was local. The region at large did not participate to any great extent. In the northern extremity of the Clarion fields at this period some very large flowing wells were found, and prices were naturally off that year, the competition among the pipe lines not leaving them anything. So there was an agitation for a shut down, which was only effective locally. In 1876 a plan was started for pooling the surplus oil as a means of advancing the market; but conditions improved so rapidly about midsummer that it became unnecessary, and there was one of the greatest bulges in the market ever known since the trade had become established on what might be called a firm footing. The advance to \$4 a barrel in the fall of 1876 was responsible for nearly all the ills that followed for the next ten years; it called the attention of persons not permanently engaged in the oil business of the great amount of money to be obtained through drilling wells. Prices did not continue long at \$4. In the fall of that year a peculiar development was started in the region of Bullion. I say peculiar, because it was to one side and out of the usual line of oil belts. This field, not great in extent, was yet large enough to add within two years 3,000,000 barrels to the production. Bradford coming on at the same time, gave the producers about the worst quarter of a year they ever had, and it might be extended to a quarter of a century, because prices have scarcely recovered yet.

ORGANIZATION OF THE PRODUCERS' PROTECTIVE UNION.

In 1877 and 1879 what was called the Producers' Protective Union was started in a small way as a result of the effect of the Bullion development on prices. It was the work of a few producers at Elk City, in Clarion county, who thought that by uniting their interests and suspending operations they might induce their friends and neighbors to join them until they formed an unbroken chain. David Armstrong formed the first union and within a short time became the head of an organization taking the name of the Petroleum Producers Union. This movement continued for two years. When once fairly started Mr. B. B. Campbell, who was called to the presidency, carried the organization along for a grater period than any others of a similar nature that had ever been formed up to that time. Organizations since that time have lasted for longer periods, but up to 1879 no similar movement had lasted two years.

SUITS AGAINST MEMBERS OF THE STANDARD OIL COMPANY AND PIPE LINES.

This movement, which started as a protective concern, developed rapidly into an aggressive organization. They undertook to fight the transpor-

tation companies and the railroads. Suits were started in the Supreme Court of Pennsylvania to annul the charters of pipe lines, and criminal actions instituted against some of the owners of pipe lines, members of the Standard Oil Company. The object of these suits was never developed. The aim, if it was to improve their condition, failed of its purpose.

Q. Where were the suits brought against members of the Standard Oil Company and the pipe lines? A. A suit against members of the Standard Oil Company was instituted in Clarion county; the proceedings against the pipe lines were in Venango county.

Q. Was that suit tried in Clarion county or was it removed from Clarion county? A. It was not tried anywhere and was not removed from Clarion county.

Q. Did they not take an appeal to the supreme court at Philadelphia? A. No doubt they did, but, as I understand it, the suit was settled outside of court.

Q. Yes, but after an appeal was taken? A. I am not clear on that point.

Q. It was a suit for conspiracy, was it not? A. It was called a suit for conspiracy, but it hardly was a conspiracy from the fact that it was never tried.

CONDITION OF PRODUCERS NOT IMPROVED BY THE COMBINATION.

Q. Oh, certainly not. You have covered the ground very fully; you have said it was a criminal suit? A. The condition of the producers was no better after the termination of that combination than it was before. The production continued to increase, and prices were falling with the additions to the stock. In 1879 the daily production was 54,206 barrels and the price 85½ cents. When the movement was started in 1877 the daily production was 35,988 barrels and the price \$2.39¾. That was the average for the year. That is what makes me say the condition of the producers was no better at the end of the combination than it was at the beginning. The great increase in drilling had not ceased to any extent; stocks had accumulated and production increased. In 1881, during the development of the white-sand pools in Warren county, an individual shut down occurred among the heavier operators. It was partially successful.

THE PRODUCERS' ASSOCIATED OIL COMPANY.

In 1884 there was an attempted combination of producers to restrict drilling. The movement, while very general, was only partially successful. That was the year of the Thorn Creek development, the period when very large wells were found in a small area. The persons engaged in engineering the shut down of 1884—that is, the combination of 1884 for the improvement of prices and the betterment of the condition of the producers—claimed and alleged that the failure was due to the want of co-operation

on the part of the Thorn Creek operators, for it was carried out very generally through other sections of the field. One of the results of this was the formation of what is known as the Producers' Associated Oil Company, which is in existence today. This was a company formed by all the companies, all the existing producing companies, taking some of the shares. The capital stock, I believe, was \$1,000,000, and the shares were parceled out to existing producing companies. It became necessary to purchase property in order to curtail production or stop the drilling. Purchasing was resorted to by the Associated Producers' Company, and all the shareholders participated in the profits accruing. It was considered a very wise arrangement at the time, and the fact that it is still in existence and doing business would attest that it was in every way a success. In connection with that I want to state another movement, born of it. It was a drilling contract, known as the boundary line contract, entered into by the operators connected with a subsequent shut down. It was the contract of the shut down combine of 1887 and was an agreement between the producers and the Standard Oil Company for mutual benefit. It provided for reducing production one-third and for relinquishing certain holdings in oil, 6,000,000 barrels, I think.

Q. What year was that? A. 1877-88. In consideration of the receipt of 5,000,000 barrels of oil the producers on their part agreed to suspend active drilling operations and to restrict their production at least one-third for the period of a year.

RELATIONS OF THE PRODUCERS' ASSOCIATION TO THE STANDARD OIL COMPANY.

Q. (By Representative Livingston.) Will you explain to the commission what you mean by the producers? Does that take in all the producers—the Standard and the independent companies? A. No; I refer now to the Producers' Association itself, the association in existence today.

Q. What is the name of the organization? A. It was the Producers' Protective Association, and it is in existence and organized today. It was organized previous to 1887.

Q. That does not cover the independent companies? A. No; not necessarily. It is an organization for the betterment of their condition as producers, out of which came these independent companies which you refer to. They resulted from this agreement. I shall lead up to that presently.

Q. (By Mr Smyth.) Entirely separate from the Standard Oil Company? A. Yes; the organization is entirely separate from the Standard Oil Company.

Q. (By Representative Livingston.) Opposition? A. It is not opposition. They are in harmony in many respects; the proceedings state that.

Q. How are they hitched together? If they are in harmony what hitches them up?

Q. (By Mr Smyth.) What is their relation? A. The remunerative feature that existed in the origi-

nal contract between the Standard Oil Company and the Producers' Protective Association—

Q. (By Representative Livingston.) Have you a copy of that contract? A. The contract is published in the voluminous report of the investigations of the Manufacturers' Committee in 1888.

Q. When you speak of producers do you mean the Standard Oil Company and the Protective Association? A. Yes, if you please; speaking of both sides during that one year.

Q. (By Mr. Phillips.) You spoke of the receipt of 5,000,000 barrels of oil. On what terms was that oil turned over, and what was the price of oil at the time this shut-in movement, as it is called in the oil country, began? On what terms, if any, was that oil turned over to the producers? A. The oil was turned over to the producers on condition that they suspend drilling operations as far as practicable and restrict their production at least one-third. The price at which it was turned over was 62 cents a barrel. The existing price at the time it was turned over was 10 cents a barrel more. The Standard sacrificed 10 cents a barrel on the oil when they turned it over to the association.

Q. That might possibly be; when the papers were drawn up it was in anticipation, but the day the contract was made it was 62 cents? A. I can only testify to the facts as they appear now—

Q. (By Mr. Farquhar.) You testified as to the agreement, that is all? A. Yes, and the price when the transfer was made; oil was 71 cents.

THE EXTENT OF THE COMBINATION.

Q. I wish you would state very explicitly how wide this combination was, what class of producers it took in, and what control it had over the market and the consumer. A. Well, I should say that the agreement was far-reaching; it took in every class of producers they could get in. They made strenuous efforts to bring people into it, and I believe great sacrifices were asked on the part of the Standard Oil Company, or rather demanded, to enable some of the large producers to join it.

Q. (By Representative Livingston.) Now, then, if I understand that answer, you mean to say that they endeavored to get everybody into it if they could? A. Yes.

Q. Did they get them all in? A. No.

Q. Why not? A. Well, I think it might be said to be due to energy, enterprise, or hoggishness—anything you care to call it—that some people would stay out.

Q. (By Mr. Phillips.) The Standard people were as anxious to have other people in as the Producers'? A. It was mutual.

Q. (By Mr. Farquhar.) Who made the first proposition? A. That I am not prepared to answer; I do not think I ever heard it stated or saw it in print.

Q. Did not the proposition originate with this very company of which we have been speaking—the Producers' Protective Association? Did it or

did it not? A. Well, as a matter of opinion, I should say it did.

Q. As a matter of common belief? A. Belief at the time; yes. Now, as to the other branch of your question—

THE EFFECT OF THE COMBINATION UPON THE CONSUMER.

Q. (By Representative Livingston.) The other part of the question was: How was the consumer benefited by it? A. The condition of the producer was bettered by it. Crude oil advanced 29 or 29½ cents a barrel. We will now see what refined oil did. I should say that the parallel of increase was regular; that, taking the annual average, the advance to the producer was no greater than the advance to the refiner and the advance to the public. Refined oil sold in 1887 at 6¾ cents retail, and the average for 1888 was 7½.

Q. What was the advance, then, on refined oil? A. About three-fourths of a cent.

Q. A gallon? A. A gallon. The price was not advanced to the consumer in proportion to what it was to the producer.

Q. The producer of crude oil? A. Yes, of crude oil.

Q. (By Mr. Farquhar.) Do you propose to say that the Standard Oil Company stood the difference? A. Somebody stood it.

Q. Well, what is your judgment? A. If we hold that the Standard Oil Company produces three-fourths of the refined oil they certainly stood three-fourths of it.

Q. (By Representative Livingston.) The Standard Oil Company was involved in that original proposition. It would seem that they were working for their health along about that time? A. It did seem so to me; I thought so.

Q. Now, then, what was the ulterior purpose? If they were standing that loss, in the end they hoped to gain. Do you know how, in the end, they hoped to be benefited by the arrangement, after standing the loss? A. That question involves an opinion on my part that I do not think I would be justified in submitting. I do not know that I can answer it in any intelligent way. To answer it would be to give an opinion only.

Q. In the end they would put down competition and regain all they had lost? A. No, sir; that is not it. I can not agree with that, but I can agree with one branch of it. The betterment and the benefit of the producer is always the concern of the Standard. If you kill the goose, where are you going to get the golden egg?

Q. There are more geese. A. Oh, no. The supply is limited.

Q. (By Mr. Smyth.) Was the cost of refined oil lessened at that time? A. I do not think there was any material change in that feature of it.

Q. They could not have recouped their loss by reducing the price in that way? A. No, I think the

recoveries have been fully made in oil and its by-products.

Q. I understood you to say that the price was advanced to the producer, but was not advanced in proportion to the consumer. Now, was the process cheapened in the meantime? A. I think not.

Q. (By Representative Livingston.) The witness seems to be an intelligent one all along this line, and I do not see why we should not insist on having his opinion as to the nature of this recoupment? A. I can state it as a matter of opinion.

Q. Well, that is all. A. I am very willing to state my opinion.

Q. Where would they recoup and how? A. Well, the betterment of the trade would leave a condition of harmony that could not exist where everybody was working at unremunerative prices.

THE COMBINATION THE RESULT OF TOO MUCH COMPETITION.

Q. Now, that word "harmony;" do you mean by that the killing of competition? A. What word?

Q. The word "harmony." Do you mean by that the removal of competition? A. My dear sir, this whole trouble was brought about by competition, too much competition in drilling, too much drilling.

Q. That is what led to the combine. You needed a combine to control it? A. It led to the combine, and that leads me to the question of one of the movements connected with the shut down of 1887 and 1888. In the drilling contract it was provided that the members of the association were not to drill a well along any line within a stated distance—that is, closer than would give an area of 20 acres for each well.

Q. That lessened production? A. The aim was to lessen production, and therefore it benefited the trade.

Q. Now, I want you to use another word for that word harmony. You said trade was improved because it produced a kind of harmony among all the parties interested here. You mean that it took all the competition out of the way? A. Well, I can not say that competition was destroyed.

Q. I do not mean to say it was, but crippled or lessened?

Q. (By Mr. Farquhar.) Hypnotized?

Q. Hypnotized? A. I will adopt that term, "hypnotized."

Q. Was it not lessened? A. Oh, unquestionably.

THE LABORER SUFFERED BY THE RESTRICTION OF COMPETITION.

Q. If it was lessened, who suffered by it, the producer or the consumer? A. Neither—labor.

Q. Labor? A. Labor lost it all.

Q. That burden was put on labor? A. The burden was put on labor; but let me say that in addition to this 5,000,000 barrels of oil—

Q. Did you not say that crude oil increased 20 cents a barrel, and refined three-fourths of a cent

a gallon? Now, how did the laborer bear that charge? Was not the increase paid to the producer, and the 20 cents a barrel by the consumer? A. As far as the difference in price would be represented by the difference in cost.

Q. Then the laborer did not bear that loss, but the consumer? A. True from your standpoint and true from mine.

Q. You have got two ways of looking at that? A. Yes.

Q. You know what the Scripture says: "He that seeth double"? A. Yes; I neglected to state that in addition to the 5,000,000 barrels 1,000,000 was set apart in the agreement for labor. To that extent labor did not suffer.

Q. (By Mr. Phillips.) Was not that 2,000,000? A. Yes; the Standard set aside 1,000,000 and the association 1,000,000 to the labor, and the profits of the 2,000,000 barrels compensated them to that extent.

EFFECT OF THE COMBINATION UPON THOSE WHO DID NOT GO IN.

Q. (By Mr. Kennedy.) You said that about all of the producers went into this association, and I infer that enough of them entered into it to accomplish the object that they had in view. Is that true, and is it true that those who stayed out did not affect that object?

Q. (By Representative Livingston.) Ask him if the man who did not go in was not hurt. Would it not have been better for him had he gone in? A. The ones who stayed out made a lot of money by it, because they went on drilling and secured large wells, and most of them got rich. Many of them got rich by simply taking advantage of the producers' necessities. It was necessary to do something at this time. Producing oil was not a remunerative business, but at the prices at which oil was left at the close of the year it was remunerative. Nearly the entire number of operators in the Washington oil field, then the greatest field we had, stayed out because they were getting very large wells. One person drilling along the line would start another, and in this way an endless chain was formed around the group of wells. It was just like setting up a row of bricks and starting the end one—all the rest go.

THE COMBINATION AND LABOR.

Q. (By Mr. Phillips.) Well, did labor work in perfect harmony with that movement throughout the oil country—with that particular feature of it—and agree to go into the thing? There was harmony between the Standard and the laboring people, was there not? A. So far as I heard, there was.

Q. (By Mr. Farquhar.) Do you think they could help themselves, whether they went in or not?

A. Oh, yes, they could.

Q. Was labor organized at that time? A. One of

the first steps of the laborers, the well drillers, and the tool dressers, was to combine themselves in an organization. It was my observation, and I examined it very closely and took a great interest in it, watching it from year to year, that the drillers could have made a failure for the producers had they been so determined. Enough of them could have got together to start drilling on their own account.

Q. (By Representative Livingston.) Then, it is your observation that labor in that instance was not damaged by the combination? A. Not by that particular combination, but what you referred to a while ago was the drilling contract.

Q. (By Mr. Phillips.) Was not the price of labor put up after this shut in to the scale agreed upon in the movement? A. Yes, there was a scale adopted.

Q. (By Representative Livingston.) Who paid that? A. The oil producers.

Q. Did they pay it in the price of the oil? A. That is in the construction account; it goes into drilling the well, that is, building the superstructure over the well. It just adds that much to the cost of drilling wells.

Q. That does not have anything to do with the cost of the oil? A. No, not at all. It diverts the producers' profit to the extent of the advanced cost.

Q. (By Mr. Kennedy.) What did you say was the period of that shut down? A. One year.

Q. What was the amount of oil set aside by the producers and the Standard Oil Company for the benefit of labor? A. One million each, but the 6,000,000 originally came from the Standard.

Q. That oil was sold for the benefit of the laborers? A. After this shut-in; it was sold for their benefit and distributed by their organization.

Q. How did the money thus distributed to them compare with the amount they would have earned had the work continued in that field?

Q. (By Representative Livingston.) Did they lose anything by the combination?

Q. (By Mr. Farquhar.) Subsequently? A. I have not right at my tongue's end the amount that each individual driller received, but for the most part the driller constantly employed (what we call constantly employed) will perhaps work 200 days a year and make \$1,000.

Q. (By Mr. Phillips.) Did not the laborers get more out of their oil being sold first at a higher price than the producers did? A. I believe that is true.

Q. (By Mr. Kennedy.) What I want to know is, did they receive anything like the amount of money they would have received had operations continued? A. About the only way I can get at a reply to that is to state that there were nearly 800 fewer wells drilled during the year of the shut down than the year previous, and labor would lose the amount to be secured from drilling 800 wells, provided the same number would have been drilled in 1888 as in 1887.

Q. (By Mr. Phillips.) Then did labor receive com-

pensation in addition to what they got in the shut-in points? A. It seems to me that labor received some addition in the way of increased compensation. It would be very difficult to state the precise loss of labor in drilling at that time. Drilling was very active in the Lima fields in Ohio, and gas drilling was very active also during all that period and furnished a new outlet for labor. But the married men living in distant portions could not get away, and they were the ones who would have made the trouble, if there was any, in that association.

CONDITION OF THE OIL INDUSTRY AT THE TIME OF THE COMBINATION.

Q. Were there not about 31,000,000 barrels of oil in tank on top of ground when that shut-in movement was inaugurated, and was it not deteriorating in value and the price very low, as you said before? Was it not the object of the Standard and the producers to prevent the deterioration of that oil and in the end to get a remunerative price, and also to advance the price of labor? A. The conditions precedent to that movement were worse than any that had ever existed before. Great stocks had accumulated in the Bradford field, the accumulation having started just ten years before that period and still continuing with a prospect of increase. The Washington field had been opened two years before and the largest wells found anywhere were there. A very prolific district had been found in Butler county, Reibold and Glade Run, where wells were obtained producing 3,000 barrels a day, and at the same period another development was going on at Saxonburg. That was the condition when this agreement took effect. It was entered into heartily on both sides for the betterment of their condition, and I believe they were both benefited by the movement. The stocks were reduced 10,000,000 barrels and upward. I have a leaflet showing precisely the amount and I will hand that in later.

Q. (By Mr. Ratchford.) I understand you to say that this shut down was brought about for the benefit of the industry and particularly the producers? A. Well, that the industry might survive would be my way of putting it.

Q. But from your standpoint are not prices cut for the same reason? A. No; I do not believe so. Prices are cut because the trade will not take the supply at the existing prices.

Q. I understood from your previous statement that prices are cut for the purpose of improving trade conditions, and I also take it from your remark that prices are advanced for the same purpose. Now, I want to know what the peculiar methods directly the reverse of one another? A. I am very willing to answer that question, but my explanation will be simply an opinion. In answer to the first part of your question, I will say prices are cut in periods of overproduction for the purpose of finding a market for the surplus goods. One of two things can be done—the oil may be

stored in tanks and carried at great expense until it can be put on the market at remunerative prices, or prices may be made to the foreign consumer that will induce him to take the surplus. I have no doubt that all companies manufacturing oil find it necessary at times every year to hold out inducements to the trade to take surplus goods off their hands. There is a period, from May until September, when there is a decline of one-third in the consumption of oil. If there is an overproduction of crude during this period of underconsumption, it becomes necessary to convert it into money, for it would seem like folly to add millions of barrels to the existing stock during four or five months when there would be no sale for it. These various branches of the oil business are dependent on one another, the producer on the refiner, the refiner on the producer, and the consumer on both. The success of any one branch depends on the success of the whole. The division of labor has not been carried out anywhere so fully, I think, as in the petroleum business.

Q. That is your answer to the whole question? A. Yes; that is the only way I can answer it. There is only one of two things to do—to find a market at a lower price or hold the oil for higher prices.

Q. If production continues? A. Assuming that production remains at a point above the consumption.

THE COST OF PRODUCTION AND THE PRICE OF OIL.

Q. Is the trust, combination, or whatever it might be called, in the habit of introducing its products into foreign markets by selling them at prices below cost? A. Well, I do not know that it is sold below cost. It is the aim of business people to get cost where they can.

Q. You are not in a position to say whether oil is sold below cost or not? A. They may sell at a very low margin of profit, and I believe they often are induced or, rather, compelled to do so.

Q. Have you ever known them to sell, in any particular case, in order to improve the market, as low as five cents per gallon? A. I never have.

Q. If it has been done, do you believe it was below cost? Have they been able to produce it at any time for five cents to your knowledge? A. Well, that involves an opinion on my part. I am not a manufacturer, and can not tell what the cost of producing is. I have heard—what are you leading up to by that question?

Q. I am seeking to corroborate or cast doubt upon testimony that has been given. A. I should say that five cents a gallon would be a very low cost for distributing oil under the existing conditions in this country.

THE PURPOSE OF THE STANDARD IN SELLING AT OR BELOW COST.

Q. It has also been said that the Standard Oil Company has sold oil below cost in cities in the United States where the competition of other companies has had to be met. A. I can only say that I have in my business sold advertising space below cost in order to have it occupied. I have heard that other business men do that in order to get off surplus stock. You have to sell below cost in order to get cash; and every spring and fall we carry one or two pages of advertising matter for merchants' clearing sales. They are all below cost. At a period of depression in trade, I should not be surprised if a business concern were compelled to sell at less than cost.

Q. I do not think your illustration is a fair one, because it is not your object to crowd out the fellow who was paying the regular rates. I understand, however, that it has been the object of the Standard Oil Company to drive out the man who was disposing of his product at a fair price. A. I have heard a good deal of that, but I have never seen any of it.

Q. After the control of a market has been secured by the Standard Oil Company through very low prices, is it not true that prices have advanced to a very high figure? A. Assuming the facts to be as you present them, I should think it would be a very natural result.

Q. (By Mr. Phillips.) Has not the Standard Oil Company followed up new, independent producers, from one place to another, where they have found a market, and reduced the prices there so as to drive them out? Are there not a great many instances of that kind on record? A. There are none in the oil country. My observation is limited to the oil country, and there are none there.

Q. (By Mr. Farquhar.) Are you prepared to make any statement as to the dismantling of plants by the Standard Oil Company? A. None at all. I have no information of that kind. The things we hear about have certainly not occurred within the range of my vision in the oil country.

OIL PRODUCERS HAVE NOT BEEN INJURED BY THE STANDARD.

Q. (By Mr. Phillips.) You may proceed in your own way. A. I have here a paper I should like to put in evidence showing that the producers of oil are not beggared in their business relations with the Standard Oil Company. It covers the years 1860 to 1898 and has not been presented before. It shows the amount of oil produced, the average price, and the valuation by years; the total production and valuation by decades and for the period, and also the number and cost of wells drilled.

EXHIBIT I.—Yearly production and valuation.

Year	Amount of oil produced	Average price	Total valuation	
	<i>Barrels</i>			
1860	650,000	\$9 60	\$6,240,000 00	
1861	2,118,000	52	1,101,360 00	
1862	3,056,000	1 05	3,208,800 00

If one-fourth of all the oil produced went to the land interests they would receive \$194,692,962, leav-

ing \$584,078,885 for the oil producers. Deducting the cost of drilling, there still remains \$351,957,885; the cost of lifting the oil, at an average of 25 cents a barrel, would be \$87,989,471.25, leaving \$263,968,413.75 as the profits of the producing business for the last thirty-nine years, or an average of \$6,768,420.86 per year.

DRY WELLS AND THEIR COST.

Q. Do your figures include dry wells? A. They include 15,000 dry wells.

Q. Is the cost of territory included—the bonus? A. 15,000 dry wells are included which never produced any oil and which cost the producers about \$30,000,000.

Q. Is that your idea of the proportion of dry wells? Would not the percentage be much larger than that? How many wells were drilled altogether? A. 100,881.

Q. How many dry wells? A. Fifteen thousand.

Q. That does not correspond with the experience of a great many as to the percentage of dry wells, does it? A. It is consistent with the statistics available. We are liable to be mistaken, but our work is subject to revision. These are not our own figures in every case, but we vouch for those that are. We can take the figures from 1875 and vouch for them; beyond that we are dependent on the early statistician.

Q. Has the inspection of the oil country been sufficient to give you a record of all the dry wells? I can readily see that the striking of a good well would be reported; but has there been an organized attempt in the oil country to ascertain the facts as to the many thousands drilled and abandoned? A. During the first 10 years of the business there were probably a thousand men in the oil region who had been through it from the beginning to the end. Of these personal observers 900 probably had been over all parts of it. Mr. Wrigley was commissioned in 1874 to make a survey of the field and report as to the extent of the operations. His report carries us down to about 1875. From that time the newspapers have taken it up and published reports; and, whether right or wrong, they are subject to public inspection and criticism. The figures for the first 10 years are as nearly official as they can be made.

THE RENTAL OR BONUS FOR LAND NOT AN ELEMENT OF COST.

Q. I understand that you do not include the bonus or rental paid for holding the ground in these figures; but are there not many instances where persons pay a very large bonus for a prospective territory that does not prove valuable? Do not such payments amount to many millions of dollars? A. We have considered that question very fully, and have adopted the view that the bonus or rental paid on account of speculation should not enter into a question of this kind. While it is true that it operates against the profits, the amount needed to produce a given quantity of oil consists in the cost of drilling, the rental of the well, and the expense of lifting the oil; any other expense is

purely speculative and is incurred for the purpose of giving the individual producer an advantage.

Q. But is it necessary, in order to pursue the business, to pay this bonus or rental? Could any firm or individual become a large producer without paying a bonus or rental when the ground had only a prospective value? A. But it should appear as a bonus and not as the cost of operating.

Q. But is not the producer out that many million of dollars, equal perhaps to the cost of drilling? A. It is not compulsory, while the cost of drilling and lifting the oil is; the lease is speculative and does not enter into our figures; it curtails the producer's profits; when he sees fit to invest in that way he takes the chances.

but the increase in valuation of the total product was but a little over 61 per cent.

In 1871, 132,178,843 gallons of illuminating oil sent abroad brought \$33,493,351, while in 1898, nearly six times as great an amount, or 771,350,626 gallons, brought but \$48,343,916. The total exports of petroleum for the year 1898 amounted to 986,480,610 gallons, valued at \$52,551,048. The decline during the past year (1898) reached 7,817,147 in amount, and \$6,506,499 in value. For 1896, our exports of petroleum and its products were 931,795,022 gallons, valued at \$62,764,278, and for 1895, 853,126,130 gallons, valued at \$56,224,425.

In 1888, 680,000,000 gallons of petroleum were within \$6,000,000 of the value of nearly a billion gallons exported in 1897.

AVERAGE DAILY PRODUCTION AND PRICE, 1870-1898.

I should like to offer here a table of figures which purports to give the average daily production of barrels from 1870 to 1898, inclusive:

PRICES OF CRUDE AND REFINED OIL, 1891-1899.

I have another paper which I wish to offer in evidence now, and which is prepared to show the com-

EXHIBIT II.—TREND OF PRICES OF CRUDE AND REFINED OIL, 1870-1898.

1898	85,206	91 ¹ / ₈	0631	752,101	11,541,753

Since 1870 the daily production has increased 450 per cent; the price of crude oil has declined 75 per cent, and the price of refined about 75¹/₂ per cent.

In 1871 we exported petroleum and its products to the amount of 152,195,617 gallons, and of the value of \$36,663,825. In 1897 our total exports were 994,297,757 gallons, valued at \$59,057,547. In other words, our exports increased over 500 per cent in 26 years,

parative prices for four years before Mr. Seep's agency, and for four years after.

EXHIBIT III.—CRUDE AND REFINED PRICES COMPARED.

On the 23d of January, 1895, there was posted in the various offices of the Seep Purchasing Agency throughout the oil regions the following important notice:

NOTICE TO OIL PRODUCERS.

Refined prices are quoted in cents and decimal parts of a cent.

"The small amount of dealing in certificate oil on the exchanges renders the transactions there no longer a reliable indication of the value of the product. This necessitates a change in my custom of buying credit balances. Hereafter in all such purchases the price will be as high as the markets of the world will justify, but will not necessarily be the price bid on the exchange for certificate oil. Daily quotations will be furnished you from this office.

"JOSEPH SEEP.

"January 23, 1895."

This marked a radical departure in the methods of buying and selling oil and determining the price of crude petroleum. It tended to make the deal between producer and refiner a direct one, and to eliminate the speculative broker as a factor in determining values. The price of speculative oil, in the shape of certificates hawked about on the floor of the oil exchanges, was no longer to rule the real market as established directly between the man who had the oil that he wished to sell in the lines and the agents of the refiners who desired to buy it. The change was rendered imperative by the gradually diminishing volume of business in the oil exchanges and the practice of some of the larger producers, who, by the purchase of a few thousand barrels of speculative oil on the floor of the oil exchanges, were able to manipulate the market a few cents in their own favor and at the same time dispose of a large amount of credit-balance oil at the advanced figures.

This order put a sudden stop to the frequent practice of establishing a fictitious value for oil by interested parties who desired to effect sales or purchases of the commodity. It, however, did not eliminate the petroleum broker or put a check on speculative dealings in oil. This business is pursued as usual, but instead of the credit-balance price being determined by the price of certificate oil, as in times past, all speculation is based upon the price paid from day to day for credit balances in the direct dealing between the producers and refiners. But the broker has ceased to be longer a factor in the business. The manifest absurdity of basing the price of the entire amount of daily production on the few thousand barrels of oil that changed hands occasionally on the floor of the oil exchange is a thing of the past.

In the following tables are shown the average price of a barrel of oil in the exchanges, from month to month, as compared with the price of a gallon of refined oil in New York, for the four years immediately preceding the time when the new rule of the Seep Purchasing Agency went into effect.

Date	Average price crude oil, per barrel	Average price refined, per gallon, New York
1891.

November	82 $\frac{7}{8}$	5.15
December	91 $\frac{3}{8}$	5.61
Average	83 $\frac{3}{4}$	5.17

It must be remembered that the prices quoted here include the cost of the barrel. Refined oil in bulk is 2.50 cents less than the above figures. For example: In 1891 the producer realized an average of 66½ cents per barrel for his crude product, or 1.59 per gallon, while the refiner, after paying cost of transportation, manufacturing, etc., delivered it on board the tank steamers for export abroad at 4.35 per gallon. In 1894 the producer received nearly two cents a gallon for his crude product, while the refiner realized but 2.67 cents per gallon.

SEEP AGENCY PRICES.

The following table shows the price paid for crude petroleum by the Seep Purchasing Agency, since 1895, with the corresponding price of refined oil on the dates when changes in the price of crude were made:

Changes in price of crude oil by Seep Purchasing Agency and corresponding changes in price of refined oil at about the same date.

pense of price. Foreign competition has been keen, and prices for refined for four years from 1891 to 1895 were hammered down to the lowest notch. When refined oil gets above ascertain price per gallon, its use becomes almost prohibitive to millions of our foreign consumers. The result of higher prices is immediately shown in a falling off in the foreign demand.

A careful inspection of the above tables will show that the relative ratio between the price of refined and crude oil has been better maintained during the years that the practice of basing prices upon the actual conditions of supply and demand has prevailed than during the years immediately preceding the adoption of the new order of things. The speculator devoted his efforts to bearing the market whenever there was any immediate prospect of a temporary increase in new production, without any regard to the foreign demand for refined or the actual value of refined oil in the markets of the world. The producer was absolutely at his mercy.

Taking the year 1889 for illustration, it will be observed that the price of refined oil has advanced from 7.50 cents per gallon at the beginning of the year to 8.10 cents at the present time, a gain of 60 points. During the same period the Seep Purchasing Agency price for crude oil has advanced from \$1.19 to \$1.35 per barrel, or 16 cents. During March and April, when crude oil was \$1.13 per barrel, refined dropped as low as 6.95 cents per gallon. On June 28, when refined had advanced again to 7.20 cents, crude oil was marked up to \$1.15, and a few days later, when refined had advanced to 7.50 cents, the crude oil price had been raised to \$1.21 per barrel.

HOW THE PRICES OF OIL ARE FIXED.

Q. (By Mr. Phillips.) You say "it tended to make the deal between producer and refiner a direct one;" but does the producer have any part in the bargain? Do they not post the price each day that they will give? Can it be considered a deal when the producer has nothing to do with fixing the value of his commodity? A. Would you suggest that I say "option"—that the producer has the option? Would you advise me to change that?

Q. Provided he has another place to sell. A. He is not driven to that necessity. When he becomes reduced to that necessity, it may be as you say.

Q. When the Seep Agency advanced prices, as they did lately, did not the Standard advance the refined 10 or 15 hours later, the same day or the day following? A. I have no knowledge of that, but I dare say refined would go up in proportion to the advance in crude.

Q. They fix both prices, the crude and refined? A. Mr. Seep states here that the markets or the demand of the world fix it. We are giving Mr. Seep's version of it.

Q. (By Mr. Farquhar.) Does Seep post the European market? A. No.

Q. What market does he post? A. The crude oil market.

Q. Of America? A. Of the United Pipe Lines and the National Transit Company.

Q. (By Mr. Jenks.) You speak of the export price fixing the price of all oil and of the markets of the world fixing the prices when Mr. Seep is purchasing. Is it true that the relation between the regular export price in New York and the price Mr. Seep is paying the producer is a constant one? A. I believe it is.

Q. You think the relation between these two prices is substantially the same all the time? A. Inevitably. The purpose of this paper is to lead up to that question.

Q. (By Mr. Phillips.) Did not the Standard Oil Company completely control the price of oil four years before the Seep Agency? What does the statement that they "would pay what the markets of the world would justify" mean? Was there sufficient business done on the exchange by others to affect the Standard in any way? A. To affect prices, there was.

Q. To any considerable extent? A. To an extent sufficient to influence the market one way or the other. I have an instance in mind now of a gentleman coming to Oil City and advancing the market two cents by dumping on it a half million barrels of his own oil.

Q. Was that a common practice? Did not a brief period of time elapse in that transaction? A. It was just an instance of marvelous mention, you might say.

Q. The gentleman only had time to walk from one place to another? A. He took that time.

Q. (By Mr. Kennedy.) Who was that gentleman? A. Mr. Michael Murphy.

Q. (By Mr. Smyth.) That was a case of pure speculation? A. Yes. It was possible for anyone with money and nerve and oil to do the same thing any time.

Q. (By Mr. Phillips.) It would be risky for a producer to pursue that course, would it not? A. I would not want to be the man to try it.

BY-PRODUCTS AND THE PROFITS OF OIL REFINING.

Q. Is it fair to compare the price of crude oil with that of export oil to show what the profits are, without taking into consideration the by-products, such as lubricating oil, which is sold in this country and other places? A. That question has occurred to my mind a number of times, and the conclusion I have arrived at is that when we have an article of export or commerce the foreigner makes the price; Manchester fixes the price for cotton; Liverpool for wheat.

Q. Does the foreigner make the price of oil in Denver, Minneapolis, and the southern cities and towns? A. If oil could be transported by telephone, or placed there without labor, it would be sold as cheap in Denver as in New York; but since labor enters into it, the oil at Denver is produced at Denver and the eastern oil is brought into competition with it.

Q. Does not the Standard make a very large profit out of the by-products—benzine, tar, lubricating oil, etc.—which you do not take into consideration when simply comparing the price of refined oil with what they pay for crude? I may be misinformed or mistaken; what is your view in regard to that? A. Well, the way it has always appeared to me is this: The by-product is something of a gift of nature. In marketing the by-product labor and capital have been employed; the producer has nothing to do with these by-

products; he sells his product as a whole, and they are only created by labor in the process of manufacture or by chemical process. In other words, they cost something; they possibly cost something near as much as they produce in many instances, but that there is a profit is very complimentary to the refiner and to the chemist who has made it possible. There was a time in the refining business when there were no by-products. The only by-product that I know anything about when I went into the oil business and that had a ready market was benzine. That was sold as a dissolvent for paraffin, went into the wells as benzine, came out and went into the producers' tanks, and was sold back to the refiners as crude oil at 400 and 500 per cent over cost. Now, that is the only by-product that we had in the beginning. Chemistry has advanced the art of refining, and at every step labor and capital are employed in the preparation of by-products, and I dare say there is a profit. There should be a profit in them.

Q. Well, provided there is a profit, and you admit that there is and a large one, in the by-products now, is it fair to take the price of the refined export oil and compare it with the price of the crude? In your opinion are not the by-products the source of one-half the profits of the Standard Oil Company or other people engaged in shipping oil abroad? A. Well, it occurs to me that with the profits on oil at export prices, we should have no oil business, because with the production of the present volume no refinery could undertake to carry on the business and run it for the profits on burning oil alone. The oil would necessarily be so high that there would be no inducement for the consumer to buy it. It has been stated here in my presence by some person on the stand that ten cents a barrel was a fair profit, but he was taking into consideration the by-product. No refiner can take ten cents profit, and that alone.

Q. (By Mr. Farquhar.) Does not the Standard Oil Company dispose of the by-product to other manufacturers? For instance, is not the petroleum residuum which enters into dyes sold at a cheap rate to manufacturers outside of the Standard Oil Company? A. Yes.

Q. And in the long run it makes very little difference in the tables you have presented here in respect to the crude oil itself? A. That would be my view of it.

Q. Do you know whether the Standard has entered into the manufacture of by-products such as dyes, magenta dyes, and others, or is that done by different corporations and individuals who have taken up the by-product business? A. By separate concerns.

Q. (By Mr. Phillips.) How about the paraffin or wax that enters into sperm candles; do they manufacture the paraffin or wax? A. There is a large percentage of wax and they sell wax to other manufacturers.

THE PRODUCERS' PROTECTIVE ASSOCIATION BUILDS REFINERIES.

The volume of matter involved in this subject is so great that I have necessarily skimmed over it. The complete examination of this subject would require

more time than the commission can give to any one witness. Therefore, we have jumped from the movement in the 70's to the present time, but I should like to go back now to the shut-in movement and the matters growing out of that. After that period of 12 months' suspension of operations the Producers' Protective Association continued in force, and their next step was to promote the erection of refineries in competition with their benefactor, the Standard Oil Company.

Q. Did you not say that was a mutual arrangement? Were not the producers at liberty to do as they pleased after that? A. That agreement was carried out for one year; it was limited to one year, and at the expiration of that time the parties did as they agreed; their mutuality ceased. They fell apart. The Standard Oil Company pursued its course as a transporter of oil. The Producers' Association, as an inducement, that there was so much profit in the by-products that they could afford to give the burning oil away. A refinery was built on that proposition by impractical men and failed. There was no reason why a refinery where it was built should not have succeeded; there is one there now in successful operation.

Q. How many were built after that shut-in period? A. Only one.

Q. Were there not a large number before, called independent refineries, which united their interests? A. Yes.

Q. The producers did not spend money in building refineries? They supplied the money to build that one refinery.

Q. No large per cent of it? A. It was contributing financially.

THE ORGANIZATION OF NEW PIPE LINE COMPANIES.

Q. Had they a right to do that? A. They had a perfect right to do it; but, to show the object of the organization still further, they proceeded about 1890 or 1891 to organize pipe line companies. The first company organized was the Producers' Oil Company, Limited, with a capital of \$600,000. No one questions their right to do that. It was organized at a very opportune time, at the period of the greatest production that has ever occurred—the opening of the McDonald field. They entered the McDonald field, but they got away from the production that was likely to be overwhelmingly large. They kept on the outskirts and limited themselves to such wells as they could handle with their capacity. That was the first point where they entered actively into competition with the United Pipe Lines in the transportation of oil. At this time the McDonald field rose within three months from practically nothing to a daily production of 80,000 barrels, and the production was limited to a territory about six miles long by two miles wide, a very narrow strip for so large a production. That flow continued for but a single day, but the average was above 60,000 barrels a day for months. The Producers Association, which had been formed for the betterment of the oil trade, did nothing to improve the condition of the McDonald producer. It gave him competition at once useless and expensive—expensive

to the extent of \$600,000 of the producers' money embarked in it, which has never paid a cent of interest from that time to this. The one concern was obliged to shoulder the entire responsibility for carrying the oil in that district, and would have done so regardless of the presence of the association of producers.

INTEREST OF THE STANDARD IN THE PRODUCERS' OIL COMPANY, LIMITED.

Q. Did not the Standard Oil Company purchase a large percentage, a majority, of the stock in the Producers' Oil Company, Limited, of that \$600,000 capital of which you speak? A. I know of some purchase by Colonel Carter.

Q. Did not that find its way to the Standard Oil Company, and in the suit pending was it not proven that the Standard Oil Company furnished the money to purchase the majority of that stock? A. I did not understand it so, but I do not know.

Q. Did they not pay as much as two for one in order to get control? A. I have no information on that. The only sales I know of were at par; I know of some few sales at par.

Q. Was that a direct corporation, or what was the nature of the organization? A. It was a limited partnership.

Q. Mr. Carter attempted to be elected a director in it, did he not? And is it not a fact that the matter was taken into the courts with the result that it was decided that he could not become a director or have the power to vote that stock, and that therefore he failed to secure control of the company? A. I know there was a suit and a decision.

Q. You do not know that the decision was adverse to Mr. Carter or the persons who stood back of him? A. I presume that it has been from the subsequent proceedings.

Q. Are they not now appraising the value of that stock? A. I understand they are now appraising the value of the stock. The Producers and Refiners' Oil Company, Limited, proving ineffectual for the purpose intended, obtained additional capital through a combination with refiners to the amount of \$250,000. That has never paid a cent of dividend. It has been in operation nine years and has never paid a cent to the stockholders. The market price of oil has ranged from one to nine cents higher per barrel in that line as compared with the Seep Agency prices. The producers got the benefit of that. Yet the refiners to whom the oil was sold paid the existing market price, or a price less than the one paid to the producer.

THE ASSOCIATION CONSTRUCTS A PIPE LINE TO THE SEABOARD.

Q. Was there another line built after the second one to which you refer? A. The United States Pipe Line was built to the seaboard.

Q. By whom? A. By the same association. A million dollars was embarked in that. Other capital was added to that, probably four or five hundred thousand dollars, making upwards of \$3,000,000 invested in

transportation as a result of that movement, and upon which the stockholders have never received a dollar excepting a five per cent dividend paid by the United States Pipe Line at a time when it was paying nothing on its fixed indebtedness.

Q. Do you not believe that they would have reaped a large profit had it not been for the opposition of the Standard? A. Not at all. I believe that investment was useless, the capital wasted, and the producers wronged.

Q. When this company commenced to sell refined oil in New York city did not the Standard put the price down there to less than the cost of refining? A. Whatever was done there, was a matter of merchandising on both sides. They were not producers or refiners—they were merchants.

Q. Did they not do the same thing in Philadelphia? A. I believe that to be a common practice wherever there are sales. Each person having a commodity for the market places it at the best advantage to himself.

SELLING AGENCIES ESTABLISHED IN EUROPE.

Q. Did they not obtain a market in Europe and establish a selling agency there? A. I was leading up to that.

Q. Did not the Standard buy up that agency and obtain all the tanks available in Germany and leave the independents without a chance to market their oil? Did they not buy out a man by the name of Poth, who was handling the independent oil abroad? A. I understand they did.

Q. Was not the agency sold before his death? A. I know nothing about that; I cannot answer that question.

Q. Have you any knowledge of that? A. No; I have no knowledge of it.

Q. Do you know that the Pure Oil Company, as it is called, built storage tanks abroad and established agencies of their own? Are they now doing business in that way, independent of the Standard's opposition, and where they cannot be discriminated against in prices? A. I know of the existence of the concern called the Pure Oil Company.

THE PRODUCERS' ASSOCIATION BECOMES A TRUST.

Q. You do not know then that these companies have established agencies abroad and are now marketing their oil? A. Oh, yes; that is a matter of common information; but I was about to say that when the Producers' Protective Association started in to protect their business in an associated way I suppose they were incorporated. They started out with the pipe line, under an arrangement in which they could limit their responsibility and say who they would admit to partnership. That being ineffective they formed a combination of refiners and secured \$250,000 additional capital. Then came the construction of the United States Pipe Line, and after that the establishment of the Pure Oil Company. But the Pure Oil Company did not come out until after the Oil League was formed and it became necessary to complete the trust. This thing in a most untrust-like way, but ended up in a trust as

complete as could be formed. The creation of the Pure Oil Company was necessary in order to control all these other properties. The Pure Oil Company, with the nominal capital of \$1,000,000, and an actual capital of \$400,000, is trying to swing this \$3,000,000 concern, and will eventually if the voting trustees have the power.

Q. (By Mr. Jenks.) Will you explain the evolution of that trust a little more in detail? A. That is a trust.

Q. Explain just what you mean by that. Do you refer to the method of its formation?

Q. (By Mr. Phillips.) Do you mean a trust or a combination?

Q. (By Mr. Farquhar.) With respect to the form of control you regard it as a trust? A. In that respect I regard it as a trust. It is a combination, a series of combinations, but the properties are all managed by voting trustees. The property is a trust; three-fourths of the property of the United States Pipe Line, or the proportion which this organization controls, is in a trust.

Q. (By Mr. Phillips.) Do you know the reason why a voting power was put there? Had not the Standard bought several hundred thousand dollars' worth of the stock of the United States Pipe Line and did they not propose to control it? Was it not essential to the existence of the United States Pipe Line that the stock should be put in a trust? A. If we start by admitting that proposition we must endorse all that has been done before in the way of combination; that of itself is a virtual admission that the Standard Oil Company was right.

Q. (By Mr. Farquhar.) You mean to say that this action of the company has vindicated the action of the Standard Oil Company? A. Entirely.

THE PRODUCERS' ASSOCIATION COPIED THE METHODS OF
THE STANDARD OIL COMPANY.

Q. (By Mr. Smyth.) You consider that this company copied in a measure the plans and proceedings of the Standard Oil Company? A. Not exactly; that was open; this is secret.

Q. (By Mr. Phillips.) Do you mean that the Standard Oil Trust was not one of the most secret organizations in existence in the management of their business and in making statements to the stockholders? A. I suppose they have not opened the pages of their books to the public.

Q. Have they ever issued any statement to the stockholders? A. Not being a stockholder, I can not say.

Q. You are a newspaper man? A. They have never issued any to me; I have never asked for any.

Q. Was suit ever brought by a stockholder in that trust in order to get knowledge of their business and to have a statement made of how the funds were being handled? A. I think the suit failed, and properly, because the purpose of the suit was to work an injury to the company. It was not brought in good faith.

Q. Then you think that a man holding stock in the company has no right to know anything about the amount being earned or whether or not its means are

being squandered? As a rule, do other corporations exist without making a statement to their stockholders? A. If the act of the Pure Oil Company in excluding Colonel Carter is justified, I do not see how other concerns can be censured for what they have done.

THE INDEPENDENT OIL MOVEMENT HAS NOT REDUCED
PRICES OF REFINED OIL.

Q. (By Mr. Jenks.) What has been the effect of the independent oil movement upon the prices of refined petroleum to the consumers? You state that these various independent organizations that were compelled to go into a trust made no profits and declared no dividends, and that you regard the investment of that money as a practical waste, because they had been of no service to the oil producers? A. Yes.

Q. What has been the effect of this independent movement on the prices of refined petroleum? A. It has had no effect whatever.

Q. You do not think it resulted in reducing the prices of petroleum at all? A. None whatever; it only gave the members of this company and the independent refiners in the creek regions the opportunity to get immensely wealthy. They are making money faster than ever before. The producers are making a little more money than previously, to the extent of the premium which the producers will not pay the patrons, and the stockholders receive nothing for their investment.

EFFECT OF THE MOVEMENT ON THE PRODUCERS.

Q. Do you know how far the stockholders of these combinations are themselves producers? A. A very large per cent are producers.

Q. Do you know what proportion of the producers whose oil they are buying are themselves stockholders? A. I do not.

Q. Then you would say that the general result of this independent movement has been to increase the price of crude oil? A. Only to a very few, to persons interested in that line and connected with its service.

Q. To others, too? A. To others, no; its effect has not been felt to any extent anywhere.

Q. Does it benefit all of those whom it reaches? A. To that extent and by this means: It is a method of "robbing Peter to pay Paul." It is taking money out of the pipe line to pay the producer in the way of advanced prices for his oil; it performs its service by piping oil for less than published rates or established rates, whatever they may be.

Q. What is the rate? A. The pipeage rate is understood to be 15 cents a barrel. Now, when the premium has been as high as 9 cents a barrel, that would mean as much as 9 taken from 15, leaving the pipeage charge 6 cents.

EFFECT OF THE INDEPENDENT MOVEMENT ON REFINERS.

Q. I understood you to say, further, that this independent movement had resulted in making refiners in that region rich? A. It did.

Q. Will you explain how that was brought about?
A. If I could, I would be in the refining business myself.

Q. You think it has not resulted in the lowering of the price of refined oil? A. No; they claim that their success has not resulted in the lowering the price of refined oil, not in the region, at least, where we are. That oil which goes abroad is restricted in every State of the Union.

Q. (By Mr. Phillips.) That is, both as to the Standard and to the others? A. Yes; it is necessary by reason of the laws of this country.

Q. Are not these companies now making money?
A. The refining companies?

Q. The independent refining companies. Would not their stock be very desirable at the present time?
A. The refiners' stock?

Q. No; the stock of these various independent companies? A. It would be if they managed on business principles. I believe there is money in piping oil if the business is run for the benefit of the lines, for the plant itself. There must be money in it.

Q. Did they not establish the first pipe line to the seaboard to handle refined oil? A. That cuts no figure. Warren, as we have shown here, piped refined oil a distance of three miles in 1865, and in tank cars they have taken refined oil from one point to the other. And what is a tank car but a pipe line on a limited scale? If you confine oil in an iron vessel, it makes no difference whether it is a continuous pipe line or in a closed tank and agitated, the result is the same.

THE OPPOSITION MET BY THE NEW COMPANIES.

Q. Would not these companies have gained a good deal more if they had not been opposed by combinations in New Jersey and could have gotten through to New York? Would not their profits have been much larger if they had had free pipage through to New York, as the Standard Oil Company had? A. If there was only one proposition, a person might answer that.

Q. Have others the same right to go through to New York that the Standard Oil Company has? A. Undoubtedly they have the right.

Q. And is it fair or just that they should be prohibited from exercising that privilege of equality? A. Let me answer that by comparison in this way: I think it would be just as fair as for one of two producers bidding for land to outbid the other and take the land away from him. If it is unfair to prevent a pipe line from going into a market already occupied, it is unfair for one producer to compete for land and take it from another if he has, with his neighbor, superior wealth and ability to control it.

Q. One is exercising the right of eminent domain? A. And he is performing for that right an adequate service to the public.

Q. Would you say, if one railroad could supply the whole market of New York, that all other railroads should be prohibited from going there? A. If the money to construct those roads was to come from the passengers who were expected to patronize them and then to pay their fare, too, I should say yes.

Q. Do you undertake to say, then, that these inde-

pendent companies which the Standard is so anxious to control, and in which they have purchased stock which would sell today at a very large profit, are robbing their people or doing an injustice? A. "Robbing" is a hard word, and I do not care to use it in any connection. The fact remains that the money embarked in the enterprise is unremunerative.

Q. You stated they were taking money from some person and giving it to others? A. That was only a comparison; just a remark. That is a very common expression: "Robbing Peter to pay Paul."

Q. You have no direct knowledge of these people having done an injustice to any of the stockholders, have you? A. I have no knowledge that they have done full justice to the stockholders in returning them interest on their investment in the pipe lines. I have no knowledge of that kind. There are \$3,000,000 invested in that enterprise.

Q. You have no knowledge of the fact that they have been employing every honorable means to get through to the city of New York, and that they have lessened freight rates a very great deal by getting into New Jersey, have you? A. I have; yes.

Q. (By Mr. Jenks.) You have said that you do not think the independent movement has reduced the price of refined oil. What has been the price of water-white oil for the last few years, since the organization of the independent companies, as compared with what it was before? A. I have no means of knowing; we do not have water-white oil in export. In the sale of water-white or any other class of oil there is a special contract, according to the district or location.

Q. You have no record at all with regard to the price since 1874? A. None at all.

Thursday Morning, September 7, 1889.

THE SEEP PURCHASING AGENCY.

Q. (By Mr. Jenks.) During the session yesterday you spoke of Mr. Seep as being the general purchasing agent. Whom does Mr. Seep represent? Is he the general purchasing agent for the Standard Oil Company? A. I so understand it.

Q. So he receives his instructions from the New York office? A. I do not know from whom he receives his instructions; he acts independently so far as my knowledge extends.

Q. He is supposed to represent the Standard? A. Yes.

Q. Whether he fixes his prices of his own accord or whether he receives direct instructions from some superior official of the Standard Oil Company you do not know? A. I do not know.

Q. Is he a general purchasing agent with other agents under him? A. That is the way I understand it.

Q. You understand that he fixes the prices for his different subagents throughout the oil regions? A. That is my understanding.

Q. Have you any idea as to the number of subagents

he has under him? A. I have an idea; the number is very large, probably twenty or thirty.

Q. You do not think the number of agencies runs into the hundreds? A. Oh, no; I do not think that; 20 or 30 will include them all.

Q. How large a portion of the crude oil produced is purchased through Mr. Seep and his subagents? A. I should think about 80 per cent.

Q. Is that for the whole field, the Ohio, Pennsylvania, and West Virginia oil? A. I can testify only as to Pennsylvania oil.

Q. Have you any information with reference to the Ohio oil? A. I think that estimate would hold good as to Ohio.

Q. The agencies there are under his control also? A. So I understand.

Q. Mr. Seep, then, in posting prices that he will pay, is practically doing so for 80 per cent of the oil that comes into the market? A. I think about that.

FLUCTUATIONS IN THE PRICE OF CRUDE OIL EXPLAINED.

Q. In posting the prices he will pay for crude oil from day to day, are the fluctuations by the barrel very large or are they only a cent or two? A. Well, I do not know as to that; I pay but very little attention to the oil market. The fluctuations are usually a full cent at a time; sometimes a fraction of a cent.

Q. That is a barrel? A. A barrel. It has been two cents; it may have been higher than that at times.

Q. Do you see any satisfactory reason why, on a barrel of oil, fluctuations should be so small as that? Are there any special causes that affect the market in such a delicate way? A. Now that question has occurred to me, and I think I have spoken to one or two persons about it, and the reason I have heard assigned is this: They have adopted the point system on refined oil, and the point system is a very delicate fluctuation; for example, 10 points in oil may represent a fraction of a cent or a full cent, and that would account for the margin on the amount you stated; it is controlled in some way by the movements of refined and the fluctuation of refined is by points, 100 points representing a cent, and it is the fraction of 100 that controls the prices of the crude.

Q. So in your judgment these minor fluctuations that Mr. Seep makes are controlled by the fluctuations of the refined? A. Yes.

HOW THE PRICE OF REFINED OIL IS DETERMINED.

Q. The prices of refined are presumably fixed by the Standard Oil Company in New York? A. As I understand it, they are fixed by the demand in Europe.

Q. There must be somebody who has oil to sell and who determines the selling price? A. The parties holding the oil would have the option of relinquishing their holdings at the existing price, but to make the price, as you put the question, would imply that the Standard chalked the price up, and said to Europe: "You must take this or none at all." That is not the

situation, as I understand it. The pulse of the market is carefully felt in Europe constantly, and the market is made to suit the demand there.

Q. The point I had in mind was this: Is it some official of the Standard Oil Company who determines what price shall be accepted for the oil they have? A. There is undoubtedly some salesman connected with their establishment who is in direct connection with the prices at some point. The condition of the market is known to this person, and if he wants to relinquish the oil at that figure it goes.

Q. Then if the price of the crude oil that is bought by Mr. Seep varies with the price of refined oil, would there be a presumption that the two are connected? Would the prices then presumably be fixed by Mr. Seep? A. The price of crude oil is invariably controlled by the price of refined. When there is a variation in refined, amounting to points enough to make a fraction of or a full cent, it appears in the crude.

Q. (By Mr. Phillips.) Is it not the case frequently that they advance the crude before the refined, or is not the one advanced the same day the other is? Was not that the case with the recent advances, the crude oil being first advanced and the points afterwards named on refined? A. I am not clear as to that, and I will say furthermore that I am not personally familiar with the movements of refined oil.

Q. (By Mr. Jenks.) Yesterday I asked you with reference to the price of water-white oil, and you said that the regular prices of oil were the prices on export oil? A. The prices quoted.

Q. Quotations on refined oil are made in Pittsburg, New York, and other places, are they not? A. Yes; those are local market quotations, and they pay no attention to local markets; the general market is the one that controls the price of crude.

PRICES OF OIL IN CINCINNATI, 1865-1877.

Q. In your paper you pay no attention to these markets, Pittsburg or New York? A. I pay no attention to them; but in connection with that question I hunted up some figures gathered back in 1865. They consist in a series of reports of the Chamber of Commerce of Cincinnati from the year 1865 on into the seventies. Now, this gives the local market and not the export:

[Report of the Cincinnati Chamber of Commerce for the year ending August 31, 1865.]

The price of this article, owing to the decline in the price of gold, was much lower at the close than it was a year ago, though the average price is higher for the year than that of the previous season. There has been a marked falling off in the production of the article, according to the statistics of the commerce of the country.

The following was the price of refined petroleum, per gallon, duty paid, at the close of each month during the year 1865:

Cents.		Cents.	
September 28.....	85	March 29.....	83
October 26.....	85	April 26.....	73
November 30.....	88	May 31.....	70
December 28.....	93	June 28.....	70
January 25.....	92	July 26.....	70
February 22.....	93	August 30.....	70

The following were the imports of petroleum, including coal oil, of which but little is now brought to market, the last four years :

Barrels.		Barrels.	
1861-62	23,000	1863-64	49,031
1862-63	20,000	1864-65	50,925

The price of this article has been very low during the entire season, but did not undergo much change. The supply has been larger than the previous year, as is shown by the statistics of the trade, there being an increase in the foregoing exports from New York alone of over 7,000,000 gallons. Previous to July, 1868, there was a tax of 10 cents per gallon on refined; since that time it has been free of that tax, so that in comparing the prices given this must be remembered.

Q. Have you facilities for obtaining, conveniently, the prices of water-white oil at Pittsburg or New York, covering the same period as those of export oil? A. Not any more than the commission itself. These figures, I should say in explanation, were obtained some years ago when I was making an investigation into the movement of oil. The Cincinnati Chamber of Commerce seemed to be the only one that had given attention to it and kept a record from 1860 to 1869, and up to the present time.

Q. You think that Cincinnati would be as fair a point as could be chosen in determining the price of water-white oil? A. It is the only point at which a correct record has been kept, a correct record of the prices of all commodities.

Q. I understand you to say that the prices of water-white oil in these local markets do not vary with the prices of export oil? A. I said it was a matter of special contract in the various markets where it was offered. I do not know that I can add to that because, in the various cities, the prices have varied according to the quality of the oil; but water-white, as a standard quality, is always water-white wherever it is offered; the elements that enter into that are transportation; it may cost more to sell in Ohio than it does at the point of manufacture, if it is manufactured in Pittsburg.

Q. Certainly. If we could find one standard market where they have kept a record of the prices of water-white oil from, say, the early seventies or sixties up to date, would that, in your judgment, show us fairly well what the effect of the combination has been upon the American consumer? A. It undoubtedly would; it would show you the trend of prices—what the American consumer has been obliged to pay.

Q. You think a record of that kind would be fair to all parties concerned? A. Yes.

Q. Fully as much so as the record of export prices? A. Fully as much so as the export prices, taking into consideration the difference in the quality of the oil.

Q. From what you have said I infer that you believe

that a great many elements come in to affect local prices that do not affect export prices. A. Undoubtedly.

Q. For example, home competition? A. Well, and a better quality of oil; the higher the grade of oil the more the cost in manufacture, transportation, and other things besides competition.

Q. But if we were to take some one market and keep a record, comparing prices there with the price of crude oil, you would consider that a fair test? A. Yes; and I believe Cincinnati would be as fair a market as you could get.

Q. (By Mr. Phillips.) Would that be a fair test if there was no competition in Cincinnati, and there was no other market? A. Undoubtedly. Competition has very little effect in regulating prices through a long series of years. You take a series of thirty years and competition has very little to do with it; it will go down to a stable price, and that must be a remunerative one for the people to remain in the business.

Q. Taking a period of thirty years, as you have suggested, do you suppose competition would appear there on the whole, as it would in, let us say, New York and Pittsburg? A. I have no reason to doubt that it would.

THE ESTABLISHMENT OF OIL EXCHANGES.

Q. (By Mr. Farquhar.) When was the first oil exchange established in this country? A. Well, from the various records we have, it would be about 1871; that is, an oil exchange for handling business, as we now understand it.

Q. (By Mr. Jenks.) That was at Titusville? A. That was at Titusville in 1871. There were exchanges before that.

Q. (By Mr. Farquhar.) What was the character of the exchanges before 1871? A. The exchanges then were something like the Chamber of Commerce, where persons engaged in the business would call and exchange views. It was a meeting ground.

Q. How many exchanges were established in the country? A. At one time I think there were no fewer than twenty.

Q. When was the New York exchange established? A. I think about 1880; but we can determine that exactly.

Q. I want to find out who the speculators were that fleeced the public on oil. A. On May 2, 1877, I have a record of the petroleum exchange being opened in New York.

Q. How long did that exchange exist? A. That or its successor is in existence to-day.

Q. What is the character of the exchanges in New York now with respect to oil? A. Oil is dealt in in futures now. They speculate on the value of oil a month or a year ahead.

Q. The same as in cereals? A. That is the method of speculation now. But dealing in futures is only of recent date.

Q. (By Mr. Phillips.) Is there any considerable amount of speculation now of the kind to which you refer, compared with what there was 15 or 20 years ago? A. It is very small in comparison.

Q. (By Mr. Farquhar.) What is the character of the business in the oil exchanges in the oil country itself, in Oil City? A. There were two elements in the trade, one interested in high prices and one in low. The bears had a decided advantage. Through the existence of a very large stock of oil it was possible to sell along in the later seventies and early eighties and never cover. Oil could have been sold short there to get the carrying rates; brokers became rich on selling wind and got the carrying rates—all that wind, and never covering. The effect of that was to depress the prices to producers. The larger producers took a very pronounced stand against that sort of trading in the oil exchanges. It was denounced severely in their meetings and in letters to the press.

Q. Who are the supporters of the oil exchanges? A. They are generally called "lambs"—that means the public, you know; the people who come from the outside and bet on the price of oil and generally lose.

Q. Were the producers, as well as the refiners and all others, interested in this speculation? A. Undoubtedly they were—producers, merchants, laborers, and clerks.

Q. So it was a free field for a while, in an oil exchange, for people who took their chances in speculation? A. Yes.

Q. Have you any idea of the losses to the public resulting from that speculation? A. I have never heard an estimate of that, but if I were asked to make one myself I should think one hundred millions of dollars would not be too high.

POSITION OF THE STANDARD AND THE PRODUCERS' ASSOCIATION WITH REGARD TO SPECULATION.

Q. Was that speculation in oil in 1865, or what was the time? A. I should place it at a later period than 1865. I should place it from 1870 up to the early nineties. There was very little speculation in oil after the movement known as the Producers' Protective Association. That movement killed speculation in oil.

Q. Now, how was that brought about? A. That movement?

Q. Yes. A. It was brought about by an agreement between the Standard Oil Company and the association called the Producers' Protective Association, and we have the agreement here.

Q. Then you give credit to the joint action of the Producers' Protective Association and the Standard Oil Company for the suppression of speculation? A. In removing the feature of injudicious speculation. Proper speculation is all right. It is proper and just for a person to buy oil and hold it—buy the certificates outright. No one ever raised a voice against that—against the purchase of oil outright. It is the mere gambling on margins that has been destructive to values and injurious to the business standing of the communities in which these exchanges are located.

Q. Since that agreement have the producers, the

Producers' Protective Association, or the Standard Oil Company sustained in any way the petroleum exchange in New York? A. No.

Q. Have they been adverse to it? A. Well, I cannot say they have been adverse to it; I can simply say that they have left it alone.

Q. In other words, the regulation of prices by the Standard has eliminated the speculation in certificates entirely? A. Undoubtedly.

Q. At what date do you place Joseph Seep's quotations? A. January 23, 1895.

Q. Now, does it follow that Mr. Seep's quotations are standard and stable quotations following that agreement? A. They are.

Q. So we have now reached a market where speculation has nothing to do with the price of oil? A. Precisely; we have reached the point now where the consumer makes the prices.

EFFECT OF THE SHUT-IN MOVEMENT ON SPECULATION.

Q. (By Mr. Phillips.) Did not the removal of a large amount of stock by the shut-in agreement between the Standard and the producers have much to do with the elimination of speculation? A. That was an incident or a factor in it. I was about to say that, in connection with the oil exchanges, a habit grew out of the speculation that proved very injurious to all concerned. The speculator on the exchanges along in the early eighties began to influence the market by field conditions at every possible opportunity—that is, by rumors of wells, rumors of big strikes in localities from which facts could not be obtained readily. The effect of these rumors was either to elevate or depress values for the time being, and no matter if they were corrected within an hour or two, the effect would be felt on the market. Out of that movement grew a protective system among the larger speculators, and the prominent producing concerns grew out of that movement. They selected experts who were placed in the fields at points of interest where large wells were coming in or expected to come in. It was their duty to watch developments and report results at the earliest opportunity.

Q. What were they called? A. They were called scouts.

Q. (By Mr. Jenks.) Did these persons make the information public or keep it for the special use of the Producers Union? A. The Producers' Union did not do that. It was the individual producers; the individual speculators had them there for the purpose of speculation. Large producers had them there for the purpose of being informed as to the true state of affairs.

Q. (By Mr. Phillips.) Did you ever act as a scout in those days? A. I had that honor. I laid down the quill for a period of two years and served as a scout on the frontier.

Q. For whom? A. For the Union Oil Company. I reported to them daily and my reports were accepted at their value at the time.

Q. (By Mr. Jenks.) I understood you to say yesterday that when this Producers' Union was formed

one of its chief purposes was to gather trustworthy statistics and information, in order, as I suppose, to check somewhat the speculation on exchanges? A. Not this particular movement. That referred to the movement in 1865 and 1870. I should like to refer to that later on. I have some data on that subject.

Q. (By Mr. Farquhar.) Before leaving the subject will you state as nearly as you can who the parties were that participated in that movement from 1865 to 1870 and later on? Were they the large or the smaller producers? And will you also give us as complete an idea as you can of who participated in these speculations? A. That happens to be a pretty long subject, but if you will bear with what may seem to be a digression, I might start in by explaining what first made oil prices. That will lead to the oil exchanges and the dealers in oil at the stated places and times where and when they did their trading.

ORIGIN OF THE FIRST OIL MARKETS.

The first oil markets were, in my opinion, made by the dump men on Oil Creek. Now, the dump men were the first speculators in oil. A dump is a tank of any capacity from 10 barrels to 600. The dump man developed into a refiner later on, and as a refiner was known as the B. S. refiner; that is, he took B. S. oil, non-merchantable oil, and redeemed the better parts of it and placed it on the market. The dump man visited the small producer in all localities, bought his oil at so much by contract, and if there was one or two feet in the tank bottom he immediately bought it in lump sum or so much per barrel. He also bought the good oil, the merchantable oil, from small producers, who could not hold their oil long enough to get a full shipment of 50 or 100 barrels, whose wells had declined to such a point that they could not hold for a month at a time, and were obliged to sell from day to day or week to week. The dump man was their market. When the refiners sent their representatives up in the region to purchase oil—and they used to travel up and down Oil Creek like platoons of cavalry, pricing oil at various wells—the usual method of approaching the producer was to say: "Have you any oil to sell?" The answer would be "I have so much." And then the producer would say: "What price are you giving to-day?" If it was thought the producer was not posted on existing prices the trader would probably reply: "What is the dump man paying?" Receiving a reply, he might name a figure just above it, just enough to get the oil. The dump man was the first merchant to make prices in the oil field. His price was steady all the time. You could always market with the dump man. After the first few years of the business the market was spasmodic. There were days and weeks at a time, perhaps months at a time, when there were no quotations or prices from the refiners and agents. Now, in the course of time the dump man was eliminated.

OIL SOLD THROUGH REFINERS' AGENTS.

These refiners' agents during the first 10 years of the business were migratory; that is to say, they moved about through the region making individual contracts with producers and others. Their meetings would occur at night; they would meet in the evening after supper and discuss the trade. That was the origin of the first oil exchange. Later on, as the business became systematized in fewer hands, they began to adopt regular hours for business, and one of their first resolutions was to do no trading after a certain hour in the day—6 o'clock. Later on they adopted a resolution to do no trading after 4 o'clock; then they adopted banking hours for their trading, but that was when the oil exchange became a permanent factor in the trade. All the trading, say, from 1875-76 up to 1895, was done in the exchange. Trading done outside of the exchange, and known as curb trading, was considered disreputable and classed with bucket-shop operations. The rapid fluctuations in oil in 1876 did a great deal to foster the exchange element and show people that it was possible to make money rapidly by these wide fluctuations; and the sudden advance of \$3 a barrel in 1876 brought the public into speculation with the producers. I can say here and now that producers who remained out of the oil exchanges and away from speculation invariably got wealthy. Those who went into the oil exchanges outnumbered those who remained out so largely that they formed themselves into a league after a while to combat those organizations that had nothing to do with speculation and shake out of them some of their earnings.

THE SUPPRESSION OF SPECULATION.

Q. (By Mr. Phillips.) Were there not some exceptions in regard to the producers? Captain Murphy, for instance, was a producer and speculator. Did he not make a success of it both ways? A. I thank you for calling my attention to that; that is one exception. I would thank you for another one.

Q. I think as a rule you are correct. I never speculated as you know. A. No, I know you never speculated; I am satisfied of that; and you were one of the strongest opponents of the wild-cat speculation that existed, an outspoken opponent. We have letters from you in our newspaper denouncing wild-cat speculation.

Q. Especially the scout and mystery business. A. That mystery business was the source of the institution of the scout.

Q. (By Mr. Farquhar.) Are we to understand, then, that after this era of speculation and the shut-down the strong men in the oil region, the Rockefeller and others, resolved to suppress all this speculation in oil and oil certificates; that the bucket shops in oil agreed to make the shut-down on a conservative basis, and bring oil up to a paying figure for producers as well as refiners, which system, as a matter of regulation, has existed until the pres-

ent day; and that the benefit of the whole oil trade that has come to the consumer has come through the great organizations of oil men? Are we to understand by your testimony that the stronger the producers and refiners have been and the more they have been united in finding a stable market, the more the consumer has gained? A. I believe that is true.

Q. That is your observation? A. Yes.

Q. And the credit of the suppression of the inordinate speculation in 1876 and later is due entirely to the producer and the refiner, as well as stable rates of transportation and stable and cheap prices to the consumer? Are we to understand that that is the gist, so to speak, of your remarks, or have you something further? A. Well, the producer is a man of energy and force, and his tendency has usually been in the direction of overproduction; he has been entirely uncontrollable. Show him an oil field and he runs off, wild and excited, and no matter what the conditions are, he will drill as soon as he can get the means, regardless of what others are doing. That is his right; he is injuring himself as much as others.

OVERPRODUCTION AND SPECULATION THE CAUSE OF
SMALL PROFITS TO PRODUCERS.

Q. You say you regard overproduction as the cause of small profits to the producer? A. Overproduction and speculation.

Q. And speculation? A. Yes, and speculation. But overproduction has been something that has bothered them for more than thirty years. We noticed yesterday that in 1862 it was necessary to turn the stopcocks on the wells, and every year or two since there have been movements to curtail production, all due to the energy of the producers.

Q. (By Mr. Smith.) Has the consumption of oil gradually increased year after year? A. Yes.

Q. Has it kept pace with production? A. Yes; I should say it has substantially kept pace with production, but the price always induces consumption.

Q. (By Mr. Farquhar.) What effect has the cheap crude oil on the refined oil profits? A. Well, I cannot say whether or not the manufacturer's profits are very largely controlled by the price of crude oil. When he buys crude cheap he cannot sell refined very high, because the competition of the refiners is too active for that, and competition among the refiners controls the prices to the producers very much in the same manner. I should say that in a period of very low prices the refiners suffered equally with the producers.

Q. There is a sensitive touch between the two? A. Yes, there is a sensitiveness between the two. At a medium price they succeeded better; that is, at a price large enough to make it remunerative for the refiner and to induce consumption. There has to be a medium beyond which it is dangerous to go on either side.

Q. Testimony has been given before this commission which indicates a great deal of the dissatisfac-

tion and grumbling on the part of the producer, testimony which goes to show that the producer is the only one that is affected injuriously in the whole business. It indicates that the refiners are making money while the producers are losing. They have to take the rates that the Standard puts as well as their own association, which follows the Standard, as we understand it. Now, as a business proposition, can the producer ever ask to divide the profit with the manufacturer? A. I should think not.

PRODUCERS HAVE NOT BEEN ABLE TO REGULATE THE
PRODUCTION OF OIL.

Q. Does it not legitimately belong to the producers to so regulate their own output, trade, and business that they will conserve their interests in producing the oil and selling it to the refiner? Can they legitimately share in any profit beyond that? A. I should think not. It has been their constant aim to regulate their supply, but the business is one that is uncontrollable by reason of new producers constantly coming in with new fields. The conditions change continually now. If it were possible to form a combination, as did the men who produced oil on Oil Creek in 1870, when they formed their producers' agency, their corporation, and their limited partnership companies with a subscribed capital and the declared purpose to retire the surplus portion of the oil, a combination so close as to embrace everybody in the business, the same prices might exist to-day, and we might be paying the prices that were current in Cincinnati at the close of 1865. If it were possible to do that, the producers could in that case control their output and ask and receive anything they wanted for oil. The opening of new fields, as I remarked, brings in a class of new producers. Take, for example, the Parker's Landing field, opened entirely by what we now call tenderfeet, farmers, stock companies, persons owning a fraction of an interest. I happened to be present during the greater part of the development of that field, and I believe I am reasonably familiar with operations of that kind.

Q. (By Representative Livingston.) Do I understand you to say that the producers' organization is distinct from the refiners' organization? A. Yes.

Q. Why do not the producers refine their own oil and get rid of these refiners? A. They have attempted that in many cases.

Q. Why is it that they failed? A. Well, for that I shall have to refer you to the officers of the association.

Q. Do I understand you to say now that the producers are able, that they have capital and brains enough to produce the oil? A. They certainly have.

Q. Do I understand you to say that they cannot refine their own oil independently of that organization? A. I can answer that in this way: They never have; they have attempted it and failed.

Q. Have they not been able to combine? A.

The failure does not seem to be due to lack of combination; they have combined readily enough.

Q. (By Mr. Farquhar.) The combination has never stood? A. The combination has stood, but it seems to be a matter of experience.

Q. (By Representative Livingston.) What is the reason for that? Why is it that they are laboring at a disadvantage in the refining of the oil? Why do they not put up their own refineries and refine all they make and get all there is in it? A. They do not do it; we know that.

Q. (By Mr. Smyth.) It is usually considered as a separate business? A. It is a separate business.

HOW THE PRODUCERS ARE HANDICAPPED.

Q. (By Representative Livingston.) If one-third of the oil producers should organize, could they not control the price? I know that if one-third of the cotton raisers will organize they can control the price of every bale of cotton all over the country; I know it is also true of the wheat raisers. Now, could not one-third of the oil producers organize and thereby get rid of all this handicapping? A. They could organize up to the point of establishing manufactories; but the manufacturing talent and experience and the merchandising talent and experience might be wanting among the producers.

Q. Would the railroads stand in the way of their organization? Is that one of the impediments? A. I agree with what has been said about the early conditions in the oil business. The refiners being able to offer inducements to the railroads in the way of very large shipments, obtained some concessions which enabled them to tide over a time when they needed assistance very much.

Q. It is very important for this commission to know whether the railroads or any other combinations or corporations whose franchises have been granted by the States or the General Government stand in the way of the producers. I do not see why they do not organize. If it is the railroads or any other organizations having franchises or charters that stand in the way of a legitimate profit from their oil it ought to be known? A. I am leading up to that point in discussing the existing organization of the producers.

Q. (By Mr. Phillips.) Now, is it not a matter of sworn testimony by the present president of the Pennsylvania Railroad that the Standard Oil Company received over \$10,000,000 in rebates in about fourteen months in the early days? A. I do not so understand it. I understand that certain testimony was given by the present president of the Pennsylvania Railroad, certain figures stated, and that certain deductions have been made from those figures by another person who did not testify. The deductions of this person are given as the testimony of the president.

Q. I think there is a document there— A. (Interrupting.) I am referring to that document. My remarks apply to it. The president did not testify to the figures and he gave no sums. There is nothing stated in the testimony about any sums of money received.

Q. They paid rebates to someone of something over

\$10,000,000 in fifteen months? A. He did not say that; the president did not so testify.

Q. My recollection may be incorrect. It is in that volume there. A. It is in that volume in the testimony of Mr. Lewis Emery, Jr. He testified to that, and it is his own testimony.

Q. Was it not Mr. Cassatt's testimony? A. He goes further than Mr. Cassatt. Mr. Cassatt testifies as to the operations of his own road; and Mr. Emery takes it for granted that the three other roads within the pool at the time conceded the same rate, and upon this he checks the entire production for the period of 17½ months. He takes the total production for that period. During that period he was shipping to the seaboard by his pipe line and by water as much as 2,000 barrels a day, and he includes that. The trouble is that his figures cover oil that does not go over any railroad. These roads were from the producing regions to the seaboard. There were shipments westward to which this does not apply, shipments from Pittsburg, and shipments from Huntington over the Chesapeake and Ohio to Norfolk.

THE EFFECT OF OVERPRODUCTION ON PRODUCERS RESUMED.

I have said that the ills of the producers proceed largely from overproduction and from speculation. On the point of overproduction we will read the circular issued in 1870 in connection with the first organized movement for the betterment of the producing trade.

Q. (By Representative Livingston.) Now, is that on the point of overproduction? A. On overproduction; yes. (Reading.)

Office of the Secretary of the Petroleum Producers' Association of Pennsylvania,

Reno, Pa., April 25, 1870.

Dear Sir: This association is a voluntary organization "for the protection and promotion of the interests of oil producers." Its objects are declared to be "the collection and dissemination of valuable statistics and information respecting the production of petroleum, the securing of the most advantageous facilities for transportation, the protection of the producing interest against unfriendly legislation and against unjust exactions by whatever means threatened or attempted, and the general improvement of the methods of producing and handling oil.

Any person actually engaged in the production of crude petroleum may become a member of the association, with the consent of two-thirds of the managers present at a regular meeting of the board, upon subscribing the constitution and paying a membership fee of \$5.

Among other things, the association is engaged in the preparation of a full report every month of the production of oil in Pennsylvania, embracing information of value, not only to the oil producers, but to all who feel an interest in the progress of the oil producing business.

This report is made up by districts from detailed

reports of farms and single wells, and its correctness is verified by the personal visitation of all the districts by a special canvasser of ability and integrity, employed for the purpose by the association. The report exhibits monthly, in a compact table, by districts and in the aggregate, the number of barrels of oil on hand at the wells, the amount of oil delivered from the wells, the aggregate production for the month, the average production per day, the number of wells producing, wells being drilled, the number of wells commenced, the number of wells completed, the number of wells abandoned, the number of abandoned wells resumed, the capacity of iron tankage, the number of barrels of oil stored in iron tankage. These statements afford a concise view of the conditions and progress of the oil producing business essential to an intelligent comprehension of it by operators and dealers in oil. It is designed to extend the scope of the report so as to embrace the local shipments by railroad and river, the stocks of oil in hands of refiners, amount of crude and refined oil in store at home and abroad, the foreign shipments, etc.

The amount of money realized from adjoining fees of members is wholly insufficient, after providing for the necessary current expenses of the association, to defray the constant expense of preparing and publishing these reports, and at the last meeting of the board of managers of the association the following resolutions were adopted:

"Resolved, That, for the purpose of securing funds to meet the expenses of the association, each member be requested to contribute, as membership dues, \$5 at the beginning of each calendar year; and that the secretary be directed to furnish each member, who shall have paid the annual dues as above provided, a copy of each Monthly Report of Production in circular form.

"Resolved, That the secretary be authorized to regularly furnish at \$5 per year, to all persons who may subscribe therefor, a copy in circular form of the Monthly Report of Production, and that he be authorized to furnish to all members and subscribers entitled to receive the Monthly Report, as above provided, additional copies to their own addresses, for gratuitous distribution only, at such rates as he may prescribe, not exceeding \$1 per copy.

As authorized, extra copies of the report, printed upon good strong paper, of light weight, to cheapen postage, will be furnished to members of the association not in arrears for annual dues, and to regular subscribers to the report, to their own addresses, for gratuitous distribution only, upon the following terms:

One copy each one month for a year.....	\$1.00
Two copies each month for a year.....	1.75
Each additional copy for the year.....	.50

All persons engaged in the production of petroleum, either personally or as members of petroleum mining companies, are urgently requested to become members of the association; and those who are not eligible to membership, but who feel an interest in the success of the association, are respectfully invited to subscribe

for the report as a means of promoting the objects of the association.

It is suggested to petroleum mining companies that, while they can not as corporations become members of the association, it would be gratifying to receive from each company such a contribution to the funds of the association as would cover a membership fee for at least each of the officers of the company and members of the board of directors, together with such of its employes as they may see fit to constitute members of the association. In addition to the advantage of having each one who may be engaged in carrying on the operations of the company thoroughly posted in the statistics and facts relating to the petroleum business, the presentation of a membership in the association to an employe would be a judicious method of expressing appreciation of his services and of increasing his intelligent interest in the business.

Please make remittances by postoffice order, or by draft when convenient, addressed to F. W. Hastings, Esq., assistant secretary, at Franklin, Venango county, Pa., who will acknowledge the same as received, and forward receipts therefor signed by the secretary and treasurer of the association. Be careful to give accurately and fully the name and postoffice address of members and subscribers, that no errors may occur in acknowledging receipts and sending reports.

Please favor the association by such subscriptions as you may be able to make or secure.

Respectfully,

C. V. CULVER,

Secretary of the Petroleum Producers' Association.

Q. (By Mr. Phillips.) What date was that? A. April 25, 1870. As production proceeded the consumption did not keep pace with it. There was a constant increase in the supply above ground. It became apparent that further efforts were required for the betterment of the trade. A concern, known as the Producers' Agency, with a stated capital, was therefore organized to purchase from the producers within this association, a certain amount of oil per day or per month and retire it, or store it and keep it off the market to the disadvantage of the consumer. It will be sufficient to state briefly what they proposed and expected to do by the retiring plan.

Q. Was that ever carried into effect? A. It was carried into effect to the extent of an organization.

Q. It never had any effect on the market. The money was not subscribed, the plan was not carried out? A. The money was partially subscribed and the organization effected. I am attempting to show the efforts of the producers were constantly making for the betterment of their own condition and that was an effort to put their business on a paying basis.

Q. Was it an effective one? A. It was not.

Q. (By Representative Livingston.) Tell us why? A. The only reason I can assign is the constantly varying condition of the oil trade. With every change in the field new men were brought into the business and they were generally the most energetic and aggressive of producers. They went on regardless of the experience of others.

WHAT IS MEANT BY OVERPRODUCTION.

Q. What do you mean by the overproduction? A. I mean more than would be consumed at remunerative prices at the time.

Q. You mean more oil than the world would consume? A. More oil than the world would consume at that time; the facilities for taking care of a large surplus production were not in existence at that time.

Q. How much have the producers and refiners ever had that they carried over 18 months? A. Forty million.

Q. Forty million barrels? A. Forty million barrels; yes. They had 40,000,000 barrels that they carried substantially for ten years. At the end of ten years, at the point of the highest production, there still remained 31,000,000 barrels.

Q. (By Mr. Smyth.) Was that carried by one or more parties or by the trade generally? A. It was carried by the trade generally but the storage was supplied by one party.

Q. Who was that party? A. The National Transit Company.

Q. (By Mr. Clarke.) Is it not a fact that the existence of that quantity of oil in the world available for the market under existing conditions had the effect of preventing the very object they sought to accomplish? A. By this organization?

Q. Yes. A. Undoubtedly.

Q. (By Representative Livingston.) During the time they carried that surplus oil was the price lessened to the consumer? A. Not materially, but gradually.

Q. Explain why it is that a surplus like that did not lessen the price to the consumers. A. Are you speaking now of the year 1870 or the time of the greatest production?

Q. At any time. A. My reply was on the assumption that your question referred to the period of 1870. There was no material reduction then, but at the point of the greatest production and quantity of stocks there was a very material reduction in price.

Q. Do you catch my question? You say the price to the consumer was not materially reduced. Why not? A. My answer assumed that your question referred to 1870.

Q. Well, at any time? A. (Interrupting.) I will change my answer in that event, and say it was greatly reduced.

Q. At any time? A. Yes, at some time it was greatly reduced.

Q. (By Mr. Smyth.) Owing to this large surplus? A. Owing to this large surplus. I did not mean to give an evasive answer. I will state that, at the period of the large surplus, the price to the consumer was gradually lessened.

Q. (By Representative Livingston.) Is that the time of the forty millions? A. That was at the time of the forty millions.

THE PRICE OF REFINED OIL HAS BEEN CONSTANTLY REDUCED.

Q. What was the reduction? A. To the producer?

Q. No, to the consumer. A. To the consumer from the prices we have noticed at Cincinnati in 1865—

Q. (Interrupting.) No, no, I do not want any dates. I want to know what the reduction was when you had the big surplus of oil? A. Well, it was reduced to 8 or 10 cents a gallon. I can tell you precisely in a moment.

Q. Take it for granted that it was 10 cents, did you regain that loss? A. It does not appear that there was a loss. I believe that oil was sold at a profit at the time.

Q. Was the price raised to the consumer later on when the surplus disappeared? A. I think not.

Q. It remained there? A. It remained there; kept decreasing.

Q. It is a fact that the price of refined oil has been steadily decreasing for the last 15 or 20 years? A. Constantly.

MOVEMENT IN THE PRICE OF STOCK COMPARED WITH MOVEMENTS IN THE PRICE OF OIL.

Q. Did the stock in the companies also gradually decline? A. The stock of oil?

Q. No; I mean the stock in these corporations. Did the value of the Standard's stock decrease with the decrease in the price of oil? A. I think not.

Q. (By Mr. Smyth.) I suppose the cost of handling oil has decreased very much? A. Yes; very much; great improvements have been made.

Q. (By Representative Livingston.) Now, if the price of oil has decreased to the consumer on account of the surplus, and the price of the stock has not, will you explain why? A. Well, I will answer that in this way: If there were any particular company, it might be said that it was due to the larger volume handled and manufactured, the reduced rate of profit being made up on a very large quantity. But let me say the profits are not all with the Standard Oil Company. The producers in the meantime have made enormous profits.

Q. I understand that, although the price of oil decreased and you were carrying a large surplus, the value of the stock of the Standard Oil Company increased? A. The cost of producing and refining oil decreased very materially in the following years.

Q. It seems as though that did not depend upon the cost of production or anything else. It seems to be continually going up; do you know what it is worth now? A. I have not heard any quotations of the value of the stock; I am not prepared to express an opinion upon that.

THE OBJECT OF THE PETROLEUM PRODUCERS' AGENCY.

Q. (By Mr. Farquhar.) It is a good deal like the Chemical Bank of New York? A. Now, the purpose of the agency formed by the Petroleum Producers'

Association, which was created in 1869 and 1870, is contained in a few words in what is called the practical exhibit. (Reading:)

"The establishment of the Petroleum Producers' Agency is expected to accomplish among others these important things:

"It will prevent unwise competition between producers and sellers, by taking advantage of which buyers contrive to depress prices.

"2. It will, as a result, secure a fair price for whatever amount of oil the world requires—unaffected by the fact that there is more produced than the consumption demands.

"3. The surplus oil being kept in the control of the agency, it can not be used by anyone to manipulate or depress the market prices.

"4. The surplus oil placed in tank exactly represents the overproduction and unerringly indicates its extent and increase."

Q. (By Representative Livingston.) I understand from that that you will make more money by holding oil than you can by putting it on the market? A. That is it, precisely; that is the whole subject in a nutshell. (Continues reading:)

"5. No concealment or misrepresentation can be made of the stock, or overproduction to unduly affect prices.

"6. Every producer being the holder of a tank receipt representing his share of the surplus oil is doubly interested in restraining overproduction—because he suffers both from the inability to realize upon his receipt for oil in tank and from having to deduct from the value of his production the value of that required to be placed in tank and the cost of taking it.

"7. The effect of competition and of the lack of it in buying and selling crude oil is shown by the fact that with an established demand for 16,000 barrels of oil a day and a production of the same amount, the advantages of the buyers and sellers are so nearly balanced that \$5 a barrel will be freely paid by the buyer and accepted by the seller—yielding \$80,000 a day for the gross production; but if the production should fall off, say, 1,000 barrels a day, competition between buyers would exist to such an extent that \$6 would be just as readily paid and be readily accepted, making \$90,000 for the whole. If the production should still further decrease so as to not exceed 14,000 barrels a day, the price would promptly advance to over \$7, and realize at least \$100,000 for the total."

Q. Make a little explanation right there. Would that be independent of the surplus carried? Would the price vary notwithstanding the surplus? A. The surplus would be retired and kept out of the way when the market advanced.

Q. Your answer is yes? A. Yes. (Continues reading:)

"If, however, the advantage were to turn the other way, as would soon be the case with such stimulating prices, and the production should reach, say, 17,000 barrels, exceeding the demand by 1,000 barrels, the competition would be between the sellers instead of the buyers, and the price would decline to \$4 a barrel, making \$68,000 for the daily production; with less readiness 18,000 barrels would bring at most \$3.50 per

barrel, or \$63,000 in the aggregate, while 19,000 barrels would hardly find purchasers at \$3 a barrel, or \$57,000 for the daily product, and a production of 20,000 barrels would not command \$2.50 per barrel, or less than half the amount that a production of 14,000 barrels would readily command, and apparent permanent production in excess of 20,000 barrels would so thoroughly demoralize the market as to make petroleum without a reliable quotation."

Twenty thousand barrels there was considered a very extravagant estimate of the production. If it ever reached that the business would not only be a losing one, but there would be no market whatever. (Continues reading:)

"The logic of this undeniably correct statement has a thousand times suggested that it would be a profitable speculation to buy the entire production at the price which is current when the production is largely in excess of demand, and, reserving only so much as the market would actually require, to set fire to the remainder, put it out of existence, and thereby realize twice as much from the remainder as the whole cost."

Q. That would be justifiable, would it? A. That is what they say here. (Continues reading:)

"Wanton as the destruction of such valuable material would be, but one consideration has prevented long ago as a speculation—that is, the great advance in price would naturally result from its consummation would so stimulate production as to entail upon the enterprising speculator the possibility of loss by a second stock larger than the first.

"There is, however, a common-sense method of accomplishing a better result by better means. The oil is too valuable to destroy or waste; and to withdraw the supply from competition with the amount which the world requires would enable the producer to realize a fair price for what is sold and retain the surplus without other cost than that of putting it in tank. But who shall do this? If any individual or firm or company were to undertake it they would find their resources, however large, eventually exhausted, only to make a market for an enlarged production stimulated by their enterprise.

"There is but one way to secure a community of interest among producers: By affording them the advantages of the good prices resulting from selling through our agency without competition, and compelling them to bear uniformly the burdens and losses resulting from excessive overproduction. These ends are sought to be accomplished through the agency, which undertakes to receive all the oil produced, to pay a fair price for what the world will consume, and to tank the surplus at the cost of the producer, for his benefit.

"The following table shows the practical result of selling 16,000 barrels of crude oil a day at \$5 a barrel and storing the excess at the expense of the producer, estimating the cost of tankage at \$1 a barrel.

"Observe, that if the supply is not in excess of the demand, the full market price will be paid for the entire production as fast as delivered, so that there would be no delay in making payment, and no tanking of surplus oil.

"The table is only to show what would be the result

to the producer, the demand being for 16,000 barrels a day, and the production steadily rising from 17,000 to 24,000 barrels a day.

"The operation of the plan is to secure the producer a minimum price of \$5 a barrel for all the oil which can be sold—deducting therefrom only the commissions for selling the oil and the cost of tanking the surplus. For his interest in the surplus oil in store and in the tankage he has a receipt estimated in the table at a valuation of \$3 a barrel, at which valuation it is assumed the receipt can be readily sold, if the producer proposes to realize upon his entire production rather than wait for the surplus oil to be marketed at a higher rate.

"The table shows at a glance what the producer will realize from the advance made by the agency, what the proceeds of the sale of the oil in addition to the advance, and what his interest in the stored oil is worth at the estimated value. The right-hand column shows what he may realize per barrel at once on his entire production by selling his interest in the tanked oil with the amount marketed.

"The advantage to producers—resulting from the establishment of the agency, by which the rates indicated can be realized from sales through it—contrasted with the sales made in competition between sellers, is so marked and decided that it needs only the simple exhibit to prove that by the operations of the agency, at least from \$1 to \$2 a barrel upon the entire production may be saved to the producers at large—amounting in the aggregate to from \$6,000,000 to \$12,000,000 a year."

contemplated it would have undoubtedly gone into effect.

Q. It was entirely ineffective and inoperative and was not received generally by the producers? A. It was inoperative. Here is substantially the same plan, adopted a few years later by the Petroleum Producers' Association. This one was effective. Agencies were established at various points in the oil regions for the purchase of oil. Oil was bought from the producers and sold substantially on the same plan for the purpose of retiring it, as may be seen by the report of the committee on organization of the Petroleum Producers' Association, Limited, adopted by the general council of the Petroleum Producers' Union, of which Mr. B. B. Campbell was president. That was a partnership affair.

Q. Did that have any material effect on the prices either to the producers or consumers? A. I cannot say that it did. But it was an effort for the improvement of trade conditions at that time. An address by the general council of the Petroleum Producers' Union of the same date states the reasons for the existing depression and urges producers to join the union. To this movement a million dollars was subscribed.

Q. Was it ever paid in? A. Well, we have only reports of the subscription, acknowledgments of the same, and the fact that it was put into practical operation. Agencies were established at various points in the oil country and they set up opposition buyers.

Q. Did it have any especial effect on the trade?

Daily product	Daily payments \$5 per barrel		Daily receipts (sales 10,000 barrels) at \$5	Surplus oil put in tank	Cost of tanking, \$1 per barrel	Daily cash balance	Cash paid per barrel on certificates	Total cash paid per barrel	Amount per barrel of tank receipts issued	Value per barrel of tank receipts, estimating surplus oil, with tankage, at \$2 per barrel	Net return to producers, estimating tank receipts at 50 cents on the \$1
	Cash, \$3	Certificates, \$2									
Barrels.											
17,000	\$51,000	\$34,000	\$80,000	1,000	\$1,000	\$28,000	\$1 65	\$4 65	\$0 35	\$0 17½	\$4 82½
18,000	54,000	36,000	80,000	2,000	2,000	24,000	1 33	4 33	67	33½	4 66½
19,000	57,000	38,000	80,000	3,000	3,000	20,000	1 05	4 05	95	47½	4 52½
20,000	60,000	40,000	80,000	4,000	4,000	16,000	80	3 80	1 20	60	4 40
21,000	63,000	42,000	80,000	5,000	5,000	12,000	58	3 58	1 42	71	4 29
22,000	66,000	44,000	80,000	6,000	6,000	8,000	37	3 37	1 63	81½	4 18½
23,000	69,000	46,000	80,000	7,000	7,000	4,000	18	3 18	1 82	91	4 09
24,000	72,000	48,000	80,000	8,000	8,000	0	00	3 00	2 00	1 00	4 00

Q. (By Mr. Phillips.) Now, was not that a wild, visionary scheme? It did not cause a ripple in the oil fields at the time it was presented, and there were very large producers that never heard of it. A. I am not prepared to agree with you in that statement. It seems to me there was a very considerable discussion of it in the newspapers. It was talked over at various points in the region. A fund was subscribed for it at that time. While inoperative it was owing to other causes. It failed to go into operation because of the enormous production at that time in Butler county. Had conditions remained as they were when it was

A. No noticeable effect. It was very shortly abandoned, but it was an outgrowth of the movement inaugurated by D. Armstrong in 1877, 1878 and 1879. Benjamin Campbell succeeded to the chairmanship.

RESTRICTIONS ON DRILLING OPERATIONS.

I have here a drilling contract to which reference was made yesterday that I should like to submit. It is in connection with a movement in 1887 and

1888 for the restriction of operations in interior drilling:

EXHIBIT IV.—BOUNDARY LINE DRILLING CONTRACTS.

Whereas, excessive waste has occurred in the past from the prevalent practice of fighting lines, which largely increased expenses without adding permanently to the production, while it caused a spasmodic and temporarily excessive production, with a vicious influence on the market price of petroleum:

Now, therefore, to correct this waste and relieve the industry from the evils in the future, we, the undersigned producers of petroleum, do hereby agree to and with each other, as follows:

First—That hereafter the number and location of wells for the production of petroleum along or adjacent to the exterior boundary line of any producer on either side of said line shall be determined by the agreement of the producers interested in the production along said boundary line, or, in case of their failure to agree, by three arbitrators, one to be chosen by the producer or producers on one side of the said boundary line; one to be chosen by the producer or producers on the other side of the said boundary line, and the third arbitrator to be chosen by the two so chosen by the producers aforesaid.

But no decision of such arbitration shall be permitted to deny altogether the right of a producer to drill when he cannot drill at all without drilling within 800 feet of the boundary.

Second—No well shall be drilled on or within 800 feet of any boundary line until its location shall have been fixed by agreement of adjoining producers or by award of arbitrators as hereinbefore provided.

Third—This agreement shall apply to boundary lines between subscribers to this contract, and not then at points where one not a subscriber adjoins and drills within 800 feet of the subscribers hereto.

Fourth—Any subscriber hereto who shall violate this agreement shall pay to the producer or producers owning or operating the territory adjoining his boundary line, who are subscribers hereto, for every well put down along said boundary line contrary to this agreement, such damages as may be awarded by three arbitrators, or a majority of them, to be chosen in the same manner as herein provided for, the fixing of the number and location of wells along boundary lines when producers do not agree. Such award shall be final and conclusive, and for the amount so awarded, respectively, shall have the right to sue and recover against offender or offenders, as if this contract were between such parties only to this contract for this purpose, shall be considered and construed a several contract, of every subscriber to and with every other subscriber hereto.

Fifth—In case of a failure to agree as to the number and location of wells along a boundary line, if any producers, or producers' subscribers hereto shall neglect or refuse to choose an arbitrator, as provided in the first clause of this contract, in that

case the executive board of the local assembly of the proper district of the Producers' Protective Association shall, and they are hereby authorized to, appoint a suitable person to act as such arbitrator. And every producer shall, within three days after request made by another producer, either agree or appoint his arbitrator as aforesaid, or he shall be considered in default, and the arbitrator shall then forthwith be appointed by the executive board as above provided.

Sixth—Every subscriber hereto further agrees that should he convey any or all territory at any time to other parties, he will make such conveyance subject to all the conditions of this contract.

Seventh—This contract is to take effect on and after September 8, 1888.

INTERIOR DRILLING CONTRACT.

Whereas abundant territory as well as our own experience teaches us that the price of any commodity is mainly dependent upon the relation between supply and demand, and that petroleum is no exception to the rule;

And, whereas, the excess of visible supply of stocks of petroleum, furnishing an apparent supply largely in advance of the immediate demand, has been and still is the most depressing circumstance which affects the petroleum industry;

And, whereas, the effect of our "shut in" of production for eight months, while not as advantageous as we had hoped, has nevertheless put the price on a higher plane than that upon which it had previously rested, and, as we believe, has prevented the commodity from sinking to even lower prices than we had experience of in recent years, and we had, therefore, to limit the production by a moderate restraint of drilling, as demanded by the interests of the producers of petroleum until the stocks are reduced to an amount consistent with the healthy relation between supply and demand, and, as a result, the receipt of remunerative prices to the producers;

Now, therefore, we, the undersigned, producers of petroleum, do hereby agree to and with each other that we will not drill any wells for the production of petroleum on any farm or tract of land owned by us, except along or adjacent to exterior boundary lines of our respective properties, to a greater extent, exclusive of boundary-line wells, than one producing well for each 20 acres and each fractional part of 20 acres; provided that additional wells may be drilled with the consent of the local assembly of the Producers' Protective Association for the district in which the particular property may be situated and of the general executive board of said producers' association, or, in case such consent cannot be obtained, upon the allowance of the arbitrators, or a majority of them, one to be chosen by the person or persons desiring to drill, one to be chosen by the local assembly of the Producers' Protective Association for the district in which such property is situated, and the third by the two so chosen.

And we further respectively agree that all conveyances made by any of us of oil territory during the continuance of this contract shall be made expressly subject to all the conditions of this agreement.

This agreement shall continue in force until the 1st day of May, 1889, but may be abrogated before that date by the votes of a majority of the general assembly of the Producers' Protective Association, and such general assembly shall be convened to consider the question of abrogation upon the demand of one-third of the local assemblies of said association.

ATTEMPTS TO IMPROVE THE CONDITION OF THE BUSINESS IN 1887 AND 1888.

We have the various movements known as shut-in or shut-down movements for the betterment of the oil producers from 1870 up to 1887 and 1888, omitting that of 1884, which was only partially successful. I will read a few notes I have made on the subject for the purpose of connecting this association with subsequent enterprises in which the producers' association started new pipe lines and refineries, the Pure Oil Company embracing the whole movement. (Reading):

The shut-down movement of 1887 and 1888, in which the Standard Oil Company co-operated with the producers and did much to make the movement a success, was no doubt the most successful action ever inaugurated by the producers.

Having its inception among some of the heavy operators in the Washington county field, it extended over the whole region and embraced all but a very few of the operators. Its scope was wider and its effect greater than any similar movement. The mutuality of interest among all branches of the trade rendered its success certain. Thus we find that the producing, refining, land, and working interest all co-operated to make the movement a success and enhance the value of the product of the producer. The Taylorstown operators, controlling 6,372½ acres of producing territory, early in June entered into an agreement to restrict production. At this period the reduction of stocks was going on quite rapidly, but the market was in the sixties, with the consumption 8,000 barrels a day over the production; hence the conditions were favorable for the inception of the movement. On August 2, at Bradford, there was a meeting of representative producers at the invitation of H. L. Taylor, of Buffalo, at which time it was developed that the organization pending was so nearly completed as to insure a successful undertaking of the work mapped out, and the meeting decided to postpone action for a short time. About the same time the P. P. A. held a few secret meetings in Bradford in the interest of the shut-down. The movement became the subject of much discussion in the newspapers, and its probable outcome was very thoroughly discussed.

The sensational press got in its work on this movement early in the game, and among other

things given publicity by the Cleveland Leader in connection with the shut-down movement was a series of propositions which implied that the sole object of the movement was a battle against the Standard Oil Company, which allegations were promptly denied by Mr. Kirk. The Derrick criticised the action of one man in Butler county who was alleged to be hustling to get down all the holes he could while the preliminaries of the shut-down were being arranged. In Butler county, in the Reibold pool, he had two wells doing 2,900 barrels a day. The Derrick made a couple of attempts to interview him on the subject of the shut-down, but he maintained a strict silence upon the subject. Early in September there were meetings of the P. P. A. at Bradford, and a conference of large producers at Pittsburg, which included D. O'Day, of the National Transit Company. The operations in Butler county attracted special attention, and a special to the Derrick from Butler asserted that the operator was a shut-down man in name only. The leading producers, about the middle of September, had another conference at Pittsburg with officials of the Standard, presumably on matters connected with the shut-down movement. It was learned from Washington county that McKeown and Willets, two of the largest operators in the field, had refused to have anything to do with the movement, contending against the shut-down movement as a means of bettering the conditions of the trade, which had been depressed from overproduction for 10 years. Some persons asserted that the shut-down movement would have had the effect of bringing in new producers, with the result of defeating the very object of the project. The discussion in the Derrick of the shut-down movement covered a wide scope, and many diversified opinions as to how to better conditions were expressed, but the general trend of opinion was largely in favor of the shut-down. The production from the three wells in the Riebold pool amounted to 5,000 barrels daily, and on September 29 a meeting of the P. P. A. was held at Emlenton, at which matters pertaining to the shut-down were considered but not made public. At this same meeting and among the Emlenton producers it is said there was a decided change of sentiment toward the Standard Oil Company, it being asserted that but for the Standard the Pennsylvania oil would be selling at 50 cents per barrel. On October 2 the four wells at Riebold were making 5,400 barrels a day, which might be called a pretty strong showing for a man working for the success of a shut-down movement. There is no intention of stating that his actions were contrary to contract; everything was open and understood.

At the middle of October, N. F. Clark, one of the leaders in the shut-down movement, stated that 80 per cent of the producers had joined the P. P. A. and were ready to get into the shut-down; he also found that more than two-thirds of the oil was produced by the small producers. During the month of October the executive committee of the P. P. A. made strong efforts to get all the producers of oil into line, but still the gushers continued to arrive on

schedule time at Riebold, and on October 20 another was added to the list, making an aggregate production of 5,520 barrels from six wells. The first authentic news that the shut-down would be a success came out October 23, when it was learned that the movement would go into effect on November 1, and that its essential features were as follows: The shut-down was to include the shutting in of not less than one-third of the production of the operators in the agreement, the cessation of drilling operations, and the general co-operation of the producing element. The Standard Oil Company entered into the agreement to help make it successful. The company set aside 6,000,000 barrels of oil. The profits upon 5,000,000 barrels of this, that is, the advance above 62 cents, they proposed to donate to the producers, while the profits on the other 1,000,000 were to accrue to the oil-well workers thrown out of work by the shut-in and shut-down. This result was arrived at only after prolonged and energetic negotiation on the part of the producers, but once all the elements of the business were combined it was practically assured that the movement would be successful. This looked like a one-sided proposition wherein the Standard was not likely to be much of a winner, but, that being the agreement brought home by the producers' committee, they returned to the region with the sole idea of organizing the producers and making a success of the movement. How well they succeeded in handling the question is best evidenced by the fact that there were then 14,000 producers, and that they succeeded in enlisting 85 per cent of the number into the movement.

BUSINESS ASSOCIATIONS ORGANIZED BY THE PRODUCERS' PROTECTIVE ASSOCIATION.

That continued in effect until October of the year following, both sides to the agreement faithfully carrying out every condition. The Producers' Protective Association continued their organization, which at the start was secret. I think the restriction extended so far as not to permit the naming of any officer of the concern; anyone holding an office in the association was not allowed to be known by name outside of the organization itself. Altogether it was one of the closest corporations ever organized for business purposes. They continued to hold their meetings and discuss the conditions of the trade, which were not permanently bettered by this shut-in movement, owing to very large developments at McDonald within two years of the termination of the shut-down agreement, where an enormous production took place in a very short time. While operations were progressing in McDonald, the Producers' Protective Association proposed to organize business associations fostered by their own association. They were instrumental in organizing at least three or four, of which the first was the Producers' Oil Company, Limited, which had a capital of \$600,000. This went into business in Allegheny county, in the vicinity of the McDonald field,

but on the edges of the field, and did not participate to any great extent in relieving the producers of the overproduction existing there. After a period in which no very considerable success was achieved, another company was organized, known as the Producers and Refiners' Company, in which certain refiners, co-operating or combining with the associated producers of the Producers' Oil Company, subscribed \$250,000 additional capital, which was invested in pipe lines furnishing an outlet from the McDonald field, or the terminus of the Producers' Oil Company, Limited, to the refineries at various points in Pennsylvania. The next step in the movement was to combine these companies by a sale of one to the other. The Producers' Oil Company, capitalized at \$600,000, was absorbed by the Producers and Refiners' Oil Company, capitalized at \$250,000; in effect, the weak company took and assumed the property of the greater concern. From this time the Producers' Oil Company practically went out of existence, though I think the organization was maintained and all the property of the Producers' Oil Company, Limited, was not disposed of at that time; some of it remained, and perhaps still remains. This proving unsatisfactory, another consolidation was made about 1894, by which the Producers and Refiners' Oil Company undertook to absorb the United States Pipe Line Company, a company organized with a capital of \$1,000,000, with two systems of pipe lines, and according to the terms of the purchase, the stockholders of the United States Pipe Line Company—the only straight and real corporation connected with the whole concern, because it is incorporated under the pipe-line act of Pennsylvania, and none of the others are—

Q. (By Mr. Phillips, interrupting.) The others were limited partnerships? A. The others were limited partnerships.

Q. Are you not mistaken about the two first companies undertaking to absorb the United States Pipe Line Company? The United States Pipe Line Company was formed before the Producers and Refiners' Company, and they only worked in harmony with the United States Pipe Line Company at this time. Is not that correct? A. I am giving this largely from memory, and I may be in error. I have a paper here describing the whole process, and it may be just the other way. It may be that the United States Pipe Line was absorbing the other concerns, but there was an absorption attempted.

Q. Are you quite certain there was at that time? Were they not simply making running rates and agreements? A. I will proceed and then afterwards read the answer of J. J. Carter in a suit in equity. Here is a paper which recites the whole transaction.

Q. (By Mr. Kennedy.) An official paper? A. I do not believe it has a seal; it is a copy of the official paper.

Q. (By Representative Livingston.) A certified copy? A. No.

Q. (By Mr. Farquhar.) Is there a statement to

show where the original papers can be found? A. Oh, yes; the original papers can be found.

THE ORGANIZATION OF THE PURE OIL COMPANY.

Q. Is there any verification of the correctness of this copy? A. No; there is no verification of this copy, which is merely a copy of the petition to dissolve an injunction. Whatever the attempt was—to consolidate, or combine, or absorb one of these pipe lines or the other at the time—it failed through the activity of one of their own stockholders, who went into court and prevented this consolidation. That being the case, another company was formed, known as the Pure Oil Company. The Pure Oil Company was formed on or about the 24th of January, 1895, at a meeting of producers at Butler. Subscriptions were received to the amount of \$50,000 toward the organization of what was called the Pure Oil Company. The stated purpose of this company was to market the products of the refineries and pipe lines. It was to be the commercial organization of the trust then in process of formation, and it has since been sought by a reorganization of that concern which took place about 1897 in New Jersey—

THE PURE OIL COMPANY CALLED A TRUST.

Q. (By Mr. Phillips, interrupting.) Why do you call the Pure Oil Company a trust? Was not that a straight corporation like the Standard and others that have since organized? A. I quote here from Mr. David Kirk, the first president. He calls it a trust, and it is so called here. It is cited as a trust agreement.

Q. It was organized under the laws of New Jersey as a corporation? A. Mr. Kirk calls it a trust.

Q. Does Mr. Kirk's calling it a trust make it a trust? A. I think the organization makes itself a trust by the appointment of trustees for the conduct of the business.

Q. It is only a voting trust, and have not voting trusts existed in all ages, in Europe as well as America? A. I am not contending against the legality of the trust; it is merely a statement of fact based on information obtained from David Kirk. The reorganization took place at Taylor's Hotel in Jersey City in 1897, and the powers of the organization increased from that moment. They have attempted to take in all the corporations combined with them, to combine into one concern. The attempt was made several times, as I understand it, to absorb all the old interests in which the Producers' Protective Association is concerned, and they are still attempting it with a very considerable show of success, as I am informed.

(The witness then read Exhibit B, filed with a bill in equity in a suit entered by Mr. David Kirk, at Pittsburg, Pa.)

Q. (By Mr. Phillips.) Did the McCalmont Oil Company have anything to do with this as a company? A. Possibly David Kirk may have acted as trustee for the McCalmont Company; as president

of the McCalmont Oil Company he may have been trustee for that company in some subscriptions of this stock; that is the only explanation possible at this time.

Q. The agreement itself, then, shows that the trust to which you refer is a voting trust for the election of directors, does it not? A. It has a tendency to show that. I believe, if you will indulge me the time, we will accomplish more—

Q. (By Representative Livingston.) What is the point you wish to bring out? A. I will get down to that by reading one clause and submitting the rest for your consideration. The clause I particularly wish to call your attention to is one that provides for the dissolution of the trust and the conditions under which it may be done:

"Fourth—This agreement may be cancelled, and the trust hereby created dissolved, duly executed, of the equitable owners of four-fifths of the shares held in trust hereunder, and of four-fifths of all the other shares of the company, after providing in full for the redemption or purchase at one hundred and ten dollars per share, in cash, of all the preferred and common shares of the company at the time outstanding."

The purpose of this clause is in effect to make the trust perpetual; but if dissolved, the shares under that agreement, costing originally \$5, are compelled to be sold at \$110. They agree in this to repurchase at \$110 when the shares previously cost \$5.

Q. (By Mr. Phillips.) I think perhaps that is a mistake. A. It is here. It is part of Mr. Kirk's Exhibit B.

Q. (By Mr. Livingston.) Do you mean to say that A and B, two members of the company turn in \$110 for their own stock or outstanding stock? A. It stakes outstanding; it puts the redemption of all stock at \$110, the original cost of the stock being \$5.

Q. (By Mr. Phillips.) Does not that mean 10 per cent? A. I am only reading what it states.

Q. Is that a certified copy? A. Oh, no; it is a copy of the record in Allegheny county, in a suit entered by Mr. Kirk, the retiring president.

PRESENT STATUS OF THE PURE OIL COMPANY.

Q. (By Representative Livingston.) What is the condition of that company now? A. It is in existence and largely in control of this three-million corporation. There is an authorized capital of ten millions, with possibly \$400,000 paid in. It then substantially controls the other combinations, in which upwards of three millions are invested.

Q. (By Mr. Kennedy.) What is the voting power of the five trustees? A. I have stated that it is the power to vote all the stock represented in the trust.

Q. Not for the transaction of other business? A. For the election of directors. It is stated in the second clause: "At all meetings of the company for the election of directors or for any other purpose, to cast the entire number of votes which, as holders of said shares, they would be entitled to cast."

Q. That is a true copy of the original? A. It is a true copy, and the original may be obtained in the court at Pittsburg.

Q. (By Mr. Smyth.) Your opinion is that the company controls all these companies? A. Substantially; it has come to be known as the Pure Oil movement.

Q. (By Mr. Phillips.) Were there not more than five trustees? A. It is necessary to say that there have been some changes in the organization since then. At a meeting not long ago in New Jersey, I am informed, an attempt was made to reconstruct the by-laws, and in this they may have changed the voting power. This represents the condition of affairs in 1897. I submit the whole:

EXHIBIT V.—TRUST AGREEMENT, AND BY-LAWS AND RULES AND REGULATIONS OF THE PURE OIL TRUST.

Exhibit B.—The Trust Agreement in Full.

This agreement, made and entered into by the Pure Oil Company, a corporation organized and existing under the laws of the State of New Jersey; David Kirk, Jerome B. Akin, Marcus L. Lockwood, Walter A. Dennison, Charles H. Duncan, Theodore B. Westgate, William L. Curtis, James W. Lee, and David Kirk, trustees for the McCalmont Oil Company, severally subscribers to and owners of the capital stock of the said Pure Oil Company, and Thomas W. Phillips, Lewis Emery, Jr., Rufus Scott, Clarence Walker, Louis Walz, James W. Lee, David Kirk, Marcus L. Lockwood, Jerome B. Akin, Charles H. Duncan, Hugh King, Michael Murphy, Adolphus A. Hoch, Ferdinand Reiber, and Walter A. Dennison, parties mutually agreed upon to exercise the trusts created hereunder:

Witnesseth, That whereas the Pure Oil Company is formed for the purpose of engaging in directly and of aiding other companies and parties engaged in the production, transportation, storage, manufacture and sale of crude petroleum and its products, and in any business incident thereto, and it is desired to enlist therein the co-operation of other parties, and to procure capital to be invested in the shares of its capital stock, and in such other ways as may be desirable, which investments are to be solicited from parties not now interested in the company; and

Whereas it is advisable, equitable, essential and intended for their safety and advantage of all interests that the control of the said Pure Oil Company shall be secured permanently, as to prevent and render impossible at all times the diversion of its resources and business from their intended use and courses, in opposition to monopoly in the business, and to permanently protect and maintain what are known as the "independent interests" in the petroleum industry, and to maintain the policy agreed on for conducting the business of the company in the interest and for the protection of all rights in the company, created by mutual agreement of shareholders, or by operation of law; there-

fore the said parties hereto, in consideration of the sum of one dollar by each to the other paid, the receipt of which is hereby acknowledged by each, and in further consideration of the mutual benefits received, to be received, or expected from the agreements, covenants and trusts hereinunder contained, and from the undertakings and business to be promoted, do hereby agree and consent to the various acts and things hereinafter set forth; provided, however, that no party hereto shall be bound to do any act or thing, or be responsible for the results or consequences of any act or thing done or omitted to be done, except so far as relates to such act or thing as he himself expressly undertakes to do and perform; and do further agree as follows:

First—The capital stock of the Pure Oil Company, as authorized in its certificate of organization, is to be one million (\$1,000,000) dollars, represented by two hundred thousand (200,000) shares, of the legal par value of five (\$5) dollars each, divided into classes and to be issued, held and transferred subject and according to law and the by-laws, rules and regulations adopted and approved by all the shareholders of the company, a copy of which is hereto attached and referred to.

Second—The said David Kirk, Jerome B. Akin, Marcus L. Lockwood, Walter A. Dennison, Charles H. Duncan, Theodore B. Westgate, William L. Curtis, James W. Lee, and David Kirk, trustee of the McCalmont Oil Company, are the owners of all the shares of the capital stock now subscribed, amounting to three thousand (3,000) shares, of which they hereby transfer to the said Thomas W. Phillips, Lewis Emery, Jr., Rufus Scott, Clarence Walker, Louis Walz, James W. Lee, David Kirk, Marcus L. Lockwood, Jerome B. Akin, Charles H. Duncan, Hugh King, Michael Murphy, Adolphus A. Hoch, Ferdinand Reiber and Walter A. Dennison sixteen hundred (1,600) shares, being more than a majority of the shares of the company now subscribed, and agree that one-half of all the shares hereafter subscribed and issued shall be transferred in like manner to the said parties and their associate trustees, as may be appointed, to be by them held in trust for the uses and purposes herein proposed, and subject to the terms and conditions as follows:

First—The equitable ownership of the trust shares and all interests herein shall be subject to the terms of this trust agreement; such ownership of the shares or interests therein may be sold at the will of the holder, but no sale, transfer, or conveyance of such ownership or interests shall give to the purchaser any rights other than are provided for in the by-laws, rules and regulations of the company and in accordance with this trust; the trustees hereunder shall at all times be recognized as the legal owners and holders of the trust shares to carry into effect the purposes of this trust, and all equitable owners of trust shares or interests therein shall specifically agree in writing to the terms of this trust, and no transfer of any such shares or interests shall be made, or be effective if made, until the transfer of such equitable ownership or interest

shall have agreed in writing to receive and hold the same subject to the provisions of this trust.

Second—At all meetings of the company for the election of directors, or for any other purpose, to cast the entire number of votes which, as holders of said shares, they would be entitled to cast.

Third—Each trustee at such meetings shall be entitled to cast an equal number of all the votes which all of the trustees would be entitled to cast in the aggregate, if present, except as hereinafter provided.

Fourth—In case of differences of opinion among the trustees present at any such meetings as to how such votes shall be cast in regard to any matter or thing to be voted on, they shall be cast as the representatives of four-fifths of all the shares held under this trust may direct in writing, if so demanded in writing by any of the trustees.

Fifth—Any trustee unable to attend to any meeting of shareholders, and to personally cast the votes he would be entitled to cast if present, may authorize any other trustee to cast the vote which he would be entitled to cast personally present, which authority shall be in writing, approved by three-fifths of the trustees other than himself.

Sixth—When none of the trustees can be present at any meeting of the stockholders, legally held, they may be represented in proxy by an attorney appointed in writing, executed by three-fifths of the trustees.

Seventh—The trustees may execute such consents in writing as in their opinion it may be right and proper for them to do in the interest of the Pure Oil Company and of the owners of the shares held by them in trust, provided that no such consents shall be executed against the objection of the equitable owner of 10 per cent of the shares held by them in trust, unless after the question of executing such consent shall have been submitted in person, or by writing, properly addressed to the several equitable owners of the shares held in trust, and approved in writing by such owners of three-fifths of such shares.

Eighth—The number of trustees may be increased or diminished at any time; or any trustee may be removed, without assignment of cause or reason therefor, by three-fifths of the trustees and the written consent of the equitable owners of three-fifths of the shares held in trust hereunder; and upon such removal, or on filing of such written consent with the secretary of the company and on notice in writing delivered to the party so removed, or sent by registered letter to his proper address, the rights, duties and obligations of such party, as trustee, shall immediately cease.

Ninth—In case of death, resignation or removal of any of the trustees the trust shall be exercised by the remaining trustees until the vacancy be filled by the appointment of new trustees for that purpose, on the nomination of the equitable owners of a majority of the shares previously represented by the trustees, whose place is vacated with the consent, in writing, of the equitable owners of three-

fifths of the shares held under this trust and the approval of the three-fifths of the trustees.

Tenth—No trustee has any such beneficial interest in this trust, personally, as to entitle him to maintain any action at law or in equity to enjoin, delay, hinder, or prevent his removal from the trusteeship, or to recover any damages on account thereof from the company or the trustees, or from the individual stockholders by whose action he may have been removed.

Eleventh—The trustees shall appoint a chairman and secretary, and shall keep regular accounts showing the ownership and residence of the various equitable owners of the shares held by them in trust, and shall execute and deliver to such several owners certificates in due form, approved by the directors of the company, evidencing the number of shares held by them in trust for each of such several owners, and shall make such transfers of any of the shares as they may be requested to do by such several owners on the surrender of such certificates representing such shares, properly endorsed, assigned for transfer subject to the terms of this permanent trust, any of the shares thereby represented in the manner prescribed for making such transfer.

Twelfth—The trustees shall immediately advise the company, by writing, addressed to the secretary, of any transfer of ownership of any of the shares held by them; and shall, on written request of the treasurer of the company, certify to him the names and residences of all equitable owners of shares held by them in trust; and shall sign warrants for the payment to such owners, severally, of any dividends to which they may be entitled on the share so held in trust.

Third—This agreement may be changed at any time only with the consent in writing of the Pure Oil Company, three-fifths of the persons at the time acting as trustees, and of the equitable owners of three-fifths of the shares held in trust thereunder.

Fourth—This agreement may be cancelled, and the trust hereby created dissolved, only by the winding up of the Pure Oil Company, or by the consent in writing, duly executed, of the equitable owners of four-fifths of the shares held in trust hereunder, and of four-fifths of all the other shares of the company, after providing in full for the redemption or purchase, at one hundred and ten dollars per share, in cash, of all the preferred and common shares of the company at the time outstanding.

Fifth—The said Thomas W. Phillips, Lewis Emery, Jr., Rufus Scott, Clarence Walker, Louis Walz, James W. Lee, David Kirk, Marcus L. Lockwood, Jerome B. Akin, Charles H. Duncan, Hugh King, Michael Murphy, Adolphus A. Hoch, Ferdinand Reiber, and Walter A. Dennison hereby accept the trust herein conferred and imposed on them.

In witness whereof the parties hereto have severally signed this agreement as of the 6th day of November, A. D. one thousand eight hundred and ninety-five.

PURE OIL COMPANY.
David Kirk, President.
C. H. Duncan, Treasurer.

Incorporators: David Kirk, Jerome B. Akin, Marcus L. Lockwood, Walter A. Dennison, C. H. Duncan, Theodore B. Westgate, James W. Lee, David Kirk, trustee for McCalmont Oil Company, W. L. Curtis, Thomas W. Phillips, David Kirk, Marcus L. Lockwood, Clarence Walker, James W. Lee.

Trustees: Walter A. Dennison, Jerome B. Akin, C. H. Duncan, Adolphus A. Hoch, Ferd. Reiber, Louis Walz, Rufus Scott, Lewis Emery, Jr., M. Murphy, H. King.

EXHIBIT A.—BY-LAWS AND RULES AND REGULATIONS OF
THE PURE OIL TRUST.

[Incorporated Nov. 8, 1895. Capital, \$1,000,000.]

The objects of the company are to produce, purchase, transport, store and sell crude petroleum and its products and to protect and to aid other companies and parties in the production, transportation, manufacture, storage and sale of the same. The corporation may acquire, hold, maintain and dispose of any stocks, shares, bonds and other interests in or issued by the corporation, joint-stock, or limited partnership association engaged in or aiding or promoting the producing, transporting, storing, refining, and selling of crude petroleum or its products, or in any business incident thereto.

BY-LAWS.

ARTICLE I.

Meetings of the Shareholders.

Section 1. The annual meeting of the shareholders shall be held at the principal office of the company on the fourth Wednesday of January in each year, commencing at 10 o'clock a. m., standard time.

Notice of the annual meeting of shareholders shall be by written or printed letter addressed by the secretary to each shareholder at his or her last known place of residence, and mailed ten days prior to the time fixed for holding such annual meeting.

Sec. 2. Special meetings of shareholders may be called whenever it shall be deemed advisable by the board of directors, or by the president upon request in writing signed by the shareholders owning collectively not less than one-third of the shares of the company.

Notice of special meetings shall be given in the same way as the notices of the annual meetings.

Proxies.

Sec. 3. Shareholders may be represented at any meetings of the shareholders by proxy, duly authorized in writing, executed within thirty days next preceding the meeting.

Quorum.

Sec. 4. The legal representatives of a majority of all the shares of the company shall constitute a quorum

at any meeting of the shareholders; and without a quorum being present or represented by proxy no less number may adjourn from time to time until a quorum be present.

Voting.

Sec. 5. At meetings of shareholders, general or special, all votes upon disputed questions shall be by ballot, if demanded by any shareholder present, and all votes by ballot shall be determined by the number of shares represented by the respective votes cast.

At all meetings of shareholders for the election of directors, each shareholder shall be entitled to cast as many votes as he has shares of the company standing to his name on the books of the company.

The election shall be by ballot, and each ballot shall have endorsed thereon the name of the person casting the same and the number of shares represented thereby.

Vacancies.

Sec. 6. In case of death, resignation, or removal of any director, the vacancy shall be filled by the remaining directors.

Tellers.

Sec. 7. The directors shall appoint two shareholders as tellers to conduct the election and to certify the result in writing to the parties elected and to the president and secretary of the company. In case of the directors failing to so appoint, the shareholders present shall choose two tellers to conduct the election.

The secretary of the company shall furnish the tellers, for their guidance in conducting the election, a list of shareholders, showing the number of shares standing in the name of each on the books of the company, authenticated by the seal of the company.

Time of Election and Term of Office.

Sec. 8. The polls shall be open from two to three o'clock p. m. The terms of office of directors shall commence at noon on the first Wednesday after their election at the annual meeting of stockholders and continue until their successors are duly elected and seated.

ARTICLE II.

Directors—Meetings.

Section 1. The board of directors shall fix the time and place for holding its meetings.

Special meetings of the board may be held at any time on the call of the president or any two directors, after due notice given to each of the directors.

Election of Officers.

Sec. 2. At the first meeting after their election the directors shall organize by electing from their number a president and a vice president to serve until their successors are qualified, and appointing a secretary and a treasurer to serve during the pleasure of the board.

Quorum.

Sec. 3. A majority of the directors shall constitute a quorum at any meeting of the board, and no business being present.

Salaries.

Section 4. The salary of the president and vice president shall be fixed by vote of the stockholders.

Executive Committee.

Sec. 5. For the more prompt and efficient management of the affairs of the company there shall be an executive committee of the board, consisting of the president, vice president, and three other directors, who shall be appointed by and hold office during the pleasure of the board. In the intervals between the meetings of the board of directors its powers and executive committee shall be subject to the approval of the board at its next regular meeting.

The proceedings of the executive committee shall be duly recorded in the same manner as the regular proceedings of the board of directors.

A majority of the executive committee shall constitute a quorum.

In case of disagreement of the executive committee board of directors.

Minutes.

Sec. 6. The board of directors shall cause to be kept a complete record of their official proceedings and acts of the proceedings of all shareholders' meetings; present to the shareholders at the annual meeting a statement of the assets and liabilities of the company and of the condition of its affairs generally.

ARTICLE III.

Powers and Duties of Officers—President.

Section 1. It shall be the duty of the president to preside at all meetings of the board of directors, to sign all certificates of stock and warrants for the payment of money ordered by the board of directors, and such other papers as he may be ordered by the board of directors to execute on behalf of the company.

In case of the absence or inability of the president to act, the vice president shall be invested with all the powers and shall perform all the duties of president. In case of absence or inability to act of both president and vice president, the board of managers may appoint one of their number president pro tem., who shall during such absence or inability perform all the duties of president.

Secretary.

Sec. 2. The secretary shall keep the minutes of the meetings of the board of directors in a proper book provided for that purpose; attend to the giving and publication of all notices of the company, unless otherwise provided for by the board of directors; have the

custody of the seal of the company and affix same to all certificates of stock and such other papers as the directors may order; countersign all warrants on the treasury for the payment of money, which shall have been previously signed by the president as authorized by the board of directors; attend to such correspondence as shall be assigned to him; act as secretary of all standing committees of the board, and shall in general, under the direction of the board of directors, perform all the duties incident to the office of secretary of the company.

Treasurer.

Sec. 3. It shall be the duty of the treasurer of the company to receive and deposit or hold and pay, as the board of directors may order, all funds resulting from the sale of shares or any property of the company; and shall sign all stock certificates and obligations of the company created by special order of the board of directors.

The treasurer shall give bond for the faithful discharge of his duties in such amount and with such security as the directors may determine.

RULES AND REGULATIONS.

1. The business of the company shall be the producing, purchasing, transporting, storing and selling of crude petroleum and its products, and aiding other companies and parties in the production, transportation, storage, manufacturing and sale of the same. The corporation may acquire, hold, manage and dispose of any stocks, shares, bonds and other interests in or issued by any corporation, joint stock company or limited partnership association engaged in, or aiding, or promoting the producing, transporting, storing, refining and selling of crude petroleum or its products, or in any business incident thereto. And in addition to the powers hereinbefore provided for, it may also purchase, hold, manage and sell on commission, or otherwise, such investment securities and other property, real, personal, and mixed, as the corporation may be generally or specifically authorized in writing from time to time, by the owners and holders of a majority in number of the shares of the capital stock of the company, to purchase, hold, and sell.

And the company may exercise such trusts and do such other things, not inconsistent with its charter, as it may from time to time be authorized in like manner to do.

2. The principal office of the company shall be located at Jersey City, in the county of Hudson and State of New Jersey, and branch offices may be established from time to time as may be determined by the consent of the owners and holders of three-fifths of the shares of the company.

3. The shareholders shall make rules and regulations and by-laws for the government of the company and the management of its business and affairs as in their discretion they may deem advisable, which may be amended at any time by the consent of the owners and holders of three-fifths in number

of the shares of the company, given in writing, filed with the secretary, and recorded in the minutes of the proceedings, both of the shareholders and directors of the company.

4. The affairs of the company shall be managed by a board of directors, consisting of nine members, to be elected annually, by the shareholders at their annual meeting, at which each shareholder shall be entitled to cast, personally or by proxy, one vote for each share of stock in the company held by such shareholder. The directors shall choose annually from their own number a president and vice president to serve until their successors are chosen; shall appoint all other officers, managers, agents or employes of the company; prescribe the duties and fix the compensation of each; and may suspend or remove any of them at discretion, and they may make such additional by-laws as may be deemed by them advisable—all subject to the by-laws and rules and regulations adopted by the shareholders for the government of the company.

5. Interests of the company will be represented by shares which may be divided into classes, including preferred, common and deferred shares, to be issued, held and transferred, subject to the by-laws and regulations of the company.

The preferred and deferred shares may be each subdivided into various classes, each class having such special rights and limitations as will more particularly adapt them to the uses for which they are intended, subject to such relation to the shares of other classes as may be established in their issue.

The rules and regulations relating to them will embrace the following features:

6. A majority of all the shares of the company shall be held in a permanent trust approved by all the shareholders, to secure the control of the company and the faithful maintenance of the policy agreed on for conducting the business of the company in the interest and for the protection of all concerned in its affairs. The shares so held shall be designated as trust shares.

7. The capital of the company shall be the net amount of cash paid into the treasury of the company for its permanent use as the proceeds of its stock issued and sold for cash for account of capital; and no credit in excess of the amount shall be made to "capital" in accounts or statements of the company.

8. No preferred stock shall be issued except as cash to the extent of one hundred dollars for each share of such stock issued shall be paid into the treasury of the company to the credit of capital, or of surplus, or of the guaranty and redemption fund, to be created as prescribed in section 12 hereof, as may be deemed advisable.

Any of the preferred shares may be converted, at the option of the holder, into common or deferred shares by so stipulating in their issue and distinctly stating the right of conversion in the certificates representing them; otherwise they shall not be convertible.

9. The deferred shares of the company may be issued for cash, investment securities, property,

services, payment of expenses, making disbursements of any kind, and in exchange for shares of other classes issued by the company at the discretion of the directors, with the written consent of the owners of a majority of the shares of the company at the time outstanding.

10. The holders of preferred stock shall be entitled to receive cumulative dividends thereon of one dollar and a half per share quarterly, in full, before any dividend shall be payable on the common stock.

11. A guaranty and redemption fund shall be created and maintained by crediting thereto all of the cash received by the company from the following sources:

(a) The proceeds of all shares of the company sold for cash by the company when issued, in excess of the amount credited to capital.

(b) The cash proceeds of all shares, securities or other property of whatever kind acquired by the company in exchange for its shares of any class, as such proceeds may be realized, at any time, by the sale for cash of any portion of such shares, securities or property.

(c) The proceeds of all shares, of whatever class, purchased by the application of the guaranty and redemption fund, as authorized, and resold for cash by the company.

12. The guaranty and redemption fund shall be applicable to the general uses of the company, but may be applied to buying shares of all classes, in the order of their priority or right to dividend, as stipulated, at the lowest rates at which any shares of the same class can be bought, not over one hundred and ten dollars per share, on demand of the several owners and holders of shares, respectively, made within a prescribed time after the payment of dividends; provided, notice of the intention to make such demand shall have been given to the secretary of the company thirty days before the time fixed for the declaration of dividends; and provided further, that no part of the guaranty and redemption fund shall be applied to buying, at any price, the shares of any class, so long as there may remain unsatisfied any demand made by the owners and holders of the shares of any prior class to have the same redeemed at not over one hundred and ten dollars per share.

All shares so purchased shall be placed in the treasury, to be used for the benefit of the company in such form and manner as may be determined by the directors, with the consent, in writing of the owners and holders of a majority of the shares of the company.

13. When no shares of any class can be purchased at one hundred and ten dollars per share, the guaranty and redemption fund shall be applicable, at the discretion of the directors, to the purchase of the shares of the several classes, other than the trust shares, at such rates above one hundred and ten dollars per share as may be approved by the owners of a majority of the shares of the capital stock.

The shares of any class so purchased may, when

authorized by the owners of a majority of all the shares of the company, be resold at any time, at the discretion of the directors, at any price not less than that at which they were severally purchased; or they may be retired from the classes to which they belong, and be placed in the treasury of the company, to be held, reissued, and sold for its use and benefit, subject to such conditions as the directors may prescribe, in accordance with the regulations of the company.

14. When the dissolution of the company shall be determined on, voluntarily or otherwise, the trustees, acting under the permanent trust, created and prescribed in section 6 hereof, shall be trustees to convert its assets and wind up its affairs. The proceeds of all assets received by them shall be applied by them absolutely; as the guaranty and redemption fund is required by the rules and regulations to be applied, preceding, and as may be further prescribed hereinafter.

Any portion of the guaranty and redemption fund remaining after providing for the purchase and retirement of all shares, as herein prescribed, shall be distributed to the owners of the trust shares, and of any other shares then outstanding, equally per share.

15. The owners of a majority of the trust shares, acting together, shall have the right to convey to the company, absolutely or in trust, permanently or temporarily, and subject to such conditions as may be stipulated in such transfer, any securities regularly yielding net income; provided, that the receiving and holding of such securities shall not subject the company to any prejudice, or embarrassment, or legal liability to pay any money on account thereof; and no such temporary transfer in trust shall be terminable until the well-established net income of the company from its regular business and other sources of permanent revenue shall be equal to the maximum amount to which it may be raised by such temporary transfer in trust.

16. Each holder of shares standing in his name on the books of the company shall be entitled to a certificate or certificate therefor, duly signed by the president and treasurer, with the seal of the company affixed and attested by the secretary of the company, and each owner of an interest in any of the trust shares shall be entitled to a certificate of the fact, signed by the chairman and attested by the secretary of the permanent trust, showing the extent of the interest, which interest shall be assignable and transferable on the surrender of the certificate representing it, properly indorsed, as may be prescribed by the trustees, with the approval of the directors and the owners of a majority of the trust shares.

THE UNITED STATES PIPE LINE NOT ABSORBED BY THE PRODUCERS AND REFINERS' OIL COMPANY.

I want to correct some testimony given in connection with the proposed consolidation of the pipe line interests and which referred to the Pure Oil

Company and its allied concerns. Refreshing my memory, I find that it was not proposed to buy the United States Pipe Line Company. From correspondence here in this document, it seems that the facts are just the reverse, and that the United States Pipe Line Company proposed to buy, with the consent of the Producers' Oil Company, Limited, the property of the Producers and Refiners' Oil Company, the payment therefor to be made in stock of the United States Pipe Line Company, the stock of that company having been increased for the purpose from one to two millions of dollars, or it having been proposed to increase it to that amount.

THE NATIONAL TRANSIT COMPANY IN THE M'DONALD FIELD.

The commission having indulged me in a wish to read a description of the conditions existing throughout the McDonald field during the time when the original company and the association were in existence, in 1891, I desire to do that before taking up the consolidation of the various interests. This is taken from the Pittsburg Commercial Gazette, and is reprinted in the Oil City Derrick of May 5, 1892. It is entitled "A History of the Manner in Which the National Transit Company Handled the Output of Oil at McDonald."

"A few days ago the superintendent of the National Transit Company's tank department made an official report, in which he said: 'A retrospect of the work done proves conclusively that vast resources are required to cope with floods of oil such as were poured forth by the Cherry Grove and McDonald fields, and that nothing short of the experienced and well-equipped organization that did the work could have accomplished it.

"In round numbers, 10,000 tons of iron, rivets, lumber and other building material were shipped into the McDonald field by one department alone—the tankage department—and the tankage provided for at the rate of one for every ten working hours, requiring the handling, on an average, of 150 tons of material per day to keep the large force of workmen employed. Special trains were run for the accommodation of the men and no expense spared to meet the demands of the field. Rolling mills and tank shops were pressed to their utmost capacity, in many cases running night hours to meet the extraordinary demands made upon them, and second-hand tankage, wherever it could be spared, was cut down and made to do service again in the new field. Men skilled in the special work of tank building were sought for and transported to building points from Chicago, Brooklyn, and all the cities and towns of oildom, east and west, until their name was legion. More than a score of sawmills were drawn upon to furnish the lumber at the rate of thousands of feet per day to roof the huge oil receptacles.

"In addition to this force were the graders, turning out two and more tank grades per day. The Chartiers Valley presented a scene of activity rarely

witnessed since the days when armies were similarly engaged throwing up temporary fortifications. For miles teams, laden with iron, rivets, sheet iron, etc., were seen hurrying in seemingly endless confusion, and yet all were under proper direction, each going to a designated point, arriving in such order as to prevent loss of time from want of material, for there was no surplus, no reserves. Everything was used on arrival, and special agents, laboring over overtaxed railroad officials, to hurry forward supplies, others seeking belated cars on side tracks; the wires brought into requisition; the express companies shipping rivets, plate iron, and many other articles, which ordinarily were shipped by freight. It was no longer a question of expense, but simply a question of securing supplies as fast as required, by whatever means. Scarcely time for sleep, none for recreation; it would come later, as it did. Besieged everywhere by the owner, or expected owner, of a flowing well, with the ever-present and ever-recurring question, "When will you complete the next tank?" "To-morrow," the answer came uniformly, and so did the tank, but only to be filled at once and the necessity for another equally great pressing upon us.

"This vigorous, graphic and conservative statement as fully borne out by the facts, and gives an excellent pen picture of the excitement and fierce activity attending the development of that prolific territory. This was the work of but one department and involved merely the building of the iron tankage, which still stands in the McDonald field to show for itself what was done. But it does not involve that still mightier work of moving into the McDonald field the pipes for the miles of lines required to run this oil from the wells of the producers to the markets of the world, or where it might be fitted for such markets; it says nothing of the great pump stations which were erected at both McDonald and Greggs stations, on the Panhandle Railroad, to care for this enormous output of nature's wealth, or of the pumps in every valley of that field; the boilers and engines necessary as motive power to all this machinery needed to move into the flood of oil which poured forth from this, the most prolific white-sand field ever developed on this continent.

"The McDonald field is about six miles long by two miles wide, or contains in the vicinity of 12 square miles, yet the pipe line company has shipped into that field 55 miles of two-inch pipe, 41 miles of three-inch pipe, 25 miles of four-inch pipe and 32 miles of six-inch pipe, a total of 153 miles of pipe, or over 11 miles of pipe for every square mile of territory, and all this merely to carry the product from the wells to the mains of the company, which had been previously laid from the Washington field to the grand deposits at Olean, in New York, on the trunk line to New York, and to Colegrove, connecting with the trunk line to Philadelphia. Neither do these figures include 70 miles of six-inch pipe from Greggs station to Bear Creek, as an additional outlet deemed necessary, owing to the possibility that the increasing production might be-

come greater than the capacity of these two main lines to carry.

"The field itself is but about a year old, and all this work, or by far the greater part of it, was done between the middle of July and the beginning of November, 1891. The plant is completed, with the exception of laying such lines as may be necessary to connect new wells as they come in; the pipe line business has assumed its usual routine under the facilities provided by the gigantic system established; and while the output of the field is still large, it is handled without the slightest ripple of excitement. Not only the iron tankage with a capacity of 3,000,000 barrels of oil stand there, but the mighty pumps at the stations at McDonald and at Greggs are living and pulsating evidences of the achievement.

"There was much accomplished, however, which cannot appear to the mere observer in the field. Superficial examination in the erection of a plant of this size within such a brief period of time, a plant that is as permanent as the field itself, working with the smoothness and perfection of one which might have occupied years in its construction. Neither can a superficial observer see the expensiveness of certain features unless he be an expert in the handling of oil.

"The field itself is one succession of hills several hundred feet in height, with correspondingly deep hollows. There are wells on the hills as well as in the hollows. Very large producers were so situated that there was no advantage to the pipe lines from gravity whatever; everything had to be forced by pumps, a result of some wells being so much lower than others and the high pressure at which the lines were used, requiring the use of a pump station in every productive valley.

"The haste with which construction had to be prosecuted is faintly indicated by the growth of production in the oil field. The first well completed was the Royal Gas Company's well, in February, 1891. It was drilled for gas, and the field has accordingly been not only a surprise, but is also an accident. This was followed by Sauter's No. 1, which wells were connected with the main discharge line of the National Transit Company by two-inch pipes. The next well of any importance was the Matthews, situated about midway between the McDonald and the McCurdy field, already developed. It got some oil in the Gordon sand in the spring of 1891, and was a small well, say 10 or 12 barrels daily. This was connected in the usual way.

"To the beginning of July there had been no such volume of production as to cause any unusual effort to care for, or to transport. But in the early part of the month of July the Clark & Bannister well on a town lot in McDonald, struck the fifth sand and started off at 30 barrels per hour; the Matthews, already referred to, more than two miles distant, struck the same sand about the middle of the month, and was credited with 40 or 50 barrels per hour. Sauter's No. 3, as if envious that McDonald should be outdone by that out-in-the-country well, went to

the fifth sand and also came in with a jump at 120 barrels per hour.

"This was not a theory, but a condition that had to be faced. The production must be cared for. A pump station was begun at McDonald without delay. Transportation had to be forced. The capacity of the lines at the beginning of July was but about 3,000 barrels daily. This evidently would have been inadequate to run such an outpouring of oil as was going on. The production of oil by the middle of August was up to about 15,000 barrels per day. By the first of September the lines could handle 26,000 barrels per day. The production increased and exceeded that amount. By the first of October the lines could handle 40,000 barrels per day. The petroleum still increased; the race between production and the capacity of the company to handle it became fast and furious. By November the production on some days was up to the vicinity of 80,000 barrels per day, but by the first of December the capacity of the pipe line had been increased so that it was able to handle 90,000 barrels per day, if necessity should arise.

"That day has not come. The production began growing less after November, but the plant of the pipe line company is none the less. It not only erected a plant capable of handling, but actually received and run such a volume of oil as can scarcely be comprehended. The amount of oil carried away from the McDonald field in November, if carried in cars, would have required a train of 25 full loaded cars to have been run more than once every hour, day and night, to have carried it. More than 750 cars would have been required. The plant able to move such a weight is necessarily large as well as powerful, and much machinery is necessary.

"But keeping the machinery in motion was one of the difficulties encountered in that field and successfully overcome which might have been a fatal obstacle to a less thoroughly equipped organization. The water available in the vicinity of the operations was so bad, owing to coal-mine drainage, that it could not be used for the boilers. It became necessary to pipe all the water from the Ohio River and Montour Run. The injury to the boilers before the water pipe system was completed caused the expense of a large number of boiler-makers for 10 weeks. The water system from the Ohio River and Montour Run covered about seven miles, but it was subsequently found that a saving in distance could be effected by building a water station in Bridgeville, from which a three-inch main was run and is now supplying that field.

"The conditions under which this plant was erected also involved the difficulties, delays, vexations and additional expense of the means of transportation of material being in pressing demand by all manner of interests in the newly-developed field. Operators were anxious to get their machinery and tools to their leases at the earliest possible moment; well-supply companies were making demands for transportation with all the vehemence possible to exercise; merchants and craftsmen attracted thither added their mite to the pressure, not only upon the

railroad company to various stations adjacent to the field, but also for teams to transport their boilers, engines, rig timbers and building material, stocks of goods, supplies for man and beast, teams were brought into requisition to the number of many hundreds; the movement of teams was necessarily slow, and accident to one was the concern of all, as the delay stopped the procession of loaded wagons for miles; a single car on a switch might delay the whole train; but one side track was available at any of the stations on the railroad near the field; a veritable army of men was employed; the work went on night and day under competent direction; as one gang quit for rest and sleep another went on, gas furnishing the electric light by night, so there was no pause from the beginning of the line or of a pump station until it was completed; the whole plant including 64 boilers, some of them 80 horsepower; 145 pumps of various sizes, from the small ones in the valleys to the powerful works at the pumping station, with appropriate engines, all brought in, set up and put in running order, supplied with water brought through miles of an artificial water system; about 150 miles of pipe lines in the field and 70 miles of large main out of it; iron tankage, with a capacity of 3,000,000 barrels, all erected and completed within the brief period of four months. It is a triumph, whether viewed as an achievement of American enterprise, or the result of business organization which enables such vast resources to be placed at the disposal of productive industry so promptly, skillfully and advantageously to the development of natural resources."—Industrial edition of the *Pittsburg Commercial Gazette*.

At this time the Producers Oil Company, Limited, owned only a private line on the margin of the field probably sufficient to handle 2,000 barrels a day, and during the four months it did not increase beyond five to six thousand barrels a day. If that production had been dependent upon that one line, it would have gone to waste or not have been produced.

POSSIBLE EFFECTS OF A FREE PIPE LINE LAW.

Q. There might have been a free pipe line law in Pennsylvania, which was opposed by the Standard Oil Company for years, and finally granted. Do you not think that there would have been pipe lines of sufficient capacity to have taken care of the oil, if the producers had had the right to build them in our State, if they had had the right of eminent domain? Is it fair, therefore, to instance the capacity of a single pipe line, just starting up, to care for the whole field? A. To begin with, we will have to assume that the producers, or the persons engaged in constructing the pipe lines, under a free pipe line law, previous to 1877, would have been willing and satisfied to form a compact organization, to put in sufficient capital, and to continue to act as a unit, as the persons owning the existing pipe line interests there have done. If all these things could have been brought about, then I be-

lieve it would have been possible to have had enough lines there, but the constant co-operation of all the parties interested would have been necessary. They would necessarily have been obliged to be united on every proposition, and that was something that was never accomplished before; nor has it been since.

Q. Do you not believe that the pipe line industry would have held out just such inducements as the railroad industry has to the country, that there would have been two or three large competing lines in the field, and that the burden of taking care of that oil would not have been self-imposed by the Standard Oil Company? A. All we can judge is by what did occur at the time, when there were a great many competing organizations. There were one or two strong pipe lines, and they were owned by one or two strong railroad companies, and managed, in part or in whole, either openly or by agreement.

Q. It was then a growing industry—away back before it was monopolized? A. It was not a growing industry. It was overproduction. There was no pipe line in the business previous to the organization of pipe lines in 1877 that had made a dollar.

Q. That was in the infancy of the business and you could not expect to have the kind of capacity you have described. Do you maintain that one company, be it the Standard or anybody else, would be better for the oil country, for producers and consumers, and all, than several large, responsible competing companies, which undoubtedly would have been formed if there had been the right of eminent domain, and if the builders of pipe lines had not been opposed in getting it by the Standard Oil Company itself? A. I never understood that the Standard Oil Company directly opposed it. The Standard Oil Company was not in the pipe line business until the time of the great opposition and agitation for free pipe line laws. They did not go in until 1877.

Q. Was there not a great effort made in Pennsylvania to get the right of eminent domain, and did not the Standard Oil people, or the National Transit Company, which you say is controlled by the Standard or is a part of their system, oppose the giving of the right of eminent domain? Had they not secured the right of way by purchase through the State and across the railroads, and when other companies undertook to do that, did they not lease and purchase ground in front of their right of way, and did not the railroads oppose the other companies passing under or over their ground? Was it not impossible for a number of years for other people to get to the seaboard after the Standard or the National Transit Company had secured their right of way? A. I do not so understand it. I never knew of but one instance of the right of way being secured.

Q. (By Representative Livingston.) May I ask what this testimony about the pipe lines leading up to, simply a history of well digging? A. It is to show the manner in which it is done, and the uselessness of the opposition attempted by the Pure Oil Trust—its use-

lessness and inability to do any business where it was required.

Q. You want to show them that the oil company could not do any business on account of their being hampered by the pipe company? A. No; they were not hampered by the pipe company. They were not able to do anything after they had taken it, and then bought a charter and were not obliged to do anything that they wanted. It was a limited concern; it was not organized under the pipe line laws of the State; it was a private company. Its purpose was, in other words, to establish the latter movement of the Petroleum Producers' Association, and was a dog-in-the-manger policy—a going into business for the purpose of annoyance, without rendering any useful service to the State.

Q. (By Mr. Phillips.) I wanted to get at the reason why there were not other large companies in opposition. A. I never knew of the Standard Oil Company placing obstructions in the way of the construction of any pipe line. I have known of individuals obstructing the Standard Oil Company's operations. I have known of that.

Q. After the Standard Oil Company, or rather the National Transit Company, had assumed control, were there not some twenty-odd pipe line companies formed to supply the refineries from the local fields? It has been stated here by other witnesses that there were some twenty-odd. Now, do you admit that there were a number that went into local fields? Oh, yes.

Q. After the National Transit Company had control? A. Yes.

PREMIUMS PLACED ON OIL BY THE NATIONAL TRANSIT COMPANY.

Q. Now, is it not the rule of the National Transit Company to place a premium on oil in all those fields in order to add to the price of oil, so that the local men can not handle it? Has that been their rule or not? A. Some instances have come under my own observation of pipe lines being constructed into new and prolific fields for special purposes. I have one in mind in Oil City. It started, I think, as the Peerless or Keystone pipe line. It changed its name so often that I could not keep track of it. That line did not come in as a competing line in the field, and the condition upon which it entered was a guaranty of a certain amount of oil at a fixed rate of pipage. The pipage rate was fixed at five cents below the existing rates of the National Transit Company, which was virtually a bid for that oil—a bid of five cents—and was in itself a premium of five cents. The competing company then necessarily went out and bid the same figure; the premium was a bid to get the oil.

Q. You know a few years ago there was quite a line started in the Washington field, to which you have referred. It is known, I believe, as the Craig-Elkins Line, or the Western and Atlantic. Did not the Standard put a premium on Washington county or Butler county oil while that line was in existence? A. For the reason I have stated the oil was bid away from

them by these co-called independent companies coming in.

Q. I do not so understand it? A. That is as I understand it.

Q. Did not the National Transit Company eventually purchase that line? A. That is the assumption.

Q. Then did not they take off the premium? A. I do not believe that there is any premium on that oil now.

Q. But did they not reduce the price of oil seven cents per barrel to the producer the day or the next day after the purchase was made? A. If you will give me the dates I will refer to this book here. I can not state it from memory.

Q. I can not at this time. You have no knowledge? A. I have no knowledge on that subject.

Q. There has been a new field, called the Scio field, opened up in the last two years. Is there not an independent pipe line in that field? A. I have heard there were some people bidding for oil there.

Q. Is there a premium placed on that oil? A. I believe there is.

Q. Is that oil better than any other oil? A. It is said to be; it is equal to the Clarendon oil.

Q. Has there not very frequently been a premium put on oil, being claimed that it was better, which was afterwards taken off when the opposition ceased? A. I have knowledge of premiums being placed on oil, and I have knowledge of premiums being taken off; but I have no knowledge of the purpose of those premiums.

PIPE LINES WHICH HAVE PAID REBATES.

Q. (By Mr. Farquhar.) What pipe lines have paid rebates to producers, and when and how did they pay them? A. The Mutual Pipe Line paid a rebate of five cents a barrel.

Q. (By Mr. Smyth.) Is that an independent pipe line? A. They were all independent pipe lines in those days. They entered into a contract. I have some figures here on the subject. These rebates to which I refer now were a matter of common knowledge so far back as 1878. Some time after the close of that movement one of the persons connected with it made a demand upon the Union Pipe Line for a rebate and gave his reasons, which will appear from the following correspondence. I am reading now from a letter head of the Bear Creek Refining Company, Limited:

REBATE.

B. B. Campbell, chairman. R. P. Crawford, treasurer. Bear Creek Refining Company, Limited, refiners of petroleum. City office, corner Etna and Eleventh streets, Pittsburg, Pa., October 22, 1884.

The following correspondence demanding rebates on pipage passed between R. P. Crawford, treasurer of the Bear Creek Oil Refining Company, and Mr. O. P. Swisher, of the United Pipe Lines Company. Then the correspondence was transferred from Mr. Swisher to Mr. Henry McSweeney, solicitor for the United Pipe Line:

Letter No. 1. Under the above letter head, with a

28

Pittsburg date line, on the date above mentioned, Mr. Crawford writes:

Mr. O. P. Swisher.

Dear Sir: I am informed that your former attorney, Mr. Hancock, has been superseded by Mr. McSweeney. I wish the latter to get the enclosed. If not addressed properly, please see that it gets in the proper hands.

Yours sincerely,

R. P. CRAWFORD.

Letter No. 2, written under the letter head of the Bear Creek Refining Company, on even date with the above. Mr. Crawford writes:

H. McSweeney, Esq.

Sir: I met Mr. J. R. Campbell three weeks ago on a train to Oil City. I told him I was anxious to get an old unsettled matter fixed upon a matter of overcharge of pipage on oil from some small producing wells near the mouth of the Clarion river. Mr. Campbell told me to write you on the subject. In the days of the old Mutual Line (G. R. Harms, manager,) we found oil on a lease obtained from Hon. Thomas Mellon and R. Galey, Sr., about one mile from the mouth of Clarion river. We had completed our arrangements to lay our own pipe lines to the railroad. Mr. Harms came to see me, and he agreed to 15 cents pipage for all the oil from the lease above referred to, but not to extend to any other leases. The pipage at that time was settled monthly. I have the papers to show such settlement. The Union, Empire, United, and National Transit have, in succession, fallen heir to the arrangement. It has been investigated several times—by Mr. Hatch for and in behalf of the Union (afterwards the Empire) Line, by the pipe lines when operated in the pooling arrangement, and by Mr. Waller in behalf of the United, after the purchase by the latter of the Empire Line.

The wells are called Mellon (or Andes) and Brett. The last paid by the United was, up to and including the ruins for April, 1879, as follows:

April runs, Mellon, 903.66 barrels, at 5 cents. . . \$45.18
April runs, Brett, 133.01 barrels, at 5 cents. . . . 6.65

The charge of 20 cents pipage being in excess, we claim an allowance of five cents per barrel on all oil run since that date, and to continue as long as we produce from that particular territory. The wells have run down to small business, but small as the claim may appear I must get it settled, either amicably or by law. I much prefer the former, but one of my partners is a lawyer (B. B. Campbell), and, like all lawyers, is ready for the job. I write this in a spirit of kindness and fairness, as one business man should to another, and trust it will receive your prompt and careful consideration.

R. P. Crawford, Trustee.

To which Mr. McSweeney makes reply under date of Oil City, October 23, 1884.
R. P. Crawford, Esq., Pittsburg, Pa.

Dear Sir: Your letter of the 22d instant claim-

ing overcharge of pipage is received. Please send me copies of all papers upon which you base your claim, as well as a full and specific statement of the amount alleged to be due you, etc. As soon as I hear from you I will carefully examine your claim and advise you as to the result.

Yours, truly, H. McSweeney.

Letter No. 4, written on the letter head of the Bear Creek Refining Company, Limited:

Pittsburg, Pa., November 14, 1884.

Mr. H. McSweeney,

Dear Sir: I answer yours of 23d ultimo as follows: I inclose sheets marked Nos. 1 and 2, showing runs from Mellon or Andes wells (two numbers), and from Brett wells, upon which there is due five cents per barrel:

Andes or Mellon, 25,199.65 barrels,	
at 5 cents.....	\$1,259.98
Brett, 2,061.84 barrels, at 5 cents.....	103.09
Total.....	\$1,363.07

I also inclose sheet No. 4, showing a few runs from each Mellon and Brett, running backward of runs upon which five cents per barrel overcharge was paid, to give you a start toward tracing it. As to the contract, I refer you to Charles P. Hatch, Roanoke, Roanoke county, Va., formerly manager of the Empire Pipe Line, also John T. Galey, who was stockholder in the contemplated pipe line from these wells. Thomas F. Galey, Pollock postoffice, Clarion county, Pa., can give John's address. I do not know where G. R. Harms is at present. The last I heard from him he was at Cincinnati, Ohio. There is no doubt about this claim being a just one. It is just what Mr. Hatch called it, "an overcharge," and knowing all about it, I say the same thing. I think Mr. O. P. Swisher could tell you something about it, if he will be kind enough to freshen his memory.

Hoping to hear from you soon, I am, yours, respectfully,
R. P. Crawford, Superintendent.

Letter No. 5, on letter head of Bear Creek Refining Company, Limited:

Pittsburg, Pa., November 15, 1884.

H. McSweeney.

Dear Sir: In making up the account for the overcharge pipage, which I mailed to you yesterday, I left out the old Galey well, which was included in the contract. It is a very small producer, and if the others are settled, I will let it go. I sold it last spring and have nothing to do with it now.

I wish to say to you frankly that we made a mistake agreeing to 15 cents per barrel pipage from those regions, as we should have built the line, which would have been but a fraction over one mile and pumped our oil to the railroad at less than five cents per barrel. But the contract was made, com-

plied with for years, and now I only ask for compliance of same.

Respectfully,

R. P. Crawford, Superintendent.

Letter No. 6, on letter head of the Norfolk and Western Railway Company, Charles F. Hatch, general freight agent:

Roanoke, Roanoke County, Va.,

November 24, 1884.

H. McSweeney, Esq.,

Solicitor National Transit Company, Oil City, Venango county, Pa.

Dear Sir: I have your favor of 20th, referring to the matter of the claim of R. P. Crawford against the National Transit Company on account of alleged overcharge on pipage of oil produced from wells drilled on lands leased from Hon. Thomas Mellon and Robert Galey, on Clarion River, about one mile from the mouth.

When the Empire Transportation Company purchased the Mutual Pipe Line in 1872, we found among others was a contract, entered into by Messrs. Martin and Harms, owners of the Mutual Pipe Line, and R. P. Crawford and others upon the subject mentioned, by which the Mutual Pipe Line agreed to transport the oil from wells mentioned at a rate of 15 cents per barrel.

This agreement was an oral one and there was no written agreement embodying it, but the facts were conceded upon the representation of Mr. Crawford, as well as Mr. Harms, representing the respective interests. - Following this the Mutual Pipe Line and its successor, the Union Pipe Company, continued to transport the oil mentioned at the 15-cent rate. The Union Pipe Company was the name given to the pipe line interests in the lower country belonging to the Empire Transportation Company. When the Empire Transportation Company sold its pipe line property in 1877, all papers and agreements were turned over to the representatives of the Standard Oil Company, or the United Pipe Lines, and, if my recollection serves me right, I gave their representative a statement showing the special contracts and rates for the transportation of oil, among which, I think, was the one to which you refer.

There is no doubt that the agreement referred to was made between Mr. Crawford and Messrs. Martin and Harms, and that it was fully observed, as they owned the pipe line, and that this oral agreement was fully respected by their successors up to the time of the sale of the pipe line interests of the Empire Transportation Company in 1877. The reason for this contest rests upon the fact that, at the time Messrs. Martin and Harms had built their pipe lines, the parties owning the wells on the Clarion River, mentioned above, projected the construction of a short line from the wells to the railroad, and the agreement entered into, establishing a 15-cent rate, was a compromise under which Mr. Craw-

ford and others abandoned their project of constructing the Clarion line.

Yours, very truly,

Charles P. Hatch.

Letter No. 7, dated Oil City, November 20, 1884:

R. P. Crawford, Esq.

Dear Sir: Your favor of the 14th instant, in relation to the alleged overcharge of pipage, was duly received. I will investigate the matter and advise you of the course this company will pursue as early as possible.

Yours, truly,

H. McSweeney.

Letter No. 8, on letter head Standard Oil Company, 44 Broadway, S. C. T. Dodd, solicitor, dated New York, September 15, 1884:

H. McSweeney, Esq., Oil City, Pa.

Dear Sir: About the year 1879 R. P. Crawford, B. B. Campbell, and others caused a quo warranto to be filed against the United Pipe Lines, asking for a forfeiture of its charter upon this ground, among others, that it had made discriminations in its pipage charges. About the same time actions were brought in the supreme court of the State against the Standard Oil Company and the United Pipe Lines and various railroads, the burden of the complaint in each case being discrimination. A criminal action was begun in Clarion county against J. J. Vandergrift, J. D. Rockefeller, and others upon the charge that they had conspired with the railroads to give and receive discriminations in freight. R. P. Crawford was a leading man in all these proceedings. When I investigated the facts, so far as the United Pipe Lines were concerned, I discovered that the only discrimination of which it had been guilty was in reference to several contracts which it had inherited, one of which was the contract to which you refer, between R. P. Crawford, or the Bear Creek Oil Company, and the Mutual Pipe Line Company. The parties who were making all this fuss about the discriminations were the only parties receiving any benefit from the discrimination. They claimed that the discrimination was not only contrary to public policy, but was absolutely criminal. I agreed with them so far as the public policy was concerned, and I directed the United Pipe Lines to repudiate all such contracts. R. P. Crawford applied to me frequently in relation to this matter, and I always gave him the same reply, that we would charge the same rate of pipage to every man, and would recognize no contracts whatever for a less rate. I do not think that we ought to depart from this line of policy, and particularly not in favor of R. P. Crawford. I would be glad to have him bring suit. If such contracts are good in law, I would like to have it so established at the suit of R. P. Crawford or B. B. Campbell, the parties who so few years ago were endeavoring to put us in the penitentiary for the very thing for from which they now claim the benefit.

Yours, truly,

S. C. T. Dodd.

Letter No. 9, dated Oil City, Pa., December 17, 1884:

R. P. Crawford, Esq., Pittsburg, Pa.

Dear Sir: After a careful consideration of the matter, I have decided that this company must decline to recognize the claim made by you on account of alleged overcharges of pipage.

Yours, truly,

H. McSweeney,
Solicitor United Pipe Line.

PREMIUMS AND REBATES COMPARED.

Q. What is the difference between putting a premium on a given field when the oil is sold and allowing a rebate to another? What was done to evade the law? A. I think I have already given my view of the question of premiums. I have stated that they are of the nature of a bid when there is competition for a particular grade of oil.*

Q. You do not know of your own knowledge, then, of any premiums being paid where the oil was not any better in one field than another? A. Oh, as to the quality of the oil I am not competent to speak. I am a producer only in a very small way, and I do not care to testify as to the quality of the oil; but I know that the practice of paying a premium was at one time general over the whole region.

Q. (By Mr. Smith.) Who paid those premiums? A. The purchasers of the oil.

Q. It was the custom of the trade at that time? A. Yes; anyone buying oil was obliged to pay a premium.

Q. (By Mr. Phillips.) Did the National Transit Company or the Standard purchasing agency pay this premium on all credit balances? Have they not made it a rule to buy all credit balances at the market value, whatever it was, on the exchange? A. I think that rule was abandoned in 1895.

Q. Well, for a great many years previous to that it was the custom? A. Previous to 1895 they did buy at the ruling price of the exchange.

PRICE OF CRUDE OIL DETERMINED BY THE PRICE OF REFINED.

Q. Now they fixed the price themselves, but the time to which we allude there was this great discrimination? A. If I am expected to answer as to my understanding of the point of their fixing the price, I will say that I do not understand that they fixed the price. The price was fixed by demand, the price of crude oil being reflected in the price of refined.

Q. Who reflects both the price of crude and refined? A. The consumer makes the price. He is the man who states what he will pay.

Q. (By Mr. Smyth.) You stated that it was largely caused by the export demand? A. Yes; wherever the consumer is.

Q. In your judgment the price is fixed by the foreign demand? A. Yes.

Q. (By Mr. Phillips.) Then, when the Standard Oil Company marks refined oil up 10, 15 or 20

points, that is fixed by the consumer, is it. A. My reply was to a different question entirely. I think it is taking advantage of a witness to put it in that way. I have not testified on that branch of the question.

Q. I do not wish to take advantage of you. A. I stated a little while ago that in my opinion the premium is the result of a bid for oil where there is a demand. In districts where there is a demand for oil a premium is usually placed on it just as a premium is placed on leases where there is a demand for land. The producer is carrying out the same idea in competition.

Q. For 15 or 20 years past has there been any special demand by outside refiners? Have not the Standard Oil Company and the National Transit Company handled the great bulk of it? A. You have just mentioned a great line in the Washington field, the Western and Atlantic; that was a demand. It brought capital in large quantities. It employed several millions of dollars.

PRICE OF OIL, DETERMINED BY THE DEMAND AND SUPPLY.

Q. (By Mr. Smyth.) Do you think that the fluctuation in the market price of oil is caused by the demand for oil, or is it the result of manipulation on the part of the refiners? A. It is unquestionably the demand for oil.

Q. A larger demand for oil, in your judgment, causes an advance in prices? A. Yes.

Q. And when the demand slackens the production decreases? A. The supply and demand regulate the price. In the documents which I read this morning the complaint of the producers, from the first movements down, has been over-production, and it has been generally admitted that the price is determined by supply and demand.

Q. (By Mr. Phillips.) Has that law worked well in the case of the Standard Oil Company? Have their profits gone down on account of over-production? Has the business not been continually profitable to them, regardless of this law of supply and demand? Do you know any one year, of your own knowledge, in which they have lost money? A. I know nothing about their commercial business at all.

Q. (By Mr. Smyth.) I do not suppose they would admit it. A. I do not suppose anybody would.

Q. (By Mr. Farquhar.) It would simply be a matter of rumor? A. Yes.

Q. Have you, of your own knowledge, ever known of a single statement issued, giving away their business to anybody? A. If it were generally known that any company was losing money its stocks would tumble very rapidly.

Q. Have you ever known of any statement being given out by the Standard under any of the three organizations in which they have been? A. I never have.

THE VALUE OF THE STOCK OF THE STANDARD OIL COMPANY.

Q. (By Mr. Phillips.) What was the capital stock of the Standard Oil Company six or ten years ago? Was it more or less than \$100,000,000? A. I think a little less.

Q. How much less? A. Three or four millions, possibly.

Q. Do you know the highest point, or about the highest point that stock ever reached on the market? A. I have heard it stated that it was very close to 500.

Q. Five hundred millions of dollars? A. Yes.

Q. Then the law of supply and demand has not affected them very materially in a great many years? A. Is that for the purpose of showing profits in their business?

Q. I presume that the stock would not be there unless it was earning that; it would not reach that price without having the earning capacity. A. I might say in the same connection that opposition companies show even a greater increase in values. The stock of the Tidewater Pipe Line Company is quoted at from 1,000 to 2,000, I think.

Q. (By Mr. Smyth.) Will you give us the particulars there? What is the capital stock? A. The capital is \$10,000,000.

Q. What is the market value? A. Two thousand.

Q. (By Mr. Phillips.) Is not that absolutely under the control of the Standard Oil Company? A. No.

Q. Have they not running rates or agreements with the Standard Oil Company? A. There may be agreements, but it is controlled by themselves.

Q. Are they not limited as to the amount of oil shipped through their lines? A. By agreements—possibly there are agreements there.

Q. Without an agreement with the Standard have you any idea from your knowledge of the business, that the stock would have gone to that price? A. Well, that involves an opinion I do not care to express. I have no knowledge on the subject.

SUITS AGAINST THE PENNSYLVANIA TRANSPORTATION COMPANY.

Q. (By Mr. Kennedy.) You stated yesterday that you knew of one particular pipe line that had been sued on account of misrepresentation in regard to the quantity of oil on hand. Will you now state the name of that pipe line and the circumstances surrounding that suit?

Q. (By Mr. Phillips.) And the date of it? A. The pipe line was the Pennsylvania Transportation Company, and it was some time in the summer of 1876. The suit was brought in connection with the gauging movements, in which false reports had been made about the quantity of oil in the storage tanks, a discrepancy of some 50,000 barrels. The examination of the gauging tanks was a public one.

It was a test or examination of the integrity of the pipe lines at the time, and all lines were examined by agreement of the oil exchanges. A statement was issued by the gaugers of the Pennsylvania Transportation Company that it had 50,000 barrels in excess of the actual quantity on hand, making a misrepresentation to that extent to the trade. Suits were entered against the gaugers, involving the president of the line and the superintendent. Criminal action was brought, I think, in Kittanning, but the case was never tried. But it was common in those days, the early pipe line days, under the wild cat pipe line systems, for pipe lines to be short. Subsequently to 1874, when the pipe line law, requiring the publishing of statements of the condition of the line and its responsibility, went into effect, a great number of them were caught. One was the Atlantic Pipe Line, which was found short 6,000 barrels on one occasion.

Q. (By Mr. Kennedy.) Do you know of any such shortages in recent times? A. No; there have been no such shortages. There have been suspected shortages. There have been several gauge movements organized by the oil exchanges to verify the statements of the National Transit Company. There was one very prominent one in 1884, when the stocks amounted to nearly 40,000,000 barrels. An examination of the thousands of tanks in which this oil was stored in various parts of the region proved the correctness of their statement. The report of the gaugers was accepted by the various oil exchanges, and the public mind quieted as to the rumors of shortage.

THE CAPACITY OF THE NATIONAL TRANSIT PIPE LINE.

Q. (By Mr. Phillips.) Have you any knowledge of what it requires to fill the National Transit line, and of the residuum in the bottom of the tanks which would not be called merchantable oil? A. No. My knowledge of that would be hearsay and estimation altogether. I doubt if that experiment has been conducted. There have been estimates based on the capacity of the line.

Q. Would it take three million or four million? A. I have heard it estimated higher than that.

Q. Higher than four million? A. I have heard the quantity required to fill the line estimated at more than four million barrels.

Q. Do you know about how much oil was in the United Pipe Lines when oil took such a sudden advance, about two or three years ago? A. Well, I think the capacity of that line was fully represented in transit.

Q. Do you know about how much oil they had on hand at that time? A. We ought to be able to show it to you.

Q. We should be very much obliged for that information for about April, 1895. A. The amount of the stock in April, 1895, was 4,545,784 barrels.

Q. Do you know how many certificates of the Standard were outstanding at that time. A. I can not tell that.

Q. Do you know the amounts that were on hand

at that time belonging to other people? A. I can not state that. Only the monthly pipe line report will show that.

Q. Have you not the pipe line report there for that month? A. I am reading from the stocks. This book runs by shipments.

Q. Does it not show the credit balance for each month? A. I do not think so.

Q. Are not the certificates shown? A. I think not; simply runs, shipments, and stocks.

Q. Well, you stated that you had heard it estimated at between four and five million barrels. Could that and the indifferent oil in the bottom of the tanks be delivered to the purchaser, if there were a purchaser? A. If all production were stopped at a given hour and everything entirely shut off, they would probably not be able to continue operation beyond a day or two at the outside; but the production at this period was upward of 85,000 barrels a day, and that going constantly into the line equaled the shipments required to meet the demands of the trade.

Q. To meet the demands. A. That going into the line constantly, day by day, met the demands of the trade.

SHORTAGES IN PIPE LINES.

Q. Did the Standard own all that went in day by day at that time? A. As I stated before, we have no means of showing that except by the statement published every month. To return to Mr. Kennedy's question, I will say that reports of this kind were not at all infrequent in the days of wild-cat pipe lines, but they were not alarming to the trade when made. It was a condition that was met with anywhere, but it shows at the same time that the pipe lines then ran very close to shore. They used oil everywhere they had it and expected to make it up in the future. A report of the Atlantic Pipe Line was posted in Titusville, March 17, and quoted by the Oil City Derrick, March 18, 1876, under the head of "Titusville Doings. Pipe Line Returns." (Reading:)

From our special reporter. Titusville, March 17. The Atlantic Pipe Line, with headquarters at St. Petersburg, and no connection with the associated lines, makes substantially the subjoined report in round numbers. It will be seen that a shortage of 6,000 barrels appears, the actual loss in handling over and above the 2 per cent deducted for this cause by each line in the regions. This, however, is amply covered by the purchase from reliable parties of 15,000 barrels, paid for and ready for delivery when required. Notwithstanding the very large percentage of certificates in proportion to the total stocks, the line is in the most prosperous condition, and by the first of May is expected to be entirely free of debt, with the whole cost of construction fully liquidated. During February the receipts were above the usual average, footing up to 55,000 barrels. The statement for the month is as follows:

Total amount of crude oil in the pipes and tanks of the company, February 29, 1876..	84,045
Total amount of crude oil for which the company was liable on the 29th of February, 1876	90,000
Represented by certificates.....	78,000
Represented by credit balance.....	12,000
Purchased from reliable parties and paid for oil to be new from the wells.....	15,000
Total amount of crude received during the month	55,500

Then follows a line of figures showing that there was an existing shortage at that time of about 6,000 barrels on less than 2,000 barrels a day of business. And that was a very common experience in the days of wildcat pipe lines.

"IMMEDIATE SHIPMENT" EXPLAINED.

Q. (By Mr. Phillips.) Have you anything else to say? A. There are other points of interest upon which the public mind has been befogged that I should like to discuss. The question of premiums has already been discussed. Now there is another one which occurred during the period of the Bradford development that created a great deal of discussion, and that was immediate shipment.

Q. (By Mr. Smyth.) What was that. A. Immediate shipment.

Q. Immediate? A. An order known as "immediate shipment." Oil was produced so rapidly at one period in the Bradford field that the tankage system of all the pipe lines, as well as the private tankage of the country, was insufficient to take care of it; and the clamor to have their oil cared for compelled the pipe lines to issue an order for immediate shipment. That is, they would take oil for immediate shipment and then the purchaser might come into the market owning tankage and having cars to ship his oil to market, and would be able to purchase it at a lower price than the regular prices offered in the oil exchanges. That was called an immediate shipment order. And the point upon which the public mind was befogged at this time, is the supposition that it was the only time when immediate shipment ever went into effect. The first immediate shipment went into effect in the fall of 1872, following the 30-day shut-down, or very close upon the heels of the 30-day shut-down. Epizootic, which was then a new disease among horses in our region, was epidemic, and there was a compulsory shut-down of almost 30 days more following the shut-down by agreement. It was during this period that the Empire Pipe Line established the order of immediate shipment. The field gaugers were instructed by orders from the general office at Parkers Landing what oil to ship and the quantity, regardless of the practice customary at the time; the office directed the quality, the quantity, and the time the oil should be taken, precisely as was done six years later in the Bradford field and also in Butler county.

WHY 2,000,000 BARRELS OF OIL WAS SET APART FOR THE BENEFIT OF LABOR BY THE STANDARD.

Q. (By Mr. Kennedy.) You spoke yesterday about several million barrels of oil having been set apart by the Standard Oil Company and the producers for the benefit of the drillers, I believe? A. For the benefit of the oil well workers, the drillers and tool dressers, etc.

Q. Was that the natural result of a philanthropic impulse on the part of the Standard Oil Company and the Producers, or was it for the purpose of keeping those workers from engaging in work in other fields and developing them? A. Well, I might say that both motives suggested in your question operated. The purpose was to do justice to labor on the one hand, and give it an inducement—

Q. (By Mr. Phillips.) And to have co-operation on the other. A. Yes, for their co-operation.

Q. (By Mr. Kennedy.) There was an idea, though, of keeping them out of the other fields. A. Oh, yes; that was the central idea.

Q. That was the central idea? A. Yes, because the practical men can always obtain the necessary capital where there is any inducement for the drilling of wells.

Q. That, rather than philanthropy, was the motive? A. The idea was to prevent labor engaging in other employment to their detriment. But I will say this for the producers in the oil regions, that labor is nowhere better cared for than it is there, or more loyal to the producers; that is true of both the producers and the Standard. Labor has no kick there.

Q. Are they organized? A. Yes, there is a well drillers' organization. I believe it is in existence, but I do not think they hold meetings very often.

Q. (By Mr. Phillips.) Was it not generally stated that it would be a great injustice to labor to shut down for a period of a year without any compensation, leaving them out of work? A. That was stated; but I will say furthermore that it was the custom in previous shut-downs to take care of labor.

Q. (By Mr. Kennedy.) Your testimony is that the central idea was to keep these men from engaging in the work of developing wells elsewhere. A. Well, if placed upon their own resources without the means of livelihood, nothing would be left but to engage in the first movement that offered. The laborers shared in this entire movement, as a matter of justice to labor, I think, as much as anything else. That is the view that I have always taken.

NUMBER OF MEN AFFECTED AND THEIR WAGES.

Q. (By Mr. Ratchford.) Are we to understand that labor received compensation during the period that it was thrown into idleness by the shut-down? A. They received compensation, yes.

Q. Equal to their wages? A. Well, I shall have to answer that by explanation. The labor in the oil country is for the most part contract labor. While the drillers receive so much per day. the

competition is so great that they are rushed with their work. The aim is to drill a well in as short a period as possible. The interval between wells is often extended, so that it is very difficult to arrive at any estimate of what the drillers' year would be. It might be estimated at 200 days, and wages at the prevailing prices for first-class men at about \$1,000 a year.

Q. (By Mr. Phillips.) At that period it was about \$3 to \$3.50? A. Yes.

Q. And when it closed it was advanced to \$4.50? A. An advance took place.

Q. (By Mr. Ratchford.) Are you prepared to state how much they got, what the average pay offered them was? A. I believe it will appear in the testimony of the secretary of the Well Drillers' Union, in connection with the report of the committee of Congress in 1888. That subject is fully gone into there, and I believe some figures are to be found in that report.

Q. Will you state the number of men involved? A. The number of men, as stated in that report, was, I think, about 2,000. I think it was more than 2,000. The testimony of Henry Webster will throw some light on that question.

Q. (By Mr. Kennedy.) It is so extraordinary for corporations to care for the interest of workmen in this way that I should like to have a better understanding in regard to it. You say that the motive of philanthropy on the part of the Standard and the producers was one consideration, and that keeping the men out of work in other fields was another consideration. I should like to ask you which you consider overbalanced the other, the matter of philanthropy, or the matter of self-interest on the part of the oil interests? A. Inasmuch as it was a business arrangement, I think that the business consideration had a great deal to do with it. It was purely a business consideration, and you might call it a selfish one in that respect and to that extent.

Q. (By Mr. Farquhar.) Have not the parties taken credit for sympathy and philanthropy in granting the terms that they proposed to the drillers? A. Oh, yes; there is some credit taken in that way.

and half a dozen may receive 50 cents a day more than the other half. It is a matter of skill, but when it comes to the operation of lifting oil, the wage is pretty generally uniform on that. The pumpers receive uniformly from \$40 to \$55 a month.

Q. (By Mr. Clarke.) You have stated that, when there was a curtailment of production, through a cessation of drilling new wells, labor was the one interest which suffered? A. In that connection, yes.

Q. Do you mean the labor that would have otherwise been employed in drilling new wells? A. In drilling new wells.

Q. Or all the labor in the oil industry? A. I mean to say it was the labor employed in drilling 800 fewer wells drilled during the year 1888 than there were the year previous. The labor suffered to the extent of the wage involved in drilling 800 wells.

Q. (By Mr. Phillips.) Less what they received in the sale of the oil? A. In the sale of oil?

I believe you said yesterday that they received more than the producer did in the way of profit? A. Well, it was my impression that they received considerable more; their oil sold at a higher rate; it was sold at different times.

Q. (By Mr. Clarke.) If, then, that curtailment was for the interest of the oil producers, it benefited certain portions of labor as well as injured certain portions? A. It certainly benefited the producers. Labor was benefited equally with the producers, in my opinion, because drilling did not entirely cease, and drillers could get permission from their union to engage in drilling on gas wells and wells outside of the prescribed territory. The prescribed territory was limited to oil produced from the sedimentary rocks—that is, New York, Pennsylvania, Southern Ohio and West Virginia. In the oil produced from the Trenton rock was not included that of Ohio and Indiana. I presume during this period 50 wells a month were drilled in the country at large for gas, furnishing constant employment, four men to a well, for 200 men. I think that is not overestimated.

LABOR ORGANIZATION NOT PROMINENT IN THE OIL INDUSTRY.

Q. (By Mr. Kennedy.) Do the Standard Oil Company and the independent companies look with favor upon labor organizations? A. So far as I am informed on the subject, I believe they do, although so far as labor organizations apply to the oil industry, we have very little of it. It is a matter of individual contract, and the wages is dependent usually upon the skill of the operator. For that reason we have very little of the union of labor there. The question of uniting enters less, perhaps, in the oil industry than any other, because all men are not placed exactly upon the same plane. Now, in drilling, you can take a firm employing a dozen drillers,

PRESENT CONDITION OF THE OIL INDUSTRY.

Q. (By Mr. Smyth.) What would you say was the present condition of the oil industry? A. I should say that it was exceedingly satisfactory to the oil producers.

Q. Both to the independents and to the Standard? A. Both to the independents and the Standard; all the interests together are satisfied with existing conditions.

Q. (By Mr. Ratchford.) How is it as compared with some periods that we might name, say, for instance, three or five years ago? A. There was a brief period four or five years ago when it was better. Oil temporarily ran up to \$2 a barrel.

Q. You say that was two or three years ago? A. Well, it was equally favorable two years ago.

THE OIL INTERESTS IN COLORADO.

Q. You made a statement yesterday that I should like to have you explain. The statement was, I believe, that were it not for the cost of transportation, oil might be sold by the Standard Oil Company in Denver, Colo., as cheaply as at the initial point of production, or the refinery. A. Yes.

Q. Are you familiar with the oil interests of Colorado and their relation to the Standard? A. Only in a general way.

Q. Are you aware of the Standard in that State? A. No.

Q. The commission has testimony bearing upon that subject to the effect that the producers of Colorado have found it to their advantage to sell all of their crude product to the Standard Oil Company. Do you wish to say anything on that? A. Well, I have not understood that the Standard were manufacturing oil in Colorado.

Q. (By Mr. Farquhar.) They are the producers of the manufactured oil? A. I understood them to be the purchasers of the manufactured and the distributors of the oil. I am not familiar with the prices of crude oil in Colorado. The field is so distant that there is no relation between their product and ours. There is no intercourse between the oil fields of the east and those west of the Mississippi River. One does not enter into any consideration with the other, so far as I am aware, and therefore we pay no attention to the product of that region. If it entered into competition with us in the east, we should have reporters there and know all about it, but until it does that there is no occasion to be at the expense of getting reports.

Q. (By Mr. Phillips.) Are they not prohibited, in a sense, from refining oil in the western field? Is not oil confined to fuel products, sold for fuel, and seldom refined? A. I do not know as to that. I am not familiar with the operations west of the Mississippi.

SOURCES OF STATISTICS OFFERED IN EVIDENCE.

Q. (By Mr. Jenks.) I wish to ask one or two questions with reference to the sources of the statistics, etc., that you have submitted, so far as that does not appear on the papers themselves. Have you been actively engaged in the oil business, either as a producer or refiner? A. I am a producer now to a small extent.

Q. How long have you been in the business as a producer? A. In and out of it always.

Q. So that a part of the information you have given is your own personal experience? A. My own personal experience and observation.

Q. Have you been associated with any of these different producers' associations of which you have spoken? A. Never with any of them.

Q. You have always been entirely independent? A. I was never a producer to the extent that would entitle me to belong to them, because most of these associations elect their members.

Q. You have not been a refiner of oil at all. A. No.

Q. As regards the statistics we find in this book, from what source, in the main, are they? For example, the report prices come from where? A. They come from the government reports here.

Q. And what is the source of the figures you submitted with reference to the profits of the producers of oil, the amount produced, the price, etc.? A. They are deductions made from the figures given in these reports.

Q. That is, you have taken the official government figures and made your deductions from them? A. No; we get no official figures on crude oil from the government.

Q. The figures you get from the government are on the export oil? A. Yes.

Q. Where do the figures on the crude oil come from? A. From the pipe line statement. Since 1874 the statistics have been posted. Every transportation company is required by legislative enactment to post their statements.

Q. Then the information that is given concerning profits is really a deduction based upon these figures of the pipe lines and upon the official prices? A. And upon the official prices; yes.

Q. Have you any other papers whose sources are different from those you have mentioned? A. Different in what respect?

Q. I mean coming from different sources. A. Oh, yes; in arriving at the conclusions here.

Q. At the conclusions you have given in your testimony? A. We have ransacked every source of information—the trade journals and State Geological Survey, the State made an exhaustive research in the early development.

Q. You have cited them? A. These papers were made up from the daily press at the time—the daily publications of eastern cities.

Q. In every case in each of these documents do the sources of information appear? That is the special point I want to get at. A. Oh, we might cite them from the Derrick Handbook. They all come from the Handbook.

Q. So, if the Derrick Handbook is cited we can find the original sources, can we? A. Yes.

Q. And the Handbook itself will tell where you got the figures? A. On crude oil you will get it from the statistics of prices in the daily press, which gives the annual price and the average price.

Q. When you cite the Derrick Handbook, however, that will give us the sources from which the Derrick Handbook got its information? A. Oh, yes; we can furnish the information.

METHODS OF COMPETITION EMPLOYED BY THE STANDARD.

Q. With reference to the question of special cuts made by the Standard Oil Company for the purpose of selling its oil in certain localities, I believe you said yesterday that you had no specific knowledge at all excepting your observation in your im-

mediate locality? A. We have information as to the periods when the cuts were made and the amounts; we know of that; we have all that.

Q. I refer to special cutting of rates to drive out competitors? A. Do you refer to crude oil?

Q. No; refined. A. I have no further information whatever on that. Refined oil enters into our calculations in the oil country to a very small extent.

METHODS OF THE STANDARD'S COMPETITORS.

Q. Have you any specific information with reference to the methods employed by the Standard Oil Company for obstructing the completion of the independent pipe line to the seaboard? A. I never understood that; but I have information on the other side concerning the stopping of operations by the Standard Oil Company. In 1874 the National Transit Company undertook to lay a pipe line from Parkersburg to Macksburg, and they were stopped at several points by Mr. George Rice, who obtained a lease across the track of their right of way; that is, Mr. Rice employed a man to take rights of way across the track of the pipe line, a man by the name of Ogle.

Q. What is the source of your information—Mr. Ogle himself? A. No; I was present. Mr. Ogle first informed me that he was engaged in the work, and he showed me his contract.

Q. With Mr. Rice? A. No, with the farmers; he made contracts with the farmers for getting these exclusive rights. An exorbitant sum was named for this exclusive right, when the pipe line was laid. He had the exclusive right of it, but no consideration passed to him until the work was done.

Q. And he himself informed you that he was doing this work for Mr. Rice? A. Yes; he informed me that he did it in Mr. Rice's name. The work was done in Mr. Rice's name.

Q. The special purpose being to shut off the National Transit Company? A. To shut it off from its destination.

Q. Did Mr. Rice intend to build a pipe line? A. No; not under those contracts. He built a pipe line, but not under those contracts.

Q. (By Mr. Kennedy.) Did Mr. Rice succeed in preventing the building of that pipe line? A. No; the line was laid; Mr. Rice was outbid. That is the only case that has come under my observation.

Q. (By Mr. Jenks.) It has been stated here that the Standard has sold different grades of oil at the same price. Have you any knowledge of the methods of the Standard in selling refined oil. A. No; that would come within the domestic trade department; it does not enter into our business at all.

INVENTIONS AND IMPROVEMENTS IN PRODUCTION.

Q. You mentioned a number of very valuable inventions that have been made in developing the oil regions. A. Yes.

Q. In your judgment, have the most important improvements been made by men working with the

Standard or the independents? A. Well, so far as the Standard and the independents are concerned, neither has a monopoly on genius. Everybody buys from inventors wherever they can. The Standard is undoubtedly entitled to more credit than it has received for its achievements in refining Lima oil.

Q. The chief movements along that line have come from the Standard A. They have come from the Standard in the manufacture of Lima oil.

Q. (By Mr. Phillips.) Did not George Van Vleck and some others make very good oil? A. I am very glad you asked that question; their process was not a new one; it was a very old one.

Q. It was not used by the Standard prior to that time? A. No; it was used by other people. Allow me to explain that the process of Van Vleck was applied by some professor in Buffalo. That metallic oxide process has been used by gas men in the purification of gas ever since the manufacture of gas began; but as early as 1861 Homer T. Yaryan used that same process in the manufacture of Canadian oil. The Standard's process is very different from that and far more successful.

Q. That enters largely into it, does it not? A. Oh, yes; those appliances enter into it very largely.

NO KNOWLEDGE OF RECENT RAILROAD DISCRIMINATION.

Q. (By Mr. Jenks.) Statements have been made concerning the railroad discriminations in favor of the Standard Oil Company in the early days. You have yourself made some statements of the kind. Have you any knowledge of discrimination in freight rates, say, within the last 15 years? A. No; but I have some records here to show where railroads went into contracts with pipe lines to furnish them rebates of 10 cents a barrel on all oil shipped except shipments on a certain line.

Q. Within what period? A. Oh, that was 30 years ago.

Q. You have matters of record of that kind in general? A. Yes.

Q. Have you any instances different from those brought out before the Congressional committee? A. All I have is the averments of the Pennsylvania Transportation Company in its litigation with the Oil Creek Railroad.

Q. You have not anything in that line within the last 10 years? A. No.

Q. In your judgment have there been any special discriminations made in favor of the Standard Oil Company, or in favor of the independent refiners, particularly within the last 10 years? A. I am told there is not; I do not know anything about it. I am told there are no discriminations anywhere.

THE STANDARD OIL COMPANY AND THE NEWSPAPERS.

Q. You have heard the charge, of course, that the Standard Oil Company has at different times used its influence with the press to further its own interests, by having special articles put in as editorials, for example, that were paid for as advertisements and matters of that kind. Have you any

knowledge on that subject? A. Yes; I have some knowledge of such a business arrangement with certain newspapers in Pittsburg.

Q. Can you give us some information? A. Only concerning existing contracts for advertising their products. The Standard has at various times been viciously attacked by persons associated with the Producers' Association, and they have replied, and the replies have been paid for while the attacks were received free.

Q. By what papers? A. By all of them. Not one of them will receive a line from the Standard Oil Company except at advertising rates. I do not know of a single newspaper in Pittsburg that will receive a line in contradiction of the most outrageous and infamous lies.

Q. You mean to say, if I understand you, that the Standard instead of buying up the papers is practically blackmailed? A. I have not said so; no.

Q. You did not intend to make any charge? A. No; but I make this assertion: The Standard does not receive the same courtesy from the press that other corporations and individuals do.

Q. With respect to your own paper—it is, perhaps a fair question—does the Standard receive the same courtesies that the other producers do, the other oil interests? A. Exactly the same. I have rendered a bill to no man for a courtesy since my connection with it.

Q. Both parties are treated the same? A. Both parties have been treated alike.

WITNESS PROSECUTED FOR LIBEL.

Q. Have you been attacked legally in your paper? A. Oh, yes.

Q. Can you give us some account of that? A. Some little account, I guess. [Witness produces bulky package of papers.]

Q. You can, perhaps, state the substance of that and put in the exhibits. [Laughter.]

Mr. Smyth: No; let us have the whole thing.

A. I have a great many records here, gentlemen.

Q. (By Mr. Phillips.) Court records? A. Yes; they are all court records.

Q. (By Mr. Jenks.) Can you make a brief statement as to the legal proceedings? A. If you ask me a particular question concerning any particular suit, at a given time, I can, but to go into the general question—

Q. How many suits have you had for libel? A. Oh, half a dozen, I suppose. All by the same persons and the same influences.

Q. Who were those persons? A. Well, the officers and members of the Producers' Protective Association.

Q. What has been the result of those suits? A. Conviction was obtained in two of them, in two others there was a confession of judgment, and in one other a failure to convict. Those suits were all taken into a foreign county where their own element was the strongest, where prejudice was the greatest. I do not think anything more infamous was ever practiced on the press since the first news-

paper was published than the proceedings of these men who call themselves gentlemen in trying to muzzle the press by dragging it before hostile courts and juries. They did not possess the decency to give me a trial at home in my own courts where I could stand up with my neighbors and be judged by them according to my own merits. The very judge in one instance who attempted conviction was a partner of at least two of the men who brought suits, and yet he had the hardihood to sit there in judgment, just filled with prejudice, poisoned with it.

Q. (By Mr. Phillips.) Will you name that judge? A. No; I do not care to name that judge. No; I will not name anybody in connection with these suits, except where it is becomes necessary.

Q. You can perhaps give us a citation of the cases? A. I have not the citations here. Senator Lee, in his capacity as president or director or officer of one of these companies, sued me for some expressions in my newspaper. In that case there was a confession of judgment. A. D. Wood, an officer, treasurer of all these companies, sued me for expressions in the newspapers, and on the first trial of that case before a hostile court and before a packed jury, I was convicted, but obtained a new trial on the judge's charge. Upon the second trial there was a failure to convict.

STANDARD OIL COMPANY A BENEFIT TO THE COUNTRY.

Q. (By Mr. Smyth.) Are we to understand from your testimony that you do not consider the existence of the Standard Oil Company detrimental to the development of the oil industry in Pennsylvania, Ohio, and other States? A. It certainly has not been; it has been very beneficial to the industry as a whole; the organization effected by the Standard Oil Company could not be duplicated in the whole world.

Q. Do you consider the existence of the Standard Oil Company to be a marked benefit to the American people? A. It has been a very great benefit in the development of an industry that requires organizing capacity and great mercantile ability. I give them no credit for manufacturing. Others manufacture just as cheaply and as well; but where others fail is in their organizing ability and their mercantile capacity. The Standard Oil Company are the greatest merchants on earth.

Q. Do you not consider the Standard Oil Company a trust? A. Not now.

Q. Why not now? A. The trust has been dissolved and the companies have gotten back into their original positions. The trust agreement under which they operated prior to 1892 has been dissolved and a number have returned to their individual organizations and are operated as separate concerns.

Q. Is there any trust in existence now in kerosene oil? A. The Pure Oil Trust is a step in that direction, not wholly accomplished, but then it is hoped to be accomplished.

Q. That is the company you were talking about before? A. Yes.

THE STANDARD OIL COMPANY HAS MANY COMPETITORS.

Q. That is the only organization in opposition to the Standard Oil Company? A. Oh, no; there are several. There are a great many companies in opposition to the Standard Oil Company, but it is the only one that copies the Standard's organization from beginning to end, even to the trust. After the Standard relinquished the last, the Producers' Protective Association picked it up where they left off and are attempting to carry it out, under various nom de plumes and pretenses and fictions of law, just what the Standard did in a public, open way.

Q. I understood you to say that the Standard Oil Company controlled about 80 per cent of the output? A. Well, I should think that would be a very liberal estimate for them.

Q. The other 20 per cent is controlled by how many companies? A. I should think 50 or 60.

Q. Fifty or sixty? A. Yes.

Q. Independent and selling their produces? A. Yes.

Q. Both in this country and abroad? A. Yes.

Q. Have they rivals in selling their oil for export? A. Well, the Pure Oil Company is selling in rivalry.

Q. Any others? A. I am not familiar with that branch of the business.

WHY THE STANDARD IS SUPERIOR TO OTHER CONCERNS.

Q. You think the great profits of the Standard Oil Company have come from its superior organization? A. That states the case precisely; from their great mercantile ability, their commercial ability.

Q. In other words, in putting their oil on the market they have hired the best brains they could find? A. Yes; they have experience of their own to start with, and they keep adding to their mental talent right along.

Q. (By Mr. Phillips.) Do you not think, if the oil fields had been opened to competitors without monopoly and without discrimination, that talent equal to what is exhibited by the Standard now would have been developed? Do you not believe that the difficulty with the region was too much competition—over-competition? A. Competition, in fact, resulted in what the Standard has accomplished; it was a weeding out, a survival of the fittest, that made the Standard. Darwin's theory of the survival of the fittest was never better illustrated than in the organization of the Standard Oil Company; it represents the best element in all branches of the trade.

Q. Since it was organized have they kept the best element or have they proscribed men of equal ability by their methods? A. Well, there are men in the oil business who have superior abilities to any man in the Standard Oil Company for certain purposes. There are men who can beat them in producing; but your question leads to but one answer: What they have done answers you. What

you ask has been done by the Standard Oil Company. If there were others who could do that, the only reply is others did not. It is a case of Columbus and the egg over again. Lots of people could sail the ocean now, but only Columbus sailed in 1492.

Q. Now, do you want to inform this commission that twenty years ago the fittest got together and that there would not have been competition equal in ability if it had not been for the monopoly of pipe lines and rates? A. Can you tell me why the others did not go in together? That is the best answer to your question; if you can tell me why they did not get together I will answer your question.

Q. Before the free pipe line law was passed did they have an opportunity to get together? A. Exactly the same opportunity that the Standard had.

Q. I mean after they got to the seaboard? A. I am stating why they did not before that time when the region was in a state of chaos. Transportation was in a topsy-turvy condition, the Standard came in with three millions of capital and organized one pipe line that did the business of fifteen or twenty. That was all that was represented in the transportation department at that time.

Q. (By Mr. Symth.) Was there any risk—was it considered experimental in any sense? A. It was considered a very great risk.

Q. Was the risk such that other people did not go in? A. That was the very reason why other people did not go in, the amount of money required, and the risk involved.

Q. The Standard Oil Company has blazed the way there? A. They blazed the way; they had energy and courage and ability.

Q. (By Mr. Phillips.) Did they start the pipe line system, which has become the mode of transporting oil? A. They merely developed it; others started it.

Q. And when others got there they controlled the line to the seaboard and control it now and limit its output? A. Oh, yes; they do it, but that is merely an incident in the business. It cuts no figure; it is a source of vexation even to its stockholders; they are not agreed in the matter of policy.

THE STANDARD AS A PRODUCER OF CRUDE OIL.

Q. (By Mr. A. L. Harris.) I wish to know what per cent of the 80 per cent which the Standard Oil Company consumes in refining is produced by it? A. Well, in Pennsylvania, I think 25 per cent is conceded to them.

Q. Where do they get the other 75 per cent? A. By purchase from the producers.

Q. In the market from the producers? A. In the market from the producers.

Q. Is the price satisfactory to the producers? A. It seems to be satisfactory. There is no complaint now on the question of price; the price is higher now than it has been for a year or two.

Q. They are open competitors with others? A. Oh, yes; there are other buyers in the field.

Q. (By Mr. Phillips.) What part of Ohio do they

control; that is, the crude oil of Ohio? A. What proportion?

Q. What proportion, about, in Ohio? A. Well, I should think it would be 50 per cent, at least.

Q. They control therefore much more of the Ohio field than they do of the Pennsylvania and West Virginia fields? A. The Ohio oil does not come in competition to a very great extent with West Virginia.

Q. You stated a moment ago that the original trust had been dissolved. Have they reorganized under the New Jersey laws recently? A. I believe they are in process of reorganization; that is the opinion at the present time.

Q. At the present time where do they get their corporate powers? A. From the individual companies.

Q. Organized in different States? A. Organized in different States for different purposes and with different managers.

PRICE OF CRUDE OIL NOT CONTROLLED BY THE STANDARD.

Q. (By Mr. Smyth.) You do not agree, then, that the Standard Oil Company controls the price of crude petroleum? A. No.

Q. Have they any means of controlling prices and forcing producers to sell? A. The only means to force the producers is by increasing the price.

Q. Paying over what seems to be the market value? A. Paying over what seems to be the market value at the time.

Q. Do you believe that has been done? A. It has been done.

Q. They buy crude oil in the open market? A. Yes.

Q. (By Mr. Phillips.) Is there any purchaser of crude oil in the Standard lines today excepting the Standard themselves? A. Well, I can not answer that question; I am not familiar with the Standard's business; I do not know from whom they buy or to whom they sell. In a general way, I know they buy all the oil offered to them, but I do not know to whom it is sold.

THE PRODUCERS OF CRUDE OIL ARE PROSPEROUS.

Q. (By Mr. Smyth.) Is there any complaint from the producers of crude oil of lack of buyers? A. No; none whatever.

Q. Are they making money today? A. The producers are prosperous today.

Q. Are they satisfied with the price they are getting? A. They are satisfied with the price so far as we have observed.

Q. Then the fact is the Standard is the only buyer and you maintain they are paying a fair, legitimate price for the oil? A. I think they pay all it will bear, and that condition has existed since 1895, as I have submitted the figures to show.

Q. Since the Standard Oil Company is the only buyer, what would become of the product if they did not buy? A. It would mean failure.

Q. Insolvents by hundreds? A. On every hand.

Q. Great want? A. Great want would undoubtedly result from it.

THE STANDARD HAS MADE THE OIL INDUSTRY WHAT IT IS.

Q. You want this commission to understand that in your judgment the Standard Oil Company has been a large factor in developing the oil business, and that without the Standard it could not have attained the present enormous proportions? A. I do not wish to be understood as saying anything different. But for the Standard Oil Company you would not have the oil business that exists today.

Q. It would be on a smaller scale, with competition such as existed thirty years ago.

Q. (By Mr. Phillips.) Was not that in its infancy? If one railroad had control of all the business they could bring disaster and ruin by stopping? A. I do not know what you call infancy in a business twenty years old.

Q. The pipe line business did not come into existence for quite a number of years after the discovery of oil, as explained yesterday? A. The pipe line business cuts a very small figure in the general success of the Standard Oil Company; it is only one of the lines upon which it has been successful.

Q. Could it exist without the pipe line system? A. Oh, no; but it is only one of the means of their success. Their great success is due to their capacity to find markets.

Q. Is not the transportation the principal factor in their great success? A. I do not know that it is. I am not going to split hairs and express an opinion on that ground. The principal result is that today the business is greater than any other business in any country. It is due to the organization of capital and the intellect and industry of the persons who manage it.

Q. (By Mr. Smyth.) You think brains come in there too? A. Brains come in more than anything else. That is what I mean to say. The Standard Oil Company was unknown when the pipe lines were organized; they came as strangers into the business.

WASHINGTON, D. C., September 3, 1899.

TESTIMONY OF B. A. MATHEWS.

At a meeting of the Industrial Commission, held at its offices in the Bliss building, on September 8, Vice President Phillips presiding, Mr. B. A. Mathews appeared at 2:45 p. m., and, after being duly sworn, testified concerning the oil industry:

Q. (By Mr. Jenks.) Kindly state your name and address. A. B. A. Mathews, Columbus, Ohio.

Q. What business are you engaged in? A. I have charge of the marketing of the products of the Standard Oil Company in a portion of Ohio.

Q. What is the official statement of your position? A. I bear no official title.

Q. General manager for the State of Ohio, you are ordinarily called? A. I am what is generally understood as a manager, but bear no title.

Q. How long have you been in the position you now hold? A. I have been in Columbus about six years.

Q. Have you been in your present position, managing the business, for that time? A. I have been managing the business for central and southern Ohio for six years. I have been engaged as manager in other departments previous to that.

Q. I understood you had some statement to make with reference to certain statements that Mr. Clark made regarding your actions with him and the business. You may make that statement as you please.

CONNECTION OF W. H. CLARK WITH THE STANDARD OIL COMPANY.

The witness, Mr. W. H. Clark, of Newark, Ohio, who has given testimony before this commission, was hired, when a youth, to work at Marietta as office and warehouse boy, at a salary of \$15 per month to learn the business, and as fast as he became proficient in the work was promoted in salary and position, until he became local agent at Newark, at a salary of \$2.25 per day. While at Newark he became short in his accounts, was discovered and discharged, which is the only incentive that I can discover for the series of untrue and malicious statements made by him before the commission.

I have looked over his testimony carefully and desire to answer his statements seriatim.

THE "FARMER STORY"—TESTIMONY OF WILLIAM EBRIGHT.

His statements about competition and variation in prices at Marietta are untrue. His position of office and warehouse boy did not bring him in contact with the trade; he could not be informed; therefore would know nothing about methods of marketing oil or prices. Davis, the peddler referred to, has never been in the employ of the company, and the "farmer story" has been refuted by Mr. Ebright. I have a certified transcript of his testimony, which I submit.

EXHIBIT I.

Certified transcript of portions of testimony of William Ebright, selected by B. A. Mathews, taken in the case of the State of Ohio, ex. rel. F. S. Monnett, vs. the Standard Oil Company.

Q. Didn't you play the farmer there? A. No, sir.

Q. Didn't you have a barrel and a wagon and play the farmer? A. I had a barrel and got a wagon until I got my cans.

Q. Didn't you sell the oil as an independent dealer—as a farmer? A. No, sir.

Q. What were your instructions about selling oil? Where were you to sell? A. I was to sell to everybody I could.

Q. Were you not to cut the prices? A. There was no cut in the prices; they were the same.

Q. Was you not there to run out Curtiss, the colored man? A. No, sir.

Q. When you drove him to buying oil of the Standard Oil Company, then you left? A. No, sir; the wagon was still there—I sold out to another man.

Q. That was after Curtiss went to buying from the Standard Oil Company? A. I don't know this man.

Q. You knew after you got there who you was running out? A. I didn't see that I was running out anybody.

I hereby certify that the above is a true and correct copy of portions of the testimony of William Ebright, selected by B. A. Mathews, taken before me, the undersigned, in the case of the State of Ohio, ex. rel. F. S. Monnett, vs. the Standard Oil Company.

[Seal.]

L. R. PUGH, Notary Public.

UNTRUE THAT EIGHT GRADES OF OIL ARE DRAWN FROM TWO TANKS—THE FACTS.

His statement that we market eight grades of oil at eight different prices from two storage tanks at Marietta, and that the manager (meaning me) gave him such instructions, are false. Not being agent, no instructions would be given him concerning prices. The facts are, we have three grades of oil at Marietta and eight names—Ohio State Test and Prime White are two names for the same grade of oil, both sold at the same price. Ohio State Test is a brand adopted by some of the trade when Ohio passed its inspection law, while others adhered to the previously well-known trade name, Prime White, thus creating two brands for the same oil. Water White, Red Star Water White, Silver Light, and Crystal, are four names for the same grade of oil, and are sold at the same price. These four brands are trade names, having been established by custom in different localities to meet the requirements of the local demands. Eocene and Hyperion are not the same oil, but are two different grades of oil; Eocene being manufactured in Cleveland and Hyperion at Parkersburg, the Eocene being sold at one-half cent per gallon above the price of Hyperion and kept in storage at Marietta, while Hyperion is shipped direct to the trade from Parkersburg refinery. There are a few points near Marietta where it pays better on account of saving in freight to give the buyer Eocene (a better oil) under the Hyperion brand, rather than make the shipment of Hyperion from Parkersburg at a lower cost for the oil. Water White was furnished to one of the jobbers at Marietta under the brand of "Crystal Oil," and sold to him at the Water White market, and was his trade-mark brand.

UNTRUE THAT THE WITNESS ADULTERATED TURPENTINE WITH GASOLINE.

His statement about mixing gasoline with turpentine is absolutely false and malicious. Instructions to all my people have been to give the purchaser what he buys, both in quality and quantity. The officers of the

company have always impressed me with the importance of this principle; further, a buyer can determine adulteration of turpentine with gasoline instantly by the use of an ordinary hydrometer, which all druggists keep. The falsity of Clark's statement about the alleged "trick" I taught him is emphasized by the position he held of warehouse and office boy, the agent being the only one who received instructions. I have the affidavit of W. A. Reed, local agent at Marietta at the time Clark was there, which I submit, marked Exhibit 2. Mr. Reed is not in our employ at the present time.

EXHIBIT 2.

THE STATE OF OHIO, WASHINGTON COUNTY, SS:

W. A. Reed, of lawful age, being duly sworn, upon his oath says:

I was local agent for the Standard Oil Company of Ohio, at Marietta, during the entire time that W. H. Clark worked there. He was an office and warehouse boy, and not in a position to know how the business was carried on.

Referring to the testimony of Clark before the Industrial Commission, given in Washington on June 8, 1899, I would state that it is not true that Mr. Frank Davis was ever in the employment of the Standard Oil Company. Davis wished to go into the oil-peddling business, and we sold him a wagon. We sold Davis his oil outright at the ruling market prices, and he sold it at retail in competition with other peddlers and retail grocers at Marietta, and at the prices fixed by himself, the Standard Oil Company having nothing whatever to do with regulating his or the retail price. Davis continued this business until his death, when his father sold the wagon to a man named Twiggs, who soon after sold it to the Producers' Refining Company, which ran the wagon until it discontinued business.

Curtiss was also a peddler, buying and selling oil in the same way at Marietta. It is not true that he purchased his supplies from the Argand Refining Company. He bought his supplies from the Producers' and the Rice companies until those companies shut down, after which time he purchased his oil from the Standard Oil Company.

It is not true that we played the farmer or any other racket with Mr. Ebright. Ebright was another peddler, who bought and paid me for his oil supplies the same as any other peddler, and sold the oil thus purchased at retail in Marietta.

I had nothing whatever to do with retail prices of oil in Marietta, which were regulated entirely by the competition between the peddlers and the retail grocers of that city.

The statement is absolutely false that we sold oil from the same tank at different prices, representing it to be of different grades, or that we mixed gasoline with turpentine, or practiced any deception of any kind whatever with regard to the quality of our products in selling the same.

W. A. REED.

Subscribed and sworn to by said W. A. Reed before me, this 31st day of August, 1899.

[Seal.]

FRANK PANHORST,
Notary Public, Washington County, Ohio.

STATEMENTS AS TO DECEPTION OF CUSTOMERS.

His statements about instructions given George Blazer, and cause of his leaving Springfield, are malicious falsehoods. I have the affidavit of Mr. Foley and Mr. Foutz, which I submit, marked Exhibits 3 and 4. Mr. Foley was the local agent at the time Mr. Clark was there, and he is still the local agent at Springfield.

EXHIBIT 3.

THE STATE OF OHIO, CLARK COUNTY, SS:

C. W. Foley, of lawful age, being duly sworn, upon his oath says:

I am local agent of the Standard Oil Company at Springfield, Ohio, and was while W. H. Clark was employed there. It is not true that I ever had any conversation with Mr. Cragin, who is now dead, or anyone else with reference to informing Blazer or any other person about drawing different grades of oil from the same tank and charging different prices for it. It is not true that we ever sold any oil at this station in that manner. All our grades of oil were sold for precisely what they were, and no deception of any kind was practiced upon our customers as to the quality or price of the oil furnished them. It is not true that Blazer quit the employment of the company because he was required by that employment to deceive customers as to the quality or price of the oil sold. The only reason given by Mr. Blazer when he quit was that the work was too hard for him.

C. W. FOLEY.

Subscribed and sworn to by said C. W. Foley before me, this 29th day of August, 1899.

[Seal.]

W. H. HOMER,
Notary Public, Clark County, Ohio.

EXHIBIT 4.

THE STATE OF OHIO, WASHINGTON COUNTY, SS:

R. A. Fouts, of lawful age, being duly sworn, upon his oath says:

I reside in Marietta, Ohio, and went to Springfield and had an interview with George Blazer. He stated that he resided at Springfield, Ohio, and worked for a short time for the Standard Oil Company while W. H. Clark was there. He stated that he never said to Mr. Clark or anyone else that if he could not work for an honest company he would quit, and for that reason must leave the Standard Oil Company's employment; or that he was leaving or had left the Standard Oil Company's employment because he could not conscientiously draw different grades of oil from the same tank. He also stated he left the employment of the Standard Oil Company because he did not like the tank-wagon work, and for no other reason. He made

the above statement to me, but declined to make affidavit.

R. A. FOUTS.

Subscribed and sworn to before me this 4th day of September, 1899.

[Seal.]

O. C. MIDDLESWART,

Notary Public, Washington County, Ohio.

His statement that we drew four different grades of oil out of the same tank, and charged four different prices, is absolutely false. Mr. Clark, as well as all other tank-wagon drivers, was not allowed to discriminate between one buyer and another, but was to charge all customers the same price for the same grade of oil. The proof of this: In making his returns at night to the cashier his total sales had to be accounted for on the basis of the ruling market. Therefore he could not cut the price to any buyer without paying it out of his own pocket, and it goes without saying that no retailer would pay more than the market. I have the affidavits of Mr. Toland and Mr. McMahon, both tank-wagon drivers at the time Clark was at Springfield, the only two men who were doing the same kind of work that Clark did at Springfield, showing their method of conducting the business, which I submit, marked Exhibits 5 and 6.

EXHIBIT 5.

THE STATE OF OHIO, LAWRENCE COUNTY, SS:

W. W. McMahon, of lawful age, being duly sworn, upon his oath says:

I worked for the Standard Oil Company as tank-wagon driver at Springfield during the time that W. H. Clark worked there as tank-wagon driver.

I never had any instructions from Mr. B. A. Mathews, manager, C. W. Foley, local agent, Mr. Cragin, or anyone else connected with the Standard Oil Company, to deceive any customers by turning the faucet in different directions to draw different grades of oil out of the same tank.

All of our grades of oil were sold for precisely what they were, and no deception of any kind was practiced upon our customers as to quality or price of oil furnished them, and all customers paid me the same price for the same grade of oil.

W. W. McMAHON,

Subscribed and sworn to by said W. W. McMahon before me, this 31st day of August, 1899.

[Seal.]

W. D. HENRY, Notary Public.

EXHIBIT 6.

C. M. Toland, of lawful age, being duly sworn, upon his oath says:

I am now and was in the employ of the Standard Oil Company as tank-wagon driver at the time W. H. Clark worked as tank-wagon driver for the Standard Oil Company at Springfield, Ohio.

In accordance with instructions received from B. A. Mathews, manager, my prices have always been uniform, selling one grade of oil at the same price to all

dealers, and I have never deceived my customers by turning the faucet in different ways in order to draw different grades of oil from the same tank.

C. M. TOLAND.

Subscribed and sworn to by said C. M. Toland before me, this 29th day of August, 1899.

[Seal.]

GEO. S. DIAL, Clark County, Ohio.

REBATES—HOURS OF LABOR.

His statement with reference to rebates at Springfield is untrue. We did not allow Mr. Clark, while at Springfield, to make rebates.

His statement concerning hours of labor is misleading and untrue. Our tank-wagon work is planned with the view of a day's work constituting ten hours. In making drives to country towns, from 8 to 14 miles, it is understood that when a driver returns his day's work is completed.

QUALITY NOT DETERMINED BY FIRE TEST.

His statements about fire test governing the quality of oils are not true. One hundred and twenty degrees of fire test, by Ohio law, is the equivalent of 150° by the Tagliabue open cup. Concerning our three grades there is no difference in the fire test of the same. His statement that there is 10° difference is false. They are all 150° fire test by the Tagliabue open cup, or 120° fire test by the Ohio State test Foster cup, which is the State test required by Ohio.

The fire test of oil required by Ohio statutes does not represent quality, but simply safety. Oil may be exactly the same fire test, but different in illuminating power. The quality of an oil is distinguished by its illuminating quality.

His statement that he was promoted to the position of cashier at Columbus and had charge of the work around warehouse is false and absurd, for the reason that his position was simply shipping clerk, under a superintendent, who had entire charge of everything around the works.

BOILED LINSEED OIL NOT ADULTERATED.

His statement concerning boiled linseed oil is false and malicious. The dryer used in boiling was a pure linseed oil dryer, which cost 10 cents per gallon more than linseed oil, and increased the cost, instead of decreasing it, and improved the quality, instead of adulterating it, as testified by Clark.

MINER'S OIL; ITS COMPOSITION—LUBRICATING OIL.

His statement that a miner's oil is made by compounding cotton-seed oil with 40 per cent petroleum is false and malicious, because the Ohio law prohibits such a large per centage of petroleum being used. The law is rigidly enforced on gravity and smoke qualifications, which would absolutely prevent more than 14 per cent of petroleum. Miner's oil is known to the Ohio State officials to be cotton-seed oil compounded with petroleum. The price of miner's oil is regulated by the price of cotton-seed

oil, and runs about two cents per gallon below. It was malicious for Clark to state that a dealer would pay 34 cents for miner's oil, when the dealer could buy cotton-seed oil for 24 cents.

His statement that lubricating oil is received in blank heads at Columbus and shipped out to meet the requirements of the trade without regard to contents is untrue and absurd, because if the barrels came unbranded it would be impossible for the warehouse man to tell the contents, and an order for cylinder oil might be filled with a barrel of sewing machine oil, or vice versa, if Clark's statement were true. I have the affidavit of Adam Paulus, referred to by Clark as "mixer," which I submit. (See Exhibit 7.)

EXHIBIT 7.

THE STATE OF OHIO, FRANKLIN COUNTY, SS:

Adam Paulus, of lawful age, being duly sworn, upon his oath says:

I am in the employment of the Standard Oil Company of Ohio, and am the person referred to in the testimony of W. H. Clark before the Industrial Commission at Washington. While Mr. Clark was employed at Columbus I did the mixing of linseed and cotton-seed oils.

It is not true that our lubricating oils came from Cleveland in blank heads, but all barrels were branded to designate the contents of the package. In preparing boiled linseed oil it is not true that we used a cheap japan dryer, but we did use a pure linseed oil dryer, which improved the quality of the linseed oil. Heated the oil to 225° instead of 125°, as stated by him.

In compounding miner's oil it is not true that we used three barrels of cotton-seed oil to two barrels of miners' stock, being a percentage of 40 per cent of the latter. We only used one barrel of miners' stock to six barrels of cotton-seed, or about 14 per cent.

It is not true that Mr. Clark had charge of the stock from which these compounds were made, or that I had to go to him to get it. The warehouse and stock were in charge of a superintendent, from whom I received my instructions. The stock I got out myself, as directed by the superintendent.

Adam Paulus.

Subscribed and sworn to by said Adam Paulus before me this 29th day of August, 1889.

[Seal.]

W. A. Marsh.

Notary Public, Franklin county, Ohio.

CUT PRICES AND REBATES.

In reference to his statement concerning cut prices and rebates at Columbus, as he was only a shipping clerk (and absolutely without knowledge regarding marketing matters), his statements are purely malicious. On the general question of competition we always seek to protect our trade, and when any competitor makes a cut price for the purpose of taking our business away from us (quality considered) we do not hesitate to meet it.

DAILY DELIVERIES FROM TANK WAGONS.

The statement that Mr. Gradwohl took in as high as \$200 a day with his tank wagon is untrue.

The largest delivery made by any tank wagon is about \$100 per day, and would not average over \$50 per day. To deliver 3,000 gallons, or \$200 worth, a day would average one five-gallon bucket every minute, ten hours per day, which would be a physical impossibility. I have Mr. Gradwohl's affidavit, which I submit. (See Exhibit 8.)

EXHIBIT 8.

THE STATE OF OHIO, FRANKLIN COUNTY, SS:

Moses K. Gradwohl, of lawful age, being duly sworn, upon his oath says: I am a tank wagon driver in the employ of the Standard Oil Company at Columbus, Ohio, and was there at the time Mr. Clark was shipping clerk, and am the "Mose Gradwohl" referred to in his testimony before the Industrial Commission at Washington. It is not true that I ever took in \$200 a day from my wagon. The largest delivery I ever made was about \$100, and my average daily deliveries about \$50.

Moses K. Gradwohl.

Subscribed and sworn to by said Moses K. Gradwohl before me this 30th day of August, 1899.

[Seal.]

Charles S. M. Thrumm,

Notary Public, Franklin county, Ohio.

STATEMENTS AS TO ARRANGEMENT WITH COMPETITORS
AT COLUMBUS, COMPETITIVE BRANDS, AND
PRICES OF EMPTY BARRELS.

His statement with reference to having an arrangement with competitors to advance markets at Columbus is false. Strong competition still exists, which in itself contradicts his statement. He had no knowledge on the subject, being only a shipping clerk at the works, located a mile and a half away. Therefore he would know nothing of what was going on in the office.

His statement naming competitive brands of oil at Columbus is untrue, their brands being Ohio State Test, Prime White, People's Headlight, Suncene, Water White, and Diamond Light—not Penoline, Safety Light, and Electric Light, as stated by him. Ohio State Test, Prime White, and People's Headlight cover one grade of oil; Suncene and Water White, another; Diamond Light a third showing clearly their trade requirements.

His statement concerning the hiring of a boy to watch tank cars and being paid by him are false.

His statement that we took empty barrels at an exorbitant price to hold trade on oil is false. He had nothing to do with the purchasing or handling of empty barrels, and had no knowledge whatever about empty barrel prices. Our price at Columbus is strictly uniform on empty barrels to all customers.

His statement that he was manager at Urbana is

untrue. His position was simply local agent, three-quarters of his time being occupied in driving a tank wagon. He did not have full charge of all the business as stated.

THE CASE OF WILLIAM HELMICK.

His statement about William Helmick, at Urbana is untrue. Mr. Helmick bought only one car-load of competitive oil, and after he had sold about half the car he became satisfied that he would lose money on account of leakage and poor quality. We helped him out by purchasing the other half of the car, and he discontinued jobbing oil, but remained in the oil business as a peddler for about two years thereafter. We did not at any time drop the price while he was in business. On the contrary, what little oil Helmick marketed was sold by him at a cut price. No threats were made by Mr. Hollingsworth or Mr. Welsh as stated by Clark. I have their affidavits, which I submit, and also the affidavit of W. H. Hurley.

EXHIBIT 9.

THE STATE OF IOWA, LOUISA COUNTY, SS:

H. S. Hollingsworth, of lawful age, being duly sworn, upon his oath, says:

I am in the employ of the Standard Oil Company, at Columbus, and have been for several years. It is not true, as stated by W. H. Clark in his testimony before the Industrial Commission at Washington, that I ever made any threats of any kind to William Helmick, either alone or in company with Mr. Welsh and Mr. Clark, or either of them.

H. S. Hollingsworth.

Subscribed and sworn to by said H. S. Hollingsworth before me, this 30th day of August, 1889.

[Seal.] W. H. Hurley, Notary Public.

EXHIBIT 10.

THE STATE OF OHIO, CHAMPAIGN COUNTY, SS:

William Welsh, of lawful age, being duly sworn, upon his oath says:

I am agent of the Standard Oil Company of Ohio at Urbana, and am the person referred to in the testimony of W. H. Clark before the Industrial Commission as a cooper man from Springfield, Ohio, where I did formerly work for the company in the cooper shop.

It is not true that I ever made any threats of any kind to William Helmick, of Urbana, Ohio, either alone or in company with Mr. Hollingsworth, or Mr. Clark, or either of them, but the statement of Mr. Clark in that respect is absolutely false.

William Welsh.

Subscribed and sworn to by said William Welsh before me, this 28th day of August, 1899.

[Seal.] W. M. Rock,
Notary Public, Champaign county, Ohio.

EXHIBIT 11.

THE STATE OF IOWA, LOUISA COUNTY, SS:

I, W. H. Hurley, a resident of Wapello, Louisa county, Iowa, on oath state that I am a notary public in and for Louisa county, Iowa, and at the instance of H. S. Hollingsworth did request one William Helmick to make a deposition in regard to his relations and transactions with the Standard Oil Company of Ohio, at Urbana, Ohio. He was shown a copy of the testimony given by W. H. Clark before the Industrial Commission at Washington, D. C. He declared that the testimony, as shown him, in reference to himself was false and untrue, and particularly referred to the causes as therein set forth in regard to his going to the poorhouse, and that it was not brought about through any agency of the Standard Oil Company, but declined to make affidavit as to falsity until he had communicated with the above referred to W. H. Clark. I state further that he made the above statement in the presence of myself and H. S. Hollingsworth.

The copy of testimony referred to as having been shown to the said William Helmick is hereto attached and marked "Exhibit A."

W. H. Hurley.

Subscribed in my presence and sworn to before me by W. H. Hurley this the 1st day of September, A. D. 1889.

[Seal.]

J. Don Darrow,
Notary Public for Louisa county.

[Here follows a copy of the part of Mr. Clark's testimony in question.]

THE STATE OF IOWA, LOUISA COUNTY, SS:

I, H. S. Hollingsworth, first being duly sworn on oath, state that the above is a true copy in part of the stenographer's report of the testimony of W. H. Clark before the Industrial Commission at Washington, D. C., and is the copy that was shown Wm. Helmick when he was requested to make deposition as to truth or falsity of the statements therein contained.

H. S. Hollingsworth.

Subscribed in my presence and sworn to before me by H. S. Hollingsworth this 1st day of September, A. D. 1899.

[Seal.]

W. H. Hurley, Notary Public.

EXHIBIT 12.

THE STATE OF OHIO, FRANKLIN COUNTY, SS:

H. S. Hollingsworth, of lawful age, being duly sworn, upon his oath says: I reside at Columbus, Franklin county, Ohio. I have read the testimony of W. H. Clark before the Industrial Commission at Washington, D. C., in which he states that Wm. Helmick, formerly of Urbana, Ohio, has been unable to earn a livelihood in consequence of having been

EXHIBIT 14.

driven out of the wholesale oil business at Urbana, Ohio, about four years prior to the present time. Deponent further saith that said Wm. Helmick, after quitting the wholesale oil business, continued in the retail oil business for a period of about two years, to the best of his knowledge and belief, and bought his supplies from the station of the Standard Oil Company, at Urbana, Ohio. Subsequently, said Wm. Helmick retired from the retail oil business, and removed to Louisa county, Iowa, where, on or about August 31, 1899, I found him employed in the canning factory of Baxter Bros., at Wapello, Iowa, at his trade, that of tinsmith, working at hard labor from ten to eighteen hours per day. I was informed by said Wm. Helmick and by Mr. Colby, the superintendent of the factory, that he said Wm. Helmick, had first been employed in his present capacity in 1898.

Further deponent saith not.

H. S. Hollingsworth.

Subscribed and sworn to by said H. S. Hollingsworth before me this 4th day of September, 1899.

[Seal.]

H. N. Standart, Notary Public.

Helmick's so-called warehouse that Clark refers to was simply a temporary shed made of refuse, old car lumber. It had no value except for kindling wood, and Helmick afterwards used it for that purpose. I have Mr. Thomas Power's affidavit, which I submit. (Exhibit 13.)

EXHIBIT 13.

THE STATE OF OHIO, CHAMPAIGN COUNTY, SS:

Personally appeared before me, a notary public in and for said county, Thomas Powers, of lawful age, who, being duly sworn, deposes and says that he is a resident of Urbana, Champaign county, Ohio, and has been engaged in the business of draying for the past seventeen years; that he was acquainted with William Helmick, of Urbana, Ohio; that about three years ago he hauled a part carload of oil to a shed belonging to said Helmick, situated in the north part of the city of Urbana, near the city limits. The said shed was built of refuse lumber and material, and in his opinion said shed was not worth more than ten dollars.

Thos. Powers.

Subscribed and sworn to by said Thomas Powers before me this 28th day of August, 1899.

[Seal.]

W. M. Rock,
Notary Public, Champaign county, Ohio.

Mr. Helmick did not lose any money during the few days he was trying to wholesale oil, therefore it is absurd and malicious for Clark to state that any action of ours drove Helmick to the poorhouse. The loss of his money was due to an entirely different cause. I have the affidavit of N. P. Cone, which I submit. (Exhibit 14.)

THE STATE OF OHIO, CHAMPAIGN COUNTY, SS:

N. P. Cone, of lawful age, being duly sworn, upon his oath says:

I am a township trustee of Urbana township, Champaign county, Ohio, and have been for eight years. I am acquainted with William Helmick, formerly of Urbana, Champaign county, Ohio, and have been for twenty-five years past. I knew of his domestic troubles, having been informed of them by himself, and have frequently heard him complain of the extravagance of his family. On March 26, 1898, I signed an order committing said William Helmick to the county infirmary of Champaign county, Ohio, upon the report of several reputable citizens of Urbana, Ohio, of his destitute condition. The affiant further makes oath and says that he believes the cause of destitution of said William Helmick to have been the extravagance of his family and other domestic troubles as complained of by him, and due to no other cause.

N. P. Cone.

Subscribed and sworn to before me by the said N. P. Cone this 29th day of August, 1899.

W. M. Rock,
Notary Public, Champaign County, Ohio.

AMOUNT OF OIL SOLD AT URBANA AND AT NEWARK.

His statement that the business at Urbana ran about 40,000 to 50,000 gallons per month is false, the average being only about one-half.

His statement that he held the position of manager at Newark is false. His position was that of local agent, same as at Urbana, three-fourths of his time being occupied in driving tank wagon and dray.

His statement that the average monthly output at Newark was 80,000 gallons is not true, the correct figures being less than one-half that amount.

AS TO SELLING GASOLINE AND OIL AT DIFFERENT PRICES TO DIFFERENT CUSTOMERS.

With reference to variation in prices at Newark on stove gasoline, the same situation was true elsewhere on account of the marked advance in price of gasoline. Many dealers at the time of the advance were under contract for a period of time; consequently the advance only applied to those who were not under contract, but as contracts expired the advance in price was charged to them as well as others.

Answering the general statements made by Clark relative to selling refined oil at cut prices at Newark, all dealers were treated alike. His statement that at Newark we charged Mr. Rankin 6 cents for oil and Showman Brothers 7½ cents is false. The facts are Showman Brothers bought their oil in bulk from the tank wagon, while C. C. Rankin bought oil in barrels and paid 1½ cents per gallon more than Showman Brothers paid for the same oil; but we allowed Rankin 75 cents when he returned the empty barrel, the equiva-

lent of 1½ cents per gallon, which made the net cost to both dealers the same.

His statement that Hagmeier, a dealer at Newark, was rebated 1 cent per gallon on gasoline and 2 cents on oil is false. Clark was given special permission to pay a rebate which was one-half cent per gallon on both oil and gasoline, under a contract. Mr. Clark paid the one-half cent himself, and then testified here that he paid 1 and 2 cents. He also presented a letter from George J. Hagmeier stating that he had received rebates, and I have an affidavit from Mr. Hagmeier showing how that letter was procured. (See Exhibit 15.)

EXHIBIT 15.

STATE OF OHIO, LICKING COUNTY:

Before me, a notary public in and for said county, personally appeared George J. Hagmeier, who is well known to me, and being first duly sworn, deposes and says that he has read the testimony of William H. Clark, given before the Industrial Commission at Washington, D. C., wherein said Clark read a certain note or statement purporting to be signed by him. That on or about the 18th day of February, 1898, said Clark came to him with a certain note or statement, which said Clark had previously prepared, and which said Clark requested affiant to sign. That to the best of this affiant's recollection, said note or statement was in the following language and figures, to-wit:

"Feb. 18, 1898.—Mr. Clark, A'gt Standard Oil Co., has paid me a great many rebates on goods which were received for when given."

Said Clark thereupon said to this affiant, and assigned as his reason for requesting said affiant's signature thereto, that he, said Clark, was short in his accounts with said Standard Oil Company, and that said shortage had been occasioned, in fact, by the payment of the rebates in said statement mentioned to this affiant, and that he desired to use said statement in accounting to said company for said shortage in his accounts. That said Clark assigned no other reason for desiring affiant's signature to said statement, and thereupon, and in order to assist said Clark in straightening his accounts with said company, affiant signed said statement as presented to him by said Clark, and in substance as above set forth. And further affiant saith not.

GEO. J. HAGMEIER.

Sworn to before me and signed in my presence by George J. Hagmeier this 2d day of September, A. D. 1899.

[Seal.] WALTER A. IRVINE,
Notary Public in and for Licking County, Ohio.

I have another affidavit from Mr. Hagmeier regarding rebates, which I submit. (See Exhibit 16.)

EXHIBIT 16.

STATE OF OHIO, LICKING COUNTY, SS:

George J. Hagmeier, of lawful age, being duly sworn, upon his oath says:

I am a merchant operating the Pittsburg grocery stores, at different points. At the Newark branch I

have had numerous business dealings with the Standard Oil Company through its former local agent, W. H. Clark. Under contract for a large quantity (my entire consumption for a certain period), I have received a rebate of one-half cent per gallon on gasoline and 2 cents per gallon on oil. I never received more than the one-half cent per gallon as per contract as aforesaid.

GEO. J. HAGMEIER.

Subscribed and sworn to by said George J. Hagmeier before me, this 30th day of August, 1899.

[Seal.] DAVID M. KELLER, Notary Public.

NO FRAUDS OR TRICKS IN LAMP TESTS.

His statement that we used a trick in making lamp test is untrue. Competitors marketed an oil from Ohio crude, which was full of sulphur, at a reduced price; and as the dealers mixed this high-sulphur oil with our oil in their storage tank, and as the consumers were complaining about the quality, we were compelled to ask the dealers to keep our oil separate, that they might know whose oil was producing the trouble when their customers complained. It seemed impracticable in some cases for the dealers to have two storage tanks, so we were compelled, at a very large expense, to put on canvassers to visit the consumers and prove to them, by actual demonstration, that the standard quality of our oil had not been changed. Similar tests were made with the retail storekeepers, and it is the height of folly for any man to say that the people could be humbugged by the turning up of one flame higher than the other. That you gentlemen may fully understand the falsity of the statement made by Clark in relation to the drawing of several grades of oil from one tank by a "twist of the wrist," I wish to say that we have a tank wagon at Newark with three compartments, showing conclusively that we carry three grades of goods.

He states that D. J. Hull, H. S. Hollingsworth, E. G. Mathews, W. W. Hughes and W. A. Reed, all employes of the Standard Oil Company, had knowledge of frauds as testified by him in making lamp tests. Mr. W. A. Reed is not in our employ and was not at the time Mr. Clark testified. I submit the affidavits of all these gentlemen to prove the falsity of Clark's statements.

EXHIBIT 17.

THE STATE OF OHIO, CHAMPAIGN COUNTY, SS:

D. J. Hull, of lawful age, being duly sworn, upon his oath says: I am in the employment of the Standard Oil Company of Ohio, and have been for several years. I have read the statement of the testimony of W. H. Clark before the Industrial Commission at Washington with reference to testing Ohio and Pennsylvania oils, and giving my name as one who could corroborate his statements. I desire to say that his statements as to the method of these tests are absolutely false. I never heard of any instructions of any practice of the character stated by him. When these comparative tests are made, lamps of the same size, burners of the same kind, wicks of the same make, and

chimneys of the same make are always used, and at the beginning of the test the height of the flame in each lamp is precisely the same. I never knew of any deception being used in these tests.

D. J. HULL.

Subscribed and sworn to by said D. J. Hull before me, this 28th day of August, 1899.

[Seal.] W. F. RING, Notary Public.

EXHIBIT 18.

THE STATE OF OHIO, FRANKLIN COUNTY, SS:

H. S. Hollingsworth, of lawful age, being duly sworn, upon his oath says: I am in the employment of the Standard Oil Company of Ohio, and have been for several years. I have read a statement of the testimony of W. H. Clark before the Industrial Commission at Washington with reference to testing Ohio and Pennsylvania oils, and giving my name as one who could corroborate his statements. I desire to say that his statements as to the method of these tests are absolutely false. I never heard of any instructions or any practice of the character stated by him. When these comparative tests are made, lamps of the same size, burners of the same kind, wicks of the same make, and chimneys of the same make are always used, and at the beginning of the test the height of the flame in each lamp is precisely the same. I never knew of any deception being used in these tests.

H. S. HOLLINGSWORTH.

Subscribed and sworn to by said H. S. Hollingsworth before me, this 28th day of August, 1899.

[Seal.] ERNEST T. HARE,
Notary Public, Franklin County, Ohio.

[Seal.] FRANK PANHORST,
Notary Public, Washington County, Ohio.

LUBRICATING OILS.

Concerning his general statement on lubricating oils, he refers to our trade-mark brands on which there is no competition and for which we have a regular schedule, the price varying only in accordance with the quantity used and the cost of delivering same to customers. Inasmuch as no competitor can sell these

oils, there is no necessity for our making any different price other than our schedule.

THE ALLEGED PURCHASE OF A WAREHOUSE TO DRIVE A COMPETITOR OUT OF BUSINESS.

His statements concerning the purchase and removal of an alleged warehouse at Newark, in order to drive out a competitor, are false. After the so-called warehouse was purchased, Donaldson, the person whom Clark claimed we drove out of business by the purchase of a shed from its owner (without Donaldson's knowledge), continued in business by renting a barn. Further, Clark purchased the shed unknown to and unauthorized by me or Mr. Hollingsworth, and moved the building to his (Clark's) own private lot, for his own private use, and paid for by him, and not by us.

We derived no benefit from the transaction, and I criticised Clark severely when the subject came to my notice. This so-called warehouse, emphasized so largely by Clark, was only an old shed, about 4 feet by four feet, with capacity for simply one barrel of oil. I have Mr. Hollingsworth's affidavit, which I submit.

EXHIBIT 22.

THE STATE OF OHIO, LOUISA COUNTY, SS:

H. S. Hollingsworth, of lawful age, being duly sworn, upon his oath says: I am in the employ of the Standard Oil Company of Ohio, and have been for several years. With reference to the purchase of a warehouse at Newark, which W. H. Clark, in his testimony before the Industrial Commission mentions, I desire to say that I did not authorize this purchase, nor did I know of it before it was made, and it is not true that I offered Mr. Clark a two weeks' vacation on salary, or any consideration of any kind whatever, if he would get Donaldson out of the business. The first I knew of the transaction, Clark had purchased the building for \$2.50, and moved it on to his own private lot, and Clark stated to me that he bought the shed on account of needing it for an outhouse. The so-called "warehouse" was about 4 feet by 4 feet, with a capacity for storing a single barrel of oil, and in my judgment \$2.50 was an excessive price for it. The purchase of the shed did not drive Donaldson out of the business, for he rented a barn afterwards in which to store his barreled oil.

H. S. HOLLINGSWORTH.

Subscribed and sworn to by said H. S. Hollingsworth, before me, this 30th day of August, 1899.

[Seal.] W. H. HURLEY, Notary Public.

Referring to his statement concerning Mr. King, and others at Newark, running tank wagons, it is very misleading because the term generally applies to our method of delivery to the retail trade, whereas they were peddlers who ran their own wagons, bought their oil from us and made whatever price to the consumer they desired, and were practically regulated by the price made by retail stores. We had nothing what-

ever to do with fixing such prices—these peddlers all working for themselves.

CIRCUMSTANCES UNDER WHICH MR. CLARK LEFT THE STANDARD.

Mr. Lockwood was not a manager nor a special inspector, but simply a traveling auditor, whose duty it was to visit stations, check up stocks, balance cash, check accounts, and see that our agents were conducting the business honestly. Mr. Clark's reports were not received regularly, and after I had requested him repeatedly to give the matter prompt attention (and he had failed to do so), at my request Mr. Lockwood was sent to Newark to check Clark up. He did so, and after balancing the cash (which is the first thing an auditor does) he found it short. This was reported to me and I suspended Clark until Mr. Lockwood had completed his examination. Further investigation disclosed the fact that collections had been made by Clark and not reported. Some of these items were made good by Clark from day to day by payments to Mr. Lockwood on the theory that they were errors. They, however, became so numerous that Mr. Lockwood finally refused to receive any more payments until he had completed his examination, when, according to custom, he would make a final report and leave the adjustment to the officers of the company.

From the time I suspended him up to date I have never tried to re-engage him, directly or indirectly, through Mr. Fouts or anyone else. I submit Mr. Fout's affidavit showing that he has not.

EXHIBIT 23.

THE STATE OF OHIO, FRANKLIN COUNTY, SS:

R. A. Foutz, of lawful age, being duly sworn, upon his oath says: I am in the employ of the Standard Oil Company, and am the person referred to in the testimony of W. H. Clark before the Industrial Commission. It is not true, as stated by him, that since Clark's discharge by the Standard Oil Company I have asked him to re-enter the company's employ, or ever asked him how he would work for the company again. I am a traveling man and have no authority whatever to employ for the company, and I have never had any talk of any kind whatever with Mr. Clark upon the subject.

R. A. FOUTZ.

Subscribed and sworn to by said R. A. Foutz before me, this 28th day of August, 1899.

[Seal.] E. L. PEASE,
Notary Public, Franklin County, Ohio.

Nor is there any truth in his statement concerning our methods of deducting from his salary errors which others made.

The inspector's report referred to, a copy of which he filed with you, is not a part of the auditor's work, nor did the auditor have anything whatever to do with it, nor was it made out by him at that time, nor at any other time; consequently Clark's statement concerning it are false. The blank referred to is the one that I

require filled out by a special agent as occasion requires. Since my arrival in Washington I have examined the inspector's report submitted by Mr. Clark, and find that it is signed by H. S. Hollingsworth, who made the inspection and filled out the blank.

The final report of our auditor showed Mr. Clark's shortage to be \$231.57. He made good \$121.93. The balance, \$109.64, was paid in full by his bonding company after they had examined the report and found it correct.

He was finally arrested by the bonding company, who had signed his bond as agent.

Q. (By Mr. Phillips.) What became of him after his arrest? A. He was arrested on a charge of embezzling \$109.64, which is a sum largely in excess of the amount, \$35, required under Ohio laws to constitute a felony. He was bound over by the examining magistrate. It appears that the aggregate was taken in small sums, and at different times, no one amounting to \$35, or sufficient to constitute a felony under the Ohio statutes. Therefore, I understand the grand jury failed to indict, on the ground that the offenses could not be joined together, and no felony had been committed; only petty larceny.

DIFFERENCES OF PRICE.

Q. (By Mr. Jenks.) One or two questions as to the general method of doing business. You state in your testimony that wherever you have known of rivals cutting rates you intended to meet them to protect yourself. It is true, I suppose, that you had some special contracts, and in that way sold at somewhat different rates to different dealers? A. Occasionally we have a special contract, the consideration being that the dealer buys his entire supply from us. But these contracts are very limited in number, and the concession very rarely exceeds one-half cent a gallon.

Q. So that it would be possible that Mr. Clark would have received instructions from you to sell the same quality of oil to different dealers at different rates under these contracts you had made? A. As I stated, we had contracts on stove gasoline, two or three of them, in Newark, at a time gasoline advanced, and the advance did not apply to these dealers until the contract expired. That made two different prices at Newark on stove gasoline at that time.

Q. You would not be likely, then, you think, to have contracts with different dealers in the same place, covering the same time, under which the same grade of oil would be sold at different prices? A. There might be an exceptional case of that kind.

Q. The different prices being granted, as you have suggested, in consideration of the buyers purchasing their entire supply of you? A. Yes.

Q. Do you recollect special instances, for example, of instructions to sell Capitol cylinder oil to these different parties, Mr. Linafelter and the Newark Water Works, at 32 and 31? A. I do not remember. These contracts on lubricating oil are largely conditioned upon the quantity of oil purchased by the consumer and the expense of delivering.

Q. Some slight variation on that account made from time to time? A. Yes.

Q. (By Mr. Smyth.) Such a variation as that might arise in any business, might it not? A. Certainly.

Q. (By Mr. Clark.) That, you say, is confined to lubricating oil? A. These are lubricating prices.

Q. (By Mr. Jenks.) The variations in prices, I understand you to say, are much less than 1 cent a gallon? A. On illuminating oil, I do not recall any case where it is more than a half cent.

WATCHING RIVALS' BUSINESS.

Q. Reference was made by Mr. Clark, and reference has also been made by other witnesses, to the way in which the Standard Oil Company has secured information regarding the business of its rivals. You yourself have referred to it; it is your custom to have reports from your different agents? A. We ask our salesmen and our agents to keep their eyes open and keep us informed of the situation in their respective fields. We ask our agents, as they visit the trade, to make reports to us of whom the different parties are buying; principally to know whether our agents are attending to their business or not. If they are letting too much business get away from them, it looks as if they were not attending to their business. They get it from what they see as they go around selling goods.

Q. (By Mr. Jenks.) Where competition is fierce do you engage anyone to follow the competitor's wagon about to find out what prices he sells at and to whom he sells? A. No, sir; I do not recall any case of that kind.

Q. Have you yourself secured reports, or has there been any case that you know of in which reports of rivals' business have been secured from employes of those rivals? A. No, sir; never.

Q. You instruct your local agents, I infer from what you state here, as to the prices at which they are to sell lubricating oil to different dealers? A. The prices they are to receive represent either an arrangement or contract made with the different firms for oil at certain periods at these prices, and the arrangement is made with the understanding that we are to have the entire business for a certain period, possibly a year.

Q. (By Mr. Smyth.) Have you not under these contracts reduced the price during the year when you had a contract, say 32 cents for Capitol cylinder oil—have you not voluntarily reduced the price one-half cent? A. Notwithstanding the contract, we may have done that on a declining market.

Q. (By Mr. Jenks.) In the selling of lubricating oils to railroads, do you, in the same way, instruct your agents as to the prices they are to charge? A. I do not have anything to do with railroad oils; they are handled by our people in Cleveland.

Q. You have no knowledge on that subject at all? A. I have no knowledge on that subject.

Q. (By Mr. Phillips.) Is it your custom to put down oil in one locality, where there is competition, as a rule? Do you make that a rule? A. No, sir; we never do it unless the competitor makes the cut in price first and forces us to it. When the competitor makes a cut in prices we do not hesitate to meet the price to hold our business.

Q. You do not take the lead in the State of Ohio, under your jurisdiction, then, in cutting prices when there is an independent refinery that ships oil into that locality? A. No, sir; we do not.

Q. (By Mr. Blatchford.) In what capacity are you serving the Standard Oil Company now? A. I have charge of a marketing department of the company.

Q. For the State of Ohio? A. The central and southern portions of Ohio.

Q. You have presented a dozen or more affidavits from the gentlemen whose names are signed. Are all those gentlemen employes of the Standard Oil Company? A. Not all of them; probably three-fourths.

Q. Have the affidavits come to you voluntarily from these men? A. Yes.

Q. Without any solicitation? A. Simply upon being shown the testimony and being asked if correct, and whether they desired to make affidavit. It has all been voluntary on their part.

Q. I see the affidavits you have read are similar both in language and appearance. Were they gotten up in your office or some office of the Standard Oil Company and sent to the employes? A. Some of these affidavits—not all of them, but a number of them—were gotten up in my office, covering the points of Clark's testimony, and were then submitted to the person concerned, and he was asked whether the facts contained in the affidavit were true, and if they were, whether he was willing to sign it.

Q. (By Mr. Smyth.) I suppose that was largely a matter of convenience? A. Yes.

Q. (By Mr. Blatchford.) Were there any affidavits asked from employes who refused to give them? A. No.

Q. They gave an affidavit in every case? A. Yes, sir; every one.

(Testimony closed.)

WASHINGTON, D. C., September 8, 1899.

TESTIMONY OF MR. JOHN D. ARCHBOLD.

At a meeting of the United States Industrial Commission, held in Washington, D. C., September 8, 1899, Vice Chairman Phillips presiding, Mr. John D. Archbold, after being duly sworn, testified on the subject of trusts as follows:

Q. (By Mr. Jenks.) Will you kindly give your name and address to the stenographer? A. John D. Archbold, New York City.

Q. What is your relation with the Standard Oil Company? A. I am vice president of the Standard Oil Company of New York.

Q. How long have you been connected with the Standard Oil Company? A. Since 1875.

Q. Have you, in anticipation of this examination, prepared any special statement for the use of the commission? A. I have.

Q. I shall be glad if you will give that first, and then we will question afterwards. A. The general statement in answer to specific inquiries is not quite

ready, and that will be furnished you within a few days.

Q. You mean in answer to the general schedule? A. Yes.

Q. (By Mr. Smyth.) I think it would be well to ask Mr. Archbold just at this stage to give us some detailed account of the organization of the Standard Oil Company—its different departments. We do not want the names of the individuals, but your transportation department—how is it managed? A. That will all be furnished—all a part of the statement just in course of preparation.

Q. (By Mr. Jenks.) You will give a general statement in your own way of the points you care to bring out.

The Witness: It would be a matter of preference to me, and I think it would make what I have to say more intelligible to you all, if I might first be allowed to answer the criticisms of the witnesses who have appeared, and so let my answers lead up to a short general statement which I might make at the last.

The Chairman. Certainly.

The Witness. Shall I proceed?

The Chairman. Yes.

J. W. LEE THE HEAD OF A TRUST.

The Witness: I answer first the testimony of Mr. J. W. Lee, of Pittsburg. It is rather remarkable, gentlemen, that the first witness to appear before you as a critic of our business on the ground of its being a trust, should, at the outset, have acknowledged himself to be not only a member of, but the real head of a trust. This Mr. Lee specifically does acknowledge, and I may say for your information, that Mr. Lee and his associates have gone a step further than any other company that I know of, in that they have bound themselves together, not only by the ordinary trust ties, but in a voting trust, made up of a majority of the stock of their principal companies, with a view to perpetuating their faction in power indefinitely, and practically disfranchising the minority. I make this statement, gentlemen, not as a criticism, but as rather a striking evidence of the irresistible tendency toward combination.

VOTING TRUST CONTRACT OF THE UNITED STATES PIPE LINE COMPANY.

I hand you a copy of the voting trust of the United States Pipe Line. The original trustee under it was a Mr. Wood, who has since died. He has been succeeded, under this voting trust, by three trustees, viz., Thomas W. Phillips, L. Emery, Jr., and Hugh King.

Agreement made April 26, 1893, is as follows:

"Whereas each of the undersigned is a subscriber to the capital stock of the United States Pipe Line Company, and is now a stockholder thereof, and each is interested pecuniarily in the oil business either as refiner, producer of crude, exporter, owner of terminal facilities at or near tidewater, or dealers in petroleum and its products for domestic consumption;

"And whereas we have each of us entered into the organization of the said United States Pipe Line Company for the purposes expressed in its charter, and with the further intent and purpose to secure and furnish to each or us an independent outlet for our products, both crude and refined, not controlled or influenced by others hostile to our respective business interests, and to secure cheaper and better transportation facilities and available markets for our respective products;

"And whereas, to that end, the owners of several oil refineries located in the interior and at the seaboard, in which said refineries some of the undersigned are owners in whole or in part, have agreements based upon lawful and sufficient considerations entered into contracts to furnish to the said United States Pipe Line Company the product of said refineries for transportation from the wells, and for furnishing terminal and export facilities at tidewater, as by said contracts and agreements will fully appear;

"Now, therefore, in consideration of the premises and of good, lawful, and sufficient pecuniary and other considerations mutually and severally received, and in order to secure the successful completion of the oil pipe lines projected and now being laid by the said United States Pipe Line Company, with storage tanks, terminal, transportation and export facilities, and to each of us in his business, the benefits of the several contracts, agreements, plans of operation, secured or being negotiated, made or in contemplation, and to keep the control of the stock of the United States Pipe Line Company in hands friendly to the interests of the undersigned as aforesaid, we the undersigned do bind ourselves, each for himself, severally and not jointly, and each to the others jointly, to the following stipulations, covenants and agreements, each in the sum of one hundred (100) dollars for each share of stock now held by each subscriber, the amount of which is by him now placed opposite his signature hereto, to wit:

"1. We and each of us agree, in manner aforesaid, that all of our interests as subscribers to the capital stock of the United States Pipe Line Company, and our rights under our respective contracts of subscription, and all of our stock as soon as paid up, the certificates therefor and the receipts for the installments paid, be vested in and issued to A. D. Wood, trustee, who shall hold the same for each of us proportionately in trust for the term of five years from the first day of April, 1893, at which date, unless this agreement should be extended for a further term, said trustee shall assign and transfer to each of us the stock and certificates so held, unless sooner terminated by a vote of three-quarters of the stock so held in trust.

"2. We further agree and bind ourselves that each of us, not more than 30 days prior to each regular annual meeting of stockholders, or before any lawfully called special meeting thereof, will make and mail or deliver to said trustee a power of attorney or proxy to vote for each of us at such meeting or any adjournments thereof, and in case

said trustee shall not receive said power of attorney or proxy, in time for use at the same, each hereby constitutes the said A. D. Wood attorney in fact to make and sign said proxy or power of attorney in our names for each of us, empowering him, the said trustee, to vote at said meeting or meetings for each.

"3. It is further agreed that upon request in writing of any of the undersigned to said trustee, that he as the equitable owner of said stock or interest in capital, desires to pledge the same for a loan of money to the said equitable owner, the said trustee shall, within 48 hours after receiving notice of the name and location of the lender of said money, acquaint a majority of the board of directors of said request and of the name and address of said proposed lender, and shall within thirty (30) days thereafter either lend or furnish to the said applicant an equal amount of money, upon the same time, at the same rate of interest, upon the security of said stock or interest in capital, or else shall in proper legal form assign or pledge the said stock or part thereof, to the lender designated by the said equitable owner of said stock.

"4. It is further agreed that no sales of stock so held in trust shall be made by the equitable owner thereof during the continuance of this trust.

"5. In the event of the death, resignation, or disability of the trustee herein named, his successor shall be appointed by the vote of three-quarters in interest of the signers hereof. The said successor, when appointed, shall have all the powers and shall perform the duties of the trustee herein designated, failing to do which, he, or the trustee hereby appointed, may be removed by a three-quarter vote of the stock in interest hereof.

"In the event of suit being brought to enforce this agreement, or for the stipulated damages for breach thereof, the same shall be in the name of the said trustee and for the benefit of all not delinquent, as hereinbefore provided.

"The said trustee, who shall be a stockholder in the United States Pipe Line Company, shall not be held liable, personally, except for gross negligence or for the violation of this agreement in its letter or spirit. He shall, before entering upon his duties, accept this appointment in writing, and at the same time enter into a bond or obligation of five thousand (5,000) dollars that he will faithfully discharge his duties in accordance with the terms and spirit of this contract.

"It is further understood and agreed that in voting said stock the parties hereto and said trustee shall vote for persons as directors, interested in the business of refining, producing, and exporting oil, as herein stated and as near as may be for members of each in proportion to the interest of each class of capital.

"In witness whereof the said parties have hereunto set their hands and seals the day and year first above written.

"I, _____, named as trustee in the foregoing instrument, do hereby accept the duties of the trust, and bind myself to perform the same in

accordance with the law and the letter and spirit of said agreement, in the sum of five thousand (5,000) dollars, to be paid upon breach hereof.

“_____, [L.S.]

“April _____, 1903.”

VOTING TRUST AGREEMENT OF THE PURE OIL COMPANY.

I present, also, as being, perhaps, more easily understood, a printed copy of the trust agreement in full, the voting trust in full, of the Pure Oil Company.

A later modified form of this trust agreement involving many verbal changes and some important ones, is furnished the commission by Mr. J. W. Lee. It is as follows:

This agreement, made and entered into by the Pure Oil Company, a corporation organized and existing under the laws of the State of New Jersey, David Kirk, Jerome B. Akin, Marcus L. Lockwood, Walter A. Dennison, Chas. H. Duncan, Theodore B. Westgate, Wm. L. Curtis, James W. Lee, and David Kirk, trustees for the McCalmont Oil Company, and Thomas W. Phillips, Lewis Emery, jr., Rufus Scott, Clarence Walker, Lewis Walz, James W. Lee, David Kirk, Marcus L. Lockwood, Jerome B. Akin, Charles H. Duncan, Hugh King, Michael Murphy, Adolphus Hoch, Ferdinand Reiber, and Walter A. Dennison, parties mutually agreed upon to exercise the trusts created hereunder:

Witnesseth, that whereas the said Pure Oil Company is formed for the purpose of engaging in, directly, and of aiding other companies and parties engaged in the production, transportation, storage, manufacture and sale of crude petroleum and its products, and in any business incident thereto; and it is desired to enlist therein the co-operation of other parties, and to procure capital to be invested in the shares of its capital stock, and in such other ways as may be desirable, which investments are to be solicited from parties not now interested in the company, and,

Whereas, it is advisable, equitable, essential, and intended for the safety and advantage of all interests that the control of the said Pure Oil Company shall be so created as to prevent and render impossible at all times the diversion of its resources and business, and to protect and maintain what are known as “the independent interests” in the petroleum industry, and to maintain the policy agreed on for conducting the business of the company, created by mutual agreement of shareholders or by operation of law;

Therefore the said parties hereto, in consideration of the sum of one dollar by each to each of the others paid, the receipt of which is hereby acknowledged by each, and in further consideration of the mutual benefits received, to be received, or expected from the agreements, covenants, and trusts hereinafter contained, and from the undertakings and business to be promoted, do hereby agree and consent to the various acts and things hereinafter set forth; provided, however, that no party hereto shall be bound to do any act or thing or be responsible for

the results or consequences of any act or thing done or omitted to be done, except so far as relates to such acts or things as he himself expressly undertakes to do and perform; and do further agree as follows:

First. The capital stock of the Pure Oil Company as authorized in its certificate of organization, is to be one million (\$1,000,000) dollars, represented by two hundred thousand (200,000) shares, of the legal par value of five (\$5.00) dollars each, divided into classes, and to be issued, held, and transferred, subject and according to law and the by-laws, rules and regulations adopted and approved by all the shareholders of the company, a copy of which is hereto attached and referred to.

Second. The said David Kirk, Jerome B. Akin, Marcus L. Lockwood, Walter A. Dennison, Chas. H. Duncan, Theodore B. Westgate, Wm. L. Curtis, James W. Lee, and David Kirk, trustee for the McCalmont Oil Company, are the owners of all the shares of the capital stock now subscribed, amounting to three thousand (3,000) shares, of which they hereby transfer to the said Thomas W. Phillips, Lewis Emery, jr., Rufus Scott, Clarence Walker, Louis Walz, James W. Lee, David Kirk, Marcus L. Lockwood, Jerome B. Akin, Chas. H. Duncan, Hugh King, Michael Murphy, Adolphus A. Hoch, Ferdinand Reiber, and Walter A. Dennison, sixteen hundred (1,600) shares, being more than a majority of the shares of the company now subscribed, and agree that one-half of all the shares hereafter subscribed and issued shall be transferred in like manner to the said parties and their associate trustees, as any may be appointed, to be by them held in trust, for 20 years from organization of the company, for the uses and purposes herein proposed, and subject to the terms and conditions as follows:

1. The equitable ownership of the trust shares and all interests therein shall be subject to the terms of this trust agreement. Such ownership of the shares or interests therein may be sold at the will of the holder, but no sale, transfer, or conveyance of such ownership or interests shall give to the purchaser any rights other than are provided for in the by-laws, rules and regulations of the company, and in accordance with this trust. The trustees hereunder shall at all times be recognized as the legal owners and holders of the trust shares, to carry into effect the purposes of this trust, and all equitable owners of the trust shares or interests therein shall specifically agree in writing to the terms of this trust; and no transfer of any such shares or interests shall be made, or be effected, if made, until the transferee of any such equitable ownership or interest shall have agreed in writing to receive and hold the same subject to the provisions of this trust.

2. At all meetings of the company for the election of directors, or for any other purposes, to cast the entire number of votes which, as holders of the said shares, they would be entitled to cast.

3. Each trustee at such meetings shall be entitled to cast an equal number of all the votes which all of the trustees would be entitled to cast in the ag-

gregate, if present, except as hereinafter provided.

4. In case of differences of opinion among the trustees present at any such meetings as to how such votes shall be cast in regard to any matter or thing to be voted on, they shall be cast as the representatives of four-fifths of all the shares held under this trust may direct in writing, if so demanded in writing by any of the trustees.

5. Any trustee unable to attend any meeting of shareholders and to personally cast the votes he would be entitled to cast if present, may authorize any other trustee to cast the vote which he would be entitled to cast if personally present, which authority shall be in writing, approved by three-fifths of the trustees other than himself.

6. When none of the trustees can be present at any meeting of the stockholders, legally held, they may be represented in proxy by an attorney appointed in writing, executed by three-fifths of the trustees.

7. The trustees may exercise such consent in writing as in their opinion it may be right and proper for them to do in the interests of the Pure Oil Company, and of the owners of the shares held by them in trust; provided that no such consents shall be executed against the objection of the equitable owners of 10 per cent of the shares held by them in trust, unless after the question of executing such consent shall have been submitted in person, or by writing properly addressed, to the several equitable owners of the shares held in trust, and approved in writing by such owners of three-fifths of such shares.

8. The number of trustees may be increased or diminished at any time, and one-third of the trustees shall retire each year, and their successors in the trust elected at each annual meeting of the company. Those of the trustees whose names first occur in alphabetical order shall retire at the next annual meeting, and so on, and their successors shall be elected in the same manner as directors are elected, but nothing herein shall render any trustee ineligible to re-election. Any trustee may be removed, without assignment of cause or reason therefor, by three-fifths of the trustees and the written consent of the equitable owners of three-fifths of the shares held in trust hereunder; and upon such removal, or on the filing of such written consent with the secretary of the company, and on the notice in writing delivered to the party removed, or sent by registered letter to his proper address, the rights, duties and obligations of such party as trustee shall immediately cease.

9. In case of the death, resignation, or removal of any of the trustee, the trust shall be exercised by the remaining trustees until the vacancy be filled by the appointment of new trustees for that purpose, on the nomination of the equitable owners of a majority of the shares previously represented by the trustee whose place is vacated, with the consent in writing of the equitable owners of three-fifths of the shares held under this trust and the approval of three-fifths of the trustees.

10. No trustee has any such beneficial interest in

this trust personally as to entitle him to maintain any action at law or in equity to enjoin, delay, hinder, or prevent his removal from the trusteeship, or to recover damages on account thereof from the company or the trustees, or from the individual stockholders by whose action he may have been removed.

11. The trustees shall appoint a chairman and secretary who shall hold these offices for one year, and until their successors shall be qualified; and shall keep regular accounts, showing the ownership and residences of the various equitable owners of the shares held by them in trust; and shall execute and deliver to such several owners certificates in due form, approved by the directors of the company, evidencing the number of shares held by them in trust for each of the several owners; and shall make such transfers of any of the shares as they may be requested to do by such several owners, on the surrender of such certificates representing such shares, properly indorsed, assigning for transfer, subject to the terms of this trust, any of the shares thereby represented, in the manner prescribed for making such transfers.

12. The trustees shall immediately advise the company by writing, addressed to the secretary, of any transfer of ownership of any of the shares held by them; and shall, on written request of the treasurer of the company, certify to him the names and residences of all equitable owners of shares held by them in trust; and shall sign warrants for the payment to such owners, severally, of any dividends to which they may be entitled on the shares so held in trust.

Third. This agreement may be changed at any time only with the consent in writing of the Pure Oil Company, three-fifths of the persons acting at the time as trustees hereunder, and of the equitable owners of three-fifths of the shares held in trust hereunder.

Fourth. This agreement may be cancelled, and the trust thereby created dissolved, only by the winding up of the Pure Oil Company, or by the consent in writing, duly executed, of the equitable owners of three-fifths of the shares held in trust hereunder and of three-fifths of the other shares of the company, after providing in full for the redemption or purchase at one hundred and ten dollars per share, in cash, of all the preferred shares of the company at the time outstanding.

Fifth. The said Thomas W. Phillips, Lewis Emery, jr., Rufus Scott, Clarence Walker, Louis Walz, James W. Lee, David Kirk, Marcus L. Lockwood, Jerome B. Akin, Chas. H. Duncan, Hugh King, Michael Murphy, Adolphus A. Hoch, Ferdinand Riber, and Walter A. Dennison hereby accept the trust herein conferred and imposed on them.

In witness whereof the parties have severally signed this agreement as of the — day of —, A.D. 189—.

"This agreement, made and entered into by the Pure Oil Company, a corporation organized and existing under the laws of the State of New Jer-

sey; David Kirk, Jerome B. Akin, Marcus L. Lockwood, Walter A. Dennison, Charles H. Duncan, Theodore B. Westgate, Wm. L. Curtis, James W. Lee, and David Kirk, trustee for the McCalmont Oil Company, several subscribers to and owners of the capital stock of the said Pure Oil Company; and Thomas W. Phillips, Lewis Emery, jr., Rufus Scott, Clarence Walker, Louis Walz, James W. Lee, David Kirk, Marcus L. Lockwood, Jerome B. Akin, Charles H. Duncan, Hugh King, Michael Murphy, Adolphus A. Hoch, Ferdinand Reiber, and Walter A. Dennison, parties mutually agreed upon to exercise the trusts created hereunder.

"Witnesseth. That whereas, the said Pure Oil Company is formed for the purpose of engaging in directly and of aiding other companies and parties engaged in the production, transportation, storage, manufacture and sale of crude petroleum and its products, and in any business incident thereto, and it is desired to enlist therein the co-operation of other parties, and to procure capital to be invested in the shares of its capital stock, and in such other ways as may be desirable, which investments are to be solicited from parties not now interested in the company; and 'whereas, it is advisable, equitable, essential, and intended for the safety and advantage of all interests that the control of the said Pure Oil Company shall be secured permanently, as to prevent and render impossible at all times the diversion of its resources and business from their intended use and course, in opposition to monopoly in the business, and to permanently protect and maintain what are known as the 'independent interests' in the petroleum industry, and to maintain the policy agreed on for conducting the business of the company in the interest and for the protection of all rights in the company, created by mutual agreement of shareholders, or by operation of law; therefore the said parties hereto, in consideration of the sum of one dollar by each to each of the others paid, the receipt of which is hereby acknowledged by each, and in further consideration of the mutual benefits received, to be received, or expected from the agreements, covenants, and trusts hereinafter contained, and from the undertakings and business to be promoted, do hereby agree and consent to the various acts and things hereinafter set forth; provided, however, that no party hereto shall be bound to do any act or thing, or be responsible for the results or consequences of any act or thing done or omitted to be done, except so far as relates to such act or thing as he himself expressly undertakes to do and perform; and do further agree as follows:

"First. The capital stock of the Pure Oil Company, as authorized in its certificate of organization, is to be one million (\$1,000,000) dollars, represented by two hundred thousand (200,000) shares of the legal par value of five (\$5.00) dollars each, divided into classes, and to be issued, held, and transferred, subject and according to law, and the by-laws, rules, and regulations adopted and approved by all the shareholders of the company, a copy of which is hereto attached and referred to.

"Second. The said David Kirk, Jerome B. Akin,

Marcus L. Lockwood, Walter A. Dennison, Chas. H. Duncan, Theodore B. Westgate, William A. Curtis, James W. Lee, and David Kirk, trustee of the McCalmont Oil Company, are the owners of all the shares of the capital stock now subscribed, amounting to three thousand (3,000) shares, of which they hereby transfer to the said Thomas W. Phillips, Lewis Emery, jr., Rufus Scott, Clarence Walker, Louis Walz, James W. Lee, David Kirk, Marcus L. Lockwood, Jerome B. Akin, Charles H. Duncan, Hugh King, Michael Murphy, Adolphus A. Hoch, Ferdinand Reiber, and Walter A. Dennison sixteen hundred (1,600) shares, being more than a majority of the shares of the company now subscribed, and agree that one-half of all the shares hereafter subscribed and issued shall be transferred in like manner to the said parties and their associate trustees, as may be appointed, to be by them held in trust for the uses and purposes herein proposed, and subject to the terms and conditions as follows:

"1. The equitable ownership of the trust shares and all interests therein shall be subject to the terms of this trust agreement; such ownership of the shares or interests therein may be sold at the will of the holder, but no sale, transfer, or conveyance of such ownership or interests shall give to the purchaser any rights other than are provided for in the by-laws, rules, and regulations of the company, and in accordance with this trust. The trustees hereunder shall at all times be recognized as the legal owners and holders of the trust shares to carry into effect the purposes of this trust, and all equitable owners of the shares or interests therein shall specifically agree in writing to the terms of this trust; and no transfer of any such shares or interest shall be made, or be effective if made, until the transferee of such equitable ownership or interest shall have agreed in writing to receive and hold the same subject to the provisions of this trust.

"2. At all meetings of the company for the election of directors, or for any other purpose, to cast the entire number of votes which, as holders of the said shares they would be entitled to cast.

"3. Each trustee at such meetings shall be entitled to cast an equal number of all the votes which all of the trustees would be entitled to cast in the aggregate, if present, except as hereinafter provided.

"4. In case of differences of opinion among the trustees present at any such meetings as to how such votes shall be cast in regard to any matter or thing to be voted on, they shall be cast as the representatives of four-fifths of all the shares held under this trust may direct in writing, if so demanded in writing by any of the trustees.

"5. Any trustee unable to attend any meeting of shareholders and to personally cast the votes he would be entitled to cast if present, may authorize any other trustee to cast the vote which he would be entitled to cast if personally present, which authority shall be in writing, approved by three-fifths of the trustees other than himself.

"6. When none of the trustees can be present at any meeting of the stockholders, legally held, they

may be represented in proxy by an attorney appointed in writing, executed by three-fifths of the trustees.

"7. The trustees may execute such consents in writing as in their opinion it may be right and proper for them to do in the interest of the Pure Oil Company and of the owners of the shares held by them in trust, provided that no such consents shall be executed against the objection of the equitable owners of 10 per cent of the shares held by them in trust, unless after the question of executing such consent shall have been submitted in person, or by writing, properly addressed to the several equitable owners of the shares held in trust, and approved in writing by such owners of three-fifths of such shares.

"8. The number of trustees may be increased or diminished at any time, or any trustee may be removed, without assignment of cause or reason therefor by three-fifths of the trustees and the written consent of the equitable owners of three-fifths of the shares held in trust hereunder; and upon such removal, or on filing of such written consent with the secretary of the company, and on notice in writing delivered to the party so removed or sent by registered letter to his proper address, the rights, duties and obligations of such party as trustee shall immediately cease.

"9. In case of the death, resignation, or removal of any of the trustees, the trust shall be exercised by the remaining trustees until the vacancy be filled by the appointment of new trustees for that purpose, on the nomination of the equitable owners of a majority of the shares previously represented by the trustees whose place is vacated, with the consent, in writing of the equitable owners of three-fifths of the shares held under his trust and the approval of the three-fifths of the trustees.

"10. No trustee has any such beneficial interest in this trust, personally as to entitle him to maintain any action at law or in equity to enjoin, delay, hinder, or prevent his removal from the trusteeship, or to recover any damages on account thereof from the company or the trustees, or from the individual stockholders by whose action he may have been removed.

"11. The trustees shall appoint a chairman and secretary and shall keep regular accounts showing the ownership and residence of the various equitable owners of the shares held by them in trust and shall execute and deliver to such several owners certificates in due form, approved by the directors of the company, evidencing the number of shares held by them in trust for each of such several owners, and shall make such transfers of any of the shares as they may be requested to do by such several owners, on the surrender of such certificates representing such shares, properly endorsed, assigned for transfer subject to the terms of this permanent trust, any of the shares thereby represented in the manner prescribed for making such transfer.

"12. The trustees shall immediately advise the company, by writing, addressed to the secretary,

of any transfer of ownership of any of the shares held by them; and shall, on written request of the treasurer of the company, certify to him the names and residences of all equitable owners of shares held by them in trust; and shall sign warrants for the payment to such owners, severally, of any dividends to which they may be entitled on the shares so held in trust.

"Third. This agreement may be changed at any time with the consent, in writing, of the Pure Oil Company, three-fifths of the persons at the time acting as trustees hereunder, and of the equitable owners of three-fifths of the shares held in trust hereunder.

"Fourth. This agreement may be cancelled and the trust hereby created dissolved only by the winding up of the Pure Oil Company, or by the consent in writing, duly executed, of the equitable owners of four-fifths of the shares held in trust hereunder, and of four-fifths of all the other shares of the company, after providing in full for the redemption or purchase at one hundred and ten dollars per share, in cash, of all the preferred and common shares of the company at the time outstanding.

"Fifth. The said Thomas W. Phillips, Lewis Emery, jr., Rufus Scott, Clarence Walker, Louis Walz, James W. Lee, David Kirk, Marcus L. Lockwood, Jerome B. Akin, Charles H. Duncan, Hugh King, Michael Murphy, Adolphus A. Hoch, Ferdinand Reiber and Walter A. Dennison hereby accept the trust herein conferred and imposed on them.

"In witness whereof the parties hereto have severally signed this agreement as of the 6th day of November, A. D. one thousand eight hundred and ninety-five.

"Pure Oil Company,
"David Kirk, President,
"C. H. Duncan, Treasurer.

"Incorporators: David Kirk, Jerome B. Akin, Marcus L. Lockwood, Walter A. Dennison, C. H. Duncan, Theodore B. Westgate, David Kirk, trustees for McCalmont Oil Company; W. L. Curtis, Thomas W. Phillips, David Kirk, Marcus L. Lockwood, Clarence Walker, James W. Lee.

"Trustees: Walter A. Dennison, Jerome B. Akin, C. H. Duncan, Adolphus A. Hoch, Ferd. Reiber, Louis Walz, Rufus Scott, Lewis Emery, jr., M. Murphy, H. King."

DID NOT ISSUE CIRCULARS AGAINST FREE PIPE LINE LAW.

Mr. Lee charges that we fought the passage of the free pipe bill in the Pennsylvania legislature, and that we caused "dodgers" or small handbills to be circulated, saying that if the free pipe bill became a law the orchards would be destroyed, springs polluted, death lurk in their doorsills. I want to deny this in toto. In those early days to which he referred we were in favor of the passage of the free pipe law in Pennsylvania. We greatly desired it. We were entering the pipe line business, fully understanding its great importance to the fu-

ture of the petroleum trade, and it is not likely that we would be prejudiced by any such action as Mr. Lee claims.

Q. (By Representative Livingston.) You deny the issuing of the circular? A. I deny the issuing of the circular in toto. I never heard of any testimony of that kind.

Q. (By Mr. Smyth.) Do you know whether such circulars were issued? A. I do not.

Q. If you did not issue them, who did? A. I do not know that they were issued.

EMPIRE TRANSPORTATION COMPANY.

He refers in the way of criticism to our course regarding our relations with the Pennsylvania road in connection with the Empire Transportation Company refinery. I may say, in a word of explanation, that at the time specified the people prominent in official relations with the Pennsylvania road engaged in the petroleum business on their own account. We, deeming that outside of the regular province of the railroad company, of which we were large patrons, discontinued our shipments over the Pennsylvania road, transferring them to the other great lines. This loss of traffic finally brought the Pennsylvania officials proper to a negotiation regarding this special refining business, to which I have referred, and those negotiations resulted in our purchase of those refineries and our again becoming a patron, in the way of transportation, of the Pennsylvania railroad. That is the exact history of the case simply told. I will refer now to—

Q. (Interrupting.) Are you willing to state what the negotiations were? A. I would be glad to if I had it in mind; but it is a transaction of nearly 20 years ago, and I cannot, from memory, give any really exact outline of it.

Q. Were there considerable advantages offered to the Standard Oil Company over other shippers? A. There were no advantages offered to the Standard Oil Company. The advantage was in favor of their own people, as we felt it to be, and was the prime particular reason for our discontinuing our shipments over it.

Q. After these negotiations did the Standard Oil Company enjoy secret rates or better rates than other refiners? A. I go into that fully in answer to the specific charges to that effect.

Q. (By Mr. Farquhar.) Were the Pennsylvania railroad holders of oil participants with you in transportation at the same time you made arrangements with the Pennsylvania? A. No, their relations ceased.

Q. (By Mr. Jenks.) You can furnish that account more in detail, can you not? A. Undoubtedly, if you desire it.

The Empire Line and Green Line were corporations doing freight business over the Pennsylvania railroad, the stocks of which were owned by the officers and managers of the railway. Through these companies the railway became interested both in transportation of oil by pipe lines and in the re-

fining of oil. The Standard Oil Company claimed that the railway discriminated in freights in favor of its own refineries, and refused to ship over that road. This led to negotiations for the sale of the pipe lines and refineries to persons interested in the Standard. This sale took place October 1, 1877. The railway first purchased from the Empire and Green Lines all the pipe lines and refineries which they owned, which it was empowered to do by virtue of an existing contract, and then conveyed the pipe lines and refineries to the Standard parties.

MR. EMERY'S ESTIMATE OF \$10,000,000 REBATES.

Mr. Lee goes quite into detail with reference to allegations regarding preferential railroad rates to us during that early period of the oil business. I want to answer all his charges made at different times during his testimony as is indicated, and by referring to the various pages at once and as definitely as possible. He treated first the well-worn statement regarding deductions originally made by Mr. Emery, or alleged to be made by him, from the testimony of Mr. Cassatt, an official of the Pennsylvania road, covering alleged rebates paid to our company for a certain period. I have here, and desire to submit and leave with you, a statement of the analysis of Mr. Cassatt's testimony in that regard, prepared by our counsel at the time, showing the utter falsity of Mr. Emery's statement. Mr. Emery's statement was made on an absolutely false hypothesis throughout. There never was any foundation for it. It was one of those catching statements which take hold and travel fast. It has been denied over and over again; but the people who have agitated these questions have adopted it as one of their stock features in trade and keep on repeating it. I desire to submit this analysis, but I will read:

"The assertion that Mr. Cassatt testified that \$10,000,000 was paid to the Standard Oil Company as rebates from October 17, 1877, to March 31, 1879, was first made by Mr. Lewis Emery and in examination before the Committee on Manufactures of the Fiftieth Congress, May, 1888, he shows how he deduced these figures from the testimony referred to. I quote from page 241:

"Q. You were also authority were you not, for the statement which is referred to in Mr. Dodd's book that it was proved during that examination that in a period of, I think, 17 months—

"The witness (interrupting). Seventeen and one-half months.

"Q. (Continuing). The four railroad companies had paid the Standard Oil Company \$10,000,000 as rebates on the oil carried by them, were you not? A. Yes, sir.

"Q. Look at that paper [handing paper to witness] and state whether you made an analysis—an examination of the testimony given by Mr. Cassatt, the Standard Oil Company people, and other railroad officers in that suit, in order to ascertain what the total amount of money paid over as dis-

crmination during that period of 17½ months was? A. I did."

The witness then presented a paper prepared by himself, which, if true, showed a rebate to the Standard Oil Company of 64½ cents per barrel on refined oil, 29 cents on crude oil from one district, 26½ cents on crude oil from another district, and 22½ cents per barrel on crude oil paid to the American Transfer Company. He added these figures, divided them by 3, and claimed 55 cents as the average rebate to the Standard. He then took the total consumption of oil from October 17, 1877, to March 31, 1879, to-wit, 18,556,277 barrels, and multiplying by 55 cents produced \$10,155,218, which he claimed showed was the amount of discriminatory rebates paid to the Standard in 17 months.

Mr. Emery did not pretend to have any personal knowledge of the subject. He pretended to compile his figures from the evidence of Mr. Cassatt. That evidence is published in the same volume which contains Mr. Emory's evidence. To reach this result Mr. Emery had to make these absurdly false assumptions:

"I. That all oil consumed was shipped eastward over four trunk lines, and was all shipped by the Standard Oil Company.

"II. That all these trunk lines paid the same rebate as the Pennsylvania Railroad Company.

"III. That the shipments of oil of the class on which the rebate was 64½ cents was equal to the shipments of oil of the class on which the rebate was 26½ cents."

Eliminate these gratuitous assumptions from Mr. Emery's statements, and his conclusion is shown to be ridiculous.

These gratuitous assumptions are as nothing, however, compared to the gratuitous falsehoods embraced in the figures given. The claim is that a discriminating rebate, averaging 55 cents, was paid to the Standard Oil Company from October, 1877, to March 31, 1879, by four trunk lines.

The evidence of A. J. Cassatt which is referred for the truth of these statements, refers only to one trunk line, Pennsylvania railroad, and shows:

"I. That the Standard Oil Company shipped no oil over the Pennsylvania railroad until July, 1875. That the Pennsylvania railroad was then interested in refining in competition with the Standard, and not only allowed the Standard no preferences, but discriminated against it to such an extent that the Standard stopped shipping over the road in March, 1877.

"II. That in October, 1877, the Pennsylvania railroad and the Standard entered into an agreement by which the Standard Oil Company was to have a commission of 10 per cent on all freight furnished by it in consideration of the Standard agreeing to equalize oil freights on the four trunk lines.

"III. That this agreement did not effect a discrimination even to that extent as against other shippers over the Pennsylvania railroad prior to May 1, 1878, because said shippers had contracts extending to that date, which were excepted in the contract with the Standard.

"IV. That the Pennsylvania railroad was willing and offered to carry oil for all shippers on the same terms with the Standard, excepting only 10 per cent commission, for which it demanded like considerations.

"V. That it did continue to carry for all shippers who did all their business over its line as low as for the Standard commission included.

"VI. That shippers not using the Pennsylvania railroad were able after May 1, 1878, to get oil east by the Erie canal lower than by rail, and shipped their oil by that route, in consequence of which the Pennsylvania railroad shippers were paying greater freight rates than other shippers.

"VII. In consequence the Pennsylvania rate was reduced to those who continued to ship by that line 44½ cents on refined, making the net rate \$1, said 44½ cents being paid as rebate.

"VIII. For the same reason, namely, to meet canal rates, in July, 1878, the rate to those who shipped by rail was further reduced 20 cents, the 20 cents being paid as a rebate, and refunded back to May 1, 1878.

"IX. That these rebates were paid to all shippers who shipped entirely by rail, and were for the express purpose of putting them on an equality with those who shipped by canal.

"X. The same is true of the rebate allowed on crude oil during the same period, except 10 per cent. paid to Standard and 22½ cents paid to the American Transfer Company, the latter being the pipe line's share of a through rate.

"XI. That the rebates which were paid from May 1, 1878, to equalize rail and canal shipments were discontinued December 8 of the same year, when the canal was closed.

"XII. All payments of rebates entirely ceased March 31, 1879."

The result of the testimony is that while there was an agreement for a 10 per cent. commission between the dates referred to, there was in fact no discrimination against shippers by the Pennsylvania railroad; that the rebates paid were paid to all shippers over the lines, and that they were paid to put shippers by that line on an equality with shippers by canal.

Q. (By Mr. Smyth.) You will make that a part of your testimony, will you? A. I will make that a part of my testimony, and I hope it will be in the record of the proceedings of this commission as simple final answers to these lusty old lies about the \$10,000,000 rebates.

Q. (By Representative Livingston.) You say now, in your place as a witness, that there never have been any rebates in favor of the Standard Oil Company? A. I am proceeding with the statement.

Q. I understand you deny everything that has been said here before about rebates? A. I will go right into that and be glad to answer questions about that.

AS TO FAVORITISM IN BUYING LUBRICATING OILS.

Mr. Lee makes the statement that the railroad companies are now systematically robbed by their

own officers through the making of discriminatory contracts with the Standard Oil Company for lubricating oils. I had never heard of this allegation brought out here by Mr. Lee and some other witnesses until told before you. I want to deny it absolutely and entirely as being utterly untrue, and I challenge him to produce a scintilla of evidence in support of their allegations.

Q. (By Mr. Jenks.) Perhaps you will note that Mr. Lee says that he does not state that to be absolutely true, but it is a matter of belief with him. A. It is the same old method—he does not know it to be true, and he can not say it is true, and I challenge him to make any showing of any such thing at any place or any time.

Q. You say it is not true? A. I say it is not true.

NO DISCRIMINATORY RATES.

In answer to questions as to whether the Standard Oil Company is now receiving discriminatory rates, he does not answer directly, but goes back to the 1889 case, in which the Standard Oil Company was in no way involved; was not, indeed, in the case referred to by Mr. Lee and the same is true in a number of other cases also. It was not shown that there was any discrimination in favor of the Standard Oil Company, and as a matter of fact the Standard Oil Company were not given any such discriminatory rates. I make that answer more specifically with reference to the case of the period to which he referred, in answer to the testimony at that time.

Q. (By Mr. Smyth.) If there had been any such rates, you would have known it? A. I should have known it.

Q. It would have been impossible for any such rates to be in existence without your knowing it? A. It would. Further, the cases referred to in Mr. Lee's testimony as pending in the United States court to recover discriminations are really cases to recover freight which the railroad charged refiners on barrels. The Inter-state Commerce Commission decided that railroads carrying both in tank cars and in barrels should carry barrels free; and the railroads, refusing to accept such a decision, are testing the question in the United States court. It is fair to say that the same charge for carrying barrels was made against the Standard Oil Company, and if the refiners are successful in recovering, the Standard Oil Company will have a claim for a very large amount.

Q. (By Mr. Jenks.) Against the railroads? A. We shall be in the same position as the shippers if it is decided in the interest of the refiners.

Q. (By Mr. Smyth.) You will claim a rebate on the freight on the barrels of refined? A. Yes; we are in the same position as they are on that question. I may say, in my personal opinion, it is a most unjust decision for any court to make; but it is not for me to decide it.

In answer to inquiry as to whether the Standard Oil Company were paid rebates on shipments of other people, Mr. Lee answers in an untruthful and

disingenuous way, and refers finally to the Rice case as the only possible support of his assertion. The Rice case will be fully answered in connection with the testimony of another witness.

THE STANDARD HAS STRICTLY OBEYED THE INTERSTATE COMMERCE LAW.

It is fair to say here, however, and I will make this statement covering the entire question of freight rates prior to the passage of the Inter-State Commerce law, in 1887, that the shipment of oil or any considerable freight over the roads was a question of special contract. While tariffs were nominally issued, every shipper knew that a special contract could be had, and it was universally the rule that special contracts were made for the shipment of any considerable freight. Since the passage of the Inter-state Commerce law we have strictly obeyed it. I want to say further in this connection that during the period before the passage of the Inter-State Commerce law every and any rate was uniformly considered in the fixing of prices at which the oil was sold. I want an exhibit—

Q. (Interrupting.) Are your books open to verify that statement? A. To the very utmost. I have thought it worth while, in view of the hard downing of this old ghost, to go into some considerable collateral proof to show the falsity of the charges in reference to discriminatory rates. I now beg leave to submit to you, and I of course will leave them with you—

Q. (By Representative Livingston.) (Interrupting.) If you will pardon me just now—is there a suit pending or anything of the kind on the part of the Inter-State Commerce Commission against the Standard Oil Company for rebates now, or has there been since the passage of the act? A. There have been various actions instituted regarding some special features of the carrying law, but I do not know that there are any now pending. I think they have all, so far as relates to our interest directly, been adjudicated.

Letters From Railroad Officers Denying That Their Roads Give Preferential Rates to the Standard.

I submit here in answer to direct queries—and they are only a small part of the entire number I might have for the asking—letters from prominent railroad officials representing the railroads in this country, North, South, East and West, answered on their own part and over their own signatures, with reference to the charge of discrimination in any way. These letters are of the most specific character on this subject. I thought it best not simply to rest on our own denial on the charge of discrimination, but to leave these with you as collateral evidence of the falsity of these statements which our enemies and competitors in the business are continually making on this question. I will, with your permission, read a list of these letters, and I will submit a map, colored in lines, showing

the different sections of the country reached by the railroads which are represented in these letters, and which deny any preferential relation with the Standard Oil Company.

[Standard Oil Company, 26 Broadway, New York]

Dear Sir: During May and June of this year the Industrial Commission (a body appointed by Congress) had a hearing in Washington. Before that body appeared a number of oil producers and refiners who testified, generally, that it was their belief that the railroads of the United States were giving the Standard Oil Company and its interests many advantages on its shipments of petroleum and its products as compared with those of other oil shippers.

We are now and have been, as you know, large shippers of petroleum and its products over your rails, and we would be glad if you would write me a letter stating as fully as you can whether or not, since the passage of the Inter-State Commerce law, you have in any way given to the Standard Oil Company or any of its representatives any lower rates of freight, either by direct tariff, rebate, under billing or in any way given to it or its representatives any advantages in the carriage of its shipments over your rails as against any other oil shipper. In other words, have not the Standard Oil Company and its interests paid the same rate per 100 pounds on its shipments, whether in tank cars, car loads, or less than car loads, as you have charged other shippers between the same points, and has there been since the passage of the Inter-State Commerce law, or is there now, any arrangement or device by which the Standard Oil Company have in any way received any advantage in the transportation of its oil, per 100 pounds, as compared with any other shipper over your road between the same points?

If you, yourself, have not full knowledge of the matter referred to, we would be glad if you would confer with your traffic department before answering. It may be that we will show this letter with your reply to the Industrial Commission, and we would like for your reply to be as full and explicit as possible. Kindly reply at your earliest convenience, and oblige,

Yours, truly,

HOWARD PAGE.

I will not weary you, unless it is your desire, by reading all of these letters, but I will read two or three of them. I will first read the list: Atchison, Topeka and Santa Fe Railway, Paul Morton, second vice president, Chicago, Ill.; Baltimore and Ohio Railroad, Oscar G. Murray, first vice president Baltimore, Md.; Boston and Maine Railroad, W. F. Berry, second vice president and general manager, Boston, Mass.; Chicago and Alton Railroad, C. A. Campbell, vice president and general manager, Chicago, Ill.; Chicago, Milwaukee and St. Paul Railway, A. J. Earling, second vice president, Chicago, Ill.; Chicago, Burlington and Quincy Railroad, Thomas Miller, general freight agent, Chicago, Ill.; Cleveland, Cincinnati, Chicago and St. Louis Railway, E. E. Cost, freight traffic man-

ger, Cincinnati, Ohio; Delaware, Lackawanna and Western Railway, W. H. Truesdale, president, New York City, N. Y.; Erie Railroad, G. G. Cochran, fourth vice president, New York City, N. Y.; Great Northern Railway, D. Miller, second vice president, St. Paul, Minn.; Lake Shore and Michigan Southern Railway, W. H. Newman, president, Cleveland, Ohio; Louisville and Nashville Railroad, S. R. Knott, first vice president, Louisville, Ky.; New York Central and Hudson River Railroad, S. R. Callaway, president, New York City, N. Y.; Northern Pacific Railway, C. S. Mellen, president, St. Paul, Minn.; Pennsylvania Railroad, W. H. Joyce, freight traffic manager, Philadelphia, Pa.; St. Louis and San Francisco Railroad, D. B. Robinson, president, St. Louis, Mo.; Southern Pacific Company, J. C. Stubbs, third vice president, San Francisco, Cal.; Southern Railway, J. M. Culp, traffic manager, Washington, D. C.; Union Pacific Railroad, H. G. Burt, president, Omaha, Neb.; Wabash Railroad, S. B. Knight, general freight agent, St. Louis Mo.; Western New York and Pennsylvania Railroad, E. T. Johnson, general freight agent, Buffalo, N. Y.

I will read, if you please, first as representing the different sections of the country, a letter from the New England states, Boston and Maine Railroad:

[Boston and Main Railroad, Traffic Department.]

Boston, Mass., August 18, 1899.

Dear Sir: Replying to your esteemed favor of the 15th instant, you ask me to state whether or not since the passage of the Inter-State Commerce law the Boston and Maine Railroad have in any way given to the Standard Oil Company, or any of its representatives, any lower rate of freight either by direct tariff, rebate or underbilling than has been openly quoted to all other shippers of oil, and I am pleased to be able to state that we have not.

Yours truly,
W. F. Berry,
Second Vice President and General Traffic Manager.

Mr. Howard Page,
26 Broadway, New York, N. Y.

[Chicago and Alton Railroad Company, C. A. Campbell, Vice President and General Manager.]

Chicago, Ill., August 17, 1899.

Dear Sir: I take pleasure in stating to you, as I have frequently stated to others, and am willing to state before the Inter-state Commerce Commission or any other authority, that in my judgment the Standard Oil Company has obeyed the Inter-State law better than any other large shipper in the country.

So far as the Chicago and Alton is concerned, the Standard Oil Company has not only declined to accept concessions of any name or nature, but has used its influence with the railroads to maintain

agreed tariff rates, and there has been no arrangement, device or any other plan by which the Standard Oil Company received less rates than other shippers. The rates granted the Standard Oil Company have been the same that all other oil shippers have had, whether in tank cars, car loads or less than car loads.

I have frequently stated to the Inter-State Commerce Commission and to others that if all the large shippers of the country would co-operate in the enforcement of the Inter-State Commerce law, as the Standard Oil Company has done, we would have an ideal condition.

Yours very truly,
C. A. Chappell,
Vice President and General Manager.

Mr. Howard Page,
Standard Oil Company, New York.

[Louisville and Nashville Railroad Company, office of the First Vice President.

Louisville, Ky., August 19 1899.

Dear Sir: Please refer to your favor of the 15th instant

Having been since January, 1888, in one position or another, charged with the direct supervision of the traffic affairs of the Louisville and Nashville Company, and having been for several years prior to that time directly connected with that department of the company's business, I feel I am in position to speak most authoritatively upon the subject mentioned in your letter.

I beg to say that the Louisville and Nashville Railroad Company has not in any way given the Standard Oil Company, or any of its representatives or allied interests, any lower rates of freight, either by direct tariff, rebate, refund underbilling, or any other subterfuge or device, than it was at the same time extending to any and all other shippers handling the same or similar traffic and subject to the same rules, regulations, and conditions. In other words, the Standard Oil Company has been required to pay and has paid to the Louisville and Nashville Railroad Company the same charges for the same transportation rendered as any other shipper, and there is no arrangement between it or any of its agents and the Louisville and Nashville Railroad Company by which any advantage accrues to it over any other shipper handling similar traffic between the same points over this company's rails.

Yours truly,
S. R. Knott,
First Vice President.

Mr. Howard D. Page,
Standard Oil Company, New York.

[The Atchinson, Topeka and Santa Fe Railway System, Great Northern Building, 77 Jackson street, Chicago, second vice president's office.]

August 17, 1899.

Gentlemen: It is with a great deal of pleasure and satisfaction that I write you in regard to the general belief that the railroads of the United States are giving the Standard Oil Company and its interests many advantages on its shipments of petroleum and its products as compared with shipments of other oil producers.

For nearly four years I have had charge of the freight business of this company, and never in all that time has the Standard Oil Company's representatives asked for, or received, better rates than other shippers of oil secure. From my own experience I know the Standard Oil Company does not ask for rebates, and I know further that the chief aim of the freight representatives of your company has been to have the railroads of the West absolutely maintain the tariff. I wish that other large shippers would take the same position in regard to this matter that your company does. If the terrible pressure from gigantic shippers for inside rates could be relieved the transportation problem of the country would be a very easy one to solve.

The position of your company in not asking for special rates, and in declining to receive rebates, and its efforts to keep the rates on oil and its products up, has been a common topic of discussion among western traffic men ever since the inter-state commerce law became enacted.

I take this occasion to thank you, on behalf of the railroad I represent, for the broad-gauged position that you have taken in this matter.

Yours truly,
Paul Morton,
Second Vice President.

Standard Oil Company,
New York City.

[Great Northern Railway Company, office of the second vice president.]

St. Paul, Minn., August 23, 1899.

Dear Sir: Replying to your favor of the 15th instant, I herewith hand you a letter from our general traffic manager, Mr. F. B. Clarke, under date of the 21st instant, which, I think, covers your inquiry fully so far as this company is concerned.

I have no hesitancy in stating that since my connection with this company, in November last, the Standard Oil Company have paid the full legal tariff on all shipments made by it over this line, and there have been no arrangements by which any less rates were secured.

I can also make the same statement with regard to the shipments of the Standard Oil Company over the Missouri, Kansas and Texas Railroad during my connection with that road, from May, 1893, to

November, 1898.

If there is any further information desired, kindly advise and I will take pleasure in furnishing same.

Yours truly,
D. Miller,
Second Vice President.

Mr. Howard Page,
Standard Oil Company, New York City.

[Great Northern Railway, traffic department.]

St. Paul, Minn., August 21, 1899.

Dear Sir: Referring to the inclosed inquiry from the Standard Oil Company with respect to the rates charged on shipments forwarded over the Great Northern Railway since the passage of the inter-state commerce law.

My connection with this company dates from December, 1896, since which time I know personally that the Standard Oil Company has paid our company full tariff rates on all shipments we have carried for them. I have made inquiry of those connected with the general freight department who were in the service prior to my connection with the company and who have had opportunities to know what rates were being charged on the shipments of the Standard Oil Company, and have received assurances that the Standard Oil Company has always paid our company the full published tariff rates on their shipments, and that we have yet to receive the first intimation that the Standard Oil Company desired less than the published tariff rates charged other shippers of the same class of goods.

Yours truly,
F. B. Clarke,
General Traffic Manager.

Mr. D. Miller,
Second Vice President.

[Erie Railroad Company, 21 Cortlandt street, New York.]

August 29, 1899.

Dear Sir: In answer to your letter of the 15th instant to President Thomas, I desire to say, in his absence, that the Standard Oil Company has evinced the strongest disposition to co-operate with the railroad companies to the extent of paying fair and reasonable rates for transportation of all its products based upon and in conformity with the inter-state commerce act, and based on my own knowledge and information obtained from other officers of this company that said Standard Oil Company has not been afforded lower rates of freight upon such traffic than the tariffs open to and offered for the carriage of like products be-

tween the same points to any other shippers of oil over this company's lines.

Yours truly,
Geo. G. Cochran,
Fourth Vice President.

Mr. Howard Page,
26 Broadway, City.

[Delaware, Lackawanna and Western Railroad Company, office of president.]

August 22, 1899.

Dear Sir: I noted with some interest that during a hearing before the Industrial Commission in Washington during May and June of this year certain parties appeared before that body who testified in a general way that they believed that the railroad companies of the United States were giving the Standard Oil Company, or its interests, many advantages on its shipments of petroleum oil and its products over those accorded other shippers of similar commodities.

These statements or this testimony, if it may be so considered, is so much at variance with the facts and the truth as I know them to be that I feel compelled to write you and state the facts as I know them to exist, and to say that I am willing you should make such use of this letter as you may desire in refuting false statements referred to.

This company has not since the passage of the inter-state commerce act, so called, given the Standard Oil Company or any of its interests or anyone for it any reduced rates or advantages of any character whatever on its shipments of petroleum oil and its products different or in any way more favorable than was at the same time accorded other shippers of similar commodities. As I am advised by our people, no one for the Standard Oil Company has since the passage of said act ever solicited any concession in any way, shape, or form from the regular, established rates, rules, and regulations governing the transportation of petroleum oil and its products.

Furthermore, I take pleasure in certifying that at the time of the passage of the inter-state commerce act and until 1894 I was in charge of the Minneapolis and St. Louis Railway, and from 1894 until 1899 was vice president and general manager of the Chicago, Rock Island and Pacific Railway Company in charge of its freight traffic; that during my connection with the Minneapolis and St. Louis and the Chicago, Rock Island and Pacific railways, as aforesaid, neither of these companies ever granted to the Standard Oil Company or anyone in its interests or for it any concessions from the regular, established rates on its shipments of petroleum oil and its products, nor did any official of the Standard Oil Company, or anyone else in its interests, ever ask special rates or advantages on its shipments, as

against those accorded those of other shippers of the same commodities.

Should it be found necessary or desirable to have the foregoing statement of facts put in the shape of an affidavit or deposition I shall be very much pleased indeed to put my knowledge of this matter in that shape and place at your disposal for such use as you may deem best.

Yours truly,
W. H. Truesdale,
President.

Mr. Howard Page,
Standard Oil Company, 26 Broadway, City.

[Cleveland, Cincinnati, Chicago and St. Louis Railway Company.]

August 28, 1899.

Dear Sir: I have your letter of the 15th in relation to certain testimony that was given before the Industrial Commission during May and June of this year regarding shipments of petroleum and its products.

If I mistake not, this company is the recipient of a fair share of the traffic shipped by your company in all directions, and we can most positively state, and are prepared to support the same by an affidavit, that we have not, since the inception of the inter-state law, paid the Standard Oil Company or any of its agents or branches in any manner, shape, or form, one mill for the purpose of influencing business via our line, and that the Standard Oil Company have paid full tariff rates on all shipments over the line of the Cleveland, Cincinnati, Chicago and St. Louis Railway, whether in tanks, carloads, or less than carloads.

I do not know what further I can say on this subject, only that if the other large shipping interests would pursue the same policy as the Standard Oil Company in relation to the strict maintenance of published rates, it would eliminate the strife and contention among the railroad companies which often produces unhealthy competition and ruinous rates.

Very truly yours,
E. F. Cost.

Mr. Howard Page,
26 Broadway, New York.

[Chicago, Milwaukee and St. Paul Railway Company, office of second vice president.]

Chicago, August 18, 1899.

Dear Sir: In the absence of President Miller your letter of the 15th instant has been handed me. In reply I desire to say that since the passage of the interstate commerce act the Chicago, Milwaukee

and St. Paul Railway has carried a satisfactory share of the business of the Standard Oil Company to all competitive points reached by its lines, and I also desire to say that the full, lawfully published tariff rates have at all times been exacted, and that no concessions or deviations from such lawfully published rates have ever been granted by this company in any manner or by any device whatsoever; nor has the Standard Oil Company asked for any concessions or suggested any deviations from the lawfully published tariffs. I wish, further, to state that there has been no discrimination practiced by this company in connection with the business of the Standard Oil Company and that of other shippers of petroleum and its products.

Yours truly,
A. J. Earling,
Second Vice President.

Mr. Howard Page,
Standard Oil Company, 26 Broadway, New York City.

[Chicago, Burlington and Quincy Railroad Company, general freight department.]

Chicago, August 22, 1899.

Dear Sir: Answering your letter of the 15th instant, I have to say that there never has been a request made by anyone representing the Standard Oil Company since the passage of the inter-state commerce law for a reduction in our tariff rates, directly or indirectly, either by tariff, rebate, under-billing, or otherwise and no concessions have been made by this company of any character whatsoever on the business transported by us for account of the Standard Oil Company. It has all been done at published tariff rates, which are open to the inspection of everybody.

Yours truly,
Thos. Miller,
General Freight Agent.

Mr. Howard Page,
Standard Oil Company, New York City.

[The Baltimore and Ohio Railroad Company.]

Baltimore, Md., August 22, 1899.

Dear Sir: Replying to your favor of August 19, in relation to rates charged to and collected from the Standard Oil Company on their shipments of oil over the road, we invite your attention to next-attached communication from our manager freight traffic, Mr. Wright.

With reference to the Cleveland, Cincinnati, Chicago and St. Louis road, as you know, it has been a number of years since my connection with that company was severed, and it is therefore sug-

gested that you take the matter up direct with them.

Yours, very truly,
Oscar G. Murray,
First Vice President.

Mr. Howard Page,
Standard Oil Company, New York, N. Y.

[The Baltimore and Ohio Railroad, office of manager of freight traffic.]

Baltimore, August 21, 1899.

Dear Sir: With the return of attached letter from Mr. Howard Page, of the Standard Oil Company, would advise that since the inter-state commerce law became effective the Baltimore and Ohio Railroad has not to my knowledge given the Standard Oil Company or any of its representatives any rate less than published tariffs on oil, whether in tank cars or barrels or by any subterfuge whatever, all such tariffs being filed with the commission and the rates named therein being applicable on all shipments, whether made by the Standard Oil Company or its competitors.

Yours truly,
C. S. Wright,
Manager Freight Traffic.

Oscar G. Murray, Esq.,
First Vice President.

[Western New York and Pennsylvania Railway Company, general freight department, Mooney-Brisbane building.]

Dear Sir: I am in receipt of your letter of 22d instant relative to testimony given by Oil Creek producers and refiners before the Industrial Commission in Washington.

In reply to your letter would say that on any shipments of petroleum or its products forwarded by the Standard Oil Company, from or via Western New York and Pennsylvania Railway, the Standard Oil Company have not and are not obtaining any advantage in any way, shape, or manner as compared with other shippers of petroleum and its products. The shipments of the Standard Oil Company are charged exactly the same rates and the same weights as the shipments of any producer or refiner between the same points, and no lower rates are given the Standard Oil Company, or to any of its representatives, or through any other party, either through tariff, rebate, underbilling in quantity or in weight, through any device whatever; and the charges on such shipments against the Standard Oil Company have been upon exactly the same basis between the same points as charged any other refiner or producer since the inter-state commerce law was put in force.

If it is desired I am willing to appear before any United States commissioner in Buffalo and make affidavit to the above facts.

Yours truly,
Edward T. Johnson,
General Freight Agent.

Mr. Howard Page,
26 Broadway, New York City.

[The Wabash Railroad Company.]

St. Louis, August 18, 1899.

Dear Sir: I note that in the course of the investigation before the Industrial Commission, during May and June of this year, evidence was submitted to the effect that the Standard Oil Company had received advantages in the shipment of petroleum and its products as compared with other oil shippers.

I do not understand that specific reference was made to any railroads thus favoring the Standard Oil Company, but I would like to testify in defense of the Wabash Railroad Company that we have not contributed in a discriminatory manner to the Standard Oil Company, and that we have not since April 5, 1887—when the inter-state commerce law became effective—deviated from our published tariffs in the way of rebates or irregular departure from said tariff in a single instance in the handling of shipments of the Standard Oil Company. We have had but one tariff, which applies alike to all oil shipments handled by the Wabash Railroad Company, from that period up to the present time.

Yours truly,
S. B. Knight,
General Freight Agent.

Mr. Howard Page,
Standard Oil Company, 26 Broadway, New York.

[Union Pacific Railroad Company, office of the president.]

Omaha, Nebr., August 25, 1899.

My Dear Sir: Returning to Omaha after an absence, I find your letter of the 15th instant.

In reply permit me to say that as far as my personal knowledge is concerned, and from all information I am able to obtain from other officers of this company, the Standard Oil Company has at all times since the passage of the inter-state commerce act evinced the strongest disposition to co-operate heartily with the railroads to the extent of paying fair and reasonable rates for transportation of all of its products. I am unaware that the Standard Oil Company has been in any manner afforded lower rates of freight than the tariffs open to and

offered for the carriage of like products for any other shippers of oil over this company's lines.

Yours truly,
Horace G. Burt, President.

Mr. Howard Page,
Standard Oil Company, New York City.

[Northern Pacific Railway Company, office of the president, St. Paul, Minn.]

New York, August 23, 1899.

Dear Sir: In reply to your favor of August 15, I take pleasure in saying that so far as the Northern Pacific road is concerned it has not in any way allowed you any rebate or concession on your shipments of oil as compared with any other shipper of oil between the same points; and there is no arrangement or understanding, expressed or implied, by which you receive any concession or consideration not open to every other shipper of the same commodities between the same points upon our line.

The same is also true, so far as I can recall, with regard to the relation of your company with the New York, New Haven and Hartford Railroad, during the time I was connected with the same as second vice president in charge of its traffic.

Yours truly,
C. S. Mellen, President.

Mr. Howard Page,
26 Broadway, New York City.

[Southern Railway Company, office of the traffic manager.]

Washington, D. C., August 21, 1899.

Dear Sir: Replying to your favor of the 15th instant: Since the organization of the Southern Railway Company I have been in charge, as traffic manager, of its traffic interests, including the establishment and promulgation of all rates used by it in the transportation of passengers and freight over its line of railway, and I am prepared to say, unhesitatingly and without qualification, that the Southern Railway Company has at no time given to the Standard Oil Company, or any of its representatives, any lower rates of freight in the carriage of shipments made by that company over our rails, either by direct tariff, refund, or otherwise, than to any other shipper of similar commodities.

Our rates, as issued from time to time, are published and filed with the Inter-State Commerce Commission, and with the several commissions of States traversed by the Southern Railway, and the Standard Oil Company has in no instance been given the benefit of anything less than the rates so published and filed with these commissions, and

which are the same figures as are charged all other shippers of petroleum and its products.

The policy pursued by the Southern Railway Company is to treat all of its patrons alike, and to fully observe its obligations under the law, and this policy applies as well to shipments of petroleum as to other classes of freight between points on our line.

Yours truly,
J. M. Culp, Traffic Manager.

Mr. Howard Page,
26 Broadway, New York City.

[St. Louis and San Francisco Railroad Company.]

St. Louis, Mo., August 25, 1899.

Dear Sir: Absence from home has prevented an earlier reply to yours of the 15th instant.

Since the passage of the inter-state commerce law there has been no time that the Standard Oil Company, or any of its subordinate companies, have enjoyed any lower basis of rates on the business handled by our line than that which has been charged all other oil companies doing business with us. This statement is made absolutely, and without qualifications of any kind or character.

In all our dealings with the Standard Oil Company we have found it to be the rule that they have never in any instance asked us for any lower basis of rates than was enjoyed by any other company.

Yours, very truly,
D. B. Robinson, President.

Mr. Howard Page,
Standard Oil Company, New York City.

[Southern Pacific Company. Office of the third vice president.]

San Francisco, August 23, 1899.

Dear Sir: I am in receipt of your letter of August 15, in which you refer to the Industrial Commission which recently met in Washington, and before which appeared a number of oil producers and refiners, who testified generally that it was their belief that the railroads of the United States were giving the Standard Oil Company and its interests many advantages on its shipments of petroleum and its products as compared with those of other oil shippers.

I respond to your invitation to state the facts bearing upon this question in its relation to the Southern Pacific Company, not only because I believe the Standard Oil Company is entitled to it, but I believe it is my duty to my own company and to the railroad interests of the United States that these facts should be published.

Since the passage of the inter-state commerce

law, the Standard Oil Company has not solicited nor received from the Southern Pacific Company any lower rate of freight for the transportation of oil or of the products of petroleum, or anything else in which the Standard Oil Company deals, than the lawful, published tariff rates, which at the same time were given to every other shipper of like commodities for similar and contemporaneous service, nor has the Standard Oil Company, in its use of the transportation lines of the Southern Pacific Company, employed any device such as misrepresentation of the contents of packages or cars or underbilling in weights in order to avoid the tariff or to gain advantages over its competitors. I say that the Standard Oil Company has not employed these devices because it has not been detected in any such attempts, and our system of inspection has been such that I do not believe such attempts could have escaped detection. In other words, according to my observation and experience, and I have full knowledge of its transactions with the Southern Pacific Company, the Standard Oil Company has obeyed the law in its spirit as well as letter.

Yours truly,
J. C. Stubbs,
Third Vice President.

Mr. Howard Page,
Standard Oil Company, 26 Broadway, New
York.

[The Lake Shore and Michigan Southern Railway
Company.]

Dear Sir: Replying to your favor under date 15th relating to rates charged Standard Oil Company on traffic as compared with charges on similar traffic from other shippers.

The Lake Shore Company does not now, and has not heretofore, so far as can be ascertained from the records for a period of years, charged the Standard Oil Company any less rate per hundred pounds on its property, whether oil or products, in tanks or barrels, carloads or less, than charged to the trade in general on such property; in other words, the Standard Oil Company has not received any lower rates on the vast traffic handled by that company than other shippers of the same commodities, regardless of quantity.

I would further state that the Standard Oil Company, nor its representatives, have at any time asked that we give them any form of concession, but on the other hand, have insisted that the full authorized tariff rates be charged on its shipments, and that all other shippers of similar commodities be treated likewise.

The conditions in that respect do not differ from the practice during the time I was connected with the Chicago and Northwestern Railway, as the Standard Company insisted then, as it does now,

on application of the tariff rates on all shipments of petroleum and its products.

Very respectfully yours,
W. H. Newman, President.

Mr. Howard Page,
Vice President Standard Oil Company, New
York City.

[New York Central and Hudson River Railroad
Company, Grand Central Station.]

New York, August 28, 1899.

Dear Sir: Referring to your letter of the 15th instant you may state explicitly, for this company, and also for the Lake Shore and Michigan Southern Railway Company, of which I was president and am now a director, that no discrimination in the matter of rates has been, since the passage of the interstate law, extended in favor of the Standard Oil Company over either of these lines. So far as my knowledge goes, no application has ever been made by any of the officers of the Standard Oil Company for any discriminating rate.

Yours truly,
S. R. Callaway, President.

Mr. Howard Page,
The Standard Oil Company, New York City.

[Pennsylvania Railroad Company, General Office.]

Philadelphia, August 28, 1899.

My Dear Mr. Page: In reply to your inquiry, in which you call my attention to statements in the newspapers relating to the inquiry of the Industrial Commission, in which statements witnesses say that the railroad companies pay rebates to the Standard Oil Company and permit preferences by undergaging tank cars and by paying fictitious prices for oil supplies, I beg to say that if said assertions are meant to apply to this company, in its relation to the Standard Oil Company, they are wholly groundless and without foundation in fact.

Yours truly,
W. H. Joyce,
Freight Traffic Manager.

Mr. Howard Page,
26 Broadway, New York City.

NO PREFERENTIAL RELATIONS SINCE 1887—DISCRIMINATIONS INJURED THE STANDARD.

Q. (By Mr. Smith.) You state very plainly that there were no rebates or advantages in rates given to the Standard Oil Company. Have you been given any advantages with reference to quicker movement of

freight—immediate dispatch? A. None that I am aware of.

Q. You have not asked for any? A. We have not asked for any. I do not know of any such preferential arrangements.

Q. (By Mr. Jenks.) Is this a general statement you make that covers the entire period since the passage of the interstate commerce law? A. Yes.

Q. That the Standard Oil Company has in no way had any preferential relations in freights? A. That is my answer.

Q. Preferential relations would seem to cover it? With reference to the period immediately preceding that, you state that before that time for some years the freight rates to all large shippers were made by special contract, and that you did have special rates then? A. Yes.

Q. Did I understand you to say further that so far as the Standard Oil Company was concerned the prices to consumers were based upon freight rates in part, so that consumers received the benefits of any benefits you had? A. I make that statement very broadly.

Q. You make that statement very broadly, then, that the Standard Oil Company did not receive any benefit in preferential rates? A. On the other hand, I think the old system in vogue among the railroads prior to the passage of the interstate commerce law was altogether contrary to the interests of the Standard Oil Company. I repeat again that the greatest prosperity has come since the passage of the interstate commerce law.

Q. (By Representative Livingston.) In your answer a moment ago you said, "Not in any way covered by interstate commerce law." Are you getting rebates in any way not covered by this law? A. We are not. There may be local shipments, as between some points within a state where tariffs are not issued, that I am not familiar with at all, but not to my knowledge in any way that would debar any other shippers in the same business, if there was another shipper there, having the same thing.

Q. There is some specific testimony that in some place on the Pennsylvania Central, between two given points, the charge on a tank of oil was \$1.80 and that the Standard Oil Company got, or the railroads gave back, the 80 cents and put the \$1 into their treasury, and with the independent company kept the whole \$1.80? A. I do not know of any such case.

Q. Would that be a violation of the interstate commerce law? A. If within the State it might not be; but I have never heard of any such case as you say.

Q. You say they charge them all the same rates? A. Every shipper could have had the same thing. To my own knowledge I do not know of the case you specially refer to.

Q. (By Mr. Farquhar.) Are there not many railroads not under the interstate commerce law whose lines are within a State, and which are not in the interstate commerce business? A. There may be, but I do not know. I do not know, on our part, of

any arrangement that would be exclusive in connection with any such railroad, if there be such.

Q. (By Mr. Jenks.) Have you any further reference to make to this freight question? A. I think that is all.

Q. (By Mr. Kennedy.) In one of these letters your correspondent spoke of your policy in refusing rebates. Have any of the railroad companies offered the Standard Oil Company rebates in consideration of securing their business? A. Well, that would be a very difficult question for me to go into. That the Standard Oil Company during the past 10 or 11 years, since the passage of the interstate commerce law, have not secured large amounts of rebates is true; but that they may have been offered rebates at times is undoubtedly true; but I have no specific cases to state. It is one of our duties to keep looking after our competitors a little bit, and we are so shining a mark we could not if we were so disposed, but we would not, even if we could and if we were desirous, which we are not.

Q. (By Mr. Smyth.) You state positively that you did not accept them in general and have not accepted them? A. We have not and do not expect to accept them.

Q. (By Mr. Jenks.) Your statement applies also to your shipments within a State? A. Yes; and I speak of them in a general way—that we have no rates that would debar any other shippers from the same basis.

Q. (By Mr. Farquhar.) Under the old rule of special contracts, is it or is it not a fact that the Standard or any other great company never needs to solicit special contracts from great roads, but that the railroads, competing among themselves, offer the shipping contracts and then cut below their original contracts themselves? A. Unquestionably.

Q. That was the character of all traffic business before the interstate commerce bill? A. It was.

Q. (By Mr. Smyth.) That was proved by the case of the Pennsylvania railroad you have spoken of when you shipped by the Erie canal? (Question not answered.)

Q. (By Mr. Phillips.) Do we understand you, Mr. Archbold, that large shippers never solicited low rates—that they were always solicited on the part of the railroads? A. I answered that question by saying that a business as large as ours is sought for by railroads. I do not say other shippers do not solicit rates; I have no doubt they secure them.

Q. (By Mr. Jenks.) In one of the letters you read a statement was made to this effect—that the Standard Oil Company, by not asking for rebates and adhering strictly to the established or published freight rates, had aided in keeping the freights up. Is it your opinion that the railroads generally speaking, feel that the Standard Oil Company is aiding them in keeping their freights up, so as to make them good paying railroads? A. That is true, and the railroads will say so if they are frank enough to say so. Any of you who have contracts with the

great railroads of the country, if you will talk with them on that subject, will find that to be the case.

Q. (By Mr. Phillips.) How will keeping the rates up affect the general public? Is that in their interest? A. It is to the interest of the general public to have a uniformity of rates under the interstate commerce law, as the public consider it.

Q. (By Mr. Smyth.) You are in favor of the interstate commerce law? A. I am, most decidedly.

Q. (By Mr. Ratchford.) Mr. Archbold has made himself very clear, I think, on the question of rebates on the shipments of the Standard Oil Company. We have received specific testimony to the effect that the Standard Oil Company received rebates from the shipments of other companies. What do you know of that? A. I will treat on all that matter later, if you will allow me.

THE CONSUMER GOT ALL REBATES AND MORE.

Q. (By Mr. Phillips.) You stated, if the chair remembers, that since the passage of the interstate commerce law your profits have been greater than they were prior to that. Now, was that due to the passage of the interstate commerce law, or on account of the larger business and less competition? A. Well, I think that one of the causes—a number of causes may have combined in the growth of the business—but one of the causes is the better settled condition of the business incident to the passage of the interstate commerce law. I think that my assertion that the consumer was given cut rates of freight is not only true, but that the effect was greater than I have stated it; for in the strain, the anxiety that the manufacturer was necessarily under lest his neighbor, his competitor, might get a lower rate than he was getting, they were always all very anxious sellers of oil. I think that oftentimes the price was made lower than it needed to be because of the belief or expectation that lower rates of freight were either prevailing or might prevail. I think the business was sacrificed on that account.

Q. But you do not wish to leave the impression that your greater income or greater profits are due to the interstate commerce law? A. Oh, no; business has grown.

Q. And competition has not been so great? A. Oh, I think competition has been quite vigorous.

PRICES OF REFINED OIL IN NEW YORK, AND OF CRUDE IN 1896.

Mr. Lee made the statement, as to the course of prices for domestic refined oil for New York, or Greater New York, during the period from March, 1896, to July, 1898, I think it was, that the Pure Oil Company, the company with which he is related, having made its advent in the market of Greater New York, in March of 1896, found the price which we were charging to the people of that great metropolis to be 9½ cents a gallon, and that because of their advent and of their supposed competition we dropped the prices on them until July of the

same year it was 5½ cents. He spoke of this not only as illustrating our method of attack as against the competitor, but, I believe, claimed some credit from the people of Greater New York to the Pure Oil Company because of their advent there. I will read from the list prices of the period named as they prevailed at the time and show that, to all the trade in Greater New York and its vicinity, in March, 1896, our selling price averaged for the month 7.98 cents as against his statement of 9½ cents.

Q. In that immediate territory? A. In that immediate territory.

Q. (By Mr. Phillips.) Was that immediately before or at the time of the advent of the Pure Oil Company? A. Their advent there was in March, according to his statement.

Q. Can you give us the statement of the month prior to that? A. I made it only for the period covered by him in his testimony. I can give you the other. And I will also quote from that statement as showing the relation between the two—the crude oil prices as they prevailed. In March the average price of crude oil per barrel of 42 gallons at the well was \$1.42. In April our price was 7.31 cents, the average price of crude oil being \$1.22. In May the average price of refined was 6.94 cents and the average price of crude was \$1.14. In June the average price of refined was 6.72 cents and the price of crude \$1.15. In July the average price was 6.23 cents and the price of crude \$1.09. It is only an illustration of the carelessness which marks the statements which our competitors make, with reference to any feature of the business in which they want to make a point.

Q. (By Mr. Phillips.) One question there; did you sell any oil in March as high as 9 cents? A. I give the average prices.

Q. Was there any other selling price? A. I should say not, because there could not be an average of that.

Q. It could be sold at 10 or 11 cents in the beginning and three or four cents at the close? A. The following month would show that.

ANY GREAT VARIATION IN PRICE IN ANY LOCALITY WOULD BE SPEEDILY KNOWN AND WOULD BE DISHONEST.

Q. (By Mr. Jenks.) You give these average prices for Greater New York. The statement has been made at different times that it is your habit in dealing with the customers of competitors to find out the individual customers and make special cut rates to them. It might easily be, therefore, that your average price would be what you have given, and that to a good many special customers, with whom the Pure Oil Company was trying to deal it would be 5½ cents. A. I can not make any definite statement, but I would reply that it would be utterly impossible for us to have any great variation in price to any special customers in any locality. It would be speedily known and it would be dishonest, and I want to say that dishonesty will

not win in any business. We have got our hold on the trade in 30 years because we treated the trade honestly and not dishonestly.

Q. You would be safe in saying that in March, 1896, no oil was sold to any customer for less than 6 or 6½ cents? A. Oh, not for less than 6¾.

RAILROADS VS. U. S. PIPE LINE—NO FIGHT OF THE STANDARD'S.

Mr. Lee makes a statement regarding the difficulty of his pipe line, the United States Pipe Line, in crossing railroads and securing right of way to the seaboard, and makes a general statement implying that we have instituted and carried out great obstructions to their progress. I want to make a general denial of this statement. We have not at any time had any different relations with reference to any obstruction of their line than would attach to any competitor in a line of business engaging against another. With reference to the special features referred to by Mr. Lee, and which he attempts, by implication at any rate, to connect us with, in the crossing of the Delaware and Lackawanna railroad in New Jersey, I want to say that the contention in that respect was entirely in the hands of the railroad, and not at our hands in any possible respect. They went there surreptitiously and endeavored to force their way, on a Sunday, over a line where they had no right, either by private purchase or by public franchise. Having accomplished the crossing of the road in that surreptitious way, they stationed there an armed force to prevent the railroad company from asserting its rights and taking out their lines, and kept that force there for a long period. The railroad went about it in a peaceful way, in the courts, and the final result is that the decision is against the line, after the case has been carried up finally to the supreme court of the state, and they must, of course, remove their line. But any statement on Mr. Lee's part, or any other witness, that we had anything to do with that matter, or with reference to any of the difficulties interposed in their progress to the seaboard is absolutely false.

Q. (By Mr. Phillips.) Did your company own in fee simple the tract of ground, and was a roadway reserved by the landholder? Was that purchased by them? A. It was not my case, and I am not conversant with the details regarding it. The fact that after having been fought in the newspapers and in the courts for a term of years, seeking the sympathy of the judges as well as the public, the supreme court of the state has ruled against them is the best evidence, I think, that the right was against them. I want to say with reference to our pipe lines that we never endeavored to cross any man's right of way without first seeing him about it.

Q. Still did they not go through the railroad on their own ground, and was not this the final decision, that they had not the right to lay a pipe line where a man had reserved a right of way under the

ground? A. It was not only decided that they had no right there, but they were ordered to move.

THE STANDARD NEVER HAD SO LOW A FREIGHT RATE.

I want to present a statement showing the rate of freight which Mr. Lee's United States Pipe Line enjoys from the Central Railroad of New Jersey on the crude oil and refined oil also transported over that line from the terminal point of their pipe line to the seaboard; it being a lower freight, I think, than the Standard Oil Company ever had for an equal distance at any time in the history of their business. (Witness here reads a letter from the Central Railroad of New Jersey.)

CENTRAL RAILROAD OF NEW JERSEY'S RATE TO UNITED STATES PIPE LINE, HAMPTON JUNCTION, N. J., TO BAYONNE, N. J.

(Distance, 52½ miles; mileage, ¾ cent each way, equals 78 cents per car; empty car returned free. Weight per gallon, crude oil, 6 2-3 pounds; refined oil, 6½ pounds.)

	Rate per barrel of 50 gallons	Actual wgt. per barrel of 50 gallons	Rate per 100 pounds	Rate per car of 120 barrels	Rate per car, less mileage
Crude ...	0.0692	333	0.0208	\$3.20	\$7.42
Refined ..	.0769	325	.02366	9.22	8.44

The above shows that this oil is being carried 52½ miles in tank cars, averaging 120 barrels or 20 tons to the car, at a gross average revenue to the railroad, on the crude and refined oil of \$7.93 per car, and out of this revenue the railroad returns the empty car free.

The contract between the railroad and the pipe line is for 100 years from January 1, 1894, and provides for various rates from different points along the line of the Central Railroad of New Jersey to tidewater. The oil is now (and has been for three years) shipped from Hampton Junction, and the above rates are being paid.

The contract further provides the right upon the part of the Pipe Line Company to abrogate the arrangement upon five years' notice at any time during the 100 years. The railroad has no right to cancel, excepting for violation of lease.

Q. (By Mr. Smyth.) The lease is on record? A. Yes; it would seem that if there ever was a preferential contract that is one of them.

Q. (By Mr. Jenks.) You say this is on record? A. It is not a lease; it is a contract.

Q. (By Mr. Phillips.) You do not assume to say that it is an illegal contract? A. I am not a lawyer; I am not passing upon the legality of the question.

EFFORTS TO BUY OUT THE INDEPENDENTS—ADVANCES FROM THE OTHER SIDE.

Mr. Lee claims at great length and with great particularity that we have at different times done

our best to buy them out, offering them large inducements in the way of extraordinary prices for their properties, and have done our best to get them out of the business by purchase. I want to say that any approaches on that line that have been made have come from Mr. Lee's side to us; and I want to say, now that he has forced the question, that approaches of that kind have been made by pretty nearly every person in connection with his company, including not only Mr. Lee, but Mr. Phillips, Mr. Nichols, Mr. Murphy, Mr. Jennings, Mr. King, and Mr. McDonald, and as I said, pretty much every gentleman prominent in the affairs of that company. I want to say further that we have persistently declined the considering of any such combination with them on the ground, first, as we have said to them at various times, of its illegality; and, second—and this would have been enough in itself—our unwillingness to enter into any business relations with them because of our lack of faith in them. We have had experience with the gentlemen, different ones of them, at different times, and we should have known if there had been no legal difficulty in the way of such combination that it was impossible for us to enter into any such relation with them. I am making the broadest possible denial to Mr. Lee's statement that we have gone after them with reference to their purchase or combination; and I am making in return a statement that they have up to this very day, within the period of your sitting here, approached us on this question.

Q. (By Mr. Phillips.) Do you mean to include all of them? A. I mean to include the gentlemen I have named and others I have not named.

Q. Have any persons or any agent or gentlemen from whom you bought property approached individual members coming direct from your office, to solicit the selling of an interest to you? A. No; I say broadly that the approaches have been made from your side, and the answer is as broad as I can make it.

Q. You have no knowledge of a person coming from your office after soliciting you to make a transaction with these people? A. I have knowledge of persons coming to our office who came there at the instance of different people in that connection to raise a question about it; you came there—many of them—if that is what you mean.

THE INDEPENDENTS PROPOSED A DIVISION OF THE BUSINESS.

Q. Was not that to have a stop put to the litigation that was going on in New Jersey and to have a right to live as a company? A. I do not know what you mean by that.

(By Mr. Rogers.) May I have the privilege of prompting Mr. Archbold?

(By Mr. Phillips.) Certainly, you have the privilege.

(By Mr. Smyth.) I think so, certainly.

(By Mr. Phillips.) Any information of that kind is entirely admissible.

(After talking with Mr. Rogers.) A. I answer

broadly again, after conference with Mr. Rogers, that we have never sent anybody for any purpose.

Q. (By Representative Livingston.) Those propositions, were they written or verbal? A. Oh, no; they were all oral. You do not get that company into making written propositions; they are too crafty.

Q. (By Mr. Phillips.) Do you say, Mr. Archbold, that you were approached by a large per cent of those persons in an unfair way? A. Oh, I did not be so; I do not say so. It may have been entirely fair and just in their view but their propositions, in our view, was illegal and not to be entertained.

Q. Was not that after you had purchased a large amount of stock, a controlling interest, in the Producers' Oil Company, Limited, and also purchased a large amount of the United States Company's stock, and was it not to make some fair, honorable and just contract that would leave these companies the privilege of living and doing business years ago when they were very badly crippled by opposition from the Standard Oil Company, by the lowering of prices of oil in Europe and other places? A. Using your own case, Mr. Phillips, as an illustration—and you can hardly find fault with that—I do not think that at the time you came to Mr. Rogers or myself you raised any question whatever with reference to any possible minority ownership in any of these companies. What you and they proposed was simply that a division of the business be made so that you would have a percentage and we a percentage, in order to co-operate in the marketing of the oil and in all that pertained to the welfare of the business; is it not so?

Q. Was it not to get the privilege of handling the capacity of the lines then existing and to cease further opposition and to do away with the opposition which was very badly crippling these companies; and had you not at that time lowered the price of oil in Germany so as to make it entirely unprofitable to the refiners? They lost very large sums of money and you had bought out a per cent. of the refineries that were engaged in these independent lines? A. Nothing of the kind existed. Our business was entirely satisfactory, so far as I am aware; and we had no special desire that a combination should be made, as is evidenced by the fact that we were unwilling to entertain it. And I now further state that we were unwilling to entertain it not only because of its illegality, but because of the lack of faith in the individuals connected with it. There can be no question about that.

Q. Well, do you know that at that time a Mr. Poth was managing the business of the independent refiners in Germany? Did he not sell out to the Standard Oil Company the tankage procured in Germany, so that these companies could not do business? Did they not have to re-establish connections and send agents there, and build tankage in which their oil could be received and distributed in Germany? For a number of years did you not put the prices there so that there was no profit? And during that period did not you buy out some of the

largest refineries that were connected with these companies? A. My answer, Mr. Phillips, broadly, is that none of these questions have anything to do with this company, with that proposition. You came to us seeking these propositions. That is my statement and you dare not deny it. That is true, every word of it.

CHARACTER OF MEN PROMINENT IN THE STANDARD.

In answer to the query regarding gentlemen prominent in the Standard Oil Company, Mr. Lee saw fit to speak of them in a most depreciatory way. It is not amiss for me to ask these gentlemen to think for a moment of J. D. Rockefeller, William Rockefeller, H. M. Flagler, William G. Warden, Charles Pratt, J. W. Bostwick, Benjamin Brewster, Henry H. Rogers, W. H. Tilford and James Magee, and I might mention scores of others prominent in the Standard Oil connection, whose business genius and boundless energy have been given to the building up of the petroleum industry. Will you think of these gentlemen in comparison with the men who have appeared here to defame them? I might go further and speak of the beneficent use these gentlemen are making of their substance, but they require no eulogy at my hands.

In answer to the query as to what would be the effect if the Standard Oil Company were abandoned or dismantled, Mr. Lee said that the prices of refined products would go lower all over the world. I will not occupy your time by any lengthy argument in refutation of this most absurd proposition, that if we were really out of existence and put out of existence that which represents today two-thirds or three-fourths of the active capital, energy and equipment employed in the manufacture and distribution of oil, the prices would go lower; but I will call your attention to what Mr. Lee says in practically the same breath, as showing his utter inconsistency. He gives it as his opinion that if the Standard were out of the way prices would be lower, and in the same breath testified that he wanted them out of the way because for five years he, in his own business, has not made a fair profit. And the utter inconsistency of his testimony is shown by this question and answer: "Q. (By Mr. North.) What do you call a fair manufacturing profit? A. They would be entirely satisfied to do this business at 10 cents a barrel on crude oil that runs through the refinery; I think the Standard Oil Company makes \$1.50 to \$2 on every barrel that goes through their works."

If it is true that the Standard Oil Company make \$1.50 to \$2 and they can not make 10 cents, they are not good people to serve the public.

REFINED OIL FROM OHIO CRUDE AS GOOD AS THAT FROM PENNSYLVANIA.

He says that the quality of Standard oil has deteriorated because of using Ohio crude and that the

reason is that Lima oil contains arsenic and sulphur. I want to say of the gentlemen connected with the companies represented by Mr. Lee that they have from the very beginning of the great production of oil in Ohio and Indiana, because of their small interest in competition with it in the Pennsylvania region, done their very utmost to depreciate and discredit the standing of the products of Ohio oil in the markets of the world. They came to New York and before the New York Produce Exchange made a very vigorous effort to have the exchange rule that refined oil produced from Ohio crude should not be good delivery in the markets of the world. Their course has been utterly indefensible in respect to the great interest involved in those states, and nothing but the most active effort on our part has saved to those states the markets which are today giving them the profit that is inuring to them in the production of the oil in those states. And I want to say that this is in spite of the fact, which they must have known or could have known, if they had any intelligence on the subject whatever, that after the sulphur element in the Ohio crude was conquered—and it was a very difficult work to conquer it, which we applied ourselves to successfully—the average of the refined oil produced from the Ohio crude has been and is quite equal to that produced from the Pennsylvania crude. That is now admitted by all buyers and in all markets, and is known to consumers where they know anything about it at all. The talk which the agents of the Pure Oil Company and which the Pure Oil Company have made, and continue to make, as to the superiority of their products over even that which we make from the Ohio crude is entire nonsense; it is not true.

I want to call attention to Mr. Lee's testimony, given somewhat in detail, indicating that we obtained higher prices for oil abroad than we do in this country. If that is so—and I do not admit that it is so, but admitting for the sake of argument that it is—it is a pretty good argument that the consumers in the United States are being very well treated by the Standard Oil Company.

FOREIGN GOVERNMENT CONTROL—POPULATION AND OIL CONSUMPTION OF GERMANY AND FRANCE.

He makes a long talk about foreign governmental control, which is about as silly as anybody ever listened to, and I will not take the time to comment on it.

He makes a statement regarding the comparative population and oil consumption of Germany and France, and I refer to this statement only to show how exceedingly careless he is in respect to statements made before this body on matters in which he seeks to influence your minds and that of the public. (Reading.) "Q. Abroad, where the oil of the independent refineries goes, which is not of such a grade as can be consumed in the states

here, does it come into competition with the oil sent there and sold by the Standard? A. Yes; the Standard is doing a very large business in Germany. Germany is the largest oil market in the world; although the population is about the same as France. I think I am not far wrong in that."

The relative population of Germany and France, by the last census of 1891, was: German population, 49,421,803; French, 38,343,192. The consumption of oil in the year 1898, the last year of record, in barrels of 50 gallons, was, in Germany, 3,357,297; and in France, 1,683,146. Mr. Lee said it was 20 times as great in one as in the other and that their population was about the same. I submit this statement to you.

PRICES OF COAL AND MINERS' WAGES.

He makes the statement that the Standard fixes its own price at which it buys coal, and is thus enabled to oppress not only labor in its own line of business, but also the coal. The statement is entirely and absolutely untruthful. The Standard buys its coal on competitive offerings, and if the price is so low as to compel low prices for labor it is the result of competition.

PRICES OF CRUDE OIL.

He goes into an elaborate argument to prove that the prices paid for crude oil have been unremunerative to the producer. This charge, which is more specifically, and I may say hysterically, made by Mr. Lockwood, I will reserve for fuller answer until I reach Mr. Lockwood's testimony.

THE STANDARD'S MANUFACTURE OF CANS AND CASES.

In answer to a query Mr. Lee says that the Standard are largely supplying eastern markets with Russian oil and making their tin cans abroad. I want to submit, gentlemen, a series of statements on this interesting subject. Our business in the canning of oil for the markets where the oil must be put into tin cans and packed in wooden boxes for the market, has been a very important feature from the beginning. It is a business in which we have perhaps expended as much or more industry in keeping and maintaining the markets, as in all the other sections of the world combined, because in those markets we have found our great competitor, Russia, most active. In answer to Mr. Lee's statement that we have practically abandoned this business, and that we are buying Russian oil in bulk and making tin cans abroad in which to put it and send it to the market, I present this statement, being memorandum of our manufacture of tin cans for the five years beginning with the year 1894 and ending with 1898:

Number of five-gallon cans manufactured, five years, 1894 to 1898, inclusive; also cases.

About 2,500 men are steadily employed in this industry in the United States.

In five years we manufactured in the United States 223,116,660 tin cans, which were packed in boxes holding two cans each, the requirement being in boxes made from our native pine. The boxes were made mostly from Canadian pine, but made in this country, lumber being brought here and the labor being employed here. This business involv-

Total petroleum products exported from United States in cases during years 1894 to 1898, inclusive.

Q. (By Mr. Smyth.) Is there any competition from America? A. There is practically no competition from America. I do not know but these gentlemen do some small amount of business. It is almost inconsiderable from the fact that we do not even know that they are doing it.

Q. The principal competition comes from Russia? A. The principal competition comes from Russia, and now from the far east, as I will explain a little further along. There is getting to be a large production of oil, especially in the Dutch East Indies, but I will go into that in another place.

I may add, gentlemen, just by way of a word of explanation, that I think in all those countries to which we send oil we have our own active American agents on the alert for the American industry; and this gentleman comes here and states that we are not doing this business.

CONDITION OF THE OIL REGION.

In answer to the query, or in pursuing the argument, rather, that the Standard had so governed prices for oil as to have made it an unremunerative business in the oil country, Mr. Lee made a most astonishing statement, that the countries producing oil are not as well off as though they had never produced a barrel of oil. That section prior to the opening of the oil industry was a comparative wilderness, noted, if it was noted at all, principally for its hemlock and buckwheat. The oil production has made it a world renowned center of marvelous activity. It has taken there a population of tens of thousands, I may say hundreds of thousands, of prosperous, happy, contented people, the like of which probably does not exist in the same territory in any place on God's footstool. The oil production has built towns and cities and railroads. It has given employment—steady, remunerative employment—to thousands of American workingmen through all this period; and for a man to stand up, who comes from that section, with a knowledge of conditions as they exist there, and make such a statement, is, as I say, utterly incredible.

CAPITAL, PROFIT, STOCKHOLDERS, OF THE STANDARD.

Q. (By Representative Livingston.) In connection with this statement you have just made, will you give us the amount of capital invested in the Standard Oil Company, and a list of all the stockholders, and the profits on that investment? A. The figures with reference to all the questions are being made up, as Mr. Jenks knows.

Q. A list of the stockholders?

(By Mr. Jenks.) A list of stockholders, I may say, was not asked for in the general schedule.

Q. (By Representative Livingston.) Well, I am asking for it now? A. I can not answer as to that.

Q. (By Mr. Phillips.) Would you be willing to meet the commissioner's request and furnish a list of the Standard's stockholders in the trust as it formerly existed, and the combination as it now exists? A. I could not answer now without further conferring in reference to that statement.

Q. (By Representative Livingston.) Will you promise the commission that you will confer with the authorities, and if these things are not inconsistent and impracticable, you will furnish them? A. If they are not inconsistent and impracticable I should be glad, of course, to give any statement that might be asked.

Q. (By Mr. A. L. Harris.) Would not this be the best testimony in refuting the statements made by Senator Lee, to give the taxable property of those counties previous to the discovery of oil and at the present time? A. I think it would be very interesting.

Simply as an illustration of the point I make of the absurdity of Mr. Lee's statement, I present for your information a statement of the value of Pennsylvania crude oil as compared with that of other states, the total production from the beginning of the industry to the year 1898, inclusive, and figured on a very conservative basis.

Total production and value of Pennsylvania crude oil, 1859 to 1898, inclusive.

[Barrels of 42 gallons.]

Year	Production	Average price per barrel at wells	Total value	Land Interest	Working interest value

This table shows that during this period, and this is an interesting statement, I am sure, that there has been taken from the oil fields of Pennsylvania 662,048,642 barrels; and that the average for all that period of the prices paid at the wells for the oil is \$1.163, or a total value of \$769,948,397.37.

ROYALTIES TO LANDOWNERS.

Q. (By Mr. Smyth.) That amount has been paid to the producers for crude oil? A. This amount has been paid to the producers for crude oil. Now, as has probably been brought out to you in the course of this testimony, the oil producing business is done largely on a basis of what is called royalty. That is, the operator takes a lease of the land and pays to the land owner, who is usually a farmer in that section, a certain free royalty interest for the right to occupy and drill the land.

Q. (By Mr. Smyth.) That right to occupy does

not interfere with the agricultural pursuit of the farmer? A. No; it is held as free as possible from that interference. That royalty right of payment has varied during the history of the business from one-half of the oil found to the present ruling basis of one-eighth, which basis prevails perhaps today through the larger part of the oil producing country. Of the crude produced one-eighth goes over to the land owner; and for that he does nothing, as I say, but furnish the surface on which to drill.

Q. (By Representative Livingston.) Now, will you go further and give us the average profits you have made on all those wells? A. Now, what I want to say is, that figuring for the whole period that the payment was one-eighth and not the high amount that has prevailed through most of the period, the payment in royalties alone to the people of that section on the oil produced would amount during that period to the sum of \$96,243,549.67.

Q. (By Mr. Smyth.) You think these counties are worse off than before the oil wells were drilled? A. If you have traveled through them you will not think so.

Q. (By Mr. Clarke.) What is the population of that region? A. It would be a mere guess on my part. Mr. Boyle or Mr. Lee could answer more intelligently than I. I have not lived there for some years; I would say about 350,000.

SOUTH IMPROVEMENT COMPANY.

Again Mr. Lee refers in answer to a question by Mr. Jenks, to the South Improvement Company, as though it was actually doing business, which was not true.

Q. (By Mr. Clarke.) The South Improvement Company did fix rates, did they not? A. Never to do business.

Q. But they had rates fixed? A. There was a contract entered into, but abolished before it became operative.

Q. But there was another contract, and is it not in sworn testimony that that contract was in existence only two weeks afterwards, and did or did not the rates fixed by the South Improvement Company prevail after the Standard Oil Company came into existence? A. I have no knowledge of any relations on the part of the Standard Oil Company succeeding to the South Improvement Company whatever. I have been an opponent of the South Improvement Company, as you well know. I have disapproved of it in theory, and practically disapprove of it today. I want to say that the statements that that which was the South Improvement Company is continued in the Standard are not true; if they had been true, I would not have been in it.

THE SHUT-DOWN MOVEMENT.

Mr. Lee refers to the shut-down movement, so-called. It was entered into at the request of the producers, who alleged they were suffering from low prices incident to a large accumulation of stock. Our relation to it was entirely the result of the urgency of the producers, who were represented by a committee; they expressed the greatest satisfaction with our course. I want to present for your knowledge, in support of my statement in this respect, the testimony of Mr. Thomas W. Phillips, given before the Congressional committee inquiring on this subject in 1888, page 112. I will read the concluding part:

"We are certain that there would have been much bankruptcy in that region had this movement not been made. I will state further, in justice to them, that this was not a movement on the part of the Standard Oil people. It was a movement conceived by the producers themselves. They approached the Standard people in regard to this matter, and after long negotiation, which you have here in testimony, the contract, which you also have, was formulated and signed."

Q. (By Mr. Phillips.) I assert the same thing today. A. That answers Mr. Lee's statement.

Mr. Lee says: "I believe if there had been 50 concerns engaged in the manufacture of petroleum, that just as wide markets would have been obtained for the article, and that while the consumer would not have paid any more for his oil, the producers would have realized better prices and have had a handsome profit, whereas I think they have not made any profit."

I present here a statement showing in detail the list of oil refineries in the United States, with their capacity, averaging a life to this time, the first of this year, the end of December, 1898, of 14 years, and numbering 66 in all.

Capacities of outside refineries.

Year built	Name and place of refinery	Number and capacity of stills	Total still capacity	Remarks
1882.....	Oil City, Pa.: Independent Refining Co., Limited.	{ 2, 250; 1, 500 }	3,000	Naphtha plant.
1885.....	Continental Refining Company, Limited.	{ 1, 600; 2, 700 }	2,340	
1887.....	Penn Refining Co., Limited... Rouseville:	{ 3, 580; 1, 600 }	1,500	Do.
1888.....	Germany Refining Company. McClintockville:	{ 2, 250; 1, 500 }	1,300	Pressing plant.
1888.....	Crystal Oil Refining Company.	1, 250; 5, 100	750	
1883; burned rebuilt 1890.	Reno: Empire Oil Works..... Franklin, Pa.:	2, 500; 2, 250	1,500	Naphtha plant; pressing plant.
1882.....	Relief Oil Works.....	2, 250; 1, 600	1,100	
1880.....	Petrolia: I. Dougherty.....	1, 16	16	
1880.....	Karns City: Bech Bros..... Norrilstown:	1, 100	100	
	Montgomery Oil Works.....	2, 100	200	
1887.....	Beaver: Beaver Oil Works.....	2, 60	120	
1887.....	Industry: Scott Oil Co..... Kendall, Pa.:	2, 25	50	

Capacities of outside refineries.

Year built	Name and place of refinery	Number and capacity of stills	Total still capacity	Remarks
1882.....	Emery Manufacturing Co.....	8, 600; 3, 125	5,175	Naphtha works, paraffin and tar stills.
1883.....	Kendall Refining Co.....	1, 150; 2, 100		Make lubricating oils.
1892.....	Eldred, Pa.: United Oil Co.....	1, 80	350	Lubricating and refined.
	Titusville, Pa.:		80	
1881.....	Robert Foggan	{ 1, 250; 1, 350 }	2,015	Naphtha works.
		{ 1, 600; 1, 815 }		
1885.....	American Oil Works.....	1, 750; 1, 500	1,250	
1888.....	Titusville Oil Works.....	{ 1, 500; 1, 280 }	920	Do.
		{ 1, 140 }		
1887.....	Oil Creek Oil Co.....	2, 350; 2, 125	950	Paraffin plant.
1896.....	Climax Gasoline Co.....	{ 1, 250; 1, 350 }	950	Naphtha works.
		{ 1, 350 }		
1893.....	Pennsylvania Paraffin Works....	4, 350; 1, 250	1,650	
	East Warren:			
1888.....	Cornplanter Refining Co.....	2, 150; 2, 100		
		{ 1, 125; 1, 100 }	975	Filtering works.
		{ 1, 250 }		
1885 and 1889	Crew-Levick Co.	3, 125; 3, 150	825	Do.
1892.....	Seneca Oil Co.....	4, 150	600	Do.
1897.....	Wilburine Oil Works.....	1, 500; 2, 300	1,100	Lubricating works.
1886.....	North Warren: Warren Refining	{ 2, 225; 1, 225 }	875	Filtering works.
	Company.	{ 1, 200 }		
	Clarendon:			
1885.....	Tiona Refining Company.....	3, 100; 1, 50	350	Do.
	Fidelity Oil Works.....	3, 100	300	Wax plant.
1894.....	Bolivar: Bolivar Refinery.....	1, 50	50	
	Pittsburg, Pa.:			
	Miller Oil Works.....	{ 1, 1,400 }	2,175	{ Barrel factory, Naphtha works, tar
		{ 2, 250; 1, 275 }		stills.
1880.....	Waverly Oil Works.....	{ 2, 500 }	1,670	Do.
		{ 2, 300; 2, 35 }		
	Union Oil Works.....	2, 40	80	
	Freedom, Pa.:			
	St. Clair Oil Company.....	1, 300	650	{ Tar still, naphtha and paraffin
1879.....	Freedom Oil Works.....	{ 1, 250; 2, 50 }	650	works.
	Washington, Pa.:			
1890.....	Beaver Refining Co.....	1, 150; 1, 100	250	
1887.....	Leader Refining Co.....	4, 200	800	
	Coraopolis, Pa.:			
1892.....	Pittsburg Refining Co.....	{ 1, 250; 2, 200 }	1,025	
		{ 1, 375 }		
1899.....	Penn Petroleum Works.....	1, 150; 1, 250	400	
	Murraysville, Pa.:			
1884.....	Philadelphia Co.	1, 50	50	
	Philadelphia, Pa.:			
1881.....	Crew, Levick & Co.....	{ 2, 80; 1, 500 }	785	
		{ 1, 125 }		
1881.....	Delaware Oil Co.....	{ 1, 300; 3, 100 }	1,450	
		{ 3, 200; 1, 250 }		
1877.....	Bossardt & Wilson.....	1, 220; 2, 125	470	
1874.....	Philadelphia Lubricating Co....	1, 250; 1, 100	350	
	Marietta, O.:			
1875.....	Ohio Oil Works.....	{ 1, 150; 1, 100 }	1,150	
		{ 1, 600; 1, 300 }		
1862.....	Marietta Oil Works.....	1, 225	225	
1864.....	Producers' Refining Co.....	1, 250	250	
1893.....	Buffalo, N. Y.: Crystal Oil Works.	1, 150	150	
	Cleveland, O.:			
1883.....	National Refining Co.....	1, 300; 2, 85	470	Naphtha works.
		{ 3, 75; 1, 110 }		
1883.....	Cleveland Refining Co.....	2, 100; 1, 85	885	
		{ 1, 65 }		
1873.....	Great Western Refinery.....	2, 300; 8, 80	1,240	
1864.....	Merriam & Morgan.....		No crude stills; tar and pitch.
	Toledo, O.:			
1889.....	Paragon Refining Co.....	{ 4, 400; 8, 500 }	8,000	
		{ 3, 800 }		
1895.....	Craig Oil Co.....	4, 550; 1, 600	2,800	Tar stills, wax works.
1895.....	Diamond Oil Co.....	3, 400; 2, 400	2,000	

Capacities of outside refineries.

Year built	Name and place of refinery	Number and capacity of stills	Total still capacity	Remarks
1890.....	Welker, O.: Manhattan Oil Co...	12, 600	7,200	Do.
1887.....	Florence, Colo.: Florence Oil Co.....	2, 600; 5, 100	1,700	
1887.....	Western Oil Co.....	2, 76; 2, 65 1, 75; 2, 78 2, 500; 4, 250 2, 570	3,653	
1879.....	San Francisco: Alameda Refinery	1, 1000; 1, 200 1, 400; 1, 80	1,960	
1898.....	Los Angeles: Franklin Oil Co...	2, 50; 1, 100	200	
1896.....	Oleum, Cal.: Union Oil Co.....	1, 150; 3, 150	600	
1896.....	Puente, Cal.: Puente Oil Co.....	2, 250	500	
1897.....	Ventura, Cal.: Ventura Oil Co... New York:	2, 60	120	
1879.....	Tide Water Oil Co.....	18, 800; 16, 600 12, 650; 17, 600 2, 450; 1, 250	43,150	Have tar and reducing stills.
1889.....	Columbia Oil Works..... Edgewater Oil Co.....	4, 650; 4, 700 7, 400	5,400 2,800	
	Total (66 in all).....	=====	125,079	
	Total capacity of outside steam stills		19,825	
	Total capacity of outside tar stills		1,355	
	Grand total outside capacity.....		146,259	

The average time since the above refineries commenced operations is now 14 years.

COMBINATIONS AND LABOR.

Mr. Lee makes a very labored effort to show that trusts and combinations affect labor injuriously. The best refutation possible of this statement is the record of our own experience. The fact being that for all of the years we have been engaged in business we have had scarcely any serious difficulty with the vast body of men employed. On the other hand, we assert most positively that, as a whole, there never was a more zealous body of employes than have been connected with our interests. We have been practically without strikes; our labor is well paid and contented in every department, and I submit that our experience in this regard is the best possible proof of the advantages of labor and capital working together on intelligent lines, where the rights of each are fairly considered. I am a firm believer in the right, and, indeed, the duty, of labor to organize, as I am in favor of the combination and organization of capital. Of course it is true that the labor organizations often do very unwise and arbitrary things. They fall frequently into the hands of leaders who are demagogic and lack the qualities of intelligent leadership, and they are badly influenced also by political demagogues, whose sole stock in trade is often their ability to talk loudly against capital and the employing class; and above all, they are too much influenced by the bad advice of an element in the public press that is

utterly depraved and demagogic and which teaches them altogether false ideas as to their duties. They will, however, learn better as time goes on. Capital, on its side, has made and is making grievous mistakes in the treatment of labor; but the two are moving together on irresistible lines toward organization and a better mutual understanding, and one of these days labor will realize, as the employing class already knows, that the howling of a demagogue is hurtful to all concerned, and a better era of understanding between the employer and the employ will be brought about.

MR. LEE'S REMEDIES.

At the end of his testimony Mr. Lee suggests remedies. They seem almost too frivolous to demand attention. His views on destructive competition, the limitation of capital, etc., seem altogether too absurd to call for special attention. I may say in conclusion, that he has taken good care to organize his own company or embryonic trust in the very state (New Jersey) which he criticises so severely, with a view, undoubtedly, to make his capital quite unlimited if he finds it will float.

OPERATIONS OF THE STANDARD IN OHIO.

I turn next to the testimony of Mr. Monnett, the attorney general for the state of Ohio. I want to say, by way of preface, before answering directly the points presented by Mr. Monnett that we are interested in Ohio, in whole or in part, in a num-

ber of corporations, duly chartered by the state, and all carefully observing the obligations imposed on them by their charters. The actual amount paid in taxes is in the neighborhood of \$250,000. The aggregate amount paid in wages to about 4,700 employes in the state by this organization is over \$3,250,000 per annum. The further distribution of money in the state for fuel and supplies of all kinds would amount to a vast sum. I submit for your consideration whether we are not a valuable client of the state and entitled to protection rather than persecution. That Mr. Monnett's course has been an effort at the most malignant possible persecution and probably worse, I will endeavor to show in taking up his testimony.

Mr. Monnett makes a statement that there has been great discrimination in favor of the Union Tank Line or Standard Oil Company. The rates fixed by the railroads in connection with tank car lots and single barrel or part car lots have been the same to all, and carried with them no discrimination whatever in favor of the Standard Oil Company. In other words, I deny the allegation particularly.

ALLEGED BURNING OF BOOKS.

Regarding the alleged burning of books at Cleveland, Ohio, I want to deny the fact of any such burning absolutely. At the time of the original inquiry on the subject we offered to produce every employe who could have any knowledge on the subject, who would each have denied the statement as to the burning of the books. The attorney general refused to have them sworn at the time, and at the time Mr. Monnett gave this testimony he knew that Mr. Squires, the then secretary of the Standard Oil Company of Ohio, had made an affidavit in the litigation pending in Ohio that the books were in his possession. Any denial that I have made regarding the matter, or any statement that I have made in reference to the testimony in connection with it, is true, and it is not true that I have made any retraction, as Mr. Monnett states, with reference to any statement that I have made. Mr. Monnett's reiteration of this matter, after all that has been shown regarding it is most reprehensible. I would like to characterize this in stronger terms, but I bow to the wish of the commission.

AMOUNT OF TRUST CERTIFICATES ISSUED.

Mr. Monnett endeavors to carry the impression that more Standard Oil Trust certificates were issued than our statements have shown. The allegation is made without a scintilla of truth to sustain it. It is contrary to all the evidence that was offered in the case, and it is utterly destitute of the truth. The stock and transfer books of the trust were placed in the hands of Mr. Monnett's associate, Mr. Kincaid, during the Ohio investigation, who examined them thoroughly and expressed himself as thoroughly satisfied.

DISMANTLING OF WORKS.

He speaks with feeling with reference to our having dismantled some works at Marietta. I want to call attention to two at Marietta, Mr. Rice's and Mr. Davis's, and I do not recall that we have dismantled any there. I do not know of any works there that we have dismantled.

Q. (By Mr. Farquhar.) This commission, in some of its testimony, has had considerable stress laid on the dismantling of the works by your company, and the delocalizing, transferring of business from towns and other places and the concentration into larger plants. Would you give the business reasons of the Standard with respect to any of these changes? A. I shall be glad to, and I have it in another place. I think you will find it amply treated.

THE STANDARD'S OIL BUSINESS.

Mr. Monnett makes a statement which, even to a person unfamiliar with the oil business is quite unintelligible, to the effect that somehow from the business of Ohio oil we make \$120,000,000 a year. It is entirely ridiculous. As I say, it is exceedingly difficult to know what he has in his mind. It certainly had no relation to the facts. I have had prepared a statement which shows the total sales in the State of Ohio of refined oil products for 1898 to be \$979,798.56.

Q. (By Mr. Jenks.) That includes all by-products? A. Yes; I will ask you to discount his statement at least \$119,000,000.

Q. (By Mr. Clarke.) That is the sales by your company? A. These were the total sales.

BRIBERY CASE IN OHIO.

I must speak somewhat guardedly, in the nature of things, about what Mr. Monnett saw fit to say about the conduct of bribery cases in Ohio. With reference to the so-called "bribery" cases in Ohio, I desire to say that affidavits have been filed with the supreme court of the State of Ohio denying specifically all of Mr. Monnett's charges of attempted bribery and all of his allegations in relation thereto, and asking the court to appoint a commission to investigate the charges. The court has not yet acted upon the subject. If they do not, we will then see whether there is not some other method by which Mr. Monnett can be compelled to answer on this matter.

Q. (By Mr. Farquhar.) What is the supposed amount of bribery? A. The newspapers have it about \$400,000.

Q. (By Mr. Smyth.) Paid to whom—to Monnett? A. To Mr. Monnett; yes. I say we have answered the matter and our answer is before the supreme court. With reference to what our final attitude will be it would be unwise for me to state now. We court an investigation.

Q. (By Mr. Ratchford.) Are you prepared to say that such a proposition might not have been made

without your knowledge, or do you deny— A. We have denied it to the very uttermost. Our answer is now in court.

Q. The answer of your company? A. The answer of our company.

I want to speak a word regarding the recommendation by Mr. Monnett of Mr. W. H. Clark, of Newark, Ohio, as a competent witness. In recommending this witness to you Mr. Monnett must have known that he was an untruthful, dishonest, discharged employe, and his imposing him upon you as a witness was an insult alike to you, to our interest, and to the country at large.

COMPETITION IN OHIO.

Mr. Monnett testifies, in answer to a question by Mr. Harris, as follows: "Q. What companies are competing with the Standard Oil Company in Ohio now? A. There is only a limited competition—I think the Scofield, Shurmer & Teagle people; and a man by the name of Shull, at Mansfield, has an independent agency and only a limited product. The Shurmer & Teagle people originally had a contract whereby they were allowed to live—to sell and live."

Mr. Monnett again refers to the absence of competition in Ohio and repeats that he does not know of a single independent chartered corporation left in the State of Ohio. However, he attempts to carry the impression that we are attempting to deceive the public by operating through different names in the State. He quotes the Penn Oil Company. I do not know what he means by this, as we have no such company operating in the State.

I now submit statements showing a partial list of our competitors in Ohio, composed of pipe lines, refiners, and producers, covering corporations, partnerships, firms, and individuals. The list is only partial, but it gives some indication of the utter lack of knowledge, or worse, that actuated Mr. Monnett in his statement. I will give you a summary of the incorporated companies engaged in the State of Ohio; not in the southern part, but in the Lima district. There are 159 corporations.

Q. (By Mr. Smyth.) Not controlled by the Standard Oil Company? A. Not to the interest of a dollar. They are, of course, all creatures of the State of Ohio, and if not chartered under the State they are all registered under the laws of Ohio and paying taxes in that State. There are 258 partnerships.

Q. Not owned or controlled by the Standard Oil Company? A. Not to the extent of a dollar.

Q. Not agents? A. Not agents of the Standard Oil Company in any way or sense.

Q. (By Mr. Phillips.) Have you any interest in these companies, in producing them? A. None that I know of.

Q. You have alliances with producers in the Pennsylvania field? A. Our business in Ohio is done in the name of the Ohio Oil Company.

Q. The point I wish to make is this. Have you not an eighth, a quarter, or a third in the leases in Ohio, as you have in Pennsylvania? A. Not in these I am presenting.

Q. In Pennsylvania and West Virginia you have? A. Not that I know of.

Q. Are you not interested a quarter or an eighth? A. We may be to a small extent.

Q. (By Mr. Jenks.) But not at all in any of these? A. It is such a trifling exception as not to be an exception, if at all. Of individuals there are 1,240, 159 corporations, 258 partnerships; and there are of refining concerns not in the remotest degree related to the Standard Oil Company eight active large concerns chartered by and doing business in the State of Ohio, which makes a grand total of concerns doing business in competition with us of 1,665 in the Lima district against Mr. Monnett's one concern that he could name and one business man that had a station at Mansfield.

Q. (By Mr. Phillips.) What per cent of the Lima field do you control in production? A. I have that here.

Q. (By Mr. A. L. Harris.) I had in my mind, when I asked Mr. Monnett the question, the refining companies, not the producing companies. A. He answered also regarding the producing companies—regarding them all.

Q. I asked the question with reference to the refining companies, and I think that he intended to make the answer to my question. A. His answer mentioned producing companies, and he spoke about the Penn Company being a producing company, but claimed that was ours.

Q. Is that a refining company? A. It is a producing company.

Q. (By Mr. Ratchford.) The witness has stated that the Standard Oil Company has virtually no interest in a number of producing companies he has mentioned. Have they no interest in the refining companies? A. None whatever, I believe.

Q. No relation with refining companies? A. None whatever.

Q. (By Mr. A. L. Harris.) How many refineries outside of the Standard are in operation in Ohio now? A. I have just given them. I do not think this covers them all, but the larger ones. This was made the first of the year. They are: Craig Oil Company, Cleveland Refining Company, Diamond Oil Company, Manhattan Oil Company, National Refining Company, Producers Refining Company, Paragon Refining Company, and the Sun Oil Company. This is made up with reference to the Ohio field. I might say also that the business done by these companies, and in which we had not one dollar of interest, direct or indirect, or one iota of control in any way, aggregated for the five years from 1894 to 1898, inclusive, 14,647,949 barrels. I am reminded there are some Cleveland refineries in competition with ours, not included in this list. By the way, these Cleveland refineries are included in the general list of refineries which I gave in answer to Mr. Lee's testimony. I have further a supplementary list of competitive producing companies, made up of organizations, corporations, partnerships, and individuals operating in southern Ohio, apart from the Lima field, aggregating 16 corpora-

tions, 8 partnerships, 69 individuals, or a total of 93 in that section, which should be added.

AGITATION OF THE OIL TRUST IN ENGLAND.

Mr. Monnett shows his vindictiveness as against the American oil industry by applauding a scurrilous pamphlet put out by one of the yellow journals of London at the instance of the Russian oil dealers as against American oil. There was not a word of justification for the statements made, and a committee of parliament, who have gone into the subject most thoroughly with reference to possible legislation on the oil test question in England, have upheld American oil as against all the outrageous charges made by the Russian industry and given publicity through this scurrilous pamphlet. I wish to say one word on the magnitude of the Russian oil industry and its menace to our American industry. Nowhere during the past year have they made so determined an effort against American oil as they have in England, and they have retained a journal of the lowest order to make these scurrilous attacks. The name of the journal is the Star, and this pamphlet is published undoubtedly at their instance, although it is anonymous in its character. Even the Russian people who put it out would not put their names to it. I have here a further statement of the Russian oil industry, giving statistics in detail, which I am sure you will find of great interest.

Q. (By Mr. Jenks.) Can you give us a reference to the official statements of the committee of parliament to which you refer? A. I will get that for you.

Q. (By Mr. Farquhar.) You state the Star article

is on the side of the Russian industry? A. They applaud the Russian oil and decry American oil; that is the purpose of the publication. The thing is to cry down the American oil.

Q. And you claim they injure the Standard? A. That is where they—yes; we are the large distributors.

Q. What is the test? A. 73 Abel.

Q. What is the equivalent of the test? A. About 120. I might add a further list of the Ohio companies organized since November, 1898, and not yet published. I will put them in.

PRICES OF CRUDE AND REFINED OIL, 1870 TO 1898.

Mr. Monnett endeavors to make a statement that the dismantling of the Standard Oil Company would reduce prices to consumers. I wish to answer this by giving statistics showing the record of cost and prices for a period.

The world-wide facilities employed by the Standard Oil Company and its affiliated interests for the distribution of refined oil would involve years of effort, and a similar amount of capital to replace, and would immeasurably increase the cost of oil to the consumer.

Q. (By Mr. Jenks.) The price of refined oil in the table is the average export price? A. Yes.

Q. Export prices fix the price of domestic refined? A. Substantially so.

Q. Can you furnish to the commission also a list of prices of refined water-white oil in the oil markets of New York, Chicago, and Cincinnati? A. If you will give me a memorandum of that I will.

Pennsylvania oil, stocks, and prices.

Year	Average daily product	Average price per barrel	Export price refined, per gallon	Stocks increased	Stocks decreased	Total stocks
1870	15,350	\$3.90	26%	203,872		544,626
1871	15,800	4.40	24 1/4		12,626	532,000
1872	17,925	2.75	23%	552,223		1,084,423
1873	27,106	1.80	18 1/4	541,134		1,625,157
1874	29,937	1.15	13	2,080,462		3,705,639

Since 1870 the daily production has increased per cent, and the price of refined about 75½ per cent, the price of crude oil has declined 75 per cent.

Average prices received for deliveries of standard white illuminating oils at New York City, Chicago, Ill., and Cincinnati, Ohio, during years 1885 to 1899, inclusive.

[Prices given are cents per gallon in bulk, exclusive of the package; 2½ cents per gallon added will give average price, including barrel.]

Whereupon the commission, at 1 o'clock p. m., took a recess until 2 o'clock.

INDEPENDENTS WANTED TO COMBINE WITH THE
STANDARD.

Q. (By Mr. Phillips.) Will you continue your statement? A. I will, with pleasure. I desire to make a word of explanation. Senator Lee has called my attention to the fact that in his opinion my testimony indicated that his approach to us with reference to their business was with a view to selling their properties. I did not mean so to state. His approach to us was with a view to combination. I supposed I had so clearly stated it; I make this statement in the fear I did not.

Q. Was it in regard to combination, or was it just not to be interfered with in getting a line through to New York—the right to live, rather than the combination; was it not put in that form? A. My understanding of it was, as I have stated, a combination.

MR. THEODORE F. DAVIS.

I take up further the testimony of Mr. Theodore F. Davis, of Marietta, Ohio. It is a trifle difficult for us to understand why this gentleman should have appeared before you; he certainly had no experience in the refining of oil, or as an owner of a refinery, that would at all qualify him to appear before you as a witness on this important subject. He has had an interest in a little alleged refinery at Marietta, which he bought when he was somewhat in politics. He immediately approached us to sell the property. We declined to buy it, on the ground that it was valueless as a working plant and had no value as competition; and I had forgotten that there was such a thing until his appearance here. Immediately after his appearance before you he evidently thought he had again made himself prominent enough to succeed in selling it, and he came to me in New York offering to sell this property. I will submit a letter from him on the subject, and my reply thereto, which covers all that need be said of this case. I think the only possible explanation on this matter with reference to his appearance is, that he came at Mr. Monnett's invitation as one of his combination. His letter was written after his interview with me; my reply, as you will see, immediately followed it. His letter is dated July 13, 1899; his appearance here before you was on June 9, 1899.

"I called on you about two weeks ago with letter of introduction from———, and I presented the matter of negotiation for my refinery property at this place. You made memorandum of it and stated that you would present the matter to your people soon after the 4th of July, and as I have not heard from you, presume you have overlooked it. I have permitted one option to expire and have declined the proposition of another party to negotiate for them, not intimating why I do so,

which is my appointment with you in regard to the matter. Please indicate your desire in regard to whether you are inclined or desire to further consider the negotiation. I, as stated, much prefer dealing with your people than with others, yet do not want to let the favorable conditions pass by. Hoping to hear from you soon.

"Very truly, yours,
"Theo. F. Davis."

To which I replied, under date of July 18:

"I am duly in receipt of your favor of July 13. I beg to return you herewith the schedule of refinery property which you left with me. The property is of such a character as to be without value to us, and we do not care, therefore, to buy it.

"Appreciating your expression that you prefer to sell the property to us rather than to other buyers, I am,

"Truly yours,
"Jno. D. Archbold."

I do not suppose it is at all necessary to take up any further statements regarding this gentleman. I have an interesting letter here regarding him from his partner in the refining business, but I will not read it unless you ask it to be read.

Q. What do you say about reading this letter? A. It is a personal letter, but I can read that part of it referring to the matter. It is from Mr. Macdonald, and he authorized me to use it if I cared to. Some parts of it are so personal that under suggestions made here I would not read them.

Q. (By Mr. Clarke.) What is your purpose? A. Nothing, except to show the character of the gentleman in relation to the refining trade, appearing here as one having knowledge.

Mr. Phillips. Without objection, the letter will be read, omitting the personal parts.

The Witness. The letter is dated Newark, Ohio, July 17, 1899, and is from George T. Macdonald.

(Witness at this point read the letter.)

MR. T. B. WESTGATE—THE PURE OIL COMPANY IN NEW YORK.

I have to answer next concerning T. B. Westgate. Mr. Westgate begins by going over substantially the same ground with reference to the advent of the Pure Oil Company in Greater New York, which has already been covered in the testimony of Mr. Lee.

IMITATING BRANDS AND COLORS.

He makes a statement charging that the Standard Oil Company imitated his yellow barrels and used his brands so that they might get trade which he had built up by the use of these barrels and brands as a special trade mark. I have carefully investigated that question, and I find it to be the fact that instead of our having attempted to use Mr. West-

gate's brands the real facts are he used our brands. The yellow brand, as defining a certain quality of oil, had been in use by us in that territory for many years before Mr. Westgate appeared there, and when he came he adopted our yellow barrel so as to facilitate his chances for getting business. I deny emphatically that we have ever used his barrels and brands, and assert that he did use ours.

Q. (By Mr. Jenks.) That he used your brands? A. That he used our color. I deny his statement with reference to both, and charge in turn that he used our barrels.

Q. (By Mr. Smyth.) How about the charge of using their brands? A. It is absolutely untrue; absolutely and unqualifiedly untrue.

Q. (By Mr. Jenks.) The statement was made here, I believe, that you had used the brand "Sunlight Doubly Refined," but put your name on the outside of the circle, which would not be an exact imitation, but would be using the name that he was using for his oil? A. No; I deny the whole matter in toto.

Q. You had yourselves been using barrels of that same color before he began selling in that territory? A. I know so, because I had to do business in that section and with the company who made the yellow barrels, and knew all about it.

COMPETITION AT FULTON, N. Y.

Q. In regard to the statement about Fulton, N. Y.? A. The facts are that he first enticed away from us the man Crandall to whom he refers. He began a campaign against our trade by cutting prices. We, in self-defense, finally put on another seller of oil to compete with him and to regain our lost trade.

CHARLES FREY, OF HOBOKEN—ALLEGED PRICE AGREEMENT.

He goes with great particularity into the case of Charles Frey, of Hoboken, N. J., whom he characterizes as a German with Bismarckian blood in him, who had threatened us with dynamite, etc. I carefully investigated the case, having talked personally with our Jersey City agent, who was our agent at the period mentioned by Mr. Westgate. He denies emphatically ever having made any such threat toward Mr. Frey as Mr. Westgate testified to, or ever having had any understanding with him as to prices in connection with the marketing of Mr. Westgate's oil or any competitive oil, as Mr. Westgate testifies. As a matter of fact, the man Frey was a customer of ours to a considerable extent, having bought in the year 1890, his principal supplies from us; he was a man of violent temper, an avowed anarchist; he has not been in the business for a number of years now, although Mr. Westgate's testimony would carry the impression that he has continued to help him in the sale of oil at Hoboken. The last known of him was that he was running a saloon in Brooklyn.

UNDERBILLING OF TANK CARS.

Mr. Westgate alleges at great length and with some particularity the underbilling of tank cars, citing, as a special case of which he had special knowledge, shipments from Olean, to points eastward.

I beg to present to you here letters from the officials of the Western New York and Pennsylvania Railroad and the Erie Railroad, being the only two lines out of Olean, on that subject. I will read, first if you please, the letter of Mr. Edward T. Johnson, general freight agent of the Western New York and Pennsylvania Railway Company, dated at Buffalo, August 10, 1899, addressed to me.

"My attention has been called to the testimony of Mr. Theodore B. Westgate (who I think is a refiner from Titusville, Pa.), before the Industrial Commission of Washington, in which he testified that it was his belief that shipments of the Standard Oil Company from Olean, N. Y., in tank cars, were billed at a weight less than the actual contents of same.

"In answer to Mr. Westgate's testimony I would say that I have investigated the matter, and of my own knowledge am positive that there is no arrangement of this kind now, nor has there ever been at any time heretofore, between this company and the Standard Oil Company, or its representatives. On the contrary, I do know that on all oil shipments from Olean, where the weights have been per 100 pounds, we have charged and collected freight on the full capacity of the tank cars, based on, first, 6.3 pounds to the gallon, subsequently on 6.4 pounds to the gallon, the change at Olean being made at the same time that it was put in force over the entire Western New York and Pennsylvania Railway. Where the weights have been per barrel we have charged and collected freight on basis of maximum number of barrels that the tank could contain. It is possible that in view of the hundreds of cars of oil that are shipped from Olean some clerical errors have been made by which the weight of a car on the freight bill may have been misstated, but if so it has been made by clerical error only, and not by arrangement with the Standard Oil Company or any of its representatives.

"If it will be of any service to you I will be glad to put the above in the form of an affidavit, or will appear before any United States commissioner and testify in regard to same.

"Yours truly,

"Edwd. T. Johnson,
"General Freight Agent.

For the Erie road, dated at New York, August 29, 1899, addressed to me by George G. Cochran, fourth vice president:

"Referring to Mr. Harriott's letter to you of the 28th inst., in regard to weights on oil.

"I was traffic manager of the Erie lines from January, 1892, until March, 1896, and concur fully for this period in what Mr. Harriott says. The weight of 6.4 pounds per gallon was maintained

from the date of its adoption; previously, the average weight applied was 6.3 pounds per gallon.

"Yours truly,

"Geo. G. Cochran,
"Fourth Vice President.

Also the letter of Frank Harriott, general freight traffic manager of the Erie road:

"In regard to the testimony given before the Industrial Commission in Washington, June 8, 1899, by Mr. Theodore B. Westgate, of Titusville, in which he alleged that on shipments of the Standard Oil Company from Olean, N. Y., tank cars were billed at less than their actual weight, and in this way an advantage was given the Standard Oil Company over other shippers, I beg to say that for three years I have been in charge of traffic matters, covering shipments from Olean and other points on the line of the Erie Railroad, and I can state positively that there is not now, nor has there ever been, an arrangement between this company and the Standard Oil Company, or any of its agents, of a nature testified to by Mr. Westgate. On the contrary, I know that on all oil shipments from Olean, as well as from all other points on the Erie Railroad where our tariff rates are 'per 100 pounds,' we have charged and collected freight on the full-weight capacity of the tank car, based on 6.4 pounds per gallon, and in a few instances where rates have been 'per barrel,' we have charged and collected freight on the basis of the maximum number of barrels that the tank car held; and that this has been true on all shipments made by the Standard Oil Company, as well as by all other shippers.

"You are authorized to use this letter in any way that you may think best, and if I can furnish you any further information, I will be glad to do so.

"Yours truly,

"Frank Harriott,
"General Freight Traffic Manager.

I desire to submit also a pamphlet, a book known as the Tank Gauge Handbook, which covers by numbers every tank car with its full capacity that is in use in our business, and which is in the hands of every railroad organization over which we make shipments; and which I want to state positively that we have no understanding, and never have had, with any railroad, with reference to the underbilling of any car.

Q. (By Mr. Jenks.) You state you have in your freight business paid full weights according to the schedules given in this pamphlet? A. According to the schedules given in this pamphlet.

Q. These two railroads from which you have supplied letters are the only ones out of Olean? A. They are the only ones out of Olean. The concluding part of Mr. Westgate's testimony, with reference to railroad discriminations, is covered in the statement already made in reference to the same question in Mr. Lee's testimony; namely, that the cases pending in the United States court are to recover freight which the railroads charge all ship-

pers on barrels. The Interstate Commerce Commission decided that railroads should carry barrels free, and the railroads, refusing to accede to such a decision, are testing the question in the United States court. A final decision will interest us to a larger extent than all other shippers.

THREAT TO CUT PRICES AT SOUTH BEND, WASH.

Q. (By Mr. Jenks.) Mr. Westgate presented a letter from Portland, Oreg. which he put in evidence, with reference to some statements made by the special agent of the Standard Oil Company. The essential part of it is this: "You can rest assured that if another car load of Sunlight oil arrives at your place, it will be sold very cheap. We do not propose to allow another carload to come into that territory, unless it comes and is put on the market at one-half its actual cost. You can convey this idea to the young man who imported the carload of Sunlight oil." Signed by George C. Flanders, of the Standard Oil Company. The question is whether in competitive territory your people are authorized and instructed to make statements of that kind? A. If any such statement was made, it was a foolish statement by a foolish and unwise man, and in our thousands of employes we do have some. The statement had missed my attention, if it was in my copy, or I should have investigated it.

Q. I will give you a specific reference to it: It is, Portland, Oreg.; George C. Flanders, special agent. A. I will say again the gentleman had no such instructions; any such statement as that was unauthorized and unwise.

[The following letter, with the annexed newspaper clipping, was subsequently submitted by the witness:]

26 Broadway, New York, October 27, 1899.

Dear Sir: Referring to the letter submitted to the Industrial Commission at Washington, written by George C. Flanders, from Portland, Oreg., to a merchant at Southbend, Wash., and to which you call my attention. While the Standard Oil Company does not compete with other merchants for business, it is done, though, on the basis of a fair margin of profit, and Mr. Flanders did not have any authority to write that oil would be sold on the basis mentioned in his letter. The letter was written some years ago (in March, 1894), and was intended to be written in a jocular manner to deny a claim that he was selling an oil inferior in quality to that sold by others. The Standard Oil Company is at times unjustly accused of doing this, as is evidenced by the enclosed article taken from a Los Angeles paper, and a wrong construction might be put on a letter written to refute a claim of this kind.

Yours truly,

H M. Tilford.

J. D. Archbold,

26 Broadway, New York.

ASSASSINATION KEROSENE.

Pomona, Oct. 6.—[To the Editor of the Times:] To my positive knowledge 90 per cent of the kerosene sold in Pomona, Pasadena, Riverside, and Anaheim is a dangerously low-test oil. To sell kerosene for domestic use under a test of 120 in the eastern states is punished by long terms of imprisonment and from \$250 to \$500 fine. There are no laws regulating this matter in southern California. The result is human life is sacrificed and many homes destroyed. The oil shipped into these towns by the Standard Oil Company and sold to the grocers, who in turn sell it to the public as the best eastern kerosene. By actual tests I find the lowest grade used about buildings of the Santa Fe Railroad Company is 150 fire, and that sold by the Standard Oil Company to the grocers of those towns as follows: Elain, in cans and cases, 118 to 120 fire; Pratt's Astral, in cans and cases, 98 to 104 fire; Pearl, in cans and cases, 98 to 104 fire; Eastern, in bulk, 98 to 104 fire. The meaning of the fire test is at what temperature Fahrenheit will the oil throw off an explosive gas. An ordinary lamp often attains a temperature of 120 degrees. Therefore, any oil that will throw off this gas under that temperature is termed by oil men "Assassination Oil." With these facts in view, is it any wonder that lamps explode and human life is sacrificed? In the name of humanity, cannot the public be protected from this dangerous imposition?

W. S. Walker.

PROSPEROUS OIL PRODUCERS.

I will take up the testimony of Mr. Lockwood. Mr. Lockwood says: "The Standard Oil Company have driven into financial obscurity, bankruptcy, or servitude the men whose energy and enterprise have developed this great oil producing and refining industry of America." I hand you a statement, made so much in detail that I will not attempt to weary you with its reading, of producers who have been prominent in the business in what is known as the Pennsylvania oil producing section—the section Mr. Lockwood was treating of.

Q. (By Mr. Smyth.) How many names? A. There are hundreds of them; I have not figured it up—about 800.

Q. (By Mr. Kennedy.) Is Mr. Lockwood's name in the list? A. I suppose it is.

Q. Are they arranged alphabetically? A. Yes; I see they have omitted Mr. Lockwood.

SOUTH IMPROVEMENT COMPANY.

I deny emphatically Mr. Lockwood's statement that everything contemplated to be done for the South Improvement Company has been done for the Standard Oil Company. As a matter of fact, the South Improvement Company never did any business, as Mr. Lockwood well knew, and the special features of exclusive freight contracts, which were contemplated in the South Improvement Company,

were not attempted to be perpetuated by the people of the Standard Oil Company. It was at once recognized that that special feature was not defensible, and it was abandoned absolutely.

PIPE LINE CONSOLIDATION—COST OF PIPAGE.

Mr. Lockwood refers to the small pipe lines which sprang into existence in the early history of the oil business. They were inadequately capitalized in many cases; they were inefficient, and gave the producers such poor service that the remedy which was proposed, consolidation, was very gladly welcomed by the producing class as a whole. The result was the pipage was reduced from 40 cents, which was the prevailing price through the life of the small lines, to 30 cents, and after consolidation to 20 cents.

Q. About what time was the cost of pipage reduced to 20 cents? A. Shortly after the consolidation of the United Pipe Line system.

Q. Has the price lowered since? A. The price has remained at that figure.

Q. There has been no reduction in the cost of piping for many years, 20 years or so? A. No; it was considered a minimum price and has been considered a fair price.

Q. (By Mr. Smyth.) A universal price to all? A. A universal price to all comers.

Q. The cost of building, controlling, and managing, I presume, has lessened? A. It has lessened and increased. If you figure from today's standpoint it will be higher of course. The long distance involved in laying the lines to some of the fields, the field that Mr. Rogers spoke of—the West Virginia field—of course require extensive operations.

NO DISCRIMINATIONS SINCE THE INTERSTATE COMMERCE LAW.

Mr. Lockwood's statement that discriminations were continued in favor of the Standard Oil Company after the inter-state commerce law was passed, I desire to meet with absolute denial, and challenge him for any such record. He makes this statement, and then attempts to give it color by referring to a ridiculous case which he and some of his co-patriots had brought in Clarion county, Pennsylvania, nine years before the inter-state commerce law was passed. In connection with this case he goes to the length of accusing the supreme court of the State of Pennsylvania of violating the constitution in order to prevent a conviction of the Standard Oil people. The statement is so outrageous for a gentleman of his calling that it carries its own answer, and perhaps should have no further comment.

THE MATTHEWS-BUFFALO CASE.

Mr. Lockwood goes at great length into that so-called Matthews-Buffalo case. This case as first instituted attracted a great deal of attention. It has been made much of in the sensational press,

and has been made much of by careless writers, and I am very glad, indeed, of the opportunity to put this presentation on record in answer to the charges that Mr. Lockwood has made about the case and the sensational statements regarding it which he gave to the public through your hands. We shall be glad to go down, as repeated, exposing the sensational charges that have been made in connection with it. I will, therefore, with your permission, read this statement:

"Mr. Lockwood attempts to make much of the so-called Matthews-Buffalo case.

"And indeed, gentlemen, this case has been more often and more thoroughly exploited in the way of misrepresentation, not only by men of Mr. Lockwood's type, but by careless writers of magazine articles, pamphlets, and books, than any other case, unless it be that of Rice. It is high time that a simple, succinct statement of the case should be made, and I am glad to make it.

"The simple facts are that in 1881 Matthews, with two others, were in the employ of the Vacuum Oil Company, of Rochester, N. Y. The executive officers of this company were Messrs. H. B. and C. M. Everest, of Rochester, who, with their friends, represented a large ownership in the stock of the company, and were by contract fully in control of the management of the business of the company. Messrs. Everest were not at that time, nor have they ever been interested in the stock of the Standard Oil Company. The Standard Oil Company were owners in the stock of the Vacuum Oil Company, but had no direct relation whatever with the management of its affairs. While still in the employ of the company Matthews and his two associates conspired together to leave the employ of the Vacuum Oil Company and establish a like business at Buffalo. To this end they had entered into a partnership arrangement, had prepared themselves by using the Vacuum Company's patents for castings of the material to be used in construction, had thoroughly familiarized themselves with all methods of manufacture and with the patrons of the Vacuum Oil Company, and in every way prepared themselves to take advantage of the various business processes—many of them covered by patents owned by the Vacuum Company. There is plenty of indisputable evidence that they did not expect their venture at Buffalo to really succeed on its merits, but then they believed that by so imitating the brands and processes of the Vacuum Company they would induce the latter to buy them out at a high price. As I say, there is plenty of evidence even including that of one of the parties who was to join with Matthews, a man named Miller, that they expected to be bought up by the Vacuum Oil Company or the Standard Oil Company. Efforts were also made by the Matthews party to entice away other important employes of the Vacuum Company. After the business was gotten under headway at Buffalo, and the infringements became evident, various suits were brought by the Vacuum Company against Matthews and his associates. During this period Miller, one of the Matthews party, solicited

re-employment with the Vacuum Company, and finally, after considerable discussion, was re-employed. Later, having some disagreements with the Vacuum Company with reference to the question of his employment, he again coquetted with Matthews and the Buffalo party, and as a result of his statement before the grand jury as to what his intercourse had been with Messrs. Everest, and of other statements made before the grand jury charging Messrs. Everest and all the directors of the Vacuum Company, namely, Messrs. H. H. Rogers, A. M. McGregor and myself, with conspiring against the business of the Buffalo company. The evidence produced in the case clearly indicated a carefully concocted effort on the part of Matthews and his associates as against the Vacuum Company, and the balance of the testimony was tremendously in favor of the Vacuum Company. At the conclusion of the evidence for the prosecution the judge held, as he could not have held otherwise, that not a scintilla of evidence had been produced against the so-called Standard people, namely, Messrs. Rogers, McGregor and Archbold, and directed the jury to acquit them, which they did.

"As I have stated, the balance of the evidence in the case was so much against Matthews that it seems an act of gross injustice that the judge should have allowed the case against Messrs. Everest to go to the jury. The result of the trial was that the jury, plainly influenced by the cunning plea of the district attorney in behalf of the individual, Matthews, as against the so-called rich corporations, rendered a verdict against Messrs. Everest. Six of the jurors made affidavits, copies of which I attach hereto, that they only agreed to a verdict on the basis of the minor charge presented in the indictment, that of the enticing away from the Buffalo works of the man Miller by the Messrs. Everest. The judge imposed a fine, the largest permitted by the statute. As a matter of simple justice, the verdict should have been set aside entirely. All talk about the blowing up of the Buffalo works, which has been so much exploited by the yellow journals and by careless writers, is the purest fiction. There never was anything of the kind.

"With reference to Mr. Lockwood's statement that Matthews had verdicts against the Standard Oil Company people for civil damages for \$270,000, I may say that the statement is as false as every other feature which he presents. An action was brought by Matthews for \$20,000, and a sympathy verdict for that amount was rendered by the jury. Judge Baker promptly set the verdict aside as being excessive and on the ground that the jury were guided in their action by prejudice, passion or sympathy.

"Matthews brought further action for \$250,000, which he never brought to trial. Any careful student of the case who will go thoroughly into the literature of the matter, which can be easily presented, will, after this lapse of all these years, reach no other conclusion than that Matthews and his associates, lay and professional, were engaged in an effort at extortion."

The following is the copy of the affidavit of six jurors, referred to above:

State of New York, County of Erie, ss:

Nicholas Demerly, of the town of Boston, John J. Kinney, Bernhard Schlebus, R. B. Musan, George W. Havens, John Ueblueher, being severally duly sworn, each for himself, deposes and says: That he was one of the jury that served on the trial of H. B. Everest and C. M. Everest for conspiracy in the Erie County Oyer and Terminer in May, 1887, that the said jury rendered a general verdict of guilty against both of said defendants. And deponent further says that, as he verily believes, it was not the intention of said jury, in rendering said general verdict, to pronounce the defendants guilty of an attempt or conspiracy to blow up or burn the works of the Buffalo Lubricating Oil Company, Limited, but the conviction was, in the mind of the deponent, based upon the enticement of the witness, Miller, from the employ of said oil company, and he believes that the other members of the jury convicted the prisoners on the same ground. And deponent further says that he believes the ends of justice will be met in this case by the imposition of a fine upon the defendants, and he therefore begs to recommend to the court that the sentence of said defendants be that they pay a fine only, and that they be not sentenced to imprisonment.

Nicholas H. Demerly.

Nicholas Demerly was sworn to before me this 21st day of April, 1888.

Subscribed and sworn to before me this 21st day of April, 1888.

John Ueblacker.

Signed by John Ueblacker in the presence of John F. Knapp.

State of New York, Erie County Clerk's Office, ss:

I, Otto H. Wende, clerk of said county, do hereby certify that I have compared the annexed copy of affidavit and copy indorsements thereon with an original and its indorsements entered and on file in this office, and find the same to be true transcripts of and from the said originals, and the whole of each thereof.

In witness whereof, I have hereunto set my hand and affixed the seal of said county, at Buffalo, this 29th day of August, A. D. 1899.

Otto H. Wende, Clerk.

Q. (By Mr. Jenks.) You have detailed records of the court which are at the disposal of the commission if they desire them? A. Yes.

Q. (By Mr. Faruhar.) After the finding of the court with respect to conspiracy in destroying the works, in the several actions for damages, I understood you to state that Matthews did not recover at all? A. After Judge Barker set it aside there never was any further case brought to trial. There was an action pending for \$250,000, which was never brought to trial.

Q. (By Mr. Jenks.) Did Matthews make any settlement of any kind with those against whom judgment was awarded? He received no settlement at all? A. I do not know what his relations were with his lawyers. It seems, as far as I have recollection of the matter, that after the decision, in the final settlement of the matter, his lawyer partners got most of what was left. I do not know that that is a very exceptional thing, but it is true in that.

THREATEN THE INTERSTATE COMMERCE COMMISSION.

Mr. Lockwood makes the ridiculous statement that the "combines" had threatened the Interstate Commerce Commission. He evidently, in making this statement, desired to be understood that they had threatened it bodily, but this, I believe, he afterward disavowed.

THE CASE OF MR. RICE.

Mr. Lockwood goes at length into the Rice case and attempts to enlist the sympathy of the commission regarding Rice. I now desire, first, to present to the commission a full statement of the original Rice case, made by Mr. D. O'Day, before the committee of the House of Representatives in 1888, pages 273 to 276, inclusive. This statement covers the exact facts regarding the much talked of Rice case.

I would like to read Mr. O'Day's testimony, if I may make it a part of my testimony. I will try and limit it so as not to weary you unduly, reading that which pertains as directly as possible to the Rice case:

"Q. Do you remember the Cleveland and Marietta Railroad Company? A. I do.

"Q. You remember Mr. Pease was receiver. A. I met him once; yes, sir.

"Q. Did you have a conference with him upon the subject of making a rate over his railroad for crude oil? A. Yes, sir; but not for refined oil.

"Q. When was that? A. I think it was in 1882 or 1883.

"Q. Where did you desire that oil to be transported; from what point to what point? A. The arrangement that you speak of was not made with Mr. Pease. An arrangement was made with the managers of the Wheeling and Lake Erie Railroad, I think, who at that time controlled the Marietta railroad, which was continued after Mr. Pease, the receiver, was appointed. The arrangement consisted in making a through traffic with the railroad company of which the Macksburg line was a part. We made a connection from Marietta to a point south, the total arrangement of charge being divided between the railroad and the pipe line.

"Q. What rate did you get over that railroad for the transportation of oil? A. To where?

"Q. For the distance it passed over the road? A. A good deal of oil was transported from Marietta to Cleveland. The bulk of it was transferred south to Marietta and Parkersburg.

"Q. At what rate? A. I think the through pipage rate and rail rate was 35 cents, as I recollect it.

"Q. What part of that did the railroad company get? A. I have forgotten what the divisions were. My recollection is it was 20 and 15 cents.

"Q. Was it not 10 cents? A. I can not say, sir; I cannot be positive.

"Q. I will read the following to you to aid your recollection. It is an extract of a letter to Mr. Rappello, general counsel of the receiver, and signed by P. Pease. He states that—

"Mr. O'Day, manager of the Standard Oil Company, met the general freight agent of the Wheeling and Lake Erie railroad and our Mr. Terry at Toledo about February 12 and made an agreement (verbal) to carry their oil at 10 cents per barrel. But Mr. O'Day compelled Mr. Terry to make a 35-cent rate on all other oil going to Marietta, and that we should make the rebate of 25 cents per barrel on all oil shipped by other parties, and that the rebate should be paid over to them (The Standard Oil Company), thus giving us 10 cents per barrel for all oil shipped to Marietta, and the rebate of 25 cents per barrel going to the Standard Oil Company, making that company, say, \$25 per day clear money on Mr. George Rice's oil alone.'

"State whether that is a true statement. A. It is not a true statement.

"Q. In what respect? A. In the respect, first, of the divisions. It may be true regarding that, but I am not sure of that; I do not recall it well enough to know. It is not a true statement that we compelled the road in any sense to do anything of the kind.

"Q. Were you not under your agreement to have your oil transported from Marietta over the railroad at 10 cents a barrel. A. We had an arrangement by which the through rate from the wells, which included the pipage charge, was to be a cer-

tain figure, and was to be divided between the railroads and ourselves.

"Q. What share did the railroad get? A. My recollection, which is rather hearsay, was 20 cents pipage rate and the railroad 15 cents.

"Q. And not 10 cents? A. I do not want to be positive of that.

"By the Chairman:

"Q. Does that rate which you give include your local pipage, too? A. Yes, sir.

"By Mr. Gowen:

"Q. Where did this oil strike the railroad? A. At a place known as Macksburg.

"Q. Went from there to Marietta, Ohio? A. Yes, sir.

"Q. Now, I ask you if the rate which the railroad received out of this joint rate was not only 10 cents a barrel? A. My recollection is, as I said before, 15 cents. I won't be positive of that.

"Q. Would you assert your recollection against a judicial determination of this question by the court? A. I certainly should not.

"Q. Now, did you not make it as a part of that arrangement that this railroad company, or its receiver or manager, should charge a certain Mr. George Rice, who was a competitor with you, a higher rate on his oil? A. No, sir.

"Q. You did not? A. We did not.

"Q. Were you not to receive, and did you not receive from this railroad or its business a payment to your company on account of the oil they transported for Mr. George Rice? A. Yes, sir; the railroad company agreed that the rates should cover all oil transported.

"Q. What rate? A. The fixed rate as between the railroad and the pipe line.

"Q. That is to say, that when the through rate of 35 cents was charged on the oil which passed through your pipe line and their railroad together and out of which you received 20 or 25 cents, as your recollection may be, they were to charge the same rate to Mr. George Rice, whose oil passed only over their railroad and not through your pipe line? A. There was nothing special about George Rice; it covered the oil.

"Q. But did that other oil which was in competition with you pass through your pipe line? A. No, sir.

DRAWBACK ON OTHERS' OIL RETURNED BY ADVICE OF COUNSEL.

"Q. Did not they, therefore, on that oil which only passed over the railroad and not through your pipe line pay to you the same allowance or rebate that they did on your oil which did pass? A. They did, but we returned it, through the advice of our counsel, Mr. Dodd.

"Q. How long did you keep it? A. A very short time.

"Q. It was a hot time for Mr. Rice? A. I don't think it was; he was a hot man.

"Q. The result of that arrangement, if it had been carried out—assuming your recollection to be correct—you would have paid 15 cents to the railroad for your oil and Mr. Rice would have paid 35 cents, would he not? A. No, sir; he had the privilege of doing what he did, which he afterwards did do.

"Q. He was not using your pipe line? A. No, sir; we tried to get him to make an arrangement with us to use our pipe line, but he would not do it; he wanted a better rebate than anybody else.

"Q. He had his own means of bringing this oil to the railroad; he did not require your pipe for that service? A. He required the pipe to get his oil to Marietta, and subsequently laid a pipe to Marietta.

"Q. Was not this the fact, that Judge Baxter has found in this case, that Mr. Rice, who at that time only used the railroad, paid 35 cents for the transportation of a barrel of oil? Was not that true? A. I took it to be true.

"Q. Now, out of that sum how much did you get from the railroad out of what they received from Mr. Rice? A. We did not get any; that is, we did not retain any. The railroad company agreed to account to us for the oil that went over its lines, and they did make an accounting, to my recollection, of about \$200 or \$250, or something like that, on oil other than that which passed through our lines. Our counsel, Mr. Dodd, advised me that we could not do that business, and we refunded the money.

"Q. Was that refunded before the investigation of the case took place in court? A. I do not know; I do not remember.

"Mr. Buchanan. Before this examination proceeds any further, I wish to say that the use of the terms 'in court' and 'Judge Baxter' indicates to me that there has been litigation upon this subject between Mr. Rice and some company. I would like to know before the examination goes any further whether there has been such litigation between Mr. Rice and any company represented by or that would be bound by the statements of the witness now upon the stand; and second, whether, if such litigation has been had, it is concluded and the matter disposed of in the courts, or is in any way still pending. I ask this question solely for information, because I do not know anything about the matter.

"Mr. Gowen. No, sir; the proceedings are entirely completed. It was not a suit between Mr. Rice and anybody. It was a proceeding against the receiver of this road to dismiss him from his receivership. That has been terminated. It has been dismissed, the case is ended, and reported in the Federal Reporter.

"Mr. Smith. Who rendered that decision?

"Mr. Gowen. Judge Baxter. He removed him.

"Mr. Smith. Was he judge of the United States court?

"Mr. Gowen. He was judge of the circuit court for the southern district of Ohio.

"Mr. Smith. A United States court?

"Mr. Gowen. Yes, sir.

"The Chairman. I understand, in answer to Mr. Buchanan, the information is furnished that there was a proceeding pending to remove a receiver; that proceeding resulted in the finding by the court removing him, and that litigation, is closed.

"Mr. Gowen. That branch of the litigation is closed.

"Mr. Buchanan. That answers my inquiry. But there has been another remark made that leads me to ask if there is any other branch of the case remaining unclosed?

"Mr. Gowen. Only this: The jurisdiction that the United States court was enabled to take over this case arose from the fact that a receiver had been appointed in a proceeding in that court to foreclose the mortgage, and therefore as the receiver was an officer of that court, the court took jurisdiction of this question. Whether the proceeding to foreclose the mortgage is ended or not I do not know.

"Mr. Buchanan. That answers my question.

"Mr. Gowen. There is no other suit pending about it that I know of.

"By Mr. Gowen:

"Q. Where did this oil that was transported over this railroad to Marietta originate? A. In the country in and about Macksburg.

"Q. Ohio? A. Yes, sir.

"Q. There is a small oil field near the Macksburg field in southeastern Ohio? A. Yes, sir.

"Q. How far is that field from the Ohio river? A. Perhaps 15 or 20 miles; somewhere along there.

"Q. The largest town near to it on the Ohio is Marietta? A. Yes, sir; south.

"By Mr. Smith:

"Q. You stated that the charges on oil were lost in trying to get the business, if my memory serves me right? A. Very largely.

"Q. How were they lost? A. In competition in buying the oil—bidding for the oil.

"Q. Bidding for the oil? A. Yes, sir.

"Q. Did you have to purchase of somebody? A. We had to purchase oil."

That covers the record of the case as given under the sworn testimony of Mr. O'Day, who had to do with it on behalf of our interests at the time, and I now state further, on careful personal inquiry of Mr. O'Day, he informs me that the amount involved in the Rice contract, some \$200 or \$250, was immediately, under Mr. Dodd's instructions, refunded, and that such refunding was made before any proceedings were instituted as against the receiver. We were in no sense a party to the proceeding against the receiver; were not present in court when the matter was heard, and had nothing whatever to do with it.

MR. RICE NOT A REFINER OF LATE YEARS, BUT AN
AGITATOR.

I desire to state further, from my own personal knowledge, that Rice's efforts for many years have been directed, not toward making a success of his refining business, but to the pursuit of such a vexations course toward us as would lead us to buy him out of the business at an exorbitant price. In other words, his course for many years has been a direct effort toward extortion. In a personal interview which I had with him, on his request, as far back as 1886, he demanded of me that we pay him \$250,000 in cash and \$50,000 per year for five years, or a total of \$500,000, for his Marietta refinery, which was worth at that time possibly \$25,000 or \$30,000. He based this demand on the statement that he had already inaugurated a number of suits before the Interstate Commerce Commission, that he could influence the action of the commission, and had other suits in contemplation which he would at once press unless we submitted to his demand. He claimed that if we did make the deal with him he could influence the discontinuance of the suits already pending, and that he would refrain from bringing others. He further stated that he had the ability to cost us a very large amount every year by making what he termed "cut quotations" in the markets for refined oil, thereby unsettling the trade and compelling us to make concessions to our customers in the localities affected. I drew him out as much as possible on this subject in the hope of getting him to expose his plans as thoroughly as possible, and then asked for time in order to make investigations of his statements. He evidently realized, after some delay in the matter, that we had not been specially influenced by his statements, and the matter was allowed to drop. Later, however, he made further efforts in the same line.

Rice has had no active relation with the business nor made any effort to have any for many years. I can not say positively, but I believe that he has been supported as an agitator by our enemies and those seeking in this indirect and underhand way to annoy us.

MR. LLOYD—WEALTH VS. COMMONWEALTH.

I desire to say a word regarding the effort at pathetic reference of Mr. Lockwood to the Rice case in Lloyd's book. I desire to characterize this statement in Mr. Lloyd's book, as well, indeed, as all the other statements with reference to our business, as cunning fiction, made up entirely on one-sided testimony and dressed for sale. Whether Mr. Lloyd expected to share, as a result of his advocacy of Rice, in what Mr. Rice might be able to get from us, I am unable to say, but he certainly lays himself open to that suspicion.

I desire to say further with reference to this book of Mr. Lloyd's, that if you are disposed to waste your time reading it you will find it with

reference to its statements regarding the business of the Standard Oil Company one of the most untruthful, distorted compilations that was ever inflicted on a suffering public.

Q. (By Mr. Farquhar.) Will you state the title of the book? A. Wealth vs. Commonwealth.

PRICES FOR EXPORTS AND IN NON-COMPETITIVE HOME
MARKETS.

Mr. Lockwood makes an absurd statement, intended to convey the impression that at the same time refined oil is sold to Germany at two cents a gallon, the people of Texas and Arkansas are forced to pay 25 cents. There is, of course, not a word of truth in any such statement, nor does he pretend to furnish, nor can he offer, any evidence in support of it. It is the sort of statement that a silly demagogue would make in an effort to create sentiment on this question.

With reference to the course of production and present competitive prices, Mr. Lockwood makes the startling admission that he himself at one time aspired to be a monopolist and plutocrat. We can not escape a shudder at the thought of such a thing.

SOUTH IMPROVEMENT COMPANY.

He makes an absurd statement regarding the railroad companies raising the price of crude oil from 40 cents to 80 cents and paying the additional 40 cents to the South Improvement Company. There is not a shadow of basis to support it. He convicts himself with reference to this matter by testifying that the South Improvement Company was not carried out. As a matter of fact, I repeat that they never did any business.

THE STANDARD'S CONTROL OF REFINING.

Mr. Lockwood testifies:

Q. (By Mr. Kennedy.) Mr. Lockwood, can you state, approximately, what per cent of the refined oil of this country is turned out by the independent companies? A. We calculate that they are handling about 4 per cent.

Q. Only 4 per cent? A. Only 4 per cent; you know this is an immense business.

Q. (By Mr. Phillips.) That is, taking the Ohio oil? A. Taking the Ohio oil and the Pennsylvania oil and these different grades of oil."

I will now present a statement showing the aggregate business done by the Standard Oil Company and by others in the United States for the five years, 1894 to 1898, inclusive, in which it appears that the aggregate percentage of all business in petroleum and its products done by the Standard Oil Company was 82 3-10 for this period of five years as against competitors 17 7-10.

Q. (By Mr. Smith.) That includes all by-products. A. Petroleum and all its products.

Business of Standard Oil Company and other refiners, years 1894 to 1898, inclusive.

[Barrels of 50 gallons. All products, domestic trade.]

Year	Standard Oil Co.		Others		Total
	Barrels	Per cent of total	Barrels	Per cent of total	Barrels
1894 ...	18,118,933	81.4	4,145,232	18.6	22,264,165

THE STANDARD'S CONTROL OF PRODUCTION.

Mr. Lockwood testifies that by manipulation of price of Ohio crude oil, in conjunction with the railways, we succeeded in getting the price down to an abnormally low figure, and then bought substantially the whole Ohio producing field.

I now present a statement covering the years from 1890 to 1898 showing our relation to the business of producing oil, not only in Ohio, but in Pennsylvania, thinking it would set the matter at rest, as the question has been raised:

Production of Pennsylvania and Lima crude oil by Standard Oil Company and others, years 1890 to 1898, inclusive.

[Expressed in barrels of 42 gallons.]

Year	Pennsylvania Oil			Lima oil			Grand total		
	Total production	Standard Oil Co. production	Standard Oil, per cent of total	Total production	Standard Oil Co. production	Standard Oil, per cent of total	Pennsylvania and Lima production	Standard Oil Co. production	Standard Oil, per cent of total
1890	30,065,867	2,618,637	8.71	15,014,882	8,400,568	55.95	45,080,749	11,019,205	24.44
1891	35,742,127	4,913,775	13.74	17,381,923	9,319,156	53.61	53,124,050	14,232,931	26.79
1892	33,332,306	4,338,822	13.02	16,685,193	7,843,324	47.01	50,017,499	12,182,146	24.36
1893	31,256,283	6,705,276	21.45	17,823,255	7,260,899	40.74	49,079,538	13,966,175	28.46
1894	30,696,716	7,210,345	23.49	18,575,603	6,690,951	36.02	49,272,319	13,901,296	28.21
1895	30,891,868	9,119,920	29.52	21,719,250	6,808,876	31.35	52,611,118	15,928,796	30.28
1896	33,908,041	9,380,654	27.66	25,222,091	8,031,793	31.84	59,130,132	17,412,447	29.45
1897	35,170,367	9,787,353	27.83	22,793,033	7,497,349	32.89	57,963,400	17,284,702	29.82
1898	31,645,151	11,248,443	35.55	20,266,328	7,220,606	35.63	51,911,479	18,469,049	35.58
Total...	292,708,726	65,323,225	22.32	175,481,558	69,073,522	39.36	468,190,284	134,396,747	28.70

This is in answer to Mr. Lockwood's statement, as, I repeat, that we had bought substantially the whole of the Ohio producing field.

Mr. Lockwood's statement, that when the Standard Oil Company buy pipe lines producers have to pay for it two to 40 times over is so ridiculous as not to call for any answer.

In conclusion, gentlemen, it is really difficult to answer seriously a man who indulges in such extravagance of statement as has characterized Mr. Lockwood's testimony. Indeed, it is difficult to believe that he takes himself seriously. We can forgive such a man in whose veins runs the boiled

down pugnacity of 147 revolutionary sires, but when he ruthlessly attacks judges and courts and claims that the entire railroad and corporate interests of the country find their chief avocation in the "corrupting of public affairs and the debauching of public men," I think you will agree with me that we must conclude that the "fool killer" has been very remiss in his duty in the vicinity of Zelenople, Pa.

MR. RICE'S CONNECTION WITH CONTEMPT PROCEEDINGS AGAINST THE STANDARD.

In confirmation of the statement which I have made regarding my interrogatories with Mr. Rice and his overtures to me in connection with his business, I desire also to read for the information of the commission a transcript from the testimony of Mr. Rice given on cross examination in the suit of the State of Ohio vs. The Buckeye Pipe Line Company, taken on the 20th of February, 1899:

"First. In relation to Rice's connection with the contempt proceedings against the Standard Oil Company of Ohio.

"Q. Mr. Rice, you know that a proceeding for contempt was instituted by the attorney general of Ohio against the Standard Oil Company? A. Yes, sir.

"Q. Did you employ counsel in that case? A. I did.

"Q. Who? A. W. L. Flaggs.

"Q. What other counsel did you employ? A. Mr. Kinhead.

"Q. He is now acting as special counsel for the attorney general? A. Yes, sir.

"Q. How long prior to the commencement of these proceedings in contempt against the Standard Oil Company did you employ Mr. Flaggs? A. Two or three weeks—less than a month.

"Q. Did you employ him to assist the attorney general in instituting and conducting the proceed-

ings in contempt? A. I should say that would be most natural.

"Q. Did he come here to Columbus for a consultation with the attorney general? A. Yes, sir.

"Q. Did you come with him? A. I guess I came on before.

"Q. You had your consultation with the attorney general before he came? A. Yes, sir.

"Q. You three had consulted together? A. Yes, sir.

"Q. When did you employ Mr. Kinkead? A. That was about the same time, not just exactly.

"Q. Was he brought into this conference by you. A. Yes, sir.

"Q. At that time he was not employed by the State, A. I do not think he was.

"Q. He was your private counsel? A. Yes, sir.

MR. RICE'S OFFER TO MR. ARCHBOLD.

"Cross examination in relation to Mr. Rice offering to sell his property to Mr. Archbold.

"A. He (Archbold) wanted to know what I would take to go out of the business, and I told him \$250,000 and \$50,000 per year for five years; but several years before that he wanted to buy my plant and I offered to sell it for \$25,000 and \$5,000 for five years, and before that time I offered to sell it for \$20,000. I have a perfect right to ask what I please for my plant.

* * * * *
 "Q. Did you authorize or request Mr. Orvis to have an interview with him (Archbold)? A. No, sir; not at first.

"Q. Did you at any time? A. I may have done so.

"Q. Now, coming to the second interview, did you have another interview in June, 1890, with Mr. Archbold at his office in the Standard Oil building at 26 Broadway, in New York? A. I do not recollect.

"Q. Did you then make a similar offer to him? A. I did not have a second interview with Mr. Archbold.

"Q. Did you at that time authorize Mr. Orvis to make an offer to sell your property for \$500,000? A. Yes, I guess I did.

"Q. You were to get \$250,000 cash, and \$50,000 for five years? A. I guess so.

"Q. What were you to give Mr. Archbold for that consideration? A. I was to sell out my plant and get out of the business.

"Q. Were you to refrain from bringing any further litigation? A. That was to settle up the whole trouble; I was to do nothing further—have no litigation or anything of that kind."

Q. Have you a general statement to make with reference to the organization of the company? A. I have a general statement I would like to make.

Q. (By Mr. Phillips.) Just proceed with your statement. A. I desire to say that this is a much pleasanter task for me than attempting to answer the allegations of the various witnesses. I did not

come here, gentlemen, desirous of making this answer, although I am naturally under some feeling with respect to these charges so often and unfairly reiterated against us—to assail anybody harshly—and if I have been led into any expression that seems harsh at any time during the course of my answers I am sorry for it. It is out of the fullness of what I believe to be the correct answer, and a desire to make it as positive as possible, certainly not with any disrespect to this commission. It is a much pleasanter task for me to undertake, gentlemen, to say a word more particularly in defense of the organization with which I have passed almost my entire business life, intimately related with it, and in which I have the most personal pride. Shall I proceed?

Q. (By Mr. Phillips.) Certainly.

LARGE CORPORATIONS A NECESSARY RESULT OF GROWING COMMERCE.

Trusts, or speaking correctly, large corporations, are the necessary—indeed the irresistible—result of our rapidly growing commerce. In adopting them we are but following the example of that greatest of all commercial nations, England, under whose commercial charters capitalization and scope are practically unlimited. Any legislative restriction imposed here would operate alone to the benefit of foreign commercial competitors. The claim that such restriction would help the weak and incompetent of our own country as against the strong and aggressive is too perivile to call for serious answer. I speak today especially in defense of the aggregation of capital and experience in the petroleum business, on the ground of its absolute necessity, for the successful development and promotion of that business. I am here to defend the Standard Oil Company organization, also on economic and ethical grounds. Not to indulge in undue length, I will lay down a number of leading propositions in support of my position, which may serve as texts for more extended discussion, if you desire.

GOOD RESULTS OF THE RISE OF THE STANDARD.

The early years of the petroleum industry were marked by a chaotic and crude condition in all the branches of the trade, namely, the production, manufacture, transportation and marketing; and the average quality of the refined products was inferior and unsatisfactory. The advent of the Standard Oil Company aggregation changed this entirely. It brought to the business ample capital and combined into effective working shape the best possible talent in all branches of the business. It improved quality and greatly reduced costs. It supplanted old and inferior methods and refineries with the newest and most progressive methods and most perfectly equipped and favorably located refineries. It has been ever on the alert to engage the best obtainable practical and technical talent for the

development and improvement of the business in all its branches. It inaugurated new systems of transportation, which not only gave the producer the most efficient possible service at greatly reduced cost, but a daily continuing cash market for his product on a basis of the best price obtainable in the world's markets. Further, it reached out and occupied the markets of the world for American petroleum. Individual effort could not have accomplished any such herculean task in many times the same period, and indeed, the efforts of the Standard Oil Company were none too quickly made. If there had been as prompt and energetic action on the part of the Russian oil industry as was taken by the Standard Oil Company the Russians would have dominated many of the world's markets which have been made to inure so largely to the benefit of the American oil industry. Later in the history of the trade Russia and other oil producing countries have followed in the footsteps of the Standard Oil Company in the general markets of the world, and I now hand you a statement, partial in character, of the oil companies of Russia, the Dutch East Indies, Galicia, Japan and other countries, which will give you some faint idea of the menace which even now threatens the American oil industry; and when you reflect, gentlemen, that there has been brought to this country during the past 30 years from the exportation of petroleum and its products nearly \$1,500,000,000 you will appreciate the importance of this subject.

LIST OF CORPORATIONS AND INDIVIDUAL FIRMS PRODUCING AND REFINING PETROLEUM.

Russia.—Production on the Peninsula Apsheron, on the west shore of the Caspian Sea: Nobel Bros., capital 15,000,000 rubles (\$7,500,000), bonds \$3,750,000; Russian Petroleum and Liquid Fuel Company, formerly Tagaeffs, capital £1,200,000 (\$6,000,000); Anglo-Caucasian Company (Rothschilds); European Petroleum Company; Anglo-Russian Petroleum Company, Limited, capital £120,000 (\$600,000); Sheibieff Petroleum Company, capital £750,000 (\$3,750,000); Baku-Russian Oil Company, capital £1,500,000 (\$7,500,000); Mantashoffs property; capital 26,000,000 rubles (\$13,000,000); Societe Caspienne (Rothschilds), capital 6,000,000 rubles (\$3,000,000), but money invested much larger; Caspian Oil Producing and Trading Company, capital 2,000,000 rubles (\$1,000,000); Mirzoff Brothers Oil Producing Company, capital 2,140,000 rubles (\$1,070,000); Ropes Refining Company, capital 1,200,000 rubles (\$600,000); Tsoovianoff, Rillsky, Asadooliaeff, Zeitlin & Zirkvich, Caucasian Oil Company, Toomayeff & Co., Kaplan & Lev, Kascheyeff, Lianozeff, Viziereff, Nagieff Moosa, O. Leites, Kvarenstron, Lootch, Zeinaloff & A. Dembot Bros., Hatzasriantz, Pogossoff, Hagan & Zeitlin, Metrfa-noff, Beneinson, Egiazaroff, Nedezda, Shagidanoff, Melikoff, Mananoff, L. M. Leites, Sarkiesoff, Chicnaveroff, Adamoff Bros., Sergaieff Bros., and ten other smaller concerns.

Grosni.—Oil territory in northwest from the Caspian Sea oil territory; Grosni Company, of Akhverdoff, capital 1,500,000 rubles (\$750,000); Moscow Oil Producing Company, Grosni, capital 3,000,000 rubles (\$1,500,000); Maximof & Co., Petersburg Petroleum Company; Rousanofsky; Belgian Company, at Soupsa, near Batoum, Black Sea, capital, 575,000 rubles (\$287,000).

Galicia.—Anglo-Austrian Petroleum Company, Limited, capital £125,000 (\$575,000); Mineral Oil Company, Budapest (Rothschilds); Anglo-Galician Oil Company, Limited, capital £560,000 (\$2,800,000); Galician Petroleum Company, capital 1,000,000 florins (\$400,000); and the following oil territories are offered for sale: T. Laszez at Kobylaoka, 71 acres; Mad Jodwigo Biechomka, 569 acres; G. Kropiwnsk at Schodnica, 250 acres; Veadomir Podhorodzki, 425 acres; Mad Malwine Szezpanska, 57 acres; W. Posteuski at Swoboda, 426 acres; Kosimerz Lipinski, 128 acres, and a great many others.

Roumania.—Roumania Oil Syndicate, capital £500,000 (\$2,500,000), bonds \$1,000,000; Roumania Oil Trust, capital £710,000 (\$3,550,000), bonds \$1,250,000; Holland. Roumania Petroleum Company, capital 1,000,000 florins (\$400,000); Netherlands Roumania Petroleum Company, capital 500,000 florins (\$200,000); Amsterdam Roumania Petroleum Company, capital 1,000,000 florins (\$400,000); Roumania United Oil Company, Limited, capital £720,000 (\$3,600,000), bonds \$600,000; Estate Prince Cantacuzino; Estate Harnia, Campine; Estate Prince Montiosa, Buzen, and many concessions for drilling granted to natives and foreigners.

Borneo, Dutch East Indies.—Netherlands, India Industry and Trading Company, capital 2,000,000 florins (\$800,000), but \$1,750,000 invested; Bolangan Exploring Company, capital 150,000 florins (\$60,000); Kotei Exploring Company, capital 300,000 florins (\$120,000); Martapoera Mining Company; Tarakan Mining Company, capital 240,000 florins (\$96,000); Bombay Burmah Trading Company, British Borneo, capital large.

Sundries in East Indies.—Doda Mining Company, Celebes, capital 125,000 florins (\$50,000); Boela Company, Ceram, Molucca Islands.

British India.—Burmah Oil Company, Limited, Rangoon.

Alsace, Germany.—Pechelbronn Oil Works, capital 3,000,000 marks (\$750,000); Rudolf Bilibshheim Company, capital 1,200,000 florins (\$480,000); Gute Hoffnung Company; Alsace Petroleum Company, capital 200,000 florins (\$800,000); the Petrolia Company.

Japan.—Mitsumata oil field, Ogidaira oil field, Kitayama oil field, Tatsuno oil field, Yamatera oil field and Amase oil field are worked by Nippon Petroleum Company, capital unknown; Tokyo Petroleum Company, capital unknown; Osaka Petroleum Company, capital unknown; Echiqo Petroleum Company, capital unknown; Oriental Petroleum Company, capital unknown.

Miyagawa oil field, Nagamine oil field, Hirayama oil field, Nita or Samata oil field, Akata oil field, Miyohoyi oil field, Abuaradan oil field, Jabani

oil field, Ida oil field, Betsuyama oil field, Koshi oil field, Katsubo, Urase, Katsurazwa, Tsubakizawa, Mivjayi, Asoda, Mizuana, subdivisions of Koshi oil fields are partly worked by individuals and the above companies. In addition there are about 20 more oil fields, of which are most prominent as to their production the following: Niitsu oil field, Shiodani oil field, Koguch oil field, Niigata oil field, worked by individuals and above companies.

Sumatra.—Royal Dutch Company, capital 5,000,000 florins (\$2,000,000), bonds \$1,200,000; Sumatra Palembang Petroleum Company capital 7,000,000 florins (\$2,800,000); Boissevain Syndicate; Moera Enim Petroleum Company, capital 10,000,000 florins (\$4,000,000); Netherlands India Exploration Company, capital 300,000 florins (\$120,000); Moesi Ilir Syndicate, Sumatra Petroleum Company, Limited, capital 2,400,000 florins (\$960,000); Shanghai Langkt. Tobacco Company, \$500,000; W. T. Wisse, Deli Company, Banjoe Asin Exploration Company, capital 120,000 florins (\$48,000); Nagel Concession, Ali Cohen Bengkoelen concessions, Kessler concessions (about 5,000,000 acres), Petroleum Company Iliran, capital 1,200,000 florins (\$480,000); Belang Mining Company, capital 140,000 florins (\$56,000) Palembang Exploration Company, capital 250,000 florins (\$100,000); Langsar Petroleum Company (Acheen), capital 800,000 florins (\$320,000), and many millions of acres under concession to private parties.

Java and Island of Madoera.—Dordt'sche Petroleum Maatj., capital 15,000,000 florins (\$6,000,000); bonds \$2,000,000; Rembang Petroleum Company, capital 500,000 florins (\$200,000); Japara Petroleum Company, capital 500,000 florins (\$200,000); Company Insulinde, capital 3,000,000 florins (\$1,200,000); Toan Lok Sourb. Petroleum Company, capital 300,000 florins (\$120,000); Eastern Exploration and Exploiting company, Tegal Petroleum Company, capital 500,000 florins (\$200,000); Netherlands, The, India Petroleum Company, capital 700,000 florins (\$280,000); Java Petroleum Company, capital 1,000,000 florins (\$400,000); Batavia Japara Petroleum Exploration Company, capital 200,000 florins (\$80,000); East India Exploration Company, capital 300,000 florins (\$120,000); Rotterdamische Petroleum Company, capital 1,500,000 florins (\$600,000); Gaboes Petroleum Company, capital 600,000 florins (\$240,000); Sourbaya Petroleum Company, capital 250,000 florins (\$100,000); Central Java Exploration and Exploitation Company, capital 240,000 florins (\$96,000); Polynesia Petroleum Company, capital 500,000 florins (\$200,000); Bantjar Development Company, capital 500,000 florins (\$200,000); Madoera Petroleum Exploitation Company, capital 100,000 florins (\$40,000); Archipelago Exploration Company of Amsterdam, and many millions of acres under concession to private parties.

It is true beyond a question that the result to the public of the operations of the Standard Oil Company has been highly beneficial, and not hurtful, as its enemies claim. As has been already stated, it has given the public goods of vastly improved

quality at greatly reduced prices. It has by its effective system of distribution, supplied this most necessary article for domestic consumption promptly and cheaply to the most remote sections of our country, and indeed, to the world. Beyond all this, however, it has given to the community at large an opportunity for investment in the business itself, which it could never have had under the old system. Thus there are today partners in the Standard Oil Company as shareholders to the number of fully 3,500, where less than one-twentieth of that number would have been interested as partners under the old system.

NO TROUBLE WITH LABOR.

It has been most beneficial in its effect on labor. There could be no stronger evidence that the labor involved in its vast operations has been well paid and contented than lies in the statement that for more than a quarter of a century since the Standard Oil Company began its operations, it has scarcely had a serious strike of any kind among any branch of its employes—one or two temporary strikes among some special classes of workmen in sympathy with other labor organizations who were striking constituting the sole disturbances. Indeed, it is not too much to say that to the loyalty and zeal and intelligence of its vast army of about 35,000 employes the company is largely indebted for its strength and efficiency.

I unhesitatingly express the opinion that, when the history of our time is written, it will appear that the marvelous commercial and industrial evolution which we are experiencing in this great country during the year 1899 marks one of the most important steps of progress in our country's history. It will prove to be of immense value to all classes of our population. The investor, the consumer and the laborer will all be benefited by it; the investor by the better security which arises through amplitude of capital for the business contemplated, and the combination of talent in the various departments of administration; the consumer through improved processes resulting in better products at lower prices, and more efficient distribution; the laborer by steadier employment at better wages, and a better opportunity for improvement in condition, if special talent is shown.

The outcry, gentlemen, against corporations does not come from the great, busy, industrial classes, but from impractical sentimentalists, yellow journals, and political demagogues; from the latter, perhaps more than any other. It is a veritable attack upon thrift and prosperity. To listen to their voice to the extent of imposing restrictive legislation would mean a frightful step backward in the commercial development of our country.

NATIONAL CORPORATIONS THE NEXT STEP OF PROGRESS.

If you should ask me, gentlemen, what legislation can be imposed to improve the present condition, I answer that the next great, and to my mind

inevitable step of progress in the direction of our commercial development lies in the direction of national or federal corporations. If such corporations should be made possible, under such fair restrictions and provisions as should rightfully attach to them, any branch of business could be freely entered upon by all comers and the talk of monopoly would be forever done away with. Our present system of State corporations, almost as varied in their provisions as the number of States, is vexatious alike to the business community and to the authorities of the various States. Such Federal action need not take away from these States their right to taxation or police regulation, but would make it possible for business organizations to know the general terms on which they could conduct their business in the country at large. Lack of uniformity in the laws of the various States, as affecting business corporations, is one of the most vexatious features attending the business life of any great corporation today, and I suggest for your most careful consideration the thought of a Federal corporation law.

Q. (By Mr. Jenks.) Have you any further statement with reference to the organization of the Standard Oil Company itself? A. That will be included in the statement Mr. Dodd will submit; or the data regarding the organization, I think, will be in that.

PETROLEUM CONCERNS IN RUSSIA AND ELSEWHERE.

I want to hand you in connection with this paper this most interesting statement, which I think perhaps, is the first general compilation of the information that has ever been made in the country here; almost a surprise to us, who are daily familiar with the oil business, as showing a tremendous growth of the foreign petroleum business. I will only refer by name to the countries in which petroleum is now successfully mined and prepared for market. Capitalization, so far as we are able to obtain it, and the names of the companies which, as I think are substantially accurate appear in this statement.

Q. (By Mr. Smyth.) Could you give us anything like the proportion? A. I have the statement which, I think, shows the proportion of business done. It will be a little surprise to you to see the enormous capitalization of the business attaching to the Russian development, and I may say in a word of oral explanation that the business there is getting to be in strong hands. When I mention the name of the Rothschilds, that will be sufficient guaranty as to the strength of the company; and they are now growing enormously in the extension of their business in the various markets of the world.

The Nobel Brothers are there competing for the business with tremendous energy. Recently, perhaps within the past year, more than in the aggregate time before, English capital and English corporate organizations have engaged in the petroleum trade in Russia to an enormous extent; the largest

concern perhaps being the Shell Company, Sir Samuel Samuels, late lord mayor of London. I hand you this list showing firms in Russia, and this showing list of corporations in Galicia, a further statement form Roumania, one from Borneo, and sundry places in the Dutch East Indies, in British India, in Japan and in Alsace, Germany. It will probably be an item of information to many of you that the production of petroleum is assuming great proportions in Japan. They are now very rapidly progressing, are coming to the front in improved methods of production, and will ultimately become a formidable competitor to our American industry. The system of petroleum refining in Japan is by corporations and individual firms going out into the different fields and producing and refining. In Sumatra the business has already attained large proportions, and in Java and the island of Madeira.

Q. (By Mr. Smyth.) Is there any American capital represented in these firms? A. There is no American capital that I know of. But they have sent out and taken from our oil producing country here many artisans.

Q. (By Mr. A. L. Harris.) Then the Standard Oil Company is not represented in any of those corporations? A. Not in any way.

Q. Not even in the Nobel Brothers? A. Not a dollar of interest in any way, or relationship or understanding.

Q. (By Mr. Smyth.) I suppose English capital being interested in Russian refining is one of the causes of attack on the American oil in London? A. Undoubtedly, but as I said this morning, I think the attack was undoubtedly made by the people directly and largely interested now in the Russian distributions in the different countries. It may be of interest to read a short letter from our foreign exporters:

New York, September 1, 1899.

J. D. Archbold, Esq., Building.

Dear Sir: I beg to hand you herewith the statements you desired, in duplicate, and wish to say that the Russian production is on the peninsula of Apsheron, on the west coast of the Caspian Sea, and the Grosni district, northwest from the same.

We estimate the Russian production at present to be about 160,000 barrels per day, and Grosni at about 10,000 barrels daily. The Galiuian production is about 2,000,000 barrels crude, and Roumania 500,000 to 600,000 barrels per annum, and the Alsace production about 175,000 barrels crude annually. The Dutch East Indies about 3,400,000 barrels, Burmah about 2,000,000 cases refined per annum, and Japan will probably amount to about 2,000 barrels crude oil per day.

Of course, we give you these figures as near as we can get them, and where we give you the output of refined we have no reliable figures as to what it may represent in crude.

Yours truly,

C. F. Ackermann.

I have here another statement. This covers the information which you ask as to the percentages of

these various countries. It is for the year 1897. Unfortunately we have not the full data at hand with which to give you the 1898 figures. This statement shows the business of all countries of the world producing refined oil. Some little percentage of it, as you will observe, is not the production of our country, but is shown in this way because the country named compels, by its tariff laws, the bringing into that country of the crude petroleum for refining there, but the larger items are the production of this country as you will observe.

The total production in the world of refined petroleum illuminating oil, for the year 1897, was 39,338,991 barrels of 50 gallons each and was divided as follows. I will give the percentage if you please.

Q. (By Mr. Jenks.) Yes. A. United States, 64.23; Russia, 23.28; France, 3.25; Austria-Hungary, 2.66; Sumatra, 2.32; and the remainder, Scotland, Canada, Java, Roumania, India, Spain, Mexico, Cuba, Brazil, Germany, Peru, Italy, Japan, and Porto Rico are all fractions of less than one per cent, making the grand aggregate of 100 per cent; the great factors, as you will see, for the year, being the United States and Russia; and a rapidly increasing factor, of course, in Austria-Hungary and Sumatra.

World's production of refined illuminating oil, 1897.

Product of	Barrels of 50 gallons	Per cent of total
United States.....	25,268,628	64.23
Russia	9,160,700	23.28
France	1,277,761	3.25
Austria-Hungary	1,046,359	2.66
Sumatra	914,000	2.32
Scotland	331,857	.84
Canada	251,843	.64
Java	230,392	.59
Roumania	230,000	.59
India	180,685	.46
Spain	157,684	.40
Mexico	104,287	.27
Cuba	58,413	.15
Brazil	35,306	.09
Germany	34,822	.09
Peru	19,193	.05

Product of	Barrels of 50 gallons	Per cent of total
Italy	15,136	.04
Japan	13,689	.03
Porto Rico.....	8,236	.02
Total.....	39,338,991	100.00

The population of the world is 1,349,140,091; the production of illuminating oil is therefore equal to 1.5 gallons per capita.

Q. (By Mr. Clarke.) Do you suppose there has been an increase since these statistics were given? A. The business of Russia is increasing rapidly. Here is a further statement of crude oil, the world's production, which may be of interest in looking over in a general way.

World's production of crude petroleum, 1897.

[Barrels 42 gallons.]

Country	Barrels	Per cent of total
United States.....	60,496,499	47.96
Russia	57,094,303	45.26
Austria-Hungary	2,087,617	1.66
Sumatra	1,777,560	1.41
Scotland (1896).....	1,316,894	1.04
Canada	809,199	.64
Java	726,373	.58
Roumania	570,886	.45
India (1896).....	430,203	.34
Japan	283,571	.23
Germany	165,822	.13
France	70,000	.06
Peru	68,452	.05
Argentine	21,000	.02
Italy	18,149	.01
Other countries (estimated).....	200,000	.16
Total.....	126,136,528	100.00
Total production 1896.....	118,298,631
Increase.....	7,837,897	6.6

THE OIL WELL DRILLER

Crude oil production by States, years 1896, 1897.

[Barrels of 42 gallons.]

States	1896	1897	Increase or decrease	Increase or decrease	Average value per barrel	
					1896	1897
Pennsylvania	19,795,779	18,439,180	1,356,599	6.9	\$1.186	\$0.795
New York	736,606	771,606	35,000	4.8	1.179	.786
West Virginia	10,005,966	13,078,011	3,072,045	30.7	1.180	.788
Ohio (Pennsylvania oil)	3,365,365	2,877,193	488,172	14.5	1.180	.788
Ohio (Lima oil)	20,575,139	18,682,677	1,892,462	9.2	.739	.520
Indiana	4,646,952	4,110,356	536,596	11.5	.630	.456
Kentucky	1,680	322	1,358	80.8	.550	.500
Tennessee	4,325	4,377	52	1.2
Missouri	43	19	24	55.8	4.30	9.16
Colorado	361,450	477,499	116,049	32.1	.883	8.10
California	1,252,777	1,903,411	650,634	51.9	.990	.900
Kansas	113,571	81,098	32,478	28.6	.450	.400
Wyoming	2,878	3,650	772	-30.3	8.00	8.00
Illinois	250	500	250	100	5.00	4.00
Texas	1,450	65,975	64,525720	.570
Indian Territory	170	625	455	4.000	3.30
Total	60,864,401	60,496,499	367,902	0.6	.960	.676

Total value of production, 1896.....\$58,518,709
 Total value of production, 1897..... 40,929,611
 Decrease.....\$17,589,098

Total production in the United States, 1859 to 1897, inclusive (38 years) 837,494,059 barrels, on the basis of 5.6 cubic feet to one barrel of oil. This amount of crude oil would fill a pipe line 6.9 feet in diameter, extending entirely around the earth. It would cover a surface of 10,000 square miles to a depth of 0.2 inches, or fill a reservoir having an area of one square mile and a depth of 167 feet.

PETROLEUM EXPORTS FROM THE UNITED STATES, 1861 TO 1898.

Q. (By Mr. Farquhar.) Have you furnished the commission today with the total exports of the Standard Oil Company, from the first, all over the world out of the United States? A. I do not think I have submitted any statement. It may be among these statistical reports given that there are such statistics, but I hardly think so. I have for periods given the exports.

Q. (By Mr. Jenks.) Can you furnish the exports year by year? A. From the day we began.

VALUE OF EXPORTS.

Value of exports.

Total value of petroleum products exported from United States for the years 1861 to 1871, inclusive, amounted to.....\$ 199,030,333
 Value of exports from 1872 to 1898, inclusive (i. e., since the organization of the Standard Oil Company)..... 1,246,846,381
 Value of exports by Standard Oil Company.... 1,126,401,021
 Standard Oil Company 90.34 per cent total.

PRICES UNDER COMPETITION—WOULD NOT ADVISE GOING BELOW COST.

Q. With reference to the effect of the Standard Oil Company on prices, you have made the general assertion that through the influence of the Standard Oil Company, in your judgment, prices of refined oil have been very greatly lessened to the consumer. Is it generally true that the prices at the present time are considerably lower at competitive points than at those where you have little competition? A. Well, I can not speak with any precision regarding that matter. I have no manner of doubt that, when we are closely pressed with competition at any point, we try to hold our trade. That is a natural law of trade, to which we are, of course, subject.

Q. And your general practice is, if a competitor comes into the market? A. I think, as a rule the history of our transactions would be that the competitor forces the fight.

Q. About what proportion of the refined oil of the country do you supply? A. Well, the grand aggregate is there.

Q. Can you state generally? A. I should say that of this country it would be, approximately, the same as the whole; that is, about 82; 80 to 82 per cent.

Q. Do you think that an organization that controls 80 per cent of the goods that go into the market will, generally speaking, have the power, within moderate limits, of course, to fix the prices and force their competitors to follow? A. It might temporarily have such power. If it exercises it unjustly or arbitrarily it would surely lead to its own downfall.

Q. That is, if it attempted to push the prices too high it would call in competition? A. It would invite competition.

Q. And if there is fierce competition between large institutions, prices cut in any locality—prices will go down how low; to the lowest rates? A. Personally, I would never advise selling goods at a loss. I expect it is done in some cases. I would not personally advise selling goods at a loss. I think when you get to cost you are low enough.

Q. You would say, then, as regards your own methods of competition, that where the fighting is forced by competitors you do not cut prices below your cost? A. I hope not when they get to that point, because I would rather keep my works going and labor employed there than to shut down, even at the cost point.

Q. You would not, temporarily, in a special locality, go below the cost point for the sake of freezing out a similar rival, with the expectation of keeping or getting control of your market? A. I do not believe I would. There might be a greatly aggravated case where such a thing would seem advisable, but it would be a rare one.

Q. You would not say that your company had never done that? A. I would not say that it has never done it at all—no.

Q. So far as an organization of the size of the Standard Oil Company is concerned, if you put prices down to cost you can afford to hold them there, of course, very much longer than a similar rival could? A. I think so.

Q. And I presume you are in the habit of doing that to get rid of a competitor at times? A. We are in the habit of fighting vigorously to hold our trade and advance it.

Q. To the extent of holding prices down to cost until the rivals give way? A. Yes.

HOPES THE STANDARD GETS PRICES SLIGHTLY ABOVE COMPETITIVE PRICES.

Q. Now, the general result then is this: By virtue of your greater power you are enabled to secure prices that on the whole could be considered steadily somewhat above competitive prices? A. Well, I hope so. I think we have better merchandizing facilities, better marketing facilities, better distributing facilities, and better talent than a competitor can have.

Q. I am not asking with reference to your power of making profits, but it is with reference to getting the prices from the consumer. A. Prices are what make the profit. If we had a better average price, we could get a better profit.

Q. You think, generally speaking, that you get prices for oil slightly above competitive prices? A. Well, I should think so; I could not answer—that is a very general question and very difficult to answer. I could not answer that specifically. I hope that we do.

Q. Of course, in this investigation we are seeing if we can get some general principles on which

legislation might be based, and these questions are to bring out, if we can, the power that so great an organization has in fixing prices. Would you say, then, that in the case of an organization that controls perhaps 80 per cent of the markets of the country, there is a monopolistic element that enters in which enables them to hold prices above the regular rate? Is there a monopolistic power that comes merely from the power of the capital itself? A. Undoubtedly, there is an ability, and when that ability, as I have said, is unwisely used, it is sure to bring its own defeat.

Q. If that ability goes to get an exorbitant price, of course it will invite competition, but when that ability is kept within modest limits, would you still say that it was in the power of such an organization to get the benefit of the monopolistic power that comes merely from the power of capital itself? A. Well, I should say that that would be a very restricted power, a very restricted limit. The competitors in this country are very active.

Q. What? A. The competitors are very active; they are alert at all points with their small offerings in the hope to find just such a condition as you describe.

Q. Certainly. A. But, as I say, as business is and as it has been for many years, we could not have that ability to any considerable extent as merchants.

Q. If the ability were operative only to a slight extent, would it still be enough, do you think, to make a difference between what we may call a moderate dividend, say 6 or 7 per cent, and a pretty high dividend of between 15 and 20 per cent? A. Well, that involves so nice a question that I could hardly undertake to answer it; but generally, as to the effect on the community, I should say—

Q. Generally on the prices of the United States? A. I should say that the lessened cost incident to doing business in a large volume more than compensates the consumer for any ability in getting higher prices.

Q. Then that leads to this point, whether the large capital does itself give an organization the power to get a somewhat higher price than it could in the market provided the competitors were substantially equal in power? A. Oh, it may be so; but that is a difficult question to answer.

BY-PRODUCTS.

Q. In your business has there been any decided increase within the last 10 or 15 years in the by-products that come from the refining of oil? A. Oh, my, yes; oh, yes. Their utilization has been greatly improved, and the use of the by-products throughout the world have been enormously increased.

Q. Will you give us a few specific illustrations from your own business? A. Our leading by-products are the light gasoline and naphtha products, the paraffin product that is used in candle making and kindred uses; lubricating oils for all classes of machinery, as taking the place of the

animal and vegetable oils; the vaseline products, and numberless small products that I do not at the moment, perhaps, recall. I have named the leading ones.

Q. Can you say whether it would be possible for these various by-products to be secured to as great an advantage by an organization that had in its control, we will say, only half a million dollars? A. I don't think it possible for them. I don't think they could undertake the different branches of the business involved in the producing of these various articles to which I have referred with anything like the advantage we have in a large specialization.

Q. That is what you would put down as one prominent advantage that is secured by this large aggregation of capital—the use of the by-products? A. I do; the use of the by-products. It may be rather surprising to know that the by-products of petroleum now equal substantially in value the illuminating oil itself.

OIL SOLD BELOW COST IN THE FAR EAST—BUT FOR THE BY-PRODUCTS.

Q. If so large an income is secured at the present time from the by-products, would it be possible for you still to make profits, even though the main product of the refined petroleum were sold substantially at cost? A. Well, we may possibly, yes, secure a profit. It may be. However, we count the profit from the by-products as part of the whole profits in the management of our business; we take it as a whole.

Q. (By Mr. Smyth.) Which is the larger profit, from the by-products or from the oil? A. Well, I should say—I do not know which is the larger—from the by-products. In estimating the outcome from a barrel of crude, we consider the whole proposition as to what we get from the by-products and the ruling prices for the illuminating oil, and base our prices as a whole on that. Of course, it is to our interest somewhat, or in special cases, if not to our interest, these gentlemen who are our competitors in the near-by market and do not have to face the problem that we do, more particularly in competition with Russia and in the markets we have reached in the far east, will force us to do the best we can. We have been basing our calculation on the expected output; made the prices for refined oil in competition with them there, which would have given no margin of profit whatever to us here. We have had to do that so far as to hold those markets for the general American trade as against the Russian aggression.

Q. If I understand you, you say you did that in the eastern markets you have done it? A. On a very low basis; I should say at below cost, figuring transportation and the ordinary charges.

Q. And secured your profits from the by-products? A. Yes; been satisfied with that.

GENERAL IMPRESSION THAT THE MARGIN HAS NOT INCREASED IN SIX YEARS.

Q. As regards the home market here, the statement was made by you that the price has been steadily lower. If we take the margin between crude petroleum and the refined petroleum, we find that for a number of years past this margin does not seem to have lessened very materially in spite of the increased profit that has come from the by-products? A. There is a basis below which it is not possible to go very much.

Q. How far? A. I think the experience of our competitors is perhaps the best proof of the fact that with reference to the business as a whole it is pretty close. It has been carried on a pretty fairly close basis.

Q. Would you say that the margin of profit now in the refining industry was no greater, if we take the period of, say, the last three years, than it was eight or ten years ago? A. Well, I could not speak from memory as to eight or ten years ago.

Q. About six years ago, your general impression is— A. That it is not. My general impression is that it is not. I speak of all these matters with some little reservation, from memory. I am just as accurate as I can be from memory. I should not like to be incorrect.

Q. On account of the many assertions which have been made on all sides on this question, I should like to get as close as possible. A. I will answer you just as well as I can. If I err, I will endeavor to err on the safe side.

BUYING CRUDE IN PENNSYLVANIA—REFINED CHEAPER THAN CRUDE.

Q. The general question has been asked as to the general effect of the Standard Oil Company upon the price that is paid the producer for crude oil. Do you know about what proportion of the Pennsylvania product you purchase? A. Well, I think the percentage of the business done by us as a whole would be perhaps the best illustration of that.

Q. Can you recall, offhand, the figures? A. Perhaps our percentage of the Pennsylvania would be less than 82 per cent, because a larger proportion of the competitive business is done in Pennsylvania than in Ohio. I should say in the neighborhood of 80 per cent.

Q. Your purchases in this Pennsylvania field are made through your pipe line. Have you a general purchasing agent? A. Not through the pipe line.

Q. It is through your general purchasing agent? A. Mr. Joseph Seep, of Oil City.

Q. The prices that Mr. Seep there gives are fixed by you? A. Well, they are suggested, as a rule, by us.

Q. He is your general purchasing agent, and there are various sub-agents there? A. Yes.

Q. Do you recollect about how many? A. I should say forty or fifty.

Q. The prices are fixed for it generally, as you say, from your office. As covering the principles on which these prices are fixed, a circular Mr. Seep issued some time ago was produced here, stating that the prices that he would pay would be fixed, in general, by the world's markets. The implication would be that the prices would not vary probably very frequently or very violently. Has it been true, generally, that prices have kept stable for the crude oil of Pennsylvania? A. Well, the prices have varied somewhat during the past several years, according as the outlook was for the production, and as the demand was. It could not be better stated by me than the circular states it. We have before us daily the best information obtainable from all the world's markets, as to what the offerings are, and as to what it is possible to sell for; and we make from that the very best possible consensus of prices, and that is our basis for arriving at the current price.

Q. Generally speaking, are the relative prices of crude oil and the refined oil kept substantially uniform? A. We know all about it every day, of course.

Q. And is the relation kept substantially uniform? A. Oh, substantially so. Of course, it is not always the same. Of course, it seems possible sometimes to get a higher price, and we are glad to avail ourselves of the opportunity; and sometimes we have to take a closer margin and still buy the crude, and there, of course, we suffer a loss.

Q. Statements have been made here by some of the witnesses to the effect that there have been times when refined oil at the seaboard was selling lower than crude. A. I should say that is a very exceptional case. I do not recall.

Q. Can you suggest any circumstances where that would be the condition of affairs? A. I do not recall any such period. The answer is already given by me that, in competing with the Russians at certain times for certain markets, we have made prices for refined that were as low as the crude products and have taken our returns on the profits from the by-products; but they have been very exceptional cases, and it is not the case today; it does not at all exist today.

REASONS FOR DISMANTLING REFINERIES.

Q. You have at times purchased the plants of your competitors and dismantled them? Instances of that kind have occurred? A. Oh, my, yes.

Q. Will you state the business conditions which, in your judgment, justified that? A. I endeavored to do that as directly as possible in my general argument.

Q. Will you sum it up again? A. It is this, that we have at times bought refineries with the expectation of succeeding to the volume of business done by them. We have universally replaced the capacity of these refineries by better ones and better equipped construction at more favorable points.

We would not buy refineries and dismantle them for the pleasure of doing it. We have done it because of a carefully considered business proposition, that being in the direction of economy in the business.

Q. I will call your attention to the case of some refineries that were bought up at Titusville. Perhaps you can explain somewhat in detail those cases. A. They were no exception to the rule. We had opportunities to utilize some of that property quite advantageously as small refineries. I think one of them was taken to Porto Rico. One was taken to Kansas, where it was put in after the new production; and one to Porto Rico, where we were compelled by the tariff laws to refine.

Q. (By Mr. Smyth.) Is the production equal to the demand? A. Oh, always vastly in excess of it; vastly in excess of it.

Q. (By Mr. Jenks.) You made the statement that the dismantling of the plants at different times had not lessened your output. A. Oh, no. Of course there has been at all times an excess of capacity as compared with the demand. The capacity of the refineries is never run full—on very rare occasions—I should say, never. And the sole purpose in the abandoning of any plant would be to conduct the business at a point where it might be more economically done.

Q. Incidentally, in connection with that, it might be a more convenient way of holding your market in the locality where competition would figure. A. Precisely.

Q. That would enter as one factor? A. That would enter as one factor; yes.

NOT THE STANDARD'S POLICY TO MAKE PRICES SPECIALLY HIGH AFTER THEY HAVE BEEN CUT SPECIALLY LOW.

Q. The assertion is frequently made—I do not recollect whether it has been made on the stand—that in certain localities where you are compelled, in order to keep the control of your trade, to put prices down for a time until a rival withdraws from business, prices are afterwards put up above what they were before in order to recoup the losses incurred? A. There is no such policy in that business.

Q. You have no such policy? A. We have no such policy. It is possible that, in the zeal and anxiety to serve of some overzealous servant, such a case might occur. If so, and if it was known, it would not be approved.

Q. That is not your policy? A. No; that is not our policy. We fully realize that if we survive with our business we must treat the public very fairly.

THE STANDARD DOES 75 PER CENT OF THE CANADIAN REFINING—NO RAILROAD DISCRIMINATIONS IN CANADA.

Q. Statements have been made several times of late in the papers with reference to special dis-

criminations in freight rates that have been secured by the Standard Oil Company in Canada. It is said that they affect very unfavorably other American refineries. A. I am not familiar with it all. I know there have been such agitations in the newspapers, but I have considered it as one of the usual class of such agitations. I will gladly inquire about it. I do not know of any discriminations in our favor; that is, any rates to the exclusion of other shippers of like character at all. Mr. Rogers says Mr. Harris asked a question in that direction, as to our being interested in the refining business in Canada. I did not hear him.

Q. Will you please tell us about your interest in the Canadian business? A. We are interested in the Canadian refining business and are doing our best in the business there to get it on a fairly profitable basis. It has been very much disorganized there for some time, and we have come into relationship there with that in the past year or so.

Q. How large a proportion of the Canadian refining interest do you control? A. I think about 75 per cent; about 75 per cent.

Q. Have you of late, to your knowledge, made any contracts with the Canadian Pacific and the Grand Trunk with reference to advancing rates from Buffalo and Toledo? A. Well, sir, I have not any personal specific knowledge about the matter; I will gladly inquire about that.

Q. Will you look it up and send us a reply? A. I will.

Q. You will get full information on that subject? A. I will. The advance in rates on American oil from Buffalo and Detroit was made by the Canadian roads in their own interests and is in no way discriminatory in favor of the Standard Oil Company, but rather to the contrary, for that company pays these advanced rates in full and ships over 75 per cent of the American oil consumed in Canada.

DOES NOT KNOW OF ANY RECENT CHANGES IN FREIGHT RATES.

Q. Aside from the question of special rates or special favors by the railroads, the statement has been made that at times you have been enabled to influence the railroads to put rates over certain lines so high that it would work to the disadvantage of competitors who had to use those lines more than you did. For example, Mr. Westgate testified that in shipping oil into Canada he had found himself at a disadvantage on account of this increase in rate of which I have spoken and of which you say you have no knowledge, and that in attempting to ship to Canada by another route, through the State of New York, he found that rates from his refinery to the northern part of New York were very much above the rates that might be considered normal there, judging by the rates on other goods. For example, he found that on other goods the general freight rates to those places in northern New York were Boston rates; but on oil they were special rates. He felt that he was put at a disadvantage

on account of the location of his refinery, and that the Standard Oil Company had succeeded in influencing the railroads there to make those special rates to the disadvantage of their competitors. What would you say on that general question? A. I do not know.

Q. The matter would be entirely within the law, of course? A. I don't know of any such condition at all. I have no knowledge of the rates—the tariff rates on petroleum—having been changed in New York State or any place else for a long period. I don't know that to be so. It is within the bounds of possibility, but I should be disposed to doubt it exceedingly.

Q. You would be likely to know in detail with reference to the arrangement of freight rates? A. In New York State?

Q. In New York State and Rhode Island. A. I think I would. I can make inquiry about it. I would say, with reference to the question of coming into relationship with the Canadian refining interest, the question of rates was considered in connection with the refining, but, as I say, I don't know of any rates that are not open to all comers.

Q. That is not the question. Competitors say that rates over one line have worked to their peculiar disadvantage and not to yours? A. I don't know of any such condition. I would say that it would be to the interest of the Canadian roads naturally to encourage business in their own territory. I don't know about that at all as to any preferential condition with us.

REPORTS ON COMPETITORS' BUSINESS NOT SECURED BY IMPROPER OR QUESTIONABLE METHODS.

Q. In the testimony of Senator Davis a statement of this kind was made: That a man in his employ had been approached by a Standard Oil official and offered pay regularly if he would inform the Standard Oil Company with reference to their shipments. Does the Company under any circumstances get information from the employes or officials of their competitors? A. The company does nothing of the kind. If any such case occurred—and it might as an exceptionally rare case on the part of an overzealous employe, who, in his anxiety to know about his competition, might do a foolish thing—it is not approved by the company. When Mr. Davis or Mr. Westgate or anybody else says that we in New York get down to our offices to get our reports early in the morning from the spies we have out, it is utterly untrue. We do nothing of the kind. We are not figuring on Mr. Westgate's or Mr. Davis's business; we are figuring on our own business.

Q. Do you make the general statement that no reports are secured from your agents with reference to the business of competitors? A. I don't say that. I should say there would naturally be reports, such reports as they could rightfully secure; but that they should secure them by improper or questionable methods of any kind would not be approved by any member of the Standard Oil Company; and

would be only too thankful to have any such case brought to our attention.

STANDARD OIL TRUST DISSOLVED, BUT THE AGGREGATION
HAS WORKED AS HARMONIOUSLY AS BEFORE.

Q. You have said that the general information with reference to the organization of the company would be furnished in the answer to the schedules of inquiries that were given you. But there are some matters that would not be covered in that, particularly. From Attorney-General Monnett's testimony, the different forms of organization of the Standard Oil Company are brought out somewhat. You had earlier the trust organization; afterward the trust was dissolved, I believe, and you had a form of organization. Will you sketch briefly the changes in organization that the Standard Oil Company has gone through since the dissolution of the trusts? A. Would it not be vastly preferable to have that in succinct shape as Mr. Dodd would furnish it?

Q. That is not covered directly in the schedule? A. I think it would be so much more intelligently stated from the records than I could give it from memory in an oral statement, and I would like very much if you would await that.

Q. I think it possible that some of the commissioners would like to base some questions on your statement, and then we shall have that for record from Mr. Dodd. A. Well, briefly stated, the Standard Oil Trust, as such, existed from the year 1882 to 1892; formed in 1882 and dissolved in 1892. In 1892, at the time of the dissolution, the majority of the stocks of the various companies concerned or involved in the Standard Oil Trust were distributed to the equitable owners, and that distribution has gone on steadily until this time in the hands of liquidating trustees.

Q. Nevertheless, since that time the different Standard Oil companies have worked together in harmony, have they not? A. The ownership has naturally brought them into harmony of action; the like ownership, of course.

Q. The general way in which the control has been kept uniform has been this, that the men who were former trustees have held the majority of stock in each of these different companies? A. Exactly so.

Q. So that the Standard Oil combination, as we may say, has worked together as harmoniously since the dissolution of the trust as before? A. It is hardly fair to call it a combination, but you might call it an aggregation.

Q. An aggregation? A. An aggregation.

Q. But as a matter of fact it has worked as harmoniously as before? A. Yes.

THE AMOUNT OF TRUST CERTIFICATES OUTSTANDING
IS SMALL.

Q. Will you explain also briefly—because that was dwelt on also at length by Attorney-General Monnett—the method of distributing the profits to

the stockholders under the trust and since? A. Under the trust the profits, of course, were centralized into the hands of the trustees and distributed ratably.

Q. Distributed to the certificate holders? A. Since then the dividends have gone directly to the owners of the shares of the various companies. They have kept the same in one case as in the other, of course.

Q. (By Mr. Phillips.) Have they been paid on the original Standard Trust certificates? A. To the extent that those remained out, they have.

Q. Is there a very large per cent of them remaining out? A. Not very large.

Q. (By Mr. Jenks.) Do you recollect what per cent? A. I could not state; it is becoming very small.

Q. (By Mr. Phillips.) The market quotations are based on the original trust certificates? A. I supposed the quotations were based in New York on stock.

Q. (By Mr. Jenks.) Will you repeat your answer? A. Well, it covers some equitable ownership, as it was.

Q. (By Mr. Phillips.) It is largely distributed now? A. Largely distributed now.

Q. On the original trust certificates? A. No; oh, no; not largely, but to a very small extent only.

Q. And was for quite a time after the dissolution? A. Yes; but it is very rapidly being extinguished.

Q. When the Standard is quoted in the neighborhood of \$500,000,000, or \$490 a share, do we understand that to be the quotation on the original Standard? A. On what was represented by the original Standard.

Q. On what was represented by the original Standard? A. By the original Standard Trust.

TRUST CERTIFICATES EXCHANGEABLE FOR STOCK OF THE
NEW JERSEY CORPORATION REPRESENTING SUB-
STANTIALLY THE SAME INTERESTS.

Q. When a purchaser buys on the market 100 shares or 50 shares of what is nominally the Standard Trust certificates and takes it to the company to transfer, what do you give in the place of that? If I should buy 100 shares of Standard Trust certificates and take it to you— A. You would be entitled to receive a share or an equitable interest in the various companies composing the Trust.

Q. What form is that now in when it is transferred? A. It may, if it is so desired, be in the form of a certificate of stock in the various companies.

Q. They take it that way when they purchase, transfer, or sell? A. They do.

Q. Do they take it in a divided form, or do they give them a certificate representative of these aggregations? A. What is the question? What he would be entitled to? What he would be entitled to would be his interest in the business of the various constituent companies.

Q. Yes; and what form of paper do you give for

that in the way of a certificate? If I buy 100 shares on the market at, say, 490 or 480 or 500, and take that for transfer, or if a man dies and it is sold and transferred to some other person, what kind of a certificate do you give that person; will it represent all these aggregations? A. We give him, if he so desire—we could not at all reissue a certificate of the Standard Oil Trust; we won't issue any new certificate of the Standard Oil Trust, that being in final liquidation—we would give him his stock in the various companies, or, as some of us are now doing, holding our stock through the New Jersey corporation, he would hold his interest in that way. We would give him a certificate in that representing substantially the same interests.

Q. Have you such transfers being made?

Q. (By Mr. Smyth.) Have you got yours in the new stock? A. Oh, to a small extent.

Q. (By Mr. Farquhar.) The question is whether the general Standard Oil certificate of stock is on the Stock Exchange of New York? A. None on the Stock Exchange.

Q. Not at all? A. No.

Q. Then you take up the eight subdivisions? A. How many—seven or eight?

Q. And the New Jersey company? A. And the New Jersey company.

Q. And the stock that is so quoted in the New York market is what? A. It is the remaining fraction of the Standard Trust.

Q. Of the old trust? A. Yes. Although I think, to a very limited extent, the stock of the New Jersey corporation, which substantially represents all, would be also quoted.

The managers of the Standard have not speculated in its stock.

Q. (By Mr. Farquhar.) The stock that is seen quoted in the New York market is what we might call little dribblets of stock? A. That is it.

Q. Ends of estates and stock that has come from the division of property into their hands; in other words, the Standard stock is not in the market, in the general sense of the term, as a dealing stock? A. No, sir; the listing of it on the Stock Exchange is carefully avoided, and they have never endeavored to make it a speculative affair at all.

Q. Have you never, of your knowledge, at any time, known when your stockholders and your directors or officers or others have dealt in those stocks? A. Oh, I think to a limited extent there have been some transactions on the part of the officers in the stock, usually in the way of adding to their interest, perhaps, as opportunity has occurred. I think I have myself. I must myself plead guilty to the charge of having bought 100 shares and then resold them again within the past 10 years. I think that represents my entire stock transactions in 10 years.

Q. Are not usually the stock transactions confined to the officers and the present shareholders

of the Standard properties? A. There are a large number of shareholders—3,500.

Q. These are simply figures. It is the main fact that we want. The stock of the Standard Oil, the great properties, is not stock that is usually put into the New York market or any other market, but is property that is confined within a circumscribed number—say, 40 or 50 people—who are the main great owners and managers? A. Undoubtedly, the majority is held within as limited a number as that.

Q. Have you at any time in the history of your company ever sought to make a profit through your stock? A. Oh, dear; no, sir.

Q. At any time? A. Only in the promotion of the business, in the improvement of the stock as a whole, but not as a speculative thing in the stock itself. As I say, I have within the past 10 years personally bought and sold 100 shares. That shows the extent of my operations.

Q. (By Mr. Jenks.) Will a list of the dividends that have been declared on the stock, the value of it, and so on, be furnished in answers to the schedule? A. Undoubtedly.

Q. Those answers have been made? A. So far as I know; Mr. Dodd has the matter in charge, if that was called for.

THE STANDARD OIL COMPANY OF NEW JERSEY.

Q. Now, will you take a moment to explain the organization of this New Jersey corporation out of the others? A. It is simply a New Jersey corporation, with a capital of \$100,000,000 of common stock and \$10,000,000 of preferred stock, is formed that shall be competent to own stocks of these different corporations, to buy from all parties who own stock as they may desire to sell.

Q. It is expected that these other corporations will practically throw their stock into that? A. Not the corporations; the individuals owning the stock.

Q. (By Mr. Phillips.) Then would it not be a case of a hundred million company absorbing a five-hundred million stock? What would they give them in value for it? A. It is substantially the same value that was represented in this Standard Trust ownership; substantially the same value, whether it is one hundred, two hundred, three hundred, or four hundred.

Q. This new stock would be put out at three or four hundred per cent premium? A. No; there is no new stock being put out.

Q. (By Mr. Smyth.) The capital is to be one hundred millions? A. That is it.

Q. And it is simply a reissue under the New Jersey charter? A. It has nothing to do with the issue; there is no new capital sold at all.

Q. Simply a reissuing of the present stock to the present stockholders under another name and another charter?

Q. (By Mr. Phillips.) Necessarily carrying the same value? A. In other words, the trust being dissolved and the parties in it receiving their equitable shares in the various companies, bring them

and sell them to the Standard Oil Company, of New Jersey.

PREMIUMS ON CRUDE OIL MEAN USUAL QUALITY;
SOMETIMES COMPETITION.

Q. (By Mr. Jenks.) Will you explain to us briefly the system of premiums on crude oil in the districts where the crude oil is purchased? A. In the producing districts?

Q. In the producing districts. A. The premiums are usually the result of the question of value in the different parts of the district. I will not say that in some cases they have not been lower somewhat, caused by competition; where we have had private facilities in certain districts to take care of the oil, and other people had come in and tried to take it away from us, in some cases we may have paid more than we would like to pay. I can not say; perhaps that is so; but, as a rule, in the special case of the Franklin oil and the case of the Lima oil and Scio oil, that is not it. It centers entirely on the question of value.

Q. I infer from what you say that at times, in order to dispose of competitors, the premiums have been kept on till the competitors have been bought out and have been dropped afterwards? A. As I said, when our business has been attacked we have endeavored to protect it.

Q. (By Mr. Phillips.) I am somewhat familiar with the pipe line business in the oil fields. Take our district, where an independent line went in a short distance from Oil City; a premium was put on that oil, and no one claimed that that oil was more valuable than Oil Creek oil or any other oil. It was not put on there on account of the value of the oil. A. As I have already said, that may be a case in point: where we have found, after providing these special facilities, which have no value for other purposes, that our business was attacked by a newcomer, we have, of course, endeavored to protect it.

Q. You put a premium on the oil which the Standard purchased after the American—you will remember that they built a line through to Philadelphia and established refineries there, and it became quite valuable. Now you put on a premium both in Butler county and in Washington county, those very large fields at the time, did you not? A. We undoubtedly did.

Q. It was taken off when you purchased, was it not? A. Undoubtedly and we would do the same thing again. We could not do less and be in the business.

Q. And you do not do that as a mode of discrimination? A. We do not; we do that as a matter of self-protection.

Q. And when you think you can do it in a legal way you do it whereas you can not give a rebate? A. That is it, precisely.

Q. Now, there is a pipe line in the Scio field in Ohio, and there is an independent line there, and there is a premium existing there? A. There is,

but it is a question of quality. The Scio oil is of a very superior quality. We could not pay a premium for it with the light business that is being done were it not for the quality.

Q. But in the case I have referred to in Butler county and Washington county that was not a question of value, but of competition? A. It was competition, unquestionably. There were very strong competitors, and we were there to fight them, of course.

THE STANDARD'S STOCK IN INDEPENDENT COMPANIES.

Q. (By Mr. Jenks.) Several times in the course of the investigation statements have been made with reference to the very decided interest that the Standard Oil Company has taken in the Producers' Oil Company Limited. Statements have been made as to their buying stock in that company and attempting to get control of it. Will you give your version of that? A. We bought some stock in the Producers' Oil Company, Limited. We bought some stock also in the United States Pipe Line.

Q. About what proportion of the stock did you buy? A. Well, I could not state from memory—a fractional interest in the United States Pipe Line and a larger part in the Producers' Oil Company.

Q. A majority of the stock in the Producers'? A. No no; I should say considerably less than a majority.

Q. At any time? A. That is, in the Producers' Oil Company, Limited?

Q. Yes. A. To the Producers' Oil Company, Limited, we found such difficulty in the way of admission—

Q. (By Mr. Phillips.) I always understood that it was a little over half, and I want to be corrected by Senator Lee if that is wrong. A. Senator Lee, I think, is mistaken as well as yourself. We never owned more than one-half. The gentleman who bought ours, pending the ownership decision, did own a little more than half; we never did.

Q. It was under your control, and you worked in harmony? A. It was until we sold it.

Q. You worked in harmony with the other person? A. We generally work in harmony with him.

Q. You would in the management if there had been a change? A. If there had been a change we should have hoped for a better relationship, but it did not come. We bought that stock and were so opposed in the exercise of ownership that we sold it. We sold it in good faith, and the courts have upheld the ownership of Colonel Carter; that has been finally upheld in a most remarkable adjudication. The court held that he was the beneficiary, but because of some by-law on the books of the corporation he could have no voice in it whatever. We have no interest in it whatever, not even a dollar's worth. Our ownership in the United States Pipe Line was bought at a time when we thought that the business ought to become profitable. It was bought as an investment and with a view to having such knowledge as we could have rightfully through such ownership, as we could acquire in

the progress of the affair. There is nothing covered about it. Our ownership was contested by the gentlemen in charge of the property, and the courts have passed upon upholding our ownership, our right to own, and giving us our place and recognition on the board, and we have never done a thing to hurt the business of the company. We have been greatly pained that the results from it have not been more profitable, and we do not understand why they have not been. We think that one of these days, if that iniquitous voting trust is ever dissolved, the shareholders will awake to a feeling that somebody else than those who have managed it could do something for it.

Q. (By Mr. Phillips.) Did not all the shareholders agree to the voting trust? A. You got all of them to agree to it, but there have been some that want to get out of it mighty bad.

Q. Then you did control, through Colonel Carter, in the Producers' Oil Company, Limited, a little over half the stock? That was carried up to the supreme court. It was organized, a partnership, limited, in which the law itself requires the person to be admitted by consent of a majority of interest and stock in order to vote, and the by-laws recognized the same thing. The supreme court decided that purchase would not make your party a partner in that concern any more than, if I should buy a partner out in the dry goods business, I could force myself in. The law was gotten up for that special purpose, as it is understood in Pennsylvania, the same as the English law, was it not? A. I must correct you very positively, once and for all, when you say that we are controlling through Colonel Carter. We have nothing whatever to do with Colonel Carter. The purchase made by Colonel Carter of the stock that we owned was made in good faith, and he owns it entirely. He can give it away or tear it up without raising any question with us or anybody that I know of. The question of the decision of the law I am not here to criticise. I am not criticising judges or courts. But the law was a very queer one, that a man should be adjudged by the court the equitable owner of a majority of the stock, and then it should be ruled that because of some by-law of which he had not been cognizant, passed by the company, he could be kept out of any voice in the company. That is a very queer law, whether in New York or Pennsylvania or anywhere else.

Q. Did Colonel Carter buy that stock of his own instance? A. He did buy it of his own instance.

Q. And without any consultation or agreement with the Standard Oil Company? A. He was in a contention regarding the matter of his individual ownership, and he became enlisted in it and bought our stock, as I say, in the negotiation, the same as you, or I, or anybody else would buy it. We were glad to get out of it.

Q. You had purchased a large amount of stock? A. We had purchased a large amount, and we sold it.

SUSPECTS FREIGHT DISCRIMINATION AGAINST THE STANDARD.

Q. (By Mr. Jenks.) You have stated emphatically several times that you have received no discriminating favors from railroads at all since the passage of the inter-state commerce law. The statement is frequently made that railroads are making discriminating rates on freights of different kinds at different times. Have you, in your own business, met with opposition of that kind, or have you had reason to believe that your competitors were receiving special favors against you? A. Well, I would rather not go into that question. I do not feel that I am prepared to go into it. That we have strong suspicions on that line is true enough, but I am not here to make charges against other people. I am not prepared to do it. There might arise exigencies in the course of the testimony where it would seem necessary for us to look up the records; and if so, I shall be glad to do it.

Q. You have no evidence to give on that subject?

FAVORS PUBLICITY OF ACCOUNTS UNDER A NATIONAL CORPORATION LAW.

Q. You made a suggestion near the close of your direct testimony with reference to legislation. Would you consider it advantageous to the country as a whole to have greater publicity regarding the business of all of the great corporations that now exist? For example, with reference to the amounts represented by patents, by good will, the amounts that are water, and so on. In other words, would you consider it an advantageous thing for the country to have substantially the English corporation law apply in this country? A. If it could be put into Federal hands, yes.

Q. Into Federal hands? A. Into Federal hands; yes, by all means.

Q. And you would favor, then, the publicity of accounts, the making of reports to the Federal Government quite in detail? A. Oh, unquestionably.

Q. You would favor a law of that kind? A. I certainly would.

MARKET PRICE OF STANDARD STOCK.

Q. (By Mr. Phillips.) Will you state what the highest price is that the Standard Oil Company's stock has reached on the market? A. I think the present is about the highest price.

Q. What is the last quotation? A. I think 460 or 465.

Q. That would represent \$460,000,000 or \$465,000,000? A. If it could be all sold at that price.

Q. Do you object to stating the amount of dividends you have been paying? A. That is to go in the statement asked for.

(By Mr. Jenks.) I have furnished to Mr. Archbold one of the schedules prepared by the com-

mission, and that is to be filled and returned in ten days.

NO REBATES ON OIL OF OTHER COMPANIES—NO COMPELLING REFINERS TO SELL TO THE STANDARD.

Q. (By Mr. Ratchford.) Has your company received any rebates on the transportation of oil of other companies? A. It has not.

Q. What have you to say to the charge, so generally made against your company, particularly, I believe, in the Western States, to the effect that small producers and refiners are forced to sell their product to the Standard Oil Company? That is a phase of the question which, I believe, has not been touched upon today? A. I think we have gone into it very fully.

Q. What have you to say with reference to the charges, so generally made, to the effect that smaller concerns, individual producers and refiners, are forced to sell their product to the Standard Oil Company? This is a charge that is made in Colorado, and I want to give you an opportunity to deny it if it is untrue. A. It is untrue; there is no such compulsion of any kind, either with reference to the producers or refiners. In fact, we buy very little of the product of the small refiner—next to nothing.

Q. Your company has made no agreement with reference to such small concerns? A. No.

Q. Did the paper you have submitted in evidence here today state that certain other companies have received rates of transportation from certain points cheaper than your company received? A. I stated only the one case in connection with transportation of oils furnished by the Central Railroad of New Jersey to the United States Pipe Line. I furnished a statement on that.

Q. (By Mr. Kennedy.) There was testimony in Colorado to the effect that a distributing company there took all the products of the two refineries of the Colorado field, and Senator Hill, of Colorado, who owns one of these refineries, testified that the distributing company, or merchandising company, which bought all of this refined product, was the western concern of the Standard Oil Company. A. They may do so, but it is certainly a voluntary act on the part of the company refining the oil. There is certainly no compulsion about it.

Q. You said they do not buy? A. We do not here at the east—the Standard Oil Company. I did not have in mind the question of a possible purchase in Colorado of the local production; that might be so.

Q. (By Mr. Ratchford.) Is there not such a thing as cutting the prices on that distributing company and forcing them, through business reasons, to dispose of their product to your company? A. I do not know how we could do so. It might prove they were competent buyers.

Q. They hold otherwise. A. Their relation to the company—the distributing company—although

I am not familiar with it, must be voluntary; certainly no compulsion about it.

AMERICA NOT IN THE MARKETS OF THE WORLD BUT FOR THE STANDARD.

Q. (By Mr. Smyth.) Do we understand from your testimony that you claim the Standard Oil Company has been of vast benefit to the oil industry in the United States and abroad? A. I believe that it has been of vast benefit to the country.

Q. Do you believe it has been a benefit to the American people? A. To the American people and the American producer of oil. I believe firmly that America would not have been in the markets of the world if it had not been for the Standard Oil Company.

OBSERVED THE STRICT LETTER OF THE LAW.

Q. Do you state, since the passage of the interstate commerce law, in 1887, your company has not received rebates of any kind from the transportation companies? A. I think we have observed the strict letter of the law in all that pertains to inter-state transportation.

CAUSES OF STANDARD'S PROSPERITY.

Q. Yet, since that period your company has prospered more than ever before? A. Yes.

Q. How do you account for that? A. One of the contributing features, in my mind, is the greater stability that has attached to the trade since the passage of the law; the extension of business, growth of business, and better utilization of by-products, and all that; but very largely the stability of business incident to the stability of rates through the inter-state commerce law.

Q. I suppose the Standard buys the best that is to be had? A. They are on the lookout for the best.

Q. And probably their success is due to their nerve and ability and money? A. It is, undoubtedly, and to the further fact, which I must repeat, that we treat the trade fairly. We realize fully that no business can have any permanent success that is not carried on on honest principles, and you will not find customers of ours complaining of our treatment.

A NATIONAL CORPORATION LAW.

Q. (By Mr. Clarke.) You have stated that you would favor the formation of national corporations. Would you have the capital of these corporations limited by law or by a national commissioner of corporations, or would you have it unlimited? A. I would have it unlimited, but would put upon its issue such restrictions as to value involved as would fairly protect the community; I mean the general public.

Q. You would have these national corporations

subject to the supervision of a commission or some other Government authority? A. Undoubtedly, as is the case under the English corporation law.

Q. Do you not think one of the greatest evils of State corporations is the lack of supervision? A. The lack of supervision, and the entire lack of uniformity as between the States.

Q. Do you think the formation of national corporations would overcome most of the objections that are now raised to combinations commonly called trusts? A. I do. I believe it would do away with the talk of monopoly, make every business free to all comers, within the law and under the provisions made.

Q. (By Mr. Kennedy.) Favoring national charters and national supervision as you say, would you go to the extent of favoring inspection of the books and affairs of each concern, as the national banks are inspected by Government officials? A. I have not made a study of the subject so as to make a statement in detail as to what the supervision and restriction should be. I should say that is a question that ought to be very carefully considered before expression is made, and I could hardly answer it today. On general principles, I favor all fair supervision and making of statements that would enlighten the public.

ADVANTAGES OF A GREAT AGGREGATION.

Q. (By Mr. Farquhar.) Is it not a fact that, since you control the products of petroleum in this country, when you acquire, by purchase or through the agency of your own men, the formula of a better way possibly of producing oil, you can beat all competitors by the fact that you can put it into effect in every single one of your plants? Has not that been one of the great reasons of your success in carrying your oil under a Standard title all over this country, and accepted as a standard wherever sold? A. Undoubtedly.

Q. An advantage that smaller concerns, independent or otherwise, can never obtain because they can simply work a formula within themselves, whereas you can put it in the hands of fifty or sixty? A. That is entirely correct. That is one of the great causes of success of our business, and comes from combination alike of capital and talent.

Q. (By Mr. Phillips.) Have you any further or supplementary statement to make, Mr. Archbold? A. Nothing.

Testimony closed.

Washington, D. C., September 9, 1899.

TESTIMONY OF HENRY H. ROGERS.

President of the National Transit Company.

The commission met at 10.30 a. m., Vice Chairman Phillips presiding. Mr. Henry M. Rogers appeared and, after being duly sworn, testified as to the oil industry.

Q. (By Mr. Jenks.) You may state your name and residence. A. Henry H. Rogers, New York City.

THE WITNESS'S CONNECTION WITH THE STANDARD OIL COMPANY.

Q. What connection have you with the Standard Oil Company, the Standard interests? A. I am president of the National Transit Company.

Q. Are you connected with the Standard Oil Company of New Jersey? A. I am one of the vice presidents of the Standard Oil Company of New Jersey.

Q. Your position is such that you would be entirely familiar with the questions discussed in Mr. Archbold's testimony? A. I think mainly so.

Q. You heard the testimony yesterday. Do you agree substantially with all that was said? A. I do.

REASONABLENESS OF PIPE LINE CHARGES OF THE STANDARD.

Q. You have been familiar with the pipe lines, their charges, etc., for several years? A. I have.

Q. About how long is it since the charges on the pipe lines were lowered to 20 cents? A. I think, as Mr. Archbold testified, it was about twenty years ago.

Q. Can you give us any explanation as to why it is that the pipe line charges have remained substantially the same for twenty years, whereas the railways and prices in general have decreased very decidedly? A. You will understand the pipe line charges of 20 cents are what are termed "gathering charges"—that is to say, the oil is taken from the wells of the producer and delivered to the stations of the pipe line and the tanks. Wherever the oil is found we run a line to it. We are frequently called to run a line 15 or 20 miles. We never object; we make no extra charge for that. In some instances we pump oil but a very short distance to the tanks, and in some instances we pump it 15 or 20 miles, so that we consider it an average charge, really, rather than an arbitrary charge.

Q. (By Mr. Farquhar.) You mean not an average but an equalizing charge? A. An equalizing charge, if you please to term it so.

Q. (By Mr. Smyth.) Based on the circumstances of the producers in the same fields? A. Yes; and because the producer, if he is a patron of our line, is at liberty to feel that no matter where he finds oil in the vicinity of the pipe line—it may be 15 or 20 miles away; but if he is a patron and has a producing well of paying size, we will spend the money and run the line to him and take care of his oil.

COMPETING PIPE LINES.

Q. Is there any competition in the pipe line business? A. Yes.

Q. What is the competition? A. The competition in the Butler field is with the Producers and

Refiners' Pipe Line. The competition in the Ohio field is with the Manhattan Oil Company, and in the Indiana field with the Cudahy Company.

Q. (By Mr. Phillips.) Is there any competition in the Scio field in Ohio? A. There is a trifling competition. The production in that field is about 6,000 barrels a day, and the run of the outside lines is probably between 400 and 500 barrels a day.

Q. (By Mr. Jenks.) These competing lines run into the same territory, so that they might equally well take the product? A. If they had the capacity to handle it.

Q. So far as the location is concerned? A. So far as the location goes.

Q. Are the prices of these independent pipe lines in Pennsylvania the same as yours? A. I do not know. I have hearsay evidence, but that is all.

PREMIUM ON OIL IN VARIOUS FIELDS.

Q. (By Mr. Phillips.) Have you any premium on oil in any competing field except the Scio field? A. Yes.

Q. What other fields—the Tiona and Franklin field? A. The Tiona—the Franklin field is a lubricating oil field. The oil is superior to the ordinary petroleum.

Q. And the oil in the Tiona field is also superior, as it is generally understood? A. Yes.

Q. Now, the Scio is a newer field. Do you understand that to be somewhat superior? A. It is.

Q. Mr. Archbold testified yesterday that you had applied premiums on oil in fields where there was no special difference in the quality of the oil, as, for instance, in Butler and Allegheny and Washington counties, when there was competition there. Do you understand that to be substantially correct? A. I understand Mr. Archbold's statement to be absolutely correct.

A PREMIUM NOT A REBATE.

Q. He testified that you put these premiums on, but did not give a rebate. I would like you to explain to the commission the difference between putting a premium of 10, 15, or 20 cents per barrel on oil and granting a reduction in transportation prices on it. Would it not in effect be the same? A. First I would like to say that as I understand Mr. Archbold he did not testify that we had been the first to put the premium on the oil; that it had been brought about by competition. I do not think the money that goes into the pocket of the producer as an advanced price could be classed as a rebate, because he loses interest in the oil as soon as it goes into the pipe line. The pipe line charges are paid by the man who transports the oil for refining, the exporter.

Q. Did not all who shipped in these fields get an advantage over other producers in other fields the same as if it was a rebate? Is it not another name for the same thing? A. No; not nearly so, as I have explained. The producer loses interest in the oil from the instant when he delivers it to the pipe

line. If he gets a premium on the oil, the producer is benefited by it. He has surrendered it to the man who owns it after it goes into the pipe line, for refining or for sale to foreign markets, for export. The producer has no interest in the oil after he parts with it at the well.

Q. Could he get a larger price for it if there was a larger price on that oil? A. I could not answer such a hypothetical question as that.

NO PREMIUMS AT PRESENT EXCEPT FOR SUPERIOR QUALITY.

Q. (By Mr. Smyth.) Do we understand, then, in the instances of fields where you say there is a premium, that it is due to the superior quality of the oil? A. It is.

Q. (By Mr. Phillips.) At the present time? A. Yes.

Q. (By Mr. Smyth.) I understand there is no premium now except in two cases where the oil is of superior quality? A. There are three points.

Q. And at these points there is a premium? A. There is a difference in the price of oil in Ohio. There are two fields in Ohio, the North Lima and the South Lima. The oil of the North Lima field is more valuable than that of the South Lima field, and there is a difference in the price of five cents.

Q. That difference goes to the producer. A. Yes.

DISCRIMINATING FREIGHT RATES IN CANADA.

Q. (By Mr. Jenks.) We received some information yesterday with reference to the interests of the Standard Oil Company in Canada; it was said you had some refining interests there. About what proportion of the refining in the Canadian fields do you do? A. I am not familiar enough with that branch of the business to answer. Mr. Archbold, I think, will furnish that.

Q. Have you any information as to an advance of rates from Buffalo and Toledo through to Montreal or other Canadian points in the latter part of 1898 or the first part of 1899? A. I never heard of it.

Q. You did not hear that any complaint was made by Canadian oil dealers to the railroad committee of the Canadian parliament with reference to discriminating rates on part of the Canadian Pacific and Grand Trunk? A. I heard something about it, but am not posted as to details.

THE DISSOLUTION OF THE TRUST—FRACTIONAL SHARES RECEIVE NO DIVIDENDS.

Q. When the Standard Oil Trust was dissolved, in what form did the certificate holders receive their claims on the various companies that have been combined in the Standard Oil Trust? A. In what form of certificate?

Q. Yes. A. First, I think, they had to surrender their certificates, and receive a certificate that gave them equitable ownership in these constituent com-

panies, and then that certificate was exchanged for actual stock in the company.

Q. There were some twenty constituent companies? A. Yes.

Q. In the case of a holder of two or three shares of stock, would he receive fractional shares in each one of these companies? A. Yes.

Q. Did these fractional shares receive their dividends the same as the others? A. No.

Q. In that case, if a person had held less than twenty shares of the trust certificates he would not receive dividends from the different companies? A. No; I believe it is for legal reasons.

Q. Does that mean that these holders of trust certificates, who have only fractional shares in these various companies, have not received any dividends since the trust was dissolved? A. That is as I understand it.

Q. Is that a reason why the trust certificates have been surrendered so slowly on the part of many? A. I could not answer that; I do not know.

AMOUNT OF OIL THAT THE PIPES HOLD—AMOUNT OF CREDIT BALANCES AND CERTIFICATES.

Q. (By Mr. Phillips.) About how much oil does it require to fill the pipe lines of the National Transit system in the Pennsylvania and Virginia field? A. I never figured it. I can give you that information if you will give me twenty or thirty days' time; it is a mathematical calculation.

Q. One witness estimated the amount sufficient to fill the lines as about 4,000,000 barrels? A. The amount of residuum in the bottom of the tanks is published every month by the National Transit Company. That is a matter of public record and can be had.

Q. About how much oil has recently been standing out in the shape of credit balances and certificates at the end of each month? A. I can not answer, but we can furnish that from the monthly statements published in the office; that information is given to our Oil City and New York offices every month and published in the Oil City Derrick. Do I understand you would like to have it for a period, Professor Jenks.

Q. (By Mr. Jenks.) Yes. A. You are welcome to it.

CREDIT BALANCES IN NATIONAL TRANSIT COMPANY.

[In barrels of crude oil of 42 gallons each.]

Time.	Barrels.
June 30, 1889.....	3,217,749.16
December 31, 1889.....	3,160,156.81
June 30, 1890.....	3,794,873.84
December 31, 1890.....	2,758,654.30
June 30, 1891.....	5,403,170.38
December 31, 1891.....	3,201,351.34
June 30, 1892.....	5,987,319.53
December 31, 1892.....	5,532,079.21
June 30, 1893.....	4,340,713.15
December 31, 1893.....	2,705,563.20

June 30, 1894.....	2,453,417.82
December 31, 1894.....	1,644,255.13
June 30, 1895.....	783,592.96

December 31, 1898.....	3,822,997.28
June 30, 1899.....	4,910,451.22
September 30, 1899.....	5,349,392.54

As to the capacity of the lines, that would be a very difficult thing to say. We probably have 35,000 miles of pipe, or more, scattered all over the country, 2 inches, 2½, 3, 4, 5, 6, and 8 inches in diameter. Now, to figure out just how many miles there are of each and how much oil it would take to fill it is a great mathematical problem.

Q. (By Mr. Phillips.) We only want an approximation. You could probably tell within four or five hundred thousand barrels. A. We could do that, certainly.

(Estimate supplied later: The estimated amount of what is known as Pennsylvania crude oil in pipes of 5 inches in diameter and over of the National Transit Company and connecting pipe lines, as of 7 o'clock a. m., October 1, 1899, in barrels of 42 gallons each, is 535,528 barrels.)

RELATIONS OF VARIOUS "INDEPENDENT" COMPANIES TO EACH OTHER AND THE STANDARD.

Q. (By Mr. Smyth.) There was a matter mentioned yesterday that several of the commissioners did not thoroughly understand. That was in reference to the pipe lines in which the Standard Oil Company owned a half interest; I think it was in Pennsylvania. A. The Oil Producers' Company, was it not?

Q. No; I understand the Standard Oil Company owned a half interest and sold it to Colonel Carter, but under some decision of the courts of Pennsylvania he is not allowed to control or manage that company. We wanted to ask who owns the minority shares. A. I only know from rumor; rumor is that Mr. Phillips and his friends—

Q. The Pure Oil Company? A. Not the Pure Oil Company. The Pure Oil Company is a company, you understand, that contemplates the ownership of the Oil Producers' Company, the Producers and Refiners' Pipe Line, the United States Pipe Line Company, and numerous refineries in the oil regions and one or more at the seaboard. In practice, it would prove to be a repetition of the Standard Trust—a very wise thing to do, I concede.

Q. These individuals that own a minority of the stock, according to the testimony, really control the management of the company? A. It would seem so.

Q. (By Mr. Ratchford.) Are they an organization? A. I think an organization under the Pennsylvania law.

Q. (By Mr. Smyth.) What is the name of that pipe line? A. The United States Pipe Line is one and the Producers and Refiners' Pipe Line is another.

Q. Does this ownership that the Standard Oil Producers' Company as I understand it, own and control an interest in the Producers' Oil Company, Limited, and the Producers' and Refiners' Pipe Line Company. The answer to Mr. Smyth's question is, as I understand, that the Producers' Oil Company own and control an interest in the Producers and Refiners' Pipe Line, which line gathers oil in Butler and adjoining counties, and the Producers and Refiners'.

Q. This company was the United States? A. The Oil Producers' Company, Limited.

Q. And the minority of stock, you think, is held by individuals? A. I think so, but I do not know.

Q. You state the Standard Oil Company has no interest in it? A. None whatever.

MR. CARTER'S STOCK AND HOW HE GOT IT.

Q. (By Mr. Farquhar.) Was it conceded in the opinion of the court that Carter did positively own a majority of the stock? A. I so understood it.

Q. You could not positively give testimony as to that? A. Only mere hearsay.

Q. (By Mr. Phillips.) Was not Mr. Carter furnished the money to buy that stock by a trust company in New York? A. That I do not know; I think not.

Q. And he was introduced to that company by a member of the Standard Oil Company? A. What was the name of the company?

Q. I do not remember the name. A. He may have been introduced to the company; I could not answer for the moment. I suppose if Mr. Carter or Mr. Phillips came to me I would feel perfectly free to introduce them.

Q. (By Mr. Smyth.) It is not an unusual thing? A. Not an unusual thing to borrow money.

Q. (By Mr. Phillips.) Did we not understand Mr. Archbold yesterday to state that the Standard Oil Company, or the trust, or the United Pipe Line, controlled a majority of this stock at one time that was sought to be voted by Colonel Carter? A. He testified, I think, that the Standard Oil Company did not ever own any of the stock, but the parties in said—

Q. But the affiliated companies under the control of the Standard Oil Company did. A. It seems to be a question of memory between Mr. Lee, Mr. Archbold, and me as to whether Carter owned a majority of the stock or we owned a majority of the stock before his purchase.

Q. Can these facts be fully ascertained by the proceedings and hearings in New York? A. There were no proceedings brought there.

Q. I am not certain whether it was brought there or not, but I so understood it. There were some proceedings and some testimony taken in New York. A. I never heard of it. I would like to say that Colonel Carter did commence an action in Pennsylvania, and the court decided that he was a bona fide owner of the

stock and ought to be allowed to vote it, but under the rules or by-laws he could not do it.

Q. And that was carried to the supreme court and affirmed? A. I could not testify to that; I know nothing about it.

Q. (By Mr. Ratchford.) I was going to follow my previous question with a second one, but others were interjected. This organization (and I would like to have you mention the name of it) is an organization under the law of the State of Pennsylvania? A. Which company do you refer to?

Q. The company to which you refer as "Mr. Phillips' friends," the oil producers, the Pure Oil Company. A. The Pure Oil Company is an organization under the laws of the State of New Jersey.

A GENERAL FEDERAL INCORPORATION LAW IS DESIRABLE —ITS ADVANTAGES.

Q. (By Mr. Clarke.) Are you acquainted with the anti-stock watering laws of Massachusetts? A. I am not.

Q. You favor Mr. Archbold's suggestion about conducting such large interests as you are now carrying on under a national corporation? A. Most certainly, and I would like to explain. I think the English law, as referred to yesterday, is most desirable in its operation, and is most encouraging to capital and protecting to labor and to everybody interested.

Q. Would you be willing, in case there should be a general corporation law of the United States which seemed to be fair and equitable, to organize under that law and transfer or abandon your organizations under the State laws? A. Most assuredly.

Q. You would favor publication of records and a supervision of stock issued by Federal authority? A. Certainly.

Q. (By Mr. A. L. Harris.) I should like to ask Mr. Rogers whether he has investigated that question from the legal standpoint, to know whether it can be done under the present Federal constitution? A. I should judge, from all I have heard, that it can not.

Q. (By Mr. Kennedy.) You would be in favor, then, of amending the constitution so that it can be done? A. I believe, if we are going to be the greatest commercial nation in the world, that the constitution ought to be amended so that Federal charters can be granted on such plan as the English.

Q. (By Mr. Farquhar.) Has not the United States already granted a charter in the matter of the Nicaragua canal? A. I understand special charters have been granted by the Federal Government under the old constitution; but to make such a change as is contemplated here it should be applied to no particular corporation, but should be general and should cover everything.

Q. You would rather have a general provision that they could incorporate under, without special authority of Congress? A. I would practically use the same machinery in the Federal Government that is now used by the several States.

Q. As a business man, would you state the advantages that you see in these Federal corporations as to

commerce and the public generally? A. The advantage would be, in my judgment, the power to do business under the Federal law, subject only to such laws of the States as pertain to taxes and the police regulations that govern in our States.

Q. And that supreme regulation and supervision should be vested in the Federal authority? A. Yes; so far as legislation is concerned it could rest with the Federal Government very largely.

Q. Also, I suppose, that would lessen litigation in respect to corporations?? A. I think so, decidedly.

Q. Is not that one of the features the Standard people would naturally propose as an amendment to the constitution? A. We are rather case-hardened. We are getting along in years, but we think the new and younger industries would be benefited very materially.

OVER-CAPITALIZATION REGULATES ITSELF—GOOD WILL
MUST BE ALLOWED FOR.

Q. Now, as to this question of over-capitalization? A. That always regulates itself.

Q. Do you take it now that the organization of these companies in New Jersey, with the enormous capitalization that some of them have and of which a large part, in a good many instances, is watered stock, is detrimental to business generally and ultimately amounts to swindling? A. Of course, there may be a large amount of watered stock of that kind, and undoubtedly many of them could be reproduced for less money than is put into them; but we must not forget that in the organization of great businesses a great deal of time, labor, and money has been spent that can not be accounted for. Take a newspaper in New York City; it has a large circulation; its plant could probably be reproduced for a hundred thousand dollars; it would sell readily for \$100,000. Now, a certain amount of allowance for good will must necessarily go with any business. It is practically the same as the case of a lawyer. A man with years of experience and standing in the law very naturally receives larger fees than the younger man who has just taken his diploma.

Q. Is there only one thing covered by over-capitalization—that is, good will? A. That is generally the thing. There may be another; that is patents.

Q. Would good will enter into the issue of bonds? A. I should not say it would enter into the issue of bonds, because the party would probably examine the papers to see that there was absolutely enough property on which to rest his security.

Q. If a man is making a mortgage trust on it, do you suppose the good will would enter into that? A. Not at all.

Q. So the foundation of your public security ought to rest, for the benefit of the public and the safety of the public, on intrinsic value instead of fictitious good will? A. Certainly, on the underlying security.

SPECULATION CAN NOT BE REGULATED—WE SHOULD
HAVE FEDERAL CHARTERS.

Q. Do you not think that in the enlargement of these great combinations in this country, the whiskey trust and others, the great harm has come from issuing stock, as in England, and hoodwinking the public? A. No doubt a good deal of that has been done, and many of these industries have gone to the wall for lack of management. You can not regulate speculation as long as it is born in use to gamble, and there happens to be a Wall street and a Lombard street. There is no law that compels a man to go into Wall street to speculate, and experience has shown us that it is a dangerous place. I think we should say to the public, "Here is the property. You can investigate it if you want to, and if you are satisfied with the security you can put your money into it, and if you are not satisfied with the security don't put the money in."

Q. Do you think it is right for any State like New Jersey to incorporate these companies? A. We can not very well discriminate.

Q. Do you think it is comity between the State that there should be such an open law as in New Jersey, and such a close law as in New York? A. I think it would be decidedly better if all could agree upon something sensible and reasonable in that respect. Of course the laws of New Jersey have recently been followed by Delaware in liberality, and all the bad will naturally go to New Jersey and Delaware for incorporation. I think a Federal charter would do away with that evil.

Q. Remedy all these evils? A. I do.

IS THE "GOOD WILL" OF A NEWSPAPER COMPARABLE
WITH THAT OF AN ORDINARY BUSINESS?

Q. (By Mr. Jenks.) With regard to your illustration of an example of the value of good will in an enterprise, is it a fair parallel for ordinary business corporations? Is it not true that newspaper success depends upon the individual capacity of one man rather more than does the ordinary corporation? A. I know very little of the newspaper business, but I know this: in a business way it is largely successful through the amount of enterprise put into it by the head of the newspaper, the standard of excellence, and capable people. The good will of the paper is established by reason of its money-earning capacity, and that might be true of a corporation.

Q. To the same extent? A. That would depend on circumstances, amount of capitalization and amount of business. You can give the illustration of a valuable patent.

Q. That is exceptional also. A. Yet at the same time it is monopolistic.

Q. That it is. The point of the question is this: In case of a patent we have a monopolistic element capitalized; in the case of a newspaper we have the individual talent of the manager, influential to a greater extent than in ordinary corporations. That might be

capitalized? A. Still men come and go, but newspapers continue and their value increases.

Q. Sometimes it decreases very rapidly when the head man goes? A. I refer to the New York papers.

OVER-CAPITALIZATION SETTLES ITSELF BY DEPRECIATION OF STOCK.

Q. (By Mr. Kennedy.) You said that over-capitalization in combinations settles itself finally. Will you state how in your opinion that is done? A. If the corporation is over-capitalized and unable to pay dividends on its capitalization, its stock will depreciate in value. Investors first look for the security and then at the amount they get for their money. They will take a little gamble on the over-capitalized company if it will pay them. They will invest in stock that sells for 75 and pays 6 to 8. They will take chances rather than put it away in their pockets.

Q. (By Mr. Smyth.) You stated that you thought the question of good will ought not to enter into the valuation on which bonds should be issued; but do you not think that in the capitalization of a large industry or combination the question of good will enters into the value of the stock? A. I do.

THE ATTITUDE OF NEWSPAPERS TOWARD THE STANDARD AND ITS OPPONENTS.

Q. It was stated by Mr. Boyle in his testimony that, of his knowledge, in Pittsburg numerous articles attacking the Standard Oil Company were published from time to time gratuitously as communications, but that the replies of the Standard Oil Company, when made, always had to be paid for, even if published in the local or news column. Can you give us any information about that? A. I do not think we have undertaken to answer these anonymous communications very much. I know of one case where I, at one time, undertook to get in a little communication in reply and I received a bill of \$12. I paid it.

Q. The Standard receives no favors from the papers in general in the way of defending them or publishing their communications? A. I think the papers publish a good many things prejudicial to the Standard Oil Company, perhaps through ignorance about it. We are so busy we do not have time to think much about it, but I think the newspapers mean to be generally pretty fair. Undoubtedly they would open their columns freely if we cared to talk, but talk is so cheap we prefer to keep sawing wood. We have not had our side of the case fairly presented, perhaps.

THE STANDARD WILL DO WHATEVER IS FAIR FOR THE HOLDERS OF FRACTIONAL SHARES.

Q. (By Mr. Jenks.) You said some time ago that the holders of the fractional shares in the constituent companies that formerly composed the Standard Oil Trust did not receive dividends. Will you explain that a little more clearly? Does that mean, as has been

intimated here on the stand, that the holders of these fractional shares lost every opportunity of receiving any returns from these shares? A. I think that is a legal question that I can not go into. I think that fractional shares we have issued have had as a denominator about 975,000, and the numerator would range—I could not say where, but it was very small, so that the participating interest was so trifling that it would be impossible to pay a dividend.

Q. In this reorganization that has lately been made by the New Jersey corporation is there to be an opportunity for the holders of these fractional shares to get their stock back in such form that they can receive dividends? A. Whatever is fair we will do. We will treat everybody fairly, and if there is anybody here that has anything of that kind I would like to confirm it now, and perhaps Mr. Archbold will indorse it.

THE CHARTER OF THE NATIONAL TRANSIT COMPANY.

Q. (By Mr. Phillips.) What is the capital stock of the National Transit Company? A. I think \$25,000,000.

Q. What kind of charter has it? By whom was it granted? Was it a special charter? A. I think it was a charter granted by the State of Pennsylvania a good many years ago and termed a special charter. It was granted to a company of another name, but by due process in the Pennsylvania legislature we received this special charter. Of course, after the constitutional convention in the State of Pennsylvania, held twenty years ago, no special charters were granted; so we have an advantage in that charter. Practically it is the same charter that the Pennsylvania Company has that is owned by the Pennsylvania Railroad, under which, in turn, the Pennsylvania Company owns the stocks of the lines west of Pittsburg.

Q. The charter is very liberal in its terms, is it not? A. Yes; I think it is.

Q. What did the National Transit Company pay for that charter? A. As I was not an officer or connected with it, I could not tell you.

Q. Do you not know there was a very considerable sum of money paid for that charter? A. I should suppose every good thing had to be paid for; I should say a man who owned a charter of that kind would sell it at the best price he could get.

THE WITNESS DOES NOT KNOW THE COST OF GATHERING OIL.

Q. There was a question asked you about the expense of gathering oil, and you illustrated by pipe lines going out a long distance to take care of oil. You have no special knowledge in regard to what the cost would be in the gathering of this oil. Have you any idea of the profit in gathering this oil at 20 cents a barrel? A. I could not answer that; but I could probably say and be confirmed by you that we are not in the business for our health, but are out for the dollars; what that profit is I could not say.

Q. The charge is the same as it was when the transit

company was first organized, notwithstanding the cheapening of everything and the new means of doing business? In your opinion it has cost 6 or 8 cents to do this? A. I do not know.

Q. What is your charge for carrying oil to the seaboard? A. Forty-five cents to New York.

Q. Was it not testified to by one of the members of your company, or an employe of the company, that the cost did not exceed 7 cents, or about 7 cents? A. I never heard of such testimony.

Q. It is not a difficult matter to determine after a pipe line is established. I suppose that almost any member of the company would know, approximately, what the cost was, and I think it is a fair question. A. Oh, no; it is not difficult—but you must let me say that there are a great many things I do not know.

PIPES ARE TAKEN UP AND RELAID.

Q. (By Mr. Smyth.) The cost of laying pipe lines today would be immensely greater than it would have been one or two years ago, would it not? A. I think the advance is as much as 100 per cent in some material.

Q. In the cost of pipe material? A. Yes.

Q. Now, if a pipe line is abandoned on account of the giving out of the oil, of course, a pipe line in that locality is of no earthly use or value? A. There is a certain amount of salvage; it can be taken up and used elsewhere. If the oil business were to die out, then the value or amount of the salvage would be very trifling; but so far as material is concerned it can be used a second time. It has a certain value.

Q. Do you ever take up the lines and transplant them? A. We change from one field to another. We utilize our old material when we can.

Q. That, of course, is a great expense? A. There is a great expense involved in doing it—labor chiefly.

THE CHARGE FOR PIPING DOES NOT AFFECT THE PRODUCER—TWENTY CENTS VERY REASONABLE.

Q. You do not think, then, that 20 cents a barrel, being the uniform price, is excessive? A. I consider it very reasonable.

Q. Has there been any demand on the part of the producers to reduce that charge? A. I think there have been demands of the producers; I think it has been pretty well established now that it does not matter to the producers what the pipe line charges are; it is the man that buys oil from the producers.

Q. The oil is generally bought from the producer at his well, practically? A. Practically at his well. The receipts are given there for it by the pipe line, and the receipt is a merchantable receipt.

Q. In your opinion, the standard or average price per barrel for transporting this oil through pipe lines, regardless of cost, is best for all producers of oil? A. We think so, because of the varying character of the business, the new fields that are constantly getting on, the decline of the oil, and the wearing out of the pipes, or rather their usefulness.

Q. (By Mr. Farquhar.) How does 20 cents a barrel

in pipe lines compare in cheapness with any other class of transportation—railroad, wagon, or otherwise? A. Oh, it is so infinitely cheaper that it cannot be compared.

Q. (By Mr. Smyth.) What is the greatest distance you carry oil at 20 cents a barrel? A. I do not think that I can answer that specifically.

Q. Well, approximately? A. Approximately, I think we carry 25 or 30 miles.

COMPETING LINES COVER ONLY LOCAL FIELDS—CIRCUMSTANCES OF THE BUSINESS.

Q. That is cheaper than the railroad companies deliver? A. Why, certainly. May I explain a little and say our affiliated interests, so to speak, of the pipe lines gather the oil in Ohio, Indiana, West Virginia, Pennsylvania, and New York? All competing lines gather in some small local field, as for instance, the Producers and Refiners' lines. It has occurred to me—I have heard that their charge was 15 cents a barrel for refiners, but they only gather within short distances. I do not know what they are. I will say that we are willing to run a line 15 or 20 miles, and do it for the patrons of our line at times. I do not know whether they do that or not; I do not think they do, because I think they are confined to a district.

Q. I suppose you investigate a well very thoroughly before running out 15, 20 or 25 miles? A. Naturally we look into the business.

Q. But at the same time there is a certain amount of risk as to the perpetuity of the well? A. Yes.

Q. All that risk you assume? A. We do.

Q. (By Mr. Farquhar.) Is the only salvage the pipe, when you abandon a well? A. That is all.

Q. (By Mr. Smyth.) You have to buy the right of way generally? A. Sometimes—we always expect to pay for it. It is worth having and worth paying for. Testimony closed.

Washington, D. C., September 9, 1899.

TESTIMONY OF MR. THOMAS W. PHILLIPS.

At a meeting of the commission, Saturday, September 9, 1899, Mr. A. L. Harris presiding, Mr. Thomas W. Phillips appeared before the commission at 11.15 a. m., and, after being duly sworn, testified concerning trusts.

Mr. A. L. Harris. I have been called to the chair at the instance of the vice chairman, in order that he may give some testimony as a witness to the commission. Mr. Phillips desires to make a statement in his own way.

PERSONAL STATEMENT—THE PURE OIL COMPANY; ITS VOTING TRUST.

The Witness. I desire to refer to the statement which two witnesses have made before the commission that I am connected with a trust. They assume that I am

here, as a member of this commission, opposing trusts, thus giving the impression that I have prejudiced the case. This is what they imply in alleging that I am connected with a trust.

I am free to state that I am connected with a corporate organization the object of which is to combine several interests in the same company, namely, the Pure Oil Company, organized under the laws of New Jersey. A fraction over one-half of the stock of this company is in a voting trust. The sole duty of the trustees is to act with the other stockholders in electing directors. The trustees have no right to manage the business affairs of the company. The stockholders have consented in writing to this voting trust. The reasons for creating it are as follows:

PRODUCERS' OIL COMPANY, LIMITED; ATTEMPT OF THE
STANDARD OIL COMPANY TO CONTROL IT.

A very large number of the independent producers in the oil country organized a number of years ago what is known as the Producers' Protective Association. I was the first president of that organization. As a means of protection the Producers' Oil Company, Limited, was formed in June, 1891, with a capital of \$600,000. Shortly after the formation of this company the Standard Oil Trust, through one of its affiliated companies, the National Transit Company, commenced to buy the stock of the company and continued to do so until it had accumulated a small per cent over half the stock. It paid in some instances as high as 220, or 120 per cent above par, and this at a time when the company had not yet earned any money, but had, in fact, lost money. The members of the Standard Oil Company say that they afterwards sold this stock; but before the time when they claim to have parted with it they turned it over to Mr. Carter, to whom they allege they afterwards sold it, and he attempted to vote it at an important meeting of the company as his own and secure control. This was March, 1894. He returned it to the National Transit Company after his fraudulent attempt to use it as his own to accomplish a purpose which the Standard Oil Trust evidently desired. Subsequently, on the 16th day of January, 1896, the same individual alleged that he purchased the stock from the National Transit Company. It was proven in evidence that this person was introduced to a trust company in New York, from which he borrowed the \$300,000 with which the purchase was alleged to have been made. When it was attempted to show that this money came from the Standard Oil Trust, the witness, Mr. Archbold, and other agents of the Standard Oil Trust declined to answer all important questions touching the ownership of that money. The Producers' Oil Company, Limited, declined to permit Mr. Carter to vote the additionally acquired stock, amounting to \$297,000, without first being elected to membership by a majority in number and value of the interests remaining in the company.

This was in accordance with the statute of Pennsylvania of 1874 and the supplement of 1885, creating and regulating limited partnerships. A by-law of the

company also provided that such election should take place before admission to membership.

As to his effort to vote this stock without being elected, the decision was against him in the court of common pleas of Warren county, Pa., after a two-weeks' trial, and an appeal was taken by Mr. Carter, the alleged owner, to the supreme court of Pennsylvania. That court decided that both according to the letter and the spirit of the statute he was not entitled to vote that stock as a member of the company without having been elected as indicated above. That decision I have here and submit it to the commission as sustaining the position which the company took.

THE STANDARD OIL COMPANY GETS A MEMBER ON THE
BOARD OF DIRECTORS OF THE UNITED STATES
PIPE LINE COMPANY.

The Standard Oil Trust, through the same affiliated company, the National Transit Company, acquired large amounts of stock in the United States Pipe Line Company, another company organized by the independent oil producers and refiners. This company was formed to transport refined and crude oil to the seaboard. The aim of it was to cheapen transportation and to avoid discriminating rates. The United States Pipe Line Company excluded the Standard from its meetings on the ground that the Standard acquired its stock to compass its destruction and to get information that would lead to the destruction of the independent movement.

Mr. Archbold stated yesterday that one of the objects of the Standard in buying that stock was to secure information. The National Transit Company brought a bill in equity to secure admission to the meetings of the company and permission to vote that stock. The decision in the lower court was in their favor. On appeal to the supreme court, the case was prepared on both sides with elaborate briefs for argument, and counsel on both sides were present in the supreme court to argue the case. When it was called, instead of proceeding to argument upon its merits, counsel for the National Transit Company moved to quash the appeal on the technical ground that the affidavit to show that the appeal was not "taken for the purpose of delay" was not made by the chief officer or secretary of the company; and the supreme court, because the statute required such an affidavit, quashed the appeal, and the case was not heard on its merits. It was then too late, under the statute, to take another appeal and have the case heard on its merits.

The entire stock acquired by the National Transit Company in the United States Pipe Line Company was \$383,000 out of a total of \$1,190,000. To defend these two companies from the hostile invasion of the Standard Oil Trust cost about \$15,000 in actual money, besides vast labor and trouble.

THE PURE OIL COMPANY NOT A TRUST.

Because of the attempt of the Standard Oil Trust to force themselves into these independent organizations, without invitation and against the will of all

the independent members, it was thought wise in the organization of the Pure Oil Company to have at least half of its stock put into a voting trust in the names of men of known and tried loyalty to the independent interests. This was done solely for the purpose of securing that company against the hostile inroads of this great monopoly and to prevent its destruction.

The Pure Oil Company is not a trust in the commonly accepted sense of that term. A trust, as I understand it, is a corporation or combination of corporations with vast capital, organized for the purpose of securing a monopoly in any branch of trade. The Pure Oil Company is not organized for the purpose of securing a monopoly, but to prevent a monopoly and preserve competition in the petroleum industry, its promoters believing that by fair competition the highest and best interests of producer and consumer can be secured and the public interest best conserved.

It was therefore incorrect for the witness yesterday to state that the Pure Oil Company is a trust, or that any of the independent producers or refiners are members of a trust, in the obnoxious sense in which that word is understood, meaning monopoly.

The Standard's dividends will show, perhaps, without regard to the surplus they have accumulated, that they have at times made more profit on every barrel of oil they handled than they paid to the producer for it. I have known a producer to pay \$100,000 or more for a limited number of leases, on which wells were obtained which would flow from 2,500 to 3,000 barrels per day; and yet the profit that the Standard Oil Trust reaped on each barrel of oil from these wells was evidently more than they paid for the oil.

As to amount, or as to the principles involved, the tax on tea and other articles, against which our forefathers revolted, was nothing in comparison to the tribute the Standard has levied on the oil producer and consumer.

THE STANDARD OIL COMPANY'S AVERAGE PROFIT.

During the time the Standard Oil Trust has been engaged in the oil business they have made more than \$1 per barrel on all oil produced. This is capable of easy demonstration. The entire production of what is known as Pennsylvania oil for 17 years in round numbers is 500,000,000 barrels. The market value of the Standard stock is very close to \$500,000,000. This has been made chiefly out of the profits of the company, and it is practically equivalent to \$1 a barrel on all oil produced since they have been in business. During this period, or from the time the Standard came into power, oil has averaged about 90 cents a barrel; their profit has been more than a dollar per barrel. This does not take into consideration their enormous dividends nor their vast reputed surplus.

PROFITS OF THE INDEPENDENT REFINERS.

Q. (By Mr. Smyth.) That has been the profit of the independent refiners, too? A. No, sir; not by a great deal.

Q. You could not give an estimate of the profits made by the independent refiners? A. Upon this I

am not well informed. I will say this: For a number of years they lost a very considerable amount of money. They sold what is known as cut cargoes. At the close I will give all the information I can, and will submit a statement of all the companies with which I am connected. I have reason to believe the companies will not object.

Q. Will that statement be made today? A. I should not have time to do that today, but will be willing at any time to submit a complete and full statement.

THE STANDARD OIL COMPANY—THE VALUE OF ITS STOCK REPRESENTS PROFITS.

Q. (By Mr. Kennedy.) I should like to ask why, if you are able to state the profits of the Standard Oil Company, you are not able to state the profits of your own company? A. That is very easy to answer, I think. I have given the facts of their stock; it is a very large concern, and we know the market value of their stock; we could not estimate the market value of our stock. For my own part I would not take a hundred per cent.

Q. (By Mr. Smyth.) How do you know they have made a profit of a dollar a barrel? A. Their capital stock has been selling at about \$500,000,000, and there has been about 500,000,000 barrels of oil produced since they organized and the average price of that oil has been about 90 cents. This is saying nothing about the enormous dividends they have paid—I believe last year it was \$35,000,000—nor anything about their surplus. There is no kind of question of my deduction and figures.

Q. That is only an estimate or guess? A. It can not be considered so in view of the fact that they built their lines and establishments out of their profits.

Q. How do you know that? A. We have every reason to believe it, because of the capital stock with which the company was originally organized and the dividends that they have made. They built it in that way.

VALUE OF STOCK IN THE STANDARD AND IN THE PURE OIL COMPANY.

Q. (By Representative Livingston.) Have you any exact way of getting at the market value of your stock or the Standard Oil Company's stock? Are both of them listed on the market? A. No; they are not. The Standard has always kept its stock from being listed on the market, though the papers give quotations of it from time to time. Ours is not listed on the stock market; there have been only individual sales; I can give the costs of our company, though, and the profits; then you can better judge what the value is.

Q. What would you take for your stock? A. Now, since we have won against the greatest opposition that ever existed in the commercial world by cutting our way through to Germany and getting a market there, I consider this stock very valuable, even though we sell at lower rates.

Q. What would you take for your stock? A. I

would not, under the circumstances, take 100 per cent profit.

Q. At how much can you buy Standard Oil? A. I think it was stated yesterday that the last market quotation is at the rate of about \$465,000,000. It has sold within a fraction of \$500,000,000 within a year.

PRODUCERS CAN NOT AFFORD TO SELL THEIR INDEPENDENT OUTLETS. . . THE STANDARD MAKES PRODUCERS AND CONSUMERS PAY FOR WHAT IT BUYS.

Q. (By Mr. Kennedy.) You say you would not take 100 per cent profit? A. I would not sell now. I will make a statement here in that regard, since the matter is brought up. In our best judgment, i. e., that of the most intelligent producers, when the Standard buys a pipe line system and refineries they are charged up to the producers. At the time of one of their largest purchases the price of oil was put down 7 cents per barrel the day the purchase was made, or the next day after. They were then shipping about 60,000 barrels per day through the pipe lines; and that 7 times 6 would be 42—\$4,200 per day that they assessed to pay for that. And I heard Mr. Archbold say that the producers would never know what that pipe line cost them. And we do not know today; but the price was assessed, and a short time afterwards oil was dropped again. Now, along that line I could state this, that the Standard has bought very large amounts of property when oil is very low, and especially in 1895, when oil went up from less than a dollar to \$2.60. They bought a number of million dollars' worth of producing property. It is fair to say that that property did not cost them anything, because the world, the consumer, was assessed for it. In my best judgment the Standard in purchasing either pipe lines or producing property, since its organization, has not paid any money directly that they have not recouped indirectly. When they buy a pipe line they levy the cost on the producers by dropping the price of oil. They buy large amounts of producing property when oil is low, and then the price to the consumer advances. They fix both the price at which they buy and the price at which they sell.

Q. You consider this stock to be worth a premium of 100 per cent on the par value?? A. Prospectively. You see, I would not sell it, because I am a producer of oil, and I am thoroughly convinced, and it is understood by the directors, that if we were to get twice its cost from the Standard we should be assessed to pay for it. We do not know how much money the producers have been deriving through the existence of these companies. We would not sell as long as we are producers; we keep the stock for self-preservation.

OIL MONOPOLY DUE TO LACK OF CONTROL OF RAILROADS.

The Witness (continuing his statement). Mr. Archbold stated before this commission that he was in favor of the Interstate Commerce Commission. If there had been a commission with proper authority over the

transportation of oil, the Standard Oil monopoly would not be in existence today.

I am present as a member of this commission with a full determination to hear impartially, and to endeavor to the best of my ability to suggest such remedial legislation as will be for the greatest good of the greatest number; not only in regard to combinations, but also with respect to all industrial questions.

NEGOTIATIONS OF INDEPENDENT PRODUCERS WITH THE STANDARD OIL COMPANY.

In regard to the statement that I, in company with others connected with the independent movement, called upon the Standard Oil Trust seeking a combination with them, I will say that we did call upon them some three or four years ago. It was after they, or their affiliated companies, had bought the large amounts of stock, spoken of above, in our independent companies. They had bought a number of the independent refineries connected with the independent pipe lines. They had made every possible effort to prevent our marketing oil in Germany and other places. They had bought out Mr. Poth, who was handling the oil of the independent refineries in Germany. They had got almost complete control of the German petroleum installation plants or receiving tanks. The remaining refineries, as well as those who had sold out, had met with great losses in handling oil in Germany, selling what they call "cut cargoes."

The object in calling upon them, as far as I personally was concerned (and I believe it to have been the object of the other persons who was with me at the time, and who were men of the highest character), was to obtain from the Standard Oil Trust cessation of hostilities, both in regard to piping the oil and in regard to selling it. It was to secure the right to deliver in New York, without their opposition, the capacity of the then existing lines, which would not exceed seven or eight thousand barrels of oil per day.

We believed then and still believe that the opposition to laying our pipe lines across the State of New Jersey to reach the harbor of New York was instigated by the Standard. I am informed that Mr. William Rockefeller, a trustee in the Standard Oil Trust, is a director in the principal opposing road, the Delaware, Lackawanna and Western Railroad.

The members of the Standard Oil Trust with whom we conversed—and Mr. Archbold was one of them—refused absolutely to grant us any concessions, or to allow us, on any fair basis, to ship and market oil without such aggressive opposition as Mr. Archbold admits they employ to defeat competition. But in lieu thereof they proposed to buy our pipe line system, a proposition which we did not entertain. It was then proposed by one of the members of the Standard Oil Trust to buy our producing property. This was also rejected, as we did not desire to go out of the producing industry. No proposition was made to those gentlemen by me or by any gentleman with me, to the best of my knowledge and belief, on that occasion or any other, that any fair and honorable business man could not make to another.

I had not then and have not now any conscientious scruples about anything that was said to them, and should be perfectly willing, were it possible, to have all the conversation that occurred repeated now before this commission.

THE STANDARD OIL COMPANY DESIRES THE CO-OPERATION
OF THE INDEPENDENT PRODUCERS.

In regard to the statement that they had not entertained a proposition for combination because of lack of faith, both in the legality of the proposition and in the men connected with the independent movements, I have this to say: That there has never been a time when I should have been willing personally to go into a combination with the Standard Oil Trust. In proof of this I will state that in the year 1890 I sold to the Standard Oil Trust quite a large oil field in Butler county, Pa., composed of 7,500 acres of land held by lease, with 125 producing wells. The chief reason for selling this property to the Standard Oil Trust was at that time they had purchased the Union Oil Company's interests and those of the Anchor Oil Company and the McKinney Brothers' property and also the Forest Oil Company's property, these being the largest oil properties in the country.

The Forest Oil Company was negotiating for my property before they sold to the Standard. After having sold their interests they stated that the Standard would purchase mine if I so desired and the price could be agreed upon.

Fearing the power of the Standard, fearing that they might reduce the price of oil, and considering that they had bought the largest properties in the oil field, I concluded to enter into negotiations with them for the sale of the property. The negotiations continued for two days at their office, 26 Broadway, New York. During this period, at two or three times when we differed in regard to the value of the property, they asked me whether I would act in harmony with them. At each time I absolutely refused to consent to this proposition, and finally stated that if they should insist upon that as a condition I would not sell; that I was willing to sell my property, but would retain my individuality; that I had nothing to sell but my property. They bought the property for \$750,000, which was paid partly in cash and partly in stock. I subsequently sold the stock for a less price than I took it at in payment for the property, not desiring to be connected with them in any way.

As further evidence that the Standard Oil Trust desired my co-operation: A few months after the sale of this property, while spending a short time at Lake George with my family, I met Mr. Dodd, the attorney of the Standard Oil Trust, at the Fort McHenry House. In talking to my son and myself in regard to the Standard Oil Trust, he said that the Standard always sought connection with successful men, and, turning to my son, said they had sought "your parent." This conversation is fixed most distinctly upon my mind because of the use of the word "parent."

As a result of these large purchases which the Standard made, the vendors became active in the pro-

ducing departments of the Standard Oil Trust. I presume that it was there that they desired my work or influence.

There is not now and there never was any inducement that the Standard could hold out to me sufficiently strong to induce me to become an active participant in their business.

The statement that they declined any business arrangement with the independent producers because of lack of faith in them can not be true and in a gratuitous insult to a large body of business men of the character. For four years they have been trying to force business relations with us by buying large blocks of stock in the companies and going into court to force us to receive them as business associates, and they have so far succeeded as to have a director in the United States Pipe Line Company. The statement is, therefore, both false and slanderous.

COST OF PIPE LINE TRANSPORTATION.

Q. (By Mr. Kennedy.) What is the cost per barrel of transporting oil through the United States pipe line? A. I am informed that with the line carrying half the capacity, about 3,000 barrels a day, it is about 5 cents per barrel to the terminal in New Jersey, and with full capacity of the line it would cost less than 4 cents. In the gathering in the field I have had personal experience connected with lines, and we estimate from 3 to 5 cents per barrel, and yet the Standard's price is 20 cents per barrel.

Q. Twenty cents? A. Yes; it is the same now as when they were organized.

NO RECENT OVERTURES TO THE STANDARD OIL COMPANY.

Q. It was stated under oath yesterday, I think, that you had called upon Mr. Archbold for the purpose of combining with the Standard Oil Company since the organization of this commission, and you state positively under oath that this is false? A. I positively state it is false. I have nothing to do with them except as I have set forth here. If others have called upon them, it was without my knowledge, advice or approval.

THE PURE OIL COMPANY— ITS VOTING TRUST.

Q. You stated that this voting trust, in this company with which you are connected, vote simply for directors and have no voice in the management of the business affairs of the company. Do not the directors, who are their creatures, have the control of the affairs of the company? A. Oh, yes; those who are elected. The trustees have a majority of the stock, and they vote with the other stockholders and elect a board of directors. They expect to elect men of character and ability to conduct the business affairs of the company, just as any other corporation would be conducted. It is expected that everything will be open to inspection. It will be if I have my way. I do not think there will be any objection to furnishing to this commission at any time, or to the State or to the United States, a

statement of any of these lines, or a full statement of the Pure Oil Company, which will probably absorb the lines in the manner I have stated.

Q. Well, is it not true that this voting trust of five members, who vote more than the majority of the stock, do manage the affairs of the company through this board of directors? A. Yes. The voting trustees are fifteen. The number was made large in order that they might be representative throughout the oil country. They do elect the directors. That is the object of it, and I have fully stated the reason why it is done, to prevent being crushed by this great monopoly. It was the only means of safety, as we have learned by experience. And I will further state that voting trusts are not uncommon either in Europe or America. It is nothing new to have a voting trust.

THE PURE OIL COMPANY'S VOTING TRUST NOT SIMILAR TO THE STANDARD OIL TRUST.

Q. Will you state how this voting trust feature of your company differs from the old Standard Oil Trust's manner of doing business? A. The voting question?

Q. Yes. A. At the present time?

Q. Yes. A. I know nothing about their methods of later years, except that one suit was brought against them in Ohio to dissolve their trust, and they agreed to dissolve it. I know of persons holding certificates of the same trust and receiving dividends on them up to a very recent day; but it was also acknowledged here yesterday that they were still paying dividends on these trust certificates.

Q. Was not the old Standard Oil Trust, through a voting trust, electing a board of directors to manage the affairs of the trust? A. No; they were a close corporation, as I understand.

Q. A what? A. What we would call a close corporation. I mean a trust, a body of men associated together in the most secret form, probably, that exists in any business enterprise of magnitude. They themselves conducted their business, and they would make no statement to the public. The most I heard, at the time when they bought this property, from another individual, was this: He said he had had the privilege to look at what he called their quick assets, and they were enormous. That was in 1890. I do not know about their business affairs since that.

Q. You state then that this voting trust feature of yours is not similar to the old voting trust feature of the Standard Oil Company? A. Not in any way, manner, or form. It has been fully explained, and the object of it has been fully explained. I have nothing to conceal about my public transactions in connection with that business or anywhere else.

Q. I ask because the Standard Oil officers have testified in respect to this that you began where they left off. A. Well, if they said that, they said what is not the truth. The matter is fully before the commission, and the only object of the voting trust is the one I have stated.

THE REPRESENTATIVE OF THE STANDARD OIL COMPANY ON THE BOARD OF THE UNITED STATES PIPE LINE.

Q. (By Representative Livingston.) I have an allegation here, by a party who signs his name to it, that the Standard purchased stock in the name of a spy sufficient to place one director on the board of each of the "following companies," and yours is included, the Producers'. What do you know about that? A. From what do you read?

Q. I am reading from a letter signed by a man. It does not make any difference who he is now. Has the Standard Oil Company a member on your board of directors? A. Yes; they have a member on the board of the United States Pipe Line Company. They failed to secure an election in the other company, although they had a majority of the stock, as I explained. One of their members, one that is openly connected with them, though not in a managing capacity, is on the board.

Q. On your board? A. On the board of the United States Pipe Line. I have stock in it, and I am also a director in it, and I have met with him.

Q. There are several companies here mentioned in which they did purchase stock enough to put one member on the board, among them the Producers and Refiners' Oil Company and the United States Pipe Line Company. Now, this man charges that the Standard Oil Company and your company and these other two companies are one and the same thing, by a private understanding, to this extent—that you sold stock enough to the Standard to authorize them to put a member on your board and on these other boards. Is that correct? A. No; it is absolutely false.

Q. Do you mean that it is false in toto—that you have not a member? A. No, I said we had a member, but we did not consent; the stock was bought without our knowledge and consent, and he was forced there by law.

Q. I understand that. They had purchased stock enough to force a member on your board? A. And forced him on us. They said they would not be associated with any of these affiliated companies because of lack of faith both in their ability and in their honesty.

Q. Of what advantage to the Standard Oil is that member of the board of directors in your company? How can they utilize him? A. They get all the information. That is, he is called to all the meetings and treated like any other member of the board.

Q. Then they find out all your secrets in that way? A. The witness, Mr. Archbold, yesterday testified that it was one object in purchasing the stock—to get information. We have never had a doubt of their purpose in any of these purchases; that the purchases were made for the purpose of destroying or crippling our industry and breaking down opposition to them.

Q. I will show this letter both to yourself and to the representatives of the Standard Oil Company. [Representative Livingston here produced a letter and handed it to the witness.]

Q. I just request, if I am not present when you get through with the letter, that if any representative of

the Standard Oil Company be present he may have the same use of it. A. If any use is made of it by one side the other shall have the same privilege.

“MONOPOLIES”—THE STANDARD OIL COMPANY NOT A MONOPOLY BY LAW.

Q. (By Mr. Ratchford.) In the early part of your testimony you observed that your company is not a trust, but a combination. Do you understand that it is chartered under the State of New Jersey, as is also the Standard Oil Company? A. Just recently the Standard Oil Company has been chartered, as has been testified here.

Q. You also define a trust to be a monopoly. Now, I want to ask whether the laws of New Jersey give to the Standard Oil Company any advantage that is not given to your company? A. Not so far as I know. All these large combines that have been organized under the laws of New Jersey are organized alike, as I understand it; some have preferred and common stock, and others just common, etc.

Q. The combination or trust has no privilege before the law, as you understand it. That being the case, then the Standard Oil Company is only a monopoly in the State of New Jersey providing they are able to monopolize the business. Is that right? A. Yes.

Q. If that be correct, then it follows that your company will also be a monopoly, provided you are able to monopolize the business? A. Both companies have a perfect right—

Q. (Interrupting.) They have the same right under the law? A. Yes. We organized under the same law.

Q. What I meant to ask was whether they had any special privileges under the law? A. I understand all of these great industries organized in the State of New Jersey are organized under this same law and have the same privileges.

THE PURE OIL COMPANY ABSORBS ITS ALLIES—THE STANDARD ABSORBS ITS COMPETITORS.

Q. Another statement I understand you to make is that the Pure Oil Company will eventually absorb the other lines. A. It will purchase a majority of the stock of the independent lines.

Q. This is the company you are interested in? A. I am interested in all of them; I am interested in all four of the independent companies.

Q. From your standpoint I want to ask if the absorption of smaller enterprises is not the greatest objection that has been urged against the Standard Oil Company? A. Certainly; but these independent companies are practically one already. The producers formed one organization, and then another and another. The stockholders are the same, or very nearly the same. They are simply getting together because the Standard was likely to absorb them in detail. But if organized in this protective form, with a voting trust, it will be impossible for the Standard to buy the stock and control these companies. It is self-defense.

Q. But is it not in every case the purpose of the larger companies to absorb the smaller competitors?

A. I do not know the purpose of others, but it was the purpose of this Pure Oil Company to unite—if you please, to consolidate—the companies in one, because practically the stockholders were the same. It was not to get control of any other person's business; it was simply to put our own business in such a form that we could not be destroyed by this giant monopoly.

Q. In your experience with the Standard Oil Company has that not been one of its objects—to absorb the smaller concerns? A. The smaller concerns that have been absorbed have been independent and opposition companies. These are not, and the cases are not similar.

THE PURE OIL COMPANY, UNLIKE THE STANDARD, DOES NOT DESIRE A MONOPOLY—THE WITNESS WOULD REFUSE TO BE CONNECTED WITH A MONOPOLY.

Q. (By Mr. Clarke.) Did your company compete with the Standard Oil Company in any operations in the field? A. Yes.

Q. You would get business away from them if you could honestly and fairly? A. Certainly; that is, in an honest, fair manner. Competitors will always do that.

Q. You get away all their business if you could honestly and fairly, I suppose? A. It would be very difficult to do that.

Q. Well, suppose you could?

Q. (By Mr. Farquhar.) There is the same object before the two trusts, your company and the Standard? A. I would not say so. I would say that we only want a fair portion of the competitor's business, not the whole of it. I would not be connected with a monopoly. I would not control a great product and fix the price at which I could buy, transport, and sell. It is too great a responsibility for any one man to have, and it is a greater responsibility than tyrants as a rule assume toward their subjects. The profits are enormous which have been fixed by this trust.

Q. Now, you wish us to understand that if this company should become large and be an octopus you would sell out and be no longer connected with it? A. I would not be connected with it.

Q. If your company should be large enough to monopolize the business by means of fair competition, you would no longer have anything to do with it? A. I would not have anything to do with it if it pursued the methods of the Standard, influencing legislation and preventing others from doing business. If it grew naturally and the profits were fair, I should be willing to accept them, but I certainly should not want the responsibility of monopolizing a great industry and fixing the prices. I do not think that such a power should be in any hands. I would be in favor of throwing it open to Government inspection and of requiring public statements and of putting it under any laws that would be fair and just to the people.

Q. You would not, then, if you could, by perfectly fair and legitimate means, irrespective of the means of the Standard Oil Company, monopolize the oil business in any way? A. I would not. I say I would not have the responsibility of fixing, according to my own

judgment, what my profits should be from a great community. I would rather die poor than have it.

Q. That would be a matter of your own conscience?
A. Yes.

Q. How would it be under the law? Do you consider that it is not legal for any company to gain all the advantages that it can fairly and legitimately? A. Well, now, I have pretty strong views in regard to competitors and competition, and being a member of this commission, I would rather not enter into this subject and give my views in regard to it now.

"TRUSTS"—DIFFERENT MEANINGS OF THE WORD—THE PRODUCERS' OIL COMPANY AND THE STANDARD.

Q. (By Mr. Farquhar.) The witness states here that the Pure Oil Company, so called, is not a trust. Will you explain to this commission why it is that your articles of agreement all through characterize it as a trust? There are five articles in your agreement. It explicitly declares in the first article (reading):

"First. The equitable ownership of the trust shares and all interests therein shall be subject to the terms of this trust agreement. Such ownership of the shares, or interests therein, may be sold at the will of the holder; but no sale, transfer, or conveyance of such ownership or interests shall give to the purchaser any rights other than are provided for in the by-laws, rules, and regulations of the company; and in accordance with this trust the trustees hereunder shall at all times be recognized as the legal owners and holders of the trust shares to carry into effect the purposes of this trust, and all equitable owners of trust shares or interests therein shall specifically agree in writing to the terms of this trust, and no transfer of any such shares or interest shall be made, or be effective if made, unless the transferee of such equitable ownership or interest shall have agreed in writing to receive and hold the same subject to the provisions of this trust."

The objects set forth in the original trust of the Standard are the same objects, with just one exception, as are claimed for this Pure Oil Company. How can it be possible to escape the idea that this Pure Oil Company is a trust? What explanation have you to make? A. It is a voting trust. The company itself is organized under the laws of the State of New Jersey, and all those trust papers, as I understand it, were drawn solely for the purpose of protecting the stockholders in voting this stock and electing directors. The stock itself was put into a trust, a voting trust, so that it could not be sold or alienated or monopolized, and if the stock were sold the trustees would have a voice in electing directors.

Q. How do you explain here in the fourth subdivision of this agreement (reading)

"Fourth. This agreement may be cancelled, and the trust hereby created dissolved, only by the winding up of the Pure Oil Company, or by the consent in writing, duly executed, of the equitable owners of four-fifths of the shares held in trust hereunder, and of four-fifths of all the other shares of the company, after providing in full for the redemption or purchase at \$110

per share, in cash, of all the preferred and common shares of the company at the time outstanding."

Is not that trust pretty nearly perpetual? Is not that company a perpetuity? A. I do not so understand it, because it provides for its own method of dissolution.

Q. How do you provide for dissolution? Because under the general laws, that is under the power of the trustees, and you have trustees here who hold the entire property in their hands; they make their own board of directors; the administrative power of your whole concern is in men who are creatures of your trustees. How much worse than that is the whisky trust or the Standard Oil? A. I have defined my meaning of the word "trust," and it has been often repeated that the intention in that agreement was only to preserve this stock intact, so that the Standard Oil Company could not monopolize it. I have explained how they attempted to monopolize one of the companies.

ADVANTAGE TO PRODUCERS FROM THE EXISTENCE OF INDEPENDENT REFINERS.

Q. Do the producers who sell oil to independent refiners get better prices than producers who sell to the Standard? A. That varies at different times. In the beginning, when the Standard had so stopped the outlet abroad and had so monopolized everything and thrown everything in the pathway, the producers got together and made sacrifices for the benefit of the refiners. They were selling cargoes at great loss, and we gave them a reduction in the pipe line charges. There were other times, when the market was good, when the pipe lines have sold to the refiners at a profit. Now, in this recent advance the Producers and Refiners' Pipe Line advanced the oil three cents more than the Standard. The Standard in a few days came up to it; and then they advanced again to \$1.37 and this line advanced it to \$1.40. They were very anxious, however, to get the oil to win the fall trade.

Q. That was simply incidental? A. Yes; incidental. They have been competitors in every way.

Q. Now, at the present time, is not the market on all fours to the producers, whether they are sellers to the independents or the Standard? As prices go, does it pay the producers to sell to the independent refineries as well as to the Standard? A. Yes; they have the privilege of selling to the other pipe lines. There is sometimes, as I said, an advance by the one and not by the other. But this line has never paid the producers less than the Standard was paying. It has always kept pace with the Standard in advancing, and very frequently has advanced 1 or 2 or 3 or 5 cents more. We are handling the high grade oil—Pennsylvania oil. That is very desirable both at home and abroad.

Q. Now, I would like to know what the character of the competition is that caused the United States Pipe Line to put it up 10 cents more. Was it the Standard? A. That forced the United States?

Q. Or the refiners or other pipe lines? A. No; we did not do that.

Q. I thought you said they raised 3 cents and then the Standard raised 3? A. Yes.

Q. Was it the presence of the Standard that forced them up? A. I do not know how that would be.

Q. Well, it is a business proposition? A. It is a business proposition that in order to benefit their friends the refiners were perfectly willing to make the advance; furthermore, it was the time of year when they wanted to get this oil to ship abroad and to supply the markets at home.

Q. What I want to get at is whether the producers expect greater benefit through this pipe line company or through the Standard in selling their oil. A. We believe that were it not for these companies, the price of oil would be much less than it is. We believe that as large producers we have reaped great benefit from the competition, limited as it is. It is remarkable what a little competition may accomplish; they do not overlook small things. They have the power of a giant, and they use it as a giant.

Q. I want to know if these producers are any better off in connection with this independent organization than they are with the Standard, as far as prices go; then I want to have the question answered, after that, whether the refiner pays the extra profit that is paid into the hands of the producers. A. There is no doubt, in my judgment, that the producers are better off on account of this independent movement. There is no doubt that the independent refiners are better off. If it were not for these pipe lines none of these independent refiners would be living to-day. It is for mutual protection that these people have united. We believe we have received much better prices for oil; the last year the refiners have given much better prices than they would have given if there had not been this independent movement.

Q. You have stated repeatedly, or, rather, it has been stated repeatedly before this commission, that the Standard has made inordinate profits. Now, is it a fact that the independents are not making as much money, either as refiners or producers, as the Standard people are? I am not talking about commercial reasons at the seaboard. I am speaking about the field, because the producer is not concerned with anything outside of the Pennsylvania field and Ohio field. A. I think that as far as production is concerned they are substantially on a par; but as far as the selling is concerned the Standard have an advantage, because they have an accumulated capital to handle all the by-products with, and so on, as the others have not.

Q. So we come to this plain business proposition, that the producer is just as well off dealing with the Standard as he is with this Pure Oil Company? A. No, indeed; I would say not.

Q. Why is he not? A. Because when there is no opposition they pay much less prices. My judgment is, while we could not prove it, that the price of oil has been so much better that we have already paid for the plant out of the increased prices that

the Standard has paid for oil on account of this opposition.

Q. You said one minute ago that the advance made by the independents was three cents, and was met by the Standard with another advance. A. How do we know but the oil would be 50 or 60 cents to-day if it were not for this organization?

Q. That is entirely hypothetical. I want to know if they are better off. A. I said that they are better off; the producers are better off, probably by 25 cents per barrel, on account of this opposition to the Standard.

PROFITS IN THE OIL BUSINESS.

Q. These men that are engaged in the independent movement have made money out of the oil business? A. A great many of them are quite well to do, but a majority of the producers are comparatively poor.

Q. Many of them are millionaires? A. Some of them have made a great deal of money.

Q. So these men who are co-operating with you are millionaires and the Standard is simply a greater aggregation of millionaires? A. I do not know the wealth of those gentlemen, but very few are considered millionaires. I am quite sure they would have much more wealth if prices had not been depressed by the Standard.

Q. Of course that is a business question, just like railroading. The largest corporation is going to make the most money. A. I have given facts and figures here which will convince anybody, I think, that the Standard have been making more profit on each barrel of oil than they have paid for it. Now, that affects both the producer and the consumer.

Q. What I wanted was to find out whether these producers are able to get their share of the proper profits that belong to them? A. The producers could not have received their share of the profits when it is a fact, as has been shown, that the Standard makes more on each barrel of oil than they pay the producer for it.

CAPITALIZATION OF THE INDEPENDENT COMPANIES—

VALUE OF THEIR STOCK.

Q. (By Mr. Smyth.) Will you tell us what is the capital of the Pure Oil Company—the amount it is capitalized at? A. Something over \$400,000; but there has been an application to increase it. It is my recollection that the authorized capital originally was \$1,000,000, \$377,000 of which was paid in.

Q. What was the value of the different companies associated with or controlled by the Pure Oil Company? A. None of them are controlled by it as yet. It is a marketing company; but there is an effort, which we presume will be successful, to combine a majority of the stock of the others, as I have explained, into this Pure Oil Company, with an increased capital.

Q. What would be the aggregate value of these

companies? A. There is about \$3,000,000 invested in all these companies to-day, as I understand it.

Q. Then you propose to increase the capital of the Pure Oil Company? A. Yes; it has been proposed to increase it.

Q. Has it been decided to what amount? A. It has been thought we would probably increase it to \$10,000,000. Q. Now, in your judgment, the value of that stock would be about \$20,000,000? A. No, not at all.

Q. I understood you to say a short time ago that you would not take a hundred per cent advance for your stock? A. I should not feel like taking a hundred per cent for my stock in all these companies, because I think I am benefited in various ways by getting a better price for my productions.

Q. (Interrupting.) Now, you think that this Pure Oil will be a competitor in the market for the benefit of the consumer? A. For the benefit of the consumer and the producer.

THE FOREIGN MARKET—THE STANDARD WAS NOT THE PIONEER.

Q. Can you tell us what portion of the products of these companies with which you are connected goes abroad? A. About 40 per cent of the crude we handle, I am informed by the president of the company.

Q. How long have you been exporting 40 per cent of your crude? A. About two or three years.

Q. Was your company the first to export oil, or was the Standard Oil Company the first to open up the market? A. Oh, they were not; there was a large amount of oil shipped abroad before the Standard existed.

Q. One must have been first. A. The Pure Oil Company was organized in 1895, and the Standard Oil Trust, I am informed, was organized in 1882, and of course shipped oil abroad before the Pure Oil Company; but millions of barrels of oil was exported before the Standard Trust existed.

Q. They did not go into the refining business as the Standard Oil Company for a number of years after the discovery of oil? A. No.

Q. You do not consider the Standard Oil Company the pioneer in building up the export business? A. Not at all; no.

Q. At the same time they had a large proportion of it to meet? A. Oh, certainly they did, but they were not the pioneers.

Q. And covered the world, as we learned yesterday from Mr. Archbold? A. Yes; but others preceded them in almost all countries. I do not believe, as was stated by Mr. Archbold yesterday, that they have better talent than others engaged in the same business.

AGAIN THE QUESTION OF MONOPOLY.

Q. Now, the charter of the Pure Oil Company is taken in the State of New Jersey, and the charter of the Standard Oil Company is now being taken

there. You spoke of the Standard Oil Company as the Standard Oil Trust. Yet you deny that the Pure Oil Company is in any manner a trust; how do you distinguish them? A. The Standard is a monopoly. The Pure Oil Company is not.

Q. How can the Standard Oil Company be a monopoly when the Pure Oil is not? The Standard Oil Company handles only 80 per cent of the product. A. It does not require all of any commodity to make a monopoly and fix prices; anyone knows that. They do have a sufficient control to make a monopoly.

Q. You stated just now that you had advanced the price of the crude oil to the producers, and then the Standard had. So you were not alone in fixing the prices? A. That was in one locality, and in advancing crude oil.

Q. But, as a fact, it was done? A. Yes; that is, where our pipe lines went; and I may say the advance was universal over the field.

FREIGHT RATES AND REBATES—THE INDEPENDENTS HAVE NOTHING TO CONCEAL.

Q. Mr. Archbold stated that he was distinctly and clearly in favor of the interstate commerce law, and since the passage of that law in 1887 he affirmed and gave positive testimony that no rebates, no special rates on freight, no advantages of any kind, had been offered by any railroad company or transportation company or canal, or accepted by the Standard Oil Company or asked for by them. Do you say the same for the Pure Oil Company and the companies with which you are connected? A. Yes; to the best of my knowledge and belief there has been nothing of that kind.

Q. No special rates have been given your company at all? A. No; not unless you consider contracts made when we could not get through to New York. Of course there was a rate through to New York when our pipe line reached a certain point in New Jersey, and when it reached a certain further point there was a lower rate, etc. The freight was very large, and it was the only way we could get oil through to the market. It was an open rate.

Q. It was a special rate to your company? A. No; it was an open rate. They probably had no other shipper of crude oil from that given point, but it was in proportion to the rate from other shipping points, from Oil City, for instance, through.

Q. Wasn't it less than by competing lines? A. Not that I know of.

Q. Could it have been without your knowledge? A. Yes, possibly.

Q. You could not say from your own knowledge? A. I will say that there are other witnesses that will come here and give you the facts. We are perfectly willing to aid you and show whatever there is in the whole business. We have nothing to conceal whatever.

Q. Would you be willing to give a list of the dividends paid by your companies? A. Yes. I am assuming this, that we would be perfectly willing

to have all our companies, and certainly I should be willing to have anything that I am in, open to State and governmental inspection; and if it was doing any injury I would not object to having it either abolished or restricted.

Q. You stated positively that, to your knowledge, no rebate has been received or accepted by any of your companies since the passage of the interstate law? A. Not to my knowledge.

Q. Do you know of any such rebate being given to the Standard Oil Company? A. Personally I have no absolute knowledge on this question, but have been told and believe they have received such rebate. I will qualify my former statement. Pipe lines may have sold to independent refiners at special rates, as stated heretofore.

Q. To that extent it was a special rate extended to the Pure Oil Company? A. No; it was to the refiners. The Pure Oil Company is a marketing company.

THE FOREIGN MARKET—RUSSIAN OIL—DISTRIBUTION OF PETROLEUM WOULD HAVE BEEN WIDER IF THE STANDARD HAD NOT EXISTED.

Q. When you entered the German market you found the Standard already there? A. Yes.

Q. And you got in and competed with them? A. Yes; we entered into competition, as anybody had a right to do, and we found the competition a very bitter one. At least the refiners did.

Q. Did you find the Russian competition there? A. There is very little Russian oil sold there now.

Q. In Germany, as far as your knowledge goes? A. There is very little Russian oil shipped to Germany.

Q. But there was a very large amount of Russian oil shipped to Germany before the Standard went in? A. They were not the pioneers. My own judgment is that there would have been a better distribution of oil, better both for producers and for consumers, and they would have been more fairly treated, if there had been competing companies instead of this monopoly.

Q. You do not think the Standard Oil Company has been a benefit? A. The Standard Oil Company? I don't believe I should be willing that one railroad should control 80 per cent of the passenger and the freight traffic of this country and have the absolute power to fix rates. I think we should have had wider distribution of petroleum, and the public would have been better served, and the producers would have been better remunerated, if it had not existed.

Q. (By Mr. Farquhar.) Do you believe that any of the independent refiners or producers of this country, any number of them, could ever have reached the field that the Standard have all over the world unless they combined? A. Yes; the markets of the world were largely reached before the Standard combination.

PROFITS OF THE STANDARD OIL COMPANY AND OF THE PURE OIL COMPANY.

Q. (By Mr. Kennedy.) Can you state what profit the Pure Oil Company makes per barrel of oil? A. I will have the officers present that. I have not gone over it in detail. We have no public records of the amount.

Q. You have private records? A. Yes; but I have not examined into this matter. I will present the exact figures. It has varied at different times. We have met with great losses, and sometimes we have made some profits. I would state this, that the profit would be less than 10 cents a barrel at the present time.

Q. While the Standard profit is more than a dollar a barrel? A. It seems to me that the data given show conclusively that the profit is more than a dollar.

Q. And the Standard can make a profit of a dollar a barrel and you can only get a profit of 10 cents? A. We have met with this great opposition. We expected to make more than that perhaps after a time; but if we should average 10 cents a barrel and could do one-fourth of the business the Standard does, the company would get enormously rich. If a party of capitalists had purchased the right from the Standard in the State of Pennsylvania—where we could not get any free pipe line for a long time—to manufacture and sell one-fourth of the oil that the Standard did when they were organized, they could have made two or three hundred million dollars very readily had they been willing to exact the prices the Standard did. It would have been a splendid investment to have bought the right from the Standard to do business in this country without their opposition.

THE STANDARD OIL COMPANY HAS AN ADVANTAGE IN THE USE OF BY-PRODUCTS.

Q. You have stated that the Standard Oil Company has made more profit from a barrel of oil than the Pure Oil Company. Is that in any measure due to the fact that they use the by-products? A. Yes; that has considerable to do with it.

VALUE OF STANDARD AND PURE OIL STOCK—PROFITS.

Q. (By Mr. Smyth.) You wish us to understand that your company, on a profit of 10 cents a barrel, is to be considered worth 200, whereas the Standard Oil Company, on a profit of a dollar a barrel, is only worth 465? A. I have tried to explain that before. I am a producer of oil, and as a producer I would not sell my stock for twice the amount; and then I do anticipate very fair profits in the near future.

Q. Do you think the Standard Oil Company makes a thousand times the profits you do? A. For a long while we made nothing, as has been testified, and I think some of the witnesses testifying in the interest of the Standard charged us with using

people's money in some of these companies and not paying them any return, but we do not know how much the return has been in the advanced price of crude oil.

Whereupon the commission took a recess until 2 o'clock p. m.

Washington, D. C., September 11, 1899.

TESTIMONY OF MR. LEWIS EMERY, JR.

The commission met on Monday, September 11, 1899, Vice Chairman Phillips presiding. Mr. Lewis Emery, jr., appeared at 10:55 a. m. and being duly sworn, testified as follows:

PERSONAL STATEMENT.

The Witness. Mr. Chairman and gentlemen of the commission, in advance I desire to beg your indulgence in giving my testimony from this fact, that I have been absent from my home, in the State of California, for the past two years. Under the extreme weight of business and cares I broke down in health, and it was only on the 15th of August that I returned to this part of the country; and since that time I have been very busy with the many points in business that were left for me to decide. I have not been able to give the questions that are propounded to me to-day the full attention that I should have done.

I desire the privilege, with the consent of the commission, of referring to my memoranda, or to some of my colleagues, that I may refresh my memory, for this reason, that I have this question for the years from 1872 to 1898 in my memory, excepting my testimony in 1888 before the Committee on Commerce in the city of Washington.

I desire to say that I hold no animosity toward the Standard Oil people or any association. They were thirty-four years my companions, and I only meet them here to-day upon fair and equitable terms. They believe in their method of doing business, and I believe in mine. We agreed to separate. Many of the stockholders of the Standard Oil Company have been associates of mine all these years in the ownership of property, and I own property with them at the present time. We simply differ on methods of transacting business. Therefore I feel that there is no one here in this room who will say I tell an untruth because I may differ from him or because of testimony that I may give in answer to questions you may ask.

Q. (By Mr. Phillips.) Where is your residence?
A. Bradford, Pa.

Q. Your name in full? A. Lewis Emery, Jr.

Q. What is your occupation, and what has it been? A. My occupation for the past thirty-four years has been in the production and refining of oil.

CONNECTION WITH VARIOUS OIL COMPANIES.

Q. (By Mr. Kennedy.) I should like to ask your present connection with the independent companies

—producing companies, pipe line companies, and the Pure Oil Company? A. I am connected with them.

Q. In an official connection? A. I am not an official, except that I am trustee of some stock.

Q. (By Mr. Livingston.) How do you stand in relation to all these companies? A. I am a stockholder in three of them.

Q. Which three? A. United States Pipe Line, Pure Oil Company, and the Producers' Oil Company, Limited.

Q. Any connection with the Standard? A. No; none whatever.

EARLY HISTORY OF THE OIL BUSINESS.

Q. (By Mr. Phillips.) You can proceed in your own way and make a statement to the commission as to the facts. A. The discovery of oil was in 1859, in the vicinity of the city of Titusville. The commodity was new and practically unknown to the commercial or scientific world. The oil was transported from the wells down Oil Creek, near which the first well was drilled, by teams, or by pumping the oil into boats, or, rather, at that time it was carried in buckets into flatboats made of inch lumber. These flatboats ran down Oil Creek to Oil City, Pa., and from there the oil was transferred to larger bulk boats and carried down the Allegheny River to the city of Pittsburg.

The first refineries for putting this oil into a merchantable condition were in the State of Pennsylvania, the natural and most economical place for the manufacture. The business was free and untrammelled from 1859 to 1872. The transportation by boat gave way to transportation by pipe line and by rail. The production of oil in 1865, at which time I came into the business, was about 6,000 barrels a day. In the meantime the refineries had dotted the Oil Creek valley and the Allegheny valley, and reached as far south as Cincinnati and Louisville, and as far north as Portland, Me. In 1872 we find these refineries all in active operation, north and south from the points named. From 1859 up to 1865 the oil was drawn in barrels by teams from the interior of the district, Pithole and Cherry Creek and numerous other places I could mention, each team carrying, according to the condition of the road, from three to seven barrels. A barrel of oil was about 450 pounds at that time. Then, in 1865, the pipe lines were introduced. This business was free and open to all the railroads, all the people, and all the world up to 1872. If the commission will kindly refer to this little pamphlet which I have prepared:

THE FIRST PIPE LINES.

"The first successful effort to transport oil from the well to the railroads by pipe line instead of in barrels by teams was made in 1865.

"The idea of transporting oil by a pipe to the Allegheny River originated with Thomas C. Bates, of Syracuse. A company was formed with a capital

of \$100,000, Joseph Casey as president, and Thomas C. Bates as vice president. Colonel Brackett and S. M. Spencer completed the arrangements, and David Kirk was appointed superintendent. The laying of the pipe was commenced in November, 1865, and the first oil was piped on the 10th of December, 1865. From that time to January 23, 1866, the company piped 20,000 barrels of oil. The pipe was six inches in diameter, extending from Pithole to Oleopolis, a distance of seven miles, and run entirely by gravity. It had a fall of 360 feet between the field and the river. This company was known as the Pennsylvania Tubing Transportation Company.

"Another company was organized in the spring of 1865—the Rochester and Oleopolis Petroleum Company—with a capital of \$100,000.

"The Miller Farm and Pithole Pipe Company commenced to lay pipe August, 1865, and completed its line in October, 1865. The length of the line was five and one-half miles. It was a two-inch line, and originally four pumps were used, but afterward only one pump was found necessary to do the work."

To give you an idea of how crude men's ideas were at this time I will mention that it was thought necessary to place a pump at the foot of each hill in order that the oil might be carried over that hill into the next valley. In a distance of five miles there were four distinct relays of pumps. It would have been held absurd to think that oil could be pumped four miles. Now we put oil into a pipe and pump it a distance of 100 to 150 miles with one stroke of the pump.

"The men who were interested in this enterprise were: M. E. Van Sycle, of Jersey City; Henry C. Ohlen, of New York; Charles Hickox and Charles W. Noble, of Cleveland, Ohio.

"The Titusville Pipe Company was organized by H. E. Pickett and G. J. Sherman, of Titusville. They commenced laying pipes in January, 1866, and completed the line in April, 1866. There were two lines of two-inch pipe from Pithole to Titusville, nine and one-fourth miles. The line cost \$120,000.

"Harley & Co. line, from Benninghoff Run to Shaffer, two miles, was built in 1865.

"The Vandergrift & Forman pipe line, from Bradensburg to Oil City, in 1866.

"A charter granted in 1864 to the Western Transportation Company, from the Noble & Delemater well to Shaffer.

THE BEGINNINGS OF PIPE LINE COMBINATION.

"In 1866 the whole of the Van Sycle's line, from Miller farm to Pithole, fell into the hands of William H. Abbott and Henry Harley.

"The Avery & Hedden line, from Shamburg to the Miller farm.

"In 1867 Abbott & Harley acquired control of the Western Transportation Company. Under its charter they combined the Western and their own two lines as the Allegheny Transportation Company. The first board of directors, in 1869, were: Henry

Harley, president; W. H. Abbott, secretary; Jay Gould, J. P. Harley, and Joseph Douglass; T. W. Larsen, treasurer; William Warmcastle, general superintendent.

"Harley effected a combination, reorganized the Allegheny and Commonwealth as the Pennsylvania Transportation Company, with a capital of almost \$2,000,000, and 500 miles of pipe to Tidioute, Triumph, Irvineton, Oil City, Shamburg, Pleasantville, and Titusville, centering at Miller farm. Among the stockholders were. Jay Gould, Thomas A. Scott, William H. Kemble, Mrs. James Fisk and George K. Anderson. This enterprise absorbed a swarm of small lines, and was considered the acme of pipe line achievement.

"The Star Pipe Line was built by Vandergrift & Forman in 1867.

"In 1871 the Commonwealth Oil and Pipe Line Company was organized in the interest of the Oil Creek Railroad.

"Under the act of 1874 of Pennsylvania, Vandergrift & Forman organized the United Pipe Lines, into which a number of lines were merged.

"I desire here to submit, as the initial acts of Pennsylvania, that eventually merged the oil business of the United States into a monopoly—the Standard Oil Trust—"

Q. (By Mr. Farquhar.) In the detailed statement you have made of the organization of these various lines, I fail to find in the case of any of these lines any of the members, the chief officers, or directors of the Standard Oil Company itself. A. We have not come to that yet.

Q. You mean to state now that the initial one of the carrier combinations started after the United Pipe Line was formed? A. Yes; that is what I propose to show.

Q. That was in 1874? A. Oh, no; the act was of 1874; the organization was back in 1871.

Q. Was not the United Pipe Line afterwards the Commonwealth line? A. No.

Q. Are you referring to the old line of Vandergrift & Forman the year they made the junction of the oil lines in the United Pipe Lines in 1872? A. We will come to that again. I cannot answer that question until I come to it. I intended to show the consolidation of all these lines under the proper period.

THE PENNSYLVANIA RAILROAD PERMITS A PIPE LINE LAW FOR EIGHT COUNTIES TO PASS.

"The charters for oil transportation companies, granted by the legislature, were few in number and only to a favored few, the legislature steadily refusing to enact a general law. In 1872, after the exposure of the South Improvement scheme, the legislature was constrained by the popular indignation thus aroused to pass a free pipe law covering the oil producing counties—Erie, Crawford, Forest, Warren, Venango, Butler, Clarion and Armstrong. Under that law 18 lines were built from the producing districts to the railroads, the length varying from five to thirty miles."

I desire to make a remark here. In 1872, when the people of the oil field were so aroused over the report of the South Improvement Company's organization, they demanded from the legislature the repeal of the South Improvement Company's charter and the passage of the free pipe law, giving pipe line companies the right of eminent domain. Myself and many others went to Harrisburg and asked the legislature to give us such a law. We met Mr. Scott, of the Pennsylvania Railroad Company—people all-powerful in the legislative body at that time, and I do not think their strength is in any way lessened at the present.

I asked Mr. Scott, president of the Pennsylvania Railroad, to permit this law to become general. He refused. He said that he would permit us to have a law for the eight counties named, but he would not permit us to have a law by which we could run our pipes to the city of Pittsburg. Our hope was to get a law by which we could reach competing lines of railroad and the Ohio River, so that we might transport our product by water. He said he would permit a law to pass for the eight counties named, but he would provide in the law that no pipe should go within a mile of the State line, or within a mile of any railroad but the Pennsylvania. The oil-producing people would not accept that provision in the bill. By force of circumstances, and almost a resort to arms, it was finally conceded that we should have the eight counties, but we were not permitted to have Allegheny county, that we might get to Pittsburg for the competition named. This is personal experience.

RISE OF THE MONOPOLY.

"After the adoption of the new constitution, the Wallace Corporation Act, carefully excluding from its provisions transportation of oil, was passed by the legislature, and in less than two years the old South Improvement combination, now known as the Standard Oil Trust, had, by a corrupt bargain with all the railroads, forced all but one of these lines built under the act of 1872 into bankruptcy, and, practically, sale to itself."

This is where these were consolidated—the Vandergrift & Forman, but they were forced in by the monopoly.

Q. (By Representative Livingston.) Explain what you mean by monopoly; whether the word is used advisedly or not. A. It was at that time. Perhaps I might say the word monopoly there would be a little premature, because it had not accomplished all its plans to get absolute control of the business.

Q. (By Mr. Kennedy.) Has it ever had absolute control of the business? A. Absolutely so.

Q. Competition wiped out entirely? A. Entirely so; there was a time when I did not know of a living independent refiner.

Q. (By Representative Livingston.) The word monopoly means the Standard? A. It does.

Q. We would rather hereafter you would say the

Standard Oil Company. A. It will not suit when I get a little further along.

Q. There are so many monopolies that I do not know which you are speaking of.

Q. (By Mr. Kennedy.) Is there any monopoly now? A. If you will allow me to go on, I will get to these things; there will come a time when you can shoot all the shot at me you want to; but to answer that question would be a little premature until you have heard all my argument.

Q. I withdraw that question.

"The old oil fields are now entirely at the mercy of the monopoly; and upon the development of the new Bradford district, the monopoly through its transportation—the United Pipe Lines and the American Transfer Company—took possession of that field also. Since 1876 the whole oil district, covering nine counties (and with the Pennsylvania Railroad or one of its branches within from one to twenty miles of every well), has been under the complete dictation of this trust. A brief statement of the history of this trust, its methods and policy, its influence upon the crude and refining industries and upon the oil regions generally, together with certain inferences to be drawn therefrom, may enable the commission to form some estimate of its future, and possibly to suggest some relief from its baneful influence. Twenty-nine years ago the Standard Oil Company was a corporation located at Cleveland, Ohio, with a capital of less than a million dollars."

SIZE OF THE STANDARD OIL COMPANY IN 1870.

Now I wish to digress; I wish to show the holdings of the Standard Oil Company. I propose to give the commission the testimony of Mr. Flagler, which I heard at the time, and which is of record in this book. The book is the report of the investigation of the sugar trust and the Standard Oil Trust by the Committee on Manufactures of the House of Representatives in 1888. (House Reports, Fiftieth Congress, first session, vol. 9.)

Mr. Gowen asks the question (p. 288):

"Were you a stockholder of the Standard Oil Company of Ohio, as well as an officer? A. Yes, sir.

Q. From what time? When did you first become such? A. From its organization.

Q. In what year was that? A. I think early in 1870.

Q. Were you not connected in any manner with the oil trade or with associations or corporations interested in or connected with the oil trade prior to the formation of the Standard Oil Company of Ohio? A. I was a member of the firm of Rockefeller, Andrews & Flagler.

Q. Where was it located? A. Cleveland, Ohio.

Q. What was their business? A. Refining oil.

Q. That was a private partnership, was it not? A. Yes, sir.

Q. Did it engage directly in the business of refining? A. Yes, sir.

Q. Did that firm erect refining works, or did they buy them from some one else? A. They bought

works from two firms, one of which, I believe, was Rockefeller & Co. and the other Rockefeller & Andrews. They succeeded those two firms.

"Q. Were you interested in either before you became a member of the new firm? A. I was not.

"Q. Were you in business with them or connected with them in any way? A. I was not.

"Q. When your own firm came into existence, or after it had gone into business, what was the extent of its refining capacity? A. As well as I can recollect, 600 barrels a day of crude oil.

"Q. Your firm practically, therefore, formed the Standard Oil Company of Ohio and turned its works over to that company? A. Yes, sir.

"Q. And accepted stock in that company in consideration of its theretofore private ownership in the firm? A. Yes, sir.

"Q. What was the capital of the Standard Oil Company of Ohio? A. One million dollars."

That is as far as I need go; and I want this commission to bear in mind now that the Standard Oil Company of Ohio owned, in 1870 and 1871, 600 barrels refining capacity. I will call your attention later on to their ownership in 1879, in testimony before the Hepburn committee, which was appointed by the New York State legislature. I will leave that part of the subject for the present.

RAILROAD MAGNATES BECOME STOCKHOLDERS IN THE STANDARD.

Soon after this it was reorganized, when Scott, of the Pennsylvania Railroad; Vanderbilt, of the New York Central Railroad; Jewett, of the Erie Railroad; Watson, of the Lake Shore Railroad, and other railroad managers became interested in it as large stockholders. With the influence thus gained it attempted the establishment of the South Improvement Company. This attempt failed.

Just there I desire to call your attention, on page 6 of this pamphlet, to the incorporation of the South Improvement Company.

CHARTER OF THE SOUTH IMPROVEMENT COMPANY.

An Act to incorporate the South Improvement Company.

Section 1. Be it enacted by the senate and house of representatives of the Commonwealth of Pennsylvania in general assembly met, and it is hereby enacted by the authority of the same, That S. S. Moon, R. D. Barclay, John A. Fowler, or a majority of them, their associates, successors, and assigns, be, and they are hereby, authorized and empowered to form and be a body corporate, to be known as the South Improvement Company, which shall be, and is hereby, vested with all the powers, privileges, duties, and obligations conferred upon the act to incorporate the Pennsylvania Company, by the act of the legislature of Pennsylvania, approved the 7th day of April, A. D. 1870, and the supplement thereto.

Sec. 2. That the stockholders of said company, by and with the consent of the holders of not less than two-thirds of the shares of stock, be, and they are hereby, authorized to change the name and title of the said company and designate the location of its general office, which changes shall be valid after the filing of a certificate in the office of the secretary of the Commonwealth, signed by the president and attested by the seal of the said company.

JAMES H. WEBB,

Speaker of the House of Representatives.

WILLIAM A. WALLACE,

Speaker of the Senate.

Approved the 6th day of May, A. D. 1871.

Jno. W. Geary.

CHARTER OF THE PENNSYLVANIA COMPANY.

I desire to have this act read, because I was asked this morning by one of the commissioners what power they had under the South Improvement Company charter. I should like to reply to that question before the commission, if I dare, what a very eminent judge said in our section of the country relative to the powers of this company, but as it is not perhaps preliminary, I will tell the story afterwards. I desire to have Senator Lee read this incorporating act. I do that because I wish this commission to hear the unparalleled privileges granted under the charter and why they sought it; and I desire to follow this along and show you that years after that time they acquired the same charter under a different head. Charters were for sale. They were manufactured by the legislature of the State of Pennsylvania for that purpose. I know; I have spent seventeen years of my life there.

AN ACT TO INCORPORATE THE PENNSYLVANIA COMPANY.

Section 1. Be it enacted by the senate and house of representatives of the Commonwealth of Pennsylvania in general assembly met, and it is hereby enacted by the authority of the same, That Andrew Howard, J. S. Swartz, G. B. Edward, J. D. Wellsto, and J. T. Malin, their associates, successors, and assigns, or a majority of them, be, and they are hereby, authorized to form and be a body corporate, to be known as the Pennsylvania Company, and by that name, style, and title shall have perpetual succession and all the privileges, franchises and immunities incident to a corporation; may sue and be sued, implead and be impleaded, complain and defend in all courts of law and equity, of record and otherwise; may purchase, receive, hold and enjoy, to them, their successors, and assigns, all such lands, tenements and leaseholds, estates and hereditaments, goods and chattels, securities and estates, real, personal and mixed, of what kind and quality soever, as may be necessary to erect depots, engine houses, tracks, shops, and other purposes of said corporation, as hereafter defined by the second section of his act; and the same from time to time may

sell, convey, mortgage, encumber, charge, pledge, grant, lease, sublease, alien and dispose of, and also make and have a common seal, and the same to alter and renew at pleasure, and ordain, establish and put in execution such by-laws or ordinances, rules and regulations as may be necessary or convenient for the government of the said corporation, not being contrary to the constitution and laws of this Commonwealth, and generally may do all and singular the matters and things which to them shall appertain to do for the well being of the said corporation and the management and ordering of the affairs and business of the same: Provided, That nothing herein contained shall be so construed as to give to the said corporation any banking privileges or franchises or the privilege of issuing their obligations as money.

Sec. 2. That the corporation hereby created shall have power to contract with any person or persons, firms, corporations, or any other party, howsoever formed, existing, or that may hereafter exist, in any way that said parties or any of them may have authority to do, to build, construct, maintain, or manage any work or works, public or private, which may tend or be designed to include, increase, facilitate, or develop trade, travel, or the transportation or conveyance of freight, live stock, passengers, or any other traffic, by land or water, from or to any part of the United States or the territories thereof; and the said company shall also have power and authority to supply or furnish all needful material, labor, implements, instruments and fixtures of any and every kind whatsoever on such terms and conditions as may be agreed upon between the parties, respectively, and also to purchase, erect, construct, maintain, or conduct, in its own name and for its own benefit, or otherwise, any such work, public or private, as they may by law be authorized to do (including also herein lines for telegraphic communication), and to aid, co-operate and unite with any company, person, or firm in so doing.

Sec. 3. The company hereby created shall also have the power to make purchases and sales of or investments in the bonds and securities of other companies, and to make advances of money and of credit to other companies, and to aid in like manner contractors and manufacturers, and to receive and hold, on deposit or as collateral or otherwise, and estate or property, real or personal, including the notes, obligations, and accounts of individuals and companies, and the same to purchase, collect, adjust, and settle, and also pledge, sell, and dispose thereof on such terms as may be agreed on between them and the parties contracting with them; and also to indorse and guarantee the payment of the bonds and the performance of the obligations of other corporations, firms, and individuals, and to assume, become responsible for, execute and carry out any contracts, leases or subleases made by any company or companies, individuals or firms whatsoever.

Sec. 4. The company hereby created shall also have power to enter upon and occupy the lands of individuals or of companies on making payment therefor or giving security according to law for the purpose

of erecting, constructing, maintaining or managing any public work, such as is provided for or mentioned in the second section of this act, and to construct and erect such works thereon, and also such buildings, improvements, structures, roads or fixtures as may be necessary or convenient for the purposes of said company under the powers herein granted; and to purchase, make, use and maintain any works or improvements connected or intended to be connected with the works of said company; and to merge or consolidate or unite with the said company the improvements, property, and franchises of any other company or companies on such terms and conditions as the said company may agree upon; and to fix and regulate the tolls or charges to be charged or demanded for any freight, property, or passengers traveling or passing over any improvement erected, managed or owned by the said company, or on any merchandise or property transported over any road whatever by the said company, and to make from time to time, dividends from the profits made by the said company; the several roads managed by said company shall continue taxable, as heretofore, in proportion to their length within this state, respectively; and the said Pennsylvania Company shall be taxable only on the proportion of dividends on its capital stock and upon net earnings or income, only in proportion to the amount actually carried by it within the State of Pennsylvania, and on its earnings or income derived from its business beyond the limits of this commonwealth and shall not be liable for taxation.

HOW THE NATIONAL TRANSIT COMPANY (STANDARD)
GOT THE SAME CORPORATE POWERS WHICH THE
SOUTH IMPROVEMENT COMPANY
WERE GRANTED.

I simply wanted the commission to understand the powers given under this incorporation. I desire to call your attention, incidentally, now to page 15½ of this pamphlet: "When the popular excitement raised against the South Improvement Company, which resulted in the repeal of the act to incorporate it, had subsided, the trust for the purpose of its transportation business in Pennsylvania, secured a franchise substantially as follows:

"An act to incorporate the Overland Contract Company was approved March 22, 1871."

That is the act for transporting oil by pipe line throughout the State of Pennsylvania; and the provisions of the Southern Railway Security act, or the Overland Contract Company act, are the same as the Pennsylvania Company, or the South Improvement Company act identically. It is simply the same act with another head.

Q. The one you read, incorporating the Pennsylvania Company? A. Yes. What I mean to say is that this act read by Senator Lee is the identical act under which the National Transit Company is organized and from which they get all their privileges; and there is nothing not set forth in that act.

Q. Do they get their powers and privileges from this old corporation without having to go to the secre-

tary of state for any charter? A. The National Transit Company people bought this charter under which the National Transit Company is organized on March 8, 1881, for \$16,250. The provisions of that law are just the same as the provisions of the South Improvement company act—one and the same, in every word, letter and line.

Q. (By Mr. Farquhar.) How long was the South Improvement Company in existence? A. About three months.

Q. And immediately after, the other company was organized with the same rights and privileges, but not the same title. How did they come to get the privilege when they applied? A. It is another company.

Q. And contemporaneous? A. No; in 1881.

Q. When was the South Improvement Company act repealed? A. March 25, 1872.

Q. Then how was it possible for another company, except by an entire re-enactment, to take all the privileges of the South Improvement Company? A. The body of the South Improvement Company act is just the same as the body of the Southern Railway Security Company act. As I have said, there were 12 or 15 other charters of the same character, with the same body.

THE OIL BUSINESS WAS FREE TO ALL AT FIRST.

Now, from 1872, of which I have given you a history, up to the purchase of this charter in 1881, I will endeavor to show you what relation the South Improvement Company have had to the Standard Oil Company; and I come simply now to the South Improvement Company charter. I must travel along to 1874 before I can give you the connection. I have occasion, however, to refer to this; but bear in mind you are speaking of the Standard Oil Company, and perhaps I may be speaking of the National Transit Company, which is one of the lines of the Standard Oil Company of Pennsylvania. I desire you to understand this franchise carried with it all the powers and privileges exercised by the South Improvement Company, of unlimited capital and power.

Q. The question is, did other companies of Pennsylvania have just as good privileges at that time? A. No; the business was in everybody's hands at this time. It was just as free for you to go into the oil business and transport your oil down the Allegheny River and on the railroads as for you to go and fish in the Potomac. You could put your money into a well or pipe line, or anything you wanted to. It was absolutely free and open to everybody. There were no encroachments, no hampering at that time.

Q. Was there any attempt on the part of any of the other refiners and producers to get a charter of equal privileges with this South Improvement Company? A. Not to my knowledge.

Q. From 1872 to 1881? A. I do not know about that.

DRAWBACKS AND REBATES MADE THE TROUBLE.

Q. Was it the lack of taking advantage of combination at that time that handicapped the parties who

did not combine as these parties had? A. A man was at that time, I believe, and undoubtedly is at this, disposed to obey the laws of the country. The old constitution of the state of Pennsylvania, the new, and I think every other constitution of any of the states of the Union prohibited undue discrimination. It was against the law.

The whole difficulty arising today is due to the discriminating rates. The railroads of this country are responsible today for the existence of these trusts, because they gave the favored shippers such drawbacks and rebates that finally the Standard Oil Company, with its privileges, drove the entire oil industry into its own hands. I do not say for a moment but that these people had the right to do this if they wanted to, but I do say that when they did do it they were violators of the common law, and that I would not connect myself with them on that ground. I was an original. I was there; I had my refineries; I built my pipe line in 1868 and in 1870, long before I knew anything of these people. I did not see fit to place my fortunes in their hands. Dollars and cents—yes; it would have been millions to me if I had, but I did not feel that I could surrender my principles under the arrangement, or the law, set forth under the South Improvement Company. But the most damnable thing that followed was the contract. While it has been given in evidence upon this floor that the Standard Oil Company are not responsible for the acts of the South Improvement Company, but the contract that followed—that was framed in Cleveland and brought to the Pennsylvania Railroad and they accepted it, and the contract was signed by J. Edgar Thompson, president of the road at that time.

Q. Were not all the railroads wildcatting at that time, anyway? A. No, sir. I do not doubt but railroads were giving discriminating rates; I have expressed myself firmly upon that question. You know it—as a business man, you know it; and I will show you before I leave this floor that discriminations have been made right up almost to the present time.

THE CONTRACT BETWEEN THE SOUTH IMPROVEMENT COMPANY AND THE PENNSYLVANIA RAILROAD COMPANY.

Now I desire to call your attention to the contract between the South Improvement Company and the Pennsylvania Railroad, dated January 18, 1872, and I propose to show you before I quit that this contract went into existence absolutely and was signed by the president, although it has been denied upon this stand that it ever went into operation.

Q. (By Representative Livingston.) For what purpose? A. It is to show you the contract that was made between the Pennsylvania Railroad and the South Improvement Company.

Q. Is that a verified statement you read? A. I will read the contract itself, signed by the Pennsylvania Railroad.

Q. That is a verified copy, is it? A. Oh, it is in the investigation of 1871, and it is all in the congressional report of 1888, and the Hepburn committee's proceedings, and in all the investigations that have

been going on. It seems to me that investigations don't amount to a cent. It is printed; in all the libraries of the United States it can be had, or in any town library—the history of this very business I am relating. [See Fiftieth Congress, first session, House Reports, vol. 9, pp. 357.]

"Agreement made and entered into this 18th day of January, in the year 1872, by and between the South Improvement Company, a corporation organized and existing under the laws of the state of Pennsylvania, party hereto of the first part, and the Pennsylvania Railroad Company, on its own behalf and on behalf of all other railroad companies whose roads are controlled, owned or leased by it, or with which it has sufficient running arrangements, which other roads are herein described as the connections of the said Pennsylvania Railroad Company, party hereto of the second part, witnesseth:

"Whereas, the party hereto of the first part has been organized for the purpose, among other things, of increasing, facilitating and developing the trade in and the conveyance and transportation of petroleum and its products, and for that purpose proposes, among other things, to expend large sums of money in the purchase, erection and construction of, and maintaining and conducting works for storage, distillation and refining, warehousing and transportation and in various other ways, upon the inducement, among other things, of this contract;

"And whereas, the magnitude and extent of the business and operations proposed to be carried on by the party hereto of the first part will greatly promote the interest of the party hereto of the second part, and make it desirable for it by fixing certain rates of freight, drawbacks and rebates, and by the other provisions of this agreement, to encourage the outlay proposed by the party hereto of the first part, and to facilitate and increase the transportation to be received from it.

DIVISION OF PETROLEUM TRAFFIC.

"And whereas it has been agreed by and between the party hereto of the second part, for itself and its connections, the Erie Railroad Company, for itself and its connections, and the New York Central Railroad Company, for itself and connections, that the business of transporting by railroad crude petroleum and its products toward the Atlantic coast, from the points of production and refining on their lines of road, shall be allotted by the party hereto of the first part to the said three companies in the proportion of 45 per cent of the whole to the Pennsylvania Railroad Company, for itself and its connections, including the Philadelphia and Erie Railway, the Northern Central Railway, the Allegheny Valley Railroad, Camden and Amboy Railway, the Pennsylvania Company, and all other railroads which are or may be controlled, owned and leased by it or with which it has or may have sufficient running arrangements; 27½ per cent of the whole to the Erie Railway Company for itself and its connections; and 27½ per cent of the whole to the New York Central Railroad Company, for itself and its connections, and that the transportation beyond Cleveland

and Pittsburg over the railroads of the said companies and their connections, in other directions than toward the Atlantic coast, west from said points of production and refining, shall be allotted by the party hereto of the first part in the proportion of one-third thereof to the party hereto of the second part, for itself and its western connections, and the remainder to other railroads."

That means this: That all oil going to the Atlantic coast shall be divided as set forth, 27½ per cent. to the Erie, 27½ per cent. to the New York Central, and 45 per cent. to the Pennsylvania, leaving the balance of trade, which was apportioned to be about 10 per cent. to the western country, and it should be divided between three roads. Do you understand? That is to say, the 10 per cent. going to the west for the western consumption, the rebate agreed by the railroads to pay to be upon the same basis, and shall be divided third and third, the Pennsylvania Railroad paying into the hands of the South Improvement Company 27½ per cent., etc. That is the division.

"Now, therefore, this agreement witnesseth, that the parties hereto, for themselves and their successors, in consideration of the premises, of the mutual execution hereof, and of the mutual advantages hereby conferred, have covenanted and agreed, and do hereby covenant and agree, each with the other, as follows:

"ARTICLE FIRST.

"The party hereto of the first part covenants and agrees:

"1. To furnish to the party hereto of the second part, for transportation, such a proportion of the crude petroleum and its products owned or controlled by the party hereto of the first part as shall give to the party hereto of the second part 45 per cent of all the crude petroleum and its products sent from the points of production and refining toward the Atlantic coast by the said Pennsylvania, the Erie and the New York Central railroads and their connections, and 33 1-3 per cent of that which is sent west of Pittsburg and Cleveland by those railroads and their connections.

"2. To provide suitable tankage at the points where petroleum is produced on the railroads of the party hereto of the second part and its connections in which to receive crude petroleum preparatory to shipment, with the necessary pipes, pumps, racks and other appliances for its convenient transfer in bulk into railroad cars.

"3. To deliver to the railroads of the party hereto of the second part and its connections at the places of shipment and to receive from them at the places of destination all crude petroleum and its products transported over their railroads for the party of the first part.

"4. To provide at the places of destination on the seaboard necessary and suitable yards, wharves, warehouses, sheds, tanks, pipes, pumps, and motive power for the reception of petroleum and its products and loading vessels therewith."

I want you to follow this contract right there. I propose to show you that this contract has, in fact, been carried out to the letter from the day of its in-

ception, in spite of the repeal of the South Improvement Company charter.

"5. To provide, maintain and operate the works necessary to refine crude petroleum upon the largest scale practicable, and with such skill and on such a system of organization and division of labor as will secure both efficiency and economy; and for that purpose, and for the purpose of developing and increasing the petroleum trade of the country, to provide and maintain all suitable and necessary means and facilities.

RECORDS OF THE TRANSPORTATION OF ALL PETROLEUM AND ITS PRODUCTS.

"6. To keep records of the transportation over the railroads of the party hereto of the second part, and its connections, and, so far as it can obtain the same, over the Erie and the New York Central railroads and their connections, of all petroleum and its products."

That they may ship under this contract—bear that in mind—of all petroleum and its products."

"Showing the number of barrels of 45 gallons each in bulk and the number of barrels of 47 gallons in barrels carried by each road, with the points of receiving and delivery and the amount of freight received by each road, for such transportation, which records shall at all reasonable times be open to the inspection of the duly constituted representatives of the party hereto of the second part."

That is to say, the railroads are open, absolutely, to the inspection of this company; that they had the right to go in at any time and take down from the place of deposit those books and look over them and see that which I ship or anybody else ships.

"Monthly abstracts of all such records shall be regularly sent to the party of the second part."

See how complete. That an abstract of those books must be sent to the office of this company that they may look into the business of Governor Harris, Mr. Phillips, or Mr. Farquhar—anybody, it does not matter whom. That was the power given; and I simply say, if you will take the evidence of the investigation of 1871 and 1872, take the investigations of the Hepburn committee, take the investigations of the state of Pennsylvania, and every scintilla of evidence produced, and you will find that this contract has been carried out to the letter, even up to the present time. There is no secrecy in my business today. My business is known every 24 hours, just exactly what I do. I make that assertion because I can produce the evidence.

Q. (By Mr. Farquhar.) Possibly these parties entering into contracts with the railroads are a little afraid of the railroads themselves cheating? A. That might be so.

"7. To pay the party of the second part weekly for all transportation over its roads and its connections of petroleum and its products such gross rates and half rates of freight as are hereinafter specified, less the rebates and drawbacks hereinafter provided to be retained by the party hereto of the first part for its own use.

REBATES AND DRAWBACKS TO THE SOUTH IMPROVEMENT COMPANY ON ALL OIL SHIPPED BY IT OR OTHER COMPANIES.

"ARTICLE SECOND.

"The party hereto of the second part covenants and agrees:

"1. That the party hereto of the second part will pay and allow to the party hereto of the first part for its own use, on all petroleum and its products transported over the railroads of the party hereto of the second part and its connections, for the party hereto of the first part, rebates, and on all transported for others drawbacks, at the rates hereinafter provided, except in the case specified in article third."

Not only what they ship themselves, but what every individual shipped; whatever oil was shipped at that time..

"2. To deliver to the party hereto of the first part, for all petroleum and its products in packages, transported over the railroad of the party hereto of the second part and its connections, by whomsoever shipped, and consigned to the party of the first part, at the warehouses of the party of the first part, at the seaboard and inland, at the depots of the party of the second part, at the places of destination, and to deliver all petroleum and its products, in bulk, owned by or consigned to the said party of the first part, at any point required on the line of the railroads of the party of the second part and its connections.

OPEN RATES.

"3. To transport and deliver petroleum and its products over the railroads of the party of the second part, and its connections, at gross rates, which shall at no time exceed the following, without the consent of both parties hereto:

"From any point on the Oil Creek and Allegheny River railroad to Oil City, Union, Corry, Irvineton, which are herein designated as 'common points,' on each barrel of 45 gallons in bulk and on each barrel of 47 gallons in barrels, 30 cents.

"On Crude Petroleum.

From any common point (for each barrel of 45 gallons) to—	
Cleveland	\$0.80
Pittsburg80
New York	2.56
Philadelphia	2.41
Baltimore	2.41
Boston	2.71

"All other points except those on the Oil Creek and Allegheny River railway to the places of destination last named the same rates as from the common points."

"On Refined Oil, Benzine and Other Products of the Manufacture of Petroleum.

From Pittsburg (for each barrel) to—	
New York	\$2.00
Philadelphia	1.85
Baltimore ..	1.85
From Cleveland (for each barrel) to—	
Boston ..	\$2.15
New York	2.00
Philadelphia ..	1.85
Baltimore ..	1.85
From any common point (for each barrel) to—	
New York	\$2.92
Philadelphia ..	2.77
Baltimore ..	2.77
Boston ..	3.07

"From and to all points intermediate between the points aforesaid, such reasonable rates as the party of the second part shall from time to time establish on both crude and refined.

"From Pittsburg, Cleveland and other places west of Pittsburg and Cleveland, such reasonable rates as the party of the second part may deem it expedient from time to time establish.

REBATES AND DRAWBACKS.

"4. To pay and allow to the party hereto of the first part on all petroleum and its products transported for it over the railroads of the party of the second part and its connections the following rebates, and on all transported for other parties drawbacks of like amounts as the rebates from the gross rates, the same to be deducted and retained by the party hereto of the first part for its own use from the amounts of freights, payable to the party of the second part.

"On the Transportation of Crude Petroleum.

[Rebate Per Barrel.]

From the gross rate from any common point to—	
Cleveland ..	\$0.40
Pittsburg ..	.40
New York ..	1.06
Philadelphia ..	1.06
Baltimore ..	1.06
Boston ..	1.06

"From the gross rate from all other points and the six places of destination last named rebates the same as on the rates from the common points.

"On the Transportation of Refined Oil, Benzine and Other Products of the Manufacture of Petroleum.

From the gross rates from Pittsburg to—	
New York	\$0.50
Philadelphia ..	.50
Baltimore ..	.50

From the gross rates from Cleveland to—	
Boston ..	\$0.50
New York ..	.50
Philadelphia ..	.50
Baltimore ..	.50
From the gross rates from any common point to—	
New York	\$1.32
Philadelphia ..	1.32
Baltimore ..	1.32
Boston ..	1.32

Now I will refer to page 43.

"From the gross rates to and from all points intermediate between the above points a rebate or drawback of one-third of the gross rate shall be paid.

"From the gross rates from Pittsburg, Cleveland and other points to places west of the meridians of Pittsburg and Cleveland a rebate or drawback of one-third of the gross rates shall be paid.

TO CHARGE ALL OTHER PARTIES NOT LESS THAN THE GROSS RATES ABOVE.

"5. To charge to all other parties (excepting such as are referred to in article 3) for the transportation of petroleum and its products rates which shall not be less than the gross rates above specified, and should at any time any less rate be charged, directly or indirectly, either by way of rebate, commission, allowances or upon any pretext whatsoever, the same reduction per barrel shall be made to the party hereto of the first part from the net rates provided for them on all transportation for them during the period for which such reduction shall be made to others.

"6. To permit the party hereto of the first part, if in its judgment the currents of trade should so require, temporarily to increase or diminish the proportion, as herein provided, to the party hereto of the second part, for itself and its connections, as the whole business of transporting petroleum and its products, as between the party hereto of the second part, the Erie Railway Company and the New York Central Railroad Company. The party of the second part in such case to receive from the party hereto of the first part, in full payment or indemnity for the excess or deficiency, one-half the net schedule rates on such excess or deficiency, the other half to be paid pro rata to the said other companies whose apportioned quantity of transportation shall thus be varied; but such diversion of business shall not at any time exceed one week, nor be repeated without an interval of at least 60 days"—

That provision means that if it became necessary in order to crush out any particular individual they had the right to exercise the privileges of clause six; but it should not be done for more than one week in each interval of 60 days.

"Unless with the consent of the party hereto of the second part. Also that whenever, from time to time, as aforesaid, a temporary diversion of a part of the apportioned transportation of the party of the second part to the other railroads aforesaid, or to either of them, shall become necessary, cars of the party of the second part may be loaded by the party of the first part and sent away over such other railroads, or either

of them, but the cars so sent away shall be returned without unnecessary delay and in as good order as when taken, to the railroads of the party of the second part, and mileage at the usual rates paid for their use while absent.

"7. To furnish with as much regularity as possible at all times good and sufficient cars and other means suitable and necessary for the safe and prompt transportation of all crude petroleum and its products, either bulk or in barrels, which the party hereto of the first part shall desire to send from one point to another (and which shall be supplied with as much regularity as possible) on or over the railroads of the party of the second part and its connections.

ALL DETAILS OF SHIPMENTS TO BE REPORTED TO THE SOUTH IMPROVEMENT COMPANY.

"8. To make manifests or waybills of all petroleum or its products transported over any portion of the railroads of the party of the second part or its connections, which manifests shall state the name of the consignor, the place of shipment, the kind and actual quantity of the article shipped, the name of the consignee and the place of destination, with the rate and gross amount of freight and charges, and to send daily to the principal office of the party of the first part duplicates of all such manifests or waybills."

Now, do you understand that? Sending in waybills and everything connected with that shipment. The name of the shipper even must be in that report.

SUCH REPORTS STILL MADE TO THE STANDARD.

Just here I want to give you a sample. I want to state from personal experience the carrying out of that contract within a brief space of time. It grew out of this: I shipped a car load of oil. I will not call the name of the road. I shipped a car load of lubricating and refined oil—that is to say, a mixed car—from Bradford, Pa., where my little refinery is located, to Dubois, which was a station down in the coal country, in Elk county.

Q. (By Mr. Clarke.) When was this? A. A little less than a year ago. I loaded this oil and there was a gentleman who owned a sawmill in that section, and who had been an old acquaintance of mine for thirty-odd years; he was an employe of the road and is upon the road today. He runs the fast passenger train upon that road. He says: "I want two barrels of oil sent down to my mill." I put those two barrels of oil on top of a car load of stuff. I took the precaution not to put the oil in that car until after business hours. The car was sealed by the officer of the road. It was to have left the yard the next day, but through some mistake it did not leave. The engineer got off his engine and without taking off his overalls, he came up Main street to my office, and he said: "Who in the devil is giving away your business?" I said: "What's the matter?" Said he: "When I got off my engine at Dubois, ——— said" calling the engineer by name): "You are buying oil from Emery. I was advised this morning by the agent at Dubois that I had been derelict in my duty in not selling you

that oil—in permitting Emery to sell it. I am threatened with discharge." The gentleman turned around to him and said: "How the hell do you know I bought any oil from them; and if I have, what business is it of yours?" He left. Now, I swear that that oil was put in that car on the top of those barrels without a single man's knowing anything about it excepting the man who put it in and my son, who has charge of the business. I say again that is only one instance of the carrying out of this part of this section I have read. I have no doubt, and I know in my own mind, that my business is followed to this day under the provisions of that section, the same as it was in 1872. I speak not for any one else, except as I speak of the evidence as set forth in 1871 and 1880. Those cases are numerous. It is not the only instance. I could give you a hundred others if necessary and the time could be taken, and I say that although the charter of the South Improvement Company was repealed and the provisions of this contract were annulled, they have been constantly carried out and are, in my opinion, being carried out at this very moment.

Now I am coming to the most interesting article of all in this contract, and I call your particular attention to it:

EQUAL OPPORTUNITIES TO "ANY OTHER PARTY WHO SHALL FURNISH AN EQUAL AMOUNT OF TRANSPORTATION.

"ARTICLE THIRD.

"And it is hereby further covenanted and agreed by and between the parties hereto that the rebates hereinbefore provided for the party hereto of the first part may be made to any other party who shall furnish an equal amount of transportation and who shall possess and use works, means and facilities for carrying on and promoting the petroleum trade equal to those possessed and used by the party hereto of the first part."

I desire to have questions asked upon that point. It has been claimed that anybody—yes, everybody—could enter the oil business. It is true, but they must enter the business as set forth in the articles on pages 44 and 45 of my pamphlet.

"And it is hereby"—I am reading article fourth.

Q. (By Mr. Kennedy:) Why not give it to us, Senator? A. It is a question that has been denied upon the stand time and time again.

Q. (By Mr. Farquhar.) The statement was made on this stand that the Standard Oil Company enjoyed no other or greater privileges than were enjoyed by any other company? A. That is true under that section. Now, here is a contract that provides for the shipment of petroleum, all of it, at that time; or rather, had the provisions of the contract been carried out as set forth in the charter, as well as in the articles of agreement, how in the world could anybody else have that which they possessed themselves—all the oil, all the rebates and all the transportation? Would it have been possible for you to go into the business and possess an equal amount of oil, equal facilities, equal refineries, unless you had behind you a railroad company

as strong as the railroad combination itself? It was impossible, absolutely impossible, for any set of men to go out and get equal contracts, because they had got all of the roads then leading to the Atlantic coast and into the western country. There was no chance whatever for a man with a single pipe line. I was a manufacturer. I had my refinery at that time. I did not have equal facilities, and I could not get them. I was one of the hundreds that went to the wall under that contract, although it is said by witnesses and everybody else that it was repealed and went out of existence. You know, gentlemen, as well as I when the fading of the business commenced. It faded from 1872, and it went out of existence in 1877, although the contract was repealed; and I may say right here that the Standard Oil Company was organized in Cleveland, Ohio, and later on, in 1872, it, with the Pennsylvania railroad, the New York Central, the New York and Erie, became partners in that arrangement, in that contract itself. How in the world could I get equal facilities when all the railroads were in that combination? It was a moral impossibility; nobody had an equal show. Is that an answer?

THE WITNESS PAID THE OPEN OR GROSS RATES.

Q. Well, a little further. Can you give testimony to this commission as to the rates which you paid there at that time? A. At which time?

Q. At the time mentioned here. How much more did you pay, or did you pay the open rate? A. We paid the open rate. Although you see it did not go into existence, I can produce you bills showing that I was charged \$2.06 from my refinery on this oil. I say it did go into active operation in so far as freight was concerned.

Q. Have you before now or at any time produced any of these bills? A. No.

Q. Have they ever asked you? A. No; and I want to say this, that the bills at that time—now, I may be a little too fast in saying I can obtain them. We paid the open rate of freight, whatever it was at the time. That is what I say, and we went out of business in the latter part of 1873; we were compelled to go out. But what I am dwelling upon is the fact that it was laid open to the people of the country at that time. I went to Mr. Cassatt and made my complaint and said, "I can not do business." He said to me personally, "If you will give me the same amount of freight that the Standard Oil Company do we will transport goods at the same price."

Q. Did they ever make a proposition for you to transport all your oil over their lines? A. Not at that time.

Q. Did they ever? A. I went into business the second time at the instance of the Pennsylvania Railroad, and they then drove me to the wall a second time.

"AGAINST LOSS OR INJURY BY COMPETITION."

Now I will read article four:

"And it is hereby further covenanted and agreed by and between the parties hereto that the party hereto of the second part shall at all times co-operate, as far as

it legally may, with the party hereto of the first part, to maintain the business of the party hereto of the first part against loss or injury by competition"—

By competition! Think of it! Didn't care anything about the other fellow!

"To the end that the party hereto of the first part may keep up a remunerative, and so a full and regular business, and to that end shall lower or raise the gross rates of transportation over its railroads and connections, as far as it legally may, for such times and to such extent as may be necessary to overcome such competition. The rebates and drawbacks to the party of the first part to be varied *pari passu* with the gross rates."

Practiced to this day. That provision is being carried out, and I desire to be questioned on that point. Any one in this land of ours, supposed to be a land of liberty and of free trade, excepting the tariff part of it—that system extends to Germany and foreign countries generally.

UNFAIR TRADING PREVENTED IN GERMANY—INDEPENDENTS CAN DO BUSINESS THERE.

Q. (By Mr. Kennedy.) Right there, Senator, some of your business associates have testified before the commission that at the present time in Germany you are on an equality with the Standard Oil Company?

A. Thanks to the government of Germany we are, so far as our business goes, because Germany by law prohibits unfair trading and owns every mile of railroad in the great empire excepting two in the south, and no such thing as discrimination is known. They go further. They invite you to come to the Reichstag and make complaint, or to its officers, and I did in 1895. Oil was selling on the Rhine at 1½ to 2 cents a gallon below the price on the Elbe. Our agent, who was afterwards purchased, was in a grievous situation, and we are putting up oil here and sending it to Europe practically for nothing. I have sold oil at my works to take care of that trade, competing with the Standard Oil Company, or the Deutsche-Americanische Company, as low as a cent a gallon—losing twenty, twenty-five or thirty thousand dollars on a cargo of oil to maintain our agency in that country. Complaint was made by our agent, Mr. Poth. He handled at that time from four to six hundred thousand barrels. I traveled with him to Berlin and went personally before the entire ministry of that country, and in English I presented the case, and he interpreted my testimony to them and asked for help. We have been praying here from 1872 to this time, by the investigations of 1871, 1888, and the State of Ohio, and every State of the Union where these people are known. We have sued for it in every legislature of the country. Texas has waked up and she says: "Get out; we won't have you." The Reichstag of that country gave notice that there must be no unfair trading in that country.

Q. (By Mr. Clarke.) No what? A. No unfair trading. It must be on a fair, competitive basis. If it deviated from that, investigation would follow. No levying of tribute upon the Elbe citizens and advantages given to the Rhine. Prices were the same to all.

Q. How did they give that notice? A. I can not tell you.

Q. How do you know they did give notice? A. I beg your pardon. I do not know that there was notice given.

Q. You do not know of any legislation on the subject. A. Oh, no, I do not; but I understand, Mr. Clarke, that there is a law in Germany prohibiting unfair trading. I never read it.

Q. Can you tell me if there have been steps taken to obtain such information? A. Now, I do not know but there has. I do not know this, however, and I read the bill. There was a bill introduced into the Reichstag which was applicable entirely to the question of petroleum. It was considered and came up, but never has passed, to my knowledge. There may have been something passed since that time, however. But suffice it to say we find the markets of Europe on even tenure, and we are in competition, as Mr. Kennedy stated.

THE DEUTSCHE-AMERIKANISCHE COMPANY BOUGHT OUT
AGENT OF THE INDEPENDENTS.

But when I went there in 1896, the Standard Oil Company, the Deutsche-Amerikanische Company, had bought the last vestige of tankage in Germany they could get hold of. There was nothing left. I was sent there on three days' notice by my company, with which I was connected at that time, the United States Pipe Line Company, to look up the situation. We were here with our 15 refineries, with our pipe line running as far as it could toward the coast—we could not get any farther because the Standard Oil Company would not let us; but when I went to Germany in April, 1896, I went there on the report that Mr. Poth, with all his tankage on the Rhine, on the Elbe, at Flushing, Rotterdam and Amsterdam had been handed over to the Deutsche-Amerikanische Company. I do not know but the control belongs to the Standard Oil trust of America. They had purchased a man that we had supplied that oil to for four or five consecutive years, on whom we were dependent to take care of that market, that we might have the necessary money to run our refineries. They had bought it—nothing left. Where in the world we could place a single cargo of oil I did not know. Fortunately enough, I succeeded in selling three cargoes of oil to the Drennehaven Petroleum Company, which was then a Russian organization.

NEW CONNECTIONS FOR THE INDEPENDENTS.

Q. Russian? A. Yes. That three cargoes amounted to 90,000 barrels. I immediately went to Holland and let a contract to Mr. King for the construction of tanks. The city of Hamburg welcomed me there. They convened their congress in extra session and passed a law that they would furnish me ground upon which to build my tanks; and the contracts were let and the tanks finished in October, thank God, and our vessels went into the harbor with our petroleum. From there I went to Amsterdam, and they were constructing those tanks for us, because they wanted competition in the business. No competition is shut out in

that country; no discriminating rates on the railroads in Germany; none on the canals.

CONTRAST BETWEEN CONDITIONS IN GERMANY AND
CONDITIONS IN THE UNITED STATES.

I say today, with my years of experience in that country, it is one of the best governments on the face of the earth, because it looks out for the individual and offers him a helping hand. Do you get it here? No.

I am asked to come here today to go into matters I have been connected with from boyhood; not to injure Mr. Henry Rogers or Mr. John D. Archbold, my friend for 30 years, or any others connected with it. God knows I would not harm a single hair on their heads. I will tell you my side of the story, from 34 years of experience in the business, and from participation in the politics of the State of Pennsylvania—which, perhaps, is a credit and perhaps not. Whatever I may do or say here, it is not from malice of the heart, though perhaps it may be a mistake of the brain.

Q. (By Mr. Kennedy.) I asked you that question because I thought you said this practice of exclusion was being followed in this country, Germany and elsewhere. A. I did not say that it was followed in Germany; or rather, it was attempted in Germany, but is not permitted. We ask you to prevent it here. This Standard Oil Company is the parent trust of America. We in the oil business have had the experience of the struggle with monopoly from 1872 to this time. Now, whose toes are being pinched? Not the oil interests alone. It is not the ignorant only who are complaining. It is not the strikes of the coal men or of the railroad men or of the factory men alone. It has come to the intelligent part of this country. I wish to help you in every possible way to remodel our laws so we can all live, and if you don't the results are going to be very serious.

SIGNING AND RATIFICATION OF THE SOUTH IMPROVE-
MENT COMPANY CONTRACT.

Now, I did not intend to go off into these remarks not pertinent to the question. I do not know that it is necessary for me to read the rest of my pamphlet; but I desire to turn to page 48, and I will end up by saying this contract was signed—look at page 48 and you will see the name of P. H. Watson.

Q. (By Mr. Farquhar.) Did you intend that article five should be left out of your testimony? A. No; let the contract go in if you choose to have it. Cut out what you want to. I do not care, except as to the vital points. I just do not want to take up the time to read the rest of the contract. I simply want to show you that this contract was signed and this original copy has been in evidence—P. H. Watson, for the South Improvement Company, president, and the Pennsylvania Railroad, by J. Edgar Thomson, president.

Q. (By Mr. Phillips.) Have you read all you desire of that contract? A. Yes; I want to show that this contract was executed. Now I understand that it has been stated on the witness stand here that this contract was never executed or went into effect.

Q. (By Mr. Farquhar.) That statement was made broadly here. A. Now, P. H. Watson testified in Washington, in 1872, on the 5th day of April. Mr. Watson was president of the South Improvement Company, as I have shown in this agreement, and in this book of mine. I desire to read you (reading): "Q. Was there a ratification by the company of your contracts with the railroad?"—

Q. Will you state the book and the page? A. Well, now this is an investigation in 1871 here in this city.

Q. Before congress? A. Yes; the congressional investigation.

Q. What session and what committee? A. Well, I can not tell you the session. It is dated Washington, D. C., April 5, 1872, if anybody knows the congress and the dates; and it is in the archives, I know.

Q. It is an official document? A. Yes.

Q. That is all I want to know. A. Mr. Watson was testifying as to the South Improvement contract that was agreed upon between the Pennsylvania Railroad and the two northern roads, the New York Central and the Erie. This is the contract which I have read a portion of. This book is precious. Nobody could buy it for \$5,000, and I do not want it to go out of my hands, because it is history that is scarcely in existence. (Reading):

"Q. Was there any ratification by the company of your contracts with the railroad company?"

Now, this refers to the South Improvement Company. (Reading):

"A. Yes; they were approved by the board of directors, as appears in the minutes and as I am informed, it having been done at a meeting at which I was not present."

That is all I need to read. They were executed—"it having been done at a meeting at which I was not present"—by the board of directors. The contract was executed and when it was executed it was in force. It has been stated in testimony in 1888—I did not take occasion to refer to this at the time; I did not think it was of so much importance. But I say that the South Improvement contract was executed by the board of directors, as stated by the evidence of Mr. Watson, but he was not present. That is an answer to the testimony.

OFFICERS AND STOCKHOLDERS OF THE SOUTH IMPROVEMENT COMPANY.

Now, then, who were the officers and stockholders of the South Improvement Company? This is the testimony of William G. Warden, in Washington, March 30, 1872. (Reading):

"Q. Can you give the list of the stockholders of the South Improvement Company? A. I can give them from the minutes. They are as follows, Mr. Warden being secretary: William Frew, 10 shares; W. P. Logan, 10 shares; John P. Logan, 10 shares; Charles Lockhart, 10 shares; Richard S. Waring, 10 shares; W. G. Warden, 475 shares; O. F. Waring, 475 shares; P. H. Watson, 100 shares; H. M. Flügler, 180 shares; O. H. Payne, 180 shares; J. A. Bostwick, 180 shares; William Rockefeller, 180 shares, and John D. Rockefeller, 180 shares.

THE MEN WHO ORGANIZED THE STANDARD OIL TRUST.

Q. (By Mr. Phillips.) A good many of those afterwards became shafeholders in the Standard Oil Company? A. The people who organized the Standard Oil Company were as follows: H. M. Flagler, O. H. Payne, William Rockefeller, H. Bostwick and J. D. Rockefeller. All these persons were stockholders of the Standard Oil Company at the time it went into existence, and they were the men who formed the South Improvement Company. I say that under oath; I know the people. The people who composed the South Improvement Company were finally the people to organize the Standard Oil Company of Pennsylvania.

DIFFERENCE BETWEEN STANDARD OIL COMPANY AND STANDARD OIL TRUST.

Q. The Standard Oil trust? A. The Standard Oil trust. Let me explain the difference. There are, I think, in the United States some 23 Standard Oil companies under regular organization. For instance, it is the Standard Oil Company of New York, the Standard Oil Company of Pennsylvania, the Standard Oil Company of Ohio, the Standard Oil Company of Delaware, of Maryland, of North Carolina, South Carolina, Texas, California, and what not; but the Standard Oil trust, as I understand, controls the whole. So distinguish the difference between the Standard Oil Company and the Standard Oil trust. I have reference now to the Standard Oil trust.

(Whereupon the commission took a recess until 2 p. m.)

WASHINGTON, D. C., *September 11, 1899.*

Monday P. M.

Commission reassembled at 2 p. m. pursuant to adjournment, Mr. Phillips presiding.

Lewis Emery, jr., again on the stand and examination resumed.

HOW THE NATIONAL TRANSIT COMPANY (STANDARD) GOT THE SAME CORPORATE POWERS THAT THE SOUTH IMPROVEMENT COMPANY HAD HAD.

Q. (By Mr. Phillips.) Senator Emery's statement will be resumed and he will proceed to make his statements in his own way. A. Mr. Chairman and gentlemen of the commission, there seems to be some misunderstanding relative to the charter under which the South Improvement Company was organized and the charter under which the National Transit Company is organized, it being one of the several companies of the Standard Oil trust. I desire to say that all the privileges granted in the South Improvement Company's charter were also granted in the charter of the National Transit Company. Both are in the same terms. Each is what is known as the Pennsylvania Company charter. I desire to prove my assertion. I will refer

first to page 15½ of the book that you have before you. (Reading):

"When the popular excitement raised against the South Improvement Company, which resulted in the repeal of the act to incorporate it, had subsided, the trust, for the purpose of its transportation business in Pennsylvania, secured a franchise substantially as follows: An act to incorporate the Overland Contract Company was approved March 22, 1871."

This was just previous to the act of incorporation of the South Improvement Company. The South Improvement Company's charter was passed on the 6th of May, 1871, and the Overland Contract Company's charter, under which the National Transit Company is now organized, was passed March 22, 1871, before the passage of the South Improvement Company's charter. I desire to get that plain before the commission. (Reading:)

"Letters patent were granted them April 5, 1871. On May 16, 1871, they changed their name to the Southern Railway Security Company. They owed the State of Pennsylvania one-quarter per cent bonus on their capital stock, and for this debt, after a compromise had been effected, it was sold by the sheriff of Dauphin county to John W. Simonton and Marlin E. Olmsted for \$16,251 on March 8, 1881, upon a judgment entered September 13, 1881."

This judgment was entered by the Commonwealth of Pennsylvania. (Reading:)

"April 13, 1881, John W. Simonton and Marlin E. Olmsted sold it to Clement A. Griscom, Thornton Pike, Elihu Roberts, W. H. Curtis, William R. Williamson, J. W. Simonton, and M. E. Olmsted. On April 14, 1881, under this charter the National Transit Company was organized."

I read from a book in the supreme court of Pennsylvania, eastern district No. 257, January term, 1897:

"National Transit Company and J. C. McDonald, appellees, vs. The United States Pipe Line Company, appellant. Appeal by the defendant from the court of common pleas, McKean county, sitting in equity, October term, 1896. Paper book of the appellant. J. W. Lee, W. E. Burdick, solicitors for the appellant."

I desire to read from this book, and whatever I read from it, so far as this charter is concerned, is a transcript of the record of the department at Harrisburg, certified to the secretary of state, so that the evidence I shall read is absolute and can not be questioned. I first desire to read on page 429 of this book:

"Commonwealth vs. The Southern Railway Security Company. Resolution of company fixing the amount of capital stock. Southern Railway Security Company in account with the Commonwealth of Pennsylvania."

Mind you, this charter lay for a long time in the archives of the state. It was discovered, and it was purchased by the parties I have named. (Reading:)

"Southern Railway Security Company, in account with the Commonwealth of Pennsylvania, debtor, for bonus on charter, per act of May, 1, 1868. Amount charged in settlement in May 20, 1873, \$25,000. Capital stock, \$7,788,150 appears through certificate herewith filed. Bonus of one-quarter of one per cent on

said capital stock, \$18,470.37, making a total debtor charge \$43,470.37. Credit by payment in the charter March 16, 1871, \$125. By settlement of May 8, 1873, hereby superseded, \$25,000. Deducting the credits, \$25,125, from \$43,470.37, due the Commonwealth, \$18,345.37. Attorney general's office, Harrisburg, April 25, 1870. Settled and canceled. Harrison Allen, attorney general. Treasurer's office, approved. W. E. Hitt, for W. Mackley, State Treasurer. B. F. Newcombe, treasurer Baltimore and Ohio. Indorsed, bonus on charter, account of the Southern Railway Security Company, resettled April 5, 1875."

Now, I do not think it necessary for me to go further with this, only as showing the sale, and I have shown you already that this identical charter was bought from the state by J. W. Simonton and Marlin E. Olmsted for \$16,251. This is a copy of plaintiff's exhibit in this suit, called exhibit A. This is offered by the National Transit Company. (Reading:)

"National Transit Company charter. An act to incorporate the Overland Contract Company and to define the powers thereof. Be it enacted by the senate and house of representatives of the Commonwealth of Pennsylvania, in general assembly met, and it is hereby enacted by the authority of the same."

Mind you, now, the same persons got the charter in this one as in the other, "S. S. Moon, R. D. Barclay, John A. Fowler, or a majority of them, their associates, successors and assigns be and they are hereby authorized and empowered." Same incorporators as the South Improvement Company, you will note. Approved the 7th day of April, A. D. 1870. Statements as made herein were specially and particularly set forth."

THE PENNSYLVANIA COMPANY'S CHARTER.

Now follows "an act to incorporate the Pennsylvania Company" under that head which I have shown you was changed to the name of the Southern Railroad Security Company, and finally was changed to the National Transit Company. (Reading:)

"Be it enacted by the senate and house of representatives of the Commonwealth of Pennsylvania in general assembly met, and it is hereby enacted by the authority of the same. That Andrew Howard, J. W. Swartz"—

Please refer back in my pamphlet and notice that I am not making any statement incorrectly, and follow me and see if the act is not just the same as that of the South Improvement Company. What I desire to show to this committee is that the privileges exercised by the National Transit Company are the same as those set forth in the charter of the South Improvement Company. They are enjoying all the privileges and immunities that were granted by that law.

Q. (By Mr. Ratchford.) What page is that? A. Seventh page.

Q. (By Mr. Phillips.) You can read the two paragraphs to identify it. A. I do not want any mistake because I am making the statement very broadly. This is it, the same identical charter, page 6, to the South Improvement Company.

Q. You will leave this with the commission to show that it is the same? A. I will file this book under the seal of the court.

Q. It is quite long and will take time to read it? A. I will read the second section if you will please follow me through. This which has been repealed is the same as this. If there is any difference I want you to state it. (Reading:)

"That the corporation hereby created shall have power to contract with any person or persons, firms, corporations, or any other party, howsoever formed, existing, or that may hereafter exist in any way that said parties or any of them may have authority to do. To build, construct, maintain, or manage any work or works, public or private, which may tend or be designed to improve, increase, facilitate, or develop trade, travel, or the transportation and conveyance of freight, live stock, passengers, and any other traffic, by land or water, from or to any part of the United States or the Territories thereof; and the said company shall also have power and authority to supply or furnish all needful material, labor, implements, instruments, and fixtures of any and every kind whatsoever, on such terms and conditions as may be agreed upon between the parties, respectively, and also to purchase, erect, construct, maintain, or conduct in its own name and for its own benefit or otherwise any such work, public or private, as they may by law be authorized to do (including also herein lines for telegraphic communication), and to aid, co-operate, and unite with any company, person, or firm in so doing.

"Section 3. The company hereby created shall also have the power to make purchases and sales of, or investments in, the bonds and securities of other companies, and to make advances of money and of credit to other companies, and to aid in like manner contractors and manufacturers, and to receive and hold, on deposit or as collateral, or otherwise, any estate or property, real or personal, including the notes, obligations, and accounts of individuals and companies, and the same to purchase, collect, adjust, and settle, and also to pledge, sell, and dispose thereof, on such terms as may be agreed on between them and the parties contracting with them; and also to indorse and guarantee the payment of the bonds and the performance of the obligations of other corporations, firms, and individuals, and to assume, become responsible for, execute, and carry out any contracts, leases or subleases made by any company or companies, individuals or firms whatsoever."

Please return to section first; I want to get rid of reading as much as possible. I will read the first section. (Reading:)

"Section 1. Be it enacted by the senate and house of representatives of the Commonwealth of Pennsylvania in general assembly met, and it is hereby enacted by the authority of the same, that Andrew Howard, J. S. Swartz, G. B. Edwards, J. D. Kelso, and J. T. Malin, their associates, successors, and assigns, or a majority of them, be, and they are hereby, authorized to form and be a body corporate, to be known as the Pennsylvania Company, and by that name, style, and title shall have perpetual succession, and all the privileges, franchises, and immunities incident to a corporation; may

sue and be sued, implead and be impleaded, complain and defend in all courts of law and equity, of record and otherwise; may purchase, receive, hold, and enjoy, to them, their successors and assigns, all such lands, tenements and leaseholds, estates and hereditaments, goods and chattels, securities and estates, real, personal and mixed, of what kind and quality soever, as may be necessary to erect depots, engine houses, tracks, shops, and other purposes of said corporation, as hereafter defined by the second section of this act, and the same from time to time may sell, convey, mortgage, encumber, charge, pledge, grant, lease, sublease, alien, and dispose of, and also make and have a common seal and the same to alter and renew at pleasure, and ordain, establish, and put in execution such by-laws or ordinances, rules and regulations as may be necessary or convenient for the government of the said corporation, not being contrary to the constitution and laws of this Commonwealth, and generally may do all and singular the matters and things which to them shall appertain to do for the well-being of the said corporation and the management and ordering of the affairs and business of the same; provided, that nothing herein contained shall be so construed as to give to the said corporation any banking privileges or franchises, or the privilege of issuing their obligations as money."

Now, gentlemen, they were afraid of repealing the Constitution of the United States, or else they would have put in the privilege of issuing money; they have put in everything else.

Q. (By Mr. Clarke.) How do you know that, Senator? A. Why, by the reading of the act. They have got the right to do everything else; they claim they have; that is what it reads—to do anything they have a mind to.

Q. (By Mr. Farquhar.) Is it a rule to withhold from corporations banking privileges? This same clause is inserted in the charters of all corporations which are not banking corporations? A. It is within the province of the United States to authorize the issue of money.

Q. Is it not a fact that all of our State laws, in the act of incorporation, contain this clause that would shut out banking privileges? A. Not being a lawyer, I do not know.

IDENTITY IN TERMS OF THE SOUTH IMPROVEMENT COMPANY'S CHARTER AND THE EXISTING CHARTER OF THE NATIONAL TRANSIT COMPANY—POWERS IN OTHER STATES.

Q. (By Mr. Kennedy.) What does this mean? Does it mean anything more than any other corporation might do, or business man? A. Oh, no; I only want to show you that the same law was repealed, known as the South Improvement Company law, was identical with this. This is one and the same thing; the privileges that they had under this law in 1872 they have at the present time under this law. That is all; that is what I wanted to say.

Q. (By Mr. Farquhar.) One point on that, Senator. These are privileges granted by the State of Pennsylvania? A. Yes.

Q. There are twenty or more organizations of the Standard Oil Company—could any of the other organizations of the Standard Oil Company take up these privileges? A. Could they?

Q. Yes; under the State of Ohio, for instance. A. This law says they can; they can go into any other State. It says so. I do not know whether they can legally or not; but that is what it says. The Pennsylvania Railroad runs—the Pennsylvania Company runs through a portion of Ohio, does it not?

Q. (By Mr. Harris.) That is under a separate organization. One is called the Pittsburg, Chicago and Fort Wayne. A. I understand the Pennsylvania Railroad enjoys all these privileges, although they may be in foreign States, under the Pennsylvania Company's charter. I will submit that to the lawyers. We love lawyers.

Q. (By Mr. Farquhar.) The only question is this: Whether the Standard Oil Company, with all its franchises, could enjoy all the privileges which are conferred by this charter in the State of Pennsylvania in any other State? A. Subject, I suppose, to the State law. I think that would be perhaps the proper answer to it.

Q. (By Mr. Phillips.) Please proceed. A. Now, gentlemen, I have gone back to correct this. I want to show just exactly the identity of these two laws, one repealed and the other in existence, because the question was raised by two or three of the commissioners whether the one charter was like the other. I think I have proved that to them satisfactorily by reading from this book, and I will leave that book with the commission when I go.

Q. (By Mr. Farquhar.) Would it not be well to suggest that you furnish the commission chronologically with the dates, if you can, of these various charters? A. The origin of them?

Q. The origin of them, the change of name, and the year and month, if you possibly can, so that we may see the connection and the interest that follows from the beginning clear down to the end? A. I am prepared to give you all of that.

Q. (By Mr. Phillips.) I think the commission would like to have you before you go away.

Q. (By Mr. Farquhar.) I know you can, because I find dates on page 15½. A. This book contains a vast amount of knowledge on everything that you have asked, compiled in legal form and with an affidavit of the secretary of the Commonwealth as to its correctness, so you may not be misled or go astray.

the present time, 6,000,000 or 7,000,000 barrels a year of the American production.

Q. (By Mr. Phillips.) About how much is furnished by the Standard Oil Company and by affiliated companies, and how much by this company you have organized? A. I knew the statistics two years ago. About 6,000,000 barrels of the American product was consumed in Germany; Great Britain was using 3,000,000 barrels; France was using about 2,000,000 barrels; Norway and Sweden were consuming about 1,000,000 barrels; Denmark, about 600,000; Holland and Belgium, I forget.

Q. What proportion of the oils of the Russian and the Standard were sold there through 1895 and 1896? A. The Standard sold all the American oils in these markets with the exception of what was taken in by our independent companies. I think the largest exportation we have ever made—in fact, in 1894, I think, we sold over there about 400,000 barrels, and up to the time Mr. Poth was purchased by the Amerikanische—I think our sales were about 700,000 barrels.

ATTITUDE OF THE RUSSIANS TOWARD COMPETITION AND REGULATION IN GERMANY.

Q. You spoke of regulations made by the German government there. Did those cover the competition between the Standard and the Russians? A. In what respect?

Q. In respect to fair competition. A. The Russians were in just as bad a position as we were. They were independent at that time.

Q. Would you care to state whether, if the Standard then had the market there, both the independents and the Russians were desirous of having this free competition? A. I do not understand you.

Q. That is, are we to understand that the Russians, as well as the independents, wanted rectification from the German government of unfair competition from the Standard? A. I do not know what the Russian government did. I know that when I was in Europe I went on to St. Petersburg and had a conference with Mr. Noble, and also with the prime minister. Their views were just the same as ours, that they were under an unfair competition and would like to see it rectified. I went there to see if something could not be done, and I brought American influence to bear on the Reichstag to see if something could not be done to correct it. The whole question was laid before the prime minister of Russia and Mr. Nobel to find out from the Russians if the conditions existing in the trade were the same to all.

GERMAN REGULATIONS—GOVERNMENTAL EXAMINATION OF ACCOUNTS WOULD BE A GOOD THING HERE.

Q. (By Mr. Kennedy.) Did you get a charter in Germany from the imperial government? A. No; the right to sell only, and then we are required to file our organization or charter. We only get a license to become merchants, that is all.

Q. Are your business affairs then subject to the supervision of the German officials? A. Oh, yes.

AMOUNT OF AMERICAN OIL USED IN EUROPEAN COUNTRIES.

Q. Where you have spoken of the opposition and interference of the German government, could you give the commission an approximate statement of the oil sold in Germany at that time by the Standard, by all the Russian companies, and by the independents? A. I can give the statistics.

Q. That probably is in your mind? A. No, I can not do it here. I can give you the statistics of the sales in the German Empire; I know roughly what they are now. I know that the German Empire consumes, at

Q. Inspection of your books? A. Yes; whatever the law is we have to conform to it. I do not know whether that is the law; whether they can go to our books or not. Whatever the law is, that is the situation in which we are placed. We are glad to have them examine our affairs. Even in this country I wish something of that kind could be established, that all the books of these corporations of every kind should be examined.

Q. Would you like to see the nationalization of the corporations doing interstate business in this country? A. Well, I heard this question brought forth the other day in the evidence of Henry Rogers. I am not prepared to say; I have not studied the question. I do not know about the English law controlling corporations or about the capitalization or the constitution of business in England, except to a limited extent.

CHARACTER OF EXPORT OIL AND OIL FOR DOMESTIC USE.

Q. What is the quality of the oil exported from this country to Germany and other European countries? A. 73° Abel, or 112° fire test.

Q. What is the quality of oil generally consumed in this country? A. About 120° to 150°.

Q. So it is an inferior grade of oil sent abroad? A. No; it is oftentimes a very much better oil than we get here under 150°. Let me explain.

METHODS OF DISTILLING OIL—THEY ARE THE SAME AS IN 1860.

I want to state here particularly, and I want you to understand my statement as a manufacturer of oil from 1867 to 1899, that the Standard Oil Company are not benefactors and never have been benefactors. If the business had been open to the community, and the people engaged in it with their brains and ability, the development that has come up to the present time, I claim, could have been made twice as quick as they have made it. Why do I say so? Because in the year 1872 our company, known as the Octave Oil Company, was the owner of one of the best refineries on the creek—Oil Creek—right opposite that of ——— & Co., the company being John D. Archbold, who was on this stand, and others. We had every device at that day for making an illuminating oil of good quality that we have today. We had stills that held from 100 to 3,000 barrels, Mr. Archbold having the largest still that ever fire was put under, holding 3,000 barrels of crude oil. To distill oil is not difficult. It simply means that if you build a fire under that glass (indicating), supposing it was oil, and you inclose it, the steam comes out—the vapor. That is all we do in making oil. We put in these great cylinder stills, and the cylinder stills of 1870, 1868, 1865, and 1860 were the same as the cylinder still of today. There was what was known as the cheese box, which set up like a cheese box, with a grated bottom to make a fire on. But we have gone back to the old system. In spite of the modern improvements these people claim to have injected into the business we are back where we were in 1859. We put a fire under it, the vapor rises off

and gives first the lightest possible oil, the cymogene; the very lightest, like carbonic-acid gas, and the moment it comes to the air it is gone. Next we come to the next lightest, gasoline. Then we come to the naphtha, and then we come on down, if you choose, to the heavy benzine. The lighter parts come off first, from which are made the various light products that are in the market, such as you use in the gasoline engines and in the kitchen to cook with and such as are used by chemists and druggists and the commercial trade. Then you come to the illuminating oil.

MEANING OF "110°" OIL—IF PROPERLY REFINED, THERE IS NO BETTER.

The first illuminating oil is the lightest, 110° oil. You may recollect that we had in this country a general law of the States requiring oil to be of 110° fire test. That means that, putting the oil in a certain kind of instrument, it has to be heated to 110° before it will burn. It may flash at 85, but would go out. You go on up to 110° and it burns. That is the burning test, the flash test being at 85°. That is the way oil is tested. It went on for years and years, until the advent of this South Improvement Company and the Standard Oil Company. That remained a law of the States, and the law was good. There was no adulteration of it. Perhaps adulteration is not the term. When I say oil is adulterated I mean it is not properly refined; it is not properly broken up by heat; the paraffin is not taken out of it. Oil may retain a vast amount of paraffin, and show under the law 110°, but its burning properties are not good. Oil properly refined under the 110° system is the best oil you can put into your lamps. The German government—the entire German Empire—the Kingdom of Norway and Sweden, Denmark, all these countries require no other than 110° or 73° Abel. That oil is not inferior. Neither the German government nor any other government on that side of the world will permit you to send in an inferior article. There is an educated chemist at every distributing depot in that country, who tests that oil and carefully weighs it, and gives it the proper fire test; and it must pass according to the requirements of the law. That is one reason why the Ohio production has been practically ruled out of Germany because of its quality. The great German Empire and other countries are depending today, under the laws, upon the American product, because Pennsylvania and a portion of eastern Ohio and southern New York and West Virginia produce the best oil in the world.

SULPHUR CAN NOT BE GOT OUT OF OIL; THEREFORE OHIO OIL CAN HARDLY BE SOLD IN EUROPE.

Q. (By Mr. Kennedy.) The Standard people on the stand claim they have processes now for eliminating sulphur and other impurities from the oil and making it equal to the Pennsylvania oil. Is that true? A. I say here, as a refiner and a man who has in his employ as good a chemist as there is, that they can not do it, and they do not do it. You can not eliminate sulphur.

It will come back in some form. Canada has been working on it for the last thirty years and spent untold millions, and she has never been able to accomplish it entirely. It baffles all science to eradicate, and is detected by the chemists in Europe as quickly as possible, unless it may be mixed with Pennsylvania oil. That has been done before. The high grade petroleum oils are used to supply the European countries. As to what goes to India and what goes to China I am not posted; but I do know what goes to the other countries, and they expect to get an absolutely pure oil. The consumption of Ohio oil is confined to the United States and Mexico, and perhaps to some of the other southern countries. I do not know about that, but the market is not in Germany to any great extent.

CHARACTER OF EXPORT OIL AND OIL FOR DOMESTIC USE
(RESUMED.)

Q. (By Mr. Clarke.) How is the grade of oil determined, if not by the fire test? A. What do you mean—the smell?

Q. Whether the high grade or the low grade? A. The oil in its grade is designated by fire test. For instance, 110° oil is what we term the ordinary export oil, 112° test; 120° test is supposed to be a bit better in quality; 150° test is the common oil used in this country, and is a little bit better. The making of 150° oil is just exactly like making what they call patent flour. It is the head of the bolt. I am a miller by trade and acquainted with the making of flour in the modern way and the old way. If you want patent flour, you have to take the head of the bolt or cream of the wheat. You can get a certain limited amount of patent flour out of 100 pounds of wheat; so you can get a certain amount of 150° or 175° oil out of a certain amount of petroleum. In this country, I will say, we take off what we call the higher grade of oil and the balance is sent to Germany and other countries. But in order to get these high test oils up to what they should be, we make the others not as good as if we had just sold the whole thing together. Just so with our flour. If you sort out the best part of your wheat, the next grade is not as good, although it passes as good family flour, and this passes as export. In answer to Mr. Kennedy, the standard has not been changed in Germany. They have the finest lamps in the world. They are the greatest inventors of illuminants, and they have continued to hold their grades the same as 25 or 30 years ago. We want to send that class of oil into these countries, and they are satisfied with it, because it comes within the reach of the man who wears wooden shoes; it is a commodity they must all buy, and is lower in price than the higher grade.

Q. (By Mr. Kennedy.) It is a fact, then, that the oil exported to Germany is inferior to the oil generally used in this country? A. That may be; but I want to say to you, in the United States of America they burn the meanest oil in God's earth, and burn the best oil that is put on the market. In California—I have spent two years there—I have a little hut, and I go down and buy a case of oil. I buy it as Pratt's Astral, a

high grade oil; it used to be the highest grade on the market. I might say here, during my early experience in the refining business, from 1867 to 1872, we manufactured and sold thousands and thousands of barrels of oil to Charles Pratt and other companies for exportation to Europe, and we were obliged to leave the head blank. When it got to New York the quality of oil was put on it—"Pratt's Astral." He bought oil from the Octave Oil Company. My oil was taken by him and sent to Europe. Now let me give more credit to the Standard Oil Company.

Q. (By Representative Livingston.) Do they not require, in Europe and in many states of this country, an oil inspection and require you to come up to the grade? A. In every little port where oil is sold or distributed there is a man who examines the oil, and it is passed on by the government inspector.

110° OIL AND 150° OIL.

Q. What do you mean by first, second and third grade oil? Does the first have less naphtha or more? A. It is supposed to be better. One hundred and fifty degree oil is supposed to be the acme of oil in this country. You fill a lamp with it and you may get a little brighter light than you would get from 110°; there is not so much naphtha, not so much gas; but the 110° oil will last in your lamp a great deal longer than the 150°, because there is not so much body in it. The 110° will not give so brilliant a light as the 150°; that is one reason why Germany holds to that oil test.

Q. Is it not more subject to combustion than the 150°. A. One hundred and ten degree? Oh yes. It requires 110 degrees of heat to burn 110° oil, and it requires 150 degrees of heat to burn 150° oil. If a lamp is heated to 150° at its top gas will be created in the body of the lamp, and unless you release that gas it will explode.

Q. If either comes in contact with a flame, will one burn as quickly as the other? A. The 150° will not burn as quickly as the 110°. Oil is nothing but gas, practically. Take a pail of crude oil and put it out here in the sun; in all probability by night you will have lost 10 per cent of it. It has gone into the air as gas.

Q. (By Mr. Phillips.) Your testimony has not been quite clear about 150° burning quicker than 110°. A. One hundred and ten degree oil burns at 110 degrees of heat, and 150° will burn at 150 degrees of heat—that is, the burning test. The higher the test the safer the oil, so far as explosions are concerned.

Q. Which will burn up quicker in the lamp? A. That does not make a bit of difference. The wick is saturated and it burns at all times. The blaze from 110° is not as brilliant as that from 150°.

Q. (By Mr. Kennedy.) The German does not get as good light from his 110° as he would from 150°? A. That is true.

Q. They get what they want and are satisfied? A. Yes. Good 110° oil is a good oil. It is the cheapest for all the inhabitants of this country, and safe enough, because we burned it for years and years. There was no change in the laws of any of the states, so far as I know, until after 1872. Pennsylvania retains still

the 110° test; North Carolina, Texas and a good many of the southern states have the 110° test; not many of them have changed. The state of Michigan has 175°, if I remember right.

RUSSIAN COMPETITION—CHARACTER OF RUSSIAN OIL—
PER CENT OF ILLUMINATING OIL
OBTAINED FROM CRUDE.

Q. (By Mr. Kennedy.) Do you come into competition in Germany with Russian oil? A. Yes.

Q. Do they have to make that test of 110° the same as you? A. Yes.

Q. What is the quality of their oil? A. Not so good as that of America—not so good as American 110°. The Russian is of an asphalt basis, while ours is paraffin. Pennsylvania and New York oils are paraffin, and the Ohio is of a paraffin basis. The California oils have an asphalt basis and the Russian oil has an asphalt basis. The American oil will produce an illuminant of 75 per cent. For instance, 100 gallons of crude oil of America, of what we call the Pennsylvania, the West Virginia and New York and Eastern Ohio oil, will produce 75 per cent of illuminating oil of different grades. If you ran it all straight through and did not cut them out, you probably would get out 78 per cent.—perhaps 79 per cent.; but, speaking as it runs, you can get 75 gallons of illuminating oil from every 100 gallons of crude oil. The gravity of this oil will run from 40 to 52; the Russian oils run from 18 to 30. Its basis being asphalt, they can only get from that, of the ordinary export oil, such as 110°, about 25 per cent.

Q. Does their 110° oil sell for the same money in Germany as ours? A. No, it does not sell for the same money as our 110°, because it is not as good as our oil. It contains a little sulphur, the same as the Ohio, which is not as marketable as our good oils are.

Q. Russian competition, then, is not serious on that question? A. It is, because they sell their oil at a less price, and we have to meet it; but we have the advantage of quality.

FOREIGN TRADE—THE STANDARD HAS INVENTED
NOTHING.

Q. (By Mr. Phillips.) Now, I would like you to state how widely petroleum was introduced into the world at the time of the advent of the Standard Oil Company? Whether they have been very largely—? A. I want to say in answer to that question, in 1871 or 1872, when we were young and enterprising, we went to the city of Philadelphia and secured a sailing vessel. It was our determination to load that vessel with all the different inventions for burning oil—lamps, oil stoves, etc.—and also to put into the ship our oils in cases or barrels, such as we could carry; and we had arranged with one Captain Dillingham to sail that vessel to the Amazon and go up the Amazon and introduce this product, oil, which was a new commercial commodity, and the result was we did not do it. On came this clash of arms and we did not go. I will read you why we did not go.

Q. Can you state how far it had been introduced to the world before that time? A. I must say in answer to that, that the production of oil in 1872 was about 16,000 barrels of oil per day; back in 1870 it was 15,000 barrels of oil a day. For all that great quantity of oil, from 1860 to 1872, a market had grown up throughout the world, as we knew the world at that time. It was a good while ago, of course. There were in the field at that time upward of 150 refineries, and as I said before, with all the modern improvements that existed, so far as making illuminant was concerned—I want to give credit to the Standard Oil Company for this fact that, owning the business, practically, it was dependent upon them to bring out all the by-products from the residuum. They made a wonderful success of it. But do you suppose that I or any other active man, with brains and capacity, could not have done the same thing if we had had the opportunity and been left to ourselves to manage our business? Has not the iron business passed from all the world to the Sierra furnace, and every other improvement been brought about by general trade? Can one man in the business claim he was the only brain in it? Nor is it true of the Standard Oil Company. I say particularly they never invented anything. As somebody said, they did not even invent the rebate. They were dependent on the brains of the average man. They have done nothing that any member of this commission could not have done had you had the opportunity to do it, and get your product to market over the transportation lines of the country.

THE STANDARD HAD TO DEVELOP THE USE OF THE
BY-PRODUCTS.

Q. (By Mr. Kennedy.) You were just giving the Standard Oil Company credit for the wonderful growth of the by-products? A. Yes, because I have to.

Q. Do you manufacture any of these by-products, such as vaseline? A. I make the crude stock.

Q. And sell that to the Standard? A. Not entirely. I presume they buy some of it. I make all of these products. I turn out from thirty to thirty-five thousand dollars' worth every month. Perhaps I have one of the largest refineries in existence outside of the Standard.

Q. Can you manufacture these by-products just as well as the Standard Oil Company and put them on the market? If we were in like circumstances we could; but you understand, the by-products are manufactured not only by the Standard, but in a small way by others. For instance, the druggists manufacture their own, and they come to me to buy the stock; but the Standard Oil Company, I mean to say, were the first, through the agency of somebody else's brains, not their own, to establish these factories. I say to you this product of petroleum is most wonderful. Chemistry knows nothing about it even to this day, and our colleges have scarcely taken up the science of petroleum. We have to depend on Europe for the knowledge we have obtained as to these by-products.

Q. (By Mr. Clarke.) I can not see why you can not

produce these by-products. A. We can. I am not complaining about that.

Q. (By Mr. Farquhar.) Do you not sell the by-products to anybody? A. Certainly.

Q. All refineries do? A. Yes.

Q. (By Mr. Phillips.) Is it on account of the large amount the Standard refines that they have established these different plants to produce these by-products? A. They, having control of the business from 1872, had to take care of them. There was no one in the business to take care of them.

Q. What is the chief by-product from petroleum; is it not lubricating oil? A. No.

Q. What is it? A. From the by-products of petroleum there enter into the materia medica over 200 remedies.

Q. Do you speak of coal tar, etc.? A. In addition to that the beautiful aniline colors are produced from the coal tar you speak of. Thousands of things are made from petroleum; but that has come on with time, just as the time was when we could not make a piece of sheet steel.

LUBRICATING OIL IS NOT A BY-PRODUCT; NOR
PARAFFIN WAX.

Q. How about lubricating oil? Is it not a very large by-product? A. No; it would not be termed a by-product, because there is not a lubricating oil produced from the crude. That never sees fire at all, some of the richest.

Q. (By Mr. Ratchford.) How about paraffin wax? A. It is one of the products; not strictly called a by-product. The by-products, as a rule, arise from that which remains in the still, or the top, which runs anywhere from 6 to 10 or 12 per cent. From that is made the paraffin oils, red oils, yellow oils and miners' oils. These things coming from the top are strictly the by-products. The petroleum wax comes at a certain point in distillation, if you take it out. You take it out when wax is dear, and perhaps leave it in when wax is cheap, whichever pays best. You can take out the wax whenever you want to, or break it up by heat, by destructive distillation, and put it into illuminating oil.

RELATIVE VALUE OF PRINCIPAL PRODUCTS AND BY-PRODUCTS—THE STANDARD HAS NO MONOPOLY OF
MANUFACTURING BY-PRODUCTS.

Q. (By Mr. Kennedy.) State in dollars, if you can, what your income from the by-products of oil or petroleum is compared with your income from illuminating oil? A. I could not.

Q. Could not approximate it? A. I can not answer the question, because I do not make any paraffin oil. I make wax and what is called petrolatum, or what you know as cosmoline—all the same thing; all these "lins" are one and the same thing.

Q. I think the Standard people have testified that one-half their business is perhaps in the by-products. Would that be so in your business? A. No; but I have no reason to contradict their statements. I should

not put down the by-product or the residuum as being a half of their business—not by any means, because, as I have said, you get 75 per cent of illuminating oil, while you will get 10 to 12 per cent. of benzine or gasoline.

Q. I mean in value:

Q. (By Mr. Farquhar.) The statement is that the by-products amount to nearly half in value, on account of the high price of certain by-products; provided, of course, the Standard or these other manufacturers utilize these by-products themselves, instead of selling the residuum for others to manufacture.

A. I could not affirm or deny that.

Q. (By Mr. Kennedy.) Have the Standard people a great advantage over you in the development they have brought about of the by-products of petroleum? A. There are no developments today that any man can not enjoy if he wants to.

Q. You give them the credit of developing it? A. I do; because there was no one else to bring it up. The business has been in their hands from 1872 to the present time.

Q. (By Mr. Phillips.) Your understanding is the by-products were not so valuable before their advent? A. I mean they were not developed; they are not developed today.

VALUE AND USES OF PARAFFIN.

Q. (By Mr. Ratchford.) It has been stated that as the by-products of the refining of oils are comparatively new products it has cost more to market them, in many cases than has been derived from their sale. What is your experience in that? A. I do not think it is true.

Q. If that statement is true, I wanted to know whether in your judgment the price of the main product should not be reduced to the people as the value of the by-product increases? A. Until the general rise of business these things that you term by-products did not bring a high price. I sold wax as low as 1¼ cents a pound within the last three years. We had to take what we could get for it. Germany and France were full, the factories were full, people did not want any goods, and there was no market for it. We make about 4,000 to 6,000 pounds a day of it; two or three tons of nice bleached wax, white as that paper, and we get today, I think, about 3 3-8 or 4 cents a pound. It is not high, and really I do not see how you could reduce the price of that commodity very much.

Q. The main use to which that wax is put is the making of candles? A. Oh, no. You can not make a joint of pipe without the use of paraffin wax; you can not string a telegraph or scarcely a telephone line without the use of paraffin wax. It is used in almost everything where protection is required, because it is a non-conductor. It enters into everything pertaining to electricity. It is not used largely in candles, except in connection with stearin. The Standard mold all the candles of the country, and they mold the public opinion of the country pretty near. They are good molders; no question about that.

THE STANDARD RETARDED THE DISTRIBUTION OF OIL.

Q. (By Mr. Phillips.) Will you return to that question as to how widely the use of it had gone into the world? A. I want to say in answer to that every civilized country where oil is used had its representative in New York, Philadelphia, Baltimore, Pittsburg, Oil Creek, Portland, Bremen, Hamburg, Paris, London and Liverpool, and they were asking for these goods. It was pretty much all over the world before ever the Standard Oil Company was heard of. They retarded the distribution of this commodity. I was willing to go to the ends of the earth to make a market, and other manufacturers were willing to go with me and make a market; but in the first history of this business the Standard Oil Company compelled these men to step over the threshold of their offices to get this commodity. That was the condition.

THE STANDARD HAS NOT CHEAPENED OIL.

And yet they say that they are benefactors, benefactors of the people, for reducing the price of the commodity. Why, I have known a single gallon of oil to sell within the territory of the United States at one and one-half times the cost of a barrel of crude petroleum to make it, but you can not get that today. The moment you enter the market of Hornellsville, Washington or Wilkesbarre, if you choose, with oil from an independent refinery and build your stations and office, down goes the price. Not four weeks ago, when I sent my oil to a certain point the market was reduced one cent a gallon because I came there. It has been well said, "This business belongs to us; you get out." Take up that volume; read the Commonwealth vs. The Pennsylvania Railroad; it gives everything. The Standard Oil Company are not entitled to the credit of being benefactors or of cheapening this product. Wails are coming up from New Mexico and from Texas and from every state in the Union on account of the exorbitant price and poor quality of the petroleum; you have read them. Look at the condition of things. Laws are passed by several states of this Union against encroachments on the rights of the people, but when it comes to appropriating money to carry out these laws, the third house men say to the farmer, "If you vote for the appropriation that will put this law into effect you are going to increase your taxes." The result is they strike out the appropriation that should enable the attorney generals of the several states to enforce these laws. An attorney general stated in an article just a short time ago: "I have to put my hands in my own pocket to pay the necessary fees to bring this suit; no appropriation." Whenever legislation cannot be stopped against these people, they go to the next resort and stop the appropriation. I do not say they do it, but I say it happens.

THE STANDARD CUTS PRICES WHERE COMPETITION APPEARS.

Q. (By Mr. Ratchford.) You made a statement that if you erected stations or tanks in Wilkesbarre,

for instance, the Standard would reduce the price of oil? A. That is true.

Q. Can you furnish this commission with a specific instance where this has been done? A. Oh, yes; I can furnish you a hundred of them. Take it in Philadelphia: I lost \$150,000 in one station myself in lowering the price from time to time. My wagon was there with my man on it. Their wagon would come in ahead of me. They would go to that customer and reduce the price, and they would say they would sell him oil cheaper. They employed other fellows to watch where I went.

Q. (By Mr. Phillips.) When did this occur? A. It has occurred during the years 1891, 1892, 1893, 1894, 1895 and 1896. It occurred right along until I quit there.

Q. Has it occurred since you departed from that station? A. Yes; it has occurred within the last six weeks—reducing of the price.

Q. How about New York city? Has there been any reduction there? A. I have known New York to sell oil at six cents; when the Columbia Company put on their wagon it was five cents in 10 days.

Q. Has that continued to the present time? A. I do not know; I have been away two years.

Q. (By Mr. Clarke.) Did you ever reduce your price to get business? A. Have to; have to compete.

Q. Do you have any competitors besides the Standard? A. Yes.

Q. Do they follow you up? A. The other competitors? No.

Q. Never? A. Never.

Q. Do you try to follow up anybody? A. Never.

Q. Do you ever reduce your price before the price is reduced by your competitor. A. Oh, yes, I suppose so. It is trade. I am merely discussing the methods of keeping people out of business.

Q. (By Mr. Kennedy.) The Standard people say the cutting is generally commenced by the independent people. A. They know better.

Q. (By Mr. Ratchford.) That is the reason I asked the question. They make the broad statement that they never cut except to meet a cut. A. They know better. Whenever they know your oil is on the way to a particular market they will cut the price before you get there. I have shipped oil to places—started it unknown to them, I thought; but, as in the instance I gave you this morning, they knew what I was going to do before I did; and they went ahead and reduced the price before I got my oil to the point

ABSORPTION OF PIPE LINES AND REFINERIES BY THE STANDARD.

(The witness reads from his pamphlet.)

"Soon after it induced Scott, of the Pennsylvania Railroad, to surrender the oil traffic in exchange for western freights, under a general apportionment of freights between the trunk lines. By this means was diverted a greater part of the refining trade from Pittsburg and from the oil regions of Pennsylvania to Cleveland, Ohio. It then bought a controlling interest in the United Pipe Lines."

Now, that is in answer to Mr. Farquhar's question. At this time they came in and purchased from the Vandergrift people, who were formerly the United Pipe Line. They purchased from them, as you will see, all this oil production of their lines.

"The United Pipe Lines Association moved forward steadily. It bought or combined the Oil City, Antwerp, Union, Karns, Grant, Conduit, Relief, Pennsylvania, Clarion and McKean divisions of the American Transfer, Prentice, Olean, Union Oil Company's at Clarendon, McCalmont at Cherry Grove and smaller lines, covering the oil region from Allegheny to Butler. Then followed at different intervals an association with the other pipe lines, the purchase of the Columbia Conduit Company, of Pittsburg, the purchase of all the Titusville independent refiners, who were forced to sell; the Titusville Daily Herald, Bradford Daily Era, and the Oil City Derrick, which were subsidised and then purchased; the purchase of the Union Oil Company's pipe lines in the Stoneham field."

I may say right here the Standard Oil Company are not entitled to the credit for building these lines. The leading lines were built by individuals before they came in. They were simply absorbers.

Q. (By Mr. Phillips.) It was built to the seaboard, was it? A. It had the credit of building the first seaboard line, which is outside of the Standard, "the securing of the control of the Tidewater Pipe Line, and of its dependent refineries and of its associated Western Transportation Line, and the purchase of the Pittsburg Pipe Line and its dependent refineries.

EXTRAVAGANT PRICES PAID FOR LINES AND SERVICES.

Now turn to the following history on page 57:

"At some time during the progress of these purchases, the reorganization on the trust basis, formerly referred to, was effected. The sum of all these purchases amounted to millions of dollars. All, or nearly all of them were made at prices grossly in excess of the reasonable value of the material and business sold, the chief consideration being the absorption and accumulation of power, which the monopoly was thereby acquiring. From time to time new persons were taken into this association. As Mr. Dodd, solicitor for the Standard Oil Trust, said in his argument in 1888, or rather in the history of the Standard Oil Trust: 'Whenever, and wherever, a man showed himself skillful and useful in any branch of the business he was sought after.' It has paid salaries, fees, and bonuses with imperial prodigality, some for services, some for keeping out of competition, and some for keeping still.

HOW THE STANDARD USES THE RAILROADS.

"Its methods of business are in fine harmony with the manner of its growth. It has divided the Whole United States into 'oil consuming districts.' It goes to a distributing railroad company in the west and says: 'If you will receive and carry oil exclusively for me, I will furnish your whole distributing area, but if you receive and carry any oil of any other refiner or shipper I shall have to create in your district

such destructive competition as will ruin your rates."

That has been done, and can be proved by a thousand witnesses.

"Where there are competing roads it gets their managers together and shows them how it can supply them with all the oil they can distribute, so apportioned between them as to maintain rates on a non-competitive basis. It never breaks a promise when that promise conveys a threat. If, therefore, it fails to make such exclusive arrangement in any district, and an independent refiner is admitted therein as a shipper on equal terms, it forthwith ignores all freight rates and all values, puts the price of oil to the consumer below the original cost, and keeps it there until it drives the independent refiner out of the district."

Q. (By Mr. Kennedy.) When Mr. Archbold was on the stand the other day he submitted to the commission letters from a large number of railroad managers of the United States stating that they gave no favors to the Standard Oil Company, and that the Standard Oil Company asked for none. Now, that is the evidence that they put in. You make this statement here. Can you give the commission any evidence aside from your word that this was done? A. I am prepared to answer in full the documents in my statement.

Q. These letters referred to the period since the passage of the interstate commerce law. A. Yes; I do not know anything about that, but I do know that they have paid them right along.

Q. Since the passage of the interstate commerce law? A. Yes; and I will prove it was paid up to last January.

Q. To the Standard Oil Company? A. I say rebates are paid. Very well. They are not only shippers of oil, but perhaps behind everything else, as I have stated before.

Q. If you have it in order, I will withdraw my question.

THE STANDARD MAKES ITS GREATEST PROFITS IN AMERICA—THE INDEPENDENTS COULD NOT LIVE WITHOUT THE FOREIGN TRADE.

Q. (By Mr. Phillips.) You can proceed in your own way.

"It then dictates its terms to the railroad. Where it thus secures exclusion, it establishes and maintains a price to the consumer without the least regard for general market values, as high as the conditions will warrant" (that I can prove); "and where such exclusion is not established, as low as will be necessary to exterminate the competitor. There are exclusive districts where refined oil is sold at more than \$40 per barrel, and there are contested districts where it has been sold as low as \$1.25 per barrel. As all the export oil must be sold in Europe in competition with the Russian production, the profits are normal. The revenues of the Standard are, therefore, chiefly made between the American producer and the American consumer."

Q. (By Mr. Kennedy.) I think it was given in evidence by some gentleman representing your side of

this question that your business was not profitable until you secured the European field—the German and English fields. That seems to be a little at variance with your statement there. A. It is the only field we were never shut out of.

Q. (By Mr. Phillips.) Could you or could you not refine oil here without selling export oil? Is that not really essential? A. Certainly; I have shown you that the quality is not used in this country that is sold in Europe.

Q. (By Mr. Kennedy.) You say here the Standard Oil Company makes profits chiefly between the American consumer and the producer. Now, your people have testified that you have a profit in this foreign market. Therefore, if you have a profit and can sell in competition with the Standard, they must have a profit there, too? A. Certainly they have. I have stated that since the German government says there must be no unfair trading there has been no particular cutting of prices. That is the situation exactly.

THE STANDARD IS ABLE TO KEEP COMPETITORS OUT OF NEARLY ALL DOMESTIC MARKETS.

Q. (By Mr. Phillips.) Do you undertake, then, to state that the opposition are making more out of the American trade than the independents are? A. I simply say it is an impossibility for me to ship oil even to the Mississippi River and compete with the Standard Oil Company. I can not go to the coast at all, and there are a hundred and one accounts I can recall to prove my assertion. What I mean to say is that I can not even go to Elmira and sell in competition with the Standard Oil Company, a distance of 143 miles from my factory. I do not sell there; I do not sell to the nearest town.

Q. Why do you not? A. Because this war is created at once.

Q. (By Mr. Farquhar.) Competition starts in? A. That is right; but it goes on just as it did in Philadelphia, away below the cost of the commodity. There I lost \$54,000 and then I quit. I gave it over to the Pure Oil Company and it is there yet—all my horses, all my wagons. I have gone out of the outside business. I can not do business—that is all there is about it. Seventy per cent. of my product goes to Europe now. I make very largely lubricating oils and wax. The Bradford oil is one that does not yield very heavily in water whites; therefore I have got to send my commodities to Europe.

COMPETITION LEADS BOTH SIDES TO CUT PRICES; BUT THE STANDARD DOES NOT ALLOW ANY COMPETITION TO APPEAR WITHOUT WAR—AMOUNT HANDLED BY INDEPENDENTS.

Q. When you are going into the field, do you start to sell below the Standard rates? A. No; we attempt to maintain rates.

Q. And the cutting comes sometimes from the Standard and sometimes from you? A. Certainly it does; because we go into a market, and the astute merchant says, "I am not going to buy from you. I will

buy from the Standard Oil Company." What will you do? Of course you will reduce prices. But we do not go into the market. We only handle about 3,000,000 barrels a year all told out of 23,000,000 produced. Only about 3,000,000 barrels of it is not handled by the Standard Oil Company.

Q. (By Mr. A. L. Harris.) If your competition does not exceed 10 per cent of the trade at a given point, do they pay any attention to it? A. Yes; if we go in with a car load of oil that is quite sufficient to create a war.

OIL CHEAPER IN EUROPE THAN IN AMERICA, BECAUSE OF REGULAR COMPETITION.

Q. (By Mr. Farquhar.) Oil for oil, quality for quality, does the European consumer get oils cheaper than the American? A. Yes.

Q. How much cheaper? A. I can not give you the percentage. In Europe today I should say that oil of this quality is 25 per cent cheaper than the same quality is sold on the average in this country.

Q. Now, does that arise from the competition of the Russian oil with the American product? A. It arises from the fact that we are in these markets as competitors, and Russia is there as a competitor. The competition unquestionably brings that market down.

Q. But the independents and the Standard Oil Company sell at about the same rates in Europe? A. Yes.

Q. And you have got to meet Russian competition. A. No. The Russians sell very low compared with the Americans. They had rather have American oil at one-half cent advance than Russian. It goes farther, no bad smell about it, it is good oil. They must come in and pick up what they can find, and they do; but the distribution of the Russian goods is very small, indeed.

THE AVERAGE PRICE IN AMERICA IS HIGH, THOUGH THE PRICE IS VERY LOW WHERE THE STANDARD MEETS A COMPETITOR—THE STANDARD TRIED THE SAME POLICY IN GERMANY.

Q. (By Mr. Kennedy.) There is one point about this that I cannot understand. Some witness testified that your business was not profitable until you secured the German market. Now you sell the oil cheaper to Germans than in this country by 25 per cent? A. I do say that. It has been a good deal more than that at times.

Q. (By Mr. A. L. Harris.) Why is that? Is it because the government does not permit cut rates to the extent of destruction? A. No; I do not know that that is it, but until we got firmly established in the business over in Europe there was a determination that we should not go there, and they commenced the same tactics in that country as in this. They sold oil, for instance, on the Rhine at a cent or two cents or half a cent a gallon cheaper than they did at points where we were not present. In other words, in an adjoining district it would be higher than in the district where we were. Then, again, if they were obliged to cut prices, perhaps below cost, on the

Rhine, they would levy tribute upon the people on the Elbe to make up what they lost here. When I sold oil in Philadelphia as low as three cents a gallon it was selling in New York, 100 miles away, at eight cents.

Q. (By Mr. Farquhar.) Would not you have done the same? Was it not a good policy on the part of the Standard, where they had no competition in Germany, and knew they could sell at 25 per cent. less than they could in the American market, to hold these places there where there was no competition and to keep up prices there? Is not that good in any business? A. That was not the case until that competition came in.

Q. But where they had no competition would they not very naturally get 25 per cent more if they could to gain as many points as they could on the 25 per cent? A. Certainly; I would hold the price as long as I could, but I would not put it beyond a reasonable price. If you had competition in this country you would get oil, at least on an average, 50 per cent. cheaper.

PRICE AND QUALITY OF OIL AND GASOLINE IN CALIFORNIA.

In the state of California, where I have bought oil, I have gone to the markets and paid, in cans, 20 cents a gallon; and the same oil I was sending out of my factory and glad to get 4½ cents for it.

Q. (By Mr. Clarke.) Put up in the same way? A. Yes. I have gone to Valley Springs, California, and bought gasoline that was marked on the head "Double deodorized gasoline," and paid 25 cents a gallon for it; and when I paid that I was selling those goods by hundreds of barrels a day at my factory at four cents.

Q. What was the proper charge for transportation? A. I do not know. The charge on oil from the Atlantic to the Pacific is 75 cents a hundred. Now, who knows anything about what the Standard Oil Company pays? I do not. They may pay \$1.25 or 50 cents or 25 cents.

Q. (By Mr. Phillips.) If they paid the same as others, what would be the cost? A. I suppose the goods were worth about four or five cents at the refinery. If freight is 75 cents, that would be about 5¾ cents a gallon, call it, if you choose, 6½ cents, with the probable leakage and loss. It should be sold on that coast today with a good profit at 10 or 12 cents a gallon.

Q. (By Mr. Farquhar.) By the case or at retail? A. By the case. I have given the outside limit.

Q. (By Mr. Phillips.) How much did you pay at retail? A. Twenty cents.

Q. (By Mr. Farquhar.) Do you know what profit the retailer made out of this? A. I do not know what the profit was to him, but I do know I paid 25 cents for gasoline, double deodorized, and when I opened it up it was made from Lima benzine. Now, double deodorized gasoline is absolutely like ether. You can take a smell of it and it will make you drunk in 10 minutes. But one snuff of that would knock you down.

Q. So you can not tell us what the middle man

made on this deal at all? A. The quality of the goods in America is not as it is in Germany, because the inspector of this oil does not do his duty. I could make charges here that I could prove that would make your hair stand, but I am not going to do it. It is not within your province, I suppose, to know anything of this kind.

THE WITNESS CAN COMPETE WITH THE STANDARD IF HE CAN HAVE EQUAL RAILROAD RATES.

Q. (By Mr. A. L. Harris.) Do I understand, then, that it is the matter of transportation that prevents your competing in this country with the Standard Oil Company as you compete with them in foreign countries? A. That is exactly it, and that is all there is to it. If this government can know and will know what the railroad's manifest is and its charges attached thereto for freight, and will see that there is fair competition in the market, I ask no odds of the Standard Oil Company. I can manufacture just as cheap as they can, in spite of their assertions.

Q. (By Mr. Phillips.) And as good? A. As good as they can. They have got nothing better in any of their works than I have got in mine, except it be, perhaps, in their fine laboratories, in the manufacture of residuums or the by-products. We raise no question about that. The whole question is the question of transportation. If you will force the railroads to obey the law, you will have cured this evil.

PAYMENT OF REBATES HAS BEEN PROVED TO HAVE CONTINUED TO 1893, THE STATEMENT OF GREAT RAILROAD MANAGERS NOTWITHSTANDING.

Q. (By Mr. Farquhar.) That brings the commission face to face with this matter. You make the assertion, and so have others, in regard to rebates. The Standard Oil Company comes forward with the letters of 20 great railroad managers, and we can neither verify your statements nor discredit the statements of these managers. A. I will put you so you have got to say one or the other.

Q. The commission comes to a stone wall there if we do not have verification. A. Unfortunately my secretary has not brought up important documents that I should have here in this case; but I trust you will rely implicitly on my statements in what I am going to say, because it is my own case that I am going to bring before this committee. It is the case of Logan, Emery & Weaver vs. The Pennsylvania Railroad Company. Here is an abstract from the records of McKean county, from the appellants' docket, No. 130, December term, 1887. It is the case of A. H. Logan, Lewis Emery, jr., and W. R. Weaver, partners under the firm name of Logan, Emery & Weaver vs. The Pennsylvania Railroad Company.

Q. (By Mr. Clarke.) Let me inquire if the case grew out of the alleged discrimination before the passage of the interstate commerce law? A. Yes, it did; but the discrimination lasted after the adoption of the law, and a suit was brought for rebates or difference in freight up to 1888. In the settlement of the

case it was agreed between the Pennsylvania Railroad and ourselves that no further suits would be brought because they paid a certain sum of money to me to settle the case. The rebates existed after 1887, and I have the testimony to produce, if necessary, of the fact. I will produce the testimony here, part of it taken in the same case, showing that rebates were paid up to 1888. In April, 1887, the interstate commerce law went into effect.

Q. (By Mr. Farquhar.) There has never been a question before this commission about rebates and discrimination before the passage of the interstate commerce law. It is conceded that the old trouble, the wildcatting system of making freights, existed up to 1889, two years after the passage of the act. There are plenty of cases there on file now showing that rebates have been issued. A. Yes, there is a case in which I am interested now before the interstate commerce commission in which we have proven rebates to 1893.

TESTIMONY OF HIGH RAILROAD OFFICERS CONTRADICTED
BY SUBORDINATES.

I desire to present to this commission a document filed with the court in McKean county, February 17, 1890, and also an order from the court, a rule for taking testimony. I should be glad to have you examine this document to see that it was filed with the court, because there is very important testimony in it relating to transportation, and that you may be able to identify it in the future. In this suit, of which I have a transcript here from the document, which is subscribed by the county clerk, prothonotary, George W. Mitchell, we called to the stand George B. Roberts, president of the Pennsylvania Railroad, and the question was asked him if his road paid rebates on the transportation of oil.

Q. (By Mr. Phillips.) At what time? A. This was in 1890, when the suit was tried. The rebates that we claimed were paid to January 1, 1888. He replied: "No rebates are paid by our railroad on the transportation of oil." He was asked the question in various ways, and he said he knew nothing of any rebates; that was against the policy of his road. John S. Wilson, the general freight agent of the road, was put on the stand. He said positively that no rebates had been paid on their road since the suits of 1879 upon petroleum. He said: "As general freight agent of this road I should know, and I give my oath that no rebates were paid." The auditor of the road, Mr. Taylor or Mr. Justis, I do not know which, one was the auditor and the other assistant auditor, said that rebates had been paid, and if I had my books here I could read you when they were paid and under what conditions. The next called was Mr. Justis, I believe, and he corroborated Mr. Taylor that rebates had been paid on the Pennsylvania road. This testimony was taken before a master.

Q. (By Mr. Clarke.) Can it be produced? A. Oh, yes, I have the testimony. I have sent for it. Mr. Roberts was examined in the court, but I have not his testimony here. The next man that was called in the case was the bookkeeper, Mr. Thayer, who had stood at one desk, he said, 26 years, keeping accounts in a

certain department. He was asked whether rebates had been paid to any shippers of oil over the road, and he said they had. We called a large number of witnesses.

Q. (By Mr. Phillips.) What were the rebates? A. The rebates ran from eight cents a barrel to 28 cents a barrel. Under the anti-discrimination law of Pennsylvania the penalty prescribed was three times the damages, to be collected of the man proved guilty. A large amount of our shipments of crude oil from the oil regions to Philadelphia, where Logan, Emery & Weaver owned a refinery, at what is called Greenwich Point, on the Delaware, were shipped from Olean, N. Y. When we came into court with our evidence, exceptions were taken to that part of our claim which related to shipments from the state of New York on the ground that interstate shipments could not be considered under the state law.

DIFFICULTY OF GETTING RAILROAD PEOPLE TO APPEAR
AND TO ANSWER QUESTIONS.

We commenced this suit early in 1887, and it was not concluded until 1890. The railroad people were able at will to send word to the master that they could not come today, but would come some other time. We traveled with our attorneys 500 miles, simply to go home again. We were bandied about for nearly three years in taking that evidence. It was expensive; it was annoying; but the court had no power, it seemed, to compel these people to come to the stand. When we got them to the stand certain questions were propounded which they refused to answer under the advice of counsel—the screen which all these criminals of this country who are against its laws and the rights of the people get under, "We can not answer that question because it may incriminate us." They would not even attend the court in McKean county, and the judge issued a bench warrant and sent the constable to Philadelphia and brought Mr. George B. Roberts and Mr. Green and Mr. Downey and others to the bar of justice.

PROPOSITION TO SETTLE THE SUIT OF LOGAN, EMERY
& WEAVER.

When they got up into the county of McKean my partner said to me: "There is a proposition to settle this case." I did not want to settle. I wanted to fight the thing out. We had compelled the Pennsylvania Railroad to bring their books, and there were three tons of them that they had to bring upon the train to answer the summons of the court. We were more than a year in getting those books into court. Now they were cornered up, and we had absolute proof of eight to 28 cents a barrel rebates that had been paid.

THE WITNESS HAD BUILT HIS PHILADELPHIA REFINERY
AT THE SOLICITATION OF THE RAILROAD, BUT THE
RAILROAD DROVE HIM OUT OF BUSINESS.

I went to Philadelphia to manufacture oil in 1880 at the instance of the railroad officials themselves. They had a little bit of a quarrel with the Standard Oil Com-

pany after the close of the suits of 1879—Commonwealth vs. Pennsylvania Railroad. They invited the refiners to meet them and I went there at their own solicitation and built those works. I ran them from 1881, when I built them, up to 1887; but the railroad practically drove me out of business there.

SETTLEMENT OF LOGAN, EMERY & WEAVER SUIT.

Their attorney came to our attorney and said: "We will give you \$35,000 to quit, and expenses of the suit." My partners had become discouraged and disgusted. We took the money. We did not go on with the interstate commerce suit, because we knew we should never get through. I entered one suit here in the interstate commerce commission and it was seven years before I got a decision.

Q. What was the amount of your claims? A. My claim was \$107,000. A great portion of that was on shipments of oil from the state of New York. If I had gone on with the suit I could have secured a large sum of money, but I had not the heart to do it. I was not able to do it. My finances were such that I could not spare the money to go into court and overcome the dilatory tactics of the railroad officials. I simply dropped the case in disgust. I took the \$35,000 and they paid the costs of the suit.

R. B. CAMPBELL'S TESTIMONY AS TO PAYMENT OF REBATES UP TO JULY 1, 1888.

This is a document of the court of McKean county. It is only a few words I wish to read to you. It is the testimony of B. B. Campbell. Perhaps I had better read, as I can not leave this with the commission. Anything I have read, or in fact, the whole testimony or a copy of the testimony in this suit, I can give you if you would like it.

"B. B. Campbell in the suit of Logan, Emery & Weaver vs. Pennsylvania Railroad Company.

"B. B. Campbell being first duly sworn, testified as follows in answer to questions by Mr. Lee:

"Q. You were sworn in this case and testified before? A. Yes.

"Q. And certain questions you declined to answer under advice of counsel? A. Yes.

"Q. You received certain allowances on freight shipped over the Pennsylvania Railroad. From what place and by whom was that freight shipped?

"(The counsel for defendant objected to the question in the manner in which it is put, for it is assuming the fact that he did. Second, the form of the question is bad.)

"You may state whether you received any allowance on freight shipped by the Bear Creek Refining Company, limited, over the Pennsylvania Railroad, and from what point that freight was shipped, and to what points. A. Those matters are fully stated in my answer to the question propounded me under a rule of court. The freight from the Bear Creek Oil Refining Company was shipped from Coleman station on the Allegheny Valley railroad as far as the junction and from the junction I believe to Bolivar over the West

Penn, and from thence mostly to Philadelphia; some few shipments were made to Communipaw and some few to Bolivar. There was some little local trade, but the great majority were shipments of export oil to Philadelphia.

"Q. During what period were these allowances made to you? A. That is fully stated in my answers to the court, which were, of course, made up and fully stated from October 1, 1884, until July 1, 1888."

A year and four months after the interstate commerce act went into effect.

"Q. You may give the allowances by the year. A. They are already given. From October 1 to September 30, 1885, the rebates were \$8,607.51; until September 30, 1886, \$10,313.47; until September 30, 1887, \$15,200; until July 1, 1888, \$13,980.15; total received, \$48,101.13."

Q. (By Mr. Clarke.) Nearly all of that was before the passage of the interstate commerce law? A. Yes. There was a year and a half of that time after the passage of the law.

Q. The last item given there is the only one which comes in since the passage of the interstate commerce law, is it not? A. No. The interstate commerce law took effect in April, 1887. During the year from September 30, 1886, to September 30, 1887, rebates were paid amounting to \$15,200.

Q. From April to September after the law? A. And all of the last item. We knew that these same rebates were continued up to this time, and therefore the bringing of our second suit, which was settled for the \$35,000. So we dropped the whole thing.

OTHER SUITS AGAINST THE PENNSYLVANIA RAILROAD ON ACCOUNT OF DISCRIMINATIONS.

Now I desire to further fortify this statement. After this suit was decided a great number of suits were brought against the Pennsylvania Railroad. There was the Independent Refinery, of Oil City; S. Y. Ramage, of Crown Oak, Pa.; the Germania Refining Company, the Continental Refining Company, the American Oil Company, of Titusville; Rice, Robinson & Fogin, of Titusville; the Seneca Oil Works, of Warren; the Corn Planter, of Warren. All of these companies brought suits against the Pennsylvania Railroad and other roads. This is a dispatch I received today. I had other memoranda of this suit, but I wanted to be able to state definitely upon this question, so I sent another telegram yesterday and find it recorded. Of course the court record of these suits can be produced to the commission; but I make affidavit here that this is true and correct to the best of my knowledge and belief. The refiners' claims (this is addressed to myself, care of the industrial commission—refiners' claims were filed with Rogers Sherman (he was also a witness against the Pennsylvania) up to August 1, 1888 (which was contemporaneous, I think, with this I have read: "Compromise and settlement agreed"—that is to say they compromised these suits and took their money. The amount collected at that time by these several refineries, as I recollect it, was about \$84,000. I may be mistaken; it may have been a good deal more, or it may be less.

Q. (By Mr. Clarke.) Were those suits all settled by the railroad companies? A. Yes; by the Pennsylvania. "Claims therefore filed with the interstate commerce commission."

DECISION OF THE INTERSTATE COMMERCE COMMISSION
BASED ON PAYMENT OF REBATES UP TO 1893.

Q. How far does that go back? A. They settled up to August, 1888, and from August, 1888, up to 1893 the interstate commerce commission has rendered a decision that the railroads are responsible to these refineries for \$86,000.

Q. Is that decision reported in their annual report? A. Yes. You will find it in that case. The railroads have refused to pay this \$86,000, and it has gone to the circuit court of the United States at Pittsburg. The suit is now pending for the collection of this money. I want to clinch this thing right here, and I am going to do it by reading you a letter.

THE RECEIVERS OF THE BALTIMORE AND OHIO PROPOSE
TO MAINTAIN THEIR PUBLISHED RATES
AFTER JANUARY 1, 1899.

"Late open public confessions from the receivers of the Baltimore and Ohio Railroad of secret rates, drawbacks, rebates and other devices."

Q. (By Mr. Farquhar.) What are you reading from? A. I am reading from a letter addressed to the interstate commerce commission by the receivers of the Baltimore and Ohio railroad.

Q. (By Mr. Phillips.) Under what date? A. December 22, 1898.

Q. 1898? A. 1898, less than a year ago. (Reading:) "Will maintain rates. Baltimore and Ohio railroad adopts a new policy."

Q. (By Mr. Farquhar.) Who is the author of the letter? A. It is a letter that was published some short time ago. It is a public matter. I do not know who published it.

Q. Who is the authority for the letter? A. Why, Mr. Cowen.

Q. Mr. Cowen of the Baltimore and Ohio? A. Yes.

Q. He signs this letter A. To the interstate commerce commission; yes.

Q. That is what we are looking for. I want to know the author. A. (Reading:) "Receivers Cowen and Murray addressed a letter to the interstate commerce commission stating their purpose to adhere to published tariffs and to report to the commission, in lieu of other agency, the failure of other roads to do the same.

"Chairman Knapp, of the interstate commerce commission, has received a letter from Receivers Cowen and Murray, of the Baltimore and Ohio railroad announcing that after January 1 that railroad will maintain scrupulously the published tariff and rates filed with the commission, and will appeal to the commission for aid in cases coming to their attention of railroads failing to maintain rates to the detriment of their interests. This step is an important one, which will interest largely all other railroads. What the attitude of

other roads will be is unknown here. The letter in full is as follows:

"Within the territory north of the Ohio River and east of the Mississippi the railroad carriers are transporting the larger part of the interstate traffic at rates less than those shown in the published tariff filed with your commission, which are by statute the only lawful rates.

"While this condition continues there will exist the unjust discriminations and the unjust preferences and advantages between persons, localities and particular descriptions of traffic, the prevention of which is the main object of the act of congress establishing your commission. Only by securing the uniform charging of the published rates can the just equality of service and of charge required by law be secured either between persons or between localities.

NO AGENCY FOR RESTRAINT.

"Heretofore the Baltimore and Ohio Railroad Company and its competitors within the territory above mentioned have maintained joint agencies or associations under various agreements intended to act as a restraint upon each carrier and to prevent the secret cutting of rates on competitive traffic. It has been the practice for each carrier to report to a joint agency or association any departure from the published rates by a competing carrier, to the end that the facts might be fully ascertained and the unfair competition stopped.

"The supreme court of the United States has now fully determined the so-called anti-trust act applies to railroad carriers and in legal effect prohibits any agreement between them which restrains competition in any degree, even though such agreement goes no further than to secure the observance of the restraints imposed by the act to regulate commerce. It is therefore no longer lawful for the carriers to create by agreement between them joint agencies or associations as formerly to prevent the cutting of rates, however unlawful. Without some impartial body to investigate the complaints of one competing carrier against another and to check illegal rate cutting, if found to exist, it will be practically impossible for the railroad carrier alone to prevent that form of competition between them, however earnest the great majority of the carriers may be to stop it.

"The interstate commerce commission not only commands the respect of the railroad carriers for its impartiality, but also in its powers to investigate complaints of illegal rate cutting and to put a stop to all illegal practices far surpasses any association which the carriers have ever created by agreements between themselves.

TO SEEK AID OF COMMISSION.

"We see no reason why the commission should refuse its aid to the carriers in an effort to prevent competition from taking the form of illegal concessions through secret rates, drawbacks, and other devices; and we see no reason why the carriers should not seek the aid of the commission in such an effort by reporting to the commission any departure from published rates,

to the end that the facts may be fully ascertained and the illegal practice stopped.

“The receivers of the Baltimore and Ohio Railroad Company will maintain, on and after January 1, 1899, upon the lines operated by them, the rates, fares, and charges shown on the tariffs published and filed with the commission as required by law.”

After that day; a practical admission that they have not previous to that time; put your own conclusion on it. (Reading:)

“We believe that all, or nearly all of the railroad carriers within the territory above mentioned, will likewise maintain their published rates from that date.”

Referring to the fact that they did not. (Reading:)

“To prevent a relapse, however, to the conditions now existing, it is necessary that no important carrier shall long depart from the published tariff rates. Should such a departure occur, to the detriment of the interests in our charge, we shall invoke the aid of the commission to stop it. We hope and believe that many other carriers will do the same. In the anticipation that the other railroad formerly associated with the Baltimore and Ohio Railroad Company in traffic associations will adopt the course decided on by us and above outlined, we have taken the liberty of transmitting to each such carrier a copy of this letter.”

Q. (By Mr. Ratchford.) Is that letter the original? Is that letter signed by the receivers of the Baltimore and Ohio? A. It is on file; I suppose it must be; it is on file in the Interstate Commerce Commission. Now, gentlemen, there is an absolute admission on the part of the Baltimore and Ohio Railroad that rebates, drawbacks, and other devices have taken place up to January, 1899.

Q. (By Mr. Clarke.) Have you any evidence that connects that with the business of the Standard Oil Company? A. Oh, no. These discriminations are not upon oil, but they are upon the tonnage offered by the large corporations—no question about that.

Q. (By Mr. Farquhar.) Possibly individuals, too? A. Individuals as well, possibly. That is the bane of the whole thing, these discriminating rates.

Q. Have you done with that? A. I think the commission can understand clearly from that paper that the Baltimore and Ohio have given these rebates, and they have got tired of doing it, and will obey the law.

AS TO B. B. CAMPBELL.

Q. (By Mr. Farquhar.) I would like before we leave this part of it to have presented the evidence of Mr. B. B. Campbell in respect to those rebates. Mr. Campbell was the signing party of the Standard Oil Company and the United Pipe Line? A. I do not understand.

Q. He was the signing party in respect to the suppression of all rebates and drawbacks? A. Yes.

Q. The document, as drawn up in 1880, between B. B. Campbell and the Pennsylvania Railroad Company? A. Yes.

Q. Did he turn as a witness against the railroad after he received the rebates? A. Yes. He could not help himself; he kept out of our way for a long time.

Q. Then Mr. Campbell himself was the signer of the

original agreement between the railroad and the Standard and all the other producers? A. No.

Q. Well, it is testimony here; I have evidence here taken by the Bacon committee. A. But when I come to explain to you before I complete this argument, I will answer all those questions.

Whereupon at 5 p. m. the commission adjourned until 10 o'clock tomorrow morning.

Washington, D. C.,

Tuesday, September 12, 1899—a. m.

The commission was called to order at 10.30, Mr. Phillips presiding.

Lewis Emery, Jr., again on the stand and examination resumed.

Q. (By Mr. Phillips.) You can resume your testimony and proceed in your own way. A. You only let me get to 1872, yesterday, and then you hurried me on to 1889 and 1899.

REPORT OF EXECUTIVE COMMITTEE OF PETROLEUM PRODUCERS' UNION, 1872—THE FIRST RUMOR OF THE NEW POWER.

I got up to the South Improvement contract yesterday, and I showed you its repeal. I read from a public document as follows (reading): “History of the rise and fall of the South Improvement Company. Report of the executive committee of the Petroleum Producers' Union, embracing the report of the subcommittees or transportation, legislation, investigation, and treasurer's report, at Oil City, Pa., 1872.

“On February 20, 1872, rumors were rife in business circles that the railroads, having their main lines or feeders extending into the oil regions, had formed a joint arrangement to advance the freights on crude and refined oils from the fields of production to the seaboard.

“With a production of 16,000 barrels of oil per day, and the coming of spring, which always brings renewed energy to operation, and an already depressed market, this rumor created the greatest uneasiness in the minds of all operators and shippers. Nothing definite could be ascertained, and nothing further than the rumor could be heard, and the region settled back to fancied security.

“In a few days, however, a second rumor was circulated, that not the railroads, but a company bearing the wonderfully inappropriate cognomen of the South Improvement Company had purchased a right to all petroleum transportation, and were to arrange the rates of shipment of all the oil produced, and that an immediate advance of 50 per cent was but the first advance, with promise of more in the future.

THE ADVANCE OF FREIGHT RATES—PROTESTS AND STRUGGLES.

“This, however, seemed so quixotic that it did not meet with general credence until it was confirmed by telegram on the 26th from railroad officials to their

agents at shipping points in the oil regions advising them of the new rates, to take effect immediately. An advance of 100 per cent on all freight charges, on crude and refined, was equivalent to a complete paralysis of all operations for and in oil in the entire region. But oil men are made of sterner stuff than to tamely submit to so gross an outrage, let it come from what quarter it would.

"The thousands of operators were electrified with indignation, and rose as one man to defy and resist the levying of a tribute so palpably unjust. Meetings were called in all the principal towns and cities. The honor of calling and organizing the first meeting is conceded to Tidioute. E. E. Clapp was elected to the chair, and resolutions indicative of the spirit and determination of the producers of that field were passed. It was resolved, *inter alia*, to shut down all their wells until the old rates were restored, or until a new outlet could be found to remove their oil to outside markets, if such steps were necessary.

"Delegates were also chosen to attend a mass meeting called to assemble at Titusville on the evening of the 27th, 'to consider the necessity of constructing a railroad from Erie, by the way of Titusville, into the oil regions, as a competing railroad, connecting with water communication to New York and Europe, and such other business of interest to the people as might come before the meeting.'

"The meeting at Titusville demonstrated the fact that the wealth, determination, spirit, and practical ability of the men of the oil regions would render victory for them in the battle with monopoly an absolute uncertainty.

"The wonderful resources of oil men, when pressed by great difficulties, here became apparent in the plans and suggestions laid before the meeting. Railroad routes, with suggestions and estimates of cost, to reach the lakes on the north and railroads not in the combination on the south, pipe lines, and other remedies were suggested, and the feasibility of some, if not all, did much to reassure the mass of people that they would speedily find a solution of the difficulty."

THE SOUTH IMPROVEMENT COMPANY—THE REPEAL OF ITS CHARTER WAS OF NO PRACTICAL EFFECT.

I read so much only to show the spirit aroused at the time of the first notice of the formation of the South Improvement Company. Now, if you will turn to page 15 of my pamphlet, you will find an act to repeal the charter of the South Improvement Company. But on page 15½ I have shown how a charter in the very same terms was bought by the National Transit Company, which is one of the companies of the Standard Oil Trust. Clement A. Griscomb was president of the National Transit Company; he is not at this moment. He is a director of the Pennsylvania Railroad. I have explained to you from my book of the demoralized condition of trade, at the time when the South Improvement Company act was repealed, through this tremendous pressure on the railroads on the part of this South Improvement Company. You will see that all this work was done between these two northern trunk lines of railroads and the Pennsylvania in the

south was repealed by this act. I propose to show that, though the contract was annulled, the South Improvement contract, as well as the contract between the Standard Oil Company and the railroads, the annulment was never lived up to, and the business of the country proceeded just exactly as though the South Improvement Company was in full force. If you will please turn to page 48 (see Fiftieth Congress, first session, House Reports, vol. 9, pp. 361, 362) [reading]:

THE RAILROADS AGREE THAT THERE SHALL BE NO DISCRIMINATIONS OR REBATES.

Agreement Between Railroads and the Petroleum Trade, Executed the 25th of March, 1872.

'That all arrangements for the transportation of oil after this date shall be upon a basis of perfect equality to all shippers, producers and refiners, and that no rebates, drawbacks, or other arrangements of any character shall be made or allowed that will give any party the slightest difference in rates or discrimination of any character whatever.

That the present rates from Oil City, Union, Corry, Irvineton, Pittsburg, Cleveland, and other competing points shall be and remain in full force at following rates:

ON REFINED OIL, BENZINE, ETC.

From Oil City, Union, Corry and Irvineton, to—	Per bbl.
Boston	\$1.65
New York.....	1.50
Baltimore	1.35
Philadelphia	1.35
From Cleveland to—	
Boston	1.65
New York.....	1.50
Philadelphia	1.35
Baltimore	1.35
From Pittsburg to—	
New York.....	1.50
Philadelphia	1.35
Baltimore	1.35

On Crude Oil.

From Oil City, Union, Corry and Irvineton to—	
Boston	1.50
New York.....	1.35
Philadelphia	1.20
Baltimore	1.20
Cleveland50
Pittsburg50

And said rates shall not be liable to any change, either for increase or decrease, without first giving to William Hasson, president of the Producers' Union, at Oil City, at least 90 days' notice in writing of such contemplated change.

In the distribution of cars for shipments, it shall be done without discrimination.

On the basis as hereinbefore stated, the parties respectively agree to carry out the arrangements in good faith, and work for the mutual interests of each other.

In witness whereof the parties have hereunto affixed their signatures this 25th day of March, A. D. 1872.

For the Lake Shore & Michigan Southern Railroad Company, H. F. Clark, president; for the Erie Railroad Company, O. H. P. Archer, vice president; for the New York Central & Hudson River Railroad Company, William H. Vanderbilt, vice president; for the Atlantic & Great Western Railroad Company, George B. McClellan, president; for the Pennsylvania Railroad Company, Thomas A. Scott, vice president. On behalf of the producers and refiners: G. Shamburg, E. G. Patterson, William Hasson, Henry Byrom, William Parker, John J. Fisher, Oil City producers and refiners; J. J. Vandergrift, A. P. Bennett, William M. Irish, William T. Scheide, Oil City producers and refiners; Henry N. Rogers, F. C. Fleming, Josiah Lombard, Jr., New York refiners; B. Vaughan, Boston refiners.

Q. (By Mr. Phillips.) Is that the same Mr. Rogers who testified before us? Is it a mistake in the print, or is it a different man? A. I do not know whether this is the man. This is in the year 1874; but I think Mr. Archbold and Mr. Rogers did not go into the Standard Oil Company until 1875. I do not know whether it is the same or not. It does not make any difference. These gentlemen stood on the rostrum with me three or four years fighting this very principle.

Q. Did he have a refinery on Oil Creek? A. Yes; he did.

Q. (By Mr. Farquhar.) This Rogers had a New York refinery. This is another Rogers; it is H. N. A. Yes; I think you are right. Page 51 (reading):

THE OPEN RATES RAISED AGAIN.

[The New York Central & Hudson River Railroad Company, General Freight Agent's Office, Grand Central Depot.]

New York, September 9, 1874.

Dear Sir: Commencing October 1, 1874, the following rates on refined and crude oil shall govern all lines:

The rates on refined oil from all refineries at Cleveland, Titusville and elsewhere in and adjacent to the oil region shall be as follows:

	Per bbl.
To Boston.....	\$2.10
To Philadelphia.....	1.85
To Baltimore.....	1.85
To New York.....	2.00

Net rate on Albany 15 per cent less, from which shall be refunded the amount paid for the transportation of crude oil by rail from the mouth of the

pipes to the said refineries, upon the basis of 14 barrels of crude oil to the refineries for every 10 barrels of refined oil forwarded by rail from them (the refineries) to the eastern points named.

Settlements of this drawback to be made on refined oil forwarded during each month.

No rebate on these rates will be paid on oil reaching refineries direct by pipes.

On crude oil the rates from all points of rail shipments in the oil region shall be as follows:

	Per bbl.
To Boston.....	\$1.75
To New York (net rate on Albany 15 per cent less)	1.50
To Philadelphia.....	1.50
To Baltimore.....	1.50

From which shall be refunded 22 cents per barrel only on oil coming from pipes which maintain the agreed rates of pipage.

A barrel shall in all cases be computed at 45 gallons.

You will observe that under this system the rate is even and fair to all parties, preventing one locality taking advantage of its neighbor by reason of some alleged or real facility it may possess.

Oil refiners and shippers have asked the roads from time to time to make all rates even and they would be satisfied.

This scheme does it, and we trust will work satisfactorily to all.

Respectfully, yours,

J. H. Rutter,
General Freight Agent.

THE AGREEMENT THAT THERE SHOULD BE NO DISCRIMINATION WAS NOT KEPT TWO WEEKS.

The date of that contract was the 25th day of March, 1872. I tried to get yesterday a copy of the Hepburn report, but I could not. But in 1879 George R. Blanchard, the present manager, I think, of the Central Traffic Association (am I right-), of Chicago, was called to the stand by the Hepburn committee. You all know what that was—a committee of the New York legislature. He swore that this contract that I have just read, which is so soundly and so fairly worded, was not respected two weeks. I put that in as a part of my evidence, and I refer you to the Hepburn committee—that this agreement, solemnly drawn and signed by the railroads, that I have raised a question about in my testimony here before you, was abrogated within two weeks after it was signed, according to the testimony of George R. Blanchard. Does the commission want me to go into the fact and prove rebates and drawbacks from the date of this contract up to 1877?

Q. (By Mr. Clarke.) My understanding is that these rebates and drawbacks are conceded by the railroad companies and the Standard Oil Company up to the passage of the interstate commerce act. If that is so, it is not at all necessary. A. I can produce every contract.

REBATES PAID ONLY TO MEMBERS OF THE STANDARD OR
THE SOUTH IMPROVEMENT COMPANY.

Q. (By Mr. Farquhar.) In that matter of 1880, which concerns the agreement of the Producers' Union, would you have had that agreement at all unless they had made rebates and discriminations from 1872 up to 1880? It is conceded that in all the arrangements the rebates were payable from 1870 up to 1880. A. To whom?

Q. To all parties. A. No.

Q. Well? A. Only to those connected with the Standard Trust or the South Improvement Company. If you were not a member of that organization, you could not participate in the drawbacks.

Q. But that agreement or purchase which was entered into afterwards, in 1880; Mr. Campbell was president of the Producers' Union at that time? A. Now, you are getting too far; I will come to that.

Q. Oh, I understand that. A. I will give you the whole history; but I want to know whether you want me to prove to this commission that rebates were paid from 1872 to 1887, when the business became an absolute monopoly; when the Pennsylvania Railroad surrendered everything over to the Standard Oil Trust?

MAY NOT THE EMINENT GENTLEMEN WHO SAY THE
STANDARD HAS RECEIVED NO REBATES FOR
TWELVE YEARS BE MISTAKEN?

Q. (By Mr. Kennedy.) The other commissioners have said that there was no question about the practice of paying rebates before the passage of the interstate commerce law. Since then there is some question, and it seems to me that the issue shapes up in this way: The Standard Oil Company people have come here and sworn that they have not asked nor received rebates since the passage of that act. They say they were too shining a mark under that act to get or ask for rebates. All they desired was that they hold up the published rates and hold others to them. Now, it seems to me the thing for you to do, if you can do it, is to prove that they have taken rebates since that time. If you do that you can convict somebody of perjury. A. I think that it is clearly proved that rebates were paid. Mr. Roberts, president of the Pennsylvania Railroad, went upon the stand in the court of common pleas of McKean county and testified that his railroad had not paid rebates from the time the interstate commerce law took effect. Mr. John S. Wilson, whose testimony I have read, the general freight agent, corroborated Mr. Roberts. I have here the testimony in all these cases, and the witness of a hundred men, proving that Mr. Roberts and Mr. John S. Wilson were mistaken in their statements. You say that you have letters here filed by Mr. Archbold from honorable men representing the several railroads of the country. I have no doubt of their honesty. I have no right to even cast a reflection upon Mr. Archbold or upon his testimony, but I do venture to say that if Mr. George B. Roberts,

president of the Pennsylvania Railroad at that time, now deceased, and Mr. John S. Wilson, its general freight agent, will come upon the stand and make oath that no rebates have been paid since the interstate commerce law took effect, and following their testimony the auditors and bookkeepers of the road go upon the stand and swear that rebates have been paid, and we prove from 8 to 28 cents a barrel, and my claim is settled, and I receive my \$35,000 and costs of the suit, may not these gentlemen who have written these letters be mistaken? I would like to see their auditors and bookkeepers put upon the stand, as we put those of the Pennsylvania Railroad. We did not get this information until we brought their books into court. When they saw they were in a corner, they surrendered. I told you that out of a production of 23,000,000 barrels of oil a year the outsiders handle, I think, not over 3,000,000 barrels altogether, including the fields of Ohio, West Virginia, New York, and Pennsylvania. And do you think if these small men, handling this small quantity of oil, go into the courts and prove rebates from April 4, 1887, when the interstate commerce act took effect, up to August, 1888, as we did in my own suit, and then bring suit before the Interstate Commerce Commission for rebates from that time up to 1893, and the Interstate Commerce Commission render a verdict of \$86,000 against the railroad; if these men of the Standard Oil Company, with their ability, as one of the witnesses has stated, or through their great competency, through their great brain, have carried oil to the ends of the earth as nobody else could, do you think for one moment that the Standard Oil Company would allow those small men, who have not the brains or the ability, to beat them on the transportation?

UNFAIR FREIGHT RATES, DISCRIMINATING FREIGHT
RATES, CAUSE ALL OUR COMPLAINT AND TROUBLE.

Bring into the courts of this land the books of these railroads. They are responsible to-day not only for the acts of the Standard Oil Company, but for the oppressive monopolies in every line of business. Go to the stock exchange, where members are levied upon a dollar a head upon every cargo that came from the Western country. Go to the produce exchange, where they were levied upon barrels of flour that came from the Western fields. The interior mills of the country are paralyzed because of this unjust discrimination; I am a miller, and I make 500 barrels of flour a day. All these trusts, I say, are built up at the instance of the railroads; and I make the broad charge that had they obeyed the law and given equal rights to all shippers there would have been no trusts. There would not have been the dissatisfaction in the country. Go to Duluth, if you choose, to-day, and try to buy a carload of coal that you wish to take out into North Dakota, where I have a wheat farm. The coal is mined by the miners at from 35 to 50 cents a ton, drawn to Buffalo, I think, at a dollar, and loaded on the ship at cost, as I understand, of less

than \$1.75. Allow 75 cents for transporting it to Duluth and you have \$2.50. Three hundred and thirty-four miles from Duluth, by the Great Northern road, where my farm lies, west of Grand Forks 16 miles, bituminous coal is sold at \$6 and \$7 a ton. I say that the discrimination is the result of the coal combination, and the railroads are responsible for it.

ENFORCE THE LAW AGAINST GREAT LAW BREAKERS AS WELL AS SMALL.

The milk in the cocoanut of the success of the Standard Oil Company is transportation; unfair, illegal discriminations in transportation. Do you think that you can not prove rebates upon oil if you call the witnesses, with books and papers? The Pennsylvania Railroad had rather pay \$200,000 than permit me, or allow Logan, Emery & Weaver, and the court, to look over that three tons of books that were brought up to the court house in McKean county. It would have sent them to prison. The injustice in this country is that a poor devil goes along the street and steals a loaf of bread when he is hungry, and he is arrested and taken to the courts and sent up for 10 or 15 days. If he steals a coat to keep his body warm he is sent to prison for a year. These great corporations, the men managing them, come into court and say "We won't bring out our books; we won't answer your questions; because if we do we shall incriminate ourselves." There is the difficulty. The Sherman Act—the Federal Act—has been proved constitutional by the highest tribunal in this land, and if it was enforced these people would go to prison. You can prove it, Mr. Chairman and Commissioners, if you choose; it is in your power to prove discriminations, I believe, to this moment, if there is any truth in the letter of Mr. Cowen and Mr. Murray.

REFINERIES ABSORBED OR WRECKED BY THE STANDARD.

Please turn to page 78 of my pamphlet, where you will find a list of refineries bought, leased, squeezed out, or bankrupted by the Standard. The list is taken from my testimony before the Committee on Manufactures in 1888. (Fiftieth Congress, first session, House Reports, vol. 9, pp. 232,233.)

In this list there are some refineries that went out of business in 1867. I do not charge their going out of business to the South Improvement contract entered into by the railways; they went out previous to that. But you come up to 1870 and 1871, when some refiners had very large rebates, and others very small ones, or none at all. As I said yesterday, the Standard Oil Company have no patent on rebates. These same railroads have been violating the law ever since they were created, by giving rebates and drawbacks; but never so much, previous to 1872, that the average business man could not stand up under them. He could not make as much money as his neighbor, and he used to wonder why; and when this exposure came he learned the reason. But the contract of the South

Improvement Company, and the very large rebate, the 100 per cent rebate, given to the Standard companies, was the means of driving most of these refiners out of business. Now, then, these refiners were, most of them, in existence at the time of the South Improvement Company, 1872, a contemporaneous date. I have read to you this morning the repeal of the South Improvement Company charter. I have read to you the fair contract between the producers and refiners and the Standard Oil Company and the railroads. I have also said to you that the contract was violated within two weeks, according to the evidence of George R. Blanchard, formerly, and now, perhaps, the Central Traffic Association manager.

WHY REFINERS FAILED—TESTIMONY OF FRANK ROCKEFELLER.

The rebates from 1872, that are said to have gone out of existence practically, were so great that the business of the average refiner was silenced. I want to read to you from the evidence of Frank Rockefeller, whose testimony was given before the congressional committee, July 7, 1876. I read from clause L.

"Q. Do you know how many refineries there were in Pittsburg prior to this alleged combination? A. I have been told that there were sixty odd refineries.

"Q. How many are there now? A. I was told by the same parties that there were now less than twenty, and very few doing any business.

"Q. (By Mr. Reagan.) What is the cause of that reduction in the number of refiners? A. I suppose the main cause has been the fact that they could not make money. I have understood that the same lever was brought to bear upon them as upon the Cleveland refiners. We had in Cleveland at one time about thirty establishments, but the South Improvement Company was formed and the Cleveland companies were told that if they didn't sell their property to them it would be valueless; that there was a combination of railroad and oil men; that they would buy all they could, and that all they didn't buy would be totally valueless, because they would be unable to compete with the Southern Improvement Company, and the result was that out of the thirty there were only four or five that didn't sell.

"Q. From whom was that information received? A. From the officers of the Standard Oil Company. They made no bones about it at all. They said: 'If you don't sell your property to us it will be valueless, because we have got advantages with the railroads.'

"Q. Give the names. A. J. D. Rockefeller, H. M. Flagler and O. H. Payne.

"Q. (By Mr. Ross.) Mr. Payne is the son of a member of Congress of that name? A. Yes, sir.

"Q. Have you heard these gentlemen say what you have stated? A. I have heard Rockefeller and Flagler say so; other parties have told me that Payne had used the same argument with them.

"Q. What other parties? A. I won't give the

names now. There are some 20 men in Cleveland who sold out under the fright, and almost any of them would tell you that story.

"Q. Give us the names of some of those that sold out? A. J. W. Faucett, of Cleveland; W. C. Scofield, Joseph Stanley, John Critchley. Those are some of them.

"Q. (By Mr. Dunnell.) Do you make the same statement with regard to the shipment of crude oil to the seaboard that you do with regard to the shipment of refined oil? A. We do no business of that kind."

If you will refer to my pamphlet, page 82 (or to Fiftieth Congress, first session, House Reports, vol. 9, p. 234), you will find that in Pittsburg there were 58 refineries in 1877. Thirty refineries had been crushed out and dismantled and no record left. The 28 were what were running and what was left.

O. (By Mr. Phillips.) What date? A. 1877. The remaining 28 had been bought or leased by the great monopoly.

RAILROAD OFFICIALS STOCKHOLDERS IN THE STANDARD.

I do not read now from the same book, but it is the same testimony and it is in the same book, but I can find it quicker in this one. (Reading):

"Q. You spoke a while ago of having personal knowledge of certain railroad officials having been stockholders in the Standard Oil Company. How do you know that? A. I know it from the officers of the Standard Company telling me that they were stockholders.

"Q. Who are they? A. William H. Vanderbilt, vice president of the New York Central, was at one time, also Amasa Stone, of Cleveland, and I have very good reason for believing, though I do not know, that Mr. Devereaux and Mr. Newell, both stockholders at the present time. Mr. Stone sold his stock some two years ago; at the time when he quit the railroad he put the stock on the Cleveland market, and is not, I believe, a stockholder to-day.

THE OIL POOL—THE QUESTION WHO GOT THE REBATES?

"Q. (By the Chairman.) Give us the names of the officials of the railroad that you think received the benefit of this rebate. A. Understand me; I do not say that they did get it. It is merely my opinion.

"Q. Give us the names of the gentlemen who you think do reap the benefit of that rebate. A. I think that Dr. Devereaux gets it, and that Mr. Newell gets it; that Tom Scott gets it, and that Mr. Vanderbilt gets it, and other officers of those roads whose names are not in my mind at present.

"Q. What do you mean by a pool—a pool among the railroads or among the oil men? A. I do not give this as a positive fact, but as I understand the argument, I understand the New York Central, the Erie, the Atlantic & Great Western, the Pennsylvania Railroad, the Cleveland, Columbus & Cincinnati, and the Baltimore & Ohio railroads had a pool or combination for the purpose of shipping oil, and oil only, and in this pool the Baltimore & Ohio

gets a certain number of barrels to go over its road; the Lake Shore has so many to go over its road; the Pennsylvania got so many to go over its road from different points in the country, but on oil shipped over these roads by the pool to the Standard Oil Company there is a rebate or drawback from the shipment of so much, which is paid into this pool, over whichever road the oil may go, and the rebate is divided up between the Standard Oil Company and the railroad officials.

"Q. The railroad officials, do you say? A. So I understand it; I do not say that of my own knowledge.

"Q. Then it does not go to the railroads themselves? A. No, sir.

"Q. But to the railroad officials? A. To the railroad officials; yes, sir.

"Q. How do you think it stands related to Cleveland? A. We should do the same as we have done in the past years and are doing at the present time. We are shipping our oil at the present time by lake and canal because we cannot ship by rail without losing money; by lake and canal we can just save ourselves."

This was testimony in 1876, and the contract that I have read was taken October 1, 1874. Have you any doubt of rebate (after this evidence of these men) existing between 1872 and 1876? Why, I could read you volumes upon it.

LATER RATES—THE WITNESS COLLECTED REBATES UP TO 1893.

Q. (By Mr. Ratchford.) I want to remind the witness that if he seeks to prove before this commission that rebates were paid 22 or 23 years ago, his testimony avails very little; what we want to know whether these rebates have been paid last year or the year before. You are wasting your time in endeavoring to prove something of little consequence. I do not understand the Standard Oil Company has disclaimed discriminations in their favor prior to the passage of the interstate commerce law. I would ask that in order to make your testimony effective and to say the most in the least time possible, you confine yourself to recent years. A. That is what I asked yesterday morning, whether the question was to be taken up from the beginning, and I understood the object was to trace it from the beginning. The witness on the stand stated that no rebates were paid. I was endeavoring to show that contracts were still in existence and I was about to—

Q. If these contracts are still in existence, as you observe, will you make a point— A. I do not mean to say they are in existence except by rebates and the methods of carrying out—

Q. (By Mr. Phillips.) He stated yesterday that the National Transit Company was organized under precisely the same language as the South Improvement Company, and he is tracing it on from that. A. I beg the pardon of the gentleman and the commission, but I was simply following out that which I was asked to do.

Q. (By Mr. Livingston.) Do you lay down the proposition now that that contract is binding and is being enforced? A. No.

Q. How long since it expired? A. It was supposed to expire two weeks after it was made, so far as the fair rates were concerned, the agreement between all the railroads in this combination to accept the rebate system entirely, and get the opportunity to go on as it had done in former years. I am trying to show you that from that time up to the present time these rebates were participated in, I do not say by the Standard Oil Company, but I do say that we have collected them on oil we shipped, and I suppose they have on theirs.

Q. How lately did you collect any rebates? A. Up to 1893.

Q. That is the way to get at it? A. I stated it yesterday; I gave the evidence in full yesterday, and produced the papers that rebates had been paid and acknowledged up to 1893.

Q. (By Mr. Ratchford.) The point is this: what is the use of going beyond 1893? A. I do not want to if you do not want me to.

Q. (By Mr. Kennedy.) These rebates ordered paid in 1893 were for oil carried when? A. From 1888 up to 1893, because we got judgment up to 1888 in the courts of Warren county, and the balance was carried into the Interstate Commerce Commission.

Q. (By Representative Livingston.) It was made incumbent on this commission by Congress to learn, if possible, whether by combinations, trusts, or corporations, legitimate competition was interfered with or lessened in any of these industrial pursuits. I want to know if you have any testimony that will lead up to the fact that the railroads, as you asserted yesterday, are largely to blame for this discrimination in favor of one oil company or against another? A. I did not say that. I said that the Standard Oil Company under these former contracts had had rebates, and I said that, though some of these contracts had been annulled, their provisions are practically carried out, and I cited instances where the trade is being affected at the present time.

Q. I want that testimony explicit, if you have it, before you get through with your testimony.

Mr. Phillips. The Senator will proceed in his own way and come to that at the proper time.

HOW THE STANDARD GREW IN SEVEN YEARS FROM FOUR PER CENT. OF THE REFINING CAPACITY OF THE COUNTRY TO 90 OR 95 PER CENT.

A. More than 95 per cent of the refineries that existed in 1872 were driven to the wall before 1877. I can give you the proof of it, but I will make that bald statement. I proved yesterday, by the testimony of Mr. H. M. Flagler, that the Standard Oil Company was formed in 1870 in Ohio. I also proved that in 1872 W. H. Vanderbilt and other railroad magnates became stockholders of it. I also proved that rebates had been paid, and I am prepared to

prove that they were paid up to 1879. The testimony was taken before the Bacon committee of 1888. First, Mr. H. M. Flagler swore (Fiftieth Congress, first session, House Reports, vol. 9, p. 288) they had a capacity of 600 barrels per day of crude oil in their refinery, the production at that time being about 16,000 barrels a day. That would give them 4 per cent of the refining capacity at that time. At that time there existed in the oil country, spread out from Louisville, Ky., to Portland, Me., more than 250 refineries. Mr. Henry H. Rogers and Jabez H. Bostwick, deceased, members of the Standard trust, swore, in 1879, before the Hepburn committee, that they owned 90 to 95 per cent of the oil industry of America; that is, its refining capacity. Bear in mind that in 1870 and 1871 they owned four per cent, and in the brief space of seven years they silenced the fires in 95 per cent of the refineries, except their own. The history is here. You ought to have it. Every man ought to read it and know the method by which they accomplished that feat of throttling that great industry from 1872 to 1879.

Q. (By Mr. Phillips.) Do you desire that that shall be put in the record, so it shall be before the commission?

Q. (By Mr. Livingston.) Let him state in his own way how they did that in 1870. A. My own way is simply the record of this book—the Commonwealth vs. the Pennsylvania Railroad Company, a suit which was for three years being tried and the testimony being taken.

Q. Can you state in a few words how it was? A. Discrimination.

Q. What particular method? A. No different method; only what I have explained; the railroads paid it to them.

Q. If the railroads were guilty of this, tell us how they did it; in the form of rebates? A. Certainly. For instance, a man owned a refinery or several refineries in the oil country; at the beginning of the business the Standard Oil Company did not have any. They gave a rebate to the men that owned the pipe lines of 22 cents a barrel for all oil loaded upon the cars on the railroad. The man that owned a refinery on the creek and owned his own pipe line was not permitted to have that rebate. There was 22 cents against him right there.

Q. That was one of the methods by which they drove them out of the business? A. Certainly. How could you do business against 22 cents profit? The 22 cents alone would have driven them out; but in addition to that, they got 49 cents more.

Q. How? A. Transportation by the railroad and under agreements. That is the way they got from four per cent of the oil industry in 1871 to 90 or 95 per cent in 1879, and the whole country was silenced.

IT WAS NOT TO BENEFIT THEIR STOCKHOLDERS THAT THE RAILROADS MADE ALLIANCES WITH THE STANDARD.

Q. What did the Standard Oil Company give the railroads for doing that for them? A. I have just

read Mr. Rockefeller's testimony and he gives the names of the men. He said the railroads did not get it. I read you his evidence; take it for what you choose. He was driven out of the business. Out of the fifty odd refineries in Cleveland, 20 remained and they were owned by the Standard Oil Company.

Q. Well, you do not mean to say that the railroads lose that 49 and 22 cents? They recoup somewhere? A. I mean to say the stockholders did not participate in it.

Q. The stockholders lost it? A. I can answer that question; that there were times when there were rebates of 40 cents a barrel; there were times when there were rebates of \$1.32 a barrel—rebates paid to these people not only on crude but on refined as well, not only on their oil but on all the oil anybody else shipped.

Q. Now, then, as the stockholders evidently lost that, as you stated— A. I do not know.

Q. Where did the money go? Where could it go? A. Well, they may have spent it for wine or may have bought a farm—I do not know anything about it.

Q. You have no evidence to show where it went? A. No more than the testimony that was taken before Congress, which shows where it went.

Q. What does the evidence say? A. I can take Mr. Rockefeller's testimony. It gives the whole history, and he is not the only witness. I read this morning that Mr. Vanderbilt got some of it and Mr. Devreux got some of it.

THE WITNESS WAS TWICE FORCED OUT OF BUSINESS BY RAILROAD DISCRIMINATIONS.

Q. (By Mr. Kennedy.) I would like to have you state to this commission how you disposed of your different refineries. What became of them? You had one in Crawford county, I believe, and one later in Philadelphia. A. Undoubtedly some one has told you I sold out to the Standard?

Q. No; I have no such information as that. A. In Titusville, Pa., the Octave Oil Company had about 800 barrels capacity—eight hundred to a thousand—when the Standard Oil Company was formed. We were invited to come into the Standard Oil Company. We were told that if we would go in we should be allowed quite a large amount of money for our refinery, taken in stock of the company—no money. No money was used in forming this octopus from the start. They only had a capital of \$1,000,000 and the system was merely to turn the crank and make stock and take it from your pocket. The contract was presented to our company and it seemed to us illegal and not right, and we refused to go in. We attempted to do business the rest of 1872. These rebates I have named here were against us, although the South Improvement contract had been repealed. We struggled along until the latter part of 1873, and had to quit—shut down our refinery. It cost us \$85,000 and I think we got \$45,000 for it. We were forced out.

Q. Was that dismantled? A. That ran for two or three years and it was finally dismantled. The oil industry was at one time located in the vicinity of Oil Creek, or at least 95 per cent. of the manufactured product of oil was in the State of Pennsylvania at one

time, and at the coast harbor at New York and in Philadelphia, but the whole country has been depleted except some in Pennsylvania belonging to the independents—demolished.

Q. I asked you about the other one. A. The other one is in Philadelphia.

Q. Is that dismantled? A. Yes.

Q. (By Mr. Phillips.) When was that established? A. It was built in 1880 or 1881, and built at the solicitation of the Pennsylvania Railroad, after the close of the suits of 1879, in which they said they were going to do better; but discrimination again drove us out, which I have shown to you in this mass of evidence. I proved there was, on every barrel of oil I shipped to that port and about that works, a discrimination of from eight to 28 cents a barrel. Who could do business against it?

CARS WERE REFUSED FOR CARRYING THE WITNESS' OIL.

I owned a pipe line in my country, from my wells and other wells down to the railroad, and they refused to furnish me cars. The Pennsylvania Railroad owned 1,126 cars—tank cars, bulk cars. I used them for a time, until the order came from the Standard Oil trust that I must get no more oil. Previous to this time they had been delivering my oil. The evidence all shows it, and there is the whole history right before you in that very book you refer to.

Q. (By Mr. Farquhar.) A good deal of your own business is right here? A. It is all there.

Q. (By Mr. Phillips.) You will make that a part of your evidence here? A. Anything you want to use as evidence, use it, and anything you want to cut out, cut out.

Q. (By Mr. Kennedy.) What became of your Philadelphia refinery? A. It was sold to the Standard Oil Company.

Q. Was it dismantled? A. It was torn down. Another refinery close by, an investment of \$4,000,000, that is gone—torn down.

Q. (By Mr. Ratchford.) Did they buy it to dismantle it, as far as you know? A. They undoubtedly did.

Q. Dismantling took place soon after the sale, did it? A. Within a year. These cars were sent off into Colorado, Louisiana, and all over the country. A requisition was made for these cars and every one sent out of the state excepting 248, by absolute count. I sent three men in different directions to know what became of the cars so quickly and to make reports back to me. Well, the oil commenced to come into my tanks so that I could not do anything with it, and my property was put into the hands of the Producers' Protective Association, because they wanted me to shut down my wells. I had a large production at that time—2,700 barrels a day—and I was blocked in it. With a great big refinery in Philadelphia and a railroad running through my land, I could not get a single car. Mr. Merchants, of the Rochester and Pittsburg railroad, told me I could not, and it is in evidence: "They are going to take our coal traffic away from us if I draw your oil." I immediately applied to the courts against the Rochester and Pittsburg railroad, and made them bring cars in, such as I could.

I got one in a week, or one in two or three weeks, or one in four weeks; but I was deviled to death, until I had to quit.

THE WITNESS HAS NOT WISHED TO COMBINE WITH THE STANDARD.

Q. (By Mr. Kennedy.) I want to say to you in all kindness that I think you have made a remark that was rather discourteous and unkind in regard to somebody having told me that you entered the office of the Standard Oil Company in order to see them about buying your property. When Mr. Archbold was on the stand he did tell about other people having gone to the Standard Oil Company to enter a combination with them, but your name was not mentioned, and I have no information that you went there at that time. A. It was brought up in 1888, and ever since I have had to face a charge that I was groping around trying to sell to the Standard Oil Company.

Q. (By Representative Livingston.) Do you not think that you had good cause to go around to sell if you could sell? A. Well, I did not want to.

Q. I should have sold a long time since. A. I would not. I have stuck to my text. I do not like it; it is gross violation of rights.

Q. It is a question of sentiment with you principally? A. No; it is a question of principle. I can not afford this—not now. I may if this thing keeps on—in 10 years or longer, if God permits me life. I will go in the face of the law and protect my own rights if necessary.

NO BITTERNESS IN PENNSYLVANIA ON ACCOUNT OF THE REMOVAL OF REFINERIES.

Q. (By Mr. Farquhar.) In this matter of the Standard Oil Company buying up refineries and dismantling them or demolishing them, has it not been in Pennsylvania for a great many years quite an irritating subject with a great many of the smaller places there that they were abolishing these refineries and the trade passing away from this section? Has it not caused an im bitterness on the part of the people where the local refineries had been established and were then taken away? Is it not a common saying in Pennsylvania, as against the Standard, that they have changed the business from the Pennsylvania field to New York? Has not this caused an immense amount of hatred, bias and vituperation toward the Standard Oil Company? A. No.

Q. You say no? A. No.

Q. In your own former testimony did you not speak of the complaint of the Pennsylvanians that Pennsylvania, and especially Pittsburg, had been robbed of the legitimate work that belonged to it; that the whole labor of refining had been swept out of the state of Pennsylvania, wages had been taken away from Pennsylvania and had been taken down to New York by the pipe lines? A. Since that time Pennsylvania has got more refining capacity than in those days. Philadelphia is one of the largest manufacturing centers. They themselves have come back to Pennsylvania and built up the most enormous works.

That was not the condition when this testimony was given, but in these times it is different.

PENNSYLVANIA IS THE BEST PLACE FOR REFINING OIL.

Q. I am glad to know that. Now, as a refiner and business man, do you not think there were legitimate reasons why a good deal of the refining might better be done in New York, especially in view of the by-products that came into general use, than it could have been in scattered districts in Pennsylvania? A. No; and I will tell you why.

Q. So you think the representatives of the Standard Oil Company were incorrect when they testified before this commission that it was purely a business matter, and not a matter of prejudice, that they had dismantled this business in Pennsylvania and Ohio and substantially done the work in New York? A. No; that is entirely wrong. They are mistaken in the answer to that question, from the very fact that they have come back here today and are manufacturing by-products very largely. They have come back there because fuel is cheap; because natural gas is there in large quantities. There is an abundance of most excellent water, and I believe today they are sorry that every single refinery they have is not located somewhere in Pennsylvania. They have come back there and spent millions and millions of money in Pennsylvania since they made that excuse, that it was not the proper place to refine oil.

Q. (By Mr. Phillips.) You were about to go into the discriminations up to the time of the passage of the interstate commerce law? A. Yes; I have figured the matter up to 1899.

Q. Then will you oblige the commission by taking it up to that time? A. I have no further evidence.

Q. You have already covered that ground, you think? A. I have given enough. I have some other matters where rebates are collected.

Q. Then are you ready for questions in regard to the formation of these recent companies, pipe lines, etc., at this time? A. Yes.

THE WITNESS DETERMINED IN 1890 TO UNDERTAKE A PIPE LINE TO THE COAST.

Q. It has been charged here that you and others are connected with a trust in various pipe lines in the oil country—the Pure Oil Company. Will you oblige the commission by explaining that? A. In 1890, in the latter part of the year, owing to the high rates of freight over the railroads, the transportation of our refined and crude oil was so expensive that personally I determined to build a pipe line to the Atlantic coast if possible. In a secretive way, as everything had to be done then and has to be done now, I placed in the field some 20 expert right of way men to secure the right of way for a pipe line.

NEGOTIATIONS WITH THE READING—"WE SHALL DISTURB OUR RELATIONS WITH THE STANDARD.

I knew very well that it would be impossible for us to go clear through to the coast with a line, and I went

to Philadelphia and saw Mr. McLeod, the president of the Reading railroad.

I presented my question to him with a proposition that we would get the pipe, the right of way, to Williamsport, and there connect with the Reading railroad, and with a right to lay our pipe line, for a time, as we could build it, on a right of way of the railroad. I told him the amount of tonnage that we would give him, and made preliminary arrangements, and he said to me: "You return after a time." I did; I was alone; nobody knew anything about what I was going to do. I met Mr. McLeod and Mr. John Taylor, the general manager, and Lowry Brill, the general freight agent. Lowry Brill is now on the New Jersey Central. All these gentlemen came into the room. And by the way, there was one other man; I do not remember his name; anyway, all the chief officials of the road. I had to reduce my proposition to writing. The rate of freight was agreed upon and the basis of a contract was put in form, and I was to return at their dispatch when they were ready. I never got the dispatch. I returned and took with me some other gentlemen from the office, and I said: "What is the reason of this?" And they said: "If we give you this contract we shall disturb our relations with the Standard Oil trust, and we can not do it;" and I was dismissed.

NEGOTIATIONS WITH THE NEW YORK, ONTARIO AND WESTERN.

From there I went to New York and had a conference with the members of the Columbia Oil Company of New York, Mr. King and Mr. McDonald, they being independent refiners of the coast. I laid the matter before them, and we went from there to the office of the New York, Ontario and Western railroad, which runs from Oswego, N. Y., to New York city. We then concluded, Bradford being just here [indicating on map], to follow the boundary line of Pennsylvania bordering on New York, to a place called Hancock, N. Y., where the Erie railroad crosses the Delaware and into the small city or village of Hancock, and across to the New York, Ontario and Western railroad, it being to the north of the Erie railroad about one mile.

THE STANDARD TAKES AN INTEREST IN RIGHTS OF WAY.

Our men secured this right of way through the state without very much opposition, because the Standard Oil trust had not got onto our movements. Finally it became known; and all at once came in a number of men who were very anxious to build a line right exactly where we were building one, although the Standard trust owned a line right parallel with the state line, back a little in the country, running clear through to New York city. They did not need the line, because lying in the ditch were two parallel lines running from the oil country, from Olean, to New York; but they did not want us to build a line, and these men, as set forth in this pamphlet, came along and took up rights of way on top of our rights of way. They went to the records of the several coun-

ties and examined the titles to the land that we had got the rights of way through; and if there were mortgages against these properties they bought the mortgages. The owner was in debt for the place and if he overstepped his rights in law by holding that mortgage they induced that man to give them another right of way. In the state of New York, beyond the state line, we had about six miles to go down to the Delaware river; and they came along and bought strips of land right across our right of way in Pennsylvania—strips of land from a mile to a mile and a half long—throwing us into the courts in every instance where they could.

NEGOTIATIONS WITH THE ERIE.

Before we started to lay our pipe line I went to the Erie railroad office in New York and saw Mr. George M. Thomas—the president of the road, I think he was at that time. I met Mr. Thomas, a perfect stranger to me, and I told him what we wanted to do. We wanted the right to go under the Erie railroad at Bradford. "Why," he said, "certainly you can go under the railroad with your pipe." "Well," said I, "we are going down to Hancock and we want to cross your railroad or pass under it, either in the deep water of the Delaware or else through the bank of the road, with our pipe." "Well," he said, "we are disposed to assist all progress, and I will take that under advisement, and you can come back here in two weeks. But you go ahead and go under our road at Bradford or any other point that you can." I said that I was very glad that he received me so kindly, and that he gave me so much encouragement; that I would commence laying our line on the Ontario and Western railroad a mile north of Hancock, within the borough limits. "Well," he said, "you return and the matter will be fixed up all right." I said: "I am afraid that something will intervene, some power that will overcome you in this matter, and your views will be changed." "No, sir," said he, "the Erie railroad runs its own business and whatever I have done will be carried out; but this other matter I shall be obliged to take up in such a way that I will be certain." I then got up to go and he detained me. We discussed the question of transportation and business generally; and I went away and went to work, and worked a couple of weeks connecting our line to the Ontario and Western road; bought 11 acres of ground on which to build our storage tanks and put in the pipe.

PIPING REFINED OIL—THE STANDARD SAID IT COULD NOT BE DONE.

We laid two lines, refined and crude. That is a thing that the Standard Oil Company never did. They said it could not be done. We pump refined oil 500 miles and deliver it on board vessels in New York, and it comes out just as bright as it did at the refinery. We pump our refined oil.

Q. (By Mr. Phillips.) Do the Standard Oil Company pump theirs? A. No; they said it could not be done, although they are the inventors of everything, and are the benefactors of the world.

THE ERIE RAILROAD IS HELPFUL.

I laid that line down to the Erie bridge—the big iron bridge that crosses the Delaware—and I commenced on the other side of the bridge, 120 feet away from the upper side, or the line of the right of way, and I laid the line out toward Pennsylvania. We had had our fights over this right of way. I knew the men that were taking up these rights of way to have been in the employ of the Standard Oil Company. I knew the men personally and my men knew them. If necessary I can tell their names at this moment. We had overcome, as we thought, the obstacles, and I went back to New York to see Mr. Thomas, and he came from his inner room and took me by the hand and said: "You can go under our bridge at Hancock in the deep water if that is advisable, or in the bank," and he spoke to the general manager of the road—his name I forget; he was present at our conversation; so was Mr. King, of the Columbia Oil Company—and he said: "You wire Mr. Durr, the division superintendent of the Susquehanna division, to meet Mr. Emery at Hancock tomorrow morning and go with him to locate their oil pipes, either to go through the deep water of the Delaware or to pass through the bank of the Erie grade." I took the 9 o'clock train. This was done—the message was sent—I saw the gentleman write it. I took the 9 o'clock train, went to Hancock and got there about 2 o'clock in the morning and I immediately went to the Chandley House, near by. I was anxious to know whether Mr. Durr was there. I was afraid something would happen; but to my surprise Mr. Durr was there waiting for me. The next morning I took a carriage—my wife was with me—Mr. Durr, my wife and myself. We rode to the Delaware River, which was not half a mile away, crossed the river, it being low, sounded the water, went upon the bridge and saw where the rocks were, etc., and concluded the best thing we could do was to go through the bank. There were two ends of pipe 120 feet apart. He said: "Mr. Emery, I will make a profile of this and will have it in your office one week from today." That was to be on Thursday. I said, "All right." I went home and started our pipe, and the very first place where we had to lay the pipe was under the Erie track.

THE ERIE CEASES TO BE HELPFUL.

Q. (By Mr. Clarke.) What? A. Under the Erie railroad track. It was in the switch yard; some four tracks side by side; and it was pretty difficult to go in there. We went there, honestly supposing we had a right to do so. I had spoken to the superintendent about it and he did not know anything different. When I returned to New York previous to this time he said, "All right." We were working away with our men, and the first thing I knew down came a force of two or three handcars, and they jumped on the track and attempted to put our men out of the ditch. I was at my office uptown. They went to the nearest telephone and I went down there and they were having a contest. My refinery was close by and I ordered the whole force out and we drove off the opposition. We

had what we term nowadays a "scrap." I drove them away and went on with our work.

Q. (By Mr. Phillips.) That was near Bradford, was it? A. Right in the city of Bradford. The next morning we were enjoined by the court. This was the Erie railroad that was objecting now, you understand.

Q. And was it in the state of Pennsylvania, where you had the right of eminent domain? A. Yes; I should have said that before. A letter was addressed to me by our attorney. This letter I will put in evidence, because I know all the facts.

DIFFERENT LAWYERS, REPRESENTING DIFFERENT RAILROADS, RAISE THE SAME OBJECTIONS AND SUPPORT THEM WITH THE SAME ARGUMENTS.

SEPTEMBER 8, 1889.

HON. LEWIS EMERY, JR.,
Bradford, Pa.

My Dear Mr. Emery: In reply to your inquiry am pleased to make the following statement:

The first legal opposition that we met with in constructing the line of pipe of the U. S. P. L. Co. was an attempt to prevent us from laying pipe under the track of the Erie railroad within the limits of the city of Bradford, at a point where both the National Transit Company and the Tidewater Pipe Company had previously laid their lines, and so far as can be learned, without the slightest objection on the part of the railroad company. We presented our bond and petition to the court of common pleas of McKean county and were met by attorneys on the part of the railroad objecting to the granting of the prayer of the petition and the approval of the bond. They had at the hearing a very exhaustive brief, with which they seemed to be familiar. They apologized to the court for the way in which they presented same, saying that it was prepared by Mr. Elliott, and that they had not had the time to carefully consider the same. I took very full notes of the authorities cited and of the points made by the attorneys for the railroad company.

A short time after this I had occasion to appear in the courts of Tioga county, representing the U. S. P. L. Co., in opposing a bill to restrain the company from laying a pipe under the Tioga branch of the Erie railroad. The attorneys at this hearing seemed to have the same brief as was used in the hearing in McKean county, citing the same authorities and making the same points. Later I represented the U. S. P. L. Co., presenting a petition and bond to the court of Bradford county, for the right to lay a pipe under the track of the Northern Central, at a point south of Elmira, and was again met by what appeared to be the same brief, authorities and points. The objections in all the cases were many, and the authorities cited numerous, and what seemed to me strange was the fact that in each there appeared to be the most complete harmony. It is wonderful how minds and labor of attorneys so far separated should bring out the same objections and support them by the same argument, yet so it was.

Very truly yours,

W. E. BURDICK...

THE CONTEST WITH THE ERIE AT HANCOCK.

We bought our way under every single road from there to Hancock. When we got to Hancock I knew there was something wrong. But I went with my men to connect up those two pipes, 120 feet apart, and we were met first with two derricks and two locomotives, a flatcar containing lumber and a little brass cannon that had been used for shooting holes through the tank that was run off the track, and a car holding about 75 men. The moment we came there with our men they supposed of course we were going to connect up those two pipes. They threw off the old slabs and stuff and built a sort of a cob fire over each end of the pipe. They threw off the lumber and built a house on each side of the track, and put two men in them with Winchesters. We stayed there three months looking one another in the eyes. We never got under the track. We spent \$70,000.

THE NEW YORK, ONTARIO AND WESTERN VIOLATES ITS CONTRACT.

The New York, Ontario and Western were induced to violate their contract. I should state that we went by the Ontario and Western because we got a contract out of them by which they would transport our oil down to Cornwall on the Hudson, and there we were going to put it into boats and draw it down to New York and deposit it in our tanks. That contract gave us the right to construct a pipe line on the right of way to the Hudson, for which we were to pay them a royalty of two cents a barrel. We were even cut off from the contract by the same power.

MORE LEGAL CONTESTS—THE SAME BRIEF—CONTRACT WITH THE NEW JERSEY CENTRAL.

We kept a standing army there at Hancock. We went back 70 miles to the Susquehanna River and we flanked the enemy until we got down to Wilkesbarre. At Wilkesbarre we had contest after contest in passing under the tracks of the D., L. & W. and the Lehigh Valley and other roads. This same brief came into the court. Seven lawyers, representing different lines, were against us, each one reading the same brief, making the same points. We beat them, and we built our line through and we connected with the Jersey Central railroad, a friendly railroad, which had a contract with us to draw our oil for a term of 99 years, with right to cancel the contract by a certain number of months notice.

Q. Who had the right to cancel the contract, the United States Pipe Line Company or the railroad?
A. The United States Pipe Line Company. We stopped there for a time because we were out of money. It cost us more than \$150,000 to fight our way to that point; their keeping us from going to Hancock and the expense of going down to Wilkesbarre, litigation, loss of time and loss of our business. Then we stayed at Wilkesbarre about one and a half or two years, and we concluded we would go on. So we secured a right of way from Wilkesbarre over to a place about 30

miles above Easton. We built that line there to the river and then we went into Jersey. The first thing we had to pass under was the Pennsylvania railroad.

NO FREE PIPE LINE LAW IN NEW JERSEY—THAT OF NEW YORK HAS BEEN AMENDED AWAY.

Q. Was there a free pipe line law in the state of New Jersey? A. No.

Q. (By Mr. Kennedy.) Is there in New York? A. Yes. You want me to explain the law to you?

Q. (By Mr. Phillips.) No. A. I think I had better do that. In 1878 New York passed the first pipe line law that was passed in this country. It was passed under the same pressure as the Pennsylvania law. It was a good, free, open law, and the Pennsylvania law is copied from it. But some one in 1890, just before we got down to Hancock, went in and had that law amended, and it became absolutely inoperative.

Q. (By Mr. Kennedy.) And you can not get the right of eminent domain under it? A. You can not get the right under that. The pipe line to Buffalo was laid under the original law. It was a good law.

GOOD FORTUNE IN GETTING PAST THE PENNSYLVANIA.

We had to go under the Pennsylvania railroad. Fortunately we found one of the secretaries of the treasury of the United States who lived in Trenton—I can not think of his name now—but we searched up a title and we found that he owned an acre of land, just one acre, which was used many years ago, during revolutionary times for a wharf and a dumping place for very, very old furnaces, iron furnaces, just back there. He did not know he had it himself until we found his title. We bought it and paid \$500 for it and we went under the Pennsylvania track.

Q. Did they have the right of way across this? A. Yes; but we had a title for the land. We had the title and went under there after a long contest.

TROUBLE WITH THE D., L. & W.

We got over to the D., L. & W., within the borough limits of Washington, N. J., and we bought a farm, the Stewart farm, over which the old Morris and Essex railroad passed. The charter was granted in 1836, and an easement had been bought over that land and paid for—had a deed for it. We bought the fee title of the land over which the right of way was given. Our attorney said we had a right to occupy the land. Six or eight months before that we had put in a piece of pipe to test what they were going to do, and they tore it out. So we thought we would not be beaten, and I took 50 men from our line and we went over there in the dead of the night and I placed my men on both sides of the hill. They had a watchman of the road passing up and down with a lantern in his hand, back and forth. He would come up to the culvert under which we were to pass the roadway, 14 feet high from the ground. He would look down and see that silence prevailed and go away. About four o'clock in the morning we took possession and when

9 o'clock had arrived on Sunday morning we had two pipe lines buried four feet under the earth and fastened to timbers as heavy as a span of horses could draw. We piled rocks on top of them and anchored them with chains, built a house on each side of the culvert of the right of way and took our breakfast in camp. About 12 o'clock some men came along and said: "You get out of here," and came down with their picks and bars. I was there in the pit myself and he said: "You will not get out?" And I said, "No; we belong here; it is our line and we will not disturb the railroad." He said, "You will get out; come along, boys." I said, "Don't be hasty," but he was a little hasty and I told the boys to take the men by the shoulders and the seat of the pants and take them out and lay them down carefully, which they did. On Monday morning two wrecking cars with 250 men rode in from Hoboken. They made a charge on the little band in the pit and we drove them out. That is all there is about it, we drove them out.

Q. (By Mr. Clarke.) When was this? A. This was in 1891. They wanted to compromise the matter and wanted to go to the courts, where we wanted to go. They said: "You permit our men to go into this subway, and permit them to remove some earth, and you go through the formality of arrest." I said: "All right." When we got down and they wanted to move the wagons away, off the pipe, we said no. He said: "The wagons are in the way." I said, "They are there on purpose, and I am not green enough to give you any advantage just now. The wagons will stay there. If you want to do any business of that character, go on." We arrested their men, and they arrested our men, and they wanted to know if we would go up and have the trial. So we went uptown and the sheriff had the men we wanted before the justice of the peace. Each one had his trial and was bound over to the court, and the issue was made up, and we went off to our dinner at the hotel, as I supposed, when men came rushing on horseback and said: "They're in a fight." I jumped into the first buggy I found—I did not know whose it was—and I found these traitors, who had promised to take this into court, there with two locomotives standing on top of the track hitched close together. They were running hot steam and water down into this pit on my men. They went to the fire box and threw hot coals down on them, threw stones and clubbed us; but we whipped them. I ordered every man out of the pit. I told them if they came back there I would shoot them. We barricaded ourselves and the Grand Army of the Republic gave us 48 muskets, and I sent to New York and got 18 Springfield rifles. We bound our pipes in with wire and tied them down, barricaded our house and stayed there for seven months holding possession until the court decided we had a right to stay there. The very men who are at the head of this—I knew them—the men who were there on watch were in the employ of the Tide Water and the Standard Oil Company. We are pumping oil through to the junction, after the difficulty we had in getting these rights of way through New Jersey. The very same men we found up in New York were offering as high as \$5 a rod to the farmers, instead of \$1.50, which is our price. The whole community

turned out to help us and defended us because of the public wrong. We built that line through.

THE PIPE ENDS 50 MILES FROM NEW YORK—THE FREIGHT RATE FOR THAT DISTANCE.

Q. (By Mr. Phillips.) Through to where? A. Through to the junction, 50 miles from New York. From there we have a rate of freight; not, as was stated here by one of the witnesses on this stand, a discriminating rate. The total price, I believe, as given here for transporting a barrel of oil from the oil regions to the seaboard, by the Standard lines, was 45 cents. We pay for that 50 miles on our refined oil 7 2-10 cents, and on the crude 6½ cents. It is not by the car load, or, as stated by the witness, about \$6 or \$7 a car. We give them cars that hold from 132 to 150 barrels. That makes about \$10 a car; a great big rate of freight for a haul of 50 miles. The road is very glad to get it. It gives them in revenue \$200,000 a year.

Q. (By Mr. Clarke.) What road is that? A. The New Jersey Central, friendly to us. I commend them. No discrimination, mind you. It is a rate that is open and not a secret rate. Anybody else can come in at the same price. We pay from that point the 7 cents, if we choose to, and the 6 cents; and we compete with the Standard Oil Company in the markets wherever we have fair competition and fair railroad rates.

THE RAILROADS HAVE WON AT LAST.

We have contested this suit in the courts of New Jersey for the last four years; and now a decision has been handed down by the chancellor's court that the contention of the United States Pipe Line against the D., L. & W. railroad is not valid, and we have notice that we must take those pipes out. The railroads of this country are a barrier to any modern improvements of transportation.

Q. What was the ground of the decision; do you know? A. That they had a title, not only an easement but the title or the fee in the land, although they did not buy the fee. There were two decisions in our favor by the vice chancellors, one by Vice Chancellor Emerick and one by another—I do not recollect his name. But they were reversed. So our line has got to come out from under that road. It is doing no harm, lying in the midst of a large tunnel, or, I should have said, an open cut. And the old farmer, reserving the right, has egress and ingress to his fields on both sides. Nevertheless, the court is against us. I thought I could produce a letter by which we are given notice that we must remove those pipes immediately.

Q. What state was that? A. New Jersey.

Q. (By Mr. Phillips.) The decision of the lower court, if I understand—? A. Sustained the principle that we had title.

Q. Was reversed afterwards? A. Reversed in the chancellor's court. There is another court which is higher than that—the superior court.

Q. Has your company appealed this case? A. Oh, we have gone through with all of it. Now, then, that

is the story of attempting to stop competition in the business.

Whereupon the commission took a recess until 2:15 o'clock in the afternoon.

WASHINGTON, D. C., *Tuesday, September 12, 1899.*
P. M.

The commission was called to order by Vice Chairman Phillips at 2:20.

Lewis Emery, jr., again on the stand and examination resumed.

Mr. Phillips. Senator Emery will now proceed with his testimony in his own way.

THE UNITED STATES PIPE LINE COMPANY; ITS VOTING TRUST—THE STANDARD BUYS STOCK IN IT.

The Witness. I desire to take up, in connection with what I was saying this morning, the subject of competition. The United States Pipe Line Company was organized with a capital originally of \$600,000 and at the present time its capitalization is \$2,000,000, I believe. We formed in that company a voting trust. I should say that the United States Pipe Line Company was organized under the general corporation act of the state of Pennsylvania. We formed a voting trust for the purpose of keeping the stock out of the hands of any one that was disposed to attempt to control our operations. There was at the time this trust was formed, I think, about \$800,000 of the stock subscribed for and every dollar of it was in the trust. However, regardless of the provisions of this trust, the Standard Oil Company purchased at an advance on the par value, which is \$100, \$386,000 worth of the stock. Before they had purchased it, however, the stock taken had been increased by new subscriptions to about \$1,200,000; but their expectation and attempt was to get the control of the stock. Owing to the loyalty and determination of the rest of the stockholders, they were unable to purchase any more stock. That trust is in existence today—a voting trust. The Standard Oil Company presented themselves at one of the yearly meetings of the United States Pipe Line Company and attempted to vote that stock. We refused, by unanimous resolution of stockholders, and he was ejected from the room, out of which grew the suit of the National Transit Company and J. C. McDonald vs. the United States Pipe Line Company.

THE STANDARD GETS A DIRECTOR ON THE BOARD OF THE UNITED STATES PIPE LINE COMPANY.

Q. (By Mr. Phillips.) In what court? A. That was brought in the McKean county court and was appealed to the state supreme court, but was never heard by the supreme court. The case was not even called up. Our attorneys were notified that the appeal was illegally taken because an officer of the company had not made an affidavit to the bill of appeal, although a stockholder had made an affidavit. I was absent from

home. On that ground the supreme court of the state of Pennsylvania threw it out, although we gave to the court several decisions wherein other courts had held that to offer an affidavit made by a stockholder of the company was quite sufficient for an appeal to the supreme court. This was the case. The Standard representative has since been allowed in the meetings; he has listened to the deliberations, and has been allowed to vote upon such questions as he chose to vote on, ever since they have held this stock. They still own it.

Q. Was this gentleman elected a director or not? A. He was elected by the circumstance of having this stock. We recognized him and he was elected and is a director of the company; voted in every time we elect. He knows just exactly what we are going to do, and participates in everything pertaining to the general business of the company.

Q. (By Mr. A. L. Harris.) Was he prohibited by the law of the State of Pennsylvania, or by a by-law of your company? A. From entering?

Q. From entering; from voting. A. I can answer that question later. I can not just at the moment; I can read the plea of our people, which is here. I don't know which it was. It was on some ground; we thought it to a legal ground, and we still think so. But when we were cut off by the supreme court's decision that the affidavit was improperly made, why, of course, our case failing, we could not renew it. That is all there is about it. Our attorneys denominated it a technical matter and not one of good law. I don't know anything about it.

THE INDEPENDENT REFINERIES ARE INDEPENDENT.

The stock that these people purchased in the United States Pipe Line belonged, some of it, to three of the largest refinery owners in the association of refiners. The refineries belonging to the independents have no connection with any of the stock companies. The refineries are owned by individual operators and have nothing in common with the United States Pipe Line or the Pure Oil Company, or the Producers' Oil Company, limited, or any other transportation or oil marketing company. They market their oils individually. They are competitors with one another. I go into the market and I meet there my brother refiner and I put a price upon my goods and he puts a price upon his goods. No objection; free, open competition among all these refineries that are in the field. There are today something like 15 of them, which furnish oil to the transportation companies; and we sell oil not only to the Pure Oil Company, doing business in Europe, but we sell oil to England, France, Italy and every other country, independently of the Pure Oil Company. So do not confound these refineries with what we are going to finally deal with—the trust; because they have no connection with it. They are independent; all competing against one another in the markets of the world.

Q. (By Mr. Farquhar.) Do these refiners also sell to the Standard? A. Oh, yes. I sell the Standard lots of goods, and I make them pay all I can, too, like everybody else.

REFINERIES RECENTLY BOUGHT BY THE STANDARD AND
DISMANTLED.

These three gentlemen that I referred to as owning three of the largest refineries connected with this refiners' association—if you choose to call them such; they are not an association—when they sold their stock they sold their refineries as well, and they received a large sum of money for them. Within less than eight months from the purchase of these refineries by the Standard Oil Company one of them belonging to Mr. Ramage, was dismantled and destroyed. The next to be partially dismantled was that belonging to Hon. John Fertig, of Titusville, known as the National Refining Company. The next was the Continental Refining Company. All these refineries were first class and built, especially the last two, in modern times, and with every improvement; so was Mr. Ramage's; in fact, he made more by-products, etc., than any other. All these refineries have been demolished and taken from the ground where they originally stood. That has all happened since 1895.

Q. (By Mr. Phillips.) Was any effort made to buy other refineries? A. Oh yes. These people seemed to constitute themselves a committee. They labored with me, and labored with others. They said that it was the best thing to sell out and quit. The rest of us did not think so, and we are on earth yet. I should have been glad to have gentlemen who are anxious to hear about these modern-things hear those representations.

THE PURE OIL COMPANY—ITS VOTING TRUST HAS BEEN
MODIFIED.

Q. Now, will you explain something in regard to the Producer's Oil Company? A. The Standard Oil Company bought a majority of the stock of the Producers' Oil Company, limited. Its method of operation in purchasing that stock you have before you already. Through the same method they purchased a majority of the stock of the Pure Oil Company, limited. They have not been permitted by the courts to vote it, and it has had to go back into the hands of the original owners, if necessary, by order of court.

Q. Will you make some statement in regard to the Pure Oil Company as organized thereafter? A. The Pure Oil Company was organized under the laws of New Jersey. Its capital at present, I believe, is \$2,000,000, with \$377,000 paid in. We are very much afraid that when our United States Pipe Line trust expires, which will be within the next 15 months, there may be some attempt to get possession of more of that stock. We have felt the necessity of combining or putting the stock of the several companies into the hands of the Pure Oil Company and forming a voting trust, solely for the purpose of protection. I desire to say that the paper which was referred to has been amended. First, it is not a permanent voting trust. Second, three-fifths of the stock voted at any time can dissolve the trust, or can overrule the power of the voting trust. Only one-half of this stock, and 10 shares over, is put in trust, and three-fifths of the

whole at any time can control the policy of the company. Under the terms of the charter it terminates within 46 years. Therefore it is not perpetual.

Q. (By Mr. Farquhar.) Is that one of the new amendments? A. Yes.

Q. (By Mr. Phillips.) Was it originally formed for over 50 years? A. No; chartered for 50 years.

Q. (By Mr. Farquhar.) The old form required four-fifths? A. Yes.

Q. Section four of section 12 (reading): "This agreement may be cancelled and the trust hereby created dissolved only by the winding up of the Pure Oil Company, or by the consent in writing, duly executed, of the equitable owners of four-fifths of the shares held in trust hereunder, and of four-fifths of all the other shares of the company, after providing in full for the redemption or purchase, at \$1.10 per share, in cash, of all the preferred and common shares of the company at the time outstanding." A. Yes.

Q. Is this redemption feature still maintained, that the trust cannot be dissolved until after providing in full for redemption or purchase at \$1.10? A. That provision is wiped out by the fact that three-fifths can control or change the by-laws, or change anything pertaining to the organization or management of the company.

Q. Well, is this stock-redemption feature still retained? A. I don't know, sir; I can't answer that question.

THE PURE OIL COMPANY IS NOT A TRUST IN THE
INDUSTRIAL SENSE.

Q. Now, it has been said here that this Pure Oil Company is not a trust. I called the attention of another witness to the fact that it is specifically mentioned as a trust in your articles of agreement and also of incorporation. A. Yes.

Q. So that you are not afraid to call it a trust? A. I call it a voting trust. I will submit your question to decision, if you choose, according to the definition of a trust given by the Commercial Year Book of the New York Journal of Commerce. The definition is, "As popularly used, the word 'Trust' is now applied to any consolidation, combine, pool, or agreement of two or more naturally competing concerns, which establishes a partial or complete monopoly, in certain territory, with power to fix prices or rates in any industry. Viewed from the standpoint of the consumer, the informal agreement and the ironclad combine look alike if the one has the same effect as the other upon prices."

Now, there is nothing in the world about the Pure Oil Company that can possibly lead up to that definition. There are several other definitions that I can refer to.

Q. Let me suggest that there are five true definitions given by Mr. Cook, who is an authority, one of the greatest lawyers in the country, and also by Von Halle. There are five forms of trusts.

Q. (By Mr. Phillips.) I would ask the Senator to read the definition, under the Sherman act, of a

trust, if he has it there. A. It needs no argument to show that the Pure Oil Company is not a trust. It lacks every element of a trust. A trust is defined by the anti-trust law known as the Sherman act of 1890 as follows: "All trusts and combinations in restraint of trade are unlawful." Another accepted definition is that a corporation or combination of corporations, with vast capital, made for the purpose of securing and maintaining a monopoly in any branch of industry, is a trust. The odious feature is the aim and purpose to secure a monopoly. The Pure Oil Company was organized, not to secure a monopoly, but in aid of trade, and to maintain competition. It expires by the expiration of its charter 46 years from the 6th day of next November. It is therefore neither permanent nor perpetual as alleged. It would be silly to hold that a corporation with a paid up capital of only \$377,000, opposed by a trust in the same industry with a par capital over two hundred times and a market value over one thousand times as great, could be a monopoly or restrain trade; and unless it is a monopoly, or restrains trade, it can not be a trust. That the power to vote one-half of its stock has been placed in the hands of trustees, to prevent a great monopoly from intruding to destroy it, does not change the character of the corporation or make it a trust. If the Pure Oil Company should ever develop monopolistic tendencies, the present holders would be glad to have it destroyed. If any anti-trust legislation, at any time, brings within its restrictive or destructive provisions the Pure Oil Company, the stockholders of that company will welcome its destruction.

NO EFFORT TO COMBINE WITH THE STANDARD.

Q. You are a large holder in most of these companies. You are president of the United States Pipe Line Company, and you are a large holder in the Pure Oil Company. Do you know of any effort ever having been made to make a combine of these various companies with the Standard? A. No, never; no, sir.

Q. (By Mr. Farquhar.) The commission has been furnished the original form of the incorporation of the Pure Oil Company, and it will be printed as a part of the minutes of this commission. Now, can you furnish with your testimony a copy of the amended one in proper form? A. Oh, yes; I shall be very glad to.

EFFORTS NOW MAKING TO COMBINE THE INDEPENDENT COMPANIES.

Q. That is what I wanted to know. A. Now, as to the changing of that trust; we have not got the voting trust yet. We, perhaps, are crossing the bridge before we get to it; but this has not been accomplished. It has not been accomplished, so far as the combination of the stock of those companies is concerned. All that is in the shape of a trust, out of about three or four million dollars, is \$377,000. The other is in contemplation, because we fear that

when this present trust of ours—the United States Pipe Line—expires, we shall be in danger, and we are going to put ourselves under cover; that is all.

Q. You have incorporated in the State of New Jersey the Pure Oil Company? A. Yes.

Q. You have how much capital paid in? A. \$377,000.

Q. You are still under the operations of a majority of the stockholders bringing in other companies? A. Oh, no; we are simply talking about it and hope to accomplish it. It is not a question that has absolutely been decided, though I expect that it will be done. The amendments have not even been printed; but we are going to try to get this stock in for self-protection, and put it into the voting trust. It has not been accomplished yet by any means.

THE INDEPENDENTS ASKED THE STANDARD FOR PERMISSION TO LAY THEIR PIPES UNDER THE RAILROADS—THEY DID NOT PROPOSE TO SELL OUT TO THE STANDARD.

Q. (By Mr. Phillips.) Now, will you answer the other question in regard to any effort amongst all these companies to make a combine with the Standard Oil Trust? A. I was president and general manager of the United States Pipe Line Company from its inception up to a little over a year ago, and probably I should have been still in the management of it if had my health not failed. I was always present at general meetings and had, under our by-laws, the appointment of all committees. During our trouble that I have recited relative to the construction of this line, I appointed a committee, as chairman of the board of directors, to go to New York and see if some arrangement could not be made with the Standard Oil Company by which they would permit us to go under the railroads of the country. We did not go to the railroads. The railroads had nothing to say about it. We went to the Standard Oil Company, but not for the purpose of selling one single share or one dollar's worth of our property. The resolution or motion offered was that the committee go to New York for the purpose of seeing if the Standard Oil Company would not let up and let us go through to the coast. I appointed that committee under that resolution. Mr. Phillips, Mr. Lee, Mr. Murphy, Mr. King, Mr. Jennings, of Pittsburgh, and some other gentlemen were appointed to go there for the purpose I have named. They had no authority to make any proposition to sell the property or to make any settlement with the Standard Oil Company on any such basis as selling out any part of the company's property. I am sure they did not make any such proposition.

EFFORTS TO GET A GENERAL PIPE LINE LAW IN PENNSYLVANIA—METHODS OF THE OPPOSITION.

Q. In regard to the opposition to laying the pipe line through Pennsylvania it was said by Senator Lee that certain dodgers were circulated in the

eastern part of the State. Can you state the purports of these dodgers, or have you any knowledge of them? A. In 1868 the legislature of Pennsylvania passed an act for the incorporation of pipe line companies, as I told you yesterday. We got such a law, through the permission of Mr. Thomas A. Scott, for eight counties in the northern part of Pennsylvania, and the Wallace act of 1874 repealed that law. Immediately upon the repeal we attempted to get a law passed giving the right of eminent domain for the construction of pipe lines. That was introduced regularly from 1874 up to 1883—every session during my career in the legislature, both House and Senate, for ten years. It was my duty to introduce this bill and endeavor to pass it. In 1883 the bill was pending, and the Standard Oil Company, by its agents, had gone all over the southern portion of the state of Pennsylvania, which is a very beautiful part of the country, as you know, and had said to the farmers that if the pipe lines were laid in that region there would be a general destruction of their property; that their orchards would be destroyed, and there would be general havoc, and the pipe lines would explode and probably destroy life as well as property. At the same time they had thousands and thousands of miles of pipe line in the State of Pennsylvania, Ohio and West Virginia. In order to meet and counteract the impression among the people Senator Lee and myself, night after night and week after week, visited the school houses and court houses, and every place where we could get a gathering of people to listen to our explanation of the necessity of the passage of this law. Dodgers were issued and pushed under my arm. The effort was to get my attention to them. As I entered the court house in Lancaster, Pa., there was pushed under my arm a paper which read: "Look out for false prophets." Beneath it read: "These people are endeavoring to pass a law that will destroy the springs on your farms; it will blow up your houses; it will create havoc in your fields, when the pipe bursts, by killing the grass. The most dangerous of all laws."

We had placed our circulars in all the seats of the court house in Lancaster, Pa., and some miscreant went in there and took all of our circulars setting forth our object and what we were after, and in their place dropped into the seats these yellow papers, on which was written, "Look out for false prophets." Those dodgers were furnished—I don't care what the other witness said. He was not on the ground to make any speeches in behalf of the oil country. He can not say those dodgers were not circulated, and if he does he certainly says that which he does not know anything about. I was there through the whole of it, and we went on with that operation week in and week out and month in and month out. We were from 1874 to 1883 getting that law.

\$10,000,000 IN REBATES FROM OCTOBER 17, 1877, TO MARCH 31, 1879—THE EVIDENCE.

Q. There was one other question on which your testimony was brought into dispute; that of the

\$10,000,000 in rebates that was said to have been paid to the Standard Oil Company in a given time. This, I believe, was denominated a lie or a lousy lie. I think it was in connection with this question. A. Well, gentlemen, I do not mean to lie; I do not mean to tell any thing but the truth as I understand it, and I have said nothing before this commission that I can not prove, and my statements made in 1888 are just as sacred to me today as they were when I made them. If I have told any lie I shall beg the pardon of the great United States of America and all my friends therein, and endeavor to rectify any wrong that I may have done.

My authority for that, which I will produce, is unquestioned, and I defy anybody to prove that my assertions or statements at that time were false. I desire you to turn to page 101 of my pamphlet, which I have given you. I need not take your time by reading over all the evidence. It is before you on pages 101, 102, and 103; you can read it as well as I can, but we will go over to 104; there is a recapitulation of the oil business. (See Fiftieth Congress, first session, House Reports, vol. 9, pp. 242, 243.)

I hold in my hand a book of testimony in the case of The Commonwealth against the Pennsylvania Railroad Company. This testimony can be had, I think, in the Library of Congress. It can be found in the library at Harrisburg, and undoubtedly at many other places.

I had the honor to be one of a committee of three to visit Gov. John F. Hartranft and lay before him our grievances; and we invoked the aid of the Commonwealth of Pennsylvania. That good, great, and kind man gave it to us. He required the Pennsylvania Railroad Company to answer the charges made against them with regard to the South Improvement Company contract and other acts, from the commencement of the history of the Standard Oil Company or the South Improvement Company, from 1872 to the final hearing of the suits in 1879. This is the testimony of Mr. Cassatt, first vice president of the Pennsylvania Railroad, making a clean breast of everything pertaining to the contracts. From his admissions and from the admissions of other officers connected with the road I have computed the shipments of oil during 1878 and the first quarter of 1879, making a grand total of 18,556,277 barrels of oil shipped; and from this testimony I have deducted the fact that 55 cents per barrel was paid upon the transportation of that petroleum. I charge the rebates on all that oil to the Standard Oil Company; not only on what was shipped to the coast. As I showed you yesterday, on all oil that went west also they had to have their rebate. Again, it was carrying out the provisions of the old agreement, the South Improvement contract, although that had been repealed. The drawbacks on that oil are even greater than I have said in this report or in my evidence in 1888.

Q. (By Mr. Kennedy.) How much space did Mr. Cassatt's testimony occupy in that book? A. Some 50 or 60 pages. It begins on page 600 and runs to page 737. Here is my authority, and I have given

the pages in my testimony. Let anybody prove that I am mistaken. But \$10,000,000 is nothing compared to the rebates paid; it is a bagatelle.

STATEMENTS OF PREVIOUS WITNESSES AS TO THIS ESTIMATE OF THE REBATES.

Q. (By Mr. A. L. Harris.) I think it was stated that the testimony of Mr. Cassatt has been perverted, and the conclusions drawn are not warranted by the testimony. That is the reason, I suppose, that you are asked to refer to the part of the testimony in which this admission is made.

A. I have given each page in my testimony of 1888.

Q. (By Mr. Kennedy.) I thought there might be a paragraph or a page in which he made the admission. A. The testimony is not by him only, but by other officers of the Pennsylvania Railroad; that was the object, to find out what the discrimination was.

Q. I think the testimony was to the effect that this \$4,771,000 which the Pennsylvania Railroad got was all that you could figure from his statement, and all the rest assumption. A. Oh, no; because, not only did the Pennsylvania Railroad Company get it, if he admits they got \$4,000,000, in this twelve or fourteen millions they must have participated.

Q. He says that is an assumption. A. It has been proved; proved by the Hepburn committee, just as plainly as this is proved. If he admits \$4,000,000 was paid to the Pennsylvania Railroad alone, it is more than I gave them. My computation is based on the total shipments of oil. I did not say that the Pennsylvania alone got it. I say the rebate is so much; even more.

Q. I do not think he makes the admission in regard to the amount; but his statement is that Mr. Cassatt's admission was in regard to the Pennsylvania Railroad's transportation, and not with reference to the others. A. I have shown the collection of these rebates by contracts. I could produce the three contracts. These railroads were under contract to transport certain classes of oil at certain rates. This all happened from 1872 to 1877, or 1879. I have shown you the 22 cents from the pipe line to the car, and the 49 cents was to go for the transportation of oil from Cleveland and common points in the oil country to New York.

AVERAGE COST OF OIL WELLS.

Q. (By Mr. Phillips.) It was stated here that the cost of drilling a well in 1890, or during the last ten years, was about \$2,000. You are a large operator in all the fields, and we should like to have your estimate of the cost of drilling wells during that time. A. Of course, I have drilled a great many wells, running into several thousand, and we always keep track of the expense in our office and the cost of each and every well. We have drilled wells in the lower country, which we call deep territory, that have cost us \$8,000, \$10,000, some as high as \$30,000 each to drill. When you come up to \$30,000, that, of course, is accounted for by the fact that

you sometimes stick your tools or drop something into the hole, or the well may cave in. Then you are obliged to move your derricks. We have always figured that our lower country wells cost us on an average \$8,000. In the upper country we have figured that we could drill our wells for \$2,500. We can not do it for that now. That was when you could get pipe for less than half its present price. The reason why wells are so expensive in the lower country is that you have to put in three lengths of casing. Some of that casing runs down into the earth 1,600 feet, 2,000 feet. I have loaded into a single hole 150 tons of iron. I should say this—without going into a close calculation of it, the question being sprung upon me here at this moment—that the average cost of a well in the oil country under the present condition of things is nearly \$4,000, in my judgment.

Q. (By Mr. Farquhar.) On account of the high cost of iron at the present time? A. I think it was \$4,000 before the prices advanced so largely. We can not do it for that now. You can not drill wells at a profit now, at the present price of oil. Iron has gone up 100 per cent and more.

Q. (By Mr. Phillips.) What is your estimate of the average production per well, taking the wells as a whole, during the period named, from 1890? A. That I have not in my mind. If you want me to compute that I will look it up, but can not answer it offhand. That is a mathematical problem.

THE INDEPENDENT PIPE LINE MUST GIVE UP GOING TO NEW YORK AND GO TO PHILADELPHIA INSTEAD.

Q. (By Mr. Clarke.) What is the present status of the United States Pipe Line in New Jersey? Are you running oil there and carrying it part way by railroad to the seashore? A. Yes.

Q. Is that question of the right of way under the railroad in litigation? A. No; it has been settled by the courts.

Q. Settled in your favor? A. No. We have to take our pipes out. We have got to quit and come to Philadelphia. The right of eminent domain in Pennsylvania gives us the right to come to Philadelphia. We have to throw away our expense of upward of \$150,000 and turn around and come to Philadelphia with our line.

Q. You have to make Philadelphia your seaport? A. Yes.

A PIPE LINE SHOULD BE AUTHORIZED, LIKE A RAILROAD, TO GO ANYWHERE BY PAYING THE DAMAGES.

Q. You say you can not cross certain railroads in the State and can not get to the seaboard there with your pipe lines; what remedy would you suggest for that state of affairs? A. Well, I would suggest that New Jersey pass a law to let us go. But I want to say to you that I went to New Jersey—but in order to answer that question, in order to have you understand, I should have to refer to some persons I should not like to. They are very high in office; one is in the second highest office in the

United States and the next is in the third highest office in the United States.

Q. You think the passage of a free pipe line bill by the legislature of New Jersey would give you the right you long have sought? A. Oh, yes, certainly; because it is only a question of getting through by paying the damages, just as a railroad does. That is what we could not get. I have argued the case long and loud; and my experience there in the State of New Jersey, with the legislature, was one that the public ought to know, but it is so disgraceful that I am ashamed to tell it. By the way, I did not answer a question that somebody asked me: I started to refer to this and you got me off the track.

COMMONWEALTH OF PENNSYLVANIA VS. JOHN D. ROCKEFELLER, ET AL.—THE CAMPBELL CONTRACT.

Q. (By Mr. Kennedy.) I asked you about the testimony of Mr. Cassatt. A. Exactly; and in relation to that compact, the Campbell contract. The contract is here in my hands now. But I want to say to this commission that the outcome of the suit brought by Pennsylvania against the Pennsylvania Railroad was this—the indictment No. 26, session of 1879, Commonwealth of Pennsylvania vs. John D. Rockefeller et al., court of quarter sessions.

(Here the witness read the indictment.)

This was a suit brought by the Producers' Protective Association, or rather a complaint made by them to the Commonwealth of Pennsylvania, which brought suit, and out of this grew the indictment. The case was never tried. They attempted to get a change of venue, and they failed in that. A very stubborn fight was made. They claimed that the oil country was prejudiced, and they could not get justice. They appealed to the supreme court of Pennsylvania for relief, and through some process of law they got it. You lawyers know better than I how they may have obtained it; but the case was dragged along in the same old style that I have told you about, and finally, on account of discouragement and lack of funds, and disagreement of the committee upon the matter, Mr. B. B. Campbell, president of the Producers' Protective Association, settled the case, receiving \$40,000, which was used in defraying the expenses that had been incurred, and receiving the contract that has been referred to. Probably it is not necessary for me to read that contract.

Q. (By Mr. Phillips.) You had better give us the substance of it. A. You will find, on page 407 of the Bacon committee's report, the exact language of the contract itself. First of all, the provisions in respect to the Campbell admission, and the United Pipe Line, and then the Pennsylvania Railroad Company's admissions. I would state briefly that this contract was presented to the producers to accept, but almost by unanimous vote they rejected the settlement, and there was a sort of a general breakup over the action of the president of the Producers' Union.

Q. (By Mr. Farquhar.) That does not agree with the record. A. The record is right.

Q. (Reading.) "Resolved, That the general council of Petroleum Producers' Union approved the action of the president in withdrawing the suits against the Standard Oil Company as wise and judicious." A. I am very glad you corrected me on that. The reason why I said they did not accept it was this: There were only two men who signed the contract, B. B. Campbell and A. N. Perrine. I refused, as did everybody else. B. B. Campbell, being a manufacturer of oil, received the rebates, but there was some question about it. For a long while there was some difficulty between the Pennsylvania and the northern railroads because Mr. Campbell was permitted to go in and ship his oil.

NATURE AND EFFECTS OF THE DIVISION OF TRAFFIC PROVIDED FOR IN THE CONTRACT OF 1884.

You are anxious to get something new, up to date. Now, here is a contract that went into effect in 1884, and was recently brought out in a suit for discrimination for a large sum of money, which is now pending against the Pennsylvania Railroad. The amount sued for is several hundred thousand dollars. Representatives of a large concern in this country purchased oil and shipped it over the Pennsylvania Railroad, and sued for rebates, and they have recently produced the contract of 1884. I understand it is in existence at the present time. If I am mistaken about its being in force, I desire to be corrected, but I understand it is in force at the present time. If you desire to have it read I will get somebody to read it, but it is what I term a nefarious contract.

Q. (By Mr. Clarke.) Can you answer the question whether that contract provided for rebates? A. It provides for something that is a great deal worse.

Q. (By Mr. Phillips.) What is that which is worse? A. It requires that 26 per cent of the shipments of oil over the roads. The pipe lines can carry it all if they want to, with the exception of the residuum. The railroads need not have made this contract, because the residuum has to go in cars anyway. You can not pump it.

Q. (By Mr. Clarke.) Do you call that nefarious? Do you see anything written in the contract that a certain per cent. of the product shall go over the road? A. Yes.

Q. I would like to have you explain wherein that is wrong? A. I would like to have it read.

Mr. Phillips. If there is no objection the contract will be read.

A. I confess to you the provisions of this contract have only been communicated through another source, and it has never been given to the public, to my knowledge, until it came out in this suit. It is practically new to me, and I think will be new to the world.

“Agreements Between the Pennsylvania Railroad Company and the National Transit Company, Dated August 22nd, 1884, Being Two Agreements of Even Date, as follows:

“Memorandum of a traffic agreement, made this 22nd day of August, 1884, between the Pennsylvania Railroad Company, hereinafter designated the Railroad Company, and the National Transit Company, hereinafter designated the Transit Company, witnesseth:

“That for considerations mutually interchanged, the parties hereto agree, each with the other, as follows:

“First. The Transit Company owns an extended system of local pipes in the oil regions of Pennsylvania and New York, which are grouped into a separate division, known as the United Pipe Lines Division of the Transit Company’s Local Division.

“The business of this division is to collect oil from producer, store it in tanks, and deliver it, as may be desired, to any through carrier of petroleum, which will transport the same to where it is to be refined or otherwise disposed of.

“The Transit Company also own through or trunk line pipes extending from several points of connection with the aforesaid local pipe division to various refining and terminal points.

“With these latter pipes, which will be hereafter entitled the Transit Company’s Trunk Line Division, it competes in the through carriage of petroleum with all other through carriers, whether pipe or rail.

“The business of its local division is therefore entirely distinct from the business of its through trunk line division.

“It undertakes and agrees that its local division will deliver into cars furnished by the railroad company at any of its regular delivery points and under its regular delivery rules whatever petroleum the owners thereof may desire to have so delivered and as the railroad company may furnish cars to transport, and will make no discrimination either in its local charges for carriage, storage and other services, or in the use of any of its local facilities, against such oil, but will at all times treat it in the said respects as favorably as it at the same time treats any other petroleum which may be delivered to its own trunk line division or to any other through carriers.

“Second. The transit company agrees that all petroleum brought to the Atlantic seaboard by all existing carriers, whether rail or pipe, now engaged in transporting such property, or which may hereafter engage in such transportation in conjunction with the transit company’s pipe lines, shall be ascertained monthly, and so much of it as shall have been shipped in the refined state shall be reduced to its equivalent in crude oil by considering that one and three tenths (1 3-10) gallons of crude are required to make one (1) gallon of refined oil. It further undertakes and agrees that if of the total so transported the railroad company shall not have moved in its cars twenty-six (26) per centum thereof, the transit company shall cause to be delivered to cars furnished by the railroad company at Milton, Pennsylvania, such quantity

of crude petroleum as shall, when added to the amount which has been actually transported by the railroad company to the seaboard in said month, make the total transported by the railroad company in said month equal to said twenty-six (26) per centum.

“The railroad company agrees to furnish the needful cars and facilities, and promptly transport the oil which the transit company agrees in this contract to deliver to it at Milton; Provided, That if during any month the railroad company is not able to assign from its oil equipment a sufficient number of cars to the traffic of the transit company to move the proportion of oil herein provided to be delivered at Milton, then during that month the transit company shall be required to so deliver to the railroad company such quantity of oil as the railroad company shall be able to transport, and shall not be required to make up any deficiency that may occur during said month.

“Efforts shall be made by the transit company to deliver so much during each month as will probably be necessary to make the total carried by the railroad company equal to said percentage.

“Shortages, if not due to short supply of cars, and such excesses as may be found to have occurred in any month, shall be adjusted in the following month or as soon afterwards as shall be possible.

“Third. It is agreed that the proportion of petroleum which the transit company is to deliver under the second section of this agreement shall be considered as petroleum transported from Coalgrove, Pennsylvania, via Milton, Pennsylvania, to the Atlantic seaboard, and that the railroad company shall be entitled to one-half of the current through rates thereon.

“It is agreed that whenever the through rates shall be so low that the railroad company shall suspend the movement of oil by its cars at other points than Milton the transit company shall during such suspension not be bound to deliver to the railroad company any oil at Milton.

“Fourth. All joint rates for the joint transportation of oil from any delivery point of the local pipe division aforesaid to any refining or terminal point shall be fixed by the railroad company, subject to the advice and concurrence of the transit company.

“It is agreed that said joint through rates shall be uniform to all parties. The railroad company stipulates that it will make no discrimination whatever, either in rates or facilities, against the transit company or against the oil which the said transit company here-in covenants to deliver to it.

“It is agreed that the joint through rates to Philadelphia shall always be five cents less per barrel on crude oil, or its refined equivalent, than shall be currently charged to New York harbor.

“It is agreed that the joint through rates, which shall be so fixed from time to time, shall be as low as shall be currently made between same and similar points by rival carriers of petroleum, and shall not be higher than an approximate mileage proportion of rates current on petroleum produced south of Oil City, nor than rates from Olean and similar points.

“It is also agreed that rates on refined oil and other products of crude oil shall be fixed by the railroad company upon the following basis, viz.:

"From railroad stations in the oil region to which oil is delivered by local pipes the rate to any point east thereof on a barrel of refined oil or other products shall be one and three tenths (1 3-10) times the current rate on a barrel of crude oil to the same point.

"From Pittsburg the rate to any point east thereof on a barrel of refined oil or other products shall be one and three tenths (1 3-10) the rate currently charged on crude oil to any such eastern point from rail points of Oil City: Provided, That one and three-tenths times the charges for moving a barrel of crude oil by rail or through pipe from the local pipe to Pittsburg shall first be deducted therefrom.

"From Cleveland and Buffalo the net rate on a barrel of refined oil or other products to any point east thereof shall be not less than is currently charged to the same point from Pittsburg.

"Fifth. Whenever the term barrel is used herein, unless otherwise specified, it means 45 gallons of crude petroleum, and whenever the term oil is used herein, unless otherwise specified, it means crude petroleum.

"Sixth. The transit company hereby agrees that it will not make any more favorable terms with any other rail line connecting with any of its pipes than the terms which under this agreement are given to the railroad company, or if for any reason it should desire to do so, it hereby agrees to modify this contract so as to give the said 'more favorable terms' to the railroad company.

"Seventh. All existing contracts between the parties hereto shall be deemed to have been accomplished and shall become void and of no effect upon the day this contract goes into operation.

"Eighth. This contract shall take effect as of the first day of August, 1884, and shall continue until terminated under the provisions hereof. It may be terminated after August 1, 1889, by either party hereto giving 90 days' written notice to the other of a desire that it shall end, at the expiration of which notice it shall cease and determine.

"In witness whereof the parties hereto have executed this agreement under their corporate seals the day and date above written.

"THE PENNSYLVANIA RAILROAD COMPANY,
[L. S.] By FRANK THOMSON,
"Second Vice President.

"Attest: JOHN C. SIMS, JR., *Secretary*.

"THE NATIONAL TRANSIT COMPANY,
[L. S.] By C. A. GRISCOM, *President*.

"Attest: JOHN BUSHNELL, *Secretary*."

"Memorandum of agreement made this 22nd day of August, 1884, between the Pennsylvania Railroad Company, hereinafter designated the railroad company, and the National Transit Company, hereinafter designated the transit company.

"Witnesseth: That for considerations mutually interchanged the parties hereto hereby agree with each other as follows:

"Whereas, the parties hereto have made an agree-

ment of even date herewith, in which, among other things, it is stipulated that under certain circumstances the transit company shall deliver certain crude petroleum into cars furnished by the railroad company at Milton, Pa.; and

"Whereas, it has been proposed that the railroad company shall contract with the transit company to the effect that the transit company shall transport through its pipe lines the aforesaid crude oil, which, under the other contract aforesaid, it has undertaken to deliver into the cars of the railroad company at Milton.

"Now, therefore, this agreement witnesseth:

"First. The railroad company agrees that instead of delivering said crude oil to said cars at Milton the transit company shall transport the same through its pipes to destination, and the transit company undertakes and agrees to do such transportation. It is mutually agreed that the compensation to the transit company for doing said work shall be as follows, viz:

"Whenever the through rate for transporting a barrel of crude petroleum from Olean to Philadelphia shall be 40 cents, the transit company shall receive eight cents per barrel as such compensation for so much of said oil as under the provisions hereof shall be considered as Philadelphia oil.

"For each five cents of increase or diminution in said rates from Olean to Philadelphia the said compensation on Philadelphia oil shall be increased or diminished one cent per barrel.

"Provided, however, That the transit company shall not be obliged to accept less than six cents per barrel, and shall not receive more than 10 cents per barrel on such Philadelphia oil.

"It is agreed that the said compensation on the oil which under the provisions hereof is to be deemed New York oil, shall be one cent per barrel greater than it currently shall be on Philadelphia oil.

"Whenever, and from time to time, as the said joint through rates shall be so low that the said minimum compensation to the transit company of six cents per barrel shall be as much or more than the railroad company's share of said joint through rates, this contract may, at the option of either party hereto, be suspended during all or any part of the time such low rates shall prevail. During such suspension the aforesaid other contract shall alone remain in force; but whenever, and from time to time, as said joint through rates shall again be high enough to make the said minimum compensation, under said sliding scale, less than the said share of said joint through rates, this contract shall again resume its force and effect.

"Second. The transit company agrees to account for and pay to the railroad company on or before the 20th of each month the latter's share of the joint rates on joint business via Milton (as provided in said other contract) during the next preceding month, first retaining, however, the proportion of such share which it is hereinbefore agreed the transit company is to have for its services in pumping said oil to the seaboard.

"It is agreed that all such joint business shall be considered as having been transported from Coalgrove via Milton, Pa., to the Atlantic seaboard, and that it

shall be considered as having gone either to Baltimore, Philadelphia or New York, or partly to each. The proportion thereof which has constructively gone to New York shall be determined upon the following basis:

"The total amount of oil transported in any month by the railroad company to New York shall be compared with 50 per centum of the total oil which the railroad company is entitled to carry in said month under the aforesaid other agreement. If the amount which has been in such month carried by cars to New York shall be less than 50 per centum then the difference shall be considered as having been moved by the pipe to New York at New York rates, and shall be accounted for accordingly. The remainder of the oil via Milton shall be accounted for at Philadelphia rates.

"This contract shall commence and terminate simultaneously with said other contract.

"Witness the corporate seals of said parties duly attested the day and date above written.

"THE PENNSYLVANIA RAILROAD COMPANY,
[L. s.] By FRANK THOMSON, *President*.

"Attest: JOHN C. SIMS, *Secretary*.

"THE NATIONAL TRANSIT COMPANY,
[L. s.] By C. A. GRISCOM, *President*.

"Attest: JOHN BUSHNELL, *Secretary*."

The Witness. Mr. Chairman and gentlemen, according to this contract, first, the rates must be maintained as established by the pipe lines; that is, the open rate of 45 cents. The contract was made for the purpose of sustaining rates. The outside refineries were compelled before the construction of the United States pipe line to ship all their oil by rail to the sea for export. The reason for making this contract and guaranteeing about 26 per cent of the tonnage to the coast was to insure the maintenance of the rate according to its provisions. If 26 per cent of the oil was not shipped over the roads, the Standard Oil Company was obliged to make up that in dollars and cents for the payment of the freight at the toll rates. Now, the point is this: The cost of collecting oil from the well to the railroad or the storage tanks by what we term the gathering lines is from three to five cents a barrel; say five cents. I speak intelligently on that point because I am a collector of oil by several hundred miles of line belonging to myself. The cost of carrying the oil through to New York, or rather to a point in New Jersey 50 miles from New York, is about the same. We gather oil from the well and deliver it in New York at a cost not exceeding 10 cents a barrel at the present time. Now, if this contract was out of the way the railroads would seek that rate, just as they come and seek your freight at the present time, or seek to carry a person or a number of persons to Chicago. But this contract compels them to keep the rate up and compels an outside refiner to pay this enormous rate of freight. The Standard Oil Company delivers all their oil to New York at a cost of not over 10 cents a barrel. By railroad a barrel of oil has to pay 45 cents; and the Standard gets this rate held by guar-

anteeing 26 per cent of the tonnage to the several railroads which are classed as oil roads.

THE CONTRACT DID NOT REALLY INCREASE THE BUSINESS OF THE RAILROADS.

Now, then, the by-products of petroleum are just about what this 26 per cent would amount to. Among by-products there are benzine and gasoline and tar. There is about 26 per cent they can not pump through the pipe, because it consists of lubricating oil and tar and such things as benzine, etc. The intent of this is to maintain rates, that there may be no competition between the railroads and the National Transit Company as a carrier. That is what I object to, and that is what the contract says. It is a combination which is illegal.

Q. (By Mr. Phillips.) Do we understand this, senator, from your testimony, that there is about this amount in by-products, and therefore they do not ship any crude or refined oil by rail in consequence of this contract? A. No; the railroad would have to have this carrying anyhow. They would have to carry benzine; you can not pump it. You can not pump wax. There is 26 per cent of oil that you can not get through the pipe line if you want to.

THE RAILROADS HAVE RAISED THE RATE.

Q. (By Mr. Clarke.) As I understand you, you are not finding fault with the percentage or apportionment of this freight, but you are finding fault that the price is too high, and that it is an agreement to maintain rates? A. No; I am finding fault because they cut off this competition; cut it from me in my products. The railroads have carried this stuff at eight cents a barrel. I paid for years 33 cents a barrel to carry this stock through. At the present time the rate on these products is 16½ cents a hundred, making 52 1-10 cents a barrel in bulk. The railroads have raised the rates. Then, in barrels, you have to pay for the weight of the barrels; that raises the total to something like 66 cents. That is the rate of freight.

Q. Then you do not criticise this partly because the rate is too high? A. I do on that ground. It has been raised from the original 45-cent agreement.

REASON FOR BELIEVING THE CONTRACT OF 1884 TO BE STILL IN FORCE.

Q. (By Mr. Kennedy.) That contract was entered into three years before the passage of the interstate commerce law. Have you any evidence that it is still in force? A. I only know it from the admission of a railroad man who said that it was. He came to my place and invited me to go to a certain point and establish a loading station to ship oil by water to New York. Well, it is the Buffalo, Rochester and Pittsburg railroad. I went to Rochester and I met the gentleman. I picked out the location for our station and made arrangements with him for the transportation of my oil to the Erie canal. The station was to

be built on their own land, with a nominal rental, which was agreed upon, and the transportation from Bradford was to go that way. He then said: "I would like to have you build a pipe line down at a place called Irvings and bring oil down to the Rochester and Pittsburg railroad and let me draw it to your factory," all of which I agreed to do. He said: "They do not see fit to recognize us as an oil road and I am going to do some of this business." All at once he was recognized as an oil road and he was to get his percentage under this contract. My station was not built, and my pipe line was not built to bring oil to his road. That was two years ago; this contract was in existence at that time. Under these circumstances I believe it to be in existence today.

Q. Was that contract made for a term of years? Was any limit named in it? A. I do not think there was; let us see. I think it is perpetual.

AS TO THE RECORD OF TESTIMONY TAKEN BY A COMMITTEE OF CONGRESS IN 1872.

Q. (By Mr. Farquhar.) In a part of your testimony early this session you read the testimony of Peter H. Watson with respect to the South Improvement Company contract? A. Yes.

Q. You read from a pamphlet here. It, of course, is not official authority for the commission? A. That was evidence; it is on file.

Q. But we want to know where this evidence came from and who took it. A. It is in the reports of the congressional investigation of 1870 and 1871.

Q. This testimony you have read—I want to correct the date of this. This may be important. Your own reporters may have come here to take your testimony here in Washington. They had an interview with the congressional committee on the 25th—with a committee which was a sub-committee. A. What year was that?

Q. 1872, at which time a subcommittee was appointed to take testimony and subpoenas were issued for Watson and Lockhart. Now of course if this is simply a printed pamphlet the question is—. A. You have your official record here. You have got it in the library—the investigation of congress. It is here on file, the same as the investigation of 1888.

Q. This was in 1875—1872-1875? A. It is the same as the investigation of 1888. It should be on file, because it is an investigation by congress.

Q. (By Mr. Phillips.) Is it in the Hepburn report? A. No, no; it is 1871. The Hepburn report was in 1879. No; it is one of the first investigations ever instituted.

Q. (By Mr. Kennedy.) You stated yesterday that you did not know what committee took the testimony.

Q. (By Mr. Farquhar.) Your testimony ought to show the commission the official source that it is taken from. A. If you will give me access to your library here I will find it.

Q. (By Mr. Phillips.) I wish to ask Mr. Boyle for information simply on this line.

Q. (By Mr. Farquhar.) This as presented here is unofficial. A. I refer you to the library.

Q. (By Mr. Phillips.) Mr. Boyle will tell you of it. Mr. Boyle. I have been searching for that report all through the books. I have not been able to locate it. There were newspapers giving reports at the time of the subcommittee. It was a subcommittee of congress of the house, of the spring of 1872, beginning on the last day of March, 1872, and continuing at various dates for two or three years.

Q. (By Mr. Farquhar.) The chairman of the committee seems to be well known—C. W. Gilfillin. A. I think he was in congress at that time.

Q. That is the identification you make? A. I make that identification, that it is a congressional report and was published at that time. At that time I read the testimony and it is familiar to me now. I was going to get it, but I could not. I know it was an investigation of congress and I suppose it is on file, just as these books are on file; it should be.

Q. (By Mr. Phillips.) You do not know of your own knowledge that it is true, but if it is found by this commission on file you want it to be considered a part of your evidence? A. I was in Washington in 1872 myself and I know the investigation took place, and I know I have a complete copy of it—a paper file of it at home. I was keeping my scrapbook, and I think I can produce the investigation. I think I can produce the book itself. I think I can, and I shall be very glad to do it.

Q. (By Mr. Farquhar.) I should like to make a statement from Mr. Gilfillin's own report, whom we know to be of good repute everywhere. It seems that your own people took this matter to the committee of congress and you had your own reporters. The question is, was it ever reported officially by congress? A. Well, does the congressional committee go into a room without a stenographer?

Q. Sometimes; quite frequently. A. It is the strangest thing I have heard.

Q. I am not discussing where the testimony came from. I think the origin of the testimony—it would be well for one of the parties to see that it is verified. A. I rely upon that testimony as being valid, and the investigation can be produced. It is dated from Washington and I know the investigation took place, and I know Mr. Gilfillin was on the commission. I do not know whether he was here on that day or not.

SCARCITY OF COPIES OF THE TESTIMONY OF 1888.

Q. (By Mr. Phillips.) You said that, on your information and belief, as prescribed by the oath, you believe it to be true? A. Just exactly as I believe my own testimony to be true. It is very unfortunate that it is not here; and I want to say to you right here that of this testimony of 1888 there were several thousand volumes printed, but I understand there are only 300 of them in circulation today. I could not get one myself until just by good fortune I got one the other day from a friend who had two. Nobody knows how that evidence was spirited away from here, but it is gone.

Q. (By Mr. Farquhar.) 1888? A. Yes. There were only 300 volumes sent out. I sent to Congressman Stone of our district for one.

WHY THE WITNESS, HAVING GOT BOOKS INTO COURT WHICH HE BELIEVES CONTAIN PROOF OF CRIMES, LET THEM GO UNEXAMINED.

Q. (By Mr. Ratchford.) I understand from your testimony you make the broad statement that if the books of the railroad companies could be brought into court some of the officials would be sent to prison? A. If you can send anybody to prison for violating the interstate commerce act, I say yes. I am not positive whether there is a criminal clause in it or not.

Q. If you wish to modify that statement you can. A. If there is not a criminal clause I do want to correct it; if there is, I will let it stand. I stick to my statement if that is the law.

Q. Do I also understand from the previous part of your testimony that you caused one or more of those companies to produce their books in court? A. The Pennsylvania railroad.

Q. In the courts of Clarion county? A. McKean county.

Q. You state that you produced convicting evidence against them? A. We did not examine the books at all.

Q. Why? A. Because the case was settled.

Q. Why did you settle it? A. I told you yesterday that my partners got tired of fighting it. We had been at it for three or four years and they offered us \$35,000 and we settled it. The claim was for \$107,000.

Q. Settled it for \$35,000? A. And costs.

Q. If the discriminating practices by railroads and the rebates that were given by railroads are so injurious to the interests you represent, and to all other interests, why did you settle it for \$35,000, or how did you believe yourself justified in settling for any sum? A. Our association was too poor to carry it on. They could have gone on, and could have extended that suit for 10 years.

Q. And yet you are satisfied, and have been satisfied, that convicting evidence would have been adduced in court had the books been investigated? A. We got all the evidence we wanted for them to settle upon and we tried to get the books into court in the early history of the trial; but we could not get an order before the master, in taking this testimony, because he had not the power. When we got them before the McKean county court, the circuit judge having the power, we demanded the books and papers. He issued an order and the books came. If my disposition had been followed, even in the depressed circumstances that I was in—if I had had my way about it I would have examined every one of the three tons of books. But I had a partner, Mr. Logan, who had lost every dollar in the world in speculation, and he said: "This money will do me good, and I would like to have you let up."

Q. You assign, then, as a cause for settling the trouble, the fact that the association controlled by you was too poor to fight? A. And the dilatory action of the court.

THE OIL BUSINESS IS MORE PROSPEROUS THAN IT WAS TWO YEARS AGO.

Q. (By Mr. Clarke.) Are you able to state whether the condition of the oil business generally is more or less prosperous now than it was two years ago? A. Oh, it is more prosperous now, from the fact that all the factories of the country are running, and there is an enormous demand for goods, and the production of oil in New York and Pennsylvania is not adequate to the demand. That is one reason for the advance in the profits of petroleum. Every factory and every spindle is running and every coal mine and every iron mill and there is an enormous demand for the goods. We could sell from my factory five times as much as I am making, if I had it, and at good profits.

THE WITNESS HAS RECEIVED NO REBATES SINCE 1872, EXCEPT WHAT HE HAS COLLECTED BY LAW.

Q. (By Mr. Farquhar.) Have you frequently in your own business enjoyed rebates. A. Never. Now let me modify that. In my business previous to 1872, in the refinery at Titusville, Pa., rebates were a common thing; but we were young and new in the commercial business, and the fellows in Cleveland and Pittsburg were a little more experienced. We did not seem to make very much money. They were running full tilt with their wells, barrel shops and everything, and we began to look about to see what was the matter. We went to Pittsburg and we learned, to our astonishment that certain concerns were getting 25 cents a barrel. We were large shippers and we demanded to be granted the same. That was away back in 1870. We were given 25 cents, and then we got on to the fact that some of the refiners were receiving 75 cents back, and some other refiners were receiving 50 cents. The rate at that time was in the neighborhood of \$1.50, and oil could be carried at a profit today at 25 cents. From that time to this—no, I am not guilty.

Q. (By Mr. Phillips.) Following that up, have you in recent years received rebates? A. No.

Q. For how many years? A. Since 1872, excepting rebates we collected by law.

Q. Not since 1872? A. I stated here that the president of the Pennsylvania said they were not giving any, but the auditor and bookkeeper admitted it.

MR. LOGAN, OF THE SOUTH IMPROVEMENT COMPANY, WAS NOT THE WITNESS'S PARTNER.

Q. I have been requested to ask Senator Emery a question. Mr. Logan, who was one of the parties to the South Improvement Company, is there, I believe, today? A. Yes.

Q. Now, is that the same Logan that was a partner of yours in Philadelphia in recent years? A. No; Alfred H. Logan is my partner. The two Logans that were connected with the South Improvement Company, William P. and John P. Logan, are both at the present time living; but Alfred is dead—my old partner.

THE REMEDY: GOVERNMENT OWNERSHIP OF ALL MEANS OF TRANSPORTATION, ESPECIALLY OF RAILROADS.

Q. We have been in the habit of asking persons here whether they had any remedial legislation to propose along any lines of the inquiry. Have you anything to propose to the commission in the way of remedial legislation to meet these problems? A. I will simply state very briefly, because I do not expect to go into an argument on that point. I would simply say this: That I am an absolute believer in the government ownership of all means of transportation, and especially of railroads. I was anxious that when the United States government had the opportunity of taking in the Central Pacific railroad it should do it. All the railroads of Germany, excepting two in the south, are owned by the government, and discrimination is not known; nor is there any dissatisfaction in business. They often go so far in that country as to take the canals; but the canals are free. If the waterways and the railroads can be put under government control, gentlemen, you will do away with all difficulties that exist today, because the prime movers of all this trouble are the railroads. They make the trouble by giving discriminating rates, or giving rates to favored shippers lower than they give to the general public.

THE LAWS WE HAVE WOULD SERVE IF THEY WERE ENFORCED BY ACTUAL IMPRISONMENT OF OFFENDERS.

I know of no better remedy, because you have laws upon the statute books of the United States that would alter the present condition of things if they were enforced. If you would make an example of these men, if there was a criminal clause in the interstate commerce act, and put them behind the bars, I think that would strike some terror to their souls. I recollect that, owning a large flouring mill in southern Michigan and quite a large amount of land in wheat in North Dakota, I desired to ship some of this most excellent hard wheat down to Three Rivers, Mich., and manufacture it, and I wanted a transit rate. It was given me previous to the interstate commerce act by the then manager of the road. I went back the next year and he said: "I can not do by you as I did last year, because the criminal clause of the interstate commerce act is such that if I violate it I am liable to get behind the bars, and I am afraid of them. Therefore, I can not make a rate by which you can ship wheat from North Dakota and manufacture it and ship it to the east." Now, I say, Mr. Chairman and gentlemen, that some way has got to be found to cut off the rebate and drawback practices of the railroads. The mass of the people in this country are incensed and that dissatisfaction reaches to the minds of all classes of men.

THE GOVERNMENT COULD MANAGE THE RAILROADS—EUROPEAN EXAMPLE.

I am firmly of the belief that if the government would take charge of the railroads as it took charge of the transportation of the mails it could manage and

control the railways and waterways in this country as well as it can control the mails. The example of Germany is before you; the example of Norway and Sweden. If I recollect right, 18 years ago the kingdom of Norway and Sweden did not own a mile of railroad. Poor as those nations are, they saw English capital coming into that country and building railroads north and south up to the great Bessemer mines in the northern part of Sweden, and their own manufacturers were unable to compete, shipping over the same lines of road. Complaint was made to the legislature and they at once said: "We will own these railroads ourselves." And they bought them from the English capitalists. When I was in Norway and Sweden three years ago, while I was there the government took the control of them, and they own today the principal roads north and south and through both those countries. They have not cared to take the lateral lines east and west, but they make a rate from the common points of these lateral lines to the water front, and they prorate with the lateral lines belonging to the smaller companies. They have brought back into the markets the old manufacturers and they are today a happy people, because the government has taken hold and made the rates equal to everybody—to the Englishman, to the Frenchman, to the German, and the Yankee, and everybody else. We distribute oil in those countries, and we find no discrimination. Government ownership is my proposition.

THE CORPORATIONS ELECT LEGISLATORS—STATE OFFICERS AND UNITED STATES OFFICERS IGNORE COMPLAINTS OF VIOLATIONS OF THE LAW.

You have upon the statute books today one of the best laws ever written, known as the Sherman act, passed in 1890; but the difficulty in this country is that you can not enforce the law, or at least you do not. Complaint of our difficulties was made during the Cleveland administration to the attorney general of the United States, and no answer was made by the recipient of the letter. And to the present administration complaint was made more than eight months ago. The letter was pigeon holed. In the state of Pennsylvania we have asked the aid of the commonwealth, by application to the governor, since the suit I have mentioned. The letter was pigeon holed. The power of these monopolies and combinations is such that they elect or nominate their own men to serve in the legislatures. They make their own nominations a year ahead of time to prepare their candidate; and he is schooled to know their wants first and the people's second. I say that if our courts of the state, our attorney general of the state, our attorney general of the United States would put forth the strong arm of the government, under the laws that exist, they could stop these encroachments upon the rights of the people. I say that if they will not do so you must come to the control of these great transportation lines, which are causing all this trouble, by government ownership. I have been a traveler in every part of the world that I could reach by water or rail; and I have found this country advertised from China to the islands of the

east as being a country whose people are bound hand and foot by corporate power. As I told you yesterday, we came to congress, as you saw here, in 1872. We came here again and again. We have come to the attorney general of the United States a half a dozen times without result; and it seems to me that the courts are approached without result also. The settlement of litigation before the courts is delayed. Corporations come when they please and stay away when they please. They defy the courts under the plea that it will incriminate themselves if they give evidence. What are you going to do about it? If the government would stretch out its arm and take this man and say, "Answer this question or go to prison for contempt of court," he would answer. Now, I say government ownership of railroads would be my remedy unless we can get attorneys general of the United States and of the several states that will enforce the laws.

UNFAIR TRADING SHOULD BE PROHIBITED.

Q. Suppose that the government did own the railroads today. Would not these great corporations or trusts still have the power to follow the smaller merchants into the cities and towns and sell oil or any other merchandise very low at given points? And could not these corporations with their great accumulations of wealth still prevent the small corporations from doing business and the merchant from selling his goods in various markets? A. In that case you would want the law I spoke of yesterday—such as I think is adopted by Germany—to prohibit unfair trading. You have got to take care of the interests of the common people of this country. If you do not, you are going to have trouble.

WASHINGTON, D. C., November 10, 1899.

TESTIMONY OF MR. ANDREW D. GALL.

*Manager of the Gall-Schneider Oil Company, Limited,
Montreal, Canada.*

The commission met at 2:10 p. m., Mr. Phillips presiding. Mr. Andrew D. Gall was introduced as a witness, and being duly sworn testified as follows:

Q. (By Mr. Jenks.) Will you kindly give your full name and address? A. Andrew D. Gall, Montreal; a British subject.

Q. What is your business? A. We are engaged in the marketing of petroleum products generally, principally in the Province of Quebec, in Canada.

Q. Do you handle American oils at all. A. Almost exclusively.

PRODUCTION OF PETROLEUM IN CANADA.

Q. Can you give us an account of the production of crude oil in Canada, giving us the different places of production and something as to its extent? A. The production of oil in Canada is confined almost exclusively at the present time to western Ontario; that is,

the Bothwell, Oil Springs and Petrolia districts, all of which are in western Ontario. The production of oil is largely in the hands of private individuals. The Standard Oil Company, as a company, does not own a great number of wells, but some of the men formerly in the old Imperial do. I will explain that the Imperial Oil Company today in Canada is directly the Standard Oil Company. It was the name of the company in Petrolia before the Standard Oil Company got control of the Canadian market, and has been continued under that style.

Q. You say that the Standard Oil Company has gotten control. Do you mean that the Standard Oil Company bought the stock of that company and continues the company under its old name? A. Yes; under the name of the Imperial.

Q. (By Mr. Smyth.) The Standard Oil Company are stockholders now in that company? A. The Standard Oil Company are stockholders in that company. Mr. Fitzgerald, the former president of the old Imperial, admitted that only a small proportion of the stock was held by Canadians at the present time.

Q. They bought that in open market? A. Well, I do not know. It was a kind of a deal; I do not know whether you would call it open market or not. There were a number of men who were formerly in the old Imperial who have large producing interests in Canada. These men no doubt control between 20 and 25 per cent. of the production. The rest is held by the independents, or small producers, pumping from 50 to 500 barrels per month.

Q. (By Mr. Jenks.) If I understand you, then, the Imperial Company, of which the Standard Oil Company owns the controlling interest, controls about 25 per cent. only of the production? A. Of the production, yes.

Q. About how much is the total production of Canada? Can you give us the figures? A. Yes. The total production of crude oil amounts to about 750,000 to 800,000 barrels per year of 35 imperial gallons each.

CANADIAN OIL WORSE THAN OHIO.

Q. What is the quality of this Canadian oil; is it like Lima oil in Ohio, or white said oil? A. We have handled a good deal of Ohio oil and of course it is not to be compared with the Pennsylvania at all; but comparing the Canadian with what we get from Ohio we find that in marketing it at an equal price we can always get a preference for the Ohio product, so that I should be inclined to think that people would prefer the Ohio to the Canadian product.

Q. (By Mr. Smyth.) You say "we," do you represent the company? A. Yes. I might say that I am president and managing director of the Gall-Schneider Oil Company, limited.

Q. Do you produce petroleum—do you have wells? A. No; we have nothing to do with that whatever—it is only marketing it.

Q. Do you refine the crude? A. We have nothing to do with the refining.

Q. You simply buy refined oil? A. Yes.

Q. (By Mr. Jenks.) You handle also crude oil? A. No, sir; only refined, lubricating, etc.

REFINING IN CANADA ALL DONE BY THE STANDARD NOW.

Q. About how much oil is refined in Canada, and what proportion of that is controlled by the Standard Oil Company? A. Well, these figures I am about to give are supposed to be official. They are made by the department of agriculture. Up to the present time of course all oil had to be inspected and went through the inland revenue or customs department, and I presume the figures are correct. The quantity of illuminating oil that was produced and sold by oil refiners in Canada in 1896 was 11,207,150 imperial gallons, valued at \$1,251,122; of benzine and naphtha, 719,453 gallons, valued at \$70,733; of gas and fuel oils, 6,788,353 gallons, valued at \$261,618; of lubricating oils and tar, 1,447,455 gallons, valued at \$77,109. The total gallonage for 1896 was 21,176,682, and the total value \$1,792,890. The total gallonage for 1898 was 21,153,192, and the value was \$1,723,293.

Q. Can you tell us about what proportion of this refined product is refined by the Standard Oil Company? A. Today every gallon is refined by the Standard Oil Company.

Q. That is, the Standard Oil Company now has control of all refineries in Canada? A. Complete control.

Q. By complete control you mean they own them? A. They own them all. There is one—there is the old Imperial in existence today.

Q. How long is it since the Standard Oil Company secured this complete control of the refined product of Canada? A. That deal was put through in July or August, 1898.

Q. Perhaps you can give us a little fuller statement about it? A. Well, I do not know exactly how it was done, I am sure. It was simply a deal of the Standard Oil Company, and how they did it I don't know. They bought up all the refineries and they have demolished all of them except the old Imperial plant. That is running now and there is a plant at Sarnia, a little farther from Petrolia.

Q. How many independent plants were there before? A. I have them here. Before the trust got control of the business there were five refineries in operation and four refineries that were not in active operation at that time, although not closed up by any means. As I stated before, all of these, with the exception of the old Imperial Company's works at Petrolia, have been dismantled and most of the material broken up and sold as scrap or removed to Sarnia. I know about the figures they paid for one concern. That was the John McDonald refinery. He told me that he got \$65,000 for it and that it was not worth \$10,000.

Q. You spoke of their having removed part of these refineries to Sarnia? A. They removed part of the material, I believe in building up their own works at Sarnia.

AMOUNT OF CANADIAN REFINED OIL AND AMOUNT IMPORTED.

Q. Do you know whether the amount refined at the present time is less or greater than the amount refined by the five refineries previously? A. I do not see how

it can be greater. The production of crude has been about the same, and I do not see how it can be greater than the production.

Q. You think it probable, however, that they are refining all the crude oil now. I judge from what you say that possibly this one refinery at Petrolia is larger than the others have been at Petrolia, and that the one at Sarnia is a little larger. Have these two as much capacity as all the old ones? A. I guess so; yes.

Q. While there has been a concentration of several into one management, the total output has not been lessened? A. I do not think it has been lessened. It may have been somewhat increased, some crude having been sold for other purposes before, they may have made some changes which have increased it somewhat.

Q. (By Mr. Smyth.) I suppose there is as much crude refined as is demanded? A. No, sir.

Q. There is demand for more refined oil than there is on the market? A. Much more.

Q. (By Mr. Jenks.) How much of the oil used in Canada is refined there, and how much is imported from the United States? A. For 1898 the percentage of Canadian was 61.1 and the percentage of imported, which is altogether American—no oil is brought from elsewhere—was 38.9 of the consumption in Canada. In 1881 there was only 6.9 per cent. of American and 92.1 of Canadian.

Q. (By Mr. Smyth.) How do the total quantities compare? The percentages vary; are the total quantities any larger? A. Much larger. In 1881 the number of gallons of Canadian was 6,406,783, while in 1898 it was 10,796,847 gallons.

Q. (By Mr. Jenks.) The Canadian output is also largely on the increase today; the demand simply outruns the supply, so you are getting more and more from the United States? A. Yes.

THE COURSE OF PRICES.

Q. Can you give us some information on the course of prices for the last three or four years, so that we can see whether the purchase of these companies by the Standard Oil Company has had any effect on them? A. I have invoices here, dating all the way back to 1892, of the old Imperial Company, which is at the present time the Standard. In September, 1892, they were selling oil for 12½ cents delivered in St. Johns, Quebec.

Q. That is the refined product? A. Refined, in barrels. The cost of barreling and inspection is estimated to be about 2½, say 2½; then that would mean that you deduct five cents from 12½, or 7½ in bulk f. o. b. Petrolia. In 1894 it was delivered in St. Johns for 11 cents; that is, in barrels, freight paid. I might say that the first was July, 1894, and in September, 1894, it was still 11 cents. In April, 1896, it was 14¾ cents delivered at St. Johns.

Q. That was before the Standard Oil Company took them in? A. Previous to that altogether. In September, 1897, it was 13¾, delivered in barrels; in May, 1898—that was just a month or two previous to the time they took control of it—it was 12½, today it is 17½ cents delivered in barrels at St. Johns.

Q. (By Mr. Clarke.) Do you know the prices of

crude petroleum between the 11 cent time and the 13 and 17 cent times? A. I will just give this to you here. I have them from a large producer of petroleum under date of October 30 last. In January, 1895, the price was \$1.16 per barrel; in June, 1895, it was \$1.53 per barrel; in January, 1896, \$1.72; June, 1896, \$1.70; January, 1897, \$1.50; June, 1897, \$1.40; January, 1898, \$1.40; June, 1898, \$1.40; January, 1899, \$1.40; June, 1899, \$1.45; and the present price is \$1.60. I have the average price for this year, if you wish to have it; I have it here.

CRUDE OIL GOES UP ONE-HALF CENT A GALLON;
REFINED, FOUR CENTS.

Q. (By Mr. Jenks.) Can you give us the prices of refined oil at the beginning of this year, 1899? What was the price of refined, compared with the price of the crude, at the beginning of this year? A. Well, I have no invoices that I could show you covering that time, but I have a memorandum here. This is a retail price. Of course, it is pretty hard to go by that. In January of this year it is quoted at 14 cents, and in February 14½.

Q. And the present price from that invoice was 17½? A. No; I have no invoice to the effect that 17½ cents is the price of oil today.

Q. And this decided change in price has been during the latter part of this year? When the price of crude was \$1.45 per barrel the price of refined was down to 14 cents or possibly less? A. Yes. It is only recently that crude is \$1.60; very recently.

Q. How long is it since refined went up to 17 cents? A. That is very recently, too.

Q. Then the facts seem to be these: That the price of refined has gone up at about the same time as the price of crude? A. Nearly so.

Q. You would say it ran up proportionately, or nearly so? A. I am not familiar enough with the refining; I do not know enough about that.

Q. They have simply gone together? A. Yes.

Q. (By Mr. Phillips.) Has the price of crude in Canada corresponded with the recent great advance in Pennsylvania and Ohio oil within the last six months or a year? A. I do not know just what the prices have been in Pennsylvania or Ohio; but up to June of this year crude was only \$1.45 at Petrolia and even lower than that.

Q. But you can not give us the price of refined in June? A. June of this year?

Q. Of this year, that is, the wholesale price? A. Yes, I have it. In June here; well, the retail price, 13½ cents. These, of course, are one cent over the Wholesale prices.

Q. Well, that 13½, then, corresponds with \$1.45 and this 17½ with \$1.60. Is it claimed by any one that this increase in the price of the refined oil is due to the control of the refining by the Standard Oil Company? A. It is claimed so by everybody or nearly everybody.

Q. And do they make the same claim as to the increase in price of crude; that the Standard Oil Company has put up the price of crude? A. Well, no. I

might say that it pays the Standard Oil Company much better to refine Canadian oil and force it on the Canadian market than it does to import, because there is an import duty of five cents per gallon, and you can readily see it is far better to pay a little more for crude and force the people to use the Canadian product.

FREIGHT DISCRIMINATION BETWEEN AMERICAN AND
CANADIAN OIL.

Q. There have been some charges made in the papers for the last few months that there have been freight discriminations in Canada in favor of the Standard Oil Company. Can you give us any information on that subject? A. The Sun Oil Refining Company, limited, of Hamilton, Ontario, and ourselves laid a complaint before the railroad committee of the privy council regarding this matter some time in January last. The complaint was heard by the railroad committee in February. At that time we were complaining principally of the discrimination in freight rates on local shipments on Canadian oil as against American. We also complained on the through freight rates from Black Rock, where it enters Canadian territory to Montreal and other points. So far as that investigation was concerned the railways raised the objection that the railroad committee had no jurisdiction over foreign freight, or at least freight originating in foreign countries, though they decided afterwards that they did have jurisdiction over it. On the local freight rate they threw up their hands and admitted that they were in the wrong. It was a put-up job in the start, and it was about time they admitted it. For instance, I went out and bought a barrel of Canadian oil and shipped it to George L. Meikle Company, of La Shutte. On the Canadian oil I paid 77 cents freight. Taking barrels of 450 pounds, that was at the rate of 17 cents per 100 pounds. On a barrel of American oil I paid \$1.08, a rate of 24 cents per 100 pounds. Here are the original bills of lading signed and receipted. I also shipped a barrel of each kind to St. Johns, Quebec. On the American oil I paid \$1.08 for the barrel, or 24 cents per 100 pounds, and on the Canadian I paid 54 cents, or 12 cents per 100 pounds. A more glaring injustice never existed.

Q. When you delivered this oil to the stations—

A. (Interrupting.) We had to say whether it was American or Canadian.

Q. They simply made up the freight bills accordingly? A. They made up the freight bills accordingly, and you had to mark on the freight bills whether it was American or Canadian.

Q. What had been the custom before? Had they been shipping at the same rate? A. Yes; whether American or Canadian, it was shipped in the same way at the usual rate of freight.

Q. And this is simply a rating made by these roads? A. Yes; and we think at the instigation of the trust to prevent us from marketing our goods at local points. Not satisfied with marking up the through rates they wanted to cripple us further by charging double for American over Canadian.

Q. Why do you think that the Standard Oil Company was back of that? A. They have got control of

the Canadian business, and they were anxious to force people to use Canadian oil by making it impossible to get American oil.

Q. (By Mr. Clarke.) Were both of these over the Grand Trunk? A. No, sir; both over the Canadian Pacific.

Q. (By Mr. Jenks.) On what roads were those discriminations made against oil? A. Both roads.

Q. On any others? A. We have a number of small railways, but the Grand Trunk and Canadian Pacific railways are really the only roads you might say, that we shipped by; in fact, they are the only roads running into Montreal. There are others running in there, such as the New York Central, Delaware and Hudson, and some others, but they come in over the Grand Trunk tracks or the Canadian Pacific.

THE MICHIGAN CENTRAL LOSES STANDARD BUSINESS.

Q. How about the Michigan Central? A. They come as far as Hamilton, but not any farther.

Q. Was there any discrimination made to Hamilton and through that part of the territory? A. I might say the Michigan Central would not go in for increasing these freight rates. You might call it a deal, whatever you like. The exact result—they told our people that the Standard Oil Company trust had taken all their freight away from the Michigan Central. Nothing is billed over the Michigan Central, and the Michigan Central is still giving us a decent freight rate, what it was formerly, previous to October, 1898.

Q. You think there was a formal agreement between the Grand Trunk and Canadian Pacific to put up the freight on oil, but none of the other roads came into the agreement? A. No, none of the others came in; no other had anything to say about the matter; they were the only ones that could bring it into Montreal and other points the only two through lines we have.

Q. You say you are informed by the Michigan Central Company that the Standard Oil Company have taken away their business since this. Did not that information come from one of the officials or from some one in authority? A. It did, although I am not prepared to say who it was from.

SUPPOSED SPECIAL RATES TO THE STANDARD—COMPLAINTS TO THE CANADIAN GOVERNMENT.

Q. Will you explain somewhat further in reference to through freight rates? A. Of course we were not satisfied with the way the matter was handled in February last, so we made a further complaint to the railroad committee.

Q. Will you be kind enough to read this complaint and put it in evidence so that we can have it exact? A. I will. I might say I took this matter up with Mr. Blair, minister of railways and canals, and he wrote me on May 15 last as follows:

OFFICE OF THE MINISTER OF RAILWAYS AND CANALS.

Ottawa, May 15, 1899.

Gentlemen: I have your favor of May 12 before

me and note its contents. If you have found any good reason to believe, as I infer you have, that the C. P. R. and the G. T. R. are carrying the Standard Oil Company's products at a lower figure than they are proposing to charge you, and if you make such an allegation and ask us to investigate it, the railway committee will summons such witnesses to Ottawa as you may think, or we conclude, will on oath be compelled to acknowledge the facts. We will not permit the C. P. R. or G. T. R., or any other railway to tell us that it is none of the business of the public to ascertain whether there is discrimination or preference. It is essentially our business to see that it is not permitted. I will have the deputy minister ascertain, beyond this, whether there are any facts in his possession with regard to the tariff, or which he can procure, of which I can acquaint you.

Yours faithfully,

ANDW. G. BLAIR.

Gall-Schneider Oil Co., Montreal.

The witness (reading statement). Now, this is our complaint:

To the Railway Committee of the Privy Council:

The complaint of the Sun Oil Refining Company, limited, and the Gall-Schneider Oil Company, limited, with reference to the tolls charged by the Grand Trunk Railway Company, of Canada, and the Canadian Pacific Railway Company, upon petroleum and its products, humbly sheweth—

Your complainants are companies incorporated under the laws of the Provinces of Ontario and Quebec, respectively, for the manufacture and sale of petroleum and its products, and have their places of business and manufactories at Hamilton and Montreal, respectively.

Your complainants necessarily import from the United States large quantities of petroleum and its products.

According to the uniform classification of freight prescribed by the governor in council under the railway act, and now in force, illuminating oil and lubricating oil in wood are classed as fifth class for car lots and third class for less than car lots.

1. The said railway companies under like conditions and circumstances are naming unjust and partial discriminations between different localities.

2. The said railway companies are giving secret special toll rates, rebates and concessions to the Standard Oil Company and persons and corporations affiliating with them on freight carried over their respective roads.

3. The said railway companies have been since October last, and are at the present time discriminating with regard to freight rate charges in favor of the Standard Oil Company and others affiliating with them against independent shippers and all oils shipped by the Standard Oil Company and said other persons and companies from all points in the United States coming into Canada are carried at a less rate of freight than the same class of goods shipped by the independent refiners competing against the Standard Oil Company and said other companies.

4. The said companies are at present and have been

since October 1 last charging 35 cents per 100 pounds from Buffalo and Suspension bridge to Montreal, as per their tariff issued at Montreal, while they charge only 25 cents per 100 pounds from Sarnia to Montreal on the same class of goods, notwithstanding the fact that the distance from Sarnia to Montreal is 77 miles more than that from Suspension bridge to Montreal.

5. On all oil shipped from Buffalo and Suspension Bridge to Montreal by the Standard Oil Company and its connections the said railway companies are giving a secret rebate or reduction.

6. Shippers not connected with the Standard Oil Company and its connections are charged on shipments from Suspension Bridge to St. John, New Brunswick, on carload lots, 45 cents per 100, while shippers from Sarnia are charged 30 cents per 100, although the distance from Sarnia is 77 miles greater from Suspension Bridge to St. John, New Brunswick.

7. On all other points on the international boundary to which shipments of oil are made the same discrimination was made in favor of and rebate given to the Standard Oil Company and companies and persons affiliating with them, against their competitors.

8. By reason of the facts herein complained of, your complainants have sustained loss and are greatly impeded in the transaction of their business.

9. Your complainants therefore submit that an order should be made directing the said railway companies to discontinue those illegal acts, and to refund all overcharges which they have so collected from your said complainants.

And that such further order may be made with reference thereto as to your committee may seem and the circumstances of the case may require.

And for the purpose aforesaid full inquiry into the matters herein complained of may be made.

Dated at Hamilton, June 7, 1899.

The Sun Oil Refining Company of Hamilton,
Limited.

The Gall-Schneider Oil Company, Limited,

By Staunton & O'Heir, their Solicitors.

Q. (By Mr. Jenks.) I note that you speak of secret rebates that have been given to the Standard Oil Company. Did you have any positive proof that secret rebates had been given? A. We hope to be able to establish the fact if we get the right men before the railway committee. I have good reason to believe and do believe that such is the case.

Q. But as yet you have not brought that out? A. As yet I have not yet brought that out.

Q. Does the Standard Oil Company ship any American Oil into Canada? A. They do; but very little in comparison with former years.

Q. Their expectation, apparently, is to supply the Canadian market with the oil there, in which there is the largest profit? A. Yes; so long as the duty remains as it is.

Q. Have you any reason to think that for the American oil which they do ship into the country

they pay any less rate of freight than you do? A. I certainly do, and I have a good reason to believe so.

Q. The main charge, however, is this, that discrimination is made between American and Canadian oil to the detriment of those people who are dealing in American oil? A. No; we do not charge that exactly. We charge that the Standard Oil Company and companies connected with them are getting a lower freight rate than we do, or at least than the independent shippers do.

Q. In every way and over all the roads? A. Well, very nearly; anywhere and everywhere.

Q. (By Mr. Farquhar.) You mean on Canadian oil? A. Any oil. There is nobody else handling Canadian oil except themselves. You can not buy a gallon of oil unless they see fit to sell.

THE STANDARD WILL NOT SELL IN CANADA EXCEPT TO THOSE WHO AGREE TO BUY ONLY FROM THEM.

Q. (By Mr. Jenks.) Do you know whether they refuse to sell Canadian oil to anyone; for instance, have you offered to buy? A. I have tried to buy, and they refused to sell.

Q. As a matter of fact you can not get any Standard Oil Company products to handle? A. We can not get any to handle unless we get it from an outsider.

Q. Does this same fact in reference to their refusing their products apply to the Sun Oil Company, of Hamilton? A. Yes; precisely the same.

Q. And all others except those formally recognized as their agents? A. Yes; those who buy exclusively from them.

Q. Have you any knowledge of that fact, that they insist upon their dealers making an agreement that they will buy only from them? A. Yes.

Q. You have positive information of that fact? A. They have asked me two or three different times—sent a man to us, and asked us to buy all our stuff from them and stop this inquiry and all that kind of thing, which, of course, we refused to do.

Q. (By Representative Livingston.) What inducement did they offer you to do it? A. Well, they wanted to charge us about twice what the stock is worth, and to cripple us as soon as they could; that was the inducement, but they did not put it in that form. They offered us no inducement whatever.

IS IT TO PROTECT THE CANADIAN INDUSTRY?

Q. (By Mr. Farquhar.) Is there evidently a policy on the part of the Canadian roads to build up Canadian oil as against the American product by making the rates they do? A. I asked Mr. Bosworth, general freight agent of the Canadian Pacific, and he replied that he wanted to protect the Canadian industry.

Q. Has not that been the plan of your government in making as much discrimination as it could against the American product? A. In past years it has

been; I can not say it has been under the present government.

Q. Is it not of advantage to the Grand Trunk and Canadian Pacific to take the through rate and a short haul on the Canadian lines with the Canadian market in preference to prorating with American lines in competition south of the St. Lawrence? A. It certainly is not; I can not see where it come in, because on oils it is only a distance of 75 miles less.

Q. (By Representative Livingston.) Is it not done as a retaliatory measure entirely? A. I do not think it is.

Q. (By Mr. Farquhar.) Has it not been the policy as announced in the Canadian press, and declared by your ministers, to take care of your products as against anything imported across the line? A. Well, it was previous to the present administration. I can not say such is the case at the present time.

Q. Do not the two roads there that are backed up by foreign capital, Canadian capital, and subsidized, uniformly make rates to the Canadians to the disadvantage of the Americans? A. That is what they have done, if you look at it that way.

Q. (By Mr. Smyth.) Does the Standard Oil Company produce crude petroleum in Canada? A. Well, men connected with the Standard Oil Company do. The Standard, as a company, owns very little

RISKS OF STARTING AN INDEPENDENT REFINERY—NOT MUCH RISK TO THE STANDARD.

Q. They are simply refiners, are they, in Canada? A. Yes.

Q. Can not any one buy that crude petroleum in Canada? A. They can; yes.

Q. And they could refuse if they wanted to? A. If they felt so inclined they could.

Q. Then when you say no one can buy Canadian refined oil except with the permission of the Standard Oil Company, is it because they do not choose to refine it? A. Anyone who is familiar with the Standard's operations in the past would think twice before he put up a refinery in Sarnia, or any where, to refine Canadian oil.

Q. (By Representative Livingston.) If they did, tell us what the Standard Oil Company would do with them, judging the future by the past? A. I suppose they would lower the price at certain points and run them out of business as fast as they could. Then there is the uncertainty about the duty. The government, it is expected, will remove the whole or part of that duty, and if they did, a refinery in Canada would not be worth much.

Q. (By Mr. Smyth.) Then the Standard Oil Company in buying those refineries in Canada have taken a very high risk if they gave \$65,000 for a refinery that was only worth \$10,000? A. They have made that ten times over in the last three months.

Q. (By Representative Livingston.) They have the railroads in Canada subsidized or under their control, have they not? A. I think they have.

Q. Then they do not take much risk? A. I do not think they do.

Q. (By Mr. Smyth.) They take the risk of the tariff, and you think no one would invest in the refinery? A. That is, an outsider. The Standard Oil Company is a different concern altogether from any private individual. It is not run on what are known as business principles at all; at least, not what might be called honorable.

CRUDE OIL HAS BEEN HIGHER—REFINED WAS NEVER SO HIGH.

Q. Do you consider that the price of crude oil has advanced to \$1.60 as against \$1.40 and \$1.30? A. Of course, as I said before, I do not know much about the refining part of it, but it strikes me that a difference of 20 cents a barrel does not warrant an advance of 5 or 6 cents a gallon on the refined product.

Q. But it has only been advanced from 14½ cents; that is not 5 or 6 cents a gallon? A. But in past years crude oil has been a great deal higher than it is; and the price of oil never was known to be as high. I do not remember of oil being as high as it is today. In 1896 crude oil was as high as \$1.72, while oil was selling for 14½ cents delivered in Montreal.

Q. Do you think there is any profit in it? Were not business conditions very much depressed in 1896? Is there not very much more margin of profit in all business today as compared with 1896? A. There is for some people, the Standard Oil Company in particular. We do not find it so.

Q. Now, do I understand you that the Standard Oil Company is the sole buyer of crude oil in Canada? A. They are.

Q. And yet they have advanced the price from \$1.45 to \$1.60? A. Yes; that is done to encourage production, because they find, as I explained before, that it pays better to refine Canadian than it does to import the American. They want to increase the production because it pays them much better to do so.

Q. Have they not really bid against themselves in raising the market price from \$1.45 to \$1.60 for crude? A. They have.

Q. (By Representative Livingston.) But you say while they have done that they make more money by it? A. They certainly do.

Q. (By Mr. Smyth.) At the same time the producer of crude petroleum is getting 15 or 20 cents more per barrel than he got before? A. But he is getting 12 cents per barrel less than he did in 1896, and the dealer is paying 2½ to 3 cents a gallon more for his refined oil.

Q. That may be, but the business conditions may be different. A. Yes; they are. It is the Standard Oil Company that is running the business now; that is the difference.

PRODUCERS VERSUS CONSUMERS.

Q. (By Mr. Phillips.) Do you state that the Standard Oil Company had to put up the price of oil in order to induce development? There are a

large number of persons outside of the Standard Oil Company that are engaged in the producing business in Canada. A. Yes.

Q. Do we understand, then, that they put up the price of oil in order to increase production, because there was a much larger profit in refining Canadian oil than in importing American oil? A. That is precisely the idea, as I understand it, and as it is generally understood; that they advance the price because it pays them so much better a profit to refine the Canadian product than to import the other, because there is a duty of 5 cents.

Q. (By Mr. Smyth.) But the effect in the oil producing regions has been beneficial? A. Yes.

Q. It has caused more wells to be drilled? A. Yes. There is a market for much more oil in Canada than is produced there, and they want to benefit by it, I suppose.

Q. But the people are benefiting by it also, are they not? A. Some of them, I suppose, do, and some do not.

Q. Well, they are producing more oil and getting a higher price for it? A. I do not know that they are producing more oil. They may be, but, anyway, up to 1898 the production was about even.

Q. (By Representative Livingston.) How is the consumer faring while that is going on; is he getting his oil for less money and making money by it? A. No, sir.

Q. What is the ratio between the producer and the consumer as to population, as to numbers. A. I do not know how many producers there are; there are quite a number of them, but I would not undertake to say.

Q. About 1 to 100? A. No; not 1 to 10,000.

Q. Then where one in 10,000 is making money 9,999 are losing it? A. Well, they are paying a good deal more for their light.

THE TARIFF ON OIL.

Q. (By Mr. Farquhar.) How long has this 5-cent tariff rate been in existence? A. It used to be 7 and 6, if I remember right, although I am only taking it from memory; I think it was the late Conservative government that reduced it to 5; that would be the last session, in 1896. The present Liberal government said they were going to wipe out all these inequities. They may be going to do it, but they have not done it yet.

Q. So the remedy lies with the Canadians in establishing a tariff that will admit American oil and bring the Standard's price down? A. The remedy lies in that and in obliging the railways to carry petroleum products at a reasonable freight rate.

Q. You would say that these Canadian railroads, through establishing these tariff rates, discriminating in favor of Canadian oil, are carrying out the policy of the Canadian government, whether it is Liberal or Tory? A. No, sir; most decidedly not.

Q. You think not? A. No, sir; I think they were carrying out the policy of the Standard Oil Trust I do not think it emanates from any other source.

Q. Then you would say that if they charge that 5-cent rate, and do not lower it to 3 or 2, and allow competition, the Canadian government is really in aid of the Standard Oil Trust? A. Of course, that has been standing for a long time—this duty. If they would remove that it would help us greatly, but while they allow the railroads the monopoly of freight rates I do not know where they may put them to.

FREIGHT DISCRIMINATIONS (RESUMED).

Q. (By Mr. Jenks.) Do I understand you to say, in regard to local rates in Canada itself, that the railroads had all been compelled to put back the rate and make it the same on American oil as on Canadian? A. Yes; they did.

Q. And the only discrimination now that remains against you in the Canadian rates is on the oil that is imported, on which there is a through rate from the United States? A. Yes. Of course if we can not get through rates on the oil our stuff does not reach a local rate town, and it doesn't amount to "shucks."

Q. (By Mr. Smyth.) Have you evidence as to the rates of freight charged the Standard Oil Company from the United States into Canada, as compared with the rates you and other independent dealers in oil have to pay? A. We have proved nothing yet. The railways say the freight is alike to them and all others, but we don't believe it, and we hope—in fact, we believe—that we can prove that such is not the case when we are given an opportunity to do so.

WAGES.

Q. (By Mr. Jenks.) Have you any information with reference to the rates of wages that are paid by the Standard Oil Company in their refineries as compared with the rates that were paid before? A. No; I know nothing about that, except that I did hear that their men were complaining in Montreal, at their establishment there, that they had reduced their wages. Beyond that I have no definite knowledge.

Q. (By Mr. Farquhar.) Your last answer was hearsay; you know nothing about it? A. Yes; from the men I know nothing about it.

INDEPENDENT IMPORTERS IN CANADA AND WHERE THEY BUY.

Q. (By Mr. Phillips.) Do the independents in Canada import more American oil into Canada than the Standard? A. I do not know. I should not want to say that they import more, but the importations into Canada by independents have been largely increased during the past fifteen months.

Q. What refining companies in the United States, independents, export or import their oil? A. The Sun Oil Company and ours are the chief importers in Canada, and, in fact, the only ones I know of at the present time. We import all our stuff, or nearly

all, from the Corn Planter Refining Company, in Warren, and the Warren Refining Company, in Warren, Pa. We also import some from the Craig Oil Company, in Toledo. We bought a good deal from the Paragon Refining Company, in Toledo, and we have bought some from Scofield, Shurmer & Teagle, in Cleveland, I think.

AMERICAN OIL BETTER THAN CANADIAN, AND PENNSYLVANIA BETTER THAN OHIO.

Is this oil that is bought by you, the independent oil, considered better than the Standard or equal? A. From what I can learn from the consumers, the oil that we have been selling as American oil, which it was, is considered much better than what the Standard was selling them as Pennsylvania oil. As a matter of fact, I think they had been giving them for years the Ohio product and putting it off as Pennsylvania oil, although I have nothing to prove that by, except the people have said that they considered what we were giving them far better.

Q. At the same price the citizens of Canada would buy of the independents in preference to the Standard, would they? A. Every time. There is not one instance in 1,000 but they will give us the preference over the Standard.

Q. You speak of importing oil from Toledo, Ohio. That is what is called Ohio or Lima oil, is it? A. I think so.

Q. Do you sell that as Ohio oil? A. Oh, yes.

Q. And you make a difference in price between the Ohio oil and the Pennsylvania oil? A. Oh, yes.

Q. You sell them for what they are? A. For what they are. We sold the Ohio oil last fall—that is, about this time last year—at precisely the same price that they were selling Canadian oil at. We were paying those excessive freight rates and five cents duty, but we still sold it at precisely the same price that they did, and we did not lose anything by it, although I admit we did not make much.

Q. (By Mr. Smyth.) The Canadian public would not pay you more for that oil? A. They would at that time, but they would not sometimes; but we did not want to ask them any more at that time.

Q. Is it not recognized in Canada among consumers that the American oil is better than the Canadian oil? A. It certainly is.

Q. And yet they will not pay more for it? A. They will; but at that time we were not asking more for it.

Q. (By Mr. Jenks.) What difference do you make in prices between the Pennsylvania product and the Ohio product? A. Well, generally about a cent or a cent and a half.

Q. (By Mr. Smyth.) Do you sell much Pennsylvania oil? A. Yes; we sell a lot of it.

Q. The parties you mention that you deal with were mostly Ohio people. Whom do you buy from in Pennsylvania? A. From the Corn Planter Refining Company and the Warren Refining Company. I might say that the men who are interested in these two companies are also interested in our con-

cern in Montreal, and also in the Sun Oil Refining Company, in Hamilton. Mr. Jameson is a shareholder in our company, and so is Mr. Todd, of the Corn Planter. They are also shareholders in the Sun Oil Company, in Hamilton.

CANADIAN OIL DUTY DISPROPORTIONATELY HIGH.

Q. (By Mr. Clarke.) You think that the Canadian duties on American oil are disproportionately high; that is, higher than the duties on other products that are imported? A. Oh, yes. Take, for instance, the oil that we bought in Ohio last year. It was worth about, say, 3 cents a wine gallon, and the duty was 5 cents a gallon on it. Of course, today Ohio oil is worth considerably more money, but the duty is still very, very high. I know of nothing in the whole list—there may be some things—but I know of nothing that compares with oil. And Mr. Fielding, in his budget speech last year before the house, said there was nothing he had any apology to offer for but coal oil. He did mention that, and said that he regretted he had not been able to remove any duty from that then. It was the only thing he apologized for, which would go to show that there was nothing else to compare with it.

Q. Have you figured out what the percentages of duty on oil and on other products would be? A. No; I have not; but the duty generally goes all the way from 10 to 25, 30, and even 40 and 45 per cent; and even if it went to 50, it is still away behind the oil. I do not know of anything that comes anywhere near that.

Q. (By Mr. Conger.) What is the percentage on the oil, approximately? A. That would depend largely on the cost. We pay 5 cents a gallon regardless of the cost, unless it is an oil that costs over 25 cents a gallon; then we pay 25 per cent. Of course you know there are no oils sold for 25 cents, or very little, and hence we are not much concerned with that.

Q. (By Representative Livingston.) What is the price of crude oil in Ohio? A. I do not know.

Q. What is the price of the crude oil that you buy this side of the line today? A. We do not buy any crude oil; it is the refined only that we buy.

Q. What is the price of the oil you buy? A. We have bought some for 3, $3\frac{3}{8}$, and $3\frac{1}{4}$, and lately we bought three tanks that cost us, if my memory serves me right, $5\frac{1}{4}$.

Q. Then, at five cents' tariff, what is the percentage; isn't it over 100 per cent? A. Well, that is over 100 per cent.

Q. (By Mr. Clarke.) What was Mr. Fielding's reason for being unwilling to propose a reduction of the duty on coal oil? A. As nearly as I can remember, he merely said that everything and everybody was prosperous or was prospering, and it was not advisable at that time to disturb any of the other industries, and hence he had not done anything with the coal oil duty, because it would have been the only one that he would have wanted to touch at that time.

Q. It is a fact, is it not, that the Canadian gov-

ernment derives a considerable revenue from the importations of oil? A. It does.

Q. And it needs that revenue—depends on it largely for government expenses?

Q. (By Representative Livingston.) Does the Canadian government want that tax for revenue, or what do they want it for? A. That particular tax?

Q. Yes. A. I do not think it needs it; I do not see why it does.

Q. (By Mr. Clarke.) Do you not think the ministers consider that they need it? A. From Mr. Fielding's own remarks I should not say that they thought they needed it. He did not say anything about it at that time.

Q. (By Mr. Smyth.) Do you know how much it amounts to a year to the Canadian government? A. No; I could not tell you. I suppose you could find out from this [producing book]. In 1898 there were 6,880,734 gallons, at 5 cents a gallon; just what that would amount to I have not figured out.

COST OF OHIO OIL, FREIGHT AND DUTY PAID, AND BARRELED.

Q. This oil that you bought in Ohio, you say, at 5 cents a gallon; what is the freight on it to Montreal? A. Forty-three cents per 100, at the present time.

Q. How much would that be on a gallon? A. I figure that it costs us 3 1-3 cents on an imperial gallon.

Q. That would make it cost 13 or 14 cents? A. It costs us more than that when we count the cost of barreling it. We have to barrel it, of course. After the 1st of October, 1898, they did charge us as high as 46½ cents from Toledo, and previous to that time the rate from Toledo was 29½ cents. We pay 43½ cents from Warren to Montreal; and before the Standard got control of the market we got a rate as low as 23 cents—that was no later than April, 1898—23 cents from Warren. But when you go and ask the railway people anything about it, they simply will not talk to you; they do not throw a man out, but they do the next thing to it; they will not have anything to say about it.

Q. You really could not sell that oil below 17 cents and make a profit on it after paying that high freight and paying the duty? A. No; we can not sell it at that price today.

Q. The freight is double what it was a few years ago? A. Almost.

Q. Forty-three and 23? A. Forty-three is what they charge from Toledo now, although they did charge us as high as 46; and from Warren, which was as low as 23—that was in April, 1898—it is very nearly double.

Q. Then, one reason why the price of oil is higher in Canada today is the high freight charges? A. Yes.

Q. And with the duty and the cost there is not very much profit in it at 17 cents? A. There is no profit in it at 17 cents. We can not sell any Ohio oil at 17 cents. I figured it out. In barrels it costs

us 17 cents an imperial gallon; so we can not do anything with it. We can not sell it for less than 18 or over, and make anything on it.

SUPPOSED DISCRIMINATION IN FAVOR OF THE STANDARD.

Q. Do you blame the Standard Oil Company for all that increase in the price of refined oil? A. I do, so far as freight is concerned.

Q. You think they instigate that high rate freight from Toledo and Warren? A. Yes. We knew nothing about this, mind you, from the railway companies. They are supposed to give due notice or post a notice in the stations, etc., as regards an advance of freight or any other notice of that kind; but we knew nothing about that. I heard of it first from our people in Warren. They had got hold of it some way or other—I do not know how—and I went up and for ten days I tried to find out from the Canadian Pacific Railway what the freight was going to be, what the increase was going to be, and I could get no satisfaction whatever. It was in the afternoon of September 30, 1898, about half past 3, that they told me what the rate was going to be, and the Standard knew all about it, because their man was running around the office there as though he owned the office. Nobody else could get anything. They would tell you that they had no time; they would not talk to you and they would not listen to you about it. We could not get any information, although they knew all about it.

Q. That is your supposition, that they knew anything about it? A. Well, I know as nearly as I know anything that they knew about it, because they got a large lot of oil in at that time, before these freight rates came up. Just why they brought that in I could not make out; but they must have known. Any amount of it came in about the 30th of September and along about the 1st of October, which must have been on the way at that time.

Q. You think that the Standard Oil Company pay the same rates from Pennsylvania and Ohio that you do? A. No; I certainly do not; I do not think anything of the kind. The railways say they do, but I do not believe it.

Q. You think they absolutely pay it and there is a rebate? A. Yes.

WATER ROUTES.

Q. (By Mr. Jenks.) Is any oil shipped in by water from Toledo? A. Last year we had a lot of contracts on hand, and we had to fill them in some way. We could not bring in oil by rail to fill them, because the rate from Toledo to Montreal was advanced from 29½ cents to 46½ cents per 100 pounds, on October 1, 1898; and the only notice we had was given to us at half past 3 in the afternoon of September 30, 1898. We brought in a schooner load of 1,500 barrels to fill our contracts. That was about the only barreled oil of any account that came in that way. The Standard are now bringing in refined oil by water in tank vessels. They have been doing that for the last three or four months.

Q. (By Mr. Conger.) Where do they bring that from? A. I think the American oil is loaded in New York, because it comes up the St. Lawrence river. The Canadian they load at Sarnia, and bring it down through Lake Ontario and the St. Lawrence to Montreal.

LUBRICATING OIL.

Q. (By Mr. Phillips.) Do you handle any lubricating oil in Canada? A. Yes; that is the greater part of our business. We were forced to handle the lubricating oil almost exclusively, because we could not handle the other after the railways began manipulating the freight rates.

Q. Where do you buy lubricating oil? A. Nearly altogether from Warren, Pa., from the Warren Refining Company and the Corn Planter.

Q. Is there any lubricating oil made in Canada out of Canadian oil? A. Yes.

Q. Can you state the amount? A. There is quite a lot of lubricating oil made.

Q. Does it make as good a quality as you get from this country? A. No. Of lubricating oil and tar there was made in 1898 868,957 gallons. That is much less than in 1896. In 1896, you will notice, it was 1,447,455. It has gone back nearly half. That, I think, is due to the fact that they find the American product much better than the Canadian; I do not know of any other reason.

Q. Perhaps they are refining more of the Canadian oil on account of the tariff? A. Well, I do not know; the tariff was a little less in 1898 than it was—well, in 1896; it would just depend in 1896 on what time that stuff was brought in. There was nearly one-half more used in 1898 of the American than there was previous to that time; and there must have been a great deal more oil consumed in 1898 than there was in 1896, because it was increasing all the time. There are new industries and that kind of thing going on.

FREIGHT RATES RAISED BY CANADIAN ROADS, NOT BY AMERICAN.

Q. (By Mr. Farquhar.) Was there any other reason given at that time for the raising of the American freight rates on the roads that were operating with the Canadian; did they give any business reasons for it? A. No; the American roads did not increase their freight rates; our own Canadian roads did.

Q. On the through bill they added the Canadian tariff? A. Yes, or they increased the tariff so much and made it up to what it is at the present time. The rate from Warren to Suspension Bridge is still 8½ cents; it was that before and it is yet; but the rate from Suspension Bridge to Montreal is 35 cents, making a through rate of 43½. The American roads remain precisely the same as they were before.

SAMPLING COMPETITORS' OIL AND KNOWING COMPETITORS' BUSINESS.

Q. (By Mr. Jenks.) Have you any further statement that you would like to make on any points that have been omitted? A. When our tank cars come in, the Standard Oil Company have a habit of sending their man and opening that tank car and taking a sample out of it to see what it contains. I have known this for a long time, but it was only a little while ago that I was able to bring them to time for it. They did it regularly, and I had hard work to catch them. Of course we were not wasting all our time standing along the siding looking after our cars, but I got them one day and I called their attention to it and they said it was a mistake. I had a letter from our foreman at Mile End complaining of the fact; however, that is no matter. They would take a sample down to their office and find out just what we had and deal with us accordingly. As a matter of fact, before I went into this company, before it was organized, we used to buy an occasional carload of American goods. That was before the Standard got control of the Canadian business. There were some American oils that we had to have any way, because they were better. And I remember one day that the Standard Oil Company's man came into the office, and he gave me the numbers of the cars and the number of barrels contained in them and what I paid for them. I knew him very well, and he jokingly said, "I know all about it;" and he wanted to sell me the stuff. Well, how he knew it I must confess is beyond me.

Q. (By Mr. Smyth.) Do they open your letters? A. Oh, no. (Laughter.)

Q. (By Mr. Kennedy.) Are these employes and officials of the Standard Oil Company Canadians or Americans? A. I do not know; I will give that up, too.

Q. (By Mr. Smyth.) The opening of your tank cars must be done with the connivance of the officials? A. No.

Q. (By Mr. Kennedy.) Do you know the nationality of the Standard Oil people in Canada? A. Some of them have been brought from here, and some of them are Irish, and others are Scotch; but whether they are British subjects or otherwise I do not know.

Q. (By Mr. Smyth.) Do you think the railroad officials must have known of these cars being opened and samples being taken from them? A. They did, but, like myself, the agent at Mile End, where my stuff had come in—he knew it was going on, and he never had been able to catch them. When, however, our man found them at it he went and got the agent and brought him out, and showed him the man on the track. Corn Planter was written on the car in letters at least 18 inches long, and he never could have made any mistake about the tank; but they said it was a mistake. He got on the wrong tank. Of course, that was all right, as far as an explanation goes. Then they will persecute a man in every

shape, manner and form. They will send a man or men around to watch where you are delivering oil, and then they will send their salesman right there afterwards, and all such kinds of things. They do anything and everything. There is nothing but what the Standard Trust will do; I do not care what it is.

Q. (By Mr. Clarke.) You think, then, that they practically run your railroads and your government? A. At the present time I will not say that much about the government, because I expect to have these things regulated a little; but they run the railways, that is sure.

Q. (By Mr. Smyth.) How long have you been in the oil business? A. About eleven years.

Q. How long since the Standard Oil Company has had control of Canadian oil? A. Since the latter part of July or the beginning of August of last year.

Q. (By Mr. Farquhar.) Previous to that, were they open competitors there in the refining and sale of oil? A. Yes. There were five separate refineries, different concerns, in active operation at that time, and four others that were not active then.

FREIGHT RATES AGAIN.

Take the freight on other lines of goods. The Lake Shore tariff, No. 193, in April, 1895, shows sixth-class articles, carload iron, 21½ cents per 100 pounds from Pittsburg to Montreal. In September, 1899, the rate is 19½, showing a decline of two cents per 100 pounds. I do not know why it went up on oil. I know why, but there is no reason for it. I offered to guarantee them 400 tank cars a year—made the offer in writing to the Grand Trunk. The reply was this, dated the 5th of July, 1899:

"Freight rates on oil.—Replying to your favor of the 30th ultimo and previous conversation, I have now had an opportunity of discussing this matter with our general traffic manager and beg to advise you that we are not prepared to make any modifications on our present rates for oil.

"Yours truly, J. W. LOUD."

They simply will not listen to you at all or give you any satisfaction whatever. These same railroads have been built largely with the people's money. The Canadian Pacific railway, for that western extension through to Winnipeg and the coast, have got some 20,000,000 acres of land and about \$30,000,000 in money; and the land is worth all the way from \$3 to \$10 an acre today in Manitoba and the northwest. It gives you some idea of whether that road cost them very much or not.

Q. (By Mr. Smyth.) You do not think this is altogether political action on the part of the Canadian government, influencing the railroads, in the way of retaliation, to keep out American products? A. I do not think anything of that kind. I have not any such idea at all, and I do not think anybody else in Canada has.

Q. You do not believe the railroads get all the

freight they charge? A. No; I do not. I think part of it goes back to the Standard Oil trust; that is my opinion.

Q. But you have no proof of that? A. We have not. Of course there are lots of things we have got that I could have given you more information about if I had come before you later; but we have not proved these facts yet. We are sure enough that we have got information, but it is rather a serious thing to do that unless you know you are right.

Q. (By Mr. Farquhar.) As far as you know, then, you have to pay practically the same freight as the Standard? A. The railways say that.

Q. So far as you know, I say. A. So far as I know.

CANADIAN RAILROAD LAW—POWERS OF THE RAILWAY COMMITTEE.

Q. (By Mr. Smyth.) Is there any law in Canada against rebates by railroads? A. Well, yes; I do not know what it is, but they have laws governing these things; but the trouble is there, as it is elsewhere, it is pretty hard to handle these things and enforce them. You just fancy a concern of no more magnitude than our own tackling the Grand Trunk and the Canadian Pacific on questions of that kind.

Q. (By Mr. Farquhar.) You spoke of the railway committee. Do you know what scope and power that committee has? A. Well, they have, as near as I know, control of all such matters as freight rates, crossings of railways and passenger rates, and in fact anything of that nature that concerns the general public and the railways.

Q. Are their findings and judgments final? A. No; I think it is merely a court of inquiry.

Q. Investigation? A. Yes, and they can order the railway to do so and so; but I do not for a moment think that if we prove all that we have said, the Canadian Pacific railway or the Grand Trunk either will obey that decision. We should have to go to work then, I suppose, to have it enforced, which would mean a long time, and be of practically no use to us at that time when we got it.

Q. (By Mr. Phillips.) Enforce it through the courts, you mean? A. Yes, we should have to begin a civil action against them on the strength of the findings of the railway committee, because I do not think they would pay any attention to the railway committee.

COMBINATIONS FEW AND SMALL IN CANADA—SENTIMENT AGAINST THEM.

Q. (By Mr. Kennedy.) Is there any sentiment in Canada against these large industrial combinations? A. There is, and the Globe newspaper, which is supposed to be the official organ of the present administration, has been hammering away at industrial combinations, particularly the Standard Oil trust.

Q. Have you industrial combinations in Canada similar to those in this country and England? A. Oh, we have not anything of any account. The oil business is a kind of a monopoly and so is the sugar business; but that is due to the duty, and so on. There

are a few of what we might call monopolies or trusts, but they are very insignificant and small. They do not amount to anything outside of the oil business. It is something new to our people there, that kind of thing, and we have to thank the Standard Oil Company for introducing it.

Q. Are the people disposed to seek redress through legislation? A. I think that if the present government do not alter things in some way so that the people will not be at the mercy of these trusts, or the oil trust in particular—well, I think that that will be one means of defeating them at the next election. That is about the only thing that is spoken of; this freight discrimination and the duty on oil and binder twine and a few things like that. I might say that the present government said that if it was shown that there was any inclination to a trust in any manner whatsoever they would immediately remove the duty on the articles complained of. They committed themselves in that way; so I made a declaration to the effect that there was a combination in the oil business, and it was read before the house at its last session. They were going to consider it and I suppose they are considering it yet. There was nothing done about it. This is the declaration that I made:

CANADA, PROVINCE OF QUEBEC, DISTRICT OF MONTREAL.

I, Andrew Downie Gall, of the city of Montreal, in the Province of Quebec, oil merchant, do solemnly declare that I am extensively engaged in the wholesale trade of coal oil, burning oil and other oils in the Dominion of Canada; that all the petroleum oil refineries in Canada at the present time are under the control of the Standard Oil Company or Standard Oil trust through the said company having acquired some outright and a controlling interest in others; that since acquiring the said refineries in Canada the Standard Oil Company, which is operating in Canada under the style of the Imperial Oil Company, limited, has closed up some refineries, demolished others and is operating only such as it sees fit; that no petroleum oil from Canadian refineries can be obtained today unless it is procured from or through the Standard Oil Company or the Imperial Oil Company, limited, directly or indirectly; that it is quite apparent, and investigation will establish beyond doubt, that the said Standard Oil Company or the Imperial Oil Company, limited, has so acquired and controls said refineries for the purpose of forming, and they have thereby formed a trust or combination to unduly enhance the price of such oil and to unduly promote the advantage of the said company at the expense of the consumers; that the firm of which I am a member, and other firms engaged in the oil business are compelled to buy in the United States and import therefrom our supplies of oil to supply our customers and the trade.

And I make this solemn declaration conscientiously, believing it to be true and knowing that it is of the same force and effect as if made under oath and by virtue of "The Canada Evidence Act, 1892."

A. D. GALL.

Declared before me at the said city of Montreal this 21st day of March, A. D. 1899.

[SEAL.] R. A. DUNTON, *Notary Public.*

Testimony closed.

Whereupon, at 3:55 p. m. the commission adjourned until tomorrow morning at 10 o'clock.

Washington, D. C., November 11, 1899.

TESTIMONY OF GEORGE RICE.

Independent Oil Producer, Marietta, Ohio.

The commission met at 11:15 a. m., Senator Kyle presiding. At 11:15 a. m. Mr. George Rice was introduced as a witness and being duly sworn testified as follows:

Q. (By Mr. Jenks.) Will you give us your full name and address? A. George Rice, Marietta, Ohio.

Q. What is your business? A. I am a moderate producer of oil at the present time.

PAMPHLET PREPARED BY THE WITNESS.

Q. (By Mr. Clarke.) Have you prepared, printed, copyrighted and published a pamphlet which purports to be testimony given, or to be given before this commission? A. I have.

Q. Were you under oath when it was prepared? A. No, sir.

Q. Was it known to any officer of this commission that such a pamphlet was being prepared? A. Yes; I notified Professor Jenks and also the secretary that I was getting up my testimony to be put in pamphlet shape; and I was also directed to send two copies here two days before the time I should appear, which I did.

Q. Were any questions asked of you or answered by you in the preparation of this pamphlet by members of the commission? A. No, sir. Not any of the members that I know of asked me anything in regard to the preparation of it.

Q. Was any schedule of questions sent you? A. No; nothing of the kind.

Q. Do you claim any right, then, to issue that pamphlet as in any sense authorized by this commission? A. No, sir; I do not claim that they have authorized me in any shape or manner to issue this pamphlet. I have published it and copyrighted it on my own responsibility.

Q. Did any member of the commission know or have any notice of the contents, or proposed contents of that pamphlet before you printed and published it? A. Not that I know of; no, sir.

Q. You do not claim, therefore, that you have any right to in any way authenticate that by the use of the name of this commission? A. No, sir; I do not claim any authority from the commission for the use of it.

Q. That is all. A. I have not been authorized in any manner, shape or form.

Q. (By Mr. Jenks.) I understand that you have a statement that you are prepared to make of your own accord in reference to the business of the Standard Oil Company. You may make that in your own way, subject to such interruptions as the commission may think desirable.

The Witness. My testimony, in the main, is in pamphlet form and I will proceed to read from it. Page No. 3. (The witness reads as follows:)

"I am a citizen of the United States, born in the state of Vermont. Producer of petroleum for more than 30 years and refiner of same for 20 years, but my refinery has been shut down during the past three years owing to the powerful and all prevailing machinations of the Standard Oil trust, in criminal collusion and conspiracy with the railroads to destroy my business of 20 years of patient industry, toil and money in building up, wholly by and through unlawful freight discriminations. I have been driven from pillar to post, from one railway line to another, for 20 years, in the absolutely vain endeavor to get equal and just freight rates with the Standard Oil trust, so as to be able to run my refinery at anything approaching a profit, but which I have been utterly unable to do. I have had to consequently shut down, with my business absolutely ruined and my refinery idle. This has been a very sad, bitter and ruinous experience for me to endure, but I have endeavored to the best of my circumstances and ability to combat it the utmost I could for many a long waiting year, expecting relief through the honest and proper execution of our laws, which have as yet, however, never come. But I am still living in hopes, though I may die in despair."

The witness offered as exhibit the following:

"MAGNITUDE OF THE PETROLEUM INDUSTRY.

"The magnitude of the petroleum industry of this country may be inferred by its being first in manufacture and fourth in value of our exports.

"Its total production in the United States for 40 years—1859, when discovered, to 1898, inclusive—per government report, is 886,442,759 barrels of 42 gallons each. There was produced in the past five years—1894 to 1898, inclusive—279,129,467 barrels (about one-third of total), or an average of 55,825,893 barrels per annum, 152,947 barrels per day, inclusive of Sundays. The total average annual exports of values past two years—1897-98—was 990,389,183 gallons, valued at \$55,804,297. Total value of exports, 1864 to 1898, inclusive, \$1,445,941,156.

"The combined wealth of the railroads and trusts are jointly owned and used by railway and trust officials to absolutely control the internal commerce of this great nation and absorb unto themselves for their private gain the immense profits to arise from off all producing interests and manufactured products by higher rates of freight through unlawful rebates or freight discriminations, to be increased as they see fit, through compulsory railway tariff exactions, underhand secret tribute and demands, that must absolutely be complied with if shipments are made."

There will be several exhibits in connection with that which I have just presented.

Witness includes exhibits as follows:

"STANDARD OIL TRUST OFFICIALS PRESIDENTS AND DIRECTORS IN ONE-FIFTH TOTAL RAILWAY MILEAGE OF THE UNITED STATES.

"I shall be able to fully prove to this commission a living and prominent example thereof, as embodied in the Standard Oil trust, which has thus achieved its great wealth and power by dishonest and criminal methods in the unlawful use of our public highways, and through this means have become the largest owners in railway bonds and stocks; and today its officials are presidents and directors in one-fifth of the total railway mileage of the United States, all accomplished since 1872. This state of affairs is absolutely startling to contemplate—appalling, indeed, and as monstrous as it is infamous. This could not have been done except through one source, the railroads, whose officials have criminally conspired with Standard Oil officials for the past 27 years to give them their great power and unlawful, ill-gotten wealth.

"In 1887 the interstate commerce act was passed to stop these criminal conspiracies, but with 12 years' trial it has proved absolutely abortive.

"RAILWAY FREIGHT DISCRIMINATION IS THE FATHER AND BREEDER OF TRUSTS.

"I understand Mr. Havemeyer says that 'the tariff is the mother of trusts,' while I assert that railway freight discriminations is the father of them, the breeder of trusts, from which the greatest commercial evil of the present day arises. Although the tariff has its material effect, it is in no wise commensurate with the frightful freight discriminations; prominent example, the Standard Oil trust.

"Under the tariff it is not questioned but that every one pays the same duty, which is not the case in the payment of railway freights, for all competitors of the trusts must pay the enforced full tariff rates, jointly made by trust and rail officials, while trust freights are carried for nothing, one-fourth and one-half of the regular established rates, as is easily proved in the case of the Standard Oil trust. There is no question in my mind but all recent formation of trusts and combinations, and in which Standard officials are largely interested, are based upon and permeated with the same general plans, and investors therein privately advised that necessarily great advantages will accrue and larger dividends be declared on watered stocks through freight discriminations in the concentration of freight.

"The Standard Oil trust was the first industrial trust organized in this country, the originator and father of them all, from which all the rest have been bred. It is directly responsible for the formation of many subsequent trusts, because at an early date it lent its aid and support to the organization of other trusts, receiving therefrom large sums of money, to the extent of \$250,000 from some of them (Cotton Seed Oil trust) for a copy of the secret unlawful trust agreement, decided illegal by two states (Ohio and New York), consequently all subsequent acts and resolu-

tions changing into corporate form, etc., are regarded illegal.

"MAGNITUDE OF THE STANDARD OIL TRUST.

"The magnitude of the Standard Oil monopoly, as consummated and centered in the Standard Oil trust, will be seen from the last enforced public utterance, in February, 1898, in which they really do admit having at least 20 corporations in the trust, capitalized at \$102,233,700, of which pipe line companies represent over one-half—\$52,455,200. In 1888 they reported 39 corporations in the trust, capitalized at \$47,830,200, or less than one-half of the combined 20, and \$5,000,000 less than the present capitalization of the pipe line companies.

"At the market price in May of 500, on par of 100, represents a valuation of over half a billion of dollars.

"SINCE THEIR PRETENCE OF DISSOLUTION, MARCH, 1892,
THE STANDARD OIL TRUST HAS PAID OUT
IN DIVIDENDS \$170,730,279. . . .

"For the first 10 years of the Standard Oil trust—1882 to 1892—it paid out in dividends more than double its entire capitalization in 1888. Since their pretense of a dissolution, March 21, 1892, and including September, 1899, they have paid 30 quarterly dividends of three per cent, or 90 per cent and paid 77 per cent in specials (none paid previous to December, 1895), or a total of 167 per cent, and on a capitalization of only \$102,233,700 amounts to the sum of \$170,730,279.

"There could have been paid much larger dividends if net earnings had not been and were not now being used in the purchase of large blocks of producing properties, paid for out of surplus earnings to the extent of many millions of dollars. While this trust accumulated these immense dividends and extra surplus earnings, there is not an independent refinery in the country which can even pay a small dividend. No new refineries have been built for several years, owing to this monstrous condition of affairs, and no material additions made to the old ones. The independent refiner is simply struggling for an existence, in the hope that an overruling Providence may yet come to the rescue.

"The Standard Oil trust now owns nine-tenths of all the local gathering pipe lines in the oil producing regions, consequently purchases 90 per cent of all the crude oil produced, and thus absolutely makes the market price for this great product, dictating to the producer the price he shall take for his oil and to the consumer what he shall pay for the products thereof, and take whatever quality of oil they choose to give. This monopoly governs and controls production by its necessities, increasing the price when more oil is needed and reducing it when less oil is required, so that greater percentage of profits may accrue with less capital used between the lowest priced crude possible and the highest price for the refined and not materially restrict consumption.

"The Standard Oil Trust dictates to the railway lines

the compulsory tariff rates on petroleum its competitors must pay, while its own is carried at nominal figures, as was fully proven in my own experience when in business.

1872.—ATTACK BY THE TRUNK LINES OF RAILWAY ON THE PETROLEUM INDUSTRY, BY WHICH THE STANDARD OIL MONOPOLY WAS CREATED, AND WHICH CAUSED THE FORMATION OF THE STANDARD OIL TRUST, UNDER AND BY VIRTUE OF SEVERAL CONTRACTS MADE BY THESE ROADS WITH THE SOUTH IMPROVEMENT COMPANY, WHICH GAVE THEM THE MONOPOLY OF THIS GREAT INDUSTRY THROUGH RAILROAD REBATES OR FREIGHT DISCRIMINATIONS, COMPLETE CONTRACT.

"The origin of the Standard Oil trust was the Standard Oil Company of Ohio, which was organized January 10, 1870, with a capitalization of \$1,000,000, increased to \$3,500,000 March 13, 1875, at which it now stands. January 2, 1872, was the advent of the Standard Oil monopoly, by the directors of the Standard Oil Company of Ohio organizing a fictitious corporation called the South Improvement Company, with a nominal capital of \$200,000, whose sole aim and object was to make secret rebate contracts with the railroads, as subsequently will be shown, and was exposed in 1879 by the Hepburn investigating committee, of New York; and fortunate it was that these contracts happen to be in writing and are now upon the records to condemn the makers of them from time to eternity. The Standard Oil Company received the grossest discrimination in the form of rebates, not only upon its own shipments, but also a like amount on the shipments of its competitors. These rebates ranged from 40 cents to \$1.06 per barrel on crude petroleum and from 50 cents to \$1.32 per barrel on refined.

"JANUARY 1, 1872, THE STANDARD OIL COMPANY ONLY HAD FIVE PER CENT OF THE PETROLEUM INDUSTRY AND ITS COMPETITORS HAD 95 PER CENT, WHILE IN 1879 THIS WAS REVERSED.

"At this early date in the oil business its competitors had 95 per cent of the petroleum industry, while the Standard Oil Company had less than five per cent, so that the Standard Oil Company received 19 times more rebates per barrel from off the shipments of its competitors than it did from off its own shipments.

"Henry M. Flagler, secretary of the Standard Oil trust, testified in April, 1888, before a congressional committee (page 288) that in 1870-71, just prior to the making of these unlawful rebate contracts—January 18, 1872—the refining capacity of the Standard Oil Company was 600 barrels a day. The average annual production of petroleum in the years 1870-71, per government report, was 5,232,989 barrels, or an average of 14,336 barrels a day, showing conclusively by the testimony of one of the highest of Standard officials that the Standard Oil Company had control of less than five per cent of this great industry just previous to the signing of these nefarious contracts.

"HENRY M. FLAGLER, SECRETARY OF THE STANDARD OIL TRUST, TESTIFIES THAT WILLIAM G. WARDEN, AN ORIGINAL TRUSTEE OF THE STANDARD OIL TRUST, AND THE LOGANS WERE THE GREAT LEADERS IN THE SOUTH IMPROVEMENT POLICY."

"Mr. Flagler further testifies (pages 289, 290) that William G. Warden and the Logans, who were directors with him in the South Improvement Company, 'were the great leaders in the South Improvement policy,' and in the next breath denies it by saying that Payne and himself, 'or any one connected with the Standard Oil Company, had any confidence in or regard for the scheme known as the South Improvement Company,' and that 'the company never did a dollar's worth of business and never had any existence other than its corporate existence,' while William G. Warden, its secretary, testifies, on March 30, 1872, before a congressional committee, that its purpose was to refine oil and get 'all the refineries in the country into the company,' also gives the names of its 13 directors, as follows:

"Q. Where did that company intend to refine oil? A. Their calculations were to get all the refineries in the country into one company.

"Q. Was it the design of the stockholders to include all the oil refineries in this country? A. Yes, sir; every one of them.

"Q. Can you give us a list of the stockholders in the South Improvement Company? A. I can give them to you from the minutes. They are as follows:

	Shares.
John D. Rockefeller.....	180
William Rockefeller	180
H. M. Flagler	180
J. A. Bostwick	180
W. G. Warden.....	475
O. H. Payne (treasurer).....	180
"Above were original trustees of the Standard Oil trust (1882)."	
P. H. Watson	100
O. F. Waring	475
Richard S. Waring.....	10
Charles Lockhart	10
William Frew	10
John P. Logan	10
W. P. Logan	10

Original issue (par value, \$100)..... 2,000

"The original trustees of the trust, as above shown, held 1,375 of the 2,000 shares, or 70 per cent of its capitalization, while the balance of the shares were held by the officials of the Standard Oil Company.

"This proves absolutely and conclusively that ostensibly the South Improvement Company was to control all the refineries in the country, but in reality its only official purpose was to make rebate contracts with the railroads.

"THESE GROSS REBATE CONTRACTS WERE APPROVED BY THE BOARD OF DIRECTORS OF THE SOUTH IMPROVEMENT COMPANY, COMPOSED WHOLLY OF THE OFFICIALS OF THE STANDARD OIL COMPANY.

"Peter H. Watson, its president, testified on April 5, 1872, before a congressional committee as follows (page 67, Rise and Fall of the South Improvement Company):

"Q. Was there any ratification by the company of your contracts with the railroad companies in its formal capacity? A. Yes, sir. They were approved by the board of directors, as appears in the minutes, and as I am informed, it having been done in a meeting at which I was not present."

"This conclusively establishes the fact by the testimony of the president of the company that the above 13 directors of the South Improvement Company approved of these iniquitous contracts by a resolution of its own board of directors, as against the oft repeated denials of some of these men that they were not in said company or had anything to do with these unpalatable and unsavory contracts; but this clear and indisputable evidence places the responsibility of the inauguration of this villainous and most infamous scheme where it properly belongs—with Standard Oil officials.

"John D. Rockefeller, president of the Standard Oil trust, on February 27, 1888, testified before a legislative committee of New York state, relative to trusts (page 419) that he was not in it, but Warden above and Flagler below say that he was.

"Had there been, previous to that, a trust company called the South Improvement Company? A. No, sir.

"Q. There was such a company? A. I have heard of such a company.

"Q. Were you not in it? A. I was not.

"H. M. Flagler, secretary of Standard Oil trust, two months later, April 27, 1888, testifies before the manufacturers' committee of congress (p. 289):

"Q. Do you remember what was called the South Improvement Company? A. Yes, sir.

"Q. We have had in evidence here some facts relating to it. Who composed that company? A. I can not recall the names of all the gentlemen who were supposed to be interested in it.

"Q. Tell us to the best of your knowledge. A. The South Improvement Company was a matter brought to Mr. Rockefeller's and my attention perhaps six months before it was known publicly. Perhaps I shall ramble if I undertake to tell you all about it.

"Q. Precisely what I want to know is the names of all whom you knew to be connected with it. A. William G. Warden, Charles Lockhart, William P. Logan, John Logan, J. D. Rockefeller, William Rockefeller, O. H. Payne and myself are the only names I recall."

"Mr. Scheide, a former prominent official of the Standard Oil monopoly, testified before the Hepburn committee (p. 2766) as follows:

"Q. Was the Standard Oil Company and the South Improvement Company the same at that time? A. The Standard Oil Company was part of the South Improvement Company.

"Q. The South Improvement Company at that time was the larger, comprehending the Standard Oil Company? A. Yes, sir; it comprehended the Standard Oil Company and a dozen other different firms in Pittsburg and Cleveland."

"These most extraordinary contracts were the sole cause of the creation of the Standard Oil monopoly, and the subsequent formation of the Standard Oil trust, and the inauguration of subsequent trusts.

"These contracts were signed by the trunk lines of road and Peter H. Watson, representing the Standard Oil Company, within 16 days after the organization of the South Improvement Company.

"It is a significant fact to note that Peter H. Watson, who signed these contracts on behalf of the Standard Oil Company, January 18, 1872, a few months later, July 9, 1872, was elected to the office of president of the Erie Railway Company, one of the trunk lines of this combine, and continued in office for the period of two years, until July 14, 1874.

"It is also a further most significant fact to note, that at the time these contracts were signed by the officers of these trunk lines of railway, they were cognizant of the fact that they were dealing with a mythical organization, which did not even own a refinery, nor was it in possession of a single oil well.

"It is difficult to conceive of a more malicious scheme to throttle competition, under the forms of law, and if permitted to continue, sooner or later sounds the knell of liberty.

"BRIEF EXTRACTS FROM THE FREIGHT CONTRACTS.

"To pay and allow to the party hereto of the first part, on all petroleum and its products, transportation for it over the railroads of the party of the second part and its connections, the following rebates, and on all transported for other parties, drawbacks of like amounts as the rebates from the gross receipts, the same to be deducted and retained by the party hereto of the first part (Standard Oil Company), for its own use, from the amounts of freights, payable to the party of the second part."

"And it is hereby further covenanted and agreed by and between the parties hereto that the party hereto of the second part (Pennsylvania Railroad Company) shall at all times co-operate, as far as it legally may, with the party hereto of the first part (Standard Oil Company) to maintain the business of the party hereto of the first part against loss or injury by competition, to the end that the party hereto of the first part may keep up a remunerative, and so a full and regular business, and to that end shall lower or raise the gross rates of transportation over its railroads, as far as it legally may, for such times and to such extent as may be necessary to overcome such competition. The rebates and drawbacks to the party of the first part to be varied *pari passu* with the gross rates."

"The party hereto of the first part (South Improvement Company) from time to time shall notify the

party of the second part, in writing, of the change required, whereupon the party hereto of the second part (Pennsylvania Railroad Company) shall forthwith make a corresponding change of such gross rates."

"It is further mutually agreed by and between the parties hereto that this agreement shall continue and remain in force for the period of not less than five years; and shall not then nor thereafter terminate until one of the parties shall have given 12 months' written notice to terminate it."

"South Improvement Company, party of the first part, by Peter H. Watson, president (president of the Erie Railway Company 1872 to 1874).

"Parties of the second part:

"Pennsylvania Railroad Company, J. Edgar Thomson, president, and for the Pennsylvania Company, Philadelphia and Erie Railway Company, Northern Central Railway, Allegheny Valley Railroad, Camden and Amboy Railway.

"The New York Central and Hudson River Railroad Company, William H. Vanderbilt, vice president, and for the Lake Shore and Michigan Southern Railway.

"Erie Railway Company, Jay Gould, president, and for the Atlantic and Great Western Railroad Company."

"(Original contract, pamphlet B, p. 7, George Rice.)

"Frank Rockefeller, brother of John D. Rockefeller, on July 7, 1876, testified before a congressional committee against his brother (per following extracts), and fully confirmed the results of the disastrous effects of the above contracts by saying that John D. Rockefeller and Henry M. Flagler told him, 'If you don't sell your property to us it will be valueless, because we have got advantages with the railroads (tactics of Jack Sheppard, Claude Duval):

"Q. Do you know how many refineries there were in Pittsburg prior to this alleged combination? A. I have been told there were 60 and odd refineries.

"Q. How many are there now? A. I was told by the same parties that there were now less than 20 and very few doing business.

"Q. (By Mr. Regan.) What is the cause of that reduction in the number of refiners? A. I suppose the main cause has been the fact that they could not make money. I have understood that the same lever was brought to bear upon them as upon the Cleveland refiners. We had in Cleveland at one time about 30 establishments, but the South Improvement was formed and the Cleveland companies were told that if they didn't sell their property to them it would be valueless; that there was a combination of railroad and oil men; that they would buy all they could, and that all they didn't buy would be totally valueless, because they would be unable to compete with the South Improvement Company, and the result was that out of the 30 there were only four or five that didn't sell.

"Q. From whom was that information received? A. From the officers of the Standard Oil Company. They made no bones about it at all. They said: "If you don't sell your property to us it will be valueless, because we have got advantages with the railroads."

"Q. Give the names? A. J. D. Rockefeller, H. M. Flagler and O. H. Payne.

"Q. (By Mr. Ross.) Mr. Payne is the son of the member of congress of that name? A. Yes, sir.

"Have you heard those gentlemen say what you have stated? A. I have heard Rockefeller and Flagler say so. Other parties have told me that Payne has used the same argument with them.

"Q. What other parties? I won't give you the names now. There are some 20 men in Cleveland who sold out under the fright, and almost any of them will tell you that story.

"Q. Give us the names of some of those that sold out? A. J. W. Faucett, of Cleveland; W. C. Scofield, Joseph Stanley, John Chritchely. Those are some of them.'

"I also refer to the testimony of John Alexander, W. H. Doane, Charles I. Morehouse and Isaac L. Hewitt, who sold out one-third to one-half of the cost of their refineries (B. 18-19).

"FREIGHT RATES DOUBLED WITHIN 30 DAYS AFTER SIGN-
ING OF THESE CONTRACTS IN ORDER THAT THE
REBATES MIGHT NOT BE SO DISPROPOR-
TIONATE TO THE TARIFF
CONTRACT RATE.

"On February 26, 1872, 30 days after these iniquitous contracts were made, freight rates on petroleum were doubled, and on oil only (South Improvement pamphlet, p. 5) by which these most extraordinary of rebates would not seem so disproportionate to the tariff rates.

"In this connection it might be well to state that the charter of the South Improvement Company was repealed by the legislature of Pennsylvania under the intense excitement and universal indignation aroused against it throughout the oil region from producers, refiners and shippers of oil.

"On March 25, 1872, the same lines of railway, under threats of destruction of their properties, entered into an agreement with the independent refiners and producers of oil to give them equal rates and facilities as enjoyed by the Standard Oil Company, as follows:

"That all arrangements for the transportation of oil after this date shall be upon a basis of perfect equality to all shippers, producers and refiners, and that no rebates, drawbacks or other arrangements of any character shall be made or allowed that will give any party the slightest difference in rates or discrimination of any characted whatever. * * * *

"And said rates shall not be liable to any change, either for increase or decrease, without first giving to William Hasson, president of the producers' union at Oil City, at least 90 days' notice in writing of such contemplated change.

"In the distribution of cars for shipments it shall be done without discrimination.

"On the basis as hereinbefore stated, the parties respectively agree to carry out the arrangements in good faith and work for the mutual interest of each other.

"In witness whereof the parties have hereunto affixed their signatures, this 25th day of March, A. D. 1872.

"For the Lake Shore and Michigan Southern Railroad Company, H. F. Clark, president.

"For the Erie Railroad Company, O. H. P. Archer, vice president.

"For the New York Central and Hudson River Railroad Company, Wm. H. Vanderbilt, vice president.

"For the Atlantic and Great Western Railroad Company, George B. McClellan, president.

"For the Pennsylvania Railroad Company, Thomas A. Scott, vice president.'

"It is important to note the fact that the above 90-day notice was never given in order that competitive shippers would understand that said agreement was honestly kept in full force and effect.

"Simon Sterne, counsel for the Hepburn committee, says that 'after the South Improvement Company was broken up these same terms and rebates were, without any open contract, substantially continued to the Standard Oil people.'

"George R. Blanchard, second vice president of the Erie Railway Company, on October 17, 1879, testified before the Hepburn committee 'that this agreement, although fully considered and agreed upon, lasted less than two weeks.' So that necessarily the same contract transportation rates and rebates continued indefinitely.

"TRUSTEES OF THE STANDARD OIL TRUST TESTIFY IN
1879 THAT THEY CONTROL 95 PER CENT OF THE OIL
INDUSTRY, WHERE SEVEN YEARS PREVIOUSLY THEY
ONLY CONTROLLED FIVE PER CENT.

"In October, 1879, Henry H. Rogers, present trustee (p. 2615), and J. A. Bostwick, a former trustee (p. 2696), testified before the Hepburn committee of New York that the Standard Oil Company at this early date controlled 95 per cent of the entire oil industry of the United States, when just previous to the making of these rebate contracts the Standard Oil Company only had 5 per cent of it, having acquired by unlawful and dishonest means, within the brief space of seven years 90 per cent more of this great industry, transforming and completely changing ownership from the hands of the many into the hands of a minor few, wholly through the connivance and conspiracy combination and acts of Standard and railroad officials.

"Moreover, while the Standard was thus building up its monopoly the railroads were at the same time destroying the value of their own properties, and the non-payment of dividends and appointment of receivers in many instances were due to these unwise, illogical, and dishonest practices.

"The effect of these contracts was to carry the Standard oil free and pay it a large bonus besides. Railroad freights were doubled that greater rebates might follow, while the consumer of petroleum became the victim, and was forced to pay, indirectly, untold millions of rebates in higher-priced oil and of a poorer quality through railway tariff exactions for the sole benefit of a few unscrupulous rail and trust officials jointly interested.

"Frank Rockefeller also testifies, July 7, 1876,

that such prominent railroad men as William H. Vanderbilt, Amasa Stone, Devereaux, and John Newell, were stockholders in the Standard Oil Company.

"You spoke a while ago of having a personal knowledge of certain railroad officials having been stockholders in the Standard Oil Company—how do you know that? A. I know it from the officers of the Standard Oil Company telling that they were stockholders.

"Who are they? A. William H. Vanderbilt, the vice president of the New York Central Company, was at one time a stockholder in the Standard Oil Company; also Amasa Stone, of Cleveland, the general manager of the Lake Shore road, and I have very good reason for believing, though I do not know it, that Mr. Devereaux and Mr. Newell are both stockholders at the present time. Mr. Stone sold his stock some two years ago, at or before the time when he quit the railroad. He put his stock on the Cleveland market and sold it, and he is not, I believe, a stockholder today.

"And says he thinks that William H. Vanderbilt, Tom Scott, Devereaux, Newell, and other officials of the railroads received rebates.

"Q. (By the Chairman.) Give us the names of the officials of the railroads that you think received the benefit of this rebate. A. Understand me. I don't say they did get it. It is merely my opinion.

"Q. Give me the names of the gentlemen that you think do reap the benefit of that rebate. A. I think that Mr. Devereaux gets it, and that Mr. Newell gets it, that Tom Scott gets it, and that Mr. Vanderbilt gets it, and other officers of those roads whose names are not in my mind at present.

"Also further testifies that rebates go into a pool and are divided up between the Standard Oil Company and railroad officials.

"Q. What do you mean by the pool—a pool among the railroads or among the oil men? A. I don't give this as a positive fact, but, as I understand the arrangement, the New York Central, the Erie, the Atlantic and Great Western, the Pennsylvania Railroad, the Cleveland, Columbus and Cincinnati, and the Baltimore and Ohio roads have a pool—are combined for the purpose of shipping oil, and oil only—and in this pool the Baltimore and Ohio gets a certain number of barrels to go over its road, the Lake Shore so many to go over its road, and the Pennsylvania Company so many to go over its road from different points in the country, and on the oil that is shipped over these roads by the pool and the Standard Oil Company there is a rebate or a drawback from the shipment of so much, which is put into this pool, over whichever road the oil may go, and that rebate is divided up between the Standard Oil Company and the railroad officials.

"Q. The railroad officials, do you say? A. So I understand it. I don't say that of my own knowledge.

"Q. Then it does not go to the railroads themselves? A. No, sir.

"Q. But to the railroad officials? A. To the railroad officials.

"It will be quite interesting to figure out in dollars and cents the amount of rebate money per barrel the Standard Oil Company received off the shipments of its competitors under these ironclad rebate contracts, it being made the medium to pay over into a trust pool the following gross competitive rebates, which were to be divided between rail and trust officials:

"REBATES OF \$7.60 TO \$20 PER BARREL TO RAIL AND TRUST OFFICIALS ON COMPETITIVE SHIPMENTS OF CRUDE OIL. THE AVERAGE MARKET PRICE OF CRUDE OIL FOR THIS YEAR WAS \$3.64 PER BARREL.

"On shipments of crude petroleum from any common point, Oil City, Union, Corry, Irvineton, so designated by the contracts, the open public tariff rates from said point to Cleveland and Pittsburg, where Standard Oil refineries are located, was 80 cents a barrel, while the underhand, secret rebate was 40 cents a barrel, so that the Standard Oil Company not only received 40 cents a barrel rebate on each barrel it shipped for its own direct use, while it additionally received from off the shipments of its competitors a share in 19 times the amount, or \$7.60 per barrel, as against each barrel it shipped, which went into the rebate trust pool, as previously testified to by Frank Rockefeller.

"From said points to Baltimore and Philadelphia the open tariff rate on crude petroleum was \$2.41, to New York \$2.56, and to Boston \$2.71 per barrel, while the rebate to each point was \$1.06 a barrel, so that the Standard Oil Company not only received \$1.06 a barrel rebate on each barrel shipped for its own use, but additionally received from off the shipments of its competitors a share in 19 times this amount, or \$20.14 per barrel, as against each and every barrel it shipped, which was also dumped into the rebate trust pool.

"REBATES OF \$9.50 TO \$25 PER BARREL TO RAIL AND TRUST OFFICIALS ON COMPETITIVE SHIPMENTS OF REFINED OIL.

"On refined oil, benzine, and other products of the manufacture of petroleum these secret rebates were greater, as the following will show:

"The open, public tariff rate under these contracts from Cleveland and Pittsburg to Baltimore and Philadelphia was \$1.85 per barrel; to New York, \$2. From Cleveland to Boston (Pittsburg left out), \$2.15 per barrel, while the rebates from and to all these points was 50 cents a barrel, so that the Standard Oil Company not only received 50 cents a barrel rebate on each barrel shipped for its own use, but additionally received from off the shipments of its competitors a share in 19 times this amount, \$9.50 per barrel rebate, as against each barrel it shipped, which also went into the rebate trust pool.

"The tariff under these contracts from designated common points, such as Oil City, Union, Corry, Irvineton, where competitive refineries were located,

was 92 cents per barrel more with less hauls to all seaboard points, as follows:

"To Baltimore and Philadelphia, \$2.77; New York, \$2.92; Boston, \$3.07 per barrel, while the rebates from and to all these points were \$1.32 per barrel, so that the Standard Oil Company not only received \$1.32 per barrel on each barrel it shipped for its own direct use, but in addition thereto it received from off the shipments of its competitors a share in 19 times this amount, or \$25.08 per barrel, as against each and every barrel it shipped, which was also put into this rebate pool to be divided between rail and trust officials. The average market price per barrel of crude petroleum in 1872 was \$3.64, or 8.66 cents per gallon, while the average market price of refined oil for export in the same year was 24.9 cents per gallon, or \$12.45 per barrel, and this is how the Standard Oil monopoly has made oil so cheap to the consumer.

"These most extraordinary revelations seem incredible and beyond belief, but they are the facts as revealed by these contracts, and are plainly the sole cause of the creation of the Standard Oil monopoly, the Standard Oil Trust, and the formation of the present epidemic of trusts.

"Hon. Franklin B. Gowen, former president of the Philadelphia and Reading Railroad Company, had this to say before the Interstate Commerce Commission January 17, 1888:

"I remember well, in those halcyon days when Fisk and Gould controlled the Erie Railway and managed the Atlantic and Great Western Railroad, that an oil association made a contract with the railroad company which gave them a rate on oil, based upon the price at tidewater, with a guaranty that a fixed rate per barrel profit should be made in handling it. The first year's business over the Atlantic and Western Railroad developed the fact that the hundreds of thousands of barrels transported under this contract brought not one cent into the treasury of the railroad for transportation, and that the railroad company had to pay, at the end of the year, 25 cents upon every barrel for the privilege of transporting it in order to make up the guaranty of a fixed profit to the dealer."

"TO TAKE EFFECT OCTOBER 1, 1874.—PLAN BY WHICH A COMBINATION OF RAILWAYS FORCE THE INDEPENDENT PIPE LINES OF THE OIL REGIONS TO SELL OUT TO THE STANDARD OIL MONOPOLY AT THE PRICE OF OLD JUNK, AND ALSO GAVE THEM ADDITIONAL DISCRIMINATIONS IN THE SHIPMENTS OF REFINED OIL, IN GROSS VIOLATION OF THE AGREEMENT OF MARCH 25, 1872.

"After the wholesale destruction of competitive oil refineries by the railroad rebate contracts of 1872, which absolutely gave the Standard Oil Company the monopoly in the manufacture of petro-

leum and of its rail transportation, achieved so easily and with such success, that two years later (1874) it eagerly sought and again applied to the railroads for help to secure the control and monopoly of the local pipe line transportation of petroleum in the oil producing regions, which was easily accomplished by their mutual and trusted friend, J. H. Rutter, general freight agent of the New York Central and Hudson River Railroad Company. He issued a circular, to take effect October 1, 1874, as follows:

"From which shall be refunded 22 cents a barrel only on oil coming from pipes which maintain the agreed rates of pipage.

"The agreed rates of pipage could not, of course, be maintained by the independent pipe lines, which had to lower transportation rates in order to offset the exclusive 22-cent rebate advantage given to the Standard Oil Company, by which they were enabled to bid 22 cents a barrel more for crude oil and not lose anything. The resulting effects were that the old, established pipe lines had to succumb. They could not make money and were forced to sell out their properties at the price of old junk to those joint-interested railroad and Standard Oil conspirators.

"E. G. Paterson, before the Hepburn committee, August 28, 1879, testified as follows:

"A. The effect of it was that whoever was dealing through a pipe line which was receiving that 22-cent drawback from a railroad company, absorbed or crushed out the business of any opposition pipe line, by putting its buyers into the field and bidding the whole or a portion of that drawback, more for the product than those who were buying through another pipe line could, not receiving such a drawback."

"Simon Sterne, in his argument before the Hepburn committee, said as follows:

"After the Rutter circular appeared the independent pipe lines died off like sheep and were all bought up by the Standard Oil Company."

"As early as 1874 the Standard Oil Company was in possession of all tank cars and the terminal facilities of the railroads at the seaboard. (George Rice book, pp. 38, 39, 40.)

"Franklin B. Gowen's argument (page 13) before the Manufacturers' committee of Congress (1889) has this to say:

"At this time the American Transfer Company, according to the testimony of its owner, Mr. J. A. Bostwick (p. 386), was a corporation having from 50 to 75 miles of local pipage, a capital of \$100,000, and no debt. And yet upon this small capital it received from the three trunk lines in 1878 the magnificent income of \$3,093,750, or 22½ cents upon the 13,750,000 barrels of oil shipped in that year, equal to a dividend of 3.093 per cent annually.

"1877-1878.—ATTACK BY THE RAIL LINES UPON THE EMPIRE TRANSPORTATION COMPANY, BY WHICH ITS REFINERIES PIPE LINES, 1,000 TANK CARS, AND 400 RACK CARS WERE FORCED INTO THE HANDS OF THE STANDARD OIL COMPANY AT A RUINOUS PRICE. FREIGHT RATES CUT TO EIGHT CENTS PER BARREL LESS THAN NOTHING DURING THE FIGHT, AND WHEN ENDED, COMPETITORS OF THE STANDARD OIL COMPANY WERE CHARGED \$1.90 PER BARREL, WHILE THE STANDARD OIL WAS CARRIED AT ELEVEN CENTS PER BARREL, NET, IN TANK CARS, LUMP SUM, REGARDLESS OF WEIGHT—1,600 PER CENT DISCRIMINATION.

"The transportation tariff rates on refined oil to competitive refineries in 1878 was \$1.90 per barrel to the seaboard. The Standard Oil Company, through its well-trained railroad agent, J. H. Rutter, general freight agent of the New York Central and Hudson River Railroad Company, gave it a special freight rate on petroleum, Cleveland to New York, of \$60 per tank car, a lump sum, regardless of weight, or 60 cents a barrel, average rate, from which there was deducted the transportation charge on crude oil from the wells to Cleveland and Pittsburg on the basis of 14 barrels of crude, at 35 cents a barrel, or \$4.90, as against 10 barrels of refined from Cleveland and Pittsburg to New York, at 60 cents a barrel, or \$6, leaving \$1.10 net, or only 11 cents a barrel paid by the Standard Oil Company, as against \$1.90 per barrel their competitors had to pay, or 1,600 per cent freight discrimination allowed them by the conspiracy acts of rail officials.

"1879.—ATTACK BY THE RAIL LINES UPON THE TIDE-WATER PIPE COMPANY TO CRUSH AND DESTROY IT IN THE INTEREST OF THE STANDARD OIL COMPANY—THE TRUNK LINES OF RAILWAY AGAINST THE PHILADELPHIA AND READING RAILROAD COMPANY, BY WHICH RAIL RATES WERE REDUCED TO ONE-SIXTH OF A CENT PER TON PER MILE AND BARELY YIELDED THE COST OF THE FUEL FOR THE ENGINES.

"The fight against the Tide-Water Pipe Company would have succeeded but for the prompt financial support given by the Philadelphia and Reading Railroad Company, of which Hon. Franklin B. Gowen was president.

"The Tide-Water Pipe Company, first projected seaboard pipe line, had contracted to get its oils to tide water by another and cheaper route to avoid the excessive discriminating freight rates constantly being imposed by the trunk lines of railway in the interest of the Standard Oil Company.

"The Tide-Water Pipe Company laid a 6-inch line of pipe, 110 miles in length, from the Bradford oil regions to Williamsport (a station on the Reading road), and, by joint traffic arrangement between the Philadelphia and Reading and the Central Railroad Company of New Jersey, had secured rates to the seaboard which were to be equal to the rates

paid by the Standard Oil Company over the trunk line of railway, and on account of the fight freight rates were cut to 15 cents a barrel in favor of the Standard Oil Company, which barely yielded the cost of the fuel for the engines.

"EXTRACT FROM ANNUAL REPORT OF FRANKLIN B. GOWEN, PRESIDENT OF THE PHILADELPHIA AND READING RAILROAD COMPANY, TO THE STOCKHOLDERS.

"Within the last two or three years certain producers and shippers of oil, in order to reach the few refineries in the neighborhood of New York which yet remained independent of the Standard Oil Company, associated themselves as the Equitable Pipe Line Company, laid a local pipe to connect with a railway terminating at Buffalo, and shipped from the latter place crude petroleum in canal barges, via the Erie Canal, to the waters of New York bay.

"As this avenue of transportation was closed during the winter, it proved ineffectual as a source of permanent supply, and in order to secure an outlet for the entire year, as well to Philadelphia as to New York, certain gentlemen interested in the Equitable Pipe Line Company, Limited, and, having secured the right of way, laid a 6-inch pipe line a distance of over 100 miles, from the Bradford oil region, in McKean county, Pa., to Williamsport, the terminus of the Catawissa branch of this company, and a contract was entered into between the Tide-Water Pipe Line Company, this company, and the Central Railroad Company of New Jersey for the transportation of the oil to Philadelphia and New York by rail from Williamsport.

"This attempt of the producers of oil to secure an outlet independent of the Standard Oil Company and the trunk lines was at once resented by both interests affected, and from the date of the completion of the pipe line to the present, every effort has been made by some of the companies interested to convert the profitable business of the transportation of the oil into a losing one.

"The trunk line rates on oil by rail have been so reduced as to yield at times but about one-sixth of a cent per mile for its transportation, or about one-quarter of the actual cash cost, and for many months motive power which might have been most profitably employed in hauling remunerative traffic has been occupied with an enormous tonnage of oil which barely yielded the cost of the fuel for the engines.'

"I also refer this commission to the report of the Hepburn committee of New York, January 22, 1880, investigating the Standard Oil monopoly, in which those astounding and celebrated rebate contracts of 1872 were exposed. The following are extracts of the report:

"In which these roads agreed to pay said company rebates on shipments to different points, ranging from 40 cents to \$3.07 per barrel.'

"The roads transporting the refined oil shall refund to the refiners, as a drawback, the charges paid by them upon the crude oil reaching their re-

fineries by rail; and the roads transporting through crude oil to the eastern seaboard shall refund to the shippers 22 cents per barrel; both of said drawbacks to be paid only on oil reaching the initial points of rail shipment through pipes, the owners of which maintain agreed rates of pipage." By this agreement the roads carry crude oil from the oil regions to Cleveland and Pittsburg and then carry the refined oil to the seaboard as cheaply as they would from the mouth of the well. Mr. Vanderbilt explains this (Testimony, p. 1596.)

"In June, 1879, the Tide-Water Pipe Line effected a connection with the seaboard and commenced shipping oil. Opposition, of course, was not to be brooked, and again the Standard called upon the railroads to protect them "against injury by competition," and again the railroads responded. On June 5, at a conference between the four trunk lines and the Standard people held at Niagara, the rate on crude oil was made to the Standard over the Erie and Central 20 cents per barrel (from \$1.40). The rates to Philadelphia and Baltimore were made the same.

"The Standard got the 'plum;' and as a result it owns exclusively the terminal facilities for handling oil in Philadelphia and Baltimore.

"It owns and controls the terminal facilities for handling oil of the four trunk roads. It owns and controls the pipe lines of the producing regions that connect with the railroads. It controls both ends of these roads. It ships 95 per cent of all the oil.

"It dictates terms and rates to the railroads.

"They can use the power here given them, and have used it to crush out opposition.

"This company also owns all the oil cars run on the Central road.

"It has bought out and frozen out refiners all over the country.

"By means of superior facilities for transportation which it thus possessed it could overbid in the producing regions and undersell in the markets of the world.

"Resting under the commerce law obligation to treat all parties alike, they deliberately undertake to protect a certain company 'against injury by competition.'

"Thus it has gone on buying out and freezing out all opposition until it has absorbed and monopolized this great traffic, this great production, which ranks second on the list of exports of our country.

"And yet all the trunk lines have grown into such relations with this oil combination that they were forced to forgo all these millions they might have earned and look to the other produce of the country for their revenue.

"They bury their own interests in the interest of the Standard Oil Company and join in this war of rates to protect it 'against injury by competition,' whose business and transactions are of such a character that its members declined giving a history or description of it lest their testimony be used to convict them of a crime.

"JOSIAH LOMBARD, R. T. BUSH, GEORGE F. GREGORY, COMPETITIVE OIL REFINERS AT THE SEABOARD, TESTIFY IN 1879 WHAT A. J. CASSATT, NOW PRESIDENT OF THE PENNSYLVANIA RAILROAD COMPANY, AND TOM SCOTT, FORMER PRESIDENT, SAID TO THEM ABOUT THE STANDARD OIL COMPANY.

"Cassatt says to Lombard:

"That the Standard Oil Company was the only party that could keep peace between the trunk lines.'

"He said "I can not trust," or, rather, he said "They are the only people that can keep harmony."

"I asked Mr. Cassatt if we shipped as much oil over the Pennsylvania Railroad as the Standard Oil Company whether we should have the same rate of freight. He said "No." I said "Why?" He said because they would not be satisfied.

"We asked him whether the discrimination against us would be larger if the rate of freight were high than it would if the rate of freight were low. He said yes; it would be.'

"Also said:

"That if we built a pipe line he would buy it up for old iron in 60 days.'

"He said there would be no peace or profit in the business until we made some arrangements with the Standard Oil Company.'

"R. T. Bush to Mr. Cassatt:

"That is, you asked Mr. Cassatt? A. Mr. Cassatt, whether we should have as low a rate of freight as the Standard Oil Company or any other shipper. He said "No." We asked him why. "Well, in the first place, you can't ship as much oil as the Standard Oil Company." "Well, if we could ship as much oil"—I think Mr. Lombard put this question—"would we then have the same rate?" He said "No." "Why?" "Why, you could not keep the road satisfied; it would make trouble; you would not keep the road satisfied; you could not satisfy the roads; you could not satisfy the different trunk lines;" and he remarked, in connection with that, that the Standard Oil Company was the only party that could keep the road harmonized or satisfied.'

"Well, you may lay all the pipe lines you like and we will buy them up for old iron.

"To Tom Scott:

"Q. Go back again to the interview with Colonel Scott and tell us more particularly about it. A. They tried to make us believe and feel, I suppose, that we were getting our due proportion, when for some considerable time previous to this we had not been able to do any business in advance. We could only do business from hand to mouth. We could not sell any refined oil unless we absolutely had the crude oil in our possession in New York, and Mr. Lombard, one of our number, had sold a cargo of crude oil, I think, 9,000 barrels, and Denslow & Bush absolutely stopped their refinery for three weeks, consequently, in order to let their oil go to Lombard & Ayers to finish their vessel, because

they would only get three or four cars a day; and we stopped our place for three weeks to give them our crude oil, all we could give—our proportion—in order to lift them out and get their vessel cleared.

“Q. At the interview between Colonel Scott and Mr. Cassatt and yourself, here at Philadelphia, did you gentlemen propose to build your own cars or provide yourselves with cars? A. Yes, sir; we told Mr. Scott that if they hadn't sufficient cars on their road we would like to put some on, and he told us flatly that they had just bought out one line and they would not allow another to be put on; that if they hadn't cars enough they would build them.

“Whether we could have—if there was any means by which we could have the same rate of freight as other shippers got, and he said flatly, “No;” and we asked him then if we shipped the same amount of oil as the Standard, and he said “No,” and gave the same reasons Mr. Cassatt had in New York.

“Q. Did he give you the information as to the rate of discrimination? A. No, sir. All the information we got on that point was from Mr. Cassatt, in New York, when he stated that the discrimination would be larger on a high rate of freight than on a low rate of freight, which led us to infer that it was a percentage discrimination. That is all the point that I recollect we ever got as to the amount of the commission.’

George F. Gregory to Cassatt:

“We asked him if we should have as low a rate of freight—we spoke a good deal of what had been printed in the newspapers in regard to rates, etc., and we asked him if we should have a rate of freight as low as the Standard Oil Company, and he said “No.”

“Mr. Lombard asked him if we could have the same rate of freight that the Standard had if we shipped the same amount of oil. He said “No; you can not.”

“Mr. Cassatt declined to state what the discrimination was. I said to him, “Is it a greater discrimination on a higher rate of freight than it is on a low rate,” and he said “Yes.” He said, “Well, I didn't mean to answer that question; but very well,” he said, “I have answered it.”

“Q. Please to state what you denominate the squeeze. A. A squeeze or a scarcity of cars; that is what we call it; a difficulty in getting cars in sufficient amount; that is what I mean.

“Q. That is, Green Line cars, you mean, from Mr. Brundred, as agent of the Pennsylvania Railroad? A. Yes, sir.’

“This ought to be sufficient to briefly summarize how the Standard Oil Company acquired its monopoly of the petroleum industry and still holds it with a bulldog grip, and by its actions considers all competitors as interlopers or outlaws. My pamphlets, here introduced, marked “A,” “B” and “C,” and Newlin's, marked “D,” will more fully substantiate it. I also refer this committee to my testimony given in 1888 before a Congressional committee.”

FAVORITISM IN BUYING LUBRICATING OILS.

Q. (By Mr. Jenks.) Have you a copy with you of this testimony before the Congressional committee? A. No, sir; I have not. You have that volume. Since I have put these in as exhibits I think I had better put these others in as exhibits now. I also present and submit to this commission Exhibit E, the authorized Official Railway Guide of the United States for September, 1899, which gives, on page 43 and subsequent pages, a list of the 44 unlawful freight associations and freight committees heretofore mentioned by me.

You will also perceive on the front page of said guide an advertisement of the “Galena Oil Company”—Standard Oil Trust—in which this trust advertises its goods as follows:

“Galena oils are used on nineteen-twentieths of the total railway mileage of the United States, Canada, and Mexico, and are being introduced in Europe.”

That is to say, the Standard Oil Trust here admit that they furnish their lubricating oils to 95 per cent of all the railways in the United States, Canada and Mexico, and portions of Europe. That is to say, this trust furnished 95 per cent of all such oils as are used by the railways mentioned, for no railroad would use trust and competitive oils in conjunction. These oils are taken by the railroads at most extraordinary prices, ranging from 25 to 75 cents a gallon; and here come in another species of favored freight discriminations.

Q. (By Mr. Farquhar.) That seems quite a large claim in respect to the Standard Oil Company in the matter of Galena oils. What is the character of the Galena oils in the market among railroad men and among buyers? A. Well, I know from hearsay that they furnish different grades of lubricating petroleum, running from 25 cents up to cylinder stock—cylinder goods.

Q. Has it not been a fact that Galena oil has really held the American market for years as one of the best standard oils—best quality of oil? A. I do not know anything about the quality.

Q. Is it not a fact that the headlight oil is the best oil made in the world? A. I do not know it to be a fact.

Q. Is not its general use a good reason for thinking that it is so? A. Well, I suppose they would have to make a pretty good quality of oil to get good prices, but at the same time they get greater prices than any competitor could get, and a competitor could hardly get any chance. I know that on general hearsay. Parties have been told that they could not sell the railroads of the country lubricating oils because if they did the Standard Oil Company would not give them any freight.

Q. Do you know whether it is the fact or not that the Standard Oil Company paid exorbitant prices for the Galena formula, for the word? A. No; I do not know.

Q. Have you ever sold in competition with the Galena oil anywhere? A. No; I have sold some, but in a very moderate way. I never manufactured

any fancy brands of lubricants at all. I just manufactured ordinary oil—ordinary lubricant—a cheap grade.

Q. (By Mr. Jenks.) You spoke a moment ago about the high prices the Standard Oil Company received from the railroads for lubricating oil. Were you going to support that general statement by the specific prices? A. No; I can not support that by specific prices, excepting by talking with persons that knew about it who have tried to sell the railroads and have been told. It is only hearsay.

Q. (By Senator Kyle.) What are the figures that are paid for this kind of oil? A. From 25 cents up to 75 cents a gallon. There are some oils as high as \$1 a gallon.

Q. (By Mr. Jenks.) Your information in reference to high prices is on authority of the Standard's competitors and not on authority of any of the Standard's officials or of railroad officials? A. No, sir; no, sir.

Mr. Jenks. Continue, please.

DESPEUX VS. PENNSYLVANIA RAILROAD COMPANY, DISCRIMINATIONS 1881 TO 1883.

The Witness. By permission of Mr. J. W. M. Newlin, of Philadelphia, who was the attorney for some French refineries, I put in this book, marked "D," under the title of Despeaux vs. Pennsylvania Railroad Company. It is a bill of exceptions in a suit for freight discrimination that occurred in 1882 and 1883; but the cases were tried last year, and Mr. William Rockefeller and several Standard Oil Company officials testified in Philadelphia. I did not expect that Mr. Newlin was going to give me the privilege of putting it in. In this exhibit there are several important contracts made with the Standard Oil Trust, including a special contract of August 22, 1884, made by the National Transit Company and the Pennsylvania Company, by which the Standard Oil Trust, through the National Transit Company, was to pay to the Pennsylvania Railroad Company 26 per cent of all the petroleum freights carried from the oil region to the seaboard at tariff rates. I have referred to this in my testimony. I will now read a letter of the counsel covering the substance of the case.

Philadelphia, Pa., November 2, 1899.

Dear Mr. Rice: Referring to your request for information as to the facts developed in the taking of testimony in the cases of Fenaille & Despeaux vs. The Pennsylvania Railroad Company in the circuit court of the United States for the eastern district of Pennsylvania, and in the case of Ladenburg, Thalman & Co. vs. The Pennsylvania Railroad Company in the court of common pleas, No. 4, of Philadelphia county (both of which cases are still pending), I beg to say as follows:

In the Fenaille & Despeaux case it was shown that the plaintiff paid local pipage 20 cents per barrel to Foxburg and other points in that region on crude oil, and that in addition thereto the plaintiff

paid to the Pennsylvania Railroad Company 48 cents per barrel for its carriage, all rail, from Foxburg to Communipaw during the years 1881, 1882, and 1883. It was also shown that the Pennsylvania Railroad Company at the same time and between the same points carried crude oil for the Standard Oil Company of New York at a reduction of 22½ cents per barrel.

It was further shown in the same case that the plaintiff paid 20 cents local pipage on crude oil to McCalmont and other points in the same region, and that the Pennsylvania Railroad Company then carried it to Communipaw and charged the plaintiff 33 cents per barrel.

At the same time the Pennsylvania Railroad Company was carrying crude oil between the same points for the Standard Oil Company of New York as proven in this way:

On May 6, 1881, the National Transit Company made an agreement with the Pennsylvania Railroad Company concerning the shipments of crude oil to the seaboard under which these reductions in favor of the Standard Oil Company were effected. I have furnished you a copy of this agreement.

It was shown on the trial of the Fenaille & Despeaux case that at the time named a majority of the stock of the National Transit Company was deposited, with other corporation stock, with the Standard Oil trustees, who also held practically all of the stock of the Standard Oil Company of New York and that upon the basis of the stock holdings of the trust the Standard Oil trust certificates were issued.

The agreement between the National Transit Company provides for a division of the through rate on crude oil from the wells to seaboard between the National Transit Company and the Pennsylvania Railroad Company. The clause of the contract particularly referring to this are paragraphs 4 and 8 thereof.

Now, taking Foxburg to Communipaw, the local pipage being 20 cents and the all rail carriage 48 cents or 68 cents, and the evidence showing that the transit company under this agreement delivered large amounts of oil to the railroad company at Foxburg, which oil it was shown by the transit company's secretary, Mr. John Bushnell, belonged to the Standard Oil Company of New York, this particular oil was paid for on the following basis:

Starting with 68 cents as the through rate from the wells to Communipaw, via Foxburg, one-fourth of 68 cents, viz, 17 cents, went to the local pipe line (i. e., the Transit Company) "and one-fourth of the difference between this one-fourth (i. e., 17 cents) and the said public rate (i. e., 68 cents) shall be considered as due and to be paid to the railroad." The charge is worked out thus:

	Cents.
Local to Roxburg.....	20
Through to Communipaw (New York)....	48
	<hr/>
	68
One-fourth to local pipe.....	17
	<hr/>
This leaves balance of.....	51
One-half of this balance to railroad company is	25½

The amount paid railroad company by Fenaille & Despeaux was..... 48
 Amount paid by Standard to railroad company 25½
 Rebate to the Standard Oil Company equals.. 22½

In other words, while the word "rebate" nowhere occurs in the agreement between the Transit Company and the railroad company, all the railroad company received was the 25½ cents per barrel

See paragraph 8 of the contract of May 6, 1881. It is to be observed that this paragraph in terms only applies to cases where the through rate from the exit point of gathering pipe shall be less than 40 cents. This is the only provision in the contract, and in terms would apply to McCalmont and similar shipments, which were 33 cents per barrel. But not only is this the only provision in the contract for the division of the through rate between the transit company and the railroad company, but in addition thereto, the officers of both the railroad company and the Transit Company stated in evidence that the railroad company received payment from the Standard Oil Company of New York on the rail shipments from Foxburg to Communipaw under this contract, and received what the contract called for. It was further testified by these officials that what the railroad company got it collected directly from the Standard Oil Company of New York and that the railroad company received no money from the Transit Company on these shipments.

The evidence was to the same effect as to all rail shipments between McCalmont and Communipaw, Fenaille & Despeaux paying 20 cents local pipe rate and 33 cents open rail rate to Communipaw, making 53 cents in all.

The evidence further was that the Transit Company furnished to the railroad company crude oil of the Standard Oil Company of New York for carriage between McCalmont and Communipaw, for which the railroad company was paid directly by the Standard Oil Company the amount called for by this agreement of May 6, 1881.

Hence the railroad company charged Fenaille & Despeaux, between McCalmont and Communipaw, New York, 33 cents, and charged the Standard Oil Company 19.875 cents a barrel. This is worked out thus:

	Cents.
Local pipe rate	20
Open rate rail McCalmont to Communipaw..	33

Through rate	53
One-fourth to local pipe.....	13.25

Balance	39.75
One-half of this balance paid by Standard Oil Company of New York to the railroad company	19.87

Under the contract of May 6, 1881, the railroad company was to be guaranteed one-third of the total movement of oil to New York.

Under a subsequent contract between the National Transit Company and the Pennsylvania Railroad

Company, dated August 22, 1884, of which I have furnished you a copy, the railroad company was to be granted 26 per cent of the total movement of oil to the Atlantic seaboard, which would include Baltimore, Philadelphia, New York and Boston.

Prior to 1884 the railroad rates to seaboard, i. e., New York, were from Foxburg 48 cents, and from McCalmont 33 cents.

There was a difference in favor of Philadelphia of five cents per barrel.

From 1884 to 1887 the rail rate between Foxburg and similar points and Communipaw was 55 cents per barrel, and between Clarendon and Kane and similar points and Communipaw was 45 cents per barrel. There was a difference in favor of Philadelphia of five cents per barrel.

It was in evidence in the case of Ladenburg, Thalmann & Co. vs. The Pennsylvania Railroad Company, as to shipments between 1884 and 1887, under the contract of August 22, 1884, between the National Transit Company and the Pennsylvania Railroad Company that monthly settlements were made between the Transit Company and the railroad company, showing the total movement of oil to seaboard and the amount carried by the Pennsylvania Railroad Company on account of its 26 per cent allowance and then the deficiency on the 26 per cent (and there was always a deficiency) was settled between the transit company and the railroad company in this way:

I take for illustration the settlement made for the month ending September 30, 1884, as shown by a copy of the settlement certified to be correct by John Bushnell, comptroller of the National Transit Company:

Total number of barrels so transported....	1,574,961
Railroad company's share.....	409,490
Amount carried by railroad.....	325,596
Deficiency	83,894

On this deficiency the railroad company was allowed on New York oil, at one-half of the current through rate, 45 cents, equals 22½ cents per barrel, on 43,665 barrels \$9,824.63
 Less compensation allowed transit company for pumping the same, at 9 cents..... 3,929.85

Total \$5,894.78

The railroad company was allowed on Philadelphia oil for 40,229 barrels, at one-half current through rate, 40 cents, equals 20 cents per barrel..... 8,045.80
 Less allowed National Transit Company for pumping same, at 8 cents..... 3,216.32

Total \$4,827.48

Total payment by the National Transit Company to the Pennsylvania Railroad Company for deficiencies for the month ending September 30, 1884..... 10,722.26

In the Fenaille & Despeaux there are two cases against the Pennsylvania Railroad Company, one for \$10,778.56 and the other for \$164,220.03. This is exclusive of interest and treble damages. In the small-

er case the treble damages were remitted in order to allow the plaintiff to call the officers of the defendant company as witnesses.

In the case of Ladenburg, Thalman & Co. against the Pennsylvania Railroad Company the amount claimed is \$172,832.46 with interest and treble the amount of the claim for damages, also with interest.

Referring generally to the contract of August 22, 1884, that contract was for the purpose of keeping up the freight charges by making the rail rates and pipe rates the same.

You will observe, however, that if the Standard Oil Company of New York, on its shipment, went through the form of paying the full rates, inasmuch as practically all of the stock of the National Transit Company (viz 96 per cent.) belonged to the Standard Oil trust, it all came back again except the actual cost of pumping; and then you will observe that in the case of the railroad company it was only allowed one-half the current rates which were open to the public in the settlement made between it and the National Transit Company for monthly differences, as per the settlement above quoted.

Yours truly,
JAMES W. M. NEWLIN.
George Rice, Esq., Astor House, New York City, N. Y.

Q. (By Mr. Jenks.) These cases referred to here, I understand, are still pending? A. Yes.

Q. (But they refer back to discrimination between the years 1881 and 1887? A. 1881, 1882 and 1883, I believe.

Q. But there is no discrimination since 1887 that is charged? A. I think not; I do not think there is any.

Q. Is this the original copy? A. That is the original signature.

RAILROAD MAGNATES INTERESTED IN STANDARD OIL.

(Reading:) "William H. Vanderbilt, who signed one of the contracts in behalf of the trunk line combine, was a stockholder in the Standard Oil Company as early as 1875 and it is fair to presume, under these circumstances, that he became one when these contracts were entered into. In 1875 John D. Rockefeller acted as attorney for Vanderbilt and also for Samuel F. Barger, his protegee, to vote an increase of the stock of the Standard Oil Company.

"At same meeting Henry M. Flagler, secretary of said company, acted for the same purpose as attorney for Peter H. Watson, president of the Erie Railway Company, one of the combine. Vanderbilt testified August 27, 1897, before the Hepburn committee of New York that E. D. Worcester, treasurer of the Lake Shore and secretary of the New York Central, was a director in the United Pipe Lines, the pipe line branch of the Standard Oil monopoly, and that he held from \$100,000 to \$250,000 of its stock. At the same time Vanderbilt stated as follows:

"Q. You were disgusted with them a long while ago' (meaning Standard officials)? A. 'I was, because I said if the thing kept on the oil people would own the roads instead of the roads owning them.'

"He also said: 'I don't believe that by any legisla-

tive enactment or anything else through any of the states or all of the states you can keep such men as them down.'

"These were strong words for a Vanderbilt to say, and also how prophetic, for William Rockefeller, vice president of the Standard Oil trust, has just been elected director in the New York Central and Hudson River Railroad Company, to take the place of Cornelius Vanderbilt, lately deceased. Since his advent he has been made a member of the executive committee, and on October 23 the issue of \$15,000,000 additional stock was authorized, and all this within a few weeks only after the death of Cornelius Vanderbilt, the son of the late William H. Vanderbilt, who testified that he did not believe that even "by any legislative enactment or anything else through any of the states you can keep such men as them down.' He was in truth prophetic, and it has dramatically reached his own family.

"Hugh J. Jewett, recent president of the Erie Railway Company, who died in March, 1898, left by his will to his sons and daughters equal shares of his holdings in the trust certificates of the Standard Oil trust.

"Clement A. Griscom, for many years a director in the Pennsylvania Railroad Company, testified on April 30, 1888 (p. 395), before a congressional committee, that he then was president of the National Transit Company, the principal pipe line company in the Standard Oil trust, with over \$25,000,000 of capital, and had been so connected since its formation in 1881 or 1882.

"This clearly proves my assertion that rebates or freight discriminations created the Standard Oil monopoly, out of which came forth in 1882 the great Standard Oil trust, the originator of all the other trusts, receiving corresponding rebates on the transportation of general products, the resulting effects of which are that about nine-tenths of the commerce of the country is controlled by a score of men, who dictate and exact from the masses high tariff transportation rates, while their own goods are carried at nominal figures, which is nothing more or less than the levying of an embargo or secret indirect heavy confiscation tax upon general production and manufactured products, in the interest of a few men, to the destruction of all private industrial interests, with large depreciation also of personal and realty holdings.

"MY EXPERIENCE.

"In 1876 I commenced the refining of petroleum with a capacity of 500 barrels per week, and later on increased same to 2,000 barrels a week, or 100,000 barrels per annum. In 1879 I became interested in an investigation by the Ohio legislature of freight discriminations, which came to naught, and practically had no appreciable effect, although it was proven that independent refineries at Marietta had to pay 50 per cent more freight than did the Standard Oil monopoly. Being thus shut out of the markets to the north, east and west, I turned my attention to the south, when I was again peremptorily brought up with a short and decisive turn by an attack of the

railroads at both ends of the line, through the tireless, smokeless rebate or freight discriminations, not only upon the manufactured products, but also upon the transportation of crude petroleum to my refinery.

"Outside of rebates or freight discriminations I had no show with the Standard Oil trust, because of their unlawfully acquired monopoly, by which they could temporarily cut only my customers' prices, and below cost, leaving the balance of the town, nine-tenths, uncut. This they can easily do without any appreciable harm to their general trade, and thus effectually wipe out all competition, as fully set forth. Standard Oil prices generally were so high that I could sell my goods two to three cents a gallon below their prices and make a nice profit, but these savage attacks and cuts upon my customers' goods and their consequent loss plainly showed them their power for evil and the uselessness to contend against such odds, and they would buy no more of my oil.

Q. (By Mr. Ratchford.) A question there, if you please. At the beginning of that paragraph you said that, outside of rebates and freight discriminations, you have no show with the Standard Oil trust? A. Yes, I say that. I mean by that their power of monopoly. That is, by their getting this great wealth, they can jump right on my cars of oil, outside of rebates or freight discriminations. They can clean me out on any one car I may send to any one town.

Q. Is it not a fact that your contention is that the Standard Oil Company has its greatest advantage over you and other independent producers in the matter of rebates and freight discriminations? A. Certainly, that is the whole thing.

Q. You say that outside of this they have a great advantage over you. Where is it? A. They get this great power through these rebates and from discriminations. They, for instance, could lose a moderate amount of money in any one town, which would not affect all the rest. That is what I had reference to in that.

"PLEASE TURN ANOTHER SCREW.

(Reading:) "In 1881 a Standard official wrote to J. M. Culp, the general freight agent of the Louisville and Nashville Railroad Company, to turn another screw upon shipments, which they did in five days, exacting from me 50 per cent more freight, which shut me out of the Tennessee markets."

I have the original letter if you would like to see it. (By several of the commissioners.) Yes.

The witness. I think I have a fac simile of it, too. It is a very nice letter to see. Here is the original. I will present this to the chairman, and here is the fac simile of the original.

Q. (By Mr. Smyth.) This was before the interstate commerce law? A. Yes, certainly; but that does not help them out. Rebates were unlawful before the interstate commerce law, just as unlawful as they are now.

Q. Were the letters Mr. Archbold read regarding rates before 1887? A. I will come to freight discriminations since 1887 in my own cases.

Q. (By Mr. Clarke.) Can we not have this letter read?

The witness. I will read it. Chess, Carley & Co., who signed this letter, were a branch of the Standard Oil Company at that time, and they wrote a letter to J. M. Culp, who was general freight agent of the Louisville and Nashville railroad. This is the original stamp of receipt by the hailrail company: "J. M. Culp, general freight agent."

Now, before I read this letter I want to say that Wilkinson & Co. were my agents in Tennessee.

Chess, Carley & Co., Louisville.

J. M. Culp, Esq., G. F. A.

Dear Sir: Wilkinson & Co., Nashville, received car of oil Monday, 13th, 70 bbl., which we suspect slipped thro' on the usual 5th class rate—"in fact, we might say," we know it did—paying only \$41.50 freight from here. Charges \$57.40. Please turn another screw.

Yours truly,

CHESS, CARLEY & CO.

June 16, '81.

That screw was turned on me to the extent of 50 per cent in five days.

Q. (By Senator Kyle.) That contract he speaks about was the same as charged the Standard Oil Company to that point, was it? A. Yes; I suppose it was.

Q. (By Mr. Jenks.) \$41.50? A. Well, let us say \$41.50; I do not know about that, whether the same as charged, \$41.50.

Q. (By Senator Kyle.) You have not an inside rate? A. No.

Q. (By Mr. Farquhar.) Is not \$41.50 the open rate? A. No; I will tell how it is. The \$41.50 is the rate from Louisville to Nashville and the \$57.40 was the previous rate from Marietta to Louisville.

Q. (By Mr. Phillips.) Then do I understand that they added 50 per cent after that? A. Yes; 50 per cent; the road raised the rates on me, but they did not on the Standard.

Q. (By Mr. Farquhar.) Did they make that rate? A. No; that was the open tariff rate.

Q. It was not a discriminating rate particularly against your product in this matter, but they had made a new rate for all? A. Why, yes, certainly; the tariff rates are published rates. I paid tariff rates and the Standard paid less rates.

Q. (By Mr. Phillips.) Was there any other competitor considered at that time but yourself? A. I do not recollect now. I think I was about the only competitor about that time; that is my impression; it was a good many years ago. I do not recollect.

Q. (By Mr. Clarke.) How do you know that they did not make the same rate to the Standard? A. I do not know, but it is fair to presume they did not on all past experience. I do not know it certainly. I can not prove it; it is a pretty hard thing to prove rate discriminations.

Q. (By Senator Kyle.) You do not think they intended to turn another screw on themselves? A. I do not think so.

Q. (By Mr. Smyth.) I should think that if you could get this letter, you might find out how much the Standard Oil Company paid. A. I guess one would have a nice time doing that. I would like to see you come here and bring an action in court and get them to show their books.

Q. You had a nice time in getting this letter? A. Yes, I did.

Q. I thought that if you could get that from the railroad you could find out what the rates were? A. You can not sue a railroad; you can not get their books.

Q. I was only comparing. It seemed to me that if you could get that letter you could also find out what the rates were? A. How could I? What good would that do?

Q. That is what I want to know. I do not know how you got this letter. A. No.

Q. If you were able to get the private correspondence of the railroad company, why are you not able to find out what their private rates are? A. Some things are impossible, and that is one of them. It is a mighty hard thing to find out rebates.

Q. The rates must be on the books, you know; it must show in some way. A. I do not know about that, whether it shows on the books or not.

Q. (By Mr. Farquhar.) Of your own knowledge, do you know that other parties had to pay this particular rate the same as you had to? A. I do not know that, but if they shipped they would; of course they would.

Q. It was well understood that that was the rate made and given out to all shippers? A. I have always shipped on tariff rates, and of course they were public to everybody.

THE CLEVELAND AND MARIETTA RAILWAY CASE.

(Reading:) "Phineas Pease, receiver of the Cleveland and Marietta Company, under the jurisdiction of a United States court, suddenly doubles its crude petroleum freights on me, without previous notification or warning, from 17½ cents a barrel to 35, in the carriage of same 25 miles from the oil producing fields of Macksburg to Marietta, Ohio, where my refinery was located, while at the same time he makes a rate to the Standard Oil trust of 10 cents a barrel, or 250 per cent of a discrimination against my shipments."

Q. (By Mr. Smyth.) What proof have you of that? A. You will see it right along as I come to it; there is plenty of it.

(Reading:) "Not satisfied with that, the trust demanded of the receiver, in addition thereto, under threat to remove its business from his road, that the 25 cents per barrel so paid by Mr. Rice in excess of tariff rates be paid over to the Standard Oil trust for the privilege of the road having its business to do, and it was so paid. In other words, Mr. Rice was compelled not only to pay his own freight, but the freight of his rival in the business, and 15 cents per barrel to his rival besides, for the privilege of living and doing business.

"To be sure of its victim and secure the spoils the Standard Oil trust pay the local railroad freight agent at Marietta \$25 per month to collect and turn

over to the trust this enforced freight contribution, which he did."

The witness. I will put in as exhibits extracts from two letters to prove both statements.

Pease to Rapello, February 25, 1885.

"But Mr. O'Day compelled Mr. Terry to make a 35-cent rate on all other oil going to Marietta and that we should make the rebate of 25 cents per barrel on all oil shipped by other parties, and that the rebate should be paid over to them (the Standard Oil Company), thus giving us 10 cents per barrel for all oil shipped to Marietta, and the rebate of 25 cents per barrel going to the Standard Oil Company, making that company, say, \$25 per day clear money on Mr. George Rice's oil alone.

"In order to save the oil trade along our line, and especially to save the Standard Oil trade, which would amount to seven times as much as Mr. Rice's, Mr. Terry verbally agreed to the arrangement, which, upon his report to me, I reluctantly acquiesced in, feeling that I could not afford to lose the shipment of 700 barrels of oil per day from the Standard Oil Company. But when Mr. Terry issued instructions that on and after February 23 the rate of oil would be 35 cents per barrel to Marietta, Mr. George Rice, who has a refinery in Marietta, very naturally called on me yesterday and notified me that he would not submit to the advance, because the business would not justify it, and that the move was made by the Standard Oil Company to crush him out. (Too true.) Mr. Rice said: 'I am willing to continue the 17½-cent rate which I have been paying from December to this date.'

"Now the question naturally presents itself to my mind, if Mr. George Rice should see fit to prosecute the case on the ground of unjust discrimination, would the receiver be held, as the manager of this property, for violation of law? While I am determined to use all honorable means to secure traffic for the company, I am not willing to do an illegal act (if this can be called illegal), and lay this company liable for damages. Mr. Terry is able to explain all minor questions relative to this matter.

"Hoping for your careful consideration of this matter and an early reply, I remain, sir, truly yours,

P. PEASE,

"Receiver and General Manager."

Rapello to Pease, March 2, 1885.

"That company also owns the pipes through which oil is conveyed from the wells, owned by individuals, to your railroad, except those pipes leading from the wells of Mr. George Rice, which pipes are his own.

"The company has or can acquire facilities for storing all its oil until such time as it can lay pipes to Marietta and thus deprive your company of the carriage of all its oil. The amount of oil shipped by Mr. Rice is comparatively small; say a quantity sufficient to yield \$300 per month for freight.

"The Standard Oil Company threatens to store, and

afterwards pipe, all oil under its control unless you make the following arrangement, viz: You shall make a uniform rate of 35 cents per barrel for all persons excepting the Standard Oil Company; you shall charge them 10 cents per barrel for oil, and also pay them 25 cents per barrel out of the 35 cents collected from the other shippers.

"You must agree to carry all such oil of the Standard Oil Company or of others delivered to your road, through their pipes at 10 cents per barrel. You may also charge all others shippers 35 cents per barrel freight, even though they deliver oil to your road through their own pipes; and this, I gather from your letter and from Mr. Terry, would include Mr. Rice.

"You are at liberty, also, to arrange for the payment of a freight by the Standard Oil Company, calculated upon the following basis, viz: Such company to be charged an amount equal to 10 cents per barrel, less an amount equivalent to 25 cents per barrel upon all oil shipped by Rice, the agreement between you and the company thus being that the charge to be paid by them is a certain sum ascertained by such a calculation. If it is impracticable so to arrange the business that the Standard Oil Company shall, in effect, collect 25 cents per barrel from those persons using the company's pipes from the wells to the railroad without its passing into your hands, you may properly also deduct from the price to be paid by the company an amount equal to 25 cents per barrel upon the oil shipped by such persons.

"Provided your accounts, bills, vouchers, etc., are consistent with the real arrangement actually made, you will incur no personal responsibility by carrying out such an arrangement as I suggest.

"It is possible that, by a proper application to the court some person may prevent you in future from permitting any discrimination. Even if Mr. Rice should compel you subsequently to refund to him the excess charged over the Standard Oil Company, the result would not be a loss to your road, taking into consideration the receipts from the Standard Oil Company, if I undersand correctly the figures. There is no theory, however, in my opinion, under the decisions of the courts relating to this subject, upon which, for the purpose, an action could be successfully maintained in this instance.

Yours truly, EDWARD S. RAPELLO."

Now I will read Judge Baxter's decision (reading): United States Judge John Baxter delivers the following opinion of the court in Handy et al. vs. Cleveland and Marietta Railway Company et al. (Federal Reporter, vol. 31, p. 692. Circuit court, southern district of Ohio, E. D., 1897):

"It appears that the Standard Oil Company and George Rice were competitors in the business of refining oil; that each obtained supplies in the neighborhood of Macksburg, a station of said railroad, from whence the same was carried to Marietta or Cleveland, and that for this service both were equally dependent on the railroad, then in the hands of the receiver.

"It further appears that the Standard Oil Company, desired to 'crush' Rice and his business, and that, under a threat of building a pipe for the conveyance

of its oil and withdrawing its patronage from the receiver, O'Day, one of its agents, 'compelled Terry,' who was acting for and in behalf of the receiver, to carry its oil at 10 cents per barrel and charge Rice 35 cents per barrel for a like service and pay it 25 cents out of each 35 cents thus exacted from Rice, 'making,' in the judgment of the receiver, '\$25 per day clear money' for it 'on Rice's oil alone.'

"But it is due to the receiver to say that, notwithstanding his admitted 'reluctant acquiescence' in the contract made by Terry on his behalf, and the indorsement thereof by Rapello and the further conceded fact that he charged the Standard Oil Company 10 cents and Rice 35 cents per barrel, as aforesaid, he denies that he ever paid to the Standard Oil Company any part of the money ever received from Rice. We will therefore, for the present accept his affirmation touching this matter as true."

In a parenthesis I have stated here "Subsequent proceedings proved the statement of the receiver in this respect was false." (Reading:) "But why should Rice be required to pay 250 per cent more for the carriage of his oil than was exacted from his competitor? The answer is that thereby the receiver could increase his earnings. This pretense is not true. But suppose it was would that fact justify, or even mitigate the injustice done to Rice? May a receiver of a court, in the management of a railroad thus discriminate between parties having equal claims upon him, because thereby he can accumulate money for the litigants? It has been repeatedly adjudged that he can not legally do so. Railroads are constructed for the common and equal benefit of all persons wishing to avail themselves of the facilities which they afford. While the legal title thereof is in the corporation of individuals owning them and to that extent private property, they are, by the law and consent of the owners dedicated to the public use. By its charter and the general contemporaneous laws of the state, which constitute the contract between the public and the railroad company, the state, in consideration of the undertaking of the corporators to build, equip, keep in repair and operate said road for the public accommodation, authorized it to demand reasonable compensation, from every one availing himself of its facilities, for the services rendered. But this franchise carried with it other and correlative obligations. Among these is the obligation to carry for every person offering business, under like circumstances, at the same rate. All unjust discriminations are in violation of the sound public policy and are forbidden by law."

This was before the interstate commerce act.

(Continuing reading: "We have had frequent occasions to enunciate and enforce this doctrine in the past few years. If it were not so the managers of railways, in collusion with others in command of large capital could control the business of the country, at least to the extent that the business was dependent on railroad transportation for its success, and make and unmake the fortunes of men at will.

"The idea is justly abhorrent to all fair minds. No such dangerous power can be tolerated. Except in the mode of using them, every citizen has the same right to demand the services of railroads on equal terms

that they have to the use of a public highway or the government mails; and hence, when in the vicissitudes of business a railroad corporation becomes insolvent and is seized by the court, and placed in the hands of a receiver to be by him operated pending the litigation and until the rights of the litigants can be judicially ascertained and declared, the court is as much bound to protect the public interests therein as it is to protect and enforce the rights of mortgagors and mortgagees. But after the receiver has performed all obligations due the public and to every member of it—that is to say, after carrying passengers and freight offered for a reasonable compensation, not exceeding the maximum authorized by law, if such maximum rates shall have been prescribed, upon equal terms to all—he may make for the litigants as much money as the road thus managed is capable of earning. But all attempts to accumulate money for the benefit of the incorporators or their creditors by making one shipper pay tribute to his rival in business at the rate of \$25 per day or any greater or less sum, thereby enriching one and impoverishing another, is a gross, illegal and inexcusable abuse of a public trust that calls for the severest reprehension.

“The discrimination complained of in this case is so wanton and oppressive it could hardly have been accepted by an honest man having due regard for the rights of others, or conceded by a just and competent receiver, who comprehended the nature and responsibility of his office; and a judge who would tolerate such a wrong or retain a receiver capable of perpetrating it ought to be impeached and degraded from his position.

“A good deal more might be said in condemnation of the unparalleled wrong complained of, but we forbear. The receiver will be removed.

“The matter will be referred to a master to ascertain and report the amount that has been as aforesaid unlawfully exacted by the receiver from Rice, which sum, when ascertained, will be repaid to him. The master will also inquire and report whether any part of the money collected by the receiver from Rice has been paid to the Standard Oil Company, and if so, how much, to the end that if any such payments have been made suit may be instituted for its recovery.”

Q. (By Mr. Jenks.) This is the formal decision of the court? A. Simply.

Q. (By Senator Kyle.) What was the outcome of the matter? A. The court appointed a master commissioner, who is the present elected governor of Ohio, George K. Nash. The court appointed him a master commissioner to investigate this matter, and he found these to be the facts of the case as I have stated them here.

Q. (By Mr. Jenks.) Did you collect the money over? A. Yes. It was not very much. I got onto it right quick, so it did not injure me much. As soon as they doubled the rate of freight on me I thought there was something wrong. I immediately went to Cambridge, to the headquarters of the road, in person, to see the receiver, and asked him why my freight rates had been doubled. He pretended to know scarcely anything about it. He says: “That is a matter that belongs to the freight agent. I understand

there has been an advance. I understand it is necessary that the road should have more revenue.” That is the substance of the interview; but he gave me to understand that the rates were going to remain. He did not give me any good reason why they were advanced, but I of course thought there was something up, and I went back and got up a correspondence with him to put him down on paper to see where he would land, whether he would make any evasions or give me some reasons by which I could find out what the trouble was. He made some replies that were not to the point, and I had counsel at Marietta write to Judge Baxter, who had charge of this road of which Phineas Pease was receiver, asking if a private hearing could not be had before him in chambers upon what these letters showed. He granted the request at once. I went down to Cincinnati with my attorney, and the local attorney of the road went down, and he owned up the whole business right there before Judge Baxter, although this thing had passed through the hands of ex-Judge Rapello, of New York city, who was then the leading counsel of the road. That is the way it came out.

Q. (By Mr. Farquhar.) Do you know whether it was customary in those days, before the interstate commerce law was passed, for the receivers usually under instructions from the courts to get all out of a road it was possible to get for the benefit of the stockholders? A. I do not know anything of that kind. I do not think, though, that any receiver of a road should charge any less to a big shipper than to a small shipper, because it violates the law, the common law of the land, which no road had a right to do even before the interstate commerce law, as Judge Baxter says here. It was just as bad before 1887; it was unlawful. As I understand it, the only additional thing that was put into the interstate commerce act was the penalty clause, by which every shipper and every carrier is subject to a penalty of \$5,000 and two years in the penitentiary for each and every offense. And what good has it done? They discriminate every day just as much as they ever did. It has had no effect whatever, and I can show it as I go along here by my own cases before the interstate commerce commission.

Q. Has it not been a fact that there were some very great discriminations made by receivers in giving rates? A. I do not know that.

Q. As against all competing roads, and the court itself would sustain them in working for the benefit of the stockholders, to get all the revenue it was possible to get out of it? A. No; I do not think that any honest judge would ever decide that a railroad could discriminate in favor of a large shipper against the small shipper.

Q. Is it not a fact that in some cases receivers have discriminated and cut rates on their road? A. Right there in my own case they did; and here are Receivers Cowen and Murray admitting it themselves, when they wrote the letter to the interstate commerce commission, December, 1898, that they were giving rebates; criminally doing it.

Q. (By Mr. Ratchford.) Is it not a fact that the managers of railways generally follow that practice,

discriminating in rates to all large shippers and giving them inside prices? A. Why certainly.

Q. That is your observation, is it? A. Yes, certainly.

Q. That being the case, does it not follow that receivers necessarily have to resort to the same practice in order to compete? A. Well, I do not think that receivers of a railroad ought to violate the law. No man ought to; but in particular receivers of a road. It does not make any difference how it strikes the road.

Q. Do you recognize their inability to compete in case they do not resort to the same practice? A. Very likely they do. But the receiver is specially appointed by the court, and it is supposed that the courts do not want to sanction any unlawful act. I mean to say there is a greater obligation on receivers of a railroad not to discriminate, because they are appointed by the court and are under the jurisdiction of the court. Supposing the railroad does lose freight—that is no reason; they must obey the law. That is the trouble with the country—our laws are not obeyed nor enforced.

THE STANDARD GOES INTO THE GROCERY BUSINESS.

(Reading:) "Threats and intimidations, highwayman tactics, used by the Chess Carley Company (Standard Oil) on my agents, that 'competition will not be confined to coal oil or any one article.' Also 'that the Standard Oil Company had authorized him to spend \$10,000 to break up any concern that bought oil from any one else.'"

Now I refer to one of my exhibits, B. p. 84, for that.

Q. (By Mr. Jenks.) Perhaps you can state in a word what the substance of this is and then put it in as an exhibit; it will save you some time? A. Well, it is merely that the Chess Carley Company wrote my agents, Wilkinson & Co., at Nashville, threatening letters, of which I have copies in my exhibits. They had tried to buy them out, and made threats that if they did not come to time they would not only cut the prices of oil, but all the general goods that they sold; that was the substance of it, but I have it all here.

Q. I understand from what you have said elsewhere that they did, as a matter of fact, set up a separate grocery store? A. Oh, no, not at that point; that was at another place; that was in Mississippi.

Q. But that was this same company that did subsequently set up a grocery store? A. Yes.

Q. In order to drive the rivals out? A. That is right; this same company.

(Reading:) "Rust proof oats, meats, sugar, coffee used as weapons by the Standard Oil monopoly to kill off competition.

"R. M. Fraser, general freight agent of the Marietta and Cincinnati railroad, wires a Standard official as follows: '_____, at Marietta, is inquiring for rates of freight on oil to Chillicothe. Don't you control that field?' Colonel Thompson (he was a Standard official) to Mr. Fraser: 'Yes, that is our meat.' (B 85.)"

Q. (By Mr. Smyth.) Will you give us the date of that telegram? A. I do not know whether I have the

date. I refer to B. 85. I do not know whether there is a date to it or not; but it is all true, all the same.

Q. (By Mr. Farquhar.) This occurred in 1881, did it not? A. I guess along in there. I calculated that all these things where there were not dates would come along about in chronological order.

Q. Did you get the name that you had left blank in the body of the telegram? A. Well no; I did not get the name. It came over my wire, and a friend of mine hearing it going over the wire, gave it to me. He was a telegraph operator himself.

(Reading.) "Standard Oil also establishes a grocery house at Columbus, Miss. and sells groceries at cost in order to force merchants to buy their oil. (B. 86.)"

There is quite an extensive account in connection with that.

Q. (By Senator Kyle.) How prevalent is that custom with the Standard Oil Company? A. It is not so prevalent now, because they are establishing their agencies all over the United States—and they do not have to go into that kind of work.

Q. Threats are made and have been made—they resort to threats? A. Oh, yes; there is no trouble about that.

RATES DOUBLED FOR MR. RICE, UNCHANGED FOR THE STANDARD.

(Reading.) "The Standard Oil Trust makes contract with a merchant of New Orleans to pay him the sum of \$48,000 not to handle my oils, and while I was down there to establish another agency I was apprised by wire that my rates to Memphis and New Orleans were doubled without previous warning."

That was to discourage me from establishing another agency; but I did it, all the same. I went on and got another man to take hold, and when I got back to Cincinnati I stopped off to find out what it meant. I called upon the general freight agent of the road, and he said that the connecting line was all the trouble. You know the initial line makes the rate, and Mr. Fraser was the general freight agent of the initial line out of Marietta, but he made the excuse that the connecting line caused the trouble. I did not get any satisfaction, and I said that I would like to see the president of the road, Mr. Orland Smith. I said, "Mr. Smith, why has my freight rate been doubled all at once without any warning?" He did not seem to know anything about it, but I guess he did. He called Mr. Fraser in and said, "What is this trouble with Mr. Rice about these rates?" Mr. Fraser said, "The connecting lines have been writing us that they must have their freight rates advanced; they could not see any other way to do." Well, what do you suppose they did? After two or three months correspondence they restored my rate, but in the following year they put up a job on me that stood, by which on July 15, 1886, they set up a rate on my shipments, on all of my shipments—they were all from Marietta—from 43 to 162 per cent. They never raised the rates on the Standard Oil Company one

cent, which had a big refinery at Parkersburg, 12 miles from Marietta. The tariff rates from both points were exactly equal. On subsequent investigation I got the attorney-general of Ohio to bring an action and I bore all the expenses of it, to forfeit the charters of the Cincinnati, Baltimore and Washington Railroad and the Queen and Crescent Road for these accursed discriminations. I spent a lot of money and it took a lot of time, and I got a verdict from the supreme court after a while saying that they should not do it any more; and it did not amount to anything. They continued to do it right along under my nose. And it shut up 19 agencies out of 24 and shut me out of 39 towns in 73 in five months; that is what it did. And these men here, Orland Smith and R. M. Fraser, are responsible for this collusion to ruin my business.

Q. (By Mr. Farquhar.) What year was this thing in? A. In 1886.

Q. (By Mr. Smyth.) Were the published rates the same from Parkersburg as from Marietta? A. Yes.

Q. You believe that the Standard Oil Company received a rebate? A. I proved 43 to 162 per cent. I went into court and proved it before a referee. There were two suits to forfeit the charters, and the court said they could not do this any more. It was a very fine, sweet verdict. Of course, it had no effect.

Q. (By Mr. Jenks.) In connection with the statement that the Standard Oil Trust made a contract with a merchant of New Orleans to pay him the sum of \$48,000 not to handle the oil, in the exhibit that is given, you set out the contract in full? A. Yes.

Q. You are perfectly certain as to the trustworthiness of this? A. Yes, of course; because I got the facts right from the party, Mr. Ong. I got the contract; without a question these are genuine contracts.

Q. Mr. Ong gave you the contracts? A. Oh, yes; they are absolute facts. They are the contracts without a question. These are the genuine contracts.

(Reading:) "October 15, 1886, a friend of mine writes me from Cleveland as to inside rates given to the Standard Oil Trust as follows: 'They say that they only get so many tons of freight and so many dollars and cents in payment of so much tonnage. Can't tell whether in barrels or tank cars.'"

(Reading) "The general freight agent of the Little Rock and Memphis Railroad Company wrote me November 17, 1890, as follows: 'We are handling your oil. This, of course, we expect, as common carriers, to be compelled to do. It is a fact, nevertheless, that on account of handling your oil the Standard Oil Company will not route any of their freight over our lines. As a consequence, we have none of their tanks.'"

That is very nice.

(Reading:) "By the power and fear of the Standard Oil Trust I have paid five cents a barrel more for crude oil than the regular established market price of the trust for additional stock to run my refinery."

TANK CAR DISCRIMINATIONS.

"Can't purchase tank cars except for cash, because of my 'supposed controversy' with the Standard Oil Company."

Office of the Milton Car Works,

Milton, Pa., December 6, 1887.

George Rice, Esq., Marietta, Ohio.

My Dear Sir: We have just wired you as follows: "Our financial friends decline to advance the money. We can not build them except for cash," which we confirm.

Our Mr. Dickerman returned this morning and after using every exertion, failed to negotiate the deferred payments on your cars. Our financial friends state that they have declined to do this mainly on account of some supposed controversy which they claim you have had with the Standard Oil Company and various railroads in the west. They feared you could not use these cars to advantage if the railroads should be hostile to your interests.

We regret this very much as we have been to considerable trouble and expense in making arrangements to build cars, and are now seriously disappointed at the refusal of the parties to take deferred payments, as they had partially promised to do.

We should be very much pleased to build these cars for you if you can negotiate the notes with your friends and pay us the cash.

Please let us hear from you at your earliest convenience concerning your ability to raise the money.

Yours, very respectfully,

Murray, Dougal & Co., Limited.

You see there was a discrimination in the carriage of oil in barrels as against tank cars of about 25 per cent; and if anybody could afford to buy tank cars—rolling stock for the railroad—of course, shippers ought to furnish railroads all the cars they want and let them charge what they please—so I saw that it was necessary to get hold of some cars. The way it is generally done is, a person goes and contracts for tank cars and pays down 20 or 25 per cent, and then pays the balance in installments in four or five years; and they hold the title to the cars.

Q. (By Mr. Farquhar.) Yet this is a business letter from Murray, Dougal & Co.; that if you would furnish the cash they would build the cars? A. Yes, but the trouble was that that would take just so much money out of my business, and, of course, cramp me so much that I could not afford to do it.

Q. You went into the building of tank cars afterwards, later on—got the Pennsylvania works to build them for me and paid 20 or 25 per cent down, and the balance in five years.

Q. Do you think it was an advantage to the Standard Oil Trust to have the tank cars built? A. Well, that might be, if everybody got the same rate,

if the railroad would furnish the same tank cars; but they did not furnish the tank cars. The Standard Oil Company in the early days bought up all the tank cars from the railroads, and no doubt with the understanding that they must not build any more, tank cars. The railroads have not furnished tank cars to the shippers, who thought they ought to do it, and they had to put box cars on, just as the Pennsylvania road did for years and years; and after the interstate act went into effect, the Standard got them to charge for the weight of the wooden package.

Q. You made quite a contention there, did you not, for a long time against the tank cars? A. Why, certainly. It is all right enough if the roads would only furnish that means of carrying, but they would not do it; and they know that the independent refiners of small means can not afford to buy tank cars. Why should they not do this? It is the duty of the railroad to furnish all the cars that are necessary. It is a freeze out, that is all.

Q. That is the question we are reaching now. You know the private car system of the United States today; they are used in transportation, refrigerator cars, and everything of that kind, furnished by private corporations. Was it not a positive advantage to have tank cars in the transportation of oil? A. No, I do not think it was. I think it was the greatest possible evil in petroleum transportation, for the reason that the railroads carried tank cars of oil for the Standard Oil Company at a lump sum tank rate. I proved that before the Interstate Commerce Commission, between barrel rates and tank car rates; that I paid four times as much to Birmingham, Ala.

Q. Where they were able to furnish tank cars, did not the railroads try to discourage the barrel? A. I can not answer. Why should they?

Q. I can not say that. Was it not a condition while you were shipping? A. Yes, they did. I will say that they did it for the purpose of freezing out the refiners; I will answer that, "Yes." They did it certainly, because they wanted to discourage the smaller ones; because the railroads and the trusts all work hand in hand together; each one owns the stocks and bonds of the other, and they are all working in collusion and in conspiracy to freeze out all competition.

Q. Did any railroads ever propose that you should put on your cars and they would pull them for so much a mile; did they ever refuse you at all? A. Yes. I have had railroads that refused; I forget what the lines were.

Q. Some roads did not? A. Why, certainly; I will tell you something about the tank car business. In 1878, J. H. Rutter, the general freight agent of the New York Central and Hudson River Railroad, in an investigation before the Hepburn committee of the New York legislature, put in a special tariff sheet of rates for the Standard Oil Company, and in that tariff was a particular special rate on tank cars of \$60 per tank car, lump sum, from Cleveland to New York, which would be 60 cents a barrel. The outside rate was \$1.90 a barrel to all competi-

tors. They also got a reduction off that 60 cents for the carriage of crude oil from the oil regions to the refineries at Cleveland, 35 cents per barrel of crude oil. Fourteen barrels of crude at 35 cents were allowed for 10 barrels of refined shipped from Cleveland to New York. That made \$4.90 drawback. The freight on 10 barrels, at 60 cents a barrel, would be \$6; \$6 less \$4.90 drawback is \$1.10, for transporting 10 barrels of oil from Cleveland to New York. That is 11 cents a barrel as against \$1.90, or 1,600 per cent discrimination.

Q. (By Mr. Smyth.) Do you know any railroad in this country that owns tank cars? A. I think the Pennsylvania Railroad has a lot of tank cars, or did have; but in the early days it was almost impossible for a competitor to get the use of them; the Standard Oil Trust had practically the exclusive use of them.

Q. Is it not the custom in all oil refineries, both in petroleum and cotton seed oil, that the tank cars are owned by the refiners? A. Yes; to a certain extent I think the cotton seed oil refiners are owning their own cars.

Q. And the railroad companies do not furnish any cars? A. I think not.

Q. (By Mr. Ratchford.) You are aware that the representatives of the Standard Oil Company have stated before this commission that no such thing as rebates were given them— A. (Interrupting:) Since the interstate commerce act?

Q. Yes. A. Yes; I will come to that.

Q. And the claims that you have just mentioned, referring to the rate from Cleveland to New York, you should support by the strongest possible testimony that you can present. Proof is what we want. A. Well, I am going to give it to you as I go along. I am going to give you plenty of proof as to freight discrimination since the interstate commerce law went into effect. I was coming to that; I have not got to that yet.

(Reading:) "I have for years vainly sought Government protection through Congress and the Interstate Commerce Commission, and get it not; also through State legislatures, and get it not; through the courts, and get it not. Soon there will be trouble in this land if this nefarious work does not cease, for anarchy will be supreme. The railways and the trusts are run conjointly on a fraudulent, dishonest, and destructive basis. The channels of trade and transportation are no longer open free to the people at large. Our greatest criminals and corruptionists are at the head of these mighty and all-powerful institutions, who also use their vast resources to corrupt our politics. They have no fear of the law, because of the fabulous fortunes so easily and quickly obtained, from which they expect to buy immunity.

"It is quite evident our Government is a failure, because of non-enforcement of our laws against this piratical crew who infest our inland commerce under the secret cover of unlawful rebates and commissions and thus rob the people out of hundreds of millions of dollars.

"The trusts are worse than the pirates of the seas, for they sailed in the open; and, though they gave

no quarter, they did their work under their own pirate flag, and not under the livery of the law.

"I have had a number of applications from unknown correspondents to take hold of new oil developments in different States, and have invariably replied that it would be useless, that however prolific an oil field might be, it would be made unprofitable and no money in it, as against the power of the Standard Oil Company monopoly over the rail lines of this country."

Whereupon at 1 p. m. the commission took a recess until 2 o'clock p. m.

The commission met at 2.15 p. m., Chairman Kyle presiding. George Rice again on the stand and examination resumed.

Q. (By Senator Kyle.) You may proceed. (Reading:)

"John D. Archbold and Henry H. Rogers, trustees of the Standard Oil Trust, testify before this commission, September 8 and 9, that this trust has not received discriminating freight rates since the interstate commerce act took effect, April 5, 1887.

"In 1886 I entered complaints with the attorney-general of Ohio to forfeit the charters of the Cincinnati, Washington and Baltimore, and Cincinnati, New Orleans and Texas Pacific railways for gross freight discriminations. The petitions were filed December 23, 1886, and depositions filed November 23, 1887. The referee made his report July 3, 1889, and the supreme court rendered its decision March 4, 1890. I proved that the Cincinnati, Washington and Baltimore Railroad Company, the initial line out of Marietta, and governing connecting lines, issued an order to take effect July 15, 1886, by which freight rates were not only advanced, but that my shipments were discriminated against by this road in favor of the Standard Oil Trust from 43 to 162 per cent.

"That the Cincinnati, New Orleans and Texas Pacific had so discriminated from 29 to 212 per cent. That the Louisville and Nashville Railroad Company had so discriminated from 35 to 260 per cent. That the St. Louis, Iron Mountain and Southern Railway had so discriminated from 48 to 191 per cent, which continued at least to March 4, 1890, and probably much longer, regardless of the order of the commission. These unlawful freight discriminations had the effect to close up 19 out of 24 of my agencies, and shut me out of 39 towns in 73 within five months.

"The supreme court of Ohio, after this abundant and most extraordinary proof before them, ignored the people's sacred right of eminent domain, and simply decided that these roads be ousted from charging less rates per 100 pounds on tank car shipments, as compared with barreled oil, which decision proved ineffective."

This suit was to forfeit their charters for these discriminations.

DISCRIMINATIONS AT LEAST UP TO 1888.

"In November, 1887, before the Interstate Commerce Commission, I proved the following gross

freight discriminations, which were exclusively in favor of the Standard Oil Company and for no one else. The cases were decided February 23, 1888, and the several defendant rail lines pretended to acquiesce in the verdict by simply changing their mode of rating.

"The following outrageous and most extraordinary of freight discriminations, exclusively in favor of the Standard Oil Trust, was proved by me and existed at least up to April 1, 1888, that we know of, and from my subsequent complaints and proofs it is exceedingly doubtful if the decision of the commission had any appreciable effect on the railroads."

Now, I have put in exhibits which show discrimination to the extent of 333 per cent. There is a lot of them, and I just merely mention that fact; the exhibits show that the highest discrimination was 333 per cent.

Newport, Ark.....	10	18.2	82

"The above gross freight discriminations continued for at least one year of the interstate commerce act, regardless of the penalty of \$5,000 fine and two years in the penitentiary for each and every offense.

"On May 8, 1888, the Missouri Pacific Railroad, regardless of this decision, were still carrying tank cars by the lump sum. This same road (1888) in the State of Arkansas were carrying petroleum in iron barrels for the Standard Oil Trust at 284 per cent discrimination in their favor.

"In 1889 I made several general complaints to the commission of general violations of the interstate commerce act by the Southwestern lines of railroads, reaching to the Pacific coast, of which the Cincinnati, Washington and Baltimore Railroad Company was the initial line out of Marietta, where my oil refinery was located, and at my request the commission issued notices to 151 contiguous lines as parties thereto to appear and be heard if they so desired. The substance of these complaints was embodied in these notices, as follows:

"It appearing to the commission in the above cases that in addition to the question of reasonableness of rates, the following other questions are also raised, namely:

"1. The question of the like classification of barrel and tank oils, and of the right of the railroad companies to charge for the weight of the barrel package in addition to the weight of the contents.

"2. The question of discrimination arising from the returning of empty tank cars free of charge, and also of the paying a mileage rate on empty tank cars.

"3. The question of whether railroad companies are not obliged to furnish tank cars as well as cars of other description for oil transportation.

"4. The question of the proper classification of cotton seed oil and turpentine as compared with petroleum and its products.

"5. The question of discrimination in favor of petroleum and its products when carried in tank cars, resulting in giving a low rate on cotton seed oil or turpentine, or either, when carried as back loading in such tank cars.

"6. The question of the duty of railroad companies to furnish shippers with tank cars in cases where the traffic of their lines can profitably or properly be carried in such tank cars and is large enough to justify the expenditure.

"Long and short haul."

"The four separate cases were tried together in December, 1889, and thoroughly done by that astute and experienced lawyer in railroad matters, Franklin B. Gowen, for many years the president of the Philadelphia and Reading Railroad Company. The cases were duly argued, and a partial but insignificant decision rendered, but not until two years had elapsed, when the commissioners decided that 'All the cases are held open for additional evidence,' which so thoroughly disgusted me after having spent so much time and money thereon, that I then determined to proceed no further, and abandoned the apparently hopeless pursuit of combined and

confederated iniquity, and resolved to have nothing further to do with any future proceedings before the Interstate Commerce Commission.

"I fully and clearly proved the following facts:

"That the Trans-Continental Association, composed of 21 lines of road, had advanced freight rates in 1889 over 1887, when my first complaints were brought, to the extent of 83 per cent, which was unreasonable. Also proved that these lines carried cotton seed oil, worth four times as much as petroleum, at 26 cents less per 100 pounds. That the Trans-Missouri Freight Association charged 25 cents per 100 pounds more for carrying petroleum than cotton seed oil.

"That the Southern Railway and Steamship Association, of which the Louisville and Nashville Railroad Company was a member, advanced freight rates in 1889 over 1887 from 10 to 121 per cent, which was clearly unreasonable. Also proved that the Chicago, Rock Island and Pacific Railroad charged 25 cents more per 100 pounds for carrying petroleum than cotton seed oil.

UP TO MARCH 15, 1892, THE STANDARD OIL TRUST GOT
1¼ PER CENT OF ITS SHIPMENTS CARRIED FREE BY A
REBATE REDUCTION OF 62 GALLONS ON EACH
TANK CAR.

"I also proved that the Standard Oil Trust had an exclusive secret rebate reduction on quantity shipped, in place of money rebate, of 62 gallons deduction on each and every tank, or 1¼ per cent of its shipments carried free."

No one else got that at all; no one else got that rebate or reduction.

Q. Is that supposed to be on tank cars as compared with barrel shipments? Is that the reason that they themselves gave? A. I think the only reason I heard for it was for wind in the dome of the car, or something of that kind. There was no good valid reason for it.

Q. The question is this, what reason did they pretend that there was for it? A. I do not know. I never knew what their pretended reason was; there was no good reason.

Q. When this matter was brought to their attention, both the Standard Oil Company and the railroad company presumably assigned some reason for it? A. I do not know what they did assign, probably leakage or something or other. There was no sense in it, anyhow.

(Reading:) "This continued until March 15, 1890, when it was changed to 42 gallons reduction, and continued to September 1, 1892.

"Also proved that shippers of oil in barrels should be charged only for the oil shipped, and not for the barrel, to offset the return of empty tank cars that can't bring back other freight (except in extreme cases), while a box car can. Besides a tank car weighs 3,500 pounds more than a box car of same capacity."

Why, up to 1888 the Pennsylvania Railroad carried oil in barrels, including the package, for the

same rate as so many gallons in a tank car; and about a year after the interstate commerce act took effect they changed it so that the independent shipper would have to pay for the weight of the package.

Q. (By Mr. Ratchford.) What reason do you assign for the change in the rate on shipments in tank cars as compared with the rate for barrels? A. I think it was done at the instigation of the Standard Oil Trust.

Q. Did the Standard Oil Trust at the time of the change have control of all the tank cars? A. Principally. Almost absolutely.

Principally? A. Of course there were more or less outside refiners that had a moderate amount of cars, but not very many.

Q. Then you believe that the railroad rate of shipment in tank cars is not due to the advantage that results to the company from the transportation of oil in tank cars, but rather is a favor for those who control the tank cars? A. Yes.

TANK CARS NOT AN ADVANTAGE TO THE RAILROADS,

Q. (By Mr. Farquhar.) But is not the tank car really an advantage in handling the oil? A. To whom?

Q. To the railroad companies, an advantage to all that handle oil? No, sir. I have got the very best evidence from the Pennsylvania Railroad, if you will let me read this.

(Reading:) "John S. Wilson, general freight agent of the Pennsylvania Railroad Company (the highest authority we have), testifies before the Interstate Commerce Commission on January 3, 1888, that he would rather carry powder than oil in tank cars, and that the shipment in barrels is preferable. Hear him:

"I think, altogether, it is the most undesirable business we do, the carriage of oil in tank cars. There is no stopping it when once it starts. We had a smash up at New Brunswick. We came in collision there with a line of tank cars, the oil got on fire, and I think it ran two squares, got into a sewer, ran burning a square or two more, ran on the canal, which was then frozen over, followed the ice a square or two beyond, and besides our own direct losses, we have already paid nearly \$500,000 for the destruction there. I regard it as worse that powder to carry. The bridge at New Brunswick was burned down, which cost us \$200,000 or \$300,000, besides nearly \$500,000 paid out for outside destruction.

"We might run for ten years and by good luck and have no serious accident. Whereas, on the other hand, we might strike another case like that at New Brunswick and lose more money than we could make on carrying oil for ten years. I would rather carry anything else than oil in tanks.

"The movement in barrels I have always considered preferable for two reasons. First, we load barrels in a car that will carry a return cargo. There are no back loads for a tank car. For stock and box cars we can load back and get an increased earning for the round trip. Secondly, if there comes

a collision or fire, the packages being separate we are enabled to save some of the tonnage. There is no hope of saving the contents of a tank car if it once gets on fire. Barrels you can sometimes scatter and roll off and break them up."

This gentleman did not stay long with this railroad company after that evidence was given.

Q. (By Mr. Farquhar.) Well, independent of this gentleman's opinion on that, the railroads have adopted the tank car instead of the barrel for the shippers? A. Yes; and principally under the control of the Standard Oil Trust.

Q. And independent also of the barrel transportation, the railroads put tanks in the sixth-class classification and barrels in the fifth class. How do you account for that as a practical business proposition? A. I think that tariff was made by the Standard Oil Trust. I think they make up the petroleum tariffs in the United States. They make up the oil tariffs at 26 Broadway and give them out to the railroads to carry it as they say, or else they do not get any freight.

Q. (By Mr. Ratchford.) Is not there an advantage in carrying and loading and unloading tank cars as compared with the barrels? A. Yes; if your cars arrive at a point where you could gravitate it out, or if you had a short hose attached to them—a short hose into which you could put a pump, you could suck it out; and of course, a tank car carries more oil and saves the weight of the barrel; they carry a larger weight.

Q. In every case it is either taken out by gravity or pumped out? A. Yes.

Q. (By Mr. Farquhar.) In nearly all cases it is gravity, is it not? A. I do not know about that, either. At the refinery at Bayonne, owned by the Columbia Oil Company, I think they take all the oil out by pump; I am quite sure they do; their works, I know, are right down on almost level ground and they could not take it out by gravity.

Q. (By Mr. Ratchford.) Do the railroad companies load the oil, or the producer? A. The producer.

Q. And the railroad or shipping company unloads it? A. The receiver of the oil unloads it, and the producer or owner of the oil loads it; so that the road has nothing to do with it. It is the same with barreled oil. The refinery loads its barrels into the car and the road has nothing to do with it; and so with unloading. There is no difference in that respect.

(Reading:) "I proved that the intermediate rate on petroleum, via the trans-continental lines, in 1889 was \$1.90 per 100 pounds. The wooden-barrel shipper was required to pay on 85 pounds additional weight, which would amount to \$1.61 per barrel more, in gross violation of sections 4 and 5 of the act. The average market price of crude oil in 1889 was 94 cents.

"I proved that there was a charge of \$95 per tank car by the trans-continental lines, to return empties from Pacific coast to Missouri river."

This is all since the interstate commerce act went into effect.

(Reading:) "Thomas M. Kimball, general traffic

manager of the Union Pacific, testified, June 22, 1887, before the Pacific Railway Commission, that his road carried the empty tank cars of the Standard Oil Company free, same as the other roads.

“Q. What was the rate allowed to the Standard Oil Company? A. All sorts of rates, according to point of delivery, and the liveliness of competition at that point; 5 per cent, 10 per cent, 15 per cent, and up to 30 per cent.”

“So this great line, and a Government road, enters the arena to assist the Standard Oil Trust to throttle competition as against the rights of the people who have built the road.

“I proved that refined oils in bulk were being carried at 6 per cent less than actual weight, or 6 per cent of refined oil carried free for the Standard Oil Trust. Their various lubricants, residum, etc., carried at 10 to 15 per cent less weight, according to gravity.”

DISCRIMINATION BY EXCLUSIVE “STOP-OVER” PRIVILEGES.

“I also proved that the several associated lines of railway constitutin the Southern Railway and Steamship Association pool, the Southwestern Traffic Association pool, and the Trans-Continental Association pool were grossly violating the third and fourth sections of the act, long and short haul, to the extent of 56 to 225 per cent, which inured to this extent, in favor of the Standard Oil Trust, by prepayment of its freight at the low car lot, terminal rate, with privilege of stop all such cars at high rate intermediate points.

“I paid out over \$1,200 in subpoenas in those cases by an imperative rule adopted by the commission, which was not required in my first cases.

“It is fair to assume, because of failure of the commission to properly decide these cases, that the same discriminations not only have continued, but they have even gotten worse, for, on May 2, 1890, the St. Louis, Arkansas and Texas Railway (applicable to all southwestern lines) issued a special oil tariff sheet for exclusive benefit of the Standard Oil Trust”—

That I know, and I could not get it.

(Reading:) “By which this trust could stop off full loaded tank cars at high rate intermediate points and divide same up into less than car lots, to be distributed at several stations, by canning same, which should have paid three times the terminal rate. This was an exclusive tank car tariff sheet, not applicable to barreled oil in box cars, for the independent refiner who could afford to purchase rolling stock tank cars.

“Per letter of the commission, July 12, 1897, these special and most extraordinary of freight discriminations yet continue, and are exclusively in favor of the Standard Oil Trust on petroleum shipments.

“As to what lines allow stop-over privileges, it is understood that all the lines named on the Southwestern Traffic Association tariffs as parties thereto participate in the stop-over privilege provided therein”

That is a quotation from the Interstate Commerce Commission.

TANK CAR DISCRIMINATION.

(Reading:) “The tank car has been the greatest medium for the Standard Oil Trust to receive rebates by carloads being carried at a lump sum rate regardless of weight, inconceivably low as compared to tariff rates by the 100 pounds.

“The railroads won't furnish tank cars, and if an independent refiner is able to buy a few, thus decreasing his working capital, he is confronted by these present special railroad instructions inserted in the tariff sheets.”

To show you how the railroads put every possible obstacle in the way to freeze out and keep out competitors, this is what they put in. (Reading:) “The ‘Southwestern Bureau,’ of which the Missouri, Kansas and Texas Pacific is a member, owned by the Standard Oil Trust officials, has this to say at the present time: ‘Oil tanks.—Carload, petroleum storage tanks for petroleum and its products, intended for permanent oil stations—’”

Intended for permanent oil stations, mind you, gentlemen.

(Reading) “‘Shall be transported at actual weight at the oil rate, when filled with oil that pays the bureau line's oil rate.’”

That is as much as to say that the railroads have a right to say whether a station that I might put up is going to be a permanent one. But if I wanted to put up one it would be practically impossible to get the right of way or a place to put it up, for I was two years waiting and trying to get that; or if you did get it and you put your plant up, it was in the discretion of the railroad to say whether that was going to be a permanent thing. Anybody would know that it would not be permanent because you can't live. The railroad would discriminate and you could not survive. It would not be any good whatever. I have another one right here.

(Reading:) “Central Freight Association.—Tank gauge handbook No. 4 says, applicable to all roads in the United States at the present time: ‘Petroleum and its products in tank cars will be delivered only when consigned to parties at points at which they have proper unloading and storage facilities, and when shipments in tank cars are sent to parties who have not such facilities the shipments will be returned to shippers at their risk and expense.’”

Just think of it! It is all left with the railroad to say whether you can have any show or not, and they do not give you any show and don't propose to do it, either.

(Reading:) “On May 6, 1891, the Southern Pacific Company issued an exclusive special oil tariff”——

Here is something very important.

(Reading:) “With these exclusive advantages in favor of the Standard Oil Trust, being the exclusive owner of a peculiar box tank car combination, patented, of two upright iron tanks set inside a box car that thus avoids paying \$105 a tank car for return of empty cylinders from Pacific coast to

Missouri river. This special oil tariff, governing all trans-continental lines, allowed this trust 27 cents per 100 pounds lower rates for petroleum transported in these special patent cars, as against the regular rates. This is discriminatory against the independent tank and barrel shipper by \$1.05 a tank car, and \$1.08 per barrel when shipped in barrels.

"The present highest intermediate rate on petroleum in less than car lots, Chicago to Pacific coast over trans-continental lines, is \$2.70 per 100 pounds, or \$10.80 per barrel of 400 pounds to the independent barrel shipper, while the Standard Oil Trust, by prepayment of its freight at the car terminal rate of 78½ cents per 100 pounds on 320 pounds, or \$2.51 per barrel, gets an advantage of 330 per cent over its competitors in freight discrimination."

TEMPORARY REDUCTIONS FOR THE PROFIT OF THE
STANDARD.

"Another method of freight discrimination in favor of the Standard Oil Trust on the trans-continental lines, per tariff of 1888, was to reduce rates temporarily one-half and then raise them again 50 per cent, so the trust, on exclusive secret information, could stock up on the low prices, while its competitors always had to pay the high tariff rates."

Now, I will just read some telegrams that passed between Mr. Stubbs, of the Southern Pacific, in which he agrees to allow the Standard Oil Trust to stock up with petroleum products at low prices. This is here to show how it is done all at the pleasure of the Standard. This is from the Paint, Oil, and Drug Review of January 25, 1893, and I know all about it, because one of the men that is interested came to see me about it and showed me some of these telegrams.

[From the Paint, Oil and Drug Review, January 25, 1893.]

HOW IT IS DONE—ALL AT THE PLEASURE OF THE
STANDARD.

How completely the Standard Oil Company has its grip on the railroads is best evidenced by producing copies of telegrams that passed between the freight agents of the transcontinental lines, the Standard Oil Company at San Francisco, and the Standard Oil Trust at New York. How, at the pleasure of the unscrupulous monopoly, it was enabled to stock up during low freight, and an interesting game of seesaw was played on weak competitors. In all cases freights were to be advanced and lowered upon notice from the Standard. A baser trade conspiracy never went into print. It follows:

[Copy of Telegram.]

San Francisco, November 14, 1888.

J. C. STUBBS,

General Traffic Manager Southern Pacific Company,
St. Louis:

Tilford says regarding raising and lowering oil rates during the year, as talked before leaving, he

thinks it better if you could, without giving particulars to Transcontinental Association lines, get consent to leave oil rates in hands of committee without explaining exactly why, but if your judgment approves you might give full particulars to two or three longest lines.

W. SPROULE,
Asst. Genl. Frt. Agt. Southern Pac. Co.

[Copy of Telegram.]

San Francisco, November 14, 1888.

W. SPROULE, *San Francisco*:

Say to Tilford that association will probably consent to following agreement: Oil rate from Cleveland to be \$1; at this rate he can stock up; after doing so he to notify Chairman Leeds, who, after giving necessary notice, will advance rate to \$1.25, and continue that rate until such time as Tilford notifies him of reduced stock, when he will again reduce it to \$1 to enable him to stock up.

J. C. STUBBS.

[Copy of Telegram.]

San Francisco, November 15, 1888.

J. C. STUBBS, *St. Louis*:

Tilford received your message, and in reply says he can not afford to pay \$1—that is too much, owing to water competition—but will agree to pay for petroleum and its products 85 cents from Cleveland, and if roads hard up might possibly raise the rate to 87½ cents. Tilford says this offer of his is provided association will agree to advance rate to \$1.25, and reduce it from time to time as he may desire, as outlined in your message of yesterday. Please answer. Tilford says please do not advance present linseed or lead rates, as it would interfere with negotiations that he has now under way with Whittier, Fuller & Co.

W. SPROULE.

[Translation of message to W. A. Bissell, general freight agent Atlantic and Pacific Railroad.]

San Francisco, November 15, 1888.

W. A. BISSELL, *St. Louis*:

Tilford's proposition to the association through Stubbs is that he will pay 85 cents on petroleum and its products from Cleveland; possibly, if roads hard up, he might increase this to 87½, provided association advance freight to \$1.25 when he gives notice. He would stock up at low rate, then notify the association when to advance, the advance or decline to be made at certain seasons of the year in accordance with his supply on hand. Do not let Stubbs know of this telegram.

W. SPROULE.

[Copy of Telegram.]

St. Louis, November 16, 1888.

W. SPROULE, *San Francisco*:

All rates will be advanced. Would advise that he accept proposition, otherwise sure rate will be made \$1 without any conditions; clipper competition will be cared for.

J. C. STUBBS.

[Copy of Telegram.]

San Francisco, November 19, 1888.

W. H. TILFORD,

Trustee Standard Oil Trust, 26 Broadway, New York:

J. C. Stubbs telegraphs as follows under date of 14th instant: "Transcontinental Association will probably consent following arrangement: Oil rate from Cleveland to be \$1; at that rate Standard Oil Company, San Francisco, can stock up. After doing so Standard Oil Company can notify Chairman Leeds, who, after giving necessary notice, will advance freight rate \$1.25 and continue that rate until such time as Standard Oil Company notifies him of reduced stocks. I telegraphed J. C. Stubbs as follows: "Can not afford to pay \$1; that is too much, owing to water competition, but will agree to pay for petroleum and its products 87½ cents, provided Transcontinental Association will agree to advance rate to \$1.25 and reduce it from time to time as outlined in Stubb's message; adding request of Transcontinental Association not to advance linseed or lead rates." Under date of 6th instant, J. C. Stubbs telegraphs as follows: "All rates will be advanced. Would advise that Standard Oil Company accept proposition; otherwise sure rate will be made \$1 without any conditions. Clipper competition will be taken care of." What do you advise me to say to him? Advise me by wire at once.

E. A. TILFORD,

President Standard Oil Company of Iowa.

[Copy.]

San Francisco, November 20, 1888.

J. C. STUBBS,

Care Southern Hotel, St. Louis:

Your telegram, 16th, through Sproule, received. I will raise my offer to 90 cents for petroleum and its products from Cleveland, association agreeing to conditions stated in your telegram to Sproule, 14th. This is the highest we have ever paid. This rate I believe would be a permanent thing and not stimulate clipper shipments or private clipper charters; therefore in long run would prove mutually more beneficial than \$1. Will you advocate 90 cents? I think with your vote for this rate, and you personally putting it before association, it would go through. We will have to ship quite a number of cars during high rate owing to special orders coming in. This should be taken into consideration when I ask that 90 cents be adopted. Please answer.

E. A. TILFORD.

[Copy of Telegram.]

San Francisco, November 21, 1888.

W. H. TILFORD,

26 Broadway, New York:

Dispatches received. Since telegraphing you yesterday, I received telegram from A. T. and S. F. R. R., St. Louis, intimating that Transcontinental Association

would accept something less than \$1 from us. Therefore, I will telegraph J. C. Stubbs, care Southern Hotel, St. Louis, as follows: "I will raise my offer to 90 cents on petroleum and its products from Cleveland, Transcontinental Association agreeing on conditions stated in his telegram, 14th. This is highest rate we ever paid. This rate, I believe, would be permanent thing and would not encourage heavy clipper shipments; therefore in long run would prove mutually more beneficial than \$1. Will you advocate 90 cents? I think with your vote for this rate and you personally putting it before association it would go through. We will have to ship quite a number of cars during high rate, owing to special orders coming in from points where we have no warehouses. This should be taken into consideration when I ask that 90 cents be adopted." I request J. C. Stubbs please answer. I do not know whether my telegram reached J. C. Stubbs. owing to his being in New York city. When you see J. C. Stubbs, say I telegraphed him as above, care Southern Hotel, St. Louis. In your talk advocate 90 cents as outlined above. Do not intimate to Stubbs that I have received any result from A. T. and S. F. R. R. people, St. Louis. Telegraph me the result of your interview with Stubbs. Pay charges on Union Tank Line patent car referred to and send expense bill to me.

E. A. TILFORD.

[Copy—Subject: New T. C. A. rates.]

STANDARD OIL COMPANY,

San Francisco, November 21, 1888.

W. H. TILFORD, *26 Broadway, New York:*

After telegraphing you yesterday afternoon saying that I would telegraph J. C. Stubbs as outlined in your message of yesterday, I received word, through A. T. & S. F. office here, from W. A. Bissell, general freight agent of the Atlantic and Pacific Railroad, who is now in St. Louis, that he thought the association would accept something less than \$1 from us if our offer was properly put before them, consequently I telegraphed J. C. Stubbs, as per my translated copy of message to you herewith attached. I was not aware that Mr. Stubbs was in New York and sent my message to the Southern Hotel, St. Louis; therefore I requested in my message to you that when you meet Mr. Stubbs you say that I telegraphed him, care Southern Hotel, St. Louis, and also outline to him the substance of my message, incorporating further along in my telegram that in your interview with Mr. S., please advocate the 90 cent rate.

I will advise you as soon as I hear definitely when the new rates of freight that the Transcontinental Association are agreeing on now will take effect. I heard today, through A. T. & S. F. office here, that Mr. Bissell had telegraphed from St. Louis that he thought the new traffic would go into effect on or about the 15th or 20th of next month. Please treat this confidentially, but, as I state before, as soon as I find out definitely regarding the new rates I will duly advise you.

E. A. TILFORD.

[Copy.]

New York, November 23, 1888.

E. A. TILFORD, *San Francisco*:

General meeting adjourned to meet at Chicago, Monday morning. Will take up matter then. Will do best I can. Probably can make it 95, which your brother Hunt says you can stand. If you have to address me, care Pacific Hotel, Chicago.

J. C. STUBBS.

[Copy.—Subject: Rates on oil from Cleveland to the Pacific coast.]

STANDARD OIL COMPANY,
San Francisco, November 23, 1888.

W. H. TILFORD, ESQ., 26 Broadway, New York:

Dear Sir: I beg herewith to hand you copy of my translated dispatch to you of even date, which explains itself.

From Mr. Stubbs' dispatch you will see that he seems to think that you have already agreed that I will stand 95 cents on oil from Cleveland to the Pacific coast. In your dispatch to me a few days ago you stated you talked with Mr. Stubbs about 90-cent rate, suggesting, however, further along in your message that Mr. Stubbs should telegraph that he could get the 95-cent rate adopted, that I had better accept the same. From your message I would imagine that you simply talked the 90-cent rate, without committing yourself to Mr. Stubbs about a 95; hence my reason for asking you the question as to whether you had agreed to the 95, in my message of today.

Yours truly,

E. A. TILFORD.

[Copy.—Subject: Error in translation of message.]

STANDARD OIL COMPANY,
San Francisco, November 24, 1888.

W. H. TILFORD, ESQ.,

Vice President Standard Oil Company, 26 Broadway, New York:

Dear Sir: I am just in receipt of your message of even date saying that you translated my message wrong, reading the rate that I had offered the transcontinental lines 95 cents, instead of 90 cents.

I think whoever translated my message in your office should be disciplined, for the error will prove, I am afraid, quite expensive to us here. I am afraid now the damage is done and I will be unable to secure a lower rate than 95 with the Transcontinental Association lines. I am fully convinced, however, if you had talked 90 cents to Mr. Stubbs when you saw him I could have had this rate put in effect. I will, however, as you suggest, telegraph Mr. Stubbs tonight, care Grand Pacific Hotel, stating that when you mentioned 95 cents to him, that the same was based on an error in translating my cipher message, and that I still hope he will advocate the 90-cent rate.

Yours truly,

E. A. TILFORD.

[Copy of Telegram.]

Chicago, November 26, 1888.

E. A. TILFORD, *San Francisco*:

I told Hunt your dispatch to me read 90, and he must be in error. He afterwards confirmed my view, and at the same time expressed himself as willing to compromise on 95.

J. C. STUBBS.

[Copy.—Subject: Oil rate.]

[Personal.]

W. H. TILFORD, ESQ.,

Vice President Standard Oil Company, 26 Broadway, New York:

Dear Sir: I am just in receipt of the following message from Mr. Stubbs:

"Chicago, November 26, 1888.

"E. A. Telford, San Francisco:

"I told Hunt your dispatch to me read 90, and he must be in error. He afterwards confirmed my view; at the same time expressed himself as willing to compromise on 95."

I telegraphed Mr. Stubbs as I wrote you I would on the 24th instant, and the above message from him is in reply to my telegram. Mr. Stubbs' statement as to you agreeing to compromise on 95 cents does not exactly tally with what you wired me under date of the 24th instant. (Please see your telegram of that date.) Will you please write me (for curiosity sake) what are the facts as to your interview with J. C. S. Of course I understand before my letter can reach you, and you can reply, the 90 or 95 cents rate will be selected; but as I would like to know for my own satisfaction, hence my requesting you to write me. I will make up some sort of message tonight to send to Mr. Stubbs in reply to his of above date, but, as I state in my letter of the 24th instant, I believe now that nothing will be accepted but 95 cents.

Yours truly,

E. A. TILFORD.

[Copy of Telegram.]

San Francisco, November 26, 1888.

J. C. STUBBS,

Care Grand Pacific Hotel, Chicago:

To quote Pinafore, Hunt evidently got those babies or rates mixed up. Lines had better give 90 a trial. If later on there's possibility advancing, you know I am always willing. Whittier has large lot clipper oil now arriving and it will be hard for us to meet this competition even if our rate made 90.

E. A. TILFORD.

[Copy.—Subject: Freight rates.]

STANDARD OIL COMPANY,
San Francisco, November 28, 1888.

[Personal.]

W. H. TILFORD, ESQ.,

26 Broadway, New York:

Dear Sir: I am just in receipt of your day message of even date, saying that Standard Oil Company,

Cleveland, and Standard Oil Company, Pittsburg, would probably fill all my orders by Saturday night, December 22, and that the new rate of \$1.25 per 100 should go into effect 24th proximo, etc.; contents of the same carefully noted.

I have not heard anything this week from the transcontinental roads which are now holding forth at Chicago, as to when they will be ready with their new tariffs. I wrote you some few days ago that the Atchison, Topeka and Santa Fe people telegraphed me from St. Louis that they did not believe the new tariff would go into effect before the 15th proximo. It looks to me now as though this tariff would not be put into effect before December 20 to January 1, 1889. I am, however, in communication with the agents of the different lines, who are now at Chicago, and just as soon as I learn definitely as to date when the new tariffs will go into effect, I will promptly telegraph you. If I find out definitely that they will be ready with their tariffs before December 22, I will arrange to have the present rates remain until the 24th proximo, as you suggest. I wish, however, you would impress upon Standard Oil Company, Cleveland, and Standard Oil Company, Pittsburg, the necessity of filling out all our orders at an early date as possible.

Yours truly,

E. A. TILFORD.

OFFICE GENERAL FREIGHT AGENT,
SOUTHERN PACIFIC COMPANY,
San Francisco, December 3, 1888.

E. A. TILFORD,

President Standard Oil Company, City:

Dear Sir: I have advices from Chicago that arrangements for coal oil rates have been closed, and the new rates thereunder will probably go into effect January 1. From Cleveland and Pittsburg 90 cents per 100 pounds, and from New York \$1 per 100 pounds. The basis of operation of these rates, looking to the conserving of your interests, is intended to be communicated in recent advices from Chicago, of which you are informed.

Yours truly,

WM. SPROULE.

[Copy of telegram.]

San Francisco, December 4, 1888.

W. H. TILFORD,

26 Broadway, New York:

J. C. Stubbs telegraphs as follows from Chicago: "Oil freight rates have been closed. New freight rates thereunder probably effective January 1. From Cleveland and Pittsburg 90, from New York \$1." This message from J. C. Stubbs means 90 for us to stock up with, with \$1.25 in effect whenever we want. See my letter of this date.

E. A. TILFORD.

[Copy.—Subject: Freight rates.]

[Personal.]

STANDARD OIL COMPANY,
San Francisco, December 4, 1888.

W. H. TILFORD, ESQ.,

Vice President Standard Oil Company, 26 Broadway, New York:

Dear Sir: I will telegraph you this afternoon as per translated copy of message herewith attached, which is self-explanatory.

I herewith hand you a copy of a letter I have just received from Mr. Sproule, assistant general freight agent of the Southern Pacific Company, this city. This letter I interpret to mean the 90-cent rate is for us to stock up from time to time, and that the \$1.25 per 100 rate will be in effect whenever we may desire. This \$1.25 rate is what Mr. Sproule refers to in the latter portion of his letter, as my offer of 90 cents to Mr. Stubbs was on condition that he has the rate of \$1.25 put into effect when we might ask him. This letter also reads as if the 90-cent rate and \$1 rate was to be put in effect January 1. No doubt Mr. Stubbs was unaware that we were stocked up at the present rate of 82½.

The Transcontinental Association adjourned at Chicago yesterday, and I understand that Mr. Stubbs is now on his way home. I will see him on his arrival here, and if Chairman Leeds, of the Transcontinental Association, has been notified to put the 90-cent rate in effect January 1, I will have the same corrected by wire and the \$1.25 rate put in. As soon as Mr. Stubbs reaches home I will telegraph you whether it is intended that the 90-cent rate should be put in effect January 1 or the \$1.25.

Yours truly,

E. A. TILFORD.

(Inclosed 2.)

[Copy.—Subject: Transcontinental Association freight rates from Chicago. U. P. cut to Denver.]

[Personal.]

STANDARD OIL COMPANY,
San Francisco, December 5, 1888.

W. H. TILFORD, ESQ.,

Vice President Standard Oil Company, 26 Broadway, New York:

Dear Sir: I am just in receipt of your two dispatches of yesterday bearing on the subject at the head of this letter—contents of the same carefully noted. I herewith hand you translated copy of my reply, which is self-explanatory. I hardly think the newspaper reports that the Transcontinental Association will allow differentials in favor of Chicago to such an extent that the local rate from Lima and the oil regions to Chicago, added to the rate from that point, would be less than the through rate from Cleveland to the Pacific coast on petroleum and its products.

My telegram and letters to you of yesterday in which I enclose you a copy of the letter from Mr.

William Sproule, assistant general freight agent of the Southern Pacific Company, of this city, giving the substance of the telegram that he had received from Mr. Stubbs at Chicago, names the rates on petroleum from Cleveland, Pittsburg, and New York.

I expect (without knowing) that the rates from the oil regions and Lima will be the same as from Cleveland and Pittsburg to the Pacific coast. Just as soon as I see Mr. Stubbs I will advise you what other points—other than Cleveland and Pittsburg—the 90-cent rate will apply. If there is any truth in the newspaper report which you refer to, about the local rate added to the Chicago making a less rate than the through, I will have the same duly corrected without delay and promptly notify you.

I will not telegraph the Union Pacific people regarding the cut rate into Denver, as your second dispatch states the rates will be restored on Saturday night next.

Yours truly,

E. A. TILFORD.

[Copy of telegram sent to J. C. Stubbs through Sproule.]

San Francisco, December 6, 1888.

J. C. STUBBS, *Chicago*:

If it is not already agreed upon that the \$1.25 rate is to go into effect January 1, on petroleum and its products from Cleveland and Pittsburg to the Pacific coast, will you kindly telegraph Chairman Leeds to put this rate in effect on the day mentioned. Please answer.

E. A. TILFORD.

[Copy of telegram.]

San Francisco, December 6, 1888.

W. H. TILFORD,

26 Broadway, New York:

J. C. Stubbs reaches Windsor Hotel, New York, tomorrow morning. I have telegraphed him, if it is not already agreed upon, to arrange to have \$1.25 rate put in effect January 1, requesting answer. I telegraphed this to J. C. Stubbs fearing might be some misunderstanding and 90-cent rate put in. Dispatch received. I have telegraphed Union Pacific Railway.

E. A. TILFORD.

[Copy.—Subject: Freight rate.]

[Personal.]

STANDARD OIL COMPANY,
San Francisco, December 6, 1888.

W. H. TILFORD, Esq.,

Vice President Standard Oil Company, 26 Broadway, New York:

Dear Sir: I will telegraph you this afternoon as per translated copy of my message herewith attached. I telegraphed Mr. Stubbs today through his office here (Southern Pacific Company) as follows: "If it is not already agreed upon that the \$1.25 rate is to go into effect on January 1 on petroleum and its products from Cleveland and Pittsburg to Pacific coast, will you

kindly telegraph Chairman Leeds to put this rate into effect on the date mentioned. Please answer." I wrote you on the 4th instant, subject, "Freight rates," giving particulars as to the freight situation up to that date. Kindly see my letter of above date. I was a little bit fearful there might be some misunderstanding and the 90-cent rate put into effect January 1 instead of the \$1.25; hence my reason for telegraphing Mr. Stubbs today, as outlined above. When I wrote you on the 4th instant I was under the impression that Mr. Stubbs was on his way to San Francisco, but today I learn that he will reach New York tomorrow. I will duly advise you of the reply I receive from Mr. Stubbs in answer to my today's telegram. My reason for telegraphing you Mr. Stubbs is in New York was thinking possibly that you might wish to see him and discuss our freight situation, and in order to have you do so intelligently I desire to keep you posted as to what was passed between Mr. Stubbs and myself by telegraph. Up to date I have repeated to you in substance everything that has passed between Mr. Stubbs and myself since the Transcontinental Association has had their last meeting east.

E. A. TILFORD.

STANDARD OIL COMPANY.

San Francisco, December 8, 1888.

W. H. TILFORD, Esq.,

*Vice President Standard Oil Company,
26 Broadway, New York.*

Dear Sir: I will telegraph you this afternoon as per translated copy if by message herewith attached, which is self-explanatory.

I wrote you on the 6th instant, subject, "Freight rate." In my letter of above date I give you verbatim my telegram that I sent to Mr. Stubbs in New York. I herewith hand you copy of a letter that I have re-

ceived from Mr. William Sproule, assistant general freight agent Southern Pacific Railway Company, this city. This letter of Mr. Sproule's is quoting in substance a telegram from Mr. Stubbs in answer to my message to him of the 6th instant.

I think we have managed this freight business pretty well from this long distance, especially when you think that we have secured the 90 cents rate with which to stock upon from time to time, and after some misunderstanding as to a compromise,

Yours truly,

E. A. TILFORD.

[Copy—Subject: Correspondence with Mr. Stubbs.]

[Personal.]

STANDARD OIL COMPANY,

San Francisco, December 8, 1888.

W. H. TILFORD, Esq.,

Vice President Standard Oil Company,
26 Broadway, New York.

Dear Sir: In looking over my letters and telegrams to Mr. Stubbs regarding the petroleum and its products rate, also my correspondent to you on this subject, I find on the 27th ultimo I wrote you, subject, "oil rate" (please refer to this letter), wherein I quoted a dispatch that I had received from Mr. Stubbs. I also stated in this letter that I would make up some sort of message to send to Mr. Stubbs in answer to his from Chicago, November 26. I do not think that I sent you a copy of the message referred to, which telegram was as follows:

"NOVEMBER 26, 1888.

"J. C. STUBBS,

"Care Grand Pacific Hotel, Chicago.

"To quote Pinafore, Hunt evidently got those babies, or rates, mixed up. Lines had better give 90 a trial. If later on there's possibility advancing, you know I am always willing. Whittier has large lot Clipper oil and it will be hard for us to meet this competition even if our rate is made 90."

As this freight rate question is now settled, and I want you to know just exactly what has passed between Mr. Stubbs and myself, I believe with the above dispatch you now have the full data up to date on this subject.

Yours truly,

E. A. TILFORD.

[Copy of Telegram.]

SAN FRANCISCO, December 11, 1888.

W. H. TILFORD, 26 Broadway, New York:

Assistant general freight agent Union Pacific railway just arrived here. He says practically rates from Chicago 99 per cent of New York rate. This answers your telegram, 4th. Lead rate will be January 1, \$1.06 from St. Louis; linseed 90 from Missouri river. We have stocks both sufficient to last next 4 months. ..

E. A. TILFORD.

This is since the interstate commerce act and shows that the roads allow the Standard Oil trust to stock

up on low rates without the general public knowing anything about it.

Q. (By Mr. Phillips.) How do you explain that, in view of the letters that were read by Mr. Archbold before this commission stating that there had not been discriminating rates given since the interstate commerce law went into effect? A. I do not believe those letters at all. My experience with railroad men has been such that I have a very low opinion of them.

HOW WERE THESE TELEGRAMS OBTAINED?

Q. (By Mr. Jenks.) Do you know where this paper secured copies of these telegrams? A. This Mr. Bissell came to the interstate commerce commission and also corresponded with me. Mr. Bissell wanted me to go with him to prosecute this matter before the interstate commerce commission, and I would not be surprised if the interstate commerce commission had got copies of all these.

Q. But you do not know where the paper itself secured the copies? A. At Chicago; that is a Chicago paper.

Q. Where did they get copies of these telegrams? A. I think they got them from Bissell himself.

Q. Who is Mr. Bissell, and how did he get them? A. He is one of the officers of this railroad; W. A. Bissell, St. Louis. He was general freight agent of the Atlantic and Pacific railroad, one of the through lines. I think Bissell was discharged, and it strikes me he became an employe of the Standard Oil Company afterwards; that is my impression. I am not positive about that, but he was the man that exposed all this.

Q. Of course these telegrams are of a private character between officials of the Standard Oil Company, and it is quite singular that they should fall into the hands of Mr. Bissell. A. Mr. Bissell was discharged, either discharged from the railroad or the Standard Oil Company, or he left them; that is the way they got out.

Q. So you think there is no question at all as to the trustworthiness of these? A. No question, not at all; and I would not be surprised if the copies of these were with the interstate commerce commission, because I know he corresponded with them.

"COMMISSIONS" ON FREIGHT.

Now, they have got up a new phrase; that is, comparatively new; within five or ten years, maybe, but since the general rebate exposures came out. They have adopted the new phrase, "commission," a per cent off. The railroads say they can pay whatever commission they please; that is, they can pay 10, 25 or 50 per cent on a shipment, you know, and then go on the stand and say they are not paying rebates. They have adopted that name "commission" instead of rebate; a new order of things, that is all, to whip the devil around the stump.

Q. (By Senator Kyle.) Paying commissions for freight? A. Yes; for instance; if you are shipping \$50,000 or \$100,000 worth of goods in a certain length

of time they will take off 50 or 75 per cent instead of making a rebate.

Q. Paid as a bonus to get trade? A. Yes. Here is the point: These large shippers send an agent to a railroad and say to them, "Now, I think I can get that man's business, amounting to so much, provided you can pay him a certain commission." Well, "How much do you want?" That is finally arranged about the per cent; it is done through this intermediary, maybe, although I do not know that the Standard Oil trust has to do anything of that kind. I think they go direct to the headquarters of the road and make their own commission. Their own men are officers and trustees and fix all that easy enough.

Q. (By Mr. Clarke.) Have you any correspondence or documents of any kind to prove that use of the word "commission?" A. No; I do not know that I have. I have not any at hand here.

Q. How do you know, then, that is their present method? A. I know that from general information that I have had on the subject.

Q. (By Mr. Smyth.) Have you ever asked for a commission? A. No, sir.

Q. It has never been refused you? A. I have never asked for it, and of course it has never been refused.

Q. Do you suppose it would be refused? A. Why, certainly. They would say at once, we are not giving rebates, are not giving any discriminations or giving commission to anybody.

Q. Do you think that is done in other lines of business than the oil business? A. Oh, yes; only I think the discriminations in the oil business are much greater. I think that almost all these trusts and combinations are formed upon these lines; and then they go to a railroad and say: "We have got so much freight to carry. What will you take it for? and if you do not want it we will give it to some other railroad." They will fix up a rate and say, "We will give you so much freight within a certain length of time." These large shippers figure all these things out. They know just what a road can take freight for and make a small margin.

Q. You have no proof of that? A. No; I have no proof of that.

Q. But you think it is so? A. I do. I should say with all these gross freight discriminations that I have exposed here they would do almost anything to accomplish their end, when it is right against the law. It is \$5,000 fine and two years in the penitentiary for each and every offense of freight discrimination, but what does it amount to? It does not amount to anything. It doesn't deter any of these men from freight discrimination, not a bit.

Q. Do you mean us to understand that it is owing to the hostility of the Standard Oil Company to you personally that these commissions are not granted to you? Do you think they are granted in other lines of business? A. Oh, yes; certainly they are; and the letters of Receivers Cowen and Murray are the best evidence I know of. They themselves say and admit in that letter to the commission that they themselves are criminally violating the interstate commerce law, and after January, 1899, "we are going to observe

tariff rates"; and they say further, "If we find any of our neighbors violating the law we will complain to you and we hope you will use your best efforts to compel them to come to time." They write a letter and admit that they are criminally violating the law, and they are the receivers of a railroad under protection of the United States court. My idea of it is that they thought that the other roads were giving a bigger commission and better rebates than they, and they were not getting their share, and they just thought they would come out and expose them.

Q. Your complaint is that they would not give you any? A. My complaint is against freight discrimination; that the small shipper can not do any business today because of rebates and freight discriminations. It is the greatest evil of the day and it is in gross violation of the law. We have plenty of laws but they are not executed; one man stops the whole business. The Federal anti-trust act has all the elements in it to protect the people, but it is not enforced. It is not worth that [snapping his fingers].

THE ATTORNEY GENERAL SAID NOT TO ENFORCE THE LAW.

Q. (By Representative Livingston.) Please explain why the anti-trust act is not executed. A. Because the attorney general does not enforce it as he ought to enforce it.

Q. Can it not be enforced in the states independent of the attorney general? A. No. The act says that it must be done through the attorney general of the United States and his deputies. You know he has about 75 deputies under him. I will just read section 4:

"Sec. 4. The several circuit courts of the United States are hereby invested with jurisdiction to prevent and restrain violations of this act; and it shall be the duty of the several district attorneys of the United States, in their respective districts, under the direction of the attorney general, to institute proceedings in equity to prevent and restrain such violations. Such proceedings may be by way of petition setting forth the case and praying that such violation shall be enjoined or otherwise prohibited. When the parties complained of shall have been duly notified of such petition, the court shall proceed, as soon as may be, to the hearing of the case; and pending such petition and before final decree, the court may at any time make such temporary restraining order or prohibition as shall be deemed just in the premises."

Q. Has there been any effort made in your state to enforce that by any one of those solicitors? A. I do not know. I have had correspondence with the attorney general of the United States myself in regard to proceedings against the Standard Oil trust, but he doesn't act. I wrote him a year ago.

Q. Have you that correspondence? A. No; I haven't it with me; but that is the great trouble with the whole business. If this anti-trust act which was passed had been immediately enforced, I do not think there would have been this epidemic of trusts we have today, because they can enjoin and prohibit and confiscate their goods. I will just read that part of it:

"Sec. 6. Any property owned under any contract or by any combination or pursuant to any conspiracy (and being the subject thereof) mentioned in section 1 of this act, and being in the course of transportation from one state to another or to a foreign country, shall be forfeited to the United States and may be seized and condemned by like proceedings as those provided by law for the forfeiture, seizure and condemnation of property imported into the United States contrary to law."

They can enjoin. Suppose all these 75 attorneys were under orders from the attorney general of the United States to proceed against every one, it would make a great difference. But of course it would not amount to anything unless you get some of them in state prison—fines with them dont amount to anything.

Q. (By Mr. Jenks.) Do I understand you to say that in your correspondence with the attorney general, the attorney general declined to enforce the law? A. He made excuses from one thing to another; that he hadn't the time to look into it, and the assistant attorney general had gone to Europe and hadn't got back. Senator Kyle. I think it would be better to have a copy of the correspondence furnished, if you can furnish it, inasmuch as an implication has been made that he in a sense has put you off.

Q. (By Mr. Jenks.) Will you be kind enough to furnish the commission a copy of the correspondence with the attorney general? A. Yes, I can.

Mr. Jenks. If you please.

THE INTERSTATE COMMERCE COMMISSION DOES NOT DECIDE.

Q. (By Representative Livingston.) You said a while ago that discriminations on this trans-continental line were prevalent and constant. Have you made any effort with the interstate commerce commission to have that stopped? A. I have in a few of my own cases here. Eight or 10 years ago I made complaint—and the cases have all been held up and have been decided, partially decided—and they do not amount to anything. I have brought suits against the trans-continental lines, with notifications to 150 lines that they should appear and answer; and I proved all these gross freight discriminations, and I believe they are going on just as much today as ever.

Q. What does the interstate commerce commission say about it? A. They do not decide my cases; they do not decide this gross freight discrimination.

Q. Do they give you any reason why they do not decide them? Have you any correspondence here that will show that? Yes, here is the decision of this case.

Q. (By Mr. Phillips.) When was that decision rendered? A. April 9, 1892. They were brought in March, 1889, and April 26, 1889. They did not decide them until April, 1892, and then they only partially decided them, and left them all for additional evidence.

Q. (By Representative Livingston.) Additional evidence on which side? A. And of course it so disgusted me that I would not have anything more to do

with it; I would not take any more evidence. I had spent a lot of money, and I had a first class lawyer, one of the finest in the United States, and a railroad man, to see to the cases, and proved all that I charged, and then they hung them up.

CONDITION OF INDEPENDENT REFINERS.

Q. (By Mr. Smyth.) You are a producer of oil as well as a refiner? A. No, I have not refined oil since May, 1896.

Q. Does this persecution on the part of the Standard Oil Company apply to your business as a producer of oil? A. No, I do not suppose it does, because I get the same price per barrel as anybody else.

Q. They buy your crude oil? A. Yes.

Q. It is only your business as a refiner? A. Yes.

Q. Have you been forced to discontinue your business of refining? A. Yes, I have been forced to discontinue refining owing to freight discrimination.

Q. And your refinery is idle? A. Yes, idle and rotting down. I have not run it since 1896. It is useless for anybody to try to build a new refinery against these odds. That would be suicidal. Even if I had \$1,000,000 or \$5,000,000, I would not "buck" against them.

Q. (By Representative Livingston.) Did they offer to buy your refinery? A. At one time we had some negotiations, but not latterly.

Q. Why did not you sell to them? A. Well, they did not want to pay me what I thought it was worth, and I did not sell to them.

Q. You either had to take what they offered or quit? A. Yes; and since that time they have been charging me as a blackmailer because I did not take what they thought it was worth.

Q. (By Mr. Smyth.) But there is no obstacle in your way as a producer of oil? A. No.

Q. (By Mr. Kennedy.) Are there any refineries in Ohio independent of the Standard Oil Company? A. Yes; Scofield, Shurmer & Teagle have one at Cleveland.

Q. Do they refine the Lima oil? A. I do not know that; I am not sure about that.

Q. Do you know whether they are doing business at a profit or not? A. No; I do not.

Q. How long have they been in business? A. They have been in business a good many years; I do not know whether they were doing it at a profit, but on general principles I think there is hardly any refinery making money.

Q. They have a large refinery? A. Yes; a pretty good size.

GOVERNMENT OWNERSHIP OF RAILROADS THE ONLY REMEDY FOR FREIGHT DISCRIMINATION.

Q. (By Representative Livingston.) What is your opinion and the opinion of others similarly situated with yourself as to the real reason why these things are not attended to? You seem to think the authority is broad enough. A. Yes; I do. The whole trouble

is because the officials whose duty it is to execute the law don't do it.

Q. Why do they not do it? A. That is what the matter is—why don't they do it? That I can not answer.

Q. Is it political, pecuniary, or what is the trouble? A. I think the trusts and combinations have their powerful influences.

Q. Do you mean in a pecuniary or political way, or both? A. I think they have it politically.

Q. (By Mr. Farquhar.) Do you not think there is a remedy in the Sherman anti-trust act for all of these troubles that have come upon you? A. Yes; certainly I do.

Q. You think the law is sufficient? A. Certainly. All the trusts and combinations could have been destroyed if the Sherman act had been executed in its earlier days.

Q. (By Mr. A. L. Harris.) You know the Knight case was decided many years ago? A. That was before the Sherman act.

Q. (By Representative Livingston.) Do you mean to say that you have no new suggestions or recommendations to give to the commission by which we can amend that law or bring into life a new law by which these trusts and combinations can be controlled? A. I do not think any amendment to any law that you have got will do any good; I believe in government ownership of railroads. I do not believe there is any other way that you can get out of that trouble. We have had 12 years' trial of the interstate commerce act and nine years of the Federal anti-trust act, and have not reached it.

Q. (By Mr. Phillips.) Provided the government did own the railroads and there was absolutely no discrimination in freights, could you refine and market oil in this country? A. I think I could, but I can not do it now. Of course I could not do it so well as I could before this epidemic of combinations came on several years ago, before these mammoth combinations got up. Now they come in and cut prices right where you sell and freeze you out.

Q. If I understand you, any large combination can follow up the small operator and get the markets? A. Yes.

Q. And absolutely destroy him? A. Yes.

Q. If there was absolutely no discrimination? A. Yes, they could do even that without any discrimination and do it by these ill gotten gains that they have secured in the past.

ONLY DIRECT LEGAL ACTION CAN DESTROY THE COMBINATIONS.

Q. (By Representative Livingston.) Then ownership of railroads would do no good unless the other remedy came with it? A. What?

Q. The destruction of the combinations? A. Yes, that would help, you know, to destroy them. Of course, I do not see any other way of destroying these combinations, excepting that the attorneys general of the various states forfeit their charters.

Q. (By Mr. Clarke.) Do we have any power against

combinations of foreign countries? A. I do not know why we do not.

Q. Would you repeal the protective tariff? A. I would repeal the protective tariff wherever it affects any trust or combination.

Q. Well, suppose a trust or combination was formed in a foreign country upon some article or line of merchandise that gives them an opportunity to operate against similar productions in this country as strongly as any combination does here. Wouldn't you need a protective tariff to protect you against that? A. I believe in a protective tariff to a certain extent, to the protection of home industries.

Q. (By Representative Livingston.) Provided it is an individual industry? A. Yes, I say to protect the individual more than the trusts. The trouble is that the trusts and combinations are getting all the protection, and the people and smaller fellows do not seem to get it.

(Reading:) "The Chicago, Rock Island and Pacific railway, in which two trustees of the Standard Oil trust, Henry M. Flagler and Benjamin Brewster, were directors, issued on June 13, 1891, a 'special tariff,' including all connecting lines, in which petroleum and its products from Whiting, Ind., are made at Chicago rates as follows:

"Current Chicago rates as published in various issues of this company."

(No doubt practically in effect today without a published tariff.)

"The Standard Oil trust have at Whiting, Ind., suburb of Chicago, on the Lake Shore, the largest petroleum refining plant in the world.

"FREIGHT DISCRIMINATION OF 110 PER CENT IN 1897, IN FAVOR OF THE STANDARD OIL TRUST."

Now, here is something in 1897; that is pretty late discrimination. Mr. Archbold says you have not had any since 1887. This is up to 1897.

(Reading:) "In 1897 the New York, New Haven and Hartford Railroad Company, in which William Rockefeller is a director, discriminated in freight rates in favor of the Standard Oil trust to the extent of 110 per cent, by which two cars of naphtha, containing car loads for one, applicable to all Standard shipments, this being accidentally discovered."

Q. (By Mr. Jenks.) Where was that proved? A. Why, it was before the interstate commerce commission, and I have got here letters from Mr. Coburn in regard to it, the Liberty Oil Company.

Q. What did the interstate commerce commission decide? A. They have not made any decision yet. I have extracts of the testimony—I do not know but I had better read them—published in the Springfield Republican of March 13, 1898, of different officers of the railroad in regard to it.

Q. Perhaps you had better file this with us so that we will have it on file here? A. I will read a letter here.

Q. You might read the letter and we will take references to the interstate commerce hearing? A. This

is a letter from the Liberty Oil Company, which refers to some of the matters.

(Reading:)

"CHELSEA, MASS., December 15, 1897.

"MR. GEORGE RICE, *Astor House, New York, N. Y.*

"Dear Sir: Your esteemed favor of the 14th instant at hand, and your kind feeling toward us in our fight with the Standard Oil Company we certainly appreciate. We are still having a very hard fight with the Standard Oil people here in our tank wagon business, but up to the present time we 'hold the fort.'"

But I was going to say right here that I have seen the original waybills of these: Mr. Marchand of the interstate commerce commission showed me the original waybills showing this.

Q. (By Senator Kyle.) The ones referred to in this case? A. Yes.

(Reading:)

"In regard to the underbilling of Standard Oil Company freight, the paid freight bill of which we hold, will say for your personal use that the whole matter with all papers is now in the hands of Mr. Marchand, agent of the interstate commerce commission, who leaves here today for Washington, and everything looks fair now that we shall be able to procure a criminal indictment against the Standard Oil Company in this case. Both Mr. Prouty and Mr. Marchand of the commission feel confident that they have a sure case, and we shall push it for all it is worth.

"When anything new occurs in this matter I will, both at your own request and at the request of Mr. H. D. Lloyd, keep you posted.

"Thanking you for the interest you have manifested in our welfare, we are,

"Most respectfully yours,

"LIBERTY OIL COMPANY.
"C. M. COBURN, *Manager.*"

(Reading:) "This is a fine expose of what legalized pooling would mean, for this road was a member of the joint tariff association, which comprised all railroad lines east of Chicago—strongest railroad pool ever organized—by which they dictated the rate terms to all lines west of Chicago on which they would be permitted to their traffic to the seaboard.

"Another fine feature about this pool was that they excluded petroleum from the regular classified rate making power and made it subject to special contract.

"On December 14, 1882, the Produce Exchange of New York established, by resolution, and not changed, a gravity weight in the sale of refined oils of 44 degrees which actually weighs 6.4 pounds per gallon, by which the refined oils of the Standard Oil trust are now carried free, to the extent of 4.68 per cent, through under weight."

Q. That applies also to the oil of all their competitors? A. Why, certainly; of course it does; but their having a large amount more makes it greatly to their advantage, and on their lubricating oils, that are carried at $\frac{63}{4}$, it is 15 per cent.

Q. (By Mr. Smyth.) That statement that you make at the top of the page about the two cars of naphtha—

was it proved that that was the custom? Was there more than one case or was only one case proved? A. They would not be apt to prove more than one case. That was the only case that came up. There was not, as I understand, any further proof of any other cases. There would not be; this only got out accidentally, you know. You never can find out anything of this kind except it comes out accidentally. It is fair to presume that all their shipments over this line were on this same basis. No question about that whatever.

Q. (By Mr. Jenks.) Do you know what defense they put in? A. Mr. Howard Page, the agent of the Standard Oil Company, went over to Boston and said that it was a clerical error, and it was corrected. They would do that. Of course, they are very nice men and they would probably do that every time. They probably carried a thousand cars there that same way.

(Reading:) "This also applies to paraffin and lubricating oils, fuel oil and residuum, which are carried at 17 per cent less than actual weight. The Standard Oil trust own over 8,000 tank cars, which are paid for every three years, through the allowed mileage rate of three-quarters of a cent a mile each way, another form of freight discrimination, for the railroads pay them three-quarters of a cent a mile to haul back a dead weight empty tank car that is not applicable to general freight like a box car.

Just think of that.

Q. (By Mr. Farquhar.) That applies to all owners of tank cars? A. Yes; but they have got most of the tank cars.

Q. Does it not also apply to the private cars of meat companies? A. Why, yes, of course; it applies to all. But a box car can bring back other freight.

(Reading:) "Receivers Cowen and Murray, of the Baltimore and Ohio Railroad Company, on December 20, 1898, admit that within the territory north of the Ohio river and east of the Mississippi secret rates, drawbacks, rebates and other devices were then in vogue."

If you would like to have it I will read it.

Q. (By Mr. Farquhar.) We have had this fully in the testimony by Mr. Cowen himself. He explains his own letter in the transportation part of it. A. I would like to call your attention to a very important thing.

(Reading:) "Section 6 of the interstate commerce act provides that all original tariff sheets 'shall also state separately the terminal charges and any rules or regulations which in any wise change, affect or determine any part or the aggregate of such aforesaid rates and fares and charges.'"

Now, let us see about that.

(Reading:) "The railroads in gross violation of this section issue and file with the commission general tariff sheets for public use, and then sidetrack these by the issuance of innumerable supplements, special oil tariffs, special circulars, commodity rates, etc., that are often and indiscriminately filed as a substitute to change, cancel and amend the original tariffs, and to such an extent is this done that in reality there is no head or tail left of it—very little of the body—but it stands inviolate for public use.

Now, that is one of the grossest misuses, you know, of the interstate commerce commission by the railroads. Here they come and file a general tariff and the act says here that the general tariff shall state everything that affects the rates, and they do not pay any attention to that and the interstate commerce commission do not enforce it. And why do they not enforce it, I should like to know?

Q. (By Mr. Kennedy.) Do they not say themselves that they have no power to enforce it? A. No power to do that? It is very queer. They can enforce that, I think. I think it is a very flimsy excuse about this no power.

Q. Have not the interstate commerce commission year after year asked to have their power enlarged so that they could enforce their findings? A. Oh, yes. I have understood that, but they have plenty of power to do a good deal more than they do, and they don't do it. I say that is one thing. I say here (reading):

"The query is, why is it that for 12 years the interstate commerce commission have neglected their duty and not corrected this gross evasion of the law, and allowed such special tariffs to be filed, and why is it that all general tariffs omit this wise provision of the law, and why is it that railroads do not comply with the law in any of its essentials, nor are forced thereto?"

What is the reason they don't do it? Because we have not got any kind of a country here that enforces its laws.

(Reading:) "Charles Francis Adams, president of the Union Pacific railroad, had this to say, December 15, 1888, before the Commercial Club of Boston:

"The dishonest methods of rate cutting, the secret system of rebates, the indirect and hidden payments made to influence the course of traffic resorted to or devised during the last two years and I do not hesitate to say are unprecedented in the whole bad record of the past."

"The above charges included eight months' experience of the interstate commerce act, which was, and is today utterly ignored with no effect on lawless railroad freebooters.

"In 1894 an expert accountant discovered that \$7,000,000 in rebates had been paid by the Atchison, Topeka and Santa Fe Railroad Company, of which no doubt the Standard Oil Company got the lion's share.

"These discriminations are not now confined to oil, but extend to and cover nine-tenths of the commerce of the country, meat and manufactured products, as well as the products of the soil and mines, which articles today are controlled by the great trusts and combines, and this control has been secured only through unlawful rebates. These combinations having thus obtained the absolute control of the railroads, turn about and dictate the rates of freight these railroads shall charge, and thus dictate what their competitors shall pay.

"I am reliably informed that there is not a railroad leading out of Chicago but has a representative buyer that purchases all the grain shipped over its lines. On this grain 10 to 15 cents a bushel rebate is paid to the

buyer, who divides the same with the railroad officials, all of which comes out of the farmer.

"The state exercises its rights of eminent domain to give the right of way to the railroads; the people thus part with their property to these corporations on the faith that they will exercise the franchises thus granted honestly and with an equal hand.

"It is a burning shame that these rights and franchises, the gift of the state, should be administered by railroad magnates to the impoverishment and slavery of the people.

"Free and open transportation and untrammelled opportunities of doing business and virtually closed and sealed.

"The farmer complains of extortion, but is blinded by the secrecy with which it is planned.

"The amount of these fraudulent rebates would pay the interest on the homestead mortgage, earn him a living and make his life contented and happy.

"These discriminations in rates and fraudulent rebates of freight to favored combinations and officials are the crying evil of the day.

"Our laws are overridden, our courts are condemned and our whole social structure is debauched.

Q. (By Mr. Jenks.) You have already explained to us the rest? A. I will put in the following as an exhibit:

"THE INTERSTATE COMMERCE ACT PROVIDES A PENALTY ON CARRIERS AND SHIPPERS, OF \$5,000 FINE AND TWO YEARS IN THE PENITENTIARY, FOR EACH AND EVERY OFFENSE, BUT IT HAS NO DETERRENT EFFECT TO STOP REBATES.

"The interstate commerce act provided a penalty on carrier officials, and by amendment, on the shippers, of \$5,000 fine and two years in the penitentiary for each and every offense, and with such stringent measures no deterrent effect is had on rail or trust officials. The same old unbroken line of freight discriminations for 27 years in the form of secret rates, drawbacks, rebates and other devices have continued to exist up to date without a break, and for the reason that not a violator of the act has yet been sent to the penitentiary to atone for his misdeeds.

"IT IS QUITE EVIDENT FROM THE FOLLOWING FACTS THAT THE STANDARD OIL TRUST HAS ONLY MADE CRUDE PETROLEUM CHEAP TO THE PRODUCER WHILE IT MAKES THE PRODUCTS THEREOF IN COMPARISON HIGH PRICED TO THE CONSUMER.

"It is ridiculously absurd to say that the Standard Oil trust has made oil cheap, and all that is necessary to refute such false assertions is to refer to a pamphlet issued by Solicitor Dodd in 1888, in which he broadly asserts that over production was the cause of making crude petroleum cheap, but in subsequent speeches he couples the products thereof with it.

"Petroleum products are as much higher than they should be as the overcharges of freight discrimination this monopoly receives; for all freights are purposely advanced and made that much higher in order that

greater discriminations may follow, which the consumer is forced to pay in higher priced oil. Today, and for many years back, this monopoly has charged producers of oil in the oil producing regions 20 cents a barrel for local pipage not costing five cents, or four times more than it costs, and when crude oil sells at 50 cents a barrel this charge is 40 per cent of its market value. This is the how of it that this monopoly makes crude oil so cheap to the producer. The Standard Oil trust admits cost of local pipage of five cents a barrel. (B. 102.)

"Today and for many years back, in conspiracy with the railroads, it has charged the same pipage rates to the seaboard as the railroads charge, and today this conspiracy charge is 10 times more than the pipage cost—that is to say, the present rail rate from the oil regions to the seaboard is 16½ cents per 100 pounds, and on 320 pounds in bulk to the barrel equals 52.8 cents per barrel, while the pipage does not cost to exceed five cents a barrel—and this is another way this monopoly has of making crude oil cheap to the producer and high to the consumer.

"Mr. F. B. Thurber seems to be an outside champion for this monopoly, and says it has made oil cheap, because in 1871 the average price of refined oil for export was 25.7 cents per gallon, while in 1898 it only averaged 5.7 cents per gallon, and gives the following reasons thereof:

"This great decline in the price of oil is attributed partly to the increase in production, but more largely to improvements in manufacture and transportation, which were only attainable through the aggregation of capital in this industry."

This man has no experience whatever in the oil business, but he is the champion of the Standard Oil trust. They put him forward here as an outside man.

Q. (By Mr. Clarke.) Do you dispute his statement that it was only attainable through the aggregation of capital in this industry? A. Yes; I do dispute it.

(Reading:) "Why is it that Mr. Thurber does not enlighten us and give the reason why refined oil for export was reduced 35 cents a gallon, or \$17.50 per barrel, from 61½ cents, average price in 1861, to 26½ cents, average in 1870? I presume his reasoning would be that the Almighty did that, while the Standard Oil monopoly engineered all the balance without His aid or assistance.

"Why is it that eastern home dealers and consumers of refined oil, just previous to the entering of home competition at the seaboard, April, 1896, had to pay more than twice as much for their oil as foreign consumers for export? The price per gallon in bulk to retail dealers was 9½ cents a gallon, and for export 4½ cents a gallon, with crude oil \$1.20 per barrel, and this is how the Standard Oil is made so cheap.

"Why is it that Mr. Thurber does not enlighten this committee and give the reason why in 1892 refined oils were selling in several of the states, like Texas, Utah and Idaho, at four times the price of export oil for foreign consumption? In Wyoming and Nebraska it was three times as much, and in Arkansas, Alabama, Florida, Georgia, Mississippi, Missouri, North Da-

kota, South Carolina, South Dakota, Tennessee and Washington double the export price."

This is all fully explained, gentlemen, in my exhibits here, B. 171, etc.; and my own experience in finding out all over the United States, by sending out special circulars in 1892, shows those facts to be absolute and the details are in my exhibits full and complete.

(Reading:) "The Pennsylvania Railroad Company up to August 28, 1888, carried same number of gallons of refined oil in a barrel (including the package) at same price as bulk oil in tank cars to offset the return dead weight of the return tank car, when by the power of the Standard Oil trust and under the interstate commerce act 25 per cent more freight has been charged since that time. The rate of freight in 1887 was 52 cents a barrel, or 13 cents per 100 pounds. Today it is 16½ cents or 27 per cent higher.

"Today it costs 25 per cent more to ship the same number of gallons of oil in a barrel than it does by bulk in a tank car, because the railroads will not furnish the tank cars in which to ship it. The competitive independent refiner who can not afford to purchase tank cars is subject to the very important discrimination and can not compete, and he can not help himself. This is the how of it that the Standard Oil monopoly makes oil so cheap to the consumer. In the case of export it had to sell its oils at a fair living price, owing to Russian competition, while to general consumers in America, for want of competition, it charges fabulous prices, double, treble, and four times as much owing wholly to the power of this monopoly to dictate to the railroads the high tariff rates their competitors must pay, while their own goods are carried at nominal figures through the grossest of the gross rebates or freight discriminations. The absurdity of Thurber's reasoning may be further illustrated when I state that the cost of refining petroleum from 1871 to 1880 did not exceed one cent a gallon, and from 1880 to 1890 not over half a cent, and from 1890 to the present time it has not cost this monopoly to exceed one-quarter of a cent a gallon, and to the average independent refiner about one-eighth more, so that improvements in manufacture cut no figure, while the monopolistic and most extraordinary charges for pipe transportation could only be maintained through the power of the railroads. Mr. Thurber would manifestly have been more correct if he had stated that the price of petroleum products had been greatly advanced by the standard Oil monopoly through the methods stated by me, and that its unlawful aggregation of capital, so necessary to the business, was thus acquired. Mr. Thurber on November 24, 1882, testified before a legislative committee of New York as follows:

"The Standard Oil Company is an example. Here is a corporation which, according to testimony recently given in Pennsylvania, began in 1872 with \$1,000,000, which was subsequently increased to \$3,500,000, and on this latter capitalization is paid dividends in 1880 amounting to \$10,321,812, and it practically controls and fixes the value to the consumer on a staple ranking third in the list of our nation's exports."

This is only on one corporation.

(Reading:) "Through its speculative manipulation it has within a few weeks more than doubled the price of crude oil; and its profits thereby are variously estimated from \$20,000,000 to \$40,000,000.

COST OF REFINED OIL FREIGHT PAID, $2\frac{3}{4}$ CENTS.

"The market price of crude oil for the past 10 years—1889 to 1898 inclusive—has only averaged $1\frac{3}{4}$ cents a gallon, while the local pipage does not cost to exceed five cents a barrel, or one-eighth of a cent a gallon. It does not cost to exceed this amount to pipe same to the seaboard, or an eighth of a cent a gallon more. It can be refined for one-quarter of a cent a gallon, making a total average cost of $2\frac{3}{4}$ cents per gallon for the past 10 years of refined oil at the seaboard, which is also applicable to interior refineries, to which, if we add one-half cent a gallon as a fair average freight paid by the Standard Oil trust, makes the cost $2\frac{3}{4}$ cents a gallon, delivered to all interior cities and towns; so that one can form some conception when he buys oil of the immense percentage of profits thus to accrue, which can be turned over every 60 days, and conclusively how philanthropic this trust is in comparison with the prices the consumer is forced to pay. The process of refining oil is very simple, easy as making steam, similar distillation.

"Another method the Standard Oil trust has of making illuminating oils cheap to the consumer is that where they have no regular established agency they give a secret rebate to certain private dealers who have been selling competitive oils, ranging from 25 to \$1.50 per barrel, according to the opposing strength of the opponent, to thereafter maintain the regular established card list price, made by the trust.

"THE STANDARD OIL TRUST RECEIVES 72 PER CENT ADDITIONAL PROFITS IN THE SALE OF PETROLEUM PRODUCTS, MANUFACTURED FROM LIMA CRUDE THAN FROM THOSE OF THE BEST GRADE CRUDE.

"On September 15, 1895, the produce exchange of New York, through the power of the Standard Oil trust, passed a resolution making the manufactured products from inferior Lima crude petroleum, known as sulphur oil, a good delivery, on a parity with the manufactured products from best grade crude. The average annual market price of this inferior grade crude for past five years—1894 to 1898, inclusive—was 59 cents per barrel as against $\$1.01\frac{1}{2}$ for the best grade, or the latter 75 per cent higher. Thus it is that the Standard Oil trust received 72 per cent more profit in the sale of manufactured Lima crude products than from those of the higher priced crude, which could not be done except through the power of this monopoly to enforce and exact equal price for both classes of goods, and this is another instance of this great trust making petroleum products from inferior crude so cheap to the consumer. For the past five years—1894 to 1898, inclusive—the total production of petroleum was 279,129,467 barrels, of which Ohio produced 85,306,684 barrels and Indiana 20,608,793 of

this inferior grade of crude petroleum, or 38 per cent.

"The last government report for 1898 has this to say about this inferior grade of crude:

"The product is characterized by the presence of sulphur compounds, which make it of less value for refining purposes than the eastern Pennsylvania product."

"The refined product from this poor grade crude is adulterated with the products made from the best grade crude, and the results are easily seen by a white film on the lamp chimney that obstructs the light, requires constant attention to turn up the wick to get more light, smokes the lamp, and has an offensive smell. In view of Archbold's laudatory remarks on this particular oil it will be quite refreshing to refer to a caution circular, issued in 1890 by one of the trust corporations denouncing said oil. (B. 166.)"

This is a very interesting circular giving what they think about that oil (B. 166). It tells what the Standard thought of these oils.

Q. (By Mr. Farquhar.) Have they not, under two new processes, eliminated the sulphur and a great many other various ingredients from the Lima oil? A. Partially; but the product from the Lima oil is not near as good as the other oil.

Q. But there has been a great improvement since 1890, since they issued this circular? A. Oh, yes, there has been a great improvement. They have improved the manufacture of it to some extent. I will put it in as an exhibit to show violations of the interstate commerce law.

(Reading:)

"NONCOMPLIANCE AND NONENFORCEMENT OF THE INTERSTATE COMMERCE ACT PRODUCES GROSS DISCRIMINATING FREIGHT RATES, AS TO PERSONS AND PLACES, AND TO THE EXTENT OF 211 PER CENT IN VIOLATION OF SECTIONS 3 AND 4 OF THE ACT.

"The commission constantly receives and places on file without protest thousands of rate tariff sheets that plainly and unequivocally show upon their face gross violations of that all-important section of the act, the fourth section, which says that it shall be unlawful for any common carrier to charge or receive more for a short than a long haul over the same line in the same direction. Today there exists 211 per cent more traffic rate charge on the short intermediate haul over the long haul, as the following figures will show, from statements made to me by the secretary of the commission, July, September, and October, 1899.

"On the shipments of petroleum and its products in car lots over the transcontinental lines, comprising 21 lines of railroad, as merged into that unlawful and changed combination now known as the 'Transcontinental Freight Bureau,' the following two railroads in the pool are cited as samples of the gross violations of the interstate commerce act as they exist today by this association of railways: Chicago to San Francisco, 2,357 miles, via Union Pacific, the present tariff rate is $78\frac{1}{2}$ cents per hundred weight, while the highest intermediate rate to Humboldt, Nev., 1,982 miles, is \$1.75 per hundred weight, or 122 overcharge for 325

miles less haul, with a proportionate overcharge on 84 per cent of the total shipments. Ten years ago the intermediate rate overcharge was 56 per cent, now double. From Chicago to San Francisco, via Atchison, Topeka and Santa Fe, 2,652 miles, present tariff rate is 87½ cents per hundred weight, while the highest intermediate rate to Bagdad, 2,017 miles, is also \$1.75 per hundred weight, or 122 per cent overcharge for 635 miles less haul, with a proportionate overcharge on 76 per cent of total shipments. Ten years ago the intermediate overcharge was 116 per cent. Present fifth-class commodity rates, via transcontinental lines, Chicago to San Francisco, is \$1.65 per hundred weight, the highest intermediate rate is \$1.85, or only 12 per cent overcharge. Petroleum products belong to fifth-class, but made special. The Standard Oil Trust has at Whiting, Ind., on the lake shore, suburb of Chicago, the largest refining plant in the world, which is connected by Chicago's belt line with railways to all points in the United States. The southwestern lines, comprising the Southwestern Bureau, composed of 10 prominent lines of railway, combined with two prominent steamship lines—the New York and Texas Steamship Company and Cromwell Steamship Company—are engaged in an unlawful combination to fix rail and water rates, in violation of the Federal anti-trust act, while they grossly violate the interstate commerce act as to persons and places, and to this extent as samples: From St. Louis to Galveston, Tex., 870 miles, via St. Louis, Iron Mountain and Southern Railway, present tariff rate is 33½ cents per hundred weight, while the highest intermediate rate to Aldine, Tex., 807 miles, is 55 cents per hundred weight, or 64 per cent overcharge for 63 miles less haul, with a proportionate overcharge on 92 per cent of total shipments. From St. Louis to Fort Scott, 338 miles, via the Missouri, Kansas and Texas, owned by Standard officials, of which John D. and William Rockefeller and Joel F. Freeman, former treasurer of the Standard Oil Trust, are directors, present tariff rate is 22½ cents per hundred weight, while to Parsons, 49 miles farther, it is raised to 30, or 36 per cent higher; continues same to Wagoner, 101 miles farther. At South McAllister, 78 miles from Wagoner, the rate is raised to 55, or 80 per cent more. This rate continues to Atoka, 44 miles from South McAllister, while at Coalgate, 43 miles from Atoka, the rate is again raised to 60, or 9 per cent more, while to Denison, 8 miles from Atoka, it is reduced 8 per cent, or to 55, which rate is maintained to Letitia, 1,088 miles, while the rate to Houston, 1,105 miles, is 33½ cents, or 64 per cent overcharge for 17 miles less haul, with a proportionate overcharge on 98 per cent of total shipments.

“THE LONG AND SHORT HAUL CLAUSE OF THE ACT NOT VIOLATED IN THE SHIPMENT OF GENERAL COMMODITIES IN FIVE DIFFERENT CLASSES.

“It is a very significant fact to note that in the transportation of general commodity goods in five different classes, St. Louis to Galveston, as promulgated by the pooled ‘Southwestern Bureau’ of ten prominent rail lines and two ocean steamship lines, there is no differ-

ence between the terminal and intermediate rates. This is in compliance with the law, while in the case of petroleum shipments the railroads adopt the flimsy excuse of water competition and grossly violate the act to the extent of 64 per cent.

“St. Louis to Mobile, by the Mobile and Ohio Railroad, distance 644 miles, present tariff rate is 35 cents per hundred weight, while the highest intermediate rate to Eight Mile Station, 636 miles, is 57 cents, or 63 per cent overcharge for 8 miles less haul, with a proportionate overcharge on 98 per cent of total shipments. From Memphis to New Orleans, via the Yazoo and Mississippi Valley Railroad, 445 miles, present tariff rate is 17 cents per hundred weight, while the highest intermediate rate to Norwood, La., 329 miles, is 33, or 94 per cent overcharge for 126 miles less haul, with a proportionate overcharge on 72 per cent of total shipments. From Cincinnati to New Orleans, by the Queen and Crescent route, 826 miles, present tariff rate is 22½ cents per hundred weight, while the highest intermediate rate to Poplarville, Miss., 756 miles, is 44½, or 97 per cent overcharge for 70 miles less haul, with a proportionate overcharge on 91 per cent of total shipments. These same rates have been continuous for the past ten years.

“From Cincinnati to Vicksburg, same line, 770 miles, present tariff rate is 22½ cents per hundred weight, as against an intermediate rate of 45½ to Brandon, Miss., 711 miles, or double—100 per cent more for 59 miles less haul, with a proportionate overcharge on 92 per cent of total shipments.

“From Louisville to Mobile, 670 miles, via Louisville and Nashville Railroad Company, present tariff rate is 18 cents per hundred weight, as against an intermediate class rate of 56 to Flomaton, 609 miles, or 211 per cent overcharge for 61 miles less haul, with a proportionate overcharge on 90 per cent of total shipments, with no change in rates since the partial decision of April, 1892, except in one instance, although directed by the commission to revise and correct these general overcharges. In 1889 the highest intermediate overcharge was 146 per cent, now 211, or 65 per cent higher.

“From Cairo to New Orleans, 550 miles, via Illinois Central, present tariff rate is 29 cents per 100 pounds, as against an intermediate rate of 41 to Mauchac, Miss., 513 miles, or 42 per cent overcharge for 37 miles less haul, with a proportionate overcharge on 93 per cent of total shipments.

“From Louisville to New Orleans, same line, 847 miles, present tariff rate is 18 cents per 100 pounds, as against an intermediate rate of 35 to Sauve, La., 842 miles, or 94 per cent overcharge on 5 miles less haul, with a proportionate overcharge on 99 per cent of total shipments.

“Louisville to Memphis, same line, 392 miles, present tariff rate is 12 cents per hundred weight, as against an intermediate rate of 34 to Lucy, 379 miles, or an overcharge of 183 per cent for 13 miles less haul, with a proportionate overcharge on 96 per cent of total shipments.

“It must be conceded that the lesser terminal rates must be paying ones or there would be no object in

the roads allowing such shipments. The Interstate Commerce Commission hold that established tariff rates must be remunerative. Thus it is that the inhabitants of regions through which these lines of railway run are forced by railway tariff exactions to pay 42 to 211 per cent more for the products they buy than they should pay.

"By prepayment of freight at the low-car terminal rate the Standard Oil Trust is allowed to stop off its cars at high-rate intermediate points and thus receive an advantage of 42 to 211 per cent over their competitors. It also has the extra privilege to divide up full-loaded tank cars into less than car lots that should have paid three times the terminal rate, although, as an owner of tank cars, I was denied this privilege.

"Common carriers, under section 4 of the act, are not allowed to violate the long and short haul clause of the act without permission from the commission. From December 17, 1895, to August 4, 1896, I made complaint to the commission that it was their duty, under section 12 of the act, to proceed against violators of section 4 of the act (long and short haul). They would not act, but said that I might. Knowing from the answer that my action would be futile, I did not act any further in the matter.

"The State exercises its right of eminent domain to give the right of way to the railroads. The people thus part with their property to these corporations on the faith that they shall exercise the franchise thus granted honestly and with equal hand.

"It is a burning shame that these rights and franchises, the gifts of the state, should be administered by railroad magnates to the impoverishment and slavery of the people.

"The United States Supreme Court, on March 30, 1896, Social Circle Case, fully upheld the statutes and decided that in this case railroads could not charge more for a short haul than for a long haul over the same line in the same direction. This decision has had no deterrent effect whatever on present railroad violators, as the evidence here plainly shows."

I will also put in here as an exhibit. (Reading:)

"CLEMENT A. GRISCOM, PRESIDENT OF THE NATIONAL TRANSIT COMPANY (A STANDARD TRUST), AND AS A DIRECTOR IN THE PENNSYLVANIA RAILROAD COMPANY, MAKES CONSPIRACY AGREEMENT FOR AND ON BEHALF OF ALL TRUNK LINES TO THE SEABOARD AND OF THE TIDE WATER PIPE COMPANY, SUPPOSED COMPETING PIPE LINE, FOR MAINTENANCE OF PIPE WITH RAIL RATES, TEN TIMES ABOVE PIPAGE COST EXISTING TODAY.

"On October 9, 1883, to take effect October 1, the National Transit Company, for and on behalf of the Standard Oil Trust, made an agreement with the Tide Water Pipe Company by which it allowed them 11½ per cent of the total pipe line transportation of petroleum to the seaboard. It also guaranteed them \$500,000 per annum profits for 15 years, or \$7,500,000. Within three months after contract was made refined oils advanced 87½ cents per barrel, crude oil 1¾ cents. This contract gave these pipe lines 74 cents a barrel

advantage over rail rates, but what followed? On August 22, 1884, the Pennsylvania Railroad Company, for and on behalf of the National Transit Company and as representing the Tide Water Pipe Company, entered into a conspiracy agreement with all existing pipe lines to the seaboard for the maintenance of equal pipe line rates with rail rates in the transportation of petroleum and its products from the oil regions to the seaboard, which agreement is in practical effect today, with or without a contract, as rail and pipage rates are the same. The Standard Oil Trust ostensibly guaranteed 26 per cent of all such traffic to the sea, or, in the language of the agreement, 'all petroleum brought to the Atlantic seaboard by all existing carriers,' railroads and pipe lines combined, establishing much higher joint pipe and rail tariff rates than should be, a complete and perfect monopoly 'in restraint of trade' of all petroleum transportation to the seacoast, for eastern home consumption and for export, at ten times pipage cost, in violation of the Federal anti-trust act and of the interstate commerce act.

"This guaranty in reality guaranteed but little. It, however, blinded the eyes of the innocent dupes—unsuspecting railroad directors and stockholders. This 26 per cent was largely covered in the transportation of the by-products of petroleum that could not be piped, such as benzine, naphtha, and gasoline, lubricating paraffin oils, residuum, etc., besides accounting for and including in the guaranty competitive shipments. This kind of an agreement is easily accounted for when made by joint interested parties in the trust certificates of the Standard Oil Trust. This is another peculiar method that this joint conspiracy combine has of making crude oil cheap to the producer and the products thereof high to the consumer.

"Franklin B. Gowen says in regard to this contract as follows:

"By which it will be proved that the rate on oil prior to the making of that contract was one-half of what it was before the recent advance, of which we complain, was made.

"Our allegation about that contract, gone into in this testimony, although it was not admitted, is this:

"The National Transit Company secured a pipe line to tide water. They then became a transporter of oil.

"It was important for them to maintain a high rate on the transportation of that oil, because they made a great deal of profit out of it.

"They could not maintain a high rate on the transportation of oil if that rate was cut under by the railroad company, and we allege, and will endeavor to prove in this case.

"That within two years prior to the making of this contract the rate on the Pennsylvania Company for oil was one-third of what it now is.

"If that had been continued the pipe line could not have made one-third as much money as they do now—could not have made one-fifth as much money as they do now—because the cost would have been the same.

"They then entered into a contract with the Pennsylvania Railroad Company for a division of the rate, and agreed to make equal rates. It became to the interest of both parties to get high rates.

"The consequence of which is that this contract provides that the National Transit Company shall pay practically several hundred thousand dollars a year as a bonus, over and above fair earnings of the railroad, in consideration of the railroad's maintaining a high price on oil.

"Of course, if the National Transit Company could make people using their pipes, or using the railroads, pay 52 cents a barrel for having the crude oil transported, when it cost them about 5 cents, as we say, to do the business, they would have an advantage of 47 cents per barrel over any competitor at tide water, and, with a view of maintaining such advantage, they entered into this contract with the Pennsylvania Railroad, which contract, as we allege, guaranteed to the Pennsylvania Railroad Company 26 per cent of the entire oil business transacted by the railroads and the two pipe lines.

"They then both agreed to maintain equal rates.'"
I will read the heading on page 61. (Reading:)

"Railroads allow Standard Oil Trust to lay its pipes in the road's right of way, in consideration of the road having only the pipe to transport, thereby losing all its former oil freight."

The following was offered by the witness as an exhibit:

"Dan O'Day, general manager of the pipe line system of the Standard Oil Trust, testified before a Congressional committee, 1888, that the Chicago and Atlantic Railroad allowed this trust to lay its pipes from the Lima oil fields to Chicago in the roadbed's right of way, for the profit it received in the transportation of the pipe, its material, and construction.

"After the road granted these most extraordinary of privileges (1888) and after the pipe line was constructed and the trust's mammoth refining plant at Whiting, Ind., suburb of Chicago, was finished, freight rates from the Lima oil fields to general points of delivery in the various States were raised from 20 to 87 per cent

"The present freight rate, Lima to Chicago, is 10 cents per 100 pounds, or 40 cents a barrel, eight times its pipage cost.

"THE UNITED STATES PIPE LINE COMPANY HAS BEEN TRYING FOR SEVEN YEARS TO GET ITS TWO PIPE LINES, CRUDE AND REFINED, FROM THE OIL REGIONS TO NEW YORK BAY, THROUGH THE STATE OF NEW JERSEY, AND NOW MUST ABANDON IT, BECAUSE OF JOINT OPPOSITION OF THE RAILROADS AND OF THE STANDARD OIL TRUST.

"For seven years the United States Pipe Line Company has endeavored to get its two pipe lines, crude and refined oil, through the State of New Jersey to the seaboard at New York, but has been obstinately opposed by the rail lines and the Standard Oil Trust from crossing under railroad tracks, although the owner of the fee right, while the roads have an easement only. New Jersey courts have finally decided that this cannot be done. Resulting consequence is that this company's pipe lines are being taken up, Philadelphia made the terminus, and the oil will be

barged to New York. But the Standard Oil Trust have had no trouble, and even her lines lie in the road beds of many railroads.

"Lewis Emery, Jr., of Bradford, Pa., producer, refiner, and transporter of petroleum, has this to say, October 5, 1899, to a correspondent:

"We are very large manufacturers of oil and oil products, and feel the discrimination in rates over the railroads very severely indeed, so much so that we are obliged to market 70 per cent of our products in Europe."

An exhibit will show the favor of railroads to exporters. (Reading:)

"ON AUGUST 1, 1899, 50 PER CENT MORE IS CHARGED BY THE RAILROADS TO CARRY GRAIN FROM CHICAGO TO NEW YORK FOR DOMESTIC USE THAN EXPORT FOR FOREIGN CONSUMPTION. WITHIN THREE MONTHS, BY NOVEMBER 1, 1899, DOMESTIC RATES HAVE BEEN RAISED 30 PER CENT AND EXPORT 80, WITH REBATE ON EXPORT QUANTITY SHIPPED."

"The tariff sheets on file with the Interstate Commission to take effect August 1, 1899, show that in shipments of grain, Chicago to New York, the export rate was 11 cents per 100 pounds, while the domestic rate was 17 cents, or 50 per cent higher to eastern home manufacturers and consumers. The present rate on export, November 1, 1899, is 20 cents per 100, as against 22 domestic, or only 10 per cent of a difference. Within three months, August 1 to November 1, 1899, domestic rates have been raised 30 per cent, while export rates have advanced 80 per cent, and the difference between domestic and export rates has been reduced 40 per cent within three months. But this apparent advance in export rates will easily be wiped out in a rebate on quantity shipped, as a substitute for a moneyed rebate, as follows:

"Hon. Franklin B. Gowen, president of the Philadelphia and Reading Railroad Company, stated before the Interstate Commerce Commission, January 17, 1888:

"Mr. Colston. What kind of a train is that?

"Mr. Gowen. It is a long train of loaded cars which, though visible to the sight and susceptible of identification by all the other senses, makes no impression upon the manifests of the corporation, and leaves no trace upon the treasury of the company. This gentleman to whom I allude, in search of statistics, was struck with the fact that in one certain year the amount of grain which left Boston, New York, Philadelphia, Baltimore, and Portland in vessels for Europe, was much greater than the aggregate amount transported over the railways from the west to those points in the same period, and yet he knew that a large amount of grain transported from the west to the east is used for home consumption and does not enter into foreign commerce at all; and the only reason that he could give for this anomaly in statistical information was supplied by the report of ghost trains as a favored method of transportation by some celebrated shippers who were then supplying the European demand for our cereals.'

"Also said:

"What is a railway? A public highway—nothing else. Just like the rivers. The rivers are public highways. Nobody in this country, the Standard Oil Trust or other inferior character, attempts to put a tourniquet upon them. When the first public roads were made in this country they were turnpike or wagon roads; but they were public highways. No company attempted to make a different charge for toll to one man as against another for the like vehicle. When the railroad companies were organized they took the private property of the citizen, under the right of eminent domain, because the property was taken for a public highway in trust for the uses of the public; and the first railway companies in this country were organized simply with the right to maintain a public highway and to charge a toll for its use. It was expected that the transporters should furnish their own cars and their own locomotives or horses, because originally the service on railways was done by horses. Railroads are simply advanced and improved avenues of transportation; but, with reference to the rights of the community to equality of rates, they preserve throughout the same features as the rivers and turnpikes. Now, why should there be any difference now existing? God made the rivers, and man laid the rails, I suppose our friends will say, and hence the Standard Oil Company deserves to have the monopoly of low rates.

"The gross receipts of the railroads of this country, in round numbers, are \$800,000,000 per annum, and I verily and honestly believe that \$100,000,000 annually are taken out of the pockets of the people of this country by unjust railway discriminations and turned over to this privileged class—and this is equal to a tax of \$2 per head paid by the people for the sake of building up the new aristocracy of wealth that in this free country arrogate to themselves the position of the nobility of older countries. And who compose this privileged class and constitute this new order of nobility? Not men of intellect, or genius, or learning, or even of honest thrift, or patient industry. By no means. Cold, calculating men, who, by open bribery and naked rascality, secure the favor of railroad officials, until they wring \$100,000,000 annually from the mass of the people and the overburdened industry of the country. These are our privileged classes; these are the men whose patents of nobility are inscribed upon the records of a railway company—at- tested by the broad seal of the corporation and countersigned by a general freight agent—and when people from other lands visit this country and ask to see our great men we do not say, This is a man of great intellect and genius and learning, or of long descent, of kindly character, and great charity; but we say, Behold him whom the railroads delight to honor, and the limits of whose wealth we are only permitted to conjecture!

"It is utterly impossible that there can be any success attending a monopoly of natural products without the aid of unjust discrimination of railroad companies. And only when such unjust discrimination ceases will all people be placed on terms of equality.

"Let us suppose that in France but one corporation handled 80 per cent of the wine grown in the country. The grape grows all over the country. You see train loads of wine in France as frequently as you see train loads of oil in America. The price of wine enters largely into and affects the social and financial condition of the French people, just as the price of oil affects the interests of the people of this country who produce it. I venture to say that if any such thing existed in France as one corporation controlling 80 per cent of the wine manufacture and traffic of the country there would be a French revolution within 24 hours of the discovery of the existence of such a monopoly.

"The system of illegal and unjust railroad rebates or freight discriminations, more than any other social evil, has been the source of that unequal distribution of wealth which today confronts the country with a menace greater than threatened by any other social wrong or inequality. That the Standard Oil Trust owes its control of the oil trade of the country entirely through unjust and illegal discrimination in charges of railroad freights. That nearly all of its great wealth and power have been thus dishonestly and illegally obtained. That it is far the most conspicuous example among the many instances of the great fortunes made by the favoritism of railway officials."

The Standard Oil monopoly is the originator of the system of devices for rebates in the form of commissions, arbitraries, billing underweight, blind billing, dockage, lighterage, terminal charges, special style tank cars, overloading, billing to intermediate points at the low rate, stopping cars in transit and delivering small lots at carload rates, 'ghost trains' on which no freight is paid, commissions or rebates on all competitors' shipments, shipping out from its agencies to surrounding territory and paying no freight thereon, that today permeates all the arteries of commerce exclusively in favor of the trusts, effectually wiping out and closing up all competitive industries.

Q. (By Mr. Kennedy.) Will you tell us something about these ghost trains—what they are? That is something new to me. A. That is what Mr. Gowen explains at the beginning of the quotation that I have just put in.

(Reading:) "These freight discriminations in favor of one great trust, the Standard Oil Trust, have enabled that concern to build, free of cost, thousands of miles of gathering pipe lines in the oil producing country, thousands of huge iron storage tanks, several trunk lines of pipe from the oil regions to the seaboard, thousands of tank cars, and tens of thousands of stationary plants (represented by local agencies located in all parts of the Union), which stand as a menace and a threat to all competitors who dare enter their sacred domain in competition with them.

"Whoever interferes with the natural laws which govern or ought to govern commerce is a public enemy. No other nation under the sun would tolerate for an instant such a destructive element within its borders. In monarchical Germany Baron H., in one short month, was tried, convicted, and sentenced to imprisonment for receiving a rebate from a railroad. In England the owner of the Bass breweries was found

to be receiving a rebate, and in twenty-four hours it was stopped by the railroad commission. What a contrast, my countrymen, does our land present.

"The time to guard against corruption and tyranny,' says Thomas Jefferson, 'is before they have got hold of us.'

"That the Germans appreciate this wisdom is shown by the attitude of the German Government toward the Standard Oil Company. When some member of the Reichstag, alarmed by the apparition of the original and greatest 'octopus,' asked what the Government proposed to do, Count Posadowsky, minister of the interior, showed that the most vigorous and effective campaign possible had already been opened. 'And,' he added, 'the Government will oppose abuses on the part of the Standard Oil Company immediately and ruthlessly.'

"The American, Philadelphia, February 12, 1898, has the following:

"It is often remarked that it is impossible to make something out of nothing. This is indeed regarded as a truism. But when we look at the growth of the Standard Oil trust we are inclined to doubt our senses. Self-evident it is, indeed, that we can not create something out of nothing, but something very akin to this have the men behind the Standard Oil Trust succeeded in doing. They have not, indeed, accomplished the impossible, but they have found something better than the alchemist's equation, something more important in the accumulation of wealth without labor than the possession of the philosopher's stone. The alchemists sought to turn base metal into gold and failed; the unscrupulous men who organized the Standard Oil Company sought to turn dishonesty into gold and they succeeded. They have not, indeed, discovered the undiscoverable art of making something out of nothing, but they have succeeded in getting property without creating it, in enjoying wealth without earning it.'

"The New York Sun, in its financial article of September 4, 1899, has this to say:

"The Standard Oil monopoly has sustained itself by getting possession of all the available crude petroleum wells in the country, and by not raising the price of the refined oil so high as to make other illuminants more desirable it has shut out competition from that quarter."

I thought it well enough to read that because it comes from a strong monopoly paper.

(Reading:) "Benjamin F. Butler says this: "The Parliament of Great Britain undertook to put a tax of a penny a box on friction matches, which would have increased the revenue about \$500,000. The people of England revolted to such an extent that the government dare not press it. The match was needed to light the petroleum lamp. What would be said in Great Britain if their government would allow a corporation to put a tax of 500 per cent on the means of lighting the poor man's house and the rich man's palace in England?"

"Under that government it would not be borne, not an hour after it was known. Shall it be said that under a republican form of government, where the people are represented in making the laws, such a monopoly

shall obtain, by which men can make fortunes such as were never dreamed of since the days of the plundering of the world by the proconsuls of Rome?"

"To the great credit of the United States Supreme Court, they have taken a broad and liberal view of the Sherman anti-trust act, and decided that it 'applies to and covers common carriers by railroad,' which adds vital importance to the act, and, in brief, decided as follows: While the statute prohibits all combinations in the form of trusts or otherwise, the limitation is not confined to that form alone. All combinations which are in restraint of trade or commerce are prohibited, whether in the form of trusts or in any form whatever. "SINCE THE FEDERAL ANTI-TRUST ACT TOOK EFFECT, 1890, THERE HAVE BEEN CONSOLIDATED 946 RAILROADS, AGGREGATING 63,000 MILES, OR ONE-THIRD OF TOTAL.

"On October 7, President M. H. Vreeland, of the Metropolitan Railway Company, had this to say:

"Probably in no industry in the world has consolidation been more active in the last ten years than in railroads. In fact, railroad history of that period is one continuous record of combinations, amalgamations, mergings, leasings, or whatever terms lawyers please to give to one and the same thing. In the nine years since 1890, 946 railroads, aggregating 63,000 miles, have been consolidated.'

"Just think of it; 946 different railroads consolidated into a mammoth railroad trust, one-third of total railway mileage, within nine years (passage of the anti-trust act), forming part and parcel of 44 separate and distinct unlawful associations of rail and water lines combined, acting in entire unison with the other lines for the maintenance of railroad rates, which puts into the hands of a few leading men an unlimited and mighty power of control over transportation rates, which power they have extended to the creation of many industrial manufacturing trusts, by which the price of the products thereof will be entirely regulated by these men through high tariff transportation rates, that greater rebates shall accrue to them from off their own and competitive shipments, which completely annihilates competition, destroys competitive industries, and the incentive to embark in new enterprises. In other words, the conspiracy combine of rail and trust officials now dictates to the former competitor the amount of salary he will receive to help them conduct and carry out their unlawful designs.

"THE RAILROADS AND INDUSTRIAL TRUSTS' ARE CAPITALIZED AT \$18,818,554,031.

"The aggregate capitalization of the railroads per last official report of the Interstate Commerce Commission is \$10,818,554,031. The single State of New Jersey has given life to 15,000 concerns with a capitalization of \$8,000,000,000. For the fiscal year ending October 1, 2,000 corporations were chartered in this State, capitalized at \$3,500,000,000. Here is a joint railroad and industrial trust company, capitalized at \$18,818,554,031, working exclusively in the interest of each other. Conservative authorities estimate that

one-half of this amount is fictitious, or 'watered,' on which rail and trust officials have enforced, and will continue to enforce, from off the producer of the soil and mine and from off the consumer and user of general products, through railway tariff exactions, sufficient revenue to pay liberal dividends upon fraudulent issues, representative waste paper, merely vignettes and nothing else. Ruinous freight charges will be levied upon all competitive goods outside the combinations in order to freeze them out, while Armour will receive rebates on his beef, Havemeyer on his sugar, Morgan on his coal, and Rockefeller on oil and iron, while the dealer outside the trusts must ship at higher prices, without rebates and without favor. Under the liberal laws of New Jersey alone these 15,000 trusts and corporations are operating in every section of America, and this State has richly earned the sobriquet of 'The cradle of monopolies.' With all this vast wealth centered in one State, how easy it is to elect and manage all necessary political power for the control of all needed legislation.

"How easy for this combination of railroad and trust officials to so increase and temporarily reduce transportation rates, and thus materially affect net earnings of the railways and of the trusts, by which they get a clutch on their adversaries in stock gambling operations, and without risk, in the purchase or selling of stocks short, according to their well-matured plans and conspiracies."

(Reading:)

"THERE ARE TODAY AT LEAST 44 UNLAWFUL RAILROAD TRAFFIC ASSOCIATIONS AND WATER LINES COMBINED, ACTING IN ENTIRE UNISON TO INCREASE AND MAINTAIN FREIGHT CHARGES AND DISCRIMINATE IN FAVOR OF THE TRUSTS ON ALL RAIL AND WATER TRANSPORTATION RATES IN VIOLATION OF THE INTERSTATE COMMERCE ACT AND OF THE FEDERAL ANTI-TRUST ACT.

I will put in as exhibits the following:

"By the Official Railway Guide of September, 1899, there exist today 44 separate and distinct illegal combinations, composed of joint railroad, lake and ocean steamship lines, thus precluding excuse for water competition.

"These several pooled traffic associations and freight committees (latter new term) represent all the principal railroads and water lines in the United States, and some of the Canadian railways, working unitedly and in unison for the unlawful maintenance of joint freight rates, both rail and water, which is in the 'restraint of trade,' as forbidden by the Federal anti-trust act and confirmed by the Supreme Court.

"Section 5 of the interstate commerce act reads as follows:

"That it shall be unlawful for any common carrier subject to the provisions of this act to enter into any contract, agreement or combination with any other common carrier or carriers for the pooling of freights of different and competing railroads, or to divide between them the aggregate or net proceeds of the earnings of such railroads, or any portion thereof; and in any case of an agreement for the pooling of freights

as aforesaid, each day of its continuance shall be deemed a separate offense.'

"The names of these combinations are changed as often as the Supreme Court renders a decision against any one of them applicable to all, but the roads will not submit to the act nor to court decisions.

"The following steamship lines represent the Association of Lake Lines:

"Western Transit Company, owned by the New York Central and Hudson River Railroad Company, transports freight to and from Buffalo and Chicago, touching at Erie, Cleveland, Detroit and Milwaukee.

"Union Steamboat Company, owned by Erie Railway Company, carries freight to and from Buffalo and Chicago, touching at Detroit and Milwaukee.

"Erie and Western Transportation Company (Anchor Line), owned by Pennsylvania Railroad Company, carries freight to and from Buffalo, Erie, Chicago, Milwaukee and Lake Superior ports, and delivers freight to all railroads.

"Northern Steamship Company, owned by Great Northern Railway, carries passengers and freight to and from Buffalo, Cleveland, Detroit, Duluth and Lake Superior ports, and delivers freight to all railroads.

"Lake Erie Transportation Company, owned by Wabash railroad. Its steamers run between Buffalo and Toledo and deliver freight to all railroad lines.

"Lehigh Valley Transportation Company, owned by the Lehigh Valley Railroad and its steamers run between Buffalo and Chicago.

"Minneapolis, St. Paul and Buffalo Steamship Company, owned by the Minneapolis, St. Paul and Sault Ste. Marie Railroad Company, which is controlled by the Canadian Pacific Railway Company, carries freight between Gladstone and Buffalo and delivers same to all railroad lines.

"Cleveland and Buffalo Transit Company; Detroit and Cleveland Navigation Company; Lackawanna Transportation Company; Port Huron and Washburn line; Lackawanna Green Bay line; Wilson Transit Company; Union Transit Company; Fleming line."

"In addition the following water lines are combined with railroad associations and freight companies:

"Plant system of steamers, operating 1,283 miles of water lines; New York and Baltimore Transportation line; Baltimore, Chesapeake and Richmond Steamboat Company; Merchants and Miners' Importation Company; Detroit and Cleveland Navigation Company; New York and Texas Steamship Company; Old Dominion Steamship Company; Cromwell Steamship Company; Atlantic Coast line; Ocean Steamship Company; Red River line.

"This Official Railway Guide also contains the Canadian Freight Association, composed of all the railroads and principal water lines of Canada, which are in collusive alliance with our unlawful pooling railroad combinations as represented in said association by the following American lines, such as the New York Central and Hudson River, Michigan Central, Delaware and Hudson, Boston and Maine, Central Vermont, Maine Central, Great Northern, Northern Pacific and Manitoba, which roads are linked with Can-

ada's water ways, such as the St. Lawrence Steamboat Company, Lake Ontario Steamship Company, Merchants' line of steamers, Northwest Transportation Company, Bay of Quinte line of steamers, Bay of Quinte Railway and Navigation Company, forming a gigantic trust and pool of rail and water lines of America and Canada to increase and maintain, without competition, unlawful transportation rates in the United States, which is in restraint of trade, in violation of the Federal anti-trust act, and also in violation of the interstate commerce act.

"The following are the water lines in the above association:

"The Clyde, New England and Southern lines, Portland Steamship Company, Goodrich Transportation Company, Lake Michigan and Lake Superior Transportation Company, Northern Michigan Transportation Company.

"October 1, 1889, the Transcontinental Association, composed of 21 lines of railroad including the Canadian Pacific railway, made an agreement with the Pacific Mail Company to pay them \$900,000 per annum for the privilege to fix all freight and passenger rates, both steamship and rail, both ways, between New York and San Francisco, 'and that no through freight or passengers shall be taken except at prices fixed by the party of the first part (Transcontinental Association), or by its consent. (B 194.) No question of doubt, a similar arrangement is in practical effect today.

"November 28, 1890, this same association agreed with the Canadian Pacific Railway Company to pay them \$500,000 per annum 'to maintain the rates and rules of the Transcontinental Association as in force on the direct United States lines.' Benjamin Brewster and Henry M. Flagler, then trustees of the Standard Oil trust, were also directors in the Chicago, Rock Island and Pacific railroad, one of the roads in the combine, while Oliver H. Payne, former treasurer of the Standard Oil trust, was a director in the Pacific Mail Company. (B 196.)

"Judge Willis, of St. Paul, Minn., in addressing the new grand jury on January 9, 1897, has this to say:

"The government of this state is divided into three departments—the legislative, executive and judicial. All of these departments are proximately connected with the common people. To the legislature any qualified elector may be chosen. In the executive department the same rule of eligibility exists. In the judicial department none but men learned in the law can be selected for the judiciary itself; but in order to link that department closely to the people it has been provided that grand juries should be summoned from time to time, and that to them should be committed the duty and prerogative of scanning the conduct of all members of society and making such accusations as would correct the evils in society which amount in their enormity to crimes. Consequently you have the whole field of society before you.

"You must bear in mind that when criminality rears its head and becomes dangerous to society it does so because the people themselves, represented in the grand juries, fail to execute with vigor the judicial department of the government. As grand jurors

you are officials of the judicial department of the state government. A weighty responsibility rests upon you.

"The literature of our day, both transitory and permanent, is filled with denunciations of those enormous aggregations of capital which threaten to destroy not only the symmetry of our social conditions, but the essential nature of those social conditions. We hear much of trusts and of combinations, of railway pools, and of associations which are detrimental to the public benefit. Now, if the grand jury retains the vigor and essential patriotism which constituted the fathers of the republic, all these abuses will be annihilated.

"It is a mere idle performance for the people to claim patriotism when they themselves countenance and tolerate the most flagrant abuses.

"It is indeed a performance of questionable propriety to stand in the market place or upon the public rostrum and bewail the existence of abuses and the oppressions of financial and commercial tyrants instead of setting the judicial machinery known as the grand jury in operation for the correction of these abuses and for the dethronement of the tyrants. A grand jury should realize its power; should comprehend its functions; should, like Siegfried in Wagner's great drama, take up the sword and proceed to fight the dragon.'

"Section 5370 Revised Statutes of the United States reads as follows:

"Every person who, upon the high seas, or in any open roadstead, or in any haven or basin, or bay, or in any river where the sea ebbs and flows, commits the crime of robbery in or upon any vessel, or upon any ship's company of any vessel, or the lading thereof is a pirate, and shall suffer death.'

"THE ONLY EFFECTUAL REMEDY TO CURE EXISTING COMMERCIAL EVILS IS GOVERNMENT OWNERSHIP OF RAILROADS, PURCHASED ON THE CREDIT OF THE PEOPLE, BOND ISSUES.

"With 12 years' patient trial of the interstate commerce act and nine years of the Federal anti-trust act this seems to be the only effectual remedy left, for gross freight discriminations and rebates continue to date, and we have not only an epidemic, but a plethora of trusts.

"Why should not the people own the railroads instead of being owned and controlled by an autocratic, arbitrary few, and get from these bandit chiefs and robber barons their properties back, their several rights of eminent domain, the basis of the railways, which were parted with only in trust for the public use for guaranteed equality in transportation rates and privileges, and now so ignored and ruthlessly disregarded, and by which these men dictate the terms and levy their tributary exactions as they see fit on the entire commerce of this country through these high rate, ironclad tariff sheets, which must be complied with or no one can ship?

"If the railroads were purchased at their actual appraised worth, for value received, with all the barnacles scraped off—all fictitious and watered stocks—with the created government bonds of the people, or consols with no time limit of payment, same as Great

Britain, bearing 2 or 2½ per cent interest, present railroad freights could be reduced at least one-half and passenger rates not to exceed one cent a mile, and easily pay interest and all expenses, and set aside the necessary surplus for bond liquidation, if so desired, so that the greatest good shall accrue to the greatest number."

And you can get rid of this political bugbear, centralization, and all that. Just disfranchise the railroad employes. There are only about 800,000 of them, and there are 1,000,000 men today that do not vote. Then you would get rid of the political end of it.

Q. (By Mr. Kennedy.) Are you in favor of disfranchising the 800,000 employes of the railroads of this country? A. Yes; in order to take the question out of political power or influence.

Q. You would be in favor of disfranchising those 800,000 workingmen? A. Certainly I would; yes, of course. There would be plenty of voters left.

Q. (By Senator Kyle.) Do you not think that this proposed remedy would be absolutely impracticable? A. Why, if that is the best remedy, I think it is practicable. You can get plenty of men to take the position, and that will take it out of politics.

Q. (By Mr. Kennedy.) Do you think that they could get plenty of men today who would be willing to be disfranchised? A. Why certainly; why not?

Q. Do you know any man in the United States that would be in favor of it? A. I should say there would. Why not? The greatest good for the greatest number, you know. What harm is there in it.

Q. They are citizens of this country? A. How are the citizens of this District right here? They can't vote. The residents of this town can't vote.

(Reading:) "If the money already spent and to be spent in our more than useless foreign war had been expended in the purchase of railways for the relief of 70,000,000 of our own oppressed home subjects instead of foreigners, how much better it would have been. Under such a condition every citizen would be put on perfect footing as to equal transportation rates and privileges, with much higher prices to the producer, without increase in price to the consumer, for all the necessaries of life, because rebates and freight discriminations would be eliminated. The value of personal and realty holdings would also thus be greatly enhanced, and then there would actually come an era of that real, genuine prosperity so much desired by the American people, and not be exclusively monopolized in the interest of the selfish minor few. It is a deplorable and dangerous situation.

"IF THE PEOPLE CAN NOT GET JUSTICE AND ARE NOT SOON RELIEVED OF THE BURDENS AND CONSPIRACY OPPRESSIONS IMPOSED BY THE RAILROADS AND THE TRUSTS, IN GROSS VIOLATION OF THE LAWS OF THE LAND, MATTERS MAY ASSUME AN UGLY SHAPE.

"A century ago the American colonies, goaded to despair by the long continued injuries, insults and exactions, broke the fetters that had bound them for many years and appealing to the Supreme Judge of the world for the rectitude of their intentions, 'assumed

amongst the powers of the earth the separate and equal station to which the laws of nature and of nature's God entitled them.' In that renowned Declaration of Independence our forefathers asserted 'that when a long train of abuses and usurpations, pursuing invariably the same object, evinces a design to reduce them under absolute despotism, it is their right, it is their duty, to throw off their oppressors and to provide new guards for future security.'

"The last resort is for the people to retake into their own hands the power that has been delegated and abused. Vigilance committees have more than once had a purifying influence. There may be conditions which will again render them a necessity. There is a limit to human forbearance. Has that limit yet been reached?

"I am free to assert that unless some drastic measures are soon taken to do justice for the people the end will come in an ugly shape. The colossal fortunes that have been piled up as a result of the advantages enjoyed by the few and denied to the many represent just that much money coined from the blood and sweat of the masses. I do not believe any system will be permitted to exist which allows one man to accumulate a fortune of \$400,000,000 to \$500,000,000, while millions of his fellow creatures are suffering for the bare necessities of life.

"Every great wrong upon the people can be traced back to the greed and selfishness of the men who have cornered the resources of the earth, who keep the 'corner' intact by reason of an illicit power bestowed upon them by corrupt officials, who for the time being constituted the state. These criminal monopolies would be impossible if officials who administer the laws performed their sworn duty to the people. But they persistently refuse to do this. Men may impoverish themselves in an effort to secure rights which the constitution gives to them, but for want of an official execution those rights are denied them. This is a condition wholly incompatible with the principles upon which our government is founded, and should not continue. The people will soon throw off the yoke if relief does not soon come. They have a right to life and some of its enjoyments. They have the former, but only because it is necessary to the furtherance of the ends of the selfish rich. As to the enjoyments of life, look for them in the poverty of the common people and find them not. The people of this country are its sovereigns, and it is not only a crime, but a monstrous crime, to rob them so flagrantly and with so much persistence.

"The voice of genius has sent a trumpet in response to the cry of the oppressed. The dawn of emancipation should be near at hand. There is a rebellious spirit stirring within the people which may burst into a whirlwind of wrath.

"'The man with the hoe,' whose terrible aspect Professor Markham has so powerfully portrayed, may yet hoe his row, throw off his burden and deliver his fellow man from the toils of the downtrodden and oppressed."

Q. (By Mr. Kennedy.) Do you expect or hope for any deliverance from "The man with the hoe?" A.

Their vote is just as good as anybody else's, and it is the vote that is going to regulate it.

Q. Do you expect intelligent deliverance from any evils from such a source as that? A. Do you not think that there are a great many men with a hoe that have as good intelligence as anybody?

Q. Not the one that is pictured by Professor Markham. A. Well, I do not know about that.

Q. (By Senator Kyle.) Have you any further statement that you desire to make? A. Mr. Archbold reads a letter from J. M. Culp, traffic manager of the Southern Railway Company, in which he emphatically denies that the Southern Railway Company has at any time given to the Standard Oil Company or any of its representatives "any lower rates of freight in the carriage of shipments made by that company over our rails, either by direct tariff, refund or otherwise than to other shippers of similar commodities." I am unable to give a specific case of freight discrimination over this line in favor of the Standard Oil trust, but will answer Culp's specific denial in a more general and comprehensive form by reference to the letter of Receivers Cowen and Murray, in which they say that "within the territory north of the Ohio River and east of the Mississippi" the railroad carriers are making "illegal concessions through secret rates, drawbacks, rebates and other devices."

The Southern Railway Company is connected with and is a member of the following unlawful freight associations: The Louisville Freight Committee, the Southeastern Freight Association, the Southeastern Mississippi Valley Association, the Virginia Freight Traffic Association, the Southern Iron Committee and the Baltimore Freight Committee.

Through the Louisville Freight Committee and the Baltimore Freight Committee the Southern Railway Company is pooled with rail lines that cover the territory north of the Ohio and east of the Mississippi, such as the Pennsylvania Railroad Company, the Baltimore and Ohio Railroad Company, the Chesapeake and Ohio, the Big Four, the Illinois Central and others. Cowen and Murray say that these lines of road were in December last granting secret rates, drawbacks, rebates, etc. Then it stands to reason that the Southern Railway Company followed suit. If any kind of rebates in any shape or form are given, you can rest assured that the Standard Oil trust gets the lion's share, as fully exposed by me.

"PLEASE TURN ANOTHER SCREW."

This seems to me an opportune time to show this commission the original letter written by the Chess Carley Company—but I recall I have already shown you that.

Q. (By Mr. Farquhar.) In the investigation by the Bacon committee of congress in 1888, when that question was put, and you were present and gave testimony at the same time, Mr. Cowen presented this letter of the Chess Carley Company to Mr. Culp and Mr. Culp, under oath, gave testimony, as found in this volume here, and they also furnished at the same time the tariff that was published and in effect at that time,

showing that there was no discrimination against you in any way whatever, and that there were equal rates all around the board. A. At that time; at that particular time?

Q. At that particular time; at that time you gave testimony here in respect to this letter written by Hatha-way? A. He testified that there was no discriminations?

Q. There was not any discrimination at all; the testimony showed the published sheet of the regular rate, and the road made an explanation of what was called "putting the screw on." A. Very lame; very lame explanation.

Q. But still it is sworn evidence; it is here? A. Why, here are lots of letters.

Q. Well, here is the letter here in evidence, too. A. Oh, yes; that is all right; that is all right.

Q. And there was the man subjected to cross examination at that time, and that stands out in entire antagonism to your evidence here today? A. Well, the people can believe Mr. Culp against me if they want to; that is all.

Q. Well, what is the commission to do? That is the question. Here is the congressional evidence before us; what are we to do? There ought to be a reference to this testimony here in the records in some way. I want to ask you another question, too; and that is in respect to the testimony that you heard at the same time offered by Mr. Carley himself, in his vindication of this thing, that he had never got a rate at that time discriminating in any way whatever, which is also sworn testimony of a reputable witness outside. A. Who is a reputable witness? Do you call Carley a reputable witness?

Q. Well, you can not call him otherwise; the congressional committee took it. A. They can if they want to. I do not believe it.

Q. It is given in the Bacon report. A. I would not believe either of those men; that is my experience with them, you know; I would not believe either one of them.

Q. I merely desired to call your attention to it. A. That is all right.

Q. Because many of the exhibits are in sworn testimony. A. The people can take what they believe of that, and believe what they are a mind to. I am telling the truth absolutely, without the shadow of a doubt, by solid experience. There is not a question in regard to it whatever. There is not any question that they raised the rates on me 50 per cent within five days. I have had men tell me that they would shoot such a man as that. There is not language strong enough to express a man's disgust at the execution of our laws. How can any man excuse such men or have any belief in them I can't understand, that will do such outrageous things.

Q. (By Mr. Clarke.) Do you recommend shooting as a remedy? A. I think it will come to something of that kind if you can not get relief. What did our colonists do over in Boston? They threw the tea overboard, did they not, because of oppression? We are just as much oppressed today as they were, and more so.

UNLAWFUL ASSOCIATIONS.

The Baltimore and Ohio Railroad Company are members of the following unlawful associations. I want to say this because the Cowen and Murray letter has been put in here, and Mr. Cowen has been here on the witness stand and explained it; and I want to show that they are members of what I call unlawful associations in keeping up rates. The Baltimore and Ohio Railroad Company by the official railway guide which I put in here, the best evidence in the world, are members of the Chicago Freight Committee, the Chicago Railroad Association, Eastern Railroad Association, Middle States Freight Association, Trunk Line Association, Western Pennsylvania and Eastern Ohio Railway Traffic Association, Wheeling Freight Committee, Baltimore Freight Committee, General Managers' Association of Chicago, Mansfield Freight Committee, Middle States Lumber Association, Ohio Coal Traffic Association, Sandusky Freight Committee.

I want to say right here that about every time a decision is rendered by the Supreme Court of the United States against any one of these associations the others change their names immediately; they are not incorporated, and they can change them very easy, so they can get rid of all their past unlawful acts.

RELATIONS BETWEEN RAILROADS AND THE STANDARD.

In the late reorganization of the Baltimore and Ohio Railroad Company within the last few months, Henry Clay Pierce, of St. Louis, president of the Waters-Pierce Oil Company, Standard Oil trust, is made a director.

Q. (By Mr. Farquhar.) Do you think that it is well enough for these persons that are large owners of stock, I mean Standard Oil stock, and all that, to make investments in all these other things; is it not natural for business men to do that? A. It looks rather suspicious, you know, when you come to see all these men going into railroads, these big shippers; it looks very suspicious. Mr. Archbold falsely asserts when he states that pipage rates were included in the rail rates on the Cleveland and Marietta railroad. The absolute truth is that this railroad charged me 35 cents a barrel on my petroleum shipments, while it only charged the Standard Oil trust 10 cents a barrel; confirmed by the receivers of the railroad, its counselor, ex-Judge Rapello, and by the decision of Judge Baxter. This difference or overcharge on my shipments was taken from the treasury of the railroad and paid over to the Standard Oil trust.

Phineas Pease, the receiver of this railroad, allowed the Standard Oil trust to lay its pipe lines, not only in the roadbed's right of way, but also across passenger bridges, to assist it to convey crude oil from the Macksburg oil fields to Parkersburg, W. Va., 35 miles, where the trust had a large refining plant, and by this means deprived the railroad of the Standard Oil transportation. In 1885 when I wanted to simply cross once with my pipe line under the tracks of this same road, which I had the legal right to do, in order to reach the Muskingum River and thence barge my oil to Marietta, I was confronted by a telegram from

Pease to desist from laying my pipes thereunder. I did not obey. A competing pipe line from Parkersburg tried to reach the Macksburg oil fields, and was prevented from doing so by this same railroad. But the Standard Oil trust could get everything they wanted; no objection at all.

In November, 1887, seven or eight months after the interstate commerce act took effect, I proved before the interstate commerce commission that I was then paying more than four times as much freight as the Standard Oil trust on shipments of oil to Birmingham, Ala., where I had an agency. I paid 59 cents per 100 pounds on 400 pounds to the barrel, which was \$2.36; the Standard Oil Company only paid 16 8-10 cents per 100 on 315 pounds of bulk oil, which amounted to 52 cents and 9 mills, as against my \$2.36. The discrimination was 346 per cent.

ACCUSATIONS AGAINST THE WITNESS.

I want to say just a little in reply to what Mr. Archbold said about me here:

(Reading from a paper:) "In reply to Mr. Lockwood, Mr. Archbold dealt at length with the Matthews and Rice cases, which Mr. Lockwood had instanced to show, as he claimed, that the Standard Oil Company controlled the courts. Mr. Archbold claimed in effect that these suits had been brought to compel purchase. He asserted that in the Rice case Rice had tried to induce him to buy his plant at Marietta, Ohio, for \$500,000, when it was not worth \$25,000, and had agreed to see that prosecution in certain cases was stopped in case the deal was made, claiming that he had sufficient influence to accomplish this result. He expressed the opinion that Rice was employed as an agitator by the enemies of the Standard Company. Mr. Rice was present in the room, and it is understood will reply later."

I want to say right here that no man in this country has ever put up a dollar to aid me in any fight I have had with the Standard Oil trust or railroads of this country. The statement is false.

Q. (By Mr. A. L. Harris.) Did you ever offer to sell out for \$500,000? A. I did. I will explain that. They offered me \$250,000 in 1882; and negotiations were started again in 1886 or 1887, about the time I was trying to get some Standard Oil trust certificates, which I owned, transferred to my name. They refused to make the transfer. I want to read these extracts just a little before I do anything else. This is another account of Mr. Archbold's testimony.

"He dwelt particularly on the claim that Mr. Rice had been discriminated against by the railroads in the matter of rates, and that the Standard Oil Company had made the railroads divide with them the charge they had collected from Mr. Rice. Mr. Archbold admitted that their agent had received something like \$250 in this way, but said the money had been refunded to the railroad on the advice of their lawyer.

"Mr. Archbold charged Mr. Rice with running his business not for the legitimate profits in it, but for the purpose of selling out to the Standard people at an immense profit."

Mr. Archbold also read to this commission certain

extracts from the testimony I gave last February at the Ohio investigation, with the avowed purpose of showing that I am a blackmailer. The ground of this accusation is that I asked less for my refining plant at an early date than subsequently, when I had increased the capacity of my plant to five times what it was at the time the lesser prices were given, and I had not included my producing properties. Now, just think of it, gentlemen; and Mr. Boyle reiterates it in his testimony.

In March last at the Ohio investigation they engineered a scheme to put Archbold forward to denounce me with great vehemence as a blackmailer, in order to divert public attention from the real questions at issue, and commenced at once their vicious attack on me at the fourth question. This charge of blackmail is only a continuation of their oft recited and only stock in trade against me for 18 years. In 1881, in their red lettered pamphlet entitled "Black Death," issued by the Standard Oil monopoly, a fac simile of mine, they charged me on the upper marginal part, page 2, with blackmail, and have kept up this tirade of abuse ever since, for the avowed purpose of prejudicing the public mind against me. Why is it that they still keep it up, not only through trust officials direct, but through their special mouth organ, the Oil City Derrick, although my refinery has not been running for 3½ years to interfere with their high priced oil? On page 3 they admit my oil refinery alone to be worth \$50,000 in 1881. It is fair to presume that they would have paid me double this price at that early date, when so willing to state its worth publicly. How silly and ridiculous it is for these hundred million millionaires to charge me with blackmail, when they have robbed the stockholders of the railroads by dishonest and unlawful means, through freight discriminations, out of hundreds of millions of dollars, which has been paid by the public in higher priced oils, and of poorer quality. I will read from my evidence given at New York on March 21 last:

"Before J. Edgar Mills, New York—The Buckeye Pipe Line Company.

March 21, 1899, 10 a. m.

"Hearing resumed.

"Redirect examination by the attorney general.

"Q. Mr. Rice, there is another branch of the case, of the Buckeye Pipe Line case, that I will call your attention to briefly. There is a cause of action charging that the defendant company assisted the Standard Oil Company of Ohio in evading the decree, known as the decree of March 2, 1892, and, perhaps, anticipating your evidence now rather as rebuttal evidence from what has taken place in the contempt proceedings, I will call your attention to that part of the testimony, and will introduce it here at this time, in which it is said the charge of contempt was a case of blackmail on your part, if I understand the import of Mr. Archbold's testimony, and to that most particularly where he says that your plant was only worth \$25,000. Will you now state for the court the history of that attempted settlement and the amount that was offered for your plant actually, and what it is worth?

I refer to the proposition that was made. Give the history of that entire proposition.

"Mr. Kline. I note an objection to the question not only as leading and suggestive, but as irrelevant and incompetent.

"A. The charge that Mr. Archbold has made against me as being a blackmailer because of any interest that I may have taken in the proceedings against the Standard Oil Company of Ohio; or in these proceedings, is a malicious statement and false; there is not a word of truth in it whatsoever in that regard, in that respect. In 1882, Mr. B. F. Squire, the present secretary of the Standard Oil Company of Ohio, came to me at Asbury Park, where I was stopping with my wife, and offered me \$250,000 for my oil properties, including the producing properties and the refining plant. This I testified to before Judge O'Brien, of this city, in 1888, in proceedings that I brought against the trustees of the Standard Oil trust to get transferred an original trust certificate standing in another man's name into my name. Mr. Archbold was present at the proceedings and heard what I testified to and made no objections, nor was it denied. He at the same time went onto the stand and testified that my plant was not worth to exceed \$25,000 or \$30,000. He also produced an expert to say that it was not worth over \$25,000. At this same time that I testified and at which Mr. Archbold was present—in the early spring of 1887, some four or five months previous to the proposition to which he alluded and which I will subsequently allude to—I offered my plant to him through Mr. Orvis, to Mr. Archbold, for the sum of \$125,000, and \$25,000 a year for five years. In 1886 it is true that I did submit a proposition to him to take for my producing properties and refining plant—the whole oil business that I had—the sum of \$250,000, and \$50,000 a year for five years. He considered the proposition, and wrote me two letters, of which I would like to submit here the copies of them, because they are very short.

"Mr. Kline. I note an objection to the copies.

"Q. Have you the means of getting the originals? A. have not the originals in my possession, but I will swear that these are copies.

"Q. Will you read the copies into the records?

"Mr. Kline. I note an objection.

"A. (Reading from paper:) '26 Broadway, New York, November 17, 1886. George Rice, Marietta, Ohio. Dear Sir: I write to advise you that I have not lost sight of our recent interview, but there has been unavoidable delay in gathering information which we desire on the subject. We now expect to have this information in a week or so, and will then again communicate with you. Believe me, very truly yours, John D. Archbold.' The second letter: Dated, 'Standard Oil Trust, 26 Broadway, New York, December 13, 1886. George Rice, Marietta, Ohio. Dear Sir: We have given further consideration to the subject of our recent interview and are prepared, if you so desire, to discuss it further with you. Awaiting your advice as to your wish in the matter, and, if favorable, the designation of a time when you will meet with us here, I remain, truly yours, John D. Archbold.'

I never replied to the letter or never called upon them.

Q. (By Mr. Phillips.) What was the price fixed or talked of at that time? A. \$250,000 and \$50,000 a year for five years. Now, here is another. (Reading:)

"Q. There is another term that you use that I don't quite understand. I wish you would be kind enough to elucidate it more clearly. What do you mean by a refinery and a producing plant? What is the difference? What does your property include that you say you were offered \$250,000 for? A. The proposition I made to Mr. Archbold and to Mr. Squires both, was to include all the producing properties that I had, which was some 200 acres of fee simple oil land and from 150 to 200 barrels per day production, and also to include all the machinery and everything attached thereto used in the production, and also to include my refining plant and everything connected therewith, tank cars and pipe lines, and so on, and the good will of the business.

"Q. Where was that 200 acres of oil producing land that you say you owned in fee simple located? In the oil district? A. Yes, sir.

"Q. Already developed? A. Yes, sir.

"And has it been oil territory ever since? A. Yes, sir.

That is the end of the quotation. Now I will make some of my own remarks. My property was fully worth the amount I asked. The mercantile agency of R. G. Dun & Co. for several years made a rating of \$1,000,000 on this same property. It seems ridiculous to answer all these statements, but as the charges have been made, under all the circumstances, I have done it. In 1884-85, and part of 1886, my business had largely increased by my persistent efforts, which was not agreeable to the Standard Oil trust; so they invoked the aid of Orland Smith, president, and R. M. Fraser, freight agent, of the Cincinnati, Washington and Baltimore Railroad Company, the initial line out of Marietta, so to advance my petroleum freights as to ruin my business, so that this noble and philanthropic trust could easily buy it up for old junk. To the disgrace of these two men they readily assented to the nefarious demand and on July 15, 1886, they did advance my freight rates from 43 to 162 per cent, and did not advance the rates at all to the Standard Oil trust. This had the effect to close up 1 out of 24 of my agencies, and shut me out of 39 towns in 73, within the brief space of five months. From that time on my profits were very much lessened by these unlawful freight discriminations, and by the constant attacks and savage cuts made by the Standard Oil trust upon my customers' goods I was forced to yield and quit the oil refining business in May, 1886, and my refinery has been idle since—rotting down. I will also read some extracts from the Ohio investigation, but before doing so, will state that my testimony in said case has been very materially changed by two very important alterations, and of the same particular figure twice repeated, by which it now appears in the official printed evidence that the negotiation for the sale of my properties was conducted in 1887, the very month that the Ohio contempt proceedings were brought, instead of the year 1887, as I testified. I also testified that the ca-

capacity of my refinery was 100,000 barrels per annum, which has been changed to 10,000.

I am reading now from the record of the Ohio investigation of the Standard Oil trust.

Q. (By Mr. Farquhar.) Is it not strange, don't you think, that Attorney General Monnett would have those changes made? Could it have been on purpose?

A. I am saying that they have been changed. I am not charging any one. "I will go back to 1897," cross examination of me by Mr. Elliott, counsel for the Standard Oil Company, page 385. "I will go back to 1897"—it should be '87. If I said '97, it was a mistake. (Reading:)

"Q. I will go back to 1897. Did you say to Mr. Archbold in an interview, 'I believe it is better for the Standard Oil people to make a deal with me, and that by so doing parties will be deterred from encouraging a line of action against the Standard Oil Company, which others are about to do?'

"A. No, sir; I do not recall anything of the kind. I wish to explain right here when those suits were enforced in regard to the transfer of my five shares"—

This is very important. (Witness resuming reading.)

"Of trust certificates; they tried to produce evidence the Standard Oil people did, and it came forth in the trial of the transfer of these five shares of trust certificates in my own name. They brought forward two men for that purpose that proposed to swear that I had demanded from the Standard Oil trust people a large amount of money, and they were the only ones who could settle this matter, and Mr. Bartlett, my counsel—this was indicated to him that such kind of evidence was coming out—and he particularly questioned me before I went to the stand, before the matter came up, to know whether this could be true that he had heard. And I said, if they brought up any matter of that character it certainly would be a lie, it would not be true; could not see how they could back it up. He was considerably nervous over it, and I was myself. I did not know but what they had adopted some kind of plan to smirch my character, and when it came up Mr. Bartlett objected to any of this testimony going in, and the judge said: Mr. Bartlett we will allow this to go in and if they do not connect Mr. Rice with this matter it will all be thrown out.' They went on and brought up two agents, one I have known in the oil business, Hill was his name, and I forget the other man's name; and they went on the stand and testified that they had letters that were written pro and con with the Standard officials in which they said to them they could arrange a settlement between Mr. Rice and themselves; that they had the whole thing in their hand. I never knew a thing about it. I never heard a word about it, and they admitted that they had no conversation with me. They had taken up their report and it was written on Standard Oil paper, making those threats, and those letters were used against me before the chairman of the committee in congress to poison his mind against me. There was nothing in them. They were gotten up by these men themselves, and to show the truth of it the judge threw out that testimony and would not allow it to go in. It was all

a concocted story to smirch my character; that is what is the matter."

Now, I want to read you the letter and correspondence that passed. I want to say right here, I think this correspondence was engineered for the purpose of being used afterwards, as Solicitor Dodd did use it. Here are letters—without my knowledge parties wrote letters under the head of the Standard Oil trust, and I never knew a thing about it. It was let in temporarily while the case was on with the understanding that if they did not connect me with it it would be thrown out. It was thrown out, but Mr. Dodd used it against me before the congressional committee in 1888. Now, this is a letter which was written, that I did not know anything about, and I think it was concocted for the purpose by this man Hill.

Q. (By Senator Kyle.) Who is Hill? A. Edgar P. Hill, Nassau street, New York.

Q. A man whom you know? A. I knew him once in the oil business. He directs this letter to Mr. Cuthbert, an official of the Standard Oil Company. He says:

"Edgar P. Hill,

"Attorney and Counselor at Law,

93 Nassau Street, New York, March 20, 1888.

"My Dear Cuthbert: I am going to write you a very plain letter in regard to the matter of Rice and the Standard Oil Company. In my judgment the company is making a great mistake in not getting Rice out of their way. I know what I am writing about, and the necessity of Mr. Brewster's being put in possession of such facts as I shall give you some account is urgent. Can you consistently and properly, through Mr. Bushnell, have them reach Mr. Brewster? If you can without prejudice to your interest, I hope you will do so. If you can not say so plainly, and reply to this letter as soon as you possibly can. I shall not call on Mr. Dodd again unless he sends for me. I don't think he appreciates the situation. But to the facts, of which you will see something in the papers before you are many days older.

"First. Mr. Rice owns certain shares of the Standard Oil Company stock. An alternative mandamus has or will be soon issued commanding the company to transfer that stock to George Rice, or show cause why it is not done. If the company transfers the stock, Mr. Rice will prove to be a more troublesome customer than he is now, unless he is settled with at once. If the company refuse to transfer the stock they will be compelled to, and its trouble will be greater. The company can not resist the court if it refuses.

"Second. Rice has been summoned before the interstate commerce commission and will be before that commission tomorrow or very soon, to answer the interrogatories already framed, the answers to which will be troublesome to the company, to speak within bounds. Those interrogatories had better remain unanswered.

"Third. Legal proceedings are about to be commenced against the two railroads having large contracts in the past, and at present, with the Standard Oil Company in violation of the interstate commerce law for a forfeiture of their charters.

"Fourth. A law has been framed and will soon be introduced in congress giving Mr. Rice the authority to bring suits in any state against railroads that have made contracts with the Standard Oil Company discriminating against Rice and to his prejudice.

"Fifth. It is useless for the company to try to make a settlement with Rice through other parties. It must be done with me or not at all. There are other matters I could call attention to, but this is sufficient for the present. I write as I have to you for the sole purpose of having these facts brought to the notice of Mr. Brewster, and for no other purpose. Could I have an interview with him I am sure it would be to the advantage of the company. Again, let me say that I do not want you to be prejudiced in the least in this matter and unless you can see your way clearly to do this, don't do it, but return this letter to me and that will be the end of it, so far as you are concerned. Please do not delay your answer.

Sincerely yours,

EDGAR P. HILL.

"EDGAR P. HILL,

"ATTORNEY AND COUNSELOR AT LAW,

"93 Nassau St., New York, March 29, 1888.

"My Dear Cuthbert: I have your letter of the 26th instant, for which you have my thanks. I am very glad indeed that you sent my letter to Mr. B. and I infer that he or Mr. Brewster has it now, as you do not mention its having been returned to you. I shall be fully engaged today and tomorrow in another matter, and as soon as that is off my hands I shall ask Mr. Brewster for an interview, and I am confident that good will come to the company from it. I desire to have you understand that I am not acting and will not act in this matter in any spirit of hostility to the company, but on the contrary I desire to bring about a settlement between the company and Rice, and nothing else. I am the only person who has the handling of this matter, and the Standard Oil Company is simply wasting valuable time in trying to reach Rice through some one else. That this has been done I am very sure, but it has had and will not have the least encouragement. I shall endeavor to make myself understood by Mr. Brewster, and am not without hope of causing him to see matters as they are, and not as they are represented to be by others in whom he places confidence. Mr. Dodd hinted at blackmail on the part of Rice, but that is absurd on its face, as I only ask to be heard fairly in an endeavor to settle a matter between these parties now, and which will be more difficult the longer it is delayed. I can settle the matter in less than a week if a fair and accommodating spirit is shown on the other side. I am well pleased with the situation, and again thank you for the kind assistance you have rendered me.

"Sincerely yours,

EDGAR P. HILL."

Now, then, Mr. Dodd a few months later writes a letter to the Hon. Henry Bacon, chairman of the committee on manufactures, giving him the substance of these letters. He says:

"To Hon. Henry Bacon,

"Committee on Manufactures:

"We offer the correspondence on behalf of George Rice with persons connected with the Standard Oil Company to show that he threatened to give troublesome evidence before this committee unless settlement was made with him, and parol evidence to show that the price demanded for settlement was \$550,000.

"Yours, S. C. T. Dodd,

"July 12, 1888. Solicitor Standard Oil Trust."

These letters and all the evidence pertaining thereto had been thrown out by the court and he used it afterwards.

Q. (By Mr. Phillips.) Did Mr. Dodd know that it had been thrown out? A. Certainly he knew; no question about it. You know it is ridiculous and outrageous to have to answer all that, but the charges have been made against me and I think I ought to answer them here.

Q. (By Mr. Jenks.) You never yourself had any communication with Mr. Hill at all? A. No, sir; not a particle.

Q. (By Mr. Farquhar.) Was Hill a broker in New York? A. No, sir; a lawyer. Now, gentlemen, here is a pamphlet that is issued by the great Standard Oil trust. I issued a pamphlet called "Black Death." It was in the papers a good deal at the time. That is my original pamphlet, and the Standard Oil trust issued that kind of a pamphlet with all the vacant places filled up with that scurrilous stuff against me. It is in exact size, same print, same paper, and everything, with the margins filled with a lot of scurrilous matter printed in red ink, and I think it might be well to read it, which will not take long, to show what kind of people they are.

Q. (By Senator Kyle.) Did you attack them in your pamphlet? A. Yes, certainly.

Q. This is in the shape of a rebuttal? A. Yes; I suppose so. Now, they have admitted this, you know, in a suit I had. They have admitted this pamphlet with all this stuff. They say: "If the Standard Oil Company pay George Rice \$250,000 for his refinery, worth \$50,000, can they sell oil any cheaper, or serve the public any better than they do now?" But on the front part they say: "Common sense pricks this hullaballoo." "Such missionaries as George Rice work mostly for George Rice." "Buy the best and cheapest goods of the agents of the Standard Oil Company." "The black border on the first page means blackmail by George Rice." This is issued by the great Standard Oil trust, a great philanthropic institution, which is worth several hundred million dollars, you know, and they say at the bottom of the second page: "Buy the 'Standard' goods." "If George Rice's goods are no better than his pamphlet, you don't want them." "His pamphlet boiled down simply means 'sour grapes.'"

[Other similar quotations in pamphlet.]

They acknowledged this as their property; that they published it.

It is generally known in the oil region that the Oil City Derrick is the organ of the Standard Oil trust, because they do not publish anything against them. It

is all against anybody that attacks the Standard Oil trust.

Q. (By Mr. Phillips.) Is it the habit of the Oil City Derrick to attack independent producers? A. Yes.

Q. Producers engaged in opposition refineries. A. Yes; that is what it does. It attacks everybody that is in opposition to the Standard Oil trust.

Q. Did you ever know of its attacking any member of the Standard trust? A. I never did. I never knew of its attacking anybody in the Standard Oil trust or that has anything to do with the Standard Oil trust. It is known as an organ under the Standard Oil trust throughout the oil region.

Q. You have made sufficient reply to all these matters? A. I suppose I have. I wanted to reply to these things. I don't like this business, but these things have to be answered.

Q. Do you know what the dividends of the Standard Oil Company have been since its organization? A. Why, say \$170,000,000 since 1892, and the 10 years previous would be \$100,000,000—about \$270,000,000.

Q. What is the capital stock sold at? A. It sold in May at 500 on a par of 100.

Q. What would that make the total? A. Half a billion dollars.

Q. Do you know anything about the surplus? A. No, I do not. They do not make a statement to anybody.

GOVERNMENT OWNERSHIP OF RAILROADS.

Q. (By Mr. Clarke.) I would like to ask Mr. Rice if he has any further remedy to recommend to this commission than government ownership of railroads? A. I do not believe I have, Mr. Clarke. The experience of the past 12 years of the interstate commerce law shows that the penalty clause of \$5,000 and two years in the penitentiary for each and every offense is absolutely without effect. I think more drastic measures must be used; and I do not see how freight discrimination can be remedied except by government ownership of railroads.

Q. In your pamphlet you make some allusions to the ease with which certain people can control legislation, especially in the state of New Jersey? A. Yes; I think that by the centralizing of trusts and combinations in one state, it is much easier to control that state in the way of legislation.

Q. Do you not recognize that there would be great danger that if railroads were owned and controlled by the government there would be great abuses, political abuses incident to it? A. No; I do not. For this reason, that I do not know of any instances now of any particular account that any department of the government is run dishonestly. That is to say, every man is getting his equal just deserts. That is the way I understand it. You do not hear of any complaints that the government is being robbed, excepting, of course, occasionally; now and then. In a general way the departments of the government are run honestly, fairly and squarely.

Q. We have heard from you several times today that you do not think the government officials are performing their duty? A. I do not.

Q. Would they be any more likely to do it if they had control of the railroads? A. Yes, they would. If they did not do their duty quite so well, they would have no freight discrimination, which I can tell you would be of great advantage to the people of the country; but as I understand it all government employes do their duty generally.

Q. Do you not think that discriminations can be provided against effectively without government ownership of railroads? A. No; I do not know how it can be. They pay no attention to this severe penalty clause, and as everything shows, discriminations are about as bad to day as ever; but of course they are more covered up, and you do not get onto the worst of it. There was an expert that was employed on the books of the Atchison, Topeka and Santa Fe when that \$7,000,000 of rebates was discovered five years ago. This railroad expert told a friend of mine—this expert who was put on the books—that he was getting into the “meat” of it, and discovering this discrimination, and he had got onto it through a certain key, of a pencil mark on the books, which turned out to be the secret. He was just getting into it when he was shut off, after he had discovered rebates to the extent of \$7,000,000; and he said he thought more could have been discovered if he had had time to work it out. That was told to me by friends on whom I can rely—that the expert told him, and I have no doubt that it is so.

Have I said enough in regard to the existence of the Standard Oil trust? I pretend to say that the Standard Oil trust is growing stronger all the time and that said trust is not dissolved by any means; simply passing resolutions to dissolve it does not dissolve it by any means. I did not know whether I made that plain enough.

Mr. A. L. Harris. I think so.

Washington, D. C., Wednesday, December 13, 1899.

TESTIMONY OF MR. HOWARD PAGE.

Vice President of the Union Tank Line Company.

The commission met at 10.45 a. m., Chairman Kyle presiding.

Mr. Howard Page, of New York city, vice president of the Union Tank Line Company, was introduced and, being duly sworn, testified as follows:

Q. (By Senator Kyle.) State your full name, address and business. A. Howard Page, New York city. I am vice president of the Union Tank Line Company, which is a company that owns the cars in which the Standard Oil Company makes its shipments over the various railroads in the United States. I began in the business with Chess, Carley & Co. in 1878, and continued with that firm until it became the corporation of the Chess-Carley Company, which was in 1881. The Chess-Carley Company was succeeded by the Standard Oil Company of Kentucky, about 1886. Chess, Carley & Co. and the Chess-Carley Company were under the

direct control and management of Mr. F. D. Carley, who was the resident partner and manager at Louisville.

Q. (By Mr. Jenks.) At what time did you go into the employ of the Standard Oil Company? A. The Standard Oil Company of Kentucky was formed about 1886. I was with that company until I came to New York, in 1889, to take a position with the Standard Oil Company of New York. I have been with that company and the Union Tank Line Company since that time.

Q. Have you been immediately connected with the transportation business ever since coming to New York? A. I have, and prior to that time I was in charge of the traffic matters of the Standard Oil Company of Kentucky, and also of the Chess-Carley Company, when I was in Louisville, and also familiar with that part of the business when I was with Chess, Carley & Co.

Q. And in New York with the Standard Oil Company, you were especially in charge of their transportation business? A. As vice president of the Union Tank Line Company, which, as I have stated, is the company that owns all the tank cars in which the Standard Oil Company makes its shipments throughout the United States, I was familiar with the transportation business of the company throughout the United States.

Q. How long have you held your present position as vice president of the Union Tank Line Company? A. Since the formation of the company in 1891.

Q. I understand that you have a general statement that you wish to make? A. I have a memorandum or answer that I wish to offer to the allegations and charges made by Mr. Rice before the commission in regard to transportation and freight arrangements, which he alleges that we have as against himself and other shippers. I have gone in detail into his testimony and will now answer the points which I have picked out.

Mr. A. L. Harris. Mr. Chairman, I do not know but there is a possibility of saving time. As I understand it, there is nothing that the commission desires before the time of the interstate commerce law. I think it is conceded that there were rebates and discriminations previous to that time. Mr. Archbold, when he was on the stand, said that there had been nothing since that time: Mr. Rice claims there has. Will it not be enough if Mr. Page answers the charges made by Mr. Rice regarding discriminations since 1887?

The Witness. I would say, in answer to that, that there are some charges relating to the time before the interstate commerce law, which Mr. Rice has made and reiterated and advertised so frequently that they have come to be believed, and which I think I can answer very satisfactorily, and which we should like to have the opportunity of answering.

Mr. A. L. Harris. There is one particularly that you have in mind, I think, that we have no objection to, and that is “putting another on.” You may make any answer in regard to that.

The Witness. That is the principal one, and it will

not take as much time to answer it, Mr. Harris, as we have taken now.

Mr. A. L. Harris. I wanted to prevent covering the entire ground previous to 1887, when there is no dispute particularly between the Standard Oil Company and Mr. Rice. It is conceded that there were a number of favors granted. But since that time, as I understand, the Standard Oil Company claims to have lived strictly up to the law.

The Witness. Absolutely.

Mr. Phillips. I think, in opposition to my friend, Mr. Harris, that it is entirely competent for the witness to go over the whole ground covered by Mr. Rice. Mr. Rice stated facts; and he has a right, it seems to me, and it is proper, that he should cover the ground covered by Mr. Rice without regard to dates. Of course, what has transpired since the interstate commerce law was enacted is more important to this commission; but if Mr. Rice has made any statements in regard to discriminations before that time, I think the witness should have the privilege and the unlimited privilege of replying to such statements.

Senator Kyle. It strikes me, gentlemen, that inasmuch as Mr. Archbold admits discriminations prior to 1877—

The Witness (interrupting). Admits that we got as low rates as we could prior to 1887.

Q. That there were rebates given prior to that time? A. Yes.

Senator Kyle. That there is no issue except as to some special discriminations against Mr. Rice that he complained about, and as to this Chess-Carley business in Kentucky.

The Witness. That is all; and as I was there at the time and was familiar with it, I think it is only fair to the company that I should be allowed to make a statement.

NO PAYMENT FOR A COPY OF A TRUST AGREEMENT.

Mr. Rice charges that the cotton seed oil trust paid the Standard Oil Company \$250,000 for a copy of its trust agreement. We deny this absolutely as to any amount; in other words, we did not receive a dollar.

ALLEGED FAVORITISM IN THE PURCHASE OF LUBRICATING OILS.

Mr. Rice claims that the railroads paid the Galena Oil Company very high prices for its oils, and this forms a kind of freight discrimination in favor of the Standard Oil Company. Mr. Archbold denied it, and I deny it again. The facts are that the trade secured by the Galena Oil Company is because of the superior and uniform quality of its oils as compared with the ordinary oils on the market. As to the prices paid for the Galena oils as compared with others, the Galena Oil Company sells its oils to railroads under an agreement by which the Galena Oil Company always guarantees that the cost shall not exceed the cost of oils that the railroad has used before, and generally guarantees a reduction. This

guarantee is in the form of a certain cost per train per mile for the different equipments which the railroad runs over its rails. That is, the cost per train mile of engines, freight cars, and passenger cars is found from the railroad's own books, and then the Galena Oil Company guarantees that railroad, after finding the cost of the use of the other oils, that the cost of using Galena oils will be less, and never more, than by using the other oils.

Q. (By Mr. Clarke.) You refer to lubricating oils entirely? A. Lubricating oils entirely, and signal oils.

Q. Signal oils. A. The result of this has been that there has been a great saving in the cost of the lubrication of railroads, and a growing trade to the Galena Oil Company. This saving is produced by the fact that the Galena oil will do more work for the same money than any other oils, and experience has shown that that result has been obtained, and the guarantee is made good. And as regards the amount of money that the railroads pay to the Galena Oil Company for the use of its oils as compared with the cost of the ordinary oils on the market, is shown to be less.

Q. (By Mr. Farquhar.) Has it not been customary for the last thirty years to demand these tests of all persons that present oils for railroad use? Has it not been the custom of the oil trade for thirty years to do as the Galena does? I do not think any other company has gone into it as a science as the Galena Company has done.

Q. Not as to uniformity? A. Nor do I know that they have ever guaranteed the cost of a train mile for a year or a series of years, as the Galena company does. It is immaterial to a railroad if a gallon of oil cost 10 cents or 5 cents, if the 10-cent oil will do work for three miles that the 5-cent oil will only do for one mile. That is simply the result of the use of the Galena oils. The Galena oils, although they have but one price, and a uniform price, and a higher price than the cheaper grades of oil, will do more work, and the railroad will pay less money in a year by the use of those oils than they pay by the use of the cheaper oils; and they are so guaranteed.

Q. (By Mr. Smith.) Has that fact ever been demonstrated? A. Absolutely. The demonstration is proved just by what Mr. Rice claims—that the result has been that 95 per cent—I do not say it is 95 per cent, but I do say the Galena Oil Company has secured the large and growing trade with the railroads; and it could not have done so had not the oils been superior and the results been obtained that they have shown.

Q. You say this large trade with the railroads is due to the superiority of that oil and not to influence brought to bear by the Standard Oil Company? A. Absolutely; the superiority of the oils and the economy that they have given to the lines themselves.

Q. (By Mr. Jenks.) You make the general statement, then, that in no case does the Standard Oil Company receive a higher cost of lubrication from any of the railroads than would be paid to other companies for bad oils? A. Per mile?

Q. Per mile? A. Absolutely.

Q. You do not deny that the Galena Oil Company does receive more per gallon than might be given to some of the other companies? A. For the cheaper grades of oil.

Q. But in no case do they receive more for the same grade of oil than would be given to the other companies? A. I have tried to make myself clear on that. The guaranty of the Galena Oil Company is to the effect that by using their oils the cost per train mile of the various equipments of the railroads is guaranteed to be no more, and is generally guaranteed to be less, than with the use of other oils.

Q. That applies generally to all the railroads to which it is sold? A. Yes; absolutely to all the railroads.

GALENA COMPANY'S PRICES UNIFORM—ITS BUSINESS MULTIPLIED BY TEN IN ELEVEN YEARS.

Q. (By Mr. Smyth.) Do I understand you to say that there is a uniform price for this oil? A. The price is the same to every railroad in the United States.

Q. Regardless of quantity? A. Regardless of quantity. Of course one railroad may use very much more oil than another, but the price per gallon is the same to all railroads all over the United States. The guaranty is not the same, because in running over one railroad, for instance, like the Northern Pacific, or the transcontinental line, the cost is necessarily greater than in running over a railroad like the Pennsylvania or the New York Central; but the guaranty is that the cost, whatever it has been, over the road with which they make the contract, shall not be greater, and generally that it shall be less, than the former cost in the use of the particular oils.

Q. (By Mr. Phillips.) Do you claim that there is no refiner or person engaged in the manufacture of lubricating oil that can make oil equal to the Galena oil? A. I can not answer that; I can only say what the result of the Galena Company's oil and its business has been.

Q. Yes; but you spoke of their guaranteeing a superior quality of oil? A. I did not say guaranteeing a superior quality; I said they guaranteed their cost.

Q. And above the cheaper oils? A. Yes.

Q. The inference would be probably that all others made inferior or cheaper oils than the Galena. A. I did not say.

Q. You did not say it in so many words. A. I said that the result of the use of the Galena oils had been a saving to the railroads in the cost, and that they were justified in guaranteeing that cost by the fact that the Galena oils did better work for the same money than the cheaper grades of oil that were offered on the market.

Q. Did or did not the monopoly of the lubricating oil business, so far as the railroads are concerned, grow up during the time when the rebate system was in vogue everywhere? A. Absolutely not. For

ten years back, during which time the Standard Oil Company has not received a dollar in rebates, the trade of the Galena Oil Company has grown tremendously, and I would say is probably ten times today what it was at the date of the passage of the interstate commerce law.

Q. Did they not get this monopoly of the lubricating business of the country prior to the interstate commerce act, though it has grown largely since? The railroads have increased by thousands and tens of thousands of miles since that day. A. I should think that I had already answered that by saying that today the trade of the Galena Oil Company is ten times what it was ten years ago, and in the last ten years we have not received a dollar in rebates; therefore, prior to the interstate commerce law, when we did receive lower rates of freight than the tariff, as all other shippers did, the trade of the Galena Oil Company was only one-tenth of what it is today.

Q. But still it was practically a monopoly of that business at that date? A. It was not. If they only had one-tenth of the business they have today, they can not have had a monopoly at that time.

Q. Did they not use your oil and other oils? Has not the use of lubricating oil been growing all the time? Was there or was there not any considerable amount of oil furnished by independent or outside people to railroads prior to the interstate commerce act? A. They sold the railroads then and they sell them now.

Q. No considerable amount to the railroads prior to that? A. Oh, yes; as far as my knowledge goes, they did, and they try to now and they do now.

Q. (By Mr. Farquhar.) Is it not a fact that the Galena Company, before it ever came into the Standard, established a lubricating business? A. Yes.

Q. Is it not generally known and understood that the Galena is the best lubricant ever made in this country? Is it not the general reputation among railroad men and all others? A. Its success has certainly proved that.

GALENA COMPANY HAS NOT SOUGHT MANUFACTURING TRADE.

Q. (By Senator Kyle.) How does it commend itself to enterprises outside of railroad companies? A. The Galena Oil Company has made a specialty of the railroad and steamship trade; it does not try to sell the manufacturing and machine trade.

Q. It does not refuse to sell? A. No; it does not refuse to sell, and has also a large and growing trade abroad.

Q. Do not these other private corporations discover the merits of the Galena oil, and if it is cheaper, would not they find this merit out? A. They use those oils, but as I say, the Galena Company has made a specialty of the railroad and steamship business, and while that does still hold, and it is only too glad to sell the mills, it has not made a special branch of the business in that direction.

Q. I want to get the comparative merits of the Galena oil. If private enterprises are still using other brands outside of the Galena, there must be some merit in those, because all those institutions are determined to get and use the very best oil in their business. Economy dictates that. A. But the Galena oil is an oil that is compounded and made especially for the requirements of the railroads. The oil that is required for an engine and for the axles of a freight train is not necessarily the kind of oil that is required in machinery.

Q. The other companies, then, are not catering for that sort of trade; they are not making that kind of oil? (No answer.)

OIL SOLD ON LONG CONTRACTS—PRICES ABSOLUTELY UNIFORM.

Q. (By Mr. Jenks.) Where do you sell this Galena oil to mills, how do the prices quoted to the mills compare with the prices quoted to the railroads? A. Absolutely the same.

Q. Not lower? A. Absolutely the same; not lower.

Q. At what time did the Galena Oil Company go into the Standard Oil Company? A. I do not know.

Q. Does this fact that the Galena oils are sold to the railroads mostly on contract for a year explain the statement that has been made here at different times, that when independent dealers attempted to sell oil to local railroad officials, they were referred invariably to the higher officers of the railroad company? Your own officers also have testified that they had no knowledge of the price of oils to railroads because they themselves, the local managers, did not deal with the local officers. A. That is generally true, I believe, of the supplies used on railroads. The purchasing agent or local division agent of a railroad is not the man that buys for a large system of roads any article that is used to any large extent, and naturally the local man would not know the price of a contract, that would probably be made by the general manager for a series of years, covering the entire lubrication of a railroad.

Q. (By Mr. Farquhar.) All those articles are generally bought by contract by the year? A. The contracts are generally for from three to five years, simply because the results and the economies can not always be demonstrated in one year.

Q. (By Senator Kyle.) They have no schedule prices on those? A. They have an absolute schedule price per gallon.

Q. For from three to five years? A. From three to five years; and they guarantee the cost per train mile of the various equipments run, based on the cost that has been shown before by that same railroad in the use of ordinary oil.

Q. And that price is quoted to all consumers? A. Yes.

Q. Whether railroads or not? A. Yes.

Q. And yet nobody knows it because it is referred to the head officers of the road or of the company? A. I do not think that is a fair inference. What Mr.

Jenks said was that the local man of the railroad does not always know what the prices are that the railroad is paying to the Galena Oil Company for the oils. That is not saying that the Galena Company does not quote these prices to the customer that wants the oil.

Q. They make the same prices to a railroad for a five-year contract that they would for a barrel of oil to a private consumer? A. I know that the price is the same for a barrel of oil on every railroad as outside.

Q. (By Mr. Smyth.) Can you give the price of the oil per barrel? A. I do not know, Mr. Smyth. I know it has a large trade and a growing trade.

DESPEAUX VS. PENNSYLVANIA RAILROAD COMPANY.

In regard to Mr. Newlin's letter to George Rice, alleging freight discriminations by the Pennsylvania Railroad in favor of the Standard Oil Company, as compared with other shippers. I beg to hand you a letter from Solicitor Dodd, addressed to the commission, attached to which are some letters from the attorneys of the railroad in reference to that matter. I will say briefly that Mr. Newlin's deductions, as presented in his letter to Mr. Rice, were the same as argued by him before the United States court at Philadelphia, and the court dismissed the case. The facts in the case, boiled down, are simply that the Standard Oil Company paid exactly the same rate of freight as all other shippers over the Pennsylvania Railroad from and to the various points named in Mr. Newlin's letter, but on such oil as was carried partly by pipe line and partly by railroad, the pipe line was allowed a share of the through rate the same as the railroad would allow any other connection. The pipe line is a common carrier under the laws of Pennsylvania, and on all oil that is gathered in the oil fields and piped toward the seaboard and delivered to the Pennsylvania Railroad as it was at Hamilton, the rate was the same as the through railroad rate, and the pipe line got a share of that rate for its haul as the Pennsylvania Railroad got a share for its haul. The legal and the full explanation is in this letter from Mr. Dodd and the attorneys of the Pennsylvania Railroad, which I shall present as an exhibit.

I.

New York, December 7, 1899.

The United States Industrial Commission.

Dear Sirs: James W. M. Newlin, in his letter to George Rice, which was given in evidence before the United States Industrial Commission, made two specific allegations:

First. That during the years 1881, 1882 and 1883, Fennille Depeaux paid the Pennsylvania Railroad Company 48 cents per barrel for carriage of oil, all rail, from Foxburg to Communipaw, and at the same time, between the same points, the railroad company carried oil for the Standard Oil Company at a reduction of 22½ cents per barrel.

Second. That the Pennsylvania Railroad Company carried oil from McCalmont and other points to Communipaw, charging Fennaille & Depeaux 33 cents per barrel, and at the same time, between the same points, carried oil for the Standard Oil Company of New York for 19.875 cents per barrel.

He further claims that these facts were proven in the case of Fennaille & Despeaux vs. The Pennsylvania Railroad Company.

We desire to make the most specific denial of these statements:

First. That it is not true that oil was so carried for the Standard Oil Company; and

Second. It is not true that any evidence of such fact was given in the case of Fennaille & Despeaux vs. Pennsylvania Railroad Company or any other case, nor was any evidence given, written or oral, from which any sane man could infer such a state of facts. On the contrary, the evidence given was positive that at the dates mentioned the Standard Oil Company paid the same rates on freight as other shippers and received no drawbacks or preferences.

Mr. Newlin, after stating these facts were proven in said case, refers to the specific evidence, which was an agreement between the Pennsylvania Railroad Company and the National Transit Company, dated May 6, 1881. I presume a copy of this agreement was handed to the commission, and it is only necessary to say that the most astute and suspicious mind could not distort the language of that agreement into a support of the allegations which Mr. Newlin bases upon it, and Mr. Newlin should have been more cautious in making such allegation, as he had already been heard in the United States court at Philadelphia on his construction of this agreement, and after argument the case was dismissed by the court for want of any proof of discrimination.

Mr. Newlin claims the discrimination lurks in sections 4 and 8 of the said agreement. The agreement was a joint traffic agreement in regard to oil carried partly by pipe line and partly by rail, the through pipe line at that time having been completed to a point near Milton, Pa. The fourth section is as follows:

"The through rates from the discharging points of the gathering pipes in the region to the destination of the oil, whether the same shall be shipped entirely by rail or by trunk pipe and rail, shall be fixed by the trunk line railroad companies, provided they can agree upon the same, and the transit company agrees to accept thereof as the share due to its through pipes, the proportions hereinafter fixed. The through pipe lines include only such lines as receive oil from the local or gathering pipes and do not include any part of said local gathering pipes."

By this section the railroad companies were authorized to make the through rate, and a distinction was drawn which has always been maintained between the local and gathering lines and the through pipe lines. With the local or gathering pipe lines and their charges for gathering oil, the railroad had no connection, except in the single event provided for in section 8. Charges for oil

carried by the through lines to Milton and thence by rail were prorated between the pipe lines and railway as provided in section 7.

Section 8 is as follows:

"Whenever the through rate from the exit point of gathering pipe shall be less than forty (40) cents per barrel, the local or gathering pipe shall be considered as entitled to a rate equivalent to only one-fourth ($\frac{1}{4}$) of the rate which shall be formed by the addition of the said through rate to the public rate which the local pipe charges, and one-half ($\frac{1}{2}$) of the difference between this one-fourth and the said public rate shall be considered as due and to be paid to the railroad company, but this difference shall never be such as to make the local pipe receive less than ten (10) cents per barrel."

The obvious intention of this so-called dangerous section is to take from the pipe line a certain portion of its charges and give it to the railroad when the through rate is less than 40 cents.

Referring to Mr. Newlin's figures, the first relates to a rate in excess of 40 cents, and he certainly could see, if he has eyes, that section 8 has no reference to such a case. The second table of Mr. Newlin's figures relates to a rate less than 40 cents, and if it referred to carrying oil by pipe line to Milton, or any point on the through lines, and thence by rail to seaboard, it would come within section 8, but it does not so refer. If the Standard had oil carried by rail from Foxburg or McCalmont, it was not affected by this agreement; if it had oil carried by pipe line to Milton and thence by rail to seaboard and the total through rate was 33 cents, it paid the railroads 33 cents and the railroads adjusted the charges with the pipe line company under section 8.

Further, Mr. Newlin's figures are based on a total misreading of section 8. This misreading consists in confounding "through rate from exit point of gathering pipe" and the "public rate which the local pipe charges."

In Mr. Newlin's first figures the through rate from exit point of gathering pipe is 48 cents. The public rate which the local pipe line charges is 20 cents. One-fourth of the sum of these rates is 17 cents.

Mr. Newlin says one-half of the difference between this 17 and 68 cents is the amount the Standard paid the railway company for freight. The contract does not say so. It says one-half of the difference between 17 cents and the "said public rate" shall be paid to the railroad. Referring back to see what "public rate" has been mentioned we find it is "the public rate which the local pipe charges." There is no other reference to "public rate" in the section.

The figures which Mr. Newlin injects instead of the "said public rate" are made up of the through rate from exit point of gathering pipe and the public rate which the local pipe line charges, or 68 cents, while "said public rate" is 20 cents, and one-half of the difference between 17 and 20 is $1\frac{1}{2}$. Therefore, if he had made his figures correctly, he would have shown that the Standard only paid $1\frac{1}{2}$ cents per barrel freight while others were paying 48 cents.

But such a reduction as that would have defeated his purpose.

Pursuing the investigation further, it will be found on Mr. Newlin's theory that "one-half of the difference between this one-fourth and the said public rate" fixed the amount the Standard paid for its freight. If the railroad charged others 60 cents per barrel, the Standard would pay nothing. But if others paid 33 cents per barrel, the Standard would pay 3.37½ cents, and the lower the rates to others the higher to the Standard.

All this is absurd, and the absurdity consists in the misreading and misapplication of the section. It has no reference whatever to the freight rates the Standard shall pay. They were fixed by the railroad without discrimination. When others paid 48 cents the Standard paid 48 cents, and when others paid 33 cents the Standard paid 33 cents, but if oil went part of the way to seaboard by pipe line, under this agreement, the pipe line was paid a pro rata proportion for its share of the transportation. To compensate the railroad for a low rate of freight, the pipe line company agreed to take something from the pipe rate which the local pipe line charged and pay it to the railroad. This only applied when the rate was less than 40 cents, and would increase as the railroad rate diminished below this point, but was "never to be such as to make the local pipe receive less than 10 cents per barrel."

Admit for argument that the Standard and the pipe lines are essentially the same, and what is the result? The Standard received from the railroad company a pro rata amount for its share of the transportation by pipe line, and to recompense the railway company for an exceedingly low rate for through freight, agreed to pay to the railroad company a portion of its local pipe line earnings. It may have been a rebate to the railroad; it certainly was not a rebate to the Standard.

Coming next to the agreement of May 6, 1881, a case of payment to the railroad company is much more clearly shown. The pipe line was then completed to the seaboard. It could not have reached that point without the consent of the railway company, as no free pipe line law then existed in the State of New Jersey. It was still necessary to have a traffic contract with the railroad and to deliver oil to the railroad at different points on the through line, that point being Milton, as before, for oil destined for Philadelphia. In addition to agreeing to prorata rates for oil carried partly by pipe and partly by rail, it was further agreed that if the railroad company did not move 26 per cent of the oil, the Transit Company should pay it the deficiency.

Settlements were made with the railroad company, and one of the settlements is referred to in Mr. Newlin's letter, that of September 30, 1884, which shows a payment to the railroad company for such deficiency, amounting to \$10,722.22.

Many such settlements were put in evidence, all of them showing monthly payments of large amount to the railroad company. None of these were payments for freight, but payments to the railroad

company for deficiency in the amount it carried as specified in the agreement.

Attempting to distort a payment of this kind to the railroad company as a discrimination in favor of the Standard Oil Company ceases to be absurd—it is malicious.

November 29, 1899.

S. C. T. Dodd, Esq.,

Standard Oil Company, 26 Broadway, New York.

Dear Sir: I did not find Mr. Sellers in when I called today, and am now writing without consultation with him. I will, however, supplement this letter by any suggestions which Mr. Sellers may have to make.

Mr. Newlin's claim, to which you refer, is based not upon any oral testimony given at the trial, but entirely upon his construction of the fourth and eighth paragraphs of the agreement of May 6, 1881. This agreement was between the National Transit Company and the railroad company, and it was in our view of the matter simply a traffic agreement between two transporting companies. Mr. Newlin's position, however, was that the National Transit Company was in reality the Standard Oil Company, which owned a large controlling interest in its stock, and his argument is based upon that assumption, and his contention is that any diminution or abatement of the charges of the railroad company under this contract inured to the advantage of the Standard Oil Company and was to be treated as if it were an allowance or rebate to the latter company.

He arrives at the figures which you give in your letter in this manner:

He considers the fourth and eighth paragraphs in the agreement together, and he contends that the provisions as to through rate contained in the latter paragraph, when read in connection with the former, are applicable to through rates, whether the same are greater or less than 40 cents per barrel from Foxburg to Communipaw. Assuming this to be so, Mr. Newlin's calculation is as follows:

The eighth paragraph provides:

"Whenever the through rate from the exit point of gathering pipe shall be less than 40 cents per barrel, the local or gathering pipe shall be considered as entitled to a rate equivalent to only one-fourth of the rate which shall be formed by the addition of the said through rate to the public rate which the local pipe charges, and one-half of the difference between this one-fourth and the said public rate shall be considered as due and to be paid to the railroad company, but this difference shall never be such as to make the local pipe receive less than ten cents per barrel."

The through rate by rail was 48 cents.

The public rate of the local or gathering pipe line was 20 cents.

The calculation, therefore, would be thus: 48 plus 20 equals 68; one-fourth of 68 equals 17; one-half of 51 equals 25½; 48 minus 25½ equals 22½.

The above calculation is the basis on which Mr. Newlin's allegation, in his letter to Mr. Rice, to which you refer, is based.

The 19.875 cents per barrel is arrived at by Mr. Newlin in this way, the calculation being at the rate of 33 cents per barrel from McCalmont to Communipaw on the same principle as above. Thus: 33 plus 20 equals 53; one-fourth of 53 equals 13.25; one-fourth of 39.75 equals 19.875.

This is the way in which he gets his figures showing, as he says, that the Standard Oil Company was charged that amount only for transportation.

In addition to the obvious replies that the arrangement was a traffic arrangement, and that such an agreement can not be construed as a rebate to a shipper simply because that shipper happens to be a stockholder, and even a controlling stockholder, in one of the transportation companies, there are other answers based upon the language itself of paragraphs 4 and 8. The assumption that the provision in paragraph 8, when the rate is less than 40 cents, shall be applicable to paragraph 4, which refers to a rate above 40 cents, would seem to be without warrant. Moreover, the "one-half of the difference between this one-fourth and the said public rate" refers to the difference between the said one-fourth (made up of the through rate by rail to the public rate by local pipe charges) and the rate of local pipe charge—that is, 20 cents. In other words, instead of taking one-half of 51 (see above calculation), there should be taken one-half of 3, being 20 less 17, or 1½.

Whether I am right in this last calculation or not, it is nevertheless true, as I have stated above, that there was no evidence whatever, oral or written, which was introduced at the trial, which justifies Mr. Newlin's assertion; but that assertion rests altogether upon his forced construction of the fourth and eighth paragraphs of the agreement of 1881, which I have endeavored to explain.

If the foregoing is not sufficiently clear to you, let me know and I will endeavor to make it plain.

Truly yours,

GEO. TUCKER BISPHAM.

Attached thereto is the following:

Law offices of Geo Tucker Bispham, A. H. Wintersteen, John Hampton Barnes, Sharswood Brinton. Girard Building, Broad and Chestnut streets, Philadelphia. Despeaux vs. P. R. R.

December 6, 1899.

S. C. T. Dodd, Esq.,

26 Broadway, New York.

Dear Sir: I have your favor of the 5th instant.

After the plaintiff closed his evidence a motion for a nonsuit was made and fully argued by Mr. Sellers

and myself on the part of the defendant and by Mr. Newlin for the plaintiff. The motion for a nonsuit was granted. Mr. Newlin made a motion to take it off, and this was subsequently argued and the motion denied. The nonsuit therefore stands. Mr. Newlin has taken an appeal to the circuit court of appeals, but there has been some difficulty about settling a bill of exceptions. When this is finally adjusted I will advise you. Meanwhile the above will give you the present condition of affairs.

Truly yours,

GEORGE TUCKER BISPHAM.

Q. (By Mr. Jenks.) Have those pipe line and railway companies changed their rates on oil since 1894? A. You go back too far for me. I can say that the rate for oil of the Pennsylvania Railroad Company, both for pipe and rail, is the same as it was when I came to New York nearly ten years ago.

Q. A copy of the contract was furnished by Mr. Archbold, and fixed the dates pretty definitely. But you say the rates have not changed for ten years? A. For ten years.

"PLEASE TURN ANOTHER SCREW."

Regarding the letter from Chess, Carley & Co. to J. M. Culp, general freight agent of the Louisville and Nashville railroad, June 16, 1881, in which the expression was used: "Please turn another screw." The firm of Chess, Carley & Co. was a partnership in which the Standard Oil Company of Cleveland had an interest. This was before the formation of the Standard Oil Trust, which was formed in 1882, and the firm of Chess, Carley & Co., as I have testified, was a partnership in which Mr. F. D. Carley was the resident partner and manager. The Standard Oil Company of Ohio had an interest in the Chess-Carley business, but absolutely no control or direction of that company's affairs. I was in the office, and the only boss we knew was Mr. F. D. Carley. I should like to refer, in regard to Mr. Carley's control of that business, to his testimony taken before the Bacon committee in 1888. On page 526 of that committee's report Mr. Carley testified as follows (reading):

"Q. Were you a member of the firm of Chess, Carley & Co.? A. Yes, sir.

"Q. At what time? A. Through its whole history.

"Q. Over what years does that extend? A. I do not remember exactly, but think somewhere about 1869 or 1870 we formed that firm.

"Q. When did you terminate it? A. When we formed the Chess-Carley Company.

"Q. When was that? A. Four or five years ago. I was president of it until its dissolution.

"Q. State whether or not it was dissolved when it sold its property to the Standard Oil Company? A. Yes, sir.

"Q. Are you connected with the Standard Oil Company? A. No, sir.

"Q. You occupy no position under it? A. No, sir.

"Q. Where did you reside during the time you were a member of the firm of Chess, Carley & Co. and the Chess-Carley Company? A. Louisville, Ky.

"Q. Had you charge of that business? A. Yes, sir;

I was sole and exclusive manager of the Chess, Carley & Co. and of the Chess-Carley Company."

The party who wrote this letter (and without the knowledge of Mr. Carley) was a Mr. Hathaway, who had formerly been in the Louisville and Nashville railroad employ. His explanation of this letter was that when errors occurred in the Louisville and Nashville railroad office there was an expression used, that the machinery of the office was loose," and it should be corrected or tightened up by turning a screw. In the case referred to, the shipment of a car of oil by Rice to Nashville was billed at less than the regular tariff rate which other shippers were paying, and Hathaway simply called their attention to the error and used the expression referred to. By reference to page 530 in the book of testimony taken before the committee on manufactures in 1888, it will be seen that Mr. F. D. Carley testified as follows (reading):

"This much I know about this letter that Hathaway wrote. He would say to me, 'Mr. Carley, there is another car load gone through to Wilkerson,' or to whoever it might be. I said, 'I do not think it is right on the part of the road. Can not you get them to stop it? I mentioned it to them before. They said it was the fault of the clerk; that it was clerical.'"

Now, on page 524 of the same book, Mr. J. M. Culp, who is the gentleman to whom the letter was addressed, and who was general freight agent of the Louisville and Nashville road, and who is now traffic manager of the Southern railway here, testified as follows (reading):

"I desire to say, with regard to that letter, or rather with regard to the rate charged on the shipment referred to in that letter, that it was less than the proper rate. It was less than any rate that we had with Chess, Carley & Co., or I believe ever have had. It was a fifth class rate. Our rate on oil from Louisville to Nashville was higher than fifth class, and I presume the desire of Chess, Carley & Co. was to have at least as high a rate as was charged on their shipments charged on this. Had that letter come to me—had I seen the letter—I would have simply understood it that it meant that we should require our agents to charge at least as high a rate as was charged on the shipments of Chess, Carley & Co.

This is the explanation of it, and in my opinion a very reasonable one. The facts are, as Mr. Culp has testified, and as I recollect the occurrence, that the rate charged on that shipment was less than we were paying, at that time and less than we ever paid, even prior to the interstate commerce law.

CHESS, CARLEY & CO.'S GROCERY STORE.

Mr. Rice alleges that the Standard Oil Company established grocery stores in the south. This was before the Standard Oil Company had any control or direction in Chess, Carley & Co.'s business, as that business was entirely under the control of Mr. F. D. Carley. And the establishment of that grocery store, as referred to by Mr. Rice, was during the time of Chess, Carley & Co.

Q. (By Mr. Jenks.)* Such a grocery was establish-

ed by Chess, Carley & Co. for the purpose alleged by Mr. Rice? A. There was such a store.

Q. (By Mr. Smyth.) Was there only one? A. Only one.

Q. (By Mr. Jenks.) Was it established for the purpose of driving out a competitor in the oil business? A. I did not say that. I say that Chess, Carley & Co. established that store to sell groceries and oil, the same as there were stores established selling oil and groceries.

Q. Did Chess, Carley & Co. have stores elsewhere for the purpose of selling groceries and oil? A. No; it only had that grocery store. Probably the profits of that were not sufficient to justify any extension.

Q. (By Mr. Smith.) Where was that store? A. Columbus, Miss.; but the Standard Oil Company had no more to do with it than that stenographer.

Q. (By Senator Kyle.) Have the Standard Oil Company ever indulged in such a practice? A. It has not to my knowledge, in any way or at any place.

Q. Prior to the interstate commerce act or since? A. Not to my knowledge.

Q. Have they ever made any threats in that direction through their agents? A. Not to my knowledge.

Q. You do not know, then? A. I do not.

TANK CARS.

Regarding McDougal declining to build tank cars for Rice on credit, the Standard Oil Company never directly or indirectly had anything to do with it and never had any knowledge of it until it was seen in Mr. Rice's testimony.

The charge that the Standard Oil Company bought up tank cars from railroads, in order to keep them from other shippers is positively denied.

As to railroads owning tank cars, I would say that the tank car is a special car, used for the transportation principally of petroleum, and it would be a burden upon the railroads if they were required to invest their capital in tank cars. The ownership of the car would not insure transportation of oil, and if every railroad were required to have a sufficient tank car equipment to do the oil business that at times moves over its rails it would mean the building of many more tank cars than the business would require. For instance, say it would require 200 tank cars, costing \$150,000, to transport oil between Chicago and St. Paul and Minneapolis. There are five lines competing for this business, and if each railroad was required to own 200 cars there would be four times as many tank cars as the business would require. Take as another example the McDonald field, which was a producing field and is now. At one time it produced oil to the extent of 60,000 to 80,000 barrels a day. It has run down now to 5,000 barrels. If the Pennsylvania road and the Lake Erie and Western, which are the two roads which touch that field, had been required to furnish tank cars to move the oil produced in the McDonald field when it was producing 60,000 to 80,000 barrels a day those roads would be in rather bad shape with their tank cars now, when there is only 5,000 barrels to move from there. A tank car is just

like a Pullman car; you might just as well require a railroad to own all the Pullman cars that are necessary to go over its road as to require the railroad company to own all the tank cars that may at times go over its rails.

Q. (By Mr. Kennedy.) Can you state which is the cheaper system for the railroads to employ in the transporting of oil—the tank car or barrels? A. I would like to say now the tank car by all means. But Mr. Rice referred especially to that in his evidence, and I will touch that later on. If you will allow me to proceed in the regular order of his testimony, I think it is better to go right through it.

TANK CARS FAVORED AS AGAINST BARRELS.

Mr. Rice alleged great discriminations in favor of the Standard Oil Company as against himself for a year or so after the passage of the law. I would say that he refers to the published tariffs of the various railroads, that were published and printed and open for all on the Louisville and Nashville railroad and other railroads which at that time made lower rates on oil in tank cars than on oil in car loads in barrels. These were published tariffs and open to everybody, and Mr. Rice and other shippers shipped in tank cars as well as the Standard Oil Company, and the Standard Oil Company shipped oil in barrels and car loads the same as Mr. Rice and other shippers. It was simply a tariff rate in which the railroads made a difference between the tank car rate and the barrel box car rate, and it was open to all; there was no discrimination between parties at all. It was a discrimination, or difference rather, between two modes of shipment.

Q. (By Mr. Jenks.) At that time had there been any ruling upon the relative rates for tank cars and barrel shipments by the interstate commerce commission? A. There had not been; but in 1888 Judge Cooley, of the interstate commerce commission, ordered that the rates per hundred pounds on oil in tank cars as well as on oil in barrels in car loads, including the weight of the barrels, should be made the same, and the railroads adjusted their tariffs according to that, and the tariffs remain on that basis today.

Q. At the time Mr. Rice claims he was discriminated against in this way was he, as a matter of fact, shipping oil in tank cars? A. He had a few tank cars, and other shippers had tank cars; and as far as the higher rates on oil in barrels are concerned, the Standard Oil Company was shipping more in barrels than all the others put together.

Q. How about the relative amounts in barrels and in tank cars shipped at that time over these roads? A. At that time I would say that, as I recall the evidence which was given at that time in this book, our car load shipments were in excess of our tank car shipments.

Q. Your barrel shipments? A. Our barrel shipments were in excess of our tank car shipments.

Q. Over those roads on which you said the discriminations were made? A. Over those roads the shipments—prior to those shipments the rates were made on barreled oil and tank cars; the tariffs were published, and they simply pursued that same system

of making rates, and it was open to everybody that had both methods of shipment.

Q. And other shippers than the Standard Oil Company had both modes of shipment which they were using? A. Absolutely.

"OUTAGE" OF 62 GALLONS ON TANK CAR SHIPMENTS.

Mr. Rice refers to outage of 62 gallons and then 42 gallons which was made on all tank car shipments. This was an allowance for the average loss between the full shell capacity of the tank car, which tank car was loaded at the loading point, and the amount that was taken by actual measurement to be received in the tank car at destination. This allowance was made to all tank car shippers alike and was reasonable, as the actual loss was in excess of the allowance. The allowance, however, was discontinued in the summer of 1892, and has never been reinstated. The principle of that allowance was simply that the railroad ought not to charge on a quantity greater than it delivered, and as the actual result and experience had shown that there was a loss between the amount of oil put into the tank car at the refinery and the amount delivered at the point of destination, an allowance was made, which was very small, at that time 62 gallons, and at another time 42 gallons; but this, as I say, since 1892 has been done away with completely.

ESTIMATED AVERAGE WEIGHT OF PETROLEUM PRODUCTS.

Mr. Rice refers to the relative charge made by railroads between oil in tank cars and oil in barrels in car loads. The railroads receive a very much larger percentage of live weight on oil in tank cars than on oil in barrels. Railroads charge and collect freight on tank car shipments at full shell capacity of the tank car, no matter whether that tank car is loaded to its full capacity or not. The average capacity of the Union Tank Line Company's cars today is 140 barrels, and it is on that basis that the railroads charge and collect their freight.

Q. (By Mr. Smyth.) You do not weigh the cars? A. The weight of the petroleum in tank cars is taken on the basis of the full shell capacity of the tank, based on an average weight of 6.4 pounds to the gallon. The reason for that is that some products of petroleum, such as naphtha, weigh from $5\frac{1}{4}$ to $5\frac{3}{4}$ pounds to the gallon; refined oil weighs $6\frac{1}{2}$; lubricating oil weighs from $7\frac{1}{4}$ to $7\frac{1}{2}$ pounds to the gallon and the average weight of 6.4 pounds represents the actual average weight of the various products of petroleum as they are manufactured and as they are shipped through the United States; and the reason the railroads have made such a rule is to prevent misrepresentation and the cost that would be involved in weighing every tank car. You can see that it would be a very difficult matter for a railroad to get the actual weight of tank car shipments, because those tank cars are first loaded at the refinery and not in the railroad yard, as ordinary freight is, and then pulled out by the railroad. They could only weigh, therefore, the full tank car with the weight of the car added to it, and that car is probably destined to some

point away beyond that railroad that receives it on its rails. So the custom has been ever since I have had any knowledge of the business to have one average weight which applies to all products alike and applies to all shipments alike.

Q. The average is both as to weight and capacity? A. No; the average is as to weight. The capacity of the tank car varies, and the capacity is shown by the various tank car owners to the railroads, and they publish it at large to the world in the form of this tank gauge handbook, which shows the actual number, owner and capacity of every tank car that is used over the various lines in the United States today.

Q. (By Senator Kyle.) And the average charge is, as you state, 6.4 pounds to the gallon? A. To the gallon.

Q. For the full tank capacity? A. Full shell capacity of the car.

Q. (By Mr. Smyth.) Do all the large refining concerns own tank cars? A. Very largely. I will show you the tank car ownership in the United States in a few moments. The same rule applies, I might say, where oil is shipped in barrels. There is an average of 400 pounds applied to the various products of petroleum. Some weigh less and some more, but 400 pounds is the accepted weight on railroads on all petroleum products.

TANK CARS RETURNED FREE.

Q. (By Mr. Clarke.) Those which you have referred to are for freight one way, I suppose? A. The freight rate is charged, of course, only on the freight that is hauled.

Q. (By Mr. Smyth.) Does the car come back empty? The car comes back empty; the tank car as well as the box car, very largely, simply because the box car when loaded with oil is unfit for use for sundry merchandise. You will find that every large oil carrying railroad in the United States has the box cars marked "oil," meaning that they can be used only for oil. I do not mean to say they are never used for any other freight, but they are set aside for that purpose.

Q. (By Senator Kyle.) Is there any charge for these return tanks? A. No charge.

Q. Has there ever been a charge for return tanks? A. No, sir; not in my recollection.

Q. Have they ever charged the independent companies outside of the Standard Oil Company for the return of these tanks? A. No, sir. They charge the Standard Oil Company the same rate. I mean to say that since the passage of the interstate commerce law there has been no charge on the return of what is known as regular tank cars, the cylinder tank car, within the United States, excepting to one section.

Q. (By Mr. Smyth.) There is no freight charged on empty cars, is there? A. No, sir.

ADVANTAGE OF TANK CARS.

I digress from this question as to the relative charge. I have stated that the average capacity of the Union Tank line car today is 140 barrels. The min-

imum weight required by railroads in the shipment of oil in barrels is 60 barrels, and not one per cent of the car loads of oil in barrels in the United States run over 60 barrels, from the fact that even loading 60 barrels in an ordinary box car requires putting them up on top of the lower tier. This is an expense to the owner and the railroad, and it also causes leakage from the rolling of the barrels on top. The result is that car loads of oil shipped in barrels in box cars average 60 barrels as against the average capacity of tank cars of 140 barrels. Therefore one tank car holds twice as much as a box car when loaded with oil and the railroads receive their pay accordingly.

Q. It takes less cars? A. Necessarily. It means one car instead of two for the same freight. It means carrying two cars for one; all expense of handling, and the cost of two cars.

Q. (By Senator Kyle.) And the expense of unloading is less? A. Yes; in the tank car. It is universally loaded by the shipper and unloaded by the consignee. In the box car it is generally loaded by the shipper and very often unloaded by the railroad in their depot. The tank car never is.

Q. (By Mr. Jenks.) Is the freight rate the same per barrel, whether in barrels or in tank cars? A. It is the same rate per 100 pounds. In barrels the weight of the barrels is charged for.

Q. So when shipped in barrels freight is charged on 400 pounds? A. Yes.

Q. When in tank cars it is 300 pounds for the same amount of oil. A. Yes.

Q. That makes shipping by tank car cheaper than by barrel? A. Absolutely; but the barrel is an article of merchandise. When the oil is sold in barrels the value of the barrel is added to it. There is no ground why the railroad should, on an article of merchandise, which the barrel is, receive no pay for the shipment. Admitting the pay on the weight of the barrel, the railroad then only gets half as much revenue on the oil in barrels as on tank cars of oil.

TARIFFS NOT MADE UP AT NO. 26 BROADWAY.

Mr. Rice charges that railroad tariffs were issued from No. 26 Broadway. I deny positively that we have ever made or promulgated any railroad tariff by any Standard Oil Company interest, and I am positive that no railroad tariff was ever promulgated by any Standard Oil Company interest.

Mr. Phillips. I will ask Colonel Clarke to take the chair, as I expect to ask some questions in a short time. I shall be obliged to you, colonel, if you will take the chair.

Q. (By Mr. Jenks.) You say that no oil tariff has been made or promulgated by any of the Standard Oil Companies. I suppose that when that statement was made it was not intended to be taken literally. Would you go so far as to say that the Standard Oil Company, or the Standard Oil officials, did not reason with railroad officials in order to get them to agree upon what they considered to be a fair and just rate of freight on oil? A. I certainly do not wish to be understood that myself or possibly others of our representatives have not seen railroads in regard to tariffs

on the shipments. We do have intercourse with railroad officials, as every large shipper probably does, but that we have ever issued— Mr. Rice's intent certainly was to give the idea that we simply named a rate and sent it to the railroads to accept. It is not true.

RATES NOT ARRANGED TO FAVOR STANDARD OIL SHIPPING POINTS.

Q. Is it a fact, as has been frequently stated, that over lines of railroad where the Standard Oil Company has very large shipments the rates on oil are frequently made, relatively speaking, lower than over other roads where the business rivals of the Standard Oil Company have large shipments and where the Standard Oil Company's interests are relatively small, and that this difference in rates to the advantage of the Standard Oil Company is brought about by the influence of the Standard Oil Company officials? A. That is absolutely not true, sir. In the first place I do not know any railroad on which competitors of the Standard Oil Company ship that we do not ship on ourselves; and the oil rates of the United States from the various oil shipping points are on a basis. In other words, the same rates apply from all of the Pennsylvania oil fields, both east and west, and the same is true of the Lima field; and while we may not be located at the very point some competitor is, he has the same rate from his shipping point in that field that we have from our shipping point in the same field.

Q. Your main distributing points are, I suppose, ordinarily different from those of your chief competitors. Would you be able to secure rates from your main distributing points which would affect your business favorably and not affect your rivals in the same way? Is that frequently true? A. I do not think it is, sir. I can only say that we get exactly the same rate from the same point and to the same point that every other shipper pays from and to that point.

STANDARD MEN CONNECTED WITH RAILROADS DO NOT GET SPECIAL RATES FOR THE STANDARD.

Q. (By Mr. Kennedy.) Are the Standard Oil Company officials stockholders ever in a position, as railroad officials, where they can give favors to the Standard Oil Company in its shipments? A. I am glad you asked that question, sir. I do not think it, but I know. Mr. Rice wishes to give that impression, and I can say in reply that since I have had any knowledge of railroad rates on the Standard Oil Company's business, no official of the Standard Oil Company who is connected with railroads has ever made a rate or arrangement for the Standard Oil Company, nor have any of those gentlemen who are connected and have interests with railroads ever asked me to give any undue or unreasonable, or in fact, any share of the Standard Oil Company business over such a railroad. In other words, the Standard Oil Company's business stands on its own merits; and as I before said, none of these gentlemen who may or may

not have interests in these various railroads have ever made a rate or made an arrangement for Standard Oil Company business. That business is done by me, or by the proper party in whose territory or district the question may arise.

Q. Should you be sure to know whether that was so or not? A. I should know. If any of the gentlemen who have large railroad interests, as alleged, made a tariff or arrangement with a railroad for our business, I certainly should know of it. I should be advised of it, as I am the proper department that has a record of those rates, and should have to know, necessarily.

Q. (By Mr. Smyth.) Do we understand that shipments of the Standard Oil Company have not been influenced toward certain lines by the fact that the officers of the Standard Oil Company were reputed to be large owners of the stock in those lines? A. In no way, sir; and you can readily see that if the Standard Oil Company's business was run on the basis of favoring the individual interests of the different stockholders of the Standard Oil Company, the company's business itself would necessarily suffer.

Q. (By Mr. A. L. Harris.) It is true that officers of the Standard Oil Company have offices in different railroads? A. It is true that Mr. William Rockefeller, for instance, is a director in some of the railroads. He probably is also a bondholder in the United States, but there is no connection between such interests and the interests of the Standard Oil Company, or the business of the Standard Oil Company.

ALLEGED TANK CAR DISCRIMINATIONS.

Q. (By Mr. Clarke.) We will proceed.

The witness. Mr. Rice refers to a rule of the Southwestern bureau in regard to charging on the weight of a tank, when that tank is intended for storage, at the same rate as on the oil contained in the tank. If, as Rice alleges, the Standard Oil Company owns nearly all the sub-stations of the country, this rule is hard on the Standard Oil Company. If the railroads wished to discriminate in favor of the Standard Oil Company, they would carry the weight of the tank free the same as they do the regular tank car. Do you understand? Here is a tank that is intended to be used as a storage tank at some sub-station. It is loaded with oil and sent to that station. The railroad rule referred to charges the same rate per hundred pounds on the weight of the tank as on the oil contained in the tank. Now, ordinarily on the tank car there would be no charge for the weight of the tank. If they wanted to favor us, all they would have to do would be to treat that tank containing the oil as they do the ordinary tank car.

Q. (By Mr. Phillips.) There is one question I want to ask. That is in regard to shipping oil by barrel and by tank car. Has it not been testified that it is much more dangerous to ship oil in tank cars than in barrels, in case of collision and fire? A. It may have been so testified, sir. Different men have their different opinions; but the answer to that is that the tank car is growing in favor, not only in the shipping

of petroleum, but in shipping all other liquid products, which are open to the same objection. I think the economy in shipping in tank cars over shipping in barrels, which is being shown by the enormous growth in the use of tank cars for a great many liquids, proves that the tank car is a better method for shipping. And the Central Freight Association rule to which he refers is entirely proper, as it is intended to prevent the unloading of bulk petroleum in railroad yards or depots without proper facilities, as such unloading would increase the danger of loss by fire. The rule simply means that they will not allow a tank car to be held in the depot or in the yard of a railroad to be unloaded by improper means into a tank wagon or into barrels, as leakage or accident might result, to the large loss of the surrounding property, and they simply require that proper facilities should be at the point where the tank car is shipped to.

The Southern Pacific tariff: The rule referred to was submitted to the interstate commerce commission, who did not order it stopped when they decided the transcontinental case of 1890.

Q. (By Mr. Jenks.) Will you be kind enough to state the rule? A that rule was simply the rule by which the transcontinental lines charged for returning the cylinder car, and did not charge for returning what is known as the box tank car. The box tank car is a car which has a tank in each end and loading space between. There are other shippers besides the Standard Oil Company that ship and own these cars, and the Standard Oil Company ship both these cars and cylinder cars to the transcontinental points, and they pay exactly the same rates on cylinder cars as other shippers and get their box cars returned free the same as other shippers.

TEMPORARY REDUCTION FOR THE PROFIT OF THE STANDARD.

Regarding alleged correspondence from the Standard Oil Company's San Francisco office, I know nothing about this correspondence and can not verify it. It would be fair to say, however, that I have full knowledge on all rates paid in California, and I can say positively we pay the tariff rates in force at the time of shipments, wherever made; Mr. Rice's charge there was that the rates were put up at one season and put down at another from Chicago and other eastern points to the transcontinental points. I can say, and the interstate commerce commission can affirm, that the rates on petroleum and its products from Chicago and other transcontinental points have not been changed since March 2, 1891. The rates have absolutely been the same for nearly nine years.

"COMMISSIONS ON FREIGHT."

Regarding commissions on freight business and charges that the Standard Oil Company make their own commission, it is absolutely false, and I state unqualifiedly that the Standard Oil Company has never received, either directly or indirectly, a commission from any railroad in any form since the passage of the interstate commerce law.

Q. (By Mr. Phillips.) Should you be in a position to know absolutely if it received any? A. I should, sir.

Q. In regard to all railroads and transportation? A. I should, sir.

Q. And in regard to divisions and local freights in certain sections, and so on,, would it bar others than the Standard Oil Company from entering those sections? You would be in position to know all about that, should you, either directly or indirectly? A. I did not catch the last part of your question. I should know if the Standard Oil Company received any benefits throughout the United States, and I would unqualifiedly say they have not.

AS TO LOCAL RATES FAVORABLE TO THE STANDARD.

Q. I think it has been testified before this commission that in certain sections of the country, while they may have a through rate of freight up to a certain division of the United States, local rates are made so that independent refiners can not enter those portions, and in a way, indirectly, the Standard Oil Company has an advantage, which would be similar, and perhaps superior to a rebate or drawback? A. If you mean, sir, because we have refineries at the Atlantic seaboard to supply New England and at Chicago to supply the west, as compared with the man who has his refinery in the oil regions and tries to supply both the west and New England, I admit we have advantages; but I say we pay the same rate of freight from the same shipping point to the same destination as every other shipper does.

Q. And there are no local rates, as far as your knowledge goes, that would interfere with the independents entering that subdivision? A. Whatever the local rate is from any point to any point we pay the same as any other shipper pays from that point to that point.

Mr. Clarke. You may proceed.

RECEIVERS COWEN AND MURRAY'S LETTER.

The witness. In regard to the letter from Receivers Cowen and Murray to the interstate commerce commission, in which they admit paying rebates since the passage of the interstate commerce law, and which Mr. Rice assumed means paying us large rebates, I would say positively that since the passage of the interstate commerce law the Baltimore and Ohio railroad has not paid us one dollar in rebates, or in any way made any concession from their tariff rates. Mr. Archbold filed with this commission a letter from the Baltimore and Ohio railroad dated August 21, 1899, confirming this statement.

Q. (By Mr. Kennedy.) Would you say that an inspection of the books of the Baltimore and Ohio Railroad Company would not show that rebates or discriminations or commissions or anything of the kind had been paid to the Standard Oil Company since the passage of the interstate commerce law? A. I would; absolutely, sir.

Q. (By Mr. Smyth.) You know Mr. Rice stated that rebates were not paid, but that commissions were

given to persons to secure the business of the Standard Oil Company and others? You deny that? A. Previously I denied that we received commissions in any form from any railroads. That applies particularly to the Baltimore and Ohio and any other railroad you wish to point out.

UNDERBILLING OF TANK CARS.

Regarding alleged underweighing of tank car shipments from Boston to Newport, R. I.: For most of the years 1896 and 1897 we were making occasional shipments of naphtha in tank cars from Boston to the Newport Gas Company. The shipments altogether amounted to some 15 or 20 tank cars during the entire period. On three or four of the cars the New York, New Haven and Hartford railroad, through clerical error, billed these cars at less than their actual weight. This resulted in an under charge. As soon as it was discovered the balance due was paid.

The railroads transporting these shipments, as well as all railroads of the United States, had the actual capacity of all these cars, and the error occurred through no fault of the Standard Oil Company.

I shall hand as an exhibit Tank Gauge Book No. 4, which is the fourth book which has been published by the Central Freight Association, giving the capacity of all tank cars of the Union Tank Line Company. The same publication has been in the hands of the railroads for the past ten or fifteen years. This book contains the number and the capacity of the tank cars referred to by Mr. Rice. We furnished this information to the railroads, and we submit that it is not likely that, having furnished the actual capacity of the cars to the railroads, we would go to these same railroads on interstate shipments and show a less rate, because it would simply mean that we would know that we were violating the law and furnishing evidence to prove that we had.

The interstate commerce commission through Commissioner Prouty, investigated this charge at Boston, March 12, 1898, and after the investigation dropped it, as it was clearly shown by testimony taken there that the mistakes were simply clerical errors. I wish to offer a sworn statement of Vice President Hall (now president) of the New York, New Haven and Hartford railroad, which was given in answer to the request of the interstate commerce commission in regard to this very matter, in which he gives the detail of the shipments for the two years. I read from his answer that the mistakes occurred "through error of this (railroad) company's agent and without misrepresentation or fault on the part of the shipper."

I refer now particularly to the two cars which Mr. Rice refers to; two cars containing 100,986 pounds which were carried at 48,000 pounds.

Q. (By Mr. Jenks.) Was this the same case investigated by Mr. Prouty? A. Yes. Vice President Hall, who is now president of the New Haven road, says this in his sworn answer: "(h) On the 19th day of May, 1897, this company received from the Boston and Albany Railroad Company at Boston two U. T. L. cars, Nos. 7915 and 1286, consigned to the Newport Gaslight Company, containing naphtha, weight

48,000 pounds, which this company rebilled from Boston to Newport at its rate of 10 cents per 100 pounds; total charges \$48. Said weight was that given in the waybill of the Boston and Albany Railroad Company as delivered to this company and accepted through error of this company's agent and without misrepresentation or fault on the part of the shipper. It was subsequently found that the weight should have been 100,986 pounds, and correction thereof was made. Its charge of 10 cents per 100 pounds on the difference, amounting to \$52.98, was collected.

I also offer in connection with that case the testimony taken before Commissioner Prouty at the hearing in Boston March 12, 1898, and I would like to read from Mr. Winlock's testimony at that time. Mr. Winlock was general agent of the New Haven road at Boston, and testified that he had full charge of rates from Boston to all points on the New Haven road.

Mr. Winlock says: "I have nothing to say except what Mr. Page has said, so far as the relations between the New Haven road and the Standard Oil Company are concerned, is absolutely true. There is no arrangement of any kind between the Standard Oil Company and the New Haven road by which they can get any better rates, whether it is by a rebate, or by underbilling, or by anything of that kind, than what everybody else gets. Our rates are published, and posted for everybody. These under charges in weight were errors of our local agents in accepting them as such. They should have investigated the matter more than they did. Instead of blindly taking the weights given by the Boston and Albany railroad vouchers, they should have taken some means, as they did in nearly every other case, to get at the proper weights. The tariffs to Newport were based on actual weight, and instead of taking this constructive tonnage of the Boston and Albany road, which they used for purposes of their own, they should have taken, as I have said, some means of ascertaining the weights in every case. The other cases were errors of theirs."

Q. (By Mr. Jenks.) I see in the testimony that the weights are taken from the Boston and Albany. I understand your shipping point is East Boston? A. It is.

Q. And the Boston and Albany road takes the oil from East Boston to where it delivers to the New Haven and Hartford? A. Yes.

Q. Is it true, as has been stated, that when oil is delivered to the Boston and Albany road by your people the billing is done by your people, directly, and that you furnish the weights to the Boston and Albany? A. It is not true, sir, as was shown in this testimony. I will explain it: Our works are located at East Boston on the Boston and Albany road. The Boston and Albany road have to switch any car from Boston to East Boston, where the cars are delivered to the New Haven road. That switching charge, as I recall it, is \$6 per car; either \$4 or \$6 per car. The Boston and Albany road, like many other roads, wishes to show the tonnage, whether the rates are per car or per hundred pounds; and where the rate is per car, as in this instance, it probably uses 24,000 pounds, which is the usual car load weight. They simply put in 24,000 pounds. The testimony shows, and I swear

now, that we did not give the Boston and Albany road 24,000 pounds as the weight of those cars, nor did we give them any weight. We did notify, not only directly, but through this book, the actual weight of all those cars, and it was simply an error of the New Haven road, as shown in the testimony, and as offered by Vice President Hall, that the New Haven road took in error the constructive weight of the Boston and Albany in their bill, instead of taking the actual weight, which they had in their power to get, and should have got.

Q. It is usually the custom of the Boston and Albany in their shipping to put in the minimum weight, 24,000 pounds? A. It seems to be so in this case. I can not say what the general custom is, but it is the custom. There is nothing exceptional in the Boston and Albany having a switching rate for switching; it is no more than any other railroad does.

Q. As to the regular custom of the Boston and Albany in shipping to points in Massachusetts, you would swear somewhat positively that their shipping rates are based on the full car rates? I am not speaking of interstate traffic. A. I say this: that, as far as the Boston and Albany rates are concerned, whether within the state of Massachusetts or without the state, we pay exactly the same rates as any one else pays from Boston to the same destination. Now, I can not recall and I do not know every local rate on every railroad in the United States, but I do know that we pay the same rate of freight from the same point to the same point as every other shipper.

Q. Whether it be local, within the state, or interstate? A. Yes.

Q. (By Mr. A. L. Harris.) Who determines the weight and contents of the tank car as listed in your book? A. The capacity of the tank car is first found in the case of the Union Tank Line Company by measurement, and that is confirmed by water gauge, and the Central Freight Association have a bureau of inspectors who go around and test the capacity of those cars.

Q. Each car is numbered? Each car is numbered and each cars capacity in gallons is given, and its equivalent in capacity in pounds, based on the average weight of 6.4 pounds per gallon.

Q. (By Mr. Clarke.) What paper or vouchers passes from the Boston and Albany Railroad Company to the New York, New Haven and Hartford Railroad Company in that case? A. Simply a bill of Lading that that car which they receive at East Boston and which they delivered to the New Haven road at Boston was destined for the Newport Gas Light Company at Newport.

Q. Do the Boston and Albany haul this freight over its line from Albany to Boston at a lower measurement or at a higher measurement? A. This shipment originated at East Boston on the line of the Boston and Albany road.

Q. Over the road that used to be called the Freight railroad from East Boston to Boston? A. I do not know the name of the road, but the switching charges is from Boston to East Boston.

Mr. Clarke. I will explain to the commission that it is a road some four or five miles long. It is rather

more than an ordinary switch. This used to pass around through Cambridge and connect with the main line of the Albany road, and then ran back into Boston to connect with the New York, New Haven and Hartford.

REGION SUPPLIED WITH OIL FROM BOSTON.

Q. (By Mr. Jenks.) You spoke of this shipment originating at East Boston. Do you have East Boston for the main distributing point for all New England? A. For a section of New England.

Q. What section? How much is covered from your central distributing point? A. Well, I can not say. Of course, it is for Boston particularly, and I know we make shipments from there up to Portland, and I know we make shipments from there down into Massachusetts and Connecticut.

Q. Down as far as New Haven? A. Almost. I mean as far as New Haven. It depends upon what we may have in the Boston tanks, and what the order may be for. You know there are many grades of petroleum, and we do not carry everything required at that point or at every shipping point.

Q. Do you suppose that your ordinary shipments of petroleum for lighting purposes, at New Haven, for example, would come from East Boston? A. No; I do not think that we ship to New Haven from East Boston.

Q. You would to Providence and Newport, probably? A. Newport. In these cases it depends upon the stock and depends upon the situation. I can not answer as to the exact territory that may be supplied from and station, but would supply the territory as far as its location and stock was able to do so.

Q. How do you supply your shipping station at East Boston? A. We supply partly by rail shipments and partly by steamer shipments from New York and Philadelphia.

Q. From your refineries at Bayonne? A. From seaboard refineries, whatever one it may be.

WHY ARE THROUGH RATES REFUSED ON PETROLEUM PRODUCTS?

Q. The statement has been made here by some of the independent refiners that in their attempts to ship oil into New England from the west they had found that, although there were through rates on the regular tariff sheets for almost all kinds of goods, there were no through rates for petroleum on the New York, New Haven and Hartford. They stated that in shipping corn, or almost anything else, to Newport or Providence, they would get through rates the same as the Boston rates; but that on petroleum no such through rates were given at all; they had to give the local rate, and this local rate, added to the regular rate from the west, made a rate to New Haven or Newport or Providence very much higher than to Boston.

Now, the statement was made here that that applies not only to New Haven, but generally, and that the shippers of petroleum in the west were placed at a decided disadvantage on that account. Can you give

any reasonable explanation why the railroads should make a special exception of petroleum as to the furnishing of through rates? A. Why, I can say this—that I do not know anything about the corn rates at all.

Q. As to what is the general rate? A. I mean to say that there are many commodities which the railroads make rates on, on the basis of through rates and local rates, whereas they may be applying through rates on other commodities. I do not know anything exceptional in the matter of oil in New England as compared with corn in the west. I do know that we ship from the oil regions to New England to some extent, and we pay exactly the same rates as the other fellow pays.

Q. Can you mention some of the New England points you supply from the west or from regions of the west? A. I can not. I can say we do make shipments to New England as well as Boston. I know also we have made shipments from Cleveland, and also as far as Lima, and wherever we have made those we pay the same rates as other people do.

Q. Is it your rule to make shipments from Cleveland, Lima, or other western points to the territory of the New Haven road? A. Yes; we have.

Q. The general fact that you have a distributing point at Boston, from which you can supply this territory that is supplied by the New York and New Haven road, and that they can not furnish tariffs from the west, would seem to some of your competitors, at any rate, to give you some decided advantage, although no illegal advantage, over them. A. We do not deny that by having our refineries at the Atlantic seaboard and supplying New England from those refineries we have an advantage over the man who has to take the oil from Cleveland or the oil region, but we claim no fair adjustment of rates can be made that will put that man on an equality with us in that situation.

Q. Would you say further that the Standard Oil Company officials have not represented the matter to the New Haven road in such a way that they have succeeded in getting the New Haven road to refuse to make through rates on petroleum, while it does make through rates, and those equivalent to Boston rates, on a very large proportion of other goods that are shipped? A. I think that Mr. Commissioner Prouty answered that question by saying that the New Haven road in charging arbitrary rates on oil from Boston as well as from the Hudson river were receiving more money themselves than they would if they applied the through rate, and for selfish reasons they got the most money they could out of the traffic.

Q. (By Mr. Smyth.) Is it not a fact that those rates apply to a great many other commodities besides oil; that a larger rate is charged for the shorter distance? A. As I say, Mr. Smyth, I do not know much about other traffic. I can say specifically in regard to the difference in the rate of corn and oil that I do not know the reasons for it. I can say in a general way that I do not believe the railroads make rates that will injure the business or prosperity of the road. The prosperity of a road depends upon the prosperity of the patrons, and if the railroad makes any rates that are going to prevent shipping over their road, it seems to me they are doing what a reasonable man would not do; and

my experience is that the railroads are represented by as high an order of intelligence in this country as any class that I know of.

Q. You have no reason to believe that oil is the only commodity that is charged a higher rate for the shorter distance? A. Absolutely none.

Q. I mean to that point? A. No, sir. I only know, however, about oil.

MR. WILLIAM ROCKEFELLER DOES NOT INFLUENCE
TARIFFS ON THE NEW YORK, NEW HAVEN AND
HARTFORD.

Q. (By Mr. Jenks.) It has been intimated by Mr. Rice and others that this special refusal to give through rates on petroleum by the New York, New Haven and Hartford road was presumably brought about by the fact that Mr. William Rockefeller was a director of the road, or by some other special influence brought to bear in favor of the Standard Oil Company to check these shippers of the west? A. I will say, as far as the New Haven road is concerned, and Mr. William Rockefeller, that absolutely I do not know of any arrangement, or any tariff, or any change in tariff, that Mr. William Rockefeller has ever suggested or influenced on the part of the New Haven road or any other road. I do not believe that Mr. Rockefeller knows who the traffic manager for his road is today, or would know him if he was in this room.

LOW RATES FROM THE STANDARD'S WORKS AT WHITING.

Q. (By Mr. Kennedy.) I see that your testimony has been so far in rebuttal of Mr. Rice; there was another witness before the commission who made a statement that I should like to hear you say something about. He is the gentleman to whom you just alluded, an interstate commerce commissioner. He made a statement before the commission which seemed to show that the Standard Oil Company had an advantage in shipping from its Whiting works down the Mississippi Valley to New Orleans over the independent shippers or refiners of Cleveland, Ohio. I do not know just what the figures were, but they struck me at the time, if true, as indicating that the Standard Oil Company did have an advantage in the rates that were made, a great advantage, over the refiners of Cleveland. As traffic manager of this tank line association, do you know anything about those rates? A. I know what the rates are from Cleveland and from Lima to New Orleans. They are based on the local rate to the Ohio river plus the rate from the Ohio river to New Orleans. The rate thus figures out, as I recall, less than half a cent a ton per mile. The haul from Cleveland to New Orleans is over 1,000 miles and has a low rate. As to the rate from Whiting to New Orleans we have an advantage. Whiting is some 400 or 500 miles nearer New Orleans than Cleveland. The rate from Whiting—

Q. (Interrupting.) Not that much nearer. A. Well, I do not know that it is, but it is appreciably nearer. And the rate from Cleveland to Whiting plus the rate from Whiting to New Orleans is higher than the rate from Cleveland to the Ohio River plus the rate from

the Ohio River to New Orleans. In other words, I mean to say that we are paying a higher rate in proportion from Whiting to New Orleans when you consider the haul from Cleveland to Whiting.

Q. (By Mr. Jenks.) The rate from Whiting, as you say, is considerably lower than from Cleveland. Do you know whether the rate from Whiting on other similar products, like linseed oil, for example, is lower than the rate from Cleveland to New Orleans? A. I do not know what the rates are on linseed oil either from Whiting or Cleveland.

Q. Statements have been made to this effect—I do not mean to say that these figures are exact, but approximately exact—that on linseed oil the rate from Cleveland to New Orleans would be possibly 28 cents, and from Chicago it would be somewhat less, say, 26, but that on petroleum the difference would be as great as from 31 to 26 cents, showing that there would be a considerable advantage to petroleum as compared with a somewhat similar product, like linseed oil? A. I can not testify on that; but you can not pick out any two commodities and say that because there is a difference on one between two points the same difference should apply to the other. The reasons governing commodities are very often different in the matter of their manufacture, of the territory that they go over, and the cost in getting them up to that point, and various and sundry reasons, which are good reasons from the railroad standpoint; and as they have the authority we accept them as good reasons.

Q. (By Mr. Clarke.) Are linseed oil shipments made in tank cars? (No answer.)

Q. (By Mr. Farquhar.) Is there a large shipment of linseed oil from Whiting? A. Without being an expert on linseed oil, let me call your attention to the difference. Linseed oil is grown very largely in the west. At Chicago linseed oil is nearer the point of production than it is at Cleveland. Now, there may be very good reasons why the rate from Chicago to New Orleans on linseed oil might be higher than it is from Cleveland simply because the traffic may stand more.

Q. The natural distributing point for linseed oil is east of Cleveland rather than west of it? A. The natural distributing point is west of Cleveland rather than east, because the oil is grown in the west.

Q. Would not the same reasons hold good for Buffalo the same as Cleveland? A. Yes.

Q. Now, does this commission understand you to say that the position of the Standard Oil Company on the seaboard, having an inside line of distribution, is an advantage that you get over all competitors, and that that one is just the one that you have? A. I do not understand what you mean by the inside advantage.

Q. By the shorter line of distribution—geographical distribution. A. At the seaboard for the east and at Chicago for the west, as I have said, we have an advantage over the man who is shipping at some interior point.

Q. And the Standard would have the advantage over all competitors on an even tariff? A. No.

Q. On an even tariff for all from the same point? A. Yes. I say we are on an even tariff for all. We ship from Cleveland where our competitor is, and we ship

from the oil region where our competitor is; yet we have competitors on the Atlantic seaboard that pay the same rate as we do. We endeavor to supply each point from our nearest refinery.

Q. (By Mr. Clarke.) Do you know why your company located their refinery at Whiting? A. Because it was nearer the great west, which is a large consumer of oil.

HAVE OBEYED THE INTERSTATE COMMERCE LAW.

Mr. Farquhar, I do not know whether you were here when I made the explanation in regard to the Newport case.

Q. (By Mr. Farquhar.) I do not care; I will take the record as it came on that. A. But I will call your attention to the fact that the Standard Oil Company has shipped thousands of car loads of freight to all points in the United States, over nearly every railroad line in the country, and the freight bills for its cars pass through the hands of numberless employes both of the railroads and the shippers who have such large and diversified interests throughout the United States, and it would have been impossible to keep such rebates secret had any such been granted, especially since Mr. Rice and others like him have been on the constant lookout for something tangible by which to prove their oft repeated allegations that the Standard Oil Company has been violating the interstate commerce law. That law has been in effect for more than 12 years, and at the end of this period the best case that the opponents of the Standard Oil Company can produce is that involving a clerical error in the billing of three or four cars shipped from Boston to Newport; and I would like to see somebody else equal that record.

EARNINGS OF UNION TANK LINE COMPANY ONLY 4½ PER CENT.

Mr. Rice makes the statement that the mileage paid the Union Tank Line Company of three-fourths of a cent a mile pays back the investment every three years. I would say that since the formation of the Union Tank Line Company, August 1, 1891, that company has never paid a dividend, and that the earnings of that company for the eight years, 1891 to 1898, inclusive, have shown an average yearly return on the capital invested of 4½ per cent per annum. This return has been figured without charging off for depreciation, although according to master car builders' rules (on which railroads base their settlements between each other) a depreciation of 6 per cent per year is deducted in case one railroad destroys another railroad's cars. The three-fourths of a cent mileage paid the Union Tank Line Company is exactly the same as is paid all other tank car owners, and there are in the United States between 170 and 180 individuals and companies, entirely outside of the Standard Oil Company, owning an aggregate of 7,420 tank cars, while the Union Tank Line Company's equipment November 1, 1899, was 5,851 cars.

I offer a statement giving the names and ownership made up from the very best records we have, of the

owners of cars outside of the Union Tank Line Company, showing an aggregate ownership of nearly 2,000 cars more than the Union Tank Line Company has.

[Following is a copy of the exhibit offered by the witness:]

Statement Showing Number of Tank Cars and Owners of Same, Other Than Union Tank Line Company, Based Upon Best Obtainable Published Information as of November 1, 1899.

Name.	Location.	Number.
American Cotton Oil Company	Chicago	356
Alcatraz Asphalt Company	San Francisco	1

Q. (By Mr. Kennedy.) Do these tank line companies outside of the tank line you are speaking for, carry oil for the Standard Oil Company? A. The Standard Oil Company ship, as far as they can, in Union Tank Line cars. They do use outside cars when they can not get the Union Tank Line cars, and need them.

Q. Now, the testimony is that the Standard Oil Company do pretty nearly 90 per cent of the business in the United States, and it would look a little curious that they could do that business with 40 per cent of the tank line cars of the country, unless they were using the cars of some other company to some extent. A. The explanation of that is that the tank cars used by other individuals are not confined to the use of petroleum, but their tank cars receive exactly the same mileage basis as is paid to the Union Tank Line Company; and that company, I say, as vice president of it, has shown an average earning of 4½ per cent per annum, charging off nothing for depreciation. It ought to be borne in mind in connection with the Union Tank Line, that, owing to the fact that during the summer the consumption of petroleum is small, a large part of the equipment of the Union Tank Line Company is idle, and during that time is earning nothing whatever; and at other times the volume of the business requires the whole number of cars owned.

Q. (By Mr. Jenks.) What did you say is the number of cars owned by the Union Tank Line Company? A. Five thousand eight hundred and fifty-one, November 1.

SEVEN MILLION DOLLARS REBATES FROM ATCHISON, TOPEKA AND SANTA FE RAILROAD; NONE TO THE STANDARD.

Regarding the statement that in 1894 an expert accountant discovered that \$7,000,000 in rebates had been paid by the Atchison, Topeka and Santa Fe railroad, I would say that the Standard Oil Company did not receive one dollar of this money.

WHY THE UNION TANK LINE COMPANY CONTINUES TO DO BUSINESS WITHOUT PROFIT—WHY A SEPARATE ORGANIZATION.

Q. (By Mr. Conger.) I should like to return for a moment to this matter of tank cars. The statement made would indicate that that was very far from being a profitable business. As I understand, it has been continued by this company for a period of years, and I would like to ask upon what theory you are able to induce the stockholders to continue their investments and make additional investments from time to time as would seem to be necessary. A. The answer is simple: The tank car is a necessary facility in the economical distribution of petroleum and its products. It is one of the means by which we are enabled to ship oil cheaply and supply it cheaply. For that reason the investment, as you see, in the Union Tank Line Company is a proper one, for the Union Tank Line Company is the necessary arm of the petroleum business.

Q. The owners of the Union Tank Line Company,

to a large extent, are the same as the owners of the Standard Oil Company? A. You see—

Q. (By Mr. Farquhar, interrupting.) Is it not of just the same character as horses and vans and other things that are used in distribution? You can not expect a profit out of it, but it is an incident and a condition that you can not escape from in distribution? A. It has been one of the most necessary parts of the business in distributing economically the products of petroleum.

Q. (By Mr. Conger.) If you regard it in the same light as you do horses and freight wagons, why is the business conducted by an independent company—by the company called the Union Tank Line Company—and not by the Standard Oil Company itself? A. The Union Tank Line Company is simply a corporation that owns tank cars.

Q. What is the purpose or advantage of the separate organization? A. I am not a lawyer.

Q. You do not need to be a lawyer to answer a question like that, if you choose to answer it; it is a business question, not a question of law. A. I do not refuse to answer it. The Union Tank Line Company has been formed to own and run these cars over the various railroads of the United States for the transportation of oil.

Q. You have testified that there is no profit in it at all? A. I do.

Q. What I am trying to get at is why it is continued as a separate organization instead of by the Standard Oil Company itself directly? A. Well, if it is profitable or unprofitable, it would make no difference whether it was conducted in the name of the Union Tank Line Company or in the name of the Standard Oil Company; but it was formed under the name of the Union Tank Line Company, and I say it is a necessary adjunct in the distribution of petroleum, and it is therefore continued, although it is not profitable.

Q. (By Mr. Smyth.) I suppose the stock of the tank line company can be bought independently of the stock of the Standard Oil Company? A. I do not know.

Q. I mean is it listed for sale? A. It is a separate company.

Q. If a man becomes a stockholder in the Union Tank Line Company, does he necessarily become a stockholder in the Standard Oil Company? A. No; I do not understand he does.

Q. (By Mr. Kennedy.) In what state is the Union Tank Line Company incorporated? A. In New Jersey.

Q. Does the interstate commerce commission exercise control over it like any other interstate transportation company? A. Why, I never heard that the interstate commerce commission had control of private car lines. No; this is a car line.

Q. (By Mr. Smyth.) It does not make rates? A. It has no rate or payment like a railroad.

Q. (By Mr. Kennedy.) It does not come under the control, then, in any way of the interstate commerce commission? A. No; no more than the dressed beef cars or Pullman cars or refrigerator cars or any other private cars.

Q. (By Mr. Farquhar.) In the building and running of your tank steamships, is that done by a separate department of the Standard Oil, or is it the Standard Oil

itself? A. I do not know enough to answer you in regard to that.

Q. (By Mr. Jenks.) The Union Tank Line Company has nothing to do with foreign shipments? A. Nothing whatever.

Q. (By Mr. Conger.) Referring to the number of stockholders in this organization, do you know whether they are many or few, three, four or five, or several hundred? A. Of what organization?

Q. The Union Tank Line Company. A. I think there are a great many; I do not know. I have never kept the books; the secretary could say how many stockholders there are, but I do not know.

Q. Do you know, or would you care to testify as to the salaries that are paid the officers of the company? The point I am getting at is this, that if such an organization is continued and continues in business when that business is so unprofitable as you testify, it seems to me that there must be some other way than through the distribution of dividends to make it profitable to its officers and stockholders. A. I think I have made that clear, that the tank car is a necessary adjunct in the petroleum business.

Q. Well, that is— A. (Interrupting.) And is necessary in enabling the Standard Oil Company to distribute the products of petroleum economically throughout the United States; and by economically distributing, it has increased its business—the Standard Oil Company's. Now, that the tank car line itself only shows, as I have testified, a return on the investment of 4½ per cent is no reason why it should be discontinued if it is necessary.

By Mr. Boyle. May I consult with the witness?

By Mr. Clarke. What is the pleasure of the commission?

By Mr. Farquhar. There is no objection at all.

(Mr. Boyle consults with witness.)

Q. (By Mr. Conger.) How long has this Union Tank Line Company been in business or operation? A. Since 1891, when the company was formed.

Q. The point I was getting at is the advantage that the Standard Oil Company gets by having this Union Tank Line Company continue in business. Does the Union Tank Line Company do it simply through philanthropic or generous motives toward the Standard Oil Company? A. I have testified that my knowledge and belief is that the present owners of the Union Tank Line Company and the Standard Oil Company are the same. Now, those owners think that the tank car is necessary in the conduct of the general business and therefore continue in the use of those cars under the name of the Union Tank Line Company.

Q. Well, that puts a little different light on it; I understood you to say that they were not the same in all respects? A. You misunderstood me; I said they were different corporations.

Q. Now, then, do you know of any reasons why the officials or officers of the Standard Oil Company should prefer to operate this as an independent company instead of by the Standard direct? A. I do not.

Q. (By Mr. Jenks.) When you speak of the Standard Oil Company, are you thinking of one company or the several Standard Oil Companies? A. I am speak-

ing of the company as it is generally known, as one company.

Q. Is this company that you are speaking of in that way technically and legally one company, or is it several—twenty-five different companies? A. I do not know that I am competent to answer as to that. There has been recently formed, as you know, the Standard Oil Company of New Jersey, which, as I understand—I had rather cancel that answer. I do not know; that is all.

Q. You had intimated some little time ago that there were probably some legal reasons which you yourself did not know about, for having this Union Tank Line Company organized as a separate corporation. Perhaps in the same way there are some legal reasons why the Standard Oil Company, which we speak of sometimes as one, was organized as different companies. I had thought it possible that as long as the Union Tank Line Company was serving so many different companies it might be a convenient matter legally for it to have its separate organization, and I did not know but you had — A. (Interrupting.) I am very much obliged for the suggestion. I have no doubt that that is the reason: That the Union Tank Line Company, as a separate corporation running its cars all over the United States, is in a better position to do so than if those cars were owned by the Standard Oil Company that was doing the manufacturing or the marketing business.

Q. You also had suggested that it was largely a matter of bookkeeping between all these different companies? A. Well, I did not mean to convey any such idea. I did mean to say this, and that is all I can say about it, that the Union Tank Line Company is a separate corporation, and serves all these companies in furnishing tank cars for shipment.

Q. (By Mr. Kennedy.) Have the tank cars that the Union Line owns been provided with air brakes and couplers in compliance with the interstate commerce law? A. They have.

Q. Consequently they are an instrumentality of interstate commerce? A. The cars are used in interstate commerce, yes, and would be subject to the general order requiring cars used in interstate commerce to be equipped with air brakes and couplers.

Q. I asked you those questions because you said in reply to a question of mine a little while ago that you did not know that a company like that was subject to the interstate commerce commission. A. As I understand that, you refer to requiring cars used in interstate traffic to be equipped with safety appliances, and that is not a part of that law.

Q. It is put under the interstate commerce commission's supervision. A. It is? Then to that extent they are.

THE TANK LINE'S ONLY INCOME IS ITS MILEAGE—IT PAYS NO COMMISSIONS.

Q. (By Mr. Smyth.) But they are not under the jurisdiction of the interstate commerce commission in reference to fixing rates, because on those cars the railroads fix the rates. A. We simply carry the oil and

receive the mileage, the same as the railroads pay all other tank car line owners.

Q. (By Mr. Farquhar.) Does not your company stand in the same relation as the other private cars in this country? A. Exactly.

Q. Paying exactly the same as the other cars do? A. Exactly.

Q. (By Mr. Conger.) I would like to inquire if the witness can tell whether the Union Tank Line Company pays commissions to the Standard Oil Company for freight carried? A. They do not. They get nothing from the Standard Oil Company; the only thing that the tank line company gets is the mileage they receive from the railroads when they run their cars over the line.

Q. I think you misunderstand my question. Does the tank line company pay any of its earnings to the Standard Oil Company as a commission for getting its business? A. Not one dollar.

Q. Would you care to state the salaries paid to the officers of this tank line company; are they large? A. I should say they are small. I should prefer not to say what my salary is or what the others are, but I would say they are not exorbitant. I am not afraid of its making too large a showing for the Union Tank Line Company, but I think they are small.

Q. The point is this: I think it has been testified to before this commission that in the opinion of several very prominent and highly respectable railroad men this rate of three-quarters of a cent a mile ought to be profitable for the owners of the cars, and the testimony that you have given here this morning seems to me remarkable; I have been trying to get at the disposition of the earnings of this company. A. If a car was continued in constant use throughout the year on long trips, it might be; but I tell you honestly that my statement that 4½ per cent is the average earnings on the investment of the Union Tank Line Company is the exact truth, without any manipulation of the books to make a salary or a big earning. We have been, for instance, in the last two years at an expense of \$125 on each car for these automatic brakes, air brakes and the automatic couplers; and that \$125 on each car does not bring us back one cent.

Q. Oh, that is probably true; in addition you testified that in your opinion there are conditions surrounding the use of these tank cars that would make the business of owning and operating them less profitable than the owning and operating of cars in use the year around? A. Yes.

Q. (By Mr. A. L. Harris.) What allowance is made by the Standard Oil Company to the Union Tank Line Company for hauling its oil? A. Nothing at all. The Union Tank Line Company gets its pay and its only pay from the railroads over whose lines the car travels.

Q. That is all the pay it gets? A. It pays none of its earnings to the Standard Oil Company, nor does the Standard Oil Company pay any of its earnings to the Union Tank Line.

Q. (By Representative Livingston.) The majority of the stock, I understand, of the Union Tank Line Company is owned by the principal owners of the Standard Oil Company; is that correct? A. I do not know in detail. I believe, and I have stated, that the owners

of the Union Tank Line Company and the owners of the Standard Oil Company are the same.

Q. What this commission seems to be trying to get at is why a corporation of that sort should be organized and run without a profit. Now, it seems to me that for some reason of their own, the large owners of this company have organized the Union Tank Line Company for the purpose of running that company in the interest of the Standard Oil Company, and they get their profits by way of dividends on the Standard Oil Company's stock; is not that really the relation? A. I have testified that I believe the owners of the two properties are the same, and that those gentlemen think that the ownership and the running of the tank cars is a necessary adjunct to their general business, and therefore they continue it.

Q. You probably are not in position to testify that they intend to earn that profit without making the profit directly out of that company, but to get their profits out of the other company? A. I can not say what their intentions are; I only know the result of the running of the Union Tank Line Company.

Q. Of course, there does not seem to be anything in connection with the Union Tank Line that is worth hedging about? A. There is not. The inference that Mr. Rice tried to draw and the statement that he made to the commission was that this mileage returned to us the cost of the car every three years. I say to you that for eight years that company has shown an average earning of $4\frac{1}{2}$ per cent. Mr. Rice evidently intended to convey the impression that that mileage was unfair and unreasonable and intended as a freight discrimination on the Standard Oil Company's shipments; and I give you the results of the operations of that company to deny Mr. Rice's allegation.

Q. Do you know whether or not any of this stock is held by persons other than those who own Standard Oil Company stock? A. Yes, I do.

Q. You know that it is held by others? A. Yes.

Whereupon, at 1 p. m., the commission took a recess until 2 o'clock p. m.

The commission met at 2:10 p. m., pursuant to recess, Commissioner Clarke presiding.

(By Mr. Clarke.) The commission will be in order and the examination of Mr. Page will be resumed.

Mr. Howard Page again on the stand and examination resumed.

HOW MR. RICE GOT THE "TURN ANOTHER SCREW" LETTER.

Q. (By Mr. Smyth.) Mr. Chairman, I should like to ask Mr. Page a question. He has testified in reference to the Chess-Carley "turn another screw" letter to Mr. Culp, who was at that time general manager of the Louisville and Nashville railroad and is now traffic manager of the Southern. I want to ask Mr. Page if he knows how Mr. Rice came into possession of that original letter, written by Mr. Carley to Mr. Culp? A. My information and belief is that Mr. Rice, in making some shipments after the time of the shipment which was referred to in that letter, was charged the regular tariff rate, which all other shippers were pay-

ing and which was more than he paid on that shipment. He made a claim on the later shipment, claiming the same rate as had been paid on the shipment which Chess, Carley & Co. complained of. The claim was sent, as I understand, in the regular way to the railroads, and as is customary with railroads, the billing of the car and the correspondence in connection with the shipment were all gathered together in one folder and attached to the papers and the claim when it was returned to Mr. Rice with the claim refused. He got that letter in that way. It showed that the railroad people did not construe it in any such way as Mr. Rice has tried to put it, because if they had they certainly would not have sent it broadcast and attached it to their papers and sent them back to Mr. Rice.

Q. Mr. Culp, I believe, testified that he had never seen the letter personally? A. He testified in the proceedings before the Bacon committee in 1888 that he had never seen the letter, and if he had he would have understood it as it has been explained, that it was simply calling attention to an error, and that Mr. Hathaway used the same expression that was current in the Louisville and Nashville office when an error occurred, that the machinery was loose and ought to be tightened up.

Q. There was apparently no intent on the part of the Louisville and Nashville officials to suppress the letter or destroy it; it was handled in the ordinary course with papers in that case? A. Exactly. And I might further add that Chess, Carley & Co.'s offices in Louisville at the time that letter was written were at the corner of Fourth and Main streets, and the office of Mr. Culp was on the corner of Second and Main streets, two squares away; and I think if it had ever been intended that an order was to be given to the Louisville and Nashville road to advance rates in any such way as Mr. Rice tried to show, a letter would not have been written that had to go only two squares. It would have been attempted in some other way.

(By Mr. Clarke.) Mr. Page, you may resume where you left off.

"GHOST TRAINS."

Mr. Rice refers to ghost trains as a means of discrimination in favor of the Standard Oil Company. I wish to say that the Standard Oil Company has never shipped a pound of freight on such a train, even if there has ever been such a train in existence, which we doubt.

NEGOTIATIONS FOR SALE OF MR. RICE'S PROPERTY.

Mr. Rice states that Mr. F. B. Squire, of the Standard Oil Company of Ohio, made him an offer of \$250,000 for his oil properties. I beg to offer an affidavit from Mr. Squire denying this, and affirming that Mr. Rice offered him his oil properties at one time for \$24,000, and several years afterwards Mr. Rice again offered to sell his oil properties and stop prosecutions, etc., for the sum of \$250,000; and offered to give Mr. Squire \$50,000 of this sum if he could bring about this sale. In other words, Mr. Rice offered to pay a part of the money that he was to receive from

the Standard Oil Company to an employe of the Standard Oil Company if that employe could bring about the sale of the property to the Standard Oil Company.

(By Mr. Farquhar.) Had you not better read that affidavit?

Witness read the affidavit as follows:

"State of Ohio, County of Cuyahoga, ss:

"On this 1st day of December, 1899, personally appeared before me, F. B. Squire, who, being duly sworn, deposeth and saith that in the fall of 1876 I lived on Forty-second street, New York city, and while there I was introduced to Mrs. George Rice, who stated that her husband wanted to sell his oil property, consisting of production of crude oil, storage tanks for same, pipe lines, and refinery. The result of the conversation was a 30 days' option, which she secured for me to present to the Standard Oil people for \$24,000 for the entire property, but it was promptly declined, they claiming it was only worth half the money. I so advised Mrs. Rice. She stated that the Standard Oil Company would be sorry.

"I met Mr. Rice several times after this, and he kept urging the matter. In the summer of 1881 or 1882 he invited me to meet him and his wife at Asbury Park. I did so. They there made me an offer to sell the property, stop all prosecutions, and be friendly with the Standard Oil Company for \$250,000—\$50,000 to go to me for my good office if I could bring it about. I reported the result to Mr. Archbold, including the offer to me, and it was immediately declined. I advised Mr. Rice, who called at my office the next day, and he stated that the company would regret this act. Immediately after this Mr. Rice published the pamphlet called 'Black Death.'

F. B. SQUIRE.

"Sworn and subscribed before me the date aforesaid.

F. W. LOTMAN,
Notary Public."

"[SEAL.]

Q. (By Mr. Farquhar.) Is there any way of impeaching the credibility of the man who makes this affidavit? (No answer.)

Q. (By Mr. Smyth.) Is he still in the employ of the Standard Oil Company? A. Yes.

Q. What position does he occupy? A. He is one of the officers of the Standard Oil Company of Ohio; whether vice president or treasurer, I do not recall; but he is an officer of the Standard Oil Company of Ohio.

Q. Occupying a position of trust and responsibility? A. Yes.

Q. He lives in Ohio? A. Yes.

Q. (By Mr. A. L. Harris.) Of the former Standard Oil Company of Ohio; have you a Standard Oil Company in Ohio now? A. Yes.

Q. Of Ohio? Of Ohio.

Q. Organized under the laws of Ohio? A. Yes.

Q. Doing business in Ohio? A. Yes.

Q. As such? A. Yes. He is the man Mr. Rice refers to as having made such an offer.

Q. (By Mr. Clarke.) Did Mr. Rice increase the capacity of his refinery and the value of his property

between the times of those two propositions? A. I do not know.

NO FREIGHT CONCESSIONS IN VIOLATION OF THE INTER-STATE COMMERCE LAW.

In the foregoing I have tried to pick out and deny positively the different allegations made by Mr. Rice in regard to freight discriminations by various devices, which railroads, both prior to and since the passage of the interstate commerce law, have given to the Standard Oil Company against himself and other oil shippers. I would say that since July, 1889, as vice president of the Union Tank Line Company, I know the facts regarding the freight business of the Standard Oil Company, rates, shipments, etc., with the various roads of the United States. I wish to deny positively that during that time we have received any rebates or concessions from tariff rates contrary to either the letter or spirit of the interstate commerce law. While from Mr. Rice's testimony one might assume that the oil tonnage of the United States was about the only tonnage transported, yet the total consumption of oil in tons in the United States is less than one-half of one per cent of the total tonnage moved by the railroads of the United States, and it is absurd to either argue or conclude that so small a percentage of the traffic moved by the railroads of the United States should be of such controlling influence over railroads and their officials as is so often alleged by Mr. Rice.

I wish to present a letter to Mr. Moseley, secretary of the interstate commerce commission, dated December 1, and his reply of December 6, 1899, in which he refers to the statistics compiled by the interstate commerce commission for the year ending June 30, 1898, showing that the tons carried by the railroads of the United States were 879,006,307 tons. The total consumption of petroleum produced in the calendar year 1898, from the very best sources that can be obtained, was a little less than 24,000,000 barrels; 24,000,000 barrels is equivalent to about 4,000,000 tons and 4,000,000 tons is less than one-half of one per cent of the total tonnage carried by the railroads.

"December 1, 1899.

"E. A. MOSELEY, Esq.,

"Secretary, Interstate Commerce Commission,
Washington, D. C.

"Dear Sir: In the advance copy of your twelfth annual report, dated January 11, 1899, you give the earnings of the railways of the United States. On page 79 of this report you say that you have returns of 720 lines, representing 97 per cent of the operated mileage in the United States. You then show that of the earnings there was \$874,865,487 received from freight service.

"Have you any tonnage figures showing the number of tons carried by the railroads which earned this \$847,000,000? If so, I would be very much obliged if you would advise me of the number of tons (2,000 pounds to the ton) at your early convenience.

"Yours truly, HOWARD PAGE."

Interstate Commerce Commission,
 "Office of the Secretary,
 "Washington, December 6, 1899.

"MR. HOWARD PAGE,
 "26 Broadway, New York. N. Y.

"Dear Sir: I beg to acknowledge the receipt of your letter of the 1st instant, requesting certain tonnage information bearing upon the freight earnings of railways as shown in the advance copy of the twelfth annual report of the interstate commerce commission. In reply, I would say that we have not the exact tonnage figures referred to, as such data are not compiled for the preliminary report.

"On page 67 of the advance copy of the 'Statistics of Railways in the United States' for the year ending June 30, 1898, tons carried as reported are shown as 879,006,307; tons carried one mile, 114,977,576,305.

"A copy of the volume referred to is sent you under a separate cover, page 67 of which is attached hereto.

"Very respectfully, EDW. A. MOSELEY, *Secretary.*"

Mr. Archbold filed here with you letters from about 20 of the principal railroads of the United States, in which, without exception, they stated that since the passage of the interstate commerce law, no concessions or allowances from tariff rates had been made to the Standard Oil Company in any manner or form. It is impossible to believe that men of the character of President Callaway, of the New York Central; President Newman, of the Lake Shore; President Mellen, of the Northern Pacific; Mr. A. J. Earling, vice president then and now president of the St. Paul road; President Burt, of the Union Pacific; and the chief traffic officials of lines like the Burlington, Pennsylvania, Baltimore and Ohio, Cleveland, Cincinnati, Chicago and St. Louis, Atchison, Topeka and Santa Fe, Southern Pacific, Louisville and Nashville, Boston and Maine, and other railroads whose letters were presented, would all unanimously state that we had obeyed the law, both in letter and spirit, if the facts were to the contrary.

We might be asked why (in view of the known fact that some of the railroads, since the passage of the interstate law have paid rebates to large shippers) we have not received same. We have not done so because, in the first place, it was against the law, and secondly, because we knew from past experience that if we received cut railroad rates other oil shippers would receive the same, and we felt, as we now feel, that from a business standpoint alone it has been, and is now, to our interest to have tariff rates maintained.

The Standard Oil Company does not need any freight advantages to maintain its business, and all it wants is to be required to pay the same rates of other oil shippers from and to the same points.

THE STANDARD'S ADVANTAGE IN HAVING MANY DISTRIBUTING POINTS—THE CONSUMER GETS THE BENEFIT.

In reference to Interstate Commerce Commissioner Prouty's remarks in regard to the Standard Oil Company, when Mr. Prouty appeared before the commis-

sion early in October, which testimony I heard: Commissioner Prouty's arguments seem to be to the effect that the Standard Oil Company had advantages by reason of having its refineries and distributing plants at Chicago and the Atlantic seaboard, as well as at Lima, Buffalo and other middle state points, as compared with a refiner who had his works only at Cleveland or in the Pennsylvania oil regions. We admit that by having refineries and distributing plants at Chicago for the west; at Buffalo, Lima and Parkersburg for the middle states and the south, and at the Atlantic seaboard for the east and New England, we have decided advantages over a refiner who has his works only at one point, and who tries to compete with us in selling oil throughout the country. We claim, however, that such an advantage is a fair one, and can not be overcome by any fair or reasonable adjustment of freight rates. We further claim that by having our refineries and distributing plants located at various points throughout the country we can and do distribute more cheaply and sell the oil at a less cost to the consumer, and it is more to the interests of the country at large for the consumer of oil to get it at a low cost than it is to try to fix freight rates on any basis that will permit one manufacturer at one point to distribute his products throughout the United States.

That, gentlemen, closes all that I have prepared. I am perfectly open and glad to answer any questions you gentlemen have.

ADVANCE IN CANADIAN FREIGHT RATES.

Q. (By Mr. Jenks.) We had some testimony here a little time ago with reference to the freight rates on American oils from the United States into Canada, in which it was said that very lately there had been a very decided increase in the freights on American oil going into Canada. This was thought to be much to the disadvantage of those who had to ship oil from the United States into Canada. Can you explain to us that matter of freight rates? A. I can say that I know there was an advance in rates from Detroit and Toledo and Buffalo and other frontier points on oil from the United States into Canada. I can further add that we pay those advanced rates and that we ship 80 per cent of the oil that is exported from the United States into Canada. We therefore pay four times as much as all the balance of the oil shippers together.

Q. What proportion of your sales in Canada are shipped from the United States, and what proportion are sales from the Canadian product? I understand that the Standard Oil Company owns practically all of the Canadian refineries. A. I do not so understand it, and I do not know the relative shipments from the United States compared with the consumption of oil manufactured in Canada. I do know, though, that shipments from the United States into Canada have increased in the last year; in fact, since that advance in rates as compared to the old situation.

Q. Do you know what proportion of the refining industry of Canada is owned by the Standard Oil Company? A. I do not; I do not know that the Standard Oil Company owns any interests in Canada.

PENDING SUITS FOR ALLEGED FREIGHT DISCRIMINATION;
CHARGES ON OIL IN BARRELS.

Q. We have had some evidence with reference to suits that were brought against the railroads by independent refiners in western Pennsylvania, in which they claimed that the railroads had been dealing unfairly with them in the charging of freight rates—suits that are still pending—can you tell us anything with reference to those suits? A. I do know that several years ago—I do not recall how many—the interstate commerce commission decided that the weight of the barrel, when loaded with oil, should be carried by the railroad free. In other words, they should not charge for the barrel when it contained oil. An order was entered to that effect, which the railroads declined to obey. The interstate commerce commission have since that time gotten some evidence from the plaintiffs in that case as to the volume of their shipments in barrels within a certain period, and fixed the amount of damages which they claim the railroads should pay back to those shippers of oil in barrels. The railroads also declined to pay that, and that case is now, I believe, before the United States court in Pittsburg and is still pending. I would say in connection with it that at the time when the shipments were made in barrels by these plaintiffs and the rate of freight was charged on the weight of the wood, the Standard Oil Company was making shipments of oil in barrels and paying for the weight of the wood. In other words, there was no difference in the rule or the rate that was applied on the shipments of the plaintiffs and upon the shipments of the Standard Oil Company.

Q. Was this custom of the railroads one that was brought about in any way, to your knowledge, by the action of the Standard Oil Company officials? A. No.

Q. What was it? A. In the first decision of the interstate commerce commission in regard to the relative rates that should be charged on oil in barrels and oil in tank cars, the commission decided, by Judge Cooley, that the rate per 100 pounds in car loads, on oil in tank cars or on oil in barrels, including the weight of the barrels should be alike. The railroads adopted that order. Then on the second case, after Judge Cooley had left the bench, some other commissioner decided that the barrel should be carried free; and that the railroads declined to follow.

Q. The commission practically reversed its own decision? A. They tried to reverse their own decision before the United States circuit court in Pittsburg.

Q. I say practically reversed its former decisions? A. Yes.

Q. But it was under the first decision that the charges were made? A. Under the first decision that the charges were made.

THE MOST OF THE STANDARD'S OIL IS FINALLY DISTRIBUTED
IN BARRELS.

Q. Do you recall what proportion of the shipments of the Standard Oil Company at that time before the second decision was rendered, was in tank cars, and what in barrels? A. Your question involves the whole country, and I should say that the shipments, as a

whole, of the Standard Oil Company in barrels exceed the shipments of the Standard Oil Company in bulk in tank cars. You must bear in mind that when the Standard Oil Company ships its oil in tank cars to a distributing station, it is barreled there to a very large extent, and it goes out in barrels, and it is a part of the barrel sales of oil. I think I am correct in that statement, and it is the best I can give; that is all.

Q. That is so at the present time? A. It is true still.

Q. (By Mr. Clarke.) Therefore, very much of the oil which is shipped is shipped part way in tanks and the rest of the way in barrels? A. It is. When it comes to local country points on the line of a railroad. The rule that the commission made there, if applied to oil, would naturally apply to every other package that might be put around any other commodity that was susceptible of any other mode of shipment.

Q. (By Mr. Smyth.) Lubricating oil, I suppose, is shipped in barrels, is it not? A. It is shipped in tank cars to some extent—yes.

SO FAR AS THE WITNESS' EXPERIENCE GOES, THE STANDARD NEVER DICTATED FREIGHT RATES TO BE
CHARGED TO OTHER SHIPPERS.

Q. (By Mr. Phillips.) You admit, Mr. Page, that the Standard Oil Company did receive large rebates before the passage of the interstate commerce act? A. I admit that.

Q. From your knowledge and belief and information? A. My knowledge and belief and actual experience, Mr. Phillips, was that prior to the interstate commerce law we got as low rates as we could.

Q. That amounted to very considerable worth to the Standard Oil Company during that period, no doubt? A. It meant that we got lower than tariff rates, the same as all other shippers; not only shippers of oil, but all other people. We could get them and did get them. I can add this, that as far as my own experience goes, prior to the interstate commerce law, when we secured lower than tariff rates, it never was in any instance a part of an agreement what the railroads should charge. Any other oil shipper could get as low a rate as we could, or lower, if the railroad saw fit to give it. We attended simply to our own business.

Q. (By Mr. A. L. Harris.) That was the universal rule of the Standard Oil Company? A. Which?

Q. Not to interfere with the rates of any one else? A. I can only speak in that regard so far as my own knowledge goes, and so far as my own knowledge goes it is true.

Q. You do not know anything about the rule which seemed to have prevailed in what is known as the Marietta and Cleveland railroad, do you? A. I have no knowledge of that, sir. I believe that case has been fully explained, and prior to the interstate commerce law my residence and knowledge was confined to the business of the Standard Oil Company in Louisville—in Kentucky.

Q. The only reason that I asked that question was that you made your answer very broad. A. I answered from my own knowledge.

Q. (By Mr. Smyth.) Do you know of any other oil company besides the Standard Oil Company that re-

ceived rebates prior to the interstate law? A. I do, sir.

Q. You think, then, that it was the general custom, as far as your knowledge goes? A. I know it; and in some cases we found they had a lower rate than we had.

WHERE OTHER SHIPPERS GOT LOWER RATES THAN THE STANDARD.

Q. You believe, then, that it was the general custom prior to the passage of the interstate commerce law? A. That every shipper and others got the lowest rates they could from the railroads.

Q. (By Mr. Phillips.) Can you name any of those companies who received it? I am not doubting the truth of your statement. A. I know it was shown in some other cases that Scofield, Shurmer & Teagle, of Cleveland, had some lower rates than the tariff. It has been 10 years, Mr. Phillips, and I do not know that I can recall the names, but I recall very distinctly that in one instance it was shown that some large shippers of oil from Memphis to Nashville, out on the roads leading from there, had special rates as against—had lower rates than we were paying from the same points to the same points. We found it out because people were selling oil cheaper than we were at the same points.

DOES NOT BELIEVE THE STANDARD EVER RECEIVED A SHARE OF THE RATE PAID BY OTHERS.

Q. Do you know of any instance where there was a higher rate charged to the independent refiners than to the Standard, and that was divided between the Standard and the railroads? Is there any such testimony? A. I do not know of any instance. I will say no; I do not know of any case. In fact, I do not believe there ever was a case where the Standard Oil received from the railroad a share of the rate that was paid by independent shippers. I know it was not so in the territory which I had anything to do with, and it has never been so since I have been in New York.

DOES NOT KNOW.

Q. You are connected with the transportation and know something about the pipe line business also of the Standard Oil Company? A. No, sir; I know very little about pipe line matters.

Q. Do you know whether the Standard Oil Company ever placed a premium on oil in special fields where there were independent pipe lines, and by this means caused them to suspend business or bought them out? A. I know nothing whatever as to any prices paid for crude oil.

Q. Or about the pipe line business in that regard? A. No, sir; I do not.

Q. Do you or do you not know whether the Standard Oil Company opposed, after having their pipe line to the seaboard, the passage of the free pipe line law in Pennsylvania or in New Jersey? A. I know nothing whatever about it, sir.

Q. Do you know whether the Standard Oil Company opposed, directly or indirectly, the United States pipe

line in securing the right of way through the state of New Jersey? A. I know nothing whatever about it.

Q. You do not know about that? A. No, sir. I am not connected with the pipe line department in any way.

Q. When independent companies shipped abroad did the Standard Oil Company ever obstruct ocean transportation in any way or obstruct them in getting ocean steamship service? A. Not to my knowledge, in any way.

Q. Have you knowledge or information as to the installation plants or receiving tanks in Germany or other countries? A. I have not, sir.

Q. Have you any information in regard to the agents who transferred and sold the Standard oil in foreign countries—Standard agencies abroad? A. I know there are some Standard agencies abroad; yes.

Q. Have you any information in regard to this: to a man in Germany, or who was in Germany, recently deceased, by the name of Poth, who handled oil of the independent companies in Germany? A. Never heard the name before, sir.

Q. You have no knowledge, then, of their purchasing all these installation plants abroad, almost wholly in Germany? A. I have no knowledge.

EXPORTS—PRICES HIGHER ABROAD.

Q. (By Mr. Kennedy.) Have you any knowledge of the relative value and prices of oil exported? A. I only know in a general way that the exports of petroleum products produced by the Standard Oil Company are in excess of their wells within the United States. In other words, a large share of the Standard Oil Company's business is outside of the United States.

In regard to the relative prices, I would say that the consumer of oil in the United States gets his oil for very much less than the consumer of that same oil abroad, and that is due principally to the fact that we have facilities within the United States for cheaply distributing the oil to the consumer that the company has not got on the other side. Mr. Rice refers to the price of oil at New York for export as compared with the price of oil in Montana and Idaho, and tries to convey the idea that we sell our oil abroad for less money than to the consumer within the United States. I submit that the price of export oil at New York is the price for cargoes at the mouth of the refinery, whereas the price of oil in Montana and Idaho must necessarily include expenses of distribution. The freight goes from Chicago, for instance, out to those western states, and comparing the price to the consumer of a barrel of oil out in the mountain districts of Idaho and Montana with the cargo of export oil at New York is manifestly unfair.

Q. Have you any knowledge of the Standard Oil Company selling oil in the German market below the point of profit for the purpose of driving other dealers out of that market and of their being curbed in that practice by the German government? A. I have no such knowledge, sir.

RUSSIAN OIL.

I have heard, and I believe, that the German government issued an order within the last year or so re-

quiring the railroads of Germany, which are under government control, to burn exclusively Russian oil and not American.

Q. (By Mr. Smyth.) Is it not a fact that the great competition you have in England is with the Russian oil, which is backed by the Rothschilds? A. The Russian field is a great competitor of the American petroleum field. The production of oil in Russia is, I believe, today equal to that of the United States, and at times has been in excess of it. In fact, I have known of reports of one well in Russia that has produced as much as 100,000 barrels per day, which is as much as the entire Pennsylvania oil field in certain sections, and the price, I do know, of Russian crude oil is very much lower than the price of American crude oil.

Q. (By Mr. A. L. Harris.) What about its quality? A. Its quality is not so good as the Pennsylvania oil. It is more like the Ohio crude.

Q. (By Mr. Phillips.) Do you know whether the Russian oil is extensively sold now in Germany? A. It is sold in Germany, and it is sold in Italy, and it is sold in England.

Q. Is it sold to any great extent in Germany? A. To as great an extent as they can sell it, sir.

OCEAN TRANSPORTATION—FOREIGN MARKETS AND AGENCIES.

Q. (By Mr. Farquhar.) Does the Standard Oil Company own its own ocean lines for transportation of oil to Europe? A. I am not very familiar with that part of it, Mr. Farquhar, but I know in a general way that they do own or have an interest in certain bulk tank ships and also some schooners. The tank ships are used for the transportation of the bulk oil from the United States to certain points in Europe where there are tank facilities for receiving it, and the ships are used for the purpose of shipment of case oil to the far east.

Q. Can you tell the commission how many countries in the world the Standard Oil Company sells its oil to? A. I think it would be easier to name those that we do not, or that we do not try to. I think we sell, sir, all over the world, as far as we can.

Q. Will you kindly state the means of transportation for the Asiatic trade? Is that by steamer or sail? A. By sail, usually, and against very severe competition of the Russians. They have tank steamers by which they transport oil from Batoum to India, and even to China and Japan.

Q. The statement has been made that the Standard has sold oil in foreign markets—in Asiatic countries—where they have had a return of only one-third of the price of the oil in the market itself. Do you know anything about that? A. I do not know as to that, sir.

Q. You know nothing about the price of oil and competition of other oils used in Asiatic countries? A. I only know we have shipped oil there, and still do, as against Russian competition. As to what the prices are there, I do not know. But I do know, from information and belief, as I have before stated, that the consumer of oil abroad pays much more for his oil than the consumer within the United States.

Q. (By Mr. Smyth.) Testimony has been given here that the Standard Oil Company has over 360 agencies throughout the world, every one of which is in charge of an American citizen. Do you think that is correct? A. I do not know. I do know that we have many agencies, but how many I do not know. I do know in a general way that we send Americans to take charge of those departments, but how many there are I can not say.

Q. (By Mr. Phillips.) Do they exert a very considerable influence on our consuls abroad? A. I have no knowledge of it, sir.

THE STANDARD WOULD MAKE PRICES TO KEEP THE TRADE

Q. You spoke some time ago of the advantage the Standard Oil Company has over others by having refineries at many different points in the United States in the lessening of freights, etc. There are quite a number of the independents that have such advantage, too, in localities; that have advantages, perhaps, over the Standard Oil Company in certain localities. Is it or is it not, has it or has it not been the practice of the Standard Oil Company where independent oil was being distributed to ship their oil in and sell it lower than the usual price or make it unprofitable for others? Do you know of any such instance as that? A. I can only say in a general way, Mr. Phillips, that we doubtless ship the oil from the nearest point and try to sell it.

Q. Do you know or do you not know that when the independent refineries recently began to distribute oil in New York the Standard dropped prices very greatly so as to make it unprofitable? A. I do not know that, sir.

Q. Or Philadelphia? A. I do not know it.

Q. (By Mr. Jenks.) You said a moment ago that of course— A. (Interrupting.) It goes without saying that we are in the business and we try to keep our trade, and we make prices that will also keep it.

Q. So, speaking generally, you would presume it was true that competitive prices are lower than where you have no competition? A. To a reasonable degree, yes; but I will say that the object and the success of the Standard Oil Company has been due to the fact that their effort is continually to reduce the cost of manufacturing and distributing of oil; and we sell it as cheaply as we can, based on that cost, to the consumer, and thereby increase the volume of our business by cheapening the cost to the consumer.

STATEMENTS FURNISHED TO THE COMMISSION.

Q. (By Mr. Phillips.) I am informed that the independent companies have recently made a statement of their business affairs to this commission through Professor Jenks. Would you be willing to advise the Standard Oil Company to make such a statement of their business? A. I do not know what kind of a statement the independent people have made, and I would not take it upon myself to do so. I think it would be rather impertinent for me, as a subordinate, to advise the officials in charge of the Standard Oil Company matters what kind of a report they should make.

THE TEXAS OIL FIELD.

Q. (By Mr. Kennedy.) I should like to ask you something about the new Texas oil field. Does the Standard Oil Company own that field, and where is the product refined, and to what part of the country is it shipped? A. I do not know that the Standard Oil Company owns that field. I know there is a refinery at Corsicana, Tex.

Q. A Standard refinery? A. It is not known in any way as the Standard Oil Company, and I do not know that it is.

Q. (By Mr. A. L. Harris.) I understood the witness to say that he knew of no instance in which the Standard Oil Company had interfered in any way or concerned themselves in any way with what other companies might get in the way of rebates, etc. Is that true? A. I said that no arrangement prior to the interstate commerce law, through which we got lower than tariff rates, was predicated in any way upon what that same railroad should give in the way of rates or rebates to other oil shippers.

Q. Do you know anything about the case of Handy and another, trustee, against the Cleveland and Marietta Railroad Company? A. I do not.

Q. Would you care to have the syllabus of that case read so as to get in the evidence? A. As I have no knowledge of it, Mr. Harris, I do not know what my testimony would be worth on the subject.

Q. It would be merely to show that your statement in regard to the action of the Standard Oil Company against other companies was probably not entirely correct? A. I, of course, can speak and only speak of my own knowledge, and my knowledge in the time prior to the passage of the interstate commerce law was confined to the Louisville business and south.

Q. You desire to have your testimony limited to your own knowledge, and not to be broader than your own knowledge? A. I supposed that went without saying.

Q. I would like, for the benefit of the commission, to read the syllabus:

["Circuit Court, S. D. Ohio, E. D., 1877.]

I. RAILROAD COMPANIES—RECEIVERS—DISCRIMINATIONS.

"The receiver of an insolvent railroad company can not unjustly discriminate in the charges imposed upon rival shippers over his road in order to increase his revenues, and, if guilty of discrimination, may be removed by the court therefor.

2. SAME—REMOVAL.

"The Standard Oil Company having threatened to store its oil until it could lay a line of pipes to Marietta, unless the receiver of a railroad company should give a special rate, the receiver agreed to carry its oil at 10 cents per barrel, to charge rival shippers 35 cents per barrel, and to pay 25 cents per barrel of the sum collected from rival shippers to the Standard Oil Company. Held to be such gross and wanton discrimina-

tion on the part of the receiver as to require his removal."

This is on page 575, Trust Proceeding of 1888. (Testimony closed.)

SUPPLEMENTARY EVIDENCE.

AFFIDAVIT OF GEORGE RICE IN REBUTTAL OF HOWARD PAGE.

City, County, and State of New York, ss.

On this 2d day of January, 1900, personally appeared before me George Rice, of Marietta, Ohio, who, being duly sworn, doth depose and say:

That he had read the affidavit of one F. B. Squires, the secretary of the Standard Oil Company of Ohio, which was presented to your commission by Howard Page December 13, 1899. In answer thereto I most positively and unequivocally deny that in 1876, or at any other time, I offered or included my producing properties and pipe lines in the proposed sale of my oil properties for the sum of \$24,000.

The real truth of the matter is that in the year 1876 Mrs. Rice and myself were boarding in New York at the same place with Squires, and Mrs. Rice was acquainted with a Mrs. Waring, who was also an acquaintance of Squire. That in some conversation with Mrs. Waring the matter of the oil business came up between them, and subsequently the said Squire spoke to deponent about his oil interests, and said he could possibly sell some of it to the Standard Oil Company, if he was so disposed to part with it. That the result of several conversations was that deponent informed Squire that if he or the Standard Oil Company desired to purchase my refining plant (which was only a small part of my entire oil properties and interests in the oil or petroleum business) he or it could have the same for \$20,000, as my wife was very desirous that I should get out of the refining business, and it was finally offered to Squire for that sum, which was not accepted.

In the summer of 1882 I was stopping with my wife at Asbury Park, where Squire, on his own solicitation, came to see me and he then and there offered me \$250,000 for my entire oil properties, including production, pipe lines, storage tanks, and refinery plant. I never offered the said Squire the sum of \$50,000 commission or any other sum to make said sale; nor did he suggest it or demand it, or any other sum whatever, nor did I say to him that the company would regret their act if they did not purchase from me, nor was I ever aware that said Squire had an office, except by hearsay, at Cleveland, Ohio. As this latter alleged interview occurred in the summer of 1882, as I testified before your commission, and as my pamphlet, *Black Death*, was published on December 15, 1881, it is superfluous to swear to it, that, because said proposition was not accepted by said Standard Oil Company, I immediately published said pamphlet as retaliatory against said company.

I further solemnly deny, as stated by said Squire, that I several times thereafter urged the matter further with him in any manner whatever.

I also further most solemnly and emphatically deny that either Mrs. Rice or myself ever said to said Squire, or to any other person or persons whomsoever, that the Standard Oil Company would be sorry, or any similar words or of like effect.

On November 13, 1889, before Justice Morgan J. O'Brien, at a special term of the supreme court of New York city, I testified as follows:

"I made that offer of \$250,000 to Mr. Squire, who represented the Standard Oil Company—the Standard Oil Trust—in some capacity; his name is F. B. Squire, I think; I don't know when I made that offer to him; some four or five years ago; I can't recollect just the time; I was stopping at Asbury Park with my wife, and he came there as their representative, I suppose, and made that offer to me. I don't know how long my price remained at \$250,000."

I had previously made this same offer to Mr. Squire, and he came down there to buy said properties at a less price, and finally offered me \$250,000 therefor, which I rejected.

When I testified to above, John D. Archbold, a trustee of the Standard Oil Trust, was present and heard said testimony, and when he followed me on the stand he did not allude to or in any manner contradict my said testimony; moreover, at this time Mr. Archbold testified as follows:

"I know Mr. George Rice, the plaintiff. I remember an interview with him in the month of October, 1886, in which he proposed to dispose of his property and all his future time of service or absence from service, and that conversation is fresh in my recollection.

"After the ordinary commonplaces we came to a discussion of the property question as owned by him, and he expressed his willingness to dispose of the property and business—the refinery property, I should say.

"There was no reference made at that interview, nor at any time in my conversation with Mr. Rice, to the producing property, and I never heard of it until now. He gave me a rough description of the refinery which I might know of, and told me of the volume of business which he had done the preceding year and which he was capable of doing, and came to the point of fixing his price."

This deponent further says that he incorporates herein the above portion aforesaid testimony of Archbold's as a corroboration of this affidavit, and a contradiction of the affidavit of said Squire, that my producing properties and pipe lines were all to be included in the original offer for the insignificant sum of \$24,000, while Archbold in 1889 swears, "I never heard of it."

GEO. RICE.

Sworn to before me this 2d day of January, 1900.

J. WILLIAM HILL,
Commissioner of Deeds, New York City.

JOHN D. ROCKEFELLER.

Answers to interrogatories.

1. Q. What was the first combination in which you were interested of different establishments in the oil industry? A. The first combination of different establishments in the oil industry in which I was interested was the union of William Rockefeller & Co., Rockefeller & Andrews, Rockefeller & Co., S. V. Harkness, and H. M. Flagler, about the year 1867.

2. Q. What were the causes leading to the formation? A. The causes leading to its formation was the desire to unite our skill and capital in order to carry on a business of some magnitude and importance in place of the small business that each separately had heretofore carried on. As time elapsed and the possibilities of the business became apparent, we found further capital to be necessary, obtained the required persons and capital, and organized the Standard Oil Company with a capital of \$1,000,000. Later we found more capital could be utilized and found persons with capital to interest themselves with us, and increased our capital to \$3,500,000. As the business grew and markets were obtained abroad, more persons and capital were added to the business, and new corporate agencies were obtained or organized, the object being always the same, to extend our business by furnishing the best and cheapest products.

3. Q. Did the Standard Oil Company or other affiliated interests at any time before 1887 receive from the railroads rebates on freight shipped, or other special advantages? A. The Standard Oil Company of Ohio, of which I was president, did receive rebates from the railroads prior to 1880, but received no special advantages for which it did not give full compensation. The reason for rebates was that such was the railroads' method of doing business. A public rate was made and collected by the railway companies, but so far as my knowledge extends, was never really retained in full, a portion of it was repaid to the shippers as a rebate. By this method the real rate of freight which any shipper paid was not known by his competitors nor by other railway companies, the amount being in all cases a matter of bargain with the carrying company. Each shipper made the best bargain he could, but whether he was doing better than his competitor was only a matter of conjecture. Much depended upon whether the shipper had the advantage of competition of carriers. The Standard Oil Company of Ohio, being situated at Cleveland, had the advantage of different carrying lines, as well as of water transportation in the summer, and taking advantage of those facilities made the best bargain possible for its freights. All other companies did the same, their success depending largely upon whether they had the choice of more than one route. The Standard sought also to offer advantages to the railways for the purpose of lessening rates of freight. It offered freights in large quantity, carloads and trainloads. It furnished loading facilities and discharging facilities. It exempted railways from liability for fire. For these services it obtained contracts for special allowances on freights. These never exceeded, to the best of my

present recollections, ten per cent. But in almost every instance it was discovered subsequently that our competitors had been obtaining as good, and, in some instances, better rates of freight than ourselves.

4. Q. If so, in what years were these advantages largest, and from what roads were they received? A. To the best of my recollection the greatest rebates were paid from 1877 to 1879. During that time we had an agreement for a special ten per cent commission, I think that agreement was made with the Pennsylvania, the Erie, and the New York Central roads. Large rebates were also paid during the summer of 1878, amounting I believe to 64½ cents on refined oil to equalize eastern shipments by rail with shipments by Erie canal. But these rebates were paid to all who shipped by rail. They were not discriminatory rates. I am not sure now whether any other road than the Pennsylvania collected the full amount and paid these rebates. The Erie and New York Central made the same reductions in rates to meet canal shipments, but my impression is that the Erie at least did not collect the higher rate from shippers and rebate it as did the Pennsylvania.

5. Q. About what percentage of the profits of the Standard Oil Company came from special advantages given by the railroads when these were greatest? A. No percentage of the profits of the Standard Oil Company came from advantages given by railroads at any time. Whatever advantage it received in its constant efforts to reduce rates of freight was deducted from the price of oil. The advantages to the Standard from low freight rates consisted solely in the increased volume of its business arising from the low price of its products.

6. Q. Did the Standard Oil Company or any of its affiliated companies ever receive, under any name whatever, any income from any railroad for oil shipped over those roads by any of its competitors? If so, give particulars. A. I know of no such instance. It seems that some arrangement of that nature was entered into by one of our agents in Ohio, being the same case which has been testified to by George Rice. When notice of this agreement was brought to the officers of the company for which it was made it was promptly repudiated, and the money received, some small amount, I think under \$300, was refunded. And this was not done because of any action in court or judicial opinion, but promptly as soon as reported, and before we had any knowledge of judicial proceedings.

7. Q. Has the Standard Oil Company received any financial favors from any railroad since 1887? A. To my knowledge, none whatever.

8. Q. Has the ownership of stock in railroad companies by officers of the Standard Oil Company given the Standard advantages with those railroads over its competitors? If so, give particulars. A. It has not. Stockholders and officers of the Standard have invested in stocks of railroad companies. But in no instance have they done so for the purpose of influencing the policy of the railway companies, nor to the best of my knowledge and belief has any attempt ever been made through such ownership to influence any railway in favor of the Standard.

9. Q. To what advantages, or favors, or methods of

management do you ascribe chiefly the success of the Standard Oil Company? A. I ascribe the success of the Standard to its consistent policy to make the volume of its business large through the merits and cheapness of its products. It has spared no expense in finding, securing and utilizing the best and cheapest methods of manufacture. It has sought for the best superintendents and workmen and paid the best wages. It has not hesitated to sacrifice old machinery and old plants for new and better ones. It has placed its manufactories at the points where they could supply markets at the least expense. It has not only sought markets for its principal products, but for all possible by-products, sparing no expense in introducing them to the public. It has not hesitated to invest millions of dollars in methods for cheapening the gathering and distribution of oils by pipe lines, special cars, tank steamers, and tank wagons. It has erected tank stations at every important railroad station to cheapen the storage and delivery of its products. It has spared no expense in forcing its products into the markets of the world among civilized and uncivilized. It has had faith in American oil, and has brought together millions of money for the purpose of making it what it is, and holding its markets against the competition of Russia and all the many countries which are producers of oil and competitors against American oil.

10. Q. What are, in your judgment, the chief advantages from industrial combinations—(a) financially to stockholders; (b) to the public? A. All the advantages which can be derived from a co-operation of persons and aggregation of capital. Much that one man can not do alone two can do together, and once admit the fact that co-operation, or, what is the same thing, combination, is necessary on a small scale, the limit depends solely upon the necessities of business. Two persons in partnership may be a sufficiently large combination for a small business, but if the business grows or can be made to grow, more persons and more capital must be taken in. The business may grow so large that a partnership ceases to be a proper instrumentality for its purposes, and then a corporation becomes a necessity. In most countries, as in England, this form of industrial combination is sufficient for a business co-extensive with the parent country, but it is not so in this country. Our Federal form of government, making every corporation created by a State foreign to every other State, renders it necessary for persons doing business through corporate agency to organize corporations in some or many of the different States in which their business is located. Instead of doing business through the agency of one corporation they must do business through the agencies of several corporations. If the business is extended to foreign countries, and Americans are not today satisfied with home markets alone, it will be found helpful and possibly necessary to organize corporations in such countries, for Europeans are prejudiced against foreign corporations as are the people of many of our States. These different corporations thus become co-operating agencies in the same business and are held together by common ownership of their stocks.

It is too late to argue about advantages of industrial combinations. They are a necessity. And if Ameri-

cans are to have the privilege of extending their business in all the States of the Union, and into foreign countries as well, they are a necessity on a large scale, and require the agency of more than one corporation. Their chief advantages are:

- (1) Command of necessary capital.
- (2) Extension of limits of business.
- (3) Increase of number of persons interested in the business.
- (4) Economy in the business.
- (5) Improvement and economies which are derived from knowledge of many interested persons of wide experience.
- (6) Power to give the public improved products at less prices and still make a profit for stockholders.
- (7) Permanent work and good wages for laborers.

I speak from my experience in the business with which I have been intimately connected for about 40 years. Our first combination was a partnership and afterwards a corporation in Ohio. That was sufficient for a local refining business. But dependent solely upon local business we should have failed years ago. We were forced to extend our markets and to seek for export trade. This latter made the seaboard cities a necessary place of business, and we soon discovered that manufacturing for export could be more economically carried on at the seaboard, hence refineries at Brooklyn, at Bayonne, at Philadelphia, and necessary corporations in New York, New Jersey, and Pennsylvania.

We soon discovered as the business grew that the primary method of transporting oil in barrels could not last. The package often cost more than the contents and the forests of the country were not sufficient to supply the necessary material for an extended length of time. Hence we devoted attention to other methods of transportation, adopted the pipe line system, and found capital for pipe line construction equal to the necessities of the business.

To operate pipe lines requires franchises from the States in which they were located, and consequently corporations in those States, just as railroads running through different States, are forced to operate under separate State charters. To perfect the pipe line system of transportation required in the neighborhood of fifty millions of capital. This could not be obtained or maintained without industrial combination. The entire oil business is dependent upon this pipe line system. Without it every well would shut down and every foreign market would be closed to us.

The pipe line system required other improvements, such as tank cars upon railways, and finally the tank steamer. Capital had to be furnished for them and corporations created to own and operate them.

Every step taken was necessary in the business if it was to be properly developed, and only through such successive steps and by such industrial combination is America today enabled to utilize the bounty which its land pours forth, and to furnish the world with the best and cheapest light ever known, receiving in return therefor from foreign lands nearly \$50,000,000 per year, most of which is distributed in payment of American labor.

I have given a picture rather than a detail of the

growth of one industrial combination. It is a pioneer, and its work has been of incalculable value. There are other American products besides oil for which the markets of the world can be opened, and legislators will be blind to our industrial interests if they unduly hinder by legislation the combination of persons and capital requisite for the attainment of so desirable an end.

11. Q. What are the chief disadvantages or dangers to the public arising from them? A. The dangers are that the powers conferred by combination may be abused; that combinations may be formed for speculation in stocks rather than for conducting business, and that for this purpose prices may be temporarily raised instead of being lowered. These abuses are possible to a greater extent in all combinations, large or small, but this fact is no more of an argument against combinations than the fact that steam may explode is an argument against steam. Steam is necessary and can be made comparatively safe. Combination is necessary and its abuses can be minimized; otherwise our legislators must acknowledge their incapacity to deal with the most important instrument of industry. Hitherto most legislative attempts have been an effort not to control but to destroy; hence their futility.

12. Q. What legislation, if any, would you suggest regarding industrial combinations? A. First. Federal legislation under which corporations may be created and regulated, if that be possible. Second. In lieu thereof, State legislation as nearly uniform as possible encouraging combinations of persons and capital for the purpose of carrying on industries, but permitting State supervision, not of a character to hamper industries, but sufficient to prevent frauds upon the public.

JOHN D. ROCKEFELLER.

State of New York, County of New York, ss:

I swear that these statements made by me of my own knowledge are true, and that all other statements I believe to be true.

JOHN D. ROCKEFELLER.

Sworn and subscribed to before me this 30th day of December, 1899.

S. MARSHALL BUSSELLE,
Notary Public, No. 190.

INFORMATION FURNISHED BY MR. S. C. T. DODD.

S. C. T. Dodd, solicitor of the Standard Oil Company, furnishes the following additional facts in reply to schedule of questions:

Q. What patents, machines, or processes of any kind formerly used exclusively by one plant are now used by all adapted to use them? A. The following is no doubt an incomplete, but as full as we can now supply, list of patents, by patent numbers, belonging to the various companies in 1882, the use of which was open to all. The subject of the patent is given when known: 9406, 104747, 146946, seaming machine; 146947, seaming machine; 148748, machine for stamping and bending sheet metal; 149516, sheet metal seaming machine; 150352, soldering iron heater; 150606,

apparatus for the distribution of liquid fuel; 150607, can-seaming machine; 150887, machine for uniting tinned plates by heat and pressure; 151155, apparatus for uniting tinned plates; 151619, apparatus for heating soldering irons; 152862, 154077, 154877, 155320, 158117, 158119, 165362, soldering apparatus; 167356, apparatus for facilitating the filling, etc., of cans; 169372, liquid-fuel burners; 171164, oil can nozzles; 177553, apparatus for facilitating the conveyance and delivery of boxes; 179135, box nailing machines; 182470, apparatus for facilitating the examination and packing of cans; 185777, machines for nailing boxes; 191172, sheet metal can machines; 192,278, feeding mechanisms for nailing machines; 194168, 203073, 224843, 227823, 227824, 227825, 227826, 227829, 228553, 228554, 230962, 334423, 234803, 234424, 236499, 239981, 240176, 240331, 240332, 240333, 240923, 240936, 240937, 239618, 3365, design for can; 7609, 23735, seaming machine; 23736, corrugating sheet metal; 24482, powder kegs; 38974, sheet metal can; 39616, soldering cans; 40661, sheet metal can; 42355, tin cans; 43326, cans for paint and fruit; 43371, sheet metal cans; 43079, molding sheet metal; 81692, sheet metal can; 82481, bending tops and bottoms; 82766, sheet metal cans; 86571, sheet metal cans; 87692, seaming machine; 87704, soldering machine; 88410, soldering machine; 89431, soldering machine; 91248, machine for metal cans; 192446, sheet metal cans; 87485, improvement in the manufacture of lubricating oils from petroleum; 87658, improved process of preparing petroleum to be used in lubricating wool; 68974, improvement in stills for refining and distilling oils; 85810, 86535, 137157, 5570, 6871, 7095, improvement in burning heavy hydro-carbon oils; 7996, improvement in manufacturing of hydro-carbon oils; 7155, 8373, 8374, 43157, 50935, 66594, 79661, 113795, 124917, 148075, piston balance valve for steam engines; 163710, helicat-cone suction fans; 181814, apparatus for purifying paraffin; 182169, apparatus for the separation of petroleum products; 183909, balanced slide valves; 191430, metallic cartridges; 200310, 211761, 212562, 217063, 229962, 223549, 229297, 255861, method and apparatus for glueing barrels; 237130, horizontal hoop-driving machine; 219228, improvement in barrel-trussing machines; 4920, 5053, 5652, 7321, 7322, 9017, 37798, 42671, 44258, 47082, 59780, 58021, 68426, 77959, license under Cheeseborough patent; 99500, 174506, process for determining the grade of lubricating oils; 212914, 2960, 4366, 4367, 4375, 32568, 53539, 120539.

Q. What by products, if any, are available to your organization which could not profitably be made by separate plants? A. All products are made by separate plants, but most of them were at one time protected by patents, the use of which became available to all plants.

Q. Has there been under the organization any specialization of the plants, further than at time of the organization, giving to each the work for which it is best adapted? Give details, if any. A. Some of the corporations whose stocks were taken into the original trust were abandoned because of location or ill adaptation for the desired work. Others were organized at more convenient locations and with superior plants.

Those manufacturing oil for export are located at tide water, while those for domestic trade are located at central shipping points in the interior.

Q. Have any plants or offices of the original organization been closed, shut down, suspended, dismantled or sold out? If so, give list, with disposition made of each. A. No plants or offices of the organization have been closed or sold out. But in the 18 years all plants of companies have been made new and more effective, and plants have been abandoned at one place because of more effective plants erected in a more suitable place. I am unable to give the particulars of the changes for 18 years; suffice it to say that almost nothing now remains of plants of 18 years ago.

Q. Are your prices, in fact, the same throughout the United States, allowing for cost of transportation? A. Yes.

Q. Are they, in fact, the same in the United States as in foreign countries, allowing for cost of transportation? A. Somewhat lower in the United States.

Q. Have your agents ever authority to make, or have they ever in fact made, lower prices or rebates in special sections of the country? A. No authority.

Q. Have they done so for the purpose of meeting competition or otherwise? A. No doubt prices have been cut to meet lower prices made by competitors.

Q. What dividends have you declared? Give complete list, with dates. A. Dividends were paid quarterly and have aggregated per annum as follows:

	Per Cent.		Per Cent.
1882.....	5.25	1891.....	12
1883.....	6	1892.....	12.21
1884.....	6	1893.....	12
1885.....	10.50	1894.....	12
1886.....	10	1895.....	17
1887.....	10	1896.....	31
1888.....	11.50	1897.....	33
1889.....	12	1898.....	30
1890.....	12		

Q. Give list of stock dividends, with dates. A. May, 1887, 20 per cent.

Q. What was the total amount of net profit, or loss, during your last business year? A. Profit, 30 per cent.

Q. What distinctions, if any, are made in the distribution of profits between the former owners of closed or dismantled plants and others? A. None.

Q. What sums have been added in enlargement or improvement of plant? Specify the use. Give particulars, with dates. A. In 1882 the property of the various companies was estimated to aggregate \$75,000,000, for which amount trust certificates were issued. In 1882 they were estimated to aggregate \$121,631,312. This increase was partly from profits, partly from additional capital invested. Possibly 50 per cent of the addition was profit. No estimate has since been made, but the addition of profits to capital was in about the same proportion until 1896, since which time profits have been divided. The improvements are in the way of greater efficiency in method and in facilities for enlarged output.

Q. What has been allowed for annual depreciation? A. An average of 5.77 per cent.

Q. What disposition has been made of plants closed or dismantled since the formation of the organization? List, with particulars of each. A. All that was useful of closed or dismantled plants was used in construction of new plants; all else was sold as junk. No data are within my knowledge or control from which particulars can be given.

Q. Give any further particulars which show the work of the organization and its effects. A. About the year 1872 the condition of the refined oil business was disastrous, and failures were of constant occurrence. Leading refiners began to combine for the purpose of making the business successful. The combination was by means of purchase of stocks and interests of various companies, and until 1872 the combination was solely by stock ownership in the hands of a limited number of individuals, who controlled the corporations as agencies in a common business. In 1882 these owners, whose names appear in exhibit A, entered into the trust agreement. The companies whose stock they owned in whole or in part, appear in the same agreement. They were not then competing companies. The individuals named as trustees controlled them by virtue of absolute ownership of a majority of their stocks. When the trust was dissolved in 1882 the same fact existed. The individuals then trustees continued to control the companies by virtue of absolute ownership of a majority of their stocks. Consequently the corporations named have been, many of them since 1872, separate agencies carrying on business as a unit for the individuals who are their common stockholders. What they have accomplished in that time may be thus briefly summarized:

1. They have cheapened transportation, both local and to the seaboard, by perfecting and extending the pipe line system; by constructing and supplying cars by which oil is shipped in bulk; by building tanks for storage of oil in bulk; by purchasing and perfecting terminal facilities for receiving, handling and reshipping oils; by purchasing and building steamers and lighters for river and harbor service; by building wharves, docks and warehouses for foreign shipments; by purchasing and building ocean steamers for carrying oil in bulk, and by employing in foreign countries the same special methods for storing and transporting oils in bulk, by which means alone the markets of Europe are today held for American oil against Russian competition.

2. By uniting capital, skill and acts, and the various processes and patents of a number of persons, as well as their secret processes, and by building up manufacturing on a more extensive and perfect scale, with improved machinery and appliances, and by locating them in the centers of the trade they were intended to reach, the manufacture of oil has been much cheapened and improved.

By spending large sums in the investigation of methods of utilizing Ohio and Indiana oils, and by purchase of various patents they have succeeded in making a superior article of illuminating oil out of what for some years seemed an almost worthless product.

3. By uniting with the business of transporting and refining businesses necessarily collateral thereto, to-wit, the manufacture of barrels, tin cans, boxes for

inclosing cans, paints, glue, sulphuric acid, etc., and by union of capital and skill obtaining the best machinery and manufacturing on a large scale, they have cheapened these products.

4. They have obtained and utilized the best skill in investigating and experimenting upon the obtaining of new and useful products from petroleum, and have cheapened illuminating oil and otherwise benefited mankind by the utilization of these by-products.

5. They have used their united capital in opening up the markets of the world for American petroleum, and have held those markets against the fiercest foreign competition. This was rendered possible only by the employment of millions of capital, in the cheapening of transportation at home, across the ocean, and in foreign lands, and by the best and cheapest methods of manufacture.

The proofs of these propositions will be found in the statistics of petroleum, showing its production, prices of crude and refined, consumption at home, and amount exported to foreign markets. While the Standard does not produce, refine and market all the oil, it has been the leader in the business, and competitors have succeeded by uniting their capital, skill and acts and following the same methods.

It may be asked whether all this could have been accomplished without combination. It could if one man could have commanded the necessary capital and employed the proper means and persons. But that was manifestly impossible. It could have been accomplished by one corporation instead of many, but no charter could be obtained authorizing a corporation at once to produce, manufacture, transport by pipe line, car and steamer, and deal in oils, and also to manufacture packages, acids, etc. The theory of the combination was that a corporation created by and largely doing business in a state should take its charter from that state. Until charters can be granted by the Federal government the agency of different corporations will be required in any business like that of American petroleum, which seeks all the markets of the world.

September 18, 1899.

S. C. T. DODD.

AFFIDAVIT OF HENRY DEMAREST LLOYD.

Author of Wealth Against Commonwealth.

Henry Demarest Lloyd being sworn and shown the following statement made by Mr. John D. Archbold before the Industrial Commission—

"I desire to say a word regarding the effort at pathetic reference of Mr. Lockwood to the Rice case in Mr. Lloyd's book. I desire to characterize this statement in Mr. Lloyd's book, as well, indeed, as all other statements with reference to our business as cunning fiction, made up entirely on one-sided testimony and dressed for sale. Whether Mr. Lloyd expected to share, as a result of his advocacy of Rice, in what Mr. Rice might be able to get from us, I am unable to say, but he certainly lays himself open to that suspicion.

"I desire to say further with reference to this book

of Mr. Lloyd's, that if you are disposed to waste your time reading it you will find it, with reference to its statements regarding the business of the Standard Oil Company, one of the most untruthful, distorted compilations that was ever inflicted upon a suffering public.

"Q. (By Mr. Farquhar.) Will you state the title of the book? A. Wealth vs. Commonwealth."—

makes deposition as follows:

That he is the author of *Wealth Against Commonwealth*.

That the main and central statements of *Wealth Against Commonwealth* are:

First. That certain men, now commonly known as the Standard Oil Company, entering the oil business before and after 1872, with no more capital and business experience than men already successfully established in the business, were declared by judicial and legislative investigations by the state and national governments to have obtained in a few years after 1872 a controlling and monopolistic position in the great oil industry.

Second. That judicial decisions and formal reports of legislative investigations declare them to have done this largely by making with the railways secret and unlawful contracts, by which their competitors and the people at large were denied the protection of competitive markets for buying and selling and deprived of their right to work at the occupation of their choice, and were forced to abandon their efforts in the oil industry to provide a livelihood for themselves and their families. After taking 3,700 pages of evidence and sitting for months, the railroad investigating committee of 1879 of the New York legislature said in their report: "The history of this corporation is a unique illustration of the possible outgrowth of the present system of railroad management in giving preferential rates, and also showing the colossal proportions to which monopoly can grow under the laws of this country. * * * The parties whom they have driven to the wall have had ample capital and equal ability in the prosecution of their business in all things save their ability to acquire facilities for transportation."

Third. That this success of the oil monopoly has encouraged the formation of other monopolies by similar means, filling the minds of the people with alarm and threatening not only the prosperity, but the peace of the country.

Deponent further swears that his account of these matters in *Wealth Against Commonwealth* makes no claim to be the result of original investigation, nor personal knowledge, but is in all things essential and controversial a transcription from the documentary records of state and Federal courts, civil and criminal, of legislatures, of congress, of the interstate commerce commission and of sworn testimony given in legal proceedings and official inquiries, corrected by rebuttal of testimony and cross examination, with no changes in substance and no changes in form other than those necessary for such condensation and simplification as make the transcription intelligible to the common people.

He further swears that in giving the public the par-

ticulars on which the official verdicts have been found his account is so far from being "one sided" that in less than 500 pages it contains more than 200 quotations, some of them nearly a page in length, from the testimony and statements in behalf of the members of the oil monopoly, and that in all cases he has indicated the nature of their defense, so much so that what is pertinent in the replies to him which have been made for them will be found to have already been given by him in *Wealth Against Commonwealth*.

Deponent further says that every controversial statement made by him is supported by exact references, by page and volume, to the official sources of information on which it is based; that in the five years which have elapsed since the appearance of the book it has not been shown that his conclusions have gone beyond the decisions or the testimony on which they are based, nor has the accuracy of his quotations and condensations been disproved.

Deponent further points out, in answer to the charge of "one sided testimony" that the selection of the testimony was not his work; but that of courts and legislative committees which, after hearing both sides on direct and cross examination, chose the "one side" which was to be believed. Deponent believes he would have been entirely within his legal and literary rights in accepting this "one-sided testimony" as the testimony officially and judicially attested and approved. But the deponent points out that, though he would have been justified in disregarding the testimony of the other side, as these public authorities disregarded it after hearing it, he has not done so, but in all cases has made sufficient reference to and frequent quotations from this testimony on the other side.

The deponent, in answer to the characterization of "all" of the statements of *Wealth Against Commonwealth* as "cunning fiction, made up entirely on one-sided testimony and dressed for sale," refers to his verbatim quotations from the many decisions of the supreme court of Ohio and supreme court of New York, the Federal court of the southern district of Ohio, decisions of the interstate commerce commission, of the criminal court of oyer and terminer of Erie county of New York, in the Buffalo cases, of the court of Cuyahoga county, Ohio, in the case of the Standard Oil Company against W. C. Schofield & Co. in the "contract in restraint of trade" case, the decision of the supreme court of New York in the case of Samuel Van Sickle against the Acme Oil Company for the suppression of inventions and inventor, the decisions of the interstate commerce commission in the cases of other refiners than Rice attacked by the same methods, the formal declarations of the New York assembly railroad investigating committee of 1879, and of the senate select committee of the forty-ninth congress, and adding to these the many quotations made by him from the testimony of the members of the oil monopoly or men favorable to them respectfully submits that these decisions and findings and friendly testimony can not be properly described as "cunning fiction made up entirely on one sided testimony and dressed for sale."

Further, as to the complaint that the statements regarding the business of the Standard Oil Company

are "distorted," deponent states that he would have been able to add largely to his quotations from the defense of the Standard Oil Company but for the fact, stated by the New York assembly legislative committee of 1879, that they were "unable to ascertain the exact relations of these different organizations, owing to the refusal of several members * * * subpoenaed as witnesses to obey the subpoena, and the refusal of those who did attend to answer questions." The committee refers to the combination as "this mysterious organization, whose business and transactions are of such a character that its members declined giving a history or description of it lest their testimony be used to convict them of a crime."

The deponent further points out that *Wealth Against Commonwealth* quotes from official sources the fact, which is not now denied by any one, though denied at first, that the men seeking to obtain a monopoly of the oil business organized a company called the South Improvement Company, and that this company in 1872 made secret and unlawful contracts with the principal railroads by which their competitors could move.

And deponent further states that *Wealth Against Commonwealth* cites other decisions and findings to the effect that, although the charter of this company was almost immediately forfeited by the state of Pennsylvania and the contracts with the railroad canceled, substantially similar relations with various railroads were thereafter re-established by the Standard Oil men, as shown in many cases.

To show the part taken by the president of the Standard Oil Company in this South Improvement Company, *Wealth Against Commonwealth* quotes the testimony of one of the principal associates before congress in 1888 and quotes said president at about the same time in his testimony before the New York senate committee of 1888, when asked under oath if he had not been in the Southern Improvement Company, as saying, "I was not."

Wealth Against Commonwealth reproduces from the official publications of congress and the state of New York the details of the contract made by the South Improvement Company with the railroads of the oil regions as showing that this bound the railroads in substance: First, to increase the oil freight rates, sometimes to double; second, not to charge it the increase; third, to collect the increase from its competitors; fourth, to put the rates of freight up or down as might be necessary to overcome competitors; fifth, to spy out the details of the business of these competitors and make reports to the South Improvement Company of all shipments made by these competitors, with full particulars as to how much was shipped and to whom, and so on.

The purpose of this contract was stated by the vice president of the Erie railroad, a witness friendly to the South Improvement Company and the Standard Oil Company, to be to give it "a complete monopoly."

The Hon. S. C. T. Dodd, now and for many years counsel for the oil monopoly, when still an anti-monopolist, a member of the constitutional convention of Pennsylvania in 1873, said:

"The South Improvement Company's scheme would give that corporation the monopoly of the entire oil

business of this state, amounting to \$20,000,000 a year."

The causes of the forfeiture of the company's charter and the cancellation of the contracts are declared in *Wealth Against Commonwealth* to have been publicly stated by Mr. Dodd in the proceedings of the Pennsylvania constitutional convention of 1873 as follows: "Their scheme was contrary to law, but before the legal remedy could have been applied the oil business would have lain prostrate at their feet, had it not been prevented by an uprising of the people, by the threatenings of a mob, if you please, by threatening to destroy property, and by actually commencing to destroy property of the railroad company, and had the companies not cancelled the contract which Scott and Vanderbilt and others had entered into, I venture to say there would not have been one mile of railroad track left in the county of Venango, the people had come to that pitch of desperation."

The identity of the South Improvement Company and the Standard Oil Company is shown by the fact that 10 of the 13 members of the South Improvement Company were active members of the oil trust, among them the president and the majority of its directors. The New York assembly committee of 1879 officially confirmed this, saying, "The controlling spirit of both organizations being the same."

The denial and explaining away of this affair by the president of the Standard Oil Company are fully credited to him in *Wealth Against Commonwealth*.

Deponent further states that nowhere in *Wealth Against Commonwealth* does he allege that business was continued under this contract, but does allege that the fact that these men were willing to make and did make such a contract and withdrew only when threatened with popular revolution is a headlight illuminating their whole track and since then.

Deponent further states that *Wealth Against Commonwealth* cites official records, like the decision in 1885 of the supreme court of Ohio, to show that the Standard Oil men, after the abrogation of this South Improvement Company contract and the nominal abandonment of the scheme, proceeded to make other contracts with various railroads, practically similar in important particulars to the contract of the South Improvement Company, and that he cites the adjudications and testimony in the Rice case and in other cases before the interstate commerce commission which are to the effect that these relations continued even after the passage of the interstate commerce law had made unlawful railroad discriminations criminal.

Deponent further says that his statement in *Wealth Against Commonwealth* that this South Improvement Company no longer exists in name, only "in reality," and that the decease of the name was no obstacle to the continuance of the scheme is supported in *Wealth Against Commonwealth* by official findings in others than the Rice cases.

Wealth Against Commonwealth quotes from the exhibits, affidavits and decisions in the case of *Standard Oil Company vs. W. C. Schofield et al.*, Cleveland, 1880, to the following effect: "In 1876, four years after the forfeiture of the South Improvement Company charter,

and the cancellation of the contracts, the president of the Standard Oil Company conducted a negotiation with a firm of Cleveland competitors in which they were put under bond to refine only about half their capacity for the ensuing 10 years."

An Ohio court set aside the contract as unlawful and "in restraint of trade." *Wealth Against Commonwealth* cites, as indicating the source of the power which had enabled this bond to be forced on unwilling competitors, a decision of the supreme court of Ohio in 1885, 13 years after the apparent abandonment of the South Improvement Company scheme. This decision revealed that in 1875, a year before making this contract "in restraint of trade," the Standard Oil Company had secured a contract from the Lake Shore railroad, which, like the South Improvement Company contract, was meant, as the supreme court of Ohio said, "to keep the price" of transportation "down for the favored customers, but up for all of the others, and the inevitable tendency and effect of this contract was to enable the Standard Oil Company to establish and maintain an overshadowing monopoly, to ruin all other operators and drive them out of business."

The purposes of the oil company in this contract with the railroad the court declared to be unlawful, and the court in the same case declared a contract between two railroads which was related to the business of the oil company and in its interest to be "not only contrary to a sound policy, but to the lax demands of the commercial honesty and ordinary methods of business."

Deponent further refers the Industrial Commission to the fact that *Wealth Against Commonwealth* quotes official findings showing that the monopoly of pipe lines now held by the Standard Oil men and constituting the most valuable part of their property was obtained by them by the help of railroad discriminations closely resembling those they sought to procure from the South Improvement Company.

The report of the New York assembly committee of 1879 is quoted to show that the rates made by the railroads to the pipe lines of the Standard Oil Company were such that the company "could overbid in the producing regions and undersell in the markets of the world."

The relations of the oil monopoly with the railroads in this case were regarded by the committee as in "flagrant violation of every principal of railroad economy and natural justice."

This discrimination was followed by the absorption of the pipe lines belonging to the men who could not get the rates that were "flagrant" by those who could get them and by the creation of the present pipe line monopoly.

The last great act in the completion of this monopoly was the conquest of the Tide Water Pipe Line, also along the lines of the South Improvement Company scheme. The Tide Water was the first trunk pipe line built to the seaboard, one of the most important developments ever made in the oil business, and due not to the oil trust but its competitors, as has been all the improvements except the "Improvement" Company. It was built by the surviving independent oil producers and refiners of Pennsylvania in their desperate

struggle to escape the discriminations of the railroads against them in behalf of the monopoly.

The railroads in the interest of the monopoly made war on the Tide Water, reducing rates, as was stated by a witness friendly to the monopoly, to "not enough to pay for the wheel grease," with the ultimate result that the Tide Water Pipe Line passed, in 1883, into the control of the National Transit Company, which is the pipe line branch of the oil monopoly.

Wealth Against Commonwealth quotes the president of the Standard Oil Company under oath in 1888, before the New York senate committee on trusts as swearing that the Tide Water was a "competing company," in opposition to his company, and quotes him in the same investigation, when asked if he had any connection with the National Transit Company, which is the most valuable part of his oil trust's property, as saying, under oath, "I have not." *Wealth Against Commonwealth* then quotes the attorney and treasurer of the Tide Water as both testifying that a contract to settle their rivalry in business had been made in 1883, and quotes the interstate commerce commission in 1892 as judicially finding the same fact, saying, "About December, 1883, the pipe lines, with the view of getting better rates, adjusted their differences and the competition between them ceased. The pipe line business appears then to have passed into the control of the National Transit Company."

Wealth Against Commonwealth reproduces the official finding of the New York assembly committee of 1879, that, in 1877, the railroads of the east, largely the same that took part in the South Improvement Company, united in a railroad war against the Pennsylvania railroad and "joined hands with the Standard Oil Company and proceeded to enforce by a war of rates, which terminated successfully in October of that year" a sale by the Pennsylvania railroad to the oil monopoly of its entire outfit, pipe lines, cars and refineries in New York and Pennsylvania. This again was like the South Improvement Company scheme of 1872, in which the railroads had bound themselves to "maintain the business against loss or injury by competition," and to put the rates of freight up or down as might be "necessary to overcome * * * competition." *Wealth Against Commonwealth* also quotes the testimony shortly after in a Pennsylvania court of the present president of the Pennsylvania railroad, Mr. A. J. Cassatt, always friendly to the oil trust, to the effect that after this forced sale by the Pennsylvania railroad of its oil business and oil outfit, all the remaining competitors of the oil monopoly who were doing business over the lines of the Pennsylvania railroad were notified, according to the South Improvement Company precedent, that the Pennsylvania railroad would thereafter give lower rates to the members of the oil monopoly than to them, though they had been during the preceding year the largest shippers of oil over the road, and that they would not be allowed to put cars of their own on the road, though the Standard Oil Company were allowed to do so.

In referring to Mr. John D. Archbold in these proceedings, *Wealth Against Commonwealth* confines itself to the records. It quotes him when put on the witness stand, in the proceedings brought by the state

of Pennsylvania against the Pennsylvania railroad in consequence of this discrimination, as stating under oath that he was not allowed a rebate amounting to \$0.64½ per barrel, but immediately afterwards compelled to produce his books, admitting "there was a total allowance of \$0.64½ a barrel."

Deponent further states that judicial inquiry in Pennsylvania and legislative inquiry in New York are used by him in *Wealth Against Commonwealth* as showing that the Pennsylvania and other railroads, acting as if in pursuance of the South Improvement Company plan, paid to some of the members of the Standard Oil Company, under the name of the American Transfer Company in 1878, an allowance of 22½ cents a barrel on all the oil these railroads carried from the oil regions. This payment was defended as made for the service of the American Transfer Company in collecting and delivering the oil to the railroads, but *Wealth Against Commonwealth* quotes the present president, Mr. A. J. Cassatt, as swearing that this allowance was paid to the American Transfer Company on oil which it (the American Transfer Company) never handled. "It is paid on all oil received and transported by us." (*Commonwealth of Pennsylvania vs. Pennsylvania Railroad et al.*, 1879, p. 691.)

Deponent further points out that official, judicial and legislative sources of information are quoted in *Wealth Against Commonwealth* to the effect that the plans contemplated in the South Improvement Company contract with regard to a monopoly of oil terminal facilities had been substantially carried out since the cancellation of that contract. The South Improvement Company's bargain of 1872 had provided substantially that the railroads should turn over to it such oil terminal facilities as they possessed at the seaboard.

Seven years later, in 1879, the New York assembly committee found that the oil combination was in control of the oil terminal facilities of the four great trunk lines at New York, Philadelphia and Baltimore, and the committee stated in their report that "they can use the power here given, and have used it to crush out opposition"; and 20 years later, in 1892, the western traffic manager of the Erie testified before the interstate commerce commission that he would not receive at the Weehawken oil docks of the Erie road a shipment of oil in competition with the oil of the monopoly, and in 1892 the interstate commerce commission found that the combination "have a monopoly of those facilities to the exclusion of complainants."

As to the Rice case, which Mr. Archbold emphasizes, *Wealth Against Commonwealth* quotes the decisions of a Federal court, of the interstate commerce commission, of the supreme courts of New York and Ohio and the testimony of friendly railroad men and of men connected with the Standard Oil Company to the effect that the important features of the South Improvement Company scheme were substantially reproduced in the treatment given Rice by many railroads.

Freight rates were doubled to Rice and more, but not only were not increased to the monopoly, but actually lowered to it, and freight rates collected from Rice were paid over to it. The railroads in 1879 and

later, which in 1872, in the language of the South Improvement Company contract, undertook to "maintain the business against loss of injury by competition," and to make the freight rate such as might be "necessary to overcome such competition," again refused Rice, after the passage of the interstate commerce act, as the Pennsylvania railroad did to the other independents mentioned above, the right to put on his own cars, and in repeated cases, refused him information even as to what would be the freight charged him if he undertook to ship anything.

Wealth Against Commonwealth quotes from the testimony of one of the men of the oil monopoly given before the interstate commerce commission, to the effect that the feature of the South Improvement Company arrangement, by which the business done by its competitors was to be spied out for the oil monopoly, was reproduced in the treatment given Rice.

In the first South Improvement Company only half a dozen of the eastern trunk lines took part, but in this later application of its methods to Rice nearly all the railroads in the Mississippi valley and on the Pacific coast took part. A deliberate and successful attempt was made to prevent Rice from doing business, except by accident and at a loss, in any town, county or state in which these roads could, by their power of manipulating rates, determine the question of business existence.

Wealth Against Commonwealth quotes from the records to show that the things done for this purpose by the railroads and inuring to the interest of the oil monopoly were so relentless and destructive and so outside the law that the judges and other public representatives in their decisions and reports were startled out of their formal phraseology usual in such deliverances into expressions of unaffected indignation.

Referring to one of the arrangements by which the railroads doubled Rice's freights, and out of every 35 cents he paid them handed over 25 cents to the Standard Oil Company—in reproduction of the South Improvement Company and the American Transfer Company schemes—*Wealth Against Commonwealth* quotes Judge Baxter, of the Federal circuit court of Ohio, as calling it "abhorrent," "dangerous," "gross," "illegal," "an inexcusable abuse by a public trust," "unparalleled wrong," "discrimination so wanton and oppressive it could hardly have been accepted by an honest man, and a judge who would tolerate such a wrong or retain a receiver capable of perpetrating it ought to be impeached and degraded from his position."

A senate select committee on interstate commerce of the forty-ninth congress is quoted as, after investigating the matter, characterizing the transaction as follows: "No comment is needed upon this most impudent and outrageous proposition"—by the oil company to the railroad.

Wealth Against Commonwealth shows that the Ohio supreme court in deciding a case brought by the State of Ohio against certain railroads to forfeit their charters for their treatment of Rice, decided that these railroads had charged "discriminating rates," "strikingly excessive," which "tended to foster a monopoly," "actually excluded these competitors," "giving to the favored shippers absolute control."

It shows also that the supreme court of New York in deciding another case in which Rice was a litigant with the oil trust, for his rights as a stockholder, said that the oil trust was "for the purpose of forming a combination whose object was to restrict production, control prices and suppress competition," and the "trust agreement was therefore opposed to public policy and void."

Wealth Against Commonwealth calls public attention to the fact that a large part of the time and attention of the interstate commerce commission was taken up for several years in hearing the complaints of Rice to it for redress, and that in a large proportion of the cases brought by him before the commission, it found his complaints justified, and ordered the roads to give him relief. The discrimination made by the railroads against Rice for the benefit of the Oil monopoly were so great that even the self-contained interstate commerce commission had to call them "vast discrepancies."

Wealth Against Commonwealth quotes the commission as stating in 1893 that these discriminations were made "on no principle. * * * Neither greater risks, greater expense, competition by water transportation, nor any fact or circumstance brought forward in defense, nor all combined, can account for these differences."

Again, speaking of the refusal of rates to Rice, the commission said: "Complainant did not succeed in obtaining rates. The denial of his right was plain and stands unexcused. * * * What reason there may have been for it"—the refusal of rates—"we do not know, but find they were not just or legal reasons."

The refusal to give Rice these rates was an "illegal refusal," the commission decided; "the obligation to give the rates * * * was plain and unquestionable."

The treatment of Rice by the railroads in another particular the commission adjudicated to have been "specially oppressive," and it "would have put success in the traffic out of the question."

Rice was misled and misinformed by the railroad officials, and Wealth Against Commonwealth quotes the interstate commerce commission as noting this fact and pointing out the "remarkable thing" that so many of these "defendants," the railroads, "should make the same mistake, a mistake, too, that it was antecedently so improbable any of them would make. The Louisville and Nashville, the Cincinnati, New Orleans and Texas Pacific, the Newport News and Mississippi Valley and the Illinois Central companies are all found giving out the same erroneous information, and no one of them can tell how or why it happened to be done, much less how so many could contemporaneously, in dealing with the same subject, fall into so strange an error. It is to be noted, too, that it is not a subordinate agent or servant who makes the mistake in any instance, but it is the man at the head of the traffic department, and whose knowledge on the subject any inquirer would have a right to assume must be accurate. In no case is the error excused."

Wealth Against Commonwealth quotes some of the expressions used by the interstate commerce commis-

sion with regard to the complaints before it of discriminations by the railroads, as follows:

"Great differences in rates," "unjust discrimination," "international disregard of rights," "unexcused," "a vast discrepancy," "enormous," "illegal," "excessive," "extraordinary," "forbidden by the act to regulate commerce," "so obvious and palpable a discrimination that no discussion of it is necessary," "wholly indefensible," "patent and provoking discriminations for which no rational excuse is suggested," "obnoxious," "disparity * * * absurd and inexcusable," "gross disproportions and inequalities," "long practiced," "the most unjust and injurious discrimination * * * and this discrimination inured mostly to the benefit of one powerful combination."

The deponent further states that in Wealth Against Commonwealth he has taken the verdicts, decisions and findings of the courts and legislatures as the authoritative version of the facts, and that it has not been shown that he has either inaccurately quoted or omitted any important fact on the record, nor that he in any case has failed to give the reader information as to the nature of the defense, nor have his statements in any case gone beyond the record.

Deponent further says that his statement in Wealth Against Commonwealth that Mr. Archbold when asked what was his part in the business of the Standard Oil Company, replied, "I am a clamorer for dividends; that is the only function I have," is a quotation from the testimony of Mr. Archbold before the New York assembly commission of 1879 investigating the railroads and their relations to the oil monopoly and other favored shippers.

Wealth Against Commonwealth quotes from the reports, decisions and testimony of the interstate commerce commission to show that the principal matters litigated before the commission have been discriminations made by the railroads to the profit of the oil monopoly; that the cases referred to cover the oil business on practically every road of any importance in the United States—in New England, the middle states, the west, the south, the Pacific coast; on the great east and west trunk roads—the Pennsylvania, the Erie, the Baltimore and Ohio, the New York Central, and all their allied lines; on the transcontinental lines—the Union Pacific, the Central Pacific, the Southern Pacific; on the steamship and railroad association controlling the south and southwest; and that from ocean to ocean, and from the Gulf of St. Lawrence to the Gulf of Mexico, wherever the American citizen seeks an opening in this industry, he finds it a "privilege" of a few and shut against the common people.

The witnesses on whose testimony are founded the decisions of the courts, legislative committees and other findings which make the substance of Wealth Against Commonwealth have come forward all through the period between 1872 and 1894, the date of Wealth Against Commonwealth, and from every point of importance in the industry—New York, Pittsburg, Cleveland, Oil City, San Francisco, Titusville, Philadelphia, Marietta, New Orleans, Buffalo, Boston, Cincinnati, Louisville, Memphis; they have come from every province of the industry—the refiners, the oil fields, the pipe lines, the railroads, the wholesale and retail mar-

kets; bound together by no common tie or organization or partnership, they have, each and all exactly the same story to tell. Wealth Against Commonwealth gives as the substance of their complaint that one selected knot of men, members of one organization, were given unlawfully the control of the railroad highways to the exclusion and ruin of the people, and quotes to sustain it the evidence taken by many official investigations and the decisions of substantially every court to which the facts have been submitted.

Deponent further points out that the testimony taken by the interstate commerce commission in Boston March 12, 1898, seems to show that one of the most important railroads in New England, the Boston and Albany, 26 years after the South Improvement Company scheme dies "in name," was "underbilling" cars of the oil trust to such an extent that in some cases half of such shipments within Massachusetts went free.

Lastly, the evidence taken in the investigation in the early part of 1900 by the Canadian parliamentary committee, if correctly reported, seems to indicate that the same South Improvement Company system, substantially, has been extended by the Canadian railroads to the oil trust, and that these railroads have been putting the "price"—of transportation—"down for the favored customers and up for the others," just as the supreme court of Ohio found the railroads of that state doing for the same organization in 1885:

The deponent further says in answer to the insinuation as to his share in the alleged blackmailing operations of Rice, that he feels it to be unnecessary to notice anything of which the insinuator himself is compelled to state, "I am unable to say." And he challenges the production of an iota of fact justifying even the utterance of the insinuation.

The deponent further points out that the method by which the members of the oil monopoly meet the decisions, verdicts and findings of which Wealth Against Commonwealth is based is to treat all those utterances of the constituted authorities, judicial and legislative, as nullities, and insist that the public shall receive from themselves, now and out of court, years after the events in question, without any of the protective procedure of trial and investigation, entirely new versions of the matters concerned, altogether in conflict with the findings reached by these tribunals at great expense of the people's time and money. Though in every case they had a full and fair hearing, they refuse to accept like ordinary citizens the findings of the courts and legislatures and deny the right of the people to accept as authentic any official records which contain truths disagreeable to themselves.

HENRY DEMAREST LLOYD.

State of Rhode Island, County of Newport:

Subscribed and sworn to before me this 4th day of August, 1900.

[SEAL.]

F. R. BROWNELL,
Notary Public for Rhode Island.

AFFIDAVIT OF CHARLES B. MATHEWS.

Producer and Refiner of Petroleum, Buffalo, N. Y.

State of New York,

County of Erie, City of Buffalo, ss:

Charles B. Mathews being duly sworn, says that he is 55 years of age and a resident of the city of Buffalo, N. Y., and that he has been for nearly 30 years engaged in the production, refining and dealing in crude petroleum and its products; and deponent further saith:

In reading the testimony of J. D. Archbold, on page 554 of your committee's printed record of testimony relative to the Standard Oil combination, I find such errors and misstatements regarding myself and associates, "lay and professional" that I beg leave to submit the "simple facts" in their true light. In the year 1880 J. S. Wilson, A. A. Miller and myself were employed by the Vacuum Oil Company. None of us being engaged for any specified time, we were at liberty to engage in any occupation we saw fit. I had much to do in the management of their salt property and their few oil leases. These properties were sold soon after the Standard Oil Company bought three-fourths of the stock of the Vacuum Oil Company and began to conduct its business. J. D. Archbold, H. H. Rogers and A. M. McGregor, being its ruling force, directed its business from the Standard Oil offices in New York. In the testimony of F. N. Beach, on page 900 of the report of the manufacturers' congressional committee, 1888, we find that the district attorney, in the prosecution of the cause of the people, subpoenaed certain books of record, and Mr. Beach, secretary of the Vacuum Oil Company, said: "I was also subpoenaed to produce here the record books containing the proceedings of the board of directors of the company, and I now produce the same. I know John D. Archbold, and I know his handwriting." The district attorney then calls the attention of the witnesses to the meeting of the board of directors of the Vacuum Oil Company held January 18, 1881.

Witness says the meeting are in the handwriting of John D. Archbold.

The district attorney then read from the meeting of January 18, 1881:

"Meeting called to order by Charles M. Everest, vice president. Present: Henry H. Rogers, Charles M. Everest and John D. Archbold.

"On motion John D. Archbold was appointed secretary.

"Waiver of notice by A. M. McGregor and H. B. Everest presented to the secretary.

"H. H. Rogers moved that a dividend of 40 per cent, payable as of January 1, and 10 per cent, payable as of January 1, to be paid at once from the earnings of the company.

"Carried.

"On motion, adjourned.

"(Signed)

JOHN D. ARCHBOLD,
"Secretary Pro Tem."

The Everests, father and son, who had built up the business of the Vacuum Oil Company as an independent anti-monopoly company, now held the offices of president and vice president simply as figureheads to maintain, for trade purposes, the pretense that they were not a Standard company. Published statements in the Rochester papers appeared denying that they had sold to the Standard Oil Company, and seemed to satisfy their consciences by saying to those who knew the truth that it was the Acme Oil Company they had made the deal with, whereas all the Acme Oil Company stock belonged to the Standard. The Standard management of the Vacuum Oil Company was distasteful to those accustomed to the service of the independent original Vacuum Oil Company, and they expected things might occur, which have since taken place—that their principal refining and manufacturing would be transferred from the Vacuum to other Standard plants and their selling agents dismissed. The Standard people, under various names, corporations and contracts, controlled the manufacture and sale of nearly all the petroleum lubricating oils of the country. Their monopoly was so complete that Cylinder stocks then sold for 20 to 25 cents per gallon, when crude oil was 80 cents per barrel, that now sell under competition for eight cents per gallon. With crude oil worth \$1.25 per barrel, the best refined oil was sold at Buffalo and other eastern cities at 14 cents per gallon, that now sells at eight cents per gallon. We also knew very well that to use the Vacuum and other processes we desired to employ was no infringement on any valid patents, and subsequent litigation in the Federal courts fully proved the groundless nature of their patent claims, and the evident object of the Standard people in bringing suits was for the purpose of involving us in expensive and harassing litigation, eventually resulting in court decrees in our favor. The claim that we used some of their tools in preparing our machinery is not a serious one. If any one in my employ used their chalk line or pocket rule or other tool, I was not aware of it, and trust the Standard trust will outlive its grief and loss on that score. From 1880 to 1885 the Standard people brought many suits against the independent manufacturers of oils, petroleum and greases. These suits were brought in the name of the Cheeseborough Manufacturing Company, or Vacuum Oil Company, or some company recently acquired by the Standard, and I believe none of these suits were ever successful, except in compelling the defendants to incur large expense in gathering evidence to defeat plaintiff's claims. The Buffalo Lubricating Oil Company was the name of my company, and the stock was soon subscribed for by those who had faith in the business of refining and selling oil. No business undertaking could be more legitimate, and the margin of profit between the cost of the crude and the selling price of the manufactured product was reason enough to enlist necessary capital. Mr. Archbold, in his statement before your commission, denies that the Standard Oil companies enjoyed discriminations and freight rebates not given to their competitors. If the Vacuum Oil Company, under the management of Messrs. Archbold, Rogers and McGregor, could pay

the dividend of 40 per cent in a few months in 1881, as shown by the above record of their directors' meeting, and the Standard combine stock now sells for \$800 per share, I must insist my company had a perfect right to expect good profits from manufacturing, transporting and selling oil, or the Standard profits were and are illegitimate and fraudulent. We fully established our rights in the courts to engage in the business as we did and when we did. Where should we begin? Buffalo was decided upon as the best location. Here the Atlas Oil Company was constructing a large oil refinery and endeavoring to lay pipe line from the Bradford oil field to Buffalo. The Atlas people assured us of their ability and determination to pipe oil to Buffalo and refine it there without the consent of the Standard Oil trust. The Atlas Oil Company promised me that they would give my company a five-year contract to furnish crude oil at our works, charging us 10 cents per barrel for piping it to us, and they would give us a contract as soon as the line was completed, and the "Green Line," running tank cars on Buffalo, New York and Philadelphia railroad, offered to bring us oil at the same price. In a few months the Standard trust got control of the Atlas pipe line and refinery and advanced at once with the railroads carrying charges on oil from 10 to 25 cents per barrel, and subsequently to 35 cents per barrel. The railroads also advanced all rates on oil going out of Buffalo, while rates on grain, coal, lumber and other commodities were generally reduced. The first still of oil run at our works was run under such extraordinary heat and pressure, with safety valve fastened down, that the gases were blown off at explosive pressure and the oil ruined and considerable property was destroyed, and we narrowly escaped the destruction of the entire works, with many fatalities. Our superintendent fled under the most suspicious circumstances and was secreted by and placed on the payroll of the Vacuum Oil Company, they maintaining him mostly in idleness; secretly sent him to California, where he remained nearly a year. After abundance of evidence of the power and cruelty of the Standard-Vacuum conspiracy came to hand my company brought suit against the Vacuum Oil Company and its officers, asking damages in \$100,000. This suit was brought in 1883. The defendants exhausted all their resources for delays, and finally came to trial March, 1885. The rulings of the trial justice were so narrow and so evidently against the plaintiff that the judge preferred to grant a new trial to having the case go up on appeal, and a new trial was granted nearly a year after our verdict of \$20,000 was given by the jury. Thereupon we brought a new conspiracy action, with broader allegations, and asking damages in \$250,000.

Our various suits with the Standard parties had taught us the great power of the Standard attorneys in securing long delays in forcing a case in which they were interested to trial on its merits, and as the five-year limitation had almost run, the district attorney felt it his duty to indict them in the criminal court. About his time, however, my company brought an action against the Atlas Oil Company, alleging damages and fraud to the amount of \$20,000. We alleged

that this company, having passed into the hands of the Standard, supplied us with inferior crude oil mixed with distillate and slops from the Atlas works, and that the same was sold us as pure crude oil. At a term of Erie county court of sessions in February, 1886, an indictment was found by the grand jury, charging Hiram B. Everest, Charles M. Everest, John D. Archbold, Henry M. Rogers and Ambrose McGregor of the crime of conspiracy and committed as follows: Copy of this indictment is found in the manufacturers' congressional committee's report of 1888, beginning on page 801. The defendants are accused of conspiracy to destroy the business of my company by corrupting its servants, by bringing vexatious suits at law for the purpose of harassing the company, by blowing up our works, and destroying a quantity of oil. The Standard suspects fought off the day of their criminal trial with the same success as they had done in the civil courts. Meanwhile their attorneys and detectives were busy with plans to hire the state's most material witnesses to go to a foreign country. Burdened with the expenses of the civil action and weary with delays, I made a final appeal to the district attorney urging immediate trial of the people's cause, and was told no judge could be got to hear the criminal case in the spring of 1887. I told him I should appeal to the governor to assign a judge for that purpose if there was no judge in our district willing to take it who was not disqualified. It was soon arranged for Judge Daniels to try the action. But Judge Daniels had tried and sentenced Jarvis Lord, of the famous canal ring, and so the Standard defendants were taken unawares and were not to be tried just then or by Judge Daniels. Affidavits of physical disability of Mr. Archbold and others put the trail off to a time Justice Daniels must hold court in New York, and it was then ascertained that Judge Haight would try the suspects. The district attorney was not pleased with the substitution of Judge Haight for Judge Daniels. I urged the district attorney to go on with the trial, as we could at least prove the allegations of the indictment, and make a record of the testimony, whatever judge tried the case, and the state's witnesses would be relieved from the pressure of the Standard's spies and detectives. It was shown at the criminal conspiracy trial that one Lane Borell, an employe of my company, was in the secret service of the Standard interests and that they paid him a higher daily wage for making daily reports of our sales and customers and business than we paid him for work at the refinery. These reports were mailed from Borell direct to S. C. T. Dodd, Standard attorney. Borell received his pay indirectly through Mr. Dodd, and it was shown by the books of account kept by the Vacuum Oil Company that Miller received some \$4,000 for a year of running and hiding from my company while he was under contract from us for the same period at \$100 per month for service as superintendent at our works. The district attorney also put in evidence the testimony of J. D. Archbold, given in the civil action tried in 1885, as follows:

"Q. During the year 1881 and the year 1882 were you connected in any way with the Standard Oil Company; and if so, what? A. I was.

"Q. In what capacity or way? A. I was one of the executive board of the Standard Oil Company.

"Q. Mr. Archbold, you made the contract, did you not, with reference to the transfer of the 75 shares of the Vacuum Oil Company's stock by the Messrs. Everest? A. I bought the 75 shares; yes, sir.

"Q. Was that transaction a verbal transaction or a transaction reduced to writing? A. There was a written contract following the transaction as agreed.

"Q. Can you tell to whom the contract was delivered when it was completed? A. It was delivered to the counsel of the purchasers whom I represented.

"Q. May I inquire who the counsel of the purchasers to whom it was delivered were? A. It was George F. Chester; my impression is that the contract is on file at the office of the Standard Oil Company in Cleveland; I am not sure about that.

"Q. Let me inquire who George F. Chester was and where he lives? A. He was at that time the counsel for the Standard Oil Company, and the Everest interests that were affiliated with it.

"Q. How long is it since you have seen the contract? A. I don't think I have seen it since the time of its execution.

"Q. You never had it in your possession since? A. No, sir.

"Q. Where would such papers be kept in the usual course of your business? A. We had a record of the contract in our office in New York, it was in a large contract book which we kept for the purpose of recording contracts, but the paper itself I am not sure about; it may have been kept in New York, and it may have gone to Cleveland; I am not sure about that.

"Q. Mr. Archbold, whom did you represent in that transaction? A. I represented the shareholders of the Standard Oil Company.

"Q. After this purchase was made, did you continue to represent the purchasers in the management of the affairs of the Vacuum Oil Company? A. I did.

"Q. By virtue of power delegated to you or by virtue of being a member of the board of directors or trustees of the Vacuum? A. By virtue of power delegated to me.

"Q. By the purchasers? A. By the purchasers."

As further showing what control the Vacuum Company was under, I asked C. M. Everest for an increase of salary if I remained at Rochester, and he referred me to Mr. Archbold as the one to determine that, and as things grew more unsatisfactory, I gave them notice that I should quit in a short time. The state's attorney had evidently made out a convincing case against the defendants on the criminal trial. When he rested the case Judge Haight asked the jury to stand up, and he instructed them to acquit Archbold, Rogers and McGregor and continue the trial concerning H. B. and C. M. Everest. Some of the jurymen afterwards told me that this act of the judge greatly embarrassed their subsequent action, as the very ones who had the leading motive in the conspiracy to destroy competition in the oil business were taken out of the case, while their agents and tools were left for the jury to deliberate about. The judge had in his hands the sworn answer of J. D. Archbold, H. H. Rogers and McGregor in the \$250,000 tort action in

which they admitted that they had advised their co-defendants, Hiram B. Everest and Charles Everest, also directors of the Vacuum Oil Company, to re-employ Miller at increased wages, and advised bringing actions on alleged infringement of their patents. This sworn answer in the civil action was withheld from the jury in the criminal trial by Judge Haight as not being permissible to use the sworn answer in civil action to convict the one making it of crime, and of course the Standard officials had so often refused to explain their doings before courts and committees lest their evidence be used to convict them of crime, that they were lucky in escaping at the very moment when their conviction seemed certain. And now comes Mr. Archbold to your committee with the affidavits of six of the panel of jurymen that Judge Haight delivered him from. These affidavits, you will notice, were taken one year after the trial. Any one at all acquainted with the situation will believe it possible that even six of the jurymen, or in fact, any of them, would have signed any such affidavits when the trial closed and the jury was together and the facts of the trial fresh in remembrance. But taking them one by one, under the pressure and encouragement of adroit lawyers, six of them yielded. When these affidavits were first presented District Attorney Quimby offered to prove that money was offered to procure similar affidavits from other jurymen of the panel. Of course the Standard defendants got all the affidavits they possibly could of that kind. The affidavits read as follows:

State of New York, County of Erie, ss:

"Nicholas Demerly, of the town of Boston, John J. Kinney, Bernard Schlebus, R. B. Vusan, Geo. W. Havens, John Ueblueher, being duly sworn, each for himself, deposes and says: That he was one of the jury that served on the trial of H. B. Everest and C. M. Everest for conspiracy in the Erie county oyer and terminer in May, 1887; that the said jury rendered a general verdict of guilty against both of said defendants. And deponent further says that, as he verily believes, it was not the intention of said jury, in rendering said general verdict, to pronounce the defendants guilty of an attempt or conspiracy to blow up or burn the works of the Buffalo Lubricating Oil Company, limited, but the conviction was, in the mind of deponent, based upon the enticement of the witness, Miller, from the employ of said oil company, and he believes that the other members of the jury convicted the prisoners on the same ground. And deponent further says that he believes the ends of the justice will be met in this case by the imposition of a fine upon the defendants, and he therefore begs to recommend to the court that the sentence of said defendants be that they pay a fine only and that they be not sentenced to imprisonment."

This affidavit was verified by the men whose names appear in the above copy of the affidavit. The maker of this affidavit avers that he did not vote for a conviction of the Everests for blowing up the works of the Buffalo Lubricating Company, but for the entice-

ment of the witness, Miller, from the employ of said company.

Now, in the sworn answer of the defendants, acquitted by order of Judge Haight, they admit that they advised the hiring of Miller from my company.

It must be evident to any one reading the official record of the conspiracy trial as given in the report of the manufacturers' congressional committee's report, 1888, that the charges of the indictment were fully proven, and that the three big Standard officials would have been convicted with the Everests if they could have gone to the jury at the close of the trial in 1887. The Everests went into this trial with the advantage of good reputations as honorable business men. Standard officials have been repeatedly indicted for violations of law, and their bad reputation is so well known that Mr. Archbold and other Standard officials and attorneys choose to refer to the "ignorance and prejudice" of the people against big corporations as the cause of the conviction of some of the conspirators at the Buffalo trial. I do not wish to review the Buffalo trial, but no one knows better than Mr. Archbold and his associates the truth of the old saw that—

"No man e'er felt the halter draw,
"With good opinions of the law."

The Standard defendants had been unanimously decided against by two grand juries and two petit juries in Buffalo, and they found abundant evidence of the Standard conspiracy. If untrue or misleading testimony was given by any one at the conspiracy trial, why did all the defendants choose to remain silent and give no word of testimony in their own behalf, and then go on forever abusing witnesses and attorneys for telling what the conspirators dare not dispute from the witness stand? The Standard conspiracy did not end with the conviction of the Everests and the escape of their associates in crime from immediate and full punishment under the law. My company was harassed in shipping its oil to and from the refinery until we felt obliged to associate with others in the oil field in building tank cars, tanks, etc. We found discriminations in freights under the interstate commerce law were as harmful, if more secret, than before, and finally with the failure of the Excelsior of Cleveland and the Keystone refinery of Oil City, we were so involved that the Lubricating Oil Company was thrown into a receiver's hands. My company had trusted for the benefit of creditors and stockholders, the various causes of action against the Standard conspirators. The judgment creditor obtaining the first judgment against my company was controlled by the Standard people and got a receiver appointed that acted in the Standard interest. The Standard trust then made an offer of \$85,000 to the receiver for our refinery in Buffalo and the cancellation of all our suits against the Standard. The hearing of this proposition of the Standard's was brought before Judge Haight by Receiver Norton. Although all the officers of my company urged him not to take it before Judge Haight, to him it went; and was heard by Judge Haight in February, 1888. At the hearing on this motion all the stockholders of my company and the creditors asked to

have the Standard's proposition refused. But Judge Haight ordered the receiver to accept their proposition to that the stockholders and creditors were denied a trial by jury of their causes in action on a demand by the Standard defendants that we should accept their proposition. Judge Haight said at this hearing that the Standard defendants could not be twice punished for the same offense. Hence consequential and punitive damages might be small if they were punished in criminal court, so he ordered the suit settled on the Standard's terms and then when he came to sentence them the following May he fined them \$250 each. So that when he had let three of the five defendants out at the criminal trial and settled the civil actions on the offer of the Standard, he then proceeded to fine the millionaire defendants the trifling sum of \$250 without imprisonment, lest they be twice punished for the same conspiracy to blow up the works of the competitive refinery. The Standard people had large interests in Buffalo in the way of natural gas, illuminating gas, electric lighting plants, etc., and had a large part of the public press and many attorneys retained, and their retained newspapers and attorneys were worked during and after the criminal trial to express a public opinion favorable to the Standard. But the Buffalo Morning Express was the sturdy defender of the cause of the people and the good name of the intrepid public prosecutor.

Mr. Archbold well knows that Standard officials have been repeatedly sheltered by the governors of this and other states when they were under indictment for violations of law, two governors of the state of New York having refused to extradite them on requisitions of the governors of other states, and now Mr. Archbold complains before your committee. The Buffalo defendants were convicted as charged in the indictment of the conspiracy to blow up the works of a competing refinery. The charges in this case were fully proven, as the charges of freight discriminations ruining the business of George Rice were proven. Hence, Mr. Lloyd in his book, *Wealth Against Commonwealth* takes the court records for facts in history instead of the brassy denials of the guilty parties.

Large and frequent claims have been made by Standard solicitors and stockholders about their great skill and economies in refining and transporting oil. The independents laid the first pipe lines for transporting oil for short as well as long distances. The Tide Water Pipe line, the first long distance line, was harassed without ceasing by the Standard until compelled to surrender its independence. Prominent Standard officials declared 10 years ago that it was not practical to pump refined oil long distances as the oil would be discolored, and the Standard fought in every conceivable way the laying of the United States pipe line, which the independent people were laying for that purpose (as the records of your commission fully show).

On page 306 of the report of the congressional committee's report on manufactures, 1888, H. M. Flagler, of the Standard, says "that refined oil does not come from Lima oil at all. The Lima oil can not be refined successfully." On page 77 of the same report I. E.

Dean (independent) says they are now able to refine Ohio oil perfectly, so that the smell is taken out entirely. At the time Messrs. Flagler and Dean gave their testimony in 1888, the Standard was rapidly acquiring oil producing territory in Ohio and Indiana, and either did not know that this class of oil had been successfully refined in Canada for 25 years; and now in the United States, or they were systematically engaged in an effort to beat down the price of Ohio oil to obtain control of the production. From my experience as an oil producer and refiner for about 30 years I have found the independents more progressive and scientific and practical in the art of refining oils than the Standard people have been, and the small per cent of refining of oil now done by them is due almost entirely to freight discriminations and rebates in favor of the Standard combine. The remedy for this evil, that grows with the growth of railroad consolidations and lake and ocean transportation companies, I believe must come through the public ownership of railroads, so that they can be used by all people on equal and just terms, and that the people can not be protected in the enjoyment of industrial liberty so long as the roads remain in private hands.

CHARLES B. MATHEWS.

Subscribed and sworn to before me this 16th day of April, 1901.

E. N. HEATH,

Commissioner of Deeds in and for the City of Buffalo, N. Y.

AFFIDAVIT OF M. L. LOCKWOOD.

Producer of Petroleum, Zelienople, Pa.

Hon. Thomas W. Phillips,

Vice Chairman, Industrial Commission.

Honorable Sir: I have been reminded by a letter from a gentleman of national reputation that J. D. Archbold had made a personal attack on me in his testimony before your honorable body, delivered by him September 8, 1899, and that it was my duty, in the interests of truth, not to allow your permanent report to be printed without first answering, as such final report would become historic, and be placed upon the shelves of the different libraries and institutions of learning throughout the land.

We who have kept watch of Archbold before investigating committees for nearly a quarter of a century have learned to pay very little attention to what he says. But this letter from a gentleman of national repute reminds me that the public is not now, and that future generations will not be so well posted. And I therefore ask that this sworn answer be ingrafted into the testimony of your report, as I understand that you have adopted the policy of allowing witnesses who have had their testimony attacked to answer by sworn statement. And I have faith that you will extend to me the same courtesy.

I will not burden your pages by answering unim-

portant attacks, for you will note that Mr. Archbold denies everything and anything, not only of my testimony but the testimony of other witnesses not satisfactory to the Standard Oil Company's interests. So I will commence at once at page 559 of his testimony in your preliminary report.

He says: "Mr. Lockwood makes an absurd statement, intended to convey the impression that at the same time refined oil is sold to Germany at two cents a gallon the people of Texas and Arkansas are forced to pay 25 cents. There is, of course, not a word of truth in any such statement, nor does he pretend to furnish, nor can he offer, any evidence in support of it. It is the sort of a statement that a silly demagogue would make in order to create sentiment on this question."

My testimony on this point was this, and will be found on page 394 of your preliminary report:

"I take no stock in the idea that inordinately great capital produces cheaply; where monopoly begins, there improvement ends; it is competition that drives men to economy, improvement and invention; it is monopoly that demands great profit. While competition was putting refined oil into tank steamers for the competitive markets of Germany at two cents a gallon, monopoly, backed by railway favoritism, was forcing the people of Texas and Arkansas to pay 25 cents a gallon for the oil that they burned in their lamps."

Mr. Archbold says, "There is, of course, not a word of truth in any such statement."

I again assert its truth, and here present the sworn evidence and statement from the export books of the independent refiners of America to prove it.

On page 8, independent refiners export books, date of March 9, 1894, the refined oil sold at this date for export was 800,000 gallons. This oil, after commission and other expenses off, netted the independent refiners 2.7 cents per gallon. This oil was shipped to the competitive markets of Germany.

On page 11, March 29, 1894, oil sold this day for export was 3,000,000 gallons. This oil, after commission and other expenses off, netted the refiners 2.1 cents per gallon. This oil was shipped to the competitive markets of Germany.

Page 12, April 18, 1894, refined oil sold this date for export was 1,500,000 gallons. This oil, after the commission and other expenses off, netted the independent refiners 2.1 cents per gallon. This oil was shipped to the competitive markets of Germany.

On page 13, April 18, 1894, refined oil sold this date for export was 1,250,000 gallons. This oil after the commission and other expenses off, netted the independent refiners 0.210 cents per gallons. This oil was sold to the competitive markets of Germany.

On page 18, June 9, 1894, refined oil sold this date for export was 1,500,000 gallons. This oil, after the commission and other expenses off, netted the independent refiners 2.17825 cents per gallon. This oil was shipped to the competitive markets of Germany.

On page 22, July 20, 1894, refined oil sold this date for export was 1,500,000 gallons. This oil, after commission and other expenses off, netted the independent refiners 2.35 cents per gallon. This oil was shipped to the competitive markets of Germany.

On page 25, September 20, 1894, refined oil sold this date for export was 1,500,000 gallons. This oil, after commission and other expenses off, netted the independent refiners 0.275 cents per gallon. This oil was shipped to the competitive markets of Germany.

On page 26, October 17, 1894, refined oil sold this date for export was 1,500,000 gallons. This oil, after commission and other expenses off, netted the independent refiners 2.275 cents per gallon. This oil was shipped to the competitive markets of Germany.

The commission will note that, in spite of Mr. Archbold's denial, my testimony is more than made good by this statement of the books of the independent refiners of America. And if the commission desires any further sworn evidence on this point, I am ready to produce it.

Even at this late date, the people of Texas are paying \$1 for a five-gallon can of oil. And for fear that Mr. Archbold will deny this, I will present the commission with the sworn testimony of the citizens of Texas to prove this statement.

Here see the affidavits:

Know all men by these presents, that the undersigned, as a citizen of the state of Texas, United States of America, and a consumer of petroleum oil, has been obliged within the last year to pay \$1 for a five-gallon can of oil, and that is the usual price here for that amount of oil at this time.

Witness my hand and seal this 23d day of April, 1901.

J. P. BUCKENDORFER.

Know all men by these presents, that personally brought before me, D. W. Solliday, a notary public in and for Orange county, of the state of Texas, J. P. Buckendorfer, who being duly sworn, deposes and says that the statement set forth in the above paper is true, so help him God at the great day.

[SEAL.]

D. W. SOLLIDAY,
Notary Public in and for Orange County, Tex.

Know all men by these presents that the undersigned, as a citizen of the state of Texas, United States of America, and a consumer of petroleum oil, has been obliged within the last year to pay \$1 for a five-gallon can of oil, and that is the usual price here for that amount of oil at this time.

Witness my hand and seal this 23d day of April, 1901.

M. STEPHENSON,

Know all men by these presents, that personally brought before me, D. W. Solliday, a notary public in and for Orange county, of the state of Texas, M. Stephenson, who being duly sworn, deposes and says that the statement set forth in the above paper is true, so help him God at the great day.

D. W. SOLLIDAY,
Notary Public in and for Orange County, Tex.

And now for the purpose of showing the commission what the people of other states have been paying for their oil where monopoly controls, I desire to submit the following sworn statement:

Know all men by these presents, that the undersigned, now a citizen of Butler county, Pa., but from 1885 to 1890 was a citizen of Orange county, Fla., that while there I was a consumer of petroleum oil and paid while there not less than 25 cents a gallon for the oil that I burned in my lamps, and that was the usual retail price for oil at that time in that state.

Witness my hand and seal this 9th day of May, 1901.

STEPHEN LOCKWOOD,

Know all men by these presents, that personally before me, Paul W. Miller, a commissioner of deeds for the state of New Jersey, in Pennsylvania, appeared Stephen Lockwood, who being duly sworn, deposes and says that the statement set forth in the above paper is true, so help him God at the great day.

[SEAL.]

PAUL W. MILLER

A Commissioner of Deeds for the State of New Jersey, in Pennsylvania.

And yet in spite of all these statements and sworn affidavits, and regardless of the penalty for perjury, and with customary audacity, Archbold brushes aside my testimony by saying, "There is, of course, not a word of truth in any such statement."

On page 560 of your preliminary report Archbold presents a portion of my testimony, as follows:

"Q. (By Mr. Kennedy.) Mr. Lockwood, can you state approximately what per cent of the refined oil of this country is turned out by the independent companies? A. We calculate that they are handling about four per cent.

"Q. Only four per cent? A. Only four per cent; you know this is an immense business.

"Q. (By Mr. Phillips.) That is, taking the Ohio oil? A. Taking the Ohio oil and the Pennsylvania oil and all these different grades of oil."

At the time I was called to testify before your honorable body the rumors were already afloat that the Cudahys and Manhattan oil companies, operating principally in Ohio and Indiana oils, with their pipe lines and refineries, were being absorbed by the Standard Oil Company, which rumors afterwards proved to be true, and the absorption was done through the route of an English syndicate, and it was from this standpoint that my estimates before you were made.

Mr. Archbold proceeds: "I will now present a statement showing the aggregate business done by the Standard Oil Company and by others in the United States for the five years 1894-1898, inclusive, in which it appears that the aggregate percentage of all business in petroleum and its products done by the Standard Oil Company was 82.3 per cent for this period of five years as against competitors' 17.7 per cent,

"Q. (By Mr. Smyth.) That includes all by-products. A. Petroleum and all its products."

Here are Mr. Archbold's figures:

Business of Standard Oil Company and Other Refiners, Years 1894-1898, Inclusive.

[Barrels of 50 gallons; all products, domestic trades.]

Year	Standard Oil Co.		Others		Total barrels
	Barrels	Per ct. of total	Barrels	Per ct. of total	
1894	18,118,933	81.4	4,145,232	18.6	22,264,165
1895	18,348,051	81.8	4,084,720	18.2	22,432,771
1896	16,341,161	82.1	3,569,719	17.9	19,910,880
1897	18,141,479	82.4	3,876,706	17.6	22,018,185
1898	19,999,939	83.7	3,914,999	16.3	23,914,938
Total	90,949,563	82.3	19,591,376	17.7	110,540,939

The commission will note that by ingeniously presenting this data for years preceding—now mark, preceding this absorption of the Cudahys and Manhattan refineries—that he made these figures do his falsifying for him, and apparently proved to you that my estimates were false.

And more and worse, on page 541 of his testimony, he further convicts himself of purposely deceiving and misleading the commission. He there gives what purports to be the independent refineries operating at that time. In that list, in addition to the above absorbed refineries and pipe lines, and the 26 refineries in that list which Scofield, Shurmer & Teagle, of Cleveland declare to be shut down and gone out of the business, he gives the Tide Water Oil Company, with its 43,150 barrels of still-refining capacity, as independent and outside of the Standard Oil Company's combination.

The Tide Water Company was the first concern that ever started in unhandicapped by railway discrimination and upon anything like even terms in transportation facilities in competition with the Standard Oil Company, their pipe line and railroad connections guaranteeing them equal transportation charges with the Standard Oil people, and since they whipped the Standard Oil Company into giving them a large percentage of the oil business they have become as much a part of the Standard Oil conspiracy against the producers and consumers of oil as Archbold himself. Everybody who is posted knows this, and yet Archbold has the impudence and audacity to impose on your honorable body this kind of testimony with the purpose of deceiving the commission and the country in an attempt to prove that my estimates were false.

He further testifies (preliminary report, p. 560):

"Mr. Lockwood testifies that by manipulation of price of Ohio crude oil, in conjunction with the railways, we succeeded in getting the price down to an abnormally low figure, and then bought substantially the whole Ohio producing field."

And here again Mr. Archbold uses figures to deceive and mislead the commission and the country.

For, mark you, it was not until the latter part of 1886 that the withering force of railway discrimination was applied to the man who had developed the Lima

oil field, and by July of 1887, after that withering force had been applied, they had forced the price of crude Lima oil down to 15 cents a barrel. At that time, 1887, the Standard Oil Company owned practically nothing in production in the Lima oil field. Think of what the financial slaughter must have been to force over 55 per cent of the producers to transfer their property to the Standard Oil people in a little more than two years. In some places nearly whole townships were sacrificed—transferred to the Standard. I know all about it. I was one of the producers who was obliged to sacrifice his property there.

Think of a financial condition brought about by monopolistic control of the price of wheat, for instance, among the farmers of a state that would force them in two short years, in order to save themselves from the sheriff, to give up to such monopoly over 55 per cent of their farms. Would it not be a pardonable extravagance for some farmer who happened to be in the thickest of it to testify?

“They held it at 15 cents a barrel in Ohio until they broke the hearts of the producers and then bought nearly the entire country upon that basis.”

And here Mr. Archbold could sit coolly down in his office at 26 Broadway, surrounded by his high priced lawyers and statisticians, and compile this table of figures to prove what he wanted.

Here are Archbold’s figures, expressed in barrels of 42 gallons:

Year	Pennsylvania Oil			Lima Oil			Grand Total		
	Total production	Standard Oil Co. production	Standard oil, per cent of production	Total production	Standard Oil Co. production	Standard oil, per cent of production	Pennsylvania and Lima oil production	Standard Oil Co. production	Standard oil, per cent of production
1890	30,065,867	2,618,637	8.71	15,014,882	8,400,568	55.95	45,080,749	11,019,205	24.44
1891	35,742,127	4,913,775	13.74	17,381,923	9,319,156	53.61	53,124,050	14,232,931	26.79
1892	33,332,306	4,338,822	13.02	16,685,193	7,843,324	47.01	50,017,499	12,182,146	24.36
1893	31,256,283	6,705,276	21.45	17,823,255	7,260,899	40.74	49,079,538	13,966,175	28.46
1894	30,696,716	7,210,345	23.49	18,575,603	6,690,951	36.02	49,272,319	13,901,296	28.21
1895	30,891,868	9,119,920	29.52	21,719,250	6,808,876	31.35	52,611,118	15,928,796	30.28
1896	33,908,041	9,380,654	27.66	25,222,091	8,031,793	31.84	59,130,132	17,412,447	29.45
1897	35,170,367	9,787,353	27.83	22,793,033	7,497,349	32.89	57,963,400	17,284,702	29.82
1898	31,645,151	11,248,443	35.55	20,266,328	7,220,606	35.63	51,911,479	18,469,049	35.58
Total..	292,708,726	65,323,225	22.32	175,481,558	69,073,522	39.36	468,190,284	134,396,747	28.70

The commission will especially note that these statistics given by Archbold did not begin until the year 1890, after the financial slaughter was over in Ohio, and the price of Lima oil had gone up. But they seem to prove to his satisfaction that the situation was not as bad as I had pictured it, he selecting his figures from such dates as to best deceive the commission and the country. Why did he not give his statistics for the years 1887, 1888, 1889? The answer is, “because they would have proved too much,” and exposed the awful wreckage which in a little over two years enabled the Standard Oil people to get possession of over 55 per cent of the oil production of the Lima oil field.

His figures, however, are of service, for they prove that just in proportion as the producer is able to get a fair price for his product, that he is more than able to hold his own with the Standard Oil Company in the acquisition of property, for in 1895, when Lima

oil went to \$1.27 a barrel, the producers of Lima oil had been able to reduce the Standard Oil Company’s percentage of production to less than 32 per cent.

Mr. Archbold further testifies, on page 561, that “Mr. Lockwood’s statement * * * is so ridiculous as not to call for any answer.” He takes exception to my attack upon the courts and upon the corruption of our public men by railroads and corporate interests, and then he takes the commission into his confidence and says: “I think you will agree with me that we must conclude that the fool killer has been very remiss in his duty in the vicinity of Zelenople, Pa.”

And now, in conclusion, I desire to submit that when Mr. Archbold ruthlessly denies all facts and systematically and cunningly compiles figures and falsifies, as per his classification of the Tide Water Oil Company, that the commission must agree with the country that the knave killer has not done his full duty in the vicinity of No. 26 Broadway, New York.

And now I desire to repeat what in substance I said when I appeared and testified before your honorable body, that I have no combat against Mr. Archbold and his associates, for I do not believe that they are any worse than some other men might be, armed as they are with special privileges and advantages over the highways, the railways, of the country. I have no combat with men. My protest is against this accursed system of favoritism over the railways by which a few men, by the organization of trust combinations, can

monopolize, destroy the equal rights of the citizenship, declare 48 per cent dividends on a three-times watered stock in 12 months, and thereby absorb the wealth produced by the many.

M. L. LOCKWOOD.

Witness: Ira S. Zeigler.

I do solemnly swear that the above statement is true to the best of my knowledge, information and belief.

M. L. LOCKWOOD.

Sworn and subscribed to before me this 14th day of May, A. D. 1901.

IRA S. ZEIGLER,

[SEAL.]

Notary Public...

State of Texas, County of Orange:

Before me, V. H. Stark, a notary public in and for Orange county, Tex., on this day personally appeared J. T. Stark, who, after being duly sworn, on oath de-

poses and says that he is a resident citizen of the United States of America, and is now a resident of the state of Texas, and has resided in the said state of Texas for a period of 44 years next preceding the date of this affidavit; that for a period of 10 years he has been a consumer of illuminating oil; that he now pays for said oil 20 cents per gallon; that for three years next preceding the filing of this affidavit he has not been able to purchase illuminating oil for a less price than 20 cents per gallon, and that said prices have been the regular price from the merchant to the consumer for said oil for the period above mention in Orange county, Tex.

That for a period of seven years next preceding said above three years he has paid 25 cents per gallon for said oil.
J. T. STARK.

Sworn to and subscribed before me this 14th day of May, A. D. 1901. And I do hereby certify that affiant above subscribing is a credible person.

AFFIDAVIT OF HON. F. S. MONNETT.

Ex-Attorney General of Ohio, Columbus, Ohio.

To the Honorable Industrial Commission,
Washington, D. C.:

I beg leave to submit a reply affidavit to the scurrilous misrepresentations of a man by the name of John D. Archbold, testifying before your commission, as appears upon page 543 et seq.

ANSWER TO ARCHBOLD'S PRELUDE.

The State of Ohio, Franklin County, ss:

It is true that the Standard Oil Company is and has been interested in Ohio, as set forth in the prelude of Archbold's testimony; that certain corporations, like the Buckeye Pipe Line Company, the Ohio Oil Company, Solar Refining Company and the Standard Oil Company of Ohio are and have been duly chartered by the state, but I specifically deny that they are "carefully observing the obligations imposed upon them by their charter," but each and every one have openly and notoriously violated their charter, and have violated the statutes of the state, criminally and civilly, and are now so violating them, and did not dare to come into court and answer the charges of such violation as set forth in the petition in quo warranto and the interrogatories thereto attached, the Buckeye Pipe Line Company, the Solar Refining Company, and the Standard Oil Company of Ohio, other than filing such an affidavit to their pleadings as the inclosed one indicates, and as appears on page 34 of the supreme court record of the case, and which still stands in open and notorious defiance of the state laws.

COPY OF BUCKEYE PIPE LINE COMPANY'S JURAT TO ANSWER IN SUPREME COURT OF OHIO.

The State of New York, County of New York, ss:

Henry H. Rogers, being duly sworn, says that he is president of the defendant herein, a corporation, and that the averments in its foregoing answer are not verified because the admission of the truth of certain facts stated in the pleadings might subject the defendant and its officers to a criminal or penal prosecution and to a forfeiture of its charter, franchises and privileges, and for the same reason the interrogatories are not answered.
HENRY H. ROGERS.

Subscribed and sworn to by the said Henry H. Rogers before me this 18th day of January, 1899.

JOHN BENSINGER,
Notary Public for Kings County.
Certificate filed in New York county.

They ceased to hold bona fide meetings in the state of Ohio of their directors and stockholders, as required by statute; they removed their principal office to 26 Broadway, New York, entered into and remained in the Standard Oil trust by part of the companies, continuing to nourish the trust certificates issued by the Standard Oil trust by paying dividends thereon, in open defiance of the court, for eight years; they escaped the contempt of the court for violating the original decree of the Standard Oil Company, wherein they were adjudged to have entered into the trust contract illegally, and escaped punishment in contempt by the supreme court of Ohio by a vote of three to three. The three judges voting to hold them in contempt were the three judges that were on the bench when the original decision was rendered. It is charged and uncontradicted that their influence defeated Joseph P. Bradbury for renomination as judge of the supreme court of the state of Ohio, who was known to be against their treatment of the court in this decree, and not until after his defeat and election of a judge in his place did they get a tie vote that failed to convict them. They have openly and notoriously evaded the taxes due the state by making returns upon their property, in many instances estimated at less than 10 per cent of its real value, considering the earning capacity of the property.

I reaffirm that on their own figures, as reported to the excise board, they shipped from the oil fields of Ohio to their various refineries an average of upward of 30,000,000 barrels per year, as appears in my testimony, on page 311 of the records of your commission, and that the gross receipts for refined oil and by-products received by the Standard Oil combination companies from Ohio's crude oil would reach \$120,000,000 a year. I did not claim, as indicated in Archbold's reply, that any such amount was consumed in Ohio. It was the amount that was extracted from Ohio and mostly piped out of Ohio. If Archbold's testimony is as represented in its prelude on page 543, in which he says that the said corporations composing his combination of companies are "carefully observing the obligations imposed upon them by their charters," I wish to caution the commission against drawing any conclusions or deductions from any of his evidence; and his reiteration of this matter, after all that has been shown in the courts by the affidavits of their own officers and their conduct before the court and in the state legislature regarding the same, is most reprehensible.

I would like to characterize this absurd statement of Archbold's and his misrepresentation of the conduct of his companies in Ohio in much stronger terms, but I "bow to the wish of the commission."

He entirely misquotes Mr. Kinkead; at least, he misconstrues Mr. Kinkead's "satisfaction on his investigation." Mr. Kinkead demanded record and answers to the state's interrogatories that were never answered, but when Mr. Archbold undertakes such a large job of swearing as to malign, contradict, vilify and reflect upon Senator Theo. F. Davis, M. L. Lockwood, Mr. Lloyd, Mr. Phillips, Senator Lee, Mr. Emery, Theo. B. Westgate, David Kirk, Messrs. Dennison, Akin and Murphy and the whole army of witnesses, their vic-

tims and others that do not bow down their knee to worship at his oily shrine, and cry "Allah, Allah," at the altar of his by-products, I am not surprised that he would palm off such testimony upon the commission.

Looking at his testimony in the light of the various records as shown in the courts, in the face of the testimony of the other witnesses and of the company's refusal to testify when called upon to do so what strength or force can his testimony have as to what his corporations have done to obey the law in Ohio when these companies had an opportunity to demonstrate to the court that they were law abiding, but did not dare answer the interrogatories submitted to them for fear of penal or criminal prosecution, as they allege, in Ohio.

BURNING OF THE BOOKS.

I submitted to the commission the sworn testimony of the witnesses who helped burn the books and of the draymen who helped haul them to the funeral pyre. I also gave them an opportunity to produce a single volume, whether daybook or ledger, covering the subject matter that was contained in the books burned. They never did produce them and openly refused to produce them under the court's order, and flagrantly subsidized 110 newspapers in the state of Ohio to protect them in their methods. Since said sworn testimony one of their traveling auditors or employes has admitted that he was out collecting the books and records that were shipped into the office and burned, and he himself was ordered, if subpoenaed, to answer no questions, but to go to jail in contempt. This employe said the state was "hot on their trail."

THE BRIBERY CASE IN OHIO.

I charged them before the supreme court with having attempted to bribe the Hon. D. K. Watson, former attorney general, and also myself as attorney general, as fully set forth in the complaint, and began taking testimony to establish the fact, but Mr. Archbold said in his testimony on page 544 that they had called upon the court to investigate the charges, and if the court did not investigate, they would. On the day I began to take the testimony to establish every allegation made in reference to the bribery in my reach, showing how the \$400,000 was offered, and showing how \$100,000 was offered to my predecessor, and giving all the details, telegrams and intermediaries, and all the evidence connected therewith, the chief justice of the supreme court, at the request of the attorneys of record of the Standard Oil Company verbally ordered me not to take the testimony, and the charges were thereafter dismissed by the court without hearing any of the testimony on the part of the state to establish the same. So that instead of the trust "courting investigation," they deliberately evaded and suppressed an investigation of these bribery charges, the court holding among other grounds that they had no jurisdiction over the question of contempt as charged, as to whether the Standard Oil Company was allowed taken, either by the company or the court, although the state stood ready to give a full exposition and exposure thereof.

Through their pipe line charges and by means of their monopoly in transportation, the Standard Oil combinations continue their monopoly in handling oil in Ohio, as every consumer of oil in this state can verify by his pocketbook.

Campaigns come and go, commissions investigate, and legislatures meet and adjourn, and magazine articles are written and read, and yet, through their monopolistic and criminal exactions, the Standard Oil combinations of transportation and distribution thereof levy tribute upon the owner of the oil rock and exact from the consumer of the refined oil and its by-products this unnatural profit. The public are its victims; the little band of law violators owning the controlling shares are the beneficiaries of the plunder. The public for a short time stand aghast at their very boldness and defiance. The government alone can check their abuses.

Subsidized papers and public officials bribed by these law violators will work their own ruin sooner or later. The exposure made by the industrial commission has had its wholesome place in this work, but some more drastic measures must soon be administered. The states have the sovereign power to protect all lawful efforts of organized wealth, but when the state creates the corporations that use their delegated powers for other purposes than the government itself could use them, it is time then to revoke such charters by the courts. This government was established to promote the "general welfare," not for the special welfare of a few magnates; neither can this sovereignty delegate its governmental functions to seven trustees to operate the government for their special welfare and for "their posterity."

No corporate creature of this government can deprive a citizen of his property through monopolistic combinations and exact an unnatural and an unconscionable tribute or excise from the consumer by this brute force, and long hold the public good will. Neither can this band of law violators long deny the common citizen the equal protection of the laws; neither can they destroy competitors' property at will without adequate compensation. They have shown little respect in Ohio for "vested" rights of competitors, and little respect for "vested facts" or "truth" in their reports and testimony from my views of this evidence.

F. S. MONNETT.

I swear that these statements made by me of my own knowledge are true, and that all other statements I believe to be true.

F. S. MONNETT.

Sworn and subscribed to before me this 6th day of June, 1901.
L. R. PUGII,
[SEAL] Notary Public, Franklin County, Ohio.

AFFIDAVIT OF HON. JAMES W. LEE.

President Pure Oil Company, Pittsburg, Pa.

State of Pennsylvania, County of Allegheny, ss:
James W. Lee, being duly sworn, deposes and says,

in answer to the statement made on page 507, volume 1, part II, of the record of the industrial commission:

It is not true that the said affiant acknowledged himself to be not only a member but the head of a trust. The company to which reference is made is the Pure Oil Company, and it is not now nor has it ever been in any sense a trust. It was organized to have exactly the opposite effect, to prevent, if possible, instead of securing monopoly. The fact that a portion of its stock is held in a voting trust does not in any way contribute to make it a trust. This voting trust was created for the express purpose of preventing monopolies in the business in which it is engaged from securing control of its business and destroying the small measure of competition which the said company affords in the industry in which it is engaged. These voting trusts had been employed for proper and laudable purposes long prior to the date at which modern trusts came into existence.

Affiant is not now nor ever has been connected with modern trusts—that is, corporation or combination of corporations intending to create and maintain a monopoly in an industry.

Affiant desires to reiterate the statement that the Standard Oil Company was absolutely opposed to the passage of the free pipe line law in Pennsylvania in 1883 and to the attempted passage of a similar law in 1879 and 1881. This was a matter of common and general knowledge at the time, and their agents forwarded hundreds of telegrams in opposition to the measure during the time of its consideration.

The letters submitted on pages 517 to 526 of the report are wholly inconsequential as proving the matter which they are offered to establish. They are in the nature of negative testimony. Affiant has knowledge of a case in which the general freight agent swore that no discrimination in rates were made, and then the honest auditor of said road testified and submitted written statements showing discriminations to the amount of thousands of dollars in said year.

Affiant further desires to call attention to the average price given for oil in New York, beginning in March, 1896, and says that the average prices were given for the month of March. The price he gave was 9 to 9½, which was the price on March 9, 1896, and the statement of the average price for March 7, 1898, on page 528, is simply confirmatory of affiant's statement of the rapid reduction in price after the Pure Oil Company began the sale of oil in the city of New York. On page 528 Mr. Archbold gives the average price for July at 6.23, while the affiant gave the price at 5½. The price given by affiant was correct, and Mr. Archbold found it necessary to give the average price of all their business for July in order to raise the price above this figure of 5½. The average price for July as given by him includes not only the sales made in July but their previous contracts for July, some of them possibly made before the Pure Oil Company began business.

Affiant says that the statement made by Mr. Archbold on page 530 that affiant approached the Standard Oil Company, or any of its officers or employes, seeking the sale of any portion of the independent inter-

ests, is wholly untrue. The only approach affiant ever made to an officer or employe of said company was made to the attorney of the company, and there was no suggestion of sale or even of combination, but simply that the Standard Company would cease to use the destructive methods which they were employing against the independent interests, stating to said attorney that this, if it was not, should be a free country in which any one, even with limited capital, should be entitled to engage in a legitimate business and to carry it on without efforts on the part of others engaged in the same business seeking by unfair methods to destroy it.

JAMES W. LEE.

Sworn to and subscribed before me this 11th day of June, A. D. 1901.

JAMES S. CAMPBELL,
Notary Public.

AFFIDAVIT OF JOHN D. ARCHBOLD.

Vice President Standard Oil Company.

To the Honorable Industrial Commission,
Washington, D. C.

Gentlemen: I beg to submit the following affidavit relative to the new assertions contained in the affidavits of F. S. Monnett, Charles B. Mathews, M. L. Lockwood, and J. W. Lee, filed with you in June last. At the time I gave my former testimony the question of attempted bribery and burning of books was pending before the supreme court of Ohio for investigation, and I was instructed by counsel that it was not proper to go into details respecting these matters. The court has completely vindicated the Standard Oil Company from both charges, and has dismissed all the actions instituted against it by Attorney General Monnett. The attorney general, notwithstanding this result, reiterated before you his charges and reflected upon the purity of the court. I therefore desire the privilege of setting forth the facts shown by the court in some detail in order that you may judge between F. S. Monnett on the one side, and the supreme court of Ohio and the Standard Oil Company on the other.

BRIBERY.

The first public mention of the bribery charges came from George Rice in an interview at Marietta, which was given out to the newspapers on March 3, 1899. The last paragraph of this interview was as follows:

"In this connection it might be of interest to the citizens of the state to know that they have an incorruptible official in Attorney General F. S. Monnett, who within the past month has been offered the sum of \$500,000, less \$100,000, to be retained by the person attempting the bribery, to stop proceedings against the Standard Oil interests, and evidence has come to me from such source and in such manner that establishes this fact beyond the possibility of a doubt."

To his friends Monnett pretended surprise and expressed anger at Rice's disclosure. He told the court afterward that the story had been given Rice in confidence in the attorney general's office, and that Rice had given it out because he had been goaded to anger by charges of blackmail.

The story was soon made prominent in all the newspapers. Reporters thronged Monnett's office and telegrams crowded his desk, urging him to tell what he knew about it. He put on a mask of fairness. He feigned hesitation, and told them the matter was in court and he did not "feel at liberty to discuss it," but before closing his mouth confirmed it in confidential parenthesis. He pretended it was true, conceded the reported negotiation and figures, but concealed the name of the man who offered them. When pressed for the name, his usual reply was, "I do not think it a wise plan. If I were to give out his name, half a dozen different departments of the trust would be after him at once, and it might be they could force him or persuade him to keep his mouth shut, and in that case I might be placed in an unpleasant predicament."

The Standard's attorneys, Kline and Elliott, after a few days of this mystery, addressed Monnett a letter on the 20th of March, as follows:

Hon. F. S. Monnett, Attorney General of Ohio:

On March 4, instant, George Rice announced to the public press that a bribe of \$500,000, less \$100,000 commission, had been offered you to induce you to stop or delay proceedings against the Standard Oil Company, now pending in the supreme court of Ohio.

You are reported to have entirely denied, at Toledo, the Rice story, but by the time you arrived at Columbus, on the evening of the same day, you concluded that the story was true, and accordingly in various newspapers on the morning of the 5th instant you made the statement that the Standard Oil Company, through some friend of yours, had offered you \$400,000 to influence your action with respect to the cases pending against it and other companies in the supreme court of Ohio. Reputable newspapers of the state, notably the Cleveland Leader, the Toledo Blade, and the Ohio State Journal have called upon you to disclose the name of the "friend" who thus corruptly approached you.

You are reported in the Cleveland Plaindealer of March 7, as saying that 'if you were to give out the name of your friend, half a dozen departments of the trust would be after him at once, and it might be they could force him to keep his mouth shut.'

You do not seem to realize that the reason given by you for refusing to disclose the name of your friend is an admission that the company does not know the name of the party whom you say it commissioned to offer you \$400,000 and therefore you must have known that the alleged friend made the offer to you without the authority or knowledge of the Standard Oil Company.

In the New York World of the 9th instant you are reported as saying that if you had written the friend who tried to bribe you that you would not expose him until public interest demanded it.

"In another interview in the Cincinnati Commercial

Tribune of the 6th inst. you are reported as saying that 'Your friend had agreed to protect you.' The arrangement for protection, therefore, seems to be mutual.

So far as any connection with the Standard Oil Company with any attempt to bribe you is concerned, it is totally false. You have the names, or claim to have, not only of the friend who approached you, but also of others acting with him, because, on the 14th inst., you said in the public prints that these men were telegraphing you from New York.

While nothing in your story has directly connected the Standard Oil Company with the attempted bribery, you have desired the public to assume such connection. We now demand that you give the name or names of the person or persons who made such an offer to you, claiming to represent the Standard Oil Company, that we may take steps to quiet this last and most vicious of the many false and sensational stories to which you have given currency.

Respectfully,
 VIRGIL P. KLINE,
 M. F. ELLIOTT,
 Attorneys for Standard Oil Company.

After studying over the letter 25 days, on April 15, 1899, Monnett filed in the supreme court a paper which he called a bill of informal contempt. This bill contained not only a statement of what Monnett claimed was an attempt to bribe him, but contained allegations of an attempt to bribe D. K. Watson in 1890 by several mysterious persons, no names of such persons being given. It then referred to conversations at different dates between another mysterious person and Monnett, still failing to name the person.

The effect upon the public of an information of this character after the direct demand made upon him by the Standard's attorneys can be best judged by the following extracts from the newspapers of that day:

"The attorney general has filed the long promised statement of the attempt to bribe him by the Standard Oil Company. It is as unsatisfactory as the play of Hamlet with Hamlet omitted. He gives no names, but says that certain parties or a certain party offered to do so and so. What the public wants is the name of the briber and then proof that he was an agent of and authorized to act for the company. If it can be proven and is proved that the Standard Oil Company offered a bribe to the attorney General, there is not an honest citizen who will not insist on the punishment of the guilty man or men. "A certain party" may be nobody, or nobody with authority, a mere myth. Let us have the name of the briber and his connection with the company." (Sandusky Register, April 17, 1899.)

"Attorney General Monnett's bill of information is a disappointment. It fails to answer definitely the request of the Standard Oil Company's attorneys for the name of the man who is said to have attempted to bribe him in the interest of the company. Not only is the man not named, but the recital of the circumstances surrounding the alleged attempt to bribe the state officer is much weaker than the stories that have filled the newspapers. Instead of clarifying the matter, he

has made it, if possible, more confused, and has prematurely invoked the aid of the supreme court. At no time has there been placed in the hands of the attorney general a better weapon than this, which he says he has, but seems afraid to use. Using it properly in his warfare against illegal corporations, he might abandon the other weapons, which it has been troublesome for him to employ successfully. Using this effectively, he would early have at his back a public sentiment that would do more than aught beside to further his crusade.

The boldness of the company's attorneys in demanding the name of the alleged bribe offerer and the failure of the attorney general to comply with that reasonable demand have certainly created a bad impression. The party from whom concealment would naturally be expected is not an officer of the law who has refused a bribe, but rather the company or individual whom the bribe offerer represented. Was the bribe offering a dream or a reality? The attorney general's information does no make it clear." (Columbus Dispatch, April 17, 1899.)

"Mr. Monnett, anxious to have the press promulgate his charge against the Standard Oil Company, and to have himself praised loud and long for refusing a princely sum, utterly ignored the claim of the people, made through the press, for the names of the alleged bribers. He had numerous excuses to offer, but declined to recognize the just demand, until, to bring the matter to a focus, the Standard Oil Company took the steps that forced Mr. Monnett to give the names of the alleged bribers, the manner of the reputed tender, and all other information connected therewith." (Cincinnati Times-Star, May 9, 1899.)

"The charge made by Monnett called for action—action against the agent who tendered the bribe and the principal who supplied the bribe. A crime had been committed and the duty of the attorney general of the state was to expose the criminal and to take such action as would bring him and the Standard Oil Company into court to be tried for a serious and reprehensible violation of the law. So far Mr. Monnett has declined to make known the man who sought to debauch him, and no effort has been exerted to punish the Standard Oil Company for seeking to bribe the attorney general of the state of Ohio." (Cleveland Leader, May 3, 1899.)

The more the attitude of Attorney General Monnett is examined into as regards the Standard Oil muddle, the more conscientious people of all classes question his consistency. That his conduct was inspired all the way through by a feeling of buncombe is plainly evident. He hoped by coping with the biggest corporation in the world to incite a feeling of admiration on the part of the trust-opposed people that would give him the nomination and land him in the gubernatorial chair. That the people are not falling over themselves to honor him indicates that they understand his motives and are not in sympathy with his political tricks, even if they would like to see some of the trusts brought under anti-trust laws. But in the case of the Standard

Mr. Monnett has not as yet proven, or came anywhere near proving that the company is any particular exceeding the prerogatives of its charter." (Fostoria Times, May 10, 1899.)

No process was issued upon the filing of this paper and no notification given the Standard Oil Company that it had been filed. But learning of the fact, the Standard's attorneys immediately went into court with the following motion, which appears in the records of the case. Notice of the filing of the motion was immediately given Monnett.

In the Supreme Court of Ohio.

The State of Ohio ex rel. D. K. Watson, Attorney General, Plaintiff,

vs.

The Standard Oil Company, Defendants.

No. 2294. Motion.

(Filed in supreme court May 4, 1899.)

Now come Virgil P. Kline and M. F. Elliott, attorneys for defendants in above case, in reference to a paper filed in above case by F. S. Monnett, attorney general, on the 15th day of April, A. D. 1899, and making known to the court that no notice has been given to the defendants of the filing of said paper, and that no process has been issued requiring an appearance, yet, being unwilling that such false, defamatory and libelous charges should remain among the records of this court without contradiction and in order that the falsity thereof may be made susceptible of proof they move the court:

I. That the attorney general be required to make the charges in paragraph designated "First" more specific and certain by naming the person who it is therein alleged requested Hon. Daniel J. Ryan to use his influence as therein stated.

II. That the attorney general be required to make the charges designated "Second," "Third," "Fourth," "Fifth," and "Sixth" more specific and certain by naming the persons who it is therein alleged made the offers and representations to D. K. Watson therein stated.

III. That the attorney general be required to make the charges in paragraph designated "Seventh" more specific and certain by naming the party who had the conversation with him therein referred to, and also by naming the "certain party" referred to in the telephone message from Cleveland, and by naming the "parties representing the Standard Oil Company" therein referred to, and by naming the three persons designated as "one of the stockholders of defendant company and two other people," and by naming the parties in New York who were telegraphed to from Columbus, as stated, and if any others are referred to therein as "representatives of the Standard Oil Company" that they be named.

IV. That a commissioner be appointed to take all legal testimony which bears upon the truth or falsity of the charges in said paper contained.

V. That a disinterested attorney be appointed to conduct the examination upon the part of the court.

In support of the requests contained in paragraphs IV and V of this motion, the attorneys for the defendant make the following statement upon information and belief, to wit:

That all the facts set forth in said paper, so far as they connect the defendant with any attempt at bribery or undue influence are false; that while Attorney General Monnett may have had conversations with some person connected with and unknown to defendant nothing therein occurred which gave the attorney general any reason to believe the defendant had any knowledge of or connection with the matter; that the attorney general has filled the newspapers with false and libelous reports of attempts at bribery on the part of the defendant, well knowing that there was no foundation for the same. That until the attorney general gives the name of his friend, defendant can not prepare to meet these charges, and that by reason of the facts alleged it is evident that both F. S. Monnett and S. W. Bennett must be witnesses in the case; that the attorney general is not disinterested and can only acquit himself of false and libelous statements and free himself from suspicion by proving defendant guilty of the charges he has preferred.

Wherefore it is highly improper and unjust that he, as representative of the court, should conduct the investigation.

STANDARD OIL COMPANY,
By VIRGIL P. KLINE and
M. F. ELLIOTT, its attorneys.

In the Supreme Court of Ohio.

The State of Ohio ex rel. D. K. Watson, Attorney General, plaintiff,

vs.

The Standard Oil Company, defendant.

Cause No. 2284. Notice of motion.

(Filed in the supreme court May 4, 1899.)

To Hon. F. S. Monnett, Attorney General of Ohio:

You are hereby notified that the defendant in the above cause has filed therein a motion to require you to make certain allegations in the paper styled "A bill of information in contempt," filed by you therein on the 15th day of April, 1899, more specific and definite; and also asking the court to appoint a commissioner to take all legal testimony bearing upon the truth or falsity of the charges in said bill of information in contempt contained; and to appoint a disinterested attorney to conduct the examination relating to the charges in said bill of information in contempt set forth, on the part of the court.

Said motion will be for hearing at 8:30 a. m. on the 18th day of May, 1899.

Dated this 4th day of May, 1899.

LAWRENCE T. NEAL,
Of Counsel for Defendant.

I hereby acknowledge service of the above notice this 4th day of May, 1899. We ask for an earlier hearing of motion.

F. S. MONNETT,
Attorney General.

Forced by this motion and notice, Monnett filed what he termed an amendment to the complaint in contempt, in which he confessed his inability to name the persons referred to as approaching Watson, and in which he named Charles B. Squire as the friend who had approached him. This Charles B. Squire, let it be remembered, was the intimate friend of F. S. Monnett, had no connection, and never had, with the Standard Oil Company, and no acquaintance, so far as we can learn, with any of its leading members.

Charles B. Squire immediately caused the following explanation of his connection with Monnett to be published. Whether it is true or not, the Standard has no means of knowing, as it is in utter ignorance of the whole affair, and Mr. Monnett and his friend must settle this question of veracity between them:

If Attorney General Monnett in his statement to the court of Ohio, said that I offered him a bribe, as representing the three men he mentions it is absolutely and unqualifiedly false.

I know nothing about the statement you say the attorney general has made, but he surely could not have said that I offered him a bribe of \$400,000 or any other sum as representing men from the Standard Oil Company, or anybody else. I never offered a man a bribe in my life, and if anybody says I did he tells an untruth.

What I have said before is true. I had been approached by a promoter of schemes and warned the attorney general to beware of him. I do not believe the man in question ever had any connection with the Standard Oil Company, or represented it in any way in his offer. He was merely "fishing" in the hope of getting something for himself. I thought at the time he might have been representing the Standard, and that is why I warned Mr. Monnett to keep away from him, and by all means not to resign or drop the prosecution, as the talk would be that he had been bribed.

Later I learned that the man had no connection with the Standard Oil Company; that he was a promoter and evidently had tried to approach the attorney general merely on his own hook, and without any authorization whatever from the Standard Oil Company.

I can not understand why the attorney general—if he did so—could say I attempted to offer him a bribe. It is absurd and untrue. The contrary is the case. I warned him to beware of certain persons that might possibly lead him into a trap. (Charles B. Squire in a statement to the Press last night.)

This was the state of the record on September 8, 1899, when I was called before the industrial commission. I said in relation to the bribery charge that

"we had answered the charge of bribery and our answer was before the supreme court. We court an investigation. We deny it (the bribery) to the very uttermost."

Monnett, in his affidavit filed in June, 1901, with the industrial commission, says:

I charged them before the supreme court with having attempted to bribe the Hon. D. K. Watson, former attorney general, and also myself as attorney general, as fully set forth in the complaint, and began taking testimony to establish the fact, but Mr. Archbold said in his testimony, on page 544, that they called upon the court to investigate the charges, and if the court did not investigate they would. On the day I began to take the testimony to establish every allegation made in reference to the bribery in my reach, showing how the \$400,000 was offered and showing how \$100,000 was offered my predecessor, and giving all the details, telegrams and intermediaries, and all the evidence connected therewith, when the chief justice of the supreme court, at the request of the attorneys of record of the Standard Oil Company, verbally ordered me not to take the testimony, and the charges were thereafter dismissed by the court without the hearing of any testimony on the part of the state to establish same.

Compare with this statement the record as I have disclosed it. Consider the motion made on May 4, 1889, that a commissioner be appointed to take the testimony, and that a disinterested attorney be appointed to conduct the examination upon the part of the court, and notice the reasons given for said motion, to wit, that "the attorney general has filled the newspapers with false and libelous reports of attempts at bribery on the part of the defendants, well knowing there was no foundation for the same," and that "it is evident that F. S. Monnett and Bennett must be witnesses in the case," and "that the attorney general is not disinterested and can only acquit himself of false and libelous statements and free himself from suspicion by proving the defendant guilty of the charges he has preferred. Wherefore it is highly improper and unjust that he should, as a representative of the court, conduct the investigation."

Can it be possible that, pending that motion, and oblivious to the reasons given in its support, without awaiting the action of the court, Monnett, did, as he swears, "begin taking testimony to establish the fact?" How could he begin to take testimony when the court had appointed no commissioner to take it, and how dare he begin to take testimony when the record showed he was a party implicated and could only clear his own character by proving the guilt of the defendant? The plain fact is that he did not begin to take testimony, as he swears. But it is true that, utterly regardless of his duties as an attorney and as a representative of the court, he did give notice that he would take testimony before a notary public, a proceeding which he knew to be illegal, preposterous and contemptuous. This notice of an intended illegal proceeding was brought to the attention of the court in

the proper manner, and the court very properly peremptorily stopped it.

These are the facts to prove the falsity of Monnett's oath that "instead of the trust courting investigation, they deliberately evaded and suppressed an investigation of these proper charges." The motion for an investigation was made in good faith and pressed in good faith, and it was not until December, 1899, that the court unanimously entered the following order:

It is ordered that the information herein filed by the attorney general on the 15th day of April, 1899, be stricken from the files, it not appearing that there is any competent evidence to connect the defendant with the alleged offer to the attorney general.

It is only necessary to add to this record the now well known fact that the original action against the Standard Oil Company for contempt, instigated by the attorney general at the request of George Rice, was afterwards dismissed by the court, and that the present attorney general of the state of Ohio, after carefully considering all the evidence taken by Attorney General Monnett in the various other cases instituted by him against the Standard, moved for the dismissal of the cases, which motion was promptly granted by the court. Nothing was left for Monnett but the usual rule, when an attorney has lost his case, but to abuse the court which had decide against him.

BURNING BOOKS.

Monnett's charge that the Standard Oil Company burned its books was first published in Cleveland, Ohio, newspapers on the evening of December 21, 1899. This charge was promptly and completely denied by Kline, Carr, Tolles & Goff, attorneys for the Standard, in the following letter:

Editor the Cleveland Press:

The charge or insinuation made by Attorney General Monnett that the Standard Oil Company has burned or destroyed any of its books is absolutely false. It is simply based upon the fact that the company, from time to time, destroys useless material which accumulates in its business, as is the case with every other large corporation or business house. This it does openly and has always done.

The attorney general having learned of such a transaction occurring in November, has undertaken to create an impression through the public press that this was an attempt on the part of the company to evade the order of the supreme court, an impression which is entirely unfounded.

In view of the notice you have given the public in this matter, we trust you will kindly publish this statement.

Very respectfully,

KLINE, CARR, TOLLES & GOFF.

A few days thereafter Monnett revived the charge and for the first time used it officially in a paper filed with the supreme court in an application for issuing

further process and for the removal of Commissioner Brinsmade.

In that paper Monnett said:

The state is informed and believes that many valuable records and documentary evidence have already been destroyed since the former adjournment of said referee on or about November 15, 1898, and the order of said court on December 7, 1898.

While this slander was new, Mr. Kline, in the presence of the court and the attorney general, in discussing the question of producing books, said to the court:

Now, your honor has inquired whether we have books showing the gross earnings and disbursements of this corporation. Yes; and all its business detail in all its relations to all the world, and this talk about destruction is the merest chaff. We are glad to have an opportunity to meet in this tribunal the claim that books have been destroyed. The attorney general may send to this court every single scrap of testimony, whether it be signed or not. There is an intimation of collusion, or that the master has acted unfairly and that we are destroying valuable records. Of course these falsehoods will get around the world before the truth can get after them. But we can satisfy this court and we owe it to this court.

According to Monnett's testimony before the industrial commission at Washington on May 16, 1899, five months afterwards, the original basis of this charge was anonymous. On this point Monnett then and there testified:

We received an anonymous communication that they had burned their books. We subpoenaed certain parties and had them testify to the fact. The information to the state, after following up the matter, was that they had burned 16 boxes of books. I give you Mr. McNirney's testimony touching upon the subject:

"Question. (By Mr. Jenks.) You believe that those books that were burned were the ones you required Mr. Squire to produce? A. That is the fair legal presumption from the testimony, considering the size of the books, the size of the boxes, the number, the circumstances and the refusal to produce them afterwards, although Mr. Kline in open court stated that they had not destroyed them, that they had them yet, and that they would not produce them on the request of the chief justice of the court. They absolutely refused to produce them, and relied upon their constitutional privilege to refuse to answer. The exact testimony as to burning of the books I will furnish you for your own conclusions."

Compare the testimony of Monnett in Washington and his charges in Ohio, with the following testimony taken by him in the case:

McNirney testified:

I am employed by the Standard Oil Company as car builder and repairer. On or about November 19,

1898, was ordered to and did help load boxes of books and sacks from the general offices of the Standard Oil Company on Euclid avenue, Cleveland, into a wagon to be hauled to the warehouse of the Standard Oil Company at their No. 1 works. Moran helped me in the loading. There were 16 boxes in all. Moran is a car builder and laborer. We burned some of the boxes the next Monday. We did not burn them all; think we burned all we took out. We also burned papers and letters in the sacks. I think we burned nine chests and six sacks. Those sacks were all letters and copying books, I should think, of something like them. Loose paper, waste paper, I say. Moran helped me throw them in the furnace. Moran helped me through the whole transaction. George Field, the car shop foreman, gave me the order to go to the general office, and also to do the burning. We went to the office about 9 or 10 o'clock in the morning. Don't know whether the books were tagged for the car shop bill or just "Chas. Hogan" for distribution. Charles Hogan is general superintendent. He can tell you more about this book burning than I can.

On cross examination McNirney said:

Everybody in the shop knew that those books were destroyed, and those papers, and they all understood that they were waste paper, as we understood it. There was no secret about that, no secret about this case at all. All the employes in the car shop knew that those books and papers were destroyed and understood they were waste paper.

On the same day Charles Hogan testified that—

His place of business was the Standard Oil Company's No. 1 works. Had charge of the mechanical department. On or about November 19, 1898, gave instructions to George Field to have him send to the general offices for boxes. Order to me to send for them came by telephone from the general office. Saw the boxes and personally inspected the burning of the contents. The boxes contained miscellaneous lot of paper, letter press copying books, etc. The contents were burned in the furnace.

Cross examination:

Have been at No. 1 works 21 years. It is a very common occurrence to burn accumulations of waste paper. This kind of stuff was of same character as on previous occasions. Was ordered to burn nothing less than 10 years old. This was the old accumulation gotten out of the block at the time of changing office rooms, occupying two floors instead of five.

William Moran testified:

Work for Standard Oil Company as car repairer. Went with John McNirney and teamster to Standard Oil Company offices to get boxes—about 16 boxes; took them to storehouse; left them in Hogan's charge. There were boxes and sacks. The following Monday

morning we burned a lot of scrap paper. It was 9 or 10 o'clock on Monday morning. John McNirney assisted me in burning the books. We also burned similar stuff a year or a year and a half ago. This was done before the employes and no effort at secrecy. Nothing unusual about the transaction of burning this waste stuff, and no suggestion from Mr. Hogan or anybody that it was to be kept secret.

In addition to the foregoing statement taken by Monnett there were submitted and read in his presence two affidavits, one by Charles C. Hogan and the other by S. H. Tolles, the substance of which is as follows:

HOGAN'S AFFIDAVIT.

In the Supreme Court of Ohio.

The State of Ohio ex rel. F. S. Monnett, Attorney General, Plaintiff,

vs.

The Standard Oil Company, Defendant.

Affidavit. Filed in Supreme Court.

The State of Ohio, Cuyahoga, ss:

Charles C. Hogan, of lawful age, being duly sworn, upon his oath says that he is in the employment of the defendant and has charge of the mechanical department of its No. 1 works; that he has been in the employment of the company since November 1, 1878.

During all that time it has been the practice of the company, currently, every two or three months, to burn up accumulations of waste paper and books from its general offices, the quantity of material thus burned having been currently much larger prior to 1891 than since that time, by reason of the fact that about that date the company's business became much reduced.

It is the practice at the company's office to keep all invoices, reports and other like transactions in tissue paper impression books, which are kept during the current month and until the transactions therein contained get on to the company's regular books, after which time they are useless, and at the end of the current month, after the book entries are made, are thrown aside. These books, together with the accumulations of reports, incoming invoices which have been transferred to vouchers, and other accumulations of waste paper, have been, during all the time of affiant's connection with the company, at current intervals, destroyed by fire. This has been the case with all waste accumulations except such as had one blank side and could be used over again, which are sent to the printing department, cut up and worked into pads for miscellaneous purposes. A considerable quantity was formerly burned at the boiler of the company's candle works. The furnace, however, being of small capacity, three or four years ago, while waste paper was being burned there, fire was communicated to the works and they were burned down. Since that time

all refuse has been burned at No. 1 works, either at the cooper shop or the pumping station boilers, the capacity of the furnaces at those places being larger and the burning attended with little risk. During the time of my connection with the company, portions of the refuse material have been burned at the No. 1 works, and since the date last named all has been burned there. Prior to 1889 the material there destroyed was burned at what was known as No. 1 boilers, which were then located directly in the rear of the company's office at the works and conveniently adjacent thereto. In 1889 these boilers were dismantled, leaving the only places for such burning the boilers at the cooper shop and the pumping station. Affiant has seen such burning during those years a number of times.

Prior to 1896 the general office of the company on Euclid avenue occupied five floors of the Standard block, so called, and had a large quantity of vault room in which were stored accounts and records of the business dating back to the organization of the defendant corporation, and to the time of Rockefeller, Andrews and Flagler, in 1863. In 1896 the general offices of the company were consolidated upon two floors of the building it had formerly occupied, so that it became necessary to find a storage place for a large quantity of these accumulations, which were then brought out and then placed in the old warehouse at No. 1 works, and thereafter, from time to time, such records and books as were not of the character above described as currently destroyed were brought out and placed in the storehouse, so that its capacity became overcrowded. These books were loaded into wagons, brought out and stacked up in the warehouse, and being crowded for room affiant applied to the auditor of the company to make some disposition of old records, account and letter books of which in his judgment there were at least 20 cords piled up in the warehouse, so as to get them out of the way, and received in reply to his complaint a communication from the auditor of the company, bearing date March 15, which was as follows:

"Subject: Storing books and papers.
"Mr. C. C. Hogan, No. 1 works.

"Dear Sir: Referring to your favor of March 14, Mr. Kline says that we may destroy all books of account, vouchers, as well as miscellaneous books, reports, etc., that are over six years old. I believe, however, that we had better modify this somewhat, and that you had better keep all books of account, mainly ledgers, journals and cash books, that are not more than 10 years old for the present, at least. You may destroy everything that is older. All letter books, letter files and miscellaneous books and reports, cancelled checks, which, I believe, represent the bulk of stuff stored in the old warehouse, you may destroy up to the six year limit. This will reduce the amount of shelving you require."

Thereupon affiant went through the storehouse and personally superintended the selection of books and papers for destruction at that time. He personally examined every book of account which was set aside for destruction and destroyed, and of his personal knowl-

edge knows that no book of account which was not more than 10 years old at that time was taken out and destroyed. Impression books, letter files, miscellaneous books and reports, cancelled checks and papers of that character that were more than six years old he set aside and had burned with the books of account and other refuse matter selected by him.

He knows from his personal examination and selection that there were destroyed no books of account less than 10 years old, and no other material less than six years old, all books and papers within those limits remaining in the warehouse; that between that time and November, 1898, from time to time, there was sent out and burned waste material of the kind herein described, but no books of account, and about November 9, 1898, another lot of refuse matter, which has been spoken of in the testimony taken before H. C. Mason, notary public. The quantity then burned was not larger, nor was its character other than that which currently comes out and is destroyed. Since that time—and while the testimony was being taken before Mason, the notary public—another batch of refuse has been sent out and destroyed at the cooper shop furnace. At none of these times has affiant known of books of account being burned, except at the time above mentioned by him.

There never has been secrecy about the destruction of this refuse matter. It has always taken place in open day and in the presence of a large number of defendant's employes, and conducted by men not specially selected for the purpose, but any of the company's workmen who might happen to be detailed by their foreman therefor. Affiant has never had any instructions as to secrecy, nor have any ever been given by him, and he has never known of anything being burned except waste and refuse material.

CHARLES C. HOGAN.

Subscribed and sworn to by said Charles C. Hogan before me this 3d day of January, 1899.

[NOTARIAL SEAL]

H. O. JONES,
Notary Public.

In the Supreme Court of Ohio.

The State of Ohio ex rel. F. S. Monnett, Attorney General, Defendant,

vs.

The Standard Oil Company, Defendant.

Affidavit. Filed in Supreme Court January 5, 1899.

The State of Ohio, Cuyahoga, ss:

S. H. Tolles, of lawful age, being first duly sworn, upon his oath says that he is an attorney at law and a member of the firm of Kline, Carr, Tolles & Goff, attorneys for the defendant in the contempt proceedings herein; that regardless of the orders heretofore made appointing a commissioner before whom parties to this contempt proceeding were directed to take their evidence in this action, the attorney general, late in the

evening of December 19, 1898, served notice upon affiant's firm that depositions would be taken in this proceeding in the office of Harry C. Mason, in the city of Cleveland, on the 21st day of December, 1898, and caused subpoenas to be issued by the said Harry C. Mason, as notary public, for sundry witnesses to appear before him at that time.

That said Harry C. Mason is, in fact, one of the attorneys for the state, being one of the counsel appointed under the provisions of law by the food commissioner and the attorney general to represent the state in the prosecutions brought for violations of the pure food laws.

That thereupon, at the time fixed in said notice, and over the protest of affiant as such counsel the attorney general proceeded to examine witnesses before said Mason, acting as such notary public; that there were present on said day at such hearing Victor Bkorklund, an engineer; Charles Anderson, a foreman; Denman Bolton, a night watchman; C. A. Birch, a night watchman; and Nels Anderson, a fireman, all in the employment of the Cleveland Arcade Company, of Cleveland, Ohio, who were examined upon some supposed theory that some books of the defendant had been burned under boilers of said Arcade Company.

In addition thereto, one Ludwig Darmstaetter, a Bohemian rabbi, was examined by the attorney general, and testified that, being one evening in a saloon he overheard some Bohemians talking about hauling papers and books from the Euclid avenue office of this defendant to its works.

There were called by him also one Edward O'Hearn, employed in the car shops of this defendant, and one Cornelius O'Hearn, employed in the car shops of this defendant, to prove that on or about November 19 they assisted in hauling some boxes and sacks of loose paper from defendant's office to the warehouse at its No. 1 works.

The hearing then adjourned to the following day, Thursday. Thursday morning the attorney general produced Emanuel Pollack, a saloon keeper, from whom Edward O'Hearn rented rooms, who testified that O'Hearn, the teamster, returned home on the evening of November 19, being a little late, he said he had been hauling some boxes.

Also a witness, John McNirney, whose testimony occupied about 30 printed pages, testified that on the morning of November 19 he assisted in burning up some books and papers at one of the furnaces of the defendant; went down to the block later in the day and hauled some sacks and boxes of loose paper to the warehouse, and on Monday morning assisted in burning some sacks of loose paper and some of the contents of the boxes in one of the defendant's furnaces. He wound up his testimony with the statement that there was no secret about the transaction; that all the employes of the car shops knew of the burning, and supposed and understood that what was being burned was waste paper. The witness further testified that the burning was done in the forenoon, in broad daylight, and in the presence of the hundreds of employes of the defendant's car shops.

At the conclusion of the taking of the testimony of McNirney the hearing was adjourned until 4 o'clock at which time the attorney general examined Charles C. Hogan, superintendent of the defendant's No. 1 works, who testified as to the burning of waste paper and impression books, and to the fact that there was nothing unusual in the transaction.

Thereupon, it having appeared in the testimony of the witnesses examined that one Moran, an employe of the defendant, assisted McNirney in the work done by him, and they had been designated for this service by George Field, foreman of the defendant's car shops, and that men named Gabeline, Schaff and Becker assisted in the teaming of the boxes from the defendant's office to the works, the attorney general announced that they had been endeavoring to serve these people with process, but were unable to do so, and would be obliged to adjourn until the next day, Friday morning at 10 o'clock, intimating, as usual, that the defendant was keeping these witnesses hidden.

Thereupon affiant produced the witnesses Moran and George Field, for examination by the attorney general, and also, having ascertained the names of the firemen at each of the furnaces at which burnings were had, and of the clerk who had superintended the burning at one of the furnaces, Mr. Hogan having superintended it at the other, produced to the attorney general the two firemen and the clerk in charge, whose name was Stanbury. Gabeline, Schaff and Becker not then being at work for the defendant, affiant was unable to produce them.

Thereupon, on the morning of Friday the attorney general examined the witnesses Field and Moran, but declined to examine the fireman and clerk, who were the only other witnesses who had anything to do with the transaction directly, but, inasmuch as affiant had failed to get the witnesses Schaff, Gabeline and Becker, announced that they were the only ones whom he really cared to examine, and the hearing was adjourned until these witnesses could be found.

Thereupon affiant, having ascertained the homes of the witnesses Gabeline and Schaff, sent for them so that they might be examined, desiring that any person who knew anything about the transaction might be accessible to the attorney general; but on inquiry at the office of Mr. Mason it was learned that the hearing had been adjourned until Saturday morning at nine o'clock; that upon attending said hearing at said hour it was ascertained that the attorney general had the night before left the city.

A transcript of the evidence given by the witnesses examined by the attorney general before the notary public is annexed to and made a part of this affidavit, so that the court may see the character thereof.

Affiant believes that said pretended taking of depositions was not done in good faith, with the design of using same in court, and that none of the matters therein contained are material, relevant or important to any issue in this action, but believes that the same were taken without design of using them as evidence herein, but merely as a fishing expedition.

That during the taking of said testimony and upon December 22, 1898, at about 10 o'clock, the attorney

general said to the affiant that it was then time to adjourn and go over to the commissioner, who was ready to begin taking testimony. Affiant replied that the defendant had no notice that the taking of any testimony before the commissioner was designed, except as the statement had appeared in the morning paper of that day; that the attorney general was that morning going to have the books of the defendant produced and examine its officers, and the attorney general left the office of the notary to attend said hearing. Affiant was not present before the commissioner, but attaches hereto and makes a part hereof a stenographic account of what took place at that time. S. H. TOLLES.

Sworn to before me by the said S. H. Tolles and by him subscribed in my presence this 3d day of January, 1899.

[NOTARIAL SEAL]

C. H. GALE,
Notary Public.

The foregoing are the substantial parts of all the evidence given by the witnesses in the matter of burning books.

Consider Monnett's treatment of the facts above recited.

In his testimony before the industrial commission on May 16, 1899, with all this evidence known to him, he submitted to the commission only the testimony of McNirney in direct examination, which closed with the question by Monnett in the form of a statement, as follows: "I was informed he could, but we have not been able to subpoena him yet," meaning that they had not at that time been able to get the testimony of Hogan who, according to McNirney, "could tell more about it than he could."

Is it not clear that Monnett intended to have the commission believe that Hogan had not testified, and that the principal witness to the charge of burning was McNirney, when, as a matter of fact, Hogan testified on the same day that McNirney did, was the next witness, was voluntarily produced by the Standard, and was examined by Monnett? He suppressed that part of the evidence known to him of McNirney, and the evidence of Hogan and Moran, all to the effect that the stuff burned was waste paper and old books, the testimony of Hogan and Moran that such destruction of old books and papers was of frequent occurrence and submitted the first part only of McNirney's testimony, closing with his own question in the form of a statement to the effect that they had not been able to get Hogan, who knew more about the burning than McNirney did. There was in his evidence both suppression of truth and suggestion of falsehood; and now after two years granted for reflection and repentance, thoroughly discredited by the records of the court he represents, he again returns to the charge in his affidavit filed before the commission in June, 1901, pretending he has found new evidence. I leave him face to face with the record that the commission may judge.

JAMES W. LEE.

In relation to the denial of James W. Lee that the Pure Oil Company is not a trust, it is only necessary to call attention to his definition of a trust, to wit: "A

corporation or combination of corporations intending to create and maintain a monopoly in any industry. Under this definition there are no trusts. Mr. Lee admits that a portion of the stock of the Pure Oil Company is held in a voting trust. I am informed by able lawyers that a voting trust has been held to be illegal as often as the question has been raised in the courts, including the highest court of New Jersey, the state in which the Pure Oil Company is organized. I desire to reiterate my former statement as to approaches to us of many connected with the Pure Oil Company in relation to sale and combination and to say that Mr. Lee's suggestion did include a combination of interests of the competitive pipe lines.

M. L. LOCKWOOD.

My former testimony, which gave statistics and figures in refutation of wild statements of M. L. Lockwood, need only be referred to as an answer to his subsequent affidavit. One point, however, deserves some comment, as certain newspapers have already been misled by Mr. Lockwood's statement. The New York World on June 21, 1901, announced editorially that "affidavits just submitted to the industrial commission by M. L. Lockwood, of Buffalo, afford evidence to the effect that at a certain date the Standard Oil combine was shipping its tanks to Germany at two cents per gallon, while at the same time it was charging its customers in Texas and Arkansas, where it has no competitors, 25 cents per gallon." This was the substance of Mr. Lockwood's original statement to the commission, and it was denied by me. In his last affidavit he reasserts the truth of his former statement and attempts to establish it by showing—

1st. That the independent refiners exported oil which after deducting commissions and other expenses, netted the refiners something over two cents per gallon. This is very far from proof of the assertion that oil is put into tank steamers for Germany at two cents per gallon. The wayfaring man, though a fool, should see the difference between a selling price and a net profit. If the independent refiners netted two cents per gallon they did remarkably well. Further to sustain the assertion under oath that the monopoly forces the people of Texas to pay 25 cents per gallon for oil burned in their lamps, he produced affidavits from residents of Orange county, Tex., and Orange county, Fla., that the usual price of a five-gallon can of oil in those counties was \$1. Suppose this to be true. How does it show that the monopoly, aided by the railways, forced that price? That was the retail price in a remote region, and how many middle men's profits had been added to the wholesale price is not shown. Besides, oil transported such a distance in cans is not expected to be the cheapest. It is transportation in bulk that enables oil to be retailed cheaply at distant points. The result of Mr. Lockwood's statement is that neither the Standard Oil Company nor any of its competitors sold oil for Germany at two cents per gallon, and that monopoly, backed by railway favoritism did not force the people of Texas and Arkansas to pay 25 cents per gallon for oil they burned in their lamps.

CHARLES B. MATHEWS.

In relation to the affidavit of Charles B. Mathews, I need only appeal to the record, which is the only correct evidence as to the facts. Mathews appeared before a committee of congress in 1888 and swore as in his present affidavit to facts of which the record is the only correct evidence. The Standard Oil Company was not permitted by that committee to put witnesses on the stand to contradict Mathews as to specific statements, but was allowed to put their entire record in evidence. It did so, and it was published in the report of the committee. Those who read it will easily find that there was not in that case a particle of evidence against any member of the Standard Oil Company upon which any court could have held them, and the record, supplemented by the subsequent affidavits of several of the jurors, shows that the Everests were only convicted of enticing away a workman under contract, and that, too, a workman who had been seduced away from them and carried with him the secrets of the Everests' manufactory to incorporate into a rival manufactory.

STATISTICS OF PETROLEUM PRODUCTION.

Presented to the Industrial Commission by W. B. Foster, Pittsburg, Pa.

Total production, in barrels of 42 gallons each, by years, from 1886 to 1900, both inclusive, of crude petroleum, known as "Lima oil," in the States of Indiana and north-western Ohio, and aggregate sum realized for same at average price for each year.

Year	Production	Average price	Total Value
	Barrels.	Cents.	
1886	649,881	37½	\$ 243,705.37
1887	5,152,709	15	772,906.35
1888	9,682,683	15	1,452,402.45
1889	12,186,564	15	1,827,989.60

State of Pennsylvania, Allegheny county, ss:

W. B. Foster, being duly sworn, says that the foregoing statement being compiled by him from the most reliable statistics attainable, and is believed to be approximately correct.

W. B. FOSTER.

Sworn and subscribed before me this 4th day of March, 1901.

JAMES S. CAMPBELL,
Notary Public.

[SEAL]

Total production, in barrels of 42 gallons each, by years, from 1859 to 1877, both inclusive, of crude petroleum, known as "Pennsylvania petroleum," in States of Pennsylvania, West Virginia, New York, and eastern Ohio, and aggregate sum realized for same at average price for each year.

Year	Production	Average price	Total Value.
	Barrels.		
1859	8,500	\$20.00	\$ 170,000.00
1860	650,000	9.60	6,240,000.00
1861	2,118,000	.52	1,101,360.00
1862	3,056,000	1.05	3,208,800.00
1863	2,631,000	3.15	8,287,650.00
1864	2,116,200	8.15	17,247,030.00
1865	2,497,700	6.59	16,459,843.00
1866	3,597,500	3.75	13,490,625.00

1877	13,337,363	2.39%	31,926,312.68
Total	101,212,377	\$284,244,889.45

Despite the wholesale and almost interminable attacks upon the Standard Oil Company, however, the result of its great economy and superior efficiency in the oil industry have forced an unwilling public to admit its usefulness to the community. The fact that it has improved the quality and reduced the price of petroleum, without in any way inconveniencing the community, is no longer seriously challenged. Its motive is questioned, its great wealth is envied, its success is distrusted, but its economic superiority is no longer disputed, although the sensational magazines and journals have usually devoted themselves to denouncing the Standard Oil Company as a "monopoly" foreign to American principles. This is absurd in the extreme, for every penny's worth of stock is owned and held by American citizens. This can not truthfully be said of any other corporation of any importance in the United States. The United States Steel Company and the Pennsylvania Railroad Company, for instance, the stock of these two companies, as in a great number of other American corporations, is principally held by foreigners. This can not be said of the Standard Oil Company. One thing can truthfully be said of the

Standard Oil Company. Since it organized as a trust in 1882 that can not be said of any other person, company or corporation, and that is, it always has a market for merchantable crude oil, and at one time this company had 40,000,000 barrels of crude oil stored in iron tanks. This oil was the over production above the consumption. The oil so stored represented a value in oil and tankage of \$52,000,000.

N. B.—The writer of this book on his last visit to the Bradford, Pa., oil field inquired of a number of pumpers who owned the wells and to whom did they sell their oil. One pumper said:

"We own the wells and we sell the oil to the Standard, but it fixes the price. It gives us what it's a mind to."

"But are you compelled to sell?"

"We have to sell or else keep the oil."

"How is it with your potatoes?" was asked. "Who fixes the price of them? Do the farmers? If so, why did you not raise the price last year, instead of letting your potatoes rot in the fields?"

"Oh, we could not sell them at any price," he replied.

"Is it ever that way with your oil?"

"No, you can always sell all you produce."

"Do you ever have to wait for your money?"

"No, you can get your money on the spot."

"So it does not matter how much oil you produce, you can sell it all, can you? and you never have to wait for your money? and never have any bad debts? Do you not wish it was that way with your potatoes and corn?"

"Well, it would have been better last year," was the reply.

After continuing the interview some time, the Bradford producer admitted that after all there were some advantages in having the Standard Oil Company as a customer. When asked what he thought would happen if the Standard was broken up and every oil producer had to market his own oil, the same as the farmer does his potatoes and other products, he shook his head and replied, "It would be pretty poor business for one-barrel well owners. It would not pay to run them." And then, as if conscious that he had made some concession, he exclaimed, "But it's a — monopoly."

Another anti-trust "leaseholder," who was in the hardware business, when approached, voiced similar sentiments but he remarked, "It's a monopoly, but I wish I could sell my stoves the same way." He added, "I invest my money in hardware, supply the farmers with plows and stoves, wait six months for my money, and if the crops are poor, do not get it at all. With the oil you are sure of your sale, sure of your money, and do not have to wait a moment."

After getting the sentiments of various well owners, which were monotonously unanimous, I interviewed an energetic, intelligent newspaper man on the subject. He was more intelligent, better informed and had a broader conception of large capital and economic importance of the operation of large capital and concentration of productive machinery, and went so far as to admit that on the question of refining, The Standard Oil Company was a good thing, but it was the power of disaster to producers. In answer to questions, he admitted that the Standard furnished an

unlimited market for all the oil the producers could supply, and guaranteed instant cash payment, and took all responsibility of transportation and all other expenses, after the oil reached the surface, and when asked why he was opposed to the Standard, he said: "We believe that if the refining business was in the unlimited market for all the oil the producers could get higher prices for our oil. They would bid against each other and we could hold back the oil till the price went up, but the Standard is the only purchaser and we have to take the price it offers or let the oil run on the ground."

"We believe" is truly the basis of the oil producer's thinking, but why they so believe seems not to occur to them to need explanation. Why they should expect that oil would go higher with a large number of small refiners as purchasers than with one large purchaser, none seemed to know. It does not seem to occur to them that if there was not a large company that would buy and sell the oil, they would have each to store it for himself as the farmer does for his corn, wheat and potatoes, and that there is nothing to prevent their doing so now. It does not occur to them either that if the market was made up of small purchasers, who would take only what they needed, as manufacturers do cotton and wool, leather and other products, they would have on their hands all that is continually being held in storage by the Standard Oil Company, and as is often the case now with farm crops, they could not sell their whole output at any price.

The persistent ignoring of the advantages, and emphasizing the disadvantages of the Standard with relation to oil production exceeds anything to be found in any other line of business. When the facts, which they all admit, are fairly considered, the universal wall against the Standard more nearly resolves itself into pure economic prejudice than in any other case we ever knew. In fact, the oil producing industry is unique. With the exception of drilling the well and finding the oil, it affords an almost automatic income without much effort, responsibility or hardly any care. All an oil producer has to do is simply to furnish the well and the Standard Oil Company will do the rest. The Standard owns the pipe lines that pump the oil from the well to the refineries. When a producer drills a well and finds oil, all he has to do is to notify the Standard and it will lay the pipe line connecting it with his tank, bear all the expense of transportation and take all the product whether it needs it or not. The well owner simply has a tank into which he pumps his oil, and as fast as he pumps it, he can run it into the Standard pipe lines and draw his money. The Standard sustains about the same relation to the well owner that the government would to the silver mine owner under free coinage of silver, namely, take all the product, regardless of how much it is or whether it is needed, and pay "spot cash" for it. There is no other industry in the world where the producers have such absolutely unlimited market, such ease of sale and such complete guarantee against loss. No agents or drummers are needed; not even skill in bargaining is necessary. The most ignorant well owner can sell his product and get the market price for it as the most skillful operator. In fact, the Standard completely

protects them from all risks of ordinary commerce and assumes all the responsibility of the entire industry itself. Of course, some of the producers, strange to say, seem to be about as ignorant of the economics of the oil business as is an ordinary city merchant, imagining that they are robbed by the arbitrary fixing of the price of the oil; they insist that the price is fixed by the Standard at whatever point it pleases.

As a matter of fact, nothing of the kind occurs. If such were the case, it is needless to say that the Standard would put the price very much lower than it is, practically give nothing for the oil. Crude oil has been as high as six dollars a barrel. Since the Standard has been organized it has been nearly four dollars, frequently between two and three dollars a barrel. Why does the Standard give nearly three dollars a barrel at one time and less than seventy cents at another? Why does it not give seventy cents all the time? The simple answer is that it cannot get the supply at that price. Despite the Standard and all its monopolistic powers, the price of crude oil is governed by economic conditions over which neither the well owners nor the Standard have arbitrary control. Of course, the conditions are different from those in any other industry because the Standard Oil Company assumes a responsibility which is assumed by the purchasers of no other commodity. In no other industry is there either individual or collective interests which stand ready under all circumstances to take the entire product, regardless of the market demand. This the Standard Oil Company does, and when there is more than is needed, it stores it, and in doing so, it relieves the well owners of all contingent responsibility. If this were not done, the well owners would have to store it or sell at a sufficiently lower price, to pay some one else to store it. In that case the price would be governed by the cost of the dearest portion that the market, under those competitive conditions, would take, and when it was too much, some would remain unsold.

This competitive element being taken out of the market by the Standard Oil Company standing ready to take the entire product, causes the economic forces affecting prices to operate in a different way. Under the present arrangement, the Standard cannot refuse to buy when it does not need, hence, when the supply is greater than the demand and stock is being accumulated, the Standard materially lowers the price it will give; that is to say, it will still take all the product but at a lower price; and if the demand is pressing hard against the supply, it will pay a higher price so as to induce greater risk in drilling new wells to furnish an adequate supply. The Standard stands in relation to crude oil very much as the Bank of England does to gold. When it needs a greater supply of gold it raises the rate of discount; and when there is more than is needed, it lowers the rate of discount, but it always takes all that comes. It is thus easy to see that such an excess of supply would involve a great loss in storage, consequently the Standard offers a lower price.

This is not due to anything the Standard does or can do; it is due to the prolific output of the West Virginia oil fields. The new wells near Mannington, West Virginia, are each yielding from one hundred to

six hundred barrels a day. Under the ordinary competitive conditions of purchase, only what is needed being taken and the dealers fixing the price, with this output, a very large number of single-barrel wells in Bradford would go out of use because the more prolific wells could supply the whole demand and could lower the price sufficiently to undersell the producers with the small wells. But as the Standard will take all that is produced, the single-barrel wells can sell their product the same as the six-hundred-barrel wells. In other words, the small producers cannot be crowded out by competition, so that in reality it is not the Standard that is now fixing the price of oil at one dollar and forty-two cents, but the prolific wells of West Virginia. Thus the law of cost of production operates, despite the seeming monopoly of the purchase, and operates the same on crude oil as on silver or wheat or any other product. From this there is no final escape, but the well owners in the Bradford oil fields imagine, that because oil was once three and four dollars a barrel and is now only one dollar and forty-two cents, that the Standard has arbitrarily reduced the price by that amount. They seem to know nothing of the economic effect of the West Virginia oil fields on the price of their product. Instead of the Standard being the enemy, consciously or otherwise, of the smaller well owners in the Bradford oil fields, it is in reality their best and almost only friend, for if the Standard were out of the way and free competitive conditions prevailed, many of the small well owners would be driven entirely from the field. For instance, if the one-barrel well owners had to furnish storage for their own product, transport it themselves and then run the risk of selling it in competition with owners of the more prolific wells, the cost of handling their small amount would be more than the price that they could get for it. It is only because the Standard furnishes all the storage and transportation and stands ready at all times to buy all the product that these small well owners can furnish, that they are able to stay in the field at all. As a matter of fact, they are a surplus quantity which competition would drive out; nothing but the economic paternalism of the Standard keeps them in existence. Yet curiously enough, it is the small well owners and not the large ones who think the Standard is robbing them.

It is not at all clear, however, that this is a good thing. It is quite certain that in the natural order of competitive evolution a large number of the small well owners would be rendered economically useless and be eliminated. They would be compelled either to move into the new fields and be a part of the live, active movement, or disappear, but for this somewhat abnormal method of the Standard in buying all the product, whether needed or not.

Under the present system of a guaranteed market for the whole product, oil production is reduced to an almost automatic process. The owner, for instance, of a one-barrel well is as completely assured of remaining in the market as the owner of a six-hundred barrel well. The one-barrel well will yield nearly five hundred dollars a year. This income being guaranteed by the Standard against all competition, the owner is relieved from all economic responsibility.

Whatever may be said against the Standard Oil Company, it cannot be charged with crowding out the small producers. On the contrary, it is the only power that perpetuates their existence. Were they exposed to the full force of competition, they would soon be annihilated or compelled to keep pace in the thrifty march of progress.

THE STANDARD OIL COMPANY OF NEW JERSEY.

Reorganized from the Standard Oil "trust," successors to the original Standard Oil Company. This company has the general directorship over the United Standard Oil and affiliated interests, and pays all the dividends to all the allied companies and its several branches.

John D. Rockefeller, sr., president; John D. Archbold, chairman of the executive committee; vice presidents, William Rockefeller, John D. Archbold, Henry H. Rogers, Henry M. Flagler; William Rockefeller, treasurer; William P. Howe, secretary; Samuel C. T. Dodd, general solicitor; M. F. Elliott, attorney.

Directors: John D. Rockefeller, sr., Oliver H. Payne, William Rockefeller, W. H. Tilford, Henry M. Flagler, John D. Archbold, F. Q. Barstow, Benj. Brewster, O. B. Jennings, Henry H. Rogers.

Dividends paid by the Standard Oil Company:

	Per Cent.		Per Cent.
1882.....	5.25—100	1894.....	12
1883.....	6	1895.....	17
1884.....	6	1896.....	31

1892.....	12.21—100	1904.....	42
1893.....	12		

The Standard Oil Company is able to pay the large dividends owing to the fact that the 39,000,000 barrels of Pennsylvania oil it had stored in iron tanks has been reduced to a little over 4,000,000 in stock; the 35,000,000 barrels of oil has been refined and sold and converted into money; the same has been done with the over stock of Lima, Ohio, oil. Besides the daily runs, the best money maker for the Standard is its pipe lines, the refineries next, and the producing wells last.

THE STANDARD OIL COMPANY OF NEW YORK.

The general operating head of all the United Standard Oil companies.

This company regulates and makes the oil market of

the world, produces and refines 90 per cent of all the oil produced in America, and has the general management over the several branches and allied companies united with the Standard Oil Company. Its officials are:

William Rockefeller, president; John D. Archbold, chairman of the executive committee; active vice presidents: John D. Archbold, Henry H. Rogers, Henry M. Flagler, William Rockefeller, treasurer; William P. Howe, secretary; Samuel C. T. Dodd, general solicitor; M. F. Elliott, attorney; L. D. Clarke, controller; A. H. Brainard, assistant controller; directors: John D. Rockefeller, sr, William Rockefeller, John D. Archbold, Henry H. Rogers, Henry M. Flagler, John D. Rockefeller, jr., F. Q. Barstow, Harry Payne Whitney, Oliver H. Payne, Harold L. Pratt.

Roster of the general and department officials of the Standard Oil Company, Standard Oil building, 26 Broadway, New York:

John D. Archbold, chairman of the executive committee.

Departments:

Crude oil department—P. S. Trainer, manager; W. L. Scryniser, assistant manager.

General sales department—Chas. P. Holdrege, manager.

Domestic trade department—William R. King, manager; E. C. Halsey, assistant manager.

Export sales department—F. D. Asche, manager.

Export trade committeemen—Livingston Roe, Wm. Donald and Walter M. McGee.

Foreign shipping department—Philip Ruprecht, manager.

Marine oil department—C. E. Bedford, manager.

Fuel oil department—C. W. Owston, manager; Henry Fisher, assistant manager.

Ligherage department—O. L. Holenbeck, manager; Geo. J. O'Brien, assistant manager.

Inspecting department—George M. Saybolt, manager.

Agents' department—R. P. Tinsley, manager.

Transfer department—Chas. T. White, manager.

Purchasing and supply department—T. H. Wheeler, manager.

Stationary department—E. B. Mead, manager.

Industrial exhibits department—O. T. Waring, manager.

Real estate and tax department—Theo. M. Towl, manager; C. P. Thurston, assistant manager.

Telegraph and telephone department—E. D. Arnold, manager.

Wick department—J. P. Haws, manager; Lou D. Sweet and L. P. Sheldon, committee.

Paint department—James G. Newcomb, manager.

Purchasing and crude oil department—P. S. Trainor, manager; W. L. Scryniser, assistant manager; E. T. Bedford, F. H. Bedford and Theo. Newman, committee.

Shipping and ligherage department—R. C. Veit, C. G. Little and O. L. Halenbeck, committee.

Legal department—Samuel C. T. Dodd, general solicitor; M. F. Elliott, attorney.

Auditor's department—Allen Wardwell, manager.

NATIONAL TRANSIT COMPANY.

Pipe Line Department.

Henry H. Rogers, president; Daniel O'Day, vice president; John Bushnell, controller; Geo. Chesebro, assistant controller; Geo. W. Colton, treasurer; W. A. Harris, assistant treasurer; F. M. Towl, general superintendent; D. S. Bushnell, assistant superintendent.

STANDARD OIL COMPANY OF NEW YORK.

Refining Departments.

Acme works—John D. Archbold, president. John D. Archbold, F. Q. Barstow and Fred Mohr, committee.

The General Manifold Oil Company—Chas. Miller, president.

Pratt Oil Works—Harold L. Pratt, manager; H. C. Folger, jr., assistant manager.

Eagle Oil Works—G. B. Gifford, manager; Wm. H. Erwin, assistant manager; H. A. McGee, T. J. Williams and J. H. Lecour, committee.

Bayonne refinery—James Smith, L. D. Morrison and J. P. Krebs, committee.

Bergenport Chemical works (Chas. Pratt & Co.)—Harold L. Pratt, manager; A. C. Bedford, assistant manager.

Union Tank Line Company department—H. R. Payne, secretary; Wm. M. Hutchinson, treasurer; Chas. M. Bloxham, master car builder.

The several departments have a committee meeting of their respective departments each and every forenoon on every business day through the whole year, when the oil trade is thoroughly gone over. The chairman of each department committee meets at 1 o'clock sharp each business day in the general committee room, fifteenth floor. This is known as the general executive committee, of the whole, of which John D. Archbold is the chairman. This committee investigates the supply and demand of the oil trade of the world, and upon the reports of the trade, demand and supply, the oil market of the world is made each day.

The Standard Oil Company controls 75 per cent of the entire output of oil in the world, by outgenerating the Russian, British, French, Austrian and Dutch oil companies in the oil markets of the world. The Standard Oil Company has over 100,000 employes on its regular payroll.

The Standard Oil Company have agencies in all parts of the world, and it is not out of place to say that the sun never sets on American produced oil and its by-products.

JOHN D. ROCKEFELLER.

John D. Rockefeller, president and founder of the Standard Oil Company, was born at Richford, Tioga

county, New York, July 8, 1839. Owing to an affliction of the hair glands John D. Rockefeller, sr., is perfectly bald and beardless. John D. Rockefeller says the chief advantages of combination are:

- 1 Command of necessary capital.
- 2 Extension of limits of business.
- 3 Increase of number of persons interested in the business.
- 4 Economy in the business.
- 5 Improvements and economies which are derived from knowledge of many interested persons of wide experience.

6 Power to give the public improved products at less prices and still make a profit for the stockholders.

- 7 Permanent work and good wages for laborers.

The disadvantages or dangers to the public which may arise from combinations are stated by Mr. Rockefeller as follows: "That the power conferred by the combination may be abused; that combinations may be formed for speculation in stocks rather than for conducting business, and that for this purpose prices may be temporarily raised instead of lowered." But the possibility of abuse is no more an argument against combination than the fact that steam may explode is an argument against steam. The abuses can be minimized, Mr. Rockefeller believes, by proper legislation.

JOHN D. ARCHBOLD,

Chairman of the executive committee of the Standard Oil Company, was born in Leesburg, Carroll county, Ohio, July 26, 1848.

Standard Oil Company officials, their names and residence in the city of Greater New York for the year of 1904:

John D. Rockefeller, sr., president Oil Co., 26 Broadway. Residence, 4 West 54th St.

John D. Rockefeller, jr., Oil, 26 Broadway. Residence 13 West 54th St.

William Rockefeller, Oil, 26 Broadway, and treasurer 52 Broad St. Residence 689 Fifth and 54th St.

William G. Rockefeller, jr., residence 292 Madison avenue.

Henry M. Flagler, 26 Broadway, N. Y. Residence, Florida.

Henry H. Rogers, president, Oil, 26 Broadway. Residence 26 East 57th St.

John D. Archbold, vice president, Oil, 26 Broadway. Residence 20 East 37th St.

The late Charles M. Pratt, pres., 26 Broadway. Residence 241 Clinton avenue, Brooklyn.

The late Stevenson V. Harkness, Oil, 26 Broadway. Residence 685 Fifth avenue and 54th St.

Henry M. Tilford, merchant, 26 Broadway. Residence 24 West 52d St.

Wesley H. Tilford, pres., 26 Broadway. Residence 10 West 43d St.

Dan'l O'Day, vice pres., 26 Broadway and 39 Cortlandt St. Residence 128 West 72d St.

William T. Wardwell, Oil, 26 Broadway. Residence 21 West 58th St.

Oliver H. Payne, Oil, 26 Broadway. Residence 852 Fifth avenue.

Benj. Brewster, Oil, 26 Broadway. Residence 695 Fifth avenue.

Alfd J. Pouch (estate of), 68 Broad St.
Samuel F. Barger, Oil, 26 Broadway. Residence 192 Madison avenue.

Chas. W. Harkness, Oil, 26 Broadway. Residence 8 East 63d St.

Sam'l C. T. Dodd, lawyer, 26 Broadway. Residence 42 East 64th St.

William P. Howe, Oil, 26 Broadway. House 33 East 65th St.

Richard P. Tinsley, auditor, Oil, 26 Broadway. House, 36 Washington Square, West.

Silas H. Paine, Oil, 26 Broadway. Hotel Majestic.

Chas. M. Higgins, Oil, 26 Broadway. House 11 St. Nicholas Place.

Wade Hampton, Oil, auditor, 26 Broadway. House 278 Decatur, Brooklyn, N. Y.

John D. Rockefeller, sr., city residence No. 8 West 54th St., New York city. Country summer residence, Pocantico Hills, Bedford Roads, Tarrytown, New York. Cleveland city residence, Euclid and Case avenues and Prospect St. Forest Hill summer residence, 3220 to 3320 Euclid avenue, Cleveland, Ohio. Summer residence, Lakewood, New Jersey.

William Rockefeller, city residence, 689 Fifth avenue and East 54th St., New York city. Country summer residence, Broadway, Tarrytown, New York.

William Rockefeller's hunting lodge tract in Brandon township, five miles wide and 30 miles long, Adirondack mountains, New York. William Rockefeller, Waverly township tract, 20 by 30 miles, 42 sections. St. Regis river runs through center of tract; Northern Adirondack railroad runs through one end of tract. The tract contains six large fish ponds—Woll pond, Long pond, Whitley pond, Cranberry pond, Elbow pond, McDonald pond and Potter pond. The tract is known as Buck Mountains, North Hudson, Adirondack mountains, New York. William Rockefeller's Debar Mountain Park tract, five miles wide and six miles long, 16 sections, Duane township, Adirondack mountains, New York.

It is a well known fact that the wealth of the Standard Oil Company has increased so rapidly during the past five years that the chief problem of the all powerful contingent has been to find investments for its money, which it is unable to invest all of its income in the oil and natural gas business. The Standard has of late been purchasing large blocks of stock in the leading banks, railroads and insurance companies of America, and have directors in the following:

United States Steel—John D. Rockefeller, jr., H. H. Rogers.

Amalgamated Copper—H. H. Rogers, James Stillman, William Rockefeller, William G. Rockefeller.

Consolidated Gas—James Stillman, William Rockefeller.

New York Central—James Stillman, William Rockefeller.

Union Pacific—H. H. Rogers, James Stillman.

St. Paul—H. H. Rogers, William Rockefeller.

Missouri Pacific—John D. Rockefeller, jr.

Mutual Life Insurance Company—William Rockefeller, H. H. Rogers.

New York Life—James Stillman.

National City Bank—James Stillman, William Rockefeller.

Seaboard National Bank of New York—Daniel O'Day, Joseph Seep.

Wabash railroad—John D. Rockefeller, jr.

Delaware, Lackawanna and Western railroad—William Rockefeller, John D. Rockefeller, jr.

Baltimore and Ohio railroad system—H. H. Rogers.

Atchison, Topeka and Santa Fe railroad system—H. H. Rogers.

Pennsylvania railroad system—John D. Rockefeller, jr., James Stillman.

The two leading Standard Oil banks are the National City Bank of New York and the Seaboard National Bank of the City of New York.

The National City Bank of New York, one of the oldest, largest and most conservative banks in the country, was incorporated in 1812, with a capital of \$800,000, which was increased in 1853 to \$1,000,000. Its capital, surplus and undivided profits exceed \$3,500,000, and its deposits ranged from \$15,000,000 to \$18,000,000 in 1892.

The bank is situated at 52 Wall street, where it has had its office since it first commenced business, the present building being the second one on the same site occupied by it. The building which it first occupied had been previously used by the New York branch of the first Bank of the United States, the stock of the latter having been received in payment for subscriptions to the stock of the City Bank. The first president of the bank was Samuel Osgood, who had been naval officer of the port; and the first board of directors comprised Abraham Bloodgood, Ichabod Prall, William Irving, Samuel Tooker and William Cutting. G. B. Vroom was its first cashier. Moses Taylor became its president in 1856; and the energy, ability and integrity which long made him one of the foremost and most conspicuous merchants and business men of New York, characterized his administration of the bank and contributed largely to its increased prosperity. He died in 1882, and was succeeded in the presidency by his son-in-law, Percy R. Pyne, who resigned in 1891,

when James Stillman, of the well known firm of Woodward & Stillman, cotton merchants, was elected president.

Following is the statement of the condition of the National City Bank of New York September 9, 1903:

The Seaboard National Bank of the City of New York, located at 18 Broadway, adjoining the Standard Oil building. This bank was organized in 1880 and from its organization it has steadily risen to the highest position among the banks of that city, in the extent of its business, and the sound, yet enterprising character of its management; and it has passed, in volume of business and deposits, some 50 banks of that city, which were well established before this bank was organized. During the panics of 1884 and 1890 this bank relied entirely upon its own resources, not accepting the assistance of the New York clearing house association, which was offered to all banks that were members of the association, and was freely used by many of the strongest. It has been the practice of the bank never to charge its depositors more than the legal rate of interest, no matter what the ruling rate in the market, so that in a time of stringency in the money market its depositors have had every assistance which the bank was able to extend, which fact has been greatly appreciated by them, as shown by the steady increase of its deposits, which, during the last five years, have increased at the rate of one million dollars per annum. The bank is also represented in the management of the New York Clearing House Association, one of its officers being a member of one of the most important committees, necessitating the examination of all banks applying for membership to the association. The varied interests of its depositors are duly represented in its board of directors and contribute to its business, which covers all departments of trade. The bank has an extended connection with, any

line of deposits from, leading bankers in other cities, a large corporation custom, and many accounts among large mercantile firms and individuals. It is also a depository for the United States, the state of New York, and the city of New York, and is officially designated for the same purpose by the Produce, Cotton and Coffee exchanges of New York. Promptness, accuracy and a spirit to accommodate its depositors, of whatever class, is the rule of the management; and this to a large extent explains its remarkable progress.

HISTORY OF PURE OIL COMPANY.

(INDEPENDENT.)

(Not interested with Standard Oil Company.)

Incorporation Office, Jersey City, New Jersey; General Office, Manhattan Building, Philadelphia, Pa.

Pure Oil Company, producers and refiners of petroleum, crude oil and by-products. Organized November 6, 1895; incorporated under the laws of the state of New Jersey, May 1, 1897; capital stock, \$1,000,000.

Incorporators: David Kirk, Jerome B. Akin, Marcus L. Lockwood, Walter A. Dennison, C. H. Duncan, Theodore B. Westgate, James W. Lee, Adolphus A. Hoch, Ferd Reiber, Louis Walz, Rufus Scott, Lewis Emery, jr., M. Murphy, H. King, W. L. Curtis, Thomas W. Phillips, Clarence Walker.

Officials at time of organization: David Kirk, president; Clarence Walker, secretary; C. H. Duncan, treasurer.

Present board of officials: Michael Murphy, president; James W. Lee, vice president; W. S. Weber, secretary; W. W. Tarbell, treasurer.

PURE OIL COMPANY AGREEMENT.

Trust Agreement and By-Laws and Rules and Regulations of the Pure Oil Trust.

THE TRUST AGREEMENT IN FULL.

This agreement, made and entered into by the Pure Oil Company, a corporation organized and existing under the laws of the state of New Jersey; David Kirk, Jerome B. Akin, Marcus L. Lockwood, Walter A. Dennison, Charles H. Duncan, Theodore B. Westgate, Wm. L. Curtis, James W. Lee and David Kirk, trustees for the McCalmont Oil Company, severally subscribers to and owners of the capital stock of the said Pure Oil Company, and Thomas W. Phillips, Lewis Emery, jr., Rufus Scott, Clarence Walker, Louis Walz, James W. Lee, David Kirk, Marcus L. Lockwood, Jerome B. Akin, Charles H. Duncan, Hugh King, Michael Murphy, Adolphus A. Hoch, Ferdinand Reiber and Walter A. Dennison, parties mutually agreed upon to exercise the trusts created hereunder.

Witnesseth, That whereas the Pure Oil Company is formed for the purpose of engaging in directly and of aiding other companies and parties engaged in the production, transportation, storage, manufacture and sale of crude petroleum and its products, and in any business incident thereto, and it is desired to enlist therein the co-operation of other parties, and to procure capital to be invested in the shares of its capital stock, and in such other ways as may be desirable, which investments are to be solicited from parties not now interested in the company; and

Whereas, it is advisable, equitable, essential and intended for their safety and advantage of all interests that the control of the said Pure Oil Company shall be secured permanently, as to prevent and render impossible at all times the diversion of its resources and business, and to permanently protect and maintain what are known as the "independent interests" in the petroleum industry, and to maintain the policy agreed on for conducting the business of the company in the interest and for the protection of all rights in the company, created by mutual agreement of shareholders, or by operation of law; therefore the said parties hereto, in consideration of the sum of one dollar by each to the other paid, the receipt of which is hereby acknowledged by each, and in further consideration of the mutual benefits received, to be received, or expected from the agreements, covenants and trusts herein-after contained, and from the undertakings and business to be promoted, do hereby agree and consent to the various acts and things hereinafter set forth; provided, however, that no party hereto shall be bound to do any act or thing, or be responsible for the results or consequences of any act or thing done or omitted to be done, except so far as relates to such act or thing as he himself expressly undertakes to do and perform; and do further agree as follows:

First. The capital stock of the Pure Oil Company, as authorized in its certificate of organization, is to be one million (\$1,000,000) dollars, represented by two hundred thousand (200,000) shares, of the legal par value of five (\$5.00) dollars each, divided into classes

and to be issued, held and transferred subject and according to law and the by-laws, rules and regulations adopted and approved by all the shareholders of the company, a copy of which is hereto attached and referred to.

Second. The said David Kirk, Jerome B. Akin, Marcus L. Lockwood, Walter A. Dennison, Chas. H. Duncan, Theodore B. Westgate, William L. Curtis, James W. Lee and David Kirk, trustee of the McCalmont Oil Company, are the owners of all the shares of the capital stock now subscribed, amounting to three thousand (3,000) shares, of which they hereby transfer to the said Thomas W. Phillips, Lewis Emery, jr., Rufus Scott, Clarence Walker, Louis Walz, James W. Lee, David Kirk, Marcus L. Lockwood, Jerome B. Akin, Charles H. Duncan, Hugh King, Michael Murphy, Adolphus A. Hoch, Ferdinand Reiber and Walter A. Dennison sixteen hundred (1,600) shares, being more than a majority of the shares of the company now subscribed, and agree that one-half of all the shares hereafter subscribed and issued shall be transferred in like manner to the said parties and their associate trustees, as may be appointed, to be by them held in trust for the uses and purposes herein proposed, and subject to the terms and conditions as follows:

First. The equitable ownership of the trust shares and all interests therein shall be subject to the terms of this trust agreement; such ownership of the shares or interests therein may be sold at the will of the holder, but no sale, transfer or conveyance of such ownership or interests shall give to the purchaser any right other than are provided for in the by-laws, rules and regulations of the company and in accordance with this trust the trustees hereunder shall at all times be recognized as the legal owners and holders of the trust shares to carry into effect the purposes of this trust, and all equitable owners of trust shares or interests therein shall specifically agree in writing to the terms of this trust, and no transfer of any such shares or interests shall be made, or be effective if made until the transference of such equitable ownership or interest shall have agreed in writing to receive and hold the same subject to the provisions of this trust.

Second. At all meetings of the company for the election of directors, or for any other purpose, to cast the entire number of votes which, as holders of said shares, they would be entitled to cast.

Third. Each trustee at such meetings shall be entitled to cast an equal number of all the votes which all of the trustees would be entitled to cast in the aggregate, if present, except as hereinafter provided.

Fourth. In case of differences of opinion among the trustees present at any such meetings as to how such votes shall be cast in regard to any matter or thing to be voted on; they shall be cast as the representatives of four-fifths of all the shares held under this trust may direct in writing, if so demanded in writing by any of the trustees.

Fifth. Any trustee unable to attend any meeting of shareholders, and to personally cast the votes he would be entitled to cast if present, may authorize any other trustee to cast the vote which he would be entitled to cast if personally present, which authority

shall be in writing, approved by three-fifths of the trustees other than himself.

Sixth. When none of the trustees can be present at any meeting of the stockholders, legally held, they may be represented by proxy by an attorney appointed in writing, executed by three-fifths of the trustees.

Seventh. The trustees may execute such consents in writing as in their opinion it may be right and proper for them to do in the interests of the Pure Oil Company and of the owners of the shares held by them in trust, provided that no such consents shall be executed against the objection of the equitable owner of 10 per cent of the shares held by them in trust, unless after the question of executing such consent shall have been submitted in person or by writing, properly addressed to the several equitable owners of the shares held in trust, and approved in writing by such owners of three-fifths of such shares.

Eighth. The number of trustees may be increased or diminished at any time; or any trustee may be removed, without assignment of cause or reason therefor, by three-fifths of the trustees and the written consent of the equitable owners of three-fifths of the shares held in trust hereunder; and upon such removal, or on filing of such written consent with the secretary of the company and on notice in writing delivered to the party so removed, or sent by registered letter to his proper address, the rights, duties and obligations of such party as trustee shall immediately cease.

Ninth. In case of death, resignation or removal of any of the trustees the trust shall be exercised by the remaining trustees until the vacancy be filled by the appointment of new trustees for that purpose, on the nomination of the equitable owners of a majority of the shares previously represented by the trustees, whose place is vacated with the consent in writing of the equitable owners of three-fifths of the shares held under this trust and the approval of the three-fifths of the trustees.

Tenth. No trustee has any beneficial interest in this trust, personally, as to entitle him to maintain any action at law or in equity to enjoin, delay, hinder or prevent his removal from the trusteeship, or to recover any damages on account thereof from the company or the trustees, or from the individual stockholders by whose action he may have been removed.

Eleventh. The trustees shall appoint a chairman and secretary, and shall keep regular accounts showing the ownership and residence of the various equitable owners of the shares held by them in trust, and shall execute and deliver to such several owners certificates in due form, approved by the directors of the company, evidencing the number of shares held by them in trust for each of such several owners, and shall make such transfers of any of the shares as they may be requested to do by such several owners on the surrender of such certificates representing such shares, properly endorsed, assigned for transfer subject to the terms of this permanent trust, any of the shares thereby represented in the manner prescribed for making such transfer.

Twelfth. The trustees shall immediately advise the company, by writing, addressed to the secretary, of any

transfer of ownership of any of the shares held by them and shall, on written request of the treasurer of the company, certify to him the names and residence of all equitable owners of shares held by them in trust; and shall sign warrants for the payment to such owners, severally, of any dividends to which they may be entitled on the share so held in trust.

Thirteenth. This agreement may be changed at any time only with the consent in writing of the Pure Oil Company, three-fifths of the persons at the time acting as trustees hereunder, and of the equitable owners of three-fifths of the shares held in trust thereunder.

Fourteenth. This agreement may be cancelled, and the trust hereby created dissolved, only by the winding up of the Pure Oil Company, or by the consent in writing, duly executed, of the equitable owners of four-fifths of the shares held in trust hereunder, and of four-fifths of all the other shares of the company, after providing in full for the redemption or purchase, at one hundred and ten dollars per share, in cash, of all the preferred and common shares of the company at the time outstanding.

Fifteenth. The said Thomas W. Phillips, Lewis Emery, Jr., Rufus Scott, Clarence Walker, Louis Walz, James W. Lee, David Kirk, Marcus L. Lockwood, Jerome B. Akin, Charles H. Duncan, Hugh King, Michael Murphy, Adolphus A. Hoch, Ferdinand Reiber and Walter A. Dennison hereby accept the trust herein conferred and imposed upon them.

In witness whereof the parties hereto have severally signed this agreement as of the 6th day of November, A. D. one thousand eight hundred and ninety-five.

PURE OIL COMPANY.

DAVID KIRK, *President*.

C. H. DUNCAN, *Treasurer*.

Incorporators: David Kirk, Jerome B. Akin, Marcus L. Lockwood, Walter A. Dennison, C. H. Duncan, Theodore B. Westgate, James W. Lee, David Kirk, trustee for McCalmont Oil Co., W. L. Curtis, Thomas W. Phillips, David Kirk, Marcus L. Lockwood, Clarence Walker, James W. Lee.

Trustees: Walter A. Dennison, Jerome B. Akin, C. H. Duncan, Adolphus A. Hoch, Ferd. Reiber, Louis Walz, Rufus Scott, Lewis Emery, Jr., M. Murphy, H. King.

BY-LAWS AND RULES AND REGULATIONS OF THE
PURE OIL TRUST.

[Incorporated November 8, 1895. Capital \$1,000,000.]

The objects of the company are to produce, purchase, transport, store, and sell crude petroleum and its products and to protect and to aid other companies and parties in the production, transportation, manufacture, storage, and sale of the same. The corporation may acquire, hold, maintain, and dispose of any stocks, shares, bonds, and other interests in or issued by the corporation, joint-stock, or limited-partnership association engaged in or aiding or promoting the producing, transporting, storing, refining and selling

of crude petroleum or its products, or in any business incident thereto.

BY-LAWS.

ARTICLE I.

Meetings of Shareholders.

Section 1. The annual meeting of the shareholders shall be held at the principal office of the company on the fourth Wednesday of January in each year, commencing at 10 o'clock a. m. standard time.

Notice of the annual meeting of shareholders shall be by written or printed letter addressed by the secretary to each shareholder at his or her last known place of residence, and mailed ten days prior to the time fixed for holding such annual meeting.

Section 2. Special meetings of shareholders may be called whenever it shall be deemed advisable by the board of directors, or by the president upon request in writing signed by the shareholders owning collectively not less than one-third of the shares of the company.

Notice of special meetings shall be given in the same way as the notices of annual meetings.

Proxies.

Section 3. Shareholders may be represented at any meeting of the shareholders by proxy, duly authorized in writing, executed within thirty days next preceding the meeting.

Quorum.

Section 4. The legal representatives of a majority of all the shares of the company shall constitute a quorum at any meeting of the shareholders; and without a quorum being present or represented by proxy no business shall be transacted or election held, but a less number may adjourn from time to time until a quorum be present.

Voting.

Section 5. At meetings of shareholders, general or special, all votes upon disputed questions shall be by ballot, if demanded by any shareholder present, and all votes by ballot shall be determined by the number of shares represented by the respective votes cast.

At all meetings of shareholders for the election of directors, each shareholder shall be entitled to cast as many votes as he has shares of the company standing to his name on the books of the company.

The election shall be by ballot, and each ballot shall have endorsed thereon the name of the person casting same and the number of shares prescribed thereby.

Vacancies.

Section 6. In case of death, resignation, or removal

of any director, the vacancy shall be filled by the remaining directors.

Tellers.

Section 7. The directors shall appoint two shareholders as tellers to conduct the election and to certify the results in writing to the parties elected and to the president and secretary of the company. In case of the directors failing to so appoint, the shareholders present shall choose two tellers to conduct the election.

The secretary of the company shall furnish the tellers, for their guidance in conducting the election, a list of shareholders, showing the number of shares standing in the name of each on the books of the company, authenticated by the seal of the company

Time of Election and Term of Office.

Section 8. The polls shall be open from two to three o'clock p. m. The terms of office of directors shall commence at noon on the first Wednesday after their election at the annual meeting of stockholders and continue until their successors are duly elected and seated.

ARTICLE II.

Directors—Meetings.

Section 1. The board of directors shall fix the time and place for holding its meetings.

Special meetings of the board may be held at any time on the call of the president or any two directors, after due notice is given to each of the directors.

Election of Officers.

Section 2. At the first meeting after their election the directors shall organize by electing from their number a president and vice president to serve until their successors are qualified, and appointing a secretary and a treasurer to serve during the pleasure of the board.

Quorum.

Section 3. A majority of the directors shall constitute a quorum at any meeting of the board, and no business shall be transacted by the board without a quorum being present.

Salaries.

Section 4. The salary of the president and vice president shall be fixed by vote of the stockholders.

Executive Committee.

Section 5. For the more prompt and efficient management of the affairs of the company there shall be an executive committee of the board, consisting of the president, vice president, and three other directors, who shall be appointed by and hold office during the

pleasure of the board. In the intervals between the meetings of the board of directors its powers and duties shall devolve upon and be exercised by the executive committee, subject to the approval of the board at its next regular meeting.

The proceedings of the executive committee shall be duly recorded in the same manner as the regular proceedings of the board of directors.

A majority of the executive committee shall constitute a quorum.

In case of disagreement of the executive committee on any subject, the matter shall be referred to the board of directors.

Minutes.

Section 6. The board of directors shall cause to be kept a complete record of their official proceedings and acts of the proceedings of all shareholders' meetings; present to the shareholders at the annual meeting a statement of the assets and liabilities of the company and of the condition of its affairs generally.

ARTICLE III.

Powers and Duties of Officers—President.

Section 1. It shall be the duty of the president to preside at all meetings of the board of directors, to sign all certificates of stock and warrants for the payment of money ordered by the board of directors, and such other papers as he may be ordered by the board of directors to execute on behalf of the company.

In case of the absence or inability of the president to act, the vice president shall be invested with all the powers and perform all the duties of president. In case of absence or inability to act of both president and vice president, the board of managers may appoint one of their number president pro tem., who shall during such absence or inability perform all the duties of president.

Secretary.

Section 2. The secretary shall keep the minutes of the meetings of the board of directors in a proper book provided for that purpose; attend to the giving and publication of all notices of the company, unless otherwise provided for by the board of directors; have the custody of the seal of the company and affix same to all certificates of stock and such other papers as the directors may order; countersign all warrants on the treasury for the payment of money, which shall have been previously signed by the president as authorized by the board of directors; attend to such correspondence as shall be assigned to him; act as secretary of all standing committees of the board, and shall in general, under the direction of the board of directors, perform all the duties incident to the office of secretary of the company.

Treasurer.

Section 3. It shall be the duty of the treasurer of the company to receive and deposit or hold and pay,

as the board of directors may order, all funds resulting from the sale of shares or any property of the company; and shall sign all stock certificates and obligations of the company created by special order of the board of directors.

The treasurer shall give bond for the faithful discharge of his duties in such amount and with such security as the directors may determine.

Rules and Regulations.

1. The business of the company shall be the producing, purchasing, transporting, storing, and selling of crude petroleum and its products, and aiding other companies and parties in the production, transportation, storage, manufacturing, and sale of the same. The corporation may acquire, hold, manage, and dispose of any stocks, shares, bonds, and other interests in or issued by any corporation, joint stock company, or limited partnership association engaged in, or aiding, or promoting the producing, transporting, storing, refining, and selling of crude petroleum or its products, or in any business incident thereto. And in addition to the powers hereinbefore provided for, it may also purchase, hold, manage, and sell on commission, or otherwise, such investment securities and other property, real, personal, and mixed, as the corporation may be generally or specifically authorized in writing from time to time, by the owners and holders of a majority in number of the shares of the capital stock of the company, to purchase, hold, and sell.

And the company may exercise such trusts and do such other things, not inconsistent with its charter, as it may from time to time be authorized in like manner to do.

2. The principal office of the company shall be located at Jersey City, in the county of Hudson and State of New Jersey, and branch offices may be established from time to time as may be determined by the consent of the owners and holders of three-fifths of the shares of the company.

3. The shareholders shall make rules and regulations and by-laws for the government of the company and the management of its business and affairs as in their discretion they may deem advisable, which may be amended at any time by the consent of the owners and holders of three-fifths in number of the shares of the company, given in writing, filed with the secretary, and recorded in the minutes of the proceedings, both of the shareholders and directors of the company.

4. The affairs of the company shall be managed by a board of directors, consisting of nine members, to be elected annually by the shareholders at their annual meeting, at which each shareholder shall be entitled to cast, personally or by proxy, one vote for each share of stock in the company held by such shareholder. The directors shall choose annually from their own number a president and vice president to serve until their successors are chosen; shall appoint all other officers, managers, agents, or employes of the company; prescribe the duties and fix the compensation of each; and may suspend or remove any of them at discretion, and they may

make such additional by-laws as may be deemed by them advisable—all subject to the by-laws and rules and regulations adopted by the shareholders for the governing of the company.

5. Interests of the company will be represented by shares which may be divided into classes, including preferred, common, and deferred shares, to be issued, held, and transferred, subject to the by-laws and regulations of the company.

The preferred and deferred shares may be each subdivided into various classes, each class having such special rights and limitations as will more particularly adapt them to the uses for which they are intended, subject to such relation to the shares of other classes as may be established in their issue.

The rules and regulations relating to them will embrace the following features:

6. A majority of all the shares of the company shall be held in a permanent trust approved by all the shareholders, to secure the control of the company and the faithful maintenance of the policy agreed on for conducting the business of the company in the interest and for the protection of all concerned in its affairs. The shares so held shall be designated as trust shares.

7. The capital of the company shall be the net amount of cash paid into the treasury of the company for its permanent use as the proceeds of its stock issued and sold for cash for account of capital; and no credit in excess of the amount shall be made to "capital" in accounts or statements of the company.

8. No preferred stock shall be issued except as cash to the extent of one hundred dollars for each share of such stock issued shall be paid into the treasury of the company to the credit of capital, or of surplus, or of the guaranty and redemption fund, to be created as prescribed in section 12 hereof, as may be deemed advisable.

Any of the preferred shares may be converted, at the option of the holder, into common or deferred shares by so stipulating in their issue and distinctly stating the right of conversion in the certificates representing them; otherwise they shall not be convertible.

9. The deferred shares of the company may be issued for cash, investment securities, property, services, payment of expenses, making disbursements of any kind, and in exchange for shares of other classes issued by the company at the discretion of the directors, with the written consent of the owners of a majority of the shares of the company at the time outstanding.

10. The holders of preferred stock shall be entitled to receive cumulative dividends thereon of one dollar and a half per share quarterly, in full, before any dividend shall be payable on the common stock.

11. A guaranty and redemption fund shall be created and maintained by crediting thereto all of the cash received by the company from the following sources:

(a) The proceeds of all shares of the company sold for cash by the company when issued, in excess of the amount credited to capital.

(b) The cash proceeds of all shares, securities, or other property of whatever kind acquired by the company in exchange for its shares of any class, as such proceeds may be realized, at any time, by the sale for cash of any portion of such shares, securities, or property.

(c) The proceeds of all shares, of whatever class, purchased by the application of the guaranty and redemption fund, as authorized, and resold for cash by the company.

12. The guaranty and redemption fund shall be applicable to the general uses of the company, but may be applied to buying of shares of all classes, in the order of their priority or right to dividend, as stipulated, at the lowest rates at which any shares of the same class can be bought, not over one hundred and ten dollars per share, on demand of the several owners and holders of shares, respectively made within a prescribed time after the payment of dividends; provided, notice of the intention to make such demand shall have been given to the secretary of the company thirty days before the time fixed for the declaration of dividends; and provided further, that no part of the guaranty and redemption fund shall be applied to buying, at any price, the shares of any class, so long as there may remain unsatisfied any demand made by the owners and holders of the shares of any prior class to have the same redeemed at not over one hundred and ten dollars per share.

All shares so purchased shall be placed in the treasury, to be used for the benefit of the company in such form and manner as may be determined by the directors, with the consent, in writing, of the owners and holders of a majority of the shares of the company.

13. When no shares of any class can be purchased at one hundred and ten dollars per share, the guaranty and redemption fund shall be applicable, at the discretion of the directors, to the purchase of the shares of the several classes, other than the trust shares, at such rates above one hundred and ten dollars per share as may be approved by the owners of a majority of the shares of the capital stock.

The shares of any class so purchased may, when authorized by the owners of a majority of all the shares of the company, be resold at any time, at the discretion of the directors, at any price not less than that at which they were severally purchased; or they may be retired from the classes to which they belong, and be placed in the treasury of the company, to be held, reissued and sold for its use and benefit, subject to such conditions as the directors may prescribe, in accordance with the regulations of the company.

14. When the dissolution of the company shall be determined on, voluntarily or otherwise, the trustees, acting under the permanent trust, created and prescribed in section 6 hereof, shall be trustees to convert its assets and wind up its affairs. The proceeds of all assets received by them shall be applied by them absolutely, as the guaranty and redemption fund is required by the rules and regu-

lations to be applied, preceding, and as may be further prescribed hereinafter.

Any portion of the guaranty and redemption fund remaining after providing for the purchase and retirement of all shares, as herein prescribed, shall be distributed to the owners of the trust shares, and of any other shares then outstanding, equally per share.

15. The owners of a majority of the trust shares, acting together, shall have the right to convey to the company, absolutely or in trust, permanently or temporarily, and subject to such conditions as may be stipulated in such transfer, any securities regularly yielding net income; provided, that the receiving and holding of such securities shall not subject the company to any prejudice, or embarrassment, or legal liability to pay any money on account thereof; and no such temporary transfer in trust shall be terminable until the well-established net income of the company from its regular business and other sources of permanent revenue shall be equal to the maximum amount to which it may be raised by such temporary transfer in trust.

16. Each holder of shares standing in his name on the books of the company shall be entitled to a certificate or certificates therefor, duly signed by the president and treasurer, with the seal of the company affixed and attested by the secretary of the company, and each owner of an interest in any of the trust shares shall be entitled to a certificate of the fact, signed by the chairman and attested by the secretary of the permanent trust, showing the extent of the interest, which interest shall be assignable and transferrable on the surrender of the certificate representing it, properly indorsed, as may be prescribed by the trustees, with the approval of the directors and the owners of a majority of the trust shares.

Tide Water Oil Company, producers, shippers and refiners of petroleum—Crude oil. General office, Bowling Green building, No. 11 Broadway, New York. Samuel D. Brown, president; W. W. Smith, controller; A. A. Summers, treasurer; C. R. Norman, manager; literage and export oil, shipping department; B. F. Warren, manager Domestic oil department; R. D. Benson, Geo. A. Keeney, managers paraffin and lubricating oil department.

HISTORY OF THE OIL FIRES IN THE OIL REGIONS OF AMERICA.

The first serious oil fire was at the famous "Merrick Well," Rouseville, on Oil Creek, Pa., April 17, 1861. The Merrick well was drilled into the second sand and began flowing oil at the rate of 2,500 barrels a day. The people of the neighborhood gathered around the well watching it flow. The gas came in contact with the fire in the boiler of the Wadsworth well about eight rods away and a violent explosion occurred. It is estimated that three

hundred persons were present when the explosion which set the Merrick well on fire occurred. Forty-two men were burned, 19 of whom died; 23 were maimed for life; 9 were burned up on the spot. Two men were seen to come from the direction of Oil City just before the explosion. After the fire was extinguished the only remains of the two men were two small piles of ashes and the iron binding of their valises. The Hon. Henry R. Rouse, for whom Rouseville, Pa., was named, was one of the unfortunate ones to be burned to death in the Merrick well oil fire.

HISTORY OF THE BIG FIRE ON OIL CREEK, PA.

On Wednesday, October 8, 1862, fire broke out on the Blood farm, at 3 o'clock, at its intersection with the Tarr farm, and in thirty minutes the fire had spread over 18 to 20 acres, and in three hours consumed 150 tanks, 30,000 barrels of oil and a large number of derricks, engine houses, offices and dwelling houses. During the conflagration the oil on the surface of Oil Creek took fire and the flames presented a grand spectacle. The loss was estimated to be \$100,000. The following are some of the principal sufferers:

TARR FARM.

	Loss.
American Petroleum Company.....	\$1,000
Smith & Curwin.....	3,500
Densmore Bros. & Co.....	2,500

BLOOD FARM.

	Loss.
Lehigh Company.....	\$5,000
Collins Well.....	3,500
Burrows & Scott.....	2,000
Steel, Jackson & Co.....	2,500
C. J. Lloyd & Co.....	5,000
Filkins Well.....	5,000
Painter & Lauffer.....	6,500
Lee's Well.....	2,500
Maple Grove Well.....	3,500
Kelly & Patterson Refinery.....	4,000
Arner's Well.....	1,200
Duncan Well.....	1,500
Richardson & Copeland.....	1,800

This was the largest oil fire on Oil Creek up to 1862.

EDENBURG—KNOX, CLARION COUNTY, PA.

Central town of the Edenburg oil field. Edenburg-Knox has had more destructive fires than any oil town in America. The town was badly burned out in 1877, had a bad fire early in 1878, and again in the fall of 1878. This last was a great fire, enveloping the whole town. The town was built up again, and in 1879 was again burned, and yet a worse fire occurred in May, 1880, which swept away 70 buildings. Again on August 23, 1880, many of the newly erected buildings were burned.

BRADFORD OIL FIELD—M'KEAN COUNTY, PA., OIL FIRES.

On the 6th, 9th and 12th of May, 1880, three very destructive oil fires occurred in the Bradford oil field. May 6th Rew City was destroyed by fire, together with 54 derricks, tanks, etc. May 6th fire destroyed 101 oil derricks and oil tanks in the near vicinity of Bradford. Nineteen derricks and tanks were burned at Foster Brook, and 6 derricks in Tram Hollow, not including those burned at Rew City. On May 9, 1880, fire destroyed Rixford, together with 54 oil derricks, 3 iron tanks and about 75,000 barrels of oil. On May 12, 1880, a great oil fire swept through Tram Hollow, totally destroying Otto City, Midaughville and Oil Center, and burned 300 oil derricks, 12,500 barrel oil tank and a number of small oil tanks, with nearly 100,000 barrels of oil. Total 536 oil derricks burned in those three oil fires. In the fall of 1900 and 1902 the Bradford as well as the whole of the McKean county oil fields were visited with very destructive forest fires, over 1,000 oil derricks and tanks were burned.

PARKER'S LANDING—PARKER, PA., OIL FIELD.

Parker had two very destructive oil fires in the height of the oil boom in 1873-1874. At both fires the town was entirely destroyed.

KARNS CITY.

Karns City, Butler county, Pa., oil field experienced three very destructive oil fires in 1874. Sixty-four buildings in the heart of the city went up in smoke. September, 1876, 16 buildings were burned up and on March 5th, 1877, the Bateman house burned, Mrs. F. E. Bateman, three children and one guest perished in the fire.

TITUSVILLE, PA., OIL FIRE, JUNE 1, 1880.

Acme Oil Refinery and all buildings on Buffalo and Franklin streets near Oil creek were burned.

Second great Titusville oil fire, June 11th, 1886. Lightning struck iron oil tank at Acme Oil Refinery, the fire raged three days and nights. The fire departments from Warren, Corry and Oil City, Pa., were called and rendered assistance. The loss to the Acme Oil Refinery alone was over six hundred thousand dollars, and about that amount in buildings and bridges.

HISTORY OF THE GREAT BURNING WELL—CADWALLADER-ANCHOR OIL COMPANY WELL NO. 1, LOT 647, CHERRY GROVE, WARREN COUNTY, PENNA.

The gas caught fire from a match in the hand of a man nearby lighting his pipe, Tuesday afternoon, June 20th, 1882. At the time of the fire there were five 800-barrel tanks, two 1200, one 1000 and one 600-barrel tanks at the well. When the gauges were taken the afternoon the well caught fire there were 3,000 barrels of empty tankage and 5,000 barrels of oil. This was the amount of oil burned. The well burned for two weeks, when Victor Gretter and

Edward Humphrey succeeded in extinguishing the fire by shooting the casing head off with a small canon. A tapered casing nipple was screwed into a 5 $\frac{5}{8}$ casing tee and at each end of the tee five joints of 5 $\frac{5}{8}$ casing were screwed together and at each end of the casing a gate valve was screwed on the casing. After the tapered casing nipple was screwed into the casing tee and the ten joints of casing and the two gate valves were screwed together, the gates were opened. Twelve men at each end or near the gates picked up the casing connections with the tapered nipple in the middle and carried the whole connections together until the tapered nipple was centered over the well. The connections was lowered to allow the tapered nipple to go inside of the top of the casing of the well. The well was made to flow through the casing connections, then one gate valve was closed until all the fire was extinguished around the well, and at the end of the casing with the closed gate after the fire was out on that end the gate was again opened, and the one on the other end was closed which extinguished all the fire about the well. The well at the time of the fire was producing 2,000 barrels of oil a day. The men received \$4,000 for putting out the fire.

CLARENDON, PA., CLARENDON, WARREN COUNTY, PA.,
OIL FIELD.

The great Clarendon fire began at 8:30 p. m. July 4th, 1887, and in three hours had completely burned over the whole town.

HISTORY OF THE GREAT OIL FIRE AT M'DONALD, PA.

S. H. Cook Lot, Well No. 1, McDonald, Pa., Wheeling Gas Company, owners.

Drilled in the fifth sand Thursday morning, August 14th, 1891, it caught fire Thursday evening about 10 o'clock from a torch being lowered in the hole of the Abner Conkle well one location from the Cook well. The Conkle well was spudding at the time. The Cook well was producing 400 barrels an hour when it was burning. The well burned nearly seven days. A. B. Dally superintended the putting out of the fire. By unscrewing the casing head and with a tapering nipple tee, two gate valves and eight joints of casing, four joints of the casing was screwed in each end of the tee; the tee and tapering nipple were placed over the well and the fire extinguished.

THE SAD AND DESTRUCTIVE FIRE ON OIL CREEK—FROM
TITUSVILLE TO OIL CITY, PA.

The most appalling disaster occurred Saturday and Sunday, June 4th and 5th, 1892. Heavy rains raised Oil and Pine creeks to such a height that mill dams at Spartansburg and Riceville gave way, precipitating a vast mass of water upon Titusville Saturday night. With a roar like thunder it struck the town. Sleepers were awakened by the restless tide and drowned. Refineries and tanks of oil caught

fire and covered acres of the watery waste with flames. Sweeping into the yards of an oil refinery at the upper end of Titusville, the water tore open a tank containing five thousand gallons of gasoline. Farther down an oil tank and gasoline tank were rent in twain. Water covered the streets and shut people in their houses. The gas works and the electric light plant were submerged, and the city was in darkness. At midnight a curious mist lay thick and dense and white for a few feet above the water. It was the gasoline vapor, a half mile long a quarter mile wide and six feet thick, with a coating of oil beneath waiting to be fired. One arm of the mist reached into the open furnace of the Crescent works and touched the live coals on the grate. There was a flash, then the explosion came and death and havoc reigned. Helpless men, women and children tottered and tumbled and disappeared. The death roll exceeded fifty. The elements seemed to try which could work the greater destruction. At Rouseville, above Oil City, a large iron tank of benzine was undermined and upset on Sunday morning. The combustible stuff floated on Oil creek, which had risen four feet over the floors of houses on the flats. The gas fire in a boiler at a well near the Lake Shore railroad tunnel, at upper Oil City, ignited the cloud of benzine. An explosion followed such as mortal eyes and ears have seldom seen and heard. The report shook the city to its foundations, a solid sheet of flame rose hundreds of feet and enveloped the flats in its fatal embrace. Houses charred and blazed at its deadly touch and upwards of fifty persons perished horribly in the Oil Creek oil fire. That memorable Sunday, June 5th, 1892, was the saddest day Oil City and Titusville, Pa., ever witnessed. The awful grandeur of the spectacle at both cities and along Oil creek has had no parallel.

BAYONNE, NEW JERSEY, OIL FIRE.

Lightning struck three of the 35,000-barrel iron oil tanks at the Standard Oil Company's Bayonne oil refinery in the evening of July 4th, 1900, and burned for three days. The loss to oil and other property amounted to \$3,000,000.

LAKE OF OIL BURNED AT BEAUMONT, TEXAS, JANUARY
20, 1901.

The famous Guffy and Galey well, known as the Lucas Beaumont gusher, was struck January 10th, 1901, and flowed uninterruptedly for ten days. It was estimated by the best of judges to flow from 10,000 to 50,000 barrels of oil a day. This immense lake of oil was so dangerous that the owners decided to burn it, but before it could be done safely it caught fire and 100,000 to 250,000 barrels of oil were burned.

SALEM, WEST VIRGINIA.

Fire nearly destroyed the oil town of Salem, December, 1902.

FIRES AT DRILLING WELLS.

In the early days as well as at the present time drilling wells have quite frequently caught fire, without a moment's warning from the gas which is frequently found in drilling wells and the derrick burned down and the driller and tool-dresser burned to death or disfigured for life. In late years one or two-inch steam pipe lines are laid from connections made with a stopcock or valve in the steam line near the engine in the engine house. The lines then runs along the walk and into the derrick at the base of the headache post, where a swing joint is used, and a nipple four feet long is screwed into the L of the swing joint. The upper end of the nipple is tied up in front of the headache post by a single strand of rope. In case of fire the string is cut or broke, the nipple is lowered to the floor in front of the hole. The steam is then turned on at the stopcock or valve in the engine house. The steam extinguishes the fire. Thousands of dollars worth of property and countless lives have been saved by this method. Every drilling well when rigging up should make the derrick steam connection, called jet or snuffer, before starting to spud or drill.

OIL SHAFTS AND DEEP WELLS.

Many, in the early history of oil developments entertained the idea of sinking shafts so as to obtain oil in vast quantity, and then, as it were, to tap the fountain at its head. Instances are recorded of such shafts being sunk to a depth of from two hundred to five hundred feet, in Burmah, which have yielded large quantities of oil for hundreds of years. In these Burmese shaft-wells, the mode of lifting the oil is not remarkably skillful, the entire work being accomplished by buckets. When it is necessary to clear the shafts, men are let down by means of ropes, and they often die from the effects of the gas. Life, however, is cheap in that country; and there is no difficulty in keeping the wells clear at moderate cost. The first oil shaft sunk in this country, was near Tarentum, in Allegany county, about twenty miles above Pittsburg, which was finished in the latter part of 1859. The third sand in this locality is found at a depth of not much less than two thousand feet, and as the shaft was sunk to a depth of only one hundred and sixty feet, it is needless to say that little or no oil was obtained. The salt wells of that section, which usually penetrate to a great depth, have always yielded more or less oil mixed with salt water.

On the south side of the Allegheny river, opposite Tidioute, is a shaft, sunk in 1865 by the New York Enterprise and Mining Company. The aim of the company was to penetrate, if possible, the third sand, and then tunnel into it. The Tidioute shaft is the only one in this country which has penetrated the third sand. The shaft is twelve by eight feet in width, and a hundred and sixty feet

deep. Upon striking the oil rock, holes were drilled at various angles, and quite a large amount of rock was removed and brought to the surface. The men worked in tours of eight hours each, and the shaft was kept supplied with fresh air by means of a powerful air blast. At the end of one of the tours the men came up to the surface, the engine was for some reason stopped, and the gas accumulated. The two gangs of men were seated on the curbings round the edge of the shaft, and Mr. Hart, the foreman, occupied a position on a plank directly over the mouth of the pit. As a preliminary to descending, one of the men dropped a lighted taper into the shaft, which was instantly followed by a powerful explosion. The men were thrown violently back from the curbing, and as soon as they recovered from the shock, they found that Mr. Hart had disappeared into the pit below. The body of Mr. Hart was found in a shockingly mangled condition, having been tossed from beam to beam on its way to the bottom. His death, more than anything else, put a stop to the operations—at least no work was ever done after that.

A second shaft well was put down at Tidioute, about the date of the one described above. I have, however, been unable to obtain reliable data in regard to it.

Another shaft was sunk near the Hyde and Egbert farm, below Petroleum Centre. Work was suspended on reaching one hundred and sixty feet, owing to the large flow of gas, and the great cost of the undertaking. In November, 1865, Mr. Jonathan Watson, of Titusville, Pa., conceived the idea of drilling a well beyond the third sand, in the hope of reaching a fourth sand. Drilling on this well was prosecuted for upwards of two years without reaching the fourth sand. This well was cased with three and a quarter inch casing, to its full depth of two thousand one hundred and thirty feet, and pumped, but without any show of oil. This enterprise cost Mr. Watson upward of twenty-five thousand dollars, and was the deepest drilled well in America at that time.

EARLY FLOWING OIL WELLS ON OIL CREEK, IN PENNSYLVANIA, FROM 1861 to 1864.

Foster Farm.

The Sherman Well.—In May, 1862, there was but one producing well on the Foster farm and that was called "The Sherman Well,"—and that was struck off in March of the year first named. She strated off at 1,000 to 1,300 barrels, and was for some months the largest well "on the Creek." "The Sherman Well" continued to flow until February, 1864, gradually diminishing. Her daily product as a pumping well was quite large, and she held out for two or three years.

"The Sherman Well" lease was the property of Mr. J. W. Sherman, then a resident of Cleveland, Ohio. He came to the oil region in the early days of petroleum, in somewhat straightened circumstances. He had some means, but not enough, as the sequel proves, to complete his first well. He obtained a lease upon the Foster farm below Shaffer, on the Creek, and commenced the work of drilling a well. Passing over the trials and embarrassments encountered in getting ready to drill, he finally began his enterprise, employing "spring pole power." In the first sand he had a good show of oil, but long before he reached the second sand his money gave out, and he was compelled to shut down. The "spring pole" had become powerless to work the tools effectively, and a horse or steam power was indispensable. Mr. Sherman waited for something to turn up, by which he could obtain either a steam engine or a horse. After many days of waiting, an interest in the well was disposed of for an old horse—and the work proceeded. Two or three weeks of horse power drilling, and the labor became too heavy for "Old Pete." Another one-sixteenth was sold to two gentlemen who owned a small steam engine, and work was again resumed. Coal was an expensive item, and it could not be had without the ready cash and not one of the owners could muster enough to buy a single ton! Another halt!

A week's delay and another interest was forced upon a reluctant purchaser for "\$80 in cash and a shot gun." Just before the last dollar of this money had been expended, the tools penetrated the third sand, and the Sherman commenced to flow at the rate of 1,000 barrels per day. The fortunes of the plucky lessees were made—they had "struck ile" indeed. The Sherman continued to flow for two or three years, finally coming down to a pumping well. It is safe to say, the product of this well enriched its owners in fabulous degree, for its total receipt for oil sold is estimated at \$1,700,000.

Soon after the Sherman began to flow, a dozen or more wells were drilled upon this farm, but they were mainly non-productive. Mr. Frederick Crocker put down one well on the farm, which he pumped two months steadily, when she started off at the rate of five hundred barrels daily. The Crocker well had a short career, however. The surrounding wells let down the surface water and soon drowned her out. She produced for a year or more and was then abandoned.

LOWER M'ELHENNY FARM.

This farm was purchased by Capt. A. B. Funk, in the fall of 1859, of David McElhenny, the original proprietor, for \$1,500—McElhenny reserving one-quarter of the oil. In the spring of 1860, the work of development began, and the first well drilled was named the Fountain. It was put down with spring pole power to a depth of 260 feet. To reach this depth required months of labor, running into the winter and spring of 1861. During the early months of the latter year, the spring pole process was

abandoned, and a small locomotive boiler and a stationary engine were obtained, and with this the drilling was completed. At this early day few, if any wells were drilled below the second sand, obtained generally at about 160 feet. Capt. Funk was inclined to abandon this well at 260 feet in depth—100 feet below the only oil-bearing rock yet discovered. His son, A. P. Funk, then and afterwards in charge of operations upon the farm, determined to sink it still deeper, persuaded that another oil rock could be found.

The well was completed in May, 1861, the tools having reached the third sand, and perforated it to a depth of sixty feet before the slightest evidences of gas or oil were visible. Its entire depth was 460 feet, and the top of the pebble rock or third sand was struck at 400 feet deep. When the oil was reached, the drilling tools were hammering away at the bottom of the well, and the first intimation the drillers had of the presence of oil was the gradual rising of a foam, under which was a volume of water, bubbling and rushing over the top of the conductor. This continued for some moments, the column of water, mixed with oil, steadily rising to the height of eight or ten feet above the conductor, when it seemed to explode, and the oil followed in immense volume, rising to the altitude of the derrick and above it.

This was the first well put down to the third sand in the Pennsylvania oil region. It was, as before remarked, named the Fountain well, and produced (flowing) 300 barrels per day for about six months, and then stopped short—instantly, it is said, and never afterwards produced a barrel of oil. It was agreed upon all hands that the well was destroyed by paraffin, for the lead pipe from it to the tanks—two hundred feet distant—was completely filled up with it to such solidity that a sucker rod could not be driven through it with a sledge hammer. Only thirty feet of tubing was ever used in the well, and the hole doubtless presented the same appearance as to obstructions as did the lead pipe. The verdict therefore was, the Fountain well was destroyed by paraffin.

The Empire well, same farm, was put down by Bennett & Hatch, lessees, and was completed about the 20th of September, 1861. The Empire had the same sands and the same depth of third sand as that found in the Fountain well. When struck, she started off at 2,500 barrels. Six weeks after she began to flow, 2,200 barrels was her regular daily product. She flowed nearly eight months gradually falling off to about 1,200 barrels, when in May, 1862, she, like her predecessor, the Fountain, stopped suddenly and as mysteriously as did her consort, but not with the same fatality as to future profit. The Empire was soon afterwards cleaned out and the pump applied to her and for some months she produced to 600 barrels per day, and then fell off and for eight or nine months gave out about 300 barrels per day.

There is one incident connected with the history of the Empire well which will bear repetition. While in the height of her flow one month's product was

sold to Bradley & Son of Cleveland, Ohio, for five hundred dollars. Not less than 100,000 barrels of oil poured out of her during this thirty days' transfer, for which her owners realized not more than five cents per barrel.

The lower McElhenny farm was among the most prolific of flowing well localities on the Creek. After the Fountain and Empire wells were struck the farm became rapidly studded with derricks, engine houses, and all the paraphernalia of an oil producing locality. The Davis and Wheelock well was struck in the fall of 1862 and daily poured out 1,500 barrels. The Densmore well No. 1, struck about the same time, flowed 600 barrels per day. No. 2, same party and name, 400 barrels per day; and No. 3, same owners, about 500 barrels per day. These latter wells were all struck about the same time—in the fall of 1862, and were all put down upon a two-acre lease. The Crocker well was struck about the same date and flowed 1,000 barrels daily. This well was owned by Mr. Fred. Crocker, of Titusville.

To these noted flowers of the lower McElhenny farm may be added to the Hibberd well, struck in March, 1863, and started off at 400 barrels. The American well, struck about the same time and flowed 500 barrels. The Canfield well, struck in the summer of 1863 and flowed 400 barrels.

During the fall, winter and spring of 1862-63, the daily product of the lower McElhenny farm was between five and six thousand barrels. Oil was sold from this farm, during the years just mentioned, as low as 10 cents a barrel; the average price, however, being 25 cents per barrel, the purchaser furnishing his own barrels. In the spring of 1864 better prices were realized; oil being sold from tanks on the farm at \$5.00 per barrel.

THE ESPY FARM.

This farm, adjoining the lower McElhenny, had some noted flowing wells in the early days of petroleum development. The Buckeye well was one of the most famous. She was completed in September, 1861, and flowed 1,000 barrels per day; while there were other good producing wells upon this farm, they were small compared to those upon the McElhenny farm. The Buckeye was a famous producer. The tanks to receive her oil were set up on the hill above her, two hundred feet, and for a year the oil was forced through a lead pipe into those tanks from the well.

HYDE AND EGBERT FARM—PETROLEUM CENTER.

Dr. A. G. Egbert, then an enterprising and wealthy resident of Franklin, Pa., purchased or contracted to purchase the Davidson farm, of its owner and occupant, in 1860. Later, Mr. Davidson died, and some difficulty was experienced in obtaining a clear title to the property. Without further detail, we may add that all was cleared up, and in 1862, Charles Hyde, of Hydetown, became a purchaser of one-half the property from Mr. Egbert, who meantime had effected a settlement with the widow

Davidson, agreeing to pay her \$2,625 and one-twelfth of the oil for a deed of the farm. This sum, \$2,625, Mr. Hyde paid to Dr. Egbert for one-half his purchase from Mrs. Davidson.

Prior to this sale to Mr. Hyde, or in the spring of 1861, a well had been drilled upon the property. This was called the Hollister well and when struck the oil flowed in great volume, flooding everything about the derrick. The lessees had contracted to deliver to the landowners their one-half royalty in barrels. Barrels could not be obtained in sufficient quantities at any price, and \$3.50 to \$4.00 was demanded for all that could be procured. Oil was selling at 25 to 30 cents per barrel. The drillers, therefore, abandoned their enterprise and the well was never tested. It continued to flow for some days, the oil running upon the ground. The lessees could not afford to barrel that portion going to the land proprietors for it would cost them more than the entire product was worth.

The Jersey well was one of the famous flowers of the Hyde & Egbert farm, and was the property of a company of Jerseymen, and was struck in the spring of 1863. It produced from the start 350 barrels per day, and this product was maintained with little variation for quite nine months.

The Maple Shade well—working interest—was the property of an organized company, The Maple Shade Oil Company, and was struck August 5th, 1863. Its product was 800 barrels per day, and continued at this standard for eight or ten months. It was a steady flower, and brought its owners a large amount of wealth. Dr. A. G. Egbert informed the writer that during its life its aggregate net earnings and clear profits were more than \$1,500,000.

The Coquet well, Hyde & Egbert farm, was struck in the spring of 1864. The Coquet was pumped for ten or twelve days, when, upon drawing the sucker rods, in order to relieve her of an excessive quantity of gas, she began to flow largely and for a few days produced 1,000 to 1,200 barrels. She finally settled down at 800 barrels and continued for many months at this standard.

CHERRY RUN OR RYND FARM.

The Reed Wells.—The original Reed well was struck on the 18th of July, 1864, and flowed 280 to 300 barrels per day. The lease upon which this well was located consisted of one acre of land, and upon this small tract the lessees put down four wells, all proving abundantly productive. Mr. William Reed was the original lessee and before he succeeded in getting down the first well—the Reed—he was joined by one or two parties with a little money. After the well was down to a proper depth, it had every appearance of a dry hole. Several days were spent in pumping and testing it, when she began to flow at the rate of 300 barrels, and continued to produce largely for two or three years. The other three wells upon this lease added to the product considerably, and in the end netted handsome fortunes to the owners. One-quarter of the land interest belonged to Mr. Cresswell, who

came into the enterprise plethoric with a lack of greenbacks, was sold soon after the first well was struck for \$280,000 to the Mingo Oil Company, of Philadelphia, Mr. Cresswell having previously realized from the product of the well \$30,000. Mr. Reed, after realizing \$75,000 from the sale of oil from the well, disposed of his one-half interest in the property to Bishop, Bissel & Co. for \$200,000. Mr. Frazer, who owned one-quarter of the property, and who had received from sales of oil from the well more than \$100,000, subsequently disposed of his interest to other parties for \$100,000. This in round numbers makes a total of \$785,000 realized by the original proprietors for the working interest of the Reed well and lease, and all within ninety days from the commencement of operations. The purchasers made money from their investment, for these four wells continued to produce largely, two or three years after they passed out of the hands of the original owners. Multiply \$785,000 by two and we have \$1,570,000 as the grand total realized by the lessees and subsequent purchasers. Add to this princely sum the amount received by the land interest and it is safe to estimate the profits of this one oil operation at \$2,000,000, and this is only one of the many having like fabulous history.

TARR FARM.

The Phillips well (No. 2), Tarr farm, was struck on the 14th of November, 1861, and commenced to flow at the rate of 3,000 barrels per day. Oil at that date was sold as low as fifteen, and even ten cents per barrel. Thousands of barrels of the product of this well for want of barrels—worth then at the well \$3.50 to \$4.00 each—ran off into Oil Creek, or were allowed to waste in various ways. In December, one month after the Phillips well began to flow, she produced by actual measurement three thousand nine hundred and forty barrels in twenty-four hours. She finally settled down to 2,500 to 3,000 barrels, and maintained this standard for months. The owners of interests in this marvellous well were accustomed to take their portion of the product by the hour. A rude trough made of six-inch boards was constructed from the Creek to the tanks, and as boats could be obtained and sales made, the oil was let on and run two, three five, or more hours in each owner's interest. If the boats, barges, barrels or tanks—supplied as fast as possible—filled up before the expiration of the party's allotted time, the oil ran into the creek or upon the ground, and was thus wasted and lost.

Samuel Downer, Esq., later the proprietor of the Downer Oil Works at Corry, was one day standing at the discharge end of the leading trough, which had half an hour before been thrown from a flat boat just filled. The oil was running into the creek in a volume as large as the trough would hold. "See here," said Mr. Downer, "don't you know you are wasting a hundred barrels an hour here?" "Yes," said the interested party addressed, "but what am I to do with it? You won't give five cents a barrel for it; and I can stand a loss of five dollars an hour

rather than let you have it at that price." Mr. Downer passed on up the creek.

The lessees of this portion of the Tarr farm had obligated themselves to give one-half the oil, and deliver it to the landowners in barrels. For a few weeks after the well was struck the flow was stopped by means of a stopcock. The question of barrels was finally adjusted and the flow began again, as above stated, in December, 1861. The product of this well is variously estimated; some put it as high as 750,000 barrels, and others at 1,000,000 barrels. The Phillips flowed for a year or more, her product lessening, when the pump was applied, and she produced largely for twelve years, and was shut down as late as May, 1873, when her product was from seven to ten barrels per day.

During the "stock company epidemic" in 1854-5, all but the land interest of this well was stocked at a fabulous sum—one or two million dollars. While she had vigorous life and marvellous product, oil was sold from her immense wooden tanks as low as ten cents per barrel, and as high as \$13 per barrel.

The Phillips was 491 feet deep and had 60 feet of oil rock.

The Crescent well, Tarr farm, was drilled by N. S. Woodford during the summer of 1861, with a spring pole, and to the first sand. This was the first well put down upon the Tarr farm. She flowed thirteen months and twenty days, averaging 300 barrels per day, and shut off in an instant, and never afterwards produced a barrel of oil. In 1871 efforts were made to resuscitate the Crescent, but without avail. The well was cleaned out, drilled deeper and pumped for several weeks, but it was a dry hole. During the life of this well, oil was sold at such low rates, that while there was little or no expense attending its running, beyond tankage, not a dollar of profit or dividend was ever realized by any one of its owners. She, however, paid for herself, but the landowners claim to have lost money in outlays to save their portion of the product.

The Woodford well, Tarr farm, was put down by N. S. Woodford, in the winter of 1861. This well was located within a few rods of the Phillips well and soon after she began to produce—two thousand barrels per day—the water flooded the Phillips and materially affected her flow. When these wells became pumpers, neither would give out oil unless both were in motion. When the Woodford shut down the Phillips produced only water, and vice versa. A compromise was subsequently effected by which both wells were to be operated at one and the same time, and each to have one-third of the product of the other well.

There were several large flowing wells upon the Tarr farm during the early developments there, from 1861 to 1863-4. Phillips No. 1, struck in June, 1861, flowed 600 barrels per day; Elephant No. 1, completed in December, 1861, was a bountiful producer—600 barrels per day; the Union, struck in April, 1862, measured out 300 barrels per day; the Eagle started off August, 1862, at 100 barrels per day, and later, August and September, 1864, the

Cornwell and Sterling each produced one hundred and twenty barrels per day.

The great flowing wells of the Tarr farm in 1861 and 1862 were closely followed by others at various points on the creek. The Van Scyke well on the widow McClintock farm yielded 1,500 barrels per day; the Brawley well, on the Buchanan farm, 1,000 barrels per day; the Blood well, Blood farm, 1,000 barrels per day; the Noble well, Farrel farm, 2,500 barrels per day, and others which we have already mentioned in more detail, in this connection.

PIT HOLE IN 1865.

In January, 1865, the famous United States or Frazer well was struck on the Thos. Holmden farm, in a ravine on Pit Hole creek, six or eight miles from its mouth and almost as many miles from any other developments. "This intelligence," I quote an author, "who was himself of the moving mass," naturally created some excitement in the restless world of Oildom; but the spring floods of that memorable year, as well as the attractions to enterprising operators afforded by more accessible localities, for several months prevented extensive developments in the direction of the new discovery. Indeed the town could boast of only two buildings by the end of May, although the production of the United States well had steadily increased, and was then fully eight hundred barrels a day. However, the beginning of June witnessed the striking of the Grant well, a spouter of twelve hundred barrels magnitude, and forthwith commenced the rush for the inviting hills and dales of Pit Hole, which resulted in the rise of a city in soome respects the most wonderful the world has ever seen. Capitalists eager to invest their greenbacks, thronged in thousands to the spot. Labor and board commanded exorbitant rates; every purchasable farm for miles around was immediately bought at a fabulous price; hundreds of wells were begun with the least delay possible. New strikes continually intensified the excitement. Speculators roamed far and wide in quest of a source of wealth that promised to outvie the golden treasures of California. The value of oil lands was reckoned by millions; small interests in single wells brought hundreds of thousands of dollars. New York, Boston, Philadelphia, Chicago, and numberless other lesser centers, measured purses in the insane strife for territory. Money circulated like waste paper, and for weeks the scene recalled the wildest fictions of the South Sea Bubble or Law's Mississippi Scheme.

Everything conspired to favor the growth of the city. The close of the war had left the country flooded with an inflated currency, besides throwing many thousands of energetic men upon their own resources, and hundreds of these flocked to the latest Oil-Dorado, which presented manifold inducements alike to venturesome spirit, the active speculator, the unscrupulous stockjobber, the needy laborer, the reckless adventurer, and the dishonest trickster.

Some time previously the Holmden farm had been

purchased for \$25,000 by Prather & Duncan, who surveyed the greatest portion into building lots that found ready sale at figures varying from \$300 to \$15,000, which latter sum was actually paid for the site of the Danforth House. Before the end of September the improved Chicago boasted a population variously estimated at from twelve to sixteen thousand, including the daily average of transient visitors. The postoffice required seven clerks, and transacted a volume of business that ranked it third in the State, Philadelphia and Pittsburg alone surpassing it. Hotels, theaters, saloons, public halls, and places of general resort could be counted by the score. A fire department was organized; stores and dwellings sprang into existence as if by enchantment; a railway to Reno was projected and completed almost the entire distance, and the unpoetic name of Pit Hole became familiar to every newspaper reader throughout the civilized world. Incredulous foreigners, unaccustomed to the suddenness of Americans, with unfeigned astonishment, learned that in the brief space of three short months a dense forest had been transformed into a bustling city, possessing nearly all the conveniences and appliances of old established towns—a city, the wondrous story of whose dazzling rise and unexampled fall sounds even now like the weird romance of ancient fable. What a rich field for a graphic sketch of fortunes reverses, of feverish excitement and unhealthy speculation, does the history of Pit Hole offer to some later Scott or Dickens.

But, alas, the youthful city was destined to decline as rapidly as it had risen. In October the production of the wells fell off largely; the laying of pipe lines to Titusville and Oleopolis forced hundreds of teamsters to seek employment elsewhere; two destructive fires helped to accelerate the final disaster, and January dawned upon a comparatively deserted city, with scarcely anything more than long rows of empty buildings to indicate its former greatness and short-lived prosperity.

Many of the finest structures were removed to other places and not a vestige of the first wells is to be seen.

I add a single projected transaction of the Pit Hole furor in 1865, as an index to scores of others of like or very like mammoth proportions.

In July, 1865, Mr. George J. Sherman, Henry E. Picket and Brian Philpot, then residing at Titusville, contracted with Messrs. Prather & Duncan, the owners, for the purchase of the Thomas Holmden farm, at Pit Hole, for \$1,300,000; The farm contained about two hundred acres of land, and at the date of this contract, July 24th, 1865, was producing 3,500 barrels of oil per day, and had one hundred wells going down, at half royalty, and was besides part and parcel of the city plot of Pit Hole, upon which were building leases, netting \$60,000 per annum. Dwellings, stores, shops and hotels were begun and completed every day. The contract spoken of was for the purchase of this farm, just as it was, and thirty days were stipulated as the time in which to make the first payment of \$300,000.

Mr. Sherman proceeded to New York with his

contract, survey, statistics, etc., to interest parties there in the scheme. A few days subsequent to his arrival in New York he secured purchasers of his contract from Prather & Duncan at \$1,600,000. The preliminaries were all settled upon, and a committee of the purchasers was selected to visit Pit Hole, to make examinations and ascertain if the property was up to its representations. On the very day the committee were to leave New York for the oil region the great Ketchum forgeries were announced, and as many of the gentlemen interested in this "Pit Hole oil scheme," were victims of Ketchum's rascality, the journey was abandoned and subsequently the whole thing fell through.

In this dilemma, Mr. Sherman telegraphed to Mr. H. H. Honore, a wealthy gentleman at Chicago, giving him an outline of the property he had for sale and urged him to meet him at Titusville in five days, prepared to close up the transaction. Mr. Honore and a party of Chicago capitalists made good Mr. Sherman's appointment, and after going over the property, reopened negotiations with Duncan & Prather, who, in lieu of the \$400,000 cash stipulated as the first payment, agreed to take that amount in real estate situated in Chicago. To this end Duncan & Prather were to visit Chicago, examine the real estate—which was to be priced by disinterested parties—and close up the sale. Delays followed—Messrs. Duncan and Prather were a week or more in reaching Chicago, and once there they hesitated and finally declined to receive real estate in Chicago as payment for their property. Among the many valuable properties offered was Honore's block, adjoining the Tremont House—at \$175,000—since valued at \$500,000.

The contract for the sale of the Holmden property had been renewed and the time extended two weeks. This extension had only about five days' life—and a Sunday intervened. Messrs. Duncan & Prather had left for St. Louis, intending to return home on the following Tuesday. Judge Beckwith, the attorney for the Sherman party, advised a tender of the first payment, \$400,000, in greenbacks. This was late Saturday evening. On the Tuesday following, the \$400,000 had been obtained and Mr. Sherman, Joshua A. Ellis, president Second National bank, Chicago, John G. La Moyné and Mr. Honore started for Titusville with their treasure for a legal tender. The contract required that the first payment should be "made upon the Holmden farm." The party had reached Titusville with their valuables in safety. Pit Hole was 12 miles distant and the country was just then infested by highwaymen of the meaner sort. Each of the gentlemen named provided himself with a pocket pistol and mounting horses—the \$400,000 equally divided between them—they set out for Pit Hole. "It was the last day in the afternoon," and late at that, when the party reached Prather & Duncan's banking office. They entered, made known the object of their coming, and thereupon laid upon the bank's counter, in full view of Messrs. Prather & Duncan, \$400,000 as a legal tender for the first payment as required by the contract.

The tender was declined. Messrs. Prather & Dun-

can claimed that the life of the contract expired with the setting sun, of that very day, and they would listen to no further negotiations. Suit was soon after commenced in the United States District court at Pittsburg, which finally terminated in a compromise, by which the Honore party obtained title to seven-eighths of the Holmden farm property.

Soon after the tender was made Mr. Samuel J. Walker, of Chicago, now one of the largest real estate operators in the west, became interested in the transaction, and he was the owner of the seven-eighths interest in the Holmden farm, as also of the Copeland farm adjoining. The sum paid for the seven-eighths interest in the Holmden farm is not known to the writer of this.

Pit Hole, however, developed a great many flowing wells, a few of which I make brief mention of hereafter.

"THE UNITED STATES WELL."

This well was located on the Thomas Holmden farm, and was the property of the United States Oil Company, struck on the 7th of January, 1865. The well flowed at the rate of 650 barrels at the start, and continued to flow, gradually falling off for quite ten months. The well ceased to flow November 10, 1865. The same farm developed other great producers. Among the most noted were the "Twin wells"—800 barrels a day. "No. 54," 800 barrels a day. "The Grant well," 450 barrels per day. "The Eureka well," 800 barrels per day. None of these, however, "held up" their product beyond six to ten months. The daily product of the Holmden farm for some time during the season of 1865 was 3,685 barrels per day.

Upon the Rooker farm, adjoining the Holmden, were several large "flowers," during the summer of 1865. Among the most noted were the J. R. Johnson, "No. 110," which spouted out 800 barrels per day; "No. 15," the property of Pratt & Sumner, which produced 400 barrels daily, and "No. 108," 400 barrels a day. Nos. 18 and 147, each 200 barrels daily. The daily product of the Rooker farm for several months was 2,230 barrels. Leases of one acre upon this farm were sold as high as \$3,000 and one-half the oil.

"The Homestead well," at Pit Hole, located upon the Hyner farm, was among the "great flowers" of 1865, in this prolific territory. This well started off at 500 barrels daily. "The Arletta" flowed 250 barrels per day, and "The Stevenson, No. 2," produced 175 barrels per day. But these wells, as "flowers," lasted only about three months.

"The Burtiss Well" was struck late in the summer of 1865. It was located on the Copeland farm, Pit Hole, and flowed from the start, and for months after, quite 800 barrels per day. Besides "the Burtiss," there were upon this farm three other flowing wells. "The Rice well" gave out 300 barrels a day; "No. 1," 150 barrels per day, and the "Clara well" ran up to 300 barrels per day for nearly four months.

VARIETIES OF PETROLEUM.

PENNSYLVANIA OILS—QUALITY AND VARIETY.

The oil found in the Pennsylvania oil region is, for the most part a light lemon to a greenish color, and by some considered of a rather unpleasant odor. The specific gravity ranges from .820 to .782, or from 40° to proof 48° Beaume. The oil yields by distillation from 70 to 85 per cent of illuminating oil, which, when properly manufactured, should not vaporize and inflame under a temperature of 110° to 116° Fahrenheit.

Of lubricating oil produced in the Franklin district the specific gravity varies from .880 to .860, or from proof 28° to 32° Beaume.

The oil of Pennsylvania varies somewhat in color in the different districts and in the different sands. The black oil district of Pleasantville is so called from the fact that the oil is of a dark, inky, greenish color. This district extended from a little northeast of Pleas-

antville to the Story farm on Oil Creek, taking a northeast and southwest direction, and is in extent, as developed, about 12 miles in length and half a mile wide.

It is claimed by oil men that the rock in which the black oil is found is not a regular oil producing sand.

They term it a stray sand, as green oil is found in a lower sand on the same land.

On the eastern portion, or upon the lands of the Shamburg and Cherry Run Petroleum Companies, is the dividing line between the green oil and the black. The line is defined sharply, as if by a plummet. The rock in which the black oil is found is nominally thinner than the green oil sand.

The cause of this coloring of the oil is reasonably attributed to the metallic composition of the sand, it being largely impregnated with oxide of iron. In the Modoc and Millerstown districts in Butler county, Pa., Southwest Pennsylvania, West Virginia, South-eastern Ohio and Kentucky the oil is of an amber color, with a very light greenish tinge. As before stated, oil differs in color and, to a slight extent, in gravity in the different sands, which, we think, can be fairly accounted for by the presence of iron in the composition of the sands.

The True History and Life of John W. Steele

Better known to the world as "Coal Oil Johnny," the greatest spendthrift and all 'round easy man that the oil country ever produced, from personal interviews with him by the author of this book.

John Washington Steele was born near Sheakleville, Mercer county Pennsylvania, May 23, 1843, and was the second child born to Anna Steele, the first being a girl, who was given the name of Permelia. She was two years older than Johnny, and on December 10, 1844, Permelia and Johnny Steele were adopted into the family of Culbertson McClintock, a well to do farmer, who lived on Oil Creek, in the county of Venango, Pennsylvania, across the creek from and slightly above the present site of Rouseville, three miles north of Oil City, Pa. Permelia and Johnny Steele were taught to address Culbertson McClintock as "Uncle Culbertson," and his wife Sarah they called "Aunt Sally." Those were the foster parents of Permelia and Johnny Steele. In the summer of 1853 Permelia, Johnny's sister, died at the age of 12 years. After the death of Permelia, Sarah Emily Scott was taken into the family. She was also two years older than Johnny. Hamilton McClintock, the father of Culbertson McClintock, the foster father of Johnny Steele, was one of the first settlers of the Oil Creek valley. He was born in Ireland, and settled on Oil Creek when he was a young man, and before his death he divided a large farm which he earned by hard labor, among his three sons, Culbertson, James and Hamilton, jr., the latter occupying the old homestead, situated on the site of the present and once thriving town of McClintockville. In those times the farmers living along that afterwards famous stream known to the world as Oil Creek were dependent for a livelihood upon produce off their hard and stony acres. Measured by the agricultural standard of other portions of the country, the land was not fertile, and the woodland to be cleared and the rocks removed presented obstacles which would have appalled a less hardy class of people. However, their tastes were simple and their wants easily satisfied, and ceaseless and untiring industry brought to the homes of many what in those days were comparative comforts. Culbertson McClintock did not live to see the golden flood of wealth which in later years swept down the valley, transforming the slow going agricultural valley into a beehive of industry, such as has never before or since been known in the busy oil regions of the world. On the 10th day of March, 1855, he died at the age

of 45 and was laid to rest according to the wish in his will, which is as follows:

CULBERTSON McCLINTOCK'S WILL.

In the name of God, amen.

I, Culbertson McClintock, of Cornplanter township, in the county of Venango, in the state of Pennsylvania, being weak in body, but of sound mind and memory, thanks be to God therefor, and calling to mind the mortality of my body, and knowing that it is appointed for all men once to die, do make this my last will and testament, in manner following; that is to say, principally and first, I recommend my soul into the hands of Almighty God, who gave it, hoping through the merits of our Savior Jesus Christ to receive remission of all my sins and a happy admission into eternal bliss, my body I recommend to the earth to be buried in the graveyard at Cherry run meeting house; and as touching such worldly estate wherewith it has pleased God to bless me in my life time, I give, devise, bequeath and dispose of in the following to-wit:

Imprimis it is my will and I do order that in the first place all my just debts, funeral charges, be paid and satisfied by my hereinafter named executors, and that as soon as conveniently can be after my decease. It is my will, and I order that my hereinafter named executors shall at any time after my decease collect my outstanding debts, a portion whercof to be applied as hereinafter directed.

I give and bequeath unto my wife Sarah all that certain tract of land on which I now reside lying on Oil Creek, adjoining lands of John Rynd and John McClintock and other lands, containing about two hundred acres of land, with all buildings and appurtenances belonging thereto, to have and to hold during her life time, or so long as she shall remain my widow, and after her marriage or decease the tract of land to pass in fee simple into the hands of John Washington Steele, for him to have and to hold forever and his heirs after him.

I give and bequeath to Sarah Emily Scott, who is now of my family, one three year old heifer and two good sheep. I give and bequeath unto Sarah, my wife, all the remainder of my stock, which may be left after

my decease, together with the household furniture, loose property and farming utensils which is now belonging to my farm and all debts which may be due to me of any description to be collected by my executors after paying all my just debts and funeral expenses the remainder to be and remain the property of the said Sarah, my wife.

And lastly I do nominate and appoint John Rynd & Sarah my wife to be Executors of this my last will and testament, hereby annulling and making void all prior and other wills, hereby ratifying this and no other to be my last will and testament. In testimony whereof I the said Culbertson McClintock have hereunto set my hand and seal the twenty-eighth day of February in the year of our Lord one thousand eight hundred and Fifty-Five.

CULBERTSON McCLINTOCK. [SEAL.]

Signed, sealed, published and delivered by the said testator as his last will and testament in the presence of us who at his request in his presence and presence of each other subscribed our names as witnesses thereto.

THOMAS MCKNIGHT,
JOHN BLOOD.

Commonwealth of Pennsylvania, County of Venango, ss:

I, D. K. Buchanan, register for the probate of wills and granting of letters of administration in and for the said county, do hereby certify that the foregoing is a true and compared copy of the last will and testament of Culbertson McClintock, late of Cornplanter township, in said county, deceased, as proved before, and admitted to probate by the register of wills for said county on the 30th day of March, A. D. 1855, and as the same appears of record in said office, in Will Book No. 3, at page 151.

In testimony whereof I have hereunto set my hand and affixed the seal of said office, this 6th day of August, A. D. 1903.

[SEAL.]

D. K. BUCHANAN,
Register of Wills.

At the time of Culbertson McClintock's death Johnny Steele was less than 12 years of age and was attending school at what was then known as the McClintock school house, one mile down Oil Creek from the farm, and later he attended school at the Blood school house, situated two and one-half miles above the farm. At that time the school term was only four months of the year. One winter he attended the academy at Cherry Tree, an institution of learning of some pretensions for the time, and locality. It was at this school Johnny Steele graduated; that is, there ended his education, so far as schooling was concerned, except for a short period many years afterward. Mr. and Mrs. Culbertson McClintock were very religious and were members of what was called the Seceders' church, which was a creed supposed to represent the old time Presbyterian faith, and the meeting house they attended was situated in Oakland township, three miles from their farm. The old meeting house is standing there today. Such was the condi-

tion of affairs in the Oil Creek valley previous to the drilling in of the Drake well at the junction of Oil and Pine creeks near Titusville, Pa., August 27, 1859. As soon as the Drake well was struck and began producing oil it created a great deal of excitement, and on Monday morning, August 29, 1859, Johnathan Watson, of the firm of Brewer, Watson & Company, owners of the land on which the Drake well was drilled, mounted a horse and hurried down Oil Creek to secure a lease on the Hamilton McClintock farm, near the mouth of Oil Creek, which had an oil spring on it, and where the surface indications were even better than on their own tract, which had passed entirely from their control to the Pennsylvania Rock Oil Company. In the spring of 1860 J. D. Angier began drilling a well on the Hamilton McClintock farm, with a spring-pole, for Brewer, Watson & Co. In the middle of December, 1860, the well filled up and ran over with oil. This was the third well ever drilled on Oil Creek and the first one near the mouth, and was the beginning of the lower Oil Creek excitement. In a short time all the intermediate territory for 16 miles along the narrow valley of Oil Creek was soon leased and taken up.

The next farm adjoining and above the Hamilton McClintock jr., farm on the left side of Oil Creek, was the Archie Buchanan farm, and adjoining and above the Buchanan farm on the same side of the creek was the Sarah McClintock farm, the widow of Culbertson McClintock, the foster parents of John W. Steele. The lower end of the farm was leased in 1861 to Armstrong and Hathaway. The next to Armstrong and Hathaway's was the Hays Brothers Oil Co. Then the Chambers Oil Co., the Hammond Oil Co., the Vanslyke Oil Co., the Scott Oil Co., the Eldorado Oil Co., the Lone Star Oil Co., and the Henry Blackmore on the upper end of the farm. In the fall of 1861 and the spring of 1862 a number of large wells was drilled on the farm and Johnny Steele occupied his time by hauling oil in barrels with a team from the farm to the mouth of Oil Creek on the Allegheny river and to the railroad at Union City, Pa., and in the fall of 1862 he was married to Miss Eleanor J. Moffitt, the eldest daughter of Robert Moffitt, a well to do farmer of Oakland township, Venango county, Pa. They had known each other from childhood, had attended the same church and participated in the same neighborhood festivities.

Johnny Steele was 19 years of age at the time of his marriage, which was later blessed by the birth of one son, Oscar Culbertson Steele. Up to this period Johnny Steele had never been in a large city and from the stories of city life told him by the oil men he longed to visit one. So Mrs. Sarah McClintock, his foster mother, concluded that he should give up driving teams and take a partnership in the store owned by her nephew, David Hayes. She decided to send him to Pittsburg with Hays to purchase goods. This was before the days of railroad transportation down the Allegheny valley and they made the trip by steamboat.

This was his first trip to a city and on his return home he took up the position of buyer and deliverer, and started out on his first trip with a single horse and cracky wagon to buy produce for their small store.

To give the reader an insight into his shrewdness as a buyer, he drove to Dempseytown and called at Merri-
 rick's store and asked if they had any eggs to sell. He
 was told they had. He inquired the price and then asked
 how many eggs they could let him have. "About one
 hundred dozen," replied the grocer. "We have a few
 hungry oil men down on the creek, what will you take
 for the whole lot?" he next inquired, and the grocer
 named a lower figure than before, and was informed
 by Johnny Steele that he would take all the eggs and
 give the oil men something to eat. As a merchant,
 Johnny Steele was not a success. In those days the
 people didn't know the danger incident upon the
 handling of crude oil, and on the 18th day of March,
 1864, Mrs. Sarah McClintock poured crude oil in the
 kitchen stove for the purpose of starting a fire therein.
 Doubtless at the time she thought there was no fire in
 the stove, and therefore was not prepared for the flash
 which followed, and which set fire to her clothing. She
 started to run from the kitchen into the open air, which
 increased the draft and fanned the flames from her
 clothes, which blinded and bewildered her. She fell
 at the base of an apple tree near the kitchen door. She
 was horribly burned and died the next day, which
 was the 19th day of March, 1864. From that date
 began the career of John W. Steele, known to the
 world as "Coal Oil Johnny." After Mrs. McClintock
 was laid to rest beside her husband, Culbertson Mc-
 Clintock, in the cemetery at Cherry Run, the will of
 Sarah McClintock was found in the safe she had
 bought to store the money in as her share of the in-
 come of the oil bonuses and rentals from the farm.
 The will is as follows:

In the name of God, amen.

I, Sarah McClintock, of the township of Cornplanter,
 in the county of Venango, and state of Pennsylvania,
 being of sound mind and memory, and knowing the un-
 certainty of life, do therefore make and ordain
 publish and declare and acclaim this to be my last will
 and testament, that is to say after all my lawful debts
 are paid and discharged, the residue of my estate, real
 and personal, I give and bequeath and dispose of as
 follows:

To my cousin, Rachel McKnight, one hundred dol-
 lars in cash; to Sarah Emily Moffitt, two hundred dol-
 lars in cash; the remainder to John W. Steele. Like-
 wise I make and constitute the said John W. Steele
 and R. W. McFate executors of this my last will and
 testament, hereby revoking all former wills made by
 me. In witness whereof I have hereunto set my name
 and affixed my seal this eighteenth day of March, in
 the year of our Lord one thousand eight hundred and
 sixty-four. SARAH MCCLINTOCK. [SEAL.]

The above was her last will and testament, and we,
 at the testator's request and in her presence have sign-
 ed our names as witnesses hereto and written oppo-
 site our respective places of residence.

W. W. BROWN,
 Cornplanter Township, Venango, Co., Pa.

JESSE MURTZ,
 Cornplanter Township, Venango, Co., Pa.

Venango county, ss:

Personally came before me, H. B. Gordon, register
 for the probate of wills and granting of letters of ad-
 ministration in and for the county aforesaid, W. W.
 Brown and Jesse Mertz, the subscribing witnesses to
 the above will, who being duly sworn according to
 law, say that they were present and saw and heard
 Sarah McClintock, the testator, sign, seal, publish and
 declare the foregoing instrument of writing as being
 her last will and testament, and that at the time of so
 doing she was of sound mind, memory and under-
 standing to the best of their knowledge and belief.

Witnesses:

W. W. BROWN.
 JESSE MERTZ.

Sworn and subscribed before me this 22d day of
 March, 1864. H. B. GORDON, Register.

Letters granted to John W. Steele and R. W. Mc-
 Fate the 22d day of March, 1864. Recorded March
 22d, 1864. Oath filed in the will. Revenue stamps
 five dollars.

Will of Sarah McClintock is recorded on page 344,
 Will Docket No. 3 at Franklin court house, county
 seat of Venango county, Pennsylvania.

After all the provisions in the will were complied
 with and all indebtedness was settled, together with
 all legacies, there was left twenty-four thousand and
 five hundred dollars, a farm of two hundred acres, with
 20 producing oil wells thereon, one-eighth of all the oil
 produced going to the land owner, one house, barn
 and other small buildings, together with all farming
 utensils then and there became the inherited property
 of John W. Steele.

Soon after the demise of Mrs. McClintock, Johnny
 Steele went to Franklin, the county seat of Venango
 county, Pa., to consult with a lawyer as to his business
 interests. Already the news of an unsophisticated
 country boy having fallen heir to a large fortune had
 preceded him. He desired to find out what forms, if
 any, were necessary that his interests might be pro-
 tected, as well as the interests of the oil men who leas-
 ed various portions of the farm. The lawyer advised
 him to allow the leases to run on as they had been do-
 ing, and that when he became of age he could ratify
 them. It didn't take the lawyer 30 minutes to give
 him this advice and for which he charged Johnny
 Steele \$500. He paid the money, however, without ob-
 jection, as he reflected that at that time no one in the
 oil regions was transacting business to benefit his
 health. That 500 was the first peel off the roll of
 \$24,500 found in the safe. He left Franklin and went
 back to his farm and attended strictly to his business,
 collecting his royalties and otherwise employing his
 time, and not in the slightest dreaming of the giddy
 whirl into which he was doomed soon to plunge. He
 always loved a good horse, and as soon as he got full
 possession of the property he satisfied his craving for
 a good horse. With the purchase of his first team of
 real good horses began that long line of misfortunes
 which finally landed him high and dry as a wreck
 upon the reefs of adversity. A devil always creeps

into a man's life in some way or other. The first Satan that crawled into his garden got there because of that pair of horses and the pestiferous devils caused him no end of trouble. One day he met a man by the name of Daniel Fowler, who hailed from Meadville, Pennsylvania, and whose occupation was the selling of barrels to oil producers, as agent for a cooperage establishment. In his hearing Johnny expressed his desire to purchase a good team and he ventured the information that he knew where he could get one, that the horses were owned by a gentleman named Barton, who resided in Crawford county, not far from Meadville. Johnny went there and purchased the team. This was his second dip from the money box, and it was the only one that proved a profitable investment. He finally sold the team for more than he paid for it, the selling price being \$1,000. In other respects, however, this visit to Meadville did not result so fortunately, and in many ways proved in the end to be more expensive than any he ever made. A country boy coming into possession of a fortune, which by hearsay, at any rate, grew to enormous proportions, with a probable income for the future which would prove much greater, he soon became known for quite a distance from his home, and each and every day he received invitations to visit newly made friends, among them came one from Daniel Fowler, the fellow who had engineered the horse deal. He was a plausible fellow of excellent address and a good entertainer, and Johnny at once accepted the invitation and went to Meadville to visit him. On arriving at the Fowler home he was introduced as one of the greatest and sharpest financiers on earth, and he was entertained better and with more consideration than he had ever known before, and one of those specially invited guests with whom Mr. Fowler made him acquainted was Mr. Horace Cullom. He had not been talking to Mr. Cullom many minutes before he made him a business proposition, the substance of which was that he proposed to erect a business block on a lot which he owned situated at the corner of Chestnut and Water streets, and he desired him to take a half interest. The inducements which he held out were so enticing that Johnny was not long in making up his mind to accept them, and he agreed to pay \$45,000 for his share. Articles to this effect were duly drawn up, presumably by Mr. Cullom himself. Johnny Steele agreed to pay \$5,000 down and \$5,000 a month thereafter until the total was all paid in. Mr. Cullom was to superintend the putting up of the building and all Johnny Steele had to do was to put up his share of the money. In view of what later occurred it is proper to state here that either directly or through his agent he kept up these payments, and has in his possession at the present time a receipt for the whole amount he paid. We will now give the remainder of John W. Steele's history as he himself gives it.

In the course of the conversation which resulted in the building transaction, Mr. Cullom mentioned that he was the owner of a fine residence property, situated as I remember, at the corner of Crab alley and Chestnut street, in Meadville, and as I had been so willing to invest in the business block, he said he thought that possibly I would be willing to purchase the house and

lot. This led me to visit the premises in his company, with the result that I purchased it for \$10,000. At the same time I bought the Barton farm, where I had purchased the horses, for the sum of \$7,000.

I knew as much about real estate as a pig knows about the dead languages, and afterwards discovered that I had granted a favor of considerable proportions instead of having been the recipient of one.

Mrs. McClintock died in March and the Meadville transactions occurred in the following May.

My Meadville friends still insisted on granting me favors, and Fowler having flattered me into a partial belief that I was the greatest and sharpest financier of my time, shortly after the date of the foregoing transactions I was induced to purchase several choice building lots, for which I laid down the snug sum of fifty-five hundred dollars.

My wife was in extremely poor health at this time, and had been for some months. I called in a young physician from Meadville to diagnose her case, a doctor whom I had met on my visits to that place. His advice was that a change of scene would be beneficial to Mrs. Steele's health. For this advice he did not charge me anything, for which I was very grateful. However, later he confided to me the desire to borrow six hundred dollars in order to take a further course in medicine, and I loaned it to him. He has it yet. At least he never returned it to me; and I have an impression that I paid pretty dearly for professional advice at that time, both to lawyers and doctors. The advice of the doctor, however, proved to be the most expensive in the long run, as it led me to Philadelphia, where, before I left, I disposed of a goodly sum of the coin of the realm in various ways. But I have always hoped that the "pill mechanic" finished his education and lived happily ever after.

The events here related, in connection with what occurred later, will show that I was gradually getting into a position from which I was to emerge eventually not only as a lamb shorn, but very greatly disfigured.

Following the advice of the good Samaritan "who took me in," I made arrangements to take my wife and boy to Philadelphia, hoping they would be benefited by the change of scene and climate. My father-in-law had been a merchant in the Quaker City before moving to Venango county, and we had many friends and relatives in the city. So I hired an agent by the name of John Williams to look after my interests while I would be away, leaving instructions for him to report to me regularly as to business at the farm. This was in the latter part of May, 1864. However, before starting for Philadelphia, the famous Hammond well came in. It was located on the flat portion of the farm, down close to the creek. It flowed at the rate of 300 barrels a day, and proved the center of much interest and excitement. The income from this source promised to swell my income to no inconsiderable extent, and I jumped into greater "prominence" than ever as one of the lucky "oil kings" of the time. Special dispatches, greatly exaggerated, were sent out regarding this new strike.

No fortune ever comes easier to a man than the income from royalties on oil. In the first place, there is practically nothing to lose financially, the entire risk being assumed by the producer, and if a lucky strike be made, the money from the royalty comes so fast as to leave one in a kind of a trance. With me it was surely a case of "come easy, go easy." All I had to do at this time was to loaf around, smoke good cigars and watch my bank roll swell. Yet while it was all I was compelled to do, it was not all that I did. So much wealth bothered me, and I was itching with a desire, which I guess had always lain dormant in me, to get rid of it. The opportunity to do so arrived, and I took advantage of it.

Also about this time the Lone Star well was struck, which was a good one. At this period, too, I became acquainted with Mr. William H. Wickham, of New York city, afterwards mayor of that famous metropolis, I believe, and who at this time, like thousands of others was in the oil regions seeking investment. He was a member of the firm of Wickham & Jones, and when the Hammond well was struck he offered to purchase my one-eighth royalty right in the lease for \$100,000. After some thought I agreed to accept his proposition, and one Saturday afternoon the bargain was verbally completed. It being late in the day, however, it was agreed that he should come to my place on the following Monday, when articles would be signed and I should receive the money.

But, alas! My fondest hopes were shattered, and fortune frowned where I expected to be favored with a smile. On Sunday the well stopped flowing, it having been flooded out by water on account of the pulling of the tubing from a couple of wells across the creek from it. I stood and gazed at the well, and realized that one-hundred thousand dollars had slipped through my fingers without the slightest trouble, and I felt worse about this than if some masked robber had held me and taken it from me forcibly. For the first time I realized how it felt to have my hand upon a fortune and then lose it, and for the first time I appreciated the feelings of one who had staked a fortune upon the turn of a card and lost.

However, in the present case the malefactor was nature, and while in later life I learned the uselessness of filing objections to her decrees, I was not so wise at this time, and some of my kicks were of the forcible variety.

But through the dark cloud of misfortune and disappointment I suddenly caught some glimmer of hope. I had not agreed to part with my interest in the Hammond well on the ground that it was a flowing well, and this presented to me a chance of which I tried to take advantage. As I have said, our agreement of Saturday had not been reduced to writing, and I figured that if I could get down to Oil City and have the papers drawn up and signed before Wickham started for the farm, all would be well, and my conscience would be clear. Of course, there was a probability that he would ask me if the well was still flowing, but I would not be able to tell for sure, as it might start up again during the night, and I would not visit the well before leaving for Oil City Monday morning.

It was early on that day when my agent, Williams, and myself hitched the fastest horse in the barn to a light buggy and started on a race down the creek for a hundred thousand dollar stake. Never did I take a trip in which I was so much interested. The horse ran most of the way, the mud was scattered promiscuously, and through the early dawn of that Monday morning inquiring faces peeped out at us from the windows of houses and from derrick doors. To get to Oil City before Wickham left was my one aim and purpose, and every other idea was banished from my head as we tore madly down the road.

It happened, however, that Wickham was also an early riser, for we met him just on the outskirts of the place. My heart was down in my boots, and I reasoned correctly that the "jig was up." Vainly I argued that he had better turn back, as I was going to Oil City on business, and while there we could draw up the papers and complete the deal. Whether he observed any traces of anxiety in my voice or face, I do not know, but I do recall distinctly that he said, "No, let's go up and take a look at the well first."

The blow was struck right there, all thoughts of the fortune vanished suddenly, and with sadness I turned my horse around and remarked with all the steadiness I could master, "All right, I'll go back with you."

I went back. I never let him know that I was trying to take advantage of a little oversight in language to sell my interest in the well. In fact, I told him I was pleased to discover that the well had stopped flowing, before he turned over the money, and he did not know how happy it had made me that he had insisted on going to the lease before completing the agreement. Yet I must confess, happy as I was, I have had far happier moments in my life. Of course, the agreement was called off, and I compromised with my conscience as cheerfully as possible by writing one hundred thousand dollars in the column of losses.

The newspapers printed a report to the effect that I received \$200,000 for my interest in the well, which, in view of what actually occurred, was slightly misleading. However, it assisted in making my burdens heavier, as many hundreds of people, believing I was animated with a sincere desire to part from my money, offered their services as separators, and I received enough proposals of marriage to have caused the most pronounced Mormon to drop dead from joy. The current report that the Hammond well flowed 600 barrels a day was also wrong, but nearer the truth than the statement that I sold my interest in it.

In spite of the unsatisfactory outcome of the Hammond well transaction Mr. Wickham remained in the neighborhood and paid me an occasional visit. He informed me he was anticipating a trip to New York, and as this was about the time I intended leaving for Philadelphia with my family, he gave me a very pressing invitation to accompany him to his home. This I accepted, and arranged that my people should follow me in a couple of days, when I would proceed with them to Philadelphia. Wickham seemed to take a great interest in me; in fact, I thought treated me better than I deserved. Retaining a vivid recollection of the Hammond well incident, I would have taken it as more appropriate if he had refused to consider

that I was on earth. But later I came to a better understanding of his motives.

I went to New York with him, smoked his Havana cigars, played billiards with him, drank his good wines and feasted sumptuously. The sights of the city interested me. Unlike my trip to Pittsburg, I did not ride on the street cars, but in a stylish carriage driven by a coachman; and considered myself "It." Wickham introduced me to his friends as a smart young man and a great financier, but I could not guess the meaning unless he had reference to the team of horses which I had bought for \$600 and sold for \$1,000. I was so well pleased with this visit that my mind was made up to see more of the doings of large cities, and I did. I was beginning to see the world outside of the narrow surroundings of my previous life, and it was a world which attracted me more and more.

My family joined me in New York and we proceeded to Philadelphia. This was in June, 1864. Leaving my people with their friends in the Quaker City, I returned to the oil regions to see how matters were progressing. And it was on this trip to the Oil Creek farm that I discovered Seth R. Slocum.

This man Slocum was a man of the world, without all the refinements that sometimes go with such a character. His home was in Erie, Pa., and he belonged to a most excellent family. There was nothing in his face or bearing to attract any one, but he possessed a smooth tongue and an insidious manner, which enabled him to easily win the confidence of one as gullible as myself. The faculty of winning one's good will is a commendable one if rightly used, but is dangerous if it is not, and, as Slocum never showed any evidences to me of having a conscience, and as I became his willing follower, the result can be guessed.

I have seen people on the stage perform antics when under the control of hypnotic performers that they would not have performed for any inducement had they been in possession of their own will. And certain it is that under the spell of Slocum's influence I cut capers without the slightest protest or murmur that I would never have thought of had I been left to my own sweet self.

I found Slocum at the farm when I arrived there from Philadelphia, and he informed me that he was in search of work. In this way our acquaintance began. The conversation led from one topic to another, and his ready tongue and patronizing manner, which so often prove attractive to those not experienced in the ways of the world, allayed any suspicion I might have had and captured my imagination completely. In fact, I was not long in reaching the conclusion that Slocum was the best friend I had on earth, one who was solely animated with a desire for my welfare and happiness.

Therefore, when he volunteered to go to Philadelphia with me and "show me the town," at my expense, I considered he was doing me a great favor, and accepted his offer with pleasure, and agreed to pay the bills if he would perform his part of the agreement

properly. I kept my agreement so far as I could, but Slocum's habits seemed to expand with age, as did my own, and when we were at the zenith of our career it kept a good healthy income busy to stay anywhere near us. Slocum kept his part of the bargain faithfully; in fact, I sometimes thought he went farther than he had agreed to do.

Arriving at the Quaker City with my newly formed acquaintance, I stowed him away temporarily at the Girard House and went to visit my family. I found the house in which they were stopping quarantined, and learned that my little boy was ill with the small-pox. Not being permitted to see him, I returned to the hotel and took up my quarters there, not feeling very cheerful over the dangerous illness of my son. However, in a few days he was reported out of danger, and having received news concerning my agent at the farm which seemed to justify a visit there, I started back and took Slocum along. He went with me because he volunteered to accompany me, and would not listen to a refusal. He had possibly already found out that I was a "good thing" and did not wish to lose me. I installed a new agent at the farm, by the name of William Blackstone, and Slocum and I returned to Philadelphia. Then in October I took my people back to the farm. It was on this trip to the old place that I saw Wickham after our New York visit, and he agreed to purchase the farm outright for \$1,000,000. This I refused, and returned to Philadelphia and rejoined Slocum. However, Wickham sought me out in Philadelphia and renewed his offer for the property, but I again refused him; but after much bargaining it was agreed that I would dispose of the farm to him for \$1,200,000. Of this amount he paid me \$30,000 spot cash, which was to represent the rental of the farm at the rate of \$5,000 a month for six months, and if at the end of said period I could make a clear deed to him, the \$30,000 was to be considered as a part of the purchase price, and the balance of the \$1,200,000 to be turned over to me.

Some time previous to the making of this bargain Hamilton McClintock, a brother of Culbertson McClintock, my benefactor, had secured a lease on the farm which I had not ratified, and he brought suit for the purpose of breaking the will of Culbertson McClintock, by the provisions of which I had come into possession of the farm at Mrs. McClintock's death. Therefore, this suit at that time stood in the way of making a clear title, and it was necessary for me to wait until the litigation had been disposed of. In the meantime Wickham took the farm on the terms agreed, put his agent upon it, and operated it for his own benefit. It was also agreed that if at the end of the six-month period I could not give a deed the \$30,000 was to be considered only as so much rental, and the farm was to come back to me. Otherwise, the balance of the money was to be paid to me by Wickham.

Therefore, all I could do was to wait. I was temporarily out of the oil business, and with \$30,000 in my pocket and with Slocum at my side, I started out on a little "painting trip," all the time harboring pleasant anticipations of the greater amount of money to

come in the future, beside of which the sum then in my possession was a mere bagatelle. The "beyond" looked rosy, and therefore Slocum and I in our enthusiasm began to sprinkle a little red throughout the possibly at times sober precincts of Philadelphia. The money I had received from Wickham was deposited in the safe at the Girard House, in a private box generously (?) loaned to me by the proprietor. Having known of several disastrous results from depositing money in banks, I considered this a safe place for my wealth, as I carried the key. I never deposited any money in a bank in Philadelphia, reports to the contrary notwithstanding.

As my transaction with Wickham occurred at the Girard House, it became known through generous advertising. On account of my youthful appearance I was stared at with a good deal of curiosity as the lucky possessor of millions, and I held regular receptions for those whose bank accounts were in a chronic state of depression. Chances came to me to purchase all kinds of property, to invest in all kinds of schemes, perpetual motion, and the like, and every one seemed willing to unload upon me every "flash" company in creation, some of them doubtless gotten up for my especial benefit; some of them so transparently crooked that I could see through them even when I was in a condition that would not have permitted me to walk a rope across Niagara. But I brushed all these offers to one side, and reached the conclusion to spend my money as best suited my taste and inclination.

It was at this time that I performed one of the greatest strokes of business of my career. It will give the reader of these pages an idea of the kind of a Napoleon of finance I was, and therefore I mention it. The stroke was this: I gave to Slocum a power of attorney so comprehensive and generous that he could handle all my money, draw upon my "bank" account and run bills in my name. I will do him credit by saying that, to the best of my knowledge he never failed to carry out every one of the conditions of that power of attorney to the fullest extent. He exhibited the most untiring industry in that direction, and I could have given him a letter of recommendation to that effect at any time. He always spent money when he had it to spend, or when he did not, and became expert in disposing of promises with great facility.

Slocum had an idea that in order to do things right, we should make the proper kind of a start. He argued that to see a couple of young millionaires walking around in ordinary clothing had a depressing effect on the spectators, and that we should have something more striking and that better befitted our station in life.

Under his guidance we went to a tailor shop. We looked at the different patterns and grades of cloth presented for our inspection, some of which I thought pretty good, and I saw a number of patterns that would have suited me. But Slocum had his ideas up that day. After showing almost everything in the store the tailor finally came to a piece of goods of a style that I considered would have looked well in a horse blanket for a blind horse. I thought, and do yet, that the tailor pulled out that piece of goods by

mistake, or else showed it to us in order to scare us out of the store. But the pattern caught Slocum's eye, and he gave an order for two suits to be made from it, one for him and one for myself, to be constructed exactly alike. I told him that if we went out with a pattern like that we would be arrested for disturbing the peace of the city. But my partner was insistent and the goods were purchased.

I shall never forget the pleasant afternoon when we sallied forth in our newly constructed suits. In addition we sported "stove-pipe" hats, carried gold-headed canes, and wore diamond pins in our neckties. Surely Solomon in all his glory was not fixed up like either one of us. As we stepped out on the street Slocum was smiling and confident, while I was trembling and afraid. The street seemed to take on a new appearance when we struck it, as people all turned and looked back or followed us, and soon most all the traffic was going our way. On the corner of the street a block or two above the hotel a policeman was standing or was doing so until he saw us. Then he came towards us and stopped in front of us, and when he informed us that we would have to go to the police station with him I was temporarily paralyzed. As soon as I could regain my equilibrium sufficiently to talk, my first words were to Slocum, and I reminded him of what I had said, that if we appeared in that doggasted attire some doggasted cop would run us in. Slocum said nothing, but all the way to the police station he looked as crestfallen as a boy who has been discovered in the act of stealing jam. We were two surprised looking lambs as we stood facing the judge.

"Where did you get these fellows, officer?" inquired that personage.

"Sure, I picked 'em up down the strate," replied the minion of the law.

"What's the charge?"

"Bounty jumpin,' yer honor."

"Did any one tell you to arrest them?"

"No, sir. I arrested them on their looks, and if them burruuds aint bounty jumpers, what be they?"

We assured the magistrate that we were two innocent young men from the oil regions, who had been in town but a short time, and had never received any bounty to jump; that while we did not exactly know what kind of a bird a bounty jumper was, no doubt the policeman had selected us because of our plumage; and if we could be let off we would never do it again, whatever it was that we had done.

The judge took in the humor of the situation and discharged us. I "cussed" Slocum all the way to his room and when we got there made him change his clothes. Then we ordered up drinks, celebrated our escape from the clutches of the law and closed the wide chasm of disagreement.

As I have stated, the transaction with Wickham occurred at the Girard House, and it attracted much attention. Rumor followed rumor as to the amount involved, and it soon became an accepted belief that I

had received a fortune amounting to at least a million of dollars: As a consequence my credit became unbounded, as did the notoriety which arose out of the affair. I became the cynosure of a thousand curious eyes as the formerly poor boy who had suddenly become possessed of riches which a prince might envy; and I started on a course of living which can be accurately described as "fast." Many foolish things were attributed to me, of course, of which I was never guilty, but I was at best leading a life which rendered many of the untrue surmises justifiable. Many of Slocum's escapades were charged to my account, but we were so much together that this could not be considered strange, and certainly his foolish actions were backed up by my money and credit. Therefore, I cannot wholly blame those faraway critics, who through the magnifying of rumors, attributed outlandish actions to me as a spendthrift "oil prince" of mushroom growth. The flattery of pretended friends and the misrepresentations of the newspaper press were not objected to by me so strenuously as in later years. In a kind of way I enjoyed the "jollying" extended to me even by those who were engaged upon a "leg-pulling" expedition. In the dazzle and glitter which surrounded us Slocum fairly swam, and acted like a man who had been accustomed to such things all his life, conducted himself like a spoiled and pampered son of riches, and spent my money as freely as any one could have spent it. The finest of clothes adorned our persons, diamond pins sparkled from our neckties, diamond rings glittered on our fingers, expensive gold chains encircled our necks and were attached to the most expensive gold watches. Similar articles were bestowed upon our friends. But these were mostly presented by Slocum, whose generosity was not even bounded by the size of my money roll.

Other misguided beings from the oil regions of Pennsylvania were scattered about the country, doing foolish things, any many of their performances were afterwards credited to us. But as I had played the fool in so many directions, it was not strange that this was so, as possibly I was the "king bee" of the oil region spendthrifts. I was not considered an "absorber" of wealth, but a "distributor," in the language of recent financial arguments. I sized up pretty well with the best, but have never been guilty of one-quarter of the foolish transactions that have been charged to my account; in fact, could not have mixed up in so many all at once. However, as it was, I did fairly well. While the original role of "Coal Oil Johnny" was played by me, to have acted it in all the comedies and possible tragedies in which that was the star part would have required me to project myself into a dozen or more places at the same time. It may be as well to state that at this writing I am alive, in spite of the fact that I have been killed several times. While I circulated at a pretty lively gait, and largely in my own particular orbit, still I was only one. My nickname seemed to have been catching, and was conjured with by writers whose fanciful imaginations overbalanced their regard for facts. But the ball was set rolling, and it gathered all kinds of "Coal Oil Johnny" moss.

The first time I ever heard the name was one day in Philadelphia, and it was applied to me by a dirty faced

street gamin, who possibly never realized for how much he has been responsible. Three friends and myself were being driven back from the races to our hotel. Not having had a drink since we left the track, we were overtaken by a consuming thirst, and were urging the driver to do his best to get us to the hotel in order to save our lives. The rapid beat of the hoofs upon the pavement, and the rattle of the carriage, attracted the attention of those unfortunate ones who were compelled to walk. Seeing our carriage filled with four sporty looking individuals wearing high hats and diamond bedecked apparel, it was but natural that some one's curiosity should be aroused to the extent of asking who we were. Turning a corner slowly I heard some one ask, "Isn't that the coal oil crowd?" and an insignificant urchin piped up, "Yep, that's Coal Oil Johnny and his gang." The other occupants of our carriage also caught the remark. It seemed to please them, for they adopted it there and then, and fastened the term upon me for good. In this way was started a name that has stuck to me closer than a brother, and was destined to be bandied about wherever the English language was spoken.

Outside of our personal appearance on this occasion of my christening, doubtless our carriage attracted attention and in planning the vehicle Slocum and I determined that it should. In the first place we felt the need of a carriage of some kind, for, on many accounts, it was not always convenient to walk. On concluding to have one of our own we resolved it should possess some distinctive feature that would mark it from the usual run of stylish turnouts, and compel people to recognize it at a glance as our own particular property.

I had read somewhere that it was the custom of people to display a coat of arms to mark the distinguishing achievements and occupations of their family. Therefore, I concluded to try something of this kind myself. My idea was not so much to boast of any achievements of former generations as to show off my own business and attainments. So Slocum and I put our heads together and decided the best thing in this line to be done was to have painted on the doors of our vehicle the picture of an oil derrick, an oil tank and a flowing well. We found a painter who knew how to mix colors and put in the proper amount of red. The carriage had cost me \$1,600. We had been painting everything else red, and we did not wish to take any chances with somber colors. The artist adorned the doors to our liking. When we saw the result of his work we could hardly wait for the paint to dry. But finally when, with our new team of horses, we were at last driven forth, with instructions to the driver to go slow, the sensation created was only equaled by our gratification that we had made the hit of the hour. The only experience we had had which equaled it was when we appeared in those flashy suits. But this time we escaped arrest. How it happened we never knew. In our new outfit we shone for all there was in it, and we did not care who knew it, as we were prouder of that carriage and its coat of arms than Barnum ever was of a car load of monkeys. I felt better than any old king ever did in his chariot. The only regret was that the folks up home could not see me, and I wished that some of the boys from the oil regions could come down

so that I could give them a ride. In my time I have seen many carriages, but to my mind they were all commonplace in comparison to the one owned by me. It was the only one of the kind, when the coat of arms was included, in the Quaker City at that time. It has never been duplicated, and I do not know how it could be.

We hired a man to care for our horses and our carriage for a stated amount, I forget the sum; but it was large enough, no doubt. The driver was a willing fellow, at any rate, and devoted himself entirely to us and our interests; and we often felt sore need of that devotion. His working hours were irregular, but mainly during the night and 'way long in the A. M.'s. He knew how to handle men as well as horses, for he was often compelled to handle us, and his responsibility often became great along toward the wee small hours. Our carriage was a familiar sight "down the line," and wherever it was, it was a safe guess that we were in it, or at least not far away.

Given an inexperienced young fellow with a good sized bank account and a willing and earnest desire to see the world, and include in this combination a thirst for liquor, and fasten on to this same fellow companions who are consumed with a desire to further his ambitions along the lines indicated, and you have a result that has thrown many an older head than I had at that time off the track. So, of course, I did many foolish things, some of which I look back to today with regret, and I presume I performed many outlandish tricks which I do not now remember, because of their being acted at times when John Barleycorn held me in an "extra loving grip."

I do recall distinctly, however, that one of our principal amusements was theatre going. The play house possessed attractions which I could not resist, and I became very familiar with life therein. It was to me a new world, and naturally possessed attractions for one who never until going to the city had seen anything more pretentious than a district school exhibition or a Punch and Judy show.

I was to be found many nights with my friends occupying a box at Fox's Casino, a famous resort of its kind, conducted on Bohemian principles, where a man was not obliged to crawl over a crowd to procure liquid refreshments, and where we could enjoy our fragrant Havanas while we sat and watched the gyrations of the ballet girls. Of course, such a resort appealed strongly to our temperaments and we frequented it more than any of the others then to be found in Philadelphia.

Carncross & Dixie's minstrels had quite a run in Philadelphia at this time, and I always enjoyed listening to the comical sayings of Dixie and Simmons, spurred on by Carncross, one of the finest of interlocutors. I became well acquainted with Dixie, who associated somewhat with our crowd, and I recall him as a jolly, good natured little fellow, and a great favorite with every one. But of this aggregation I came to know Lew Simmons best of all, and liked him for his unceas-

ing jollity, exhibited in private as well as in public. The memory of my friendship with him is more closely treasured by me than any which I formed during this giddy and delirious period.

One of our favorite means of recreation during the daytime was a drive in our famous carriage through Fairmount park, where we vied in conspicuousness with the elite of the city; in fact, attracted more attention than the most of them. Our faces were familiar at many of the road houses surrounding Philadelphia at that time, where we distributed liberal patronage. Generally after these drives we would wind up at the Girard House in the evening in a "highly seasoned" condition. Naturally, at this time memory of places and dates is somewhat dimmed, and would be, even if I had at that time kept my vision entirely clear, but as it was considerably blurred by alcoholic methods, it is not surprising that I do not retain anything more than a faint recollection, extending in many instances not beyond the fact that Philadelphia was on the map, and I was mixed up in it somewhere.

I have often regretted that I did not keep a record of places, occurrences and dates, but the thought never entered my mind that I was making any kind of history, and, anyway, I was too busy to attend to it. Never did I for a moment realize that I was achieving a notoriety that some day would be widespread, and that my name would be one to be conjured with by special writers and paragraphers for a generation. But one of my chief regrets at overlooking the importance of such a record is that I have forgotten the name of the house and its proprietor where the specialty on the bill of fare was the prosaic sounding dish of "catfish and waffles." I recall that it was a road house somewhere in the vicinity of Philadelphia, and on an average of once a week we would visit it and regale our appetites with these delectable viands. It is providential that time dims the vision to many things of the past, but today I would thank my stars if I could publicly pay tribute to the name of the man who served catfish and waffles as the leading feature of his bill of fare. I ate them until I broke out with a rash, gorged myself near to bursting and never grew tired of the diet. Syrup I had long ago given the goby, and I did not regain my youthful liking for it, but I never grew weary of the fish and waffle mixture. These feasts stand out in glaring spots on the memory of that hazy and delirious period. The catfish is the most delicious morsel that swims our waters, not much to look at, perhaps, but in the hands of the caterer he becomes a thing of beauty and a joy forever.

A Philadelphian who attached himself to our crowd at this time, through an acquaintanceship he had formed with Slocum, was George Brotherton, who, besides being one of the handsomest and most stylishly dressmen I had ever known, was an expert and nervy wooer of fortune with cards. In fact, he was an adept at every game of chance played in America at that day. Possessing a pleasing manner and the bearing of a gentleman, I became attracted to him and liked him first rate. In every sense of the word he was a better fellow than Slocum and filled with more manly instincts, in spite of the calling to which he claimed alle-

giance. It takes a bright man to become even fairly successful as a gambler, and Brotherton had a knowledge of men and the ways of the world which would have brought him success in life had he chosen a legitimate occupation. He was a partner, although largely a silent one, in an all night saloon in Philadelphia which drove a thriving trade in wet goods, and to which place we often resorted to slake our ever-recurring thirst, especially when our finances became temporarily depressed, for there our names would accommodateably be written down "upon the slate." Brotherton made a great deal of money by gambling, but spent it just as freely, and as a result of such a condition was often in a state of financial collapse. Consequently he knew how to sympathize with others who would occasionally go broke and come to their assistance when in his power to do so.

I recall that at one time I was walking with him along the street he mentioned the fact that there was a first rate faro game being dealt in rooms near by and he confided to me that he felt an inward "hunch" that he could play to win, but that unfortunately he was temporarily out of funds. At that particular moment I was in straits for the long green myself, but glancing across the street and seeing a pawnshop, I went over and put up my gold watch for \$20, the amount Brotherton said he needed. I handed the money to him and together we went to the rooms, he to play and I to watch the game. Fortune did not smile upon the player till he was reduced to the last dollar of the twenty. But with that dollar the "hunch" seemed to get in its work, for Brotherton called the last turn on the deal, and received four for one. He then began to win steadily, more rapidly than he had lost, and in half an hour from the turning point he quit the game a thousand dollars to the good. The watch was relieved from its imprisonment, restored to my pocket, and we went out to spend the winnings, which we succeeded in doing in the most approved style.

The loud, rowdy and spendthrift ways of my erstwhile self-appointed guardian and authorized agent were well known, and coupled with outlandish reports of great wealth which had come to me, jewelers, tailors and other dealers were led to send in bills many times larger than they actually should have been, and once seeing them paid without protest the next time would add a little more commission. In this manner much money was foolishly paid out, which, had I used ordinary business caution and placed less faith in Slocum, would have been saved.

Ours was a riotous, feverish life, with scarcely a sober moment, and to a large extent we knew not what we did, and did not seem to care. The fool killer favored us by remaining religiously away at this particular period, and diamonds bedecked the persons of those who would not have been so favored had we not been allowed to live.

No one was allowed by Slocum to approach me whom he thought could possibly render me such service as would imperil the good time he was having at my expense. No one borrowed money from me at this time unless it happened to be a friend of his; and the crowd which surrounded me consisted largely of

actors, men about town, so-called, gamblers and young fellows whose only occupation seemed to be to spend the money left them by some saving and economical ancestor. There were also adventurers hanging around, who looked upon me at all times as a lamb well worth shearing. Every one who stopped at the Girard House tried to get a glimpse of me, and it sometimes seemed a slice of my roll, and I was pointed out to the curious as the "oil prince" who was creating the sensation of the hour in his own peculiar way. At first I shrank from this curiosity, but afterwards got so I did not care, and with a cigar in my mouth, with diamonds sparkling on my shirt front and on my fingers I would march up and down the corridors, the cynosure of admiring eyes. The help of the hotel would jump at my word, for I was always lavish with my tips for the most trivial service. Therefore, by outward appearance, at least, I fully justified many of the inferences drawn of me at that time. Never had I known before what it was to be surrounded by a crowd of flatterers and I was not sufficiently acute to detect the reason or to pick out the sycophants. Consequently I was placed upon a pedestal and worshipped for what there was in it, and in return for flattering praises spent my money freely upon my admirers.

As I have stated, I drank a great deal. Whiskey more strongly appealed to my appetite than any other liquor, and finding this appetite harder to appease as time went on, I contributed largely towards the revenues of the government. Money went freely through my hands, still more freely through Slocum's, and in that brief six months of delirium in Philadelphia and other cities, I lived longer than in all the balance of my time on earth.

Occasionally some old friend from the oil country would visit me, when I would consider it my bounden duty to extend to him the kind of hospitality for which I was becoming celebrated. What such a one told when he got home I do not know, but if he told the truth, tales were related at oil country firesides such as were never listened to before.

What is the gait of Philadelphia today among the class of people with whom we associated I do not know, but at that time they stayed out later at night and traveled swifter than the Quakers, and their manners were such as would have blackballed them for admission into the Society of Friends. The city, as were many other cities at that time, was filled with strangers owing to the great war then being waged. Palaces of sin were in full blast and in many quarters the clinking of glasses, the maudlin songs, the shrieks of siren and masculine laughter could be heard throughout the night.

Gambling resorts were numerous, where unwary lambs were parted from their fleece; but I did not part with mine by this method. Certain writers have stated that I lost thousands of dollars by the turn of a card, while the truth is I never played for money in my life. However, my chances for doing so were unlimited. I consorted with gamblers to some extent, and frequented gambling rooms; but while urgent invitations were extended to me to woo fickle fortune in this manner, I refused to do so, arguing that I preferred

to spend my money in a way which would be more productive of enjoyment to a man of my tastes. I have often regretted that my refusal did not extend to other invitations, the acceptance of which proved detrimental and contributed to my final undoing.

However, it might be stated that I spent enough money at the Girard House, or was charged with having spent enough to have purchased a controlling interest in a first class hotel. When leaving there the proprietor presented me with a bill for myself and Slocum of \$19,000. Considering the fact that I paid him large amounts at various times, I naturally wondered how it could be so large. Yet, assuming it to be correct, I figured that our bill at this one house alone for the six months in Philadelphia exceeded \$25,000. This speaks louder of our career in the Quaker City than anything else I can mention.

The only "time" I ever had at the Continental Hotel was in that part reserved for the dispensing of liquid refreshments. As has been noticed by every one, intoxication develops strange characteristics in individuals. A surly man will be changed into the most genial soul in the world, while the man who in sober life is the incarnation of geniality will be converted into the most offensive belligerent, and want to fight everybody he meets. Some, with no music in their souls, will break out in song and the clumsiest will insist on tripping the light fantastic toe. When I reached a certain stage my nature took on the hat smashing mania, and I tried or wanted to smash every high hat that came to my notice. One night I was with a party of friends at the Continental bar. It happened that we all wore high hats, and it also happened that while we were drinking and swearing eternal fealty my mania asserted itself. Seizing a cane I rapped the hat of the fellow next to me down over his eyes. This seemed so funny that I jammed the hat of another fellow so hard that it completely covered his face, and he was pulled out with considerable trouble. By this time all of the crowd entered into the spirit of the thing. One of them struck at my hat, and thinking to fool him I removed it just in time to catch his cane on my head in the most emphatic manner. For some reason or other the crowd seemed to think the joke was on me. When we had finished we possessed a collection of the most dilapidated looking dicers ever seen, and resembled a group of shabby genteel wrecks. But we stayed in the bar until it was reported dry. The next day I purchased a new \$8 hat for each one of the crowd. The foregoing escapade, of course, attracted attention, and possibly from it originated the Ananias story of the purchase of the hotel. I only purchased the liquor. It reminds me of the little line reading, "Tall aches from little toe-corns grow."

So many demands were made upon me for loans of money from all sections of the country, both personally and by mail that I soon became hardened to them, and refused all applicants point blank, except in the case of a few personal friends, who sought temporary loans. To the latter I always responded favorably when I could, but in many instances I found my confidence misplaced. To have responded to all my mail would have required a large force of clerks. When any one came in person for a loan I listened to their tale of

woe and acted according to the best judgment I happened to have with me at the time.

Among those who came to me with schemes which afforded me an opportunity to invest my money were Low Gaylord and M. T. Skiff (the boys called him "Empty" Skiff), minstrel men, who had been conducting an organization under the title of Skiff and Gaylord's minstrels, and which after running through a season of hard luck, had become stranded. They were filled with a desire to get once again upon their feet, and therefore the appeal to me for financial assistance.

To one who viewed the stage with the liking I did the proposition made by them proved attractive and appealed to me strongly. Consequently Slocum and I agreed to take a half interest, but as the former had no money which was not mine, half of the show really belonged to me. Skiff and Gaylord owned the costumes and other material that goes with a burnt cork aggregation, but money was required to reorganize and rehearse a company, and to put out new advertising. With the money I furnished wood cuts were purchased and bills printed which set forth in glaring letters and in flattering terms the merits of the show. One of the large posters had a picture of Slocum and myself in the upper left and right hand corners, respectively, while in the lower corners appeared the pictures of Skiff and Gaylord.

The company was soon organized, placed in rehearsal, the advance agent started out upon the road and the show moved up into New Jersey to win shekels and gather up a bunch of fame.

It was a good show, as many who saw it at the time will testify. Skiff was interlocutor, while Gaylord played the bones and Hughey Dougherty the tambo. At the present time I do not recall the names of all the performers who, including the band, numbered about 20 people, but among the crowd were Delehanty and Ward, a fine double clog team, and Joe Maires, the best female impersonator I ever saw. The leader of the band was a little Dutchman by the name of Buckholz, who was certainly an artist. But the great fun maker of the aggregation was Dougherty, who in his time has made thousands of people laugh at his original and irresistible humor. At this time he was a young man, just rising in his calling. He took to the business like a duck to water, and his constant comicalities off the stage were as amusing as those he sprung behind the footlights. His fun was of that spontaneous kind which made him appear to do and say the right thing at the right time, and he was very apt at hitting off popular fads and follies as they appeared. He was a good dancer, and one night, feeling in a particularly happy condition, he danced for 35 minutes, until he was dripping with perspiration and the orchestra had become exhausted. Whenever the musicians would show any inclination to stop, he would spur them on. The audience became uproarious and urged the contestants to further effort. Another of Dougherty's acts was a stump speech, the delivery of which always convulsed the hearers. He appeared dressed in the burlesque style of an old fashioned colored preacher, wearing a high hat of ancient mintage, a long coat and carrying a large umbrella. Each night the speech would be varied to suit local conditions or

national happenings and was as much enjoyed by his colleagues as by the audience. Walking up to the table in the center of the stage he would place his hat upon it, and as he proceeded with his remarks he would gradually work himself up to a state of feigned earnestness and excitement. Then he would raise his umbrella ostensibly to bring it down upon the table to emphasize his remarks, and miss the table, which miscalculation would appear to throw him off his balance and compel him to turn a complete somersault in order to regain his equilibrium. Excusing himself to the audience for his undignified action, he would proceed with his remarks, slowly at first, and then gradually work himself up to another pitch of excitement, when he would bring his umbrella down upon his hat with a violence sufficient to smash it flat. Picking it up he would look at the wreck so ludicrously that his audience would shriek with laughter; and although I saw him do this many times, it always drew a smile from me. Dougherty certainly was one of the smartest men in the business, and when I saw him last he was still maintaining his reputation for jollity, although an old man then.

Slocum and I did not appear in the performance, but confined our duties to the taking and selling of tickets, and marching with our partners at the head of the daily parade. As I marched to the stirring notes of the band, dressed in the regulation high hat, long coat and carrying a cane, while diamonds sparkled upon my necktie and upon my fingers, for the time being I was oblivious of everything else, and secretly thought I was one of the great moguls of the earth, whom ordinary mortals would be more than pleased to fall down and worship.

The aggregation started from the Quaker City in good style and spirits, and played up through New Jersey to good houses. Slocum and I stayed with them for a week, showed them a good time whenever opportunity presented, and opportunities were plentiful. It was a howling, whirling week. Our ordinary expenses were paid out of the funds which came from the treasury, and this was the only financial benefit we ever received from the venture. The extraordinary expenses, a much larger sum, I paid myself, and thought all the while I was having a jolly good time. However, we did not drink champagne, some accounts to the contrary notwithstanding. I began my "spiritual" education on whiskey, and when one becomes thoroughly addicted to that habit every other drink seems mild and tame in comparison.

So while the merry minstrel men went their happy way, my partner and myself besought once more the quiet precincts of Philadelphia.

While my partner and myself clung closely to our adopted city of Philadelphia, we frequently varied our life by a trip to adjoining towns. The cities of Washington, Baltimore, Cleveland and New York and many others were favored financially by visits from us, for in each of these places we strove to part from some of our "unearned increment." But we never stayed for any great length of time away from our Quaker City haunts. In that place we had friends, such as they were, and the people having become accustomed to our rough and rowdy ways, did not gaze at us

with the curiosity that met us at other places. Another evidence of fame that came to me at this time was a letter from a circus man, in which he held out glittering inducements to me to travel with his combination exhibit myself as a sort of freak. I treated the offer, however, with all the scorn I could muster and informed him that I was engaged in running a little show of my own, which in certain ways at least, was a complete and howling success. I had no desire to sit by the side of the fat lady or the tattooed man and be pointed out as the untamed rooster from the oil regions.

When Slocum and myself had carried out most of the foolish ideas which we had been able to conjure up, we cudged our brains for something new. We did not want to feel stale. Therefore in one of our fits of idocy we decided that two young men of our tendencies should branch out into the horse racing business. Slocum was the first to broach the idea, and I was so much elated over it that I invited him to a continuance performance at the bar. We decided that no common scrub would suffice for us; we must have a horse that would make all others resemble "30 cents" as he would trot down the home stretch; an animal that would make his owners famous wherever the trotting horse was known. And the race track, which had heretofore only recognized us as gay and festive spectators, should now look upon us as important factors in the racing annals of the country.

Therefore I started out to find an animal that would answer our expectations. As soon as people found out what I was after I was offered all kinds of bargains in the horse line, in the shape of "comers," "wasers," et cetera, but I informed every one that I was looking for an "iser." As I was in a condition that would as likely lead me to buy a saw-horse as a sure enough equine of flesh and blood, I was liable to be misled; but at last I found a horse that seemed to please my fancy. It had always been a sort of belief of mine that I could tell by looking at a horse's ears the kind of a disposition he possessed. But I must say that this animal upset all my notions of horse physiognomy completely. He had a sort of melting look which seemed to imply that he would do his best under all circumstances, in fact an animal that one could tie to. I afterwards found that this was true to the extent that anything that horse was tied to was perfectly safe. His was not a disturbing disposition. He was guaranteed sound of wind and limb, and this was true. He certainly had all the wind capacity which his speed called for.

We purchased him and placed him in the hands of a trainer out at the race track, to whom we afterwards referred to as "our trainer," and he grew an inch every time we did so. The horse was a pacer, but I have forgotten his name. I started out deliberately to do so after the first race.

Having placed him in the hands of "our trainer," Slocum and I visited the track at Point Breeze almost every day to see him go. We were all wrapped up in him. All by himself he could go, or seemed to go, faster than any horse we had ever seen. Therefore we entered him in races and lived in great anticipation of the events. In our minds we could see him come thundering down the track and covering us with fame

and his driver with mud at one and the same time. However, it came to pass that the horse could go fast enough by himself, but in the company of others he developed a shrinking disposition—shirking, Slocum called it. With other animals around he appeared exclusive and backward—way backward. He would retire within himself when most was expected of him. If the driver had been aware of this, he kept it to himself. From his standpoint it would have been poor finance for him to have given it away.

On the evening preceding the race we went out to take a final look at our pet; saw to it that he was properly blanketed and bandaged; and we drove home with pleasant anticipations for the morrow. Our driver was confident, the horse seemed so, and consequently so were we. We returned to the city, toasted the horse for several hours and retired to dream horse dreams.

On the afternoon of the race Slocum drove one of the horses which we owned to a road wagon, and I hitched the other one of the team to a sulky. I must have created a sensation. To see a fellow wearing a high hat, sitting in a sulky, smoking a cigar and driving along the street, must have been an edifying spectacle to those who witnessed it, a sort of reminder of the eternal fitness of things. But I wanted to appear sporty that day, and I was not at all disappointed with myself.

There was a large crowd at the track, and Slocum and I congratulated ourselves that so many had come out to see our horse. Slocum at first, in his enthusiasm suggested that we treat the whole crowd, but I finally compromised with him by asking him to take a drink with me. Our driver told us that he was confident the horse would make a record for himself—and he certainly did.

The time for "our race" arrived finally. As certain horses would appear, they would be cheered by their admirers. When our pet trotted out, or paced out, the crowd seemed stunned, for no sound was heard except the hip-hooray emitted by Slocum and myself, at which some of the crowd started and others laughed. I did not know why then.

But soon they were off, with our horse right up in the bunch as far as the quarter pole, at which place he seemed to withdraw from the bunch, or possibly, more properly speaking, the bunch left him. His old exclusive habit overcame him, and he showed his preference for going along by himself instead of in the company of third-raters. It would have pleased us better, however, if he had withdrawn from the bunch the other way, and gone ahead of it. But what could one expect, any way, from a strong minded horse, with such an individuality as he had? The more the driver urged, the haughtier he became, and the truth is, he was hustling to get inside the distance flag just as the band was getting ready to play "Hail to the Chief," or something else in honor of a third-rater that was about to push his nose under the wire. My partner and I, respecting the disposition shown by our horse, never entered him in another race.

Driving home from the races in those days was a thrilling and dangerous event, a sort of free-for-all contest between all kinds of horses, attached to all sorts of vehicles, and driven by all sorts of drivers, all spur-

red by an ambition to get ahead, even if they had to run their animals. Feeling somewhat disappointed with my track experience and somewhat exhilarated by the liquid consolation which I had absorbed, I resolved to beat that crowd up the road or die in the attempt. My horse seemed to catch my spirit, and for a time our efforts seemed crowned with success, but just at that time my sulky collided with another vehicle, and my expectations and myself took a drop. When I came to my senses a few moments later I was lying in the gutter, with my vision cast skyward, with the skin shy from one side of my face, and the horse and sulky missing. Also on arising I discovered that my left leg had become slightly warped, although I soon got it straightened out to its accustomed length. A leg that had been pulled as mine had could not, in the nature of things, stay warped very long by a little thing like a collision. I also dared to hope that some one had stolen the horse, for in that brief afternoon I had become disgusted with the whole equine family.

Gathering myself together I boarded a street car and set the passengers in consternation by my appearance. My stovepipe hat resembled an accordion, and I resembled one who had gotten the worst of it in a stabbing affray. When I got to the city I found the horse calmy waiting for me at the barn, the proprietor wondering where he had left me and one wheel of the sulky. Our racing animal afterwards did business for a street car company, which I always considered a good joke on that corporation.

The agreement with Mr. Wickham, by the terms of which he was to have the use of my farm for six months at a rental of \$30,000, which would apply as so much purchase money upon the sale of the farm to him for \$1,200,000 dollars, providing I could make a clear deed of the land at the end of the rental period, went into effect about January 1, 1865. That is, under the foregoing arrangement he assumed entire charge of the farm at the time stated. I had received the \$30,000. In talking over the transaction with him a little later in the day on which Wickham paid me the \$30,000, he asked me to sign a note for that amount so as to secure him in case anything should turn up whereby he could not hold the farm for the full term. If at the end of six months the agreement was fulfilled the note was to be returned to me. Without waiting to see whether the contract would be fulfilled, he entered the note as a judgment against the farm on January 9, 1865, in the courts of Venango county. S. Q. Brown also entered the same judgment against my Meadville property about a month later. Through some private transaction between Wickham and Brown Brown came into possession of the note, and entered it as stated. Instead of recognizing the spirit of the agreement, Wickham proceeded upon the idea, I think, that the \$30,000 was to be considered as a loan, which it was not, in any sense of the word. I do not wish to do any one injustice, but the whole affair looked to me then, and more particularly in the light of later years, like a scheme to wrest my property from me.

In February, 1865, Dan Fowler, my Meadville friend, visited me in Philadelphia and conveyed to me the news that a judgment had been entered against my Meadville property; also that I had not made all my

payments on the same as per my agreement with Horace Cullum. Fowler, too, had entered a judgment against my Meadville holdings for \$6,000, for money he had loaned me. It is true that I had borrowed some money from him prior to my arrangement with Wickham and, in the confusion attendant upon my Philadelphia career, could not state the exact amount, though I never believed it equaled the amount of the judgment. He also entered the judgment against my oil farm in Venango county, and later entered another judgment of \$20,000 against the farm, but for what reason I did not know then, and do not know today.

As stated, when Fowler visited me in Philadelphia in February, 1865, he brought me word that my payments in the transactions with Cullum had not been kept; and he also informed me of the judgments entered by himself and Brown. The news of this laxity in the matter of payments came to me as a surprise, and almost sobered me up. Later I ascertained that my agreement with Cullum had been kept, that my agent, William Blackstone, had attended to the payments, and today I have a receipt in my possession for all of them, amounting to \$45,000, which represented my interest in the business block.

Fowler represented himself as a sort of angel of mercy. He pandered to my weaknesses and called old "John Barleycorn" in to assist him. He stated that I would never receive much, if anything, from the Meadville property, and that he thought it would soon be hopelessly beyond my control. In this he was right. He further stated that if I would deed the property over to him he would make me a present of \$1,600, and if there should be anything left after the judgments were satisfied he would give me the benefit of it, and he thought he would probably be able to save something over and above what these amounted to.

Leaving Philadelphia, Fowler proceeded to Rouseville to see Mrs. Steele, and represented to her that he had purchased my Meadville property and asked for her signature to the deed. Possessing more sense than I had displayed, she hesitated about signing. He informed her that all my Meadville possessions were involved, and were bound to go out of our control, anyway; that he felt sorry because we had to lose so much property, and on account of that sympathy was willing to pay her \$3,000 in return for her signature to the deed—a matter easy of granting, a mere trifle. The notary—I do not recall his name, but he must have been a close friend of Fowler's—interjected his opinion that, as Mrs. Steele was not of age, the fact of her signing the deed would really make no difference; but that she might as well sign the document, as it would be like finding money.

Thus misled, Mrs. Steele finally consented, signed the deed, although she stated to them she did not do so of her own free will, and Fowler and his man Friday went their way, carrying in their inside pocket half of a Meadville business block, a \$10,000 residence, and the Barton farm.

Not hearing anything from Fowler after he was supposed to arrive home, a few weeks after the transaction I went to Meadville to see him. And while I succeeded in doing so, I found him an altogether different man in his actions toward me than formerly.

He was now the possessor of my property, and he could not find time to talk to me. Witnessing this coldness, it began to dawn upon me that I had been duped. If I had had some one to advise me properly at the time, I am quite certain I could have compelled him to disgorge; but I was chary in seeking advice, for so far in my career it seemed as if every one was inclined to advise me wrong. So chagrined did I feel about being taken in in the above transaction, that I never said anything about it until the present.

Whether or not Fowler came to Philadelphia as a representative of Mr. Cullum, by whom he had theretofore been employed in selling barrels to the oil producers along Oil Creek, I do not know. Certainly while in Philadelphia, and in the transaction with Mrs. Steele, he so represented himself, and the property was decided to him. One fact, however, is indelibly impressed upon my memory, and that is, I met Fowler first in the month of March, when he was selling barrels along the creek, and that in February of the following year he owned \$67,000 worth of what had been my property, for which I never received any return except the amount which he had loaned me and the \$1,600 paid to me in Philadelphia. In addition there was the \$3,000 paid to my wife at the time she signed the deed.

I am aware that the foregoing reflects rather harshly upon my mental condition at the time and upon my lack of comprehension of business matters. In fact, I was a regular bargain counter. Yet I am willing to allow my actions to stand in comparison with those of the people who handled the other end of the transactions.

Troubles, they say, never come singly, and when they started on me they seemed to flock. At the end of six months Wickham gave up the farm, claiming it had not produced enough oil to justify a purchase, although before this period I had so adjusted matters with Hamilton McClintock that I could offer a clear title to the property, and was in a position, upon receipt of the purchase price, to pay all judgments against my holdings. The withdrawal of Wickham, however, left me without resources, except to the extent that I could "raise the dust" myself by operating the farm. I am happy to say that; so far as possible, I paid my obligations; but the avalanche of judgments that rushed down upon me proved so heavy as to almost overwhelm and discourage me. Learning of my embarrassments, other creditors were not slow in rushing in. The correctness of the greater part of the amounts I have always questioned, but the creditors went upon the principle that, as long as the slaughtering had begun, they might as well make a complete job of it. In Philadelphia I owed four firms, besides a small balance upon my board bill at the Girard House. But this is what I got:

Henry Carnegie, proprietor of the hotel, entered a judgment of \$19,000. I thought I had paid him nearly everything, but this bill brought to me the conclusion that I had not practiced the strict economy I should have done. They must have charged me for the air I breathed and then read the meter wrong. The four firms mentioned to enter judgments were J. E. Caldwell & Company, jewelers, for \$5,000; Lewis Lado-

mus, jeweler, for \$6,000; Charles Oakford & Company, tailors, \$540; and last, but not least, Field & Collender, \$1,500. In explanation of the latter. I would say some friend of Slocum's wanted to start a billiard room, and the latter, together with George Brotherton, went his security for the amount of \$1,500, and the claim came upon me. As to the jewelry, I must confess that more people in the Quaker City were wearing diamonds and such than there were before we made our sensational entrance into the city. The greater part of the jewelry for which I received bills was gotten by my friends, and some of it found its way into pawn shops, and was sold below cost to raise money when finances were low. Gold at that time was worth \$2.50, and diamonds in proportion. So it is evident that it took some money to deck our crowd out with this costly material.

Andrew McKnight also entered a judgment against me for \$5,000. He took a lease on the farm before Mrs. McClintock died, drilled a well, which proved dry, and when the farm came into my possession he wanted me to pay him the money he had lost. This I refused to consider, and he entered judgment.

Disgusted with myself, discouraged and sick at heart, upon the advice of Major James Mackey, my agent, I turned the farm over to Mrs. Steele for whatever benefit she could derive from it. It was also upon his advice that Mrs. Steele sold the farm to Taylor, Mackey & Company for \$20,000. Immediately following the purchase Judge William A. Galbraith, of Erie, Pa., entered up a judgment of \$10,000 for legal services; Charles E. Taylor, of Franklin, entered two judgments, amounting to \$12,500, and James Mackey a judgment for \$5,000. I do not believe that any of these judgments were valid, and I did not owe any of the parties one cent, and the judgments were doubtless entered against the property to ward off others which might have been contemplated. Galbraith's claim was for legal services, but I had paid him all I owed him. I had never had any dealings with Charles E. Taylor up to that time, and Mackey's claim was for services rendered, I believe.

They took possession of the land in March, 1866, and ran it until January 1, 1867. After they had held it for this period (I was absent), Mrs. Steele insisted upon the purchase price. And although the farm had been held by them for nearly a year, all she realized from it was \$6,000.

So the famous and much talked of oil farm passed out of our possession. If in my short, grotesque and foolish career as owner and proprietor I had been surrounded by my men who had had my best interests at heart instead of by those who seemed to wish to profit by my weaknesses and innocence of legal procedure and business methods, circumstances might have been altered, and instead of being held up to the public in the light of a silly, unreasoning spendthrift, I would have been in possession of an ample fortune during my declining years.

During 1867 the farm was sold under the sheriff's hammer and was bid in by George W. Hinkle, of Philadelphia, for \$35,000. It was afterwards controlled by a company, the shares of which were \$100 each. It has passed through various hands, until today it

is owned by Mr. John W. Waitz, of Oil City, who, by drilling upon the hillsides as well as along the banks of the creek, and adopting up-to-date methods in oil production, has once more converted it into one of the best paying properties along Oil Creek.

Through some kind provision of nature, the pleasantest of dreams often come to those whose daily lives are crowded full of trial and grief, and it is good that it is so, for in that brief forgetfulness of daily trials they find their only happiness on this big earth. The poor man in his hovel may dream of a palace, where everything is of the gold and glitter order, where every want may be granted simply for the asking, and where the care-furrowed brow is made smooth. However, such surcease from life's actualities is only temporary, and sometimes only serves to make the real existence more bitter. No matter whether the dreamer be a king lying upon his downy couch or the beggar resting upon a board, to each the awakening comes, the terrible realities of life again face them.

Today as I look back upon that period of my life when I might have accomplished so much good for myself and my friends, and accomplished nothing; when I think of the obligations of manhood placed upon me by reason of my family and friends, which I carelessly and thoughtlessly cast aside, to rush into and be engulfed by a vortex of dissipation, it seems as though it were a dream, so utterly impossible and inhuman does it appear to me now.

From the time I made the bargain with William H. Wickham in the Girard House of Philadelphia, by the terms of which he paid me \$30,000, and held dangling before my eyes the promise of over a million dollars more in six months from that time, my feet trod the downward way, and at all times I was surrounded by those who were willing and ready to accompany me, so long as I paid the freight. I spent my money foolishly, recklessly, wickedly, gave it away without excuse; threw dollars to street urchins to see them scramble; tipped waiters with \$5 and \$10 bills; was intoxicated most of the time, and kept the crowd surrounding me usually in the same condition.

I seemed to forget the folks at home. The easiest thing in the world is to forget, even those things which should be kept in memory. Once or twice, however, I broke away from Philadelphia to go back to the old farm. Slocum accompanied me; another time Brotherton went along, at my expense, and we scattered wild oats on the way. I was sufficiently conscience stricken, however, that I did not want to see my wife; but I did talk to her once, and then she pleaded with me to forsake my evil ways before it was too late. I paid no attention to this at that time, for I went back to Philadelphia and resumed the usual course. Liquor can make a man sell his soul to the devil quicker than anything else on earth, and certainly at this time mine was going devilward as fast as it could. A good evidence of this is shown by my neglect of those who, although they could have justly cast me off, remained true, hoping that some day I would forsake my evil ways and companions and hold up my head among men. I am no temperance lecturer and never wrote an article on the subject in my life, but if some one were to ask me to pen a sentiment for

the benefit of young men who have to face the temptations of the world, I do not know of anything better to say than, "Tell the boys to drink water." Such a warning should be placed upon the walls of every household, so that the meaning of it would sink deep into the minds of the young.

Of course I consider it somewhat out of place that I should offer an excuse for making a fool of myself. A man is generally looked down upon for trying to apologize for something for which he is more to blame than any one else. When a man goes into a thing with his eyes open, generally he cuts a poor figure when he adopts the excuse that some one else is responsible for his condition. But when I started out I was new to the world with which I was to mingle. My early life had been surrounded by good Christian influences, and my footsteps guarded as carefully by my good Christian guardian as though I had been of her own flesh and blood. I loved my wife, I loved my boy, and yet I went the "pace that kills."

Already I have given some idea of the crowd that surrounded me in my Philadelphia life. Some names I have not mentioned, but it is because I have forgotten them. All I can recall is that they swore eternal fealty and friendship, clung to me while my money lasted, and forsook me when it was gone. These men were gamblers, men about town, actors, youths whom riches had pampered into a condition to make my kind of life attractive to them; business men whose motives were not of the best, and who should be classed with the sharpers whose methods were not always apparent to me because of my condition. Such was the following of courtiers who attended me, laughed when I laughed, drank when I drank, and at my expense; and by them I was flattered and fleeced. The pedestal upon which they placed me was so high that I seemed to look down into their expectant eyes and read in them admiration for my brightness, and I scattered favors in profusion. It was my prominence upon this pedestal also which made me such an easy mark.

While in this delirium rumors reached me that all was not well at home. Wickham, some one informed me, had not been doing right. To these things I paid but little attention, and continued on my giddy career. At the end of six months, I foolishly argued, I would be able to make a clear title to the property, and great wealth would be mine. So dull care was driven away, and I kept sailing along the same old rapids.

One day in the midst of the wild delirium a missive was handed me by the hotel clerk from W. A. Galbraith, which read that Wickham had given up the farm and James A. Mackey had been placed in charge as my agent. More than a million dollars gone in one dash. I tried to realize it all. The fortune on which I had been staking everything had disappeared like a flash. I called Slocum to me—Slocum, to whom in some wild drunken freak I had entrusted all; Slocum, who had always pretended to be my friend, and was friendly as long as I gave him money to spend. I needed his sympathy, and thought I had some right to it, but he had no sympathy or advice for me. He seemed willing to desert the ship. For the first time in a considerable period I became strictly sober, and for the first time in many, many days I thought of

friends back home, of my good wife, who was now weighted with grief for me, and now had to confront this additional misfortune; and for the first time in my career of dissipation I did the manly and upright thing—I went to those who needed me.

At home I found things practically as they had been represented to me. Matters too long neglected had gone from bad to worse through the machinations of those who had taken advantage of my weakness. Looking at it in any way I could, the future seemed gloomy and dark. The farm, it is true, was left, but black clouds were hovering over it, and laden so heavily that, when the storm broke, it engulfed all.

Having now an occasional sober moment, I began to see Slocum in a different light and I resolved to get rid of him and Philadelphia at the same time. I shook the city first, however, reasoning that the only just and manly thing to do was to go back to the oil regions and save what could be saved from the wreck. Before leaving Philadelphia I did something which has gained for me a great deal of notoriety, and has been magnified so much that it has been told as happening in a number of cities, and in a manner which best suited the imagination of the writers who treated of the occurrence. I owed to the man who had the stable where I kept my team and carriage, and who acted as my driver, as well as my "chaperone" on certain state occasions, a nice little bill for his services. Having no money to give him and feeling under obligations to him for his arduous and faithful attention, I concluded to turn the horses, carriage, with its "coat of arms" and all over to him, and did so before I bade him farewell. I regretted I could not pay my other bills as easily as I did this one. That action led to many outlandish and exaggerated stories, which have had a tendency to lead readers to the conclusion that I gave away a team of horses and a carriage as a regular daily recreation.

My back was now turned upon Philadelphia. My friends, the courtiers of my flush days, had forsaken me and were seeking pastures new. My face was turned to the future, and the world looked cold enough. I was forsaken by all but one, and although she had been made to suffer more than all because of my misdeeds, she still believed in me and had faith that I would yet come out all right, and prove myself a man.

Two incidents of my brief and meteoric career have been touched upon in various newspaper articles meant to set forth some of my foolishness while I was playing the character of the champion spendthrift of the oil regions, and which had some, but exceedingly slight foundations of truth.

If some accounts are to be believed, I spent a large portion of my wealth and the major portion of my time in giving banquets to my friends. It is quite true that often at the Girard House I treated a friend to a dinner at my table, where I always displayed a great profusion of liberality, tipped the waiters up to the limit, and made them my staunch and steadfast friends; and therefore it is quite probable secured many delicacies from the kitchen which many a more deserving boarder did not get. But the only real banquet which I ever backed financially was one that Slocum and I gave to our minstrel friends of the silent-

dividend company of Skiff and Gaylord. At one time my companion and myself, being in New York on one of our excursions, heard that the merry crew was to play at Ithaca, New York, on a certain date, and we went up there, incidentally to gaze upon our investment, but more particularly to have a high old time. And we had it. We received a cordial greeting from our old friends of the burnt cork, and my gratitude for the same swelled to such proportions that I resolved to even up in some way. Possibly I argued that some day I would get it all back in dividends; but then, what was the matter of a few hundred dollars between friends. So I arranged with the proprietor of the hotel to set a banquet, to be pulled off after the show. It was a complete success. Beyond that I hardly recollect, and to describe the details of the feast is beyond me. Neither could I describe them accurately the next morning. I remember that some one nominated me for president of the United States, and that I accepted the nomination. Also I recall the fact of a biscuit hitting a merry minstrel man in the eye; also that some of the delegates went to sleep under the table. Tax my memory as I may I have no recollection of the manner in which the nominee for the presidency made his way from the banquet hall to his downy couch; but I do recall that the state of his feelings the next morning called for ice water in large doses. That was the only real, true banquet I ever gave. I think that was enough. From current report some people were led to believe that I spent most of my time in stocking special trains with drinkables, eatables, cigars, et cetera, and traveling with my friends about the country. This would doubtless have produced a lot of enjoyment, but I got mine in other ways.

The only special train I ever hired to run for me was not a train, but that essential portion thereof known as the engine. On one of our trips to the oil regions, Slocum and I decided to go to Erie, his home. Following a custom which he had acquired, we alighted from the train at a certain station to get a drink. We became so engrossed that the train very inconsiderately pulled out without us. This we considered as treatment entirely out of proportion to our rank, and we became somewhat indignant and wanted every one to know that we were not accustomed to such slights, and that a railroad or two was the most insignificant of all our possessions. In an effort to pacify our wounded feelings, the railroad people agreed to give us a special engine for the sum of \$50 and catch the train for us, which they would hold up for 10 minutes at one of the stations ahead. They got the fifty, and got us to the train, where we arrived scared nearly sober and full of cinders. And that was the only excursion I ever backed in my life.

Having now bumped up against a great heap of adversity, as I have observed, I shook the soil of Philadelphia from my soles and started for the oil regions. Seth Slocum went with me. He had never left me from the first moment he had become acquainted. He did not wish any one to have a share of my wealth while he was on earth, and scarcely any one did, especially of the gilded circle, unless he himself was also a beneficiary. He clung to me closer than a brother could or would have done, and would have so clung

to his dying day, no doubt, had my money held out. But on my last trip to Philadelphia I did something that I had not been indulging in theretofore, namely, I began to think; and the more I thought the more I became impressed with the idea if ever I was to amount to anything in the world, which I very much doubted, I must rid myself of Slocum. Every man is to a large extent what he makes of himself, and therefore, to a large extent should be held responsible. But I was confident that the influence which Slocum had exerted over me had not been beneficial, and I could see no good which could come to me by keeping him on my staff. Therefore I resolved to be rid of him as soon as I arrived home. I will give the fellow credit, however, for having a liking for me, but whether this was on account of any special characteristic beyond a willingness to part with my money to him, I do not know. But now my sober reflection told me that to get rid of him was the best thing I could do. I wanted to gain a foothold in the world somehow, and did not fancy the idea of being tripped up in so doing.

Therefore when we arrived at Franklin I informed Slocum that our partnership must be dissolved. For a moment he seemed to think I was joking, but I soon convinced him, for the first time in my life, of my earnestness, for I informed him that a memory of him would be more preferable than his presence; that no matter where he went, there I would not follow, and I did not intend he should follow me. He seemed dazed and bewildered at this statement of my intentions, or possibly at my firmness; as this was the first time I had ever shown any towards him, and for the first time in our experience positions were reversed and I was dictating terms to him. He begged, he entreated, he supplicated, but all to no purpose. My mind was made up, and for the first time in my life I felt the satisfaction which comes to one when he succeeds in casting a baneful influence to one side. The air I breathed seemed clearer, and more than that, I had the pleasant realization that I could assert myself on occasions if I wanted to, and take on some of the slight attributes of manhood.

When Slocum was spending my money, when he was surrounded by flatterers and fawners, and playing the role of a blustering spendthrift, he was the opposite of the man who on this day of parting pleaded with me for mercy and forgiveness. And even then I listened to his entreaty that he was a physical as well as a financial wreck, and gave him two notes of \$2,500 each, he thinking that he might get something for them. And he did, for he sold the notes to John C. Porter, of Meadville, and they were afterwards entered against what was left of my property.

I had given Slocum everything he had ever asked me; had never refused him a favor. His will power seemed stronger than mine, and the foregoing proves that I had not yet gotten wholly rid of his influence. But after this transaction Seth Slocum went out of my life, and I breathed freer. I never saw him after that. He died in about two years after the time I parted from him. During his illness he sent word that he wanted to see me, but I did not go to him. If he wanted to explain anything, it was not necessary. He may have wanted forgiveness. He has that anyway.

I will not say that I was not as much to blame as Seth Slocum ever was.

With several hundred dollars in my pocket I started out. First I went to Rouseville and took a look over the old place. Then I went up to visit Petroleum Center, which at that time was in its glory as one of the toughest places on the footstool. And so I was again back in the old Oil Creek valley, but not at this time playing the character of the bedangled, diamond de-decked "Coal Oil Johnny" of yore, but practically stranded, estranged from my friends of former days, with plenty of people around to whom I could speak, but none who would advise or who offered to extend a helping hand. Now that I was down and comparatively penniless, no one fawned upon me. To all intents and purposes I was practically a wanderer on the face of the earth. One time I went back to the old church up there in the woods of Oakland township. Memories came to me of a barefoot, happy boy, of the honest, open hearted neighbors and of the good old people who had guided my youthful footsteps and tried to start me right in the world. It seemed to me as though I was driven instinctively to the old church to pay a penance, to give away to bitter feelings, to confess that I had not lived as I should have lived, and ask forgiveness. The regrets which came to me at certain times I can never express. I realized that the life I had been living was but a rope of sand, and the problem set me for the future was one which I hardly dared to solve. Fully realizing that drink had been the principal cause of my undoing, I made many a fight against it, and many times I lost before I conquered.

As I have stated, I visited Petroleum Center. Like all the early oil towns it had been built in a hurry, and possessed board shanties, hotels, places of amusement, and muddy streets. But for pure, unadulterated wickedness it eclipsed any town I had ever favored with my presence, and I had witnessed the seamy side of life in many cities. For open, flaunted vice and sin it laid over any other on the map. There was no city government, thugs carried matters with a high hand, resorts of a disreputable character flourished openly, and the unwary were fleeced right and left. The scenes enacted caused even old "rounders" to blush. It was not safe for a man to walk the streets at night alone. Sandbagging seemed to be a regularly recognized occupation, and murder quite an occasional one. Gambling did not run behind closed doors, and thousands of dollars changed hands over the green cloth. Pleased to get away with life, I went to Titusville, which was a lively, hustling town, which a capable municipal government had transformed into a place where, comparatively, law and order were not at a discount.

Speaking of oil towns, one must justly mention Rouseville, a place which had grown up on the old Buchanan farm, almost opposite my old farm. There was no settlement there when oil was first discovered along the creek, but now it was a bustling place, containing one or two good hotels, a theatre, several churches and a lot of inhabitants of that busy, cheery, hospitable kind so characteristic of the oil country then as now. Today Rouseville retains more of the typical architecture of the early oil regions times than any other place along Oil Creek, and like all other

towns has had its tragedies and comedies incident to the excitement attending the surging rush for wealth in the oil country. The burning of the well where Henry R. Rouse and many others met their death was a scene which I witnessed.

Leaving Titusville I turned my steps toward the west, hoping, as many pilgrims before me, that fortune would at last smile upon me.

From Titusville I went to Cleveland, Ohio. While there I stopped at the Weddell House, and on the evening of my arrival visited the theatre. Somehow it became known to a few that I was in the city, and I was gaped at by curious individuals, and remarks reached my ears which were not intended for me to hear. On my way back to the hotel after the performance at the theatre I became suspicious of the actions of two men, thinking they had laid a conspiracy to part me from my money. However, I was not feeling in a mood to be sandbagged and spirited up some dark alley for the edification of a couple of crooks. What money I had with me I needed worse than I ever needed money before. So I took the middle of the street. They did not follow me there, and I arrived at the hotel without molestation. This was the nearest I ever come to being robbed in the old fashioned, approved way, and that may not have been as near as I mistrusted. To being robbed in the more genteel fashion I had not objected strenuously; but I did not wish to welcome any new departures. Having received in my brief career more notoriety than I ever desired, my inclination now was to seek rest and quiet, to get into places where I was not known, and procure some honest employment by which to live. But go where I would it seemed that my record had preceded me, with the result that soon after arrival I would become surrounded by what to me at this time was an undesirable crowd of curiosity mongers, who, whatever their intention, made my life a burden. Then I would move on to some other place, wishing for peace and quiet, with the usual result of being driven out. My nervous system was rendered more sensitive by articles which would appear in the newspapers, and they put me in a bad temper. My attempted refutations would not appear in print; so I stopped saying anything about myself, harbored bitter thoughts, kept on retreating, and came to regard humanity in general as my bitter enemy.

I went over to Buffalo from Cleveland, and ran into a coterie of friends who had known me when I was on the "firing line," and who insisted on making my stay pleasant and agreeable according to their ideas. I stood them off temporarily and in the night time I skipped. I stopped in many places after leaving the Bison City, but a short time thereafter I found myself in Kansas City looking for work, being really desirous of securing any honest occupation which would enable me to forget myself and become contented and happy once again. Certainly I thought this a worthy ambition, but no one seemed to share it with me, and often I became despondent yet I never reached that stage of insanity which brought me to a contemplation of suicide. What was of no account in this world would stand a mighty poor show in the next, I argued, and

if the world would try and put up with me I would do my level best to get along on the best terms I could with it. My mind at this time, too, often reverted to the happy days of the home on Oil Creek, and to the folks up there. Then would follow the thought of how things were, instead of what they might have been, of the wreck which had followed my wake, instead of what might have been there; and at these times I did what many another fool has done, partook of the cup that cheers, but which too often inebriates.

On the first morning after my arrival at Kansas City I started out for a walk, wishing to see some familiar face or hear the voice of a friend, when some behind me remarked:

"Well, I'll be darned."

"Well, I'll bet it isn't," chimed in another.

"Take your bet," argued the first voice.

I turned around and bumped right into my old minstrel friends and partners, Skiff and Gaylord.

I was as glad to see them as a hungry man is to eat. At that particular moment I realized how the Israelites felt when they clapped their eyes on the promised land. I stood there and shook their hands, we hugged each other, and raised high jinks, much to the edification of the onlookers.

My friends had heard of my misfortunes and now expressed genuine sympathy, the first I had listened to since the collapse. Their show was playing in the city at the time, and I found I was being advertised on the same old bills which I had paid for back in Philadelphia. To myself I argued that I was just as much a proprietor of the aggregation as I had ever been, and therefore when Skiff said, "Johnny you have been a good friend to us. Come along and travel with the show," the sun came out brighter than it had for a long time. We did not stick upon terms. My expenses were to be paid, and I was to take or sell the tickets.

So again I was embarked upon a minstrel career, this time, however, destined to last much longer than my previous one. While I had up to this time argued that the returns from my investment in minstrelsy had not been adequate for the money expended, never having received a cent, it now seemed to me that I was being generously compensated. To travel with a crowd of congenial companions, with the assurance of a good living, at least, during the winter, was certainly preferable to traveling alone when all was uncertainty.

We visited many of the principal western cities, among them Chicago, but while there I never tried to buy an opera house for a benefit performance, as reported. The show finally worked its way over into Canada, where we played in the leading towns, including the cities of Toronto and Montreal. I was the "freak" of the aggregation, of course, and "Coal Oil Johnny" was pointed out and stared at all along the line, for which I always held the advance agent largely responsible. I controlled my natural feeling of resentment on the ground that if it helped the show, it was all right. When with the minstrel company I did not object to being pointed out so strongly as when traveling by myself, as with the company one was more or less in the public eye, and therefore felt that some-

thing was due to the public for the privilege of living at its expense.

Leaving Canada, we went over into New York state, crossing at Ogdensburg, and played a number of towns in the eastern and central portions of the state. Thence we traveled up into Maine and down through a goodly portion of New England. "Is that Coal Oil Johnny? Wal, I swan!" was a common remark during this portion of our tour. Among a certain type of the New Englanders this expression never varied more than a word or two, and seemed as typical of the country as the rock-bound coasts and granite mountains.

I liked the New England people. There are many different types, generous, shrewd, and all hospitable. There is a quaintness in the speech of the rural type which attracts the stranger, and is as distinctive as the dialect of the south. And I could not help contrasting the solid New England yeomanry with the inhabitants of the old Oil Creek valley before the oil excitement disturbed them.

There was one individual in New England whom I did not like, and I ran across him several times in my capacity as ticket gatherer for the show. He was the fellow who tried to beat down the price of admission. To have reduced the tariff one cent would have afforded him unbounded satisfaction. This particular individual is the one who gives New England people a reputation for closeness and parsimony which is undeserved.

However, one day during the trip through New England I received a letter asking me to come home and begin to live over again, and show my friends that I could be a man. After one has kept away from the home folks as long as I did and dreads to go back because of a realizing sense of the injuries he has wrought to their feelings by reason of the disgrace which he has brought upon them, and therefore has come to believe that home ties are broken beyond repair, such a missive touches the heart. I had left home discouraged, filled with a thousand regrets, and surrounded by circumstances which brought to me a feeling that I had forfeited all the friends that I had ever possessed back there. As a consequence I had gone out into the world, cast my lot among strangers in order to if possible forget. Many times in my wanderings I had felt that I must certainly have been obliterated, and perhaps justly, from the thoughts of those who held the warmest place in my memory. Then regrets would overwhelm me, and I would go forward in a reckless, careless way, hoping to banish all such thoughts from my mind, for they were as so many evil spirits, disturbing my sleeping and waking hours. I had received two or three messages from home urging me to lead a better life; and this I was earnestly trying to do; and while my efforts were not what they should have been, yet my life was one of complete sobriety and upright living in comparison with my record in the old Philadelphia days with Slocum.

An invitation to come home was not one which I expected, and it was some time before I could realize its full meaning. To expect full forgiveness by those I loved, and a complete restoration of their friendship was something I could not bring myself to realize,

so little did I consider I deserved such recognition. But here was the invitation.

I decided to accept it, and told my decision to my minstrel friends. The boys gathered around me at parting and expressed true regret. We had traveled many hundreds of miles together, and our minstrel family was a happy one. And with sadness in my heart at the parting, but with a glad realization that I was going home, I bade farewell to that happy, genial, merry minstrel crowd forever. Most of the boys have passed over the Great Divide, and their laughter is hushed forever from the ears of men. Some of them are still in the land of the living, and if any of them read this page, I want them to understand that I still possess a fond remembrance of those old days of 1866 and 1867, when we joked and laughed as we traveled the world together.

While I left the boys back there in New England with feelings of sorrow, I was happy in the fact that after all I had done, after all that had been said, after all the heart pangs and the heart burnings, forgiveness was written over the threshold, and I was going home.

When I arrived in the Oil Creek valley I went first to the house of my brother-in-law, who was living on the old farm in a new dwelling which had been erected there, near the old McClintock house, where my boyhood days had been spent. My father-in-law, at whose house my wife and boy were stopping, was living at Dempseytown, Venango county, several miles from our old home. I at first hesitated about going there, fearing I would not be welcome; then I reflected that the letter asking me to come was in my pocket. However, before I started, they heard I was back at the old place and I received a cordial invitation to come.

I can never forget my feelings as I approached the house. They were of doubt mingled with glad expectation of seeing those whom I loved, and yet whom I felt I had so heartlessly and thoughtlessly neglected. Finally I mustered up courage sufficient to knock at the door. It was opened by Mr. Moffitt, who gave me a cordial handclasp and asked me to walk in. And inside was my good wife and mother, with tears in their eyes, and, too, there was the lively youngster of a boy, who jumped around and clapped his hands with delight. Figuratively the fatted calf was killed for the returning and foolish prodigal. There was no word of reproach, no word of regret from that family circle. My welcome was true and hearty, and implied that I was to be considered in the future, if I so desired, as one of the household. In other words, I was "returned and no questions asked."

When one has gone wrong and his conscience rises in reproof at the wrong doing, as mine had often done, when one has been cast out upon the world and brings himself to the thought that those who loved him at one time will, or should, know him no more; until such time and then only will he enjoy to the fullest extent being again with those whom he loves, and appreciate the full forgiveness which can come from kind and loving hearts. And until such time arrives, he cannot

ring down the curtain over the past and look with complacency toward the future.

The kindly interest and good will of other friends gave me added hope, and I felt ready now to go out and battle with the world in earnest. The happiest moments of my life were those that I spent at this time, as I sat at the fireside with my family and friends, where full forgiveness banished the reproach which might have justly been given to me. Mrs. Moffitt treated me as kindly and lovingly as though I had been her son. I was "her boy," as she often expressed it; and it has always been a gratification to me that in later years it was possible for me to be near her in her final illness, to make her last hours happy. Then there was my boy, a robust lad, with a fine healthy interest in everything going in the world and capable of asking more questions than any other youngster living. He was glad to have me home, too; possibly not so much because I was his father as that I had traveled about some, and could gratify his curiosity by answering a part of his questions, at least.

The fall and winter of 1867 I spent at my father-in-law's. The next spring he sold the farm and moved to one in Sugarcreek township, in Venango county, which I had purchased. My wife gave me enough money with which to purchase a team, and with it I assisted to move the belongings over to the new place and then assisted in the farming operations. My father-in-law and I worked hard and faithfully, and accomplished a great deal towards clearing land and putting the rest of it in good and paying condition.

In May of the year 1868, I took advantage of the bankruptcy law. Afterwards I regretted many times I did this, for many reasons, but the action was taken on the advice of a lawyer. It placed me in a position where it was impossible for me to contest any rights which I might have considered I still held in the property. The money represented by the Philadelphia judgments was the only amount which I honestly owed. Had I not followed the lawyer's advice it might have been possible for me to have proven the illegality of the other judgments, and paid the money owed to my honest creditors. Still, I can truthfully set forth and aver that, even in the condition in which I was now placed, I was far happier and better contented than when engaged in the gayer occupation of buying diamonds for myself and friends and spending many thousands.

It was during the summer of 1868 when Mrs. Steele, with the assistance of her father, succeeded in collecting \$6,000 for the oil farm in the transaction by which it passed into the possession of Taylor, Mackey and Company. In the fall of 1868 I moved my family to Franklin, where I went to teaming. At that time Henry Cullum, a son of Horace Cullum, the gentleman with whom I had gone into partnership on the business block venture in Meadville, Pa., was conducting a barrel factory in Franklin, in the third ward. About the first job of teaming I secured was hauling stave bolts for him, and when the bill amounted to about \$40 he failed and I never received a cent for my work. Although the amount was but a drop in the bucket compared with the sums I had parted with in

other transactions, I felt the loss more keenly than any I had ever experienced.

It was while in Franklin that I joined the Episcopal church. The rector of St. John's parish at that time took a kindly interest in me, which he has always retained, and for which I have always felt under the deepest obligations.

After working in Franklin for a year I went to Rouseville, in the fall of 1869, and there for some time followed the occupation of a teamster, receiving good prices for my work. Later I was offered and accepted a position in the depot under Mr. E. A. Keane, who was agent there. My duties, for which I received \$60 per month, included the handling of baggage and freight, and the checking of the latter in and out. I received \$10 a month more for extra services, and later, when the express office was put there, I received \$10 additional for assisting in that department. It is needless to say that I was as busy as the traditional boy killing snakes. With my income I bought a home nearly opposite the depot. I rented my team out. I worked in the depot from six in the morning until eleven at night, sent my boy to school and kept myself in a comparatively happy frame of mind—happy because I was winning my way in the world, regaining the respect of my former neighbors and friends, and that, too, in sight of the old farm across the creek that had been such a factor in my life.

As old timers will remember, the Rouseville station at this time was a busy one, and Rouseville itself a lively community. A train was kept busy running between that town and Oil City, three miles below, transporting oil down and bringing coal back. The land around Rouseville had brought immense sums. Corning & Beers were offered \$4,000,000 for the Smith farm, located up Cherry run, which they had originally purchased for \$3,500 from a man who had secured it in a trade for a yoke of oxen. This is only given as an example of the numerous business investments which surrounded the busy little town.

When Mr. Keane, the station agent at Rouseville, resigned he was succeeded by a gentleman whose name I will omit, but who was known by every one as a ceaseless practical joker, but of the harmless kind. He was always causing uneasiness in some quarters. I recall that he tied a cannon firecracker under the chair of a clerk and soared that individual heavenward, and who came down cussing until the air was blue. We were afraid of answering his questions for fear of being "sold." As a consequence of this tendency for joking, every one was laying for the station master. One fellow filled a tin horn with flour, went to the depot and called the agent to the window. He pointed the horn at him, but the flour was packed so tight it could not be blown out. The agent took in the situation at a glance, reached down under the window, seized a small sack of flour, hit the old gentleman with it and sent him out of the depot looking like Jack Frost. A book could be written of these pranks. They served to make our duties seem lighter.

While at Rouseville I was initiated as an Odd Fellow, and have always remained a member of that organization. I had not lived long at Rouseville, however, before I began to receive extended mention once

more in the newspapers. They told of how I had reformed, of things I did, of things I did not do, each article being more exaggerated than the preceding one. It was at this time the story originated, which gained wide circulation, to the effect that one day when upon one of my sprees in Philadelphia, I had placed \$10,000 on deposit in a certain bank, which fact I had completely forgotten upon my return to sobriety. In later years the bank officials located me and the money with interest was turned over to me. No one could have been more pleased than I had this been true, but unfortunately it was not. It may have originated from the fact of my keeping a large sum of money in the safe at the Girard House.

While living at Rouseville a gentleman came to me and offered me \$5,000 to relate to him the principal details of my career so that he could write a history of it. This offer I refused, as I refused all others. I thought that possibly some day the public would be allowed to forget all about me. But it never has and as the years roll on the accounts become more and more exaggerated, and I have been compelled to get into print myself as a sort of self protection. I refused many offers to exhibit myself with theatrical aggregations. In later years I could have received a large amount for exhibiting myself at the centennial exposition in Philadelphia. I was hewing out a new course, breaking a fresh path, and saving my money. Of course I got chances to invest the money, and I did. Mr. James Bredin had an oil lease at Bredinsburg which he thought unusually promising and wished me to go into partnership with him and drill a well. I put \$600 into this enterprise, the well proved dry, and thus went a good lot of money which I had worked long and hard to accumulate, and demonstrated that my lucky star was not getting in its work at influencing my career to the fullest extent. After nearly two years and a half at the depot, feeling dissatisfied and wishing to fit myself for something better, I withdrew after a period of the hardest work I ever performed in my life. But I had worked myself into the good favor of many people, and I felt recompensed, for they were good enough to come and take me by the hand and make me feel that I was, at least, some sort of a factor in the world. And I can say that during this period, when working 17 hours out of every 24, leading a sober life, and with wife and boy happy on my account, I first realized what a pleasure it was to take care of myself and family.

Leaving Rouseville in the fall of 1873, I went to Pittsburg, taking my family with me, my purpose being to try a course in the Iron City Business College, thinking it would further my chances of meeting with success in life.

I found Pittsburg a busier city than when I had visited it in company with Mr. Hayes a few years before, but in view of my experiences in the interim, it did not seem as large. Nor did I care so much for riding upon the street cars. However, I had a boy to whom this afforded much pleasure, and I often accompanied him. We were in Pittsburg four months, the time necessary to complete the course I was taking, and I have always believed I acquitted myself with credit as

a student. To see a fellow who had been through the experience I had calmly settle down to the life of a scholar, even in a business college, seemed almost a paradox to some people. My previous experience had been chiefly confined to one side of the ledger. Now I became acquainted with the other as well. I should have done this earlier in life.

We returned to Franklin in the spring of 1874. I tried to secure a position, and several men offered to assist me to that end. But I was not successful and became somewhat discouraged. The little city did not offer as many opportunities for advancement then as it does today. However, I did make a business move to the extent of putting some money in a meat market with my brother-in-law, but the venture did not pay and I withdrew.

I found the feeling of despondency creeping over me again. At times everything seemed to conspire against my getting a foothold. Surrounding me, too, were many who were acquaintances of long standing, and the invitations to drink became too frequent. So I concluded to seek pastures new and felt a deeper longing than ever to find some place where no one knew of my past career. Taking my family with me, I again turned westward. Before starting we had not fully determined upon our destination. But one day we left the train at Denison Iowa, and here I planted my flag with the resolve to go to work at any honest occupation I could get which would afford a living for us.

Denison is the county seat of Crawford county, Ia., and is located between the East and West Boyer rivers at the junction of the two streams.

Here we found the people warm hearted and generous, and so far as I knew, no one in the town was aware of my identity as "Coal Oil Johnny," although I went under my full name. We bought some lots and built a house, went to housekeeping, and then I looked around for something by which to earn a living. The first one to offer me employment was a Mr. Homer Darnell, who, as it happened, had relatives in Franklin, Pa. He employed many men, as he had a contract for building bridges for two counties, and he engaged me to drive a team and haul lumber for these structures. I went to work with a will and kept at this occupation steadily all through the first summer and until the cold weather came in the fall.

I had never since my return to sober life enjoyed myself so thoroughly as I did in this western town. No one but my family knew my identity, or if they did said nothing about it, and I was for a period protected from that prying curiosity which had always been so odious to me. Oftentimes my duties would take me for miles over the prairie, where there was not a building or a human being in sight; and out there in the solitude with nothing but the sky above and the ground beneath far away from the old world I had known, where no one could break in upon the silence and burden my mind with a thought of the cares and troubles of other days, I felt that I had many blessings to be thankful for. My work was hard, but I liked it, and I could contemplate the future with perfect serenity.

Of necessity our gang roughed it a good deal, slept where night would overtake us, and partook of any

kind of food that was presented. This was always eaten with a relish.

As I have said, the people of the town were warm hearted and generous, so characteristic of the west. I recall that Mr. J. Fred Myers was the editor of the Review, a Republican weekly. I want to give him full credit for his kindness in an indirect way to me; for when my identity afterwards became known, and a new batch of exploits appeared in the papers of the larger cities, he never printed any of them in the pages of his bright little journal. And this was done by him without any request upon my part for him so to do.

In the fall of the year I secured a position as manager of the grocery department in a large department store, an establishment that sold everything that could possibly be needed, from pins to coffins. One of the partners was an Englishman, who had come to Denison to take an interest in the store, and from the time he became a partner it was a success. With him came one brother, and a friend who held a position as book-keeper in the establishment. I refer to these people, not only because they were exceedingly friendly to me, but because they were Episcopalians. My wife and I belonging to this denomination, our little coterie concluded it would be a good thing to build a church in which we could worship according to our creed. Consequently we formed a little society, called upon other people whom we thought would be interested, and some who did not attend regularly any church. We got up a Sunday school and gathered in all the scholars we could find, many of them children who had never attended such a school, and made them welcome. We soon had a good attendance. The ladies formed an aid society and raised some money in that way. The work on the church was performed by different individuals in the congregation, and most of the work was done after regular business hours. One of the members, a carpenter, aided most efficiently. The structure was begun in April, and about Thanksgiving time the roof was completed. We all went to work with a will, and in order to keep down expenses the duties of the church were attended to by the different members. Two ladies were designated each week to sweep it. As I lived near the edifice, I attended to the fires. I was also elected as one of the vestrymen, in which capacity I served for about two years, when I was elected senior warden. I was never more interested in anything than to see that church a success, and it was a success, and its power of doing good gradually extended. Our first rector was a kindly old gentleman, who believed that one of the paramount duties of this world was in doing good to others. He made this his daily creed, and lived up to it. Those who live in the west know that a cyclone is no respecter of a church more than of any other building. One day a cyclone came to Denison and lifted the little church off of its foundations. At a comparatively slight expense it was replaced. I recall that one of the contributors to this fund was the former rector of St. John's church at Franklin, Pa. Not only do I feel grateful for this contribution, but for many other acts showing an interest in my welfare. At one time when some misguided young man of wealth was parading under the name of "Coal Oil Johnny," and met his death

in a tragic manner, my obituary began to appear in the newspapers, together with a record of my life. At that time this rector took it upon himself to set at rest these misleading reports, and was kind enough to say that I was living the life of a respected and honored citizen in a western town and that most of the stories told of me could not be justified or sustained by actual facts. To this man I owe a great deal for putting me upon the way to a better life than I had ever known before I came under his kind and thoughtful influence.

Another man to whom I owe a debt of gratitude was Mr. Issachar Schofield, of Dunlap, Ia., a Quaker, who owned a flour and feed store in Denison. After serving 18 months in the department store I left to take charge of the Denison branch of Mr. Schofield's business. The latter was one of the squarest men I have ever met. He would rather have parted with his right arm than to have taken undue advantage of any one, and as a consequence he enjoyed great credit and patronage. Afterwards his Denison business was increased by adding a grain elevator, and I superintended all of the business connected with that. My son had been at school at Ames, Ia., for a year and coming home and anxious for something to do, I put him at work running the engine in the elevator for a time.

I say with some pride that during the entire period of my service with Mr. Schofield he never found one word of fault with the way I conducted matters. Affairs were handled honestly, and that satisfied him. Near us were large settlements of Swede and German farmers. The latter were our exclusive customers, and would trust us implicitly in the matter of weight and measurement of their grain. These farmers were thrifty. I remember one old German who had six pretty daughters, but no sons. The daughters worked on the farm, and they would assist their father in drawing the grain to market. They could handle the heavy sacks as easily as a man could have done. I remember they had rosy cheeks and the healthy complexions which an outdoor life gives.

I remained with Mr. Schofield until the fall of 1880, when he decided to go out of business. I would have purchased the Denison branch myself, but I found my health giving out. The dust of the elevator had proven injurious to my lungs, and I therefore felt it necessary to secure some other occupation. Never did I part from an employer with more regret than I did from this good old Quaker gentleman. He lived up to the golden rule, one of his mottoes being, "When buying grain, pay all you can for it; but do not pay so much that you will have to cheat your customer in weight."

In this connection I might say that, as a side issue, my employer permitted me to conduct a small coal yard on my own account.

A Franklin gentleman, who was then doing business in Sioux City, learning that I was in Denison, came down and paid me a visit. We were glad to see him, and would have been glad to see any one from the oil regions. However, in conversation with some of the people of Denison, he let drop the fact that I was the famous "Coal Oil Johnny" of newspaper notoriety, and this fact soon became known to every one in Denison. My place of residence soon became located and advertised by all the newspapers, after which I had an op-

portunity offered me of going to Chicago and entering a dime museum. Many other offers came to me from showmen. Yet, while my identity became known, it did not seem to make any difference in the actions of my Denison friends toward me, for they always treated myself and family kindly. Although the outlandish reports appeared in the public prints, they did not worry me as they did. My feelings towards the newspapers were not cordial, and when a Burlington Hawk-eye man one day got into my house and asked for an interview I effectively fired him through the portal with the remark that if during my career I had killed half a dozen or so of his profession, my peace of mind would have been much greater.

Possibly I did not look at the matter in the right way; but when one has been hounded day and night by column after column of fabrication, and was afraid of walking along the street for fear of being pointed out as a freak; when he has seen his family suffer humiliation because of the lying propensities of some irresponsible space writer—until then he cannot comprehend the feelings which came over me.

I have had some very peculiar experiences with individuals who knew all about me and whose information was gathered from reading the reports which had been put in circulation. One in particular comes to my mind now, of a traveling man who came up from the depot with me one day in the bus. Learning that my name was Steele, he asked me if I had ever known "Coal Oil Johnny" Steele. I professed ignorance of such an individual, whereupon he informed me that he knew him at one time, was with him when he bought the Fifth Avenue hotel in New York city and rode all over the country with him on a special train. Whereupon I think I was justified in thinking that as a prevaricator that traveling man was something of what the boys called a "bird."

While in Denison I gave up the tobacco habit. I had always used the weed to excess, and was always chewing or smoking. It made me nervous, affected my health and I resolved to rid myself of the habit. My appetite left me, and for a long time after breaking off I could not sleep. It was one of the greatest trials I ever had, but I won, and with that habit went all the bad ones I ever had, and for 25 years I have not used tobacco in any form.

My health growing somewhat worse, we decided to move to Lincoln, Neb., where we could place our son in college. We lived in Lincoln during the winter of 1880 and 1881. I recall that it was an exceptional season. Snow is much scarcer in that part of the country than many of the people of the east imagine, and a snow storm was welcomed as a sort of a novelty; the citizens took advantage of the pleasures it afforded in peculiar ways. Improvised sleighs would appear upon the streets soon after a fall of snow, a familiar kind being made of dry goods boxes placed on runners. I remember one individual who hitched his horse to a rocking chair. It is needless to say that he was the chief attraction.

During the fall of 1881, my health having improved to an extent that would enable me to go to work, I secured a position in a general merchandise store in Kearney, Neb. A few months later my family follow-

ed me. In the summer of 1882, there being a vacancy in the freight department of the Burlington station, I decided to quit the mercantile business and return to my former occupation of railroading. After serving in this capacity for some time, I was made cashier and worked in this line until the spring of 1886.

Kearney was a lively little town at this time and was experiencing a real estate boom of considerable dimensions. I invested some money in this line and realized a good turn. At this time I also invested in some Nebraska land near Kearney. When I purchased it the nearest railroad station was 19 miles from it, but at the present time there is one railroad within two and a half and another within three and a half miles. I still own this land, rent it on shares, and it is gradually improving in value. Kearney was a great shipping place for cattle and the cowboys used to visit it. After a roundup these individuals would inject a little excitement into the life we lived there. They never did any great injury, but their fun was of a kind to scare a tenderfoot. They would ride their bronchos through the streets, fire revolvers in the air and emit whoops which would chill the blood of any one unused to such scenes. Another favorite amusement was to ride their ponies into a saloon and ask the bartender to hand them up a drink. When they had disposed of it they would turn the pony around, give a shout and ride out. Sometimes they would race their animals along the sidewalks, at which time all foot passengers discreetly got out of the way.

While at Kearney we had the pleasure of assisting to reorganize the Episcopal mission, which had been suspended for some time. We found a few families who entered into the work heartily, and we began holding service in a store building; later the services were held in the Christian church, and a Sunday school and ladies' auxiliary organized. The bishop, seeing the needs of the place, sent a clergyman and furnished means to carry on the work. In about a year we had a nice little church edifice. From this small beginning it has grown to be one of the leading churches of the diocese.

Finding that the close confinement of the office did not agree with me, I made application for a change that would give me outside work. I was transferred to Louisville, Neb., and given charge of the yard. It was with sincere regrets that we left Kearney and the many kind friends we had made there. Louisville at that time was a busy little town of ten or twelve hundred inhabitants. There were large stone quarries which were getting out about 75 cars of ballast daily for the Burlington railroad, and a large pottery manufactory. The country surrounding was given over to farming. We remained here about two years, when I was transferred to Ashland, Neb., a much larger town, about midway between Omaha and Lincoln. I remained here about ten years, when I was called east by the serious illness of a near relative, and our time has been divided between the east and my western home ever since.

Franklin, Pa., at which time an agreement was entered into for the publishing of a full and true history of his life, together with all the true information that could be gathered together. John W. Steele now makes his home with his father-in-law, Robert Moffitt, on rural route No. 3, Sugar Creek township, five miles north of Franklin, Pa. Mrs. Steele also makes her home with her father, while their son, Oscar Culbertson Steele, is located at Ashland, Nebraska, where he holds a responsible position with the Burlington railroad. John W. Steele is a very difficult man to interview, owing to the fact that he has been so often misrepresented through the newspapers and magazines. However, through the kindness of W. S. Whitaker, late editor of the Franklin Daily Leader, Smith & Co., news dealers, and other influential people of Franklin, Pa., the writer was enabled to make a date for an interview with Mr. Steele, at which time he found him a very courteous gentleman, and learned from him that he makes two or three trips to Franklin every week in a single buggy drawn by a small bay pacer horse, in company with his brother-in-law, Abe Moffitt. The horse is taken care of at W. B. Myers' livery stable, on Thirteenth street, while the men are in Franklin. After the writer had interviewed John W. Steele, he went to the old Culbertson McClintock farm, later the Johnny Steele farm, and now the John W. Waitz farm, at Rouseville, Pa. On the farm are three houses. C. Adam Waitz, brother of John W. Waitz, superintendent of the wells and farm, resides in the first house from Rouseville; John W. Waitz, sole owner of the Steele farm and wells, makes his home with his sister, Mrs. Austin J. Shanfelter, who resides in the second house; while David E. Tracy resides in the third house, which is better known as the Coal Oil Johnny Steele house. There are 62 wells on the farm, 26 on the flats and the remainder on the hill, operated and pumped by three powers, two gas engines and one water power. The water power was built by Armstrong and Hathaway, who had a millrace dug from Oil Creek on the upper end of the McClintock-Steele farm, now Waitz farm, through the farm to run their water power on their lease on the lower end of the farm on the flat. This makes the flat an island, with Oil Creek running around one side and the millrace on the other side of the 200 acres, which comprises the farm; 25 are on the flat, or creek bottom land. In the early sixties no oil producer would think of drilling for oil on a hill, nor could he be induced to drill on level ground 500 feet from running water. All the first wells were drilled wet to the first and second sand and in a few years nearly all the old wells were abandoned. In a short time after John W. Waitz got full possession of the farm he began to drill over the old territory. One of the old holes was under the bull wheels of one of the wells he drilled and cased. This well started off at 35 barrels of oil a day, and another old hole was under the Sampson post of a well he had drilled, which started off at 25 barrels of oil a day, and later all of the wells were drilled to the third sand, which is 144 feet below the second sand, which is 500 feet below the surface, and 1,000 feet on the highest point on the hill. The present production of the farm is about 1,000 barrels of oil a month.

The writer first met John W. Steele on March 4, 1903, at the corner of Liberty and West Park streets,

THE FRANKLIN, PENNSYLVANIA, LUBRICATING OIL DISTRICT.

JAMES EVANS,

The Pioneer Franklin, Pa., Lubricating Oil Operator.

James Evans was born near Morgantown, Va., (now West Virginia) in 1801. Mr. Evans while very young learned the blacksmith trade. Mr. Evans left Virginia (now West Virginia) in 1825, locating at Meadville, Pa., where he was employed at his trade until 1839, when he moved his family to the Evans homestead on Otter street, Franklin, Pa. It was on this property Mr. Evans drilled his first lubricating oil well in 1859. Mr. Evans died in 1875. The property is owned by the Evans heirs. This brief history of Mr. James Evans is given by authority of his son, Ralph Evans.

The Franklin lubricating oil district lies around and in the city of Franklin, and is made up, for the most part, by the territory lying between and including Point Hill, Patchen run and Two Mile run. The line or belt of the most important developments, is about one hundred rods wide, and so far as developed, two miles in length, and includes the following farms: Hyde and Blakely farm, Geo. P. Smith farm, McCalmont tract, Lamberton, Galloway, Dr. Fee, Fee, Kunkle & Co.'s farm, and D. Grimm farms.

Soon after the striking of the Drake well Mr. James Evans, a blacksmith by trade, drilled a well on the lot on which he resided, within the borough limits. The well was put down at first for the purpose of obtaining water, and at the depth of 17 feet a vein of water was struck, which soon became covered with a thick scum of oil, so as to render the water almost unfit for use. On learning that Drake had obtained oil by drilling into the sand rock, he concluded to do likewise. Not having the means to procure the necessary implements to carry his resolution into effect, he was obliged to seek for assistance, but for some time his efforts were in vain. Finally a merchant in Franklin, who became enlisted in the enterprise, sold him iron on credit, and he manufactured the tools himself. He then erected a derrick and by means of a spring pole drilled the well to the depth of 72 feet, when he struck a heavy oil in the first sand. He then put down the tubing and commenced pumping by hand, with a common pump, at the rate of 10 barrels per day, which he readily sold for \$30 per barrel. The success of the well occasioned considerable excitement. A writer at the time says, "The town almost involuntarily pored forth its inhabitants to witness the natural curiosity. The attendants at court (which was then in session) went into a "committee of the whole," on the state of the oleaginous condition of the country, and adjourned to the Evans well. Attorneys, jurymen and witnesses who were concerned in the various cases then pending in the court of common pleas, suddenly became a self constituted

judicial tribunal to decide upon the merits of this uncommon cause of public excitement."

Mr. Evans, having raised in a few days money sufficient to enable him to purchase an engine, he commenced pumping by steam power. The yield of the well was variously estimated at from 20 to 40 barrels in 24 hours. He was offered \$50,000 dollars for an undivided half interest in his well and refused the offer, as his income then was probably not less than \$2,000 per day.

This well has earned the fame of giving occasion for the famous saying, "Dad's struck ile." The story is vouched for as true, and runs as follows: Mr. Evans had a daughter, who was courted by a young man living nearby, and the course of their love ran smoothly enough until the ill starred day when the damsel's father reached the first sand and success in his well. On the evening of this day the swain, not dreaming of anything less pleasant than moonlight and love, called on his sweetheart and was met coldly at the door and promptly informed that he needn't trouble himself to come there any more, for "Dad's struck ile."

The quality of the oil obtained in this district is not the common illuminating oil, but lubricating oil of the best quality, being similar to the best West Virginia oil, which is 28 degrees gravity, while that of Franklin ranges from 30 to 32 degrees, and is now taking the lead in the markets of the world as a lubricator.

At the present time the production is estimated at 150 barrels per day. The largest production having been reached in the early part of the excitement, amounting to 1,250 barrels per day, which was caused by the striking of a number of large wells on the Galloway farm, one of which produced 150 barrels per day. The number of wells now pumping will reach about 1,150, many of which produced between 40 and 50 barrels each per day, when first drilled. Not a few of the wells included in the above estimate have been in operation from 40 to 44 years, quite a number of which produce a very small quantity of oil, but such wells are only pumped by "heads," once, twice or three times a day.

The depth of the wells in this district averages from 260 to 700 feet. The oil bearing sand and rock is from 50 to 80 feet in thickness, being an open, pebbly rock.

HISTORY OF GALENA OIL, FRANKLIN, PA.

Names of the First Brands of Oil Manufactured and Sold—Coach, Engine, Car and Machinery Oils.

The lead process for mixing heavy Franklin oil was protected by letters patent of the United States by Charles Miller and John Coon. Their first refinery was built in 1869, near the James Evans well, the first oil well drilled in Franklin. The refinery was a very small one, located near the junction of the Allegheny river and French creek. After a short time R. H. Austin was taken in as a partner. The firm was then known as Miller, Coon and Austin, refiners. In a short time the refinery was destroyed by fire. A large kerosene refinery half a mile up the creek was vacant and for sale on reasonable terms. This was at once pur-

chased and the firm, strengthened by another valuable accession, was reorganized on a solid basis as the Galena Oil Works. Later Galena Signal Oil Works of Franklin, Pa.

ECLIPSE LUBRICATING OIL WORKS, FRANKLIN, PA.

The manufacture or refining of lubricating oils has for years been an important industry at Franklin. The Eclipse Lubricating Oil Works are located there and are the most extensive of its kind in the world, and have a capacity of 10,000 barrels per day, and generally keep the concern running up to this point. A ready market is found for the oils in England, Prussia, Austria and Russia. The company are now making arrangements for supplying the governments of Prussia and Russia for use on railroads, arsenals, navy and other public works. Oils were exhibited by the company at the Vienna exposition and were awarded a first medal and certificate for lubricating oils made from petroleum. I ought here to observe that the mode of refining adopted at these works is under patent, granted to H. W. C. Tweddle, the general manager of the company, in 1873, which latter own the patents and use them exclusively.

Eclipse Lubricating Oil Works, Franklin, Pa., organized 1868. Capital stock of the company was \$200,000. The following is a list of the company's officers for 1873: A. G. Egbert, president; Chas. W. Mackey, vice president; H. W. C. Tweddle, general manager; W. H. Howard, secretary; W. M. N. Hayes, treasurer; Hon. John S. McCalmont, solicitor.

The Eclipse oil refineries, as stated, were started by Dr. H. W. C. Tweddle, an English chemist, in 1868. Dr. Tweddle interested a number of local oil producers who supplied crude oil in lieu of money to a very large extent. The vacuum process was first used. A battery of six 80-barrel stills was installed by this company, expecting to handle 1,000 barrels of crude oil a week. The enterprise went through various vicissitudes and finally into the sheriff's hands. It was bought at a sheriff's sale by the Standard Oil Company and was the first purely lubricating oil works the Standard owned. From the day the Standard Oil Company acquired the property until the present time its history has been one of continuous progress and success. Very largely the handling of the Franklin crude oil has been discontinued and the crude used at this works is the third sand oil.

The works has grown from a small plant covering about four acres until now it covers 125 acres and stretches something over 6,000 along the Allegheny river. They are handling 10,000 barrels of crude oil a day and make every commercial product manufactured from petroleum. There is only one other place in the world where this is done.

A large proportion of the products of this refinery are distributed all over the world, going to South Africa, Australia and the far east, as well as Europe.

Among the products they are turning out about 25,000 barrels a month of filtered cylinder oils and about 100 barrels a day of paraffin wax. This last por-

duct is almost entirely exported and has become one of the great commercial products of the country, having been put to a great many uses in the manufacturing world, and is being constantly introduced into new channels. A great deal of it is made into candles, but large quantities of it are used as an insulating material in conduits and subways connected with electrical plants, as a substitute for gutta percha. It is also utilized in many other ways that would be too numerous to name.

This particular refinery turns out also 3,000 or 4,000 barrels a day of illuminants, or burning oils, of various grades, and has on its list about 130 current products that it is manufacturing.

From 600 to 700 men are employed, and in the last five years the facilities have been materially increased, there being a constant endeavor to keep up with modern improvements. As an instance, a few years ago it was supposed that the acme of utility had been reached in 100 horse power tubular boilers. This company had something over a hundred of them in use. Today they have eight 600 horse power upright boilers of the so-called water tube type, and are installing them as fast as the others give out.

From the old Tweddle still of 80 barrels they have gone up to 1,500 barrel stills. From the old method of having steam pumps scattered all over the works, they have condensed them and are running so-called power pumps, having them assembled in three or four central points and running with large Corliss engines. They have no steam end to the pump, but a fluid end only. There have also been great improvements in other lines—in fact, all through this refinery has kept to the front with the most modern and latest appliances for the conduct of their business.

Col. S. C. Lewis is the head of the concern, having held the position of president for many years. For the past 20 years, by his untiring and indefatigable labor he has built up the works to its present large proportions. During 18 of the past 20 years Mr. Lewis has been ably seconded in all of his good work by Duncan McIntosh, his assistant, and the secretary and treasurer of the Eclipse. Mr. McIntosh is a man of large caliber, a business man of ability. R. J. Hanna, an old Franklin boy, is superintendent of the Eclipse Oil works and is the right man for the place. Mr. Hanna has demonstrated by years of preliminary work that he is competent to fill the position and has won the confidence and respect of the men under him.

Many fortunes have been made out of heavy oil since its discovery at Franklin, Pa., in 1859.

THE GALENA—SIGNAL OIL COMPANY.

The first heavy oil well was struck on French creek, in Franklin, Pa., in November, 1859, by James Evans, a blacksmith, who at the time was in straitened circumstances. The news of Drake's success near Titusville, Pa., started him to thinking. He hammered out rough drilling tools and with his son Henry rigged up a spring pole and bounced the drill in his water well. At 72 feet a crevice was encountered and the tools

dropped, breaking off a fragment of iron, which obstinately refused to be fished out, so pumping by hand was resorted to, and the two men plied the pump vigorously. A stream of dark green fluid gushed forth at the rate of 25 barrels a day. It was heavy oil, about 30 degrees gravity, free from grit and as smooth as silk. The greatest lubricant the world has ever known was thus unearthed.

Steam power later on increased the yield to 70 barrels a day, and inside of a year, on July 1, 20 wells were producing and 22 were being drilled, 15 of the former within the borough limits on November 1 yielding 140 barrels a day. The first flowing well was struck on May 15 to the tune of 100 barrels a day. The first shipment of oil was on April 27, to Pittsburg by the steamboat Venango, and consisted of 400 barrels. The oil then brought \$30 a barrel.

Gradually the field was extended, but heavy oil has never been found, except in isolated spots, outside of about five square miles to the north of Franklin, Venango county, although a few small wells have been drilled on the southern limits of the city. The field is clearly defined and wildcatting is no longer indulged in. The runs of heavy oil through the Franklin pipe line average 4,000 barrels a month, and in addition there is perhaps a further production of 1,000 barrels which does not pass through the lines, making a total production of 60,000 barrels annually. The production in 1875 aggregated 130,000 barrels. In 1877 it dropped to 88,000, and in 1878 to 70,000. Thirteen hundred wells produced 60,000 barrels in 1883, so that it will be seen that the field is holding its own in good shape. It would be interesting to know the exact number of wells in the field, but there is no data at hand from which this is obtainable. One well posted producer places the average production for each well as low as a barrel and a half a month, but an average of two barrels would probably be more correct.

Many wells have been pumping for 30 years, and some as long as 35 years. In fact, three wells are still being pumped on the lease where the first well was struck in 1859, although the original well is not one of this number. Each lease is now fitted up with a pumping rig, from the power house of which radiate the rod connections that make it possible to operate as high as 80 wells with one boiler and engine or with a gas engine. This modern device connects wells which are far apart by coupling them with the rods, which are placed about 10 feet above the ground. The downward stroke of one helps the upward stroke of the other, each pair nearly balancing. This enables the owners of small wells to pump them at the least possible expense. It is worth traveling a long distance to stand on the hill and watch the pumping of the wells belonging to Baum, Grimm, Cain, Grant, Sheasley and James (some of the largest operators), some of them a mile from the power that sets the strings of connecting rods in motion. If some of these wells give forth but a few gallons a month, the whole goes to constituting a total production which makes any one of these leases a very valuable piece of property.

For some time heavy oil was used principally in its natural state, being the finest lubricant for all kinds of machinery just as it comes from the wells. The en-

tire product of the Franklin field, with the exception of that of the Smith farm and one or two other leases, is now and has been for years purchased by the Galena Signal Company, of which General Charles Miller is president and Representative Sibley a large share holder. The price remains stationary at \$4 a barrel at the wells. As this is the only oil that will stand the freezing test of 20 degrees below zero, it is a great factor in the oils which that company produces for the railroads of the United States and other countries, for it is a fact that no matter in what direction you may travel in this country, the cars are oiled with Galena oil, while the headlights are furnished with signal oil. That company oils the rolling stock of 98 per cent of the railroads in this country, Canada and Mexico, and already has a good foothold in England and on the continent.

It will be news to all readers to learn how this company contracts to furnish its oils. It has a department whose business it is to know the exact amount of rolling stock owned by each railroad and this is the basis upon which they operate. Knowing the mileage of each road they are able to, submit figures to oil a road for so much a mile by the year and this is the way their contracts are written. They employ a force of half a hundred men, most of them old engineers, who are located in various parts of the country, whose duty it is to go on the locomotives with the engineers, either to remedy any defects where the oil does not appear to give satisfaction, or to show them how to economize if they think they are too extravagant in the use of the oils. These men, along with the salesmen, meet in Franklin, Pa., in June of each year to discuss the business and profit from each other's experience. The new Galena-Signal office building is provided with a large and finely furnished lecture room for their especial use on these annual occasions.

Within the past few months when freight has been so congested on all the railroads, the Galena-Signal company has experienced great difficulty in delivering their oil to the consumers, without which traffic on the different roads would be brought to a standstill. So many cars were lost that the railroads found it impossible to locate them in the usual manner, and the Galena-Signal Company resorted to the very expensive expedient of placing men at the different terminal points and doing all their tracing by the liberal use of the telgraph.

The Franklin heavy oil district has turned out many a fortune and is still a great factor in the prosperity which the city is now enjoying.

TORPEDOES—NITRO-GLYCERIN.

THE OIL WELL DRILLER would be singularly incomplete without mention of the Roberts torpedo, for to this remarkable invention may be attributed, more than to any other agency, the success which has attended its prosecution. I propose, therefore, to present, as concisely as possible, a history of this invention, from its inception to the present time.

In 1862 Col. E. A. L. Roberts, then an officer in the

volunteer service, and with his regiment in the army of the Potomac, in front of Fredericksburg, conceived the idea of exploding torpedoes in oil wells for the purpose of increasing the production. He made drawings of his invention and in November, 1864, made application for letters patent. In the fall of the same year he constructed six torpedoes and on the second of January, 1865, he visited Titusville, Pa., to make his first experiment. Col. Roberts' theory was received with general disfavor, and no one desired to test its practicability at the risk, it was supposed, of damaging a well. On the 21st of January, however, Col. Roberts persuaded Captain John Mills to permit him to operate on the Ladies' well, on Watson flats, near Titusville. Two torpedoes were exploded in this well, when it commenced to flow oil and paraffine. Great excitement of course followed this successful experiment and brought the torpedo into general notice. The result was published in the papers of the oil region, and five or six applications for patenting the same invention were immediately filed at Washington. Several suits for interference were commenced, which lasted two years, and decisions in all cases were rendered declaring Col. Roberts the original inventor.

Notwithstanding the success of the first experiment, operators were still very skeptical as to the practical advantages of torpedoes, and it was not until the fall of 1865 that they would permit the inventor to operate in their wells to any great extent, from fear that the explosion would fill them with rock, and destroy their productiveness.

In December, 1866, however, Col. Roberts exploded a torpedo in what was known as the Woodin well, on the Blood farm. This well was a dry hole, never having produced any oil. The result of the operation secured a production of 20 barrels per day, and in the following month, January, 1867, a second torpedo was exploded, which brought up the production to 80 barrels. This established for the torpedo, beyond question, all that Col. Roberts had claimed, and immediately the demand for them became general throughout the region. I present below a tabular statement of the result of the first 38 wells torpedoed:

THE RESULTS OF THE TORPEDO.

NAME AND LOCATION OF WELLS	Increase in Barrels	Pumping & Flowing

Gardner's well, Pioneer Run.....	8	Pumping
A. Aldrich, Tip Top well, Tarr farm..	35	Pumping

In 1865, immediately after operating on the Ladies' well, a company was organized in New York for the purpose of prosecuting the business with the following officers: President, William S. Fogg, 24 Fulton street; vice president, James W. Simonton, 145 Broadway; secretary, W. B. Roberts, 47 Bond street; treasurer, Erastus Titus, 283 Washington street; counsel, Hon. Gilbert Dean, 74 and 76 Wall street; superintendent, Col. E. A. L. Roberts, Titusville, Pa.

Trustees: Walter B. Roberts, Wm. H. Dwinelle, M. D., A. G. Trask, Erastus Titus, Gilbert Dean, Wm. S. Fogg, Erastus Titus, jr., Wm. H. Akin, James W. Simonton, Wm. H. Chapman, E. A. L. Roberts.

About the time the Woodin well was struck (1866) the wells of the region had materially decreased, and but little oil was produced. There was general apprehension that the territory had been drained and would soon be quite exhausted unless new belts were discovered. But the application of torpedoes immediately effected a revolution, and during the summer of 1867 the wells on Oil Creek were increased several thousands barrels. Immediately thereafter Col. Roberts introduced nitro glycerin as an explosive for his torpedoes and established a manufactory near Titusville and during the year 1872 some 25 tons of this compound were used for this purpose alone.

The developments of Tidioute, Shamburg and other districts followed the operations of 1866, and the employment of torpedoes continued with the same striking success. And it may be safely stated that up to the present time over one-third of the oil production has been dependent upon the use of this invention.

In the summer of 1866 infringements commenced by different parties throughout the oil region, and suits were instituted by Col. Roberts against the parties and injunctions granted. In 1868 the Reed Torpedo Company was organized, with several oil operators at its head, for the purpose of infringing and

breaking down the Roberts patent. Suits were commenced by Col. Roberts against all parties and carried to a final hearing before Judge Grier of Philadelphia, and decisions were given in favor of Roberts and judgments rendered to the amount of \$10,000. Numerous other suits were commenced and final judgment rendered, among which was one against James Dickey, which was tried before Justices Strong and McKenan in Washington, in January, 1871. An elaborate opinion was rendered in this case in favor of Roberts. The case was regarded with great interest in the oil region, from the magnitude of the considerations involved and the newspaper controversies upon the subject. Since the great rubber suits no patent suit has elicited more general attention, involved so important consideration, or its termination more anxiously awaited. The sum of \$50,000 had been subscribed among the producers for the purpose of breaking down the Roberts patent, and such a result was looked for with entire confidence. Few cases have ever enlisted higher professional ability, or been more earnestly contested. Messrs. Bakewell and Christy, of Pittsburg, and Geo. Harding, of Philadelphia, conducted the case for Roberts; and Messrs. Kellar and Blake, of New York, were employed by the oil producing interest for the defence. The decision was rendered in May, 1871, and was in favor of Roberts. It was made the occasion of a very elaborate and exhaustive opinion, which, as a matter of course, was received with general disapprobation on the part of the producers and occasioned great disappointment. Very many suits were brought for infringements, and over \$100,000 was expended by the inventor in protecting his legal rights.

Roberts torpedo patent for torpedoing oil wells was dated June 1, 1863; reissued June 1, 1873; expired June 1, 1879.

NITRO-GLYCERIN.

A POWERFUL EXPLOSIVE.

The process of manufacture of nitro-glycerin was discovered by Prof. Ascanio Sobrero, an Italian chemist, in 1846. Nitro glycerin was first successfully used by Alfred B. Nobel, a Swedish engineer at Helenborg, Sweden, in 1861. Nitro glycerin has 13 times the power of the same bulk of gunpowder, and eight times the power of the same weight.

Compounds in nitro glycerin: Sweet glycerin, nitric acid and sulphuric acid. The word nitro-glycerin is a compound word. *Nitr*, from nitric acid, *o* from sulphuric acid and glycerin from sweet glycerin—nitro-glycerin.

SWEET GLYCERIN.

In composition is a sweet substance that forms the basis of fatty matter; a transparent liquid, without color or smell, of a syrupy consistency and is used as a medicine.

Nitric acid is a colorless fuming fluid which discolorizes indigo, stains the skin, and when added to cotton forms an explosive called guncotton.

Impregnated with nitric acid. Nitric acid is composed of oxygen and nitrogen or azote, from its fatal effects upon animal life, but more generally causing a severe headache to those who handle it in the proportions of two equivalents of the oxygen to one of the nitrogen.

Sulphuric, pertaining to sulphur. More strictly designating an acid formed by one equivalent of sulphur combined with three equivalents of oxygen, as sulphuric acid, formerly called vitriolic acid or oil of vitriol.

Nitro-glycerin is formed by dissolving glycerin in equal parts of nitric and sulphuric acids, agitated together and washed through water, it begins to decompose at 150 to 180 degrees F. and explodes at 450 degrees; also if allowed to become solid at from 40 to 45 degrees. The red danger mark on all thermometers used for making nitro-glycerin is 100 degrees.

NITRO-GLYCERIN.

How it is Made and What Happens When it is Destroyed.

Nitro-glycerin and its peculiarities are little known, even in localities where it is made. Probably in no other place in the United States is there such an amount of the explosive used as in the oil fields. The explosive is made from a composition of acids and glycerin. It is generally pale yellow in color. It is odorless and has a sweet, pungent, aromatic flavor. If touched by one's tongue, or even brought into contact with the skin, it will produce a severe headache. A large tank, called an agitator, is where the fluid is mixed, and the mixture is composed of equal parts of nitric and sulphuric acids. Inside the tank are several paddles, like those of a churn, and it is here that the real danger in the manufacture exists. The paddles are put into operation and a steady stream of glycerin is turned into the vat until 220 pounds are thoroughly mixed with 1,500 pounds of acid. The chemicals coming in contact produce an intense heat, and in order to obviate the danger cold water is run through pipes encircling and running through the vat. At 400 degrees Fahrenheit a red vapor, almost like fire arises. If cutting off the supply of glycerin in the agitator does not lower the temperature, it is time to say farewell. Before 450 degrees are reached nothing but atoms of the structure and its contents are left.

However, it is a fact that all the thermometers used by the makers of nitro-glycerin have a red danger mark at 100 degrees.

In its manufacture water is used to flood the work-room, since a drop falling on the floor might lead to an explosion. Not a nail is to be found in the floor of the factory, and the visitor is cautioned not to drag his feet. Those who make the dangerous fluid say that one may pour a barrel of nitro-glycerin from a high building to a cement walk below and it will not explode, but a small quantity dropped from the same height in a can will blow the building up. A sharp concussion instantly touches it off.

The average production of glycerin from 1,500 pounds of acid and 220 pounds of glycerin is about 140 quarts. While nitro-glycerin magazine explosions are not rare, the real cause of the blowing up never becomes known. Those who are close enough to see the cause always go up with the building. The average time for a shooter of nitro-glycerin or maker to remain in the business does not exceed 15 years.

Very few ever recover from a nitro-glycerin accident and those who are killed have their bodies torn to atoms. A great number of persons have been killed by the so-called empty nitro-glycerin tin cans. Beware of the dangerous empty nitro-glycerin cans.

DYNAMITE.

(Dynamite, from the Greek, Meaning Strength.)

How to make dynamite. The most powerful dynamite is made of 60 per cent of nitro-glycerin, 30 per cent of wood pulp—sawdust, and 10 per cent of nitrate of soda. The lowest grade of dynamite is made of 20 per cent of nitro-glycerin, 60 per cent of wood pulp—sawdust, and 20 per cent of nitrate of soda. Granite dust is used instead of wood pulp—sawdust—for blasting salt. Wood pulp blackens the salt.

TORPEDOING OR SHOOTING AN OIL WELL.

When the productive rock strata, oil sand, has been reached the next step in the process is to shoot or torpedo the well, unless it has proven a gusher, or flowing well. This plan for increasing the production of oil was devised in 1862 by Col. E. A. L. Roberts of the United States army, and like almost every other new idea, it met at first with great opposition on the part of the oil men. After four years of argument Colonel Roberts was given permission to experiment with the wooden well near Titusville, which had never produced any oil. The first shot made it a producer at the rate of 20 barrels a day, while a second charge, put down a month later, brought the daily flow to 80 barrels.

The operation is simple enough. When a well is ready to be shot, the torpedo company is notified, and the charge of nitro-glycerin is sent to the spot in cans carried in padded compartments in a light spring wagon. Although the driver knows the nature of his load, he becomes oblivious to the danger, and often races at a reckless speed over the rough mountain roads. Every one gives him a wide berth, however. When an accident does occur there is nothing left to tell the tale.

A charge usually consists of about 80 quarts, or 265 pounds of the explosive, and it is carefully low-

ered into the well in shells about six feet long and five inches in diameter, by a hemp rope one-quarter inch in diameter, and 3,000 feet long. The rope is coiled on an adjustable reel attached to the balance or fly-wheel of the engine. The engine is located in the engine house of the well. The reel is governed with a brake by the man known as "a shooter." The rope passed over the walk from the reel in the engine house into the derrick, to and over a small pulley attached to the drilling stem or bailer by a piece of soft rope about five feet above the casing head. The stem rests on a block of wood near the casing head. If the bailer is used the lower end or dart is tied to the casing head with a piece of soft rope. The casing head is the top cover of the well on the floor in the center of the derrick. On the end of the torpedo rope is attached a small hook. The top of each shell is provided with a bail. The bail of the shell is hung on the hook on the end of the torpedo rope near the small pulley over the center of the hole. The other end of the rope is coiled around the reel in the engine house. The reel is locked by a brake. Then the shooter begins to fill the shell. This is done by pouring the nitro-glycerin from the eight-quart square tin cans which the nitro-glycerin is shipped in. After the shell is filled the shooter goes to the engine house and loosens the brake on the reel and begins to unwind the reel very slowly. As the reel unwinds the shell lowers into the well. When the shell reaches the bottom of the well this reduces the weight on the rope and gives the reel a light jar. This tells the shooter the shell is on the bottom of the well. Ten or fifteen feet of rope is unwound from the reel. This slackens the rope in the well and unhooks the hook from the bail on the shell. The brake is again locked on the reel, and the engine is reversed and run backward. This reels the rope out of the well. This is repeated until all of the shells are lowered into the well, the bottom of each being made conical so it will fit snugly into the top of the one next below it. On the top of the uppermost section is a cap or exploding device called a squib. Everything being in readiness the shooter drops into the well a 5-pound piece of iron called the "go-devil," and at once seeks a place of safety from which to watch the results.

In the shallow wells the nitro-glycerin is set off by an electric battery. In wells of 1,000 to 1,500 feet deep jack-squibs are used. These are tin shells about two feet long by two inches in diameter, and are loaded with dynamite, cap and fuse. When the well is ready to be shot the shooter lights the fuse of the squib in the engine house and walks out to the well with the squib and drops it in the hole. From a two thousand foot well no report of the explosion is perceptible, but after a few minutes a gurgling liquid is heard rushing up to the surface, and then with a grand burst the fountain of oil and gas bursts forth, accompanied by a shower of bits of rock and pieces of the shells. Nothing is done to stop the first flow from the well, and at least 25 or 30 barrels of oil are lost at every shot.

OIL COMPANIES.

A FEW SPECIALLY MENTIONED.

THE HARMONY OR ECONOMITE SOCIETY.

It was not the intention to give special notice of the existence of individual associations and companies. I, however, make exceptions in a few instances. I do so because these present interesting and peculiar features. In the case of the Economite Society their history is of marked interest to the public, because of their strange organization, their singular history and their great success as oil operators. The Harmony Society was founded near the beginning of the nineteenth century by George Rapp and a colony of emigrants from Wurtemberg, numbering over 100 families. They belonged to that class of devout people in Germany to whom in the previous century had been given in reproach, the name of Pietists. Dissatisfied with the state of religion in the established Lutheran church, they gave themselves to the more diligent private study of the Scriptures, and to the edification of each other in social assemblages for conference and prayer. Two men arose among them who, by force of character, became leaders. These were Michael Hahn and George Rapp. They were earnest, zealous men, who magnified their office by gathering together on the Sabbath the people who sympathized with them, and administering to them words of instruction and encouragement.

Hahn had commenced the work of preaching at an earlier period than Rapp. He was a man of more literary culture, and made use of the press in the work of reformation. He was a humble farmer, with limited education, but he was a man of deep religious spirit and great force of character. Feeling himself constrained to proclaim to others the religious convictions which filled his own heart, he soon gathered around him a number of followers of kindred views. The work grew gradually until several hundreds looked to him as their leader. These movements excited the opposition of their more worldly neighbors, and especially of the clergy, whose ministrations they neglected. Hahn and his adherents, under the name of Pietists, still retained their connection with the established churches, giving at least occasional attendance on the ordinances as then administered. Like the first Methodists in England, they hoped to bring about a reformation within the church itself. They thus escaped in great measure the persecutions which arose against Rapp and his followers, who refused to attend upon the ministrations of the regular clergy. They were called Separatists, and although demeaning themselves as quiet, orderly citizens, and paying their dues both to church and state, they became objects of odium, and were denounced to the civil authorities by the offended clergy. They were persecuted with fines and imprisonment, and their appeals for redress were in vain. After long endurance and after having made an ineffectual application to their own government for permission to form a settlement by themselves, they

determined to emigrate. In the year 1803 George Rapp visited this country in search of a location suitable for a colony. He purchased a large tract of land near Zelienople, in Butler county, Pennsylvania, and in the autumn of the ensuing year three ship loads of colonists arrived.

Before leaving Germany they had embraced some peculiar views of religion and social economy, to which they were led, as they supposed, by their careful study of the New Testament. They had generally adopted the millenarian theory of the personal and pre-millenarian advent of Christ, which they regarded as near at hand. They were also disposed to follow the example of the primitive Christians, in having all things in common. It was not, however, until some years later that this practice became a law among them. Soon after their settlement in this country marriage was prohibited, celibacy being strictly adhered to by members of the society.

The society for some reason changed their location, having purchased lands in the valley of the Wabash, in Posey county, Indiana, disposing of their property in Pennsylvania at a great sacrifice. After a residence of 10 years on the Wabash they again determined to change their location, finding the country unhealthy and their neighbors ignorant, vicious and turbulent. It is said unpleasant collisions occurred between them and the peacefully disposed Harmonists. These circumstances induced them to think of returning to Pennsylvania.

In 1825 they made a purchase of their lands in Beaver county, Pennsylvania, on the Ohio river, about 18 miles from Pittsburg. They built a steamboat and removed in detachments to their new and final place of settlement. Here they founded a town, to which they gave the name of Economy, and from this circumstance the popular name of the society is derived.

A few years prior to the discovery of oil the Economists' Society came into possession of a large tract of land, some 6,600 acres, opposite Tidioute, in Warren county, Pa. This land was originally purchased as a lumber enterprise, for the supply of their own wants and to meet the extensive demand for timber at their mills in Economy. This tract proved to be valuable oil territory, as is now well known. When oil was first discovered it was a great and unexpected addition to the value of their lands, and they generously entrusted the management of it to the former proprietor, with such share of the profits as enabled him to retrieve his shattered fortune and place his family in independent circumstances. They then took the whole business into their own hands.

In the early part of the summer of 1860 oil was found immediately below the river tract belonging to the society, which created great excitement, and many persons sought to purchase or lease the land from them, but fortunately for them a law suit was then pending for the possession of this tract, which prevented leasing or sales. In September of the same year they took actual possession of this tract, located five different wells upon it, made contracts for drilling them, and engaged workmen for the vigorous development of the property. The first two wells drilled were entire failures. The third had a pretty good show of

oil, but finally proved to be nearly worthless, after three months of hard labor and the expenditure of a large amount of money. The prospect of success now looked gloomy, but they hoped and worked on, and unexpectedly at the depth of 99½ feet the drill struck the first sand, and in a few minutes large quantities of oil and water were thrown high above the derrick in a continuous stream. This well flowed steadily for six months, gradually decreasing in production, then stopped and flowed periodically, and at the end of nine months ceased to flow, and afterwards was pumped for a number of years. Immediately after the striking of the flowing well, a new well was struck near to it, which at first produced but little oil, but after some time proved a good well, and continued to produce for eight years.

During the spring of 1861 eight wells were finished, four of which were failures, and four of them good shallow wells, of not more than 150 feet in depth.

In March, 1862, the society had four good producing wells; had erected a number of buildings, made roads, constructed wharves—a cooper shop, with a stock of several thousand barrels to send their oil to market; a blacksmith shop, carpenter shop and all the necessary tools.

The history of the society's operations for the years following, up to 1868, is varied, meeting like all other operations, with successes and reverses, but still maintaining their position against all the drawbacks incident to the business.

In 1868 the society met with marked success, having sold during the year upwards up 100,000 barrels of oil, and in 1869 over 75,000 barrels.

From the records of their drillings I find that the wells vary in depth from 99½ feet to 578 feet, and the oil bearing sand from 12 to 55 feet in thickness. Their largest well was 250 barrels a day.

It is something remarkable that the Economites never pumped their wells on Sunday. They declared that their wells did not suffer thereby, though of like character to those of their neighbors, being subject to water, which was presumed to injure wells by standing on the oil bearing rock. I dare say the fact of the Economite wells being so long lived is an argument in favor of their practice of cessation of pumping on Sunday.

In a few instances the trustees leased small portions of their oil territories, and in all such cases they made binding, it being in the lease, not to pump on the Sabbath. Their operators said that they have never known their wells injured by cessation of pumping on Sunday.

The society was represented in all its business matters by two trustees, one of whom formerly took especial care of their oil interests. We refer to Mr. R. L. Baker, now deceased, who was ably assisted by Mr. Jacob Henrici. After Mr. Baker's death Mr. John Lenz was selected by the society to fill his place.

There were no members of the Economite Society on the Tidioute property. The business was conducted by their agents, under the supervision of the trustees, who made frequent visits of inspection. I ought not to omit to mention that most of the land of the

Tidioute property was valuable as timber land, on which the society has two large sawmills.

The Economites are very few in number now, as death is thinning them out, and their adoption of celibacy and their numerous quarrels, as a matter of course put an end to their existence, and their vast property has been divided and sold to other parties.

THE LOWER OIL FIELD.

ST. PETERSBURG, FOXBURG, PARKER'S LANDING AND
BUTLER COUNTY, PA.

In the year 1860 Thomas McConnell, W. D. Robinson, Smith K. Campbell and Col. J. B. Finley of Kittanning, purchased two acres of land on the west bank of the Allegheny river, about 90 rods north of Tom's run, from Elisha Robinson, sr., and organized the Foxburgh Oil Company, consisting of 16 shares, and commenced putting down a well, which reached a depth of 460 feet, when an accident occurred to obstruct operations for a few days. In the interval the war broke out and the excitement incident thereto stopped all further work on the premises, and the well was abandoned.

Subsequently the same parties purchased 100 acres, known as the Tom's run tract, from Mr. Robinson, for which they paid \$50 per acre. In 1865 the company sold about 30 acres of this purchase to a number of gentlemen in Philadelphia, for the sum of \$20,000. On these 30 acres the Clarion and Allegheny River Oil Company put down their first well, which struck oil in October, 1865, the first to produce in that locality.

Many were the scoffs and jeers and insulting remarks made about these first operators. They were held up to ridicule by men of means, as well as by others, and were euphoniously called "crazy," having "oil on the brain," etc. The followers of these pioneers are now, however, numerous.

It is remarkable that the well of 1860 was put down on territory which has since proved dry, and had it then been finished would have undoubtedly been a failure, and possibly prevented all future development in this region. But it was not to be so. It was abandoned for a period of four years before the Allegheny and Clarion River well had been commenced, and which, proving a success, gave this field to the world at a time when Venango county was rapidly declining in product.

The Pennsylvania oil region is divided into two grand divisions, termed the upper and lower region, or the creek region and the river or Parker's Landing region. The tendency for operations has of late moved towards this lower division of the oil field. Here the great bulk of the present production is obtained and here are to be found the leading men of this great industry. From the first developments in this section operations have been conducted on the theory of a belt, or series of belts.

In 1868 some wells were struck at Lawrenceburg, situated on the hill just above Parker's Landing. A well known operator, Mr. Marcus Brownson, of Ti-

tusville, acting on data—the result of actual operations—projected a line or belt from this point north, 22 degrees east, and south 22 degrees west, in breadth about five miles, and in length as now developed about 35 miles, and venturesome operations soon opened up a belt, the end of which has not yet been reached in either direction. Many were stimulated to wildcat, and it was found that northeast of this, which may be termed the central belt, is one extending up the Clarion river, out through Turkey run, in Clarion county. Southward it passes a little to the west of Millerstown, Butler county. To the westward of the eastern, or central belt, is another, extending and developed from the Russel farm, opposite Antwerp, in Clarion county, to a point abreast of Lawrenceburg on the east, with the Robinson, Black and Grant farms, which may be termed the western belt. Then there is a break in the development in this middle belt of some three miles, until the Stonehouse property is reached on the west line. This belt will pass not less than five miles to the left, or east of the borough of Butler, Butler county. Between the central and east belts the distance is about one mile; between the central and west belts about three miles. The eastern belt is of the greatest importance; in fact, the middle belt appears to run into it, after they cross Bear creek, east of Lawrenceburg. (I ought here to say that many operators differ in their opinions from this last suggestion.) Actual developments northeast of Lawrenceburg show that this eastern belt runs through Parker's Landing, Foxburg, St. Petersburg, Antwerp, etc. Below, and just across Bear creek, are the Say and the Stonehouses farms. Then follow, lying end to end, the Fletcher and Campbell farms, the Martin and Hutchinson, the Gibson and Turner farms, the Robert Campbell and Marcus Brownson farms, the Mayville tract, the James Campbell and Ward farms, the Canada Oil Company and A. L. Campbell and Wilson farms, the Blaney and Dougherty farms at Petrolia City, the McClymonds, Wilson and Bank farms, the J. B. Campbell and the Adams farms, the Story and Riddle farms at Karns City, and last the Moore and Hepler farms, now known as the Angel Oil Company's tract, which consists of 270 acres, and lying in the Millerstown belt. From Bear creek to the Angell tract the distance is about 10 miles and the average width four miles, giving an area of 40 square miles developed or in process of development.

Prominent among the first wells of this region, and perhaps I should say, the belt just described, was the noted one on the McClymonds farm, at the date of its completion, one mile and a half in advance of other developments. It was drilled some 1,400, 50 feet deeper than the wells thereabouts, and the owner, fearing the rock had run out, sold it as a dry hole to Morehead, Tack and Preston, who purchased it solely on the strength of their belief in the existence of belts. Three hours after they had purchased it the drill entered the sand, and before the well could be tubed 700 barrels of oil flowed out of it. Their success encouraged others, and the intervening territory was rapidly developed. A town called Karns City, a compliment to Mr. S. D. Karns, a well known operator, was soon built up.

The success at Karns City greatly emboldened oper-

ators, and the line of the western belt was then projected in the direction of Butler, seven miles out. Several wells were started on the Jamieson farm, in the latter part of the year. Four of them produced 200 barrels a day for a considerable time. This point has since been called Greece City, and now has a population of 4,000 or 5,000. This is the largest jump ever taken, there being some four or five miles of undeveloped territory in the rear. On the Angell Oil Company's territory, lying along the line of the central or eastern belt, successful strikes have but recently been made, and thus all the territory near or between it and Fairview, a distance of some two miles, has been opened.

The St. Petersburg district, upon the east side of the Allegheny river (it may be said to be from one to eight miles from it, and its limit has not yet been reached) is northeast of the Butler oil field. The general direction of the belt, like that just described, is northeast and southwest. Developments in this district were commenced in the summer of 1869 and the first well was struck in September of that year. This was the Mead well, south of the Clarion river and near its mouth. Soon after the Elephant well, near the first named, was struck. Parties then began to extend developments north of the river and in October following a well was struck there, and operations continued on up the Allegheny to where Foxburg now stands. The wells on this portion of the new field were not extraordinarily large. The pioneer who pushed developments back from the Allegheny to St. Petersburg was Marcus Hulings, who struck the Hulings or Antwerp well, in November, 1871. This well started up at the rate of 100 barrels a day, and maintained this production for some time. It is still producing oil, and pumps about seven barrels a day. Within two weeks after the Hulings well was struck 25 wells were commenced on the J. J. Ashbaugh and Dan Ritz farms, in and around the borough of St. Petersburg. The farms between the Allegheny river and St. Petersburg were soon taken up by active operators and derricks were rapidly reared all along the line. These farms are the Frederick Rupert, Whitting, Shoup, Collins, Foust and Keating. Then commenced the building up of St. Petersburg, which is now one of the important villages of the lower oil field. Early in the spring of 1872 building went on rapidly (it had previously been a farming settlement and center), as there was a large influx of population. Houses were put up at the rate of 25 a day. Shortly afterwards it was incorporated as a borough. The distance from the Allegheny to St. Petersburg is two miles. A quarter of a mile beyond St. Petersburg stands the village of Antwerp. St Petersburg contains a population of 2,500 to 3,000.

The thickness of the oil bearing rock in this district is 25 feet nine inches. The average depth of the well is 975 feet. The deepest is the Fountain well, which is 1,241 feet. The shallowest, the Antwerp or Hulings well, is 790 feet. These two wells are half a mile apart.

The lower oil field proper is varied and beautiful in scenery. The land is rolling, fertile and fairly cultivated. The homes of the old settlers bear the marks of peace and plenty. The hills and valleys contain

rich deposits of coal, and their bowels rivers of oil.

Recent developments have centered at points lying between and including Petrolia and Fairview on the north, and Millerstown on the south, and Karns City on the east, and Greece City on the west, all in Butler county, Pa., which comprise the best producing oil territory of late years. At no period in the history of petroleum developments has there existed such a large number of flowing wells as are to be found at the present writing, and at no time has there been so large a production of oil.

The country has been chiefly developed by combinations of individuals, some ventures being divided into sixteenths. The most prominent gentlemen engaged in developing this territory, are S. D. Karns, C. D. Angell, Parker, Thompson & Co., Lambing Brothers, Campbell Brothers, Fisher Brothers, Tack Brothers, Moorehead and Ripley, Robert Leckey, H. W. Scott, F. F. A. Wilson, Marcus Brownson, Dimick, Nesbitt & Co., John Preston, John L. and J. C. McKinney, and John H. Gailey, Vandergrift & Foreman, Phillips Brothers, H. L. Taylor, John Satterfield, Tarbell & Hess, and others not known to the writer.

THE MODOC DISTRICT.

Having in the early part of this chapter noted the lines of development and marked its progress, I will now proceed to chronicle the more recent developments with a brief sketch of the progress of the work.

We have already made mention of the striking of the Troutman well on the Troutman farm, in that portion of this oil field known as the Modoc City district. This famous well, which began flowing enormous quantities of oil on the 23d of March, 1873, is situated on a tract of land of some 55 acres, upon which a Frenchman named Troutman settled some four years since. A party of capitalists known as the Hope Oil Company, purchased the land about one year ago. This well created great excitement among operators, and soon extensive operations were commenced in the neighborhood. The amount of oil produced for the first few days is variously estimated at from 800 to 1,000 barrels a day. From the 23d of March to the 10th of September of 1873, this well produced, according to the pipe line company's receipts, 85,413 45-100 barrels. Add to this 3,000 barrels lost for want of tankage, the first few days of its production. The production on the 10th of September was 308 barrels, after flowing five months and 17 days. The Troutman is 1,440 feet in depth, and was sunk as a test well, the success of which soon attracted operators to the locality. Surveys were made and leases given out: The following shows the results thus far of this wonderful territory:

	Barrels.
The Troutman well, Troutman farm, struck 23d of March, 1873, now producing daily . . .	308
Capt. Grace well, John Starr farm, struck in July, '73, now producing daily	300
Boyer well, John Starr farm, struck in July, '73, now producing daily	300

Capt. Grace No. 2, John Starr farm, struck in July, '73, now producing daily.....	300
Percy & Beck well, John Starr farm, struck in July, '73, now producing daily.....	250
Brawley well, Jerry Starr farm, struck in July, '73, now producing daily.....	300
Captain Jack well, Harper farm, struck in July, '73, now producing daily.....	200
Dean well, Harper farm, struck in August, '73, now producing daily.....	300
Modoc well, Troutman farm, owned by Hope Oil Co., struck in August, '73, now producing daily.....	300
W. W. Thompson well, Morrow farm, struck in August, '73, now producing daily.....	350
Fleming well No. 1, Ralston farm, struck September 6, '73, at first produced at the rate of 700 barrels, and is now producing daily..	500
Fleming No. 2, Ralston farm, struck September 6, 1873, flowed at the same rate as No. 1, and is now doing daily.....	500
Tip Top well on the Troutman farm, started up at 700 on September 7, '73, and is now producing daily.....	500
Phillips and Vandall well on the Harper farm, struck September 1, '73, and started at 500 barrels, is now doing daily.....	300
Phillips well on the Sutton farm, struck on the first of September, '73, commenced at 500 barrels, and is now doing.....	300
Miller well on the Troutman farm, struck September 3, '73, commenced at 500, and is now doing daily.....	350
Gordon well, on the McClelland farm, struck August 28, '73, commenced at 350 and is now doing.....	200
Columbia well, on the Columbia Oil Co.'s tract, struck September 7, '73, commenced at 350, and is now producing daily.....	225
The Markham and Jock well, struck September 11, '73, produced daily.....	500
Capt. Grace well No. 3, on the Starr farm, was finished on the 4th of September, '73, the well filled with salt water, which was cased off and pumping commenced, which is now producing daily.....	150

These wells are situated in the Modoc district, and all, with one exception—the Grace well No. 2—are flowing, making a grand total daily production of 7,033 barrels.

The gas well on the Banks farm in the famous district is supposed by many to have a greater flow than the famous Newton gas well, near Titusville. It was struck about the 5th of August, and a volume of gas has ever since been pouring forth, with a noise like "the rush of mighty waters." An attempt was made to lower the tools into the well, but the tremendous force of gas forced them out of the hole.

There are about 75 wells going down in this district, principally on the Troutman, Ralston, Starr, Sutton, Harper, Grover, McClurg and Brown farms, embracing an area of 1,000 acres. All these wells flow through the casing, not one of them having been tubed.

No sooner do the tools strike the sand rock than the oil spouts forth. A contrivance on the top of the casing having been provided, the oil is allowed to flow undisturbed. The depth of the wells in this district average 1,500 feet. The oil bearing sand is from 12 to 15 feet in thickness, being pebbly and porous.

The Starr farm is now owned by Phillips Bros., of Parker's Landing, Pa., having been recently purchased by them for the sum of \$100,000.

GREECE CITY DISTRICT.

The first well struck in the Greece City district was the Morrison well on the 24th of August, 1872, on the Jameson farm, which flowed at the rate of 250 barrels a day for four months. It then gradually fell off and is now producing 40 barrels per day. S. D. Karns struck the next well, the Dogley, on the 25th of December, 1872. This well is situated half a mile below the Morrison well. It flowed liberally for several weeks, and is now pumped, producing in moderate quantities. A third well was put down by the same gentleman with what result we could not ascertain. The fourth well, owned by John Preston, was struck on the 12th of January, 1873, and began flowing at the rate of 130 barrels per day, and is at present (September, 1873) yielding oil in paying quantities. Numbers of others followed in close succession during the latter part of February and through March and April. Some of these started off very largely; a fair percentage never yielded above 25 barrels per day, while all fell off after the first spurt.

The greatest number of wells producing at this point at any time did not exceed 35. The largest daily production never stood above 1,200 barrels daily, and this occurred during the months of February, March, April and May of the present year. At present the production is about 300 barrels per day. No new wells are going down here.

MILLERSTOWN DISTRICT.

The first well struck in the Millerstown district was the Shreve well on the Stewart farm, in March of this year, which produced at the start 150 barrels per day, and is now doing 125 barrels per day. Next came the Dr. James well on the Barnhart farm, which was struck in May, and started off at 150 barrels, and is now doing 130 barrels per day.

The Lambing well followed and produced 100 barrels per day, and is now doing 50 barrels. This well produced a large amount of gas, and is situated on the Barnhart farm.

The Howe and Clark well on the McDermott farm next followed and produced at the rate of 125 barrels, and continues to produce 75 barrels per day.

The Green well on the Johnston farm never penetrated the third sand. About the first of August the Wolf well commenced flowing at 150 barrels per day. It is situated on the Barnhart farm and continues to produce at the above rate.

The Carlien and Mosier well on the McDermott farm began at the rate of 150 barrels on the 21st of August and continues at about the same rate. The Preston well on the McKinney Bros. and Gaily tract, was struck on the 10th of August, and on striking the oil rock was burned down. It is now pumping at the rate of 100 barrels per day.

The Parsons well on the McKinney Bros and Gaily tract was struck on the first of September and flowed at the start 250 barrels per day is now flowing 200 barrels.

Dr. J. McMichael or Salsbury well, on the McDermott farm, started at 125, and is now doing 75 barrels per day.

The Farquar well, on the Farquar farm, one mile southeast of Millerstown, was struck on the 20th of August, and is now flowing 250 barrels per day.

The Salsbury well No. 2, owned by Dr. McMichael, was struck on the first of September and started at the rate of 300 barrels per day, continuing to do about the same rate.

The Dubenspeck well on the Dubenspeck farm, adjoining the McDermott farm, was struck on the first of September, 1873, and flowed 300 barrels per day. No perceptible reduction is noticeable at the present writing.

A new well on the Abidiah Barnhart farm was struck on the 10th of September, 1873, and is flowing 100 barrels.

The Kepler well, on the Kepler farm, struck on the 10th of September, 1873, is flowing 200 barrels per day.

The Hulings well on the Barnhart farm is in the sand and flowing in large quantities. (September 11.)

The Shidemantle well on the Dubenspeck farm began flowing (September 11, 1873) at the rate of 250 barrels per day.

PETROLIA DISTRICT.

The first wells in the Petrolia district were put down by Messrs. Dimick, Nesbitt & Co., in November and December, 1871, on the Sheakley farm, which attracted considerable attention from operators. These wells proved quite remunerative, but it was not till April of 1872 that the first great strike was made at Petrolia, then a rural district. Early in April, 1872, Dimick, Nesbitt & Co., finished the Fanny Jane well, which yielded liberally for a time. This successful venture was attended with the usual result, and forthwith began a regular rush for the latest oil-dorado.

The Blaney farm was purchased by Fisher Bros. for \$60,000 and other tracts in the vicinity were either bought at extravagant prices or leased at high rates; houses multiplied rapidly and ere long the infant settlement presented all the bustle and activity characteristic of new oil towns. Large numbers of wells on the Blaney, Wilson, Jamieson and neighboring farms produced in abundance. The wells on the farms above named are but short lived, as with few exceptions they declined materially within a short period, gradually falling off, many of them ceasing to yield in paying quantities six months after their completion.

At present a large number of these wells are shut down in consequence of the low price of oil. At present there are only some five wells going down in this section. No new strikes of consequence to be recorded in the last few months.

KARNS CITY DISTRICT.

The success attending the operations at Petrolia induced operators to extend developments further south and in May, 1872, the Cooper Bros. began on the McClymonds farm. This property is situated on a branch of Bear creek, Fairview township, one mile and a half from Petrolia, and the same distance from Fairview. In June the Coopers, fearing it destined to be a failure, disposed of a well partly down, to S. D. Karns, who drilled a few feet deeper and struck a 100 barrel well. The next was completed by the Coopers and for several weeks this well flowed 200 barrels a day. Other wells soon followed on the J. R. Campbell, Story, Riddell and Kincaid farms. On the 9th of January the famous Salsbury well on the J. B. Campbell farm began to flow at the rate of over 100 barrels per day. This point became at once the center of developments and soon the nucleus of a town was built, which, as before mentioned, in an early part of this chapter, was named after S. D. Karns, and called Karns City. At present operations are at a standstill, only five wells drilling in this section and 43 wells producing; operators rushing to newer and for the present more productive fields. We ought here to remark that a fourth sand has been reached in two wells near Karns City with good results, which discovery is likely to give rise to the deepening of all the small wells on the line of development in the neighborhood of Karns City and Petrolia. The opinion of operators in regard to these two wells differ. Some believe that no oil exists in the fourth sand, while others are of opinion that the reckoning in these two wells is correct.

Passing through Karns City one and a half miles to the south is the Moore, Hepler and Myers farms. The first well struck in this section was on the 31st of January of the present year, which flowed some 200 barrels per day. Another was struck soon afterwards, which proved a good well. Mr. C. D. Angell, the owner of the Moore and Hepler farms, has now five producing wells doing 500 barrels per day, and five new wells going down.

A new town has sprung up on this property, called in honor of the owner Angelica. Extensive operations are in progress at Fairview and Angelica.

Having now taken a cursory glance at the present state of developments and given initial operations at different points of interest, we will bring this chapter to a close.

The importance of this lower oil field must be evident to all conversant with the history of its steady development; but we would here say that with this rapid progress of developments a large and very extensive scope of territory has been left behind untouched and undeveloped. Oil men pushed ahead, only desiring to make great conquests in the way of flowing wells. That portion of the field which has been left

in the rear has only been skimmed, but will most assuredly be once again opened up, and again become the scene of fortunes made and fortunes lost.

At the present moment there are in this lower oil field no less than 28 flowing wells, producing the enormous sum total of 8,833 barrels, giving an average production to each well of 315 barrels.

DISCOVERY OF THE FOURTH SAND ROCK.

We have already mentioned briefly the discovery of a fourth sand, or oil rock, in the vicinity of Karns City. It was first found by Mr. Charles Stewart, a native of Butler county. He purchased an abandoned well on the Scott farm, near Karns City, and after a month's vain effort to make it pay as a pumping well, resolved to sink it deeper. He began this labor about the middle of June last, and after nearly eight weeks drilling in daylight struck the first flowing well in the fourth sand. This well is known as the Banks or Stewart well, and averages 400 barrels daily. The entire oil community, including the shrewdest operators, scouted the idea of this being the fourth sand and claimed that the well had not originally been drilled deep enough. Messrs. Tack and Morehead, however, on the adjoining farm, commenced to drill one of their abandoned wells, known as the McCleer No. 1, about four weeks ago, and struck the fourth sand on the 15th of September, when the well commenced flowing at the rate of 700 barrels a day. The most experienced operators claim that the fourth sand is only prolific at these points, where a spur branches out from the main belt, and this is evidently the spur of the Modoc belt. This theory will be very fully studied within the next 60 or 90 days, as there is a determination on the part of everybody owning an abandoned or non-paying well to try it. The fourth sand thus far developed is from 65 to 75 feet below the third sand and is of excellent quality.

THE OIL FIELDS OF CANADA

IN 1873.

THE CANADA OIL REGIONS.

The first discovery of petroleum oil in Canada was made in the township of Enniskillen, in the county of Lamberton, in the extreme western section of the province of Ontario.

Among the settlers on the almost barren and unproductive soil of this section of the county was a lean, swaggy down easter named Shaw, who had emigrated thither from the state of Massachusetts about the year 1836. Shaw is represented as being luckless, thriftless and poverty stricken to the last degree. He had ever been considered a visionary, a schemer of impracticable projects and many were the undertakings which

he broached to his friends and neighbors, only to be laughed at. In the years 1855-6 he set the seal to his reputation as a demented visionary by his vain endeavors to get up a stock company for the purpose of boring down through the swamps with a view to extracting from the bowels of the earth a substance which he averred existed there in exhaustless quantities. He waxed eloquent on this theme and declared his conviction that beneath the barren marshes, a source of untold wealth lay hidden. By these and similar wild representations Mr. Shaw ere long came to be regarded as a lunatic. He was wondered at by some, abused by others, and laughed at for a fool by all.

It must be premised that ever since the original settlement of Enniskillen, a dark oily substance had been observed by the settlers floating on the surface of the water in the creeks and swamps. Good water was not to be had. No matter how deep the wells were dug, the water was brackish and ill smelling, and in some localities totally unfit for use; while a surface of black, oily slime frequently arose an inch thick, as cream rises on new milk. Here and there in the forest the ground consisted of a gummy, oderiferous, tar colored mud, of the consistency of putty. These places were known by the name of gum beds, and in two or three instances were of considerable extent. At the present day such surface indications as these would reveal the secret to the most casual observer. But to the primitive, untutored minds of the then residents of the township they failed to convey any other impression than that their lines had not fallen in very pleasant places.

Finding it impossible to arouse any enthusiasm, or get up any agitation on the subject, Shaw quietly subsided into his normal condition of mental torpidity, in which condition he remained until the summer of the year 1857, when he was seized by another of his intermittent attacks of enterprise, and this time he determined to commence operations on his own account. He inaugurated proceedings by digging an ordinary well as if for water, in a hollow about a hundred yards from his dwelling. He worked away at intervals for some days without attracting any notice, and without assistance from any one. Finally he was one day aroused while eating his dinner by a loud explosion, accompanied by what seemed to be the shock of an earthquake. Upon running out to ascertain the nature of the disturbance, he perceived a huge fountain of what seemed to be black mud bursting with great violence from the hole where he had been digging. The mud emitted a very offensive smell. The jet when he first cast his eyes on it, was as nearly as he could judge, about a foot in diameter, and it every moment increased in volume, frequently shooting high up in the air. As a necessary consequence the ground was soon flooded and had not his dwelling been built on an elevation, considerably higher than the mouth of the well, it would have been partially submerged.

Upon examination, the substance thus ejected proved to be crude petroleum. The well continued to flow, with brief cessations, for upwards of 67 hours, and this in a large and swift stream, which poured into the adjoining creek, and the contents were thus carried away and lost. The neighbors for miles around came and lent their assistance; but of course, owing to the

want of tanks and barrels, only a very inconsiderable quantity could be preserved.

The neighboring proprietors followed Mr. Shaw's example and leased portions of their lands to the highest bidders. In an inconceivably short space of time enterprising operators from all parts of Canada and the adjoining republic began to pour in. The needy denizens of the Enniskillen swamps began to realize the fact that their slimy morasses might be confidently counted on to yield a revenue such as could never be hoped for from the richest and best cultivated agricultural soil in America. Land changed hands rapidly, and from \$1,000 to \$2,500 an acre was paid for territory which, previous to the great discovery, could hardly have been given away. The more common method resorted to, however, was not to transfer the fee simple of the lands, but to grant oil leases thereof, whereby the lessee acquired the exclusive right to operate for oil upon the land for a specified number of years, in consideration of which privilege a certain sum of money—usually several hundreds of dollars per acre—was paid down to the lessor, who, by the terms of the instrument, was further to receive a percentage—generally one-third—of the oil produced, called a royalty. Stores, taverns and dwelling houses sprang up all around with marvelous celerity, forming a village, to which the name of Oil Springs was given. Postal and telegraphic communication was shortly afterwards granted, passable roads were constructed connecting the region with civilization, and for some time all went merry as a marriage bell. The supply of oil was supposed to be almost inexhaustible; but it was soon found necessary to spend much more time, and to incur much greater expense, than Shaw and his immediate successors had been compelled to do. In other words, the wells would not flow, but had to be pumped, and it became necessary not only to sink a surface well down to the rock, but to bore by means of the drill through the rock until the vein was reached; whereupon oil was said to be "struck." Frequently a vein of water instead of oil would be struck, which had to be exhausted before operations could be proceeded with, and this sometimes occasioned great delay.

Meanwhile, Mr. Shaw was regarded as a public benefactor, and received as great credit as if he had discovered the philosopher's stone. He found himself in possession of enormous wealth, arising partly from the lease of his lands and the royalties therefrom; but chiefly from the product of his wells, the first of which continued to yield from 300 to 600 barrels daily. The market fluctuated considerably; but oil seldom brought less than \$6 per barrel at the well, and was generally much higher. For two days it reached the enormous figure of \$16.25.

Mr. Shaw, through injudicious speculation, spent all his splendid fortune. He came to the Pennsylvania oil region in 1868 and was employed as a common day laborer at Titusville up to 1870, at which place he died broken hearted and quite unknown.

About 30 miles to the south of Oil Springs, near the village of Bothwell, another large vein of oil was struck, and ere long a busy community sprang up there, scores of wells were put down, and fortunes made and lost. Oil was soon after discovered five

miles north of Oil Springs, to which place was given the suggestive name of Petrolia.

In the year 1864 Oil Springs contained a population of more than 3,000 inhabitants, several spacious and well conducted hotels, and at least a dozen or more places of entertainment, which could lay no claim to remarkable distinction. It moreover contained two private banking houses, a board of trade, a printing office, and weekly newspaper, and 247 wells, all in active operation, yielding a large number of barrels per diem, and more were being put down. Money was plentiful, and gambling was practiced on a scale which, for Canada, might well be pronounced gigantic. Every night, Sunday night not excepted, was consecrated to the unholy rites of poker and euchre. Dancing assemblies were formed, tri-weekly fandangoes were held, and the whole place presented the appearance of a California in miniature. But the end was not very far distant. Already the deposit had indicated tolerable palpable symptoms of exhaustion. The Shaw well, after having yielded a sum total of 30,000 barrels—and this in addition to the immense quantity which was lost, as already described—suddenly collapsed and refused to yield another drop. The Twenty Friends well, which was second only in importance to Shaw's, followed the example of its predecessor; and a gradual falling off was perceptible throughout the entire district. Towards the end of the year Hendrick's well revived the hopes of the operators somewhat by a daily yield of 700 barrels for about a week; but in the course of a fortnight these 700 barrels were reduced to from 30 to 40, and shortly afterwards to 15. Operators could no longer count with certainty upon striking a vein of oil wherever they chose to bore, and many wells had to be abandoned as dry holes. Many even of the yielding wells did not produce oil in paying quantities. About this time charlatans professing to be endowed with the mystery of the divining rod made their appearance on the scene, and though laughed at and condemned by nine-tenths of the operators, they contrived to realize something more than a good livelihood out of the other tenth. Success generally followed their predictions, even when dry holes were becoming alarmingly numerous in the district; but of course the secret lay in their former extensive experience of surface indications in Pennsylvania. They could form something more than a plausible guess as to where oil was to be found, but their science gave them no information as to the quantity; and the wells sunk by their directions generally exhausted themselves in a day or two from the time the vein was struck.

Though Western Pennsylvania has produced numerous flowing wells of wonderful capacity, there is no quarter of the world where the production attained such prodigious dimensions as in 1862, on Black creek, in the township of Enniskillen. The first flowing well was struck there on January 11, 1862, and before October not less than 35 wells had commenced to drain a store house, which provident nature had occupied untold thousands of years in filling for the uses—not for the amusement—of man. There was no use for the oil at that time. The price had fallen to 10 cents per barrel. The unsophisticated settlers of that wild and

wooded region seemed inspired by an infatuation. Without an object save the gratification of their curiosity at the unwonted sight of a combustible fluid pouring out of the bosom of the earth, they seemed to vie with each other in plying their hastily and rudely erected spring poles to work the drill that was almost sure to burst, at a depth of a hundred feet, into a prison of petroleum. Some of these wells flowed 300 and 600 barrels per day. Others flowed 1,000, 2,000 and 3,000 barrels per day. Three flowed, severally, 6,000 barrels per day; and the Black and Matthewson well flowed 7,500 barrels per day. Three years later that oil would have brought \$10 per barrel in gold. Now, its escape was the mere pastime of full grown boys. It floated on the waters of Black creek to the depth of six inches, and formed a film on the surface of Lake Erie. At length the stream of oil became ignited, and the column of flame raged down the winding of the creek in a style of such fearful grandeur as to admonish the Canadian squatter of the danger, no less than the inutility of his oleaginous pastimes. From detailed determinations Professor Winchell says, "I have ascertained that during the spring and summer of 1862 not less than 5,000,000 barrels of oil floated off on the water of Black creek—a national fortune totally wasted."

The extent of the field is very great if we include every place where oil is found. Reckoning in that way, a district of 200 square miles would not more than cover it. Most of these places, however, present only ooziings from limestone rocks, such as occur in various other places in the world unconnected with qualities of any practical value.

The region of value, as developed by actual borings to this time, and the existence of the proper rock, is confined to the western part of the Dominion, and extends from near Lake Erie to Lake Huron, and from the St. Clair river eastward 75 miles or more; thus being about 50 miles north and south by, say, 100 east and west. Its outside lines are somewhat irregular, but such is the general range of it. The part of practical value is, thus far, limited to the "carniferous limestone" (so called from containing nodules of flint resembling a harp) and which is mostly confined to the southern part of Canada.

Within this range Petrolia, Bothwell and Oil Springs have produced nearly all the oil. The latter had the largest wells, though the former now produces more than nine-tenths of present amount. Petrolia is about 16 miles southeast of the outlet of Lake Huron, Oil Springs seven miles south of that, and Bothwell about 35 miles from that.

The surface of the country above described is nearly level, except where the ground descends to the bed of streams, and being largely covered with a dense forest of hardwood trees, is often wet and muddy, and in a rainy season would wonderfully help a traveler to appreciate the "slough of despond." Time, muscle and money will cure this, however, and while the timber now keeps out the drying process of the sun, it is furnishing most valuable fuel for the oil wells.

Western Canada has no coal. The land descends gently to the southwest and the general dip of all the rock formations is westerly.

In drilling the first thing found is a yellow clay, and sometimes sandy soil, five to 15 feet deep. Next a pact of blue clay of even consistency and appearance, from 50 to 100 feet deep. This rests on a thin shell of limestone, resembling a stalactite formation, which seems to have been crystalized out of the water as it drained from the clay into the next bed below, which is composed of gravel from two to eight feet thick. Next comes a slate rock called Hamilton shale, usually 15 feet thick, in the region of good wells, and thinning out to nothing eastward. The surface wells, formerly so productive, were found in this gravel, held down by the clay and thin limestone; and when in digging the pick broke through this thin shell the oil and gas would rush up so rapidly the laborer would often be compelled literally to flee for his life.

Next below the shale lies the carniferous limestone already referred to, the upper layer of which is about 40 feet thick. This alternates with 30 to 50 feet of slate; then comes about 40 feet more of limestone, then a similar amount of slate again, and then (being now at the depth of about 250 feet from the surface), is again found the limestone, which continues 250 feet more, making a total of about 500 feet. All the oil is found within that range, being regularly in veins in the limestone, and the deeper the veins usually the larger. All the rocks below the clay are more or less saturated with it. Next below the oil bearing limestone is a stratum of hard blue limestone, averaging four feet thick, and immediately underneath that a vein of salt water apparently inexhaustible.

At this point commences, with few exceptions in the oil regions what is called the Onondaga salt group, which is a formation of unknown thickness, and in which is found the salt of Syracuse, N. Y., and also of Goderich, on Lake Huron, at a depth of 1,000 feet. It has been penetrated 500 feet in several places near Petrolia without producing a barrel of oil.

To prevent mistake, we ought to say that the salt of Western Virginia is taken from quite another formation, lying geologically much higher, and coming very near the coal, being the conglomerate of the coal measures. In some places, as near Oil Springs, the upper strata seem thinner, and the lower thicker, thus bringing the oil bearing part nearer the surface, giving rise to large surface wells, and also to the gum beds there, which resemble the residuum after the oil has evaporated or been drawn off, leaving a black deposit like asphalt covering, in one or two instances, a hundred acres.

The oil bearing limestone varies from a close compact structure to quite open, and these characteristics are presented often in bands or belts, and the best wells are expected where the rock is most open. In all its parts it is largely composed of marine shells and other fossils peculiar to that geological horizon. This seems to have strengthened the theory of the animal origin of the oil. The thought is quite romantic—perhaps poetic—that the little animals which occupied these shells ages before men appeared, unwilling to be of no use in the future, built up the rocks out of the ruins of their dwellings, and then, by some subtle chemistry, allowed their substance to be converted into oil to fill them, and thus, with true charity, even "gave

their bodies to be burned." Other facts, however, point to other causes of the oil, at least in a majority of cases.

The rocks of Canada, it will be seen, differ widely from those of Venango county, Pa., these being almost exclusively limestone, and others sandstone, alternating with slate.

The odor of the oil is rather unpleasant, and this arises from the sulphur and other substances often found in limestone. Sulphuric acid occurs occasionally in the water, corroding tools and tubing, and sulphuret of iron is found in the rock. Its decompositions and recompositions are taken up by the oil. An English deodorizing process called Allen's is now effectually used. The gravity of the oil varies from 33 to 43 degrees Beaume. Refining produces about 80 per cent of illuminating fluid, with less benzine and more tar than Pennsylvania oil. The color of the crude is dark green, shading into black. Very little paraffine is deposited in pumping, and benzine in wells is rarely used. Casing six inches in diameter is put down to 280 feet, or say 30 feet into the hard limestone, which shuts off fresh water and prevents the soft shale rock from caving. Tankage of the oil is accomplished in part by the use of wooden tanks, but mostly by making use of the blue clay above described. It is found to be almost impervious to water and quite so to oil. Excavations are made in it from 10 to 20 feet in diameter and sometimes 75 feet in depth. Curbing is used to prevent the possibility of caving. The top of the excavation is planked and covered with earth. Here is stored the oil, both crude and refined, free from waste and safe from danger until wanted, when it is pumped out, sometimes by engines and sometimes by spring poles. This blue clay, which the farmers in some parts of northern Ohio and elsewhere regard with exceeding dislike, is here one of the best friends of the oil producer.

Exhaustion of the oil is not to be anticipated for several generations. Enough is produced for the present wants of the Dominion, and as Canada develops and her population increases upon the surface, the regions below will respond to their wants. Nature does not display all her treasures at once, but opens one storehouse after another as man's needs may require.

Glaciers, it is quite evident, once moved over that country, for whenever excavations are made down to the solid rock scratches and grooves are found, varying from mere lines to the size of 15 inches, and nearly all running in a uniform course of northeast to southwest. They dip up under Lake Erie and appear along its southern shore, where they have been seen often, even larger than any found in Canada. Icebergs have also floated over the same sections, and evidences of both are abundant from New England to the Mississippi and beyond, and from Lake Superior nearly to the southern lakes.

By these and similar means were many of the Pennsylvania hills torn down and valleys formed, and from these sources came most of the soil, gravel and boulders scattered along the Oil creek country. Their home was in the north. It seems wonderful that in all the tumults, earthquakes and upheavals of the past

nothing has been permitted to disturb the oil, though it has been left comparatively near the surface and easily accessible to man.

FOREIGN OIL FIELDS.

SOUTH AMERICAN OIL FIELDS IN 1873.

Much attention has of late been directed to this field. Peru, Ecuador, Bolivia and Chili offer inducements to speculators in search for oil, but only in the two first named countries are the prospects of such a character as to attract foreign capital for the present. The existence of oil in Peru and Ecuador has been known as far back as the tradition of these countries reached, but to a certainty it has been made use of for at least 250 years, by the Spaniards, the first conquerors of the Peruvian empire, which included Ecuador), for making pitch. The oil was collected in a manner similar to that employed by the Seneca Indians to obtain the petroleum of Oil creek, viz, shallow pits were dug and the oil which collected was skimmed from the surface and was then allowed to evaporate under the heat of a tropical sun till it became of a thick, glutinous consistency, when it was removed and boiled down to a hard pitch. This pitch was used for coating the inside of earthenware and particularly aguardienti or liquor jars. The Spanish government long held a monopoly of this trade, which yielded an annual profit of \$35,000. That portion of the South American oil field lying in the neighborhood of the town of Payta, on the river Achira, was purchased by a Mr. Lama in the year 1830, who worked the mines or pits after the primitive mode. In 1868 a Mr. Blanchard C. Dean in prospecting along the coast discovered the works of the Lamas, and proposed a partnership agreement with them, and a joint prosecution of the work. They refused. He then "denounced" a mine according to the old Spanish mining laws, which resulted in a law suit. The proceeding is this: Any person who may have discovered a mine or vein of any metals, or as the Peruvian mining laws say, juices of the earth, can present himself before the mining tribunal and demand possession of said vein. The discoverer or claimant is called the denouncer. The tribunal then awards him the possession of a piece of ground containing the vein 200 yards long and of the same width. Within 90 days he is obliged to commence work. He must dig a pit at least 10 feet deep by the same in length and width. When this is completed his next duty is to publish in the nearest daily papers for 30 days in succession, calling and asking if there be any person or persons who can show a better right to the discovery. Within these 30 days he must post handbills in the village nearest the mine, and within the jurisdiction of the mining tribunal making his award, bearing the same import. If no opposition is made or sustained, then the tribunal decrees the ownership and title to the denouncer, and that the former owner of the ground shall receive from the denouncer payment therefor at a price reckoned without the added value of the mine.

Mr. Rollin Thorne, a resident of Lima, assisted Mr. Blanchard in the litigation and won the suit, and possession of the land, which in extent is 31 miles in length and six in width.

Within the past year the courts of Peru have decided that petroleum is not denounceable. Happily for the Messrs. Thorne, who obtained their best oil territory by this means, the Peruvian law will not allow a decision already made to be affected by any subsequent one.

The Peruvian oil field is a belt on the west coast of South America, running along the 30th parallel of longitude, between Point Aguja on the south, or needle point, and the town of Tumbez on the north and about seven degrees south of the equator. The known distance is about 251 miles, running north and south along the Pacific coast, and about 150 miles inland to the Andes. It is a singular coincidence that the oil belt corresponds with the oil regions of Pennsylvania, as both are intersected by the 80th degree of longitude. The topographical structure of the Peruvian territory is broken and mountainous, and has evidently been subjected to volcanic action. It is also worthy of note that the mountain range of the Andes to the east, contains large deposits of anthracite coal, and that this coal deposit is about the same distance from the oil field of Peru as our Allegheny anthracite deposit is from the Pennsylvania oil region. A coating of sand about eight inches thick covers the entire surface of the Peruvian oil field. A fossiliferous deposit of marine remains is found on the surrounding hills, from 250 to 300 feet above the level of the sea. The same deposits are also found on the bottom lands, which proves that this part of the continent has at some period of time been covered by the sea. The oil belt appears to belong to the tertiary formation. The outcroppings of sand rock are to be met with everywhere as we find them in Pennsylvania. Shale exists below the top coating of the sand, and is completely saturated with oil, which, to say the least, is a good surface indication. The shale varies from 30 to 40 feet in thickness. These strata of shale are interlined with thin lamina of bluish gray sand rock, of a fine texture. The first sand rock is to be found at a depth of from 130 to 132 feet, and is from five to ten feet thick. The second sand rock is found at 300 feet, and the third has not yet been reached, as no well has been sunk to a greater depth than 350 feet.

In 1871 Messrs. Rollin, Thorne & Co. commenced drilling with a common rod auger. Three wells were drilled and oil was found in very considerable quantities at very shallow depths, viz, 226, 56 and 38 feet. Other wells followed with good results. In July, of last year, a new well was commenced at Point Pavinás and drilled to a depth of 351 feet, or 51 feet in the second sand, through which the tools have never yet penetrated. No crevice was perceptible to the driller, as a volume of gas and oil at this depth was suddenly ejected from the well, compelling the abandonment of the drilling. The well was finally tubed, and both valves and sucker rods put in to diminish the flow, which was calculated at 1,000 barrels per day. The well is now flowing 250 barrels per day with the lower valve in. From all the wells struck on this territory

great volumes of gas continually issue. The gravity of the oil is from 40 to 50 degrees Beaume. In color it is a little darker than Pennsylvania oil, and it has the same odor as an oil of the same gravity. It yields from 70 to 75 per cent of 110 fire test kerosene when refined, and is a superior article.

A contract has been entered into with Messrs. R. Thorne & Co. by an Anglo-Peruvian firm for 200 barrels crude oil per day at \$5 gold extending over a long period. This firm is now building a refinery of 200 barrels capacity at the point of operation.

In the year 1864 Messrs. G. H. Bissell and James Bishop, of the city of New York, leased of Don Diego Lama his estate of Prancora, consisting of 4,500,000 acres. A company called the Peruvian Oil Company was formed, with capital of \$5,000,000. Operations were soon commenced by the company on the northern portion of the tract at Zorritos, 20 miles south of the Tumbez river, immediately on the coast.

This company has put down a number of wells with good success. In the early part of 1868 the company struck a well which produced 300 barrels per day for nearly a year, when it caved in and the production ceased. The company refine their own oil and find a ready market for this product on the Pacific coast, Australia and New Zealand. The president of the company is Mr. Geo. H. Bissell.

In one well on the company's lands the following is the order in which the rocks are found: Soapstone and slate, sand rock and slate, conglomerate limestone, hydrate of iron or reddle, cretaceous sandstone, carboniferous slate, gravel pebble in which the oil was found. Oil was met at 18 feet.

ECUADOR OIL FIELDS IN 1873.

The oil fields of Santa Elena, in the Republic of Ecuador, are spoken of in the following terms by Raymond De Peiger, engineer and geologist to the government of Ecuador, in his report to the president of the republic. He says:

"Petroleum is to be found in the country in very large quantities. On a surface of about four square leagues from the sulphurous spring of San Vicente to the sea shore the wells have been sunk, and the bituminous matter obtained in a liquid state. Its consistence is not the same in the different wells. In some of them it is fluid, like whale oil; in others it has the consistence of butter at ordinary temperature. At the surface, or upper part of many wells, it can be seen in hard, compact masses, which probably have been formed by the evaporation of the liquid. This oil has a dark brownish color, which gets darker with the greater consistence of the oil. In one place where it oozes from the bed of a dried stream, the bituminous matter has a greenish color. Its smell is not disagreeable, which is generally the case with many of the American and especially the Canadian oils. As the inhabitants have neither the knowledge nor the implements required, the works are very rude. Pits from 10 to 12 feet deep are dug into the sand till the clay

is reached and when the oil, which oozes from all sides has filled them it is dipped out.

"Near the wells are primitive furnaces, built with sun dried clay, on which are open iron boilers. The bituminous matter is thrown into these vases and cooked until all the volatile products disappear and leave a thick pitch.

"In * * * Santa Elena it is not admissible to suppose that petroleum has been formed in the upper sandy deposits. Its presence there can only be explained by the escape of the bituminous matter from the fissures in which it was contained. * * * We may then safely admit that, although large quantities of oil are to be found in the sand, it is only the mere waste of the real springs. Deeper sinking will without any doubt be very profitable and yield immense proportions of petroleum.

"Their proximity to the sea is another advantage of these mines. While great difficulties have been encountered in the United States for the conveyance of the oil to the seaboard, here it may be conducted at small expense from the wells to the port of Santa Elena, by means of pipes if the crude oil is exported.

"Although I should think that it would be more profitable to refine at the place of production, the advantage expressed remains the same.

"By this extent, by the enormous quantities of petroleum that they contain, and by the short distance which lies between them and the sea, these mines have a real value. Intelligent capitalists will promptly appreciate it and works will soon be established.

"By building refineries at Santa Elena enough kerosene might be produced for the use of the country, and for the markets of the neighboring republics."

What has been said of the topography and geology of the Peruvian field applies with equal force to that of Santa Elena. The climate of this region, though situated almost directly under the equator, is mild and salubrious, owing to the elevation of the country and its proximity to the Pacific, the cool breezes of the ocean exercising a favorable influence on the temperature. In the coldest season it is never below 50 degrees, and in the hottest never above 85 degrees.

These discoveries and these developments are destined to exercise a potent influence on the future of the trade of Peru and Ecuador. A powerful competition will be offered to Pennsylvania in the markets of Europe, Australia and New Zealand, while in the republics of Central and South America it can result in nothing less than entire exclusion.

WEST INDIA ISLANDS.

CUBA IN 1873.

In the early history of Cuba it is recorded that Havana was originally named by the early visitors and settlers Carine—"for there we careened our ships, and we pitched them with the natural tar which we found lying in abundance on the shores of the beautiful bay." Petroleum springs are in number near Havana, rising

from fissures in the serpentine rocks at Guanabacoa, and have been known for two centuries. Allan's Manual of Mineralogy says the whole of Cuba is impregnated with bituminous matter to a surprising degree, in cells and cavities in the rocks. The *Essai Politique sur l'Isle de Cuba*: "Petroleum leaks out in some, indeed, in numberless places in this delightful island, from amidst the fissures of the serpentine, and perhaps has deeply seated sources. We are acquainted with abundant springs of petroleum between Holquin and M'ayari in the eastern end of the island, and also possess notices in the direction of Santiago de Cuba."

SANTO DOMINGO.

On a stream called El Aguatediondo, or stinking water, three miles north of the town of Azua, this spring makes its appearance as a stagnant, torpid pool, exuding slowly through a heavy gravel deposit. A very small area in the vicinity is covered with deposits of pitch. For half a mile down the bed of a rain water stream the gravel or sand as the case may be is more or less cemented by an impure pitch, sometimes plastic, oftener hardened to asphaltum. The pools of the spring and neighboring excavations contain a dirty water rendered brown by contact with the oil and on the surface is a thin scum of petroleum, dark brownish green to reflected light and a reddish brown by transmitted light. An attempt was made during the recent oil excitement of 1865 to bore here. The usual tools were taken to the spot, but the undertaking was eventually abandoned. In the driving pipe yet remaining at the mouth of the well, may be observed an accumulation of oil through which gas bubbles up. At the distance of a few yards from this well are several jets of gas. Over the whole area there is not a single blade of grass or any other vegetable.

BARDADOES IN 1873.

An American gentleman in business in this island in 1864 visited the oil regions of Pennsylvania, and from his observations became convinced that a like article had been noticed by him oozing out of the rocks and lying on the surface of the ground on some of the plantations of this island, but being engaged in business demanding his entire attention he made no effort to test the facts in regard to it. During the year 1871 a firm on the island quietly commenced to secure it by sinking shafts and curbing as they went down; it was soon found that they shipped considerable oil, and that it was very valuable for lubricating purposes, netting them \$30 per barrel on the island. These facts coming to the knowledge of other parties a company was formed and a favorable spot secured on a plantation having abundant surface indications. This company determined to take advantage of the modern Pennsylvania mode of obtaining oil by drilling and pumping. An experienced driller was engaged in Pennsylvania, who was furnished with a full rig—boiler, engine, tools and wood work, and was dispatched to the island. In a letter dated the second of March the driller says: "We have drilled 168 feet, but the

rock is soft soapstone and not hard enough to prevent caving, so we had to abandon the well. We then moved the rig from the ravine to higher ground." After the abandonment of this well it was found that it filled up 75 feet with oil. The second well, for some cause unknown to us, has also been abandoned.

TRINIDAD.

In the island of Trinidad, three-fourths of a mile back from the coast, is a lake called the Tar Lake, a mile and a half in circumference, apparently filled with impure petroleum and asphaltum. The latter, more or less charged in its numerous cavities with liquid bitumen, forms a crust around the margin of the lake and in the center the materials appear to be in a liquid boiling condition. The varieties contain more or less oil, and methods have been devised for extracting this, but the chief useful application of the material seems to be for coating the timbers of ships to protect them from decay. By the patented process of Messrs. Atwood, of New York, the crude tar of that locality, having been twice subjected to distillation and treated with sulphuric acid and afterward with an alkali, is then further purified by the use of permanganate of soda or of potash. Being again distilled it yields an oil of specific gravity of 0.900, which is fluid at 32 degrees Fahr.

THE CARPATHIAN PETROLEUM BELT, 1873.

The existence of rock oil springs and wells in Galicia, Moldavia and Wallachia, outside or along the north, northeast and east foothills of the chain of Alps which surrounds Hungary on the side of Russia, has been known for some years. In 1859 the Austrian geologist, M. Foetterle, wrote of them in the Year Book of the K. K. Geological Institute. In 1866 Hochstetter and Prosepný published further observations in the same annual; and Licinsky, in the *Berg-und-Hutten-wesen-Zeitung*, No. 36-37. In No. 39-41, 1866, Prosepný gave another account of them; as Cotta did also in the *East Austrian Review*. Ellenberger in 1867 added something in the annual *K. K. G. R.*, and M. Coquand inserted his memoir in the xxiv. vol. *Bulletin of the French Geological Society*.

We have now, however, a completer resume of all that is known on the subject from the pen of M. Emile Heurteau, engineer of mines, in the recently issued third part of the xix. vol. of the annals of the Paris School of Mines, with a map of the Krosno-Dukla districts and sections of the petroleum bearing rocks. He says that in 1869 he visited most of the points where oil was actually sought or obtained, but that the work was conducted by the proprietors of the land, no records of borings were kept, and scarcely any traces of what had been done were left to view.

The mountain range, in this part of it, runs northwest and southeast, and falls off gently to the great Miocene Tertiary plains of Galicia and Moldavia, in a series of parallel anticlinal and synclinal undulations, which are visible in the sections made by all the de-

scending valleys and ravines. The mountain mass consists of cretaceous rocks and outcropping on the southwest flank, covered by Eocene Tertiary sandstones and clay-slate formations, almost vertical or a little overturned, so as to plunge southwestwardly and rarely fossiliferous.

On these Carpathian rocks lie the Miocene Tertiaries, the lowest of which, outcropping all along the foothills, are the two thin beds of saliferous clay-slates which furnish the salines of the region. The salt mines of Weilisk and Bochnia, the gypsum masses of Podgorze, and the sulphur deposit in the gypseous marls of Schloszowice, are all in the Miocene.

Everywhere along the range of the salt bearing rocks is a blackish clay marl bed, more or less bituminous, of muddy consistency, strongly impregnated with salt, either crystallized in large grains imbedded in the mass, or condensed into large lenticular beds of impure rock salt; or irregularly distributed. The whole saliferous formation is traversed by contorted beds of anhydrite gypsum alternating with beds of salt clay, more or less pure. All stand vertical or plunge deeply south, growing less deep the further down they are followed, puzzling the observer with the appearance of passing underneath the older steeply south dipping rocks of the mountain range. Heavy coverings of moss help the deception. It is of course necessary to suppose a long fault, the northeast country having settled down and curled the edges of its rock formation completely over. This fault is the key to the subject of the memoir.

On the Galician side the oil belt, though extending for 200 miles, is explored at three principal centers—New Saudac on the west, Dukla, Krosno and Sanock in the middle, and Borslau in the east, where the mineral wax ozokerit occurs in great abundance.

From time immemorial the peasants of Bobrka, on the banks of the Jasolka, between Dukla and Krosno, have noticed oil oozing from joints of the sandstone rocks, and standing, especially in dry seasons, on the little pools of water. They collect it to grease their wagons, and fire it off on festival occasions. In 1860 M. Luckasilwitch, hearing of the American petroleum wells, experimented with his own in the laboratory, and then commenced work on M. Klobassa's lands, but with very poor success. In 1861 he transferred his search to a place further east and struck oil in a bore 50 feet deep which yielded 16,000 pounds daily. His second well yielded 600 barrels. Wells multiplied until in 1870 the yield amounted to \$70,000 per annum, giving a profit of \$50,000. Seventy-seven wells are ranged along the axis of a sharp anticlinal, one-third of a mile long, none being more than 80 feet off the straight line, and the oil from all flows through a pipe to a common reservoir. Some of the wells are 350 feet deep; but no law of depth has been obtained. Shafts seven feet square are sunk about 70 or 80 feet to the sandstone, and bore holes are continued from this downward. Gunpowder is used in shafting and strong ventilating fans blow out the gases. Lights are forbidden and accidents are few. The boring is very rude, being done by four hands without machinery.

On reaching the oil stratum a great quantity of carbonic acid gas mixed with hydro-carbons escapes from

the well, followed by the oil, which rises to the surface of the water, filling the shaft. A small Jewish hand pump is used to draw off the water and oil into barrels, from which the water is allowed to escape by gravity. It is evident that the oil is kept down by the weight of water and must be relieved of this load before it will rise in any quantities. Some wells yield per day 3,000 kilogrammes, others 600, 302 down to 80, and some mere traces of oil. The author gives interesting details of the lawless behavior of the various wells of the group, with diagrams showing their relative situations and relations to the anticlinal axis, and confesses that no trace of a method of explanation has been obtained. The oil is always mixed with water, sometimes fresh, ordinarily saline. Between the two petroleum horizons the water is always salt. The following table shows the authenticated and official statistics of all the oil which has been transported and conveyed by the Carl Ludwig & Kaiser Ferdinand (Nord-Bahn) railroads for eight successive years from the oil regions.

YEAR	Oil conveyed and transported by roads	Into Austrian provinces and Prussia	Consumed in the towns & cities of Galicia	American Oil consumed in Galicia
	cwt.	cwt.	cwt.	cwt.
1862....	32,295	26,725	5,570
1863....	67,336	53,796	13,560	787
1864....	113,099	91,672	21,427	238
1865....	133,356	117,043	16,313	114
1866....	166,349	146,802	19,547	1,552
1867....	155,589	139,059	16,530	395
1868....	147,251	134,535	12,716	297
1869....	81,398	72,701	8,697

The above table will give some idea of the resources of the Galician portion of the Carpathian oil field, as it exhibits how many years the product of this field has been in the market.

A recent traveler says of the Wallachian portion of the Carpathian oil belt that "there is no country in the old world which has been so plainly proved to be a land flowing with petroleum." Associated capital has been brought to bear on its extraction and export, but strange enough the mechanical appliances by which success has been achieved in western Pennsylvania have been but to a very limited extent introduced into Wallachia. The Roumanian petroleum companies, situated on the same end of the Carpathian belt have been contented to adopt the primitive mode of collection in use with the peasantry, by making excavations into the earth, into which the oil saturating the strata flows. This plan of operations is not conducive to profitable commercial working on a large scale, but should attention be given to deep boring on the plan adopted in the oil region of Pennsylvania there is every prospect of success.

In the course of this chapter mention has been made of ozokerit, a mineral wax or solidified petroleum. We consider the matter of so much interest that we give a brief account of this singular product of the field now under notice.

Ozokerit is a mineral wax and in the raw or native state is of a yellowish color, of light specific gravity and somewhat fibrous in its structure. It will not burn

of itself, but will readily melt on a light being applied to it. On being roughly wrapped around a central wick, even in its native state, it is easily and readily consumed. In fact, a rude candle can be made of the raw material and a cotton wick. It is found principally in Austria, Moldavia, the Caucasus, and near the Caspian Sea, where it is obtained in great quantities, being largely used in those countries for illuminating purposes. It was discovered about two years since by a Russian military officer, who communicated the fact to a Mr. Gustav Siemssen, who has introduced it into England. In the premises where the candles are made the native ozokerit is found in two conditions—in the one as dug from the earth, and in the other as roughly melted down for convenience of storage and transit. In the latter condition it forms a dark colored mass, and is packed in barrels, the native or unmelted ozokerit being sent over in canvas bags. From the store, the crude material is conveyed into the melting tanks, holding from two to three tons each, where it is melted down by means of a steam coil. From these tanks, which are situated in a gallery some 15 feet above the ground level, the ozokerit is run off by gravitation to a series of stills placed outside the main building and holding from two to three tons each, into which it is distilled over, partly by steam and partly by bottom heat. The dirt and bottoms from the crude ozokerit are run off from the melting tanks into another series of tanks beneath them, where they are remelted, the finer products being afterwards distilled over. The ozokerit comes from the stills in the form of an oily distillate, which is run from the condensers into molds and allowed to cool. This gives a deep yellowish wax like substance of a spongy nature, the pores being filled with oil, which exudes under a slight pressure. These cakes are packed between oilskins and canvas cloth, and are placed in hydraulic presses, of which there are three of large capacity. The pressed cake after removal is placed into reheating tanks and again melted down, and is pumped from these tanks by a steam pump into the acidifier, where it is treated with sulphuric acid. These acidifiers are steam jacketed, and are fitted with revolving agitators, by which the ozokerit and acid are agitated for a certain time, after which the mixture is allowed to settle. After settling the purified ozokerit is drawn off from the lower part of the acidifiers, the acid remaining on the top, and run into vessels which are heated by bottom heat. This is the final heating, and from these vessels the fine stuff is drawn off into molds, the result being a hard white wax, the melting point of which is 140 degrees, that of paraffin wax being only 128 degrees. These blocks are sent to Messrs. Field's works at Lambeth, London, England, and from them the ozokerit candles are made. There are several by-products, the chief of which is a very clear, colorless oil, and of very high illuminating power.

BURMAH, INDIA, OIL FIELDS.

The petroleum business in Burmah has long been in operation, the oil being used by the natives for heating purposes, for preserving wood and also as a medicine.

Thousands of wells have been excavated and after working them so long as profitable, they were left and new ones dug out. Dry holes are as frequent as in western Pennsylvania, broken down operators as numerous, and lucky ones, who have succeeded in making their first million, just as few. The possession of the royalties of Burmese oil lands are still so valuable as to be deemed the most desirable gifts the sovereign of the country can bestow upon chosen favorites. Not only this, but English capital is largely invested there, and large quantities of the oil finds a ready market in Europe.

The following interesting account of the wells of that distant county is taken from the journal of John Crawford, Esq., F. R. S. F. L. G., and ambassador of the governor general of India to the court of Ava, in 1826. Though his report is of old date, it applies with equal truth to the present state of the business.

"At 3 in the afternoon our whole party proceeded to the celebrated petroleum oil wells. Those which we visited cannot be further than three miles from the village, for we walked to them in 40 minutes. The wells altogether occupy a space of about 16 square miles. The country here is a series of sand hills and ravines, the latter torrents after a fall of rain, as we now experienced, and the former covered with a very thin soil, or altogether bare. The trees, which are more numerous than we looked for, did not rise above 20 feet in height. The surface gave no indication that we could detect the existence of petroleum. On the spot which we reached were eight or ten wells and we examined one of the best. The shaft was of a square form and its dimensions about four feet to a side. It was formed by sinking a frame of wood composed of the mimosa catechu, which affords a double timber. Our conductor, a son of the Myosugi of the village, informed us that the wells were commonly from 140 to 160 cubits deep, and their greatest depth in any case 200. He informed us that the one we were examining was the private property of his father—that it was considered very productive and that its exact depth was 140 cubits. We measured it with a good lead line and ascertained its depth to be 210 feet, thus corresponding exactly with the reports of our conductor, a matter which we did not look for, considering the extraordinary carelessness of the Burmans in all matters of this description. A pot of oil being taken up and a good thermometer being plunged into it, indicated a temperature of 99 degrees. That of the air when we left the ship an hour before was 82 degrees. We looked into one or two of the wells and could discern the bottom. The liquid seemed as if boiling, but whether from the emission of gaseous fluids or simply from the escape of the oil itself from the ground we had no means of determining. The formation when the wells were sunk consisted of good loose sandstone and blue clay. When the well is dug to a considerable extent the laborers informed us that brown coal was occasionally found. Unfortunately we could obtain no specimens of this mineral on the spot, but I afterward obtained some in the village. The petroleum itself when taken out of the well is of a thin watery consistence, but this, by keeping and in the cold weather it coagulates. Its color at all times is a dirty green and

not much unlike that of stagnant water. It has a pungent, aromatic odor, offensive to most people. The wells are worked by the simplest contrivance imaginable. There is over each well a cross beam, supported by two rude stanchions. At the center of the cross beam and embracing it is a hollow revolving cylinder, with a channel to receive a drag rope, to which is suspended a common earthen pot, that is let down into the well, and brought up full, by the assistance of two persons pulling the rope down an inclined plane by the side of the well. The contents of the pot are deposited for the time in a cistern. Two persons are employed in receiving the oil, making the whole number of persons engaged on each well only four. The oil is carried to the village on posts in carts, drawn by a pair of bullocks, each cart conveying from 10 to 14 pots of 10 viss each, or from 265 to 371 pounds avoirdupois of the commodity. The proprietors store the oil in their houses and then vend it to the exporters. The price varies according to the demand, from four ticals of flowered silver to six ticals per 1,000 viss; which is from five pence to seven pence half penny per 100. The carriage of so bulky a commodity and the breakage to which pots are so liable enhances the price in the most distant parts to which the article is transported to 50 ticals per 1,000 viss. Sesamun oil will cost at the same place not less than 300 ticals for an equal weight, but it lasts longer, gives a better light and is more agreeable than the petroleum, which in burning emits an immense quantity of black smoke, which soils every object near it. The cheapness, however, of this article is so great that it must be considered as conducing much to the comfort and convenience of the Burmans. Petroleum is used by the Burmans for the purpose of burning in lamps and smearing timber to protect it against insects, especially the white ant, which will not approach it. It is said that about two-thirds of it is used for burning, and that its consumption is universal until its price reaches that of Sesamun oil, the only other oil which is used in the country for burning. Its consumption, therefore, is universal wherever there is water carriage to convey it—that is, in all the country watered by the Krowaddy, its tributary streams and its branches. It includes Bassien, but excludes Martaban, Tavoy and Mergui, Aracan, Tongo and all the northern and southern tributary states. The quantity exported to foreign ports is a mere trifle, not worth noticing. It is considered that a consumption of 30 viss per annum for each family of five and a half persons is a moderate average. If it were practical, therefore, to ascertain the real quantity produced at the wells, we should be possessed of the means of making a tolerable estimate of the inhabitants who make use of this commodity, consisting of the largest part of the population of the kingdom. Of the actual produce of the wells we received accounts not easily reconcilable to each other. The daily produce of the wells was stated according to quality to vary from 35 to 500, the average giving about 235 viss. The number of wells was sometimes as low as 50, and sometimes as high as 400. The average made about 200. Considering that they are spread over 16 square miles, as well as that the oil is well known to be an article of general consumption

throughout the country, I do not think the number exaggerated. This estimate will make the consumers of petroleum for burning amount to 2,066,721. In the narrative of one of my predecessors, Captain Cox, the number of wells is given as high as 520, and the daily average produce of each well is reckoned at 300 viss, which makes the whole amount produced 56,940,000."

We here give extracts in reference to Petroleum from the narrative of Major Michael Symes of the English army, who was sent by the governor general of India as ambassador to the court of Ava, in 1765 (published by Bulmer and Co., in London, in 1800), who says:

"After passing various sands and villages we got to Yaynangheoum, or Earth Oil (Petroleum) creek, about two hours past noon. We were informed that the celebrated wells of petroleum, which supply the whole empire and many parts of India with that useful product, were five miles to the east of this place. The mouth of the creek was crowded with large boats waiting to receive a lading of oil, and immense pyramids of earthen jars were raised within and around the village, disposed in the same manner as shot and shells are piled in an arsenal. This is inhabited only by potters, who carry on an extensive manufactory, and find full employment. The smell of the oil is extremely offensive. We saw several thousand jars filled with it, ranged along the bank; some of these were continually breaking and the contents mingling with the sand, formed a very filthy consistence. Mr. Wood had the curiosity to walk to the wells; but, though I had felt the same desire, I thought it prudent to postpone visiting them until my return, when I was likely to have more leisure, and to be less the object of observation.

We rode until 2 o'clock, at which hour we reached Yaynangheoum, or Petroleum creek, of Benangyun. The oil drawers stated to us that in cleaning out old wells accidents sometimes happened from the fire damp and they pointed out a particular well at which two men had lost their lives from this cause.

The celebrated petroleum wells afford, as I ascertained at Ava, a revenue to the king, or his officers. The wells are private property and belong hereditarily to about 32 individuals. A duty of five parts in 100 is levied on the petroleum as it comes from the wells and the amount realized on it is said to be 25,000 ticals per annum. No less than 20,000 of this goes to contractors, collectors or public officers, and the share of the state, or 5,000, was assigned during our visit as a pension to one of the queens.

The petroleum wells of Renangyorong have been already described in the Journal. From the more accurate information which I obtained at Ava, it appears that the produce of these may be estimated at the highest in round numbers at 22,000,000 of viss, each of 365-100 pounds avoirdupois. This estimate is formed from the report of the Myo Thugyi, who rents the tax on the wells, which is five in a hundred. His annual collection is 25,000 ticals, and he estimated or conjectured that he lost by smuggling 8,000, making the total 33,000. The value of the whole produce, therefore, is 660,000 ticals. The value of the oil on the spot is

reckoned at three ticals per 100 viss, and consequently its amount will be as above stated.

I should observe that petroleum is universally used wherever navigation of the Irrawaddy and Ryendwen, with their tributary streams, will allow of its being conveyed, and that it is also carried to a place already noticed in our journey up the river. Dr. Buchanan partook of an early dinner with me and when the sun had descended so low as to no longer inconvenience us, we mounted our horses to visit the celebrated wells that produce the oil, an article of universal use throughout the empire.

The evening being far advanced, we met but few carts. Those we did observe were drawn by a pair of oxen, and of a length disproportionate to the breadth, to allow space for earthen pots that contained the oil.

It was a matter of surprise to us how they could convey such brittle ware with any degree of safety over so rugged a road. Each pot was packed in a separate basket and laid in straw, notwithstanding which precaution the ground all the way was strewn with broken fragments of the vessels and wet with oil, for no care can prevent the fracture of some in every journey. As we approached the pits, which were more distant than we had imagined, the country became less uneven and the soil produced herbage. It was nearly dark when we reached them, and the laborers had retired from work. There seemed to be a great many pits within a small compass. Walking to the nearest we found the aperture about four feet square, and the sides lined as far as we could see down with timber. The oil is drawn up in an iron pot fastened to a rope passed over a wooden cylinder, which revolves on an axis, supported by two upright posts. When the pot is filled two men take hold of the rope by the end and run down a declivity, which is cut in the ground, to a distance equivalent to the depth of the well. Thus, when they reach the end of the track the pot is raised to its proper elevation; the contents, water and oil together, are then discharged into a cistern and the water is afterwards drawn through a hole in the bottom. Our guide, an active, intelligent fellow, went to a neighboring house and procured a well rope, by means of which we were enabled to measure the depth, and ascertained it to be 37 fathoms; but of the quality of the oil at the bottom we could not judge. The owner of the rope, who followed our guide, affirmed that when a pit yielded as much as came up to the waist of a man, it was deemed tolerably productive; if it reached his neck, it was abundant; but that which rose no higher than the knee, was accounted indifferent. When a well is exhausted they restore the spring by cutting deeper in the rock, which is extremely hard in those places where the oil is produced. The government farms out the ground which supplies this useful commodity, and it is again let to adventurers, who dig wells at their own hazard, by which they sometimes gain and often lose, as the labor and expense of digging are considerable. The oil is sold on the spot for a mere trifle—I think 200 or 300 pots for a tackal, or half a crown. The principal charge is incurred by the transportation and purchase of vessels. We had but half gratified our curiosity when it grew dark and our

guide urged us not to remain any longer, as the road was said to be infested with tigers, that prowled about at night among the rocky, uninhabited ways through which we had to pass. We followed his advice and returned with greater risk, as I thought, of breaking our necks from the badness of the road, than of being devoured by wild beasts. At 10 o'clock we reached our boats without misadventure."

PUNJAB, INDIA, OIL FIELDS.

The public works department of the government of India a few years since engaged a gentleman from Pennsylvania, Benjamin Smith Lyman, Esq., to report on the commercial value of the oil lands of the Punjab. Mr. Lyman reports as follows:

The Punjab oil region is in the corner between Cashmere and Cabul, and lies wholly between north latitude 32 degrees 31 minutes and 33 degrees 47 minutes, and east longitude from Greenwich 71 degrees 18 minutes and 73 degrees 5 minutes; a nearly square space about a hundred miles long east and west by ninety miles wide, north and south.

Just inside the northeast corner of this square is Rawul Pindee, the largest town of the region, with about 20,000 inhabitants; just inside the southeast corner is Pind Dadun Khan, a town of about 12,000 inhabitants; and just inside the southwest corner is the ancient uninhabited ruin of a walled town now called Kaffir Kot. Just within the northwest edge of the region, and less than 20 miles from its eastern edge, stands the little village of Shah kee Dheree, on the site of the ancient capital Taxila, where the King Taxiles hospitably entertained Alexander the Great. The small town of Attok, where Alexander crossed the Indus into India is only 10 miles north of the middle of the northern edge of the square. The famous Muneekyala Tope, built by King Kanishka, about the Christian era, to mark the spot where Boodha in compassion gave his own flesh to satisfy the hunger of a starving tiger, stands a little outside the square, 15 miles southeast of Rawul Pindee.

The river Indus enters the square about the middle of the northern edge and leaves it at the southeast corner. The Jhelum river (the "fabulosus Hydaspes) of the ancients), one of the five rivers that gives its name to the Punjab, flows across the southeast corner, past Pind Dadun Khan, southwesterly toward the Indus. The center of the region is drained by the Sohan, which rises near Rawul Pindee and flows west southwest to the Indus.

The region lies, then, mostly between the Indus and Jhelum, in what is called the Sind Sagur Doab (two rivers), and it is mainly in the mountainous or hill part (Kohistan) of the Doab. The oil has been drilled for at Gunda, and at least 50 gallons of it a day were pumped from the well; but the yield, of course, grew quickly less (like the ordinates of a parabola), and after the whole amount had reached 2,000 gallons (about five months) the daily yield was less than 10 gallons. In the region oil flows also at five other natural springs, from a gill to three quarts a

day, and there are traces of it at two other places, making eight in all. Asphalt, or dried oil, is found in small quantities at four of these places, and at four other places, at two in notable quantities. At most of the asphalt places there are traces of rock tar or asphalt melted by the heat of the sun; and at one of them (Aluggud) as much as 100 gallons. Besides these dozen places where oil or asphalt is found there are half a dozen places where there are small traces of one or the other, enough to attract notice in the minute examination of the country by its inhabitants. About half of all the places are in the northeastern corner of the region; about half toward the southwestern corner and one or two in the northwestern corner toward the middle.

The Aluggud oil (now dried to asphalt) seems to have come from rocks of carboniferous age, to judge by their fossils, though other things would rather show that they were of later age. If they are carboniferous, then the nummulitic rocks are wanting above them, and have thinned completely away from a thickness of 2,000 feet only 30 miles distant. This oil is also the only case of oil outside of the older tertiary rocks anywhere in the whole region.

All the other oil springs or shows of oil in the southern part of the region are on the northern side of the Salt Range and in the nummulitic lime rock, or close above it. The northern ones are either in the nummulitic lime rock of the Choor hills, the same probably as that of the Salt range, or in the Gunda rocks (chiefly sand rocks) that lie south of them, also accompanied by nummulites.

In every case the oil seems to come from a deposit of very small horizontal extent, sometimes only a few feet, seldom as much as a few hundred yards; only in one case, that of the Chhota Kuta and Burra Kutta oil springs near Jaba, does the deposit seem to extend as much as half a mile. Here, too, the oil comes from a thickness of about 100 feet, and the natural springs yield as much as three quarts a day. At all other places the oil comes from a much smaller thickness of rock, from 40 feet at Aluggud and 20 at Gunda and Punnoba downward. Scarcely do any two oil springs come from the same bed of rock.

The oil is dark green in color and so heavy as to mark 25 degrees of Beaume's scale, or even less. The Gunda oil has been burned a little by the natives with a simple wick, resting on the side of an open dish; but the Punnoba oil is more inflammable and needs a special tube for the wick, though the main opening of the dish or lamp may stay uncovered. The oil, generally, however, has been little used for burning, except at Punnoba, but has been sought for as a cure for the sore backs of camels. The asphalt was highly prized 40 years ago by the natives as a medicine, especially for broken bones. It was carried far and wide, and was called "negro's fat," because it was believed to have dripped from the brain of a negro who had been hung up by the heels before a slow fire.

It is perhaps needless to say that there is nothing whatever in the mode of occurrence of the Punjab oil to uphold the chimerical belief that rock oil passes by distillation, emanation or otherwise from one set of rocks to another that it originates in any different

rocks from those in which it is found; and nothing to show that it has been formed by any other method than the very natural and sufficient one of the slow decomposition of organic matter, deposited along with the other materials of the rock. Neither is there anything to show that the oil has been driven up by the upward pressure of water from the lower parts of a bed of rock through its pores to a higher part of the same bed; on the contrary, as the rocks near most of the oil springs dip pretty steeply, if such an action of water were possible, all the oil would long ago have been altogether forced out of the rock at the outcrop. Indeed, such an idea is quite inconsistent with the fact that even a slight amount of oiliness in the pores of the body is a complete bar to the entrance of water; much less could water (without soap) scour the oil from one mass of rock and make it flow into another mass filled with moisture. If oil wells are more numerous in some regions along the tops of rock saddles, the reason is clear, that the oil bearing bed lies too deep for drilling conveniently elsewhere. Wild hopes have sometimes been entertained that a large amount of oil might be drilled near the oil springs, be struck in some cavity below the oil bearing bed; but it is safe to say that they are not justified by anything whatever, either in the Punjab or in any other part of the world either in the practical experience of oil drilling or in the general laws of physics.

CHINA.

Late accounts from China report immense oil fields, some of which are worked to a limited extent. The Chinese may justly claim to be the first to drill for oil, as for hundreds of years they have regularly drilled their wells, and that to a very great depth. The celebrated traveler, Abbe Hue, discovered the existence of petroleum in many parts of the empire. In describing the wells he states that many are drilled to a depth of 1,500 to 2,000 feet, the drilling being done very laboriously by a tube six inches in diameter.

A Catholic missionary who was engaged in the province of Slo-Tchouch in 1833—a territory which is celebrated for its fine wells, gives some very interesting particulars about the petroleum business in the Celestial empire. After describing a burning well and the method of quenching it by turning the waters of a small lake upon the flames; the missionary states that when the mouths of these wells are closed the gas is conveyed to any place where it is needed through hollowed bamboos and used for lighting the towns and villages. He also describes how in a province about 200 leagues from Canton the gas is used in the great salt mines for fuel. The gas is conducted under the boilers by bamboos from the well. These are tipped with earthenware, which keeps the bamboo from burning when the gas is ignited. So great is the quantity of gas produced that all the flame cannot be utilized, but much of it is allowed to escape to the surface of the earth by means of chimneys.

JAPAN.

A very extensive and valuable oil field exists in this country. Oil is found at shallow depths by sinking pits. An English company recently purchased the necessary tools and machinery to commence developments. This company took out with them a driller and refiner from the Pennsylvania oil regions. From accounts received from this field, we conclude that it is of a very promising character.

ALSACE.

The value of Alsace to Germany, and the consequent extent of the loss to France, commercially considered, are alike enhanced by the probable development of a considerable petroleum industry in that celebrated province.

Oil works on a small scale already exist in the valley of the Rhine, near the village of Schwatwiller, within and near the borders of the forest of Hagenau. A thick alluvial deposit has first to be penetrated, beneath which are alternating strata of indurated clay and micaceous sandstone, with seams of compacted sand. These last named seams contain the petroleum and are found at a depth of 200 or 250 feet. Indications of the presence of petroleum are observable in various parts of the forest and bitumen is found and worked in the adjacent country. Drillings to test the presence of the petroliferous sand have been multiplied to some extent, and in all cases with satisfactory results. The mode of working very much resembles that of a colliery. We believe that at present there are only two oil pits existing, and one of these is of a very recent date. The pits are sunk in the ordinary way, and the seams of sand are worked by galleries, in a manner similar to that of getting coal. As the workmen cut their way through the compacted sand the oil oozes out of it, running down the wall of the gallery to the floor, where it accumulates in shallow wells dug for the purpose. From these wells the crude petroleum is conveyed to the surface. But the process of draining does not remove all the oil, and the sand itself is accordingly taken to the surface, to be distilled in retorts. The crude oil which oozes from the sides of the gallery, and that which is distilled from the sand, are subsequently rectified by a further distillatory process, and the product is understood to be in no degree inferior to Pennsylvania refined petroleum. In working the existing pits it is a singular fact that no water is found. Of the extent to which the petroliferous sand prevails, it would be premature to judge at present, but there seems no reason to doubt its presence over a considerable range of territory.

HANOVER.

Experiments have been made in regard to the well ascertained deposits in different localities in Hanover and drilling has been prosecuted in the neighborhood

of Helde, with the object of determining the thickness and extent of a remarkable layer of chalk, occurring at the depth of about 120 feet and saturated with petroleum. Several years ago this chalk deposit was examined to a depth of 400 feet, and the first 150 feet were extremely rich in petroleum, and various amounts were yielded as the drillings descended. It would appear that in consequence of the inefficiency of the apparatus the engineer was unable to penetrate any deeper than 400 feet at the point pure petroleum was found. At present the drilling is to be conducted more vigorously and is to be carried down to a depth of 1,000 with a drill of the diameter of 17 inches.

ITALY.

From time immemorial the inhabitants of Rivanazzano, a small place a short distance from the town of Voghera in the former kingdom of Sardinia, have been in the habit of using mechanically a certain fluid which issues in small rills from the Madonna del Monte, as well as of burning it as a light in their dwellings. At the top of this mountain are the traces of an extinct volcano, and some short time since wells were sunk at its foot and their contents subjected to chemical analysis, the result of which was that petroleum of an excellent quality was found to be present in considerable quantities. The explorers then came to the conclusion that abundant subterranean reservoirs of this mineral oil must necessarily exist at no great distance from the scene of their operations and they determined to trace the above mentioned rills to their sources.

Excavations were accordingly commenced on the borders of the pleasant slopes of Nazzano, some 12 kilometers from Voghera. At a depth of about 15 meters a considerable issue of gas took place and when 30 meters had been reached salt water strongly impregnated with petroleum was met with, a circumstance which the explorers remembered as always occurring in the oil springs of Pennsylvania. Following up the excavations, loud explosions of gas took place at a depth of 90 meters, and large volumes of salt water mixed with petroleum issued from a stratum of sandstone rock which was there met with. Pumps, on the principle of those used in America, under similar circumstances, were then introduced and an abundant supply of petroleum obtained. Ultimately a concession of this valuable property was granted by the Italian government to the explorers, as a reward for their exertions.

The petroleum thus obtained has now been refined and found to yield a valuable lubricating oil, and one well adapted for mixing up paints and varnishes, while the oil for burning gives a very brilliant white light, and has been found remarkably free from the offensive odors usually existing in mineral oils. Our contemporary adds that the result of these explorations has created quite a sensation, and that it is to be hoped that capital will not be wanting to fully develop discoveries which have been pronounced by eminent engineers, geologists and chemists to be most promis-

ing in a commercial, as well as important in a national point of view.

"At Salso the Marchese della Rosa," says an American gentleman traveling in Italy, "took me to see the place where he is drilling for oil. The country has very much the appearance of that around Oil City, Pennsylvania. The Marchese said that one could not stick a cane into the ground without finding traces of oil. The work has now been carried down about 1,000 feet, but not in paying quantities.

NEW ZEALAND.

In the vicinity of Taranaki there is an exhalation of gas, and bubbles of bituminous matter have been observed since the earliest days of the settlement, at about a half mile from high water mark, between the mainland and Moturoa, the highest of the Sugar Loaf islands; and according to Dieffenbach, "was whimsically attributed by the Maoris to the decomposition of an atua, or spirit, who was drowned there."

It was not, however, until November, 1869, that any attempt appears to have been made to search for this oil by boring or sinking wells on land, and as these experiments have to a certain degree proved successful, much attention has been recently attracted to this natural production.

Two companies were formed to test the oil lands of this island. The Taranaki Company drilled two wells, and the Alpha Oil Company one well. Dr. James Hector, in his abstract report on the progress of the geological survey of New Zealand, says, close to the main Sugar Loaf and to the foot of the cliffs is the Taranaki Company's bore No. 1, which has been sunk with much trouble to a depth of 300 feet. The derrick stands at 10 feet above high water, and for some time the water level in the bore maintained by this level, but after a time it sunk suddenly to 32 feet, which would appear to indicate the existence of subterranean channels, communicating with chambers where there is less than the external atmospheric pressure, owing perhaps to the condensation of oil vapors. At 254 feet a patch of gray, ferruginous tufa was passed through, charged with oil, which was the only result. In this bore some patches of hard basaltic rock were encountered, but in the whole there was no decided change in the character of the conglomerate.

Taranaki Company's bore No. 2 is on the island on the north headland and is commenced on a shelf above the water level. The bore was in October sunk to a depth of 145 feet, being 10 feet in the sandstone, 95 feet in the agglomerate breccia, 30 feet in the consolidated tufa and a few feet more in the agglomerate again. A few oil patches have been passed through, but no appreciable quantity has been found.

The third bore is that of the Alpha Company, which is situated a short distance from the north well.

At 10 feet above high water, and close to the boulder covered shore, into a high sandy cliff, a shaft was sunk for 60 feet into the agglomerate, from the sides of which, at 44 feet from the surface, oil was found

to ooze. The shaft was continued by a bore hole to a depth of 180 feet, oil being got at 80 feet and again at the extreme depth. When allowed to stand at rest a considerable quantity of oil collected on the surface of the water in the well * * * accompanied by the escape of gas. The oil was pumped into a tub along with the water. Recently the well has been pumped more regularly and yields, I am informed by the directors, about two barrels per week."

The general results of the chemical examination of the oil obtained from these wells are given as follows: One hundred parts of crude oil, as obtained from the wells, having a specific gravity of .963, give—

Distilled oil of specific gravity.....	.874	.02
Distilled oil of specific gravity.....	.893	.10
Distilled oil of specific gravity.....	.917	.08
Distilled oil of specific gravity.....	.941	.60
Solid bitumen.....		.06.1
Fixed carbon.....		.12.4
Ash01.5
		100.00

The presence of petroleum has been reported in other parts of New Zealand. We understand that recent developments promise success. During the summer of the present year a complete set of the most approved Pennsylvania drilling tools were sent out to be used at this oil field.

NOVA SCOTIA.

Attention has been attracted to the existence of surface oil oozing from the sand rock exposed on the shore of Lake Anslie. A company has been formed at Halifax and are now operating under the superintendence of Mr. William Harrington. Two wells have been drilled to a depth of 800 feet, in which the tools were lost. A third was commenced of which we have had no report. The drill has revealed the existence of three sand rocks. The second well struck oil at 758 feet. Oil was produced from this well in such abundance as to give reasonable evidence of the existence of oil in paying quantities. The oil taken from the well was of unusually high gravity and almost destitute of odor. The oil field is distant from Halifax some 200 miles and is near a fine harbor on the coast, which we understand is now connected by rail with Halifax.

RUSSIA OIL FIELDS.

CAUCASIAN OIL REGION, 1871.

The petroleum deposits of the region of the Caucasus are very remarkable. For many centuries the springs have been known and the oil has been collected by skimming. On the eastern shores of the Caspian sea 20,000 such wells, all of them quite shallow, exist-

ed in 1868. The wells are described as being often close to each other, and the opening of a new one, it is ascertained, does not affect the productiveness of another near it. One sunk in 1863, by the side of another, which for centuries had produced 3,500 pounds per day, yielded 40,000 per day, without affecting in the least the first. The American method has lately been introduced, and flowing wells have burst forth from a depth of 250 feet, which have, until controlled, sent up a jet from 40 to 60 feet high. It is calculated that 19,000,000 pounds are annually produced in the Caucasus region. The present oil producing region is 25 miles in length and about half a mile in width. The oil is found in a porous argillaceous sandstone belonging to the tertiary period. In the vicinity are hills of volcanic rocks, through which heavier sorts of petroleum flow out. It has been observed that from the central portion of the tract the oil is as pure as if refined, and by its faint yellow tint resembles Sauterine wine. That obtained near the sides of the tract is darker, changing to a yellowish green, then reddish brown, and finally to asphaltum.

The oil is largely introduced into Persia, and over large districts no other material is used for producing artificial light. The following article by M. Sainte-Claire-Deville upon the properties of Caucasian petroleum will be found of much interest:

On the Physical Properties and the Calorific Power of Some Petroleum of the Russian Empire. By M. Sainte-Claire-Deville, Corresponding Member of the Academy of Sciences of St. Petersburg. Read April 21, 1871.

Rear Admiral Likhatchof desiring to know, in the interest of the transport trade on the Caspian sea, the value and composition of the petroleum oils of Bakou, sent to me samples of these materials. I have made a very attentive examination of them, persuaded that one day the employment of mineral oils as a combustible will be general in all countries where nature furnishes them abundantly to a regular and well organized exploitation.

Petroleum receives divers applications which necessitate a knowledge of certain of their properties and composition. These special properties and the result of their analysis will be the object of this memoir.

1. The investigation of volatility.—Petroleum is employed in considerable quantities for lighting purposes. Lamp oils, to use an expression established in France (*les huiles lampantes*), ought at the same time be very fluid in order to mount easily into the wick, and little volatile in order not to be too dangerous in their management. The more fluid these oils are, the more volatile are they, and the lower their density. When they distil, as they do in Amreica, on a large scale, petroleum of low density, they only devote to the manufacture of lamp oils the intermediate products whose points of ebullition are above 150 degrees and below 250 or 280 degrees. Those portions which go above 300 degrees in the retorting possess a viscosity which make them useless for lamps, and puts them in demand for the fabrication of lubricating matters, or for fuel. To handle a petroleum oil, one must know exactly the number which represents the quantity of these volatile matters between 150 and

300 degrees. This number indicates the proportion of lamp oils which can be extracted from the natural product.

All that which does not pass in the distillation below 280 degrees should be considered as properly furnishing the lubricating oils, or to be employed without danger as a combustible of perfect quality. As to the volatile portions below 150 degrees, they are composed of gaseous substances, such as hydrure of butyline, or of matters possessing at ordinary temperatures strong volatility. These are the substance which cause such frequent accidents since the development of a commerce in petroleum on so grand a scale.

The table which I am about to give, and which contains numerous figures relative to the volatility of the Caucasian oils, enables them to distinguish at once those which are dangerous, those which furnish lamp oils, and finally the parts of these oils which may be employed for heating purposes.

It will suffice for this to state for each of them the quantities of materials volatilized below 150 degrees, between 150 and 300 degrees, and those which have resisted this temperature.

M. Likhatchof has sent me three specimens of oils, or products of the works at Bakou. On submitting them to distillation, the following results are obtained:

No. 1. Raw Naphtha, from the Balchany Wells.

Volatile matters at 100 degrees.....	1.0 per cent
Volatile matters at 160 degrees.....	5.0 per cent
Volatile matters at 180 degrees.....	9.3 per cent
Volatile matters at 200 degrees.....	14.0 per cent
Volatile matters at 220 degrees.....	15.3 per cent
Volatile matters at 260 degrees.....	29.0 per cent
Volatile matters at 280 degrees.....	37.0 per cent
Volatile matters at 300 degrees.....	41.3 per cent

No. 2. Residue from distillation of the Bakou Wells.

Volatile matters at 240 degrees.....	1.0 per cent
Volatile matters at 260 degrees.....	2.3 per cent
Volatile matters at 280 degrees.....	4.3 per cent
Volatile matters at 300 degrees.....	7.7 per cent

No. 3. Black oil from the Weyser works, Bakou.

Volatile matters at 200 degrees.....	2.3 per cent
Volatile matters at 240 degrees.....	8.0 per cent
Volatile matters at 260 degrees.....	14.0 per cent
Volatile matters at 280 degrees.....	22.3 per cent
Volatile matters at 300 degrees.....	33.7 per cent

Numbers 1 and 3 give a certain quantity of lamp oil, and No. 2 can only serve as a combustible or lubricating substance.

The specimens from another source, but which have been collected at Bakou itself, and of which M. Likhatchof has sent me great quantities, have given the following results:

No. 4. Light Oil.

Volatile parts at 140 degrees.....	2.7 per cent
Volatile parts at 160 degrees.....	7.0 per cent

Volatile parts at 180 degrees.....	13.3 per cent
Volatile parts at 220 degrees.....	19.0 per cent
Volatile parts at 240 degrees.....	23.3 per cent
Volatile parts at 260 degrees.....	29.3 per cent
Volatile parts at 280 degrees.....	36.7 per cent
Volatile parts at 300 degrees.....	75.3 per cent

No. 5. Viscous Oil.

Volatile parts at 200 degrees.....	1.0 per cent
Volatile parts at 220 degrees.....	1.3 per cent
Volatile parts at 240 degrees.....	3.7 per cent
Volatile parts at 260 degrees.....	1.0 per cent
Volatile parts at 280 degrees.....	6.0 per cent
Volatile parts at 300 degrees.....	9.7 per cent

These materials are those which have served to determine the calorific power which will be given further on.

2. Density and coefficients of dilatation. —I have had many times occasion to note the dangers which arise during the transportation of petroleum from their considerable dilatibility. When a building is filled with barrels containing petroleum, a large empty space must be left in order to avoid their explosion; the volume of which space can be calculated from tables now to be cited, constructed with reference to the changes of temperature to which the material may be exposed on its voyage or during its stay in the ports and warehouses of commerce.

I have taken the density at 0 and 50 degrees of the petroleum oils of Bakou, and have calculated with these numbers their coefficients of dilation. Supposing the oil to be exposed during its voyage to a change of temperature of 50 degrees, which is prudent to admit, the value of the space which must be left empty in the vessel is found by means of the following formula: $v+k+50$; v being the volume of the vessel and k being coefficient of dilatation given below:

No. 1. Density at 0°.....	0.882
at 50°.....	0.8473

Raw naphtha from the Balchany wells.
Coefficient of distillation.....0.000781

No. 2. Density at 0°.....	0.928
at 50°.....	0.888

Residue of distillation from Bakou works.
Coefficient of distillation.....0.00091

No. 3. Density at 0°.....	0.897
at 50°.....	7.865

Black oil from Weyser works of Bakou.
Coefficient of distillation.....0.000737

No. 4. Density at 0°.....	0.884
at 50°.....	0.854

Light oil of Bakou.
Coefficient of distillation.....0.000724

No. 5. Density at 0°.....	0.938
at 50°.....	0.907

Heavy oil of Bakou.
Coefficient of distillation.....0.000681

3. Elementary composition.—The elementary analysis of petroleum serves principally to calculate the theoretical calorific power of these minerals. In default of direct determination, you can admit that the quantity of heat given by the combustion of the compound is the sum of the quantities of heat of the combustion of the elements, and calculate thus the calorific power of these hydro-carbons. The number thus found for petroleums is always a maximum that experience never permits us to reach, doubtless because carbon and hydrogen in combining disengage heat and naturally this disengaged heat is no longer present in the compound. But, as M. Macquorn Rankine has very judiciously remarked, you obtain by this calculation an approximate number, which, wholly inexact as it is, may be a guide in the comparison of values, as combustible of divers mineral oils. Here are the results which I have obtained by analyzing the petroleums of Bakou. I designate them by the numbers which have already served me to specify them in the preceding chapters.

No. 1.	Hydrogen	12.5
	Carbon	87.4
	Oxygen	0.1
		100.
No. 2.	Hydrogen	11.7
	Carbon	87.1
	Oxygen	1.2
		100.
No. 3.	Hydrogen	12.0
	Carbon	86.5
	Oxygen	1.5
		100.
No. 4.	Hydrogen	13.6
	Carbon	86.3
	Oxygen	0.1
		100.
No. 5.	Hydrogen	12.3
	Carbon	86.6
	Oxygen	1.1
		100.

To compute with these results the heat of combustion, deduct from the number of hydrogen one-eighth of the found, multiply this difference by 344.62, multiply the number of the carbon by 80.8, and get the sum of the two products thus obtained.

Thus calculated, the following table gives the theoretical heat of combustion of the Bakou oils:

No. 1.....	11.370 units of caloric.
No. 2.....	11.000 units of caloric
No. 3.....	11.060 units of caloric
No. 4.....	11.660 units of caloric
No. 5.....	11.200 units of caloric

4. Calorific power or heat of combustion.—I have determined already the calorific power of petroleums

by proceedings which have been described in reports rendered by the Academy of Sciences. No longer having at my disposal the apparatus which has served for these experiments, I have had recourse to a method which seems to me to give also very good results, and which has the advantage of possible application whenever you have a steam engine whose boiler is heated by mineral oils.

I have shown that the heavy oil of gas works has a very nearly constant composition, and furnishes with truly remarkable regularity the same quantity of heat when it is burned in a calorimeter rightly arranged. Under these conditions heavy oil at 0 degree, a density of 1.044, furnishes by kilogram 12k.77 of vapor, and produces in burning 9.916 units of caloric. These numbers being definitely fixed (see table reports); it is evident that a sufficiently exact relation could be obtained by burning successively representative oil under the boiler of a steam engine producing a known work, and then the oil to be experimented on doing the same work, and burning the same quantity of matter. The quantities of water vaporized by the combustibles will be very nearly in proportion to their calorific powers. As you know the number for the heavy oil, a simple proportion enables you to determine the heat of the combustion of the mineral oil taken experimentally.

I operated upon an engine with a Belleville boiler of eight horse power. I maintained constant, for less than a tenth of an atmosphere nearly, the pressure in the boiler while the engine was condensing in a large iron reservoir of 40 cubic meters, air at a constant pressure of two atmospheres three-quarters.

The air brought in by pumps escaped by a cock whose opening was conveniently arranged so that—the engine doing a constant work—the pressure in the reservoir remained itself absolutely invariable. Under the conditions which I have just mentioned, you can measure exactly the quantity of water volatilized in the boiler, the quantities of oil consumed to produce the constant work of the engine, and when you have made the two determinations successively for the heavy gas, oil serving as representative and the oil taken as experiment, you have given all that is necessary to calculate the calorific power of this last.

1. Baku oil, specimen sent by M. Likhatchof, and arrived in a sheet iron box carefully closed, fluid oil and already studied under No. 4.

Here are the results of its comparison with heavy oil:

Heavy oil has given—

Pressure of the engine.....	3a.8
Pressure of the air in the reservoir.....	2a.75
Temperature of the feed water.....	26°.
Volatilized water.....	161k.
Oil consumed.....	18k.23

Oil No. 4 has given—

Pressure of steam.....	3a.8
Pressure of the air in the reservoir.....	2a.75
Temperature of the feed water.....	26°.
Volatilized water.....	175k.
Weight of the oil burned.....	15k.45

From this is deduced:

1. Calorific power of oil No. 4, 11,460 cal. Quantity of vapor produced at an ordinary pressure, and without work, by one kilogram of oil, 16k.4.

2. Bakou oil, specimen sent by M. Likhatchof, and arrived in a sheet iron box, carefully closed, oil very viscous, and already examined above under No. 5.

This oil, to flow easily in the pipes of conduit, requires that it should be put under a pressure of about four decimeters of mercury. To burn well an oil so little volatile, you must give to the vertical grating of my preparations (see their descriptions in the reports) a little more height than for the fluid oils, and so dispose it (or such a disposition) that the air arrive a little more easily at the bottom than at the top of the grate, where the access of the air should be a little narrower.

Oil No. 5 has given:

Vaporized water..... 126k.6
Oil consumed..... 11k.852

From this is deduced:

Calorific power of oil No. 5..... 10,800 cal.
Quantity of vapor produced without work and
at ordinary pressure by one kilogram of oil. 15k.55

If you compare these calorific powers with those which were theoretically deduced from their composition, you find:

	Observed power.	Calculated power.	Diff.
Oil No. 4.....	11,460 cal.	11,660 cal.	200
Oil No. 5.....	10,800 cal.	11,200 cal.	400

If you admit that this difference which is in mean some 300 units of heat, between the real calorific power and the calculated calorific power, is the same for all the Bakou oils, you find for the specimens of the materials sent me by M. Likhatchof, which bears the numbers 1, 2, 3, and of which too small a quantity were sent me to make the experiment possible, the following results:

No.	Real power.	Calculated power.
No. 1.....	11,070 cal.	11,370 cal.
No. 2.....	10,700 cal.	11,000 cal.
No. 3.....	10,760 cal.	11,060 cal.

All these determinations are infected by a very slight cause of error, proceeding from the manner in which the calculations are established. But they demonstrate nevertheless that the oils of Bakou, compared to the American and European oils which I have examined previously, hold the first rank from the considerable value of their calorific power.

HISTORY OF THE RUSSIAN OIL FIELDS.

Bakou, Balakhani, Grosnia, Romanee and Sabroonchi.

Bakou, the chief oil town of Russia, is a city of

140,000 people and was originally a walled city, and it contains some interesting old towers and buildings. For more than a hundred years it has been a Russian possession, being in its early occupation by Russia a penal colony at the time the walls were built. Now the place is an oil town, having outgrown the limits of the great stone wall that surrounded the original ancient settlement, although the wall, some 30 feet high, still stands in excellent condition. The city inside the walls is largely peopled by Persians and Armenians, who manufacture every variety of thing and keep stores. Baku is on the Caspian sea, but a few miles from the Persian frontier. It is the extreme south-eastern point of Russia, about 575 miles from the Black Sea, and 1,200 miles from Constantinople, Turkey. From the Black Sea Baku is separated by the Caucasus mountain range, a high and rocky continuation of the Alpine system that runs all through Southern Europe, from France to the Caspian Sea. The Caucasus reach a height of from 3,000 to 3,500 feet, the lowest summit crossed by the Trans-Caucasus railroad at Pomi, being nearly 3,000 feet above sea level. After the Caucasus are crossed, going from the Black Sea eastward, the descent is rapid to the arid plains of Georgia. From Tiflis, a thriving and populous Georgian city, to the Caspian Sea, a distance of some 300 miles, is a gravelly plain, occasionally broken by a mountain spur, fertile when irrigated, but with little rain.

The surface is a drift formation—sand, gravel and cobblestone boulders—indicating that at one time the Caspian Sea extended from its present limits to the foot of the Caucasus mountains. Baku and the Baku oil fields are undoubtedly in what was the bed of the sea. Naturally the American expects to find in such a place a stratified formation of aqueous rock, like our regular deposits of oil sands and limestone formations, but he finds nothing of the kind. The Caspian country is simply a great loose deposit of sand, gravel and boulders, swept down evidently from the mountains, carrying at times a little clay, which must not be forgotten in studying the singular oil country, all thrown together, which forms the sources of the oil. The sand carries a little clay, which makes it impervious to water to a great extent, but the clay is not sufficient to bind the mass together. The depth of this formation is not known. It continues to the bottom of the deepest oil well, some 2,000 feet, and in this more or less loose sand and gravel all the oil of Baku is found. Baku is nearly 100 feet below the sea level. The Caspian is a salt sea with no outlet; it is slowly lowering its level. Its coast skirts the city of Baku, situated on a slight rise above it. The oil wells are drilled to a depth of from 300 to 2,000 feet below the surface and were it not for the clay in the loose sand the sea would percolate into every well drilled, for some of them are but a few feet distant from the beach. Yet, while the clay in the sand does hold the water back, it does not stiffen the sand so that it will stand up or permit drilling, and every hole drilled has to be cased, as the hole is drilled, or the wall will fall in. While Baku is the center of the oil fields, there are no wells in the city. On the contrary, they are situated in five places. South of Baku about two

miles is Bibi-Eibat, a field about a half a mile square, which at one time produced more oil than all the wells in America. Eight miles south of Baku is Balakhani, the largest oil field of Russia, two miles long and one mile wide. Close by, and really an extension, is Sabroonchi, and farther east is the smaller oil field known as Romanee. The four fields do not cover a scope of more than four square miles. The Romanee oil field is famous for containing the big oil well of Asaddulaeff, which flowed at one time 150,000 barrels of oil a day. That was more oil than all the wells of America combined were producing at that time.

When one of these big wells is discharging its flow of oil in the air before it is in some measure confined, the sight is wonderful. The column of oil and sand shoots up to 400 to 500 feet, and if the wind is blowing the spray is carried miles away.

The wind over the plain from the Caspian had a fashion of blowing a gale very often, and it not infrequently happens that while a big well is flowing in the air a gale sweeps in off the sea, and then havoc be paid for frequently by the man who is the owner of a big well to find himself in receipt of heavy bills for damage; and gardens, houses, churches and buildings of various sorts destroyed by the oil have had to be paid for frequently by the man who is the owner of one of these phenomenal fountains of oil. Sand, gravel and gas. Were it not for one thing drilling an oil well in the Apsheron peninsula would be the easiest drilling imaginable, for in the soft sand the drilling tools will drill faster than the sand and gravel can be bailed out. A well could be drilled with a shovel, but as it is, drilling a Russian well is a task that takes five or six months, and costs anywhere from \$8,000 to \$25,500. Our American drillers would look at the Russian outfit and laugh, and think to improve on it, and do good work, but an American driller in Russia, to succeed, has to learn the Russian method and follow it. Years of experience and trials of all plans have shown what is best. The Russian derrick is built of immense spars, set upright instead of the fragile plank fabric that an American erects. The spars are stoutly braced with smaller timbers, and all the derrick is boarded in for a two fold purpose; first, to protect the workmen, and second to keep the well from flowing in the open air, as the wind has the habit of carrying the oil and scattering it over houses and gardens, etc. When the derrick is completed and rigged up a joint of casing from 28 to 30 inches in diameter, made of heavy boiler iron and riveted, is set in place to start the conductor hole. It is driven, pile driver fashion, with a heavy wood maul, into the sand as far as it will go; the tools are then used to clean out the hole to the bottom of the casing. Practically the whole process of drilling a well is to clean out the sand at the bottom of this big casing. So that it can be forced or driven downward into the earth. As one joint of casing a few feet long is lowered, another is riveted to the top, instead of screwing it together, as in America, and the process of drilling and lowering the sectional casing is continued. The soft sand presses against the casing, and after a short distance the pressure is so great that further headway is impossible. Then a smaller size of casing is introduced, and work goes on again at

the bottom of the hole. The theory of procedure is similar to the system of casing through the cave in this state of West Virginia, except that in Russia the casing must keep up with the tools to attempt to drill a few feet and put the casing in the hole would be as absurd as to try to drill a hole in the Atlantic ocean.

Innumerable accidents happen. The casing sometimes collapses from the pressure of the sand, or perhaps a boulder is encountered that stands in the way of progress, and it makes a crooked hole, or the casing batters at the bottom, or the sand that comes up cuts the casing into shreds, or the casing sticks fast, and will not drive lower, or the tools are lost, and fishing in the sand becomes necessary. As a consequence the number of wells drilled is not large and not over 25,000 have been drilled in Russia since oil was first drilled for. A Russian well is never finished. A well that has produced an enormous quantity of oil may cease to produce and be drilled deeper and produce more oil than before. The oil wells in Russia are mostly owned by the Nobel family. The Nobels are of Swedish descent.

Emmanuel Nobel, the father, was the inventor of the torpedo, and one of his sons, Alfred Nobel, discovered dynamite, and Robert and Ludwig Nobel became the twin organizers of the Russian petroleum industry. In 1875 the brothers began to refine oil at Baku. Later a refinery was built near the wells at Balakhani. The first pipe was laid by the Nobel brothers in 1876 from Balakhani to the Black town, or Baku, a distance of eight miles, through the Apsheron oil region, owing to the great cost and leakage of the barrels.

The first liquid transport or "cistern steamer," appeared on the Caspian in 1879. The first was named the Mahomet, second Tatarin, third Bramah, fourth Spinoza, fifth Darwin, sixth Talmud, seventh Koran, eighth Calmuck, ninth Zoroaster. The vessels are steel, built 245 feet long, 27 $\frac{3}{4}$ feet broad and when laden with kerosene have a draught of 11 feet. The engines are of 120 nominal horse power, steaming at 10 knots; they burn oil for fuel. The bunkers contain a supply calculated to last six days, sufficient for the journey from Baku to the mouth of the Volga. The oil is transferred in smaller boats. The large vessels cost \$28,000, and the smaller ones \$15,000. The smaller boats take the oil from the mouth of the Volgoa to Tsaritzina, and pump it into reservoirs for storage, alongside the railway, from which point it is sent over the Russian railway to middle and western Europe. In 1877 tank cars were introduced by the Nobel brothers and in two years they had 1,500 of them in use. In 1879 the business became a joint stock company, under the title of Nobel Brothers Petroleum Production Company (Tovarishchestro Neph-tanavo Proisvodstva Bratieff Nobel). The chairman being Ludwig Nobel, the oil king of Russia, and the directors General Bilderling, Alfred Nobel, Count Tatischeff and Mr. Beliamins.

Tsaritzin was made the starting point of the railroad. In the winter the Volga is frozen over and no oil could be carried for four months from Baku to Taritzen. In summer, on the other hand, when the boats can run freely, twilight prevails all night long.

and the public need no kerosene. As a result of this it was necessary to form in different parts of Russia great storage depots where the oil could be collected in summer, and from whence it could be distributed in winter. The central place chosen for this operation was Orel, which is conveniently situated in middle Russia.

Stations are located at St. Petersburg, Moscow, Warsaw and Saratoff and at points on the Baltic and Black Sea. The company delivers all the oil in tank steamers, tank cars or in iron tanks. No barreling is carried on by the firm. They sell the oil by ship load or train load to the oil dealers in provincial Russia. No oil is sold only for cash. Owing to the high tariff by Russia on foreign oil American oil is excluded from Russia.

HISTORY OF THE OIL INDUSTRY OF ECHIGO, JAPAN.

In 1613 a man called Magara Mikei discovered oil at Karameki, near Nutsu, where the fire well is located. The first refinery was built in 1869 at Naguaka by Nakajima Sangoro and Wakizaka Hachigoro. Oil is produced in the following places: Shiwodani, Nagasaga, Urase, Urase and Hire, Amaza, Miyagawa. Names of oil companies: The Amaze Sekiyu, The Nippon Sekiyu, The Nippon Sekiyu Kwaiska, The Zawo Sekiyu.

CHRONOLOGY OF THE OIL FIELDS OF AMERICA.

The first oil well drilled in America expressly for oil was the Bissell-Drake well at the junction of Pine and Oil creeks, Venango county, Pa. The well was drilled into the first sand Saturday, August 27, 1859. Production first 24 hours is estimated at 20 barrels.

EARLY OIL HISTORY OF TIDIOUTE, PA.

Early in 1860 the Tidioute oil field was opened and so numerous, eager and energetic were the operators that in July of that year more than 60 wells were being drilled at the same time. A perfect furor raged for a while. Squatter claimants took possession of sandbars in the river, while others of the same class essayed to drill for the greasy product from floats and rafts anchored in mid stream. A number of the rafts were cut loose and let float down the river. The floats or rafts were watched night and day. A regular war was going on between the owners of the leases on the island and shore land of the Allegheny river and the squatters. When the fight was at its height a rise in the river washed the rafts and floats down the river.

In 1861 Triumph and Enterprise oil fields were struck.

In 1862 Fagundus oil field was struck.

FIRST WELL, DRILLED IN BRADFORD, PA.

Bradford Oil Company organized January 10, 1861. Capital stock \$5,000, divided into 1,000 shares, at \$5 per share. President, S. Holmes; secretary, E. P. Steers; treasurer, L. T. Harper. Directors: Geo. Sanford, G. D. Crooker, C. L. Alton, J. R. Dart and H. Burgess.

The first hole was drilled 200 feet deep on the Kingsbury farm on West Branch, now in the city limits of Bradford. Pole tools were used. The contractors were Peter Chase & Co.

First oil discovered in Bradford, Pa., oil field was near the village of Limestone, Cattaraugus county, New York, in 1863. The first well in the Tuna valley was drilled by the Olmstead Oil Company on the Crookes farm in Pennsylvania about one-half mile south of the state line. A small show of oil was found at a depth of 550 feet.

In 1864 Dr. James Nichols, Henry Renner and Daniel Smith drilled a well just north of Limestone village to the depth of 570 feet and found a show of oil. The Hall Farm Petroleum Company, incorporated under the laws of New York, in 1865, purchased the Hall farm in Limestone village, Cattaraugus county, N. Y., and at once began drilling. After much delay the well reached the depth of 1,000 feet, when the company failed and turned the well over to Job Moses, the largest creditor. The well was drilled 50 feet deeper and at a depth of 1,050 feet sand was struck. On October 15th the well began to produce five barrels of oil and was a paying well until water broke in and flooded the sand and ruined the well.

In 1865 F. E. Dean and brothers drilled a well in the valley of Tuna creek on the Sheperd farm, near the present site of Custer City, Pa. One hundred and sixty feet of drove pipe was used. The well was drilled 900 feet deep and abandoned 200 feet above the Bradford sand.

In 1860 the citizens of the village of Bradford concluded to club together and drill the Barnsdall well deeper, and it was drilled to a total depth of 875 feet, or within 150 feet of the Bradford oil producing sand.

In 1867 F. E. Dean and brothers drilled a well on the Clark farm at Tarport, now East Bradford, to a depth of 605 feet, or over 400 feet above the Bradford sand. All of these wells were drilled with the expectation of finding the Venango county, Pa., oil sand at about the same depth below water level as at Oil City, but they were all dry holes at that depth. The first well drilled to the Bradford sand was drilled by James E. Butts, Hon. C. H. Foster, Darius Foster, Job Moses and others on the H. Gilbert farm, two miles northeast of Bradford, Pa.

Slush oil was found at a depth of 751 feet and in November, 1871, the well was drilled to the brown or chocolate sand, which was reached at a depth of 1,110 feet. The well began producing 10 barrels a day from this sand, which was then named the Bradford

sand. On December 6, 1874, Messrs. Butts and Foster drilled a well in the Bradford sand on the Archy Buchanan farm, two and a half miles northeast of Bradford. This well started off with a production of 70 barrels a day, and was the real beginning of the oil excitement in Bradford and McKean county, Pa.

The David Beatty well at East Warren, Pa., was drilled into the Glade oil sand in March, 1875 and produced 10 barrels of oil a day when first drilled in.

The John Bell well opened up the north Warren, Pa., oil field in 1876.

The Bradford Oil Company was chartered June 6, 1876; Wesley Chambers, president; L. G. Peck, secretary; J. T. Jones, treasurer.

H. L. Westerman well on Holder's run, Armstrong county, Pa., was drilled in the sand November 15, 1877. The well produces a water white oil that stands a fire test of 110 degrees as it comes from the well. The well is known as the Hair oil well and produces one barrel of oil a day.

The Tolles well was the first well drilled in the Stoneham, Pa., oil field in 1878.

In December, 1878, four years after the completion of the Butts well, the average daily production of crude oil in the Bradford oil field was 23,700 barrels, and in 1880 the Bradford oil field produced 63,000 barrels of oil a day.

In June, 1880, the first oil well was struck at Clarendon, Pa., known as the Eagan well.

The first wells were drilled that produced oil in Tiona and Sheffield, Pa., in 1880.

The famous wildcat mystery on lot 646, Cherry Grove, Pa., was drilled in the oil sand May 17, 1882.

Wardwell and Glade run, Warren county, Pa., oil fields were being drilled in 1883.

The great Thorn creek, Butler county, Pa., oil field was opened up by the Phillips school house lot well in June, 1884.

Samuel Gantz mill lot well at Washington, Pa., was the first well to find oil in the second sand, in May, 1884 and was named Gantz sand in honor of the owner of the lot. Production of well 15 barrels of oil the first 24 hours. Well drilled for the Citizens Oil and Gas Company.

James Gordon farm well, Washington, Pa., was the first well drilled to the third sand, named Gordon sand in honor of the owner of the farm. Well drilled in Gordon sand in August, 1885; started to flow at the rate of 150 barrels of oil a day. People's Light and Heat Company, owners.

Kinzua and Jo Jo oil fields in Warren and McKean counties, Pa., were opened up in 1885.

Ben C. Farout Paper Mill lot well, Lima, O., was drilled in the Trenton limestone in June, 1885. After shooting the well it began to produce 10 barrels of

black oil a day. By the drilling of this well the great Lima, Ohio, oil field was discovered.

The first Trenton rock well struck in the state of Indiana was drilled by the Eaton Oil and Gas Company in August, 1885, at Eaton, Delaware county. The well was a small gas well and produced a small amount of oil.

John McMannis farm well; first oil well drilled in the Taylorstown, Pa., oil field. Drilled in the Gordon sand July 6, 1886; production first 24 hours, 125 barrels of oil. West Virginia Gas Company, owners.

D. F. Hamilton farm well, Mannington, W. Va.; first well to find oil in the Big Injun sand in the Mannington oil field. The well was drilled in the Big Injun sand October 3, 1889. The well was plugged and held as a mystery for a number of days. Flaggy Meadow Oil Company, owners.

First oil shipped out of Marion county, W. Va., in two tank cars April 10, 1890. The cars were decorated with flags and flowers, with two large, long streamers announcing the first shipment of oil from the Mannington oil field by the Burt Oil Company to Parkersburg, W. Va., via Grafton. That was a sight seeing day for Fairmont. Over 500 people gathered at the depot at Fairmont and watched the two tank cars of oil pass on their journey to Parkersburg.

Edward McDonald farm well, McDonald, Pa.; first well drilled in the fifth sand in the McDonald oil field. Drilled to the fifth sand November, 1890. Well began spraying oil at the rate of 10 barrels of oil a day. Royal Gas Company, owners.

Joseph Mathews farm well, Noblestown, Pa.; drilled in fifth sand July 17, 1891; began flowing at the rate of 1,200 barrels of oil a day. Jennings, Guffey and Galey, owners.

First oil well drilled in Smithfield, W. Va., well No. 1, Laura Smith farm, South Penn Oil Company, owners. Well drilled in September, 1894, produced 10 barrels of oil a day from Big Injun sand. Geo. L. McKain, contractor.

The Chipmonk oil field, near Salamanca, New York, was opened up by a well being struck in April, 1895, on the Mike Kelley farm, owned by Dr. J. P. Colegrove, of Salamanca, New York.

The first oil well drilled on the Cornplanter Indian reservation at South Vandalia, New York, was struck on the flat near the Allegheny river, in March, 1897, at 382 feet. The well began to flow oil at the rate of 1,000 barrels a day.

Jacob Cunningham farm well No. 1, Mannington, W. Va., was struck October 15, 1901. South Penn Oil Company, owners.

Showalter farm pool, Morris Run, Littleton, Pine Grove district, Wetzel county, W. Va. First well struck June, 1903.

Lemaster's farm pool, Pine Grove extension, Wetzel county, W. Va., first well struck June, 1903.

McCalmont Farm Oil Company, J. H. McCalmont farm, six miles southwest of McDonald, Pa.; first well to produce oil from the Squaw or Lewis sand. Production first 24 hours, eight barrels light amber oil.

Milton oil field, Cabell county, W. Va., first well struck September 1, 1903; oil dark, 39 specific gravity.

Church Forks oil field, near Hundred, Wetzel county, W. Va.; Mrs. Sarah Anderson farm; first well drilled in the fourth sand July 4, 1904; production first 24 hours, 300 barrels of oil. Philadelphia Gas Company, owners.

HISTORY OF OIL FIELDS.

The most notable fields in the Appalachian region beginning at the north or upper field are the Allegheny and Chipmonk, of New York; the middle field, Warren, Forest, Venango and Crawford counties, Pa.; the lower field, Butler, Clarion and Armstrong counties, Pa.; the southwest Pennsylvania fields, Allegheny, Beaver, Washington and Green counties, Pa.; the West Virginia oil fields, Mannington, Eureka, Sistersville, Volcano, Cairo, Wolf Summit, Salem, Smithfield, Folsom, Sand Fork, Ritchie and Calhoun counties; the Gould, Scio, Marietta, Macksburg, Corning and Monroe county fields in southeastern Ohio.

GEOGRAPHICAL RANGE OF THE SEVERAL DIVISIONS, WITH NAMES AND DATES OF PIONEER OIL WELLS.

Oil Creek, Pa., Division.—Oil Creek valley and borders, Cherry Run, Keech farm, West Pithole, Pleasantville and surroundings, Enterprise, Shamburg, Octave, Titusville and Church run. Commenced producing August 27, 1859, from Drake well, near Titusville, Pa.; well 69½ feet deep; produced about 20 barrels per day.

Central Allegheny, Pa., Division.—Allegheny river from Scrubgrass to East Hickory, including East Sandy, Bully Hill, Franklin, Reno, Slate run, Walnut Bend, Henry's Bend and mouth of West Hickory. Commenced producing oil in the fall of 1860; Evans well and others at Franklin.

Tidioute, Pa., Division.—Tidioute, Economy, Dennis run, Triumph, New London, Colorado and Fagundus. Commenced producing in the fall of 1860, Island well, at Tidioute; Economy well "A," or flowing well, struck December 25, 1860.

Beaver, Pa., Division.—Smith's Ferry, Ohioville and Slippery Rock. Commenced producing oil December, 1860, Patten, Finlen, Swan & Co.'s well; produced oil at 180 feet deep.

Pithole, Pa., Division.—Holmden, Morey, Ball and Rooker farms and the Cashup pool. Commenced producing oil January 7, 1865, United States Oil Company's Frazer well.

Butler and Armstrong, Pa., Division.—Embracing all the oil territory in these two counties. Commenced producing oil October, 1865, Tom's run well, near Parkers; January 3, 1866, Brady's Bend well, No. 1; March 23, 1878, Troutman well at Modoc.

Clarion, Pa., Division.—Foxburg, Richey run, Emmenton, St. Petersburg, Edenburg and Shippensville. Commenced producing oil in 1866.

Bradford, Pa., Division.—The northern oil field of McKean county, Pa., and Cattaraugus county, N. Y. Commenced producing oil in the summer of 1868, Moses well No. 3, about five barrels; November, 1872, Foster Oil Company's well No. 1, about 10 barrels; December, 1874, Butt's well No. 1, about 70 barrels; summer of 1875, Olmstead well.

Warren and Forest, Pa., Division.—Warren, Stoneham, Clarendon, Cherry Grove and Sheffield, in Warren county; and Balltown, Blue Jay and Cooper districts in Forest county, Pa. Commenced producing oil in March, 1875, Beatty well No. 1, at East Warren; April, 1877, Grandin and Berry No. 1 at Balltown; summer of 1877, Huling's well, Blue Jay district; January 12, 1878, Tolles No. 1, Stoneham; June 24, 1880, Eagan No. 1, Clarendon; April, 1881, Magee and Horton No. 1, south of Sheffield; May 17, 1882, The Mystery, Cherry Grove; September 15, 1882, Shannon well No. 1, Cooper district.

Bullion, Pa., Division.—Bullion run and its surroundings in Venango county. Commenced producing oil in May, 1876, Phillips Bros.' well No. 1.

Allegheny County, N. Y., Division.—Richburg, Boliver, Genesee, Alma, etc., in Allegheny county, N. Y. Commenced producing oil in June, 1879, Triangle well No. 2, about four barrels; July, 1880, Triangle No. 3, about 15 barrels; May, 1881, Richburg No. 1, about 35 barrels.

Allegheny County, Pa., Division.—Wildwood, Bakertown, Belleview, McKees Rocks, McCurdy, Oakdale, Noblestown, Crafton and Bridgeville.

Washington, County, Pa., Division.—Washington, Canonsburg, Finney, Coffeys Crossing, Taylorstown, McDonald, Cecil and Burgettstown.

Green County, Pa., Division.—Fonner, Mount Morris, Nineveh, Bristoria, Leppo, Deep Valley, New Freeport, Dunkard and Davistown.

Mannington, W. Va., Division.—Mannington Downs, Fairview, Flat run, Whetstone, Campbell's run, Cunningham and Bartholomew's run.

Smithfield, W. Va., District.—Smithfield, Robinson's Mills, Brink, Folsom and Dead Fall.

Harrison County, W. Va., Division.—Wolf Summit, Salem, Wallace, Dewey Town, Big Isaac, Lynchburg, Marshville, Ten Mile and Grass run.

Lewis County, W. Va., Division.—Camden, Sand Fork, Riverside and Fink.

Doddridge County, W. Va., Division.—Sedalia,

OIL AND GAS POOLS.

The maps are intended to show the locations of all the oil and gas pools known at date. In the old fields the pools and belts are outlined with considerable precision, in the new a portion of the tracings are necessarily somewhat hypothetical. It would hardly be possible to trace the exact boundaries in every instance, and, indeed, if they could be so traced, probably some new development would change the shape of the figure before the map could be published. In most cases the productive spots are outlined liberally. Very few of the white sand pools are productive in ever part. They are generally made up of prolific streaks and spots separated by many acres of barren territory.

The northwest and west territory of the great chain of productive pools has been sufficiently drilled to dispel all reasonable hope of finding important extensions of the oil rocks of either the McKean, Warren or Venango-Butler groups in that direction; the southwesterly and easterly limit of the chain seems to be almost as certainly defined; in the central portion of the belt the spaces between the pools have been quite thoroughly drilled in almost every direction in efforts to connect one pool with another or to discover something new. Still there is ample room within the proven lines of possible production for many more oil and gas pools of limited extent, particularly in the

southern districts, where the pools are very prolific, and no doubt many more will yet be found. There is also a possibility that deep drilling and widespread prospecting may lead to the discovery of new productive horizons in some parts of the field.

OUTCROP LINES AND ANTICLINALS.

In the southwestern part of Greene county the Olean Sharon conglomerate lies about 2,800 feet beneath the surface; but rising towards the northwest at an average rate of nearly 20 feet to the mile, it gradually approaches the surface, comes up to water level in the Allegheny river near Red Bank and rises to the top of the highest ridges in McKean county, at an altitude of about 2,350 feet above ocean level.

Of course all the overlying rocks rise in a similar manner, and one layer after another comes to the surface in regular succession. First the upper beds outcrop and disappear, then the middle, then the lower.

For the purpose of showing the northerly limits of some of these formations, the approximate geographical ranges of a few important outcrops have been traced on the map, as follows:

Pittsburg coal bed. The great irregularity of this outcrop is due to the influence of the important anticlinals which traverse this region.

Feriferous limestone. This rock varying in thickness from five to 20 feet appears to have its best development in Butler county. Along its outcrop it has shrunk materially and when traced underground in the direction of the broken line curving south and west on the map, it thins out and runs into a bed of dark sandy shale so unlike the massive limestone of Butler county that the driller does not even recognize its horizon.

Mahoning sandstone. A broad belt of elevated sandy country marks this outcrop. This is the sand of the Dunkard creek region of Green county.

Olean conglomerate. Only a few isolated outliers of this rock are found north of the line of outcrop indicated on the map and therefore the line defines the extreme northerly limit of all possible coal fields in this part of the state.

The Chestnut, ridge, Laurel hill and Nolo anticlinals are approximately located on the map for the purpose of showing where the great folds of the mountains commence.

OIL FIELDS AND OIL POOLS IN PENNSYLVANIA.

As the oil and gas pools are now so numerous that they could only be referred to by name on the maps the lists are repeated here for the purpose of adding some explanatory notes which seem to be required.

"Unimportant" indicates that sufficient developments have been made to warrant the conclusion that

OUTLINE MAP OF NEW YORK

OIL AND GAS FIELDS

EXPLANATION

-  OIL FIELDS
-  NATURAL GAS FIELDS

-  PUMP STATIONS ON PIPE LINES
-  * REFINERIES TO BUFFALO AND THE SEABOARD

no large production need be expected in that locality.

"Gleaning" indicates that small wells are still pumping and new ones of small capacity are being drilled in the field. This process will go on for many years.

NORTHEASTERN OIL FIELDS, "BLACK SANDS," DEVONIAN.

Oil sands fine grained, friable and occasionally containing pinhead pebbles. Color, black, dark brown, chocolate brown and brownish gray. Drillings popularly spoken of as resembling coffee grounds, chocolate or brownish coal ashes. Oil dark, amber, green, occasionally black. Gravity ranging from 36 to 49 degrees.

No. 1. Allegheny district, New York.—Composed of the Central Richburg field and outlying pools of Clarksville, Niles, Wirt, Harding and O'Connor, and Waugh and Porter, the last named producing an amber oil of 40 degrees gravity, while just north of Richburg a few wells produced a very black oil of 35 degrees gravity.

No. 2. Bradford district.—Productive everywhere within the limits outlined. In some localities produces from several horizons, but the great reservoir is the Bradford sand, which varies in thickness from 30 to 100 feet and sometimes encloses shaly beds between its productive members.

No. 3. Bradford-Kinzua pool.—An outlier of the Bradford field, which has furnished some remarkably productive and long lived wells.

No. 4. Smethport pool.—Only two or three very small wells. The oil is amber color, of rather heavy gravity and comes from a brown sand lying apparently about 350 feet below the Bradford sand.

No. 5. Kane pool.—Discovered in November, 1885, by Jos. Craig & Co. Oil from a brown sand 400 feet below the Bradford sand.

No. 6. Wilcox pool.—The first well was drilled here in 1864. It produced some oil and much gas. Other wells were drilled later, resulting in the development of a very prolific gas field and finally, in 1887, and 1888, a number of good oil wells were obtained. The Bradford sand is the principal oil horizon, but two other brown sands lie below it at intervals of about 100 and 200 feet, and contain gas under very strong pressure.

No. 7. Elk county.—Came into prominence early in 1887. Oil derived from brown sands lying below the Bradford sand horizon. The Elk county oil group may be said to include the Smethport, Wilcox (lower sands), Kane and Elk sands, or all the brown sands that are found within the first 400 feet after drilling through the horizon of the Bradford sand.

MIDDLE OIL FIELDS. "WHITE AND GRAY SANDS." DEVONIAN.

Oil sands generally grayish and fine grained, but sometimes white, coarse grained and pebbly in streaks.

Oils, amber; ranging from dark amber to light and varying in gravity from 35 to 50 degrees.

No. 8. Kinzua.—Opened in the summer of 1885. Some large wells flowing from 500 to 800 barrels per day for a short time.

No. 9. Sugar run.—Small wells, uncertain territory. Oil from so-called second sand. Unimportant.

No. 10. Dew Drop.—A small cluster of old wells with comparatively little production. Unimportant.

No. 11. Warren and North Warren.—Developed in 1875. Little new work being done. Unimportant.

No. 12. Clarendon, Wardwell, etc.—This includes the Clarendon, Stoneham, Stone Hill, Glade, Wardwell and Tiona developments. There are dry streaks within its outlines, but it is practically all one field and contains a large number of small but profitable wells, as most of them still flow naturally and with very little expense to the operator. Active developments commenced in 1880.

No. 13. Cherry Grove.—Discovered in May, 1882. Remarkable for large but short lived wells. The pool is now almost depleted.

No. 14. Balltown.—Active developments commenced in the summer of 1882. Now thoroughly developed.

No. 15. Cooper.—Opened in September, 1882. Large wells and prolific pool.

No. 16. Wolf creek.—Indicated by the Hood well in 1883.

SOUTHEASTERN OIL FIELDS, VENANGO, BUTLER SANDS. CATSKILL.

White, yellowish and grayish sandstones. Generally friable and coarse grained and frequently a conglomerate mass of quartz pebbles from one-eighth of an inch to an inch in diameter, well water worn and flattened.

Oils in the northern district generally green to black, in the southern generally amber and sometimes very light colored. Gravities range from 32 to 52 degrees—the green and black oils weighing about 48 degrees.

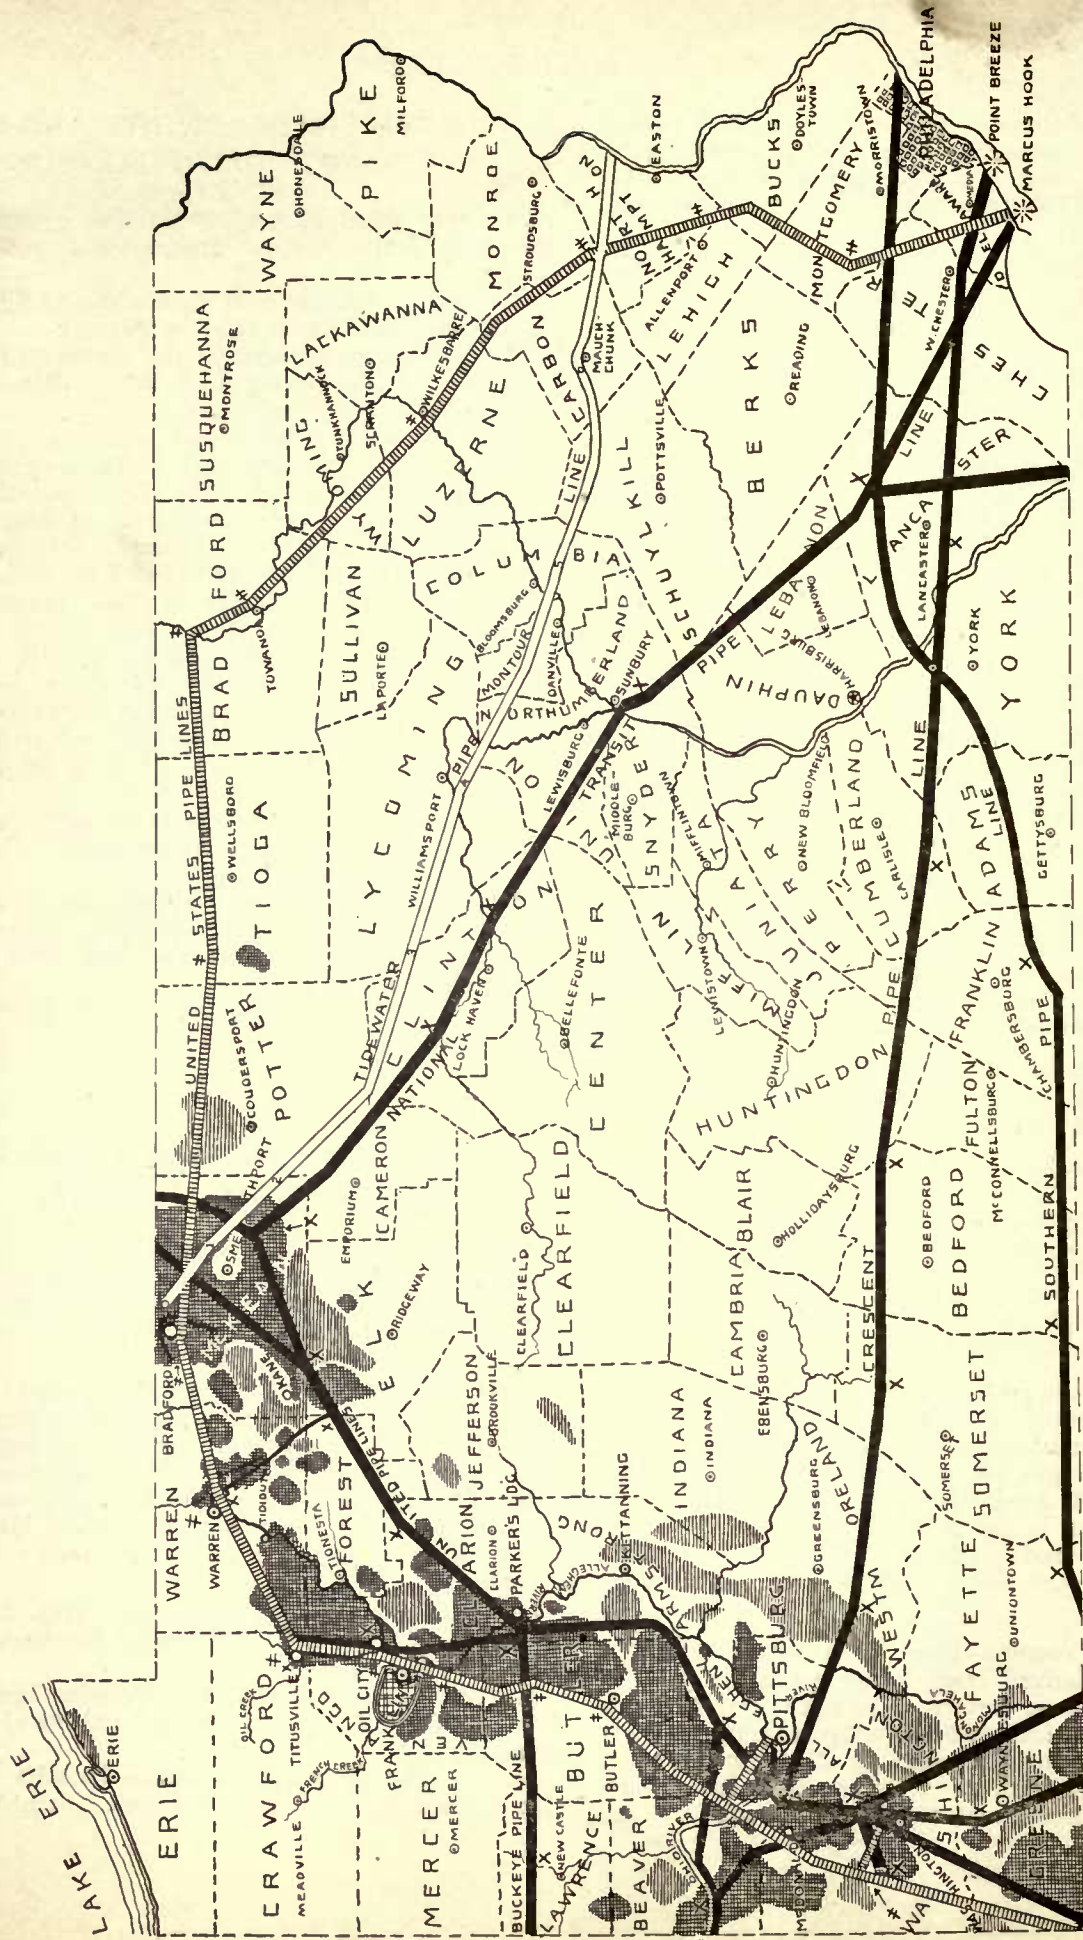

No. 17. Eldred, or Spring creek development.—A number of small wells, producing a green black oil of 47½ degrees gravity from the first sand. Unimportant.

No. 18. Grand Valley.—Dates from 1885. Moderate wells. Third sand. Now pretty thoroughly developed. Gleaning.

No. 19. Tidioute and Triumph.—Includes New London and Colorado. An old and exhausted field. Gleaning.

No. 20. Church run and Octave.—Includes Titusville, Watson Flats, the Drake well, etc. Scene of the

earliest developments. Production now small. Gleaning.

No. 21. Enterprise.—An old field with very little output. Gleaning.

No. 22. Neilltown.—A development of small extent and notable for the fact that the oil is of an amber color, although it apparently comes from the third or green oil sand. The only instance of the kind in the northern oil field. Gleaning.

No. 23. Fagundus.—A very productive field in 1870. Now reduced to the gleaning from a few wells.

No. 24. Dennis run.—An old black oil district. Unimportant.

No. 25. West Hickory, Fogle, etc.—A cluster of pools, embracing the Neill, Stufflebeam, Fogle, McIntyre, White, McGregory, Greene, Dawson and other farms. Small wells, irregular sands and oils of varying gravities derived from first, second and third sand horizons. Gleaning.

No. 26. Oil Creek, Reno, etc.—Including all the old Oil Creek developments, the Reno belt, Shamburg, Pleasantville, etc., also covers the field of the second sand developments in 1888. Oil from the first, second, stray and third sands, amber, green and black. Gravity 43 to 51 degrees. Gleaning.

No. 27. Pit Hole.—The location of the renowned Pit Hole City oil excitement in 1865.

No. 28. Cashup.—A rich pool in 1872. Now abandoned.

No. 29. Sowers.—Including Jamieson farm. A small well or two of second sand oil in 1865. Unimportant.

No. 30. Tionesta.—A few small wells in olden times, but later tests show the field to be unimportant.

No. 31. Walnut and Henry's Bends.—Two old pools which have produced considerable oil. A few small wells are still at work. Unimportant.

No. 32. McGrew.—A small well in 1888 showing the presence of oil in that locality. Unimportant.

No. 33. Clapp-Fleming.—A new pool of good wells developed in 1888 and still producing.

No. 34. Cooperstown.—Old oil pool. Irregular sands. Unimportant.

No. 25. Sugar creek.—Some heavy oil in former years. Unimportant.

No. 36. Utica.—A little heavy oil. Unimportant.

No. 37. Franklin and vicinity.—Lubricating oil of excellent quality. First sand.

No. 38. Two Mile run.—Second sand oil. Unimportant.

No. 39. Raymilton.—Small but lasting wells. Gleaning.

No. 40. Fosters, Cochran farm, Bully Hill and Lower Two Mile.—Formerly very prolific fields, second and third sands. Gleaning.

No. 41. Sage run.—Old. Gleaning.

No. 42. Hope farm.—Old. Gleaning.

No. 43. Norway.—Old. Gleaning.

No. 44. Tipperary.—Discovered in 1886. Production now small.

No. 45. Cranberry.—Old. Gleaning.

No. 46. Hall's run.—A moderate production and rather uncertain sand rock.

No. 47. Tarr Kill.—Discovered Septemebr 16, 1885. Fine wells. Developed and declining.

No. 48. Gas City.—Old pool. Unimportant.

No. 49. East Sandy.—Some good wells.

No. 50. Scrubgrass.—Old. Abandoned.

No. 51. Bullion.—Once an important field. Gleaning.

No. 52. Red Valley.—A prolific pool in 1886. Gleaning.

No. 53. Nickelville.—Only a few good wells. Very treacherous.

No. 54. Cogley run.—A prolific pool in 1885. Gleaning.

No. 55. Lucinda.—Opened in March, 1889. Of no great importance.

No. 56. Emlenton and Six Corners.—Old fields that have yielded a great deal of oil and still furnish many small wells.

No. 57. Rumbaugh.—Old and never of any importance, as only a few wells were obtained.

No. 58. Clarion.—Developed early in 1888. Some very large wells, but soon declined. Limited in extent and disappointing to those who attempted to enlarge it. Oil is from so-called fourth sand, the equivalent of the third of Oil Creek.

No. 59. Reidsburg.—Small wells of amber oil. Unimportant.

No. 60. Clarion-Butler.—Including all the old fields of these districts and Whiskey run, Brady's Bend, Kaylor, Somerville; also the more recent developments of Pontius, Hickey, Herman, etc. Considerable unproductive territory is included within the outlines, but all of it properly belongs to this great oil field. Central parts pretty well developed.

No. 61. Glade.—A limited area, producing oil from the first sand, here called the "hundred foot."

No. 62. Thorn creek, etc.—Including Thorn creek extension, Bald ridge, Reibold and Glade run, not all directly connected, but practically one field. Has furnished very large wells.

No. 63. Saxonburg.—Developed in 1887. Field is not fully outlined.

No. 64. Phillipsburg.—A number of small wells. Not very important.

No. 65. Wild Wood, Legionville and McCurdy.—First wells drilled in 1889-90. Large fields and large wells. Production at present very small.

No. 66. Brush creek.—Opened in November, 1887. A new field of considerable importance.

No. 67. Bakerstown.—Apparently a field of promise but one which has so far been rather disappointing to its developers.

No. 68. Shannopin.—Opened in January, 1886. A very prolific field, but now well defined.

No. 69. Mt. Nebo.—A field of promise in May, 1885, which has never realized the expectations of its prospectors.

No. 70. Murdocksville.—Opened in 1888. A good field.

No. 71. Montour run.—A few small wells. Not considered very promising.

No. 72. Crafton.—1888. A few small wells.

No. 73. Canonsburg.—Some good wells. Oil sands irregular.

No. 74. Taylorstown.—July, 1886. Prolific.

No. 75. Knox.—Developing. Prolific wells.

No. 76. Gordon.—Opened in 1886.

No. 77. Washington.—Commenced with Gantz well, January 1, 1885. Reached its maximum in the summer of 1886.

No. 78. Nineveh.—Opened by Smith well No. 3, August 25, 1888.

No. 79. McDonald.—Opened by K. McDonald well No. 1 August, 1890, largest white sand oil field in the world.

SUB-OLEAN, SHENANGO SANDSTONE. BIG INJUN. POCONO.

A white sandstone of medium grain with some small pebbles. Where the rock is very thick the top is generally a lime sand, which changes gradually to a sandstone. But drillers usually call it sand. Amber oil, gravity 48 degrees.

No. 84. Mount Morris.—Opened in October, 1886. A promising field and still in process of extension.

No. 85. Dolls run.—First well in May, 1889.

BEREA GRIT. POCONO.

A white to gray sandstone, generally a fine grained rock, but coarse and sometimes pebbly where productive. Oil a beautiful light amber color. Gravity 47 to 49 degrees.

No. 80. Slippery Rock.—One of the early fields. Unimportant.

No. 81. Smith's Ferry.—Old, but still occasionally furnishes a good well along its borders.

No. 82. Turkeyfoot.—Opened in October, 1888.

No. 83. Hookstown.—Opened in May, 1889.

MAHONING SANDSTONE, PITTSBURG SERIES.

A grayish white sand, where productive, about 30 feet thick.

Oil reddish amber, gravity 46 degrees, heavy oil in Westmoreland county.

No. 86. Pleasant Unity.—Old. Abandoned.

No. 87. Brownsville.—Old. Never of any importance.

No. 88.—Whiteley creek.—Now of little importance.

No. 89. Dunkard creek.—Now of little importance.

Gas Fields and Gas Pools of Pennsylvania

NORTHERN DIVISION, "BLACK SANDS." DEVONIAN.

- No. 1. Mt. Jewett.—Some gas, but no large development. Piped to Mt. Jewett.
 No. 2. Kane.—Used locally and piped to Bradford.
 No. 3. Wilcox.—First well in 1865. Piped to Bradford, Salamanca, Buffalo, etc.
 No. 4. Roy and Archer.—Large gas field in 1881. Used locally in making charcoal and acid from wood.
 No. 5. Johnsonburg.—Used locally and piped to Ridgway and St. Mary's.
 No. 6. Millstone.—Large gas field. Held in reserve.

WHITE AND GRAY SANDS. DEVONIAN.

- No. 7. Sheffield.—Opened by Hague well in 1875. Pioneer well still flowing. Used locally. Piped to Sheffield, Warren, Jamestown, N. Y., Corry and Erie. A large and reliable field.
 No. 8. Clarendon.—Used locally and piped to Clarendon.
 No. 9. West Hickory.—Opened December, 1887. Piped to Tidioute, etc.
 No. 10. Speechley.—Opened early in 1885. Used locally. Piped to Franklin, Meadville, Mercer, Sharon, Oil City, Titusville, Pleasantville, Tionesta, etc.
 No. 11. Brookville.—Small supply, partly from the Big Injun and partly from a lower sand. Piped to Brookville.
 No. 12. Canoe creek.—Piped to Punxsutawney and other towns. Gas from an horizon certainly as low as the Speechley sand.

VENANGO-BUTLER GROUP. CATSKILL.

- No. 13. Newton well.—Piped to Titusville in 1872.
 No. 14. Marienville.—Moderate flow. Supplies Marienville.
 No. 15. Clarion.—Not voluminous, but piped to Clarion.
 No. 16. Millville.—Piped to New Bethlehem, Millville, etc.
 No. 17. Harrisville.—Developed in 1885. Intended for Youngsville, Ohio, but found insufficient and not piped there.
 No. 18. Centerville.—Piped to New Castle in 1885.
 No. 19. Kittanning.—The main pool has supplied

Kittanning for several years, but since Ford City was built with its immense plate glass works, and commenced to draw upon it, it has been found necessary to reinforce its supplies. Other wells have been obtained, as noted, on the east side of the river, but nothing which indicates a very extensive deposit has yet been discovered there.

- No. 20. Saxon Station.—Considerable gas used locally.
 No. 21. Baden.—Piped to towns along Ohio valley.
 No. 22. Economy.—Piped to towns along Ohio valley.
 No. 23. Bakerstown.—Some good wells.
 No. 24. Lardintown.—Piped to Sharpsburg in 1876. Now unimportant.
 No. 25. Freeport.—Formerly some gas. Now unimportant.
 No. 26. Tarentum.—First well in 1878. A large field in 1885.
 No. 27. Leechburg.—First well in July, 1871. Unimportant.
 No. 28. Apollo.—Formerly some small wells. Unimportant.
 No. 29. Pine run.—Opened January, 1885. Piped to Apollo, Leechburg, Freeport, Natrona, etc., and being introduced in Saltsburg.
 No. 30. Homewood.—Opened by Westinghouse well No. 1, in 1884. Gas from Butler gas sand. Unimportant.
 No. 31. Murrysville.—First well Haymaker No. 1. Piped to Pittsburg in summer of 1884.
 No. 32. Grapeville.—A large field. Piped to Johnstown and towns by the way; to Connellsville, Scottsdale, Uniontown and other places in that direction; to Braddock, Pittsburg and also used locally in the great glass works at Jeannette and other places near the belt.
 No. 33. Latrobe.—Some moderate wells supplying Latrobe and also connected with the Johnstown line.
 No. 34. Beaver.—A large field opened in 1885, already drawn upon heavily and weakening in pressure. Piped to Phillipsburg, Rochester, Beaver Falls and Youngsville, Ohio. Also westerly and southerly to several of the Ohio river towns.
 No. 35. Hickory.—A large field opened with the McGuigan well in 1882. Piped to Pittsburg and towns along the line, and to Wheeling and other places southwest. Gas from the McGuigan sand, and in some wells from the Homeward sandstone.
 No. 36. Ridgeville.—Piped to Pittsburg, etc., and used locally.
 No. 37. Jefferson.—Piped to Jones and McLaughlin's American iron and steel works, Pittsburg.

No. 38. Canonsburg.—First well November, 1884. Piped to Pittsburg and used locally.

No. 39. Washington.—Opened by Hess well, April, 1884. Piped to Washington, etc.

No. 40. Manifold.—Piped to Pittsburg and used locally.

No. 41. Belle Vernon.—Opened in 1887. Piped to Belle Vernon, etc., and connected with Pittsburg.

No. 42. Brownsville.—Some small wells, but, not very reliable.

SUB-OLEAN. "BIG INJUN." POCONO.

No. 43. Fayette.—Opened by Ryder well in 1887. One very powerful well and two smaller ones. Piped to Uniontown.

No. 44. Mt. Morris.—Strong gas, used locally and piped to Morgantown, West Virginia.

"Gas used locally," indicates that there is considerable consumption near the wells. Frequently a large quantity is used in drilling other wells, to which it is sometimes piped for miles.

"Unimportant," indicates that the pools have weakened and are now only of local value.

In the city of Erie and along the lake shore many wells, probably 200, have been drilled and more or less gas obtained. Nearly all that country is a low pressure gas field, and while the wells are useless for pipe line purposes, they are long lived and of great value to land owners who, by putting down a well on their own premises, can almost always secure a reliable supply of fuel and light for many years.

No. 45. Green county.—The largest gas producing county in Pennsylvania.

OIL FIELDS AND OIL POOLS IN WEST VIRGINIA.

Northern division.—No. 1, Turkey Foot and New Cumberland; salt sand and Berea grit.

Northeastern division.—No. 2. Mannington, Whetstone, Flaggy Meadow, Downs, Fairview, Jake's run, Doll's run, Mohn's run, Campbell's run, Flat run, Merville run, Cross Roads, Beulah, Wadestown, Blacksville, Bartholomew's run, Hafer and Cunningham.

Northwestern division.—No. 3. Church's Fork, Hundred, Littleton, Steel's run, Clover Leaf run, Morris run, Cameron, Germany and Proctor.

Central Smithfield division.—No. 4. Smithfield, Folsom, Dead Fall, Jacksonburg, Mill's tract, Piney, Big Flint, Center Point, Sedalia, Wallace, Wolf Summit, Lynchburg, Deweytown, Salem and Big Isaac.

Southeastern division.—No. 5. Sand Fork, Fink, Freeman's creek and Porto Rico.

Western (Sistersville) division.—No. 6. Sistersville, Friendly, Elk Fork, Indian creek, Jug Handle, Iuka and Willow Fork.

Southwestern (Volcano) division.—No. 7. St.

Marys, Belmont, Eureka, Waverly, Hendershot, Ogdon, Murpheytown, Volcano, Cairo, Pennsboro, Bald Knob, Yellow creek, Wriskey run and Burning Springs.

Southern (Cabell county) division.—Milton pool.

OIL FIELDS AND OIL POOLS IN OHIO.

(Producing Pennsylvania high grade oil.)

Southeastern (Marietta) division.—No. 1. Macksburg, Elba, Warner, Cow run, Newport, Lowell, Tunnel and Sand Hill.

Eastern (Ohio) division.—No. 2. Wilson run, Stringtown, Miller's run, Trail run, New Castle, Jackson ridge, Jerusalem and Griffith.

Northeastern (Scio) division.—No. 3. Scio, Jewett, Gould, Limestone run, Knoxville, Yellow creek, Toronto, Bowerstown, Cadiz, Uniontown, Colerain, Barnesville and Cambridge.

OIL FIELDS IN NORTHWESTERN OHIO.

(Trenton Rock.)

Lima, Findlay, North Baltimore, Cygnet, Hammondsburg, Portage, Bowling Green, Jerry City, Oil Center, Cridersville and St. Marys.

OIL FIELDS IN INDIANA.

(Trenton Rock.)

Wells, Blackford, Jay, Adams, Grant, Huntington, Madison, Marion, Miami, Delaware, Randolph, Hamilton and Wabash counties.

OIL FIELDS IN KANSAS.

Neodesha, Chanute, Independence, Iola, Peru, Cherry Vale, Sedan, Coffeyville and Thayer.

OIL FIELDS IN OKLAHOMA AND INDIAN TERRITORY.

Cleveland, Bartlesville, Tulsa, Red Forks, Muskegee and Chelsea.

OIL FIELDS IN COLORADO.

Florence and Boulder.

OIL FIELDS IN CALIFORNIA.

Santa Paula, Newhall, Torrey Canon, Bakersfield, Los Angeles, Whittier, Summerlands, Puente, Colinga and McKitterick.

LEADING OIL COMPANIES IN CALIFORNIA.

Union Oil Company of California. Directors: Wallace L. Hardison, Santa Paula; Lyman, Stewart, Los Angeles; Dan McFarland, Los Angeles; T. R. Bard, Hueneme; W. S. Chaffee, San Buenaventura; Alexander Waldic, Santa Paula; John Irwin, Santa Paula; I. H. Warring, Santa Paula; Casper Taylor, Santa Paula. Certificate filed October 17, 1890. Place of business, Santa Paula, Cal. Capital stock, \$5,000,000. Number of shares, 50,000; value per share, \$100.

The Consolidated Oil Companies of California, 1902; capitalization \$1,000,000; combining Rex Crude Oil Company, Yukon Crude Oil Company, American Fuel Oil Company, Union Consolidated Crude Oil Company. Officers: Allen McD. Riddell, president; Charlton W. Canfield, vice president; W. H. Kent, secretary and treasurer. Wells and leases in Los Angeles and Kern counties, Cal.

Associated Oil Company.

OIL FIELDS IN TEXAS.

Spindle Top, Beaumont, Sour Lake, Batson, Corsicana and Nacogdoches.

Beaumont, Texas, field, on 200 acres of ground more than 400 wells were drilled. The field is known as the Spindle Top.

OIL FIELDS IN LOUISIANA.

Jennings and Welch.

PETROLEUM.

REPORT BY F. H. OLIPHANT,
United States Geologist.

(The barrel used in this report, unless otherwise specified, is the United States standard barrel, containing 42 Winchester gallons.)

IMPORTANT FEATURES OF THE YEAR.

The following are the most conspicuous features in the production, sale and export of crude petroleum and its products in the United States for the year 1903:

1. The production was greater than that of any previous year.

2. The great increase was due to the remarkable output in California, now larger than that of any other state, and to a less extent to the increased production in Indiana, Kansas, Kentucky and Louisiana, and to the larger production maintained by Texas.

3. The remarkably regular output of the Appalachian and the Lima-Indiana fields combined has continued for many years, but the large production of late in the newer fields of the south and west has caused a rapid shifting of the proportions or percentages of the whole output from the older to the newer fields, where a large quantity of the inferior grades of petroleum is consumed for fuel, especially in California, Texas and Louisiana.

4. The general average price paid for crude petroleum was greater by 14.07 cents per barrel than the average price for 1902. The average price paid for Pennsylvania petroleum showed an increase of 35.25 cents; and the average price in the Lima-Indiana field was about 27 cents per barrel more in 1903 than in 1902.

5. Stocks held in tanks in both the Appalachian and the Lima-Indiana fields were considerably decreased during the year.

6. There was a slight decline in the quantity of all grades of petroleum exported during 1903, and a slight gain in the value of the same when compared with that of 1902. There was a decided decrease in the quantity of the illuminating petroleum exported, and a considerable increase in both quantity and value of the lubricating petroleum exported during 1903 over the previous year.

7. The demand for home consumption continued to increase during 1903, the western demand being partly supplied by refineries in Texas, Kansas and Colorado.

INCREASE IN THE PRODUCTION OF THE UNITED STATES.

The total production of crude petroleum in the United States in 1903 was 100,461,337 barrels, being larger than that of any previous year and greater than that of 1902 by 11,694,421 barrels, a gain of 13.17 per cent as compared with a gain of 27.92 per cent in 1902 over 1901. The greatest part of the increase during 1903 was from the state of California, which in 1903 produced 24.27 per cent, or nearly one-fourth of the entire production. This state in 1902 produced 15.75 per cent of the whole production, 12.66 per cent in 1901, and only 6.79 per cent in 1900. The increase in California in 1903 was 10,398,204 barrels, or 74.36 per cent of the production of 1902.

Next to California the largest gain in production was in Indiana, which was 1,705,515 barrels, or 22.80 per cent of the production of 1902. Kansas showed a remarkable gain in production of 600,465 barrels, or 181 per cent; Kentucky and Louisiana showed gains of about 369,000 barrels each; Indian Territory gained 101,811 barrels, or 274.4 per cent; and New York gained 43,248 barrels, or 3.86 per cent in 1903, as compared with 1902.

On the other hand there was a slight decrease of 128,086 barrels, or 0.708 per cent in Texas; and Ohio, Pennsylvania and West Virginia all showed decreased production, amounting to a total of 1,856,619 barrels, or 3.98 per cent in 1903, as compared with 1902. The largest decrease in production in 1903 was in Pennsylvania, and amounted to 708,724 barrels.

PERCENTAGE OF PRODUCTION BY FIELDS AND STATES.

The following table reveals the fact that in the last six years there has been a very remarkable change in the percentage of the local production. The Appalachian and Lima-Indiana fields, which for many years produced all but a very small percentage of the whole, in the year 1903 produced only 55.38 per cent of the total as compared with 93.99 per cent in 1898. The Appalachian and the Lima-Indiana fields have continued regularly for the last 10 years to produce about 55,000,000 barrels per year. California has increased its production since 1900 in the most remarkable manner, so that during 1903 it produced 127,921 more barrels of petroleum than did the states of Pennsylvania and West Virginia combined. Texas has also been a very important factor in bringing about the readjustment of the percentages of production. The production in Texas in 1903 was only slightly less than in 1902, but the great increase in California caused Texas to show a much less percentage of the total in 1903 than in 1902; in 1902, in fact, the Texas percentage of the total production was greater than that of California. All the other states combined under the head of all other fields, show an increase in 1903 of

nearly one per cent over 1902, which in round numbers represents 1,000,000 barrels.

Percentages of crude petroleum produced in the several fields, 1898-1903.

Field.	1898	1899	1900	1901	1902	1903
Appalachian	57.29	57.94	57.05	48.45	36.07	31.41
California	4.08	4.63	6.79	12.66	15.75	24.27
Lima-Indiana ..	36.70	35.44	34.20	31.61	26.31	23.97
Texas98	1.17	1.31	6.33	20.37	17.87
All other95	.82	.65	.95	1.50	2.48
Total	100.00	100.00	100.00	100.00	100.00	100.00

The increased production in the states of Texas, Louisiana and California of large quantities of an inferior grade of petroleum during the years 1902 and 1903 required for its consumption new markets and new conditions of transportation that were unknown to the older fields, and also demanded that a large amount of capital be suddenly invested in tanks, pipe lines, tank cars and tank vessels. The markets and transportation for this new production have been secured to a very large extent; most of the problems connected with its production and transportation have been solved, and during 1903 its consumption for fuel purposes and as an enricher of manufactured gas has been very largely increased.

A very considerable quantity of Texas petroleum has been refined with satisfactory results, although the percentage of the yield is much smaller than from the eastern petroleum. When the value of the petroleum produced in the Appalachian and the Lima-Indiana fields is considered in comparison with that of all the remaining fields, it is found that 82 per cent of the total value comes from the 55.38 per cent of the total production furnished by those fields, the remaining 44.62 per cent of the production receiving 18 per cent of the total value, so that 3.8 barrels of the southern and western petroleum is required to equal the value of one barrel of that produced in the Appalachian and the Lima-Indiana fields.

INCREASE IN PRICE AND TOTAL VALUE.

When the total value of the production, which was \$94,694,050, is compared with \$71,178,910, the value in 1902, the former shows a gain of \$23,515,140, or 33 per cent. The production of Ohio was valued at \$26,234,521 in 1903; West Virginia at \$20,516,532; Pennsylvania at \$18,170,881; Indiana at \$10,474,127; Texas at \$7,517,479; and California, which produced the largest number of barrels of crude petroleum, was valued at only \$7,399,349.

The average price of all the petroleum produced and marketed during 1903 was 94.26 cents per barrel, as compared with 80.19 cents per barrel in 1902, an increase of 14.07 cents per barrel as compared with a decrease of 15.51 cents per barrel when the value received for the production of 1902 is compared with that of 1901. For the last two years the increasing

quantity of cheaper petroleum produced has had its influence in reducing the average price per barrel of the entire production, notwithstanding that much higher prices were paid for eastern petroleum in 1903 than in 1902.

The average price paid for Pennsylvania petroleum, which is about 95 per cent of the entire production of the Appalachian field in 1903, was \$1.59 per barrel, as compared with \$1.23 $\frac{3}{4}$, the average price paid in 1902. This shows the remarkable gain of 35 $\frac{1}{4}$ cents per barrel in the price paid during 1903 over that of 1902. There was also a gain of about 27 cents per barrel in the price paid for the production in the Lima-Indiana field during 1903 over that of 1902. On the other hand, the average price of California petroleum decreased from 34.8 cents per barrel, the lowest price at which any petroleum was marketed during 1903. The price of the Texas petroleum showed a large advance in the average price paid, as the production of 1903 averaged 41.87 cents per barrel as compared with 22.1 cents for that of 1902, a gain of 19.77 cents, or 89 per cent. The highest price quoted during the year was \$7 per barrel for the lubricating petroleum produced in Wyoming.

INCREASE IN THE NUMBER OF WELLS DRILLED.

The total number of wells drilled in the United States during the year 1903 was 18,880; of this number 4,650 were dry, leaving 14,230 as the number of productive wells, as compared with 11,326 productive wells in 1902. At an average cost of \$1,400 per well, this total number represents an investment in 1903 of \$26,402,000.

The total number of wells drilled in the Appalachian and the Lima-Indiana fields during 1903 was 16,232. Of this number 2,889 were dry, leaving 13,343 productive wells. The proportion of produc-

tive wells to dry holes in these fields in 1903 was 78 $\frac{1}{2}$ to 21 $\frac{1}{2}$, as compared with 80 to 20 in 1902, and with 78 to 22 in 1901.

DECREASE IN EXPORTS.

The exports of petroleum and its products during 1903 was slightly less than 1,000,000,000 gallons. The quantity was 936,699,145 gallons, valued at \$72,628,539, a decrease as compared with 1902 of 127,534,456 gallons in quantity, but an increase in value of \$4,031,396, chiefly the result of an increased quantity of lubricating petroleum exported in 1903 over the previous year. There was a decline in the quantity of illuminating petroleum exported, accompanied by a slight increase in value.

NEW POOLS DISCOVERED.

The only important pool discovered during 1903 was that known as the Batson Prairie, west of Saratoga, Hardin county, Texas. There were numerous extensions of territory in Kansas and Indian Territory, and a vast amount of territory well inside of limits defined during 1902 was opened and tested. This field began this year to assume a much more important position as productive and profitable territory. The developments in Alaska have not yet sustained the predictions made last year.

PRODUCTION AND VALUE.

Production by States and Fields.

In the following table is given a statement of the total quantity and the total value of all crude petroleum produced in the United States in 1902 and 1903, by states and important districts:

Total quantity and value of crude petroleum produced in the United States and the average price per barrel in 1902 and 1903.

State and District.	1902			1903		
	Quantity	Value	Average price per barrel	Quantity	Value	Average price per barrel
	Barrels			Barre

Total	88,766,916	100.00	Total	100,461,337	100.00

The increased production in California during 1903, nearly one-fourth of the entire output of the country, has caused it to appear at the head of the list of producing states in the United States, passing Ohio and Texas from third place to first. Ohio has for many years held this distinction. Kansas has also changed places with Louisiana by a small margin.

When the states are arranged according to the value of the petroleum produced in the United States, and not, as in the first of the preceding tables, ac-

ording to quantity, there is a considerable readjustment for the year 1903. As in the arrangement for 1902, Ohio is first in the list and leads West Virginia by a large percentage. Next in line after West Virginia is Pennsylvania, third, followed by Indiana. Texas is fifth. California is sixth in the list of values, credited with only 7.81 per cent of the total value, though it produced 24.27 per cent of the quantity. Louisiana is eleventh in the list of values and ninth in the list according to quantity.

Rank of petroleum producing states and territories, with value of production and percentage of each, in 1902 and 1903.

1902.				1903.

PRODUCTION BY FIELDS AND STATES.

The production of petroleum in the principal fields of the United States from 1898 to 1903, inclusive, was as follows:

Production of petroleum in the United States, 1898-1903, by fields and states.
(Barrels of 42 gallons.)

FIELD.	1898	1899	1900	1901	1902	1903
Appalachian	31,717,425	33,068,356	36,295,433	33,618,171	32,018,787	31,558,248
Lima-Indiana	20,321,323	20,225,356	21,758,750	21,933,379	23,358,626	24,080,264
California	2,257,207	2,642,095	4,324,484	8,786,330	13,984,268	24,382,472
Colorado	444,383	390,278	317,385	460,520	396,901	483,925
Kansas	71,980	69,700	74,714	179,151	331,749	932,214
Texas	546,070	669,013	836,039	4,393,658	18,083,658	17,955,572
Louisiana	548,617	917,771
Indian and Oklahoma Territories	37,100	138,911
Wyoming	5,475	5,560	5,450	5,400	6,253	8,960
Other	370	492	8,274	12,585	957	3,000
Total	55,364,233	57,070,850	63,620,529	69,389,194	88,766,916	100,461,337

This table, showing the production by fields and states in the United States from 1898 to 1903 clearly illustrates the remarkable persistency with which the older fields continue to produce. The regularity of the combined production of the Appalachian and the Lima-

Indiana fields is quite marked. Taking the nearest million barrels, the following is the result: 1898, 52 millions; 1899, 53 millions; 1900, 58 millions; 1901, 55.5 millions; 1902, 55.4 millions, and 1903, 55.6 millions. Nearly all the other fields and states show a surprisingly continuous growth since 1896.

COMBINED VALUES OF PETROLEUM AND NATURAL GAS IN 1903.

Petroleum and natural gas combined rank next to pig iron and coal in the list of values of the crude mineral products of the United States in 1903, as is shown in the following table:

Value of petroleum and natural gas produced in 1903, their combined value and percentage, and rank of combined value by states.

State	Value of crude petroleum	Value of Natural Gas	Value of petroleum and natural gas	Percentage	Rank
STATE.					
Pennsylvania	\$18,170,881	\$16,182,834	\$34,353,715	26.32	1
Ohio	26,234,521	4,479,040	30,713,561	23.53	2
West Virginia	20,516,532	6,882,359	27,398,891	20.99	3
Indiana	10,474,127	6,098,364	16,572,491	12.70	4
Texas	7,517,479	21,351	7,538,830	5.79	5

PRODUCTION OF CRUDE PETROLEUM IN UNITED STATES FROM 1859 TO 1903,
INCLUSIVE.

In the table following will be found a statement of the production of crude petroleum in the United States from the beginning of production, marked by the drilling of the Colonel Drake well in 1859, up to and including the production of 1903, the table being by years and states.

Production of petroleum in the United States, 1859-1903, by years and by states.
(Barrels of 42 gallons.)

Year	Pennsylvania and New York	Ohio	West Virginia	California	Kentucky & Tennessee	Colorado	Indiana
1859	2,000						
1860	500,000						
1861	2,113,609

The entire production of petroleum in the United States since it was first discovered in 1859 amounts to 1,265,751,585 barrels. If we allow 5.6 cubic feet for the cubical contents of each barrel, the number of cubic feet would be 7,088,208,876, which would require a cube whose sides would be 1,921 feet in each direction; or the oil would fill a tank whose base is one square mile to a height of 254 feet. If we allow 3½ barrels to be the equivalent of one ton of average coal, this number of barrels represents 361,643,310 tons of coal. The total quantity of all the coal produced in the United States during 1902 was 301,590,439 short tons.

Of the grand total of all the crude petroleum produced since the beginning in 1903 Pennsylvania produced 50.6 per cent, Ohio 24 per cent, West Virginia 11.4 per cent, California 5.23 per cent, Indiana 4.34 per cent, and Texas 3.36 per cent, leaving only one

per cent to be supplied by the remainder of the states producing petroleum.

DECREASE IN APPALACHIAN FIELD.

This field embraces all the districts producing what is popularly known as Pennsylvania oil. It extends from Wellsville, in New York state on the northeast, down through western Pennsylvania into West Virginia, includes a large portion of southeastern Ohio, and extends across the states of Kentucky and Tennessee into Alabama. The production in Kentucky is becoming more important each year. That of Tennessee has remained almost stationary for the last 10 years, being confined to one locality near its northern border. Alabama has not yet produced any merchantable quantity of petroleum.

The year 1903 showed in all the states which go to

make up the Appalachian field a decrease in production of 460,879 barrels, or about 1.44 per cent, the comparatively small increase in the production in New York, southeastern Ohio and Kentucky and Tennessee not being sufficient to offset the larger decrease in Pennsylvania and West Virginia.

The following table gives the production of the Appalachian states in 1902 and 1903 with the percentage of their increase or decrease. A part of the production in Ohio comes from another field, known as the Lima-Indiana field, but is not included in this table.

Production of petroleum in the Appalachian field in 1902 and 1903, by states, showing increase or decrease

State	Production		Increase	Decrease	Percentage	
	1902	1903			Increase	Decrease
	<i>Barrels</i>	<i>Barrels</i>	<i>Barrels</i>	<i>Barrels</i>		
New York	1,119,730	1,162,978	43,248	3.86
Pennsylvania	12,063,880	11,355,156	708,724	5.875
West Virginia	13,513,345	12,899,395	613,950	4.543
Southeastern Ohio	5,136,501	5,586,433	449,932	8.76
Kentucky and Tennessee.....	185,331	554,286	368,955	199.08
Total	32,018,787	31,558,248	460,539	1.439

INCREASE IN LIMA-INDIANA FIELD.

This field embraces a portion of northwestern Ohio and Central Indiana. The petroleum in this field comes from the Trenton limestone and carries a small percentage of sulphur. The petroleum from the Appalachian field is found almost entirely in sandstone, and is generally known as white sand oil; it is free

from sulphur, produces a larger percentage of illuminating oil, and is more easily refined. There was a decrease in 1902 and 1903 in the production in that portion of the Lima-Indiana field lying in Ohio, which was more than offset by the increased production in Indiana. The increase in the Indiana portion during 1903 was 1,705,515, and the decrease in that portion of the field in Ohio was 983,877 barrels, a gain of 721,638 barrels, or 3.09 per cent.

Production of petroleum in the Lima-Indiana field in 1902 and 1903.

State	Production		Increase	Decrease	Percentage	
	1902	1904			Increase	Decrease
	<i>Barrels</i>	<i>Barrels</i>	<i>Barrels</i>	<i>Barrels</i>		
Ohio	15,877,730	14,893,853	983,877	6.196
Indiana	7,480,896	9,186,411	1,705,515	22.80
Total	23,358,626	24,080,264	721,638	3.09

WELLS AND STOCKS IN APPALACHIAN AND LIMA-INDIANA FIELDS.

1903.

In the tables following are shown the number of wells completed and of dry holes in the Appalachian and Lima-Indiana fields for the years 1902 and 1903:

Number of wells completed and of dry holes in the Appalachian and Lima-Indiana fields in 1902 and 1903, by months.

1902.

December	678	163	615	59	1,293	223
Total	8,474	2,214	7,758	675	16,232	2,883

Of the entire number of wells drilled in both fields in 1903, 82 per cent were productive, as compared with 80 per cent in 1902, with 78.6 per cent in 1901, and with 80.6 per cent in 1900, which indicates the remarkable character of the general result in securing paying wells. The total number of wells drilled and operated in these two fields during 1903 is estimated at 133,500.

Stocks of petroleum held by pipe lines at close of 1899, 1900, 1901, 1902 and 1903 in the Appalachian and Lima-Indiana fields.

This table shows that the stocks of oil held by various pipe line companies in iron tanks decreased 3,054,698 barrels in 1903. The whole Appalachian field revealed a decline in the net stocks of 886,909 barrels. The stocks of the Lima oil suffered a reduction of 2,167,789 barrels. Stocks at the close of 1903 were the smallest of the last five years. Since 1900

there has been a decrease in stocks in the eastern and Ohio-Indiana oil regions of 8,471,124 barrels. The Appalachian stocks have been drawn upon very heavily within the five years covered by the above table; owing to the increasing demand for the products of the high grades of oils. In the early eighties, when the production of the great Bradford field was at its

zenith, and the Trenton rock districts of Ohio and Indiana were an unknown factor in the petroleum supply, the stock of surplus oil stored in iron tanks rose to 40,000,000.

PRODUCTION BY FIELDS, STATES AND DISTRICTS.

The detailed results of the petroleum operations in the Appalachian oil field in 1903, by states, fields and districts, and in the Lima-Indiana field, are represented in the pages that follow. A portion of both these fields is embraced within the geographical limits of Ohio, and the discussion of production, wells, etc., for both will be found under the head of Ohio.

APPALACHIAN OIL FIELD.

This is the oldest field, and has the distinction of having the first well drilled to develop petroleum. Other wells scattered over a large portion of the territory, in the search for salt brines, had shown the existence of petroleum, but the well drilled by Col. E. L. Drake and his associates in 1859, near Titusville, Pa., was the first one drilled especially in search of the petroleum that was supposed to be stored in the sand rocks in that region. Upon the success of this venture the development of this great industry hinged.

This well was the first of over 150,000 that have been completed within the area of the great Appalachian field, involving the outlay of at least \$270,000,000. This great field follows the northwest flank of the Appalachian uplift, extending in a general southwest direction from New York to Alabama, a distance of about 650 miles, and reaching over into Ohio near its northwestern extension. It includes within its area at least 50,000 square miles. This field embraces all of the producing region of New York, Pennsylvania, West Virginia, Kentucky, Tennessee and the southeastern portion of Ohio, with a range of strata in the geological scale beginning with the upper productive coal measures and extending into the lower Silurian. The greater portion of the oil comes from the open and pebble sandstones beginning with the Pocono, extending down to the middle Chemung, and including the upper Chemung, Catskill or Venango group. A small portion of the petroleum produced in Kentucky and Tennessee is found in the upper and lower Silurian formations. The greater portion of the petroleum produced in this field is of a superior quality, and includes the largest quantity of the most valuable products when compared with the crude products of any of the other fields in the United States or of the world. The very easy manner in which the crude petroleum of this great field is refined and the superior quality of the illuminating and lubricating products derived from it have given to the United States the prestige of building up the great industry which it now possesses.

The Appalachian field produced 31.41 per cent of the entire production of the United States in 1903, 36.07 per cent in 1902, 48.45 per cent in 1901, and 57.05 per cent in 1900. Of the entire output of petroleum in the United States this field has produced 70 per cent.

Its original operators set the example which has been followed in all the producing regions of the world; its products are the standard of excellence in all countries, and its methods, both of obtaining the products from their rocky reservoirs and of transporting them, have been introduced into all other petroleum producing countries.

The productive areas in eastern and central Kentucky and in northern-central Tennessee have, in 1903, been completely connected with the pipe line system formerly extending to central West Virginia. Now there is a system of pipe lines reaching from Braden, W. Va., to Lacy, Pickett county, Tenn., a distance of 270 miles, with branch lines 85 miles in length to the Ragland, Barbourville and Floyd county, Ky., pools. These states will be more thoroughly developed in the near future.

No new pools worthy of the name were developed in 1903; the new work was mostly directed toward extending the known pools, which in several instances proved moderately successful. The operators in the older portions of this field have generally applied themselves to the more economical production of the older wells, the cheap source of power secured in the natural gas engine and the easy method of transmitting electric power over some of the rugged hills of West Virginia having cheapened the cost of operating. The natural gas engine has been universally applied in all of the producing pools of these fields, and owing to its great economy and its capacity to run without a constant attendant, it has become profitable to pump small wells in clusters that would otherwise have to be abandoned.

Old wells that were abandoned have been cleaned out and have been made to become small producers. Greater efforts were also made to keep the walls of the producing wells free from paraffin by the use of hot water and steam, and thereby increase their output. Occasionally they were torpedoed with a light shot and thoroughly cleaned out before pumping began.

NEW YORK AND PENNSYLVANIA.

NEW YORK.

All of the Allegheny county district and a portion of the Bradford district are in the state of New York. The entire production in western New York in 1903 is placed at 1,162,978 barrels, valued at \$1.59 per barrel, or \$1,849,135, an increase in quantity of 43,248 barrels, or 3.86 per cent, and in value of \$318,283 over the production of 1902.

New York occupied the seventh place, when rank is considered, for both 1902 and 1903. In 1902 it pro-

duced 2.15 per cent of the total value of the entire production, as compared with 1.95 per cent in 1903.

A considerable portion of the Bradford field extends over into southern central New York, hence the production of New York and Pennsylvania are considered together. Oil territory is no respecter of state lines, and where the districts extend over the dividing lines between two states the statistics of wells completed, of field operations and of production are extremely difficult to separate and are generally combined.

PENNSYLVANIA.

In this state the original well was successfully drilled for petroleum in 1859. Since that first well was completed it is estimated that in this state alone not less than 63,000 wells have been drilled. Of this number 23,000 were dry and have been abandoned. This leaves an average of 40,000 wells in operation during 1903, which produced 11,355,156 barrels of petroleum, an average of 284 barrels for each well, or a production of nearly one barrel per well for each working day throughout the year. Of the entire production of petroleum in the United States since the beginning, amounting at the close of 1903 to 1,265,751,585 barrels, the state of Pennsylvania produced 50.6 per cent. During the year 1895 Ohio, from its two producing fields, obtained for the first time a greater production than Pennsylvania. Pennsylvania held fifth place in rank, and produced 11.30 per cent of the entire output of the United States in 1903; and it ranked third in value of production in both 1902 and 1903, the value of the output in 1903 being \$18,170,881, or 19.18 per cent of the total, as compared with 21.45 per cent in 1902.

There was a general decline in all of the districts in Pennsylvania, except in the lower district and the Beaver county district, the greatest decline being in the Allegheny and Washington districts. The total decline amounted to 708,724 barrels, or 5.87 per cent. This decrease is rather remarkable when it is remembered that the average price paid for the product in 1903 was 33½ cents greater than the average price paid in 1902.

Nothing in the way of new pools was developed during the year, except that near the Butler and Armstrong county line some Speechly sand wells were productive. The main business of the operators seems to have been in securing the greatest production possible at the least cost and the drilling of a few wells around the edges of the developed territory. There was some activity in the Speechly and fourth sand pools, near the old Modoc pool in Butler county during the year. The production in many of the older fields has been seriously affected by the drainage of the rock, and the last dregs are secured with increased expense and discouragement.

Franklin district.—This district is in Venango county, being a subdivision of the lower district in the neighborhood of Franklin. It has long been celebrated for the production of the finest natural lubricating petroleum found in the United States or elsewhere. It gives a cold and fire test that is unequaled

by any other. It is used on a large number of railroads in this country and to a considerable extent on many of the foreign roads.

The lubricating petroleum is found in the first sand, which has a thickness of 50 feet, at a comparatively shallow depth, and is associated with large quantities of salt water. The wells are small producers and a large amount of salt water is pumped with the petroleum. The whole area covers a space of about 16 square miles. The wells are operated and pumped in clusters of from 50 to 100 each by a single power, many of them producing only a few gallons daily. The depth of these wells on the French creek bottom is only about 300 feet.

The gravity of the natural lubricating petroleum found in the old field is 32 degrees Beaume; in the area outside of the older territory, but bordering on it, the gravity is 34 degrees Beaume. Its fluidity is not seriously affected by a temperature of zero.

The production of this variety of lubricating petroleum has been quite steady for many years in this district. In 1903 the production declined slightly, the total being 48,209 barrels, valued at \$4 per barrel, or \$192,836, as compared with 50,555 barrels, valued at \$199,432, in 1902.

SOUTHEASTERN OHIO.

That portion of Ohio which produces what is known as Pennsylvania oil, in contradistinction to the Trenton rock product of the northwestern part of the state, and which belongs to the Appalachian field, will be found described at greater length further on in this report under the general head of Ohio.

WEST VIRGINIA.

Operations in West Virginia during 1903 were confined almost entirely to the development of the known petroleum producing areas. Nearly all the counties and pools showed a slight decline in the number of wells drilled. The county of Hancock, in the Panhandle of the state, appears for the first time in the list of counties, with 71 wells to its credit. There was a decided decline in the new work in Marshall county and in the Sand Fork and Sistersville pools. In September a new well developed a considerable production in the eastern portion of Cabell county near Milton, which started off at 60 barrels per day. This well was considerably in advance of any known productive territory. Since the opening of this new pool a number of wells have been drilled, some of which have given promise of being fair producers, although the general result can hardly be said to be satisfactory.

The production of West Virginia in 1903 was 12,899,395 barrels, a decline of 613,950 barrels, or 4.54 per cent, when compared with 1902. The decline of 1902 as compared with 1901 was 4.70 per cent, and the production was 12.5 per cent less in 1901 than in 1900, when the maximum production was reached.

West Virginia has for several years produced more of what is known as Pennsylvania petroleum than has Pennsylvania and New York combined. The very

deeply buried sand in this state and the nature of the strata makes the drilling of wells expensive. The average depth of all the wells in West Virginia can not be far from 2,500 feet; usually not less than two strings of casing are required to reach the pays; often three are used. There are some comparatively shallow productive areas in Pleasant, Ritchie, and Wirt counties. In many instances the pools which were productive in the Big Injun sand were also productive in the Gordon sand, about 775 feet under the former. The most productive areas in 1903 were in Tyler and Wetzel counties and in the Folsom district. Near the line of Marion and Harrison counties numerous wells were secured, but the average was considerably less than in the previous year.

Northwest of Pine Grove, in Wetzel county, a number of deep-sand producers were secured. Those drilled on the Showalter farm were nearly all large producers. During the year the Pine Grove extension was practically connected with the Rock run pool farther to the northeast, forming a continuous line of producing wells for 10 miles. To the west and south the opening of the Lemasters well nearly two miles in advance indicated a still further extension of the pool. The Gordon sand pool west of Littleton, Wetzel county, came in as a prominent factor in the way of new production in the latter half of 1903. In the older field the liberal use of high explosives was necessary to keep up the production, and without them the output would have been considerably less. It has been questioned whether the use of these high explosives causes the well, in the end, to increase its output. It does, however, certainly cause the rock to give up its fluid more rapidly for the time being.

There was an average increase in price amounting to about 33 cents per barrel paid for Pennsylvania crude in 1903 over 1902. The whole value of the West Virginia production in 1903 was \$20,516,532, as compared with \$17,040,317 in 1902. There was therefore a gain in value of \$3,476,215, about 20.4 per cent for 4.54 per cent less quantity of petroleum. There is no doubt the increased price paid for the petroleum had a stimulating effect in keeping up the production. West Virginia produced also about \$6,000,000 worth of natural gas; when this is added to the value of the petroleum produced it amounts in round numbers to \$26,500,000.

The greater portion of the petroleum produced is sold directly to the agents of the pipe lines, who make daily quotations of the price offered at their several purchasing centers, paying cash for their purchases. The tanks of the producers are connected by a series of pipe lines, leading to larger tanks owned by the pipe line company. The petroleum is delivered by the field collectors to main lines, a number of which cross the state from east to west. A large refinery is in operation at Parkersburg.

The total number of wells operated in West Virginia fields in 1903 was 12,600; of this number 1,448 were drilled during the year. The entire number of wells drilled in 1903 was 2,072, and of this number 624 were dry holes, as compared with a total of 2,193

wells drilled in 1902, 649 being dry and 1,544 productive.

The natural gas engine has been a remarkably economical and efficient source of power for operating clusters of wells, and it has in many instances replaced the steam engine. Many localities on the rugged hills of the productive section of this state are very difficult to supply with fuel and water, even where natural gas is used as fuel under the boiler.

The gas engine requires only a small percentage of the gas necessary to use under a boiler to furnish an equal amount of power, besides the boiler requires constant personal attention, whereas the gas engine will furnish a continuous power for many hours unattended.

Within the year the South Penn Oil Company has completed a large electric plant for pumping wells at Folsom, W. Va., near the line of Marion and Harrison counties, which promises to work a revolution in the pumping, pulling and drilling of wells in that section, when the dynamo is substituted for the gas or steam engine. This plant has a capacity for pumping 200 wells. The building is of brick; the engine room is 57 by 60 feet. The equipment consists of two triple expansion, condensing engines of 375 horse power, connected directly to two 250 kilowatt general electric, 3-phase generators, at 300 revolutions per minute, supplying 600 volts. The steam is supplied by boilers using natural gas fuel. The generators supply the current by local feeders to motors at the wells within a radius of about one mile. For greater distances the current is raised to 6,000 volts and connected with sub stations located as much as two miles from the plant, where it is reduced by transformers and supplied to motors of nearby wells. Each well is equipped with a 10-kilowatt motor governed by an oil brake controller. The motor is geared up to a 30-inch pulley connecting with a large wheel of the standard rig, and usually gives a speed of 20 revolutions per minute to the pump.

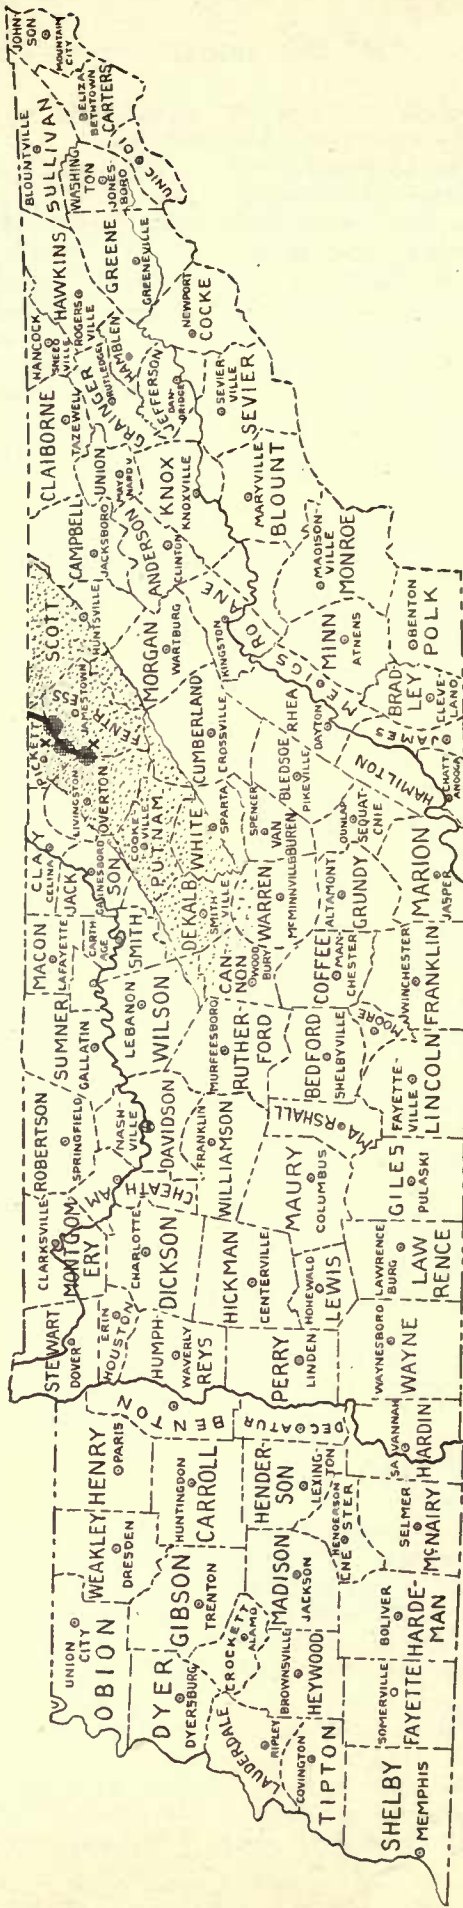

As compared with the ordinary plan of using one 25 horse power boiler to supply the engines used in pumping three or four wells with steam through long lines of pipe in wooden boxes, which in wet or cold weather condense a large percentage of the steam, the use of the electric motor presents great advantages since the power is conveyed by wires to the well without serious loss.

KENTUCKY.

The completion of a pipe line by the Cumberland Pipe Line Company during 1903 gave an outlet for the petroleum produced in southeastern and southern central Kentucky. The entire production of Kentucky and Tennessee during 1903 was 554,286 barrels, of which quantity about 3,700 barrels were produced in Tennessee. This is a gain of almost 200 per cent. A considerable portion of this increase was in the hands of the producers at the close of 1902 and remained unsold, awaiting the completion of the pipe line. The opening of the pipe line and the high price of the crude petroleum were the incentives for a large amount of

new work during 1903. This pipe line enters the state from West Virginia at Clifford, on the Tug river, and extends in a general southwestern direction for 150 miles, passing through the counties of Martin, Johnson, Breathitt, Perry, Osley, Clay and Laurel, to the town of Somerset in Pulaski county. From Somerset a line passes 40 miles farther southwest through Wayne county into Tennessee to the terminus at Lacy, Pickett county, 15 miles south of the state line. Eighty-five miles of branch lines added bring the total up to 275 miles of main line and branches.

The Somerset district produced during 1903 about 46 per cent of the total state output. The district embraces the Slickford, Cooper Sunnybrook and Steubenville pools in Wayne county, which pools produced 90 per cent of the petroleum credited to this district. There was some production in Cumberland and Clinton counties. The Barbourville pool in Knox county produced two varieties of petroleum, one light and the other heavy, the whole production amounting to 12 per cent of the total state production for 1903. The Ragland pool in Bath county, produced 36½ per cent of a heavy, dark petroleum from a great number of shallow wells. The Beaver creek pool in Floyd county furnished 2½ per cent of the total, for which the largest price was paid, amounting to an average of \$1.25½ per barrel. The remaining 3 per cent was furnished by Beaver, Cumberland and Barren counties.

Operations in this state have been for the most part to the development of the known pools, except that a good pool was opened in September of 1903 by a well at Steubenville, five miles north of Monticello, in Wayne county, which produced 125 barrels per day when first drilled into the pay.

In Whitley county, near the Tennessee line, a well was drilled during the fall of 1903, which started off at 75 barrels per day, and which caused numerous wells to be located and some of them to be drilled, although at the close of the year the existence of any considerable pool remained to be demonstrated. The Cooper district in Wayne county was the pool which produced the greatest quantity of petroleum during 1903. The Steubenville district was rapidly increasing its production toward the close of the year. Cumberland county developed a number of paying wells which have not as yet been connected with the trunk line and operators are not pushing the production at present. Bath and Rowan counties produced a large portion of the petroleum during 1903 from shallow wells of comparatively small production, which, however, hold up their output in a very remarkable manner. The petroleum produced is dark and heavy and was marketed at an average of 60½ cents per barrel. Barren county produced some petroleum which was shipped by rail to Louisville principally.

Although Kentucky has shown substantial gains since the pipe line facilities have been in operation, and has responded to the stimulus of high prices, yet the production has not increased so rapidly as was expected; the pools so far developed are comparatively small and the yield of the wells usually declines at a rapid rate, all of which is rather discouraging for this new territory. It is, however, by no means developed

to any great extent even yet, and there remain many areas to be tested by the drill, some of which in all probability will yield a big return to the fortunate explorers who locate them.

TENNESSEE.

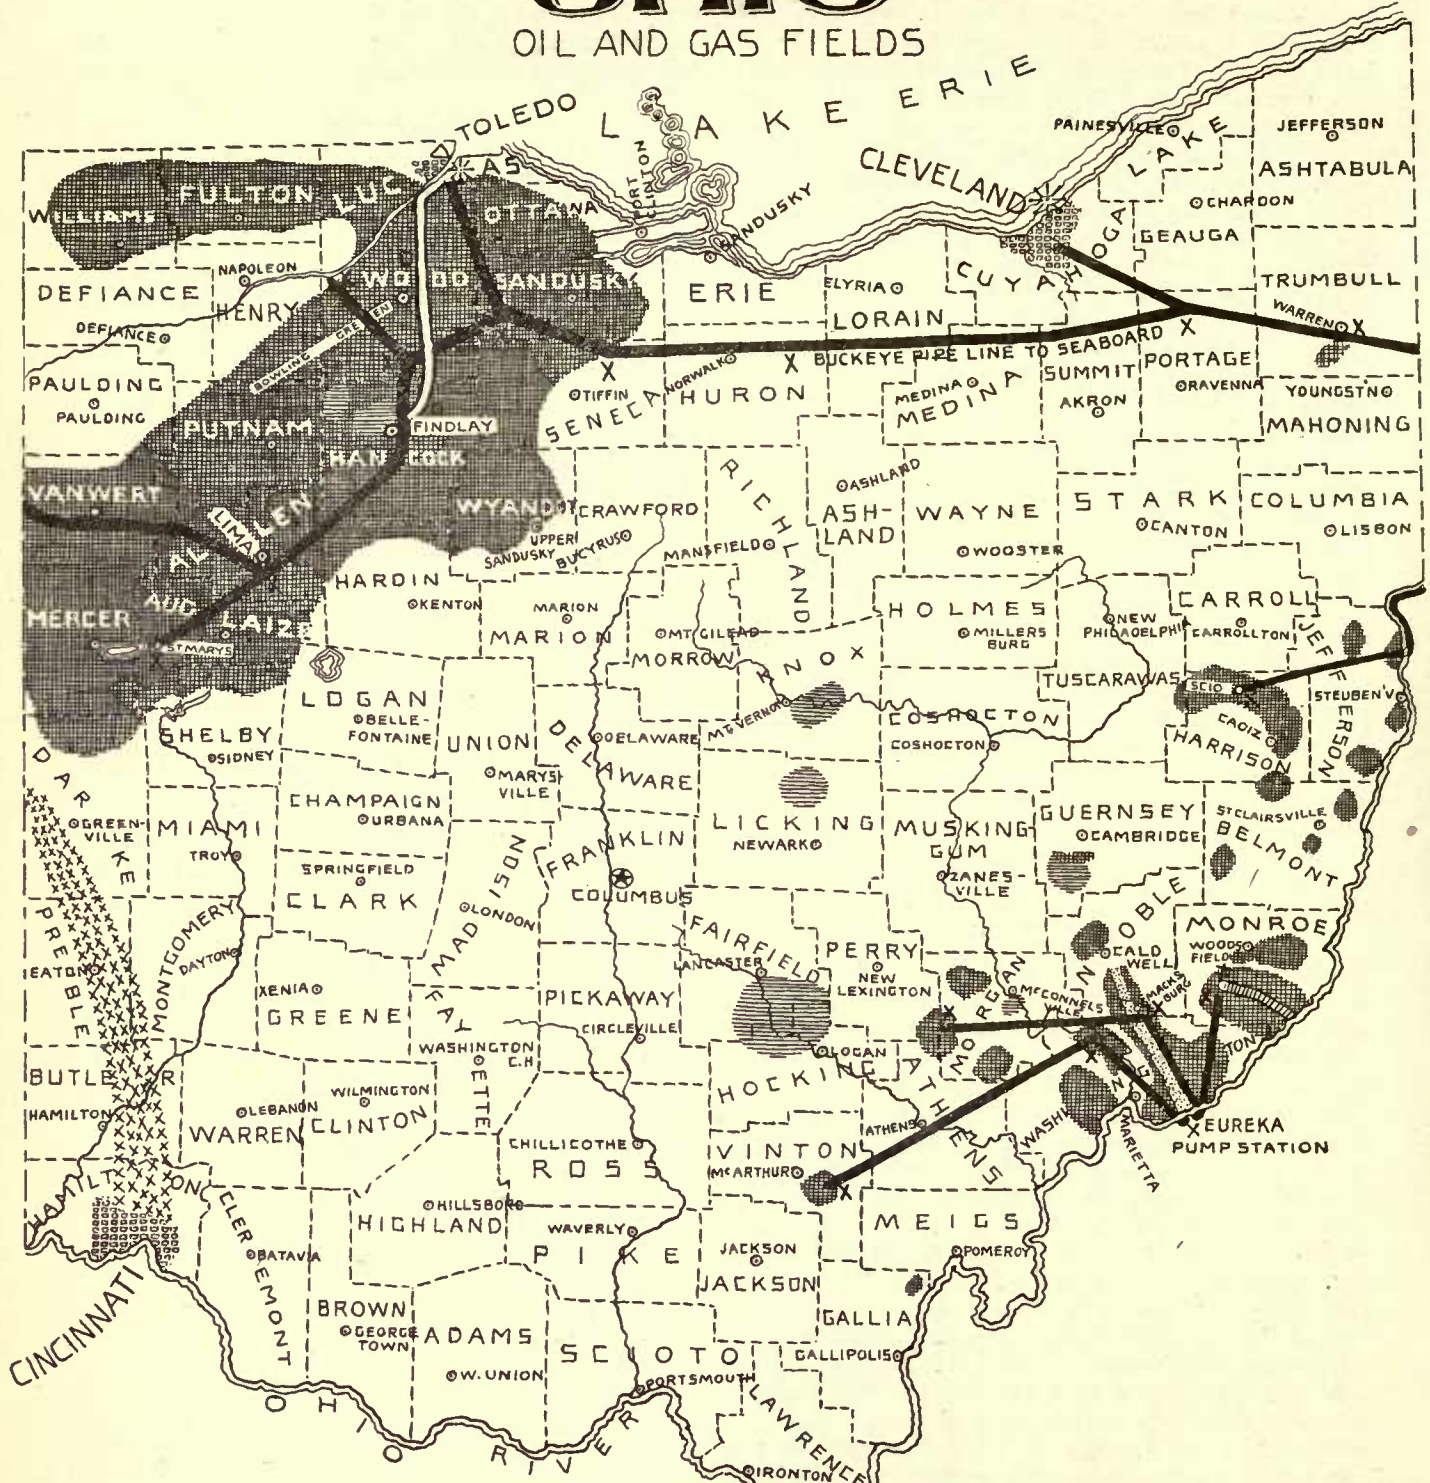

The entire production of Tennessee during 1903 was only 3,703 barrels, nearly all of which came from the old Bobs bar well and wells near it in the Lacy district. A number of test wells were drilled during the year in Fentress and Pickett counties, which failed to find petroleum in paying quantities. Little, however, has been done as yet to test the possibilities of a production of petroleum in this state. There are numerous surface indications of petroleum in a number of localities, some of which have been tested without satisfactory results.

OHIO.

This state produces two well defined grades of petroleum from distinct geological horizons. The older field is generally known as the southeastern Ohio, and the other as the Lima, or northwestern Ohio field. The former produces petroleum of the Pennsylvania type and the latter that grade of petroleum known as Lima oil. The Pennsylvania variety is found in the sandstones of the carboniferous measures, beginning with the lower portion of the Monongahela or upper productive coal measures and extending down to the upper Devonian measures. It embraces all varieties of color and gravity, ranging in color from jet black to straw color and in gravity from 30 to 50 degrees Beaume, the general average delivered to the pipe lines being 43 degrees Beaume. The average gravity of the Lima variety is about 38½ degrees Beaume. This variety is produced at different depths from one formation, known as the Trenton limestone, on the great Cincinnati uplift, and it contains a small percentage of sulphur combined as sulphureted hydrogen, which is difficult to remove in the process of distillation. The southeastern Ohio field has been operated since a few years after the famous Drake well was completed in 1859. The discovery of the Lima field was made in 1885 by persons prospecting for natural gas. This Lima field now produces 72 per cent of the total output and 66.2 per cent of the total value in Ohio. This state, from these two fields, has for a number of years previous to 1903 produced more petroleum than any other. The combined production of the two fields for 1903 was 20,480,286 barrels; and yet the state yields its place at the head of the list to California. The value, however, of the Ohio petroleum production in 1903 was greater than that of any other state, and amounted to \$26,234,521, the greatest value in the history of the state's production.

There was a loss in the quantity of the 1903 production, when compared with that of 1902, of 533,945 barrels, but a gain of \$5,477,162 in the value of the product. The average price received in 1903 was \$1.28 per barrel, as compared with \$0.988 in 1902, a gain of 29.2 cents per barrel. The greatest produc-

tion, amounting to 1,813,618 barrels, was in the month of July; the least was in February, and amounted to 1,491,586. The year 1903 shows the greatest value and the largest production in the southeastern district of Ohio in the history of the state.

About 44,000 wells were operated during 1903 in all fields. There were 2,233 wells drilled in 1903 in the southeastern portion of the state, and 4,072 wells were completed in the Lima, Ohio, district, a total of 6,305 for both fields, of which number 1,014 were dry and 5,291 were productive wells, as compared with 5,309 wells completed during 1902, of which number 891 were dry and 4,418 were productive wells. There was an average of 452 wells drilling and of 221 rigs building in 1903.

No new pools were opened except a few in southeastern Ohio, the most important being the one near Uniontown, in the northern-central portion of Belmont county, in which a number of productive wells were secured. The original well was drilled during the fall of 1902. The greatest activity was in the Chester hill and the Marietta pools, more than 500 wells being completed in each during 1903.

INDIANA.

This state made, under the stimulation of the high prices paid, remarkable gains in the production of crude petroleum during 1903. No new pools were opened, except that in the latter part of the year a small pool of dark, heavy petroleum was partly developed near Princeton, in Gibson county, near the southeastern corner of the state. Nearly all of the increased production was secured by wells inside defined limits, and in sections where the natural gas pressure had decreased until it was of no great importance and the gas pools had in some instances been developed into petroleum producing areas. It is a field of easy access, being abundantly supplied with pipe lines and other facilities for producing petroleum profitably.

Indiana produced in 1903 the unprecedented output of 9,186,411 barrels, nearly all from the Trenton limestone, valued at \$10,474,127, an increase in quantity of 1,705,515 barrels, or 22.8 per cent, and in value of \$3,947,505, or 60.5 per cent, as compared with 1902. The price per barrel rose from \$0.872 in 1902 to \$1.14 in 1903, a gain of 26.8 cents per barrel. This state produced 9.14 per cent of the total output of the United States in 1903, and 11.06 per cent of the total value, the value of the Indiana output being more than 3 per cent greater than the value of the product of either Texas or California.

The total number of wells drilled in 1903 was 3,693, of which number only 380 were dry holes and 3,313 were productive wells, the dry wells representing only 10.3 per cent in 1903, as compared with 15 per cent in 1902, and with 16 per cent in 1901. The average initial production of new wells per month in 1903 was 4,250 barrels, as compared with 3,772 barrels in 1902.

The increased production was well maintained throughout the state, and in numerous instances new pay streaks were found deeper in the Trenton lime-

stone. One of the serious drawbacks connected with the operation of wells in this state is the immense quantity of salt water that it is necessary to pump to secure and maintain the production. In some localities 20 barrels of salt water are pumped for one barrel of petroleum produced. The economical and efficient natural gas engine enables this great expenditure of power to be applied at a reasonable expense.

Outside of the well developed areas of the Trenton limestone there are a few smaller pools in the state which have produced some petroleum, but nothing to compare in quantity to the original field. There are small producing areas in Jasper, Vigo and Dubois counties, in which the corniferous limestone is productive. In Gibson county several small wells were developed during the latter portion of the year near Princeton, which gave a production of from five to 15 barrels of heavy, dark petroleum from a formation corresponding to the lower salt sand or Maxon sand of West Virginia, but known as the Mansfield sand in Indiana, and resting upon the subcarboniferous limestone. All the well sections in this portion of southern Indiana show a very remarkable thinning out of the formation, as the distance from the bottom of the Mansfield sand or salt sand to the top of the corniferous limestone near the bottom of the Devonian is less than 550 feet, as compared with an interval of about 4,500 feet between the same horizons in western Pennsylvania.

ALABAMA.

A well was bored at Falkville, Morgan county, in 1902, and a black oil was struck at about 800 feet. The well was drilled to a depth of about 1,800 or 2,000 feet and plugged. At Hartsells, Morgan county, a well was being drilled at the close of 1903 with good indications, some oil and a considerable flow of gas having been struck. A well was being drilled in Limestone county, but no report could be obtained. Two very good gas wells were struck in 1903 and 1904 about one mile from Hazelgreen, Madison county, one with a pressure of 55 pounds and the other with a pressure of about 100 pounds. Prospecting for oil is being carried on in Escambia county. Near Mobile two small gas wells are flowing, but no oil has been found. In southern Alabama several holes have been bored without any indications of petroleum or natural gas.

FLORIDA.

A number of prospect holes have been drilled in the Pensacola section, but in none of them has oil been found. One well has been in process of drilling for nearly two years.

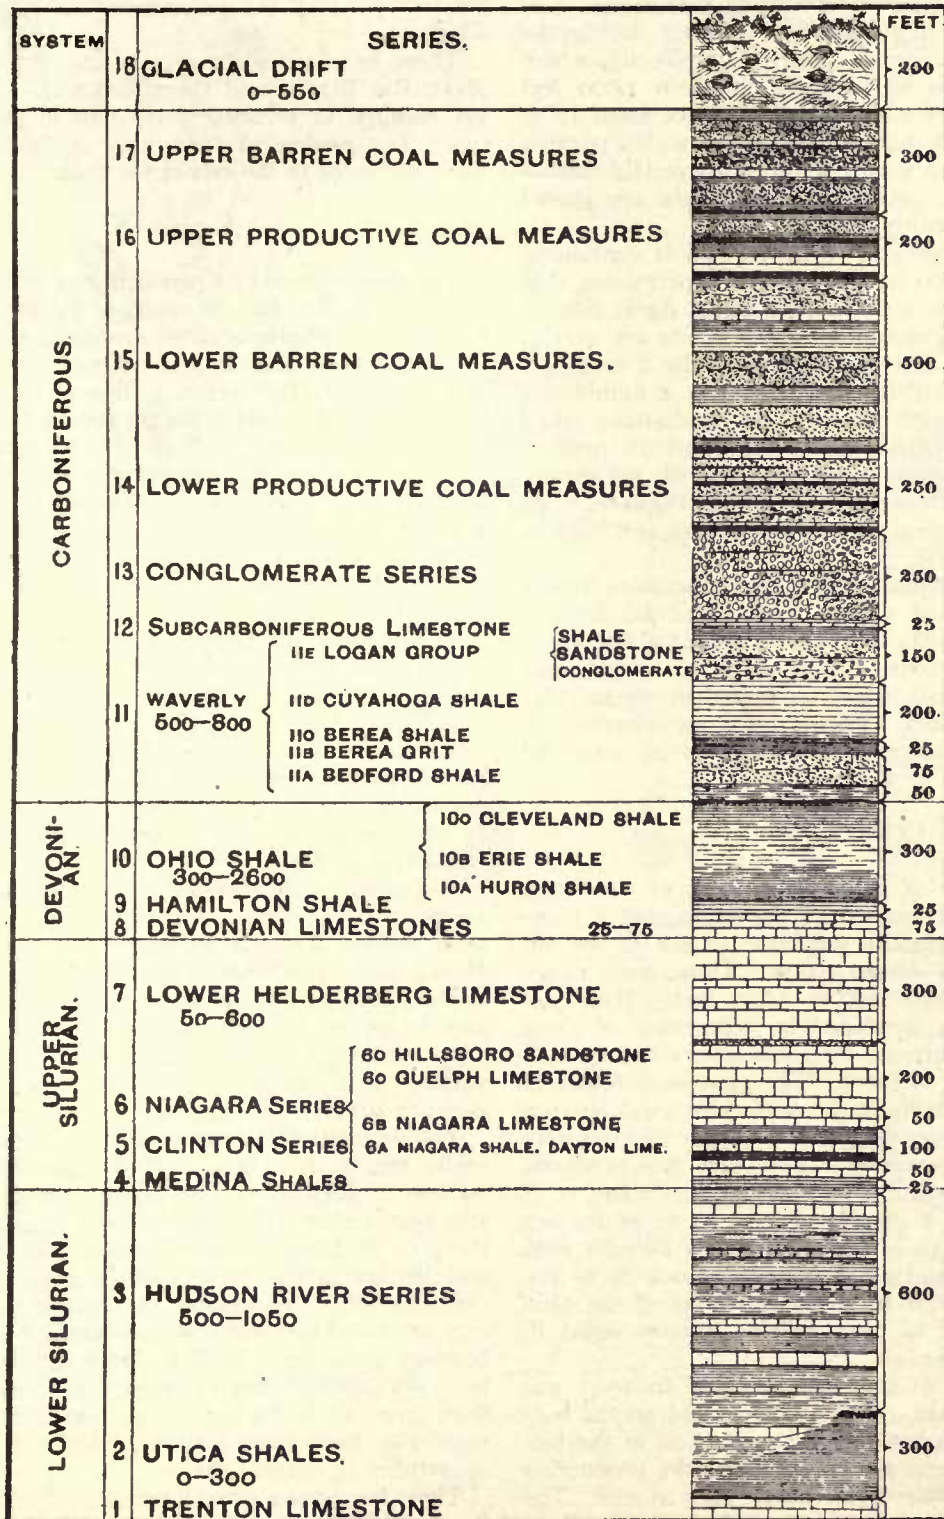

MISSISSIPPI.

At the close of 1903 a company was boring for oil in Clarke county, but at the present writing had not found petroleum or natural gas.

GENERAL GEOLOGICAL SECTION FOR SOUTHEASTERN OHIO AND WEST VIRGINIA

GENERAL GEOLOGICAL SECTION FOR NORTHWESTERN OHIO AND INDIANA

WYOMING.

The only regular production of petroleum in this state is on Salt creek in the northeastern portion of Natrona county, where 11 wells supply a small refinery at Casper, 50 miles distant. The crude oil is hauled to this refinery in tank wagons and is there converted into a superior lubricating petroleum. The most active work in prospective territory during the year was at New Spring valley, Uinta county, where a number of wells were drilled to about 1,000 feet in depth, several of which would produce from 10 to 20 barrels of a very superior petroleum with a paraffin base and operations would be more active if a market could be secured. About 3,000 barrels are stored in tanks at this locality.

There are also several artificial pools containing from 4,000 to 5,000 barrels of heavy petroleum that has collected from wells in the Popo Agie district, south of Landin, Fremont county. There are several wells in this pool that will flow naturally a considerable amount of petroleum. There are a number of localities on the north flank of the Rattlesnake range where there are petroleum springs and an outcrop of massive sandstone impregnated with petroleum. During 1903 wells have been drilled in Bighorn, Converse, Crook, Natrona, Sweetwater, Uinta and Weston counties.

The chief difficulties that confront operators in this state are the want of a home market and the distance by rail to a market which would consume any large quantity of the product. Wyoming is well supplied with bituminous coal, which excludes petroleum from the market as a fuel. There was a considerable increase in the production at Salt creek during 1903, the price remaining at \$7 a barrel.

COLORADO.

The production of crude petroleum in this state was considerably increased by the drilling of a number of deep wells in the southern portion of the old Florence field to a deeper strata. These wells range in depth from 2,850 feet to 3,600 feet. Four pay streaks have been developed by a number of these wells, although there are instances where a deep well failed to find any of them. The petroleum found in this district is probably in the same geological horizon as that of the Boulder field and lies in the Pierre group of the Montana cretaceous. The petroleum produced in the Florence district is of a dark green color, is of good quality, with a gravity of from 31 to 32 degrees Beaume. The depth of the wells in the Boulder field is between 2,700 and 2,850 feet. The quality of the petroleum is superior to any found west of the Mississippi river, and is of a specific gravity equal to 42 degrees Beaume.

The production of the Florence field in 1903 was 447,203 barrels, that of the Boulder field 36,722 barrels, a total of 483,925 barrels, the largest in the history of the state, and an increase over the production of 1902 of 87,024 barrels, or nearly 22 per cent. The value of the product of 1903 was \$431,723, or 89.2

cents per barrel, as compared with \$484,683, or \$1.22 per barrel in 1902, a decrease of \$52,960. The production of Colorado in 1903 was 0.48 per cent of the total production of the United States, and its value was 0.45 per cent of the total value.

The number of wells producing in the Florence field during 1903 was 70, that of the Boulder field nine, a total of 79. All the present production is refined at Florence.

There has been some prospecting in Pueblo, Archuleat, Rio Blanco and Routt counties, which has not yet resulted in securing petroleum in paying quantities. The geological conditions of the Boulder field were discussed in the report for 1902.

KANSAS.

The developments of petroleum in this state during 1903 has shown that, in addition to the area already known, an immense area of profitable territory exists in southeastern Kansas and extends over into Indian and Oklahoma territories. The physical conditions surrounding this field have proven to be very similar in many particulars to those of the original Pennsylvania field, except that the surface is more level. The petroleum is found in pools of greater or less extent, associated with natural gas over many square miles of area and not in concentrated pools containing from 200 to 250 acres, as is the case at Spindle Top and Sour Lake in Texas.

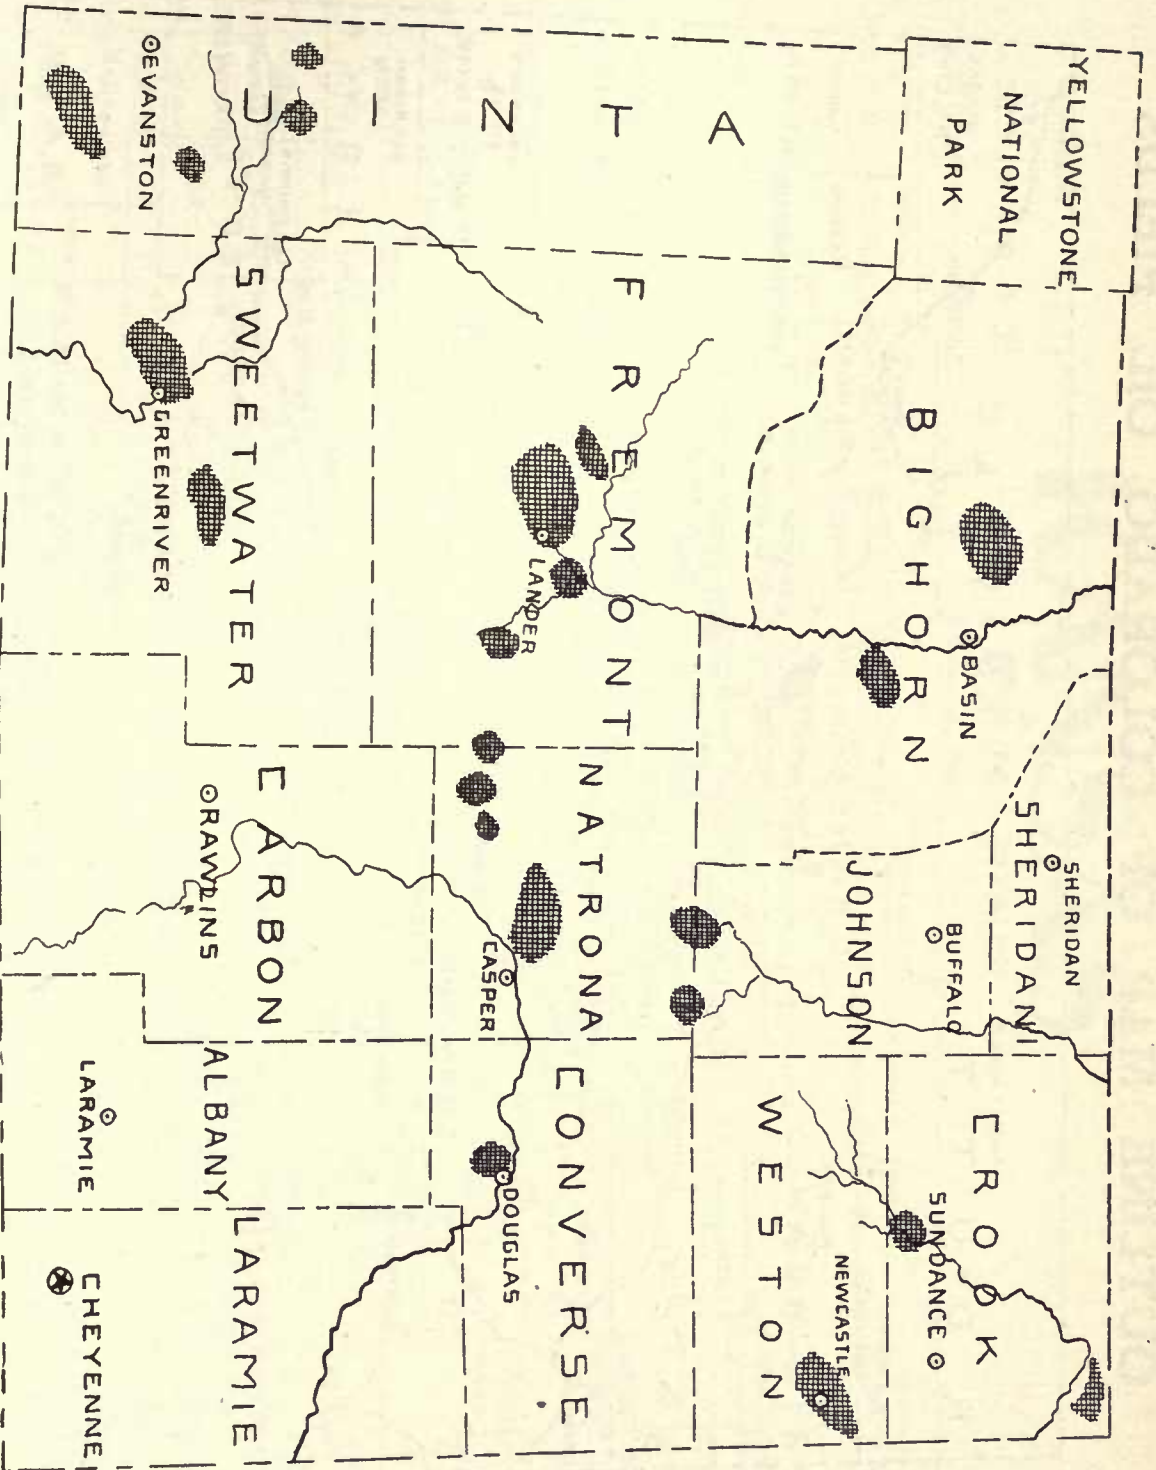

The quantity of petroleum produced would have been considerably larger had the pipe lines been in condition to handle it as they did during the last five months of the year. Shippers by rail to Noedeha were obliged to submit to a reduction of 23 cents per barrel, which in many cases was prohibitive. The production at the close of the year was about six times as great as it was at the beginning, which shows the wonderful increase.

Beginning with Humboldt, in Allen county, there seems to be an almost continuous pool to the southwest, passing through the counties of Neosho, Wilson, Montgomery and Chautauqua to the state line, where it joins that of Indian and Oklahoma territories, an area 65 miles in length, with an average width of 20 miles, although at some points the distance between develop local pools of petroleum and natural gas is much greater.

The production is from a sandstone formation, generally known as a "sugar sand," usually from 15 to 30 feet in thickness. The general dip is to the west and southwest. The wells in the northern portion of the pool in Allen county are about 700 feet in depth, and they increase in depth with the general trend of the development. The gravity and quality of the petroleum produced increase with the depth of the petroleum bearing sandstone. No very large flowing wells have been developed; but a large number of wells that produce from 10 to 50 barrels per day with remarkable regularity have been secured, which can be cheaply operated with natural gas.

There has been a great increase in the length of pipe lines and in the number of storage tanks completed

during the latter part of the year, and nearly all of the pools have been connected by pipe line with the refinery at Neodesha, which has been greatly enlarged to take care of the increased production. A very large area has been leased by individuals and companies, and drilling has been most actively pushed. Fully 1,400 wells have been completed during the year, about four times as many as were completed during 1902. In no other locality in the petroleum fields has there been such activity as there was in Kansas and in Oklahoma and Indian territories during 1903. The quality of most of the petroleum produced in Kansas is equal, if not superior to that of the Lima-Indiana field, and the indications are that the year 1904 will witness a production of about 3,800,000 barrels from this section.

PRODUCTION IN KANSAS.

The production for 1903 was 932,214 barrels, as compared with 331,749 barrels in 1902, an increase of 600,465 barrels, or about 181 per cent. In rank of production Kansas was eighth, and produced 0.93 per cent of the total output of the United States; in 1902 Kansas was tenth in rank, and produced 0.38 per cent of the total for that year. When the value of the production is considered, Kansas occupied eighth place and produced 1.04 per cent of the total value in 1903, as compared with ninth place and 0.41 per cent of the total value in 1902.

The average price for the Kansas production in 1903 was \$1.06 per barrel, as compared with 88 cents in 1902, a gain of 18 cents per barrel. The highest price obtained was for the oil produced at Independence, which averaged \$1.30½ per barrel. The petroleum from the Chanute district, which produced over 60 per cent of the total, brought an average of 88⅞ cents per barrel. The lowest price paid was 60 cents per barrel for heavy petroleum produced in the Humboldt district.

INDIAN AND OKLAHOMA TERRITORIES.

The extension of the Kansas pool into Indian and Oklahoma territories has been known for a number of years, but owing to the complications in the law governing leases in both of these territories, comparatively little has been done in the way of development until during the year 1903. The developments so far have shown Indian territory to contain a very large area of petroleum, some of which is of superior quality, nearly equal to that of Pennsylvania. A number of flowing wells were drilled near Bartlesville and at other localities during 1903, which brought up the production by leaps and bounds, with the possibilities only just beginning to be realized. The present pipe line system connects Bartlesville with Neodesha, Kans. The total production in Indian territory in 1903 was 138,801 barrels, and 110 barrels were produced in Oklahoma, making a total of 138,911 barrels, which sold for \$142,402, at an average price of \$1.02½ per barrel. There was a gain of 101,811 barrels over the production of 1902, an increase of 274.42 per cent.

At the close of the year there were about 110 wells producing, but many were shut in on account of the want of transportation. There were 10 wells drilling. The producing sand at Bartlesville lies about 1,250 feet below the surface.

The production in Oklahoma territory was only 110 barrels from three wells, which is probably the mere beginning of the operations in this territory. There is no doubt that much of the northeastern portion is underlaid by the same measures, more deeply buried, that are so productive in Indian territory and Kansas.

LOUISIANA.

The petroleum thus far produced in this state has been from wells in beds of loose sand saturated with petroleum. More or less difficulty has attended their successful operation. The development at Jennings and Welsh have long ago passed the experimental stage and have become regularly productive areas. Jennings is located 90 miles east of Beaumont, Texas, and 190 miles west of New Orleans. Welsh is some 12 miles west of Jennings.

The first well was opened in August, 1901, and tapped a loose bed of sand at 1,822 feet, which flowed spasmodically large quantities of sand and petroleum, accompanied with some natural gas. During the past year a number of producing wells have been added in both of these fields, accompanied by a number of dry holes. Some petroleum has also been developed in a well at Brearex bridge. The serious difficulty in most of the wells is to control the loose sand saturated with petroleum, which is often forced into the casing by gas pressure and shuts off the flow. No solid material is encountered in drilling. The formation consists of a series of clay, sand and gumbo.

There was an increase in the production during the year 1903 of 369,145 barrels, or 67.29 per cent as compared with 1902. The petroleum produced at Jennings is slightly lighter in gravity than that produced at Beaumont and carries less sulphur. It finds a market chiefly for fuel purposes, its value being about 19,840 B. T. U. More or less petroleum and natural gas have been developed at Calcasieu, Lake Charles, Cowley, Lafayette and Sulphur.

TEXAS.

The close of the year 1903 about completes the third year of the discovery of the remarkable deposit of petroleum at Spindle Top by the large flowing well drilled by Captain Lucas. Since then within a radius of 30 miles from Spindle Top there has been produced, including loss by fire and fuel consumption, not less than 40,000,000 barrels of crude petroleum. A large quantity has also been absorbed by earthen reservoirs.

Since 1896 there has been a considerable production of a remarkably pure crude petroleum at Corsicana, amounting to 401,817 barrels in 1903, but the wells are small, and there has been a gradual decline since its maximum of 829,560 barrels of production was reached in 1900. The oil has been refined at that locality.

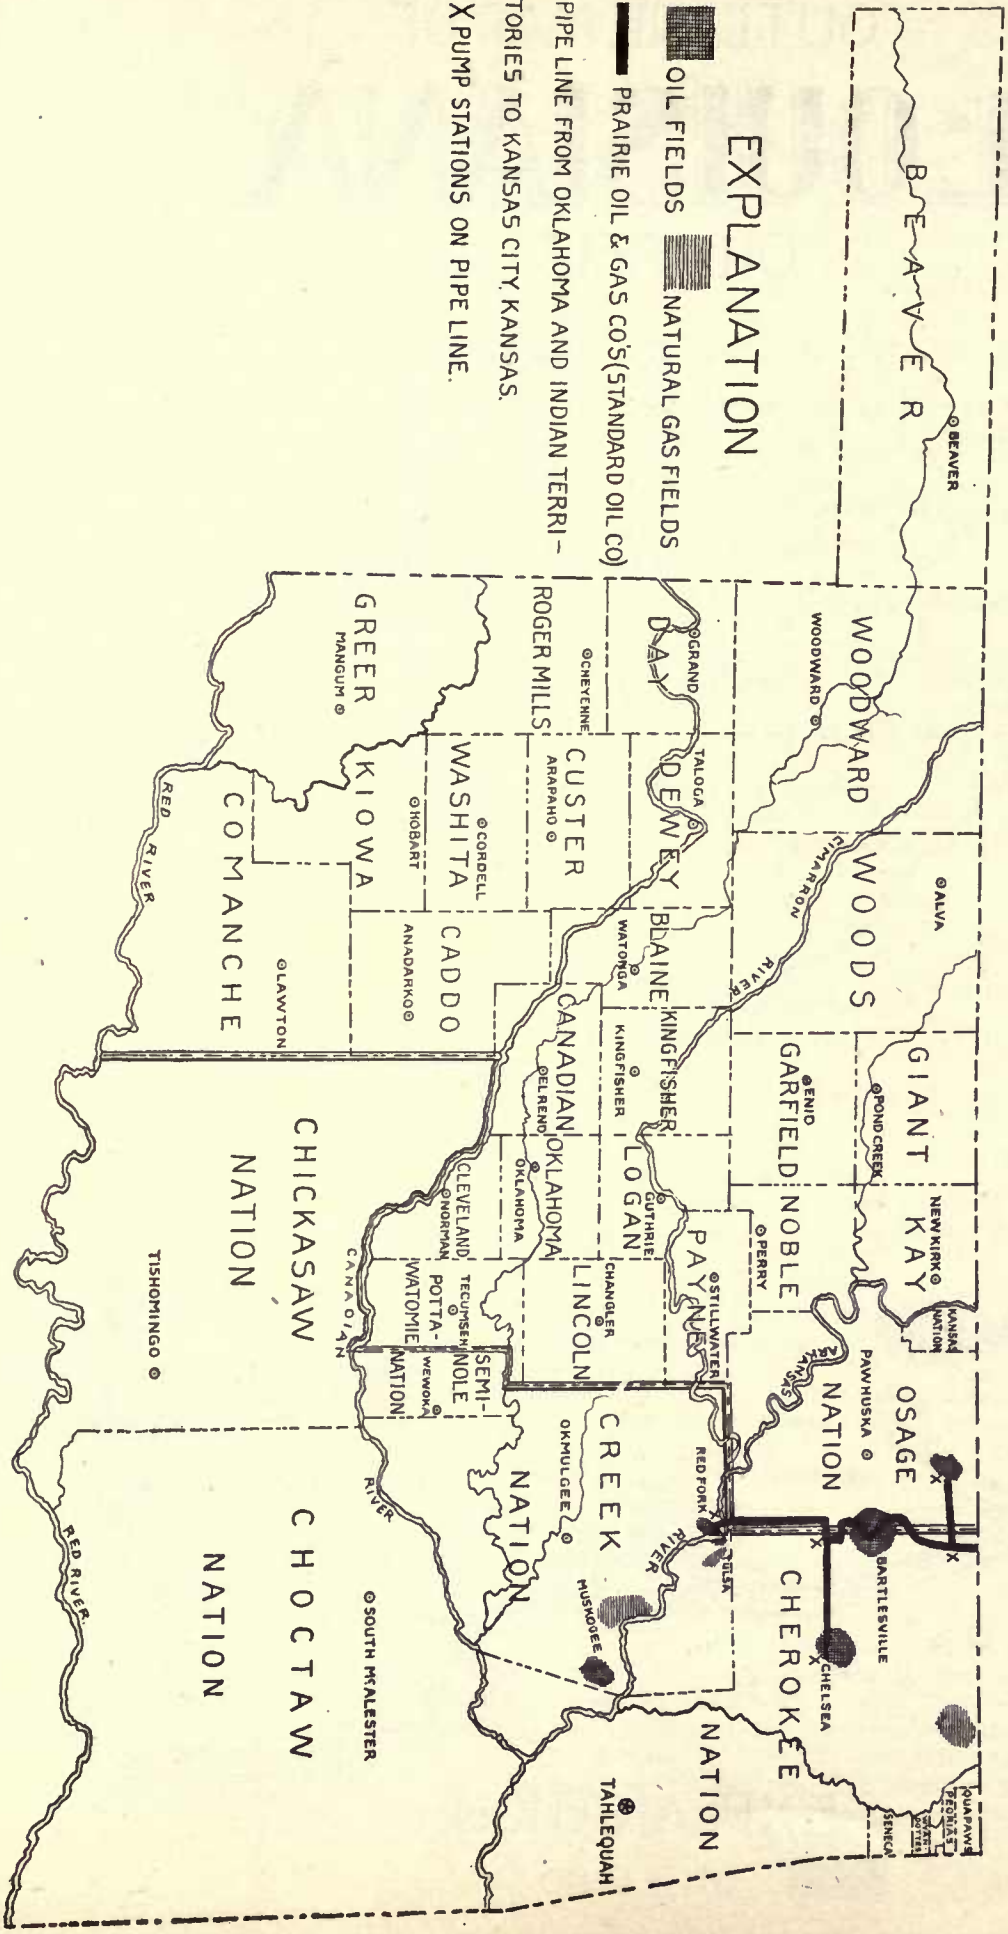

The rapid development of the Sour Lake pool, the

increased production at Saratoga, the decline in the production of the original pool at Spindle Top and the opening of an entirely new pool known as Batsons Prairie, near the close of 1903, are among the important events of the industry in this state during the last year.

The chief market for the crude petroleum produced in this section of the state is its use for fuel. The greater portion was transported by water from Port Arthur and Sabine Pass, and another very considerable portion was distributed by railways in tank cars to points of consumption. A considerable quantity of refined products and residuum was also shipped to coastwise and foreign ports. The entire production of the state in 1903 was 17,955,572 barrels, a decline of only 128,068 barrels as compared with that of 1902. On the other hand, the value of the production in 1903 was \$7,517,479 as compared with \$3,998,097 in 1902, a gain of \$3,519,382. In 1903 Texas ranked third in quantity of production, being credited with 17.87 per cent of the total, and fifth in value, being credited with 7.93 per cent of the total value of the domestic output.

The actual quantity of all the petroleum brought to the surface in the Spindle Top, Sour Lake, Saratoga and Batsons prairie pools in 1903 is estimated to be close to 19,000,000 barrels. If to this 500,000 barrels produced in Corsicana be added the grand total for Texas production in 1903 is 19,500,000 barrels in round numbers, made up as follows:

	Barrels.
Shipped by water.....	8,000,339
Shipped by rail.....	6,096,207
Shipped to storage tanks.....	3,352,518
Estimated loss by fire and seepage, and used for fuel.....	1,550,936

Total production at Spindle Top, Sour Lake, Saratoga and Batson.....	19,000,000
Production at Corsicana and Powell....	500,000

Total production in Texas in 1903.. 19,500,000

EQUIPMENT AND DEVELOPMENT IN SOUTHEASTERN TEXAS.

There are at present completed and in operation in the southeastern Texas oil fields, not including Corsicana, 209 miles of 6-inch pipe line, 23 miles of 8-inch line, and 20 miles of 4-inch line—a total of 252 miles, exclusive of loops and connections, short lines to Beaumont from Spindle Top, and lines from the fields to the loading racks on the railroad lines. Adding to these several connections, there is a grand total of over 300 miles, representing an investment of approximately \$2,000,000.

At the close of the year there were in the southeastern Texas fields, not including Corsicana, 19,226,800 barrels of tankage. This was divided as follows:

Steel tankage, 5,568,000 barrels; wooden tankage, 736,800 barrels; earthen tankage, 12,922,000 barrels.

At the same time, by conservative estimate, there were distributed over the state, for the purpose of storing oil for the use of railroads, factories, etc., something over 2,000,000 barrels in steel and wooden tankage. In addition to this storage equipment, there were in operation on the railroads of Texas during the year over 1,500 tank cars, varying in capacity from the 300-barrel car of the Southern Pacific system to the 150-barrel and 160-barrel car of the private lines and distributing agents. These cars carried during the year about one-third of the total production of the fields to points in this state and Louisiana. Very little oil was shipped by rail elsewhere than to these two states. A considerable part of the oil so shipped was for the use of the railroad companies themselves as fuel for oil burning locomotives, one company having since 1901 equipped 212 locomotives with oil burners and tank tenders.

Since the discovery of the Spindle Top field there have been drilled in that and other fields in Texas over 1,200 wells. This does not include the many unproductive wells drilled outside the limits of the proven fields and in other parts of the state in search of new fields. Of the total number of wells drilled in these fields a number not exceeding 300 were in operation at the end of the year. The remaining 900 and more were inoperative from three principal causes:

1. Many were lost in the early development period through faulty drilling.
2. Many which at first were good producers eventually ceased to produce and were abandoned.
3. Many others had to be abandoned on account of salt water which made its appearance either during the drilling operations or after a few weeks of good oil production.

SPINDLE TOP POOL.

Prominent Events During 1903.

The original Spindle Top or Beaumont pool produced only one-half the quantity of petroleum in 1903 that it did in 1902. A very large portion of this quantity was secured by the slow method of pumping. During May an extension of the original lenticular pool containing less than 200 acres was secured to the northwest, a distance of about 1,000 feet, by the finding of a well which at first produced 5,000 barrels per day. However, this extension must have been very narrow, as only a few wells drilled in this new outlet proved of any value whatever, and the first well soon became choked with loose sand and was abandoned. In January of 1903 the entire production of this field was only about 25,000 barrels per day; during February it was increased to about 40,000 barrels per day from 110 wells in operation; but from this production there was a gradual decline and at the close of the year the quantity was reduced to about 13,000 barrels per day. There was a number of wells drilled during the year into the first or upper pay, found at from 750 to 800 feet, which secured a moderate production. The larger quantity produced in this field comes from an open, porous limestone at a depth

of about 1,050 feet. The upper pay is a loosely cemented sand from which in some instances shallow wells produced from 500 to 600 barrels a day. Many of the small operators became discouraged, sold out or leased their wells to the larger companies, and removed to Sour Lake and Batson prairie, and there took part in the development of the newer fields. The slow and more economical exhaustion of what remains is being carried on by the purchasers.

The majority of the productive wells during 1903 were those more recently completed. The most productive area is that portion of the field known as the Flats, just west of the original development. The presence of water in considerable quantity has seriously retarded production in many wells. The original well, which was drilled into the sand early in 1901, by Captain Lucas, and which flowed at the rate of 70,000 barrels per day for 10 days until capped, has long since ceased to be a producer.

On the 15th day of April, 1903, a serious fire broke out in this field, which destroyed a number of derricks, tanks and equipments, and also consumed several hundred thousand barrels of petroleum, involving a loss of about \$440,000 to the operators. According to all the most reliable sources of information that were available, the production of the Beaumont or Spindle Top pool during 1903 was 8,600,905 barrels, as compared with 17,420,949 barrels in 1902. Besides the several immense loading racks where the petroleum is loaded into tank cars connected to the wells by pipe lines, there are two 6-inch lines connecting Spindle Top with Port Arthur, operated by the Guffey Petroleum Company, one 6-inch line operated by the National Oil and Pipe Company, and another 6-inch line operated by the Texas Company; there is also one 6-inch line connecting Spindle Top with Sabine Pass, operated by the Lone Star and Crescent Company, and another 6-inch line operated by the Security Oil Company.

SOUR LAKE.

This field was partly developed during 1902, and is located in Hardin county, 25 miles northwest of Spindle Top. During 1903 the area of productive territory was shown to be about 250 acres, and up to the close of 1903 about 450 wells had been completed, of which only 150 were productive. In their early life a number of these wells produced over 20,000 barrels per day. During the first two months of the year only six or seven wells were producing less than 1,000 barrels per day. Some of the original gushers opened during 1902 were abandoned early in 1903.

In May the real development of the Sour Lake pool began, and by the close of June 144 wells had been completed since the first of the year, the number of producing wells being 28. An area extending 3,800 feet north and south and 2,500 feet east and west had been proven to be profitable territory. On August first there were 75 producing wells; many others had been lost in drilling or abandoned as dry holes. The production at this time was estimated to be close to

80,000 barrels per day, which was far beyond the facilities for storing and transporting the product.

By the close of 1903 there were four 6-inch lines and one 8-inch line leading to Beaumont, a number of lines leading to the loading racks at the railroad, one 6-inch line to Saratoga, 10 miles distant, and one 4-inch line to Raywood station, on the Southern Pacific railroad.

The greatest production in this field was in August and September, when it averaged from 50,000 to 60,000 barrels per day, the decline being due to the falling off of the known areas of production. On what is known as the "Shoestring tract," so called on account of the land being divided up into long narrow strips, many wells were drilled within a few feet of each other until 150 had been completed. Many of these wells were originally good producers; but the closeness of the holes soon depleted the reservoir, which caused the abandonment of one-half, and left but 75 productive wells at the close of the year. In the southeastern portion of the field on the Davis tract over 100 wells were drilled during the year, not half of which were productive.

The early development of the Sour Lake field dates back to 1893, when six or seven wells were drilled to a depth of from 260 to 370 feet. Three of these wells produced a limited quantity of very dark and heavy petroleum of about 16 degrees Beaume. There was also some natural residuum found on the surface near where the first wells were drilled. A second sand was found at an average depth of 750 feet. Some of the wells on this horizon produced as much as 1,000 barrels per day. The third and fourth sands or pays are encountered at from 850 to 1,050 feet, respectively. The last named horizons were by far the most productive, and many of them produced as much as from 10,000 to 20,000 barrels per day when first opened up. One remarkable condition was developed especially in this field—the sand being found to be quite uniform in depth, but often locally irregular inside of short distances. In a number of instances where wells were only a few feet apart one well found a prolific pay streak, but the other failed to find any, although drilled many feet below the depth of the paying well.

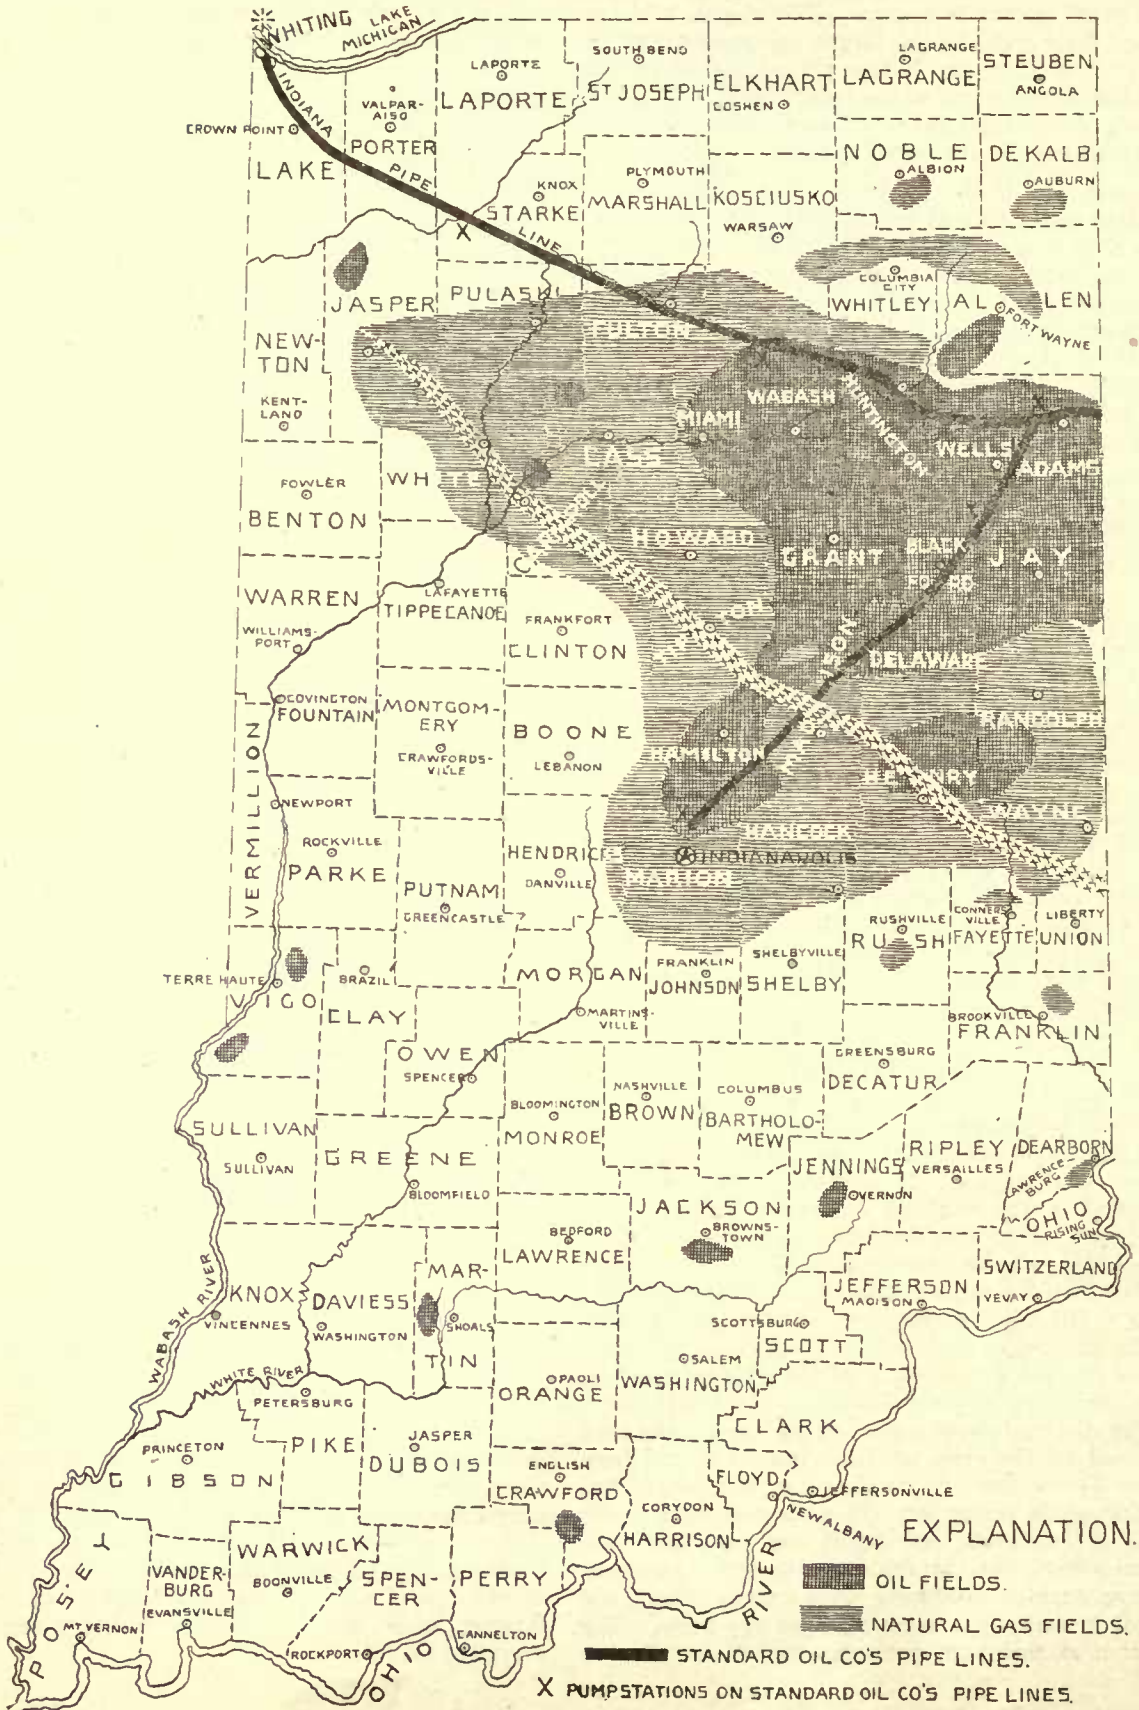

The production of this district in 1903 is placed at about 8,700,000 barrels, which is slightly more than the production at Spindle Top for the same time. The quality of the petroleum is quite similar to that produced at the latter place, but it is slightly heavier in specific gravity.

The prices fluctuated considerably in 1903, the highest quotation being 60 cents per barrel in May; the lowest being 15 cents in August; and the average for the year being 30½ cents per barrel.

There was little regularity in the production of wells in close proximity; a few made notable records by their temporarily large output. The Sharp well produced 325,000 barrels in 20 days, valued at \$80,000. Gilbert No. 1 produced enough petroleum in 30 days to bring \$125,000. These were exceptional wells, however, and at the close of the year there were no flowing wells, all the production being secured by pumping.

OIL & NATURAL GAS FIELDS

EXPLANATION.

-  OIL FIELDS.
-  NATURAL GAS FIELDS.

 STANDARD OIL CO'S PIPE LINES.

 PUMP STATIONS ON STANDARD OIL CO'S PIPE LINES.

UPLIFT ARCH OF THE CINCINNATI ANTI-CLINAL.

Considerable difficulty was experienced in the winter months in freeing the heavy petroleum produced from water, as the pipe lines insist that only a small percentage of the latter must be delivered to them. To get rid of the water it was necessary to heat the petroleum in settling tanks. This was expensive and caused delay in transportation. The tankage in the Sour Lake district at the close of 1903 amounted to 3,155,000 barrels, distributed as follows:

Iron tankage, 1,555,000 barrels; wooden tankage, 200,000 barrels; earthen tankage, 1,400,000 barrels.

The most disastrous fire of the year in this field broke out on August 24, and destroyed several derricks and a large amount of equipment. However, only about 1,500 barrels of oil were consumed. A very serious effect of the fire was that, when the wells were repaired they refused to flow upon being reopened, and many of them were abandoned.

SARATOGA DISTRICT.

This pool is located 10 miles northwest of Sour Lake and 35 miles from Spindle Top. The area so far developed contains about 150 acres, upon which there are five wells pumping 2,225 barrels per day. The production for this year is estimated to be about 150,000 barrels, gravity 18 degrees Beaume.

Operations in this field began a number of years ago, when a spring-pole rig drilled to the depth of 100 feet and found a heavy black petroleum accompanied with some natural gas. Some years afterwards a shallow well drilled to the depth of 250 feet produced considerable petroleum. Not until after the remarkable development at Spindle Top were deeper wells drilled, which resulted in developing a pool. Hooks well No. 1 was drilled to 1,000 feet, when it flowed naturally and produced at first about 500 barrels per day. On May 1 Tell well No. 1 was drilled in and flowed at the rate of 500 barrels per day. In June there were 14 locations. In July the Rio Bravo Oil Company (Southern Pacific Railroad Company) drilled in a well near Hooks well No. 1, which started off at 500 barrels per day. During the year three iron tanks, having a capacity of 130,000 barrels were completed, also wooden tankage to hold 4,000 barrels was completed.

Several large pockets of gas were encountered at a depth of 500 feet by a number of the wells, which for a time blew out in considerable quantity, accompanied by more or less sand and mud.

BATSON PRAIRIE DISTRICT.

On the last day of October, 1903, a flowing well was drilled in at the third entirely new field in southeastern Texas, Batson Prairie, Hardin county, eight miles west of Saratoga and 15 miles west of Sour Lake. Previous to this discovery a well was drilled in this locality by the Libby Oil Company, in the fall of 1901, which, at a depth of about 1,000 feet, encountered a small showing of petroleum followed by a large flow of hot salt water, when the well was abandoned without further test. This well is about three miles from that of the Paraffin Oil Company, which

at a depth of 790 feet in depth found a big flow of petroleum. Drilling was continued through about 35 feet of oil strata and the flow was natural.

The petroleum found in this district is different in character and gravity from that of Sour Lake and Spindle Top, having a gravity of between 23½ and 24 degrees Beaume. Just after the close of 1903 the Riley well south of the Paraffin Company's well found oil at a depth of about 1,150 feet, which flowed at the rate of 18,000 barrels per day. Previous to this a second well on the Paraffin Oil Company's property on the 19th day of December had a blow out of mud and sand which filled up the casing. After cleaning the hole of mud and water a solid stream of petroleum began to flow to the top of the derrick, which was controlled with difficulty. When opened this well produced 4,500 barrels per day. The petroleum produced by this well has a gravity of 29.9 degrees Beaume, the highest of any petroleum produced in southeastern Texas. On December 24, well No. 3 of the Paraffin Oil Company pierced the oil pay, which, like that found on Spindle Top, developed some salt water. When this was bailed off it started to flow at the rate of 15,000 barrels per day. By the close of the year 28 rigs had been built and operations were increasing daily. Only 4,500 barrels are reported as sold in this district during 1903 at 25 cents per barrel.

CORSICANA DISTRICT.

This pool is located at Corsicana, Navarro county, 200 miles northwest of Beaumont. Since 1897 it has had an annual average production of over 500,000 barrels of a superior grade of crude petroleum very different from that found elsewhere in the state.

The output has decreased about 47 per cent since 1901 and fewer wells have been drilled.

The greater portion of the petroleum comes from a depth of 1,010 to 1,040 feet in a loose grained quartz sand, in which foraminifera or microscopic fossils are found. This bed of sand ranges from 15 to 30 feet in thickness, and is capped by an almost continuous deposit of Ponderosa clay and marl. There are a few limestone concretions found near the surface. The original wells produced from 10 to 30 barrels per day when first opened up, and they are now producing about one-half of that quantity.

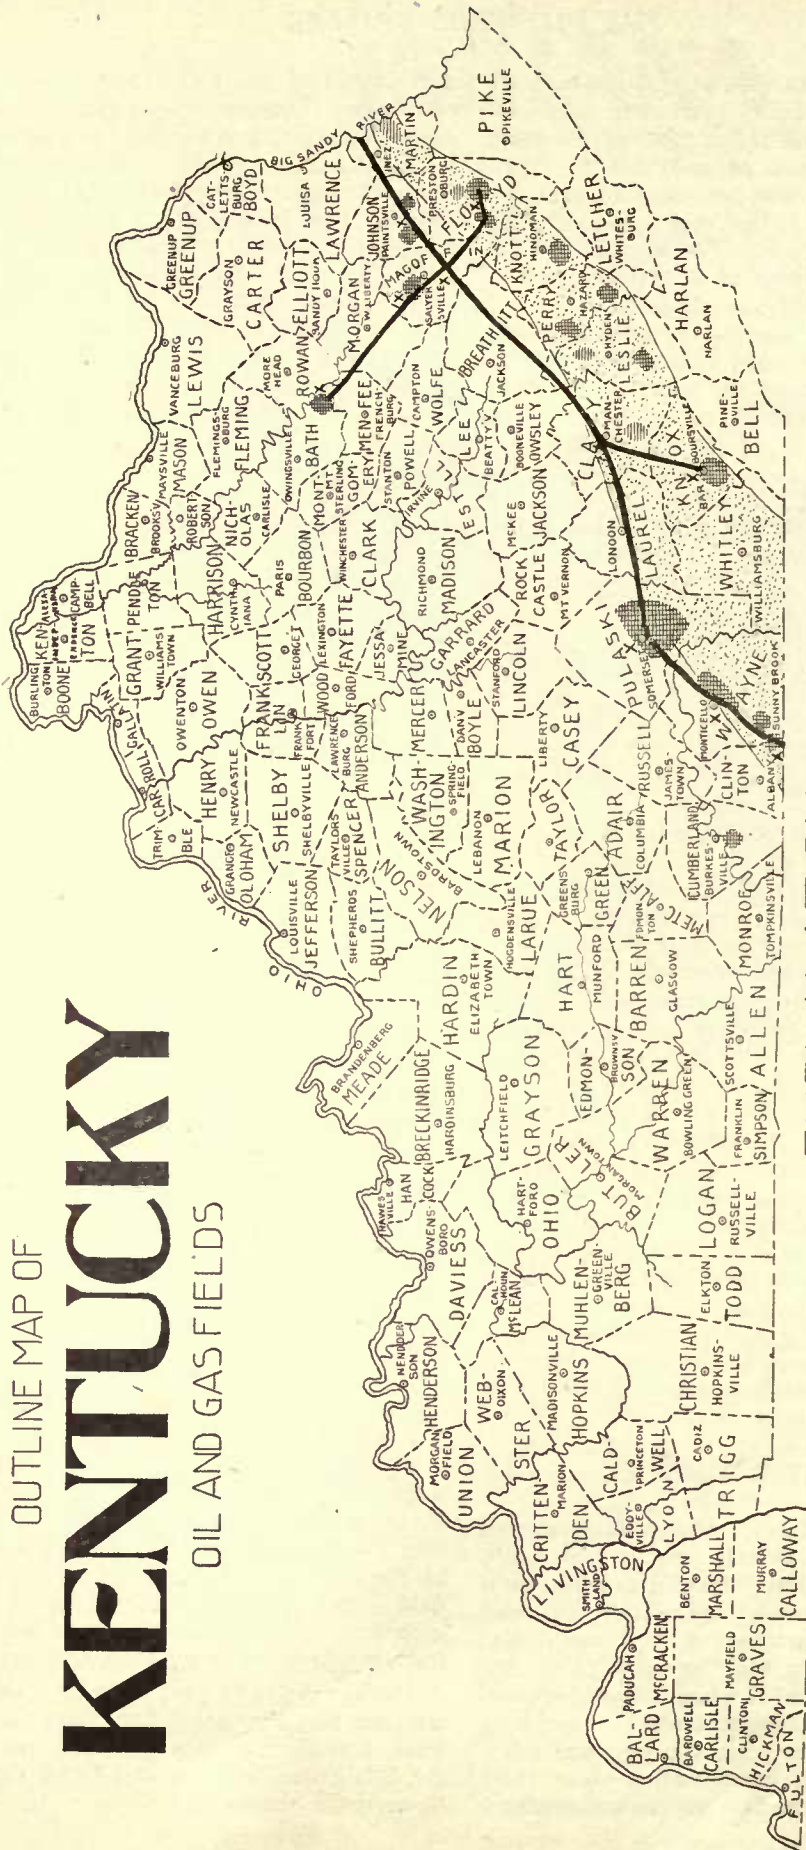

The area of the original field as now developed begins just southeast of Corsicana, near the old reservoir and extends in a general northern direction taking in a large portion of the town and extending almost north for four miles, with an average width of over one mile, the western boundary being very close to the line of the Southern Pacific railroad. This field is fully equipped with all the modern appliances, including gas engines in some instances, for producing petroleum in an economical manner.

During the early part of 1901 a field of heavy petroleum was developed five miles due east of Corsicana, and also at Powell, two miles farther east on the St. Louis, Arkansas and Texas railroad. Some of these wells that produced over 100 barrels per day

-  X PUMP STATIONS ON PIPE LINE

when first opened are now producing only from three to eight barrels per day.

The production in 1903 showed a considerable decline in the production of the lighter grade and a considerable increase in the heavier grade produced near Powell station.

BEXAR COUNTY DISTRICT.

Only a small quantity of heavy petroleum was produced in this pool in 1902. It came from wells 600 to 800 feet in depth near San Antonio and supplied a small local demand.

NACOGDOCHES COUNTY DISTRICT.

Numerous shallow wells were drilled prior to 1895 near Oil Springs in Nacogdoches county, some 12 miles southeast of the town of Nacogdoches. There has been a considerable outlay in drilling wells, establishing receiving tanks and building a pipe line, all of which has been practically abandoned. Only a very limited quantity supplying a local demand is now marketed.

NEW MEXICO.

The following is a summary of the report to the secretary of the interior by the governor of New Mexico:

Colfax county.—Indications of petroleum are found in the vicinity of Raton and a well is being drilled. Three wells have been drilled to the south of Raton and Chico Rico Mesas. Two were lost by caving, one reaching a depth of 2,640 feet. A third hole in process of drilling has reached a depth of over 1,700 feet. Some petroleum and natural gas have been found.

The entire plain is said to be underlaid with drab colored shales belonging to the Montana and Colorado cretaceous groups. The sands which should carry the petroleum are buried deep. Dikes of basalt where exposed to the surface are in localities impregnated with a dark green petroleum. Natural gas has been encountered in digging wells. Surface indications of petroleum are also found six miles southeast of Springer. In San Juan county there are numerous surface indications of petroleum, and several wells have been started, but as yet nothing has been developed in the way of a producing well.

McKinley county. In the western portion of this county there are surface indications of petroleum, and a well is drilling at Manuelito, but without practical results so far as tested.

UTAH.

Ozocerote, elaterite and other varieties of hydrocarbons, oil shales, natural gas and petroleum in limited quantities are known to exist in Utah. Large deposits of semi-liquid asphalt are reported to be found covering a portion of the bottom of Salt Lake, and arrangements are being made by men of large exper-

ience to drill a deep well at some locality along its shores in the near future.

MONTANA.

A number of petroleum springs or seeps are known to exist in two localities in Montana. One of these localities is near the Canadian boundary separating Montana from Alberta, east of the Flathead river, in Flathead and Teton counties. The recent strike reported to the north of this section, in Alberta, on the waters of the Kootenai river, has added additional interest to this section.

The other sections of this state in which numerous seeps are known to exist are in southern central Montana in the counties of Sweetgrass and Carbon. The latter county adjoins Wyoming. Three wells have been recently completed, but without practical results, in Carbon county, north of the foothills of Bear Tooth mountains, where the formations exposed are a series of sandstones and shales.

CALIFORNIA.

The most important event connected with the output of petroleum in the United States in 1903 was the remarkable increase in the production of California and its sudden elevation to the head of the states producing petroleum, superseding Ohio, which for several years previous ranked first. When values are compared, however, California's rank is sixth, being slightly less than that of Texas. During 1903 the state produced 24.27 per cent of the production and 7.81 per cent of the value of the petroleum produced in the United States. The total state production was 24,382,472 barrels in 1903, an increase of 10,398,204 barrels, or 74.36 per cent over that of 1902. The value of the petroleum produced was \$7,399,439, an average of 30.3 cents per barrel, as compared with 34.8 cents per barrel in 1902.

The greater portion of the increase in 1903 came from Kern county, which, almost doubling its former large output, produced over 74 per cent of the total. The largest percentage of gain was in Fresno county, which increased 374 per cent over the production of 1902. The average price paid for the petroleum produced in Kern county in 1903 was 21 cents per barrel and 33 cents for that produced in Fresno county. The highest price paid was for a limited production from Santa Clara county, valued at \$1.91½ per barrel.

FIELD OPERATIONS.

There was a total of about 480 wells completed during 1903, of which number about 125 were dry holes. Of the 16 counties in this state in which wells were drilled by far the greatest number were drilled in Kern county. So far profitable developments have been confined almost entirely to the Coast range, on the western side, and to the southern end of the great central San Joaquin valley.

Operations were conducted in the counties of Kern, Fresno, Los Angeles, Orange, Ventura, Santa Bar-

bara, Santa Clara, San Mateo, Monterey, Kings, Madera, Contra Costa, Colusa, San Bernardino and Humboldt. No new pools were opened, most of the operations for the year being confined to known localities as the increased facilities for transportation enabled much new work to be prosecuted.

KERN COUNTY.

The Bakersfield, McKittrick and Sunset fields, located in this county, were the scene of much active work during 1903, which resulted in the production of 18,077,900 barrels. The loose sand in which the deposit is found in this field is remarkably regular and often of great thickness, and the wells are also remarkably regular in their output, and range from 900 to 1,000 feet in depth. There must be considerable gas pressure to cause so heavy an oil as is found to flow naturally. The Bakersfield pool is by far the most important and there is good reason to infer that this pool will continue to produce still greater quantities of this quality of petroleum in the future. The southern terminus of the pipe line leading to Port Richmond is located at this field, and there is an immense quantity of petroleum, amounting to 3,500,000 barrels, stored in iron tanks in this vicinity.

FRESNO COUNTY.

The production in this county, so far, comes from what is known as the Coalinga field, in the southern portion of the county. Recently there was an extension of the oil field to the southwest. There was a remarkable increase in the production secured in this pool during 1903, which amounted to 1,560,129 barrels, or 374 per cent over that of 1902.

There are a number of grades of petroleum produced in this field, which range from 11 to 45 degrees Beaume. The greater portion has a gravity of about 33 degrees Beaume, but strange as it may seem the lighter grades are nearest the surface. Since 1897 this field has had from five to seven miles of pipe line in operation to receiving tanks on the Southern Pacific railway, near Coalinga. The Pacific Coast Oil Company has connected the Coalinga field with Mendota station by 31 miles of pipe line. This station is on the main line from Bakersfield to Point Richmond, and 166 miles south of the last named locality. One of the serious drawbacks at Coalinga is the scarcity of water, which is supplied to the drilling and pumping wells by a pipe line from wells several miles distant.

LOS ANGELES COUNTY.

The Los Angeles pool was quite active during 1903, and increased its production by the careful working of the original wells from 1,938,114 barrels in 1902 to 2,087,627 barrels in 1903. There was an average of 1,150 producing wells pumped during the year. Nearly the entire production was marketed as fuel petroleum. The Whittier pool in the southeastern portion of this county reaches over into Orange county and is known

as the Fullerton pool. There are a number of deep wells in this pool that produce a large quantity of superior petroleum susceptible of refining in a profitable way. Other wells toward Brea Canyon produce large quantities of dark and heavy fuel petroleum.

At Newhall nothing new was developed during 1903. The older wells have been operated regularly and a few new producers added inside of the developed territory. In this pool a very light variety of petroleum was found several years previous, which was almost colorless and had a specific gravity of 50 degrees Beaume.

SANTA BARBARA COUNTY.

In Santa Barbara county the Union and the Pinal Oil Companies each secured a large flowing well during 1903, with indications of the existence of a large petroleum deposit at both localities.

Ventura and San Mateo counties had some slight fluctuations in their production. There is a slight production for the first time recorded in Santa Clara county.

TRANSPORTATION.

One of the most important events of the year bearing upon the petroleum industry in California was the successful operating of the pipe line built by the Pacific Coast Oil Company and extending from Bakersfield to Point Richmond, a distance of 278 miles, with a branch line of 31 miles from Mendota to Coalinga.

The successful handling of petroleum produced in Kern county, the southern terminal, with a gravity averaging 15½ degrees Beaume, was an entirely new departure in the transporting of liquids in pipes. This was brought about principally by the heating of the fluid by the exhaust steam and the covering of the line with a nonconductor; it was assisted also somewhat by the admixture of the lighter crudes developed at Coalinga, and in some instances by using a percentage of water.

The pipe line is now delivering from 20,000 to 25,000 barrels per day.

REFINERIES.

There are about 40 refineries in California, although many of them can hardly be classed as such, as they are designed more particularly to reduce the asphalt to a more compact form suitable for roadways. This is done by crudely distilling the heavier natural petroleum, from which 35 to 40 per cent of solid asphalt is secured. By far the most important refinery in the state was in process of erection during 1903 at Point Richmond, on the waters of San Francisco bay, connected with the Santa Fe railroad. This refinery is one of the largest, and is destined to have a most important influence by refining the crude petroleum of California for distribution on the Pacific coast, and to the Hawaiian islands, Japan, China and India by tank steamers as a grade of petroleum that can be sold

at reduced rates to the great masses of humanity who inhabit those portions of the globe. A large proportion of California petroleum must continue to be disposed of as fuel.

PETROLEUM FUEL.

The successful introduction of petroleum fuel on the Pacific coast has caused the rapid decline in the importation of coal. The problem of cheap fuel has been solved. The railroads, the manufacturers and the steamship lines are being directly benefited by its general introduction as an economical and perfect fuel.

Petroleum that is to be consumed inside of buildings or in steam vessels should not contain any of the lighter products, which are in many cases found in the heavier crude. It should have a fire test ranging from 220 to 270 degrees F. Under these conditions it is safe to handle and there is no loss from evaporation.

Numerous tests have shown that where the petroleum fuel is sold by measure the heavier grades have as high an evaporative test as the lighter ones; when sold by weight the lighter crudes usually have a higher evaporative value.

The important condition necessary is good combustion, and to insure that the liquid fuel should be completely atomized by a steam jet or by compressed

air. The latter is preferable, especially when superheated, because it more easily produces complete combustion and does not carry off so large a quantity of heat. To insure satisfactory results it is also necessary in all cases to have the jet of liquid fuel spray upon hot fire bricks and not come in direct contact with the plates of the boiler until combustion has been completed.

The best results have been secured by building an arch of fire brick over the grate bars, the crown of which comes within five or six inches of the bottom of the boiler and is parallel to it. About every fourth brick in this arch should be left out for openings through which the products of combustion may escape. Inside of this arch a loose checkerwork of fire brick should be placed, upon which the petroleum should spray, only the necessary air being admitted through the openings in the grate bars. This can easily be regulated by the arrangement of the fire brick upon the bars.

In like manner the fire boxes of locomotives which use petroleum for fuel must be arched with fire brick above where the spray strikes the back of the box, which must also be protected by fire brick, and an inverted arch of the same material should extend down into the ashpan, with open spaces in the brick work and an open space at the front end for the admission of the air.

HISTORY OF NATURAL GAS

Natural Gas Wells in Pennsylvania, Ohio, New York, Kentucky and Other States

Carburetted hydrogen is the chief component of the gas which escapes from the earth in wells and springs in many localities. It is evolved in the working of coal mines, and constitutes "fire damp." It is also a constant associate of petroleum and always issues in greater or less quantities from oil wells. It is given off, too, in the decomposition of recent vegetable matter, and may be seen bubbling up through the water of all pools in which plants are decaying. When it escapes from the earth it may be generally traced to beds of bituminous matter, such as coal, lignite, carbonaceous shale, oil, etc. From these substances it may be obtained by artificial distillation, and evolved by the spontaneous decomposition which all organic substances suffer in decomposition.

As carburetted hydrogen produces a brilliant light in combustion, it is largely manufactured and used for the illumination of cities and residences. So extensively is it employed for this purpose that it may be regarded as an indispensable element in our modern civilization. It is not strange, then, that efforts have been made to utilize the immense quantities of gas which flow from wells and springs in so many different countries. The Chinese have for hundreds of years used for lighting and heating the gas which emanates from the earth in several provinces of their country. In the United States the gas which issues from the salt wells of the Kanawha valley for many years was employed as a fuel in the evaporation of the brine.

Of course the oil wells of Pennsylvania produce gas, and often in very great abundance, and it occasionally occurs that wells drilled for the purpose of obtaining oil produced gas only. On newly developed territory the sight to be witnessed at night in the many illuminations from this natural gas is truly grand, causing the heavens to be lighted up, and the earth to be spread abroad with a brightness equal to the best artificial illumination of any modern city.

The village of Fredonia, in western New York, had for more than 40 years been fully or partially lighted by gas which issued from springs at that place. In drilling for oil in the various oil districts of the western states, the gas which has been produced so abundantly was regarded as a useless, frequently inconvenient and dangerous product, in the early days, but in late years, however, this gas has been utilized in numerous localities and thousands of wells have been drilled for the express purpose of obtaining it. In some

cases these gas wells have been highly productive, furnishing an abundance of material for heating and lighting in its most convenient and manageable form, so that this deserves to be reckoned as one of the important elements in the mineral resources of our country. As this method of procuring carburetted hydrogen gas forms a new industry, and one which will probably assume considerable importance, a few words in reference to its present condition and prospects may not be without interest to the public. I therefore extract from my notes a few facts in regard to some of the most interesting of our gas producing districts. On the upper Cumberland, in Kentucky, gas accumulated in such quantities beneath the sheets of lower Silurian limestone that many hundred tons of rock and earth were blown out with great violence. These explosions received the local name of gas volcanoes. In Ohio gas escapes from nearly all the wells drilled for oil in the oil producing districts. Of these two drilled by Peter Neff, Esq., near Kenyon college, in Knox county presented some remarkable features. These wells were drilled in 1866, at the same geological horizon as that which furnishes the oil in Oil Creek, Pa. At the depth of about 600 feet, in each well a fissure was struck from which gas issued in such volume as to throw out the drilling tools and form a jet of water more than 100 feet in height. One of these wells was tubed so as to exclude the water, and the gas escaped from it in such quantity as to produce as it rushed through a two and a half inch pipe a sound that was heard a considerable distance. When ignited the gas formed a jet of flame three feet in diameter and 15 feet long. The other well was never tubed.

At West Bloomfield, N. Y., is another gas well not unlike those described. This is drilled to the depth of 500 feet, reaching down to the vicinity of the Marcellus bituminous shales. From some measurements made by Professor Wurtz, it appears that about 15 cubic feet of gas escaped from this well every second. It was proposed to utilize it through pipes to Rochester, a distance of 20 miles.

At Erie, Pa., there were 25 wells in successful operation, most of which were drilled for the special purpose of obtaining gas.

First.—H. Jarecki & Co. (Petroleum Brass Works) had two wells; the first drilled for oil in 1854, 1,200 feet deep. No oil was obtained, but brackish water and an abundant supply of gas.

At Conneaut and Painesville, Ohio, wells have been

drilled for gas with entire success, and others are being drilled in these localities, and at many points farther west.

Of two of the Painesville wells a few notes may be of interest to the residents of the lake shore. First, is the well of Gen. Casement on the east side of the town. This well is 700 feet deep and passed through the following materials:

One.—Drift, clay and gravel, 40 feet.

Two.—Erie shale, soapstone rock, 648 feet.

Three.—Huron shale, very black and bituminous, with strong smell of oil, 12 feet.

Gas was found in the Erie shale. The supply is abundant and is used for all domestic purposes in Gen. Casement's house. The pressure of the gas was tried, but at 27 pounds per square inch part of the apparatus failed.

Second.—Well at Erie Seminary, 725 feet deep at the time of observation. Strata passed through:

One—Clay and sand, 23 feet.

Two—Erie shale, alternations of sandy and argillaceous gray and green shales, 687 feet.

Three—Huron shale, black and bituminous, 15 feet.

The gas was found in the fissures or crevices of the soapstone rock. In the seminary well four such fissures were found. The first gas was obtained at 300 feet.

Another well at the seminary is of similar character. The supply of gas from both wells is sufficient to light and heat the building. If collected in a gasometer it would at least supply all the light required.

In the vicinity of Cleveland, as in many other localities in the eastern half of the state, gas and oil are frequently met with, and many wells have been drilled for one or the other of these useful articles. Here, as elsewhere, there are two marked lines of gas and oil springs, connected with the outcrops of the two sheets of bituminous shale which underlie the surface. First the Cleveland shale of lower carboniferous age, which crops out along the base of the hills that bound the Cuyahoga valley. This bituminous shale is from 30 to 60 feet in thickness and is the source of the oil of the East Cleveland and Kingsbury quarries, the noted gas spring at the brick yard beyond East Cleveland, etc. The oil of Mecca and Liverpool is derived from the Cleveland shale. Second, the Huron or Great Black shale, which passes beneath Cleveland and rising westward comes to the surface in Huron and Erie counties and forms a broad belt of outcrop, thence to the Ohio river. The Huron shale has a thickness of 300 to 400 feet, mostly black and highly bituminous, and is the source from which the gas of the Neff wells and the well on the lake shore, and the oil of Oil Creek are derived. In the valley of the Cuyahoga, in Cuyahoga and Summit counties, a large number of wells were drilled for oil some years ago. Most of these yielded both gas and oil, but neither in large quantity. From a similar well in the valley of Rocky river a copious flow of gas has continued to escape for several years. Of the wells recently drilled in this vicinity a brief notice may perhaps be of interest to the people of Cleveland. First, well at mouth of Kingsbury run, drilled by the Standard Oil Company for

water. The depth of this well is 1,005 feet. The well is about ten feet above the run. Before reaching the rock, 238 feet of clay with partings of sand and gravel were passed through. The rock penetrated was gray and black shale. Some water and gas flowed from this well, but neither in large quantity.

Second, well drilled by the gas company, at the gas works near the mouth of the river, well head about 15 feet above the lake. This well is 835 feet deep. The rock was reached at 116 feet, the overlying material being mainly blue clay, with sheets of quicksand and gravel. The rock passed through consisted of alternations of gray and black shale. Gas was obtained at several points, but not in remunerative quantity.

Third, well drilled by Captain Spaulding between Cleveland and Rocky river. This well began about 100 feet above the lake. At the depth of 715 feet it passed through—

1. Sand and clay, 12 feet.

2. Erie shale, gray argillaceous shale, with bands of sandstone, 400 feet.

3. Black shale with thinner bands of gray Huron shale, 303 feet. In this well gas was obtained at several horizons and the quantity was sufficient to light a number of houses.

In the city of Erie there were some 30 gas wells. These wells were for the most part drilled to a depth of from 500 to 700 feet. The shale is here reached at the depth of from 30 to 40 feet, and extends below any depth yet reached by the drill and is composed of alternate gray and black layers or veins—the gas being found only in the latter. The gas from a portion of the wells here furnishes fuel to three steam flour mills, the city water works, an oil refinery, two machine shops, a car manufactory and four or five other steam works. The City Gas Company also have a well and use a mixture of natural and manufactured gas for the use of the city.

At Buffalo, N. Y., a well was drilled to a depth of 640 feet, when a large vein of gas was struck. The volume of uprising gas showed a pressure of 130 pounds to the inch. This gas was soon exhausted.

HISTORY OF NATURAL GAS.

REMARKABLE GAS WELL, AT FAIRVIEW, PA.

In June, 1872, a well was drilled about two miles from Fairview, Butler county, Pa., to a depth of 1,335 feet for oil, and was abandoned on account of the strong flow of gas and salt water; so great was the flow of gas that the boiler had to be removed to a distance of 25 rods. After the well was abandoned some two months the pressure of gas became so strong that it forced the water entirely out of the hole, and in the autumn of the same year a company was formed to utilize the gas, which was done by bringing it through a 3¼-inch casing to Fairview, and thence to Petrolia, three miles from Fairview. The gas is used

to light the streets and heat residences and offices in both places. The pressure, as indicated on a steam gauge, is 80 pounds. This well has an escape through a 6-inch pipe and the noise of the escaping gas can be heard readily for a distance of two miles.

A correspondent of the Titusville Herald under date of September 3, 1873, gives the following graphic account of this remarkable gas well:

The roar of the escaping fluid was equal to the sound of Niagara, and the iron tools that had penetrated 1,335 feet of solid rock were raised and tossed in the hole with as much ease as a skiff is rocked upon the surface of an angry ocean; so strong was the gas giant that one man might have helped the tools out of the well without the aid of an engine. A man might throw a one hundred pound rock into the escaping column and it would be thrown with ease to a height of 40 or 50 feet in the air; an ordinary club might be launched into the upward stream and it would be toyed with as a fountain jet toys with a marble. It would raise a club 75 or 80 feet in the air and when it would begin to descend it would be elevated again until it would escape the center of the current and then return to the ground. The voice of this giant can be heard for five miles distinctly, and it sounds like the approach of a train of cars on the railroad, or like the sound of a brake when letting down tools into a 1,500 foot well. In the hole is a little salt water, just enough to make the gas appear like blue smoke. The water, under the force of the gas, is formed into a mist and on approaching the well appears like a column of smoke rushing out of the valley, but woe be unto him who touches a match in this giant's face, for his breath is explosive and would when lit make heat enough to melt iron.

"For a few weeks this well blew, and howled, and whistled, making night hideous and day tedious with its ceaseless yells, until the arms of science opened to receive the wasting fuel. A 20 horse power boiler was stationed near the well and connected to receive it; to the boiler was connected a 3½-inch tubing, which was laid seven miles to Fairview, Petrolia, Karns City, and Argyle. To this seven miles of pipe are attached 40 pumping and drilling wells, eight pump stations and different pipe lines, 200 gas burners and 40 cook stoves, all of which burn the gas from this well. But they do not use it all. The well is only a 5½-inch hole, but the waste pipe is a 5⅝-inch casing, which fairly rings with the pressure of the escaping waste gas."

NEWTON GAS WELL NEAR TITUSVILLE, PA.

Nearly all wells producing oil yield small amounts of gas, which is often found in large enough quantities to make it available as fuel for boiler fires; but wells producing large quantities of gas unaccompanied by oil are comparatively rare. I have instances a few in different parts of the country, and would here make mention of one quite famous well of this sort, at the mouth of East Sandy creek, hereafter described, and another at Stewart's run, both in the Pennsylvania oil

region. But the most remarkable gas well yet discovered is the Newton well on the A. H. Nelson farm, 5¼ miles northeast of Titusville. The well is the second one drilled in this vicinity—the first sunk in the fall of 1871, proved a dry hole. The usual strata of rock found in this region were passed through in drilling and there was no indication of oil, and but slight sights of gas during the process of drilling.

This well is drilled to the depth of 786 feet and was finished on the 11th of May, 1872. A few minutes after the pump was set in motion the flow of gas commenced throwing up the fluid as fast as a 2½-inch outlet would allow it. Soon the water was exhausted and the gas rushed out with a deafening noise and with terrible force. The well was at this time tubed only to the second sand rock, a depth of 705 feet. The casing was now lowered below the second and the tubing to the third sand rock, and pumping resumed, with about the same pressure from the third sand rock as from the second, but showing a difference in the quality of the gas, it being much purer and of higher illuminating power. On the 24th of June the casing was removed and placed above the first sand rock, leaving all the gas veins open below the casing. A sand pump was then run down a few times for the purpose of exhausting the water, and agitating the well so as to permit the gas to flow more freely. On putting down the sand pump for the fourth time the gas again rushed up, carrying the sand pump and line with it faster than steam power could be made to draw it out; and for several minutes the well discharged a column of water to a height of at least 100 feet, making a splendid sight, and a noise which is said to have been heard for a distance of 10 miles.

As soon as possible the gas was divided into seven 2-inch jets, one of which was sufficient to run the engine, the gauge showing a pressure of 75 pounds to the square inch. Calculations, as accurate as it is possible to make, showed a total pressure of not far from 350 pounds to the square inch, and a flow of more than 500,000 cubic feet of gas per day. Each day the volume of gas seemed to increase and then occurred to some capitalists the feasibility of carrying the gas to Titusville to supply the many manufacturing firms and private families with it as fuel, and to this end the well was purchased by Henry Hickley, Esq., of Titusville, who had the product of the well measured, which revealed the fact that it was producing over 4,000,000 cubic feet per day. On the first day of August, 1872, the gas was conveyed through a 2-inch pipe to the city of Titusville. This 2-inch pipe was found after a short time inadequate for the demand and a line of 3¼-inch pipe was laid down, and supplied 250 firms and private families with gas for heating and lighting purposes.

Of the many striking features of the Pennsylvania oil region, Gas City, Cranberry township, Venango county, was one of the most remarkable. It is called Gas City because of the large amount of gas flowing from its wells, of which there were some 30 producing oil. The town had about 40 houses, composed principally of hardware stores, groceries, restaurants, etc.,

and these were all heated and lighted by gas from one well. Each well had gas enough to make steam for its engine and to light the engine and boiler house, and each engine house used for light as much gas as would supply a large hotel, and wasted more than would supply a town of 5,000 inhabitants. At each well there was a pipe run from the well to some distance, through which the waste gas was burned at an elevation of 15 to 20 feet.

GAS WELLS AT EAST SANDY.

There was a remarkable gas well at East Sandy, in the Pennsylvania oil region, which was struck in the spring of 1869. It caught fire and resisted all efforts to extinguish it, and burned for a little more than a year, lighting up the surrounding country for a great distance. The rush of gas and flame roaring like a cataract could be heard for miles. After partial exhaustion the gas was conveyed in pipes in some instances upwards of half a mile for use on both drilling and pumping wells. The amount of gas produced daily by the well is not known, having never been tested. But some idea of it may be gathered from the fact that it has supplied gas to 20 pumping and drilling wells at one time. In some instances this gas was utilized directly into the engine, like steam as a motive power, the steam gauge indicating a pressure of 80 to 90 pounds to the inch.

The presence of large quantities of gas in the Pennsylvania oil region usually indicates the presence of an abundance of oil in the neighborhood. East Sandy offering such inducements, oil men, prominent among whom were F. W. Andrews, of Titusville, commenced operations. Success was not so great as expected, yet quite a number of good paying wells were found.

THE PHENOMENA OF OIL AND GAS WELLS.

As every human being has his own set of features, tone of voice, and the like, so each individual well has its characteristics, whether it be a flowing or pumping well. All differ in regard to the flow of water, gas or petroleum. In one the flow of oil will be continuous and uniform, day and night, not ranging more from week to week than a spring brook. In others the flow will be intermittent, but with precise regularity as to time; others again flow at intervals.

It is recorded of The Coquet well—Hyde and Egbert farm—that it emitted a succession of sounds as loud and sharp as the exhaust of a small steam engine, occurring in regular order every 10 seconds, in such a manner as 1, 2, 3, 4; 1, 2, 3, 4, and sometimes two or three coming off together by an extraordinary effort. The Wild Cat and Yankee wells remained silent for 40 and 20 minutes respectively, and then began to foam and flow, the oil coming off at first only in drops, but increasing by degrees until it belched forth with terrifying force and power. These discharges then decreased in violence and finally fell off entirely, after the lapse of from five to eight minutes. Each escape of

liquid was accompanied by a sharp report, heard at the distance of a hundred yards or more. Some wells have remained quiescent for 21 or 22 hours in the day and then have broken forth in one continuous flow, or a succession of belchings, for two or three hours. A few wells have run for six hours and then subsided or distributed their favors over 12 hours in the 24. The Dunn well on the Watson flats produced freely from morning till mid day; then the supply diminished or stopped altogether for the rest of the day, the pump bringing little but salt water. In the case of pumping wells, with each revolution of the band wheel, all things being in working order, a discharge of oil, or salt water, or both, takes place.

It is not difficult to account for the phenomena of flowing wells. Gas seems to be the life blood of these remarkable wells. Professor Winchell, in an article on gas wells intelligently disposes of the question, which is here appended:

"The escape of oil at the surface of a well is caused sometimes by mere hydrostatic pressure, as water rises in a common artesian well. More frequently, perhaps, the oil is forced up by the elastic reaction of confined gases. An open cavity, or a porous portion of rock, bounded on all sides by impervious walls—which constitutes a virtual cavity—may be partly filled with oil, while gases occupy the higher portions of the cavity. Such a cavity, whether actual or virtual, may possess any form or extent, or may consist of a number of cavities connected by narrow passages or mere fissures. In nearly all cases more or less gas accompanies the oil and subsists under a very high degree of pressure. The pressure in such cases is not the hydrostatic pressure of water, but a consequence of the continual generation of gas and oil long after the cavity had been filled. If the drilling happens to penetrate the higher portion of such a cavity the gas at once rushes forth with greater or less violence and persistence. As soon, however, as the tension is relieved the escape ceases. No oil will be obtained in such a case without applying suction, since there is no hydrostatic pressure exerted from behind, and the reaction of the gas tends rather to confine the oil in the lowest ramifications of the cavity.

"Suppose, however, that on drilling a hole for oil we happen to penetrate some of the lower portions of the cavity occupied by the oil. The elastic pressure of the confined gas above will at once force the oil up, and produce a spouting or flowing well. The flow must necessarily subside by degrees, as the confined gas, by the escape of the oil, acquires more space for its accommodation. It may continue, however, until the cavity is exhausted of its oil, after which pumping will be of no avail. If the confined gas attains its equilibrium before the oil has been completely forced from the cavity, it is evident that the remainder must be obtained by pumping.

"Intermittent wells appear to act in some cases precisely after the manner of intermittent springs. More frequently, however, it is manifest that the combined action of gas and oil produces the phenomenon. In drilling a well, suppose a volume of

gas is struck over one hundred feet from the surface of the rock, and a small stream of oil twenty feet below the gas. The entrance of oil fills twenty feet of the hole, and begins to submerge the fissure at which the gas is escaping. The gas forces its way through the oil with a sputtering sound, bubble after bubble rising to the surface. As the oil ascends, the gas makes louder and louder complaints, till, finally, summoning all its accumulated energies, it hoists the superincumbent column of oil to the surface, and pours it out in a few seconds' duration. The flow then ceases, and the same operation begins to be repeated. After a minute or more, renewed grumbling and sputtering, the pent-up gas again relieves itself, and thus the work continues. The same result would ensue if oil and gas found entrance at the same fissure, or even if the gas were admitted at any distance beneath the entrance of a small supply of oil."

In evidence of the truth of Professor Winchell's conclusions, I may instance a case in point. On the main street of Rouseville, Venango county, Pa., is the site of an old well, drilled some years ago, which was pumped, and long since abandoned; it is now covered with earth, and hidden from view. This well, with the regularity of time, flows oil and gas once a month. The cause is obvious: evidently the gas accumulates, carrying with it oil, forcing itself through the resisting earth.

THE PRODUCTION OF NATURAL GAS IN THE UNITED STATES.

ITS ORIGIN, USE AND THE FORTUNES INVESTED IN SUPPLYING IT TO CONSUMERS.

Natural gas is the most perfect and convenient fuel known. It is found in nature perfectly prepared for use, stored in immense reservoirs under such high pressure that, when tapped by the drill, it furnishes the power to transport itself hundreds of miles through pipe lines to the consumer. No artificial gas compares with it in heating power, 1 cubic foot of it being sufficient, with proper appliances, to evaporate a pint of water. It is instantly available for use by merely turning the valve and the fire can be extinguished the moment the service is completed. When properly burned, it leaves no soot, ashes or other residue.

Among some of the nations of Asia, notably China and Persia, the use of natural gas "antedates authentic history," and in the United States its existence has been known for more than a century. In 1775, General Washington, while locating lands received in payment for military service, visited a burning spring on the Great Kanawha River near the site of the present city of Charleston, W. Va. He pre-empted the tract containing the spring and

dedicated it, together with an acre of surrounding ground to the public forever.

The first recorded use of natural gas in the United States was in 1824, at Fredonia, N. Y., where it was piped from a well to illuminate the village inn in honor of the visit of General de Lafayette.

A few years later, in 1841, William Thompkins struck a large flow of gas just above the burning spring in the Great Kanawha valley, and used the gas for heating salt furnaces. Early in the history of oil-well drilling, which began in 1859, the waste gas which almost invariably escapes from oil wells was used for firing the boilers of the drilling engines, and it was very soon piped to houses of the oil producers, where it was used for light and fuel, and large out-door flambeaus were burned at the wells. But it was not until 1874 that its great value as a manufacturing fuel was demonstrated. In that year Messrs. Rodgers & Burchfield began to burn it under boilers and for all the puddling and heating furnaces in their plant at Leechburg, Armstrong county, Pa. The advantages and conveniences were at once apparent, and the use rapidly increased. By 1887, 96 rolling mills and steel works were either wholly or in part supplied with this fuel, and by 1890, it is estimated that it displaced annually 10,000,000 tons of coal.

In the earlier days of its production, the original "rock" pressure of the wells (the pressure of the reservoirs as shown by closed-in wells) was so great and the producing area so extensive that the supply of gas was believed to be practically inexhaustible. As a result the gas was wasted in the most extravagant manner. Wells were permitted to discharge their product into the air and little or no effort was made to check the flow. Frequent escape pipes and flambeaus were provided to lessen the pressure on the pipe lines and to consume the surplus gas. No effort was made to measure the amount furnished to a consumer, and as a consequence it was burned in a very wasteful manner. However, between 1885 and 1890, the earlier fields began to show unmistakable evidences of depletion, and as a result, the gas became more valuable. Meters and other saving appliances were employed, and, while the quantity of gas consumed probably decreased in five or six years to less than half the former yield, the price was increased to such a degree that the total value of the product showed but little decline. Since 1895 the value has increased, and since 1898 both the amount and value of gas consumed has increased until in 1901 the value of the product probably exceeded \$25,000,000. The amount sold in 1900 was 127,000,000,000 cubic feet, and if the rate of increase continued during 1901, as the statistics of some of the largest gas companies indicate, the amount consumed was 150,000,000,000 cubic feet, equivalent to one cubic mile. The largest gas holder yet constructed is of 5,000,000 cubic feet capacity, and the supply during 1901 would be sufficient to fill it 30,000 times, an amount which would furnish nearly 1,000 cubic feet per month to every family in the United States.

GAS WELLS.

The supply of gas is obtained from more than 10,000 wells of depths varying from a few hundred feet to more than 3,000 feet, and of an aggregate depth which would penetrate from the surface almost to the center of the earth. Three thousand miles of casing and tubing are in these wells.

The rock pressure of these wells varies greatly. In old, depleted territory it is practically nothing, and the only way of securing an additional supply is by diminishing by means of pumps the pressure at the mouth of the well below that of the atmosphere. However, in new fields, especially those drilled to the deeper sands (2,500 to 3,500 ft. deep) the pressures frequently exceed 1,000 pounds to the square inch. Some of the largest wells known, if unconfined, would discharge into the air at least 25,000,000 cubic feet per day, although an average "open flow" volume is probably not more than 250,000 cubic feet. The quantity actually obtained is but one-fifth of this amount, as most wells discharge against more or less line pressure and under normal conditions quite a large proportion of the wells are "shut in" as a reserve supply until needed. The roar resulting from the "blowing off" of some of the largest wells into the open air is terrific. Formerly it was considered impossible to shut in some of the largest wells until they had become partially exhausted. It was several months after the "Big Moses" well in Tyler county, W. Va., was "struck" before it was controlled. The roar was so great that voices could not be heard within 200 feet of the well. When the Robinson well, in Wetzel county, W. Va., was struck, six years ago, it was deemed unsafe to confine the gas, and the pipe line was laid to the well, the connections made, and the gas turned into the line, without shutting in the well. The gate on the well was not closed until four years after it was drilled. In 1844, while drilling a salt well in West Virginia, near the burning spring referred to above, so strong a flow of gas was struck that it threw the drilling tools, weighing about 1,000 pounds, out of the hole. Since then there have been several instances of much heavier tools being forced out of the hole by the pressure.

DRILLING WELLS.

The means employed in drilling gas wells are identical with those in use in drilling oil wells.

NATURAL GAS PIPE LINES.

In the handling of natural gas a system of pipe lines is necessary to connect the producing wells and the cities and towns where the gas is consumed, as well as an additional system to distribute the gas throughout the cities to the individual consumers. In the earlier period of the industry it was not believed possible to conduct gas at high pressure for great distances, and in the light of present knowledge it seems incredible that less than 25 years ago it was believed by a few that gas, being elastic,

could not be forced through lines at high pressure, under the erroneous idea that the friction on the sides would retard the flow, while the continued inflow would increase the pressure sufficiently to burst the pipe.

In 1881, Spang, Chalfant & Co. piped gas from Millerstown, Pa., to their mills on the Allegheny River opposite Pittsburg. One of the first large gas mains of any considerable length was laid in 1882, by Mr. J. C. McDowell for the United Pipe Lines, which have since been included in the National Transit Company. It was an eight-inch line twenty miles long, connecting a well near Wilcox with the pumping station at Colegrove, McKean county, Pa., where it supplied the boilers. About the same time, a line was laid from McKean county, Pa., to Buffalo, N. Y. Between 1882 and 1885, natural gas came into general use in most of the cities and villages of western Pennsylvania and southwestern New York.

As the adjacent fields became depleted, the gas has been brought from greater and greater distances through pipe lines until at the present time Pittsburg is receiving gas from Doddridge county, W. Va., more than 100 miles distant; Akron, Canton, Cleveland and Toledo, Ohio, receive their supply of gas from Wetzel county, W. Va., a distance of 150 to 300 miles; and Chicago from central Indiana.

The pipes used for these conductors vary in size from two inches to three feet in diameter. For the most part the pipe is wrought iron or steel. The smaller pipes (10 inches in diameter and under) are usually made of screw-joint pipe, although in the last few years plain end pipe with couplings and rubber packing has become very popular, and is in a large measure taking the place of screw pipe, it being equally cheap in cost and is more readily laid. Sizes from ten inches to two feet in diameter are frequently laid with "Converse" pipe, which consists of plain end pipe with the joints of heavy cast-iron sleeves or hubs fitted by molten lead which is caulked into the space between the pipe and the sleeve. The disadvantage of this point is one common to all lead joints in that the packing material, being inelastic, becomes loosened by the settling of the pipe and by the slight movement due to changes in temperature. By a re-enforcement with rubber packing pressed against the outside of the joint by iron clamps, a very satisfactory connection is made, and frequently a pipe line of this construction has been operated to upward of 300 pounds pressure to the square inch. Pipes above two feet in diameter are either cast-iron water-pipe or steel pipe riveted after the method of boiler plating. A line of riveted steel pipe, 36 inches in diameter, extends from Pittsburg 20 miles to the southward, and cost to construct approximately \$50,000 per mile. In times of maximum demand it passes daily over 100,000,000 cubic feet of gas.

The length of pipe of all sizes in the various transportation systems of this country is from 15,000 to 20,000 miles. In addition there are from 7,000 to 10,000 miles of pipe in the various distributing

systems in cities using natural gas. Thus in the aggregate there is approximately 25,000 miles of natural gas pipe lines in operation, and it is estimated that the lines cost \$150,000,000, not counting the drilling, the tools, offices, pump stations, leases and rights-of-way, which would amount to \$150,000,000 more, or \$300,000,000 all told.

For the most part the power necessary to transport the gas through the pipe lines is furnished by the natural rock pressure of the wells. In many places, however, the well pressures are so nearly exhausted, or the distances to be transported are so great, that this source of power is insufficient, and it is necessary to supplement it artificially by pumping. Where the pressure is small and the lift 10 pounds or less, as in drawing gas from depleted territory for nearby consumption, some form of rotary blower has been used successfully, but for higher pressures a cylinder gas compressor is necessary. Among modern gas pumping machinery are some of the finest specimens of mechanic art. Probably nowhere has a greater amount of work been done with the same expenditure of fuel than has been accomplished in gas compressors; in fact, it is doubtful if the results have been equaled in any other power plants. An indicated horse power has been maintained for one hour with less than the equivalent of two-thirds of a pound of coal. Thirty cubic feet of gas have been compressed from the atmospheric pressure to 270 pounds gauge pressure with the expenditure of but one cubic foot of gas in producing the power. This result was, of course, obtained only by the use of a gas engine.

GAS MEASUREMENT.

There are four methods in vogue for measuring gas, namely: (1) By meters, (2) by Pitot tubes, (3) by computation from the initial and discharge pressures and size and length of pipe line, and (4) by computing the output of the well from the volume of the hole and minute pressure.

1. Meters.—The method of measurement by meter is in most frequent use. The meters for the most part depend for their operation on two principles: one is the actual measurement of the gas by passing the whole volume through pockets or bellows of given capacity which fill and empty by the movement of a series of valves operated automatically by the flow of gas through the meter. Where the quantity of gas is so great as to need very large and expensive meters thus to measure it directly, another method—the proportional meter—is used. In this device, two routes, differing greatly in size and capacity, are available for the passage of gas through the meter. The flow through these two channels is controlled by a valve in each so arranged that they operate in unison, or in such a manner that the ratio between the discharge of the two branches remains constant. One of the direct measuring meters is placed in the smaller branch and the flow through it is measured, from which the total amount passed by the meter is easily calculated. In general use a special dial is attached to the

small meter, from which can be read the entire amount of gas passed. When gas is passed through a meter at a higher pressure than the standard at which it is sold, it is necessary to make a correction to the meter reading due to the extra pressure on the gas. The usual standard at which gas is sold is four-ounce gauge pressure, and a simple formula for reducing to this pressure is as follows:

$$Q=q \frac{p+h}{h+0.25}$$

in which

Q=cubic feet of gas at 4-oz. pressure,
 q=cubic feet as shown by meter,
 p=gauge pressure in pounds per square inch,
 h=pressure of atmosphere in pounds.

Since the pressure of the atmosphere is about 14.75 lb., this becomes

$$Q=q \frac{p+14.75}{15}$$

Self-recording pressure devices can be attached to meters operating at high pressures by means of which the average pressure and the actual quality of gas passed can be quickly determined.

2. Pitot Tubes.—The amount of gas passing through a pipe line can be quite accurately determined by means of the Pitot tube, which consists of a small metal tube inserted in the line, having its open end turned in the direction from which the gas is flowing. This tip communicates with one branch of a glass U-tube partly filled with some liquid (generally water). The other branch of the U-tube is connected to an opening in the pipe line, the plane of which is at right angles of that of the opening into the Pitot tube. By this means the branch connected to the Pitot tube will show a higher pressure than that connected to the pressure line, due to the force of the current of gas flowing against it. This difference of pressure will be shown by the difference in level of the liquid in the U-tube. Since this force is due to the velocity and density of the gas passing, the rate of flow can be obtained, and with frequent observations, the quantity of gas passing through the line can be readily determined. The formula of the Pitot tube as applied to gas measurement has been very carefully determined by Prof. S. W. Robinson, whose report is published in the Geological Survey of Ohio, Vol. 6, pp. 548-594. The final formula is:

$$Q=1.690d^2 \sqrt{h \left(1 + \frac{p}{15}\right)}$$

in which

Q=number of cubic feet of gas flowing in pipe line per hour,
 d=diameter of pipe line in inches,
 p=static pressure of gas in pounds,
 h=difference in level of water in U-tube, measured in inches.

This formula is computed for gas flowing through the tube at a temperature of 40° F., but reduced to

a standard temperature of 50° F. in the measurement by this formula. It is for gas of 0.60 sp. gr. To reduce to gas of any other gravity multiply by,

$$\sqrt{\frac{0.6}{\text{Sp gr gas}}}$$

3. Computation from Pressures at Two Given Points.—It is possible to determine with considerable accuracy the quantity of gas passing through a pipe line from the pressures at two given points when the distance between them and the size of the line are known. The formula for this purpose is:

$$Q = 40d^2 \sqrt{\frac{(P_1^2 - P_2^2)d}{LD}} \text{ in which}$$

Q=cubic feet of gas passing in one hour,
p=absolute pressure in pounds (gauge pressure+15 lb.) at initial point,
d=diameter of pipe in inches,
L=length of pipe between points in miles,
D=density of gas.

Probably the most complete study of this method has been made by Mr. Forrest M. Towl, who has constructed a slide rule for determining at sight the discharge of any line.

4. Computation of the Output of a Well from Its Minute Pressure.—A fair approximation of the output of a well at atmospheric pressure can be obtained from the capacity of the hole in cubic feet, and the increase in pressure of a well in one minute after it is shut in. The formula for this purpose is:

$$Q = \frac{d^2 \times 31416 \times L}{4 \times 144} \times \frac{p}{15} \times 60 \times 24, \text{ in which}$$

Q=quantity in cubic feet of gas discharged into the open air in twenty-four hours,
d=diameter of hole in inches,
L=depth of hole in feet,
p=pressure in pounds shown by gauge one minute after closing gate (less any pressure gauge might have shown before closing gate).

Reduced to lowest terms, this becomes approximately $Q = \frac{1}{2} d^2 L p$, or the output of a well in one day is equal to one-half the product of the square of the diameter of the hole in inches by the depth of the hole in feet by the pressure in pounds per square inch. Of course, if a well is tubed, the diameter of the tubing is used instead of the diameter of the hole, and if the packer is above the bottom of the hole, the capacity of the tubing to the depth of the packer is first obtained and to this is added the capacity for the full size of hole for the distance from the packer to the bottom of the hole.

If the output of the well is desired at any other pressure than that of the atmosphere, the gate on the well is closed as before and the rise in pressure noted for one minute from the instant the pressure reaches the desired point, this amount being used for the minute pressure.

Geologic Sources.—Although small quantities of gas are always present in the decomposition of ani-

mal and vegetable matter, the principal sources of natural gas are from porous strata of rock, usually at considerable depth below the earth's surface. The strata are chiefly sand, gravel, shale or limestone lying between more impervious layers. Petroleum is frequently discovered in these same strata, although from much more limited areas than those producing gas. The deposits are found in various portions of the world in the strata of all periods from the Silurian to the Tertiary. The great gas reservoirs overlying the Cincinnati arch are located in the Trenton and Clinton limestones of the Silurian period. Those of the Appalachian system are in the Devonian. In eastern Ohio they belong to the Sub-carboniferous period. Those of the southwestern States and California are in the Tertiary formation, as also are those of Eurasia. In the oldest formations, i. e., the Trenton limestone, the gas is found in the upper layers of the limestone itself and directly underneath the Utica shales. In the Clinton limestone, the source of gas appears to be a layer of sand within the limestone. The only source of gas in the Appalachian reservoirs is from layers of sand rock enclosed by limestone or slate. In the Tertiary formation, the gas comes from beds of sand which are frequently so soft as to hardly merit the name of rock. The natural gas is usually obtained from the most elevated portions of the stratum, i. e., along the anticlinals of the rock, while the petroleum collects on the lower horizon and frequently salt water is found on a still lower level along the synclinals of the rock. This anticlinal theory for the location of gas and oil is very thoroughly discussed by Prof. I. C. White, State Geologist, in the West Virginia Geological Survey, Vol. 1, 1899, pp. 158-180, and by Prof. Edward Orton, State Geologist, in the Geological Survey of Ohio, Vol. 6, p. 89 and following. The essentials of the theory are that the natural gas, being the lighter product, collects at the top of the reservoir, formed by the porous rock under the impervious layer, while the oil and water arrange themselves in the same layer in accordance with their respective gravity.

The most prolific natural gas fields thus far developed have been (1) those along the western slope of the Appalachian mountain system extending from the Canadian border to Tennessee, and (2) those throughout the great anticlinal extending from Kentucky to and even beyond Lake Erie, known as the Cincinnati arch, with its center near Cincinnati. Between these two large deposits is a marked synclinal, which, at its lowest point near the Ohio River in northwestern West Virginia, is many thousand feet below the crest of the Cincinnati arch on the one side and of the Appalachian mountain system on the other.

1. Appalachian Gas Fields.—The Appalachian gas deposits occur in the small folds or anticlinals which exist in the strata as they rise toward the Alleghany Mountains from the synclinal that lies to the westward. At the deepest place of this synclinal, in Wetzel county, W. Va., the Pittsburg coal drops

almost to the level of tide-water. A few miles west of Pittsburg the coal in this synclinal is about 900 feet above tide level. In Armstrong county the rocks have risen 1,100 or 1,200 feet higher, and from this region the rise is quite uniform to the New York boundary at a rate of about 32 feet to the mile.

In lines approximately parallel with this synclinal on the one side and the ranges of the mountains on the other, are a series of small folds, the crests of which are from a few feet to 300 or 400 feet above the adjacent synclinals, and in these small anticlinals nearly all the great deposits of the Appalachian system have been found.

As has been observed in the main trough between the Cincinnati arch and the Alleghany Mountains, all the strata dipped downward in a line from the northeast toward the southwest. In the northern portion for the first 50 miles south of the New York boundary this dip amounts to about 30 feet to the mile. For the next 50 miles, or to about the line of Pittsburg, the dip is about 20 feet to the mile, while south of Pittsburg it does not average more than 9 or 10 feet to the mile.

The gas deposits of southern New York and of McKean, Elk and Warren counties, Pa., are found in several different strata of sand included in the Chemung group of the middle Devonian period. The deepest of these sands are those producing gas in Elk county, which are about 200 to 250 feet below the Bradford sand. From the Bradford sand there is an interval of about 300 feet to the Cherry Grove sand, and about 400 feet above this is located the Warren sand. The most productive sands because of their vast extent are those of the Venango and Butler group. These are found from 600 to 1,000 feet above the Warren group in the Catskill epoch of the Upper Devonian period. In Butler and Venango counties there are three distinct strata of these sands with an interval between them of a little more than 100 feet. Gas from some of the strata of this group has been obtained from Crawford county southward to Kentucky. The sands are known by various names in different localities. In Crawford, Venango, Butler, Clarion and Forest counties they are known as the first, second and third oil sands. In Armstrong, Allegheny, Westmoreland and Washington counties the upper layers are known as the Murraysville or salt sand and the Hundred Foot sand, while the lower layer is broken into a number of strata known under the names of Gordon, Gordon Stray, Fourth and Fifth. South of the Pittsburg district, the Hundred Foot divides into the Thirty and Fifty Foot sands, and below the Gordon are found the Fourth, Fifth, Bayard and Elizabeth sands in the above order. North of Pittsburg is observed a thick layer of sandstone, the lower edge of which lies two or three hundred feet above Number One of the Venango group. This layer is about 300 feet in thickness, and outcrops in Butler and Venango counties, in the latter region being found only on the hill tops, from which it secured the name of Mountain Sands. From the Pittsburg region southward it is known under the

name of "Big Injun," and is productive of gas and oil in many localities.

The strata generally increase in thickness to the southward, consequently the interval between the sands becomes greater. There is an exception to this rule, however, between Green county and Wetzel county, W. Va., where the interval diminishes slightly.

Gas Deposits About Cincinnati Arch.—The Trenton limestone of the Silurian period has an elevation at the crest of the Cincinnati arch of more than 400 feet above tide level. From this region it rapidly falls until at Columbus, Ohio, it is 1,200 feet below tide level, and from thence eastward the decline is very rapid, equalling 3,000 feet to the Ohio River at East Liverpool. To the northward it declines to about 600 feet below tide level, where the crest of the anticlinal passes under Lake Erie in Ottawa county. At Indianapolis it is 280 feet below tide level. From the crest of the arch, in Claremont county, just east of Cincinnati, two marked anticlinals extend, one a little east of north toward Lake Erie, and the other more marked branch extends northwestward into Indiana, apparently passing through Union, Fayette, Wayne, Henry, Delaware, Madison and Grant counties. Prof. Orton concludes that the northwestern branch was first elevated and that later there extended northwestward from it what is known as the Lima axis. Near Findlay, Ohio, this meets an abrupt terrace passing due north and south, and causes the anticlinal to change direction at that point. The vast gas deposits of Indiana and Ohio are found on the northwestern anticlinal of the Cincinnati arch and along the Lima axis and the crest of the Findlay terrace.

Besides the Trenton deposits, there are those of the Clinton limestone in Fairfield and Licking counties, Ohio, which appear to be along a terrace in that rock. Also in eastern Ohio gas is obtained from the Berea sandstone of the Sub-carboniferous period.

While the principal gas deposits are along the crests of anticlinals, they are greatest where there is a considerable dip from the crest of the anticlinal downward. An essential to a gas reservoir is a layer of impervious rock above the gas horizon.

DESCRIPTION OF GAS DEPOSITS.

As above stated, the two great sources of natural gas on this continent are along the western slope of the Appalachian Mountains and the great Cincinnati arch. These two fields supply fully 95 per cent of all the gas produced in North America. Besides these, Kansas, Arkansas, Indian Territory, Texas, California and Colorado yield smaller quantities. However, for the past eight or nine years the actual amount of gas produced in Indiana has exceeded the Pennsylvania production, which is due to the fact that the price of gas obtained in Indiana has been exceedingly low. From 1888 to 1892, when the Indiana fields were being rapidly developed, both Ohio and Pennsylvania were producing large

quantities of gas, and in order to secure the removal of manufactories to this territory, contracts at a very low price for long periods were made. In like manner, franchises for gas in Indiana cities were made with imposed conditions that were then easily complied with, but as the supply has diminished, are now very burdensome. The prices for manufacturing contracts were based on output, and for domestic consumption on the number of fires or size of openings in the burner instead of by meter. The average price of gas in this State is but little more than one-half the price of coal or wood displaced, while with equal economy its price should exceed coal owing to the greater convenience and cleanliness, a condition that is true for almost all other localities.

Pennsylvania Gas Fields.—Gas first began to attract attention as a fuel during the development of the Bradford and adjoining oil fields. In many sections in this region wells of high rock pressure and great volume were found and while the rock pressure now is, generally speaking, small, large quantities are still taken from McKean and the adjoining counties of Elk and Warren. However, before its value as a fuel was appreciated, the extensive fields about Pittsburg had been discovered. Among the first of these was at Murraysville, located 15 miles east of Pittsburg, a field of moderate depth, showing a loose sand, which yielded consequently a great volume of gas. The first well in this field, Haymaker No. 1, was opened November 4, 1878, in drilling for oil. No attempt was made to use the product of this well for four years, and very little drilling was done in the field until 1884. A short distance to the east of Murraysville was the Grapeville field, which, though much smaller than the Murraysville field, contained wells of very large volume. Probably more gas was wasted from both these reservoirs than was ever utilized.

In the same month that Haymaker No. 1 was opened, the first well was struck near Tarentum, and as the supply from Murraysville and Grapeville diminished, this also was piped to Pittsburg, and as was needed, gas was brought from Canonsburg, Hickory and Venice, to the southwest. While the rock pressure is now very small in these various fields, and, while some of them have become entirely exhausted, they have showed wonderful lasting qualities. Armstrong county has been producing gas for nearly 20 years and still yields a daily output approximating 50,000,000 cubic feet.

About 1890 the development of the territory south of Pittsburg began, although gas had already been discovered and used to considerable extent about Washington, Pa. Later the developments extended into Green and Fayette counties. At present the most prolific territory is in Green and Washington counties, where a "Bayard" sand pool was discovered in 1897. The sand lies about 300 feet below the Gordon sand and 2,435 feet below the Pittsburg coal. This pool has been explored from within a few miles of the West Virginia line northeastward to a point about five miles north of the Washington and Green county line. It is about 25 miles long,

with a width of three or four miles. The rock pressure of the wells varied from 800 to 1,200 pounds, and still shows from 400 to 1,000 pounds, although the average daily output during the past two years cannot have been less than 75,000,000 cubic feet.

West Virginia Gas Fields.—In West Virginia the most prolific sands are the Gordon and those grouped near it, namely, the Gantz, Gordon, Stray, Fourth, Fifth, and in some few places, the Elizabeth or Bayard sand; many large producers also have been secured from the shallower sands. Although vast quantities of gas have been taken from these reservoirs, they are the most extensive and prolific known at present. Vast areas of natural gas deposits exist in Wetzel, Marshall, Marion, Monongalia, Tyler, Harrison, Doddridge, Lewis, Ritchie, Gilmer and Calhoun counties, and many others farther south. Wells have been drilled which show rock pressures exceeding 1,200 pounds and volumes of from 12,000,000 to 20,000,000 cubic feet per day, while some have been estimated as high as 50,000,000 cubic feet. If this supply is properly conserved, it will furnish vast quantities for many years, not only for local consumption, but for transportation to markets in Ohio and Pennsylvania which are now being supplied for the most part from the less distant fields. Unfortunately for the preservation of the gas, the deposits are almost invariably associated with oil pools, from which the gas is discharged with the oil, and in the past little effort has been made to restrain its flow. From one region in Wetzel and Tyler counties, embracing 100 square miles, with an original rock pressure of about 1,000 pounds, fully one-half of the entire supply has been wasted. It is a matter of regret that there is no satisfactory legal protection for this product. However, the value of gas is now becoming so universally understood and the principal oil producers are either directly or indirectly interested in the gas companies, so that the former waste has very appreciably decreased and there is reason to believe a new era of economy in gas production and preservation has begun.

Ohio Gas Fields.—The chief supply of gas in this State, i. e., the reservoir in the Trenton limestone, has been practically exhausted. This field originally embraced 500 or 600 square miles in the northwest portion of the State and had a uniform rock pressure of over 400 pounds. At present the pressure is nearly exhausted, and the wells drowned with salt water. In the eastern portion of the State quite a large quantity of gas was obtained from the Berea sandstone. However, the only source of any considerable supply at present known in the State is the Sugar Grove field south of Lancaster and the recently discovered Licking county field to the north of it. The gas in these fields comes from wells in the Clinton limestone 2,000 feet or more in depth and showed originally about 750 pounds pressure. The Sugar Grove field was first opened in 1887 and already shows no more than one-third of

the original rock pressure. The amount of gas produced in Ohio reached its maximum in 1888 or 1889. From thence it steadily diminished until 1897, although later the production has increased considerably and the value of the product has nearly doubled. This increase in value has been due in a measure to a more economic method of handling resulting from an extensive adoption of the meter system of measurement. It seems probable, however, that the maximum production has about been reached and existing companies are making extensive preparations for securing large quantities of gas from West Virginia.

Indiana Gas Fields.—The productive area in this State originally extended over an area of between 2,500 and 3,000 square miles, located from the center of the State eastward and northward to the Ohio boundary. The source was from the Trenton limestone. Originally the fields showed a nearly uniform rock pressure of 325 pounds, which now varies from zero to 150 pounds. For the past nine years this state has produced more gas than any other, but the fields have become greatly depleted. Large compressing plants are installed to diminish the line pressure at the wells and to furnish power to transport the gas to points of consumption. It would seem that these more and more expensive methods of gas production must soon prevent the successful conduct of the gas industry in many portions of this territory unless relief is obtained from the uneconomic methods of consumption due to lack of meter measurement and a price obtained for the product more commensurate to its value.

THE ORIGIN OF NATURAL GAS.

Many theories of natural gas have been advanced, but the one which meets with most general accept-

ance is that propounded and discussed so ably by Prof. Edward Orton, in the Geological Survey of Ohio. Briefly stated, the theory is that gas and petroleum are the results of decomposition at moderate temperature of vegetable and animal matter, chiefly in the stratum where found. There seems to be little doubt expressed at present that its source is organic rather than inorganic, and, while there are many adherents to the theory of distillation by heat, this latter theory is losing ground because, as a rule, there are no noticeable evidences of heat and, furthermore, it can be shown that a process of this character is unnecessary.

CHEMISTRY OF NATURAL GAS.

Natural gas is composed principally of the gaseous hydrocarbons of the paraffine group, whose general formula is $C_n H_{2n+2}$. Besides the paraffines, there are small but varying amounts of the following gases: nitrogen (N), carbonic acid gas (CO_2), olefiant, oxygen (O), ammonia (NH_3), hydrogen sulphide (H_2S) and hydrogen (H). The paraffines, however, amount to 90 or 95 per cent. of the entire volume of the gas, and consist principally of marsh gas or methane (CH_4). Frequently it is the only member of the series present. It seems difficult to separate the various members of this group, but the presence of the heavier members is frequently shown by the increased gravity, the increased heat units in its combustion and by the smaller proportion of water to carbonic acid gas in the products of combustion. The following table of the properties of the first three members of the paraffine group (the ones most frequently present) has been compiled from data in Schorlemmer's Hand Book of Chemistry and from the work of Prof. F. C. Phillips, which is published in the Pennsylvania Geological Survey, 1892.

Properties of the three lighter Members of the paraffin group.

Name	Chemical Formula	Carbon by Weight	Hydrogen by Weight	Specific Gravity	Weight per Cu. Ft.	Liquefying Pressure	No. B.T.U. per Cu. Ft. a
Methane (marsh gas).....	CH ₄	74.97	25.03	0.533	0.0446	2,650 at 10° F	1,064
Ethane	C ₂ H ₆	79.96	20.04	1.034	0.0837	676 at 39° F	1,863
Propane	C ₃ H ₈	81.78	18.22	1.45	0.12303	550 at 39° F	2,662

It is observed that the lower members of the series increase in specific gravity and in available heat units at a fairly constant ratio, each member yielding approximately 800 heat units to the cubic foot more than the one preceding. It should be observed also that the pressure on many natural gas reservoirs exceeds the liquefying pressure of the gas in all but the first member of the group. Consequently in such reservoirs all ethane and propane exist as a liquid, and are only vaporized at the bottom of the well as the pressure is reduced at that point. Since these gases are much richer in

heat units than methane, it would seem probable that as the pressure of gas fields containing these liquids depletes a large proportion of them would vaporize and result in a richer gas being produced than in earlier stages of production. The next lower member, butane, of the series remains, in its normal state, a liquid at atmospheric pressure and 33° F. and consequently does not vaporize in large quantities under normal line pressure. The boiling points of the remaining members of the group are sufficiently high to preclude any large amount of their vapors being present in the gas.

Besides the paraffines, small quantities of the illuminants, or the olefiant series (C H), have been observed. About the only member of which an appreciable amount has been observed is ethylene (C H). The analysis of gases from the Trenton limestone in Ohio and Indiana as given in the

Geological Survey of Ohio, Vol. 6, page 137, show about 0.25 per cent of olefiant.

The subjoined tables give a number of analyses of natural gas from various fields in New York, Pennsylvania, West Virginia, Ohio and Indiana.

Analysis of natural gas of New York and Pennsylvania, made by Prof. F. C. Phillips.

Combustion.—It will be observed that few attempts have been made to separate the hydrocarbons. The process is very difficult and unsatisfactory and as the chief and only use of gas is for fuel, the principal point to be considered is its heat-

ing power. (Its use as an illuminant is limited to the application of incandescent mantels, where the light is dependent on the heating power of the gas.) This subject has been very carefully considered by many of the best chemists and physicists, notably Prof. C. C. Howard, of Ohio; Mr. Robert Young and Prof. F. C. Phillips, in Pennsylvania; Forrest M. Towl, and many others. The difference in their results are due mostly to differences in methods of analysis. For all practical purposes the following rule will give British Thermal Units (B. T. U.) per cubic foot: B. T. U.=per cent. of hydrocarbons X specific gravity of gas X 18.3.

This formula is only a rough approximation, but gives a result slightly too small with gas of low specific gravity and correspondingly higher with the heaviest gases.

The products of the combustion of hydrocarbons vary in proportion to the amount of oxygen available for the combustion. If sufficient oxygen is supplied, the resultant products are steam (H O)

and carbonic acid gas (CO). If the supply is insufficient, carbon is burned to carbon monoxide (CO) with a loss of more than one-half of the heat units in the carbon. If the amount of oxygen is still less, the hydrogen will burn to steam and the carbon be deposited as soot, and in the last named case nearly one-half of the heat units of the gas will be lost.

To burn marsh gas in oxygen, the formula is:

or 1 cubic foot of marsh gas requires 2 cubic feet of oxygen to burn it, the results produced being 1 cubic foot of carbonic acid gas and 2 cubic feet of steam.

To burn ethane, the chemical formula is:

or 2 cubic feet of ethane require 7 cubic feet of oxygen to consume it. Since the source of oxygen commonly used in combustion is the air, of which but 21 per cent. by volume is oxygen and 79 per cent. is innate nitrogen, about 5 cubic feet of air is necessary to furnish 1 cubic foot of oxygen, or approximately 10 parts by volume of air are necessary to burn one of methane and 17.5 parts to burn one of ethane.

As an example in combustion, suppose it is desired to burn gas under boilers for making steam, the composition of the gas being 95 per cent paraffines, of which 25 per cent. is ethane and 70 per cent. methane. Suppose the stack temperature to be 400°F. and the temperature of the air 60°F. There would be available in 1 cubic foot of this gas:

Methane, 70 per cent. of 1,064=744.8 B. T. U.

Ethane, 25 per cent. of 1,863=465.6 B. T. U.

Total, 1,210.4 B. T. U.

To burn this gas would require of air:

70 per cent. of 10 cu. ft.=7 cu. ft.

25 per cent. of 17.5 cu. ft.=4.4 cu. ft.

Total, 11.4 cu. ft.

This would weigh 11.4×0.08071 (weight of 1 cu. ft. of air)=0.92 lb. To this must be added the weight of 1 cubic foot of the gas, or about 0.056, making 0.976 lb., or in addition to the work done in evaporating water in the boiler, each cubic foot of gas must raise 0.976 lb. of the gaseous products of combustion from 60°F. to 400°F. or through 340°F. Since the average specific heat of the products of combustion is about 0.24, this work will consume

$$0.976 \times 0.24 \times 340 = 79.6 \text{ B. T. U.}$$

Subtracting this amount from the heat units in a cubic foot of gas, we have $1,210.4 - 79.6 = 1,130$ B. T. U. still available for evaporating water. If the temperature of the feed water be 80°F., it will take $212 - 80 = 132$ B. T. U. to raise the temperature of

1 pound of water to the boiling point and, since 965.7 B. T. U. are necessary to convert 1 pound of water at 212°F. into steam of the same temperature, there will be necessary $965.7 + 132 = 1,097.7$ B. T. U. to convert 1 pound of water 80°F. into steam at 212°F., or the heat of 1 cubic foot of gas would be sufficient to evaporate $1,130.8 \div 1,097.7 = 1.03$ lb. of water from 80°F. to steam at 212°F. If the water was at 212°F. in the beginning, 1 cubic foot of gas would convert $1,130.8 \div 965.7 = 1.17$ lb.

Of course in practice considerable heat is lost by radiation and other causes, and the above mentioned conditions are not realized. However, in a number of instances one pound of water has been evaporated from a temperature of 212 degrees F. for each cubic foot of gas consumed. In December, 1900, at Tarpport, Pa., one cubic foot of gas with Klein burners evaporated 1.15 pounds of water under 80 horse power boilers.

USES OF NATURAL GAS.

Natural gas is most valuable as a domestic fuel. For heating dwellings it is the ideal fuel, being perfectly clean, without dust or soot, operated without labor, and with a thermostat connection for regulating the feed of gas by the temperature of the room it operates from week to week without attention and without any variation in the temperature of the apartment. For cooking it is unsurpassable. Besides being cleanly, it makes an extremely hot fire, is always at hand in a moment, and can be extinguished immediately when not needed. It permits the kitchen to be cool and clean, and with an oven thermometer, the baking temperature can be controlled to a single degree. In roasting and broiling a quick hot fire over the meat sears the outside and results in a sweeter, more juicy and heavier roast than is possible by any other means.

With reference to economy, natural gas at 25 cents per 1,000 cubic feet is as cheap for domestic heating and cooking as anthracite coal at \$5.50 per ton.

For manufacturing purposes it is probably most valuable in the manufacture of glass where its advantages are the reduction in labor in caring for furnaces; the improved quality of the product, due to the freedom from dust or soot to discolor it, and the longer life of the furnaces.

In the heating and melting of iron and steel, there is less wear on the furnaces and smaller furnaces can be used for the same output than is possible with coal. It is economical and advantageous to use natural gas in annealing furnaces, tool heating and welding furnaces, coke ovens, heating furnaces where blasts are used, and in all kinds of gas generating furnaces for heating and melting purposes.

In burning brick a better color can be obtained and a better output from the kiln, because the fire is regulated more quickly and easily than with coal. In fact, natural gas is useful for nearly all purposes where coal may be used, except in the reduction of iron ore, where its composition and gaseous nature preclude its use.

Burned under boilers, with the most economic burners, natural gas at 10 cents per 1,000 feet is about as

economic as coal at \$1.80 per ton, even though the coal be burned in the most economic manner with mechanical stokers.

AIR IN THE GAS MAINS.

It has become such a common cry among consumers of natural gas that the company from which they secure their supply is pumping air into their main, when the gas pressure is low, that some attention should be given the subject. And the most peculiar feature of this charge is that men of ordinary common sense and many with a rudimentary education in chemistry make these charges. If firms supplying natural gas were to pump air into their mains they would within 24 hours asphyxiate or blow up seven-eighths of their consumers and the consequent damage suits would ruin such a concern beyond all hope for recovery.

The simplest illustration to show that air cannot be forced through a gas main and made to light, even for an instant, is that of a new installation in a building. After the plumber or pipe fitter completes his work and the gas pressure is permitted to enter the pipes any attempts at lighting a burner will be frustrated. A pressure of air will be forced from the pipe sometimes strong enough to blow out a lighted match, but it will not burn. This is because the pipes are filled with air, nitrogen, oxygen, carbon dioxide and a certain amount of vapor. This will not burn, although it is necessary to aid combustion of gas and other inflammable substances. What results in a new pipe or where air fills a pipe would also result if a pressure of air was forced into a gas main to force the gas more quickly through the mains or to enrich the gas, or even to make a gas meter work more rapidly, as the charge is frequently made.

It has been maintained that the air pressure forced into the main assimilates with the gas and impoverishes it. If this is true, why did not the air in the gas pipe left there after the plumber or pipe fitter has completed his work assimilate with the gas? That it does not every one has observed who has ever tried to light a burner at the end of a newly laid pipe.

Many companies supplying natural gas maintain large pumping stations along their mains between the gas wells and the point of consumption. These are located in isolated places usually, and the public merely learns that such pumping stations are maintained, but few attempts are made to investigate the working of these pumps and why they are necessary. When natural gas was first made use of as a fuel it was wasted in every possible manner. Within a few years the pressure from nature's storage tanks began to diminish. There was still plenty of gas within the bowels of the earth, but it could not issue forth in sufficient volume to supply the demand. What more natural than to have pumps erected and pump it out of the earth to consumers? This is exactly what is being done.

Some cities have rivers passing through their confines, others have lakes nearby from which the water supply is secured. The water does not run into the homes of citizens. It is pumped into reservoirs or

stand pipes, or it is pumped direct in some places to the consumer. Do the pumps supply air instead of water? Not any more than the natural amount that mingles with the water in its passage. The pumping of natural gas is exactly the same proposition. The only air that is mixed with the gas is that which comes from the gas mixer below, and every one who has given the subject any attention knows that gas will ascend above the air because it is lighter, volume for volume.

If air was pumped into the gas mains the people would have a gust of air, then a small supply of gas between the strokes of the pump. It would require a continuous igniter at the place of burning to start a blaze every time the rush of air extinguished the blaze. The truth is, that some gas is so poor that it will not develop the proper heat. In most cases, however, the ignorance of the plumber and the consumer is to blame. They do not know how to regulate the air pressure through the mixer, believing that one mixer will do for all sorts of gas and pressure. A special mixer is necessary for each mixture of gas and it requires some little attention to regulate the amount. Gas burners have been noticed with large quantities of black carbon hanging about and the complaint is heard that the gas is poor is mixed with air so as to hurry the gas meter and enrich the corporation. The very carbon hanging about in profusion is evidence that the gas and air are not mixed properly for the burning and the fault lies with the consumer.

When the gas is burning and it forms carbon or lamp black commonly called soot in the grate or stove or on the bottoms of the cooking utensils the fault lies in the air mixer, in not supplying enough air to the burner. When the blaze or fire is light blue in color and does not make the required heat the fault lies in the air mixer supplying too much air to the burner. The heating qualities of the gas should be regulated by the air mixer. The blaze to give the proper heat and be free from soot, dust or smoke should be of a blue turning to a dark straw color.

GAS METERS.

These were adopted for general use by all the natural gas companies owing to the consumers' abuse of the abundant supply of gas at a fixed low monthly rate for stoves, grates, jets and street lights. While it is true the consumers were given an abundance of gas at very low rates and most of the gas companies furnished their consumers with natural gas at one-tenth the cost of coal, coke or wood (not to mention the inconvenience of burning coal, coke and wood, as compared with burning natural gas, which requires no attention whatever) and was supplied nine times cheaper than coal, coke and wood, with all of its inconvenience of irregular heat and the annoyance of kindling the fire and carrying out the ashes. Notwithstanding the fact the gas required no kindling, there is no ashes or dirt to carry out, and at so small a cost was the gas that no person was too poor to burn it. However, the consumers did not appreciate it. Any person visiting a city or town that was supplied

with natural gas up to and within the past eight years would see everywhere an abundance of gas lights—in the streets, houses, stores, hotels, livery stables, everywhere; and curiously enough they would leave their jets burning night and day. Street lights were blazing away at noon as well as at midnight. On hot summer days it was a common sight to see open gas jets burning in stores, shop windows, in houses with the doors and windows open, and in the dining rooms of hotels, with fans going to keep cool. The abuse and willful waste of gas was carried to such an extent that a great number of consumers during the coldest days in the winter would turn on all the gas their stoves, grates and jets would consume, which would soon overheat their house or store, and instead of turning down the gas they would open the doors and windows. A number of the consumers were asked why they did not turn down the gas instead of wasting it. Their reply was "to get even with the gas company."

"But how do you injure the company by making yourselves uncomfortable?"

"Oh, just waste the gas and make the company drill more wells."

While it is true the gas companies were compelled to drill a few more wells, but is it not a fact that thousands of new houses, pianos and fine furniture were ruined by overheating the houses in an endeavor to waste the company's gas? "The greed of a few has become the burden of the many," as all of the leading gas companies of the present day require their consumers to burn their gas by meters at a much higher rate and a great saving to the gas over the old way. Since the consumers burn their gas by meter they must pay for every 1,000 feet of gas used. This has taught the consumers the virtue of economy.

THE LARGEST GAS WELL EVER STRUCK IN THE WORLD.

History and Record of the Big Moses Gas Well.

Moses Spencer farm well No. 1, Indian creek, Tyler county W. Va.; Victor Oil and Gas Company, of Pittsburg, Pa., Wilson Brothers, Bolivar, N. Y., and George Earnest, of Sistersville, W. Va., owners of one-third each in the well.

Drilling began August 3, 1894. Conductor 14 feet, 10-inch casing 158 feet, 8¼-inch casing 1,050 feet, coal 740 to 744 feet, Cow run sand 800 to 820 feet, salt sand 1,200 to 1,290 feet, Keener sand 1,710 feet, Big Injun sand 1,750 feet. Gas was struck September 3, 1894. Well was shut down to move the boiler back. Two days were required to haul the pipe and connections from Sistersville and move the boiler back to a safe distance from the well. On September 5 drilling was again resumed, but the gas began to come so strong that the contractor, Mr. Wilson, told the drillers to pull the tools out and wait a few days to see if the gas would not blow out. The next morning, September 6, the well drilled itself in and the gas came so

strong that it raised the crown block on the top of the derrick, with a 38 foot 4½ stem a big hole set of jars and rope socket and a new 8¼ bit hanging on it. When the well first drilled itself in nothing could be seen of the derrick but a cloud of sand and dust. The roaring noise of the well was heard for a distance of 10 miles. The gas well was let blow in the open air until November 28, 1894. In the meantime the Victor Oil and Gas Company, Wilson Brothers and George Earnest sold the gas right to the Philadelphia Gas Company. The Philadelphia Gas Company awarded the contract to a man by the name of Matheny to shut the well in for \$1,000. The man Matheny ordered one 10-inch Y and two 10-inch gate valves that were billed at 4,000 pounds each and failed to appear at the well after taking the contract and ordering the material. A 10-inch gas line was laid to the well, which was the extreme end of the Philadelphia company's 16-inch gas line in West Virginia. After the material had arrived at the well and the man Matheny failed to appear the contractor, Mr. Wilson, sent George McCutchen and J. N. Curry to work and they poured eight barrels of cement in between the 8¼-inch and 10-inch casing, dug a hole eight feet square around the casing down to the rock 14 feet deep and filled the hole within eight feet of the top with concrete. They anchored two large oak timbers with four large bolts 12 feet long bolted through the timbers and filled the hole to the top with concrete. They put the Y and the two gate valves on to the 10-inch casing, fastened them to a set of clamps that they bolted down with the four bolts bolted to the two timbers that were anchored in the concrete, closed the gate valves and shut the well in on the 28th of November, 1894. The well blew through the 8¼-inch casing two months and 25 days and had an open pressure of 575 pounds and everything seemed in the best of order until the first of February, 1895, the pressure broke out through the 8¼ and 10-inch casing and came out through the ground, making a number of holes large enough to bury a team of horses, wagon and teamster, for a distance of a fourth of a mile around the well. The gate valves were opened February 7 and the well was allowed to blow in the open air until the first of April, when the gate valves were taken off and they started to put in 6¼-inch casing, with a packer on the bottom joint. They had to pull 25 joints in the hole with block and tackle after putting in 1,600 feet of the 6¼-inch casing the pressure of the gas unscrewed the casing near the top of the hole and dropped it.

While fishing for the casing lightning set the gas on fire June 14 and burned for one hour. The fire only burned part of the derrick and the end off of the walking beam. The pressure of the gas blew the fire out. The derrick was rebuilt and the men fished for the dropped casing, and on July 27 the gas again caught fire from lightning and burned the derrick and everything up. The gas burned 180 feet high until August 12, when they put the fire out with 8¼ and 10-inch tee bell socket with two joints of 8¼-inch casing 40 feet in length screwed in both ends of the tee.

As an illustration to the reader of the voluminous

pressure of the well an ordinary boiler steam gauge with $\frac{1}{4}$ -inch connections was held at the edge of the casing and registered 45 pounds. The empty cement barrels were thrown over the hole and blown up in the air from 100 to 300 feet. They looked like balloons before the barrels would break. It was impossible to hold any small thing over the hole, the pressure was so great that it would break, bend or blow away anything that would come in contact with the hole. The derrick was again rebuilt and the casing fished out down to 1,150 feet and another string of $6\frac{1}{4}$ -inch casing with a packer on lower joint was put in the hole and the well was shut in again on August 27, 1895, and had a pressure then of 450 pounds. The well was only one location north of the oil belt after Kyle No. 1 was struck and a great deal of drilling was done around the Big Moses gas well. The flowing wells soon took the gas pressure off of the sand and the Big Moses gas well soon weakened and all that is left of it today is the casing sticking up out of the ground. The Philadelphia Gas Company abandoned the well and moved the rig away. Drillers, George McCutchen and J. G. McElhattan; tool dressers, J. N. Curry and Jos. Smith; L. C. Wilson, contractor; record and history by L. C. Wilson and J. N. Curry.

Estimated production of well, 100,000,000 cubic feet of gas each 24 hours open flow through $8\frac{1}{4}$ -inch casing under 575 pounds open pressure.

LARGEST NATURAL GAS PUMP STATION IN THE WORLD.

This is at Hastings station on the West Virginia Short Line railroad one and a half miles southeast of Pine Grove, Wetzel county, W. Va., pump station of the Hope Natural Gas Company. Main building 50 by 224 feet, 22 feet in height this building is to cover four pumps of 1,200 horse power each the combined horse power of the four pumps is 4,800, the largest gas pumps in the world. Only two pumps will be used at the present time. The electrical building is 30 by 144 feet; it is used for the office, gas engine and electric plant. A 15 horse power gas engine is used in this building to furnish power for the electric generators. The third building is 30 by 60 feet and is used as the machine and pipe shops. A 30 horse power gas engine is used in this building for power. The fourth building is 20 by 30 feet and is used as the gas meter house. The large pumps are run by gas power and are used to pump the gas from the wells at a low pressure and raise it to a high pressure of 600 pounds. In this method the gas transports itself from 10 to 200 miles away from the wells to the consumers. The gas lines from the wells to the pump station are 8 and 10-inch screw joints. Three 12-inch screw joint lines are laid from the pump station over a hill that has a rise of 500 feet and about two miles from the pump station, then two of the 12-inch lines are coupled to one 18-inch line; then two lines, one 12-inch and one 18-inch, run to the Ohio river, where seven 10-inch screw

joint lines cross the Ohio river. Then one 12-inch and one 18-inch line with patent couplings run to Cleveland, Ohio; then one 12-inch line from Cleveland to Toledo, Ohio, where it connects with the line that supplies, Toledo, North Baltimore, Findlay, Lima and other towns in northwestern Ohio and a number of cities and towns in Indiana. This is not only the largest and finest natural gas pump station in the world but it is the most costly one. Glenn T. Braden, general manager; Dennie Hastings, superintendent.

NATURAL GAS CONSUMED IN THE UNITED STATES—1889-1901.

The consumption of natural gas has continued to increase, although the pressure, except in the new fields in West Virginia, has continued to decline, necessitating the expense of compression in order to market an increased production from the declining fields, which expense must continue to increase as the pressure declines and the distance to the source of supply increases.

During the year 1901 there was an unusual amount of consolidation of the older companies, and there were organized also a number of new companies with large capital, with a view chiefly of utilizing the great areas of high pressure gas territory in Lewis, Harrison, Marion and Wetzel counties of West Virginia by the construction of larger and longer pipe lines, so as to market this increased production in western Pennsylvania and Ohio. This involves the outlay of many millions of capital.

Natural gas is a luxury in the household which when once acquired is most difficult to dispense with. Consumers who have learned to know its value and convenience are very loath to part with it, and even under the penalty of additional compensation to the producer they prefer to retain it rather than go back to the grosser methods of heating by the use of wood or coal. In fact, outside of the areas supplied by natural gas the consumption of manufactured gas in the household has increased, although the substitutes offered are vastly inferior to natural gas in heating power and are at least double in cost per thousand feet.

These are the facts that have stimulated capitalists to invest the money necessary to develop the reservoirs of the natural gas fields that are still holding their original pressure and volume. These capitalists are building hundreds of miles of larger lines in order to supply the towns and cities formerly supplied by nearer but now exhausted fields, and also to supply other cities that have never known the blessings of natural gas.

As a source of heat, light and power, natural gas is unexcelled from the moment it reaches the surface of the earth at the mouth of the well until it reaches the farthest consumer at the end of the pipe line. No preparation is necessary for its combustion, and no residue is left. It needs only to be mixed with the proper amount of air and to have the combustion started by a naked flame or by an electric spark, when it will ap-

propriate to itself the proper amount of oxygen. As a source of heat it is unrivaled in the household, as it is also in the workshop in the generation of steam and in varied metallurgical operations; and as a source of light, even in its crude state, it will in many cases give a fair illumination, which is much improved by the use of an argand burner and chimney. However, it remained for the Welsbach mantle, now in such general use throughout the area supplied by natural gas, to produce from natural gas the most perfect and economical of lights.

As a source of power it stands at the head of the list for economy, both as to expense of installation and expense of operation. The natural gas engine is used most extensively in the petroleum fields for pumping the petroleum to the surface in the thousands of small producing wells. In very many instances the flow of natural gas from the upper strata, above the petroleum producing rock in the well is sufficient to supply a gas engine to pump a cluster of from six to thirty wells.

It has been supplying power for a very large number of factories and operations in the gas belt; and lately it has been extensively applied in creating the power by which the natural gas itself is compressed from a low pressure to a high pressure when the original pressure has failed and the pipes are insufficient to deliver the necessary quantity of gas at the well pressure. A number of these compressors work up very close to 1,000 horse power with an economy that enables eight to 10 cubic feet of natural gas to develop a horse power for an hour, a saving of from 40 to 50 per cent over high duty steam engines.

The state of West Virginia has for several years furnished an increasing quantity of natural gas to Pennsylvania and Ohio; yet there still remain under the domes and arches of its rugged hills great reservoirs of it that have only been sufficiently tested by the drill to prove their existence.

These reservoirs are being connected by additional lines of large pipe, and will shortly supply larger quantities to localities in these states that have exhausted their own nearer reservoirs, and now turn to West Virginia for a continuation of their supply.

The value of the natural gas sold in 1901 was greater than that of any previous year, though the quantity was greatly exceeded when it was first introduced extensively from about 1883 to the close of 1889. During this period of six years it was used in the most extravagant and reckless manner, and it was paid for at rates that were in many instances less than one-half the price of the equivalent of coal. Large quantities were allowed to escape and burn from the mouths of the hundreds of stand pipes from Saturday afternoon until Monday morning. It is highly probable that in these six years of reckless consumption four times the present production was consumed annually.

As the visible supply grew less the value became more apparent, and the appliances for consuming the gas became greatly improved after the introduction of the meter. The pipe line companies greatly improved their methods in securing better joints, in shutting off

wells that were not needed to keep up the pressure in the mains, and in manipulating the wells themselves. By the extension of lines into newer territory they have been enabled to market increasing quantities at increased prices since the years 1895 and 1896, in each of which years only \$13,000,000 worth of gas was sold.

The value of the natural gas consumed in the United States in 1901 was \$27,067,000, which, at 15 cents per 1,000 cubic feet, is equivalent to 180,450,000,000 cubic feet. If it were possible to store this gas in a cube, the density throughout being equal, its sides would be 5,530 feet in length, or 250 feet greater than the sides of a cubic mile. If 20,000 cubic feet of natural gas be taken to equal one ton of coal, 8,458,600 tons of coal, valued at \$3.20 per ton would be required to yield the sum of money for which the natural gas sold.

The value of the production for 1901 was greater than that of 1900 by \$3,368,826, or over 14 per cent. It also exceeded that of 1899 by \$6,992,627. It may also be interesting to note that the value of the 69,389,194 barrels of petroleum produced in the United States during 1901 was \$66,417,335, and that the value of the natural gas amounted to 40.7 per cent of the value of the petroleum for the same year, and that, further, when the fuel value of coal and wood displaced by natural gas in 1901—which amounts to \$32,445,156—is considered, this estimated value of natural gas is nearly 49 per cent of the entire value of the crude petroleum produced in the same year.

There were 11,297 wells producing natural gas at the close of 1901, of which number 74 were not turned into the gas mains, and 2,088 producing wells were drilled in the same year; there were 453 dry holes, or nonproducers, and 1,084 were abandoned. In 1900 there were 10,293 producing wells, of which number 24 were shut in; 1,759 wells were drilled in the same year; 359 were dry holes, and 991 were abandoned. There were very nearly 800 miles of pipe laid during 1901, the mains varying from two inches up to 20 inches. This brought the total up to 21,848 miles of natural gas mains of from two inches to 36 inches in diameter in use at the close of 1901.

COMPRESSION OF NATURAL GAS.

The following table for ascertaining the compression of natural gas under different gauge pressures is calculated on a pressure of four ounces to the square inch, the usual pressure at which it is marketed by many of the natural gas companies. The atmospheric pressure is assumed to be 14.4 pounds to the square inch, and the temperature at which the table is calculated is 60 degrees F. The quantity for any pressure greater than four ounces, or one-fourth of a pound up to a pressure of 136 pounds can be found by multiplying the reading of the meter by the figures opposite the pressure observed. The table contains the multipliers to be used in measuring the gas under pressures greater than four ounces to the square inch.

Multipliers to be used for natural gas which is measured at pressures greater than four ounces per square inch, atmospheric pressure being taken at 14.4 pounds per square inch.

Gage pressure	Multiplier or Density	Gage pressure	Multiplier or density	Gage pressure	Multiplier or density	Gage pressure	Multiplier or density	Gage pressure	Multiplier or density

Texas			765	8,000	20,000	20,000
Utah	20,000	15,050	7,875			
West Virginia	640,000	912,528	1,334,023	2,335,864	2,959,023	3,954,472
Other states	50,000	20,000	20,000			
Total	13,002,512	13,826,422	15,296,813	20,074,873	23,698,674	27,067,500

The above table is conspicuous for the value of the natural gas sold during 1901, the increase being \$3,368,826, as compared with the value in 1900. This increase is due principally to increased production, the increase in the general price being very slight, and is not due so much to the output from the recently developed fields in southwestern Pennsylvania and central West Virginia as to the enlarging of lines and the installation of gas compressors. It is this that has kept up the quantity marketed in Indiana to about the average of former years, although the rock pressure has very largely decreased. Kansas, however, has increased the value of natural gas marketed both by developing new territory and by exploiting more thoroughly that which was already known. The value of the gas produced in each state is credited to it, although

Pennsylvania furnished natural gas to Ohio, New York and West Virginia; West Virginia furnished gas to Pennsylvania and Ohio; Indiana furnished gas to Ohio and Illinois, and Kentucky furnished gas to Ohio and West Virginia. These complications require a careful tabulation of the values, so that each state shall receive its proper credit.

Notwithstanding all the care exercised in the collection and distribution of the statistics, there is a very considerable amount of natural gas consumed of which no account is rendered, as it is used universally in the oil fields for pumping wells, both in the gas engine and under the boilers, for driving gas compressors, for supplying farm houses, and many operations in the field. There are instances, which reach from northern central New York to eastern Illinois, where single

wells supply one or two houses, so that if it were possible to secure a complete return of the value of all the fuel displaced, the figures presented would be increased by at least 10 per cent.

It is estimated that fully 1,000,000 domestic fires are supplied by natural gas, and that 4,000,000 people are furnished with this ideal fuel and light to gladden their homes.

AMOUNT AND VALUE OF NATURAL GAS CONSUMED.

The following table gives the amount of natural gas consumed in each state as reported by 1,545 companies and individuals, and the value of the coal and wood or other fuel displaced by the gas.

There was a considerable increase in the value of the natural gas consumed in Pennsylvania, a slight increase in Ohio, and a large increase in West Virginia and Kansas, as shown in the second column. The third column shows the estimated value of the coal, wood and other fuel displaced, amounting to \$32,445,156, which if divided by the 8,458,600 tons of coal, would give an average value of \$3.84 per ton instead of \$3.20 per ton, the estimated value given on a previous page. This discrepancy is due to the low price received for natural gas in the state of Indiana, which was only about 60 per cent of the value of the fuel displaced. Kansas also shows a much less value for the natural gas than for the fuel displaced.

Value of natural gas consumed in the United States in 1901, by states, and the value of coal or wood displaced by same, as reported by 1,545 persons, firms and corporations.

STATE.	Companies or individuals reporting	Amount received for sale of gas or value of gas consumed	Estimated value of coal, wood, or other fuel displaced by gas
Pennsylvania	296	\$11,785,996	\$11,892,070
Indiana	656	6,276,119	10,669,402
Ohio	305	4,119,059	4,448,584
West Virginia	44	2,244,758	2,415,360
New York	114	1,694,925	1,655,942
Kansas	48	659,173	995,350
Kentucky	26	187,660	206,426
California	12	67,602	122,064
Texas	2	20,000	20,000
South Dakota	3	7,255	15,005
Illinois	22	1,825	1,825
Colorado	2	1,800	1,800
Missouri	15	1,328	1,328
Total	1,545	\$27,067,500	\$32,445,156

In the following table is given the value of natural gas consumed in the United States in 1889, 1900, and 1901, by states.

Value of natural gas consumed in the United States in 1899, 1900 and 1901, by states.

STATE.	1889	1900	1901
Pennsylvania	\$7,926,970	\$9,812,615	\$11,785,996
Indiana	5,833,370	6,412,307	6,276,119
Ohio	3,207,286	3,823,209	4,119,059
West Virginia	1,310,675	1,530,378	2,244,758
New York	1,236,007	1,456,286	1,694,925
Kansas	332,592	356,900	659,173
Kentucky	125,745	194,032	187,660
California	86,891	79,083	67,602
Texas	8,000	20,000	20,000
South Dakota	3,500	9,817	7,255
Illinois	2,067	1,700	1,825
Colorado	1,480	1,800	1,800
Missouri	290	547	1,328
Total	\$20,074,873	\$23,698,674	\$27,067,500

By comparing this table with the first one, giving the approximate value of the natural gas produced in the several states, it will be noticed that Pennsylvania produced nearly \$1,000,000 worth more than was consumed within the state. Indiana, as has been stated, supplied large quantities to Chicago and some to Ohio; West Virginia supplied large quantities of natural gas to Pennsylvania and Ohio, and Kentucky furnished gas to Ohio and West Virginia. This accounts for the rearrangement of the figures whose totals are the same.

USES OF NATURAL GAS.

In the following table are specified the uses to which the natural gas produced in the United States in 1901 was put.

Uses to which natural gas produced in the United States in 1901 was put, as reported by 1,545 persons, firms and corporations.

STATE	Companies or individuals reporting	Domestic fires supplied	Establishments supplied				Total
			Iron mills	Steel works	Glass works	Other establishments	
Pennsylvania	296	326,912	82	80	1,581	1,743
Indiana	656	153,869	11	111	2,448	2,570
Ohio	305	49,709	5	1	13	930	949
W. Virginia	44	55,808	2	13	251	266
New York	114	95,161	2	96	98
Kansas	48	10,227	72	72
Kentucky	26	16,420	1	19	20
California	12	1,438	7	7
Texas	2	180	9	9
S. Dakota	3	93	8	8
Illinois	22	73
Colorado	2
Missouri	15	31
Total	1,545	709,921	100	2	219	5,421	5,742

RECORD OF WELLS AND PIPE LINES BY STATES.

In the following table will be found the number of companies and individuals reporting, the producing wells at the close of 1900 and 1901, the producing wells drilled and the nonproducing or dry holes drilled in 1901, together with the total length of pipe in use at the close of 1901, by states.

large quantities to New York, Ohio, and a smaller amount to West Virginia. On the other hand it received large quantities from West Virginia, but not enough to make good the quantity supplied by it to other states. Pennsylvania produced almost as much natural gas in value as Ohio, Indiana and West Virginia combined, or about 45 per cent of the whole. There were 4,197 producing wells and 660 drilling wells in the state at the close of 1901; and there were

Record of wells and amount of pipe line, as reported by 1,545 persons, firms and corporations in 1901, by states.

STATE	Compa- nies or individu- als re- porting	Wells					Total pipe laid to Dec. 31, 1901	
		Produc- ing Dec. 31, 1900	Produc- ing, drill- ed in 1901	Abandoned in 1901	Produc- ing, Dec. 31, 1901	Non pro- ducing holes drilled in 1901	Feet	Miles
Pennsylvania	296	3,776	660	239	4,197	143	47,913,618	9,074.55

There were 1,004 more producing wells at the close of 1901 than at the close of 1900, also 50 more wells held in reserve. There were 329 more wells drilled, 93 more wells abandoned, and 84 more dry holes developed in 1901 than in 1900.

The increase in new mains or pipe line laid in 1901 over the pipe line in use at the close of 1900 was 799.79 miles. The greater portion of this increase was in Pennsylvania, West Virginia and Kansas. In Indiana 514 miles were taken up and used elsewhere.

RECORD BY STATES OF THE USE OF NATURAL GAS.

PENNSYLVANIA.

The deep sand territory in southwestern Pennsylvania and the use of gas compressors throughout the different fields brought about an increase in the production of natural gas in this state in 1901 over that of 1900 amounting to \$2,472,749, as compared with an increase of \$1,878,202 in 1900 over the production of 1899. The price advanced slightly over that of the previous year, but the increase is due almost entirely to the increased quantity marketed. Pennsylvania produced \$12,688,161 worth of natural gas in 1901, and consumed \$11,785,996 worth, producing \$902,165 worth more than was consumed. This state supplied

also 239 wells abandoned and 143 dry holes completed in 1901 as compared with 3,776 producing wells, 210 abandoned wells and 142 dry holes for the year 1900.

INDIANA.

The value of the natural gas produced in Indiana during 1901 was \$6,954,566, a decrease of \$299,973. This is a remarkable record when the decrease in pressure and the exhaustion over the entire field amounted to an average of about 80 pounds at the close of 1901, leaving but 25 per cent of the original quantity packed in the Trenton limestone over an area of about 2,850 square miles.

The decrease of pressure has caused the salt water to invade the gas strata over large areas. The practice of allowing large quantities of gas to escape from the upper portion of the strata so that the petroleum can be secured from the lower portion has been the source of considerable waste, which would have been much greater had not the legislature of the state passed stringent laws prohibiting it.

It is remarkable that with the declining pressure there is not a much greater decline in the quantity marketed, and that many of the wells connected with gas pumping plants continue to produce when the pressure is reduced to a few pounds, or even below that of the atmosphere.

It is due to the gas compressors that the quantity is

maintained. Many of these are arranged to draw the gas into large pumps at low pressure and to discharge it into other smaller pumps, where additional pressure is put upon it. At this rate a few years more, possibly two or three, will see a very large reduction in the production, probably 60 or 80 per cent, and very many individuals and manufacturers that have known the benefits of this most precious fuel will be forced with regret to resort to other methods of heat and light. No other state has parted with this precious fuel for so little compensation. The statistics show that the money received from the sale of natural gas was not over 60 per cent of the value of other fuel, and that the value of the fuel consumed was nearly 81 per cent of the value of that consumed in Pennsylvania. The quantity, therefore, of natural gas consumed in Indiana for a number of years past must be fully as large as that consumed in Pennsylvania, although only about 55 per cent of the value received in Pennsylvania was received in Indiana.

For several years Indiana has furnished a large amount of natural gas to Chicago, approximately 20,000,000 cubic feet per day.

There were 4,572 producing wells in Indiana at the close of 1901, as compared with 4,287 at the close of 1900. There were 985 gas wells drilled, as well as 208 dry holes completed during 1901. There were 656 individuals and companies that produced gas in Indiana, more than double the number in Ohio and Pennsylvania; and there were 597 miles less pipe in Indiana at the close of 1901 than at the close of 1900.

To show the great reduction in pressure in one of the best territories of the state, Grant county, the following report of tests, made by one of the leading producers of the state of Indiana, is given.

The tests were made in August, 1901, so as to make provision for the winter. The last well drilled in November, 1900, six miles southeast of Gas City, as the crow flies, within a mile of being half way between Gas City and Hartford City, which is six miles due east of the well. Here, taking the mid distance as a center, within a radius of four miles is the best territory in the state of Indiana. This well showed in November, 1900, when drilled, a pressure (with correct gauge) of 182 pounds, and on August 28, 1901, it tested 142 pounds, having lost in pressure 40 pounds in 10 months. The well when drilled was dry. It was drilled 28½ feet in Trenton rock and showed a volume by Pitot tube of 1,851,880 cubic feet. August 28, 1901, the well was wet and a correct test was not obtained, but from experience a flow of 1,200,000 cubic feet was estimated.

Another well three-fourths of a mile west and a trifle south of the one described, drilled on July 30, 1899, has the following record:

Date	Rock pressure	Volume in 24 hours
	Pounds	Cubic feet
July 30, 1889.....	215	2,623,212
August 8, 1900.....	190	2,208,500
August 28, 1901.....	145	1,661,100

The last named is our best well, being in a territory that is not drawn from heavily, and it is a good test of the best territory in the state. The pressure of this well is now (February 6, 1902) probably 120 pounds, and will diminish rapidly next fall, as the territory has not the pressure to resist the water.

WEST VIRGINIA.

This state is the hope for the future for the continued supply of gas fuel to Pennsylvania and Ohio. Its rock-bound reservoirs lie deeply buried in the folds of strata over many square miles that have recently been proved, by wells of remarkable volume and pressure, to contain great reservoirs of this most precious fuel.

During the last year Lewis, Harrison, Marion Monongalia and Wetzel counties have produced some remarkable wells from the Gordon sand, the Stray sand, the Fifth and the Elizabeth or Bayard sands, which are from 2,700 to 3,200 feet in depth, and have a volume of from 10,000,000 to 15,000,000 cubic feet in 24 hours and a rock pressure of from 1,000 to 1,300 pounds per square inch. The other counties that have more or less natural gas are Tyler, Ritchie, Doddridge, Marshall, Wood, Wirt, Roane, Calhoun, Boone, Mingo, Kanawha, Logan and Gilmer.

A number of the largest natural gas companies in western Pennsylvania get more or less of their supply from West Virginia and as there are several of them extending their lines farther south, as well as enlarging them, the indications are that the years to come will see very large quantities of natural gas supplied by this state to Pennsylvania and Ohio. There is more natural gas consumed in this state in the development of the petroleum than in any other. For this gas it was impossible to get full or even partial returns.

The value of the natural gas produced in West Virginia from 1889 to 1901 is shown in the following table:

Value of natural gas produced in West Virginia from 1889 to 1901, inclusive.

Year	Value	Year	Value
1889.....	\$12,000	1896.....	\$640,000
1890.....	5,400	1897.....	912,528
1891.....	35,000	1898.....	1,334,023
1892.....	500	1899.....	2,335,864
1893.....	123,000	1900.....	2,959,032
1894.....	395,000	1901.....	3,954,472
1895.....	100,000		

OHIO.

This state received very little gas from the original Trenton rock fields during the year 1901, the pressure having been reduced over a large area of about 500 square miles to practically nothing, where it originally

registered 425 pounds. The failing supply from the original field was partially made up from the Sugar Grove field, 150 miles to the southwest. A number of additional towns were supplied from this field during the last two years, and this has caused a great reduction in its pressure, which has declined from 750 pounds to the square inch until the average pressure was less than 160 pounds at the close of 1901, although there was an average pressure of 350 pounds at the close of 1900. This shows the immense drain on this pool, which must have supplied over \$1,500,000 of the total of \$2,147,215 produced during the year 1901. There was a new pool of natural gas developed in Morgan township, Knox county, from the same horizon as that found in the Sugar Grove field. There are a number of natural gas pools in Guernsey, Belmont, Noble and Perry counties, which get their gas from the Berea sand, and supply the towns of Cambridge, Corning, New Lexington and numerous other small places.

In Ashtabula county a number of small gas wells have been secured from the corniferous limestone, which have lately been piped to Ashtabula and Jefferson. West Virginia, however continued to furnish a large quantity of natural gas to Ohio, supplying Marietta, Belpre, Newport, New Matamoras, Sardis, Powhatan, Dennison, Uhrichsville, Canal Dover, Canton, Massillon, Akron, and in part Steubenville, East Liverpool, Toronto, Bridgeport, Mingo and Wellsville. The indications are that a much larger quantity will be delivered to Ohio from West Virginia in the future. Indiana and Pennsylvania also furnished a decreasing amount during 1901.

NEW YORK.

Natural gas is found over a very large area in the western portion of New York in a number of different sands and limestones, including the Devonian black slate, the Bradford sand, and the underlying Kane and Elk sands, the corniferous limestone, the Medina sandstone, the Trenton limestone and the upper calciferous. The greater portion of the gas comes from the neighborhood of Wellsville and Ricebrook, in Allegheny county, from the sands found in the upper Devonian. There are a vast number of wells scattered along the south shore of Lake Ontario that furnish from one to four families with gas. The greater portion of the natural gas consumed in the state comes from Pennsylvania, the largest consumption being in the city of Buffalo. The town of Fredonia used natural gas as far back as 1821 from natural flows and shallow wells, and has the honor of first making use of it as a source of light and heat. The counties producing natural gas are Allegheny, Cattaraugus, Erie, Livingstone, Niagara, Onondaga, Ontario, Oswego, Seneca and Steuben. The value of the natural gas produced in 1901 was \$293,232, being a considerable decrease as compared with the year previous, while the value of the amount consumed was \$1,694,925, showing that only about 18 per cent is produced in the state. The number of wells producing at the close of 1901 was 580, as compared with 535 at the close of

1900. There were 1,096 miles of natural gas mains from two inches and over in use at the close of 1901.

KANSAS.

No other state increased as largely in the production of natural gas as Kansas during 1901, and southeastern Kansas seems awakening to the fact that it has buried under its fertile, gently undulating surface reservoirs of the most valuable fuel, and is capable of furnishing large quantities to private consumers and manufacturers at prices that will attract outside capital as well as enable the native products to be profitably worked. Already the towns of Neodesha, Coffeyville, Cherryvale, Iola, Independence, Chanute, Paola, Parsons and Osawatomie and numerous villages have a regular supply.

KENTUCKY.

The principal gas area thus far developed is in eastern Kentucky, in Martin county. There are some fair gas wells in western Floyd county. Ashland, Catterburg and Louisa are supplied from this region. In Meade county there is still found some shale gas, which is conveyed to Louisville. During the fall of 1901 a large gas well was developed near the Beaver oil pool in Wayne county. There is also a fair gas well over the state line in Fentress county, Tenn. There is a small supply of gas obtained for domestic use in Breckinridge county, in the vicinity of Cloversfoot, also in Hardin and Jefferson counties.

There was a slightly decreased amount of natural gas sold in this state in 1901 as compared with the previous year. A considerable quantity was consumed in West Virginia and Ohio, which was supplied by Kentucky. The value of the natural gas produced during 1901 was \$270,871, and of this amount \$187,660 was marketed in the state. The value of other fuel displaced for the same year was \$206,426. There were 109 producing wells at the close of 1901, as compared with 101 producing at the close of 1900.

CALIFORNIA.

Although there are numerous small gas wells in this state, by far the greatest production comes from wells at the city of Stockton, in the great San Joaquin valley. It is also found near the city of Sacramento, in the Sacramento valley, in Tulare county, near Tulare lake, and in Tehama county. To a small extent it is produced by a few wells at the city of Los Angeles. In the two former instances it is associated with artesian water flows. At Stockton the wells are 2,000 feet deep, yet none of them has passed through the alluvial deposit into the solid stratified measures. Under the pressure of 2,000 feet water will absorb a large amount of gas, which is gradually liberated as it ascends in the well and the pressure diminishes. Ten of these wells at Stockton yield about 30,000 cubic feet of natural gas a day. It is questionable whether the flow of most of the water from artesian wells is not due to gas pressure rather than to artesian head in

a porous stratum, to which it is generally credited.

The following is taken from the Pacific Reporter, contributed by Mr. A. S. Cooper, formerly state geologist of California:

There are a number of wells yielding natural gas in California. In most of these wells there is no free gas. This is clearly shown by the fact that when the wells cease to flow water the flow of gas ceases.

The absorbing power of different liquids for different gases varies greatly. It is facilitated by low temperature and high pressure. Under one atmosphere 100 volume of water will absorb about four volumes of natural gas. When the water enters the bottom of the casing of a well the gas is in solution with the water; as the water ascends the well the pressure is decreased and the gas is liberated.

Crude California oil when exposed to the atmosphere gradually evaporates. Light hydrocarbons are constantly splitting off and the residue grows richer in carbon until finally the result is hydrocarbon rich in carbon and sulphur. The oil becomes thick like

molasses, then viscous, plastic, hard and finally brown and friable.

The accompanying table shows that the natural gas in the different fields varies as to the percentage of the different gases present, although it usually contains the same gases in uncertain quantities. Analyses also show that the flow from the same well is subject to daily variations in composition.

Hydrogen, carbonic acid, carbonic oxide, sulphureted hydrogen and oxygen have been introduced into the natural gas from extraneous sources by circulating water, or by chemical actions other than that necessary for the production of natural gas; therefore the variability in the composition of natural gas.

The presence of gas is the cause of spouting wells. If a well is sunk into the top of a porous stratum containing free gas the gas will escape, but if the well penetrates a porous stratum where the gas is in solution with the oil under pressure a mixture of gas and oil will be thrown out of the well. This will continue until the gas pressure is exhausted and the well will have to be pumped.

Composition of natural gases of California.

Constituent.	1	2	3	4	5	6	7	8	9	10
Hydrog. sulphide.....						Trace.	Trace.

1. From Minor's rancho, Contra Costa county. Came through the sandstone in a small spring of water. From a hole five feet in diameter and six feet deep.

2. From a well 1,300 feet deep, from which water was flowing copiously, on Minor's rancho, Contra Costa county.

3. Corner La Fayette and Lincoln streets, Stockton.

4. Shipyard well, Stockton.

5. North and Hunter streets, Stockton.

6. Jackson well, Hot Mineral bath, Stockton.

7. Greenwood well, American and Miner avenues, Stockton.

8. Orland, Tehama county.

9. Marsh gas from marsh ground.

10. Blower in coal mine.

A spouting well is similar in action to a bottle of champagne. When the bottle is first opened a mixture of gas and wine is driven from the bottle; when the

pressure of gas is decreased the wine has to be poured from the bottle.

As will be seen by the analyses of the natural gases of California, they are largely made up of methane debased with nitrogen, a nonluminant. It is a good fuel gas, but possesses no great value as an illuminant in its natural state. It can be converted into an excellent illuminant gas by passing it through incandescent coal, decomposing it, carbon being deposited on the coal and hydrogen being released. The hydrogen is then mingled with the vapors of crude oil; this mixture is passed through heated checker brick, forming a permanent gas. Its candle power is regulated by the quantity of crude oil vapor introduced.

Owing to the high heating power and small luminosity of natural gas, the use of a mantle of rare earths or metals greatly increases the candle power of its light.

The value of the natural gas produced in California from 1889 to 1901 is shown in the following table:

Value of natural gas produced in California from 1889 to 1901, inclusive.

Year	Value	Year	Value
1889.....	\$12,680	1896.....	\$55,628
1890.....	33,000	1897.....	50,000
1891.....	30,000	1898.....	65,337
1892.....	55,000	1899.....	86,891
1893.....	62,000	1900.....	79,083
1894.....	60,350	1901.....	67,602
1895.....	55,000		

There were 27 wells producing more or less gas and water at the close of 1901, as compared with 23 at the close of 1900. During 1901 four wells were drilled and nearly 31 miles of main pipe line were in use.

UTAH.

No natural gas has been produced in this state for two years. The wells, 12 miles north of Salt Lake City, have become choked up by the decomposition of the slate forming the walls of the gas wells.

The value of the natural gas produced in Utah from 1893 to 1901 has been as follows:

Value of natural gas produced in Utah from 1893 to 1901, inclusive.

Year	Value	Year	Value
1893.....	\$500	1898.....	\$7,875
1894.....	500	1899.....	
1895.....	20,000	1900.....	
1896.....	20,000	1901.....	
1897.....	15,050		

TEXAS.

Some wonderful pockets of high pressure gas have been developed in the Beaumont field, which blew up boulders and sand mixed with water and traces of petroleum. The gas strata were usually developed about 200 feet above the oil pay. When the pressure was confined it developed 250 pounds to the square inch, and after the gas originally in the rock had been exhausted the gas under pressure was used to assist the petroleum wells to flow by having the gas turned into the petroleum wells. The gas under pressure spread itself over the surface of the petroleum in the porous limestone and thereby started the wells to flow.

Toward the close of the year there was a company organized to supply Beaumont, but the declining pressure in the field caused the undertaking to be abandoned.

All of the large producing wells when flowing gave out more or less natural gas, which is highly charged with sulphuretted hydrogen, and is very deadly in effect when taken into the lungs in large quantities.

During the year a very large gas well was developed on Bryans mound, near the shore of the gulf, and near the Brazos river, in Brazoria county, which gave a persistent supply of 2,000,000 to 3,000,000 cubic feet per day.

Numerous artesian wells along the gulf coast give off considerable natural gas with the artesian water, whose flow is no doubt caused by the expansion of the gas rather than by a hydraulic head.

Corsicana produces some natural gas which is used in several instances to fire boilers and drive gas engines in the petroleum field, although only in a few cases is it made use of as a domestic fuel.

CANADA.

The Welland county field in Ontario, near Buffalo, continues to furnish gas to Buffalo, N. Y. The Essex county field formerly furnished a large amount of natural gas to Detroit, Mich. The drain on both of these fields has been felt, as there has been a very considerable reduction in the rock pressure. There is some natural gas found in the oil region between Petrolia and Sarnia, which is mostly used in gas engines that are pumping oil wells. The value of the production for 1901 shows a decrease of over \$100,000 as compared with that of 1900. These figures are supplied by the Mineral Statistics and Mining Bureau, Ottawa, Canada.

The value of the natural gas produced in Canada from 1892 to 1901 is shown in the following table:

Value of natural gas produced in Canada from 1892 to 1901, inclusive.

Year	Value	Year	Value
1892.....	\$150,000	1897.....	\$325,873
1893.....	366,233	1898.....	364,699
1894.....	313,754	1899.....	387,271
1895.....	423,032	1900.....	417,094
1896.....	364,156	1901.....	312,359

The value of natural gas piped from Canada to the United States and consumed in the cities of Detroit and Buffalo during the year 1901 amounted to \$361,719, as compared with \$672,362 in the year 1900, a decrease of \$310,643. The supply was shut off from Detroit, Mich., the latter part of August, 1901, by order of the Canadian government, which accounts in part for the large falling off in the amount exported into the United States during 1901.

The following table furnished by the Bureau of Mines, Toronto, shows the number of producing wells, miles of pipe, workmen employed, value of the gas

product at the point of production and the wages for labor. The values are generally placed at the points of consumption:

Statistics of natural gas production in the Province of Ontario, Canada.

Year	Producing wells	Miles of gas pipe	Workmen employed	Value of gas product	Wages for labor
1893.....	107	117	59	\$238,200	\$24,592
1894.....	110	183½	99	204,179	53,130
1895.....	123	248	92	282,986	73,328
1896.....	141	287¼	87	276,710	47,527
1897.....	140	297	84	308,448	42,338
1898.....	142	315¼	85	301,599	31,457
1899.....	150	341½	95	440,904	40,149
1900.....	175	306	161	392,823	43,636
1901.....	158	368	129	342,183	59,140

THE LEADING NATURAL GAS COMPANIES OPERATING IN THE UNITED STATES.

Pennsylvania Gas Company, organized 1883. C. N. Payne, president; J. P. Jefferson, vice president; W. H. Filler, secretary and treasurer; J. W. Kitchen, assistant treasurer. Two hundred and ten gas wells are operated by this company in the gas fields of Roystone, Kane and Elk county, Pa. The company supply the cities and towns of Erie, Corry, Warren, Glade Run, Stoneham, Clarendon, Tiona and Sheffield, Pa., and Jamestown, N. Y., with natural gas. The gas is supplied to these cities and towns through 8 and 12-inch iron pipes. (Commonly known as gas mains or gas trunk pipe lines.)

Philadelphia Company (Successors to the Philadelphia Natural Gas Company.) Joseph F. Guffey, general manager, Pittsburg, Pa. Philadelphia Company supply Pittsburg and Allegheny, Pa., with natural gas from the gas fields in Armstrong, Westmoreland, Allegheny, Washington and Green counties, Pa., and Wetzel, Tyler and Lewis counties, West Virginia. Size of main lines 6, 8, 10, 12, 16, 18, 20, 30 and 32 inches in diameter.

The Manufacturers Light and Heat Company, general headquarters, Pittsburg, Pa. H. B. Beatty, president; O. H. Strong, vice president; L. A. Meyran, second vice president; E. H. Myers, treasurer; H. E. Seybert, secretary and assistant treasurer; L. B. Beatty, auditor and assistant secretary. Directors, H. B. Beatty, O. H. Strong, L. A. Meyran, E. H. Myers, Fred. N. Chambers, Geo. W. Crawford, H. M. Nichols, E. V. Seldon, H. J. Beers, David Isenian, James Kuntz, Jr. The Manufacturers Light and Heat and principal affiliated companies: Tri-State Gas Company, The Wheeling Natural Gas Company, Venture Oil Company, The Ohio Valley Gas Company, Sewickly Illuminating Gas Company, New Cumberland Water and Gas Company, The Wetzel Gas Company. Producers and suppliers of natural gas for fuel and all purposes. The supply of gas is produced from the

gas fields of Butler, Beaver, Lawrence, Allegheny Washington and Green counties, Pa., and Monongalia, Marshall, Wetzel and Tyler counties, West Virginia. Acreage under lease 448,979; operating 2,447 miles of gas mains; size of mains 6, 8, 10, 12, 14, 16, 18, and 20 inches in diameter; 890 wells of which 241 produce oil; with principal distributing plants in the following cities and towns: Pittsburg, Allegheny, Washington, McDonald, Waynesburg, Canonsburg, Carnegie, Corapolis, Bellevue, Avalon, Ben Avon, Glenfield, Emsworth, Sewickley, Rochester, Beaver Falls, New Brighton, Beaver, Ellwood City, New Castle, Monaca, Clairton, McKees Rocks, and Claysville, Pa., East Liverpool, Wellsville, Toronto, Empire, Steubenville, Brilliant, Martins Ferry, Bridgeport, Bellaire, Knoxville, Clarington and Sardis, Ohio, Chester, New Cumberland, Wellsburg, Wheeling, Benwood, McMechen, Moundsville, Cameron and New Martinsville, W. Va.

Taylorstown Natural Gas Company, W. J. Young, president; James I. Buchannan, secretary and treasurer. This company supplies Taylorstown, Taylorstown Station (Crothers) and Claysville, Pa., with natural gas.

Carnegie Gas Company (affiliated with the United States Steel Company); D. M. Clemson, president; N. Johnson, vice president and superintendent; general headquarters, Pittsburg, Pa. This company produces and supplies natural gas to the Homestead Steel Works, Duquesne and Edgar Thompson Steel Works. This company operates 160 wells in the gas fields of Armstrong, Indiana, Washington and Green counties, Pa., and Wetzel, Tyler, Marion and Doddridge counties, W. Va. The company operates 271 miles of main lines and 351 miles of branch lines; the lines extend 40 miles north and 100 miles south of the mills; size of lines 8, 10, 12, 16 and 20 inches in diameter. The mills consume 60,000,000 cubic feet of natural gas per day.

Mountain State Gas Company; principal office, Oil City, Pa.; incorporated under the laws of the State of West Virginia September 6th, 1892; authorized capital \$500,000; par value shares \$100; amount subscribed \$50,000; amount paid in \$10,000; incorporators, E. Strong, Oil City, Pa.; N. F. Clark, Oil City, Pa.; H. W. McSweeney, Oil City, Pa.; C. N. Payne, Titusville, Pa.; Joseph Seep, Titusville, Pa.

Mountain State Gas Company (Sistersville, W. Va., division), E. Strong, president; H. W. McSweeney, secretary; J. B. Crawford, treasurer; R. W. Brink, local manager. Supplies Sistersville, Trail run, Miller's run, Cochranville, New Matamoras, Friendly and Grand View with natural gas.

Hope Natural Gas Company; incorporated under the laws of West Virginia September 17, 1898. The Hope, People's Reserve and Connecting natural gas companies are operated jointly under the management of the Hope Natural Gas Company. Principal office, Oil City, Pa. Incorporators, E. Strong, Oil City, Pa.; H. W. McSweeney, Oil City, Pa.; Jno. Tomkin, Oil

City, Pa.; C. N. Payne, Titusville, Pa.; Robert S. Hampton, Titusville, Pa. Glen T. Braden, president and general manager. Headquarters, Pittsburg, Pa. The Hope, People's Reserve and Connecting natural gas companies are the gas producing companies. The People's company operate in the gas fields of Armstrong, Indiana, and Green county, Pa. The Hope, Reserve and Connecting gas companies operate in the gas fields of Monongalia, Marion, Wetzel, Tyler, Doddridge, Harrison, Lewis, Ritchie and Calhoun counties, W. Va. The Hope, Reserve and Connecting gas companies own and operate the largest natural gas pump station in the world. It is known as Hastings station, located near Pine Grove, on the Short Line railroad (B. & O. R. R.) in Wetzel county, W. Va. The field supply pipe lines are 8, 10, 12, 16, 18 and 20 inches in diameter. The main fields that supply those companies with gas are Sand Fork, Freeman's creek, Fink and Riverside, Lewis county, W. Va., Wilsonburg and Big Isaac, Harrison county, W. Va.; Farnington, Marson county, W. Va.; Willow Fork, Tyler county, W. Va.; Pine Grove and numerous other gas fields in Wetzel county, W. Va. All the supply lines connect with the pump station at Hastings, which is the central point of gas supply. The main supply line, known as the Pittsburg line, is two 10-inch lines from Hastings station, W. Va., to Glover, W. Va., distance 16 miles, one 16-inch line; from Glover to Brave, Pa., distance 17 miles; one 20-in. line from Brave to Pittsburg. This company operates and supplies its customers in Pennsylvania under the name of the People's Natural Gas Company. The main supply line, known as the Cleveland line, one 10-inch and one 18-inch line from Hastings station to Ohio river, near Powhatan, Ohio; from the Ohio river to Cleveland this company is known as the East Ohio Gas Company. The officers of the East Ohio Gas Company are E. Strong, president; C. N. Payne, vice president; H. V. Shulters, secretary and treasurer; M. B. Daly, general manager; W. W. Richardson, superintendent; general headquarters, Cleveland, Ohio. The East Ohio Gas Company supplies Uhrichville, Dennison, New Philadelphia, Canal Dover, Massillon, Canton, Akron, and Cleveland with natural gas.

The main supply line, known as the Barnsdall connecting gas line, one 18-inch line from Hastings station to Gaston station, W. Va., distance 33 miles; two 10-inch lines from Gaston station to Dry Fork station, W. Va., distance 10 miles; one 12-inch line from Dry Fork station to Schultz station, W. Va., distance 36 miles; three 10-inch lines from Schultz station to Sugar Grove station, Ohio. The station at Sugar Grove is an intersection meter station. From this station the Northwestern Ohio Natural Gas Company and the Union Natural Gas Corporation receive their main supply of gas. The officials of the Northwestern Ohio Natural Gas Company are as follows: Daniel O'Day, president, New York city; C. N. Payne, vice president, Titusville, Pa.; E. Strong, second vice president, Oil City, Pa.; M. B. Daly, general manager, Toledo, O.; J. W. McMahon, general superintendent, Toledo, O.; R. J. Burkhalter, assistant secretary and treasurer, Toledo, O. This company receives part of its supply from the counties of Fairfield, Hocking, Licking and Knox, in Ohio. Its main line extends northwest

through the counties of Fairfield, Licking, Franklin, Delaware, Marion, Wyandot, Hancock, Wood and Lucas to Toledo. This line supplies Toledo, Maumee and Perrysburg, Ohio, with natural gas.

Union Natural Gas Corporation, T. N. Barnsdall, president; E. P. Whitcomb, secretary and treasurer. The Union Natural Gas Corporation supplies Athens, Chillicothe, Circleville, Logan, Newark, Mt. Vernon, Galena, Delaware, Marion, Upper Sandusky, Galion, Crestline, Findlay, Mansfield, Ashland, Shelby, Tiffin, Fortoria, Fremont, Toledo, Plymouth, Norwalk, Elyria, Lorain, Vermillion and Sandusky, Ohio, with natural gas. Size of main lines, 3, 4, 6, 8, 10, 12 and 16 inches in diameter.

Potter County Gas Company, T. N. Barnsdall, president; J. F. Stone, secretary and treasurer. Gas field, Card creek, Potter county, Pa. Supplies Elmira, N. Y., with natural gas. Size of main line 8 inches in diameter.

United Natural Gas Company, W. C. Henry, general superintendent, Bradford, Pa. Supplies Buffalo, N. Y., with natural gas under the name of Buffalo Natural Gas Company (Salamanca, N. Y., United Natural Gas Company), (Olean, N. Y., Keystone Gas Company), (Bradford, Pa., Commercial Natural Gas Company). Gas fields at Kane, Wilcox, Halsey and Mt. Jewett, McKean county, and Sharon township, Potter county, Pa. Size of main lines 8 inches in diameter.

Bradford Gas Company, supplies Bradford, Pa., with natural gas, from Rowlet or Card creek gas field in Potter county, Pa. Size of main line 10 inches in diameter.

Ohio Fuel Supply Company, George W. Crawford, president; F. W. Crawford, vice president; H. C. Reeser, secretary and treasurer; J. M. Garard, general manager. Supplies Columbus, Lancaster, Mt. Vernon, Zanesville, Barnesville, Cambridge and Caldwell, Ohio, with natural gas. Gas supplied from Sugar Grove and Knox and Licking counties. Gas fields in Ohio. Size of main lines 4, 6, 8, 10 and 12 inches in diameter.

Pennsylvania Fuel Supply Company, C. E. Crawford, president; H. C. Reeser, secretary and treasurer. Gas supplied from Speechley gas field, Clarion and Armstrong counties, Pa. Supplies Maysville, Oak Ridge, Fairmont, New Bethlehem, Edenburg, St. Petersburg, Emlenton, Foxburg and Parker, Pa., with natural gas.

The Southern Ohio Gas Company, capital \$300,000. George W. Crawford, president; John M. Garard, vice president; H. C. Reeser, secretary and treasurer. Supplies Wellston, Jackson and Hamden, O., with natural gas.

Fayette County Gas Company, George W. Crawford, president; John M. Garard, vice president and general manager; J. W. Donnan, treasurer; H. C.

Reeser, secretary and assistant treasurer. General office, Pittsburg, Pa. Supplies Uniontown, Connellsville, Scottdale, Mt. Pleasant, Dunbar, Dawson, Alverton, Tarrs, Ruffsedale and Youngwood, Pa., with natural gas. Gas supplied from Masontown and Carmichaels gas fields in Fayette and Green counties, Pa., and Farmington gas field in Marion county, W. Va. Size of main supply lines 8 and 12 inches in diameter.

Oil City Fuel Company, Oil City, Pa. Supplies Oil City, Titusville, Franklin, Meadville and Sharon, Pa., with natural gas. Gas supplied from 460 wells in the Speechley gas field in Venango county, Pa. Size of main supply lines 5½, 8 and 10 inches in diameter.

Warren and Chautauqua Gas Company, Warren, Pa., William Barnsdall jr., president; James Clark, vice president; E. P. Whitcomb, secretary and treasurer. Supplies Warren, Glade run, Stoneham, Clarendon, Tiona and Sheffield, Pa., with natural gas. Gas supplied from 19 gas wells in the Elk county, Pa., gas field. Size of main supply line 8 inches.

Manufacturer's Gas Company, Bradford, Pa., T. N. Barnsdall, president; William Barnsdall, jr., secretary and treasurer; William Barnsdall, jr., general manager. Supplies Kane, Bradford, East Bradford, State Line, Pa., and Limestone, N. Y., with natural gas. Gas supplied from Jamestown, Elk county, and Kane, McKean county, Pa., gas fields. Size of main lines 4, 6 and 8 inches in diameter.

Triple-State Natural Gas and Oil Company, general office, Franklin, Pa.; incorporated under the laws of West Virginia in 1898. W. O. Johnson, president, Chicago, Ill.; Otto Germer, first vice president, Erie, Pa.; Thomas Brown, second vice president, Franklin, Pa.; J. B. Moorehead, secretary, Franklin, Pa.; E. H. Sibley, treasurer, Franklin, Pa. This company have at present about 125,000 acres of land located in Martin and Johnson counties, Kentucky, and Mingo county, W. Va. This company supplies Guyandotte, Ceredo, Central City, Kenova and Huntington, W. Va., Coal Grove and Ironton, O., Inez, Louisa, Catlettsburg and Ashland, Ky., with natural gas. Size of main lines 8 and 10 inches in diameter. Length of main line from wells to Kenova, 10-inch line, 50 miles; main line from Kenova east to Huntington, nine miles 8-inch line; to Ironton, O., and Ashland, Ky.

The Natural Gas Company of West Virginia, Geo. Heard, president; A. S. Hare, secretary. Supplies Wheeling, W. Va., with natural gas. Supply of gas from Jacktown gas field, Green county, Pa.

Mountain State Gas Company (Parkersburg-Marietta division), E. Strong, president; H. W. McSweeney, secretary; J. B. Crawford, treasurer; W. P. Craig, general field superintendent. Supplies Parkersburg, Williamstown, Waverly, Eureka, Belmont and St. Marys, W. Va., with natural gas. Also supplies Marietta, Belpre and Newport, Ohio, with natural gas under the name of River Gas Company.

Fairmont Gas and Light Company, Fairmont, W.

Va., S. S. Watson, president; Edwin Robinson, secretary. Supplies Fairmont, W. Va., with natural gas. Gas supplied from Farmington, W. Va., gas field.

Home Gas Company, Mannington, W. Va., F. W. Bartlett, president; W. H. Furbee, secretary and treasurer; J. M. Barrack, superintendent. Supplies Mannington with natural gas. The gas is supplied from Brink and Downs, W. Va., gas fields. Size of main supply lines 4 and 6 inches in diameter.

Fairmont and Grafton Gas Company, Joseph W. Craig, president; A. C. Lowrie, vice president and general manager; C. W. Baker, secretary and treasurer. General office Fairmont, W. Va. Supplies Fairmont and Grafton with natural gas. Supply of gas from Farmington gas field.

The Clarksburg Light and Heat Company, Clarksburg, W. Va., John I. Alexander, John Koblegard, E. R. Davis, B. F. Robinson and F. B. Haymaker, incorporators. Successors to Mountain State Gas Company and the West Fork Oil and Natural Gas Company of Clarksburg. E. Strong, president; C. N. Payne, general manager; John Tonkin, assistant manager. Supplies Clarksburg with natural gas.

Union Utility Gas Company, Morgantown, W. Va.; I. C. White, president; Davis Elkins, vice president; George C. Sturgiss, secretary; H. R. Warfield, general manager. Supplies Morgantown with natural gas. Supply of gas from Dunkard township, Green county, Pa., and Cass district, Monongalia county, W. Va.

The Wetzel Natural Gas Company; Augustus Arnold, president and treasurer; E. B. Woodruff, secretary; A. J. Throckmorton, manager. Supplies Hundred, W. Va., with natural gas.

Virginia Oil and Gas Company, Wheeling, W. Va.; Albert M. Schenk, president; George Folmer, secretary. Supplies Wheeling, Benwood and Moundsville, W. Va., with natural gas. Supply of gas from Majorsville gas field, Green county, Pa.

Light, Fuel and Power Company, Sutton, W. Va.; F. J. Robert, president; C. E. Bonwell, general manager. Supplies Burnsville, Sutton, Heater, Coglers, Chambers and Flat Wood, W. Va.; with natural gas. Supply of gas from Burnsville gas field.

The Keener Oil and Gas Company, Weston, W. Va. Supplies Weston with natural gas. Supply of gas from Big Isaac gas field.

Weston Gas Company, Weston, W. Va.; W. S. Hoskins, president; J. W. Wilson, secretary; F. M. Knapp, treasurer. Supplies Weston with natural gas. Supply of gas from Maxwell farm wells Nos. 1 and 2 at Weston. Size of main supply lines 4 and 6 inches in diameter.

West Virginia Central Gas Company; Howard A. Forman, president; H. V. Thomas, general manager.

Supplies Audra, Janelew, Philippi, Belington, Elkins, Deanville and Buckhannon, W. Va., with natural gas. Supply of gas from Riverside and West Fork river gas field, Lewis county, W. Va. Size of main supply lines, 4 and 6 inches in diameter.

Glenville Natural Gas Company, Glenville, W. Va. Supplies Glenville with natural gas. Supply of gas from Trace Fork gas field, Gilmer county, W. Va.

Salem Natural Gas Company, Salem, W. Va. Supplies Salem with natural gas. Supply of gas from Sedalia gas field. Size of main line 4 inches in diameter.

Cabot Gas Company, Grantsville, W. Va. Supplies Grantsville and Cabot carbon factory with natural gas. Supply of gas from Leaf Bank creek gas field, Calhoun county, W. Va.

Charleston Gas Company, Charleston, W. Va. Supplies Charleston with natural gas. Supply of gas from Spencer, W. Va., gas field.

Marietta Consolidated Gas Company, Marietta, O.; H. A. Jamieson, president; W. J. Cram, vice president; W. D. Todd, secretary; W. F. Messner, treasurer; A. A. Schnauffer, general manager. Supplies Marietta with natural gas. Supply of gas from Tunnel and Vincent gas fields, Washington county, O.

Elizabeth Gas Company, Elizabeth, W. Va. Supplies Elizabeth with natural gas. Supply of gas from Elizabeth gas field.

Jeanette Gas Company, Jeanette, Pa.; Joseph W. Craig, president; John W. Shay, vice president; C. W. Baker, secretary and treasurer. Supplies Irwin, Jeanette, Penn station and Manor, Pa., with natural gas. Supply of gas from Harmony gas field, Westmoreland county, Pa. Size of main lines 6 and 10 inches in diameter.

Greensboro Natural Gas Company. General office, Pittsburg, Pa. John W. Shay, president and general manager; Jos. W. Craig, vice president; C. W. Baker, secretary and treasurer. Supplies Greensburg, Carmichael, New Geneva, Masontown, Bridgeport, Brownsville, West Brownsville, California, Coal Center, Donora, Charleroi and the steel works at Claiton, Pa., with natural gas. Supply of gas from Bellsville and Zollersville gas fields, Washington county, Pa. Size of main lines 6, 10 and 12 inches in diameter.

Valley Gas Company; H. M. Preston, president; W. S. Hoskins, vice president; F. M. Knapp, secretary and treasurer. Supplies Hazel Chemical works, glass factory and Hazelhurst, Pa., with natural gas. Supply of gas from Hutchins gas field, McKean county, Pennsylvania.

Jefferson County Gas Company, Warren, Pa.; George E. Degolia, president and general manager; J. A. Viele, treasurer; E. J. Brennan, secretary. Supplies oil refineries located in East Warren with natural gas. Supply of gas from Heath gas field, Jefferson

county, Pa. Size of main lines 6 and 8 inches in diameter; length of line 42 miles.

Cambridge City Gas Company, Cambridge City, Indiana; C. Ferguson, president; Edward McDonald, secretary and treasurer; A. C. Foringer, general manager. Supplies Cambridge City with natural gas. Supply of gas from Maysfield, Ind., gas field; 16 miles of 4-inch main line.

Ohio and Indiana Consolidated Natural and Illuminating Gas Company. Supplies Lima, Ohio, with natural gas.

Form of natural gas meter notice in general use by the leading natural gas companies.

June 1, 1903.

The inventor of the Wellsbach or incandescent mantle for gas lights was Amer Von Wellsbach, of Vienna, Austria-Hungary.

CARBON BLACK.

The history of petroleum and natural gas would be singularly incomplete without the history of the manufacture of carbon black. Carbon black is also known as hydro carbon black, American gas black, satin gloss black, jet black, and silicate of carbon. Carbon black is the trade name given in this country, and to a certain extent abroad to lamp black made upon the surfaces of metal or stone by direct impact of flame. The first carbon black ever made in this country and sold in a commercial way seems to have been made in the year 1864 by an ink maker, J. K. Wright, of

Philadelphia, Pa., for use in printing ink. Mr. Wright is still living and engaged in the same business. It is therefore, plain that this industry is a new one in this country, and it certainly never attained any great importance abroad, although I cannot say when it was first made in other countries. Mr. Wright made black on sheet iron cylinders revolved over gas jets, from which the black was removed by stationary scrapers. This process was used by other ink makers for making carbon black from artificial gas in a small way for use in printers' ink, and a very glossy high priced ink of intense color was obtained. These pioneers in the carbon black industry apparently did not consider the process of sufficient importance to patent it, for the first patent granted in this country was issued December 10, 1867, to A. Millochan, New York, for a process which proved to be of no value, and it was not until the year 1872 that any process was patented that was subsequently used on a regular commercial scale. It had attracted the attention of many different people, among others Peter Neff, Gambier, Ohio, and John Howarth, Salem, Mass., that large quantities of natural gas were going to waste in the gas regions offered a cheap and abundant raw material for this manufacture, and on September 17, 1872, John Howarth received a patent for the manufacture of carbon black from natural carburated hydrogen gas, claiming the production of carbon black from a natural carburated hydrogen gas issuing from the earth, etc. His plan was to connect the gas well with a gas holder, such as used in artificial gas works, with a blow-off, from which might escape the surplus flow of the well, not required in the process of manufacture. As the natural pressure of gas in the rock sometimes exceeds 500 pounds on the horizon from which he derived the supply of his factory, and there was at that time no method of regulating the flow, this waste of gas was a necessary feature of his enterprise. From the gas holder the gas passed through pipes to ordinary iron gas jets arranged in the same horizontal plane beneath slabs of soapstone.

These slabs of soapstone were provided with holes for ventilation without which the carbonic acid gas and other inert products of combustion would have formed a layer about the middle of the slabs and kept the flame away from the surface, thereby greatly diminishing the yield and impairing the color of the resulting product. Above these slabs of soapstone rose in an arch an iron dome or hood with a chimney at the top of this arch, and in this chimney a damper that could be set to give the right amount of draft. On the slabs rested pans of water closed in and kept cool by a continuous circulation. The edges of this arch descended below the edges of the soapstone slabs and were grooved longitudinally with horizontal grooves, in which ran a scraper that could be pulled to and fro by hand with a long handle. This scraper removed, from time to time, the deposited soot which fell into the sheet iron aprons or troughs, which hung from the burner pipe. From these again the black fell through discharge pipes into receptacles which could be changed by hand when full. This was a very crude, clumsy and expensive way of making carbon black, decidedly less advantageous than that

previously employed in making black from artificial gas, but nevertheless, owing to the cheapness of the raw material, the price which had been \$3.00 to \$5.00 was immediately dropped to \$2.50 and then to \$1.50, and shortly after to \$1.25 per pound. It is, however, a curious fact that the black from natural gas does not possess all the qualities of that made from artificial gas, hence some small amount is still made from artificial gas, and also from oil at an expense of something like a dollar a pound, and used in a very small way for certain fine grades of ink.

The next patent granted for carbon black was for a cylinder cooled externally by water and slowly revolving over burners placed on its interior, but I am not aware that this process was ever used.

On March 23, 1875, John Howarth received a further patent on a traveling car, which hung from rails also held between them the slabs themselves. This car carried a scraper, a shallow frame and hanging from that frame on each side two deep receptacles of sheet iron, which could be detached at will and emptied. These receptacles were joined together over the burners by a narrow arch of sheet iron just wide enough to allow the apparatus to pass over the single row of burners without striking. This car was turned by an endless rope passing over pulleys and first pulled in one direction and then the reverse. The scrapers were held against the plates by wire springs and were only in contact with the place when passing toward the end at which the receptacles were removed. The dome was a surplus adjunct. Cast iron was better than soapstone, and there was no need of water cooling. Indeed, Mr. Howarth never used water cooling on a commercial scale. Obviously its effect would hardly be felt through such a non-conductor as soapstone.

The first factory was located at New Cumberland, W. Va., and the gas came from what is known as the salt sand and was very rich in carbon and made an excellent black. The factory was made of wood and before long it burned down and the business was removed to Saxonburg station, Pa. In two or three years competition sprang up at Gambier, Ohio, where a small factory was erected by Mr. Peter Neff, who made black by a somewhat similar process for something like 10 or 12 years. He has as many patents for carbon black apparatus as all other inventors put together or thereabout, but most of them were fantastic and useless. His factory reached an output at one time of 125 pounds per day.

The next important competition was by Mr. A. V. Nolen, who in the year 1879 built a factory at New Cumberland, W. Va., and made black on cast iron pans holding water. By this time the price of black had gone down to about 60 cents per pound, but nevertheless where two pioneers had met with little pecuniary success, Mr. Nolen by superior ability made a good deal of money and bought out the original company. Various other small factories were started from time to time, but it was not until the year 1883 that any considerable advance was made, when the firm of L. Martin & Co., of Philadelphia became interested in a small and struggling enterprise at Foster's Mills, Pa., and there erected five plates 24 feet in diameter, cast in segments and suspended on a central

mast, which rotated with it upon the bronze bed plate. Beneath this was fixed a stationary burner of parallel horizontal iron pipes $1\frac{1}{4}$ inches in diameter branching from a central supply $3\frac{3}{4}$ inches inside diameter, and this in turn connected suitably with the well.

Incredible as it may seem even at this time, after 10 years of experience, no attempt had been made by any of these three leading manufacturers to control the flow of gas from the wells, although this was then quite possible with available appliances and a blazing torch at each natural gas well, wasting millions of feet was a feature at the principal factories, including that at Foster's Mills, Pa. About the same time a factory was started by Godfrey L. Cabot, a Boston man, in the adjacent village of Worthington, at which some efforts to confine and economize the gas were made, but remained in a large part fruitless for some years, owing to the inefficiency of the foreman. At the factory at Foster's Mills the idea of a traveling box scraper was discarded and a plan for the first time successfully adopted on a commercial scale of a horizontally rotated collecting surface. The same principle was adopted at Worthington, at about the same time, but failed of success, owing to purely mechanical imperfections. At first blush it would seem as if the original idea of moving only the scraper box was the correct principle, and yet it is now entirely abandoned and about one-half of all the black that is made today is made on surfaces which are moved over a stationary scraper box and stationary burners.

The first decade of the manufacture of carbon black from natural gas on a commercial scale was the epoch of factories in which the collecting surfaces were arranged in rectangular shapes placed end to end to form what the workmen call benches. The details whereby the black was collected, the dimensions of the different parts and the arrangement of the size of the burners varied in different factories. But four-fifths of all the black made was made on benches and the rest was made on the external surfaces of rotating cylinders. Various efforts were made to use petroleum oil and the firm of Carnahan & Swan, of Duke's Center, Pa., made a very fine black by this method for several years.

Various other manufacturers of carbon black tried to use oil and were tempted thereto by the greater amount of black deposited by a flame of given size on a given surface, but one and all of them found it unprofitable, owing to the great expense of oil and the danger of fire, which increased very greatly with any increase in size of the apparatus. An apparatus which worked perfectly well on a laboratory scale was quite unsafe on a commercial scale. At the end of this epoch Mr. A. V. Nolen was the largest manufacturer and the total output was probably ten hundred to fifteen hundred pounds a day. The year 1883 brought with it the introduction of large stationary plates, which replaced at Foster's Mills a factory in which benches had been used. A scraper box and scraper were placed radically, so that in revolving the scrapers faced direct against the direction at which the surfaces passed across them. The black was removed by a screw conveyor in the bottom of the scraper box, which carried it outward to a longer conveyor, which

ran tangential to a row of five plates and carried the black to a rotating bolt through which it went into the bin. It was then lifted from the bin by hand in large scoops and packed by hand with a screw press. but the black is very light and the handling of it was very dirty, unhealthy work, involving considerable loss in raw material. In the earlier factories it had been the habit to brush the black through a fine horizontal sieve by means of brushes rotating on a vertical axle, a bolt revolving on a horizontal axis, which discharged the coarser particles of black at one end and allowed only the finer particles to fall through, it was a decided improvement. In the same year a very able young man named A. R. Blood, of Warren, Pa., devised a method in which a small plate about three feet in diameter was used. The advantage of this was that no ventilation holes were needed, as in the case of the larger plates, excepting, however, that this small plate was cast in the form of a ring with an opening in the center. This plate was moved by means of a ratchet at the center. This ratchet was worked by a lever and this by another lever revolved on a shaft. Every time the shaft came around it would give the plate a little shove, which would move it an inch or so. Beneath the plate was a scraper in the mouth of a vertical slot, through which the black fell into a longitudinal conveyor running beneath the row of plates. There were 14 plates in a row and six rows in the building. The buildings were of sheet iron on a frame work of pipe and angle iron, and were pierced with small holes near the bottom to give the needful supply of air. Along the ridge pole was an opening about 30 inches wide and about six inches above this a little pent roof to prevent the entrance of rain. The space between was something like six inches through which the products of combustion passed. All of these factories used gas jets, either of iron or stealite, such as are ordinarily used in houses. There was one factory which used argand burners, but did not last many years. About this same year the father of this A. R. Blood began making black on the roller process and using a burner with a small hole in the point of the tip, giving a round flame. This black was at first very unprofitable owing to the small yield, but the successors of Mr. E. R. Blood improved the details of manufacturing and experience has shown this black to possess very valuable qualities, and it sells for a high price, and is profitable to the owner, the Peerless Carbon Black Company, of Pittsburg, Pa.

This company was for many years the only company making carbon black in this country from natural gas on revolving cylinders, although in the earlier days there were two or three factories on this principle. At the present day over one-half of the carbon black is made by the revolving cylinder process.

In the second decade the process of making carbon black introduced by Mr. E. R. Blood became the most important as to output and the total value of black produced. The prices of black fell rapidly and reached seven cents a pound by the year 1887, and three cents a pound by 1888. After this there was a considerable improvement in prices, followed by a further rapid increase in the output, and by the close of the second decade the total output had reached about 10,000 pounds per day, worth at that time about six

cents per pound, on an average. Toward the end of the second decade two new processes began to become an appreciable factor in the total output. The first of these was the process whereby, under 24-inch plates similar to those previously mentioned, though varying somewhat in details, was rotated a burner and black box radically placed. The burner was made up of parallel $1\frac{1}{4}$ -inch pipe inserted in a central supply pipe $3\frac{3}{4}$ inches in diameter. As first used by the radical black box discharged into a hopper placed at the side of the plate by means of a little trap door with a lever, which was pressed in such a way as to open the trap door every time it passed over the hopper, and after the discharge the trap door closed again by means of a counter poise. This method of a rotary burner was introduced at Worthington somewhere about the year 1884, but did not become a commercial success until the year 1887. The factory changed hands and the new owner changed the method to that of a central discharge, whereby the black was continuously discharged by a vertical spout at the inner end of the radical black box into a circular ring shaped box, where it fell through a trap door into a long conveyor. By the former method the longitudinal conveyor had been tangent to the rings and by this it went within two feet of the center. A cover was hung above this round box in such a way as to exclude air and rotate with the burners, black collecting box, etc. The bottom of the vertical spout above alluded to pushed the black in front of it, as it slowly swung around the ring until it reached the orifice through which the black fell. One great advantage of this method was that the black was not exposed to the air. By the former method whenever the box emptied a cloud of black arose, making a nuisance and a great loss of output. As rebuilt the black was kept under cover and carried to a bolt also shut in and lifted from beneath this bolt in an elevator into a bin. From this bin it was packed by machinery in either sacks or barrels, always under cover, so that from the time the black was made until it was used by the consumer it was never touched by hand and was always under cover and protected from all appreciable drafts of air.

The other process above referred to was introduced about the year 1891 at a place called Gallagher, Pa. and consisted of a system of channel beams turned with flat side downward over horizontal rows of stationary burners and black boxes. By a reciprocating mechanism these beams are slowly moved back and forth, and the black is scraped and removed by a screw conveyor in the usual manner. The chief advantage of this system is the perfection of the surfaces, which are better than the surfaces of cast iron plates.

In the beginning of the third decade of this industry another attempt was made to manufacture carbon black with the help of petroleum and under a somewhat new principle by evaporating petroleum and burning it over through gas burners. The cost of making this black was probably less than that of any other black made from petroleum oil by the contact process, still much more than could be realized by its sale. One great difficulty was the formation of adamantine carbon in the black. These particles were so hard that they would scratch glass and the manufacturer was unable to discover a method of removing

it. Since that time there has been no carbon black made from oil on a commercial scale in this country, although there is a small amount of a very expensive grade made in Europe from what are known as gas oils, a heavy oil obtained in the distillation of shale and chiefly used by manufacturers of illuminating gas. No important improvement in carbon black making has appeared in the third decade just drawing to a close. The output has steadily increased, and is now over 25,000 pounds a day.

The price has fluctuated a good deal, the average for the decade is about six cents. The amount of black produced with rotating burners and with the reciprocating channel has very considerably increased, there have also been detailed modifications of the principle of the small stationary plate, the amount made on this general principle has also increased. At the present time about 12,200 pounds of carbon black are made with rotating burners, and something like 1,500 pounds with reciprocating channel beams, and 10,800 pounds on stationary cast iron plates, mostly with the smaller sizes. There is only one factory in existence which operates on the bench principle and has a capacity of 500 pounds daily.

The largest carbon black factory in the world is located at Cabot, three miles east of Grantsville, county seat of Calhoun county, W. Va., on the Little Kanawha river. The factory has 115 rings in operation and others building. The rings are made to revolve in a circle by an endless chain elevator, operated from the power house. The rings are 23 feet in diameter and nine feet high. Enclosed in a round sheet iron house in the center of each house a stone pillar is built. On the top of the pillar is bolted an 8-horned ball bearing casting, with a $3\frac{3}{4}$ -inch center pipe feed line passing through the center. This supplies the gas to the burner pipes, which are $1\frac{1}{4}$ inches in diameter, with burner pipes 26 on one side of the ring and 27 burner pipes on the other side, with 1,200 jets burning under each ring. The ring is supported by eight 2-inch pipe legs, with the lower ends connected with the horned casting and the upper ends bolted to the ring five feet from the center. The conveyor or catch pan takes the place of one burner pipe and passes the black to the center conveyor, which runs beneath the center of each ring house. The conveyors are 4, $5\frac{1}{2}$ and 6 inches in size, round on the bottom and flat on the top. The conveyors convey the black to the bolter house, then to the packing house, where the black is packed in $12\frac{1}{2}$ pound sacks, 75-pound barrels, and in boxes of 150 pounds. The gas is supplied to the factory from seven gas wells located on Leaf Bank creek, two miles northwest of Grantsville; a 6-inch pipe line connects the wells to the factory. The capacity of this factory is 6,000 pounds of carbon black daily.

Carbon black factories are located at Weston, Smithburg, West Union, Bristol and Wilsonburg, W. Va.; Saxonburg station, Worthington, Sunset, Ridgeway, Wilcox, Kane, Wetmore and Duke Center, Pa.; two factories are located in Ohio, four in Indiana and two in Kentucky.

The combined output of all the factories is 25,000 pounds of carbon black daily. The carbon black is shipped to New York, Chicago, Boston, Baltimore,

Philadelphia, Pittsburg, Milwaukee and San Francisco.

All the leading newspapers in the world are printed with ink made from carbon black, paints, stencil black, shoe blacking, harness blacking and dyes are also made from carbon black. The present price of carbon black is five cents a pound.

A modern carbon black plant, irrespective of the gas, would cost in the neighborhood of \$50,000 or \$60,000. This is outside of any royalty that would have to be paid for patents.

THE LAW

In the Several Oil and Natural Gas Producing States Regarding the Plugging of Oil, Natural Gas, Salt and Mineral Water Wells.

Before abandoning, in all of the states where oil and natural gas is found, there are special laws concerning the plugging and sealing of abandoned wells. These laws should be carefully observed by all companies and operators, as the penalties for violations are very large, in some cases being \$1,000 fine and six months imprisonment.

PENNSYLVANIA.

The laws of the commonwealth of Pennsylvania regarding the plugging of oil, natural gas, salt and mineral water wells.

In the past years it was the practice when oil wells ceased to produce oil in paying quantities to pull the casing out and abandon the well without properly plugging the hole. That is, the hole is left open instead of being plugged above the oil producing sands with wooden plugs and sediment to keep the surface water from running down the hole to the oil producing sands and spreading itself indefinitely until it reaches other wells in the same sand and they begin to pump water with the oil and in a short time the surface water will flood the sand and ruin the well. This is so important a matter to the general welfare of the oil producing regions that a law has been enacted making it a misdemeanor for a company to abandon a well and leave it unplugged. The penalty is two hundred dollars (\$200) for each offence, one half to go to the informer and one half to be turned into the fund for the use of the public schools in the district where the well is situated. The enactments are those of the commonwealth of Pennsylvania enacted May 16, 1878 and June 10, 1881.

"Oil wells to be plugged.

16 May, 1878, Sec. 1 (P. L. 56).

All owners of and operators of oil lands within this commonwealth, shall in a practical manner plug their wells, at proper depth, with wood and sediment, in a

manner sufficient to exclude all fresh water from the oil-bearing rock, and to prevent the flow of oil or gas into the fresh water.

"Penalty for omission." Ibid. Sec. 2.

Any person found guilty of violating the provisions of this act shall be fined in any sum not less than \$20 nor more than \$100 for each and every offense; which shall be paid, one half to the informer and the other half to the school district in which the offense is committed, which shall be collected as fines of like manner are by law collected.

"Powers of adjoining owners in case of neglect. Ibid. Sec. 3.

Whenever the owner of any well has abandoned the same or does not reside in the county in which it is situated, any person owning property adjoining may enter in and take possession of any well, for the purpose of carrying out the provisions of the first section of this act, where the owner has refused or neglected to plug said well so as to shut off the fresh water from the oil rock and exclude the gas and oil from the fresh water, as provided in section first, at the expense of the owner.

"How abandoned wells to be plugged.

10 June, 1881, Sec. 1 (P. L. 110.)

Whenever any well shall have been put down for the purpose of exploring for any producing oil, upon abandoning or ceasing to operate the same, the owner or operator shall, for the purpose of excluding all fresh water from the oil bearing rock, and before drawing the casing, fill up the well with sand or rock sediment to the depth of at least 20 feet above the third sand or oil bearing rock, and drive a round, seasoned, wooden plug at least two feet in length, equal in diameter to the diameter of the well below the casing, to a point at least five feet below the bottom of the casing, and immediately after the drawing of the casing, shall drive a round wooden plug into the well, at the point just below where the lower end of the casing shall have rested, which plug shall be at least three feet in length, tapering in form, and to be of the same diameter at the distance of 18 inches from the smaller end as the diameter of the well below the point at which it is to be driven; (and) after it has been properly driven, shall fill in on top of same with sand or rock sediment, to the depth of at least five feet.

"Penalty for neglect. Ibid. Sec. 2.

Any person who shall violate the provisions of the act shall be liable to a penalty of \$200, one half to be for the use of the informer, and one half to the use of the school district in which such well may be situated, to be recovered as debts of like amount are by law recoverable.

"Powers of adjoining owners. Ibid. Sec. 3.

Whenever any owner or operator shall neglect or refuse to comply with the provisions of (this) section one of this act, the owner of, or operator upon any land adjoining that upon which such abandoned well may be, may enter, and take possession of said abandoned well, and plug the same as provided by this act, at the expense of the owner or company whose duty it may be to plug the same.

GENERAL CORPORATION LAWS.

CODE OF WEST VIRGINIA.

Requirements Concerning Abandoned Gas, Oil, Salt Water or Mineral Water Wells.

This chapter is the same as chap. 58, acts of 1897.

WELLS MUST BE ENCASED.

1. When any well shall be drilled for the production of petroleum oil, natural gas, salt or mineral water, it shall be the duty of the owner thereof before drilling said well into the oil and gas sand to encase such well with good and sufficient wrought iron, steel or metal casing, in such manner as to exclude and shut out all surface water, salt water, or fresh water, and to prevent the same from reaching or penetrating said oil and gas sand.

HOW WELL TO BE PLUGGED.

2. It shall be the duty of the owner of any well drilled for any of the purposes mentioned in the first section of this act before abandoning or ceasing to operate the same, and before drawing the casing therefrom, to fill up the well with sand or rock sediment to a depth of at least 50 feet above the top of the oil or gas bearing sand or rock and drive a round seasoned wooden plug, at least three feet in length, equal in diameter to the diameter of the well below the casing, to a point at last five feet below the bottom of the casing; and immediately after drawing the casing, except in regions where the well caves after the withdrawal of the casing, shall drive a round seasoned wooden plug at a point just below where the lower end of the casing rested; which plug shall be at least three feet in length, tapering in form, and of the same diameter at the distance of 18 inches from the smaller end as the diameter of the hole below the point at which it is to be driven. After the plug has been properly driven there shall be filled in on top of the same, sand or rock sediment to the depth of at least 50 feet above the top of the gas bearing sand or rock.

WHEN GAS WELLS TO BE SHUT IN.

3. It shall be the duty of any owner of any well producing gas, to prevent the waste of said gas by escape, and within the time hereinafter limited, to shut in and confine the same in said well or in the pipes or pipe lines connected therewith. Said gas, with respect to any well heretofore drilled, shall be so shut in within 90 days after the approval of this act, and with respect to any well heretofore drilled or completed, shall be shut in within 90 days after the said well shall reach the lowest oil and gas sand defined or recognized in the gas or oil district in which said well is situated; but if any such well in the course of drilling shall pass through any oil and gas sand which produces gas above the said last or lowest oil and gas sand then the drilling of said to the last or lowest oil and gas sand shall be prosecuted with reasonable diligence, so that any waste of gas from the said upper sand shall not

continue longer than shall be reasonably necessary; provided, however, that this section of this act shall not apply to any well producing both oil and gas from the same sand, or to any well while it is being operated as an oil well.

WHO MAY PLUG WELL IF OWNER FAIL.

4. If the owner of any such well shall neglect or refuse to cause said well to be plugged or shut in pursuant to the provisions of the second and third sections of this act, for a period of 20 days after written notice so to do (which notice may be served personally upon such owner, or may be posted in a conspicuous place at or near the well), it shall be lawful for the owner or operator of any adjacent or neighboring lands to enter upon the premises where said well is situated and to cause the same to be plugged if it be an abandoned well or shut in if not abandoned pursuant to the provisions hereof; and the reasonable cost and expenses incurred in so doing shall be paid by the owner of said well, and may be recovered as debts of like amount are by law recoverable.

WHO DEEMED OWNER.

5. The term "owner," as herein used with reference to any well, shall mean and include each and every person, persons, copartnership, association or corporation owning, managing, operating, controlling or possessing said well as principal or principals or as lessees, contractors, employes, or agents of such principal or principals; and the terms "oil and gas sands," or "sand," as herein used shall mean and include any bed, seam or stratum of rock, sand or other material which produces, yields, or contains in quantity, sufficient to be utilized, petroleum oil and natural gas or either of them.

PENALTIES.

Any person or persons, copartnership, partnership, association or corporations violating any of the provisions of this act shall be liable to a penalty of \$100 to be recovered with costs of civil action to be brought in the name of the state of West Virginia in any circuit court, and such action may be brought at the instance and upon the relation of any citizen of the state.

REMEDY IN EQUITY.

7. Aside from or in addition to the imposition of any penalties under this act, it shall be the duty of any circuit court in the exercise of its equitable jurisdiction to hear or determine any bill or bills in equity which may be filed to restrain the waste of natural gas in violation of this act, and to grant relief by injunction or by other decrees or orders, in accordance with the principles and practice in equity. The plaintiff in such bill shall have sufficient standing to maintain the same if he shall aver and prove that he is interested in the lands situated within the distance of one mile from said well, either as an owner of such land in fee simple, or as an owner of leases thereof, or of rights therein, for the production of oil and gas, or either of them.

ACTS REPEALED.

8. All acts or parts of acts inconsistent herewith are hereby repealed.

LIMITATIONS OF ACTIONS ON OIL OR MINERAL LEASES.

Any person or persons in peaceable possession of land claiming title under a lease of the same for the purpose of operating for oil or minerals, and who may have continuously remained in such possession for the space of three years, and have bored for, and in good faith expended money in such boring and operating, shall be entitled to plead said facts in bar, and said facts shall be a bar to any action at law, or in equity, instituted to establish title to recover possession of said lease, or to recover the profits received therefrom; provided, that nothing in this act contained shall be so construed as to authorize a tenant to set up as a bar to a recovery an adversary possession against his landlord, and that this act shall not affect any suit brought within twelve months after the passage of this act.— [1872-3 Acts 61; Code 1899, page 1113.]

OIL AND NATURAL GAS LAWS PASSED BY THE LAST GENERAL ASSEMBLY OF THE STATE OF OHIO.

[House Bill No. 125.]

AN ACT

To amend sections 306-1, 306-2, 306-3, 306-4, and 306-5, and to repeal sections 306-5a, 306-5b, 306-5c, 306-5d, 306-5e and 306-6 of the Revised Statutes of Ohio.

Be it enacted by the General Assembly of the State of Ohio:

Section I. That sections 306-1, 306-2, 306-3, 306-4,

and 306-5 of the Revised Statutes of Ohio be amended so as to read as follows:

Sec. 306-1. It shall be the duty of every person, firm or corporation engaged in drilling or exploring for natural gas or oil upon any land from which coal is being mined upon notice from the chief inspector of mines of the State of Ohio, or from any district inspector of mines of said State, to make or cause to be made, an accurate map thereof, which shall show the boundaries of each tract of land drilled upon, and the buildings and all monuments found upon such premises. Each well shall be plainly marked by a name, number or letter, and located whenever possible with reference to some well defined and lasting monument, so that its exact location may be determined. Such map shall contain a sworn statement of the person, firm, or corporation operating such oil or gas wells, that it is a true and accurate representation of the property; and a copy thereof shall be filed in the office of the chief inspector of mines and be open to inspection at all reasonable times.

Sec. 306-2. It shall be the duty of every person, firm or corporation leasing any land for coal mining purposes, and upon which gas or oil wells have been drilled to, or below any veins or seams of such mineral coal before proceeding to mine such coal to make, or cause to be made, and filed in the office of the chief inspector of mines such a map as is described in section 306-- of the Revised Statutes of Ohio.

Sec. 306-3. Whenever any person, firm or corporation sinks any well for gas or oil on lands upon which coal or other mineral is being mined, and which well passes through any mine, it shall be the duty of the person drilling such well to drill the hole to a depth of at least ten feet below the vein of coal or other mineral being mined, when such hole shall be cased and sealed upon the outside of the casing, with suitable material to the level of the coal floor; and each vein of mineral coal being mined, pierced by such well shall be sealed in same manner.

Sec. 306-4. It shall be the duty of the owner of any well drilled for gas or oil and which in drilling shall have passed through any vein of mineral coal, before abandoning, or ceasing to operate such well, and before drawing the casing therefrom, to seal the same in the manner following: There shall be driven in such well to a depth of at least ten feet below the floor of the lowest coal measure a round seasoned wooden plug at least three feet in length and equal in diameter of the well at that point, on the top of which plug there shall be filled at least seven feet of sidement or drillings, or cement and sand. Where any gas or oil well passes through any gas or oil bearing rock lying above the coal measures, the owner of said well or his agent, shall, upon abandoning or ceasing to operate such well, drive a dry wooden plug not less than two feet in length, equal in diameter to the diameter of the hole, to a point as near as possible to the top of the coal vein, on the top of which plug there shall be filled at least five feet of sediment or drillings, or cement and sand, as the mine inspector shall direct.

In case such well is not plugged as aforesaid within ten days from the abandonment thereof, the chief inspector of mines, or a district inspector of mines, may

cause the well to be plugged, and the costs and expenses of such plugging may be recovered of the person, firm or corporation whose duty it is to plug the same in the manner provided for the recovery of penalties by section 303-5 of the Revised Statutes of Ohio.

Sec. 306-5. Every person, firm or corporation, failing to comply with any of the provisions of this act, shall be subject to a penalty of not less than one hundred dollars, nor more than two hundred dollars, to be recovered by action in the name of the state, and on collection, paid into the treasury of the state to the credit of a fund which is hereby appropriated for prosecuting violations of this act, to be paid out on requisition signed by the chief inspector of mines. Such action may be instituted in the court of common pleas of the county wherein any such well is located, or of Franklin county. In addition to the penalties herein provided, any person deemed guilty of a misdemeanor, and on conviction, be fined in any sum not less than fifty dollars nor more than two hundred dollars, or be imprisoned not less than ten days nor more than thirty days, or both.

Sec. 2. Said original sections 306-1, 306-2, 306-3, 306-4, 306-5, 306-5a, 306-5b, 306-5c, 306-5d, 306-5e, 306-6 of the Revised Statutes of Ohio be and the same are hereby repealed, and this act shall take effect and be in force from and after its passage.

W. S. MCKINNON,

Speaker of the House of Representatives.

CARL L. NIPPERT,

President of the Senate.

Passed April 3, 1903.

LAWS OF PRIVATE CORPORATIONS OF THE STATE OF INDIANA.

THE LAW REGARDING PLUGGING ABANDONED OIL, NATURAL GAS AND ARTESIAN WELLS.

Sec. 651. *Plugging Abandoned Wells.* 2. Whenever any well shall have been sunk for the purpose of obtaining natural gas or oil or exploring for the same, and shall have been abandoned or cease to be operated for utilizing the flow of gas or oil therefrom, it shall be the duty of any person, firm or corporation having the custody or control of such well at the time of such abandonment or cessation of use, and also of the owner or owners of the land wherein such well is situated, to properly and securely stop and plug the same as follows: If such well has not been "shot" there shall be placed in the bottom of the hole thereof a plug of well-seasoned wood, the diameter of which shall be within one-half inch as great as the hole of such well, extend at least three feet above the salt water level, where salt water has been struck; where no salt water has been struck such plug shall extend at least three feet from the bottom of the well. In both cases such wooden plugs shall be thoroughly rammed down and made tight by the use of drilling tools. After such ramming and tightening the hole of such well shall be

filled on top of such plug with finely broken stone or sand, which shall be well rammed to a point at least four feet above the Trenton limestone, or any other gas or oil bearing rock; on top of this stone or sand there shall be placed another wooden plug at least five feet long with diameter as aforesaid, which shall be thoroughly rammed and tightened. In case such well shall have been "shot," the bottom of the hole thereof shall be filled with a proper and sufficient mixture of sand, stone and dry cement, so as to form a concrete up to a point at least eight feet above the top of the gas or oil bearing rock or rocks, and on top of this filling shall be placed a wooden plug at least six feet long, with diameter as aforesaid, which shall be properly rammed as aforesaid. The casing from the well shall then be pulled or withdrawn therefrom, and immediately thereafter a cast-iron ball, eight inches in diameter, shall be dropped in the well and securely rammed into the shale by the driller or owner of the well, after which not less than one cubic yard of sand pumping or drilling taken from the well shall be put on top of said iron ball. (R. S. 1897, sec. 7888; R. S. 1901, sec. 7511.)

[1899, p. 82. Approved February 22, 1899. In force April 28, 1899.]

Sec. 652. *Penalties.* 3. Any person violating any provisions of this act shall be guilty of a misdemeanor, and upon conviction thereof shall be fined in any sum not less than twenty dollars nor more than two hundred dollars, to which may be added imprisonment in the county jail not less than ten days nor more than sixty days; and each day during which such violation shall continue shall constitute a separate offense. (R. S. 1901, sec. 7512.)

[1893, p. 300. Approved March 4, 1893. In force May 18, 1893.]

Sec. 653. *Liability.* 4. Whenever any person or corporation in possession or control of any well in which natural gas or oil has been found shall fail to comply with the provisions of this Act, any person or corporation lawfully in possession of lands situated adjacent to or in the vicinity or neighborhood of such well may enter upon the lands upon which such well is situated and take possession of such well from which gas or oil is allowed to escape in violation of the provisions of section one of this Act, and pack and tube such well and shut in and secure the flow of gas or oil, and maintain a civil action in any court of competent jurisdiction in this State against the owner, lessee, agent or manager of said well, and each of them jointly and severally, to recover the cost and expense of such tubing and packing, together with attorney's fees and cost of suit. This shall be in addition to the penalties provided by section three of this Act. (R. S. 1897, sec. 7890; R. S. 1901, sec. 7513.)

Sec. 654. *Expense of Plugging, Liability for.* 5. Whenever any person or corporation shall abandon or cease to operate any natural gas or oil well, and shall fail to comply with the provisions of section two of this Act, any person or corporation lawfully in possession of lands-adjacent to or in the vicinity or neigh-

borhood of such well may enter upon the lands upon which such well is situated and take possession of such well, and plug and fill the same in the manner provided by section two of this Act, and may maintain a civil action in any court of competent jurisdiction of this State against the person, persons or corporations so failing, jointly and severally, to recover the costs and expense of such plugging and filling, together with attorney's fees and costs of suit. This shall be in addition to the penalties provided by section three of this Act. (R. S. 1897, sec. 7891; R. S. 1901, sec. 7514.)

HISTORY OF THE ORIGIN AND THE METHOD OF TUBING AND RODDING OIL WELLS FOR PUMPING.

The first pumping oil wells were on Oil Creek in Pennsylvania, and they were modeled after the system of pumping salt brine wells at the Kanawha Salt Works near Charleston, West Virginia. When wells are first drilled some are flowing wells, some are small wells which have not gas enough to make them flow, while a number of the wells drilled are dry holes. The small wells and also the large ones when they have not gas enough to make them flow are tubed, rodded and put to pumping. All the wells are tubed with 2-inch tubing, except those that pump more salt water than oil, for example the hundred foot oil field in Butler county, Pa., the Sistersville oil field in West Virginia, and the Salt water wells in the Lima, Ohio, and Indiana oil fields. Those wells are tubed with 2, 3, and 4 inch tubing. A pumping well is tubed as follows: First the rope or wire tubing line is run over the derrick, one end is tied to one of the arms in the bull wheel and coils on the bull wheel shaft on the other end of the tubing line. A tubing hook is tied, then a short piece of tubing, with a plug drove in the end, which is used for anchor is screwed into a perforated tubing nipple, which has 15 to 30 quarter-inch holes drilled or punched in it. To let the oil inside of the tubing and a long nipple or whole joint of tubing is screwed on. A tubing elevator is put on under the collar of the tubing; the hook is placed in the reins of the elevator, the tubing is pulled up in the derrick and backed down into the hole until the tubing elevator rests on the casing head. The hook is unhooked from the elevator, the second elevator is put on under the collar of the working barrel, in the bottom of the working barrel is a seat for the standing valve to rest on. The standing valve is six to eight inches in length and one and three-quarter inches in diameter, with three-quarter inch hollow tube running through the center, with yoke bottom, 22 round leather rings, ball and seat and cage top. After the working barrel is lowered into the hole, the elevator is put under the collar of a joint of tubing and is pulled up in the derrick, and screwed into the top of the working barrel and lowered into the well. Then joint after joint of two-inch tubing from 18 to 24 feet long is screwed together and lowered in the well, one joint at a time, until the weight of the tubing gets too heavy for a single line. The tubing line is doubled up and the tubing block is used until the anchor or lower end of

the tubing strike the bottom in the well, when the tubing is raised up so as to have the anchor suspended from the bottom 18 or 20 inches. The tubing is marked even with the tubing ring on the casing head at the mouth of the well. It is then pulled up to the next joint below the marked joint. The joint is either cut off or a short piece of tubing is used in its place after the tubing ring is put on and packed the tubing is anchored on the casing head. The next thing to do is to screw a two-inch T and nipple about one foot long in the collar of the tubing above the casing head, and from the two-inch T connect the well with a two-inch line to the tank. Take down the tubing line and put up a single rod line and tie one end to one of the arms of the bull wheel and then tie a rod hook on the other end of the rod line with a single bowline knot. The working valve which is 12 to 15 inches long, $1\frac{3}{4}$ inches in diameter with a $\frac{3}{4}$ inch hollow tube yoke bottom and cage top with four leather cups. Seat and ball is screwed to the $\frac{5}{8}$ four-foot long iron valve stem. The sucker rod elevator is placed on the square under the pin of a hexagonal wooden sucker rod from 20 to 24 feet long, $1\frac{5}{8}$ inches in diameter with iron strap pin and box joints. The valve and stem are screwed to the rod, pulled up in the derrick and lowered down into the tubing. Another rod is pulled up in the derrick and screwed on to the rod resting on the elevator on the tubing. One rod after another is screwed together and lowered into the tubing until the working valve strikes the standing valve in the bottom of the working barrel in the well. The rod is marked even with the two-inch T above the casing head and is pulled up and rested on an elevator. The long rod is unscrewed and taken off and a sub is screwed on. The polish rod, stuffing box, stand pipe and adjuster are pulled up and screwed on to the rods which are then lowered until the working valve rests on the standing valve. A string is then tied on the polish rod above the stuffing box; the rods, polish rod and adjuster is pulled up about 18 inches, the bull rope is thrown off and the wrist pin is put in the second hole of the crank. The crank is then stopped on the upper center, the walking beam is raised up by the pitman, the lower end of the pitman is coupled to the wrist pin, the stand pipe is screwed into the T and the polish rod is then placed in the slot of the beam and let down until the adjuster rests in the seat of the beam and bolted fast to the polish rod. The adjuster board and T bolt are then put in place and bolted down. This keeps the adjuster in its place on the walking beam, and leaves the valves about 15 inches apart in the working barrel. The working barrels are six feet long and $1\frac{3}{4}$ inches in diameter. The engine is now started and the walking beam is kept in an up and down motion which raises and lowers the rods and working valve in the barrel 15 to 18 inches. The cups on the working valve fit tightly in the working barrel, and the up and down motion of the walking beam causes a vacuum or suction in the working barrel. The band wheel and crank revolve in a circle, and as the pitman and walking beam change from the upper to the lower center the rods and working valve are raised in the working barrel and the oil is sucked up through the standing valve. Then the pitman and

beam change from the lower to the upper center, forcing the working valve down in the working barrel and as the working valve starts on the down center the ball drops in the seat of the standing valve and holds the oil from going back into the well. This forces the oil up through and above the ball and seat in the working valve and as the latter goes up the ball drops back in the seat of the working valve and holds the oil, while the cups and working valve cause a suction between the two valves which sucks more oil up through the standing valve and as the working valve again starts to go down in the working barrel the ball drops in the seat of the standing valve, forcing the oil up through and above the ball and seat in the working valve. Each revolution of the band wheel and crank sucks and raises the oil in the tubing until the space between the rods and tubing is filled up to the top of the hole. The oil is then forced through the lead line to the tank. Some wells pump a steady, small stream of oil, while the majority of wells pump by head, all the oil in the hole down to the perforated pipe. This is called pumping the head off. The head may be 1, 2, 3, 4, 5 or 10 barrels. Head wells are usually pumped every day except Sunday. Where gas pumps are used or in salt water oil fields the pumping wells are run regularly night and day.

MEASURING WELLS.

HOW OIL WELLS ARE MEASURED.

At the beginning of drilling a well a record or log is kept of the different kinds and thickness of drilling or strata drilled through and the number of feet of conductor, drive pipe and casing used in the well. The method of measurement used at all drilling wells where cables are used is the same. It is done by letting the bit or drill down even with the derrick floor, then one end of a five foot measuring stick is placed on the derrick floor below the bull wheel shaft in a perpendicular position, that is to say straight up and down from the derrick floor to the cable running from the bull wheel shaft up to and over the crown pulley on top of the derrick and down to the tools. A string is tied on the cable at the top of the measuring stick at the bull wheel shaft. The driller eases the brake on the bull wheel by raising the brake lever, which allows the bull wheel to revolve and unwind the cable, letting the tools in the hole. As the cable unwinds from the bull wheel the string runs up to and over the crown pulley and down to the hole. As the string nears the floor the driller checks the bull wheels by lowering the brake lever which stops the string even with the floor at the hole. Another string is tied to the cable at the bull wheel shaft five feet above the derrick floor. The string is then taken off the cable at the hole. The tool-dresser places his right hand in a strap which is attached to the middle of the measuring stick and with his left hand he takes hold of the cable with his thumb under the cap rubber on the upper end of the measuring stick five feet above the hole. This is done for a mark. Then with the

right hand he removes the stick from the cable and clear from the hole. This done the driller eases the brake by raising up the lever and allowing the bull wheels to unwind and leave the tools and cable run into the hole until the tool dresser's thumb reaches the floor. The right hand with the stick is placed against the cable with the lower end of the stick resting upon the thumb of the left hand. This is called hand-over-hand measure and is repeated until the second string which was tied on the cable at the bull wheel shaft goes up to and over the crown pulley on top of the derrick and down to the hole on the derrick floor. The distance between the two strings on an 82-foot derrick is about 32 sticks. Each stick measures five feet (or 160 feet from the bull wheel shaft) over the derrick and down to the hole. The five feet between the derrick floor and the bull wheel shaft is not counted. The drillers and tool dressers keep a record of the wells by tying a string (called derrick string) on the cable. As the drilling progresses, or, in other words, as the hole is drilled deeper it requires more cable and as each string reaches the hole another is tied on at the shaft. Then the one at the hole is taken off. This is called "stringing over." Each string is numbered 1, 2, 3, etc. The space between each string on an 82-foot derrick is about 160 feet; for example, the first string is 160 feet, the second is 320, the third 480 and so on. Ten strings would make the well 1,600, and fifteen strings would make the well 2,400 feet deep. The records of the wells southwest of Pittsburg, Pa., are governed by the seam of the Pittsburg coal. For example, a well is located where the Pittsburg coal crops out. The Gordon sand is from 5 to 100 feet in thickness and is found from 2080 to 2100 feet below the Pittsburg coal. The fourth sand is from 4 to 30 feet in thickness and is found 2140 feet below the Pittsburg coal. The fifth sand (the deepest oil producing sand) is from 5 to 25 feet in thickness and is found 2201 feet below the Pittsburg coal. If oil or gas is found in any of the sands the well is measured by a flat steel line modeled after the clock spring. This is done to get an accurate measurement of the well. It should be remembered that cable measure is not accurate, since no two cables stretch or take up alike.

The steel line is coiled on an adjustable small reel, which is attached to an iron frame attached to the fly or balance wheel of the engine in the engine house. The end of the line passes along the walk into the derrick, where it passes over a small pulley attached to the drilling stem or bailor. On the end of the measuring line is fastened a small iron weight. Then the weight and line are let down the hole by unwinding the reel in the engine house. When the weight has been run down near the bottom of the well, the line is unwound and sprung down to the bottom by hand. When the weight strikes the bottom of the well it makes a jar on the line, which is felt by the man springing the line at the top of the hole. The line is tightened up to where the jar picks up even with the hole, when a small string is tied to the line and measured back to the first 50 or 100 foot mark on the line with a five foot stick. The first 50 feet of the line is stamped 50 feet. The second 50 feet is stamped 100, and the third 150, and so on. The lines

are from 1,000 to 3,700 feet long. The steel measuring lines are pulled out of the hole by locking the brake on the reel and reversing the engine.

HISTORY OF THE USE OF JARS FOR DRILLING, FISHING AND CLEANING OUT WELLS.

The round rein drilling jars were invented by William Morris, a blacksmith by trade, at the salt works of the Ruffner Brothers, at Malden, between Charleston and Burning Springs, on the Great Kanawha river, in West Virginia, in 1832. In that early day the jars were very crudely made, but the present style and make of jars is very difficult to manufacture, and requires the best steel and iron, as well as workmanship. The maker of jars is usually known as a "jar maker," and first class blacksmith throughout the oil region. The first swedged and crutched 6-inch stroke rectangle steel reins or links with knocking heads and cap ends made of iron for the pin and box joints on jars were made by Gibbs and Sterritt, oil well tool makers at Titusville, Pa., in 1865. The drilling jars are made with solid steel reins with four to six inch stroke and are called short stroked jars. The fishing jars are usually made of iron with steel lined reins or links, with a stroke from three to six feet and are called long stroked jars. The drilling jars are used on drilling wells only when the tools become fast, or in starting a fresh or newly dressed bit. All former writers who have had no practical experience with the use of drilling jars have led the public to believe that the jars open and close as the tools raise and drop to the bottom of the hole. Every practical oil man knows this is not true. In the first place they cannot drill as much hole with jars as they can without them. This accounts for all of the big holes drilled without jars. The jars are not used in West Virginia and southwestern Pennsylvania until the Big Dunkard sand is reached. This sand is below the big red rock and other caves, and is found at a depth of 1,000, to 1,500 feet below the surface. No jars are used in the big hole in the Lima, Ohio, and Indiana oil and gas fields; and no jars are used in the big hole in the northeastern Pennsylvania and New York oil fields. Jars are used very little and only in the small hole in Colorado and Kansas oil and gas fields. In the Texas oil fields jars are only used to clean out wells and fish with.

Jars are used on a great number of wells in California, from the top to the bottom of the hole, owing to the great number of crooked holes, due to the angle of the rocks or formations being on an angle of 90 degrees. Jars are only used in the lower or older rocks, where the grain of the lime and sand formations are finer and more gritty. This wears the bit out of gauge and in starting a fresh or new dressed bit, it usually sticks more or less before the hole is

reamed out on the bottom. In case the bit is much worn out of gauge the proper thing to do is to put on a fresh dressed bit and after the joint is "set up" run the tools to the bottom of the hole very rapidly without checking the tools until the hitch string is at the hole and not try to start the bit with a tight hitch. This is the cause of breaking the points off the bit and often breaks the jars. Five or six feet of rope should be allowed for a loose hitch below the last hitch.

After hitching on, a little more steam should be given the engine than is required to drill with. This gives the engine a faster motion and as the jar picks the tools up and raises them from the bottom the engine is checked down by the added weight of the tools, and as the tools drop the bit reams out the hole. After the tools are raised and dropped 10 or 15 times the tools will drop and raise free and regularly without sticking. This is called a loose or Big Injun hitch and is the only time the jars open and close. Just as soon as the tool dresser is ready the bull rope should be put on and the cable and tools pulled up in the hole. The bull rope should be thrown off and the tools should be sprung down for a tight or drilling hitch. The screw can be run up to suit the driller and hitched on and drilling start. When drilling is done as it should be the jars are wide open and act like solid steel or iron. If the jars open and close while running this is a true sign that the driller is running too loosely and is not raising his stem off the bottom. This is called "boot jacking the jars." The jar or kick that is seen or felt on the cable or temper screw is caused by the tools striking bottom. When the tools just touch bottom a light jar is felt. When the tools strike heavily a very heavy jar is felt, and when a light springy jar is felt it is a sign that the tools are too loose. This is the rule that all drillers go by. It applies to all kinds of cable drilled wells with or without jars. On a great number of wells accidents occur, such as a bit unscrewing or a pin may break off the bit. The box on the stem may break off, the jars or the stem may break in twain or the casing may collapse and a hundred other things may happen to cause a fishing job. On all fishing jobs long stroke jars are used because drilling jars are made of solid steel reins and short stroke, while the fishing jars are iron and steel lined and with extra long reins. The reins are made long that they may be able to jar up without breaking the hold. Jarring down or in both ways breaks the hold. It is very difficult to jar only one way in a fishing job with drilling jars; for example, the pitman and temper screw ends of the walking beam from the lower to the upper center is from two to three feet. While the stroke of the drilling jar is only four to six inches long this would allow the jars to strike both ways, which would break the hold. Whereas the fishing jar has a stroke from three to six feet.

PUMPING OIL WELLS BY ELECTRICITY.

The second and largest electric oil well pumping plant in the world is located at Folsom, Robinson station, Wetzel county, W. Va. In June, 1902, while

the officials of the Standard Oil Company were on a tour of inspection of their properties in West Virginia Mr. H. H. Rogers, president of the National Transit Company and first vice president of the Standard Oil Company, conceived the idea of purchasing the large block of leases held by the firm of Carnahan, Smith and Robinson, known as the Robinson tract in Folsom district, W. Va. Messrs. Carnahan, Smith and Robinson had two wells producing and one well drilling on the large tract of leases when they were interviewed by an agent for the Standard Oil Company in August, 1902. The sale of the leases at \$1,000,000 was agreed upon and they were turned over to the management of the South Penn Oil Company, one of the producing branches of the Standard Oil Company, and at once steps were taken to drill and have the property producing as fast as possible.

The South Penn Oil Company at that time were experimenting with electric power for pumping oil wells at the first electric power pumping plant built in the world, on one of their leases at Finney station, Washington county, Pa., which proved to be a success. This prompted Mr. H. H. Rogers to suggest electrical power for the Folsom district to the operating committee of the Standard Oil Company, which consisted of H. H. Rogers, president of the National Transit Company and first vice president of the Standard Oil Company; John D. Archbold, president of the South Penn Oil Company and chairman of the executive committee of the Standard Oil Company; Colonel John J. Carter, president of the Carter Oil Company, one of the producing branches of the Standard Oil Company; W. J. Young, vice president of the South Penn Oil Company; C. N. Payne, president of the Pennsylvania Natural Gas Company; G. T. Braden, general manager of the Hope Natural Gas Company, and John S. Kline of the National Transit works.

This committee was appointed to procure estimates on the probable cost of constructing a power plant with a capacity for pumping 200 deep sand wells. Electrical engineers, boiler and engine makers and manufacturers of electrical equipment had to be consulted in preparing the specifications and in the end it was discovered that to construct a plant with a capacity for pumping 200 wells the cost would reach about \$200,000. It was at once decided to build the plant and the work was pushed forward with the greatest energy, as it was desired that the plant be completed and in operation in time for the annual inspection in 1903.

The building in which the plant is installed is constructed of brick, the engine room being 57x60 feet in dimensions. The boiler room is 50x55 feet and is separated from the engine room by a wall partition running the full length of the building, and the unoccupied floor space is covered with cement. The roof is of slate, supported by steel trusses.

The equipment of the engine room consists of two triple expansion, condensing 375 horse power vertical engines of the Williams type; directly connected to two 250 kilowatt general electric, three phase, revolving field generators, moving at 300 revolutions per minute and 600 volts. These machines are of the alternating current type and run at 25 cycles per second, which gives the best results for power work.

The generators are supplied with exciting current from a 30 kilowatt, direct connected engine driven set. The generator current is started by the engine driven exciter, after which it is supplied by a 30 kilowatt motor driven set. The main switchboard is of blue Vermont marble, and consists of six panels as follows: One main panel for each 250 kilowatt generator and three feeder panels, all equipped with the necessary instruments and oil break switches. The main panels are also supplied with overload time limit relays.

The current is generated at 600 volts for local feeder lines, which supply the current to motors at the wells, located within a radius of one mile from the power plant. For greater distances than this the current is raised to 6,000 volts for transmission to the sub stations, located two miles apart, and is transmitted in both directions from sub stations and supplied to motors at the wells in their respective localities. The transformers consist of three 100 kilowatt 600 volt primary, 6,000 and 13,000 volts secondary, step-up transformers of the oil cooled type and located in the main station. The equipment of the sub stations consist of one 150 kilowatt, 6,000 and 13,000 volts primary, and 600 volts secondary, step-down transformers of the three phase type.

The switchboard consists of high potential panel with automatic oil break switch and ammeter, in addition to local feeder panels with oil switch, of the non-automatic type and expulsion fuses. The transmission of the current from the main and sub stations to the motor at the well consists of a pole line of standard construction, with bare wire on all main lines. The branch lines running to the wells are insulated from the main line to the same. The transmission line is of No. 4 soft drawn copper wire and hung on seven inch double petticoat glass insulators. Each well is equipped with a specially designed 10 horse power motor, governed by an oil break controller, which allows for series and paralleling of the fields to change speed in addition to reversing the motion when it is so desired. The motors are circular in shape and about two feet in diameter, and are bolted firmly to the engine block. The motor is geared up to a 30-inch pulley, which is belted direct to the band wheel in the belt house and the speed controlled by the usual wire and pulley attachment, when it is desired to change from a low to a high speed, such as is required in pulling rods and tubing. For pumping the motor is run at slow speed, giving on an average about 20 revolutions on the pitman. The output of the motor at this speed is from seven to eight horse power, and is regarded as the most economical running of the motor for ordinary work. However, when the motor is thrown from low to high speed the output is increased to 52 horse power, this being the limit or breakdown point of the motor. The motors are constructed without collector rings or starting resistance and are put in motion by a specially constructed controller filled with transil oil, which prevents sparking and removes the danger of fire from that cause.

The boiler house contains the usual equipment and apparatus for generating steam, a battery of three boilers of 225 horse power each of the Geary water tube type, equipped with duplicate boiler feed pumps

and feed water heater. Natural gas is used for fuel, boilers being fitted up with Kline and Kirkwood burners. All three boilers feed into an underground flue draft for same, being supplied by a steel, self supporting stack, 125 feet in height and 54 inches in diameter.

The boiler equipment is designed with a view to the economical use of water, being supplied with a Worthington surface condenser and cooling tower, which is 40 feet high and 72 inches in diameter. The water is cooled by a 72-inch rotary fan driven by a 15 horse power motor. There is also installed a hot well and vacuum pump driven by a 15-horse power motor. By this means the water is converted into steam and the exhaust, or steam, reconverted into water over and over again, the only loss being caused by evaporation. For supplying the loss arising from that cause an 800 barrel reservoir has been constructed so that a shrinkage of water supply can be averted at all times.

It is expected by the adoption of electricity as a power for pumping and drilling wells the expense can be reduced to the minimum. As compared with steam power, it will have many advantages aside from a reduction in operating expenses.

The two items of greatest expense in equipping a pumping well are the boiler and engine. In the deep sand territory it requires one 25 horse power boiler and three engines to pump three wells. This alone represents an outlay of about \$680 to each well. With the power supplied direct from the main plant these can be done away with and the motor substituted at a nominal cost not to exceed \$400. Another heavy item of expense is the laying and boxing of steam lines. In the spring time when the frost leaves the ground there are numerous slides that carry away the lines and in crossing ravines the lines have to be supported by trestle work to prevent them from being carried away when the mountain streams become roaring torrents, as is frequently the case. Fuel and water are also expensive, and it is estimated that a saving of from 60 to 70 per cent can be made in these two items. During the dry season a scarcity of water not only causes a suspension of drilling wells, but many of the pumping wells have to be shut down. The only expense with the adoption of electricity will be the erection of poles and the stringing of the copper wire to the point where it is desired to utilize the power. The estimated cost of electricity, compared with steam as a motive power, is very much less and decreases proportionately as the number of motors installed is increased. Exclusive of equipment and installation, the probable cost of pumping a well, which includes all labor connected therewith, will not exceed five or six cents per hour. The wells in this district are not pumped continuously and the most of them not more than three out of each 24 hours. A series of say 125 wells can be pumped at one time, this method allowing the installation of a large number of motors and pumping the wells in sections of, from 20 to 25; then the current is switched to another series and so on until the entire group of wells within a radius of as many miles as desired have been pumped. The distances, as has been demonstrated by the adoption of electricity as a motive power for purposes other than pumping oil wells, is limited only to the capacity of the equipment. While the plant at Fol-

som is equipped for pumping 200 wells, the construction is such that its capacity can be increased to 400 wells.

From an economical standpoint the new system promises to work a revolution in furnishing power and equipment for pumping and drilling wells.

DRILLING CABLES, ROPE AND ROPE MAKING, ANCIENT AND MODERN.

The word cordage is used in general for all sorts of ropes and cords, great and small, but its application is more particularly to rigging and fitting out vessels and drilling wells. The first ropes were probably made of the fibers of the inner bark of some kinds of trees, or of vines or grasses, and of thongs made from the hides of animals.

There are sculptures among the relics of the ancient Egyptians illustrating the manner of making ropes more than 4,000 years ago, and their most ancient records contain representations of well made ropes capable of withstanding the enormous strain developed in transporting their colossal statues and huge blocks of stone.

The process of preparing the hemp is shown in the tomb of Beni Hassan, at Thebes. Ropes of the palm are found in the tombs, and it was probably almost as common as coir or cocoanut fibre in India. The sculpture represents the process of making ropes from the thongs of leather. The material is shown by the skin hanging up in the shop. The thongs were cut by turning the piece around while the workman cuts with a knife, the same means we now use. As the workman receded he twisted the rope by some kind of a swivel that evidently had a weight, used both for a handle to twist the rope and by its weight to prevent the rope untwisting. An assistant arranged the strands as the work progressed.

The most celebrated ropes known to history were the cables used in the construction of the bridges on which the army of Xerxes crossed the Hellespont (Herodotus vii, 36). There were two bridges and six cables assigned to each bridge. If we assume the cubit to be 22 inches, the cable must have measured about 28 inches in circumference. The ropes of the Tartars are made of camel's hair and horse hair. Herodotus (iv, 74) mentions the wild and uncultivated hemp of Scythia. Hesychius says the Thracian women made sheets of hemp. Moschion (about 200 B. C.) records the use of heimen ropes for rigging the ship Syracusia, built for Hiero II.

The earliest attempt to introduce machines for making rope was made by Cartwright, the famous inventor of the power loom, who in 1792 obtained a patent for a machine called by him a "cordelier." Cartwright's cordelier, as improved in 1805 by Captain Huddart, became the basis of modern laying and forming machines. Numerous modifications and improved combinations have been introduced, but the principle on which they worked is essentially the same.

The use of machinery for making rope in the Unit-

ed States began in the nineteenth century, prior to 1820. The wheel or "whirl" used for hand spinning, to manufacture rope, aided by other imperfect mechanical contrivances, in the old fashion rope walk, was the only means employed.

Some machines were imported from England for twisting hand spun yarn into strands. These were considered a great improvement and proved to be a step in the right direction.

The skill of the American inventor has made such radical changes in machinery for the spinning of the threads and the process of rope making from the raw material that cordage made in the United States is held in high esteem and is exported to nearly all the countries on the globe. American rope machinery is now extensively used in European countries.

There are still some varieties of cordage manufactured by hand labor, but before many years the old fashioned rope walk will be a curiosity hardly to be found. This old process of rope making is essentially as follows:

The fibres of the hemp are first hackled to straighten out the fibre and to remove all tow, broken hemp and foreign substance. The workman places a bundle of fibre around his body, attaching one end to a hook in the whirl, drawing out the threads from the bundle with one hand, compressing the strand with the other. Experience teaches him the amount of fibre to use for the size cord he is to make. He then walks slowly backward down the walk, making the yarn as he goes, the spinning being done by the whirl, which is operated by an attendant, the spinner being very attentive to supply the fibre equally.

Two spinners may occupy the same walk and the same whirl, uniting the ends of their yard when they reach the end of the walk, and thus make it continuous. They will begin again at the whirl, and so repeat the operation to the end, uniting them as before, when all is wound upon reels. When a sufficient number of yards are spun they are twisted into strands and the strands into ropes. Sometimes horse power is used for this purpose.

The methods now in use in the immense factories of today with the latest improved construction, driven by large steam engines, present a very striking contrast with this primitive process.

The materials now employed in the manufacture of rope are various, embracing jute, cotton, hemp, sisal, manila, flax and other vegetable fibres.

The manila hemp is perhaps more extensively used for rope than any other material. Its strength and great pliancy make it more particularly adapted for vessels and for a great number of ordinary uses.

Sisal from Yucatan and jute from the East Indies are used for the cheaper grades of rope.

The fibre is cut down and divided into small strips.

These, while still in their succulent condition, are drawn between a sharp knife edged instrument and a hard wooden block to which it is fixed. By repeated scraping in this way the soft cellular matter which surrounds the fibre is removed, and the fibre so cleaned has only to be hung up to dry in the open air, when, without further treatment, it is ready for use. Each stock yields on an average nearly one pound of fibre—round, silky looking and lustrous, eas-

ily separated, stiff and very tenacious, and also very light. These fibres have great strength in the direction of their length, but are weak transversely. The finest is then separated by the women, and packed into bales of about 270 pounds each. Two natives cutting down plants and separating fibre will prepare not more than 25 pounds a day. The fibre yielded by the outer layers of the leaf stocks is hard, fully developed and strong, but the produce of the inner stalk is increasingly thin and fine. From these the inhabitants weave tissues of great delicacy. The fibres are not spun, but used in their natural state, those of a proper size being selected. The single fibres are tied together at their ends and wound into a ball, then soaked in hot water and dried, when they are ready for weaving. Tissues woven from the Abaca fibre are almost transparent, somewhat rigid, light and cool to the touch. Muslins, veils, napkins, etc., are made from it. The material readily takes dyes of all colors.

Approximate Strength and Length of Rope.

Size in Circumference	Size in Diameter	Strength of Manila Rope pounds	Length of Manila Rope per pound
½	3-16	540	60 feet inches
¾	1-4	780	40 feet inches
1	5-16	1000	30 feet inches
1¼	3-8	1280	23 feet inches
1½	7-16	1562	16 feet 8 inches
1¾	1-2	2250	12 feet 9 inches
2	9-16	3062	9 feet 8 inches

7¼	2 9-16	64000	5½ inches
7½	2 3-4	72250	5 inches
8	2 7-8	81000	4½ inches
8¼	3 -	90250	4 inches
8½	3 3-16	100000	3½ inches

PREPARING THE FIBRE.

Bales of manila as originally brought from the Philippine islands weigh about 270 pounds each. These are taken into the opening room where the bamboo bands are cut and the matting removed; then the manila is taken up; each hank (as twisted together) is hung up, untwisted, shaken out and straightened as much as possible. It is then placed upon carts of suitable length and width for convenience in hand-

MANILA PLANT

(MANILA ISLAND FIBER PLANT) THE FIBER IS USED FOR MAKING OIL WELL DRILLING CABLES

ling, when it is taken to the scutching room, the first mechanical operation. Here will be found machines with large cylinders having many long, sharp steel teeth. The manila is taken up and passed over these cylinders, to remove all the tow, broken ends, dirt and all other foreign matter which may adhere to it. It is then placed upon another cart and ready for the preparation room.

As it reaches this room the first machine to further treat it is the breaker. Here we find a very large, heavy machine, having two endless chains, each full of long, sharp steel pins. The first chain, running slow, passes the fibre to the second and faster running chain, which combs out and straightens the fibre, drawing it into one long, continuous sliver. The fibres, while passing through this machine are lightly sprayed with oil to soften and lubricate them. These slivers are then taken to a machine called the spreader, which is very similar to the breaker, but smaller, the mechanism is much finer and runs more rapidly. Several slivers are passed through this machine together, producing a much smaller sliver, combed out more evenly.

This drawing continues through a series of these machines, each in succession being lighter, running with endless chains, with finer sharp steel pins.

This drawing is repeated a number of times, in order to make the sliver more even, evenness being necessary to produce a nice, fine, even yarn.

This process is finally completed on a very fine drawing frame called a finisher. From this machine the material emerges complete ready for spinning. From the preparation room the fibre, in large cans, is carried to the spinning room, where the sliver is converted into yarn. In this room are long rows of spinning frames, each operating two spindles, run at a very high rate of speed. As the fibre is being spun it is wound upon bobbins holding about 10 pounds each. This is the most interesting part of the process as well as the most particular, as each attendant has to see that the sliver is regularly supplied, and that the bobbins, when full, are replaced again with empty ones, and each machine as well as the floor around it kept clean. After being spun, the yarn which is on the bobbins is put on carts and taken to the carriers, where it is delivered to the several departments for which it is intended—rope yarn going to the rope room and binder twine to the balling room.

ROPE ROOM.

Here we find different machines. Some to make twisted hay rope and hide rope, and others to lay up twines for tying up packages, and paper twine. Machines with formers and layers combined, which twist the yarns into strands and strands into ropes. Other layers and formers are separate. The formers lay the yarns into strands on large iron bobbins and when full these bobbins are transferred to the rope layer, where the strands are laid into rope. It is then reeled into a nice compact coil and covered with clean new burlap. After being properly marked and weighed, it is sent to the carrier, which delivers it to the store house.

DRILLING CABLES.

Cables for drilling oil and gas wells are made in lengths varying from 850 feet to 3,500 feet, and in size from 1¼ to 2½ inches in diameter. In manufacturing them they use three ropes of three strands each, twisted right handed. When made into a cable they are laid left handed. These are made upon upright machines, constructed especially for this work, being large and heavy, because of the great power required to manufacture one of these large cables.

1 Sub sill, 18 x 18.....	18 feet
1 Sand sill and tall post, 12 x 12.....	16 feet
1 Samson post 16 x 16, 20 x 20.....	16 feet
1 Jack post, 18 x 18.....	18 feet
1 Bull wheel shaft, 8 sq. 20 inches diameter.....	16 feet
2 Bull wheel posts, 14 x 14.....	11 feet
1 Swing lever, 10 x 14, 10 x 10.....	10 feet
1 Beam, 15 inches thick, 26 inches deep.....	26 feet
2 Side sills flattened, 12 x 12 face.....	21 feet
2 Working sills flattened, 12 x 12 face.....	21 feet
4 Derrick sills, 10 x 8.....	21 feet
1 16-foot log for props, 16 inches diameter.	
1 16-foot log, 16 inches diameter.	

NAMES OF PARTS OF RIGS.

- 1 Nose sill or Short Sill under end of Main Sill.
- 1—1 Mud Sill No. 1.
- 1—2 Mud Sill No. 2.
- 1—3 Mud Sill No. 3.
- 1—4 Mud Sill No. 4.
- 2 Main Mud Sill.
- 3 Sub Sill or Counter Sill.
- 4 Sand Reel Tail Sill.
- 5 Knuckle Post.
- 6 Tall Post.
- 6—1 Tail Post Braces.
- 6—2 Front Jack Post.
- 8 Rear Jack Post.
- 8—1 Jack Post Brace.
- 8—2 Jack Post Brace.

DERRICK CORNICE.

1 Piece	1½ x 14	16
1 Piece	1½ x 10	16
1 Piece	1½ x 6	18
1 Piece	1¼ x 12	16
2 Pieces (Top)	1½ x 12	16

NAILS.

125 lbs. 10 d. 75 lbs. 20d. 100 lbs. 30 d.

BOLTS WITH WASHERS.

20 ¾-in. Machine, assorted lengths.
8 7-8 x 16-inch double end.

FOR WHEELS.

1 Set of Bull Wheel Cants.
1 Set of Bull Wheel Arms.
1 Set of Bull Wheel Pins.

1 Bull Wheel Shaft.
1 Set Band Wheel and Tug Pulley Cants.
1 Sand Pump Reel.

IRONS FOR RIG.

1 Derrick (or Crown) Pulley.
1 Sand Pump Line Pulley.
1 Stirrup.
1 Saddle and Slide Irons with Bolts.
1 Shaft, Crank, Wrist Pin and Collar.
1 Pair Flanges with Bolts.
1 Back Brake for Sand Reel.
1 Brake Band.
1 Brake Lever.
1 Brake Staple.
1 Pair Bull Wheel Gudgeons.

THE SIZE, MEASURES AND WEIGHTS OF TOOLS
USED ON ALL OIL AND GAS WELLS AND THE
PRESSURE OF OIL AND WATER.

The specific gravity of oil varies from .865 to .777. I will use an average of .800.

Size pipe.	Oil. Lb. per ft.	Water. Lb. per ft.
2 inch	.9152	1.144
4 inch	4.1728	5.216
5 inch	6.428	8.16
6 inch	9.344	11.68
6½ inch	11.008	13.76
8 inch	16.704	20.88
10 inch	25.112	32.64
13 inch	44.096	55.12

THE OIL WELL DRILLER

PRESSURE OF WATER.

The pressure of water in pounds per square inch for every foot in height to 260 feet; and then by intervals to 3,000 feet head. By this table, from the pounds pressure per square inch, the feet head is readily obtained, and vice versa.

Feet, Head.	Pressure, per sq. inch.	Feet, Head.	Pressure, per sq. inch.	Feet, Head.	Pressure, per sq. inch.	Feet, Head.	Pressure, per sq. inch.	Feet, Head.	Pressure, per sq. inch.	Feet, Head.	Pressure, per sq. inch.

RECORDS OF DRILLED WELLS IN ALL PARTS OF THE WORLD.

ADVICE ON OIL WELL RECORDS, AND THE PROPER WAY OF KEEPING THEM.

In preparing the following well records for publication the terms used in the originals have been retained as far as practicable. My experience is that the driller's record should never be dressed up to suit the views of the publisher. It may be imperfect, unscientific, and even inappropriate names may be used; but let the record stand as he gives it, then every one has an opportunity of making his own deductions from it. I always distrust a record that bears the earmarks of attempted improvements, for it is very seldom that these improvements are judiciously made; and, indeed, they are often decidedly misleading; as for instance, when the driller's "slate and shells" is persistently changed to "slate and shales." Drillers have

certain terms—not classical, but expressive and well understood by the craft and by oil men generally—“Sugar sand, clover seed, white sand, salt and pepper, chocolate sand, variegated, corn meal, Cow run, Dunkard, Trenton rock, blue Monday, salt sand, Maxon, Keener, boulder, Big Injun, Berea grit, Gantz, Gordon, fourth and fifth, Warren, Cherry Grove, Bradford, Kane and Elk sands and shells, slate and shells, soapstone,” etc., and those who substitute other names should first be certain that they clearly comprehend the meaning of the originals.

A simple form has been adhered to throughout which brings out all the need facts (as far as they may be known) plainly and without unnecessary verbiage, to wit: name of well, date of completion, location, owners, authority for facts given and elevation above ocean—followed by an unbroken chain of thickness and depths of strata drilled through. The frequent appearance of interrogation marks where descriptions of materials should be shown in what fragmentary manner many of the records were kept. They cast no doubt upon the figures given, however, but simply indicate that the driller omitted to note what kind of rocks filled these intervals. For instance, if the driller’s memorandum reads “struck first sand at 750 feet, sand 25 feet thick; struck second sand at 870 feet, sand 30 feet thick,” it shows an interval of 95 feet between the sands—and as this is one of the links in the chain of depths it must be inserted, although the materials cannot be described.

The names of those who have kindly furnished records are given in plain Quaker fashion; and in making my grateful acknowledgments to the people of the oil regions for their zealous and cordial co-operation in furthering the interests of the OIL WELL DRILLER and for their many personal courtesies, I desire to especially refer them to those which appear in a similar connection in the former edition. Their numbers show the widespread interest that has been awakened; and also furnish a justifiable plea for my not attempting to particularize.

Many inquiries have been made, both verbally and by letter, as to the best methods of keeping well records and preserving sand pumpings.

I know of no better or more convenient form for a well register than that employed in the following pages. When records are kept in this manner mistakes are not likely to occur and one may always have before him the thickness of each rock division and the depth to both its top and bottom—with the tide water elevations, if the altitude of the well mouth is known. Every useful fact is plainly noted in its place and no mental calculations are required when any of them are wanted.

A very common, but satisfactory way of keeping a record is this:

Struck limestone at..... 320 feet
 Through limestone at..... 335 feet
 Top of hundred-foot at.....1200 feet
 Through hundred foot at.....1280 feet
 Top of thirty foot at.....1340 feet
 Through thirty foot at.....1365 feet
 Top of third sand at.....1465 feet
 Through third sand at.....1500 feet

How much plainer do the facts stand out, and in the same number of lines when placed in this form, although the intervals can only be filled in with interrogation marks?

?320' to 320'
 Limestone 15' to 335'
 ?865' to 1200'
 Hundred foot 80' to 1280'
 ? 60' to 1340'
 Thirty foot 25' to 1365'
 ?100' to 1465'
 Third sand 35' to 1500'

Another popular method consists of a simple enumeration of the kind of material drilled through, with the thickness of each bed and notes of measurements when important beds are struck, thus:

Soil 20 feet
 Slate130 feet
 Sandstone 20 feet
 Slate 30 feet
 Struck limestone at.....220 feet
 Limestone 10 feet
 Slate 50 feet etc., etc.

This form is good, provided no mistakes occur in the original record, nor in copying it from the driller’s memoranda, which are generally pretty well blurred and defaced by the time the well is completed; but if mistakes should occur, there is no way of definitely locating them and the record may be ruined. In the last example, the four divisions overlying the limestone only aggregate 200 feet, yet the note says “struck limestone at 220 feet.” Has one division of 20 feet been omitted, or has a figure 5 been mistaken in copying for a figure 3? It is impossible to decide or to positively locate the error. But if the record had been kept with the depths carried out in a second column and copied as below:

Soil20' to 20'
 Slate130' to 170'
 Sandstone 20' to 190'
 Slate 30' to 220'
 Limestone 10' to 230'

it would be seen at a glance that an error had been made between the depths of 20' and 170', and the inference would be that in the slate division 130 feet had been copied instead of 150 feet. At any rate, the mistake is located; and even if it be suspected that one division has been omitted, the integrity of the other parts of the record can be presented in this way:

Soil 20' to 20'
 ? 20' to 40'
 Slate130' to 170'

Records of this kind, even when supposed to have been kept with the greatest of care, can seldom be put into the two-column form and made to agree with the

checking points mentioned or the total depth of the well without more or less adjustment; and in some cases the discrepancies seriously affect the value of the record, or perhaps destroy all confidence in it. In this system there are no checks (or at least the driller does not take the trouble to foot up his figures as often as he should) and a mistake may readily be made and pass unnoticed until too late to properly correct it. But if the thicknesses and depths are both noted at the same time one is a check upon the other; any adjustment that may be required is made at the proper time and in the proper place; so that when the well is completed the record stands without a flaw. Therefore, by all means keep a consecutive register of both thicknesses and depths, since errors are less liable to occur in the original; and should they creep in at any time, can be corrected with confidence, and without jeopardizing the value of the whole record.

Preserving Specimens.—Wash the sand pumpings thoroughly, until no muddy water drains from them; dry immediately, but without roasting the materials; when dry, put a couple of ounces into a small, strong paper bag; number the bags consecutively as used and note the depth; note also the character of the material enclosed, whether hard or soft, clean or muddy, and any other item that may be of interest in connection with the well; fold each bag by itself, tie in convenient packages, and they are ready to be sent anywhere by mail or express whenever required. This is by far the most practical way of preserving specimens at wells.

Never put specimens in common letter envelopes; they are not gummed at the corners and invariably leak.

Never send bottles to a well, for they will be filled with wet sand pumpings, which are good for nothing. The depths will be indistinctly marked upon the corks which may have been changed from one bottle to another, or upon labels that refuse to adhere, and when the bottles return to you some will have been broken and lost and the remainder will be found in such a hopelessly disordered condition that they cannot be studied with any satisfaction or confidence.

Never send boxes of paper, wood or tin to a well. These are very popular, and I have received and examined many specimens put up in that way. But unfortunately it always happens that all the figures are noted upon the covers. Such specimens can only be compared by opening several boxes at one and the same time, and when all the boxes are alike some of the covers are sure to get misplaced. Specimens kept in this way are always of doubtful value.

Never put samples in boxes or bags with a loose slip of paper having the depth, etc., marked upon it, for the first person who examines them is likely to make unintentional transpositions of slips.

Never put up a shelf at the side of the derrick and make a row of little boxes to receive the sand pumpings in rotation, as they are saved, for every man who visits the well will take a pinch to examine and generally return it to the wrong apartment. By the time the well is completed the boxes contain a heterogeneous mixtures which are only a delusion and a snare

to those who may attempt to make deductions from them.

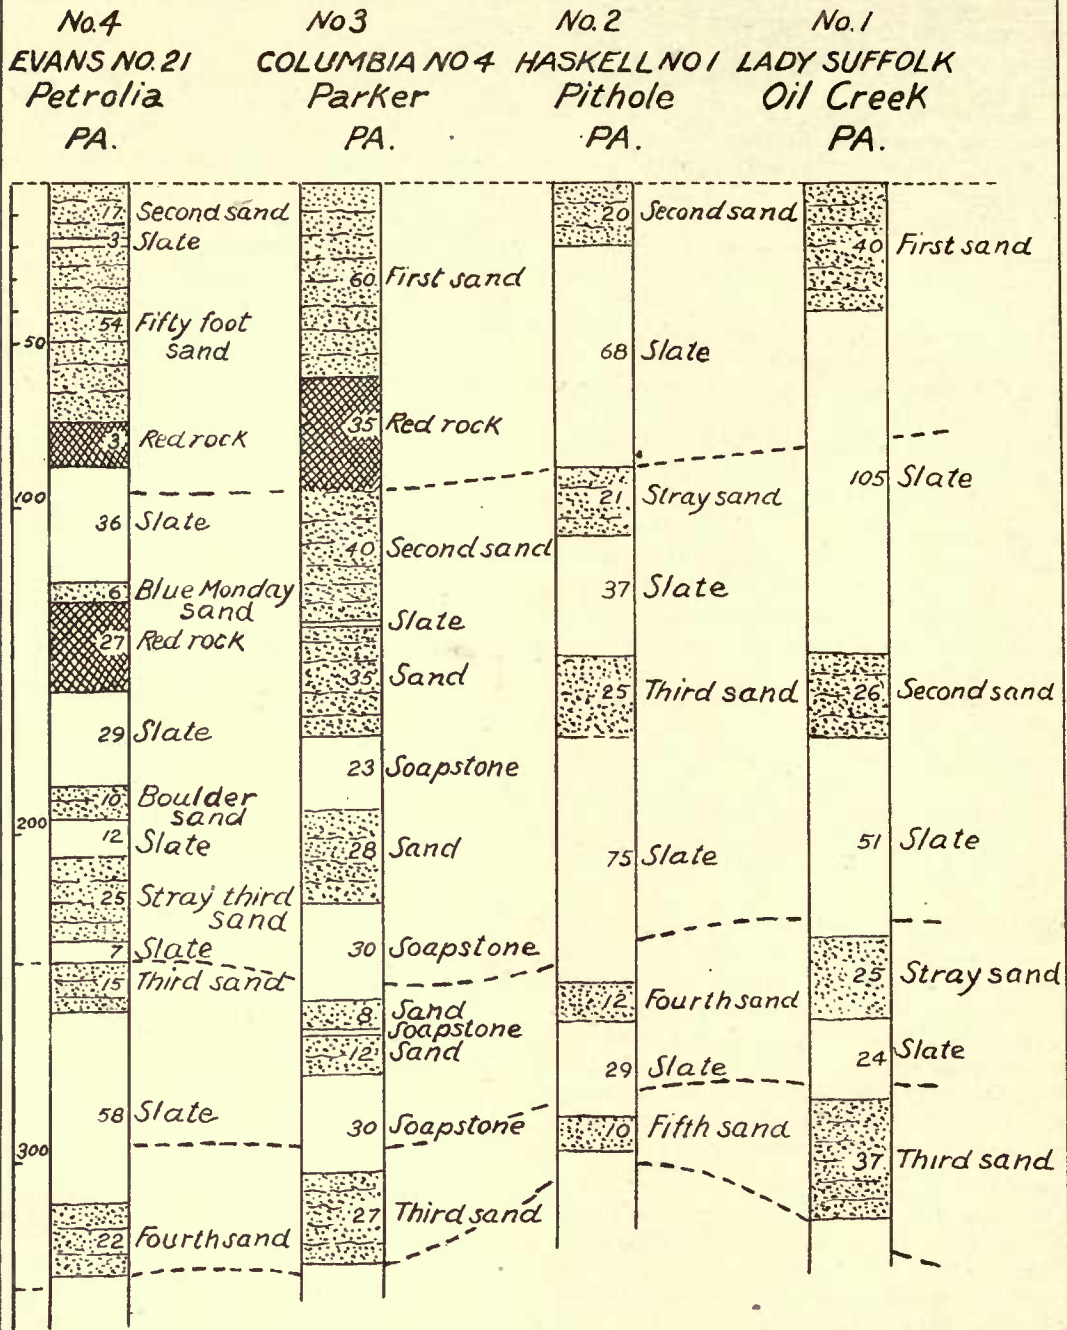

Never keep specimens in a box divided into several rows of small compartments, or in several rows of an augur hole bored into a plank, and don't nail narrow strips or boards on the main sill or engine block brace (bumper brace) along the belt house, in small compartments the jar caused by pulling out the drilling tools or bailing out the hole will cause the sand to move from one compartment to another, thereby the sand becomes mixed as mentioned. This plan is even more objectionable than one single row of apartments, since the depths will sometimes be marked on one side and sometimes on another, and when an attempt is made to arrange the material in order it is not always clear to which box the figures refer.

Never suppose that you will get a satisfactory representation of the strata drilled through by charging a glass tube with the sand pumpings. The theory looks good, but did any one ever see a glass tube prepared in this way, whether by a driller or by an accomplished expert, that was of any practical value? I have examined many, some of them having been prepared at considerable expense, and as supposed, with great care, but I never saw one that accomplished what was intended, or that was of any special use in studying the geology of oil wells.

I am impelled to be thus prolix in these apparently trivial matters by recollections of my experiences, of my disappointments, of my griefs. I have frequently driven 10 or 15 miles to examine some locally noted "complete set of sand pumpings," with the expectation, or at least the hope of getting information on some important feature of structure not clearly brought out in the ordinary records, and always returned foiled and disheartened; having invariably found that the specimens were worthless in any special or definite study, on account of the unreliable manner in which they had been preserved.

To secure a complete set of sand pumpings it is necessary to save some sediment after each and every full screw run. Bag the specimens; number the bags and mark them provisionally, three feet, five feet, or whatever depth the driller thinks the bit has penetrated. Measure up occasionally at important changes in the rocks, and if the provisional measurements on the bags do not tally with the actual measurements, correct them judiciously and re-mark the bags permanently, keeping a written record all the while. When the samples are brought to the office and bottled for use, they can be so arranged that nearly every bottle (I use half ounce square bottles) may represent five feet in the well, and thus, when numbered and placed side by side upon a shelf a complete columnar section of the well is presented and every portion of the material is easily accessible for examination.

The common way of saving one specimen to represent each kind of rock drilled through is good as far as it goes; but its value, of course, depends entirely upon the judgment of the driller, as he decides where one rock ends and another commences and selects the specimen which is to be considered typical of the whole stratum. In well pronounced beds of sandstone, limestone or slate, these selections can easily be made;

 TO ILLUSTRATE THE STRUCTURAL VARIATIONS OF THE
 VENANGO-BUTLER OIL SANDS GOING SOUTHWESTERLY

but there are horizons of mixed sediments (and they are generally important horizons) where even a geologist might make mistakes if he neglected to properly test the materials. These intervals are seldom properly represented by the driller's samples. For instance, in localities where the Ferriferous limestone is very thin and shaly and lies enclosed in a bed of dark slaty shale—a specimen of the shale is preserved, the limestone is passed unnoticed, the whole mass is recorded as shale, and the position of a very important stratum is overlooked. Or in places where the Silicious limestone blends so deftly with the underlying sandstone and acts so much like a sandstone under the drill that it is generally counted as one continuous rock—if a sample be taken from the upper part we have a silicious limestone, if from the lower part a pure sandstone, and neither correctly represents the whole of the stratum described in the record. Therefore, it is safer and more satisfactory, whenever the beds are of considerable thickness or at all doubtful in composition, to take specimens every 10 or 15 feet, although the naked eye can detect but little variation in the sand pumpings.

PENNSYLVANIA WELL RECORDS.

Jonathan Watson, Flats well No. 1, East Titusville, Pa.; Williams, Tanner, Watson & Co., owners.—The well was known at that date as the Williams well. It was drilled in the first sand March, 1860, and produced 10 barrels of oil a day. After producing for three months the well was drilled down to the second sand and began to flow at the rate of 200 barrels of oil a day, July 7, 1860. From the fact that the Williams well was a flowing one after drilling it down to the second sand, it was renamed the Fountain well which name it was known by until it was abandoned because of its small production and the low price of oil about 15 years ago. In 1902 Schlosser and Yankee leased the land that the old Fountain well was on. They cleaned out the old hole and put in a string of casing and shot the well in February, 1903. It flowed and caught fire from the drilling machine, which burned up. After the well was cleaned out and put to pumping it began to produce 10 barrels of oil each 24 hours.

Record of Barnsdall, Mead, Rouse & Co. well No. 1, Jonathan Watson flats, Titusville, Pa.

Drive pipe, 47 feet; depth of well, 116 feet. The well produced 600 gallons of oil on an average a day. Well commenced pumping on the first day of February, 1860, and in four months 56,000 gallons of oil was sold for \$16,800. The oil sold at 30 cents a gallon at the well. The cost of the well was \$3,000. First well to drive pipe with a battering ram or wooden maul.

Record of the first well drilled in the Oil City, Pa., oil field.

Nearly opposite the mouth of Oil creek, now South Oil City, on the bank of the Allegheny river, in February, 1860, Phillips, Frew & Co. started to drill the first well in Oil City on April 5, 1860. The well was

drilled in the sand at a depth of 197 feet. It produced 42 barrels of oil the first 24 hours, which sold at 50 cents a gallon, and was the cause of one of the greatest excitements on the Allegheny river. It was the beginning of the boom of the world's famous oil town of Oil City.

Record of the first well drilled at Warren, Pa., John Kitchen lot well No. 1, on the east side of Conewango creek near the Conewango creek dam.

The well was drilled in the spring of 1860. A small show of oil was found at 500 feet deep, but for the lack of funds the well was not drilled deeper and was soon abandoned.

Record of the second well drilled at Warren.

The well was drilled on the old Tanney lot, later known as the Truby lot, near the Pennsylvania avenue millrace bridge. The well was drilled in the summer of 1860 to a depth of 600 feet and abandoned as a dry hole.

Record of the third well drilled at Warren, and the first well to produce oil; David Beatty farm well No. 1; David Beatty, owner.

Began drilling January, 1875; on March 12, 1875, oil was struck at a depth of 640 feet in a sand that was named the Beatty or Glade sand. The well was shut down and held as a mystery, but on the morning of March 13, 1875, the well flowed over the derrick and over the snow hundreds of feet away. The well produced 10 barrels of oil a day. It was drilled in search of natural gas to supply Mr. Beatty's residence with fuel.

Record of the first Speechley or gas sand well drilled.

In January, 1885, Samuel Speechley started a well on his farm near McPherson, Coal Hill postoffice, Pine Grove township, Venango county, nine miles east of Oil City, intending to drill three thousand feet deep in search of the Bradford sand. On April 13, 1885, at 900 feet below the third sand the Speechley or gas sand was found. The well had a pressure of 600 pounds to the square inch. Oil City, Franklin and a number of other towns in Pennsylvania are supplied with natural gas from this sand.

Record of Calaboose and Cornplanter tract well No. 46, Chamberlain farm, two miles northeast of Oil City; Chambers Trust estate, owners.

Eight inch conductor, 20 feet; 5½ inch casing, 325 feet; top of second sand, 778 feet; bottom of second sand, 802 feet; top of third sand, 823 feet; bottom of third sand, 935 feet; total depth of well, 940 feet. Well shot in second sand with 40 quarts of nitro-glycerin. Well shot in third sand with 20 quarts of nitro-glycerin. Production first 24 hours, 10 barrels of oil. G. W. Schneider, superintendent.

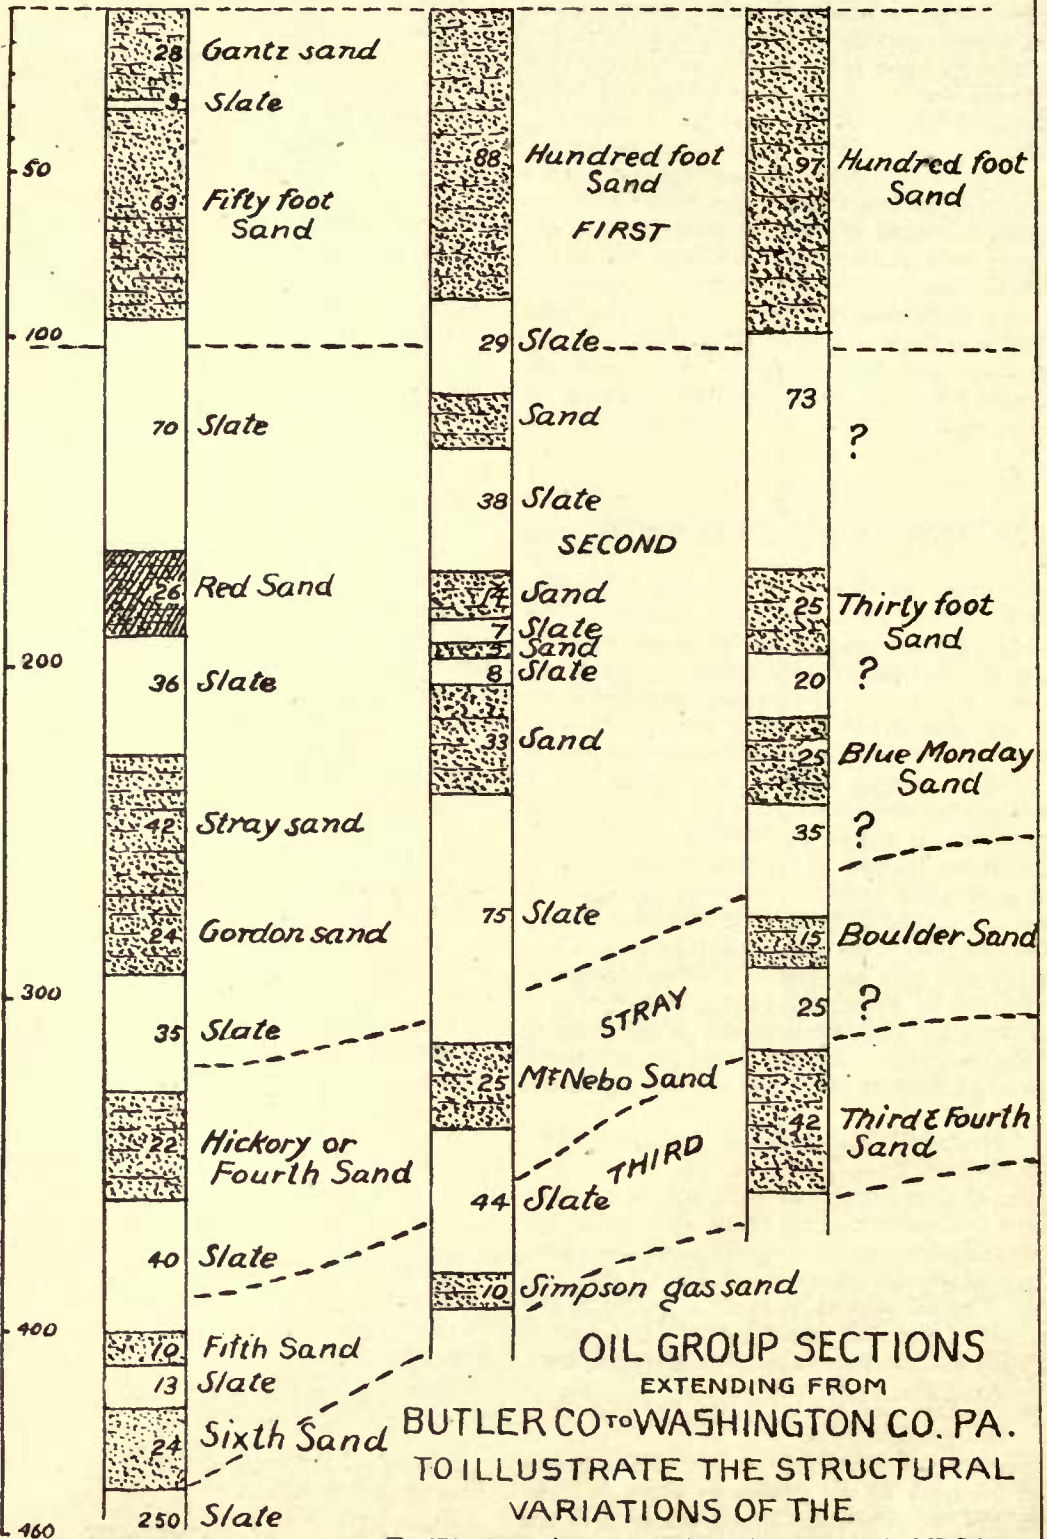

Record of Rollins farm well No. 4, Kinzua; Smith, Bright and Borchers.

Eight inch drive pipe, 72 feet; 5½ inch casing, 190 feet; top of the oil sand, 650 feet; first pay, 653 feet.

 TO ILLUSTRATE THE STRUCTURAL
 VARIATIONS OF THE
BUTLER-ALLEGHENY-WASHINGTON
OIL SANDS GOING SOUTHWESTERLY.

Well began flowing at 662 feet. Total depth of well, 668 feet. Well flowed first 24 hours, 140 barrels of oil. Well finished December 15, 1885.

Record of Smith, Bright and Borchers's farm well No. 6, Billy's run, opposite Kinzua, Glade township, Warren county.

Eight inch conductor, 27 feet; 5 $\frac{5}{8}$ inch casing, 227 feet; top of oil sand, 888 feet; first oil pay, 807 feet. Well began flowing at the rate of 200 barrels of oil each 24 hours. Total depth of well, 923 feet. Well finished February 7, 1887.

Record of Rogers Farm Oil Co. well No. 1, Rogers farm, Morrison run, Warren county.

Eight inch conductor, 16 feet; 5 $\frac{5}{8}$ inch casing, 163 feet; top of Glade sand, 1020 feet; bottom of Glade sand, 1055 feet; top of Gartland sand, 1165 feet; bottom of Gartland sand, 1177 feet; total depth of well, 1192 feet. Production, one barrel a day. G. W. Schneider and F. H. Trap, owners.

Record of Rockwell and Gilbert well No. 1, Deer Lick oil field, Warren county.

Eight inch conductor, 20 feet; 5 $\frac{5}{8}$ casing, 250 feet; Cherry run sand, 1720 feet; gas sand, 1872 feet; Deer Lick sand, 1970 feet; total depth of well, 1980 feet. Production of well first 24 hours, 600 barrels of oil.

Record of Mead tract well No. 25, Henry's Mills, Warren county; Jamison, Bright and Borchers.

Conductor, 18 feet; 5 $\frac{5}{8}$ inch casing, 435 feet; Clarendon sand, 1369 feet; second sand, 1470 feet; top of Cooper sand, 1687 feet; bottom of Cooper sand, 1707 feet; total depth of well, 1707 feet. Well finished November, 1900. Production first 24 hours, 25 barrels of oil.

Record of well No. 10, D. Grimm farm, Point Hill, near Franklin.

Driving pipe, 8 inch, 19 feet; casing 5 $\frac{5}{8}$, 205 feet; top of sand, 565 feet; bottom of sand, 617 feet; whole depth (pocket), 643 feet. The above is a record of a first sand Franklin lubricating oil well, drilled in June, 1898, and started to pump at the rate of one barrel daily. D. Grimm, owner. Record by D. Grimm and Son.

Record of well No. 14, tract 35, D. Grimm farm, Franklin, Pa.; D. Grimm, owner. Drilled by Elmer Keeley and shot with 30 quarts of nitro-glycerin on December 20, 1898. Started pumping at the rate of 60 barrels per day.

Conductor, 32 feet; casing, 6 $\frac{1}{4}$ inch, 246 feet; bottom of first sand, 547 feet; top of second sand, 628 feet; bottom of second sand, 651 feet; total depth, 700 feet. Record by D. Grimm and Son.

Record of Bowersock farm well, 1 $\frac{1}{2}$ miles southeast of Oil City; Chambers Trust estate, owners.

Eight inch conductor, 10 feet; 5 $\frac{5}{8}$ inch casing, 300 feet; Mountain sand, 470 to 500 feet; top of first sand, 695 feet; small show of oil, 700 feet; bottom of first

sand, 740 feet; top of second sand, 845 feet; oil in second sand, 850 feet; bottom of second sand, 869 feet; gray and third sand run together, 979 feet; show of oil, 998 feet; total depth of well, 1055 feet. Well was shot in second sand with 23 quarts of nitro-glycerin, in the third sand with 26 quarts. Production two barrels a day. Well drilled October, 1901. G. W. Schneider, superintendent.

Record of Cracker lot well No. 50, Good Will Hill, Grand Valley oil field, Warren county; John Bright and Sons, owners.

Eight inch conductor, 15 feet; 5 $\frac{5}{8}$ inch casing, 341 feet; first sand, 574 feet; top of second sand, 703 feet; bottom of second sand, 715 feet; top of third or Grand Valley sand, 804 feet; bottom of pay, 824 feet; total depth of well, 846 feet. Production first 24 hours, 18 barrels of oil. Well finished May 19, 1902.

Record of Gray sand district, 7 miles east of Oil City, Humboldt C well; Chambers trust estate, owners.

Eight inch conductor, 16 feet; 5 $\frac{5}{8}$ inch casing, 326 feet; second sand, dry, 810 feet; top of Gray sand, 952 feet; total depth, 981 feet. Under this territory is found the Speechley or gas sand. It is found 950 feet below the Gray sand. Well shot with 40 quarts of nitro-glycerin. Production first 24 hours, 10 barrels. Well drilled, 1902. G. W. Schneider, superintendent.

Record of well No. 32, tract 66, D. Grimm farm, Cranberry township, Venango county.

Conductor, 8 inch, 12 feet; casing, 6 $\frac{1}{4}$ inch, 354 feet; top of first sand, 717 feet; water in first sand, 729 feet; bottom of first sand, 767 feet; top of second sand, 867 feet; bottom of second sand, 895 feet; top of Gray sand, 994 feet; bottom of Gray sand, 1020 feet; total depth, 1055 feet; 53 feet liner, 4 $\frac{1}{4}$ inch casing set in bottom of hole; liner in second sand 28 feet 5 inches; casing setting on 5 $\frac{5}{8}$ inch shoulder; 440 feet of 4 $\frac{1}{4}$ inch casing disconnected and set on top of second sand liner to shut off the salt water of first sand, with 6 $\frac{1}{4}$ inch leather cup, collar on top with left hand screw; shot with 80 quarts in the Gray sand and 15 quarts in the second sand by T. M. Agnew on September 9, 1902. Drilled by J. B. Hayslett, contractor. Tubed and started to pump September 11, 1902. Started to pump at 25 barrels a day. Record by D. Grimm and Son.

Record of Bell lot No. 77, well No. 16, 4 miles southwest of Oil City; Chambers Trust estate, owners.

Eight inch conductor, 14 feet; 5 $\frac{5}{8}$ casing, 320 feet; top of second sand, 850 feet; bottom of second sand, 876 feet; total depth of well, 916 feet. Well shot with 40 quarts of nitro-glycerin. Production first 24 hours, 30 barrels of oil. G. W. Schneider, superintendent.

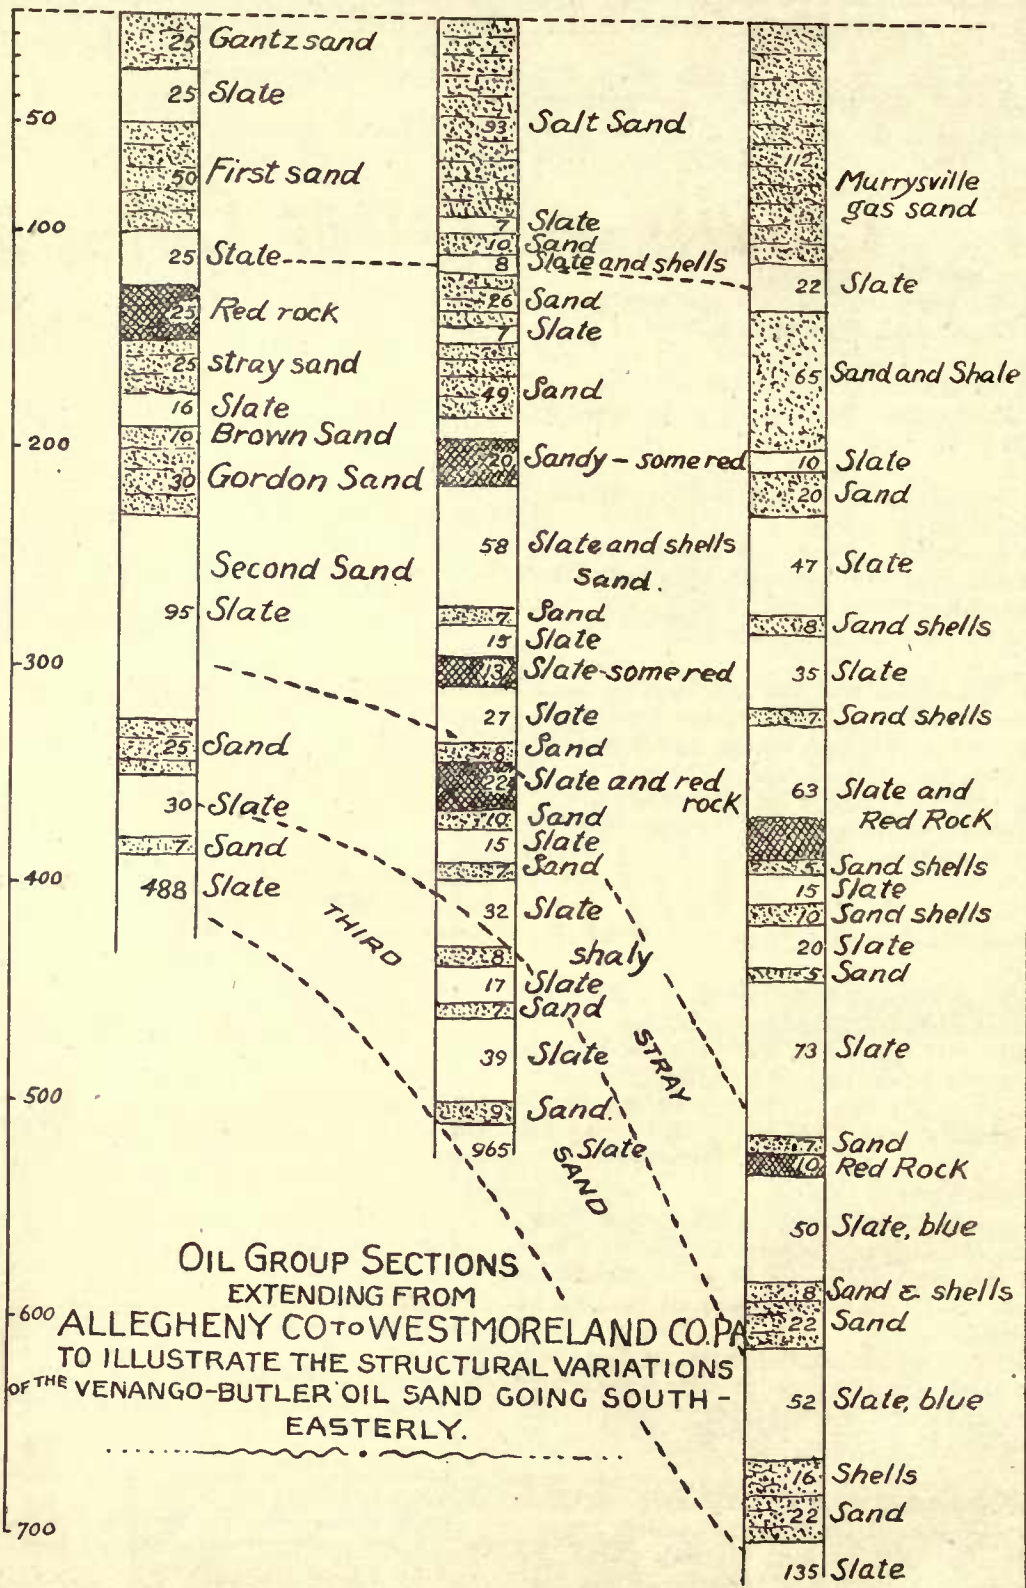

Record of McClintock farm well No. 17, Rouseville; Puriton Oil Company.

Eight inch conductor, 15 feet; 6 $\frac{1}{4}$ casing, 112 feet; first sand, 252 feet; top of second sand, 423 feet; bottom of second sand, 423 feet; top of third sand, 543 feet; bottom of third sand, 560 feet; total depth, 620

feet. Production first 24 hours, five barrels. Well drilled February, 1903. Record by Samuel Reynolds, driller; William Moyer, contractor.

Record of the first fifth sand well drilled in Allegheny county; N. D. Jones and J. M. Patterson, owners; Joseph J. McCurdy farm well No. 1, McCurdy.

Began drilling August, 1890; conductor, 16 feet; $8\frac{1}{4}$ casing, 244 feet; $6\frac{1}{4}$ casing, 1024 feet; top of the hundred foot sand, 1815 feet; bottom of the hundred foot sand, 1900 feet; top of the thirty foot sand, 1982 feet; good show of oil, 2002 feet; bottom of the thirty foot sand, 2024 feet; top of Gordon sand, 2085 feet; no oil, little gas; bottom of Gordon sand, 2118 feet; top of fourth sand, 2132 feet; bottom of fourth sand, 2153 feet; top of fifth sand, 2215 feet; 6 feet in the sand the well started to flow at the rate of 25 barrels each hour; best well on the farm produced 125 barrels an hour; 10 wells were drilled on the farm. Well completed October, 15, 1890.

Record of the largest oil well struck in Pennsylvania and largest white sand oil well in the world; Greenlee and Forst, owners; James Mevey farm well No. 1; McDonald oil field; well located three-fourths of a mile northeast of McDonald.

Began drilling July, 1891; top of Gordon sand, 2180 feet; bottom of Gordon sand, 2202 feet; top of fifth sand, 2300 feet; bottom of fifth sand, 2316 feet; well drilled in fifth sand Saturday, September 26, 1891; Monday, September 28, 1891, the well produced 15,600 barrels of oil in 24 hours. South Penn Oil Co., present owners.

Record of Adams farm well No. 6; Fisher Oil Co.; Cliff Mines, Allegheny county.

Conductor, 19 feet; $8\frac{1}{4}$ casing, 305 feet; $6\frac{1}{4}$ casing, 935 feet; $4\frac{7}{8}$ casing, 1780 feet; top of hundred foot sand, 1739 feet; bottom of hundred foot sand, 1780 feet; top of thirty foot sand, 1863 feet; bottom of thirty foot sand, 1881 feet; top of Gordon sand, 1898 feet; bottom of Gordon sand, 1933 feet; top of fourth sand, 2010 feet; bottom of fourth sand, 2070 feet; total depth, 2080 feet; dry hole. Record by J. W. Christen, driller.

Record of the largest oil well struck in the McCurdy oil field; W. H. Kelso farm well No. 2; McCurdy, Allegheny county; N. D. Jones, owner.

Drilled in the fifth sand October 27, 1891. Produced 330 barrels each hour. N. D. Jones drilled 48 wells in the McCurdy oil field, only two being dry holes. Both dry holes drilled in 1896. The sand was drained by the larger wells drilled five years before.

Record of Nancy Gibson farm well No. 5; Devonian Oil Co.; Wildwood oil field, Allegheny county.

Conductor, 15 feet; $8\frac{1}{4}$ casing, 318 feet; $6\frac{1}{4}$ casing, 790 feet; $4\frac{7}{8}$ casing, 1507 feet; top of third sand, 1844 feet; oil pay in third sand, 1850 to 1868 feet; total depth, 1868 feet. Well began flowing 125 barrels of oil each hour May 19, 1897. A. W. Leonard, contractor.

Record of Mary Boyle farm well No. 4; Devonian Oil Co.; Wildwood oil field, Allegheny county.

Conductor, 16 feet; 10 inch casing, 335 feet; $8\frac{1}{4}$ casing, 740 feet; $6\frac{1}{4}$ casing, 1640 feet; hundred foot sand, 1690 to 1800 feet; third sand, 1881 to 1890 feet; fourth sand, 1935 feet; oil in fourth sand 1951 feet; total depth, 1968 feet; production first 24 hours, 25 barrels. Well finished August, 1897. A. W. Leonard, contractor.

Record of the deepest cable drilled well in the world; William Bedell farm well No. 1; Peters creek, $2\frac{1}{2}$ miles west of West Elizabeth, Allegheny county, and 12 miles southeast of Pittsburg. Forest Oil Company, owners.

Began drilling, 1895; the well was 115 feet below the Pittsburg coal; conductor, 15 feet; $8\frac{1}{4}$ inch casing, 320 feet; $6\frac{1}{4}$ inch casing, 960 feet; fifth sand, 2285 feet; 10 feet of sand; struck gas in top of fifth sand; sixth sand, 2395 feet; 15 feet of broken sand; the well was drilled 4509 feet deep and shut down. J. G. Clark and Reed Banks were the drillers, and J. P. Fishel, contractor.

The well was shut down for one year, during which time lightning struck the derrick and burned the rig. In a short time the Forest Oil Co. decided to build a new rig over the hole. It was built extra large and strong, with a set of bull wheels, two brakes and three grooves for three bull ropes, and drill the well down in search of the Bradford sand. The men hired by the Forest Oil Company to drill the well from 4509 feet to 5582 feet deep were Drillers Samuel W. Coleman and Cliff Young of McDonald, Pa.; tool dressers, Henry A. Stroup and Eugene O'Brien of McDonald. The well was started to be drilled down in 1896. It made gas enough from the Elizabeth sand for fuel to drill with and for lights. At a depth of 5275 feet the machinery became too light and small to handle the tools. It then became necessary to put in extra heavy machinery. Two 25 horse power boilers, two engines, one 15 horse power and the other 30 horse power were used. They were coupled together. The tug pulley or belt wheel end of the shaft of one engine was coupled by a flange union to the balance or fly wheel end of the shaft of the other engine. The engines were arranged similar to the locomotive engines which have no dead center. The two boilers were connected together with 3-inch steam line which ran to a 3-inch throttle in the engine house, then to a 3-inch tee; $2\frac{1}{2}$ connections were made to the 30-horse power engine and 2-inch connections were made to the 15 horse power engine. Both engines were governed by one 3-inch throttle. One 16-inch belt, three $2\frac{1}{2}$ -in. bull ropes, one $13\frac{1}{2}$ -foot band wheel, one 5-inch forged shaft and crank, one set $4\frac{1}{2}$ -foot flanges were used and two cables spliced together, making about 6,000 feet. One cable $2\frac{1}{4}$ inches in diameter and weighing 5,600 pounds was used at the bottom of the well, and the cable that was used on the top of the hole was $2\frac{3}{8}$ inches in diameter and weighed 8,400 pounds, making a total weight of cable of 14,000 pounds, which would represent a value of about \$2,250. The size of the hole was $6\frac{1}{8}$ inches and the tools used were the ordinary

drilling tools used in $6\frac{1}{4}$ holes. On Saturday night June 30, 1897, before shutting down for the week the well was measured with a steel measuring line. The hole measured 5,582 feet deep. This was the last measurement made of the well. On Monday morning, July 2, 1897, while springing the tools to bottom the crown pulley on top of the derrick broke and cut the cable and dropped the tools. The tools have never been fished out. The approximate cost of the well was about \$40,000.

Record of Robert and Henry Garraux farm well No. 1, Bakerstown oil field, Allegheny county. Devonian Oil Company.

Began drilling, 1901; conductor 13 feet; 10 inch casing, 122 feet; $8\frac{1}{4}$ casing, 770 feet; top of the hundred foot sand, 1547 feet; bottom of the hundred foot sand, 1639 feet; $6\frac{1}{4}$ casing, 1645 feet; top of the boulder sand, 1792 feet; gas in boulder sand, 1796 feet; break in boulder sand, 1800 to 1803 feet; oil in boulder sand, 1817 to 1827 feet; second pay in boulder sand, 1831 to 1840 feet; total depth of well, 1843 feet; finished well July 3, 1901. Production 10 barrels an hour. Present production, 45 barrels a day. A. W. Leonard, contractor.

WEST VIRGINIA WELL RECORDS.

Record of the first well drilled in Virginia, now West Virginia, exclusively for oil. It was drilled by the lever system, by C. H. Shattuck, now of Parkersburg, W. Va. The well was drilled on a 10-acre tract of land he purchased from Bushrod Creel at the Sand Diggings, on Hughes river, 22 miles east of Parkersburg, on the Stanton and Parkersburg turnpike. The well was drilled 300 feet deep in November, 1859, and proved to be a dry hole. This well was drilled 59 days after the Drake well at Titusville, Pa. Record by C. H. Shattuck, Parkersburg, W. Va.

Record of the first well drilled on Oil Spring run, Ritchie county; Ford and Hanlon, owners.

Began drilling with spring pole May, 1861. Well finished through the salt sand 300 feet deep November, 1861. Well put to pumping December, 1861, and produced five barrels of oil a day.

Record of the first well drilled at Volcano, White Oak run, Wood county; W. W. Harkness, owner.

Began drilling May, 1865; conductor hole 10 feet deep; square 8 inch conductor box 10 feet; top of gas sand 10 feet; bottom of gas sand 30 feet; top of salt sand 250 feet; first show of oil 255 feet; slate in salt sand 295 to 305 feet; oil in second salt sand, 310 feet; drilled through the salt sand, 355 feet; well put to pumping August, 1865 pumped 10 barrels a day.

Record of the first well drilled in the Big Injun sand in the Mannington oil field; Flaggy Meadow Oil Company; D. F. Hamilton farm well No. 1.

Began drilling May, 1889; the record of the cas-

ing and hole is lost. The Flaggy Meadow Oil Company was composed of M. B. Montgomery, of Washington, Pa., and the Jackson Oil and Gas Company, which was composed of Prof. I. C. White, of Morgantown, W. Va.; T. M. Jackson, of Clarksburg, W. Va.; Gen. C. L. Smith, of Fairmont, W. Va.; A. L. Prichard and A. W. Prichard, of Mannington. The well was drilled into the Big Injun sand October 3, 1889 and plugged with a home made plug and filled up with broken stone and sand and worked as a mystery; but a few days after being plugged the well raised a pressure of gas and blew the plug and stone and sand out, and flowed on the ground at the rate of 10 barrels a day. In a second attempt to plug the well for a mystery the well was ruined. After a long fishing job the well was abandoned. Contractors, Barrows and Dugan. The Jackson Oil and Gas Company had 20,000 acres of land under lease for oil and gas and in a short time sold their holdings to the South Penn Oil Company for a large sum.

Record of the second well drilled in the Big Injun sand in the Mannington oil field; Burt Oil Company; Burt farm, Daisy well No. 1.

Began drilling October 18, 1889. 13 inch conductor, 16 feet; 10 inch casing, 200 feet; $7\frac{5}{8}$ inch casing, 950 feet; $4\frac{7}{8}$ inch casing, 1624 feet; top of Big Injun sand, 1745 feet; first oil pay, 1815 feet; second oil pay, 1825 feet; total depth, 1836 feet. Produced 250 barrels of oil first 24 hours. Well finished April 5, 1890. F. M. Wright, contractor.

Record of Johnny Smith farm well No. 1; Gorrel run, Tyler county; Owls Head Oil Company.

Began drilling 1890. conductor, 10 feet; 10 inch casing, 350 feet; $8\frac{1}{4}$ inch casing, 800 feet; $6\frac{1}{4}$ inch casing, 1500 feet; Big Lime, 1800 feet; show of oil and water together, 1840 feet; $4\frac{7}{8}$ casing, 1900 feet. The well was drilled through the Gordon sand 2810 feet and abandoned as a dry hole. Drillers, John Goodwin and Wilkes Hoag; tool dressers, Will Smith and Peter Hasson. The well was plugged in the red rock cave and the rig was moved.

On the second hole while spudding, Wilkes Hoag, the driller on four then, was sitting on the driller's stool, the extra crown pulley and block, used for putting in casing, fell from the top of the derrick and broke both of his legs. One was amputated below the knee; he lived only three days. Harry Doyle took Mr. Hoag's place on the well. This was the first deep well drilled in Tyler county. At that date it was not known that oil and salt water could be produced together on a paying basis from the Big Injun sand in Tyler county. Well drilled in 1890. Palmer and Davis, contractors.

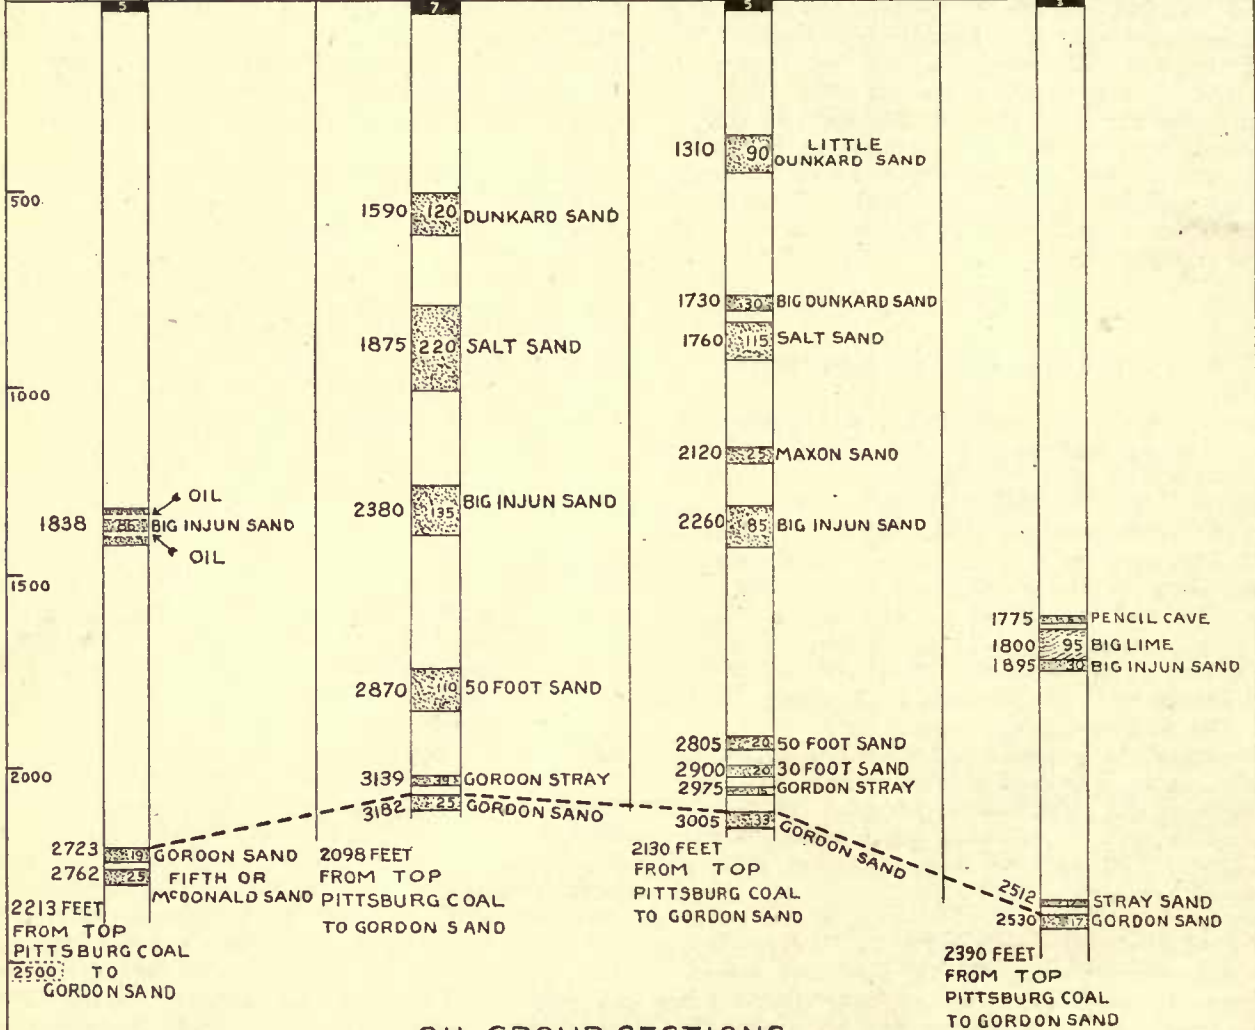

Record of the first well drilled to the Gordon sand in West Virginia; Mannington oil field; Burt Oil Company; Burt farm well No. 14.

Began drilling May, 1891; 13 inch conductor, 16 feet; 10 inch casing, 255 feet; Pittsburg coal, 505 to 512 feet! $7\frac{5}{8}$ casing, 1030 feet; $5\frac{5}{8}$ casing, 1782 feet; $4\frac{1}{4}$ liner, 225 feet; top of Big Injun sand, 1838 feet; first oil pay, 1914 feet; second oil pay, 1924

feet; total depth through Big Injun sand, 1940 feet. Produced 10 barrels of oil first 24 hours. Well finished through Big Injun sand August, 1891. Began to drill well down to Gordon sand in May, 1894. Top of Gordon sand, 2723 feet; oil in Gordon sand, 2727 feet; through Gordon sand, 2742 feet; dark slate to top of fourth sand, 2762 feet; gas in fourth sand, 2780 feet; bottom of fourth sand, 2788 feet; slate, 2800 feet; limestone, shells, 2900 feet; slate, 3000 feet; total depth, 3000 feet. Well drilled 2488 feet below the Pittsburg coal. Produced 80 barrels of oil first 24 hours from the Gordon sand. Well finished August 15, 1894. Contractors Burt Oil Company. Drillers and tool dressers sworn to secrecy before drilling well to Gordon sand.

The first Keener sand oil well was drilled by the Victor Oil and Gas Company on the Widow Jane Keener farm, three miles south of Sistersville, in October, 1892, well began producing 25 barrels of oil a day.

Record of John B. McCoy farm well No. 1, Sistersville; Capt. J. T. Jones, owner.

Ten inch drive pipe, 55 feet; 8¼ casing, 246 feet; 6¼ casing, 1000 feet; top of Big Injun sand 1360 feet; oil pay in Big Injun sand, 1384 to 1401 feet; total depth, 1434 feet. Produced 1200 barrels of oil the first month. Producing 14 barrels of oil a day at present. Well finished May 25, 1892. W. L. Armstrong, Superintendent.

Record of David McGregor heirs farm well No. 1, Cairo; A. C. Hawkins and Company, owners.

Conductor, 16 feet; 10 inch casing 178 feet; 8¼ casing, 800 feet; 6¼ casing, 1204 feet; top of the salt sand, 1481 feet; gas and oil, 1486 feet; bottom of the salt sand, 1509 feet; top of the Big Injun sand, 1617 feet; break in Big Injun sand, 1621 to 1626 feet; gas and oil, 1631 feet; gas, 1648 feet; finished well at 1652 feet; drilled in the salt sand June, 1896, and produced 20 barrels of oil each 24 hours. Well drilled down to the Big Injun sand April, 1897. Produced 25 barrels of oil from the Big Injun sand each 24 hours. John Cain, contractor.

Record of William Farrell farm well No. 4, Elk Fork, Tyler county; Treet and Crawford, owners.

Conductor, 16 feet; coal, 310 feet; Cow run sand, 964 feet; 8¼ casing, 964 feet; 6½ casing, 1590 feet; top of Big Lime, 1590 feet; top of Keener sand, 1787 feet; total depth, 1810 feet. Production 200 barrels of oil first 24 hours. McCutcheon Bros., contractors.

Record of Mason Bros.' farm well No. 1, Jug, Tyler county; Treet and Crawford Company.

Conductor, 50 feet; 10 inch casing, 375 feet; 8¼ casing, 862 feet; Cow run sand, 775 feet; bottom of Cow run sand, 787 feet; top of Maxin sand, 1542 feet; bottom of Maxin sand, 1561 feet; well finished September, 1899. Production first 24 hours, 30 barrels of oil. Drillers, Charles Ramsey and Grant

Lee. Tool dressers, John Sayre and Ed Webber. McCutcheon Brothers, contractors.

Record of the largest well ever struck in West Virginia; M. Copley heirs farm well No. 1, Sand Fork, Lewis county; South Penn Oil Company, owners.

Well drilled in the Gordon sand Saturday, September 22, 1900. Produced 6,000 barrels of oil first 24 hours. Contractors, Black Bros.

Record of a salt sand well in Calhoun county; Other Oil Company; Ellen Betts farm well No. 1, located on Pine Bottom at the mouth of Nigh Cut run on Little Kanawha river, three miles west of Grantsville, county seat of Calhoun county.

Began drilling May, 1902; oil in salt sand, 1330 feet; finished well July, 1902. Production first 24 hours, eight barrels.

Record of the deepest producing oil well in the world; Genine Robinson farm well No. 17, situated in Folsom district, in the southeastern part of Wetzel county; South Penn Oil Company, owners.

Began drilling June 24, 1902; 13 inch conductor, 16 feet; 10 inch casing, 1005 feet; 8¼ casing, 1952 feet; 6½ casing, 2763 feet; 5 3-16 casing, 2873 feet; total length of casing, 8609 feet; Pittsburg coal, top, 1428, bottom 1435 feet; Dunkard sand, top, 1940, bottom, 1995 feet; salt sand, top, 2045, bottom, 2250 feet; Little Lime, top, 2640, bottom, 2650 feet; Pencil cave, top, 2650, bottom, 2655; Big Lime, top, 2665, bottom, 2730; Big Injun sand, top, 2730, bottom, 2835 feet; fifty foot sand, top, 3350, bottom, 3385 feet; red rock, top, 3405, bottom, 3640 feet; stray sand, top, 3500, bottom, 3520 feet; oil in stray sand, 3505 feet; Gordon sand, top, 3531, bottom, 3550 feet. Production first 24 hours, 50 barrels. Total depth, 3555 feet. Well finished September 12, 1902. Contractors, Smith and Burton.

Record of W. Hunter Atha farm well No. 1; Fayette County Gas Company; Farmington.

Conductor, 12 feet; Mapletown coal, 260 to 265 feet; Pittsburg coal, 357 to 366 feet; 10 inch casing, 370 feet; first Dunkard sand, 968 feet; 8¼ casing, 1090 feet; second Dunkard sand, 1090 feet; top of gas sand, 1158 feet; bottom of gas sand, 1200 feet; top of salt sand, 1290 feet; water in salt sand, 1295 feet; bottom of salt sand, 1360 feet; top of Maxin sand, 4178 feet; bottom of Maxin sand, 1492 feet; top of Little Lime, 1618 feet; bottom of Little Lime, 1628 feet; Pencil cave, 1628 to 1634 feet; 6½ casing, 1634 feet; top of Big Lime, 1634 feet; break, 1714 feet; top of Big Injun sand, 1718 feet; bottom of Big Injun sand, 1800 feet; Squaw sand, 1830 feet; fifty foot sand, 2235 feet; thirty foot sand, 2373 feet; Gordon sand, 2580 feet; fifth sand, 2730 feet; total depth, 2730 feet. Produced when drilled in, 5,000,000 cubic feet of gas each 24 hours. Finished February 12, 1903. Hatzell and Wilson, contractors.

Record of Edwin Maxwell farm well No. 2; Weston; Weston Gas Company, owners.

Conductor, 20 feet; 10 inch casing, 145 feet; 8¼ casing, 705 feet; Big Lime, 1412 feet; small show of oil, 1432 feet; 6¾ casing, 1440 feet; top of Big Injun sand, 1495 feet; bottom of Big Injun sand, 1575 feet; slate, 1600 feet; sand, 1645 feet; slate and shells, 1800 feet; top of Gantz sand, 1850 feet; gas, 1871 feet; bottom of Gantz sand, 1889 feet; slate, 1909 feet; fifty foot sand, 1924 feet; slate, 1955 feet; thirty foot sand, 1978 feet; red rock, 1994 feet; stray sand, 2068 feet; slate, 2070 feet; top of Gordon sand, 2072 feet; bottom of Gordon sand, 2102 feet; lime, 2130 feet; sand, 2140 feet; slate, 2170 feet; top of fifth sand, 2254 feet; gas in fifth sand, 2255 feet; bottom of fifth sand, 2272 feet; total depth, 2272 feet; volume of gas, 3,000,000 cubic feet each 24 hours. Well finished March 18, 1903. Hatzell and Wilson, contractors.

Record of well No. 1, W. H. H. Wheaton farm, Burning Springs, Wirt county; Henning and Ewing, owners.

Struck oil in the 500 foot sand, 450 feet deep. Production first 24 hours, five barrels of oil. Well drilled May, 1903.

OHIO WELL RECORDS.

Record of the first well drilled in Ohio, on Duck creek, between Caldwell and Dudley, Noble county.

The first well was drilled by Thomas Thorley in 1814 for salt water brine. Oil and gas were found at 75 feet. The well was abandoned, as the devil's grease, as the oil was then called, spoiled the salt brine.

Record of the first well drilled in Ohio from which the oil was sold, at Dudley, Noble county, in the summer of 1841.

Robert McKee began drilling on the bank of Duck creek for salt water brine; at the depth of 475 feet oil was struck. The well produced about 20 gallons a day. The product was called devil's oil, and had very little sale until 1846, when it was put on the market and sold by Bosworth, Wells & Co., of Marietta, Ohio, for medicinal purposes.

Record of the first well drilled in the first Cow run sand in Ohio.

On the second day of February, 1861, leases were taken from Samuel and Uriah S. Dye by a company composed of John Newton, Douglass E. Newton, William Naylor, Moffat Dye and George S. Bosworth for 140 acres of land on Cow run, in Lawrence township, Washington county. The first well was located near a natural gas spring on the U. S. Dye farm. It was drilled by spring pole. A very small show of oil was found in the first Cow run sand at 150 feet. The well was drilled 200 feet and abandoned as a dry hole in July, 1861.

Record of the first oil well drilled in the first Cow run sand, Cow Run, Lawrence county.

John Newton, Douglass E. Newton, William Naylor, Moffat Dye and George S. Bosworth, owners; Samuel Dye farm well No. 1. Began drilling with spring pole August, 1861; struck oil in first Cow run sand 150 feet deep in December, 1861. The well produced 50 barrels of oil a day when first struck and was named the Old Cow and is the first well which produced oil from what is known as the first Cow run sand of Ohio and West Virginia.

Record of the first well drilled in Ohio expressly for oil.

The well was drilled by James Dutton, Alden T. Warren and John Smithson on a lease given by William Bayley on August 18, 1860, for a strip of land two rods wide and 10 rods long fronting on Duck creek, one-half mile southeast of Macksburg, Aurelius township, Washington county. The term of the lease was for 99 years; the consideration was \$1, to be paid at the end of 10 years. Search was to be made for rock oil and if none were found the land was to revert to the owner and no money was to be paid. At 60 feet lubricating oil was struck. The spring pole system was used in drilling. The well was finished in December, 1860, and produced 25 barrels of lubricating oil a day. It was pumped by hand and the old fashioned wooden pump was used. The oil was taken by wagon to Lowell on the Muskingum river and shipped by boat to Pittsburg. The gravity was 28 degrees Beaume, and sold at one time for \$28 dollars a barrel.

Record of the first oil well drilled in northwestern Ohio; Ben A. Faurot paper mill lot well No. 1; Lima, Allen county.

Began drilling well for gas January, 1885. Drive pipe 30 feet; 5½ casing, 375 feet; top of Trenton rock, 1300 feet; small show of gas and oil, 1310 feet; total depth, 1350 feet. Well was shot and put to pumping May 9, 1885. Production first 24 hours, 10 barrels of oil.

Record of the first flowing oil well drilled in the Lima oil field; Underwood town lot; J. L. Apple well No. 1; Lima, Allen county.

Began drilling April, 1886; drive pipe, 18 feet; 5½ casing, 370 feet; top of Trenton rock sand, 1304 feet; first gas, 1305 feet; first show of oil, filled up 100 feet in hole, 1316 feet; oil filled up 1000 feet in hole at 1321 feet; well started flowing at 1322 feet; total depth, 1322 feet. Production first 24 hours, 175 barrels of oil. Well completed May 3, 1886. Record by J. L. Apple, owner.

Record of the first well that produced oil that was run in the pipe line and sold in the Sistersville, W. Va., oil field; F. and C. Russell farm well No. 1, near Millers run, Monroe county, Ohio, 1½ miles north of Sistersville; Captain J. T. Jones, owner; W. L. Armstrong, superintendent.

Ten inch casing, 36 feet; 8¼ casing, 370 feet; salt sand, 640 feet; 6¼ casing, 772 feet; top of Big Injun sand, 1389 feet; total depth, 1440 feet. Finished

August 21, 1891. Production first 24 hours, 25 barrels. E. A. Myers, contractor.

Record of James Scott farm well No. 1, Scio oil field; Le Comte Bruner, Stewart & Co.

Conductor, 16 feet; 8¼ casing, 250 feet; 6¼ casing, 895 feet; top of Berea grit sand, 1268 feet; oil pay in Berea grit, 1284 feet; bottom of Berea grit, 1291 feet; total depth, 1291 feet. Well finished in February, 1899. Production first 24 hours, 40 barrels of oil.

Record of M. J. Millhorn farm well No. 1, Graysville oil field; Bruner, Stewart & Co., owners.

Conductor, 20 feet; 10 inch casing, 103 feet; 8¼ casing, 650 feet; 6¼ casing, 1255 feet; top of Keener sand, 1469 feet; bottom of Keener sand, 1488 feet; total depth, 1491 feet. Production 50 barrels first 24 hours. Drilled December, 1900.

Record of Asa Cline farm well No. 3; Pure Oil Co.; Jackson ridge oil field, Monroe county.

Conductor, 15 feet; 8¼ casing, 745 feet; 6¼ casing, 1200 feet; top of Keener sand, 1468 feet; pay in Keener sand, 1470 to 1485 feet; total depth, 1515 feet; production first 24 hours, five barrels of oil. Record by J. W. Chrispen, driller.

Record of Turkey Foot well; A. W. Gooden farm well No. 1, Knoxville oil field; Cleveland and Port Home Oil Company.

Conductor, 16 feet; coal, 30 to 33 feet; coal, 75 to 79 feet; 8¼ casing, 175 feet; top of Hurry Up sand, 250 feet; bottom of Hurry Up sand, 290 feet; top of

salt sand 730 feet; bottom of salt sand, 780 feet; top of Big Injun sand, 900 feet; bottom of Big Injun sand, 955 feet; 6¼ casing, 960 feet; top of Berea grit, 1402 feet; bottom of Berea grit, 1451 feet; total depth, 1451 feet. John Weldron and Sons, contractors. Record by J. W. Chrispen, driller.

Record of Edwin Sharp farm well No. 2; Uniontown oil field; Le Comte Bruner and Co., owners.

Conductor, 16 feet; 10 inch casing, 140 feet; 8¼ casing, 900 feet; 6¼ casing, 1340 feet; top of Berea grit sand, 1683 feet; oil in Berea grit, 1695 feet; bottom of Berea grit, 1708 feet; total depth, 1711 feet; produced first 24 hours, 100 barrels; well drilled in February, 1903.

Record of Corporation well No. 1, Matamoras Oil Co.; New Matamoras.

Ten inch drive pipe, 44 feet; 8¼ casing, 209 feet; first Cow run sand, 485 to 493 feet; coal, 512 to 522 feet; second Cow run sand, 555 to 579 feet; gas sand, 755 to 805 feet; coal, 830 to 834 feet; first salt sand, 902 to 952 feet; 6¼ casing, 960 feet; coal, 980 to 987 feet; second salt sand, 1072 feet; gas, 1080 feet; fine show of oil, 1085 to 1090 feet; gray sugar sand, 1164 to 1182 feet; Big lime, 1268 feet; show of oil and gas, 1284 to 1289 feet; Big lime sand, 1289 to 1318 feet; Keener sand, 1318 to 1360 feet; top of Big Injun sand, 1378 feet; Good sand, 1378 to 1383 feet; Hard sand, 1383 to 1388 feet; break of slate, 1386 to 1424 feet; second streak of Big Injun sand, 1424 to 1444 feet; black slate, 1444 to 1450 feet; total depth when abandoned, 1450 feet; drilled March, 1903. James A. Kennedy, contractor.

OIL WELL SUPPLY CO.

ESTABLISHED 1861

Manufacturers of Machinery and Supplies of all Descriptions for Oil Country Operations.

The "oil country outfit" is a variable term. It is a safe assertion that two could not be found alike in all details. While the general characteristics vary but little, it is the detail which must be considered, and which involves great change in selection and variation in price. Very little of this is due to fancy or other cause than that of necessity. Each outfit must be made up of parts all of which harmonize and work well together and are adapted to the particular conditions under which the outfit is to be used. From this may easily be conceived the inability of naming prices on an "ordinary outfit." They are all ordinary to the manufacturer, but one perfectly adapted to one section of country might be almost useless in another. A few general rules and observations may be given which will be of interest and value. For this purpose we will divide the material composing an outfit in the following manner:

RIG

This refers only to the structure, with its foundation of heavy timbers, and the wheels and reels on which are carried the lines or cables to which are attached the drilling tools proper. We furnish all the irons, nails, bolts and special parts for building the wheels and reels, and can, if desired, give specifications for cutting the timber and lumber, which may be obtained from local sources. The portion which we furnish will cost from \$50.00 to \$275.00, according to size and design. The weight varies from 15 cwt. to 80 cwt. In cases where timber and lumber cannot be obtained we supply the entire Rig, carefully framed, and ready to erect. Prices vary from \$600.00 to \$750.00 and average weight equivalent to two ordinary car lots or 60,000 lbs. Shallow wells not exceeding 600 to 800 feet in depth may be drilled through ordinary formations by the use of the Corbett Mast Rig. This Rig, while not as strong or admitting of such rapid work as the standard Rig, is particularly useful for prospecting or for conducting work where transportation facilities are limited and economy more desirable than speed.

MACHINERY

By this we refer to the Boiler and Engine. The former ranges from 15 to 40 H. P., the latter from 12 to 30 H. P. Both are specially adapted to the work, and the Engine in particular is an essential. In fact, it is not practicable to use an ordinary engine for this purpose. Price, Boiler and Engine, from \$580.00 to \$900.00. Weights, 8,000 to 16,000 lbs.

DRILLING TOOLS

We include under this head all essentials for making the bore and cleaning out the detritus, also all special appliances for removing tools which may be broken or otherwise fastened in the bore; also Cable and Sand Line, and tools for handling Casing and Pipe used in the construction of the well. This is the portion of the outfit which must be selected with the greatest care, and with an eye to its efficiency in meeting the peculiar conditions for which it is intended. It is quite impossible to give other than the widest range, and while some of the simplest and lightest outfits might be used to advantage at a cost of \$500, other conditions might require the expenditure of \$4,000 to \$5,000.

TUBULAR GOODS

Every well requires some casing or piping in its construction. In some wells a single column of casing to shut off the water is sufficient, in others several such are needed, each column being of a size to pass through the preceding column with the least possible lost space between the two. Frequently it is necessary to drive the columns of pipe instead of inserting them after the bore is prepared to receive them. In that case heavy pipe, called drive pipe, must be used. In drilling a well in a district where the geological formation is not well known it is much safer to use drive pipe. The ordinary sizes are 10, 8, 6 and 4½ inches inside diameter. No one can tell how much of each size might be required until the initial well is completed. In the different districts of the oil regions the correct amounts can be quite accurately determined, as well as the sizes and kinds which can be most economically used. The foregoing observations apply to all operations conducted where the formations are composed largely of rock of varying degrees of hardness. The recent developments in Texas disclose a formation nearly devoid of rock, the formation from surface to oil-bearing stratum being a series of strata of clay and quicksand. To successfully cope with this unusual condition a quite different system is necessary, known as the

ROTARY HYDRAULIC OUTFIT

This includes Boiler and Engine for power, heavy Steam Pump for the hydraulic pressure, special Hoisting Gear, Rotary Table for turning and lowering the pipe, and special appliances for connecting and operating the outfit. Such an outfit costs about \$3,000. The contractors having the most experience use two Boilers and two Pumps to provide against the danger of sticking the pipe by stopping for repairs. This would increase the cost about \$650.00. The Rig used is a simple Derrick, which can be built by any ordinary carpenter. The same rules pertaining to the regular outfit for casing and pipe will apply in the use of the Rotary Hydraulic.

COMBINATION RIG AND OUTFIT

The Combination Rig, as its name implies, embodies the principles of both the Standard Cable Rig and the Hydraulic Rotary Rig. This involves a higher cost and greater weight. A complete outfit, not including the Tubular goods or the timber and lumber for derrick, costs about \$5,000, and will weigh approximately 470 cwt.

PORTABLE DRILLING MACHINES

It has been shown that great power and strength are required in performing the ordinary functions of a drilling rig. This implies a corresponding weight, or the very antithesis of mobility. The obvious advantages of a Rig which may be freely moved about are such that many attempts have been made to produce one of sufficient power to compete with the Standard Rig. These efforts have usually resulted in disappointment. The exceptions are so rare that experienced drillers are justified in questioning any broad claims, but we are now prepared to offer portable Machines which will do all that we claim for them. These are built in various sizes for depths ranging from 150 feet to 2,500 feet.
