The True Bermuda Easter Lily

(Engraved from a photograph.)

Copyrighted, 1891, by Peter Henderson & Co.

THE TRUE BERMUDA EASTER LILY.

The TRUE Bermuda Easter Lily. (*Lilium Harrisii.*)

HENDERSON'S "HIGH GRADE" STOCK.

THIS PEERLESS LILY IS THE MOST PROFITABLE BULB THAT FLORISTS CAN GROW.
THE MOST PROFITABLE TO GROW FOR CUT FLOWERS.

THE MOST PROFITABLE TO GROW AND SELL AS POT PLANTS.

THE MOST PROFITABLE EVEN THOUGH YOU ONLY WANT TO RETAIL THE BULBS.

The True Bermuda Easter Lily is our Great Specialty. We were the pioneer introducers of it in quantities for florists' forcing purposes and have always been "Headquarters," supplying the trade generally and the large dealers both in Europe and America. Our immense and annually increasing trade in these bulbs will this season reach nearly 1,500,000 bulbs. Our acreage in Bermuda is probably double that of all others combined.

Our Bulbs are Larger, Healthier and Better than those usually sold—for the reason that no expense is spared in manuring and cultivating. Experience having shown us that bulbs so treated are incomparably superior to bulbs grown on impoverished and unfertilized land year after year, which constitutionally weakens the bulbs and they give results accordingly. This is the general practice—especially among those who endeavor to grow cheaply—to enable them to undersell.

Our Stock is True and Unmixed. Our strict selection for years secures true and unmixed stock. You can not afford to force stock mixed with Longiflorums, even though the bulbs were given you, as they would flower so irregularly as to occupy a bench the whole winter.

Reduced Prices for Immediate Orders for Season 1892.

The following is for the benefit of these who are not acquainted with

THE INCOMPARABLE MERITS OF The True Bermuda Easter Lily.

It is the greatest acquisition to floriculture made in many years. They are by far the most profitable bulbs florists can grow for forcing on account of their profusion of bloom, the remarkably short time required to bring them into flower, and the certainty to produce abundant and profitable crops; and, also the ease with which they can be manipulated to be flowered at any desired period such as Christmas, Easter and other special occasions.

THE FLOWERS are delightfully fragrant, pure waxy white, of great substance, and if cut as soon as they open or partially open they can be kept—in a proper place—for two weeks, and can be shipped long distances in perfect condition. The flowers are of great value for floral pieces, vase, house and church decoration, and especially at Christmas and Easter find a ready and profitable sale.

THE QUANTITY OF BLOOM PRODUCED IS MARVELLOUS, the average production of bulbs 5 to 7 in circumference, even when forced, is from 5 to 8 flowers; and of bulbs 7 to 9 inches, 8 to 12 flowers; and if desired a second crop of flowers frequently equal to the first can be secured the same season by drying the plants off after blooming for a time and then again starting them. In their native habitats it is nothing unusual for good bulbs to bear from 30 to 50 flowers and occasionally as many as a hundred or more.

A short time only is required to bring them into bloom. Bulbs are ripe and ready for delivery by the first of August, and if potted within a short time they can be had in flower in November if desired and

A succession of bloom can be kept up from November to May by bringing the pots of rooted bulbs in from cold frames at intervals throughout the winter; of course, the great desideratum is to bring large lots into bloom at Christmas and Easter.

Blooming Plants in Pots for typical Easter offering, and decoration of the window, table, house or church, nothing is more appropriately beautiful or more highly appreciated. Thousands upon thousands are sold in the large cities every winter for this purpose at from \$1.00 to \$2.00 per plant, and the demand, which is rapidly growing, has never been fully supplied.

As a Garden Lily it is of great beauty, being entirely hardy south of Washington, and in the Northern States only requires a protection of leaves or litter to the depth of 5 or 6 inches during the winter.

This Lily is a geographical variety of Longiflorum which has been produced by the peculiarly congenial climate and soil of the island of Bermuda. The efforts to produce and propagate it in other countries have proved that it then loses its distinguishing and marvellous merits of earliness and profusion of bloom—and the ease with which it can be bloomed at any particular period—therefore for best results be sure and get **Henderson's "High Grade" True Bermuda Easter Lily Bulbs.**

MIXED DUTCH HYACINTHS

{ IN SEPARATE COLORS.

(FOR DELIVERY IN SEPTEMBER.)

In making up these mixtures we have had the early flowering sorts, which are the ones most suitable for forcing, kept separate from the late flowering sorts, which are only suitable for bedding. Therefore, if you will kindly state what you want the bulbs for—whether for forcing or bedding—we are sure you will be better satisfied with results than if you got bulbs of all degrees of earliness and lateness mixed together, as they are generally sold. Our experience in forcing bulbs has taught us this important fact.

Henderson's
Large Flowering German
Lily of the Valley.

LILY OF THE VALLEY.

Henderson's Large Flowering German Pips.
(DELIVERY IN NOVEMBER.)

To make a complete success of forcing Lily of the Valley, it is absolutely necessary to have the best imported German (Berlin or Hamburg) early flowering pips, that have been grown in a soil and climate congenial to their proper development. There are thousands of Dutch or Holland pips annually offered that are late flowering, and having few and small bells, they are offered at a lower price, but are absolutely worthless for forcing. We make Lily of the Valley one of our great features, and have it grown for us by an experienced specialist.

PRICES.—3 year old Selected Forcing Pips. Per 1,000, \$9.00; per original case of 2500 Pips, \$21.00.
Price, Large Clumps, per 100, \$18.00.
