⁽O) RESULTS: (For all hits claimed on ship targets and for land targets of special interest, draw diagram, top or side view or both, as appropriate, showing type and location of hits. For all targets give location and effect of hits, and identify by numbers above. Use additional sheets if necessary).

^{1.} These gun positions were located within 500 yards of the east side of Naha Airfield, Okinawa, and were firing medium AA, moderate and accurate. The positions are - well hidden and/or camouflaged. Pilots and crewmen were not able to assess damage, especially for two reasons; they were not visually sure wheather or not they had hit a gun position and because of dirt and debris from preceding planes hits, they could not be sure as to the effectiveness of bombs and rockets expended.

Air Group Commander, as Air Coordinator, and three other pilots took off as part of group of 24 FM-2's and 15 TBM's. The group was for support work (pre-landing date). They were given AA positions around Naha Airfield, Okinawa.

With 2500 ft. cloud base it was very difficult to come down through the clouds and get any bombing accuracy. Also, the positions were so well camouflaged and/or hidden that pilots were unable to effectively identify a pinpoint target. Also, where several planes are diving in column, after the first two planes have dropped, smoke and debris obscure the target from vision of succeeding planes in the dive.

In his fourth dive, Ensign EBERLEY's plane received a direct hit on the underside of his port wing, just outboard of the stub wing. He returned to base and landed.

EBERLEY informed base that the plane stalled out at 125 knots (with wheels and flaps up). He made several passes at this speed but was waved off. He was told to get some altitude and experiment. After an hour, he called in that he could approach more slowly. He then came in again and received a cut at about 90 knots. He was brought in a little high and when he got the cut, he nosed over a little and brought the stick back rather severely. This resulted in a whip stall and just as the port wing started to fall off, the hook caught and straightened out the plane into a good landing.

No other planes were damaged. The wing was changed and the plane received an up within twelve hours.

AIRCRAFT ACTION REPORT

The projectile which damaged the wing of Ensign EBERLEY's

penetrated the under side of the wing, exploded inside, and came

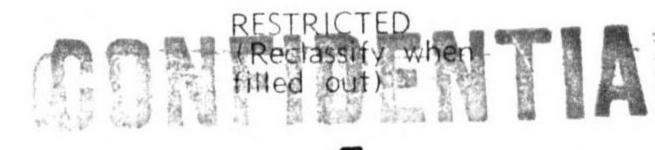

out the topside in about 25 pieces, making holes from the size

of a fingernail to 21" in diameter. The leading edge of the

wing, directly forward of the hit, buckled in as if it had

No jolt was felt by the pilot or crew when the hit was received, but they heard a crack like that of a whip.

plane appeared to be a 40 mm in size with contact fuze. It
