SITUATION

- New cases continue arising from unknown chains of transmission in Guinea and Sierra Leone, according to the WHO, as of 25 February. Furthermore, unsafe burial practices are still being reported in both countries.
- In Sierra Leone, EVD transmission is widespread, despite a brief decline of case incidence between December 2014 and end of January 2015.
- In contrast, in Liberia, virus transmission currently remains low, with only one new confirmed case since 16 February, whose chain of transmission could in fact be traced to registered contacts. Thanks to the progress in EVD response, two markets were due to re-open on 27 February in Grand Cape Mount county.
- Community engagement efforts by response partners continue, despite security incidents in all three countries. In Guinea only, on 25 February, resistance to response efforts were reported in four separate administrative regions.

EVD OUTBREAK STATISTICS

Numbers correct as of 23 February (Liberia), 25 February (Guinea), 25 February (Sierra Leone)

Country	EVD cases	EVD deaths
LIBERIA	9 265	4 057
